DIRECT TESTIMONY
OF
DAVID M. YOUNG

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is David Young, and my business address is 341 White Pond Drive, Akron, Ohio 44320.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as a Consultant – Rates and Regulatory Affairs – Pennsylvania. The Pennsylvania Rates Department provides regulatory support for FirstEnergy Corp.'s ("FirstEnergy") wholly-owned Pennsylvania electric distribution operating company, FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company"). FE PA consists of the following rate districts: Met-Ed, Penelec, Penn Power, West Penn and The Pennsylvania State University ("PSU"), which is a sub-part of the West Penn rate district (individually a "Rate District" and in any combination the "Rate Districts").

Q. What is your educational background?

A. I have a Bachelor of Science degree in accounting and a Master of Business Administration degree from the University of Akron. I have over 25 years of experience at FirstEnergy. My educational background and work experience are described in Appendix A.

Q. Please describe your duties as a Rates Consultant.

A. I am responsible for the development, coordination, preparation and presentation of FE PA's accounting and financial data in its rate-related matters before the Pennsylvania Public Utility Commission ("Commission" or "PaPUC") and New York State Public

Service Commission. I am also responsible for tariff interpretation, tariff filings, and the design and development of retail electric rates.

Q. Have you ever testified before the Commission?

A. Yes. I have testified before the Commission in other rate-related matters, as shown in Appendix A to this statement.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FE PA. FE PA was formed through the combination of several predecessor Pennsylvania electric utilities after approval by the Commission. On January 1, 2024, Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the "Predecessor Companies") merged into FE PA (the "PA Consolidation"). Consistent with the approvals received from the Commission, FE PA was certificated as a public utility and authorized to provide public utility service in the territories of the Predecessor Companies (now, the Rate Districts).

Q. What is the purpose of your direct testimony?

A. My testimony will describe the following elements of FE PA's proposed seventh default service program ("DSP") for the period June 1, 2027 through May 31, 2031 (hereinafter "DSP VII") that is the subject of this proceeding: (1) compliance with Commission directives and settlement commitments arising from the Predecessor Companies' sixth DSP proceedings decided at Docket Nos. P-2021-3030012 (Met-Ed), P-2021-3030013 (Penelec), P-2021-3030014 (Penn Power), and P-2021-3030021 (West Penn) (collectively, "DSP VI"); (2) customer benefits and notice; (3) plan term; (4) Time-of-Use ("TOU") Default Service Rate Rider ("TOU Rider"); (5) assigning default service customers to the

Price to Compare ("PTC") Default Service Rate Rider ("PTC Rider") or the Hourly Pricing Default Service Rider ("HP Rider") based on their maximum registered peak load ("MRPL"); and (6) proposed supplier coordination changes related to electric generation supplier ("EGS") arrangements with customers and the Company's purchase of EGS receivables ("POR") program.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes, FE PA Exhibits DMY–1 through DMY–7 were prepared by me or under my supervision and are described later in my testimony.

II. SUMMARY OF DSP AND COMPLIANCE WITH DSP VI COMMITMENTS AND OBLIGATIONS

Q. Please describe FE PA's default service obligations.

A. FE PA is obligated to arrange for and provide electric generation service (default service) to all customers within its service territory who do not select an EGS or who return to default service after being served by an EGS that becomes unable or unwilling to serve. By law, the Company is required to file a plan with the Commission that sets forth how it will meet its default service obligation, including a strategy for procuring generation supply, a schedule for implementation, and a rate design to recover the Company's reasonable costs.

Q. Why is FE PA filing a new DSP?

A. The Company's current DSP ("DSP VI") will expire on May 31, 2027.[1] To comply with the Commission's default service regulations, the Company must file a new DSP to establish supply plans to obtain market-based generation supply for its customers that

[1] *See Joint Petition of Metro. Edison Co., Pa. Elec. Co., Pa Power Co., and West Penn Power Co. for Approval of their Default Serv. Programs for the Period Beginning June 1, 2023 through May 31, 2027*, Docket Nos. P-2021-3030012 et al. (Recommended Decision dated June 29, 2022) ("DSP VI RD"). The Commission adopted the DSP VI RD without modification by Order entered on August 4, 2022 ("DSP VI Order"). In the DSP VI Order, the Commission approved a Joint Petition for Partial Settlement ("DSP VI Settlement") without modification.

choose not to, or are unable to, shop for generation service not less than 12 months prior to the conclusion of the currently effective Commission-approved DSP VI.[2]

With limited changes, FE PA is proposing to generally continue the framework from DSP VI, which, as noted above, was previously approved by the Commission. In addition, FE PA has used the Commission's default service regulations, the associated Policy Statement,[3] the Electricity Generation Customer Choice and Competition Act (the "Competition Act"), as amended by Act 129 of 2008 ("Act 129"),[4] and the Alternative Energy Portfolio Standards ("AEPS") Act,[5] as guides in developing its proposed DSP VII. As explained in the direct testimony submitted by FE PA in this proceeding, FE PA believes that the DSP set forth in its filing: (1) complies with the Commission's default service regulations and Policy Statement, as well as applicable provisions of the Competition Act, Act 129, and the AEPS Act; (2) is consistent with Commission decisions in similar prior proceedings; and (3) is in the public interest.

Q. Please describe the settlement conditions and Commission directives in the DSP VI proceeding that are relevant to FE PA's proposed DSP in this proceeding and explain how FE PA has complied with its obligations related thereto.

A. The provisions and FE PA's compliance actions are as follows:

1. In the DSP VI proceeding, the Predecessor Companies proposed new TOU rate options for the residential and commercial classes consistent with Commission guidance

[2] 52 Pa. Code §§ 54.181-54.189.

[3] Commission Policy Statement on Default Service, 52 Pa. Code §§ 69.1801- 69.1817.

[4] 66 Pa.C.S. §§ 2801 et seq.

[5] 73 P.S. §§ 1648.1 – 1648.8 and related provisions of 66 Pa.C.S §§ 2813-2814.

on TOU rate design and Act 129 requirements.[6] The DSP VI Settlement adopted the Predecessor Companies' originally proposed TOU rate options with limited modifications related to periodic updates to their TOU pricing multipliers and the communications plan for the TOU rates.

I will discuss FE PA's review of the TOU pricing multipliers during DSP VI and the Company's proposed enhancements to its existing TOU rate options later in my testimony.

2. As part of the DSP VI Settlement, the Predecessor Companies agreed to terminate their Customer Referral Programs ("CRPs") on May 31, 2027, and to address whether a successor CRP should be implemented in its next DSP filing. In addition, the Predecessor Companies agreed to convene a collaborative to explore the compilation of metrics related to the CRP. In her direct testimony (FE PA Statement No. 4), Company witness Carlixta De La Rosa discusses the results of the collaborative and explains why FE PA is not proposing to implement a successor CRP during DSP VII.

[6] After the Commission's initial approval of each Predecessor Company's TOU Rider, the scope of an EDC's obligation to offer TOU rates to default service customers was the subject of litigation before the Commission and Commonwealth Court. *See Petition of PPL Elec. Utils. Corp. for Approval of a New Pilot Time-of-Use Program*, Docket No. P-2013-2389572 (Order entered Sept. 11, 2014) (holding that Act 129 did not require PPL Electric Utilities Corp. ("PPL") to offer TOU rates directly to customer-generators); *Dauphin Cty. Indus. Dev. Auth. v. Pa. P.U.C.*, 123 A.3d 1124, 1136 (Pa. Cmwlth. 2015) ("*DCIDA*") (holding that Act 129 does not authorize default service providers to delegate the obligation to offer TOU rates to customers with smart meters to EGSs); *Petition of PPL Elec. Utils. Corp. for Approval of a New Pilot Time-of-Use Program*, Docket Nos. P-2013-2389572 and M-2016-2578051 (Secretarial Letter issued Apr. 6, 2017) ("April 2017 Secretarial Letter") (proposing a TOU design for PPL in accordance with the *DCIDA* decision and noting that the proposed TOU design "may provide future guidance to all EDCs" for incorporation into their own TOU proposals in their individual default service proceedings).

III. CUSTOMER BENEFITS AND NOTICE

Q. Is FE PA proposing any changes from DSP VI that will benefit customers?

A. Yes. The Company is proposing several changes to DSP VI that will provide customer benefits, including:

- changes to FE PA's TOU rate options, including shortening the peak period duration to produce more meaningful price differences that could encourage customer usage behavior, as described later in my testimony;
- the Company's proposal to classify commercial and industrial default service customers by their MRPL as described later in my testimony;
- an introduction of a five-year full-requirements product for residential customers as described in the direct testimony of Ryan J. Rose (FE PA Statement No. 2) and Dr. Nicholas E. Powers (FE PA Statement No. 3);
- removing Network Integration Transmission Service ("NITS") costs from the auction product for all default service customers and simplifying the capacity proxy price process as described in Mr. Rose's direct testimony; and
- supplier coordination tariff changes to address issues arising from FE PA residential shopping customers paying EGS charges in excess of the PTC, as discussed later in my testimony.

Q. Please describe how FE PA will provide notice to customers of this DSP filing.

A. Pursuant to 52 Pa. Code § 54.188(e)(1), FE PA must provide all customers with notice of its DSP filing in a manner similar to that described in 52 Pa. Code § 53.68. Accordingly, within 30 days of filing its DSP VII Petition, FE PA will provide public notice of the filing by publishing a notice in the major newspapers serving each Rate District. The notice will

contain information about FE PA's Petition; the Company's proposed competitive solicitations of generation resources for each Rate District; how FE PA's plan may affect customers; where the filing is available for public inspection; how comments or complaints can be filed; and how customers can participate in this proceeding. Additionally, the Company's Petition and supporting testimony and exhibits will be posted on FE PA's public internet domain, where those materials will be available electronically for public inspection. Finally, FE PA is providing additional public notice by means of a press release. In accordance with 52 Pa. Code § 54.185(c), FE PA is also serving a complete copy of its Petition on the Pennsylvania Office of Consumer Advocate ("OCA"), the Pennsylvania Office of Small Business Advocate ("OSBA"), the Commission's Bureau of Investigation and Enforcement ("I&E"), PJM Interconnection, L.L.C. ("PJM"), and all EGSs registered to provide service in its service territory. As a courtesy, FE PA is also serving a complete copy of its Petition on the intervenors in the Predecessor Companies' last default service proceedings, specifically, Calpine Retail Holdings, LLC, the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania, Constellation Energy Generation, LLC and Constellation NewEnergy, Inc., Enerwise Global Technologies, LLC d/b/a CPower Energy Management, John Bevec and Sunrise Energy LLC, the Met-Ed Industrial Users Group, the Penelec Industrial Customer Alliance, and the West Penn Power Industrial Interveners (collectively, the "Industrials"), NRG Energy, Inc., PSU, and the Retail Energy Supply Association.

Q. Please describe the proposed customer notices that will be provided for any default service rate changes.

A. FE PA will continue to submit tariff supplements to recover the costs reasonably incurred in acquiring electricity at market prices the later of 45 days prior to the effective date of each change in their default service rate, seven days after the last supply auction for that delivery period or seven days after the last NITS rate applicable to load serving entities in the Rate Districts is published by PJM or more frequently. The tariff supplements will be accompanied by the calculations that convert procurement plan results into retail rates. Written notice of the submission of these tariff supplements will be provided to the OCA, OSBA, I&E, the Industrials, PSU, and other parties included on the service list of this proceeding. The tariff supplements will be posted on FE PA's public internet domain when they are filed with the Commission. In addition, FE PA will continue to post the filed PTC Rider rates for the residential and commercial classes on the Commission's website at www.papowerswitch.com. Also, the revised PTC Rider rates for the residential and commercial customer classes will be posted on FE PA's public internet site within one business day of the effective date of the revision. Consistent with its current practice, as approved in the DSP VI proceeding, customers will be provided notice, via bill message, that new default service rates will take effect. The notices will enable customers to analyze how the new rates will affect their bills and provide an opportunity for them to seek competitive alternatives from EGSs.

Q. What is the proposed term of DSP VII?

A. If approved, DSP VII would span the 48-month period of June 1, 2027, through May 31, 2031. This term is consistent with the four-year DSP VI term approved by the Commission in the DSP VI Order.

IV. TIME-OF-USE DEFAULT SERVICE RIDER

Q. Does FE PA currently offer TOU rate options as required by Act 129?[7]

A. Yes. FE PA currently offers TOU rate options to eligible residential and commercial default service customers through its Time-of-Use Default Service Rider ("TOU Rider") as approved by the Commission in the DSP VI Order. FE PA's existing TOU rates differentiate prices across three periods (peak, off-peak and super off-peak) that remain constant year-round based on price multipliers for each class and Rate District that are updated every two years and are designed to motivate customers to shift usage to lower-cost, off-peak hours.

FE PA's current TOU rate structure offers a higher rate during non-holiday weekdays from 2 p.m. to 9 p.m. relative to the Company's non-time varying PTC Rider default service rate and a reduced rate during two off-peak periods. The current TOU rates include a super off-peak pricing period from 11 p.m. to 6 a.m. every day to encourage electric vehicle charging during overnight low-priced hours. The off-peak period consists of all other hours.

Participating customers remain on the TOU rate until they affirmatively elect to return to FE PA's standard default service rate, switch to an EGS or otherwise become

[7] 66 Pa.C.S. § 2807(f)(5). The Hourly Pricing Default Service Rate Rider for commercial class already meets Act 129 requirements.

ineligible. Participating customers may leave the Company's TOU rate for any reason and at any time without penalty. However, they may not re-enroll for 12 billing months to discourage customers from joining the TOU Rider only in certain months when they do not have to shift usage to save money, thereby reducing the ability to game the rider.

Q. Is FE PA proposing any changes to the eligibility rules for its TOU rates?

A. No. FE PA's TOU Rider is available, with limited exceptions, to default service customers with smart meters who are not receiving hourly-priced default service. Residential customers enrolled in FE PA's Customer Assistance Program ("CAP") are not eligible for the TOU Rider. The Company is proposing to continue excluding CAP customers from the TOU Rider.

Q. What are the current TOU rate multipliers and how long are they effective?

A. The current TOU rate multipliers, which are effective from June 1, 2025. through May 31, 2027, are summarized in Table 1. Details regarding the calculation of those multipliers using market data from 2021 through 2024 is provided in FE PA Exhibit DMY-1.

Table 1		On-Peak	Off-Peak	Super Off-Peak
Met-Ed	Commercial	1.7434	0.8431	0.6124
	Residential	1.7060	0.8397	0.6215
Penelec	Commercial	1.6999	0.8541	0.6437
	Residential	1.6792	0.8482	0.6510
Penn Power	Commercial	1.6307	0.8817	0.6474
	Residential	1.6048	0.8744	0.6512
West Penn	Commercial	1.6946	0.8636	0.6242
	Residential	1.6649	0.8542	0.6298

Q. How are the TOU rate multipliers calculated?

A. The TOU price multipliers reflect the load-weighted locational marginal price ("LMP") for each TOU pricing period calculated from Rate District-specific historical PJM day-ahead

spot market pricing data and load data for their respective zones. FE PA allocates the cost of capacity, which varies by Rate District and customer class, entirely to on-peak hours. This approach is intended to send cost-based pricing signals and create pricing differentials between the on-peak and off-peak pricing periods that are more likely to motivate customers to adjust the time of day they use electricity. In accordance with Paragraph 56 of the DSP VI Settlement, FE PA reviews the TOU pricing multipliers every two years by Rate District and class, using an updated rolling four years of historical PJM spot market and capacity pricing data. The Company updates all TOU rate multipliers if the calculation of at least one TOU rate multiplier results in a 15% or larger change in any direction. FE PA proposes to continue updating the TOU rate multipliers every two years in the same manner as DSP VI, and the updated multipliers for the first year of DSP VII will be reflected in FE PA's PTC Rider filing 45 days before June 1, 2027.

Q. Is FE PA proposing any changes to the TOU Rider's price-differentiated usage periods for DSP VII?

A. Yes. The current on-peak period runs for seven hours from 2 p.m. to 9 p.m., which could present challenges for customers to shift their load to off-peak hours. In addition, the on-peak to off-peak price ratios shown in Table 1 are relatively low (less than 2 to 1 in many classes and rate districts). FE PA is proposing to shorten the duration of the on-peak period to four hours from 3 p.m. to 7 p.m. Reducing the on-peak hours will produce a more meaningful price variation (on average 2.5 times higher than off-peak) to create a stronger incentive for customers to sign up for the TOU program and change their energy consumption habits. The off-peak period will gain the three hours removed from on-peak

and the super-off peak period will remain the same. Table 2 highlights the proposed time periods.

Table 2

Pricing Period	Days of Week	Current	Proposed
On-Peak	Mon - Fri	2 p.m. - 9 p.m.	3 p.m. - 7 p.m.
Super Off-Peak	Everyday	11 p.m. - 6 a.m.	11 p.m. - 6 a.m.
Off-Peak		All Other Hours	All Other Hours

In addition, FE PA Exhibit DMY-2 shows a graph highlighting the average load and LMPs for FE PA during the proposed on-peak pricing period.

Q. How do the Company's proposed changes to the on-peak and off-peak usage periods impact its currently effective TOU rate multipliers?

A. As summarized in Table 3 below and shown in more detail in FE PA Exhibit DMY-3, the Company's proposal increases the price variation between on- and off-peak periods, thereby giving customers a stronger incentive to sign up for the TOU program and change their energy consumption habits.

Table 3		On-Peak	Off-Peak	Super Off-Peak
Met-Ed	Commercial	2.3110	0.8617	0.6124
	Residential	2.2608	0.8584	0.6215
Penelec	Commercial	2.2457	0.8702	0.6437
	Residential	2.2189	0.8657	0.6510
Penn Power	Commercial	2.0867	0.9010	0.6474
	Residential	2.0481	0.8959	0.6512
West Penn	Commercial	2.0799	0.9121	0.6242
	Residential	2.0339	0.9055	0.6298

Q. Is FE PA proposing any other changes to its TOU rate multipliers for DSP VII?

A. Yes. As shown in the above table, FE PA currently calculates a multiplier for each Rate District and customer class. FE PA is proposing two additional changes. The first is to

apply a single weighted-average customer class TOU rate multiplier to all Rate Districts and the second is to use the multiplier from the Rate District with the greatest on-peak to off-peak price ratio across the FE PA footprint. FE PA believes this approach will provide the most incentive for customers to change their consumption patterns and shift their usage to lower cost hours. In addition, FE PA believes it will be easier to educate consumers on the benefits of TOU while streamlining future pricing updates from a back-office perspective. Table 4 shows the current TOU rate multipliers with the Residential and Commercial classes combined on a weighted-average basis. FE PA Exhibit DMY-4 provides more detail as to how these numbers were calculated.

Table 4		On-Peak	Off-Peak	Super Off-Peak
Met-Ed	R & C Combined	2.2741	0.8593	0.6190
Penelec	R & C Combined	2.2281	0.8673	0.6484
Penn Power	R & C Combined	2.0620	0.8978	0.6498
West Penn	R & C Combined	2.0470	0.9074	0.6282

Q. How will FE PA determine which TOU rate multipliers to apply across all Rate Districts?

A. FE PA will continue to calculate TOU pricing multipliers for the residential and commercial customer classes at all Rate Districts, in addition to the weighted-average customer class TOU rate multipliers discussed above. Each time the calculation is completed, FE PA would choose the weighted-average customer class TOU multipliers at the Rate District with the largest pricing differential between the on-peak and off-peak pricing periods to apply to all Rate Districts. This would provide the most incentive for customers to enroll in the TOU program and shift their usage to the off-peak pricing periods.

Q. Based on the current data, if this proposal was approved by the Commission, what multipliers would be used?

A. Currently, the Met-Ed multipliers would be used for all of the Rate Districts since they provide the biggest spread between the on-peak price and the off-peak and super-off peak prices.

Q. Did FE PA consider applying seasonal TOU rate multipliers in place of the current year-round TOU multipliers?

A. Yes. FE PA calculated summer only weighted-average TOU rate multipliers using the Company's proposed time-differentiated pricing periods. The remainder of the year pricing would be at the PTC Rider rates. However, there was not a material difference between the summer-only and year-round TOU rate multipliers for on- and off-peak usage periods. Therefore, FE PA concluded that the year-round TOU multipliers keep the program simple to understand and appropriately incentivize customers to shift their usage to the off-peak periods throughout the year. Table 5 below highlights the summer only weighted-average TOU rate multipliers, while FE PA Exhibit DMY–5 provides more detail.

Table 5		On-Peak	Off-Peak	Super Off-Peak
Met-Ed	R & C Combined	2.2664	0.8610	0.4924
Penelec	R & C Combined	2.2335	0.8758	0.5340
Penn Power	R & C Combined	2.0419	0.9065	0.5187
West Penn	R & C Combined	2.0551	0.9084	0.4854

Q. Will FE PA continue its current methodology for adjusting default service rates for customers on the Company's TOU Rider?

A. Yes. TOU rates will be adjusted on a semi-annual basis, synchronized with the PTC Rider adjustment periods for the residential and commercial classes. TOU customer kilowatt-hours ("kWh") usage and costs will be included in the semi-annual reconciliation of the

over/undercollection component of the PTC Rider by class (i.e., residential or commercial). The Company's proposed reconciliation process using a single E-Factor for each customer class will help mitigate potential large swings in the PTC Rider over/under collections that could arise if customers switch between the Company's standard default service and TOU default service rates. In addition, the Commission has previously authorized other electric distribution companies ("EDCs") to recover TOU over/undercollection amounts from all default service customers based on its finding that the TOU rates mandated by Act 129 are a "form of default service."[8]

Q. Are there any TOU tariff changes?

A. Yes, TOU tariff changes can be found beginning on page 5 of FE PA Exhibit DMY-6.

V. CLASSIFICATION OF NON-RESIDENTIAL DEFAULT SERVICE CUSTOMERS

Q. How does FE PA currently classify non-residential default service customers between the commercial and industrial classes served under the PTC Rider and the HP Rider, respectively?

A. Effective June 1, 2019, default service customers with a demand of 100 kilowatts ("kW") or above are classified as industrial customers and receive hourly-priced default service under the HP Rider while default service customers with a demand below 100 kW are classified as commercial customers served under the PTC Rider.

[8] *See Pa. P.U.C. v. PPL Elec. Utils. Corp.*, Docket No. R-2011-2264771 (Opinion and Order entered Aug. 30, 2012) at 22-23.

Q. How often does FE PA review the demand to determine if a default service customer is served under the PTC Rider or the HP Rider?

A. FE PA reviews the demand determination annually. Per the tariff, effective June 1st of each year, a review of the measured demand for the period of April 1 of the preceding year through March 31 of the current year will be conducted.

Q. What is FE PA proposing as the criteria to determine if a non-residential default service customer is served under the PTC Rider or the HP Rider?

A. FE PA is proposing that default service customers with a demand of 100 kW or above **or** MRPL of 100 kW or above will be served under the HP Rider. Default service customers with a demand below 100 kW **and** MRPL below 100 kW will be served under the PTC Rider.

Q. How is MRPL defined by the Commission's regulations?

A. The Commission's regulations (52 Pa. Code § 54.182) define MRPL as the highest level of demand for a particular customer, based on the PJM "Peak Load Contribution Standard," or its equivalent, and as may be further defined by the EDC's tariff in a particular service territory.

Q. Is FE PA proposing to define MRPL in its tariff?

A. Yes, based on the definition discussed previously, FE PA is proposing tariff changes as shown on FE PA Exhibit DMY-6 to define MRPL as a customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution system.

Q. Why is FE PA proposing to classify commercial and industrial customers according to MRPL?

A. FE PA's proposed methodology includes both demand and supply impacts to ensure that large customer-generators are grouped with other large customers for default supply procurement purposes. Unlike traditional customers, net metering customer generators have little to no onsite electric load and any kWh of energy delivered by the Company is used primarily or even exclusively to facilitate operation of the customer's generating facilities. Net metering generation projects are typically utility scale (greater than 1 MW but less than 3 MW), and the current 1,200 applications on the Company's system as of September 30, 2025 total approximately 3.3 gigawatts of nameplate capacity.

FE PA does not use excess energy from net-metered customer generators as supply to serve default service load. Instead, excess energy from intermittent net-metered customer generators is recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions. That load reduction is submitted to PJM and credited to the applicable Rate District at the LMP. In short, adding large customer-generator supply to the commercial procurement group would increase risk premiums included in fixed-price full requirements products. In addition, the costs of net metering excess power purchases paid by the Company are recovered from other customers in the same class as large customer generators (under FE PA's current classification based solely on demand, the PTC Rider). Classifying default service customers based on demand and MRPL avoids the risks associated with reduced load for commercial customers on the PTC Rider and potential subsidization of large customer generators by smaller commercial retail customers.

Q. Please describe the Company's responsibility to compensate non-shopping customers taking service under FE PA's net metering rider for excess generation.

A. On an annual basis, the Company will compensate customer-generators for excess energy during the preceding year at the "full retail value for all energy produced" consistent with Section 5 of the AEPS Act (73 P.S. § 1648.5) and the Commission's net metering regulations (52 Pa. Code § 75.13). Currently, excess generation produced by net metering customers is banked until the end of the PJM Planning Year (each May 31). At this time, their banked excess generation is cashed out at the commercial PTC Rider rate and collected from other commercial PTC Rider customers.

Q. What is the current true-up expense for commercial PTC Rider customers due to compensation for excess generation for non-shopping net metering customers?

A. For the period June 1, 2024 to May 31, 2025, the true-up expense for commercial PTC Rider customers totaled just over $4.4 million.

Q. Based on the number of net metering applications FE PA currently has, does FE PA expect this true-up expense to increase in the coming years?

A. Yes. Based on the analysis set forth in FE PA Exhibits DMY-7, if as little as 10% of the proposed projects in the current applications come online by 2029, the true-up expense in 2029 will be approximately $81 million. If closer to 50% of those projects come online by 2029, the true-up expense in 2029 would approach $750 million.

Q. If the proposal is approved, what will be the impact on large customer generators?

A. As mentioned, these customers will be classified as industrial customers served by the HP Rider rather than the PTC Rider. This means their excess generation will be paid out based on the HP Rider rate. Likewise, the costs to pay for the excess net-metered generation will be recovered in the HP Rider as well. The HP Rider is calculated using real-time pricing based on the hourly generation needs of the customers. Since most HP Rider customers are more active in managing their energy needs, they are less likely to be impacted by an increase in default service rates due to an influx of net-metered generation pushed to the grid.

Q. How would the Company implement its MRPL proposal?

A. The Company would calculate a customer's MRPL on an annual basis for the period April 1 of the preceding year to March 31 of the current year to be effective on the upcoming June 1. For new customers without a 12-month billing history, the MRPL shall be based on the Company's estimate using factors such as, but not limited to, similarly equipped buildings, and similarly utilized buildings and square footage. Updated classifications would be communicated to the affected customers approximately 30 days prior to each June 1.

Q. What is the proposed effective date for this change?

A. FE PA proposes to make this change effective June 1, 2027, for new net metering customer generation coming online after June 1, 2027. However, existing net metering customer generation online prior to the start of DSP VII will be exempt from the annual reclassification until June 1, 2029.

Q. Has the Commission approved any similar proposals to determine if a non-residential default service customer is served under the PTC Rider or the HP Rider?

A. Yes. In UGI Utilities, Inc. - Electric Division's ("UGI Electric") most recent DSP case,[9] the Commission approved a similar proposal. While UGI Electric uses the term "supply peak load impact" to make the determination if its non-residential default service customers are served under its equivalent to FE PA's PTC Rider (GSR-1) or HP Rider (GSR-2), FE PA is proposing to use the MRPL to make that determination.

Q. Does the Company believe that any waivers of the Commission's regulations are required to implement its proposal?

A. No. As noted above, the Company maintains that its proposal is authorized by the existing provisions in the Commission's regulations. However, to the extent necessary, FE PA respectfully requests a waiver of the customer groupings recommended in 52 Pa. Code §§ 54.187 and 69.1805, along with any other Commission regulations or requirements that may be necessary to implement its proposal.

VI. SUPPLIER TARIFF AND RETAIL SHOPPING CHANGES

Q. Is FE PA proposing any changes related to how its shopping customers take service?

A. Yes. The Company is proposing two key modifications to its supplier coordination tariff and protocols regarding its customers' arrangements with EGSs. First, FE PA proposes a new provision to require EGSs entering into new contracts with residential customers after June 1, 2027 to return those residential customers to default service at the conclusion of their fixed duration contracts, absent an affirmative choice to remain with the EGS in response to the notices required by the Commission's regulations at 52 Pa. Code § 54.10.

[9] *See Petition of UGI Utils., Inc. – Elec. Div. for Approval of a Default Serv. Plan for the Period of June 1, 2025 through May 31, 2029*, Docket No. P-2024-3049343, et al. (Opinion and Order entered Feb. 20, 2025) at 52-56.

In addition, commencing June 1, 2027, EGSs will be required to provide an attestation of affirmative customer consent on a quarterly basis for all residential customers on variable-priced month-to-month products. These revisions will encourage customers to make intentional and informed choices about the cost of their generation supply as prices change and help mitigate the adverse impact of above-PTC prices on customer bills and affordability.

Second, the Company proposes a limitation on eligibility for its POR program to incentivize EGSs to consider the impact of their pricing on a customer's ability to pay and affordability. Specifically, for all contracts entered into after June 1, 2027, EGSs on utility consolidated billing ("UCB") must use "rate-ready" billing and charge a rate that is at or below the PTC at the time of the customer's enrollment or at the time of a pricing change to be eligible for POR for the individual customer account. The Company is also proposing a supplier coordination tariff change to remove language stating that the POR program is mandatory for EGSs electing UCB, consistent with the Company's current practice of offering UCB with and without POR.

Q. Why is FE PA proposing these changes, generally?

A. The Company has been keeping a continuing focus on customer affordability and has concerns regarding the amounts its shopping customers are paying in excess of PTC rates. FE PA compared amounts that its residential customers paid to EGSs over what would have been charged to those customers had they remained on default service for each month in 2025. In 2025, 84 EGSs served FE PA's residential customers, with 68 of those suppliers serving customers at a rate above the Company's applicable PTC. As shown in Table 6 below, this resulted in FE PA's residential customers paying nearly $85 million more in

generation charges to those 68 EGSs that charged an average price in 2025 that was 27% higher than the PTC. Conversely, 16 EGSs served FE PA residential customers at a rate that was on average 6% lower than the applicable PTC, which resulted in those customers saving a little more than $3 million. In total, FE PA residential shopping customers paid approximately $82 million more in net generation charges in 2025 than they would have paid if they were paying for the same amount of generation at the Company's default service rates.

Table 6	MWh	Third-Party $'s Received	Default Service $ Amount	Difference	Third-Party Avgerage Rate	Default Service Average Rate	Average Rate Difference
Paid Less than PTC	467,332	$47.7	$50.8	($3.1)	$0.102	$0.109	-6.1%
Paid More than PTC	2,895,254	$398.0	$313.1	$84.9	$0.137	$0.108	27.1%
Total	**3,362,587**	**$445.7**	**$363.8**	**$81.9**	**$0.133**	**$0.108**	**22.5%**

In addition, in 2025**,** FE PA experienced an approximately 50% increase in formal and informal customer complaints related to competition issues, including slamming and high EGS prices, compared to 2024.

Q. What typically happens for customers at the end of their fixed-duration EGS contracts under today's structure?

A. Under the Commission's regulations at 52 Pa Code. § 54.10(3) and the Company's supplier coordination tariff, a customer served by an EGS that does not respond to the required notices regarding expiration of a fixed duration contract automatically renews with the customer's current EGS on a month-to-month contract or another fixed duration contract, without cancellation fees. In order to implement its proposed changes to EGS arrangements with FE PA shopping customers, the Company requests a waiver of Section 54.10(3) for new contracts entered into beginning with DSP VII, as well as the corresponding supplier

coordination tariff changes outlined by Ms. De La Rosa in FE PA Statement No. 4 and FE PA Exhibit CDL-4.

Q. Does this change apply to commercial or industrial class customers?

A. No.

Q. What will happen for residential customers who select variable rate products from EGSs on and after June 1, 2027?

A. Residential customers that do not respond to the notices required by the Commission's regulations at 52 Pa. Code § 54.10 upon the expiration of a fixed duration contract with a variable rate structure will be returned to default service in the same manner as residential customers on a fixed rate contract with an EGS. Starting June 1, 2027, residential customers who select month-to-month variable products will be required to affirmatively consent, on a quarterly basis, to remain with their existing EGS. If the EGS does not affirm customer consent each quarter for those accounts on month-to-month variable rate products through an electronic data interchange ("EDI") transaction, the customer will be returned to default service.

Q. Do you believe that these changes will support customer affordability in light of the Company's findings?

A. Yes. Absent affirmative customer action, EGSs currently have the right to increase a residential customer's rate to a level that may be much higher than the PTC, to change a fixed-rate contract to a variable-rate fixed-duration contract, or charge variable rates on a month-to-month basis. Requiring affirmative action by residential customers to remain with an EGS after expiration of a fixed duration contract and requiring customer consent

on a quarterly basis for month-to-month variable rate products addresses issues arising from residential customers unknowingly paying EGS prices well above the PTC.

Q. Please describe the POR program included in FE PA's supplier coordination tariff.

A. Consistent with the Commission's Policy Statement at 52 Pa. Code § 69.1814, each of the Predecessor Companies agreed to provide, and the Commission approved, voluntary POR programs for residential and small commercial accounts served by EGSs.[10] FE PA's POR program entails purchasing accounts receivable from participating EGSs at a zero-discount rate. Under this program, FE PA pays the face value of the accounts receivable without recourse to the EGS regardless of what the Company is actually able to collect from customers. As such, the Company's POR program offers a significant benefit to participating EGSs by eliminating the risk to EGSs that some of their customers will not pay their bills. It also enhances EGSs' cash flow and reduces their collection expenses because EGSs are paid on a regular and timely basis by EDCs, do not have to wait for late payments and do not need to pursue delinquent accounts.

Q. How does FE PA recover uncollectible accounts expense created by its POR program?

A. An adjusted allowance for uncollectible accounts expense was approved in FE PA's most recent base rate case. A portion of that allowance is attributable to distribution rates and the balance is attributable to the provision of default service and the POR program. The

[10] *See Joint Petition of Metro. Edison Co. and Pa. Elec. Co. for Approval of Their Default Serv. Programs*, Docket Nos. P-2009-2093053 and P-2009-2093054 (Opinion and Order entered Nov. 6, 2009) (Met-Ed and Penelec); *Petition of Pa. Power Co. for Approval of Its Default Serv. Programs*, Docket No. P-2010-2157862 (Opinion and Order entered Nov. 17, 2010) (Penn Power); *Joint Petition of Metro. Edison Co., Pa. Elec. Co., Pa. Power Co., and West Penn Power Co. for Approval of Their Default Serv. Programs*, Docket Nos. P-2013-2391368, et al. (Opinion and Order entered July 24, 2014) (revising West Penn).

default service and POR-related portion of uncollectible accounts expense is recovered through the Company's Default Service Support ("DSS") Rider on a non-bypassable basis.

Q. Who pays for that uncollectible account expense in the DSS Rider?

A. The residential and commercial customer classes pay for the POR-related uncollectible accounts expense charged in the DSS Rider.

Q. You mentioned that the POR program does not include a discount. Does the Company's current supplier coordination tariff include any other mechanism to reduce FE PA's and customer exposure to increased uncollectible expense due to excessive EGS write-offs?

A. Yes. In the DSP VI proceeding, the Commission approved a Clawback Provision as a permanent element of the POR program outlined in the Predecessor Companies' supplier coordination tariffs. The Clawback Provision employs two objective screening measures over a 12-month period to identify EGSs that impose a risk of generating excessive levels of write-offs: (1) an average write-off percentage more than 200% of the average write-off percentage of the Company's entire EGS population and (2) an average price over 150% of the Company's average PTC for the applicable 12-month period. If both thresholds are crossed, an EGS that wishes to remain in the POR program must, as a condition of doing so, pay an administrative charge equal to the difference between its actual write-offs and what its write-offs would have been at 200% of the average write-off percentage for all participating EGSs.

Q. Why is the Company seeking POR changes given the existence of this Clawback Provision?

A. As shown in Table 7, during DSP VI, a substantial number of EGSs serving FE PA customers continued to charge prices higher than the PTC and generate POR-related write-offs well above the average for the entire EGS population notwithstanding the Clawback Provision.

Table 7

Year (November 1 to October 31)	Total Clawback Charges	# of EGSs	Total Residential EGS Population
2022	$945,483	22	111
2023	$1,023,809	20	113
2024	$432,307	13	116
2025	$503,995	16	89

In 2025 alone, 16 EGSs – nearly 18% of suppliers currently serving FE PA residential customers – incurred clawback charges totaling over $500,000. In aggregate, the EGSs that were identified by the screening measures for the most recent clawback charge (November 2024 to October 2025) served approximately 150 million kWh of FE PA's residential customer load. Seven of those 16 EGS also incurred clawback charges in 2024, and four were assessed three years in a row.

In addition, the Clawback Provision only partially compensates the Company and its customers for costs that are imposed by EGSs whose write-offs exceed the average by more than 200% and who are charging prices substantially above the PTC. Each year, FE PA must examine the historic performance of its entire EGS population to identify those

EGSs who are most likely to be the ones imposing higher bad debt costs on the Company and its customers. Modifying the terms of the sale and purchase of EGS accounts receivable, as the Company proposes, will reduce administrative burden and reduce the risk of excessive EGS-driven write-offs up front at the time of customer enrollment.

Q. Please describe the eligibility provisions of the Company's POR program as outlined in the Company's current supplier tariff.

A. All EGSs that elect FE PA's UCB option are currently eligible to participate in the Company's POR program. Under FE PA's current UCB option, EGSs may use "bill-ready" or "rate-ready" billing. "Bill-ready" billing means that FE PA receives calculated results from the EGSs for its charges for printing on the customer's consolidated bill. Under "rate-ready" billing, FE PA calculates the dollar amounts of generation charges using a fixed rate provided by the EGS.

Q. Please highlight how this will change under the Company's proposal in this case.

A. The Company will apply the new eligibility parameters for POR on a customer account level. FE PA will identify EGS customer accounts that are eligible for POR based on the pricing information (in cents per kWh) included in the EDI "rate-ready" enrollment transaction or "rate-ready" rate change transaction that includes acknowledgement of affirmative consent. EGSs may still use UCB for its customers that are charged a "rate ready" rate above the PTC without POR or bill-ready transactions, and the Company would continue to serve as the billing agent for those EGSs. In that capacity, FE PA will receive payments from customers and these payments would be remitted to the EGS. Any arrearages for generation charges would remain with the EGS.

FE PA Tariff No. 1 Definitions
(Relevant Pages)

GENERAL RULES AND REGULATIONS, DEFINITIONS (continued)

FERC - The Federal Energy Regulatory Commission.

Generating Facility - Any equipment and/or facility that is electrically interconnected to the Company and is (i) capable of generating electrical energy for delivery into the PJM control area and (ii) is located on a single site within the Company's service territory. A single site with multiple generating units, each owned by a single entity, shall constitute one Generating Facility. The Company shall have the sole and exclusive right to determine if any particular equipment qualifies as a Generating Facility if the operating characteristics and/or circumstances relating to such equipment are different than described in this definition.

Hertz - A unit of frequency, equal to one cycle per second.

Horsepower (HP) - Unit of mechanical power representing rate of consumption of power and equivalent to 746 watts. As used herein, horsepower is computed as the equivalent of 750 watts.

Hourly Pricing Service Charges - For Customers served under Rate Schedules GS-Small (Special Rule GSDS), GS-Medium (HP), GS-Large, GP, TP, as well as GS-Small and GS-Medium (PTC) Customers that elect this rate, the charges representing the Company's costs for providing energy, capacity, including the cost of complying with non-solar AEPS, transmission, and ancillary services for Default Service Customers.

Individualized Contract - Shall have the meaning ascribed to it in Rule 14.

Industrial Customer Class - Rate Schedules GS-Large, GP, TP, GS-Small (Special Rule GSDS), and Schedules 44 and 46.

Kilovar (KVAR or kVAr) - 1,000 volt-amperes reactive.

Kilovolt-ampere (KVA or kVA) - 1,000 volt-amperes.

Kilowatt (KW or kW) - 1,000 watts.

Kilowatt-hour (KWH or kWh) - 1,000 watts for one (1) hour.

Line Extension - The extension of the Company's distribution system from the nearest suitable and available Distribution Line to the Service Line which will provide service to the Customer.

Maximum Registered Peak Load - A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this shall also be inclusive of the nameplate capacity of the generation system.

Monthly Minimum Charge - A charge designed to recover the costs incurred in billing a Customer's account and providing other services.

~~**Net Station Power** - The quantity of electrical energy and/or capacity actually provided by the Company to the Generating Facility for Station Power during an applicable period after crediting the amount, if any,~~

~~of electric energy during the applicable period (i) produced by the Generating Facility and delivered into the PJM control area or (ii) as permitted under "Station Power Energy Netting" as described in the applicable Rate Schedule.~~

GENERAL RULES AND REGULATIONS, DEFINITIONS (continued)

Net Station Power – The quantity of electricity energy and/or capacity actually provided by the Company to the Generating Facility for Station Power during an applicable period after crediting the amount, if any, of electric energy during the applicable period (i) produced by the Generating Facility and delivered into the PJM control area or (ii) as permitted under "Station Power Energy Netting" as described in the applicable Rate Schedule.

Network Integration Transmission Service - Network Integration Transmission Service as set forth in the PJM Open Access Transmission Tariff and any direct Transmission Owner charged expense.

Network Service Peak Load (kW NSPL) - A Customer's one (1) coincident peak kW Network Service Peak Load in effect from time to time, as calculated by the Company in accordance with PJM rules and requirements.

Non-Profit Ambulance Service - Any nonprofit chartered corporation, association, or organization located in the Commonwealth of Pennsylvania which (i) is regularly engaged in the service of providing emergency medical care and transportation of patients, (ii) possesses all necessary legal authority in Pennsylvania to perform emergency medical care and transportation of patients and (iii) provides such services from a building or other structure located in the Company's service territory that constitutes a separately metered location for electric delivery purposes. The electric service used by the Non-Profit Ambulance Service shall be primarily to support its service. The Customer/Applicant shall provide all documentary and other evidence of its compliance with this provision if requested by the Company.

Non-Profit Rescue Squad - Any nonprofit chartered corporation, association, or organization located in the Commonwealth of Pennsylvania which (i) is regularly engaged in providing rescue services, (ii) possesses all necessary legal authority in Pennsylvania to perform rescue services and (iii) provides such services from a building or other structure located in the Company's service territory that constitutes a separately metered location for electric delivery purposes. The electric service used by the Non-Profit Rescue Squad shall be primarily to support its service. The Customer/Applicant shall provide all documentary and other evidence of its compliance with this provision if requested by the Company.

Non-Profit Senior Citizen Center - A separately metered service location comprised of a building or other structure used by senior citizens as a meeting or gathering facility for individuals or groups, and where services to senior citizens are provided. The Customer of record at this service location shall be an organization recognized by the Internal Revenue Service as non-profit and by the Department of Aging as an operator of a senior citizen center.

Non-Speculative Line Extension - A Line Extension for a Permanent Residential Customer under which the Company has taken into account various factors including, but not limited to, Customer location, rate classification, projected Company revenues, permanency of use, primary residence and prospect of use by future Customers, and has deemed the cost for the Line Extension to be reasonable for the Company to incur.

Non-Summer - The calendar months of October through May.

RATE SCHEDULES, RATE GS-MEDIUM (continued)

DEFAULT SERVICE CHARGES:

For Rate Schedule GS-Medium (PTC) Customers receiving Default Service from the Company, the Price to Compare Default Service Rate Rider, Commercial Customer Class rate applies unless the Customer elects to receive Default Service from the Company under the Hourly Pricing Default Service Rider. For Rate Schedule GS-Medium (HP) Customers receiving Default Service from the Company, the Hourly Pricing Default Service Rider rates apply.

DETERMINATION OF RATE SCHEDULE GS-MEDIUM (PTC) AND GS-MEDIUM (HP):

Rate Schedule GS-Medium (PTC): Customers receiving service under this Rate Schedule with a kW Demand less than 100 kW and Maximum Registered Peak Load less than 100 kW.

Rate Schedule GS-Medium (HP): Customers receiving service under this Rate Schedule with a kW Demand equal to or greater than 100 kW or Maximum Registered Peak Load greater than or equal to 100 kW.

The Customer's demand and Maximum Registered Peak Load used for the determination of the default service rider that the customer should be billed under if receiving Default Service from the Company shall be determined as follows: effective June 1st of each year, a review of the measured demand and Maximum Registered Peak Load for the period April 1st of the preceding year to March 31st of the current year will be conducted. Based on the review, if the measured demand and Maximum Registered Peak Load in any twelve months is less than 100 kW, then the Customer shall receive Default Service under the provisions of the Price to Compare Default Service Rate Rider. Otherwise, the Customer will receive Default Service under the provisions of the Hourly Pricing Default Service Rider.

(C)

DETERMINATION OF BILLING DEMAND:

The Company shall install suitable demand meters to determine 15-minute to a maximum of an hourly integrated demand when (i) the connected load being served equals fifteen (15) kilowatts or more, or (ii) the Company estimates that a demand greater than five (5) kilowatts will be established. The Company may install a demand meter on new or upgraded electric services.

A determination of connected load or estimated demand may be made by the Company at any time and shall be made when the Customer's total consumption exceeds 1,500 kWh per month for two (2) consecutive months in the most recent twelve-month period.

TIME-OF-USE DEFAULT SERVICE RIDER

Availability:

Time-Of-Use ("TOU") default service ("$TOU_{Default}$") is available under this Rider for Residential Customers, and Commercial Customers with demand less than 100 kW and Maximum Registered Peak Load less than 100 kW, including those served under the Net Metering Rider, and are receiving Default Service from the Company, upon the terms and conditions set forth herein, that: (1) have had smart meters installed pursuant to the Company's Smart Meter Technology Procurement and Installation Plan; (2) are not enrolled in the Company's Customer Assistance Program; (3) are not enrolled in budget billing; (4) are not involved in virtual net metering; (5) have not elected to terminate service under the TOU Default Service Rider, for any reason, within the last 12 months; and (6) affirmatively elect to receive service under this Rider and comply with its enrollment procedures.

Rates:

Hours:

The rates for TOU default service are different for On-Peak, Off-Peak and Super Off-Peak hours during the year, and are billed on a service rendered basis, as shown below. All times listed below are prevailing time.

TOU Pricing Period	Included Time Periods
On-Peak	~~2~~3 PM - ~~9~~7 PM Monday - Friday

Off-Peak	All Other Hours
Super Off-Peak	11 PM - 6 AM Every day

$TOU_{Default}$:

The $TOU_{Default}$ rates are based on the $PTC_{Default}$ rates, which will be calculated semi-annually for the six-month period ending March 31st to be effective for the six-month period beginning June 1st and for the six-month period ending September 30th to be effective for the six-month period beginning December 1st.

Customer Switching:

A Customer that has enrolled in the TOU default service program remains eligible to return to standard Default Service. A Customer that has enrolled in the TOU default service program may, at any time, elect to receive another product from any EGS. Customers may leave the TOU Default Service Rider at any time without incurring fees or penalties. If a Customer elects to terminate service under the TOU Default Service Rider for any reason, the Customer cannot re-enroll in the TOU Default Service Rider for twelve billing months.

Annual Review and Audit:

The application of TOU Default rates under this Rider shall be subject to annual review and audit by the Commission

REBUTTAL TESTIMONY
OF
DAVID M. YOUNG

I. INTRODUCTION AND BACKGROUND

Q Please state your name and business address.

A. My name is David Young, and my business address is 341 White Pond Drive, Akron, Ohio 44320.

Q. Have you previously submitted testimony in this proceeding?

A. Yes, I submitted direct testimony and exhibits on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company"),[1] which have been designated as FE PA Statement No. 1 and Exhibits DMY-1 through DMY-7. My background and qualifications are set forth in my direct testimony.

Q. Please describe the purpose of your testimony.

A. I will provide rebuttal testimony responding to certain issues regarding FE PA's proposed seventh default service program ("DSP VII") raised in the direct testimony of witnesses on behalf of the Office of Consumer Advocate ("OCA"); the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"); the Retail Energy Supply Association ("RESA"); the Customer-Generator-Coalition ("CGC")[2]; the Coalition for Community Solar Access and Solar Energy Industries Association (collectively, the "Joint

[1] FE PA was formed through the combination of several predecessor Pennsylvania electric utilities after approval by the Commission. On January 1, 2024, Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company (collectively, the "Predecessor Companies") merged into FE PA. Consistent with the approvals received from the Pennsylvania Public Utility Commission ("Commission"), FE PA was certificated as a public utility and authorized to provide public utility service in the territories of the Predecessor Companies (now, the "Rate Districts").

[2] The CGC consists of Sunrise Airport Road LLC, Sunrise Forrester Road LLC, Sunrise Franklin Road LLC, Sunrise Harlansburg Road LLC, Sunrise Hendersonville Road LLC, Sunrise McCurdy Road LLC, Sunrise Perry Highway LLC, Sunrise Sandy Lake Greenville Road LLC, Sunrise Sandy Lake Polk Road LLC, and Sunrise Springfield Church Road LLC.

Solar Advocates" or "JSA"); Town Square Energy East, LLC ("Town Square"); and Walmart, Inc. ("Walmart"). Specifically, I will address the following topics: (1) concerns about FE PA's proposed changes to its time-of-use ("TOU") rate options raised by OCA witnesses Barbara R. Alexander and Serhan Ogur; (2) arguments against FE PA's proposed supplier coordination tariff changes related to electric generation supplier ("EGS") arrangements with customers and the Company's Purchase of Receivables ("POR") program advanced by RESA witness Frank Lacey and Town Square witness Randal Mitchell; (3) CAUSE-PA witness Patrick Cicero's recommendation that FE PA increase its maximum bill credits for customers enrolled in the Company's customer assistance program ("CAP"); and (4) the Company's proposal to assign non-residential default service customers to the Company's Price to Compare ("PTC") Default Service Rate Rider ("PTC Rider") or Hourly Pricing Default Service Rider ("HP Rider") based on their maximum registered peak load ("MRPL") and criticisms offered by CGC witness James A. Heidell, JSA witness Thomas S. Michelman, and Walmart witness Steven W. Chriss.

Q. Mr. Young, do you have any revisions to your exhibits accompanying your direct testimony?

A. Yes. In the process of reviewing non-Company direct testimony, FE PA determined that the calculations presented in FE PA Exhibit DMY-7 regarding the costs of net metering compensation under the commercial PTC Rider rate inadvertently omitted the impact of PJM Interconnection, LLC ("PJM") load reduction credits for excess generation. I have corrected this omission in FE PA Exhibit DMY-7 Revised.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. Yes. FE PA Exhibits DMY-8 to DMY-18 were prepared by me or under my supervision and are described later in my rebuttal testimony.

II. TIME-OF-USE DEFAULT SERVICE RIDER

Q. Please summarize the OCA's objections to the Company's proposed changes to its TOU rate options.

A. In summary, Ms. Alexander generally opposes any changes to FE PA's existing TOU rates because FE PA has not determined the potential bill impacts and peak load reductions under the existing and proposed rate designs.[3] She also raises concerns about the impact of revenue shortfalls on non-TOU default service customers and the Company's proposal to move all existing TOU customers to the new rate design without affirmative consent.[4]

Dr. Ogur opposes FE PA's proposed revisions to its TOU rate multiplier based on his view that the proposed TOU rate design changes would not support FE PA's goal of increasing participation in TOU rates and shifting usage away from on-peak periods.[5] In support of his position, Dr. Ogur points out that the Company's proposed on-peak period (3-7 p.m.) does not capture at least one of PJM's five coincident peak ("5CP") hours from 2025.[6] In addition to maintaining the Company's current TOU rate structure, Dr. Ogur recommends that FE PA develop and propose load response programs that would create demand response ("DR") capacity resources that could be offered into PJM's base residual auctions.[7]

---

4 *Id.*

5 *See* OCA St. No. 1 at pp. 28-30.

6 *Id.* at p. 29.

7 *Id.* at pp. 27, 30-33.

Q. Do you believe FE PA must perform a quantitative analysis of peak load impacts of its existing and proposed TOU rate designs, as the OCA suggests?

A. No. As explained in my direct testimony, FE PA's existing and proposed TOU rates incorporate Commission guidance on electric distribution company ("EDC") TOU rate structures to satisfy requirements under Act 129 of 2008 and balance a variety of objectives, including simplicity, customer acceptance and aligning TOU rates with market signals. The on-peak period under FE PA's current TOU Rider runs for seven hours from 2 p.m. to 9 p.m. A shorter, more focused peak window makes it easier for customers to manage usage and encourages higher adoption of energy-shifting behaviors like delaying running appliances or charging electric vehicles. Reducing the peak period duration and applying a single weighted-average customer class TOU multiplier to all Rate Districts, as the Company proposes for DSP VII, will produce more significant price variation (on peak rates that are on average 2.5 times higher than off-peak rates) and increase the financial incentive for customers to enroll in the program and shift their usage. I also note that the Commission approved the voluntary TOU default service rate options of the Predecessor Companies and several other EDCs without requiring the pre-implementation evaluation Ms. Alexander and Dr. Ogur propose.[8]

[8] *See Proceeding Initiated to Comply with Directives Arising from the Commonwealth Court Order in DCIDA v. PUC, 123 A3d 1124 (Pa. Cmwlth 2015) Reversing and Remanding the Order of the Comm'n Entered Sept. 22, 2014 at Docket Number P-2013-2389572 in which the Comm'n had Approved PPL's Time of Use Plan*, Docket Nos. M-2016-2578051 et al. (Recommended Decision issued Apr. 2, 2018 and adopted by Order and Opinion entered May 17, 2018), pp. 17-18, 21-25; *Petition of PECO Energy Co. for Approval of Its Default Service Program for the Period from June 1, 2021 through May 31, 2025*, Docket No. P-2020-3019290 (Recommended Decision issued Oct. 20, 2020 and adopted by Order and Opinion entered Dec. 3, 2020), p. 82.

Q. Does FE PA's proposal to shorten the duration of the on-peak period from seven hours (2 p.m. to 9 p.m.) to four hours (3 p.m. to 7 p.m.) reasonably encompass expected system peak usage times?

A. Yes. As shown on FE PA Exhibit DMY-2, based on an examination of PJM zonal data from 2021 to 2024, the hours between 3 p.m. and 7 p.m. tend to have the highest average system loads for FE PA. Dr. Ogur criticizes the Company's proposed on-peak pricing period because one of PJM's 5CPs in 2025 occurred during the hour ending 15:00 or 3:00 p.m. However, as shown on FE PA Exhibit DMY-8, between 2021 and 2024, PJM's 5CPs occurred between 3 p.m. and 6 p.m. In other words, 24 out of the last 25 PJM 5CPs fell within the Company's proposed on-peak time period.

Q. Does the Company's proposed TOU rate design benefit participating customers at the expense of other residential default service customers as OCA witness Alexander suggests?

A. No. FE PA recognizes that the amount of revenue received from customers participating in the Company's TOU default service rates is likely to be lower than the amount that would be collected under its otherwise applicable standard non time-varying generation rates. This potentially creates a revenue shortfall that is recovered from other default service customers that have not elected the Company's TOU rate option. However, given the low level of enrollment in the Company's current TOU rate option, the revenue shortfall will not materially impact other default service customers. From June 2023 to August 2025, the average monthly revenue shortfall from discounted TOU rates recovered through the PTC Rider totals just over $8,650 when combining the Rate Districts. See FE PA Exhibit DMY-9 for supporting calculations and a month-by-month analysis of the revenue shortfall.

Q. Please respond to Ms. Alexander's concerns about moving current residential customers enrolled in the Company's TOU rate options to the new rate structure without affirmative consent.

A. As is the case with current updates to the TOU multipliers, residential default service customers currently enrolled on the TOU rate option will remain on TOU rates once the updated multipliers calculated using the methodology approved by the Commission are effective. Customers are free to leave TOU rates at any time without penalty, subject to time limitations on re-enrollment in the Company's current TOU Rider.

Q. Please respond to Dr. Ogur's recommendation that the Commission direct the Company to explore load response programs that would create DR capacity resources that could participate in PJM markets.

A. FE PA along with other EDCs in Pennsylvania have a statutory obligation to offer TOU rate options to eligible default service customers under Section 2807(f)(5) of the Pennsylvania Public Utility Code. FE PA believes that direct load control programs, such as the air conditioning cycling offered by Maryland utilities mentioned by Dr. Ogur are more appropriately considered in the context of comprehensive Energy Efficiency and Conservation ("EE&C") plans. In addition and as Dr. Ogur notes in his direct testimony, FE PA's Act 129 Phase V EE&C Plan that commences on June 1, 2026 includes DR programming. For example, the Company's portfolio includes managed electric vehicle charging, battery storage, smart thermostats and various behavioral measures designed to produce peak demand reductions. Notably, several parties advocated for event-based DR programs and targets in their comments on implementation of Phase V of the Act 129 EE&C program, but the Commission declined to adopt those recommendations.

III. SUPPLIER TARIFF AND RETAIL SHOPPING CHANGES

Q. Please summarize FE PA's proposed supplier coordination tariff changes based on the recent experience of its residential shopping customers.

A. FE PA's proposed changes to EGS arrangements with residential customers and eligibility for FE PA's POR program are designed to encourage customers to make intentional choices about the cost of their generation supply and to incentivize EGSs to consider the impact of their pricing on affordability. As documented in my direct testimony, in 2025 alone, the Company's residential shopping customers, in aggregate, paid $82 million more in generation charges than what they would have if they had been billed on the applicable default service rate, even after factoring in customers who saved money by switching to an EGS. FE PA's concerns about the impact of EGS charges in excess of default service rates on affordability is particularly important given the autorenewal with customer opt-out practice authorized in the Commission's regulations at 52 Pa. Code § 54.10(3). Under that practice, if a customer does not respond to the required regulatory notices, EGSs currently have the right to increase the customer's price after an introductory "teaser" rate that might be temporarily lower than the PTC or other competitive offers or change a fixed-rate contract to a variable-rate contract. Requiring affirmative action by residential customers to remain with an EGS after the end of a fixed duration contract and requiring customer consent on a quarterly basis for month-to-month variable rate products, addresses issues arising from residential customers unknowingly paying prices in excess of the PTC.

Under the Company's current supplier coordination tariff, POR is available to all EGSs that elect utility consolidated billing ("UCB") and participating EGS are paid upfront with no discount and have little incentive to moderate prices. FE PA's proposal is a

reasonable approach that allows suppliers to continue using UCB but places the collection risk on those EGSs that charge rates above the PTC.

Q. Have you reviewed the positions of witnesses for CAUSE-PA, the OCA, RESA and Town Square regarding FE PA's revisions to its supplier coordination tariff for DSP VII?

A. Yes. Witnesses for CAUSE-PA and the OCA support FE PA's proposals and associated waiver of 52 Pa. Code § 54.10(3) to address affordability of electric generation service, pointing to data showing that residential customers paid millions of dollars more to EGSs than they would have for default service. As OCA witness Alexander testified, residential shopping customers collectively paid 30% more than the PTC in every month from January 2022 through January 2026 and $394.8 million in aggregate.[9] In contrast, as Ms. Alexander explained, commercial and industrial ("C&I") shopping customers collectively all paid less to EGSs than they would have for default service over the same 49-month period.[10] Similarly, CAUSE-PA witness Cicero presents data showing that residential shopping customers have paid $888 million in aggregate net costs above the PTC since 2017.[11]

RESA and Town Square both oppose the Company's supplier coordination changes as anticompetitive and allege that changing the rules for EGS arrangements with customers will reduce competitive offerings in FE PA's service area and increase overall costs for customers.[12]

---

[9] *See* OCA St. No. 2 at p. 10.

[10] *Id.*

[11] *See* CAUSE-PA St. No. 1 at p. 31.

[12] *See* RESA St. No. 1 at pp. 8-35; Town Square St. No. 1 at pp. 15, 20-23.

Q. RESA and Town Square contend that FE PA's concerns about customer affordability are based on an inappropriate comparison to the PTC.[13] Do you agree?

A. No. Although Mr. Lacey and Mr. Mitchell dismiss the relevance of the historical EGS pricing data presented in my direct testimony, they do not dispute that FE PA's residential shopping customers have paid more to EGSs than they would have paid for default service. RESA and Town Square also ignore two key adverse impacts of higher supplier charges compared to the PTC on FE PA's residential customers. First, the termination rates for FE PA residential shopping customers is significantly greater than all residential customers and residential default service customers. In fact, as shown on FE PA Exhibit DMY-10, which summarizes the data presented in Table 7 of CAUSE-PA witness Cicero's direct testimony, residential shopping customers are more than 9 times more likely to have their electric service terminated compared to default service customers.

EGS pricing in excess of the PTC also imposes higher uncollectible expense on the Company, which is then recovered from customers. FE PA Exhibit DMY-11 shows that, on average, from 2022 to 2025, the uncollectible expense per customer was $7.82 for the Company's residential default service customers. However, for the Company's residential shopping customers that amount skyrockets to $22.86 per customer, or almost 3 times as much. Similarly, from 2022 to 2025, on average, 40% of the Company's total residential generation uncollectible expense was attributable to purchased EGS accounts receivable even though only 18% of residential customers were shopping over that same period. See FE PA Exhibit DMY-12. In short, POR-related uncollectible expense disproportionately

[13] *See* RESA St. No. 1 at pp. 4-13, 31, 50-27; Town Square St. No. 1 at pp. 4-7, 14-16.

contributes to the Company's overall generation-related uncollectible expense relative to the share of shopping customers.

Finally, FE PA customer complaints related to competition issues, including slamming and high EGS prices, have been increasing in recent years. Complaints involving EGSs in the first quarter of 2026 are 33% higher than they were in the first quarter of 2025 and complaints are up over 60% when compared to the first quarter averages over the past four years.

Q. Mr. Lacey urges the Commission to disregard Table 6 of your direct testimony showing that FE PA's residential shopping customers, in aggregate, paid $82 million more to EGSs in 2025 than they would have on default service based on alleged data inconsistencies.[14] How do you respond?

A. Table 6 represents the summation of costs for all FE PA residential shopping customers across the Rate Districts during 2025. Since all of the costs were combined from the four Rate Districts into Table 6 and the PTC rates were averaged together, the information shown on Table 6 cannot be compared to a single Rate District's PTC or at a single point in time as Mr. Lacey pointed out in his testimony. FE PA Exhibit DMY-13 provides supporting data for Table 6 that allows comparison of each supplier's rate to the filed PTC rate by month.[15]

[14] *See* RESA St. No. 1 at pp. 51-53.

[15] The Company notes that the June and December PTC rate shown on FE PA Exhibit DMY-13 does not tie to the filed PTC rate because the PTC rate changes in those months and each of EGS customer's billing cycle is different, causing the average PTC rate to also be different.

Q. Did RESA and Town Square present any evidence to support their witnesses' claims that above-PTC competitive pricing does not present affordability concerns given the additional value provided by EGS products, such as green energy and price stability through long-term fixed-price contracts?

A. No. During the discovery process, Town Square provided information about its retail contracts with FE PA residential customers, including terms and pricing, in 2024 and 2025.[16] [**BEGIN HIGHLY CONFIDENTIAL**]

[16] *See* Town Square's Highly Confidential responses to CAUSE-PA-TSE Set 1, No. 2, FE PA-TOWN SQ Set 1, No. 1, and OCA Set 10, Nos. 1-3, which are attached to my rebuttal testimony as Highly Confidential FE PA Exhibit DMY-14.

[**END HIGHLY CONFIDENTIAL**]

RESA declined to provide information about its members' products or pricing offered to FE PA customers to support its claim that comparison of EGS prices to the PTC is misleading, asserting that RESA does not have access to its member's retail contracts.[17]

Q. RESA witness Lacey compares the Company's proposed supplier tariff changes to legislation adopted in Maryland that purportedly reduced residential customer shopping from 13% to less than 1%.[18] Is that an accurate characterization?

A. No. The legislation discussed by Mr. Lacey represents a complete overhaul of the framework for the retail electric market in Maryland. For example, the new regulatory requirements for retail electric suppliers cap residential supply prices relative to 12-month historical utility standard offer rates, impose a 12-month limit on the length of supplier

[17] *See* RESA's response to FE PA-RESA Interrogatory Set 1, No. 3, which is attached to my rebuttal testimony as FE PA Exhibit DMY-15.

[18] *See* RESA St. No. 1 at pp. 4-5.

contracts with residential customers, largely prohibit variable-rate products, impose restrictions on auto-renewal and eliminate POR for residential electricity suppliers.

The changes being proposed by FE PA to EGS contracts with residential customers do not regulate pricing or restrict customer choice as Mr. Lacey and Mr. Mitchell claim.[19] EGSs may offer any pricing relative to the PTC and contract durations they desire to shopping customers as they do today. In addition, FE PA is not proposing to eliminate its POR program in DSP VII. EGSs that choose not to use rate ready billing or that wish to charge rates higher than the PTC at the time of enrollment or a price change can still use UCB and seek to collect arrearages from their customers using the same legal options available to other competitive businesses. Restricting POR access for those EGSs that charge prices higher than the PTC will, however, substantially reduce FE PA customers' exposure to unreasonable EGS-driven uncollectible expenses.

Q. Please respond to RESA witness Lacey's argument that the Company's supplier coordination changes will impose implementation costs that will be recovered from all default service customers.[20]

A. No system changes are necessary and FE PA will not incur material implementation costs since the attestation of affirmative customer consent and EGS pricing for POR eligibility will be processed through EDI transactions.

[19] *See* RESA St. No. 1 at pp. 14-20, 29-32; Town Square St. No. 1 at pp. 8-13, 18-20.

[20] *Id.* at pp. 13, 26, 36.

Q. In his direct testimony, Mr. Lacey suggests that the PUC should revisit transitioning the default service provider from EDCs to EGSs as an alternative to the Company's proposed supplier tariff changes to address affordability concerns and lower costs for customers.[21] Do you agree?

A. No. During its Retail Markets Investigation, the Commission considered whether the Company and other EDCs should remain in the default service provider role, or whether these responsibilities should be transitioned to an alternative default service supplier. In its Final Order on the "end state" of default service ("End State Order"), the Commission determined that it would be prudent to retain EDCs in this role.[22] In the 13 years following the End State Order, RESA had the opportunity to request that the Commission open a proceeding to reconsider alternative default service providers, but did not do so. Mr. Lacey also presents no evidence to support his claim that removing FE PA and other EDCs from the default service provider role would remove "perverse incentives to erect barriers to electricity market competition."[23] FE PA and its predecessors have served as the default service provider in its service area since the beginning of electric restructuring, without any Commission finding of adverse effects related to this service.

---

[21] *Id.* at pp. 5-6, 37.

[22] *See Investigation of Pennsylvania's Retail Elec. Mkt.: End State of Default Serv.*, Docket No. I-2011-2237952) (Final Order entered Feb. 15, 2013), p. 20.

[23] *See* RESA St. No. 1 at p. 6.

IV. INCREASE IN MAXIMUM CAP CREDITS

Q. Have you reviewed CAUSE-PA witness Cicero's testimony raising concerns about FE PA's maximum CAP credit limits?

A. Yes. Mr. Cicero raises concerns about the effectiveness of FE PA's current CAP credit given the number of CAP customers that exceeded the limits in 2025 and rising residential default service rates.[24] Based on those concerns, he recommends that FE PA increase maximum annual CAP credits for electric customers by 60% for each income tier, effective January 1, 2027.[25] Because customer affordability is a priority, the Company shares CAUSE-PA's concern about CAP customers exhausting the credit before the end of the year. However, the Company recently amended its Universal Service and Energy Conservation Plan ("USECP") to increase the maximum CAP credit in proportion to the Commission-approved distribution rate increase in January 2025 and additional changes to FE PA's CAP design are more appropriately addressed in the context of a USECP proceeding.

[24] *See* CAUSE-PA St. No. 1 at p. 38.

[25] *Id.* at p. 44.

V. CLASSIFICATION OF NON-RESIDENTIAL DEFAULT SERVICE CUSTOMERS

Q. In their direct testimony, CGC, JSA and Walmart generally object to FE PA's proposed approach to classification of net metering customer-generators.[26] Why is it reasonable to classify default service customers with a peak demand or a maximum registered peak load ("MRPL") of 100 kW or above as industrial customers subject to the Company's Hourly Pricing Default Service ("HP") Rider?

A. Currently, net metering customer-generators, which are nonutility owners and operators of distributed generation systems with generating capacity of less than three megawatts ("MW") and a demand below 100 kilowatts ("kW"), are classified as commercial customers and assigned to the PTC Rider. As explained in my direct testimony, unlike traditional C&I customers, net metering customer-generators have little or no onsite electric load – meaning they consume minimal energy from the grid – but they generate electricity. The amount of generation that exceeds their minimal consumption is banked until the end of the planning year of PJM on May 31, at which point the banked generation is cashed out at the commercial PTC Rider rate. The costs associated with net metering credits and cash outs are recovered from the other commercial PTC rider customers.

Because these customer generators do not bid into the Company's default service auctions, their excess energy and alternative energy credits are not used to serve default service load or satisfy associated Alternative Energy Portfolio Standards ("AEPS") Act requirements. Instead, this excess energy is recognized financially as an aggregate reduction of the Company's default service load and is credited to the applicable Rate District at the locational marginal price ("LMP"). The PTC Rider rate is significantly higher

[26] *See* CGC St. No. 1 at pp. 3-23; JSA St. No. 1 at pp. 5-68; Walmart St. No. 1 at pp. 3-6.

than wholesale market prices for energy, which creates a "true-up" expense that represents the difference between the full retail rate and the load reduction credits from PJM valued at the LMP for a given hour. As shown in Exhibit DMY-7 Revised, the true-up expense as of May, 31 2025 for the commercial PTC Rider class is $4.6 million and is projected to increase to between $60 million and $544 million by 2029. FE PA's MRPL proposal ensures that the costs associated with compensation for excess generation are allocated fairly.

As explained in the rebuttal testimony of Dr. Nicholas E. Powers (FE PA Statement No. 3-R), the addition of customer-generator supply to the commercial procurement group also introduces uncertainty in the net default service load to be served that cannot be fully hedged using stand wholesale market instruments, particularly where such load may be concentrated in peak or high-price periods. Suppliers reflect this type of volumetric, shape and migration risk in fixed-price full requirements products through risk premiums, consistent with standard industry practice. Assigning no load customer-generators with MRPL greater than 100 kW to the HP Rider will mitigate those risk premiums and ensures that the Company can meet its obligations as default service provider to procure adequate and reliable default service supply at the least cost to customers over time.

Q. On page 5 of Mr. Heidell's direct testimony he states, "FirstEnergy's changes will reduce the compensation that net-metered customer-generators will be entitled to for their exported green energy."[27] This implies net-metered customer generators are entitled to receive the PTC rate. Is this true?

A. No, net-metered customer generators are not entitled to receive the PTC Rider rate for their excess generation. Pennsylvania's net-metering framework compensates customer generators for the value of their distributed generation at the full retail rate, which would be provided to customer-generators under the HP Rider. FE PA is not proposing any changes to its net metering cash out structure for default service customers. Non-shopping customer-generators will still have their onsite load offset by their generation, and any excess generation will be paid out at the end of the year using the applicable default service rate.

Q. Several witnesses contend that net metered customer-generators provide benefits to other customers, such as avoided energy costs and environmental benefits, but customer-generators will not receive compensation for those benefits under the HP Rider.[28] Does the Company provide compensation for excess generation to customer generators in accordance with the AEPS Act and Commission requirements?

A. Yes. FE PA compensates customer-generators at the full retail value for their excess generation through annual cash outs. The HP Rider represents the full retail rate associated with default service for the industrial class, including the LMP, transmission, capacity, ancillary services and administrative costs. The HP Rider rate in effect December 1, 2025

[27] *See* CGC St. No. 1 at p. 5.

[28] *See* CGC St. No. 1 at pp. 13-17; JSA St. No. 1 at pp. 9-29.

to May 31, 2026 provides additional value over the wholesale LMP across the four Rate Districts as shown in Table 2.

Table 2
Industrial HPS Rates
December 2025 PTC Rate

$ / KWH	Met-Ed	Penelec	Penn Power	West Penn
HP Reconciliation Charge	($0.0103)	($0.0054)	$0.0075	($0.0008)
HP Cap-AEPS-Other Charge	$0.0620	$0.0508	$0.0633	$0.0284
HP Administrative Charge	$0.0001	$0.0001	$0.0001	$0.0001
HP Uncollectibles Charge	$0.0002	$0.0006	$0.0001	$0.0000
Total	**$0.0520**	**$0.0461**	**$0.0709**	**$0.0277**

Customer-generators also have a variety of options outside of the Company's net metering tariff to acquire a rate for their excess generation that aligns with their profit expectations. Those customer-generators can participate directly in wholesale markets, shop for generation supply with competitive retail suppliers and enter into bilateral power purchase contracts. FE PA Exhibit DMY-17 provides an illustrative example of the excess generation compensation for the year ending May 31, 2025 under the PTC Rider rate, HP Rider rate and wholesale energy prices. As shown on that exhibit, a net metering customer with 936,535 kWh of excess generation would receive an annual cash out of $43,208.80 at the HP Rider rate versus $37,672.99 at the LMP, which is nearly 15% more revenue.

Q. CGC witness Heidell asserts that the compensation to solar generators under the PTC Rider is appropriate because of other benefits he believes solar energy provides, including environmental and health benefits, additional electricity generation, and construction jobs.[29] For his part, JSA witness Michelman presents a "value of solar" argument for compensation under the PTC Rider based on a variety of speculative assumptions and calculations of energy, capacity, and transmission savings from customer-generators as well as wholesale market demand price reductions.[30] Mr. Michelman also recalculates your Exhibit DMY-7 to incorporate additional energy, capacity and transmission benefits. How do you respond?

A. It is important to note that the issue here is not whether solar energy can produce certain societal benefits to Pennsylvania. The question is whether the customers of FE PA's small commercial class should continue to subsidize large customer-generators under the PTC Rider. Mr. Michelman even concedes in his testimony that "the Commercial default service class is limited in its ability to absorb additional net-metered excess generation due to the size of its load requirements" in arguing for longer "legacy rights" for customer-generators.[31]

In arguing for compensation under the PTC Rider instead of the HP Rider, many of the benefits CGC witness Heidell lists are, or would be, received by other Pennsylvanians or the public at large. Mr. Heidell does not quantify or explain why the costs associated with the benefits he lists should be borne only by FE PA default service commercial class customers at PTC Rider rates. Similarly, while Mr. Michelman takes additional steps to

[29] *See* CGC St. No. 1 at pp. 13-21.

[30] *See* JSA St. No. 1 at pp. 40-51.

[31] *Id.* at p. 63.

quantify the benefits in his value of solar analysis (in which he does not include the broader societal benefits proposed by Mr. Heidell), the benefits that he calculates accrue to "FE customers" or the "FE Rate District", including shopping customers – not the FE PA default service commercial customer class paying for those benefits.[32]

I have considered Mr. Michelman's testimony regarding DMY-7 with respect to incorporating the aggregate load reduction benefits of energy from customer-generators and have prepared a revised DMY-7 as I noted earlier. FE PA witness Gregory F. Hussing addresses those energy costs as well as the problems in Mr. Michelman's inclusion of capacity and transmission benefits in his analysis.

Q. In addition to arguing that the Company's analysis of the impact of the true-up expense on PTC Rider rates does not account for the value of net metering solar projects in FE PA's service area, CGC witness Heidell questions the cancellation rate assumptions employed in Exhibit DMY-7 given the maturity of applicants in the Company's interconnection queue.[33] Are those assumptions unreliable as Mr. Heidell suggests?

A. No. As Mr. Heidell acknowledges, the viability of solar projects in FE PA's interconnection queue is influenced by many factors outside of FE PA's control, including financing, construction delays, permitting and siting delays, and market changes. As such, Exhibit DMY-7 presents a sensitivity analysis under three illustrative scenarios for solar facilities in the Company's interconnection queue that will reach commercial operation. Even if less than 10% of the projects in the Company's queue come online by 2029 (the "low" scenario

[32] *See* JSA St. No. 1 at 41.

[33] *Id.* at p. 9.

in FE PA Exhibit DMY-7), it would only decrease the lower end of the range of the true-up expense recovered from other commercial default service customers through the PTC Rider. Moreover, during 2025, FE PA received 786 applications for solar facilities larger than 1 MW, and only 42 of those applications were cancelled, translating to a cancelation rate of about 5% – well below the "high" scenario in FE PA Exhibit DMY-7 assuming 75% of projects come online by 2029.

Q. Mr. Heidell also criticizes the PTC rates for 2026 through 2029 that FE PA used to derive the estimated cost impact of annual net metering cash outs based on the growth rate of over-the-counter ("OTC") peak forwards for PJM East.[34] Please respond.

A. The Company's analysis presented in FE PA Exhibit DMY-7 does not assume a compound annual growth rate in the PTC rider of almost 25% as Mr. Heidell asserts. That analysis shows the impact of the increase in the year-over-year true-up expense related to net generation annual cashouts on the current PTC rider while holding all other PTC inputs constant. Mr. Heidell also improperly conflates the PTC with projected whole energy prices. The power forwards referenced on page 9 of his testimony only include energy and does not reflect other default service costs. The HP Rider rate represents the sum of all costs associated with default service for the industrial class, including the LMP, transmission costs, capacity costs, ancillary services and administrative costs. Finally, the OTC forward pricing data pertains to the PJM East region which is not specific to FE PA's rate districts since the PJM East region encompasses New Jersey, Delaware and Maryland.

[34] *Id.*

Q. Several witnesses argue that FE PA's proposed two-year exemption from reclassification for net-metered projects that come online by June 1, 2027 is inadequate to mitigate the financial impacts on project owners and offer proposals to establish legacy rights.[35] Do you agree with these recommendations?

A. No. The Company selected a two-year period for its proposed exemption as opposed to a longer period because it will ensure that the reclassification of non-residential default service customers will be implemented before the beginning of FE PA's next default service program on June 1, 2031. Extending the exemption period for existing projects or establishing legacy rights for transitional projects, as Walmart and JSA suggest, would undermine the cost equity and non-customer generators will continue to bear disproportionate costs. Solar developers operate in a competitive, unregulated market, and they are not guaranteed a return on their investments, particularly when the Company's customers will subsidize the costs.

Q. Specifically, JSA witness Mr. Michelman recommends that the grandfathering term for "operational" projects be a period of 25 years.[36] How do you respond to this proposal?

A. Allowing operational projects to maintain their classification on the commercial PTC rider for a period of 25 years would have a significant impact on all rate districts but it would have a particularly catastrophic effect on the Penn Power Rate District's PTC rate. See FE PA Exhibit DMY-18 for an illustrative example of the impact on the Penn Power Rate District. In this example, there are two buckets of projects: 1) operational projects are

[35] *See* JSA St. No. 1 at pp. 60-68; Walmart St. No. 1, pp. 7-9.

[36] *See* JSA St. No. 1 at p. 65.

facilities currently online as of May 2026; and 2) transitional projects are facilities that have paid the 10% engineering fee as of May 2026. In Penn Power, there are currently 11 operational facilities and 10 transitional facilities. The total nameplate capacity for the 11 operational facilities is 30.72 MW. Based on the interconnection applications, each 3 MW solar farm is expected to produce 5.5 million kWh of electricity annually, roughly a 21% capacity factor. Assuming none of the transitional projects come online in 2027 and keeping all other factors of the current PTC rate the same as they are today, Penn Power's PTC for the commercial class would increase by an astronomical 23,600% to $32.62/kWh in the 25th year as compared to the $0.1373 kWh it is today. To compound an already catastrophic problem, if all 11 of the transitional facilities came online in 2027, even having them only receive 90% of the PTC value, the PTC rate in the 25th year would be $182.71/kWh. Table 3 highlights the increase in the PTC rate from only the true-up expenses for each of the Rate Districts in Year 25 for both the operational only facilities and operational and transitional facilities coming online by 2027.

Table 3

	Number of Facilities in Queue			25-yr Increase in PTC Due to True-Up Expenses			
				Operational Facilities Only		Operational and Transitionals Facilities	
	Operational	Transitional	Current PTC Price	PTC (kWh)	%	PTC (kWh)	%
Met-Ed	15	25	$0.1293	$0.1620	25%	$0.9915	667%
Penelec	3	35	0.1216	0.1260	4%	1.1829	873%
Penn Power	11	10	0.1373	32.62	23660%	182.71	132980%
West Penn	11	18	0.1099	0.1333	21%	0.271	147%

However, it is anticipated that these PTC prices are low since Exhibit DMY-18 includes a 1% sales growth factor in the GS-Medium class. If the PTC prices in the Exhibit come to fruition, we would expect shopping in this class to increase dramatically resulting in less kWh to spread the true-up expense across.

III. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PETITION OF FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY FOR APPROVAL OF ITS DEFAULT SERVICE PROGRAM FOR THE PERIOD JUNE 1, 2027 THROUGH MAY 31, 2031	:	**DOCKET NO. P-2026-**

VERIFICATION

I, David M. Young, hereby state that the facts set forth in the pre-marked statements and exhibits listed below are true and correct to the best of my knowledge, information, and belief. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PETITION OF FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY FOR APPROVAL OF ITS DEFAULT SERVICE PROGRAM FOR THE PERIOD JUNE 1, 2027 THROUGH MAY 31, 2031	:	**DOCKET NO. P-2026-3060298**

VERIFICATION

I, David M. Young, hereby state that the facts set forth in the pre-marked statements and exhibits listed below are true and correct to the best of my knowledge, information, and belief. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

- FE PA Statement No. 1 (Corrected) and FE PA Exhibit DMY-7 Revised (Corrected)

BEFORE THE
INTERROGATORIES OF
FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY
TO THE RETAIL ENERGY SUPPLY ASSOCIATION
Set 1

FE PA-RESA-1-3 Reference RESA Statement No. 1, pp. 18-19. For the members of the Retail Energy Supply Association in aggregate, please provide the following data for each month in 2025 and 2026 to date:

a. The number of residential customer accounts receiving fixed-price products with contract lengths of less than 12 months in each of FE PA's rate districts.

Response to FE-1-3(a): Mr. Lacey does not have access to RESA members' retail contracts. Because of the Competitive nature of the retail energy markets, RESA does not house any information related to its members specific retail supply contracts, or pricing. Additionally, according to Mr. Young's testimony, about 3.363 billion kWh of load were served by retail suppliers in 2025. Using an average consumption of 10,402 kWh (US EIA estimate) for residential customers in Pennsylvania, that equates to approximately 323,000 residential EGS contracts in 2025. One of the points of Mr. Lacey's testimony is that competitive supply contracts – offered by many different companies - have multiple structures, terms and prices that cannot be put into a neat square box focusing only on the pricing part of the contract and then having the utility make judgments based solely on that data as to whether or not the customer can be served under the competitive contract. The matters pending before the Commission in this docket involve FE and its proposals to implement practices that will impact the ability of competitive suppliers to develop and offer their varied retail contracts in an appealing manner for customers.

b. The number of residential customer accounts receiving fixed-price products with contract lengths of 12 months in each of FE PA's rate districts.

Response to FE-1-3(b): See response to FE PA-RESA-1-3(a).

c. The number of residential customer accounts receiving fixed-price products with contract lengths of 24 months or longer in each of FE PA's rate districts.

Response to FE-1-3(c): See response to FE PA-RESA-1-3(a).

d. The number of residential customers receiving renewable energy products in each of FE PA's rate districts.

Response to FE-1-3(d): See response to FE PA-RESA-1-3(a).

Response provided by: Frank Lacey, Consultant for Retail Energy Supply Association

FE PA Statement No. 1-RJ

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY

DOCKET NO. P-2026-3060298

DEFAULT SERVICE PROGRAM

For the Period
June 1, 2027 to May 31, 2031

Rejoinder Testimony of
David M. Young

List of Topics Addressed

Classification of Non-Residential Default Service Customers

REJOINDER TESTIMONY
OF
DAVID M. YOUNG

Q. Please state your name, professional position, and business address.

A. My name is David M. Young. I am employed by FirstEnergy Service Company as a Consultant – Rates and Regulatory Affairs – Pennsylvania. My business address is 341 White Pond Drive, Akron, Ohio 44320.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted direct and rebuttal testimony on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company"), which are designated as FE PA Statement Nos. 1 and 1-R.

Q. Please describe the purpose of your testimony.

A. I will address the surrebuttal testimony offered by witnesses on behalf of the Customer-Generator Coalition ("CGC") and the Coalition for Community Solar Access and Solar Energy Industries Association ("Joint Solar Advocates" or JSA") criticizing the Company's proposed changes to its classification of non-residential default service customers.

Q. Mr. Young, have you reviewed the surrebuttal testimony of CGC witness James A. Heidell?

A. Yes, I have.

Q. On pages 2 and 3 of his surrebuttal testimony, Mr. Heidell asserts that your assumptions regarding the number of new customer-generator projects that will be energized are speculative and likely inaccurate.[1] How do you respond?

A. I recognize that not all customer-generator projects that apply for interconnection to the Company's distribution system will be energized. That is why I have prepared a variety of sensitivity analyses that are reflected in my direct and rebuttal testimony. FE PA Exhibit DMY-7 Revised reflects a range of percentages of solar farms coming online from 1% to 50%. Even with a projected low Price to Compare ("PTC") Default Service Rate Rider ("PTC Rider") rate and just 10% of customer-generator projects coming online by 2029, the net metering expense rises to over $59 million.

Q. On page 7 of his surrebuttal testimony, Mr. Heidell presents Table 1 that purports to show the compound average annual increase he refers to as "CAGR" if the Company maintains its current classification of non-residential default service customers for 25 years.[2] Are the figures presented in Table 1 accurate?

A. No. I reviewed Table 1 in Mr. Heidell's surrebuttal testimony and determined that the 25-year CAGR for the Met-Ed rate district should be 0.9% instead of 23.6% and the correct value for the Penn Power rate district is 24.5%, not 0.1%. The value for the Penelec rate district should be updated to 0.1%, and the value for the West Penn rate district should be 0.8%.

---

1 *See* CGC St. No. 1-SR at pp. 2-3.

2 *Id.* at p. 7.

Q. Please refer to page 7, lines 6 to 14, of Mr. Heidell's surrebuttal testimony, where he states that the Company should have considered socializing net metering "cash-out" payments across commercial PTC Rider customers in all rate districts or among all FE PA default service customers instead of its Maximum Registered Peak Load proposal.[3] Do you agree?

A. No. Either approach proposed by Mr. Heidell would result in unreasonable subsidization of customer-generators by other default service customers. In addition, consolidation of default service rates across the Company's rate districts is not appropriate because FE PA is continuing to procure default service supply separately due to the pricing differences in each rate district's PJM Interconnection, LLC zone.

Q. On page 8 of his surrebuttal testimony, Mr. Heidell claims that you did not dispute the societal benefits of solar energy discussed in Mr. Heidell's direct testimony.[4] Is that a fair characterization of your rebuttal testimony?

A. No. In my rebuttal testimony, I noted Mr. Heidell asserted that solar energy can provide benefits in Pennsylvania and to the public at large. However, as I explained, Mr. Heidell did not quantify any of the benefits he believes customer-generators provide, and I do not agree that those benefits from customer-generators are established. I also noted in my rebuttal testimony that he did not explain why small businesses in Pennsylvania should bear the costs of providing any of those unquantified benefits.

Q. Mr. Young, have you reviewed the surrebuttal testimony of JSA witness Thomas S. Michelman?

A. Yes.

---

[3] *Id.* at p. 7.
[4] *Id.* at p. 8.

Q. Please refer to page 15 of Mr. Michelman's surrebuttal testimony where he states that FE PA should have used the production-weighted estimate of load reduction credits in the Company's analysis of the impact of net metering expense to commercial PTC Rider rates.[5] Have you prepared an alternative version of Exhibit DMY-7 Revised submitted with your rebuttal testimony in response to that statement?

A. Yes. Pages one to three of Exhibit DMY-19 attached to my rejoinder testimony include the load reduction credit values recommended by Mr. Michelman as presented in JSA Exhibit TM-10 instead of the average of the day-ahead locational marginal pricing used in Exhibit DMY-7 Revised.

Q. Does that adjustment to Exhibit DMY-7 Revised have a material impact on the Company's estimated net metering cash out payments under any of the modeled scenarios?

A. No. The estimated true up expense is still expected to increase from $4.6 million as of May 31, 2025 to between $56 million and $511 million by 2029.

Q. I'd like to direct your attention to page 20 of Mr. Michelman's surrebuttal testimony where he questions the Company's analysis of the impact of JSA's legacy rights proposal on commercial PTC Rider rates presented in Exhibit DMY-18 because that exhibit uses different assumptions than Exhibit DMY-7 Revised.[6] Is this a valid criticism?

A. No. The analysis presented in Exhibit DMY-7 was prepared with data available at the time of the Company's initial filing to provide a range of potential rate impacts from continuing the current classification of large customer-generators under various scenarios. Exhibit

---

5 *See* JSA St. No. 1-SR at p. 15.
6 *Id.* at p. 20.

DMY-18 analyzes the impact of JSA's specific proposal to grandfather operational and transitional projects on the PTC Rider for 25 years. However, if I employed all of the Exhibit DMY-18 assumptions in Exhibit DMY-7 Revised, net metering expenses would jump to between $77 million and $880 million as shown on pages four to six of Exhibit DMY-19.

Q. Mr. Young, does this conclude your rejoinder testimony?

A. Yes, it does.

DIRECT TESTIMONY
OF
RYAN J. ROSE

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Ryan J. Rose. My business address is 341 White Pond Drive, Akron, OH 44320.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as an Advanced Business Analyst, Regulated Commodity Sourcing Department ("RCS"). RCS is primarily responsible for procuring power and power-related products for all FirstEnergy Corp.'s ("FirstEnergy") regulated utilities, including FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company"). FE PA consists of the following rate districts: Met-Ed, Penelec, Penn Power, West Penn and The Pennsylvania State University ("PSU"), which is a sub-part of the West Penn rate district (individually a "Rate District" and in any combination the "Rate Districts").

Q. What is your educational background?

A. I have a Bachelor of Science degree in Biology from the University of Cincinnati and more than ten years of experience with FirstEnergy and its subsidiaries.

Q. What is your work experience at FirstEnergy?

A. I joined FirstEnergy Service Company in 2015 as a Lab Technician in Water Chemistry. In that role, I conducted analytical testing and ensured compliance with environmental and safety standards. From 2018 through 2022, I transitioned to a role where I supported corporate sustainability initiatives, data analysis, and reporting. In 2022, I became an Advanced Business Analyst in RCS, where I provide strategic analysis and management

of Pennsylvania default service-related activities including contract management, alternative energy portfolio management, and procurement auctions.

Q. Please describe your duties as an Advanced Business Analyst in RCS.

A. In my role, I am primarily responsible for the procurement and management of the regulated energy supply and renewable energy portfolio that FirstEnergy's electric distribution utilities are required to maintain in their role as load serving entities ("LSEs").

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FE PA.

Q. What is the purpose of your direct testimony?

A. The purpose of my testimony is to describe the Company's proposed: (i) products to be procured under the Company's seventh default service program ("DSP") for the period June 1, 2027 through May 31, 2031 ("DSP VII"); (ii) procurement process and schedule for the multiple procurements by the Company; and (iii) compliance with Pennsylvania's Alternative Energy Portfolio Standards ("AEPS") Act and Commission requirements for default service contingency plans.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. FE PA Exhibits RJR-1 and RJR-2 were prepared by me or under my supervision and are described later in my testimony.

II. PROCUREMENT PLAN PRODUCT DEFINITIONS

Q. Please provide an overview of the Company's DSP VII.

A. In this proceeding, the Company is proposing a four-year term for DSP VII. As such, the plan would span forty-eight months beginning June 1, 2027 and ending May 31, 2031. The proposed DSP VII will procure the required power supply in the wholesale marketplace,

by Rate District and rate class, through multiple solicitations. Power to serve the non-shopping loads of each of the Rate Districts will be procured in tranches of approximately 50 megawatts ("MW") each for the residential and commercial rate classes and in tranches of approximately 100 MW each for the industrial rate class. DSP VII is designed to offer non-shopping customers power through a prudent mix of products. Residential and commercial customers will be served via fixed price contracts with terms of 12 and 24 months. In addition, 10% of the residential load will be procured through a new 60-month contract. The Company is proposing a variable-priced product for industrial customers in each Rate District. Default service ("DS") suppliers who are successful bidders in the competitive procurement process will be responsible for satisfying the AEPS Act requirements associated with the default service customer load they supply.

Q. What products does the Company's DSP VII procurement plan include?

A. Under DSP VII, customers will be served by products reflecting market-based generation rates, which will provide opportunities for electric generation suppliers ("EGSs") to offer competitive alternatives in accordance with the provisions of the Electricity Generation Customer Choice and Competition Act and the Commission's default service regulations. For residential and commercial customers, the DSP will offer fixed generation rates that change on a semi-annual basis and will be synchronized with the energy year of PJM Interconnection, L.L.C. ("PJM") beginning every June 1. For industrial customers, DSP VII will continue to offer hourly pricing. DSP VII will enable the Company to procure its generation supplies through multiple solicitations, providing price diversity to the DSP rates while protecting residential customers from short-term price variations due to anomalies in the generation marketplace. In particular, the 60- , 24- and 12-month fixed

products will provide some price stability for residential customers, and the 24- and 12-month fixed products will provide some price stability for commercial customers. In total, the Company's DSP is designed to yield market-reflective rates through a prudent mix of products acquired at the least cost over time, which is a key requirement of Act 129 of 2008 ("Act 129"). In FE PA Statement No. 3, Mr. Powers further describes how the Company's proposed DSP VII comports with Act 129's least-cost-over-time mandate.

Q. What is the nature of the products the Company seeks to obtain under DSP VII?

A. The Company proposes to procure full requirements, load-following energy and energy-related products for their non-shopping customers. The Company's non-shopping load will be segregated into customer classes, and each class will have its own product specifications. The load of each class will be divided into tranches, with each tranche representing a fixed percentage of the Company's non-shopping load. Procurement winners will be responsible for fulfilling all obligations of a PJM LSE. As such, winning suppliers will be required to provide energy, capacity, and transmission service, as well as all PJM administrative expenses and any other services or fees required by PJM of an LSE, with some limited exceptions. Specifically, winning bidders will not be responsible for: (i) Regional Transmission Expansion Plan ("RTEP") charges; (ii) Expansion Cost Recovery Charges; (iii) Reliability Must Run ("RMR")/Generation Deactivation Charges associated with generating plants for which specific RMR charges began being assessed following July 24, 2014; (iv) historical out-of-market tie line, generation, and retail customer meter adjustments; (v) unaccounted for energy; (vi) any approved reallocation by the Federal Energy Regulatory Commission ("FERC") of PJM Regional Transmission Expansion Plan charges related to Docket No. EL05-121-009 (collectively, referred to as "non-market

based charges" or "NMB charges"); (vii) Network Integration Transmission Service ("NITS") charges; and (viii) DOE Section 202(c) charges. Under the Company's proposal, default service suppliers in the Company's service territories will also be responsible for meeting 100% of the solar, non-solar Tier I and Tier II AEPS Act requirements. AEPS Act compliance is discussed further in Section IV of my testimony. The NMB charges will be paid by the Company on behalf of all customers and recovered from all customers through the Default Service Support ("DSS") Rider in each Rate District. Ms. De La Rosa discusses these costs and how their proposed recovery remains the same as the Company's sixth DSP ("DSP VI") in her direct testimony (FE PA Statement No. 4).

Q. What customer classes are being proposed by the Company?

A. The Company proposes to segregate load into the same three classes that the Company has traditionally used for default service purposes, namely, residential, commercial, and industrial.

Q. How many and what size customer class tranches are being proposed by the Company?

A. For the residential class, the Company proposes to bid out a total of two hundred and fifty-seven (257) tranches of approximately 50 MW each. A total of ninety-three (93) tranches of approximately 50 MW each is proposed for the commercial class, and one hundred and twenty-eight (128) tranches of approximately 100 MW each of an hourly pricing service are proposed for industrial customers. A tranche represents a defined percentage of the load of a particular customer class that the default service supplier must serve, including the provision of energy, capacity, ancillary services, and transmission services but excluding NMB charges.

Q. You stated that the Company proposes to hold simultaneous procurement processes. Will residential, commercial, and industrial class products be offered concomitantly using the same type of procurement process?

A. Yes. As was the case with DSP VI, the Company proposes employing procurement processes for its fixed-price residential and commercial products and the hourly-priced service for industrial customers through auctions that will be scheduled to occur on the same day. Each procurement will feature a descending clock auction ("DCA") process that will be administered by CRA International, Inc. d/b/a Charles River Associates ("CRA"), the Company's proposed DSP VII independent auction manager (i.e., the Independent Evaluator). CRA presently serves in this role under the Company's extant DSP VI as it has for the majority of the Company's prior DSPs.

Q. Please describe the residential class products proposed by the Company.

A. For the residential-class tranche, the Company proposes a fixed-price, load-following full-requirements product, with either a 12-, 24-, or 60-month term. All required residential tranches will be secured over eight procurement dates.

Q. Please describe the commercial class products proposed by the Company.

A. The commercial-class tranche proposed by the Company is a fixed-price, load-following, full requirements product, with either a 12- or 24-month term. All tranches would be secured over eight procurement dates.

Q. Please describe the industrial class products proposed by the Company.

A. Consistent with the Company's current DSPs, the Company proposes to secure power supply for the industrial class utilizing a service referred to as the "hourly pricing service" ("HPS"). Contracts for HPS will be for 12-month terms beginning June 1 in 2027, 2028,

2029, and 2030. The HPS is not a fixed-price service; rather, it is a variable hourly service that is priced to the PJM real-time hourly total locational marginal price ("LMP") for each rate district's PJM delivery point. Default service suppliers will be bidding for the right to serve a portion of a Rate District's HPS load: a total of one hundred and twenty-eight tranches for HPS load will be up for bid across all of the Rate Districts. Customers on HPS will pay, and winning default service suppliers will receive: 1) the winning price bid by the winning default service supplier in the hourly-priced auction; and 2) the applicable PJM zonal real-time hourly LMP.

Q. Do the residential, commercial, and industrial products proposed by the Company comply with Act 129 and the Commission's default service regulations and policy statement?

A. Yes. The proposed product mix meets the current legislative standard under Act 129 and the Commission's default service regulations and policy statement, which require a default service procurement plan to include a prudent mix of variable market purchases, short-term contracts, and long-term purchase contracts that provides adequate and reliable service and is designed to ensure least cost to customers over time. This is further described in the testimony of Mr. Powers (FE PA Statement No. 3). This conclusion is supported by the fact that the Commission approved a similar product mix as part of the Company's previous DSPs.

Q. Please describe the general obligations imposed by PJM on default service suppliers.

A. Winning default service suppliers must schedule delivery to the applicable PJM delivery point of the Rate District for which the supplier won tranches to supply load. Winning default service suppliers must be valid LSEs within PJM and cognizant of and compliant

with all Commission regulations, including 66 Pa.C.S. § 2807(e), 52 Pa. Code § 54.186 and 52 Pa. Code § 69.1805. Suppliers must also comply with the business rules, scheduling protocols, and all other aspects of doing business within PJM, including the introduction of new billing line items that are not otherwise specified as the responsibility of the Company. All operational supply risks to perform under this procurement process will be borne by the winning default service suppliers.

Q. Has the Company experienced a default by any of its default service suppliers?

A. No. The Company has not experienced a default by any of its default service suppliers since the inception of its default service programs. However, in the wake of the recent rise in energy prices, the Company has witnessed retail supplier defaults and has had to work with wholesale suppliers who were having difficulty maintaining the margin requirements imposed by the Supplier Master Agreement ("SMA" or "Agreement"). Given the significant customer harm that could result from a default by one of the Company's default service suppliers, the Company believes this is the time to ensure its customers remain adequately protected.

Q. Do you have plans in place to address a supplier default?

A. Yes. There are contingency plans to address a supplier default, which are described later in my testimony.

Q. Is the Company proposing any modifications to the procurement process?

A. Yes, while the procurement process itself is not changing and the Company is proposing to conduct auctions twice a year as it did in DSP VI, there is an exception that in year one, there will be three auctions (January, April, and November). The first auction for DSP VII would be in January of 2027. From 2028-2031, auctions would be conducted semiannually

in January and November, as opposed to April and November. The procurement schedule is shown in FE PA Exhibit RJR-1.

Q. What auction design is the Company proposing for the default service auctions?

A. The Company proposes continuing its current approach of using a version of the simultaneous, multiple-round, DCA format to procure default service supplies. This auction platform is commonly used for multiple commodity types and has been successfully used in numerous electricity procurements, including the Company's procurements in Pennsylvania and by other utilities in various states since the late 1990s. The bidding format is simultaneous: multiple products or tranches, or both, are bid on simultaneously. Bidding takes place online using web-based software in a series of bidding rounds, with pre-specified starting and ending times for each round. Prior to the start of each round, the announced price for each product is disclosed to bidders. The announced price is the same for each tranche for a product but may differ across products. The announced round 1 starting price for each product is set sufficiently high enough to encourage bidder participation. At the end of each round, the bidding software (through CRA's oversight) determines which products are over-subscribed and which products are under-subscribed. A product is over-subscribed if suppliers bid to supply more tranches than the number of tranches needed of that product. Conversely, a product is under-subscribed if fewer tranches were bid on it than the number that is needed. If a product is over-subscribed, the announced price for that product will be reduced by a decrement for the next round. If a product is not over-subscribed, its announced price will not change for the next round. The bidding process continues in this manner, with prices tending to tick down like a countdown clock. As prices change across the products, bidders are allowed

to change the number of tranches they bid, with certain restrictions. Subject to these restrictions, in each round a bidder simply specifies the number of tranches it is willing and able to supply for each product at the announced price for each product. There is no pre-determined number of rounds before the auction closes. The auction closes after the first round in which no product is over-subscribed. The clearing price for a product is the lowest price at which the product is not under-subscribed. Winning tranches for the product are tranches that were bid at a price no higher than the clearing price. Winning bidders are those bidders who bid the winning tranches. Throughout the auction, the pricing for each product is known to the suppliers, which provides price transparency. This price transparency allows the bidders flexibility to switch products throughout the auction, as is described in the direct testimony of Mr. Powers (FE PA Statement No. 3). The Bidding Rules and appendices for the default service procurement auctions are presented and discussed in Ms. Patria's testimony (FE PA Statement No. 5).

Q. Do you believe that the use of a DCA is the appropriate design for the default service auctions?

A. Yes. As previously mentioned and explained by Ms. Patria in her direct testimony, the proposed DCA process is identical to the auction process used under the Company's current and past DSPs and is similar to auction processes used in other jurisdictions to successfully procure electric power supply. It is a process that default service suppliers and other stakeholders accept and are experienced with. Further, its design encourages participation because it is fair, open, transparent, and non-discriminatory, and it provides low barriers to participation for a variety of prospective bidders. The tranche sizes and the range of contract durations appeal to various bidders because they are consistent with

products available in energy markets. With simultaneous bidding on products that are related in value (the residential and commercial products across the Company, and the industrial products across the Company), bidders are able to switch their bid quantities across the Company's products and bid simultaneously on substitutable products or complementary products, or both, in response to changes in pricing. Because these factors encourage active participation and allow participants to bid efficiently, a DCA auction design foments competitive outcomes.

Q. Recognizing that FE PA did include a long-term contract to serve a portion of its load by way of the 60-month energy purchase, did the Company consider entering into a contract for energy of any longer durations?

A. Yes. The Company has been considering the viability of even longer-term contracts for future default service procurements in instances that would be supportive to bringing incremental generation online by way of new or uprated facilities. Should the Company determine that such contracts would be beneficial and could be designed in a way that would support customer needs while maintaining the integrity of FE PA's balance sheet and credit metrics, the Company will file an amendment to DSP VII or incorporate such contracts into procurement and implementation plans for its next default service program period. If such contracts are to be included in the Company's next default service program, the Company expects it would file the program for approval with sufficient time for contracts to be executed in order to allow for construction and in-servicing of the incremental generation to support delivery during the term of that program.

III. AEPS COMPLIANCE

Q. What requirements does the AEPS Act impose on Pennsylvania's default service providers?

A. The AEPS Act requires the Company and other electric distribution companies ("EDCs") and EGSs in Pennsylvania to obtain a percentage of electricity sold to the Commonwealth's retail customers from certain alternative energy sources—such as wind, solar energy, and biomass. Compliance is measured through alternative energy credits ("AECs"), which are equal to one megawatt-hour ("MWh") of energy from approved "Tier I" or "Tier II" alternative energy sources. The AEPS Act also includes a solar "set-aside," which mandates that a specific portion of the Company's Tier I requirements be satisfied through AECs derived from solar photovoltaic energy (i.e., Solar Photovoltaic Alternative Energy Credits or "SPAECS"). The AEPS Act defines Tier I and Tier II alternative energy sources and the dates and percentages of supply required for compliance. The Tier I, Tier II, and SPAEC percentage requirements during the term of the proposed DSPs are as follows: Tier I Non solar - 8.0%, Tier I Solar - 0.5%, and Tier II - 10%.

Q. Is this a change from DSP VI?

A. Yes, in DSP VI, FE PA allocated SPAECs separately procured by the Company to suppliers to meet a portion of the suppliers' SPAEC requirements. In DSP VII, suppliers will be responsible for meeting all AEPS requirements.

Q. Will default service suppliers be responsible for any changes to the AEPS requirements going forward?

A. Yes. If AEPS requirements change due to federal or state law or any other reason, the suppliers will be responsible for any incremental AEPS compliance obligations.

Q. What procedure will the Company use to verify that winning default service suppliers have complied with the AEPS Act?

A. The Company will continue to only accept AECs from Tier I and Tier II sources that are approved by the Commission's AEPS Program Administrator and generated through PJM Environmental Information Services Inc.'s Generation Attributes Tracking System ("GATS"), which the Commission has designated under the AEPS Act as the "registry" for tracking and issuing AECs. It will be incumbent on the winning default service supplier to open and maintain, at its own expense, a GATS account in order to satisfy the AEPS Act requirements. This process is currently and successfully being used by the Company to comply with AEPS Act requirements.

Q. What happens if a portion of a default service supplier's sourced AECs are found by the Commission to be non-compliant with the AEPS Act requirements, and a penalty is levied against the Company?

A. Any default service supplier that fails to acquire the necessary AECs during the compliance periods will be identified by the Company and assessed charges to cover an alternative compliance payment or other penalty imposed upon the Company by the Commission for the AEPS non-compliance.

Q. How is the Company proposing to treat excess AECs?

A. Should any of the Rate Districts have excess AECs, the Rate District in question will first see if the AECs can be used by one of the other Rate Districts. If that Rate District still has excess AECs, the Company proposes to sell the excess AECs to the open market. Proceeds from the sale of excess AECs will be refunded through the Company's DSS Riders.

Q. How would the Company ensure that AEC transfers between Rate Districts would be conducted at market prices?

A. On the date of the transaction, bid/offer market quotes will be obtained from three AEC brokers through their published broker sheets. The Company will then calculate the average mid-price of the three broker quotes to establish a sell/buy per REC cost between affiliate companies. The Company then ensures that the vintage is the same for the broker quotes when obtaining the average. If a mid-price isn't available on a broker sheet, it will take the average of the bid and ask prices to establish the mid.

IV. DEFAULT SERVICE SMA

Q. What is the SMA?

A. The SMA is the agreement executed by the Company and each successful bidder that governs specific duties, rights, and obligations in connection with the sale and purchase of default service supply to serve the Company's retail electric customers receiving default service.

Q. How was the Company's proposed form SMA developed?

A. In its Order entered on February 15, 2013, in its Investigation of Pennsylvania's Retail Electricity Market: End State of Default Service, the Commission directed its Office of Competitive Market Oversight ("OCMO") to create a procurement collaboration working group, which was tasked with formulating, among other things, a uniform SMA.[1] The Company participated actively in the working group's development of a uniform SMA, which was to be used on a statewide basis. The resulting SMA, with minor modifications,

[1] *Investigation of Pennsylvania's Retail Electricity Market: End State of Default Service*, Docket No. I-2011-2237952 (Order entered February 15, 2013).

was adopted by the Company and is currently in use under the Company's current DSP VI. The Company is proposing a similar form SMA for use under the proposed DSP VII, subject to minor modifications as discussed below. The proposed form SMA is attached hereto as FE PA Exhibit RJR-2.

Q. How are suppliers to be paid under the proposed form SMA?

A. It depends largely upon the class being served. For residential customer products, default service suppliers will be paid a fixed price. This fixed price will be included in Exhibit 1 of the SMAs once known. The fixed price will be a supplier's compensation for all cost components associated with meeting the full-requirements default service supply, including capacity, ancillary services, AEPS Act compliance, and all PJM administrative expenses and any other services or fees as required by PJM of an LSE, with some limited exceptions.[2] The applicable delivery point will be provided to bidders and included in Exhibit 1 of the executed SMAs.

For commercial customer products, default service suppliers will be paid a fixed price. The fixed price, in dollars per MWh, will be for 100% of the delivered supply each hour, which will be established through the Company's competitive procurement process and included in Exhibit 1 of the SMA once known. The fixed price will be a supplier's compensation for all cost components associated with meeting the full-requirements default service supply, including capacity, ancillary services, AEPS compliance, and all PJM administrative expenses and any other services or fees as required by PJM of an LSE,

[2] Specifically, winning bidders will not be responsible for the following charges: RTEP; Expansion Cost Recovery Charges; Reliability Must Run/generation deactivation charges associated with generating plants for which specific RMR charges that began after July 24, 2014; historical out-of-market tie line, generation, and retail customer meter adjustments; unaccounted for energy, any FERC-approved reallocation of PJM RTEP charges related to NMB charges, NITS, and DOE 202(c) charges.

but excluding the NMB charges as previously discussed. As with the Company's prior and current DSPs, for industrial customer products, default service suppliers will be paid a variable price for each hour during the applicable period. The price paid is equal to the delivered supply multiplied by the sum of the real-time hourly LMP for the applicable PJM delivery point, plus the winning price for the winning default service suppliers in the hourly-priced auction.

Q. Is there a change in responsibility for PJM charges from DSP VI?

A. Yes, in DSP VI, suppliers were responsible for NITS charges. In DSP VII, NITS will be part of the price-to-compare ("PTC") and will no longer be included in the auction product and is no longer the responsibility of the supplier.

Q. Why is FE PA removing NITS from the auction product?

A. Because of the continued increase in transmission spend, removing NITS from the auction product will reduce the supplier risk premium and therefore reduce the overall cost to customers. In addition, the removal of NITS from the auction product is consistent with other Pennsylvania EDCs' treatment of these charges.

Q. Is anything changing in the hourly-priced product?

A. Yes, there will no longer be a $4.00 per MWh adder for winning suppliers in the hourly-priced auctions. Suppliers will need to consider all costs of providing full-requirements supply in their bid price.

Q. Are the credit requirements changing from DSP VI?

A. No, the credit requirements are staying the same for DSP VII.

Q. Is the Company proposing any modifications to the SMA?

A. Yes, the Company is proposing to make the following changes to the SMA:

- **Appendix A**: Add the Independent Credit Requirement per tranche for the 60-month product;
- **Appendix D**: Update the following PJM Billing line items:
    - Add items 1935 and 2935, Department of Energy; Billing which are associated with the emergency orders issued by the U.S. Department of Energy ("DOE") pursuant to section 202c of the Federal Power Act and will be the responsibility of the "Buyer" for recovery from customers. This is consistent with how item 1930 (Generation Deactivation Charges) is handled under our current tariff language.
    - Revise items 1101, 1102, and 1104 regarding the Network Integration Service Charges to reflect that these charges will now be the responsibility of the "Buyer" for recovery from customers for reasons discussed earlier in my testimony; and
    - Remove items 1930 and 2930 where there are references to "before PaPUC Approval of the Company's Default Service Program in PAPUC Docket Nos. P-2013-2391368 et al." Items 1930 and 2930 will be the responsibility of the "Buyer";
- **Appendix E**: Update the years on the compliance period section for AEPS obligations;
- **Exhibit 1**: Remove reference to "of total tranches," remove "total allocated AECs," and update the delivery period. Remove reference to a $4.00 per MWh adder on the industrial example; and

- **Appendix H**: Update language to accurately reflect how the capacity proxy price ("CPP") will be used. The true-up is to be performed for the delivery year in which the CPP is in effect and will be based on the result of the most recent base residual auction ("BRA") clearing price.

V. CONTINGENCY PLANS

Q. What default service supply contingencies does the Company propose to address in DSP VII?

A. While not every contingency can be anticipated, the Company has identified the following possible scenarios for which contingency plans have been developed:

(1) The Company's competitive solicitations for full requirements, load-following tranche products are not fully subscribed due to a lack of bids or the rejection of bids by the Commission;

(2) A default by any of the winning suppliers prior to the start of the delivery period or at any time during the delivery period; or

(3) PJM does not conduct its BRA in time for default service suppliers to incorporate the capacity price into their bids.

Q. What is the contingency plan if the Company's competitive solicitation for full requirements, load-following products is not fully subscribed due to a lack of bids or rejection of bids by the Commission?

A. In the event that a scheduled solicitation is not fully subscribed following the initial proposed procurement due to a lack of bids or due to rejection of bids by the Commission, the Company will rebid the unfilled tranches from that solicitation in the next scheduled procurement for which there is sufficient calendar time to include the tranches. If the 60-

month product is not fully subscribed or is rejected by the Commission, the Company plans to offer those tranches as 12-month products in the remaining auctions. For any unfilled tranches still remaining, the Company, acting as the LSE, will purchase the necessary physical supply through PJM-administered markets. The Company's procurements will be made at real-time zonal variable market prices, plus other supply costs, including capacity, ancillary services, and AEPS Act compliance. The Company will not enter into hedging transactions to attempt to mitigate the associated price or volume risks to serve these tranches. The Company will satisfy AEPS compliance requirements for unfilled tranches by procuring AECs at market prices. At the next semi-annual rate adjustment, the Company will include an estimate of these costs in the weighted cost of the default service supply calculation and utilize the reconciliation process to recover from default service customers the difference between the estimated and actual costs that the Company incurs as a result of purchasing the necessary supply and AEPS requirements.

Q. What is the contingency plan if a winning bidder of a full-service load-following tranche product were to default prior to the start of or during the Company's delivery periods?

A. If a winning bidder defaults prior to the start of or during the delivery period, the Company will offer the unfilled tranches to the other registered bidders who participated in the most recent solicitation, subject to applicable load caps. The Company may enter into an agreement with the registered bidder or bidders offering the best terms for the unfilled tranches resulting from the default, provided the prices offered by such bidder or bidders are consistent with the original prices under which the unfilled tranches were procured adjusted for changes in market conditions from the time when the original tranches were

procured. If the Company is not able to enter into such an agreement and more than thirty calendar days exist prior to the start of the delivery period, the Company will seek to bid the defaulted tranches in the next available or a separate supplemental competitive solicitation. As with other unfilled tranches described above, if insufficient time exists to conduct an additional competitive solicitation, or if the supplemental solicitation is unsuccessful, the Company will supply the tranches using PJM administered markets with recovery and reconciliation of estimated and actual costs as described previously.

Q. What is the contingency plan if PJM does not conduct its BRA in time for default service suppliers to incorporate capacity costs into their bids?

A. A CPP will be used for default service auctions to establish a capacity cost when PJM does not conduct its BRA in time for default service suppliers to incorporate the auction results into their bids. Each billing month the Company will prepare a statement of amounts due to the DS Supplier. This statement will show the aggregate amounts due based on the DS fixed price multiplied by the hourly energy requirements of DS supply used to determine the preliminary monthly energy allocation ("PMEA") multiplied by the DS fixed percentage as shown on the transaction confirmation(s) for each hour of the billing month, plus the aggregate amounts due based on the DS variable price multiplied by the hourly energy requirements of DS supply used to determine the PMEA multiplied by the DS variable percentage, if applicable, as shown on the transaction confirmation(s) for each hour of the billing month. For each billing month where a CPP was used, an additional line item on the supplier invoice will show the true-up amount expressed in dollars which is the difference between the EDC capacity price actually charged for load served on the day for the Company's PJM zone and the CPP multiplied by the DS supplier responsibility share

of the capacity obligation ("UCAP") for each day of the billing month in question. True-ups will occur in the delivery year when a proxy price is utilized.

Q. Is the CPP calculation changing from DSP VI?

A. Yes. The CPP will be equal to the most recent PJM BRA clearing price conducted by PJM. In DSP VI, it was the average of the two most recent BRA auctions, including any incremental auctions. The incremental auctions will no longer impact the CPP.

VI. CONCLUSION

Q. Does this conclude your testimony?

A. Yes, it does.

Exhibit RJR-1

Proposed Procurement Schedule

Auction Date	FP or HP Auction	Customer Class	# Mos to Delivery	Delivery Duration	Rate District	# Tranches	% of DS Load	2026	2027	2028	2029	2030	2031	2032
January 2027	FP Auction TT = 45 LC = 22	Residential	4	12 Mos	Met-Ed	6	20.00%		JAN	Jun 2027 - May 2028

SUPPLIER MASTER AGREEMENT

TABLE OF CONTENTS

PENNSYLVANIA DEFAULT SERVICE SUPPLIER MASTER AGREEMENT..... 1
ARTICLE 1: DEFINITIONS..... 2
ARTICLE 2: GENERAL TERMS AND CONDITIONS..... 16
2.1 Capacity In Which Company Is Entering Into This Agreement..... 16
2.2 Parties' Obligations..... 17
2.3 Congestion and Congestion Management..... 19
2.4 PJM Services..... 19
2.5 PJM Agreement Modifications..... 20
2.6 PJM Member Default Cost Allocation..... 21
2.7 Other Fines and Penalties..... 21
2.8 Communications and Data Exchange..... 21
2.9 Record Retention..... 22
2.10 Verification..... 22
2.11 Forward Contract Merchant..... 23
ARTICLE 3: REPRESENTATIONS AND WARRANTIES..... 23
3.1 DS Supplier's Representations and Warranties..... 23
3.2 Company's Representations and Warranties..... 26
3.3 Survival of Obligations..... 27
ARTICLE 4: COMMENCEMENT AND TERMINATION OF AGREEMENT..... 28
4.1 Commencement and Termination..... 28
4.2 Termination of Right to Supply..... 28
4.3 Survival of Obligations..... 28
4.4 Mutual Termination..... 28
ARTICLE 5: BREACH AND DEFAULT..... 30
5.1 Events of Default..... 30
5.2 Rights upon Default..... 33
5.3 Damages Resulting From an Event of Default..... 34
5.4 Declaration of an Early Termination Date and Calculation of Settlement Amount and Termination Payment..... 37
5.5 Step-up Provision..... 40
5.6 Setoff of Payment Obligations of the Non-Defaulting Party..... 40
5.7 Preservation of Rights of Non-Defaulting Party..... 41
ARTICLE 6: CREDITWORTHINESS..... 41
6.1 Applicability..... 41
6.2 Creditworthiness Determination..... 42
6.3 Independent Credit Requirement per Tranche..... 42
6.4 Independent Credit Threshold..... 43
6.5 Credit Exposure Methodology..... 46

6.6 Credit Limit 4645
6.7 Posting Margin and Return of Surplus Margin 4948
6.8 Grant of Security Interest/Remedies 5150
6.9 Security Instruments 5352
6.10 Maintenance of Creditworthiness 5453
6.11 Calling on Security 5453
6.12 Interest on Cash Held by Company 5554
6.13 No Endorsement of DS Supplier 5554
6.14 Multiple DS Supply Agreements 5554
ARTICLE 7: PROCEDURES FOR ENERGY SCHEDULING, CAPACITY RESOURCE SUBMISSION AND TRANSMISSION 5655
PROCUREMENT 5655
7.1 Load Obligations 5655
7.2 Data Transmission 5655
7.3 Energy Scheduling 5655
ARTICLE 8: THE ENERGY SETTLEMENT/RECONCILIATION PROCESS 5755
8.1 Energy Settlement By PJM 5755
8.2 Energy Settlement by the Company 5756
ARTICLE 9: BILLING AND PAYMENT 5756
9.1 The Company Payment of Obligations to the DS Supplier 5756
9.2 Billing for DS Supplier's Obligations to Other Parties 6058
9.3 The DS Supplier Payment of Obligations to the Company 6058
ARTICLE 10: SYSTEM OPERATION 6159
10.1 Disconnection and Curtailment By the Company 6160
10.2 Inadvertent Loss of Service to DS Customers 6260
10.3 Good Faith Efforts 6261
10.4 PJM Requirements 6261
10.5 Compliance with Governmental Directives 6361
ARTICLE 11: DISPUTE RESOLUTION 6362
11.1 Informal Resolution of Disputes 6362

PENNSYLVANIA DEFAULT SERVICE SUPPLIER MASTER AGREEMENT

THIS DEFAULT SERVICE SUPPLIER MASTER AGREEMENT, made and entered into this _____ day of _____ ("Effective Date"), by and between **FirstEnergy Pennsylvania Electric Company** (the "Company" and "Buyer"), a corporation and a public utility organized and existing under the laws of the Commonwealth of Pennsylvania **[INSERT NAME OF SUPPLIER]** ("DS Supplier"), the Company and the DS Supplier hereinafter sometimes referred to collectively as the "Parties", or individually as a "Party",

WITNESSETH:

WHEREAS, the Company is an electric public utility engaged, inter alia, in providing retail electric service within its service territory located in the Commonwealth of Pennsylvania; and

WHEREAS, the Pennsylvania Public Utility Commission ("PaPUC" or "Commission") Orders issued pursuant to the Electricity Generation Customer Choice and Competition Act, 66 Pa.C.S. §§ 2801-2812, direct Buyer to supply electric service to Default Service Load within Buyer's Pennsylvania franchise service territory; and

WHEREAS, the PaPUC has found that, for periods further identified in Appendix C it would serve the public interest for the Company to secure Default Service Supply ("DS Supply") through a competitive procurement process ("DS Solicitation") and the PaPUC has approved such a process; and

WHEREAS, the Company has conducted and completed a successful DS Solicitation for the provision of DS Supply, and the DS Supplier was one of the winning bidders in the DS Solicitation; and

WHEREAS, pursuant to the competitive bidding procedures of the DS Solicitation, the Company and the DS Supplier desire to enter into this Agreement setting forth their respective rights and obligations concerning the provision of DS Supply.

NOW, THEREFORE, in consideration of the mutual covenants and promises set forth below, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto, intending to be legally bound, hereby covenant, promise and agree as follows:

ARTICLE 1: DEFINITIONS

Any capitalized or abbreviated term not elsewhere defined in this Agreement shall have the definition set forth in this Article.

AEPS Act – The Pennsylvania Alternative Energy Portfolio Standards Act, 73 P.S. §§ 1648.1-1648.8.

Affiliate - means, with respect to any entity, any other entity that, directly or indirectly, through one or more intermediaries, controls, or is controlled by, or is under common control with, such entity. For this purpose, "control" means the direct or indirect ownership of fifty percent (50%) or more of the outstanding capital stock or other equity interests having ordinary voting power.

Allocated AECs – Shall mean the types and amounts of AECs specified on Appendix E, if any.

Alternative Energy Credit or "AEC" – Shall have the meaning ascribed thereto in the AEPS Act.

Alternative Energy Portfolio Standards or "AEPS" – Standards requiring that a certain amount of electric energy sold to retail electric customers in the Commonwealth of Pennsylvania

be comprised of electricity generated from alternative energy sources, as measured by AECs, in accordance with the requirements of the AEPS Act and provisions of the Electricity Generation Customer Choice and Competition Act, 66 Pa.C.S. §§ 281214, in effect on the Effective Date including, without limitation, any subsequent increases in Tier I requirements under 66 Pa.C.S. § 2814.

Ancillary Services – Shall have the meaning ascribed thereto in the PJM Agreements.

Applicable Legal Authorities – Those Federal and Pennsylvania statutes and administrative rules and regulations that govern the electric utility industry in Pennsylvania, as they may be amended from time to time.

Auction Revenue Rights or "ARR" – The current or any successor congestion management mechanisms as may be employed by PJM (whether set forth in the PJM Agreements or elsewhere) for the purpose of allocating financial congestion hedges or financial transmission auction revenue rights. As currently defined by PJM, ARRs are entitlements allocated annually by PJM which entitle the holder to receive an allocation of the revenues from the annual auction of financial transmission rights conducted by PJM pursuant to the PJM Agreements.

Bankruptcy Code – Those laws of the United States of America related to bankruptcy, codified and enacted as Title 11 of the United States Code, entitled "Bankruptcy" and found at 11 U.S.C. § 101 et seq., as such laws may be amended, modified, replaced or superseded from time to time.

Billing Line Item Transfers - "Billing Line Item Transfers" shall have the meaning ascribed to it in Section 2.4 (PJM Services).

Billing Month – Each calendar month during the term of this Agreement.

Business Day – Any day on which the Company's and PJM's corporate offices are open for business and commercial banks are not authorized or required to close in New York, New York.

Capacity – "Unforced Capacity" as set forth in the PJM Agreements, or any successor, measurement of the capacity obligation of a Load Serving Entity as may be employed in PJM (whether set forth in the PJM Agreements or elsewhere).

Capacity Market Auction – The auctions conducted by PJM in the accordance with PJM's Reliability Pricing Model ("RPM").

Capacity Proxy Price or "CPP" - The capacity price DS Suppliers account for in their bid if the PJM capacity price is not known for a given year.

Charge – Any fee, charge or other amount that is billable by the Company to the DS Supplier under this Agreement.

Commercial Class – Group of Rate Schedules that comprise the Commercial Class for DS Supply and itemized in Appendix C.

Costs – With respect to the Non-Defaulting Party, brokerage fees, commissions and other similar transaction costs and expenses reasonably incurred by such Party either in terminating any arrangement pursuant to which it has hedged its obligations or entering into new arrangements which replace this Agreement; and all reasonable attorneys' fees and expenses incurred by the Non-Defaulting Party in connection with the termination of this Agreement.

Customer – Any person or entity who enters a contractual agreement with the Company to receive retail electric service including, without limitation, all persons or entities taking service under a retail tariff, eligible to receive competitive electricity supply from an EGS or DS, respectively, in accordance with the Applicable Legal Authorities.

Damages – Financial compensation from the Defaulting Party to the Non-Defaulting Party associated with the occurrence of an Event of Default or an Early Termination of this Agreement. This compensation shall be assessed pursuant to Article 5 of this Agreement.

Default Allocation Assessment – shall have the meaning ascribed to it under the PJM Agreements.

Defaulting Party – A Party to this Agreement that has caused or precipitated an Event of Default or an Early Termination of this Agreement.

Default Service or "DS" – Electric generation service that is provided at retail pursuant to the Applicable Legal Authorities under the Company's retail electric tariffs and under any other agreements or arrangements between the Company and Customers, to any Customer that is not being served by an EGS.

Default Service Supply or "DS Supply" – All necessary Energy, Capacity, AECs for AEPS Act compliance, Ancillary Services, and transmission services, all transmission and distribution losses and congestion and imbalance costs associated with the provision of such services, and such other services or products that the DS Supplier may be required, by PJM or any governmental body having jurisdiction, to provide in order to meet the DS Supplier Responsibility Share for serving DS Load under this Agreement and as detailed in Appendix C. For the avoidance of doubt, any reference in this Agreement to any other agreement for DS Supply shall include any agreement between the Parties for the provision of Energy to serve DS Load, even if such other agreement does not require delivery of additional products (e.g., Capacity).

Delivery Period – The delivery period specified in Appendix C.

Delivery Point – Means the applicable zone of the Company as designated by PJM.

DS Customer(s) – Retail customers who are provided Default Service pursuant to the terms of this Agreement, the Applicable Legal Authorities and the Company's retail tariffs.

DS Fixed Percentage – The percentage of DS Supply provided at a fixed price, as set forth in Exhibit 1.

DS Fixed Price – The price in dollars per MWh, as set forth in Exhibit 1 hereto, as determined pursuant to the DS Solicitation.

DS Load – The aggregate load of DS Customers being provided DS Supply.

DS Solicitation – The competitive bidding processes, procedures and rules employed by the Company to competitively procure DS Supply for purposes of this Agreement.

DS Supplier – An entity that (i) has been selected through the DS Solicitation and has accepted the obligations and associated rights to provide DS Supply to the Company for retail customers in accordance with the Applicable Legal Authorities, (ii) has entered into this Agreement with the Company as a Party, and (iii) is a PJM Member and registered with PJM as a LSE.

DS Supplier Representative – Any officer, director, employee, consultant, contractor, or other agent or representative of the DS Supplier in connection with the DS Supplier's activity under this Agreement. To the extent the DS Supplier is a division or group of a company, the term DS Supplier Representative does not include any person in that company who is not part of the DS Supplier division or group.

DS Supplier Responsibility Share – The fixed percentage share of the Company's DS Load for which the DS Supplier is responsible as set forth in Appendix C.

DS Tariff – The Company's existing schedules of rates and services provided to retail customers as currently on file with the Commission and on the Company's website at

https://www.firstenergycorp.com/content/customer/customer_choice/pennsylvania/pennsylvania_tariffs.html, as they may be amended from time to time.

DS Variable Percentage – The percentage of DS Supply provided at a variable price, as set forth in Exhibit 1 hereto**.**

DS Variable Price – The price in dollars per MWh, as set forth in Exhibit 1 hereto.

Early Termination – Termination of this Agreement prior to the end of the term due to the occurrence of an Event of Default as specified in Article 5.2 of this Agreement and the declaration of Early Termination.

Early Termination Date – The date upon which an Early Termination becomes effective as specified in Article 5.2 of this Agreement.

Electric Distribution Company or "EDC" – A public utility providing facilities for the transmission and distribution of electricity to retail customers in Pennsylvania.

Electric Generation Supplier or "EGS" – A person or entity that is duly certified by the Commission to offer and provide competitive electric supply to retail customers located in the Commonwealth of Pennsylvania.

Emergency – (i) an abnormal system condition requiring manual or automatic action to maintain system frequency, or to prevent loss of firm load, equipment damage, or tripping of system elements that could adversely affect the reliability of an electric system or the safety of persons or property; or (ii) a condition that requires implementation of Emergency Operations Procedures as defined in the PJM Agreements or PJM manuals; or (iv) any other condition or situation that the Company or PJM deems imminently likely to endanger life or property or to affect or impair the Company's electrical system or the electrical system(s) of other(s) to which the Company's electrical system is directly or indirectly connected (a "Connected Entity"). Such a

condition or situation may include, but shall not be limited to, potential overloading of the Company's transmission and/or distribution circuits, PJM minimum generation ("light load") conditions, or unusual operating conditions on either the Company's or a Connected Entity's electrical system, or conditions such that the Company is unable to accept Energy from the DS Supplier without jeopardizing the Company's electrical system or a Connected Entity's electrical system. Other additional emergencies can only be declared by PJM, FERC, or the PaPUC.

Energy – Three-phase, 60-cycle alternating current electric energy, expressed in units of kilowatt-hours or megawatt-hours.

Event of Default – A Party's breach of obligations under this Agreement as set forth in Article 5 of this Agreement.

FERC – The Federal Energy Regulatory Commission.

Final Monthly Energy Allocation or "FMEA" – A quantity of Energy which, for any Billing Month, is the PMEA adjusted for any billing or metering data received subsequent to the calculation of PMEA of which PJM is notified within 60 days.

Force Majeure - Means an event or circumstance which prevents one Party from performing its obligations under one or more transactions, such as riots or revolutions, demands or embargoes of the United States Government, fire, flood, drought, insurrection, acts of God which are not within the reasonable control of, or the results of the negligence of the affected Party and which, by the exercise of due diligence, the Party is unable to mitigate or avoid or cause to be avoided. Notwithstanding the foregoing, under no circumstance shall an event of Force Majeure be based on: (i) the loss or failure of DS Supplier's supply; (ii) DS Supplier's ability to sell the DS Supply at a price greater than that received under any Transaction; (iii) curtailment by a utility transmitting DS Supply; (iv) the Company's ability to purchase the DS Supply at a price lower

than paid under any Transaction; (v) any change in requirements of any governmental authority; or (vi) labor stoppage or lockout.

Forward Market Price – The price for On-peak Energy Forward Price and Off-peak Energy Forward Price as determined by averaging concurrent broker quotes obtained by the Company for the Market Price Hub as available.

Gains – With respect to any Party, an amount equal to the present value of the economic benefit to it, if any (exclusive of Costs), resulting from an Early Termination of this Agreement, determined in a commercially reasonable manner.

Generator Attribute Tracking System or "GATS" - the system owned and operated by PJM Environmental Services, Inc. to provide reporting and tracking services to its subscribers in support of the AEPS Act, or any successor credit registry selected by the PaPUC. (As specified in Appendix E)

Guarantor – Any party having the authority and agreeing to guarantee the DS Supplier's financial obligations under this Agreement, recognizing that such party shall be obligated to meet the Company's creditworthiness requirements specified in this Agreement for such DS Supplier.

Guaranty – A guaranty, suretyship, hypothecation agreement, margins or security agreement or any other document in the form attached to this DS Supplier Master Agreement or other form approved by the Company.

Independent Credit Requirement per Tranche or ICRT - Amount per Tranche required as security under Section 6.3, to mitigate the risk to the Company of Energy price movements between the date of an Early Termination caused by an Event of Default by a DS Supplier and the date the final calculation of Default Damages owing to the Company under Section 5.3 is made.

Independent Credit Threshold or ICT- Amount of credit, based on the creditworthiness of a DS Supplier or its Guarantor, if applicable, determined pursuant to Section 6.4, granted by the Company to such DS Supplier to be applied towards the satisfaction of such DS Supplier's Independent Credit Requirement.

Industrial Class - Group of Rate Schedules that comprise the Industrial Class for the DS Supply and itemized in Appendix C.

Interest Index – The average Federal Funds Effective Rate for the period of time the funds are on deposit. The Federal Funds Effective Rate is published daily on the Federal Reserve website (http://www.federalreserve.gov/releases/h15/update/).

Kilowatt or "kW" – Unit of measurement of useful power equivalent to 1000 watts.

Kilowatt-hour or "kWh" – One kilowatt of electric power used over a period of one hour.

Load Serving Entity or "LSE" – An entity that has been granted the authority or has an obligation pursuant to state or local law, regulation or franchise to sell electricity to retail customers located within the PJM Control Area as that term is defined in the PJM Agreements or in successor, superseding or amended versions of the PJM Agreements that may take effect from time to time over the term of this Agreement.

Losses – With respect to any Party, an amount equal to the present value of the economic loss to it, if any (exclusive of Costs), resulting from an Early Termination of this Agreement, determined in a commercially reasonable manner.

Margin – The amount by which the Total Exposure Amount exceeds the DS Supplier's, or Guarantor's, credit limit as defined in Section 6.6.

Mark-to-Market ("MtM") Exposure Amount – An amount calculated daily for each DS Supplier reflecting the total MtM credit exposure to the Company due to fluctuations in market

prices for Energy minus amounts due pursuant to this Agreement to such DS Supplier for the delivery of DS Supply. The methodology for calculation of the MtM credit exposure is illustrated in Appendix B.

Market Price Hub - A liquid pricing point located within PJM's geographic footprint, as specified in Appendix B.

Maximum Credit Limit – The lesser of the applicable percentage of TNW or the applicable credit limit cap as specified in Section 6.6 of this Agreement.

Megawatt or MW – One thousand kilowatts.

Megawatt-hour or MWh – One megawatt of electric power used over a period of one hour.

Merger Event – When a DS Supplier consolidates or amalgamates with, or merges into or with, or transfers all or substantially all of its assets to another entity and either (i) the resulting entity fails to assume all of the obligations of such DS Supplier hereunder in the sole discretion of the Company or (ii) the benefits of any credit support provided pursuant to Article 6 of this Agreement fail to extend to the performance by such resulting, surviving or transferee entity of the DS Supplier's obligations hereunder, and the resulting entity or its guarantor fails to meet the creditworthiness requirements of this Agreement in the sole discretion of the Company.

Minimum Rating – A minimum senior unsecured debt rating as defined in Appendix A of this Agreement.

Minimum Transfer Amount - $100,000.

NERC – The North American Electric Reliability Council or its successor.

Network Integration Transmission Service or "NITS" – "Network Integration Transmission Service" under the PJM Agreements in effect as of the date of this Agreement, or its

successor, superseding or amended versions of the PJM Agreements that may take effect from time to time over the term of this Agreement. In the event the PJM Agreements are modified such that "Network Integration Transmission Service" is no longer offered, Network Integration Transmission Service shall mean the type of transmission service offered under the PJM Agreements that is accorded the highest level of priority for scheduling and curtailment purposes.

Non-Defaulting Party - A Party to this Agreement who, at the time an Event of Default occurs, is not itself in default of this Agreement and has not otherwise caused or precipitated an Event of Default or Early Termination of this Agreement.

Off-Peak Energy Forward Price - Means the price for Off-Peak Hours for each billing month of the delivery period stated in terms of $/MWh as based on the most recent publicly available information and/or quotes from reference market makers on forward energy transactions occurring at the Market Price Hub. In the event that the Market Price Hub is no longer available or no longer representative of a transparent trading hub, the Parties will negotiate in good faith to agree upon an alternate liquid price.

On-Peak Energy Forward Price – Means the price for On-Peak Hours for each billing month of the delivery period stated in terms of $/MWh as based on the most recent publicly available information and/or quotes from reference market makers on forward energy transactions occurring at the Market Price Hub. In the event that the Market Price Hub is no longer representative of a transparent trading hub, the Parties will negotiate in good faith to agree upon an alternate liquid price.

PaPUC or Commission – The Pennsylvania Public Utility Commission or its successor.

PJM – PJM Interconnection, L.L.C. or its successor.

PJM Agreements – The PJM OATT, PJM RAA, PJM OA and all other PJM agreements, procedures, manuals and documents applicable to the Transactions covered by or relating to this Agreement.

PJM Control Area – That certain Control Area encompassing electric systems in parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia, and the District of Columbia, as may be modified from time to time, and which is recognized by the North American Electric Reliability Council as the "PJM Control Area".

PJM Member – A member in good standing of PJM that satisfies the requirements to conduct business with PJM.

PJM OA – The PJM Operating Agreement or the successor, superseding or amended version of the PJM Operating Agreement that may take effect from time to time.

PJM OATT – The PJM Open Access Transmission Tariff or the successor, superseding or amended version of the PJM Open Access Transmission Tariff that may take effect from time to time.

PJM OI – The PJM Office of Interconnection, the system operator for the PJM Control Area.

PJM RAA – The PJM Reliability Assurance Agreement or the successor, superseding or amended version of the PJM Reliability Assurance Agreement that may take effect from time to time.

PMEA/FMEA Adjustment Amount – For any Billing Month, the monetary amount due to the DS Supplier or the Company, as the case may be, in order to reconcile any difference between the PMEA used for the purpose of calculating estimated payments made to DS Supplier for a given

month and the FMEA used for calculating the final payments due to the DS Supplier for such month as more fully described in Article 9 hereof.

Preliminary Monthly Energy Allocation or "PMEA" – A quantity of Energy which, for any Billing Month, is the preliminary calculation of the DS Supplier's DS Supplier Responsibility Share.

Rate Schedule(s) – Shall mean the specified existing, and modified or successor customer rate schedule(s) in the electric service tariff of the Company filed with the Commission.

Reliability First Corporation or "RFC" – The approved regional NERC entity with responsibility for the Commonwealth of Pennsylvania.

Residential Class – Group of Rate Schedules that comprise the Residential Class for the DS Supply and itemized in Appendix C

Rounding Amount - $100,000

Settlement Amount – With respect to a Non-Defaulting Party, the net amount of the Losses or Gains, and Costs, expressed in U.S. Dollars, which such Party incurs as a result of Early Termination, as set forth in Section 5.4(a) of this Agreement. For the purposes of calculating the Termination Payment, the Settlement Amount shall be considered an amount due to the NonDefaulting Party under this Agreement if the total of the Losses and Costs exceeds the Gains and shall be considered an amount due to the Defaulting Party under this Agreement if the Gains exceed the total of the Losses and Costs.

Statement – A monthly report prepared by the Company for the DS Supplier indicating the amount due to the DS Supplier by the Company as compensation for DS Supply supplied to DS Customers by the DS Supplier during the current Billing Month, in accordance with DS Supplier's obligations under this Agreement.

Supply Day – Any calendar day during the term of this Agreement on which the DS Supplier is providing, or is obligated by this Agreement to provide, DS Supply to the Company's DS Customers.

Tangible Net Worth or "TNW" – Total assets less intangible assets and total liabilities. Intangible assets include benefits such as goodwill, patents, copyrights and trademarks.

Termination Payment – An amount paid by the Defaulting Party due to Early Termination.

Tier I AEC – Shall mean an AEC generated by a non-solar photovoltaic energy source that will satisfy the non-solar Tier I requirements of the AEPS Act applicable to the Company. (As specified in Appendix E)

Tier I (Solar) AEC – Shall mean an AEC generated by a solar photovoltaic energy source that will satisfy the Tier I solar photovoltaic requirements of the AEPS Act applicable to the Company. (As specified in Appendix E)

Tier II AEC - Shall mean an AEC generated by a non-solar photovoltaic energy source that will satisfy the non-solar Tier II requirements of the AEPS Act applicable to the Company. (As specified in Appendix E)

Total Exposure Amount – An amount calculated daily for the DS Supplier reflecting the total credit exposure to the Company and consisting of the sum of (i) the Mark-to-Market Exposure Amount arising under this Agreement; (ii) any amount(s) designated as the "Mark-to-Market Exposure Amount" arising under any other DS Supply agreements providing for "DS Supply" or similar default service; and (iii) the amount designated as the "credit exposure" under any other

DS Supply agreements providing for DS Supply or similar default service; provided that in the event the amount calculated for any day is a negative number, it shall be deemed to be zero for such day.

Tranche – A fixed percentage share of the Company's DS Load, as specified in Appendix C.

Transaction – Means a particulate agreement by which the Company purchases and the DS Supplier sells DS Supply pursuant to this Agreement, the details of which are more fully set forth in Exhibit 1 – Transaction Confirmation.

Transaction Confirmation – Shall have the meaning ascribed to it in Appendix C and Exhibit 1 of this Agreement.

ARTICLE 2: GENERAL TERMS AND CONDITIONS

2.1 Capacity In Which Company Is Entering Into This Agreement

The DS Supplier agrees and acknowledges that the Company is contracting for the provision of DS Supply from such DS Supplier for Customers receiving Default Service on the Company's electric system pursuant to the authorizations provided to the Company. The DS Supplier further agrees and acknowledges that the Company will administer and monitor the DS Supplier's performance in providing DS Supply under this Agreement and that the Company shall be entitled to enforce the DS Supplier's obligations related to the provision of DS Supply. The DS Supplier hereby permanently, expressly and irrevocably waives any claim that Company is not entitled to seek enforcement of this Agreement on behalf of Customers. It is the specific intention of the Parties hereto that Customers and Customer groups are not third party beneficiaries of this Agreement and that no Customer or Customer group shall seek enforcement of this Agreement

against the DS Supplier on their own behalf, either independently or by joining in any legal proceeding brought by the Company.

The Parties acknowledge that the Agreement is a forward contract and, accordingly, the Parties hereto are entitled to the protections of Section 556 of the Bankruptcy Code. The Parties therefore agree that the Agreement may be terminated by either Party upon the commencement of a proceeding by the other Party under any chapter of the Bankruptcy Code in accordance with Article 5.2 of this Agreement.

2.2 Parties' Obligations

(a) Obligations of DS Supplier

The DS Supplier hereby agrees as follows:

(i) DS Supplier shall provide service on a firm and continuous basis such that the supply delivered for the term of the Agreement meets the terms and conditions set forth in Appendix C;

(ii) To provide sufficient quantities of DS Supply on an instantaneous basis at all times and supplied to the Delivery Point to meet the DS Supplier Responsibility Share;

(iii) To procure those services provided by the PJM OI and to perform such functions as may be required by the PJM OI that are necessary for the delivery of DS Supply required hereunder;

(iv) To cooperate with the Company in any regulatory compliance efforts that may be required to maintain the ongoing legitimacy and enforceability of the terms of this Agreement and to fulfill any regulatory reporting requirement associated with the provision of DS Supply, before the PaPUC, FERC or any other regulatory body

asserting jurisdiction;

(v) To become the Load Serving Entity ("LSE") with respect to the provision of DS Supply for the DS Supplier Responsibility Share and to comply with all requirements of a LSE with respect to such DS Supplier Responsibility Share;

(vi) To pay to the Company the PMEA/FMEA Adjustment Amount for any Billing Month in which the PMEA exceeds the FMEA, as more fully described in Article 9 of this Agreement;

(vii) To accept assignment of and to fulfill all obligations of a LSE that are assigned to it by this Agreement;

(viii) To comply in a timely manner with all obligations under this Agreement imposed upon the DS Supplier; and

(ix) To comply with the AEPS requirements of the Company's Default Service Plan, as detailed in Appendix E.

(b) Obligations of the Company

The Company hereby agrees as follows:

(i) To pay to each DS Supplier every month an amount due, resulting from the calculations, as detailed in Article 9 of this Agreement, subject to the adjustments as expressed therein;

(ii) Pay to the DS Supplier the PMEA/FMEA Adjustment Amount for any Billing Month in which the FMEA exceeds the PMEA, as more fully described in Article 9 of this Agreement;

(iii) To provide to the DS Supplier its estimated aggregate load obligation (capacity MW value) for each Supply Day no less than five (5) calendar days prior to

the day of delivery. Further, this information will be posted in the DS Supplier's specific PJM eMTR account, or successor system or process;

(iv) To comply in a timely manner with all obligations under this Agreement imposed upon the Company;

(v) Accept the delivery of DS Supply necessary to meet the DS Load; and

(vi) Be responsible (as between the Company and the DS Supplier) for the provision of the Allocated AECs, if any, to satisfy a portion of AEPS requirements.

2.3 Congestion and Congestion Management

The DS Supplier is responsible for any congestion costs incurred to meet the DS Supplier Responsibility Share. The Company shall transfer or assign to the DS Supplier the Company's rights to Auction Revenue Rights ("ARRs") to which the Company is entitled as an LSE pursuant to the PJM Agreements, including the rights to ARRs, provided that such rights are related to the service being provided to meet the DS Supplier Responsibility Share and such rights are for the Delivery Period. All rights, liabilities and obligations associated with such ARRs will accrue and be assumed by the DS Supplier through the transfer or assignment from the Company to the DS Supplier including the responsibility and ability of the DS Supplier to request or nominate such ARRs when applicable and feasible. Should the conditions above not be met, the entity recognized by PJM as having the right to make the nominations will nominate such ARRs for the upcoming PJM planning period and such ARRs will be allocated to the DS Supplier in accordance with the PJM Agreements based upon its DS Supplier Responsibility Share.

2.4 PJM Services

The DS Supplier shall make all necessary arrangements for the delivery of DS Supply through the PJM OI. The Company will advise the PJM OI of the magnitude and location of each

DS Supplier's actual DS Supplier Responsibility Share, as required by the PJM OI, for the purpose of calculating such DS Supplier's appropriate DS Supply requirements related to the provision of service under this Agreement by DS Supplier arising under the PJM Agreements. The DS Supplier shall remain responsible to PJM for the performance of its LSE obligations associated with the provision of DS Supply under this Agreement until the effective date of the transfer of such LSE obligations.

The Company shall generate and provide to DS Supplier PJM shortname(s) associated with supplier's unique contract type(s), as necessary. Unique shortname(s) may be generated for each differing contract type. DS Supplier shall complete all required forms and processing to PJM to create shortname(s) within the PJM system.

For the period of time that this Agreement is in effect, both Buyer and DS Supplier agree that PJM Settlement, Inc. shall transfer the applicable billing line item charges and/or credits as designated between the Buyer and DS Supplier in EXHIBIT D. Buyer will be responsible for initiating and/or maintaining Billing Line Item Transfers utilizing the PJM Billing Line Item Tool. DS Supplier agrees to confirm/approve Billing Line Item Transfers by the last business day of the month prior to the Delivery Period of the first Transaction under the Agreement.

2.5 PJM Agreement Modifications

(a) If the PJM Agreements are amended or modified so that any schedule or section references herein to such agreements is changed, such schedule or section references herein shall be deemed to automatically (and without any further action by the Parties) refer to the new or successive schedule or section in the PJM Agreements which replaces that originally referred to in this Agreement.

(b) If the applicable provisions of the PJM Agreements referenced herein, or any other PJM rules relating to the implementation of this Agreement, are changed materially from those in effect on the Effective Date, both Parties shall cooperate to make conforming changes to this Agreement to fulfill the purposes of this Agreement, including the DS Supplier's responsibility for changes in PJM products and pricing during the Term.

2.6 PJM Member Default Cost Allocation

In the event PJM imposes a Default Allocation Assessment upon the Company relating to a default during the Term, the Company shall invoice DS Supplier and DS Supplier shall pay an amount equal to the product of (i) DS Supplier Responsibility Share, and (ii) the Default Allocation Assessment, less the amounts of any types of charges allocated to the Company under this Agreement that are used by PJM in calculating such Default Allocation Assessment.

2.7 Other Fines and Penalties

If fees, fines, penalties, or costs are claimed or assessed against the Company by any Applicable Legal Authority or PJM due to noncompliance by the DS Supplier with this Agreement, any other requirements of law, or the PJM Agreements, the DS Supplier shall indemnify and hold the Company harmless against any and all losses, liabilities, damages, and claims suffered or incurred by the Company, including claims for indemnity or contribution made by third parties against the Company, except to the extent the Company recovers any such losses, liabilities or damages through other provisions of this Agreement.

2.8 Communications and Data Exchange

The DS Supplier and the Company shall supply to each other in a thorough and timely manner all data, materials or other information that is specified in this Agreement, or that may

otherwise reasonably be required by DS Supplier or by the Company in connection with the provision of DS Supply by the DS Supplier to DS Customers, if required.

The DS Supplier shall be equipped with the communications capabilities necessary to comply with the communications and data exchange standards that are set by and as may, from time to time, be modified by PJM, and shall exclusively bear the costs of installing, maintaining, testing, and operating all required information technology systems that will enable it to send to and receive data from the Company and PJM and to satisfy its obligations under this Agreement, the PJM Agreements and all other relevant agreements.

2.9 Record Retention

The Company shall retain necessary records for the longer of two years or as required under applicable PaPUC requirements so as to permit DS Supplier to confirm the validity of payments due to DS Supplier hereunder; provided that if a DS Supplier has provided notice pursuant to this Agreement that it disputes the validity of any payments, the Company agrees that it shall retain all records related to such dispute until the dispute is finally resolved.

2.10 Verification

In the event of a good faith dispute regarding any invoice issued or payment due under this Agreement, and provided that a mutually acceptable confidentiality agreement is executed by the Parties, each Party will have the right to verify, at its sole expense, the accuracy of the invoice or the calculation of the payment due by obtaining copies of relevant portions of the books and records of the other Party.

2.11 Forward Contract Merchant

The Parties agree that the Agreement is a "forward contract merchant" within the meaning of the United States Bankruptcy Code, all setoffs, netting and liquidations contemplated hereunder constitute "settlement payments" as set forth in Sections 101 and 741 of the United States

Bankruptcy Code and each payment or transfer of Performance Assurance is a "margin payment", "settlement payment" or transfer within the meaning of Section 101 of the United States Bankruptcy Code for the purposes of and as used in such Code.

ARTICLE 3: REPRESENTATIONS AND WARRANTIES

3.1 DS Supplier's Representations and Warranties

The DS Supplier hereby represents, warrants and covenants to the Company on the Effective Date and throughout the term of this Agreement as follows:

a) It is a corporation, partnership, limited liability company or other legal entity, duly organized, validly existing and in good standing under the laws of the Commonwealth of Pennsylvania or, if another jurisdiction, under the laws of such jurisdiction and, in such case, is duly registered and authorized to do business in such other jurisdiction;

b) It has all requisite power and authority to execute and deliver this Agreement and to carry on the business to be conducted by it under this Agreement and to enter into and perform its obligations hereunder, including satisfaction of all applicable FERC requirements;

c) The execution and delivery of this Agreement and the performance of such DS Supplier's obligations hereunder have been duly authorized by all necessary action on the part of the DS Supplier and do not and will not conflict with, or constitute a breach of or default under, any of the terms, conditions, or provisions of the DS Supplier's certificate of incorporation or

bylaws or other constituent instruments or any indenture, mortgage, other evidence of indebtedness, or other agreement or instrument or any statute or rule, regulation, order, judgment, or decree of any judicial or administrative body to which the DS Supplier is a party or by which the DS Supplier or any of its properties is bound or subject;

d) All necessary and appropriate action that is required on the DS Supplier's part to execute this Agreement has been completed;

e) This Agreement is the legal, valid and binding obligation of the DS Supplier, enforceable in accordance with its terms, except as such enforceability may be limited by applicable bankruptcy, insolvency or similar laws from time to time in effect that affect creditors' rights in general or by general principles of equity;

f) There are no actions at law, suits in equity, proceedings or claims pending or, to the DS Supplier's knowledge, threatened against the DS Supplier before any Federal, state, foreign or local court, tribunal or governmental agency or authority that might materially delay, prevent or hinder the DS Supplier's performance of its obligations hereunder;

g) It has entered into this Agreement with a full understanding of the material terms and risks of the same, and it is capable of assuming those risks;

h) It is in good standing as an LSE in PJM, is a signatory to all applicable PJM Agreements, and is in compliance with, and will continue to comply with, all obligations, rules and regulations, as established and interpreted by the PJM OI, that are applicable to LSEs as defined by the PJM Agreements; provided that the DS Supplier shall not be obligated to become an LSE in PJM until the date it begins providing DS Supply;

i) It has made its trading and investment decisions (including regarding the suitability thereof) based upon its own judgment and any advice from such advisors as it has deemed necessary and not in reliance upon any view expressed by the Company;

j) It will comply with any and all information and data transfer protocols that may be adopted by the Company or that are set by, and from time to time modified by, the PaPUC; provided that DS Supplier shall be entitled to exercise its reserved right to challenge any such protocols in the appropriate forum.

k) It is not Bankrupt or insolvent and there are no proceedings pending or being contemplated by it or, to its knowledge, threatened against it which would result in it being or becoming Bankrupt or insolvent;

l) There are no pending, or to its knowledge threatened, actions, suits or proceedings against it or any of its Affiliates, or any legal proceedings before any Governmental Authority, that could materially adversely affect its ability to perform its obligations under this Agreement;

m) No Event of Default with respect to it has occurred and is continuing and no such event or circumstance would occur as a result of its entering into or performing its obligations under this Agreement;

n) It is not relying upon the advice or recommendations of the other Party in entering into this Agreement, it is capable of understanding, understands and accepts the terms, conditions and risks of this Agreement, and the other Party is not acting as a fiduciary for or advisor to it in respect of this Agreement;

o) It has entered into this Agreement in connection with the conduct of its business and it has the capacity or ability to provide or take delivery of DS Supply as required by this Agreement; and it is an "eligible contract participant" as defined in Section 1a(12) of the

Commodity Exchange Act.

3.2 Company's Representations and Warranties

The Company hereby represents, warrants and covenants to the DS Supplier as follows:

a) The Company is an electric utility corporation duly organized, validly existing and in good standing under the laws of the Commonwealth of Pennsylvania;

b) The Company has all requisite power and authority to carry on the business to be conducted by it under this Agreement and to enter into and perform its obligations hereunder;

c) The execution and delivery of this Agreement and the performance of the Company's obligations hereunder have been duly authorized by all necessary action on the part of the Company and do not and will not conflict with, constitute a breach of or default under, any of the terms, conditions, or provisions of the Company's certificate of incorporation or bylaws or any indenture, mortgage, other evidence of indebtedness, or other agreement or instrument or any statute or rule, regulation, order, judgment, or decree of any judicial or administrative body to which the Company is a party or by which the Company or any of its properties is bound or subject;

d) All necessary and appropriate action that is required on the Company's part to execute this Agreement has been completed;

e) This Agreement is the legal, valid and binding obligation of the Company, enforceable in accordance with its terms, except as such enforceability may be limited by applicable bankruptcy, insolvency or similar laws from time to time in effect that affect creditors' rights in general or by general principles of equity and the Commission's power under section 508 of the Public Utility Code, 66 Pa.C.S. § 508, to amend or modify the contracts of public utilities;

f) The ability of the Company to pay any and all amounts due and payable under this Agreement, or upon any potential breach thereof, is not conditioned upon any governmental or administrative appropriation by the Commission, the Commonwealth of Pennsylvania or any other governmental authority;

g) There are no actions at law, suits in equity, proceedings or claims pending or, to the Company's knowledge, threatened against the Company before any Federal, state, foreign or local court, tribunal or governmental agency or authority that might materially delay, prevent or hinder the Company's performance of its obligations under this Agreement;

h) It has entered into this Agreement with a full understanding of the material terms and risks of the same, and it is capable of assuming those risks;

i) The Company's performance under this Agreement is not contingent upon the performance of Customers or the ability of Customers to pay rates;

j) The Company shall have sole responsibility for metering and billing with respect to Customers; and

k) The Company shall be responsible for electric distribution services and the DS Supplier shall not be responsible for distribution charges.

3.3 Survival of Obligations

All representations and warranties contained in this Article are of a continuing nature and shall be maintained during the term of this Agreement or until all amounts due hereunder, including all obligations, have been paid or performed in full. If a Party learns that any of the representations, warranties or covenants in this Agreement are no longer true during the term of this Agreement,

the Party shall immediately notify the other Party via facsimile, with a hard copy of the notice delivered by overnight mail.

ARTICLE 4: COMMENCEMENT AND TERMINATION OF AGREEMENT

4.1 Commencement and Termination

The term of this Agreement shall commence upon the Effective Date. Unless otherwise agreed upon by the Company and the DS Supplier, this Agreement shall continue in full force and effect from the Effective Date until the end of all Transaction(s) executed under this Agreement, unless the Agreement is terminated prematurely pursuant to the provisions of this Agreement.

4.2 Termination of Right to Supply

The DS Supplier agrees that termination of this Agreement for reason of an Event of Default shall terminate any right of the DS Supplier to provide DS Supply to the DS Customers and nullify any of the entitlements to which the DS Supplier became entitled as a result of being selected as a winning bidder in the DS Solicitation.

4.3 Survival of Obligations

Termination of this Agreement for any reason shall not relieve the Company or the DS Supplier of any obligation accrued or accruing prior to such termination. Applicable provisions of this Agreement shall continue in effect after termination to the extent necessary to provide for final billings.

4.4 Mutual Termination

The Company and the DS Supplier may agree at any time during the term of this Agreement to terminate their respective rights and obligations hereunder on such terms and under such conditions that they mutually deem to be appropriate as set forth in a mutual termination agreement

acceptable in form and substance to the Company and the DS Supplier ("Mutual Termination Agreement"); provided that Company agrees that it shall enter into such a Mutual Termination Agreement, which will discharge the terminating DS Supplier (the "Terminating DS Supplier") with respect to liabilities arising after the effective date of the Mutual Termination Agreement if the following conditions precedent are met: (i) the Terminating DS Supplier identifies a replacement DS Supplier willing to assume all obligations of the Terminating DS Supplier hereunder for the remaining term of this Agreement (the "Replacement DS Supplier"); (ii) the Replacement DS Supplier demonstrates its compliance with Article 6 of this Agreement, "Creditworthiness", as of the effective date of the Mutual Termination Agreement, that determination to be made in the sole discretion of Company; (iii) the Replacement DS Supplier executes a counterpart signature page to this Agreement and thereby becomes a Party under this Agreement, effective immediately following the effective date of the Mutual Termination Agreement; and (iv) the Terminating DS Supplier is not, to the belief or knowledge of the Company, subject to an Event of Default as of the effective date of the Mutual Termination Agreement or, if the Company believes that the Terminating DS Supplier may be subject to an Event of Default, either (a) the Company has determined that, as of the effective date of the Mutual Termination Agreement, it has not incurred any Damages as a result of the Event of Default or (b) if the Company has determined, as of the effective date of the Mutual Termination Agreement, that it may have incurred Damages as a result of the Event of Default, that the Replacement DS Supplier has agreed in writing to be responsible for the payment of such Damages or to otherwise cure the Event of Default, in either case to the satisfaction of the Company in its sole discretion.

ARTICLE 5: BREACH AND DEFAULT

5.1 Events of Default

An Event of Default under this Agreement shall occur if a Party (the "Defaulting Party"):

(i) Is the subject of a voluntary bankruptcy, insolvency or similar proceeding;

(ii) Makes an assignment for the benefit of its creditors;

(iii) Applies for, seeks consent to, or acquiesces in the appointment of a receiver, custodian, trustee, liquidator or similar official to manage all or a substantial portion of its assets;

(iv) Is dissolved (other than pursuant to a consolidation, amalgamation or merger) or is the subject of a Merger Event;

(v) Has a secured party take possession of all or substantially all of its assets or has a distress, execution, attachment, sequestration or other legal process levied, enforced or sued on or against all or substantially all of its assets;

(vi) Has a resolution passed for its winding-up, official management or liquidation (other than pursuant to a consolidation, amalgamation or merger);

(vii) In the case of a DS Supplier, PJM terminates the DS Supplier's ability to make purchases from PJM markets or PJM holds the Company responsible for the provision of DS Supply under this Agreement and PJM does not rescind such termination or assignment of responsibility within seven (7) Business Days;

(viii) Fails to comply with the creditworthiness requirements as set forth in Article 6 of this Agreement, including, without limitation, compliance with the

creditworthiness requirements to cover the Margin calculated under Section 6.7 or post any Margin due under Section 6.7 of this Agreement, within the time frames set forth in this Agreement;

(ix) Is declared by PJM to be in default of any provision of any PJM Agreement, which default prevents a Party's performance hereunder if such failure is not remedied within three (3) Business Days after written notice;

(x) Failure to make, when due, any payment required pursuant to this Agreement if such failure is not remedied within two (2) Business Days after written notice;

(xi) Violates any Federal, state or local code, regulation or statute applicable to the supply of Energy and/or AECs in a manner that materially, and adversely, affects the Party's performance under this Agreement, including by way of failure to continually satisfy all applicable FERC requirements, or, in the case of the DS Supplier, by way of failure to maintain any other governmental approvals required for participation in the Pennsylvania retail Energy market, or defaults on any obligation or other failure to comply with PJM requirements under the PJM Agreements;

(xii) Is the subject of an involuntary bankruptcy or similar proceeding;

(xiii) Subject to Section 5.3(b) of this Agreement, in the case of the Company, fails to accept DS Supply properly tendered by the DS Supplier under this Agreement;

(xiv) Failure to perform any material covenant or obligation set forth in this Agreement, if such failure is not remedied within three (3) Business Days after written notice;

(xv) Makes a materially incorrect or misleading representation or warranty under this Agreement or under any response to the DS Solicitation; or

(xvi) Commits an act or makes an omission that constitutes an "Event of Default" under any other agreement(s) for the provision of DS Supply between the Company and the DS Supplier; and fails to remedy such condition, event or delinquency herein above described such that the other Party (the "Non-Defaulting Party") is completely made whole with respect to such condition, event or delinquency, within three (3) Business Days of receipt of written notice thereof from such NonDefaulting Party; provided, however, that an Event of Default shall be deemed to have occurred immediately, without any need for the provision of notice thereof by the Non-Defaulting Party and without any right of cure on the part of the Defaulting Party, in the event of the occurrence of a condition, event or delinquency described in subsections "i", "ii", "iii", "iv", "v", "vi", "vii" or "viii" above. Termination of

this Agreement by the PaPUC, other regulatory authority or court of law does not constitute an Event of Default under this Agreement.

With respect to the DS Supplier's Guarantor, if any:

1. any representation or warranty made by the Guarantor in connection with this Agreement is false or misleading in any material respect when made or when deemed made or repeated;

2. Guarantor fails to make, when due, any payment required or to perform any other material covenant or obligation in any guaranty made in connection with this

Agreement and such failure shall not be remedied within two (2) Business Days after written notice;

3. Guarantor's guaranty fails to be in full force and effect for purposes of this Agreement (other than in accordance with its terms) prior to the satisfaction of all obligations of such Party under this Agreement without the written consent of the other Party; or

4. Guarantor repudiates, disaffirms, disclaims, or rejects, in whole or in part, or challenges the validity of any guaranty.

5.2 Rights upon Default

Upon and during the continuation of an Event of Default, the Non-Defaulting Party shall have the right to suspend performance, provided that such suspension shall not continue for longer than ten (10) Business Days. At any time during or subsequent to the temporary suspension of performance, the Non-Defaulting Party may proceed with the steps outlined in Article 5.7. In addition to any other remedies available at law or in equity to the Non-Defaulting Party, if an Event of Default has occurred and is continuing, the Non-Defaulting Party shall have the right to implement all of the following remedies:

(i) Declare an Early Termination Date of this Agreement with respect to the obligations of the Defaulting Party without any liability or responsibility whatsoever except for obligations arising prior to the date of termination, by providing written notice to the Defaulting Party; provided, however, that this Agreement shall immediately terminate automatically and without notice in the case of any Event of Default in which a DS Supplier is the Defaulting Party occurring under subsections (i), (ii), (iii), (iv), (v), (vi), (vii) or (viii) of Article 5.1 of this Agreement and

such date of automatic termination shall be deemed the Early Termination Date of this Agreement with respect to such DS Supplier; and

(ii) Receive Damages in accordance with Section 5.3 of this Agreement. The Non-Defaulting Party shall be entitled to elect or pursue one or more of the above remedies.

5.3 Damages Resulting From an Event of Default

(a) DS Supplier's Failure to Supply DS Supply or Declaration of Early Termination By Company: Damages resulting from (i) the DS Supplier's failure to (A) provide DS Supply in conformance with Article 2.2 hereof or (B) pay PJM for purchases of any products or services from PJM, or other failure to comply with PJM requirements, such that PJM holds the Company responsible for the provision of DS Supply to meet the DS Supplier's DS Supplier Responsibility Share under this Agreement or (ii) the occurrence of any Event of Default attributable to the DS Supplier resulting in Early Termination, shall include all Costs incurred by the Company, acting in a commercially reasonable manner consistent with any statutory or regulatory requirements imposed by the Applicable Legal Authorities, in obtaining replacement services or in obtaining a replacement supplier, which Costs exceed the amounts that would have been payable to the defaulting DS Supplier under this Agreement. Costs incurred by the Company for the purpose of calculating Damages hereunder will consist of:

(i) The cost of DS Supply allocated to the Company by the PJM OI due to the failure of the DS Supplier to meet obligations owing to the PJM OI in connection with its obligations under this Agreement;

(ii) The costs of DS Supply purchased by the Company to replace DS Supply that a DS Supplier was obligated to supply under this Agreement during the term hereof;

(iii) Administrative and legal costs associated with procuring replacement DS Supply; and

(iv) Financial hedging costs incurred by the Company on behalf of DS

Customers as a result of having to procure DS Supply not provided by the DS Supplier.

The Parties further recognize and agree that the final calculation of Damages hereunder may not be known for some time since the level of such Damages may be dependent upon the arrangements made by the Company to obtain replacement services or a replacement DS Supplier. The Company and the DS Supplier agree that, until the calculation of Damages under this provision is completed, the amount and payment to the Company of the Settlement Amount on behalf of DS Customers in the event of an Early Termination as set forth in Article 5.4 of this Agreement shall be immediately due and owing as an estimate of all Damages ultimately determined to be due and owing. After Damages have been finally determined under this Article 5.3, the amounts of Damages due and owing will be reconciled with payments already made by the DS Supplier under Section 5.4 of this Agreement.

(b) Failure By Company on Behalf of Customers To Accept DS Supply Tendered By DS Supplier: Damages resulting from the failure of the Company on behalf of Customers to accept DS Supply tendered by the DS Supplier necessary to meet the DS Supplier Responsibility Share of DS Load under this Agreement shall consist of the positive difference (if any) between (i) the amounts that would have been payable to the DS Supplier hereunder had the Company accepted the DS Supply tendered by the DS Supplier necessary to meet the DS Supplier Responsibility Share of DS Load under this Agreement and (ii) the amount realized by the DS Supplier in disposing, in a commercially reasonable manner, of the DS Supply not accepted by the

Company; provided, however, that the Company shall not be required to accept on behalf of any Customer, quantities of DS Supply utilized by Customers on an instantaneous basis as a function of electrical load, in excess of such Customer's instantaneous consumption of such component of DS Supply; and further provided that the Company shall not be liable for any Damages if this Agreement is terminated by the PaPUC, other regulatory authority or a court of law.

(c) Damages Resulting From Early Termination Due To An Event of Default Attributable To the Company: Damages resulting from Early Termination due to an Event of Default attributable to the Company shall be as set forth in Section 5.4 of this Agreement. Damages calculated in accordance with said Article 5.4 shall be the exclusive remedy available to the DS Supplier in the event of Early Termination resulting from an Event of Default attributable to the Company.

(d) Damages Resulting from DS Supplier's Failure to Continuously Satisfy it AEPS Obligations: Damages resulting from the DS Supplier's failure to continuously meet and satisfy all or any portion of its obligations under Section 2.2(a)(viii) of this Agreement shall include, but not be limited to, the amount of all penalties, costs associated with the procurement of additional AECs, etc. including, without limitation, interest and other charges, if any, levied against the Company related to AEPS regulations, due to such DS Supplier's conduct or inaction.

(e) Other Damages: Damages for Events of Default not specified above shall consist of the direct Damages incurred by the Non-Defaulting Party.

(f) Waiver of Event of Default: If an Event of Default has occurred and the NonDefaulting Party is the Company, then unless the Event of Default was a failure by the DS Supplier to meet any or all of its DS Supply obligations, the Company may elect, at its sole discretion, to offer to waive the default on such terms and conditions as the Company, at its sole discretion, may deem

appropriate to propose a special remedy. Any such special remedy can only be offered to the DS Supplier if it first is specifically approved by the PaPUC in accordance with Commission Orders.

5.4 Declaration of an Early Termination Date and Calculation of Settlement Amount and Termination Payment

(a) Settlement Amount. If an Event of Default with respect to a Defaulting Party shall have occurred and be continuing, the Non-Defaulting Party shall have the right (i) to designate a day, no earlier than the day such notice is effective and no later than twenty (20) days after such notice is effective, as a date for Early Termination ("Early Termination Date") to accelerate all amounts owing between the Parties and to liquidate and terminate the undertakings set forth in this Agreement, (ii) to withhold any payments due to the Defaulting Party under this Agreement, and (iii) to suspend performance; provided however, that an Early Termination Date shall be deemed to occur automatically and concurrently with the Event of Default, without any requirement for the provision of notice by the Non-Defaulting Party, with respect to an Event of Default under subsections (i), (ii), (iii), (iv), (v), (vi), (vii), and (viii) of Article 5.1 of this Agreement.

The Non-Defaulting Party shall calculate, in a commercially reasonable manner, a Settlement Amount with respect to the obligations under this Agreement.

The DS Supplier may, in its sole discretion, select the notional quantity in the following subsection 5.4(a)(i) by checking the box below. If the DS Supplier does not select subsection 5.4(a)(i) by checking the box, it will be deemed to be excluded from this Agreement. ☐

(i) For the purposes of such determination, the DS Supply provided for under this Agreement for the period following the Early Termination Date through the remainder of the term of this Agreement shall be deemed to be those quantity amounts that would have been delivered on an hourly basis, had this Agreement been in effect during the previous

calendar year adjusted for such DS Load changes as may have occurred since the previous calendar year.

(b) Net Out of Settlement Amounts. The Non-Defaulting Party shall calculate a Termination Payment by aggregating all Settlement Amounts due under this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply into a single amount by netting out (a) all Settlement Amounts that are due or will become due to the Defaulting Party, plus at the option of the Non-Defaulting Party, any cash or other form of security then available to the Non-Defaulting Party and actually received, liquidated and retained by the Non-Defaulting Party, plus any or all other amounts due to the Defaulting Party under this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply against (b) all Settlement Amounts that are due or will become due to the NonDefaulting Party, plus any or all other amounts due to the Non-Defaulting Party under this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply, so that all such amounts shall be netted out to a single liquidated amount; provided, however, that if the DS Supplier is the Defaulting Party and the Termination Payment is due to the DS Supplier, the Company shall be entitled to retain a commercially reasonable portion of the Termination Payment, which may be equal to the entire amount of the Termination Payment, as security for additional amounts that may be determined to be due and owing by the DS Supplier as Damages and further provided that any previously attached security interest of the Company in such retained amounts shall continue. The

Termination Payment shall be due to or due from the Non-Defaulting Party as appropriate. If the Termination Payment has been retained by the Company as security for additional amounts that may be determined to be due and owing by the DS Supplier, and if, upon making a final

determination of Damages, the Termination Payment, or any portion thereof, is to be made to the DS Supplier, the Company will pay simple interest on the Termination Payment amount being made to the DS Supplier. Simple interest will be calculated at the lower of the Interest Index or six (6) percent per annum.

(c) Notice of Termination Payment. As soon as practicable after calculation of a Termination Payment, notice shall be given by the Non-Defaulting Party to the Defaulting Party of the amount of the Termination Payment and whether the Termination Payment is due to or due from the Non-Defaulting Party. The notice shall include a written statement explaining in reasonable detail the calculation of such amount. Subject to Article 5.4(b) above, the Termination Payment shall be made by the Party that owes it within three (3) Business Days after such notice is effective.

(d) Disputes With Respect to Termination Payment. If the Defaulting Party disputes the Non-Defaulting Party's calculation of the Termination Payment, in whole or in part, the Defaulting Party shall, within three (3) Business Days of receipt of Non-Defaulting Party's calculation of the Termination Payment, provide to the Non-Defaulting Party a detailed written explanation of the basis for such dispute; provided, however, that if the Termination Payment is due from the Defaulting Party, the Defaulting Party shall first transfer collateral to the Non-

Defaulting Party in an amount equal to the

Termination Payment, such collateral to be in a form acceptable to the Non-Defaulting Party as specified in the Termination Payment Dispute Notice.

(e) Multiple DS Supply Agreements. It is the intention of the Company and the DS Supplier that, in the event the DS Supplier is a party to other agreements with the Company for the

provision of DS Supply that existed prior to the Effective Date of this Agreement or are entered into after the Effective Date of this Agreement, the Company will calculate a single Termination Payment applicable to all such agreements as set forth herein.

5.5 Step-up Provision

The Company may ask other DS Suppliers whether they wish to assume all or part of the delivery obligations on the same terms and price contained herein, but any DS Supplier shall not be obligated to assume any such step-up requests. Any agreement to make additional supply available shall be termed a "Step-Up", and is subject to compliance with the creditworthiness provisions of Article 6 of this Agreement and the DS Supplier's load cap as per the Company's approved default service procurement plan. For the avoidance of doubt, in the event that the DS Supplier does not respond to the Company's Step-Up request within the relevant timeframe, then the DS Supplier shall be deemed to have rejected the Company's request in full.

5.6 Setoff of Payment Obligations of the Non-Defaulting Party

Any payment obligations of the Non-Defaulting Party to the Defaulting Party pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply shall be set off: (i) first, to satisfy any payment obligations of the Defaulting Party to the Non-Defaulting Party pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply that are unsecured and not subject to any Guaranty; (ii) second, to satisfy any payment obligations of the Defaulting Party to the Non-Defaulting Party pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply that are unsecured, but which are subject to a Guaranty; and (iii) third, to satisfy any remaining payment obligations of the Defaulting

Party to the Non-Defaulting Party pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply.

5.7 Preservation of Rights of Non-Defaulting Party

The rights of the Non-Defaulting Party under this Agreement, including without limitation Article 5.4 and 5.7 of this Agreement, shall be supplemental to, and not in lieu of any right of recoupment, lien, or set-off afforded by applicable law, and all such rights are expressly preserved for the benefit of the Non-Defaulting Party.

a. Duty to Mitigate. Each Party agrees that it has a duty to mitigate damages and covenants that it will use commercially reasonable efforts to minimize any damages it may incur as a result of the other Party's failure to perform pursuant to this Agreement.

b. Return of Auction Revenue Rights. When the DS Supplier is the Defaulting Party, the DS Supplier will make best efforts to facilitate the transfer or reassignment to the entity which is the replacement DS Supplier on the Early Termination Date, any and all of the replacement DS Supplier's rights to ARRs to which the replacement DS Supplier is entitled as a LSE pursuant to the PJM Agreements, which were transferred or assigned to the DS Supplier under Section 2.3 (Congestion and Congestion Management).

ARTICLE 6: CREDITWORTHINESS

6.1 Applicability

The DS Supplier agrees that it shall meet the creditworthiness requirements of this Article 6 at all times during the term of this Agreement and shall inform the Company immediately of any changes in its credit rating or financial condition. Without limitation of the foregoing, the DS

Supplier shall, upon written request, affirmatively demonstrate to the Company, its compliance with the creditworthiness requirements set forth hereunder.

The Company may establish less restrictive creditworthiness requirements under this Article 6 in a non-discriminatory manner.

6.2 Creditworthiness Determination

The DS Supplier may submit and maintain a security deposit in accordance with Section 6.7 of this Agreement in lieu of submitting to or being qualified under a creditworthiness evaluation. The DS Supplier shall have the opportunity to request that the Company re-evaluate its creditworthiness whenever an event occurs that the DS

Supplier believes would improve the determination made by the Company of its creditworthiness. The Company's credit re-evaluation must be completed as soon as possible but no longer than thirty (30) days after receiving a fully documented request. The Company must provide the rationale for its determination of the credit limit and any resulting security requirement. The Company must perform its credit re-evaluation and associated security calculation in a nondiscriminatory manner. DS Supplier shall provide the Company and its agent's unrestricted access to audited financial statements; provided that if audited financial statements are not available, the Company, in its sole discretion, may specify other types of financial statements that will be accepted.

6.3 Independent Credit Requirement per Tranche

The Independent Credit Requirement per Tranche ("ICRT") that will be required of DS Suppliers under each Agreement will initially be the sum of the amounts set forth on Appendix A at the inception of the Original Delivery Period for each Tranche and will decline throughout the Term in accordance with the schedule set forth on Appendix A.

6.4 Independent Credit Threshold

Each DS Supplier that qualifies under the following criteria will be granted an Independent Credit Threshold ("ICT").

(a) For a DS Supplier or its Guarantor that has been organized under the laws of the United States, the following requirements must be satisfied in order for such SSO Supplier to be granted an ICT:

(i) the DS Supplier or its Guarantor, as applicable, must (1) be rated by S&P Global Ratings ("S&P"), Moody's Investors Service, Inc. ("Moody's") or Fitch, Inc. ("Fitch"), and (2) have a minimum senior unsecured debt rating (or, if unavailable, corporate or issuer rating) of at least "BB" from S&P, "Ba2" from Moody's, or "BB" from Fitch (a "Minimum Rating"). If the DS Supplier or its Guarantor is rated by only two rating agencies and the ratings are split, the lower rating will be used. If the DS Supplier or its Guarantor is rated by three rating agencies and the ratings are split, the lower of the two highest ratings will be used; provided that, in the event that the two highest ratings are common, such common rating will be used. If the DS Supplier and an Affiliate(s) are both winning bidders in the Solicitation for the provision of DS Supply, then the DS Supplier or its Guarantor, as applicable, and the Affiliate(s) will proportionally share the maximum level of the ICT using the highest rating as determined for the DS Supplier or its Guarantor, as applicable, and the Affiliate(s). The maximum level of the ICT will be determined based on the following table:

Credit Rating of the DS Supplier or its Guarantor			Max. Independent Credit Threshold (calculated as the lesser of the percentage of TNW and the applicable Independent Credit Cap below)	
S&P	Moody's	Fitch	Percentage of TNW	Independent Credit Threshold Cap
A- and above	A3 and above	A- and above	16%	Not applicable
BBB+	Baa1	BBB+	16%	Not applicable
BBB	Baa2	BBB	10%	Not applicable
BBB-	Baa3	BBB-	8%	Not applicable
BB+	Ba1	BB+	4%	$3,000,000
BB	Ba2	BB	3%	$1,500,000
BB- and below	Ba3 and below	BB- and below	0%	$0

(ii) for DS Supplier having a Guarantor, the maximum level of the ICT that can be granted based on an ICT Guaranty will be determined in accordance with subsection (i) above, with reference to the credit rating of the Guarantor.

The ICT granted to the DS Supplier will not exceed the amount of the ICT Guaranty. The ICT Guaranty tendered by the DS Supplier to satisfy the ICT requirement arising under this Section 6.4 shall be a separate guaranty from the Total Exposure Amount Guaranty, if any, tendered by the DS Supplier to satisfy any requirement for a Credit Limit to cover the Total Exposure Amount arising under Section 6.7; provided, however, that a single Guaranty may be provided if such Guaranty is for an unlimited amount.

(b) For a DS Supplier or Guarantor that has not been incorporated or otherwise formed under the laws of the United States and whose financial data is not denominated in United States currency and does not conform to generally accepted accounting principles ("GAAP") in the United States, they shall supply the following additional information:

(i) A legal opinion of counsel qualified to practice in the foreign jurisdiction in which the DS Supplier or Guarantor is incorporated or otherwise formed that this Agreement is, or upon completion of execution formalities will become, the binding obligation of the DS Supplier or Guarantor in the jurisdiction in which it has been incorporated or otherwise formed; and

(ii) The sworn certificate of the corporate secretary (or similar officer) of such DS Supplier or Guarantor that the person executing this Agreement on behalf of the DS Supplier has the authority to execute the Agreement and that the governing board of the DS Supplier or Guarantor has approved the execution of this Agreement;

(iii) The sworn certificate of the corporate secretary (or similar officer) of such DS Supplier or Guarantor that the DS Supplier or Guarantor has been authorized by its governing board to enter into agreements of the same type as this Agreement; and

(iv) Such other documents and certificates as may be required by the Company in its sole discretion.

6.5 Credit Exposure Methodology

The credit exposure per tranche that will be required of the DS Supplier under this agreement will be determined by the DS Customer Group as stated on the Transaction Confirmation(s).

For the Industrial class, the credit exposure under this Agreement shall be $140,000 times the number of tranches shown on the Transaction Confirmation(s). If the DS Supplier meets the Minimum Rating in Section 6.6, no security will be required as long as the Total Exposure Amount does not exceed the maximum credit limit of the DS Supplier or its Guarantor.

To calculate the daily exposure for each DS Supplier for the Residential and Commercial classifications as stated on the Transaction Confirmation(s), the MtM credit exposure methodology will be used. The "mark" for each Billing Month will be determined at the time the auction is completed based on the available Forward Market Prices and for the remaining Billing Months will be derived based on historical data. At the time the auction is completed, the MtM credit exposure for each DS Supplier shall be equal to zero. Subsequently, the differences between the available Forward Market Prices on the valuation date and the "mark" prices for the corresponding Billing Months will be used to calculate the daily credit exposures for each DS Supplier. The total MtM credit exposure will be equal to the sum of the MtM credit exposures for each Billing Month. The methodology for calculation of the MtM credit exposure is illustrated in the example (using hypothetical numbers) set forth in Appendix B hereto.

6.6 Credit Limit

The following criteria constitute the Company's creditworthiness requirements for the DS Supplier to cover the Total Exposure Amount. In all instances, the most current senior unsecured debt rating (or, if unavailable, the most current corporate issuer rating) will be used.

(i) For a DS Supplier to be granted an unsecured line of credit, the DS Supplier must be rated by at least two of the following rating agencies: S&P, Moody's, or Fitch. The methodology for determining the credit rating to use is set forth in Appendix A of this Agreement. The Maximum Credit Limit to cover the Total Exposure Amount will be determined based on the credit matrix table in Appendix A of this Agreement.

The DS Supplier will be required to post cash or a letter of credit in an acceptable form as defined in Section 6.9 (b) of this Agreement (see standard format in Appendix F) for the Margin due the Company as set forth in Section 6.7 of this Agreement; or

(ii) For a DS Supplier having a Guarantor, in the case of a Guarantor organized under the laws of the United States, the Guarantor (1) must be rated by at least two of the following rating agencies: S&P, Moody's, or Fitch, and (2) must have a minimum senior unsecured debt rating (or, if unavailable, corporate issuer rating) equal to the Minimum Rating. If the Guarantor is rated by only two rating agencies, and the ratings are split, the rating will be established based on the methodology outlined in Appendix A of this Agreement. The Maximum Credit Limit to cover the Total Exposure Amount that could be provided through the Guaranty (see standard format in Appendix G) will be determined based on the credit matrix table for Guarantors on Appendix A. The DS Supplier will be granted a credit limit equal to the lesser of (i) the amount of the Guaranty as provided to the Company at the time this Agreement is executed as such amount may be modified in any amended or substitute Guaranty provided to the Company during the term of this Agreement, or (ii) the Supplier's Maximum Credit Limit. The DS Supplier, however, may not increase or substitute its Guaranty for the purpose of increasing its applicable credit limit during the time period after the Company has made a Margin call but before the DS Supplier has posted

the required Margin. Notwithstanding anything herein to the contrary, the DS Supplier may increase the limit of its Guaranty after satisfying a Margin call from the Company and upon the Company's receipt of an amended or substitute Guaranty increasing the limit of the Guaranty, the DS Supplier may request a return of Margin in accordance with Section 6.7 of this Agreement. The DS Supplier will be required to post cash or a letter of credit in an acceptable form as defined in Section 6.9(b) of this Agreement (see standard format in Appendix F) for the Margin due the Company as set forth in Section 6.7 of this Agreement; or

(iii) For a DS Supplier or Guarantor that has not been incorporated or otherwise formed under the laws of the United States and whose financial data is not denominated in United States currency and does not conform to generally accepted accounting principles ("GAAP") in the United States, they shall supply the following additional information:

a. A legal opinion of counsel qualified to practice in the foreign jurisdiction in which the DS Supplier or Guarantor is incorporated or otherwise formed that this Agreement is, or upon completion of execution formalities will become, the binding obligation of the DS Supplier or Guarantor in the jurisdiction in which it has been incorporated or otherwise formed; and

b. The sworn certificate of the corporate secretary (or similar officer) of such DS Supplier or Guarantor that the person executing this Agreement on behalf of the DS Supplier has the authority to execute the Agreement and that the governing board of the DS Supplier or Guarantor has approved the execution of this Agreement;

c. The sworn certificate of the corporate secretary (or similar officer) of such DS Supplier or Guarantor that the DS Supplier or Guarantor has been authorized by its governing board to enter into agreements of the same type as this Agreement; and

d. Such other documents and certificates as may be required by the Company in its sole discretion.

(iv) The posting of cash or a letter of credit as defined in Section 6.9 (b) below for the entire Total Exposure Amount as set forth in Section 6.7 of this Agreement.

6.7 Posting Margin and Return of Surplus Margin

(a) If at any time and from time to time during the term of this Agreement, the Total Exposure Amount, rounded by the Rounding amount, exceeds the DS Supplier's or the Guarantor's credit limit by the Minimum Transfer Amount (MTA), then the Company on any Business Day, may request that the DS Supplier provide cash or a letter of credit in an acceptable form as defined in Article 6.9(b) of this Agreement (see standard format in Appendix F), in an amount equal to the Margin (less any Margin posted by the DS Supplier and held by the Company pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply).

If the DS Supplier receives written notice for Margin from the Company by 1:00 p.m. New York time on a Business Day, then the DS Supplier shall post Margin the next following Business Day, if posting cash, and by the second Business Day following the date of notice, if posting a letter of credit, unless the Company agrees in writing to extend the period to provide Margin. If the DS Supplier receives notice for Margin from the Company after 1:00 p.m. New York time on

a Business Day, whether posting cash or a letter of credit, then the DS Supplier must post Margin the second Business Day following the date of notice unless the Company agrees in writing to extend the period to provide Margin. The Company will not unreasonably deny a request for a one-day extension of such period. In the event that the DS Supplier fails to post Margin when due in accordance with this Article 6.7, then an Event of Default under Article 5 of this Agreement will be deemed to have occurred and the Company will be entitled to the remedies set forth in Article 5 of this Agreement.

(b) Surplus Margin being held by the Company that is not needed to satisfy the Total Exposure Amount, as determined above, will be returned to the DS Supplier upon receipt of a written request by the DS Supplier. Surplus Margin means cash or a letter of credit posted by the DS Supplier as a result of a request by the Company pursuant to Article 6.7(a) that exceeds the Total Exposure Amount less the DS Supplier's or the Guarantor's credit limit (rounded by the Rounding Amount). If the resulting Surplus Margin amount is more than the Minimum Transfer Amount, it will be returned to the DS Supplier. If the DS Supplier posted cash and notice is received by 1:00 p.m. New York time on a Business Day, the surplus Margin will be returned by the next following Business Day and if the DS Supplier posted cash and notice is received by the Company after 1:00 p.m. New York time on a Business Day, the surplus Margin shall be returned by the second Business Day following the date of notice, unless the DS Supplier agrees in writing to extend the period to return the surplus Margin. If the DS Supplier posted a letter of credit, the surplus Margin shall be returned on the next Business Day following the Business Day on which the amendment to the letter of credit is received from the issuing bank, unless the DS Supplier agrees in writing to extend the period to return the surplus Margin. The DS Supplier will not unreasonably deny a request for a one-day extension of such period. In the event that the Company

fails to return the surplus Margin when due in accordance with this Article, then an Event of Default under Article 5 of this Agreement will be deemed to have occurred and the DS Supplier will be entitled to the remedies set forth in Article 5 of this Agreement.

6.8 Grant of Security Interest/Remedies

To secure its obligations under this Agreement and to the extent that the DS Supplier posted Margin/collateral hereunder, the DS Supplier hereby grants to the Company a present and continuing security interest in, and lien on (and right of setoff against), and assignment of, all cash collateral and cash equivalent collateral and any and all proceeds resulting therefrom or the liquidation thereof, whether now or hereafter held by, on behalf of, or for the benefit of, the Company, and the DS Supplier and the Company agree to take such action as is reasonably required to perfect the secured Party's first priority security interest in, and lien on (and right of setoff against), such collateral and any and all proceeds resulting therefrom or from the liquidation thereof. Upon or any time after the occurrence or deemed occurrence and during the continuation of an Event of Default or an Early Termination Date, the Company may do any one or more of the following: (i) exercise any of the rights and remedies of the Company with respect to all collateral, including any such rights and remedies under law then in effect; (ii) exercise its rights of setoff against any and all property of the DS Supplier in the possession of the Company whether held in connection with this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply; (iii) draw on any outstanding letter of credit issued for its benefit; and (iv) liquidate all security held by or for the benefit of the Company free from any claim or right of any nature whatsoever of the DS Supplier, including any equity or right of purchase or redemption by the DS Supplier. The Company shall apply the proceeds of the collateral realized upon the exercise of such rights or remedies to reduce the DS Supplier's obligation under this Agreement or any other agreement(s) between the Company and the DS

Supplier for the provision of DS Supply (the DS Supplier remaining liable for any amounts owing to the Company after such application), subject to the Company's obligation to return any surplus proceeds remaining after such obligations are satisfied in full.

All notices, demands or requests regarding credit requirements and credit related security or deposit transfers shall be in writing and shall be personally delivered or sent by overnight express mail, courier service or facsimile transmission (with the original transmitted by any of the other aforementioned delivery methods) addressed as follows:

Notice received after the close of the Business Day shall be deemed received on the next Business Day; provided that notice by facsimile transmission shall be deemed to have been received by the recipient if the recipient confirms receipt telephonically or in writing.

6.9 Security Instruments

At each DS Supplier's choice, the following are deemed to be acceptable methods for posting security, if required:

(a) Cash; or

(b) A standby irrevocable letter of credit acceptable to the Company, in its sole discretion, issued by a bank or other financial institution with a minimum "A" senior unsecured debt rating (or, if unavailable, corporate issuer rating discounted one notch) from S&P and "A2" from Moody's (see standard format in Appendix F). The letter of credit shall state that it shall renew automatically for successive one-year or shorter periods, until terminated upon at least ninety (90) days prior written notice from the issuing financial institution. If the Company receives notice from the issuing financial institution that the letter of credit is being cancelled, the DS Supplier will be required to provide a substitute letter of credit from an alternative bank satisfying the minimum requirements. The receipt of the substitute letter of credit must be effective as of the cancellation date and delivered to the Company thirty (30) days before the cancellation date of the original letter of credit. If the DS Supplier fails to supply a substitute letter of credit as required, then the Company will have the right to draw on the existing letter of credit and to hold the amount as Margin.

If the credit rating of a bank or other financial institution from which a DS Supplier has obtained a letter of credit falls below the levels specified in Article 6 of this Agreement, the DS Supplier shall have two (2) Business Days following written notice by the Company to obtain a

suitable letter of credit from another bank or other financial institution that meets those standards, unless such period is extended in writing by the Company. The Company shall have no obligation under this Agreement or otherwise to make or grant such extension.

6.10 Maintenance of Creditworthiness

(a) Reporting of Changes.

The DS Supplier shall promptly notify the Company of any change in its credit rating or financial condition or that of its Guarantor. The DS Supplier or Guarantor shall also furnish evidence of an acceptable credit rating or financial condition upon the request of the Company.

(b) Change in Credit Standing.

The Company will re-evaluate the creditworthiness of a DS Supplier whenever it becomes aware of an adverse change, through the provision of notice by the DS Supplier or otherwise, in the DS Supplier's or Guarantor's credit standing. If the lowest credit rating (whether senior unsecured debt rating or corporate issuer rating) used to determine the DS Supplier's Maximum Credit Limit or its credit limit adversely changes, the Company will require additional security from the DS Supplier in accordance with Sections 6.6 of this Agreement. The additional security must be in a form acceptable to the Company in its sole discretion, as specified in Article 6.9 of this Agreement and must be posted as set forth in Section 6.7 of this Agreement.

6.11 Calling on Security

The Company may call upon the security posted by the DS Supplier if the DS Supplier fails to pay amounts due to the Company pursuant to this Agreement or any other agreement(s) between the Company and the DS Supplier for the provision of DS Supply after all of the following events occur:

(a) Written Notice of Default is provided to the DS Supplier; and

(b) Any applicable cure period associated with the written Notice of Default ends.

The foregoing notwithstanding, the security posted by the DS Supplier shall become due automatically without prior notice or right of cure in the case of any Event of Default arising under subsections (i), (ii), (iii), (iv), (v), (vi), (vii) and (viii) of Section 5.1 of this Agreement.

6.12 Interest on Cash Held by Company

The Company will pay simple interest calculated at the lower of the Interest Index or six (6) percent per annum on all cash held by the Company pursuant to this Agreement. Each Billing Month, the Company will prepare a statement of interest amounts due to the DS Supplier. The statement will be sent to the DS Supplier within three (3) Business Days after the end of the Billing Month via overnight mail or other expeditious means. The Company shall make interest payments on the first Business Day after the 5th day of each calendar month**.**

6.13 No Endorsement of DS Supplier

The Company's determination that a DS Supplier is creditworthy pursuant to the process set forth above, shall not be deemed to constitute an express or implied warranty or guarantee of any kind with respect to the financial or operational qualifications of the DS Supplier. The Company will treat all DS Suppliers in a non-discriminatory manner and shall provide no preference to any DS Supplier.

6.14 Multiple DS Supply Agreements

It is the intention of the Company and the DS Supplier that, in the event the DS Supplier is a party to other agreements with the Company for the provision of DS Supply that existed prior to the effective date of this Agreement or is entered into after the effective date of this Agreement, the Company will calculate the Margin applicable to all such agreements as set forth herein. Each

DS Supplier that is a party to such other agreements with the Company for the provision of DS Supply hereby agrees that such other agreements are deemed amended by this Agreement for the purpose of calculating the Margin as described herein.

ARTICLE 7: PROCEDURES FOR ENERGY SCHEDULING, CAPACITY RESOURCE SUBMISSION AND TRANSMISSION PROCUREMENT

7.1 Load Obligations

The Company and the DS Supplier acknowledge and agree that (1) the Company shall determine the DS Load, (2) the Company shall allocate the DS Supply obligation using the DS Supplier Responsibility Share, (3) the Company shall provide the DS Supplier's DS Supply obligation to PJM, and (4) the DS Supplier shall be responsible for meeting its DS Supply obligations as a LSE under the PJM Agreements.

7.2 Data Transmission

The procedures for transmitting load obligation data to PJM for DS Supplier's DS Load shall be as set forth by PJM.

7.3 Energy Scheduling

The Company is not obligated to provide any day ahead scheduling services. If the Company chooses to provide such services, the information provided is not guaranteed by the Company.

ARTICLE 8: THE ENERGY SETTLEMENT/RECONCILIATION PROCESS

8.1 Energy Settlement By PJM

The settlement process occurs at PJM to reflect the DS Supplier's actual Energy obligations in a supply/usage reconciliation process. The Energy obligations for each DS

Supplier will be determined based on the DS Supplier Responsibility Share of the DS Load. The reconciled total DS Energy obligation will be based on the final total Energy loads for the Customers receiving DS service, including duration adjustments for marginal losses.

Any adjustments for billing and metering errors reported subsequent to the calculation of FMEA will be proportionally allocated by the Company to the DS Suppliers based on the respective DS Supplier Responsibility Share.

8.2 Energy Settlement by the Company

In the event that actual DS Customer consumption data is not available until after the PJM deadline for conducting the final settlement, the Company will conduct the settlement process with the DS Supplier. In the event PJM imposes penalties against the Company as a result of the DS Supplier's Transactions or failure to meet PJM requirements, such penalties shall be passed through by the Company, to the DS Supplier as part of this settlement process. In addition, all other applicable charges from PJM, including any billing adjustments, will be appropriately allocated to the DS Supplier.

ARTICLE 9: BILLING AND PAYMENT

9.1 The Company Payment of Obligations to the DS Supplier

The Company shall pay all amounts due to the DS Supplier hereunder in accordance with the following provisions:

(a) Each Billing Month, the Company will prepare a Statement of amounts due to the DS Supplier. This Statement will show the aggregate amounts due based on the DS Fixed Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Fixed Percentage as shown on the Transaction Confirmation(s) for each hour of the Billing Month, plus the aggregate amounts due based on the DS Variable Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Variable Percentage, if applicable, as shown on the Transaction Confirmation(s) for each hour of the Billing Month.

(b) The Statement will be sent to the DS Supplier within eight (8) Business Days after the end of the Billing Month via overnight mail or other expeditious means. (c) The Company shall make payment on the first Business Day after

(d) the 19th day of each calendar month.

(e) To the extent that the FMEA differs from the PMEA, the Company shall pay or charge the DS Supplier for the PMEA/FMEA Adjustment Amount within the PJM deadline for conducting the final settlement.

(f) If each Party owes an amount to the other Party pursuant to this Agreement, including any related interest, payments or credits, the Parties may satisfy their respective obligations to each other by netting the aggregate amounts due to one Party against the aggregate amounts due to the other Party, with the Party, if any, owing the greater aggregate amount paying the other Party the difference between the amounts owed.

(g) Payments shall be subject to adjustment for any arithmetic errors,

computation errors, meter reading errors, or other errors, provided that the errors become known within one (1) year of the termination of this Agreement.

(h) The Company shall make payments of funds payable to the DS Supplier by electronic transfer to a bank designated by the DS Supplier.

(i) If a good faith dispute arises between the Company and the DS Supplier regarding a Statement, the disputing Party shall be obligated to pay only the undisputed portion of the Statement, if any, and shall present the dispute in writing and submit supporting documentation to the non-disputing Party within one hundred twenty (120) calendar days from the date of the Statement in dispute. Statement disputes shall be addressed promptly, and in accordance with the dispute resolution procedures set forth in Article 11 of this Agreement. Upon resolution of a Statement dispute, any payments made to either Party will include simple interest on the payment at the lower of the Interest Index or six (6) percent per annum payable from the date that notice of a Statement dispute was received by the non-disputing Party.

(j) If payment is made to the DS Supplier after the due date shown on the Statement, a late fee will be added to the unpaid balance until the entire Statement is paid. This late fee shall be the lesser of (a) the per annum rate of interest equal to the prime lending rate as may from time to time be published in The Wall Street Journal under "Money Rates" on such day (or if not published on such day on the most recent preceding day on which published), plus two percent (2%) or (b) the maximum rate permitted by applicable law.

9.2 Billing for DS Supplier's Obligations to Other Parties

The Company shall have no responsibility for billing between the DS Supplier and PJM; the DS Supplier and any Energy or Capacity source; or the DS Supplier and any other third party. The Company will be solely responsible for billing DS Customers for Default Service.

9.3 The DS Supplier Payment of Obligations to the Company

The DS Supplier shall pay all Charges it incurs hereunder in accordance with the following provisions:

(a) Each Billing Month, the Company shall submit an invoice to the DS Supplier for all Charges owed by the DS Supplier under this Agreement. The DS Supplier shall make payment for Charges shown on the invoice. The due date will be on the first Business Day after the 19th day of each calendar month. The invoice will be sent to the DS Supplier within eight (8) Business Days after the end of the Billing Month via overnight mail or other expeditious means.

(b) Invoices shall be subject to adjustment for any arithmetic errors, computation errors, meter reading errors, or other errors, provided that the errors become known within one (1) year of the termination of this Agreement.

(c) The DS Supplier shall make payments of funds payable to the Company by electronic transfer to a bank designated by the Company.

(d) If a good faith dispute arises between the Company and the DS Supplier regarding an invoice, the disputing Party shall pay only the undisputed portion of the invoice, if any, and shall present the dispute in writing and submit supporting documentation to the nondisputing Party within one hundred twenty (120) calendar days from the due date of the invoice in dispute. Billing disputes shall be addressed promptly, and in accordance with the dispute resolution procedures set forth in Article 11 of this Agreement. Upon resolution of a billing

dispute, any payments made to either Party will include simple interest on the payment at the lower of the Interest Index or six (6) percent per annum payable from the date that notice of a bill dispute was received by the non-disputing Party.

(e) If payment is made to the Company after the due date shown on the invoice, a late fee will be added to the unpaid balance until the entire invoice is paid. This late fee shall be the lesser of (a) the per annum rate of interest equal to the prime lending rate as may from time to time be published in The Wall Street Journal under "Money Rates" on such day (or if not published on such day on the most recent preceding day on which published), plus two percent (2%) or (b) the maximum rate permitted by applicable law.

ARTICLE 10: SYSTEM OPERATION

The Parties shall adhere to any applicable operational requirements of PJM necessary to protect the integrity of the transmission system within the PJM Control Area and the transmission systems of interconnected control areas, and shall satisfy any and all PJM, RFC and NERC criteria, when applicable. The DS Supplier shall also adhere to any applicable operational requirements of the Company necessary to protect the integrity of the Company's local distribution system.

10.1 Disconnection and Curtailment By the Company

The Company shall have the right, without incurring any liability to the DS Suppliers, to disconnect (or otherwise curtail, interrupt or reduce deliveries from) the DS Suppliers or to disconnect (or otherwise curtail, interrupt or reduce deliveries to) any Customer whenever the Company determines in the exercise of its good faith discretion, or when the Company is directed by PJM, that such a disconnection, curtailment, interruption or reduction is necessary to facilitate construction, installation, maintenance, repair, replacement or inspection of any of the Company's facilities; or due to any other reason affecting the safe and reliable operation of the Company's or

a Customer's facilities, including, without limitation, an Emergency, forced outage or potential overloading of the Company's transmission and/or distribution circuits, potential damage to any Customer's facilities or any risk of injury to persons or property.

10.2 Inadvertent Loss of Service to DS Customers

The Parties agree and acknowledge that service to DS Customers may be inadvertently lost due to storms, weather, accidents, breakage of equipment or other events beyond the reasonable control of the Company affecting the transmission and distribution system of the Company. Neither Party will have any liability to the other Party for the occurrence of such events except for the Company's obligation to pursue steps for the resumption of the disrupted service as set forth in Section 10.3 below. In no event will an inadvertent loss of service affect a Party's obligation to make any payments then due or becoming due with respect to performance rendered prior to such inadvertent loss of service.

10.3 Good Faith Efforts

The Company shall use good faith efforts to: (a) minimize any curtailment, interruption or reduction in service to DS Customers to the extent reasonably practicable under the circumstances; (b) provide the DS Supplier with prior notification of any curtailment, interruption or reduction in service to DS Customers, to the extent reasonably practicable; and (c) resume service to DS Customers as promptly as reasonably practicable.

10.4 PJM Requirements

The DS Supplier acknowledges and agrees that, as a member of PJM, the Company is bound by all PJM operating instructions, policies and procedures as are currently set forth in the PJM Operating Manual, which are available through the Internet on the PJM Home Page (http://www.pjm.com), as may be revised from time to time, which are needed to maintain the integrity of the PJM system. The DS Supplier acknowledges and agrees that it will cooperate with

the Company so that the Company will be in compliance with all PJM Emergency Operations Procedures, which include, but are not limited to, those procedures pertaining to minimum and maximum generation Emergencies, and measures requiring involuntary Customer participation, such as supply voltage reduction or full interruption of Customer load by either manual or automatic means.

10.5 Compliance with Governmental Directives

The DS Supplier also acknowledges and agrees that the Company may need to act in response to governmental or civil authority directives which may affect DS Customer load. The DS Supplier agrees to cooperate with the Company in order to comply with said directives.

ARTICLE 11: DISPUTE RESOLUTION

11.1 Informal Resolution of Disputes

Before pursuing resolution of any dispute arising out of this Agreement (other than an Event of Default under Article 5.1(i)-(ix), (xii), or (xvi)), the disputing Party shall provide written notice to the other Party setting forth the nature of the dispute, the amount involved, if any, and the remedies sought. The Parties shall use good faith and reasonable commercial efforts to informally resolve such dispute. Such efforts shall last for a period of at least thirty (30) calendar days from the date that the notice of the dispute is first delivered from one Party to the other Party. Any amounts that are owed by one Party to the other Party as a result of resolution of a dispute pursuant to this Article 11.1 (Informal Resolution of Disputes), shall be paid within two (2) Business Days of such resolution and the payment shall include interest calculated at the Interest Index from the original due date through the date of payment.

11.2 Recourse to Agencies or Courts of Competent Jurisdiction

After the requirements of Article 11.1 (Informal Dispute Resolution) have been satisfied, all unresolved disputes, except as noted below, between the Parties shall be submitted to the

appropriate authority. Nothing in this Agreement shall restrict the rights of either Party to file a complaint with the FERC under relevant provisions of the Federal

Power Act ("FPA"), with the PaPUC under relevant provisions of the Applicable Legal Authorities, with a Pennsylvania State court or a Federal court of competent jurisdiction and within reasonably close proximity to the Company. The Party's agreement hereunder is without prejudice to any Party's right to contest the jurisdiction of the agency or court to which a complaint is brought.

The Parties hereby acknowledge and agree that both Parties have negotiated and entered into this Agreement freely and in good faith and that the terms of this Agreement have not been affected in any way, either directly or indirectly, by (A) any fraud, duress, unfairness, or any inequity in the relative bargaining power of the Parties or (B) any manipulation, unlawful activity, disruption, anomaly, dysfunction, or other adverse market conditions of any type or description.

To the extent permitted by law and absent agreement to the contrary, each Party, for itself and its successors and assigns, hereby expressly and irrevocably waives its rights (i) to argue before any governmental authority that any review, modification, or rescission of this Agreement should be considered under any standard of review other than the "public interest" standard set forth in *United Gas Pipe Line Co. v. Mobile Gas Service Corp., 350 U.S. 332 (1956)* and *Federal Power Commission v. Sierra Pacific Power Co., 350 U.S. 348 (1956), affirmed by Morgan Stanley Capital*

Group, Inc. v. Public Utility District No. 1 of Snohomish County, Washington, et al., 554 U.S. 527 (2008) (the "Mobile-Sierra Doctrine"), and (ii) to argue before any governmental authority that any terms of this Agreement should be modified or rescinded based on (A) any claim of fraud, duress, unfairness, bad faith, or inequity in the relative bargaining power of the Parties or (B) any

claim of market manipulation, unlawful activity, disruption, anomaly, dysfunction, or other adverse market conditions of any type or description.

ARTICLE 12: REGULATORY AUTHORIZATIONS AND JURISDICTION

12.1 Compliance with Applicable Legal Authorities

The Company and the DS Supplier are subject to, and shall comply with, all existing or future applicable Federal, State and local laws, all existing or future duly promulgated orders or other duly-authorized actions of PJM or of Applicable Legal Authorities.

12.2 FERC Jurisdictional Matters

The inclusion herein of descriptions of procedures or processes utilized by PJM or otherwise subject to the jurisdiction of FERC is intended solely for informational purposes.

If anything stated herein is found by the FERC to conflict with or be inconsistent with any provision of the FPA, or any rule, regulation, order or determination of the FERC under the FPA or if any existing procedures or processes utilized by PJM are duly modified, the applicable FERC rule, regulation, order, determination or modification shall control. To the extent required under any provision of the FPA, or any rule, regulation, order or determination of the FERC under the FPA, the Company and/or the DS Supplier, if applicable, shall use reasonable commercial efforts to secure, from time to time, all appropriate orders, approvals and determinations from the FERC necessary to support this Agreement.

12.3 Energy Efficiency, Conservation, and Retail Market Programs

DS Supplier acknowledges that DS Customers may participate in energy efficiency and conservation programs offered by the Company (required by Applicable Legal Authorities or otherwise offered by the Company whether voluntarily or not), by PJM, or by other third parties

and, for the avoidance of doubt, any programs offered or conducted by the Company or other entities relating to or arising from the PaPUC's Investigation of Pennsylvania's Retail Electricity Market, PaPUC Docket No. I-2011-2237952 (including legislation enacted to address the Commission's Final Order in Docket No. I-20112237952), and that such participation may reduce or change the amount of DS Supply that

DS Supplier is required to provide and the amount of monies it may receive under this Agreement. The Company shall have no obligation whatsoever to DS Supplier with respect to the effect, if any, of such programs. DS Supplier is solely responsible for determining the effect, if any, of such programs on future load requirements.

ARTICLE 13: LIMITATION OF REMEDIES, LIABILITY AND DAMAGES

13.1 Limitations on Liability

Except as set forth in this Agreement, there is no warranty of merchantability or fitness for a particular purpose, and any and all implied warranties are disclaimed. The Parties confirm that the express remedies and measures of Damages provided in this Agreement satisfy the essential purposes hereof. For breach of any provision for which an express remedy or measure of Damages is provided, such express remedy or measure of Damages shall be the sole and exclusive remedy, the obligor's liability shall be limited as set forth in such provision and all other remedies or Damages at law or in equity are waived. If no remedy or measure of Damages is expressly provided herein, the obligor's liability shall be limited to direct actual Damages only, such direct actual Damages shall be the sole and exclusive remedy and all other remedies or Damages at law or in equity are waived. Unless expressly herein provided, neither Party shall be liable for consequential, incidental, punitive, exemplary or indirect Damages, lost profits or other business interruption Damages, by statute, in tort or

contract, under any indemnity provision or otherwise. It is the intent of the Parties that the limitations herein imposed on remedies and the measure of Damages be without regard to the cause or causes related thereto, including the negligence or any Party, whether such negligence by sole, joint or concurrent, or active or passive. To the extent any Damages required to be paid hereunder are liquidated, the Parties acknowledge that the Damages are difficult or impossible to determine, or otherwise obtaining an adequate remedy is inconvenient and the Damages calculated hereunder constitute a reasonable approximation of the harm or loss.

13.2 Risk of Loss

Solely for purposes of determining risk of loss and for determining the indemnity obligations under Article 14 of this Agreement, the Company shall be deemed to have custody and control of the electric Energy delivered by the DS Supplier upon receipt thereof into the Company's distribution system and until delivery thereof at the retail electric meter of the Customer; and the DS Supplier shall be deemed to have custody and control of the DS Supply at all times prior to receipt thereof by the Company. The Party deemed to have custody and control of DS Supply shall be responsible for all loss or damage to property or injury or death to persons arising in connection with such DS Supply while in its custody and control and shall indemnify the other Parties with respect to same as set forth in Article 14 of this Agreement.

ARTICLE 14: INDEMNIFICATION

14.1 Indemnification

(a) Should the Company become the defendant in, or obligor for, any third party claims and/or liabilities for losses, penalties, expenses, damage to property, injury to or death of any person including a Party's employees or any third parties, that were caused by or occur in

connection with an act or omission of the DS Supplier with respect to an obligation arising under or in connection with this Agreement, or for which the DS Supplier has otherwise assumed liability under the terms of this Agreement, the DS

Supplier shall defend (at the Company's option), indemnify and hold harmless the Company, its shareholders, board members, directors, officers and employees, from and against any and all such third party claims and/or liabilities, except to the extent that a court of competent jurisdiction determines that the losses, penalties, expenses or damages were caused wholly or in part by the gross negligence or willful misconduct of the Company. The Company may, at its own expense, retain counsel and participate in the defense of any such suit or action.

(b) Should the DS Supplier (the "Indemnified DS Supplier") become the defendant in, or obligor for, any third party claims and/or liabilities for losses, penalties, expenses, damage to property, injury to or death of any person including a Party's employees or any third parties, that were caused by or occur in connection with an act or omission of the Company with respect to an obligation arising under or in connection with this Agreement, or for which the Company has otherwise assumed liability under the terms of this Agreement, the Company shall defend (at the option of the Indemnified DS Supplier), indemnify and hold harmless the Indemnified DS Supplier, its shareholders, board members, directors, officers and employees, from and against any and all such third party claims and/or liabilities, except to the extent that a court of competent jurisdiction determines that the losses, penalties, expenses or damages were caused wholly or in part by the gross negligence or willful misconduct of the Indemnified DS Supplier. The Indemnified DS Supplier may, at its own expense, retain counsel and participate in the defense of any such suit or action.

(c) If either Party intends to seek indemnification under Article 14.1(a) or

14.1(b), as applicable, from the other Party, the Party seeking indemnification shall give the other Party notice of such claim within ninety (90) days of the later of the commencement of, or the Party's actual knowledge of, such claim or action. Such notice shall describe the claim in reasonable detail, and shall indicate the amount, estimated if necessary, of the claim that has been, or may be, sustained by said Party. To the extent that the other Party will have been actually and materially prejudiced as a result of the failure to provide such notice, such notice will be a condition precedent to any liability of the other Party under the provisions for indemnification contained in this Agreement. Neither Party may settle or compromise any claim without the prior consent of the other Party; provided, however, said consent shall not be unreasonably withheld, conditioned or delayed.

14.2 Survives Agreement

The obligation of a Party to defend, indemnify, and hold harmless another Party under this Article shall survive termination of this Agreement, and shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for either Party under any statutory scheme, including any Worker's Compensation Acts, Disability Benefit Acts or other Employee Benefit Acts.

ARTICLE 15: FORCE MAJEURE

15.1 Force Majeure

Notwithstanding anything in this Agreement to the contrary, the Parties shall be excused from performing their respective obligations under this Agreement (other than the obligation to make payments with respect to performance prior to the event of Force Majeure) and shall not be liable for damages or otherwise due to their failure to perform, during any period that one Party is unable to perform due to an event of Force Majeure, provided that the Party declaring an event of

Force Majeure shall: (i) act expeditiously to resume performance; (ii) exercise all commercially reasonable efforts to mitigate or limit damages to the other Party; and (iii) fulfills the requirements set forth in Article 15.2 (Notification).

15.2 Notification

A Party unable to perform under this Agreement due to an event of Force Majeure shall: (i) provide prompt written notice of such event of Force Majeure to the other Party, which shall include an estimate of the expected duration of the Party's inability to perform due to the event of Force Majeure; and (ii) provide prompt notice to the other Party when performance resumes.

ARTICLE 16: MISCELLANEOUS PROVISIONS

16.1 Notices

Unless otherwise stated herein, all notices, demands or requests required or permitted under this Agreement shall be in writing and shall be personally delivered or sent by overnight express mail or courier service. Notice may also be provided via e-mail or facsimile transmission (with the original transmitted by any of the other delivery methods specified in the previous sentence) addressed per the notification information for the DS Supplier and Company as set forth in Exhibit 2 hereto.

Such notices, demands or requests shall also be provided to such other person at such other address as a Party may designate by like notice to the other Party. Notice received after the close of the Business Day shall be deemed received on the next Business Day.

16.2 No Prejudice of Rights

The failure of a Party to insist on any one or more instances upon strict performance of any provisions of this Agreement, or to take advantage of any of its rights hereunder, shall not be construed as a waiver of any such provisions or the relinquishment of any such right or any other

right hereunder, which shall remain in full force and effect. No term or condition of this Agreement shall be deemed to have been waived and no breach excused unless such waiver or consent to excuse is in writing and signed by the Party claimed to have waived or consented to excuse.

16.3 Assignment

Parties shall not assign any of their rights or obligations under this Agreement without obtaining the prior written consent of the non-assigning Party, which consent shall not be unreasonably withheld. The Company agrees that it shall grant its consent to a proposed assignment by the DS Supplier if the proposed assignee meets all of the Company's creditworthiness requirements then in effect under this Agreement and any applicable load cap restrictions. No assignment of this Agreement shall relieve the assigning Party of any of its obligations under this Agreement until such obligations have been assumed by the assignee and all necessary consents have been obtained. Any assignment in violation of this Section 16.3 shall be void; provided, however, the Company may assign any or all of its rights and obligations under this Agreement notwithstanding anything contained herein to the contrary, without the DS Supplier's consent, to any entity succeeding to all or substantially all of the assets of the Company, if such assignee agrees, in writing, to be bound by all of the terms and conditions hereof and all necessary regulatory approvals are obtained. The DS Supplier may, with prior written notice to the Company but without obtaining the approval of the Company, assign the accounts, revenues or proceeds under this Agreement to a third party. The Company agrees that, following receipt of such notice of the assignment of accounts, revenues or proceeds and such other documentation that the Company may reasonably request, the Company will pay amounts becoming due to the assigning DS Supplier under this Agreement directly to the designated assignee; provided, however, that nothing herein shall enlarge or expand the rights of such designated assignee beyond

the rights granted to the DS Supplier and the right of such designated assignee to receive payments shall be subject to all defenses, offsets and claims of the Company arising under this Agreement.

16.4 Governing Law and Venue

To the extent not subject to the jurisdiction of the FERC, questions including those concerning the formation, validity, interpretation, execution, amendment, termination and construction of this Agreement shall be governed by the laws of the Commonwealth of Pennsylvania, without regard to principles of conflicts of law. Except for matters jurisdictional to FERC, the PUC or the appellate courts having jurisdiction over the PUC or FERC matters, all disputes hereunder shall be resolved in the Pennsylvania State court or Federal court of competent jurisdiction and within reasonably close proximity to the Company. Each Party hereby waives its respective rights to any jury trial with respect to any litigation arising under or in connection with this Agreement.

16.5 Regulatory Approvals

DS Supplier agrees to cooperate, to the fullest extent necessary, to obtain any and all required State, Federal or other regulatory approvals of the Agreement and/or Transaction Confirmations hereunder. The commencement of the Delivery Period and the obligations hereto are subject to (i) the receipt or waiver by Company of all Company required regulatory approvals, (ii) the receipt or waiver by DS Supplier of all DS Supplier required regulatory approvals, and (iii) Pennsylvania PUC approval.

16.6 Headings

The headings and subheadings contained in this Agreement are used solely for convenience and do not constitute a part of the Agreement between the Parties hereto, nor should they be used to aid in any manner in the construction of this Agreement.

16.7 Third Party Beneficiaries

This Agreement is intended solely for the benefit of the Parties hereto and nothing in this Agreement shall be construed to create any duty, or standard of care with reference to, or any liability to, any person not a Party to this Agreement.

16.8 General Miscellaneous Provisions

(a) This Agreement shall not be interpreted or construed to create an association, joint venture, or partnership between the Parties, or to impose any partnership obligation or liability upon any Party. No Party shall have any right, power, or authority to enter into any agreement or undertaking for, or on behalf of, or to act as or be an agent or representative of, or to otherwise bind, any other Party.

(b) Cancellation, expiration or Early Termination of this Agreement shall not relieve the Parties of obligations that by their nature survive such cancellation, expiration or termination, including warranties, remedies, promises of indemnity and confidentiality.

(c) Should any provision of this Agreement be held invalid or unenforceable, such provision shall be invalid or unenforceable only to the extent of such invalidity or unenforceability without invalidating or rendering unenforceable any other provision hereof unless it materially changes the agreement of the Parties; provided that in such event the Parties shall use commercially reasonable efforts to amend this Agreement or any Transaction in order to give effect to the original intention of the Parties.

(d) Each of the Parties acknowledges that it has read this Agreement, understands it, and agrees to be bound by its terms. This Agreement is intended by the Parties as a final expression of their agreement. The Parties further agree that this Agreement is the complete and exclusive statement of agreement and supersedes all proposals (oral or written), understandings,

representations, conditions, warranties, covenants and all other communications between the Parties relating thereto. This Agreement shall be considered for all purposes as prepared through the joint efforts of the Parties and shall not be construed against one Party or the other as a result of the preparation, substitution, submission or other event of negotiation, drafting or execution hereof. Each Party further agrees that it will not assert, or defend itself, on the basis that any applicable tariff is inconsistent with this Agreement or any Transaction.

16.9 Taxes

As between the Parties: (i) The DS Supplier is responsible for the payment of all taxes imposed by all present and future Federal, state, municipal or other taxes imposed by any taxing authority on the wholesale sales of DS Supply under this Agreement; and (ii) The Company is responsible for the payment of all taxes imposed by all present and future Federal, state, municipal or other taxes imposed by any taxing authority on retail sales of DS Supply under this Agreement. Should the DS Supplier be required to remit any Pennsylvania State Sales and Use Taxes directly to the applicable taxing authority, other than taxes previously collected by the DS Supplier on behalf of the Company, the Company will defend and indemnify the DS Supplier for such Sales and Use Taxes and will pay to the DS Supplier all such tax amounts upon demand. If any Transaction is exempt from the payment of any such taxes, the affected DS Supplier will, if requested, provide the Company with valid tax exemption certificates. Should the Company be required to remit any such taxes directly to any applicable taxing authority, other than taxes previously collected by the Company directly from the DS Supplier, the DS Supplier will defend and indemnify the Company and will pay to the Company all such tax amounts upon demand.

16.10 Audit

Each Party has the right on at least three (3) Business Days prior written notice, at its sole expense and during normal working hours, to examine the records of the other Party to the extent reasonably necessary to verify the accuracy of any statement, charge or computation made pursuant to this Agreement. If any such examination reveals any inaccuracy in any statement, the necessary adjustments in such statement and the payments thereof will be made in accordance with Article 9 (Billing) and 9.1 (i) (Interest on Unpaid Balances) of this Agreement.

16.11 Rules of Interpretation

The following principles shall be observed in the interpretation and construction of this Agreement:

(a) Unless otherwise stated, the terms "include" and "including" when used in this Agreement shall be interpreted to mean by way of example only and shall not be considered limiting in any way;

(b) All titles and headings used herein are for convenience and reference purposes only, do not constitute a part of this Agreement and shall be ignored in construing or interpreting the obligations of the parties under this Agreement;

(c) References to the singular include the plural and vice versa;

(d) References to Articles, Sections, Clauses and the Preamble are, unless the context indicates otherwise, references to Articles, Sections, Clauses and the Preamble of this Agreement;

(e) In carrying out its rights, obligations and duties under this Agreement, each Party shall have an obligation of good faith and fair dealing; and

(f) If any payment due under this Agreement would be, by operation of the terms and conditions of any provision hereof, due and payable on a day other than a Business Day, such payment shall be made on the next following Business Day.

16.12 Confidentiality

(a) Each Party shall hold in confidence and not release or disclose any document or information furnished by the other Party in connection with this Agreement, unless: (i) compelled to disclose such document or information by judicial, regulatory or administrative process or other provisions of law; (ii) such document or information is generally available to the public; (iii) such document or information was available to the receiving Party on a non-confidential basis; (iv) such document or information was available to the receiving Party on a non-confidential basis from a third-party, provided that the receiving Party does not know, and, by reasonable effort, could not know that such third-party is prohibited from transmitting the document or information to the receiving Party by a contractual, legal or fiduciary obligation or (v) such disclosure is made to PJM or Pa PUC and is necessary in order for the Transactions contemplated by this Agreement to be consummated or to otherwise comply with the provisions of this Agreement.

(b) Notwithstanding any other provision of this Section 16.12, a Party may disclose to its employees, representatives and agents all documents and information furnished by the other Party in connection with this Agreement, provided that such employees, representatives and agents have been advised of the confidentiality provisions of this Section 16.12, and further provided that in no event shall a

document or information be disclosed in violation of the standard of conduct requirements established by FERC.

(c) A Party receiving notice or otherwise concluding that any confidential document or information furnished by the other Party in connection with this Agreement is being sought under any provision of law, to the extent it is permitted to do so under any applicable law, shall: (i) promptly notify the other Party; and (ii) use reasonable efforts in cooperation with the other Party to seek confidential treatment of such confidential information.

(d) The Parties agree that monetary damages may be inadequate to compensate a Party for the other Party's breach of its obligations under this Section 16.12. Each Party accordingly agrees that the other Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party breaches or threatens to breach its obligations under this Article 16.12, which equitable relief shall be granted without bond or proof of damages, and the receiving Party shall not plead in defense that there would be an adequate remedy at law.

16.13 Federal Acquisition Regulation

If any of the following clauses prescribed by the Federal Acquisition Regulation ("FAR"), 48 Code of Federal Regulations Chapter 1, should be deemed to apply to this Agreement, the DS Supplier shall comply with the requirements of such clause(s), and shall include the terms or substance of such clause(s) in its subcontracts, as and to the extent required by the FAR:

1) Clean Air and Water: § 52.223-2;

2) Contract Work Hours and Safety Standards Act-Overtime Compensation: § 52.222-4;

3) Equal Opportunity: § 52.222-26;

4) Affirmative Action for and Employment Reports on Special Disabled and Vietnam Era Veterans: § 52.222-35 and § 52.222-37;

5) Affirmative Action for Handicapped Workers: § 52.222-36;

6) Utilization of Small Business Concerns and Small Disadvantaged Business Concerns and Small Business and Small Disadvantaged Business Subcontracting Plan: § 52.219-8 and § 52-219-9.

In case of a conflict between the provisions of the FAR and the balance of this Agreement, the requirements of the FAR shall prevail.

16.14 Binding Terms

This Agreement and the rates, terms and conditions herein shall remain in effect for the entire term hereof and each Party agrees not to seek any change to such rates, terms and conditions pursuant to the FPA, if the FPA is deemed to have jurisdiction over this Agreement, including on the grounds that they are not just and reasonable.

16.15 Amendment

This Agreement, including the appendices hereto, cannot be amended without the written agreement of all Parties prior to such amendment becoming effective. Except as provided in Appendix C and the Transaction Confirmation(s), the rates, terms and conditions contained in this Agreement are not subject to change under Sections 205 or 206 of the Federal Power Act absent the mutual written agreement of the Parties. Absent the agreement of all parties to the proposed change, the standard of review for changes to this Agreement proposed by a Party, a non-Party or the FERC acting *sua sponte* shall be the "public interest" standard of review set forth in *United Gas Pipe Line Co. v. Mobile Gas Service Corp., 350 U.S. 332 (1956)* and *Federal Power*

Commission v. Sierra Pacific Power Co., 350 U.S. 348 (1956), affirmed by Morgan Stanley Capital Group, Inc. v. Public Utility District No. 1 of Snohomish County, Washington, et al., 554 U.S. 527

(2008) (the "Mobile-Sierra Doctrine").

16.16 Counterparts

This Agreement may be executed in counterparts, each of which will be considered an original, but all of which shall constitute one instrument.

16.17 Successors

This Agreement and all of the provisions hereof are binding upon, and inure to the benefit of, the Parties and their respective successors and permitted assigns.

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed by their duly authorized representatives as of the date first set forth above.

BB+	Ba1	BB+	4%	$10MM
BB	Ba2	BB	3%	$5MM
BB-	Ba3	BB-	2%	$2MM
Below BB-	Below Ba3	Below BB-	0%	$0MM

Credit Rating Determination Methodology

Formatted: Left, Indent: Left: 0.01", First line: 0", Right: 0", Space After: 2.5 pt

The DS Supplier or it Guarantor must have a minimum senior unsecured debt rating (or, if unavailable, corporate issuer rating) equal to the Minimum Rating. If the DS Supplier or its Guarantor is rated by only two rating agencies, and the ratings are split, the lower rating will be used. If the DS Supplier or its Guarantor is rated by three rating agencies, and the ratings are split, the lower of the two highest ratings will be used; provided, however, that in the event that the two highest ratings are common, such common rating will be used. The maximum level of the credit limit to cover the Total Exposure Amount will be determined based on the above table and will be aggregated – meaning, this is the maximum credit limit for all the Companies combined.

Minimum Rating – The lowest credit rating for a DS Supplier, as set forth in this Appendix A, that can obtain unsecured credit.

Independent Credit Requirement per Tranche (ICRT) Schedule for ICRT - FEPA

Commented [FR2]: @Rose, Ryan J Do we need a schedule for the 60-Month product from Justin?

DSPVI

* ICRT required for both Residential and Commercial tranches (not required for Industrial)

* ICRT **not** required for 6-month tranches

* ICRT netted with prior ICRT requirements

Month	60-Month Product ($/tranche)	24-Month Product ($/tranche)	12-Month Product ($/tranche)

APPENDIX B – MTM EXPOSURE AMOUNT CALCULATION INFORMATION

Table 1 contains the initial marks[1] for each month of the DS auction period. Monthly marks (example only,) are provided for a twelve-month period. For the months, two-month blocks[2] or quarterly blocks[3] where broker quotes are available, broker quotes will be used for those months. For all the remaining months the EDCs will be using a proprietary method that reflects forward market conditions. The initial mark for each Billing Month is the initial mark that was calculated on the date that the DS auction closes and will not change over the life of the contract.

After the close of the DS auction On-Peak Energy Forward and Off-Peak Energy Forward prices will change. In addition, the on-peak and off-peak loads used to calculate the MtM Exposure Amount will be adjusted monthly to reflect the most current changes. On-Peak and Off-Peak Energy Forward prices for the months, two-month blocks or quarterly blocks where at least two broker quotes are available will be equal to the broker quotes. In case quotes for a component of a block and for the block are both available, the EDCs reserve the right not to use both the component of a block and the block if they are inconsistent with each other. However, when this inconsistency occurs the EDC must use either the component or the block. On-Peak and Off-Peak Energy Forward prices for the months, two-month blocks or quarterly blocks where broker quotes are unavailable will be equal to the last available broker quotes or in case they have not been quoted

Formatted: No underline, Font color: Black
Field Code Changed
Formatted: No underline, Font color: Black
Field Code Changed

[1] Initial marks represent Market Price Hub on-peak prices.

[2] For two-month and quarterly blocks for which the average for the block and a component of the block are both quoted, the component will be equal to its quoted price and the other months in the block will be constructed so that the weighted average (weighted by on-peak hours in each month) of the block equals the quote for the block; e.g., Q4 2013 = $50 and Oct 2013 = $40; therefore, Oct 2013 = $40 and Nov-Dec 2013 = $55 ($50*(336+336+368)$40*336)/(336+368)=$54.77. If only the block is quoted, that price will be used for all relevant months; e.g., Jan/Feb 2014 = $35, then Jan 2014 = $35 and Feb 2014 = $35.

on the broker sheets since the DS auction closed, they will be equal to the marks set at the close of the DS auction.

MtM Calculation Example

Parameters – On the closing day of the auction, the following parameters are set:

1. The expected monthly On-Peak Load per tranche for each EDC.
2. The expected monthly Off-Peak Load per tranche for each EDC.
3. The monthly on-peak forward prices (to be used as the inception price "initial mark" for each month of the supply period).
4. The monthly off-peak forward prices (to be used as the inception price "initial mark" for each month of the supply period) Indicative on-peak and off-peak loads per tranche for each EDC will be made available 14 days prior to the auction.

All Energy Prices are based on a Market Price Hub that the Company will specify as follows: PJM Western Hub

APPENDIX C - DS SUPPLY SPECIFICATIONS

The following DS Supply specifications will be specified in Transaction Confirmations to this Agreement.

Product:

DS Supply: All necessary Energy, Capacity, AECs for AEPS Act compliance, Ancillary Services, transmission services -including Network Integration Transmission Service, all transmission and distribution losses, and congestion and imbalance costs associated with the provision of such services, as well as such other services or products that the DS Supplier may be required, by PJM or any governmental body having jurisdiction, to provide in order to meet the DS Supplier Responsibility Share for serving DS Load.

Appendix D - describes Company and DS Supplier responsibilities for PJM Billing Statement Line Item Credits and Charges associated with the Product. In addition, any unaccounted for energy and historical tie line, generation, and retail customer meter charges not set forth in

Appendix D shall be the responsibility of the Company through the applicable nonbypassable Default Service Support Rider.

Appendix E - further describes DS Supplier responsibilities for compliance with the AEPS Act in the product specification.

DS Customer Group:

Each Transaction Confirmation shall be associated with DS Supply to one of the following DS Customer categories as defined in the Company's Tariff, by Rate District:

Residential – Met-Ed and Penelec (Rate RS, and Rate GS – Volunteer Fire Company, Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate)

Penn Power (Rate Schedules RS; and GS Special Provision for Volunteer Fire Companies, Non-Profit Senior Citizen Centers, Non-Profit Rescue Squads, and Non-Profit Ambulance Services)

West Penn (Rate Schedule 10 and Rate Schedule 20 special provision for Volunteer Fire Company, Non-Profit Ambulance Service, Non-Profit Rescue Squad and Non-Profit Senior Citizen Center)

Commercial – Met-Ed (Rate GS-Small, Rate GS-Medium (PTC), Rate MS, Borderline Service, Street Lighting Service, Ornamental Street Lighting, LED Streetlighting Service, and Outdoor Lighting Service)

Penelec (Rate GS-Small, Rate GS-Medium (PTC), Rate H, Borderline Service, High Pressure Sodium Vapor Street Lighting Service, Municipal Street Lighting Service, LED Streetlighting Service, and Outdoor Lighting Service)

Penn Power (Rate Schedules GS (excluding GS Special Rule GSDS), PNP, GM (PTC), PLS, SV, SVD, and LED)

West Penn (Rate Schedules 20, 30 (PTC), 51, 52, 53, 54, 55, 56, 57, 58, 71 and 72)

Industrial – Met-Ed (Rate Schedules GS-Medium (HP), GS-Large, GP, and TP)

Penelec (Rate Schedules GS-Medium (HP), GS-Large, GP, and LP)

Penn Power (Rate Schedules GM (HP), GS-Large, GP, GT, or GS if such GS Customers also are under Special Rule GSDS)

West Penn (Rate Schedules 30 (HP), 35, 40, 44, 46 and Tariff No. 37 – Pennsylvania State University)

Delivery Point: [METED_RESID_AGG, PENELEC_RESID_AGG, PENNPOWER_RESID_AGG, APS_RESID_AGG as applicable for the appropriate zone]

Delivery Period: The term of the Company's Default Service Plan is from June 1, 2023 to May 31, 2027. The applicable Delivery Period for awarded contracts will be as identified on each Transaction Confirmation within the Default Service Plan date range.

Number of Tranches and Percentage for Each Tranche, by Rate District:

Residential – For **Met-Ed** there are [TBD] total Residential tranches available. Each tranche represents [TBD]% of the Residential DS Load. For **Penelec** there are [TBD] total Residential tranches available.

Each tranche represents [TBD]% of the Residential DS Load. For **Penn Power** there are [TBD] total Residential tranches available. Each tranche represents [TBD]% of the Residential DS Load. For **West Penn** there are [TBD] total Residential tranches available. Each tranche represents [TBD]% of the Residential DS Load. Tranches won for the applicable Delivery Period will be specified on the Transaction Confirmation.

Commercial – – For **Met-Ed** there are [TBD] total Commercial tranches available. Each tranche represents approximately [TBD]% of the Commercial DS Load. For **Penelec** there are [TBD] total Commercial tranches available. Each tranche represents approximately [TBD]% of the Commercial DS Load. For **Penn Power** there are [TBD] total Commercial tranches available.

Each tranche represents approximately [TBD]% of the Commercial DS Load. For **West Penn** there are [TBD] total Commercial tranches available. Each tranche represents approximately [TBD]% of the Commercial DS Load. Tranches won for the applicable Delivery Period will be specified on the Transaction Confirmation.

Industrial – For **Met-Ed** there are [TBD] total Industrial tranches available. Each tranche represents [TBD]% of the Industrial DS Load. For **Penelec** there are [TBD] total Industrial tranches available. Each tranche represents [TBD]% of the Industrial DS Load. For **Penn Power** there are [TBD] total Industrial tranches available. Each tranche represents [TBD]% of the Industrial DS Load. For **West Penn** there are [TBD] total Industrial tranches available. Each tranche represents [TBD]% of the Industrial DS Load. Tranches won for the applicable Delivery Period will be specified on the Transaction Confirmation.

DS Supplier Responsibility Share:

Fixed percentage share of DS Load for DS Customer Group associated with Transaction Confirmation. Typically, number of tranches won x Tranches Percentage for the DS Customer Group.

DS Fixed Percentage/DS Variable Percentage:

The percentage of DS Supply provided at a fixed price and the percentage of DS Supply provided at a variable price. For each Transaction Confirmation, DS Fixed Percentage + DS Variable Percentage specified shall add to 100%.

APPENDIX E – DS SUPPLIER'S OBLIGATIONS FOR AEPS COMPLIANCE

To satisfy AEPS with respect to the DS Supplier's Responsibility Share, DS Supplier shall fulfill the following obligations:

1. Providing sufficient AECs for each tranche awarded via the DS Solicitation less the Allocated AECs; if any
2. Paying any AEPS penalties, costs, charges, etc. assessed against the DS Supplier and/or the Company associated with the DS Supplier's nonperformance with AEPS requirements;
3. Submitting to the Company proof of AEPS compliance under this Agreement in such form and manner as may be required by the Company.
4. Provide to the Company all information the Company may require to comply with the AEPS Act and its implementing regulations and other Requirements of Law, including, but not limited to the price paid per AEC required by 73 Pa.C.S. §1648.3(e)(8).

This Appendix E shall confirm the Alternative Energy Portfolio Standards Obligation of the Transaction Date as defined in the Transaction Confirmation.

Alternative Energy Portfolio Standards Obligations for the period beginning June 1, 202~~3~~ based on the total MWh supplied by DS Supplier:

Compliance Period	Tier I	Tier I Solar	Tier II
6/1/202~~73~~ to 5/31/2028~~2024~~	8.00%	0.50%	10.00%
6/1/2028~~4~~ to 5/31/2029~~5~~	8.00%	0.50%	10.00%
6/1/2029~~25~~ to 5/31/2030~~26~~	8.00%	0.50%	10.00%
6/1/2030~~26~~ to 5/31/2031~~27~~	8.00%	0.50%	10.00%

The percentages set forth above are those applicable for the first DS Solicitation and may be revised for future DS Solicitations to reflect changes in law or other applicable regulatory requirements.

The above amounts are estimates and will vary based on actual load served. DS Supplier will need to true-up, higher or lower, actual credits needed based on Monthly Settlement Amount.

If Alternative Energy Portfolio requirements change by Federal or state law or any other reason, the DS Suppliers shall be responsible for any incremental AEPS compliance requirement in order to comply with DS Supplier's obligations under DS Supply.

EXHIBIT 1
TRANSACTION CONFIRMATION

This Transaction Confirmation letter is being provided pursuant to and in accordance with the Agreement dated _____ between _____ ("Company") and _____ ("DS Supplier"). Terms used but not defined herein shall have the meanings ascribed to them in the Agreement. This Transaction Confirmation shall confirm the following terms of the Transaction agreed to on _____ ("Transaction Date").

Product: DS Supply

DS Customer Group: Residential

Delivery Point: [METED_RESID_AGG, PENELEC_RESID_AGG PENNPOWER_RESID_AGG, or APS_RESID_AGG as applicable]

Delivery Period: June 1, 2027~~3~~ through May 31, 2028~~24~~ (Example of a 12 Month Product)

DS Supplier Responsibility Share: X Tranches won ~~of Y Total Tranches~~

DS Fixed Price = $XX.XX/MWh as bid by DS Supplier

DS Fixed Percentage = 100%

~~**Total Allocated AECs:** To be determined.~~

Please confirm that the terms stated herein accurately reflect the agreement reached on the date above between DS Supplier and Company by returning an executed copy of this Transaction Confirmation. The signatories to this Transaction must have the authority to enter into this Transaction.

APPENDIX F - LETTER OF CREDIT DOCUMENTATION

Sample DS Letter of Credit

[Insert Date]

Letter of Credit No. [Insert Credit No]

To: FirstEnergy Pennsylvania Electric Company ("Beneficiary")

We hereby establish in your favor this irrevocable transferable Letter of Credit (this "Letter of Credit") for the account of _____(the "Applicant"), in the amount of $_____, effective immediately and available to you at sight upon demand at our counters at _____(Location) and expiring 364 days from date of issuance, unless terminated earlier in accordance with the provisions hereof.

This Letter of Credit is issued at the request of the Applicant, and we hereby irrevocably authorize you to draw on us, in accordance with the terms and conditions hereof, up to the maximum amount of this Letter of Credit, subject to reduction as provided in paragraph 11 hereof. This Letter of Credit may be drawn upon an Event of Default under the DS Suppler Master Agreement(s) between the Applicant and you, dated _____ and the DS Supplier Supplier Master Agreement(s) between the Applicant and you, dated _____.

A partial or full drawing hereunder may be made by you on any Business Day on or prior to the expiration of this Letter of Credit by delivering, by no later than 11:00 A.M. (New York, NY time[7]) on such Business Day to _____ (Bank), _____

Formatted: No underline, Font color: Black

Field Code Changed

[7] If the issuer of the Letter of Credit is located in an area that is not in the Eastern time zone, this time and all other times in this Letter of Credit, and the definition of a Business Day should be adjusted accordingly.

Formatted: No underline, Font color: Black

Field Code Changed

(address), (i) a notice executed by you in the form of Annex 1 hereto, appropriately completed and duly signed by your Authorized Officer of the Beneficiary and (ii) your draft in the form of Annex 2 hereto, appropriately completed and duly signed by your Authorized Officer of the Beneficiary. Authorized Officer shall mean President, Treasurer, any Vice President or any Assistant Treasurer.

We hereby agree to honor a drawing hereunder made in compliance with the terms and provisions of this Letter of Credit by transferring in immediately available funds the amount specified in the draft delivered to us in connection with such drawing to such account at such bank in the United States as you may specify in your draft delivered to us pursuant to Paragraph 3 hereof, by 3:00 P.M. (New York, NY time) on the date of such drawing, if delivery of this requisite document is made prior to 11:00 AM (New York, NY time) on a Business Day pursuant to Paragraph 3 herein above, but at the opening of business on the first Business Day next succeeding the date of such drawing if delivery of the requisite document is made on or after 11:00 AM (New York, NY time) on any Business Day pursuant to Paragraph 3 herein above.

If a demand for payment made by you hereunder does not, in any instance, conform to the terms and conditions of this Letter of Credit, we shall give you prompt notice (not exceeding three (3) Business Days following the date of receipt of the documents) that the demand for payment was not effected in accordance with the terms and conditions of this Letter of Credit, stating the reasons that the demand for payment was not effected _____ in accordance with such terms and conditions, and that we will upon your instructions hold any documents at your disposal or return the same to you. Upon being notified that the demand for payment was not effected in conformity with this Letter of Credit, you may attempt to correct any such

nonconforming demand for payment to the extent that you are entitled to do so, provided, however, in such event a conforming demand for payment must be timely made in accordance with the terms of this Letter of Credit.

This Letter of Credit shall automatically terminate and be delivered to us for cancellation on the earliest of (i) the making by you of the drawings in an amount equal to the maximum amount available to be made hereunder, (ii) the date we receive from you a Certificate of Expiration in the form of Annex 3 hereto, or (iii) will be automatically extended without written amendment for successive additional one (1) year periods from the current or any future extended expiry date, unless at least ninety (90) days prior to such date of expiration, we give written notice to the Beneficiary by registered or certified mail, return receipt requested, or by overnight courier, at the address set forth above, or at such other address of which prior written notice has been provided to us, that we elect not to renew this irrevocable standby Letter of Credit for such additional one (1) year period.

As used herein:

"Business Day" shall mean any day on which commercial banks are not authorized or required to close in New York, New York and any day on which payments can be effected on the Fed wire system.

This Letter of Credit is assignable and transferable, in accordance with Annex 4, to an entity who you certify to us in the form of Annex 4, and we hereby consent to such assignment or transfer, provided that this Letter of Credit may not otherwise be amended or modified without consent from us, you and the Applicant, and except as otherwise expressly stated herein, is subject to the Uniform Customs and Practice for Documentary Credits – 2007 Revision, ICC Publication No. 600, or any successor publication thereto (the "UCP"). Any and all transfer fees, expenses and

costs shall be borne by the Applicant. This Letter of Credit shall, as to matters not governed by the UCP, be governed and construed in accordance with New York law, without regard to principles of conflicts of law. Transfers fees shall be borne by the Applicant.

This Letter of Credit sets forth in full our undertaking, and such undertaking shall not in any way be modified, amended, changed, amplified or limited by reference to any document, instrument or agreement referred to herein, except for Annexes 1 through 6 hereto and the notices referred to herein; and any such reference shall not be deemed to incorporate herein by reference any document, instrument or agreement except as set forth above.

We certify that as of _____(date) we _____ ("Bank") satisfy the senior unsecured debt rating of "A" from Standard & Poor's Ratings Services or "A2" from Moody's Investors Service Inc.

The amount which may be drawn by you under this Letter of Credit shall be automatically reduced by the amount of any drawings paid through us referencing this Letter of Credit No. _____. Partial drawings are permitted hereunder.

Faxed document(s) are acceptable. Presentation by fax must be made to fax number _____ confirmed by telephone to _____.

In the event of act of God, riot, civil commotion, insurrection, war, terrorism or by any strikes or lock outs, or any cause beyond our control, that interrupts our business, and causes the place for presentation of this Letter of Credit to be closed for business on the last day of presentation, the expiration date of this Letter of Credit shall be automatically extended without amendment to a date thirty (30) calendar days after the place for presentation reopens for business.

This original Letter of Credit has been sent to the beneficiary EDC located at _____ above (as per Applicant's instructions). The aggregate amount paid to the

_____ during the validity of this Letter of Credit will not exceed the amount of this Letter of Credit. Any demands or communications in the form of the attached Annexes or other communications directed to us under this Letter of Credit must be signed by an Authorized Officer of the _____. Acceptance or rejection of any amendments to this Letter of Credit must be signed by an Authorized Officer of the (Bank).

Very truly yours,

APPENDIX G - GUARANTY

GUARANTY (this "Guaranty"), dated as of [Insert Date], made by _____ (the "Guarantor"), a corporation organized and existing under the laws of [Insert Law References] in favor of [Insert Company Name] (the "Guaranteed Party"), a corporation organized and existing under the laws of the Commonwealth of Pennsylvania.

Terms not defined herein take on the meaning given to them in the DS Supplier Master Agreement(s). Guarantor enters into this Guaranty in consideration of, and as an inducement for Guaranteed Party having entered into or entering into the "Agreements" with [Insert Name] (Name), a [Insert State] (State) corporation (the "DS Supplier"), which may involve the extension of credit by the Guaranteed Party. Guarantor, subject to the terms and conditions hereof, hereby unconditionally and absolutely guarantees to the Guaranteed Party the full and prompt payment when due, subject to an applicable grace period and upon demand in writing from the Guaranteed Party to the Guarantor's attention at the address for Guarantor set forth in Section 11 hereof of any and all amounts payable by the DS Supplier to the Guaranteed Party arising out of the Agreement(s), and,

1. The Guarantor, as primary obligor and not merely as surety, hereby irrevocably and unconditionally guarantees the full and prompt payment when due (whether by acceleration or otherwise) of the principal and interest on any sums due and payable by the BGS Supplier as a result of an Event of Default under the Agreement(s) (including, without limitation, indemnities, damages, fees and interest thereon, pursuant to the terms of the Agreement(s)). Notwithstanding anything to the contrary herein, the maximum aggregate liability of the Guarantor under this

Guaranty shall Option 1 (in no event exceed [Insert Limit Amount].) Option 2 (in no event exceed the lesser of [Insert Limit Amount] or the sum of the Total Exposures Amounts under the Agreement(s).) All such principal, interest, obligations and liabilities, collectively, are the "Guaranteed Obligations". This Guaranty is a guarantee of payment and not of collection.

2. The Guarantor hereby waives diligence, acceleration, notice of acceptance of this Guaranty and notice of any liability to which it may apply, and waives presentment and all demands whatsoever except as noted herein, notice of protest, notice of dishonor or nonpayment of any such liability, suit or taking of other action by any Guaranteed Party against, and any other notice to, any party liable thereon (including the Guarantor or any other guarantor), filing of claims with a court in the event of the insolvency or bankruptcy of the DS Supplier, and any right to require a proceeding first against the DS Supplier.

3. The Guaranteed Party may, at any time and from time to time, without notice to or consent of the Guarantor, without incurring responsibility to the Guarantor and without impairing or releasing the obligations of the Guarantor hereunder, upon or without any terms or conditions: (i) take or refrain from taking any and all actions with respect to the Guaranteed Obligations, any Document or any person (including the DS Supplier) that the Guaranteed Party determines in its sole discretion to be necessary or appropriate; (ii) take or refrain from taking any action of any kind in respect of any security for any Guaranteed Obligation(s) or liability of the DS Supplier to the Guaranteed Party; or (iii) compromise or subordinate any Guaranteed Obligation(s) or liability of the DS Supplier to the Guaranteed Party including any security for such Guaranteed Obligation(s) or liability of the DS Supplier to the Guaranteed Party.

4. Subject to the terms and conditions hereof, the obligations of the Guarantor under this Guaranty are absolute and unconditional and, without limiting the generality of the foregoing,

shall not be released, discharged or otherwise affected by: (i) any extension, renewal, settlement, compromise, waiver, consent, discharge or release by the DS Supplier concerning any provision of the Agreement(s) in respect of any Guaranteed

Obligations of the DS Supplier; (ii) the rendering of any judgment against the DS Supplier or any action to enforce the same; (iii) the existence, or extent of, any release, exchange, surrender, non-perfection or invalidity of any direct or indirect security for any of the Guaranteed Obligations; (iv) any modification, amendment, waiver, extension of or supplement to any of the Agreement(s) or the Guaranteed Obligations agreed to from time to time by the DS Supplier and the Guaranteed Party; (v) any change in the corporate existence (including its constitution, laws, rules, regulations or powers), structure or ownership of the BGS Supplier or the Guarantor, or any insolvency, bankruptcy, reorganization or other similar proceedings affecting the DS Supplier or its assets, the Guarantor or any other guarantor of any of the Guaranteed Obligations; (vi) the existence of any claim, set-off or other rights which the Guarantor may have at any time against the DS Supplier, the Guaranteed Party or any other corporation or person, whether in connection herewith or in connection with any unrelated transaction; provided that nothing herein shall prevent the assertion of any such claim by separate suit or compulsory counterclaim; (vii) the invalidity, irregularity or unenforceability in whole or in part of the Agreement(s) or any Guaranteed Obligations or any instrument evidencing any Guaranteed Obligations or the absence of any action to enforce the same, or any provision of applicable law or regulation purporting to prohibit payment by the DS Supplier of amounts to be paid by it under the Agreement(s) or any of the Guaranteed Obligations; and (viii) except for a failure to comply with any applicable statute of limitations, any other act or omission to act or delay of any kind of the DS Supplier, any other guarantor, the Guaranteed Party or any other corporation or person or any other event, occurrence

or circumstance whatsoever which might, but for the provisions of this paragraph, constitute a legal or equitable discharge of the Guarantor's obligations hereunder.

5. The Guarantor hereby irrevocably waives (a) any right of reimbursement or contribution, and (b) any right of salvage against the DS Supplier of any collateral security or guaranty or right of offset held by the Guaranteed Party.

6. The Guarantor will not exercise any rights, which it may acquire by way of subrogation until all Guaranteed Obligations to the Guaranteed Party pursuant to the Agreement(s) have been paid in full.

7. Subject to the terms and conditions hereof, this Guaranty is a continuing one and all liabilities to which it applies or may apply under the terms hereof shall be conclusively presumed to have been created in reliance hereon. Except for a failure to comply with any applicable statute of limitations, no failure or delay on the part of the Guaranteed Party in exercising any right, power or privilege hereunder, and no course of dealing between the Guarantor and the Guaranteed Party, shall operate as a waiver thereof; nor shall any single or partial exercise of any right, power or privilege hereunder preclude any other or further exercise thereof or the exercise of any other right, power or privilege. The rights, powers and remedies herein expressly provided are cumulative and not exclusive of any rights, powers or remedies, which the Guaranteed Party would otherwise have. No notice to or demand on the Guarantor in any case shall entitle the Guarantor to any other or further notice of demand in similar or other circumstances or constitute a waiver of the rights of the Guaranteed Party to any other or further action in any circumstances without notice or demand.

8. This Guaranty shall be binding upon the Guarantor and upon its successors and assigns and shall inure to the benefit of and be enforceable by the Guaranteed Party and its

successors and assigns; provided, however, that the Guarantor may not assign or transfer any of its rights or obligations hereunder without the prior written consent of the Guaranteed Party. The assignment rights of the Guaranteed Party will be in accordance with the terms of the underlying Agreement(s).

9. Neither this Guaranty nor any provision hereof may be changed, waived, discharged or terminated except upon written agreement of the Guaranteed Party and the Guarantor.

10. The Guarantor agrees that its liability as guarantor shall continue and remain in full force and effect in the event that all or any part of any payment made hereunder or any obligation or liability guaranteed hereunder is recovered (as a fraudulent conveyance, preference or otherwise) rescinded or must otherwise be reinstated or returned due to bankruptcy or insolvency laws or otherwise.

11. All notices and other communications hereunder shall be made at the addresses by hand delivery, by the next day delivery service effective upon receipt or by certified mail return receipt requested (effective upon scheduled weekday delivery day) or telefacsimile (effective upon receipt of evidence, including telefacsimile evidence, that telefacsimile was received).

If to the Guarantor:

[Insert Guarantor]

If to the Guaranteed Party:

[Insert Guaranteed Party]

12. If claim is ever made upon the Guaranteed Party for repayment or recovery of any amount or amounts received in payment or on account of any of the Guaranteed Obligations and the Guaranteed Party repays all or part of such amount by reason of (a) any judgment, decree or order of any court or administrative body having jurisdiction over such payee or any of its property,

or (b) any settlement or compromise of any such claim effected by such payee with any such claimant (including the Guarantor), then and in such event the Guarantor agrees that any such judgment, decree, order, settlement or compromise shall be binding upon it, notwithstanding any revocation hereof or the cancellation of the Agreement(s) or other instrument evidencing any liability of the Guarantor, and the Guarantor shall be and remain liable to the Guaranteed Party hereunder for the amount so repaid or recovered to the same extent as if such amount had never originally been received by any such payee.

13. The Guarantor hereby certifies that it satisfies the Minimum Rating as defined in the Agreement(s).

14. This Guaranty shall remain in full force and effect until all Guaranteed Obligations have been fully and finally performed, at which point it will expire. The Guarantor may terminate this Guaranty upon thirty (30) days prior written notice to the Guaranteed Party which termination shall be effective only upon receipt by the Guaranteed Party of alternative means of security or credit support, as specified in the Agreement(s) and in a form reasonably acceptable to the Guaranteed Party. Upon the effectiveness of any such expiration or termination, the Guarantor shall have no further liability under this Guaranty, except with respect to the Guaranteed Obligations entered into prior to the time the expiration or termination is effective, which Guaranteed Obligations shall remain guaranteed pursuant to the terms of this Guaranty until finally and fully performed.

15. The Guarantor represents and warrants that: (i) it is duly organized and validly existing under the laws of the jurisdiction in which it was organized and has the power and authority to execute, deliver, and perform this Guaranty; (ii) no authorization, approval, consent or order of, or registration or filing with, any court or other governmental body having jurisdiction

over the Guarantor is required on the part of the Guarantor for the execution, delivery and performance of this Guaranty except for those already made or obtained; (iii) this Guaranty constitutes a valid and legally binding agreement of the Guarantor, and is enforceable against the Guarantor, except as the enforceability of this Guaranty may be limited by the effect of any applicable bankruptcy, insolvency, reorganization, moratorium or similar laws affecting creditor's rights generally and by general principles of equity; and (iv) the execution, delivery and performance of this Guaranty by the Guarantor have been and remain duly authorized by all necessary corporate or comparable action and do not contravene any provision of its [insert appropriate corporate organizational document, such as Declaration of Trust, Limited Liability Agreement, Articles of Incorporation or bylaws] or any law, regulation or contractual restriction binding on it or its assets.

16. This Guaranty and the rights and obligations of the DS Supplier and the Guarantor hereunder shall be construed in accordance with and governed by the laws of the Commonwealth of Pennsylvania. The Guarantor and Guaranteed Party jointly and severally agree to the exclusive jurisdiction of State and Federal courts located in the Commonwealth of Pennsylvania over any disputes arising or relating to this Guaranty and waive any objections to venue or inconvenient forum. The Guarantor and Guaranteed Party each hereby irrevocably waive any and all rights to trial by jury with respect to any legal proceeding arising out of or relating to this Guaranty.

17. This writing is the complete and exclusive statement of the terms of this Guaranty and supersedes all prior oral or written representations, understandings, and agreements between the Guaranteed Party and the Guarantor with respect to subject matter hereof. The Guaranteed Party and the Guarantor agree that there are no conditions to the full effectiveness of this Guaranty.

18. Every provision of this Guaranty is intended to be severable. If any term or provision hereof is declared to be illegal or invalid for any reason whatsoever by a court of

competent jurisdiction, such illegality or invalidity shall not affect the balance of the terms and provisions hereof, which terms and provisions shall remain binding and enforceable. This Guaranty may be executed in any number of counterparts, each of which shall be an original, but all of which together shall constitute one instrument.

19. No Trustee or shareholder of Guarantor shall be held to any liability whatsoever for any obligation under this Guaranty, and such Guaranty shall not be enforceable against any such Trustee in their or his or her individual capacities or capacity. This Guaranty shall be enforceable against the Trustees of Guarantor only as such, and every person, firm, association, trust or corporation having any claim or demand arising under this Guaranty and relating to Guarantor, its shareholders or Trustee shall look solely to the trust estate of Guarantor for the payment or satisfaction thereof.

IN WITNESS WHEREOF, the Guarantor has caused this Guaranty to be executed and delivered as of the date first above written to be effective as of the earliest effective date of any of the Agreement(s).

APPENDIX H– CAPACITY PROXY PRICE

For purposes of this Appendix: (i) the "PJM RPM Zonal Net Load Price" is the price charged by PJM to LSEs for capacity in the Company's PJM zone under the Reliability Pricing Model ("RPM") or its successor; and (ii) the "Capacity Proxy Price" (CPP) for the Company is $_____/MW-day.

The CPP for each Company will be equal to the most recent PJM Base Residual Auction "BRA" clearing price conducted by PJM.

In the event a CPP is implemented, Section 9.1 (a) of the SMA is replaced with the following:

Each Billing Month the Company will prepare a Statement of amounts due to the DS Supplier. This Statement will show the aggregate amounts due based on the DS Fixed Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Fixed Percentage as shown on the Transaction Confirmation(s) for each hour of the Billing Month, plus the aggregate amounts due based on the DS Variable Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Variable Percentage, if applicable, as shown on the Transaction Confirmation(s) for each hour of the Billing Month. For each Billing Month where a CPP was used, an additional line item on the supplier invoice will show the true-up amount expressed in dollars which is the difference between the EDC Capacity Price actually charged for load served on the day for the Company's PJM zone and the Capacity Proxy Price multiplied by the DS Supplier responsibility share of the Capacity obligation (UCAP) for each day of the Billing Month in question. True-ups will occur in the delivery year where a proxy price was utilized.

~~after the Capacity Proxy Price is known, the Companies will apply the Capacity Proxy Price true-up across the The calculation of the day-weighted average capacity price adjustment for purposes of determining the true-up amount will reflect final unforced capacity (i.e., UCAP) quantity weighting. For example, for a 24-month contract term, the Company will calculate the average capacity price adjustment by appropriately weighting the amount of capacity (i.e., the final UCAP quantity) purchased by the supplier at each PJM capacity price~~.

APPENDIX H – CAPACITY PROXY PRICE

For purposes of this Appendix: (i) the "PJM RPM Zonal Net Load Price" is the price charged by PJM to LSEs for capacity in the Company's PJM zone under the Reliability Pricing Model ("RPM") or its successor; and (ii) the "Capacity Proxy Price" (CPP) for the Company is $_____/MW-day.

The CPP for each Company will be the average of the capacity prices from the last auctions of the previous two Capacity Market Auctions conducted by PJM.

In the event a CPP is implemented, Section 9.1 (a) of the SMA is replaced with the following:

Each Billing Month the Company will prepare a Statement of amounts due to the DS Supplier. This Statement will show the aggregate amounts due based on the DS Fixed Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Fixed Percentage as shown on the Transaction Confirmation(s) for each hour of the Billing Month, plus the aggregate amounts due based on the DS Variable Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Variable Percentage, if applicable, as shown on the Transaction Confirmation(s) for each hour of the Billing Month. For each Billing Month after the Capacity Proxy Price is known, the Companies will apply the Capacity Proxy Price true-up across the entire contract term. The calculation of the day weighted average capacity price adjustment for purposes of determining the true-up amount will reflect final unforced capacity (i.e., UCAP) quantity weighting. For example, for a 24-month contract term, the Companies will calculate the relevant 24-month average capacity

~~price adjustment by appropriately weighting the amount of capacity (i.e., the final UCAP quantity) purchased by the supplier at each PJM capacity price.~~

APPENDIX I – ASSIGNMENT AGREEMENT

ASSIGNMENT, ASSUMPTION AND RELEASE AGREEMENT

This **Assignment, Assumption and Release Agreement** (this "**Assignment Agreement**") dated as of _____, _____ (the "**Assignment Execution Date**") by and among:

("Transferor")

("**Transferee**")

and

[Applicable EDC listed here – Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, or West Penn Power Company], a corporation and a public utility organized and existing under the laws of Pennsylvania ("**Remaining Party**").

RECITALS

WHEREAS as identified in Schedule 1 hereto, Transferor and Remaining Party have in place the Default Service Supplier Master Agreement between Remaining Party and Transferor dated _____, including the associated appendices attached thereto (collectively referred to herein as "**Agreement**");

WHEREAS Transferor has agreed to assign to Transferee and Transferee has agreed to assume all of the rights, liabilities, duties and obligations of Transferor under and in respect of the Agreement on and subject to the terms contained herein;

WHEREAS Remaining Party is willing to consent to such assignment and assumption as herein set forth and to accept Transferee as its counterparty with respect to the Agreement in the place and stead of Transferor pursuant to the terms of this Assignment Agreement; and

WHEREAS Transferor and Remaining Party have agreed to release and discharge, as a result and to the extent, of the assignment and assumption described above, their respective future obligations under and in respect of the Agreement all as more fully set forth below.

NOW THEREFORE, for good and valuable consideration (receipt and sufficiency of which are hereby acknowledged), the parties hereto mutually covenant and agree as follows:

1. **Assignment and Assumption.** Transferor hereby assigns, conveys, transfers and delivers to Transferee, and Transferee hereby accepts and assumes, in each case as of the Assignment Execution Date, Transferor's entire right, title, estate and interest in and to, and Transferor's rights, liabilities, duties and obligations under, the Agreement from and after the Effective Date, for Transferee's sole use and benefit absolutely. For purposes of this Assignment Agreement, the term "**Effective Date**" shall mean _____.

2. **Acceptance by Transferee.** Transferee hereby assumes and accepts the aforesaid Agreement, and covenants and agrees with Remaining Party and Transferor that from and after the Assignment Execution Date, Transferee will be bound by, observe and perform, carry out and fulfill all covenants and agreements, duties and obligations under the Agreement from and after the Effective Date that were formerly required to be observed and performed by Transferor under the terms of the Agreement, and that the Agreement shall be fully enforceable against Transferee by Remaining Party, in each case, as if Transferee were an original party thereto.

3. **Consent and Acceptance by Remaining Party.** In satisfaction of Section 16.3 of the Agreement, Remaining Party hereby consents to the assignment and assumption of the Agreement in accordance with the terms set forth herein and accepts Transferee as the party

to perform the obligations of Transferor under the Agreement from and after the Effective Date, and Remaining Party agrees that it shall not make any claim against Transferee as a consequence of or relating to the observance and performance of the covenants, representations and agreements under, or any default, breach or non-performance attributable to Transferor under the Agreement or any other transaction entered into pursuant to the Agreement prior to the Effective Date, regardless of when Remaining Party's cause of action accrued.

4. Release.

(a) Effective as of and from the Effective Date, Remaining Party hereby releases and forever discharges Transferor from all obligations to Remaining Party with respect to the Agreement and of and from any and all liability as a consequence of or relating to all manner of action and actions, cause or causes of action, suits, debts, dues, sums of money, claims and demands whatsoever at law or in equity ("**Claims**") arising out of, or which are in any way related to, the Agreement after and including the Effective Date; provided that, for certainty, the foregoing shall not release or discharge Transferor in respect of the settlement, payment or performance of any liabilities or obligations due and payable or due to be performed, including without limitation payment of any adjustments thereof, or causes of action for breach of the Agreement, with respect to periods prior to the Effective Date (the "**Transferor Excluded Liabilities**) and all such Transferor Excluded Liabilities shall be paid or performed by Transferor in accordance with the terms of the Agreement.

(b) Effective as of and from the Effective Date, Transferor hereby releases and forever discharges Remaining Party from all obligations to Transferor with respect to the Agreement and of and from any and all liability as a consequence of or relating to all Claims arising out of, or which are in any way related to, the Agreement after and including the Effective Date; provided that, for certainty, the foregoing shall not release or discharge Remaining Party in respect of the settlement, payment or performance of any liabilities or obligations due and payable or due to be performed, including without limitation payment of any adjustments thereof, with respect to periods prior to the Effective Date (the "**Remaining Party Excluded Liabilities**"), and all such Remaining Party Excluded Liabilities shall be paid or performed by Remaining Party in accordance with the terms of the Agreement.

(c) In respect of the Agreement, effective from and after the Effective Date, Remaining Party and Transferee each undertake liabilities and obligations towards the other and acquire rights against each other identical in their terms as if Transferee were Transferor and with Remaining Party remaining the counterparty, save for any rights, liabilities or obligations of Remaining Party with respect to any Remaining Party Excluded Liabilities, if any, or Transferor with respect to any Transferor Excluded Liabilities, if any.

5. **Further Assurances.** Each party hereto agrees that it shall, from time to time and at all times hereafter, execute such further assurances and do all such acts and things as may be reasonably required for the purpose of vesting in Transferee the rights and obligations of Transferor in the Agreement as assigned to, and assumed by, Transferee and effecting the release and other transactions set forth herein, including, at the request of Remaining Party,

executing a new default service supplier master agreement with the same terms and conditions of the Agreement.

6. **Address for Notices**.

The address for Transferor for notices shall be:

_____

The address for the Transferee for notices shall be:

_____

7. **Enurement.** This Assignment Agreement shall enure to the benefit of and be binding upon the parties hereto and their respective successors and assigns.

8. **Counterpart Execution.** This Assignment Agreement may be executed in separate counterparts and delivered by facsimile, or as an attachment to an electronic message (such as a pdf, tif or other mutually acceptable type of file attachment) each of which when so executed and delivered shall constitute the one and the same original document.

9. **Governing Law; Waiver of Jury Trial.** This Assignment Agreement will be governed by and construed in accordance with the laws of the Commonwealth of Pennsylvania, without giving effect to principles of conflicts of laws. Any judicial action arising out of, resulting from, or in any way relating to this Assignment Agreement shall be brought only in a state or federal court of competent jurisdiction located in the Commonwealth of Pennsylvania, except to the extent subject to the jurisdiction of the Federal Energy Regulatory Commission ("FERC"), Pennsylvania Public Utility Commission ("PUC") or appellate courts having jurisdiction over the PUC or FERC matters. **EACH PARTY WAIVES, TO THE FULLEST EXTENT PERMITTED BY APPLICABLE LAW, ANY RIGHT IT**

AFT

MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY SUIT, ACTION OR PROCEEDING RELATING TO THIS ASSIGNMENT AGREEMENT. EACH PARTY CERTIFIES THAT NO REPRESENTATIVE, AGENT OR ATTORNEY OF THE OTHER PARTY HAS REPRESENTED, EXPRESSLY OR OTHERWISE, THAT SUCH OTHER PARTY WOULD NOT, IN THE EVENT OF SUCH A SUIT ACTION OR PROCEEDING, SEEK TO ENFORCE THE FOREGOING WAIVER.

10. Representations, Warranties and Covenants.

(a) Transferor hereby represents and warrants that: (i) its right, title, estate and interest in and to the Agreement is free and clear of any liens, charges, pledges, options, mortgages, deeds of trust, security interests, restrictions (whether on voting, sale, transfer, disposition, or otherwise), and easements, whether imposed by law, agreement, understanding, or otherwise whatsoever, (ii) it has the power and authority to effect the sale, assignment and transfer of the Agreement and to execute this Assignment Agreement; (iii) it is a "public utility" as such term is defined under the Federal Power Act, (iv) it has no captive customers; (v) it does not own, or provide transmission services over, transmission facilities subject to the jurisdiction of the Federal Energy Regulatory Commission; (vi) assuming the truthfulness of the representations of Transferee set forth in Section 11(b)(iii), (iv) and (v) below, the transfer of rights under the Agreement falls within the blanket authorization granted under 18 C.F.R. Section 33.1(c)(16); (vii) the Agreement has not been amended or modified and is in full force and effect; (viii) no event or condition has occurred that constitutes, or will with the passage of time constitute, an event of default or termination under the Agreement; (ix) there are no material disputes pending or to its knowledge threatened related to any rights or obligations

DRAFT

transferred by this Assignment Agreement; (x) as of the Assignment Execution Date, it has performed all of its obligations under the Agreement that are required to be performed and will have performed all such obligations as of the Effective Date; (xi) it is acting for its own account, and it has made its own independent decisions to enter into this Assignment Agreement and as to whether this Assignment Agreement is appropriate or proper for it based upon its own judgment and upon advice from such advisers as it has deemed necessary; (xii) it is not relying on any communication (written or oral) of the other parties as investment advice or as a recommendation to enter into this Assignment Agreement; it being understood that information and explanations related to the terms and conditions of this Assignment Agreement shall not be considered investment advice or a recommendation to enter into this Assignment Agreement; (xiii) no communication (written or oral) received from any of the other parties shall be deemed to be an assurance or guarantee as to the expected results of this Assignment Agreement; (xiv) it is capable of assessing the merits of and understanding (on its own behalf or through independent professional advice), and understands and accepts, the terms, conditions and risks of this Assignment

Agreement; (xv) it is also capable of assuming, and assumes, the risks of this Assignment Agreement; and (xvi) none of the other parties is acting as a fiduciary for or an adviser to it in respect of this Assignment Agreement.

(b) Transferee hereby represents and warrants that: (i) it has the power and authority to accept and assume the sale, purchase, assignment and transfer of the Agreement and to execute this Assignment Agreement; (ii) it is qualified to do business in the

Commonwealth of Pennsylvania; (iii) it is a "public utility" as such term is defined under the Federal Power Act, (iv) it has no captive customers; (v) it does not own, or provide transmission services over, transmission facilities subject to the jurisdiction of the Federal Energy Regulatory Commission; (vi) it is a "Load Serving Entity" as defined in the Agreement in good standing with PJM Interconnection, LLC ("PJM") and is in compliance with all applicable PJM obligations, rules and regulations; (vii) assuming the truthfulness of the representations of Transferor set forth in Section 10(a)(iii), (iv) and (v) above, the transfer of rights under the Agreement falls within the blanket authorization granted under 18 C.F.R. Section 33.1(c)(16); (viii) it is acting for its own account, and it has made its own independent decisions to enter into this Assignment Agreement and as to whether this Assignment Agreement is appropriate or proper for it based upon its own judgment and upon advice from such advisers as it has deemed necessary; (ix) it is not relying on any communication (written or oral) of the other parties as investment advice or as a recommendation to enter into this Assignment Agreement; it being understood that information and explanations related to the terms and conditions of this Assignment Agreement shall not be considered investment advice or a recommendation to enter into this Assignment Agreement (x) no communication (written or oral) received from any of the other parties shall be deemed to be an assurance or guarantee as to the expected results of this Assignment Agreement; (xi) it is capable of assessing the merits of and understanding (on its own behalf or through independent professional advice), and understands and accepts, the terms, conditions and risks of this Assignment Agreement and the Agreement; (xii) it is also capable of assuming, and assumes,

the risks of this Assignment Agreement and the Agreement; and (xiii) none of the other parties is acting as a fiduciary for or an advisor to it in respect of this Assignment Agreement.

(c) Transferee hereby represents and warrants (i) that each representation and warranty of the Transferor set forth in the Agreement is true, correct and complete with respect to Transferee as of the Assignment Execution Date and will be true, correct and complete as of the Effective Date, and hereby makes each such representation and warranty for the benefit of Remaining Party as if set forth in full herein, and (ii) that Transferee is familiar with and meets all of Remaining Party's creditworthiness requirements and all applicable load-cap requirements, currently in effect under and pursuant to the Agreement. Transferee acknowledges that Remaining Party is relying upon, and agrees that Remaining Party may rely upon, the representations and warranties of Transferee set forth in this Assignment Agreement in providing its consent to and acceptance of the assignment to and assumption by Assignee of the Agreement.

(d) Transferee hereby agrees to be bound by the terms of the Agreement and to perform all of the obligations thereunder in accordance with the terms thereof.

Each party hereto represents and warrants to the others that: (i) this Assignment Agreement and, as to Remaining Party and Transferee, the Agreement, do not and will not violate or conflict with its charter, articles or certificate of incorporation, or by-laws (or comparable constitutive documents), any statute, law, rule, regulation or ordinance, or any judgment, order, consent order, stipulated agreement, writ, injunction, or decree of any court or governmental agency,

applicable to it or any agreement to which it is a party or by which it or any of its property is bound; provided that the Remaining Party shall provide an informational filing to the PUC advising of the execution of this Assignment Agreement after the

Assignment Execution Date; (ii) its obligations hereunder and, as to Remaining Party and Transferee, under the Agreement are legal, valid and binding on it, and enforceable in accordance with their terms; and (iii) the person signing this Assignment Agreement for such party is an officer, director, and/or partner of such party and is authorized and duly empowered to do so.

11. **Informational Filing**. The parties acknowledge that Remaining Party shall provide an informational filing to the PUC advising of the execution of this Assignment Agreement after the Assignment Execution Date.

12. **Costs and Expenses.** The parties will each pay their own costs and expenses (including legal fees) incurred in connection with this Assignment Agreement and as a result of the negotiation, preparation and execution of this Assignment Agreement.

13. **Amendments**. No amendment, modification or waiver in respect of this Assignment Agreement will be effective unless in writing (including a writing evidenced by a facsimile transmission) and executed by each of the parties.

14. **Waiver**. No waiver under this Assignment Agreement is effective unless it is in writing and signed by the party waiving its right. Any waiver authorized on one occasion is effective only in that instance and only for the purpose stated and does not operate as a waiver on any future occasion. None of the following constitutes a waiver or estoppel of any right, remedy, power, privilege or condition arising from this Assignment Agreement:

(a) any failure or delay in exercising any right, remedy, power or privilege or in enforcing any condition under this Assignment Agreement; or (b) any act, omission or course of dealing between the parties.

15. **Cumulative Remedies.** All rights and remedies provided in this Assignment Agreement are cumulative and not exclusive, and the exercise by either party of any right or remedy does not preclude the exercise of any other rights or remedies that may now or subsequently be available at law, in equity, by statute, in any other agreement between the parties or otherwise.

16. **No Third Party Beneficiaries.** This Assignment Agreement benefits solely the parties to this Assignment Agreement and their respective permitted successors and assigns and nothing in this Assignment Agreement, express or implied, confers on any other person any legal or equitable right, benefit or remedy of any nature whatsoever under or by reason of this Assignment Agreement.

17. **Headings; Defined Terms.** The headings in this Assignment Agreement are for reference only and do not affect the interpretation of this Assignment Agreement. Capitalized terms used herein and not otherwise defined shall have the meaning set forth in the Agreement.

18. **Severability.** If any term or provision of this Assignment Agreement is invalid, illegal or unenforceable in any jurisdiction, such invalidity, illegality or unenforceability does not affect any other term or provision of this Assignment Agreement or invalidate or render unenforceable such term or provision in any other jurisdiction. Upon such determination that any term or other provision is invalid, illegal or unenforceable, the parties to this Assignment Agreement shall negotiate in good faith to modify this Assignment Agreement so as to effect the original intent of the parties as closely as possible in a mutually acceptable

manner in order that the transactions contemplated hereby be consummated as originally contemplated to the greatest extent possible.

Default Service Products, Procurement and Schedule

Generic Proceeding Addressing Certain Procurement Issues

REBUTTAL TESTIMONY

OF RYAN J. ROSE

I. INTRODUCTION AND BACKGROUND

Q Please state your name and business address.

A. My name is Ryan Rose, and my business address is 341 White Pond Drive, Akron, OH 44320.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I filed direct testimony and exhibits on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") which have been designated as FE PA Statement No. 2 and Exhibits RJR-1 and RJR-2.

Q. Please describe the purpose of your testimony.

A. My rebuttal testimony will respond to various issues raised in the direct testimony of witnesses on behalf of the Office of Consumer Advocate ("OCA"), Retail Energy Supply Association ("RESA"), and the Office of Small Business Advocate ("OSBA"). I will address the following topics: default service products, procurement and schedule, billing line items ("BLI"), Network Integration Transmission Service ("NITS") charges, and Department of Energy ("DOE") Section 202 charges.

Q. Have you prepared any exhibits to accompany your testimony?

A. No.

II. AUCTION PRODUCTS AND PROCUREMENT

Q. Please summarize OCA witness Serhan Ogur's objections to the Company's proposed changes to its procurement.

A. Dr. Ogur opposes the proposed 60-month fixed-price full requirements ("FPFR") product for each rate district (~10% of supply).[1] Dr. Ogur recommends replacing 60-month contracts with 36-month contracts, which he states has been successful in New Jersey, with delivery periods commencing on June 1, 2030.[2] Dr. Ogur recommends that 60-month contracts be conditioned on contingency procurement of 24-month contracts and a pre-determined reasonable risk premium developed by the auction monitor.[3] He also recommends different shares of 12- and 24-month products for certain rate districts to promote uniformity and the addition of 18-month FPFR products to streamline the transition to more overhang in the Company's seventh default service program.[4]

Additionally, Dr. Ogur recommends shifting auction timing from January and November to February and September to space procurements more evenly and avoid concentrating two auctions in the same winter season risk profile.[5] Lastly, Dr. Ogur recommends additional laddering by procuring half of the 12-month and 24-month products with delivery starting in June and half starting in December.[6]

---

2 *Id.*
3 *Id.*
4 *Id.*
5 *Id.*
6 *Id.*

Q. Do you agree with Dr. Ogur's opposition of the 60-month fixed-price full requirements product?

A. No, I do not agree. In her rebuttal testimony (FE PA Statement No. 5-R), FE PA witness Margarita Patria fully addresses Dr. Ogur's concern that the 60-month product may result in large supplier risk premiums.

Q. **Dr. Ogur recommends that 60-month contracts should be conditioned on contingency procurement of 24-month contracts.[7] Do you agree with this recommendation?**

A. No, FE PA has proposed a contingency plan best suited for the proposed procurement schedule. FE PA is proposing to procure unfulfilled tranches of the 60-month product as 12-month products in the remainder of the auctions. Shorter-duration, 12month default service procurement structures are generally more beneficial for customers because they produce rates that more closely reflect current market conditions. In addition, the 12-month products are operationally more efficient if the 60-month product is only partially subscribed. The 12-month product simplifies the contingency process and makes the transition easier to manage.

Q. **Do you agree with Dr. Ogur's recommendation for replacing the 60-month product with 36-month products?[8]**

A. No. I do not believe replacing the proposed 60-month FPFR product with a 36-month product is warranted. First, I disagree with Dr. Ogur's characterization of the proposed 60-month product as "untested" or premature.[9] While Dr. Ogur points to New Jersey's use of 36-month products as an example of a successful longer-duration procurement structure,

---

7 *See* OCA St. No. 1 at p. 17.
8 *Id.* at p. 16.
9 *Id.* at p. 13.

precedent from Pennsylvania utilities is more relevant for evaluating procurement practices in Pennsylvania markets. In particular, PPL Electric Utilities Corporation ("PPL") successfully procured 5-year products in two separate default service proceedings solicitations completed in April 2021 and October 2021. More recently, PPL also successfully procured a 10-year long-term block supply product in October 2025. These procurements demonstrate that suppliers are willing and able to evaluate and price longer-duration obligations in Pennsylvania.

Second, the Company's proposed 60-month product represents only a limited portion of the overall procurement portfolio, approximately 10 percent of residential default service supply. As a result, the proposal constitutes a measured and incremental extension of procurement duration rather than a fundamental restructuring of the portfolio. In my view, this limited allocation appropriately balances the potential benefits of longer-duration products against any uncertainties associated with longer-term pricing.

Finally, I believe the proposed 60-month product contributes positively to the overall laddering and diversification objectives of the procurement portfolio. The Company's proposed structure utilizes a balanced mix of products with different durations and procurement timing in order to moderate customer exposure to short-term wholesale market volatility and reduce the frequency with which portions of the portfolio are repriced. The proposed 60-month tranche extends those laddering benefits further into future periods while remaining a relatively modest share of the overall supply portfolio. In my view, the Company's proposal represents a reasonable and prudent procurement approach consistent with broader market practice and long-term rate stability objectives. Moreover, a 36-month product will not satisfy the long-term contract component under 52 Pa.Code. §

54.186(b)(1)(iii), which requires the procurement plan to include a prudent mix of spot market purchases, short-term contracts, and long-term contracts between 4 and 20 years in length.

Q. Dr. Ogur recommends shifting auction timing from January and November to February and September.[10] How do you respond?

A. FE PA acknowledges that shifting auction timing as Dr. Ogur recommends is possible, but doing so narrows the window of time between the auction clearing results and PJM Interconnection, LLC's ("PJM") Auction Revenue Rights ("ARR") allocation process. In addition, having a September auction leaves a 9-month gap prior to the start of delivery, as compared to a 7-month gap if conducted in November. When the auction is closer to delivery, more real time data is available on the PJM forward market which could lead to less uncertainty and potentially lower risk premiums.

Q. Why is it important for suppliers to choose their own ARR paths?

A. Allowing suppliers to choose their own ARR paths is beneficial because it improves how suppliers manage congestion costs and risk. By selecting ARRs that align with their customer load and procurement strategies, suppliers can more effectively hedge transmission congestion charges, leading to more predictable and potentially lower costs. This flexibility also promotes competition by enabling suppliers to develop more efficient and tailored pricing, which can ultimately benefit consumers.

[10] *See* OCA St. No. 1 at p. 18.

Q. Dr. Ogur also recommends additional laddering changes, including greater reliance on 24-month products, the addition of 18-month products, different procurement timing, and revised staggering of delivery periods.[11] Do you agree with those recommendations?

A. No. While I agree with the general principle that laddering and procurement diversification are important components of a prudent default service strategy, I do not believe the additional modifications proposed by Dr. Ogur are necessary or clearly superior to the Company's proposed structure. The Company's proposed procurement design is already broadly consistent with industry practice among large default service procurements in Pennsylvania and neighboring states, including the use of staggered 12-month and 24-month FPFR products and laddered procurement schedules. For example, PECO Energy Company ("PECO"), PPL, Duquesne Light Company, AES Ohio, Duke Energy Ohio, Ohio Edison, The Illuminating Company, and Toledo Edison all utilize combinations of 12-month and 24-month products in their procurement structures.

In addition, New Jersey's basic generation service ("BGS") structure for all electric distribution companies ("EDCs") similarly relies on laddered procurement products with longer duration contracts for residential and small commercial customers, including 36-month FPFR products for residential and small commercial load. Similarly, PPL has utilized a laddered procurement structure that includes combinations of 6-month, 12-month, and 24-month FPFR products, as well as separate long-term block products with 5-year and, more recently, 10-year durations. These examples further demonstrate that the

[11] *See* OCA St. No. 1 at pp. 18-20.

Company's proposed structure is consistent with tested and established procurement practices rather than representing material departure from industry norms.

I also note that Dr. Ogur's recommendations appear internally inconsistent in certain respects. On the one hand, he argues that longer duration products generally improve rate stability, and specifically states that 24-month products provide greater stability than 12-month products.[12] On the other hand, he argues that extending the duration further from 36 months to 60 months suddenly becomes inappropriate or excessively risky.[13] In my view, that distinction is not well supported. Extending duration is fundamentally a continuum rather than a categorical shift, and the Company's proposed 60-month product reasonably advances the same laddering and rate stability objectives Dr. Ogur identifies elsewhere in his testimony.

Further, Dr. Ogur's proposed procurement structure introduces additional complexity through the inclusion of transitional 18-month products, revised auction schedules, and more granular staggering approaches. While such modifications may theoretically provide incremental diversification benefits, they also increase administrative complexity and may reduce procurement efficiency without demonstrating commensurate customer benefits. The Company's proposed procurement structure represents a balanced and practical approach that appropriately advances laddering, portfolio diversification, and rate stability objectives while maintaining a procurement framework that is straightforward, transparent, and consistent with established market practice.

[12] *See* OCA St. No. 1 at p. 14.
[13] *Id.* at pp. 15-16.

Q. Dr. Ogur raises concerns regarding the lack of detail regarding the implementation through billing line item transfer agreements and reconciliation of bypassable NITS charges. Do you have a response to this concern?

A. Yes. Billing line items will be transferred using PJM's BLI transfer tool and the process is straightforward. FE PA and the Default Service Supplier would both approve the transfer of NITS or any PJM BLI required under the Supplier Master Agreement. To create the transfer, FE PA would enter the request for BLI 1100 between the FE PA PJM account and the Default Service Supplier's PJM account. BLI transfers are in effect throughout the term of the Default Service Supplier's contract. The use of BLI transfers between FE PA and Default Service Suppliers is described in Section 2.4 of the Supplier Master Agreement.[14] When it comes to billing line transfers, all load serving entities, including Default Service Suppliers, have their specific daily Network Service Peak Load ("NSPL") obligation submitted to PJM by the EDC based on the customers served under that supplier's PJM account. Scaling factors may be used if the NSPL values uploaded by the EDC do not exactly sum to the annual NSPL for the zone/area. This daily obligation is multiplied by the NITS rate to calculate the charge to the supplier. Rates are set per megawatt per day based on the Annual Transmission Revenue Requirement of the transmission owner in that specific zone. FE PA will acquire NITS for its default service customer load and recover the associated PJM charges through the NITS component – instead of the cost component – of the PTC and HP Riders.

[14] *See* FE PA Exhibit RJR-2.

Q. Please summarize RESA witness Frank Lacey's opposition to FE PA's proposed procurement changes.

A. Mr. Lacey opposes any pass-through of PJM NITS charges or capacity costs to default service customer in full-requirements contracts because the risk transfer provides no value to customers and harms the competitive market.[15] Mr. Lacey also recommends that FE PA should replace the $4.00 adder with a competitive bid process for capacity, transmission (NITS), ancillary services, Alternative Energy Portfolio Standards ("AEPS") Act compliance and other costs that are part of a full requirements supply obligation.[16] He also adds that default service suppliers should be responsible for managing DOE Section 202(c) charges for the same reasons as NITS.[17]

Q. Do you agree with Mr. Lacey's recommendation of NITS charges to remain with the suppliers?

A. No. Mr. Lacey claims that the risk transfer provides "no value to customers" and "harms the competitive market."[18] NITS charges are integral components of serving load in PJM. Preventing suppliers from passing through these costs forces them to embed risk premiums into their bid prices, which can increase the overall cost to customers due to increased uncertainty. By allowing NITS charges to become a pass through, we avoid the need for Suppliers to estimate the charge and add a premium to cover the uncertainty. By removing the uncertainty, the 60-month product will also benefit. In addition, by having the Company be responsible for NITS, the charges will become more transparent and known

15 *See* RESA St. No. 1 at p. 65.
16 *Id.* at p. 48-49
17 *Id.* at p. 47.
18 *Id.* at p. 65.

when they are passed through for recovery rather than being imbedded in a risk premium the suppliers add in their bid.

Q. Mr. Lacey asserts that the Company's proposed use of the capacity proxy price ("CPP") is inappropriate because the proposed contract extends beyond the PJM planning horizon.[19] Do you agree?

A. No. The proposed CPP is necessary to establish a capacity cost when PJM does not conduct its base residual auction ("BRA") in time for default service suppliers to incorporate the auction results into their bids. The Company's CPP mechanism appropriately addresses uncertainty associated with PJM capacity costs. In addition, the fact that the contract extends beyond PJM's immediate planning horizon does not render the CPP inappropriate. Long-term contracts inherently involve forward-looking risk allocation. The CPP is designed to approximate expected capacity costs.

Q. Mr. Lacey suggests modifications to the removal of the $4.00 adder and suggests replacing that with a competitive bid process in the hourly priced product.[20] Do you agree with his suggestions?

A. No. The $4.00 adder was intended to cover costs associated with capacity, ancillary services, NITS, AEPS Act compliance, and other full requirements costs. However, the $4.00 no longer functions as a mechanism to cover these increased costs given changes (and proposed changes) in supplier responsibilities and FE PA proposes that they should be included in the competitive bid process with or without NITS included in the product.

---

19 *Id.*

20 *Id.* at p. 48-49.

Q. **Do you agree with Mr. Lacey's recommendation on DOE 202(c) charges?**[21]

A. No. The Company's proposal to recover DOE 202(c) charges on a nonbypassable basis ensures that all customers contribute equitably to this system cost regardless of supply choice. By applying these charges uniformly across both default service and competitive retail supply, the proposal eliminates any potential cost-shifting between customer classes.

III. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

Rebuttal Testimony of
Carlixta De La Rosa

List of Topics Addressed

Costs Included in Default Service Rates
Reconciliation of Residential and Small Commercial Default Service Rates
Customer Referral Program

REBUTTAL TESTIMONY
OF
CARLIXTA DE LA ROSA

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Carlixta De la Rosa, and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19605.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted written testimony and exhibits on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company"),[1] which have been designated as FE PA Statement No. 4 and FE PA Exhibits CDL-1 to CDL-5. My background and qualifications are set forth in my direct testimony.

Q. Please describe the purpose of your testimony.

A. The purpose of my rebuttal testimony is twofold. First, I will respond to the direct testimony of witnesses on behalf of the Office of Consumer Advocate ("OCA") and the Retail Energy Supply Association ("RESA") regarding the rate design for the Company's seventh default service program ("DSP VII"), specifically: (1) issues related to costs recovered through default service rates raised by RESA witness Frank Lacey; and (2) an alternative schedule for reconciliation of default service rates under the Price to Compare Default Service Rate Rider ("PTC Rider") proposed by OCA witness Serhan Ogur.

---

[1] FE PA was formed through the combination of several predecessor Pennsylvania electric utilities after approval by the Commission. On January 1, 2024, Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company (collectively, the "Predecessor Companies") merged into FE PA. Consistent with the approvals received from the Pennsylvania Public Utility Commission ("Commission"), FE PA was certificated as a public utility and authorized to provide public utility service in the territories of the Predecessor Companies.[2] *See* RESA St. No. 1 at pp. 49-53.

Second, I will respond to RESA witness Lacey's recommendation for a successor Customer Referral Program ("CRP") during the DSP VII term.

Q. Have you prepared any exhibits to accompany your rebuttal testimony?

A. No.

II. COSTS REFLECTED IN THE COMPANY'S DEFAULT SERVICE RATES

Q. Please summarize RESA witness Lacey's contentions regarding the costs included in the Company's Hourly Pricing Default Service ("HP") Rider rates.

A. Mr. Lacey contends that comparison of electric generation supplier ("EGS") prices to FE PA's Price-to-Compare ("PTC") is misleading because the Company improperly excludes administrative and overhead costs from default service rates and instead recovers them through distribution rates.[2] Mr. Lacey recommends that the Commission direct FE PA to include all of its costs to serve industrial customers in the HP Rider Administrative Charge.[3] This includes unbundling its overhead costs for billing, customer care, computers, customer information systems, desks, chairs, offices, and personnel spending time on default service issues.[4] He further recommends that the Commission investigate a complete unbundling of residential and commercial rates at a separate docket or over six months before implementation of DSP VII.[5]

---

2 *See* RESA St. No. 1 at pp. 49-53.
3 *Id*. at p. 49.
4 *Id*.
5 *Id*.

Q. Does the Commission identify what types of costs should be included in the PTC?

A. Yes. In a Policy Statement regarding default service and retail electric markets (52 Pa. Code § 69.1808), the Commission identified the types of costs that should be recovered from default service customers. As the Policy Statement explains:

> (a) The Price to Compare should be designed to recover all generation, transmission and other related costs of default service. These cost elements include:
>
> (1) Wholesale energy, capacity, ancillary, applicable RTO or ISO administrative and transmission costs.
>
> (2) Congestion costs will ultimately be recovered from ratepayers. Congestion costs should be reflected in the fixed price bids submitted by wholesale energy suppliers.
>
> (3) Supply management costs, including supply bidding, contracting, hedging, risk management costs, any scheduling and forecasting services provided exclusively for default service by the [electric distribution company ("EDC")], and applicable administrative and general expenses related to these activities.
>
> (4) Administrative costs, including billing, collection, education, regulatory, litigation, tariff filings, working capital, information system and associated administrative and general expenses related to default service.
>
> (5) Applicable taxes, excluding Sales Tax.
>
> (6) Costs for alternative energy portfolio standard compliance.[6]

Q. Has the Commission previously determined that the Company's PTC and HP Riders are consistent with Commission requirements?

A. Yes. The Commission considered the FE PA's default service rate design, including the costs that would be recovered in the PTC and HP Riders, multiple times in its approvals of the Predecessor Companies' prior default service programs. In addition, the Commission reviewed the Predecessor Companies' distribution rates twice, in 2014 and 2016, and FE PA's distribution rates in 2024, and determined that those distribution rates were just and reasonable.

[6] *See* 52 Pa. Code § 69.1808.

Q. Do you believe the proposed allocation of costs to the PTC and HP Riders in this proceeding is consistent with Commission requirements?

A. Yes, the allocation of costs between default service and distribution in this proceeding are consistent with the allocations previously approved by the Commission in Predecessor Companies' prior default service cases and distribution rate proceedings and in FE PA's recent distribution rate proceeding.

Q. Describe the Company's approach to allocating administrative costs between distribution and default service.

A. FE PA's allocation of costs between distribution and default service reflects established cost causation principles. Under the Pennsylvania Public Utility Code, FE PA has an obligation to provide default supply to all distribution customers who do not take generation service from an EGS. FE PA's customers are not distribution customers or default service customers—they are distribution customers who may or may not receive default service at any point in time on a moment's notice. As such, FE PA does not consider default service as a separate "business." If costs are incurred to support FE PA's distribution customers, whether shopping or non-shopping, and are not caused by fulfilling FE PA's obligation to provide default service, FE PA allocates the costs to distribution. If a cost is incurred because of fulfilling FE PA's default service obligations, FE PA allocates the cost to default service. This allocation is consistent with cost causation principles. Accordingly, RESA's request for the Commission to examine those cost allocations and direct further unbundling should be denied.

Q. Mr. Lacey observes that FE PA's HP Rider does not include administrative costs for billing and collection costs.[7] Please explain how the Company recovers these costs from customers.

A. Consistent with prior Commission approvals, billing, collection costs are recovered through distribution rates. Such recovery is appropriate for billing costs because customers receiving default service are also distribution customers and already receive a bill from FE PA. In addition, nearly 100% of the billing performed for EGS-supplied generation service in FE PA's service territory is through EDC consolidated billing, where the EGS does not issue its own bill and its charges are included in the bills issued by the Company. FE PA also assumes collection responsibility for the amounts owed to EGSs who participate in the Company's purchase-of-receivables ("POR") programs under which FE PA does not discount payments to EGSs to reflect collection costs. Uncollectible accounts expense attributable to default service and POR-participating EGS rates is recovered through FE PA's non-bypassable Default Service Support Rider. If billing and collections costs were separated into shopping and non-shopping categories, FE PA would expect to recover the shopping customers' costs directly from EGSs.

[7] *See* RESA St. No. 1, p. 49.

Q. Mr. Lacey argues the Company is improperly omitting administrative and general ("A&G") expenses from the HP Rider, such as those associated with Company executives and employees spending time on issues related to default service.[8] Do you agree?

A. No. FE PA's allocation of A&G expenses is appropriate and consistent with prior allocations that have been approved by the Commission. When A&G expenses are incurred to fulfill the Company's default service obligations, such as costs for external consultants and the independent evaluator, those costs are included in the PTC.

III. RECONCILIATION OF DEFAULT SERVICE RATES UNDER THE COMPANY'S PTC RIDER

Q. Ms. De La Rosa, in your direct testimony, you explained that the Company is proposing to continue to adjust and reconcile default service rates under its PTC Rider on a semi-annual basis. Have any parties taken issue with that proposal?

A. Yes. While Dr. Ogur supports semi-annual reconciliation of residential default service rates under the PTC Rider, he recommends that FE PA collect or refund the net overcollection or undercollection balance from each reconciliation period over a prospective 12-month period instead of six-month period with a one cent per kilowatt hour ("kWh") cap on the balance in either direction.[9] Dr. Ogur argues that his proposal will provide additional stability and certainty for residential default service customers, particularly at a time of high-capacity prices.[10]

---

8 *Id*.

9 *See* OCA St. No. 1 at pp. 34-36.

10 *Id*.

Q. Does the Company agree with Dr. Ogur's recommendation to use a 12-month refund or recovery period for the over/undercollection component of the Company's PTC and HP Riders, known as the E-Factor?

A. No. FE PA's proposal to continue to recover or refund the net balances of PTC Rider revenues minus costs over a six-month period appropriately achieves the Company's goal of mitigating volatility for residential and small default service customers, while maintaining the PTC Rider rate as a price signal correlating to the underlying wholesale supply costs for customers and EGSs. Dr. Ogur has not provided any analysis or other evidence supporting his conclusion that semi-annual reconciliation of PTC Rider rates with a twelve-month refund/recovery period for the E-Factor could provide more stable rates. Additionally, Dr. Ogur's proposal does not recognize that a larger amount of interest on over-or undercollections may accrue because the balance will be collected or refunded over 12 months instead of six months.

Q. Does the Company agree with Dr. Ogur's recommendation for the E-Factor rate be capped at one cent per kWh in either direction, with the remaining amounts above the one cent per kWh cap to be included in the subsequent period's reconciliation balance?[11]

A. No. Dr. Ogur's proposal could cause the reconciliation balance to compound and grow. Imposing a one cent per kWh cap in either direction on the E-factor rate could create a larger deferral balance in the subsequent PTC Rider period, perpetuating the one cent per kWh cap with no meaningful reduction of the deferral balance, especially in times of high-capacity prices and associated capacity proxy price true-ups. This would only perpetuate

[11] *See* OCA St. No. 1 at p. 36.

recovery over a more protracted period and at a higher cost to customers over the long term, with less nexus to the customers who should bear responsibility for the costs at that specific point in time. None of the Company's reconcilable riders have a cap on recovering prior period balances, and the PTC Rider should be no different.

IV. CUSTOMER REFERRAL PROGRAM

Q. Ms. De La Rosa, please summarize other parties' positions regarding the Company's proposal to discontinue the existing CRP as previously approved by the Commission.

A. The OCA and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") support the Company's proposal not to include a successor CRP in DSP VII given the drop in supplier participation and overall negative outcomes for shopping residential customers.[12] RESA, on the other hand, proposes that the Company implement a successor CRP and hold another collaborative to discuss how to expand the program and enroll 50% of new customers.[13]

Q. Does the Company agree with RESA's characterization of the collaborative that was held to discuss the CRP in accordance with the Commission-approved settlement of the Predecessor Companies' sixth default service proceedings at Docket Nos. P-2021-3030012 et al. (the "DSP VI Settlement") as an "initiative to close the program"[14]?

A. No. In my opinion, RESA's characterization of the collaborative is incorrect. As explained in my direct testimony, all parties to the DSP VI Settlement, including RESA, agreed that the CRP would end on May 31, 2027, and that the Company would address whether a successor CRP program should be implemented in its next default service proceeding. In

[12] *See* CAUSE-PA St. No. 1 at pp. 27-29; OCA St. No. 2 at pp. 5-8.
[13] *See* RESA St. No. 1 at pp. 58-61.
[14] *Id.* at p. 59.

accordance with the DSP VI Settlement, FE PA also convened a collaborative to compile and review CRP metrics, including supplier participation, customer enrollment levels, and the prices CRP customers pay during and after the 12-month CRP contract term.

On October 14, 2025, FE PA distributed data regarding its CRP assembled in accordance with the DSP VI Settlement to all active parties to the DSP VI proceeding, including several EGSs and RESA. That data showed the trend of declining supplier participation and relatively low customer interest discussed in my direct testimony. On October 30, 2025, FE PA held a collaborative meeting to further discuss the CRP data. RESA was represented at the meeting held to discuss the CRP data and did not address the data showing the lack of supplier interest in the program over the DSP VI term or offer any reasons why the CRP should be continued beyond its termination date of May 31, 2027 under the DSP VI Settlement. On November 7, 2025, counsel for FE PA emailed the group that participated in the October 30 collaborative (including RESA) requesting any feedback on the continuation of the CRP by November 18, 2025. FE PA did not receive any feedback from RESA. RESA had ample time to review the CRP data and bring recommended improvements for a proposed successor program to the collaborative but did not do so.

Q. Have any other EDCs in Pennsylvania terminated their CRP or standard offer program?

A. Yes. As of June 1, 2025, PPL Electric Utilities Corp. and Duquesne Light Company no longer offer standard offer programs in their service areas.

V. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

Customer Referral Program

REJOINDER TESTIMONY
OF
CARLIXTA DE LA ROSA

Q. Please state your name and business address.

A. My name is Carlixta De la Rosa, and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19605.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted written direct and rebuttal testimony and exhibits on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company"),[1] which have been designated as FE PA Statement Nos. 4 and 4-R and FE PA Exhibits CDL-1 to CDL-5. My background and qualifications are set forth in my direct testimony.

Q. Please describe the purpose of your testimony.

A. I will address the surrebuttal testimony offered by witness Frank Lacey on behalf of the Retail Energy Supply Association ("RESA") regarding the Company's Customer Referral Program ("CRP").

Q. Have you prepared any exhibits to accompany your rejoinder testimony?

A. No.

Q. Ms. De la Rosa, have you reviewed the surrebuttal testimony of Frank Lacey on behalf of RESA?

A. Yes, I have.

---

[1] FE PA was formed through the combination of several predecessor Pennsylvania electric utilities after approval by the Commission. On January 1, 2024, Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company (collectively, the "Predecessor Companies") merged into FE PA. Consistent with the approvals received from the Pennsylvania Public Utility Commission ("Commission"), FE PA was certificated as a public utility and authorized to provide public utility service in the territories of the Predecessor Companies.[2] *See* RESA St. No. 1-SR at p. 23.

Q. Please refer to page 23 lines 17-18, of Mr. Lacey's surrebuttal testimony where he states that the Company's response to OCA Set I, No. 27 shows that CRP participants achieved savings of more than $750,000 compared to what they would have paid under default service for the time period of January 2025 through February 2026.[2] Do you agree with Mr. Lacey's characterization of the data provided in column d of the Company's response?

A. I do not.

Q. Can you please explain what the data provided in the Company's response to OCA Set I, No. 27 Attachment A, part d represents?

A. Yes. In reviewing Mr. Lacey's testimony, the Company determined that the amount shown in OCA Set I, No. 27, Attachment A, part d represents the total amount paid for CRP participants for generation during the time period shown, not the difference between the PTC and the discounted price paid by CRP participants for generation during the same time period.

Q. Does this complete your rejoinder testimony?

A. Yes, it does.

[2] *See* RESA St. No. 1-SR at p. 23.

DIRECT TESTIMONY
OF
CARLIXTA DE LA ROSA

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Carlixta De la Rosa, and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19605.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as an Analyst - Rates and Regulatory Affairs - Pennsylvania. The Pennsylvania Rates Department provides regulatory support for FirstEnergy Corp.'s ("FirstEnergy") wholly-owned Pennsylvania electric distribution operating company, FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company"). FE PA consists of the Met-Ed, Penelec, Penn Power, West Penn and The Pennsylvania State University ("PSU") rate districts, with PSU being a sub-part of the West Penn rate district (individually a "Rate District" and in any combination the "Rate Districts").

Q. What is your educational background?

A. I have a Bachelor of Science degree in Business from Pennsylvania State University, and a Master of Business Administration degree from Alvernia University. I have over seventeen years of experience with FirstEnergy. My educational background and work experience are more fully described in Appendix A to this statement.

Q. Please describe your duties as Rates Analyst.

A. I am responsible for the development, coordination, preparation and presentation of the Company's accounting and financial data in its rate-related matters before the Pennsylvania Public Utility Commission ("Commission" or "PaPUC") and New York State Public

Service Commission. I am also responsible for tariff interpretation, tariff filings, and the design and development of retail electric rates.

Q. Have you ever testified before the Commission?

A. Yes. I have testified before the Commission in other rate-related matters, as shown in Appendix A to this statement.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FE PA. FE PA was formed through the combination of several predecessor Pennsylvania electric utilities after approval by the Commission. On January 1, 2024, Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the "Predecessor Companies") merged into FE PA (the "PA Consolidation"). Consistent with the approvals received from the Commission, FE PA was certificated as a public utility and authorized to provide public utility service in the territories of the Predecessor Companies.

Q. What is the purpose of your direct testimony?

A. My testimony will describe the following elements of the Company's proposed seventh Default Service Program ("DSP VII") that is the subject of this proceeding: (1) rate design and cost recovery; (2) the Customer Referral Program ("CRP"); and (3) other related matters.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. FE PA Exhibits CDL-1 though CDL-5 were prepared by me or under my supervision and are described in detail later in my testimony.

II. RATE DESIGN AND COST RECOVERY

Q. Please provide an overview of the Company's current default service rate design.

A. The default service rates for the Company's residential and commercial customer classes consist of a single flat per kilowatt-hour ("kWh") energy charge, which is charged through the Price to Compare ("PTC") Default Service Rate Rider ("PTC Rider"). The Company currently projects the cost of generation supply for residential and commercial default service customers with a demand less than 100 kW on a semiannual basis and adjusts PTC Rider rates on June 1 and December 1 each year. The PTC Rider rates are the basis that customers may use to evaluate competitive generation service offerings by electric generation suppliers ("EGSs").

The Company's industrial customer class default service rates are based upon the PJM Interconnection, LLC ("PJM") real-time hourly locational marginal price ("LMP") for each Rate District's respective PJM-designated delivery zone. The industrial customer class default service rates are charged through the Hourly Pricing ("HP") Default Service Rate Rider ("HP Rider").

Q. Has FE PA implemented any strategy to mitigate fluctuations in the PTC and HP Riders caused by over/under collections?

A. Yes. Over- and under-recoveries are driven by two principal factors: the difference between projected and actual supply costs and billing cycle lag. Customer billing cycles are not perfectly aligned with the actual incurrence of generation supply costs. Because customers are billed at different times throughout the month, the revenue from the month reflects sales from the subject month and the prior month that may have experienced higher or lower usage. This billing cycle lag results in a timing difference between revenue and expense

that can produce significant fluctuations in the PTC that are not directly related to the underlying cost of default service supply. FE PA uses a semi-annual, rather than quarterly, schedule for the reconciliation of over/under collection amounts for all classes to mitigate the potential volatility in default service rates.

Q. What costs does the Company recover under the default service rates currently in place?

A. The default service rates currently recover: (1) generation costs, certain transmission costs, ancillary service costs, and Alternative Energy Portfolio Standards Act compliance costs, as described by Company witness Ryan J. Rose in FE PA Statement No. 2; (2) supply management and administrative costs, as contemplated by 52 Pa. Code § 69.1808; (3) applicable taxes; and (4) a charge or credit, or "E-factor," for semi-annual reconciliation of any under or over-collection of actual revenues against actual costs for each class from prior rate periods.

Q. Did the Company consider consolidation of rates across Rate Districts as part of DSP VII?

A. Yes, but it was determined that each Rate District will continue to procure default service supply separately due to the pricing differences in each Rate District's geographic delivery zone at PJM. Therefore, the PTC and HP Riders will remain separate for each Rate District. However, the Company is proposing to consolidate the Consumer Education Charges

"CEC") component of the Default Service Support ("DSS") Rider, which is currently set to zero for all Rate Districts.

Q. Is the Company proposing any changes to its existing default service customer classifications of residential, commercial and industrial?

A. No. The Company will continue to procure default service supplies separately for each of the three retail customer classes. The rate schedules that comprise each customer class in the proposed DSP VII are consistent with the rate schedules approved by the Commission in the Predecessor Companies' sixth default service proceedings at Docket Nos. P-2021-3030012 (Met-Ed), P-2021-3030013 (Penelec), P-2021-3030014 (Penn Power), and P-2021-3030021 (West Penn) (collectively, "DSP VI").

Q. Is the Company proposing to maintain its existing default service rate design in DSP VII?

A. Generally, FE PA is adopting the same rate design employed in DSP VI, which the Commission has previously approved as consistent with the Pennsylvania Public Utility Code ("Code") and the Commission's default service regulations. The only changes the Company is proposing are limited tariff revisions: (1) to remove Network Integration Transmission Service ("NITS") costs from the default service suppliers' fixed-price auction products for all customer classes and include them as a separate component in the PTC and HP Riders for all customer classes as more fully described by FE PA witness Ryan Rose; (2) to modify the schedule for filing the PTC and HP Rider rates as a result of the proposed change in cost responsibility for PJM Interconnection, L.L.C. ("PJM") NITS charges to load serving entities; and (3) limited tariff revisions to align with the

procurement plan for DSP VII presented in the direct testimony of Company witness Ryan Rose (FE PA Statement No. 2).

Q. Please describe the proposed change to the Company's PTC Rider and HP Rider default service rates related to NITS costs.

A. Currently, default service suppliers are responsible for PJM charges for NITS and those costs are embedded in their prices for full requirements products, which FE PA recovers as part of the cost component in its bypassable PTC and HP Riders. Commencing June 1, 2027, FE PA will acquire NITS for its default service customer load and recover the associated PJM charges through the NITS component – instead of the cost component – of the PTC and HP Riders. FE PA's PTC and HP Riders currently provide that rate change filings will be made 45 days prior to the effective date or seven days after the last supply auction, whichever occurs later. PJM publishes NITS rates typically in January and June to align with transmission owner formula rate updates. Therefore, FE PA proposes to modify the PTC and HP Riders to provide for a filing date 45 days prior to the effective date, seven days after the last supply auction, or seven days after PJM publishes NITS rates applicable to load serving entities in the Rate Districts.

Q. Are you sponsoring any exhibits that show the proposed changes to the Company's tariff necessary to implement these changes to the PTC and HP Riders?

A. Yes. FE PA Exhibit CDL-1 shows the changes to the Company's PTC Rider, and FE PA Exhibit CDL-2 presents modifications to the Company's HP Rider.

Q. Is the Company requesting any waivers of the Commission's regulations to continue the semi-annual adjustment of default service rates under the PTC Rider, as well as the semi-annual reconciliation of the over/under collection component of the HP Rider?

A. Yes. Consistent with the waivers obtained in DSP VI, FE PA is requesting waivers pursuant to: (1) the Commission's regulation 52 Pa. Code § 54.187(i), default service rates shall be adjusted on a quarterly basis, or more frequently, for customers with load requirements between 25 and 500 kilowatts ("kW"); and (2) the Commission's regulation 52 Pa. Code § 54.187(j), default service rates shall be adjusted monthly, or more frequently, for customers with load requirements equal to or greater than 500 kW.

Q. Are the designs of the PTC Rider rates for the residential and commercial customer classes and the HP Rider rates for the industrial customer class consistent with the Commission's default service regulations and the Code?

A. Yes. The Commission's regulations at 52 Pa. Code § 54.187(d) state that default service rates may not use a declining block structure. For the residential class, the Code at 66 Pa.C.S. § 2807(e)(7) and the Commission's regulations at 52 Pa. Code § 54.187(h) provide that rates shall change no more frequently than on a quarterly basis. Consistent with these requirements, FE PA's proposed PTC Rider rates for the residential and commercial customers in each Rate District employ a flat per kWh rate design, with rates that will change on a semi-annual basis. The hourly-priced service offered under the HP Riders is consistent with Commission precedent, the Commission's regulations at 52 Pa. Code §§ 54.187(i) and (j), other applicable provisions of those regulations, and the Commission's

prior approval of the Predecessor Companies' customer class definitions and service offerings.

Q. Describe the Company's DSS Rider and the costs currently recovered through this rider.

A. The DSS Rider is a non-bypassable rider which recovers various categories of costs at each of the Rate Districts from all distribution customers. The four categories of costs consistent across all Rate Districts are: (1) the uncollectible accounts expense incurred through the provision of default service and on behalf of EGSs through the purchase of receivables programs for residential and small commercial customers; (2) retail enhancement costs for the CRP; (3) customer education costs; and (4) non-market based ("NMB") charges.[1] Additionally, the Penn Power Rate District may also recover any Federal Energy Regulatory Commission ("FERC")-approved Midcontinent Independent System Operator ("MISO") and MISO Transmission Expansion Plan ("MTEP") costs, PJM integration fees, and MISO exit fees associated with Penn Power's move from MISO to PJM.

Q. Is FE PA proposing any changes to its DSS Rider?

A. Yes. FE PA is proposing to eliminate the Penn Power Rate District's MTEP and MISO exit fees component, which is currently set to zero, as there are no remaining costs associated with Penn Power's move from MISO to PJM in 2011. Additionally, the Company is proposing to consolidate the CEC component of the DSS rider, which is currently set to zero for all Rate Districts. As mentioned below, FE PA is proposing to

[1] NMB Charges currently include FERC approved costs for: (i) PJM Regional Transmission Expansion Plan charges; (ii) PJM Expansion Cost Recovery charges; (iii) PJM charges for Reliability Must Run generating unit declarations and charges associated with plants deactivated on or after July 24, 2014; (iv) historical tie line, generation, and retail customer meter adjustments; (v) unaccounted for energy; (vi) any FERC-approved reallocation of PJM Regional Transmission Expansion Plan charges related to Docket No. EL05-121-009; and (vii) any other FERC-approved PJM charges billed by PJM that will not be reconciled through the PTC and/or HP Riders and as approved for recovery under the DSS Rider by the Commission.

eliminate the CRP as of June 1, 2027, but continue to maintain the Retail Enhancements as part of the DSS rider in order to provide the final reconciliation of items that may flow through this provision in the future.

Q. Are you sponsoring any exhibits that show the proposed changes to the Company's tariff necessary to implement the change to the DSS Rider?

A. Yes. FE PA Exhibit CDL-3 reflects the changes to the Company's DSS Rider.

Q. Is FE PA proposing any changes to its Solar Photovoltaic Requirements Charge ("SPVRC") Rider?

A. Yes. FE PA is proposing to eliminate its SPVRC Rider, which is applicable to the Met-Ed, Penelec and Penn Power Rate Districts because all legacy solar contracts have expired and the rider is no longer active. FE PA also proposes to eliminate any references to the SPVRC Rider throughout its tariff. FE PA completed the final reconciliation of the SPVRC Rider at Docket No. P-2025-3054284.

Q. Is the Company proposing any changes to the Electric Generation Supplier ("EGS") Coordination Tariff ("Supplier Tariff")?

A. Yes. The Company is making additions to Appendix A of the Supplier Tariff to include new PJM billing line items 1935 and 2935 related to emergency orders issued by the Department of Energy pursuant to section 202c of the Federal Power Act as discussed by Mr. Rose in FE PA Statement No. 2. Additionally, FE PA is proposing two supplier tariff changes to implement new protocols governing EGS arrangements with residential customers and the proposed changes to the Company's purchase of receivables ("POR") program discussed by Company witness David Young in FE PA Statement No. 1. Should the proposed changes to the Company's POR program be approved, the Clawback

Provision will be phased out as redundant. All of the foregoing changes are reflected in FE PA Exhibit CDL-4.

III. CUSTOMER REFERRAL PROGRAM

Q. Please provide an overview of the Company's CRP.

A. FE PA currently has a CRP for residential and small commercial customers that was first established in the Predecessor Companies' second default service proceeding, consistent with the Commission's guidelines in its Retail Markets Investigation.[2] The CRP provides eligible customers with an opportunity to select among a group of EGSs that have voluntarily chosen to offer customers a twelve-month contract priced at least 7% below the Company's applicable PTC at the time of the offer. Customers may terminate a CRP contract at any time without penalty, either to re-enroll in the CRP with a new rate, select another EGS, or return to default service.

Q. Did any parties raise concerns about the Rate Districts' CRP in the DSP VI proceeding?

A. Yes. In that case, the Office of Consumer Advocate ("OCA") and the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") opposed continuation of the CRP based on concerns about the prices CRP customers pay for electric supply after the initial 12-month contract. To address the OCA's and CAUSE-PA's concerns, under the Commission-approved settlement of the DSP VI proceeding ("DSP VI Settlement"), the Predecessor Companies agreed to: (1) continue the current CRP design until May 31, 2027; and (2) address whether a successor CRP should be

[2] *See Investigation of Pa.'s Retail Elec. Mkt.: Intermediate Work Plan*, Docket No. I-2011-2237952 (Final Order entered Mar. 2, 2012), at 31; *Joint Petition of Metro. Edison Co., Pa. Elec. Co., Pa, Power Co. and West Penn Power Co. for Approval of Their Default Serv. Programs*, Docket Nos. P-2011-2273650 et al. (Opinion and Order entered Aug. 16, 2021) at 137-140, 144-146.

implemented in FE PA's next DSP filing. In accordance with the DSP VI Settlement, FE PA also convened a collaborative to compile and review CRP metrics, including supplier participation, customer enrollment levels, and the prices CRP customers pay for competitive generation service during and after the 12-month CRP contract term.

Q. Did FE PA receive any feedback from the parties to the DSP VI Settlement following the collaborative?

A. Yes, CAUSE-PA provided feedback that the CRP program should be discontinued.

Q. Did FE PA receive any feedback from the parties to the DSP VI Settlement that the CRP should be continued beyond its termination date of May 31, 2027?

A. No.

Q. Is FE PA proposing to implement a successor CRP for DSP VII?

A. No. Based on FE PA's review of the data collected and reviewed during the collaborative, supplier participation in the CRP has been significantly declining and interest in the program from eligible customers is very low. As shown in Table 1 below, since the start of DSP VI on June 1, 2023, EGS participation decreased by more than 50% for three of the Rate Districts and 100% for the Penelec Rate District.

Participating EGS				
Rate	Rate	Billing Period		
District	Class	2023/06	2024/06	2025/06
Met-Ed	RS	12	8	6
	COM	5	4	0
Penelec	RS	12	2	0
	COM	5	3	0
Penn Power	RS	12	4	5
	COM	5	4	0
West Penn	RS	12	9	6
	COM	5	4	1

In addition, currently 10,367 residential customers are enrolled in the CRP, which represents only 3% of the Company's total eligible residential customers. Finally, as I noted

earlier in my testimony, none of the parties that attended the CRP collaborative requested that FE PA include a successor CRP in DSP VII.

IV. OTHER RELATED MATTERS

Q. What are the proposed effective dates of the tariff changes described in your testimony?

A. All changes to the Company's tariffs are proposed to be effective on June 1, 2027, which is the start of the delivery period for the proposed default service term.

Q. Are there administrative or general expenses associated with the proposed DSP that the Company intends to recover in its PTC and HP Riders?

A. Yes. FE PA Exhibit CDL-5 lists the estimated expenses by category for the proposed DSP VII. The total estimated expenses were allocated to each Rate District using forecasted kWh for the June 2027 through May 2031 period. Each Rate District's estimated expenses were then allocated by customer class using the kWh for the same period to determine the estimated amount to be recovered in the PTC and HP Riders.

V. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

Exhibit CDL-1

Price to Compare Default Service Rate Rider

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER

A Price to Compare Default Service Rate ("$PTC_{Default}$") shall be applied to each kWh of Default Service that the Company delivers to Customers under this rider as determined to the nearest one-thousandth of a cent per kWh. The $PTC_{Default}$ rate shall be billed to Customers receiving Default Service from the Company under this rider. The rates shall be calculated according to the provisions of this rider.

For service rendered June 1, XXXX~~2025~~ through November 30, XXXX~~2025~~ the $PTC_{Default}$ rates billed by Customer Class are as follows: (C)

Met-Ed		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), MS, Borderline Service, Street Lighting Service, LED Street Lighting Service, and Outdoor Lighting Service
Charge	$0.XXXXX~~11903 (I)~~ per kWh	$0.XXXXX~~11574 (I)~~ per kWh

Penelec		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), H, Borderline Service, Street Lighting Service, LED Street Lighting Service and Outdoor Lighting Service
Charge	$0.XXXXX~~11003 (I)~~ per kWh	$0.XXXXX~~11405 (I)~~ per kWh

Penn Power		
Customer Class	Residential	Commercial
Rate Schedule	RS, GS-V	GS-S, GS-M (PTC), PNP, PLS, SV, Outdoor Lighting Service and LED
Charge	$0.XXXXX~~11857 (I)~~ per kWh	$0.XXXXX~~12726 (I)~~ per kWh

West Penn

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER (continued)

The $PTC_{Default}$ rates by Residential or Commercial Customer Class will be calculated semi-annually for the six-month period ending March 31st to be effective for the six-month period beginning June 1st and for the six-month period ending September 30th to be effective for the six-month period beginning December 1st. The $PTC_{Default}$ rate shall be calculated by Customer Class in accordance with the formula set forth below:

$$PTC_{Default} = (PTC_{Current} + E) \times [1 / (1 - T)]$$

$$PTC_{Current} = (PTC_{Current\ Cost\ Component} \times PTC\ Loss_{Current}) + PTC_{Adm} +$$

$$PTC_{NITS}\ E = \{[(DS_{Exp1} + DS_{Exp2}) - PTC_{Rev} + DS_{Int}] / DS_{Sales}\}$$

Where:

$PTC_{Current}$ = The current cost component of the $PTC_{Default}$ rate grossed up for line losses calculated by Residential or Commercial Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

The computation of the $PTC_{Current}$ component of the $PTC_{Default}$ rate by Residential or Commercial Customer Class will use the following procedures:

$PTC_{Current\ Cost\ Component}$ = The current cost component of the $PTC_{Default}$ rate calculated by Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider. This rate will be determined by Customer Class using the projected weighted cost of Default Service supply acquired by the Company to serve Default Service load and any PJM charges related to the provision of Default Service.

$PTC\ Loss_{Current}$ = Distribution line losses for energy that are determined by the applicable Loss Factors specified below:

Rate District	Met-Ed		Penelec		Penn Power		West Penn	
Customer Class	Res	Com	Res	Com	Res	Com	Res	Com
Loss Factor	1.0515	1.0515	1.0573	1.0573	1.0661	1.0661	1.0910	1.0899

PTC_{Adm} = An administrative fee for applicable administration costs by Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER (continued)

PTC_{NITS} = When the Company purchases Network Integration Transmission Service from PJM on behalf of customers, a Network Integration Transmission Service Charge for Default Service, is determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

E = The Price to Compare Default Service Reconciliation Rate component by Customer Class. The rate determined to the nearest one-thousandth of a cent per kWh by Customer Class shall be applied to each kWh of Default Service delivered to retail Customers by Customer Class under this rider.

DS_{Exp1} = An allocated portion of the incremental start-up costs incurred by the Company through May 31, 2027 in connection with the Company's Default Service Supply Plan to provide Default Service amortized over the forty-eight (48) month period ending May 31, 2031, including but not limited to:

- Incremental start-up administrative costs including metering and billing costs incurred and other costs as necessary to provide service to Default Service Customers.
- Other start-up costs incurred to develop and implement the competitive bid process for the Default Service Supply Plan for Default Service including legal, customer notice, and consultant fees.
- The incremental administrative start-up costs incurred to implement the Time-of-Use Rider.

Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month that the over and under collection occurs, as reported in the Wall Street Journal, to the effective month that the over collection is refunded or the under collection is collected and included in the determination of the monthly amortized amount.

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER (continued)

DS_{Exp2} = The cumulative costs to provide Default Service incurred by the Company for the respective Customer Class for the six-month period ending two months prior to the effective date, including but not limited to the following:

- Payments made to winning bidders.
- Any PJM related charges including capacity, operating reserve, transmission-related costs other than Non-Market Based Services Transmission Charges identified in the Default Service Support Rider, and ancillary services associated with the acquisition of default service supply.
- All contingency plan implementation costs incurred during the supply period, including any PJM charges to implement the Company's contingency plans.
- An allocated portion of other costs incurred to develop and implement the competitive bid process for Default Service including legal, customer notice, and consultant fees.
- The net AEPS expenses incurred by the Company. ~~associated with the portfolio procurements of the supply needed from block and spot purchases. These net AEPS expenses will reflect the net proceeds of sales of AEPS credits purchased that exceed the AEPS credits needed to meet AEPS requirements.~~
- The cost of credit when the Company is considered by PJM to be the load serving entity.
- ~~Any cost incurred by the Company associated with any Commission-approved solar power purchase agreements and the administration of the Company's long-term solar procurement, including the costs associated with spot purchases to satisfy a fixed quantity of default service load. These costs will be recovered from the customers in the applicable procurement classes receiving an allocation of the solar energy and/or the SPAECs procured.~~

PTC_{Rev} = The cumulative revenues billed to Retail Customers by Customer Class for Default Service under the Default Service Supply Plan, excluding applicable Pennsylvania gross receipts tax, for the six-month period ending two months prior to the effective date billed under the respective Customer Class $PTC_{Default}$ rates.

DS_{Int} = The cumulative amount of carrying charges calculated on a monthly basis for the six-month period ending two months prior to the effective date by Customer Class. Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month that the over and under collection occurs, as reported in the Wall Street Journal, to the effective month that the over collection is refunded or the under collection is collected.

DS_{Sales} = The Company's projected Default Service kWh sales to Retail Customers by Customer Class for the six-month billing period that the E rate component of the $PTC_{Default}$ rate will be in effect.

PRICE TO COMPARE DEFAULT SERVICE RATE RIDER (continued)

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

Each change in the $PTC_{Default}$ rates will be filed with the Commission by the later of: (a) forty-five (45) days prior to the effective date of the rate changes or (b) seven (7) days after the last supply auction; or (c) seven (7) days after PJM publishes NITS rates applicable to load serving entities in the Rate Districts. The Company shall file details in support of the revised $PTC_{Default}$ rates.

At the conclusion of the duration of this reconciliation rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the $PTC_{Default}$ rates shall be subject to annual review and audit by the Commission.

Exhibit CDL-2

Hourly Pricing Default Service Rider

HOURLY PRICING DEFAULT SERVICE RIDER

AVAILABILITY:

The charges billed under this rider are applicable to all Customers on Rate Schedules 44, 46, GS-Medium (HP), GS-Large, GP, TP or GS-Small (Special Provision GSDS) who elect to take Default Service from the Company. These charges are also applicable to Customers on Rate Schedules GS-Small, and GS-Medium (PTC) on a voluntary basis who meet the metering requirements of this rider. Rates shall be billed under this rider on the next scheduled meter reading date after electing Default Service.

Rate Schedule GS-Small, GS-Medium (PTC) Customers electing service under this rider must have Smart Meter technology installed as part of the Company's Smart Meter Plan filed with and approved by the Commission.

Hourly Pricing Service Charges:

Customers participating in the Hourly Pricing Default Service Rider will be billed for usage based on the following calculation:

$$\text{Hourly Pricing Service Charges} = (HP_{\text{Energy Charge}} + HP_{NITS} + HP_{\text{Cap-AEPS-Other Charge}} + HP_{\text{Administrative Charge}} + HP_{\text{Unc}} + HP_{\text{Reconciliation Charge}}) \times [1 / (1-T)]$$

HP Energy Charge per kWh:

$$HP_{\text{Energy Charge}} = \sum_{t=1}^{n} (kWh_t \times (LMP_t + HP_{Oth}) \times HP_{\text{Loss Multiplier}})$$

Where:

n = Total number of hours in the billing period

t = An hour in the billing period

LMP = the "Real Time" PJM load-weighted average Locational Marginal Price for the Met-Ed, Penelec, ATSI (Penn Power), or APS (West Penn) Transmission Zone.

~~HP_{Oth} = $0.00400 per kWh for estimate of capacity, ancillary services, NITS, AEPS compliance and other supply components.~~

HOURLY PRICING DEFAULT SERVICE RIDER (continued)

HP Reconciliation Charge:

The HP Reconciliation Charge Rate ("E_{HP}") shall be applied to each kWh of Default Service that the Company delivers to Customers under this rider as determined to the nearest one- thousandth of a cent per kWh. The E_{HP} rate shall be included as a non-bypassable component billed to Customers receiving Default Service from the Company under this rider. The rate shall be calculated according to the provisions of this rider.

For service rendered June 1, 20XX~~25~~ through November 30, 20XX~~25~~, the E_{HP} rate is as follows: (C)

Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$X.XXXXX ~~(0.00985)~~ ~~(D)~~ per kWh	$X.XXXXX ~~(0.03684) (D)~~ per kWh	$X.XXXXX ~~(0.06069) (D)~~ per kWh	$X.XXXXX ~~0.00239 (I)~~ per kWh	$X.XXXXX ~~0.00239 (I)~~ per kWh

The E_{HP} rate will be calculated semi-annually for the six-month period ending March 31st to be effective for the six-month period beginning June 1st and for the six-month period ending September 30th to be effective for the six-month period beginning December 1st. The E_{HP} rate shall be calculated in accordance with the formula set forth below:

$$E_{HP} = [(DS_{HPExp1} + DS_{HPExp2}) - PTC_{HPRev} + DS_{HPInt}] / DS_{HPSales}$$

Where:

E_{HP} = The rate determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Customers under this rider.

DS_{HPExp1} = An allocated portion of the incremental start-up costs incurred by the Company through May 31st, 2027~~3~~ in connection with the Company's Default Service Supply Plan to provide Default Service amortized over the forty-eight (48) month period ending May 31st, 203127~~27~~ including but not limited to:

- Incremental start-up administrative costs including metering and billing costs incurred and other costs as necessary to provide service to Default Service Customers
- Other start-up costs incurred to develop and implement the competitive bid process for the Default Service Supply Plan including legal, customer notice, and consultant fees

Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month that the over and under collection occurs, as reported in the *Wall Street Journal*, to the effective month that the over collection is refunded or the under collection is collected and included in the determination of the monthly amortized amount.

(C) Change
(D) Decrease
(I) Increase

HOURLY PRICING DEFAULT SERVICE RIDER (continued)

DS_{HPExp2} = The cumulative costs to provide Hourly Pricing Default Service incurred by the Company for the six-month period ending two months prior to the effective date, including but not limited to the following:

- Payments made to winning bidders
- Any PJM related charges other than Non-Market Based Services Transmission charges identified in the Default Service Support Rider associated with the procurement of Hourly Pricing Default Service
- All contingency plan implementation costs incurred during the supply period
- An allocated portion of other costs incurred to develop and implement the competitive bid process for Default Service including legal, customer notice, and consultant fees
- The net AEPS expenses incurred by the Company
- The cost of credit when the Company is considered by PJM to be the load serving entity

PTC_{HPRev} = The cumulative revenues, excluding any revenues associated with the HP Uncollectibles Charge and applicable Pennsylvania gross receipts tax, for the six-month period ending two months prior to the effective date billed to Hourly Pricing Default Service Customers under this rider including the applicable E_{HP} rates.

DS_{HPInt} = The cumulative amount of carrying charges calculated on a monthly basis for the six-month period ending two months prior to the effective date. Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month that the over and under collection occurs, as reported in the *Wall Street Journal*, to the effective month that the over collection is refunded or the under collection is collected.

$DS_{HPSales}$ = The Company's projected Hourly Pricing Default Service kWh sales to Retail Customers for the six-month billing period that the E_{HP} rate will be in effect.

HOURLY PRICING DEFAULT SERVICE RIDER (continued)

Gross Receipts Tax:

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

General:

Each change in the E_{HP} rate as well as other rates within this rider will be filed with the Commission by the later of: (a) forty-five (45) days prior to the effective date of the rate changes or (b) seven (7) days after the last supply auction; or (c) seven (7) days a after PJM publishes NITS rates applicable to load serving entities in the Rate Districts.. The Company shall file details in support of the revised rates.

At the conclusion of the duration of this reconciliation rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the E_{HP} rate shall be subject to annual review and audit by the Commission.

Exhibit CDL-3

Default Service Support Rider

DEFAULT SERVICE SUPPORT RIDER

A Default Service Support ("DSS") rate shall be applied to DSS Sales delivered by the Company to Delivery Service Customers under this rider as determined to the nearest one-thousandth of a cent per kWh or dollar per kW NSPL, as applicable. The DSS rate shall be billed to Customers receiving Delivery Service from the Company under this rider. The DSS rates shall be calculated according to the provisions of this rider. The DSS Rider shall be non-bypassable.

For service rendered during the DSS Initial Computational Period and thereafter, the DSS Computational Year, the DSS rates billed by Rate Schedule are as follows:

Rate District	Met-Ed			
Customer Class	Residential	Commercial		Industrial
Rate Schedule	RS, GS-V	GS-S	GS-M, MS, Outdoor Area Lighting Service, STLT, LED, BRD	GS-L, GP, TP
Charge	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	$X.XXX ( ) per kW NSPL

Rate District	Penelec			
Customer Class	Residential	Commercial		Industrial
Rate Schedule	RS, GS-V	GS-S	GS-M, H, BRD, LED, Street Lighting, Municipal Street Lighting, Outdoor Area Lighting Service	GS-L, GP, TP
Charge	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	$X.XXX ( ) per kW NSPL

Rate District	Penn Power			
Customer Class	Residential	Commercial		Industrial
Rate Schedule	RS, GS-V	GS-S	PNP, GS-M, PLS, SV, SVD, SM, LED	GS-L, GP, TP, GS-S (GSDS)
Charge	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	$X.XXX ( ) per kW NSPL

Rate District	West Penn			
Customer Class	Residential	Commercial		Industrial
Rate Schedule	RS, GS-V	GS-S	GS-M, 51-58, 71, ~~72~~	GS-L, GP, TP, 44, 46
Charge	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	X.XXX ( ) cents per kWh	$X.XXX ( ) per kW NSPL

Rate District	PSU
Customer Class	Industrial
Rate Schedule	GP
Charge	$X.XXX ( ) per kW NSPL

(D) Decrease
(I) Increase

DEFAULT SERVICE SUPPORT RIDER (continued)

The DSS rates by rate schedule shall be calculated annually in accordance with the formula set forth below:

DSS rate = (UE ~~+ MPI~~ + CEC + NMB + RE + CB) x [1 / (1-T)]

The components of the formula are defined below:

Default Service Related Uncollectibles:

UE = A default service-related unbundled uncollectible accounts expense charge, determined by Customer Class and stated to the nearest one-thousandth of a cent per kWh to be applied to DSS Sales delivered by the Company to residential and commercial Delivery Service Customers under this rider. The UE reflects the default service-related portion of the uncollectible account expense based on revenues in the Company's distribution base rate case and the additional uncollectible accounts expense incurred by the Company as a result of providing Default Service under this tariff. This component of the DSS rate in this non-bypassable rider is non-reconcilable.

The unbundled uncollectible accounts expense associated with Default Service and a purchase of receivables program allocated to Delivery Service Customers on a non-bypassable, non-reconcilable basis will be Customer Class specific and will be adjusted annually on June 1 of each year based on the projected price of Default Service. Adjustments, if necessary, will be made to the uncollectible percentage in a future distribution base rate case or the start of the next Default Service Program, whichever occurs earlier.

The UE charges by Customer Class to be included in DSS rates are as follows:

Customer Class	Residential			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh

Customer Class	Commercial			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh	X.XXXXX ( ) cents per kWh

(D) Decrease
(I) Increase

DEFAULT SERVICE SUPPORT RIDER (continued)

Solar Photovoltaic Requirements Charges, Met-Ed, Penelec, & Penn Power only:

$$SPV = SPVE / S$$

Where:

SPV = The charge to be applied to Delivery Service Customers under this rider to recover or refund the balance of the cumulative over or under collection of the Solar Photovoltaic Requirements Charge Rider ("SPVRC") which was approved by the Commission in it's final order at Docket No. P-2025-3054284. The SPVRC is being recovered under this DSS Rider. The SPV rate will be effect on June 1, 2025 and will be amortized over the 12-month period ending May 31, 2026.

SPVE = The balance of the SPVRC that remains to be recovered from or refunded to customers projected for the DSS Computational Year

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The SPV rates to be included in DSS rates are as follows:

	Residential and Commercial		
Rate District	Met-Ed	Penelec	Penn Power
Charge	X.XXXXX cents per kWh	X.XXXXX cents per kWh	X.XXXXX cents per kWh

	Industrial		
Rate District	Met-Ed	Penelec	Penn Power
Charge	$X.XXXX per kW NSPL	$X.XXXXX per kW NSPL	$X.XXXXX per kW NSPL

DEFAULT SERVICE SUPPORT RIDER (continued)

Customer Education Charges:

$$CEC = (CEC_C - E) / S$$

Where:

CEC = The charge to be applied to Delivery Service Customers served under this rider for Customer Education Charges incurred by the Company.

CEC_C = Customer Education costs for the specific Customer Class to cover customer education costs associated with competitive market enhancements approved by the Commission.

E = The over or under-collection of the CECC that results from the billing of the CEC during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month. The over and under collection occurs, as reported in the Wall Street Journal, to the effective month that the over collection is refunded or the under collection is collected.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The CEC rates by Customer Class to be included in DSS rates are as follows:

~~Customer Class~~	~~Residential~~			
Customer Class~~Rate District~~	~~Met-Ed~~Residential	~~Penelec~~Commercial	~~Penn Power~~Industrial	~~West Penn~~PSU
Charge	X.XXX cents per kWh	X.XXX cents per kWh	X.XXX cents per kWh	X.XXX cents per kWh

~~Customer Class~~	~~Commercial~~			
~~Rate District~~	~~Met-Ed~~	~~Penelec~~	~~Penn Power~~	~~West Penn~~
~~Charge~~	~~0.000 cents per kWh~~	~~0.000 cents per kWh~~	~~0.000 cents per kWh~~	~~0.000 cents per kWh~~

~~Customer Class~~	~~Industrial~~				
~~Rate District~~	~~Met-Ed~~	~~Penelec~~	~~Penn Power~~	~~West Penn~~	~~PSU~~
~~Charge~~	~~$0.000 per kW NSPL~~	~~$0.000 per kW NSPL~~	~~$0.000 per kW NSPL~~	~~$0.000 per kW NSPL~~	~~$0.000 per kW NSPL~~

DEFAULT SERVICE SUPPORT RIDER (continued)

Non-Market Based Services Transmission Charges:

$$NMB = (NMB_C - E) / S$$

Where:

NMB = The charge to be applied to Delivery Service Customers served under this rider for Non-Market Based Services Transmission Charge costs incurred by the Company.

NMB_C = Forecasted NMB costs applicable to the Company's DSS Sales. Forecasted NMB costs shall include FERC approved costs for (i) PJM Regional Transmission Expansion Plan charges; (ii) PJM Expansion Cost Recovery; (iii) PJM charges for Reliability Must Run generating unit declarations and charges associated with plants deactivated after July 24, 2014, the approval date of the Company's Default Service Program at Docket No. (ME) P-2013- 2391368, (PN) P-2013-2391372, (PP) P-2013-2391375 and (WP) P-2013-2391378; (iv) historical tie line, generation, and retail customer meter adjustments; (v) Unaccounted for Energy; (vi) any FERC-approved reallocation of PJM Regional Transmission Expansion Plan charges related to Docket No. EL05-121-009; and (vii) any other FERC-approved PJM transmission charges billed to the Company by PJM that will not be reconciled through the Company's Price To Compare Default Service Rate Rider and/or Hourly Pricing Default Service Rider. Forecasted NMB costs are allocated to each Customer Class based upon each Customer Class's contribution to the total Company Network Service Peak Load.

E = The over or under-collection of the NMB_C that results from billing of the NMB during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month the over and under collection occurs, as reported in the *Wall Street Journal*, to the effective month that the over collection is refunded or the under collection is collected.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The NMB rates by Customer Class to be included in DSS rates are as follows:

Customer Class	Residential			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

Customer Class	Commercial			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

Customer Class	Industrial				
Rate District	Met-Ed	Penelec	Penn Power	West Penn	PSU
Charge	$X.XXXX ( ) per kW NSPL	$X.XXXX ( ) per kW NSPL	$X.XXXX ( ) per kW NSPL	$X .XXXX ( ) per kW NSPL	$X.XXXX (.) per kW NSPL

(D) Decrease

DEFAULT SERVICE SUPPORT RIDER (continued)

Retail Enhancements:

$$RE = (RE_C - E) / S$$

Where:

RE = The charge to be applied to Delivery Service Customers served under this rider for the Retail Enhancement Costs incurred by the Company.

RE_C = The Retail Enhancement Costs incurred by the Company to cover programming expenses and implementation costs associated with competitive market enhancements approved by the Commission.

E = The over or under-collection of the REC that results from billing of the RE during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly for the over or under collection at the prime rate of interest for commercial banking, not to exceed the legal rate of interest, in effect on the last day of the month the over and under collection occurs, as reported in the *Wall Street Journal*, to the effective month that the over collection is refunded or the under collection is collected.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The RE rates by Customer Class to be included in DSS rates are as follows:

Customer Class	Residential			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

Customer Class	Commercial

Charge	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

(D) Decrease
(I) Increase

DEFAULT SERVICE SUPPORT RIDER (continued)

Clawback Charge Credit:

$$CB = CB_C / S$$

Where:

CB = The credit to be applied to Delivery Service Customers related to the clawback provision, under the Default Service Program, which is collected by the Company from Electric Generation Suppliers. This credit will be amortized for each applicable DSS Computational Year.

CB_C = Clawback credits applied to each Customer Class eligible for the Company's POR to refund the clawback charges collected from Electric Generation Suppliers. The clawback charges are returned to customers when the Company's actual uncollectible expense was less than the amount of uncollectible expense recovered in base rates and the Default-Service Related Uncollectibles component of this Rider. CB will be applied to each Customer Class eligible for the Company's POR based upon each Customer Class's kWh.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The CB rates by Customer Class to be included in DSS rates are as follows:

Customer Class	Residential			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

Customer Class	Commercial			
Rate District	Met-Ed	Penelec	Penn Power	West Penn
Charge	X.XXXX (.) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh	X.XXXX ( ) cents per kWh

(D) Decrease
(I) Increase

DEFAULT SERVICE SUPPORT RIDER (continued)

Gross Receipts Tax:

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

Other Information:

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in Section 2 of this Tariff. For purposes of this Rider, the following additional definitions shall apply:

1. DSS Sales – The kWh or kW NSPL delivered during a billing month to all Delivery Service Customers, as applicable to each Rate Schedule billed under the DSS Rider.

2. DSS Computational Year – The 12-month period from June 1 through the following May 31.

3. DSS Reconciliation Year – The 12-month period ending March 31 immediately preceding the DSS Computational Year.

4. DSS Initial Computational Period – the period from May 3, 2015 through May 31, 2015 that the DSS Rider is in effect. Thereafter, the DSS Computational Year will be in effect.

The Company shall recalculate its DSS Rates annually and, based on that recalculation, shall file with the Commission, by May 1st of each year, revised Rates to become effective on June 1st of the same year unless the Commission orders otherwise. The revised DSS rates shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determining that its DSS rates, if left unchanged, would result in material over or under-collection of all costs incurred, or expected to be incurred, for DSS during the then current DSS Reconciliation Year, the Company may request that the Commission approve one or more interim revisions to its DSS rates to become effective thirty (30) days from the date of filing, unless the Commission orders otherwise.

At the conclusion of the period during which this DSS Rider is in effect, the Company shall be authorized to recover or refund at any time, any remaining differences between recoverable costs and revenues billed under this rider by charges or credits to be applied to customer's bills under such mechanism the Commission may approve, but uncollectibles, which are non-reconcilable under the terms of this rider, shall not be included in the final reconciliation.

Application of the DSS rates shall be subject to annual review and audit by the Commission.

~~**DEFAULT SERVICE SUPPORT RIDER (continued)**~~

~~**MTEP and MISO Exit Fees and PJM Integration Charges, Penn Power only:**~~

~~$MPI = \{[(MPI_{Exp1} + MPI_{Exp2}) - E] \times Adjustment\ Factor\} / S$~~

~~Where:~~

~~MPI = The charge to be applied to each Delivery Service Customer served under this Tariff for the Midwest Independent System Operator ("MISO") Transmission Expansion Plan ("MTEP") charges and MISO and PJM charges associated with the transition from MISO to PJM approved by FERC.~~

~~MPI_{Exp1} = The Company's cost of the MTEP charges assessed on the Company pursuant to the Open Access Transmission Tariff ("OATT") of MISO.~~

~~MPI_{Exp2} = The Company's (i) charges assessed under MISO's OATT that are associated with the Company's exit from the MISO control area and (ii) charges assessed under the PJM OATT that are associated with the Company's integration into the PJM control area. All such MISO exit fees and PJM integration fees charges approved by FERC shall not exceed $3.5 million, excluding carrying charges. The Company shall recover these charges plus applicable carrying charges over a minimum five-year period.~~

~~E = The over or under collection of MTEPs and MISO exit fees and PJM integration charges that result from the billing of the MPI portion of the DSS during the DSS Reconciliation Year (an over collection is denoted by a positive E and an under collection by a negative E), including applicable interest. Interest shall be computed monthly based upon 41 P.S. §202, the legal statutory interest rate, from the month the over or under collection occurs to the month that the over collection is refunded to or the under collection is recovered from Delivery Service Customers.~~

~~S = The Company's total DSS Sales to Delivery Service Customers projected for the DSS Computational Year.~~

~~The MPI Adjustment Factors and charges, by Customer Class, to be included in DSS rates are as follows:~~

~~Rate District~~	~~Penn Power~~		
~~Customer Class~~	~~Residential~~	~~Commercial~~	~~Industrial~~
~~Adjustment Factor~~	~~.4126~~	~~.3101~~	~~.2773~~
~~Charge~~	~~0.00000 cents per kWh~~	~~0.00000 cents per kWh~~	~~$0.000 per kW NSPL~~

Exhibit CDL-4

Electric Generation Supplier Coordination Tariff
(Relevant Pages)

DEFINITIONS (continued)

FirstEnergy ("FE") – the parent company of Ohio Edison Company, Cleveland Electric Illuminating Company, Toledo Edison Company, FirstEnergy Pennsylvania Electric Company, and Jersey Central Power and Light Company.

Hourly or Sub-Hourly Metering Equipment – electric metering equipment that supplies hourly or sub-hourly data of Customer consumption.

Individual Coordination Agreement – An agreement between the Company and a Registered EGS that arranges for the provision of Coordination Services.

Interest Index - an annual interest rate determined by the average of 1-Year Treasury Bills for September, October and November of the previous year.

Market Participant – has the same meaning as set forth in the PJM Tariff.

Meter Read Date - the date on which the Company schedules a meter to be read for purposes of producing a Customer bill in accordance with the regularly scheduled billing cycles of the Company, as may be modified from time to time.

MISO – Midwest Independent Transmission System Operator.

~~**MISO Exit Fees** – charges assessed under MISO's Open Access Transmission Tariff that are associated with ATSI's exit from the MISO control area. (PP only)~~

DEFINITIONS (continued)

~~**MTEP Charge**s – A transmission charge levied by ATSI or by Midwest ISO Transmission Owners pursuant to Attachment FF of the Midwest ISO Tariff. For MTEP Projects constructed by Midwest ISO Transmission Owners, the definition of MTEP Project shall include only transmission projects with respect to which FERC has approved the allocation methodology of a portion of the revenue requirement to Transmission Customers in the ATSI zone. (PP only)~~

Network Integration Transmission Service - Network Integration Transmission Service as set forth in the PJM Open Access Transmission Tariff and any direct Transmission Owner charged expense.

North American Energy Industry Standards Board ("NAESB", formerly known as the Gas Industry Standards Board, "GISB") – The Board which sets standards associated with the electronic method of communication for data transfer that allows information to be sent and received electronically using the Internet. This method must meet the following minimum criteria:

- Security and/or encryption of transactions and Customer information.
- Proof of transmission and receipt.
- Positive identity of sender and recipient (non-repudiation).
- Reliability.
- Data and file integrity.
- Network performance and availability.
- Recoverability and archiving of data.

PaPUC (or "the Commission") - The Pennsylvania Public Utility Commission.

PJM - PJM Interconnection, L.L.C., or any successor organization/entity thereto.

PJM Control Area – has the same meaning as set forth in the PJM Tariff.

5.4 Provisions relating to an EGS's Customers.

5.4.1 Arrangements with EGS Customers. EGSs shall be solely responsible for having appropriate contractual or other arrangements with their Customers necessary to implement Direct Access consistent with all applicable laws, PaPUC requirements, the PJM Tariff and this Tariff. The Company shall not be responsible for monitoring, reviewing or enforcing such contracts or arrangements.

Beginning June 1, 2023, consistent with Docket No. P-2021-3030012 (ME) P-2021-3030013 (PN), P-2021-3030014 (PP), P-2021-3030021 (WP), Customers enrolled in the Company's Pennsylvania Customer Assistance Program ("PCAP") are required to be enrolled in the Company's Default Service at the price-to-compare. Additionally, EGSs shall not charge any early termination, cancellation or other add-on fees to customers transitioning to PCAP.

5.4.2 Transfer of Cost Obligations Between EGSs and Customers. Nothing in this Tariff is intended to prevent an EGS and a Customer from agreeing to reallocate between them any charges that this Tariff imposes on the EGS, provided that any such agreement shall not change in any way the EGS's obligation to pay such charges to the Company.

5.4.3 Customer Obligations. Customers of an EGS remain bound by the rules and requirements of the applicable EDC Tariff under which they receive service from the Company.

- **5.4.4 Return of Residential Customers to Default Service**. For new duration contracts executed after June 1, 2027, the EGS must automatically transfer residential Customers to Default Service upon expiration of the contract unless the residential Customer affirmatively elects to remain with the EGS. In addition, commencing June 1, 2027, for all Customers on month-to-month variable rates, the EGS must submit an attestation that the Customer affirmatively elects to remain with the EGS, via EDI transaction, on a quarterly basis.

7. ENERGY SCHEDULES AND USE OF SCHEDULING COORDINATORS

7.1 Energy Schedules. The EGS, or its designated Scheduling Coordinator(s), shall be responsible for scheduling energy and purchasing all transmission and ancillary services as defined by the PJM Tariff necessary to get energy to the Customer's point of delivery pursuant to the service agreement for Network Integration Transmission Service under the PJM Tariff, as noted in Appendix A –Responsibilities for PJM Billing Line Items as Defined in Applicable PJM Agreement or Manual.

EGSs will no longer be responsible for PJM Regional Transmission Expansion Plan charges ("RTEPs") (PJM Tariff Schedule 12) and PJM Expansion Cost Recovery charges (PJM Tariff Schedule 13) billed for service rendered by PJM beginning June 1, 2013.

Beginning June 1, 2015, EGS will no longer be responsible for the following transmission costs: (1) PJM charges associated with reliability must run ("RMR") generating unit declarations and deactivation of plants deactivated after July 24, 2014, the date of the Commission approval of the Company's Default Service Programs in PaPUC Docket No.(ME) P-2013-2391368 , (PN) P-2013-2391372, (PP) P-2013-2391375, (WP) P-2013-2391378; (2) historical out of market tie line generation and retail customer meter adjustments; and (3) unaccounted for energy.

EGSs will not be responsible for any approved reallocation of PJM Regional Transmission Expansion Plan charges related to Docket No. EL05-121-009.

~~**7.2 Transition From MISO To PJM.** EGS will not be responsible for MTEP Charges or any MISO Exit Fees or PJM Integration Fees. In the event EGSs are assessed for such charges, the Company shall arrange for EGSs to receive credit equal to the assessed charges through PJM or reimbursement directly from the Company, in the Company's discretion. (PP only)~~

12.9 Purchase of EGS Receivables ("POR") Program. The Company will purchase the account receivables, associated with Basic Electric Supply. for any EGS that charges a Rate Ready rate that is at or below the Price To Compare at the time of the Customer's enrollment transaction or rate change transaction. The program will be applicable to residential and commercial Customers on Consolidated EDC Billing under the following rate schedules:

Rate Schedule	ME	PN	PP	WP
Residential Service RS	X	X	X	X
General Service GS-Small	X	X	X	X
General Service GS-Medium	X	X	X	X
Borderline Service	X	X		
Street Lighting Service	X	X		
Street Lighting Service-SV			X	
Street Lighting Service-SVD			X	
Street Lighting Service-SM			X	
Private Outdoor Lighting Service PLS			X	
Ornamental Street Lighting Service	X	X		
Outdoor Lighting Service	X	X		
Municipal Service	X	X		
51-58 and 71				X
GS-V	X	X	X	X

Provided that the Company is able to bill EGSs for all fees as provided in Section 12.9(f), the POR will be "non-recourse", except as provided for under Section 12.9(g). To the extent the Company has to provide any consumer protections other than those provided for under Chapter 14 of the Public Utility Code and Chapters 55 and 56 of the Commission's regulations, 52 Pa. Code §§ 55.1 and 56.1 et. seq., the costs will be borne by the EGSs. The Company will purchase only those receivables that are associated with basic electric supply services and not receivables associated with charges for other products or services. The Company has the right to withhold from the POR payment to an EGS an amount equal to any undisputed outstanding and unpaid balance in excess of thirty (30) or more days associated with EGS obligations to the Company as provided for in Section 12.2.

Suppliers serving both industrial and commercial/residential Customers on Consolidated EDC Billing would need a DUNs number. EGSs will not deny service to residential customers whose accounts are included in the POR program for credit-related reasons and will not ask residential customers for deposits separate from any deposit required by the Company pursuant to Chapter 14 and Commission regulations.

The Company will purchase receivables only for service rendered on or after June 1, 2011. Receivables for service rendered before June 1, 2011 cannot be used for termination purposes. For Penn Power Rate District.

(a) **Eligibility:** The POR program will be available only for EGSs who employ the Company's Consolidated EDC Billing option and charges a Rate Ready rate that is at or below the Price To Compare at the time of the Customer's enrollment transaction or rate change transaction. Participation in the Company's POR program will be mandatory for any EGS that does employ the Consolidated EDC Billing option.

(b) **Timing of Payments:** Payments to EGSs will be made based on the current amount that is billed and owed by the Customers and will be paid forty (40) days after invoicing the Customer. The POR payments to EGSs will be subject to the Clawback Provision provided for in Section 12.9(g).

Classification of Non-Residential Default Service Customer-Generators

REBUTTAL TESTIMONY
OF
GREGORY F. HUSSING

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Gregory F. Hussing, and my business address is 341 White Pond Drive, Akron Ohio 44320.

Q. Can you please describe your professional and education background?

A. Yes. I am employed by FirstEnergy Service Company as Director – FE Transmission. I have a Bachelor of Science degree in Electronic Engineering Technology from the University of Akron and a Master's degree in Business Administration from the University of Akron. I have been employed by subsidiaries of FirstEnergy Corp. ("FirstEnergy") for over 39 years holding various positions in Distribution & Transmission Operations, Market Settlements, Rates and Regulatory Affairs, Revenue and Load Forecasting, Information Systems, Customer Service, Generation & Load Interconnection, Federal Energy Regulatory Commission ("FERC") & PJM Interconnection, LLC ("PJM") policy and technical support, and PJM Regional Transmission Expansion Major Projects Group.

From 1987 through September of 2004, I held various positions, including Director & Manager of Distribution and Transmission Metering, Director & Manager of Market Settlements and Director & Manager of Transmission Operations. From October of 2004 through February of 2009, I held the positions of Director of State Rates and Regulatory Affairs and Director of Regulatory Analytics & Revenue Forecasting. From March 2009 through September of 2015, I held the position of Director of IT managing FirstEnergy's Transmission, Distribution and Customer Service systems. From October 2015 through

May of 2019, I held the positions of Director of Customer Contact Centers and Director Customer Management & Billing supporting FirstEnergy's distribution companies' Customer Service functions. In June 2019, I joined the FERC & PJM Policy and Technical Support organization and assumed my current position in April 2025.

Q. Have you previously submitted testimony in this proceeding?

A. No.

Q. Please describe the purpose of your testimony.

A. The purpose of my rebuttal testimony is to respond to various issues in connection with FirstEnergy Pennsylvania Electric Company's ("FE PA" or the "Company") seventh default service program ("DSP VII") raised in the direct testimony of the Coalition for Community Solar Access and Solar Energy Industries Association (collectively, the "Joint Solar Advocates" or "JSA") and the Customer Generator Coalition ("CGC").[1]

Specifically, I will address the issues relating to assertions that non-residential customer-generators provide incremental significant value in reduced default service costs for energy, capacity and transmission that may offset the costs of net metering compensation to those customer-generators under FE PA's Price to Compare Default Service Rate ("PTC") Rider.

Q. Have you prepared any exhibits to accompany your testimony?

A. No.

[1] The CGC consists of Sunrise Airport Road LLC, Sunrise Forrester Road LLC, Sunrise Franklin Road LLC, Sunrise Harlansburg Road LLC, Sunrise Hendersonville Road LLC, Sunrise McCurdy Road LLC, Sunrise Perry Highway LLC, Sunrise Sandy Lake Greenville Road LLC, Sunrise Sandy Lake Polk Road LLC, and Sunrise Springfield Church Road LLC.

II. NET METERED EXCESS GENERATION AND ENERGY COSTS

Q. Please summarize the views of JSA witness Thomas Michelman regarding the effects of excess generation on default service energy costs.

A. Mr. Michelman asserts that FE PA does not properly reflect the effects of net metered generation on energy supply costs, contending that FE PA has failed to include such benefits in costs found in the "Payment to Winning Bidders" line in Figure 1 of his testimony and more generally in FE PA Exhibit DMY-7 included in FE PA witness Young's direct testimony.[2] In support of his contention, Mr. Michelman provides an example in which in which he asserts that a customer-generator's excess generation "serves part of the 10,000 kWh in consumption from the non-generating customer."[3] Based on that example, he asserts that FE PA is substantially overstating the costs of net-metered customer-generators.[4]

Q. Do you agree with Mr. Michelman?

A. No. Excess generation does not "serve" a single customer but is an aggregate load reduction mechanism. There are no controls, no dispatch signals, or any kind of balancing function, nor is there any certainty of where any excess generation from a customer-generator might flow since power adjusts across the entire distribution network serving both default service customers and shopping customers. For non-generating customers, it does not reduce the amount of energy they have consumed.

Default service ("DS") suppliers are paid for the amount of load they served as measured by each customer's metered load. If there is excess customer generation and an

---

2 *See* JSA St. No. 1 at pp. 10, 14.
3 *Id*. at p. 13.
4 *Id*. at p. 14.

associated aggregate load reduction established through the financial PJM settlement process, the load reduction credit which FE PA receives from PJM (which is valued at locational marginal pricing, or "LMP") is included in Figure 1 in Mr. Michelman's direct testimony – but in the calculation of "Net Metering Costs (Credits)," not "Payment to Winning Bidders." The amount received from PJM is allocated to each default service customer class based on the metered excess generation of that class in each billing period.

Customers thus receive the benefit of any aggregation load reduction that may be derived from excess customer generation of other customers in their default service class.

While Figure 1 is thus correct, I understand that Mr. Young's projection of future costs of customer-generators in FE PA Exhibit DMY-7 should include an amount that reflects the aggregate load reduction credit that may be received from PJM under current settlement procedures. I understand that FE PA witness Young has made a correction to his exhibit to reflect PJM aggregate load reduction credits, which he addresses in his rebuttal testimony.

III. NET METERED EXCESS GENERATION AND CAPACITY

Q. Please summarize Mr. Michelman's contention that excess generation also reduces capacity costs.

A. In his testimony, Mr. Michelman describes the 5 coincident peaks ("5CP") mechanism by which PJM determines capacity costs using a customer's Peak Load Contribution ("PLC").[5] He argues in favor of a "negative PLC" for customer-generators and that the asserted capacity benefits of customer generation should be included in calculating the benefits of net metering.[6]

[5] *See* JSA St. No. 1, at p. 15.
[6] *Id.*, at pp. 28, 51-52.

In supporting his argument for a negative PLC, Mr. Michelman contends that failure to recognize the contribution of customer-generators results in a "loss" of this assumed benefit to customers of other utilities in the same PJM zone.[7] He contends that because the overall capacity requirements are reduced but the benefit of doing so is not properly kept within the utility serving the customer-generator, customers of other utilities pay less for capacity.[8]

Q. Do you agree that a negative PLC is appropriate in evaluating customer generation?

A. No, for several reasons. First, it is important to understand that the PLC is a cost allocation mechanism which is used to assign each customer a share of system capacity costs. If a customer-generator's PLC is reduced through a negative PLC, then another customer, presumably a non-customer-generator in the same customer class, will pay more. It appears that Mr. Michelman understands this, as he acknowledges that the allocation of capacity costs via PLC is an accounting construct.[9]

Second, Mr. Michelman's suggestion that the Pennsylvania Public Utility Commission ("Commission") should rely on assumed solar generation by a customer-generator to calculate a dollars per megawatt year benefit ignores the fact that there is no certainty that the customer-generator will be providing excess generation at the future peak which the 5CP mechanism is designed to address.[10] Notably, Mr. Michelman does not propose that customer-generators should pay any penalty if they do not perform, as other entities with a capacity obligation do.

---

7 *Id.*, at p. 23 & 27.
8 *Id.*
9 *See* JSA St. No. 1 at p. 21.
10 *Id.* at p. 19.

In short, Mr. Michelman's proposal for a negative PLC is essentially to modify FE PA's methodology and introduce other subsidies for customer-generators. Even assuming there are benefits, wholesale PJM market PLC activity does not provide support for the continued compensation of customer-generators under the PTC Rider instead of the Company's Hourly Pricing Default Service ("HP") Rider. To the extent customer-generators have provided a benefit, that benefit is realized through load aggregation and the value of that generation is reflected in credits as I previously discussed and no additional modification to Mr. Young's calculations is appropriate to address asserted capacity benefits of customer generation.

Q. Is Mr. Michelman correct that customers of other utilities, even in other states, benefit because FE PA does not assign a negative PLC?

A. Mr. Michelman's argument does not cure the problems with using a negative PLC. While FE PA customers in one particular rate district might have a lower overall capacity cost if customer-generators receive a negative PLC in comparison to the customers of other utilities in the PJM zone, the costs are still shifted to other customers within the rate district. In any event, his assumptions are incorrect; in PJM zones where there are multiple utilities, FE PA and its affiliates provide PJM load grouped by utility and load-serving entity.

Q. Mr. Michelman notes that the Commission has approved a negative PLC for customer-generators served by UGI Utilities, Inc. ("UGI").[11] He also states that FERC has approved negative PLCs in Commonwealth Edison's ("ComEd's") service territory.[12] Why should the Commission permit differentiated treatment in FE PA's service territory?

A. It is my understanding that negative PLCs in those Commission proceedings were established through settlements, and UGI opposed negative PLCs in testimony. While the Commission approved an overall settlement in UGI, it did not specifically address the issues associated with a negative PLC.

FE PA's approach of assigning zero instead of negative load is consistent with PJM's established methodology. Negative PLCs could artificially reduce the Company's load obligation and shift risk and cost inequities to other customers. I note that behind-the-meter generation is not a PJM capacity resource and dispatchable by PJM, and thus customer-generators do not directly reduce PJM's forward capacity resource requirements.

Mr. Michelman's comparison of a negative PLC for FE PA to a negative PLC available in the service territory of ComEd is not an "apples to apples" comparison. FE PA procures default service supply, while in ComEd's service area the Illinois Power Agency, not the local utility, procures default service supply.

[11] *Id.* at p. 28.
[12] *Id.*

IV. METERED EXCESS GENERATION AND TRANSMISSION COSTS

Q. Please describe Mr. Michelman's proposal for a negative Network Service Peak Load ("NSPL").

A. NSPLs are used to calculate and allocate transmission costs and are based on a customer's contribution to peak transmission demand. Mr. Michelman makes a similar argument that customer generation during the coincident peaks used to establish NSPLs reduces aggregate net load.[13] He also makes the same arguments that failure to provide a negative NSPL to customer-generators leads to subsidies to customers of other utilities, and notes that both the FERC and the Commission have permitted utilities to provide negative NSPLs.[14]

Q. Do you agree that negative NSPLs are appropriate?

A. No, I disagree for the same reasons I have provided as to why negative PLCs should not be used. As with capacity costs, the NSPL framework is an accounting construct, and the benefits from solar generation are uncertain; allocating transmission costs based on negative NSPL is not appropriate.

Q. Mr. Michelman quotes from a FE PA discovery response to suggest that FE PA acknowledges that reductions in aggregate demand can reduce transmission costs.[15] Is he correct, and if so, does that justify a negative NSPL?

A. No. As reflected in the discovery response provided in Exhibit TM-7, as a theoretical matter, additional generation can theoretically reduce overall transmission allocation costs in PJM. However, as the discovery response explains, any actual reduction in allocated

[13] *See* JSA St. No. 1 at pp. 28-29.
[14] *Id*.
[15] *Id*. at p. 38.

cost is dependent upon the actions of other entities; moreover, any such reduction would be very dependent on location, timing, and other factors. Any such reduction is uncertain, whereas Mr. Michelman's proposal is about reallocating actual current costs. As with PLCs, it would just result in a different cost allocation – and another subsidy for customer-generators.

VII. REQUIREMENT TO MODIFY FE PA PLC AND NPSL CALCULATIONS

Q. Mr. Michelman also proposes that the Commission should direct FE PA to allow negative PLCs and NPSLs in order to comply with "cost-based ratemaking" and to achieve "least-cost supply procurement" and to address his other concerns with the lack of a negative NSPL.[16] Do you agree with these recommendations?

A. No, I do not. For the reasons I have explained, negative PLCs and NPSLs are inappropriate in light of the actual benefits provided by customer-generators are should not be adopted.

VIII. CONCLUSION

Q. Does this conclude your testimony?

A. Yes, it does.

List of Topics Addressed

Negative Peak Load Contributions

REJOINDER TESTIMONY
OF
GREGORY F. HUSSING

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Gregory F. Hussing, and my business address is 341 White Pond Drive, Akron Ohio 44320.

Q. Mr. Hussing, have you reviewed the surrebuttal testimony of James Heidell on behalf of the Customer-Generator Coalition ("CGC")?

A. Yes, I have.

Q. On pages 9-10 of his surrebuttal testimony, Mr. Heidell refers to your testimony opposing negative peak load contributions ("PLCs") for customer generator capacity and states that he understands you believe that "there is no certainty of the peak load reduction and that the PJM market does not provide compensation for PLCs."[1] Is that a correct characterization of your testimony?

A. No. I did state that there is no certainty that a customer-generator will be providing excess energy at a future PJM Interconnection, LLC ("PJM") coincident peak. I did not state that "the PJM market does not provide compensation for PLCs"; instead, I explained that, with respect to capacity and transmission, the PLC is an accounting construct. Incorporating negative PLCs into that accounting construct will generally shift costs between customers.

[1] *See* CGC St. No. 1-SR at pp. 9-10.

Q. Mr. Heidell suggests that "it is important to distinguish between certainty and reasonable probability" with respect to capacity credit and cites a PJM report for the proposition that PJM calculates and updates an effective load carrying capability ("ELCC") for different types of solar projects. He also suggests that FirstEnergy Pennsylvania Electric Company ("FE PA") consider using ELCC to evaluate the 5 coincident peaks ("5CPs") capacity contribution of customer-generators.[2] How do you respond?

A. Mr. Heidell's testimony underscores why the Pennsylvania Public Utility Commission ("Commission") should not assume that customer-generators will reduce the 5CPs. In PJM, ELCC is a method to calculate the contribution of resources to overall system reliability. As Mr. Heidell notes in his testimony, PJM has actually ***reduced*** the ELCC for tracking solar systems from 11% to 8%.

Q. Mr. Hussing, have you also reviewed the surrebuttal testimony of Thomas Michelman on behalf of the Joint Solar Advocates?

A. Yes, I have.

Q. Mr. Michelman asserts that you do not appear to understand the basics of his proposal for negative PLCs for customer-generators and how those negative PLCs can reduce default service capacity costs and the capacity and transmission components of the Price to Compare Rider rate.[3] How do you respond?

A. As I noted in my rebuttal testimony, Mr. Michelman agrees with me that the PLC is simply an accounting construct used to assign PJM obligations. Customer PLCs are summed and

---

2 *Id.*

3 *See* JSA St. No. 1-SR at pp. 25-26. I note that the page numbering of Mr. Michelman's surrebuttal testimony starts on page 12 (not page 1).

scaled to meet a zonal target established by PJM. FE PA provides aggregated PLCs and Network Service Peak Loads for the applicable rate district and load-serving entities, which in aggregate may be higher or lower than the zonal target established by PJM.

In his surrebuttal testimony, Mr. Michelman does not dispute my basic point. Even assuming that some portion of customer generation will align with PJM coincident peaks in the future, assigning negative PLCs to customer-generators can shift cost responsibility to other customers, including other default service customer classes.

In addition, as I also noted in my rebuttal testimony, assuming a dollar per megawatt benefit based on assumptions that future solar generation will align with future coincident peaks is not appropriate. While Mr. Michelman has performed a quantitative analysis of historical solar generation incorporating solar tracker assumptions, I agree with the Office of Consumer Advocate's witness Serhan Ogur in his surrebuttal testimony that it is entirely unclear how such "negative loads" would be reflected in future PJM zonal targets.

Q. Mr. Michelman says that your statement that negative PLCs will create additional subsidies for customer-generators is the "exact opposite" of his proposal.[4] Is he correct?

A. No. If the capacity costs allocated to the class in which customer-generators belong are reduced due to negative PLCs, all members of that class – including customer-generators receive an additional subsidy.

[4] *Id.* at p. 25.

Q. Mr. Michelman also appears to take issue with your views of his calculation of avoided capacity and transmission costs using average capacity factors, suggesting that FE PA is comfortable with such values in its own analyses. Do you have a response?

A. My colleague Mr. Young used average capacity factors to determine the amount of excess generation from increasing numbers of "no load" solar systems for which customers would have to pay under the Price-to-Compare Rider. Mr. Michelman uses average capacity factors to predict solar generation but then also assumes that the associated intermittent solar generation will align with PJM coincident peaks. Those are significant additional assumptions that he wants the Commission to accept.

Q. Mr. Michelman also argues that your discussion of negative PLCs adopted by UGI Electric Utilities ("UGI") and Commonwealth Edison do not provide any basis to reject negative PLCs for FE PA.[5] Is he correct?

A. No. I acknowledge that UGI chose to implement negative PLCs. While I am not a lawyer, there does not appear to have been any specific Commission review of this issue. With respect to Commonwealth Edison, my understanding is that Commonwealth Edison adopted a negative PLC to facilitate capacity-related payments to net metering customers required by new Illinois law.

II. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

DATE: **October 9, 2025**
TO: **CIFP-LLA**
FROM: **PJM IMM.**
SUBJECT: **PJM CIFP Proposal**

The current tight/short conditions in the PJM Capacity Market are almost entirely the result of large data center load additions, both actual historical and forecast.[1] [2] The current supply of capacity in PJM is not adequate to meet the demand from large data center loads and will not be adequate in the foreseeable future. There is a market solution to the issues created by the addition of unprecedented amounts of large data center loads that does not require a massive wealth transfer. That solution is to require large data center loads to bring their own new generation. It is essential to have a pragmatic market solution that allows data centers to come to market as quickly as feasible and that is consistent with and sustains efficient and competitive PJM markets rather than to create the conditions for a return to cost of service regulation.

It should not be assumed that PJM is required to allow the interconnection of large loads that cannot be served reliably. The result of such a path would be an unreliable system that imposes costs on all the other PJM customers. That assumption is the premise on which the other CIFP-LLA options are based. If PJM does not believe that PJM has the authority to implement the requirement that new large loads will not be interconnected if the loads cannot be served reliably, PJM should file with FERC to ask for clarification. The requirement is consistent with, and required by, the definition of just and reasonable rates.

The solution is not to create reliability issues and wealth transfer issues by clearing the capacity market at the maximum price and at a quantity less than the reliability requirement. Status quo, co-location, cost of service, and demand side options all ignore the real issue and exacerbate reliability issues and customer cost issues. The options that accept the premise that PJM must interconnect new large data center loads that cannot be served reliably means by definition that reliability will be degraded. PJM will be in the position of allocating blackouts rather than ensuring reliability.

PJM should not permit the interconnection of large new data center loads if they cannot be served reliably. That means that the supply of capacity must be adequate to meet the total load

2 See "Analysis of the 2026/2027 RPM Base Residual Auction - Part A," ("Part A") (October 1, 2025) <https://www.monitoringanalytics.com/reports/Reports/2025/IMM_Analysis_of_the_20262027_RPM_Base_Residual_Auction_Part_A_20251001.pdf> .

© Monitoring Analytics 2025 | www.monitoringanalytics.com

including the large new data center loads consistent with the defined reliability requirement. In order to implement this approach, PJM should establish an interconnection queue for large new data center loads. Requested interconnections would be studied for both transmission system reliability and for capacity reliability. Loads would not be permitted to interconnect unless there is adequate capacity to serve them reliably. If large new data center loads want an expedited interconnection process, loads should be required to bring their own new generation.

The market solution is to require new large data center loads to bring their own new generation with locational and temporal characteristics matched to their load profile. The generation must be able to serve the actual hourly load of the data centers without transmission constraints. The generation must be deliverable to the system and deliverable to the new load. The generation must match the energy requirements of the data centers for all hours of the year. The added capacity would equal the load plus the required reserve margin. In the absence of that requirement, some or all of the costs of serving the new large data center loads would be imposed on other customers. The additional new generation would be UCAP MW defined by ELCC.

PJM would establish an expedited interconnection process for the new generation and for the new load. Both would be added to the system at the same time in order to minimize the impacts on other customers. The large new data center loads and their new generation would be studied and interconnected as quickly as possible. This requires cooperation and coordination among PJM, transmission owners, EDCs and state regulatory authorities.

While improving the load forecasting process is an important goal, simply improving the load forecasting process does not eliminate the issues created by the interconnection of large new data center loads without matching generation. Even if the load forecast were perfect, the impact on reliability issues would remain. The load forecasting process will remain significantly uncertain regardless of any improvements. The uncertainty in the current load forecasting process that results from the uncertainty about large new data center load additions would be eliminated by the bring your own new generation option. If the data centers do bring their own generation but the data centers do not materialize, the system is better off and there is no harm from the incorrect forecast. The bring your own new generation option requires a financial and physical commitment to the reliability of the grid that eliminates the current concerns about the forecasting process.

One of the many issues that have not been addressed to date and would not be addressed by other options is whether Part V (RMR) obligations would be incurred in order to serve large new data center loads. This includes Part V RMR obligations and Section 202(c) obligations. Such obligations would not be incurred under the bring your own new generation option. Such obligations would be incurred under the other options. The RMR cost is another significant subsidy that other load could be required to pay to support large data center load additions.

All of the currently identified options require PJM to plan the transmission system to meet large data center loads consistent with the RTEP and require all customers to pay an allocated share of the transmission upgrades required to serve large data center load additions.

The bring your own new generation option will also reduce the impact on the energy market costs of all other PJM customers that would result from proposals that do not include new generation.

Demand side options, including DR and PRD, are not equivalent to new generation. If there were to be a demand side option, the new large data centers would have to agree to be interrupted whenever capacity is needed to serve the other loads that paid for capacity, at a reasonable energy price and not limit interruptions to emergencies or to the limited run hours of backup generation. Those non-limited interruptions could be frequent given that current forecasts for additional new large data center load are approximately 30,000 MW.[3] Demand side resources are not subject to market power mitigation and thus large new data center loads if defined as demand resources could exercise market power in the capacity and energy markets.

The Market Monitor recommends that new data center load be required to bring their own new generation. If that recommendation were adopted, the reliability and market price impacts of data center load growth on other customers would be limited, although the existing impact of the already embedded data center load would remain. In addition, the impact of the uncertain forecast of data center load on other customers would be limited or eliminated, and the slower underlying dynamic of organic load growth and incentives would play out.[4] Under this option, data centers would enter into bilateral contracts with developers to build generation with locational and temporal characteristics reasonably matched to their load profile. The capacity would be offered into and clear in the PJM Capacity Market. The load would be included in total PJM load. The generation would be subject to the market seller offer caps (MSOC) for existing generation. Both the data center load and the associated generation would have an expedited queue option that would permit both the load and the generation to be added without delays.

It has been asserted that requiring large new data center loads to bring their own new generation would be discriminatory. The relevant standard for prohibited discrimination is

---

[3] See PJM. 2025 PJM Long-Term Load Forecast Report <https://www.pjm.com/-/media/DotCom/library/reports-notices/load-forecast/2025-load-report.pdf> (January 24, 2025).

[4] See "Pre Technical Conference Comments of the Independent Market Monitor for PJM," *Meeting the Challenge of Resource Adequacy in Regional Transmission Organization and Independent System Operator Regions*, Docket No. AD25-7.

unduly discriminatory.[5] It is not unduly discriminatory to identify the class of large data centers and impose requirements on that class that match the impact of that class on all other customers. It would be unduly discriminatory to all other customers, from the smallest residential customer to the largest industrial customer, to allow large data centers to add massive amounts of load to the system that cannot be served reliably with resulting price impacts and reliability impacts on those other customers. Preventing undue discrimination requires that data center loads bring their own new generation.

It is not an overstatement to assert that the ongoing addition of large data center loads will put PJM competitive markets at risk unless there is a solution that requires large data center loads to pay for the costs that they would otherwise impose on other customers. This does not mean just the costs of a substation or a large financial commitment to purchase power. Bringing the new generation needed to meet the data center load is a long term investment required for reliable service that signals that data centers are in the markets for the long haul and committed to the competitive market design. The other options put PJM competitive markets at risk.

[5] *See* Federal Power Act § 205, 16 U.S.C. § 824d(b) ("No public utility shall, with respect to any transmission or sale subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.").

Re: Technical Conference on Resource Adequacy in Pennsylvania
Docket No. M-2024-3051988

Dear Secretary Chiavetta:

Enclosed for filing please find FirstEnergy Pennsylvania Electric Company's Comments in the above-referenced matter.

Please feel free to reach out with any questions or concerns.

Very truly yours,

Angelina Umstead

Enclosure

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Technical Conference on Resource Adequacy in Pennsylvania	**:** **:**	**Docket No.: M-2024-3051988**

COMMENTS OF FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY TO THE TECHNICAL CONFERENCE ON RESOURCE ADEQUACY IN PENNSYLVANIA

I. INTRODUCTION

FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") respectfully submits these comments in response to the November 15, 2024 Secretarial Letter stating that the Pennsylvania Public Utility Commission ("Commission" or "PUC") will hold a Technical Conference on November 25, 2024, and that a comment period would follow the conclusion of the conference. Comments were initially due on December 27, 2024, however, in a subsequent Secretarial Letter dated November 25, 2024, the comment period was extended until January 9, 2025.

At the Technical Conference held on November 25, 2024, Commissioners posed questions to various panelists and engaged in discussions involving electric resource adequacy challenges in Pennsylvania and possible solutions moving forward. FE PA shares the Commission's concerns surrounding this topic and commends the Commission's efforts in taking a proactive approach to ensuring the continued safe, affordable, and reliable delivery of electricity to all Pennsylvanians. To that end, FE PA submits the following comments in response to the questions posed during the Technical Conference.

II. RESPONSE TO REQUEST FOR COMMENTS

A. Overview of Resource Adequacy Challenge

The Company is deeply concerned about the looming resource adequacy challenges in the PJM Interconnection, L.L.C. ("PJM") footprint and the associated affordability and reliability impacts expected to customers. In furtherance of its task to manage grid reliability, PJM administers its Reliability Pricing Model ("RPM"), which is designed to ensure that sufficient generation capacity is available to serve all load within its footprint. However, PJM cannot direct the build of generation resources, nor does it dictate what types of generation are built to ensure alignment with state or federal specific policies or energy goals. Only the states themselves have the jurisdictional authority to direct that new, generation is built on a timely basis.[1] For this reason, it is incumbent upon the Commonwealth to bridge the gap by setting energy policies that align market outcomes with energy goals while preserving Pennsylvania's status as the powerhouse of PJM. Without prompt actions by the Commonwealth, customers will continue to face increasing costs for less reliable service with no assurance that those costs will lead to much needed additional dispatchable generation.

Electricity demand continues to increase at an unprecedented pace due to electrification and the influx of intensive energy consuming data centers. This demand is dramatically outpacing the rate at which new generation supply is scheduled to or can come online. With compounding supply retirements and the time required for new supply to be built, the gap between supply and demand could continue to grow depending on the realized demand growth. PJM began to identify a potential resource gap in its Resource Retirements, Replacements & Risks report published in

[1] The states' reserved powers under the Federal Power Act include control over in-state facilities used for the generation of electric energy, and also the determination of need for new power facilities, their economic feasibility, and retail generation rates and services. *E.g.*, *Hughes v Talen*, 136 S.Ct. 1288 at 1292 (U.S. 2016).

early 2023.[2] Since that time, PJM has continued to refine its load forecasts. In its August 8, 2024, Planning Committee meeting, PJM listed a potential shortfall of 1,663 megawatt ("MW") Unforced Capacity ("UCAP")[3] beginning in the 2029/2030 delivery year and increasing to 5,562 MW UCAP by the 2034/2035 delivery year.[4] Additionally, the North American Electric Reliability Corporation ("NERC") recently published its 2024 Long-Term Reliability Assessment, finding that North America "faces mounting resource adequacy challenges over the next 10 years as surging demand growth continues and thermal generators announce plans for retirement."[5] Most recently, PJM shared an updated load forecast, which showed the demand in 2030 is approximately 10% higher than it had previously projected.[6] Taking the anticipated 2025 load forecast into account, the PJM Board stated in a letter it released in support of PJM's recent capacity market enhancements, the PJM system could see a capacity shortage as soon as the 2026/27 Delivery Year.[7]

Energy supply is not only unable to keep pace with unprecedented demand increases; it is decreasing in the proportion of demand it is projected to meet. Economic and policy pressures at both the state and federal levels have led to the retirement of critical dispatchable generation. Those same policy pressures have prevented investment into new dispatchable generation despite all-time-high capacity market clearing prices of approximately $270/MW per day for most of PJM, which was a nearly ten-fold increase from the prior auction.[8] Moreover, there is a concern that proposed projects that have been approved through the interconnection queue are not actually being built.[9] Without further reform, costs to customers in the PJM footprint could continue to increase without any assurance that those cost increases will result in new dispatchable generation.

Some stakeholders suggest that there is sufficient generation capacity currently in the PJM queue and that addressing the backlog to ensure those resources are realized while leaving the market to work itself out is an adequate remedy to capacity shortfalls. The Company strongly disagrees. While the PJM queue backlog is certainly a concern, the reality is that 97% of the queue consists of variable and intermittent battery, solar, and wind projects that simply cannot be depended upon alone. To the contrary, immediate investment in dispatchable generation is needed to ensure stable, reliable supply. In its December 9, 2024 filing, PJM itself acknowledged the compelling immediate need for construction of new dispatchable generation resources.[10]

The PJM region is not alone in requiring significant investment in new dispatchable resources. Many regions and local utility service territories are grappling with significant load

[9] Commercial Deployment of New Generation (September 25, 2024), *available at* 20240925-item-09---pjm-interconnection-queue---presentation.ashx

[10] *See, e.g.,* Docket No. ER25-712, *PJM Interconnection, LLC*, Tariff Revisions for Reliability Resource Initiative at 9, 28-29 (Dec. 13, 2024) (describing resource adequacy issues caused by "thermal generation retirements, their replacement by intermittent renewable resources with low completion rates, and greatly increased load growth" and proposing modifications to the interconnection process to accelerate shovel-ready projects that "best satisfy the need" for reliable capacity that can be available quickly).

growth, primarily coming from data centers, increased manufacturing, and the "energy transition." Importantly, the nature of the load growth identifies the type of generating resources that are needed. In this case, increased data center and manufacturing load drives a need for high-capacity factor, controllable generation; that is, the need is for new dispatchable generation.[11]

The PJM capacity market was originally designed to address issues related to the competitive electricity market by addressing economic, operational, and planning challenges that existed after the day-ahead and real-time energy markets were brought online. More specifically, it was designed to address the so-called "missing money" problem by retaining resources necessary to meet future demand and manage peak conditions. However, the capacity market was built during a time of abundant traditional, dispatchable generation sources that could reliably supply power on demand and were not dependent on weather conditions. Since then, coal, oil, and nuclear plants continue to retire at an accelerated pace.

The marginal-cost economic model that underlies the PJM power markets provides a single clearing price to all resources that clear in the auction. As such, the capacity market was not designed to account for the loss of generation with specific attributes (i.e., dispatchable), and thus is not suitable for addressing the financial strain on traditional dispatchable generation resources. Moreover, PJM has not adjusted its market rules to fully integrate and complement renewable resources with dispatchable resources. Another challenge is the simple fact that significant amounts of PJM capacity resources, particularly the renewable resources and certain nuke units, receive out-of-market subsidies that insulate them from competitive outcomes in the wholesale

[11] "New," meaning new units, not uprates. "Dispatchable," meaning that unit is available 24/7 and that the unit's full capacity can be dispatched by PJM as required by system conditions. *See generally PJM Manual 12: Balancing Operations*, *available at* https://www.pjm.com/-/media/DotCom/documents/manuals/m12.pdf. Intermittent units – generation that is only available during limited periods – is not dispatchable (because of its limited availability). Variable generation – generation that is subject to external factors that result in moment-to-moment changes in its available output – is not dispatchable (because the unit's output is not subject fully to central control).

power markets. More fundamentally, the marginal-cost economic model that underlies the PJM power markets does not sufficiently support the capital cost for new investment; a fact that was understood at market inception.[12]

Again, FE PA is committed to advocating for its customers and promoting solutions that result in reliable and affordable electric service in the future. The Company strongly believes that the best solution for customers includes prioritizing immediate investments in dispatchable generation while simultaneously implementing strategies to manage and levelize costs for customers. This will assure a reliable energy supply while maintaining long-term affordability to customers. Further, the solution must also include legislation and rules at the state level that address the nature of generation supply, current demand circumstances, and the resource adequacy challenge faced by all customers.

B. What is the Right Mix of Resources?

FE PA supports development of all resources in Pennsylvania that address the projected gap between increasing load and capacity resources. However, the world today is dramatically different than when the capacity market was designed. As discussed earlier in these comments, the current PJM market construct was not designed to solve the challenges presented today. As a result, the Company has very real concerns that the markets are not going to be able to compensate for the gap in capacity needs in sufficient time to ensure sufficient grid resources are available, leading to the conclusion that state-initiated out of market solutions must be considered.

As the Company considers what effective out of market solutions might look like, it emphasizes three critical criteria to consider in order to ensure success: customer impact, timing,

[12]*See, e.g.,* Docket Nos. OA97-261, *et. al*., *PJM*, Transcript of Technical Conference, pp. 233-36 (5/9/1997) (Mr. Falkenburg: "And when people build new generation, what happens is that the price drops and they lose money." Mr. Shanker: "That's competition.").

and risk management for all affected parties. The Company's foremost priority is to ensure safe, reliable, and affordable service to its customers. In light of this, FE PA is focused on identifying solutions that maintain service quality without causing disruptions or undue financial impact to those it serves. Second, timing is of utmost importance. Generation shortfalls could be expected as early as 2026 or 2027 and it is estimated that it will take approximately five to six years – at the earliest - to bring new dispatchable generation online. As a result, there is a very short window to identify a solution before customers are impacted. Given this limited timeframe, FE PA recommends practical, immediate actions that can be implemented swiftly while minimizing risks to customers. Lastly, the Company recognizes that these solutions will come with a cost. To that end, it is critical that any successful solution ensures access to the needed capital investment while mitigating financial risks for all parties involved.

Nuclear generation, including the potential for small modular reactors ("SMRs"), is an attractive option for Pennsylvania because these resources are not intermittent. However, the timeline, financial uncertainty, and ongoing technological advancements associated with the development of nuclear generation may not meet the urgency of the issue in PJM's footprint. The development of new gas-fired generation resources could help meet the near-term gap between supply and demand while keeping Pennsylvania on track to meet longer-term goals. Adding these resources will not slow the need for development of solar, wind, and energy storage generation, as a balanced mix of all types of generation is needed to meet this significant challenge.

FE PA also recognizes the criticality of resources that can be rapidly developed while ensuring their successful implementation and providing sufficient and timely cost recovery. Such resources could include natural gas peaker plants that could capitalize on the abundant gas supply in Pennsylvania. Additionally, modular battery storage systems, combined heat and power plants

("CHP"), and SMRs could also help bridge the resource gap until longer term solutions can be realized.

With new load from data centers and electrification coming on in unprecedented abundance and pace, Pennsylvania must focus on the most efficient and effective way to bring new dispatchable generation to commercial operation within the timeframe for need. Given the significant lead times and complex challenges involved in developing new generation projects, states cannot afford to delay action. For example, the addition of dispatchable on-demand generation brought online most recently in the PJM region, Guernsey Power Station in Valley Township, Ohio, started construction in 2019 and was not brought online until 2023.[13] However, permits for this generator were filed three years earlier in 2016.[14] At this pace, newly permitted generation would not be available until after 2030, missing the projected emergence of the capacity gap. Immediate state action towards resolving the projected gap is imperative to ensure sufficient dispatchable capacity to maintain grid reliability and provide stable, affordable energy. Finally, while dispatchable resources must make up the bulk of the potential solution and distributed energy resources ("DER") cannot feasibly close the resource adequacy gap alone, options such as energy storage, demand response, and load optimization can serve an important function in addressing a portion of the gap by reducing the need for new centralized resources.

[13] https://guernseypowerstation.com/economic-benefits-community/.
[14] https://www.naturalgasintel.com/news/power-developers-file-for-1650-mw-natgas-fired-plant-in-ohio/.

C. How to Facilitate Completion of Construction of Resources?

Keeping the criteria listed above in mind, the solutions need to be initiated and implemented at the state level. There is an immediate need for state rules and legislation that address the nature of generation supply, current demand circumstances, and the timing of resource adequacy challenges for all customers.

As a first step, the solutions must include a means to direct or effectively incentivize new dispatchable generation with high ELCC; the metric used to evaluate the reliability contribution of a given power resource. ELCC resources are quick to respond to changes in demand, can complement intermittent renewable resources, and ultimately, can meet demand during peak times. While resource selection is a critical piece to working toward a solution, it is also important to focus on reviewing and revising the pre-construction approval process. Permitting alone for a transmission project can take up to seven years with construction taking another three years. Since 2022, the average time it takes for new generation to move through the interconnection process is five years. Efforts should be focused on developing strategies to streamline the permitting process and other PJM queue activities while simultaneously seeking a resource solution.

As the Company maintains that Pennsylvania should consider a portfolio approach while addressing this challenge, FE PA has several suggested potential frameworks for ensuring that the proper resources are brought online to close the resource adequacy gap. The Company discusses these only as concepts for the Commission to consider, as further investigation into these models and collaboration with relevant stakeholders are important to determine the viability of each.

State-initiated solutions to assuring that necessary resources are brought online might include state-owned generation. State-owned generation can provide greater control over cost

and price stability. Unlike private generators, state-owned facilities would have the ability to prioritize public interests with a focus on more stable and predictable pricing for customers. Additionally, states are in a unique position to bypass some of the financial and permitting challenges that can cause delays in the private sector leading to more timely construction of new generation to meet the demand.

Other possible solutions might include state or utility-run competitive procurement processes whereby either state entities or utilities (either individually or in collection) would conduct competitive procurements to address capacity, energy and attribute needs identified through state-level evaluation, analysis and planning. The ultimate outcome would be power purchase agreements ("PPA") for the desired output and durations that tie to system needs based on long-term forecasts, with net costs allocated to utility customers or taxpayers. Financial certainty tied to long-term PPAs could reduce investment risk and remove challenges for developers to secure financing for new generation projects. Developers would be incentivized to build new projects that are aligned with market needs and policy goals set by the state. Moreover, state-run processes could coordinate permitting and siting to help reduce some of the barriers to developers and ultimately streamline the process for the development of new generation.

Another solution might include strategic reserve models. Strategic reserve models can be particularly useful because they maintain a dedicated pool of electricity generation resources that do not participate in the day-to-day market operations. These resources are only dispatched under certain conditions to help ensure grid reliability. Because they operate outside the market, they do not affect market pricing. However, they can act as a safety net to prevent blackouts during supply shortages.

What Can the PUC do to Ensure Resource Adequacy?

Given its stance as a leader in the energy policy space, the PUC is uniquely poised to be viewed as an invaluable voice in providing overall education to key non-industry Pennsylvania stakeholders and decisionmakers who may not yet understand the significance of this discussion and the need for cooperative solutions. Importantly, the PUC acts as an impartial authority to bring utilities and other stakeholders together. This role allows it to present unbiased information about challenges like reliability, affordability, and market dynamics. The PUC also has many platforms available to communicate with the public and decisionmakers regarding the risks of capacity shortages and the importance of diversifying energy sources in an accessible way.

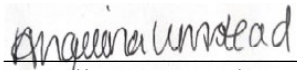
FE PA commends the PUC in holding the Technical Conference to discuss these very important issues and encourages continued active engagement in the dialogue with PJM and other national-level forums. This will ensure interstate cooperation and reduction of regional free ridership to the benefit of Pennsylvanians. FE PA suggests that the Commission create and maintain an ongoing forum amongst stakeholders oriented towards attempting to leverage existing solutions to maximum ability while brainstorming the most feasible path towards implementing real, effective solutions.

Additionally, FE PA suggests that the Commission explore its historic policy stances on default service program ("DSP") period terms. Specifically, the Commission could reconsider a term beyond the current three- to four-year approach. The Commission could also review its historical stance on contract durations and encourage input from the demand projection reports currently required under Section 524 of the Pennsylvania Public Utility Code.

For any functional solutions directed, the Commission should consider how such solutions might be better funded through DSP or other mechanisms on a non-bypassable basis in order to

ensure that non-shopping customers are not inordinately bearing the burden of the costs for any individual solutions. To that point, any solution, whether long or short-term, associated with DSP or otherwise, must incorporate a "beneficiary pays" methodology. Costs associated with each solution must be allocated to the entire region as opposed to the customers of a singular electric distribution company. Similarly, costs should be allocated on a non-bypassable basis rather than to any limited class of ratepayers.

Finally, it must not be forgotten that unprecedented load growth and the needed changes to supply cannot be sustained without adequate transmission. The Commission should support the thoughtful and proactive buildout of transmission which will support new load and economic development while ensuring that new and existing generation is able to meet the current needs of Pennsylvanians.



III. CONCLUSION

FE PA appreciates the opportunity to comment on this complex and evolving topic. Although there does not appear to be a quick or simple solution, the Company applauds the Commission for attempting to get ahead of the issue and solicit comments from all interested parties. As always, providing safe and reliable service is a priority to FE PA, and the Company is looking forward to working with all stakeholders on tackling the multi-faceted issues outlined above. FE PA strongly believes that an 'all of the above' approach will be necessary to ensure the continued safe, reliable, and affordable flow of electricity to all Pennsylvanians. Beyond basic utility service, economic development relies upon stable and reliable energy; failing to address the resource adequacy issues highlighted above could lead to missed opportunities for economic growth within the Commonwealth. Ensuring the electric grid has sufficient capacity to meet demand is foundational to attracting and sustaining businesses and ensuring a high quality of life

for residents. The Commonwealth has a unique opportunity to position itself as a leader in economic development by tackling this critical topic head on.

I. QUALIFICATIONS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Serhan Ogur. I am a Principal and Senior Economist at Exeter Associates, Inc. ("Exeter"). My office is located at 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. PLEASE STATE YOUR EDUCATIONAL BACKGROUND.

A. I received a B.A. degree in Economics from Bogazici University (Istanbul, Turkey) in 1996 and a Ph.D. in Economics from Northwestern University (Evanston, IL) in 2007.

Q. WHAT IS YOUR PROFESSIONAL EXPERIENCE?

A. I have 25 years of experience in the energy industry specializing in organized wholesale and retail electricity markets. My diverse background comprises energy management and consulting; analysis, design, and reporting of Regional Transmission Organization ("RTO") electricity markets and products; and state and federal regulation of electric utilities. I was employed as Economic Analyst at the Illinois Commerce Commission between 2001 and 2005; Senior Economist at PJM Interconnection, LLC ("PJM") between 2005 and 2014; and Senior System Operator at Fellon-McCord & Associates, LLC between 2014 and 2015. I joined Exeter as Senior Analyst in 2015 and became a Principal of the firm in 2020. A complete description of my professional background is provided in Exhibit SO-1.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes. The list of the Pennsylvania Public Utility Commission (the "Commission") proceedings in which I testified, all of which was on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"), is provided below.

- Docket No. P-2016-2534980 in PECO Energy Company's Default Service Program IV proceeding.
- Docket Nos. P-2020-3019383 and P-2020-3019384 in the joint Default Service Plan VI of Citizens' Electric Company of Lewisburg, Pennsylvania and Wellsboro Electric Company.
- Docket No. P-2020-3019522 in Duquesne Light Company's Default Service Plan IX proceeding; Docket No. P-2020-3019907 in UGI Utilities, Inc. – Electric Division's Default Service Plan IV proceeding.
- Docket No. P-2020-3019907 in UGI Utilities, Inc. – Electric Division's Default Service Plan IV proceeding.
- Docket No. P-2020-3022988 in Pike County Light & Power Company's Default Service Plan proceeding.
- Docket Nos. A-2021-3025659 and A-2021-3025662 in the case concerning the acquisition of Pike County Light & Power Company and Leatherstocking Gas Company, LLC.
- Docket Nos. P-2021-3030012, P-2021-3030013, P-2021-3030014 and P-2021-3030021 in the joint Default Service Plan of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company.
- Docket No. A-2023-3038771 *et al* in the merger of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company; and Docket No. P-2023-3039927 in Pike County Light & Power Company's Default Service Plan.
- Docket No. P-2023-3039927 in Pike County Light & Power Company's Default Service Plan proceeding.
- Docket No. P-2024-3046008 in PECO Energy Company's Default Service Program VI proceeding.
- Docket No. P-2024-3047290 in PPL Electric Utilities Corporation's Default Service Plan VI proceeding.
- Docket No. P-2024-3048592 in Duquesne Light Company's Default Service Plan X proceeding.
- Docket No. P-2024-3049343 in UGI Utilities, Inc. – Electric Division's Default Service Plan V proceeding.
- Docket Nos. P-2024-3049357 and P-2024-3049357 in the joint Default Service Plan VII of Citizens' Electric Company of Lewisburg, Pennsylvania and Wellsboro Electric Company.

Q. ON WHOSE BEHALF ARE YOU OFFERING THIS TESTIMONY?

A. I am offering this testimony on behalf of the OCA.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. My testimony addresses certain elements of FirstEnergy Pennsylvania Electric Company's ("FE PA's" or the "Company's") proposed Default Service Plan VII ("DSP VII" or the "Plan") for providing default service to its residential and non-residential customers for the four-year period from June 1, 2027, through May 31, 2031. The specific issues I address are related to (1) the wholesale default service supply product portfolio, including the types and lengths of products to be procured, timing of procurements, and contingency plan; (2) certain aspects of, and changes proposed to by FE PA, the proposed Supplier Master Agreement ("SMA"), including the Capacity Proxy Price ("CPP") mechanism, the treatment of PJM Network Integration Transmission Service ("NITS") charges, and the responsibility for compliance with the Alternative Energy Portfolio Standards Act ("AEPS Act"); (3) the changes proposed by the Company to its existing voluntary time-of-use ("TOU") rate program; (4) the Company's reconciliation adjustment mechanism; (5) FE PA's proposal to use a measure of customer account size called the maximum registered peak load ("MRPL") to classify nonresidential customers into the commercial and industrial class groupings for the purposes of default service procurement; and (6) changes to residential customer retail shopping rules proposed by the Company. Issues related to consumer protection, as well as some issues related to the TOU program, are also addressed by OCA witness Ms. Barbara Alexander. Our respective testimonies are meant to be complimentary.

II. SUMMARY AND RECOMMENDATIONS

A. Overview of the FE PA Petition

Q. WHAT IS FE PA REQUESTING IN THIS CASE?

A. FE PA, a wholly owned subsidiary of FirstEnergy Corp., provides regulated electric delivery service to 2.1 million customers in throughout Pennsylvania, making it the largest electric distribution company ("EDC") in the state. FE PA was formed on January 1, 2024, with the merger of four predecessor Pennsylvania EDCs: Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the "Predecessor Companies"). The service territories of these Predecessor Companies are now "Rate Districts" of FE PA. [1]

On February 3, 2026, FE PA filed a petition for the approval of its DSP VII filing, which includes supporting testimony and exhibits, including draft supplier contracts and its proposed revised tariffs, by the Commission. I have been asked by the OCA to review the proposed plan as it pertains to the Company's residential customers and to develop recommendations that would provide improvements if those recommendations were adopted by the Commission.

Q. WHAT ARE THE PRIMARY ELEMENTS OF FE PA'S PETITION AS IT RELATES TO RESIDENTIAL CUSTOMERS?

A. The primary elements of the proposed DSP VII that affect FE PA's residential customers are: (1) the structure of the wholesale supply portfolio for default service, including scheduling of the purchases and the wholesale products purchased to supply residential default service customers; (2) specific aspects of the standardized supplier contracts (also referred to as SMAs) that govern the load-following, fixed-price, full

[1] Petition of FirstEnergy Pennsylvania Electric Company ("Petition"), paragraph 1.

requirements ("FPFR") contracts between the Company and the wholesale suppliers, including the CPP mechanism to true up PJM capacity charges; the treatment of PJM NITS charges, and the Company's proposed method of meeting the requirements of the AEPS Act; (3) FE PA's voluntary TOU program that is available to residential default service customers; (4) the Company's proposed method of reconciling Default Service Plan revenues and costs; and (5) FE PA's proposed changes to residential customer retail shopping rules. FE PA's MRPL proposal, while not directly relevant for residential default service customers in this case, is also an important element of the proposed DSP VII.

The Company's Plan also proposes other material changes to the retail market rules aimed at protecting shopping residential customers from consistently paying generation supply rates to electric generation suppliers ("EGSs") that are above the default service rates (Price-to-Compare, or "PTC") offered by FE PA. OCA witness Ms. Alexander addresses most issues in this proceeding related to the retail market, shopping, and customer protection.

The residential default service load is proposed to be supplied from three sources: 12-month FPFR contracts; 24-month FPFR contracts; and 60-month FPFR contracts. In other words, the FPFR contracts make up the entirety of the power supply, with laddered contracts procured twice per year to replace prior contracts set to expire. The 60-month FPFR contracts are proposed to make up approximately 10 percent of the power supply in each respective Rate District. The remaining 90 percent of residential default service load requirement is to be met from a combination of 12-month products and 24-month products, with the share of each varying across the Rate Districts. Each residential tranche represents a fixed

percentage of the residential default service load, also varying across Rate Districts.[2] If the default service load shrinks or increases (e.g., shrinks due to customers migrating to competitive retail supply or increases due to customers returning to default service), the size of the tranches measured in kilowatt-hours ("kWh") would correspondingly change in size. Thus, the wholesale suppliers assume the "volumetric risk" of an uncertain load obligation for the entire residential default service load.

FPFR contracts would be procured through a competitive descending clock auction ("DCA") process,[3] which is consistent with FE PA's procurement approach taken in DSP VI. Procurements would be conducted in January and November of each year, which is approximately five months prior to the start of deliveries for January auctions and seven months prior to the start of deliveries for November auctions.

The Company proposes to continue using a CPP mechanism in FE PA's auctions in the event PJM does not conduct a base residual auction ("BRA"),[4] with some revisions to clarify the true-up methodology for the CPP.[5] FE PA proposes to remove PJM NITS charges from the auction products, making NITS the Company's responsibility for default service customers.[6] The Company also proposes to modify

[2] Each residential tranche represents 3.3 percent of load in Met-Ed, 5.0 percent of load in Penelec, 11.1 percent of load in Penn Power, and 2.7 percent of load in West Penn.
[3] This format is characterized as a "descending clock" auction because prices "tick down" as rounds progress, starting at an initial price and being reduced until the number of tranches that all bidders are willing to supply is just enough to match the load to be supplied. (Petition, paragraph 18). According to the Company, its multi-product design allows all products to be procured in a single auction, which provides a cost-effective, economically efficient means to obtain multiple products while also allowing for instantaneous market-based pricing. Suppliers receive feedback from the results of each round. Because pricing is transparent, some suppliers will withdraw, and the least-cost suppliers will prevail. (Petition, paragraph 19).
[4] The PJM capacity auction, called the Base Residual Auction, procures capacity supply from generation and demand response resources, typically three years in advance of the delivery year, to meet electricity "resource adequacy" needs in the PJM control area. Participation of (existing and forecasted) loads and existing generation resources in a BRA are mandatory. PJM pays resources that clear the auction based on locational clearing prices and collects these sums from load-serving entities representing existing and forecasted loads.
[5] Petition, paragraph 22.
[6] *Id*.

the SMA to put the AEPS Act compliance responsibility fully on the wholesale suppliers of FPFR contracts.[7]

The Company is proposing to continue offering a voluntary TOU rate to residential and small commercial default service customers, which includes peak, off-peak, and super off-peak prices.[8] FE PA's TOU proposal for DSP VII is similar to the TOU program currently in place in DSP VI, with the major difference being the Company is proposing to revise the current on-peak pricing period from 2 p.m. to 9 p.m. during non-holiday weekdays to from 3 p.m. to 7 p.m. during non-holiday weekdays in DSP VII.[9]

FE PA proposes to continue its practice of using a reconciliation mechanism based on accumulated deviations between default service revenues and costs over a six-month period, which are amortized and collected over the subsequent six-month period.[10] The Company is also proposing to maintain the status quo from DSP VI with regard to a flat per kilowatt-hour ("kWh") rate design and semi-annual PTC Default Service Rate Rider ("PTC Rider") rate adjustments for residential customers.[11]

The Company is clarifying that the 100 kilowatt ("kW") threshold that separates the commercial and industrial class groupings will be determined both by demand and by the MRPL of the customer. FE PA proposes to define MRPL as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the

Company's distribution or transmission system. As related to customer-generators, this shall also be inclusive of the nameplate capacity of the generation system." [12]

B. Review of Findings and Recommendations

Q. WHAT ARE THE SPECIFIC TOPICS THAT YOU ADDRESS IN YOUR DIRECT TESTIMONY?

A. I address (1) the wholesale default service supply product portfolio for residential customers, (2) certain aspects of the SMA, (3) the TOU rate program, (4) the Company's reconciliation adjustment mechanism, (5) FE PA's MRPL proposal; and (6) changes to residential customer retail shopping rules proposed by the Company.

Q. WHAT ARE YOUR PRINCIPAL CONCERNS WITH RESPECT TO FE PA'S PROPOSED DEFAULT SERVICE PLAN?

A. My principal concerns include the following: (1) it is premature to attempt to solicit 60-month FPFR contracts; (2) the changes proposed to the residential TOU rate structure cannot be supported because they are not properly justified; and (3) FE PA's proposed reconciliation method can be modified to result in greater rate stability and potentially smaller E-Factor rates for residential customers.[13]

Q. WHAT ARE YOUR RECOMMENDED MODIFICATIONS TO THE FILED PLAN?

A. My principal recommendations are that: (1) the 60-month FPFR contracts be replaced with 36-month FPFR contracts; (2) FPFR auctions be held in September and February each year; (3) auction products be modified to provide further laddering and heavier reliance on 24-month products than 12-month products; (4) the changes proposed by

[12] FE PA Exhibit DMY-6, p. 1.

[13] The E-Factor rate, also referred to as the reconciliation rate in the industry, is a component of the PTC. The E-Factor rate is based on the actual over- or under-collections of default service costs in the prior rate period. The E-Factor rate can be positive (a net charge to customers) or negative (a net credit to customers) in a given rate period.

the Company to the residential TOU rate program be rejected; (5) the Company be ordered to develop and propose for the Commission's approval load response programs that create Demand Response ("DR") capacity in PJM; and (6) FE PA's reconciliation mechanism be revised to include 12-month amortization of over- or under-collections and a cap on the "E-Factor" rate.

C. Testimony Organization

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. Section III of my testimony addresses the residential default service supply portfolio, including the products to be procured and the procurement schedule. Section IV addresses certain aspects of the SMA, including the CPP mechanism, treatment of NITS charges, and AEPS Act compliance. Section V addresses the Company's voluntary residential TOU program. Section VI addresses FE PA's OTC Rider rate design and proposed reconciliation mechanism. Section VII addresses the Company's MRPL proposal. Section VIII addresses FE PA's proposed changes to residential customer shopping rules.

III. DEFAULT SERVICE SUPPLY PORTFOLIO

Q. ARE THERE PENNSYLVANIA STATUTES THAT GOVERN AN EDC's PROVISION OF DEFAULT SERVICE?

A. Yes. The provision of default service is required under Pennsylvania's Electricity Generation Customer Choice and Competition Act, which was amended by Act 129 in 2008. Act 129 requires that the default generation supply for customers reflects a prudent mix of spot, short- and long-term supply resources to ensure adequate and reliable service to customers at least cost over time. Default service also must comply with the AEPS Act. FE PA states that its filed plan complies with these requirements.

Q. HOW DOES FE PA PROPOSE TO PROVIDE DEFAULT SERVICE TO RESIDENTIAL CUSTOMERS DURING THE DSP VII TERM?

A. FE PA will use a competitive DCA process to acquire a series of FPFR contracts to provide generation service for the default service load. Contracts are proposed to have terms of either 12, 24, or 60 months and will cover the four-year DSP period with some overlap with the subsequent program period. The FPFR contracts would be procured using a simultaneous DCA approach, consistent with the approach used by FE PA in the past. Procurements are proposed to be conducted twice per year so that the FPFR contracts are laddered, that is, the contracts will expire at different times so that only a portion of the overall residential supply is procured at any single point in time. Procurements would be held in January and November of each year (except for an additional procurement in April 2027 for catch-up purposes), which is approximately five months prior to the start of deliveries for January auctions and seven months prior to the start of deliveries for November auctions. This is an unusual schedule since there are only two months from the November auction to the January auction, but there are 10 months from the January auction to the subsequent auction in November. A more logical approach would be to conduct auctions with approximately six-month intervals to maximize temporal diversity of procurements. The Company states that it is proposing auctions in January instead of in April to allow winning bidders to nominate auction revenue rights ("ARRs") in PJM's ARR allocation process.[14]

[14] Auction Revenue Rights are entitlements allocated annually to PJM Firm Transmission Service Customers that entitle the holder to receive an allocation of the revenues from PJM's Annual Financials Transmission Rights ("FTR") Auction. An FTR is a path-specific (from a specified pricing point on the PJM grid to another specified pricing point on the PJM grid, known as a source and a sink, respectively) financial instrument that pays its owner the Day-ahead Market congestion price difference between the source and the sink. The purpose of the PJM ARR allocation process is to return the congestion rents collected by PJM during the course of its grid operations and locational energy pricing to Firm Transmission Service Customers that pay for the underlying transmission grid through transmission service (e.g., NITS) charges. Source: https://www.pjm.com/-

Wholesale suppliers will bid to supply load "tranches," with each tranche representing a fixed percent of the residential default service load. The number of total tranches into which residential default service load is divided varies by Rate District. FE PA proposes to procure default service supplies for each Rate District separately because of the differences in the cost of serving load among the Rate Districts. The final price specified in the awarded bid (dollars per megawatt-hour, or $/MWh) is fixed for the duration of the contract term (12, 24, or 60 months) and includes all generation products (with a few exceptions) required to serve load (e.g., capacity, energy, ancillary services, and alternative energy credits ("AECs").

Q. PLEASE EXPLAIN THE TRANCHE STRUCTURE.

A. FE PA has divided the residential default service load into 30 tranches for the Met-Ed Rate District, 20 tranches for the Penelec Rate District, nine tranches for the Penn Power Rate District, and 37 tranches for the West Penn Rate District. Each tranche is a "slice" of load, meaning that each tranche incorporates the same residential load "shape," i.e., the hourly residential default service load profile over the course of the year. In other words, each tranche represents 3.3 percent of the residential load in Met-Ed, 5.0 percent of the residential load in Penelec, 11.1 percent of the residential load in Penn Power, and 2.7 percent of the residential load in West Penn, in each hour.

/media/DotCom/training/core-curriculum/lse/09-auction-revenue-rights-and-financial-transmission-rights-for-lses.pdf

Q. DO YOU AGREE WITH FE PA'S PROPOSAL FOR A FOUR-YEAR DSP VII TERM?

A. Yes. The four-year default service plan period reduces administrative costs relative to the shorter default service plan periods that have been relied on historically. It is also consistent with the default service plan terms for other EDCs in Pennsylvania.

Q. DO YOU OBJECT TO THE USE OF THE DCA APPROACH PROPOSED BY FE PA TO PROCURE FE PA'S RESIDENTIAL WHOLESALE DEFAULT SERVICE SUPPLY?

A. No. This process has generally worked as proposed and implemented by FE PA and the Company has successfully procured default service supplies with this procurement method in the past. In the absence of clear cost or administrative benefits to changing the procurement method, I do not see a compelling reason to change the existing DCA approach.

Q. WHAT IS YOUR ASSESSMENT OF FE PA'S PROPOSED RESIDENTIAL DEFAULT SERVICE SUPPLY PORTFOLIO?

A. In general, I view the composition of the proposed residential default service supply portfolio favorably. The mix of 12- and 24-month FPFR contracts representing approximately 90 percent of wholesale default service supplies represents a reasonable balance between rate stability, which is extremely important to residential customers, and reflectiveness of competitive market conditions.

I have four concerns regarding the residential portfolio and procurement schedule proposed by the Company. First, the 60-month FPFR contract for approximately 10 percent of the wholesale default service supply for each Rate District is untested and it may result in large risk premiums due to the uncertainty associated with various price and volumetric risks placed on bidders for five years.

Second, conducting auctions in November and January imposes an unnecessarily large single-point pricing risk on the residential portfolio since these two months are part of the same winter season pricing risk profile. Third, FE PA is proposing different shares of 12-month and 24-month FPFR contracts for each Rate District, with the Met-Ed Rate District portfolio relying more on 12-month contracts than 24-month contracts while 12-month and 24-month contracts are more balanced for Penelec and Penn Power, and the share of 24-month contracts is approximately double the share of 12-month contracts in the West Penn Portfolio. 24-month contracts typically provide better rate stability. Fourth, the portfolios can be better staggered by procuring 12-month and 24-month products, half of which commence delivery in June and half commencing delivery in December, similar to other large Pennsylvania EDCs.

Q. DO YOU SUPPORT THE COMPANY'S EXCLUSIVE RELIANCE ON FPFR CONTRACTS FOR RESIDENTIAL DEFAULT SERVICE SUPPLIES?

A. Yes. FPFR contracts place all price and volumetric risk on the wholesale suppliers, insulating the Company and its customers from these risks. It is desirable to rely exclusively on FPFR products for the residential portfolio as long as these products can be procured with reasonable risk premiums.

Q. DO YOU SUPPORT THE INCLUSION OF OVERHANGING CONTRACTS THAT EXTEND BEYOND THE END OF DSP VII FOR THE RESIDENTIAL PORTFOLIO?

A. Yes. Overhanging contracts are used to avoid the problem of a "hard stop," which occurs when 100 percent of a new portfolio needs to be procured at the beginning of the subsequent default service plan period because all of the power purchase

agreements expire at the conclusion of the prior plan period. I agree with the Company's proposal to procure FPFR contracts with delivery periods extending into the subsequent default service plan period. The use of overhanging FPFRs extends the price stability benefits of FE PA's proposed DSP VII into the beginning part of the Company's subsequent default service plan period.

Q. PLEASE EXPLAIN YOUR OBJECTION TO THE 60-MONTH RESIDENTIAL FPFR PRODUCT.

A. While 60-month FPFR contracts would be a valuable component of residential portfolios due to their rate stability benefits, I am concerned that it may not be possible to procure them with reasonable risk premiums due to the long duration of risks assumed by wholesale suppliers. Even though wholesale suppliers would not be assuming risks associated with PJM capacity costs (due to the CPP mechanism) and PJM NITS costs (due to the removal of NITS charges from the FPFR auction products), suppliers would still assume energy, ancillary services, uplift, and AEC cost risks and ARR revenue risk as well as volumetric (e.g., load migration, net metering) risk. Energy price risk is likely hedgeable for the suppliers at major PJM trading hubs (e.g., Western Hub) even five years out, but zonal price risk for individual Rate Districts, or congestion costs from Western Hub to individual Rate Districts, may be more challenging or costly to hedge.[15] The SMA places regulatory risk (e.g., change in AEC requirements, introduction of new PJM billing line items such as new ancillary services or reserve products, change in ancillary services requirements by PJM, change in PJM credit or collateral requirements) on wholesale

[15] Hedging refers to physical or financial asset acquisitions by suppliers to reduce or eliminate the risk and uncertainty associated with future revenues, costs, and payment and cash flow obligations. For example, a wholesale supplier that assumes the obligation of delivering energy to residential default service customers in the Met-Et Rate District at a fixed price would attempt to pre-purchase its future energy obligations for the term of its commitment period to reduce or eliminate its risk of paying more for such energy supplies than the fixed price in the default service supply contract.

suppliers, which may prompt suppliers to incorporate large risk premiums to take such risks for five years. The Company is not aware of any EDCs that have attempted to procure 60-month FPFR contracts, and neither am I. FE PA has not solicited feedback from existing or potential wholesale suppliers regarding the 60-month product, either. Under these circumstances, I believe it is premature to attempt procuring 60-month FPFR products.

Q. WHAT DO YOU RECOMMEND THAT FE PA REPLACE THE 60-MONTH PRODUCTS WITH?

A. I recommend that FE PA replace the 60-month FPFR contracts with 36-month contracts. More specifically, I recommend that FE PA procure a set of 36-month contracts with a delivery period from June 1, 2027 through May 31, 2030, and then another set of 36-month contracts with a delivery period from June 1, 2030 through May 31, 2033, for the same number of tranches that is allocated to the 60-month products under the Company's proposal. This approach would have at least three benefits. First, it has been successfully procured by New Jersey EDCs for many years. Second, it will represent a gradual approach to increasing the average duration of the residential portfolio. Third, if the Company can successfully procure 36-month contracts with reasonable risk premiums, it can propose a larger share of 36-month FPFR contracts in its subsequent DSP and also propose a 48-month or a 60-month product to continue gradually extending the duration of the FPFR contracts.

Q. HAS A 60-MONTH RESIDENTIAL FPFR PRODUCT BEEN PROPOSED IN A DEFAULT SERVICE PLAN OF A PENNSYLVANIA EDC?

A. Yes. In "Petition of PECO Energy Company for Approval of its Default Service Program for the Period from June 1, 2017 through May 31, 2021 (Docket No. P-2016-2534980), PECO Energy Company ("PECO") proposed to include a 60-month

residential FPFR product in its default service supply portfolio for approximately 3 percent of the residential portfolio. In response to OCA's objection presented in OCA's intervenor direct testimony, PECO witnesses Mr. John J. McCawley and Mr. Scott G. Fisher, in their respective rebuttal testimonies, agreed to replace the proposed 60-month FPFR contract with a 24-month FPFR contract. The Joint Petition for Partial Settlement included the replacement of the proposed 60-month FPFR contract with a 24-month FPFR contract, and this provision of the Joint Petition for Partial Settlement was adopted by the Commission in its Opinion and Orders.

Q. IF THE COMMISSION WERE INCLINED TO APPROVE 60-MONTH FPFR CONTRACTS, WOULD YOU RECOMMEND THAT SUCH APPROVAL BE CONDITIONED?

A. Yes. If the Commission were to approve the solicitation of 60-month FPFR contracts, I recommend that such approval come with two conditions. First, contingency for the failure to procure 60-month contracts should be soliciting 24-month FPFR contracts, instead of 12-month contracts proposed by the Company. Second, the Company's auction monitor should develop a cost-to-serve forecast for the 60-month FPFR contracts and the Commission should apply a pre-determined, reasonable risk premium (either as a percentage of the cost-to-serve forecast or a $/MWh value) when determining whether or not to approve the lowest bids in the auction. This would avoid a situation where the risk premium being implicitly demanded by wholesale suppliers for the 60-month products is reasonable from their point of view, but it is not necessarily a good deal for customers.

Q. HAVE YOU PREPARED AN ALTERNATIVE RESIDENTIAL PRODUCT PORTFOLIO AND PROCUREMENT SCHEDULE?

A. Yes. It is presented in Exhibit SO-2 to my direct testimony. I consider the changes I made to the Company's proposed residential product portfolio and auction schedule to be modest changes that are meant to address the four concerns I stated above.

Q. ARE YOU RECOMMENDING A DIFFERENT AUCTION SCHEDULE THAN THE ONE PROPOSED BY FE PA?

A. Yes. I find the Company's desire to schedule the FPFR auctions such that winning bidders can participate in PJM's ARR allocation process on behalf of the default service loads which they will be serving acceptable. However, as Figure 1 shows, PJM's ARR allocation process begins in early March. Therefore, FE PA can conduct the FPFR auctions mid-February (instead of in January), and winning bidders can still participate in PJM's ARR auction allocation process. For the other auction, I recommend that the Company conduct the auction in September instead of November. This would space the auctions more evenly (five months from the September auction to the February auction, and seven months from the February auction to the September auction) while avoiding two auctions to be conducted within the same season's risk profile. I note that the procurement schedule which I am recommending and presenting in Exhibit SO-2 to my direct testimony proposes the procurement of FPFR products with delivery terms beginning on December 1 for the auctions to be conducted in September. Therefore, under my recommended residential product portfolio and procurement schedule, auctions are held approximately three months (September auctions for contracts commencing in December) and four months (February auctions for contracts commencing in June) prior to the beginning of the delivery terms.

Figure 1. PJM ARR Allocation Schedule

Market Name	Product	Period	Auction Round	Bidding Opening Day	Bidding Closing Day	Results Posted Day	Start Day	End Day
2026/2027 RTEP IARR	ARR	All	1	03/04/2026 0001	03/05/2026 1700	03/09/2026 1700	6/1/2026	5/31/2027
2026/2027 ARR[2,3]	ARR	All	Stage 1A	03/04/2026 0001	03/05/2026 1700	03/09/2026 1700	6/1/2026	5/31/2027
2026/2027 ARR[2,3]	ARR	All	Stage 1B	03/10/2026 0001	03/11/2026 1700	03/16/2026 1700	6/1/2026	5/31/2027
2026/2027 ARR[3]	ARR	All	Stage 2 Round 1	03/18/2026 0001	03/19/2026 1700	03/25/2026 1700	6/1/2026	5/31/2027
2026/2027 ARR[3]	ARR	All	Stage 2 Round 2	03/26/2026 0001	03/27/2026 1700	04/02/2026 1700	6/1/2026	5/31/2027

Source: https://www.pjm.com/-/media/DotCom/markets-ops/ftr/ftr-allocation/ftr-market-schedule/2026-ftr-arr-market-schedule.xlsx

Q. DO WHOLESALE SUPPLIERS NEED TO PARTICIPATE IN PJM'S ANNUAL ARR ALLOCATION PROCESS TO BE ELIGIBLE FOR ARR CREDITS ON BEHALF OF THE DEFAULT SERVICE LOADS WHICH THEY SERVE?

A. No. ARRs are acquired by PJM load-serving entities ("LSEs") through two mechanisms: (1) in the annual ARR allocation process; and (2) via daily ARR reassignment. Daily ARR reassignment entails the reassignment of ARRs, which were already allocated for the planning period in the annual ARR allocation process, on a proportional basis within a zone as load switches between LSEs within the planning period.[16] Therefore, wholesale suppliers receive the value of the ARR credits associated with the default service loads they serve even if they cannot directly participate in PJM's annual ARR allocation process due to the timing of FE PA's default service auctions.

Q. PLEASE DESCRIBE THE OTHER CHANGES YOU ARE RECOMMENDING IN EXHIBIT SO-2 ACCOMPANYING YOUR DIRECT TESTIMONY.

A. I included four more changes in Exhibit SO-2. First, I slightly modified the tranche targets of 12-month and 24-month products for some Rate Districts. Second, I included 18-month FPFR products to the product mix for the beginning part of DSP VII to streamline the transition from the approach employed in DSP VI to the

[16] Source: https://www.pjm.com/-/media/DotCom/training/core-curriculum/lse/09-auction-revenue-rights-and-financial-transmission-rights-for-lses.pdf, p. 6.

approach I am recommending in DSP VII. Third, I modified the contract delivery terms such that half of 12-month and 24-month products commence delivery in June and half of them commence delivery in December. Finally, I also proposed corresponding changes to the FPFR product lineup and procurement schedule for the commercial class as well as to the auction dates for the industrial class to align with my proposal for the residential class. A certain level of alignment, particularly between residential and commercial products, is desirable since all products are procured simultaneously as part of the same DCA process that allows switching between products by the bidders during the auction.

Q. IS YOUR RECOMMENDATION TO INCLUDE FURTHER LADDERING OF 12-MONTH AND 24-MONTH PRODUCTS CONSISTENT WITH COMMISSION-APPROVED PROCUREMENT SCHEDULES OF OTHER PENNSYLVANIA EDCS?

A. Yes. The residential FPFR procurement schedules of Duquesne Light Company ("DLC"), PECO, and PPL Electric Utilities Corporation ("PPL") in their current, most recently Commission-approved default service plans are structured similarly to my recommendation in this case.[17]

IV. SUPPLIER MASTER AGREEMENT

Q. WHAT IS A SUPPLIER MASTER AGREEMENT?

A. An SMA, or a Default Service SMA, is an agreement between FE PA and a successful bidder in FE PA's default service auctions by which the Company

[17] DLC: https://www.duquesnedsp.com/Portals/0/DUQ_Auction_Products_and_Schedule_DSP-X.pdf
PECO: https://www.pecoprocurement.com/assets/files/Petition%20for%20PECO%20DSP%20VI%20(February%202,%202024).pdf (PECO Exhibit - SD-1).
PPL: https://ppldsp.com/wp-content/uploads/2024/11/1846242.pdf (Exhibit JC-2).

contracts for the provision of default service supply. As such, the SMA sets the terms and conditions under which the Company procures default service supplies from wholesale suppliers.

Q. WHICH ASPECTS OF THE SMA ARE YOU HIGHLIGHTING IN YOUR DIRECT TESTIMONY?

A. I am highlighting three aspects of the SMA: the CPP mechanism, the treatment of PJM NITS charges, and the responsibility for compliance with the AEPS Act.

Q. PLEASE DESCRIBE THE COMPANY'S CPP PROPOSAL.

A. The CPP is meant to serve as a placeholder if the PJM BRA clearing price is not known for all months of the delivery period for an FPFR product. If this occurs, bidders would use the CPP as the proxy for the final zonal PJM capacity rate (expressed in dollars per megawatt of PJM capacity obligation per day, or $/MW-Day) to formulate their bids. The CPP for each Rate District will be equal to the most recent PJM BRA clearing price conducted by PJM. Winning bidders would then be made whole through a reconciliation mechanism. For each month for which the capacity price was not known at the time of the FPFR auction, a true-up for a given day would be calculated as the difference between the final zonal PJM capacity rate and the CPP, multiplied by the winning bidder's daily capacity obligation. If the CPP is less than the actual capacity price, the winning bidder would receive an additional payment to ensure that it is fully compensated for its capacity cost to serve the FPFR contract. Conversely, if the CPP is greater than the actual capacity price from PJM, FE PA's payment to the winning bidder under the contract would be reduced based on the same calculation.[18]

[18] FE PA Exhibit RJR-2, p. 132.

Q. WHAT ARE SOME OTHER OPTIONS FOR HANDLING DELAYS IN PJM'S CAPACITY AUCTIONS?

A. There are three alternatives to the Company's CPP proposal. First, the bidders could be asked to include capacity costs in their bids, without subsequent true-up, even if PJM has not conducted a capacity auction for part or all of the delivery period of the FPFR contract. Second, the Company could remove the PJM capacity charge from the FPFR auction products and assign it to itself (and not to the FPFR suppliers) and recover those costs from customers through a Commission-approved rate. Third, FE PA could shorten the term of the FPFR products (likely, from 24 months and 60 months to 12 months) for which capacity price is unknown for at least a part of the delivery period.

Q. DO YOU AGREE WITH FE PA'S CPP PROPOSAL?

A. Yes. FE PA's CPP proposal is preferable to the other alternatives. The first option is not preferable because it puts the price risk of a hard-to-hedge, large, and highly variable component on the FPFR suppliers, which in turn would result in the incorporation of large risk premiums into the bids. While this cost can theoretically be hedged through bilateral contracting, it is unlikely to yield a benefit to default service customers due to the capacity shortfall which the PJM market currently is in as well as the uncertainty surrounding PJM capacity market (e.g., resource accreditation, load forecasting methodology) and auction rules (e.g., capacity price caps and ceilings). As a result, asking the bidders to include capacity costs in their bids would have the effect of increasing costs for consumers. The second option is not preferable because it removes the opportunity for wholesale suppliers to obtain and utilize bilateral contracts for capacity that could be less costly than the prevailing price in the wholesale capacity market. As such, it would be administratively cumbersome both

for the Company and for the Commission without a clear corresponding benefit. The third option is particularly unattractive because it would adversely affect PTC Rider residential rate stability by forcing FE PA to procure shorter term hedges and exposing the overall portfolio to wholesale market volatility through more frequent repricing of the portfolio than necessary. Therefore, while it would be desirable to encourage wholesale suppliers to find competitive solutions to obtaining capacity through bilateral contracts, the current market and regulatory environment calls for use of the CPP approach proposed by the Company, which is the best option among available alternatives. I also note that the CPP approach is utilized by other EDCs in Pennsylvania, including in DSP VI proceeding of Predecessor Companies,[19] as well as EDCs in other retail choice states.

Q. PLEASE DESCRIBE FE PA'S PROPOSED TREATMENT OF NITS CHARGES.

A. FE PA proposes to remove NITS charges from the FPFR auction products in DSP VII, so wholesale suppliers will not be responsible for these charges. Instead, the Company will retain NITS responsibility and will recover it through a bypassable rider on default service customer bills.[20] Furthermore, "the NSPL will continue to be assigned to the default service suppliers. FE PA and the default service supplier will have a billing line-item transfer agreement in place so that PJM will bill FE PA for the NITS charges. NSPL will serve as the basis for FE PA's payment of NITS charges to PJM."[21] This represents a change from DSP VI, in which wholesale suppliers are responsible for NITS charges.[22] The Company states that, because of the continued increase in transmission spend, removing NITS from the auction product

[21] FE PA's Response to OCA Set 3, No. 6.
[22] FE PA Statement No. 2, p. 16, lines 7-10.

will reduce the supplier risk premium and therefore reduce the overall cost to customers.[23]

Q. DO YOU AGREE WITH FE PA'S PROPOSAL TO REMOVE NITS CHARGES FROM FPFR AUCTION PRODUCTS?

A. Yes. Table 1 shows the year-on-year changes in NITS rates in FE PA's Rate Districts in the last five years. NITS charges are a large component of all-in energy supply costs, and they are unhedgeable by wholesale suppliers. While the increase has been generally consistent directionally, the rate of change has been highly variable from one year to the next and the magnitude has been unpredictable in the last few years. Including NITS charges in the FPFR auction products as the responsibility of wholesale suppliers would lead to large risk premiums being built into supplier bids, particularly for longer-term products such as the 24-month, 36-month, or 60-month FPFR contracts.

Table 1. Annual Changes in NITS Rates by FE PA Rate District

	Met-Ed & Penelec		Penn Power		West Penn	
Year	NITS Rate ($/MW-Year)	Year-on-Year Change	NITS Rate ($/MW-Year)	Year-on-Year Change	NITS Rate ($/MW-Year)	Year-on-Year Change
2021	50,128		$66,744		$13,930	
2022	50,128	0%	$67,421	1%	$18,162	30%
2023	52,088	4%	$66,479	-1%	$17,660	-3%
2024	73,260	41%	$87,624	32%	$17,115	-3%
2025	82,592	13%	$88,390	1%	$7,581	-56%
2026	96,066	16%	$91,372	3%	$8,742	15%

Q. DO YOU HAVE ANY CONCERNS REGARDING FE PA'S PROPOSAL TO PICK UP PJM NITS CHARGES ON BEHALF OF DEFAULT SERVICE CUSTOMERS?

A. Yes. While I support FE PA's proposal to pick up PJM NITS charges on behalf of default service customers, I have concerns regarding the implementation of this

[23] *Id.*, lines 11-14.

initiative due to the lack of details associated with such implementation. For example, the Company should be more specific about how billing line item transfer agreements would be used to operationalize its proposed approach, what kind of regulatory oversight the Commission and statutory advocates would have over such billing line item transfer agreements, how the Company will determine and true up the bypassable NITS charge for each rate period, how the Commission and statutory advocates will be able to confirm the accuracy of these calculations. This information is necessary to assure the Commission, the statutory advocates, and customers that the process will operate transparently without the possibility of the customers being overcharged compared to the NITS charges associated with their loads.

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSAL FOR SATISFYING THE AEPS ACT REQUIREMENTS.

A. FE PA proposes that winning wholesale suppliers of FPFR auctions in FE PA's Rate Districts be responsible for meeting all Tier I and Tier II AEC requirements, including solar photovoltaic AEC ("SPAEC") requirements, of the AEPS Act.[24] This represents a change from DSP VI in which FE PA allocated SPAECs separately procured by the Company to suppliers to meet a portion of the suppliers' SPAEC requirements.

Q. DO YOU CONCUR WITH FE PA'S PROPOSAL TO ASSIGN ALL AEPS ACT COMPLIANCE REQUIREMENTS TO WHOLESALE SUPPLIERS?

A. Yes. AECs, including Tier I, Tier II, and SPAECs, can be purchased in the bilateral market for multiple years into the future.[25] Therefore, it is appropriate to assign the

[24] Petition, paragraph 24.

[25] Unlike PJM's energy and capacity markets that operate as a centralized exchange, AEC markets operate as bilateral markets where willing buyers and sellers transact with each other directly or through brokers. AEC market price indices are published by multiple vendors, which indicate liquid trading and allow for efficient price discovery.

responsibility of satisfying all requirements of the AEPS Act to wholesale suppliers of FPFR contracts.

V. TIME-OF-USE RATES

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSAL TO OFFER VOLUNTARY TIME-OF-USE RATES TO RESIDENTIAL DEFAULT SERVICE CUSTOMERS.

A. In DSP VII FE PA proposes to continue, with certain modifications, the TOU rate program that is currently in place in DSP VI. The Company proposes to offer a residential TOU rate on a voluntary, opt-in basis. Generation supply for both standard and TOU residential default service customers would be sourced from the same supply portfolio. The Company offers three TOU periods: peak, off-peak, and super off-peak. The price for each TOU period would be calculated as the PTC Rider price times a multiplier derived from energy and capacity price data for the respective FE PA Rate District zones over the most recent four years (currently, 2021-2024). The TOU pricing multipliers are reviewed every two years using an updated rolling four-year energy and capacity pricing, and they get revised to the updated multipliers if the change is 15 percent or larger for at least one TOU rate multiplier. The current (June 1, 2025, through May 31, 2027) peak period price for the residential class is 2.74 times the super off-peak period price, and the off-peak period price is 1.35 times the super off-peak period price for Met-Ed Rate District. These ratios are similar for other Rate Districts. [26] These price multipliers and the TOU peak period allocators (the percentage of kWh usage) for each of the three relevant time periods are used in conjunction with the PTC Rider price, which changes semiannually, to compute the

[26] FE PA Statement No. 1, pp. 9-11.

semiannual TOU prices for the residential class.[27] Residential customers could opt into the TOU rate at any time and exit at any time, though once they leave, they must wait 12 months before being able to return to the rate. This restricted entry is designed to minimize the opportunity for residential customers to game the rate.[28]

The Company's current on-peak TOU period is between 2 p.m. and 9 p.m. on non-holiday weekdays, and its super off-peak TOU period is between 11 p.m. and 6 a.m. daily. All other hours are classified as off-peak. The Company proposes revising its on-peak TOU period to between 3 p.m. and 7 p.m. on non-holiday weekdays; retain the same super off-peak TOU period definition; and all other hours would be off-peak.[29] The new TOU structure would result in larger price variation between on- and off-peak periods. For example, under the proposed TOU rate periods, for the Met-Ed Rate District, peak period price for the residential class would increase to 3.64 times the super off-peak period price for Met-Ed Rate District.[30]

Q. HAS FE PA'S TOU RATE PROGRAM BEEN SUCCESSFUL SO FAR IN DSP VI?

A. No. I agree with Ms. Alexander's analysis that the TOU rate program currently in place does not appear to meet the needs of FE PA's customers given its low enrollment.

Q. ARE YOU RECOMMENDING THAT FE PA'S TOU RATE PROGRAM BE DISCONTINUED IN DSP VII?

A. No. While, as Ms. Alexander explains, the program did not deliver much, if any, value to the overall residential customer base, discontinuation of the program will not result in significant cost savings, either. That is because the implementation cost of

[27] *Id.*, p. 14, lines 17-20.
[28] *Id.*, p. 10, lines 1-4.
[29] *Id.*, p. 12, line 3.
[30] *Id.*, p. 12, line 12.

the program is a sunk cost, and the Company indicates that there are no additional costs associated with administering the current TOU program.[31]

Q. WHAT IS THE COMPANY'S STATED REASON FOR PROPOSING TO REVISE THE TOU RATE PERIODS?

A. FE PA witness Mr. David Young provides two reasons for the proposed revisions to the TOU periods: That the length of the current on-peak period (seven hours) is challenging for customers to shift usage to off-peak hours; and that the on-peak to off-peak ratios are too low to incentivize load shifting.[32] According to Mr. Young, "reducing the on-peak hours will produce a more meaningful price variation (on average 2.5 times higher than off-peak) to create a stronger incentive for customers to sign up for the TOU program and change their energy consumption habits."[33]

Q. PLEASE COMMENT ON FE PA'S REASONS FOR PROPOSING REVISIONS TO TOU RATE PERIOD DEFINITIONS.

A. While I share the Company's goals of increasing participation in TOU rates and having customers shift their usage from heavier system load periods to lighter system load periods, the Company has not demonstrated that its proposed revisions to the residential TOU rate program would advance these goals. While Mr. Young speculates that a larger price variation between TOU periods would create a stronger incentive for customers to sign up for the TOU program, it is also possible that a higher on-peak rate would scare, even existing participants, away from TOU rates. While it is possible that larger rate differentials would prompt participants to shift usage away from the on-peak period, this conclusion is based on the unsubstantiated presumption that customers that signed up for the TOU rate did so with the intention

[31] FE PA's Response to OCA Set 1 No 004.
[32] FE PA Statement no. 1, p. 11, lines 13-18.
[33] *Id.*, p. 11, lines 19-22.

of shifting usage. It is also possible that customers that would happen to save money with the TOU rates due to their usage profiles sign up for the TOU program, without any intention of shifting usage. A deliberate statistical analysis featuring appropriate baselines and control groups would be required to address these questions. The Company appears to have developed the proposed revisions to the existing TOU program without conducting such analyses. In her direct testimony, OCA witness Ms. Alexander explains in detail the shortcomings of the Company's proposal and recommends that the Commission reject the changes to the TOU rate program as proposed.

Q. DOES THE PROPOSED ON-PEAK PERIOD APPEAR APPROPRIATE FROM THE PERSPECTIVE OF PJM SYSTEM PEAKS?

A. No. Table 2 shows the day and time of five PJM systemwide peak load hours (also known as Five Coincident Peaks, or 5CP) in the summer of 2025. I note that one of those five hours (highlighted in Table 2), which are also used by FE PA Rate Districts to allocate PJM capacity charges to individual customers, is outside of FE PA's proposed on-peak TOU rate period. The on-peak period of a TOU rate program should at least include 5CPs from previous years. In comparison, the on-peak period in the existing TOU rate structure includes all 5CPs in the last five years.

Table 2. PJM Five Coincident Peaks, Summer 2025

Capacity	Peak Date	HE EPT
Peak 1:	6/23/2025	18:00
Peak 2:	6/24/2025	18:00
Peak 3:	6/25/2025	15:00
Peak 4:	7/28/2025	18:00
Peak 5:	7/29/2025	18:00

Source: FE PA's Response to OCA Set 2 No 4 Attachment A. HE: Hour-ending.

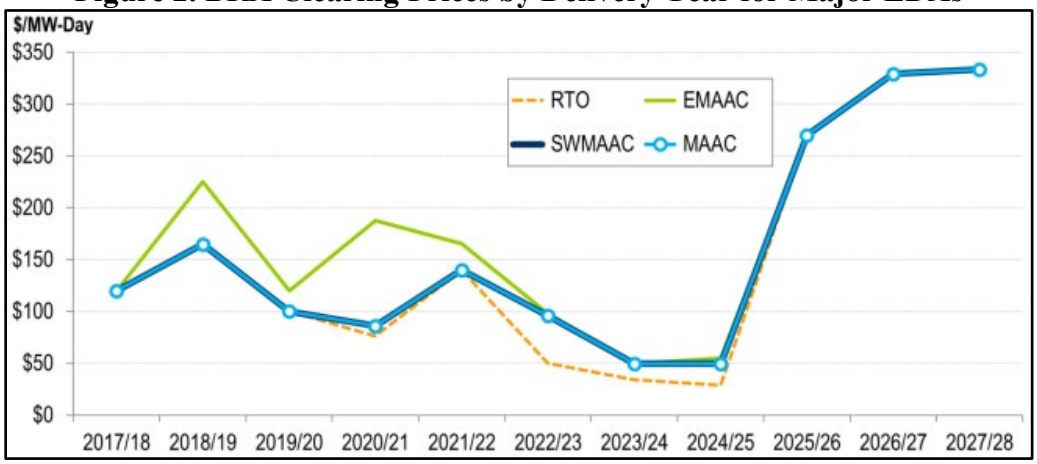
Q. DO YOU CONCUR WITH MS. ALEXANDER'S RECOMMENDATION THAT THE COMMISSION REJECT THE PROPOSED CHANGES TO THE TOU PROGRAM?

A. Yes. I recommend that the Commission leave the current TOU rate program intact for DSP VII. If the Company proposes a different TOU program with the appropriate analyses and justifications, such proposal should be reviewed based on its merits.

Q. IN ADDITION TO A TOU RATE PROGRAM IN COMPLIANCE WITH ACT 129 REQUIREMENTS, DO YOU HAVE ANY RECOMMENDATIONS REGARDING WAYS IN WHICH FE PA CAN INCENTIVIZE SHIFTING USAGE IN WAYS THAT WOULD CREATE VALUE?

A. Yes. I recommend that FE PA, as the EDC, develop and propose for the Commission's approval load response programs in its service territory that would create Demand Response ("DR") capacity resources that would be eligible to offer into BRAs conducted by PJM. Load response programs can be geared to residential, commercial, or industrial customers on an opt-in basis, whether they receive generation service from EGSs or default service. They can be in the form of direct load control of residential or commercial heating, cooling, or water heating equipment or electric vehicle charging; dispatchable distributed generation; virtual power plants; or other forms of load response. PJM is in dire need of new capacity resources, and EDCs such as FE PA are well situated to create DR capacity in the face of explosive load growth from data centers and slow buildup of generation capacity due to various bottlenecks (e.g., interconnection, permitting, supply chain constraints). I am advised by counsel that Phase V (June 1, 2026 through May 31, 2031) of Act 129 reintroduces DR programming and that FE PA has agreed to

changes in its Act 129 proceedings to make DR a more meaningful component of its Phase V Energy Efficiency & Conservation Plan.[34]



Q. DO RECENT PJM BRA RESULTS REFLECT DIRE NEED FOR NEW CAPACITY?

A. Yes. Figure 2 shows BRA clearing prices since the 2017/2018 Delivery Year ("DY"). Capacity prices jumped for the 2025/2026 DY and they continued to climb since then. PJM reports that without the temporary cap on prices that was applicable in the BRA for the 2027/2028 DY, the clearing price would have been $529.80/MW-Day.[35] To put it in perspective, every $100/MW-Day in capacity price would contribute approximately one cent per kWh to a residential customer's electricity supply rate. The most recent capacity auction price of $333/MW-Day would add approximately 3.5 cents per kWh to a residential customer's electricity supply rate, without even accounting for energy, transmission, ancillary services, and AEPS Act compliance costs. Another $200/MW-Day increase in capacity prices beyond the most recent capacity auction price of $333/MW-Day would add another 2 cents per kWh to the residential supply price. The next two BRAs (for 2028/2029 and 2029/2030 DYs) will likely be conducted with the same price cap, but the price caps are slated to expire after that. Therefore, it is critical to create capacity that can offer into PJM's BRAs from an affordability perspective, in addition to the reliability benefits.

Q. IS THE CAPACITY CRUNCH IN PJM PROJECTED TO IMPROVE?

A. No, it is projected to worsen with each passing year. Figure 3 depicts the growth in the reliability requirement (which consists of PJM's peak load forecast plus the reliability reserve margin) projected by PJM, and the associated shortfall in capacity resources, for the next 10 DYs. While PJM's estimated supply forecast may be an underestimate because of its exclusion of future resources, load is projected to grow at an unprecedented pace and it will be challenging for capacity buildup to catch up to it, which would keep capacity prices elevated for years to come.

Figure 3. Projected Capacity Shortfalls in PJM

	Estimated Reliability Requirement	Estimated Supply♦	Potential Backstop Target
2026/2027	133,000	134,000	0
2027/2028	138,000	134,000	4,000
2028/2029	142,000	133,000	9,000
2029/2030	147,000	132,000	15,000
2030/2031	156,000	132,000	24,000
2031/2032	163,000	132,000	31,000
2032/2033	170,000	132,000	38,000
2033/2034	176,000	132,000	44,000
2034/2035	180,000	129,000	51,000
2035/2036	184,000	129,000	55,000

♦Estimated Supply is 27/28 Committed Capacity, less that of announced retirements

Q. CAN YOU GIVE AN EXAMPLE OF AN EDC DR PROGRAM?

A. Yes. Baltimore Gas and Electric Company's ("BG&E's") A/C cycling program is an example of a DR program. During periods of high electricity use in the Mid-Atlantic region, BG&E sends a radio signal to the programmable thermostat or outdoor air conditioning switch at participating customer homes to interrupt the flow of electricity to air conditioning units for a period of time each hour. This is referred to as cycling. Cycling reduces the peak demand for electricity, helping to maintain reliable service and keep down the cost of electricity. [36]

Q. IS A DEFAULT SERVICE PLAN PROCEEDING THE APPROPRIATE VENUE TO ADDRESS THE NEED FOR CREATING EDC DR PROGRAMS?

A. Yes. A base rate case proceeding addresses delivery service matters, while a default service plan proceeding addresses supply matters. Accordingly, a default service plan proceeding such as this one is an appropriate venue to consider these issues. That said, proceedings under Act 129 are generally the more appropriate forum for the detailed development and implementation of meaningful DR programs. It is my understanding that DR is being addressed in the Act 129 Phase V proceedings, and any actions taken in this proceeding should complement and enhance the framework established there.

Even if developing and proposing specific DR programs falls outside the scope of this proceeding, the Commission could direct FE PA to develop and file such programs in a future proceeding or initiate a separate statewide proceeding to address the issue. As long as the Commission acts expeditiously to address this urgent matter, the specific venue in which it does so is of secondary importance.

[36] https://bgesmartenergy.com/residential/earn-incentives/peak-rewards/ac/ac-cycling-overview

VI. RESIDENTIAL RATE DESIGN AND RECONCILIATION

Q. PLEASE DESCRIBE THE COMPANY'S PTC RIDER RESIDENTIAL RATE DESIGN.

A. The Company is proposing to continue a flat per-kWh rate design for residential customers. FE PA is also proposing to maintain semiannual rate changes for residential customers, on June 1 and December each year.[37]

Q. DO YOU SUPPORT THE RATE DESIGN PROPOSED BY THE COMPANY FOR RESIDENTIAL CUSTOMERS?

A. Yes. A flat per-kWh rate design is appropriate for residential customers due to its simplicity. Semiannual residential rate adjustment frequency also strikes the appropriate balance between rate stability and predictability and responsiveness of the rate to underlying market conditions.

Q. HOW IS FE PA PROPOSING TO RECONCILE RESIDENTIAL DEFAULT SERVICE REVENUES WITH COSTS?

A. FE PA is proposing to retain the same reconciliation mechanism used in DSP VI for DSP VII, that is, a reconciliation balance is calculated over a six-month period and collected (or refunded), with interest, over the following six-month period. Reconciliation balance is collected (or refunded) through the "E-Factor" rate, which is a component of the PTC.

Q. WHAT ARE THE PRINCIPAL DRIVERS OF OVER/UNDER COLLECTIONS?

A. According to the Company, "over- and under-recoveries are driven by two principal factors: the difference between projected and actual supply costs and billing cycle lag."[38]

[37] FE PA Statement No. 4, p. 3, lines 1-8.
[38] FE PA Statement No. 4, p. 3, lines 18-19.

Q. HAVE THE RESIDENTIAL E-FACTOR RATES BEEN LARGE IN RECENT YEARS?

A. The residential E-Factor rates in the five years from January 2021 through December 2025 averaged 0.5 cents per kWh (or 6 percent of the $PTC_{Current}$, or "C-Factor" rate) for Met-Ed, 0.4 cents per kWh (or 5 percent of the C-Factor rate) for Penelec and Penn Power, and 0.2 cents per kWh (or 3 percent of the C-Factor rate) for West Penn. However, in the same time period, E-Factor rate was as high as 1.1 cents per kWh (or 11 percent of the C-Factor rate) on the positive side and 1.3 cents per kWh (or 16 percent of the C-Factor rate) on the negative side for Met-Ed. The swings in the E-Factor rates have been similarly large for Penelec and Penn Power, but not as large for West Penn.[39]

Q. ARE THERE FACTORS THAT COULD INCREASE THE E-FACTOR RATES IN DSP VII?

A. Yes. While I support the Company's CPP mechanism proposal, I am concerned that the true-up adjustments between the CPP and the realized PJM capacity rate in the current environment of highly volatile PJM capacity prices will lead to larger under- or over-collections than has been experienced in recent years, which will further increase the swings in the E-Factor rate under the current semi-annual adjustment. There are two additional factors that could increase the volatility of E-Factor rates. First, higher levels of participation in TOU rates could, and likely would, result in higher reconciliation adjustments. Similarly, increasing adoption of net metering systems by residential customers is likely to increase cash out payments and thus reconciliation adjustments.

[39] Source: FE PA's Response to OSBA Set 1, No. 001-Attachment A.

Q. ARE YOU RECOMMENDING ANY CHANGES TO THE RECONCILIATION ADJUSTMENT TO ADDRESS THE POTENTIAL FOR HIGHER E-FACTOR RATES?

A. Yes. I am making two recommendations. First, I recommend that the six-month reconciliation approach used by the Company under DSP VI (and proposed by FE PA to be retained under DSP VII) be modified slightly such that the cumulative amount to be collected (or refunded) be amortized over the subsequent 12 months. This would reduce the size and variability of the E-Factor rate and make the PTC more stable and market reflective. Second, I recommend that the E-Factor rate be capped at 1 cent per kWh in either direction. If the entire reconciliation balance cannot be amortized at the E-Factor cap rate, the remaining amount would be included in the subsequent period's reconciliation balance.

Q. DO YOU HAVE ADDITIONAL OBSERVATIONS RELATED TO YOUR RECONCILIATION PROPOSAL?

A. Yes, I have two additional observations. First, my recommendation has potential upside without material downside. If the residential reconciliation balances remain small, then the effect of implementing my recommendation would be negligible since amortizing a small reconciliation balance over six months or 12 months would not have a material difference on the E-Factor rate. However, if the residential reconciliation balances increase in one or more reconciliation periods, then a 12-month amortization period would result in more stable E-Factor rates and PTCs, and more market-reflective PTCs, compared to a six-month amortization period. Second,

the Commission already approved a 12-month amortization period for reconciliation balances for some Pennsylvania EDCs.[40]

VII. MAXIMUM REGISTERED PEAK LOAD

Q. PLEASE DESCRIBE THE CRITERION BY WHICH FE PA PROPOSES TO CLASSIFY A NON-RESIDENTIAL ACCOUNT AS COMMERCIAL OR INDUSTRIAL.

A. FE PA is proposing that non-residential default service customers with a demand of 100 kW or above or MRPL of 100 kW or above will be classified as "commercial," for default service procurement and provision purposes, and served under the Hourly Pricing Default Service Rider ("HP Rider"). Default service customers with a demand below 100 kW and MRPL below 100 kW would be served under the PTC Rider.[41] FE PA proposes to define MRPL as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this shall also be inclusive of the nameplate capacity of the generation system." [42]

Q. PLEASE DESCRIBE FE PA'S RATIONALE FOR PROPOSING MRPL AS AN ELEMENT OF THIS CRITERION.

A. Mr. Young states that FE PA's proposed methodology includes both demand and supply impacts to ensure that large customer-generators are grouped with other large customers for default supply procurement purposes. Mr. Young states that net metering generation projects are typically utility scale (between 1 MW and 3 MW). He points out that FE PA does not use excess energy from net-metered customer

[40] For example, PPL (approved by the Commission in Docket No. P-2020-3019356), and Pike (approved by the Commission in Docket No. P-2023-30399).
[41] FE PA Statement No. 4, p. 16, lines 6-11.
[42] FE PA Exhibit DMY-6, p. 1.

generators as supply to serve default service load, but instead, excess energy from intermittent net-metered customer generators is recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions.[43]

Mr. Young highlights two benefits of classifying default service customers based on both demand and MRPL. First, it would avoid the risks associated with reduced load for commercial customers on the PTC Rider. Second, it would avoid potential subsidization of large customer generators by smaller commercial retail customers since the costs of net metering excess power purchases paid by the Company are recovered from other customers in the same class as large customer generators.[44]

Q. PLEASE EXPLAIN THE EFFECT OF INCLUDING LARGE CUSTOMER-GENERATORS IN THE COMMERCIAL CUSTOMER PROCUREMENT GROUP.

A. The inclusion of large customer-generators in the commercial customer procurement group would bundle truly small commercial customers, (i.e., which have net power flow from or into the Company's distribution system less than 100 kW) with more sophisticated, large customer-generators in the same FPFR contract procurements. This would negatively affect small commercial default service customers in two ways. First, because the more sophisticated, large customer-generators would entail higher switching risk for the FPFR suppliers, the FPFR suppliers would either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions. This would have the likely effect of higher PTCs and/or more

[43] FE PA Statement No. 4, p. 17.
[44] Id., p. 17, line 18 to p. 18, line 2.

volatile rates for small commercial customers due to the inclusion of large customer-generators in the small commercial procurement group. In addition, large customer-generators would receive the higher PTC, which would have been inflated simply by their mere participation and switching risk, for their exports, which in turn would be recovered from all small commercial default service customers, most of which are small commercial customers.

The difference between shopping rates of commercial customers and industrial customers is evident in the shopping data provided by the Company in response to interrogatories. As of end-February 2026, by the capacity peak-load contribution (in kW) measure, 59 percent of commercial customer load was receiving generation supply from EGSs while 96 percent of industrial load was receiving generation supply from EGSs.[45] The Commission's Retail Electricity Report for activity in 2024[46], the relevant table from which is replicated below, confirms this finding that larger customer size (and thus higher sophistication) is associated with higher propensity to shop. In the case of FE PA Rate Districts, by kWh of sales, between 35 percent and 45 percent of small non-residential load shopped in 2024, compared to between 65 percent and 70 percent of medium non-residential load and between 96 percent and 97 percent of large non-residential load.[47]

*See Appendix A for definitions of small, medium, and large non-residential classifications.
**FirstEnergy Pennsylvania Electric Company (FE PA)

Second, even the large customer-generators that stay on default service constitute volumetric risk for FPFR suppliers because of the uncertainty surrounding the level and profile of on-site generation (e.g., outages, in-service dates of on-site generators that are in FE PA's distribution interconnection queue). Similar to switching risk, this volumetric risk would prompt the FPFR suppliers to either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions, resulting in higher PTCs and/or more volatile rates for small commercial customers.

Q. BASED ON YOUR FOREGOING OBSERVATIONS, DO YOU SUPPORT FE PA'S PROPOSAL TO CLASSIFY COMMERCIAL AND INDUSTRIAL ACCORDING TO BOTH DEMAND AND MRPL?

A. Yes. To properly protect small commercial consumers, the non-residential customer classification framework should avoid cross-subsidization and risk contamination, which requires keeping higher-risk, more sophisticated larger commercial and industrial customers separate from small commercial customers so small commercial customer rates remain stable, predictable, and tied to their own load characteristics.

VIII. RETAIL SHOPPING CHANGES

Q. PLEASE DESCRIBE THE CHANGES TO RETAIL SHOPPING RULES PROPOSED BY THE COMPANY.

A. FE PA is proposing three major changes to retail shopping rules. First, FE PA is proposing to require EGSs entering into new contracts with residential customers after June 1, 2027, to return those residential customers to default service at the conclusion of the fixed duration contract term absent an affirmative choice to remain with the EGS.[48] Second, commencing June 1, 2027, EGSs would be required to provide an attestation of affirmative customer consent on a quarterly basis for all residential customers on variable-priced month-to-month products.[49] Third, the Company is proposing that, for all contracts entered into after June 1, 2027, EGSs on utility consolidated billing must use "rate-ready" billing and charge a rate that is at or below the PTC at the time of the customer's enrollment transaction or rate change transaction to be eligible for purchase of receivables ("POR") for that customer account. EGSs that do not comply with the new pricing requirement for the Company's POR program would be responsible for all arrearages those EGSs generate. The first two rule changes would apply to residential customers while the third one would apply to both residential and commercial customers.

Q. DO YOU AGREE WITH THESE SHOPPING RULE AND RETAIL SUPPLIER TARIFF CHANGES PROPOSED BY THE COMPANY?

A. Yes. OCA witness Barbara Alexander discusses these reforms proposed by the Company in detail and provides the basis on which they should be adopted. I concur with her reasoning, conclusions, and recommendations.

[48] Petition, paragraph 51.
[49] *Id.*

Q. THE COMPANY'S PROPOSED REFORMS FOCUS PRIMARILY ON PROTECTION OF RESIDENTIAL CUSTOMERS. DO YOU CONCUR WITH THIS FOCUS ON RESIDENTIAL CUSTOMERS?

A. Yes. As Ms. Alexander states, Shopping residential customers across FE PA's four Rate Districts (and Predecessor Companies) have paid $394,826,692.63 more than the PTC to EGSs in the 49-month period from January 2022 through January 2026. I have two additional observations. First, the consistency and persistence of this trend is striking, as FE PA's shopping residential customers collectively as a group paid more than the PTC in every single month of this 49-month period. On average, over 49 months across four Rate Districts, shopping residential customers paid 30 percent more than the PTC. Second, residential customers were FE PA's only customer class the shopping members of which collectively paid more to EGSs than they would have paid to the Company under default service. The shopping members of the commercial, industrial, and street lighting class customers collectively all paid less to EGSs than they would have paid for default service. Shopping commercial customers across four Rate Districts as a whole paid to EGSs 12 percent less than they would have paid for default service in the 49-month period from January 2022 through January 2026, while industrial customers paid 29 percent less and street lighting customers paid 33 percent less by the same measure.[50] In light of these facts, the Company is correct in focusing on prioritizing the protection of residential customers.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes, it does.

Statement of Qualifications of
Serhan Ogur

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

SERHAN OGUR, Ph.D.

Dr. Ogur is a Principal of Exeter Associates, Inc. with 23 years of experience in the energy industry specializing in organized wholesale (Regional Transmission Organization / Independent System Operator) and retail electricity markets. Dr. Ogur's diverse background comprises energy management and consulting; analysis, design, and reporting of RTO electricity markets and products; and state and federal regulation of electric utilities.

Dr. Ogur's coursework in graduate school focused on Microeconomic Theory, Game Theory, and Industrial Organization. His doctoral dissertation investigates imperfect competition in deregulated wholesale electricity markets and oligopolistic competition between private and public generators.

Education

Ph.D. (Economics), 2007
Northwestern University

B.A. (Economics), 1996
Bogazici University, Turkey

Exeter Employment

2020-current	Principal and Vice President
2015-2020	Senior Economist

Previous Employment

2014-2015	Senior System Operator Fellon-McCord & Associates, LLC Louisville, KY
2005-2014	Senior Economist PJM Interconnection, LLC Audubon, PA
2001-2005	Economic Analyst Illinois Commerce Commission Springfield, IL

Professional Experience

Dr. Ogur's work at Exeter includes analysis of electricity supply contracts; utility rates and tariffs; energy markets and prices; power procurement; default electric service design; project evaluation; demand response opportunities; congestion hedging strategies; and price forecasting.

Prior to joining Exeter, Dr. Ogur's responsibilities at Fellon-McCord encompassed overseeing and performing the daily tasks of the "24/7" wholesale electricity desk, including all aspects of scheduling, managing, and monitoring direct market participant load and generation assets (mostly in ISO/RTO markets) as well as their settlements and custom reporting. He was also in charge of developing strategies and making recommendations, through analytical, financial, and market research, for longer-term management of clients' load obligations and generation assets such as Auction Revenue Rights (ARR) nominations; participation in energy, ancillary services, and capacity markets; load forecasting; energy, basis, and capacity price forecasting; hedging; and peak load management. Dr. Ogur also served as the company's lead analyst in various special consulting projects.

In PJM Interconnection's Market Strategy and Market Analysis departments, Dr. Ogur was responsible for analyzing and reporting on all PJM-administered electricity market products, including day-ahead and real-time energy, operating reserve, regulation, synchronized reserve, virtual transactions, financial transmission rights, capacity, demand response, energy efficiency, and renewables. He was part of the team that developed the protocols and business rules for participation of energy efficiency in PJM markets as well as a lead reviewer for energy efficiency plans and post-installation measurement and verification (M&V) reports for PJM's capacity market auctions. He also has training and experience in PJM's stakeholder management process.

Dr. Ogur's responsibilities at the Illinois Commerce Commission (ICC) included monitoring all Illinois-related developments under federal jurisdiction, mostly Federal Energy Regulatory Commission (FERC) filings and rulings concerning major Illinois electric public utilities. In addition, Dr. Ogur reviewed all actions concerning Illinois public utilities at the FERC level (applications to join RTOs, market-based rate authority filings, merger applications, transmission rate cases, etc.), and developed positions and official comments for the consideration of the ICC to file in the related FERC dockets. Dr. Ogur also filed written testimony and served as staff witness (including standing cross-examination) in the ICC dockets establishing auction-based competitive wholesale energy procurement mechanisms for major Illinois electric public utilities.

- *Retail Supply and Standard Offer Service Reform for Maine*, prepared for Maine Office of the Public Advocate, February 2023 (with Steven Estomin, Matthew Hoyt, Olivia Kuykendall, Afton Hauer, and Cali Clark of Exeter Associates)

Expert Testimony

- Before the Federal Energy Regulatory Commission, Docket No. EC25-43, Constellation Energy Corporation, Constellation Energy Generation, and Calpine Corporation, 2025, on behalf of the Pennsylvania Office of Consumer Advocate. Affidavit addressed public utility merger and acquisition issues related to market concentration and horizontal market power.
- Before the Pennsylvania Public Utility Commission, Docket Nos. P-2024-3049357 and P-2024-3049357, Citizens' Electric Company of Lewisburg, PA and Wellsboro Electric Company, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Affidavit addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket No. P-2024-3049343, UGI Utilities, Inc. – Electric Division, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket No. P-2024-3048592, Duquesne Light Company, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket No. P-2024-3047290, PPL Electric Utilities Corporation, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket No. P-2024-3046008, PECO Energy Company, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket No. P-2023-3039927, Pike County Light & Power Company, 2023, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Pennsylvania Public Utility Commission, Docket Nos. A-2023-3038771 *et al*, Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company, 2023, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed public utility merger and acquisition issues.
- Before the Pennsylvania Public Utility Commission, Docket Nos. P-2021-3030012, P-2021-3030013, P-2021-3030014 and P-2021-3030021, Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company, 2022, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.
- Before the Ontario Superior Court of Justice, In the Matter of Just Energy Group Inc. et al, Court File No. CV-21-00658423-00CL, 2021, on behalf of the *Donin and Jordet* Plaintiffs. Testified on overcharges by a retail electric supplier in a class action suit with plaintiffs in 11 states in the U.S.
- Before the Pennsylvania Public Utility Commission, Docket Nos. A-2021-3025659 and A-2021-3025662, Pike County Light & Power Company and Leatherstocking Gas Company, LLC, 2020, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed public utility merger and acquisition issues.

- Before the U.S. District Court for the District of New Jersey, Civil Action No. 3:17-cv-02680-MAS- LHG, 2021, on behalf of Janet Rolland, et al. Testified on systematic overcharges by a retail electric supplier in a class action suit with plaintiffs in eight states.

- Before the Pennsylvania Public Utility Commission, Docket No. P-2020-3022988, Pike County Light & Power Company, 2020, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.

- Before the Pennsylvania Public Utility Commission, Docket No. P-2020-3019907, UGI Utilities, Inc. – Electric Division, 2020, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.

- Before the Pennsylvania Public Utility Commission, Docket No. P-2020-3019522, Duquesne Light Company, 2020, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.

- Before the Pennsylvania Public Utility Commission, Docket Nos. P-2020-3019383 and P-2020-3019384, Citizens' Electric Company of Lewisburg, PA and Wellsboro Electric Company, 2020, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.

- Before the Pennsylvania Public Utility Commission, Docket No. P-2016-2534980, PECO Energy Company, 2016, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed default service issues.

- Before the Illinois Commerce Commission, Docket No. 05-0159, Commonwealth Edison Company, 2005, on behalf of the Staff of Illinois Commerce Commission. Testimony addressed default service design and competitive procurement issues.

- Before the Illinois Commerce Commission, Docket Nos. 05-0160, 05-0161, and 05-0162 (Consolidated), Central Illinois Light Company d/b/a AmerenCILCO, 2005, on behalf of the Staff of Illinois Commerce Commission. Testimony addressed default service design and competitive procurement issues.

- Before the Illinois Commerce Commission, Docket No. 02-0428, Central Illinois Light Company and Ameren Corporation, 2002, on behalf of the Staff of Illinois Commerce Commission. Testimony addressed competition issues in a utility merger case.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031	: : : : :	Docket No. P-2026-3060298

VERIFICATION

I, Serhan Ogur, hereby state that the facts above set forth in my Direct Testimony, OCA Statement No. 1, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: April 29, 2026

I. INTRODUCTION 1

II. DEFAULT SERVICE SUPPLY PORTFOLIO 2

III. MAXIMUM REGISTERED PEAK LOAD 15

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Serhan Ogur. I am a Principal and Senior Economist at Exeter Associates, Inc. ("Exeter"). My office is located at 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony in this proceeding on April 29, 2026 on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. My Rebuttal Testimony addresses certain issues raised by Mr. Frank Lacey in his Direct Testimony filed on behalf of the Retail Energy Supply Association ("RESA"). These issues relate to FirstEnergy Pennsylvania Electric Company's ("FE PA's" or the "Company's") proposed residential default service supply portfolio under FE PA's Default Service Plan VII ("DSP VII"). My Rebuttal Testimony also responds to certain issues raised by a number of intervenors in their respective direct testimonies related to the Company's maximum registered peak load ("MRPL") proposal.

II. DEFAULT SERVICE SUPPLY PORTFOLIO

Q. PLEASE DESCRIBE FE PA'S PROPOSED RESIDENTIAL DEFAULT SERVICE SUPPLY PORTFOLIO FOR DSP VII.

The residential default service load is proposed to be supplied from three sources: 12-month fixed-price, full requirements ("FPFR") contracts; 24-month FPFR contracts; and 60-month FPFR contracts. In other words, the FPFR contracts make up the entirety of the power supply, with laddered contracts procured twice per year to replace prior contracts set to expire. The 60-month FPFR contracts are proposed to make up approximately 10 percent of the power supply in each respective Rate District. The remaining 90 percent of residential default service load requirement is to be met from a combination of 12-month products and 24-month products, with the share of each varying across the Rate Districts. Each residential tranche represents a fixed percentage of the residential default service load, also varying across Rate Districts.[1] If the default service load shrinks or increases (e.g., shrinks due to customers migrating to competitive retail supply or increases due to customers returning to default service), the size of the tranches measured in kilowatt-hours ("kWh") would correspondingly change in size. Thus, the wholesale suppliers assume the "volumetric risk" of an uncertain load obligation for the entire residential default service load.

FPFR contracts would be procured through a competitive descending clock auction ("DCA") process,[2] which is consistent with FE PA's procurement approach taken

[1] Each residential tranche represents 3.3 percent of load in Met-Ed, 5.0 percent of load in Penelec, 11.1 percent of load in Penn Power, and 2.7 percent of load in West Penn.

[2] This format is characterized as a "descending clock" auction because prices "tick down" as rounds progress, starting at an initial price and being reduced until the number of tranches that all bidders are willing to supply is just enough to match the load to be supplied. (Petition, paragraph 18). According to the Company, its multi-product design allows all products to be procured in a single auction, which provides a cost-effective, economically efficient means to obtain multiple products while also allowing for instantaneous market-based pricing. Suppliers receive feedback from the results of each round. Because pricing is transparent, some suppliers will withdraw, and the least-cost suppliers will prevail. (Petition, paragraph 19).

in DSP VI. The Company proposes to continue using a Capacity Proxy Price ("CPP") mechanism in FE PA's auctions in the event PJM Interconnection, LLC ("PJM") does not conduct a base residual auction ("BRA"),[3] with some revisions to clarify the true-up methodology for the CPP.[4] FE PA proposes to remove PJM Network Integration Transmission Service ("NITS") charges from the auction products, making NITS the Company's responsibility for default service customers.[5] The Company also proposes to modify the Supplier Master Agreement ("SMA") to put the Alternative Energy Portfolio Standards Act ("AEPS Act") compliance responsibility fully on the wholesale suppliers of FPFR contracts.[6]

Q. DID YOU ADDRESS THIS ISSUE IN YOUR DIRECT TESTIMONY?

A. Yes. I generally supported the Company's proposed default service supply portfolio for the residential class,[7] but I recommended certain improvements, including replacing the 60-month (or five-year) FPFR products with 36-month FPFR products.[8] The aspects of FE PA's proposed default service supply portfolio with which I concurred include exclusive reliance on FPFR contracts,[9] the inclusion of "overhanging" contracts,[10] the Company's proposal to continue using a CPP mechanism,[11] and FE PA's proposal to remove NITS charges from the FPFR auction products in DSP VII.[12]

[3] The PJM capacity auction, called the Base Residual Auction, procures capacity supply from generation and demand response resources, typically three years in advance of the delivery year, to meet electricity "resource adequacy" needs in the PJM control area. Participation of (existing and forecasted) loads and existing generation resources in a BRA are mandatory. PJM pays resources that clear the auction based on locational clearing prices and collects these sums from load-serving entities representing existing and forecasted loads.

Q. PLEASE SUMMARIZE MR. LACEY'S POSITION WITH RESPECT TO THE COMPANY'S PROPOSED DEFAULT SERVICE SUPPLY PORTFOLIO.

A. Mr. Lacey opposes FE PA's proposal to remove NITS charges from the FPFR products,[13] and recommends that the five-year FPFR contracts for residential default service be procured with no pass-through costs to customers.[14] Mr. Lacey also contends that the FPFR contracts proposed by FE PA are not aligned with the Act 129 requirements for such contracts.[15] According to Mr. Lacey, FPFR contracts as proposed by the Company are not for full-requirements service.[16] Mr. Lacey also claims that FE PA's proposed default service portfolio is anti-competitive because it disadvantages offerings of electric generation suppliers ("EGSs") relative to default service.[17]

Q. DO YOU CONCUR WITH ANY OF THESE CRITICISMS OF FE PA'S PROPOSED RESIDENTIAL DEFAULT SERVICE SUPPLY PORTFOLIO AND MR. LACEY'S ASSOCIATED RECOMMENDATIONS?

A. No. None of Mr. Lacey's criticisms or arguments summarized above have any merit. I address them below in order.

Q. DO YOU AGREE WITH MR. LACEY THAT DEFAULT SERVICE CONTRACTS TO BE SOLICITED TO WHOLESALE SUPPLIERS WILL NOT BE PROCURING FULL-REQUIREMENTS SERVICE?[18]

A. No. Mr. Lacey's assertion appears to be based on an extremely narrow and incorrect assumption that a contract qualifies as full requirements only if it includes all PJM billing line items. In my opinion, these contracts are referred to as "full requirements" because the wholesale supplier takes on the responsibility to provide a fixed percentage of energy

[13] RESA Statement No. 1, page 7, lines 17-20.
[14] *Id.*, page 8, lines 4-5.
[15] *Id.*, page 4, lines 14-15.
[16] *Id.*, page 44, lines 6-9.
[17] *Id.*, page 44, lines 10-12.
[18] *Id.*, page 44, lines 8-9.

consumption of the relevant customer class's default service load in each hour regardless of the variation in hour-by-hour usage and daily migration of customers into and out of default service (i.e., volumetric risk). These full-requirements contracts typically also include most other (than energy) PJM billing line items and other costs (e.g., distribution losses, AEPS Act compliance), but they do not need to include all such costs to be considered full requirements. An example of contracts that are not for full-requirements service would be fixed-quantity energy block products, where the supplier would deliver the same quantity (e.g., 25 megawatts) in every hour regardless of the default service load.

Mr. Lacey's definition of full requirements is demonstrably flawed, for three reasons. First, FE PA's FPFR default service contracts (or SMAs) in DSP VI exclude certain PJM billing line items from these contracts. The excluded PJM billing line items are Transmission Enhancement, Transmission Enhancement Settlement (EL05-121-009), Meter Error Correction, Expansion Cost Recovery, and Generation Deactivation.[19] According to Mr. Lacey, default service contracts that exclude the above PJM billing line items qualify as full-requirements service, but they cease to be for full-requirements service simply by adding NITS to the list of PJM billing line items that are excluded from the contracts.

Second, according to FE PA's Electric Generation Supplier Coordination Tariff, Transmission Enhancement, Transmission Enhancement Settlement (EL05-121-009), Expansion Cost Recovery, and Generation Deactivation are the responsibility of FE PA, and therefore not the responsibility of EGSs, for shopping customers.[20] If full-requirements service requires the inclusion of all PJM billing line items in the contract,

[19] FE PA Exhibit RJR-2, pages 96-106.
[20] https://www.firstenergycorp.com/content/dam/customer/Customer%20Choice/Files/PA/tariffs/FEPA-supplier-Tariff.pdf, pages 56-63.

then EGS service contracts are not for full-requirements service, either. Therefore, Mr. Lacey contradicts himself by claiming that EGS contracts that exclude certain PJM billing line items are full requirements while claiming at the same time that FPFRs that also exclude certain PJM billing line items are not full requirements.

Third, as Mr. Lacey also acknowledges, other Pennsylvania electric distribution companies ("EDCs") treat NITS charges in a way that is similar to how FE PA proposes to treat NITS charges.[21] Since the Pennsylvania Public Utility Commission (the "Commission") approved such contracts (with NITS excluded from them) as full-requirements default service contracts for other Pennsylvania EDCs, it necessarily follows that the Commission rejects Mr. Lacey's reasoning. The Pennsylvania EDCs for which the Commission approved removing NITS from their FPFR contracts include Duquesne Light Company,[22] PECO Energy Company,[23] and PPL Electric Utilities Corporation.[24]

Q. PLEASE EXPLAIN WHY MR. LACEY BELIEVES THAT THE PROPOSED FPFR CONTRACTS DO NOT MEET THE STANDARDS REQUIRED BY ACT 129.

A. Mr. Lacey claims that "[c]ontracts that do not include NITS and capacity cannot be deemed to be adequate and reliable."[25] Mr. Lacey also posits that "proposed contracts, without NITS and capacity fully hedged, also fall short on the 'least cost to customers over time' requirement."[26]

[21] RESA Statement No. 1, page 38, lines 1-5.

[25] *Id.*, page 65, lines 20-21.
[26] *Id.*, page 66, lines 3-5.

Q. DO YOU AGREE WITH MR. LACEY THAT THE COMPANY'S PROPOSED RESIDENTIAL DEFAULT SERVICE PORTFOLIO CANNOT BE DEEMED ADEQUATE AND RELIABLE BECAUSE DEFAULT SERVICE CONTRACTS EXCLUDE NITS AND INCLUDE A CAPACITY COST TRUE-UP UNDER SOME CIRCUMSTANCES?

A. No. In making this assertion, Mr. Lacey is relying upon an interpretation of 66 PA. C.S. § 2807(e), paragraph 3.4, with which I do not agree as a regulatory and economics expert. The statute requires the prudent mix of contracts to be designed to ensure adequate and reliable service. It does not require these specific contracts to ensure adequate and reliable service by themselves. In my opinion, it merely requires these contracts to be compatible with adequate and reliable service when combined with other services provided or separately obtained by the Company. Clearly, the Commission agrees with my interpretation of the statute since the Commission approved default service contracts that exclude NITS and include a capacity cost true-up (i.e., CPP) mechanism for other Pennsylvania EDCs.

Q. DO YOU CONCUR WITH MR. LACEY THAT THE COMPANY'S PROPOSED RESIDENTIAL DEFAULT SERVICE PORTFOLIO FAILS THE "LEAST COST TO CUSTOMERS OVER TIME" STANDARD?

A. No. The basis for Mr. Lacey's assertion that the Company's proposed residential default service portfolio fails the "least cost to customers over time" standard is that "[w]ithout NITS and capacity costs properly hedged for the duration of the default service contracts, the Commission is not even equipped with the information needed to determine if the contracts meet the standard, because the 'cost over time' will not be known until that time has passed."[27] This reasoning is flawed for multiple reasons.

[27] *Id.*, page 66, lines 5-8.

First, in a DSP proceeding, the Commission does not approve actual contract prices or customer rates, but a process for acquiring default service supplies. Therefore, the Commission need not, and cannot, know the specific cost that would result from a procurement approach, at the time it approves it, to determine compliance with the "least cost to customers over time" standard. Contract prices and therefore costs to customers over time are determined based on market conditions at the time such contracts are solicited. Including or excluding NITS and capacity in the FPFR contracts does not change this fact.

Second, some default service procurement plans approved by the Commission for some Pennsylvania EDCs include spot purchases, which are also allowed by the governing statute.[28] For example, PECO Energy Company's (PECO's) current Commission-approved Default Service Plan includes PJM spot market purchases for 0.8 percent of the residential default service portfolio. By definition, costs to customers of spot purchases cannot be known in advance by the Commission. According to Mr. Lacey's reasoning, spot market purchases would violate the "least cost to customers over time" standard because the Commission is not even equipped with the information needed to determine if these purchases meet the standard. However, since the Commission approved PECO's Default Service Plan that includes a spot market purchases component in the residential supply portfolio, it necessarily follows that the Commission rejects Mr. Lacey's suggestion for determining compliance with the "least cost to customers over time" standard. Similarly, as Mr. Lacey also acknowledges, other Pennsylvania EDCs also exclude NITS charges from FPFR contracts.[29] Since the Commission found these EDCs' Default Service Plans that consist of such contracts (with

[28] 66 PA. C.S. § 2807(e), paragraph 3.1.(i).
[29] RESA Statement No. 1, page 38, lines 1-5.

NITS excluded from them) to be compliant with the "least cost to customers over time" standard, it necessarily follows that the Commission rejects Mr. Lacey's reasoning.

Q. DO YOU CONCUR WITH MR. LACEY'S RECOMMENDATION THAT FIVE-YEAR FPFR CONTRACTS FOR RESIDENTIAL DEFAULT SERVICE BE PROCURED WITH NO PASS-THROUGH COSTS TO CUSTOMERS?

A. No. If the Commission approves the Company's proposal to include five-year FPFR contracts in the residential default service portfolio, which I recommended against in my Direct Testimony, such contracts should exclude NITS and include the CPP mechanism. Forcing wholesale suppliers to include NITS costs, which are variable, unknowable and unhedgeable, for five years would lead to higher risk premiums and lower auction participation. While capacity costs can theoretically be hedged through bilateral contracting, it is unlikely to yield a benefit to default service customers due to the capacity shortfall which the PJM market currently is in as well as the uncertainty surrounding PJM capacity market (e.g., resource accreditation, load forecasting methodology) and auction rules (e.g., capacity price caps and ceilings). In fact, approving a default service product portfolio design that raises costs to customers by increasing FPFR contract risk premiums and reducing supplier participation would be inconsistent with the "least cost to customers over time" standard.

Q. PLEASE COMMENT ON MR. LACEY'S ASSERTION THAT "UNDER THE FE PROPOSAL, THE [NITS COST] RISK AND RISK PREMIUM STILL EXISTS."[30]

A. The risk still exists, but the risk premium is eliminated when wholesale suppliers do not have to take on the risk. Over time, customers pay the true NITS cost, nothing more or

[30] *Id.*, page 39, line 23.

less. Importantly, customers do not have to pay a risk premium in addition to the full NITS cost.

Q. DO YOU CONCUR WITH MR. LACEY'S CLAIM THAT MOST EFFICIENT RISK MANAGERS SHOULD BE CAPABLE OF SHIELDING CUSTOMERS FROM NITS RISK?[31]

A. No. Successful risk managers can shield customers from risks that can be hedged. For example, risk managers can shield customers from energy and market-based ancillary services price risks by making physical and financial forward hedge purchases. NITS rates or costs are not hedgeable, so risk managers can only price the risk by including appropriate risk premiums in their fixed price offers.

Q. DO YOU CONCUR WITH MR. LACEY'S ASSERTION THAT IF THOSE SUPPLIERS ARE UNABLE TO MANAGE THAT RISK, THEY WILL LIKELY NOT PARTICIPATE IN THE AUCTION PROCESS?[32]

A. Not necessarily. NITS cost risk is unhedgeable, and it is common knowledge among all suppliers that it is unhedgeable. Armed with this knowledge, suppliers either do not participate in the auction process or they participate but they incorporate large risk premiums into their offers to compensate them for the risk they are assuming. In either case, FPFR auction prices would increase and customers would be harmed.

[31] *Id.*, page 42, lines 17-18.
[32] *Id.*, page 42, lines 18-19.

Q. PLEASE COMMENT ON MR. LACEY'S ASSERTION THAT "IF AN EGS SELLS A FULLY HEDGED PRODUCT, ALL ELSE BEING EQUAL, THE FULLY HEDGED SUPPLIER CONTRACT WOULD LIKELY BE MORE EXPENSIVE THAN THE UNHEDGED DEFAULT SERVICE PRODUCT."[33]

A. Mr. Lacey is acknowledging that including NITS in the FPFR contracts would increase costs for customers. In light of this fact, Mr. Lacey's argument amounts to wanting to increase costs for default service customers by including unhedgeable NITS costs in FPFR contracts simply because EGSs need to include NITS costs in their fixed-price contract offerings. I disagree with this approach. Default service supply portfolios need to be designed in a way that is expected to result in least cost to customers over time while also being concerned about rate stability. The Commission should reject the idea of designing an inferior default service supply portfolio to allow EGSs to more effectively compete with default service. The Commission should approve the supply portfolio design that finds the most appropriate balance between least cost over time and rate stability, and EGSs should design products and offerings that would appeal to customers given the fact that default service is always available to them under Commission-approved rates.

[33] *Id.*, page 63, line 21 to page 64, line 2.

Q. DO YOU CONCUR WITH THE PENNSYLVANIA OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA") WITNESS MR. MAKSIM MALUKOFF THAT "THE COMPANY HAS NOT PROVIDED EVIDENCE THAT REMOVING NITS FROM THE AUCTION PRODUCT WILL REDUCE RISK PREMIUMS?"[34]

A. No. The Company observed the continued increase in transmission spend in the Petition.[35] In discovery, FE PA also provided historical NITS rates in each Rate District,[36] which I summarized in my Direct Testimony and observed that "the rate of change has been highly variable from one year to the next and the magnitude has been unpredictable in the last few years."[37] Since NITS charges are a large component of all-in energy supply costs and they are unhedgeable by wholesale suppliers, including NITS charges in the FPFR auction products as the responsibility of wholesale suppliers would clearly lead to large risk premiums being built into supplier bids, particularly for longer-term products such as the 24-month, 36-month, or 60-month FPFR contracts. Therefore, the Company provided ample and convincing evidence in the Petition and in discovery to demonstrate that removing NITS charges from FPFR auction products would benefit customers.

[34] OSBA Statement No. 1, page 6, lines 12-13.
[35] FE PA Statement No. 2, page 16, lines 11-15.
[36] FE PA's Response to OCA Set 2, No. 5 Attachment A.
[37] OCA Statement No. 1, page 24, lines 3-13.

Q. DO YOU CONCUR WITH MR. LACEY'S CLAIM THAT "UNDER FE'S PROPOSAL, COUPLED WITH THE COMMISSION'S DEFINITION OF A FIXED PRICE CONTRACT, IT WOULD BE IMPOSSIBLE FOR CONSUMERS TO COMPARE PRICES BETWEEN DEFAULT SERVICE AND A SUPPLIER'S FIXED PRICE CONTRACT ON A UNIFORM BASIS."[38]

A. No. Customers do not need to compare FPFR auction clearing prices with fixed price contract offers from EGSs. The Company publishes the default service rate (also known as the Price-to-Compare, or PTC), which remains fixed for a six-month period for residential customers, before the start of that six-month period. Customers just need to compare the published PTC with fixed price contract offers from EGSs, by also considering the fact that PTC changes on June 1 and December 1 each year.

Q. DO YOU AGREE WITH MR. LACEY'S ASSERTION THAT "IN ORDER TO MAINTAIN COMPETITIVE NEUTRALITY, THE [DEFAULT SERVICE] CONTRACTS PROCURED MUST BE FULL-REQUIREMENTS CONTRACTS?"[39]

A. No. I disagree for two reasons. First, regardless of how default service contracts that are procured from wholesale suppliers are structured, default service and EGS service contain identical ingredients (e.g., PJM billing line items, AEPS Act compliance requirements). The fact that FE PA acquires some of the ingredients through default service contracts and some of them directly from PJM does not change this fact. Second, risk profile of wholesale suppliers of FPFRs cannot be directly compared with risk profile of EGSs because wholesale suppliers assume risks that EGSs do not have to, just as EGSs assume risks that wholesale suppliers do not have to. For example, by FPFR product

[38] RESA Statement No. 1, page 46, lines 15-17.
[39] *Id.*, page 63, lines 7-8.

design, wholesale suppliers have to assume customer migration (from default service to EGS service, and vice versa) risk whereas EGSs do not face that risk because an EGS is free to offer or not offer a fixed-price contract to any customer. Similarly, by FPFR product design, wholesale suppliers need to offer their fixed-price service to an unknown number of customers for a fixed period of time (e.g., 12 months starting on a certain date, 24 months starting on a certain date). On the other hand, an EGS is free to offer fixed-price contracts at the duration of its choosing, which the EGS can adjust based on market conditions. For example, an EGS can offer a shorter-term fixed price contract before the annual NITS rate or the PJM capacity auction price is announced and offer a longer-term contract after these announcements are made.

Q. DO YOU AGREE WITH MR. LACEY'S RECOMMENDATION THAT THE COMMISSION "OPEN A PROCEEDING TO INVESTIGATE THE ADOPTION OF ALTERNATIVE DEFAULT SUPPLIERS?"[40]

A. No. While I agree that the Competition Act allows the default service role to be provided either by an EDC or an alternative supplier approved by the Commission, I do not see the need for such an investigation. I am not aware of any evidence which suggests that EDCs in Pennsylvania have not been successfully fulfilling their roles as default service providers. The justifications provided by Mr. Lacey for this recommendation, which include EDCs in Pennsylvania being better positioned to advocate at the legislature to re-regulate the market for generation and generation-related services if they undermine the operations of the competitive market and removing their perverse incentives to erect barriers to electricity market competition, are speculative and unsubstantiated.

[40] *Id.*, page 5, lines 22-23.

Q. DO YOU CONCUR WITH MR. LACEY'S RECOMMENDATION THAT THE COMMISSION REVIEW FE PA'S DISTRIBUTION COSTS AND UNBUNDLE THEM BETWEEN THE DISTRIBUTION FUNCTION AND THE DEFAULT SERVICE FUNCTION?[41]

A. No. While I agree with Mr. Lacey that this is not the appropriate docket to perform such an analysis,[42] I do not agree with Mr. Lacey that such an analysis should be performed at all. The Commission already considered and resolved this issue in base rate cases and default service plan proceedings of multiple EDCs. Mr. Lacey does not point to any specific misallocation of costs in FE PA's provision of default service. Therefore, Mr. Lacey's recommendation amounts to looking for a solution to a problem that does not exist. The Commission should decline to engage in such unnecessary analysis.

Q. DO YOU CONTINUE TO RECOMMEND THAT THE COMMISSION APPROVE FE PA'S PROPOSAL TO REMOVE NITS FROM FPFR CONTRACTS AND TO CONTINUE USING THE CPP MECHANISM, AS YOU DID IN YOUR DIRECT TESTIMONY?

A. Yes.

III. MAXIMUM REGISTERED PEAK LOAD

Q. WHAT IS MAXIMUM REGISTERED PEAK LOAD?

Maximum registered peak load, or MRPL, is the criterion by which FE PA proposes to classify a non-residential account as commercial or industrial. FE PA proposes to define MRPL as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this

[41] *Id.*, page 49, line 15 to page 50, line 16.
[42] *Id.*, page 49, line 17.

shall also be inclusive of the nameplate capacity of the generation system." [43] FE PA is proposing that non-residential default service customers with a demand of 100 kW or above or MRPL of 100 kW or above will be classified as "commercial," for default service procurement and provision purposes, and served under the Hourly Pricing Default Service Rider ("HP Rider"). Default service customers with a demand below 100 kW and MRPL below 100 kW would be served under the PTC Default Service Rate Rider ("PTC Rider").[44]

Q. WHY DID THE COMPANY PROPOSE MRPL AS AN ELEMENT OF THIS CRITERION?

A. FE PA witness Mr. David Young states that FE PA's proposed methodology includes both demand and supply impacts to ensure that large customer-generators are grouped with other large customers for default supply procurement purposes. Mr. Young states that net metering generation projects are typically utility scale (between 1 MW and 3 MW). He points out that FE PA does not use excess energy from net-metered customer-generators as supply to serve default service load, but instead, excess energy from intermittent net-metered customer-generators is recognized financially as an aggregate reduction of the load served by winning bidders in the Company's default service auctions.[45]

Mr. Young highlights two benefits of classifying default service customers based on both demand and MRPL. First, it would avoid the risks associated with reduced load for commercial customers on the PTC Rider. Second, it would avoid potential subsidization of large customer-generators by smaller commercial retail customers since

[43] FE PA Exhibit DMY-6, p. 1.
[44] FE PA Statement No. 4, p. 16, lines 6-11.
[45] *Id.*, p. 17.

the costs of net metering excess power purchases paid by the Company are recovered from other customers in the same class as large customer-generators.[46]

Q. DID YOU ADDRESS THIS ISSUE IN YOUR DIRECT TESTIMONY?

A. Yes. I supported the Company's proposal because including large customer-generators in the commercial customer procurement group would bundle truly small commercial customers, (i.e., which have net power flow from or into the Company's distribution system less than 100 kW) with more sophisticated, large customer-generators in the same FPFR contract procurements, which in turn would negatively affect small commercial default service customers in two ways. First, because the more sophisticated, large customer-generators would entail higher switching risk for the FPFR suppliers, the FPFR suppliers would either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions, which in turn would have the likely effect of higher PTCs and/or more volatile rates for small commercial customers. Second, even the large customer-generators that stay on default service would constitute volumetric risk for FPFR suppliers because of the uncertainty surrounding the level and profile of on-site generation (e.g., outages, in-service dates of on-site generators that are in FE PA's distribution interconnection queue). Similar to switching risk, this volumetric risk would also prompt the FPFR suppliers to either build larger risk premiums into their FPFR contract bids or shy away from participating in the FPFR auctions, resulting in higher PTCs and/or more volatile rates for small commercial customers.[47]

Q. IS THIS ISSUE ADDRESSED BY OTHER INTERVENORS?

A. Yes. Mr. Malukoff on behalf of OSBA, Mr. Thomas S. Michelman on behalf of Joint Solar Advocates, Mr. James A. Heidell on behalf of Customer-Generator Coalition, and

[46] *Id.*, p. 17, line 18 to p. 18, line 2.
[47] OCA Statement No. 1, page 38, line 12 to page 40, line 17.

Mr. Steve W. Chriss on behalf of Walmart Inc. addressed the Company's proposal regarding MRPL in their respective direct testimonies.

Q. WHAT IS MR. MALUKOFF'S POSITION ON FA PA'S MRPL PROPOSAL?

A. Mr. Malukoff, the witness for the statutory advocate for small business customers, agrees with the Company's proposal to classify commercial and industrial customers based on MRPL because "[t]he Company's current classification results in small business default service customers disproportionately subsidizing customer-generators."[48]

Q. PLEASE SUMMARIZE THE RESPECTIVE POSITIONS OF OTHER WITNESSES.

A. Mr. Michelman argues that the Company's Petition overestimated the impact of net-metering customer-generators on the Commercial PTC Rider rates because the Company failed to recognize the energy, capacity, and transmission costs that net-metered excess generation allows FE PA, its suppliers, and ultimately its customers to avoid.[49] He recommends that, as a way to mitigate the consequences of the Company's proposal to shift net-metered customer-generators from the commercial to the industrial default service class, the Commission should require FE to modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by allowing customers to register "negative loads" as a result of the excess generation they produce, and apply the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.[50] Mr. Michelman also recommends a "legacy rights" framework where (i) projects that are either currently operational or provide a completed copy of their Certificate of Completion to FE PA on or before June 1, 2027 would maintain their classification on the

[48] OSBA Statement No. 1, page 9, lines 10-14.
[49] Joint Solar Advocates Statement No. 1, page 4, lines 15-19.
[50] *Id.*, page 4, line 20 to page 5, line 11.

Commercial PTC Rider and be compensated at the full value of the PTC Rider rate for their excess generation for a 25-year period; and (ii) pre-construction, non-yet operational projects that demonstrate the achievement of certain project development maturity thresholds by June 1, 2027 would also maintain their classification on the Commercial PTC Rider but would receive a reduced level of compensation equal to 90% of the PTC Rider rate for their excess generation for a 15-year period.[51]

Mr. Heidell states that FE PA has failed to demonstrate any significant net cost shifting as a result of compensating customer-generators at the PTC rate; FE PA has failed to demonstrate that customer generation has increased the risk premium in the PTC rate, as evidenced by a lack of quantitative analysis by the Company; FE PA has failed to account for the direct financial benefits provided by customer-generators including avoided energy, capacity, and transmission purchases, as well as indirect benefits in the form of economic, environmental, health and energy system benefits; FE PA's proposed changes are anticipated to have a chilling impact on renewable energy investment in Pennsylvania; and changing compensation for existing projects harms the existing projects while also sending the message to investors that Pennsylvania is a risky environment to invest in distributed solar photovoltaic generation.[52]

Mr. Chriss states that changing the compensation benchmark for the value of onsite generation from the PTC Rider to the HP Rider would fundamentally change the value proposition of onsite generation projects and could significantly impact customer-generators' ability to develop positive-value solar projects in FE PA's territory.[53] He posits that changing the classification of onsite solar projects currently under development from the PTC Rider to the HP Rider without robust transition protections

[51] *Id.*, page 65, lines 1-11.
[52] Customer-Generator Coalition Statement No. 1, page 22, line 8 to page 23, line 11.
[53] Walmart Statement No. 1, page 7, lines 5-10.

would retroactively alter the economics of those investments, which in turn would create stranded value for customers who acted reasonably under the current rules.[54] Mr. Chriss proposes a grandfathering resolution that is similar to the provisions of the MRPL settlement (not yet approved by the Commission, but recommended for approval in the Recommended Decision) in the PPL base rate case (Docket No. R-2025-3057164) and summarizes the pertinent elements of the settlement in the PPL base rate case in his Direct Testimony.[55]

Q. HAS THE COMMISSION RULED ON THE ISSUE OF MRPL, OR A SIMILAR CONCEPT, IN A PREVIOUS PROCEEDING?

A. Yes, the Commission in pertinent part ruled on UGI Utilities, Inc – Electric Division's ("UGI Electric's") proposal to use supply peak load impact ("SPLI"),[56] similar to the way FE PA is proposing to use MRPL, as follows:

- "In addition, contrary to Penn Renewables' claims, we conclude that UGI's [supply peak load impact] proposal avoids rate discrimination against residential and small commercial customers because, without it, these customers will pay higher default service rates caused by and for the benefit of large customer-generators."[57]
- "In addition, including customers with large on-site generators attached to their loads in the same default service procurement and rate group as residential customers would also result in unreasonable subsidization by the residential customers."[58]

Q. IS THERE A DIFFERENCE BETWEEN THE COST COMPONENTS INCLUDED IN THE PTC RIDER AND THE HP RIDER?

A. No. Both the PTC Rider and the HP Rider include PJM billing line items (other than the ones included in FE PA's Default Service Support Rider), AEPS Act compliance, FE PA's administrative costs, and Pennsylvania gross receipts tax.

[54] *Id.*, page 8, lines 3-9.

[57] *Id.*, page 54.
[58] *Id.*, page 60.

Q. PLEASE COMMENT ON MR. HEIDELL'S CLAIM THAT FE PA'S MRPL PROPOSAL WILL REDUCE COMPENSATION THAT NET-METERED CUSTOMER-GENERATORS WILL BE ENTITLED TO FOR THEIR EXPORTED ENERGY.[59]

A. Mr. Heidell's claim is speculative and unsubstantiated in light of the fact that the PTC Rider and the HP Rider include the same cost components. Commercial customer PTCs (under the PTC Rider) would only differ (positively or negatively) from industrial customer PTCs (under the HP Rider) because of the way in which individual cost components are procured by the Company for each customer class as well as the unique load and (switching and usage) risk characteristics of each customer class. Therefore, regardless of whether compensation for customer-generators' exported energy is smaller or larger, or more or less volatile, under the HP Rider than under the PTC Rider, that is the fair outcome because large customer-generators belong in the same default service procurement group as the industrial customers in terms of sophistication and risk profile for wholesale suppliers of FPFR contracts, as affirmed by the Commission's decision in the UGI Electric DSP case (Docket No. P-2024-3049343).

Q. PLEASE COMMENT ON MR. HEIDELL'S ASSERTION THAT FE PA HAS FAILED TO DEMONSTRATE THAT CUSTOMER GENERATION HAS INCREASED THE RISK PREMIUM IN THE PTC.

A. Mr. Heidell bases this assertion on FE PA not quantifying the risk premium in the PTC. I disagree with Mr. Heidell that the risk premium should be deemed nonexistent simply because it is hard to quantify. It is also important to note that the Company is projecting much higher net-metering volumes in the coming years than realized net-metering volumes in recent past based on the volume of interconnection applications FE PA has

[59] Customer-Generator Coalition Statement No. 1, page 5, lines 13-16.

received. Therefore, risk perceptions and risk premiums of FPFR suppliers in past auctions may not, and likely would not, be a reliable indicator for risk perceptions and risk premiums in future FPFR auctions. I support FE PA's proactive approach to take measures to protect small commercial customers from larger risk premiums and higher default service prices before they begin occurring.

Q. PLEASE COMMENT ON MR. HEIDELL'S ASSERTION THAT THE HP RIDER DOES NOT COMPENSATE CUSTOMER-GENERATORS FOR FIVE OF THE NINE BENEFITS HE IDENTIFIES.

A. Mr. Heidell claims that large customer-generators provide nine benefits: (i) electric energy, (ii) electric capacity, (iii) reduced system losses, (iv) reduced transmission costs, (v) market electric price reductions, (vi) health benefits, (vii) decarbonized energy, (viii) investments in the distribution system, and (ix) state economic benefits. He states that the HP Rider fails to compensate customer-generators for all of these benefits because the HP Rider only addresses the first four benefits.[60] In his response to FE PA Interrogatory Set I, No. 3(a), Mr. Heidell states that the PTC Rider does not capture the last five benefits, either. Notwithstanding the merits of the nine benefits of customer-generators claimed by Mr. Heidell, both the PTC Rider and the HP Rider capture the same set of benefits on Mr. Heidell's list. Therefore, Mr. Heidell's assertion that the HP Rider fails to compensate customer-generators for benefits (v)-(ix) is irrelevant to the discussion regarding MRPL.

Q. PLEASE COMMENT ON GRANDFATHERING ARRANGEMENTS PROPOSED BY MR. MICHELMAN AND MR. CHRISS.

A. Mr. Michelman is proposing a grandfathering arrangement, which he calls legacy rights, where projects that are either currently operational or provide a completed copy of their

[60] *Id.*, page 13, lines 1-18.

Certificate of Completion to FE PA on or before June 1, 2027 would maintain their classification on the Commercial PTC Rider and be compensated at the full value of the PTC Rider rate for their excess generation for a 25-year period; and pre-construction, non-yet operational projects that demonstrate the achievement of certain project development maturity thresholds by June 1, 2027 would also maintain their classification on the Commercial PTC Rider but would receive a reduced level of compensation equal to 90% of the PTC Rider rate for their excess generation for a 15-year period. I find both the 25-year grandfathering for completed projects and the 15-year grandfathering for pre-construction projects, even at 90 percent of commercial PTC, excessive. In UGI Electric's DSP case, the Commission determined that residential and small commercial customers will pay higher default service rates caused by and for the benefit of large customer-generators in the absence of SPLI (which is the equivalent of MRPL in FE PA's Petition). In the same case, the Commission also determined that including customers with large on-site generators attached to their loads in the same default service procurement and rate group as residential customers would also result in unreasonable subsidization by the residential customers. The reasoning for residential customers would also apply to small commercial customers. Perpetuating this harm to, and subsidization of large customer-generators by, small customers by grandfathering these arrangements for 15 or 25 years is not fair for small commercial customers and it should be rejected by the Commission.

Mr. Chriss' grandfathering proposal is more reasonable than Mr. Michelman's because Mr. Chriss is recommending a 10-year grandfathering for certain projects, and an EDC-wide cumulative capacity limit for others. While I believe that the Company's proposal for a two-year grandfathering for existing projects as of the beginning of DSP VII (i.e., making the MRPL method effective June 1, 2027, for new net metering

customer generation coming online after June 1, 2027, and exempting existing net metering generation coming online before June 1, 2027 from the annual reclassification based on MRPL until June 1, 2029) properly protects small commercial customers from subsidizing larger customer-generators and financial harm as the Commission determined in UGI Electric's DSP case, an approach that finds the middle between the Company's proposal and Mr. Chriss' recommendation would not be unreasonable, either, in terms of balancing protection of small commercial customers with fairness to existing customer-generators who made an investment based on the status quo that was prevailing at the time of their investment.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031	: : : : :	Docket No. P-2026-3060298

VERIFICATION

I, Serhan Ogur, hereby state that the facts above set forth in my Rebuttal Testimony, OCA Statement No. 1R, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. Section 4904 (relating to unsworn falsification to authorities).

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Serhan Ogur. I am a Principal and Senior Economist at Exeter Associates, Inc. My office is located at 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony and Rebuttal Testimony in this proceeding on April 29, 2026, and on May 28, 2026, respectively, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. My Surrebuttal Testimony responds to certain issues raised by FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") witnesses Mr. David M. Young, Mr. Ryan J. Rose, Nicholas E. Powers, Ms. Carlixta De La Rosa, and Dr. Margarita Patria; Retail Energy Supply Association witness Mr. Frank Lacey; Joint Solar Advocates witness Mr. Thomas S. Michelman; and Customer-Generator Coalition witness Mr. James A. Heidell, in their respective Rebuttal Testimonies. These issues relate to (i) the wholesale default service supply product portfolio, including the types and lengths of products to be procured and timing of procurements; (ii) the treatment of PJM Network Integration Transmission Service ("NITS") charges and the Capacity Proxy Price ("CPP") mechanism; (iii) the Company's reconciliation adjustment mechanism; (iv) time-of-use ("TOU") program and rate design; (v) FE PA's proposal related to the maximum registered peak load ("MRPL") as a way to classify nonresidential customers into the commercial and industrial class groupings for the purposes of default service procurement; and (vi) effects of FE PA's

proposed retail market reforms on residential default service rates. Each of these issues is addressed in turn in the following sections of my Surrebuttal Testimony.

II. RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT

Q. PLEASE SUMMARIZE THE PERTINENT ASPECTS OF THE COMPANY'S PROPOSED RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT SCHEDULE.

A. The Company proposed to supply residential default service load from three sources: 12-month load-following, fixed-price, full requirements ("FPFR") contracts; 24-month FPFR contracts; and 60-month FPFR contracts. In other words, FPFR contracts make up the entirety of the power supply, with laddered contracts procured twice per year to replace prior contracts set to expire. The 60-month FPFR contracts are proposed to make up approximately 10 percent of the power supply in each respective Rate District. The remaining 90 percent of residential default service load requirement is to be met from a combination of 12-month products and 24-month products, with the share of each varying across the Rate Districts.[1] All contracts would start delivery on June 1, which means that 12-month contract periods would not overlap with each other.[2] Procurements would be conducted in January and November of each year, which is approximately five months prior to the start of deliveries for January auctions and seven months prior to the start of deliveries for November auctions.[3]

[1] OCA Statement No. 1, page 6, lines 16-24.
[2] FE PA Exhibit RJR-1.
[3] OCA Statement No. 1, page 7, lines 12.

Q. DID YOU PROPOSE AN ALTERNATIVE PRODUCT MIX AND PROCUREMENT SCHEDULE?

A. Yes. I presented my proposed product mix and procurement schedule in OCA Exhibit SO-2 as part of my Direct Testimony. The changes I proposed to the Company's proposal include replacing the 60-month (i.e., five-year) FPFR contracts with 36-month (i.e., three-year) FPFR contracts;[4] slight modification to the tranche targets of 12-month and 24-month products for some Rate Districts to achieve heavier reliance on 24-month contracts than on 12-month contracts for greater rate stability;[5] inclusion of 18-month FPFR products to the product mix for the beginning part of Default Service Plan VII ("DSP VII") to streamline the transition from the approach employed in DSP VI to the approach I am recommending in DSP VII;[6] modification to the FPFR contract delivery terms such that half of 12-month and 24-month products commence delivery on June 1 and half of them commence delivery on December 1;[7] and conducting procurements in September (for contracts commencing delivery on December 1) and in February (for contracts commencing delivery on June 1).[8]

Q. HOW HAVE FE PA WITNESSES RESPONDED TO YOUR RECOMMENDATIONS?

A. Mr. Powers addresses only the issue related to the 60-month contracts. He agrees that a 36-month product would align more closely with available forward market liquidity and hedging instruments but points out that a 60-month product would provide greater longer-term price stability. He posits that "the Company's proposed approach remains reasonable and consistent with Act 129's objective of maintaining a prudent mix of products designed

[4] OCA Statement No. 1, page 16, lines 9-10.
[5] *Id.*, page 19, lines 21-22.
[6] *Id.*, page 19, line 22 to page 20, line 1.
[7] *Id.*, page 20, lines 1-3.
[8] *Id.*, page 18, lines 11-18.

to achieve the least cost to customers over time," and that "the Company's proposal reasonably balances those considerations."[9]

Dr. Patria also addresses only the issue related to the 60-month contracts. She claims that my concern about the 60-month contracts is "largely speculative and not well supported" in light of my proposal to replace the 60-month contracts with 36-month contracts. She points out that PPL Electric Utilities Corporation ("PPL") has successfully procured 5-year products and, more recently, a 10-year long-term block product. She claims that the risks associated with 60-month FPFR products are narrower than I suggest because NITS will be excluded from FPFR contracts and the CPP mechanism addresses uncertainty associated with PJM Interconnection, LLC ("PJM") capacity costs.[10]

Mr. Rose disagrees with my recommendation to replace the 60-month contracts with 36-month contracts,[11] because he disagrees with my contention that 60-month products are untested and premature,[12] pointing out PPL's successful procurement of 5-year and 10-year block products in 2021 and in 2025, respectively.[13] He also appears to claim that a default service portfolio without a contract between 4 years and 20 years in length would violate 52 Pa. Code. § 54.186(b)(1)(iii).[14]

A common theme in the respective rebuttal testimonies of the aforementioned three FE PA witnesses is support for the proposed 60-month product because it is "only" 10 percent of the residential portfolio. The underlying presumption appears to be that any product that does not exceed 10 percent of the portfolio should automatically be deemed appropriate without a thorough examination of its risks and benefits.

[9] FE PA Statement No. 3-R, page 2, lines 2-18.
[10] FE PA Statement No. 5-R, pages 4-12.
[11] FE PA Statement No. 2-R, page 3, lines 16-19.
[12] *Id.*, page 3, lines 19-20.
[13] *Id.*, page 4, lines 1-7.
[14] *Id.*, page 4, line 22 to page 5, line 3.

Mr. Rose acknowledges that conducting auctions in February and September of each year as I propose is feasible, but expresses two concerns with doing so: narrowing the time window between the auction clearing results and PJM's Auction Revenue Rights ("ARR") allocation process; and that having a September auction would leave a 9-month gap prior to the start of delivery as compared to a 7-month gap if the auction is conducted in November.[15]

Mr. Rose posits that my "proposed procurement structure introduces additional complexity through the inclusion of transitional 18-month products, revised auction schedules, and more granular staggering approaches." While he agrees that my suggested modifications would "theoretically" provide incremental diversification benefits, he claims that "they also increase administrative complexity and may reduce procurement efficiency without demonstrating commensurate customer benefits."[16] He posits that the Company's proposed procurement design is broadly consistent with industry practice among large default service procurements in Pennsylvania and neighboring states, providing PECO Energy Company ("PECO"), PPL, Duquesne Light Company ("DLC"), AES Ohio, Duke Energy Ohio, Ohio Edison, The Illuminating Company, and Toledo Edison as examples.[17] Mr. Rose also contends that my recommendations are internally inconsistent because I recommend greater reliance on 24-month contracts than on 12-month contracts while recommending to replace the 60-month contracts with 36-month contracts.[18]

[15] *Id.*, page 5, lines 4-10.
[16] *Id.*, page 7, lines 12-17.
[17] *Id.*, page 6, lines 8-14.
[18] *Id.*, page 7, lines 3-8.

Q. PLEASE RESPOND TO MR. POWERS' ASSERTION THAT THE COMPANY'S PROPOSED APPROACH REMAINS CONSISTENT WITH THE ACT 129 OBJECTIVES.

A. Mr. Powers does not respond to the shortcomings of the Company's proposal, including the 60-month FPFR products for the residential class, which I have identified in my Direct Testimony. Nor does Mr. Powers suggest that my proposed approach would violate Act 129. He seems to suggest that the Company's proposal is "good enough" without providing his reasoning for why the Company's proposal is superior to my proposed portfolio and procurement schedule. The Commission and FE PA's ratepayers need not contend with "good enough" or with the status quo if there is a better approach available. As I explained in my Direct Testimony and as I also explain below in this section of Surrebuttal Testimony, I am proposing improvements to the Company's proposed approach, and the Commission should recognize the improvements and customer benefits associated with my recommendations and adopt them for FE PA's default service customers.

Q. PLEASE RESPOND TO FE PA WITNESSES' ASSERTIONS THAT PPL SUCCESSFULLY PROCURED 5-YEAR AND 10-YEAR BLOCK PRODUCTS.

A. Dr. Patria and Mr. Rose disregard the extremely important distinction between the 5-year and 10-year fixed-quantity, energy-only blocks procured by PPL and the 5-year load-following, full-requirements load tranches proposed by FE PA. As I explained in my Direct Testimony, "[e]ven though wholesale suppliers would not be assuming risks associated with PJM capacity costs (due to the CPP mechanism) and PJM NITS costs (due to the removal of NITS charges from the FPFR auction products), suppliers would still assume energy, ancillary services, uplift, and AEC cost risks and ARR revenue risk as well as volumetric (e.g., load migration, net metering) risk."[19] The suppliers of 5-year and 10-year

[19] OCA Statement No. 1, page 15, lines 11-16.

blocks to PPL did not assume any of these risks. PPL's energy blocks included only energy, and the same quantity of energy in every hour the 5-year or 10-year duration of the contracts. The 60-month FPFR product proposed by FE PA requires the supplier to assume many other line-item price risks for an uncertain quantity and profile of load. Therefore, for suppliers, the 60-month FPFR product proposed by FE PA is not comparable to and much riskier than the energy-only blocks procured by PPL. Since I already acknowledged in my Direct Testimony that FE PA's 60-month FPFR product would exclude NITS charges and mitigate capacity price uncertainty through CPP, Dr. Patria's claim that "the risks associated with 60-month FPFR products are narrower" than I suggest is meritless. The risks associated with 60-month FPFR products are neither narrower than I suggest, nor are they narrow at all.

Q. DID YOU ADDRESS PPL'S PROPOSAL TO PURCHASE A 10-YEAR ENERGY BLOCK IN DOCKET NO. P-2024-3047290?

A. Yes. I submitted direct, rebuttal, and surrebuttal testimony in PPL's most recent default service plan proceeding in Docket No. P-2024-3047290 as the OCA's witness and addressed PPL's Long Term Power ("LTP") proposal as follows:

> *I recommend that PPL's proposal to procure 10-year, 150 MW of LTP product, consisting of 10-year, 150 MW of around-the-clock block energy (i.e., Block Service) and 10-year, 150 MW of unforced capacity (i.e., Bilateral Transferred Capacity), be replaced with the procurement of 10-year, 150 MW of around-the-clock block energy. The adoption of this recommendation would entail the elimination of the long-term capacity contract, but the acceptance of the procurement of the around-the-clock block energy. Further, if the Commission is inclined to authorize PPL to procure both a 10-year block energy product and a 10-year capacity product, I recommend that the Commission direct the Company to solicit these two products separately.*[20]

[20] Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the Period from June 1, 2025 through May 31, 2029, Docket No. P-2024-3047290, OCA Statement No. 1, page 22, lines 3-14.

Q. IF FE PA WERE TO PROPOSE 5-YEAR OR 10-YEAR ENERGY-ONLY BLOCKS FOR THE RESIDENTIAL PORTFOLIO, WOULD YOU SUPPORT THAT PROPOSAL?

A. Yes, I would support either/both. It would enhance the longer-term price stability of the residential default service portfolio while meeting the definition of a long-term contract (between 4 years and 20 years in length) in 52 Pa. Code § 54.186(b)(1)(iii), without exposing default service customers to the risks and potentially excessive risk premiums associated with an untested product that would be prematurely added to the residential portfolio.

Q. IN LIGHT OF YOUR OPPOSITION TO THE 5-YEAR FPFR CONTRACT PROPOSED BY FE PA, PLEASE EXPLAIN WHY YOU WOULD SUPPORT A 5-YEAR AND/OR 10-YEAR FIXED-QUANTITY ENERGY-ONLY BLOCK SUCH AS THE ONE PROCURED BY PPL IN 2025.

A. As its description suggests, a fixed-quantity energy-only block requires the supplier to deliver only energy and in a pre-determined quantity that is identical in every hour of its 5-year or 10-year duration. The supplier of a fixed-quantity energy-only block does not need to assume, manage, or price the costs and (regulatory and market) risks associated with other (than energy) requirements for serving residential default service load, such as ancillary services, uplift, AEPS Act requirements, distribution losses, ARRs, migration (into and out of default service) risk, weather-driven usage risk, regulatory risks associated with PJM market rules and AEPS Act requirements. On the other hand, an FPFR contract supplier assumes all of these risks. Therefore, supplying an FPFR contract is a much riskier endeavor than supplying a fixed-quantity energy-only block. The Commission needs to be convinced that adding such a risky product that requires its suppliers to assume all of these risks in a fixed-price contract for five years is consistent with the “least cost over time”

standard and it is also in the residential customers' interest. In my opinion, the Company did not provide the factual basis to give that assurance while I provided the factual basis to demonstrate otherwise. The 5-year or 10-year energy only block would provide the longer-term price stability benefits sought by the Company, but it would avoid prematurely exposing residential customers to potentially excessive risk premiums that would be associated with prematurely attempting to procure the untested and unproven 5-year FPFR product.

Q. PLEASE COMMENT ON MR. ROSE'S ASSERTION THAT THE 60-MONTH FPFR PRODUCT IS NEITHER UNTESTED NOR PREMATURE.

A. Mr. Rose's (and Dr. Patria's) comparison of the 60-month FPFR product to a 5-year or even 10-year energy-only block product is erroneous for the reasons I explained above. Mr. Rose acknowledged in discovery that FE PA has not investigated whether there are any 5-year or longer load-following products in any jurisdiction.[21] It is important to recognize that while there is precedent for Pennsylvania electric distribution companies ("EDCs") procuring 5-year and 10-year fixed-quantity energy-only products, to my knowledge, no restructured state or utility has procured or currently procures FPFR products that are 60-months or longer in duration, and the Company has not even investigated whether a 60-month FPFR product has been successfully procured anywhere in the country. The jump to 60 months in duration for a load-following, full-requirements contract undoubtedly entails additional risk. My recommendation to extend the maximum FPFR contract duration to 36 months in DSP VII and to consider including a 60-month FPFR product in a subsequent DSP after consultation with potential bidders is the prudent path at this time. Mr. Rose also acknowledged in discovery that FE PA did not solicit feedback from wholesale suppliers regarding their interest or capability to supply a five-

[21] FE PA's Response to OCA Set 2, No. 18(b).

year full-requirements product.[22] Therefore, the Company's 60-month FPFR residential product proposal is both untested and premature.

Q. PLEASE RESPOND TO MR. ROSE'S SUGGESTION THAT A DEFAULT SERVICE PORTFOLIO WITHOUT A CONTRACT BETWEEN 4 YEARS AND 20 YEARS IN LENGTH WOULD VIOLATE 52 PA. CODE § 54.186(B)(1)(III).

A. While I am not an attorney, my understanding as an economist and a utility regulatory expert is that the Pennsylvania Public Utility Commission (the "Commission") does not require that a DSP include all contract types listed in 52 Pa. Code § 54.186(b)(1), and a prudent mix can include some but not all contract types listed in 52 Pa. Code § 54.186(b)(1). For example, it is my understanding that there is precedent for the Commission not requiring a DSP to include all three options listed in 52 Pa. Code § 54.186(b)(1).[23] I also note that Mr. Rose is not an attorney, either. Therefore, it would be best for market and regulatory experts to leave the legal issues for the briefing stage of the proceeding, and to focus on economic and regulatory issues.

Q. DO YOU AGREE THAT THE PROPOSED 60-MONTH FPFR CONTRACT SHOULD AUTOMATICALLY BE DEEMED APPROPRIATE MERELY BECAUSE IT IS "ONLY" 10 PERCENT OF THE PORTFOLIO?

A. No. Each product included in the portfolio should be assessed for its merits, risks, and benefits regardless of its share in the portfolio because it can set a precedent for the Commission for future cases. While 10 percent is smaller than the respective shares of 12-month and 24-month FPFR contracts, I do not consider 10 percent to be negligibly small.

[22] FE PA's Response to OCA Set 2, No. 18(a).
[23] *Popowsky v. Pa. PUC*, 71 A.3d 1112 (Pa. Cmwlth. 2012).

Q. WHY IS 10 PERCENT OF THE PROCUREMENT MIX NOT NECESSARILY NEGLIGIBLE IN THIS PROCEEDING?

A. It is not necessarily negligible because even a 10 percent portion of an EDC's supply portfolio can have a meaningful impact on customer rates, portfolio risk, and procurement outcomes. In large default service programs such as that of FE PA, which is the largest EDC in Pennsylvania, 10 percent represents a substantial amount of electricity and significant dollars at stake for residential ratepayers.

Q. WHY SHOULD THE COMMISSION BE CONCERNED ABOUT A 10 PERCENT COMPONENT OF THE PORTFOLIO?

A. The Commission's role is to determine whether a procurement plan is prudent and in the public interest. Even if a component represents only 10 percent of the portfolio, it can significantly affect customer outcomes and therefore warrants careful review. I also note that, depending on the product involved, a component comprising 10 percent of the portfolio may account for a disproportionate share of overall portfolio risk.

Q. PLEASE ADDRESS MR. ROSE'S CONCERN THAT CONDUCTING FPFR AUCTIONS IN FEBRUARY INSTEAD OF IN JANUARY WOULD INTERFERE WITH WHOLESALE SUPPLIERS' TRANSMISSION CONGESTION HEDGING EFFORTS.

A. Mr. Rose states that "[b]y selecting ARRs that align with their customer load and procurement strategies, suppliers can more effectively hedge transmission congestion charges, leading to more predictable and potentially lower costs."[24] While I agree with Mr. Rose that effective transmission hedging is an important element of wholesale suppliers' risk management, directly participating in PJM's ARR allocation process is neither necessary nor the only way to acquire congestion hedges. In fact, an ARR merely entitles

[24] FE PA Statement No. 2-R, page 5, lines 15-17.

its owner to the revenue associated with the proceeds from the sale of the underlying Financial Transmission Right ("FTR") in PJM's annual and monthly FTR auctions,[25] whereas FTRs provide the congestion hedge.[26] In addition to nominating ARRs in the annual ARR allocation process and "self-scheduling" or "converting" them to FTRs in the annual FTR auction, wholesale suppliers have many other options to acquire congestion hedges, including, but not necessarily limited to, PJM's annual FTR auctions (which are conducted in four rounds throughout the month of April following the completion of the annual ARR allocation process); PJM's long-term FTR auctions; PJM's monthly FTR auctions; bilateral trading of FTRs in the secondary market; and congestion and basis contracts (other than PJM-issued FTRs) in the bilateral market.[27] Therefore, while enabling wholesale suppliers to participate in PJM's annual ARR annual allocation process is desirable, it is of secondary importance compared to other considerations associated with FPFR auction timing since there are other ways pursuant to which wholesale suppliers can obtain FTRs and hedge congestion risk.

Q. PLEASE COMMENT ON MR. ROSE'S CONCERN THAT A SEPTEMBER FPFR AUCTION LEAVES A 9-MONTH GAP BETWEEN THE AUCTION AND THE START OF ASSOCIATED DELIVERY YEAR.

A. Mr. Rose states that "[w]hen the auction is closer to delivery, more real time data is available on the PJM forward market which could lead to less uncertainty and potentially lower risk premiums."[28] However, Mr. Rose also opposes my recommended procurement schedule which would reduce the gap between the auction and the delivery period to three months (from the seven months proposed by the Company) by conducting the auctions for

[25] https://www.pjm.com/-/media/DotCom/training/core-curriculum/lse/09-auction-revenue-rights-and-financial-transmission-rights-for-lses.pdf, page 3. Access requires being signed into PJM account.
[26] *Id.*, page 16. Access requires being signed into PJM account.
[27] *Id.*, page 18. Access requires being signed into PJM account.
[28] FE PA Statement No. 2-R, page 5, lines 10-12.

December 1 delivery start date products in September (rather than procuring nothing but June 1 delivery start date contracts and holding half of the auctions for such products in November, which is seven months before the start of delivery). This represents a clear internal inconsistency in Mr. Rose's reasoning. My proposed procurement schedule, when combined with my recommended product mix, results in a gap between the auction and the start of the associated delivery period that is no longer than four months, versus seven months as proposed by the Company, while spacing out the semi-annual auctions approximately equally.

Q. DO YOU AGREE WITH MR. ROSE'S CONTENTION THAT YOUR RECOMMENDED CHANGES TO THE PRODUCT MIX AND PROCUREMENT SCHEDULE REPRESENT ONLY THEORETICAL BENEFITS AND DO NOT JUSTIFY THEIR ADMINISTRATIVE COMPLEXITY?

A. No. Mr. Rose himself acknowledges the importance of minimizing the time between the conduct of the FPFR auction and the start of the associated delivery period and states that auctions being conducted closer to delivery results in less uncertainty and lower auction premiums.[29] My proposal reduces the time between the FPFR auction and the start of the associated delivery period, which, as acknowledged by Mr. Rose, will result in lower price premiums in FPFR auctions. Therefore, this benefit is not theoretical; it is real and it is acknowledged by Mr. Rose. Mr. Rose claims that my proposed 18-month products, revised auction schedules, and more granular staggering approaches would increase administrative complexity and "may" reduce procurement efficiency. However, he does not specify how my proposal would increase administrative complexity or reduce procurement efficiency. His claim is unsubstantiated and, in my opinion, untrue. In any event, I already

[29] *Id.*

demonstrated that my proposal would create customer benefits in the form of lower auction premiums that would outweigh any administrative complexity associated with it.

Given the real benefit associated with my proposal, it is incumbent on Mr. Rose to explain why the product mix and procurement schedule in my proposal would lead to administrative complexity or reduce the efficiency of the auction in a way that nullifies the real benefit associated with lower risk premiums and therefore lower default service rates. Mr. Rose fails to do that. The Commission should dismiss Mr. Rose's objections and adopt my recommendations.

Q. DO YOU AGREE WITH MR. ROSE THAT THE PROCUREMENT SCHEDULE PROPOSED BY THE COMPANY IS CONSISTENT WITH INDUSTRY PRACTICE?

A. No. As I also stated in my Direct Testimony, current default service plans of other large Pennsylvania EDCs (i.e., PECO, PPL, and DLC) include residential FPFR products that have both June 1 and December 1 delivery start dates, and they all conduct auctions closer to delivery than proposed by FE PA.[30] Adopting my recommendations would bring FE PA's product mix and procurement schedule in line with industry practice among large Pennsylvania EDCs.

Q. DO YOU AGREE WITH MR. ROSE THAT YOUR RECOMMENDATIONS ARE "INTERNALLY INCONSISTENT?"

A. No. Mr. Rose claims that my recommendations "appear" internally inconsistent because I recommend greater reliance on 24-month contracts than on 12-month contracts while recommending replacing the 60-month contracts with 36-month contracts. When taken to its logical conclusion, Mr. Rose's reasoning would require one to support the inclusion of a 10-year or even a 20-year FPFR contract in the residential default service supply portfolio

[30] OCA Statement No. 1, page 20, lines 10-17.

simply for supporting greater reliance on 24-month contracts than on 12-month contracts. This reasoning is clearly flawed. I recommended replacing the 60-month contracts with 36-month contracts because of the riskier, untested, and unproven nature of the proposed 60-month contracts. The goal is to achieve a portfolio that results in the highest level of rate stability while adhering to the "least cost over time" standard and not adding excessive risk premiums to residential default service rates. There is no internal inconsistency or contradiction in my recommendations.

Q. DID YOU CHANGE ANY OF YOUR RECOMMENDATIONS ON THE RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT SCHEDULE AFTER REVIEWING THE COMPANY'S REBUTTAL TESTIMONY?

A. No. For the reasons I explained above, I continue to recommend that the residential default service portfolio and procurement schedule be modified as I proposed in my Direct Testimony and in OCA Exhibit SO-2.

III. NITS AND CAPACITY COSTS

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED TREATMENT OF NITS AND CAPACITY COSTS FOR RESIDENTIAL DEFAULT SERVICE CUSTOMERS.

A. The Company proposed to continue using a CPP mechanism in FE PA's FPFR auctions in the event PJM does not conduct a base residual auction ("BRA"), with some revisions to clarify the true-up methodology for the CPP.[31] FE PA also proposed to remove PJM Network Integration Transmission Service ("NITS") charges from the auction products, making NITS the Company's responsibility for default service customers.[32]

[31] Petition, paragraph 22.
[32] *Id*.

Q. DID YOU SUPPORT THIS ASPECT OF THE COMPANY'S PROPOSAL?

A. Yes, I supported both the CPP proposal and the NITS proposal in my Direct Testimony.[33] FE PA witnesses also filed Rebuttal Testimony to rebut opposition to FE PA's proposals associated with the treatment of NITS and capacity costs.[34]

Q. HOW DID MR. LACEY RESPOND TO YOUR SUPPORT OF THE COMPANY'S PROPOSAL IN HIS REBUTTAL TESTIMONY?

A. Mr. Lacey disagrees with the Company's proposal and my support for it, for three reasons. First, he claims that "contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement," and "would not provide the Commission with information required to determine if the default service portfolio was the 'least cost over time' as the NITS and capacity cost components would be unknown."[35] Second, he contends that FE PA's "proposed contracts for wholesale energy supply are neither fixed-price nor full-requirements contracts."[36] Third, Mr. Lacey posits that the "pass-through of NITS and capacity true-ups would shift substantial market risks onto customers who are not well positioned to evaluate or manage those risks."[37]

Q. PLEASE RESPOND TO MR. LACEY'S ASSERTIONS.

A. Mr. Lacey's assertions in his Rebuttal Testimony are in essence repetitions of his assertions in his Direct Testimony. I responded to each of his arguments in my Rebuttal Testimony.[38] Mr. Lacey's assertion that contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement is

[33] OCA Statement No. 1, page 22, lines 12-13, and page 24, lines 3-5.
[34] FE PA Statement No 2-R, pages 8-10; FE PA Statement No 3-R, pages 3-5; FE PA Statement No 5-R, pages 4-8.
[35] RESA St. No 1R, page 28, lines 4-9.
[36] *Id.*, page 29, lines 10-11.
[37] *Id.*, page 27, line 27 to page 28, line 1.
[38] OCA Statement No. 1-R, pages 4-11.

demonstrably false.[39] His contention that FE PA's proposed contracts for wholesale energy supply are neither fixed-price nor full-requirements contracts is also untrue,[40] and it contradicts his other statements in this proceeding.

Q. PLEASE EXPLAIN THE CONTRADICTIONS AND INTERNAL INCONSISTENCIES IN MR. LACEY'S STATEMENTS.

A. In discovery, Mr. Lacey defined "full-requirements" as follows: "Mr. Lacey's definition of a 'full-requirements' default service contract between a wholesale default service supplier and the EDC as the default service provider is a procurement contract that requires the chosen wholesale default service supplier to provide firm, continuous supply for default service customers and includes energy, capacity, losses, congestion charges, ancillary services, marginal losses, imbalance charges, transmission charges, and any other applicable requirements from the ISO."[41] Mr. Lacey also stated in discovery that he considers FE PA's FPFR contracts in the currently effective DSP VI to be full-requirements.[42] This is a contradiction. As I explained in my Rebuttal Testimony, FE PA's FPFR default service contracts in DSP VI exclude the following PJM billing line items from these contracts: Transmission Enhancement, Transmission Enhancement Settlement (EL05-121-009), Meter Error Correction, Expansion Cost Recovery, and Generation Deactivation.[43] FE PA's FPFR contracts in the currently effective DSP VI clearly do not include certain transmission charges or "any other applicable requirements from the ISO [in this instance, PJM]" so they do not meet Mr. Lacey's definition of a full-requirements default service contract. Yet, Mr. Lacey states that they are full-requirements contracts.

[39] *Id.*, page 6, line 14 to page 9, line 2.
[40] *Id.*, page 4, line 16 to page 6, line 13.
[41] RESA's Response to OCA-XII-2-a.
[42] RESA's Response to OCA-XII-12-a.
[43] OCA Statement No. 1-R, page 5, lines 10-18.

In conclusion, while Mr. Lacey claims that my position effectively redefines "full requirements" service by permitting FE PA to exclude NITS from FPFR contracts,[44] it is in fact Mr. Lacey who redefines full requirements service by arbitrarily choosing to exclude certain PJM line items from his definition of full requirements service. The Commission should dismiss his arbitrary definition of a full requirements wholesale default service contract.

Q. ARE MR. LACEY'S INTERPRETATIONS OF ACT 129 REQUIREMENTS CONSISTENT WITH THE COMMISSION'S REVEALED INTERPRETATIONS OF ACT 129 IN RECENT DSP PROCEEDINGS OF OTHER PENNSYLVANIA EDCS?

A. No. In his Rebuttal Testimony, Mr. Lacey states that "contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement."[45] In discovery, Mr. Lacey acknowledges that the default service contracts procured by PECO and PPL in their current Commission-approved DSPs exclude NITS.[46] Since the Commission approved PECO's and PPL's respective DSPs, the implication of Mr. Lacey's positions is that the Commission approved DSPs in PECO's and PPL's most recent DSP proceedings that violate Act 129. The Commission should reject this inappropriate and illogical proposition put forth by Mr. Lacey and dismiss his objections explicitly in no uncertain terms.

[44] RESA St. No 1R, page 30, lines 2-5.
[45] *Id.*, page 28, lines 4-9.
[46] RESA's Response to OCA-XII-10-a and 10-b.

Q. PLEASE COMMENT ON MR. LACEY'S ASSERTION THAT PASS-THROUGH OF NITS AND CAPACITY TRUE-UPS WOULD SHIFT SUBSTANTIAL MARKET RISKS ONTO CUSTOMERS.

A. As Mr. Lacey points out, I agree that FE PA's proposal transfers NITS cost risk from wholesale default service suppliers to customers in exchange for eliminating supplier risk premiums associated with NITS uncertainty.[47] I continue to recommend this approach because customers are better off paying actual NITS and capacity costs instead of paying large risk premiums associated with the uncertainty surrounding NITS and capacity costs, on top of estimated NITS and capacity costs. I explained in my Direct Testimony and in my Rebuttal Testimony that NITS costs are unpredictable, highly variable, and unhedgeable. While Mr. Lacey disagrees with me that NITS costs are unhedgeable because evidence was not presented to show that NITS costs cannot be hedged,[48] Mr. Lacey does not point to any standard products which would hedge NITS costs, either. For example, the Intercontinental Exchange, which offers hundreds of electricity futures and options products and other energy products,[49] does not offer any PJM capacity or NITS products. In my opinion, NITS was being included in FE PA's and Pennsylvania EDCs' FPFR contracts until recently because NITS revenue requirements and rates were relatively stable from one year to the next until a few years ago. As transmission investments began increasing rapidly, initially to replace aging transmission infrastructure and to integrate renewable energy resources, and more recently to interconnect new data center and other large loads, NITS revenue requirements and rates began to exhibit large and unpredictable increases from year to year. In response, most Pennsylvania EDCs began removing NITS from their FPFR auction products to prevent unnecessary risk premiums from being

[47] RESA St. No. 1R, page 31, lines 1-3.
[48] *Id.*, page 30, lines 9-11.
[49] https://www.ice.com/products/Futures-Options/Energy/Electricity.

included in FPFR product bids and therefore in default service prices. The Commission agreed with that approach in its approval of their DSPs. The Commission should make the same determination and render the same decision in this proceeding and approve the Company's proposal to remove NITS from FPFR contracts. This will ensure that FE PA's default service customers do not pay unnecessary risk premiums that would otherwise be embedded in FPFR suppliers' auction bids. Under FE PA's current approach, customers also pay suppliers a risk premium for assuming NITS cost uncertainty. Removing NITS from the FPFR contracts would eliminate that risk premium, allowing customers to pay actual costs rather than estimated costs plus a risk premium.

Similarly, if the FPFR product bidders are asked to include capacity costs in their bids, without subsequent true-up, even if PJM has not conducted a capacity auction for part or all of the delivery period of the FPFR contract, it would put the price risk of a hard-to-hedge, large, and highly variable component on the FPFR suppliers, which in turn would result in the incorporation of large risk premiums into the bids. Therefore, the CPP mechanism benefits customers by ensuring that FE PA's default service customers do not pay unnecessary risk premiums that would otherwise be embedded in FPFR suppliers' auction bids.

Q. WHAT IS MR. HEIDELL'S POSITION ON THE COMPANY'S PROPOSAL RELATED TO THE TREATMENT OF NITS COSTS?

A. Mr. Heidell did not address the issue in his Direct Testimony. However, in his Rebuttal Testimony, Mr. Heidell responded to my support of the Company's proposal in my Direct Testimony and stated that he disagrees with my (and the Company's) assertion that including NITS costs in FPFR contracts would increase risk premiums.[50]

[50] CGC Statement No. 1-R, page 6, lines 14-17.

Q. HOW DO YOU RESPOND TO MR. HEIDELL REGARDING NITS?

A. I disagree with Mr. Heidell's assertion that evidence was not presented to support my conclusion. I provided the data and evidence supporting my conclusion in my Direct Testimony,[51] and also in my Rebuttal Testimony.[52]

Q. ARE YOU STILL RECOMMENDING THAT THE COMMISSION APPROVE FE PA'S PROPOSAL REGARDING THE TREATMENT OF NITS AND CAPACITY COSTS?

A. Yes. For the reasons I provided above, as well as in my Direct Testimony and Rebuttal Testimony in this proceeding, I recommend that the Commission approve the Company's CPP and NITS cost treatment proposals.

IV. RECONCILIATION

Q. HOW DID FE PA PROPOSE TO RECONCILE RESIDENTIAL DEFAULT SERVICE REVENUES AND COSTS IN ITS PETITION?

A. FE PA proposed to retain the same reconciliation mechanism used in DSP VI for DSP VII, that is, a reconciliation balance is calculated over a six-month period and collected (or refunded), with interest, over the following six-month period. Reconciliation balance is collected (or refunded) through the "E-Factor" rate, which is a component of the Price-to-Compare ("PTC").[53]

Q. DID YOU RECOMMEND A DIFFERENT RECONCILIATION MECHANISM?

A. Yes. I suggested two modifications to the mechanism proposed by FE PA. First, I recommended that the six-month reconciliation approach used by the Company under DSP VI (and proposed by FE PA to be retained under DSP VII) be modified slightly such that

[51] OCA Statement No. 1, page 24, lines 3-13.
[52] OCA Statement No. 1-R, page 9, line 19 to page 12, line 17.
[53] OCA Statement No. 1, page 34, lines 13-19.

the cumulative amount to be collected (or refunded) be amortized over the subsequent 12 months. Second, I recommended that the E-Factor rate be capped at one cent per kWh in either direction. If the entire reconciliation balance cannot be amortized at the E-Factor cap rate, the remaining amount would be included in the subsequent period's reconciliation balance.[54]

Q. HOW DID FE PA WITNESS MS. DE LA ROSA RESPOND TO YOUR RECOMMENDATIONS?

A. Ms. De La Rosa disagrees with both of my recommendations. She states that the Company's proposal mitigates rate volatility for residential customers while maintaining PTC Rider rate as a price signal correlating to the underlying wholesale supply costs for customers and EGSs. She also claims that I did not provide any analysis or other evidence supporting my conclusion that my recommendation would provide more stable rates. She contends that I do not recognize that larger amount of interest would accrue with a 12-month amortization schedule of over- or under-collections.[55] Ms. De La Rosa also opposes my suggestion for a one cent per kWh cap on the E-Factor rate in either direction, with the stated concern that the reconciliation balance could compound and grow under my proposal, especially in times of high capacity prices and associated capacity proxy price true-ups.[56]

Q. PLEASE RESPOND TO MS. DE LA ROSA'S CONCERNS AND RECOMMENDATIONS.

A. I disagree with Ms. De La Rosa's position for five reasons. First, a historical empirical analysis is not needed to conclude that a longer amortization period would yield a lower reconciliation rate than a shorter amortization period would. Amortizing the same sum over

[54] *Id.*, page 36, lines 1-12.
[55] FE PA Statement No. 4-R, page 7, lines 1-13.
[56] *Id.*, page 7, lines 14-22.

a longer time period (thus over a larger number of kWh) would result in a lower reconciliation rate per kWh. This is an arithmetic fact. Second, a longer amortization period (such as the 12-month amortization I am proposing) and thus a lower E-Factor rate would be more reflective of underlying wholesale supply costs as a price signal for customers and EGSs because the larger the E-Factor rate is, the more removed the PTC is from the underlying wholesale market costs. Third, interest accrual would work in both directions and over time interest paid and interest received would offset each other to some extent, as some six-month periods would result in under-collections and other six-month periods would conclude with over-collections for the Company. Even if interest expenses are passed through to residential default service customers due to more frequent under-collections than over-collections, this would still be a benefit particularly for low-income customers with credit card debt because the interest they would be paying to the Company for the Company's 12-month amortization of under-collections would be lower than the interest rates they pay on their credit card debt. Fourth, Ms. De La Rosa's concern regarding perpetual balances as a result of a one cent per kWh cap on the E-Factor rate is unsubstantiated and unfounded because the Company procures residential default service supply through fixed-price full-requirements contracts, with only CPP true-up adjustments. PJM BRAs will be conducted with a price cap through May 31, 2030, and that price cap is nearly identical to the capacity price in the two most recent capacity auctions.[57] Therefore, there is no reason to believe that the Company will chronically incur very large under-collections and carry large reconciliation balances under my proposal. Nevertheless, if the Company is concerned about large under-collection balances due to CPP true-ups, it should agree to a 12-month amortization period to mitigate the expected volatility in the E-Factor rate. Finally, since the Company's DSP VII will end on May 31, 2031, the Company will

[57] https://insidelines.pjm.com/ferc-approves-capacity-auction-price-collar-to-next-two-capacity-auctions/

have ample time to address with the Commission (either as an amendment to DSP VII or as part of its petition for its subsequent DSP) any elongated revenue shortfalls that would result from a one cent per kWh cap on the E-Factor rate.

Q. WHAT IS YOUR RECOMMENDATION AFTER REVIEWING MS. DE LA ROSA'S REBUTTAL TESTIMONY?

A. The recommendations which I have stated in my Direct Testimony are unchanged after reviewing Ms. De La Rosa's Rebuttal Testimony. I continue to recommend that the cumulative amount to be collected (or refunded) be amortized over a 12-month period, and that the E-Factor rate be capped at one cent per kWh in either direction because Ms. De La Rosa does not show any harm that would result from the adoption of my proposal while I demonstrated price stability benefits of my proposal.

V. TIME-OF-USE RATES

Q. WHAT CHANGES DID THE COMPANY PROPOSE TO ITS TOU RATE STRUCTURE IN ITS PETITION?

A. The Company's current on-peak TOU period is between 2 p.m. and 9 p.m. on non-holiday weekdays, and its super off-peak TOU period is between 11 p.m. and 6 a.m. daily. All other hours are classified as off-peak. The Company proposed revising its on-peak TOU period to between 3 p.m. and 7 p.m. on non-holiday weekdays; retain the same super off-peak TOU period definition; and all other hours would be off-peak.[58]

Q. DID YOU ADDRESS THIS ISSUE IN YOUR DIRECT TESTIMONY?

A. Yes. I recommended that the Commission reject the Company's proposed changes to the TOU program and leave the current TOU rate program intact for DSP VII.[59] I based my recommendation on my conclusion that the Company has not demonstrated that its

[58] *Id.*, p. 12, line 3.
[59] OCA Statement No. 1, page 30, lines 1-5.

proposed revisions to the residential TOU rate program would advance its stated goals of increasing participation in TOU rates and having customers shift their usage from heavier system load periods to lighter system load periods.[60] I also pointed out that one of five PJM systemwide peak load hours (also known as Five Coincident Peaks, or 5CP), which are also used by FE PA Rate Districts to allocate PJM capacity charges to individual customers, in the summer of 2025, was outside of FE PA's proposed on-peak TOU rate period. The on-peak period of a TOU rate program should at least include 5CPs from previous years. In comparison, the on-peak period in the existing TOU rate structure includes all 5CPs in the last five years.[61]

Q. HOW DID MR. YOUNG RESPOND TO YOUR (AND OTHER OCA WITNESS MS. BARBARA ALEXANDER'S) DIRECT TESTIMONY?

A. Mr. Young acknowledges that the Company's proposed on-peak TOU period excludes one of PJM 5CP hours in 2025, but he points out that all PJM 5CP hours fell in FE PA's proposed on-peak TOU period in the previous four years.[62] Mr. Young also acknowledges Ms. Alexander's claim that the amount of revenue received from customers participating in the Company's TOU default service rates is likely to be lower than the amount that would be collected under its otherwise applicable standard non time-varying generation rates, and that this potentially creates a revenue shortfall that is recovered from other default service customers that have not elected the Company's TOU rate option.[63] However, Mr. Young disagrees that the Company's proposed TOU rate design benefits participating customers at the expense of other residential default service customers as Ms. Alexander claims because the revenue shortfall will not "materially" impact other default

[60] *Id.*, page 28, lines 14-17.
[61] *Id.*, page 29, lines 10-21.
[62] FE PA Statement No. 1-R, page 5, lines 1-10.
[63] *Id.*, page 5, lines 14-18.

service customers given the low level of enrollment in the Company's current TOU rate option.[64]

Q. HOW DO YOU RESPOND TO MR. YOUNG'S CLAIMS?

A. I disagree with both arguments presented by Mr. Young. First, it remains a fact that is also acknowledged by Mr. Young that the Company's proposed on-peak TOU period fails to include one of PJM 5CP hours in 2025. Given the dynamic nature of grid operations and wholesale markets, the most recent year should carry more weight than older time periods. Therefore, changing FE PA's on-peak TOU period from a time interval that would include all PJM 5CP hours in the last five years to a time interval that would exclude one of PJM 5CP hours in the most recent year (2025) is not appropriate. Defining the on-peak TOU period accurately to capture all highest-load periods in PJM is particularly important right now given the precarious condition of PJM's resource adequacy and capacity market. Customers that opt into TOU rates should have the incentive to reduce usage during PJM's highest load hours.

Second, Mr. Young's reasoning for dismissing Ms. Alexander's concern regarding the Company's proposed TOU rate design benefiting participating customers at the expense of other residential default service customers is flawed and contradictory. On the one hand, Mr. Young claims that the changes proposed by the Company to its TOU program design would increase enrollment in the program and load-shifting by enrollees. On the other hand, Mr. Young states that the revenue shortfall will not materially impact other default service customers because of the low level of enrollment in the Company's current TOU rate option. Mr. Young cannot have it both ways. If we are to believe Mr. Young's assertion that the changes proposed by the Company to its TOU program design would increase enrollment in the program and load-shifting by enrollees, it necessarily

[64] *Id.*, page 5, lines 18-20.

follows that the revenue shortfall stemming from the TOU program design will materially impact other default service customers.

Q. PLEASE ADDRESS MR. YOUNG'S CONTENTION THAT "THE COMMISSION APPROVED THE VOLUNTARY TOU DEFAULT SERVICE RATE OPTIONS OF THE PREDECESSOR COMPANIES AND SEVERAL OTHER EDCS WITHOUT REQUIRING THE PRE-IMPLEMENTATION EVALUATION" PROPOSED BY MS. ALEXANDER AND ME.[65]

A. While the Commission may have approved the initial rollout of TOU rates without requiring a pre-implementation evaluation, I do not believe such initial approval represents a black check for the Company to experiment with the design of the TOU program and rates without considering at least customer impacts that would result from such experimentation. Even if the Commission would not require a quantitative analysis, the Commission should require the Company to coherently and factually support the changes it is proposing to a Commission-approved program. FE PA did not meet that standard in its Petition as demonstrated by Ms. Alexander and me in this proceeding.

Q. WHAT IS YOUR RECOMMENDATION ON FE PA'S TOU PROGRAM DESIGN AFTER REVIEWING MR. YOUNG'S REBUTTAL TESTIMONY?

A. My recommendation stated in my Direct Testimony is unchanged after reviewing Mr. Young's Rebuttal Testimony. Until the Company comes up with a coherent TOU program design supported by research and analysis, the Commission should order the Company to continue with its TOU program design from DSP VI and reject the changes proposed by the Company for DSP VII.

[65] *Id.*, page 4, lines 14-17.

VI. MAXIMUM REGISTERED PEAK LOAD

Q. WHAT IS MAXIMUM REGISTERED PEAK LOAD AND WHAT DID THE COMPANY PROPOSE ON THIS ISSUE?

A. Maximum registered peak load, or MRPL, is the criterion by which FE PA proposes to classify a non-residential account as commercial or industrial. FE PA proposes to define MRPL as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this shall also be inclusive of the nameplate capacity of the generation system." [66] FE PA is proposing that non-residential default service customers with a demand of 100 kW or above or MRPL of 100 kW or above will be classified as "industrial" for default service procurement and provision purposes, and served under the Hourly Pricing Default Service Rider ("HP Rider"). Default service customers with a demand below 100 kW and MRPL below 100 kW would be served under the PTC Default Service Rate Rider ("PTC Rider").[67]

Q. DID YOU ADDRESS THIS PROPOSAL IN YOUR DIRECT TESTIMONY AND REBUTTAL TESTIMONY?

A. Yes. I supported the Company's proposal in my Direct Testimony because including large customer-generators in the commercial customer procurement group would bundle truly small commercial customers, (i.e., which have net power flow from or into the Company's distribution system less than 100 kW) with more sophisticated, large customer-generators in the same FPFR contract procurements, which in turn would negatively affect small commercial default service customers.[68] I maintained my support for the Company's

[66] FE PA Exhibit DMY-6, p. 1.
[67] FE PA Statement No. 4, p. 16, lines 6-11.
[68] OCA Statement No. 1, page 38, line 12 to page 40, line 17.

MRPL proposal in my Rebuttal Testimony by rebutting the claims of Mr. Heidell and Mr. Michelman in their respective Direct Testimonies regarding harm to customer-generators from the Company's MRPL proposal and the lack of harm to small commercial customers from the status quo.[69] I also pointed out that the Company's MRPL proposal is consistent with Commission precedent.[70]

Q. HOW DO MR. HEIDELL AND MR. MICHELMAN RESPOND TO YOUR SUPPORT FOR THE COMPANY'S MRPL PROPOSAL IN THEIR RESPECTIVE REBUTTAL TESTIMONIES?

A. Mr. Heidell disagrees with my contention that large net-metering customer-generators present switching risk that would increase risk premiums in commercial FPFR contract bids because customer-generators typically have little or no load, and that I have not presented any evidence regarding the shopping trends of large net-metering customer-generators.[71] Mr. Heidell also states his disagreement with what he calls my characterization that customer-generators receive an inflated PTC rate for their exported electricity because he is unaware of any evidence in this proceeding that quantifiably supports that wholesale default service suppliers are building additional risk premiums into their bids because of net-metered generation.[72]

Mr. Michelman criticizes me for not discussing or considering cost reduction benefits of net-metered excess generation that currently accrue or should accrue to commercial default service customers.[73] He suggests that my reliance on the Commission's order in UGI Utilities, Inc. – Electric Division's ("UGI's") DSP proceeding may be misplaced because the Commission will make its decision in this proceeding based on the

[69] OCA Statement No. 1-R, pages 18-24.
[70] *Id.*, page 20, lines 8-19.
[71] CGC Statement No. 1-R, page 4, lines 8-15.
[72] *Id.*, page 5, lines 14-18.
[73] Rebuttal Testimony of Thomas S. Michelman on behalf of Joint Solar Advocates, page 4.

evidence presented in this proceeding rather than its reasoning in the UGI DSP case.[74] Mr. Michelman claims that I did not provide any testimony on the actual impact of a high percentage of medium and large non-residential customers having switched to EGSs on the Commercial PTC Rider rate.[75] He contends that I did not provide any data to support my statement that volumetric risk will result in higher PTC rates and/or more volatile rates for small commercial customers.[76]

Q. PLEASE COMMENT ON THE CRITICISMS OF MR. HEIDELL AND MR. MICHELMAN REGARDING YOUR SUPPORT OF THE COMPANY'S MRPL PROPOSAL IN YOUR DIRECT TESTIMONY.

A. A common theme in the respective Rebuttal Testimonies of Mr. Heidell and Mr. Michelman is that I have not properly supported my assertion that large customer-generators would increase risk premiums in commercial FPFR contracts and therefore commercial default service rates by introducing various measures of volumetric risk because I have not quantified such risk premiums for past or future commercial FPFR auctions. I acknowledge that this effect is hard to quantify with any precision, as suppliers' risk premiums can only be determined by the suppliers themselves and they are not directly observable to anyone else. However, there is no doubt that a developer that invests in a three-megawatt solar (or other technology) generation facility is a sophisticated "customer" that can and will switch between default service and EGS service to maximize revenue from net-metered generation cashouts, and the wholesale suppliers of FPFR contracts will recognize them as such. A quantitative analysis estimating risk premiums in past auctions or forecasting risk premiums in future auctions based on various levels of net-metered customer-generation, and the uncertainty surrounding thereof, is not necessary to conclude

[74] *Id.*, page 10.
[75] *Id.*
[76] *Id.*, page 11.

that the inclusion of a non-trivial amount of such customer-generation in the commercial default service load would prompt FPFR bidders to recognize the volumetric risk and price their bids accordingly.

Q. IF CUSTOMER-GENERATORS TYPICALLY HAVE LITTLE OR NO LOAD, DO THEY STILL PRESENT VOLUMETRIC RISK FOR FPFR BIDDERS?

A. Yes. The load may be considered little compared to the size of the generator behind the customer's load, but the customer's peak load can still be up to 100 kWh, similar to other small commercial customers. The customer can have a capacity peak-load contribution ("PLC") of as high as 100 kW (if the generator does not come online on the date expected by wholesale suppliers, if the generator is experiencing an outage during 5CP hours that year, or if the generator produces less than anticipated during 5CP hours), and as low as zero (if the generator fully offsets the customer's load during 5CP hours). Given the current high level of capacity prices in PJM, this represents a significant risk for an FPFR bidder that needs to provide a fixed price that includes energy and capacity (in addition to other line items) for that customer's net load. I note that capacity cost uncertainty, and the associated risk premium, would be even higher for FPFR suppliers under Mr. Michelman's proposal to assign negative PLCs to customer-generators because now the customer's PLC can be as high as 100 kW and as low as *negative* 3,000 kW. The same risk exists for energy pricing because the customer will register a net load for the FPFR supplier to serve if the generator is not online (due to outage or a delay in online date) but register no load if the generator is online and fully offsets the customer's load.

Q. PLEASE DESCRIBE MR. MICHELMAN'S PROPOSAL REGARDING "NEGATIVE LOADS" THAT WOULD BE APPLICABLE TO CUSTOMER-GENERATORS.

A. Mr. Michelman recommends that FE PA modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by allowing customers to register "negative loads" as a result of the excess generation they produce; and applying the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.[77]

Q. HOW DOES FE PA WITNESS MR. GREGORY F. HUSSING RESPOND TO MR. MICHELMAN'S "NEGATIVE CAPACITY AND TRANSMISSION PEAK LOAD" PROPOSAL?

A. Mr. Hussing disagrees with Mr. Michelman's proposal to assign negative PLCs to customer-generators for three reasons. First, he points out that PLC is a cost allocation mechanism which is used to assign each customer a share of system capacity cost, and that if a customer-generator's PLC is reduced through a negative PLC, then another customer, presumably a non-customer-generator in the same customer class, will pay more.[78] Second, Mr. Hussing states that Mr. Michelman's suggestion that the Commission should rely on assumed solar generation by a customer-generator to calculate a dollars per megawatt year benefit ignores the fact that there is no certainty that the customer-generator will be providing excess generation at the future peak which the 5CP mechanism is designed to address. He also points out that Mr. Michelman does not propose that customer-generators should pay any penalty if they do not perform, as other entities with a capacity obligation do. [79] Third, Mr. Hussing posits that while FE PA customers in one particular rate district

[77] Joint Solar Advocates Statement No. 1, page 5, lines 7-11.
[78] FE PA Statement No. 6-R, page 5, lines 7-11.
[79] *Id.*, page 5, lines 14-20.

might have a lower overall capacity cost if customer-generators receive a negative PLC in comparison to the customers of other utilities in the PJM zone, the costs are still shifted to other customers within the rate district.

Mr. Hussing also opposes Mr. Michelman's proposal assign negative capacity network service peak load contributions ("NSPLs"), which are used to calculate and allocate transmission costs and are based on a customer's contribution to peak transmission demand, to customer-generators, for the same reasons he opposed Mr. Michelman's proposal to assign negative PLCs to customer-generators.[80] Mr. Hussing points out that reduction in PJM transmission costs as a result of lower aggregate demand (due to "negative loads" of customer-generators) is uncertain.[81]

Q. AFTER REVIEWING THE ARGUMENTS PRESENTED BY MR. MICHELMAN AND MR. HUSSING, PLEASE STATE YOUR POSITION ON ASSIGNING NEGATIVE PLCS TO CUSTOMER-GENERATORS.

A. I oppose Mr. Michelman's proposal and I agree with Mr. Hussing's conclusion, for four reasons. First, capacity requirements and costs assigned by PJM to an EDC zone is determined three years before the start of a delivery year (in "steady state" when BRAs are conducted according to schedule). Since "negative loads" of customer-generators are not included in such capacity requirement and cost assignment by PJM, customer-generators' "negative loads" would not reduce the EDC zone's total capacity requirement or total capacity costs. Therefore, paying customer-generators for a value (in this instance, negative PLC) which they have not created amounts to an unfair subsidy to customer-generators from all other customers in the zone.

[80] *Id.*, page 8, lines 11-15.
[81] *Id.*, page 8, line 16 to page 9, line 5.

Second, PJM's load forecast, which is also used as an input for capacity procurement in BRAs, incorporates historical load and weather trends as well as anticipated load growth. It is unclear how long it would take for customer-generator "negative loads" to be reflected in PJM's load forecasts to begin lowering the EDC zone's capacity requirement; how much it would reduce the capacity requirement, if any; or how well intermittent output of solar generators would coincide with PJM's modeled peaks for future years. Paying customer-generators for a speculative and uncertain benefit by raising capacity costs for all other customers would be unfair.

Third, paying customer-generators more for capacity through the assignment of negative PLCs would send the wrong signal to generation developers. When a generator interconnects directly to PJM, it becomes a capacity resource and puts downward pressure on PJM capacity prices by increasing supply. When a generator interconnects to the EDC distribution network behind a retail meter, PJM does not recognize that generator as supply for its capacity market. Therefore, incentivizing and subsidizing generation developers to interconnect to the EDC distribution network, all else being equal, perpetuates high capacity prices in PJM. Being a capacity resource in PJM and getting compensated for it would entail making a commitment to PJM, subject to nonperformance penalties, to be available during system emergencies including during non-solar hours. Interconnecting to the EDC distribution grid does not entail any performance commitment, so customer-generators cannot be deemed to be entitled to capacity revenues based merely on performance during PJM 5CP hours.

Finally, implementing Mr. Michelman's proposal to assign negative PLCs to customer-generators in this proceeding without at least giving a few years of prior notice to the marketplace would be disruptive for existing long-term fixed-price retail contracts with EGSs and FPFR contracts with wholesale suppliers. Those contracts were priced

based on FE PA's existing capacity cost allocation mechanism. Assigning negative PLCs to customer-generators would raise capacity requirements and costs for all other customers and may prompt the need to renegotiate the fixed prices on which customers and EGSs agreed. Given the impact on all other customers as well as EGSs and wholesale suppliers, it would be more appropriate for the Commission to address Mr. Michelman's proposal to assign negative PLCs to customer-generators in a separate proceeding in which all affected parties can participate and a more robust record can be developed that also includes extensive discovery.

Q. AFTER REVIEWING THE ARGUMENTS PRESENTED BY MR. MICHELMAN AND MR. HUSSING, PLEASE STATE YOUR POSITION ON ASSIGNING NEGATIVE NSPLS TO CUSTOMER-GENERATORS.

A. I oppose Mr. Michelman's proposal and I agree with Mr. Hussing's conclusion, for three reasons. First, the NITS rate base and the associated annual revenue requirement are fixed for existing transmission facilities in a transmission zone. Customer-generators cannot lower that rate base or revenue requirement by registering "negative loads." Therefore, assigning negative NSPLs to customer-generators unfairly shifts costs from customer-generators to all other customers.

Second, Mr. Michelman's proposal seems to be predicated on the assumption that "negative loads" from customer-generators would avoid or defer future transmission investments. Some transmission investment is made to replace aging existing infrastructure, which cannot be avoided or deferred by customer-generators registering "negative loads." It is also speculative to assume that customer-generators' "negative loads" during zonal transmission peak times would reduce future transmission investments because transmission expansion may be needed in locations without customer-generators or it may be necessary during times and system conditions when customer-generators are

not registering "negative loads" (e.g., summer evening hours; winter early morning, evening, or overnight hours).

Finally, implementing Mr. Michelman's proposal to assign negative NSPLs to customer-generators in this proceeding without at least giving a few years of prior notice to the marketplace would be disruptive for existing long-term fixed-price retail contracts with EGSs and FPFR contracts (which will continue to include NITS until the start of DSP VII) with wholesale suppliers. Those contracts were priced based on the existing capacity cost allocation mechanism. Assigning negative NSPLs to customer-generators would raise NITS rates and costs for all other customers and may prompt the need to renegotiate the fixed prices on which customers and EGSs agreed. Given the impact on all other customers as well as EGSs and wholesale suppliers, it would be more appropriate for the Commission to address Mr. Michelman's proposal to assign negative NSPLs to customer-generators in a separate proceeding in which all affected parties can participate and a more robust record can be developed that also includes extensive discovery.

Q. IF THE COMMISSION WERE INCLINED TO ADOPT MR. HEIDELL'S PROPOSAL TO ASSIGN NEGATIVE PLCS AND NSPLS TO CUSTOMER-GENERATORS, WOULD YOU OFFER ADDITIONAL RECOMMENDATIONS FOR THE COMMISSION TO ADOPT?

A. Yes. While my primary recommendation is that the Commission deny Mr. Heidell's proposal to assign negative capacity peak load contributions (PLCs) and transmission peak load contributions (NSPLs) to customer-generators for the reasons I stated above, if the Commission were inclined to adopt that proposal, I recommend that a customer-generator gets compensated for the capacity component of the retail rate based on its negative PLC, and gets compensated for the transmission component of the retail rate based on its negative NSPL. This differs from Mr. Heidell's proposal to assign negative PLC and NSPL

to customer-generators but compensate them for capacity and transmission based on the average cost of capacity and transmission, respectively, for the customer class to which the customer-generator belongs.

Mr. Heidell seems to predicate his proposal to assign negative PLCs and NSPLs to customer-generators on his assumption that the negative PLC and NSPL of a customer-generator represent the capacity-related and transmission-related value that the customer-generator provides. In that circumstance, it would be appropriate to compensate the customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, to align its compensation with the value it creates. Otherwise, a customer-generator would still receive compensation for capacity and transmission even if the generator did not produce any electricity or produced a minimal amount during capacity and transmission peak load conditions. Compensating a customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, would also provide the proper incentive for the customer-generator to make the generator available and maximize its output during peak PJM-wide and zonal load conditions.

Q. PLEASE COMMENT ON MR. HEIDELL'S RECOMMENDATION TO RELEASE INFORMATION TO FPFR AUCTION BIDDERS REGARDING EXISTING AND PENDING CUSTOMER GENERATOR PROJECTS TO MITIGATE UNCERTAINTY.[82]

A. I support Mr. Heidell's suggestion that the Company should provide information to FPFR auction bidders regarding the cumulative number and nameplate capacity of customer-generation projects as well as the information on projects in its interconnection queue. However, while this would mitigate uncertainty to some extent, it will not eliminate such uncertainty. The bidders would still need to contend with as well as what portion of the

[82] CGC Statement No. 1-R, page 5, lines 9-12.

pending projects would come online and what portion of these customers would be in default service over the 12-month or 24-month terms of the FPFR contracts, as well as generation profile and outage risk. In other words, such information release would not address the uncertainty associated with customer switching, generation outages, or project online dates.

Q. DO YOU AGREE WITH MR. MICHELMAN THAT YOU SHOULD ADDRESS THE PRICE REDUCTION BENEFITS OF CUSTOMER-GENERATORS IN YOUR REVIEW OF THE COMPANY'S MRPL PROPOSAL?

A. No. The price suppression or cost reduction benefits (or lack thereof) of customer-generators are not relevant to the MRPL issue in this proceeding. The only relevant issue in this proceeding is whether customer-generators will be included in the commercial default service procurement group and receive the PTC Rider rate for their exported generation, or they will be included in the industrial default service procurement group and receive the HP Rider rate for their exported generation As I explained in my Rebuttal Testimony, both the PTC Rider and the HP Rider include the same cost components; that is, PJM billing line items (other than the ones included in FE PA's Default Service Support Rider), Alternative Energy Portfolio Standards Act compliance, FE PA's administrative costs, and Pennsylvania gross receipts tax.[83]

Q. DO YOU AGREE WITH MR. MICHELMAN THAT THE COMMISSION'S DECISION IN THE UGI DSP PROCEEDING IS IRRELEVANT TO THIS PROCEEDING?

A. No, I do not. The Commission provided economic and regulatory reasoning for its decision in the UGI DSP proceeding that in my opinion applies to the MRPL issue in this proceeding because the Supply Peak Load Impact proposed in the UGI DSP proceeding is identical to

[83] OCA Statement No. 1-R, page 20, lines 20-24.

the MRPL proposed by FE PA in this proceeding. However, since neither Mr. Michelman nor I are attorneys, it would be best to leave this issue for attorneys to address in the briefing stage of the proceeding.

Q. ARE YOU AWARE OF OTHER COMMISSION ORDERS IN WHICH THE COMMISSION ADDRESSED DEMAND DETERMINATION AND DEFAULT SERVICE CLASS CLASSIFICATION OF CUSTOMER-GENERATORS?

A. Yes. In Docket No. R-2025-3054394, the Commission addressed a proposal by Citizens' Electric Company of Lewisburg, Pennsylvania to revise its definition of "Billing Demand" which also determines a customer's rate classification and default service class. In relevant part, the Commission made the following determination:

> *In sum, based upon the discussion and reasons set forth above, we shall deny all four of the Solar Projects Exceptions because the Solar Projects have failed to demonstrate that Citizens' Billing Demand proposal violates the AEPS Act. To the contrary, we find that Citizens' proposal does not violate the AEPS Act, Pennsylvania law, or Commission Regulations, and it is consistent with our recent decision in UGI DSP V. Therefore, we shall adopt Citizens' Billing Demand proposal, consistent with our discussion herein.*[84]
>
> *Accordingly, Citizens' shall define "Billing Demand" in tariff Rule 26 as:*
> *Billing Demand shall reflect the Customer's use of the distribution system, which will be the greater of Gross Generator Rating (kW(AC)) as stated in the generator interconnection application or the maximum demand of the customer during any 15-minute period during the current month.*[85]

VII. RETAIL MARKET REFORMS

Q. PLEASE COMMENT ON MR. LACEY'S CLAIM THAT FE PA'S RETAIL MARKET REFORM PROPOSALS WOULD RESULT IN HIGHER DEFAULT SERVICE PRICES.

A. Mr. Lacey contends that FE PA's retail market reform proposals would result in higher default service prices based on supply and demand principles.[86] In discovery, Mr. Lacey

[84] *Pa. PUC v. Citizens' Elec. Co. of Lewisburg,* R-2025-3054394 (Jan. 15, 2026), Order at 72-73.
[85] *Id.* at 73.
[86] RESA St. No. 1R, page 11, lines 18-21.

further explains that "[i]f the default service auction is clearing at a price today that procures "just enough" power to match the load, then all else being equal, an auction that must procure 20% more power, will clear at a higher price" based on his assumption that FE PA's residential shopping rate will decline from nearly 20 percent today to nearly zero if FE PA's retail market reforms are implemented.[87] Mr. Lacey's reasoning is flawed and his assertion is incorrect. FPFR suppliers currently price their bids based on their cost of hedging their commitments under FPFR contracts, including energy requirements. Forward market prices for energy reflect demand by FPFR suppliers that currently serve 80 percent of residential load and demand by EGSs that currently serve 20 percent of residential load (per Mr. Lacey's assertion in RESA's Response to OCA-XIII-14). If all residential load migrates to default service and FPFR suppliers serve all residential load (as per Mr. Lacey's contention in RESA's Response to OCA-XIII-14), forward market prices for energy will reflect the same level of demand, equivalent to the residential class's energy requirements, but this time exclusively reflecting demand by FPFR suppliers that would be serving 100 percent of residential load and no demand by EGSs that would be serving no residential load. Since demand-supply balance would be the same, all else being equal, FPFR suppliers' cost of hedging and therefore bids would be the same, so default service prices would not increase in the scenario contemplated by Mr. Lacey. In fact, a bigger market for default service supply may bring more competitors and result in fiercer competition among FPFR suppliers and lower FPFR auction prices.

[87] RESA's Response to OCA-XIII-14.

Q. PLEASE COMMENT ON MR. LACEY'S CLAIM THAT FE PA'S RETAIL MARKET REFORM PROPOSALS WOULD RESULT IN ENHANCED RISK PREMIUMS TO ACCOMMODATE GREATER MIGRATION RISK.

A. Mr. Lacey's contention is counterintuitive and incorrect. In RESA's Response to OCA-XIII-14, Mr. Lacey is positing that FE PA's Pennsylvania service territories will likely experience substantial reductions in residential shopping participation. He gives the example of residential shopping rate in Potomac Edison, FE PA's Maryland service territory, having declined to a mere 0.1 percent as of March 31, 2026. While I do not believe that Mr. Lacey demonstrated that FE PA's retail market reforms would lead to a residential shopping rate of 0.1 percent in the FE PA service territory, if Mr. Lacey's prediction proves accurate, switching risk-driven risk premiums in FE PA's residential FPFR auctions would eventually decline, not increase. This is because a 0.1 percent shopping rate would imply virtually no switching risk for FPFR suppliers, resulting in elimination of switching risk-driven risk premiums from FPFR supplier bids.

Q. PLEASE ADDRESS MR. LACEY'S CLAIM THAT "ONE OF THE MAJOR RISKS TO DEFAULT SERVICE PROVIDERS IS CUSTOMERS RETURNING IN RISING PRICE MARKETS" AND "THEY WILL NEED TO ADD PREMIUMS TO PROTECT AGAINST THAT RISK."[88]

A. This is called switching risk, and it is the essence of the FPFR approach. FPFR suppliers provide a load-following product and assume all volumetric risk, which includes, but is not limited to, customer switching risk associated with customers leaving or returning to default service. In a rising wholesale market price environment, some customers with expiring fixed-price EGS contracts may return to default service because default service prices react more gradually to the underlying wholesale market pricing trends. Conversely,

[88] RESA St. No. 1R, page 11, lines 14-18.

in a declining wholesale market price environment, some customers may want to switch to fixed-price EGS contracts because, once again, default service prices react more gradually to the underlying wholesale market pricing trends than EGS pricing does. FPFR suppliers price their bids to account for this feature of the commitment which they assume. However, this is irrelevant to the retail market reforms proposed by the Company, and Mr. Lacey does not establish any link between the two. For example, the Company is not proposing to return EGS customers to default service only when prices are rising or only when prices are falling. The Company is proposing to return a customer to default service absent an affirmative consent from the customer to renew service with EGS,[89] regardless of wholesale or retail market conditions. Mr. Lacey's assertion that this aspect of the Company's proposed retail market reforms is purely speculative and unsubstantiated.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

[89] *Id.*, page 12, lines 13-16.

ERRATA TO OCA STATEMENT NO. 1SR

Errata to OCA Statement No. 1SR

pp. 36-37:

Q. IF THE COMMISSION WERE INCLINED TO ADOPT MR. ~~HEIDELL'S~~ MICHELMAN'S PROPOSAL TO ASSIGN NEGATIVE PLCS AND NSPLS TO CUSTOMER-GENERATORS, WOULD YOU OFFER ADDITIONAL RECOMMENDATIONS FOR THE COMMISSION TO ADOPT?

A. Yes. While my primary recommendation is that the Commission deny Mr. ~~Heidell's~~ Michelman's proposal to assign negative capacity peak load contributions (PLCs) and transmission peak load contributions (NSPLs) to customer-generators for the reasons I stated above, if the Commission were inclined to adopt that proposal, I recommend that a customer-generator gets compensated for the capacity component of the retail rate based on its negative PLC, and gets compensated for the transmission component of the retail rate based on its negative NSPL. This differs from Mr. ~~Heidell's~~ Michelman's proposal to assign negative PLC and NSPL to customer-generators but compensate them for capacity and transmission based on the average cost of capacity and transmission, respectively, for the customer class to which the customer-generator belongs.

Mr. ~~Heidell~~ Michelman seems to predicate his proposal to assign negative PLCs and NSPLs to customer-generators on his assumption that the negative PLC and NSPL of a customer-generator represent the capacity-related and transmission-related value that the customer-generator provides. In that circumstance, it would be appropriate to compensate the customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, to align its compensation with the value it creates. Otherwise, a customer-generator would still receive compensation for capacity and transmission even if the generator did not produce any electricity or produced a minimal amount during capacity and transmission peak load conditions. Compensating a customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, would also provide the proper incentive for the customer-generator to make the generator available and maximize its output during peak PJM-wide and zonal load conditions.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Serhan Ogur. I am a Principal and Senior Economist at Exeter Associates, Inc. My office is located at 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?

A. Yes. I submitted Direct Testimony and Rebuttal Testimony in this proceeding on April 29, 2026, and on May 28, 2026, respectively, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. My Surrebuttal Testimony responds to certain issues raised by FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") witnesses Mr. David M. Young, Mr. Ryan J. Rose, Nicholas E. Powers, Ms. Carlixta De La Rosa, and Dr. Margarita Patria; Retail Energy Supply Association witness Mr. Frank Lacey; Joint Solar Advocates witness Mr. Thomas S. Michelman; and Customer-Generator Coalition witness Mr. James A. Heidell, in their respective Rebuttal Testimonies. These issues relate to (i) the wholesale default service supply product portfolio, including the types and lengths of products to be procured and timing of procurements; (ii) the treatment of PJM Network Integration Transmission Service ("NITS") charges and the Capacity Proxy Price ("CPP") mechanism; (iii) the Company's reconciliation adjustment mechanism; (iv) time-of-use ("TOU") program and rate design; (v) FE PA's proposal related to the maximum registered peak load ("MRPL") as a way to classify nonresidential customers into the commercial and industrial class groupings for the purposes of default service procurement; and (vi) effects of FE PA's

proposed retail market reforms on residential default service rates. Each of these issues is addressed in turn in the following sections of my Surrebuttal Testimony.

II. RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT

Q. PLEASE SUMMARIZE THE PERTINENT ASPECTS OF THE COMPANY'S PROPOSED RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT SCHEDULE.

A. The Company proposed to supply residential default service load from three sources: 12-month load-following, fixed-price, full requirements ("FPFR") contracts; 24-month FPFR contracts; and 60-month FPFR contracts. In other words, FPFR contracts make up the entirety of the power supply, with laddered contracts procured twice per year to replace prior contracts set to expire. The 60-month FPFR contracts are proposed to make up approximately 10 percent of the power supply in each respective Rate District. The remaining 90 percent of residential default service load requirement is to be met from a combination of 12-month products and 24-month products, with the share of each varying across the Rate Districts.[1] All contracts would start delivery on June 1, which means that 12-month contract periods would not overlap with each other.[2] Procurements would be conducted in January and November of each year, which is approximately five months prior to the start of deliveries for January auctions and seven months prior to the start of deliveries for November auctions.[3]

[1] OCA Statement No. 1, page 6, lines 16-24.
[2] FE PA Exhibit RJR-1.
[3] OCA Statement No. 1, page 7, lines 12.

Q. DID YOU PROPOSE AN ALTERNATIVE PRODUCT MIX AND PROCUREMENT SCHEDULE?

A. Yes. I presented my proposed product mix and procurement schedule in OCA Exhibit SO-2 as part of my Direct Testimony. The changes I proposed to the Company's proposal include replacing the 60-month (i.e., five-year) FPFR contracts with 36-month (i.e., three-year) FPFR contracts;[4] slight modification to the tranche targets of 12-month and 24-month products for some Rate Districts to achieve heavier reliance on 24-month contracts than on 12-month contracts for greater rate stability;[5] inclusion of 18-month FPFR products to the product mix for the beginning part of Default Service Plan VII ("DSP VII") to streamline the transition from the approach employed in DSP VI to the approach I am recommending in DSP VII;[6] modification to the FPFR contract delivery terms such that half of 12-month and 24-month products commence delivery on June 1 and half of them commence delivery on December 1;[7] and conducting procurements in September (for contracts commencing delivery on December 1) and in February (for contracts commencing delivery on June 1).[8]

Q. HOW HAVE FE PA WITNESSES RESPONDED TO YOUR RECOMMENDATIONS?

A. Mr. Powers addresses only the issue related to the 60-month contracts. He agrees that a 36-month product would align more closely with available forward market liquidity and hedging instruments but points out that a 60-month product would provide greater longer-term price stability. He posits that "the Company's proposed approach remains reasonable and consistent with Act 129's objective of maintaining a prudent mix of products designed

[4] OCA Statement No. 1, page 16, lines 9-10.
[5] *Id.*, page 19, lines 21-22.
[6] *Id.*, page 19, line 22 to page 20, line 1.
[7] *Id.*, page 20, lines 1-3.
[8] *Id.*, page 18, lines 11-18.

to achieve the least cost to customers over time," and that "the Company's proposal reasonably balances those considerations."[9]

Dr. Patria also addresses only the issue related to the 60-month contracts. She claims that my concern about the 60-month contracts is "largely speculative and not well supported" in light of my proposal to replace the 60-month contracts with 36-month contracts. She points out that PPL Electric Utilities Corporation ("PPL") has successfully procured 5-year products and, more recently, a 10-year long-term block product. She claims that the risks associated with 60-month FPFR products are narrower than I suggest because NITS will be excluded from FPFR contracts and the CPP mechanism addresses uncertainty associated with PJM Interconnection, LLC ("PJM") capacity costs.[10]

Mr. Rose disagrees with my recommendation to replace the 60-month contracts with 36-month contracts,[11] because he disagrees with my contention that 60-month products are untested and premature,[12] pointing out PPL's successful procurement of 5-year and 10-year block products in 2021 and in 2025, respectively.[13] He also appears to claim that a default service portfolio without a contract between 4 years and 20 years in length would violate 52 Pa. Code. § 54.186(b)(1)(iii).[14]

A common theme in the respective rebuttal testimonies of the aforementioned three FE PA witnesses is support for the proposed 60-month product because it is "only" 10 percent of the residential portfolio. The underlying presumption appears to be that any product that does not exceed 10 percent of the portfolio should automatically be deemed appropriate without a thorough examination of its risks and benefits.

[9] FE PA Statement No. 3-R, page 2, lines 2-18.
[10] FE PA Statement No. 5-R, pages 4-12.
[11] FE PA Statement No. 2-R, page 3, lines 16-19.
[12] *Id.*, page 3, lines 19-20.
[13] *Id.*, page 4, lines 1-7.
[14] *Id.*, page 4, line 22 to page 5, line 3.

Mr. Rose acknowledges that conducting auctions in February and September of each year as I propose is feasible, but expresses two concerns with doing so: narrowing the time window between the auction clearing results and PJM's Auction Revenue Rights ("ARR") allocation process; and that having a September auction would leave a 9-month gap prior to the start of delivery as compared to a 7-month gap if the auction is conducted in November.[15]

Mr. Rose posits that my "proposed procurement structure introduces additional complexity through the inclusion of transitional 18-month products, revised auction schedules, and more granular staggering approaches." While he agrees that my suggested modifications would "theoretically" provide incremental diversification benefits, he claims that "they also increase administrative complexity and may reduce procurement efficiency without demonstrating commensurate customer benefits."[16] He posits that the Company's proposed procurement design is broadly consistent with industry practice among large default service procurements in Pennsylvania and neighboring states, providing PECO Energy Company ("PECO"), PPL, Duquesne Light Company ("DLC"), AES Ohio, Duke Energy Ohio, Ohio Edison, The Illuminating Company, and Toledo Edison as examples.[17] Mr. Rose also contends that my recommendations are internally inconsistent because I recommend greater reliance on 24-month contracts than on 12-month contracts while recommending to replace the 60-month contracts with 36-month contracts.[18]

[15] *Id.*, page 5, lines 4-10.
[16] *Id.*, page 7, lines 12-17.
[17] *Id.*, page 6, lines 8-14.
[18] *Id.*, page 7, lines 3-8.

Q. PLEASE RESPOND TO MR. POWERS' ASSERTION THAT THE COMPANY'S PROPOSED APPROACH REMAINS CONSISTENT WITH THE ACT 129 OBJECTIVES.

A. Mr. Powers does not respond to the shortcomings of the Company's proposal, including the 60-month FPFR products for the residential class, which I have identified in my Direct Testimony. Nor does Mr. Powers suggest that my proposed approach would violate Act 129. He seems to suggest that the Company's proposal is "good enough" without providing his reasoning for why the Company's proposal is superior to my proposed portfolio and procurement schedule. The Commission and FE PA's ratepayers need not contend with "good enough" or with the status quo if there is a better approach available. As I explained in my Direct Testimony and as I also explain below in this section of Surrebuttal Testimony, I am proposing improvements to the Company's proposed approach, and the Commission should recognize the improvements and customer benefits associated with my recommendations and adopt them for FE PA's default service customers.

Q. PLEASE RESPOND TO FE PA WITNESSES' ASSERTIONS THAT PPL SUCCESSFULLY PROCURED 5-YEAR AND 10-YEAR BLOCK PRODUCTS.

A. Dr. Patria and Mr. Rose disregard the extremely important distinction between the 5-year and 10-year fixed-quantity, energy-only blocks procured by PPL and the 5-year load-following, full-requirements load tranches proposed by FE PA. As I explained in my Direct Testimony, "[e]ven though wholesale suppliers would not be assuming risks associated with PJM capacity costs (due to the CPP mechanism) and PJM NITS costs (due to the removal of NITS charges from the FPFR auction products), suppliers would still assume energy, ancillary services, uplift, and AEC cost risks and ARR revenue risk as well as volumetric (e.g., load migration, net metering) risk."[19] The suppliers of 5-year and 10-year

[19] OCA Statement No. 1, page 15, lines 11-16.

blocks to PPL did not assume any of these risks. PPL's energy blocks included only energy, and the same quantity of energy in every hour the 5-year or 10-year duration of the contracts. The 60-month FPFR product proposed by FE PA requires the supplier to assume many other line-item price risks for an uncertain quantity and profile of load. Therefore, for suppliers, the 60-month FPFR product proposed by FE PA is not comparable to and much riskier than the energy-only blocks procured by PPL. Since I already acknowledged in my Direct Testimony that FE PA's 60-month FPFR product would exclude NITS charges and mitigate capacity price uncertainty through CPP, Dr. Patria's claim that "the risks associated with 60-month FPFR products are narrower" than I suggest is meritless. The risks associated with 60-month FPFR products are neither narrower than I suggest, nor are they narrow at all.

Q. DID YOU ADDRESS PPL'S PROPOSAL TO PURCHASE A 10-YEAR ENERGY BLOCK IN DOCKET NO. P-2024-3047290?

A. Yes. I submitted direct, rebuttal, and surrebuttal testimony in PPL's most recent default service plan proceeding in Docket No. P-2024-3047290 as the OCA's witness and addressed PPL's Long Term Power ("LTP") proposal as follows:

> *I recommend that PPL's proposal to procure 10-year, 150 MW of LTP product, consisting of 10-year, 150 MW of around-the-clock block energy (i.e., Block Service) and 10-year, 150 MW of unforced capacity (i.e., Bilateral Transferred Capacity), be replaced with the procurement of 10-year, 150 MW of around-the-clock block energy. The adoption of this recommendation would entail the elimination of the long-term capacity contract, but the acceptance of the procurement of the around-the-clock block energy. Further, if the Commission is inclined to authorize PPL to procure both a 10-year block energy product and a 10-year capacity product, I recommend that the Commission direct the Company to solicit these two products separately.*[20]

[20] Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the Period from June 1, 2025 through May 31, 2029, Docket No. P-2024-3047290, OCA Statement No. 1, page 22, lines 3-14.

Q. IF FE PA WERE TO PROPOSE 5-YEAR OR 10-YEAR ENERGY-ONLY BLOCKS FOR THE RESIDENTIAL PORTFOLIO, WOULD YOU SUPPORT THAT PROPOSAL?

A. Yes, I would support either/both. It would enhance the longer-term price stability of the residential default service portfolio while meeting the definition of a long-term contract (between 4 years and 20 years in length) in 52 Pa. Code § 54.186(b)(1)(iii), without exposing default service customers to the risks and potentially excessive risk premiums associated with an untested product that would be prematurely added to the residential portfolio.

Q. IN LIGHT OF YOUR OPPOSITION TO THE 5-YEAR FPFR CONTRACT PROPOSED BY FE PA, PLEASE EXPLAIN WHY YOU WOULD SUPPORT A 5-YEAR AND/OR 10-YEAR FIXED-QUANTITY ENERGY-ONLY BLOCK SUCH AS THE ONE PROCURED BY PPL IN 2025.

A. As its description suggests, a fixed-quantity energy-only block requires the supplier to deliver only energy and in a pre-determined quantity that is identical in every hour of its 5-year or 10-year duration. The supplier of a fixed-quantity energy-only block does not need to assume, manage, or price the costs and (regulatory and market) risks associated with other (than energy) requirements for serving residential default service load, such as ancillary services, uplift, AEPS Act requirements, distribution losses, ARRs, migration (into and out of default service) risk, weather-driven usage risk, regulatory risks associated with PJM market rules and AEPS Act requirements. On the other hand, an FPFR contract supplier assumes all of these risks. Therefore, supplying an FPFR contract is a much riskier endeavor than supplying a fixed-quantity energy-only block. The Commission needs to be convinced that adding such a risky product that requires its suppliers to assume all of these risks in a fixed-price contract for five years is consistent with the “least cost over time”

standard and it is also in the residential customers' interest. In my opinion, the Company did not provide the factual basis to give that assurance while I provided the factual basis to demonstrate otherwise. The 5-year or 10-year energy only block would provide the longer-term price stability benefits sought by the Company, but it would avoid prematurely exposing residential customers to potentially excessive risk premiums that would be associated with prematurely attempting to procure the untested and unproven 5-year FPFR product.

Q. PLEASE COMMENT ON MR. ROSE'S ASSERTION THAT THE 60-MONTH FPFR PRODUCT IS NEITHER UNTESTED NOR PREMATURE.

A. Mr. Rose's (and Dr. Patria's) comparison of the 60-month FPFR product to a 5-year or even 10-year energy-only block product is erroneous for the reasons I explained above. Mr. Rose acknowledged in discovery that FE PA has not investigated whether there are any 5-year or longer load-following products in any jurisdiction.[21] It is important to recognize that while there is precedent for Pennsylvania electric distribution companies ("EDCs") procuring 5-year and 10-year fixed-quantity energy-only products, to my knowledge, no restructured state or utility has procured or currently procures FPFR products that are 60-months or longer in duration, and the Company has not even investigated whether a 60-month FPFR product has been successfully procured anywhere in the country. The jump to 60 months in duration for a load-following, full-requirements contract undoubtedly entails additional risk. My recommendation to extend the maximum FPFR contract duration to 36 months in DSP VII and to consider including a 60-month FPFR product in a subsequent DSP after consultation with potential bidders is the prudent path at this time. Mr. Rose also acknowledged in discovery that FE PA did not solicit feedback from wholesale suppliers regarding their interest or capability to supply a five-

[21] FE PA's Response to OCA Set 2, No. 18(b).

year full-requirements product.[22] Therefore, the Company's 60-month FPFR residential product proposal is both untested and premature.

Q. PLEASE RESPOND TO MR. ROSE'S SUGGESTION THAT A DEFAULT SERVICE PORTFOLIO WITHOUT A CONTRACT BETWEEN 4 YEARS AND 20 YEARS IN LENGTH WOULD VIOLATE 52 PA. CODE § 54.186(B)(1)(III).

A. While I am not an attorney, my understanding as an economist and a utility regulatory expert is that the Pennsylvania Public Utility Commission (the "Commission") does not require that a DSP include all contract types listed in 52 Pa. Code § 54.186(b)(1), and a prudent mix can include some but not all contract types listed in 52 Pa. Code § 54.186(b)(1). For example, it is my understanding that there is precedent for the Commission not requiring a DSP to include all three options listed in 52 Pa. Code § 54.186(b)(1).[23] I also note that Mr. Rose is not an attorney, either. Therefore, it would be best for market and regulatory experts to leave the legal issues for the briefing stage of the proceeding, and to focus on economic and regulatory issues.

Q. DO YOU AGREE THAT THE PROPOSED 60-MONTH FPFR CONTRACT SHOULD AUTOMATICALLY BE DEEMED APPROPRIATE MERELY BECAUSE IT IS "ONLY" 10 PERCENT OF THE PORTFOLIO?

A. No. Each product included in the portfolio should be assessed for its merits, risks, and benefits regardless of its share in the portfolio because it can set a precedent for the Commission for future cases. While 10 percent is smaller than the respective shares of 12-month and 24-month FPFR contracts, I do not consider 10 percent to be negligibly small.

[22] FE PA's Response to OCA Set 2, No. 18(a).
[23] *Popowsky v. Pa. PUC*, 71 A.3d 1112 (Pa. Cmwlth. 2012).

Q. WHY IS 10 PERCENT OF THE PROCUREMENT MIX NOT NECESSARILY NEGLIGIBLE IN THIS PROCEEDING?

A. It is not necessarily negligible because even a 10 percent portion of an EDC's supply portfolio can have a meaningful impact on customer rates, portfolio risk, and procurement outcomes. In large default service programs such as that of FE PA, which is the largest EDC in Pennsylvania, 10 percent represents a substantial amount of electricity and significant dollars at stake for residential ratepayers.

Q. WHY SHOULD THE COMMISSION BE CONCERNED ABOUT A 10 PERCENT COMPONENT OF THE PORTFOLIO?

A. The Commission's role is to determine whether a procurement plan is prudent and in the public interest. Even if a component represents only 10 percent of the portfolio, it can significantly affect customer outcomes and therefore warrants careful review. I also note that, depending on the product involved, a component comprising 10 percent of the portfolio may account for a disproportionate share of overall portfolio risk.

Q. PLEASE ADDRESS MR. ROSE'S CONCERN THAT CONDUCTING FPFR AUCTIONS IN FEBRUARY INSTEAD OF IN JANUARY WOULD INTERFERE WITH WHOLESALE SUPPLIERS' TRANSMISSION CONGESTION HEDGING EFFORTS.

A. Mr. Rose states that "[b]y selecting ARRs that align with their customer load and procurement strategies, suppliers can more effectively hedge transmission congestion charges, leading to more predictable and potentially lower costs."[24] While I agree with Mr. Rose that effective transmission hedging is an important element of wholesale suppliers' risk management, directly participating in PJM's ARR allocation process is neither necessary nor the only way to acquire congestion hedges. In fact, an ARR merely entitles

[24] FE PA Statement No. 2-R, page 5, lines 15-17.

its owner to the revenue associated with the proceeds from the sale of the underlying Financial Transmission Right ("FTR") in PJM's annual and monthly FTR auctions,[25] whereas FTRs provide the congestion hedge.[26] In addition to nominating ARRs in the annual ARR allocation process and "self-scheduling" or "converting" them to FTRs in the annual FTR auction, wholesale suppliers have many other options to acquire congestion hedges, including, but not necessarily limited to, PJM's annual FTR auctions (which are conducted in four rounds throughout the month of April following the completion of the annual ARR allocation process); PJM's long-term FTR auctions; PJM's monthly FTR auctions; bilateral trading of FTRs in the secondary market; and congestion and basis contracts (other than PJM-issued FTRs) in the bilateral market.[27] Therefore, while enabling wholesale suppliers to participate in PJM's annual ARR annual allocation process is desirable, it is of secondary importance compared to other considerations associated with FPFR auction timing since there are other ways pursuant to which wholesale suppliers can obtain FTRs and hedge congestion risk.

Q. PLEASE COMMENT ON MR. ROSE'S CONCERN THAT A SEPTEMBER FPFR AUCTION LEAVES A 9-MONTH GAP BETWEEN THE AUCTION AND THE START OF ASSOCIATED DELIVERY YEAR.

A. Mr. Rose states that "[w]hen the auction is closer to delivery, more real time data is available on the PJM forward market which could lead to less uncertainty and potentially lower risk premiums."[28] However, Mr. Rose also opposes my recommended procurement schedule which would reduce the gap between the auction and the delivery period to three months (from the seven months proposed by the Company) by conducting the auctions for

[25] https://www.pjm.com/-/media/DotCom/training/core-curriculum/lse/09-auction-revenue-rights-and-financial-transmission-rights-for-lses.pdf, page 3. Access requires being signed into PJM account.
[26] *Id.*, page 16. Access requires being signed into PJM account.
[27] *Id.*, page 18. Access requires being signed into PJM account.
[28] FE PA Statement No. 2-R, page 5, lines 10-12.

December 1 delivery start date products in September (rather than procuring nothing but June 1 delivery start date contracts and holding half of the auctions for such products in November, which is seven months before the start of delivery). This represents a clear internal inconsistency in Mr. Rose's reasoning. My proposed procurement schedule, when combined with my recommended product mix, results in a gap between the auction and the start of the associated delivery period that is no longer than four months, versus seven months as proposed by the Company, while spacing out the semi-annual auctions approximately equally.

Q. DO YOU AGREE WITH MR. ROSE'S CONTENTION THAT YOUR RECOMMENDED CHANGES TO THE PRODUCT MIX AND PROCUREMENT SCHEDULE REPRESENT ONLY THEORETICAL BENEFITS AND DO NOT JUSTIFY THEIR ADMINISTRATIVE COMPLEXITY?

A. No. Mr. Rose himself acknowledges the importance of minimizing the time between the conduct of the FPFR auction and the start of the associated delivery period and states that auctions being conducted closer to delivery results in less uncertainty and lower auction premiums.[29] My proposal reduces the time between the FPFR auction and the start of the associated delivery period, which, as acknowledged by Mr. Rose, will result in lower price premiums in FPFR auctions. Therefore, this benefit is not theoretical; it is real and it is acknowledged by Mr. Rose. Mr. Rose claims that my proposed 18-month products, revised auction schedules, and more granular staggering approaches would increase administrative complexity and "may" reduce procurement efficiency. However, he does not specify how my proposal would increase administrative complexity or reduce procurement efficiency. His claim is unsubstantiated and, in my opinion, untrue. In any event, I already

[29] *Id.*

demonstrated that my proposal would create customer benefits in the form of lower auction premiums that would outweigh any administrative complexity associated with it.

Given the real benefit associated with my proposal, it is incumbent on Mr. Rose to explain why the product mix and procurement schedule in my proposal would lead to administrative complexity or reduce the efficiency of the auction in a way that nullifies the real benefit associated with lower risk premiums and therefore lower default service rates. Mr. Rose fails to do that. The Commission should dismiss Mr. Rose's objections and adopt my recommendations.

Q. DO YOU AGREE WITH MR. ROSE THAT THE PROCUREMENT SCHEDULE PROPOSED BY THE COMPANY IS CONSISTENT WITH INDUSTRY PRACTICE?

A. No. As I also stated in my Direct Testimony, current default service plans of other large Pennsylvania EDCs (i.e., PECO, PPL, and DLC) include residential FPFR products that have both June 1 and December 1 delivery start dates, and they all conduct auctions closer to delivery than proposed by FE PA.[30] Adopting my recommendations would bring FE PA's product mix and procurement schedule in line with industry practice among large Pennsylvania EDCs.

Q. DO YOU AGREE WITH MR. ROSE THAT YOUR RECOMMENDATIONS ARE "INTERNALLY INCONSISTENT?"

A. No. Mr. Rose claims that my recommendations "appear" internally inconsistent because I recommend greater reliance on 24-month contracts than on 12-month contracts while recommending replacing the 60-month contracts with 36-month contracts. When taken to its logical conclusion, Mr. Rose's reasoning would require one to support the inclusion of a 10-year or even a 20-year FPFR contract in the residential default service supply portfolio

[30] OCA Statement No. 1, page 20, lines 10-17.

simply for supporting greater reliance on 24-month contracts than on 12-month contracts. This reasoning is clearly flawed. I recommended replacing the 60-month contracts with 36-month contracts because of the riskier, untested, and unproven nature of the proposed 60-month contracts. The goal is to achieve a portfolio that results in the highest level of rate stability while adhering to the "least cost over time" standard and not adding excessive risk premiums to residential default service rates. There is no internal inconsistency or contradiction in my recommendations.

Q. DID YOU CHANGE ANY OF YOUR RECOMMENDATIONS ON THE RESIDENTIAL DEFAULT SERVICE PORTFOLIO AND PROCUREMENT SCHEDULE AFTER REVIEWING THE COMPANY'S REBUTTAL TESTIMONY?

A. No. For the reasons I explained above, I continue to recommend that the residential default service portfolio and procurement schedule be modified as I proposed in my Direct Testimony and in OCA Exhibit SO-2.

III. NITS AND CAPACITY COSTS

Q. PLEASE DESCRIBE THE COMPANY'S PROPOSED TREATMENT OF NITS AND CAPACITY COSTS FOR RESIDENTIAL DEFAULT SERVICE CUSTOMERS.

A. The Company proposed to continue using a CPP mechanism in FE PA's FPFR auctions in the event PJM does not conduct a base residual auction ("BRA"), with some revisions to clarify the true-up methodology for the CPP.[31] FE PA also proposed to remove PJM Network Integration Transmission Service ("NITS") charges from the auction products, making NITS the Company's responsibility for default service customers.[32]

[31] Petition, paragraph 22.
[32] *Id*.

Q. DID YOU SUPPORT THIS ASPECT OF THE COMPANY'S PROPOSAL?

A. Yes, I supported both the CPP proposal and the NITS proposal in my Direct Testimony.[33] FE PA witnesses also filed Rebuttal Testimony to rebut opposition to FE PA's proposals associated with the treatment of NITS and capacity costs.[34]

Q. HOW DID MR. LACEY RESPOND TO YOUR SUPPORT OF THE COMPANY'S PROPOSAL IN HIS REBUTTAL TESTIMONY?

A. Mr. Lacey disagrees with the Company's proposal and my support for it, for three reasons. First, he claims that "contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement," and "would not provide the Commission with information required to determine if the default service portfolio was the 'least cost over time' as the NITS and capacity cost components would be unknown."[35] Second, he contends that FE PA's "proposed contracts for wholesale energy supply are neither fixed-price nor full-requirements contracts."[36] Third, Mr. Lacey posits that the "pass-through of NITS and capacity true-ups would shift substantial market risks onto customers who are not well positioned to evaluate or manage those risks."[37]

Q. PLEASE RESPOND TO MR. LACEY'S ASSERTIONS.

A. Mr. Lacey's assertions in his Rebuttal Testimony are in essence repetitions of his assertions in his Direct Testimony. I responded to each of his arguments in my Rebuttal Testimony.[38] Mr. Lacey's assertion that contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement is

[33] OCA Statement No. 1, page 22, lines 12-13, and page 24, lines 3-5.
[34] FE PA Statement No 2-R, pages 8-10; FE PA Statement No 3-R, pages 3-5; FE PA Statement No 5-R, pages 4-8.
[35] RESA St. No 1R, page 28, lines 4-9.
[36] *Id.*, page 29, lines 10-11.
[37] *Id.*, page 27, line 27 to page 28, line 1.
[38] OCA Statement No. 1-R, pages 4-11.

demonstrably false.[39] His contention that FE PA's proposed contracts for wholesale energy supply are neither fixed-price nor full-requirements contracts is also untrue,[40] and it contradicts his other statements in this proceeding.

Q. PLEASE EXPLAIN THE CONTRADICTIONS AND INTERNAL INCONSISTENCIES IN MR. LACEY'S STATEMENTS.

A. In discovery, Mr. Lacey defined "full-requirements" as follows: "Mr. Lacey's definition of a 'full-requirements' default service contract between a wholesale default service supplier and the EDC as the default service provider is a procurement contract that requires the chosen wholesale default service supplier to provide firm, continuous supply for default service customers and includes energy, capacity, losses, congestion charges, ancillary services, marginal losses, imbalance charges, transmission charges, and any other applicable requirements from the ISO."[41] Mr. Lacey also stated in discovery that he considers FE PA's FPFR contracts in the currently effective DSP VI to be full-requirements.[42] This is a contradiction. As I explained in my Rebuttal Testimony, FE PA's FPFR default service contracts in DSP VI exclude the following PJM billing line items from these contracts: Transmission Enhancement, Transmission Enhancement Settlement (EL05-121-009), Meter Error Correction, Expansion Cost Recovery, and Generation Deactivation.[43] FE PA's FPFR contracts in the currently effective DSP VI clearly do not include certain transmission charges or "any other applicable requirements from the ISO [in this instance, PJM]" so they do not meet Mr. Lacey's definition of a full-requirements default service contract. Yet, Mr. Lacey states that they are full-requirements contracts.

[39] *Id.*, page 6, line 14 to page 9, line 2.
[40] *Id.*, page 4, line 16 to page 6, line 13.
[41] RESA's Response to OCA-XII-2-a.
[42] RESA's Response to OCA-XII-12-a.
[43] OCA Statement No. 1-R, page 5, lines 10-18.

In conclusion, while Mr. Lacey claims that my position effectively redefines "full requirements" service by permitting FE PA to exclude NITS from FPFR contracts,[44] it is in fact Mr. Lacey who redefines full requirements service by arbitrarily choosing to exclude certain PJM line items from his definition of full requirements service. The Commission should dismiss his arbitrary definition of a full requirements wholesale default service contract.

Q. ARE MR. LACEY'S INTERPRETATIONS OF ACT 129 REQUIREMENTS CONSISTENT WITH THE COMMISSION'S REVEALED INTERPRETATIONS OF ACT 129 IN RECENT DSP PROCEEDINGS OF OTHER PENNSYLVANIA EDCS?

A. No. In his Rebuttal Testimony, Mr. Lacey states that "contracts excluding fixed NITS and capacity obligations do not satisfy the Act 129 framework governing full-requirements default service procurement."[45] In discovery, Mr. Lacey acknowledges that the default service contracts procured by PECO and PPL in their current Commission-approved DSPs exclude NITS.[46] Since the Commission approved PECO's and PPL's respective DSPs, the implication of Mr. Lacey's positions is that the Commission approved DSPs in PECO's and PPL's most recent DSP proceedings that violate Act 129. The Commission should reject this inappropriate and illogical proposition put forth by Mr. Lacey and dismiss his objections explicitly in no uncertain terms.

[44] RESA St. No 1R, page 30, lines 2-5.
[45] *Id.*, page 28, lines 4-9.
[46] RESA's Response to OCA-XII-10-a and 10-b.

Q. PLEASE COMMENT ON MR. LACEY'S ASSERTION THAT PASS-THROUGH OF NITS AND CAPACITY TRUE-UPS WOULD SHIFT SUBSTANTIAL MARKET RISKS ONTO CUSTOMERS.

A. As Mr. Lacey points out, I agree that FE PA's proposal transfers NITS cost risk from wholesale default service suppliers to customers in exchange for eliminating supplier risk premiums associated with NITS uncertainty.[47] I continue to recommend this approach because customers are better off paying actual NITS and capacity costs instead of paying large risk premiums associated with the uncertainty surrounding NITS and capacity costs, on top of estimated NITS and capacity costs. I explained in my Direct Testimony and in my Rebuttal Testimony that NITS costs are unpredictable, highly variable, and unhedgeable. While Mr. Lacey disagrees with me that NITS costs are unhedgeable because evidence was not presented to show that NITS costs cannot be hedged,[48] Mr. Lacey does not point to any standard products which would hedge NITS costs, either. For example, the Intercontinental Exchange, which offers hundreds of electricity futures and options products and other energy products,[49] does not offer any PJM capacity or NITS products. In my opinion, NITS was being included in FE PA's and Pennsylvania EDCs' FPFR contracts until recently because NITS revenue requirements and rates were relatively stable from one year to the next until a few years ago. As transmission investments began increasing rapidly, initially to replace aging transmission infrastructure and to integrate renewable energy resources, and more recently to interconnect new data center and other large loads, NITS revenue requirements and rates began to exhibit large and unpredictable increases from year to year. In response, most Pennsylvania EDCs began removing NITS from their FPFR auction products to prevent unnecessary risk premiums from being

[47] RESA St. No. 1R, page 31, lines 1-3.
[48] *Id.*, page 30, lines 9-11.
[49] https://www.ice.com/products/Futures-Options/Energy/Electricity.

included in FPFR product bids and therefore in default service prices. The Commission agreed with that approach in its approval of their DSPs. The Commission should make the same determination and render the same decision in this proceeding and approve the Company's proposal to remove NITS from FPFR contracts. This will ensure that FE PA's default service customers do not pay unnecessary risk premiums that would otherwise be embedded in FPFR suppliers' auction bids. Under FE PA's current approach, customers also pay suppliers a risk premium for assuming NITS cost uncertainty. Removing NITS from the FPFR contracts would eliminate that risk premium, allowing customers to pay actual costs rather than estimated costs plus a risk premium.

Similarly, if the FPFR product bidders are asked to include capacity costs in their bids, without subsequent true-up, even if PJM has not conducted a capacity auction for part or all of the delivery period of the FPFR contract, it would put the price risk of a hard-to-hedge, large, and highly variable component on the FPFR suppliers, which in turn would result in the incorporation of large risk premiums into the bids. Therefore, the CPP mechanism benefits customers by ensuring that FE PA's default service customers do not pay unnecessary risk premiums that would otherwise be embedded in FPFR suppliers' auction bids.

Q. WHAT IS MR. HEIDELL'S POSITION ON THE COMPANY'S PROPOSAL RELATED TO THE TREATMENT OF NITS COSTS?

A. Mr. Heidell did not address the issue in his Direct Testimony. However, in his Rebuttal Testimony, Mr. Heidell responded to my support of the Company's proposal in my Direct Testimony and stated that he disagrees with my (and the Company's) assertion that including NITS costs in FPFR contracts would increase risk premiums.[50]

[50] CGC Statement No. 1-R, page 6, lines 14-17.

Q. HOW DO YOU RESPOND TO MR. HEIDELL REGARDING NITS?

A. I disagree with Mr. Heidell's assertion that evidence was not presented to support my conclusion. I provided the data and evidence supporting my conclusion in my Direct Testimony,[51] and also in my Rebuttal Testimony.[52]

Q. ARE YOU STILL RECOMMENDING THAT THE COMMISSION APPROVE FE PA'S PROPOSAL REGARDING THE TREATMENT OF NITS AND CAPACITY COSTS?

A. Yes. For the reasons I provided above, as well as in my Direct Testimony and Rebuttal Testimony in this proceeding, I recommend that the Commission approve the Company's CPP and NITS cost treatment proposals.

IV. RECONCILIATION

Q. HOW DID FE PA PROPOSE TO RECONCILE RESIDENTIAL DEFAULT SERVICE REVENUES AND COSTS IN ITS PETITION?

A. FE PA proposed to retain the same reconciliation mechanism used in DSP VI for DSP VII, that is, a reconciliation balance is calculated over a six-month period and collected (or refunded), with interest, over the following six-month period. Reconciliation balance is collected (or refunded) through the "E-Factor" rate, which is a component of the Price-to-Compare ("PTC").[53]

Q. DID YOU RECOMMEND A DIFFERENT RECONCILIATION MECHANISM?

A. Yes. I suggested two modifications to the mechanism proposed by FE PA. First, I recommended that the six-month reconciliation approach used by the Company under DSP VI (and proposed by FE PA to be retained under DSP VII) be modified slightly such that

[51] OCA Statement No. 1, page 24, lines 3-13.
[52] OCA Statement No. 1-R, page 9, line 19 to page 12, line 17.
[53] OCA Statement No. 1, page 34, lines 13-19.

the cumulative amount to be collected (or refunded) be amortized over the subsequent 12 months. Second, I recommended that the E-Factor rate be capped at one cent per kWh in either direction. If the entire reconciliation balance cannot be amortized at the E-Factor cap rate, the remaining amount would be included in the subsequent period's reconciliation balance.[54]

Q. HOW DID FE PA WITNESS MS. DE LA ROSA RESPOND TO YOUR RECOMMENDATIONS?

A. Ms. De La Rosa disagrees with both of my recommendations. She states that the Company's proposal mitigates rate volatility for residential customers while maintaining PTC Rider rate as a price signal correlating to the underlying wholesale supply costs for customers and EGSs. She also claims that I did not provide any analysis or other evidence supporting my conclusion that my recommendation would provide more stable rates. She contends that I do not recognize that larger amount of interest would accrue with a 12-month amortization schedule of over- or under-collections.[55] Ms. De La Rosa also opposes my suggestion for a one cent per kWh cap on the E-Factor rate in either direction, with the stated concern that the reconciliation balance could compound and grow under my proposal, especially in times of high capacity prices and associated capacity proxy price true-ups.[56]

Q. PLEASE RESPOND TO MS. DE LA ROSA'S CONCERNS AND RECOMMENDATIONS.

A. I disagree with Ms. De La Rosa's position for five reasons. First, a historical empirical analysis is not needed to conclude that a longer amortization period would yield a lower reconciliation rate than a shorter amortization period would. Amortizing the same sum over

[54] *Id.*, page 36, lines 1-12.
[55] FE PA Statement No. 4-R, page 7, lines 1-13.
[56] *Id.*, page 7, lines 14-22.

a longer time period (thus over a larger number of kWh) would result in a lower reconciliation rate per kWh. This is an arithmetic fact. Second, a longer amortization period (such as the 12-month amortization I am proposing) and thus a lower E-Factor rate would be more reflective of underlying wholesale supply costs as a price signal for customers and EGSs because the larger the E-Factor rate is, the more removed the PTC is from the underlying wholesale market costs. Third, interest accrual would work in both directions and over time interest paid and interest received would offset each other to some extent, as some six-month periods would result in under-collections and other six-month periods would conclude with over-collections for the Company. Even if interest expenses are passed through to residential default service customers due to more frequent under-collections than over-collections, this would still be a benefit particularly for low-income customers with credit card debt because the interest they would be paying to the Company for the Company's 12-month amortization of under-collections would be lower than the interest rates they pay on their credit card debt. Fourth, Ms. De La Rosa's concern regarding perpetual balances as a result of a one cent per kWh cap on the E-Factor rate is unsubstantiated and unfounded because the Company procures residential default service supply through fixed-price full-requirements contracts, with only CPP true-up adjustments. PJM BRAs will be conducted with a price cap through May 31, 2030, and that price cap is nearly identical to the capacity price in the two most recent capacity auctions.[57] Therefore, there is no reason to believe that the Company will chronically incur very large under-collections and carry large reconciliation balances under my proposal. Nevertheless, if the Company is concerned about large under-collection balances due to CPP true-ups, it should agree to a 12-month amortization period to mitigate the expected volatility in the E-Factor rate. Finally, since the Company's DSP VII will end on May 31, 2031, the Company will

[57] https://insidelines.pjm.com/ferc-approves-capacity-auction-price-collar-to-next-two-capacity-auctions/

have ample time to address with the Commission (either as an amendment to DSP VII or as part of its petition for its subsequent DSP) any elongated revenue shortfalls that would result from a one cent per kWh cap on the E-Factor rate.

Q. WHAT IS YOUR RECOMMENDATION AFTER REVIEWING MS. DE LA ROSA'S REBUTTAL TESTIMONY?

A. The recommendations which I have stated in my Direct Testimony are unchanged after reviewing Ms. De La Rosa's Rebuttal Testimony. I continue to recommend that the cumulative amount to be collected (or refunded) be amortized over a 12-month period, and that the E-Factor rate be capped at one cent per kWh in either direction because Ms. De La Rosa does not show any harm that would result from the adoption of my proposal while I demonstrated price stability benefits of my proposal.

V. TIME-OF-USE RATES

Q. WHAT CHANGES DID THE COMPANY PROPOSE TO ITS TOU RATE STRUCTURE IN ITS PETITION?

A. The Company's current on-peak TOU period is between 2 p.m. and 9 p.m. on non-holiday weekdays, and its super off-peak TOU period is between 11 p.m. and 6 a.m. daily. All other hours are classified as off-peak. The Company proposed revising its on-peak TOU period to between 3 p.m. and 7 p.m. on non-holiday weekdays; retain the same super off-peak TOU period definition; and all other hours would be off-peak.[58]

Q. DID YOU ADDRESS THIS ISSUE IN YOUR DIRECT TESTIMONY?

A. Yes. I recommended that the Commission reject the Company's proposed changes to the TOU program and leave the current TOU rate program intact for DSP VII.[59] I based my recommendation on my conclusion that the Company has not demonstrated that its

[58] *Id.*, p. 12, line 3.
[59] OCA Statement No. 1, page 30, lines 1-5.

proposed revisions to the residential TOU rate program would advance its stated goals of increasing participation in TOU rates and having customers shift their usage from heavier system load periods to lighter system load periods.[60] I also pointed out that one of five PJM systemwide peak load hours (also known as Five Coincident Peaks, or 5CP), which are also used by FE PA Rate Districts to allocate PJM capacity charges to individual customers, in the summer of 2025, was outside of FE PA's proposed on-peak TOU rate period. The on-peak period of a TOU rate program should at least include 5CPs from previous years. In comparison, the on-peak period in the existing TOU rate structure includes all 5CPs in the last five years.[61]

Q. HOW DID MR. YOUNG RESPOND TO YOUR (AND OTHER OCA WITNESS MS. BARBARA ALEXANDER'S) DIRECT TESTIMONY?

A. Mr. Young acknowledges that the Company's proposed on-peak TOU period excludes one of PJM 5CP hours in 2025, but he points out that all PJM 5CP hours fell in FE PA's proposed on-peak TOU period in the previous four years.[62] Mr. Young also acknowledges Ms. Alexander's claim that the amount of revenue received from customers participating in the Company's TOU default service rates is likely to be lower than the amount that would be collected under its otherwise applicable standard non time-varying generation rates, and that this potentially creates a revenue shortfall that is recovered from other default service customers that have not elected the Company's TOU rate option.[63] However, Mr. Young disagrees that the Company's proposed TOU rate design benefits participating customers at the expense of other residential default service customers as Ms. Alexander claims because the revenue shortfall will not "materially" impact other default

[60] *Id.*, page 28, lines 14-17.
[61] *Id.*, page 29, lines 10-21.
[62] FE PA Statement No. 1-R, page 5, lines 1-10.
[63] *Id.*, page 5, lines 14-18.

service customers given the low level of enrollment in the Company's current TOU rate option.[64]

Q. HOW DO YOU RESPOND TO MR. YOUNG'S CLAIMS?

A. I disagree with both arguments presented by Mr. Young. First, it remains a fact that is also acknowledged by Mr. Young that the Company's proposed on-peak TOU period fails to include one of PJM 5CP hours in 2025. Given the dynamic nature of grid operations and wholesale markets, the most recent year should carry more weight than older time periods. Therefore, changing FE PA's on-peak TOU period from a time interval that would include all PJM 5CP hours in the last five years to a time interval that would exclude one of PJM 5CP hours in the most recent year (2025) is not appropriate. Defining the on-peak TOU period accurately to capture all highest-load periods in PJM is particularly important right now given the precarious condition of PJM's resource adequacy and capacity market. Customers that opt into TOU rates should have the incentive to reduce usage during PJM's highest load hours.

Second, Mr. Young's reasoning for dismissing Ms. Alexander's concern regarding the Company's proposed TOU rate design benefiting participating customers at the expense of other residential default service customers is flawed and contradictory. On the one hand, Mr. Young claims that the changes proposed by the Company to its TOU program design would increase enrollment in the program and load-shifting by enrollees. On the other hand, Mr. Young states that the revenue shortfall will not materially impact other default service customers because of the low level of enrollment in the Company's current TOU rate option. Mr. Young cannot have it both ways. If we are to believe Mr. Young's assertion that the changes proposed by the Company to its TOU program design would increase enrollment in the program and load-shifting by enrollees, it necessarily

[64] *Id.*, page 5, lines 18-20.

follows that the revenue shortfall stemming from the TOU program design will materially impact other default service customers.

Q. PLEASE ADDRESS MR. YOUNG'S CONTENTION THAT "THE COMMISSION APPROVED THE VOLUNTARY TOU DEFAULT SERVICE RATE OPTIONS OF THE PREDECESSOR COMPANIES AND SEVERAL OTHER EDCS WITHOUT REQUIRING THE PRE-IMPLEMENTATION EVALUATION" PROPOSED BY MS. ALEXANDER AND ME.[65]

A. While the Commission may have approved the initial rollout of TOU rates without requiring a pre-implementation evaluation, I do not believe such initial approval represents a black check for the Company to experiment with the design of the TOU program and rates without considering at least customer impacts that would result from such experimentation. Even if the Commission would not require a quantitative analysis, the Commission should require the Company to coherently and factually support the changes it is proposing to a Commission-approved program. FE PA did not meet that standard in its Petition as demonstrated by Ms. Alexander and me in this proceeding.

Q. WHAT IS YOUR RECOMMENDATION ON FE PA'S TOU PROGRAM DESIGN AFTER REVIEWING MR. YOUNG'S REBUTTAL TESTIMONY?

A. My recommendation stated in my Direct Testimony is unchanged after reviewing Mr. Young's Rebuttal Testimony. Until the Company comes up with a coherent TOU program design supported by research and analysis, the Commission should order the Company to continue with its TOU program design from DSP VI and reject the changes proposed by the Company for DSP VII.

[65] *Id.*, page 4, lines 14-17.

VI. MAXIMUM REGISTERED PEAK LOAD

Q. WHAT IS MAXIMUM REGISTERED PEAK LOAD AND WHAT DID THE COMPANY PROPOSE ON THIS ISSUE?

A. Maximum registered peak load, or MRPL, is the criterion by which FE PA proposes to classify a non-residential account as commercial or industrial. FE PA proposes to define MRPL as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this shall also be inclusive of the nameplate capacity of the generation system." [66] FE PA is proposing that non-residential default service customers with a demand of 100 kW or above or MRPL of 100 kW or above will be classified as "industrial" for default service procurement and provision purposes, and served under the Hourly Pricing Default Service Rider ("HP Rider"). Default service customers with a demand below 100 kW and MRPL below 100 kW would be served under the PTC Default Service Rate Rider ("PTC Rider").[67]

Q. DID YOU ADDRESS THIS PROPOSAL IN YOUR DIRECT TESTIMONY AND REBUTTAL TESTIMONY?

A. Yes. I supported the Company's proposal in my Direct Testimony because including large customer-generators in the commercial customer procurement group would bundle truly small commercial customers, (i.e., which have net power flow from or into the Company's distribution system less than 100 kW) with more sophisticated, large customer-generators in the same FPFR contract procurements, which in turn would negatively affect small commercial default service customers.[68] I maintained my support for the Company's

[66] FE PA Exhibit DMY-6, p. 1.
[67] FE PA Statement No. 4, p. 16, lines 6-11.
[68] OCA Statement No. 1, page 38, line 12 to page 40, line 17.

MRPL proposal in my Rebuttal Testimony by rebutting the claims of Mr. Heidell and Mr. Michelman in their respective Direct Testimonies regarding harm to customer-generators from the Company's MRPL proposal and the lack of harm to small commercial customers from the status quo.[69] I also pointed out that the Company's MRPL proposal is consistent with Commission precedent.[70]

Q. HOW DO MR. HEIDELL AND MR. MICHELMAN RESPOND TO YOUR SUPPORT FOR THE COMPANY'S MRPL PROPOSAL IN THEIR RESPECTIVE REBUTTAL TESTIMONIES?

A. Mr. Heidell disagrees with my contention that large net-metering customer-generators present switching risk that would increase risk premiums in commercial FPFR contract bids because customer-generators typically have little or no load, and that I have not presented any evidence regarding the shopping trends of large net-metering customer-generators.[71] Mr. Heidell also states his disagreement with what he calls my characterization that customer-generators receive an inflated PTC rate for their exported electricity because he is unaware of any evidence in this proceeding that quantifiably supports that wholesale default service suppliers are building additional risk premiums into their bids because of net-metered generation.[72]

Mr. Michelman criticizes me for not discussing or considering cost reduction benefits of net-metered excess generation that currently accrue or should accrue to commercial default service customers.[73] He suggests that my reliance on the Commission's order in UGI Utilities, Inc. – Electric Division's ("UGI's") DSP proceeding may be misplaced because the Commission will make its decision in this proceeding based on the

[69] OCA Statement No. 1-R, pages 18-24.
[70] *Id.*, page 20, lines 8-19.
[71] CGC Statement No. 1-R, page 4, lines 8-15.
[72] *Id.*, page 5, lines 14-18.
[73] Rebuttal Testimony of Thomas S. Michelman on behalf of Joint Solar Advocates, page 4.

evidence presented in this proceeding rather than its reasoning in the UGI DSP case.[74] Mr. Michelman claims that I did not provide any testimony on the actual impact of a high percentage of medium and large non-residential customers having switched to EGSs on the Commercial PTC Rider rate.[75] He contends that I did not provide any data to support my statement that volumetric risk will result in higher PTC rates and/or more volatile rates for small commercial customers.[76]

Q. PLEASE COMMENT ON THE CRITICISMS OF MR. HEIDELL AND MR. MICHELMAN REGARDING YOUR SUPPORT OF THE COMPANY'S MRPL PROPOSAL IN YOUR DIRECT TESTIMONY.

A. A common theme in the respective Rebuttal Testimonies of Mr. Heidell and Mr. Michelman is that I have not properly supported my assertion that large customer-generators would increase risk premiums in commercial FPFR contracts and therefore commercial default service rates by introducing various measures of volumetric risk because I have not quantified such risk premiums for past or future commercial FPFR auctions. I acknowledge that this effect is hard to quantify with any precision, as suppliers' risk premiums can only be determined by the suppliers themselves and they are not directly observable to anyone else. However, there is no doubt that a developer that invests in a three-megawatt solar (or other technology) generation facility is a sophisticated "customer" that can and will switch between default service and EGS service to maximize revenue from net-metered generation cashouts, and the wholesale suppliers of FPFR contracts will recognize them as such. A quantitative analysis estimating risk premiums in past auctions or forecasting risk premiums in future auctions based on various levels of net-metered customer-generation, and the uncertainty surrounding thereof, is not necessary to conclude

[74] *Id.*, page 10.
[75] *Id.*
[76] *Id.*, page 11.

that the inclusion of a non-trivial amount of such customer-generation in the commercial default service load would prompt FPFR bidders to recognize the volumetric risk and price their bids accordingly.

Q. IF CUSTOMER-GENERATORS TYPICALLY HAVE LITTLE OR NO LOAD, DO THEY STILL PRESENT VOLUMETRIC RISK FOR FPFR BIDDERS?

A. Yes. The load may be considered little compared to the size of the generator behind the customer's load, but the customer's peak load can still be up to 100 kWh, similar to other small commercial customers. The customer can have a capacity peak-load contribution ("PLC") of as high as 100 kW (if the generator does not come online on the date expected by wholesale suppliers, if the generator is experiencing an outage during 5CP hours that year, or if the generator produces less than anticipated during 5CP hours), and as low as zero (if the generator fully offsets the customer's load during 5CP hours). Given the current high level of capacity prices in PJM, this represents a significant risk for an FPFR bidder that needs to provide a fixed price that includes energy and capacity (in addition to other line items) for that customer's net load. I note that capacity cost uncertainty, and the associated risk premium, would be even higher for FPFR suppliers under Mr. Michelman's proposal to assign negative PLCs to customer-generators because now the customer's PLC can be as high as 100 kW and as low as *negative* 3,000 kW. The same risk exists for energy pricing because the customer will register a net load for the FPFR supplier to serve if the generator is not online (due to outage or a delay in online date) but register no load if the generator is online and fully offsets the customer's load.

Q. PLEASE DESCRIBE MR. MICHELMAN'S PROPOSAL REGARDING "NEGATIVE LOADS" THAT WOULD BE APPLICABLE TO CUSTOMER-GENERATORS.

A. Mr. Michelman recommends that FE PA modify how it calculates customer peak loads used to determine generation capacity and transmission cost allocation by allowing customers to register "negative loads" as a result of the excess generation they produce; and applying the cost savings of those negative loads to reduce the allocation of the relevant costs to the default service class in which the customer-generator is assigned.[77]

Q. HOW DOES FE PA WITNESS MR. GREGORY F. HUSSING RESPOND TO MR. MICHELMAN'S "NEGATIVE CAPACITY AND TRANSMISSION PEAK LOAD" PROPOSAL?

A. Mr. Hussing disagrees with Mr. Michelman's proposal to assign negative PLCs to customer-generators for three reasons. First, he points out that PLC is a cost allocation mechanism which is used to assign each customer a share of system capacity cost, and that if a customer-generator's PLC is reduced through a negative PLC, then another customer, presumably a non-customer-generator in the same customer class, will pay more.[78] Second, Mr. Hussing states that Mr. Michelman's suggestion that the Commission should rely on assumed solar generation by a customer-generator to calculate a dollars per megawatt year benefit ignores the fact that there is no certainty that the customer-generator will be providing excess generation at the future peak which the 5CP mechanism is designed to address. He also points out that Mr. Michelman does not propose that customer-generators should pay any penalty if they do not perform, as other entities with a capacity obligation do. [79] Third, Mr. Hussing posits that while FE PA customers in one particular rate district

[77] Joint Solar Advocates Statement No. 1, page 5, lines 7-11.
[78] FE PA Statement No. 6-R, page 5, lines 7-11.
[79] *Id.*, page 5, lines 14-20.

might have a lower overall capacity cost if customer-generators receive a negative PLC in comparison to the customers of other utilities in the PJM zone, the costs are still shifted to other customers within the rate district.

Mr. Hussing also opposes Mr. Michelman's proposal assign negative capacity network service peak load contributions ("NSPLs"), which are used to calculate and allocate transmission costs and are based on a customer's contribution to peak transmission demand, to customer-generators, for the same reasons he opposed Mr. Michelman's proposal to assign negative PLCs to customer-generators.[80] Mr. Hussing points out that reduction in PJM transmission costs as a result of lower aggregate demand (due to "negative loads" of customer-generators) is uncertain.[81]

Q. AFTER REVIEWING THE ARGUMENTS PRESENTED BY MR. MICHELMAN AND MR. HUSSING, PLEASE STATE YOUR POSITION ON ASSIGNING NEGATIVE PLCS TO CUSTOMER-GENERATORS.

A. I oppose Mr. Michelman's proposal and I agree with Mr. Hussing's conclusion, for four reasons. First, capacity requirements and costs assigned by PJM to an EDC zone is determined three years before the start of a delivery year (in "steady state" when BRAs are conducted according to schedule). Since "negative loads" of customer-generators are not included in such capacity requirement and cost assignment by PJM, customer-generators' "negative loads" would not reduce the EDC zone's total capacity requirement or total capacity costs. Therefore, paying customer-generators for a value (in this instance, negative PLC) which they have not created amounts to an unfair subsidy to customer-generators from all other customers in the zone.

[80] *Id.*, page 8, lines 11-15.
[81] *Id.*, page 8, line 16 to page 9, line 5.

Second, PJM's load forecast, which is also used as an input for capacity procurement in BRAs, incorporates historical load and weather trends as well as anticipated load growth. It is unclear how long it would take for customer-generator "negative loads" to be reflected in PJM's load forecasts to begin lowering the EDC zone's capacity requirement; how much it would reduce the capacity requirement, if any; or how well intermittent output of solar generators would coincide with PJM's modeled peaks for future years. Paying customer-generators for a speculative and uncertain benefit by raising capacity costs for all other customers would be unfair.

Third, paying customer-generators more for capacity through the assignment of negative PLCs would send the wrong signal to generation developers. When a generator interconnects directly to PJM, it becomes a capacity resource and puts downward pressure on PJM capacity prices by increasing supply. When a generator interconnects to the EDC distribution network behind a retail meter, PJM does not recognize that generator as supply for its capacity market. Therefore, incentivizing and subsidizing generation developers to interconnect to the EDC distribution network, all else being equal, perpetuates high capacity prices in PJM. Being a capacity resource in PJM and getting compensated for it would entail making a commitment to PJM, subject to nonperformance penalties, to be available during system emergencies including during non-solar hours. Interconnecting to the EDC distribution grid does not entail any performance commitment, so customer-generators cannot be deemed to be entitled to capacity revenues based merely on performance during PJM 5CP hours.

Finally, implementing Mr. Michelman's proposal to assign negative PLCs to customer-generators in this proceeding without at least giving a few years of prior notice to the marketplace would be disruptive for existing long-term fixed-price retail contracts with EGSs and FPFR contracts with wholesale suppliers. Those contracts were priced

based on FE PA's existing capacity cost allocation mechanism. Assigning negative PLCs to customer-generators would raise capacity requirements and costs for all other customers and may prompt the need to renegotiate the fixed prices on which customers and EGSs agreed. Given the impact on all other customers as well as EGSs and wholesale suppliers, it would be more appropriate for the Commission to address Mr. Michelman's proposal to assign negative PLCs to customer-generators in a separate proceeding in which all affected parties can participate and a more robust record can be developed that also includes extensive discovery.

Q. AFTER REVIEWING THE ARGUMENTS PRESENTED BY MR. MICHELMAN AND MR. HUSSING, PLEASE STATE YOUR POSITION ON ASSIGNING NEGATIVE NSPLS TO CUSTOMER-GENERATORS.

A. I oppose Mr. Michelman's proposal and I agree with Mr. Hussing's conclusion, for three reasons. First, the NITS rate base and the associated annual revenue requirement are fixed for existing transmission facilities in a transmission zone. Customer-generators cannot lower that rate base or revenue requirement by registering "negative loads." Therefore, assigning negative NSPLs to customer-generators unfairly shifts costs from customer-generators to all other customers.

Second, Mr. Michelman's proposal seems to be predicated on the assumption that "negative loads" from customer-generators would avoid or defer future transmission investments. Some transmission investment is made to replace aging existing infrastructure, which cannot be avoided or deferred by customer-generators registering "negative loads." It is also speculative to assume that customer-generators' "negative loads" during zonal transmission peak times would reduce future transmission investments because transmission expansion may be needed in locations without customer-generators or it may be necessary during times and system conditions when customer-generators are

not registering "negative loads" (e.g., summer evening hours; winter early morning, evening, or overnight hours).

Finally, implementing Mr. Michelman's proposal to assign negative NSPLs to customer-generators in this proceeding without at least giving a few years of prior notice to the marketplace would be disruptive for existing long-term fixed-price retail contracts with EGSs and FPFR contracts (which will continue to include NITS until the start of DSP VII) with wholesale suppliers. Those contracts were priced based on the existing capacity cost allocation mechanism. Assigning negative NSPLs to customer-generators would raise NITS rates and costs for all other customers and may prompt the need to renegotiate the fixed prices on which customers and EGSs agreed. Given the impact on all other customers as well as EGSs and wholesale suppliers, it would be more appropriate for the Commission to address Mr. Michelman's proposal to assign negative NSPLs to customer-generators in a separate proceeding in which all affected parties can participate and a more robust record can be developed that also includes extensive discovery.

Q. IF THE COMMISSION WERE INCLINED TO ADOPT MR. MICHELMAN'S PROPOSAL TO ASSIGN NEGATIVE PLCS AND NSPLS TO CUSTOMER-GENERATORS, WOULD YOU OFFER ADDITIONAL RECOMMENDATIONS FOR THE COMMISSION TO ADOPT?

A. Yes. While my primary recommendation is that the Commission deny Mr. Michelman's proposal to assign negative capacity peak load contributions (PLCs) and transmission peak load contributions (NSPLs) to customer-generators for the reasons I stated above, if the Commission were inclined to adopt that proposal, I recommend that a customer-generator gets compensated for the capacity component of the retail rate based on its negative PLC, and gets compensated for the transmission component of the retail rate based on its negative NSPL. This differs from Mr. Michelman's proposal to assign negative PLC and

NSPL to customer-generators but compensate them for capacity and transmission based on the average cost of capacity and transmission, respectively, for the customer class to which the customer-generator belongs.

Mr. Michelman seems to predicate his proposal to assign negative PLCs and NSPLs to customer-generators on his assumption that the negative PLC and NSPL of a customer-generator represent the capacity-related and transmission-related value that the customer-generator provides. In that circumstance, it would be appropriate to compensate the customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, to align its compensation with the value it creates. Otherwise, a customer-generator would still receive compensation for capacity and transmission even if the generator did not produce any electricity or produced a minimal amount during capacity and transmission peak load conditions. Compensating a customer-generator for capacity and transmission based on its negative PLC and negative NSPL, respectively, would also provide the proper incentive for the customer-generator to make the generator available and maximize its output during peak PJM-wide and zonal load conditions.

Q. PLEASE COMMENT ON MR. HEIDELL'S RECOMMENDATION TO RELEASE INFORMATION TO FPFR AUCTION BIDDERS REGARDING EXISTING AND PENDING CUSTOMER GENERATOR PROJECTS TO MITIGATE UNCERTAINTY.[82]

A. I support Mr. Heidell's suggestion that the Company should provide information to FPFR auction bidders regarding the cumulative number and nameplate capacity of customer-generation projects as well as the information on projects in its interconnection queue. However, while this would mitigate uncertainty to some extent, it will not eliminate such uncertainty. The bidders would still need to contend with uncertainty surrounding what

[82] CGC Statement No. 1-R, page 5, lines 9-12.

portion of the pending projects would come online and what portion of these customers would be in default service over the 12-month or 24-month terms of the FPFR contracts, as well as generation profile and outage risk. In other words, such information release would not address the uncertainty associated with customer switching, generation outages, or project online dates.

Q. DO YOU AGREE WITH MR. MICHELMAN THAT YOU SHOULD ADDRESS THE PRICE REDUCTION BENEFITS OF CUSTOMER-GENERATORS IN YOUR REVIEW OF THE COMPANY'S MRPL PROPOSAL?

A. No. The price suppression or cost reduction benefits (or lack thereof) of customer-generators are not relevant to the MRPL issue in this proceeding. The only relevant issue in this proceeding is whether customer-generators will be included in the commercial default service procurement group and receive the PTC Rider rate for their exported generation, or they will be included in the industrial default service procurement group and receive the HP Rider rate for their exported generation As I explained in my Rebuttal Testimony, both the PTC Rider and the HP Rider include the same cost components; that is, PJM billing line items (other than the ones included in FE PA's Default Service Support Rider), Alternative Energy Portfolio Standards Act compliance, FE PA's administrative costs, and Pennsylvania gross receipts tax.[83]

Q. DO YOU AGREE WITH MR. MICHELMAN THAT THE COMMISSION'S DECISION IN THE UGI DSP PROCEEDING IS IRRELEVANT TO THIS PROCEEDING?

A. No, I do not. The Commission provided economic and regulatory reasoning for its decision in the UGI DSP proceeding that in my opinion applies to the MRPL issue in this proceeding because the Supply Peak Load Impact proposed in the UGI DSP proceeding is identical to

[83] OCA Statement No. 1-R, page 20, lines 20-24.

the MRPL proposed by FE PA in this proceeding. However, since neither Mr. Michelman nor I are attorneys, it would be best to leave this issue for attorneys to address in the briefing stage of the proceeding.

Q. ARE YOU AWARE OF OTHER COMMISSION ORDERS IN WHICH THE COMMISSION ADDRESSED DEMAND DETERMINATION AND DEFAULT SERVICE CLASS CLASSIFICATION OF CUSTOMER-GENERATORS?

A. Yes. In Docket No. R-2025-3054394, the Commission addressed a proposal by Citizens' Electric Company of Lewisburg, Pennsylvania to revise its definition of "Billing Demand" which also determines a customer's rate classification and default service class. In relevant part, the Commission made the following determination:

> *In sum, based upon the discussion and reasons set forth above, we shall deny all four of the Solar Projects Exceptions because the Solar Projects have failed to demonstrate that Citizens' Billing Demand proposal violates the AEPS Act. To the contrary, we find that Citizens' proposal does not violate the AEPS Act, Pennsylvania law, or Commission Regulations, and it is consistent with our recent decision in UGI DSP V. Therefore, we shall adopt Citizens' Billing Demand proposal, consistent with our discussion herein.*[84]
>
> *Accordingly, Citizens' shall define "Billing Demand" in tariff Rule 26 as:*
> *Billing Demand shall reflect the Customer's use of the distribution system, which will be the greater of Gross Generator Rating (kW(AC)) as stated in the generator interconnection application or the maximum demand of the customer during any 15-minute period during the current month.*[85]

VII. RETAIL MARKET REFORMS

Q. PLEASE COMMENT ON MR. LACEY'S CLAIM THAT FE PA'S RETAIL MARKET REFORM PROPOSALS WOULD RESULT IN HIGHER DEFAULT SERVICE PRICES.

A. Mr. Lacey contends that FE PA's retail market reform proposals would result in higher default service prices based on supply and demand principles.[86] In discovery, Mr. Lacey

[84] *Pa. PUC v. Citizens' Elec. Co. of Lewisburg,* R-2025-3054394 (Jan. 15, 2026), Order at 72-73.
[85] *Id.* at 73.
[86] RESA St. No. 1R, page 11, lines 18-21.

further explains that "[i]f the default service auction is clearing at a price today that procures "just enough" power to match the load, then all else being equal, an auction that must procure 20% more power, will clear at a higher price" based on his assumption that FE PA's residential shopping rate will decline from nearly 20 percent today to nearly zero if FE PA's retail market reforms are implemented.[87] Mr. Lacey's reasoning is flawed and his assertion is incorrect. FPFR suppliers currently price their bids based on their cost of hedging their commitments under FPFR contracts, including energy requirements. Forward market prices for energy reflect demand by FPFR suppliers that currently serve 80 percent of residential load and demand by EGSs that currently serve 20 percent of residential load (per Mr. Lacey's assertion in RESA's Response to OCA-XIII-14). If all residential load migrates to default service and FPFR suppliers serve all residential load (as per Mr. Lacey's contention in RESA's Response to OCA-XIII-14), forward market prices for energy will reflect the same level of demand, equivalent to the residential class's energy requirements, but this time exclusively reflecting demand by FPFR suppliers that would be serving 100 percent of residential load and no demand by EGSs that would be serving no residential load. Since demand-supply balance would be the same, all else being equal, FPFR suppliers' cost of hedging and therefore bids would be the same, so default service prices would not increase in the scenario contemplated by Mr. Lacey. In fact, a bigger market for default service supply may bring more competitors and result in fiercer competition among FPFR suppliers and lower FPFR auction prices.

[87] RESA's Response to OCA-XIII-14.

Q. PLEASE COMMENT ON MR. LACEY'S CLAIM THAT FE PA'S RETAIL MARKET REFORM PROPOSALS WOULD RESULT IN ENHANCED RISK PREMIUMS TO ACCOMMODATE GREATER MIGRATION RISK.

A. Mr. Lacey's contention is counterintuitive and incorrect. In RESA's Response to OCA-XIII-14, Mr. Lacey is positing that FE PA's Pennsylvania service territories will likely experience substantial reductions in residential shopping participation. He gives the example of residential shopping rate in Potomac Edison, FE PA's Maryland service territory, having declined to a mere 0.1 percent as of March 31, 2026. While I do not believe that Mr. Lacey demonstrated that FE PA's retail market reforms would lead to a residential shopping rate of 0.1 percent in the FE PA service territory, if Mr. Lacey's prediction proves accurate, switching risk-driven risk premiums in FE PA's residential FPFR auctions would eventually decline, not increase. This is because a 0.1 percent shopping rate would imply virtually no switching risk for FPFR suppliers, resulting in elimination of switching risk-driven risk premiums from FPFR supplier bids.

Q. PLEASE ADDRESS MR. LACEY'S CLAIM THAT "ONE OF THE MAJOR RISKS TO DEFAULT SERVICE PROVIDERS IS CUSTOMERS RETURNING IN RISING PRICE MARKETS" AND "THEY WILL NEED TO ADD PREMIUMS TO PROTECT AGAINST THAT RISK."[88]

A. This is called switching risk, and it is the essence of the FPFR approach. FPFR suppliers provide a load-following product and assume all volumetric risk, which includes, but is not limited to, customer switching risk associated with customers leaving or returning to default service. In a rising wholesale market price environment, some customers with expiring fixed-price EGS contracts may return to default service because default service prices react more gradually to the underlying wholesale market pricing trends. Conversely,

[88] RESA St. No. 1R, page 11, lines 14-18.

in a declining wholesale market price environment, some customers may want to switch to fixed-price EGS contracts because, once again, default service prices react more gradually to the underlying wholesale market pricing trends than EGS pricing does. FPFR suppliers price their bids to account for this feature of the commitment which they assume. However, this is irrelevant to the retail market reforms proposed by the Company, and Mr. Lacey does not establish any link between the two. For example, the Company is not proposing to return EGS customers to default service only when prices are rising or only when prices are falling. The Company is proposing to return a customer to default service absent an affirmative consent from the customer to renew service with EGS,[89] regardless of wholesale or retail market conditions. Mr. Lacey's assertion that this aspect of the Company's proposed retail market reforms is purely speculative and unsubstantiated.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

[89] *Id.*, page 12, lines 13-16.

June 1, 2027 to May 31, 2031

Direct Testimony of
Nicholas E. Powers

List of Topics Addressed
Analysis of Default Service Program Plans

DIRECT TESTIMONY
OF
NICHOLAS E. POWERS

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Nicholas E. Powers. I am a Principal of The Brattle Group ("Brattle"). My business address is 1800 M St. NW, Suite 700 North, Washington, D.C.

Q. What is your educational background?

A. I hold a Ph.D. in Business Economics from the University of Michigan and a Bachelor of Science in Applied Economics and Management from Cornell University. My areas of specialization within economics are industrial organization and environmental economics. I have also completed field courses in economic theory.

Q. Please describe your duties as Principal.

A. I provide economic analysis to a variety of clients in a variety of contexts, in regulatory, litigation, and advisory roles. For more than 15 years, I have worked on matters related to competition and regulation, both in the electricity industry and more generally. Appendix A provides further detail regarding my professional experience and educational background.

Q. Have you ever testified before the Pennsylvania Public Utility Commission ("Commission" or "PaPUC")?

A. Yes. I have previously submitted written testimony to the Pennsylvania Public Utility Commission on behalf of FirstEnergy Corp.'s Pennsylvania electric distribution utilities—now consolidated as FirstEnergy Pennsylvania Electric Company ("FE PA" or "the Company")—in the most recent (pre-consolidation) sixth default service proceedings

("DSP VI") at Docket Nos. P-2021-3030012, P-2021-3030013, P-2021-3030014, and P-2021-3030021. That testimony evaluated whether the proposed procurement plans provided a prudent mix of supply products and achieved the statutory standard of least cost to customers over time. Following consolidation, FE PA consists of the following rate districts: Met-Ed, Penelec, Penn Power, West Penn and The Pennsylvania State University ("PSU"), which is a sub-part of the West Penn rate district (individually a "Rate District" and in any combination the "Rate Districts").

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FE PA.

Q. What is the purpose of your direct testimony?

A. My testimony evaluates the Company's proposed procurement of full-requirements service for residential and commercial default service customers and hourly-priced service for industrial customers during June 2027 through May 2031. I explain how the products and the auction format together produce a prudent mix of spot, short-term, and long-term purchases that meets applicable requirements of Pennsylvania's Act 129 of 2008 ("Act 129") and delivers least cost over time.

Q. Please summarize your testimony.

A. My testimony evaluates FE PA's-proposed Default Service Program ("DSP") for the period June 1, 2027 through May 31, 2031 ("DSP VII"). I describe the structure of the proposed procurement, including the use of competitive descending-clock auctions to acquire full-requirements, load-following service for residential and commercial customers and hourly-priced service for industrial customers. I explain how the mix of 12-, 24-, and

60-month products, combined with a limited exposure to spot market pricing, provides a prudent balance between price stability and responsiveness to market conditions.

I also discuss the allocation of supplier responsibilities under the proposed plan, including the treatment of capacity costs through the continued use of a Capacity Proxy Price ("CPP") and the recovery of transmission-related and other non-market-based charges through established tariff mechanisms. In addition, I describe the proposed long-term 60-month product and the contingency provisions designed to ensure reliable service in the event that any procurement does not fully clear.

Finally, I present an analysis of historical default service auction outcomes, comparing auction prices to expected wholesale market costs to assess whether the procurements have produced reasonable, market-consistent results. Based on this analysis and Commission precedent, I conclude that the proposed procurement framework is consistent with Act 129's requirements for a prudent mix of supply and is designed to achieve the least cost to customers over time.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. I have prepared FE PA Exhibit NEP-1, which is attached hereto and will be discussed later herein.

II. THE DESIGN OF THE SUPPLY PLAN FOR THE COMPANY'S DEFAULT SERVICE CUSTOMERS CONFORMS WITH THE REQUIREMENTS OF ACT 129, SUCH THAT IT WILL RESULT IN THE LEAST COST OVER TIME FOR THOSE CUSTOMERS

Q. Can you provide an overview of the Company's proposed DSP VII?

A. Yes. Under DSP VII, FE PA proposes to procure full-requirements, load-following generation service for non-shopping residential and commercial customers through a series of descending-clock auctions. The resulting contracts will satisfy default service supply

requirements for the period June 1, 2027, through May 31, 2031. The residential default service portfolio will consist of 12-, 24-, and 60-month fixed-price full-requirements tranches, which together will serve 100 percent of residential load.[1] Commercial load will continue to be served through a mix of 12- and 24-month full-requirements procurements. Industrial customers will remain on hourly-priced service, under which suppliers provide a full-requirements product priced at the PJM real-time energy price plus the price bid by winning suppliers.

Each auction will solicit tranches—defined slices of customer-class load—under standard contract terms. There will be separate default service products for each Rate District and for commercial and residential customer classes, and while the mix of tranches offered in each auction will vary, both residential and commercial products will be procured simultaneously in each auction. Auctions will occur three times in 2027 (to establish the full portfolio before delivery begins) and semi-annually thereafter. The staggered timing of the procurements of tranches, combined with varying contract durations, is designed to promote both price stability and ongoing supplier participation.

The customers receiving default service will be billed at a fixed price per kilowatt hour that will change every six months, with the timing synchronized to PJM Interconnection, LLC's ("PJM") energy year, which begins on June 1 and lasts through May 31.[2]

[1] Specifically, at any point in time during the default service period, roughly 45% of the load obligation will effectively be priced based on one-year purchases, while another 45% of load will be priced based on two-year purchases. The remaining share of load (approximately 10%) will be met through 60-month full-requirements purchases. I describe this aspect of the default service program in further detail later in this testimony.

[2] Specifically, a new price-to-compare ("PTC") will take effect on June 1 and December 1 of every year and remain in effect for the ensuing six-month period.

Q. How will suppliers' responsibilities be defined under DSP VII?

A. Winning suppliers will be responsible for all components, other than transmission costs, of serving their assigned share of default service load, including energy, capacity, ancillary services, PJM administrative fees, and compliance with Alternative Energy Portfolio Standards ("AEPS"). Suppliers will not be responsible for Network Integration Transmission Service ("NITS") charges; rather, the Company will retain NITS responsibility and will recover it through a bypassable rider on default service customer bills. Suppliers will not be responsible for Regional Transmission Expansion Plan ("RTEP") charges; Expansion Cost-Recovery Charges; Reliability Must Run/generation deactivation charges; Department of Energy emergency order-related generation charges; historical out-of-market adjustments related to tie lines, generation, and retail customer-metering costs; unaccounted-for energy costs; or any FERC-approved reallocation of PJM RTEP charges related to Docket No. EL05-121-009 (collectively referred to as "non-market-based charges," or "NMB charges"). The costs associated with NMB charges will be charged to customers directly through a non-bypassable tariff rider (i.e., the Default Service Support Rider (hereinafter "DSSR")).

For capacity, DSP VII continues the use of a CPP. Because future PJM capacity prices are uncertain, the CPP serves as a forward estimate of expected base residual auction ("BRA") outcomes for later delivery years in the terms of the 24- and 60-month default service contracts. Prior to relevant default service supply auctions, suppliers will be informed of the relevant CPP so that they can account for it in their bids. Eventual differences between the proxy and actual realized costs during the term of the service contract will be reconciled through a true-up mechanism applied as part of the DSSR. This approach limits suppliers' exposure to unpredictable capacity costs, thereby reducing risk

premiums embedded in bids. The Company proposes to simplify the calculation of the proxy price as well as the true-up mechanism in a manner that maintains these principles of the current CPP approach. The proposed modifications to the CPP are described in Mr. Rose's testimony (FE PA Statement No. 2).

Q. Are long-term products included in DSP VII?

A. Yes. DSP VII introduces a 60-month full-requirements fixed-price product that will represent approximately 10 percent of the Company's residential default service load at any time. This product will be procured in the January 2027 auction through the same auction platform used for shorter-term tranches. The inclusion of longer-term tranches enhances portfolio diversity and provides a partial long-term energy hedge for customers, while maintaining manageable exposure to market changes.

Q. What contingency provisions apply if the 60-month product tranches do not clear?

A. If the 60-month tranches offered in the January 2027 auction do not attract sufficient bids to clear, the Company will fill the uncovered portion of the portfolio by procuring additional 12-month full-requirements tranches during the subsequent April 2027 auction. This ensures that the entire default service load will be supplied beginning June 1, 2027 and maintains continuity with prior Commission-approved contingency protocols.

Q. Does the term length of the products proposed in the DSP VII plan demonstrate compliance with the prudent mix requirement of Act 129?

A. Yes. Under Act 129 of 2008, an electric distribution company's ("EDC's") default service plan must include a "prudent mix" of spot-market purchases and short- and long-term

contracts.[3] Consistent with this requirement, the Company's proposed procurement design achieves a balanced portfolio that limits risk while providing reasonable cost stability. The combination of 12-, 24-, and 60-month full-requirements contracts offers both short-term responsiveness to changing market conditions and longer-term price stability. The inclusion of 12-month and 24-month contracts procured at multiple points in time during the four-year plan, along with the 60-month tranche, ensures that customers are exposed to meaningful price signals while also benefiting from the stabilizing effects of a diversified portfolio of contracts with differing durations.

While I am not an attorney, I have been advised by counsel that Pennsylvania case law recognizes that a prudent mix can include different combinations of contract terms, or even rely on a single type of procurement structure, when doing so provides the least cost to customers over time.[4] In this case, the proposed plan's mix of contract durations and auction timing provides a disciplined, competitive process that meets the prudent-mix standard and balances cost, risk, and stability in accordance with Act 129.

Q. Do you believe that the Company's proposed DSP VII is consistent with 66 Pa.C.S. § 2807(e)(3.4), which requires that default service be designed to ensure "the least cost to customers over time"?

A. Yes, I do. The plan's design is consistent with both the letter and intent of Act 129. The use of a competitive auction process to procure a full-requirements product encourages active participation from qualified suppliers and promotes efficient pricing outcomes. Through the auction, suppliers that can manage portfolios of energy, capacity,

[3] 66 Pa.C.S. § 2807(e)(3.2).

[4] *Popowsky v. Pa. P.U.C.*, 71 A.3rd 1112, 1117 (Pa. Commw. Ct. 2013) ("*Popowksy*").

transmission, and renewable energy products most effectively—and at the lowest expected cost—will emerge as winning bidders.

This competitive structure has proven reliable in prior proceedings and continues to meet the "least cost over time" standard established by the Commission and affirmed by the Commonwealth Court in *Popowsky*. The plan balances short-term market responsiveness with longer-term price stability by blending contracts of different durations, while the inclusion of a real-time component for industrial customers ensures that customers remain exposed to current market conditions.

Overall, the proposed procurement framework leverages supplier expertise and competition to secure supply at the lowest sustainable cost for ratepayers, consistent with Act 129's directive to minimize long-term costs rather than momentary price levels.

Q. How does the reliance upon a full-requirements product contribute to a procurement strategy that is designed to ensure "the least cost to customers over time," as required under Act 129?

A. A full-requirements product provides a clear, standardized means of acquiring default service supply through competition. Each tranche represents a defined percentage of a customer class's load that the supplier must serve—including energy, capacity, ancillary services, and transmission components—excluding non-market-based charges recovered through separate tariff mechanisms. Because all bidders compete to supply an identical product, the auction results are transparent and price-driven.

By bidding to provide a fixed-price, load-following product, suppliers assume risks associated with fluctuating wholesale prices, customer migration, weather-related variability, and other market factors. Those suppliers that are best equipped to manage these risks will submit the most competitive bids. In this way, the procurement process

relies on suppliers' portfolio-management expertise to achieve the least cost to customers over time while providing reasonable rate stability.

This approach also conforms with Commission precedent recognizing the advantages of the full-requirements model: it transfers market and volumetric risk to suppliers that specialize in managing it, minimizes administrative burden on the distribution utility, and uses competition to select the most cost-effective resources available in the market. See, for example, the Commission's discussion of full-requirements procurements in the Final Rulemaking Order in Docket No. L-2009-2095604:

> The major benefit associated with the FR [full-requirements] approach is that the procurement function is delegated to the electric supplier which is presumably better equipped with the necessary personnel and infrastructure to perform the activities associated with acquiring electric supplies in the complex and ever changing wholesale market environment. The FR process insulates default supply customers from the volatility associated with wholesale market conditions with the supplier bearing the risks of factors such as customer migration, weather, load variation and economic activity.

2011 Final Rulemaking Order, at 54.[5]

Q. How does the reliance upon full-requirements products compare to the alternative where the EDC instead uses a managed-portfolio approach?

A. The full-requirements approach remains the most practical and cost-effective framework for meeting default service obligations in Pennsylvania. Under this model, suppliers compete to provide all elements of generation service for their share of load, and they assume responsibility for managing the underlying portfolio of energy, capacity, and related products. This structure transfers both price and volumetric risk to entities that specialize in wholesale market participation and portfolio optimization.

[5] *Implementation of Act 129 of October 15, 2008; Default Serv. and Retail Elec. Mkts*, Docket No. L-2009-2095604 (Final Rulemaking Order entered October 4, 2011).

By contrast, a managed-portfolio approach—where the utility itself would procure and assemble individual market components—would expose customers to additional risk if the utility's procurement or risk-management decisions proved less effective than those of experienced wholesale suppliers. The PaPUC has previously found that EDCs generally lack the staffing, systems, and market infrastructure necessary to manage a complex energy portfolio competitively.

> On balance, we are not persuaded that the MP [managed portfolio] approach is superior to the FR approach in achieving the "least cost to customers" while also achieving the other objectives of "prudent mix" of products and price stability. The MP approach has clear advantages to the retail markets and the retail customer provided the EDC is capable of performing the full range of portfolio management functions….**Our principal concerns are that EDCs do not currently possess the requisite expertise and infrastructure to perform these portfolio management duties and the risks to retail customers from EDC inexperience in performing these functions is too great.** We are also mindful of the fact that the current default supply process, with the EDC acting as the default supplier and distribution entity purchasing its supply from electric suppliers knowledgeable about the workings of the wholesale electric market, is a product of the Competition Act, which created the market structure we now operate within. [emphasis added].[6]

The full-requirements model, by comparison, relies on transparent competitive bidding to identify the suppliers best able to manage cost and risk over time. It ensures that default service customers receive reliable supply at prices reflecting true market competition, consistent with Act 129's least-cost-over-time standard.

Q. Have previous full-requirements default service procurements conducted by the Company resulted in substantial participation?

A. Yes. Participation in prior full-requirements default service procurements has remained consistently robust. In recent auctions conducted for DSP VI, the number of registered

[6] *Id*. at 55-56.

bidders ranged from eight to nineteen, depending on the procurement class and delivery period.[7] These results demonstrate continued supplier interest and confidence in the competitive design of the auction process.

The level of participation indicates that qualified wholesale suppliers view the Company's procurement framework as transparent, well-structured, and capable of producing fair market outcomes. Strong competition among multiple qualified bidders also reinforces the effectiveness of the descending-clock auction format in achieving reasonable prices for default service customers.

Q. Have the Company's previous default service auctions resulted in reasonable prices that reflected expected wholesale market conditions?

A. Yes. Analyses of recent full-requirements procurements conducted for the Company's DSP V and DSP VI show that resulting prices generally track the combination of expected wholesale energy, capacity, ancillary-service, and transmission costs prevailing at the time of each auction. As detailed in FE PA Exhibit NEP-1, average clearing prices were typically only modestly above projected market fundamentals—consistent with efficient competition among suppliers.

My analysis of the prices resulting from recent default service auctions conducted for the Company's residential and commercial customers shows that for most of the period I analyzed, the resulting prices were only slightly above the combined wholesale energy, capacity, ancillary service, and NITS costs that were projected at the time of each auction

[7] The reported range reflects the number of bidders who registered for each of the seven procurements held under DSP VI thus far.

for the corresponding delivery periods.[8] This analysis is set forth in FE PA Exhibit NEP-1.

For my analysis, I first estimated the expected wholesale energy costs to serve retail loads of the Company's residential and commercial customers. For this calculation, I used PJM Interconnection, LLC ("PJM") West forward prices, which I adjusted for the delivery location by using the difference in spot-energy prices between the PJM West hub and the corresponding zonal price (*e.g.*, METED, PENELEC, PENN POWER, or APS).[9] I then adjusted these flat prices by the load-shape factor of the Company's residential and commercial non-shopping customers to reflect the fact that the retail load of these customer classes is, on average, higher during hours with higher prices. The resulting energy prices were in the range of $24-$103/MWh for Met-Ed, $25-$93/MWh for Penelec, $25-$93/MWh for Penn Power, and $26-$98/MWh for West Penn.[10]

To calculate the capacity-cost component of serving the Company's residential and commercial customers, I generally relied on the PJM BRA prices for the appropriate delivery periods. The exception to this rule is that to calculate the capacity-cost component

[8] I did not include costs associated with alternative energy credits needed to satisfy AEPS requirements. Given the exclusion of these costs, my estimates of implied risk premiums in providing default service may be somewhat overstated.

[9] For this "basis" adjustment, I used 2018 as the reference year for default service auctions that occurred in 2018 and 2019. I used 2020 as the reference year for default service auctions that occurred in 2020 and 2021. I used 2022 as the reference year for default service auctions that occurred in 2022 and 2023; and I used 2024 as the reference year for default service auctions that occurred in 2024 and April 2025. METED, PENELEC, APS, and PENN POWER zonal prices are used for the respective Met-Ed, Penelec, West Penn, and Penn Power basis adjustments. APS refers to the Allegheny Power System zone in PJM. For purposes of this analysis, APS is used as the relevant PJM zonal price for the West Penn rate district, as West Penn load is settled in the APS zone. Accordingly, references to APS zonal prices in this analysis are economically equivalent to references to West Penn zonal prices.

[10] Examination of the detailed results in FE PA Exhibit NEP-1 shows that energy prices were substantially higher beginning in November 2021. For example, column [I] on p. 1 of that exhibit (presenting calculations for Met-Ed) shows that for auctions held between October 2018 and April 2021, the load shape-adjusted energy price ranged from approximately $24/MWh to approximately $36/MWh. For auctions held between November 2021 and November 2025, the load shape-adjusted energy price ranged from approximately $44/MWh to $103/MWh.

of serving those same customers with 24-month products during auctions held in DSP VI, I relied instead on the capacity proxy prices provided to DSP auction participants.[11] Then, I converted these capacity prices, all of which are expressed in dollars per megawatt day ("$/MW-day"), into levelized capacity costs (expressed in $/MWh) by using the ratio of peak-to-average load for each customer class.[12] The resulting levelized capacity prices were in the range of $5-$35/MWh for Met-Ed, $4-$32/MWh for Penelec, $3-$36/MWh for Penn Power, and $2-$35/MWh for West Penn.

For ancillary service costs, I used the actual observed costs (or in more recent years, a reasonable estimate thereof), which ranged from $1.06 to $1.46 per MWh between 2018 and 2024.[13]

For NITS costs, I used costs expressed in $/MW-day, as provided by the Company. As I did with the capacity prices, I converted NITS costs into levelized costs (expressed in $/MWh) by using the ratio of peak-to-average load for each customer class.[14] The resulting levelized NITS costs were in the range of $6-$34/MWh for Met-Ed, $6-$21/MWh for Penelec, $11-$24/MWh for Penn Power, and $3-$7/MWh for West Penn.

Finally, I added together the energy, capacity, ancillary service, and NITS costs to estimate the expected wholesale market cost of serving the Company's residential and

[11] As discussed above, this approach limits suppliers' exposure to unpredictable capacity costs. It also means that for 24-month products auctioned during DSP VI, the CPP is the appropriate measure of the capacity cost component of serving residential and commercial customers.

[12] For this capacity price adjustment, I used 2018 load data for default service auctions that occurred in 2018 and 2019; 2020 load data for default service auctions that occurred in 2020 and 2021; 2022 load data for default service auctions that occurred in 2022 and 2023; and 2024 load data for default service auctions that occurred in 2024 and 2025.

[13] For ancillary service costs, I used: 2018 costs for default service auctions that occurred in 2018 and 2019; 2020 costs for default service auctions that occurred in 2020 and 2021; 2022 costs for default service auctions that occurred in 2022 and 2023; and 2024 costs for auctions that occurred in 2024 and 2025.

[14] I used the same load data for the NITS cost adjustment as for the capacity price adjustment.

commercial customers. This represents my estimate of the expected cost of serving retail customers without accounting for any potential risk premium that default service suppliers may include in their bid prices to reflect volumetric and price uncertainty. I refer to this estimated cost as the "Estimated No-Risk Price", as shown in FE PA Exhibit NEP-1.

My estimated cost of serving retail customers is conservative as it does not include the costs of alternative energy credits needed to meet AEPS requirements, as well as any other costs not described above that are incurred by suppliers of default service. Therefore, the "risk premium" referenced in FE PA Exhibit NEP-1, which is calculated as the difference between the auction price and the sum of the expected cost of serving the customer (i.e., the sum of energy, capacity, ancillary services, and NITS costs), may be larger than the "true" risk-premium to the extent that any material costs have been omitted.

In spite of the conservatism of my cost calculations, the average difference between the auction price and expected cost is relatively modest. The average risk premiums expressed in $/MWh were $6.46/MWh for Met-Ed, $9.26/MWh for Penelec, $10.24/MWh for Penn Power, and $8.22/MWh for West Penn. Expressed as a percentage of the Estimated No-Risk Price, the risk premiums were, on average, 9.32% for Met-Ed, 13.73% for Penelec, 14.16% for Penn Power, and 13.50% for West Penn. My results are summarized below in Table 1, and further detail is provided in FE PA Exhibit NEP-1.

Table 1: Average Estimated Risk Premium in Default Service Full-Requirements Auctions (October 2018 – November 2025): DSP V and VI

EDC	Risk Premium ($/MWh)	Risk Premium (% of No-Risk Price)
Met-Ed	6.46	9.32%
Penelec	9.26	13.73%
Penn Power	10.24	14.16%
West Penn Power	8.22	13.50%

Source: The Brattle Group

Q. What are the advantages of conducting simultaneous procurements across the Company's Rate Districts?

A. Conducting simultaneous procurements for all customer classes and service territories offers several benefits that enhance both competition and administrative efficiency. A single, coordinated auction encourages greater supplier participation by allowing bidders to evaluate opportunities across territories within the same procurement event, thereby reducing transaction costs and barriers to entry.

The simultaneous, multi-round descending-clock auction format also improves price discovery. Suppliers can shift bids between products or territories as relative prices adjust, ensuring that clearing prices reflect underlying cost differences rather than timing effects between separate auctions. This leads to more economically efficient outcomes and helps maintain consistent default service rates across service areas.

From an administrative standpoint, a unified procurement schedule simplifies oversight and implementation for both the Company and the Commission. It promotes uniformity in contracting, credit requirements, and communication with market

participants—further contributing to a transparent, replicable process that has proven effective in securing least-cost supply over time.

Q. Do the proposed procurement formats conform with the requirements of Act 129?

A. Yes, they do. Section 2807(e)(3.1), Title 66, of the Pennsylvania Consolidated Statutes requires that default service be provided pursuant to a Commission-approved competitive procurement plan, which may include auctions, requests for proposals, or bilateral agreements entered into at the utility's discretion:

> [T]he default service provider shall provide electric generation supply to that customer pursuant to a commission-approved competitive procurement plan. The electric power acquired shall be procured through competitive procurement processes and shall include one or more of the following:
>
> (i) auctions;
> (ii) requests for proposal;
> (iii) bilateral agreements entered into at the sole discretion of the default service provider. . . .[15]

The procurement structure proposed by FE PA fully satisfies this requirement.

The Company's use of a descending-clock auction—an approach that has been reviewed and approved by the Commission in prior default service proceedings—ensures that all qualified suppliers compete on an equal basis to provide the same full-requirements product. The auction rules are transparent, pre-established, and replicable, allowing prices to be determined solely by competitive market forces.

This format continues to provide the benefits recognized by the Commission in previous orders: it encourages robust participation, promotes fairness and efficiency, and yields outcomes that reflect the least cost to customers over time. The proposed

[15] 66 Pa.C.S. § 2807(e)(3.1).

procurement process therefore conforms fully with Act 129 and with the Commission's long-standing guidance for competitive default service procurements.

Q. Is the proposed procurement format designed to achieve a competitive result, which would be essential to achieving the least cost to customers over time?

A. Yes. The descending-clock auction format is specifically designed to promote competitive outcomes that yield fair, market-based prices for default service customers. The auction process is open to all qualified suppliers that meet established credit and eligibility criteria, ensuring a broad pool of participants and a level playing field.

The format itself is transparent and easily understood: prices begin at a pre-announced level and decline in successive rounds as suppliers indicate the quantities they are willing to serve. The auction concludes when the amount of supply offered matches the amount required. This structure motivates suppliers to bid aggressively based on their true costs of serving load, leading to efficient pricing outcomes.

Because each bidder competes to provide an identical full-requirements product, non-price factors do not influence award decisions. The process is fair, replicable, and verifiable, providing confidence that the resulting prices reflect robust competition rather than administrative judgment. By encouraging broad participation and ensuring that winning suppliers are selected solely on price, the proposed auction format is well aligned with Act 129's goal of achieving the least cost to customers over time.

Q. Why is it that the superior portfolio managers will place the lowest bids in these full-requirements procurements?

A. Supplying default service requires bidders to assemble and manage portfolios of wholesale energy, capacity, ancillary services, and related products in a dynamic market environment.

In a full-requirements procurement, suppliers compete to serve a fixed percentage of load at a fixed price per MWh while bearing the associated market and volumetric risks.

Suppliers that are the most proficient portfolio managers—those with superior analytical capabilities, diversified generation assets, or the lowest cost of hedging—can manage these risks more efficiently than their competitors. As a result, they can submit lower bids while still meeting their return requirements. Conversely, suppliers that face higher transaction costs or less effective risk-management strategies will bid at higher prices to compensate for those disadvantages.

In this way, the auction process naturally identifies the suppliers best positioned to provide reliable service at the least cost over time. By transferring the responsibility for portfolio construction and risk management to competitive suppliers, the full-requirements procurement framework ensures that customers benefit from the expertise and efficiency of market participants rather than from administrative cost forecasts.

Q. Does the competitiveness of the auction procurement process depend on the competitiveness of the underlying wholesale market?

A. While the effectiveness of the auction format depends on active supplier participation, the broader competitiveness of the PJM wholesale market provides the foundation for that participation. The PJM markets—both forward and spot—include a large number of capable suppliers and counterparties, which helps ensure that the prices discovered in the auction reflect genuine market conditions.

PJM's market design incorporates numerous safeguards to maintain competitive outcomes. The Independent Market Monitor actively oversees PJM's energy and capacity markets, and PJM applies ex ante market-power-mitigation rules that limit bids in its day-ahead and real-time energy markets whenever structural conditions could allow the

exercise of market power. These protections, along with transparent pricing and publicly available forward markets, provide confidence to potential suppliers that they can obtain the products needed to meet their load obligations at fair, market-based prices.

The continued presence of multiple qualified bidders demonstrates that the wholesale market remains competitive enough to support vigorous bidding in FE PA's default service auctions. As evidenced by past results, these conditions have consistently produced reasonable and stable prices for default service customers.

Q. Are there contingency plans in place for alternative procurement strategies if any given auction attracts limited interest or if a winning supplier subsequently defaults on its obligation before or during a delivery period?

A. Yes. As described in detail in Mr. Rose's testimony (FE PA Statement No. 2), the Company will continue to maintain contingency procedures similar to those approved by the Commission in prior default service proceedings. If an auction fails to produce sufficient winning bids to meet the required load, or if a supplier subsequently defaults on its obligation, the Company will procure replacement supply through Commission-approved short-term or interim procurements. These procedures ensure continuity of service and protect customers from exposure to unmanaged spot-market risk.

In addition, specific contingency measures apply to the proposed 60-month full-requirements tranches. If these long-term products do not clear during the initial January 2027 auction, FE PA will fill the unserved portion of load by procuring additional 12-month tranches during the subsequent April 2027 auction. This approach preserves the integrity of the portfolio design and guarantees that all default service requirements are met by the start of the June 1, 2027, delivery year.

These contingency provisions provide a tested and transparent mechanism for maintaining reliable supply under all market conditions and are consistent with prior Commission approvals of similar protocols.

Q. Do you think that the plan to enter into long-term contracts for the 60-month full-requirements tranches contributes to the objectives of Act 129?

A. Yes, I do. The addition of a 60-month full-requirements product strengthens the portfolio's alignment with Act 129's requirement for a prudent mix of spot, short-term, and long-term contracts. Including a limited share of longer-term supply enhances overall cost stability for customers while maintaining sufficient flexibility to respond to changing market conditions.

These contracts will provide an additional source of cost certainty by fixing energy costs for a portion of load over a five-year period. Because the products will be procured through the same competitive descending-clock auction used for the shorter-term tranches, suppliers will continue to compete on a level playing field, ensuring that the resulting prices reflect actual market fundamentals.

Incorporating a modest long-term component also advances Act 129's broader goals of promoting price stability and prudent risk management. The winning suppliers for the 60-month tranches will be those most capable of managing energy and volumetric risk over longer horizons, which helps deliver reliable service to customers at the least cost over time.

III. CONCLUSION

Q. Can you summarize how the proposed plan to procure full-requirements service for default service customers leads to the "least cost to customers over time" in the provision of default service supply?

A. Yes. FE PA's proposed procurement framework is designed to achieve the least cost to customers over time by combining competitive market forces with prudent risk management. The plan relies on descending-clock auctions to secure full-requirements, load-following products of varying durations—12-, 24-, and 60-month tranches—to serve residential and commercial default service load.

Industrial default service load will be priced based on the PJM real-time market. Suppliers will compete for this load through an auction process where they will bid an additional adder to cover any costs (or profit margin requirements) of the capacity, ancillary services, AEPS Act, and other costs that are part of the full-requirements obligation.

This structure promotes both competition and price stability. By staggering contract terms and holding regular auctions, the plan smooths the effects of short-term market volatility while continuously refreshing the portfolio with new market information. The inclusion of the 60-month product introduces a measured long-term hedge that enhances stability without compromising responsiveness to evolving market conditions.

Winning suppliers must act as sophisticated portfolio managers, acquiring energy, capacity, and ancillary services from PJM markets and managing the risks of load variability, fuel-price changes, and customer migration. Because suppliers compete on

price to provide these services, the auction design ensures that the most efficient risk managers—and therefore the lowest-cost suppliers—are selected.

The process is open, transparent, and replicable, consistent with the Commission's standards for competitive procurement. In this way, the proposed plan integrates competitive market discipline with regulatory safeguards to provide reliable default service to customers at the least cost over time.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Appendix A

Nicholas Powers

PRINCIPAL

Washington, DC +1.202.419.3369 Nicholas.Powers@brattle.com

Dr. Powers specializes in conducting econometric and economic analysis and applying concepts from industrial organization and regulatory economics in competition, regulatory, and other litigation matters, with a focus on the electricity sector.

His electricity experience includes several key analyses of price effects, market power, and anticompetitive behavior. Dr. Powers also conducts econometric analyses of innovative pricing programs in the electric industry.

Dr. Powers has supported expert testimony in three separate litigation proceedings arising from the California electricity crisis of 2000–2001. He has also overseen statistical analyses in several New Source Review cases and performed damages and other analyses in energy-related litigation proceedings

For the Department of Energy, Dr. Powers coauthored two reports on electric grid infrastructure and approaches to valuation of various grid assets, and for multiple clients he has analyzed retail electric market conditions and regulatory developments. He has also acted as both an independent evaluator and an advisor to several procurement processes in the electricity sector, and has estimated the cost and feasibility of renewables-only energy portfolios.

Dr. Powers also has extensive experience conducting analysis for and submitting expert reports in regulatory proceedings in other industries. This includes the extensive analysis of regression-based costing models in the postal industry, rate of return analysis in the telecommunications industry, and econometric analysis of the renewable fuels market.

In the competition space, he has performed analysis estimating cartel impacts in large-scale price-fixing cases, potential competitive effects from proposed mergers, and price effects of competitor entry and exit in proposed joint ventures. Dr. Powers regularly provides economic analyses of cartel behavior, and he also has experience analyzing exclusionary practices.

Reports filed on behalf of claimants, related to overcharge and to the estimation of the volume of commerce affected by an alleged cartel agreement among major international cargo airlines pertaining to fuel surcharges. Presented to the Court on two occasions.

- **Dover Chemical Corporation v. City of Dover, Ohio, et al.** | In the Court of Common Pleas – Tuscarawas County, Ohio | Case No. 2021 CV 020097 | Expert Testimony of Nicholas E. Powers, Ph.D (June 30, 2023)

SELECTED CONSULTING EXPERIENCE

ENERGY AND ENVIRONMENTAL

- For FirstEnergy's Pennsylvania utilities, sponsored witness testimony before the Pennsylvania Public Utility Commission, analyzing the cost and risk associated with the Companies' proposed default service supply plans. Analysis included estimates of the implied price premium for covering volumetric and pricing risk that was associated with past procurements of full-requirements power supplies, showing that this premium was relatively modest in size.
- For the California parties, conducted several key pieces of analysis evaluating effects of tariff violations in the summer of 2000 on CAISO market prices and drafted portions of expert testimony, in a litigation matter before the FERC arising from the California electricity crisis.
- For the California parties, conducted econometric analyses detecting the exercise of market power and price discrimination in the 2001 "CERS" period of the California electricity crisis. This analysis formed the basis of key parts of the testimony of two expert witnesses.
- Supervised the analysis for four cases in support of testimony relating to alleged New Source Review (NSR) violations at coal-fired power plants. For a Southeastern power cooperative, analysis of government's claims included examination of alternative baseline emission calculations, analysis of changes in fuel quality, and evaluation of long-run patterns in utilization, generation, and emissions, as well as econometric analysis of the determinants of emissions. For a Midwestern utility, analysis consisted of identifying long-term trends in pricing strategy, market dispatch outcomes, and emissions prices to inform PROMOD runs in order to generate emissions projections that are consistent with NSR regulations. For a Mid-Atlantic utility, the analysis focused on long-run variation in coal plant operations, including analysis of changing market conditions that influenced that variation.
- In conjunction with a Commission-mandated time-of-use ("TOU") pricing pilot, analyzed the impacts of TOU prices on peak load and conservation in three Maryland electric utilities. Designed and implemented a matching-based regression methodology; co-authored two reports presenting our findings.

- For a Mid-Atlantic electric utility, performed cost-benefit analyses underlying several performance incentive mechanisms (PIMs) tied to environmental objectives, in support of testimony before the state utility Commission.
- Co-authored a short report summarizing the extent and scale of rail disruptions in 2022, in support of expert testimony filed in a fuel cost reconciliation proceeding before the Wisconsin Public Service Commission.
- For multiple regulated utilities in Pennsylvania, on multiple occasions, designed and managed the procurement of solar photovoltaic alternative energy credits (SPAECs). Responsibilities included: (i) designing and drafting the auction rules, structure, and bid forms; (ii) overseeing the provision of auction-related information on the procurement website; (iii) corresponding with interested bidders; (iv) interacting with company personnel regarding bidder credit issues; (v) hosting bidder information sessions; (vi) evaluating bid materials; (vii) building a financial model to determine the likely value of the solar energy credits; (viii) providing a benchmarking study to determine if the bids were reflective of market fundamentals; and (ix) drafting and submitting reports to the Pennsylvania Public Utility Commission to secure approval of the procurements.
- For multiple regulated utilities in Pennsylvania, designed and managed the procurement of a long-term solar power purchase agreement (PPA). Responsibilities included: (i) designing the auction rules and bid forms; (ii) implementing and marketing the procurement; (iii) analyzing market conditions to determine if the bids were reflective of market fundamentals; and (iv) drafting and submitting a report to the Pennsylvania Public Utility Commission to secure approval of the procurements.
- For Transmission Developers Inc., managed sale of transmission rights for Champlain Hudson Power Express transmission project. Prepared report in support of Section 205 filing for submission to the Federal Energy Regulatory Commission.
- For the owner of a merchant transmission line connecting PJM with NYISO, designed and managed an RFP process to sell transmission scheduling rights. Responsibilities included: (i) designing the auction; (ii) drafting rules and bid forms; (iii) developing marketing materials and conducting various types of market analyses to assist bidders in understanding the value proposition offered by the transmission rights; (iv) identifying potentially interested bidders; (v) hosting a website and overseeing the provision of auction-related information through the website; (vi) communicating with potential bidders; (vii) responding to bidder questions and posting answers to those questions on the auction website; (viii) interacting with the client regarding a variety of bidder-related issues;

(ix) selecting the winning bidders; and (x) preparing a report describing the auction process that was submitted to the Federal Energy Regulatory Commission.

- For an expert report submitted as part of a revenue requirements proceeding, benchmarked BC Hydro's non-fuel operations and maintenance costs against those of U.S. investor-owned utilities.
- In follow-on work, developed testimony assessing the value or appropriateness of a suite of cost benchmarking reports as proposed by BC Hydro.
- For the Department of Energy and Pacific Northwest National Laboratory, coauthored a baseline report on electric transmission, distribution, and storage infrastructure in the United States as part of the inaugural Quadrennial Energy Review process.
- For the Department of Energy and Pacific Northwest National Laboratory, coauthored a report on the valuation of electric power systems and technologies as part of the Quadrennial Energy Review process.
- Coauthored a report analyzing the economics and reliability of alternative energy portfolios (approaching 100% renewable power) for the City of Memphis.
- For a Southeastern generation and transmission electric cooperative, oversaw preparation of expert damages report and advised counsel on same in the context of an arbitration proceeding stemming from an alleged breach of contract.
- Advised a large nonprofit energy buying consortium in a procurement of retail electric service for their members, assessing offers over a variety of products, services, and geographic areas, and assisting in negotiations with several large retail electric suppliers.
- For a valuation matter concerning a back-office IT services provider to retail energy suppliers, supervised the analysis for and supported industry witness in a report assessing the status and prospects of the retail energy service business in restructured states.
- On behalf of Growth Energy, coauthored a report analyzing the role that higher ethanol blends of gasoline (E85) could play in meeting the proposed 2017 renewable volume obligations (RVOs) under the Renewable Fuel Standards (RFS) program. The report was filed with Growth Energy's comments in the Environmental Protection Agency's rulemaking docket regarding proposed renewable fuel standards for 2017.
- Researched alternative rate plans and presented results to senior management of a mid-sized electric utility as part of a regulatory strategy consulting engagement.

- For a utility in the Southeastern United States, conducted a review of NERC region load forecasts. This consisted of econometric analysis to weather-normalize actual loads and evaluate the portion of the forecast error that could be attributed to variations in weather.
- For a mid-Atlantic utility, estimated economic benefits to ratepayers from natural gas service, as portion of eventual PUC filing justifying investments related to storm resilience of distribution system.

ANTITRUST

- In a large civil case concerning alleged collusion in the corrugated packaging industry, executed the econometric analysis forming the basis of a report critiquing plaintiff's damages estimates. Supported the expert testimony of Nobel laureate Daniel McFadden.
- On behalf of purchasers of air cargo (plaintiffs) in a class action civil suit, conducted econometric and other statistical analyses in order to estimate economic damages from alleged price-fixing. Supported the expert testimony of Nobel laureate Daniel McFadden.
- Served as damages co-expert, covering both overcharge and volume of commerce, in a cartel class action stemming from the international air cargo cartel. Co-authored confidential expert reports on volume of commerce and overcharge; on two occasions presented findings before the Court of Amsterdam, where I was subjected to Court examination.
- Currently serving as damages co-expert (on behalf of Claimants) in another cartel proceeding in the Netherlands.
- Assisting a Class I railroad in assessing competitive effects from the proposed merger between Union Pacific and Norfolk Southern. Ongoing.
- Retained as expert in U.S. Federal Court case involving alleged collusive boycott in transportation sector. Matter settled.
- Managed economic analysis in support of damages expert for one of the defendants in the undersea cables matter in proceedings before the United Kingdom Competition Appeal Tribunal.
- Advised chemical industry defendant in a litigation proceeding involving alleged collusion.
- Advise counsel representing a large multinational industrial firm by estimating overcharges stemming from a series of price-fixing conspiracies covering several input commodities.
- Analyzed the competitive effects associated with a joint venture in the music industry.

- Analyzed the competitive effects associated with a proposed merger involving two firms selling niche/specialty ERP software.
- Analyzed the competitive effects associated with a proposed merger in the medical equipment industry.
- Analyzed Surface Transportation Board waybill data to identify potential competitive effects in the context of a proposed railroad merger.
- Analyzed the competitive effects associated with a proposed merger in the venue management industry.
- Analyzed the anti-competitive impacts resulting from a proposed merger in the television broadcast industry.
- Performed econometric estimates of the price effects resulting from competitor entry and exit in geographic product markets to support expert testimony that assessed anti-competitive effects from a proposed joint venture in the airline industry.
- Conducted econometric analysis in evaluation of expert testimony that sought to quantify network effects in the payment card industry.
- Identified flaws in the econometric analysis of opposing experts in the context of settlement negotiations arising from price-fixing allegations in the plastics manufacturing industry.
- Oversaw preparation of expert report and quantification of damages, on behalf of plaintiffs, stemming from exclusionary conduct.
- Supported testifying expert, on behalf of plaintiffs, in a competition matter related to vertical restraints.

OTHER REGULATORY

- On behalf of United Parcel Service, manage analysis and support expert witness in several regulatory dockets before the Postal Regulatory Commission. Apply regulatory economic principles and econometric expertise to detailed knowledge of USPS costing models; provide input on economic arguments and regulatory strategy. Conducted econometric analyses and assisted in the preparation of reports and testimony in a number of Dockets before the Postal Regulatory Commission, including Dockets ACR2014, RM2015-7, RM2016-2, and RM2016-3. Coauthored expert report critiquing a proposed change to costing principles in the Purchased Highway Transportation cost segment, in Docket RM2016-12.
- On behalf of the Railway Supply Institute's Equipment Leasing Committee, filed a Verified Statement in a proceeding before the Surface Transportation Board, considering whether

the current system for determining car hire rates fosters an economically appropriate long-term supply of boxcars. Docket No. EP 334 (Sub-No. 8A).

- Managed the analysis in support of multiple verified statements filed in a railroad trackage rights proceeding before the Surface Transportation Board, leveraging the Brattle Rail Network Model. Our analysis relied on a variety of data sources, including confidential Carload Waybill Sample data, proprietary railroad traffic tapes, and Form R-1 data.
- For an express package delivery carrier, managed the construction of an integrated Excel-based cost and demand financial forecasting model of the United States Postal Service (USPS), based on public USPS data and filings in previous Postal Regulatory Commission dockets.
- Submitted an expert report analyzing the rate of return of a land-based telecommunications network in Alaska for a proceeding before the Federal Communications Commission.

OTHER LITIGATION

- For the City of Los Angeles, submitted expert testimony analyzing the economic arguments for airport rental car regulations, and assessing potential economic harms from uneven application of those regulations.
- In a lawsuit brought by the City of Ontario, CA against Los Angeles World Airports, evaluated the reliability of plaintiff's claim for damages in excess of $3 billion for alleged mismanagement of the Ontario airport.
- For a class of Australian owners of Volkswagen vehicles, analyzed the impact of the diesel emissions issue on resale prices for VW vehicles affected by non-compliant emissions "defeat devices."

EXPERT REPORTS AND REGULATORY FILINGS

- "PC44 Time of Use Pilots: End-of-Pilot Evaluation," with Sanem Sergici, Ahmad Faruqui, Sai Shetty, and Ziyi Tang, prepared for Maryland Joint Utilities and Filed with the Maryland Public Utility Commission (October 4, 2021)
- "PC44 Time of Use Pilots: Year 1 Evaluation," with Sanem Sergici, Ahmad Faruqui, Sai Shetty, and Jingcheng Jiang, prepared for Maryland Joint Utilities and filed with the Maryland Public Utility Commission (September 15, 2020)

- "Expert Declaration of Kevin Neels and Nicholas Powers," before the Postal Regulatory Commission and related to the Statutory Review of the System for Regulating Rates and Classes for Market Dominant Products, in Docket No. RM2017-3 (February 2020)
- Expert report and supplemental report submitted to the Court of Amsterdam (Case No. C/13/486440 / HA ZA 11-944; C/13/561169 / HA ZA 14-283), on behalf of claimants, related to the estimation of the volume of commerce affected by an alleged cartel agreement among major international airlines pertaining to fuel surcharges. Later submitted resports on overcharge methodology and overcharge results (2019, 2020, 2022, 2025)
- "Evaluation, Measurement and Verification Plan for the PC44 Time-of-Use Rate Pilots," with Sanem Sergici and Ahmad Faruqui, prepared for Maryland Public Service Commission PC44 Rate Design Work Group (June 2018)
- "Rate of Return Analysis of GCI's TERRA Network," with William P. Zarakas and Agustin J. Ros, prepared for GCI Communication Corp. (March 2018)
- "Report of Dr. Kevin Neels and Dr. Nicholas Powers to Accompany UPS Comments in Docket No. RM2016-12," before the Postal Regulatory Commission, related to costing principles in the highway transportation segment; reply report also submitted (October 2016)
- "Peeking Over the Blendwall: An Analysis of the Proposed 2017 Renewable Volume Obligations," with Marc Chupka, J. Michael Hagerty, and Sarah Germain, prepared for Growth Energy; filed with comments in Docket EPA-HQ-OAR-2016-0004 (July 2016)

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PETITION OF FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY FOR APPROVAL OF ITS DEFAULT SERVICE PROGRAM FOR THE PERIOD JUNE 1, 2027 THROUGH MAY 31, 2031	:	**DOCKET NO. P-2026-**

VERIFICATION

I, Nicholas E. Powers, hereby state that the facts set forth in the pre-marked statements and exhibits listed below are true and correct to the best of my knowledge, information, and belief. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

- FE PA Statement No. 3 and FE PA Exhibit NEP-1

Nicholas E. Powers

Date: February 3, 2026

Nicholas E. Powers

FE PA Statement No. 3-R

BEFORE THE

PENNSYLVANIA PUBLIC UTILITY COMMISSION

FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY

DOCKET NO. P-2026-3060298

DEFAULT SERVICE PROGRAM

For the Period
June 1, 2027 to May 31, 2031

Rebuttal Testimony of
Nicholas E. Powers

List of Topics Addressed

Selected Issues Related to Default Service Product Design
Distributed Generation Impacts

REBUTTAL TESTIMONY

OF NICHOLAS E. POWERS

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Nicholas E. Powers, and I am a Principal of The Brattle Group. My business address is 1800 M Street NW, Suite 700 North, Washington, D.C.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I previously offered testimony and an exhibit in this proceeding on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company"), which have been designated as FE PA Statement No. 3 and Exhibit NEP-1.

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to evaluate certain intervenor testimony as it relates to the Company's proposals. I address issues related to default service product design and the impact of distributed generation and provide analysis to assist the Pennsylvania Public Utility Commission ("Commission") in its consideration of those matters.

Q. Have you prepared any exhibits to accompany your testimony?

A. No.

II. SELECTED ISSUES RELATING TO DEFAULT SERVICE PRODUCT DESIGN

Q. Office of Consumer Advocate ("OCA") witness Serhan Ogur recommends replacing the Company's proposed 60-month default service product with a shorter-term product, such as a 36-month product.[1] What is your view of that recommendation?

A. In my view, the Company's proposed approach remains reasonable and consistent with Act 129's objective of maintaining a prudent mix of products designed to achieve the least cost to customers over time. The proposed 60-month product represents only a limited portion of the residential portfolio, approximately 10 percent of load, and therefore provides an element of longer-term price stability and portfolio diversification while maintaining substantial exposure to shorter-term market pricing through the 12- and 24-month products that comprise the majority of the portfolio.

Shorter-term products, such as a 36-month product, may align somewhat more closely with available forward market liquidity and hedging instruments. However, shorter-term products also provide less long-term price stability. In my view, the Company's proposal reasonably balances those considerations by limiting the 60-month product to a relatively modest share of the overall portfolio, thereby retaining most of the benefits associated with shorter-term procurement while also obtaining some of the benefits associated with a longer-term hedge.

[1] *See* OCA St. No. 1 at pp. 9, 16.

Q. In addition to issues related to product tenor, have you reviewed testimony addressing the structure of the default service product?

A. Yes. I have reviewed testimony from Retail Energy Supply Association's ("RESA") witness Frank Lacey regarding the treatment of Network Integration Transmission Service ("NITS") costs and his discussion of how those costs relate to the definition of a full-requirements product.[2]

Q. Do you agree that removing NITS from the default service supply product changes whether the product is a full-requirements product?

A. No. In my view, a full-requirements product refers to a supplier's obligation to serve a customer's load on an as-needed basis across all hours and to manage the associated market risks. That obligation does not depend on whether specific cost components, such as transmission charges, are included in the supplier's price or recovered through a separate mechanism.

Q. Can a product still be considered a full-requirements product if certain cost components are handled outside of the supplier contract?

A. Yes. In practice, default service procurement structures often treat certain cost components, such as transmission or other regulated charges, separately from the supplier's energy and capacity obligations. The defining feature of a full-requirements product is that the supplier is responsible for meeting load and managing the variability and uncertainty associated with serving that load under a fixed-price obligation. The treatment of specific cost components does not alter that fundamental characteristic.

[2] *See* RESA St. No. 1 at pp. 37-48.

Q. Is this interpretation consistent with how the term "full-requirements service" is used in practice?

A. Yes. This interpretation is consistent with default service procurement practices both within Pennsylvania and in other jurisdictions. For example, PPL's default service procurement materials define full-requirements service in a manner that excludes certain transmission-related charges, including NITS.[3] Similarly, in Ohio's Standard Service Offer procurements, auctions are conducted for full-requirements service while NITS and certain other transmission-related costs are not included in the supplier's product and are instead recovered separately through utility tariffs.[4] These examples demonstrate that the definition of a full-requirements product does not depend on the inclusion of transmission costs within the supplier's price.

Q. Does Pennsylvania law require that default service be procured as a "full-requirements" product?

A. Not to my understanding. The Public Utility Code requires that default service procurement be designed to ensure adequate and reliable service at the least cost to customers over time using a prudent mix of contracts. It does not, to my understanding, require that the product be structured as a "full-requirements" product or that all cost components be bundled into a single supplier price. As a result, the treatment of NITS

---

[3] *See, e.g.*, PPL Electric Utilities Corporation, Default Service Program VI Procurement Materials (describing "Full Requirements Service" as including energy, capacity, and ancillary services while excluding certain transmission-related charges, including NITS). Among other materials, see https://ppldsp.com/wp-content/uploads/2025/06/DSP-VI-PPL-Electric-RFP-FR-Webcast-3-JUN-2025.pdf, Slide 18.

[4] *See, e.g.*, AEP Ohio, *Standard Service Offer Auction Rules* (March 2026) (describing "full requirements" auctions in which suppliers provide energy, capacity, and ancillary services, while Network Integration Transmission Service and certain other transmission charges are the responsibility of the utility and recovered separately through regulated tariffs), available at https://aepohiocbp.com/assets/files/March%202026%20AEP%20Auction%20CBP%20Rules_09%20DEC%202025.pdf.

costs is a matter of procurement design and cost allocation and does not determine whether the statutory requirements for default service are satisfied.

III. EVALUATING DISTRIBUTED GENERATION IMPACTS

Q. Have you reviewed testimony regarding the impact of distributed generation on default service costs?

A. Yes. I have reviewed the testimonies of the Joint Solar Advocates ("JSA") witness Thomas Michelman and the Customer Generator Coalition's ("CGC") witness James Heidell regarding the impact of net-metered excess generation on default service procurement costs.[5]

Q. What economic considerations are relevant in evaluating the effect of net-metered excess generation on default service procurement costs?

A. In evaluating procurement costs, it is important to distinguish between changes in aggregate load quantities and the effect of uncertainty on supplier pricing. As other Company witnesses discuss, net-metered excess generation may reduce aggregate zonal load under certain conditions.[6] However, default service procurement costs also depend on the uncertainty associated with serving load and supplier pricing of that risk. The introduction of non-dispatchable generation with variable output profiles provides another element of uncertainty for default service suppliers.

Q. What factors affect how net-metered excess generation influences supplier pricing and procurement costs?

A. Procurement costs are determined not only by expected load levels, but also by how that load is distributed across hours, particularly the relatively limited number of peak hours

[5] *See* JSA St. No. 1 at pp. 9-40; CGC St. No. 1 at pp. 10-12.
[6] *See* FE PA St. No. 6-R at p. 8.

that drive a large share of capacity and transmission costs and are often associated with elevated wholesale energy prices**.** The impact of net-metered excess generation on the cost to serve default service load depends in part on whether its output coincides with those specific peak periods.

While we generally expect solar output to be elevated during the high-temperature summer hours that determine capacity needs, Mr. Michelman's Table 3 shows that solar output during peak hours can vary significantly, with the solar capacity factor of the representative unit ranging widely across the highest-load hours.[7] These data indicate that solar output during those hours can vary substantially, meaning that the impact of net-metered excess generation on net load during the hours with high energy prices that also set capacity needs is highly uncertain.

Transmission costs are driven by a related but distinct set of peak load intervals, which may occur in different seasons depending on the characteristics of the relevant transmission zone. In addition, the peak season can vary from year to year within a given zone. As a result, the degree to which solar output coincides with the hours that drive transmission costs may vary across both service territories and years, in a manner that may be difficult for default suppliers to predict. This variation introduces an additional layer of uncertainty in assessing the impact of net-metered excess generation on procurement costs per megawatt-hour.

[7] *See* JSA St. No. 1 at p. 19. This Table shows that over the 20 hours relevant to capacity costs over the 2021-2024 period, the capacity factor of the representative solar unit analyzed by Mr. Michelman varied widely, ranging from values as low as 9% and 17% to values as high as 66% or 67%.

Q. How do these considerations relate to supplier pricing?

A. Default service suppliers provide fixed-price products based on expected conditions and associated risks. While the introduction of distributed generation resources reduces procurement quantities, supplier pricing per megawatt-hour reflects uncertainty regarding future load patterns and peak demand. As such, suppliers must form expectations regarding the level of net-metered generation that will be present during the delivery period. The timing and extent of new distributed generation installations is uncertain, and the record reflects uncertainty regarding how many proposed projects will ultimately reach commercial operation.

As solar penetration increases, the range of potential net load outcomes during peak periods may widen. When that range increases relative to the expected power provided by the default service supplier, the supplier may embed a higher risk premium into its bidding in the default service auction.

While suppliers may be able to estimate average solar production over time, procurement costs are highly influenced by a limited number of peak hours, and solar output during those hours is variable. As illustrated by Mr. Michelman's Table 3, solar production during peak intervals can range widely.

In addition, suppliers are responsible for serving load within specific service territories that represent a relatively small portion of the PJM Interconnection, LLC footprint. System peak conditions and associated price spikes may occur at times when solar output within a particular service territory may differ materially from year-round or system-wide averages. Where customer-sited solar installations within a given geographic area have similar production profiles, their output may be highly correlated, which can

widen the range of potential net load outcomes during peak periods. As a result, suppliers must consider a range of possible conditions, including scenarios in which solar output is relatively high or relatively low during the hours that drive a large share of costs.

Q. How should the Commission think about the magnitude of the impact of net-metered excess generation on risk premiums?

A. Mr. Young identifies a potential concern that an increase in large customer-generator supply to the commercial procurement group may increase supplier risk premiums.[8] Mr. Heidell, in turn, observes that the record does not quantify the effect of customer-generator supply on supplier risk premiums.[9] This lack of quantification reflects the fact that supplier risk premiums incorporate multiple sources of uncertainty into a single bid price, making it difficult to isolate the contribution of any individual factor. In this context, the analysis presented is intended to illustrate the mechanisms through which net-metered excess generation may affect supplier pricing under certain conditions.

Supplier risk premiums reflect multiple sources of uncertainty, including load variability, market conditions, and customer behavior, and are incorporated into a single bid price. As a result, isolating the contribution of any one factor, such as net-metered excess generation, is inherently difficult and cannot be done without additional data or assumptions.

The testimony in this proceeding does, however, provide useful context regarding how net-metered excess generation may affect supplier pricing. In particular, it indicates that:

---

[8] *See* FE PA St. No. 1 at p. 17.

[9] *See* CGC St. No. 1 at pp. 10-12.

- the impact of net-metered excess generation on procurement costs is not limited to changes in expected quantities, but may also affect supplier pricing through risk premiums;

- suppliers consider a range of potential load outcomes, not just average conditions, particularly during a limited number of peak hours that drive a large share of costs;

- suppliers face additional uncertainty regarding the timing and extent of distributed generation penetration; and

- where customer-sited solar installations within a service territory have similar production profiles, their output may be highly correlated, which can widen the range of potential net load outcomes.

Taken together, these factors indicate that increasing penetration of net-metered generation may increase the uncertainty suppliers must manage, which could lead to higher risk premiums under certain conditions.

IV. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

DIRECT TESTIMONY
OF
MARGARITA PATRIA

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Margarita Patria. My business address is John Hancock Tower, 200 Clarendon Street, T9, Boston, Massachusetts 02116.

Q. By whom are you employed and in what capacity?

A. I am a Principal at the energy practice at Charles River Associates ("CRA"). Founded in 1965, CRA provides economic and financial expertise and management consulting services to businesses, law firms, accounting firms, and governments.

Q. What is your educational background?

A. I have a PhD in Economics from Boston College.

Q. Please describe your duties as a Principal at CRA.

A. As a Principal in CRA's energy practice, I focus on the U.S. power sector, leading competitive procurements for utilities and advising utilities and other market participants on mechanism design. My responsibilities include designing auction and request for proposal ("RFP") frameworks, preparing solicitation rules and bidder qualification requirements, conducting bidder outreach and training, managing application and credit review, running clock auctions and related formats, overseeing bid evaluation and price analysis, monitoring for compliance and transparency, and preparing public reports and regulatory testimony.

Since joining CRA in 2007, I have served as RFP Manager, Auction Manager, and Independent RFP Monitor or Auction Monitor across various U.S. jurisdictions. I have led

or managed over 200 auctions and competitive procurements, including processes similar to the FirstEnergy Pennsylvania Electric Company ("FE PA" or "Company") process. My curriculum vitae is provided as Appendix A, which includes additional details on my background and experience.

Additionally, for the last eight years, I have led the Auction Manager team for both FE PA and Duquesne Light Company. As part of those procurements, I have been responsible for preparing and submitting pre- and post-auction reports to the Pennsylvania Public Utility Commission ("Commission" or "PaPUC").

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of FE PA. FE PA consists of the following rate districts: Met-Ed, Penelec, Penn Power, West Penn and The Pennsylvania State University ("PSU"), which is a sub-part of the West Penn rate district (individually a "Rate District" and in any combination the "Rate Districts").

Q. What is the purpose of your direct testimony?

A. The purpose of my direct testimony is to describe CRA's role and recommendations in connection with FE PA's proposed seventh default service program ("DSP VII"). CRA has served as the Independent Evaluator for FE PA's default service procurements since 2011. In my testimony, I will address the structure and design of the competitive auctions, the role and responsibilities of the Independent Evaluator, bidder qualification requirements and bidder interactions, the confidentiality safeguards that apply to the auction process, and the reporting provided to the Commission before and after each auction. My testimony is intended to assist the Commission in its review of the proposed DSP VII competitive procurement process for default service supply.

Q. Please summarize your testimony.

A. My testimony explains how the competitive auction process for default service supply will operate under DSP VII. Specifically, I will describe the structure and design of the auctions, the role and responsibilities of the Independent Evaluator, the bidder qualification requirements and bidder interactions, the confidentiality safeguards that govern the process, and the reports that will be provided to the Commission before and after each auction. My testimony is intended to assist the Commission in its review of the proposed DSP VII competitive procurement process for default service supply.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. I am sponsoring the following exhibits:

- FE PA Exhibit MP-1 – Part 1 Application;
- FE PA Exhibit MP-2 – Part 2 Application;
- FE PA Exhibit MP-3 – Bidding Rules; and
- FE PA Exhibit MP-4 – Pre-Bid Letter of Credit.

II. DESCRIPTION OF THE DEFAULT SERVICE PROCUREMENT PROCESS

Q. Please describe the Company's proposed DSP VII.

A. The DSP VII continues the well-established process administered by the Independent Evaluator, CRA. The process is designed to promote open, fair, and transparent competitive solicitations using standardized products, clear rules, and equal access to information. It is guided by several key objectives, including the following:

- Provide a fair and equitable process where all qualified bidders have equal access to the same information needed to prepare bids;
- Maintain strict confidentiality of bidder information and auction results prior to Commission approval;

- Ensure independent oversight to verify that each auction is conducted in accordance with Commission-approved procedures; and
- Deliver pre- and post-auction reports that allow the Commission to confirm that the results reflect a competitive, least-cost outcome.

The major elements of the default service program ("DSP") include:

- Product design and contracts. Default supply products and terms are developed to encourage participation by licensed electric generation suppliers ("EGSs") while maintaining portfolio diversity and laddering principles.
- Bidder information and outreach. The information website (www.fepaauction.com) provides all documents, load data, schedules, answers to frequently asked questions ("FAQs"), and announcements to ensure transparency. CRA also conducts bidder webinars and mock auctions to encourage participation.
- Bidder qualification. A two-stage application process establishes both financial and non-financial criteria to ensure only serious, creditworthy participants qualify.
- Auction design and implementation. The descending-clock auction format promotes competition and price discovery while preventing gaming. CRA administers the auction using a secure electronic platform and monitors compliance.
- Oversight and reporting. CRA, as the Independent Evaluator, oversees all bidder communications, verifies confidentiality, and prepares pre- and post-auction reports for Commission review.

The proposed DSP VII incorporates a revised auction schedule and other procedural updates from the Company's sixth default service program ("DSP VI") process. As described in Mr. Rose's direct testimony (FE PA Statement No. 2), the proposed DSP VII

is intended to reflect current market conditions and supplier participation, while maintaining compliance with the Commission's objectives of ensuring reliable and least-cost default service through a competitive procurement framework.

FE PA Exhibits MP-1 through MP-3, including the Bidding Rules and Parts I and II of the bidder application materials referenced above, incorporate limited updates intended to ensure consistency with the language of the Supplier Master Agreement, changes to which are also described in Mr. Rose's testimony. In addition, CRA recommends several minor procedural updates designed to improve administrative efficiency and bidder convenience without altering substantive qualification standards or auction mechanics. These include removal of the fax option as a back-up communication procedure, which has become outdated, and clarification that bidder assistance will be provided via email and a dedicated Help Desk telephone line. The proposed revisions also eliminate notarization requirements for the Part I and Part II applications, which are no longer necessary and can present an unnecessary burden to bidders. Collectively, these changes are intended to modernize the process while maintaining the integrity, transparency, and competitiveness of the DSP VII procurement framework. These changes are reflected in FE PA Exhibits MP-1 through MP-3.

Q. Describe the role of Independent Evaluator.

A. The Independent Evaluator is responsible for administering the competitive procurement process in a fair, transparent, and nondiscriminatory manner. The Independent Evaluator manages bidder outreach and communication, oversees bidder qualification through the two-stage application process, and ensures that all prospective bidders receive equal access

to information. This includes maintaining the public information website, managing the FAQ process, and conducting bidder information sessions.

During the auction, the Independent Evaluator oversees the bidding process and monitors compliance with the Commission-approved bidding rules. All auctions are conducted using secure web-based software under the Independent Evaluator's supervision. The Independent Evaluator also maintains bidder confidentiality and prevents the disclosure of any sensitive or bidder-specific information.

In addition, the Independent Evaluator reports to the Commission before and after each auction. These reports confirm that the auction was conducted in accordance with approved procedures and that the results reflect a fair and competitive process.

Q. Please explain the confidentiality safeguards that govern the process.

A. The process is designed to protect bidder-specific and competitively sensitive information while ensuring equal access to public information, and prevent any bidder from gaining an advantage through any means, including affiliation with the Company. The Independent Evaluator maintains a public information website that provides the same documents and data to all potential bidders. The Independent Evaluator also manages all inquiries through a structured FAQ process in which questions are acknowledged, redacted to remove identifying details, and answered for public posting ensuring that no bidder receives preferential information. Communications are governed by established protocols that limit who may access confidential material and require that notices to interested parties be distributed uniformly (*e.g.*, via blind carbon copy) to prevent disclosure of bidder identities.

Bidder qualification occurs through a secure, two-stage application on an online platform. Financial and credit information, indicative offers, pre-bid security, and any

association disclosures are treated as confidential and are shared only with those individuals necessary to evaluate eligibility and credit, including the Independent Evaluator and limited Company credit representatives, each subject to confidentiality undertakings. During the auction, bidding occurs on secure web-based software under the Independent Evaluator's oversight; bidder identities, bidding strategies, and round-by-round positions are not disclosed to other participants or to non-authorized personnel. Following each auction, the Independent Evaluator submits a post-auction report to the Commission that confirms compliance with approved procedures and provides results necessary for regulatory review.

These safeguards—uniform public disclosures, redaction of inquiries, controlled access to confidential materials, secure bidding and application systems, and Commission-facing reporting—all ensure a fair, transparent process without compromising bidder confidentiality.

Q. How is information about the DSP auctions communicated to prospective bidders?

A. Prior to each auction, the Independent Evaluator conducts proactive bidder outreach to help ensure maximum participation and maintain a competitive process. This outreach includes contacting all suppliers who have participated in previous auctions, issuing announcements through Business Wire, and maintaining a comprehensive information website at www.fepaauction.com.

The information website serves as the central public source of all auction-related information. It includes the auction schedule, supplier documents, load and other data, Bidding Rules, credit requirements, and presentation materials from bidder information

sessions. The Independent Evaluator manages this website to ensure that all interested parties have equal access to accurate and timely information.

Interested suppliers may register as "Registered Users" on the information website to submit questions, receive notifications, and access updates. Questions are handled through a structured FAQ process, where each inquiry is acknowledged, redacted to remove identifying details, and answered by the Independent Evaluator, often in coordination with FE PA. Final FAQs are posted publicly on the website so that all participants receive the same information.

Additionally, the Independent Evaluator conducts bidder information sessions via webinar to review the auction process, demonstrate the bidding platform, and answer procedural questions. Presentation materials from these sessions are posted on the information website.

This combination of targeted outreach, open information sharing, and transparent communication ensures a fair and equitable process for all bidders and supports strong participation in each solicitation.

Q. How is the default service procurement designed to encourage participation in each auction and to ensure that no bidder is advantaged?

A. The default service procurement is designed to promote broad participation and maintain a level playing field among all qualified bidders. Any entity capable of meeting the default service delivery requirements for the Company's service territory may participate. Ownership of physical generation is not required, and the default service procurement does not provide any preference to bidders that own generation assets.

The descending-price clock auction format is inherently non-discriminatory: any qualified bidder may participate under the same terms, subject to the standard application, financial, and credit requirements. The process is structured to ensure transparency and fairness—information is made available equally to all participants before and during the auction.

Before each auction, all prospective bidders receive the same training and educational materials on the default service procurement procedures and products. During the auction itself, all participants receive identical real-time information about auction status. In this way, the default service procurement ensures that no bidder is advantaged and that participation opportunities are open, transparent, and equitable for all qualified suppliers.

Q. If an affiliate of FE PA were to own generation and seek to bid in the auction, would it have any advantage?

A. No. All bidders are treated equally and an affiliate of FE PA would have no advantage in bidding or providing default service under the SMA.

Q. How are bidders qualified to participate in the DSP auctions?

A. Bidder qualification is conducted through a two-stage application process administered by the Independent Evaluator using a secure online platform. Prospective bidders must first request access to the application system by submitting an Online Account Request Form available on the public home page of the Information Website. Once access is granted, applicants complete a Part 1 Application and, if accepted, a Part 2 Application. Only bidders who successfully complete both stages become Registered Bidders and are eligible to participate in the auction.

During the Part 1 Application, the Independent Evaluator:

- Collects basic company information and contact details;
- Confirms the legitimacy and licensing status of the applicant;
- Reviews financial and credit information to determine the applicant's maximum credit limit and pre-bid security requirements; and
- Confirms that the applicant agrees to the auction rules and procedures.

An applicant whose Part 1 Application is approved becomes a Qualified Bidder.

During the Part 2 Application, each Qualified Bidder:

- Submits an indicative offer stating the maximum number of tranches it may bid at the maximum starting prices;
- Provides the required pre-bid security consistent with the bidder's credit limit; and
- Confirms compliance with all bidding requirements.

The indicative offer cannot exceed the load cap applied to the total tranches available across all products in the auction. A Qualified Bidder that completes the Part 2 Application successfully becomes a Registered Bidder. This includes meeting pre-bid security requirements through posting cash or a pre-bid letter of credit consistent with the sample pre-bid letter of credit attached as FE PA Exhibit MP-4. Only Registered Bidders may participate in the auction.

Q. What bidding design will be used for DSP VII?

A. FE PA will continue to use the simultaneous, multiple-round, descending-price clock auction to competitively procure default service supply. This auction format has been used successfully in prior default service programs, including DSP II through DSP VI, and has been approved repeatedly by the Commission. Variants of this format have also been used

in other states, including New Jersey, Ohio, Illinois, and Massachusetts, to procure wholesale electricity supply, renewable energy, and other energy products.

The auction is simultaneous because multiple products (tranches serving different Rate Districts, customer classes, and delivery periods) are bid on at the same time. Bidding occurs online over a series of discrete rounds using secure web-based software. Each product has an announced price in each round, and prices start at levels designed to encourage participation.

At the end of each round, the auction software, under the oversight of the Independent Evaluator, determines whether each product is over-subscribed (more tranches bid than needed) or under-subscribed (fewer tranches than needed). If a product is over-subscribed, its price is reduced by a pre-specified decrement for the next round. If it is not over-subscribed, its price remains unchanged. Prices typically move downward across rounds until supply and demand balance.

In each round, bidders state how many tranches they are willing and able to supply at the current prices, subject to bidding rules designed to ensure orderly bidding. There is no preset number of rounds. The auction concludes when, in a round, no product is over-subscribed and there is no excess supply. The bidders holding tranches at that time are the winning suppliers, and their final prices become the auction results submitted to the Commission for approval. The Bidding Rules filed with DSP VII provide full procedural details.

Q. What reports are provided to the Commission in connection with each DSP auction?

A. Two reports are prepared for each auction: a pre-auction report and a post-auction report, both submitted by the Independent Evaluator to the Commission.

The pre-auction report is submitted prior to each auction and provides context for the upcoming solicitation. It includes an overview of the default service program, the products and tranche targets to be procured, the auction timeline, and a description of current PJM Interconnection, LLC ("PJM") market conditions. The report also summarizes key cost drivers for default service supply such as energy prices, PJM capacity prices, ancillary services, transmission charges, and Alternative Energy Portfolio Standards requirements. In addition, the pre-auction report discusses recent procurement results in Pennsylvania and other competitive wholesale markets to provide a market benchmark.

The post-auction report is submitted following each auction. It documents that the auction was conducted in accordance with Commission-approved procedures, describes bidder participation and competitiveness, and summarizes the bidding process and price outcomes. The post-auction report includes an assessment by the Independent Evaluator regarding whether the auction results are the product of a fair and competitive process. The report also identifies any issues, unusual bidding behavior, or procedural anomalies, if any, and confirms that no information was disclosed that could compromise bidder confidentiality or future auctions.

Together, these reports provide transparency to the Commission, confirm compliance with the approved process, and support Commission review and approval of auction results.

Q. Please describe the process that occurs following the close of a DSP auction.

A. At the close of each default service auction, the Independent Evaluator prepares and submits a post-auction report to the Commission. This report summarizes the conduct of the auction, confirms that it was administered in accordance with Commission-approved

rules, and provides the results of the auction, including the identities of the winning bidders, the number of tranches won by each bidder, and the closing prices for each product. The report also includes the Independent Evaluator's assessment of whether the auction was competitive and free of any collusion or misconduct.

Immediately following the last round of the auction, each active bidder is able to view its own preliminary results on the secure bidding website, including the number of tranches it has tentatively won and the final prices. These results remain preliminary until reviewed by the Commission.

After submission of the post-auction report, the Commission reviews the auction results. Upon Commission approval, each winning bidder executes the Supplier Master Agreement and related transaction confirmations with FE PA. Pre-bid security is then returned to winning bidders once their agreements are executed. Pre-bid security for non-winning bidders is returned within five business days after the close of the auction. However, pre-bid security may be withheld if a bidder has violated any auction rules or certifications.

Q. Does this conclude your testimony?

A. Yes.

Margarita Patria, Ph.D., is a Principal in CRA's Energy Practice and an energy economist specializing in energy procurement, regulatory analysis, and data analytics. She provides policy development and analysis solutions to utilities, regulators, and other electricity market stakeholders. Dr. Patria leads energy auctions and renewable procurements across multiple states, overseeing electricity market analysis, bid valuation, and forecasting. She has advised bidders in high-stakes auctions. She provides economic analysis in support of policy development for ISOs and delivers economic and policy support to hyperscalers and data center developers related to planning and system integration. Her research focuses on empirical and theoretical analysis of energy markets and applied game theory. Dr. Patria received her Ph.D. in Economics from Boston College and is currently an Adjunct Professor at Northeastern University, where she teaches Economics of Energy Markets. She is also the author of several academic papers.

Professional experience

2016–Present	*Principal*, Charles River Associates, Boston, MA
2011–2016	*Associate Principal*, Charles River Associates, Boston, MA
	Managing projects to design and implement auctions, RFPs and other market mechanisms in energy, renewable procurements, and other commodities markets. The work includes providing expert energy market forecasts, developing market, and bidding rules, overseeing stakeholder communications, managing auctions and RFPs in real time. Managing projects to provide bidder strategy support for clients participating in spectrum auctions and other auctions and bidding mechanisms.
2010–2011	*Senior Econometrician*, Keystone Strategy, Cambridge, MA
	Supported a major litigation case that involved two leading global Internet organizations. The case relied heavily on econometric analysis as well as on industrial organization and auction theory. Multiple law firms represented the client, and Dr. Patria worked closely with internationally renowned economic experts who testified in support of the case. The investigation is ongoing and is being presented to the European Commission and to the Federal Trade Commission.
2007–2010	*Senior Associate*—Energy Practice, Charles River Associates, Boston, MA

Worked on a broad variety of projects in the Energy, Auctions, and Competition Practices. CRA's Auctions & Competitive Bidding Practice designs and manages trading platforms for domestic and international clients in telecommunications, energy, and other industries. CRA's Energy Practice provides expert economic and business consulting services to a wide range of electricity industry clients on issues that include litigation support, expansion of private equity firms into the energy sector, investments in transmission and generation assets, electricity industry reform, long-term electricity price forecast, and asset valuation. CRA's Competition Practice provides economic analysis and testimony in numerous competition matters in the United States and abroad.

Select project descriptions

Energy Procurement

- Project Manager for FirstEnergy's Pennsylvania Default Service Auction process. The Default Service Auction process is set up to procure wholesale generation and capacity for full requirements Default Supply generation service for Default Service customers of FirstEnergy's Pennsylvania Utilities — Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company. The project includes expert market forecast reports in the utilities territory.
- Outside Consultant for the All-Source RFP for a utility in the Midwest. Worked closely with the utility evaluation team to develop the process rules and evaluation criteria associated with the RFP, including working to clearly define the resources eligible to participate in the process. Provided an advisory role throughout the bid review process, taking on the primary responsibility for the issuance and evaluation of the RFP. Provided an expert report for the public utilities commission.
- Designed and developed the Duquesne Light Solar RFP process to procure Solar resources in 2021 and 2023, including bid valuation model and expert report.
- Designed and developed multiple utilities processes to procure capacity credits to cover immediate capacity need.
- Supported Consumer's all-source RFP in document review, modeling and bid valuation.
- Project Manager for FirstEnergy Ohio Competitive Bidding Process for SSO Procurement. The CBP process is set up to procure wholesale generation and capacity for full requirements Standard Service Offer generation service for SSO customers of FEOU. The project includes expert market forecast in the utility's territory.
- Project Manager for Duquesne Light Default Service Auction process. The Default Service Auction process is set up to procure wholesale generation and capacity for full requirements Default Supply generation service for Default Service customers of Duquesne Light. The project includes expert market forecast reports in the utility's territory.

- Designed the Percentage of Income Payment Plan ("PIPP") RFP process for multiple utilities in Ohio. Set up the bidder qualification process, developed the bidding rules and other key documents.
- Designed and managed the overall process and conducted an auction to sell SO_2 and NOx emission allowances for FirstEnergy Solutions Corp.

Energy Economics

- Lead joint MISO–PJM efforts focused on developing transmission benefit frameworks for interregional transmission planning
- For a hyperscalar, led a project evaluating behind-the-meter configurations, with a focus on energy cost impacts and potential energy hedging options.
- For a gas generation developer in ERCOT, developed a contracting strategy to identify and secure offtake arrangements with data center developers.
- For SPP, leading the team to assist with transmission benefit valuation.
- For MISO, reviewed transmission benefits for Tranches 1 and 2, and provided expert opinion. Led Order 1920 compliance review.
- For an ERCOT market participant, projected data center load growth was evaluated and compared with the ERCOT forecast.
- For a utility engagement to evaluate the resource adequacy gap in their territory, I led the PJM-wide load forecast, assisted with policy analysis, and contributed to the interpretation of the results.
- Expert witness at RoLR hearings in Alberta.
- Lead the team that provides an independent review of current MISO rules for entry and exit from the interconnection queue. Within the review, we evaluate the security deposits required within the MISO Definitive Planning study process, specifically focusing on the M2, M3, and M4 deposit amounts. Advised MISO on how deposit amounts, policies, and the overall study process can be restructured to enhance the efficiency of the interconnection queue.
- Within the rate case for a Midwestern utility, performing a statistical analysis to assess the effects of different Net Metering structures on consumers.
- Assisted a foreign transmission company with identifying suitable US acquisition targets. Worked with the client to understand their principal criteria; designed a robust selection approach; researched and screened companies; and recommended 10 targets to the client.
- Provided legislation support for an equity return hearing for a regulated utility. Oversaw modeling. Evaluated the model and principal assumptions behind the proposed settlement agreement. Augmented the model to evaluate the impact of potential risks. Proposed principal arguments for rebuttal testimony.
- Designed empirical analysis and wrote a report to rebut an expert witness report in which the opposing side's expert alleged use of market power by the client.

- Designed, developed, and delivered a damages model to support litigation for a breach of contract case involving two high-profile international companies. Managed a team to evaluate opposing side claims and supporting documentation.
- Designed empirical analysis to investigate potential causes of increase in nodal prices at the sites of the client's generating units. Model included a regression analysis to find transmission constraints that caused the price increase. Presented results to client to investigate potential solutions.
- Performed impact analysis of price distribution upon transfer of major electricity market player from MISO to PJM. Actively involved in transmission modeling, standard industry LMP forecasting models. Led the data collection and empirical analysis to identify key flowgates that contribute to price separation between the two ISOs.
- Evaluated financial performance of combined cycle generation in the United States. Performed data collection and analysis. The research led to a presentation at an International Association of Energy Economics (IAEE) conference.

Appendix 1-Part 1 Application

Part 1 Application

For Fixed-Price and Hourly-Priced Auctions

To Procure Default Service Products

Under Default Service Program DSP-VII for

FirstEnergy Pennsylvania Electric Company

("FE PA")

Appendix 1 to Bidding Rules

Name of Applicant

PART 1 APPLICATION

AUCTIONS TO PROCURE DEFAULT SERVICE PRODUCTS FOR FIRSTENERGY PENNSYLVANIA ELECTRIC COMPANY

INSTRUCTIONS

There are two parts to the application process.

- **Part 1 Application:** Applicants submit the Part 1 Application and all documents required therein to become Qualified Bidders for the fixed-price auction ("FP Auction") and/or the hourly-priced auction ("HP Auction") used to procure default service products for FirstEnergy Pennsylvania Electric Company's ("FE PA") Met-Ed, Penelec, Penn Power, and West Penn Rate Districts. A Qualified Bidder for an auction need not submit a new Part 1 Application for subsequent auctions in the same calendar year unless the information in the Qualified Bidder's Part 1 Application has changed. In any case, a Qualified Bidder must submit its most recent financial statements during the Part 1 Application process before each auction.

- **Part 2 Application:** Qualified Bidders for the FP Auction and/or the HP Auction submit the Part 2 Application in which they will: (a) agree to comply with the Bidding Rules, (b) agree to accept the terms of the Supplier Master Agreement ("SMA") should they become a winning supplier, (c) make certifications regarding associations and the handling of Confidential Information, (d) submit Indicative Offers, and (e) post Pre-Bid Security to become Registered Bidders.

This document is the Part 1 Application.

For further information, consult the Information Website.

Unless otherwise defined, capitalized terms in this document have the definitions provided in the SMA. "Communications Protocols" refers to the section "Communications Protocols" and related sections in the Bidding Rules.

_____
Name of Applicant

PART 1 APPLICATION SUBMISSION

To become a Qualified Bidder for the FP Auction and/or the HP Auction, Applicants must submit the following to the Independent Evaluator electronically through the Secure Online Application Process by the Part 1 Application Due Date:

- **Electronic Application Form:** Completed Part 1 Application submitted online;
- PDF Copy Application Form: A copy of the Part 1 Application document with signatures, and the name of the Applicant on every page of the Application;
- **Supporting Documentation:** A copy of required financial statements and other requested documents supporting the Application as specified in Appendix A; and
- **Changes to Pre-Bid Letter of Credit (Optional):** Any suggested modifications to the template for the Pre-Bid Letter of Credit must be provided to the Independent Evaluator in an electronic, red-lined version.

Proposed modifications to the Pre-Bid Security Letter of Credit and any other inquiries may be directed to the Independent Evaluator by email at fepaauction@crai.com. Inquiries can also be made through the Information Website.

It is in your interest to seek independent legal and financial advice before deciding to participate in the FP Auction and/or the HP Auction.

Name of Applicant

The completed Part 1 Application and any proposed modifications to the Pre-Bid Security Letter of Credit MUST be received by the Independent Evaluator no later than 12:00 p.m. noon prevailing Eastern Time on the Part 1 Application Due Date as posted in the timeline on the Information Website.

CONFIDENTIALITY OF PART 1 APPLICATION SUBMISSIONS

Confidentiality requirements specific to the Part 1 Application are provided below.

CONFIDENTIALITY OF CREDIT INFORMATION

Any information and materials that you submit in this Part 1 Application may be provided on a confidential basis to the Independent Evaluator team and the Pennsylvania Public Utility Commission ("Commission") and their representatives. Information that you provide in this Part 1 Application, except for information regarding bidding agreements provided in Section 1.11, may be provided on a confidential basis to representatives of the Company for a creditworthiness assessment.

CONFIDENTIALITY OF QUALIFIED BIDDERS

Upon completion of the Part 1 Application process, the names of Qualified Bidders will be provided to other Qualified Bidders on a confidential basis. As part of this Part 1 Application, you are required to certify that you agree to release your name to other Qualified Bidders and that you will keep confidential the list of Qualified Bidders that is provided to you.

Name of Applicant

PART 1 APPLICATION
Fixed-Price Auction and Hourly-Priced Auction to Procure Default Service Products

This Part 1 Application is the application form to become a Qualified Bidder in the FP Auction and/or the HP Auction.

Background Information

Before completing this application, please review the Bidding Rules document, the SMA, and other documents posted on the Information Website so that you understand the conditions under which the FP Auction and HP Auction will be conducted.

Confirmation of Receipt

When your Part 1 Application is submitted online through the Secure Online Application Process, an email will be sent to the Authorized Representative and the Delegate of the Applicant to confirm receipt.

Incomplete Applications

If your Part 1 Application is incomplete or requires clarification, the Independent Evaluator will send a deficiency notice to your Authorized Representative by email. You will have until 12:00 p.m. noon prevailing Eastern Time on the Part 1 Application Due Date, or until 5:00 p.m. prevailing Eastern Time on the Business Day following the Business Day during which a deficiency notice is sent to you, whichever comes later, to respond. If you do not correct or adequately explain the deficiency within the time allowed, your Part 1 Application may be rejected and you may be unable to participate in the FP Auction or the HP Auction. All corrections to remedy deficiencies within an Applicant's Part 1 Application must be submitted online. The Authorized Representative needs to sign and date next to the correction(s) to the Part 1 Application and send a copy as an email attachment to the Independent Evaluator at fepaauction@crai.com or through the Secure Online Application Process.

Late Applications

Part 1 Applications received after the Part 1 Application Due Date will NOT be accepted under any circumstances.

Name of Applicant

Notification to Qualified Bidders

If you become a Qualified Bidder for the FP Auction and/or the HP Auction, the Independent Evaluator will send a Notification of Qualification to your Authorized Representative by email after the Part 1 Application Due Date.

Name of Applicant

PART 1 APPLICATION FORMS

1.1. Applicant Basic Information

Name of Applicant (Company Name)		
Legal Name of Applicant (if different from above)		
Place of Incorporation, if applicable	Federal Tax ID	D&B DUNS #
Please state whether the Applicant is a corporation, partnership, etc.	Years in Business	URL for Applicant's Website
Has the Applicant participated in a prior FE PA Default Service solicitation?	If yes, indicate the most recent auction date (month, year):	

Name of Applicant

1.2. Authorized Representative

The Authorized Representative is authorized to represent the Applicant in the FP Auction and/or the HP Auction. The Authorized Representative will receive all documentation related to the relevant auction(s) if and when the Applicant becomes a Qualified Bidder and subsequently a Registered Bidder, including any auction procedures and Confidential Information required for the submission of bids in any trial auction(s) and in the actual auction(s). The Authorized Representative must ensure that only authorized persons act on behalf of the Applicant in the FP Auction and/or the HP Auction. The Authorized Representative is the only person authorized to distribute auction procedures and Confidential Information and should do so in accordance with the Communications Protocols. The integrity of the FP Auction and the HP Auction depends upon each Authorized Representative safeguarding Confidential Information and passwords used in the auctions.

The person designated below is the Applicant's Authorized Representative.

Last Name	Given Name(s)	Mr/Mrs/Ms/Dr/(other)

Title

Street Address 1

Street Address 2

City	State	Zip Code

Telephone No.	Cell Phone No.	Fax No.	Email Address

Communications with the Authorized Representative for purposes of the Part 1 Application are typically done via email.

The Applicant hereby acknowledges that any notification or other communication given by the Independent Evaluator to the Applicant with respect to the Part 1 Application shall be emailed to the email address above.

Name of Applicant

This certification must be signed by the Authorized Representative.

I hereby certify that I am authorized by the Applicant to serve as Authorized Representative, to represent the Applicant both (i) in the FP Auction and/or the HP Auction, and (ii) for purposes of this Part 1 Application. I further certify that I will be responsible for all Confidential Information regarding the FP Auction and/or the HP Auction and I will distribute Confidential Information only to other individuals who are authorized to act on behalf of the Applicant according to the Communications Protocols.

Signature of Authorized Representative Date

Name of Applicant

The person designated in this section by the Applicant is the Delegate. The Delegate serves as a secondary point person for communications with the Independent Evaluator.

1.3. Designation of the Applicant's Authorized Representative and the Applicant's Delegate for the FP Auction and/or the HP Auction

This certification should be signed by an officer or director of the Applicant. The person making this certification cannot be either the Authorized Representative or the Delegate.

I certify that I am an officer or director of the Applicant, empowered to undertake contracts and bind the Applicant. I have read and accept the Bidding Rules, the provisions contained in the SMA, and the provisions of the Communications Protocols pertaining to bidders in the FP Auction and/or the HP Auction.

All the information contained in this Application is true and correct to the best of my knowledge. If there are material changes to the Applicant's information provided in this Part 1 Application, I agree to notify the Independent Evaluator. I designate _____ to act as the Authorized Representative of the Applicant in the FP Auction and/or the HP Auction and _____ to act as the Delegate for the Authorized Representative. I am not designating myself as Authorized Representative or Delegate.

1.4. Applicant's Legal Representative in Pennsylvania

Please check here ☐ if the Applicant's Authorized Representative is also the Applicant's Legal Representative.

The Applicant's Legal Representative in Pennsylvania must:

- be a legal counsel or a representative agent;
- have an address in Pennsylvania; and
- be authorized and agree to accept service of process on the Applicant's behalf.

The person designated below is the Applicant's Legal Representative or Representative Agent.

Last Name	Given Name(s)	Mr/Mrs/Ms/Dr/(other)

1.6. General Requirements to Participate in the Auctions to Procure Default Service Products

1. If the Applicant already is a Transmission Customer of PJM who has executed the applicable PJM Agreements as that term is defined in the SMA, please check ☐ and please provide a copy of the signature page of the PJM Agreements.

   Otherwise, please certify that there exist no known impediments for the Applicant to execute the applicable PJM Agreements prior to the start of the supply period.

   Signature of Authorized Representative Date

2. If the Applicant already has PJM E-Accounts necessary to provide Default Service supply, please check ☐ and please provide documentation from PJM that the Applicant has a PJM E-Account.

   Otherwise, please certify that there exist no known impediments for the Applicant to establish the PJM E-Accounts necessary to provide Default Service Supply and execute the PJM E-Account contract(s) for the supply period prior to the beginning of the supply period.

   Signature of Authorized Representative Date

3. If the Applicant already is a PJM Market Participant and a Load Serving Entity in PJM, please check ☐ and please provide documentation from PJM that the Applicant is a Market Participant.

   Otherwise, please certify that there exist no known impediments for the Applicant to become a PJM Market Participant and a Load Serving Entity in PJM by the start of the supply period.

   Signature of Authorized Representative Date

Name of Applicant

4. Further, please certify that:

(a) The Applicant and its corporate officers have no indictments or pending criminal litigation in any federal, state or local jurisdiction relating to the Applicant;

(b) The Applicant and its corporate officers have no criminal convictions;

(c) The Applicant has no civil penalties, judgments, sanctions or consent decrees arising out of the violation of any law, rule, regulation or ordinance in connection with its business activities;

(d) The Applicant has not had any permit or authority to do business in any jurisdiction revoked or suspended; and

(e) The Applicant has never been barred from public bidding or sanctioned for unauthorized disclosure of Confidential Information.

Signature of Authorized Representative Date

If you are unable to make these certifications in Section 1.6, subsections (1) to (4), please state which certifications you are unable to make and explain all reasons in the space given below.

Name of Applicant

1.7. Financial and Credit Information for the Applicant

Please provide the following information for the Applicant:

(a) If the Applicant is not an SEC registrant, provide the most recent Annual Report;

(b) If the Applicant is an SEC registrant, provide the Form 10-Q or Form 10-K, whichever was filed most recently with the SEC. If unavailable, please provide the most recent audited quarterly or annual financial information (including a balance sheet, income statement, and cash flow statement);

(c) If the Applicant is an SEC registrant and if both the Form 10-K and Form 10-Q most recently filed with the SEC are not available, please provide the most recent annual or quarterly financial data accompanied by an attestation by the Applicant's Chief Financial Officer that the information submitted is true, correct and a fair representation of the Applicant's financial condition;

(d) The following financial information along with page references to the relevant financial filings submitted:

	Amount ($)	Financial Document Page Number	Financial Document Source	Date of Financial Document Source
Goodwill				
Shareholders' Equity				
Net Intangible Assets				

Name of Applicant

(e) Applicant's senior unsecured debt ratings from the following three rating agencies if available, and the date of the rating, along with documentation showing the name of the rating agency, the type of rating, and the rating of the Applicant:

	Rating	Date of the Rating
Moody's		
Standard & Poor's		
Fitch		

If senior unsecured debt ratings are unavailable, but corporate issuer ratings are available, please provide the corporate issuer ratings, and the date of the rating, along with documentation showing the name of the rating agency, the type of rating, and the rating of the Applicant:

	Rating	Date of the Rating
Moody's		
Standard & Poor's		
Fitch		

(f) If the Applicant has not been incorporated or otherwise formed under the laws of the United States, the Applicant is asked to provide in addition to (a)-(f) above:

i. A legal opinion acceptable to the Company of counsel qualified to practice in the foreign jurisdiction in which the Applicant is incorporated or otherwise formed that the SMA will become the binding obligation of the Applicant in the jurisdiction in which it has been incorporated or otherwise formed.

ii. Any additional information that the Applicant wishes to include that could provide comparable credit assurances to those that are provided by other Applicants that have been incorporated or otherwise formed under the laws of the United States.

An Applicant that has not been incorporated or otherwise formed under the laws of the United States and that does not provide this information or any information that could provide comparable assurances of creditworthiness will be required to post the maximum security if they become a winning bidder.

Name of Applicant

Further, if such Applicants become Default Service Suppliers, they will be required to submit additional documents as detailed in Article 6 of the SMA, including:

- A legal opinion of counsel qualified to practice in the foreign jurisdiction in which the Default Service Supplier is incorporated or otherwise formed that this Agreement is, or upon the completion of execution formalities will become, the binding obligation of the Default Service Supplier in the jurisdiction in which it has been incorporated or otherwise formed;
- The sworn certificate of the corporate secretary (or similar officer) of such Default Service Supplier that the person executing the Agreement on behalf of the Default Service Supplier has the authority to execute the Agreement and that the governing board of such Default Service Supplier has approved the execution of the Agreement; and
- The sworn certificate of the corporate secretary (or similar officer) of such Default Service Supplier that the Default Service Supplier has been authorized by its governing board to enter into agreements of the same type as the SMA.

Is the Applicant and/or its parent:

	Applicant		Parent	
	Yes	No	Yes	No
Operating under federal bankruptcy laws or bankruptcy laws in any jurisdiction?	☐	☐	☐	☐
Subject to pending litigation or regulatory proceedings (in state court, or in federal court, or from regulatory agencies, or in any other jurisdiction) which could materially impact the Applicant's and/or parent's financial condition?	☐	☐	☐	☐
Subject to collection lawsuits or outstanding judgments that could impact solvency?	☐	☐	☐	☐

Name of Applicant

Please provide a statement disclosing any existing, pending or past adverse rulings, judgments, litigation, contingent liabilities, revocations of authority, administrative, regulatory (state, FERC, SEC or DOJ) investigations and any other matters relating to financial or operational status for the past three years that arise from the sale of electricity or natural gas, or that materially affect current financial or operational status.

Name of Applicant

1.8. Guarantor Information

The Guarantor information is required only if the Applicant expects to have a third party act as a Guarantor should the Applicant become a Default Service Supplier.

Please check here ☐ and proceed to the next section if this section does not apply to you because you will not have a third party act as a Guarantor.

(f) If the Guarantor has not been incorporated or otherwise formed under the laws of the United States, the Guarantor is asked to provide in addition to a)-f) above:

i. A legal opinion acceptable to the Company of counsel qualified to practice in the foreign jurisdiction in which the Guarantor is incorporated or otherwise formed that the Guaranty will become the binding obligation of the Guarantor in the jurisdiction in which it has been incorporated or otherwise formed.

ii. Any additional information that the Guarantor wishes to include that could provide comparable credit assurances to those that are provided by other Guarantors that have been incorporated or otherwise formed under the laws of the United States.

An Applicant whose Guarantor has not been incorporated or otherwise formed under the laws of the United States and that does not provide this information or any information that could provide comparable assurances of creditworthiness will be required to post the maximum security if they become a winning bidder.

Further, if an Applicant with such a Guarantor becomes a Default Service Supplier, the Guarantor will be required to submit additional documents as detailed in Article 6 of the SMA, including:

- A legal opinion of counsel qualified to practice in the foreign jurisdiction in which the Guarantor is incorporated or otherwise formed that this Guaranty is, or upon the completion of execution formalities will become, the binding obligation of the Guarantor in the jurisdiction in which it has been incorporated or otherwise formed;

Name of Applicant

- The sworn certificate of the corporate secretary (or similar officer) of such Guarantor that the person executing the Guaranty on behalf of the Guarantor has the authority to execute the Guaranty and that the governing board of such Guarantor has approved the execution of the Guaranty; and
- The sworn certificate of the corporate secretary (or similar officer) of such Guarantor that the Guarantor has been authorized by its governing board to enter into agreements of the same type as the Guaranty.

Subject to collection lawsuits or outstanding judgments that could impact solvency?	☐	☐	☐	☐

Name of Applicant

Please provide a statement disclosing any existing, pending or past adverse rulings, judgments, litigation, contingent liabilities, revocations of authority, administrative, regulatory (State, FERC, SEC or DOJ) investigations and any other matters relating to financial or operational status for the past three years that arise from the sale of electricity or natural gas, or that materially affect current financial or operational status of the Guarantor.

Name of Applicant

1.9. Additional Certifications

The Bidding Rules, the SMA, and the Information Website include important information that an Applicant should understand prior to participating in the FP Auction and/or the HP Auction.

(a) Please certify that you have read the Bidding Rules for the Auction(s) in which you intend to participate (the FP Auction and/or the HP Auction) and that you will comply with these rules.

Signature of Authorized Representative Date

(b) Please certify that you have read the SMA and that you accept its terms. Please also certify that if you become a winning bidder, you will execute the SMA within three (3) Business Days following the date of the Commission's approval of the auction results:

Signature of Authorized Representative Date

Name of Applicant

(c) Please certify that if you qualify to participate in the FP Auction and/or the HP Auction, you will not disclose at any time information regarding the list of Qualified Bidders in the FP Auction and/or the HP Auction, including but not limited to the number of Qualified Bidders, the identity of any one of the Qualified Bidders (including yourself), or the fact that an entity has not qualified for participation in the FP Auction and/or the HP Auction. Further, please certify that you will destroy any document distributed by the Independent Evaluator that lists the Qualified Bidders within five (5) days of the close of the bidding, or earlier if so instructed by the Independent Evaluator.

Signature of Authorized Representative Date

(d) No Qualified Bidder in the FP Auction and/or the HP Auction shall substitute another party, transfer its rights to another party, or otherwise assign its status as a Qualified Bidder to another party. Any such substitutions, transfers, or assignments shall be null and void and will result in the exclusion of the Qualified Bidder from the FP Auction and/or the HP Auction. Please certify that you agree to the limitation set forth in this paragraph.

Signature of Authorized Representative Date

The Bidding Rules and Communications Protocols include restrictions on the disclosure of Confidential Information. For purposes of the following certifications, the definition of Confidential Information relative to bidding strategy is defined according to Section 12.2 of the Bidding Rules.

(e) Please certify that you agree not to disclose any Confidential Information relative to bidding strategy to any party that may have an effect on the participation of another bidder, prospective bidder, or on any of the bids that another bidder would be willing to submit.

Signature of Authorized Representative Date

Name of Applicant

(f) Please certify that, to the extent Confidential Information relative to bidding strategy is disclosed within your organization or to a third party, you will ensure that sufficient precautions are taken to ensure that such Confidential Information is not made public or made available to another bidder. Such precautions include, but are not limited to confidentiality agreements, non-disclosure agreements, firewalls, and other contractual or structural protections that would maintain the confidential nature of a bidder's bidding strategy.

Signature of Authorized Representative Date

If unable to make the certifications requested above please identify the nature of your need to disclose Confidential Information without sufficient precautions to ensure that such Confidential Information is not made public or made available to another bidder.

Name of Applicant

1.10. Alternate Guaranty Form

A prospective Default Service Supplier that wishes to rely on a Guarantor upon becoming a Default Service Supplier can use the standard form of guaranty (Appendix G to the SMA) and be assured that the standard form of guaranty is acceptable to the Company. Alternatively, the Company will consider alternate forms of guaranty if they are submitted with this Part 1 Application. Also, you may submit an alternate form of guaranty that was previously approved by the Company in a prior solicitation.

The Alternate Guaranty Form must be a financial guaranty for unlimited liability. Additional requirements are specified in Appendix B of this Part 1 Application.

Please check here ☐ and proceed to the next section if this section does not apply to you because you are not submitting an alternate form of guaranty. Otherwise please read Appendix B and complete this section.

The Authorized Representative acknowledges by signing below that he/she has read the requirements of Appendix B and that he/she believes that the proposed Alternate Guaranty Form complies with these requirements:

Signature of Authorized Representative Date

Please check below to show that you are including all required documents.

- ☐ The proposed form of alternate guaranty;
- ☐ Certification that the alternate guaranty has been in general use by the Applicant in its ordinary course of business over the past twelve months;
- ☐ An enforceability opinion with respect to the alternate form of guaranty from counsel; and
- ☐ Previously approved alternate form of guaranty.

Name of Applicant

1.11. Bidding Agreements

Please note that the Company will not review information provided in this section.

Please check here ☐ and proceed to the next section if you will be bidding independently and not as a party to any bidding agreement with another party or through any other arrangement involving joint or coordinated bidding with any other party.

Otherwise, please indicate below whether you are a party to or a part of a bidding agreement, a joint venture, a bidding consortium, or other arrangements for purposes of participating in the FP Auction and/or the HP Auction or pertaining to bidding in the FP Auction and/or the HP Auction. On the next page, please also provide the names of the other parties to the bidding agreement or other arrangement.

Other parties to the arrangement:

☐ Bidding Agreement ☐ Bidding Consortium

☐ Joint Venture ☐ Other (define)

If you are part of a bidding agreement, bidding consortium or joint venture, you must nominate a single party to the bidding agreement, bidding consortium or joint venture to fulfill the creditworthiness requirements. This party may have a Guarantor. Please indicate below which party from the bidding agreement, bidding consortium, or joint venture will be fulfilling the creditworthiness requirements:

Name of the single party fulfilling the creditworthiness requirements:

Name of Applicant

The Authorized Representative of the party named above must sign here to acknowledge the fact that this party has agreed to fulfill the creditworthiness requirements:

Signature of Authorized Representative Date

1.12. Justification of Omissions

If you are unable to provide all documents or all information requested in this Part 1 Application, please justify fully any omissions in the space provided below.

Name of Applicant

Appendix A – Enclosures to the Part 1 Application

This is a checklist of documents to be enclosed with this Part 1 Application. Please submit only one copy of required supporting documents to the application unless noted otherwise.

☐ A copy of the completed Part 1 Application with original signatures ~~and original notarized signatures~~ of Sections 1.2, 1.3 and 1.4 [Instructions Part 1]

For the Applicant:

- ☐ A copy of the signature page of the applicable PJM Agreements as that term is defined in the SMA [Section 1.6]
- ☐ If the Applicant is not an SEC registrant, provide the most recent Annual Report [Section 1.7]
- ☐ If the Applicant is an SEC registrant, provide the Form 10-Q or Form 10-K, whichever was filed most recently with the SEC. If unavailable, please provide the most recent audited quarterly or annual financial information (including a balance sheet, income statement, and cash flow statement) [Section 1.7]
- ☐ If the Applicant is an SEC registrant and if both the Form 10-K and Form 10-Q most recently filed with the SEC are not available, please provide the most recent annual or quarterly financial data accompanied by an attestation by the Applicant's Chief Financial Officer that the information submitted is true, correct and a fair representation of the Applicant's financial condition [Section 1.7]
- ☐ Senior unsecured debt ratings or, if unavailable, corporate issuer ratings [Section 1.7]
- ☐ If the Applicant has not been incorporated or otherwise formed under the laws of the United States, (i) a legal opinion acceptable to the Company of counsel qualified to practice in the foreign jurisdiction in which the Applicant is incorporated or otherwise formed that the SMA will become the binding obligation of the Applicant in the jurisdiction in which it has been incorporated or otherwise formed, and (ii) any additional information that the Applicant wishes to give that could provide comparable credit assurances to those that are provided by other Applicants that have at least two credit ratings from accepted credit ratings agencies. [Section 1.7]

Name of Applicant

For the Guarantor:

- ☐ If the Guarantor is not an SEC registrant, provide the most recent Annual Report [Section 1.8]
- ☐ If the Guarantor is an SEC registrant, provide the Form 10-Q or Form 10-K, whichever was filed most recently with the SEC. If unavailable, please provide most recent audited quarterly or annual financial information (including a balance sheet, income statement, and cash flow statement) [Section 1.8]
- ☐ If the Guarantor is an SEC registrant and if both the Form 10-K and Form 10-Q most recently filed with the SEC are not available, please provide most recent annual or quarterly financial data accompanied by an attestation by the Guarantor's Chief Financial Officer that the information submitted is true, correct and a fair representation of the Applicant's financial condition [Section 1.8]
- ☐ Senior unsecured debt ratings or, if unavailable, corporate issuer ratings [Section 1.8]
- ☐ If the Guarantor has not been incorporated or otherwise formed under the laws of the United States, (i) a legal opinion acceptable to the Company of counsel qualified to practice in the foreign jurisdiction in which the Guarantor is incorporated or otherwise formed that the Guaranty will become the binding obligation of the Guarantor in the jurisdiction in which it has been incorporated or otherwise formed, and (ii) any additional information that the Guarantor wishes to give about the Guarantor's financial standing that could provide comparable credit assurances to those that are provided by other Guarantors that have at least two credit ratings from accepted credit rating agencies. [Section 1.8]

If the Applicant is proposing an Alternate Guaranty Form:

- ☐ Proposed form of alternate guaranty [Section 1.10]
- ☐ Certification that the alternate guaranty has been in general use by the Applicant in its ordinary course of business over the past twelve months [Section 1.10]
- ☐ An enforceability opinion with respect to the alternate form of guaranty from counsel [Section 1.10]
- ☐ Proposed form of alternate guaranty [Section 1.10]

Name of Applicant

Appendix B – Alternate Guaranty Form (Optional)

The criteria used to review the alternate form of guaranty are as follows:

1. The alternate guaranty must be a financial guaranty; performance guarantees are not acceptable.
2. The Company will consider alternate forms of guaranty only if the guaranty is for unlimited liability.
3. The alternate guaranty must be an unconditional guaranty of payment of all amounts due by the Default Service Supplier to the Company under the SMA. The SMA must be expressly identified and the satisfaction of obligations through performance may not be authorized.
4. The alternate guaranty may be terminated upon not less than thirty (30) days advance written notice to the Company and termination shall not discharge liabilities and obligations of the Guarantor that have been incurred before the effective date of the termination.
5. The alternate guaranty must not be subject to any monetary limit.
6. The alternate guaranty must be accompanied by a certification that this form of guaranty, subject to changes needed to conform to the specific requirements of the , has been in general use by the submitting party in its ordinary course of business over the past twelve months.
7. The alternate guaranty must be a guaranty of payment and not of collection.
8. Assignment of the alternate guaranty shall not be permitted except with the prior written consent of the Company.
9. The Applicant must provide an enforceability opinion with respect to the alternate form of guaranty from its counsel. The accompanying enforceability opinion must be from a law firm of national (i.e., United States) standing, must not be weaker than would be industry norm and must contain only those qualifications that would be typical. The opinion shall name the Company and explicitly state that the Company is entitled to rely on the opinion.

The alternate forms of guaranty will be reviewed in accordance with the following process:

- Upon receipt of the Part 1 Application, the Independent Evaluator will redact the proposed alternate form of guaranty to remove any information identifying the Applicant. The Independent Evaluator will then forward the redacted version to a credit and legal representative of the Company.

Name of Applicant

- The credit and legal representative will determine whether the alternate form of guaranty provides sufficient assurances of payment, taking into account the following considerations:

  (i) whether the alternate form of guaranty conforms with the specific requirements identified by the Company (listed above);

  (ii) whether the alternate form of guaranty provides substantially similar credit protections to the credit protections provided to the Company by the standard form of guaranty; and

  (iii) whether the alternate form of guaranty includes defenses in favor of the Guarantor not found in the standard form of guaranty. The Company's representative may also identify specific changes that would permit the alternate form of guaranty to be acceptable, if such changes are of a limited nature.

- The credit and legal representative shall inform the Independent Evaluator of its decision no later than seven (7) Business Days following the Part 1 Application Due Date.

- Upon receipt of the Company's decision, the Independent Evaluator will notify the Applicant of the Company's decision. The Company's decision will state one of the following:

  (i) The proposed alternate guaranty is acceptable to the Company in the form in which it was submitted.

  (ii) The proposed alternate guaranty is not acceptable to the Company in the form in which it was submitted, but would be acceptable subject to specific changes of a minor nature. The correspondence from the Independent Evaluator will set forth the required changes.

  (iii) The proposed alternate guaranty is not acceptable to the Company.

- If specific changes are required to the proposed alternate guaranty, the Applicant will be required to resubmit the alternate guaranty form with changes identified by the Company on the Business Day following the Business Day during which the Independent Evaluator notified the Applicant of the Company's decision. No later than three (3) Business Days after the Applicant's resubmission, the Independent Evaluator will notify the Applicant of the Company's final decision.

Name of Applicant

A potential bidder that had secured approval for an alternate form of guaranty from any previous Default Service procurement auction held by one or more of the Company's and wishes to use the same alternate form of guaranty can renew this by submitting the following:

1. The alternate form of guaranty from any previous Default Service procurement auction by the Company;
2. The enforceability opinion from any previous Default Service procurement auction by the Company;
3. A certification that the text of the alternate form of guaranty is exactly the same as the alternate form of guaranty that had been previously approved from any previous Default Service procurement auction by the Company;
4. A certification that the text of the enforceability opinion is exactly the same as the enforceability opinion that had been previously approved from any previous Default Service procurement auction by the Company.

If a potential bidder submits the materials as specified above, the alternate form of guaranty will be approved for the FP Auction and/or the HP Auction without further re-evaluation. If a potential bidder had secured approval for an alternate form of guaranty from any previous Default Service procurement auction by the Company but is unable to provide the materials as specified above, the potential bidder must resubmit the alternate form of guaranty and all supporting documentation as specified in the Alternate Form of Guaranty section above and these materials will be re-evaluated according to the criteria set forth in this document.

All proposing parties that become Qualified Bidders under the Part 1 Application process, but whose alternate guaranty is rejected by the Company, are required to submit with their Part 2 Application a supplemental certification that the Applicant unconditionally accepts all terms and conditions of the SMA.

Name of Applicant

Appendix C – Proposing Changes to the Pre-Bid Security Letter of Credit (Optional)

The standard form of the Pre-Bid Security Letter of Credit that is acceptable to the Company will be posted to the Information Website. However, an Applicant has the option to propose changes to the Pre-Bid Security Letter of Credit during the Part 1 Application process by clearly identifying the proposed changes in an electronic, redlined version. This version may be submitted by email to fepaauction@crai.com or as an attachment through the Secure Online Application.

The Company will assess, in their sole and exclusive discretion, whether such modifications are acceptable. The Qualified Bidder, in its Part 2 Application, must provide the required executed Pre-Bid Security Letter of Credit that either uses the standard form or incorporates only those modifications to the standard form accepted by the Company upon review of the Part 1 Application. The draft Pre-Bid Security Letter of Credit will be reviewed in accordance with the following process:

- Upon receipt of the Part 1 Application, the Independent Evaluator will redact the draft Pre-Bid Security Letter of Credit to remove any information identifying the Applicant. The Independent Evaluator will then forward the redacted version to a credit and legal representative of the Company.

- The credit and legal representative will determine whether such modifications are acceptable. The credit and legal representative shall inform the Independent Evaluator of its decision no later than seven (7) Business Days following the Part 1 Application Due Date.

- Upon receipt of the Company's decision, the Independent Evaluator will notify the Applicant of the Company's decision. The Company's decision will either state:

    (i) The proposed changes to the Pre-Bid Security Letter of Credit are acceptable to the Company in the form in which they were submitted.

    (ii) The proposed changes to the Pre-Bid Security Letter of Credit are not acceptable to the Company in the form in which they were submitted, but would be acceptable subject to specific changes of a minor nature. The correspondence from the Independent Evaluator will set forth the required changes.

    (iii) The proposed changes to the Pre-Bid Security Letter of Credit are not acceptable to the Company.

- If specific changes are required pursuant to (ii) above, the Applicant will be required to resubmit the draft Pre-Bid Security Letter of Credit with changes identified by the Company on the Business Day following the Business Day during which the

Name of Applicant

Independent Evaluator notified the Applicant of the Company's decision. No later than three (3) Business Days after the Applicant's resubmission, the Independent Evaluator will notify the Applicant of the final decision.

FirstEnergy Pennsylvania Electric Company

("FE PA")

Appendix 2 to Bidding Rules

Name of Applicant

PART 2 APPLICATION

AUCTIONS TO PROCURE DEFAULT SERVICE PRODUCTS FOR FirstEnergy Pennsylvania Electric Company

INSTRUCTIONS

There are two parts to the application process.

- **Part 1 Application:** Applicants submit the Part 1 Application and all documents required therein to become Qualified Bidders for the fixed-price auction ("FP Auction") and/or the hourly-priced auction ("HP Auction") used to procure default service products for the Met-Ed, Penelec, Penn Power, and West Penn Rate Districts. A Qualified Bidder for an auction need not submit a new Part 1 Application for subsequent auctions in the same calendar year unless the information in the Qualified Bidder's Part 1 Application has changed. In any case, a Qualified Bidder must submit its most recent financial statements during the Part 1 Application process before each auction.

- **Part 2 Application:** Qualified Bidders for the FP Auction and/or the HP Auction submit the Part 2 Application in which they will: (a) agree to comply with the Bidding Rules, (b) agree to accept the terms of the Supplier Master Agreement ("SMA") should they become a winning supplier, (c) make certifications regarding associations and the handling of Confidential Information, (d) submit Indicative Offers, and (e) post Pre-Bid Security to become Registered Bidders.

This document is the Part 2 Application.

For further information, consult the Information Website.

Unless otherwise defined, capitalized terms in this document have the definitions provided in the SMA. "Communications Protocols" refers to the section "Communications Protocols" and related sections in the Bidding Rules.

Name of Applicant

PART 2 APPLICATION SUBMISSION

To become a Registered Bidder for the FP Auction and/or the HP Auction, Applicants must submit the following to the Independent Evaluator electronically through the Secure Online Application Process by the Part 2 Application Due Date:

- **Electronic Application Form:** Completed Part 2 Application submitted online;
- PDF Copy Application Form: A copy of the Part 2 Application document with signatures and the name of the Applicant on every page of the Application;

In addition to the completed Part 2 Application Forms, each Qualified Bidder must:

- Submit an Indicative Offer for each auction — either the FP Auction, the HP Auction, or both auctions;
- Submit a Pre-Bid Security Letter of Credit and/or cash to support the Indicative Offers. The Letter of Credit can be submitted either as a hardcopy or electronically; and
- Make required certifications on Applicant Associations and Confidential Information and, if unable to do so, make required information disclosures.

Please note that interest will not be paid by the Company for cash posted as Pre-Bid Security.

It is in your interest to seek independent legal and financial advice before deciding to participate in the FP Auction and/or the HP Auction.

_____

Name of Applicant

The completed Part 2 Application and Pre-Bid Security MUST be received by the Independent Evaluator no later than 12:00 p.m. noon prevailing Eastern Time on the Part 2 Application Due Date as posted in the timeline on the Information Website.

Name of Applicant

CONFIDENTIALITY OF PART 2 APPLICATION SUBMISSIONS

Confidentiality requirements specific to the Part 2 Application are provided below.

CONFIDENTIALITY OF CREDIT INFORMATION

Any information and materials that you submit in this Part 2 Application may be provided on a confidential basis to the Independent Evaluator team and the Pennsylvania Public Utility Commission (the "Commission") and their representatives. Representatives from the Company will decide whether the form of Pre-Bid Security submitted is acceptable; Pre-Bid Security documents will be redacted prior to the closing of the bidding process so as not to reveal an Applicant's identity or the amount of the Applicant's Indicative Offer.

CONFIDENTIALITY OF REGISTERED BIDDERS AND INITIAL ELIGIBILITY

Upon completion of the Part 2 Application process, the names of Registered Bidders will be provided to other Registered Bidders on a confidential basis for each auction independently, as well as the total Initial Eligibility aggregated across all Registered Bidders for each auction. As part of this Part 2 Application, you are required to certify that you agree to release your name to other Registered Bidders and that you will keep confidential the list of Registered Bidders and total Initial Eligibility that is provided to you.

Name of Applicant

PART 2 APPLICATION
Fixed-Price Auction and Hourly-Priced Auction to Procure Default Service Products

This Part 2 Application is the application form to become a Registered Bidder in the FP Auction and/or the HP Auction.

Background Information

Before completing this application, please review the Bidding Rules document, the SMA, and other documents posted on the Information Website so that you understand the conditions under which the FP Auction and HP Auction will be conducted.

Confirmation of Receipt

When your Part 2 Application is submitted online through the Secure Online Application Process, an email will be sent to the Authorized Representative and the Delegate of the Applicant to confirm receipt.

Incomplete Applications

If your Part 2 Application is incomplete or requires clarification, the Independent Evaluator will send a deficiency notice to your Authorized Representative by email. You will have until 12:00 p.m. noon prevailing Eastern Time on the Part 2 Application Due Date, or until 5:00 p.m. prevailing Eastern Time on the Business Day following the Business Day during which a deficiency notice is sent to you, whichever comes later, to respond. If you do not correct or adequately explain the deficiency within the time allowed, your Part 2 Application may be rejected and you may be unable to participate in the FP Auction or the HP Auction. All corrections to remedy deficiencies within an Applicant's Part 2 Application must be submitted online. The Authorized Representative needs to sign and date next to the correction(s) to the Part 2 Application and send a copy as an email attachment to the Independent Evaluator at fepaauction@crai.com or through the Secure Online Application Process.

Late Applications

Part 2 Applications received after the Part 2 Application Due Date will NOT be accepted under any circumstances.

Changes to Part 1 Application

If changes to the Part 1 Application are warranted in order to fulfill the requirements of the Part 2 Application, those changes to the Part 1 Application must be received by the Independent Evaluator no later than 12:00 p.m. noon prevailing Eastern Time seven (7)

Name of Applicant

Business Days prior to the Part 2 Application Due Date. All changes to an Applicant's Part 1 Application must be signed and dated by the Authorized Representative and sent as an email attachment to the Independent Evaluator at fepaauction@crai.com or through the Secure Online Application Process.

Deficient Pre-Bid Security

If your Pre-Bid Security Letter of Credit is not in a form acceptable to the Company your Authorized Representative will be emailed a deficiency notice. You will have until 12:00 p.m. noon prevailing Eastern Time on the Part 2 Application Due Date or 5:00 p.m. prevailing Eastern Time of the second Business Day following the Business Day during which you are notified, whichever comes later, to submit a revised Pre-Bid Security Letter of Credit. If you fail to meet this deadline, your Part 2 Application will be rejected.

If your Pre-Bid Security amount is insufficient for your Indicative Offer, your Authorized Representative will be emailed a deficiency notice. You will have until 12:00 p.m. noon prevailing Eastern Time on the Part 2 Application Due Date or 5:00 p.m. prevailing Eastern Time of the second Business Day following the Business Day during which you are notified, whichever comes later, to submit acceptable Pre-Bid Security. If you cannot correct the deficiency, your Part 2 Application may be rejected or your Initial Eligibility may be reduced by the Independent Evaluator so that your Pre-Bid Security is sufficient to cover your Indicative Offer.

Certifications Regarding Associations

You may be required to provide additional information to the Independent Evaluator and to the Commission and its representatives if you are unable to make the certifications in this Part 2 Application.

Notification to Registered Bidders

If you become a Registered Bidder for the FP Auction and/or the HP Auction, the Independent Evaluator will send your Authorized Representative a Notice of Registration by email after the Part 2 Application Due Date. If there are material changes to the Applicant's information provided in this Part 2 Application, you are obligated to notify the Independent Evaluator.

Prior to the auction date, Registered Bidders will receive information on how to participate in the auction(s) using the Independent Evaluator's secure Bidding Website.

Name of Applicant

Indicative Offers and Pre-Bid Security

Provide your Indicative Offers in Table 1 and Table 2 below. For each auction that you are applying for, you will provide an Indicative Offer at the Minimum Starting Prices and you will provide an Indicative Offer at the Maximum Starting Prices for the products in the auction. For each auction, your Indicative Offer should be the maximum number of tranches that you would be willing to supply at the applicable starting prices subject to the limitations of any applicable load cap for the auction. In each auction itself, you are not required to bid the number of tranches in your Indicative Offer. However, your Initial Eligibility to bid in each auction will be determined by the total number of tranches across the products in your Indicative Offer at the Maximum Starting Prices for that auction.

For the FP Auction, you are required to submit Pre-Bid Security in the form of cash or a Pre-Bid Security Letter of Credit for an amount equal to $500,000 multiplied by the total number of tranches in your Indicative Offer at the Maximum Starting Prices for the FP Auction.

For the HP Auction, you are required to submit Pre-Bid Security in the form of cash or a Pre-Bid Security Letter of Credit for an amount equal to $500,000 multiplied by the total number of tranches in your Indicative Offer at the Maximum Starting Prices for the HP Auction.

If using a Pre-Bid Security Letter of Credit for your Pre-Bid Security, it should be in the form provided on the Information Website or as approved in modified form during the Part 1 Application process.

After completing Tables 1 and 2, complete Table 3 to include the amount of the cash deposit or Pre-Bid Security Letter of Credit that you are providing in support of this Part 2 Application.

Part 2 Application: FEPA Fixed-Price and Hourly-Priced Auctions to Procure Default Service Products

Name of Applicant

Table 1. Indicative Offer at Minimum Starting Prices (prices in $/MWh)

Part 2 Application: FEPA Fixed-Price and Hourly-Priced Auctions to Procure Default Service Products

Name of Applicant

In the following table, indicate the amount of cash deposit or the amount of the Pre-Bid Security Letter of Credit that you are using as your Pre-Bid Security. This amount must be equal to $500,000 multiplied by your Indicative Offer in box [A], plus $500,000 multiplied by your Indicative Offer in box [B] in Table 2 above.

Table 3. Pre-Bid Security Amount

$	Cash
$	Pre-Bid Security Letter of Credit

Name of Applicant

If you are submitting a Pre-Bid Security Letter of Credit, in the space below please provide instructions for returning the Pre-Bid Security Letter of Credit once it can be cancelled.

If you are submitting a cash deposit, you must attach a copy of your W9 (for tax ID) and a copy of your banking information on your company's letterhead, signed and dated. Furthermore, in the space below, please provide wiring instructions for returning your cash deposit.

Name of Applicant

Certifications by Authorized Representative

Please consult the list of Qualified Bidders for the FP Auction and/or the list of Qualified Bidders for the HP Auction provided to you upon qualification. The following certifications are those contained in the "Association and Confidential Information Rules" of the Bidding Rules. Please consult the criteria for associations and the definition of Confidential Information in the Bidding Rules.

Please make the following certifications. All Qualified Bidders, including each party to a Bidding Consortium, Bidding Agreement or Joint Venture for the purpose of bidding in the FP Auction and/or the HP Auction, must make these certifications. The following certifications (1) to (8) will apply from the time of qualification until the results of the Default Service Auctions, are finalized. Completion of the following certifications also signifies your acknowledgement that you do not know of or cannot reasonably anticipate, at the time of this Part 2 Application, any events that might cause these certifications to become untrue during the period to which each certification applies. If you cannot make one or more of these certifications, please disclose the necessary information to explain why you cannot make these certifications.

(1) Please certify that you are not associated with another Qualified Bidder according to the criteria as defined in the Bidding Rules.

Signature of Authorized Representative Date

If unable to make certification (1) requested above, please identify the Qualified Bidder(s) in the FP Auction and/or the HP Auction, with whom you are associated along with the nature of the association.

Name of Applicant

(2) Please certify that, other than parties explicitly named in Section 1.11 of your Part 1 Application as parties with whom you have entered into a Bidding Agreement, Joint Venture, Bidding Consortium, or other arrangement pertaining to bidding in the FP Auction and/or the HP Auction, you have not entered into any agreement with another Qualified Bidder, directly or indirectly, regarding bids in the FP Auction and/or the HP Auction, including, but not limited to, the amount to bid at certain prices, and when or at what prices bids are to be withdrawn.

Signature of Authorized Representative Date

(3) Please certify that any person who will be advising or assisting you with bidding strategy in the FP Auction and/or the HP Auction, with estimation of the value of tranches, or with the estimation of the risks associated with serving Default Service Load (an **advisor**), will either (i) not provide any similar advice or assistance to any other Qualified Bidder; or (ii) if such person will provide similar advice or assistance to another Qualified Bidder, or if such person will be privy to Confidential Information relative to any other Qualified Bidder's bidding strategy, that appropriate protections have been put into place to ensure that the advisor does not serve as a conduit of information among, or as a coordinator of the bidding strategies of, multiple bidders, and please describe such appropriate protections in the space below.

Signature of Authorized Representative Date

If unable to make certification (3) requested above, please name the advisor(s) and the Qualified Bidder(s) concerned.

Name of Applicant

(4) Please certify that you are not a party to any contract for the purchase of power that might be used as a source of supply for Default Service, and that (i) would require the disclosure of any Confidential Information (Confidential Information relative to the bidding strategy or Confidential Information regarding the FP Auction and/or the HP Auction) to the counterparty under such a contract; or (ii) that would require the disclosure of any Confidential Information (Confidential Information relative to the bidding strategy or Confidential Information regarding the FP Auction and/or the HP Auction) to any other party; or (iii) that would provide instructions, direct financial incentives, or other inducements for the Bidder to act in a way determined by the counterparty in the agreement and/or in concert with any other Bidder in the FP Auction and/or the HP Auction. Notwithstanding the above, you may, during negotiations prior to the FP Auction and/or the HP Auction for contractual arrangements for power to serve Default Service Load were you to be a winner at the FP Auction and/or the HP Auction, discuss with the counterparty to such arrangements the nature of the standard products to be purchased, the volume, and the price at which you are willing to buy these products, so long as such arrangements do not result in violation of (i), (ii) or (iii) above.

Signature of Authorized Representative Date

If unable to make certification (4) requested above please disclose the contractual terms that prevent you from making the certification. Please identify the counterparty and if applicable, the party to whom information disclosure must be made under the terms of the contract.

(5) Please certify that you do not have any knowledge of Confidential Information that is relevant to the bidding strategy of any other Qualified Bidder.

Signature of Authorized Representative Date

Name of Applicant

If unable to make certification (5) requested above please name the other Qualified Bidder(s) and the nature of the Confidential Information

(6) Please certify that you will not disclose Confidential Information relative to your bidding strategy except to bidders that were explicitly named in your Part 1 Application as parties with whom you have entered into a Bidding Agreement, Joint Venture, or Bidding Consortium, or other arrangement pertaining to bidding in the FP Auction and/or the HP Auction, Bidders with which you are associated as disclosed through certification (1), to your advisors, and to your financial institution.

Signature of Authorized Representative Date

If unable to make certification (6) requested above, please explain.

(7) Please certify that, other than entities with which you are affiliated and other than bidders with which you have entered a Bidding Agreement, or Joint Venture, or Bidding Consortium, or other arrangement pertaining to the FP Auction and/or the HP Auction, no party has agreed to defray any of the costs of participating in the FP Auction and/or the HP Auction, including the cost of preparing the bid, the cost of any financial guarantees, the cost to be paid upon winning a tranche, and any other participation cost.

Signature of Authorized Representative Date

Name of Applicant

If unable to make certification (7) requested above, please explain.

(8) Please certify your agreement that the submission of any bid in the FP Auction and/or the HP Auction creates a binding and irrevocable offer to provide service under the terms set forth in the SMA and that a binding and enforceable contract to provide service with respect to the number of tranches for which you were a winner in the FP Auction and/or the HP Auction shall arise under the SMA. Please note that failure to execute the SMA within three (3) Business Days following the date of the Commission's approval of the auction results may result in the forfeiture of the Pre-Bid Security Letter of Credit.

Signature of Authorized Representative Date

If unable to make certification (8) requested above, please explain.

The following certifications (9), (10) and (11) will apply from the date on which you make the certifications.

(9) Please certify that if you are registered to participate in the FP Auction and/or the HP Auction, you will not disclose at any time information regarding the Initial Eligibility in the FP Auction and/or the HP Auction or the list of Registered Bidders, including the number of Registered Bidders, the identity of any one or all entities that have been registered, or the fact that an entity has not been registered for participation in the FP Auction and/or the HP Auction.

Signature of Authorized Representative Date

Name of Applicant

(10) Please certify that you will not disclose any Confidential Information regarding the FP Auction and/or the HP Auction to any party except your advisors and Bidders with which you are associated as disclosed in certification (1).

Signature of Authorized Representative Date

If unable to make certification (10) requested above, please explain.

(11) Please certify that you will continue to abide by your prior confidentiality certifications. You will not disclose any Confidential Information regarding the FP Auction and/or the HP Auction to any party except to your advisor and Bidders with which you are associated. Please certify that you will destroy all documents, written or electronic, provided by the Independent Evaluator that contain Confidential Information regarding the FP Auction and/or the HP Auction within five (5) days of the close of the bidding, or earlier if so instructed by the Independent Evaluator

Signature of Authorized Representative Date

If unable to make certification (11) requested above, please explain.

Name of Applicant

Ongoing Obligations

Please note that all obligations, terms and conditions set forth in the Bidding Rules and SMA remain in effect and apply to the certifications made herein, including but not limited to the following:

- Section 4.2.3 of the Bidding Rules - Sanctions may be imposed on a Bidder for failing to abide by any of the certifications that it will have made in its Part 1 and Part 2 Applications. Such sanctions can include, but are not limited to, termination of the SMA, loss of all rights to provide supply for the Company to serve any load won by such bidder, forfeiture of financial guarantees and other fees posted or paid, prosecution under applicable state and federal laws, debarment from participation in future solicitations, and other sanctions that may be appropriate.

Justification of Omissions

If you are unable to provide all documents or all information requested in this Part 2 Application, please justify fully any omissions in the space provided below.

APPENDIX A — EXAMPLE OF ROUND-BY-ROUND BIDDING 36

1. INTRODUCTION

These Bidding Rules apply to the auctions to procure Default Service products for FirstEnergy Pennsylvania Electric Company ("FE PA") for all of its retail customers that take retail generation service from the Company.

Default Service products for residential and commercial customers will be procured in a separate auction ("Residential/Commercial Auction" or "Fixed-Price Auction" or "FP Auction") from the auction for industrial customers ("Industrial Auction" or "Hourly-Priced Auction" or "HP Auction"). Unless otherwise noted, these Bidding Rules apply to each auction.

Bidders need to be familiar with the Supplier Master Agreement ("SMA"), the Bidding Rules, and all other documents for the auctions, including the Part 1 Application and the Part 2 Application which apply to both auctions. Bidders should visit the Information Website regularly for up-to-date information, including information specific to each auction. The Information Website contains relevant data, the schedule and key dates for participating in the auction process, frequently asked questions, and other information.

The following documents are appended to, and shall be considered integral parts of, these Bidding Rules:

Appendix 1	Part 1 Application for Fixed-Price and Hourly-Priced Auctions to Procure Default Service Products
Appendix 2	Part 2 Application for Fixed-Price and Hourly-Priced Auctions to Procure Default Service Products
Appendix 3	Sample Pre-Bid Letter of Credit

Unless noted otherwise, "days" refer to business days and times refer to prevailing Eastern Time. Capitalized terms in this document, which are not defined explicitly herein, are defined in the SMA. In accordance with the SMA, "Default Service" and "DS" are equivalent (e.g., "Default Service Load" in these Bidding Rules corresponds to "DS Load" in the SMA).

Examples in these Bidding Rules are illustrative only.

These Bidding Rules may be modified from time to time by the Independent Evaluator in order to: (i) facilitate a more competitive auction process, (ii) make any necessary corrections and/or clarifications, (iii) account for any change in auction products, (iv) conform to any change in state or federal law or rule, and (v) apply any change deemed necessary at the discretion of the Independent Evaluator. All modifications will be posted to the Information Website and carried out in consultation with the Company.

1.1 Independent Evaluator

The Independent Evaluator is CRA International, Inc. d/b/a Charles River Associates ("CRA"). The Independent Evaluator (also referred to as the Auction Manager) can be contacted by sending an email to fepaauction@crai.com. The full contact information for the Independent Evaluator is as follows:

Independent Evaluator
c/o ~~Brad Miller~~Robert Lee, Vice President
CRA International, Inc.
200 Clarendon Street, T-9
Boston, MA 02116-5092
Phone: 617.425.~~3384~~3365
fepaauction@crai.com

2. THE PRODUCTS BEING PROCURED

This section summarizes the common elements of the products to be procured in the auctions. The Information Website provides details about the products to be procured in a specific auction, including the delivery periods, the number of tranches, and the nominal MW size of the tranches.

2.1 Default Service Load

Default Service Load is the Company's aggregate requirement to serve its Default Service customers. For purposes of these Bidding Rules, a "Default Service Customer" is a retail customer of the Company taking Default Service.

2.2 Full Requirements Service

The auctions are designed to procure full requirements, load-following energy and energy-related services for Default Service Customers of the Company.

Obligations of Default Service Suppliers include the following:

- Assume all responsibilities of a PJM Load Serving Entity ("LSE"), including all PJM administrative expenses and any other services or fees as required by PJM of an LSE.
- Provide for energy.
- Provide for capacity.
- Provide for ancillary services.
- Meet the requirements of the Alternative Energy Portfolio Standards Act ("AEPS Act" or "AEPS")
- ~~Provide for transmission service, including Network Integration Transmission Service ("NITS").~~

Obligations of Default Service Suppliers exclude the following:

- Regional Transmission Expansion Plan charges ("RTEP");
- Transmission service, including Network Integration Transmission Service ("NITS");
- PJM Expansion Cost Recovery charges ("ECRC");
- Reliability Must Run / Generation Deactivation charges ("RMR") associated with generating plants for which specific RMR charges begin after the approval of the Company's current Default Service Plans ("DSP-VII") by the Pennsylvania Public Utility Commission ("Commission"). All Suppliers will continue to be responsible for RMR charges associated with generating plants that began before the approval of DSP-III by the Commission, as those charges may change over time;
- Unaccounted for Energy;
- Historical out of market tie line, generation and retail customer meter adjustments; or
- Any Federal Energy Regulatory Commission ("FERC")-approved reallocation of PJM Regional Transmission Expansion Plan charges related to Docket No. EL05-121-009.

~~**Alternative Energy Portfolio Standards Act ("AEPS Act" or "AEPS") credits needed to meet the requirements of the Company's Default Service Load**~~

~~It is the responsibility of Default Service Suppliers to provide all Alternative Energy Credits ("AECs") necessary to meet the AEPS obligations, except for certain Solar Photovoltaic Alternative Energy Credits ("SPAECs").~~

- ~~During the first year of DSP VII, Default Service Suppliers in the Met-Ed, Penelec, and Penn Power Rate Districts will be allocated a portion of the SPAECs from the long-term SPAEC contracts that expire on May 31, 2024.~~
- ~~Once the PaPUC approves the long-term solar procurement for DSP VI, FE PA will allocate a portion of the SPAECS from the long-term procurement to Residential Default Service Providers in its Met-Ed, Penelec, Penn Power and West Penn Power Rate Districts.~~
- ~~FE PA will provide in each transaction confirmation a quantity of SPAECs that will be allocated to the supplier, either as a percentage of the supplier's obligation or as a fixed quantity.~~

The requirements of Default Service Suppliers are described more specifically in the SMA.

Formatted: Not Highlight

2.3 Tranches

Default Service Load will be divided into identical units called tranches, each representing a defined percentage of Default Service Load. For example, if there are 25 tranches for a given customer class, then each tranche equals one divided by twenty-five, or four percent of that class's load. This includes four percent (4%) of the actual hourly energy required for Default Service Load for the applicable delivery period as well as four percent (4%) of the PJM capacity requirement for the applicable delivery period.

The number of tranches intended to be procured in the auction for a product is referred to as the "tranche target" for that product. The Independent Evaluator may reduce the tranche targets if indications of interest in the auction are such that doing so is required to promote more competitive bidding.

3. PRICES PAID TO DEFAULT SERVICE SUPPLIERS

This section summarizes the components of the prices to be paid to Default Service Suppliers. The SMA takes precedent over the summary provided here.

3.1 Prices Paid to Winning Suppliers in the Fixed-Price Auction

In accordance with the SMA, the Default Service Suppliers from the Fixed-Price Auction for residential customer load will be paid a price comprising a fixed-price component and a variable price component while the Default Service Suppliers from the Fixed-Price Auction for commercial customer load will be paid a price comprising a fixed-price component only.

- The residential fixed-price component will be equal to 100 percent (100%) of the delivered supply each hour multiplied by the price established through the Company's competitive procurement process.

- The commercial fixed-price component will be equal to 100 percent (100%) of the delivered supply each hour multiplied by the price established through the Company's competitive procurement process.

3.2 Prices Paid to Winning Suppliers in the Hourly-Priced Auction

In accordance with the SMA, the Default Service Suppliers from the Hourly-Priced Auction will be paid a price comprising a fixed-price component and a variable price component.

- The fixed-price component will be equal to 100 percent (100%) of the delivered supply each hour multiplied by the price established through the Company's competitive procurement process.

- The variable price component will be equal to 100 percent (100%) of the delivered supply each hour multiplied by ~~a "spot price." The "spot price" will be equal to the sum of:~~ the real time hourly total LMP for the Delivery Point. ~~is the real time hourly total LMP established by PJM for the PJM delivery point of the applicable Company, plus~~

  (a) ~~An adder of $4/MWh. This adder is designed to capture an estimate of costs of other supply components associated with meeting the full-requirements obligation, including capacity, ancillary services, NITS, AEPS compliance, and other costs~~.

Formatted: Keep with next

4. PRIOR TO THE START OF BIDDING

4.1 Information Provided to Bidders

The Company will make available certain information to suppliers in advance of qualification. This information will be posted on the Information Website.

4.1.1 Data

Load and other data that are posted to the Information Website are described in a data description document on the Information Website.

4.1.2 Minimum and Maximum Starting Prices

The Independent Evaluator will announce a minimum starting price and a maximum starting price for each product in the auction. The minimum and maximum starting prices establish the range for the possible round 1 prices for the auction.

4.1.3 Tranche Size, Tranche Targets

No later than eight (8) days prior to the Part 1 Application Due Date, the Independent Evaluator will announce for each product in the auction:

- The tranche targets or the number of tranches being procured for each product.
- The size (%) and MW-measure of the tranches in the auction.

No later than four (4) days prior to the Part 2 Application Due Date, the Independent Evaluator will announce:

- Any update to the MW-measure of the tranches in the auction.

4.2 Qualification Process

There are two parts to the bidder application and qualification process. In Part 1, prospective bidders apply to become Qualified Bidders. In Part 2, each Qualified Bidder provides certifications and its indicative offer and pre-bid security in order to become a Registered Bidder.

A prospective bidder is required to submit a new Part 1 Application before the first auction in a calendar year in which it would like to participate.

If a prospective bidder submits a successful Part 1 Application for an upcoming auction, in general the Qualified Bidder will not need to submit a new Part 1 Application for any subsequent auction that is held in the same calendar year as the upcoming auction. For example, if the prospective bidder submits a successful Part 1 Application and becomes a Qualified Bidder for an auction held in January, the Qualified Bidder generally would not need to submit a Part 1 Application prior to any other auctions held in the same calendar year. However, the Qualified Bidder will need to submit a new Part 1 Application if the information in the prior successful Part 1 Application has changed. Also, the Qualified Bidder is required to submit its most recent (e.g., quarterly) financial statements before each auction.

A Qualified Bidder is required to submit a new Part 2 Application before each auction it would like to participate in.

4.2.1 Part 1 Application: Certifications and Other Qualified Bidder Requirements

In the Part 1 Application process, prospective bidders will be required to:

- Submit an application from a person with the power to bind the bidder.
- Agree to comply with all rules of the auction.
- Agree that if they become winning bidders, they will execute the applicable SMA with the Company within 3 business days following the date of the Commission's approval of the auction results.
- Show either that they are a PJM Market Participant and Load Serving Entity in PJM, or that there exist no impediments to them becoming a PJM Market Participant and Load Serving Entity in PJM by the start of the applicable delivery period.
- Agree that if they become winning bidders, they will comply with the creditworthiness requirements set forth in the SMA.
- Certify that if they qualify to participate, they will not disclose information regarding the list of Qualified Bidders or confidential information that may be obtained during the bidding process about Qualified Bidders.
- Certify that if they qualify to participate, they will not substitute another entity in their place, transfer their rights to another entity, or otherwise assign their status as Qualified Bidders to another entity.

Part 1 Applications must be submitted to the Independent Evaluator no later than 12:00 p.m. noon prevailing Eastern Time on the Part 1 Application Due Date. Prospective bidders will be notified by the Independent Evaluator no later than three (3) days after the Part 1 Application Due Date whether they succeeded in becoming Qualified Bidders.

A prospective bidder that has qualified during the Part 1 Application process becomes a Qualified Bidder. The Independent Evaluator will send a list of all Qualified Bidders to relevant parties that have undertaken to maintain the confidentiality of the list of Qualified Bidders. The relevant parties that will receive this list of Qualified Bidders are as follows:

- Each Qualified Bidder.
- Other parties as necessary to oversee the proper conduct of the auction, including representatives from the Company and Commission Staff.

All parties receiving a list of Qualified Bidders will be subject to the confidentiality requirements as specified below and in the section, “Communications Protocols,” in these Bidding Rules.

4.2.2 Part 2 Application: Certifications, Indicative Offer, and Pre-Bid Security

For each auction, a Qualified Bidder must successfully complete the Part 2 Application process in order to become a Registered Bidder that can bid in the auction. Only Qualified Bidders may submit a Part 2 Application.

Part 2 Applications must be submitted to the Independent Evaluator no later than 12:00 p.m. noon prevailing Eastern Time on the Part 2 Application Due Date. Qualified Bidders will be notified by the Independent Evaluator whether they succeeded in the Part 2 Application process no later than three (3) days after the Part 2 Application Due Date.

Certifications

In the Part 2 Application, each Qualified Bidder will make a number of certifications to ensure the confidentiality of information regarding the auction, and in regards to associations with other Qualified Bidders, to ensure that they are participating independently of other Qualified Bidders. More details on the certifications can be found in the section, “Confidential Information, Certifications, and Sanctions,” later in this document.

The competitiveness of the auction and the ability of the auction to produce competitive prices may be harmed by the coordinated or collusive behavior that associations among bidders may facilitate. As the Independent Evaluator relies on a number of factors to assess and promote competitive bidding, including the number of independent competitors, providing inaccurate information or insufficient disclosure of associations in the Part 2 Application is prohibited. More details on rules and protocols for participation by associated bidders can be found in the section, “Bidder Associations,” later in this document.

Indicative Offers

With its Part 2 Application, a Qualified Bidder will be required to submit indicative offers and to post pre-bid security sufficient for their indicative offers. A Qualified Bidder provides two indicative offers for each

auction that the Qualified Bidder is applying to participate in: one indicative offer at the minimum starting prices for the products in the auction, and one indicative offer at the maximum starting prices for the products in the auction. An indicative offer specifies for each product in the auction the number of tranches that the Qualified Bidder is willing to serve for that product. Thus, the indicative offer at the minimum starting prices in the auction specifies the number of tranches that the Qualified Bidder is willing to serve for each product in the auction at the minimum starting price for the product. The indicative offer at the maximum starting prices in the auction specifies the number of tranches that the Qualified Bidder is willing to serve for each product in the auction at the maximum starting price for the product. For each product in the auction, the number of tranches specified in the indicative offer at the minimum starting price cannot exceed the number of tranches specified in the indicative offer at the maximum starting price.

Indicative offers are important in two respects. First, the Independent Evaluator may use the indicative offers to inform the setting of the starting price for each product (i.e., round 1 announced price). Second, the total number of tranches in the Qualified Bidder's indicative offer at the maximum starting prices is used to determine the Qualified Bidder's initial eligibility (i.e., the maximum total number of tranches the Qualified Bidder can bid across all products in round 1 of the auction): the Qualified Bidder's initial eligibility is set to the total number of tranches across all products in the Qualified Bidder's indicative offer at the maximum starting prices. During the auction, bidders are free to switch their tranches among products in response to changes in announced prices (subject to any bidding restrictions). However, a bidder will never be able to bid a total number of tranches across products that exceeds the bidder's initial eligibility. Thus, the number of tranches for each product in the Qualified Bidder's indicative offer at the maximum starting prices does not limit the number of tranches the Qualified Bidder can bid on a particular product, but the total number of tranches across all products in the indicative offer at the maximum starting prices must be equal to the Qualified Bidder's desired initial eligibility across all products in the auction.

Restrictions on the Indicative Offer: Load Cap

Each Qualified Bidder will be subject to a load cap that limits the number of tranches the bidder can bid on and win. Thus, the Qualified Bidder's indicative offer at the maximum starting prices across all products in the auction is not allowed to exceed the load cap. The load cap will be 50 percent for fixed-price products and 75 percent for hourly-price products on an aggregated load basis across all products in each auction such that no bidder may bid on and win more tranches than the load cap. The load cap will be implemented by ensuring that each bidder's initial eligibility does not exceed the load cap in an auction.

Restrictions on the Indicative Offer: Credit-Based Tranche Cap

A Qualified Bidder may have a credit-based tranche cap that limits the Qualified Bidder's initial eligibility. The Qualified Bidder's indicative offer at the maximum starting prices across all products in the auction is not allowed to exceed the Qualified Bidder's credit-based tranche cap. This credit-based tranche cap is based on the credit rating of the Qualified Bidder or its Guarantor. A Qualified Bidder's credit-based tranche cap is determined as shown in Table 1.

Table 1. Credit-Based Tranche Cap

Credit Rating of Qualified Bidder or Guarantor			**Credit-Based Tranche Cap**
S&P	**Moody's**	**Fitch**	
BBB- & up	Baa3 & up	BBB- & up	Unlimited up to auction's tranche target
BB+/BB	Ba1/Ba2	BB+/BB	8 tranches
BB- & below	Ba3 & below	BB- & below	4 tranches
If not rated by any of those rating agencies			4 tranches

Note that the parameters in the table above may vary by auction and over time, at the sole discretion of the Company.

To be assigned a credit-based tranche cap greater than the minimum credit-based tranche cap, the Qualified Bidder or its Guarantor must:

- Be rated by at least one of the following rating agencies: Standard & Poor's Rating Services ("S&P"), Moody's Investors Service, Inc. ("Moody's"), or Fitch, Inc. ("Fitch"), and
- Have a senior unsecured debt rating (or, if unavailable, corporate or issuer rating).

If the Qualified Bidder or Guarantor is rated by only one rating agency, that rating will be used. If the Qualified Bidder or Guarantor is rated by only two rating agencies, and the ratings differ, the lowest rating will be used. If the Qualified Bidder or Guarantor is rated by the three rating agencies, and the ratings differ, the lower of the two highest ratings will be used; provided that, in the event that the two highest ratings are common, such common rating will be used.

If a Qualified Bidder is not rated by any of the rating agencies, the Qualified Bidder's credit-based tranche cap will be the minimum credit-based tranche cap as shown in Table 1.

The credit-based tranche cap is in effect only during the bidding process. After the SMA has been executed by a winning bidder, the credit-based tranche cap no longer will be in effect and the Default Service Supplier will be required to meet the credit terms in accordance with the SMA.

Pre-Bid Security

Each Qualified Bidder must post pre-bid security sufficient for its indicative offer at the maximum starting prices. Each Qualified Bidder must post pre-bid security in an amount specified in the Part 2 Application for all products included in the bidder's indicative offer at the maximum starting prices. Either cash or a pre-bid letter of credit will be accepted as pre-bid security. Letters of Credit can be submitted as a hardcopy or in electronic form. Interest will not be paid on cash posted as pre-bid security. The standard form of the pre-bid letter of credit that is acceptable to the Company will be posted to the Information Website.

If a draft pre-bid letter of credit submitted by the prospective bidder with the Part 1 Application does not conform to the standard form, the prospective bidder shall indicate clearly any and all modifications in electronic, redlined format from the standard form. The Company will assess, in its sole and exclusive discretion, whether such modifications are acceptable. Modifications that are accepted by the Company will be posted on the Website. Subsequently in its Part 2 Application, a Qualified Bidder must provide the required executed pre-bid letter of credit that either is the standard form or is the version that incorporates only those modifications to the standard form accepted by the Company upon review of the bidder's Part 1 Application.

The following is an example calculation of the pre-bid security.

Example 1. Pre-Bid Security

A Qualified Bidder submits an indicative offer of 5 tranches for the Met-Ed 24-month residential product at the minimum starting price and 10 tranches for the Met-Ed 24-month residential product at the maximum starting price, 3 tranches for the Penelec 12-month residential product at the minimum starting price and 6 tranches for the Penelec 12-month residential product at the maximum starting price, and 2 tranches for the Penn Power 12-month commercial product at the minimum starting price and 4 tranches for the Penn Power 24-month commercial product at the maximum starting price. The Qualified Bidder must submit with this indicative offer of 20 tranches at the maximum starting prices cash or a pre-bid letter of credit of $500,000 per tranche (as specified in the Part 2 Application). The Qualified Bidder thus posts cash or a pre-bid letter of credit of $10 million (20 tranches X $500,000 per tranche).

For a Part 2 Application to be accepted, it must be complete and include the Qualified Bidder's indicative offers and pre-bid security (either a pre-bid letter of credit or cash). After its Part 2 Application is accepted, a Qualified Bidder becomes a Registered Bidder. The Independent Evaluator will send each Registered Bidder a summary of its indicative offers, pre-bid security amount, and the Registered Bidder's initial eligibility.

The Independent Evaluator also will send simultaneously to each Registered Bidder, and to those other parties as necessary to oversee the proper conduct of the auction, a list of Registered Bidders, and the total initial eligibility aggregated across all Registered Bidders. The list of Registered Bidders and the total initial eligibility will not be released publicly. Qualified Bidders, in their Part 2 Applications, will have undertaken to maintain the confidentiality of the list of Registered Bidders and the total initial eligibility, and to destroy documents including electronic files with this information provided by the Independent Evaluator within five (5) days following the conclusion of the auction, as explained further in the Part 2 Application.

Pre-bid security will remain in full force, at a minimum, until the fifth calendar day after the conclusion of the auction. Subsequently, a bidder's pre-bid security will be cancelled and returned:

- For non-winning bidders: as soon as practicable after the Commission issues its post-auction Secretarial Letter.

- For winning bidders: after the bidder has signed the SMA and has complied with all creditworthiness requirements of the SMA for the tranches that the bidder has won.

The Company can collect on the pre-bid security of bidders that win tranches but that fail to sign the SMA or fail to comply with the creditworthiness requirements immediately following the close of the auction.

4.2.3 Sanctions for Failing to Comply with the Part 1 and Part 2 Applications

Sanctions can be imposed on a bidder for failing to disclose information relevant to determining associations, for coordinating with another bidder, or for failing to abide by any of the certifications that it will have made in its Part 1 and Part 2 Applications. Such sanctions can include, but are not limited to, termination of the SMA, loss of all rights to provide supply for the Company to serve any load won by such bidder, forfeiture of financial guarantees and other fees posted or paid, prosecution under applicable state and federal laws, debarment from participation in future solicitations, and other sanctions that may be appropriate. For any failure to disclose information or for any violation of the certifications, the Independent Evaluator will make a recommendation on a possible sanction.

4.3 Starting Prices (Round 1 Prices)

No later than three (3) days before bidding starts for an auction, the Independent Evaluator will inform all Registered Bidders of the starting price for each product in the auction, which is the announced price that will be in effect for round 1. For each product, the starting price will be no higher than the maximum starting price and no lower than the minimum starting price for the product. The Independent Evaluator will set the starting prices.

4.4 Extraordinary Events

The Independent Evaluator, in consultation with the Company, may determine that, due to extraordinary events, the minimum starting prices and the maximum starting prices require revision. In this event, the schedule for the auction process also may be revised. If the indicative offers have already been received, the Independent Evaluator will request that the Registered Bidders (or the Qualified Bidders if the Part 2 Application process had not been completed) revise their indicative offers on the basis of the revised minimum starting prices and the revised maximum starting prices.

For such a revision to be necessary, an extraordinary event must occur between the time at which the minimum starting prices and the maximum starting prices are announced and the day on which bidding starts. An extraordinary event must be agreed to by the Company and the Independent Evaluator. Such events could include, but are not limited to, the advent of war, the disruption of a major supply source for potentially extended periods, or other events that could affect significantly the cost of supply.

If an extraordinary event occurs during that time, the Independent Evaluator in consultation with the Company will determine revised minimum starting prices and revised maximum starting prices. New indicative offers based on these prices will be required from bidders. To the extent practicable, the determination of new minimum and maximum starting prices, the submission of new indicative offers, and if necessary the announcement of new starting prices, will be carried out so as to afford bidders sufficient time. If an extraordinary event occurs during that time that causes a possible change in the schedule, the Independent Evaluator in consultation with the Company and Commission Staff, will determine a revised schedule.

5. BIDDING FORMAT

In order to participate in the auction, bidders must have been successful in the Part 1 Application process and the Part 2 Application process. Only Registered Bidders are permitted to participate in the auction. Registered Bidders will bid in the auction by accessing the Independent Evaluator's secure Bidding Website.

5.1 Descending-Price Clock Format

The auction format is a simultaneous, multiple-round, descending-price clock format for "N" rounds. The number of rounds "N" for the auction is not pre-determined. Instead, it is determined by the closing rule for the auction (described below). All products are available to bid on simultaneously in the auction. Bids are submitted during bidding rounds. Prices are announced for the products prior to each bidding round, and during a bidding round, a bidder submits for each product the number of tranches it would supply at the product's announced price. If the total number of tranches bid on a product exceeds the product's tranche target — i.e., the product is over-subscribed — the announced price for the product will be reduced for the next round. Announced prices will tend to decline round by round until the number of tranches bid falls sufficiently so that no product is over-subscribed and the auction closes.

An important rule is that a bidder cannot reduce the number of tranches it bids on a product if the product's announced price does not fall from one round to the next; in this case, the bidder can only maintain or increase the number of tranches it bids on the product (subject to other rules).

5.1.1 Rounds

Each bidding round has a specified start time and a specified end time. These start and end times are enforced by the Bidding Website. Prior to the start of the auction, the initial schedule of rounds will be available on the Bidding Website. As the auction progresses, the Independent Evaluator will keep bidders informed of the start and end times of subsequent rounds through the Bidding Website. The Independent Evaluator retains the option of pausing a round, delaying the start or end of a round, or otherwise adjusting the round times. The Independent Evaluator will inform bidders through the Bidding Website if it exercises this discretion to change the start time or end time of a round.

Bidders submit bids only during a round. When a round ends, the bids submitted during that round are processed and results of that round are reported to all bidders as explained in the section "Reporting Round Results" below. Each bidder then prepares to submit a bid for the next round if the auction remains open.

5.1.2 The Announced Prices and a Bid

Prior to the start of each round, the Independent Evaluator announces the price that will be in effect for each product for the round. The announced prices are specified in dollars per MWh or $/MWh. The price announced by the Independent Evaluator for a product applies to all of the product's tranches. Each bidder decides how many tranches it is willing and able to supply for each product at the product's announced price. A bid by a bidder is, for each product, the number of tranches that the bidder is willing to supply at that announced price for the product. All bids are irrevocable and binding upon the bidders.

At sufficiently high announced prices there will be excess supply for a product causing it to be over-subscribed; that is, the number of tranches bid on the product will exceed the product's tranche target. Excess supply for a product is measured as the total number of tranches bid across all bidders on the product in the round minus the product's tranche target.

5.1.3 Reservation Prices and Starting Prices

There are reservation prices for the auction. The reservation price for a product is the price above which tranches for the product will not be purchased. If, at the conclusion of the auction, the reservation price for a product has not been met, no tranches for that product will be awarded. At the conclusion of the auction, the Independent Evaluator will inform bidders through the Bidding Website if the reservation price for a product has not been met.

Starting prices for the auction are determined after reservation prices are determined. The starting price for a product will be no lower than the reservation price for the product. The starting price may be the same as or higher than the reservation price for the product. The Independent Evaluator will not announce the reservation prices to bidders in advance of an auction.

5.1.4 Restrictions on What a Bidder Can Bid

The total number of tranches a bidder bids across all products in a round cannot exceed the bidder's eligibility for that round. That is, a bidder's eligibility to bid in a round is the maximum number of tranches it is allowed to bid across all products in that round. A bidder's eligibility for a round simply is the number of tranches the bidder bid across all products in the preceding round. Thus, a bidder cannot increase its eligibility from round to round; its eligibility can only stay the same or decrease from round to round.

A bidder is not allowed to bid more tranches on a product in a round than the product's tranche target.

A bidder is not allowed to bid a number of tranches that would violate any applicable load cap.

If the announced price for a product has been reduced from one round to the next round, the bidder can reduce the number of tranches it bid on that product.

If the announced price for a product has not been reduced from one round to the next round, the bidder cannot reduce the number of tranches it bid on that product.

Subject to the rules above, in each round a bidder is free to bid its tranches of eligibility across products however it would like to. Thus, subject to the rules above, bidders are free to reduce the tranches they bid and/or to switch tranches across products from round to round in response to changes in the announced prices for the products.

As discussed above, a bidder's initial eligibility is its eligibility for round 1 of the auction and is determined by the total number of tranches across products at the maximum starting prices in the bidder's indicative offer. During the course of the auction, the bidder's eligibility will decline or remain unchanged depending on the total number of tranches bid by the bidder across all products in each round of the auction.

If a bidder's eligibility falls to zero tranches, it will not be allowed to bid in any more rounds of the auction.

5.1.5 Multiple Bids by a Bidder

Because a bidder may decide to change a bid it submitted previously within the current open round, a bidder is allowed to make multiple bid submissions in a round as long as the round remains open for bidding, with each new confirmed bid fully replacing any prior bids it submitted in the round. If a bidder submits multiple bids in a round, the only bid considered in the round for that bidder is the last confirmed bid it submitted in the round.

5.1.6 Default Bid

After the end of a round, a default bid is submitted automatically on behalf of a bidder if the bidder:

- Entered the round with positive eligibility, and
- Did not submit a confirmed bid in the round.

If the announced price for a product declined from the prior round, then zero tranches will be the default bid for that product.

If the announced priced for a product did not decline from the prior round, then the number of tranches that the bidder bid on the product in the prior round as determined by the end-of-round ("EOR") procedure following the prior round will be the default bid for the product.

Each bidder is solely responsible for ensuring it submits a confirmed bid prior to the end of the round in order to avoid a default bid of being submitted on the bidder's behalf.

5.1.7 The EOR Procedure

At the end of each round, the EOR procedure is used to process the confirmed bids submitted during the round. The EOR procedure includes the following steps.

(a) The supply for each product is measured by summing up — across the confirmed bids for all bidders — the number of tranches bid for each product.

(b) The subscription level for each product is measured by comparing the supply for the product to the tranche target for the product. A product is over-subscribed, subscribed, or under-subscribed if supply (i.e., the number of tranches bid) is greater than, equal to, or less than the product's tranche target, respectively.

(c) If a product has become under-subscribed in a round after being over-subscribed or subscribed in the preceding round, then tranches will be rolled back to the point that the product is subscribed. That is, at least some of the tranches that were bid on the product in the preceding round but that were not bid on the product this round will be deemed to still be bid on the product. The price at which a rolled-back tranche is deemed to have been bid simply is the announced price at which the bidder had bid the tranche. There is a priority for selecting tranches to roll back: tranches that otherwise would no longer be bid on any product in the auction and therefore would be reductions in bidders' eligibilities are rolled back first (referred to as "eligibility reduction tranches"), and then if needed, tranches that were switched from being bid on the product to being bid on another product are selected next for rollbacks (referred to as "switched tranches"). Eligibility reduction tranches are selected for rollback proportionally tranche by tranche, not bidder by bidder. Likewise, switched tranches are selected for rollback proportionally tranche by tranche, not bidder by bidder. More precisely, because integer tranches are needed, the actual selection mechanism uses a random number generator to select rollbacks tranche by tranche (first for eligibility reduction tranches and then for switched tranches), but on average the selection process results in proportional rollbacks (with priority given to rolling back eligibility reduction tranches first and then switched tranches second). All tranches that are rolled back maintain their eligibility for the bidder. Any bidder subjected to a rollback will be notified through the Bidding Website that a rollback has taken place and will be informed about the number of tranches deemed bid on each product and the price at which those tranches have been deemed bid.

> For example, suppose a bidder bids five tranches on a product and no tranches on other products in round 8, and the price for that product is reduced for round 9 and the bidder bids only 1 tranche on the product and no tranches on other products for round 9. Absent any EOR rollbacks following round 9, the bidder's eligibility would fall from 5 tranches to 1 tranche. But during the EOR procedure, suppose two of the bidder's 4 "eligibility reduction tranches" are rolled back on the product, so after the EOR procedure the bidder is deemed to have bid 3 tranches on the product — one at the announced price of the round just ended and two at the announced price of the preceding round — and therefore the bidder is deemed to have 3 tranches of eligibility for round 10.

(d) "Free eligibility tranches" are determined as follows. A product's "bid stack" is a list of the tranches currently deemed bid on the product and the price at which each tranche was bid for the product. Because of rollbacks, a product's bid stack could have tranches bid at two different prices: some tranches bid at the earlier, higher announced price and some tranches bid at the current, lower announced price. Any new tranche bid on such a product necessarily will be bid at the current, lower announced price. This new tranche will displace a tranche in the product's bid stack at the earlier, higher announced price. The displaced tranche becomes a "free eligibility tranche". The free eligibility tranche counts as eligibility for the bidder and the bidder can bid the tranche on any product next round, or the bidder can choose not to bid the tranche at all. But if the bidder does not bid the free eligibility tranche next round, the tranche will be withdrawn from the auction permanently and will reduce the bidder's eligibility by one tranche after the next round.

(e) In some cases, the Independent Evaluator may reduce the tranche targets. The criteria that could lead to such a reduction will be determined prior to the auction but will not be announced to bidders. Once certain pre-specified criteria related to excess supply and related to the reservation price have been met, the discretion to reduce a product's tranche target because of insufficient supply will be eliminated. Thus, any tranche target reduction would more likely occur in the earlier rounds of the auction. If the Independent Evaluator reduces the tranche target for a product, bidders will be informed of the revised tranche target. Any bidder that otherwise would have eligibility exceeding the new tranche targets will have its eligibility reduced so as not to exceed the new tranche targets.

(f) The closing rule determines whether the auction has concluded. The closing rules is that the auction concludes if either case (1) or case (2) holds as follows:

(1) If no product is over-subscribed and no bidder has free eligibility tranches, then the auction has concluded. Note that it is possible for the auction to continue with no reductions in announced prices: if no product is over-subscribed there will be no reductions in announced prices but if there are free eligibility tranches (which "expire" after one round), the auction will remain open for one more round (subject to case (2) described next), allowing bidders with free eligibility to bid those tranches.

(2) If this is the Nth consecutive round in which no product is over-subscribed, and the number of tranches of free eligibility across all bidders as a percentage of the sum of the tranche targets across all products is less than or equal to X percent, then the auction has concluded. The parameter values for N and X will be determined before the auction. The likelihood that this case (2) would occur in a particular auction is expected to be low.

(g) If the auction has concluded, the winning tranches, winning bidders, and winning prices are determined as described below.

(h) If the auction has not concluded, then each bidder's eligibility is determined for the next round and the price decrement (if any) is determined for each product for the next round.

5.1.8 Price Decrements

The announced prices will decrease round by round by a price decrement for over-subscribed products. Pre-specified price guidelines are used to determine the price decrements. Generally the price decrement for a product will be larger for the earlier rounds in the auction and when the excess supply for the product is greater. The price decrement is expected to be between 0.5 percent and 5 percent of the announced price for the most recently completed round.

The Independent Evaluator reserves the right to override the price decrement guidelines. The exercise of that right is expected to occur rarely and only if doing so is believed to facilitate timely progression of the bidding process.

5.2 Determination of Winning Tranches, Winning Bidders, and Winning Prices

At the close of the auction, the winning tranches, winning bidders, and winning prices will be determined as follows.

As a result of the EOR procedure as described above, there are two possible scenarios for a product at the close of the auction.

5.2.1 Bid Stack for a Product has All Tranches at the Same Price

In this scenario, there are no rolled-back tranches in the product's bid stack: all tranches in the bid stack were bid at the last announced price, including any tranches bid on the product in the last round of the auction as determined by the EOR procedure. That announced price is the product's clearing price, and all tranches in the product's bid stack are winning tranches if the clearing price satisfies the product's reservation price. Bidders who bid those tranches are winning bidders for those tranches, and all bidders with winning tranches on a product are paid the same price — i.e., the clearing price — for each winning tranche on the product. Note that this scenario includes the case in which a product was over-subscribed at some point in the auction and later became subscribed, as well as the case in which a product was always under-subscribed in the auction (i.e., it was never subscribed or over-subscribed in the auction).

5.2.2 Bid Stack for a Product has Tranches at Two Different Prices

In this scenario, there are rolled-back tranches in the product's bid stack: some tranches in the bid stack were bid at the last announced price (including any tranches bid on the product in the last round of the auction as determined by the EOR procedure), and some tranches in the bid stack were bid at the next most recent announced price. In this case, the product's clearing price is the next most recent announced price — which necessarily is higher than the last announced price for the product. All tranches in the product's bid stack are winning tranches if the clearing price satisfies the product's reservation price. Bidders who bid those tranches are winning bidders for those tranches, and all bidders with winning tranches on a product are paid the same price — i.e., the clearing price — for each winning tranche on the product.

5.3 Example of Round-by-Round Bidding

Appendix A provides an illustrative example of round-by-round bidding.

5.4 Reporting Round Results

During a round, a bidder can see the current status of the auction and the status of the current round including the announced price for each product as well as the bidder's own bidding status. A bidder will not see information about other bidders.

Between rounds the Bidding Website will report the results for the most recently completed round. Results for all prior rounds also will be accessible. The round results for each completed round in the auction will show:

- The announced price for each product and a range of total supply across all bidders and all products (that is, a range that includes the total number of tranches bid). The range of total supply will be defined by two different integers. Actual total supply will not be reported but will be at least as high as the lower of the two integers and no higher than the higher of the two integers. There is an exception to reporting total supply as a range of two integers: if and when total supply has declined below a pre-determined level, total supply will be reported simply as being below that level. The reporting ranges will be made available to bidders in advance of each auction.

- For each bidder, that bidder's bid for the round — i.e., the number of tranches bid on each product — and the bidder's eligibility for the next round. (Each bidder does not see information about other bidders.)

- The announced price for each product for the next round if the auction will continue with the next round.

5.5 Frequency of Rounds

The early rounds of bidding may be longer in duration than later rounds. The duration of a bidding round will be at least five (5) minutes.

The time between early rounds of bidding may be longer in duration than for later rounds. The time between bidding rounds will be at least five (5) minutes.

The schedule of rounds and any changes to the schedule will be made available to bidders through the Bidding Website.

5.6 Auction Pause Declared by Independent Evaluator

At any time during the auction, the Independent Evaluator may decide to pause the auction. This is not expected to happen often if at all. If the Independent Evaluator pauses the auction or changes the round schedule in any way, bidders will be notified.

6. AFTER THE AUCTION CLOSES

6.1 Notification of Results

At the close of the auction, the Independent Evaluator will notify the Company, the Commission, and the bidders as follows.

- The Independent Evaluator will notify the Company and the Commission of the identities of the winning bidders, the number of tranches won by each winning bidder, the prices for the tranches won, and other aggregated information on the bidding process.

- The Independent Evaluator will notify each winning bidder of how many tranches the bidder has won and at what prices. The Independent Evaluator also will notify the unsuccessful bidders that they have not won any tranches.

The names of the winning bidders, the number of tranches won by each bidder, and the winning prices will remain confidential until released publicly by the Commission or as required by law.

The auction results are tentative subject to Commission approval.

After the conclusion of the auction and provision of the auction results to the Commission by the Independent Evaluator, the Commission is expected to make a decision within two business days to approve or reject the auction results.

6.2 Execution of SMA

The winning bidders and the Company will execute the SMA within three (3) business days following the Commission's approval of the auction results. If the supplier has already executed a SMA with the Company they have won tranches for, they will only need to execute the Transaction Confirmation. Each winning bidder must demonstrate compliance with the creditworthiness requirements set forth in the SMA.

6.3 Sanctions for Failure to Execute the SMA

A winning bidder's pre-bid security posted with its Part 2 Application may be forfeited if the winning bidder does not execute the SMA within three (3) business days following the Commission's approval of the auction result, if it fails to demonstrate compliance with the creditworthiness requirements set forth in the SMA, or if it fails to agree to any of the terms of the SMA. In addition, the winning bidder will be liable for damages incurred by the Company, which will be determined in accordance with the terms of the SMA as though the winning bidder were a defaulting party to the SMA.

7. USE OF THE BIDDING WEBSITE

Bidders will bid in the auction by accessing the Independent Evaluator's secure Bidding Website. A bidder will access the Bidding Website using their own Web browser. The URL address for the Bidding Website, as well as usernames and passwords, will be provided to Registered Bidders prior to the start of the auction.

The Bidding Website allows a Registered Bidder to submit and confirm bids, to verify its status, to view results from prior rounds, to view the schedule of rounds, and to view messages from the Independent Evaluator.

7.1 Importance of Confirmed Bids

Submitting a bid on the Bidding Website involves three steps:

(1) Web page for entry and submission of the bid quantities. The bidder enters its desired bid and then submits the bid in order to proceed to the next step.

(2) Web page for validation of the bid. The bidder is asked to review the bid it submitted in the first step before proceeding to the confirmation step.

(3) Web page showing confirmation of the bid. The bidder receives a unique confirmation ID for the bid and the time-stamp at which the bid was recorded by the Bidding Website server.

It is important to note that a bid is not accepted and recorded as an accepted bid until and unless the bidder reaches the third step in which the bid confirmation Web page displays the unique confirmation ID and time-stamp for the bid.

7.2 Requirements for Using the Bidding Website

Access to the Bidding Website requires all of the following:

- Username and password provided by the Independent Evaluator.
- Access to the Internet.
- Use of one of the more recent versions of a standard Web browser.
- Status as a Registered Bidder.

A bidder loses access to the Bidding Website after it no longer is possible for the bidder to win tranches in the auction.

7.3 Messaging

The Bidding Website displays messages from the Independent Evaluator. These messages from the Independent Evaluator are displayed for all bidders with access to the Bidding Website.

8. BACKUP BIDDING PROCEDURES

In case a bidder has technical difficulties, and as a result is not able to submit a bid via the Bidding Website in a round, backup bidding procedures will be provided as described below. Note that the Authorized Representative and the Delegate automatically are designated as authorized bidders. Requests to designate additional authorized bidders must be sent to the Independent Evaluator in writing prior to the start of round 1 of the auction.

(1) Option 1. Upon encountering a technical difficulty, it is recommended that the bidder call the Independent Evaluator's Help Desk and inform the Help Desk operator that it would like to submit a bid over the phone. The Help Desk operator will verify the identity of the caller, for example by asking for the bidder's company name, and the first and last name of the caller, along with the username and password of the bidder. Then a member of the Independent Evaluator team will attempt to enter the bid on the Bidding Website on behalf of the bidder. Please note that the Independent Evaluator can accept bids over the phone only from callers that have been identified as authorized bidders by the bidder company.

(2) Option 2. In case the bidder is unable to place a call to the Independent Evaluator's Help Desk, it is recommended that the bidder submit its bid via email to the Independent Evaluator. If possible, the email should be sent using encrypted email. Once the backup bid is received via email, a member of the Independent Evaluator team will attempt to enter the bid on the Bidding Website on behalf of the bidder. Note that prior to the auction, bidders will be provided with one or more forms to use for submitting a bid using this email-based backup bidding procedure.

~~(3) Option 3. In case the bidder is unable to place a call to the Independent Evaluator's Help Desk or to submit a bid via email, the bidder should use the Backup Bidding Fax Number to submit its bid via facsimile. Once the backup bid is received via facsimile, a member of the Independent Evaluator team will attempt to enter the bid on the Bidding Website on behalf of the bidder. Note that prior to the auction, bidders will be provided with the Backup Bidding Fax Number and with one or more forms to use for faxing a bid using the faxed-based backup bidding procedure.~~

Bidders must be aware and understand that there is no guarantee or other assurance that if it submits a bid using a backup bidding procedure that its bid will be submitted and confirmed on its behalf by the Independent Evaluator team consistent with the intentions of the bidder and in time before the round ends.

If a backup bid submitted by a bidder is not accepted and confirmed by the Bidding Website because the round has ended, a default bid will be entered for the bidder as described above in the sections on default bids.

If a backup bid submitted by a bidder is not accepted and confirmed by the Bidding Website for other reasons (e.g., the number of tranches bid is greater than a bidder's eligibility or violates the bidder's credit-based tranche limit or applicable load cap), the Independent Evaluator team will use reasonable efforts to inform the bidder that a new bid must be submitted.

If a backup bid submitted by a bidder is confirmed by the Bidding Website, the Independent Evaluator team will contact the bidder and provide the confirmation of the accepted bid to the bidder.

Bidders use the backup bidding procedures at their own risk. In all cases involving backup bids, the Independent Evaluator team does not accept any responsibility, obligation, or liability for errors, omissions, timeliness, or otherwise, related to whether a backup bid is entered into and confirmed by the Bidding Website on behalf of the bidder or as intended by the bidder.

9. WHO TO CONTACT IN CASE OF PROBLEMS DURING THE AUCTION

A bidder should contact the Help Desk if it has questions or problems. The phone number for the Help Desk will be provided to bidders prior to the start of the auction.

10. CONTINGENCY PLAN

There is a contingency plan to cover three scenarios:

- At least one of the products in an auction is not fully subscribed.
- At least one of the winning suppliers defaults prior to the start of the delivery period or at any time during the delivery period.
- A Capacity Proxy Price is utilized.

10.1 If an Auction is Not Fully Subscribed

In the event that an auction is not fully subscribed, the Company will re-bid the unfilled tranches from that auction provided the start of the delivery period for the tranches is more than 30 calendar days away. If the delivery period is more than 30 calendar days away:

- The unfilled tranches will be re-bid in the next scheduled auction — if there is sufficient calendar time to include the unfilled tranches — where supply is sought with the same delivery start date as the unfilled tranches.
- If there is no such scheduled auction, then the unfilled tranches will be re-bid in a separate solicitation no later than 30 calendar days before the original delivery start date.

For any remaining unfilled tranches, the Company will purchase the necessary physical supply through PJM administered markets and meet any AEPS compliance requirements through purchases at market prices.

10.2 If a Winning Bidder Defaults

If a winning bidder defaults prior to the start of or during the delivery period, the Company will offer the unfilled tranches to the other Registered Bidders who participated in the most recent solicitation. The Company will enter into an agreement with the Registered Bidder or Bidders offering the best terms for the unfilled tranches resulting from the default, provided the prices offered by such bidder or bidders are consistent with the original prices under which the unfilled tranches were procured and changes in market conditions from the time when the original tranches were procured. If the Company is not able to enter into such agreement and a minimum of 30 calendar days exists prior to the start of the delivery period, the Company will seek to bid the defaulted tranches in the next scheduled solicitation for supply with the same start date as the unfilled tranches or in a separate supplemental competitive solicitation. As with other unfilled tranches described above, if insufficient time exists to conduct an additional competitive solicitation, or if the supplemental solicitation is unsuccessful, the Company will supply the tranches using PJM-administered markets. In addition to damages to which the Company may be entitled, costs incurred by the Company in implementing this contingency plan for supply and AEPS requirements will be assessed against the defaulting supplier's credit security, to the extent available.

10.3 If a Capacity Proxy Price ("CPP") is Used

Appendix H of the Master Supplier Agreement describes the process that will be followed in the event that a Capacity Proxy Price is utilized.

~~Each Billing Month, the Company will prepare a Statement of amounts due to the DS Supplier. This Statement will show the aggregate amounts due based on the DS Fixed Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Fixed Percentage as shown on the Transaction Confirmation(s) for each hour of the Billing Month, plus the aggregate amounts due based on the DS Variable Price multiplied by the hourly Energy requirements of DS Supply used to determine the PMEA multiplied by the DS Variable Percentage, if applicable, as shown on the Transaction Confirmation(s) for each hour of the Billing Month. For each Billing Month after the Capacity Proxy Price is known, the Company will apply the Capacity Proxy Price true-up across the entire contract term. The calculation of the day weighted average capacity price adjustment for purposes of determining the true-up amount will reflect final unforced capacity (i.e., UCAP) quantity weighting. For example, for a 24-month contract term, the Company will calculate the relevant 24-month average capacity price adjustment by appropriately weighting the amount of capacity (i.e., the final UCAP quantity) purchased by the supplier at each PJM capacity price~~.

11. COMMUNICATIONS PROTOCOLS

The communications protocols described here are intended to promote a fair, open, transparent, objective, and non-discriminatory auction. These protocols also are intended to protect proprietary information of participants and information that, should it be released, would be detrimental to the outcome of the auction process or future solicitations.

11.1 The Company and Affiliates

11.1.1 Internal Communications

The Company will designate individuals to work on the auction process. These individuals directly or indirectly will not have communication with, or exchange information with, any individuals of an affiliate of the Company that may bid in the auction process where such communication or information is related directly or indirectly to this auction process.

11.1.2 Communications with Bidders

The Company will not communicate with bidders prior to the selection of winning bids. When the Independent Evaluator informs the Company about the prices and tranches of the winning bids and the identity of winning bidders in accordance with Section 6.1 of the Bidding Rules, representatives from the Company then will communicate with the winning bidders in order to execute the necessary documents.

If a bidder attempts to contact the Company regarding the auction process by phone call, email~~, fax,~~ or other means, the Company will direct the bidder to the Information Website and/or to the Independent Evaluator.

11.1.3 Part 1 Application Process

For the Part 1 Application process, the Independent Evaluator will need to provide the names of applicants to the Company credit department for purposes of confirming the applicants' credit requirements.

11.1.4 Part 2 Application Process

For the Part 2 Application process, the Independent Evaluator will need to provide the aggregate eligibility and other information from the Part 2 Applications to the Company with the names of applicants redacted.

11.2 General Public and Media

While bidding is in progress, there is to be no communication with the media or the public. After the auction process is completed, results are determined, and bidders have been notified, all media inquiries will be forwarded to the Company.

11.2.1 The Information Website

The central source of information made available publicly and to bidders is the Information Website. The Independent Evaluator will manage the information flow on the Information Website and will be designated on the Website as the contact for any questions or inquiries from parties. Any party will have access to the public sections of the Information Website.

11.2.2 Frequently Asked Questions

Among other information and resources on the Information Website, there will be an FAQ (frequently asked questions) section with posted questions and answers. As inquiries are received, they will be converted into an FAQ and posted on the Information Website without revealing the identity of the party posing the inquiry.

Inquiries to be answered by the Company will be forwarded by the Independent Evaluator to the Company. Inquiries to be answered by the Independent Evaluator will be forwarded to the Company with a draft response. Any inquiry or draft response forwarded by the Independent Evaluator to the Company will not identify the party posing the inquiry. Both the Company and the Independent Evaluator will review any inquiry and response before the FAQ is posted to the Information Website.

11.2.3 Registered Users

If a party wishes to receive notices and updates regarding public information and new postings to the Information Website, then the party can register through the Information Website to become a Registered User.

Any information the Independent Evaluator has concerning the auction process that is relevant and that can be disclosed publicly will be made available equally to all Registered Users in a timely manner. The method of such communication likely will be via the Information Website and/or emails to Registered Users using the BCC email field so identification of Registered Users is not disclosed to other Registered Users.

11.2.4 Press Releases

The Company and/or the Independent Evaluator may issue one or more press releases or may place news items in the trade press with the intent to disseminate information about the auction process in an efficient, fair, and timely manner.

11.2.5 Answering Inquiries from the General Public or Media

Inquiries from the general public or the media to the Independent Evaluator will be directed to the Information Website.

11.3 Bidders

11.3.1 Communications Among Bidders

Bidders are prohibited from communicating with each other in ways that would compromise the integrity and competitiveness of the auction process. Sanctions will be applied if these rules are violated.

11.3.2 Communications between the Independent Evaluator and Bidders

The central source of information made available to bidders is the Information Website. The Website facilitates making information available equally to bidders in a timely manner.

Bidders are encouraged to become Registered Users of the Information Website to receive ongoing information about the auction process. As discussed above, once registered through the Information Website, Registered Users will receive notifications from the Independent Evaluator about updates to the auction process and to the Information Website.

If the Independent Evaluator receives an inquiry from a party and prepares a response that would be relevant for other parties, the Independent Evaluator will ensure the information will be made available equally to all Registered Users in a timely manner and will post the information on the Information Website and/or will email the Registered Users without revealing the identity of parties.

In addition to posting information to the Information Website, the Independent Evaluator may contact bidders directly in order to seek or provide information about the auction process in a way that does not advantage any bidder.

Any communications from the Independent Evaluator to a bidder will not reveal the identity of other bidders.

11.3.3 Bidding Process

During the auction, the Independent Evaluator, the Commission, and Company's personnel may monitor the bidding process.

The Independent Evaluator will ensure the bids submitted by bidders conform to the rules of the auction process.

The Bidding Rules and pre-determined bid selection criteria will be applied to determine which bids, if any, are winning bids.

11.3.4 Limitations on Disclosures by Bidders

Bidders are not allowed to disclose they are participating in the Fixed-Price Auction or the Hourly-Priced Auction, and winning bidders are not allowed to disclose that they have won any tranches in the Fixed-Price Auction or the Hourly-Priced Auction until the Commission publicly reports the results of the auction. Such limitation on public disclosure by bidders is waived if disclosure is required by law.

11.4 The Commission

11.4.1 Communications with the Independent Evaluator

During the bidding process, the identity of bidders, prices, and the number of tranches bid will be kept confidential. This information may be released to the Commission after the auction results are finalized.

11.4.2 Communications with the Company

The Commission may communicate with the Company regarding the auction process. However, the Company will not disclose any proprietary information until after the final round of the auction is completed and bidders are informed of the results of the auction.

11.4.3 Communications with Bidders

The Commission will not communicate with bidders about the auction process prior to the determination of winning bids. If a bidder attempts to contact the Commission by phone call, email, ~~fax,~~ or other means, the Commission will direct the bidder to the Information Website and/or to the Independent Evaluator.

11.4.4 Information on Auction Participation

In order to maintain confidential and proprietary information provided by bidders as part of the auction process, the identity of all bidders that submitted Part 1 and/or Part 2 Applications in the auction and the indicative offers will be kept confidential until released publicly by the Commission. The Commission may elect to keep these data confidential at its sole discretion.

11.4.5 Round-by-Round Bids

Round-by-round bids by bidders will be kept confidential pursuant to the confidentiality provisions of the Bidding Rules and the SMA for as long as the Company continue to procure Default Service.

12. CONFIDENTIAL INFORMATION, CERTIFICATIONS, AND SANCTIONS

12.1 Confidential Information

Confidential Information relative to bidding strategy means information relating to a bidder's bid(s) in the auction, whether transmitted in writing or verbally, which if it were to be made public likely would have an effect on any of the bids that another bidder would be willing to submit. Confidential Information relative to bidding strategy includes (but is not limited to): a bidder's strategy; a bidder's indicative offer; the quantities that a bidder wishes to supply; the bidder's estimation of the value of a tranche; the bidder's estimation of the risks associated with serving the load for the auction; and a bidder's contractual arrangements for purchasing power to serve such load were the bidder to win tranches in the auction.

Confidential Information regarding the auction means information that is not released publicly by the Commission, the Company or the Independent Evaluator and that a bidder acquires as a result of participating in the auction, whether transmitted in writing or verbally, which if it were to be made public could impair the integrity of current or future solicitations, impair the ability of the Company to hold future solicitations, or harm consumers, bidders or applicants. Confidential Information regarding the auction includes (but is not limited to): the list of Qualified Bidders, the list of Registered Bidders, the initial eligibility, the status of a bidder's participation, and all non-public reports of results and announcements made by the Independent Evaluator to any or all bidders in this auction.

Confidential Information may not receive continued confidential or protected treatment should: (a) a bidder publicly disclose Confidential Information relating solely to that bidder; or (b) public disclosure is required or compelled by the Commission, a court or otherwise by law. The Independent Evaluator, the Commission, and the Company shall not be liable for such public disclosures or, so long as reasonable measures have been taken to keep such information confidential, any other public disclosure of Confidential Information. By participating in this auction process, each bidder acknowledges and agrees to the confidentiality provisions set forth herein, as well as any limitations thereto.

In addition, the bidder agrees the bidder's data and information submitted in this auction process will be disclosed if required by any federal, state or local agency (including, without limitation, the Commission) or by a court of competent jurisdiction. However, the Company will endeavor to notify the bidder in advance of such disclosure. In any event, neither the Company nor the Independent Evaluator, nor any of their employees or agents, will be responsible to the bidders or any other party, or liable for any disclosure of such designated materials before, during or subsequent to this auction. Notwithstanding the above, the Company and the Independent Evaluator reserve the right to use and communicate publicly and/or to third parties any and all information/data submitted as part of this auction process in any proceedings before FERC, the Commission, and any other regulatory body and the courts, if necessary, without the prior consent/approval of, or notice to, any such bidder. The bidder expressly agrees that the Company may provide bidder information on a confidential basis to the Commission, the Pennsylvania Office of the Consumer Advocate, and the Office of Small Business Advocate as necessary for compliance with any default service procurement reporting obligations.

12.2 Certifications and Disclosures to Be Made

A prospective bidder will be required in its Part 1 Application to disclose any bidding agreement or any other arrangement in which the prospective bidder may have entered and that is related to its participation in the auction. A prospective bidder that has entered into such an agreement or arrangement must name the entities with which the prospective bidder has entered into a bidding agreement, or a joint venture for the purpose of participating in the auction, or a bidding consortium, or any other arrangement pertaining to participating in the auction. A bidding consortium is a group of separate businesses or business people joining together to submit joint bids in the auction.

In addition, a prospective bidder will be required to make the certifications listed in the Part 1 and Part 2 Applications.

The Commission may publicly release the winning prices and the names of the winning bidders from the auction. The Commission may choose to release additional information. After the auction, a winning bidder itself may release information regarding the number of tranches it has won, and a non-winning bidder itself may release information only regarding the fact that it participated in the auction. The winning bidders and the non-winning bidders otherwise continue to be bound by their certifications as described previously. In particular, no winning bidder and no non-winning bidder itself can reveal the winning prices of the auction prior to these being publicly released by the Commission.

12.3 Actions to Be Taken if Certifications Cannot Be Made

If a bidder cannot make all the certifications above, the Independent Evaluator will decide within five (5) days following the deadline to submit the Part 2 Application on a course of action on a case-by-case basis. To decide on this course of action, the Independent Evaluator may make additional inquiries and information requests to understand the reason for the inability of the bidder to make the certification.

If Qualified Bidders do not comply with additional information requests by the Independent Evaluator regarding certifications required in the Part 2 Application, the Independent Evaluator may reject the application.

12.4 Sanctions for Failure to Comply

Sanctions may be imposed on a bidder for failing to properly disclose information relevant to determining associations, for coordinating with another bidder, for failure to abide by any of the certifications made in its Part 1 Application or Part 2 Application, for releasing Confidential Information or disclosing information during the auction (aside from only specific exceptions provided with respect to entities explicitly named in the Part 1 Application as entities that are part of a bidding agreement or other arrangement), and in general for failing to abide by any of the communications protocols in the section, “Communications Protocols,” of these Bidding Rules. Such sanctions can include, but are not limited to, any one or more of the following:

- Termination of the SMA.
- The loss of all rights to provide tranches won by such bidder.
- The forfeiture of letters of credit and other fees posted or paid.
- Action (including prosecution) under applicable state and/or federal laws.
- Attorneys’ fees and court costs incurred in any litigation that arises out of the bidder’s improper disclosure.
- Debarment from participation in future solicitations.
- And/or other sanctions that may be appropriate.

Should such an event occur, the Independent Evaluator will make a recommendation to the Company regarding sanctions. The imposition of such sanctions will be at the discretion of the Company.

13. BIDDER ASSOCIATIONS

A Qualified Bidder is associated with another Qualified Bidder if the two bidders have ties that could allow them to act in concert or that could prevent them from competing actively against each other.

The competitiveness of the auction and the ability of the auction to produce competitive prices may be harmed by the coordinated or collusive behavior that associations among bidders may facilitate. As a result, the Independent Evaluator has developed standards that apply when associated parties apply to participate in FP and/or HP auctions. The following sections outline the specific protocols that will be followed when associated entities submit Part 1 and/or Part 2 Applications to participate in an auction for the Company.

13.1 Procedure Followed by the Independent Evaluator

Potential associations among participants may come to the attention of the Independent Evaluator at different points in the bidder qualification application process. In order to improve the process efficiency and minimize the risk of disclosure of potentially confidential information, the Independent Evaluator will approach each case as described below.

13.1.1 Following the Receipt of the Part 1 Applications

Potential associations among applicants may become apparent after the Part 1 Applications are submitted but before Qualified Bidders are required to disclose such associations as part of their Part 2 Applications. The Independent Evaluator will take no action related to potential associations until each party submits their completed Part 1 Application. In cases where there is an apparent relationship among applicants, the Independent Evaluator will initiate a request for additional information regarding the relationship among the potentially associated parties, the structure of their organization, and the independence of the respective bidding teams.

In such cases, the Independent Evaluator will notify representatives of the Company and Commission Staff that there is a potential association among applicants.

In addition, as outlined in the Part 2 Application, the Independent Evaluator reserves the right to request additional information from each party including, but not necessarily limited to:

(a) Information on how the entity maintains its independence from the associated party including any available supporting documentation such as a Corporate Separation Agreements, Codes of Conduct, and/or organization charts.

(b) A list of individuals within the organization who have played or will play a material role in the auction(s).

(c) Information regarding the nature of any work done in conjunction with or on behalf of the associated party.

(d) Information describing the organizational structure of the associate(s), identifying common management and oversight among the associated entities as well as the management involved in or responsible for bid approval.

(e) The internal process or protocol related to determining indicative offers submitted as part of the Part 2 Application.

(f) Disclosure of whether the entity is bidding on behalf of itself or acting as an agent for other entities.

Any responses to the above will be treated as confidential if labeled as such.

13.1.2 Following the Receipt of the Part 2 Applications

In some cases, the potential relationship among Qualified Bidders will not be known to the Independent Evaluator until the Qualified Bidders submit final certifications along with their Part 2 Applications. In such cases, the Independent Evaluator will initiate the steps outlined above, upon receipt of the completed Part 2 Applications.

After the Independent Evaluator has requested and received additional information from each associated bidder, the Independent Evaluator will work with representatives of the Company and Commission Staff to determine:

(a) Whether each of the associated bidders will be allowed to participate independently in the auction(s); and

(b) Any restrictions that may be applied as a result of the participation by associated bidders.

Any restrictions will be based on the information provided by the associated bidders as part of the Part 1 Application, the Part 2 Application, and the additional information that was provided at the request of the Independent Evaluator.

13.2 Remedies and Actions Related to Participation by Associated Bidders

This section summarizes the potential restrictions that will be considered by the Independent Evaluator, the Company, and Commission Staff in relationship to associated participation. Restrictions on participation may include, but may not be limited to, the following:

(a) Indicative offers may be restricted such that any applicable load cap may apply across the associated bidders;

(b) Pre-bid security or collateral requirements may be altered for the associated bidders to ensure that associated bidders do not gain a competitive advantage over other bidders; and,

(c) In some cases, one or more associated bidders may not be allowed to participate in the auction(s).

13.3 Handling of Confidential Information

In order to execute the process of gathering information on associated entities and executing the remedies outlined above, there may be situations that require the Independent Evaluator to share, directly, certain confidential information among the associated parties, the Company, and the Commission and its Staff.

In addition, as part of the remedies outlined in above, an associated party may gain access to or be able to ascertain certain confidential information of the other associated entities. While access to such information otherwise may be counter to certifications in the Part 2 Application, access to such information acquired through the data gathering and remedies related to associated bidders will not be considered a violation of the auction rules.

Confidential information includes but may not be limited to the initial eligibility for each associated bidder based on indicative bids submitted with the Part 2 Application. The Independent Evaluator will make reasonable efforts to minimize the disclosure of any such confidential information.

14. MISCELLANEOUS

14.1 Warranty on Information

The information provided for the auction, including but not limited to information provided on the Information Website, has been prepared to assist bidders in evaluating the auction process. It does not purport to contain all the information that may be relevant to a bidder in satisfying its due diligence efforts. Neither the Company nor the Independent Evaluator make any representation or warranty, expressed or implied, as to the accuracy or completeness of the information, and shall not, either individually or as a corporation, be liable for any representation expressed or implied in the auction process or any omissions from the auction process, or any information provided to a bidder by any other source. A bidder should check the Information Website frequently to ensure it has the latest documentation and information. Neither the Company, nor the Independent Evaluator, nor any of their representatives, shall be liable to a bidder or any of its representatives for any consequences relating to or arising from the bidder's use of information.

14.2 Hold Harmless

Bidder shall hold the Company and the Independent Evaluator harmless of and from all damages and costs, including but not limited to legal costs, in connection with all claims, expenses, losses, proceedings or investigations that arise in connection with the auction process or the award of a bid pursuant to the auction process.

14.3 Bid Submissions Become the Company's Property

All bids submitted by bidders participating in the auction will become the exclusive property of the Company upon conclusion of the auction process.

14.4 Bidder's Acceptance

Through its participation in the auction process, a bidder acknowledges and accepts all the terms, conditions and requirements of the auction process and the SMA.

14.5 Permits, Licenses, Compliance with the Law and Regulatory Approvals

Bidders shall obtain all licenses, permits and status that may be required by any governmental body, agency or organization necessary to conduct business or to perform hereunder. Bidders' subcontractors, employees, agents and representatives of each in performance hereunder shall comply with all applicable governmental laws, ordinances, rules, regulations, orders and all other governmental requirements.

14.6 Auction Intellectual Property

All title, interests and other intellectual property rights in and to the auction design, the auction format and methodology, the auction software, the source code (including all modifications, enhancements, customization, adaptations and derivative works made by the Independent Evaluator) and associated documentation, including but not limited to these Bidding Rules, and the screen formats and forms designed by the Independent Evaluator (the "Auction Software"), are proprietary to the Independent Evaluator and all rights, title, and interest to the Auction Software remain with the Independent Evaluator. The Independent Evaluator grants Qualified Bidders a non-exclusive, non-transferable, limited license to use the Auction Software, solely for use in connection with the auction, subject to the terms and conditions set forth herein, and not for copying, relicensing, sublicensing, distribution or marketing by the Qualified Bidder. No other interest is conveyed to the Qualified Bidder other than the license expressly granted herein. The foregoing use license shall immediately terminate upon disqualification of the Qualified Bidder or upon termination or completion of the auction process. If at any time it is determined in the Independent Evaluator's sole discretion that the Qualified Bidder is in breach of this Section 13.6, the Independent Evaluator shall be entitled to terminate the Qualified Bidder's access rights to the Auction Software.

Notwithstanding anything herein to the contrary, and without limiting the Qualified Bidder's other obligations herein, the Qualified Bidder shall not, nor shall it permit any third party to: (i) modify, translate or otherwise create derivative works of the Auction Software; (ii) reverse engineer, decompile, decode, disassemble or translate any Auction Software, or output thereof, or otherwise attempt to reduce to human readable form or derive the source code, protocols or architecture of any Auction Software; (iii) use or study any Auction Software, or output thereof, for the purpose of developing any software that is intended to replace, or that has functions, structure or architecture similar to, such Auction Software, or any part thereof; (iv) publish, or otherwise make available to any third party, any benchmark or other testing information or results concerning the Auction Software; (v) permit any other person who is not authorized to access or use all or any part of the Auction Software or (vi) copy the Auction Software, distribute the Auction Software, remove or obscure any proprietary labeling on or in the Auction Software, create any derivative works based on the Auction Software, or modify the Auction Software, in each case, except to the extent expressly permitted by the Independent Evaluator in writing.

In using the Auction Software, a Qualified Bidder shall take steps to prevent any virus, worm, built-in or use-driven destruction mechanism, algorithm, or any other similar disabling code, mechanism, software, equipment, or component designated to disable, destroy or adversely affect the Auction Software from being introduced into the systems.

APPENDIX A — EXAMPLE OF ROUND-BY-ROUND BIDDING

The illustrative example below shows for two bidders (BidderA and BidderB) and two products (Product-1 and Product-2) the confirmed bids (pre-EOR) and the post-EOR results for each round. In the example, the auction closes after round 4.

Round 1

For round 1, the announced prices are $75.00 and $82.00 for Product-1 and Product-2, respectively. At those announced prices, BidderA bids 55 tranches and 85 tranches on Product-1 and Product-2, respectively. BidderB bids 80 tranches and 27 tranches on Product-1 and Product-2, respectively.

When the round closes the EOR procedure is executed. Each product is over-subscribed: 135 tranches were bid on Product-1 which has a tranche target of 100, and 112 tranches were bid on Product-2 which has a tranche target of 100.

The announced price for Product-1 will be reduced from $75.00 to $72.50 for round 2. The announced price for Product-2 will be reduced from $82.00 to $78.60 for round 2.

BidderA will have eligibility of 55+85 = 140 tranches for round 2, and BidderB will have eligibility of 80+27 = 107 tranches for round 2.

Round 2

At the announced prices for round 2, BidderA bids 40 tranches and 85 tranches on Product-1 and Product-2, respectively. Thus, BidderA reduced its tranches bid on Product-1 from 55 to 40 tranches. BidderB bids 50 tranches and 57 tranches on Product-1 and Product-2, respectively. Thus, BidderB switched 30 tranches from Product-1 to Product-2.

When the round closes the EOR procedure is executed. Product-1 is under-subscribed by 10 tranches: only 90 tranches bid against the tranche target of 100 tranches: BidderA's bid represents a reduction in its eligibility by 15 tranches, while BidderB's bid maintained its eligibility. Thus, 10 of the 15 eligibility reduction tranches of BidderA are rolled back on Product-1. Those 10 tranches are priced at the announced price for Product-1 at which they were bid in round 1: $75.00. The announced price for Product-1 will remain at $72.50 for round 3.

Product-2 is over-subscribed by 42 tranches. The announced price for Product-2 will be reduced from $78.60 to $76.10 for round 3.

BidderA will have eligibility of 50+85 = 135 tranches for round 3 (including the 10 tranches rolled back on Product-1), and BidderB will have eligibility of 50+57 = 107 tranches for round 3.

Round 3

At the announced prices for round 3, BidderA bids 99 tranches and 36 tranches on Product-1 and Product-2, respectively. Thus, BidderA is switching 49 of the tranches bid from Product-2 to Product-1. BidderB bids 50 tranches and 35 tranches on Product-1 and Product-2, respectively. Thus, BidderB is reducing its tranches bid on Product-2 from 57 to 35 tranches.

When the round closes the EOR procedure is executed. Product-1 is over-subscribed by 49 tranches. Product-2 is under-subscribed by 29 tranches: only 71 tranches bid against the tranche target of 100 tranches: BidderA's bid maintained its eligibility while BidderB's bid represents a reduction in its eligibility by 22 tranches. Thus, all 22 of the eligibility reduction tranches of BidderB are rolled back on Product-2. Those 22 tranches are priced at the announced price for Product-2 at which they were bid in round 2: $78.60. Even after rolling back those 22 eligibility reduction tranches of BidderB, Product-2 still is under-subscribed — by 7 tranches. So 7 tranches that BidderA had switched from Product-2 to Product-1 are rolled back to Product-2. Those 7 tranches are priced at the announced price for Product-2 at which they were bid in round 2: $78.60.

After rolling back 7 tranches from Product-1 to Product-2 for BidderA, BidderA still has increased the number of tranches it is bidding on Product-1: from 50 tranches bid in round 2 (10 tranches at $75.00 and 40 tranches at $72.50) to 92 tranches bid in round 3 (10 tranches at $75.00 and 82 tranches at $72.50). Product-1 is over-subscribed as a result, so higher-priced tranches in Product-1's bid stack can be removed. All 10 of BidderA's higher-priced tranches are removed from Product-1's bid stack, and these 10 tranches become BidderA's free eligibility for round 4. In round 4, BidderA can bid any of the 10 tranches on any product, but to the extent those 10 tranches are not bid on a product in round 4, those free eligibility tranches and their associated eligibility for BidderA will be permanently removed from the auction after round 4.

Because Product-1 is over-subscribed, the announced price for Product-1 will be reduced from $72.50 to $70.15 for round 4. Because Product-2 is not over-subscribed, the announced price for Product-2 will remain at $76.10 for round 4.

BidderA will have eligibility of 82+43+10 = 135 tranches for round 4, and BidderB will have eligibility of 50+57 = 107 tranches for round 4 (including the 22 tranches rolled back on Product-2).

Round 4

At the announced prices for round 4, BidderA bids 46 tranches and 43 tranches on Product-1 and Product-2, respectively. Thus, BidderA reduced its tranches bid on Product-1 from 82 to 46 tranches. BidderB bids 32 tranches and 57 tranches on Product-1 and Product-2, respectively. Thus, BidderB reduced its tranches bid on Product-1 from 50 to 32 tranches.

When the round closes the EOR procedure is executed. Product-1 is under-subscribed by 22 tranches: only 78 tranches bid against the tranche target of 100 tranches: BidderA's bid represents a reduction in its eligibility by 36 tranches, while BidderB's bid represents a reduction in its eligibility by 18 tranches. Of the 54 fewer tranches bid on Product-1, 36 were eligibility reductions from BidderA and 18 were eligibility reductions from BidderB. Of those 54 fewer tranches bid, 100-78 = 22 tranches need to be rolled back on Product-1. The selection of which tranches are rolled back is done by assigning random numbers tranche by tranche (not bidder by bidder) to each of the 54 fewer tranches bid on Product-1. On average, the selection of the rolled back tranches will be proportional based on the number of tranches by which each bidder reduced its bid on the product. Thus, if the assignment of random numbers and selection of rolled back tranches were repeated many times, the number of rolled back tranches for BidderA on Product-1 would be expected to be 15 on average or (82-46)/(132-78)*(100-78) = 36/54*22, rounded, and the number of rolled back tranches for BidderB on Product-1 would be expected to be 7 on average: (50-32)/(132-78)*(100-78) = 18/54*22, rounded.

Auction Close

After the rollback is done for Product-1, it is determined that no product is over-subscribed and no bidder has free eligibility tranches. Thus, the criteria are met for closing the auction.

Product-1's bid stack has tranches bid at $72.50 and tranches bid at $70.15. So Product-1's clearing price is the higher of the two, or $72.50. BidderA wins 61 tranches and BidderB wins 39 tranches for Product-1. All 100 tranches procured for Product-1 are paid the price of $72.50.

Product-2's bid stack has tranches bid at $78.60 and tranches bid at $76.10. So Product-2's clearing price is the higher of the two, or $78.60. BidderA wins 43 tranches and BidderB wins 57 tranches for Product-2. All 100 tranches procured for Product-2 are paid the price of $78.60.

Example 2. Round-by-Round Bidding with Pre-EOR and Post-EOR Results

Round	Product-1					Product-2					Next-Round Eligibility	
	Announced Price	Tranche Target	Tranches Bid	@ Price	Excess Supply	Announced Price	Tranche Target	Tranches Bid	@ Price	Excess Supply	Free	Total

Exhibit MP-4

Pre-Bid Security Letter of Credit

Appendix 3 to Bidding Rules

Sample Pre-Bid Letter of Credit

[On Issuing Bank's Letterhead]

IRREVOCABLE STANDBY LETTER OF CREDIT

_____ ("Date of Issuance")

Letter of Credit No. _____

Beneficiary:
FirstEnergy Pennsylvania Electric Company

C/O Independent Evaluator – Robert Lee
CRA International
200 Clarendon Street, T-9
Boston, MA 02116-5092
Applicant:
[Name of Bidder]
[Address]

1. We, _____ (the "Issuing Bank") hereby establish in your favor this irrevocable Letter of Credit (this "Letter of Credit") for the account of _____ (the "Bidder"), in the amount of USD $_____, effective immediately and available to you at sight upon demand by all of you at our counters at _____ [Location]. This Letter of Credit, unless terminated earlier in accordance with the provisions hereof or otherwise extended, shall remain in full force and effect at least until (i) the PaPUC has accepted the results of the Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction and the Bidder does not hold a winning Bid in the respective auction; or (ii) the PaPUC has accepted the results of the Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction, and the Bidder holds a winning Bid, the Bidder has executed the Default Service Supplier Master Agreement ("Default Service SMA") associated with its winning Bid, and the Bidder has satisfied the creditworthiness standards of such Default Service SMA; or (iii) the PaPUC has rejected the results of the Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction; or (iv) the expiration date of this Letter of Credit, _____ which is at least thirty (30) days following the Bid Date.

2. This Letter of Credit is issued at the request of the Bidder, and we hereby irrevocably authorize you to draw on us, in accordance with the terms and conditions hereof, up to the maximum amount of this Letter of Credit, subject to reduction as provided in Paragraph 11 hereof. This Letter of Credit may be drawn by presenting documents required in Paragraph 3 hereof and your certificate, in the form of Annex 1, stating that the Bidder:

   a) "has made a material omission or misrepresentation in its Part 1 Application or in its Part 2 Application to participate in the Company's Default Service Residential/Commercial Auction and/or Default Service Industrial (Hourly Priced) Auction"; or

   b) "has disclosed information relating to its Application or its Bids publicly or to any other party before the PaPUC has rendered a decision on the results of the Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction"; or

   c) "has won one or more tranches and has failed to execute the Default Service SMA(s) within three (3) business days of the PaPUC's approval of the results of the Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction"; or

   d) "has won one or more tranches and has failed to meet the creditworthiness requirements of the Default Service SMA(s) at the time of their execution".

3. A partial or full drawing hereunder may be made by you on any Business Day on or prior to the expiration of this Letter of Credit by delivering, by no later than 11:00 A.M. (prevailing Eastern Time[1]) on such Business Day to _____ (Issuing Bank), _____ (address), (i) a notice in the form of Annex 1 hereto executed by an Authorized Officer of each Company and (ii) your draft in the form of Annex 2 hereto, appropriately completed and duly signed by an Authorized Officer of each Company. Authorized Officer shall mean President, Treasurer, any Vice President or any Assistant Treasurer.

4. We hereby agree to honor a drawing hereunder made in compliance with the terms and conditions of this Letter of Credit by transferring in immediately available funds the amount specified in the draft delivered to us in connection with such drawing to your account at such bank in the United States as you may specify in your draft delivered to us pursuant to Paragraph 3 hereof, by 3:00 PM (prevailing Eastern Time) on the date of such drawing if delivery of this requisite document is made prior to 11:00 AM (prevailing Eastern Time) on a Business Day pursuant to Paragraph 3 hereinabove, but at the opening of business on the first

[1] If the issuer of the Letter of Credit is located in an area that is not in the Eastern time zone, this time, all other times in this Letter of Credit, and the definition of a business day should be adjusted accordingly.

Business Day next succeeding the date of such drawing if delivery of the requisite document is made on or after 11:00 AM (prevailing Eastern Time) on any Business Day pursuant to Paragraph 3 hereinabove.

5. If a demand for payment made by you hereunder does not, in any instance, conform to the terms and conditions of this Letter of Credit, we shall give you prompt notice (not exceeding three (3) Business Days following the date of receipt of the documents) that the demand for payment was not effected in accordance with the terms and conditions of this Letter of Credit, stating the reasons why the demand for payment was not so effected, and that we will upon your instructions hold any documents at your disposal or return the same to you. Upon being notified that the demand for payment was not effected in conformity with this Letter of Credit, you may attempt to correct any such non-conforming demand for payment to the extent that you are entitled to do so, provided, however, in such event a conforming demand for payment must be made prior to expiry in accordance with the terms of this Letter of Credit.

6. This Letter of Credit shall automatically terminate and be cancelled on the earliest of (i) the making by you and payment by us of the drawings in an amount equal to the maximum amount available to be made hereunder, (ii) the date we receive from you a Certificate of Expiration in the form of Annex 3 hereto, (iii) the above-stated expiration date hereof.

7. As used herein:

   "Authorized Officer" shall mean President, Treasurer, any Vice President or any Assistant Treasurer.

   "Bid Date" shall mean the day when the Default Service auctions are conducted.

   "Bidder" shall mean a party that submits a Part 1 Application and a Part 2 Application to the Company in response to the Company's Default Service Residential/Commercial Auction and/or the Default Service Industrial (Hourly Priced) Auction.

   "Business Day" shall mean any day on which commercial banks are not authorized or required to close in New York, New York and any day on which payments can be effected on the Fedwire system.

   "Default Service Supplier Master Agreement" shall mean each of the agreements by which the Company will be contracting for the provision of Default Service Supply.

"Residential/Commercial Auction" shall mean the FirstEnergy Pennsylvania Electric Company Default Service Residential/Commercial Auction.

"Industrial (Hourly Priced Auction)" shall mean the FirstEnergy Pennsylvania Electric Company Default Service Industrial (Hourly Priced) Auction.

"PaPUC" shall mean Pennsylvania Public Utility Commission.

"Rules" shall mean the rules that govern the conduct of the Residential/Commercial Auction and the Industrial (Hourly Priced) Auction as filed and approved by the PaPUC.

8. This Letter of Credit is not transferable, and except as otherwise expressly stated herein, is subject to the Uniform Customs and Practices for Documentary Credits – 2007 revision, ICC Publication No. 600, or any successor publication thereto (the "UCP"). All banking charges are for the account of the Bidder. This Letter of Credit shall, as to matters not governed by the UCP, be governed and construed in accordance with New York law, without regard to principles of conflicts of law.

9. This Letter of Credit sets forth in full our undertaking, and such undertaking shall not in any way be modified, amended, changed, amplified or limited by reference to any document, instrument or agreement referred to herein, except for Annexes 1 through 3 hereto and the notices referred to herein; and any such reference shall not be deemed to incorporate herein by reference any document, instrument or agreement except as set forth above.

10. We certify that as of _____ (date) we _____ (Issuing Bank) satisfy the minimum senior unsecured debt rating of at least "A" from Standard & Poor's or Fitch, or "A2" from Moody's.

11. The amount which may be drawn by you under this Letter of Credit shall be automatically reduced by the amount of any drawings paid through us referencing this Letter of Credit No. ___. Partial drawings are permitted hereunder.

12. Faxed document(s) are acceptable. Presentation by fax must be made to fax number _____ and confirmed by telephone to telephone number _____.

13. In the event of act of God, riot, civil commotion, insurrection, war, terrorism or by any strikes or lock outs, or any cause beyond our control, that interrupts our business, and causes the place for presentation of this Letter of Credit to be closed for business on the last day of

presentation, the expiration date of this Letter of Credit shall be automatically extended without amendment to a date thirty (30) calendar days after the place for presentation reopens for business.

14. This original Letter of Credit has been sent to the Independent Evaluator at 'Independent Evaluator — c/o Robert Lee, CRA International, 200 Clarendon street, T-9, Boston, MA, 02116-5092' (as per Bidder's instructions, the Independent Evaluator holds the Letter of Credit for the benefit of the Company). The aggregate amount paid to the Company during the validity of this Letter of Credit will not exceed the amount of this Letter of Credit. Any demands or communications in the form of the attached Annexes or other communications directed to us under this Letter of Credit must be signed by an Authorized Officer of the Company. Acceptance or rejection of any amendments to this Letter of Credit must be signed by an Authorized Representative of the Independent Evaluator on behalf of Company. An Authorized Representative of the Independent Evaluator means any Vice President or Senior Vice President of the Independent Evaluator.

Very truly yours,

(Issuing Bank)

Rebuttal Testimony of
Margarita Patria

List of Topics Addressed

Laddering and Contract Duration
60-Month FPFR Product
Removal of NITS from FPFR Products

REBUTTAL TESTIMONY

OF MARGARITA PATRIA

I. INTRODUCTION AND BACKGROUND

Q Please state your name and business address.

A. My name is Margarita Patria. My business address is John Hancock Tower, 200 Clarendon Street, T9, Boston, Massachusetts 02116.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I filed direct testimony and exhibits on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") which have been designated as FE PA Statement No. 5 and Exhibits MP-1 through MP-4.

Q. Please describe the purpose of your testimony.

A. The purpose of my rebuttal testimony is to respond to the Office of Consumer Advocate's ("OCA") witness Serhan Ogur's testimony regarding the Company's proposed procurement structure, specifically the proposed 60-month fixed price full requirements ("FPFR ") product. Additionally, I will respond to the Retail Energy Supply Association's ("RESA") witness Frank Lacey's testimony and the Office of Small Business Advocate's ("OSBA") witness Maksum Malukoff's testimony regarding the removal of network integration transmission services ("NITS") charges from the FPFR products. I explain why the Company's proposal is consistent with established procurement practices and supports prudent portfolio diversification and rate stability objectives.

Q. Dr. Ogur expresses concern that 60-month FPFR products may result in excessive supplier risk premiums.[1] Do you agree?

A. No. I do not believe Dr. Ogur has demonstrated that the proposed 60-month product would result in excessive supplier risk premiums relative to other longer-duration products. Dr. Ogur himself argues that longer-duration products can improve rate stability and supports greater reliance on 24-month products relative to 12-month products.[2] He also recommends the use of 36-month products.[3] However, he does not identify a clear economic or operational basis for concluding that extending product duration from 36 months to 60 months suddenly becomes imprudent or results in excessive risk premiums. In my view, the distinction he draws is largely speculative and not well supported.

Further, there is already precedent in Pennsylvania for longer-duration procurement products. PPL Electric Utilities has successfully procured 5-year products and, more recently, a 10-year long-term block product. These procurements demonstrate that suppliers are willing and able to evaluate and price longer-duration obligations in Pennsylvania markets.

The proposed 60-month product also represents only approximately 10 percent of the overall residential supply portfolio, which limits exposure while still allowing customers to benefit from additional laddering and longer-term rate stability. The Company's proposal therefore represents a measured and balanced approach rather than an excessive reliance on long-duration products.

---

1 *See* OCA St. No. 1 at p. 15.
2 *Id.* at p. 17.
3 *Id.* at p. 16.

In addition, the Company's proposal already includes mechanisms that substantially reduce supplier exposure to some of the largest and most uncertain cost components. Specifically, the Company's capacity proxy price ("CPP") mechanism addresses uncertainty associated with PJM Interconnection, LLC ("PJM") capacity costs, and the Company's proposal to remove NITS charges from the FPFR products similarly removes another significant source of uncertainty from suppliers. As a result, the remaining risks associated with the proposed 60-month product are materially narrower than Dr. Ogur suggests.

Ultimately, the competitive solicitation process itself is the appropriate mechanism for determining whether suppliers are willing to provide competitively priced long-duration products. If suppliers believe the risks associated with the proposed 60-month product are excessive, that would naturally be reflected in auction participation and pricing outcomes. If bidders perceive the risks associated with the 60-month product to be high, then a higher risk premium would naturally be reflected in bid prices. However, it is important to note that the starting prices are representative of the highest price that the Company and the Pennsylvania Public Utility Commission ("Commission") would be willing to accept. Therefore, the auction, by design, would not allow prices that are higher than what the Company would consider to be the upper bounds of reasonable.

Q. Dr. Ogur also proposes that a condition to the 60-month contract be that the Company's auction monitor should develop a cost-to-serve forecast for the 60-month FPFR products and that the Commission should apply a pre-determined, reasonable risk premium when determining whether to approve the lowest bids in the auction.[4] What is your response to this?

A. The notion that Dr. Ogur is proposing is not entirely different from what is done currently. A view of the expected cost to serve load and risk premium is developed and the bids are evaluated relative to that benchmark. The Commission then also uses this benchmark in evaluating the bids.

Q. RESA witness Mr. Lacey and OSBA witness Mr. Malukoff oppose or question the Company's proposal to remove NITS charges from the FPFR product.[5] How do you respond to those concerns?

A. I disagree that NITS charges should remain within the FPFR product. NITS charges are not a competitive wholesale commodity cost that suppliers can meaningfully manage or hedge. Rather, they are largely administratively determined transmission costs that are outside the control of default service suppliers. If suppliers are required to include NITS in a fixed-price product, they must estimate an uncertain and uncontrollable cost over the contract term and include a corresponding risk premium in their bids. Removing NITS from the FPFR product therefore reduces supplier exposure to uncertain non-market-based transmission costs and should reduce unnecessary risk premiums embedded in supplier pricing.

---

4 *Id.*

5 *See* RESA St. No. 1 at pp. 38-47; OSBA St. No. 1 at p. 6.

The Company's proposal is also consistent with broader industry precedent and established procurement practices. PECO Energy Company, PPL Electric Utilities, Duquesne Light Company, AES Ohio, Ohio Edison, The Illuminating Company, Toledo Edison, Duke Energy Ohio, and basic generation service provided by New Jersey EDCs all utilize procurement structures in which the utility, rather than the wholesale supplier, retains responsibility for NITS.

Accordingly, the Company's proposal does not represent a novel or unusual procurement approach. Rather, it is consistent with prevailing market practice and reflects the practical reality that NITS costs are primarily administratively determined costs that suppliers do not directly control. In my view, removing NITS from the FPFR product represents a reasonable approach that improves pricing efficiency and supports the Company's broader objective of reducing unnecessary supplier risk premiums.

Q. **Mr. Lacey compares the ability of an electric generation supplier ("EGS") to manage the risk of changes in NITS with that of a default service supplier's ability to do the same.[6] Can you respond?**

A. Yes. I believe Mr. Lacey's discussion somewhat mischaracterizes the nature of the issue. The question is not whether wholesale suppliers are capable of incorporating NITS uncertainty into their bids. Suppliers can and do incorporate many forms of uncertainty into fixed-price products. Rather, the relevant question is whether requiring suppliers to estimate uncertain, administratively determined transmission charges years in advance represents the most efficient procurement structure for customers.

[6] *See* RESA St. No. 1 at p. 39.

The risk associated with NITS is fundamentally different from many other wholesale market risks that suppliers routinely manage. Suppliers can actively hedge or manage risks associated with energy, capacity, and load obligations through market transactions, portfolio management, and other commercial strategies. By contrast, NITS charges are primarily administratively determined transmission charges that suppliers do not directly control and cannot meaningfully hedge.

Importantly, much of the uncertainty associated with NITS charges arises from the timing mismatch between auction procurements and the timing of transmission rate determinations. For example, suppliers bidding into a multi-year default service product may be required to estimate future NITS charges before those transmission rates are finalized or announced. In that circumstance, suppliers are effectively required to forecast future administratively established charges and incorporate those forecasts into fixed-price bids over extended time horizons.

This timing issue already influences procurement design today. For example, the Company's current auction schedule is structured in part to allow suppliers to know applicable NITS rates for at least the initial delivery period before submitting bids.

However, for longer-duration products, future NITS charges necessarily remain uncertain at the time bids are submitted.

Under the Company's proposal, this uncertainty is not eliminated, but it is handled differently and more transparently through the utility's rate-setting and reconciliation mechanisms. As a result, the proposal avoids requiring suppliers to embed potentially significant risk premiums associated with forecasting long-term administrative transmission charges.

Accordingly, the issue is not whether suppliers are capable of managing risk generally. Rather, it is whether customers are better served by requiring suppliers to embed estimates of uncertain administrative transmission charges into long-term fixed-price bids, or by addressing those charges directly through regulated pass-through mechanisms once the costs are known. In my view, the Company's proposal represents the more efficient and transparent approach.

Q. Mr. Lacey also suggests that NITS should remain in the auction product to maintain an "equal playing field" between wholesale suppliers and EGSs.[7] Do you agree?

A. No, I do not agree with Mr. Lacey's characterization that maintaining NITS within the FPFR product is necessary to preserve an "equal playing field" between default service suppliers and EGSs. The procurement and contractual structures applicable to those entities are different. Default service suppliers provide service under standardized procurement products and contractual terms established through the Company's default service plan and Supplier Master Agreement. By contrast, EGSs may offer customers a variety of retail products and contract structures, including products with different pricing approaches and contract durations. As a result, the fact that EGSs may incorporate transmission-related risks into certain retail products does not necessarily mean that the same approach represents the most efficient procurement structure for default service supply.

[7] *Id.* at 41.

Q. OSBA witness Mr. Malukoff states that FE PA did not provide any evidence to support the notion that risk premiums would decrease as a result of removing NITS from the auction product.[8] How do you respond to this?

A. FE PA's determination is based on a fundamental economic principle: uncertainty regarding supplier costs creates risk, and suppliers generally reflect that risk in their bids through a risk premium. When NITS charges are included in the auction product, suppliers must estimate future NITS costs at the time of bidding, even though those costs are not known with certainty. Because suppliers face the possibility that actual costs may differ from those estimates, including the potential for losses, this uncertainty creates risk exposure that can reasonably be expected to increase bid prices. Removing NITS charges from the auction product reduces or eliminates this source of uncertainty and therefore should reduce the associated supplier risk premium and overall procurement costs. While the Company did not perform a quantitative analysis estimating the precise magnitude of this effect, the conclusion is based on the well-established principle that reducing bidder exposure to uncertain costs should reduce risk premiums embedded in offers.

II. CONCLUSION

Q. Does this complete your rebuttal testimony?

A. Yes, it does.

Declining Clock Auction

SURREBUTTAL TESTIMONY
OF
MARGARITA PATRIA

I. INTRODUCTION AND BACKGROUND

Q Please state your name, professional position, and business address.

A. My name is Margarita Patria. I am a Principal in the energy practice at Charles River Associates. My business address is John Hancock Tower, 200 Clarendon Street, T9, Boston, Massachusetts 02116.

Q. Have you previously submitted testimony in this proceeding?

A. Yes. I submitted direct and rebuttal testimony on behalf of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") which are designated as FE PA Statement Nos. 5 and 5-R.

Q. Please describe the purpose of your testimony.

A. I will address the rebuttal testimony offered by Retail Energy Supply Association ("RESA") witness Frank Lacey criticizing the analysis of EGS pricing presented in the direct testimony of Office of Consumer Advocate ("OCA") witness Barbara R. Alexander and Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") witness Patrick Cicero showing that FE PA's residential shopping customers have paid more to electric generation suppliers than they would have paid for default service.

Q. Mr. Lacey contends that the OCA's and CAUSE-PA's pricing comparisons are flawed because Ms. Alexander and Mr. Cicero did not adjust historical default service rates for additional load served by wholesale suppliers.[1] Do you agree?

A. No. Mr. Lacey's assertion that the descending clock auction "would clear at a higher price if the default service load was higher"[2] is an oversimplification and does not accurately reflect how wholesale suppliers evaluate and price default service products in the FE PA auction process. The auction clearing price is not simply a function of the total megawatt ("MW") level of default service load. As long as the load obligation is known prior to the auction and is not expected to vary materially during the delivery period, the absolute MW level itself is not the primary driver of default service supplier pricing. Default service suppliers price their full requirements products based on wholesale market fundamentals and their ability to hedge the various components of the obligation, including energy, capacity, ancillary services, and associated risks.

In the FE PA auction structure, bidders submit offers on tranches, which represent a percentage share of the load, rather than bidding directly on a fixed MW quantity. Accordingly, an increase in total default service load does not mechanically result in a higher auction clearing price. To the extent load characteristics affect pricing, the more relevant consideration is the uncertainty and variability associated with the load obligation. Specifically, unexpected changes in load requirements or increased variance in load during the delivery period may increase supplier risk exposure and hedging costs, which can translate into higher risk premiums in supplier bids. In contrast, a known and stable

[1] *See* RESA St. No. 1R at p. 10.

[2] *Id.*

increase in expected load does not, by itself, imply that auction clearing prices would necessarily increase based on a simple supply and demand relationship, as Mr. Lacey contends.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

Date Served: April 29, 2026

Date Submitted for the Record: _____

DIRECT TESTIMONY OF MAKSIM MALUKOFF

1. Introduction

Q. Mr. Malukoff, please state your name and briefly describe your qualifications.

A. My name is Maksim Malukoff. I am a Senior Associate at Industrial Economics, Incorporated ("IEc"), a consultancy headquartered at 2067 Massachusetts Avenue, Cambridge, MA 02140. I have ten years of experience in consulting and economics research, much of it related to energy markets and regulated utilities. I obtained a Bachelor of Arts degree in Mathematics from the State University of New York at Geneseo and a Master of Science in Economics from Tufts University. I have previously provided expert testimony in electric and gas base rates cases before the New York Public Service Commission, the New Hampshire Public Utilities Commission, and the Rhode Island Public Utilities Commission. I have also participated as an analyst in rates cases, purchased gas cost filings, default service provider petitions, and other cases before the Pennsylvania Public Utility Commission. My résumé and a listing of the expert testimony that I have filed in utility regulatory proceedings are attached in Exhibit IEc-1.

Q. What is the purpose of this testimony?

A. I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). OSBA requested that I review the default service plan ("DSP") proposal of FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") to evaluate whether the proposal is consistent with sound economics and regulatory policy, and whether it is equitable to small business customers. FE PA comprises four rate districts: Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Penn Power Company ("Penn Power") and the West Penn Power Company ("West Penn").

The Company offers default service to three rate class groups: Residential, Commercial and Industrial. The "Commercial" class consists of non-Residential general service customers, which includes both business and non-business customers (including lighting customers, as well as some multi-family residences served from a single meter). Currently, the Company limits the Commercial class to customers with a maximum demand of less than 100 kilowatts ("kW"); in this proceeding the Company proposes that the 100-kW threshold which separates the Commercial and Industrial classes will be determined by the maximum registered peak load ("MRPL") of the customer. For the purposes of this testimony, I deem that small business customers are subsumed within the "Commercial" rate class group, and I focus on the proposed default service procurement plans for those customers.

II. Historical Trends

Q. Please summarize the shopping trends for the Company's customers.

A. My workpapers (IEc WP1) provide the Company's shopping trends. This review shows:

- Residential shopping, measured either as a percentage of load or percentage of customers, has decreased since the DSP VI proceeding. Current residential shopping rates are in the range of 17-21 percent, down from about 20-25 percent at the beginning of 2022.
- Commercial shopping across the four rate districts dipped slightly in 2023 before reverting to 2022 levels in 2024 and 2025. By customer count, shopping rates are currently 35 to 46 percent. Measured as a percent of load, shopping rates are currently about 70 percent.
- Larger Commercial customers exhibit much higher shopping rates than smaller customers, as they tend to be more attractive to serve and have a larger economic

interest in obtaining lower prices. Over 95 percent of Commercial customer load over 300 kW shops, while shopping for the 25 to 50 kW customers is roughly 60-70 percent and shopping for the under 25 kW customers is typically below 50 percent.

- Most default service Commercial customers have maximum demand below 25 kW. Across the four rate districts, over 165,000 customers with maximum demand below 25 kW took default service in December 2025, with about 5,300 default service customers between 25 kW and 100 kW. Within the under 25 kW group, 36 percent of customers shop, while 47 percent of the load shops.

Q. What are your observations regarding shopping trends?

A. When shopping rates vary over time, more risk is associated with longer-term procurements of electricity supply. I did not identify discernible trends in customer switching between the default provider and electric generation suppliers ("EGSs"). Rising default service costs, beginning in 2025 and driven in large part by capacity charges, may soon impact shopping trends. As I discuss in more detail below, the fact that smaller Commercial customers are less likely than Industrial customers to shop supports the Company's proposal to move large net-metering customer-generators into the Industrial default service class.

III. <u>Commercial Default Service Procurement</u>

Q. Please summarize the Company's proposal for DS supply procurement for Small C&I customers.

A. The Company proposes default plans for the 48 months running from June 1, 2027 to May 31, 2031. The salient features of the Company's proposed default service procurement for Commercial customers are as follows:

- All default service supplies will be procured through full-requirements, load-following ("FRLF") contracts.
- Commercial customers will be served via fixed priced contracts with terms of 12 and 24 months. The Company proposes conducting three auctions in 2027 (January, April, and November) and conducting semi-annual auctions thereafter.
- The Company proposes to continue adjusting and reconciling default service rates on a semi-annual basis (to take effect on June 1 and December 1).
- Consistent with the Settlement Agreement in the Company's DSP VI proceeding, FE PA will include overhanging full requirement contracts that cover the period of June 2031 – May 2032 (the first year of the Company's DSP VIII program). In prior years, the Company had utilized "hard stop" contracts that did not extend beyond the end of the DSP program.
- FRLF contract tranches will be targeted at 50 MW of load, and will be procured through a descending-price clock auction process, consistent with the Company's current DSP.
- Suppliers are responsible for meeting all Alternative Energy Portfolio Standards Act ("AEPSA") energy requirements for FRLF. In the current DSP, FE PA procures a portion of suppliers' Solar Photovoltaic Alternative Energy Credits ("SPAECS"). The Company also proposes to eliminate its Solar Photovoltaic Requirements Charge ("SPVRC") Rider in this proceeding because all legal solar contracts have expired and the rider is no longer active.

- Responsibility for certain non-market-based ("NMB") transmission costs will continue to remain with the Companies and will continue to be recovered in the default service support riders ("DSSRs").
- In this proceeding, the Company proposes to include Network Integration Transmission Service ("NITS") charges in the price-to-compare ("PTC"). In the current DSP, suppliers are responsible for NITS charges. The Company represents that this change will reduce the supplier risk premium and is consistent with other Pennsylvania electric distribution companies' ("EDCs'") treatment of NITS charges.

Q. Do you have any concerns with the Company's procurement strategy for Commercial customers?

A. The Company has not provided evidence that removing NITS from the auction product will reduce risk premiums. In discovery, the Company stated that it has not received feedback from suppliers indicating that including NITS charges in full requirements products would increase risk premiums and/or reduce supplier participation in auctions.[1] While other Pennsylvania EDCs recover NITS through a bypassable rider, FE PA should provide evidence that doing so in this proceeding would benefit customers.

I reserve the right to address additional specific issues should they arise through my review of forthcoming intervening party testimony, Company testimony, and related discovery.

IV. Net Metering

[1] Company response to OCA Set 2, No. 22.

Q. Please explain what net metering is and describe the Company's proposed change for classifying customers under either the PTC Rider or HP Rider.

A. Net metering is a policy designed to encourage the adoption of renewable distributed generation, by allowing customer generators to set the kWh billing determinant for all energy charges on the bill (generation, transmission, distribution, universal service, etc.) on a net basis, reflecting the difference between power delivered to the customer and power shipped back to the distribution system. Generally, credits for total generation in excess of consumption are constrained, as net metering is conceptually based on the idea of the customer meeting its own requirements. However, the Pennsylvania legislature (a) allows net generators to cash out excess generation at the generation "price to compare," and (b) allows general service customers to install up to 3 megawatts ("MW") of generating capacity regardless of the size of the actual loads.

FE PA currently separates Commercial and Industrial customers based on a 100-kW peak demand threshold. Customers with demand below 100 kW are classified as Commercial and receive service under the Price to Compare Default Service Rider ("PTC Rider"). Industrial customers with demand of 100 kW or greater receive service under the Hourly Pricing Default Service Rider ("HP Rider"). Under the current tariff structure, customers with significant net metering output but negligible demand are still assigned to Commercial class and PTC Rider.

The Company proposes to categorize default service customers between the PTC Rider and HP Rider rate categories based on "Maximum Registered Peak Load" or MRPL, which FE PA defines as: "A customer's net demand contribution impact to the Company's default service procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system. As related to customer-generators, this

shall also be inclusive of the nameplate capacity of the generation system."[2] In other words, net power flow includes peak demand and peak export. As a result, a FE PA customer or customer-generator that imports or exports more than 100 kW during the 12-month period ending March 31 will be assigned to the HP Rider for default service.

The Company proposes June 1, 2027 as the effective date for this tariff change for new net-metering customers. FE PA proposes to exempt existing customers from potential reclassification until June 1, 2029.

Q. Why is the Company proposing to classify Commercial and Industrial Customers based on MRPL?

A. Like other electric distribution companies in Pennsylvania, notably PPL Electric and UGI Utilities, Inc. – Electric Division ("UGI"), FE PA has concerns that net-metered customer-generators with minimal to no onsite electric load are distorting default service procurement markets for residential and smaller commercial customers. The Company states that "adding large customer-generator supply to the commercial procurement group would decrease load provided by default service suppliers and would increase risk premiums included in fixed-price full requirements products."[3] In addition, when customers generate excess energy, the purchased excess power is treated as default service supply and the customer-generators receive compensation. Under existing regulations, these purchases are applied to the same class as the customer-generator from whom the power is purchased. Thus, if Commercial customers with minimal loads export large

[2] FE PA Exhibit DMY-6. Electric Pa P.U.C. No. 1. Superseding Original Page 25.

[3] FE PA Statement No. 1, p. 17.

amounts of generation, the burden of the higher-cost default service supplies currently falls on Commercial default service customers, including non-net-metering customers.

Q. Does the Company estimate the potential costs for PTC Rider customers to compensate excess net-metered generation?

A. Yes. The Company calculated that the true-up expense for Commercial PTC Rider customers was $4.6 million for the period June 1, 2024 to May 31, 2025.[4] The Company then estimates that potential costs to PTC Rider customers range from $81 million to $750 million between 2026 and 2029, depending on the number of net-metering installations that come online.[5]

Q. Do you agree with the Company's proposal to classify Commercial and Industrial Customers based on MRPL?

A. I do. The Company's current classification results in small business default service customers disproportionately subsidizing customer-generators that, based on their size and output, should be classified as Industrial customers under the HP Rider. FE PA rightly points out that HP Rider Industrial customers, relative to PTC customers, are more active and sophisticated in managing their energy needs and are thus less likely to be impacted by net-metered generation.[6] The shopping trends I discussed above also show that smaller Commercial customers (maximum demand below 25 kW) are much less likely to shop for power and are thus more vulnerable to increases in default service costs. The Company's

[4] Company response to CGC Set 1, No. 23.

[5] Exhibit DMY-7.

[6] FE PA Statement No. 1, p. 19. See also Company response to CGC Set 1, No. 24.

proposal would appropriately classify large customer-generators as merchant generators and reduce risks and costs to smaller commercial customers.

In supporting the Company's proposal, I acknowledge that customer-generators should be fairly compensated for the energy they supply to the Company's distribution system. Reclassifying large customer-generators under the HP Rider would offer these customers fair compensation without unduly burdening small businesses that are not customer-generators under the PTC Rider. The issue is whether FE PA's proposed tariff changes accurately classify customers for default service assignment, which should be based primarily on the load characteristics (peak demand and supply) of customers and how best to secure default service for similar customers.

Q. Is there any relevant Commission precedent that would support the Company's proposal?

A. Yes. OSBA has supported similar rate structure changes in the recent UGI DSP proceeding and the 2025 PPL Electric base rate proceeding. In the former, the Commission approved UGI's proposal to classify customers for default service based on their supply peak load impact ("SPLI"), separating residential/small commercial customers and large commercial/industrial customers by a 100 kW threshold, rather than their peak demand load.[7] The Joint Petition for Approval of a Non-Unanimous Settlement in the PPL Electric proceeding approves a modification that classifies customers for default service based on MRPL, where 100 kW again serves as the threshold to separate smaller and larger

[7] Docket No. P-2024-3049343, February 20, 2025, PA Public Utility Commission – OPINION AND ORDER, pp 22-68.

customers.[8] On April 17, 2026, the Administrative Law Judge recommended that the Commission approve the Joint Petition without modification.

Q. Does this conclude your direct testimony?

A. Yes, it does.

[8] Docket R-2025-3057164, March 13, 2026, NOTICE OF PROPOSED JOINT PETITION FOR APPROVAL OF NON-UNANIMOUS SETTLEMENT OF ALL ISSUES, pp. 25-29.

RÉSUMÉ & EXPERT TESTIMONY LIST

for

MAKSIM MALUKOFF

IEc

MAKSIM MALUKOFF — SENIOR ASSOCIATE

Education

Master of Science in Economics, Tufts University, 2020

B.A., *summa cum laude*, in Mathematics, SUNY Geneseo, 2015

Select Project Experience

Mr. Malukoff has participated in various proceedings concerning energy markets and regulated utilities. These efforts, which focus on issues related to revenue requirements, return on equity, cost allocation, revenue allocation, rate design, and bill impacts, include working on behalf of residential and small business intervenor groups in rate-making cases before the public utility commissions in Maryland, New Hampshire, New York, Rhode Island and Pennsylvania. He has recently submitted testimony in base rate proceedings on behalf of the **New Hampshire Office of Consumer Advocate (OCA)**, **New York Department of State, Utility Intervention Unit (UIU)**, and the **Attorney General of the State of Rhode Island**. He has also supported the Pennsylvania **Office of Small Business Advocate (OSBA)** as an analyst in multiple base rate, default service, and other proceedings before the Pennsylvania Public Utility Commission.

For the **ENVIRONMENTAL LEAGUE OF MASSACHUSETTS,** evaluated the ratepayer impacts of contracting 3.6 GW of offshore wind energy solicited by Massachusetts in the March 2024 tri-state solicitation with Rhode Island and Connecticut. The analysis indicated that contracting the full capacity of the solicitation will result in a less-than-1% increase in the average Massachusetts residential consumer's monthly electricity bill.

For the **NEW YORK STATE ENERGY RESEARCH AND DEVELOPMENT AUTHORITY (NYSERDA)**, developed analysis of inflation in the U.S. economy between 2016 and mid-year 2023 and of future inflation forecasts to assist NYSERDA in its evaluation of New York's large-scale renewables projects. The analysis considered general measures of inflation and prices specific to solar PV, onshore wind, and offshore wind development projects.

For **NYSERDA and the New York State Department of Public Service (NYDPS)**, served as lead analyst in the preparation of a Generic Environmental Impact Statement (GEIS) for New York State's Renewable Action through Project Interconnection and Deployment (RAPID) Act which creates a one-stop-shop for the environmental review and permitting of electric transmission and improve the interconnection process. As part of this effort, IEc conducted a programmatic assessment of the environmental and economic impacts and potential benefits of the RAPID Act, including an assessment of the current state of the State's transmission and distribution system. The draft GEIS was subject to multiple rounds of review by NYSERDA/DPS and an extended public comments period. The Final GEIS and Regulations were approved in March 2026.

For **NYSERDA and NYDPS**, served as lead analyst in the preparation of a Supplemental Generic Environmental Impact Statement (SGEIS) for the State's proposed extension of the Zero-Emissions

Credit (ZEC) Program. ZEC 2.0, approved by the Public Service Commission in January 2026, will continue to support the State's existing nuclear facilities and compensate them for the clean firm power they generate. As part of this effort, IEc conducted a programmatic assessment of the environmental and economic impacts and potential benefits of ZEC 2.0.

For the **U.S. ENVIRONMENTAL PROTECTION AGENCY, OFFICE OF CIVIL ENFORCEMENT,** and the **U.S. DEPARTMENT OF JUSTICE,** assess the current and future financial capabilities of municipalities to pay for environmental controls (primarily combined sewer overflow programs). Conduct data collection and analysis, specifically assessment of demographic and socio-economic conditions of the service area. Evaluate water and sewer utilities' financial rate planning models or develop same based on data provided by utilities. Prepare presentations and expert reports to support settlement negotiations.

For the **U.S. ENVIRONMENTAL PROTECTION AGENCY, OFFICE OF CIVIL ENFORCEMENT**, provide support for the financial and economic aspects of EPA's enforcement program. Assess the financial capabilities of businesses and individuals to pay for environmental controls or penalties. Evaluate ability to pay and estimate economic benefit associated with noncompliance Provide ongoing support for an EPA Helpline to assist federal, state, and local environmental enforcement personnel with questions regarding the models or financial issues.

For the **U.S. DEPARTMENT OF THE INTERIOR, OFFICE OF RESOURCE CONSERVATION AND RECOVERY,** prepare Regulatory Impact Analyses (RIAs) for agency rules regulating the disposal of hazardous or explosive waste materials. Conduct cost-benefit and environmental justice analyses of the rule's impacts on businesses, the environment, public health, and local communities.

For the **U.S. DEPARTMENT OF THE INTERIOR, BUREAU OF OCEAN MANAGEMENT (BOEM)**, developed narrative descriptions of the patterns of socioeconomic effects that would likely emerge from oil and gas development activity in each outer continental shelf (OCS) frontier planning area. Collected and analyzed data from the U.S. Census, Bureau of Labor Statistics, and Bureau of Economic Analysis to show historical socioeconomic patterns across geographies and industries. Modeled the economic impacts (employment, labor income) of OCS exploration and development on adjacent local onshore areas.

For **PRIVATE COUNSEL,** provided litigation support to the states in their suits against opioid manufacturers and distributors. Conducted statistical analyses to assign liability to defendants based on opioids shipment data and marketing and to estimate the monetary damages to the states associated with increased healthcare costs and lost tax revenues stemming from the opioid crisis. Used econometric techniques to calculate the relationships between opioid prescriptions and labor force participation and between labor force participation and state sales and income tax revenues. Developed methods and tools to calculate between and within state allocation of settlement funds. Developed methods for estimating the historical prevalence and incidence of opioid use disorder, and estimated the costs associated with a program to abate the crisis in future years. Worked closely with academic economists to coordinate data analysis and development of expert reports.

For the **U.S. DEPARTMENT OF JUSTICE, CIVIL RIGHTS DIVISION,** provided litigation support in a housing discrimination case. Conducted statistical analyses to show how black applicants at a public housing authority were systematically skipped over for housing selection in favor of white applicants. Developed STATA programs to analyze the housing authority's waiting list and offers data to flag instances where applicants were skipped over, according to the authority's internal rules regarding the prioritization of applications based on application date, elderly/disabled status, household size, and

extenuating personal circumstances. Worked closely with an academic economist to coordinate data analysis and development of an expert report.

For **THE STATE OF MARYLAND,** assessed economic damages and related financial impacts incurred by the State of Maryland due to the collapse of the Francis Scott Key Bridge and the closure of the Port of Baltimore. Conducted economic analyses to determine preliminary damages estimates across multiple categories (e.g., bridge replacement costs, foregone toll and sales tax revenues, permanent relocation of cargo away from the Port of Baltimore).

For **PRIVATE COUNSEL,** contributed to a draft complaint against a prominent social media alleging that the entity has fueled a mental health crisis among youth users. Reviewed research documenting harmful and inappropriate content presented to youth accounts and designed a methodology for documenting this content in the relevant jurisdiction. Operated synthetic spoof accounts to identify problematic content to include in the complaint.

For **PRIVATE COUNSEL,** assessed economic damages and related financial impacts incurred by Orleans Parish, Louisiana resulting from coastal land loss due to oil and gas exploration and production.

For **PRIVATE COUNSEL,** reviewed and assessed the proposed allocation scheme under the AFFF MDL PFAS settlement. Assessment identified significant data inconsistencies, methodological flaws, and inequities between participating jurisdictions. Prepared objections to the settlement agreement based on the allocation scheme's uncertainties and faulty design.

For a **TRIBAL GAMING ENTITY**, support economic analysis of existing and proposed casino operations. Identify and quantify regional economic impacts and researching the regional gaming landscape, including assessing consumer demand through information on travel patterns for these services.

Testimony and Appearances

Mr. Malukoff has provided testimony or appeared in the following cases and regulatory proceedings.

On behalf of the Attorney General of the State of Rhode Island, submitted testimony before the Rhode Island Public Utilities Commission concerning revenue requirements, IT investments, return on equity, and affordability in the matter of The Narragansett Electric Co. d/b/a Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates (Docket No. 25-45-GE, April 2026).

On behalf of the New Hampshire Office of Consumer Advocate (OCA), submitted testimony before the New Hampshire Public Utilities Commission concerning cost of service, revenue allocation, and rate design in the matter of Until Energy Systems, Inc. Request for Change in rates (Docket DE 25-025, December 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitted testimony before the Public Service Commission concerning cost of service, revenue allocation, and rate design in electric and gas base rates case of New York State Electric & Gas Corporation and Rochester Gas and Electric Corporation (Docket Nos. 25-E-0375, 25-G-0380, 25-E-0379 and 25-G-0378, October 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitted testimony before the Public Service Commission concerning revenue allocation

and rate design in electric and gas base rates case of Consolidated Edison, Inc. (Docket Nos. 25-E-0072 & 25-G-0073, May 2025).

On behalf of Pennsylvania's Office of Small Business Advocate, supporting settlement negotiations before the Pennsylvania Public Utility Commission, concerning recovery of purchased gas costs and revenue sharing for UGI Utilities, Inc. – Gas Division (Docket No . R-2025-3054938, August 2025).

REBUTTAL TESTIMONY

of

MAKSIM MALUKOFF

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Net Metering

Date Served: May 28, 2026

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF MAKSIM MALUKOFF

I. Introduction

Q. Mr. Malukoff, please state your name and briefly describe your qualifications.

A. My name is Maksim Malukoff. I submitted direct testimony and associated exhibits on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA") earlier in these proceedings and my qualifications were presented therein.

Q. What is the purpose of this rebuttal testimony?

A. This rebuttal testimony responds to the following witnesses regarding net metering and the proposal set forth by FirstEnergy Pennsylvania Electric Company ("FE PA" or the "Company") to categorize default service customers between the PTC Rider and HP Rider rate categories based on Maximum Registered Peak Load ("MRPL"):

- Customer-Generation Coalition ("CGC") Witness James A. Heidell.
- Joint Solar Advocates ("JSA") Witness Thomas S. Michelman.

II. Net Metering

Q. Please summarize the parties' positions regarding the Company's proposed change for classifying customers under either the PTC Rider or HP Rider.

A. By way of background, FE PA separates Commercial and Industrial customers for default service procurement based on a 100-kW peak demand threshold. Customers with demand below 100 kW are classified as Commercial and receive service under the Price to Compare Default Service Rider ("PTC Rider"). Industrial customers with demand of 100 kW or greater receive service under the Hourly Pricing Default Service Rider ("HP Rider"). Under the current tariff structure, customers with significant net metering output but negligible demand are still assigned to the Commercial class and PTC Rider. The Company proposes to categorize default service customers between the PTC Rider and HP Rider rate categories based on "Maximum Registered Peak Load" or MRPL, which FE PA defines as: "A customer's net demand contribution impact to the Company's default service

procurement activity, as determined upon the net power flow from or into the Company's distribution or transmission system."[1]

CGC Witness Heidell claims that FE PA (a) did not demonstrate any significant net cost shifting as a result of compensating customer-generators at the PTC rate; (b) did not demonstrate that including customer-generators under the PTC Rider increases risks premiums; (c) ignores the financial benefits that customer-generators provide to the Company's customers; (d) proposed changes to net metering that will disincentivize and discourage renewable energy investment in Pennsylvania; and (e) is harming existing clean energy investments, thus signaling that Pennsylvania is a risky environment to invest in distributed PV generation

JSA Witness Michelman does not oppose the Company's proposal to classify default service customers based on its revised definition of MRPL but recommends improvements to the Company's treatment of net-metered customer-generators. For example, Witness Michelman recommends a two-tiered legacy rights framework that would allow customer generators to maintain their classification on the Commercial PTC Rider beyond the Company's proposed cut-off date of June 1, 2029. Projects that are either currently operational or that have provided a completed copy of their Certificate of Completion to FE on or before June 1, 2027 ("Operational Projects") would maintain their classification on the Commercial PTC Rider and be compensated at the full value of the PTC Rider rate for their excess generation for a 25-year period. So-called "Transitional Projects" would maintain their classification on the Commercial PTC Rider but would receive a reduced level of compensation equal to 90 percent of the PTC Rider rate for their excess generation for a 15-year period.[2]

Q. Why is your response to CGC Witness Heidell's testimony?

[1] FE PA Exhibit DMY-6. Electric Pa P.U.C. No. 1. Superseding Original p. 25.

[2] JSA Statement No. 1, p. 65. "Transitional Projects" are projects that demonstrate the achievement of certain project development maturity thresholds by June 1, 2027.

A. FE PA's core obligation in this default service proceeding is to ensure adequate and reliable service to customers at the least cost to those customers over time. CGC Witness Heidell focuses on the benefits provided by customer-generators and how reclassifying customer-generators with MRPL over 100 kW would discourage future clean energy investments in Pennsylvania. The issue is whether FE PA's proposed tariff changes with respect to MRPL accurately classify customers for default service assignment and conform with FE PA's least cost procurement responsibility. Default service classification should be based primarily on the load characteristics (peak demand and supply) of customers and how best to secure default service for similar customers, rather than on *a priori* judgments about the price at which customer-generators should be compensated for their generation. By virtue of their size and output, customer-generators with MRPL above 100 kW should be classified under the HP Rider.

Q. Why is your position regarding legacy rights?

A. The Company's proposed transition period for legacy rights is reasonable. Extending the transition period beyond June 1, 2029 would only perpetuate the inequitable status quo where small business customers bear the burden of compensating large customer-generators.

If the Commission were to approve an extended period in which legacy rights would apply for existing Commercial PTC Rider customers, the amount of net-metered capacity among PTC Rider customers should be capped. That is, once a certain megawatt ("MW") cap is reached, no more Operational Projects or Transitional Projects (using JSA's terms) would be eligible for classification under the PTC Rider.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

Docket No. P-2026-3060298

DIRECT TESTIMONY OF

Barbara R. Alexander

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

April 29, 2026

I. INTRODUCTION AND SUMMARY OF RECOMMENDATIONS

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My office is located at 44 Beech St., Hallowell, ME 04347.

Q. FOR WHOM ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND QUALIFICATIONS.

A. I opened my consulting practice in March 1996, after nearly ten years as the Director of the Consumer Assistance Division of the Maine Public Utilities Commission. While there, I testified as an expert witness on consumer protection, customer service and low-income issues in rate cases and other investigations before the Commission. My consulting practice is directed to consumer protection, customer service and low-income programs and policies relating to the regulation of the telephone, electric and gas industries. In particular, I have focused on the changes in policies and procedures required by state regulation in the transition to retail competition. Among my areas of expertise are policies and programs related to Default Service and related issues concerning the transition to retail competition for both the electric and natural gas industries. I have appeared in over 30 U.S. and Canadian provinces on these issues and made numerous presentations on this issue before state regulatory commissions and at national conferences.

I am a graduate of the University of Michigan (B.A. 1968) and the University of Maine School of Law (J.D. 1976).

I have been involved in the implementation of retail electric and natural gas competition in Pennsylvania on behalf of the OCA since 1997. I testified on consumer education, consumer protection, supplier licensing, customer enrollment, default service, and Code of Conduct issues for the OCA in the Pennsylvania Public Utility Commission's (Commission) electric restructuring proceedings in 1997 and 1998 and in the natural gas restructuring cases beginning in 1999. I have provided testimony submitted on behalf of the OCA on service quality and low-income program issues associated with electric and natural gas distribution company mergers and in base rate proceedings for electric, natural gas, and water and sewer public utilities. With respect to issues relating to retail market competition policies, I testified on behalf of the OCA on policies that should govern the planning and acquisition of Default Service for residential customers and on proposals to adopt Purchase of Receivables (POR) programs, Customer Referral Programs, and other "retail market enhancement" programs for electric and natural gas utilities, including FirstEnergy distribution companies, Duquesne Light Co., PPL Energy (both gas and electric service), PPL Electric, UGI Utilities, Columbia Gas of Pennsylvania, T.W. Phillips Gas and Oil Co. and Peoples Natural Gas. I have opined on the design and impacts of various "smart meter" enabled rate programs, including incentive rate options and time of use rate options in Maryland, Massachusetts, and Maine. My updated CV with the specific identification of these proceedings is attached as Exhibit BA-1.

Q. WHAT IS THE PURPOSE OF THIS TESTIMONY?

A. I am filing Direct Testimony in response to the Petition filed by FirstEnergy Pennsylvania Electric Co. (FirstEnergy or Company) to adopt its Default Service program for the period June 1, 2027 to May 31, 2031. I will address the following proposals in this filing:

- FirstEnergy's proposal to not renew the Customer Referral Program (CRP) as of May 31, 2027.
- FirstEnergy's proposal to amend its Supplier Tariff and enact changes for its residential and small commercial retail shopping customers in response to higher prices charges by Electric Generation Suppliers (EGS) compared to the Price to Compare (PTC).
- FirstEnergy's proposal to change the structure of its current optional residential Time of Use (TOU) rate.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A. Based on my analysis and findings discussed in detail in my testimony, I recommend the following:

- FirstEnergy's proposal to not renew the Customer Referral Program should be adopted.
- FirstEnergy's request for a waiver of 52 Pa. Code Section 54.10(3) to implement its proposal, that EGSs entering into contracts with residential customers after June 1, 2027 return customers to default service at the end of their fixed duration contract absent an affirmative consent by the customer to elect to remain with the EGS or switch to a new supplier, should be adopted.
- FirstEnergy's proposal that for contracts entered after June 1, 2027, EGSs be required to provide an attestation of affirmative customer consent on a quarterly basis for all residential customers on variable-priced month-to-month products can be implemented as proposed or with alternatives that are likely to reduce administrative costs. Either FirstEnergy could prohibit the use of month-to-month variable rate contracts for residential customers or the Company could require only fixed rate contracts for

residential customers as a condition of an EGS use of the Purchase of Receivables (POR) to collect their prices.

- FirstEnergy's proposal to reform its POR program, including its proposal to limit eligibility for its POR as of June 1, 2027 to those EGSs on utility consolidated billing who use "rate ready" billing and charge a rate that is at or below the price to compare at the time of the customer enrollment or rate change transaction, should be adopted.
- FirstEnergy's proposed changes to its current Time of Use (TOU) rate for residential customers should not be adopted due to the lack of justification or proper consumer protection features.

Q. PLEASE LIST THE EXHIBITS ATTACHED TO YOUR TESTIMONY.

A. I include the following Exhibits:

- Exhibit BA-1: CV of Barbara R. Alexander
- Exhibit BA-2: FirstEnergy Response to OCA-I-25, Attachment A
- Exhibit BA-3: FirstEnergy Response to CAUSE PA-I-017, Attachment A
- Exhibit BA-4: FirstEnergy Response to CAUSE PA-I-11, Attachment A
- Exhibit BA-5: FirstEnergy Response to OCA-I-018, Attachment A
- Exhibit BA-6: FirstEnergy Response to OCA-I-008, Attachment C
- Exhibit BA-7: FirstEnergy Response to OCA-I-008, Attachment D

II. FIRSTENERGY'S PROPOSAL TO ALLOW THE CUSTOMER REFERRAL PROGRAM TO EXPIRE SHOULD BE ADOPTED

Q. PLEASE EXPLAIN THE HISTORY WITH RESPECT TO THE CUSTOMER REFERRAL (CRP) PROGRAM.

A. The CRP was first promoted by the Commission in 2012[1] and was adopted by all the Pennsylvania electric distribution companies, including the predecessor companies of FirstEnergy Pennsylvania shortly thereafter. The current CRP requires FirstEnergy to offer new customers (and other categories of customers who contact the Company) the option of being served by an EGS at a fixed rate that is 10% lower than the then current PTC for a 12 month period. I have reviewed and testified on the implementation of this program since its inception. Under the Commission-approved settlement of the DSP VI proceeding ("DSP VI Settlement"), the Predecessor Companies agreed to: (1) continue the current CRP design until May 31, 2027; and (2) address whether a successor CRP should be implemented in FirstEnergy's next DSP filing.[2]

Q. PLEASE SUMMARIZE OCA'S SUPPORT FOR FIRSTENERGY'S DSP VI SETTLEMENT WITH RESPECT TO THE CRP.

A. In its Statement in Support of the DSP VI Settlement, the OCA stated:

> As noted by Ms. Alexander in her Direct Testimony, there is not a sufficient value to consumers to continue the CRP. Ms. Alexander noted that the program has served its initial purpose and that there is no need for the EDC to act as the marketing agent for the EGSs since the retail market has been in effect for over a decade. Ms. Alexander provided evidence demonstrating that despite the CRP being promoted as a "7% discount program," there is a widespread disparity in actual discount levels for customers who enrolled in the CRP compared to their respective Prices to Compare (PTCs). Ms. Alexander further noted that no amount of additional customer disclosures would provide an accurate picture when the emphasis to entice enrollment is a 7% discount that does not in fact last more than a few months and does not extend beyond the initial month when the customer enrolls in certain months. Terminating the CRP as of May 31, 2027 is a reasonable

[2] *Joint Petition of Metro. Edison Co., Pennsylvania Elec. Co., Pennsylvania Power Co., and West Penn Power Co. for Approval of their Default Serv. Programs for the Period Beginning June 1, 2023 through May 31, 2027*, R.D. (June 29, 2022) ("*DSP VI RD*"). The DSP VI R.D. was adopted without modification by the Commission in its Order entered August 4, 2022.

compromise and is in the public interest.[3]

Q. HAVE YOU REVIEWED FIRSTENERGY'S COMPILATION OF CUSTOMER EXPERIENCE WITH THE CRP TO DATE?

A. Yes. FirstEnergy witness Carlixta De La Rosa presented valuable information that confirms that the participation by EGSs in the CRP has dropped considerably and that only 3% of the total eligible customers are enrolled.[4]

Q. IS THERE ADDITIONAL INFORMATION TO SUPPORT YOUR RECOMMENDATIAON THAT THE CRP NOT BE RENEWED?

A. Yes. The program design is flawed. Customers who agree to enroll with an EGS do so with a 10% discount for 12 months based on the current PTC. The PTC changes quarterly so that if the PTC changes at any time during that 12 month period and is lower than the PTC at the time of enrollment, the customer will lose the value of the discount and, in some cases, pay more than the PTC. I note that the PTC is known 45 days prior to its applicable date[5] but the CRP still relies on establishing the discount based on the PTC in effect at the day of enrollment and not the known forthcoming PTC. Under this policy, a customer can enroll based on a current PTC of 10 cents per kWh and is offered a contract with a discount of 10%, resulting in a payment of 9 cents/kWh for 12 months. But, for example, if the PTC changes to a lower rate of 9 cents per kWh a month later, there is no discount at all and the promised benefit is erased. This pattern has been documented since the onset of the CRP. The risk that the customer may lose their entire discount or even pay more than the PTC is

[3] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company, for Approval of Their Default Service Programs*, Docket Nos. P-2021-3030012 et al., OCA Statement in Support of Settlement at 10-11, (May 6, 2022) (*FE PA DSP VI*) (internal citations omitted).
[4] FirstEnergy St. 3 at 11.
[5] FirstEnergy Response to OCA-I-006. The estimated PTC is posted on the Company's website 45 days prior to the effective date, but the customer receives notice of the PTC in their bills after the effective date.

a defect in the design of the program that cannot be "fixed" with a one sentence disclosure that the PTC can change during the term of the contract by the customer representative presenting the program. Of course, I acknowledge that if the PTC increases after enrollment, the customer has received a discount that is far greater than 10%. For example, if the customer enrolls when the PTC is 10 cents/kWh and gets a fixed price supply rate of 9 cents/kWh, but the PTC then increases the next month to 11 cents/kWh, the resulting savings are more than 10%. This feature is no doubt an explanation of the recent decrease in EGS participation in the CRP because the PTC increased across the board in 2025. Most importantly, this design defect can be taken into account by EGSs more easily than can residential customers. It is not reasonable to offer a program that requires the customer to assume the risk of future changes in the PTC and pay for the incremental costs to offer the program when the EGSs have the upper hand to determine when they can benefit from the program and when they are likely to suffer losses. I attach as Exhibit BA-2, FirstEnergy's response to OCA-I-25 and Attachment A that shows the decreasing volume of EGS participation in the CRP for each of the FirstEnergy EDCs from June 2023 through June 2026.

Q. IS THERE ANY EVIDENCE THAT RESIDENTIAL CUSTOMERS REMAIN WITH THE EGS AFTER THE 12-MONTH PERIOD AND PAY MORE THAN THE PTC?

A. Yes. FirstEnergy provided the information on whether CRP participants cancelled their contract prior to the end of the 12-month period, a number that is negligible: 26 for Met-Ed, 34 for Penelec, 6 for Penn Power, and 20 for West Penn.[6] FirstEnergy has also documented the number of CRP participants who renewed with a supplier at the end of the

[6] FirstEnergy Response to CAUSE-PA-I-17, Attachment A, page 2 of 8.

12-month term and their new contract price. This information documents that a significant number of CRP customers end up with a contract price in excess of the applicable PTC. I attach as Exhibit BA-3 FirstEnergy's Response to CAUSE-PA-1-017 and Attachment A. I have highlighted the instances in which the customer renewed with a supplier in excess of the applicable PTC on page 3 of 8.

Q. AS A RESULT OF YOUR REVIEW OF THE ACTUAL EXPERIENCE WITH THE CRP AS DOCUMENTED ABOVE, DO YOU SUPPORT THE COMPANY'S RECOMMENDATION TO NOT RENEW THIS PROGRAM?

A. Yes.

III. FIRSTENERGY'S PROPOSALS TO AMEND ITS SUPPLIER TARIFF AND ENACT REFORMS TO PREVENT UNAFFORDABLE HIGHER EGS CHARGES SHOULD BE ADOPTED.

Q. PLEASE SUMMARIZE FIRSTENERGY'S PROPOSALS TO AMEND ITS SUPPLIER TARIFF AND ENACT REFORMS IN REPONSE TO HIGH EGS CHARGES.

A. FirstEnergy proposes several reforms applicable to all its residential and small commercial customers who are served by an EGS:

- FirstEnergy requests a waiver of 52 Pa. Code Section 54.10(3) to implement its proposal that EGSs entering into contracts with residential customers after June 1, 2027, return customers to default service at the end of their fixed duration contract absent an affirmative consent by the customer to elect to remain with the EGS or switch to a new supplier.[7]

[7] FE PA Pétition ¶¶ 50-52.

- FirstEnergy proposes that for EGS contracts entered after June 1, 2027, EGSs be required to provide an attestation of affirmative customer consent on a quarterly basis for all residential customers on variable-priced month-to-month products.[8]
- FirstEnergy proposes to reform its POR program, including its proposal to limit eligibility for its POR as of June 1, 2027 to those EGSs on utility consolidated billing who use "rate ready" billing and charge a rate that is at or below the price to compare at the time of the customer enrollment or rate change transaction.[9]

Q. DO YOU SUPPORT THESE REFORMS?

A. Yes. Although I have an alternative proposal with respect to the variable rate contracts that would also respond to the concerns raised by FirstEnergy.

Q. ON WHAT BASIS ARE SUCH REFORMS REASONABLE AND SHOULD BE ADOPTED?

A. The basic reason why these reforms should be adopted is to address the affordability of essential electric service. FirstEnergy has confirmed that the vast majority of residential customers served by an EGS pay more than the PTC over any reasonable period. In 2025, 84 EGSs served FirstEnergy's residential customers, with 68 of those suppliers serving customers at a rate above the Company's applicable PTC. This resulted in FirstEnergy's residential customers paying nearly *$85 million* more in generation charges to those 68 EGSs that charged an average price in 2025 that was 27% higher than the PTC. Conversely, 16 EGSs served FirstEnergy's residential customers at a rate that was on average 6% lower than the applicable PTC, which resulted in those customers saving a little more than $3

[8] FE PA Petition ¶ 51.
[9] FE PA Petition ¶ 55.

million. In total, FirstEnergy's residential shopping customers paid approximately $82 million more in net generation charges in 2025 than they would have paid if they were paying for the same amount of generation at the Company's default service rates.[10]

Q. IS THIS PATTERN UNIQUE TO THE 2025 DATA PRESENTED BY MR. YOUNG ON BEHALF OF FIRSTENERGY?

A. No. This is a long standing pattern. Residential customers of FirstEnergy's Pennsylvania EDC have paid *$394,826,692.63* more than the PTC to EGSs for the period January 2022 through January 2026. I attach as Exhibit BA-4 the data provided by FirstEnergy in response to CAUSE-PA-I-11, Attachment A with my calculations for the residential customers. These higher prices are completely without justification in light of the procurement of default service for the same product sold by the EGSs.

Q. DOES THE HIGHER PRICES PAID TO EGSs COMPARED TO DEFAULT SERVICE RESULT IN UNCOLLECTIBLE EXPENSE?

A. Yes. According to FirstEnergy, 41% of 2024 total residential uncollectible expense was due to receivables purchased from EGSs that are billed and collected by the EDC even though the number of customers enrolled with an EGS is far less than those provided with default service. A slightly lower percentage resulted from 2025 EGS uncollectible expense. I attach as Exhibit BA-5 FirstEnergy's response to OCA-I-018, Attachment A with my calculations of the annual percentages for 2024 and 2025.

Q. TURNING TO FIRSTENERGY'S PROPOSAL TO REQUIRE SUPPLIERS TO RETURN CUSTOMERS TO DEFAULT SERVICE IF THE CUSTOMER HAS NOT AFFIRMATIVELY AGREED TO THE TERMS OF THE CONTRACT AFTER THE

[10] FirstEnergy St. 1 at 21-22.

FIXED PRICE PERIOD, PLEASE STATE YOUR RECOMMENDATION.

A. I support this recommendation and the request for a waiver to allow such a policy to be implemented. This proposal is designed to respond to the common EGS offer of a promotional or low fixed rate for a certain period followed by a variable rate that is not known to the customer at the time of enrollment. While I understand that the current regulations require notices that the EGS must issue to their customers, the customer is not required to affirmatively consent to this change in rate or the methodology used by the EGS to calculate the variable rate each month. These contracts expose residential customers to the highly volatile wholesale market. Such a negative option policy contributes to higher rates and customer confusion when higher bills from FirstEnergy must be paid to avoid collection action.

Q. PLEASE RESPOND TO FIRSTENERGY'S PROPOSAL TO REQUIRE QUARTERLY AFFIRMATIVE CUSTOMER CONSENT FOR VARIABLE RATE CONTRACTS.

A. While I agree with FirstEnergy's intent, this issue can be more easily resolved with one of two alternative policies. First, one option is to prohibit variable rate contracts for residential customers, a policy adopted in Connecticut.[11] The other option is to eliminate the use of

[11] "In 2015, PURA issued a ruling that bans variable rate electric contracts in Connecticut, representing the first time this was ever done in the entire nation. Variable electricity rates produce unpredictable cost increases month after month. Customers are usually unprepared for these price escalations. Under these types of contracts, residents are first given an initial "teaser" rate that later expires. Afterwards, they pay according to a confusing variable rate that fluctuates each month. Both PURA and Connecticut legislators were concerned that these cost increases produced a negative impact on the livelihood of low income residents, struggling parents, fixed income seniors, customers using electricity for heat, [and] individuals with limited English. According to PURA's ban, third party electric suppliers must offer customers a fixed rate for four months. They can then offer renewal terms with the option of presenting a new price. However, this new rate cannot be increased for at least 4 months." *Consumer Protection Legislation and Rights Against Third Party Electricity Suppliers*, CT.GOV (Dec. 17, 2021), https://portal.ct.gov/heatinghelp/knowledge-base/articles/consumer-protection-legislation-and-rights-against-third-party-electricity-suppliers?language=en_US.

the Purchase of Receivables option for variable rate contracts, thus allowing suppliers to market and bill for such contracts directly with customers who affirmatively agree to such terms. By focusing on fixed rate contracts for the POR program, coupled with the proposal that EGSs that rely on POR must bill a rate that is equal or less than the PTC, the retail energy market will return to ensuring benefits to residential customers who require affordable generation supply to maintain essential electric service.

Q. PLEASE RESPOND TO FIRSTENERGY'S PROPOSAL THAT SUPPLIERS WHO RELY ON POR TO COLLECT THEIR CHARGES MUST USE "RATE READY" BILLING AND PROVIDE A RATE THAT IS EQUAL TO OR LESS THAN THE PTC.

A. I understand that the "rate ready" bill provides the customer with the calculation of a cents per kWh for the customer's monthly usage and a total dollar amount for the supplier. It is important that the bill shows the customer the actual cents per kWh rate charged by the supplier for all the supplier's charges so that the customer can easily compare this rate to the PTC that is also provided on the monthly bill. Suppliers should not be able to charge a monthly fee or minimum charge in addition to the cents per kWh rate that may appear on a "bill ready" bill since that method of pricing does not present the actual cents per kWh charge to compare to the PTC.[12] Beyond the bill format, the most significant and valuable reform would be to limit the use of the POR to collect charges that are equal to or less than what the customer would pay with default service.

Q. PLEASE COMMENT ON THE FIRSTENERGY'S PROPOSED REFORMS THAT WILL BE IMPLEMENTED VIA THE SUPPLIER AGREEMENT AND POR

[12] Of course, my concern can be met by the supplier providing the actual cents per kWh charged each month that includes any monthly charge. I do not seek to determine the rate design offered by the EGS, only the manner in which the charges are presented on the monthly bill so that the customer can easily compare the actual cents per kWh with the PTC.

PROGRAM.

A. FirstEnergy's proposals do not change the existence of the retail energy market. None of FirstEnergy's proposals would prohibit any licensed EGS from marketing to residential customers any product that meets the Commission's regulations. Suppliers can use dual billing to collect their charges outside of the EDC's bill. Indeed, that is a common method of billing and collecting charges by EGSs that serve commercial and industrial customers. According to FirstEnergy, 30 EGSs do not use POR to bill their commercial and industrial FirstEnergy customers[13] However, the use of FirstEnergy's bill to collect EGSs charges subject to termination of service is an option that FirstEnergy should be able to control to benefit their customers, avoid unaffordable bills, and eliminate FirstEnergy's responsibility for collecting charges that are much higher than the PTC and that threaten their reputation and community satisfaction.

IV. FIRSTENERGY'S PROPOSAL TO CHANGE THE STRUCTURE OF ITS OPTIONAL TIME OF USE RATE SHOULD NOT BE ADOPTED AT THIS TIME.

Q. PLEASE SUMMARIZE FIRSTENERGY'S PROPOSED REVISION TO THE CURRENT OPTIONAL TOU RATE FOR RESIDENTIAL CUSTOMERS.

A. FirstEnergy is proposing to change the current TOU rate to provide a shorter on-peak time period with higher price multipliers and a longer off-peak pricing with lower price-multipliers. The term "multiplier" refers to a method of changing the fixed price default service to one that reflects the relationship of the default service fixed price for all hours to

[13] FirstEnergy Response to RESA-I-9, Attachment A. Of course, most EGSs use POR to bill and collect from residential customers because they avoid the costs of billing and collecting their contract prices.

an hourly price based on wholesale market peak and off-peak conditions. The basic result of this change is that customers who select this rate option will have a shorter on-peak period at a higher rate and a longer off-peak period with a lower rate.

Q. IS FIRSTENERGY REQUIRED TO OFFER AN OPTIONAL TOU RATE TO RESIDENTIAL CUSTOMERS FOR THE GENERATION SUPPLY PORTION OF THE CUSTOMER BILL?

A. Yes. Pennsylvania statute requires larger EDCs who install smart meters to offer a TOU or a real time pricing option as part of their default service obligation.[14] I do not seek to change this obligation. My testimony is directed to the proposal by FirstEnergy to change their current TOU rate option for residential customers. However, the specific use of the terms "time of use" and "real time pricing" constrain what ideally should reflect a wide range of demand response and rate options that would make use of the hourly smart meters.

Q. DO YOU SUPPORT FIRSTENERGY'S PROPOSAL TO CHANGE THE CURRENT TOU RATE OPTION FOR RESIDENTIAL CUSTOMERS?

A. No. I recommend that this rate change as proposed be rejected. The basis for my recommendation is due to the lack of consumer protections and the missing justification that these changes will be "worth" the costs to implement the proposed TOU rate. I explored the following predicates to determine if this rate change should be adopted at this time:

[14] "By January 1, 2010, or at the end of the applicable generation rate cap period, whichever is later, a default service provider shall submit to the commission one or more proposed time-of-use rates and real-time price plans. The commission shall approve or modify the time-of-use rates and real-time price plan within six months of submittal. The default service provider shall offer the time-of-use rates and real-time price plan to all customers that have been provided with smart meter technology under paragraph (2)(iii). Residential or commercial customers may elect to participate in time-of-use rates or real-time pricing. The default service provider shall submit an annual report to the price programs and the efficacy of the programs in affecting energy demand and consumption and the effect on wholesale market prices." 66 Pa. C.S. § 2807(f)(5).

- FirstEnergy's participation in the current TOU rate option is extremely small in all its Pennsylvania EDCs. From January 2024 through February 2026, an average of 85 residential customers each month enrolled in the current TOU rate option throughout FirstEnergy's Pennsylvania EDCs.[15] The Company has not done any evaluation to determine whether this rate design change will result in higher participation and defends this rate change entirely on the theoretical assumption that reducing the on-peak hours (even at a higher price) will incent customers "to continue to shift their energy usage from on-peak to off-peak."[16] FirstEnergy has not prepared any annual report on its TOU rate option or results.[17]
- FirstEnergy has not done any evaluation of its current or proposed TOU rate to determine if customers have shifted usage or had any impact on peak load.[18] Nor has the Company tracked lost revenues relative to default service pricing.[19] As a result, it is not clear whether those few customers who enroll do so because their load profile already benefits from this rate option and experience lower bills without shifting any usage pattern.
- FirstEnergy has not evaluated the bill impact of this change for its current TOU customers[20] but proposes to move all its current TOU customers into the new rate without any requirement of affirmative consent.[21]
- FirstEnergy's customer communications about its existing and proposed TOU rate are

[15] FirstEnergy Response to OCA-I-008 (a).. See also, Exhibits BA-6 and BA-7 that reflect the actual TOU enrollment each month.
[16] FirstEnergy Response to OCA-I-009.
[17] FirstEnergy Response to OCA-I-003.
[18] FirstEnergy Response to OCA-I-008 (f).

[20] FirstEnergy Response to OCA-I-006.
[21] FirstEnergy Response to OCA-I-011.

severely lacking, consisting of a web page that explains the rate option and the Company has no plans to market the existing or revised TOU rate.[22] The Company has not done any surveys of studies regarding customer satisfaction with or customer experience, under the TOU rate option.[23]

- The Company has not prepared any customer communications about the revised TOU rate so that it is not possible to evaluate the messaging about how this change will be communicated to current TOU customers.[24]
- FirstEnergy does not have a web-based bill calculator that would allow any customer to compare their monthly bills on the current fixed price default service with the TOU rate option.[25] As a result, customers cannot properly evaluate the potential for either the current or the proposed new TOU rate design on their electricity bills.

Q. DO THE CURRENT TOU CUSTOMERS EXPERIENCE A SAVINGS COMPARED TO DEFAULT SERVICE?

A. While available data indicate that a greater number of Time-of-Use (TOU) customers experienced bill savings rather than increases, this fact alone is insufficient to demonstrate that the TOU program provides a net benefit to the broader residential customer base. Critically, there has been no comprehensive evaluation of whether TOU participation has resulted in meaningful peak load reduction or measurable changes in customer usage patterns compared to pre-enrollment behavior. Absent such analysis, it is not possible to

[22] FirstEnergy Response to OCA-I-007: "The current customer education for the TOU program can be found at: www.firstenergycorp.com/help/pa-time-of-use-pricing.html. FE PA does not provide customers enrolled in the TOU program with any additional bill inserts or other forms of communications besides the education listed on the above website."
[23] FirstEnergy Response to OCA-I-008 (c).
[24] *Id.*
[25] FirstEnergy Response to OCA-I-013.

conclude that observed bill savings are the result of improved system efficiency or demand-shifting, which are the primary objectives of TOU rate design. Instead, there is a significant risk that these savings may reflect a rate design that benefits a subset of participants without producing corresponding system-wide efficiencies. In such cases, any revenue shortfall associated with discounted TOU rates may be recovered from non-participating customers, effectively shifting costs rather than reducing them. Exhibit BA-6 is FirstEnergy's response to OCA-I-008, Attachment C that presents the residential TOU customers who experienced bills **higher** than the applicable Price to Compare for each month from January 2024 through February 2026. On average, 372 TOU customers experienced an average of over $2,300 in higher bills compared to the PTC. Exhibit BA-7 is FirstEnergy's response to OCA-I-008, Attachment D which presents the number of TOU customers that experienced **lower** bills compared to the applicable PTC. The number of those who saved is greater than those who experienced higher bills. The lack of any evaluation of peak load reduction or change in usage patterns compared to prior bills suggests a lack of sufficient evidence to conclude any benefit from the TOU rate option other than offering a small group of customers a way to lower their bills at the expense of other residential customers who then make up the lost revenues.

Q. PLEASE PROVIDE YOUR OVERALL CONCERN WITH FIRSTENERGY'S IMPLEMENTATION OF ITS TOU RATE OPTION.

A. The Company has implemented this TOU rate option pursuant to the statutory and Commission directives to do so. However, there is no evidence that the rate option as currently offered or as proposed will provide any impact on peak load usage or default service pricing. Therefore, I cannot recommend any change to the current TOU rate and

recommend that the current TOU rate remain in place until a proper analysis of the criteria I have identified is presented. OCA witness Serhan Ogur will discuss the preferred approach to addressing the peak load costs associated with default service.

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes.

Areas of Expertise:

- Default Service, Consumer Protection, Service Quality, and Universal Service policies and programs associated with the alternative rate plans and mergers;
- Consumer Protection and Service Quality policies and programs associated with the regulation of competitive energy and telecommunications providers;
- The regulatory policies associated with the regulation of Credit, Collection, Consumer Protection, Low Income, and Service Quality programs and policies for public utilities;
- Customer Education and Rate design and pricing policies applicable to residential customers; and
- Advanced Metering Infrastructure and Grid Modernization costs and benefits, time-based pricing proposals, and performance standards.

Prior Employment

DIRECTOR

1986-96

Consumer Assistance Division

Maine Public Utilities Commission *Augusta, Maine*

One of five division directors appointed by a three-member regulatory commission and part of commission management team. Direct supervision of 10 employees, oversight of public utility consumer complaint function, appearance as an expert witness on customer services, consumer protection, service quality and low income policy issues before the PUC. Chair, NARUC Staff Subcommittee on Consumer Affairs.

SUPERINTENDENT

1979-83

Bureau of Consumer Credit Protection
Department of Professional and Financial Regulation *Augusta, Maine*

Director of an independent regulatory agency charged with the implementation of Maine Consumer Credit Code and Truth in Lending Act. Investigations and audits of financial institutions and retail creditors, enforcement activities, testimony before Maine Legislature and U.S. Congress.

Education

JURIS DOCTOR

1973-76

University of Maine School of Law *Portland, Maine*

Admitted to the Bar of the State of Maine, September 1976. Currently registered as "inactive."

B.A. (WITH DISTINCTION) IN POLITICAL SCIENCE 1964-68
University of Michigan *Ann Arbor, Michigan*

Boards and Commissions

Councilor, Winthrop (ME) City Council 2020-2022

Member, Board of Trustees, University of Maine System May 2022 to present
(Nominated by Governor and Confirmed by Maine Legislature)

*The amount of generation related uncollectible accounts expense recovered in the DSS Rider is based on the default service revenues and POR eligible revenues billed on behalf of EGSs in a base rate case test year. The calculation assumes each dollar of revenue is equally likely to give rise to uncollectible accounts expense. FE PA is applying the allocation factors shown in Column B to the total uncollectible accounts expense recovered in the DSS Rider to calculate an estimated POR-related uncollectible accounts expense recovered in the DSS Rider. These allocations are not necessarily indicative of actual POR-related uncollectible accounts expense.

VERIFICATION

I, Barbara R. Alexander, hereby state that the facts above set forth in my Direct Testimony, OCA Statement No. 2, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of FirstEnergy Pennsylvania Electric Co.
For Approval of a Default Service Plan for the Period June 1, 2027 to May 31, 2031

Docket No. P-2026-3060298

REBUTTAL TESTIMONY OF

Barbara R. Alexander

Barbara Alexander Consulting LLC

ON BEHALF OF THE

OFFICE OF CONSUMER ADVOCATE

PUBLIC VERSION

May 28, 2026

Q. PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My office is located at 44 Beech St., Hallowell, ME 04347.

Q. FOR WHOM ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed Direct Testimony on behalf of the OCA on April 29, 2026.

Q. WHAT IS THE PURPOSE OF THIS TESTIMONY?

A. I am filing rebuttal testimony in response to the direct testimony filed by Mr. Frank Lacey on behalf of Retail Energy Suppliers Association (RESA) (RESA Statement No. 1) and Mr. Randal Miller on behalf of Town Square Energy East LLC (Town Square) (Town Square Statement No. 1). Both RESA and Town Square witnesses opposed the retail market reforms proposed by FirstEnergy Pennsylvania Electric Co. (FirstEnergy or Company) in its filing that I evaluated and generally supported in my direct testimony, namely:

- FirstEnergy's proposal to not renew the Customer Referral Program (CRP) as of May 31, 2027.
- FirstEnergy's proposal to amend its Supplier Tariff and enact changes for its residential and small commercial retail shopping customers in response to higher prices charged by Electric Generation Suppliers (EGS) compared to the Price to Compare (PTC).
- FirstEnergy's proposal to change the structure of its current optional residential Time of Use (TOU) rate.

Q. BASED ON YOUR EVALUATION OF THE TESTIMONY AND ASSOCIATED

DISCOVERY DIRECTED TO RESA AND TOWN SQUARE, DO YOU HAVE ANY CHANGES TO YOUR ORIGINAL RECOMMENDATIONS?

A. No. Based on my analysis and findings discussed in detail in this testimony, I continue to recommend the following:

- FirstEnergy's proposal to not renew the Customer Referral Program should be adopted.
- FirstEnergy's request for a waiver of 52 Pa. Code Section 54.10(3) to implement its proposal, that EGSs entering into contracts with residential customers after June 1, 2027 return customers to default service at the end of their fixed duration contract absent an affirmative consent by the customer to elect to remain with the EGS or switch to a new supplier, should be granted.
- FirstEnergy's proposal that for contracts entered after June 1, 2027, EGSs be required to provide an attestation of affirmative customer consent on a quarterly basis for all residential customers on variable-priced month-to-month products can be implemented as proposed or with alternatives that are likely to reduce administrative costs. Either FirstEnergy could prohibit the use of month-to-month variable rate contracts for residential customers, or the Company could require only fixed rate contracts for residential customers as a condition of an EGS's use of the Purchase of Receivables (POR) to collect their prices.
- FirstEnergy's proposal to reform its POR program, including its proposal to limit eligibility for its POR as of June 1, 2027 to those EGSs on utility consolidated billing who use "rate ready" billing and charge a rate that is at or below the PTC at the time of the customer enrollment or rate change transaction, should be adopted.
- FirstEnergy's proposed changes to its current Time of Use (TOU) rate for residential

customers should not be adopted due to the lack of justification or proper consumer protection features.

Q. PLEASE LIST THE EXHIBITS ATTACHED TO YOUR TESTIMONY.

A. I include the following Exhibits:

- Exhibit BA-8: Compilation of EGS offers to Met-Ed's residential customers as of May 23, 2026, Zip Code 17401.
- Exhibit BA-9: AEP Energy fixed rate offer included in Exhibit BA-8.
- Exhibit BA-10: APG&E fixed rate offer included in Exhibit BA-8.
- Exhibit BA-11: Reliant Energy (via American Electric Rates LLC) fixed rate offer included in Exhibit BA-8.
- Exhibit BA-12: AEP Energy 100% renewable rate offer included in Exhibit BA-8.
- Exhibit BA-13: Indra Energy (via American Electric Rates LLC) renewable rate offer included in Exhibit BA-8.
- Exhibit BA-14: Town Square Energy 18-month fixed rate offered to Met-Ed customers included in Exhibit BA-8.
- Exhibit BA-15: Town Square Energy 4-month fixed rate offered to Met-Ed customers included in Exhibit BA-8.

I. RESA'S TESTIMONY IS WITHOUT ANY EVIDENCE TO JUSTIFY MR. LACEY'S OPINIONS

Q. WHO DOES RESA REPRESENT?

A. RESA is a trade organization whose members are retail market suppliers, many of whom are licensed in Pennsylvania and other restructuring states. These suppliers, referred to as

Electric Generation Suppliers (EGSs), are authorized to sell retail generation supply service to Pennsylvania customers of investor-owned electric distribution companies (EDCs).

Q. PLEASE EXPLAIN HOW THE RETAIL ENERGY MARKET WORKS IN PENNSYLVANIA.

A. The prices offered and charged by EGSs are not regulated by the Commission, but their marketing is subject to specific disclosures and consumer protection rules adopted by the Commission. As with any competitive business, EGSs build a profit into the prices they charge Pennsylvania consumers. These retail suppliers purchase wholesale generation supply in the same wholesale market from which default service is acquired by the EDCs and resell that service to residential and small commercial customers via preprinted and non-negotiable terms of service.[1] With the Commission's approval, EGSs can sell their receivables to the EDCs to bill and collect their charges using the Purchase of Receivables (POR) program. The EDCs pay the EGSs without regard to the actual collection costs that result from those charges.[2] Rather, the EDCs bill and collect those charges as if they were subject to the regulations governing the billing and collection of regulated EDC charges, including subjecting customers to termination of electric service for nonpayment of the total EDC bill that includes the unregulated EGS charges. The costs incurred to bill and collect the EGS charges are paid for by customers of the EDC. Starting in 2012, the Commission provided EGSs even further opportunity to gain customers and contribute to their profits by authorizing the Customer Referral Program (CRP), a program that I

[1] The proposed offers on the PaPowerSwitch.com shopping web portal includes a link to those multi-page and fine print terms of service associated with the EGS price offer. These fine print contracts are presented as a "take it or leave it" proposition. Of course, larger commercial and industrial customers negotiate specific contract terms as well as the price and rate design of their contracts with retail suppliers.

[2] I am aware of FirstEnergy's "claw back" requirement that does require certain retail suppliers to contribute to excessive collection costs. I discuss this requirement later in this testimony.

described in detail in my direct testimony.[3] Under this program the EDC markets a 12-month fixed price contract to the EDC residential customers who are calling about regulated EDC services with a price that is 10% lower than the current PTC.

Q. WAS THE PURPOSE OF THE CREATION OF THIS RETAIL MARKET TO LOWER PRICES TO PENNSYLVANIA CONSUMERS FOR GENERATION SUPPLY SERVICE?

A. Yes. The overall restructuring model adopted in Pennsylvania (and other states) was to eliminate the role of the local utilities in creating, owning, or managing generation supply service and shift the risk of the prices for this service to the wholesale market and retail suppliers to compete to offer lower prices to consumers. The benchmark for comparing prices has always been the price for default supply service acquired in competitive bids by the EDC and passed on to their customers without profit, a price that appears on all customer bills as the Price to Compare (PTC). The Commission's educational campaign and its PaPowerSwitch web portal teaches customers to compare supplier offers to the PTC and then categorizes offers by other criteria to allow for customers to consider other options. The Commission's shopping web portal lists the following aspects of the supplier offers by zip code and EDC to search and compare offers to the PTC: fixed rate, variable rate, and unlimited rate. Additional criteria are also categorized that can apply to any of the rate options, such as no cancellation fee, no enrollment fee, no monthly fee, discount available, and renewable energy.

Q. DOES THE POR PROGRAM REQUIRE THE SUPPLIER TO PASS THROUGH ONLY GENERATION SUPPLY SERVICE ON THE EDC BILLS?

[3] *See* OCA St. 2 at 4-8.

A. Yes.[4] As a result, any additional services marketed and sold to retail customers by an EGS, such as a sign-up bonus, non-energy benefits such as airline miles, associated efficiency programs, or any other "rewards" or "value added" services are not billed and collected by the EDC.

Q. CAN EGSs ISSUE THEIR OWN BILLS AND INCLUDE BENEFITS AND PROGRAMS IN ADDITION TO GENERATION SUPPLY SERVICE?

A. Yes. An EGS can issue their own bills for their own contractual services and collect those bills in the same manner as other non-utility competitive businesses.

Q. WHY IS THE POR PROGRAM SO IMPORTANT TO THE EGSs?

A. The advantage of the POR program allows EGSs to shift the risk of nonpayment to the EDC and avoid billing, customer service, and collection costs. The POR program is crucial because it subsidizes the EGS's billing, customer service and collection costs and shift those costs to the EDC's ratepayers.

Q. WHY IS THE CUSTOMER REFERRAL PROGRAM SO IMPORTANT TO THE EGSs?

Q. Again, this program requires the EDC to become the marketing arm of the unregulated EGSs by offering what appears to be a benefit to customers if they agree to sign up with an EGS. The defects in this program which have been in effect for many years were documented in FirstEnergy and other EDC Default Service Plan (DSP) proceedings: (1) the fixed price may start out as a small reduction from the applicable PTC but if the PTC decreases during the term of the 12-month contract (which can occur one month after entering the contract), the customer will pay more than the PTC or receive a much smaller

[4] FirstEnergy's Electric Generation Supplier Agreement states, "The Company will purchase only those receivables that are associated with basic electric supply services and not receivables associated with charges for other products or services." FirstEnergy Ex. CDL-4, page 6 of 14.

discount; (2) the EGS can decide when to participate in the program and decline to do so at a time of rising PTC prices, a determination that they are uniquely qualified to make; and (3) the EGS can keep the customer under new contract terms that may or may not be beneficial to the customer in terms of the price for generation supply service with a series of negative option renewal notices. These notices inform the customer of the renewal terms but if the customer does not take action to reject those terms and call the EDC to return to default service or enroll with a different supplier, the customer is automatically enrolled in the new renewal notice terms. This is a "negative option" renewal because the customer who takes no action is renewed into the new contract terms.

Q. WHAT IS THE MARKET DISCIPLINE APPLICABLE TO THE EGSs IN PENNSYLVANIA TO MAKE THEIR OFFERS COMPETITIVE TO DEFAULT SERVICE AND OTHER MARKET PARTICIPANTS?

A. Unfortunately, the combination of the CRP and the POR programs erase the market discipline that would lead to lower prices. These programs negate Mr. Lacey's claim that these programs increase competition. Instead, the ease by which the EGS can charge higher prices under the POR, shifting collection risk to the EDCs who then require residential customers to pay those excess collection costs in rates, and capture customers through the CRP with negative option renewal notices has contributed to harm to many consumers in the form of higher prices and threats of termination of essential electric service for unregulated charges. CAUSE-PA and I have documented these higher prices in prior FirstEnergy default service proceedings as well as the current proceeding.

Q. PLEASE SUMMARIZE RESA'S REASONS TO OPPOSE FIRSTENERGY'S RETAIL MARKET REFORMS.

A. RESA of course opposes the proposal to not renew the CRP and opposes any suggestion to control the incidence of higher EGS prices compared to the PTC on the EDC bill. The basis for Mr. Lacey's opposition to these proposals based on his arguments about the sanctity of the competitive market mask the obvious financial benefit to the EGSs that are derived from these programs. Instead, Mr. Lacey opines that these proposals threaten the existence of the retail market itself and do not take into account the value added products and services offered by EGSs. His statements include the following reasons with my overall response that is expanded in more detail throughout my testimony:

- "FE's proposals, individually and collectively, will be extremely detrimental to the competitive electricity market and, if adopted, will result in residential customer choice being eliminated and will reduce options for small commercial customers."[5]

RESPONSE: These alleged results will only occur if the EGSs cannot make offers that compete with the PTC in the form of lower rates or if the EGSs do not take action to develop their own billing and collection systems for values and attributes that enhance value beyond the PTC that cannot be billed through the EDC.

- "FE should not be permitted to implement policies and procedures that will effectively eliminate the competitive market. Rather, the Commission should refocus FE on coming up with policies supporting market forces and the expertise of sophisticated market participants who have been managing risk on behalf of customers for a quarter of a century in Pennsylvania."[6]

RESPONSE: RESA seeks to continue or expand the subsidies currently offered to EGSs and paid for by all ratepayers through the Purchase of Receivables and Customer Referral Programs.

- "FE's proposals give rise to significant uncertainty and risk for default service customers and significantly diminish their ability to have a wide variety of competitive supply options offered by EGSs. If implemented, FE's proposals will eliminate many, if not all, options for residential customers to protect themselves in whatever manner the customer deems appropriate for his or her situation."[7]

RESPONSE: FirstEnergy's proposals do not impact the design or "risk" associated with default service. Rather, EGS options will only be eliminated if they choose not to offer

[5] RESA St. 1 at 6.
[6] *Id.*
[7] *Id.* at 7.

value to residential customers in the form of lower prices or if they choose not to develop their own billing and collection systems to offer attributes or values beyond the PTC.

- "I understand that FE is not proposing to build new generation with their proposals, but it is seeking to move risk to consumers, while at the same time, seeking to eliminate the options that customers have to protect themselves from those risks — including selecting from a variety of competitive supply options."[8]

RESPONSE: FirstEnergy has not proposed any "risk" to consumers because the PTC will continue to be competitively acquired and provided to customers based on the current statutory and regulatory policies. On the contrary, preventing higher EGSs prices on FirstEnergy's bills will reduce costs to its customers. None of these proposals prevent EGSs from offering value to residential customers in the form of lower prices or from developing their own billing and collection systems to offer attributes or values beyond the PTC.

Q. DOES MR. LACEY PROVIDE ANY EVIDENCE, DATA, OR INFORMATION ON ACTUAL PRICES CHARGED BY EGSs TO RESIDENTIAL CUSTOMERS IN FIRSTENERGY'S SERVICE TERRITORY?

A. No. He offers no analysis of prices and products offered to Pennsylvania residential customers by any EGS or any of RESA's members. Nor does he provide any evidence that contests the data about prices and bill impacts associated with EGS charges presented by me or CAUSE-PA in this proceeding.

Q. DOES MR. LACEY PROVIDE EXAMPLES OF ANY SPECIFIC OFFERS BY SPECIFIC EGSs TO FIRSTENERGY'S RESIDENTIAL CUSTOMERS THAT REDUCE "RISK"?

A. No. He does not include any data or examples of offers to FirstEnergy's residential customers by any EGS. As a result, there is no documentation of how or whether EGSs actually reduce the "risk" of wholesale market prices on FirstEnergy's customers. In fact,

[8] *Id.* at 9.

the evidence shows and I documented in my direct testimony that when the PTC is increasing due to wholesale market factors that flow into the default service portfolio, EGSs decline to make offers that will actually reduce the PTC price in the CRP. It is the EGS who can manage this risk to its benefit and not residential customers. Furthermore, as I document below, EGSs draft variable rate contracts that are non-negotiable to residential customers and include terms that transfer risks of market price fluctuations to customers. I will present examples of this practice later in my testimony.

Q. DO MR. LACEY'S OBJECTIONS TO FIRSTENERGY'S REFORMS RELY ON UNSUBSTANTIATED CHARGES THAT FIRSTENERGY'S MOTIVE IS ANTI-COMPETITIVE?

A. Yes. Mr. Lacey repeatedly claims that FirstEnergy's asserted objective of "affordability" is a mask for FirstEnergy's assumed desire to reduce or eliminate the retail competitive market.[9]

Q. HOW DO YOU RESPOND TO THIS ARGUMENT?

A. Mr. Lacey's attempt to turn this discussion about affordability into an attack on FirstEnergy's role in providing default service does not reflect the real world results of the current market where residential customers are routinely charged more for generation supply service compared to a competitively acquired PTC from the same wholesale market. And residential customers who sign a fixed rate contract that may charge less than the PTC for several months are then subject to variable rates that reflect market conditions under a formula that is completely opaque to most residential customers pursuant to negative option renewal notices.

[9] *Id.* at 11.

Q. DO YOU HAVE ANY EXAMPLES OF CONTRACTS THAT THREATEN THE AFFORDABILITY OF ESSENTIAL ELECTRIC SERVICE FOR RESIDENTIAL CUSTOMERS?

A. Yes. I reviewed offers advertised on the PaPowerSwitch web portal for residential customers of FirstEnergy's Met-Ed EDC in zip code 17401 on May 23, 2026.[10] I attach a spreadsheet showing these web portal offers as Exhibit BA-8. There are 127 separate offers for a "fixed rate," the length of which the stated price remains in effect varies widely. There are 14 offers for a "variable rate." There is one offer of an "unlimited rate" and 46 separate offers for "renewable energy." A number of these "offers" are from brokers who do not actually sell the generation service but make offers on behalf of their contracted licensed suppliers (e.g., 0 Common Energy, 1776 Energy, American Electric Rates LLC). The following examples are fixed rate offers that contain a provision for renewal under the negative option allowed by current regulations. Of particular concern is that the customer is not informed of what the renewal rate will be at the time of entering the fixed rate contract. Nor is the customer provided with the methodology that will be used to calculate the variable rate:

- AEP Energy offers a six month fixed rate price with the potential of "reward" dollars at a rate that is basically equal to the current PTC. At the end of this term: "Consistent with applicable rules, AEP Energy can convert a fixed term contract into either a month-to-month contract, terminable by either Party upon thirty (30) days prior written notice, or another fixed term contract. This Agreement will end, and your customer account will return to the EDC, without penalty or prejudice to either Party, upon the occurrence of any of the following: (1) in its sole discretion, AEP Energy chooses not to renew or convert this Agreement; or (2) at any time and at such Party's option, either you or AEP Energy elect to cancel a renewal or month-to-month term contract under this Agreement. By providing AEP Energy your email address, you agree to receive notices for contract renewal and changes to terms and conditions electronically, where permitted under applicable law." The term sheet

[10] The Commission's press release issued May 20, 2026, announced that the PTC prices that will go into effect on June 1, 2026. Met-Ed's PTC will increase from 12.965 cents per kWh to 13.951 cents per kWh, a 7.6% increase.

does not define how a variable rate or month to month price will be calculated.

I attach this document as Exhibit BA-9.

- APG&E offers a three-month fixed price contract at a price below the current PTC: "Upon completion of the Initial Duration, if Customer does not provide consent to renewal terms, this Agreement will automatically renew, and Customer shall continue to receive electric service from APG&E at a month-to-month variable Holdover Rate, until Customer renews with APG&E or switches to another REP or back to Utility. If Customer automatically renews on Holdover Rate, Customer may Terminate at any time without penalty. If Customer Terminates without selecting another REP Customer will be returned to the Utility. Customer may obtain the previous 24 months' average monthly billed Holdover Rates by visiting www.apge.com or calling APG&E (toll free). Historical pricing is not necessarily indicative of present or future pricing."

  Please note that this document uses the Texas term of Retail Electric Provider or "REP" instead of the Pennsylvania term "EGS." I attach this document as Exhibit BA-10.

- American Electric Rates LLC offers a three-month fixed price slightly below the current PTC. The terms of service identify the actual EGS as "Reliant Energy Northeast LLC d/b/a NRG Home and NRG Retail Solutions." The terms of service states that at the end of the fixed price term: "You'll receive an introductory electricity supply price of $0.12300 per kWh for your first 3 bill(s) and your price will be variable after that. The initial price after the introductory period expires will be $0.12300 per kWh. Thereafter, the price can change each month and will be shown on your monthly bill." Also, "Variable. We will determine the variable supply price at our discretion based on many different factors, which may include prices charged by competitors, industry charges we are responsible for, our costs to procure and sell energy, customer retention rates, applicable state and local taxes, changes in weather, legal and regulatory issues, profit margins, or other business conditions. Your price also reflects our costs to obtain any renewable energy content specified under this contract, which contributes to the premium we may charge over the local utility supply rate. Your variable supply price may change monthly, but no matter what, we will not increase your variable price in any given month by more than 30% from the prior month's supply price."

  I attach this document as Exhibit BA-11.

Q. WITH REGARD TO THE RENEWABLE ENERGY OFFERS ON THIS SAME PAGE, DO THEY PROMISE ANY RENEWABLE ENERGY IMPACTS ON THE ELECTRICITY CONSUMED BY THE CUSTOMER?

Q. With only one exception, none of these offers include "PA wind" (a specific variable

identified on the PaPowerSwitch spreadsheet attached as Exhibit BA-8) and most of them rely on purchasing Renewable Energy Certificates from "anywhere in the United States." As a result, there is typically no promise to actually increase the content of renewable energy consumed by the Pennsylvania customer, a statement that is not found in any of these offers.

- AEP Energy offers a 36 month fixed price plan that is priced substantially higher than the current or June 1 PTC with 100% renewable energy. The renewable energy provided with this contract does not promise any renewable energy delivered to Pennsylvania customers because the contract allows AEP to purchase a renewable energy certificate from any location in the U.S. or even a location outside the U.S. The contract term states, "The electricity supply provided to you during the term of this Agreement will include renewable energy certificates sourced from renewable resources of the type and in an amount equal to the percentage of your usage as stated in the table above under 'Generation Service Charges.' ECO-Advantage is a nationally wind-generated REC product, is Green-e® Energy certified, and meets the environmental and consumer-protection standards set forth by the nonprofit Center for Resource Solutions. For more information about Green-e Energy, visit www.green-e.org or contact energy@resource-solutions.org."

  I attach this document as Exhibit BA-12.

- When selecting the American Electric Rates LLC offer of a variable rate contract for a two month term with 100% renewable energy, the link is to Indra Energy. The contract states: "$0.11900 per kWh for the first month of service (the "Introductory Period"). After the Introductory Period, your supply Price will convert to a variable rate. The rate after the Introductory Period will be $0.11900 per kWh for one billing cycle, after which your rate may vary each month based on the factors described above." And, "You will pay a price for electric supply service that will vary from month-to-month as determined by Indra in its sole discretion on the wholesale market prices acquired for energy, any supply and agency functions that Indra performs for you, line loss, certain transmission, capacity, ancillary, administrative and regulatory compliance costs incurred by Indra, alternative and renewable energy requirements, and other prevailing business considerations and market conditions, plus Indra costs, expenses and margins. This list of factors is not exhaustive and no single factor will determine the rate. You will receive notification of any rate change when you receive your bill reflecting the new rate after completion of a billing cycle." The terms of service identifies how Indra Energy will provide 100% renewable energy based on Renewable Energy Credits (RECs) purchased from "anywhere in the United States." "For Products described as 'renewable' or 'green,' a chosen percentage of Customer's electricity supply service will be paired with renewable energy certificates generated from renewable or alternative energy sources in the United States, which may include wind, solar, hydro

or any other zero-emission sources which have been qualified as such."

I attach this document as Exhibit BA-13.

Q. WHAT IS THE ACTUAL AIM OF MR. LACEY'S TESTIMONY?

A. Mr. Lacey on behalf of RESA wants to denigrate default service as required in Pennsylvania and increase that price or continue the current subsidies paid by EDC customers for the EGSs so that his members and other EGSs can "compete."[11] This approach is contrary to Pennsylvania statutory directives on how default service is required and designed to achieve lowest cost and price stability for residential customers. He states:

> The price to compare is a backward-looking "metric" that includes many true-ups and price adjustments. FE's price to compare does not obligate FE to provide any service at that price at any point in the future. An EGS contract price, by contrast, is a forward-looking actionable price at which a supplier is obligated to provide goods and services to a customer.[12]

This statement is not correct. First, this is not "FirstEnergy's price." Rather, the price for default service is acquired from competitive wholesale providers in the wholesale market pursuant to a portfolio of contract terms approved by the Commission as meeting the Commonwealth's statutory requirements for default service. This price reflects the market price for the contract terms in the portfolio. Second, the default service price is contractually available to any residential customer for the quarterly or semi-annual period in question without any obligation to qualify for the service or seek to enroll in the service. Finally, as I have documented here, the "forward looking actionable price" is typically more expensive than the PTC and, where lower than the PTC, is accompanied by contract terms that harm customers with a negative option renewal into higher variable prices. Mr. Lacey's attempts to denigrate Pennsylvania's default service mandate have been routinely

[11] RESA St. 1 at 67.
[12] *Id.* at 31.

rejected in multiple DSP proceedings.

Q. CAN EGSs CONTINUE TO OFFER AND COMPETE WITH THE PTC IF FIRSTENERGY'S REFORMS ARE ADOPTED?

A. Absolutely. EGSs can market the sale of generation supply service on FirstEnergy's bills that actually compete with the PTC in the form of lower prices. EGSs can issue their own bills and charge any price for generation supply service with attributes that do not conform to the plain vanilla PTC and that include "value added" services that charge more than the PTC. EGSs can offer time of use rates, more costly renewable energy, and efficiency programs or other rewards outside the confines of the EDC electric bill. The issue in this proceeding is not what EGSs can offer or what price they charge, but whether the captive ratepayers of FirstEnergy's EDCs must subsidize the EGSs profits for their unregulated services with the POR and CRP programs.

Q. PLEASE RESPOND TO MR. LACEY'S ARGUMENT THAT REVERSION TO DEFAULT SERVICE IS SOMEHOW HARMFUL TO CONSUMERS.

A. I do not agree. This proposal protects consumers from the harm of higher prices for essential electric service or from being exposed to the volatile month-to-month wholesale market prices without their affirmative consent. There is no evidence that consumers want to pay more than the PTC, and because the POR is limited only to generation supply service, any claim of additional values that do not appear on the customer's electric bill should not be relied upon to threaten the affordability of electric service. EGSs have the option to issue their own bills and collect their own value-added charges. I am particularly concerned with the suggestion that FirstEnergy's proposals would eliminate the customer's option to pay more for renewable energy because there is no evidence that any of these

EGS offers guarantee more renewable energy to FirstEnergy's customers than the DSP in return for these higher prices.

Q. CAN YOU RESPOND TO MR. LACEY'S JUSTIFICATION FOR THE NEGATIVE OPTION RENEWAL POLICY THAT FIRSTENERGY HAS QUESTIONED WHEN THE CUSTOMER IS RENEWED INTO A VARIABLE RATE CONTRACT?

A. Mr. Lacey links his support for the negative option renewal policy as follows:

> There are many industries where residential consumers have term-based contracts that auto-renew absent a consumer's direct action. These industries include cellular phones, auto insurance, homeowners' insurance, cable or streaming services, newspaper and magazine subscriptions, and basic internet services, to name just a few.[13]

However, Mr. Lacey's analogy is not analogous and should be rejected since none of these other consumer products are essential to the customer's health and welfare, and none of them are monopoly providers like First Energy or other EDCs are. These entities can cancel the customer's contract if he or she does not pay for the service. None of these industries can require collection of unpaid charges by eliminating the customer from obtaining that service from other competitive providers which occurs when FirstEnergy terminates service with no recourse except payment of the overdue bill to FirstEnergy. FirstEnergy is a monopoly and customers are without any options for essential electric service when faced with an unaffordable bill that includes high EGS charges.

Q. HOW DOES MR. LACEY ON BEHALF OF RESA PROPOSE TO ADDRESS THE AFFORDABILITY ISSUE AT THE HEART OF FIRSTENERGY'S PROPOSALS?

A. Rather than point to any action that any EGS has taken or will take to address this issue in Pennsylvania, Mr. Lacey points to an example in Texas where Tesla is offering a virtual

[13] *Id.* at 17.

power plant with its distributed energy resource (DER) pilot.[14] Mr. Lacey never explains why such offers could not or have not been made in Pennsylvania, and I see no legal reason why any EGS could not do so. Rather, he blames FirstEnergy for not being able to produce a bill or invoice as being issued in Texas.[15] However, this excuse assumes that an EGS is entirely dependent on FirstEnergy for its products and bill design.

Q. DO YOU AGREE WITH ANY OF MR. LACEY'S PROPOSALS AS ALTERNATIVES TO THOSE PROPOSED BY FIRSTENERGY?

A. No. Mr. Lacey's proposals, similar to the general theme of his testimony, is that the Commission should require customers to pay the costs to enable FirstEnergy to make changes to its billing system to support a wider variety of EGS charges and pricing options or allow the EGS to bill their unregulated services on behalf of the regulated EDC charges in a supplier consolidated bill, an option rejected by this Commission years ago.[16] In short, Mr. Lacey on behalf of RESA assumes no responsibility for developing, marketing, billing, and collecting the EGS's own unregulated charges in whatever variety and innovative means they can conceive.

Q. MR. LACEY ON BEHALF OF RESA OPINES THAT THE FIRSTENERGY "CLAWBACK" POLICY AMELIORATES THE RESULTS OF HIGH EGS PRICES CHARGED TO RESIDENTIAL CUSTOMERS.[17] DO YOU AGREE?

---

[14] *Id.* at 21.
[15] *Id.* at 23. "FE cannot generate an invoice with this type of detail on it."
[16] *Id.* at 36-37 ("Alternatively, the Commission could direct FE to develop a more robust billing system that undertakes a serious effort to accommodate flexible and innovative products and services from suppliers, though it is unlikely that FE could ever build a system to meet the varying needs of a diverse set of suppliers and product offerings. If the Commission wanted to move uncollectible risk to suppliers, (which is what FE is claiming it is trying to do here), then the Commission could consider issues such as outsourced billing agents, alternative default service providers, and/or supplier consolidated billing. These latter options could be incentivized to provide customers with better information about supply and market options / conditions."); *see Re: En Banc Hearing on Implementation of Supplier Consolidated Billing*, Docket No. M-2018-2645254, Secretarial Letter (June 21, 2021).
[17] RESA St. 1 at 32.

A. Not in its current form. The Clawback provision of the Electric Generation Supplier Agreement is as follows:

> Clawback Clause: The Companies will apply a two-prong test to determine the clawback charge. The first test will identify those participating EGSs whose average percentage of write-offs as a percentage of revenues over the twelve-month period ending August 31st each year exceeds 200% of the average percentage of total EGS write-offs as a percentage of revenues per operating company. The second prong of the test will identify, of those EGSs identified in the first test, EGSs whose average price charged over the same twelve-month period exceeds 150% of the average price-to-compare for the prior 12-month period. For those EGSs identified by both prongs of the test, the annual clawback charge assessed beginning September 2016 and annually thereafter, would be the difference between that EGS's actual write-offs and 200% of the average EGS percentage of write-offs per operating company.[18]

This provision operates to prevent the most egregious charges of an EGS that has been allowed to use FirstEnergy's POR to collect their charges. As acknowledged by Mr. Lacey, the dollar amount of clawback charges has been lower in recent years and he interprets that as meaning that the policy has "worked" to reduce the incentive for higher prices charged through the POR. However, another interpretation is possible in light of the evidence presented about the frequency and amount of EGS charges that exceed the customer's PTC; that is, that some, but not all, EGSs have "learned" how high they can impose their charges on residential customers without triggering the penalty. Furthermore, according to FirstEnergy, the persistence of the high prices that trigger this penalty reflects some of the same EGSs who evidently find it profitable to repeatedly pay this penalty:

> In 2025 alone, 16 EGSs – nearly 18% of suppliers currently serving FE PA residential customers – incurred clawback charges totaling over $500,000. In aggregate, the EGSs that were identified by the screening measures for the most recent clawback charge (November 2024 to October 2025) served

[18] FirstEnergy Electric Generation Supplier Master Agreement, Section 12.9(g). See, https://www.firstenergycorp.com/content/dam/customer/Customer%20Choice/Files/PA/tariffs/FEPA-supplier-Tariff.pdf?_gl=1*1ishwq0*_up*MQ..*_ga*MTYxMzI0ODMxNy4xNzc5NTc4OTUx*_ga_TVQJK7Z44E*czE3Nzk1Nzg5NTEkbzEkZzEkdDE3Nzk1NzkwOTckajE5JGwwJGgw.

approximately 150 million kWh of FE PA's residential customer load. Seven of those 16 EGS also incurred clawback charges in 2024, and four were assessed three years in a row.[19]

Q. DOES THE CLAWBACK CHARGE OPERATE AS A FORM OF "REGULATION" OF EGS PRICES?

A. It is possible to so interpret this provision because the motivation for its adoption is exactly the same motivation that supports FirstEnergy's proposals in this proceeding. In fact, FirstEnergy has proposed that if its new reforms are adopted, the clawback provision of this document would no longer be needed.[20] FirstEnergy correctly states that this provision only addresses the most egregiously high prices and does not prevent the EDC's obligation to routinely bill and collect EGS charges in excess of the PTC and incur those costs that are paid for by non-shopping customers.[21]

Q. DOES FIRSTENERGY'S PROPOSAL TO LIMIT THE USE OF THE POR TO EGS PRICES THAT ARE EQUAL OR LESS THAN THE PTC HAVE THE SAME IMPACT AS A REFORMED CLAWBACK PROVISION THAT WOULD EQUAL THE PENALTY PROVISION TO ROUTINE CHARGES IN EXCESS OF THE PTC?

A. Yes. It would be possible to amend the current clawback provision to operate similarly to FirstEnergy's proposal to eliminate the use of FirstEnergy's bill to collect charges that exceed the PTC and shift the obligation to pay for those collection costs to the EGS. However, this approach would punish the EGS but allow FirstEnergy to continue to bill and collect those high EGS charges from customers under threat of termination of essential

[19] FirstEnergy St. No. 1 at 26.
[20] *Id.* at 28.
[21] *Id.* at 28 ("Terminating POR for EGSs that charge prices higher than the PTC, as the Company proposes, would substantially reduce FE PA's and customers' exposure to unreasonable EGS-driven uncollectible expenses. EGSs that do not comply with the new pricing requirement for the Company's voluntary POR program will be responsible for all arrearages those EGSs generate.").

electric service. As a result, FirstEnergy's proposal to focus on eliminating the use of their billing system to collect high EGS charges is the preferred approach.

Q. IN CONCUSION, DO FIRSTENERGY'S PROPOSALS PREVENT THE SUPPLIERS FROM CHARGING WHATEVER THE MARKET WILL BEAR, FROM LINKING THEIR SUPPLY SERVICE TO OTHER NON-BASIC OR VALUE-ADDED SERVICES, OR FROM DELIVERING INNOVATIVE PROGRAMS?

A. No. As I have documented, Mr. Lacey has confused the authority and ability of EGSs to bill and collect whatever charges they include in their contracts with access to the use of FirstEnergy to market, bill, and collect their charges. There is no statutory obligation that I am aware of that requires Pennsylvania's EDCs to subsidize retail energy suppliers as is currently the case with the POR and CRP programs. Rather than claiming that FirstEnergy's proposals eliminate or restrict customer choice, it is the decision of the EGSs to rely entirely on FirstEnergy's billing and collection system and use FirstEnergy to market their contracts under the CRP. Instead, they can develop their own marketing, billing, and collection systems for their products that exceed the price of the PTC or that include values and attributes that are not allowed to be billed under the POR.

Q. OVERALL, DOES MR LACEY'S TESTIMONY ON BEHALF OF RESA OFFER ANY BASIS FOR REJECTING FIRSTENERGY'S PROPOSED REFORMS THAT YOU HAVE ENDORSED?

A. No.

II. THE TESTIMONY OF TOWN SQUARE ENERGY DOES NOT INCLUDE ANY EVIDENCE TO SUPPORT THEIR CLAIMS

Q. PLEASE SUMMARIZE MR. MILLER'S OPPOSITION TO FIRSTENERGY'S RETAIL MARKET REFORMS.

A. Mr. Miller on behalf of Town Square identifies the POR as crucial to the success of his business: "POR has been a key element of retail electric choice markets throughout the country, and it is crucial to maximizing retail competition."[22] Similar to Mr. Lacey on behalf of RESA, Mr. Miller seeks to retain the advantages provided to his company with access to FirstEnergy's bill to collect his unregulated charges for generation supply service. He asks whether POR provides "customer benefits" and then answers that question with explaining how this program benefits suppliers by allowing them to ignore credit risk, stating, "POR provides access to better rates to more customers, regardless of their income or credit status."[23] He also states, "With POR, suppliers compete on price and product innovation, not on their ability to finance bad debt and manage collections."[24] Mr. Miller lists a variety of offers that he claims would not be able to be provided without POR because the price would exceed the PTC.[25] He also provides information from PaPowerSwitch as of April 8, 2026 that shows that many offers were available for long term fixed price contracts that were higher than the PTC in effect for that date but lower than the recently announced June 1, 2026 PTC and states that such offers would not be allowed under FirstEnergy's proposals.[26]

[22] Town Square St. 1 at 6.
[23] *Id.* at 7.
[24] *Id.* at 9.
[25] *Id.* at 10-11.
[26] *Id.* at 11, Ex. RM-3.

Q. PLEASE RESPOND TO MR. MILLER'S EXAMPLES IN HIS EXHIBIT RM-3.

A. Mr. Miller's argument is that customers should trust that the EGS knows that the future PTC price will increase and that the price offered today will cost the customer more but that at some point during the fixed price contract term the customer will pay less than the PTC. However, that is not what the contracts say. There is no promise in any of these contracts that the customer will pay less than the PTC in the future. If these contracts guaranteed that the customer will pay less than the PTC as of a date certain in the future, that proposal may very well be useful to some customers. However, that is not what is being offered and it is unreasonable to suggest otherwise. These offers ask customers to assume the risk of future PTC price changes, which is exactly opposite of what Mr. Lacey says in terms of how the retail suppliers assume risks on behalf of their customers.

Q. DOES MR. MILLER ON BEHALF OF TOWN ENERGY PROVIDE ANY EVIDENCE OF THESE "BETTER RATES" OR "PRODUCT INNOVATION" OFFERED BY TOWN ENERGY?

A. No. Mr. Miller does not even provide information on the rates and products offered by Town Square to FirstEnergy's residential customers.

Q. DOES TOWN SQUARE LIST OFFERS AS OF MAY 23, 2026 FOR FIRSTENERGY'S MET-ED RESIDENTIAL CUSTOMERS?

A. Yes. See Exhibit BA-8 that lists the details for all offers to Met-Ed's residential customers in zip code 17401 as of May 23, 2026. Town Square offers a fixed rate contract for 18 months at 13.170 cents per kWh. On this date, the applicable PTC is 12.965 cents per kWh and is set to increase to 13.951 cents per kWh on June 1, 2026. As a result, Town Square's offer will save a customer 0.78 cents per kWh or $5.00/month starting with the June usage.

If Town Square makes this same offer effective June 1, 2026, it would continue its eligibility for using FirstEnergy to bill and collect its charges. The important aspect of this offer is that Town Square knows about the forthcoming price change and most customers do not, since it will not appear on the customer bill until their June usage is billed. Also, the contract has a typical provision that allows Town Square to renew the customer's contract after 18 months after a series of negative option renewal notices. I attach this offer from the May 23, 2026 offers to Met-Ed's residential customers as Exhibit BA-14. Another Town Square offer is for a four-month fixed price contract at a rate of 11.870 cents per KWh, a rate below the current and future PTC, which would of course allow Town Square to continue to use FirstEnergy's POR to bill and collect those charges. That contract also allows Town Square to roll over the customer into a future contract, including a month-to-month contract, after the required notices. I attach this offer from the May 23, 2026 offers to Met-Ed's residential customers as Exhibit BA-15. As a result, I don't see any harm to Town Square in offering a proposal to guarantee a fixed price rate reduction to the forthcoming PTC or the current PTC if FirstEnergy's proposals are adopted.

Q. MR. MILLER LISTS THE STATES IN WHICH TOWN SQUARE IS LICENSED AND THOSE STATES IN WHICH POR IS ALLOWED. ARE YOU AWARE OF A STATE IN WHICH TOWN SQUARE IS LICENSED BUT IN WHICH POR IS NOT ALLOWED?

A. Yes. Town Square makes offers in Maine[27] but there is no POR comparable to what exists in Pennsylvania. The Maine EDCs do not purchase the receivables of the suppliers and do not threaten termination of service for nonpayment of supplier charges.

[27] *Maine*, Town Square Energy, https://townsquareenergy.com/residential-locations/maine/ (last visited May 25, 2026).

Q. ACCORDING TO MR. MILLER, FIRSTENERGY HAS NOT PROVIDED ANY EVIDENCE TO SUPPORT ITS CLAIM OF AFFORDABILITY AS THE BASIS FOR ITS PROPOSALS.[28] DO YOU AGREE?

A. No. Mr. Miller fails to acknowledge the "Clawback" provision of the Supplier Agreement that I have identified above that documents the high EGS charges imposed on customers. Furthermore, Mr. Miller ignores that when customers receive bills that they cannot afford to pay in full, they are subject to collection actions, including demands to provide their household income to obtain a reasonable payment plan, receive termination notices, and incur termination of service for nonpayment of any portion of the FirstEnergy bill. Higher EGS charges only exacerbate those harms to consumers.

Q. DOES FIRSTENERGY INCUR COLLECTION COSTS FOR DEFAULT SERVICE?

A. Yes. The issue here is whether FirstEnergy and its customers should incur even more collection costs associated with higher EGS charges. FirstEnergy's customers should not subsidize EGS offers that exceed the PTC.

Q. ACCORDING TO MR. MILLER, FIRSTENERGY's PROPOSED REQUIREMENT FOR AFFIRMATIVE CUSTOMER CONSENT IS NOT BASED ON ANY EVIDENCE THAT THE CURRENT CONSUMER PROTECTION REQUIREMENTS ARE "NOT WORKING." DO YOU AGREE?

A. No. The evidence that the current negative option contract renewal policy is "not working" is to review the one-sided contract terms I have identified in BA-Exhibits 9-13 that allow the EGS to define the price, contract terms, and impose volatile variable rates that are totally within the authority of the EGS to define for a future renewal. There is no evidence

[28] Town Square St. 1 at 16.

presented by Mr. Miller that customers want to pay more than the PTC as a result of these negative option renewals since the generation supply service included on FirstEnergy's bill on behalf of the EGS is the same service provided pursuant to default service contracts competitively obtained in the wholesale market. There is no contract term that I have reviewed or that has been identified by Mr. Miller that promises that the renewal price will be lower than the PTC, a contractual provision that is totally within the control of the EGS. Nor has Mr. Miller provided any evidence that renewal contracts routinely result in a price lower than the PTC.

Q. DOES MR. MILLER'S REFERENCE TO OTHER INDUSTRIES THAT RELY ON NEGATIVE OPTION RENEWAL CONTRACT TERMS[29] SUFFER FROM THE SAME DEFECT AS YOU HAVE IDENTIFIED IN RESPONSE TO MR. LACEY ON BEHALF OF RESA?

A. Yes. Electric service is essential to a customer's health and safety. There is no option for residential customers to obtain this essential electric distribution service other than FirstEnergy since it is a monopoly. None of Mr. Miller's examples carry these important criteria.

Q. HAS TOWN SQUARE PROVIDED INFORMATION IN DISCOVERY THAT SUPPORT YOUR OVERALL RECOMMENDATIONS AND CONFLICT WITH HIS STATEMENT THAT HIS COMPANY OFFERS "BETTER RATES?"

Q. Yes. When asked if Town Square makes any of the offers Mr. Miller listed in his testimony at page 10 as examples of offers that might not be available if FirstEnergy's proposals are adopted, he replied that **BEGIN HIGHLY CONFIDENTIAL** [redacted]

[29] *Id.* at 21.

[redacted] **END HIGHLY CONFIDENTIAL** Town Square was also asked for the prices charged to Pennsylvania customers and whether those prices were lower or higher than the PTC. Town Square provided a compilation of that information for 2024 and 2025.[31] According to this response, Town Square issued **BEGIN HIGHLY CONFIDENTIAL** [redacted] **END HIGHLY CONFIDENTIAL**

Q. HAVE YOU EXAMINED THE AVERAGE MONTHLY REVENUE PER CUSTOMER THAT TOWN SQUARE RECEIVED IN 2025 COMPARED TO 2024?

A. Yes. Using data provided by Town Square in response to CAUSE-PA data requests, I have calculated the average monthly revenue per customer in 2024 and 2025.[32] The information provided by Town Square shows **BEGIN HIGHLY CONFIDENTIAL** [redacted] **END HIGHLY CONFIDENTIAL**

Q. DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?

A. Yes.

[30] **HIGHLY CONFIDENTIAL** [redacted]
[31] **HIGHLY CONFIDENTIAL** [redacted]
[32] **HIGHLY CONFIDENTIAL** [redacted]
