2026					

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas. Completed the registered public offering of Centuri Group shares 9/25. Southwest Gas is a regulated gas distributor serving 2.3 million customers in Arizona, Nevada, and California. 2024 revenue mix: residential 68%; small commercial, 20%; large commercial and industrial, 5%; transportation, 7%. Southwest has 2,435 employees as of 12/31/24. Off. & dir. own .5% of common stock; Carl C. Icahn, 13.4%; BlackRock, 12.9%; The Vanguard Group, 10.1%; Corvex Management, 6.6% (3/25 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: Karen S. Haller. Inc.: DE. Addr.: 8360 S. Durango Drive, P.O. Box 98510 Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Southwest Gas Holdings has completed its seperation from Centuri. During the second half of 2025, the company completed the previously announced registered public offering of Centuri Holdings stock. Centuri was previously the company's Utility Infrastructure Services division. A lion's share of the $525 million in proceeds were used to pay down debt under a term loan and revolving credit facility. Remaining proceeds are likely to be applied to help support Southwest Gas' capital projects (see below), dividends payments, and balance sheet health.

Year-over-year comparisons in 2025 and 2026 are not meaningful, but there are various catalysts. (The company will probably provide 2026 guidance during its fourth-quarter earnings presentation, which was expected after we went to press with this report.) The biggest and most immediate is the likelihood of a favorable outcome on the regulatory front. Management was expected to file cases in Arizona and Nevada in early 2026, seeking the approval for higher rates, as well as alternative forms of rate-making. Also, in the early part of the new year, Southwest likely implemented new rates for energy supplied to customers in California. With ample capital in place, this natural gas regulated business possesses the means to support expansion in service areas. Specifically, robust energy demand has the potential to power growth at Great Basin (also known as the Northern Nevada interstate pipeline) through its expansion.

A reduction in debt and the ensuing improvement across the company's risk profile ought to help in many ways. Specifically, it has enhanced credit ratings, which ought to aid in lowering borrowing costs, and boost access to capital. This should come in handy if the company gets approval for the $1.7 billion Great Basin Gas Transmission expansion project (expected in 2028.) Too, we think the company will be better able to hike its dividend in the long term.

Our projections suggest Southwest shares, unranked due to the Centuri transaction, hold limited appeal over the 3- to 5-year time frame. The issue may attract income seekers, however, thanks to the 3.0% dividend yield.

Dominic B. Silva *February 20, 2026*

Judgment of Equity Risk Premium for the
Proxy Group of Six Natural Gas Companies

Line No.		Proxy Group of Six Natural Gas Companies
1.	Calculated equity risk premium based on the total market using the beta approach (1)	4.97% - 6.31%
2.	Mean equity risk premium based on a study using the holding period returns of public utilities with A2 rated bonds (2)	5.13%
3.	Predicted Equity Risk Premium Based on Regression Analysis of 866 Fully-Litigated Natural Gas Cases (3)	4.73%
4.	Average equity risk premium	4.94% - 5.39%

Notes: (1) From page 18 of this Schedule.
(2) From page 21 of this Schedule.
(3) From page 22 of this Schedule.

UGI Utilities, Inc.
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Proxy Group of Six Natural Gas Companies

Line No.	Equity Risk Premium Measure	Proxy Group of Six Natural Gas Companies
1.	Kroll Equity Risk Premium (1)	6.17%
2.	Regression on Kroll Risk Premium Data (2)	6.87%
3.	Kroll Equity Risk Premium based on PRPM (3)	6.71%
4	Equity Risk Premium Based on Value Line Summary and Index (4)	5.86%
5.	Equity Risk Premium Based on Bloomberg, Value Line, and S&P Global Market Intelligence S&P 500 Companies (5)	13.83%
6.	Conclusion of Equity Risk Premium	7.89%
7.	Adjusted Beta (6)	0.63 0.80
8.	Forecasted Equity Risk Premium	4.97% - 6.31%

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll 2023 SBBI® Yearbook and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2025.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2025 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.35% (from page 13 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through March 2026.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.35% (from page 13 of this Schedule) from the projected 3-5 year total annual market return of 11.21% (described fully in note 1 on page 25 of this Schedule).

(5) Using data from Bloomberg Professional Services, Value Line, and S&P Global Market Intelligence for the S&P 500, an expected total return of 19.18% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.35% results in an expected equity risk premium of 13.83%.

(6) Average of mean and median beta from pages 23 and 24 of this Schedule.

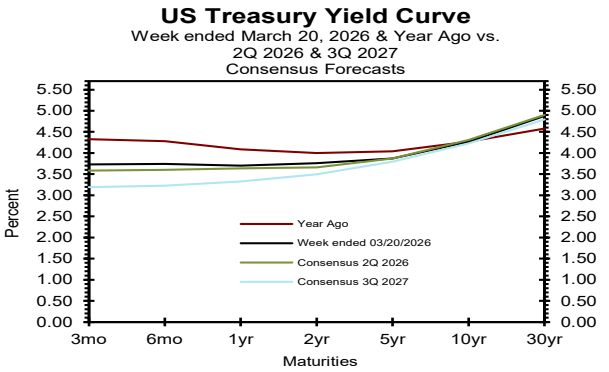
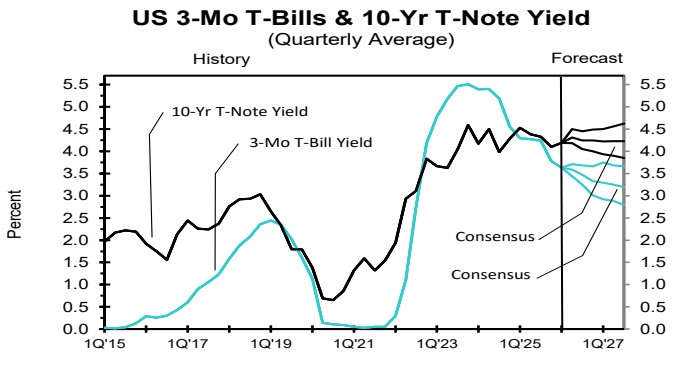
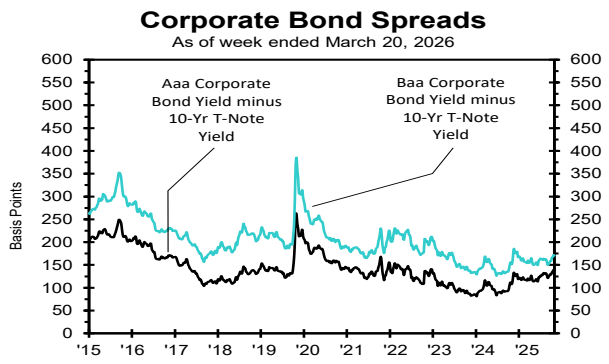
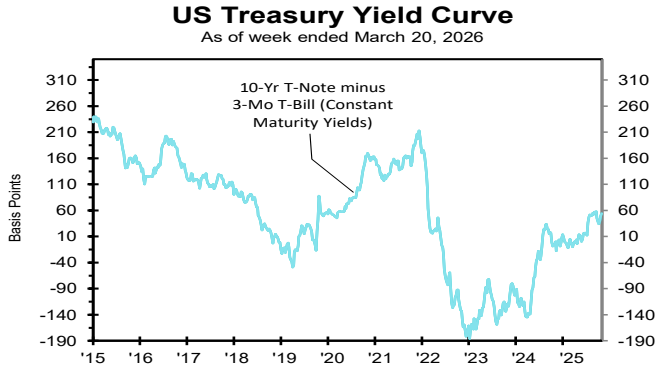
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. *Interest rate data for 1Q 2026 based on historical data through the week ended March 20. **Data for 1Q 2026 for the Fed's AFE $ Index based on data through the week ended March 20. Figures for 1Q 2026 Real GDP, GDP Chained Price Index, Consumer Price Index, and PCE Price Index are consensus forecasts from the March 2026 survey.









Long-Range Survey:

The table below contains results of our semi-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are estimates for the years 2027 through 2031 and averages for the five-year periods 2027-2031 and 2032-2036. Apply these projections cautiously. Few economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year					Five-Year Averages

Projected Market Appreciation of the S&P Utility Index
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.		Implied Equity Risk Premium
1.	Historical Equity Risk Premium (1)	4.23%
2.	Regression of Historical Equity Risk Premium (2)	4.94%
3	Forecasted Equity Risk Premium Based on PRPM (3)	4.91%
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4)	6.45%
5.	Average Equity Risk Premium (5)	5.13%

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2025. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2025 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.68% (from line 3, page 13 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - March 2026.

(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 12.13% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.68%, calculated on line 3 of page 13 of this Schedule, results in an equity risk premium of 6.45% (12.13% - 5.68% = 6.45%).

(5) Average of lines 1 through 4.

UGI Utilities, Inc.
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

Measure 1: Kroll Arithmetic Mean MRP (1926-2025)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2025:	12.35 %
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99
MRP based on Kroll Historical Data:	7.37 %

Measure 2: Application of a Regression Analysis to Kroll Historical Data
(1926-2025) 7.77 %

Measure 3: Application of the PRPM to Kroll Historical Data
(January 1926 - March 2026) 7.51 %

Measure 4: Value Line Projected MRP (Thirteen weeks ending April 3, 2026)

Total projected return on the market 3-5 years hence*:	11.21 %
Risk-Free Rate (see note 2):	4.75
MRP based on Value Line Summary & Index:	6.46 %

*Forcasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	19.18 %
Risk-Free Rate (see note 2):	4.75
MRP based on Bloomberg, Value Line, and S&P Capital IQ data	14.43 %

Average of all MRP Measures: 8.71 %

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts (See pages 19 and 20 of this Schedule). The projection of the risk-free rate is illustrated below:

Second Quarter 2026	4.90 %
Third Quarter 2026	4.80
Fourth Quarter 2026	4.80
First Quarter 2027	4.80
Second Quarter 2027	4.80
Third Quarter 2027	4.80
2027-2031	4.60
2032-2036	4.50
	4.75 %

(3) Average of CAPM and ECAPM cost rates.

UGI Utilities, Inc.
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Six Natural Gas Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of six natural gas companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.48 - 0.80 and residual standard error of the regression range of 2.4671 - 2.9423 of the proxy group of six natural gas companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus two standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the Utility Proxy Group's residual standard error of the regression is 0.1188. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1188 = \frac{2.7047}{\sqrt{518}} = \frac{2.7047}{22.7596}$$

Notes:

(1) Average of columns 2 through 4 excluding negative growth rates and extreme positive values.

(2) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 3/31/2026. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(3) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

UGI Utilities, Inc.
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Thirteen Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	6.20%
2.	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	0.25%
3.	Adjusted Bond Yield	6.45%
4.	Equity Risk Premium (3)	5.29% - 6.31%
5.	Risk Premium Derived Common Equity Cost Rate	11.74% - 12.76%

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated December 1, 2025, April 1, 2026 (see pages 19 and 20 of this Schedule). The estimates are detailed below.

Second Quarter 2026	6.30 %
Third Quarter 2026	6.20
Fourth Quarter 2026	6.40
First Quarter 2027	6.10
Second Quarter 2027	6.10
Third Quarter 2027	6.30
2027-2031	6.10
2032-2036	6.10
Average	6.20 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending March 2026. To reflect the A2 average rating of the Non-Price Regulated Proxy Group, the yield on the Baa corporate bond must be adjusted by the spread between A2 and Baa2 corporate bond yields as shown below:

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
Mar-26	5.78 %	6.04 %	0.26 %
Feb-26	5.57	5.81	0.24
Jan-26	5.63	5.88	0.25
		Average yield spread	0.25 %

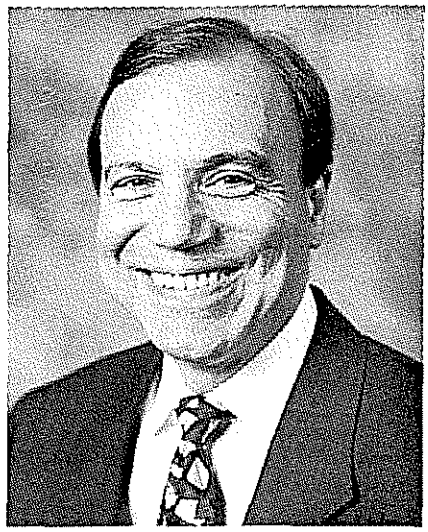
Summer 1994 edition, Arlington, Va.

Comparable Earnings: New Life for an Old Precept

Accelerating deregulation has greatly increased the investment risk of natural gas utilities. As a result, the authors believe it more appropriate than ever to employ the comparable earnings model. We believe our application of the model overcomes the greatest traditional objection to it — lack of comparability of the selected non-utility proxy firms. Our illustration focuses on a target gas pipeline company with a beta of 0.96 — almost equal to the market's beta of 1.00.



Frank J. Hanley is president of AUS Consultants — Utility Services Group. He has testified in several hundred rate proceedings on the subject of cost of capital before the Federal Energy Regulatory Commission and 27 state regulatory commissions. Before joining AUS in 1971, he was an assistant treasurer of a number of operating companies in the American Water Works System, as well as a financial planning officer with the Philadelphia National Bank. He is a Certified Rate of Return Analyst.

Pauline M. Ahern is a senior financial analyst with AUS Consultants — Utility Services Group. She has participated in many cost-of-capital studies. A former employee of the U.S. Department of the Treasury and the Federal Reserve Bank of Boston, she holds an MBA degree from Rutgers University and is a Certified Rate of Return Analyst.

Introduction

The comparable earnings model used to determine a common equity cost rate is deeply rooted in the standard of "corresponding risk" enunciated in the landmark *Bluefield* and *Hope* decisions of the U.S. Supreme Court.[1] With such solid grounding in the foundations of rate of return regulation, comparable earnings should be accepted as a principal model, along with the currently popular market-based models, provided that its most common criticism, non-comparability of the proxy companies, is overcome.

Our comparable earnings model overcomes the non-comparability issue of the non-utility firms selected as a proxy for the target utility, in this example, a gas pipeline company. We should note that in the absence of common stock prices for the target utility (as with a wholly-owned subsidiary), it is appropriate to use the average of a proxy group of similar risk gas pipeline companies whose common stocks are actively traded. As we will demonstrate, our selection process results in a group of domestic, non-utility firms that is comparable in total risk, the sum of business and financial risk, which reflects both non-diversifiable systematic, or market, risk as well as diversifiable unsystematic, or firm-specific, risk.

Embedded in the Landmark Decisions

As stated in *Bluefield* in 1922: "A public utility is entitled to such rates as will permit it to earn a return ... on investments in other business undertakings which are attended by corresponding risks and uncertainties ..."

In addition, the court stated in *Hope* in 1944: "By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."

Thus, the "corresponding risk" precept of *Bluefield* and *Hope* predates the use of such market-based cost-of-equity models as the Discounted Cash Flow (DCF) and Capital Asset Pricing (CAPM), which were developed later and are currently popular in rate-base/rate-of-return regulation. Consequently, the comparable earnings model has a longer regulatory and judicial history. However, it has far greater relevance now than ever before in its history because significant deregulation has substantially increased natural gas utilities' investment risk to a level similar to that of non-utility firms. As a result, it is

Comparable Earnings *from page 4*

more important than ever to look to similar-risk non-utility firms for insight into common equity cost rate, especially in view of the deficiencies inherent in the currently popular market-based cost of common equity models, particularly the DCF model.

Despite the fact that the landmark decisions are still regarded as having set the standards for determining a fair rate of return, the comparable earnings model has experienced decreased usage by expert witnesses, as well as less regulatory acceptance over the years. We believe the decline in the popularity of the comparable earnings model, in large measure, is attributable to the difficulty of selecting non-utility proxy firms that regulators will accept as comparable to the target utility. Regulatory acceptance is difficult to gain when the selection process is arbitrary. Our application of the model is objective and consistent with fundamental financial tenets.

Principles of Comparable Earnings

Regulation is a substitute for the competition of the marketplace. Moreover, regulated public utilities compete in the capital markets with all firms, including unregulated non-utilities. The comparable earnings model is based upon the opportunity cost principle; i.e., that the true cost of an investment is the return that could have been earned on the next best available alternative investment of similar risk. Consequently, the comparable earnings model is consistent with regulatory and financial principles, as it is a surrogate for the competition of the marketplace, and investors seek the greatest available rate of return for bearing similar risk.

The selection of comparable firms is the most difficult step in applying the comparable earnings model, as noted by Phillips[2] as well as by Bonbright, Danielsen and Kamerschen.[3] The selection of non-utility proxy firms should result in a sufficiently broad-based group in order to minimize the effect of company-specific aberrations. However, if the selection process is arbitrary, it likely would result in a proxy group that is too broad-based, such as the Standard & Poor's 500 Composite Index or the Value Line Industrial Composite. The use of such groups would require subjective adjustments to the comparable earnings results to reflect risk differences between the group(s) and the target utility, a gas pipeline company in this example.

Authors' Selection Criteria

We base the selection of comparable non-utility firms on market-based, objective, quantitative measures of risk resulting from market prices that subsume investors' assessments of all elements of risk. Thus, our approach is based upon the principle of risk and return; namely, that firms of comparable risk should be expected to earn comparable returns. It is also consistent with the "corresponding risk" standard established in *Bluefield* and *Hope*. We measure total investment risk as the sum of non-diversifiable systematic and diversifiable unsystematic risk. We use the unadjusted beta as a measure of systematic risk and the standard error of the estimate (residual standard error) as a measure of unsystematic risk. Both the unadjusted beta and the residual standard error are derived from a regression of the target utility's security returns relative to the market's returns, which takes the general form:

$$r_{it} = a_i + b_i r_{mt} + e_{it}$$

where:

- r_{it} = tth observation of the ith utility's rate of return
- r_{mt} = tth observation of the market's rate of return
- e_{it} = tth random error term
- a_i = constant least-squares regression coefficient
- b_i = least-squares regression slope coefficient, the unadjusted beta.

As shown by Francis,[4] the total variation or risk of a firm's return, Var (r_i), comes from two sources:

Var (r_i) = total risk of ith asset
= var($a_i + b_i r_m + e$)
substituting ($a_i + b_i r_m + e$) for r_i
= var($b_i r_m$) + var (e) since var(a_i) = 0
= b_i^2 var(r_m) + var (e) since var($b_i r_m$) = b_i^2 var(r_m)
= systematic + unsystematic risk

Francis[5] also notes: "The term $\sigma^2(r_i|r_m)$ is called the *residual variance around the regression line* in statistical terms or *unsystematic risk* in capital market theory language. $\sigma^2 (r_i|r_m)$ = ... = var (e). The residual variance is the squared standard error in regression language, a measure of unsystematic risk." Application of these criteria results in a group of non-utility firms whose average total investment risk is indeed comparable to that of the target gas pipeline.

As a measure of systematic risk, we use the Value Line unadjusted beta. Beta measures the extent to which market-wide or macro-economic events affect a firm's stock price. We use the unadjusted beta of the target utility as a starting point because it results from the regression of the target utility's security returns relative to the market's returns. Thus, the resulting standard deviation of beta relates to the unadjusted beta. We use the standard deviation of the unadjusted beta to determine the range around it as the selection criterion based on systematic risk.

We use the residual standard error of the regression as a measure of unsystematic risk. The residual standard error reflects the extent to which events specific to the firm's operations affect a firm's stock price. Thus, it is a measure of diversifiable, unsystematic, firm-specific risk.

An Illustration of Authors' Approach

Step One: We begin our approach by establishing the selection criteria as a range of both unadjusted beta and residual standard error of the target gas

continued on page 6

Comparable Earnings *from page 5*

pipeline company.

As shown in table 1, our target gas pipeline company has a Value Line unadjusted beta of 0.90, whose standard deviation is 0.1250. The selection criterion range of unadjusted beta is the unadjusted beta plus (+) and minus (-) three of its standard deviations. By using three standard deviations, 99.73 percent of the comparable unadjusted betas is captured.

Three standard deviations of the target utility's unadjusted beta equals 0.38 (0.1250 x 3 = 0.3750, rounded to 0.38). Consequently, the range of unadjusted betas to be used as a selection criteria is 0.52 - 1.28 (0.52 = 0.90 - 0.38) and (1.28 = 0.90 + 0.38).

Likewise, the selection criterion range of residual standard error equals the residual standard error plus (+) and minus (-) three of its standard deviations. The standard deviation of the residual standard error is defined as: $\sigma/\sqrt{2N}$.

As also shown in table 1, the target gas pipeline company has a residual standard error of 3.7867. According to the above formula, the standard deviation of the residual standard error would be 0.1664 (0.1664 = 3.7867/ $\sqrt{2(259)}$ = 3.7867/22.7596, where 259 = N, the number of weekly price change observations over a period of five years). Three standard deviations of the target utility's residual standard error would be 0.4992 (0.1664 x 3 = .4992). Consequently, the range of residual standard errors to be used as a selection criterion is 3.2875 - 4.2859 (3.2875 = 3.7867 - 0.4992) and (4.2859 = 3.7867 + 0.4992).

Step Two: The step one criteria are applied to Value Line's data base of nearly 4,000 firms for which Value Line derives unadjusted betas and residual standard errors on a weekly basis. All firms with unadjusted betas and residual standard errors within the criteria ranges are then selected.

Step Three: In the regulatory ratemaking environment, authorized common equity return rates are applied to a book-value rate base. Thus, the earnings rates on book common equity, or net worth, of competitive, non-utility firms are highly relevant provided those firms are indeed comparable in total risk to the target gas pipeline. The use of the return rates of other utilities has no relevance because their allowed, and hence subsequently achieved, earnings rates are dependent upon the regulatory

table 1

Summary of the Comparable Earnings Analysis for the Proxy Group of 248 Non-Utility Companies Comparable in Total Risk to the Target Gas Pipeline Company[1]

	1	2	3	4	5	6	7	8
			residual	rate of return on net worth				
	adj. beta	unadj. beta	standard error	3-year average[2]	4-year average[2]	5-year average[2]	5-year projected[3]	
average for the proxy group of 248 non-utility companies comparable in total risk to the target gas pipeline company	0.97	0.92	3.7705					
target gas pipeline company	0.96	0.90[4]	3.7867					
median				11.7%	12.0%	12.6%	15.5%	
average of the median historical returns					12.1%			
conclusion[5]								13.8%

[1]The criteria for selection of the non-utility group was that the non-utility companies be domestic and included in *Value Line Investment Survey*. The non-utility group was selected based on an unadjusted beta range of 0.52 to 1.28 and a residual standard error range of 3.2875 to 4.2859.
[2]Ending 1992.
[3]1996-1998/1997-1999.
[4]The average standard deviation of the target gas pipeline company's unadjusted beta is 0.1250.
[5]Equal weight given to both the average of the 3-, 4- and 5-year historical medians (12.1%) and 5-year projected median rate of return on net worth (15.5%). Thus, 13.8% = (12.1% + 15.5% / 2).

Value Line Investment Survey

Comparable Earnings *from page 6*

process. Consequently, we believe all utilities must be eliminated to avoid circularity. Moreover, we believe non-domestic firms must be eliminated because their reporting methods differ significantly from U.S. firms.

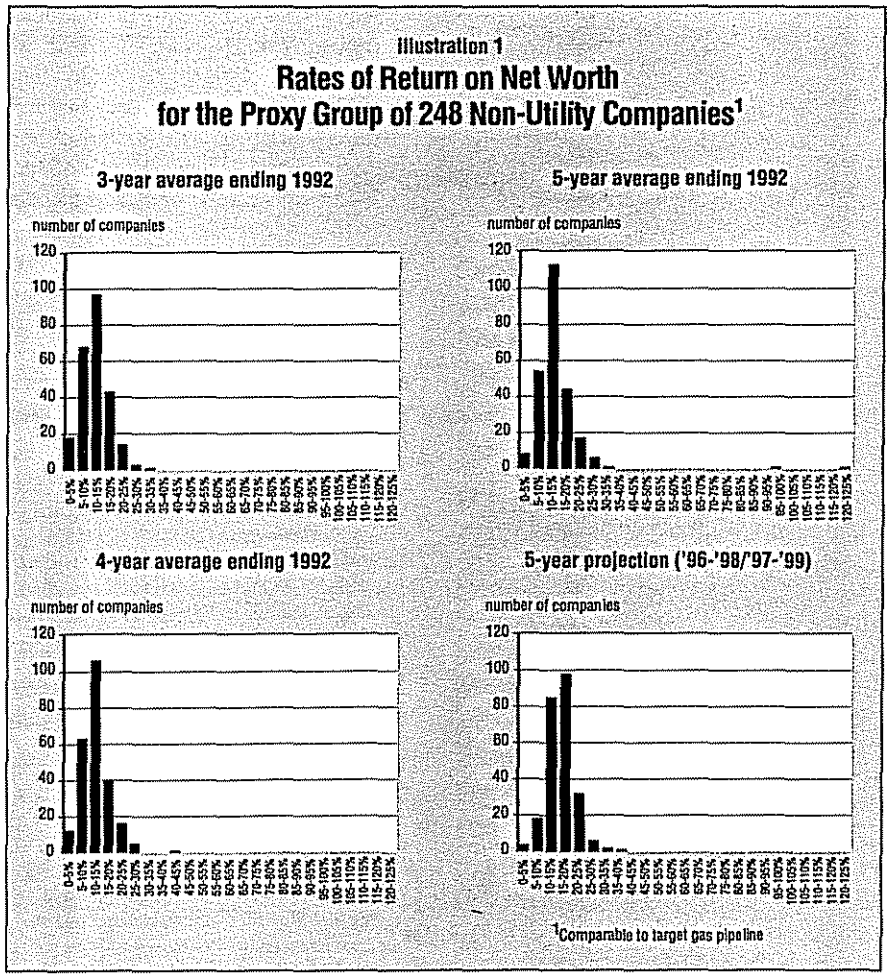
Step Four: We then eliminated those firms for which Value Line does not publish a "Ratings & Report" in *Value Line Investment Survey* so that the historical and projected returns on net worth[6] are from a consistent source. We use historical returns on net worth for the most recent five years, as well as those projected three to five years into the future. We believe it is logical to evaluate both historical and projected return rates because it is reasonable to assume that investors avail themselves of both when they are available from widely disseminated information services, such as Value Line Inc. The use of Value Line's return rates on net worth understates the common equity return rates for two reasons. First, preferred stock is included in net worth. Second, the net worth return rates are as of the end of each period. Thus, the use of average common equity return rates would yield higher results.

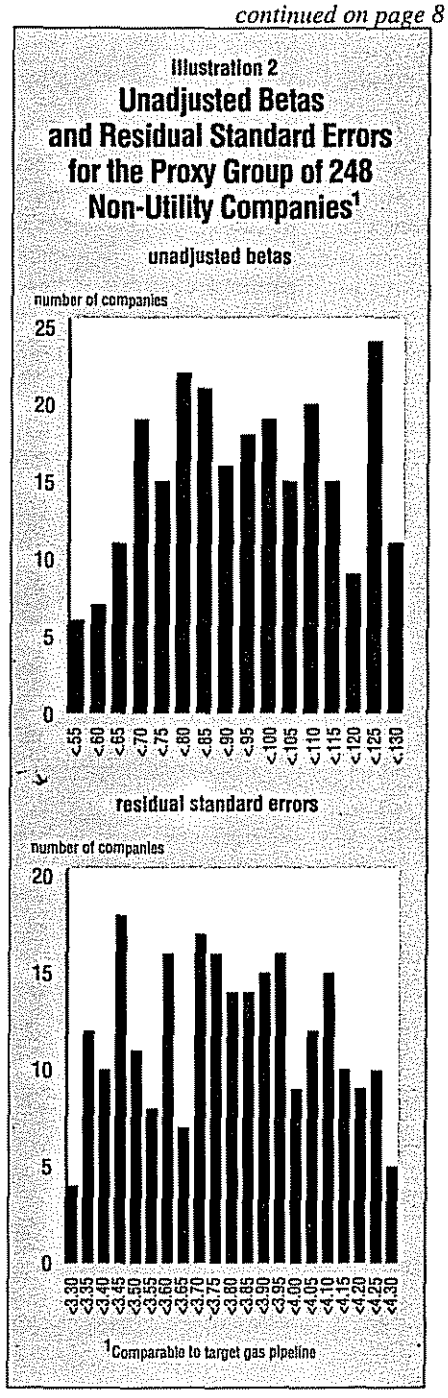
Step Five: Median returns based on the historical average three, four and five years ending 1992 and projected 1996-1998 or 1997-1999 rates of return on net worth are then determined as shown in columns 4 through 7 of table 1. The median is used due to the wide variations and skewness in rates of return on net worth for the non-utility firms as evidenced by the frequency distributions of those returns as shown in illustration 1.

However, we show the average unadjusted beta, 0.92, and residual standard error, 3.7705, for the proxy group in columns 2 and 3 of table 1 because their frequency distributions are not significantly skewed, as shown in illustration 2.

Step Six: Our conclusion of a com-

continued on page 8





Comparable Earnings *from page 7*

parable earnings cost rate is based upon the mid-point of the average of the median three-, four- and five-year historical rates of return on net worth of 12.1 percent as shown in column 5 and the median projected 1996-1998/1997-1999 rate of return on net worth of 15.5 percent as shown in column 7 of table 1. As shown in column 8, it is 13.8 percent.

Summary

Our comparable earnings approach demonstrates that it is possible to select a proxy group of non-utility firms that is comparable in total risk to a target utility. In our example, the 13.8 percent comparable earnings cost rate is very conservative as it is an expected achieved rate on book common equity (a regulatory allowed rate should be greater) and because it is based on end-of-period net worth. A similar rate on average net worth would be about 20 to 40 basis points higher (i.e., 14.0 to 14.2 percent) and still understate the appropriate regulatory allowed rate of return on book common equity.

Our selection criteria are based upon measures of systematic and unsystematic risk, specifically unadjusted beta and residual standard error. They provide the basis for the objective selection of comparable non-utility firms. Our selection criteria rely on changes in market prices over approximately five years. We compare the aggregate total risk, or the sum of systematic and unsystematic risk, which reflects investors' aggregate assessment of both business and financial risk. Thus, no adjustments are necessary to the proxy group results to compensate for the differences in business risk and financial risk, such as accounting practices and debt/equity ratios. Moreover, it is inappropriate to attempt a comparison of the target utility with any individual firm, or subset of firms, in the proxy group because only the average firm of the group is relevant.

Because the comparable earnings model is firmly anchored in the "corresponding risk" precept established in the landmark court decisions, it is worthy of consideration as a principal model for use in estimating the cost rate of common equity capital of a regulated utility. Our approach to the comparable earnings model produces a proxy group that is indeed comparable in total risk because the selection process is objective and quantitative. It therefore overcomes criticism linked to arbitrary selection processes.

All cost-of-common-equity models, including the DCF and CAPM, are fraught with deficiencies, usually stemming from the many necessary but unrealistic assumptions that underlie them. The effects of the deficiencies of individual models can be mitigated by using more than one model when estimating a utility's common equity cost rate. Therefore, when the non-comparability issue is overcome, the comparable earnings model deserves to receive the same consideration as a primary model, as do the currently popular market-based models. ■

[6] Returns on net worth must be used when relying on Value Line data because returns on book common equity for non-utility firms are not available from Value Line.

Report Lists Pipeline, Storage Projects

More than $9 billion worth of projects to expand the nation's natural gas pipeline network are in various stages of development, according to an A.G.A. report. These projects involve nearly 8,000 miles of new pipelines and capacity additions to existing lines and represent 15.3 billion cubic feet (Bcf) per day of new pipeline capacity.

During 1993 and early 1994, construction on 3,100 miles of pipeline was completed or under way, at a cost of nearly $4 billion, says A.G.A. These projects are adding 5.4 Bcf in daily delivery capacity nationwide.

Among the projects completed in 1993 were Pacific Gas Transmission Co.'s 805 miles of looping that allows increased deliveries of Canadian gas to the West Coast; Northwest Pipeline Corp.'s addition of 433 million cubic feet of daily capacity for customers in the Pacific Northwest and Rocky Mountain areas; and the 156-mile Empire State Pipeline in New York.

In addition, major construction projects were started on the systems of Texas Eastern Transmission Corp. and Algonquin Gas Transmission Co. — both subsidiaries of Panhandle Eastern Corp. — and along Florida Gas Transmission Co.'s pipeline.

The report goes on to discuss another $5 billion in proposed projects, which, if completed, will add nearly 5,000 miles of pipeline and 9.8 Bcf per day in capacity, much of it serving Florida and West Coast markets.

A.G.A. also identifies 47 storage projects and says that if all of them are built, existing storage capacity will increase by more than 500 Bcf, or 15 percent.

For a copy of *New Pipeline Construction: Status Report 1993-94* (#F00103), call A.G.A. at (703) 841-8490. Price per copy is $6 for employees of member companies and associates and $12 for other customers.

Beta Measurements The beta coefficient is an *index of systematic risk.* Beta coefficients may be used for ranking the systematic risk of different assets. If the beta is larger than 1, $b > 1.0$, then the asset is more volatile than the market and is called an **aggressive asset.** If the beta is less than 1, $b < 1.0$, the asset is a **defensive asset;** its price fluctuations are less volatile than the market's. Figure 10-1 illustrates the characteristic lines for three different assets that have low, medium, and high levels of beta (or undiversifiable risk).

Figure 10-2 shows that IBM is a stock with an average amount of systematic risk. IBM's beta of 1.02 indicates that its return tends to increase 2 percent more than the return on the market average when the market is rising. When the market falls, IBM's return tends to fall 2 percent more than the market's. The characteristic line for IBM has an above average correlation coefficient of $\rho = .7495$, indicating that the returns on this security follow its particular characteristic line slightly more closely than those of the average stock.

Partitioning Risk Total risk can be measured by the variance of returns, denoted Var(r). This measure of *total risk is partitioned into its systematic and unsystematic components in Equation (10-8).*[7]

$$\begin{aligned} \text{Var}(r_i) &= \text{total risk of } i\text{th asset} \\ &= \text{Var}(a_i + b_i r_{m,t} + e_{i,t}) \\ &\quad \text{by substituting } (a_i + b_i r_{m,t} + e_{i,t}) \text{ for } r_{i,t} \\ &= 0 + \text{Var}(b_i r_{m,t}) + \text{Var}(e_{i,t}) \\ &\quad \text{since Var}(a_i) = 0 \end{aligned} \tag{10-8}$$

$$\begin{aligned} \text{Var}(r_i) &= b_i^2 \text{ Var}(r_m) + \text{Var}(e) \qquad \text{since Var}(b_i r_m) = b_i^2 \text{ Var}(r_m) \\ &= \text{systematic} + \text{unsystematic risk} \end{aligned} \tag{10-8a}$$

$$.01389 = .00780 + .00609 \qquad \text{for IBM}$$

The unsystematic risk measure Var(e) is called in regression language the *residual variance* or, synonymously, the *standard error squared.*

Undiversifiable Proportion The percentage of total risk that is systematic can be measured by the coefficient of determination ρ^2 (that is, the characteristic line's squared correlation coefficient).

[7]In this context, **partition** is a technical statistical term that means to divide the total variance into *mutually exclusive* and *exhaustive* pieces. This partition is only possible if the returns from the market are statistically independent from the residual error terms that occur simultaneously, $\text{Cov}(r_{m,t}, e_{i,t}) = 0$. The mathematics of regression analysis will orthogonalize the residuals and thus ensure that the needed statistical independence exists.

$$\frac{\text{Systematic risk}}{\text{Total risk}} = \frac{b_i^2 \text{ Var}(r_m)}{\text{Var}(r_m)} = \rho^2 \qquad (10\text{-}9)$$

$$\frac{.007802}{.01389} = \frac{(1.021)^2\ (.00749)}{.00749} = .5617 \times 100 = 56.17\% \quad \text{for IBM}$$

Diversifiable Proportion The percentage of unsystematic risk equals $(1.0 - \rho^2)$.

$$\frac{\text{Unsystematic risk}}{\text{Total risk}} = \frac{\text{Var}(e)}{\text{Var}(r_i)} = (1.0 - \rho^2)$$

$$\frac{.00609}{.01389} = (1.0 - .5617) = .438 \times 100 \qquad (10\text{-}10)$$

$$= 43.8\% \text{ unsystematic} \quad \text{for IBM}$$

Studies of the characteristic lines of hundreds of stocks listed on the NYSE indicate that the average correlation coefficient is approximately $\rho = .5$.[8] This means that about $\rho^2 = 25$ percent of the total variability of return in most NYSE securities is explained by movements in the market.

	NYSE average	IBM
Systematic risk: ρ^2	.25	.5617
Unsystematic risk: $(1.0 - \rho^2)$	.75	.4383
Total risk: 100%	1.00	1.0000

As explained above, systematic changes are common to all stocks and are therefore undiversifiable.

A primary use of the characteristic line (or *market model,* or the *single-index model,* as it is also called) is to assess the risk characteristics of one asset.[9] The statistics in Table 10-2, for instance, indicate that IBM's common stock is slightly more risky than the average common stock in terms of total risk and

[8]The average ρ was found to be about .5, as reported in Marshall Blume, "On the Assessment of Risk," *Journal of Finance,* March 1971, p. 4. For similar estimates, see J. C. Francis, "Statistical Analysis of Risk Surrogates for NYSE Stocks," *Journal of Financial and Quantitative Analysis,* Dec. 1979.

[9]Professor Jensen reformulated the characteristic line in a risk-premium form. See M. C. Jensen, "The Performance of Mutual Funds in the Period 1945 through 1964," *Journal of Finance,* May 1968, pp. 389–416. See also M. C. Jensen, "Risk, the Pricing of Capital Assets, and the Evaluation of Investment Portfolios," *Journal of Business,* vol. XLII, 1969. Jensen interprets the alpha intercept term of the characteristic line, as he formulates it, as an investment performance measure. It has been suggested that Jensen's performance measure is biased. See Keith V. Smith and Dennis A. Tito, "Risk-Return Measures of Ex-Post Portfolio Performance," *Journal of Financial and Quantitative Analysis,* Dec. 1969, vol. IV, no. 4, p. 466.

systematic risk.[10] New risk measurements must be made periodically, however, because the risk and return of an asset may change with the passage of time.[11]

10-3 CAPITAL ASSET PRICING MODEL (CAPM)

An old axiom states "there is no such thing as a free lunch." This means that you cannot expect to get something for nothing—a rule that certainly applies to investment returns. Investors who want to earn high average rates of return must take high risks and endure the associated loss of sleep, the possibility of ulcers, and the chance of bankruptcy. The question to which we now turn is: Should investors worry about total risk, undiversifiable risk, diversifiable risk, or all three?

In Chapter 1 it was suggested that *investors should seek investments that have the maximum expected return in their risk class.* Their happiness from investing is presumed to be derived as indicated in the expected utility $E(U)$ function below.

$$E(U) = f[E(r), \sigma]$$

The investment preferences of wealth-seeking risk-averse investors represented by the function above cause them to maximize their expected utility (or, equivalently, happiness) by (1) maximizing their expected return in any given risk class, $\partial E(U)/\partial E(r) > 0$, or, conversely, (2) minimizing their total risk at any given rate of expected return, $\partial E(U)/\partial \sigma < 0$. However, in selecting individual assets, investors will not be particularly concerned with the asset's total risk σ. Figure 9-1 showed that the unsystematic portion of total risk can be easily diversified by holding a portfolio of different securities. But, systematic risk affects all stocks in the market because it is undiversifiable. Portfolio theory therefore suggests that only the undiversifiable (or systematic) risk is worth avoiding.[12]

[10]Statements about the relative degree of total risk are made in the context of a long-run horizon—that is, over at least one *complete business cycle*. Obviously, an accurate short-run forecast which says that some particular company will go bankrupt next quarter makes it more risky than IBM, although IBM may have had more historical variability of return.

[11]Empirical studies documenting the intertemporal instability of betas have been published. Marshall Blume, "Betas and Their Regression Tendencies," *Journal of Finance,* June 1975, pp. 785–795. See also J. C. Francis, "Statistical Analysis of Risk Coefficients for NYSE Stocks," *Journal of Financial and Quantitative Analysis,* Dec. 1979, vol. XIV, no. 5, pp. 981–997. An appendix at the end of this chapter reviews some evidence about shifting betas, standard deviations, and correlations.

[12]Both the systematic and unsystematic portions of total risk must be considered by **undiversified investors.** Entrepreneurs who have their entire net worth invested in one business, for example, can be bankrupted by a piece of bad luck that could be easily averaged away to zero in a diversified portfolio. Poorly diversified investors should not treat diversifiable risk lightly. Only well-diversified investors can afford to ignore diversifiable risk.

(3) Source: 2026 Kroll Cost of Capital Navigator
(4) Calculated by converting the historical return on the market from a geometric mean to an arithmetic mean as shown below:

$$R_A = R_G + \frac{\sigma^2}{2}$$

Where:
R_A = Arithmetic Mean
R_G = Geometric Mean
σ = Standard Deviation of Equity Returns

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 10-R

Rebuttal Testimony of
Sherry A. Epler

Topics Addressed:	**Test Year Sales and Revenues**
	Rate NNS
	Tariff Changes

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Sherry A. Epler. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 10, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to a portion of the direct testimony submitted by the Bureau of Investigation and Enforcement ("I&E"), I&E Statement No. 4, the direct testimony of Ethan H. Cline. I also respond to a portion of the direct testimony submitted by the Retail Energy Supply Association ("RESA"), RESA Statement No. 1, the direct testimony of Christopher Reyes. Finally, I respond to a portion of the direct testimony submitted by CAUSE-PA, CAUSE-PA Statement No. 1, the direct testimony of Patrick Cicero.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibit SAE-1R.

II. TEST YEAR SALES AND REVENUES

Q. I&E Witness Cline disagrees with the Company's claimed present rate revenue for the fully projected future test year ("FPFTY"). Please summarize his overall recommended adjustments.

A. Witness Cline believes the Company's present rate revenue in the FPFTY has been understated and recommends an adjustment concerning the Rate R/RT heating customer usage decline reflected in the FPFTY, which, according to him, was projected beyond the end of the FPFTY. I&E St. No. 4, at pp. 8-9. He recommends an increase to the average use per R/RT customer of 0.12 Mcf per customer per year as a result. I&E St. No. 4, at p. 12. In total, this would increase present rate Rate R/RT sales by 73,358 Mcf and result in an increase to distribution present rate revenues of $464,481. I&E St. No. 4, at p. 13. Witness Cline also states that there would be a corresponding increase to purchased gas revenue, but notes he has not included that as there would also be an adjustment to purchased gas expense (making that purchased gas revenue adjustment revenue neutral as related to the claimed revenue requirement in this case). I&E St. No. 4, at pp. 13-14.

Q. Is the Company accepting Witness Cline's adjustment at this time?

A. Although the Company does not agree with Witness Cline's basis for his adjustment, and UGI Gas reserves the right to propose similar use per customer determinations in the future, the Company is accepting this adjustment.

Q. Have you prepared a calculation of the detailed impact this adjustment has related to the revenues presented in UGI Gas Exhibit E – Proof of Revenue, specifically as between all distribution revenue, or margin items, and all expense items, or non-margin items?

A. Yes, UGI Gas Exhibit SAE-1R details the calculation breakout of revenue items between: (1) those that are distribution revenue, or margin-related, impacting the revenue requirement claim in this case ($483,884 in total as shown on Line 22); and (2) those that are related to Purchased Gas Cost ("PGC") and other surcharge costs not impacting revenue requirement ($553,552 in total as shown on Line 23). Notably, this detailed exhibit includes the specific $464,481 amount calculated by Witness Cline (Line 12) as well as all other line item revenue impacts related to other riders and charges.

III. RATE NNS

Q. Please explain the position of RESA Witness Reyes as related to the charge for Rate NNS.

A. In my direct testimony, I had provided an updated derivation of Rate NNS costs using the Company's historic methodology associated with the rate development for Rate NNS, as shown in detail in UGI Gas Exhibit SAE-8. However, this update resulted in a lower rate of $0.17/Mcfd than the current Rate NNS rate of $0.22/Mcfd, and my testimony recommended retaining the current rate for Rate NNS. Witness Reyes proposes that UGI "utilize standard cost causation principals and set the NNS rate based on the actual cost to provide the service." RESA St. No. 1, at p. 9.

Q. Do you agree with Witness Reyes?

A. Although I do generally agree with the position that rates should be cost based, I disagree with the idea that the Company's proposed Rate NNS does not adequately reflect the cost of the service. Witness Reyes's testimony does not appear to recognize that the Company has faced opposition to the cost-based methodology it has presented historically. Notably, OCA witnesses have proposed their own version of an alleged cost-based methodology for NNS, which results in significantly higher cost than the $0.22/Mcfd rate the Company is proposing in this proceeding. For example, in the UGI Gas rate case last year, OCA Witness Geiger supported an NNS rate of $2.0340/Mcfd. OCA St. No. 3, at p. 39 at Docket R-2024-3052716. Witness Reyes's testimony claiming that UGI Gas proposes to maintain a high NNS rate does not recognize the significant and material increase that could result to Rate NNS above the current rate if certain historic alternate, but also allegedly cost-based, proposals made by opposing parties were adopted. Further, his argument that UGI Gas will use the proceeds to offset gas costs for default service customers is irrelevant to the question of whether the proposed rate is just and reasonable, as NNS revenue offsets an appropriate portion of purchase gas costs based on such just and reasonable determination; lowering default service customer costs no matter what level the rate is set at. UGI Gas's proposal in this case is simply a meaningful "cost-based" compromise reflecting, as a starting point, the position that has been agreed to historically by interested parties.

Q. What is your recommendation as related to Rate NNS?

A. Given the reasons stated above, I do not agree with Witness Reyes that the current rate should be lowered at this time. The proposed retention of the current Rate NNS rate is a

balance of opposing methodologies for a cost basis related to Rate NNS; one which is also intended to avoid unnecessary related litigation time, effort and expense. The current rate appropriately credits overall gas costs for the use of and costs related to PGC assets.

IV. TARIFF CHANGES

Q. CAUSE-PA Witness Cicero recommends that as part of its compliance tariff filing, "UGI should eliminate all references to expired sections of the Public Utility Code and should correct all outdated references to state agency names," such as Department of Public Welfare as opposed to Department of Human Services. CAUSE-PA St. No. 1, at p. 93. Does the Company agree with this recommendation?

A. Yes.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as Chief Executive Officer ("CEO"). My business address is 10 Hospital Center Commons, Suite 400 Hilton Head Island, SC 29926.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 11, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by other parties. The areas I address are outlined below, with reference to the corresponding direct testimony of the other parties:

Proposed Revenue Targets by Class

- Office of Consumer Advocate ("OCA") Statement 1 – Direct testimony of Michael Deupree ("OCA Witness Deupree" or "Witness Deupree");
- Office of Small Business Advocate ("OSBA") Statement No. 1 – Direct testimony of Mark D. Ewen ("OSBA Witness Ewen" or "Witness Ewen"); and
- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1 – Direct testimony of Patrick M. Cicero ("CAUSE-PA Witness Cicero" or "Witness Cicero").

Allocated Class Cost of Service Study

- OCA Witness Deupree; and
- OSBA Witness Ewen.

Customer Charges

- OCA Witness Deupree;
- CAUSE-PA Witness Cicero;
- OCA Statement 6 – Direct testimony of Roger Colton ("OCA Witness Colton" or Witness Colton); and
- Bureau of Investigation and Enforcement ("I&E") Statement No. 3 – Direct testimony of Ethan H. Cline ("I&E Witness Cline" or "Witness Cline").

Weather Normalization Adjustment

- OCA Witness Deupree;
- CAUSE-PA Witness Cicero;
- OSBA Witness Ewen; and
- I&E Witness Cline.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No, I am not.

Q. Please summarize your primary conclusions in this proceeding.

A. UGI Gas requests that the Pennsylvania Public Utility Commission ("Commission" or "PUC") approve the Company's filed proposals because they reasonably reflect cost causation principles while appropriately considering customer impacts. Specifically:

i. The Company's revenue allocation approach appropriately uses the results of the Company's fully Allocated Cost of Service Study ("ACOSS") as the primary guide while applying gradualism to moderate customer bill impacts and move class revenues toward cost-based parity in a measured manner.

ii. The Company's proposed increase in the Residential monthly customer charge from $16.25 to $23.00 is a measured step toward more cost-reflective recovery of

fixed customer-related costs and improves bill stability, while preserving substantial volumetric pricing signals.

iii. Extending the existing Weather Normalization Adjustment ("WNA") mechanism pilot will help reduce weather-driven volatility in both customer bills and the Company's recovery of Commission-authorized distribution revenues, and the use of a 10-year normal Heating Degree Day ("HDD") average reasonably reflects more recent weather patterns.

iv. The proposed modifications to the WNA presented by intervening parties should be denied as they reduce the effectiveness of the WNA and provide no value to customers.

II. PROPOSED REVENUE TARGETS BY CLASS

Q. Please summarize the Company's proposed revenue apportionment in this proceeding.

A. Using the ACOSS as the principal guide, the Company proposes to allocate the requested base distribution revenue increase in a manner that moves customer classes closer to their indicated cost of service and reduces existing interclass subsidies, while also recognizing the principle of gradualism. Accordingly, the Company did not propose an immediate full movement to parity but instead proposed a moderated revenue apportionment that improves class revenue-to-cost relationships over time without imposing abrupt rate impacts in a single case.

Q. Please summarize the principal positions advanced by the parties regarding revenue apportionment.

A. Although both the OCA and OSBA propose alternative revenue apportionment approaches, neither party rejects the general principle that class revenues should continue to move closer to cost responsibility while considering gradualism and customer impact. Rather, their recommendations primarily concern the degree of movement among classes. Specifically, OCA proposes a revenue apportionment based on its alternative ACOSS results, with a cap limiting any class increase to no more than 1.15 times the system average increase and with elimination of the modest proposed decreases to certain high load factor classes.[1] Similarly, OSBA recommends removal of the relatively small proposed revenue decreases to Rate XD and Rate IS and reallocation of those amounts primarily to Rate DS.[2] Thus, while these parties recommend certain modifications, both of them continue to recognize the appropriateness of using the ACOSS as the principal guidepost in assigning the overall revenue increase among customer classes.

CAUSE-PA Witness Cicero states that he is not taking a specific position on the allocation of the overall revenue requirement across rate classes and does not opine whether UGI Gas's proposed cost allocation is methodologically sound. Nevertheless, he argues that cost of service should be viewed only as a guide and not the sole determinant of revenue apportionment, asserting that the Commission should consider broader affordability and customer impact concerns. On that basis, he criticizes the Company's proposal because certain customers receive a rate decrease (Rate XD and Rate IS) while

[1] OCA St. 1, at pp. 57-58.
[2] OSBA St. No. 1, at pp. 12-13.

other classes receive increases, and contends that if an increase is approved, all customer classes should share in the associated burden, subject to cost causation and gradualism.[3]

Q. Have you compared the revenue apportionment outcomes proposed by various parties?

A. Yes. As presented in Table 1 below, I compared the percentage of total increase assigned to each class across the Company and other parties' proposals.

Table 1 - Comparison of Revenue Increase by Class Among Parties[4]

Rate Classes	UGI Gas	OCA	OSBA	Average OCA & OSBA
Rate R	75.15%	69.95%	75.15%	**72.55%**
Rate N	23.53%	22.07%	23.53%	**22.80%**
Rate DS	0.71%	0.00%	0.57%	**0.29%**
Rate LFD	0.74%	7.98%	0.74%	**4.36%**
Rate XD Firm	-0.06%	0.00%	0.00%	**0.00%**
Rate IS	-0.07%	0.00%	0.00%	**0.00%**
Total	100.00%	100.00%	100.00%	**100.00%**

Q. What explains the differences in revenue apportionment among the parties?

A. The differences in revenue apportionment among the parties are driven by two primary factors. First, OCA relies on its own cost-of-service study results, which reflect differing assumptions and methodologies. Second, and equally important, each party applies judgment in determining how to translate the ACOSS results into revenue targets for each class. No party in this proceeding proposes to move all rate classes fully to cost-of-service parity in a single step. Instead, each party applies gradualism to moderate rate impacts and

[3] CAUSE-PA St. No. 1, at pp. 17-18.
[4] CAUSE-PA and I&E do not present an alternative revenue apportionment.

determine how far to move each respective class toward cost-based rates. As a result, the final revenue apportionment reflects both the underlying ACOSS results and each party's judgment regarding rate impacts and policy considerations. It is important to note that both the Company's proposal and OSBA's proposal set Rate N/NT to parity under the proposed revenue targets.

Q. How should the Commission consider these differences when evaluating the various proposals?

A. These differences demonstrate that revenue apportionment is not a mechanical outcome of any single cost-of-service study. Rather, it reflects a combination of analytical results and informed judgment applied by each party. The primary issue is how to reasonably apportion the approved revenue requirement among customer classes, balancing cost-of-service principles with gradualism and rate stability. As I described in my direct testimony, a cost of service study is a guide that provides directional insight into cost responsibility, but revenue allocation ultimately requires judgment, including consideration of gradualism, rate impacts, and policy objectives.

Q. Do the alternative revenue apportionment proposals presented by OCA, OSBA, or CAUSE-PA cause you to modify your recommendation?

A. No, they do not.

Q. Why do you continue to support the Company's proposed revenue apportionment?

A. I continue to support the Company's proposed revenue apportionment because it appropriately balances the two principal objectives that should guide revenue assignment in a general rate proceeding: first, moving class revenues closer to each class's indicated cost of service; and second, mitigating abrupt customer impacts through gradualism. The Company's proposal was expressly developed using the ACOSS as the primary analytical benchmark, while also moderating the pace at which under- and over-recovering classes are moved toward parity. In my view, that produces a reasonable and measured progression toward more cost-based rates.

With respect to the OCA proposal, its recommended apportionment is derivative of OCA's alternative ACOSS methodology, which I do not support for the reasons discussed below in my rebuttal testimony. Because I do not agree with OCA's underlying cost responsibility indications, I likewise do not agree that OCA's modified revenue movements provide a superior result.

Q. Do you agree with the OCA, OSBA, and CAUSE-PA recommendations to reject the rate decreases proposed for Rate XD and Rate IS?

A. No, I do not. Witness Deupree's justification for this recommendation is not reasonable. Both versions of the ACOSS, UGI Gas's and OCA's, show a revenue surplus for Rate XD and Rate IS.[5] OCA Witness Deupree fails to define how they assess the level of fairness outside of their subjective interpretations. This is why regulators across the country and the PUC look at the cost to serve each class as a guide to what rates are fair to those classes.

[5] UGI Gas, Exhibit D, Schedule 1, line 57, and OCA Exhibit MWD-5, line 20.

If fairness was not measured by the relationship between what costs are caused by the customers and what costs they pay for, then no regulatory commission would require a class cost of service to be filed with a rate case. They could rely on other subjective definitions of fairness.

Witness Ewen's disagreement to reduce Rate XD and Rate IS is based on his belief that "[t]hese customers are subject to negotiated rates, which have already been accepted by the customers."[6] I do not disagree that the rates applicable to Rate XD and Rate IS customers are subject to negotiated rates and are therefore not being modified in this proceeding. However, Witness Ewen's characterization overlooks the fact that the minor reduction shown for these classes is not the result of a discretionary decrease to those negotiated rates. Rather, as explained in my direct testimony,[7] it reflects the expiration and reset to zero of the Distribution System Improvement Charge ("DSIC") surcharge upon implementation of new base rates. Accordingly, while the proof of revenue reflects a small reduction in total revenues collected from the class, the underlying negotiated transportation rates paid by Rate XD and Rate IS customers remain unchanged. In that respect, the Company's proposal is already consistent with Witness Ewen's stated objective that these customers not receive a substantive rate adjustment in this proceeding. For the same reasons stated above, Witness Cicero's recommendation has no merit. In short, the very minor percentage decreases to Rate XD and Rate IS are a mechanical outcome of the rolling in of the DSIC costs into non-negotiated base rates. Additionally, the ACOSS shows that recovering these costs through DSIC, and thus partially from Rate XD and Rate IS, has led to an increase in the amount by which these classes' revenues exceed their cost of

[6] OSBA St. No. 1, at p. 12.
[7] UGI Gas St. No. 11, at p. 20.

service, which ultimately benefits other customer classes that are under contributing toward their cost of service.

Therefore, the Company's revenues should be allocated amongst the customer classes reflecting the results of the ACOSS that I prepared. The resulting movement of classes towards the overall system rate of return is consistent with regulatory practice and in the best interest of all customers. Rate XD and Rate IS customers represent a potential bypass risk. If pushed to do so by uncompetitive rates, their departure would reduce overall system revenue, ultimately shifting the recovery of fixed distribution costs to other customer classes.

III. ALLOCATED CLASS COST OF SERVICE STUDY

Q. How does OCA Witness Deupree disagree with the Company's ACOSS?

A. Witness Deupree disagrees with the Company's use of the Average and Excess ("A&E") methodology for distribution mains in the Company's ACOSS. He states that the A&E methodology fundamentally distorts the results by weighting the allocator towards lower load factor customers like residential customers. Therefore, he instead recommends using the Peak and Average ("P&A") methodology with a weighting based on the system load factors, producing a weight of 42.36% towards the demand portion of the method.[8]

[8] OCA St. 1, at pp. 48, 54.

Q. Please explain the key considerations in selecting an allocator for distribution mains in an ACOSS.

A. An ACOSS is intended to allocate utility costs in a manner that reflects the factors that actually drive those costs. In addition, distribution mains reflect two cost-causative realities. First, mains investment is driven by the need to connect and maintain an integrated delivery grid for a given number and geographic dispersion of customers (a customer-related driver of system extent). Second, mains must be sized to provide sufficient capacity to serve coincident peak-day requirements safely and reliably (a demand-related driver of system capacity). A reasonable allocator should recognize both drivers. Further, a system built to accommodate only average demand would be incapable of serving customers during periods of highest usage and would fail to provide safe and reliable service. Instead, mains are designed to withstand the pressures and flow requirements associated with peak system demand, often with additional margin to account for uncertainty and future growth.

Q. If both customer-related and demand-related factors drive distribution mains investment, why should the allocator recognize an average-demand component at all?

A. In selecting an allocator for distribution mains, it is appropriate to consider both (i) cost causation principles and (ii) the Commission's precedent regarding what methods are reasonable and administrable. Here, the Company selected an approach that is fully aligned with Commission precedent and that reflects the two principal drivers of mains investment. Typically, when reading through orders disallowing a customer component of mains or approving a method that incorporates annual usage, it appears that the stated rationale is

either premised upon the "annual gas delivery function" as the reason for the utility's existence or reflects a confusion of cost allocation concepts with rate design (i.e., allowing the method of recovering costs to impact the method of allocating those costs). Those policy considerations may influence outcomes, but they do not change the underlying engineering reality that mains are installed to connect customers and are sized to meet peak-day requirements.

This evolution in thinking is also reflected at the federal level: while the Federal Power Commission and later the Federal Energy Regulatory Commission ("FERC") historically used Seaboard-style cost classification for pipeline ratemaking, the FERC has since moved away from that approach in favor of methods intended to more directly reflect fixed-cost recovery and market-structure objectives. In this proceeding, the Company's selected method recognizes the concerns raised by parties who wish to incorporate an "annual delivery" concept by explicitly reflecting an average-demand component.

Lastly, to the extent any allocator incorporates an "average-use" concept, it should do so in a way that does not obscure the separate peak-capacity driver that governs main sizing.

The key is that peak-related demand remains the dominant cost driver because it is peak demand that determines how large the system must be. The A&E methodology reflects this by (1) recognizing an average-demand component and (2) separately measuring the demand in excess of average, which is the incremental component most directly associated with additional capacity and main size. This structure provides a more direct way to reflect an "average usage" concept without embedding the average component inside the peak term, as occurs under P&A.

Q. Why is OCA Witness Deupree's proposed 42.36/57.64 P&A weighting[9] inappropriate for allocating distribution mains?

A. Witness Deupree's proposal to weight P&A using the system load factor represents a fundamental misunderstanding of how distribution mains are designed and what drives their cost. Under this proposal, average demand would receive nearly 58% of the weight, while peak demand would receive only approximately 42%. This implies that average usage is the dominant driver of distribution main investment. That conclusion is inconsistent with both engineering reality and basic logic.

A system designed to withstand only average demand would fail. A system designed to withstand conditions somewhere between average and peak demand would also fail. In fact, even systems designed for current peak demand may require upgrades if a new system peak occurs or is projected to occur at design conditions. Distribution mains are therefore designed not merely around today's peak, but around the ability to safely handle extreme and potentially increasing system demands. Using a load-factor-based weighting effectively treats distribution mains as if they were sized based on how evenly customers use the system over time. That is not how mains are designed, and it is not what drives their cost. Average demand does not determine pipe diameter, wall thickness, or reinforcement requirements. Rather, peak conditions do. As a result, Witness Deupree's proposed 42.36/57.64 weighting places excessive and unjustified emphasis on average demand and severely understates the role of peak demand in driving mains investment.

[9] OCA St. 1, at p. 54.

Q. Does the P&A methodology raise additional concerns beyond improper weighting?

A. Yes. The P&A methodology inherently double-counts average demand. Under P&A, mains costs are allocated partly based on average demand and partly based on peak demand. Because peak demand necessarily includes average demand, the average component is counted twice: once explicitly as average demand, and again as part of the peak measure. In contrast, the A&E methodology avoids this problem by clearly separating average demand from the demand that exists in excess of average. Each component is counted once, and only once, which results in a cleaner and more accurate allocation. The double-counting inherent in P&A becomes even more problematic when the peak weight is reduced below 50 percent, as Witness Deupree has advocated in this proceeding. Doing so magnifies the influence of average demand, which is already embedded in both components of the P&A formula.

Q. What is the practical impact of this double-counting on class cost responsibility?

A. Double-counting average demand systematically distorts class cost responsibility. Customer classes with highly temperature-sensitive usage, such as residential customers, tend to have lower load factors and place significant demands on the system during peak conditions. When peak demand is understated and average demand is overstated, these classes are assigned less than their appropriate share of mains costs. At the same time, customer classes with flatter usage profiles and higher load factors are assigned more mains costs than they actually cause. This outcome is inconsistent with cost causation and undermines the fundamental purpose of the ACOSS.

Q. OCA Witness Deupree argues that the A&E methodology disproportionately shifts distribution mains costs to customer classes with lower load factors and characterizes this outcome as a distortion.[10] How do you respond to this claim?

A. First, it is important to return to the two primary cost drivers for distribution mains: (1) the need to extend mains to connect customers to the system and maintain an integrated system (a customer-related driver of system extent), and (2) the need to install sufficient pipe size to meet capacity requirements under coincident peak conditions (a demand-related driver of system capacity). Witness Deupree's focus on load factor speaks only to one aspect of system use and does not, by itself, capture the customer-driven requirement to extend and interconnect mains across the service territory. Smaller, lower load-factor customers, particularly in areas with lower customer density, can require substantial lengths of mains to connect and interconnect, even though their average use per customer is lower.

While OCA Witness Deupree is correct that the A&E methodology assigns a larger share of distribution mains costs to customer classes with lower load factors, characterizing this result as a "distortion" is incorrect. On the contrary, it reflects the accurate operation of cost causation principles as applied to the design and function of the distribution system. Customer classes with lower load factors tend to have highly temperature-sensitive usage that drives system demand during peak periods. These peaks are precisely the conditions that determine the required size, capacity, and cost of distribution mains. As a result, those customer classes impose greater demands on the system when it matters most from a design perspective, even if their average usage over time is lower. The A&E methodology is

[10] OCA St. 1, at p. 52.

designed to capture this relationship explicitly. By separating average demand from the demand in excess of average, A&E assigns cost responsibility in a manner that reflects how much incremental system capacity is needed to serve peak conditions. When classes with lower load factors are assigned a greater share of mains costs under A&E, that outcome is evidence that the methodology is functioning as intended, not a distortion.

By contrast, the P&A methodology masks this relationship by embedding average demand within the peak demand component. When peak weighting is further reduced, such as under OCA's proposed 42.36/57.64 weighting, the methodology increasingly shifts costs away from those classes that drive peak system requirements and toward classes with flatter load profiles. That result does not reflect system design or cost causation and instead produces a subsidization of peak-driving customers by more load-factor-efficient customers.

In short, it is neither anomalous nor inequitable that A&E results in higher cost responsibility for low-load-factor classes. It is a direct and appropriate recognition that those classes necessitate more main investments and greater system capacity. Labeling this outcome as a distortion reverses the logic of cost causation and ignores the fundamental purpose of an ACOSS.

Q. Has the Commission addressed the appropriate methodology for allocating distribution mains?

A. Yes. The Commission has explicitly endorsed the A&E methodology for allocating distribution mains and has rejected P&A for precisely the reasons discussed above. In Docket No. R-2020-3018929, the Commission found that PECO Energy Company – Gas

Division's ("PECO") use of the A&E methodology was "reasonable and acceptable for an NGDC because it aligns with cost causation principles and the design of PECO's distribution system."[11] The Commission further noted that this was not a novel determination, citing its earlier approval of A&E in the 2007 PPL Gas proceeding.

Importantly, the Commission emphasized that excess demand is a principal driver of mains investment and stated that "the excess demand component of PECO's distribution mains system garners considerable weight in the balance of mains costs."[12] The Commission also explicitly found that P&A double-counts average demand, leading to distorted cost responsibility, particularly for residential customers with temperature-sensitive usage. Based on these findings, the Commission concluded that A&E is "more reflective of an accurate representation" of distribution mains systems.[13]

Q. Did any other witness evaluate the Company's ACOSS and its use of the A&E methodology, and if so, what conclusions were reached?

A. Yes. OSBA presented direct testimony from Witness Ewen, who was specifically tasked with reviewing the Company's cost allocation, revenue allocation, and rate design proposals to determine whether they are consistent with sound regulatory economics and are fair and reasonable to customers, including small business customers. After completing this review, Witness Ewen identified no concerns with the Company's ACOSS. He concluded that the Company's cost allocation model is consistent with cost allocation methods that the Commission has previously accepted and does not produce unreasonable

[13] *Id.*, p. 230.

or inappropriate outcomes. In his testimony, he expressly acknowledged the use of A&E as one of the traditional and accepted approaches for allocating distribution mains costs and did not characterize the Company's application of that methodology as flawed, distortive, or inconsistent with cost causation principles.[14]

Q. In summary, how should the Commission evaluate the methodologies proposed in this proceeding?

A. Witness Deupree's proposal to apply a 42.36/57.64 weighting materially shifts emphasis away from peak-driven capacity requirements and further magnifies the structural issues inherent in P&A. If the goal is to employ a method that reflects average usage while still recognizing the capacity-driven nature of mains, A&E provides a more direct and internally consistent way to do so than a load-factor-weighted P&A approach. Accordingly, the Company's use of A&E is reasonable and supported.

IV. CUSTOMER CHARGES

Q. Please summarize the Company's proposed customer charge adjustments in this proceeding.

A. The Company proposes to increase the monthly customer charges for Rates R, N, and DS as part of a movement toward improved recovery of fixed customer-related costs through the customer charge. Specifically, the Company proposes to increase the Rate R customer charge from $16.25 to $23.00, the Rate N customer charge from $36.42 to $39.00, and the Rate DS customer charge from $300.00 to $353.00. As shown in Table 6 of my direct

[14] OSBA St. No. 1, at p. 10.

testimony, each of these proposed charges remains materially below the customer-related unit cost identified in the Company's ACOSS. For example, the proposed Rate R customer charge of $23.00 remains well below the ACOSS-indicated customer-related cost of $54.03. Accordingly, the Company is not proposing full recovery of customer-related costs through the monthly charge, but rather a measured step toward more cost-reflective recovery consistent with prior Commission precedent recognizing these categories of customer-related costs as appropriate for inclusion in a customer charge.

Q. Please summarize the principal positions advanced by the parties regarding the Company's proposed customer charge adjustments.

A. Both OCA and CAUSE-PA oppose the Company's proposed increases to the monthly customer charges, particularly for residential customers. Witness Deupree recommends that the Commission reject the proposed increases to the customer charges for Rates R and N and retain the current charges or, alternatively, limit any increase to the same percentage increase assigned to each class. In support of that recommendation, he states that customer charges were increased in the Company's prior rate proceeding, that current charges already recover a portion of customer-related costs, that additional fixed charge recovery places a proportionately greater burden on lower-use customers, and that higher customer charges may weaken conservation and energy efficiency price signals.[15] Similarly, CAUSE-PA raises concerns that increasing fixed monthly charges reduces customers' ability to manage bills through usage reductions and places added pressure on customers facing affordability challenges.[16]

[15] OCA St. 1, at p. 68.
[16] CAUSE-PA St. No. 1, at p. 51.

Q. Witness Deupree claims that the customer charge includes costs that are not directly related to providing service to customers and raises concerns about the Company's proposed residential customer charge because it is higher than the charges of other natural gas distribution companies ("NGDCs") in Pennsylvania.[17] How is this comparison relevant to the evaluation of the appropriateness of the charge?

A. Witness Deupree's statement about the customer charge including costs that are not directly related to providing service to customers is untrue. As indicated in my direct testimony, the Company's proposed residential customer charge of $23.00 is well below the customer-related unit cost of $54.03, which reflects cost components historically approved by the Commission for recovery through the customer charge.[18] In addition, Witness Deupree's comparison overlooks the fundamental considerations that should guide the design of utility rates. Except for the commodity cost of natural gas, the natural gas utility system is predominantly a fixed-cost system. These fixed costs are incurred to design and construct a delivery network capable of meeting the system-wide peak demand during extreme cold weather conditions. This infrastructure must be maintained and available year-round to serve customers reliably, regardless of actual daily usage. Importantly, these costs do not decrease when customer usage declines during warmer periods, only commodity-related costs fluctuate with usage. Therefore, it is appropriate for rates to be designed in a manner that aligns with the underlying cost structure of the system. Specifically, fixed costs should be recovered through fixed charges, making the

[17] OCA St. 1, at p. 64.
[18] UGI Gas St. No. 11, at pp. 26-27.

level of the Company's proposed customer charge a reflection of cost causation rather than a comparison to other utilities.

Q. How do you respond to OCA Witness Deupree's claim that a higher customer charge is inconsistent with the promotion of energy conservation and efficiency goals?[19]

A. Although I understand Witness Deupree's concern, rate design must balance multiple regulatory objectives: cost causation, revenue stability, fairness, and yes, price signals that support efficiency. It is important to recognize that the customer charge is intended to recover fixed costs that do not vary with usage, such as meter reading, billing, and service line maintenance. These costs are incurred to serve customers regardless of how much gas they use. Placing too much emphasis on conservation in the design of the customer charge risks distorting cost recovery by shifting fixed costs into the volumetric rate. This can lead to under-recovery during periods of low usage and may result in unstable rates over time. Moreover, energy efficiency can still be promoted through other aspects of the rate structure, including appropriately designed volumetric commodity charges that send efficient price signals reflecting usage, as well as through targeted efficiency programs, without compromising the integrity of fixed cost recovery. Therefore, while conservation is an important policy goal, it should not override the fundamental principle that fixed costs are most appropriately recovered through fixed charges. The Company's proposed customer charge reflects this principle while still leaving room for usage-based price signals in the volumetric portion of the rate.

[19] OCA St. 1, at p. 65.

Under UGI Gas's proposed $23.00 monthly residential customer charge, approximately 79.9% of residential revenues would still be recovered through volumetric delivery charges. Under the OCA's $16.25 proposal, that figure is approximately 85.8%. In either case, the overwhelming majority of a residential customer's bill would still be usage-based. This clearly demonstrates that customers continue to have significant opportunities to lower their gas bills through energy efficiency measures, conservation, and behavioral changes. The suggestion that a higher customer charge eliminates the incentive or ability to reduce bills is simply not supported by the numbers.

Q. What definition of conservation should be utilized in the context of setting distribution rates?

A. Conservation, in the context of distribution rate design, should be understood as the wise and efficient use of utility resources—not merely the reduction of energy consumption. When evaluating the appropriate level of the fixed monthly customer charge, it is important to recognize that many of a gas utility's distribution costs are incurred regardless of usage. These include the costs to connect customers to the system and maintain infrastructure capable of meeting customer requirements. Designing rates that recover these fixed costs through a volumetric rate can mislead customers into thinking they can avoid these costs by reducing usage, when in fact, the utility's cost to serve them remains unchanged. This misalignment can lead to inefficient price signals, as some customers may invest time or money to reduce their bills in ways that do not actually reduce system costs. In effect, those unrecovered fixed costs must then be shifted to other customers and will likely return, at least in part, to impact the customer undertaking the conservation investments as such fixed

costs are recalculated into rate designs during subsequent rate case proceedings. This dynamic creates a zero-sum situation, where volumetric charge related savings for one customer result in increased costs for others, and even for themselves, without any overall efficiency gains for the system. In short, economically inefficient rate designs result in a misallocation of societal resources where individual decision-making is skewed by inaccurate prices and the results of their decisions have unintended consequences.

Q. How do utility customers respond to price signals and changes in rates?

A. Customers respond to price signals in varied and often inconsistent ways. A change in consumption patterns is not solely driven by pricing, it is influenced by factors such as appliance efficiency, appliance technology, building insulation, access to alternative fuels, weather, and socioeconomic conditions. Additionally, customer response to price changes depends on both their ability and willingness to adjust behavior. Some customers may not prioritize investments in energy efficiency improvements, while others may not see enough benefit from marginal price changes to justify altering their usage. Small increases (such as from a $16.25 to a $23.00 customer charge) may not be noticeable enough to prompt any behavioral change. It is also important to note that natural gas is often treated as a necessity, especially for heating in colder climates, meaning consumption is less elastic. Many customers prioritize comfort and safety over potential savings, and some may not actively track their energy usage at all. Therefore, assuming that small adjustments in fixed charges will meaningfully impact conservation behavior is not supported by observed customer behavior or economic fundamentals.

Q. OCA Witness Deupree states that higher customer charges disproportionately impact lower-use residential customers, which he contends tend to be lower-income customers, and references OCA Witness Colton as discussing this concept in more detail.[20] How do you respond?

A. Neither Witness Deupree nor Witness Colton provides Company-specific data or analysis demonstrating that lower-use residential customers are generally lower-income customers. Their criticism rests on a generalized assumption rather than evidence concerning the Company's actual customer population. By contrast, the Company examined this issue using its historical residential billing data and found that confirmed low-income residential customers use more gas on average than residential non-low-income customers.[21] This directly contradicts the premise underlying OCA's argument. Accordingly, the assertion that the proposed customer charge disproportionately harms low-income customers simply because it affects lower-use customers is not supported by record evidence.

Q. CAUSE-PA Witness Cicero claims that "[t]he proposed increase in the fixed monthly customer charge weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of gas they consume."[22] How do you respond?

A. As addressed in my response to OCA Witness Deupree, the concern that an increase in the fixed customer charge will significantly weaken low-income customers' ability to manage or reduce their bills is unfounded.

[20] OCA St. 1, at p. 68.
[21] UGI Gas St. No. 11, at pp. 28-29.
[22] CAUSE-PA St. No. 1, at p. 50.

Q. CAUSE-PA Witness Cicero acknowledges your calculation that a residential customer using approximately 78.6 Mcf annually represents the breakeven point under the Company's proposed residential customer charge, but he argues that average usage does not reflect the full range of customer consumption patterns.[23] How do you respond?

A. Witness Cicero is correct that not every residential customer uses gas at exactly the class average, so individual customer bill impacts will vary depending on actual consumption. That fact, however, does not undermine the usefulness of the breakeven analysis. The purpose of my calculation was not to suggest that all customers will experience identical bill impacts; rather, it was to illustrate the point at which the increase in the monthly customer charge is offset by the corresponding reduction in volumetric delivery rates. This provides a reasonable benchmark for understanding how the proposed rate design functions across the class. By definition, some customers with usage above that level will experience net savings while some customers below that level may experience modest increases. However, that is true in virtually any rate design change involving a shift in fixed and variable recovery. The relevant point is that the proposal better aligns the recovery of customer-related fixed costs with the fixed charge while preserving substantial volumetric pricing signals, and the existence of a range of consumption patterns does not alter that ratemaking principle.

[23] CAUSE-PA St. No. 1, at pp. 51-52.

Q. What price signal does the current residential rate structure send to customers regarding the cost of using natural gas?

A. Under the current residential rate structure, approximately 84% of fixed distribution costs are recovered through volumetric charges. As a result, the per-unit price of gas delivery embedded in the volumetric rate materially exceeds the actual marginal cost of providing service. Based on the Company's current rates, customers face an effective delivered price signal of approximately thirteen dollars per Mcf ($13.1), while the underlying marginal cost of commodity gas cost is closer to seven dollars per Mcf ($6.8). This means customers are making consumption decisions based on a price signal that is approximately two times (2x) the actual incremental cost of using natural gas. The impact is most pronounced during the winter when demand for natural gas increases. During these months, customers experience higher and less predictable monthly bills, and the inflated volumetric rate makes each additional unit of usage appear far more expensive than it actually is. In addition, during the coldest periods, and particularly in colder than normal winters, commodity prices often increase - sometimes significantly, further exacerbating the effect. For many households, particularly those with limited flexibility to reduce usage, this results in the perception, and often the reality, that natural gas service is unaffordable at the time when it is needed most, even though the underlying cost to serve incremental usage is materially lower.

Q. Please expand on how a higher customer charge would impact different segments of the Company's population.

A. All else being equal, higher customer charges necessitate lower variable charges. The collection of costs through fixed or volumetric charges is the only means of collecting the revenue to cover costs for a specific customer class. The total revenue target for the class does not change, just which component is designed to recover what portion of the total revenue target. Most importantly, the choice between volumetric and fixed recovery does change how and when customers pay those costs over the course of the year. This distinction is important because affordability is not determined solely by total annual bills, but also by the timing and variability of monthly bills.

For many households, particularly low-income customers, expenses are managed on a weekly, bi-weekly, or monthly basis, with limited financial flexibility to absorb large fluctuations in costs. Research consistently shows that a significant share of low-income households have little to no liquid savings available to manage unexpected or seasonal increases in expenses. As a result, rate designs that concentrate cost recovery in volumetric charges can create sharp bill increases during the winter months, when usage is highest and energy needs are least discretionary.

In contrast, recovering a reasonable portion of costs through a fixed monthly charge helps moderate seasonal bill volatility and provides greater predictability for household budgeting. This is particularly important for vulnerable customers who may not have the ability to reduce usage in response to higher winter prices. It is also important to recognize that customers are not equally positioned to respond to volumetric price signals. Higher-income households may have the financial means to invest in energy efficiency

improvements, otherwise reduce consumption, or simply pay more for gas usage. In contrast, lower-income households—especially renters or those in less efficient housing—often lack the ability to make such investments and may instead respond by reducing essential usage in ways that negatively impact their standard of living.

Further, recovering fixed costs in volumetric charges places regressive burdens on low-income households who have to make decisions to reduce their gas usage that impact their quality of life. Recovering fixed costs in volumetric charges increases the burden on some vulnerable households during the coldest months, forcing some households to make tough decisions. These households might choose between gas use for basic human needs, such as heat, hot water and cooking or other choices that add value to their lives (e.g., food, medical care, clothing, personal care products).

Accordingly, recovering a greater share of fixed costs through volumetric charges can create regressive outcomes by concentrating costs in periods when customers are least able to respond. A more balanced rate design, such as the Company's proposal, mitigates these effects by improving bill stability while still preserving appropriate price signals.

Notably, the concerns raised by CAUSE-PA and OCA themselves underscore several of these same customer realities. These witnesses emphasize that many low-income customers have limited financial flexibility, face competing essential household expenses, and have constrained ability to materially reduce winter heating usage.[24] I agree that these are important considerations. Where I differ is in the inference drawn from those facts. In my view, because many vulnerable customers cannot meaningfully avoid winter heating usage, concentrating a greater share of fixed distribution cost recovery in volumetric winter

[24] CAUSE-PA St. No. 1, at pp.17, 20, 26-27; OCA St.6, at pp. 26-28.

charges can intensify monthly bill pressure at precisely the time those customers are least able to respond. The positions of CAUSE-PA and OCA are internally inconsistent: they want to send a price signal, but they also acknowledge that some customers, and in particular the most vulnerable, cannot meaningfully respond to it. It is also appropriate to recognize that ultimately the availability of the Company's low-income Customer Assistance Program ("CAP") serves to support affordability for low-income customers, and its design is such that most customers receive bills that are income based and fully fixed-price in terms of rate design.

Q. Have other jurisdictions recently recognized the impact of recovering fixed costs through volumetric charges on low-income customers?

A. Yes. Most recently, in its order in the Docket Cause No. 45990 issued on February 3rd, 2025, the Indiana Utility Regulatory Commission recognized the following:

> (…) we are persuaded by witness Taylor's evidence that frequently low-income customers are harmed by recovery of fixed costs through a volumetric charge. We are further persuaded that the TDSIC [Transmission, Distribution, and Storage System Improvement Charges] distribution costs should continue to be recovered through a fixed charge. These are fixed costs, and recovery through a volumetric charge would send inefficient price signals and would work to the detriment of those low-income customers who are higher volume users. [Section xi.6, Commission Discussion and Findings, page 113]

Q. How do you respond to the recommendations of OCA, CAUSE-PA, and I&E that the proposed monthly customer charges be scaled back proportionately if the Commission approves a lower revenue requirement?[25]

A. I disagree with their recommendation. Rate design should be based on the cost to serve, not applied as a function of comparing UGI Gas's revenue requirement request with what is authorized. As I have mentioned previously, the customer charge specifically reflects the fixed costs of providing service to a residential customer. Scaling back the customer charge merely to match a reduced revenue requirement would disconnect the rate design from cost causation principles and potentially result in an under-recovery of fixed costs. This shift would necessarily increase the portion of revenue recovered through volumetric charges, distorting price signals and potentially creating intra-class subsidies between low- and high-use customers. As noted by NARUC in its Gas Rate Design Manual, "Ideally, the customer charge should recover all customer costs."[26] The Company's proposed customer charges, which are below the customer related unit cost identified in the ACOSS,[27] were developed to reflect these cost-based principles and should be evaluated independently of the total revenue level ultimately approved by the Commission.

V. WEATHER NORMALIZATION ADJUSTMENT

Q. Please summarize the Company's proposal regarding the WNA and describe the key components of the mechanism.

A. The Company proposes to continue its existing WNA Rider for an additional five-year pilot period through October 31, 2032, with modifications intended to improve the accuracy and consistency of the mechanism. Under the full proposal, the WNA would continue to apply only to the Company's weather-sensitive Residential and Small Commercial customer classes, excluding CAP customers, during the heating season months of October through April. The mechanism adjusts only the distribution volumetric portion of customer bills when actual weather materially differs from normal weather, thereby reducing abnormal weather-related volatility in both customer bills and Company revenues. The WNA also retains a 3% deadband and other customer protections previously agreed upon in past cases.[28] Lastly, the Company proposed to replace the current 15-year normal HDD baseline with a 10-year historical average ending December 31, 2024, and to update that 10-year normal in each future base rate proceeding so that the same normalized weather assumptions used to establish billing determinants in base rates are also used in the operation of the WNA. No party opposed this update to the stated 10-year normal.

Q. What are the other parties' positions in this case regarding the WNA?

A. The other parties take differing positions on the Company's proposed continuation of the WNA, but all recommend some degree of modification or additional limitation. OCA opposes continuation of the WNA as proposed and recommends that the Commission

[28] UGI Gas St. No. 11, at p. 26.

either reject the renewal of the pilot altogether or, at a minimum, significantly tighten the mechanism arguing that it has resulted in substantial net surcharges to customers and shifts weather-related revenue risk away from the Company. OCA also objects to the Company's proposal to continue coupling the WNA with an increased residential customer charge, arguing that the combination further insulates the Company from normal volumetric sales risk.[29]

OSBA does not oppose the concept of weather normalization but recommends that any continued WNA be narrowed to provide stronger customer protections, including changes intended to reduce the magnitude and frequency of customer surcharges and supports only a limited two-year WNA extension pending further evaluation.[30]

I&E likewise does not oppose extending the WNA pilot but recommends increasing the deadband from 3% to 5%, consistent with recent Commission precedent in Columbia Gas of Pennsylvania, Inc. ("Columbia Gas"), arguing that a broader range of ordinary weather variation should remain the Company's responsibility before any WNA adjustment is triggered.[31]

Finally, CAUSE-PA takes the strongest position against the WNA, asserting that the rider is unjust and unreasonable, is disproportionately harmful to low-income customers, and should be permitted to expire at the end of the current pilot term rather than be renewed. CAUSE-PA argues that the WNA, particularly when combined with the proposed increase in the residential customer charge, improperly locks in Company revenues by transferring normal weather and usage risk from shareholders to customers.[32]

[29] OCA St. 1, at pp. 35-39.
[30] OSBA St. No. 1, at pp. 15-17.
[31] I&E St. No. 3, at pp. 15-16.
[32] CAUSE-PA St. No. 1, at pp. 57-63.

Q. Please summarize OCA Witness Deupree's claim regarding WNA charges outweighing credits.[33]

A. Witness Deupree asserts that, since the implementation of the WNA pilot, charges assessed under the WNA have outweighed credits provided to customers, such that the WNA has not produced a "balanced" outcome. He relies on this characterization to argue that the WNA has only increased customer bills on a net basis and should therefore be discontinued or substantially limited.

Q. How do you respond to Witness Deupree's claim that the WNA has not produced a balanced outcome?[34]

A. Witness Deupree's conclusion is driven by the interaction between the methodology used to select weather normal and prevailing weather conditions during the pilot period, which, when measured against a longer historical baseline, have tended to classify recent heating seasons as warmer than normal.

Under the existing lagged 15-year normal, the heating seasons during which the WNA has been in effect, beginning in November 2022, have generally been warmer than "normal," resulting in WNA charges to customers. In that context, the presence of net WNA charges reflects the expected operation of the mechanism and does not, standing alone, demonstrate that the WNA is structurally biased against customers or failing to function as designed.

[33] OCA St. 1, at p. 35.
[34] *Ibid.*

Additionally, whether the WNA produces a charge or a credit is highly sensitive to the choice of the weather normal. When the same billing months are recalculated using a 10-year normal, which more closely reflects recent weather patterns, both the magnitude and direction of WNA impacts change materially. A shorter normal reduces the extent to which recent heating seasons are classified as warmer than normal, thereby reducing associated WNA charges and increasing associated WNA credits. Table 2 below summarizes the WNA adjustments over the period during which the WNA has been in effect, as calculated under the existing 15-year normal and as recalculated using a 10-year normal applied to the effective rates in place during each heating season.

Table 2 – Comparison of WNA Charges/Credits Under 15 and 10 Year Normal (in millions)

WNA Month	Actual Total Residential and Commercial WNA Revenue 15-Year Normal	Estimated Total Residential and Commercial WNA Revenue 10-Year Normal
Nov-22	$1.54	$0.85
Dec-22	1.02	-0.46

2025-2026 Heating Season to Date	**$(27.30)**	**-$36.05**
Total WNA Collections/Credits	**$63.44**	**$0.13**

The monthly and seasonal results summarized in Table 2 demonstrate that observed WNA outcomes are strongly influenced by the weather normal used in the WNA mechanism. During the initial years of the WNA pilot, heating seasons were generally warmer than normal when measured against the existing 15-year baseline, resulting in net WNA charges that are an expected outcome of the mechanism's design. When the same billing months are evaluated using a 10-year normal that more closely reflects recent weather conditions, the magnitude of WNA adjustments is materially reduced.

The dependence on the selected normalization period remains evident in the most recent heating season. Under the 15-year normal, the WNA results in a substantial net

credit, reflecting colder-than-normal weather relative to that baseline. When recalculated using a 10-year normal, the same season produces a materially larger credit. These results show that conclusions regarding whether WNA charges outweigh credits are driven by baseline selection and prevailing weather conditions, rather than by any inherent imbalance in the structure or operation of the WNA mechanism itself. As demonstrated by the analysis above, the Company's proposal to move to a 10-year normal in this proceeding directly addresses Witness Deupree's concern that the WNA should provide a more balanced outcome.

Q. Does this indicate that the WNA amounts are higher than they should have been across this historical period when a 15-year normal was used?

A. No. What this analysis indicates is that the estimated usage was higher than anticipated with the 15-year normal, and as such, rates were lower than they would have been under a 10-year normal. The WNA mechanism worked correctly by adjusting bills to reflect actual weather when it differed from the normal assumption, but the 15-year normal weather basis was not as closely reflective of recent warming trends when compared to the 10-year normal. In short, the WNA does not operate in a vacuum; it operates in the context of, and in accord with, the actual normal weather used to define usage, which directly impacts the rates customers pay.

Q. Witness Deupree suggests that "budget billing" offers the same features as the WNA when it comes to normalizing billing.[35] How do you respond?

A. Budget billing and the WNA serve fundamentally different purposes. The WNA is an alternative ratemaking mechanism intended to stabilize distribution margin recovery and moderate customer bill impacts associated with deviations between actual and normal weather (an external factor outside the Company's and customers' control). By contrast, UGI Gas's Budget Billing Program, is a voluntary bill payment option that allows customers to pay levelized amounts based on prior usage, with periodic true-ups to reconcile the budgeted payments to the customer's actual billed usage.

Critically, because the Budget Billing Program trues up to actual usage, it does not "normalize" usage to normal weather conditions. For example, if weather is colder than normal, a Budget Billing customer will still ultimately pay for the higher actual usage through the next true-up. Under the WNA, however, that same customer could receive a credit for the portion of usage attributable to weather that was colder than normal, because the mechanism adjusts billed usage toward a normal-weather benchmark. In other words, the Budget Billing Program can smooth the timing of payments, but it does not change rate design, does not address weather-driven deviations from normal consumption, and therefore does not mitigate the corresponding bill and revenue volatility that the WNA is designed to address.

[35] OCA St. 1, at p. 31.

Q. How do you respond to Witness Deupree statement that the WNA is a "one-way surcharge mechanism"[36]?

A. Witness Deupree's characterization of the WNA as a "one-way surcharge mechanism" is inaccurate and is contradicted by the very data he presents. As shown in his summary of the Company's WNA Annual Reports,[37] the WNA has operated in both directions during the pilot period, producing customer surcharges in colder-than-normal periods and customer credits in warmer-than-normal periods, exactly as the mechanism was designed to do. In fact, during the 2024-2025 heating season, the WNA produced net customer credits in multiple months. Likewise, in the current 2025-2026 heating season, the WNA has produced substantial monthly customer credits in November through February, yielding cumulative net credits of approximately $27.6 million through the period reported.

Witness Deupree's conclusion appears to focus selectively on the first two years of the pilot, which experienced significantly warmer-than-normal weather and therefore generated net surcharges, while disregarding the more recent warmer-than-normal periods where the WNA flowed back to customers as intended. The table demonstrates that the WNA is not "one-way"; rather, it is a symmetrical weather normalization tool that adjusts revenues upward or downward depending entirely on actual weather relative to normal. The fact that the mechanism has recently produced significant net credits confirms that customers benefit when weather is colder than normal just as the Company is protected when weather is warmer than normal. Moreover, as demonstrated and discussed above, the move to a 10-year normal directly addresses Witness Deupree's desire for the WNA to produce more balanced outcomes.

[36] OCA St. 1, at p. 35.
[37] OCA St. 1, at p. 34, Table 1.

Q. OSBA Witness Ewen contends that the "use of a WNA mechanism means that a customer is being billed for a level of gas consumption that is not metered, but is only estimated" and calls the WNA charge or credit "mysterious."[38] How do you respond?

A. I disagree with that characterization. First, customers' gas supply charges are still based on their actual metered usage. The WNA applies only to the delivery component and adjusts a weather-sensitive billing determinant using a defined, tariffed formula that compares actual HDD to the same "normal" HDD baseline used for ratemaking purposes, subject to a deadband. This adjustment does not create additional consumption or collect revenues unrelated to service provided. Second, while the WNA calculation is necessarily formula-based, it is no more "nuanced" than other tariffed riders that rely on objective inputs. In fact, by explicitly quantifying the impact of weather that differs from normal, the WNA can make the source of bill variation clearer.

Q. Witness Ewen asserts that the WNA "weakens price signals for energy conservation during extreme periods."[39] How do you respond?

A. I disagree. The WNA does not replace volumetric delivery rates or remove the linkage between usage and a customer's bill. Customers still pay for the gas they use, and they continue to benefit from conservation and efficiency through lower base-rate volumetric charges and lower gas costs. The WNA simply adjusts for abnormal deviations from normal weather conditions so that a customer's bill is less dependent on whether a

[38] OSBA St. No. 1, at p. 15.
[39] OSBA St. No. 1, at p. 16.

particular season is warmer or colder than normal. That design purpose is fundamentally different from, and does not preclude, conservation or efficiency efforts. As discussed above in this testimony, the choice between fixed and volumetric rates impacts price transparency and the accuracy of price signals to customers, ultimately impacting economic efficiency.

Q. Witness Ewen suggests that periods of unusually low actual HDD could cause the WNA formula to produce excessively large adjustment multipliers.[40] How do you respond?

A. Witness Ewen's concern is based on a hypothetical mathematical example rather than on actual working application of the Company's WNA pilot. Specifically, the Company's billing system prevents the application of excessively large adjustment multipliers by applying a limit to the WNA multiplier that may be used for billing. (Specifically, a factor no greater than 2.12 can be applied). This functionality has been in place since the initial WNA implementation and prevents the type of excessive customer impact Witness Ewen's hypothetical implies via the application of prudent billing logic. Accordingly, Witness Ewen's theoretical scenario is moot under the Company's existing controls.

[40] *Ibid.*

Q. OSBA Witness Ewen suggests that the Company's WNA has effectively become a permanent feature of rates without the same level of regulatory scrutiny applied to other ratemaking proposals.[41] How do you respond?

A. I disagree with Witness Ewen's characterization. The Company's WNA has not continued absent regulatory scrutiny. To the contrary, it has been expressly presented, reviewed, and litigated in each of the Company's subsequent base rate proceedings since its initial approval, and the Company has also filed annual reports with the Commission regarding the operation of the WNA. In each case, the continuation or modification of the WNA has been subject to discovery, testimony, other parties' comment, and Commission evaluation as part of the overall rate case record. Thus, the WNA has not been operating as an unchecked or automatic permanent mechanism, but rather as a rider repeatedly examined by the Commission under full regulatory process. The fact that the Company now seeks an additional extension reflects the continued need for Commission authorization, not the absence of oversight.

Q. CAUSE-PA Witness Cicero states that "[t]he WNA requires an overly complicated and nuanced calculation that is difficult for customers to understand because it charges customers not for their actual usage but their hypothetical usage."[42] How do you respond?

A. I have already addressed the separate contention that the WNA charges customers for unmetered or estimated usage. The WNA does not charge customers for gas they did not use. Customers continue to pay for the actual gas commodity volumes reflected by their

[41] OSBA St. No. 1, at p. 17.
[42] OSBA St. No. 1, at p. 58.

metered usage. More specifically, the WNA adjusts only the recovery of authorized distribution revenues associated with providing gas distribution service, which remains available to customers regardless of short-term weather variations. The Company's distribution system, infrastructure, and obligation to serve customers remain in place and operational whether temperatures are warmer or colder than normal. In that respect, distribution service continues to be provided even during periods when weather-related usage declines.

With respect to Witness Cicero's additional claim that the mechanism is too complicated for customers to understand, the Company's customer experience does not support that assertion. As shown in Table 3, Company data regarding customer complaints about the WNA shows a relatively low number of complaints compared to the number of bills issued during the heating season and a significant decline over time. This is inconsistent with the claim that the rider is or has become a persistent or growing source of customer confusion.

Table 3 – WNA Related Complaints[43]

Year	Disputes	PUC Informal	PUC Formal
2022	7	2	None
2023	153	63	10
2024	31	22	2
2025	9	10	2
2026	None	None	None

[43] A customer may be counted multiple times in the data if the complaint proceeded from one process to the next.

Q. CAUSE-PA Witness Cicero states that the Company admitted in discovery that the WNA has no bearing on whether the Company can provide safe and reliable service and therefore concludes that the WNA serves only to maximize shareholder revenues.[44] How do you respond?

A. Witness Cicero misconstrues the Company's discovery response. The Company did not state that the WNA has no bearing on the Company's broader ability to sustain safe and reliable service. Rather, the Company explained that the WNA is not a physical operating mechanism that directly determines whether the system can function safely on a day-to-day basis. Instead, it is a rate design mechanism intended to address abnormal weather-driven volatility in customer bills and in the Company's recovery of its authorized distribution revenue requirement. By providing the Company with a more reasonable opportunity to recover revenues already approved by the Commission, the WNA supports the financial stability necessary to continue investing in system maintenance, aging infrastructure replacement, and other long-term reliability initiatives. Accordingly, the Company's response does not support Witness Cicero's conclusion that the WNA is merely a shareholder revenue maximization tool. Further, ratemaking mechanisms should not be judged solely on whether and how they impact a company's ability to provide safe and reliable service. This is simply a straw man argument where Witness Cicero advances a position (i.e., that the WNA should be judged on a metric irrelevant to its function) and then knocks it down by saying it does not meet that criteria.

[44] CAUSE-PA St. No. 1, at p. 62.

Q. Witness Cicero asserts that the WNA causes the Company to lose a significant incentive to operate efficiently because it allows UGI Gas to reach its projected revenue target regardless of operational performance.[45] How do you respond?

A. Witness Cicero incorrectly equates weather-related sales volatility with Company operating efficiency. The WNA does not insulate the Company from the consequences of inefficient operations, nor does it guarantee that the Company will achieve its authorized earnings. It addresses only one external factor outside of management's control and customers' control (abnormal deviations in customer usage caused by warmer or colder than normal weather). The Company remains fully subject to all traditional utility performance risks, including cost overruns, operating inefficiencies, capital execution risk, and the many other factors that determine whether it ultimately earns above or below its authorized return. Simply put, the Company cannot operate more efficiently to control the weather. The WNA therefore does not diminish incentives for prudent management; it merely reduces a source of revenue volatility unrelated to management performance.

Q. Witness Cicero claims that the WNA improperly shifts weather-related risk from the Company to customers in a manner that is inappropriate for a monopoly provider of essential utility service.[46] How do you respond?

A. I disagree with Witness Cicero's characterization. The WNA does not create an improper new entitlement to revenues divorced from actual service; rather, it is a ratemaking mechanism designed to align actual distribution revenue recovery with the normalized weather assumptions already embedded in the Company's approved base rates. The

[45] CAUSE-PA St. No. 1, at p. 63.
[46] CAUSE-PA St. No. 1, at pp. 58-59.

"weather-related risk" that Witness Cicero identifies is a product of the use of a test year for utility ratemaking, and the use of a calculated assumption for normal weather that is necessary to derive volumetric rates. The Company's authorized revenue requirement, necessary to recover its cost of service, and billing determinants are established using normal weather, not the random actual temperatures experienced in any single heating season. The "weather-related risk" goes in both directions, for the utility it undermines the ability to earn the Company's cost of service and for customers it increases bill volatility at a time where the overall rate design will make bills their highest (i.e., cold weather bills will be higher than warm weather bills due to high volumetric charges). This risk is not a benefit of ratemaking, as Witness Cicero implies; it is a negative consequence of the legacy ratemaking which is still applied in widespread form in Pennsylvania. The WNA, therefore, provides a solution that reduces the risk that the Commission approved cost of service will not be the amount customers pay. Without a WNA, the Company's opportunity to recover approved revenues would fluctuate materially based solely on warmer- or colder-than-normal weather conditions unrelated to Company management, prudence, or cost control, while customers would likewise be exposed to higher bills when weather is colder than normal. The WNA addresses that mismatch.

Q. What would be the impact of discontinuing or limiting the WNA as proposed by these parties?

A. Discontinuing or limiting the WNA, as proposed by OCA[47], OSBA,[48] I&E,[49] and CAUSE-PA[50] would remove or materially weaken the mechanism and reintroduce volatility into revenue recovery for both the Company and customers. The WNA serves as a two-sided buffer: it reduces the risk of under-recovery in mild winters and helps limit excessive charges in colder winters. In particular, when weather is unusually cold and customer bills are highest, the WNA helps moderate bill impacts; accordingly, modifications that reduce its effectiveness may harm customers. Likewise, exempting all confirmed low-income customers from the WNA would undermine the mechanism's fairness and consistency by creating intra-class cost shifts that require other customers to assume a disproportionate share of revenue stabilization. Additionally, as related to exempting low-income customers, it is important to recognize that as a result of agreement in the Company's last base rate proceeding, the WNA no longer applies to low-income CAP customers. Company Witness Cyndee S. Fang, UGI Gas Statement No. 16-R, discusses the affordability implications.

Moreover, to the extent certain parties rely on modifications recently adopted by the Commission in other proceedings, including Columbia Gas, as support for imposing similar limitations here, such reliance is misplaced. The Commission's determinations regarding WNA design are necessarily utility-specific and fact-dependent. The adoption of particular parameters in another company's proceeding does not establish a mandatory

[50]CAUSE-PA St. No. 1, at pp. 65-66.

statewide template that must automatically be imposed on UGI Gas absent record evidence demonstrating that such changes are appropriate for this Company's system, customer usage patterns, and weather normalization methodology. The Commission must evaluate UGI Gas's WNA proposal based on the evidentiary record developed in this case.

Q. What would be the impact of increasing the WNA deadband from 3% to 5%, as proposed by OCA, I&E, and CAUSE-PA[51]?

A. Increasing the deadband from 3% to 5% would materially weaken the WNA by expanding the range of weather variation for which no adjustment is made. As a result, a larger share of abnormal weather risk would remain outside the mechanism, reducing the WNA's ability to normalize revenues and customer bills around the weather assumptions embedded in base rates. Put differently, a 5% deadband would cause the WNA to respond less often and less completely when actual weather deviates from normal, even though deviations in that range can still have meaningful effects on both customer bills and the Company's recovery of authorized distribution revenues. In that respect, increasing the deadband is not merely a technical refinement; it is a substantive narrowing of the mechanism. If the Commission determines that a WNA remains appropriate for UGI Gas, then broadening the deadband in this manner would move the rider further away from effective weather normalization and closer to partial non-recognition of weather impacts.

[51] OCA St. 1, at pp. 36-37; I&E St. No. 3, at p. 16; CAUSE-PA St. No. 1, at p. 66.

Q. Do you have concerns about removing certain months from the WNA application, as proposed by OCA and CAUSE-PA,[52] given the characteristics of the Company's service territory?

A. Yes. The Company's service territory spans portions of Pennsylvania, including areas in the north and northwest of the Commonwealth where temperatures during the October through April period generally remain colder and space-heating requirements continue to be meaningful during the so-called "shoulder" months. As a result, customers in the Company's service territory may continue to experience weather-driven heating usage and bill variability during months such as October and April to a greater extent than customers in warmer regions of Pennsylvania. Because the WNA is intended to moderate the impacts of abnormal weather on both customer bills and the Company's recovery of authorized distribution revenues during periods when heating load remains material, removing October and/or April from the WNA application would reduce customer protections during months when customers still face meaningful weather-related bill volatility. In my view, applying a uniform statewide assumption regarding "shoulder" months without recognizing regional climatic differences and the Company's specific service territory characteristics would not appropriately reflect the Company's operating realities and could unnecessarily narrow the effectiveness of the WNA for the customers it is intended to protect.

Q. Does this conclude your testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 12-R

Rebuttal Testimony of
Brian J. Meilinger

Topics Addressed: **Low Income Issues**
2025 Rate Case Settlement Compliance

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Brian J. Meilinger. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 12, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. I will respond to certain portions of the direct testimony submitted by Office of Consumer Advocate ("OCA") Witness Roger Colton (OCA St. 6), and Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Patrick Cicero (CAUSE-PA St. No. 1). In particular, my rebuttal testimony will address allegations and recommendations concerning the Company's support of its low income customers through its Universal Service and Energy Conservation Plan ("USECP"), as well as compliance with its 2025 Rate Case settlement.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits BJM-1R through BJM-25R. I note that UGI Gas Exhibits BJM-14R and BJM-22R are CONFIDENTIAL exhibits.

II. RESPONSE TO OTHER PARTIES' DIRECT TESTIMONY

A. AFFORDABILITY

Q. Do any of the other parties raise concerns about the impacts of the Company's proposed base rate increase on the affordability of service, in particular with respect to low-income customers?

A. Yes, OCA Witness Colton and CAUSE-PA Witness Cicero raise such concerns.

Q. Do you agree that UGI Gas bills are consistently unaffordable to low income customers?

A. No. While I do not dispute the income data cited by Witness Colton (OCA St. No. 6, at pp. 11-13), or the Asset Limited, Income Constrained, Employed ("ALICE") figures cited by Witness Colton (OCA St. No. 6, at pp. 17-22), I believe that the Company's Universal Service Programs are well-designed and have been successfully assisting low-income customers, resulting in positive affordability outcomes for many participants. Moreover, these programs are currently under review and will be subject to a number of changes and improvements that will further assist payment troubled customers in maintaining their utility service. UGI Gas filed its 2026-2030 USECP at Docket Nos. M-2025-3054362 and M-2025-3054366 on April 1, 2025. As a part of that filing, the Company proposed to update its USECP to include, among other things, the commitments below:

- UGI Gas increased the Low Income Usage Reduction Program ("LIURP") per job customer maximum from $8,000 to $10,000. In addition, customers in need of furnace or boiler replacement are eligible for up to $14,000 per job.
- Operation Share and LIURP budget flexibility will be enhanced to meet customer demand by Rate District by removing the 5% limitation on annual budget reallocations across the Company's geographic footprint of its former three rate districts.

- The Company clarified and confirmed that customers participating in the Company's Customer Assistance Program ("CAP") are eligible to receive Operation Share grants.
- The Company clarified and confirmed that Operation Share grants can be used to pay for restoration and reconnection fees.
- UGI Gas will participate in the Pennsylvania Department of Human Services ("DHS") data sharing process to promote the availability of its USECP programs.

Based upon these updates, it is clear that UGI Gas is working to consistently improve its Universal Service Programs, in order to ensure that payment troubled customers are provided with the necessary assistance to maintain utility service.

Furthermore, as part of the 2025 Gas Base Rate Case settlement (Docket No. R-2024-3052716), the Company has implemented several noteworthy customer service enhancements to help address affordability. These include the following:

- Increased the LIURP budget by $1,000,000 or approximately 24%, from $4,214,350 in calendar year 2025 to $5,214,350 in calendar year 2026.
- Increased the Company's Operation Share contribution by $500,000, or approximately 86% from $584,500 in Fiscal Year 2025 to $1,084,500 in Fiscal Year 2026.
- Launched the Low Income Customer Assessment and Outreach Pilot in March 2026 to assess, identify, and engage estimated low income customers for enrollment in the Company's CAP.
- Facilitated additional Winter Assistance Relief Mobilization ("WARM") events in various locations throughout the service territory to assist customers with direct enrollment into CAP.
- Waived the $73 reconnection fee for verified low-income customers.

- Updated its gas service tariff to reiterate security deposit exemptions for verified low-income customers.
- Eliminated transaction costs for cash payments made at authorized retail establishments.
- Revised dunning notices and credit call center scripts to include enhanced messaging regarding CAP.
- Waived the income documentation requirement for applicants to the Company's Universal Service Programs for those that received LIHEAP in the current or prior season or have participated in the DHS data sharing process.
- Waived the CAP recertification requirements for customers that received LIHEAP in the current or prior season or have participated in the DHS data sharing process.

Q. Has UGI Gas undertaken any additional voluntary efforts to support its low-income customers?

A. Yes. The Company has taken many voluntary efforts over many years. For one recent example, in November 2025, to help mitigate the impacts to low-income customers due to LIHEAP funding delays resulting from the Federal Government shutdown, the Company made a one-time supplemental donation of $500,000, allocated between the Gas and Electric Divisions, to Operation Share for Fiscal Year 2026. A fulsome discussion of the many voluntary actions the Company took in November 2025 was included with my direct testimony at pages 10-11.

Q. Are there other programs available to assist payment-troubled customers?

A. Yes. In addition to the UGI Gas Universal Service Programs, there are external programs to support payment-troubled customers. These state and federally funded programs include, but are not limited to LIHEAP, which provides energy grants which help customers restore and/or maintain service as well as repair or replace broken heating equipment, and the Pennsylvania Weatherization Assistance Program ("WAP") which reduces energy costs and increases comfort while ensuring homes are healthier and safer. Both of these programs were discussed in greater detail in my direct testimony. UGI Gas St. No. 12, at pp. 9-10.

In addition to these benefits that target heating and utility customers for specific benefits to address heating bills, there are other programs such as Temporary Assistance for Needy Families ("TANF") and Supplemental Nutrition Assistance Program ("SNAP") available to households to help offset the costs of basic needs such as food, which are asserted by OCA and CAUSE-PA to put strain on household budgets. Similar programs like the Children's Health Insurance Program ("CHIP") and Affordable Care Act to offset costs of healthcare are also available. As described by Witness Fang, UGI Gas Statement No. 16-R, individual utility rate cases are not the appropriate forum to address these macroeconomic and society-wide affordability concerns identified by OCA and CAUSE-PA.

Q. How is UGI Gas further addressing affordability concerns for its customers?

A. In recognition of the importance of supporting affordability of utility bills, UGI Gas will contribute $1,000,000 annually to Operation Share in Fiscal Years 2027, 2028, and 2029. This multi-year commitment is unprecedented in the Company's history and will provide

substantial assistance to low and moderate income customers with income levels up to 250% Federal Poverty Level ("FPL"). The Company anticipates this funding will provide approximately 2,770 grants per year, based on an assumed average grant of $360, which is consistent with the average grant for the prior three years of Operation Share.

Q. Does OCA Witness Colton identify a different population of customers in UGI Gas's service territory, that he claims UGI Gas and the Commission should consider?

A. Yes. He claims that UGI Gas needs to examine ALICE customers in its territory.

Q. How do you respond to Witness Colton's testimony regarding the use of ALICE data to examine affordability and the impacts of the Company's base rate increase?

A. Although I do not dispute the ALICE data presented, I disagree that it is appropriate to use this data to analyze the impacts of the Company's rate case and/or its Universal Service Programs. The FPL guidelines are the standard indicator of a customer's income status and are used as such by the Commission and the Company. The FPL guidelines have also been used as a verification process to enroll customers into the Company's USECP. Witness Colton's recommendation to analyze ALICE data would be better suited outside of a rate case proceeding where various stakeholders, including the Commission and other community partners, would have the opportunity to provide input on his recommendations and consider the impacts of those recommendations. A base rate case, which involves a host of other issues and is on an expedited time frame for resolution, is simply not the appropriate time to consider such a recommendation.

Q. Do you agree with Witness Colton's claim that UGI Gas needs to better market its customer assistance programs and budget billing to payment-troubled customers?

A. No. The Company has demonstrated a concerted focus on continued marketing and customer outreach to increase CAP enrollment, which will help minimize the impact of rate increases as customers on the CAP Percent of Income Payment Plan ("PIPP") and minimum bill are not impacted. UGI Gas has only about 27% of its CAP customers on average bill (i.e., CAP participants that are likely to experience some increase based on the outcome of this proceeding). *See* UGI Gas Exhibit BJM-1R (UGI Gas response to CAUSE-PA-1-1).

Regarding UGI Gas's activities, I want to note the following. First, the Company has continued its Low Income Customer Assessment and Outreach Pilot to assess, identify, and engage estimated low income customers through various marketing channels with a goal to increase enrollment into CAP. This campaign launched on March 3, 2026, with approximately 45,000 customers receiving direct mail and approximately 67,000 receiving email. *See* UGI Gas Exhibit BJM-2R (UGI Gas response to CAUSE-PA-8-1). As of May 06, 2026, 718 customers have already been enrolled in CAP as a result of this pilot.

Second, the Company continues its marketing efforts via general outreach throughout the year, as well as semiannual, personalized marketing to customers who are self-certified low income but have not income verified in order to enroll in CAP, and to LIHEAP recipients that are not currently enrolled in CAP. *See* UGI Gas Exhibits BJM-3R and BJM-4R.

Third, the Company recently began utilizing information from the DHS data sharing process to identify customers that received LIHEAP, but were not yet enrolled in

CAP and have utilized this information to solicit these customers via email or direct mail for enrollment into CAP.

Fourth, the Company has developed a comprehensive Consumer Education and Outreach Plan ("CEOP") that was included with the 2026-2030 USECP filing and includes all the various marketing tactics being utilized to increase enrollment in not just CAP, but all Universal Service Programs. *See* UGI Gas Exhibit BJM-5R.

Q. CAUSE-PA Witness Cicero also discusses low-income customers and affordability. Have you reviewed his testimony?

A. Yes.

Q. What is your response to Witness Cicero's feedback on the self sufficiency standard?

A. Although I do not dispute the Self Sufficiency data presented, I disagree that it is appropriate to use this data to analyze the impacts of the Company's rate case and/or its Universal Service Programs. The FPL guidelines are the standard indicator of a customer's income status and are used as such by the Commission and the Company. The FPL guidelines have also been used as a verification process to enroll customers into the Company's USECP. Furthermore, when asked in discovery if Witness Cicero is proposing that the Commission adopt the Self Sufficiency standard instead of FPL, he indicated that he is not taking the position in this case that the Commission should change its eligibility criteria for universal service programs. *See* UGI Gas Exhibit BJM-6R (Response to UGI to CAUSE-PA-1-3.

Q. What is your response to Witness Cicero's feedback on the Company's estimated low income customer counts?

A. Witness Cicero specifically disagrees with my position on the PUC's methodology for estimating low-income customer population, arguing that "the Company now has information that reasonably places 90% of the households included in the Experian survey in the low income category," so "under the Commission's regulatory definitions, these households should be classified as **confirmed** low income households." CAUSE-PA St. No. 1, at pp. 23-24. He also disagrees that the PUC's ELI count is over inclusive. CAUSE-PA St. No. 1, at pp. 24-25. I continue to maintain that the census calculation methodology that is used to report this data to the Commission that was referenced in my direct testimony, UGI Gas St. No. 12, at p. 16, resulting in 143,404 estimated low income customers, may overstate estimated low-income customer counts. My reasoning for this is because the calculation simply assumes that census poverty level percentages by county apply equally to UGI's customers in those same counties. In reality, the census data does not account for the actual demographics of UGI Gas's customers. By comparison, the Company's Low Income Customer Assessment and Outreach Pilot undertaken with Experian, identified an estimated low-income population of 96,137 customers at or below 150% FPL in January 2026. *See* UGI Gas Exhibit BJM-7R (UGI Gas response to CAUSE-PA-6-17). The Experian estimate used actual demographic income data of UGI customers with a match rate of 90% on name and address, and identified significantly fewer customers, at only 67% of the estimated low income customer count of 143,404 that is reported to the Commission. Therefore, UGI Gas's estimated low-income customer counts

based on census and published in the Universal Service Programs & Collections Performance Report should be considered an over estimation and referenced with caution.

Q. What is your response to Witness Cicero's recommendation for the Company to update its Confirmed Low Income counts with Experian data?

A. I disagree with his recommendation. In accordance with Paragraph 67(a) of the 2025 UGI Gas Base Rate Case Settlement, the Company's definition of Confirmed Low Income is consistent with the Commission's definition at 52 Pa. Code §§ 62.2 and 69.262. Households that fit this criteria include:

- Self certification;
- Participation in any of the Company's income verified programs including but not limited to CAP, Operation Share, or LIURP, where income is verified to be at or below 150% FPL and/or
- Receipt of LIHEAP funds in the prior 12 months.

Witness Cicero appears to confuse estimated low income and confirmed low income, where doing so overinflates the number of confirmed low income customers that the Company must report. It is not appropriate for the Company to simply take data from a third party vendor and override records in its Customer Information System. For instance, it is unclear whether Witness Cicero is proposing that a customer who has self-certified and is included in the Company's confirmed low income counts but is not identified in Experian's data as low income, should be removed from the Company's records as a confirmed low income customer. Also, from my perspective, this is a policy issue that

would be best addressed on a Commonwealth-wide basis through Commission rulemaking, so that there is uniformity across the electric and natural gas utilities.

Q. Witness Cicero argues that LIHEAP will not mitigate the harm of the proposed rate increase on low-income households because it is not funded adequately enough to mitigate the impacts. CAUSE-PA St. No. 1, at pp. 32-33. If LIHEAP is available to low-income customers, will it mitigate the impacts of the Company's proposed rate increase?

A. Yes. Over the prior three LIHEAP seasons (2022/2023, 2023/2024, 2024/2025) the Company has facilitated approximately 109,000 grants for nearly $32 million. This funding has been instrumental in assisting low-income customers in maintaining and/or restoring natural gas service as well as emergency furnace repair or replacement. Furthermore, even though the 2025-2026 LIHEAP season was delayed in opening by about one month, the Company has already facilitated $6.1 million in grants to nearly 19,000 customers as of mid-May. Witness Cicero also notes that, "[f]or the second year in a row, LIHEAP is proposed for elimination in the federal budget." CAUSE-PA St. No. 1, at p. 33. However, it is simply too far in advance to speculate on what may happen regarding the 2026-2027 LIHEAP budget, especially since the launch of the next season, anticipated to be November 1st, is approximately six months from now. Additionally, it is important to recognize that LIHEAP is not the only assistance available to UGI Gas's customers to reduce their electric bills. Thus, LIHEAP should not be viewed in isolation when determining whether its funding is sufficient to help mitigate the impacts of the proposed base rate increase.

Q. Do you agree with Witness Cicero's claims regarding the impact of the rate increase on CAP customers?

A. No. As mentioned above, the Company currently has approximately 27% of its CAP customers on average bill. The remaining 73% of its CAP customers are on either a PIPP or minimum bill and are, therefore, insulated from any rate increases.

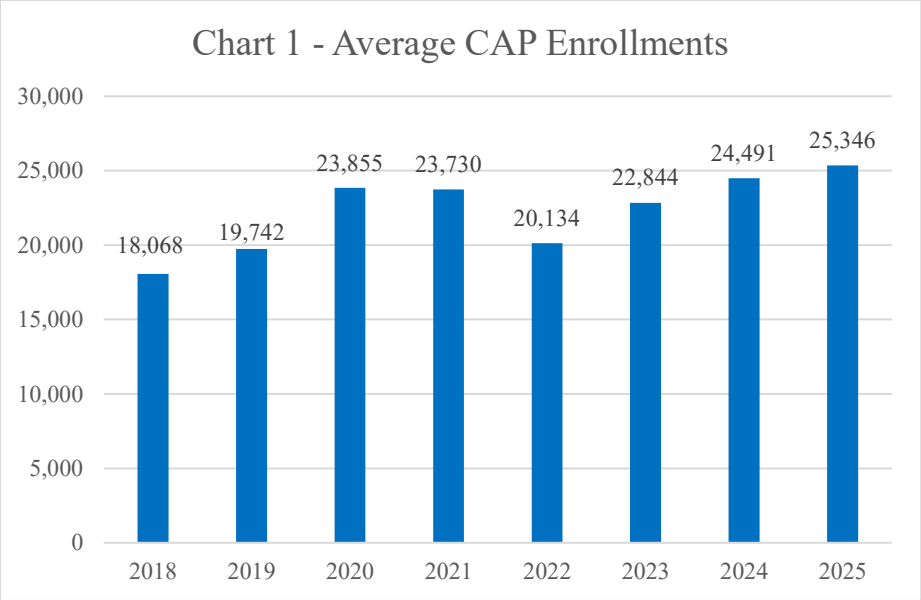
Regarding Witness Cicero's claim that CAP enrollment is insufficient relative to need (CAUSE-PA St. No. 1, at p. 17), it is worth reinforcing that CAP is a voluntary program and the Company cannot force customers to go through the income verification process and pursue enrollment in CAP. As discussed in my direct testimony (UGI Gas St. No. 12, at p. 15), as of November 2025, the Company had 68,867 confirmed low income customers, and approximately 26,000 were enrolled in CAP. However, similar to the approximate 40,000 confirmed low income customers cited by Witness Colton (OCA St. No. 6, at pp. 51-52), that were not enrolled in CAP, the Company's records indicate that approximately 30,000 of the 40,000 confirmed low income customers are self-certified low income and have not made an effort to provide the Company or its Community Based Organizations ("CBOs") with documentation in order to income verify, enroll in CAP, and receive the associated program benefits. Therefore, I take issue with Witness Cicero's claim that the program is "severely undersubscribed" (CAUSE-PA St. No. 1, at p. 32) as the population of income verified customers that are *not* enrolled in CAP is minimal.

Q. Does Witness Cicero make any claims about the Company's USECP?

A. Yes, he summarizes the programs run by UGI Gas and notes that UGI has not proposed any changes in this case. CAUSE-PA St. No. 1, at pp. 67-68. He summarizes the Company's CAP enrollment numbers and UGI's efforts to improve its enrollment numbers, asserting that such efforts have not been enough. CAUSE-PA St. No. 1, at pp. 68-72.

Q. Do you have any response to these claims?

A. Yes. I agree with Witness Cicero's assessment that UGI Gas has not proposed any changes to its USECP in this case. However, I take issue with his assessment that CAP enrollment numbers are not sufficient and more needs to be done. Witness Cicero references chart 3 on page 71 of his testimony. He used year 2020 as the baseline to evaluate CAP performance on a year over year basis. However, his chart is misleading and fails to acknowledge that he is selecting a baseline year, point in time number (December 2020) in which CAP enrollment was artificially inflated due to the economic impacts of COVID. A more accurate representation of historical CAP performance is provided in Chart 1 below which utilizes average CAP data, not point in time data that Witness Cicero appears to have used. This chart includes enrollment data prior to COVID, with 2018 as the baseline year. When comparing average CAP enrollment for 2025 to average CAP enrollment for 2018, there was a 40% increase during this timeframe. To analyze further, the Compound Annual Growth Rate (CAGR) for average CAP enrollment during the 2018 – 2025 timeframe was a respectable 4.95%. *See* UGI Gas Exhibit BJM-8R.



Q. What recommendations does Witness Cicero make about the Company's USECP?

A. He recommends, that UGI "implement routine screening of its applicants and customers to determine eligibility for CAP and other universal service programs" by: (1) screening "all new and moving customers for income level at the time their service is established and ask whether they would like information about income qualified programs that may reduce their rate"; (2) screening "existing customers for household income level on any non-emergency calls and inquire whether there have been any updates to household income information"; and (3) developing "a process for routine income screening through UGI's online account portal." CAUSE-PA St. No. 1, at pp. 72-73. He recommends that customers "identified as low income through these regular screening processes should be referred for enrollment in CAP and other universal service programs – as well as LIHEAP." CAUSE-PA St. No. 1, at p. 73. He states "[w]hile UGI customers should be able to opt out of providing household income information, they should first be informed that if they choose to disclose this information, they may be eligible for lower rates or energy

efficiency measures." CAUSE-PA St. No. 1, at p. 73. He recommends that UGI develop and implement "[the] screening and referral recommendations within 90 days of the PUC's Final Order in this proceeding." CAUSE-PA St. No. 1, at p. 73.

Q. Do you agree with these screening recommendations?

A. No. When asked in discovery what analysis Witness Cicero has prepared regarding a customer's willingness to share income, the potential customer dissatisfaction that may arise from an income screening process, and the costs associated with increased call handle times, he indicated that he had not performed any such analysis. *See* UGI Gas Exhibit BJM-9R (Response to UGI to CAUSE-PA-1-8) The Company believes that most customers will not want to share their income, and that average handle time for calls may increase as customers ask questions on why they are being solicited to provide their income. To better understand customer preferences, the Company recently surveyed a random sampling of 4,736 customers, with 355 customers completing the survey with a margin-of-error +/- 5% on their willingness to provide their income to a call center representative. The results indicated that only 31% of customers would be willing to share their income, 47% would not share their income, and 22% were not sure. *See* UGI Gas Exhibit BJM-10R. Therefore, given the likely low adoption, potential for customer dissatisfaction, and associated expenses to implement Witness Cicero's suggested income screening, this recommendation does not seem justified given that survey results suggest less than one-third of UGI Gas's customers would be willing to participate. The Company already requests income and occupancy during all inbound calls regarding past due notices and nonpayment service disconnections. This practice is designed to ascertain the caller's

eligibility for the Company's Universal Service Programs. If, based upon their stated income and household occupancy, the caller appears to be eligible for CAP, the caller is referred to a CBO and is solicited for enrollment. If the caller already had their income verified, enrollment into CAP is expedited and facilitated during the call.

Q. What recommendations does Witness Cicero make about the Company's USECP?

A. He recommends that "UGI prioritize scheduling additional future events, at a similar scale and frequency, in the other areas identified in [his] Table 13" besides Lancaster, Wilkes Barre, and Williamsport. CAUSE-PA St. No. 1, at pp. 74-75. He also recommends that UGI also target the Lebanon, Berwick, Pittston/West Pittston, and Sunbury areas for Universal Service Outreach. CAUSE-PA St. No. 1, at p. 75.

Q. Do you agree with these recommendations?

A. Yes. In accordance with Paragraph 61(b) of the 2025 UGI Gas Base Rate Case Settlement, the Company has already agreed to expand its WARM events to target a minimum of three new cities within its service territory as set forth in its tariff, which will be identified in consultation with its Universal Service Advisory Committee ("USAC"). In addition to the Lancaster, Williamsport, and Wilkes Barre locations identified for 2026, the Company has already facilitated eight different WARM events in locations such as Harrisburg, Allentown, Reading, and Lock Haven and has directly enrolled 241 customers into CAP year-to-date April 22, 2026. The Company anticipates completing at least 15 more WARM events at various locations within UGI Gas's service territory by calendar year-end.

Regarding Witness Cicero's recommendation to target the Lebanon, Berwick, Pittston/West Pittston, and Sunbury areas for Universal Service Outreach, I also agree with this recommendation. As part of the Low Income Customer Assessment and Outreach Pilot discussed above, these locations were already part of the marketing campaign that launched in early March. To date, approximately 4,200 customers in these locations have been part of the pilot and have received the Company's marketing materials promoting the availability of CAP and the benefits of enrollment.

Q. Does Witness Cicero make any claims about Operation Share?

A. Yes, he describes the Company's Operation Share Program along with the Company's proposed commitment to contribute $1 million annually for FY 2027 through FY 2029 to the fund. CAUSE-PA St. No. 1, at p. 76. He asserts that that while he "strongly support[s] UGI's proposal to contribute $1,000,000 annually to the Operation Share program, the Operation Share contribution will nonetheless be a reduction for years 2027 to 2029 compared to the 2026 budget." CAUSE-PA St. No. 1, at p. 76. He recommends that "UGI, **at a minimum**, continue its $1,584,500 total contributions to prevent a reduction in available funding for this vital program"; however, "if any rate increase is approved in this proceeding," he "believe[s] it would be appropriate for UGI to contribute additional funds over and above this $1.5 million to account for the additional hardships caused by the impact of such an increase." CAUSE-PA St. No. 1, at p. 77 (emphasis in original).

Q. Do you have a response to these claims and recommendations?

A. Yes, Witness Cicero's analysis is limited to what he presented in his direct testimony and he has not spoken with any of the Company's CBOs regarding if "it would be appropriate for UGI to contribute additional funds over and above this $1.5 million to account for the additional hardships caused by the impact of such an increase" and whether the CBOs believe that this funding would be utilized. CAUSE-PA St. No. 1, at p. 77.

B. IDENTIFICATION OF LOW INCOME CUSTOMERS

Q. OCA Witness Colton also presents testimony regarding UGI Gas's identification of low-income customers. Could you summarize that testimony?

A. Witness Colton claims that UGI Gas does a "poor job" of enrolling confirmed low-income customers into CAP and LIHEAP. OCA St. 6, at pp. 51-52. He claims that more than 7 of 10 disconnected customers that UGI Gas had a "reasonable belief" to be low-income were not enrolled in LIHEAP crisis and unfavorably compared LIHEAP enrollment to Supplemental Nutrition Assistant Program ("SNAP") enrollment. OCA St. 6, at p. 53. He made a number of recommendations, including (1) UGI Gas accept a printout or screenshot of a COMPASS application to establish confirmed low-income status, (2) that customers attempting to negotiate a DPA with the Company receive written, plain language notice of their rights to enroll in CAP and its advantages and disadvantages, as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% FPL, UGI be required to require a Confirmed Low-Income customer to pay off arrears through a payment arrangement only with informed consent, and that UGI Gas be directed to provide its low-income advisory committee regular three month reports on the operation and effectiveness of its Low-Income Customer Assessment and Outreach Pilot. OCA St. 6, at pp. 54-58.

Q. Do you agree with Witness Colton's claim that UGI Gas does a poor job of enrolling customers in CAP and LIHEAP?

A. No. Witness Colton cites more than 40,000 confirmed low income customers that are not enrolled in CAP. OCA St. 6, at p. 51. He fails to acknowledge that many of these customers are self-certified and have not taken steps to income verify which would then make them eligible for enrollment in CAP. For example, Table 17 of OCA St. 6, p.52, Witness Colton referenced 42,561 confirmed low income customers in January 2026. Of these customers, nearly 30,000, or 70%, are self-certified and have not gone through the Company's income verification process and thus would not be eligible for enrollment in a Universal Service Program. The Company utilizes various marketing tactics throughout the year to promote its CAP. In particular, as discussed above, the Company does a twice a year marketing campaign focused on self-certified customers who are not enrolled in CAP. Therefore, the 30,000 customers referenced above receive messaging on the availability and benefits of CAP. UGI Gas should not be held accountable for customers that do not take the initiative to go through the income verification process and establish eligibility for program enrollment. When asked in discovery how many of the approximate 40,000 customers Witness Colton believes actually qualify for enrollment in CAP, have received the Company's marketing materials, have returned a completed application, and have been affirmatively denied for CAP because they did not qualify for participation in the program, he did not know the answer. *See* UGI Gas Exhibit BJM-11R (OCA Response to UGI-I-17). Furthermore, Witness Colton does not acknowledge that a contingent of this customer population may simply not want to enroll in CAP for whatever reason.

Regarding LIHEAP enrollment, Witness Colton references that only 24,682 customers out of 66,139 confirmed low income customers received LIHEAP in the 2024-2025 program year. OCA St. 6, at p. 52. However, Witness Colton does not take into consideration that many of the 41,457 (66,139 minus 24,682) confirmed low income customers that he claims were not enrolled in LIHEAP, may have received LIHEAP through their Electric Distribution Company and would therefore, not be eligible to receive LIHEAP for their UGI Gas account. In these cases, UGI Gas would not have information available to indicate if a customer received LIHEAP through PPL or First Energy, etc. Since the DHS data sharing process only provides utilities with information on their own customers, there is not enough information available for utilities to have a comprehensive assessment of which federal assistance programs, such as LIHEAP, a customer may have received from another utility provider. Furthermore, LIHEAP is a program that is administered by the DHS and is not solely the responsibility of the utility, as customers need to income verify and meet the specific program criteria that have been established, implemented, and managed by DHS. However, the Company does a twice a year marketing campaign focused on LIHEAP customers who are not enrolled in CAP, which provides them information on the availability and benefits of the program, and encourages them to take action to enroll in CAP.

In reference to Witness Colton's comparison to SNAP, in which he indicated that 2022 Pennsylvania participation rates exceeded "98% of SNAP-eligible low income households" (OCA St. No.6, at p. 53), the DHS is responsible for administering both SNAP and LIHEAP. Further, as Witness Colton's response to UGI Gas Set III, No. 1 suggests, SNAP's guidelines differ from CAP's guidelines and are not based solely on gross income

as a percentage of the Poverty Level. *See* Exhibit BJM-12R (OCA Response to UGI-III-1). Therefore, Witness Colton should not be holding a regulated utility, such as UGI Gas, solely accountable for participation rates in assistance programs that are administered by the Commonwealth of Pennsylvania.

Q. Do you agree with Witness Colton's recommendation that UGI Gas accept a printout or screenshot of a COMPASS application to establish confirmed low-income status?

A. No. As explained previously, the Company's definition of Confirmed Low Income is consistent with the Commission's definition in 52 Pa. Code §§ 62.2 and 69.262 which states that households that fit this criteria include those that:

- Self certify;
- Participate in any of the Company's income verified programs, including but not limited to CAP, Operation Share, or LIURP where income is verified to be at or below 150% FPL; and/or
- Have received LIHEAP funds in the prior 12 months.

Therefore, because a customer can simply self-certify their income, Witness Colton's recommendation to have a customer provide a screenshot of a COMPASS application to "establish confirmed low income status" is not needed and is unnecessarily complicated. However, for purposes of enrollment in the Company's Universal Service Programs, customers need to have their income verified.

Q. Do you agree with Witness Colton's recommendation that customers attempting to negotiate a Deferred Payment Arrangement ("DPA") with the Company receive written, plain language notice of their rights to enroll in CAP?

A. No. In response to discovery, Witness Colton has not provided any suggestions on sample content that he considers to be plain language. *See* UGI Gas Exhibit BJM-13R (Response of UGI to OCA-1-16). Furthermore, Witness Colton has not prepared any analysis on whether a DPA or CAP enrollment is more advantageous to the customer. He is simply making a blanket recommendation without consideration of case-by-case situations. In accordance with Paragraph 67(e) of the 2025 UGI Gas Base Rate Case Settlement, the Company has already reviewed with its USAC and updated its call center scripts for interactions regarding credit and collections interventions. *See* CONFIDENTIAL UGI Gas Exhibit BJM-14R. Therefore, the Company's call center representatives are already discussing the benefits of CAP enrollment with customers who inquire about a DPA, so there is no need to create a separate process to develop new plain language notices. Additionally, in accordance with Paragraph 67(c) of the 2025 UGI Gas Base Rate Case Settlement, the Company updated its dunning communications to further emphasize the option to enroll in CAP. These communications include language regarding CAP and the associated benefits of program enrollment. *See* Exhibit BJM-15R through UGI Gas Exhibit BJM-19R (UGI response to OCA-6-8.1 through OCA-6-8.5). Witness Colton is not taking into account the level of potential confusion that may arise if a customer is speaking with a call center representative about a DPA and they are then redirected to a conversation about CAP enrollment and a plain language letter that they will receive with further details

before being allowed to enter into a DPA. UGI Gas submits that its existing notices, policies, practices, and procedures are reasonable and do not need to be modified.

Q. Do you agree with Witness Colton's recommendation that UGI Gas be directed to provide its USAC with regular three-month reports on the operation and effectiveness of its Low-Income Customer Assessment and Outreach Pilot.

A. No. In accordance with Paragraph 61(a)(i) of the 2025 UGI Gas Base Rate Case Settlement, the Company provided its Low Income Customer Assessment and Outreach Pilot marketing plan to its USAC 30 days prior to the December 4, 2025, meeting. During the December meeting, the marketing plan was reviewed with attendees, written comments were provided by the USAC, and the Company provided written responses to the comments while incorporating suggestions where feasible. Furthermore, the Company agreed to facilitate quarterly USAC meetings in 2026; a frequency level not seen in the past. The Company intends to share updates on this pilot, including the number of customers enrolled in CAP at each of these meetings. Therefore, Witness Colton's request for the Company to share regular, three-month reports on the pilot is unnecessary.

Q. Do you have additional observations regarding Witness Colton's feedback on the Low Income Customer Assessment and Outreach Pilot?

A. Yes. Witness Colton claims that "UGI Gas did not explain how it determined that the 385 new CAP enrollees were 'as a result of this pilot.'" OCA St. 6, at p. 58. The Company utilized direct mail and email to drive customers to a vanity URL that was created specifically for this pilot and was therefore able to determine that the 385 new CAP

enrollments were associated with the Low Income Customer Assessment and Outreach Pilot. Witness Colton also claims that the Company "did not explain how it selected the 45,000 customers to receive postcards." OCA St. 6, at p. 58. However, the Company previously provided the rationale for how it determined the number of customers that would receive a direct mail postcard. *See* UGI Gas Exhibit BJM-20R (UGI response to OCA-6-5.1.) Furthermore, this information was reviewed at the Company's December 4, 2025, USAC meeting. Although Witness Colton was not in attendance, he acknowledged that OCA had representation at this meeting, but apparently, he did not review the meeting's presentation or discuss his questions with OCA colleagues. *See* UGI Gas Exhibit BJM-21R (Response to UGI to OCA-1-29.)

Q. **Could you summarize Witness Colton's testimony and recommendations regarding deposit exemptions?**

A. Yes. He claims UGI does not comply with the prohibition on requiring deposits from low-income customers. OCA St. 6, at p. 59-60. He also claims that, contrary to regulatory requirements, UGI does not return deposits to customers unless they have applied for CAP and had their income confirmed. OCA St. 6, at p. 59-62. He also expressed concern with the practice of returning deposits as credits on customer accounts. OCA St. 6, at p. 63. He recommends that (1) UGI be directed to modify its processes and procedure regarding the low-income exemption from deposits and that UGI should be directed to accept any information beyond information in income and household size that would attest to the household's eligibility for a state benefit that is consistent with CAP income requirements, (2) that UGI eliminate the requirement that a customer apply for CAP to establish eligibility

for deposit exemption, and (3) that within three months of a final order in this proceeding and for every three months thereafter, UGI undertake review of the cash security deposits it currently holds and report the results of such review to interested stakeholders in this proceeding. OCA St. 6, at p. 62-63.

Q. Does Witness Cicero also bring up the Company's policy regarding the collection and return of security deposits?

A. Yes.

Q. Could you describe that testimony?

A. Yes, he expresses concerns with this policy because: (1) a low-income household does not need to enroll in CAP or another universal service program for the prohibition on security deposits to apply; and (2) the imposition of a security deposit on low-income customers "can pose a significant barrier to low income customers who are already struggling to connect to and maintain service." CAUSE-PA St. No. 1, at pp. 84-85. He asserts that "it is not clear whether UGI requires the customer to actually enroll in CAP before returning the security deposit and it is unclear [whether UGI] applies returned deposits to the customer's account or allows the customer to determine whether the customer wants the security deposit refunded to them directly or whether they want it applied to their account." CAUSE-PA St. No. 1, at p. 86. He recommends that "UGI amend its tariff and all its internal processes so that customers who have been confirmed to be income eligible for CAP have their security deposit refunded to them regardless of whether they enroll in CAP or not." CAUSE-PA St. No. 1, at p. 86.

Q. Do you have a response to this testimony?

A. Yes. I believe it is worth clarifying the Company's processes regarding security deposit exemptions. First, customers are not required to enroll in CAP to receive the exemption. The Company has developed an income verification process by using the CAP application because it provides a consistent process for customers and CBOs, and if the customer decides they want to enroll in CAP after verifying their income, the process is seamless. For customers who have received LIHEAP in the current or prior season, they do not need to income verify as they have already been through that process with DHS and UGI Gas recognizes this as an acceptable form of verification. Therefore, the concerns raised by OCA and CAUSE-PA regarding exempting low income customers from the security deposit are without merit.

Second, regarding Witness Colton's recommendation to use a screenshot or printout of the COMPASS application as part of the income verification process, it is the Company's understanding, based on feedback from the DHS, that screenshots and/or printouts of the COMPASS application are not available to customers.

Third, Witness Colton has not clarified if the COMPASS application would demonstrate consistency with the Company's required documentation included in its USECP. Witness Colton's recommendation to use COMPASS applications would be better addressed outside of a rate case proceeding where various stakeholders, including the Commission and other community partners, would have the opportunity to provide input on his recommendations and consider the impacts of those recommendations.

Fourth, for customers receiving a refund of their security deposit, if they are enrolled in autopay, the deposit will be returned to the customer by direct debit. If the

customer is not enrolled in auto pay, then the deposit will be returned via check. *See* CONFIDENTIAL UGI Gas Exhibit BJM-22R (UGI response to OCA CONFIDENTIAL Attachment OCA-3-2.4). Regarding Witness Colton's recommendation that within three months of a final order in this proceeding and for every three months thereafter, UGI undertake review of the cash security deposits it currently holds and report the results of such review to interested stakeholders in this proceeding (OCA St. 6, at p. 62), this recommendation is not supported by any analysis as to why it is necessary to pursue a review of cash security deposits. The Company has already implemented IT systems processes to automatically release a security deposit once a customer has gone through the income verification process. *See* UGI Gas Exhibits BJM-23R and BJM-24R (UGI response to CAUSE-PA-6-1 and CAUSE-PA-6-2).

C. 2025 UGI RATE CASE SETTLEMENT

Q. Witness Colton raises some concerns about UGI Gas's compliance with the 2025 Rate Case Settlement. Could you summarize his concerns?

A. Yes, he makes several observations. While he does not accuse UGI Gas of failing to comply with the settlement, his concerns support the conclusion that there has not been sufficient time to determine whether UGI is complying. OCA St. 6, at p. 78. Notably, he acknowledges several areas where UGI is complying, particularly with regard to: the LIURP budget and using LIHEAP data to recertify CAP customers; that UGI is now using the PUC Common application form for CAP enrollment; and that UGI has increased Operation Share funding by $500,000. OCA St. 6, at pp. 78-79. He also comments that it is simply too early to assess the Company's compliance with the outreach and public engagement aspects of the 2025 settlement OCA St. 6, at p. 79. He also notes that per

household grants have declined and that CAP enrollment is not rising. OCA St. 6, at pp. 79-80.

Q. Do you have a response to these claims?

A. Yes. As noted by Witness Colton, the Company has successfully implemented the majority of the 2025 UGI Gas Rate Case Settlement initiatives. Although he comments that it is simply too early to assess the outreach and public engagement settlement commitments, the Company has established the foundation for these initiatives to be successfully completed as agreed to in settlement. For instance, the Low Income Customer Assessment and Outreach Pilot launched in March and will continue for three years, additional WARM events are underway in Lancaster, Williamsport, and Wilkes Barre as agreed to in settlement, and the Company has engaged with all of the Mayor's Offices identified in settlement by providing copies of the Universal Service Programs brochures in English and Spanish.

Regarding Witness Colton's comment about a declining average per household Operation Share grant amount during November 2025-January 2026 (OCA St. 6, at p.79), his analysis is too narrow since this timeframe included the Company's efforts to offset the delay in LIHEAP launching due to the federal government shutdown. In November, the Company made a $500,000 supplemental Operation Share contribution to support customers in need. During the November 2025-January 2026 timeframe, 3,125 grants ($862,136) were issued which was 544% higher than the prior year same time period. Because of the volume of grants, the average per household Operation Share grant was slightly lower than prior years. However, a more effective way to view average Operation

Share grants would be to view the entire year, rather than comparing to only a three-month time period as Witness Colton did. This trend can be seen in the UGI response to CAUSE-PA-2-17(A), which indicates average grants per household for 2025 were consistent with 2024 and 2023. *See* UGI Gas Exhibit BJM-25R.

In terms of Witness Colton's comments on CAP enrollment not increasing, (*see* OCA St. 6, at p. 80) similar to my commentary above on average Operation Share grants per household, his analysis is far too narrow and should not be given much consideration. Witness Colton is isolating his analysis to only a four-month period (October-January) but should instead be evaluating performance based on average CAP enrollment throughout the year which accounts for fluctuations in enrollment to capture new enrollees, and those who chose to leave the program. As discussed earlier in my testimony, Chart 1 above more accurately demonstrates the Company's historical CAP performance and reflects a 40% growth in enrollment when comparing 2025 average enrollment vs. 2018 average enrollment, with a respectable 4.95% CAGR during this time period.

For a comprehensive list of all customer service-related 2025 UGI Gas Base Rate Case settlement initiatives that have been completed, or are currently underway, please reference UGI Gas Statement No. 13-R, the rebuttal testimony of UGI Gas Witness Daniel V. Adamo.

III. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit BJM-1R

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 1 (1-25)
Delivered on March 19, 2026

CAUSE-PA-1-1

Request:

Please identify the financial impact of the proposed increase on customers enrolled in UGI Gas's Customer Assistance Program (CAP) by payment plan type. If you are unable to identify the financial impact, or assert that there will be no impact, please explain.

Response:

The Company's CAP participants pay a monthly CAP amount based on a percent of income, or, if the percent of income payment is greater than their average bill, the CAP participant pays a monthly CAP amount equal to their average bill. Notwithstanding the foregoing, a CAP Customer's minimum monthly payment is set at a floor of $25 for heating accounts and $15 for non-heating accounts. A CAP participant's monthly payment is fixed until the participant recertifies income (at which time it is determined whether the monthly payment amount should change). The Company's proposed rate increase will not impact CAP payments set at a percent of income or a minimum payment. However, as of the date of this response, approximately 27% of UGI CAP customers have their CAP payment set at their average monthly bill. Upon income re-certification, these average monthly bill CAP payments could be impacted in an amount up to the approved rate increase. Also, no CAP Customer would pay more than their applicable percentage of income calculation, set forth in the Company's USECP.

Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 8 (1-7)
Delivered on April 9, 2026

CAUSE-PA-8-1

Request:

Please provide the details on the current status of UGI's Low Income Customer Assessment and Outreach Pilot? If there are interim or final findings, conclusions, or lessons learned as a result of this pilot please describe them in detail. Please provide any training and outreach materials utilized in implementing the pilot.

Response:

UGI Gas launched the Low Income Customer Assessment and Outreach Pilot on March 3, 2026. The Company utilized email and direct mail campaigns, which included 2 postcards mailed to approximately 45,000 customers and 3 emails sent to approximately 67,000 customers. Additionally, the Company initiated paid search and social media advertising. As of April 2, 2026, 385 customers have enrolled in CAP as a result of this pilot.

{Customer Name}
{Customer Mailing Address}
{Mailing City State ZIP}

Dear {Customer Name},

Based on information you previously provided to us, you may qualify for enrollment in the UGI Customer Assistance Program (CAP) for account {Account Number} . Enrollment in the CAP Program will assist you in managing your monthly energy bill, is free and has no impact on your credit score.

You are eligible for enrollment in CAP if your income is at or below the income guidelines shown below. If you are eligible and interested in enrolling in the UGI Customer Assistance Program, please complete the attached Pennsylvania Utility Assistance Application Form, and return it with proof of income to: {CBO Name}, {CBO Address}.

Customer Assistance Program (CAP) Income Guidelines 2026

Household Members	Annual Income	Monthly Income	Weekly Income
1	$23,940	$1,995	$461
2	$32,460	$2,705	$624
3	$40,980	$3,415	$788
4	$49,500	$4,125	$953
Additional People	+$8,520 / person	+$710 / person	+$164 / person

If you enroll in CAP you could benefit from having a set monthly payment based on a percentage of income or the average bill at your property (whichever is lower). The percentage of income is between 4% and 9% for a heating customer. Additional benefits include bill forgiveness and forgiveness of past due balances.

CAP participants are required to recertify when applicable in order to stay enrolled in the program and receive CAP benefits. You will receive a recertification notice, including an application form, from UGI when it is time to recertify. We also encourage CAP customers to apply for LIHEAP each year.

Thank you,

UGI Utilities

UGI Utilities, Inc.

Consumer Education and Outreach Plan

Docket Nos. M-2025-

Filing Date: April 1, 2025

I. BACKGROUND

On March 31, 2020, amendments to the Pennsylvania Public Utility Commission's ("Commission") Customer Assistance Program ("CAP") Policy Statement (at 52 Pa. Code § 69.261, et al.) became effective, including a provision stating that consumer education and outreach plans ("CEOP") should be developed. The CEOP should target low-income customers and be incorporated into a utility's Universal Service and Energy Conservation Plan ("USECP"). 52 Pa. Code § 69.265(8)(i). Additionally, CEOPs should tailor and align educational outreach efforts with the demographics of the utility's service territory. 52 Pa. Code § 69.265(8)(vi)(B). Further, per 52 Pa. Code §§ 69.265(8)(vi)(B)(I-II) and 69.265(8)(vi)(C), CEOPs should include: (1) specific efforts to educate and enroll customers at/below 50% of the Federal Poverty Income Guidelines ("FPIG"); (2) resources, translation services and translated materials for Limited English Proficiency ("LEP") customers; and (3) referrals to other appropriate support services. Accordingly, UGI hereby provides its CEOP in accordance with the above-described provisions for incorporation into its 2025-2030 USECP.

II. PURPOSE

This CEOP is structured to perform the following educational outreach activities in accordance with 52 Pa. Code § 69.265(8):

A. Educate all customers regarding the benefits and responsibilities of CAP participation.
B. Educate all customers regarding the importance of energy conservation.
C. Perform focused CAP education outreach to the demographics comprising UGI's service territory.
D. Educate and enroll interested and eligible customers in CAP with income levels at or below 50% of the FPIG.
E. Utilize translated materials and services for LEP customers in UGI's service territory.
F. Refer low-income customers to appropriate support services.

The above activities are performed in conjunction with Community Based Organizations ("CBOs") that UGI partners with to perform daily operations for UGI's low-income programs.

III. UGI'S CEOP

A. Universal Service CEOP Roles

Members of UGI's Universal Services Program team educate customers about USECP program offerings through various means. These employees include one Manager Universal Service Programs, one Senior Analyst Universal Service Programs, one Universal Service Program Administrator, one Senior Customer Outreach Representatives, and six Customer Outreach Representatives.

These employees also are subject matter experts for specific programs including CAP, Operation Share, Low Income Usage Reduction Program ("LIURP"), and Low Income Home Energy Assistance Program ("LIHEAP"). Education for these programs is provided by way of in-person Winter Assistance Relief Mobilization ("WARM") events, direct mail campaigns, responses to email inquiries, phone conversations, social media resources, and UGI's website. In addition, UGI provides educational materials to its CBOs (e.g., Conservation Literature, Universal Service Plan brochures, CAP application packets, etc.) for community distribution.

Moreover, two LIHEAP Outreach Representatives provide support to County Assistance Offices ("CAO"), but typically do not provide direct program education to customers.

B. Education Regarding the Benefits and Responsibilities of Low Income Program Participation

UGI's customers receive general information regarding the Company's Universal Services programs: Operation Share, CAP, LIURP,[1] and Customer Assistance Referral Evaluation

[1] The LIURP Weatherization Program is offered to reduce the energy consumption of low-income customers through the installation of energy conservation measures and energy conservation education. Eligible electric non heating customers may receive in home or telephonic energy education sessions.

Services ("CARES"),[2] as well as other information about ways they can reduce their bills or obtain assistance in paying their bills, as specified in Table 1 below.

TABLE 1

Communication	Content	Frequency	Language	Distribution	Recipients	Exhibit
Bill Assistance Insert	Energy Efficiency and Conservation ("EE&C") Programs for Gas & Electric. CAP, LIHEAP, Operation Share, and LIURP household income qualification and program education.	Every other month, beginning Oct. 2023	English, Spanish	Mail	All mail customers	Exhibit 1: Customer Programs Insert
Telephone On-Hold Message	Bill pay help contact information.	Continuous	English, Spanish	Phone calls into UGI Call Center	All customers who call UGI	N/A
UGI Website Assistance Page	Low Income Program and EE&C content.	Continuous	English	Online	All customers who visit UGI.com	Exhibit 2: Links to Assistance Webpages
News Releases	LIHEAP season opening information (e.g., grant period, contact information to apply, poverty level guidelines, etc.)	Released 1 to 4 weeks prior to November 1 each year	English	Mail, email, and websites	All customers	Exhibit 3: LIHEAP News Release
New Customer Guide	Contact information for payment arrangements, Budget Billing, assistance programs, fuel funds, and agency referrals. Includes a brief summary of LIHEAP, CAP, Operation Share and LIURP with contact information.	When new accounts are established.	English	Mail, Email	All new customers	Exhibit 4: Welcome Packet

[2] Each CARES customer may receive an informational mailing. The mailing contains educational material on each of the assistance programs and any other referral information that may be helpful to the customer. Customer Outreach employees maintain contact with CBOs through referrals and educational services.

Communication	Content	Frequency	Language	Distribution	Recipients	Exhibit
New Income Guidelines	Presents (1) the new annual income guidelines; (2) USECP information; and (3) a link to UGI's website assistance form.	February/ March	English, with contact information in Spanish	Email	Residential customers who provided email addresses when establishing service or who have an online portal account	Exhibit 5: Income Guidelines Email
Program Awareness	Awareness messaging targeted at customers in situations that could benefit from USECP programs with application information.	Bi-monthly	English	Text	Residential customers who opted in to receive assistance text messages	Exhibit 6: Program Awareness Messaging
Ebill Assistance Links	Bill pay assistance website link.	Continuous	English	Online Ebill Portal	Ebill customers	Exhibit 7: Ebill Assistance Website Link
Social Media Posts	Various benefits messaging prompting customers to contact UGI about USECP enrollment.	Quarterly	English	Facebook	All customers who access UGI on Facebook.	Exhibit 8: 2024 Social Media Posts

The communications included in Table 1 and their attendant exhibits demonstrate that the Company utilizes various forms of marketing channels to promote its USECP programs by outlining the benefits and responsibilities of each program.

1. Targeted Outreach about USECP Programs

UGI also performs more targeted outreach to customers about the Company's USECP programs as specified in Table 2 below. The direct targeting provides customer-specific information (e.g., CAP monthly payment, CBO or CAO information) to low-income customers. These communications encourage program enrollment to help eligible customers.

TABLE 2

Communication	Content	Frequency	Language	Distribution	Recipients	Exhibit
USP Brochure	Details of each USECP program's benefits and eligibility requirements.	Brochures sent upon request to CBOs and then handed out by CBOs	English, Spanish	Handout by CBOs	Low-income customers who engage with CBOs	Exhibit 9: USP Brochure
Self-Reported Low Income ("SRLI") Email Journey	Email series to SRLI customers regarding USECP program benefits with a link to begin enrollment process. Each	Bi-weekly over the course of 8 weeks	English	Email	SRLI customers who provide email addresses	Exhibit 10: SRLI Emails

C. Educate and Enroll Interested and Eligible Customers within the 0-50% FPIG Range in Low Income Programs

The company anticipates starting targeted communications to the 0-50% FPL level once the 2026-2030 USECP is approved. These targeted communications are still under development. However, they will provide details about the various low income programs. For example. UGI is preparing a communication explaining that customers who receive SNAP, could qualify for utility bill assistance. Additionally, the UGI Outreach team is working closely with the Community Relations team to support various organizations that assist low-income customers (e.g., Power Packs Project, Wildheart Ministries[3]). Some of these events are focused on the 0%-50% FPL audience. Finally, as stated above, UGI is providing targeted communications to customers that self-report being low income.

D. Low Income Customer Conservation Education

Regarding conservation education for low-income customers, UGI provides Conservation Packets to its CAP and LIURP agencies for distribution. These packets include the following items:

- Adult coloring book (with energy saving tips)
- Child coloring book: "Sparky" the Energy Saving Squirrel
- Magnet with contact information to inquire about low-income and energy-saving programs
- Safety – "Smell Gas" steps
- Energy Saving Tips brochure
- Information regarding all energy assistance programs with translated content

E. Low-Income Referrals to Other Support Services

a. External Referrals

UGI refers its low income customers to other organizations that may be able to provide assistance based on the circumstances presented. For example, UGI has referred customers to local churches and food banks, Office of Aging, PA 211, Service Access & Management, Inc., etc. UGI also plans to engage with predominantly Spanish-speaking cultural organizations, such as the Spanish American Civil Associations ("SACA") and currently is in discussions with Centro Hispano. In July 2024 we sent safety brochures and assistance brochures to 27 cultural and 35 community-based organizations.

b. Internal USECP Referrals

Customers who express the need for a particular service, e.g., related to a protection from abuse order, are referred to UGI's CARES program. Customers do not need to be in any FPIG level to

[3] Power Packs Project is a non-profit organization that aims to improve the mental and physical health of children by helping their parents provide nutritious meals over weekends when school breakfast and lunch programs are unavailable to them. Outreach representatives will be attending an event in April 2025 at Wildheart Ministries (https://www.wildheartministries.net/ministries/love-the-hill).

participate. If a customer contacts the Call Center, states they are low income and requests specific information about a program, they are referred to UGI's Outreach team. The Outreach team will evaluate the customer's account to determine which programs may be beneficial. Next, the Outreach team sends the customer appropriate program information by mail, including applications and program benefit materials. The application contains information about which specific CBOs can assist the customer in enrolling in the most beneficial program(s).

UGI also performs Warm Referrals for both Electric and Gas customers, which automatically refers the customer to other low-income programs that may assist the customer (e.g., LIURP, Operation Share Grant, CARES). Specifically, the Company proactively determines if these customers qualify for benefits under these other programs and solicits them for participation. The customer does not need to apply for these programs. Benefits to qualifying customers include CAP enrollment, weatherization measures at residences, and/or energy assistance grants for heating bills.

F. Demographics-Focused Low-Income Customer Education

To determine the demographics of the low-income population in its service territory, UGI monitors census data periodically and obtains the languages spoken in the counties comprising its distribution systems. This information guides UGI's efforts for translating customer communications, as required in 52 Pa. Code § 56.91(b)(17) (relating to termination notice provisions in Spanish and other languages when 5% or more of the residents use those languages). Table 3 below provides UGI's demographic analysis as of December 2021. It provides counts for residential, CLI and ELI customers by county. It also shows what percentages of the residential customer counts are English speaking, Spanish speaking and Other language speaking. On a total residential customer basis, 89.22% of UGI's customers are English speaking, 5.73% are Spanish speaking, and 5.05% combined speak All Other languages.

G. Utilize Translated Materials and Service for LEP Customers

As Table 3 below shows, the demographics for UGI's CLI and ELI populations are mainly English and Spanish. A smaller contingent of these populations (i.e., All Other) speak Ukrainian, Russian, Italian, Hindi, French, German, Arabic, Japanese, and Simplified Chinese (all individually lower than 5%). The Company typically provides USECP program applications and education materials in English. Applications are provided in Spanish upon request. Tables 1 and 2 above show the materials that are provided in Spanish to customers.

The Company is working to create both English and Spanish versions of its low-income program forms and letters. The Spanish-translated versions will be sent to customers upon request initiated through our Customer Contact Center discussions. UGI also provides translation services to its low-income customers during phone inquiries, as needed. Translation services are available to LEP customers when calling UGI's Customer Contact Center. Upon request, UGI will secure an interpreter to aid customers inquiring about Universal Services. Additionally, UGI added a dedicated queue of Spanish-speaking Customer Service Representatives in 2024.

Additionally, the Company has distributed the following statements in multiple languages to let customers know that a translator can be provided if needed. The statements are as follows:

- Statement 1 (Conservation Packets): UGI is committed to helping customers who make a sincere effort to pay their bills. Our representatives can assist you by providing information on a variety of energy assistance programs, making referrals to local agencies, offering participation in fuel funds or establishing payment arrangements. Language service interpreters are available to help over the phone. Call (800) UGI-WARM or (800) 844-9276 to learn more.

- Statement 2 (CAP Application): If you need assistance paying your UGI bill or want to know more about programs available to help with your utility bill, contact UGI at (800) 276-2722. UGI has interpreters available, free of charge.

The statements (appearing in Exhibits A and B9 and XX, respectively) have been translated in Spanish, Ukrainian, Russian, Italian, Hindi, French, German, Arabic, Japanese, and Simplified Chinese.

Additionally, the statements have been distributed to UGI's CBOs and CAOs since May 2023. CBOs and CAOs will request additional supplies when needed. The flyers also will be included as an insert with all new applications for low-income programs.

Regarding WARM events, the Outreach team has program literature available in English and Spanish when attending all events. In addition, CBOs have UGI literature, e.g., the UGI Universal Service Program brochure, program applications and program benefit information, in both English and Spanish, and many CBOs offer bilingual services.

In-person WARM events occurred from October 2019 through March 2020. They were paused as a result of COVID-19. They re-started in October 2022. The UGI Outreach team works with local CBOs, local food banks, and other assistance agencies (e.g., senior centers) to advertise its WARM events. Additionally, WARM events are advertised on UGI's website, and through emails to residential customers within specific ZIP codes where the events are taking place. UGI's CBOs support UGI's efforts with these events to provide direct one-on-one support to customers and assist with program enrollment. Typically, UGI has a bilingual Outreach team member at each WARM event to provide assistance to LEP customers. In addition, during these events, Outreach team members utilize translation services provided by a vendor for languages other than English and Spanish, if needed. Also, agencies (e.g., the Commission, BeWise, Community Outreach organizations, Senior Support outfits) hosting events regularly have bilingual staff that are utilized for LEP customers.

BeWise is a half day human services conference promoting consumer awareness, utility education, and life management skills. These conferences are attended by agencies, school counselors, and other community workers that learn about the programs to provide education to their clients. UGI continues to work with BeWise, senior centers and other Community Outreach agencies to attend events to provide additional insight to available programs.

Since 2022, UGI has hosted WARM events at requested locations (Bethlehem, Lancaster City, Mount Joy, Manheim, and Mountville). Additionally, the Company recently (1) provided several local food pantries with Universal Service literature to distribute; (2) sent Universal Service program brochures to County Assistance Offices to distribute; and (3) created a CAP educational video and is considering potential future videos for other UGI low-income programs.

UGI also provides in-person support at similar events hosted by agencies – e.g., Community Outreach Events, Senior Expos. UGI personnel have attended Community Outreach Events, such as food pantry distributions, Angel Tree sign-ups (Salvation Army), back-to-school backpack distributions and AKA Energy Forums. Senior Expos typically host many vendors that provide information and giveaways for senior citizens. UGI personnel use these events as an opportunity to educate participants on programs that are available to qualified customers.

Get to Know UGI Customer Programs

UGI ENERGY EFFICIENCY & CONSERVATION PROGRAM

UGI residential customers can receive rebates* when purchasing and installing eligible, high-efficiency equipment. At UGI, we know that our customers value saving money and energy. Making the decision to install energy efficient products is a great way to do both!

GAS REBATES

Equipment	Minimum Efficiency	Rebate Amount
Smart Thermostat	Energy STAR®	$50
Tankless Water Heater	Energy STAR®	$400
Furnace	Energy STAR®	$500
Boiler	94+ AFUE	$1,200
Combi Boiler	94+ AFUE	$1,500

All equipment must be powered by natural gas. Must apply within 90 days of purchase, Rate Classes eligible are R, RT, N or NT.

ELECTRIC REBATES

Equipment	Efficiency	Rebate Amount
Smart Thermostat	Energy STAR®	$50
Room Air Conditioner	Energy STAR®	$25
Clothes Washer	Energy STAR®	$25
Dehumidifier	Energy STAR®	$25
Refrigerator	Energy STAR®	$25
Dishwasher	Energy STAR®	$25

*Rebate amounts and availability subject to change. For current rebates, visit **www.ugi.com/savesmart**.*

INCOME-BASED PROGRAMS*

Maximum Household Income Before Taxes for CAP and LIHEAP					
Number of Household Members	1	2	3	4	Each Additional Person
Monthly Income	$1,823	$2,465	$3,108	$3,750	$643/person

Maximum Household Income Before Taxes for LIURP

UGI Reminds Eligible Customers How to Get Help With Heating Costs

Home heating season is almost here, and UGI continues to urge eligible natural gas and electric customers to apply for federal Low Income Home Energy Assistance Program (LIHEAP) funds to help cover costs this winter. Applications will be accepted by the Pennsylvania Department of Human Services beginning November 4, 2024, through April 4, 2025.

"UGI is committed to delivering safe and reliable energy services, while also working to make it affordable," says Dan Adamo, UGI Vice President of Customer Relations. "LIHEAP as well as UGI's income eligible customer assistance programs bring real savings to thousands of our customers each year."

Last winter, nearly 26,000 UGI customers received LIHEAP grants totaling more than $10 million.

LIHEAP grants help customers with limited or fixed incomes pay their heating bills, repair or replace a heater, avoid utility service shut off, and assist in restoring a terminated service. **LIHEAP grants do not need to be repaid.** Customers interested in applying for LIHEAP should contact UGI. Company representatives will provide customers with information on the application process and eligibility requirements and can also help in completing and submitting the required forms.

LIHEAP funds are limited and available on a first-come, first-served basis to qualifying customers. UGI urges customers to submit a LIHEAP application as soon as possible. For more information on LIHEAP, customers can call UGI at 1-800-UGI-WARM (1-800-844-9276) or visit www.ugi.com/liheap .

To qualify for LIHEAP funds, a customer must provide proof of income, a recent heating bill, and name, birth date and Social Security number for each household member.

LIHEAP applicants now have the option of sharing certain application information directly with public utilities, to help with the enrollment process and to help determine eligibility in additional UGI-sponsored programs. To opt in, just look for the checkbox on the application.

Income eligibility for LIHEAP through January 31, 2025:

Household Members	Annual Income	Monthly Income	Weekly Income
1	$ 22,590	$ 1,883	$ 434
2	$ 30,660	$ 2,555	$ 590
3	$ 38,730	$ 3,228	$ 745
4	$ 46,800	$ 3,900	$ 900
5	$ 54,870	$ 4,573	$ 1,055
6	$ 62,940	$ 5,245	$ 1,210
7	$ 71,010	$ 5,918	$ 1,366
8	$ 79,080	$ 6,590	$ 1,521
Above 8	+$8,070/person	+$673/person	+$155/person

UGI also offers company-sponsored assistance programs, including:

UGI's **Customer Assistance Program (CAP)** offers qualifying income-eligible customers a more manageable monthly energy bill. UGI provides CAP participants with a monthly payment amount based on gross income, household size and energy usage. When CAP bills are paid on or before the due date, the difference between the amount billed and the actual amount used may be forgiven.

The **Low-Income Usage Reduction Program,** or **Weatherization**, offers free installation of energy conservation measures to help make energy bills more affordable. Possible energy saving measures include ceiling insulation; floor, duct, and hot water pipe insulation; caulking and weather-stripping, gas heater repairs and water flow restrictors.

The **Operation Share Energy Fund** provides energy assistance grants to qualifying customers who have trouble paying their heating bills. This community-based program is funded by a corporate donation by UGI as well as voluntary donations from UGI employees, UGI customers and concerned citizens. UGI works with dozens of community agencies to administer Operation Share funds.

C.A.R.E.S. (Customer Assistance and Referral Evaluation Service) can provide referrals to other helpful programs in the community. These programs can include LIHEAP, budget counseling, and State Weatherization or Office of Aging programs.

UGI can also assist eligible customers by setting up a **Payment Plan** if a bill is higher than expected and there is difficulty paying the entire amount.

A **Budget Billing Plan** estimates your annual energy usage and spreads out that amount evenly over the budget billing period to calculate the monthly amount a customer pays. UGI reviews each customer's Budget Billing Plan every three months to determine actual energy usage and make any necessary adjustments to monthly payments.

UGI encourages customers who may qualify for any of these programs to contact the company.

UGI Utilities, Inc. is a natural gas and electric utility company that serves more than 740,000 customers. Additional information about UGI Utilities, Inc. is available at www.ugi.com.

Welcome Home

Customer Information Guide

Energy to do more®

Nice to Meet You!

Thank you for trusting your family's energy needs to UGI.

We know that safe, reliable, and affordable energy is a necessity for you, whether you use it to keep your home warm, your water hot, or your lights on. That's why we take pride in delivering your fundamental energy needs through dependable service.

With UGI as your energy supplier, you get:

- Energy questions answered by knowledgeable staff
- Expert emergency service when you need it, day or night, from skilled employees
- Options to help manage your new account and control expenses

We pride ourselves on being a responsive, engaging energy company. Every day we strive to exceed your expectations.

In this guide, you'll find information on how your service works and how to save money. You can also visit **www.ugi.com** at any time or call 800-276-2722 for even more information.

Thank you again for choosing UGI. With our dependable service, you now have the **energy to do more.**

At a Glance

UGI Utilities, Inc. is a natural gas and electric utility committed to delivering reliable, safe, and affordable energy to our 740,000 customers in 46 counties in Pennsylvania and one county in Maryland.

Understanding Your Bill

1 ***Customer Account Number***
Please have this number ready when you contact us about your account.

2 ***How to Contact UGI***
Use this contact information for questions regarding your bill or service.

3 ***Next Scheduled Reading***
This is the scheduled date of your next UGI meter reading.

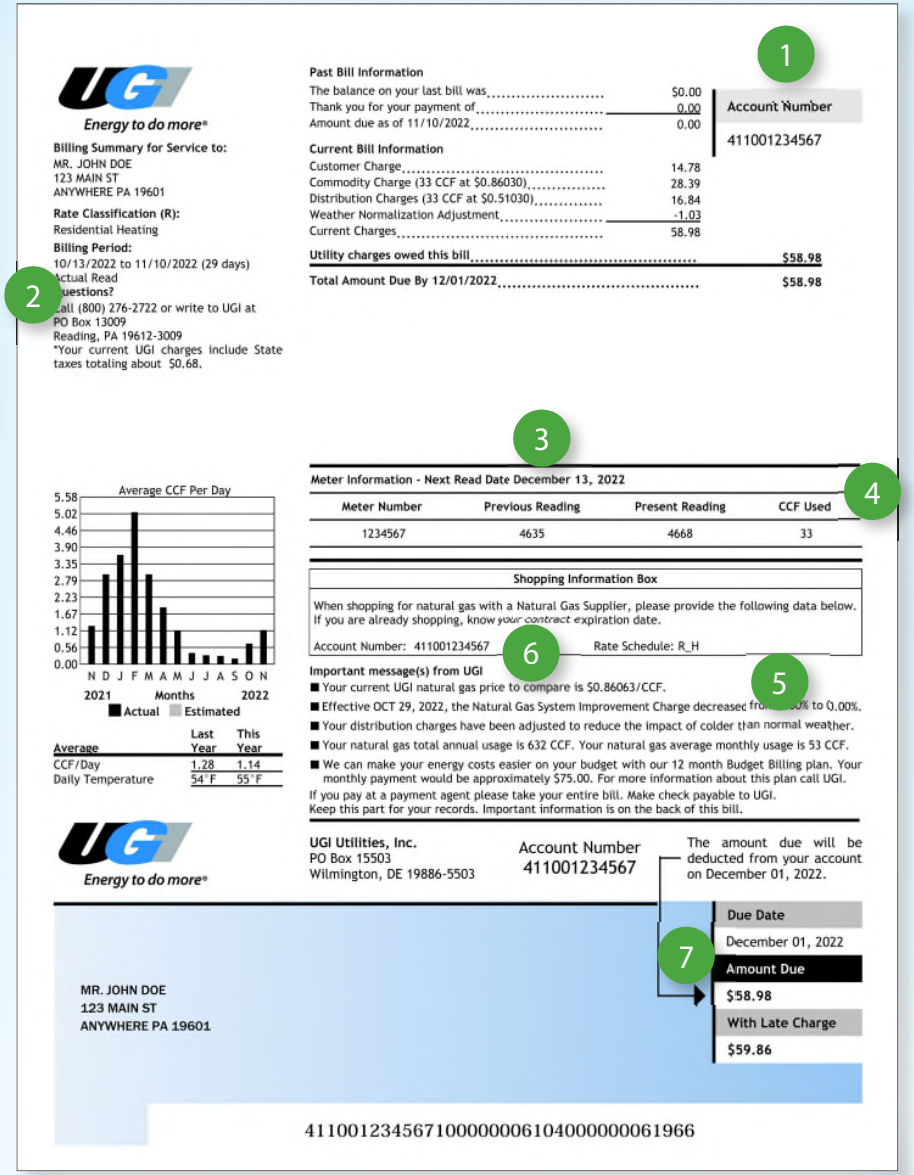
4 ***Meter Reading***
The meter reading for the current billing period and amount of energy used; natural gas is shown in CCFs (1 CCF = 100 cubic feet of gas) and electric in kWh. Our personnel are scheduled to read your meter monthly. However, there are occasions when you may receive an estimated bill. We base estimates on usage history and the actual temperature during the billing period.

5 ***Price Comparison***
Your current price to compare when shopping for an alternate energy supplier.

6 ***Messages***
Important messages from us regarding programs you may participate in, such as budget billing and the "GET Gas" program.

7 ***Due Date/Amount Due***
The amount currently owed to us and the date your payment is due.

If you have any questions or want more information, visit **www.ugi.com/billpay** or call 800-276-2722.



Paying Your Bill

Online at ugi.com

When you enroll in Paperless Billing, you'll receive an email alert when your monthly bill is available. Sign up quickly and easily when you register your account in our Online Account Center at **www.ugi.com**. Not only will you reduce clutter and simplify your life, but you'll also be able to view and download your monthly bills and usage, schedule future payments, and receive paperless billing exclusive email reminders when your bill is nearing its due date.

All UGI customers can make one-time payments via bank account or credit card at no additional charge. To view your payment options, **www.ugi.com/billpay**.

Other Payment Methods

- **Phone -** Call 800-276-2722 to pay your bill from your checking account, debit or credit card with no fee.
- **Mail -** Mail payments to P.O. Box 15503, Wilmington, DE 19886-5503. Always include your account number on your check.
- **Payment Agency -** Visit **www.ugi.com** or call us for approved payment agency locations. Walk-in payment centers may collect a fee for their service.

Payment Agreements for Past-Due Bills

If you have a problem paying your bill, please call us at 800-276-2722. Our customer care agents are happy to discuss options available to you.

Due Date Extensions

If you are on a permanent fixed income, our Due Date Extension program gives you additional time to deposit monthly checks so you can avoid late fees. Call us for an application.

Third-Party Notification Program

With this program, we send a copy of any past-due and shut-off notices to a designated third party—any friend, relative, caregiver, or even a preferred social services agency. **IMPORTANT: The third party is not responsible for paying any of your bills.** We simply give the designated party the opportunity to remind you to pay your bill and keep your account up to date. Call us to sign up.

Budget Billing

If your electric or gas usage varies widely from month to month or seasonally, our budget billing plan will spread your costs evenly throughout the year. Enrollment in this plan is free of charge. Sign up at **www.ugi.com** or call us with your UGI customer number handy.

AutoPay

Enrolling in this plan will save you time each month by automatically transferring your bill amount from your checking or savings account. Visit **www.ugi.com** or call us to sign up.

Income-Based Customer Assistance Programs

UGI is committed to helping customers who make a sincere effort to pay their bills. Our representatives can provide information on energy assistance programs and fuel funds, make referrals to local agencies, or establish payment arrangements. Call 800-UGI-WARM or 800-844-9276 to learn more. Typically, assistance is available for households with income up to 250% of the Federal Poverty Levels however, program eligibility is determined during the enrollment process. Programs include:

- Low Income Home Energy Assistance Program (LIHEAP) – Grant program run by the commonwealth of PA, which does not have to be paid back. Apply online at https://compass.state.pa.us or phone the LIHEAP Hotline at 866-857-7095.
- UGI Customer Assistance Program (CAP) – A personalized monthly payment plan based on percentage of income or average bill. Learn more at www.ugi.com/CAP.
- Operation Share – Grant program for customers experiencing a hardship like death of wage earner, sickness or loss of job, which does not need to be paid back. Call 800-UGI-WARM.
- UGI Low Income Usage Reduction Program (LIURP) – A program providing energy-saving repairs and upgrades to your home, at no cost to you. Visit www.ugi.com/LIURP to learn more.

Using Your New Energy Service Safely

Natural Gas Safety

Natural Gas is Naturally Odorless

To make it detectable, a chemical known as *Mercaptan* is added. It has a smell that is similar to rotten eggs. If you smell this odor, you need to act. There is **no cost** to you for UGI to investigate a natural gas odor.

What to Do if You Smell Gas

- **LEAVE** the inside of a building immediately. Take everyone and pets with you. Leave the door open if possible, and proceed to a safe location where you can no longer smell the odor of natural gas (approximately 500 feet away from the building).
- **CALL UGI's** gas emergency line 800-276-2722 from a safe location, 24 hours a day, 7 days a week, if you smell natural gas indoors, outdoors, or near a gas meter.
- **CALL 911** from a safe location if you ever hear or see natural gas blowing anywhere.

Use your eyes and ears as well.

Be aware of any indication of a possible natural gas pipeline leak, including:

- Air blowing the dirt, grass, or trees near a pipeline
- Bubbling or blowing air in a pond or stream
- Dead grass or plants in an otherwise green area
- Flames coming out of the ground
- Unusual hissing sounds

If you notice signs of a possible leak, contact UGI at 800-276-2722 or call 911 from a safe location.

What NOT to Do if You Smell Gas

- DO NOT use phones (standard or cellular), computers, appliances, elevators, lamps, garage door openers, or electrical devices if an odor of gas is present.
- DO NOT touch electric outlets, switches or doorbells.
- DO NOT smoke or use a lighter, match or other flame.
- DO NOT operate vehicles or power equipment where leaking gas may be present.
- DO NOT try to re-light a pilot light.
- DO NOT e-mail UGI or post emergency notifications on our social media if you smell natural gas or suspect a natural gas leak. *Please call UGI or 911.*
- DO NOT re-enter a building until it has been inspected by a UGI technician.

Visit www.ugi.com for more information, and teach your family what to do, and what NOT to do, if anyone ever notices the odor that is added to odorless natural gas.

Carbon Monoxide Safety

While natural gas has a scent added to it, incomplete combustion of ANY fossil fuel could produce an odorless, tasteless, and colorless gas called carbon monoxide (CO). Here's what you need to know about CO to protect yourself:

Protect your home with CO detectors.

- CO can enter living spaces in your home as a result of a malfunctioning appliance or blocked chimney.
- All fuel-burning equipment should be installed and regularly serviced by an experienced professional.
- All fuel-burning equipment requires proper venting and air flow for safe operation. Do not install equipment in a confined space. When renovating, have a professional specify space required for fuel-burning equipment.
- Signs that you may have a CO problem include: water vapor condensing on windows (other than normal bathroom and kitchen moisture), pets acting lethargic or lazy, headaches, dizziness, flu-like symptoms, and nausea.
- A CO detector should be installed on each floor of a home, particularly near every sleeping area.
- If you are alerted by your CO detector, or if you suspect CO poisoning, move to fresh air and call UGI or 911.

Electric Safety

Electrical emergencies can happen anywhere, anytime. Follow these tips to increase your safety in any situation.

Fallen Wires

Stay away from fallen wires and warn others to keep away. Call us immediately. If a wire touches your vehicle, stay inside. However, if your car catches fire, jump clear of the car without touching the car's metal and the ground at the same time.

Indoor Electrical Fires

Without touching the appliance, unplug it or turn off the electric supply. Use a Class C rated fire extinguisher, if available. If one is not available, throw baking soda on the fire—never use water on an electrical fire. If necessary, call your fire department.

Portable Generators

Never use a generator indoors or in any enclosed space. Always use proper power cords and follow instructions. Do not overload the generator with more equipment than its output rating. Also make sure your generator is properly grounded.

Light Bulbs

Be sure to turn light switches off before changing bulbs. Use only bulbs of the appropriate wattage for the fixture.

Electric Cords and Outlets

Replace any frayed or damaged cords. Also use proper extension cords—heavy-duty cords for power tools and moisture-resistant cords for working outdoors. If you have children in your home, make sure to install safety plugs and outlet covers. Also, never plug too many cords into one circuit.

Tree Planting and Trimming

Trees should be kept a safe distance from all electrical wires. Call us for a free "Trees for Streets and Lawns" brochure to learn more.

Safety & Security Lighting Program

We can install outdoor lighting that automatically comes on at dusk and goes off at dawn. Adequate outdoor lighting improves visibility, reduces accidents, and deters burglars and vandals. Call us for more information.

Gas Line Safety

Safe habits go beyond the walls and foundation of your home. Follow these guidelines to avoid unnecessary damage to natural gas distribution lines, electric lines, and other utilities' facilities as you enjoy your home and property.

Aboveground Pipe Safety

You should never hang anything from aboveground pipes. The added weight can weaken or break pipe joints or fittings, resulting in a leak.

Underground Pipe Safety

Call 811 three business days before a digging project—it's the law. Whether you're doing a major excavation or minor landscaping, safeguard yourself from hazards related to damaging underground pipelines. A simple call gets all your public utility lines marked to help protect you from injury and costly property damage.

811

Know what's below.
Call before you dig.

What About Gas Lines Beyond the Meter?

We are responsible only for maintaining pipes that run up to and include the meter. All natural gas pipes on the property beyond the meter must be maintained by the property owner.

Before digging near buried natural gas pipes, locate the pipes and mark the area. To ensure the safety and soundness of the pipes and customer-owned fuel lines, periodically inspect them for leaks and corrosion and never hang anything from them.

Should you need assistance in locating, inspecting, or repairing pipes, you can contact your local plumber or heating contractor or call us.

Customer Choice Information

Under the Electric and Natural Gas Choice Program, you have the option to choose a third-party energy supplier. Regardless of which supplier you choose, you will receive the same level of service and reliability you already enjoy from us.

Choosing Another Supplier

While we cannot recommend suppliers or provide information on their pricing, you can look at your most recent bill for our current Price to Compare (see the sample bill on page 3) or check **www.ugi.com/price-to-compare.**

Questions you could ask third-party suppliers:

- What is your price per kWh of electricity or per CCF of natural gas? Does this price include transmission and state-mandated alternative energy costs?
- Is this rate fixed or can it change?
- Do I need to sign a contract? What is the length of the agreement?
- Are there penalties for switching or canceling?
- Will I get one bill or two? Do I have a choice?
- Are there restrictions on how much energy I can use or when I can use it?
- Do your quoted rates include taxes?
- Are there any other charges or fees?

For a list of licensed electric generation and natural gas suppliers, visit the sites below:

- For electric generation suppliers:
  www.ugi.com or **www.papowerswitch.com**.
- For natural gas suppliers:
  www.ugi.com or **www.pagasswitch.com**.

If you decide that another electric generation or natural gas supplier is right for you:

- Notify your chosen supplier. The supplier will send you a statement outlining the terms of your agreement. You may cancel your choice within three business days of receiving the statement.
  A penalty may apply if you do not remain with a supplier for the entire agreement period.
- Your chosen supplier will notify us.
- You will receive a letter from us confirming your choice. Please make sure that it is the correct supplier.

IMPORTANT: If you participate in the Customer Assistance Program (CAP) and you wish to choose a supplier, please contact us for assistance.

Your Rights and Responsibilities

The Pennsylvania Public Utility Commission (PUC) has updated its **Standards and Billing Practices for Residential Service**.

Your Rights and Responsibilities as a Utility Consumer is a booklet prepared by the PUC to explain the rules regarding a utility's billing, credit, dispute handling and shut-off practices.

This useful booklet also includes information about various payment options for your utility bill, understanding the components of your utility bill, policies regarding security deposits, steps and rules about utility shut-offs, and how to shop for electricity or natural gas service.

You'll find a copy of the Rights and Responsibilities booklet to review or print at **www.ugi.com.** We will continue providing you with safe and reliable utility service, clear and concise bills, and fair policies. You, the consumer, should know your rights and fulfill your responsibilities to maintain your service.

As a residential utility customer, you have the RIGHT to:

- Safe and reliable service.
- A clear, concise, and accurate bill.
- Fair credit and deposit policies.
- Know how your bill is calculated and how to tell if it is too high.
- Question or disagree with your utility company.
- Personal privacy. *UGI has the responsibility of safeguarding your personal information against unauthorized use.*

As a residential utility customer, you also have the RESPONSIBILITY to:

- Pay your bill on time.
- Provide us with access to your meter.
- Give UGI at least 7 days' notice before you move or wish to discontinue service. *If you fail to notify us, you remain responsible to pay the bills.*

Special Protections

You may qualify for special protections if you:

- Are a victim of domestic violence and have a Protection From Abuse Order.
- Live in a low-income household.
- Are seriously ill or a member of your household is seriously ill. You will be required to provide proof to your provider.

Billing

All UGI customers receive bills for electric service once during a regular billing cycle (approximately one month). Customers can enroll in a program (at www.ugi.com) to pay their bills online. Please refer to www.ugi.com and "Pay Bill Online" in the left center side of the page for a list of options.

Meter Readings

Each month on approximately the same date, meter readers are scheduled to read the electric meter at your residence. Meter readers and utility service personnel carry identification, which you may ask to see for your protection. UGI has moved to an Automated Meter Reading (AMR) system throughout most of our service territory. Using the AMR system, UGI is able to record meter readings by simply driving or walking by your home. Employees use devices known as ERTs (Encoder-Receiver-Transmitters) that allow them to obtain an accurate meter reading.

- Through Automated Meter Reading, monthly bill statements are based on actual meter reads and exact electric usage. Therefore, customers will no longer routinely receive estimated electric bills.

Energy to do more®

Did you know that the Federal Poverty Income Guideline limits have increased for 2025?

If your household income is at or below these levels below, you could qualify for one or more of the UGI Customer Assistance Programs!

The New Federal Poverty Income Guidelines are in effect!

Monthly Household Income Limits

# of Household Members	150% FPL	200% FPL	250%FPL
1	$1,956	$2,608	$3,260
2	$2,644	$3,525	$4,406
3	$3,331	$4,442	$5,552
4	$4,019	$5,358	$6,698
5	$4,706	$6,275	$7,844
6	$5,394	$7,192	$8,990
Each additional person	$688	$917	$1,146

Programs Available:

Low Income Home Energy Assistance Program (LIHEAP)
Available at or below 150% FPL

LIHEAP helps families pay heating bills with a grant between the amount of $200 - $1,000. **This money does not have to be paid back and gets sent directly to UGI to pay your bill.** The program will close in April so apply now before it is too late!

Customer Assistance Program (CAP)
Available at or below 150% FPL

Avoid unpredictable utility bills and balance your household budget a little easier. Pay the same amount each month, based on the average bill at your property or a percentage of your total income. Average CAP customers only pay between 4- 6%* of their total gross income. You can also receive debt forgiveness and bill forgiveness each month with on-time payments.

**CAP percentage of income payments will vary based on customer's household income, type of service, and poverty level.*

Operation Share Grant
Available at or below 250% FPL

If you are struggling to pay your bill, apply for an Operation Share grant today. No need to wait. Grants do not have to be paid back and are funded by donations from your neighbors, UGI employees, and UGI Company to help families in need.

Low Income Usage Reduction Program (LIURP)
Available at or below 200% FPL

Is your home cold and drafty? Have you tried lowering the thermostat but have not seen a difference in your bill? Check out UGI's Low Income Usage Reduction Program (LIURP) available to homeowners and renters. We have contractors that will install energy efficient measures into your home at no cost to you! Most customers see an average of 20% reduction in their UGI bill.

Did you receive a grant from LIHEAP this season? If so, enrolling in UGI's CAP just got easier! Customers who received a LIHEAP grant towards their UGI account can enroll in UGI's CAP program over the phone! Learn about CAP and all the benefits you could receive at www.ugi.com/CAP.

LOW INCOME USAGE REDUCTION PROGRAM (LIURP)

UGI's LIURP offers free weatherization measures to qualified low-income residential heating customers in order to limit heat loss and provide long-term energy savings. These energy savings measures may include window and baseboard caulking, door and window weather-stripping, attic and sidewall insulation, duct and pipe insulation, ventilation, water conservation devices, furnace inspections and energy education.

In addition, non-heating UGI Electric accounts may qualify for measures such as refrigerator replacement and high-efficiency lighting.

LIURP ELIGIBILITY CRITERIA

To be eligible the customer must have: (1) an active UGI gas or electric heating account with twelve (12) or more continuous billing periods for the same account number; (2) higher than average gas or electric heating usage during the twelve month period to meet specified consumption levels for the program; (3) renters can qualify with written permission from landlords; (4) Gross Annual Income must be at or below 150% of the Federal Poverty Level *(see insert for details)*. A percentage of customers who may have extenuating circumstances can be accepted at 200% of Federal Poverty Level.

One additional LIURP program called the UGI Rehabilitation Program is designed to take a proactive approach to install approved energy efficient measures at the time of new construction or rehabilitation. Email **liurpteam@ugi.com** for more information.

CONTINUED ON BACK PANEL

CUSTOMER ASSISTANCE REFERRALS EVALUATION SERVICES (C.A.R.E.S.)

C.A.R.E.S. provides referrals to other helpful programs in your community. UGI will send any customer, regardless of income, a Customer Assistance Guide and energy-related information specifically for your area. In addition to LIHEAP and LIURP, these programs can include budget counseling or Office of Aging programs.

C.A.R.E.S. ELIGIBILITY CRITERIA

Customer must be a residential customer experiencing a temporary personal or financial crisis.

Additional Services offered by UGI:

- **Conservation literature**
- **Gift credits**
- **Third party notification**
- **Online bill pay**
- **Budget billing**
- **Payment arrangements**
- **Extended due date**

Everybody needs help now and then.

We want to help guide you through the many programs available to help customers manage their energy bills. Look at the table below and select the option that best describes your situation, then look at the Program you should start with.

Your Current Situation	Start With This Program
You have no heat, or an active termination notice, and limited income. (Note: Enrollment for this program occurs in early November of each year and ends in April the following year.)	Low Income Home Energy Assistance Program (LIHEAP)
You have high debt, and need help managing monthly energy bills. You want "forgiveness" of utility debt as long as you continue to make on-time payments to UGI for 3 years.	Customer Assistance Program (CAP)
You have a temporary hardship (death of wage earner, loss of job, sickness, etc.) that prevents you from paying your utility bills.	Operation Share
Your home is cold and drafty, and keeping the thermostat low doesn't result in lower energy bills.	Low Income Usage Reduction Program (LIURP)

LOW INCOME HOME ENERGY ASSISTANCE PROGRAM (LIHEAP)

LIHEAP (Low Income Home Energy Assistance Program) is a federally funded program administered by each state that helps low income households pay their heating bills through energy assistance grants. There are two components to the LIHEAP program: CASH and CRISIS.

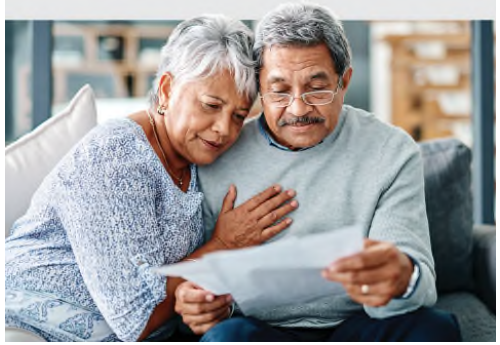
ELIGIBILITY FOR CASH GRANT

A customer must be responsible for home heating costs. CASH grants are applied directly to your account. This is not a loan and the money does not have to be paid back.

ELIGIBILITY FOR CRISIS GRANT

CRISIS grants help families who are in danger of being without heat due to situations like:

- **Utility services shut-off**
- **Active termination notice**
- **Broken heating equipment or leaking fuel lines**



Homeowners or renters whose gross annual income meets the income guidelines (see insert for details) established for the program by the State are eligible.

To apply, a customer must have a recent heating bill, and the names, Social Security numbers, and proof of income for all household members.

For more information regarding this program, customers can contact UGI or their local County Assistance Offices (**www.ugi.com/CAO**).

CUSTOMER ASSISTANCE PROGRAM (CAP)

UGI's Customer Assistance Program (CAP) benefits include:

- **A personalized monthly payment based on income and average bill;**
- **Past due debt forgiveness with on time monthly payments;**
- **The difference between the CAP payment and the actual usage bill may also be forgiven.**

UGI partners with local community agencies to provide this useful program to customers.

CAP ELIGIBILITY CRITERIA

To be eligible, a customer must: (1) have household gross income at or below 150% of Federal Poverty Level; (2) be a residential customer with active energy service. Income Guidelines change annually, see insert for details.

OPERATION SHARE

The Operation Share program provides energy assistance grants to qualified customers who experience difficulty paying their heating bills. This community-based program is funded by voluntary donations from UGI employees, UGI customers, and concerned citizens. In addition, UGI provides a corporate donation to help fund the program.

OPERATION SHARE ELIGIBILITY CRITERIA

To be eligible the customer must: (1) have an active UGI account; (2) have gross income (see insert for details) at or below 200% of Federal Poverty Level; (3) have not received an Operation Share grant within the past twelve (12) month period.

Self-Reported Low income Journey.

Energy to do more®

Dear Raymond Brooks,

Based on information you previously provided to us, you may qualify for enrollment in the UGI Customer Assistance Program (CAP) for account [redacted].

Enrollment in the CAP Program will assist you in managing your monthly energy bill, is free and has no impact on your credit score.

You are eligible for enrollment in CAP if your income is at or below the income guidelines shown below.

Customer Assistance Program (CAP) Income Guidelines

Household Members	Annual Income	Monthly Income	Weekly Income
1	$21,870	$1,823	$421
2	$29,580	$2,465	$569
3	$37,290	$3,108	$717
4	$45,000	$3,750	$865
Additional People	+$7,710/person	+$643/person	+$148/person

If you are eligible and interested, please:

1. Download the CAP application.
2. Print and complete the application.
3. Return application with proof of income to your local Community Based Organization (CBO): [redacted]

We are also mailing an application to you through U.S. Postal Service.

If you do not have a printer, you can visit the CBO listed above and they will provide an application for you.

Enrolling in CAP presents many benefits, including having a set monthly payment based on a percentage of income or the average bill at your property (whichever is lower). The percentage of income is between 4% and 9% for a heating customer. Additional benefits include bill forgiveness and forgiveness of past due balances.

Please note you must pay the CAP-Enrolled Monthly Payment on-time, each month and provide updated income annually in order to remain enrolled in the program. We also encourage CAP customers to apply for LIHEAP each year.

Sincerely,

UGI Customer Assistance Team

New CAP Enrollment Journey

To view this email as a web page, go here.

Energy to do more®

Dear [redacted],

Thank you for participating in UGI Utilities Customer Assistance Program (CAP). Your enrollment has been accepted for Account # [redacted].

Here is what you can expect from CAP:

1. Reduced monthly payment
2. Bill forgiveness (difference between your actual monthly bill and what you pay on CAP)
3. Debt forgiveness (portion of past due balance forgiven every month)

Here are few tips to manage your monthly CAP agreement:

1. Make your monthly CAP payments on time
2. Notify your Community Based Organization (CBO) of any changes to your income or household size
3. Watch for a new application and recertify in 11 months

Sincerely,

UGI Customer Assistance Team

Energy to do more®

Based on information in our system, your household income may qualify for LIHEAP If you've completed the LIHEAP application for the 2024-2025 season already, great! You're one step closer to receiving $200 (or more*) towards your winter heating bills.

If you haven't completed the form or applied online, we would like to assist you to make this process as simple as possible.

Click the button below to apply through COMPASS, the state website to help you receive LIHEAP funding.

APPLY FOR LIHEAP THROUGH COMPASS

About LIHEAP

The Low Income Home Energy Assistance Program (LIHEAP) is a federally funded program that helps pay heating bills through energy assistance grants*. The grants do not need to be paid back. Grants are applied directly to your utility account. You can apply online through the Pennsylvania state's COMPASS website.

Income Guidelines

Household Members	Annual Income	Monthly Income	Weekly Income
1	$22,590	$1,883	$434
2	$30,660	$2,555	$590
3	$38,730	$3,228	$745
4	$46,800	$3,900	$900

For additional person, add $8,070 per person annual income, $673/person monthly income or $155/weekly income.

*Minimum LIHEAP CASH grant is $200, with $1,000 maximum.

More Savings Could Be Available Through LIURP

Are your energy bills high even though your thermostat is set at a low temperature? The UGI Low Income Usage Reduction Program (LIURP) offers free weatherization measures to qualified low-income residential heating customers in order to limit heat loss and provide long-term energy savings. These energy savings measures may include window and baseboard caulking, door and window weather-stripping, attic and sidewall insulation, duct and pipe insulation, ventilation, water conservation devices, furnace inspections and energy education. Customer Number: 4[redacted]

Dear [redacted],

Your CAP recertification is due within 30 days. This process will confirm your continued eligibility to remain on the program. The CAP recertification process includes providing household occupant information, current proof of income for all household members and a valid photo identification.

For your convenience, UGI has enclosed a recertification application. Please mail the completed application and your supporting documents to Harrisburg Salvation Army at 506 S 29th St Harrisburg, PA 17104. If you need assistance in completing this application, please call (717)233-6755.

Failure to recertify and verify your current income within 30 days may result in removal from program and loss of CAP benefits which include:

- Personalized monthly CAP amount (based on income or average bill)
- CAP credits (difference between billed usage and CAP amount)
- Forgiveness of past due debt

If you have any questions about your CAP bill, please call UGI at 1-800-276-2722.

We look forward to your continued participation in CAP.

Sincerely,

UGI Customer Outreach Department

ASSISTANCE PROGRAMS

www.ugi.com/helpinfo

Your Current Situation	Start With This Program
You have no heat, or an active termination notice, and limited income. (Note: Enrollment for this program occurs in early November of each year and ends in April the following year.)	**Low Income Home Energy Assistance Program (LIHEAP)** Grant. It does not have to be paid back, and is run by the state of PA.
You have high debt and would benefit from fixed monthly payments and bill "forgiveness" of utility debt.	**UGI Customer Assistance Program (CAP)** provides a personalized monthly payment amount based on percentage of income or average bill at the property.
You have a temporary hardship (death of wage earner, loss of job, sickness, etc.) that prevents you from paying your utility bills.	**Operation Share Grant** does not have to be paid back.
Your home is cold and drafty in the winter and keeping the thermostat at a low setting does not help.	**UGI Low Income Usage Reduction Program (LIURP).** This program provides energy-saving measures to your home, at no cost to you.

How to get help:

- Ask the agency that provided this information to you for an application for the program you're interested in – you can benefit from multiple programs.
- Contact UGI at (800) UGI WARM and speak with one of our helpful WARM representatives – they can review information and eligibility with you but in most cases you must provide proof of income to your local Community Based Agency in order to enroll.
- Visit www.ugi.com/helpinfo to learn more about customer assistance programs, appliance rebates, and billing options.
- Call 211 to get connected with a resource specialist for free.

UGI is committed to helping customers who make a sincere effort to pay their bills. Our representatives can assist you by providing information on a variety of energy assistance programs, making referrals to local agencies, offering participation in fuel funds or establishing payment arrangements. Call (800) UGI-WARM or (800) 844-9276 to learn more.

Manage Energy Bills Better with Assistance through UGI

There are many reasons that you or someone you know may need help with their energy bills. The UGI Utilities Customer Assistance Program (CAP) is here to help. CAP is tailored to provide financial assistance through personalized monthly payments based on your income or average bill.

Program Benefits include:

- A personalized monthly payment based on income or average bill.
- Past due debt forgiveness with on-time monthly payments.
- The potential for additional forgiveness while in the program, including the difference between your CAP payment and the actual usage bill.

CAP can empower you to not only lower your monthly energy bills but also create a more stable financial future.

We invite you to check your eligibility for CAP and discover how you can benefit from reduced payments and debt forgiveness. It's all part of our commitment to support our community and provide assistance to those who need it most.

UGI Gas Exhibit BJM-6R

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

CAUSE-PA RESPONSE TO UGI INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION – SET I

REQUEST:

3) Reference CAUSE-PA Statement No. 1, page 20, lines 6-7:

   a. Is it Mr. Cicero's belief that the Commission should change the utilization of the Federal Poverty Income Guidelines ("FPIG") to the Self-Sufficiency Standard for Universal Service Program enrollment criteria? If so, please explain why.

   b. Does Mr. Cicero agree that the FPIG is a widely utilized and effective benchmark for measuring income status in the utility industry? If not, please explain why.

RESPONSE:

a. The term "belief" is not defined and unclear. Mr. Cicero has not taken the position in this case that the Commission should change its universal service program financial eligibility criteria. As stated by Mr. Cicero in this testimony, "[t]he Self Sufficiency Standard helps illuminate the full scope of utility insecurity and the need for utility rates and rate design to not exacerbate the precarious financial position of those UGI customers who, while not considered low income by the Commission nevertheless struggle to make ends meet each month." CAUSE-PA Statement No 1 at 21:5-8.

b. Mr. Cicero agrees that the federal poverty level is a widely used benchmark for measuring income status in the utility industry. Mr. Cicero does not agree that it is an effective benchmark for measuring need because it does not account for differences in geography or family composition (i.e., ages of children).

Response Prepared by or under the supervision of Patrick M. Cicero.
Dated: April 27, 2026

UGI Gas Exhibit BJM-7R

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 6 (1-17)
Delivered on April 2, 2026

CAUSE-PA-6-17

Request:

Reference UGI St. 12 at 16:17-21.

A. Please describe in detail the methodology used by Experian that resulted in an estimated low income count of 98,785.

B. Does UGI have demographic income data for every one of its residential customers?

C. If the answer to subpart b. above is anything other than an unequivocal yes, please describe why UGI believes that the Experian data accurately counts the number of estimated low income customers within its service territory.

Response:

A. Please see HIGHLY CONFIDENTIAL Attachment CAUSE-PA-1-11 for Experian's January 2026 data assessment and methodology which includes estimated low income counts of 96,137. The methodology used to derive this number is consistent with the methodology used to derive the 2023 figure of 98,785 reported in the Direct Testimony of Brian J. Meilinger, UGI Gas Statement No. 12, at 16:17-21.

B. No.

C. Experian accurately counts the number of estimated low-income customers because their process utilizes insights on actual UGI Gas customers. For the January 2026 data assessment, there was a 90% match rate on name and address. This is in comparison to the methodology of calculating estimated low-income customers reported annually to the Bureau of Consumer Services which is derived by using the United States Census Bureau's American Community Survey 5-year poverty level estimates by county, multiplied by the number of UGI Gas customers in that county.

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

CAUSE-PA RESPONSE TO UGI INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION – SET I

REQUEST:

8) Reference CAUSE-PA Statement No. 1, page 73, lines 1-10. Mr. Cicero proposes that the Company routinely screen customers for household income level on any non-emergency calls.

   a. Has Mr. Cicero performed any analysis on a customer's willingness to provide income information on calls when income information is not required to address the UGI Gas customer's inquiry? If so, please provide a copy of such analysis.

   b. Has Mr. Cicero performed any analysis to assess the potential impact to UGI Gas's customer satisfaction that might result from asking customers for income information on any non-emergency calls, even if the topic is not related to billing or credit? If so, please provide a copy of such analysis.

   c. Has Mr. Cicero performed any analysis related to the potential impact to the Company's call center department's average handle time to "routinely screen existing customers for household income level on any non-emergency calls – and inquire whether there have been any updates to household income in-formation already noted on accounts"? If so, please provide a copy of such analysis.

   d. Has Mr. Cicero performed any analysis related to cost impacts that may arise due to increased call center average handle time to perform income screening? If so, please provide a copy of such analysis.

   e. Has Mr. Cicero performed any analysis related to the IT costs to enhance the UGI online account portal to perform routine income screening? If so, please provide a copy of such analysis.

   f. Is it Mr. Cicero's belief that UGI Gas customers are willing to provide their utility company with income information for calls that do not require income verification?

RESPONSE:

a.-e. No.

f. The term "belief" is not defined and unclear. By way of further answer, it is Mr. Cicero's position, based on his experience, that when a customer is informed that they may be eligible for a lower rate customers are often willing to provide their demographic information, including their income, in order to determine whether they qualify for a lower rate.

Response Prepared by or under the supervision of Patrick M. Cicero.

UGI Gas Exhibit BJM-10R

Income Ask Survey

Energy to do more®

Summary

Objective: Quantify customer attitudes on concept of asking household income on incoming telephone calls to improve participation in income-based assistance programs

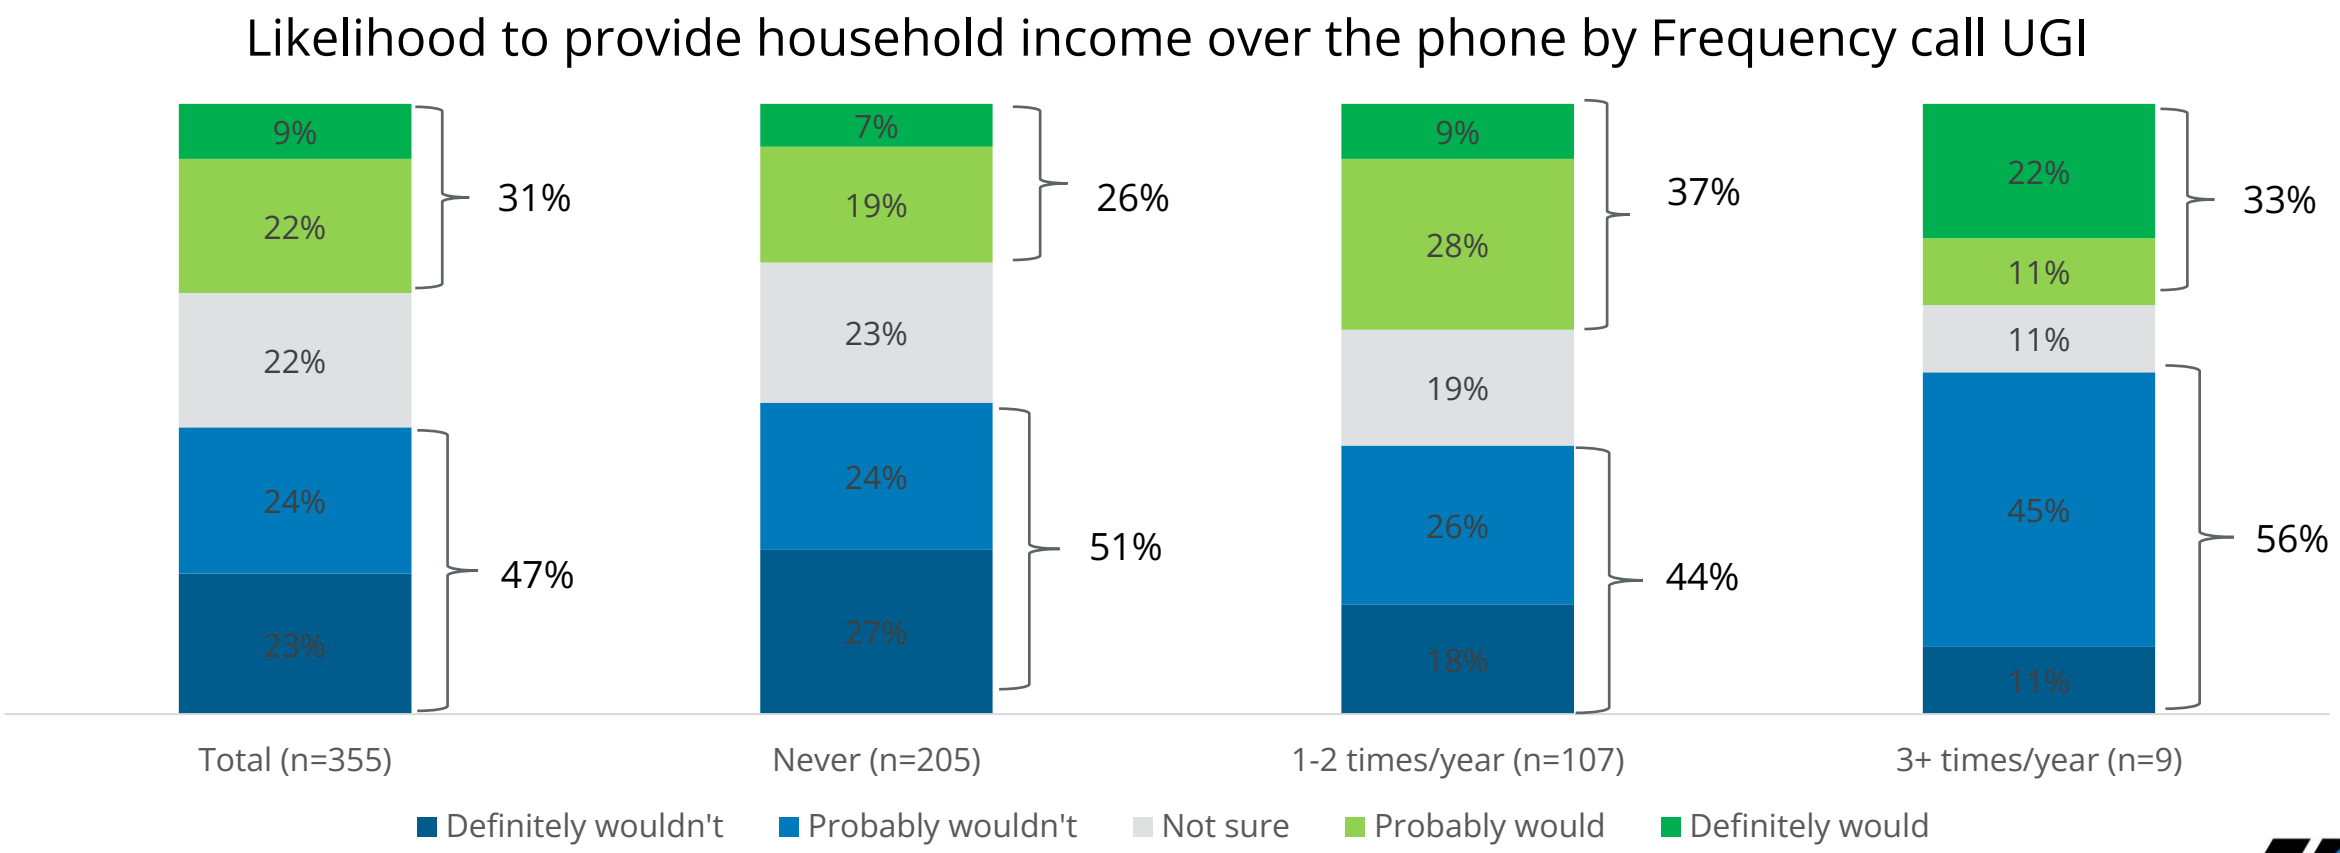
Target Audience: Randomly selected active residential natural gas customers with email address in PA service territory (excluding employees)

Data Collection: Electronic survey; 4,736 survey invites sent; 355 completes for margin-of-error ± 5%

Key Findings:

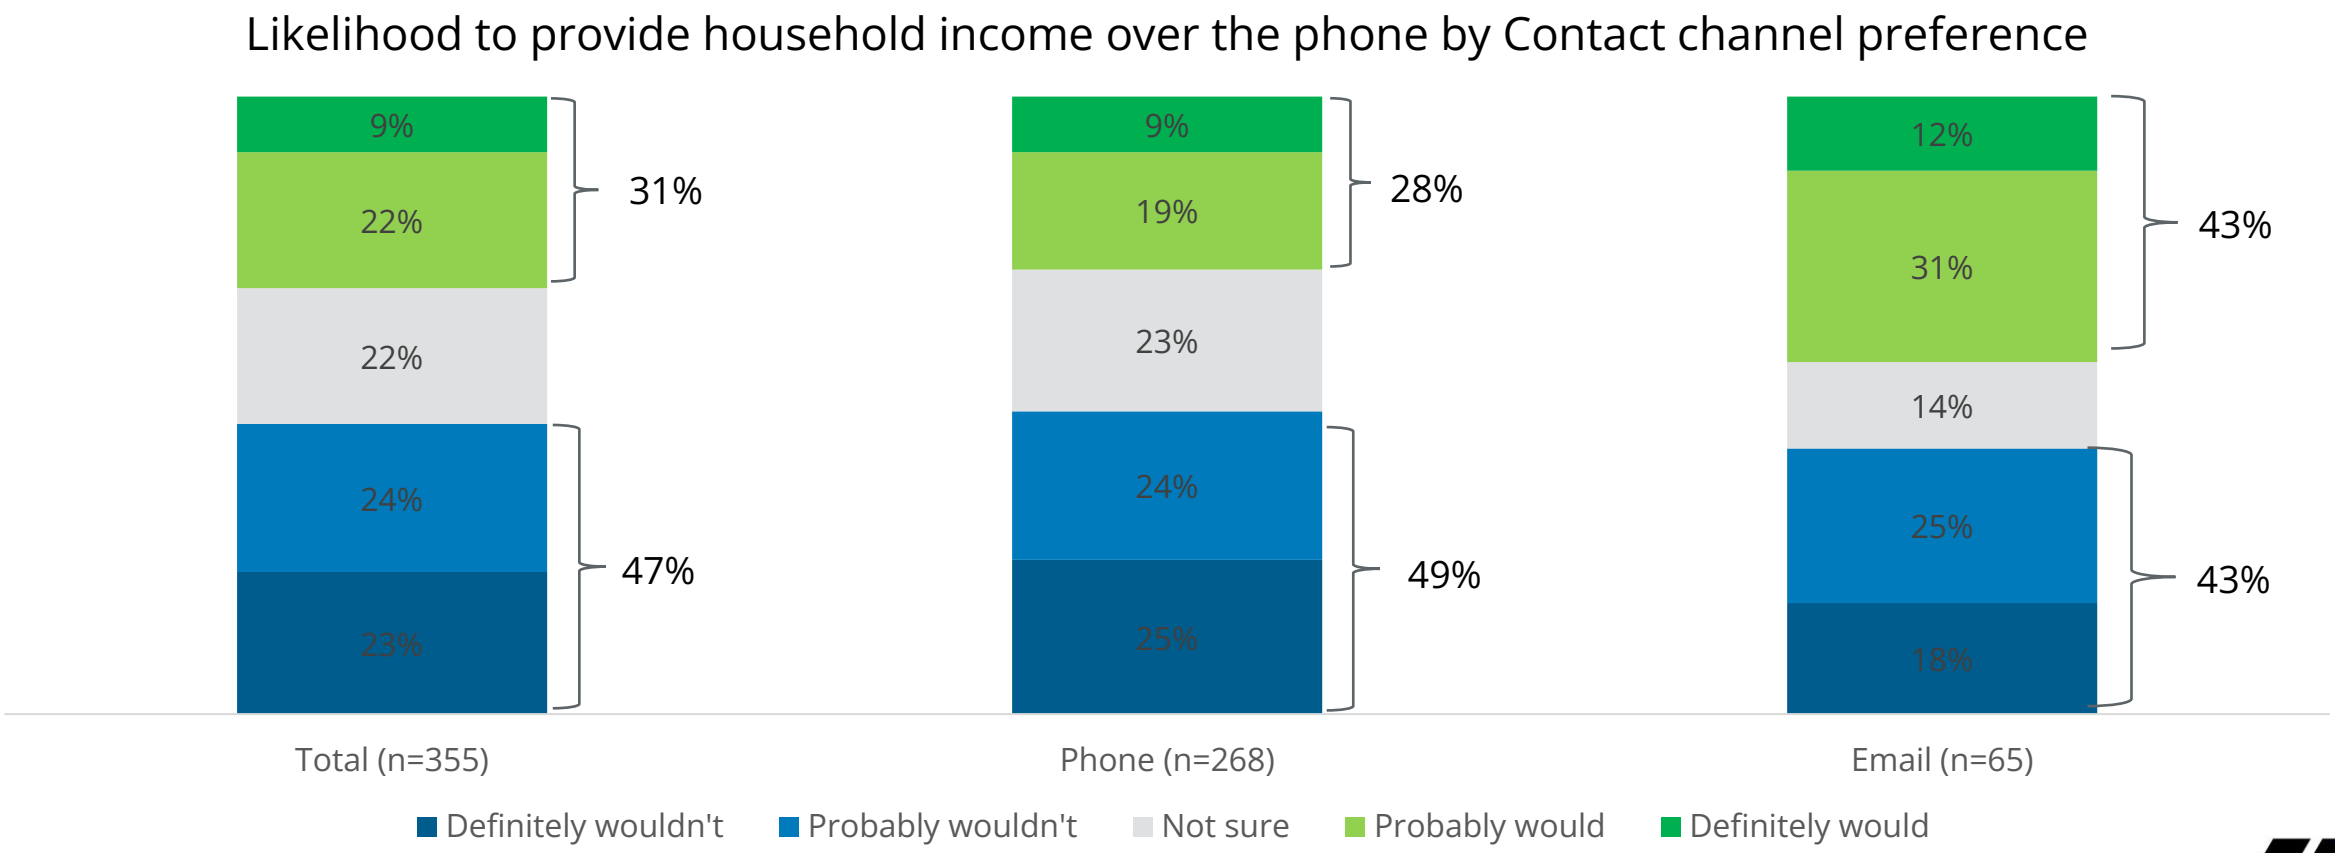
- Roughly half of all respondents stated they would not provide their household income to UGI and one-third stated they would (22% not sure)
  - Only 26% of respondents said they would have no concerns providing their income to UGI
  - Other respondents cited concerns that income data is confidential or they already know they wouldn't qualify for income-based assistance programs
- Still, 60% of respondents expressed some level of interest in learning more about income-based assistance program

Likelihood to Provide Income Data



Energy to do more®

Likelihood to Provide Income Data



Energy to do more®

Concerns and Interest in Programs

Concerns about Sharing Income

- 37% • That information is confidential
- 31% • Already know I wouldn't qualify for programs
- 16% • Don't need income-based assistance programs
- 8% • Spending extra time on phone unrelated to reason for call
- 3% • Fraud/privacy/misuse of info
- 26% • I would not have any concerns sharing my household income

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET I

17) Reference OCA Statement 6, page 51, lines 16-18, where Mr. Colton testifies, "the Company does a poor job of enrolling its Confirmed Low Income Customers into CAP. UGI Gas data documents that consistently more than 40,000 Confirmed Low Income Customers are not enrolled in CAP."

a) Of the 40,000 customers, is Mr. Colton aware of how many of these customers actually qualify for enrollment in CAP? If so, please provide that number.

b) Of the 40,000 customers, is Mr. Colton aware of how many of these customers have been provided marketing materials to apply for enrollment in CAP? If so, please provide that number.

c) Of the 40,000 customers, is Mr. Colton aware of how many of these customers have been provided materials to apply for enrollment in CAP and have returned a completed CAP application? If so, please provide that number.

d) Of the 40,000 customers, is Mr. Colton aware of how many of these customers that have been provided materials to apply for enrollment in CAP, have returned a completed CAP application, and have been affirmatively denied for CAP because they did not qualify for participation in the program? If so, please provide that number.

Response:

a) No.
b) No.
c) No.
d) No.

UGI Gas Exhibit BJM-12R

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET III

1. Reference Witness Colton's response to UGI to OCA, Set I-20, stating that SNAP's income limits are consistent with the Federal Poverty Income Guidelines ("FPIG").

   a. Does SNAP eligibility extend to 200% of the Federal Poverty Level ("FPL")? If no, what is the maximum FPL percentage for eligibility?

   b. Are these guidelines consistent with the 150% of the FPL for enrollment in the Customer Assistance Program?

Response:

a. Not necessarily. Households are not eligible for SNAP if they have gross countable income at *or below* the following as of October 2025:

	Max Monthly SNAP Income	Months in Year	Max Annual SNAP Income	100% FPL	Max Annual SNAP as FPL pct
1	$2,610	12	$31,320	$15,960	196%
2	$3,526	12	$42,312	$21,640	196%
3	$4,442	12	$53,304	$27,320	195%
4	$5,360	12	$64,320	$33,000	195%
5	$6,276	12	$75,312	$38,680	195%
6	$7,192	12	$86,304	$44,360	195%
7	$8,110	12	$97,320	$50,040	194%
8	$9,026	12	$108,312	$55,720	194%

https://www.pa.gov/agencies/dhs/resources/snap/snap-income-limits

Contrary to what is asserted in the question, however, having gross countable income below the maximum dollar amounts does not necessarily make a household income eligible for SNAP. SNAP income eligibility, of course, is not based exclusively on gross income as a percent of Poverty Level as asserted in the question. In addition, a household's net income must be less than 100% of Poverty Level. Households must meet both gross and net income limits to income-qualify for SNAP. The closer gross countable income comes to 200% of the Federal Poverty Level, the less likely it is that net income will fall below the additional income-qualifying guideline.

b. Yes. The *maximum* income limits presented above, however, do not demonstrate whether or not demonstrating Food Stamp income participation is "consistent with" the income

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET III

eligibility requirements for CAP. The Table below shows the distribution of Pennsylvania SNAP recipients by Federal Poverty Level in Pennsylvania for the three most recent years available (USDA, Characteristics of Supplemental Nutrition Assistance Program Households):

Distribution of SNAP participating households by gross countable income as percent of poverty status: Pennsylvania				
	Zero gross income	1% to 50% FPL	51% to 100% FPL	101% or more FPL
2020	16.1%	10.2%	48.6%	25.0%
2021***	Not Published			
2022	17.4%	11.3%	39.9%	31.4%
2023###	16.9%	9.4%	37.7%	36.0%

***Due to a lack of data collection caused by the COVID health pandemic, no 2021 data was published.
###Most recent year available (published April 2025).

While USDA does not disaggregate SNAP recipient households into Poverty ranges of 100% to 150% and 150% or more, the disaggregation nonetheless documents that any reasonable distribution of SNAP recipients with income 100% or more would demonstrate the consistency of Food Stamp eligibility with CAP eligibility.

Even the distribution presented above does not fully document the extent to which Food Stamp income eligibility is consistent with CAP income eligibility. The Table below shows the *average* Poverty Level of Food Stamp recipients in Pennsylvania by year for the years 2020 through 2023 (USDA, Characteristics of Supplemental Nutrition Assistance Program Households).

Gross Countable Income as Average Percent of Poverty Level of SNAP Recipient Households: Pennsylvania	
2020	74.8%
2021	***
2022	78.4%
2023###	85.9%

***Due to a lack of data collection caused by the COVID health pandemic, no 2021 data was published.
###Most recent year available (published April 2025).

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET I

16) Reference OCA Statement 6, page 4, lines 14-20. Please provide sample content that Mr. Colton is recommending as part of his plain language notice informing customers of their right to enroll in the Customer Assistance Program ("CAP").

Response:

Mr. Colton did not recommend specific language informing customers of their right to enroll in the Customer Assistance Program (along with arrearage forgiveness) as an alternative to entering into a payment arrangement through which customers would pay a non-discounted bill for current service plus a monthly installment toward their pre-existing arrears. No "sample content" has been prepared.

Regarding: [redacted]
Service Address: [redacted]

Hello,

Our records indicate that you have a past due balance of $115.41 on the UGI account listed above. Please arrange for payment of this amount as soon as possible. If this amount has already been paid, you may disregard this notice.

If you need help with your utility bill, you may be eligible for the UGI Customer Assistance Program (CAP). CAP offers a personalized monthly payment and provides bill and debt forgiveness with on-time payments. To apply for CAP, you will need to provide proof of household income and identification. To see if you are eligible, and to complete an application, visit ugi.com/CAP or call us at 800-UGI-WARM.

If you have any other questions regarding this bill or to make payment, please visit UGI online at ugi.com or call us at 800-276-2722, Monday through Friday 8 am to 5 pm.

Thank You,

UGI Utilities

IMPORTANT TO KNOW - BEFORE WE SHUT OFF YOUR UTILITY SERVICE

- If you have questions or need more information, please call us today at (800) 276-2722. After you talk with us, if you are not satisfied, you may file a complaint with the Public Utility Commission (PUC). The PUC may delay the shut off if you file the complaint before the shut-off date. To contact them call 1-800-692-7380 or write to: Pennsylvania Public Utility Commission, Box 3265, Harrisburg, PA 17105-3265.
- **If we shut off your service during the winter months (between Dec.1 - Mar. 31)** we will restore your service within 24 hours of your meeting all requirements/conditions to have service reconnected. Where street digging is required it may take up to 7 days.
- If you currently have a valid protection from Abuse order from a court your service cannot be terminated during the winter without PUC permission. There are some additional protections available to you. **Call us immediately at (800) 276-2722**. (You will be required to provide us with a copy of the order.)
- You may be eligible for a payment agreement or special assistance programs such as the UGI Customer Assistance Program (CAP). CAP offers a personalized monthly payment and provides bill and debt forgiveness with on-time payments. To apply for CAP, you will need to provide proof of household income and identification. To see if you are eligible, visit ugi.com/CAP or call us at (800) 276-2722.
- You may be eligible to pay the full past due amount on the most recent payment agreement.
- If your landlord pays your utility bill: You have certain legal protections. Call us at (800) 276-2722.
- If you have trouble understanding or speaking English or have a disability call us at (800) 276-2722 for free interpretation.
- If your service is shut off, you may be required to pay more than the amount listed on the front of this notice to have your service turned back on. You may have to pay any additional bills that have become past due.
- All adult occupants of the premise whose names are on the mortgage, deed, or lease are considered the "customer" and are responsible for payment of this bill.
- If service is shut off, ANY adult occupant who has been living at the premise may have to pay all or portions of this bill to have service restored.
- If your service is shut off, you must contact us after your payment has been made to be sure you have met all conditions to have the service turned back on and to arrange access to your premises.
- After all conditions have been met to have the service turned back on, it may take up to seven days to have your service restored. Please contact us to discuss the details.

WINTER NOTICE PROVISIONS (between December 1 - March 31)

- **Contact us BEFORE the shut off date** to give us household income & occupant information to see if you qualify for any assistance programs.
- **If your income is at or below 250% of the federal poverty guidelines, we must first ask the PUC for permission to shut off your service.** Add together the monthly income of the adults in your household. If that number is the same or less than the amount listed in the chart below for your household size, call us immediately at (800) 276-2722. You may need to provide us with proof of your income.

Monthly Income at 250% of Federal Poverty Level:2026					
Household Size	1	2	3	4	Add $1,183 for each additional household member.
Monthly Income	$ 3,325	$ 4,508	$ 5,692	$ 6,875

To contact them call 1-800-692-7380 or write to: Pennsylvania Public Utility Commission, Box 3265, Harrisburg, PA 17105-3265.
- **If we shut off your service during the winter months (between Dec.1 – Mar. 31)** we will restore your service within 24 hours of your meeting all requirements/conditions to have service reconnected. Where street digging is required it may take up to 7 days.
- If you currently have a valid Protection From Abuse order from a court your service cannot be terminated during the winter without PUC permission. There are some additional protections available to you. **Call us immediately at 1-800-276-2722.** (You will be required to provide us with a copy of the order.)
- You may be eligible for a payment agreement or special assistance programs such as the UGI Customer Assistance Program (CAP). CAP offers a personalized monthly payment and provides bill and debt forgiveness with on-time payments. To apply for CAP, you will need to provide proof of household income and identification. To see if you are eligible, **visit ugi.com/CAP or call us at 1-800- 276-2722.**
- You may be eligible to pay the full past due amount on the most recent payment agreement.
- If your landlord pays your utility bill: You have certain legal protections. Call us at 1-800-276-2722.
- If you have trouble understanding or speaking English or have a disability call us at 1-800-276-2722 for free interpretation.
- If your service is shut off, you may be required to pay more than the amount listed on the front of this notice to have your service turned back on. You may have to pay any additional bills that have become past due.
- All adult occupants of the premise whose names are on the mortgage, deed, or lease are considered the "customer" and are responsible for payment of this bill.
- If service is shut off, ANY adult occupant who has been living at the premise may have to pay all or portions of this bill to have service restored.
- If your service is shut off, you must contact us after your payment has been made to be sure you have met all conditions to have the service turned back on and to arrange access to your premises.
- After all conditions have been met to have the service turned back on, it may take up to seven days to have your service restored. Please contact us to discuss the details.

WINTER NOTICE PROVISIONS (between December 1 – March 31)

- **Contact us BEFORE the shut off date** to give us household income & occupant information to see if you qualify for any assistance programs.
- **If your income is at or below 250% of the federal poverty guidelines, we must first ask the PUC for permission to shut off your service.** Add together the monthly income of the adults in your household. If that number is the same or less than the amount listed in the chart below for your household size, call us immediately at 1-800-276-2722. You may need to provide us with proof of your income.

Monthly Income at 250% of Federal Poverty Level: 2025					
Household Size	1	2	3	4	Add $1,146 for each additional household member.
Monthly Income	$3,260	$4,406	$5,552	$6,698

YOUR GAS/ELECTRIC SERVICE MAY BE SHUT OFF!

Because your bill is past due, we will shut off the service to

_____

on or after 8:00 a.m. on
without further notice.

The Service is being shut off because:

_____ You did not pay your past due bill.
_____ You did not pay your security deposit.
_____ You have not given UGI access to our meter.
_____ You need to complete an application/establish credit.
_____ Rejected payment.
_____ Safety Check.

We will NOT shut off your service if you do ONE of the following:

- Call us at **1-800-276-2722** to:
  - Show us a paid receipt for the past due amount.
  - Arrange to pay your past due bill.
  - Pay the amount you owe on your payment plan.
  - Give UGI access to read our meter.
  - Complete the credit/application process.
- Call **1-800-276-2722 right away** if you dispute this bill or to provide us with household income and occupant information. You may be eligible for a payment agreement or special assistance programs.

If we shut off your service, you may have to pay all of the following before we can turn your service on:

Overdue Amount	$ _____
Security Deposit	$ _____
Turn-on Charge	$ _____
Total	**$**_____

- **Please call our office at 1-800-276-2722.**

MEDICAL EMERGENCY NOTICE

Let us know if someone living in your home is seriously ill or has a medical condition. **WE WILL NOT SHUT OFF YOUR SERVICE provided you:**

1. Have your licensed physician or nurse practitioner certify in writing that such an illness exists and that it may be aggravated if your service is shut off; **AND**
2. Make some equitable arrangement to pay the company your current bills for service.

IMPORTANT TO KNOW

Before we shut off your utility service please read the back of this notice. You may be eligible for certain protections from shut off.

UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 6 (1-17)
Delivered on April 2, 2026

CAUSE-PA-6-1

Request:

Please specifically describe all instances where UGI informs low income customers about the availability of the exemption from security deposit collection and ability to receive a refund of their security deposit.

Response:

UGI Gas informs low-income customers about the availability of the security deposit exemption and the ability to receive a refund of their security deposit through several touchpoints. When a customer is identified as verified low-income through enrollment in a qualifying program, the customer's account is automatically updated and any held security deposit is released at that time. Customers are notified of this action via their account statement reflecting the deposit return.

Additionally, information regarding security deposit exemptions for low-income customers is made available through UGI Gas's CCRs. For self-reported low income customers, customers are advised that they will be sent a CAP application/waiver letter. Please see CAUSE-PA-6-9.1 (waiver letter) and CAUSE-PA-6-9.2 (email confirmation).

Please reference CONFIDENTIAL Attachment OCA-3-2.4, page 70, for additional procedures related to security deposit exemptions.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 13-R

Rebuttal Testimony of
Daniel V. Adamo

Topics Addressed:	**Compliance with 2025 Rate Case Settlement** **Customer Service** **Credit and Collection Expense**

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Daniel V. Adamo. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom and in what capacity are you employed?

A. I am employed by UGI Utilities, Inc. ("UGI"), as Vice President – Customer Relations. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Electric Division ("UGI Electric") and the Gas Division ("UGI Gas" or the "Company"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. Please briefly describe your responsibilities in that capacity.

A. In this position, I am responsible for managing all marketing, sales, community relations, communications, and the customer information center for UGI, as well as the customer accounting, credit and collections, customer outreach, and compliance departments. In this role, I oversee regulatory compliance with Chapter 14 of the Public Utility Code, 66 Pa. C.S. § 1401, *et seq.*, related consumer regulations, including Chapter 56 of the Pennsylvania Public Utility Code, 52 Pa. Code § 56.1, *et seq.*, and compliance with generally applicable consumer protection, collection, consumer bankruptcy regulations, and the administration of all Universal Service Programs.

Q. What is your educational and professional background?

A. I graduated from Lehigh University in 1998 with a B.S. in Mechanical Engineering. I started my employment with UGI in 1998. My full resume is attached as UGI Gas Exhibit DVA-1R.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of UGI Gas.

Q. Have you been involved in other proceedings before the Commission?

A. Yes. I testified on behalf of UGI Gas in its purchased gas cost filings in 2008 and 2009 as well as the Company's petition for approval of the Growth Extension Tariff ("GET Gas") Program in 2013. I also testified on behalf of UGI Gas in its 2019 Base Rate Case proceeding at Docket No. R-2018-3006814, in its 2020 Base Rate Case proceeding at Docket No. R-2019-3015162, in its 2022 Base Rate Case proceeding at Docket No. R-2021-3030218, and in its 2025 Base Rate Case proceeding at Docket No. R-2024-3052716. Further, I testified on behalf of UGI Electric in its 2021 Base Rate Case proceeding at Docket No. R-2021-3023618 and in its 2023 Base Rate Case proceeding at Docket No. R-2022-3037368. Please see UGI Gas Exhibit DVA-1R for a complete listing of the proceedings in which I testified and their docket numbers.

Q. Have you previously submitted testimony in this proceeding on behalf of UGI Gas?

A. No, I have not.

Q. What is the purpose of your rebuttal testimony?

A. I will respond to certain portions of the direct testimony submitted by Office of Consumer Advocate ("OCA") Witnesses Jennifer Rogers (OCA St. 2), Barbara Alexander (OCA St. 5), Roger Colton (OCA St. 6), and Zach Teti (OCA St. 7) and Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Patrick Cicero (CAUSE-PA St. No. 1). Additionally, I will also respond to Office of the Small Business Advocate ("OSBA") Witness Mark Ewen (OSBA St. No. 1). In particular, my rebuttal testimony will address allegations and recommendations concerning the Company's compliance with its 2025 Rate Case Settlement, UGI Gas's customer service, and the Company's credit and collection expenses.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits DVA-1R through DVA-5R.

II. <u>COMPLIANCE WITH 2025 RATE CASE SETTLEMENT</u>

Q. OCA Witness Barbara Alexander summarizes the Company's compliance under the 2025 Rate Case Settlement related to customer service and consumer protections and then alleges that the Company has failed to comply with various provisions, that she cannot evaluate compliance due to timing, or that some of the deadlines for commitments had not yet come to pass when the case was filed. OCA St. 5, at pp. 9-19. Before responding to her specific claims, is there any question that UGI Gas has complied with these commitments under the 2025 Rate Case Settlement?

A. No. Please see UGI Gas Exhibit DVA-2R, which is the internal tracking project management tool that the Company has utilized to maintain compliance with all the

customer service related items required by the UGI Gas 2025 Rate Case Settlement. To date, the Company has completed all required items on time. On pages 9-11 in Witness Alexander's testimony, she questions UGI Gas's compliance on these settlement items. She focuses on the Company's performance compared to other utilities, but per the UGI Gas 2025 Rate Case Settlement, there is no question that the Company met its call center metrics when comparing 2024 to 2025. See UGI Gas Exhibit DVA-3R for a comparison of the results in 2024 and 2025. In addition, in 2024, UGI Gas had very similar results to Peoples Natural Gas Company LLC ("Peoples"). Peoples is the closest size utility in terms of number of customers served with respect to Grade of Service ("GOS"), which is the percentage of calls answered within 30 seconds and abandonment rate.

Q. Could you please respond to Witness Alexander's claims regarding the Company's call center performance, including her concern about the alleged variability in call abandonment rates from month to month and her assertion that the Company has not complied with its "soft" obligation to continue its 2024 call center performance results? OCA St. 5, at pp. 12-13.

A. Witness Alexander's position should be rejected. Although there may be month to month variability in performance, Witness Alexander apparently overlooks how UGI Gas staffs accordingly to reduce customer impact during high call volume times but not to be over staffed during periods where call volumes are lower. Traditional months where increased call volumes are experienced are in October/November, due to customers' efforts to retain gas service before the winter moratorium, and March/April, to prevent shut off for non-payment after the winter moratorium. Witness Alexander calls out three months of

abandonment rate data and then compares those numbers to the 12-month average in 2024. However, when you properly compare the month to month variance from 2024 to 2025, the Company actually outperformed 2024's statistics in 2 of the 3 months. Table 1 below provides a comparative abandonment rate analysis, which also includes the Fiscal Year 2026 results thatAdditionally, the 4.4% abandonment rate experienced in 2024, which is the 2025 Rate Case Settlement target for comparison in 2025, resulted in a 4.7% abandonment rate. Based on comparing the 12 months of data for 2024 versus 2025 using a paired t-test,[1] the abandonment rate has not meaningfully changed year-over-year. Further, the actual year-over-year variance amounts to less than one call per hour difference.

Table 1 – Abandonment Rate Selected Months for 2024 - 2026

Month/Year	Abandonment Rate (%) FY24	Abandonment Rate (%) FY25	Abandonment Rate (%) FY26
October	12%	7.8%	9.6%
November	14.6%	4.6%	7.5%
February	3.8%	6.1%	4.9%
Full Calendar Year Rate	4.4%	4.7%	n/a

[1] "Paired T-Test": A paired t-test is widely-used statistical method to compare the averages of two related groups to determine if the variance is real due to some underlying factor and not due to random chance.

Q. Witness Alexander also states that the Company has "not yet" complied with its Universal Service Advisory Committee ("USAC") reporting requirements under the 2025 Rate Case Settlement. OCA St. 5, at p. 14. Do you have anything to add?

A. The Company recently completed its submission for the Commission's annual Customer Service Performance Report at the end of March. The Company has subsequently submitted the year over year comparison report to OCA, OSBA, CAUSE-PA, and the Commission's Bureau of Investigation and Enforcement ("I&E") at the end of April 2026, which should be a reasonable period of time after the data's submission to the Commission. As Witness Alexander notes in her testimony, the Company does plan to review the results in the next USAC meeting tentatively scheduled for June 2026. Therefore, while it may be true for her to say that the Company has "not yet" complied with its USAC reporting requirement, UGI Gas is on track to do so on time.

Q. Do you have any comment on Witness Alexander's testimony regarding the Company's commitment to complete a root cause analysis for certain complaints? OCA St. 5, at pp. 16-17.

A. Yes. As demonstrated in the Company's response to discovery request OCA-9-16, material progress has been made towards this commitment. Since August 2025, a cross-functional team has: (1) worked to document the end-to-end complaint handling process and addressed process gaps; (2) aggregated and analyzed historical data to optimize record categorization and trend tracking; (3) developed a dashboard for monitoring; and (4) drafted preliminary Apparent Cause Analysis ("ACA") and Root Cause Analysis ("RCA") forms to be tested against identified scenarios. The Company is on track to deliver a report

to CAUSE-PA, the Commission on Economic Opportunity ("CEO"), I&E, OCA, and OSBA describing UGI Gas' progress and the results of its review and implementation of the RCA and/or ACA process on or before October 1, 2026.

Q. Witness Alexander acknowledges that the Company has developed a written confirmation of a payment arrangement but nonetheless asserts that the document is "defective in that it does not include any notice of customer rights and should be revised to do so, including the right to dispute the terms of the payment arrangement with UGI Gas and, if not satisfied, how to file an informal complaint to the Commission." OCA St. 5, at p. 17. Do you agree?

A. No. Paragraph 87 of the Settlement states the following: "UGI Gas agrees to develop and implement a written communication to confirm the terms of initial and substantially modified payment agreements upon conclusion of a customer's oral agreement to terms. This will be implemented by April 1, 2026." It says nothing about including a notice of customer rights in the written communication. Therefore, the Company has complied with the actual terms of the 2025 Rate Case Settlement.

Q. Please respond to Witness Alexander's testimony about the Company's revised customer communications and training materials related to the Weather Normalization Adjustment ("WNA"). OCA St. 5, at pp. 17-18.

A. Witness Alexander states that "[a] significant omission in these communications is a presentation of the historical incremental charges and/or credits imposed on customers as a result of this program." However, Paragraph 58 of the UGI Gas 2025 Rate Case

Settlement required all parties to review and provide input on the letter prior to it being programmed and implemented within UGI Gas's Customer Information System ("CIS"). OCA provided feedback on the letter, which UGI Gas largely accepted. None of the concerns being raised by Witness Alexander now were provided in OCA's comments. Due to the complexity of the inputs and changes in the customer letter, the Company's Information Technology ("IT") team is currently working through the required system changes. Implementation is targeted to coincide with the first bill that will contain WNA in the Fall of 2026, and Customer Service Representative ("CSR") training will be completed prior to the letter being available to send via the Company's CIS.

Q. Although Witness Alexander acknowledges that the Company has moved the presentation of the Price to Compare ("PTC") to the front of the bill, she asserts that the terms used to describe the "natural gas Price to Compare" and the supplier's "commodity charge" should "be the same so that the customer can more directly relate the PTC to the NGS's charges on the customer bill." OCA St. 5, at pp. 18-19. Do you agree?

A. No. First, Witness Alexander admits that the Company complied with Paragraph 66 of the 2025 Rate Case Settlement to move the PTC from the back of the bill to the front. Second, I disagree with Witness Alexander's request that the Company change PTC or the supplier's "commodity charge." The PTC is a well-established and widely utilized term in the Commonwealth that is consistently used by the Commission and other utilities, and understood by customers. Additionally, the definitions of Commodity Charge, Purchased Gas Adjustment and PTC are on the back of the customer's bill under Explanation of Terms

so that any customer that is not familiar with these terms has immediate access to the explanation.

Q. Please address Witness Alexander's testimony about UGI Gas's implementation of alternative methods for bill payment, including her claim that the Company failed to implement the ability to pay by Venmo or Apple Pay by the September 30, 2025 deadline. OCA St. 5, at p. 19.

A. The Company has complied with Paragraph 68 of the UGI Gas 2025 Rate Case Settlement. Witness Alexander bases her position entirely on the Company's "public website" purportedly not "mention[ing] the ability to pay via Venmo or ApplePay [sic]." In actuality, the Company implemented Apple Pay on July 16, 2025, and Venmo on September 11, 2025, both of which pre-dated the September 30, 2025 deadline under the Settlement. Customers could use these payment options when making a one-time payment beginning on those respective dates. Please see Table 2 below for customers that made payments via Apple Pay and Venmo once the methods were available. Additionally, the website shown in UGI Gas Exhibit DVA-4R is a copy of the Company's webpage showing the current payment options.

Table 2 – Customer Payments made via Apple Pay and Venmo

Month	Apple Pay	Venmo
July 2025	188	n/a
August 2025	340	n/a
September 2025	446	19
October 2025	504	16
November 2025	504	12
December 2025	525	18
January 2026	564	22
February 2026	603	26
March 2026	842	21
Total	4,516	134

The remaining payment options – PayPal, and PayPal Credit, were implemented in May 2026. Google Pay is currently on track to be moved to production for customers to use it by the end of May to early June of 2026. The Company's payment vendor no longer supports Amazon Pay, so that service cannot be implemented. Once the remaining three payment options are implemented fully, the Company will be using all options provided by its payment vendor. The Company will continue to add more options as the vendor makes more available. I note that there was no specified implementation date for the other payment options, specifically, Google Pay, PayPal, and PayPal Credit, under Paragraph 68 of the UGI Gas 2025 Rate Case Settlement. The Settlement only specifies that they would be implemented "on a phased-in approach to allow time for proper testing of each option."

As such, Witness Alexander's testimony on page 19 that "it is not clear if the required date for implementation was met for all these new payment options" does not accurately describe the Settlement.

Q. Do you have any final observations about Witness Alexander's testimony on these subjects?

A. I do. My testimony clearly shows that the Company has complied to date with all customer service-related items in the UGI Gas 2025 Rate Case settlement and is on track to continue meeting obligations as agreed upon. I would again refer to UGI Gas Exhibits DVA-2R and DVA-3R highlighting those commitments and the actions taken by UGI Gas to comply with the Settlement. Moreover, on page 20, lines 1-14 of her direct testimony, where Witness Alexander states UGI Gas is not meeting the 2025 Rate Case Settlement commitments, she is advocating for new proposals that were not part of the commitments made in the 2025 Rate Case Settlement. UGI Gas cannot be expected to comply with terms that were not included in the Settlement and reflect an expansion on the specific wording of the terms. As such, it is incorrect to suggest that the Company failed to comply. Therefore, Witness Alexander's positions and recommendations should all be rejected.

III. CUSTOMER SERVICE

A. CALL CENTER PERFORMANCE

Q. In addition to her testimony about the Company's call center performance related to the 2025 Rate Case Settlement, OCA Witness Alexander recommends "that the current internal UGI performance metrics for call centers that [she] ha[s] identified be formally adopted and required by the Commission to ensure that UGI Gas'

internal performance requirements are maintained and not allowed to deteriorate." OCA St. 5, at p. 22. Please respond.

A. The Company already submits customer service performance metrics on an annual basis to demonstrate compliance against a standard. While the Company is pleased that Witness Alexander positively recognizes and supports the Company's efforts, these are internal performance metrics to measure management quality, which is already evaluated through the periodic Management Efficiency Audits in which the Company participates. As such, her proposal is not necessary.

B. SHOPPING CUSTOMERS

Q. OCA Witness Alexander recommends that the Company "adopt additional and more targeted customer communications to assist customers in ensuring affordability for basic natural gas service due to high NGS charges that appear on the customer bill that UGI collects under threat of termination of service." OCA St. 5, at p. 9. What recommendations does she make specifically?

A. Witness Alexander recommends that UGI Gas: (1) "eliminate [its] prominent statement in the bill insert materials that retail choice may have the potential to 'save'"; (2) "include information in its FAQs and customer bill inserts about the right to choose and explain that the risk of higher prices is documented and how to avoid higher prices and bills"; (3) "explain how to shop and compare NGS prices during the entire term of the contracts and alter customers to the potential for a change in the NGS price after any initial promotional price and how NGS variable rates can reflect volatile changes in the wholesale market"; and (4) "develop targeted communication to customers with NGS charges that increase significantly over the PTC to alert them to compare that price to the PTC and include a

calculation that documents this difference in the customer's recent bill(s)." OCA St. 5, at p. 25.

Q. What is the Company's position on these recommendations?

A. The Company complies with the Commission's bill format regulations and has moved the price to compare section of the bill from the second page to the first page to make it more prominent for customers to view. UGI Gas also has call scripts to respond to customer's questions on choice and, as shown in the attached UGI Gas Exhibit DVA-5R, has a dedicated website page educating customers on the ability to shop and providing additional resources, such as PA Gas Switch. Lastly, concerning Witness Alexander's recommendation that UGI Gas "develop targeted communication to customers with NGS charges that increase significantly over the PTC to alert them to compare that price to the PTC and include a calculation that documents this difference in the customer's recent bill(s),"[2] there would be costs associated with programming a system alert and communications to be sent to customers when their supplier cost is above the current PTC. The Company estimates that the IT costs to program a price to compare alert versus the customer's current choice supplier rate would be approximately $150,000.

[2] OCA St. 5, at p. 25.

C. SOCIAL SECURITY NUMBERS

Q. Could you please provide an overview of OCA Witness Colton's claims regarding the Company's use of Social Security Numbers ("SSNs")?

A. Witness Colton asserts that the Company should refrain from or be prohibited from the future collection of SSNs from its customers due to the rise in identity theft. OCA St. 6, at p. 65. Among other things, Witness Colton argues that SSNs are not good authenticators for the purpose of reducing fraud and points to guidance from the Office of Management and Budget ("OMB"), the Federal Trade Commission ("FTC"), and the Task Force on Identity Theft as support for reducing the use of SSNs. OCA St. 6, at pp. 65-70, 75. He also claims that the Company lacks information about best practices regarding SSNs and that UGI Gas does not inform or notify customers about the intended retention and use of SSNs at the time the SSNs are requested. OCA St. 6, at pp. 70-74. Additionally, Witness Colton raises concerns about the sharing of customer data within the UGI corporate structure beyond UGI Gas. OCA St. 6, at pp. 74-75. Therefore, he recommends that the Commission direct UGI Gas to "report to the Commission, within 12 months of a final decision in this docket, its plan to eliminate the collection and retention of customer Social Security Numbers" and that "[t]his plan should include a plan for elimination of the SSNs currently retained in Company information technology." OCA St. 6, at pp. 75-76.

Q. What is your response?

A. To clarify, the Company asks for a new customer's SSN when they apply for service so that an Experian check can be run to verify their identity. If a customer does not wish to provide their SSN, they are able to provide their driver's license number as an alternative. Regarding enrollment for the Company's Universal Service Programs, SSN was previously

requested. However, pursuant to Paragraph 59(a) of the 2025 Rate Case Settlement, the Company agreed to implement the Commission's Common Application Form and is utilizing it for its Customer Assistance Program ("CAP") and Operation Share as of December 2025. This form does not include a request for SSN. Additionally, an SSN is requested, but not required, on the Low Income Usage Reduction Program ("LIURP") application. This information is used for validation in the event the Company finds that the same household members are listed in applications for separate properties. Further, Witness Colton raises concerns about the sharing of customer data within the UGI corporate structure beyond UGI Gas. OCA St. 6, at pp. 74-75. The Company does not share customers' SSNs with affiliates or corporate entities. The standards and policy programs for safeguarding customer personal information are what is shared across business units. Finally, Witness Colton provides no specific recommendations about what should replace the use of SSNs. Thus, his recommendation is incomplete and does not require Commission action.

D. TERMINATION OF SERVICE

Q. CAUSE-PA Witness Cicero recommends that the Company amend Rule 9 of its retail tariff governing termination and disconnection of service, such that the Company provide at least 10 days' written notice of termination (as opposed to "reasonable notice"). CAUSE-PA St. No. 1, at p. 92. Does the Company agree with this recommendation?

A. Yes.

Q. Witness Cicero also proposes that the Company be required to remove "violation of tariff Rules and Regulations" as a ground for termination with notice, asserting that such provision is "overly broad" and is "not authorized by existing PUC regulations of the Public Utility Code." CAUSE-PA St. No. 1, at pp. 92-93. Please respond.

A. I am advised by counsel that this issue will be further addressed in the Company's briefs. However, UGI Gas maintains that its existing, Commission-approved tariff is lawful. Counsel advises me that the Commission's regulations do not function as an absolute limit on the grounds for which UGI Gas can terminate customers' service with notice. Additionally, other utilities' Commission-approved tariffs contain similar language. For example, Peoples's tariff states that it can terminate gas service for "failure to comply with or violation of Tariff Rules and Regulations." Peoples Tariff Rule 5, Supp. No. 2 to Gas – Pa. PUC No. 48, First Revised Page No. 24. Likewise, PECO Energy Company – Gas Division's ("PECO Gas") tariff provides that it can terminate service "for other violation of these Rules and/or applicable Commission rules in accordance with the Pennsylvania Public Utility Code or the Commission's regulations." PECO Gas Tariff Rule 17.2, Gas-Pa. P.U.C. No. 6, Original Page No. 27. Some examples where termination of service is required without notice or with limited notice include the following: customers that are in violation of the Company's tariff and create a safety risk for the customer, others, and/or the Company's property; tampering of meter and Company equipment; theft of service; and not allowing access to inspect the Company's facilities as required by regulations.

E. SMALL BUSINESS PAYMENT PLANS AND OTHER OSBA RECOMMENDATIONS

Q. Have you reviewed OSBA Witness Ewen's testimony?

A. Yes.

Q. What recommendations does Witness Ewen make?

A. Witness Ewen notes that UGI Gas offers small business customers payment plans for up to 6 months. OSBA St. No. 1, at p. 3. He recommends that the Company implement a formal mechanism to track interactions in which small business customers report financial difficulties (e.g., trouble paying heating bills on time), including both participation in the Company's existing late payment plan and more informal complaints or inquiries. OSBA St. No. 1, at p. 3. Witness Ewen notes that these interactions should be tracked annually and categorized by the customer's respective rate class (Rate N, Rate DS, etc.). OSBA St. No. 1, at p. 3. He also recommends that UGI Gas provide the OSBA's contact information and a description of the services the OSBA offers on the Company's website. OSBA St. No. 1, at p. 3.

Q. Do you have any response to these recommendations?

A. The Company currently complies with all regulatory filing requirements with the Commission for customer-related data and performance and, therefore, does not believe additional metrics should be required. However, the Company does agree with the proposal to include OSBA's contact information and a description of OSBA's services on the Company's website.

IV. CREDIT AND COLLECTION EXPENSES

Q. Does OCA Witness Colton make any proposals with respect to UGI Gas's credit and collection expenses?

A. Yes. Witness Colton recommends that "there be a fifty-fifty sharing of the credit and collection expenses which UGI Gas proposes to include in its cost of service." OCA St. 6, at p. 4.

Q. What are the purported reasons for Witness Colton's recommendation?

A. Witness Colton points to Section 523 of the Public Utility Code as support for adjusting the Company's claimed cost of service based on alleged "inefficiency and ineffectiveness of the UGI Gas expenditures" in this area. OCA St. 6, at p. 50. According to Witness Colton, UGI Gas's current credit and collection techniques and efforts are ineffective because the Company: (1) does a poor job of responding to unaffordability issues faced by low-income customers; (2) allows customers to fall into debt; (3) fails to reconnect service; and (4) writes off a higher percentage of revenue. *See* OCA St. 6, at pp. 41-47. Witness Colton also claims that UGI Gas relies on "unrealistic agreements" instead of identifying low-income customers and enrolling them in CAP. OCA St. 6, at pp. 47-50.

Q. Do you agree with Witness Colton?

A. Absolutely not. Witness Colton asserts that "[w]hatever collection activity UGI Gas is directing toward Confirmed Low-Income customers is evidently not working." OCA St. 6, at p. 44. The Company has repeatedly explained that collection practices are consistent with the requirements of 52 Pa. Code § 56.93–56.100. These practices include numerous

attempts by mail, phone calls and in-person field visits. Further, aside from suspending terminations for nonpayment from December 1 through March 31 for confirmed low-income customers, no separate or differentiated collection activities are conducted across customer types. Witness Colton also implies that the Company resorts to termination more frequently than it should for confirmed low-income customers, when less than 10% of the 114,129 notices sent in 2025 to customers eligible for termination due to nonpayment resulted in the disconnection of service of that customer population. Further, the Company worked with those customers to restore service and, through those efforts, was able to restore service to 99.6% of those customers. As described in the testimony provided by UGI Gas Witness Meilinger, the Company has been diligent and successful in its attempts to provide outreach to vulnerable customers, expanding its tactics and programming each year.

Q. Based on Witness Colton's recommendation, OCA Witness Rogers proposes to decrease the Company's credit and collection expenses by $3.097 million, claiming that UGI Gas could not provide the exact dollar amount for the expense and, as a result, 2025 should be used as a proxy for purposes of calculating the 50% reduction in the credit and collection expenses. OCA St. 2, at pp. 15-16. Do you agree with this proposal?

A. No. The Company did not say that it was unable to provide an exact dollar amount in its response to OCA-15-5; rather, UGI Gas explained why collection expenses calculated for annual compliance reporting are not comparable to its cost-of-service study, as requested. The Company did provide an exact dollar amount and an itemized listing of the credit and

collection expenses in Attachment OCA-15-7. The Company takes a comprehensive approach to compiling these expenditures annually, pursuant to 52 Pa. Code § 62.5, and includes company wages and labor across front and back office functions and dispatching and field operations; costs associated with all required notices and communication; third party collection agency and bankruptcy costs; and expenses associated with winter survey, as prescribed in the regulation. Further, OCA's proposed disallowance would simply ignore costs substantiated by record evidence and legitimately incurred by UGI Gas to undertake necessary functions on an incorrect premise. As such, OCA's proposal should not be adopted.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

USP		**Common Application**			
	59a/66c	Adopt PUC Common Application, including a checkbox to indicate pursuing returning to default service		12/10/2025	
		Produce ADA Compliant Version of form, including a checkbox to indicate pursuing returning to default service		12/10/2025	
		Replace CAP application on the website with the new common application		12/10/2025	
		Replace CAP application in Security Deposit Waiver US Mail with Common Application		12/10/2025	
		Develop Terms and Conditions/Form Instructions, which include returning to default service if on CHOICE		12/10/2025	
		SAP CRB Enhancement to suspend collections for 45 days for customers leaving Choice to enroll in CAP.		12/10/2025	
		Develop business process and script for CAP referrals on Choice		12/10/2025	
		Introduce Common Application as a replacement for the current CAP Application		12/10/2025	
		DHS Data Sharing Opt-In			
	59b	Auto-recertification CAP customers who receive LIHEAP AND/OR consents to data sharing		10/28/2025	
		Develop process to automatically recertify customers for CAP if customer consents to data sharing		10/28/2025	
		Test/evaluate the communication being sent to the auto recertified customers to ensure compliance with data sharing order		10/28/2025	
	59c	Update procedures to waive income-verification for enrollment in CAP, LIURP and/or Op Share with DHS data sharing OR LIHEAP in prior season		10/28/2025	
CAP		**Enrollment Rules**			
	59d	Quantify impact to Company if auto-enrollment in CAP is mandated		Quarterly in 2026	
		Schedule quarterly working group meetings	X	Quarterly in 2026	
		Program Marketing			
	61a	Develop marketing plan to spend $120K	X	11/1/2025	
		Presentation for USAC Meeting, incorporate any stakeholder feedback	X	11/1/2025	
		Review current CAP webpage for content consistency across all materials		11/1/2025	
	61b/c	Plan and execute additional WARM events, including 6 in Lancaster, 3 in Williamsport and 4 in Wilkes-Barre	X	Ongoing in 2026	
		Create WARM event intake form to track attendees, materials distributed at each event		1/1/2026	
	61c	Outreach to Mayor Offices Specified		12/31/2026	
		Develop cover letter to offer meetings and share WARM events + new brochure		12/31/2025	
		Develop slide deck that can be used to present at meetings and events		12/31/2025	
		Letter Updates			
	66b	COS Enhancment to update CAP removal letter to remove the first bullet and amend CHOICE bullet	X	Unspecified	
	--	Generate standard denial letter which reflects changes mandated in 66b	X	Unspecified	
	--	Revise CAP application, welcome, renewal letters to be more customer friendly and mention application changes		Unspecified	
LIURP		**Spending**			
	60a/b/c/d/e	Develop plan to increase budget by $1MM, including contigency to rollover into 6 months of following year		12/31/2025

	62a/b	Develop plan to increase budget by $500K, including contigency to rollover into 6 months of following year		9/30/2025	
Billing					
Billing Components		**WNA**			
	58a	Enhance customer communications for WNA		Unspecified	
		Revise WNA SAP Ad Hoc letter to be customer and billing-period specific - Input provided by OCA, I&E, CAUSE-PA, OSBA	X	12/31/2025	
		Revise website language to be more customer-friendly	X	12/31/2025	
		Update call center scripts and training materials to reflect no WNA charges to May and affected CLI CAP		10/31/2025	
	58c	Remove WNA charges from CLI CAP customers on a % of income bill		10/31/2025	
	58b	WNA will no longer be applied to May Bills		10/31/2025	
		Reconnect Fees			
	64	SAP CRB Enhancement to reverse reconnection fees upon income-verification of 150% FPL		10/31/2025	
		Update Security Deposit Waiver letter to include reconnection fee language. Improve language to be plain text.		10/31/2025	
		Update Denial of Service letter to include reconnection fee language.		10/31/2025	
		Update Fiori Move-In Auto Email to include this language		10/31/2025	
		Create new BPEM Case for reversal failures, include "Get Work" button		10/31/2025	
		Create job aid for new BPEM case for Billing		10/31/2025	
		Update scripts to specify time period alloted to verify income - Gas Only		10/31/2025	
		Propose tariff language for time period alloted to verify income		10/31/2025	
		Security Deposits			
	65a	SAP CRB enhancement to refund security deposits to income-verified below 150% customers in form of check or ACH		10/31/2025	
		Update Call Center Scripts to reflect security deposit changes		10/31/2025	
	65b	Develop procedure to reverse security deposit refund check if returned as undeliverable and apply bill credit.		10/31/2025	
		Price to Compare			
	66a	SAP CRB Enhancement to move PTC from end of bill to Page 1		3/30/2026	
		Review external-facing communications that have a bill sample and coordinate update		5/30/2026	
Payments		**Payment Options**			
	68	Offer additional electronic payment options			
		Implement ApplePay		9/30/2025	
		Implement Venmo		9/30/2025	
		Implement PayPal and PayPal Credit		Phased in Implementation	
		Implement Google Pay		Phased in Implementation	
		Implement Amazon Pay		Phased in Implementation	
	69	Coordinate UGI absorbing authorized walk-in site fees		3/30/2026	
		Review and revise FISERV contract		9/30/2025	
		Update website and scripts to remove reference to fees		3/30/2026	
		Payment Arrangements			
	70	SAP CRB enhancement for 6 month Rate N/NT payment arrangement		10/28/2025	
		Update call center scripts for offering Rate N/NT payment arrangements (budget billing should be addressed)		10/28/2025	
		Update ad hoc report for incorrect IPs to include NR installment plan type		10/28/2025	
	87	SAP CRB enhancement to send written payment arrangement terms		4/1/2026	
Customer Service					
Call Center		**Performance**			
	67d + others	Schedule USAC Meetings to review progress	X	Various	
	82	Track and report on annual Quality of Service Stats vs 2024	X	Ongoing	
	83	Prepare YoY reporting for stakeholders	X	5/1/2026	
		Scripts and Training Changes			
		Change in Income/Circumstance training materials to create SME ticket for Level 1 (Outreach to update ZLOWCE)			
	67c	Review existing dunning communications to inform customers of option to enroll in CAP and details		10/28/2025	
		Coordinate update of doorhangers with Print Shop		10/28/2025	
	67c	Update call center scripts to inform customers of option to enroll in CAP and details		10/28/2025	
	67e	Update call center scripts to educated customers on USP (roll out upon USAC approval)	X	10/28/2025	
	84	Create new training materials for field representatives regarding personal contact with customers prior to disconnection		3/31/2026	
Compliance		**Dispute Tracking**			
	86	Create, document and implement PUC Complaint tracking, analysis and reporting plan		9/30/2026	
		Document current processing customer disputes and PUC Complaints		8/22/2025	
		Develop future state for processing customer disputes and PUC Complaints		3/1/2026	
		Review existing report SAP BOBJ for accuracy and request any needed changes		1/1/2026	
		SAP CRB enhancement to collect new data for tracking		4/1/2026	
		Develop apparent cause evaluations process		6/1/2026	
		Draft annual report describing progress and results		10/1/2026	
Low Income Reporting		**Definition**			
	67a	SAP Enhancement to change ZLOWCE indicator to exclude >150% FPL	X	12/31/2025	
		Data cleanup to update ZLOWCE when > 150% FPL		12/31/2025	
		Data cleanup to scrub stale LOW_INCOME_LVL, both live tables and BW/BI Reporting		12/31/2025	
		Update call center scripts to update "confirmed low income" reference to "income verified"		12/31/2025	
		Tracking			
	61di	Track and report on number of nonpayment disconnections of PUC CLI		Unspecified	
	61dii	Track and report on number of payment troubled PUC CLI customers		Unspecified	
	61diii	Update CWIP reporting to include number of PUC CLI customers		Unspecified

PAYMENTS & BILLING

Pay Your Bill Online

Pay in Online Account Center – Log in to your profile and pay your bill online. Save payment information for faster future payments. Register your account here.

QUICK PAY WITH BANK ACCOUNT - NO SERVICE CHARGE

Pay with Your Bank Account – You will need your UGI account number, zip code, and your routing and account number for your checking or savings account.

QUICK PAY WITH CARD - NO SERVICE CHARGE

Pay with Your Credit or Debit Card – You will need your UGI account number, card number, expiration date, and security code.

QUICK PAY WITH DIGITAL WALLET - NO SERVICE CHARGE

Pay with Apple Pay or Venmo – You will need your UGI account number, zip code and authorized access to your digital wallet.

Other Payment Options

Pay in Person at Authorized Pay Site

You may pay your UGI bill in person at one of the authorized CheckFreePay locations. Be sure to designate UGI as the "biller" when looking up payment options. You will also need your UGI account number. **Paying at an unauthorized payment agent may cause delays in your payment reaching UGI.***

Pay by Phone

Call 800-276-2722 to pay your bill through an automated phone system. You will need your UGI account number during the call.

To pay with a credit or debit card, select options 3, 1, 3, 2 after selecting your language preference.

To pay from a bank account Monday-Friday 8AM – 5PM, select options 3, 1, 3, 1 after selecting your language preference.

Pay by Mail

Mail payment with your UGI account number to:
UGI Utilities, Inc.
P.O. Box 15503, Wilmington, DE 19850-5503

Customer Choice FAQ's
Can UGI recommend a supplier?
UGI must remain neutral regarding your supplier selection. We cannot provide prices or recommendations on suppliers. We can only tell you if they are approved to sell electricity or natural gas to you. You must make your own choice of supplier. View list of approved natural gas suppliers on our Natural Gas Suppliers List page or PA Gas Switch. View list of approved electric suppliers on our Electric Suppliers List page or PA Power Switch.
How do I compare suppliers?
What are some of the questions I might ask a supplier?
Will I save money? How much?
How do I sign up with a supplier?
How do I change or cancel my supplier?
What is the difference between the distribution and commodity rates?

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 14-R

Rebuttal Testimony of
Timothy Angstadt

Topics Addressed:
Supplier Notifications
Imbalance Trading and Penalties
Force Majeure
Standards of Conduct

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Timothy J. Angstadt. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. No.

Q. What is the purpose of your rebuttal testimony?

A. My testimony responds to the direct testimony of Christopher Reyes on behalf of the Retail Energy Supply Association ("RESA").

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. Please see UGI Gas Exhibit TJA-1.

II. RESPONSE TO RESA WITNESS REYES

A. SUPPLIER NOTIFICATIONS

Q. Does UGI Gas provide suppliers with notification of pipeline cuts and customer interruptions?

A. Yes, UGI Gas provides suppliers with notification of pipeline cuts and customer interruptions. Customer interruption tiers are posted on the Energy Management Website (EMW) as Operational Notices. If interruptions are deemed necessary, Operational Notices

are posted daily with a 5-day forecast. Notification of pipeline cuts and mismatches over weekends and holidays follow NAESB cycles of Timely, Evening, Intra-Day 1 and Intra-Day 2. Pipeline scheduled quantities are compared to quantities nominated on the Energy Management Website by all NGSs for each NAESB cycle. If contracts are identified to have mismatched quantities, NGSs are emailed, and a posting is made to the Energy Management Website until such time that the issue has been resolved.

Q. Mr. Reyes claims that UGI did not meet its obligation to provide notifications of cuts and interruptions on weekends and holidays for the months of December and January. How do you respond?

A. With respect to notifications of pipeline cuts, I do not agree with the claims of Mr. Reyes. Mr. Reyes provides no evidence to support these claims. UGI Gas is fully compliant with terms to provide notifications of cuts on weekends and holidays as outlined in Paragraph 91 of the Settlement at Docket Nos. R-2024-3052716, et al., which stated:

> 89. Interruption Notification. UGI Gas will provide direct notification of interruptions to customers and their licensed natural gas suppliers ("NGSs") in parallel, inclusive of notice of permitted volumes, if any. UGI Gas will use commercially reasonable efforts to provide direct notification to customers and NGSs as close together as circumstances allow, recognizing emergency situations may impact this notice unpredictably.
>
> …
>
> 91. Weekend/Holiday Cuts/Mismatches. Within 6 months of the issuance of a final order in this proceeding, UGI Gas will implement a "manual or non-permanent" solution to notify NGSs when UGI Gas identifies nomination cuts/mismatches over weekends and holidays via posting to the Energy Management Website, which will trigger email distribution to all NGSs for the NAESB cycles of Timely, Evening, Intra-Day 1 and Intra-Day 2. This email distribution will identify the contracts affected by the subject nomination cuts/mismatches. The Company will utilize commercially reasonable efforts to maintain this manual process for the specified times. UGI Gas will continue to review and evaluate permanent or automated

solutions for such notifications and will continue to operate under this manual process until a permanent solution is implemented.

On the matter of customer interruption notifications, UGI Gas recognized an error in the manual process used to notify NGSs of customer-specific interruptions in January 2026 and promptly corrected this issue. Since that time UGI Gas remains compliant with Paragraph 89 above.

Q. Mr. Reyes recommends that the Commission monitor UGI Gas's compliance with the settlement requirement that it provide notification of cuts and interruptions on NGSs on weekends and holidays in the same manner it does for weekdays. What is your response to this recommendation?

A. I do not agree with the recommendation of Mr. Reyes. UGI Gas has addressed the timely notification of both pipeline cuts and customer interruptions to NGSs, and remains compliant with terms to provide notifications of interruptions and cuts on weekends and holidays as outlined in Paragraph 89 and Paragraph 91 of the Settlement at Docket Nos. R-2024-3052716, *et al*. His request should be rejected.

B. DAILY IMBALANCE TRADING AND PENALTIES

Q. What happens if a supplier is not within their required delivery tolerance?

A. After final usage and supply deliveries are determined, identification of any NGS exceedance of their daily delivery tolerance occurs. At such point, penalties are assessed in accordance with the level of restriction (i.e., Critical Day, OFO, etc.) in effect on the gas day.

Q. Why is it necessary for UGI Gas to issue penalties for noncompliance?

A. UGI Gas has a statuary obligation under the Public Utility Code, 66 Pa.C.S. §§ 1501, 1318, to provide safe, reliable, and least cost natural gas service to its customers. UGI Gas issues penalties as a deterrent for under or over deliveries to the distribution system that could potentially cause financial harm or physical disruptions of natural gas service to UGI Gas customers. Suppliers that do not match deliveries with expected customer usage create additional operational challenges for UGI Gas to balance overall positions with interconnecting interstate pipelines and may cause UGI Gas to incur penalties from interstate pipelines. In addition, NGSs that fail to deliver the supply necessary to serve their customers during peak winter events create the risk of a supply shortfall that, without utility intervention, could impact the ability to serve all customers.

Q. What concerns does Mr. Reyes raise with regard to imbalances and penalties?

A. Mr. Reyes indicates that imbalances are the number one reason penalties are imposed, and notes suppliers should be provided with the opportunity to engage in imbalance trading to ensure system balance and minimize penalties.

Q. What is daily imbalance trading?

A. Daily imbalance trading allows NGS's to "trade" an imbalance position with another NGS if their imbalance position is in the opposite direction, in essence netting the imbalance between both parties.

Q. Does UGI offer daily imbalance trading?

A. No. The Company does not offer daily imbalance trading.

Q. Mr. Reyes claims that other utilities allow imbalance trading and that UGI Gas should also be required to implement daily imbalance trading. Do you agree?

A. No, I do not. UGI Gas operates its distribution system independently of other utility companies, with its own unique and complex mix of pipeline interconnects, supply contracts, and limitations on system flexibility. Specifically, UGI Gas has a geographically large and disconnected system, where a shortfall or long position in one region or system would not operationally, or contractually, offset the opposite position in another region or system within the service territory to achieve a net zero impact to UGI Gas.

Q. Mr. Reyes claims that if UGI Gas were to implement daily imbalance trading, it would result in lower costs to customers on the system while having no impact to physical operations. Is this an accurate assumption?

A. No, it is not. It is prudent for UGI Gas to deter any supplier behavior that could result in daily fluctuations between supply and demand, as even minor deliveries beyond daily tolerances could result in additional costs for customers. In addition, the UGI Gas (EMW) is not configured for daily imbalance trading, as nearly all billing and reconciliation functions operate at the monthly aggregated level. System and programming modifications for daily imbalance trading would result in significant costs for UGI Gas customers.

Q. Mr. Reyes claims that the Company's imbalance penalties are disproportionate because there is no proof of supplier arbitrage. What is your response?

A. UGI Gas does not need proof of past supplier arbitrage in order to prevent future occurrences. Suppliers can take advantage of low penalties to achieve flexibility with obtaining/diverting gas supply and transportation capacity to maximize profits (or minimize penalty exposure) based on differences in the spot market price of gas across locational delivery areas. Even in situations where a supplier is not "short" supply, but market conditions create large profit opportunities, finding a way to maximize profits by overrunning contract entitlements, redirecting supplies or making affirmative decisions to incur a lower cost penalty can all be means by which resulting supply shortfalls can impact UGI Gas.

Moreover, arbitrage may involve situations where UGI Gas, as the supplier of last resort ("SOLR"), must then replace the diverted gas supplies and potentially have to engage in a bidding war to divert other supplies or even the same supplies back to its own system, further perpetuating the impacts of arbitrage. Moreover, UGI Gas's system has distinct characteristics that also necessitate strong penalties to ensure reliability and safeguard against arbitrage:

1. UGI Gas serves many customers in geographically diverse and often rural areas, with portions of the system that have limited supply options and redundancy;
2. The Company has experienced significant challenges during past extreme weather events, where supply shortfalls can have serious consequences for system reliability and customer safety;
3. UGI Gas has more dispersed gate stations and a more complex supply portfolio than many other Pennsylvania NGDCs, which increases the operational challenges associated with supply imbalances.

4. As SOLR, UGI Gas has a regulatory mandate to ensure that its system integrity is protected against arbitrage scenarios.

These factors justify UGI Gas's penalty structure, which proactively seeks to deter activities that threaten reliable and affordable service, as just and reasonable.

Q. Mr. Reyes recommends that UGI Gas be required to submit a new tariff with penalties at rates no higher than 20% more than the average penalties of all Pennsylvania natural gas distribution companies. Do you agree with this recommendation?

A. No, I do not agree with this recommendation for the above-stated reasons. Additionally, there is no "one-size-fits-all" approach to penalty structures that would be appropriate for all NGDCs in Pennsylvania. Each utility's penalty structure should reflect the specific characteristics of its system, the surrounding utility systems, the relevant supply sources within the market area, and the particular challenges for maintaining reliability. The Company's focus is on prevention rather than on assessing penalties and/or damages after a failure to deliver has occurred, potentially with disastrous consequences to life and property. UGI Gas's penalty structure provides clear incentives for suppliers to take all reasonable measures to meet their obligations and support continuous reliability.

C. FORCE MAJEURE

Q. Does UGI Gas currently have a documented policy regarding force majeure for its suppliers?

A. No, UGI Gas does not currently have a documented policy regarding force majeure for its suppliers, and reviews supplier force majeure claims on a case-by-case basis.

Q. What are UGI Gas's concerns with the evaluation and resolution of supplier force majeure claims?

A. For UGI Gas to consider a force majeure claim, suppliers would need to provide timely evidence of upstream force majeure, and documentation of all reasonable actions taken by the supplier to maintain deliveries of gas supply to UGI Gas. Additionally, UGI Gas may incur penalties, or deploy additional assets to avoid penalties, often at additional expense, to address shortfalls associated with upstream force majeure events.

Q. What is UGI Gas's experience with suppliers claiming force majeure?

A. In the past, suppliers have typically emailed UGI Gas to notify of their non-delivery because of claimed force majeure, often with little detail and well after the shortfall occurred, and without evidence of efforts to arrange for the timely delivery of alternate supply. This leaves UGI Gas with little information, notice, or ability to balance for non-deliveries. Additionally, outside of exceptional events such as winter storm Elliott, UGI Gas rarely receives force majeure claims, with many years of zero requests received.

Q. Mr. Reyes recommends that UGI Gas be required to implement a tariffed policy that provides for force majeure protections. Is his recommendation necessary?

A. No it is not. As stated above, UGI Gas must provide safe and reliable natural gas service to customers, even where a supplier fails to deliver on the claimed basis of a force majeure

event. For this reason, it is important for UGI Gas to protect the interest of its customers and to limit the circumstances where UGI Gas accepts a supplier's failure to deliver.

D. STANDARDS OF CONDUCT

Q. Does UGI Gas require all employees to follow the Standards of Conduct?

A. Yes. UGI Gas expects all of its employees to follow the Standards of Conduct, and provides annual training to its employees on the Standards of Conduct to support a culture of compliance. This training is mandatory for employees that may engage with suppliers, undertake market activities, or have access to competitively sensitive data. UGI Gas monitors employee participation in this training to ensure that all such Company employees are trained on the Standards of Conduct.

Q. Mr. Reyes recommends that the Commission review UGI Gas's compliance with the Standards of Conduct as it relates to affiliated natural gas suppliers as part of its next audit. Do you wish to comment on this recommendation?

A. UGI Gas is currently undergoing a Commission Management Efficiency Audit, which includes a review of Affiliated Interests and Cost Allocations. While the results of this audit are expected later this year, the Commission follow-up performed in a 2023 Management Efficiency Investigation did not indicate any Affiliate Code of Conduct concerns. Therefore, Mr. Reyes' recommendation is unnecessary because the Commission can, and already does, review UGI Gas's compliance with the Standards of Conduct and will recommend corrective action to the extent any issue is identified.

Q. Mr. Reyes recommends that the Commission direct UGI Gas to periodically conduct an internal audit that is designed to review compliance with the Standards of Conduct and report the results to the Commission's Office of Competitive Market Oversight ("OCMO"). Do you agree?

A. No. The Commission already reviews affiliate interactions in its periodic management efficiency audits and investigations. Further, Mr. Reyes does not make any specific, fact-based allegations in his testimony that relate to the Standards of Conduct. He only offers speculation. UGI Gas is fully compliant with the Standards of Conduct and is already subject to the Commission's oversight for Standards of Conduct compliance (e.g., Bureau of Audits, Office of Competitive Market Oversight ("OCMO") and Office of Administrative Law Judge). As previously mentioned, UGI Gas leadership supports a culture of compliance through the required annual training process for those employees that may engage with suppliers, undertake market activities, or have access to competitively sensitive data. There is simply no action required by the Commission as a result of Mr. Reyes's testimony. Moreover, no supplier, customer, or Commission department has raised any allegations against UGI Gas through the Commission's dispute resolution process set forth in 62 Pa. Code § 62.142(b).

III. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit TJA-1

TIMOTHY J. ANGSTADT

UGI UTILITIES, INC.
VICE PRESIDENT – ENERGY SUPPLY & MEASUREMENT

Summary

Energy Supply, Engineering, and Operations executive with over 26 years of broad experience in natural gas transmission and distribution activities, including operations and maintenance, engineering, regulatory compliance, capital budgeting and construction, project management, technology implementation, energy procurement and portfolio management, and business process transformation.

As Vice President – Energy Supply & Measurement:

- Leads a multi-functional team responsible for the procurement and portfolio management of approximately $500 million in natural gas and electricity supplies annually.
- Leads measurement, telemetry, revenue protection, and claims activities associated with the operation of over 12,000 miles of natural gas transmission and distribution pipelines and related assets, serving over 700,000 customers in Pennsylvania and Maryland.

Prior Positions with UGI Utilities, Inc.

Vice President – Energy Supply & Measurement (Denver, Pa.)	August 2023 – Present
Vice President – Operations (Denver, Pa.)	February 2019 – August 2023
Program Director – UNITE (UGI's Next Info. Technology Enterprise) (Reading, Pa.)	February 2016 – February 2019
Director – Operations, South Region (Reading, Pa.)	June 2012 – February 2016
Operations Manager – West Region (Harrisburg/Middletown, Pa.)	July 2008 – June 2012
Manager – Operational Support (Reading, Pa.)	December 2007 – July 2008
Manager – UGI/Penn Natural Gas Integration (Wilkes-Barre/Reading, Pa.)	November 2006 – December 2007
Engineer – Customer Service and Performance Systems (Reading, Pa.)	June 2005 – November 2006
Operations/Construction and Maintenance Superintendent (Reading, Pa.)	September 2003 – June 2005
Engineer II – Gas Utility Headquarters (Reading, Pa.)	January 2003 – September 2003
Engineer I/II – Reading Area (Reading, Pa.)	January 2000-January 2003
Engineering Assistant – Reading Area (Reading, Pa.)	June 1999 – August 1999

Education

MiF, The Pennsylvania State University, Malvern, Pa.
MBA, The Pennsylvania State University, Malvern, Pa.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 15-R

Rebuttal Testimony of
Jessica R. Rogers

Topics Addressed:

Overview of Rebuttal
Affordability Concerns
Ratemaking and Policy Considerations
Purchase of Receivables
Public Input Hearing Testimony

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Jessica R. Rogers. My business address is 1 UGI Drive, Denver, PA 17517.

Q. By whom and in what capacity are you employed?

A. I am employed by UGI Utilities, Inc. ("UGI") as its Vice President, Rates and Regulatory Affairs. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Gas Division ("UGI Gas" or the "Company") and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. Please briefly describe your responsibilities in that capacity.

A. As Vice President, Rates and Regulatory Affairs, I am responsible for all rate and regulatory filings for UGI Gas and UGI Electric before the Pennsylvania Public Utility Commission, the Maryland Public Service Commission, and the Federal Energy Regulatory Commission.

Q. What is your educational and professional background?

A. Please see my resume, UGI Gas Exhibit JRR-1R, which is attached to my testimony.

Q. Have you testified previously before any public utility commission?

A. Yes. UGI Gas Exhibit JRR-1R contains a list of those proceedings.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Gas?

A. No, I did not.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony has five primary purposes. First, I explain that I will be addressing certain topics originally addressed by UGI Gas Witness Mr. Hans G. Bell in his direct testimony (UGI Gas Statement No. 1). While I am not adopting his direct testimony or any of his discovery responses as my own, I will be taking over as the Company's witness for the topics identified from this stage forward. Second, I provide an overview of the Company's rebuttal case in this proceeding. Third, my testimony responds to certain portions of the following direct testimony submitted by the Office of Consumer Advocate ("OCA"), the Office of Small Business Advocate ("OSBA"), and the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") related to affordability and ratemaking policy issues. Specifically, I provide rebuttal testimony in response to: OCA Witnesses Michael Deupree (OCA St. 1), Barbara R. Alexander (OCA St. No. 5), and Zachary Teti (OCA St. 7 and 7S); OSBA Witness Mark D. Ewen (OSBA St. No. 1); and CAUSE-PA Witness Patrick Cicero (CAUSE-PA St. No. 1). Fourth, I respond to certain testimony offered by OCA and CAUSE-PA related to the Company's purchase of receivables program. Finally, I address certain public input hearing testimony.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. In addition to UGI Gas Exhibit JRR-1R, which is a copy of my resume, I am also sponsoring UGI Gas Exhibits JRR-2R through JRR-4R, as described later in my testimony.

Q. Do you have any further introductory comments?

A. Yes. While I am a licensed attorney in Pennsylvania, having practiced in Pennsylvania and before this Commission for more than a decade as an attorney representing public utilities, my testimony is not intended to offer legal opinions or conclusions. Rather, my testimony will respond to the policy concerns, and associated topics raised by the other parties' witnesses.

II. ROLE IN THE CASE

Q. Have you had an opportunity to review UGI Gas Statement No. 1, the direct testimony of Hans G. Bell, as well as Mr. Bell's discovery responses?

A. Yes, I have.

Q. Please explain your role in this proceeding in light of Mr. Bell's testimony and responses to discovery.

A. Mr. Bell should continue to be understood as the witness responsible for UGI Gas Statement No. 1 and all responses to discovery where he is indicated as the sponsor up to this point. However, with the submission of my rebuttal testimony, I will assume the role of UGI Gas's overview witness.

III. OVERVIEW OF THE COMPANY'S REBUTTAL CASE

Q. Please introduce the Company witnesses that will be providing rebuttal testimony in this matter, and provide a brief description of the subject matter of their rebuttal testimony.

A. The Company's rebuttal testimony is comprised of 14 witnesses, including many of the witnesses that submitted direct testimony as well as certain new witnesses that are offering rebuttal testimony to respond to specific issues raised by other parties in this proceeding. In addition to myself, the Company's rebuttal witnesses are:

- **Tracy A. Hazenstab** (UGI Gas Statement No. 2-R) updates several Operation and Maintenance ("O&M") adjustments and revenue components of UGI Gas's initial filing that required updating, but rebuts the PUC's Bureau of Investigation and Enforcement ("I&E") and OCA's adjustments to the Company's revenue requirement, to rate case expense, energy efficiency and conservation expense, cash working capital, and income tax expense (for interest synchronization).

- **Jill E. Walter** (UGI Gas Statement No. 3-R) responds to testimony regarding pipeline replacement costs, the Company's methane detection pilot, training protocols, and responds to certain claims regarding testimony at the public input hearing.

- **Vivian K. Ressler** (UGI Gas Statement No. 4-R) accepts the vacancy rate proposed by I&E and OCA, rebuts I&E's proposed adjustments to the Company's incentive compensation claim, I&E and OCA's reduction to employee activity expense, I&E's adjustment to membership due expenses, and OCA's adjustment to the PUC Assessment charge.

- **Amy M. Keller** (UGI Gas Statement No. 5-R) corrects an error regarding inclusion of the amortization of the regulatory liability for the past over-recovery of post-retirement welfare plan expense. She rebuts OCA's adjustments to accumulated depreciation and Accumulated Deferred Income Tax and I&E's recommendations regarding PUC annual report data.

- **John F. Wiedmayer** (UGI Gas Statement No. 6-R) responds to the parties' testimony regarding depreciation.

- **Vicky A. Schappell** (UGI Gas Statement No. 7-R) accepts I&E's reporting requirements related to plant in service for the Future Test Year ("FTY") and Fully Projected Future Test Year ("FPFTY").

- **Dylan W. D'Ascendis** (UGI Gas Statement No. 8-R) responds to the parties' testimony regarding capital structure and return on equity ("ROE"), and overall rate of return.

- **Sherry A. Epler** (UGI Gas Statement No. 10-R) accepts I&E's position regarding test year sales and revenues, as well as CAUSE-PA's proposal to make certain tariff corrections. She rebuts the Retail Energy Supply Association's ("RESA") testimony regarding Rate NNS.

- **John D. Taylor** (UGI Gas Statement No. 11-R) rebuts testimony from the other parties' regarding the Company's proposed revenue apportionment, the Allocated Cost of Service Study, customer charges, and the weather normalization adjustment ("WNA").

- **Brian J. Meilinger** (UGI Gas Statement No. 12-R) rebuts the testimony of OCA and CAUSE-PA related to affordability and the impact of the rate increase on low-income customers as well as identification and screening of low-income customers, compliance with the 2025 Gas Rate Case Settlement ("Settlement"), and these parties' testimony regarding the Company's Universal Service Programs.

- **Daniel V. Adamo** (UGI Gas Statement No. 13-R) rebuts the testimony of OCA, CAUSE-PA, and the OSBA related to compliance with the Settlement, customer service issues, and the Company's credit and collection expenses.

- **Timothy J. Angstadt** (UGI Gas Statement No. 14-R) rebuts certain of the RESA testimony and issues raised therein.

- **Cyndee Fang** (UGI Gas Statement No. 16-R) rebuts the other parties' testimony on general macroeconomic concerns around affordability.

Q. Based on your review of the testimony submitted in this proceeding, what are the major issues in this case?

A. The major issues in this case are: (1) overall revenue requirement, including limited adjustments to the Company's claimed O&M expenses; (2) cost of common equity and capital structure; (3) depreciation methodology; (4) cost allocation; (5) rate design, including the Company's proposal to continue its WNA Pilot in a modified form; and (6) affordability concerns. While these are not exhaustive of the issues raised, these are the

most impactful from a revenue and affordability perspective. As explained below and in more detail in the Company's rebuttal testimony, the Commission should adopt the Company's position on each of these issues and reject the unsound and unsupported proposals set forth in the other parties' direct testimony. As identified in the summary above, the Company has made adjustments in its rebuttal case to align with the positions taken by other parties where it was reasonable and appropriate to do so.

Q. Is the Company revising its initially requested revenue requirement?

A. Yes. UGI Gas initially requested a $99.368 million increase in annual operating revenues. However, the Company's most recent data and updates within rebuttal, including the voluntary adoption of certain adjustments proposed by other parties, now justifies an increase of $98.693 million.

Q. Please summarize the other parties' positions on the Company's overall revenue requirement, and the Company's rebuttal testimony on this issue.

A. The other parties' positions can be captured in two categories: adjustments proposed based on a detailed analysis of the Company's cost of service using the Commission's standard approach to ratemaking, and general proposals that are not grounded in cost of service principles. Specifically, I&E and OCA both undertake a cost-of-service analysis to produce recommended revenue requirements and to identify adjustments to certain expenses. I&E St. No. 1, at pp. 4-5; OCA St. 1, at pp. 39-54. However, OCA and CAUSE-PA, as primary positions, recommend that no rate increase should be allowed in light of macroeconomic circumstances and general affordability concerns. OCA St. 1, at pp. 3-4;

CAUSE-PA St. No. 1, at pp. 5-6. Similarly, OSBA provides no detailed revenue analysis or specific disallowances/adjustments, but makes general comments, encouraging the Commission to "carefully consider ratepayers' interest, affordability concerns, and the risk reduction benefits of a low-risk regulatory environment" in making its determination in this proceeding. OSBA St. No. 1, at p. 2.

To the extent the other parties provided a detailed analysis and specific adjustments, appropriate witnesses for the Company respond to the merits and facts regarding such adjustments. However, OCA and CAUSE-PA advance proposals that encourage the Commission to supplant its detailed analytic process for evaluating the need for and level of various costs incurred to serve customers with a generic rejection of the proposed rate increase based on macroeconomic conditions. The Commission should reject these arguments as they are contrary to long-standing Commission precedent and the Commission's required detailed analytic process, and reflect bad policy that may cause long-term harm to consumers, as described later in my testimony.

Q. Are the revenue requirement amounts proposed by I&E and OCA reasonable?

A. No. I&E's and OCA's proposals simply do not reflect the facts or sound application of fundamental ratemaking principles. Further, the specific revenue requirements offered by I&E and OCA would hinder the Company's ability to continue modernizing its system in order to provide safe and reliable service to customers. OCA's proposed revenue decrease, in particular, could substantially undermine the ability of UGI Gas to continue its accelerated pipe replacement program at its current pace, halt the Company's ability to make incremental progress on customer service quality and key programs to assist low-

income customers, and could cause a downgrade and financial market impacts that would increase the cost of capital.

This case is driven by capital investments. UGI Gas will invest approximately $468 million during the FPFTY in infrastructure and business systems to ensure that its service is safe, reliable, and customer-focused. The positions offered by I&E and OCA would frustrate the sustained pace of safety investments identified by the Company at a reasonable cost – investments that no party has disputed are necessary or proper for safely and reliably serving customers. Furthermore, the investments made possible by the rate increase reflected in this case will sustain thousands of good paying jobs and provide many other positive economic impacts directly to the communities where UGI Gas operates.

Q. How did the parties reach their lower revenue requirement recommendations?

A. There are very few areas of dispute in this case, and the vast majority of the difference in the revenue requirements are found in four primary areas: (1) unreasonable adjustments to the return on equity; (2) unprecedented use of a hypothetical capital structure where the Company's proposed capital structure is within the range presented by the proxy group; (3) depreciation adjustments that have been repeatedly rejected by the Commission; and (4) improper adjustments to projected operating expenses. Many of the witnesses' recommendations are founded on significant deviations from the standard ratemaking principles historically applied by the Commission, as described later in my testimony. All of the I&E and OCA recommendations that the Company has not accepted are fully addressed by the Company's witnesses in their rebuttal testimony.

Other parties' (I&E, OCA, and OSBA) equity return proposals are misaligned with the Commission's calculation of market based equity returns of the natural gas barometer group included in the Commission's recently published Quarterly Earnings Report for Q3 of 2025.[1] Moreover, the extensive evidence of risk characteristics of UGI Gas detailed by UGI Gas witness Dylan D'Ascendis fully supports the Company's 10.75% cost of equity claim.

Q. Why is it important for UGI Gas to earn a reasonable rate of return?

A. As I noted previously, this case is overwhelmingly about the Company's plans to invest in infrastructure work that will allow it to safely and reliably serve its customers, increase the number of Pennsylvanians who have access to natural gas service, and provide its customers with a quality customer service experience. Cost-effectively making these investments requires substantial and sustained access to capital. As explained in the rebuttal testimony of UGI Gas Witness D'Ascendis, the return on equity proposals advanced by the other parties are insufficient. First, as noted by Witness D'Ascendis, both OCA and CAUSE-PA argue that no increase should be approved, which based on the Company's planned costs reflected in this case would produce an effective return of 7.70% - well below the Commission's published Quarterly Earnings Report. Further, OCA's proposed return on equity, in particular, would be lower than any return authorized by the Commission in the last four decades. Further, OCA and CAUSE-PA both advance capital structure proposals that do not align with the long-standing Commission practice of using

[1] *Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended September 30, 2025*, Docket No. M-2025-3059329, https://www.puc.pa.gov/pcdocs/1922794.pdf (last visited May 12, 2026),

the Company's actual capital structure. The Company must be able to attract capital at a reasonable cost in order to undertake the investments necessary to provide safe and reliable service. These positions advanced by OCA and CAUSE-PA could frustrate the Company's ability to do so.

Q. What is the Company's overall position regarding the direct testimony of the other parties in this matter, and the Company's proposed base rate increase?

A. The Company's rebuttal testimony summarized above responds to each of the individual issues raised by the opposing parties, as well as the places where the Company has aligned its case to either accept or not oppose certain positions. However, for the most part, UGI Gas does not accept the other parties' adjustments, for the reasons identified in the Company's rebuttal testimony.

UGI Gas asks the Commission to evaluate its case based on the traditional ratemaking principles it has developed over decades of experience. Importantly, no party has challenged any of the Company's planned capital investments reflected in this proceeding. Stated differently, not a single dollar of the $468 million identified for essential and important infrastructure investments projected to be made during the FPFTY was challenged on the basis that it is unnecessary, unjustified, unreasonable, or would not be used to serve the public. The magnitude of these important capital investments, alone, clearly indicates that rate relief is necessary. The Commission should approve the requested increase with the modifications and conditions reflected in the Company's rebuttal position, and authorize a rate increase of $98.693 million.

IV. AFFORDABILITY AND RATEMAKING

A. REBUTTAL TO AFFORDABILITY CONCERNS

Q. Witnesses for OCA[2] and CAUSE-PA[3], and various Public Input Hearing witnesses[4] presented testimony regarding affordability concerns, both with respect to broader economic trends, utility bills generally, and UGI Gas's proposed rate increase specifically. Please respond.

A. The Company recognizes and understands the need to balance the completion of the important work it undertakes in order to provide safe and reliable service by continuing to make sound investments to improve its distribution system on the one hand, and providing that safe and reliable service at affordable rates on the other hand. The Company's focus on affordability is shown in how it operates and in the choices it affirmatively made in this case. As I and other witnesses will address in detail in rebuttal testimony:

- UGI Gas has managed its operating costs effectively over time such that these costs have increased at a pace lower than general inflation during the same period;
- This winter, the Company's use of WNA returned more than $27 million to customers in the form of bill credits;
- The Company has proposed to continue modifications to its WNA that will exclude low-income customers on the Company's Customer Assistance Program ("CAP"), and has made adjustments in this proceeding that are expected to make its operation more balanced over time;
- UGI Gas is seeking a return on equity in this proceeding that is below the mid-point of its peer group;
- The Company is not seeking a management effectiveness adjustment to its ROE in this case, despite providing evidence regarding the effectiveness of its management in its execution of safety related projects including achieving the removal of all known cast iron pipe, strong customer service performance, and the effective management of operating costs. Based on proposals in past cases for an incremental adjustment for

[2] *See* OCA St. 1, at pp. 10-20; OCA St. 5, at pp. 8-9; OCA St. 6, at pp. 5-41; and OCA St. 7, at pp. 4-9.
[3] *See* CAUSE-PA St. No. 1, at pp. 15-34.
[4] *See* Tr.118, 120-121, 128, 158.

management effectiveness, not including this adjustment reduced the Company's claim by more than $6 million;

- Over the past five years, UGI Gas has donated more than $4.35 million to Operation Share to support payment troubled customers, and has indicated in testimony in this proceeding that it will increase its annual donation up to $1 million for the next three years;

- The Company has proposed to expand the application of the Universal Service Plan ("USP") Rider to provide UGI Gas with the ability to negotiate contracts that include a contribution by Rate XD customers that would lower the cost of the USP Rider to residential customers while obtaining contributions from UGI Gas's largest industrial customers;

- The Company continues to evolve and expand programs targeted at supporting energy efficiency and affordability. In FY2025, UGI Gas's total support provided to payment troubled customers across its programs was approximately $31.9 million, excluding Operation Share;

These are the activities reflected in, and central to, this case. The revenue reflected in this case supports 1,528 UGI Gas jobs, as well as additional jobs at UGI Corporation, headquartered in King of Prussia that support service to UGI Gas's ratepayers. The capital investment program also supports up to approximately 500 additional contractor jobs, many of those being union jobs. In 2025 alone, the Company invested over $320 million in Pennsylvania infrastructure, the overwhelming majority of which was spent with in-state vendors and contractors.

Further, UGI undertakes a substantial amount of activity to benefit local communities that is not rate recoverable. Since October 1, 2021, UGI has donated more than $7,000,000 from non-ratepayer funds, as well as thousands of hours of volunteer time and hundreds of thousands of dollars in individual employee donations organized through Company-run campaigns, to serve and support organizations located in the communities it operates in. These donations are in addition to the Corporate donations to Operation Share, which over the same period totaled over $4,000,000. In short, the revenue generated by

customer rates established in this proceeding is overwhelmingly being reinvested into Pennsylvania both directly and indirectly.

Q. Please respond to OCA Witness Deupree's general recommendations regarding the actions that OCA believes the Commission should take in this matter. OCA St. 1, at pp. 3-7.

A. Witness Deupree encourages the Commission to take an approach that would evaluate utility rate relief entirely on the macroeconomic circumstances at the time rate relief is requested, rather than on the operating circumstances that are traditionally used to determine whether (1) costs are necessary or appropriate for service to the public and prudently incurred, and (2) the overall rates and rate design are just and reasonable. Essentially, Witness Deupree asks the Commission to depart from its statutory requirements, its precedent, and the fundamental concept of cost-of-service ratemaking. His approach, if adopted, would require a complete departure from more than a century of utility ratemaking in Pennsylvania.

Q. Do any other witnesses take positions similar to Witness Deupree?

A. Yes. CAUSE-PA Witness Cicero takes positions similar to the one advanced by Witness Deupree. Mr. Cicero proposes that no rate increase be granted in this proceeding, pointing to general economic concerns, affordability challenges for low income customers, and his general disagreement with the Commission's methodology and precedent. CAUSE-PA St. No. 1, at pp. 5-6. Mr. Cicero conducts no analysis of the Company's cost of service for the FPFTY before he concludes that the Commission should reject the rate increase as a

whole. CAUSE-PA St. No. 1, at pp. 5-6, 47-48. Indeed, he makes clear he offers no cost of service based recommendation when he indicates he does not have a recommendation about the amount of a rate increase should the PUC reject his proposal to deny any rate increase. CAUSE-PA St. No. 1, at p. 42.

Q. Both OCA and CAUSE-PA advance positions focused on the current macroeconomic situation, and the regulatory compact and zone of reasonableness principles. OCA St. 1, at pp. 7-9; CAUSE-PA St. No. 1, pp. 8-14. Are there any flaws with these arguments?

A. Yes. There are a number of issues with Witness Deupree's testimony. First, as previously noted, Witness Deupree's testimony fails to conform to statutory and regulatory requirements that have been acknowledged by the Commission over more than a century of rate cases. Critically, Witness Deupree cites to no instance where the Commission rejected cost of service ratemaking in favor of an evaluation of macroeconomic circumstances. As recently as 2020, during the COVID-19 shutdown – which resulted from a global pandemic – the Commission relied upon cost of service ratemaking to ensure that utilities maintained safe and reliable service to the public. Witness Deupree points to the conflict in the Persian Gulf to support his approach, OCA St. 1, at p. 4, yet there have been past conflicts (including in the Persian Gulf) and these did not cause the Commission to reject cost of service ratemaking.

Both Witness Deupree and Witness Cicero speak to the regulatory compact as establishing the bedrock principle that in exchange for monopoly authority, a utility submits to rate and service regulation where the Commission must permit the utility to

recover its costs plus a reasonable opportunity to earn a return on its investment. Witness Deupree also speaks to the zone of reasonableness in his testimony. But ultimately both Witness Deupree and Witness Cicero ignore the very processes used to ensure that rates are reasonable and not confiscatory, and instead both support no increase as their primary position. Witness Deupree also supports a secondary position of a rate decrease. These positions are very clearly unreasonable and confiscatory. This is particularly true given that neither Witness. Cicero nor any OCA witness opposes the ongoing work or the vast majority of the costs reflected in the Company's filing. In fact, OCA's revenue position relies primarily upon an unreasonably low ROE, a hypothetical capital structure, and a modified approach to depreciation – all of which are unprecedented in Pennsylvania utility history. Adopting any one of these proposals alone would be unprecedented and have wide-ranging and adverse consequences for UGI Gas and its ability to continue improving safe and reliable service. Witness Cicero similarly proposes a hypothetical capital structure that is not consistent with Commission precedent.

Q. Are there any contradictions in the positions Witness Deupree takes?

A. Yes. In my experience and based on my review and understanding of testimony in other base rate proceedings, OCA has long-opposed the use of general inflationary factors or other generic economic data as a basis for supporting the increase to any portion of the Company's individual cost claims. Yet, Witness Deupree now looks at general economic conditions, and specifically the impact of universal cost increases (i.e., general inflationary pressures) on what he presumes to be indicative of customer affordability. It would be both unreasonable and unfair to disallow general-inflation-based adjustments to aspects of

the cost of service for the utility, but to allow general-inflation-based concerns unrelated to the cost of service to be the basis upon which a rate increase is denied or reduced. And while I certainly do not dispute that inflationary impacts are affecting customers, those inflationary impacts are not "historic" or unusual compared to those previously seen by this Commission.

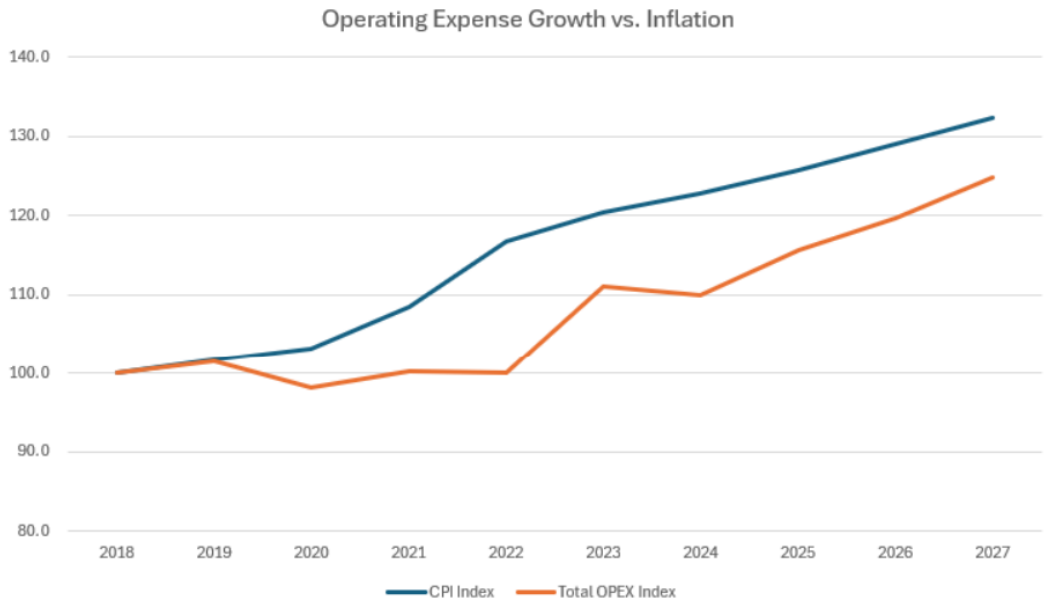
Q. Witness Deupree testifies that "utility rates do not occur in a vacuum." OCA St. 1, at p. 10. Please respond.

A. I agree with Witness Deupree that utility rates do not occur in a vacuum. In fact, utilities do not operate in a vacuum, either. To the extent Witness Deupree believes that customers are experiencing inflationary pressures that are increasing their costs, this is true for the utility, as well. The Company has continued to see increasing costs for its operations. While UGI Gas has worked hard to keep its operating costs down—including performance in managing those costs that beats general inflation during the same period—disallowing any increase at this time is not reasonable given the critical nature of the services this rate increase will fund. UGI Gas Witness Fang testifies at length as to the appropriate societal weighing of non-utility affordability issues in UGI Gas St. No. 16-R, but Witness Deupree provides no basis, methodology, or precedent for how the Commission might weigh generic cost of living concerns with the data provided by UGI Gas on its actual and anticipated cost of providing service to customers in the FPFTY.

Q. What evidence supports the claim that the Company has effectively managed its costs at a pace lower than inflation?

A. Included with my testimony as UGI Gas Exhibit JRR-2R is a breakdown of key operating and maintenance cost categories for UGI Gas, as well as its total operating and maintenance expenses for each year from 2018 through the FPFTY reflected in this case, mapped against inflation. A graphical representation of this information is reflected in Table 1, below:

Table 1: UGI Gas Operating Costs from 2018 through FPFTY v. CPI



As shown above, and in greater detail in UGI Gas Exhibit JRR-2R, based on the Company's actual and projected operating costs – none of which are developed using general inflationary factors – UGI Gas has effectively managed its operating costs such that they have increased at a pace lower than inflation. Despite being subject to general inflationary pressures, UGI Gas has taken active steps to manage how those pressures impact its cost of service, and has minimized the level of O&M expenses reflected in its cost of service in a manner that has protected and benefited its customers.

Q. Is OCA Witness Deupree's attempt to focus on wholesale electricity prices and wholesale natural gas prices appropriate or helpful in this proceeding? OCA St. 1, at p. 14-15.

A. No. This case is exclusively about the cost to UGI Gas of providing distribution service to its customers that meets its obligations under 66 Pa.C.S. Section 1501. Commodity prices are not included in the Company's distribution cost of service, and are not a part of this proceeding.

Q. What about his focus on the Iranian conflict, its alleged impact on global oil prices, and purported impacts on LNG and wholesale natural gas costs? OCA St. 1, at pp. 15-18.

A. Witness Deupree's testimony regarding the current Persian Gulf conflict and the potential for associated cost impacts is not germane to the question of whether the costs reflected in the Company's case are necessary or prudently incurred in order to provide natural gas distribution service to its customers. As I noted previously, this is not the first time the Commission has addressed a base rate case during a war, conflict, or other military engagement abroad, or other disruptive global event, and such activities have never been identified by this Commission as the basis for a full departure from cost of service ratemaking as OCA Witness Deupree advocates. Moreover, adopting OCA's and CAUSE-PA's positions would replace the Commission's prudency standard with an ever-shifting macroeconomic veto. Under their approach, utilities could recover prudently incurred costs only when economic conditions are favorable—a standard untethered from the statute and impossible to administer consistently.

Q. Please respond to OCA Witness Deupree's claim that tariffs have also affected affordability. OCA St. 1, at pp. 18-19.

A. Once again, the general impact of tariffs is irrelevant to the assessment of the Company's proposal, as the Company did not make any specific adjustments to address the potential that these tariffs will increase the cost of its operations. To the extent customers are negatively impacted by tariffs, the Company will be similarly negatively impacted. Nevertheless, and as explained above, the Company has undertaken a number of specific cost containment measures in recent years that have mitigated these impacts on its cost of service.

Q. Is there any other basis to reject Witness Deupree's proposal to rely on a variety of macroeconomic indicators?

A. Yes. Witness Deupree acknowledges in his testimony that for certain of his indicators, the economic impact is "hard to predict" (OCA St. 1, at p. 17), that the "scope and duration of these effects are uncertain" (OCA St. 1, at p. 17), that there is a "mixed picture" (OCA St. 1, at p. 18), and that even Federal Reserve Chairman Powell has said that "nobody knows" what the economic impact will be. OCA St. 1, at p. 17. As previously stated, macroeconomic events fraught with uncertainty as to their impacts do not meet the requirements established by statute, regulation, or Commission precedent, and should not be accepted as a basis for disallowing the legitimate and largely uncontested costs for providing service that are reflected in this proceeding.

Q. Both Witness Deupree and Witness Cicero refer to earnings features of UGI Gas's parent, UGI Corp. OCA St. 1, at pp. 19-20; CAUSE-PA St. No. 1, at pp. 36-39. Please respond.

A. First, the stock price and equity decisions of UGI Corp are impacted by many things beyond the financial health and effectiveness of UGI Gas. Second, as to the suggestion by Witness Deupree that UGI Gas is not in obvious market distress, UGI Gas Witness D'Ascendis evaluates the relative financial health of the Company compared to peer organizations in his testimony. While I do not disagree that UGI Gas is not in market distress today, its current position reflects a decade of thoughtful and balanced decision-making by the PA PUC that was grounded in cost of service ratemaking. Maintaining that financial health going forward requires the same thoughtful and balanced decision-making – not the outright rejection of bedrock principles. Finally, the Commission should not adopt a new standard in which public utilities could only recover prudently incurred costs, if they are in market distress.

Q. Do you have any other observations about Witness Cicero's presentation of UGI's earnings?

A. Yes, I have further observations. First, Witness Cicero presents UGI Utilities, Inc. net income by quarter for calendar years 2021 through 2025 in Table 7 of his testimony. CAUSE-PA St. No. 1, at p. 37. However, the net income reported for the quarter ended September of each year reflects the entire fiscal year's net income, rather than a single quarter's results. As a result, his stated total of $2,039,000,000 is approximately twice the

correct figure — the actual net income for that period is $1,018,000,000. A corrected net income by quarter is provided as UGI Gas Exhibit JRR-3R to my testimony.

Second, Witness Cicero mentions UGI Utilities, Inc.'s dividends to its parent. Notably, the $214 million of dividends paid in calendar years 2021 through 2025 represents just 21% of net income — meaning 79% — the substantial majority — was retained and reinvested in the utility.

Third, Witness Cicero focuses on net income and does not address cash flows. UGI Gas cannot spend net income – it must spend cash to construct the infrastructure needed to ensure that its distribution system is providing safe and reliable service to customers. UGI Utilities, Inc.'s free cash flow[5] for calendar years 2021 through 2025 was ($587,000,000)[6], reflecting that operating cash flow was insufficient to support the Company's level of infrastructure investment. To fill this gap, UGI Utilities, Inc. required additional funding, which was provided through debt issuance and capital contributions from UGI Corp. The Company's financial stability and investment-grade credit profile enable it to access this financing and attract capital contributions, allowing it to continue its critical infrastructure investment on behalf of customers.

Q. Should the Commission consider affordability in this proceeding?

A. The Commission should consider affordability in this proceeding, but it must do so in connection with traditional cost of service ratemaking considerations and not through the incorporation of extraneous and generalized data points that lack any framework or

[5] Free cash flow is defined as operating cash flow less capital expenditures, and measures a company's ability to fund investment without relying on external debt or equity financing. A negative free cash flow indicates that capital expenditures exceeded operating cash flow, requiring the company to seek external funding.

[6] See UGI Gas Exhibit JRR-4R for a schedule of UGI Utilities Inc's free cash flow for this period.

connection to the cost incurred by UGI Gas to provide service to its customers safely and reliably. The Commission can and should evaluate the many ways that UGI Gas has sought to address affordability as part of its cost of service. The Commission can and should evaluate whether UGI Gas's policies and practices adequately meet the needs of customers across income and operational demographics, and whether more can be done to support customer affordability through modifications to programs or policies. The Commission can and should evaluate whether the design of the Company's rates appropriately consider long-standing cost of service principles such as parity and gradualism. Finally, the Commission can and should consider the role that a financially and operationally healthy UGI Gas plays in serving its customers, modernizing its operations, supporting businesses and jobs, and providing a strong economic contribution to the communities it serves and the state's economy. All of these opportunities to consider affordability in the ultimate outcome of UGI Gas's base rate proceeding are consistent with the statutes, regulations, and precedent that the Commission has long used to balance the interests of customers with those of the utility.

B. REBUTTAL REGARDING REGULATORY LAG AND RATEMAKING POLICY

Q. Please summarize the testimony presented by other parties regarding ratemaking policy and concepts applicable to UGI Gas's operations and rates.

A. OCA Witness Deupree and CAUSE-PA Witness Cicero testify to a number of issues regarding ratemaking policy, including testimony on "regulatory lag", criticism of "traditional ratemaking", and concerns regarding the interaction of various rate concepts approved by the legislature and/or the Commission.

Q. What is your reaction to this testimony?

A. OCA and CAUSE-PA offer voluminous testimony that ultimately is not relevant to the evaluation of whether (1) the costs identified by UGI Gas in this proceeding are necessary to serve the public, (2) those costs are prudently incurred, and (3) the methodology for producing the proposed rates based on those costs results in just and reasonable rates for customers.

Q. What is "regulatory lag"?

A. Regulatory lag refers to the time gap between when a utility undergoes a change in cost or sales levels, and when the utility can reflect the change in new rates charged to customers. Witness Deupree offers a number of alternative definitions, but the crux of each focuses on the concept of a timing mismatch.

Q. Has UGI Gas asserted regulatory lag as a basis for rate relief in this case?

A. No, UGI Gas has not asserted regulatory lag as a basis for its request in this proceeding. Despite voluminous testimony on the concept of regulatory lag, Witness Deupree concedes in his testimony that the Company has not offered regulatory lag as a justification for this case. One could search the entirety of the Company's direct testimony in this case and find that the term "regulatory lag" only appears twice. Indeed, one of the two places where it does appear is in response to one of the factors the Commission considers under its Statement of Policy regarding alternative ratemaking mechanisms, and clearly states that

"[t]he WNA ***does not*** impact the Company's rate case frequency nor does it effect regulatory lag." *See* UGI Gas Exhibit JDT-4, at p. 3 (emphasis added).

Q. Do you have any response to the extensive testimony on regulatory lag?

A. Yes. While this testimony is ultimately extraneous, because it fails to address anything at the core of the Company's proposal, it appears that the testimony offered by both of these witnesses fails for three primary reasons. First, both witnesses fail to assess whether the generic principles they cite are applicable to Pennsylvania. Pennsylvania has codified mechanisms that seek to reduce regulatory lag in key areas, including the FPFTY and Distribution System Improvement Charge ("DSIC") reflected in Act 11 of Feb. 14, 2012, Pub. L. 72, No. 11 ("Act 11"), and the codification of riders for certain components of service (e.g., Purchased Gas Costs pursuant to 66 Pa.C.S. 1307(f)). The adoption of Act 11, in particular, indicates a policy commitment to providing real-time cost recovery to utilities to facilitate investment in facilities needed to provide safe and reliable service.

Second, both witnesses – but particularly Witness Deupree – fail to situate the various broader studies referenced with the present-day operating conditions experienced by UGI Gas in Pennsylvania to determine whether their conclusions regarding management of regulatory lag would apply. For utilities undertaking significant capital replacement programs, such as those currently being pursued by UGI Gas, reflecting only historic plant in service at the time of new rates does not reflect the anticipated operating conditions that will exist during the rate effective period.

Third, as highlighted by Witness Deupree in his testimony describing the concept of regulatory lag as a benefit, he points to two additional key elements that must exist: "(1)

the possibility of disallowances through the prudence review process and (2) the positive efficiency incentives created by regulatory lag." OCA St 1, at p. 25. However, no party to this proceeding has identified imprudently incurred costs, including no disallowances to the $468 million of planned investment in the test year. Similarly, no opportunities for positive efficiencies exist for things such as future deployment of capital needed to support safe and reliable service, or deviations from the normal weather reflected in the development of volumetric rates.

Q. Do you have other concerns with how OCA Witness Deupree and CAUSE-PA Witness Cicero describe regulatory lag?

A. Yes. Both witnesses appear to confuse revenue lost (or gained) in an individual year due to weather with cost recovery elements established in a base rate case that would be subject to regulatory lag. To be clear, to my knowledge, the Company has never adjusted the revenue requirement in its rate cases to collect historic unrecovered revenues due to weather or to remit over recovery. Individual yearly performances for revenues and expenses are treated as non-recurring. As a result, the credits/surcharges produced by the WNA are not a product of regulatory lag. They are simply an overcollection or shortfall that would never be corrected in a future proceeding, but for the WNA.

Q. Does the Company utilize ratemaking mechanisms that are permitted under Pennsylvania law to address regulatory lag?

A. Yes. The Company utilizes the FPFTY and the DSIC. I note, however, that the existence of the DSIC does not avoid the need for base rate cases or dictate that a utility must use the

DSIC up to the 5% cap rather than availing itself of base rate relief. The WNA, however, is not a tool to address regulatory lag for the reasons I have previously described.

Q. What is your response to OCA Witness Deupree's testimony regarding how the Company has "frame[d]" its request? OCA St. 1, at p. 20.

A. Mr. Deupree incorrectly suggests that the Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. That is not the Company's position nor its testimony. Rather, UGI Gas has utilized the existing Pennsylvania framework to expeditiously replace hundreds of miles of cast iron and bare steel pipe. In fact, this month it will retire the final mile of known cast iron main from its system – an accomplishment that would not have been possible in such a short amount of time without the framework in Pennsylvania that unleashed the capital necessary to transform the safety and reliability of the system. UGI Gas has filed this base rate case to ensure these necessary and important investments can continue to be made for the improvement of its system and the service it provides, and it has done so in compliance with all applicable regulatory requirements imposed by the Pennsylvania framework.

Q. Based on your review of Mr. Deupree's testimony, what appears to be his goal by focusing on "regulatory lag"?

A. Besides establishing a strawman that he can attack to avoid the cost of service basis for the Company's requests, he appears to be offering his critique of regulatory lag as a basis to argue alternative ratemaking measures not proposed by UGI Gas should be adopted in this

proceeding. He specifically takes issue with the Company not "propos[ing] any corresponding ratepayer protections such as earnings tests, revenue caps, or performance incentives" as a part of this case. OCA St. 1, at p. 28. It is my understanding that an alternative ratemaking measure can only be proposed by a utility and that UGI Gas will fully address this issue on brief. Mr. Deupree's statement ignores that a base rate proceeding is intended to establish the very items he identifies – allowed earnings, the necessary revenue requirement, and identification of service or operational issues that the Commission determines require modification. These are established for the period when rates are intended to be effective. Further, the mechanisms the Company operates under have ratepayer protections built in through legislative action. *See, e.g.,* Act 11.

Q. Are there problems with Mr. Deupree's comments regarding the ability of utilities to control the timing of their rate cases? OCA St. 1, at p. 28.

A. Yes. While it is true the utility controls the timing of base rate cases, this control is weakened where a utility must sustain a decades-long infrastructure replacement initiative. The idea that strategic timing of a rate case can benefit the utility presumes that the utility can shift or accelerate its spending into the test year, have its rates set on that basis, and then reduce its spending. Where a utility is continuously deploying tens to hundreds of millions of dollars of capital each year, the capital drives a revenue shortfall that eliminates the ability to strategically inflate a test year.

Q. Please describe Witness Cicero's testimony on ratemaking mechanisms.

A. Witness Cicero discusses "traditional cost of service ratemaking," and various ratemaking mechanisms available to UGI Gas and other utilities under Pennsylvania law (e.g., the FPFTY and DSIC). *See* CAUSE-PA St. No. 1, at pp. 10-15. He then argues that "UGI's combined use of multiple alternative rate mechanisms has a compounding negative impact on consumers" due to the use of the FPFTY (which may differ from actual expenditures and produces a reduced risk that "should result in a lower return on equity"), the use of the WNA (which "spread[s] risks to consumers that were historically born [sic] by UGI"), and the use of the DSIC (which "[d]epending on how long UGI stays out of rate cases in the future, . . . has the potential to result in significant additional dollars charged to residential customers" and "shifts future risks onto consumers because it reduces PPL's[sic] risk that rates set in this case will be insufficient to meet its planned capital plant investments" and, therefore, "should result the ROE required by UGI on its overall ratemaking rate base"). CAUSE-PA St. No. 1, at pp. 12-15.

Q. Do you have any initial comments regarding Witness Cicero's testimony on traditional cost of service ratemaking?

A. Yes. Witness Cicero appears to characterize traditional cost of service ratemaking as a methodology that purposefully injects risk as to the ability to recover costs into the dynamic, which suggests the use of a future or historic test year. He appears to posit that Pennsylvania no longer has traditional ratemaking as a result of adopting the FPFTY, and other alternative mechanisms. I disagree with Witness Cicero on two fronts – that the FPFTY is not traditional cost of service ratemaking and that risk of recovery reflects a public policy benefit. The FPFTY utilizes all the core components of cost of service

ratemaking, and actually better approximates a key principle of traditional ratemaking, that the costs included in rates reflect the operating conditions in the rate effective period. Turning to Witness Cicero's contention that the risk of non-recovery is a public benefit, that contention inherently assumes imprudent behavior. But the costs recovered pursuant to the DSIC and the WNA reflect previously reviewed and authorized infrastructure investments or the authorized cost of service as established in a base rate proceeding.

Q. Do you agree with Witness Cicero's contentions regarding the compounding impacts on consumers of the FPFTY, DSIC, and WNA?

A. No, I do not. First, it is appropriate to separate the FPFTY and DSIC from the WNA, as these mechanisms address very different components. The FPFTY and the DSIC are legislatively created mechanisms with a specific public purpose, to facilitate the accelerated replacement of vintage infrastructure to ensure safe and reliable service continues. As previously described, and as specifically identified in the direct testimony of UGI Gas Witness John Taylor, the WNA does not reduce regulatory lag. However, to the primary point of Witness Cicero's testimony, I disagree with his contention that these mechanisms are independently negative for consumers or that they compound in a way that is negative, as shown by the analysis in the rebuttal testimony of UGI Gas Witness Taylor. They allow a utility to conduct critical safety work uninterrupted, and to recover the approved costs needed to provide service without over recovering on those costs to the detriment of customers.

Q. Please respond to Witness Cicero's claim that higher approved rates in this proceeding will increase the DSIC revenues UGI Gas can collect and reduce risk in future cases. CAUSE-PA St. No. 1, at p. 15.

A. On a technical level, Witness Cicero is correct that the function of the DSIC mechanism is capped at 5% of billed distribution revenue, and therefore higher base rates would allow more capital to be recovered through the DSIC before the Company would exceed the cap. However, this mathematical feature of the DSIC is not germane as to whether the costs proposed in this proceeding are necessary or prudent. Further, to the extent Witness Cicero's testimony opposes the use of the DSIC because it reduces the likelihood of a disallowance, this is once again a clear policy decision that recognizes that certain investments made by the utility deserve the presumption that they are in the public interest.

Q. Is there any merit to Witness Cicero's claim that the Company does not need a rate increase because it received a rate increase last year? CAUSE-PA St. No. 1, at pp. 35-36.

A. No. As I noted earlier in my testimony, the Company is investing $468 million in infrastructure in the FPFTY, alone, and has experienced other cost increases impacting the overall cost of service reflected in this case. Witness Cicero's testimony seems to ignore the concept of a test year and a rate effective period, and relies instead on the position that the magnitude of and recency of a prior rate increase based on a different test year and different operating circumstances, is sufficient to reject UGI Gas's proposal. This can be contrasted with his proposal to rely on recent and projected general economic pressures to assess the ability of customers to afford a rate increase. Witness Cicero's rejection of the

Company's proposal without an assessment of the operating circumstances likely to be incurred in the test year does not provide a basis for a sound and unbiased conclusion and should be rejected.

Q. Do you have any other concerns with the approach advocated by Witness Cicero and Witness Deupree?

A. Yes, I do. For payment troubled customers, the customer group both OCA and CAUSE-PA focus much of their testimony on, there will never be a good time for a rate increase and rate increases will always strain their ability to pay without additional assistance from either government-run or utility-run programs. This dynamic is described fully in UGI Gas Witness Fang's testimony. Further, even when the economy is uncertain and world events are occurring, the utility must keep operating and must maintain safe and reliable service with an eye towards decades of future operations. Cost of service ratemaking provides the platform for ensuring that the utility has what it needs to keep operating, and to operate in a manner that is focused on providing safe, reliable and affordable service. The lack of adequate rate relief can pose a significant risk to both near and long-range projects, increasing their cost, or causing an erosion to the quality of service experienced by customers.

Q. Please summarize your testimony regarding the other parties' claims regarding ratemaking policy and its application to this case.

A. The other parties' arguments on ratemaking policy, while extensive, have no application to this case. The testimony should be rejected.

V. CHOICE PROGRAM

Q. What is the Choice program?

A. The Choice program offered by UGI Gas facilitates residential and small commercial shopping, as required by statute. As part of this program, UGI Gas provides a Price To Compare ("PTC") that allows customers to easily compare the price of gas supply offered by the Company with other Natural Gas Suppliers ("NGSs") offering gas supply services in UGI Gas's service territory. As part of the Choice program, UGI Gas offers a Purchase Of Receivables ("POR") program, where UGI Gas purchases the uncollected receivables from participating suppliers and assumes responsibility for billing the customer and collecting the associated revenue.

Q. Did any parties raise concerns regarding the Choice program?

A. Yes. OCA Witness Alexander and CAUSE-PA Witness Cicero identified concerns with and proposed modifications to the Company's Choice program. Witness Alexander's testimony focuses on communications with customers around the PTC and is addressed by UGI Gas Witness Adamo. Witness Cicero proposes that the Company cease offering to purchase receivables that are above the PTC (also referred to as the default service price) as of January 1, 2027.

Q. What is the basis of Witness Cicero's proposal?

A. Witness Cicero points to data produced by UGI Gas in discovery indicating that a substantial number of customers participating in the Choice program are paying prices higher than the PTC. Witness Cicero argues that the POR program removes the risk

proposed by uncollectible costs from suppliers, which leaves them with little incentive to moderate the prices that they charge customers. CAUSE-PA St. 1, at pp. 87-88.

Q. What is the Company's response?

A. UGI Gas offers its POR program consistent with the Commission's regulations and requirements. I commend Witness Cicero for focusing on an area where many customers are paying excessive costs that do not produce any incremental benefits in safety or service quality. However, NGS rates in many instances are more volatile and, even assuming the same supplier, may be set at different levels for different customers. It is not clear whether a single instance of a price above the PTC should result in exclusion from the POR program, and whether such an exclusion would be temporary (i.e., only so long as the customer charges were above the PTC) or permanent. Finally, the Company would need to evaluate the time and cost of any IT programming necessary to facilitate the structure of a modified POR program, which could be structurally difficult to administer if it moved suppliers on and off the POR program based on monthly variations in rates.

VI. PUBLIC INPUT HEARINGS

Q. Did you attend any of the public input hearings?

A. Yes, I attended 10 of the 12 public input hearings. I was unable to attend the public input hearings in Wilkes Barre, but two members of my team – including UGI Gas Witness Tracy Hazenstab – attended those public input hearings on my behalf. Beyond my team, each public input hearing was attended by a number of other UGI Gas representatives, including members of the Customer Service team.

Q. Please provide a summary of what you observed at the public input hearings.

A. In total, 27 individuals testified, ranging from 8 witnesses testifying in a single hearing to no witnesses testifying, which occurred at 3 of the 12 hearings. Consistent with my past experience, the predominant theme raised by those testifying focused on the affordability of natural gas service, with many witnesses expressing concern not about their own bills, but those of others in the community who may struggle with affordability. Only two individuals testifying raised issues specific to their experienced service with the Company, one as to operations in the field and the other as to call center service. UGI Gas reviewed both of these circumstances. As OCA Witness Teti discusses the operational concerns raised by Mr. Ivan Ritz (OCA St. 7, at p. 11), a review of the associated events is addressed by UGI Gas Witness Jill Walter.

Q. Did you review OCA Witness Teti's testimony regarding the public input hearings?

A. Yes, I did.

Q. Is it appropriate for Witness Teti to draw widespread conclusions based on limited public input hearing testimony?

A. No, it is not. While anecdotal information can be useful, and UGI Gas appreciates and evaluates the testimony provided at public input hearings, UGI Gas serves more than 700,000 customers. The small number of individuals that testified at the public input hearings is not, in my view, representative of widespread customer sentiment. In addition, based on my experience, I do not agree with the characterizations of certain public input hearing testimony supplied by Witness Teti.

VII. CONCLUSION

Q. Please summarize the conclusions made in your rebuttal testimony.

A. UGI Gas acknowledges that affordability is a central consideration in utility ratemaking, and one that the Commission has always evaluated with an eye toward thoughtfully balancing the need for reliable and affordable service for customers with the need for rate relief that will provide the Company with the revenue allowing it to maintain safe and reliable service and have a reasonable opportunity to earn a fair rate of return. The Commission should utilize its traditional approach to cost of service ratemaking, as it reflects the best methodology for ensuring long-term affordability while maintaining financially healthy utilities. While OCA and CAUSE-PA have submitted voluminous testimony pointing to a variety of world events and macroeconomic concerns, they do not identify how those concerns relate to the Company's cost of service, or how the Commission should evaluate the impacts of the various factors in its ratemaking process. OCA and CAUSE-PA do not seek to strike any balance by rejecting the statutory and regulatory framework, and long-standing Commission precedent, to achieve their proposals of no rate increase.

Q. Has the Company thoughtfully approached the impact to ratepayers that will result from this proceeding?

A. Yes. The Company has exercised its judgment in numerous ways in operating its business and in developing this case to appropriately manage the costs passed on to ratepayers. UGI Gas's proposed cost of service recognizes that customers need to have safe, affordable and reliable service, which can only be provided through the continued modernization of aging infrastructure.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit JRR-1R

JESSICA R. ROGERS
UGI UTILITIES, INC.
VICE PRESIDENT – RATES & REGULATORY AFFAIRS

Summary

Rates, regulatory, energy and climate strategy expert with over 15 years of experience in natural gas and electric distribution administrative agency cases. Experience includes cases filed in Pennsylvania, Maryland, Virginia, Michigan, and Washington, DC, the Federal Energy Regulatory Commission and the Surface Transportation Board, as well as appellate experience.

As Vice President – Rates & Regulatory Affairs:

- Leads a team responsible for all rate and regulatory filings for gas and electric utilities before the Pennsylvania Public Utility Commission, the Maryland Public Service Commission, and the Federal Energy Regulatory Commission.
- Develops policy positions and legislative responses for gas and electric utilities for all areas of operations.

Employment History

UGI Utilities, Inc. Vice President – Rates & Regulatory Affairs (Denver, PA)	September 2025 – Present
Washington Gas Light Company Vice President – Regulatory & Climate Strategy (Washington, DC)	June 2024 – August 2025
UGI Utilities, Inc. Senior Director – Rates & Regulatory Strategy (Denver, PA)	September 2023 – May 2024
UGI Utilities, Inc. Director – Regulatory Strategy (Denver, PA)	February 2021 – August 2023
Post & Schell, P.C. Of Counsel (Washington, DC)	June 2020 – February 2021
Post & Schell, P.C. Senior Associate (Washington, DC)	September 2014 – May 2020
Post & Schell, Associate (Harrisburg, PA)	September 2010 – August 2014

Education

Juris Doctorate, University of Virginia, Charlottesville, VA	2010
BA, Communications Studies and English, University of California Los Angeles, Westwood, CA	2005

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 16-R

Rebuttal Testimony of
Cyndee S. Fang, Director
Atrium Economics, LLC

Topics Addressed:

Scope of Utility Responsibility to Address General Affordability Concerns
Role of Utility Assistance Programs
Program Enrollment and Design

Dated: May 13, 2026

Table of Contents

I. INTRODUCTION 1
II. SCOPE OF UTILITY RESPONSIBILITY 5
III. ROLE OF UTILITY ASSISTANCE PROGRAMS 24
IV. PROGRAM ENROLLMENT AND DESIGN 27
V. CONCLUSION 30

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Cynthia S. Fang. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. By whom are you employed and in what capacity?

A. I am employed by Atrium Economics as a Director.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. No, I did not. However, this rebuttal testimony is submitted in response to the direct testimony filed by certain other parties in this proceeding. My rebuttal testimony explains that utility ratemaking is not a reasonable mechanism for addressing economywide inflationary pressures or other macroeconomic conditions, and that energy affordability concerns are more appropriately addressed through Pennsylvania Public Utility Commission ("PUC" or "Commission")-approved, targeted universal service programs that are the subject of separate proceedings designed to specifically address those issues.

Q. Please describe your professional background and education.

A. I have over 20 years of experience in the energy industry focusing on regulatory, cost recovery and rate design issues. I joined Atrium Economics in December 2024. Before joining Atrium Economics, I was Vice President of Regulatory at NorthWestern Energy. In this role I was responsible for the development and execution of the Company's regulatory strategy in Montana, South Dakota, and Nebraska. I joined NorthWestern

Energy in 2021 as the Director of Regulatory Affairs in Montana. Prior to NorthWestern Energy, I held various leadership roles at San Diego Gas & Electric, which included overseeing the Company's electric rate strategy as well as electric forecasting, electric load analysis and research, and origination teams. I began my career in the energy industry as a Public Utilities Rates Analyst at the Minnesota Department of Commerce, Energy Division. I received my Bachelor of Science in Political Economics of Natural Resources from the University of California at Berkley and completed all coursework required for a Ph.D. in Applied Economics at the University of Minnesota, focusing on environmental economics. A copy of my resume is provided as UGI Gas Exhibit CSF-1R.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by the other parties listed below, specific to affordability issues that are experienced by residential customers:

- Office of Consumer Advocate ("OCA")
  - Statement No. 1 – direct testimony of Michael Deupree ("OCA witness Deupree" or Mr. Deupree);
  - Statement No. 6 – direct testimony of Roger Colton ("OCA witness Colton" or Mr. Colton); and
  - Statement No. 7 – direct testimony of Zach Teti ("OCA witness Teti" or Mr. Teti).
- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1 – direct testimony of witness Patrick M. Cicero ("CAUSE-PA witness Cicero" or Mr. Cicero").

Q. Please summarize the principal affordability-related positions advanced by the intervenor witnesses you address in this rebuttal testimony.

A. OCA Witness Deupree places the Company's requested increase within the broader context of persistent inflation, rising costs of other household necessities, and the cumulative impact of recent utility bill increases. He urges the Commission to give consideration to those macroeconomic conditions in evaluating the reasonableness of the Company's proposal and contends that residential and small general service customers should not bear a purportedly disproportionate share of additional rate increases under current economic circumstances.[1]

OCA Witness Colton presents an affordability analysis intended to show that UGI Gas's residential bills are already increasingly difficult for low-income and moderate-income households to manage and that the proposed rate increase would worsen those conditions. He asserts that the Company's rates have risen sharply in recent years, that many households lack the income and liquid financial resources necessary to absorb additional bill increases or seasonal volatility, and that the Company should expand customer protections and affordability-related assistance efforts.[2]

OCA Witness Teti states that his testimony is intended to reflect the concerns expressed by residential customers and public officials during the public input hearings, where affordability was the dominant issue raised. He reports that witnesses repeatedly described financial hardship, difficulty managing rising household expenses, and concern that many customers cannot reasonably absorb another utility increase. Mr. Teti further

[1] OCA St. 1, pp. 7-20.
[2] OCA St. 6, pp. 5, 41, 51.

notes that public witnesses expressed a perception that the proposed increase places customer hardship secondary to shareholder interests.[3]

CAUSE-PA Witness Patrick Cicero asserts that affordability remains a serious and ongoing problem for low-income customers, particularly those not enrolled in CAP, many of whom cannot consistently afford gas service at current rates. He emphasizes that gaps in program participation and coverage leave a substantial number of vulnerable households exposed to payment difficulty, arrearages, and service termination, and that existing assistance structures do not sufficiently protect customers from unaffordable bills. Cicero urges the Commission to evaluate affordability based on actual customer outcomes and to place greater emphasis on universal service program effectiveness, accessibility, and enrollment, rather than assuming current program frameworks adequately address customer need.

Q. Are you the only UGI Gas witness that is addressing affordability issues raised by other parties in their direct testimony?

A. No, I am not. I note that UGI Gas Witness Rogers (UGI Gas Statement No. 15-R) addresses various of the arguments raised by OCA Witness Deupree and CAUSE-PA Witness Cicero regarding affordability, macroeconomic conditions, and ratemaking policy. In addition, UGI Gas Witness Meilinger (UGI Gas Statement No. 12-R) responds to the testimony of OCA and CAUSE-PA related to the Company's Universal Service Programs, the Company's performance with respect to the administration of those programs, and how those programs are designed to help and do help low-income customers manage their utility

[3] OCA St. 7, pp. 2-9.

bills. Finally, responses to parties' concerns about potential affordability impacts of the Company's rate design proposals or weather normalization mechanisms are addressed by Company Witness John D. Taylor (UGI Gas Statement No. 11-R).

Q. Are you sponsoring any exhibits other than UGI Gas Exhibit CSF-1R with your rebuttal testimony?

A. No, I am not.

II. SCOPE OF UTILITY RESPONSIBILITY

Q. Please summarize the intervenor perceived scope of a regulated utility's responsibility for addressing affordability concerns through base rates.

A. Intervenors contend that, because household budgets are strained by rising costs for housing, food, healthcare, and other necessities, utilities should take on a broader role in addressing overall affordability through base rates.[4]

Q. Do you agree with how parties have characterized the scope of a regulated utility's responsibility for addressing broader affordability concerns through base rates?

A. No. The parties misconstrue the scope of utility regulation. The Commission's statutory obligation is to ensure that utility rates are just and reasonable based on the prudent costs of providing utility service; it does not extend to requiring utilities to offset or internalize macroeconomic conditions unrelated to the provision of regulated utility service. Expanding utility responsibility to address economywide affordability pressures would

[4] *See, e.g.*, OCA St. 1, pp. 3-7, 4-19; OCA St. 6, pp. 5-41; OCA St. 7, p. 4; OSBA St. No. 1, p. 2-3; CAUSE-PA St. No. 1, pp. 25-34.

improperly transform ratemaking into a general social policy tool, contrary to long-standing cost-of-service principles embedded in state law.

Q. How does the existing customer protection and assistance framework inform the boundaries of utility responsibility for affordability?

A. The regulatory framework includes well-established customer protection and assistance tools that address payment difficulty in a focused, practical way— through clear rules for: billing (52 Pa. Code § 56.11 et seq.), collections and payment arrangements (52 Pa. Code § 56.191), and termination (52 Pa. Code §§ 56.81, 56.91); and low-income assistance programs and universal service plans (52 Pa. Code § 62.1 et seq.). Those tools are designed to help customers maintain service on reasonable terms while also protecting timely paying customers from undue cost shifting. Importantly, this framework does not treat utilities as responsible for offsetting the full range of household cost pressures (such as housing, food, or healthcare) through base rates. Instead, it reflects a policy choice to address utility affordability through targeted mechanisms within utility regulation, rather than by changing core, cost-based ratemaking principles. Consistent with that structure, the Commission's role in rate regulation is to balance the interests of customers and the utility by establishing just and reasonable rates based on the cost of providing regulated service, while ensuring the utility can maintain safe and reliable operations over the long term

Further, Pennsylvania's affordability challenges are best advanced through a coordinated, statewide approach across essential utility services—including coordinated efforts across multiple Pennsylvania natural gas and electric utilities—building on the Commission's affordability proceeding at Docket No. M-2017-2587711 and the January

2019 staff affordability study as an initial step. Accordingly, material program changes should be pursued through universal service proceedings and appropriate rulemaking or policy processes, rather than through ad hoc modifications in a base rate case.

Q. What Commission-approved mechanisms are intended to address utility affordability concerns?

A. The regulatory framework includes a structured and Commission-approved approach for addressing utility affordability through Universal Service Programs, including Customer Assistance Programs ("CAPs"). Commission regulations identify CAPs as an alternative collection method designed to align customer payments with ability to pay, reduce arrearages, and maintain access to essential utility service for low-income households (52 Pa. Code § 69.261). These programs are evaluated, approved, and modified through formal Commission proceedings and are the appropriate vehicle for addressing affordability concerns within utility regulation. Requiring utilities to address broader macroeconomic hardship not related to the cost of service through base rates would bypass this established framework and undermine the purpose of targeted assistance. In addition, the Commission-approved Universal Service Program framework—particularly those program components funded by other ratepayers—already reflects a balancing of the interests of differently situated customers, with those approved program costs incorporated in the Company's cost of service.

Q. Should utility ratemaking be used as a substitute for broader social policy or to counteract external inflationary pressures?

A. No. While utility rates can and should consider impacts on vulnerable customers, ratemaking principles are grounded in cost causation, rate stability, and understandability; they should not obligate utilities to resolve broader macroeconomic disparities through base rates. Using utility rates as a substitute for social welfare policy would erode cost causation, create inequitable cross-subsidies, and ultimately increase costs for customers who are not the intended beneficiaries of affordability relief. Pennsylvania's regulatory framework already includes targeted Universal Service Programs that address payment difficulty for income-eligible customers, with costs that are reviewed by the Commission and incorporated into rates. The issue raised by intervenors is not whether those targeted tools should exist, but whether utility base rates should be further expanded to serve as a substitute for state-developed and administered social welfare policy or to counteract broader economywide inflationary pressures. Over time, using base rates to absorb economywide affordability pressures would ultimately increase total costs borne by customers.

Moreover, in Pennsylvania—where customers are served by numerous electric and gas utilities—attempting to pursue macroeconomic affordability objectives through individual utility rate cases could lead to inconsistent outcomes across service territories and raise avoidable fairness concerns for customers statewide.

Q. How is limiting affordability obligations to targeted low-income programs consistent with the Commission's just and reasonable standard?

A. Limiting utility affordability obligations to existing low-income programs is consistent with the Commission's just-and-reasonable standard. Universal Service Programs allow

the Commission to balance affordability for income-verified customers with protections for non-participating customers, ensuring that assistance is targeted, transparent, and subject to regular oversight. By contrast, holding utilities responsible for mitigating general macroeconomic hardship through base rates would extend beyond the statutory foundation of ratemaking and risk compromising the stability and fairness of rates for all customers.

Proposals to address macroeconomic pressures through a "no increase" outcome in an individual base rate case does not create a solution grounded in cost of service: they do not resolve the underlying economywide drivers of customer hardship, and they would instead shift the burden to the utility by suppressing recovery of prudent costs. Over time, that approach can weaken the Company's financial and operating integrity by increasing regulatory risk, impairing its ability to maintain credit metrics and access capital on reasonable terms, and constraining needed investment in safety, reliability, and compliance—outcomes that can ultimately increase total costs and service risks for all customers over the long run.

Q. What is the appropriate role of the Commission and rate regulation when intervenors raise broader economywide affordability concerns?

A. Intervenors' arguments risk conflating the Commission's regulatory role with broader economic policymaking that lies outside the scope of rate regulation. The Commission's responsibility is to establish just and reasonable rates (66 Pa.C.S. § 1301(a)) based on the cost of providing regulated service, while ensuring the utility can maintain safe and reliable operations over the long term. At the same time, I recognize that many customers are experiencing real affordability pressures and that these concerns warrant careful attention.

However, the Commission is not charged with addressing general macroeconomic conditions or reallocating economywide affordability pressures through utility rates. Instead, the regulatory framework deliberately separates cost-of-service ratemaking from targeted Universal Service Programs, which are designed to address affordability concerns in a structured and transparent manner. Preserving this distinction helps maintain regulatory certainty, protects non-participating customers from undue cost shifting, and ensures affordability policy is administered through Commission-approved mechanisms rather than through ad hoc modifications to base rates.

Q. What are the implications of using utility rates to address macroeconomic affordability pressures on a utility's ability to earn a fair return and attract capital for necessary investments?

A. Expanding the role of regulation of utility rates to address economywide affordability pressures by suppressing or denying recovery of prudent costs would increase regulatory uncertainty and weaken the link between the cost of service and rates. Over time, that approach can impair a utility's opportunity to achieve a fair rate of return, which in turn can increase the Company's cost of capital and hinder access to financing on reasonable terms. Those outcomes directly affect customers because safe and reliable service depends on continued investment in distribution infrastructure, system integrity, and compliance with safety and environmental requirements. Maintaining traditional cost-based ratemaking, while addressing affordability through targeted assistance and program design, supports both customer protections and the Company's ability to attract capital for the

investments necessary to provide safe and reliable service. This is discussed further by Company Witness Rogers.

Q. Even during periods of broad macroeconomic challenge, how should the Commission approach a base rate case?

A. The Commission should apply the established just-and-reasonable standard by evaluating whether the Company's rates are supported by the prudent costs of providing regulated service and are sufficient to allow the Company to continue providing safe, reliable, and compliant service to the public. Macroeconomic conditions may heighten the importance of targeted assistance and customer protections, but they should not displace the cost-of-service and prudence framework that governs the Commission's determination of the Company's revenue requirement in a base rate proceeding. In this case, the intervenors' affordability arguments do not challenge the prudence of the Company's claimed distribution costs; rather, they seek to use this proceeding to achieve a "no increase" outcome based on broader economic conditions.

Q. If the prudence of the Company's costs is not being disputed, what is the practical effect of proposals to deny or materially reduce recovery?

A. The practical effect is to shift the burden of economywide affordability pressures onto the utility by suppressing recovery of prudent costs and, in turn, eroding the Company's opportunity to earn its authorized return. Over time, that can weaken financial integrity by increasing regulatory risk, impairing credit quality and access to capital, and constraining the Company's ability to make needed investments in safety, reliability, and compliance.

Those impacts can be significant for all customers because they can increase long-run costs (through higher financing costs, deferred maintenance, or accelerated replacement needs) and raise operational and service risks that a stable, cost-based ratemaking framework is intended to avoid. This is discussed further by Witness Rogers.

Q. Beyond direct service considerations, does a utility's financial and operating integrity have broader local implications?

A. Yes. Utilities are often significant local employers and purchasers of goods and services, and they frequently partner with community organizations on safety, customer assistance outreach, and other initiatives. Maintaining the Company's ability to operate safely and reliably—and to plan and invest on a long-term basis—supports those local first- and second-order economic impacts. That said, those broader considerations do not convert base rate cases into macroeconomic or social welfare proceedings; rather, they reinforce why a stable, cost-based approach to recovery of prudent costs is important to sustaining the essential services that utilities provide. Witness Rogers discusses the first- and second-order impacts of UGI Gas on the communities it serves.

Q. If macroeconomic conditions are contributing to broader affordability pressures, what is the appropriate forum for addressing those issues?

A. To the extent broader macroeconomic conditions are driving household hardship, the most effective tools for addressing those conditions generally lie at the state or federal level through tax policy and broad-based social assistance programs that are designed to be income-targeted and coordinated across essential needs (e.g., housing, food, healthcare,

and energy). If utility rates are expected to absorb or offset broader macroeconomic pressures by suppressing recovery of prudent costs, that creates regulatory uncertainty and can impair the Company's ability to achieve a fair opportunity to earn its authorized rate of return and attract capital on reasonable terms. Those risks ultimately affect customers because continued access to capital supports the investments necessary to maintain safe and reliable service for essential energy needs. Preserving cost-of-service ratemaking while directing affordability relief through targeted public programs and Commission-approved universal service mechanisms provides a more appropriate and effective framework.

Q. OCA Witness Colton presents affordability and energy-burden data indicating that many customers—particularly low-income households—experience high gas burden levels.[5] How do you respond?

A. I recognize that many customers are under real financial strain, and that higher bills can be especially difficult for low-income households with limited flexibility in their budgets. The energy-burden metrics presented by Mr. Colton highlight the real financial pressures many customers face, and they underscore why affordability is an important issue for both the Commission and the Company. Consistent with that concern, the Company supports and administers multiple assistance and universal service programs intended to mitigate bill burdens for vulnerable customers, which is discussed further by Witness Meilinger. This data further reinforces the importance of ensuring that available assistance programs are effective, accessible, and functioning as intended for the customers they are designed to serve.

[5] OCA St. 6, pp. 5-41.

Q. Does Mr. Colton's affordability and energy-burden analysis demonstrate that the Company's proposed rates are unreasonable?

A. No. While Mr. Colton's analysis provides useful insight into customer circumstances, it principally reflects income limitations and broader economic conditions, rather than the prudence of the Company's costs or the level of revenue required to provide safe and reliable service. Affordability and energy-burden metrics help illustrate why effective assistance programs are critical, but they do not supplant the Commission's obligation in a base rate case to determine whether the Company's proposed rates are just and reasonable based on prudent costs. Viewed in that context, Mr. Colton's testimony supports continued attention to the effectiveness and design of assistance programs, which UGI Gas Witness Meilinger addresses, not a conclusion that recovery of prudent costs should be denied.

Q. OCA witness Mr. Colton notes that affordability challenges are exacerbated by seasonal bill volatility, particularly during winter months when usage increases.[6] How do you respond?

A. Mr. Colton is correct that seasonal usage patterns can lead to significant bill volatility, and that large winter bills can create acute cash-flow stress for some customers. This seasonal volatility is most prominent with a rate design that focuses on recovery of utility costs through volumetric rates. As Mr. Colton's testimony explains, this concern is especially pronounced for low-income households that have limited liquid assets and little or no savings cushion, which reduces their ability to absorb short-term bill increases even when

[6] OCA St. 6, pp. 25-26.

annual costs are relatively predictable. This seasonality-driven cash-flow challenge reflects fluctuations in usage, rather than deficiencies in the prudence of the Company's costs or the overall level of rates. To the extent that high winter bills heighten affordability risk, those impacts can be mitigated through rate design approaches that reduce excessive seasonal bill swings by moderating how costs are recovered over the year, while still preserving appropriate price signals. In this way, rate design can help address the timing and variability of bills, while targeted assistance programs address customers' underlying income and liquidity constraints—each serving a complementary role within the Commission's ratemaking framework. Impacts of rate design on affordability are discussed further by Company witness Taylor.

Q. Do the intervenors provide an accurate assessment of the current energy burden of UGI Gas's customers?

A. No. Affordability concerns warrant careful and informed consideration. Given the importance of these issues, a more rigorous, customer-level energy-burden analysis, using consistent definitions and transparent assumptions, would better inform the nature and extent of affordability challenges.

Q. Did Atrium Economics conduct a gas-burden analysis for UGI Gas, and if so, what did it entail?

A. Yes. Atrium Economics conducted a customer-level "gas burden" study, defining gas burden as the percentage of household income spent on the UGI gas bill, with household income proxied using American Community Survey ("ACS") data by mapping each

customer to the median household income of the Census block group in which the customer resides. The analysis used customer billing and usage information for the period August 2024–July 2025 for gas only customers. Customers were then mapped to ACS 2024 5-year block-group median income, and gas burden was calculated as annual gas bill divided by that income proxy. The analysis excludes benefits from customer assistance programs.

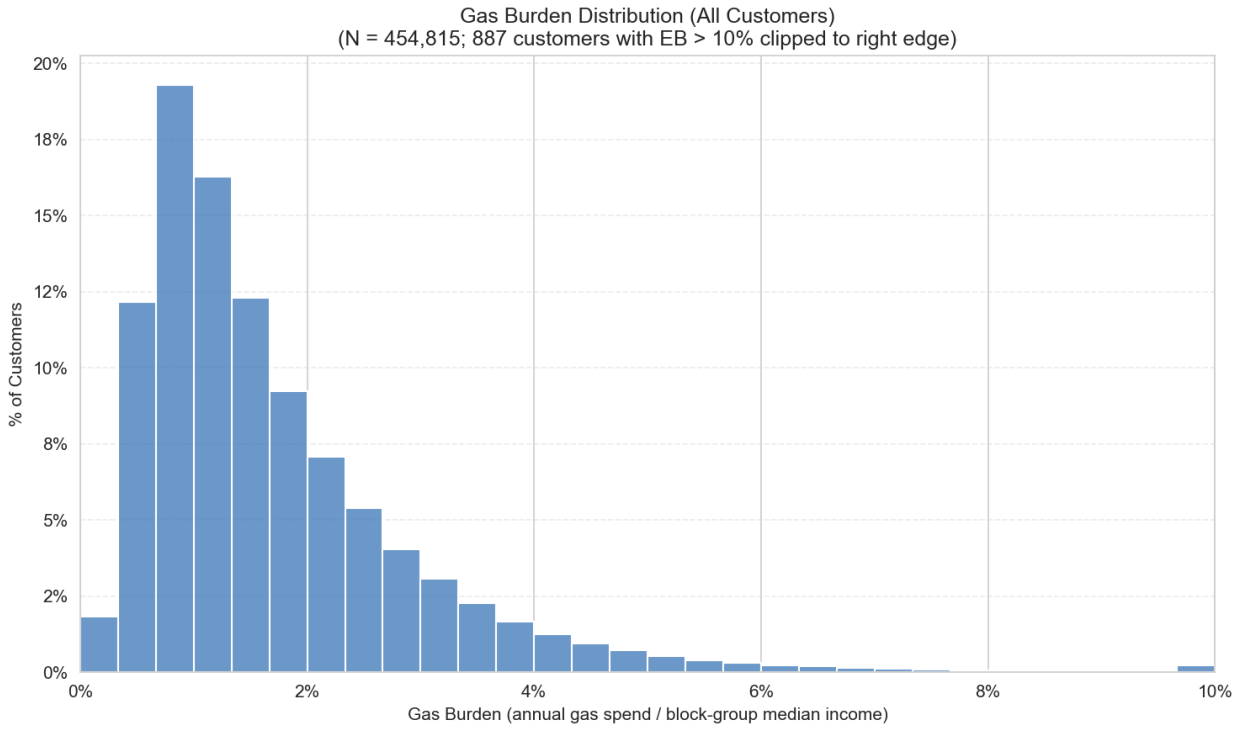
Q. What does Atrium's gas-burden analysis show for UGI Gas customers as a whole?

A. The analysis included 454,815 gas only customers:

- Estimated average annual household income: $83,026
- Estimated median annual household income: $78,082
- Average Annual gas spend: $1,171
- Median annual gas spend: $1,102
- Average annual gas usage: 775 CCF
- Median annual gas usage: 723 CCF

The average gas burden for this group was 1.71% with a median of 1.34% and a maximum energy burden of 25.11%. The results of the gas burden analysis are presented in Figure 1 below.

Figure 1: Distribution of Gas Burden for UGI (Gas Only Customers)



In addition, Table 1 below provides a summary of Figure 1.The distribution shows that the first quartile (25% of customers) has a gas burden of 0.86% or below, the median (50% of customers) is 1.34%, and the third quartile (75% of customers) is 2.17% prior to receiving any benefits from customer assistance programs.

A more granular look at the upper tail shows that 90% of customers have a gas burden ≤ 3.25%, 95% have a gas burden ≤ 4.09%, and 99% have a gas burden ≤ 6.39%. Alternatively, 5.39% or 24,514 customers have a gas burden above 4%, 1.28% or 5,821 have a gas burden above 6% and 0.20 or 909 have a gas burden above 10% prior to receiving any benefits from customer assistance programs.

Table 1: Gas Burden for UGI (Gas Only Customers)

All Customers	
Number of Customers	**454,815**
Average	**1.71%**
First Quartile - 25% of population	**0.86%**
Second Quartile/Median – 50% of population	**1.34%**
Third Quartile – 75 % of population	**2.17%**
90% of population	**3.25%**
95% of population	**4.09%**
99% of population	**6.39%**
Maximum	**25.11%**

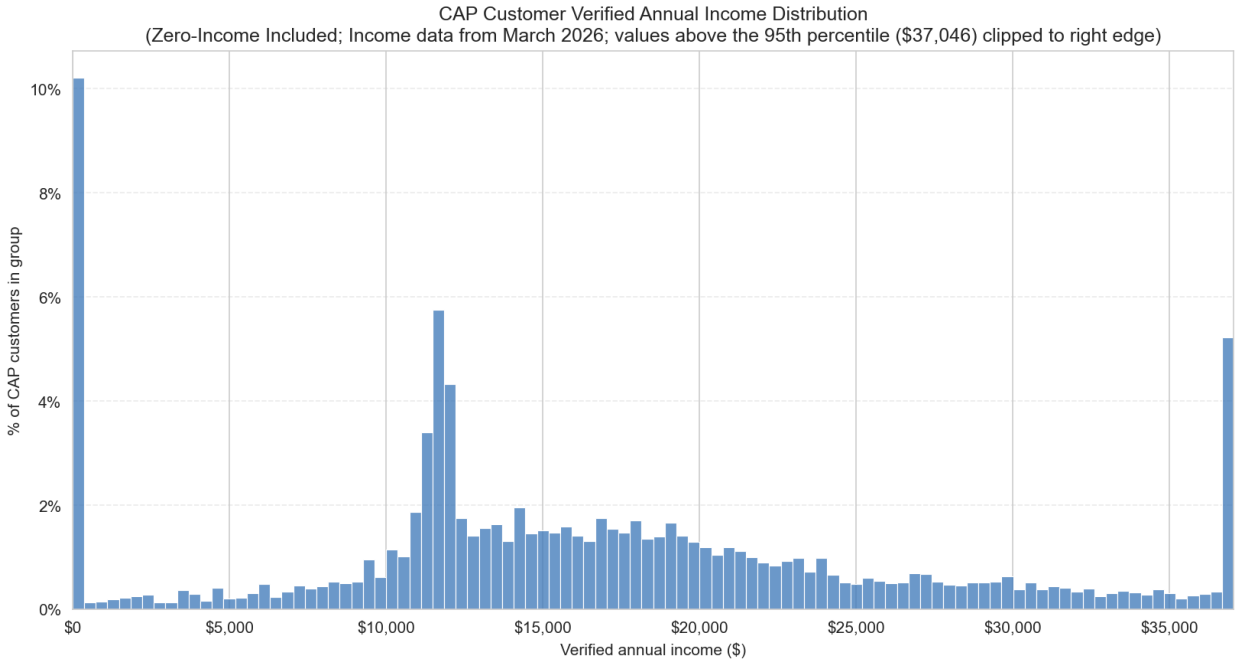
Q. Did Atrium conduct any additional analysis to evaluate the gas burden for UGI Gas's CAP enrolled customers? If so, please describe.

A. While ACS data provides publicly available income estimates that allow for a mapping of each of the Company's customers to the median household income of the Census block group in which the customer resides, those ACS-based estimates may overstate income for low-income customers. Accordingly, Atrium conducted an additional customer-level analysis for UGI's CAP-enrolled gas-only customers using anonymized CAP program data, including:

- **Verified monthly income**, which Atrium annualized by multiplying by 12;
- **CAP bill amount** (monthly, aggregated across the 12-month period), which reflects the with-benefits bill amount charged to a CAP customer; and
- **CAP credit** (monthly, aggregated across the 12-month period), which reflects the difference between the customer's without-benefits bill amount and the with-benefits bill amount charged to the customer.

A CAP customer's without-benefits bill is calculated as CAP bill amount + CAP credit.

Figure 2: Distribution of Annual Income for CAP Enrolled Customers



Atrium's analysis included 13,774 CAP-enrolled gas-only customers with 12 months of CAP bill data; customers with fewer than 12 months of CAP bill data were excluded from the analysis. Figure 2 presents the distribution of annual income for this population. Of the 13,774 customers, 1,396 (approximately 10%) had verified annual income equal to $0.

For all charts within this section, Atrium effectively "clipped" the data at the 95th percentile in an effort to keep the distribution charts legible. The 95th percentile cutoff removes the long, sparse right tail that would otherwise compress the bulk of the distribution into a small portion of the chart. For any chart that includes two distributions (overlaid on top of each other), the cutoff is set to the 95th percentile of the without-CAP benefits group only, since that group is right-shifted relative to the with-CAP benefits group and a combined-group data cutoff would over-clip the without-CAP benefits group

distribution. For the verified annual income chart, the cutoff is the 95th percentile of the income distribution itself. Values above the cutoff are pulled to the cutoff value rather than dropped, so the rightmost bar in each chart reflects both its natural density and the share of customers above the cutoff.

Because gas burden is defined as the ratio of annual gas bill to annual household income, gas burden cannot be calculated for customers with verified annual income of $0 because the metric is undefined (division by zero). This data limitation was also identified in the Commission's report on Home Energy Affordability for Low-Income Customers in Pennsylvania published on January 2019 under Docket No. M-2017-2587711.[7] As noted in that report, there are mathematical limitations when performing an energy burden analysis for customers who enroll in utility CAPs with zero income. Such customers must sign an affidavit at the time of enrollment stating that there is currently no adult receiving income and identify the source of the funds to meet monthly living expenses, such as savings; support from friends, family or community; or other means. The PUC stated

> Customers who enroll in utility CAPs with zero income (zero-income customers) may inflate the average energy burden levels, particularly for the analysis of customers with incomes at or below 50% of the FPIG. Utilities require customers that report zero income to pay the utility's CAP minimum payment amount. Thus, it is not mathematically possible for zero-income customers to receive bills below the maximum energy burden guidelines in the CAP Policy Statement because any billed amount will exceed 100% of their household income.[8]

Due to these limitations, customers enrolled in CAP with zero income have been excluded from this analysis. Pursuant to the Company's approved USECP at Docket Nos. M-2019-

[7] 1602386.pdf
[8] Page 21

3014966 and P-2020-3019196, zero income customers would be subject to the minimum bill requirements for CAP customers which are $15 per month for CAP non-heating customers and $25 per month for CAP heating customers.

Figure 3 presents the income distribution updated to reflect the exclusion of zero income customers.

Figure 3: Distribution of Annual Income for CAP Enrolled Customers Excluding Zero-Income Customers

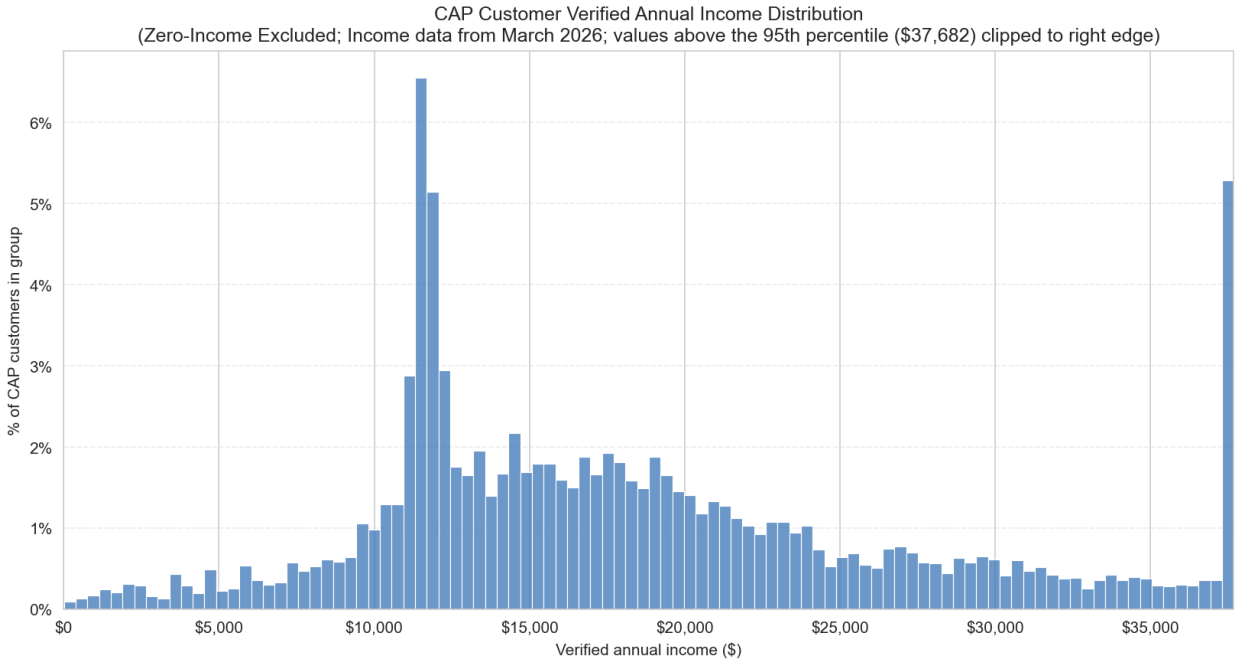


Figure 4 below presents the distribution of gas burden for CAP-enrolled customers with and without CAP benefits. The figure shows that CAP benefits materially reduce gas burden, shifting the distribution downward: mean gas burden falls from 13.02% without benefits to 5.85% with benefits, with similar reductions at the median (7.60% to 5.47%) and the upper tail (95th percentile 26.39% to 7.18%). Overall, the with-benefits distribution is more concentrated at lower burden levels, indicating that CAP benefits substantially

mitigate both typical burdens and high-burden outliers, although a small number of customers still experience high gas burdens. These results are summarized in Table 2.

Figure 4: Gas Burden for UGI CAP-Enrolled Customers With and Without CAP Benefits

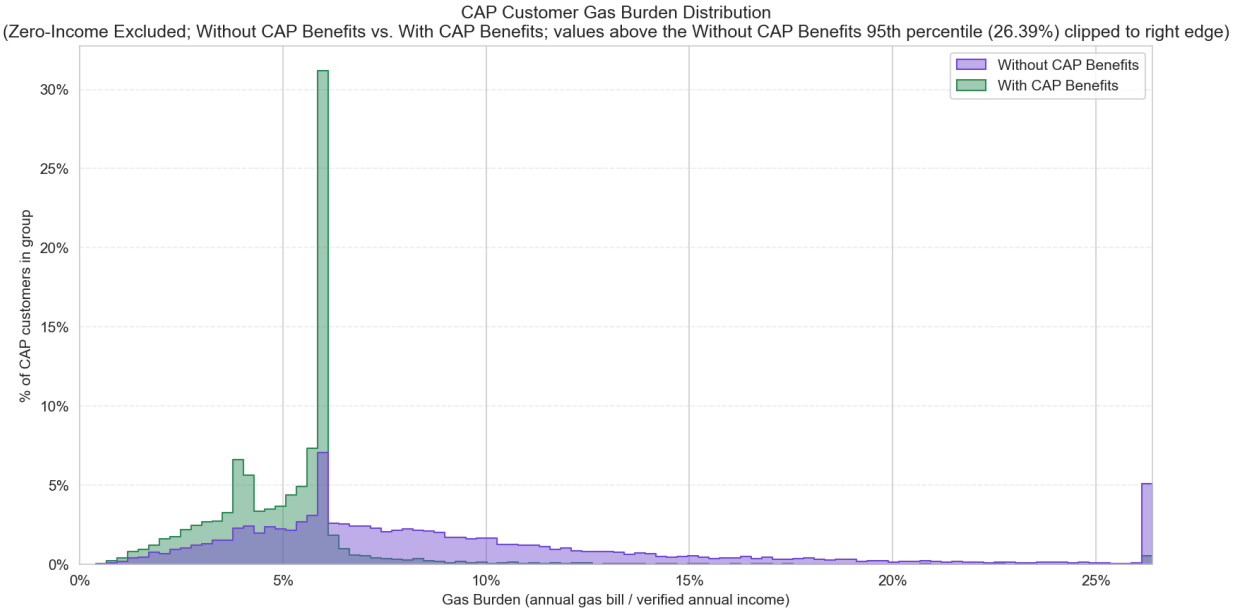

Table 2: Gas Burden for UGI CAP Enrolled (Gas Only Customers)

	Without CAP Benefits	With CAP Benefits
Number of Customers	**12,378**	**12,378**
Average	**13.02%**	**5.85%**
First Quartile - 25% of population	**5.48%**	**4.00%**
Second Quartile/Median – 50% of population	**7.60%**	**5.47%**
Third Quartile – 75 % of population	**11.43%**	**6.01%**
90% of population	**18.16%**	**6.09%**
95% of population	**26.39%**	**7.18%**
99% of population	**72.95%**	**16.81%**
Maximum	**10,179.83%**	**2,500.00%**

* Analysis excludes customers with less than 12 months of CAP bill data as well as those with zero-income.

Q. Did Atrium look at any other metrics in addition to gas burden?

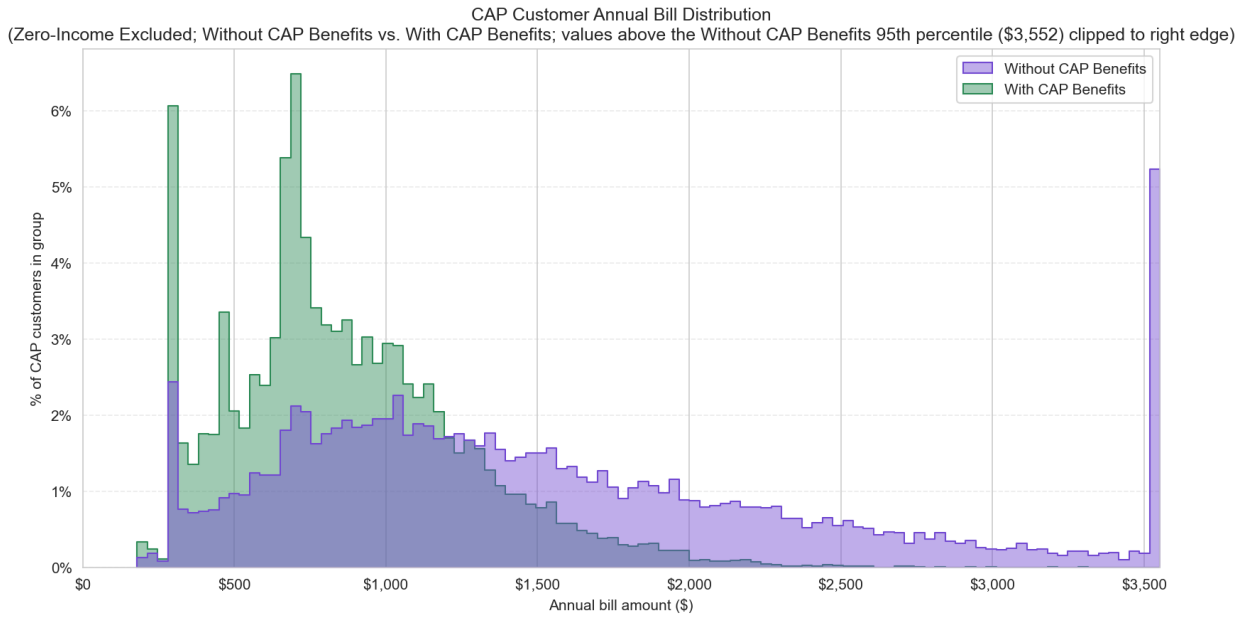
A. Yes. Atrium also evaluated annual gas bill amounts (in dollars) without and with CAP benefits—i.e., comparing each customer's estimated bill without CAP benefits (CAP bill plus CAP credit) to the CAP bill (with benefits)—to quantify the extent to which CAP benefits reduce customers' actual billed charges.

Q. Please summarize the results of that analysis.

A. Figure 5 summarizes Atrium's analysis of annual billed amounts for CAP-enrolled customers, comparing estimated without benefits annual bills (CAP bill plus CAP credit) to with benefits annual bills (CAP bill). Figure 5 shows that CAP benefits substantially

reduce annual bills: the median annual bill declines from approximately $1,341 pre-benefits to $807 post-benefits (a reduction of approximately 40%), and the mean annual bill declines from approximately $1,623 to $874 (a reduction of approximately 46%).

Figure 5: Annual Gas Bills for UGI CAP Enrolled Customers with and without CAP Benefits – excluding zero income



III. ROLE OF UTILITY ASSISTANCE PROGRAMS

Q. Please describe the customer assistance tools UGI Gas currently offers to help mitigate affordability concerns for residential customers.

A. UGI Gas offers and actively supports a comprehensive suite of assistance programs designed to address both short-term bill payment challenges and longer-term affordability issues, as discussed by UGI Gas Witness Meilinger (UGI Gas Statement Nos. 12 and 12-

R). These tools include federal and state programs, utility-administered assistance, community-based grants, usage reduction initiatives, and flexible payment options. Together, these programs reflect a broad approach intended to assist customers with varying financial circumstances, consistent with Pennsylvania's policy framework.

Q. At a high level, how can UGI's customer assistance tools be grouped by the type of need they address?

A. At a high level, these tools generally fall into three categories: (i) bill-payment assistance for customers facing financial hardship; (ii) usage-reduction offerings intended to lower bills over time by lowering consumption; and (iii) bill-stabilization and payment-flexibility options that help customers manage seasonal volatility and cash-flow constraints. Program-specific details, eligibility, and performance are addressed elsewhere in this proceeding, including in the direct and rebuttal testimony of UGI Gas Witness Meilinger.

Q. At a high level, how do these tools differ in purpose and funding?

A. These tools serve different functions and rely on different funding sources. Some bill-payment assistance is supported through federal or state programs that provide grants to eligible households. Other components—particularly the Company's Commission-approved Universal Service Programs, including ratepayer-funded assistance and usage-reduction offerings—are supported through Commission-approved cost recovery and therefore reflect an explicit balancing of the interests of participating and non-participating customers. Still other resources rely on voluntary or community-based support. Regardless of funding source, the common objective is targeted relief for

customers with demonstrated need, coupled with tools that help reduce usage or stabilize payment obligations.

Q. What do the intervenor witnesses' affordability concerns indicate, even with these tools in place?

A. The intervenors' testimony reflects that many households are experiencing real financial strain, and that even modest bill increases or seasonal bill changes can be difficult to manage for customers with limited income or limited savings. Utility-administered assistance programs can provide meaningful, targeted relief to eligible customers and are an important part of the Commission's affordability framework. At the same time, those tools are necessarily targeted and cannot, by themselves, resolve affordability challenges that are driven by broader income constraints and economywide cost pressures. Accordingly, these concerns support continued focus on the effectiveness, accessibility, and coordination of the Commission's universal service programs for customers most in need, while broader affordability pressures are addressed through broader state and federal economic and social policy tools outside of base ratemaking.

Q. What do you believe is the appropriate role of a regulated utility in addressing customer affordability concerns?

A. Utilities have a critical but inherently limited role in addressing affordability. UGI's responsibility is to provide safe and reliable service at rates that reflect prudent costs and comply with statutory ratemaking principles, while also implementing customer assistance programs. These programs can help mitigate bill impacts for income-eligible customers,

but they cannot fully resolve affordability challenges that are driven by income disparities and broader economic forces. Assigning utilities undue responsibility for addressing income-based affordability issues extends beyond traditional ratemaking objectives and is not an effective substitute for broader public policy solutions.

Q. How would you summarize the Company's overall approach to affordability while continuing to maintain a safe and reliable system?

A. UGI Gas's approach to affordability is responsible, comprehensive, and balanced. The Company actively administers and supports a wide range of assistance programs, invests in long-term usage reduction for income-eligible customers, and provides flexible payment tools for customers facing hardship. At the same time, UGI Gas continues to make the prudent investments necessary to ensure the safety and reliability of its system. Further, as described by Witness Rogers, the Company's expense history shows careful management of operating costs. This approach reflects the fundamental ratemaking principle that just and reasonable rates must support both customer protection and the operational integrity of the utility. The Company's proposed rates are consistent with that principle.

IV. PROGRAM ENROLLMENT AND DESIGN

Q. CAUSE-PA Witness Cicero and OCA Witness Colton both raise concerns about enrollment in assistance programs.[9] How should the Commission interpret that testimony?

[9] CAUSE-PA St. No. 1, pp. 70-72; OCA St. 6, pp. 53, 80.

A. The testimony of both witnesses highlights that program effectiveness depends on participation, and that enrollment outcomes are shaped by a variety of factors such as eligibility screening, documentation requirements, recertification processes, customer awareness, and coordination across assistance programs. As Mr. Colton explains, participation barriers can materially limit affordability outcomes even where assistance programs exist, and Mr. Cicero similarly points to customers who remain unenrolled and exposed to payment difficulty. Read together, their testimony supports the conclusion that enrollment challenges are programmatic and structural in nature, not evidence that current rates are unjust or unreasonable. These concerns indicate the need for a broader examination of assistance program design and administration, which is more appropriately addressed through universal service program review, rather than through base rate determinations focused on the recovery of prudent costs necessary to provide safe and reliable service.

Q. CAUSE-PA witness Patrick Cicero contends that low participation in assistance programs demonstrates that many customers remain exposed to unaffordable bills.[10] How do you respond?

A. I agree that enrollment gaps exist and that not all customers who may benefit from assistance programs are currently participating. However, enrollment gaps do not demonstrate that the Company's proposed rates are unjust or unreasonable. Rather, they indicate the need for a broader examination of program design, outreach, and coordination, including how customers are identified, informed, and supported through the enrollment

[10] CAUSE-PA St. No. 1, pp. 26-27.

process. These issues are distinct from the prudence of the Company's costs and the determination of its revenue requirement in this proceeding. The Company's ongoing efforts to address these enrollment gaps are detailed by UGI Gas Witness Meilinger (UGI Gas Statement No. 12-R).

Q. In your view, what is the appropriate role of this proceeding with respect to assistance program enrollment concerns?

A. The appropriate role of this proceeding is to determine whether the Company's proposed rates reflect prudent costs necessary to provide safe and reliable service. Concerns about enrollment levels and program design are important and warrant attention, but they point to the need for coordinated, system-level improvements in assistance programs, in proceedings designed to address those programs, rather than base rate case outcomes that deny or constrain cost recovery. Recognizing enrollment gaps as a signal for program evaluation preserves the integrity of ratemaking while allowing affordability issues to be addressed through the most effective regulatory tools.

Q. Even if the Commission revises or expands UGI Gas's independent utility assistance programs, can utility programs—or utility ratemaking itself—serve as a solution to broader macroeconomic affordability challenges?

A. No. Utility assistance programs can provide important, targeted relief for income-eligible customers and can be improved over time through program design, outreach, and administration. However, neither utility programs nor cost-based ratemaking are designed to resolve the underlying drivers of economywide affordability pressures, such as inflation,

housing costs, or healthcare expenses. Attempting to use utility rates to address those broader conditions would dilute core ratemaking principles, create inequitable cross-subsidies among customers, and introduce additional regulatory uncertainty. For these reasons, even with revisions to independent utility programs, the appropriate role of this proceeding remains to set just and reasonable rates based on the prudent cost of providing safe and reliable service, while broader macroeconomic affordability issues are more appropriately addressed through state and federal public policy tools that extend beyond utility regulation.

V. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

UGI Gas Exhibit CSF-1R

Cyndee Fang

Ms. Fang is an experienced industry leader with over 20 years of experience who strives to engage others to conceive, create, and execute practical solutions to the most challenging problems. Expert witness with extensive experience and understanding of utility regulatory process including expertise in regulatory strategy and rate design.

EDUCATION

University of Minnesota, Ph.D. (ABD), Applied Economics

University of California, Berkeley, B.S., Political Economics of Natural Resources

YEARS EXPERIENCE

20+

RELEVANT EXPERTISE

Expert Witness, Allocated Cost of Service & Rate Design, Regulatory Strategy

PROFESSIONAL HISTORY

ATRIUM ECONOMICS

DIRECTOR, 2024

- Expert witness focused on the following areas of expertise:
    - Regulatory Policy & Strategy;
    - Cost Recovery & Alternative Regulatory Mechanisms;
    - Allocated Cost of Service Studies; and
    - Rate Design.

NORTHWESTERN ENERGY

VICE PRESIDENT - REGULATORY; 2021 - 2024

- Oversaw the Company's regulatory activities in Montana, South Dakota, and Nebraska.
- Developed and executed a regulatory strategy to advance a more constructive regulatory framework to meet the Company's strategic needs.
- Established an in-house cost of service and rate design team.
- Developed and executed a strategy for Montana rate reviews to advance a more constructive regulatory framework.

SAN DIEGO GAS AND ELECTRIC

ENERGY SUPPLY - ORIGINATION & PORTFOLIO DESIGN MANAGER; 2020 – 2021

- Lead the portfolio design of Electric & Fuel Procurement (E&FP), as SDG&E right-sizes portfolio, with market analytics that inform and guide the long-term strategy including daily optimization activities and forward-looking planning efforts.
- Lead all competitive procurement of renewable energy and conventional resources beyond one year to fulfill SDG&E's energy and resource capacity needs.

FORECASTING, RESEARCH & ANALYTICS – MANAGER OF ENERGY RESEARCH & ANALYSIS; 2018 – 2020

- Lead and oversee load forecasting, research and analysis teams to ensure the advancement of data-driven decision making in support of the Company's strategic needs including the advancement of operational improvements to better address changing California energy policies. Key areas of focus include impacts of customer adoption of advanced technology (PV, EV) and analysis of COVID impacts.
- Development of collaborative internal stakeholder processes to ensure alignment on Company direction regarding electric sales forecast. Key areas of focus include identification of key drivers and CCA expansion.
- Establishment of collaborative relationships with external stakeholders to support the advancement of the Company's strategic objectives related to the sales forecast.

RATES AND PRICING – MANAGER OF CUSTOMER PRICING; 2017 – 2018

- Oversight of all aspects of the pricing policy to meet the strategic needs of SDG&E and ensure fair and equitable rates for SDG&E's 1.4 million electric customers.
- Development, advocacy and implementation of the Company's rate strategy, including the development of regulatory filings to advance this strategy.
- Development of collaborative internal stakeholder processes to ensure alignment on Company direction regarding electric rates.
- Establishment of collaborative relationships with external stakeholders to support the advancement of the Company's rate strategy needs to include representing the Company as a witness in regulatory proceedings and lead settlement negotiations.

RATE STRATEGY AND ANALYSIS MANAGER; 2015 – 2017
ELECTRIC RATES MANAGER; 2010 – 2015
PRINCIPAL/REGULATORY ECONOMIC ADVISOR; 2006 - 2010

MINNESOTA DEPARTMENT OF COMMERCE

PUBLIC UTILITIES RATES ANALYST; 2003 - 2006

- Development of the position of the Minnesota Department of Commerce on matters related to energy policy and presentation before the Minnesota Public Utilities Commission
- Implementation of Minnesota's Renewable Energy Objective, including the establishment of the Minnesota Renewable Energy Tracking System and compliance review of utility filings (integrated resource plans, certificate of need)

REGULATORY EXPERIENCE

Alternative Regulatory Mechanisms

- Consideration of the Formula Rate Mechanism Tariff Revision Designated as TA 353-4 *on behalf of ENSTAR Natural Gas Company, LLC of Alaska* (Docket No. U-25-013). Filed April 2025.
- 2022 Montana Rate Review (Docket No. 2022.07.078) - Witness: Priority Regulatory Mechanisms proposing new revenue adjustment mechanisms and redesign of existing mechanisms https://www.northwesternenergy.com/docs/default- source/default-document-library/billing-and-payment/2022-montana-rate-review/08-fang- direct-testimony-regulatory-policy.pdf
- PCIA Reform (A.17-04-018) - Joint Application of Southern California Edison Company, Pacific Gas and Electric Company, and San Diego Gas & Electric Company for Approval of the Portfolio Allocation Methodology for All Customers – *Cost Recovery and Rate Design witness for SDG&E*
- Establishment of Tree Mortality Non-Bypassable Charge (TM-NBC) (A.16-11-005) Application to Establish Non-Bypassable Charge ("NBC") for Above-Market Costs Associated with Tree Mortality Power Purchase Agreements ("Tree Mortality") in Compliance with Senate Bill 859 and Resolution E-4805 – *Cost Recovery and Rate Design witness for SDG&E*
- SDG&E's Wildfire Expense Memorandum Account (WEMA) Proceeding (A.15-09-010) – *Cost Recovery witness*
- Establishment of Cost Allocation Mechanism (CAM) (A.11-05-023) - SDG&E's Authority to Enter into Purchase Power Tolling Agreements with Escondido Energy Center, Pio Pico Energy Center and Quail Brush Power – *Cost Recovery and Rate Design witness*

Affordability

- Affordability Rulemaking – R.18-07-006: Order Instituting Rulemaking to Establish A Framework and Processes for Assessing the Affordability of Utility Service – *SDG&E lead*
- Residential Essential Use Study – A.19-11-019: Joint Utility Proposal for the Study to Identify Electric Essential Usage for Residential Customers – *SDG&E lead*
- A.17-10-007: SDG&E 2019 General Rate Case – *rebuttal witness addressing affordability*
- Residential TOU Exclusions Pursuant to Section 745 – R.12-06-013: To ensure residential customers defaulting to TOU do not experience unreasonable hardship under TOU rates – *Rate Design Policy witness*

Allocated Cost of Service and Rate Design

- Washington Gas Light Company's Application for Authority to Increase Rates and Charges for Natural Gas (Case No. 9849) – Witness: Class Cost of Service Studies, Revenue Apportionment, and Rate Design. Filed December 2025.

- 2022 Montana Rate Review (Docket No. 2022.07.078) - Witness: Allocated Cost of Service and Rate Design presenting the Company's moderation proposals to allocated cost of service and rate design for customers https://www.northwesternenergy.com/docs/default-source/default-document-library/billing- and-payment/2022-montana-rate-review/31-fang-acos-rd-direct-testimony.pdf
- SDG&E General Rate Case Phase 2 Application for Authority to Update Marginal Costs, Cost Allocation, and Electric Rate Design - *Rate Design and Policy Witness*

Rate Design

Time-Variant Pricing and Residential Default Time-of-Use

- The Narragansett Electric Company d/b/a Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates Pursuant to R.I. Gen. Laws §§39-3-10 and 39-3-11 (Docket No. 25-45-GE) – Witness: presenting the Company's framework for development of time-varying rates ("TVR") and a TVR implementation plan. Filed November 2025.
- Petition for Approval of (1) Time of Use ("TOU") and Critical Peak Pricing ("CPP") Rates and (2) Modification of the TOU Summer Period for the CPP Pilot Program, and (3) CEI South's Rate RS-CPP Tariff *on behalf of Southern Indiana Gas and Electric Company d/b/a CenterPoint Energy Indiana South* (Cause No. 46263) Filed June 2025.
- Application of San Diego Gas & Electric Company for Authority to Update Electric Rate Design Regarding Residential Default Time-Of-Use Rates and Fixed Charges (A.17-12-013)
- Residential Rate Reform (R.12-06-013) - SDG&E's Application in response to Order Instituting Rulemaking on the Commission's Own Motion to Conduct a Comprehensive Examination of Investor Owned Electric Utilities' Residential Rate Structures, the Transition to Time Varying and Dynamic Rates, and Other Statutory Obligations – *multiple phases*
- SDG&E's 2016 General Rate Case Phase 2 Proceeding (A.15-04-012) - includes proposal to update TOU periods
- SDG&E's 2015 Rate Design Window Filing (A.14-01-027) – includes proposal to update TOU periods and residential baseline

Innovative Rate Design and Emerging Technologies

- SDG&E's Electric Vehicle Grid Integration (VGI) Pilot Program (A.14-04-014) – *Rate Design Policy and Cost Recovery witness*
    - SDG&E was recognized as the 2020 Investor-Owned Utility of the Year by Smart Electric Power Alliance (SEPA) for its "Power Your Drive" program and the innovative VGI rate, an hourly dynamic grid integrated rate. https://sepapower.org/knowledge/2020-sepa-power-players- award-winners/
- Net Energy Metering Reform (R.14-07-002) - SDG&E Application in response to Order Instituting Rulemaking to Develop a Successor to Existing Net Energy Metering Tariffs Pursuant to Public Utilities Code Section 2827.1, and to Address Other Issues Related to Net Energy Metering

- Application of SDG&E for Authority to Implement Priority Review and Standard Review Proposals to Accelerate Widespread Transportation Electrification (A.17-01-020) – *Rate Design Policy and Cost Recovery witness*

Economic Development Rates

- Application of San Diego Gas & Electric Company for Authority to Implement Rate Relief and Increase Spend in Support of the San Diego Unified Port District's Energy Management Plan (A.17-09-005) – *Cost Recovery and Rate Design witness*
- Application of SDG&E for Authority to Implement Economic Development Rates (A.17-02-008) – *Cost Recovery and Rate Design witness*

Cost Recovery

- Assessment of Potential Gas LDC Capital Transition Costs and Analysis of Depreciation and Alternative Cost Recovery Approaches for Pathways to Commonwealth Decarbonization Goals *on behalf of Massachusetts Gas Local Distribution Companies (National Grid; Eversource Energy; Berkshire Gas Company; Liberty Utilities; Unitil)* Filed March 2025.
- Strategic Targeted Pipe Replacement Plan *on behalf of Washington Gas and Light Company of the District of Columbia* (Formal Case No. 1179) – rebuttal witness: responding to parties on risk of stranded assets and stranded costs. Filed January 2025.
- SONGS Decommissioning (A.14-12-007) Joint Application of SDG&E and SCE for 2014 SONGS Units 2 & 3 Decommissioning Cost Estimate and related Decommissioning – *Cost Recovery witness*
- SDG&E General Rate Case Application for Authority to Update its Electric and Gas Revenue Requirements and Base Rates - *Cost Recovery and Rate Design witness; multiple years*
- ERRA Trigger (A.17-05-012) Expedited Application of San Diego Gas & Electric Under the Energy Resource Recovery Account Trigger Mechanism
- SDG&E's Energy Resource Recovery Account (ERRA) Forecast Application for the recovery of costs associated with electric procurement – *Cost Recovery and Rate Design witness, multiple years*

PUBLIC VERSION

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 2-RJ

Rejoinder Testimony of
Tracy A. Hazenstab

Topics Addressed: **Revenue Requirement**

Dated: June 1, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy A. Hazenstab. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 2, on January 28, 2026, and Public and CONFIDENTIAL versions of my rebuttal testimony, UGI Gas Statement No. 2-R on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony provides updates to certain components of the Company's filing.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, I am sponsoring the Company's Accounting Exhibit UGI Gas Exhibit A – Fully Projected (REJOINDER), which reflects all of the updates to the Company's claim identified to date.

II. REVENUE REQUIREMENT

Q. Since the filing of your rebuttal testimony, has the Company identified any components of its filing that should be updated?

A. Yes, in order to limit the issues around the Company's revenue requirement claim for the FPFTY in this proceeding, the Company is withdrawing the following items from its revenue requirement calculation:

- Incentive Compensation: As noted above and explained further in the rejoinder testimony of Vivian K. Ressler (UGI Gas Statement No. 4-RJ), the Company is withdrawing **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** from its claim related to incentive compensation. This adjustment is reflected in Line 19, Administrative & General Expense, on Schedule D-2 and decreases the revenue requirement by **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** after cash working capital calculations.
- Employee Activity Expense: As noted above and explained further in the rejoinder testimony of Vivian K. Ressler (UGI Gas Statement No. 4-RJ), the Company is withdrawing ($195,000) from its claim related to employee activities. This adjustment is reflected in Line 19, Administrative & General Expense, on Schedule D-2 and decreases the revenue requirement by ($197,000) after cash working capital calculations.
- Sponsorship of Community Events: As noted above and explained further in the rejoinder testimony of Vivian K. Ressler (UGI Gas Statement No. 4-RJ), the Company is withdrawing ($191,149) from its claim related to sponsorship of community events. This adjustment is reflected in Line 18, Sales Expense, on Schedule D-2 and decreases the revenue requirement by ($197,000) after cash working capital calculations.

Q. Based upon the adjustment analyses conducted by the Company, what do you conclude?

A. As set forth in UGI Gas Exhibit A – Fully Projected (REJOINDER), the overall effect of these changes is a decrease in the Company's fully projected future test year ("FPFTY")

revenue increase from $98.693 million, as stated in my rebuttal testimony, to $91.438 million, using the Company's proposed capital structure and return on equity of 10.75%.[1]

III. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

[1] This amount does not include the additional dedicated low-income program advertising campaign proposed in the rejoinder testimony of UGI Gas Witness Brian J. Meilinger, UGI Gas Statement No. 12-RJ, which would be additive to the revenue requirement but within the originally filed request of $99.4 million.

UGI Utilities, Inc. – Gas Division

Statement No. 4-RJ

Rejoinder Testimony of
Vivian K. Ressler

Topics Addressed:
Incentive Compensation Expense
Employee Activities Expense
Advertising Expense
PUC Assessment

Dated: June 1, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vivian K. Ressler. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 4, on January 28, 2026. I also submitted rebuttal testimony on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. The purpose of my rejoinder is to respond certain portions of the following surrebuttal testimony submitted by the Pennsylvania Public Utility Commission's ("Commission" or "PUC") Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1-SR, the surrebuttal testimony of Zachari Walker; and OCA Statement 2SR, the surrebuttal testimony of Jennifer L. Rogers. More specifically, I provide the Company's final position for purposes of adjustments proposed by these witnesses to various of the Company's operations and maintenance ("O&M") expenses. Unless otherwise specifically indicated, the Company maintains its rebuttal position with respect to the other parties' proposals to disallow portions of its O&M expense claims.

II. REJOINDER REGARDING INCENTIVE COMPENSATION

Q. Did any of the other parties submit surrebuttal testimony regarding the Company's claim for incentive compensation expense?

A. Yes. Both I&E Witness Walker and OCA Witness Rogers submitted surrebuttal testimony to address these issues. I&E St. No. 1-SR, at pp. 21-24; OCA St. 2SR, at pp. 5-10. In summary, both I&E and OCA stand by the positions they took in direct testimony, which recommend a disallowance of a portion of the Company's claim to recover the costs of various incentive compensation plans as a part of the revenue requirement proposed in this case.

Q. What is the Company's response to the surrebuttal testimony offered by I&E and OCA?

A. For the reasons explained in my direct testimony, the Company continues to believe that the incentive compensation costs it anticipates to incur during the fully projected future test year ending September 30, 2027 (the "FPFTY") in this matter represents a reasonable and prudently incurred cost that is an important and necessary component of the overall compensation of employees, managers, and executives that have responsibility for the Company's operations and its provision of safe and reliable natural gas service to its customers. Critically, neither I&E nor OCA claims that any compensation related expenses included in the Company's claim are imprudent or excessive, let alone that the specific amounts related to this one subcategory of incentive compensation are imprudent or excessive.

While both I&E Witness Walker and OCA Witness Rogers attempt to characterize their proposals as targeted to specific elements of these costs that lack a "ratepayer benefit,"

neither of these witnesses directly responds to my rebuttal testimony which explained generally and specifically how the components of the Company's incentive compensation plans targeted for disallowance by I&E and OCA do, in fact, directly benefit ratepayers. *See* UGI Gas St. No. 4-R, at pp. 5-9.

Most specifically, I note that, among other items, I&E targeted for disallowance portions of the Company's Management Incentive Plan related to Capital Investment and Capital Placed-in-Service goals as a "financial performance metric" that only benefits shareholders. I&E St. No. 1-SR, at pp. 22-23. However, these metrics drive physical infrastructure modernization that produces a safer, more reliable system for ratepayers. And, critically, neither I&E nor any other party to this proceeding has testified that (1) UGI Gas's capital investments are imprudent or unnecessary or (2) proposed to disallow any portion of the Company's capital investments. Execution on UGI Gas's capital investment plans and strategy do have a direct and material benefit to customers, which is evidenced by the parties' decisions not to target any of the Company's projected capital work for disallowance in this case.

Q. Does the Company continue to disagree with the adjustments proposed by I&E and OCA related to its incentive compensation costs?

A. Yes, it does.

Q. In order to limit the disputes regarding the Company's revenue requirement claim for the FPFTY in this proceeding, is the Company willing to voluntarily update its position regarding incentive compensation expense?

A. Yes. I want to emphasize that the Company's incentive compensation plan costs are reasonable and should be approved. However, in order to limit the number of disputed issues in this proceeding, the Company will voluntarily withdraw the incentive compensation costs that are the subject of OCA Witness Rogers' proposed adjustment in this proceeding. The impact of this decision is to decrease the Company's revenue requirement claim by **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**. This decrease is reflected in the Company's final revenue requirement model sponsored by UGI Gas Witness Hazenstab (UGI Gas St. No. 2-RJ and UGI Gas Exhibit A – Fully Projected (REJOINDER)).

III. REJOINDER REGARDING EMPLOYEE ACTIVITIES EXPENSE

Q. Did any of the other parties submit surrebuttal testimony regarding the Company's claim to recover certain employee activities expenses?

A. Yes. Both I&E Witness Walker and OCA Witness Rogers submitted surrebuttal testimony to address these expenses. In summary, I&E maintains its direct testimony position and continues to assert that employee activities costs associated with the Company's picnic are not appropriately recoverable in rates. I&E St. No. 1-SR, at pp. 15-17. OCA updates its position and now only proposes to disallow the costs associated with the Company's picnic. OCA St. 2SR, at p. 11.

Q. What is the Company's response to I&E's and OCA's positions regarding employee activities expenses in surrebuttal testimony?

A. While the Company continues to believe that it is appropriate to recover the costs of this specific employee activity under past Commission precedent and as an important component of how it recognizes and motivates its employees, the Company will voluntarily withdraw is request to recover the costs of the Company picnic in order to limit the number of disputed issues in this proceeding. The impact of this decision is to decrease the Company's revenue requirement claim by $195,000. This decrease is reflected in the Company's final revenue requirement model sponsored by UGI Gas Witness Hazenstab (UGI Gas St. No. 2-RJ and UGI Gas Exhibit A – Fully Projected (REJOINDER)).

IV. REJOINDER REGARDING ADVERTISING EXPENSES

Q. Did any of the other parties submit surrebuttal testimony regarding the Company's claim to recover community event sponsorship advertising expenses?

A. Yes. Both I&E Witness Walker and OCA Witness Rogers submitted surrebuttal testimony to address community event sponsorship advertising expenses. In summary, both I&E and OCA maintain their direct testimony positions and continue to assert that these advertising costs are not appropriate for recovery within rates. I&E St. No. 1-SR, at pp. 11-15; OCA St. 2SR, at pp. 13-14.

Q. What is the Company's response?

A. While the Company continues to believe that it is appropriate to recover the costs of this specific advertising expense, the Company will voluntarily withdraw its request to recover the costs of community event sponsorship advertising expenses in order to limit the number

of disputed issues in this proceeding. The impact of this decision is to decrease the Company's revenue requirement claim by $191,000. This decrease is reflected in the Company's final revenue requirement model sponsored by UGI Gas Witness Hazenstab (UGI Gas St. No. 2-RJ and UGI Gas Exhibit A – Fully Projected (REJOINDER)).

V. REJOINDER REGARDING PUC ASSESSMENT EXPENSE

Q. Did any of the other parties submit surrebuttal testimony regarding the Company's claim to recover certain advertising expenses?

A. Yes. OCA Witness Rogers continues to recommend that the Company's claim be reduced by $1.8 million to reflect the use of a three-year average to calculate this expense. OCA St. 2SR, at pp. 17-18.

Q. What is the Company's response to OCA Witness Rogers's surrebuttal regarding this issue?

A. While OCA attempts to assert that this expense category is "volatile," OCA Witness Rogers simply ignores that the trend for this expense is a significant increase whether or not one looks back six years or three years. Moreover, OCA Witness Rogers ignores that the Company's method was both (1) more accurate at predicting the most recent actual expenses incurred by the Company and (2) still resulted in an understatement of this cost. The Company's method of estimating this expense is reasonable and conservative.

Finally, I note that OCA Witness Rogers testifies that "a fundamental principle of ratemaking is that costs should be assigned to those who benefit from them." OCA St. 2SR, at p. 10. My understanding of these costs is that they fund the Commission's

operations, as well as the operations of both OCA and OSBA. Her proposed adjustment related to the PUC Assessment expense appears inconsistent with this testimony.

VI. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

UGI GAS STATEMENT No. 6-RJ

REJOINDER TESTIMONY OF
JOHN F. WIEDMAYER
ON BEHALF OF
UGI UTILITIES, INC. – GAS DIVISION

June 1, 2026

REJOINDER TESTIMONY OF JOHN F. WIEDMAYER
GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC
ON BEHALF OF UGI UTILITIES, INC. – GAS DIVISION

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John F. Wiedmayer. My business address is 1010 Adams Avenue, Audubon, Pennsylvania 19403.

Q. ARE YOU THE SAME JOHN WIEDMAYER THAT PRESENTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my rejoinder testimony is to respond to the arguments and positions presented by Office of Consumer Advocate ("OCA") Witness James Garren in his surrebuttal testimony concerning the depreciation methodologies, specifically the appropriateness of continuing the longstanding practice of using the Equal Life Group ("ELG") procedure rather than the Average Life Group ("ALG") procedure for UGI Utilities, Inc. ("UGI Gas" or "Company"). Mr. Garren also proposes alternative survivor curve estimates for Account 375, Structures and Improvements; Account 376.1, Mains - Primarily steel; and Account 378, Measuring and Regulating Station Equipment- General. My testimony will respond to these positions and provide a detailed rebuttal supported by evidence and reasoning that underscores the advantages and correctness of the ELG method in this context.

Q. PLEASE PROVIDE A SUMMARY OF THE KEY ELEMENTS OF YOUR REJOINDER TESTIMONY.

A. First, I address Mr. Garren's claim that my arguments regarding ELG are invalid because I propose ALG in other jurisdictions. Additionally, I describe recent cases in other jurisdictions considering moving to ELG, in part due to significant technological, environmental and regulatory changes underway. I also provide context of Pennsylvania's depreciation practice and explain that the deferral of the recovery of future net salvage (primarily cost of removal) means that Pennsylvania utilities are behind in the recovery of capital costs relative to other jurisdictions. I then refute claims that ELG causes intergenerational inequity and Mr. Garren's inaccurate allegations that ELG is harmful to current customers, emphasizing that the goal is to match the recovery of capital costs with the decrease in the utility assets' service potential. Third, I address Mr. Garren's claims regarding the history and precedent for ELG in Pennsylvania. Fourth, I address Mr. Garren's claims about UGI Gas's implementation of rates, explaining that the ELG depreciation rates are generally stable from year to year and his concerns of the need for annual updates are unfounded and addressed by the PA PUC's regulations regarding depreciation practices. In conclusion, ELG remains the most precise and fair depreciation method for UGI Gas, ensuring accurate cost recovery and aligning with long-term customer interests.

II. EQUAL LIFE GROUP VS AVERAGE LIFE GROUP

Q. PLEASE DISCUSS MR. GARREN'S CLAIMS REGARDING GANNETT FLEMING'S USE OF THE ALG PROCEDURE IN OTHER JURISDICTIONS.

A. Mr. Garren argues that the use of ALG in other jurisdictions essentially means that ELG should no longer be used in Pennsylvania even though UGI Gas has used the ELG

procedure for 44 years.[1] While it is true that ALG is a commonly used depreciation procedure used in other state jurisdictions, that is not the in case in Pennsylvania. Nearly all of the major investor-owned gas utilities in Pennsylvania use the ELG procedure. A majority of the major water and electric companies, including UGI Electric, also use the ELG procedure. Accepting the OCA's recommendation to reverse the long-standing depreciation calculation procedure from ELG to ALG for UGI Gas, while nearly all other gas companies in Pennsylvania use the ELG procedure, is unreasonable and unfair as a ratemaking policy decision.

Q. ON PAGE 4 OF MR. GARREN'S SURREBUTTAL TESTIMONY HE STATES, "THE ELG PROCEDURE DOES HAVE THE BENEFIT OF BEING A THEORETICALLY SUPERIOR PROCEDURE FOR ALLOCATING THE COST OF PLANT INVESTMENT, BECAUSE IT TRACKS THE RETIREMENT PATTERNS." DO YOU AGREE?

A. Yes, I agree with Mr. Garren. This is an indisputable fact. In addition to Mr. Garren's statement, Robley Winfrey, a professor at Iowa State University who developed the Iowa Type Survivor Curves in the 1930s and was a pioneer in the field of Engineering Valuation called the ELG procedure, "the only mathematically correct procedure". Mr. Garren also acknowledges "that the ELG method is more precise (than ALG), for a given life and retirement curve" and that Figure 2 of my rebuttal testimony, which presents the retirement frequency curve for Account 380, Services, "correctly projects the expected life of a single vintage over time".

[1] OCA St. 4SR, at pp. 7-8.

Q. ON PAGE 5 OF MR. GARREN'S SURREBUTTAL TESTIMONY HE STATES, "WHILE ELG IS PRECISE, THAT PRECISION IS HARMFUL IF OUR ESTIMATES CHANGE OVER TIME." DO YOU AGREE?

A. First, it is not clear what is harmful when estimates change. Presumably, Mr. Garren believes that since ELG results in an accelerated rate of depreciation early in the assets' lives relative to the ALG procedure that current customers are paying higher rates effectively subsidizing future customers. To this notion I do not agree that ELG effectively provides a subsidy to customers. Mr. Garren is incorrect. As I explained in my rebuttal testimony, ELG provides a more accurate recovery of costs, and this increased accuracy should not be characterized as accelerated depreciation. ELG is not an accelerated method; rather it is a straight line method. Capital recovery using ELG occurs ratably over the specific (i.e., not average) service life of the assets. The service lives for distribution plant assets, such as service lines, range from 1 year to 84 years using a 45-R2 survivor curve. One difference between the two depreciation procedures (i.e., ALG vs. ELG) is that ALG uses <u>one</u> average service life while ELG uses 84 different service lives based on the range of service lives contemplated by the survivor curve selected for Account 380, Services. ALG is most appropriately thought of as deferring the recovery of short-lived assets because it relies on the *average* service life of the assets. The shorter-lived assets are not fully recovered at the time of their retirement, and this under-recovery must be made up for by the over-recovery on longer-lived assets. However, care needs to be exercised when dealing with averages, as averages can mask important underlying information needed to make a proper evaluation. The phrase, "Beware of the *flaw* of averages" illuminates the

potential concealment of information and intermediate steps in the calculation caused by the use of averages, as does the following anecdote:

> The Susquehanna River at Harrisburg PA has an *average* depth of 3 feet during certain summer weeks but you would not want to attempt to walk across the river at those times if you did not know how to swim, as the depth of the main river channel is 10-12 feet deep.

Overreliance on averages can lead to unexpected and detrimental outcomes. The ALG procedure uses averages which are used, for calculation purposes, primarily as a matter of convenience. The use of averages often conceals detailed recovery patterns, which includes these depreciation-related deferrals and overcollections vis-à-vis the ELG procedure. The pattern of recovery for the ALG is typical when using averages in that it under-recovers on the short lived assets (i.e., assets that have shorter lives relative to the average life) but it over-recovers on the long-lived assets.

Q. WOULD CHANGING TO ALG RESULT IN A SUBSIDY FOR CURRENT CUSTOMERS?

A. Yes. A change to ALG for UGI Gas now would provide current customers with the benefit from the lower rate base due to the historical use of ELG, the deferral of recovery over average life and artificially low ALG rates for the near term due to the higher accumulated depreciation resulting from decades of using the ELG procedure. The change to ALG, as recommended by Mr. Garren, therefore produces a subsidy for current customers for roughly the next 10 to 15 years. After 10 years or so, there will be a crossover related to customer rates as ALG will result in higher customer rates based on the higher return on rate base impact compared with the lower annual depreciation expense impact.[2] Without

[2] *See* Exhibit No. JFW-R1 submitted with Mr. Wiedmayer's Rebuttal Testimony

using a complex model to demonstrate this calculation, it is reasonable to assess the accuracy of the prior statement by considering the overall rate of return proposed by the company in this proceeding is 8.22% while the composite gas plant depreciation rate including common plant and information services is 2.58%. Since the ~$21M depreciation expense reduction proposed by Mr. Garren will cause ~$21M increase in rate base in year 1, $42M in year 2 and $210M in year 10, obviously the rate of return impact will overtake the annual depreciation expense impact since the rate of return of 8.22% is significantly larger than the composite depreciation rate of 2.58%. In 1982, when ELG was initially used by UGI Gas, the overall rate of return was 13.42% and the composite depreciation rate was ~2.50% so the crossover would occur more rapidly, perhaps over 6-10 years rather than the 10-15 years based on the current spread. The spread between the two (i.e., ROR vs depreciation rate) has historically been much larger than it is today.

Q. HAVE OTHER JURISDICTIONS CONSIDERED ELG, PARTICULARLY IN THE CONTEXT OF TECHNOLOGICAL AND REGULATORY CHANGE IN THE ENERGY INDUSTRY?

A. Yes. Mr. Garren does not address these, but in my rebuttal testimony I discussed the use of ELG in Colorado and the proposed use in New York.[3] Because the ELG procedure better matches the recovery of shorter-lived assets in a property group, it is better suited and more equitable during times of technological change and regulatory uncertainty as well. Further, because Pennsylvania depreciation practices already incorporate a significant deferral of the recovery of net salvage, it would not be reasonable to move towards further deferring depreciation expense (and the associated higher costs to

[3] UGI Gas St. No. 4-R, at p. 16.

customers). In this regard, it is to be noted that net salvage is the difference between the cost of removal of retired plant and any salvage value, which is generally a net cost. Mr. Garren's proposal would move depreciation in the wrong direction at the worst time.

Q. PLEASE EXPLAIN HOW NET SALVAGE IS DEFERRED IN PENNSYLVANIA.

A. As a result of a 1962 Superior Court Decision,[4] Pennsylvania is one of the only states in the country that defers the recovery of net salvage until after the assets are retired. Industry standard depreciation practices (which Mr. Garren typically follows) are to estimate future net salvage and include these estimates in depreciation rates. This approach, referred to as the "Traditional Method" for net salvage, results in intergenerational equity because customers pay for net salvage costs over the life of property (*i.e.,* during the time they provide service to customers). Pennsylvania, in contrast, defers recovery related to negative net salvage until after the assets are retired, meaning that customers have to pay the costs of assets that no longer provide service.

Q. HOW DOES THE DEFERRAL OF THE RECOVERY OF NET SALVAGE IMPACT THE COMPANY'S DEPRECIATION RATES?

A. The Company's depreciation rates are too low to equitably recover the full service value of property.[5] Mr. Garren is aware of this since he includes future net salvage in his proposed depreciation rates for his clients in states other than Pennsylvania. The use of the ELG procedure helps mitigate these deferrals. Mr. Garren's proposal to move away from ELG would create further inequity and push a significant share of costs to future customers.

[4] *Penn Sheraton Hotel v. Pennsylvania Public Utility Commission*, 202 Pa. Super. 403, 195 A.2d 180 (Pa. Super. Ct. 1962).
[5] Service value is equal to the original cost less net salvage, where net salvage is gross salvage less cost of removal.

Q. ON PAGE 5, LINES 15-17 OF MR. GARREN'S SURREBUTTAL, HE STATES, '… WHILE ELG DOES NOT REPRESENT ACCELERATED DEPRECIATION IN THE SENSE OF BEING A NON-LINEAR RECOVERY METHOD, IT DOES ACCELERATE RATES NECESSARILY RELATIVE TO THE ALG METHOD." HOW DO YOU RESPOND?

A. I do not dispute that ELG can lead to higher short-term depreciation rates. However, this results from more accurate cost recovery and, contrary to Mr. Garren's apparent opinion, higher depreciation in the short term is neither inappropriate nor harmful to customers. As discussed above, the claim that ELG causes current customers to subsidize future ones is incorrect. ELG *more* precisely aligns costs with the actual service lives of assets and is therefore, less likely to lead to disproportionate cost assignments between generations of customers. Further, customers benefit from a lower rate base under ELG. If anything, Mr. Garren's proposal to transition from ELG to ALG would actually be *to create* a subsidy to current customers by increasing the rate base and lowering depreciation. Under his proposal, current customers would be paying less, but it would be at the expense of future customers who would be required to pay more.

Q. MR. GARREN ARGUES THAT ELG IS INVALID IF RATES ARE NOT UPDATED ANNUALLY.[6] HOW DO YOU RESPOND?

A. Mr. Garren's argument does not align with reality regarding Pennsylvania utilities and is therefore invalid. UGI Gas (and all other major Pennsylvania utilities) update their depreciation rates each year. The Pennsylvania PUC has implemented several important and progressive regulatory changes over the past 44 years that have enhanced its ability to

[6] OCA St. 4SR, at p. 4.

review and monitor the depreciation practices of the utilities it regulates. A few of these long standing changes are present in Pennsylvania ratemaking today but typically are not present in other states, such as the filing of annual depreciation reports, updating depreciation annual accrual rates for book purposes, the overwhelming use of ELG depreciation rates, filing periodic service life studies every five years, the use of the book reserve to determine rate base, the use of a future and fully projected future test year. These enlightened regulatory policy changes have helped make the ratemaking process in PA more transparent and fairer to all stakeholders with regard to depreciation matters.

Q. MR. GARREN SUGGESTS THAT ONE OF THE SHORTCOMINGS OF USING ELG RATES (SL-ELG-RL) IS THAT THEY FLUCTUATE MORE THAN ALG RATES (SL-ALG-RL). ON PAGE 5, LINES 9-13 OF MR. GARREN'S SURREBUTTAL TESTIMONY, HE STATES, "THE ADMINISTRATIVE WORK OF REVIEWING THE RATES DOES NOT YIELD MORE ACCURATE RATES, IT ONLY CAUSES RATES TO FLUCTUATE MORE AS ESTIMATES CHANGE OVER TIME. IF OUR OVERALL LIFE ESTIMATES WERE PERFECTLY ACCURATE AND CONSISTENT, THEN THE PRECISION GAINED BY THE USE OF THE ELG METHOD MIGHT BE WORTHWHILE, BUT IN REALITY, LIFE ESTIMATES CHANGE OVER TIME FOR ALL KINDS OF REASONS." PLEASE COMMENT ON HIS STATEMENT.

A. I have used both the ELG and ALG procedure over the course of my 40-year career performing depreciation studies and have not experienced the excessive fluctuation described by Mr. Garren regarding the ELG procedure. To this observation, I offer UGI Gas's experience to refute Mr. Garren's unsubstantiated claim.

As a matter of regulatory compliance, UGI Gas's service lives are updated on a five-year basis and customer rates are implemented during rate cases within that five-year period. In addition, UGI Gas submits annual depreciation reports ("ADRs") to the PUC, which demonstrate that the composite ELG depreciation rates are relatively stable, despite new capital additions made year-over-year. For example, the table below summarizes the overall composite rates related to distribution plant from the last eleven years, which illustrates that the ELG procedure results in consistent and stable depreciation rates over time. Therefore, Mr. Garren's concerns about the fairness and instability of using ELG depreciation rates are unfounded.

Table 1. UGI Gas Composite ELG Rates – Distribution Plant

Test Year (at 9/30)	Composite Rate
2017	2.05%
2018	2.05%
2019	2.05%
2020	2.08%
2021	2.08%
2022	2.08%
2023	2.08%
2024	2.08%
2025	2.11%
2026E	2.11%
2027E	2.11%

III. DIFFERENCES IN SURVIVOR CURVE ESTIMATES

Q. DID OCA WITNESS GARREN PROPOSE CHANGES TO ANY OF THE SERVICE LIVES FOR ANY ASSET CLASS PROPOSED BY UGI GAS?

A. Yes. Please see the table below for a summary of the service life estimates made by each party for gas plant. This table also includes the currently approved service life estimate.

Table 2: Comparison of Company Proposed and OCA Proposed Survivor Curves

Account	Currently Approved	Company Proposed	OCA Proposed
375.00, STRUCTURES AND IMP.	50-S0.5	50-S0.5	70-O1
376.10, MAINS, PRIMARILY STEEL	75-R2.5	75-R2.5	79-R2
378.00, MEAS. AND REG. EQUIPMENT	48-S0	48-S0	53-R0.5

Q. DID MR. GARREN CONSIDER OTHER RELEVANT FACTORS BESIDES THE HISTORICAL LIFE ANALYSIS FOR HIS SURVIVOR CURVE SELECTION (70-O1) RELATED TO ACCOUNT 375, STURCTURES AND IMPROVEMENTS?

A. No, it appears that he was heavily influenced by the curve-fitting results of the historical life analysis. In fact, he referenced the best fit curve from my workpapers, the 80-O1, which he then reduced to a 70-O1 as his final selection. Mr. Garren criticizes the T-cuts I made in determining the data points I considered statistically significant, although he neither performed his own service life analysis nor did he use any T-cuts in trying to eliminate misleading and statistically insignificant data points on the life table. I made my T-cut at 46.5 based on a review of the exposures, the behavior of the retirement ratios and the life expectation of the underlying assets, which included small metal buildings, sheds and fencing.

Q. ARE THE RESULTS OF THE HISTORICAL LIFE ANALYSIS FOR ACCOUNT 375, STRUCTURES AND IMPROVEMENTS CONCLUSIVE?

A. No, the results are not conclusive. This happens occasionally, particularly for small plant accounts with a variety of assets included such as Account 375, Structures and Improvements. The goodness of fit was only fair, that is, not a poor fit but not an excellent fit either. Mr. Garren's survivor curve selection was an even poorer fit through the significant data points.

Q. WHAT OTHER FACTORS SHOULD BE CONSIDERED PARTICULARLY WHEN THE RESULTS OF THE HISTORICAL LIFE ANALYSES ARE INCONCLUSIVE?

A. There are several relevant factors to consider in all cases and particularly when the historical life analyses are inconclusive. First, in no particular order, is the currently approved survivor curve. The approved survivor curve at the time of the last service life study update is the 50-S0.5, which is the same as the survivor curve proposed in the last service life study. Second is the typical range of service life estimates used by other gas companies. The typical range used by other gas companies is 45-60 years. Third, is company plans and whether those plans will impact future levels of retirements in comparison with prior periods. UGI Gas's LTIIP indicates some of the Company's District M&R Station locations are no longer needed and in the near term will be retired without replacement. I expect retirements to increase in the future for this account. Fourth is to understand the assets included in the account and their expected service lives. The two primary asset groups included in this account are fencing, which should last 30 to 40 years, and small metal buildings and sheds, which should last, on average, 40 to 60 years. Put all these factors together and the 50-year average service life that I have estimated seems more reasonable for this account than the 70-year average service life that Mr. Garren estimated. Additionally, Mr. Garren's 70-O1 survivor curve has a maximum life of 140 years, while my survivor curve estimate (50-S0.5) has a maximum life of 100 years which is more reasonable than Mr. Garren's for the majority of assets included in this account.

Q. DID MR. GARREN RELY ALMOST EXCLUSIVELY ON THE CURVE-FITTING RESULTS FROM THE HISTORICAL SERVICE LIFE ANALYSIS FOR THE OTHER TWO ACCOUNTS?

A. Yes, he did. The problem with just using the results of the historical service life analysis is that it effectively assumes future rates of retirement will be similar to the past. However, for Account 376.1 – Mains – Primarily Steel, UGI Gas has accelerated the replacement of bare steel mains. The Company's bare steel main replacement program will continue until 2041, and I expect higher rates of retirements to appear on future life tables at ages 65 years and older for this account since bare steel mains primarily were installed 1925-1960. Both Mr. Garren's and the Company's survivor curve estimate fit the historical points very well from age 0 through age 65. After age 65, the Company's survivor curve estimate diverges from Mr. Garren's and is steeper than Mr. Garren's proposed survivor curve. The Company's proposed survivor curve, the 75-R.25, anticipates higher rates of retirement to occur in the future, consistent with Company plans as set forth in the LTIIP. This can be observed graphically on Figure 2 of my Rebuttal Testimony. Additionally, the typical range of service lives used by other gas companies for steel mains is 65-75 years, which would put the Company's estimate within the typical range of service life estimates while Mr. Garren's proposed survivor curve estimate is outside the typical range.

Essentially the same overreliance by Mr. Garren on the curve fitting results occurs for Account 378, Measuring and Regulating Station Equipment as well. I have proposed a 48-S0 survivor curve and Mr. Garren has proposed a 53-R0.5. The number 48 in the 48-S0 survivor curve designates the average service life. This is another account where other relevant factors besides the historical service life analysis would have led Mr. Garren to a

different conclusion had he adequately considered Company plans as it relates to increased levels of retirement in the future and the estimates used by other gas companies for Account 378. Most other gas companies estimate service lives in the 40-50 year range for this account.

IV. CONCLUSION

Q. IS THERE ANYTHING IN THE TESTIMONY OF THE OCA WITNESS THAT SHOULD INFLUENCE THE COMMISSION TO ACCEPT HIS DEPRECIATION RECOMMENDATIONS?

A. No. My rejoinder testimony addresses and refutes Mr. Garren's arguments regarding the Company's depreciation methodologies. Mr. Garren's assertion that Gannett Fleming proposes ALG in other cases is not relevant to the current case, as each case in other jurisdictions have their own unique set of circumstances to be evaluated. Mr. Garren also overlooks Gannett Fleming's near unanimous recommendation to its Pennsylvania utility clients to continue to use the ELG procedure. In addition, Mr. Garren ignores Pennsylvania's 44-year successful use of ELG for utility companies throughout the Commonwealth including UGI Gas. While ELG can result in higher short-term depreciation rates, it more precisely aligns costs with asset service lives, avoids creating intergenerational subsidies, and produces lower overall utility rates for customers. Data from ADRs show that composite rates under ELG are stable. And, finally, UGI Gas's depreciation rates are generally lower than those in other states due to Pennsylvania's retroactive recovery net salvage costs, which defers costs to future customers. ELG remains the most accurate and fair method for UGI Gas.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523 et al.

UGI Utilities, Inc. – Gas Division

Statement No. 8-RJ

Rejoinder Testimony of
Dylan W. D'Ascendis

Topics Addressed: **Return on Equity**

Dated: June 1, 2026

TABLE OF CONTENTS

I. INTRODUCTION, PURPOSE AND SUMMARY 1

II. OPPOSING WITNESS INTERPRETATIONS OF THE SHAPIRO LETTER AND PROPOSED HB 2224 3

III. RESPONSE TO I&E ROE WITNESS BREUNING 6

IV. RESPONSE TO OCA ROE WITNESS GARRETT 10

V. CONCLUSION 14

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this rejoinder testimony (referred to throughout as my "Rejoinder Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company").

Q. ARE YOU THE SAME DYLAN W. D'ASCENDIS WHO PROVIDED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF THIS REJOINDER TESTIMONY?

A. The purpose of my Rejoinder Testimony is to address certain aspects of the surrebuttal testimonies of Mr. Drew Breuning, witness for the PA PUC's Bureau of Investigation and Enforcement ("I&E"), Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA"), and Mr. Patrick M. Cicero, witness for The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), (collectively referred to as the "Opposing Witnesses") as they pertain to the Company's allowed cost of capital, which the Company should have the opportunity to earn on their authorized jurisdictional rate base.

Q. PLEASE SUMMARIZE THE KEY ISSUES AND RECOMMENDATIONS OFFERED BY THE OPPOSING WITNESSES THAT YOU ADDRESS IN YOUR REJOINDER TESTIMONY.

A. My Rejoinder Testimony responds to substantive recommendations offered by the Opposing Witnesses in their surrebuttal testimonies which are new relative to their direct testimonies. Specifically, I first respond to the Opposing Witnesses' reliance upon recent policy issuances and proposed pieces of legislation to latently bolster their arguments regarding an appropriate rate of return. Next, I respond to certain new arguments presented by Mr. Breuning regarding investment horizons and the cost of capital, reliability of selected data and data sources, my Non-Price Regulated Proxy Group, and his continued misunderstanding of the Commission's application of a size adjustment. Regarding Mr. Garrett, I respond to his contention that a multi-stage discounted cash flow ("DCF") model is appropriate for use in a cost of common equity analysis for utility companies.

Q. IS THERE A COMMON THEME ACROSS THE OPPOSING WITNESSES' SURREBUTTAL TESTIMONIES?

A. Yes, there is. Each Opposing Witness mentions Governor Josh Shapiro's letter to the CEOs of Pennsylvania utilities ("Shapiro Letter"), and Mr. Cicero references the recently introduced House Bill 2224 ("HB 2224") that aims to reform the existing regulatory construct in an attempt to advance their various arguments.

Q. HOW WILL THE REMAINDER OF YOUR REJOINDER TESTIMONY BE ORGANIZED?

A. First, I discuss the Opposing Witnesses' arguments based on the Shapiro Letter and HB 2224. Second, I will address substantive new arguments put forth in Mr. Breuning's

surrebuttal testimony. Finally, I address Mr. Garrett's use of a multi-stage DCF model in his cost of common equity analysis.

II. OPPOSING WITNESS INTERPRETATIONS OF THE SHAPIRO LETTER AND PROPOSED HB 2224

Q. HOW DO THE OPPOSING WITNESSES USE THE SHAPIRO LETTER AND THE PROPOSED HB 2224 TO SUPPORT THEIR CONCLUSIONS?

A. Mr. Breuning briefly cites the Shapiro Letter when discussing the importance of affordability concerns when determining the cost of common equity.[1] Mr. Garrett refers to the Shapiro Letter to support his allegation that the Company is using a double leveraged capital structure.[2] Mr. Cicero cites the Shapiro Letter and the proposed HB 2224 as necessary reform to establish and ROE more consistent with the actual cost of equity.[3] It is my understanding that counsel will address which each of these items cannot and should not be relied upon to support any factual findings and determinations in this matter.

Q. HOW DO YOU RESPOND TO MR. BREUNING'S CONSIDERATION OF CUSTOMER AFFORDABILITY IN DETERMINING THE ROE?

A. Rate of return analysts' assignment in utility general rate cases is to determine the investor required return on common equity at the time of their analysis. Because the ROE is considered in the utility's cost to serve its customers, it is necessary that the regulatory commission allows the utility an opportunity to recover the full cost of capital. To the extent that affordability concerns affect utility risk, documents like the Shapiro Letter and the proposed HB 2224 increase uncertainty about the State's regulatory risk, increasing investor's required returns.

---

1 I&E St. No. 2-SR, at p. 25.
2 OCA St. 3SR, at pp. 3-4.
3 CAUSE-PA St. No. 1-SR, at pp. 14-15.

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S USE OF THE SHAPIRO LETTER TO SUPPORT HIS ALLEGATION OF UGI'S USE OF DOUBLE LEVERAGE?

A. As a preliminary matter, Mr. Garrett offers no response to my arguments or support in the academic literature refuting his allegations of the Company's use of double leverage at pages 12 through 16 of my Rebuttal Testimony. Further, while the Shapiro Letter may prefer the use of the utility's parent capital structure, it does not allege double leveraging of the capital structures of all Pennsylvania utilities (or UGI Gas specifically), nor does it recommend disallowing utility capital structures that are different than their parent. Simply, the Shapiro Letter recommends a full evaluation of a utility's capital structure for reasonableness, which has always been the task of the Commission in all general rate cases.

Q. PLEASE RESPOND TO MR. CICERO'S OPINION THAT THE PROPOSED HB 2224 WILL ESTABLISH EQUITY RETURNS MORE CONSISTENT WITH THE ACTUAL COST OF EQUITY.

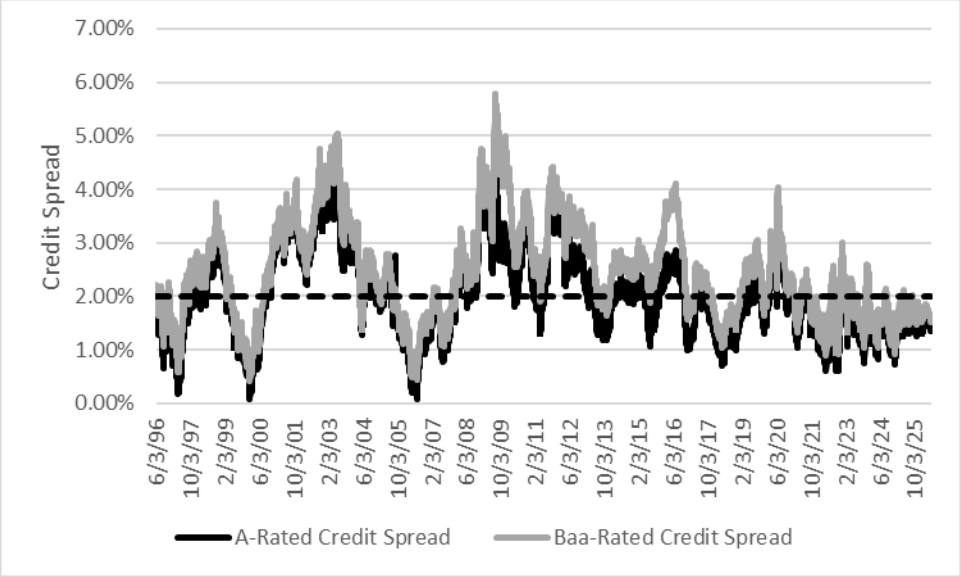
A. I disagree with Mr. Cicero's opinion that methodologies outlined in the proposed HB 2224 would establish ROEs that would reflect the actual cost of common equity.

Q. CAN YOU GIVE A SIMPLE EXAMPLE THAT DEMOSTRATES THE INADEQUACY OF THE INDICATED ROE DERIVED USING THE "DEFAULT AUTHORIZED RETURN" FORMULA USED IN THE PROPOSED HB 2224?

A. Yes, I can. The proposed HB 2224 states that in the absence of an ROE resulting from a "competitive equity auction", the ROE that would be used to set rates would be set at the "default authorized return", which is calculated by adding 200 basis points to a recent average yield on ten-year Treasury bonds. To attempt to evaluate the validity of the formula, I calculated yield spreads between the ten-year Treasury bond yield and A- and

Baa-rated public utility bonds from 1996 to the present. The results of that analysis are shown on Chart 1, below:

Chart 1: Yield Spreads between Ten-Year Treasury Bonds and A- and Baa-rated Public Utility Bonds – 1996 - Present[4]



As can be gathered from the Chart above, yields on A- and Baa-rated public utility bonds commonly exceed the yield on ten-year Treasury bonds by over 200 basis points. In fact, for the 30-year period, the average yield spread between ten-year Treasury bonds and A- and Baa-rated public utility bonds are 2.02% and 2.44%, respectively. When the yield spreads are above the 2.00% line shown on Chart 1, that means that the cost of debt exceeded the implied cost of common equity as calculated by the "default authorized return" formula. Because investing in a company's equity is generally riskier than investing in its debt, as equity investors are last in line in the event of a company's liquidation, any indicated ROE for a company that is less than its marginal cost of debt would be illogical. In the 30-year timeframe measured in Chart 1, the marginal cost of

[4] Source of Information: Bloomberg Professional Services.

debt exceeded the implied cost of equity using the "default authorized return" 46% of the time when using an A-rated public utility bond and 63% of the time when using a Baa-rated public utility bond yield.[5]

While I have significant concerns with the entirety of the proposed HB 2224 including the mechanics and application of the "competitive equity auction", this simple example shows how disconnected the proposed legislation's default assumption is from the "actual cost of equity'.

III. RESPONSE TO I&E ROE WITNESS BREUNING

Q. PLEASE SUMMARIZE BREUNING'S SUBSTANTIVE AND NEW ARGUMENTS PRESENTED IN HIS SURREBUTTAL TESTIMONIES.

A. Mr. Breuning discusses the following new arguments in his surrebuttal testimony: (1) his assertion that the investment horizon is a function of the investor, not the investment; (2) that Kroll is a trusted and publicly available source; (3) that the DCF model does not have subjective inputs; (4) that beta and the standard error of the regression are only measures of past performance; and (5) that the use of non-utility proxy groups violate the principles set forth in *Hope* and *Bluefield*.

Q. IN DEFENDING HIS USE OF THE TEN-YEAR TREASURY BOND YIELD IN HIS APPLICATION OF THE CAPM, MR. BREUNING STATES THAT THE COST OF EQUITY IS NOT A LONG-TERM CONCEPT AND THAT INDIVIDUAL INVESTOR'S INVESTMENT HORIZONS ARE RELEVANT.[6] DO YOU AGREE?

A. No, I do not. Mr. Breuning has a fundamental misunderstanding of the nature of the cost of capital. The objective of a cost of equity analysis is to determine the investor required

[5] The credit spread equaled or exceeded 200 basis points on 3,614 days using an A-rated public utility bond and 4,958 days using a Baa-rated public utility bond. The total time period used in the study was 7,818 days.

[6] I&E St. No. 2-SR, at pp. 7-8.

ROE based on the risk of the investment, in which operations are assumed to be operating indefinitely. The investment horizons of individual investors no bearing on the risks inherent in utility operations, and as such, inputs to models that reflect an individual investor's finite investment should not be considered

Q. DO ANY OF THE COST OF COMMON EQUITY MODELS USED BY MR. BREUNING ASSUME AN INDEFINITE HOLDING PERIOD?

A. Yes. Mr. Breuning's preferred cost of common equity model, the DCF, assumes an indefinite holding period as only the income return is realized by investors. Given the above, Mr. Breuning's reasoning to use the ten-year Treasury bond yield in favor of the 30-year Treasury bond yield in his CAPM analysis is misinformed.

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT KROLL IS A TRUSTED AND PUBLICLY AVAILABLE SOURCE?[7]

A. No, I do not. First, Kroll is not a publicly available source, as it is subscription-based and not available unless a subscriber pays the applicable fees. Second, while I do agree with Mr. Breuning that Kroll's historical data is trusted by many financial professionals, I do not agree with his characterization that Kroll's "recommended MRP" is trustworthy or relied upon by investors. In my Rebuttal Testimony, I showed that Kroll's estimates of the market return understate the MRP by wide margins when compared to other measures.[8]

[7] I&E St. No. 2-SR, at p. 14.
[8] UGI Gas St. No. 8-R, at pp. 28-30, 47.

Q. DO YOU AGREE WITH MR. BREUNING'S ASSERTION THAT THE INPUTS TO THE CAPM ARE HIGHLY SUBJECTIVE, WHILE THE INPUTS TO THE DCF MODEL ARE NOT?[9]

A. No, I do not. All ROE models are only as good as their inputs, and all ROE models can be easily manipulated by changing those inputs. As is the case with the CAPM, the DCF model has a number of inputs and variations of inputs that can drastically alter results as shown on Table 1:

Table 1: Various Inputs to DCF Models

Input	Variations of Inputs
Cash Flow Stream	Constant-Growth, Blended Growth, Multi-Stage Growth
Dividend Yield	Spot dividend yield, average dividend yield
Adjusted Dividend Yield	No adjustment, ½ g adjustment, full g adjustment, projected dividend
Growth Rates	Historical v. Projected v. Sustainable
Growth Measure	Earnings Per Share ("EPS"), Dividends Per Share ("DPS"), Book Value Per Share ("BVPS")
Sources of Growth Rates	*Value Line*, Zacks, Yahoo, MorningStar, etc.

Q. MR. BREUNING STATES THAT THE BETA AND STANDARD ERROR OF A STOCK ARE ONLY MEASURES OF PAST PERFORMANCE AND NOT WHERE AN INDUSTRY IS GOING OR THE RISKS IT IS EXPECTED TO FACE.[10] **PLEASE RESPOND.**

A. Mr. Breuning's statement again demonstrates his fundamental misunderstanding of the nature of the cost of capital. Market-based cost of capital analyses are a snapshot in time when the analyses are run, similar to cost of capital decisions by regulatory commissions. When the Non-Price Regulated Proxy Group was selected, those companies were of

[9] I&E St. No. 2-SR, at p. 9.
[10] I&E St. No. 2-SR, at p. 15.

comparable risk to the Utility Proxy Group at the time of the analysis. As such, investors would require a similar return on those investments to investments in the Utility Proxy Group.

Q. IS IT YOUR OPINION THAT THE USE OF NON-UTILITY PROXY GROUPS VIOLATES THE PRINCIPLES SET FORTH IN *HOPE* AND *BLUEFIELD*, AS REPRESENTED BY MR. BREUNING'S COUNSEL?

A. No. As discussed in my Direct Testimony,[11] using comparable risk companies to determine a cost of capital for a utility company is consistent with the "corresponding risk" standard in *Hope* and *Bluefield*. Whether the company is regulated or not is not contemplated by the United States Supreme Court. While I do agree that the return in this case should not be based on companies that are not of comparable risk, as discussed above and previously, I have shown that the companies that form my Non-Utility Proxy Group have comparable risk to the Utility Proxy Group, and in turn UGI Gas.[12]

Q. MR. BREUNING CONTINUES TO ASSERT THAT THE COMMISSION HAS NOT AWARDED A SIZE ADJUSTMENT.[13] PLEASE RESPOND.

A. Despite what Mr. Breuning believes, the Commission explicitly recognized size as a factor in awarding a DCF cost rate one standard deviation above the mean in Docket No. R-2019-3008212:

> Based upon the evidence of record, we agree with the recommendation of the ALJs that the Company be awarded a DCF cost of common equity of 9.49%, which is one standard deviation above the average of the mean and median proxy group ROE from the Company's DCF analysis. **In so doing, we recognize that the Company's size is a factor in assessing its ability to attract capital.**[14]

IV. RESPONSE TO OCA ROE WITNESS GARRETT

A. MISAPPLICATION OF THE DISCOUNTED CASH FLOW MODEL

Q. PLEASE BRIEFLY DESCRIBE MR. GARRETT'S CONSTANT GROWTH DCF ANALYSES AND RESULTS.

A. Mr. Garrett applied "sustainable" growth rates to the constant growth DCF Model, which produced an ROE estimate of 7.60%.[15] For the dividend yield component, Mr. Garrett relied on annualized dividend payments and 30-day average stock prices as of April 2, 2026.[16] To estimate expected growth, Mr. Garrett looked to two measures: (1) nominal Gross Domestic Product ("GDP") and (2) real GDP.[17] Of those two measures, he chose the highest estimate, 3.80%.[18] In addition, Mr. Garrett calculated his DCF results based on projected DPS growth rates from *Value Line*, which produce an average DCF result of 8.20%,[19] but he does not consider either in his cost of equity estimate.[20]

Q. WHAT ARE YOUR GENERAL CONCERNS WITH THE SUSTAINABLE GROWTH RATES ON WHICH MR. GARRETT'S DCF ANALYSIS RELIES?

A. First, Mr. Garrett assumed a single, perpetual growth rate of 3.80% for all his proxy companies.[21] By reference to the Congressional Budget Office's expected inflation rate of 2.20%, Mr. Garrett's method assumed his proxy companies all will grow at real rates of approximately 1.60%, in perpetuity.[22] It is unlikely an investor would be willing to assume the risks of equity ownership in exchange for expected growth only modestly greater than

21 Exhibit DJG-6.
22 Exhibit DJG-5; 2.20% equals nominal GDP of 3.80% minus real GDP of 1.60%.

expected inflation. The risk simply is not worth the expected return.[23] In addition, as a practical matter, because they are generic in nature, his estimate fails to account for the risks and prospects faced by the proxy companies.

Q. WHAT OTHER CONCERNS DO YOU HAVE WITH THE 3.80% GROWTH RATE ASSUMED FOR ALL COMPANIES IN MR. GARRETT'S DCF ANALYSIS?

A. Mr. Garrett's 3.80% growth rate is not based on any measure of company-specific growth, or growth in the utility industry in general. Rather, his proxy group serves the sole purpose of calculating the dividend yield. Under the DCF model's strict assumptions, however, expected growth and dividend yields are inextricably related. Mr. Garrett's assumption that one growth rate applies to all companies, even though dividend yields vary across those companies, has no basis in theory or practice.

Q. PLEASE RESPOND TO MR. GARRETT'S POSITION AND COMMENTS REGARDING "STEADY-STATE" GROWTH RATES.

A. While I agree with Mr. Garrett's statement regarding regulated utilities being in the "mature" stage in the company/industry life cycle, I disagree with his conclusion regarding the long-term growth rates of regulated utilities.

As Mr. Garrett describes, the multi-stage DCF and its growth rates reflect the company/industry life cycle, which is typically described in three stages: (1) the growth stage, which is characterized by rapidly expanding sales, profits, and earnings. In the growth stage, dividend payout ratios are low in order to grow the firm; (2) the transition stage, which is characterized by slower growth in sales, profits, and earnings. In the

[23] In the risk/return space, debt securities, with a higher yield and considerably less risk of capital loss (if held to maturity) may be the preferred alternative.

transition stage, dividend payout ratios increase, as their need for exponential growth diminishes; and (3) the maturity (steady-state) stage, which is characterized by limited, slightly attractive investment opportunities, and steady earnings growth, dividend payout ratios, and returns on equity.

Since the utility industry is in the mature phase of the company life cycle, it is the company-specific projected EPS growth rate that is the appropriate measure of growth in a constant growth DCF model, not the projected GDP growth rate as Mr. Garrett asserts.

Q. ARE THERE EXAMPLES IN BASIC FINANCE TEXTS THAT SUPPORT YOUR POSITION?

A. Yes. For example, in Investments, life cycles and multi-stage growth models are discussed:

> As useful as the constant-growth DDM (dividend discount model) formula is, you need to remember that it is based on a simplifying assumption, namely, that the dividend growth rate will be constant forever. In fact, firms typically pass through life cycles with very different dividend profiles in different phases. In early years, there are ample opportunities for profitable reinvestment in the company. Payout ratios are low, and growth is correspondingly rapid. In later years, the firm matures, production capacity is sufficient to meet market demand, competitors enter the market, and attractive opportunities for reinvestment may become harder to find. In this mature phase, the firm may choose to increase the dividend payout ratio, rather than retain earnings. The dividend level increases, but thereafter it grows at a slower pace because the company has fewer growth opportunities.
>
> Table 18.2 illustrates this pattern. It gives Value Line's forecasts of return on assets, dividend payout ratio, and 3-year growth in earnings per share for a sample of the firms in the computer software industry versus those of east coast electric utilities…
>
> By in large, the software firms have attractive investment opportunities. The median return on assets of these frms is forecast to be 19.5%, and the firms have responded with high plowback ratios. Most of these firms pay no dividends at all. The high return on assets and high plowback result in rapid growth. The median growth rate of earnings per share in this group is projected at 17.6%.

> In contrast, the electric utilities are more representative of mature firms. Their median return on assets is lower, 6.5%; dividend payout is higher, 68%; and median growth is lower, 4.6%.
>
> * * *
>
> To value companies with temporarily high growth, analysts use a multistage version of the dividend discount model. Dividends in the early high-growth period are forecast and their combined present value is calculated. Then, once the firm is projected to settle down to a steady-growth phase, the constant-growth DDM is applied to value the remaining stream of dividends.[24] (Clarification added)

The economics of the public utility business indicate that the industry is in the steady-state, or constant-growth stage of a multi-stage DCF, which would mean that the three- to five-year projected growth rates for each company would be the "steady-state" or terminal growth rate appropriate for the DCF model for utility companies, not the GDP growth rate, which is not a company-specific growth rate, nor is it an upward bound for growth, as discussed in my Rebuttal Testimony.[25]

Q. HAVE OTHER COMMISSIONS PREVIOUSLY STATED A POSITION WITH RESPECT TO MR. GARRETT'S USE OF GDP-DERIVED GROWTH RATES AS INPUTS IN THE DCF MODEL?

A. Yes. In Peoples' Gas' rate case in Florida (Docket No. 20230023-GU), the Florida Public Service Commission found Mr. Garrett's use of GDP growth rates inappropriate for reasons similar to those noted above, stating:

> Witness Garrett's argument to use the GDP growth rate in his DCF model is not supported by persuasive evidence. We agree with witness D'Ascendis that the growth rate should reflect a measure of the utilities' individual growth, and not a generic measure of the output of the entire economy.[26]

[24] Bodie, Kane, and Marcus, Investments, 7th Edition, McGraw-Hill Irwin, 2008, at 616-617.
[25] UGI Gas St. No. 8-R, at pp. 56-57.
[26] In re: Petition for rate increase by Peoples Gas System, Inc., Docket No. 20230023-GU, *Order Granting in Part and Denying in Part Peoples Gas System, Inc.'s Petition for a Rate Increase*, at 62 (December 27, 2023).

Q. DO YOU AGREE WITH MR. GARRETT'S USE OF PROJECTED GDP GROWTH RATES IN HIS DCF MODEL BASED ON ANALYST GROWTH RATES?

A. No, I do not. As discussed above, the appropriate measure for growth in a DCF model is analyst projected growth rates in EPS. In view of the above, I recommend the Commission rely solely on projected EPS growth rates, as Mr. Breuning has proposed, when determining the indicated ROE for UGI Gas using the DCF model.

V. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REJOINDER TESTIMONY

A. Given the discussion above and the updated analysis provided in my Rebuttal Testimony, an ROE of 10.75% remains reasonable for UGI Gas at this time.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 10.75% FAIR AND REASONABLE FOR UGI GAS AND ITS CUSTOMERS?

A. Yes, it is.

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523 et al.

UGI Utilities, Inc. – Gas Division

Statement No. 11-RJ

Rejoinder Testimony of
John D. Taylor, CEO
Atrium Economics, LLC

Topics Addressed: **Cost of Service**
Residential Customer Charge
Weather Normalization Adjustment

Dated: June 1, 2026

Table of Contents

I. Introduction 1
II. Allocated Class Cost of Service Study ("ACOSS") 2
III. Residential Customer Charge and Low-Income Customer Impact 4
IV. Weather Normalization Adjustment 10

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as Chief Executive Officer ("CEO"). My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 11, on January 28, 2026, and rebuttal testimony, UGI Gas Statement No. 11-R, on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain arguments of the surrebuttal testimony submitted by other parties. The areas I address are outlined below, with reference to the corresponding surrebuttal testimony of the other parties:

Allocated Class Cost of Service

- Office of Consumer Advocate ("OCA") Statement 1SR – surrebuttal testimony of Michael Deupree ("OCA witness Deupree")

Residential Customer Charge Levels

- OCA witness Deupree
- OCA Statement 6SR – surrebuttal testimony of Roger D. Colton ("OCA witness Colton")
- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1-SR – surrebuttal testimony of witness Patrick M. Cicero ("CAUSE-PA witness Cicero")

- Bureau of Investigation and Enforcement ("I&E") Statement No. 3-SR – surrebuttal testimony of Ethan H. Cline ("I&E witness Cline")

Weather Normalization Adjustment ("WNA")

- OCA witness Deupree
- OCA Statement 5SR – surrebuttal testimony of Barbara R. Alexander ("OCA witness Alexander")
- CAUSE-PA witness Cicero
- I&E witness Cline

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

II. ALLOCATED CLASS COST OF SERVICE STUDY ("ACOSS")

Q. Has OCA witness Deupree's surrebuttal caused you to change your opinion regarding the Company's use of the Average and Excess ("A&E") methodology for distribution mains?

A. No. Mr. Deupree's surrebuttal largely reiterates arguments previously advanced in his direct testimony regarding the Seaboard method, annual throughput concepts, and the weighting of peak demand within mains allocation methodologies.[1] However, his surrebuttal still does not refute the fundamental engineering reality that distribution mains must be designed to satisfy peak-day system requirements. Mr. Deupree continues to rely on a 1952 order from the Federal Power Commission,[2] which is no longer relevant, since in 1973 the Federal Energy Regulatory Commission ("FERC") departed from this

[1] OCA St. 1, pp. 50-54 and OCA St. 1SR, pp. 12-16.
[2] OCA St. 1SR, p. 12.

Seaboard method to the United method and then subsequently moved to a Modified Fixed variable approach in 1983, which allocated all fixed costs based on demand and all variable costs based on commodity. This Commission should not rely on precedents from 1952 that have since been replaced.

Q. How do you respond to OCA witness Deupree's claim that the A&E methodology considers a customer class with a 100 percent load factor as having no peak demand requirements?[3]

A. I disagree with that characterization because it is factually inaccurate. Under the A&E methodology, a customer class with a 100 percent load factor is not viewed as having no peak demand requirements. Rather, it is viewed as having peak demand requirements that are equal to its average demand requirements.

In the example provided by OCA witness Deupree, the excess demand component is zero because there is no difference between the class's average demand and its peak demand. That does not mean the class imposes no demand on the system or has no peak demand requirements. On the contrary, the class is utilizing the system at its full demand level during all hours, including the system peak period. Accordingly, the A&E methodology does allocate demand-related costs to such a customer class. Those costs are simply assigned to the average demand component rather than the excess demand component. Mr. Deupree's example, therefore, conflates the absence of excess demand

[3] OCA St. 1SR, p. 16.

with the absence of peak demand, which are fundamentally different concepts. In my view, OCA witness Deupree's example incorrectly interprets the results of the A&E methodology by treating zero excess demand as equivalent to zero peak demand. The methodology makes no such assumption.

III. RESIDENTIAL CUSTOMER CHARGE AND LOW-INCOME CUSTOMER IMPACT

Q. Please respond to OCA witness Deupree's testimony regarding the appropriate level of recovery of customer-related costs through the residential customer charge.

A. Mr. Deupree's analysis understates the appropriate level of customer-related cost recovery through the residential customer charge because it excludes legitimate customer-related overhead and administrative costs that are necessary to provide service.[4] Those costs are real, ongoing costs the Company incurs to connect, bill, serve, and support customers, and they are properly included in the Company's cost of service study consistent with standard ratemaking principles.

Mr. Deupree acknowledges that the current residential customer charge recovers only about 42 percent of the customer-related costs identified in his own analysis, which he calculates at $38.66 per customer per month.[5] That amount is materially higher than the Company's proposed charge. In my view, recovery at only 42 percent of customer-related costs does not reasonably reflect cost-causation principles, and Mr. Deupree's proposal is

[4] OCA St. 1SR, pp. 18-19.
[5] OCA St. 1SR, p. 17.

not supported by the *Lloyd* decision[6] because it would continue to recover customer-related costs well below the cost to serve without justification. Accordingly, I continue to support the Company's proposed $23.00 monthly residential customer charge as a more appropriate reflection of customer-related costs, regardless of any scale-back or the ultimate revenue requirement. Even at that level, the charge would still recover less than 50 percent of the unit cost calculated by Mr. Deupree.

Q. Please respond to OCA witness Colton's surrebuttal testimony regarding your criticism of the OCA witnesses' statements concerning lower-use and lower-income customers.[7]

A. Mr. Colton's surrebuttal does not address my central point. My rebuttal did not depend on which specific OCA witness used a particular phrase. Rather, my point was that OCA, as a whole, advanced the position that lower-use residential customers tend to be lower-income customers without providing Company-specific evidence or analysis showing that relationship for UGI Gas customers. Specifically, OCA witness Deupree stated the following in his direct testimony:

> As discussed in more detail in the Direct Testimony of OCA Witness Roger Colton, higher customer charges disproportionately impact lower use residential customers which tend to be lower income customers.[8]

[6] *Lloyd v. Pa. P.U.C.*, 904 A.2d 1010 (Pa. Cmwlth. 2006), *appeal denied*, 591 Pa. 676, 916 A.2d 1104 (2007).
[7] OCA St. 6SR, p. 25-26.
[8] OCA St. 1, p. 68.

Mr. Deupree also cites the Direct Testimony of Roger Colton, OCA Statement No. 6 at pages 10 and 11. In other words, Mr. Deupree expressly represented that Mr. Colton's testimony would support that assertion. But Mr. Colton's testimony did not even provide testimony that lower-use customers are or are not generally lower-income customers, as Mr. Colton acknowledges in his own surrebuttal testimony.[9] Instead of addressing that lack of evidentiary support, Mr. Colton's surrebuttal focuses on whether he personally made the statement referenced in my rebuttal testimony. That distinction misses the point. OCA advanced the assertion in this proceeding, attributed support for it to one of its witnesses, and ultimately left it unsupported. Therefore, my criticism remains unchanged. OCA continues to advance this position without factual support in the record, leaving the Commission without an evidentiary basis to rely on that assertion.

Q. Does OCA continue to make the argument that low-income customers are typically low-use customers?

A. Yes. In his surrebuttal testimony, OCA witness Deupree continues to advance the premise that low-income customers are low-use customers, but he does not provide Company-specific evidence demonstrating that this is true for UGI Gas customers.[10] Instead, he criticizes the Company's low-income analysis based on incorrect assertions, including the claim that the analyzed population included customers enrolled in the Customer Assistance

[9] OCA St. 6SR, p. 25-26.
[10] OCA St. 1SR, pp. 18-19.

Program ("CAP"), when it did not.[11] As a result, his criticism does not undermine the Company's analysis and does not supply evidentiary support for OCA's underlying claim.

Q. How do you respond to CAUSE-PA witness Cicero's continued opposition to the Company's proposed residential customer charge increase?[12]

A. Mr. Cicero's surrebuttal continues to reflect a policy preference for recovering a larger portion of fixed distribution costs through volumetric rates.[13] As discussed in my rebuttal testimony, the Company's proposed customer charge is supported by cost causation principles and the Company's ACOSS[14] as well as the customer-related costs calculated by OCA witness Deupree. Mr. Cicero has not presented evidence in this proceeding undermining that analysis.

Q. How do you respond to CAUSE-PA witness Cicero's position that the Company's Budget Billing Program should be used in lieu of increasing the residential customer charge?[15]

A. Mr. Cicero's position suffers from the same fundamental flaws I addressed in rebuttal when OCA witness Deupree suggested that the Budget Billing Program offers the same features as the WNA for purposes of normalizing bills.[16] Budget billing is a payment-smoothing

[11] UGI Gas St. No. 11, pp. 28-29.
[12] CAUSE-PA St. 1-SR, p. 32.
[13] CAUSE-PA St. 1-SR, pp. 33-34.
[14] UGI Gas St. No. 11-R, pp. 17-18.
[15] CAUSE-PA St. 1-SR, p. 32.
[16] OCA St. 1, at p. 31.

mechanism, not a rate design mechanism. As a payment plan, it cannot substitute for either traditional rate design or alternative ratemaking mechanisms.

Q. I&E witness Cline states that "a delicate balance exists in rate design between the revenue stability and fixed cost recovery (the Company) and affordability and conservation efforts (customers)."[17] Do you disagree with that statement?

A. I agree that rate design requires the Commission to balance multiple objectives, including cost causation, revenue stability, customer bill impacts, affordability, and conservation. However, I do not agree with framing those considerations as though revenue stability and fixed cost recovery are solely "Company" interests, while affordability and conservation are solely "customer" interests.

As discussed in my direct and rebuttal testimony, appropriately designed customer charges and rate structures can benefit both customers and the Company. More stable recovery of fixed customer-related costs can reduce weather- and usage-related bill volatility, moderate the need for future rate adjustments, improve revenue stability, improve bill stability, which may lower arrears and uncollectibles, and better align cost recovery with how those costs are incurred.[18]

Similarly, affordability and conservation are not concerns that affect only customers. The Company also has a strong interest in customer affordability, bill stability, gradualism, and efficient system utilization, all of which are longstanding and recognized

[17] I&E St. 3-SR, p. 6.
[18] UGI Gas St. No. 11, pp. 27-30 and UGI Gas St. No. 11-R, pp. 17-18, 26-28.

objectives of sound utility ratemaking. In practice, rate design requires balancing interrelated considerations that affect both customers and the Company, not weighing a set of exclusively "Company" interests against a separate set of exclusively "customer" interests.

For that reason, I continue to believe customer charges should be set primarily based on cost-causation principles and the customer-related costs identified in the ACOSS, while also considering gradualism and customer impacts. They should not be reduced mechanically as a simple proportional function of changes in the overall revenue requirement approved by the Commission.

In this case, the Company's proposed customer charge already reflects moderation and gradualism because it remains below the customer-related unit cost identified in both the Company's ACOSS and OCA witness Deupree.[19] Accordingly, further reducing that charge solely because the Commission may adjust the overall revenue requirement would move rates farther from cost-based recovery without any showing that the underlying customer-related costs themselves have changed.

Q. What is the outcome of continued pursuit of inefficient rate design?

A. When rates are designed to recover significant portions of fixed costs through volumetric charges as proposed by OCA, CAUSE-PA, and I&E, logical alternatives are rightfully pursued as a solution for the inefficiency of design. Take the WNA for example. If rates were efficiently designed to recover fixed costs in fixed charges and variable costs in

[19] UGI Gas St. No. 11, pp. 26-27.

volumetric charges, i.e., a Straight-Fixed-Variable ("SFV") rate design, the WNA would not be needed. However, the shift away from an efficient rate design goal, as advocated for by the parties in this case, necessitates the focus on WNA and similar alternative rate mechanisms to achieve recovery of the fixed costs of providing service. This is due to rate designs that recover significant portions of fixed costs through volumetric charges, creating both: (1) increased revenue instability for the utilities charged with providing safe and reliable service; and (2) increased bill stability for customers. The root of the problem here is that the further the rate design deviates from SFV, sending incorrect price signals to customers, efficiently-designed alternatives are understandably pursued. When cost recovery is aligned with cost causation and efficient rates are provided to customers, these alternatives are not necessary or only needed in more limited form, and all customers pay fairly for the same access to the same safe and reliable utility systems.

IV. WEATHER NORMALIZATION ADJUSTMENT

Q. Did you review the 2009 report cited by OCA witness Deupree,[20] and does it support his characterization of the Company's proposed WNA?

A. I did review the report titled *Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review* by Pamela G. Lesh, which OCA witness Deupree cites. The report does not support witness Deupree's conclusion that the Company's proposed WNA is one-sided or operates primarily for the benefit of the utility. To the contrary, the report states that decoupling adjustments "are both refunds to

[20] OCA St. 1SR, pp. 18-19.

customers as well as charges and tend to be small."[21] This is clearly stated in the report's abstract – right up top in italicized letters. It further states that no consistent pattern of either rate increases or decreases emerges, and that the adjustments were "most often under 2 percent," with "the majority under 1 percent."[22] Those conclusions are inconsistent with OCA's suggestion that such mechanisms operate asymmetrically or primarily to customers' detriment.

Q. Why is that report of limited applicability to the Company's proposed WNA?

A. The report has limited applicability for at least two reasons. First, it was published approximately 17 years ago and evaluated mechanisms that differ materially from the WNA structures currently used in Pennsylvania. Second, the report expressly notes that most of the mechanisms it reviewed did not adjust revenues for the effects of weather.[23] That limitation is significant because the Company's proposed WNA is specifically designed to normalize only for weather-related variation around the same weather assumptions used to establish base rates. Accordingly, the study does not provide a meaningful basis to assess the operation of a modern Pennsylvania WNA.

Q. How does the Company's proposed WNA differ from the broader decoupling mechanisms evaluated in the report?

[21] Pamela G. Lesh, "Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review," The Electricity Journal, Vol. 22, Issue 8 (Oct. 2009), p. 66.
[22] *Id.*
[23] *Id.* p. 67.

A. The distinction is important. Many of the revenue decoupling mechanisms discussed in the report were designed to address broader revenue variation associated with changes in customer usage, including conservation, energy efficiency, economic conditions, and other non-weather factors.[24] The Company's proposed WNA does not do that. It is not a general revenue decoupling mechanism. Rather, it is narrowly designed to normalize only for weather-related deviations from the weather assumptions embedded in rates. For that reason, the historical operation of broader decoupling mechanisms does not establish that the Company's proposed WNA is one-sided or primarily beneficial to the utility. Like the mechanisms described in the report, the proposed WNA operates symmetrically and can produce either customer credits or surcharges depending on actual weather conditions.

Q. Please respond to OCA witness Deupree's continued claim that the WNA has functioned as an "asymmetric" mechanism because it has produced more surcharges than credits.[25]

A. Mr. Deupree's claim continues to confuse the design of the WNA with the weather outcomes observed during the review period. The WNA is symmetrical by design because it can produce either surcharges or credits depending on if the actual weather is warmer or colder than the normal weather embedded in rates. The fact that the historical period experienced more warmer-than-normal conditions than colder-than-normal conditions

[24] *Id.*
[25] OCA St. 1SR, pp. 7-8.

does not make the mechanism asymmetric; it reflects the weather that occurred, not a one-sided feature of the mechanism. The Company does not control those weather outcomes.

What the Company can do, and has done, is improve the assumptions used in the mechanism so that the normal weather benchmark better reflects recent conditions. Specifically, the Company updated the weather normalization from a 15-year average to a more current 10-year average.[26] As shown in this proceeding, if that 10-year normalization had been applied over the historical review period, customers would have been approximately neutral overall, meaning the mechanism would have produced approximately offsetting surcharges and credits over the historical review period.[27] That result directly undermines Mr. Deupree's claim that the WNA is inherently one-sided. Notably, Mr. Deupree does not contradict, let alone address, the data presented in Table 2 of my rebuttal testimony demonstrating that a 10-year normal would have resulted in total WNA collections of approximately $130,000 from November 2022 to March 2026, compared to the actual total WNA collections over that period of approximately $63.44 million.

Q. Please respond to OCA witness Deupree's recommendation to increase the WNA deadband from 3% to 5% and to exclude October from the WNA period.[28]

A. Mr. Deupree continues to focus exclusively on limiting potential customer surcharges while largely ignoring the corresponding impacts on customer credits and the overall

[26] UGI Gas St. No. 11, p. 33.
[27] UGI Gas St. No. 11-R, pp. 33-34.
[28] OCA St. 1SR, pp. 9-11.

effectiveness of the WNA. Increasing the deadband from 3% to 5% would not merely filter out insignificant deviations. It would leave a wider range of meaningful weather-related usage variation outside the mechanism, thereby reducing both surcharges in warmer-than-normal periods and credits in colder-than-normal periods. As demonstrated during the colder-than-normal 2025-2026 winter season, the deadband also limited the credits customers otherwise would have received.[29]

The same is true of Mr. Deupree's proposal to exclude October from the WNA period. Although October accounts for a smaller share of annual heating degree days than the core winter months, it still includes heating requirements and weather-sensitive usage.[30] The relevant question is not whether October is among the coldest months of the year, but whether deviations from normal October weather can impact residential heating usage. The evidence in this case shows that they do.[31]

Q. How do you respond to OCA witness Alexander's and CAUSE-PA witness Cicero's claim that the absence of customer complaints should not be interpreted as evidence of customer acceptance or understanding of the WNA?[32]

A. OCA witness Alexander and CAUSE-PA witness Cicero criticize the Company for drawing reasonable inferences from observable customer complaint data, yet their

[29] UGI Gas St. No. 11-R, p. 46.
[30] OCA St. 1SR, p. 11.
[31] UGI Gas St. No. 11-R, pp. 33-34.
[32] OCA St. 5-SR, p. 8 and CAUSE-PA St. 1-SR, p. 38.

responses rely on speculation regarding hypothetical customer perceptions unsupported by any analysis, survey data, complaint trends, or empirical evidence.

Q. How do you respond to CAUSE-PA witness Cicero's continued criticism of the WNA?[33]

A. Mr. Cicero's surrebuttal simply reiterates arguments I have already addressed in my rebuttal testimony regarding the operation of the WNA, the allocation of weather-related risk, and the historical pattern of WNA surcharges and credits.[34]

Q. How do you respond to CAUSE-PA witness Cicero's continued request to modify the WNA mechanism deadband and months of application?[35]

A. I address those same arguments in my responses to I&E witness Cline below. As discussed there, those proposed changes are not informative and do not provide a persuasive basis to modify the WNA.

Q. Please respond to I&E witness Cline's recommendation to increase the WNA deadband from 3% to 5% which relies on the Commission's decision in the Columbia Gas of Pennsylvania, Inc. ("Columbia Gas") 2025 Rate Case.[36]

[33] CAUSE-PA St. 1-SR, p. 36-37, 40.

[36] I&E St. 3-SR, pp. 3-4.

A. I continue to disagree with increasing the WNA deadband from 3% to 5%.[37] While I do not dispute that a 5% deadband may have been found reasonable for Columbia Gas based on the record and WNA design presented in that proceeding, it does not mean a 5% deadband is the most appropriate result for UGI Gas in this proceeding. The question here is not whether 5% can be a reasonable deadband in some circumstances; the question is whether increasing UGI Gas's deadband from 3% to 5% is appropriate when evaluated together with the Company's full WNA proposal and the evidentiary record in this case.

Q. Why is increasing the deadband not appropriate for UGI Gas?

A. The deadband level should not be evaluated in isolation. In this case, the Company made a proposal to move from a 15-year weather normal to a more current 10-year normal that better reflects more recent weather conditions, which should reduce the likelihood and magnitude of WNA surcharges or credits over time. In other words, the Company's proposal already narrows the circumstances in which the WNA will produce adjustments by improving the definition of "normal" weather- by moving from a 15-year weather normal to the 10-year weather normal. These facts were not present in the Columbia Gas 2025 Rate Case's evidentiary record, and the Commission made its determination without the benefit of any analysis on the impact changing the normal weather period would have on the function of the WNA and deadband. Adding a larger 5% deadband on top of the move to 10-year normal weather is not necessary as shown by my analysis.

[37] UGI Gas St. No. 11-R, pp. 45-46.

Q. How do you respond to I&E witness Cline's point that a 5% deadband captures "normal weather fluctuations"?[38]

A. Mr. Cline's statement does not resolve the issue, nor was it supported by any analysis. A deadband is not simply a meteorological judgment about what range of weather may be considered "normal." It is a ratemaking design choice that determines how much of the weather-related revenue and bill volatility remains unaddressed and is still borne as risk to customers and the Company. A 3% deadband already prevents minor weather variations from triggering WNA adjustments. Increasing the deadband to 5% would expand the range of deviations for which no adjustment is made, even when those deviations can still have meaningful bill and revenue effects that distort the revenue recovered away from the cost of service.

Q. Would increasing the deadband from 3% to 5% benefit customers?

A. Not necessarily, and I&E witness Cline has not demonstrated that it would. A larger deadband would reduce surcharges in some warmer-than-normal periods, but it would also reduce credits to customers in colder-than-normal periods. The recent colder-than-normal winter months illustrate this point: larger deadbands reduce the extent to which customers receive the benefit of WNA credits when actual weather is colder than the normal weather assumptions embedded in rates. In my review, the Company should make the adjustment from the 15-year normal to the 10-year normal and evaluate that change's impact, which

[38] I&E St. 3-SR, p. 5.

is expected to result in a more symmetrical set of WNA credits and collections, before layering on another significant change, i.e., increasing the deadband from 3% to 5%.

Q. Does this conclude your rejoinder testimony?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 12-RJ

Rejoinder Testimony of
Brian J. Meilinger

Topics Addressed: **Low Income Issues**

Dated: June 1, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Brian J. Meilinger. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 12, on January 28, 2026, and rebuttal testimony, UGI Gas Statement No. 12-R, on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. The purpose of my rejoinder testimony is to respond to certain claims in the surrebuttal testimony of Office of Consumer Advocate ("OCA") Witness Colton (OCA St. 6SR) and Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Cicero (CAUSE-PA St. No. 1-SR).

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, attached to my testimony are UGI Gas Exhibits BJM-1RJ through BJM-3RJ.

II. RESPONSE TO OCA WITNESS COLTON

Q. OCA Witness Colton asserts that you set "the bar far too low for what the obligations of UGI Gas are" in assisting low-income customers and that the Company has been failing to meet its "statutory mandate for Universal Service Programs." OCA St. 6SR, at pp. 2-3, 5. Do you agree with this characterization?

A. No. Witness Colton is wordsmithing my rebuttal testimony regarding the "many" customers for whom UGI Gas has produced positive outcomes. The reality is that UGI Gas meets its obligations to assist low-income customers afford gas service (which Witness Colton recognizes is the applicable standard), while providing substantial relief to low-income customers. As demonstrated in my prior testimony, CAP enrollment has increased by 40% since 2018 (UGI Gas St. No. 12-R, at pp. 13-14), and LIURP participation has been near 100% of Commission approved budgets since 2022 (UGI Gas St. No. 12, at pp. 7-8). Additionally, Operation Share has provided nearly 12,000 Operation Share grants to low to moderate income customers since 2022. UGI Gas St. No. 12, at p. 8. Furthermore, the Company is continuing its targeted marketing and outreach efforts in order to drive increased participation on a year over year basis.

Q. Witness Colton asserts that you did not dispute various data points, which, according to him, show that UGI Gas is not meeting its "statutory objective" to assist low-income customers. OCA St. 6SR, at pp. 3-4. Please respond.

A. As I explained previously, and as will be further addressed in the Company's briefs, UGI Gas meets its statutory obligation to assist low-income customers. Additionally, Witness Colton is only looking at certain metrics and notably overlooks others, such as the year over year successes of the Universal Service Program enrollments. With that, it is not immediately clear to me if Witness Colton understands all the metrics that he is evaluating. For instance, he states that "UGI Gas has three times more low income customers in debt than residential customers." OCA St. 6SR, at p. 3. This statement is incorrect. The data provided in UGI Gas's response to OCA-4-31 shows 30,820 Confirmed Low-Income

(excluding CAP) residential accounts in arrears as of January 2026 compared to the 142,704 residential accounts in arrears for the same month and year in UGI Gas's response to OCA-4-30. Copies of those discovery responses are attached as UGI Gas Exhibits BJM-1RJ and BJM-2RJ, respectively.

Q. Witness Colton claims that "the Company does fail to do all it can, and does, indeed, create barriers" to LIHEAP participation. OCA St. 6SR, at pp. 4-5. Do you agree?

A. No. The Company does not create barriers for LIHEAP participation. Witness Colton provides no meaningful evidence of this assertion in his surrebuttal. Instead, he criticizes me for stating that UGI Gas "facilitated" LIHEAP grants. The use of this terminology is how I describe the process of working with the Department of Human Services ("DHS"). When the DHS sends UGI Gas its LIHEAP customer vouchers, the Company uses this information to accurately post the information to the correct customer accounts. This process spans several months, typically from November through April, and involves significant resource and IT system commitments to ensure that the millions of dollars in LIHEAP assistance are accurately applied to the correct customer accounts.

In addition, Witness Colton is incorrect when he claims that the Company's LIHEAP grant figure of 109,000 is "suspect." *See* OCA St. 6SR, at pp. 4-5 note 7. The 109,000 figure refers to the number of LIHEAP grants, while the 72,659 that Witness Colton cites is the number of unique customers receiving a grant. Since it is possible for customers to receive more than one grant, the number of grants is higher than the number of customers participating.

Q. Witness Colton argues that your "extensive argument about how well UGI Gas is doing to provide 'a concerted focus on continued marketing and customer outreach to increase CAP enrollment' . . . misses the point," because "aside from CAP enrollment, the Company has a responsibility to provide certain protections . . . to 'confirmed low-income customers.'" OCA St. 6SR, at p. 6. Please respond.

A. My response about the efforts UGI Gas has undertaken to increase CAP enrollment (UGI Gas St. No. 12-R, at pp. 7-8.) does not miss the point. Rather, it addresses the claims raised in Witness Colton's testimony that UGI Gas does not do enough to engage low-income customers for enrollment in CAP. Regarding Witness Colton's claim about identifying confirmed low-income customers, as previously stated in my direct testimony (UGI Gas St. No. 12, at pp. 14-15) and in accordance with Paragraph 67(a) of the UGI Gas 2025 Rate Case Settlement, the Company maintains that it is compliant with the Commission's regulations at 52 Pa. Code § 62.2, which defines a "confirmed low-income residential account" to include "[a]ccounts where the NGDC has obtained information that would reasonably place the customer in a low-income designation. This information may include receipt of LIHEAP funds, self-certification by the customer, income source or information obtained in § 56.97(b) (relating to procedures upon ratepayer or occupant contact prior to termination)." However, 52 Pa. Code § 62.2 also defines a "low-income customer" as "[a] residential utility customer whose gross household income is at or below 150% of the Federal poverty guidelines. Gross household income does not include the value of food stamps or other noncash income."

Q. Witness Colton disputes how you characterized OCA's discovery response regarding SNAP income eligibility, claiming that you have "deceptively represent[ed] the response." OCA St. 6SR, at pp. 6-8. Please respond.

A. I strongly disagree with Witness Colton's claim that I was intentionally deceptive when addressing his circular discovery response on SNAP eligibility and how that might be useful for CAP enrollment. *See* UGI Gas Exhibit BJM-12R (OCA Response to UGI-III-1). He asserts that the evidence of "SNAP participation would create a reasonable expectation that a UGI Gas customer is low-income," and while such evidence "may not be sufficient to certify income for purposes of CAP enrollment," the "PUC's regulations regarding Confirmed Low-Income status does [sic] not require that." OCA St. 6SR, at p. 8. However, I am advised by counsel that the Commission's regulations state that "[a]n applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the public utility's customer assistance programs." 52 Pa. Code § 56.32(e) (emphasis added). Therefore, the standard is not whether there is a "reasonable expectation" that they qualify, but instead, whether the applicant provides documentation or other information attesting to their eligibility.

Q. Witness Colton claims that it was not "reasonable" for you to "assert that more than three-of-five LIHEAP recipients" assign "LIHEAP to their secondary heating provider." OCA St. 6SR, at pp. 8-9. Do you agree?

A. No. Witness Colton misrepresents my testimony. I made no such statement that "more than three-of-five LIHEAP" recipients assign LIHEAP to their secondary heating provider. In my rebuttal testimony (UGI Gas St. No. 12-R, at p.20), I simply stated that it is possible that many of these customers "may" have received LIHEAP through their Electric Distribution Company and would, therefore, not be eligible to receive LIHEAP for their UGI Gas account. The Company would not have insight into this information because the DHS data sharing process only provides utilities with data on their own customers, not the customers of other utilities.

Q. Witness Colton asserts that when you used the term "screenshot of a COMPASS application," it is "not clear what [you] are referencing (or whether [you] even understand[] the proposal which [you are] objecting to" because "one does not apply for COMPASS." OCA St. 6SR, at p. 11. Please respond.

A. Although Witness Colton criticizes me for using the term "screenshot of a COMPASS application," he fails to realize that I was using the same terminology that he himself used multiple times in his direct testimony. Specifically, Witness Colton recommended that "UGI Gas, at a minimum, accept either a printout or a screenshot of the State of Pennsylvania's COMPASS application as adequate documentation to establish Confirmed Low-Income status." OCA St. 6, at p. 4 (emphasis added). Then, on page 54 of his direct testimony, Witness Colton stated, "My first recommendation, therefore, is that UGI Gas, at a minimum, accept either a printout or a screenshot of the COMPASS application as adequate documentation to established Confirmed Low-Income status." OCA St. 6, at p.

54 (emphasis added). Therefore, I was simply using the same terminology that Witness Colton was utilizing.

Q. Please respond to Witness Colton's claim that you "offer[ed] a series of misleading objections" to the "use of a customer's access to COMPASS in order to establish a reasonable expectation that the customer is low-income." OCA St. 6SR, at pp. 11-14.

A. Witness Colton's claim is incorrect. His recommendation to use a screenshot of COMPASS to establish Confirmed Low Income status is not needed and is unnecessarily complicated for the customer. A customer can simply self-certify their income and then they will be recorded in the Company's Customer Information System as Confirmed Low Income – there is no need to complicate the process and suggest that customers provide COMPASS documentation. Also, as I noted previously, Witness Colton keeps using the term "reasonable expectation," which appears nowhere in the applicable regulations.

Q. Do you agree with Witness Colton that you "misle[d] and mix[ed] up . . . the objections to what UGI Gas requires of a low-income customer in order for that customer to receive a deposit waiver or refund"? OCA St. 6SR, at pp. 14-16.

A. No. Witness Colton's claim is unsupported and should be rejected. He references my use of the "screenshot of a COMPASS application" language, which, as explained previously, is the same terminology that Witness Colton himself used in his direct testimony. Witness Colton also incorrectly asserts that I claimed he was wrong when he claimed that a customer must enroll in CAP to have their deposit waived. Witness Colton's incorrect claims on this point are further addressed below. Further, while Witness Colton maintains

that the Company's refund process is "inappropriate (and unlawful)," I am advised by counsel that the Company will address Witness Colton's position on this legal issue in its briefs.

Q. Witness Colton asserts that, contrary to your rebuttal testimony, he made no assertion that a customer must enroll in CAP to have their deposit waived. OCA St. 6SR, at p. 14. Did you say that was his position in your rebuttal testimony?

A. No. In my rebuttal testimony, (UGI Gas St. No. 12-R), I never asserted that Witness Colton stated in his testimony that a customer must enroll in CAP to have their deposit waived. In fact, I clearly stated that Witness Colton's position was "that UGI eliminate the requirement that a customer apply for CAP to establish eligibility for deposit exemption." UGI Gas St. No. 12-R, at p. 24, lines 23-25 (emphasis added). Moreover, when I was clarifying that customers do not need to enroll in CAP to receive the security deposit exemption under UGI Gas's process, my testimony was in response to Witness Cicero's commentary on whether or not customers need to enroll in CAP to receive the security deposit exemption.

Q. What is your response to Witness Colton's claim that "it is not possible . . . yet . . . to determine whether UGI Gas['s] actions taken pursuant to the 2025 settlement are adequate or meaningful"? OCA St. 6SR, at p. 18.

A. As stated in my rebuttal testimony, the Company's outreach efforts to engage with Mayor's Offices, facilitate additional WARM events, and launch the Low Income Customer Assessment Pilot are well underway and on track to meeting the provisions of the UGI Gas

2025 Rate Case Settlement. UGI Gas St. No. 12-R, at p. 28. Furthermore, while Witness Colton questions the relevance of directing him to UGI Gas Witness Adamo's rebuttal testimony on settlement compliance (OCA St. 6SR, at p. 17 note 27), he fails to see that the universal service-related settlement commitments, including the "provisions regarding universal service outreach and enrollment" he references, (*See* OCA St. 6SR, at p. 18.) are in the settlement compliance tracking documents provided by Mr. Adamo in his rebuttal and rejoinder testimony. *See* UGI Gas Exhibits DVA-2R and DVA-3RJ.

Q. Witness Colton concedes that he chose not to be involved "with the review of the Company's presentation of its customer outreach plan developed pursuant to the July 2025 Settlement of the 2025 UGI Gas rate case," but he believes that "[t]he testimony that gave rise to the Settlement should be the foundation of future discussions occurring pursuant to the Settlement." OCA St. 6SR, at pp. 18-19. Please respond.

A. To clarify my position, the Company does not state that Witness Colton needs to be present at each of the Company's Universal Service Advisory Committee ("USAC") meetings. However, Witness Colton criticized the Company's Low Income Customer Assessment and Outreach Pilot, while omitting in his testimony that he had opportunities to participate in the meeting or obtain a copy of the December 4, 2025 presentation. Unfortunately, he chose not to pursue either option. In addition, the Company diligently engaged with OCA and other USAC stakeholders on several rounds of feedback to provide a comprehensive marketing plan for this Pilot. These efforts, which Witness Colton fails to acknowledge in his direct testimony, demonstrate that the Company works collaboratively with interested stakeholders to develop and implement these initiatives. If Witness Colton had made an

effort to obtain this information, it likely could have avoided his criticism of the Low Income Customer Assessment and Outreach Pilot included in his direct testimony.

III. RESPONSE TO CAUSE-PA WITNESS CICERO

Q. Do you agree with CAUSE-PA Witness Cicero that you "blame[] low income customers themselves for not enrolling" in assistance programs? CAUSE-PA St. No. 1-SR, at p. 25.

A. No. There is no support for Witness Cicero's false and derogatory statement. My point was simply that because customers cannot be enrolled without their consent, customers will need to take some action to be enrolled in the programs. Also, in my position, I am strongly committed to operating and improving the Company's Universal Service Programs and helping customers receive assistance to better afford their natural gas service bills. I believe the Company's customers would be better served if the parties were to work together to develop solutions than to attack one another personally.

Similarly, nothing supports Witness Cicero's statement that "this position is problematic and representative of a culture that blames poor people for the decisions that UGI has made that result in unaffordable rates and make it difficult for eligible households to access available programs." CAUSE-PA St. No. 1-SR, at p. 25. Again, in my rebuttal testimony, I was simply clarifying that customers cannot be enrolled in a Universal Service Program without them taking some action. UGI Gas makes substantial efforts to educate its customers about the availability of assistance. Further, the Company strives to enroll as many eligible customers as possible. At some point, however, customers do need to take action to enroll in the programs. Making such an observation is not "blaming" customers for not enrolling in the programs.

Q. Please respond to Witness Cicero's purported issues with UGI Gas's survey questions regarding income screening. CAUSE-PA St. No. 1-SR, at pp. 26-28.

A. The income screening survey was developed by a UGI Gas employee who is a market research expert with over 25 years' experience (16 years in the utility industry), including survey development and analysis. The Company also utilized the survey management tool of a reputable vendor (Verint), which is a leader in voice and customer analytics, to field responses. Further, the survey was developed by the Company to gather insights into customer preference, regarding their willingness to provide income information to call center representatives. From my perspective, it appears that Witness Cicero wants to discredit the Company's survey methodologies simply because he does not like the results of the survey. On page 27 of his surrebuttal, he cites survey comments from seven respondents and relies on that information to allege that there is "a fundamental misunderstanding of the survey question and flaws in the process." Having highlighted only seven survey responses out of the 355 total responses (i.e., less than 2%), it is a stretch for Witness Cicero to imply that because of these comments, the entire survey was flawed.

Additionally, he fails to acknowledge one survey respondent's feedback that does not align with his income screening desires where the customer responded, "Please don't start asking callers for their income--just routinely ask if they'd be interested in learning more about UGI's income-based assistance. Then, if appropriate, share with them the program's income requirements. Never ask customers for personal information that you don't have a genuine need to know--it will only hurt your credibility as a utility provider and make people question whether they've called the wrong number and are speaking to a

scammer." UGI Gas Exhibit BJM-3RJ, p. 143 (UGI Response to CAUSE-PA-9-4). Although 72% of customers were either "very interested" (26%), or "somewhat interested" (34%) in learning more about income-based assistance programs, that does not mean that these customers are willing to share their income. The reality is that of the nearly 5,000 customers that were randomly surveyed, only 3 in 10 customers would be willing to share their income with the Company.

Q. Witness Cicero says that he is "<u>not</u> recommending that UGI ask every customer who calls its call center for a non-emergency call to provide their income information." CAUSE-PA St. 1-SR, at p. 28 (emphasis in original). Does that make sense given his proposed addition to the Company's call center script under his recommendation?

A. No. Witness Cicero clearly states on page 28 of his surrebuttal testimony that under his recommendation, he wants the Company to "provide the following statement (or something similar) on all calls for customers who call their call center for non-emergency calls and for new and moving customers: *UGI offers reduced rates and other assistance for income qualified customers. Would you like to provide your household income information to see if you qualify?*" That is obviously a statement asking the customer to provide their income information in exchange for information on assistance.

Furthermore, Witness Cicero made it abundantly clear in his direct testimony that he wants income screening on <u>all</u> non-emergency phone calls. Specifically, he recommended that UGI Gas be required to: (1) "[s]creen all new and moving customers for income level at the time their service is established and ask whether they would like information about income qualified programs that may reduce their rate"; (2) "[s]creen

existing customers for household income level on any non-emergency calls and inquire whether there have been any updates to household income information"; and (3) "[d]evelop a process for routine income screening through UGI's online account portal." CAUSE-PA St. No. 1, at p. 73 (emphasis added).

Finally, the Company already requests income and occupancy during all inbound calls regarding past due notices and nonpayment service disconnections. This practice is designed to ascertain the caller's eligibility for the Company's Universal Service Programs. If, based upon their stated income and household occupancy, the caller appears to be eligible for CAP, the caller is referred to a Community-Based Organization ("CBO") and is solicited for enrollment. If the caller already had their income verified, enrollment into CAP is expedited and facilitated during the call.

Q. Witness Cicero claims that "[i]t is difficult to imagine" that it would be expensive to implement his recommendation or cause customer frustration or confusion, as "UGI has provided no information about what the cost to implement this additional question would be, how it would affect call times, or why it would confuse or frustrate customers." CAUSE-PA St. No. 1-SR, at p. 29. Please respond.

A. The recommendation for income screening is CAUSE-PA's proposal, and I have been advised by counsel that CAUSE-PA bears the burden of proof on whether it should be adopted. Also, when asked in discovery what analysis CAUSE-PA has performed on this recommendation, Witness Cicero responded that he performed no analysis on any of the following critical items:

1. A "customer's willingness to provide income information on calls when income information is not required to address the UGI Gas customer's inquiry";

2. "[T]he potential impact to UGI Gas's customer satisfaction that might result from asking customers for income information on any non-emergency calls, even if the topic is not related to billing or credit";

3. "[T]he potential impact to the Company's call center department's average handle time to 'routinely screen existing customers for household income level on any non-emergency calls – and inquire whether there have been any updates to household income in-formation already noted on accounts";

4. The "cost impacts that may arise due to increased call center average handle time to perform income screening"; and

5. "[T]he IT costs to enhance the UGI online account portal to perform routine income screening."

UGI Gas Exhibit BJM-9R (CAUSE-PA Response to UGI-I-8).

Finally, the average call handle time would increase by, at a minimum, the amount of time it takes for the customer service representative to read the income screening script, and for the customer to respond. The average handle time would increase even further if the customer has questions or needs to provide income information. Increases in call times require the Company to hire additional customer service representatives to meet call performance standards. Yet, Witness Cicero failed to perform any analyses on these points. Thus, this proposal lacks support and should be rejected.

Q. Does the Company have any proposals in light of the testimony of Witnesses Colton and Cicero?

A. Yes. To the extent that the Commission believes that OCA and CAUSE-PA have identified inadequate enrollment in CAP as a key affordability issue, the Commission should grant UGI Gas up to $3 million to fund a dedicated advertising campaign promoting the Company's low-income programs.

IV. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 13-RJ

Rejoinder Testimony of
Daniel V. Adamo

Topics Addressed: **Call Center Performance**
Settlement Compliance

Dated: June 1, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Daniel V. Adamo. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Gas?

A. Yes, I submitted my rebuttal testimony, UGI Gas Statement No. 13-R on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain claims made by Office of the Consumer Advocate ("OCA") Witness Barbara Alexander in her surrebuttal testimony, OCA Statement 5SR.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. Yes, I am sponsoring UGI Gas Exhibits DVA-1RJ through DVA-3RJ.

II. CALL CENTER PERFORMANCE

Q. Have you reviewed Witness Alexander's Surrebuttal Testimony?

A. I have.

Q. Witness Alexander asserts that the information in Table 1 of your rebuttal testimony is different from the information provided in discovery. OCA St. 5SR, at pp. 4-5. Do you have a response?

A. Yes. UGI Gas timely responded to the "[a]dditional discovery" about "the underlying basis for the change in results," which was "pending" at the time of Witness Alexander's surrebuttal testimony. OCA St. 5SR, at p. 5. As explained in that response, a copy of which is attached as UGI Gas Exhibit DVA-1RJ, the Company discovered a discrepancy in the 2023 calendar year abandonment rate when submitting the requested workpapers for Table 1 in my rebuttal testimony on May 18, 2026. Specifically, the volume of abandoned calls was found to be inadvertently included twice in the value of calls received for calendar year 2023 and not adjusted for in the calculation of abandonment rate. On May 20, 2026, the Company provided a supplemental response to OCA-3-1(a), corrected the calls received and the resulting abandonment rate. The Company also followed up with the Commission's Bureau of Consumer Services ("BCS") about the reporting error, and the data has been corrected in BCS's system.

Q. What is your response to Witness Alexander's discussion of call center performance results? OCA St. 5SR, at pp. 4-6, 10-11.

A. Although Witness Alexander states that she cannot conduct a comprehensive analysis on the Company's compliance with 2025 Rate Case Settlement items focused on customer service commitments, I have demonstrated that the Company has complied fully with the items due to date and is on track to meet all required deadlines remaining.[1]

Additionally, I would like to focus on the abandonment rate metrics that Witness Alexander references on page 6 of her surrebuttal testimony, where she states:

[1] Also, in Section III, *infra*, I provide an updated version of the compliance tracker from my rebuttal testimony, which shows the most current information on the Company's compliance actions under the 2025 Gas Rate Case Settlement. As seen in that document, UGI Gas remains on track to meet all of its obligations.

> The annual average Abandonment Rate increased from 4% in 2024 to 4.7% in 2025. This data confirms that customers experienced poor service in several months, a pattern that was also reflected in 2024 data. Finally, while not required by the prior settlement, UGI Gas' performance is below that of other Pennsylvania natural gas utilities, a performance that should be taken into account in the base rate case results and supports my recommendation for the call center performance results that should be required in this base rate case. Mr. Adamo's attempt to present data to show a different result or excuse their actual results should be rejected.

OCA St. 5SR, at p. 6.

I disagree with these statements. First, the most recent of the Commission's Customer Service Performance Reports is for 2024.[2] That report shows the Company's call abandonment rate is 4%. The value mentioned as the basis for the Company's 2024 baseline metrics for call abandonment rate is truncated, rounded, or both in the Commission's report. The report does not show the value in tenths of a percent. The Company's call abandonment rate for 2024 out to the tenths decimal place was 4.4%. Witness Alexander compares the 2024 value of 4% to the 2025 abandonment rate of 4.7% as a decline in customer service. The comparison should be 4.4% versus 4.7% to be inclusive of the tenths of a percentage. Whether using Witness Alexander's incorrect value of a 0.7% variance or the actual 0.3% variance in abandonment rate from 2024 to 2025, this tiny difference is not an indication of poor or degrading performance. Classifying the Company's performance as poor based on a less than 1% variance on a volume of close to 1.5 million calls received in a year is unfair.

In further support of its position regarding the variance year over year and how the Company continues to perform at an adequate level, 2025 was a unique year. The federal

[2] *See* "2024 Customer Service Performance Report," PA. PUB. UTIL. COMM'N (Dec. 2025), *available at* https://www.puc.pa.gov/media/3762/2024-customer-service-performance-report-final.pdf ("2024 Customer Service Report").

government shutdown occurred as the Company approached the winter collections moratorium. This left the Company's most vulnerable customers without access to the very critical LIHEAP funds they needed. In UGI Gas Exhibit DVA-2RJ, I performed an additional analysis showing the impacts of the federal government shutdown, and highlighting those impacts on operations in October and November of 2025. In order to respond to this unprecedented event, the Company was required to pivot and provide additional training to call center representatives in October and to deploy those new processes in November during a very high-volume call period. These actions were critical in swiftly helping customers going into the winter who were behind on their gas bills and could not utilize LIHEAP to keep their gas service active through winter. The results of these efforts were detailed on pages 10-11 of UGI Gas Witness Meilinger's direct testimony. Providing this support to customers in need placed an unanticipated strain on customer service resources during the early winter time period.

As seen in UGI Gas Exhibit DVA-2RJ, there was an increase in call handle time year over year in the October and November period due to addressing customers' needs that were exasperated by the federal government shutdown. UGI Gas was on track excluding October and November to perform better in 2025 than 2024 when looking at percentage of abandoned calls. Although call volume was slightly higher in these two months, the amount of time the Company's representatives were on the phone with customers was significantly longer. In those 2 months, they spent an additional 3,825 hours supporting those customers in need versus the prior year.

Also, UGI Gas's customer satisfaction scores during the months of October and November 2025 exceeded the scores received from customers surveyed during the same

months in 2024. Table 1 below highlights customers' view of customer service was still at a high level despite the slight increase in abandonment rate.

Table 1

Month	2024 Customer Satisfaction Score (1-10 Scale with 10 being highest score)	2025 Customer Satisfaction Score (1-10 Scale with 10 being highest score)
October	8.97	9.10
November	8.85	8.90

In addition, Witness Alexander's comment about UGI Gas's performance relative to its peers is inaccurate when looking at multiple reporting metrics provided in the 2024 Customer Service Report.[3] In my rebuttal testimony, I included UGI Gas Exhibit DVA-3R, which highlighted the Company's performance data for 2024 compared to other natural gas utilities' data for the same period in 2024. It is inappropriate to compare UGI Gas's 2025 data to the other natural gas utilities' 2024 statistics. A proper analysis would compare data for the same time periods to evaluate the Company's performance. For example, Tables 2-4 below extracted from the 2024 Customer Service Report highlight some key areas that conflict with Witness Alexander's statement that the Company is performing below other natural gas utilities.

III. SETTLEMENT COMPLAINCE

Q. OCA Witness Alexander responds to your rebuttal testimony regarding the Company's compliance with the obligations under the 2025 Gas Rate Case

Settlement. *See, e.g.*, OCA St. 5SR, at pp. 2-7. Do you have any updates to the status of the Company's completion of its compliance obligations?

A. Yes. Please see the updated status of the Company's progress with its compliance with customer service obligations from the 2025 Gas Rate Case Settlement in UGI Gas Exhibit DVA-3RJ.

IV. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

UGI Utilities, Inc. – Gas Division

Statement No. 15-RJ

Rejoinder Testimony of
Jessica R. Rogers

Topics Addressed:

Overview of Case
Affordability Concerns
Policy Considerations

Dated: June 1, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Jessica R. Rogers. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my rebuttal testimony, UGI Gas Statement No. 15-R, on May 13, 2026. I did not sponsor direct testimony in this proceeding.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain portions of the surrebuttal testimony submitted by the Office of Consumer Advocate ("OCA"), primarily by OCA Witness Deupree (OCA Statement 1SR), and the Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA"), specifically by CAUSE-PA Witness Cicero (CAUSE-PA Statement No. 1-SR) regarding the facts and circumstances driving the Company's rate relief and how those facts and circumstances should be analyzed alongside the affordability of the Company's rates.

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No.

II. OVERVIEW OF THE COMPANY'S REJOINDER CASE AND FINAL POSITIONS

Q. Based upon your review of the surrebuttal testimony submitted in this proceeding, and the Company's rejoinder testimony, what are the major issues that remain to be resolved in this case?

A. From the outset, this case focused on a limited number of issues and was driven by the necessary capital investments planned by UGI Gas in the Fully Projected Future Test Year ("FPFTY"). Over the course of this case, the Company has reduced its claim by approximately $8.5 million to reflect adjustments to certain Operations and Maintenance ("O&M") expenses. However, at no point in this case have the parties challenged the necessity of the $468 million of the Company's planned capital investments to improve the safety and reliability of its infrastructure. Similarly, there are no disputes as to the necessity, reasonableness, or prudence of the identified capital expenditures incurred to provide safe, reliable, and reasonable service to its customers. Furthermore, the O&M disputes in this proceeding are extremely limited and not concerned with the reasonableness or prudency of the amount of costs incurred by the Company, but simply whether those reasonable and prudent expenses should be recovered in rates. As a result of the Company's updates to its revenue requirement that are summarized by UGI Gas Witness Hazenstab (UGI Gas Statement No. 2-RJ) and discussed in greater detail by other Company witnesses, at this point, the only contested revenue issues that remain are summarized in the table below:

Issue	UGI	I&E	OCA
Capital Structure	Actual 46% debt/54% equity	Actual 46% debt/54% equity	Hypothetical 51% debt/49% equity
Return on Equity	10.75%	9.81%	8.80% or 8.4%
Depreciation	Equal Life Group	Equal Life Group	Average Life Group ($20M disallowance)
Collections Expense		Accepts Company position	$3.01M disallowance
PUC Assessment		Accepts Company position	$1.80M disallowance
Rate Case Expense	1 year	2 years ($880,000 disallowance)	2 years ($880,000 disallowance)

The financial outcome of this case largely centers upon the appropriate depreciation methodology and the determination of a reasonable rate of return. On both of these issues, the alternatives presented by the parties are deficient, and for OCA in particular, reflect a rejection of long-standing Commission precedent regarding capital structure and depreciation that was affirmed as recently as December 2025.

Q. In your view, what does this mean for the Commission?

A. Given that no party has challenged the rate base inputs into the Company's revenue requirement, and many of the inputs that were disputed in the direct testimony filed by the parties in April have now been resolved, it is appropriate to conclude that the expenditures set forth in the Company's final, rejoinder accounting exhibit are just and reasonable, and therefore should not be adjusted further. In rejoinder, the Company's case reflects a baseline of capital investment and expenses necessary to continue to provide safe and reliable service to customers, to meet new customer demand, and to continue providing high-quality customer service, including substantial programs that assist low-income customers. The Company's acceptance of adjustments to the level of certain costs reflected

in rates is evidence of its willingness to (1) limit the disputed issues in this proceeding, and (2) accept the responsibility of managing those expenses.

Q. How should this influence the Commission's review of other issues?

A. The Company's case reflects the prudent management of the utility so that it can serve the public in a cost-effective manner. UGI Gas has addressed affordability considerations through many direct and tangible decisions that are reflected in this case, including managing the year-over-year increase in expenses, limiting or reducing certain costs where it was feasible to do so, and foregoing traditional and valid claims that it has sought (and been awarded) in past base rate cases for the time being in this instant case (e.g., incentive compensation; management performance adjustment). The Company also committed to a substantial multi-year increase in funding for Operation Share. In making a decision in this proceeding, the Commission should evaluate these actions to address affordability while simultaneously considering the long-term impacts on the Company's ability to cost effectively provide safe and reliable service in the future. On this last point, it is appropriate for the Commission to continue to take a long-term view of these issues, consistent with the long-term nature of UGI Gas's service, the long-lived nature of its infrastructure, and the multi-year commitments reaching out past the next decade that the Company has made to increase the safety and reliability of its system through the replacement of vintage materials.

III. REJOINDER REGARDING AFFORDABILITY ISSUES AND REGULATORY POLICY

Q. Did other parties respond to your rebuttal testimony regarding issues of affordability and regulatory policy?

A. Yes. Both OCA Witness Deupree and CAUSE-PA Witness Cicero submitted surrebuttal testimony in response to my rebuttal testimony.

Q. Please summarize the surrebuttal testimony of these witnesses.

A. Witnesses Deupree and Cicero both substantially mischaracterize the Company's arguments. Witness Cicero, in particular, asserts that the Company seeks to turn ratemaking into a simple math exercise,[1] seeks to avoid accountability around affordability impacts from rate increases,[2] and that only through denial of a rate increase would UGI Gas have "appropriate incentives" to improve its operations to achieve a fair rate of return.[3] To be clear, these statements are incorrect, as I will explain further in my testimony. Finally, both Witness Deupree and Witness Cicero argue that a lack of evidence of financial distress in this case should be considered by the Commission when evaluating OCA's and CAUSE-PA's no rate increase proposals.[4] This position must be rejected as being both inconsistent with long-standing precedent and contrary to sound public policy, as I will explain.

Q. Do you have any initial comments or responses to this testimony?

[1] CAUSE-PA St. No. 1-SR pp. 4-5.
[2] CAUSE-PA St. No. 1-SR, p. 14.
[3] CAUSE-PA St. No. 1-SR, p. 10.
[4] *See* OCA St. 1SR, at p. 6 (arguing the Commission should consider UGI Gas's lack of market distress in assessing the rate increase); CAUSE-PA St. 1-SR, at p. 12 (indicating that negative cash flow is "not a sign of financial distress").

A. Yes. OCA, CAUSE-PA and the Company (as well as other parties) all recognize that the Commission is permitted to consider and should consider the affordability of utilities' rates. However, the parties disagree as to how it should be considered and what resulting adjustments to rates are appropriately guided by that consideration. OCA and CAUSE-PA take the position that general affordability should be a threshold consideration, where any concerns at the macroeconomic level or as to a specific subset of a specific class of customers would bar any rate relief in its entirety, unless a utility evidences financial distress. The Company's position is that the Commission has always considered the affordability of rates, but has done so either through generic proceedings or, in the context of a rate case, on a wholistic evaluation encompassing rate design and revenue allocation, the additional programs and services offered by the Company, and ultimately in its allowed rate of return. The Commission's long-standing practice strikes the appropriate balance, because utilities are charged with providing service that is both safe and reliable, as well as affordable.

Q. Do you agree with Witnesses Deupree and Cicero that UGI Gas has not adequately considered affordability?

A. No, I do not agree. Contrary to the aspersions cast by OCA and CAUSE-PA witnesses,[5] the Company has taken a number of steps since its last rate case and in the context of this rate case to address the affordability of the service it provides to customers. From the outset of this case, the Company has made affirmative choices during each phase that show its consideration of affordability and in particular its focus on low-income customers. In

[5] *See, e.g.*, OCA St. 1SR, at pp. 3-4; OCA St. 6SR, at pp. 6-7; CAUSE-PA St. No. 1-SR, at pp. 17, 25.

addition to those actions set forth in my rebuttal testimony (which no party addressed in their surrebuttal),[6] the Company has proposed the following additional measures as a part of its rejoinder testimony in this proceeding:

- Withdrawing a substantial portion of its incentive compensation claim.
- Withdrawing the remaining disputed employee activity costs.
- Withdrawing the remaining disputed advertising costs.
- Proposing that the Commission approve funding that would provide the Company with the ability to implement a widespread advertising campaign about the Company's low-income programs.

Critically, while the record demonstrates that UGI Gas has successfully improved and increased participation in low-income programs in recent years, the Company agrees with OCA and CAUSE-PA that challenges remain related to the identification and enrollment of low-income customers in customer assistance programs that are important to understand and address. It is for this reason the Company invites the Commission to approve additional funding that will allow it to expand the reach of its messages to reach more vulnerable customers. Moreover, the Company is willing and able to continue to make further strides to improve in these areas, as evidenced by the substantial settlement on these issues in its last base rate case.

However, as explained by UGI Gas Witnesses Meilinger (UGI Gas St. No. 12-RJ) and Fang (UGI Gas St. No. 16-RJ), the attention warranted by these issues to examine and address them is simply ill-suited for a highly-complex base rate proceeding that must be resolved in a 9-month timeframe. Indeed, rather than being able to fulsomely engage with all interested stakeholders and collaborate regarding the issues presented and solutions to

[6] UGI Gas St. No. 15-R, at pp. 11-13.

the same in a proceeding tailored and focused upon those issues, certain of the testimony advanced by OCA and CAUSE-PA in this singular base rate case has regrettably devolved into mischaracterizations of the Company's position and ad hominem attacks that serve nobody's interests.

Q. Please respond to CAUSE-PA Witness Cicero's statement that utilities can simply move money around and do not need rate relief. [7]

A. This appears to have been in response to my testimony noting that Mr. Cicero had made an error with regard to the Company's earnings reports. Rather than acknowledging his error, Mr. Cicero appears to suggest that the substantial capital that is being spent by UGI Gas is nothing more than an accounting matter that can be remedied without any change in the revenue being recovered by the Company. This, of course, is not true and reflects a fundamental misunderstanding of utility economics. Capital expenditures are cash outlays, not mere accounting entries. The Company must maintain adequate cashflow to fund its capital program, because that capital supports payment to vendors supplying millions of dollars of materials and equipment, and to the employees and contractors that work in all conditions to ensure that service to customers remains safe and reliable. Rates that fail to provide sufficient revenue recovery do not simply produce an unfavorable variance on a financial statement; they impair the Company's ability to fund the very infrastructure investments that protect public safety and system integrity.

[7] CAUSE-PA St. No. 1-SR, p. 12.

Q. Please respond to CAUSE-PA Witness Mr. Cicero's claim that this case is merely about the Company's profits.[8]

A. This statement ignores the thousands of employees whose salaries and benefits are reflected in this case, the broad economic impact the Company's activities have on the health and welfare across its service territory and the Commonwealth generally, and the hundreds of thousands of customers that rely on the investments and expenses reflected in this case to deliver safe and reliable service. Given the voluminous testimony submitted by Witness Cicero on the topics of affordability, the sufficiency of the Company's low-income programs, the choice of rate design elements, and the critical public policies as applied through this case, his statement in his surrebuttal testimony that this case is merely about profits ignores the comprehensive universe of Company activities addressed in this case to focus on one litigated issue: the rate of return. Moreover, taking his argument to its logical conclusion, Witness Cicero assumes that the Commission's existing ratemaking process is insufficient to protect ratepayers, a proposition that is difficult to square with the Commission's well-established authority and long track record of fulfilling its statutory duties. The standard for a rate increase under Pennsylvania law is not financial distress, it is whether existing rates are just and reasonable. Section 1301 requires that rates be "just and reasonable," and the Commission's obligation is to set rates that allow a utility to recover its prudently incurred costs and earn a fair return on its investment. There is no statutory requirement, and therefore no Commission precedent, conditioning rate increases on a showing that a utility is in financial distress. Distress is not the standard; cost of service is.

[8] CAUSE-PA, St. No. 1-SR, pp. 4-5.

Q. Please respond to the arguments made by OCA Witness Deupree and CAUSE-PA Witness Cicero that cite UGI Gas's lack of financial or market distress as a reason why its rate proposals should be rejected.

A. I agree with OCA and CAUSE-PA that UGI Gas is not in financial distress. However, that is not, and should not be, the standard applied by the Commission in determining whether a rate increase is appropriate. The Company has been able to make prudent investments that make its system safer and more reliable because it has consistently been able to obtain the rate relief needed to fund that critical work while ensuring the Company has the opportunity to earn a fair rate of return on its investments. The rate relief provided in UGI Gas's rate cases funds good paying Pennsylvania jobs and customer service with high customer satisfaction, supports robust customer assistance programs (which, I note, have continuously evolved and improved as a result of engagement with stakeholders across a variety of proceedings, including base rate cases), and fuels business and industrial growth that supports Pennsylvania's economy. Rate cases reflect two sides of a coin: the steady, necessary and important investment in essential infrastructure that services the public must be coupled with steady, necessary, and reasonable rate relief that reflects the cost of serving customers. A failure on either side of this coin undermines the provision of safe and reliable service.

Steady rate relief has been recognized by the legislature and the Commission as a critical component to facilitate steady safety investments. In 2012, Pennsylvania had approximately 13,000 miles of cast iron and bare steel pipes, the replacement of which was

estimated to cost $12 billion and take decades to complete.[9] It was these very circumstances and the associated threat to public safety posed by vintage materials that led to the passage of Act 11, authorizing the FPFTY and the distribution system improvement charge ("DSIC") to provide the steady rate relief that would facilitate and expedite the decades' worth of replacement activities required. As of December 31, 2025, Pennsylvania had a total of less than 6,000 miles of cast iron and bare steel main – a reduction of more than 50%.[10] This substantial reduction in vintage materials, and the concurrent substantial increase in public safety, could not be accomplished if utilities were not provided adequate and timely rate recovery to support the sustained capital investment and were, instead, required to exhibit evidence of financial distress. The Commission has, as recently as its order in the Columbia Gas of Pennsylvania, Inc. rate case in December 2025, re-affirmed the importance of removing vintage materials on an accelerated basis. Timely rate relief is just as critical today as it was in 2012 to support accelerated replacement programs.

Q. Why is requiring financial distress as a condition for rate relief bad public policy?

A. In addition to being inconsistent with the Commission's legal obligations as part of the regulatory compact cited by Witness Cicero, requiring indications of financial distress would compromise a utility's ability to do critical work that serves the public. Prior to the point of financial distress, any prudently managed utility would take corrective steps, first

[9] Testimony of Robert F. Powelson, Chairman of the Pennsylvania Public Utility Commission, before the Pennsylvania House Appropriations Committee on February 27, 2012 https://www.legis.state.pa.us/WU01/LI/TR/Transcripts/2012_0043_0001_TSTMNY.pdf (last visited May 30, 2026).

[10] See, Pipeline and Hazardous Materials Safety Administration databases for cast/wrought iron showing 1,689 miles remaining, at https://portalpublic.phmsa.dot.gov/analytics/saw.dll?PortalPages&PortalPath=/shared/PDM%20Public%20Website/CI%20Miles/GD_Cast_Iron, and bare steel showing 4,226.58 miles remaining, at https://portalpublic.phmsa.dot.gov/analytics/saw.dll?PortalPages&PortalPath=/shared/PDM%20Public%20Website/_portal/GD_BARE_STEEL (last visited May 31, 2026).

and foremost of which would involve seeking rate relief; followed by (1) reducing any non-critical spending (e.g., charitable giving); and (2) eliminating headcount. Eliminating headcount would, in turn, slow the pace of improvements to the system, including the addition of new customers, stop the expansion of programs that would benefit the public, and erode the quality of customer service. Further, if a utility must have evidence of financial distress when it seeks a rate increase, it must then wait nine long months before it may experience any form of financial relief and only potentially see an improved financial position after the full FPFTY occurs. In the meantime, harm – potentially irreparable – may be done to the utility's facilities, employees, customers, and communities that rely on financially healthy utilities.

Finally, adopting a financial distress standard would ultimately produce the very outcome CAUSE-PA seeks to oppose - higher costs for ratepayers in the form of rate shock. A utility trending toward financial distress would face credit downgrades and higher borrowing costs long before any rate relief was granted, and deferred recovery of capital investment would accumulate into a backlog requiring recovery all at once, producing a revenue requirement far larger than incremental annual recovery would have generated. In other words, it costs far less to maintain a house than to rebuild it. The regulatory compact and the constitutional framework established in *Hope* and *Bluefield* exist precisely to prevent this scenario by maintaining utility financial health on a continuous basis, not as a crisis intervention mechanism triggered only after the damage is done. Protecting ratepayers means keeping the utility financially sound, not waiting until it is not.

Q. Do you have any other thoughts on the proposals advanced by both OCA and CAUSE-PA to provide no rate relief in this proceeding, or a rate decrease as advanced by OCA?

A. Yes. CAUSE-PA Witness Cicero cites to the Commission's decision in *Pa. Pub. Util. Comm'n, et. al v. Twin Lakes Utilities, Inc.*, Docket No. R-2019-3010958, (Order entered March 26, 2020) ("*Twin Lakes*"), and while I found this case to be illuminating, it appears to stand for the opposite of what Mr. Cicero advocates for in this proceeding. I reviewed this order, and this case involved a small, distressed utility (with approximately 110 customers) that had repeatedly failed to make necessary improvements to its water system and had a litany of service reliability and service quality issues, as well as a rate proposal that would have increased customer bills by orders of magnitude. Even though that utility was (in my view) apparently failing in its obligations to its customers, and even after the Commission discounted the authorized ROE to account for those service failures and to mitigate the immense rate impacts, the Commission still authorized a rate increase, with an approved ROE (9.23%) higher than the ROE calculated by OCA in this case (8.4% under the actual capital structure) or the implicit ROE that would be produced by both OCA and CAUSE-PA's proposal of no increase (7.70%). Given the serious customer service and safety issues in *Twin Lakes*, and for the reasons identified by UGI Gas Witness D'Ascendis, the Commission should view the positions advanced by OCA and CAUSE-PA in this proceeding as being inconsistent with the Commission's precedent or good public policy.

Q. Do either OCA or CAUSE-PA address the need for rate relief in the FPFTY due to the substantial capital investments identified?

A. No. Neither witness meaningfully addresses the point I raised in my rebuttal testimony that the substantial infrastructure replacement programs being undertaken by UGI Gas cause the Company to be cashflow negative, and that cash is required in order to run those programs, pay employees and contractors, and pay vendors supplying necessary materials. Further, they are critical of the frequency of base rate cases, and suggest that rate relief through base rate cases should only occur if there is evidence of financial distress. Financially distressed utilities—whether caused through imprudent management or a regulatory process that would deny utilities of appropriate cost recovery that is needed to meet the actual cost of service required for the provision of safe and reliable service—are good for nobody - Not the utility, its customers, stakeholders, or the Commission.

Q. Please respond to OCA Witness Deupree's and CAUSE-PA Witness Cicero's statements that statutory ratemaking authority in Pennsylvania shifts risks from utilities to their customers.

A. Both Witnesses Deupree and Cicero assert that statutorily approved mechanisms—the FPFTY and the DSIC, as well as the weather normalization adjustment ("WNA")—shift risk from the utility onto the ratepayer. I disagree with this characterization. The authorized ratemaking mechanisms in use by UGI Gas ensure the provision of safe and reliable service at a reasonable cost to the public. Each of these mechanisms is subject to careful review by stakeholders and the Commission, and is designed to allow utilities to recover prudently-incurred costs that have already been vetted by the Commission. What these mechanisms do not do is reduce the risk of recovery where a utility has acted imprudently, has exercised poor management decisions, or has incurred costs that are

otherwise inappropriate for inclusion in base rates. Said more succinctly, these mechanisms increase efficiency and improve the precision of the cost recovery process, allowing utilities to more effectively operate to serve the public while still maintaining all of the ratemaking risk associated with the disallowance of imprudent or unreasonable costs. Furthermore, while OCA and CAUSE-PA focus on these statutory mechanisms, they ignore other provisions of the Public Utility Code that clearly empower the Commission and stakeholders to challenge whether a utility is over-earning or otherwise including imprudent and unreasonable costs in its rates, and seek refunds of those amounts outside of a base rate case. Finally, the OCA and CAUSE-PA assertions do not recognize the myriad of risks the Company faces every day related to the specific execution and operational risks related to a sophisticated natural gas distribution system that must continually provide safe and reliable service.

Q. Contrary to the testimony of CAUSE-PA Witness Cicero,[11] how are UGI Gas's proposals in this proceeding responsive to the needs of its customers?

A. The record in this case demonstrates UGI Gas's dedication to cost-effectively meeting the needs of its customers. That evidence includes:

- Retirement of the last known mile of cast iron on its system in May 2026, marking a major safety milestone, and the continued accelerated replacement of other vintage materials.
- Effective management of expenses over time below the pace of inflation.
- Multi-year commitment to increase Operation Share funding up to $1,000,000, doubling the Company's annual donation.

[11] CAUSE-PA St. No. 1-SR, at p. 25.

- Voluntary actions in October/November 2026 to assist hundreds of vulnerable customers that otherwise would have been harmed by the lack of government funding of LIHEAP. This included an additional $500,000 Company donation to Operation Share.

- Growth in CAP program participation by 51% from 2018 through YTD May 2026.

- Increase in funding for LIURP by 84% since 2018.

- Evidence of steady or improved customer service metrics across many categories, including high customer satisfaction ratings.

- Proposed ROE below the mid-point of the proxy group, and no proposal of a management effectiveness adder.

- Withdrawal of approximately $8.5 million in claimed expenses that have been previously authorized by the Commission for inclusion in rates.

The Company is committed to continuous improvement in how it operates and in the quality of its facilities so that UGI Gas can meet the needs of its customers, but that continuous improvement has incremental costs, overwhelmingly costs that no party has opposed, that must be reflected in rates. UGI Gas's case in rejoinder strikes a balance between the interests of customers and the financial needs of the Company.

IV. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Cynthia S. Fang, and I am employed by Atrium Economics, LLC ("Atrium") as Director. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my rebuttal testimony, UGI Gas Statement No. 16-R, on May 13, 2026.

Q. What is the purpose of your rejoinder testimony?

A. My rejoinder testimony responds to certain portions of the surrebuttal testimony submitted by other parties in this proceeding concerning affordability, the role of targeted assistance programs, and the appropriate regulatory forum for evaluating broader questions related to program enrollment, affordability metrics, and potential program changes.

- Office of Consumer Advocate ("OCA")
  - Statement No. 1-SR – surrebuttal testimony of Michael W. Deupree ("Mr. Deupree"); and
  - Statement No. 6SR – surrebuttal testimony of Roger D. Colton ("Mr. Colton").
- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1-SR – surrebuttal testimony of Patrick M. Cicero ("Mr. Cicero").

Q. Are you sponsoring any exhibits with your rejoinder testimony?

A. No, I am not.

II. AFFORDABILITY AND THE APPROPRIATE REGULATORY FORUM

Q. Mr. Colton, Mr. Deupree, and Mr. Cicero each contend, in different ways, that affordability is an important issue in this proceeding. Do you disagree with that premise?

A. No. I do not disagree that affordability is an important issue. To the contrary, my rebuttal testimony expressly recognized that many customers are experiencing real financial strain and that affordability concerns warrant careful attention. In that respect, there is substantial agreement across the parties that affordability matters. Where I differ from these witnesses is not on whether affordability is important, but on how the issue should be evaluated in this rate case and on what regulatory tools are most likely to produce meaningful and durable improvements for customers.

Q. If the parties broadly agree that affordability is important, what is the principal difference between your approach and the approach advanced by Mr. Colton, Mr. Deupree, and Mr. Cicero?

A. The principal difference is that the Company's approach, as presented in my rebuttal testimony and the testimony of other UGI Gas witnesses, provides the Commission with a more effective way to advance meaningful change on affordability issues. It recognizes the importance of affordability, while also recognizing that those issues deserve a focused and robust review that may be difficult to achieve in a rate case with many competing issues.

The record also demonstrates that this approach is more complete than the surrebuttal criticisms suggest. Mr. Colton questions my use of census-block-group median household income in the systemwide gas-burden analysis, but my rebuttal testimony also included a separate, customer-level Customer Assistance Program ("CAP") analysis using

verified income data for the subgroup most directly relevant to affordability policy. See OCA St. 6SR at 31-43; UGI Gas St. No. 16-R at 18-25. Similarly, Mr. Cicero does not present a separate quantitative analysis, but instead focuses on the limitations of the systemwide analysis for evaluating the most vulnerable customers, while my rebuttal testimony separately included a low-income CAP analysis demonstrating that CAP materially reduces customer burdens. See CAUSE-PA St. No. 1-SR at 17-23; UGI Gas St. No. 16-R at 18-25. Mr. Deupree's surrebuttal largely restates the macroeconomic and shared-burden themes from his direct testimony without presenting additional analysis. See OCA St. 1SR at 3-7. Later in my testimony, I will provide a detailed comparison of the strengths of my approach compared to Mr. Colton's analysis, which is the only other analytic framework provided as evidence in this proceeding for the Commission to evaluate.

In short, the Company's approach does not diminish the importance of affordability; rather, it addresses affordability using the tools best suited to the issues presented here. It provides systemwide context through a transparent and replicable methodology, supplements that analysis with a customer-level review using the Company's verified CAP income data, recognizes the importance of targeted assistance, and preserves a clear distinction between rate-case determinations and broader program-policy reform. In my view, that framework is more informative and more useful to the Commission than the broader, but less procedurally focused, approach advanced by the intervenors.

Q. Why do you believe a separate proceeding is needed if the goal is to move the needle on affordability in a meaningful way?

A. A separate proceeding is needed because the record demonstrates that the most consequential affordability questions extend beyond whether affordability matters. They include how affordability should be measured, which customer populations should be prioritized, what data are sufficiently reliable, what barriers limit program participation, and whether existing program structures should evolve. Those are important questions, but they warrant a more focused inquiry than a base rate case is designed to provide. They are substantive program and policy questions that warrant dedicated examination if the Commission seeks to produce meaningful improvements in customer outcomes.

The intervenors' own critiques underscore that point. Mr. Colton's surrebuttal focuses extensively on disputes over affordability metrics, income proxies, and methodological choices. See OCA St. 6SR at 31-40. Mr. Cicero likewise emphasizes enrollment gaps, the distinction between enrolled and unenrolled low-income customers, and the interaction between base rates and universal service program performance. See CAUSE-PA St. No. 1-SR at 15-23, 24-33. Those criticisms do not establish that the Company's rate request should be decided on a different basis. Rather, they demonstrate that broader affordability reform would require a more structured inquiry into program administration, data, and design than this base rate case can reasonably provide.

That is why the Company's approach is the more effective one. It identifies what can be concluded reliably on this record—namely, that affordability is important, that targeted assistance programs matter, and that CAP is effective for participating customers—while also recognizing that moving the needle further would require a

dedicated proceeding capable of addressing the broader issues directly and comprehensively. See UGI Gas St. No. 16-R at 24-30.

Q. What types of issues, in your view, would need to be examined in that separate proceeding?

A. At a minimum, a separate proceeding addressing affordability should examine three related categories of issues. First, there should be a more detailed assessment of customer hurdles to enrollment. As both Mr. Colton and Mr. Cicero emphasize, participation outcomes can be affected by screening, documentation, communication, referral practices, and broader administrative barriers. See OCA St. 6SR at 40-43; CAUSE-PA St. No. 1-SR at 23-33. Those are implementation questions that would benefit from focused review of customer pathways, program operations, and administrative feasibility.

Second, that separate proceeding would allow for a fuller and more robust examination of which metrics should be used to assess affordability and what data are available to support those metrics. That need is evident from Mr. Colton's detailed critique of my systemwide gas-burden analysis, including his objections to the use of census-block-group median household income and his preference for alternative affordability metrics. See OCA St. 6SR at 31-40. Whether one agrees or disagrees with those criticisms, they confirm that the parties are debating foundational methodological questions. A dedicated proceeding is better suited to resolve those issues consistently, transparently, and on a more fully developed evidentiary record.

Third, that proceeding would provide the appropriate forum to assess whether program redesign should be considered. My testimony does not suggest that the current

CAP is ineffective. To the contrary, the customer-level CAP analysis in my rebuttal testimony showed that CAP materially reduces gas burdens for participating customers. See UGI Gas St. No. 16-R at 21-25. Mr. Cicero's surrebuttal, however, argues that enrollment gaps, customer needs outside CAP, and broader affordability pressures may warrant additional or different measures. See CAUSE-PA St. No. 1-SR at 15-23. If parties wish to evaluate whether there should be more—whether through refinement, expansion, or complementary tools—that inquiry should occur in a single forum designed to examine program objectives, customer targeting, administrative tradeoffs, and funding implications comprehensively, rather than piecemeal in a base rate case.

Q. Does your position mean that the Commission should disregard affordability concerns in this case?

A. No. My position does not mean the Commission should disregard affordability concerns. It means that the Commission should address them in a manner consistent with the purpose of this proceeding and the tools available in this forum. In this rate case, affordability concerns provide important context, underscore the value of targeted assistance programs, and reinforce the importance of program effectiveness. But they do not alter the central question of whether the Company's proposed rates are supported by prudent costs, nor do they eliminate the need for a more focused, separate examination if the Commission wishes to address broader affordability questions in a way that is likely to produce durable and well-informed improvements for customers.

Q. In your view, what is the central methodological issue with the intervenor criticisms of your affordability analysis?

A. In my view, the central methodological issue is that the intervenor criticisms largely attack the limitations of the systemwide proxy analysis while giving insufficient weight to the fact that my testimony already included a second, verified-income customer-level analysis of the CAP population. That second study is not peripheral—it is the direct response to the principal critique they advance. See UGI Gas St. No. 16-R at 18-25.

As a result, the intervenors' methodology critique is incomplete. It treats the first study as though it were the entirety of the affordability analysis, when in fact the record contains two related studies serving two different purposes: a systemwide contextual study and a targeted CAP study using verified income. When those two studies are read together, the Company's approach is methodologically stronger than the intervenors suggest because it both provides territory-wide context and directly evaluates the low-income subgroup using customer-level income data.

For that reason, I continue to believe the Company's methodology provides the Commission with a sound and decision-useful framework for evaluating the affordability issues presented in this proceeding.

Q. How do you respond to the criticism that your systemwide analysis "tells us nothing"[1] about low-income customers or those facing the greatest hardship?

A. I do not agree with that criticism. The systemwide study was not presented as a stand-alone measure of low-income hardship, nor was it offered as the sole basis for evaluating

[1] CAUSE-PA St. No. 1-SR at 17.

affordability. It was presented as one part of a broader analytical framework. See UGI Gas St. No. 16-R at 15-18. The criticism is therefore incomplete because it isolates the first study while disregarding the second study that I also presented.

Specifically, my rebuttal testimony included a separate customer-level gas-burden analysis of CAP-enrolled customers using verified income data. See UGI Gas St. No. 16-R at 18-25. That second analysis was conducted precisely because a proxy-based systemwide study cannot provide the same degree of precision for the low-income subgroup as a verified-income customer-level analysis. In other words, the record already contains the direct empirical check that the intervenors claim is needed.

That is why I do not find it persuasive when Mr. Colton and Mr. Cicero focus their criticism almost entirely on the systemwide study while devoting limited discussion to the CAP analysis. See OCA St. 6SR at 40-43; CAUSE-PA St. No. 1-SR at 18-23. The CAP analysis is the targeted low-income affordability analysis. It demonstrates that CAP materially reduces gas burdens for participating customers and provides the most relevant record evidence concerning affordability outcomes for income-eligible participants. For that reason, the claim that my testimony "tells us nothing" about vulnerable customers is simply not correct.

Q. Mr. Colton proposes an alternative affordability methodology based on ZIP-code-level data and a weighted average burden calculation. Why do you believe your methodology is more informative and reliable for use in this proceeding?

A. My methodology is more useful and more reliable because it uses more detailed information, including information that is specific to UGI Gas's customer base, and shows

how customer burdens vary across the population. Mr. Colton's alternative approach is less helpful for that purpose. See OCA St. 6SR at 38-40.

First, his approach uses ZIP codes rather than census block groups. ZIP codes cover larger and more diverse areas, so they provide a less precise match between customer locations and local income conditions. Second, his approach uses average usage and average bill data, which removes the customer-level differences that are important to understanding affordability. Third, his approach produces a single average burden figure for the service territory, rather than showing the full distribution of customer burdens. As a result, it cannot show how many customers are above particular burden thresholds, identify the upper end of the burden distribution, or distinguish among different customer groups in the way my analysis does. See UGI Gas St. No. 16-R at 16-18, 21-25.

For those reasons, the Company's methodology is better suited to this case. It uses customer-level annual bill data, the most detailed publicly available income proxy for the systemwide study, and verified customer-level income for the CAP subgroup. In that way, it provides both a systemwide view and a direct low-income companion study, which Mr. Colton's proposed alternative does not provide.

Q. Mr. Colton also contends that effective buying income or tax-adjusted income should be used instead of median household income. Do you agree?

A. No. I do not believe a tax-adjusted or "effective buying income" measure is better for this analysis. My use of gross household income is consistent with the way utility affordability is usually evaluated. CAP eligibility, federal poverty guidelines, and common affordability benchmarks - including the Commission's Home Energy Affordability for Low Income

Customers study provided in docket number M-2017-2587711[2] - are generally based on gross income, not an after-tax income estimate. See UGI Gas St. No. 16-R at 18-25.

Using effective buying income would also require many additional assumptions that are not directly available at the block-group level, such as household size, tax status, credits, deductions, and other tax-related factors. Those assumptions would add complexity and uncertainty. By contrast, gross median household income is a Census measure that can be applied consistently and transparently across the study population.

In addition, even if after-tax income were modeled, it is not expected to change the main result of my testimony: lower-income customers face higher burdens than the general customer population, and CAP materially reduces those burdens for participating customers. That overall pattern would remain the same due to the fact that low-income households' pre- and post-tax-adjusted incomes typically do not experience wide margins of change. In my view, the gross-income approach is clearer, more consistent with existing program standards, and better suited to the concerns raised in this proceeding.

Q. Mr. Colton criticizes your exclusion of zero-income CAP customers from the verified-income burden calculation. Why was that exclusion appropriate?

A. Zero-income customers are important and were not left out of the affordability discussion. My rebuttal testimony specifically identified them and reported that 1,396 of the 13,774 CAP-enrolled customers in the dataset—about 10 percent—had verified annual income of $0. See UGI Gas St. No. 16-R at 19-21. Those customers were discussed in the testimony;

[2] https://www.puc.pa.gov/pcdocs/1602386.pdf.

they were excluded only from the energy-burden calculation because that specific ratio cannot be calculated when income is zero.

That is because gas burden is defined as annual gas bill divided by annual household income. When verified annual income is zero, the ratio is mathematically undefined. See UGI Gas St. No. 16-R at 20-22. This is not a judgment about whether those customers matter. It is simply a mathematical limitation of the metric itself. As noted in my rebuttal testimony, the Commission's Home Energy Affordability for Low Income Customers study recognized this same limitation. See UGI Gas St. No. 16-R at 20-22. That study explained that zero-income households present a measurement challenge for burden analysis because the standard burden ratio cannot be calculated in the usual way when income is zero. See Home Energy Affordability for Low Income Customers in Pennsylvania, Docket No. M-2017-2587711, at 17-18.

In short, zero-income customers were not excluded from the discussion of affordability. They were identified and specifically discussed in the record. They were excluded only from the calculation of energy burden because the standard burden ratio cannot be computed for them.

Q. Mr. Colton and Mr. Cicero both criticize the Company's program enrollment outcomes and argue that more should be done to increase participation. Do you disagree that enrollment matters?

A. No. I do not disagree that enrollment matters. To the contrary, my testimony recognizes that participation is critical to whether targeted assistance programs achieve their intended affordability outcomes. Where I differ from Mr. Colton and Mr. Cicero is not on the

importance of enrollment, but on the regulatory conclusion that should be drawn from the existence of enrollment gaps. In my view, those gaps do not establish that the Company's proposed base rates are unjust or unreasonable. Rather, they point to questions concerning screening, outreach, recertification, customer communication, and program administration that may be better addressed through more focused review in the appropriate forum. See OCA St. 6SR at 40-43; CAUSE-PA St. No. 1-SR at 23-33; UGI Gas St. No. 16-R at 27-30.

Q. Why do you believe questions about enrollment barriers are better addressed in a separate program-focused review than in this base rate case?

A. Because enrollment barriers are operational and administrative in nature. They involve questions such as how customers are identified, how information is communicated, what documentation is requested, how recertification is managed, how referrals are handled, and what tradeoffs exist between administrative simplicity, customer burden, and program integrity. Those issues may be important, but they are not and will not be resolved by adjusting the revenue requirement in a base rate case. More fundamentally, affordability challenges are driven by low income, economic hardship, and barriers to program participation are not solved by changing the revenue requirement alone. In my view, they are better addressed in a proceeding designed to examine program operations directly, with the appropriate record on implementation feasibility, customer experience, data systems, and coordination across assistance mechanisms. That type of focused review is more likely to produce practical and durable improvements than attempting to address those issues indirectly through a base rate determination.

Q. Does the current record support the conclusion that CAP is ineffective or that the Commission should redesign the program in this proceeding?

A. No. In my view, the current record does not support the conclusion that CAP is ineffective. To the contrary, the verified-income CAP analysis in my rebuttal testimony showed that CAP materially reduces gas burdens for participating customers. See UGI Gas St. No. 16-R at 21-25. That is a strong indication that the program is functioning as an important affordability tool for those it reaches. The fact that parties may wish to examine whether there should be additional measures, modified features, or complementary tools does not convert that record into evidence that the current program is failing. Rather, it suggests that future evaluation of possible refinements may be appropriate in a forum designed to assess program design comprehensively.

Q. How do enrollment and potential program design issues fit within your overall affordability position in this case?

A. They fit within it directly. My position has been that affordability is an important issue, that targeted assistance is the appropriate regulatory tool for addressing income-based hardship, and that the record confirms CAP is an effective mechanism for participating customers. At the same time, the record also indicates that questions concerning enrollment barriers, the choice of affordability metrics, and whether any program refinements should be considered are broader issues that warrant more focused review than this base rate case can provide. In my view, that is not a reason to discount affordability concerns. It is a reason to address them using the most appropriate and effective regulatory forum. Finally,

an individual utility may be able to have some limited impact on economic hardship for its customers, particularly for low-income customers, but it cannot resolve socioeconomic disparities; nor should the Commission deviate from establishing an appropriate cost for providing safe and reliable service solely because of external socioeconomic disparities.

III. ROLE OF CAP AND POTENTIAL PROGRAM EVOLUTION

Q. How does your analysis of CAP inform your views on affordability and on possible future program changes?

A. My analysis supports two conclusions, both of which reinforce the strength of the Company's approach. First, CAP is an important and demonstrably effective affordability tool for customers who participate in it. The customer-level analysis in my rebuttal testimony used verified CAP income data and showed that CAP materially reduces burdens for enrolled customers. See UGI Gas St. No. 16-R at 18-25. That is significant because it responds directly to one of the central intervenor criticisms of my broader systemwide analysis—namely, that a proxy-based systemwide metric may not fully capture low-income customer conditions. By separately examining CAP customers using verified income data, my testimony addressed that concern directly and provided a targeted analysis of the customer group most relevant to affordability policy.

Second, the existence of a meaningful and effective targeted program does not preclude future evaluation of whether additional measures should be considered. Rather, it provides an important starting point: the current CAP is providing measurable benefit, and any discussion of future modifications or complementary tools should take that demonstrated effectiveness into account. This is another respect in which my approach is helpful to the Commission. Mr. Colton and Mr. Cicero both rely on my CAP findings to

support broader policy arguments, but those same findings also indicate that targeted assistance is an important mechanism for addressing income-based hardship and that related questions may be appropriately examined through focused program review. See OCA St. 6SR at 40-43; CAUSE-PA St. No. 1-SR at 18-23.

Q. Does acknowledging that additional program options might be worth evaluating undermine your testimony in support of the Company's position in this proceeding?

A. No. Those points are entirely consistent. Recognizing that a program can be effective today while also being open to future evaluation or refinement is not a contradiction. In this case, my testimony supports the Company's position that affordability is important, that targeted assistance is the appropriate regulatory tool, and that broader questions about enrollment barriers, measurement, and possible program evolution should be examined in a proceeding designed for that purpose. That is, in my view, a more practical and more effective path than attempting to use this base rate case to resolve broader affordability-policy questions that extend beyond the prudence of the Company's costs and the appropriate level of rate relief.

IV. CONCLUSION

Q. Does this conclude your rejoinder testimony?

A. Yes.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. PLEASE STATE YOUR OCCUPATION AND CURRENT PLACE OF EMPLOYMENT?

A. I am a Senior Research Consultant with the Acadian Consulting Group ("ACG"), a research and consulting firm that specializes in the analysis of regulatory, economic, financial, accounting, statistical, and public policy issues associated with regulated and energy industries. ACG is a Louisiana-registered partnership, formed in 1995, and is located in Baton Rouge, Louisiana.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL QUALIFICATIONS.

A. I hold a Bachelor of Arts degree in Business Economics from Buena Vista University in Storm Lake, Iowa, and a Master of Arts degree in Economics from the University of Kansas in Lawrence, Kansas. I began my professional career with the Staff of the Kansas Corporation Commission in 2008 while in graduate school conducting analyses of topics related to energy and economy as a Research Assistant, eventually being promoted to a Research Analyst and later Senior Research Economist after graduation. I left the Kansas Corporation Commission to take a position with ACG in late 2011, where I have been promoted to positions of increasing responsibility since, including my current position which I started in Spring of 2025. Appendix A provides my professional resume, which includes a listing of my publications, presentations, pre-filed expert witness testimony, expert reports, and expert legislative testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I have been retained by the Pennsylvania Office of Consumer Advocate ("OCA") to address matters related to the general rate case filed by UGI Utilities, Inc. – Gas Division ("UGI-G" or the "Company"). I specifically have been asked to provide an overview of this case from a public policy perspective, and review issues related to alternative regulation and the Company's proposed Allocated Class Cost of Service Study ("ACOSS") and associated rate design.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring the following Exhibits MWD-1 through MWD-8.

- Exhibit MWD-1: Commission Alternative Regulation Consideration (§ 69.3302)
- Exhibit MWD-2: Survey of Approved Pennsylvania Natural Gas WNA Mechanisms
- Exhibit MWD-3: Summary of Results of Company's Proposed ACOSS
- Exhibit MWD-4: Summary of Results of ACOSS Using Seaboard Allocation
- Exhibit MWD-5: Summary of Results of Alternative ACOSS
- Exhibit MWD-6: Summary of Company's Proposed Revenue Allocation
- Exhibit MWD-7: Summary of Results of Alternative Revenue Allocation
- Exhibit MWD-8: Analysis of Customer-Related Costs

Q. PLEASE INTRODUCE OCA EXPERT WITNESSES AND SUMMARIZE THE TOPICS OF THEIR RESPECTIVE TESTIMONIES IN THIS PROCEEDING.

A. In addition to my testimony, OCA is sponsoring the testimony of five additional expert witnesses in this proceeding including:

- **Ms. Jennifer L. Rogers (OCA Statement 2),** Principal and Vice President at Exeter Associates, Inc. Ms. Rogers presents OCA's recommended rate base, pro forma operating income under present rates, and overall revenue deficiency for UGI-G.
- **Mr. David J. Garrett (OCA Statement 3),** Managing Member at Resolve Utility Consulting PLLC. Mr. Garrett presents OCA's recommended proposed return on equity ("ROE"), capital structure, and overall rate of return ("ROR").
- **Mr. James S. Garren (OCA Statement 4),** Senior Manager at NewGen Strategies and Solutions LLC. Mr. Garren presents OCA's recommended depreciation expense.
- **Ms. Barbara R. Alexander (OCA Statement 5),** Owner and Manager of Barbara Alexander Consulting LLC. Ms. Alexander addresses UGI-G's compliance with certain settlement conditions included in its recent 2025 rate case settlement, as well as UGI-G customer service quality and operational performance metrics.
- **Mr. Roger Colton (OCA Statement 6),** Owner of Fisher Sheehan & Colton, Public Finance and General Economics, Belmont, Massachusetts. Mr. Colton addresses the affordability of UGI-G rates, and UGI-G's compliance with agreements as part of its recent 2025 rate case settlement pertaining to low-income support programs.
- **Mr. Zach Teti (OCA Statement 7),** Senior Regulatory Analyst at OCA. Mr. Teti presents OCA's summary of public input from the Public Hearings in this proceeding.

II. SUMMARY OF RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the

Company. Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission should not grant UGI any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence, including statements made by its parent company, suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WEATHER NORMALIZATION ADJUSTMENT?

A. I recommend that the Commission affirmatively discontinue the current Weather Normalization Adjustment ("WNA") mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the three full years the mechanism has been in operation, even though the mechanism was designed to symmetrically provide both surcharges and credits to customers. The WNA is also not required to

address regulatory lag concerns of the Company given the Company's use of a Fully Projected Future Test Year ("FPFTY") and Distribution System Investment Charge ("DSIC").

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. I recommend that the Commission increase the deadband from three percent to five percent and eliminate the month of October from the WNA period if the Commission determines that the WNA should continue. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas. WNA communications with customers should also be reformed to include a historical presentation of incremental charges and credits as recommended by Ms. Alexander.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED ALLOCATED COST OF SERVICE STUDY?

A. I recommend that the Commission adopt an alternative cost of service approach that better aligns with cost causation principles and the way the Company's distribution system is designed and operated. Specifically, I recommend the use of a Peak and Average ("P&A") cost allocation methodology using weights based on the Company's test year system load factor in place of the Company's Average and Excess ("A&E") approach for allocating distribution system costs. Conceptually, my proposed P&A cost allocation method is similar to the earlier Seaboard method relied on to allocate costs associated with distribution mains. However, where the Seaboard method uses a 50-50 weighting of the demand and volumetric components, my proposal would base these weights on the Company's system load factor, or the ratio of peak day system requirements to average daily system requirements. This bases the weights of the two components

in a P&A cost allocation method on empirical data specific to the Company's Pennsylvania operations. The Company's test year system load factor is 42.36 percent.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative Allocated Cost of Service Study ("ACOSS") results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the rate increase to any single customer class to no more than 1.15 times the system average increase and also remove all proposed rate decreases in the current proceeding. My proposal would increase base rates for the residential class by 14.01 percent under the Company's proposed revenue requirement increase, compared to the Company's proposed increase to these same customers of 15.05 percent.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. The Company's proposed increase in customer charges comes in the immediate aftermath of an 8.3 percent increase in these same charges in the Company's prior rate case, Docket No. 2024-3052716. Furthermore, an analysis of customer-related costs finds that residential rate classes are currently recovering a significant portion of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.01 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.25 increase in the monthly residential customer charge, or an increase from the current $16.25 per month to $18.50 per month. I further recommend that any increase in customer charges be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

III. CURRENT MACROECONOMIC SITUATION

Q. WHAT IS YOUR UNDERSTANDING OF THE PURPOSE OF THIS PROCEEDING?

A. The purpose of this case is to determine the "just and reasonable" rates for the Company under Chapter 13, and other provisions, of the Public Utility Code.

Q. WHAT ARE PUBLIC UTILITIES IN THE CONTEXT OF REGULATION?

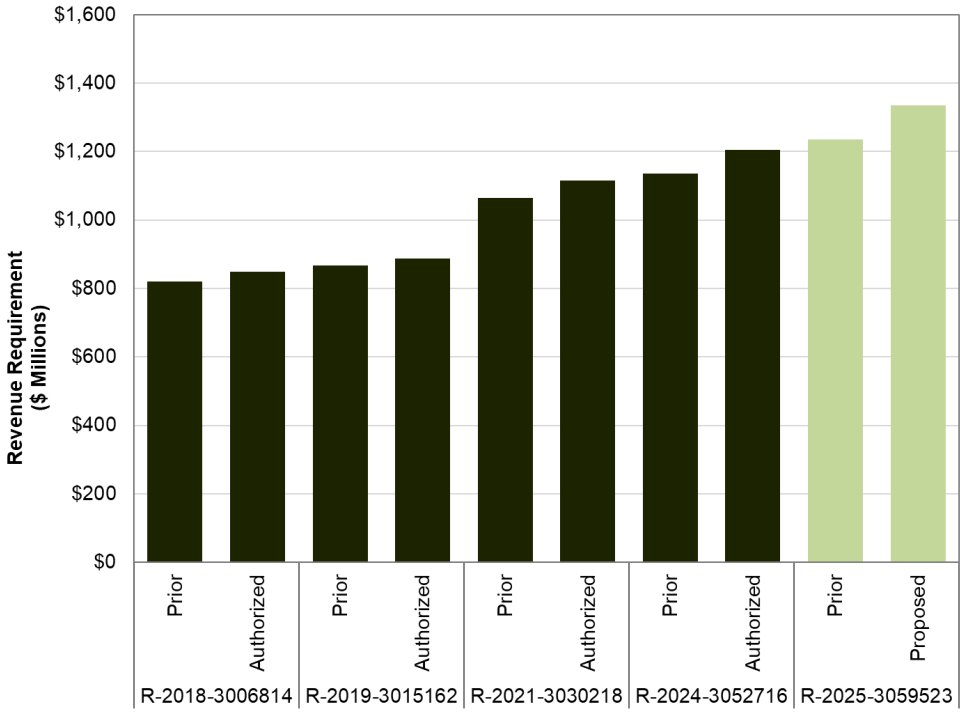
A. Public utilities are considered in economics to be natural monopolies, specifically that the high capital cost associated with the establishment and operations of public utilities renders having multiple competing services – as would be found in other industries – economically inefficient and therefore not in the public interest. Regulation, therefore, is designed as a substitute for the disciplining forces that would be found in competitive markets that prevent an industry from using its unfettered monopolistic powers to set prices and conditions of service. However, regulators

cannot tip the scale so far in the favor of consumers that regulation becomes confiscatory to the public utility by preventing the utility from the opportunity to earn a reasonable rate of return on their investment and deprives the utility of sources of capital.

Q. AS A NON-LAWYER, HOW IS THE PHRASE "JUST AND REASONABLE" GENERALLY VIEWED IN THE CONTEXT OF REGULATION?

A. Regulators typically evaluate "just and reasonable" in the context of what is called a "zone of reasonableness." This inherently assumes that there is no one correct answer to the question of "just and reasonable," but instead requires regulators to balance the interests of several sectors of the public, including not only utility investors, but also the interests of the utility's customers (that itself is comprised of different classes of customers with different individual interests) and the public policy interests of local governments impacted by the utility's operations. Importantly, this framework of regulation implies that regulators must be cognizant of the larger macroeconomic situation impacting utility customers, and how this impacts customers' ability to afford utility service.

Figure 1: Historic UGI-Gas Revenue Requirement Increases



Source: Final Orders and Compliance Filings.

Q. HOW DOES THE CURRENT PROCEEDING COMPARE WITH THE COMPANY'S PREVIOUS RATE CASE?

A. In the current filing, the Company requests a $99.4 million, or approximately 8.0 percent, increase in its currently authorized revenues. This is immediately on the heels of the Company's prior rate case (Docket No. R-2024-3052716) decided by the Commission in October of 2025, where the Company was authorized to increase revenues by $69.5 million. Figure 1 above shows the Company's proposed rate increase in conjunction with its last four rate increases since 2019, and demonstrates the burden these continual rate increases have placed on Company ratepayers. Since 2019, ratepayers have seen rates increase by more than 45 percent in just six years, averaging nearly 7.6 percent per year. If the current requested rate increase is approved, the cumulative increase since 2019 will exceed 57 percent, averaging nearly 9.5 percent per year.

Q. IS THERE ANY EVIDENCE THAT UGI CUSTOMERS ARE FACING AFFORDABILITY PRESSURES?

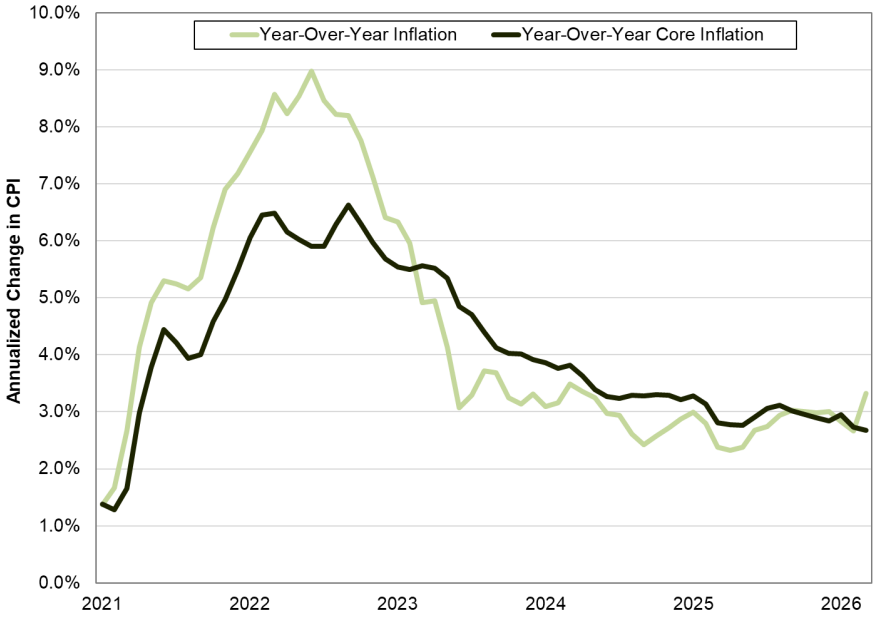
A. Yes. Both customer terminations and reconnections have been increasing in recent years. Specifically, customer terminations have increased by 36 percent from the years 2021 to 2025, with reconnections similarly increasing by 31 percent during the same period.[1] This indicates that customers are struggling to maintain natural gas service in the context of the Company's recent authorized rate increases and other macroeconomic pressures these customers are facing. These rate increases are contributing to broader affordability concerns placed on consumers.

Q. WHAT DO YOU MEAN BY AFFORDABILITY CONCERNS?

A. By affordability concerns, I mean the increasing burden on residential customers when utility costs are added to already elevated household expenses. Utility rate increases do not occur in a vacuum. Consumers experience utility rate increases alongside the ongoing price increases of food, housing, transportation, and other necessities. These concerns are especially acute for low-income households who devote a larger portion of their income to these necessities. It is for this reason that it is important to consider whether broader consumer prices remain elevated when establishing rate increases.

Pennsylvania Public Utility Commission, *2024 Residential Collections Data* (June 2025); Pennsylvania Public Utility Commission, *Terminations and Reconnections: Year-to-Date December 2024 vs. Year-to-Date December 2025* (January 16, 2026).

Figure 2: Monthly Growth in CPI

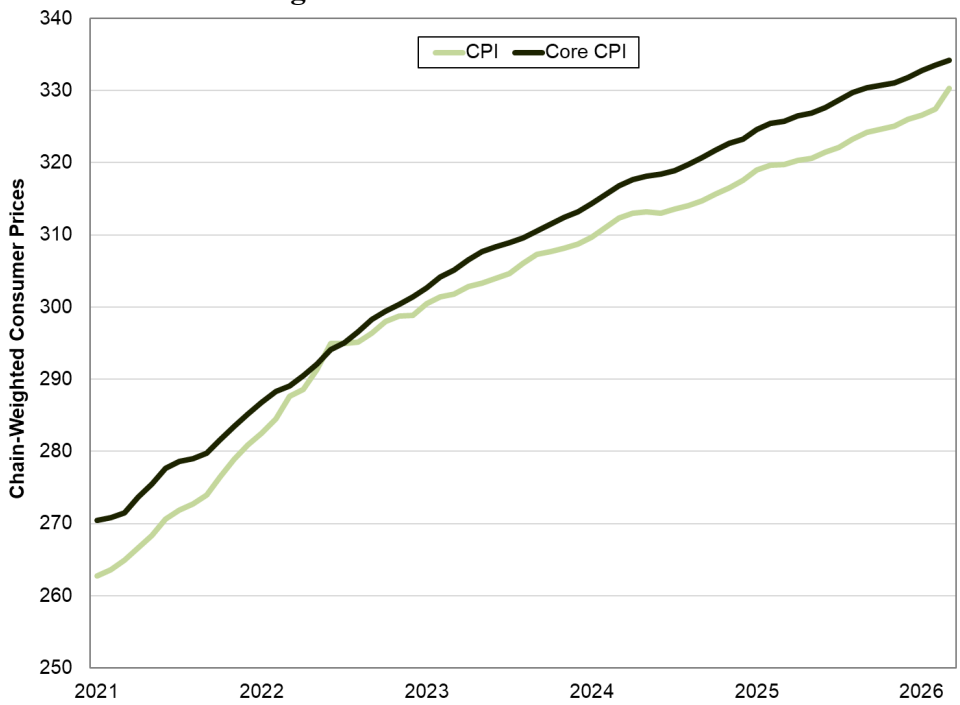


Source: Bureau of Labor Statistics

Q. IS THERE ANY EVIDENCE OF RISING PRICES IN CONSUMER PRODUCTS?

A. Yes. One commonly used measure of changes in the prices of goods and services is the Consumer Price Index ("CPI"), which is published by the U.S. Bureau of Labor Statistics ("BLS"). CPI measures changes over time in the prices consumers pay for a representative basket of goods and services, including food, energy, transportation, shelter, and other commodities. While the annualized growth in CPI has fallen from devastating highs that were seen in the immediate aftermath of the 2020 pandemic, it should be recognized that CPI is still elevated, reaching 3.3 percent in March 2026. This is well above the Federal Reserve's annual inflation target of 2.0 percent.

Figure 3: Consumer Price Index



Source: Bureau of Labor Statistics

Q. DOES THE MODERATING OF CPI GROWTH RATE FROM ITS HIGHS IMMEDIATELY FOLLOWING THE 2020 PANDEMIC MEAN THAT CONSUMER PRICES HAVE FALLEN?

A. No. It is important to recognize that CPI is reported monthly in terms of an annualized increase in consumer prices, meaning that a decline in the monthly 'headline' CPI does not mean that consumer prices have decreased, but rather that the rate of growth in consumer prices has slowed. Figure 3 shows that overall consumer prices have been continually increasing since at least 2021, even while the rate of growth has somewhat stabilized. Over the period January 2021 to January 2026, overall consumer prices increased 24.3 percent, while "core" consumer prices – which remove volatile energy and food prices – increased nearly 23.1 percent.

Q. HAS THE FEDERAL RESERVE MADE ANY STATEMENTS REGARDING RECENT INFLATION?

A. Yes. Chairman Powell addressed this in a recent press conference on March 18, 2026. The Federal Reserve's preferred measure of inflation is the Personal Consumption Expenditures Price Index ("PCE"), a related, but generally broader, measure of consumer inflation similar to CPI that is produced by the U.S. Bureau of Economic Analysis ("BEA"). Specifically, CPI is limited to out-of-pocket spending on goods and services by urban households while PCE extends this "basket of goods" to include rural households and third-party expenses on the consumer's behalf, such as employer-provided health insurance, Medicare and Medicaid.[2] He stated that estimates indicate that over the twelve months ending in February 2026, PCE and Core PCE prices rose by 2.8 percent and 3.0 percent, respectively.[3]

Q. HAS THE FEDERAL RESERVE RELEASED ANY INFLATION PROJECTIONS FOR 2026?

A. Yes. In the same press conference referenced above, Powell stated that the median PCE projection for 2026 is 2.7 percent.[4] Total PCE inflation of 2.7 percent would be 70 basis points above the Federal Reserve's 2.0 percent longer-run inflation goal. This is important because the Federal Reserve's own outlook has inflation above target levels in 2026. This means that consumers are expected to continue dealing with increasing pressures on their cost of living.

Q. ARE THERE ANY OTHER REPUTABLE INFLATION PROJECTIONS?

---

[2] "Inflation – Measuring the cost of living: The CPI versus the PCE price index," Cleveland Federal Reserve, Center for Inflation Research; note that changes in annual PCE inflation on average have been 0.39 percent than changes in annual CPI inflation.

[3] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

[4] *Id*.

A. Yes. The Federal Reserve Bank of Philadelphia releases the Survey of Professional Forecasters, which includes inflation projections. In the First Quarter 2026 Survey, released on March 6, 2026, the forecasters project that CPI and core CPI will both rise 2.6 percent. [5] This is measured on a fourth-quarter-over-fourth-quarter basis. This suggests that professional forecasters also expect inflation to remain elevated enough to affect affordability.

Q. WHAT IS THE EFFECT OF THIS CONTINUOUS INFLATIONARY PROCESS?

A. This continuous inflationary process means that when prices rise at abnormally high levels, there must be compensatory periods of lower levels for inflation to return to its long-term average. For example, if the average annual inflation rate is two percent, then a year with three percent inflation would need to be followed by a year with approximately one percent inflation to return to the average trend. Even though present inflation is below the levels seen in 2022 and 2023, it is still above two percent, so there must be periods below this target to return to the long-term average. Until the economy experiences these off-setting low inflationary periods, consumers must bear the cumulative effects of the price level rising more quickly than its average trend.

Q. HAVE ENERGY-RELATED PRICES ALSO CONTRIBUTED TO AFFORDABILITY PRESSURE?

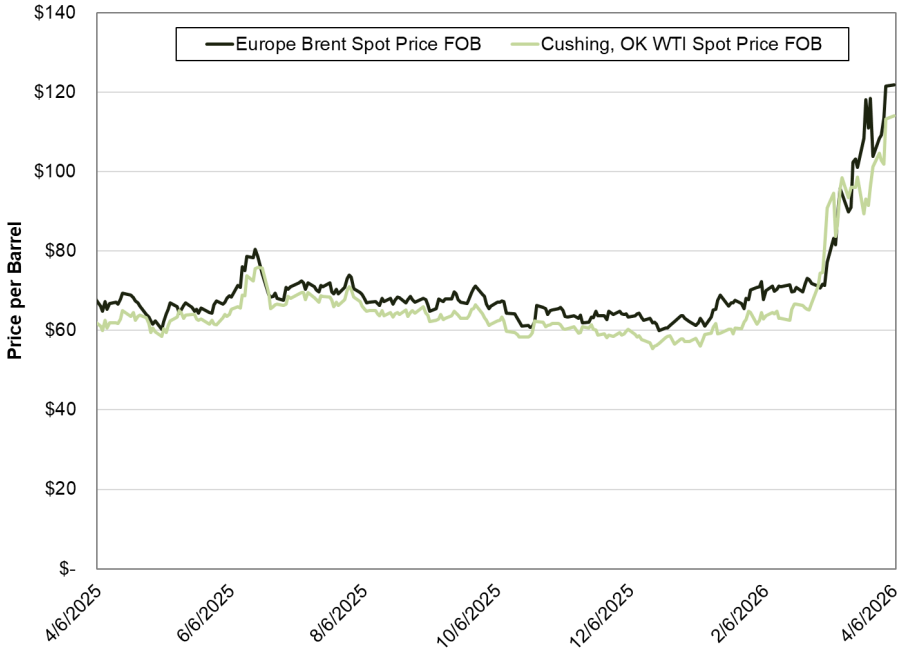
A. Yes. Pennsylvania consumers are currently experiencing financial pressure from all aspects of the energy market. Wholesale electricity prices in the PJM western hub, for example, increased 48.8 percent on average from 2024 to 2025. Likewise, Pennsylvania natural gas citygate prices increased 2.8 percent from December 2024 to December 2025 on the back of a nearly 41.9 percent increase in wholesale natural gas prices during the same period.

[5] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, First Quarter 2026, released Mar. 6, 2026, at 4.

Q. HAVE ANY RECENT DEVELOPMENTS INCREASED MARKET UNCERTAINTY?

A. Yes. Recent geopolitical and macroeconomic developments have increased uncertainty in energy markets and prices in a way that is relevant to consumer affordability. The most notable of these is the geopolitical conflict in the Persian Gulf affecting energy prices. Currently it is unknown what the lasting impact of this conflict will have on global markets, as this will be heavily influenced by how long the conflict continues. However, initial impacts on international and domestic markets present a word of caution.

Figure 4: Crude Oil Prices



Source: U.S. Energy Information Administration

Q. HOW HAS CONFLICT IN THE PERSIAN GULF AFFECTED MARKET UNCERTAINTY?

A. The conflict in the Persian Gulf has contributed to recent elevated crude oil prices in both international and domestic markets. International crude oil measured at the Brent hub in the North Sea has increased by more than 78.9 percent since the beginning of the recent conflict. Likewise,

domestic crude oil prices measured in terms of West Texas Intermediate ("WTI") have increased by nearly 70.3 percent since the beginning of the recent conflict. Both indexes are now trading in excess of $100 per barrel, well above the historic range of $60-$80 per barrel that is normally seen for these commodities.

Q. WHY ARE INCREASES IN CRUDE OIL PRICES IMPORTANT TO THE CONTEXT OF THE CURRENT RATE PROCEEDING?

A. The observed increase in crude oil prices shows how price shocks caused by the conflict in the Persian Gulf will likely filter through the larger macroeconomy. While the US does not purchase significant volumes of crude from the Persian Gulf anymore, the Persian Gulf is a major supplier of crude oil internationally, and crude oil is an international commodity. Therefore, domestic crude prices have already increased to reflect the knowledge that domestic supplies will be diverted in the international marketplace to take up the slack from constrained international supplies. Besides directly impacting Pennsylvanians through higher retail gasoline prices, higher crude prices will likely impact other aspects of the daily lives of Pennsylvanians already struggling under lingering inflation concerns. In fact, the Energy Information Administration reported that domestic gasoline prices recently have been more closely tied to Brent Oil prices than WTI.[6]

Q. COULD INCREASED OIL PRICES AFFECT AFFORDABILITY CONCERNS FOR UGI-G CUSTOMERS?

A. Yes. First the conflict in the Persian Gulf has restricted the flow of not only crude oil, but also Liquified Natural Gas ("LNG") supplies from the Persian Gulf to consumers in Asia. It is likely that these consumers will turn to alternative supplies from the US as stored supplies dwindle.

[6] U.S. Energy Information Administration, "U.S. gasoline prices move with Brent rather than WTI crude oil," Today in Energy, dated Nov. 3, 2014.

This will, in turn, place upward pressures on wholesale natural gas prices in the US as more natural gas is diverted to international supplies. Likewise, higher oil prices will lead to higher prices of downstream products as the increased transportation costs caused by higher gasoline and diesel prices are incorporated into retail prices. In the same Federal Reserve press conference discussed above, Chairman Powell stated that these elevated energy prices will push up overall inflation in the near term, but the scope and duration of these effects are uncertain.[7]

Q. IS THERE SIGNIFICANT UNCERTAINTY REGARDING HOW THE CURRENT CONFLICT WILL IMPACT THE ECONOMY?

A. Yes. As stated above, the ultimate impact of the recent conflict in the Persian Gulf is hard to predict because it is heavily determined by the ultimate length of the conflict, and how quickly international commodity markets can return to normal. Indeed, Chairman Powell, when asked if he believed the oil shock would be temporary, replied, "So, and the thing I really want to emphasize is that nobody knows. The economics effect could be bigger, they could be smaller, they could be much smaller or much bigger. We just don't know."[8]

Q. ARE THERE ANY OTHER RELEVANT INDICATORS OF MARKET UNCERTAINTY?

A. Yes. The VIX index represents a market of financial derivatives of S&P 500 traded on the CME Group, and is therefore a commonly used measure of expected near-term stock market volatility, as financial derivatives, such as options, become more valuable during periods of uncertainty. The VIX index has seen a 50 percent increase in value since the start of the recent

[7] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

[8] *Id.* at 6.

conflict in the Persian Gulf, indicating elevated concern regarding future stock market volatility.[9] I have also reviewed the Federal Reserve Bank of Philadelphia's Survey of Professional Forecasters regarding growth and the likelihood of negative real GDP growth.

Q. WHAT DOES THE SURVEY OF PROFESSIONAL ECONOMISTS INDICATE?

A. The most recent survey presented a mixed picture. Forecasters increased their annual-average real GDP forecast for 2026 from 1.8 percent to 2.5 percent. However, they continued to assign a meaningful probability to a negative quarter of real GDP growth in 2026, with mean probabilities ranging from approximately 17.8 percent to 22.7 percent over the four quarters. [10] Assuming that each of these four probabilities is independent for illustrative purposes, this forecasts a 60.1 percent likelihood of a negative real GDP growth quarter in 2026. In my view, that does not establish that a recession is likely, but it does suggest that the outlook remains uncertain enough to support caution.

Q. HAVE TARIFFS ALSO AFFECTED AFFORDABILITY CONCERNS?

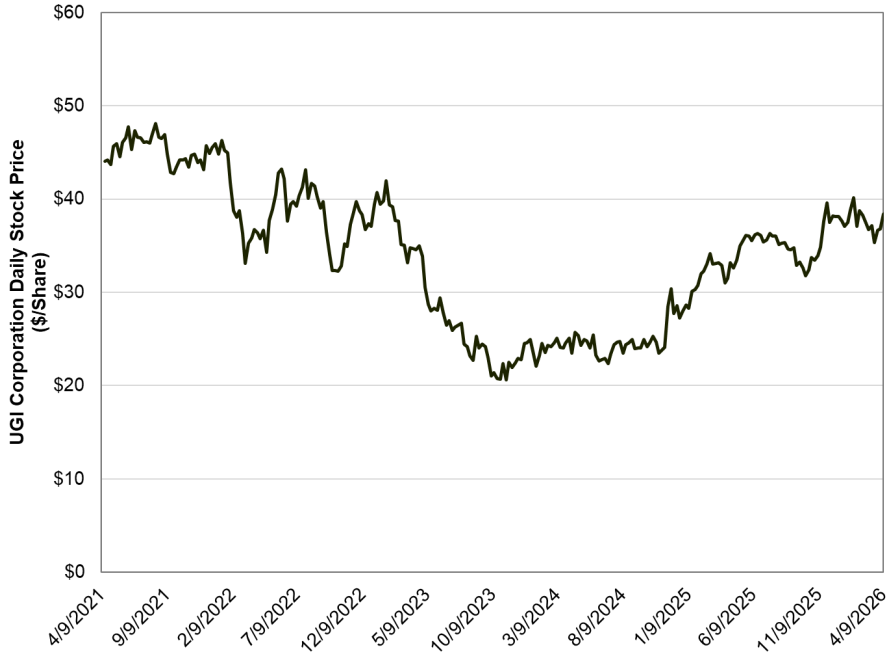
A. Although often lost in the current discussion regarding price concerns caused by the recent conflict in the Persian Gulf, it should be recognized that markets are also still dealing with uncertainty from recent tariffs placed on imports. Chairman Powell stated that of the Federal Reserve's 3.0 percent core inflation estimate, between .50 and .75 percentage points are due to

[9] Chicago Board Options Exchange via FRED, Data Set: CBOE Volatility Index: VIX, accessed April 2, 2026.

[10] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, First Quarter 2026, at 1, 6.

tariffs.[11] Federal Reserve materials indicate that those effects developed gradually rather than as a single price spike, and that some of the tariff increases were passed through to consumers.[12]

Figure 5: UGI Corporation Stock Price



Source: S&P Global

Q. HAS THE CURRENT FINANCIAL UNCERTAINTY CAUSED FINANCIAL STRUGGLES FOR THE COMPANY?

A. No, it does not appear that the Company has been experiencing significant financial concerns due to the recent macroeconomic concerns. On April 9, 2026, the common stock for UGI Corporation (the Company's ultimate parent) closed at $38.38 per share, a level consistent with where the company traded in late 2022 and early 2023, recovering its value from a minor decline

[11] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, March 18, 2026, at 4.

[12] Board of Governors of the Federal Reserve System, The Slow Climb: How Tariffs Gradually Raised Retail Prices in 2025, FEDS Notes, March 5, 2026.

in value from late 2023 through 2024. This indicates that the Company is not in a position of obvious market distress.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to the current conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company.

IV. REGULATORY LAG

Q. PLEASE DISCUSS THE COMPANY'S REGULATORY LAG CONCERNS.

A. While the Company does not explicitly frame its concerns as "regulatory lag," its testimony reflects a clear focus on improving revenue stability and predictability within its existing rate structure.[13] The Company explains that variability in weather—particularly changes in heating degree days—can materially affect customer usage and, in turn, revenues. Specifically, warmer-than-normal conditions can lead to under-recovery of revenues, while colder-than-normal conditions can result in over-recovery. To address this issue, the Company proposes to extend its Weather Normalization Adjustment ("WNA") mechanism for an additional five years after the current expiration in October 2027.[14]

---

[13] *See,* Direct Testimony of John D. Taylor, Company Statement No. 11 at 35:19 to 36:2.

[14] *Id.* at 32:6-8.

Q. DOES THE COMPANY ALREADY HAVE MECHANISMS IN PLACE THAT REDUCE REGULATORY LAG?

A. Yes. The Company utilizes a Fully Projected Future Test Year ("FPFTY") in this proceeding, which allows the Company to estimate future cost changes that will occur prior to the proposed implementation of new rates. The Company also already recovers a portion of its fixed costs through monthly customer charges, and in this proceeding, it proposes to increase those charges.[15] Lastly, the Company also has implemented a Distribution System Improvement Charge ("DSIC"), which allows for interim recovery of qualifying capital investments between rate cases. These tools provide the Company with multiple avenues to manage regulatory lag and ensure timely cost recovery. The proposed continuation of the WNA would further enhance this framework.

Q. DO CHANGES IN CUSTOMER USAGE NECESSARILY REFLECT REGULATORY LAG?

A. No. Declines in usage can result from a range of factors, including efficiency measures, economic conditions, or customer behavior. These changes are not inherently problematic and do not, by themselves, create regulatory lag. Moreover, if usage declines are accompanied by stable or declining costs, there may be no mismatch that requires correction.

Q. PLEASE DEFINE REGULATORY LAG.

A. Regulatory lag can be defined in several different ways. One definition holds that regulatory lag is the time period between when a utility's rates go into effect, after the course of

[15] *Id.* at 26.

an evidentiary hearing process and its next rate case.[16] Another definition holds that regulatory lag can be represented as the period between when a utility investment is undertaken and the time it enters into rates.[17] Yet another definition holds that regulatory lag is the time period in which a utility's achieved rate of return differs from that allowed by regulators.[18] At the heart of all these definitions is one theme: the frequency and timing of rate cases can impact utility earnings, positively or negatively.

Q. IN UTILITY RATE REGULATION, WHICH PARTY CONTROLS REGULATORY LAG OR THE DURATION OF TIME BETWEEN RATE CASES?

A. Typically, utilities control the duration between rate cases. In most states, utilities have the statutory ability to request rate increases if they believe that their rates are not affording them the opportunity to earn a fair return on and of their investments and prudently incurred costs. While state utility commissions and other stakeholders can, in theory, request a utility be "brought in" for a rate case, my experience is, and research indicates, that this event rarely happens. For instance, research on the topic of regulatory lag conducted in the early 1980s by Ronald Braeutigam and James Quirk, surveyed state utility rate cases during the period 1948 to 1978 and found that over 350 of the 363 surveyed rate cases (96 percent) were brought by a regulated utility, with the smaller number attributable to regulators or consumer groups. While this is an older, dated study, the results are likely to ring true even over the past two decades.

Q. DOES A UTILITY'S ABILITY TO DETERMINE THE TIMING OF A RATE CASE SHIFT A CERTAIN DEGREE OF REGULATORY RISK ONTO RATEPAYERS?

A. Yes. When the timing of a rate case is left in the hands of the utility, it can effectively shift the risk of regulation and regulatory lag away from itself and onto ratepayers. The option to request higher rates by utilities, in effect, creates a price floor that buttresses a utility's value.[19] This price floor allows shareholders to retain benefits created by regulatory lag (*i.e.*, earning an actual rate of return that is higher than the authorized rate of return, or over-earning), as well as the option to defend against challenges to those benefits through the timing of a rate case. Paul Joskow, writing as early as 1973, concluded in a frequently referenced regulatory article, that utility commissions tend to defend against rate increases, but are less aggressive in pursuing rate decreases when rates are stable or decreasing in real terms.[20] This outcome has often been thought to have occurred in the post-war period until about the late 1960s, and arguably throughout the 1990s.

Q. IS REGULATORY LAG UNFAIR OR CONFISCATORY TO UTILITIES?

A. No. The premise that regulatory lag is somehow unfair is simply antithetical to most of the research in utility regulation over the past 50 years. Regulatory lag has long been recognized as a key component of the overall regulatory compact, given the discipline it can impose on utility operational and investment decisions. Regulation acts as a substitute for the disciplines of competition.[21] Regulatory lag prevents utility regulation from devolving into a "cost-plus" approach that simply passes through costs on a dollar-for-dollar basis to ratepayers and can lead

[21] Charles F. Phillips, *The Regulation of Public Utilities: Theory and Practice*, (Arlington, VA: Public Utilities Reports, Inc., 1984), p. 154.

to cost and investment inefficiencies. The cost-plus regulatory approach also shifts a considerable amount of performance-related risk away from utilities and onto ratepayers and leads to inefficient outcomes, which was recognized as early as the 1960s and has come to be known as the "Averch-Johnson" or "A-J" effect.

Q. HOW ARE THE CONCLUSIONS REGARDING REGULATORY LAG RELATED TO WHAT IS COMMONLY REFERRED TO AS THE "A-J EFFECT"?

A. In the early 1960s, a seminal article was published that dramatically influenced the theory and practice of utility regulation and economic thinking regarding the optimal regulation of natural monopolies. This article, authored by Professors Harvey Averch and Leland Johnson, and published in the *American Economic Review* in 1962, posited that rate of return regulation creates an incentive for regulated utilities to overcapitalize, resulting in an inefficient utilization of resources and higher-than-optimal rates.[22] This finding; however, was premised upon a model with a number of assumptions, one of which presumed there was no regulatory lag and that rates were set on a period-to-period basis. In other words, rates were set on a "cost-plus" regulatory approach.

Q. HOW IS REGULATORY LAG RELATED TO THIS RESEARCH?

A. Soon after its publication, Averch and Johnson's article was met with a flurry of scholarly research attempting to empirically verify the A-J effect, as well as examining the conditions under which the effect would and would not, be sustained.[23] Rejoinders to the research noted that two characteristics of the regulatory process tended to temper the likelihood and prevalence of the A-

[22] H. Averch and L. Johnson. (1962) "Behavior of the Firm under Regulatory Constraint," *American Economic Review*. 52:1052-1069.

[23] These works are surveyed in Graeme Guthrie. (2006). "Regulating Infrastructure: The Impact on Risk and Investment." *Journal of Economic Literature*. 44 (December):925-972.

J effect: (1) the possibility of disallowances through the prudence review process[24] and (2) the positive efficiency incentives created by regulatory lag.[25] In fact, a series of articles published soon afterwards noted that regulatory lag typically creates incentives for utilities to seek efficiency opportunities between rate cases since the gains (profits) from those investments inure to shareholders instead of ratepayers.[26]

Q. HOW DID THE FINDINGS IDENTIFYING THE BENEFITS OF REGULATORY LAG ARISE?

A. One of the earliest works on the impact of regulatory lag was published in 1971 by William Baumol and Alvin Klevorick.[27] Their work was the first of what was to become a series of articles showing that regulatory lag actually diminished incentives for overcapitalization, since the earnings gained by avoiding these inefficient actions passed directly to shareholders. Soon after, Klevorick, writing separately from Baumol, built upon this model by explaining how multi-year regulatory lags, coupled with demand and cost uncertainty, created strong incentives for efficiency

to maintain profitability.[28] One of his additional findings at the time, however, was that these incentives might also discourage regulated firms from investing in research and development.

Q. HOW IS THIS DISCUSSION RELEVANT TO THE COMPANY'S CURRENT FILING?

A. The Company's filing focuses on concerns related to revenue variability and stability. However, as discussed above, regulatory lag can serve a beneficial regulatory function and does not, by itself, indicate a structural problem. The Company's ability to file rate cases at will, utilize FPFTYs, and recover infrastructure costs through the DSIC already provide mechanisms to reduce lag. As such, the insinuation that regulatory lag is a barrier to fair return is inconsistent with both its regulatory tools and academic literature.

Q. DOES REGULATORY LAG, WHILE ENCOURAGING EFFICIENCY, DISCOURAGE INNOVATION?

A. No. Interestingly, this notion is a myth that arises in the practice of public utility regulation but is debunked by several academic articles. Elizabeth Bailey, who also served as an economic researcher at Bell Laboratories, addressed this issue originally raised by Klevorick during this active period of regulatory scholarship in the 1960s and 1970s. Bailey found that regulatory lag helped to facilitate, not reduce, the incentives for cost-reducing innovations.[29] Bailey's work built upon earlier work that she did with Roger Coleman in 1971 that further supported the conclusions

[28] A.K. Klevorick. (1973). "The Behavior of a Firm Subject to Stochastic Regulatory Review," *Bell Journal of Economics and Management Science*. 4 (Spring): 82.

[29]Elizabeth E. Bailey. (1974). "Innovation and Regulation." *Journal of Public Economics*. 3: 285-295.

of Baumol and Klevorick, that regulatory lag induces profit-maximizing firms to adopt minimum-cost production alternatives.[30]

Q. ARE THERE ANY PARALLELS AMONG REGULATORY LAG, INNOVATION, RELIABILITY, AND SAFETY?

A. Yes. The Company links its increased capital investments for safety, reliability, and system modernization to concerns about revenue stability under its current rate design. However, it should be recognized that the key benefits of regulatory lag are the weakening of the natural incentive for a utility to over-capitalize and the strengthening of the natural incentive for a utility to minimize production costs in order to increase shareholder profits.

Q. PLEASE EXPLAIN THE TERM "REGULATORY COMPACT".

A. The regulatory compact, as it is generally referred to in a regulatory policy context, allows utilities the opportunity to earn a fair rate of return of and on their investments as well as their prudently incurred costs. In return, utilities are expected to provide safe, adequate, efficient, and reasonable service and facilities.

Q. HAVE ANY STUDIES LOOKED AT THE IMPACT OF REGULATORY LAG FROM A BROAD INDUSTRY-WIDE PERSPECTIVE DURING THESE PAST PERIODS?

A. Yes, there have been a few studies that have examined regulatory lag during the inflationary period of the 1970s. The conclusions are mixed. Seth Norton, for instance, conducted empirical research examining 45 utilities over a period from 1945 to 1974. The period spans both the high-growth, high-productivity, low-cost periods for the industry prior to 1970 and the

[30]Elizabeth E. Bailey and Roger D. Coleman.(1971). "The Effect of Lagged Regulation in an Averch-Johnson Model." *Bell Journal of Economics and Management Sciences*. 2 (Spring): 278-292.

inflationary low-growth periods throughout the 1970s. According to Norton, there were no significant financial impediments or opportunities created by regulatory lag in any of these periods.[31]

Q. WILL THE COMPANY'S PROPOSALS SHIFT ANY RISKS AWAY FROM ITSELF AND ONTO RATEPAYERS?

A. Yes. The Company's proposals are designed to insulate the Company from fluctuations in usage and weather-related variability. By guaranteeing recovery of authorized revenues regardless of actual customer consumption, these mechanisms significantly reduce the Company's exposure to traditional business risks. As a result, the risk of revenue underperformance due to declining sales, conservation, economic conditions, or unseasonably warm weather is shifted entirely onto ratepayers. Importantly, the Company has not proposed any corresponding ratepayer protections such as earnings tests, revenue caps, or performance incentives. This asymmetric risk allocation leaves ratepayers exposed to upward rate adjustments without any assurance of offsetting benefits or improved utility performance.

Q. PLEASE EXPLAIN HOW REGULATORY RISK IS SHIFTED TO RATEPAYERS.

A. As I discussed above, utilities typically control the timing of rate case filings. Accordingly, utilities enjoy the ability to request higher rates, as well as the protection afforded by a price floor that allows shareholders to retain benefits (*i.e.*, over-earning) created by regulatory lag. Thus, in times of over-earning, risk is shifted to ratepayers because utilities are not likely to elect to file a rate case. In times where a utility is under-earning, risk also is shifted to ratepayers because the utility can file for a rate increase.

---

[31] Seth W. Norton. (1987). "In Search of Regulatory Lag." *Quarterly Journal of Business and Economics*. Vol. 26 No. 4 (Autumn):3-16.

Q. DOES THE PRESENCE OF REGULATORY LAG CREATE ANY POLICY SUPPORT FOR THE COMPANY'S PROPOSALS?

A. No. The presence of regulatory lag in and of itself does not create policy justification for the Company's proposals. Regulatory lag can lead to both costs and benefits for a regulated utility. The Company's proposals are incorrectly premised upon a presumption that regulatory lag is bad and always will be bad. Regulatory lag creates opportunities for utilities to achieve gains as well as losses. The simple fact that regulatory lag creates "opportunities" and not guarantees, is one of the reasons why regulatory lag is considered efficiency enhancing. There is a long and rich history in the practice and theory of utility regulation supporting these efficiency-enhancing conclusions. Thus, there is no inherent nor *a priori* policy rationale supporting the Company's proposals. If anything, past thought and practice in utility regulation supports rejection of proposals of this nature on a policy basis.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence, including statements made by its parent company, suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

V. WEATHER NORMALIZATION PROPOSAL

Q PLEASE DISCUSS THE COMPANY'S WNA.

A. The Company's WNA is a ratemaking mechanism that adjusts customer bills during the heating season (October through April) based on deviations from what the Company defines as "normal" weather.[32] Specifically, the mechanism applies a formula using the ratio of normal heating degree days ("NHDDs") to actual heating degree days ("AHDDs") and applies that ratio to the weather-sensitive portion of each customer's usage to generate either a credit or a surcharge on the customer's bill.[33] A three-percent deadband is used to prevent minor weather variations from triggering bill changes.[34] The WNA is limited to weather-related usage changes and applies to residential customers, excluding Customer Assistance Program ("CAP") customers, as well as small commercial customers.[35]

Q. WHY ARE WEATHER NORMALIZATION ADJUSTMENTS TYPICALLY USED BY GAS UTILITIES?

A. Weather normalization adjustments are generally used to reduce revenue volatility that results from fluctuations in weather which can lower customer gas usage and thus reduce a utility's recovery of fixed costs through volumetric rates. The intent is to provide more predictable revenues for the utility while smoothing customer bills. However, this goal must be balanced with customer protections to ensure the mechanism does not systematically overcharge customers or remove all utility risk.

[33] *Id.* at 35:5-7.

[34] *Id.* at 35:8-11.

[35] *Id.* at 35:12.

Q. CAN UTILITIES SMOOTH CUSTOMER BILLS WITHOUT A WNA?

A. Yes. Utilities typically offer normalized billing, also referred to as budget billing, to customers interested in establishing fixed monthly bills for purposes of budgeting by averaging expected annual utility charges over twelve equal monthly payments. Normalized billing also assists the utility by providing greater certainty regarding its monthly revenue streams from customers.

Q. WHAT IS THE COMPANY PROPOSING IN THIS CASE WITH RESPECT TO THE WNA?

A. The Company is proposing to extend its current WNA pilot mechanism for an additional five years beyond its current expiration in October 2027.[36] The Company is also proposing to adopt a ten-year historical average of HDDs for WNA calculations in place of the current 15-year average.[37] However, the Company does not recommend applying the normalization period on a rolling basis unless the Commission also adopts the same approach for determining base-rate billing determinants.[38] Instead, the Company proposes that the ten-year normals be updated in future base rate proceedings.[39]

Q. WHY DOES THE COMPANY PROPOSE TO MODIFY THE CURRENT WNA NORMALIZATION PERIOD FROM 15 YEARS TO 10 YEARS?

A. The Company proposes to modify the current 15-year normalization period used for WNA purposes with a 10-year normalization period to align with the Company's similar proposed

---

[39] *See,* Direct Testimony of John Taylor, Company Statement No. 11 at 24:18-19.

movement in the current proceeding for normalizing base rate revenues.[40] The Company specifically argues that using different weather baselines for the setting of base rates and for WNA calculations could introduce misalignments in future WNA recoveries.[41]

Q. WHAT ARE THE PRACTICAL EFFECTS FOR RATEPAYERS ASSOCIATED WITH THE PROPOSED CHANGE IN WNA NORMALIZATION PERIODS?

A. Assuming that a 10-year historical average will better reflect future weather conditions,[42] the proposes change in the Company's weather normalization should reduce future volumetric differences between actual and normal usage due to weather conditions.[43] Theoretically, this should also reduce the volatility of future WNA surcharges and credits. The Commission accepted a similar proposed change to a 10-year normalization period recently for Columbia Gas of Pennsylvania ("Columbia Gas"), noting that normalization periods longer than 10 years appeared to result in a "historical bias" that diminished recent warming trends.[44]

Q. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY REGARDING ALTERNATIVE RATEMAKING MECHANISMS LIKE THE WNA?

A. Yes. In 52 Pa. Code § 69.3302(a) the Commission established 14 separate distribution rate considerations in determining just and reasonable alternative ratemaking distribution mechanisms and rate design. Exhibit MWD-1 presents these 14 considerations, along with the relevant effect of the WNA on each consideration. My review of the Commission's consideration criteria finds

[40] *Id.* at 33:14-19.

[41] *Id.* at 34:1-3.

[42] *Id.* at 34:8-10.

[43] *Id.* at 34:15-17.

[44] Pennsylvania Public Utility Commission, Docket No. R-2025-3053499, Opinion and Order at 302.

that the current WNA either does not impact the Commission's areas of concern or will potentially worsen those areas of concern.

Q. WHEN DID THE COMPANY FIRST IMPLEMENT ITS WNA MECHANISM?

A. The Company first implemented its WNA as part of its 2022 general rate case (Docket No. R-2021-3030218) when the Commission adopted a settlement approving the Company's proposed WNA as a five-year pilot program.[45] The settlement also required the Company to include a three percent deadband and to comply with certain reporting requirements.[46] It further provides that the continuation of the WNA pilot may be challenged or modified in future general rate proceedings.[47]

Q. HAS THE COMPANY'S WNA BEEN MODIFIED SINCE ITS INITIAL IMPLEMENTATION?

A. Yes. In the Company's most recent general rate case (Docket No. R-2024-3052716), the Commission approved a settlement that adopted several modifications to the WNA pilot.[48] The modifications include the following:[49]

- The Company was required to review and enhance its WNA customer communication materials, including sharing draft revisions with the parties, and the Universal Service Advisory Committee ("USAC") for feedback, with the review process to be completed by December 31, 2025.
- The WNA pilot was modified so that it no longer applies to May bills and instead applies only to bills rendered during the heating season months of October through April.

---

[45] Pennsylvania Public Utility Commission, *Order.* Docket No. R-2021-3030218 at ¶ 2. Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2021-3030218 at Section IV, ¶ 40.

[47] Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2021-3030218 at Section V, ¶ 42(a).

[48] Pennsylvania Public Utility Commission, *Order.* Docket No. R-2024-3052716 ¶ 1. Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2024-3052716 at Section V, ¶ 58.

[49] Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2024-3052716 at Section V, ¶ 58(a)-(e).

- The WNA pilot was modified so that it no longer applies to confirmed low-income customers participating in the CAP who are billed on a percent-of-income basis, effective for bills rendered on and after November 1, 2025.
- The Company was required to provide additional reporting regarding the number and percentage of bills that receive upward adjustments due to warmer-than-normal weather and downward adjustments due to colder-than-normal weather.
- The settlement reaffirmed that the WNA pilot will end on October 31, 2027 unless affirmatively extended by Commission order, and provides that any request to continue or modify the WNA must be filed by the Company no later than January 31, 2026, and must include a report and recommendation evaluating the use of a rolling ten-year historical average to calculate NHDDs.

Q. WHAT IS THE EFFECT OF THE COMPANY'S PROPOSAL IN THIS PROCEEDING TO EXTEND THE WNA PILOT?

A. The Company's proposal would extend a relatively new pilot mechanism before it has been subject to meaningful evaluation. In its short operations, the WNA has consistently produced net surcharges for customers and operates without key safeguards such as reconciliation, earnings tests, or weather trend adjustments. By seeking to extend the WNA, the Company is effectively attempting to shield itself from weather-driven sales risk, while continuing to recover fixed costs through volumetric charges. This conversion would institutionalize an asymmetric mechanism that benefits the utility without demonstrating corresponding benefits to ratepayers.

Table 1: Summary of WNA Annual Reports

	Heating Season

Source: Company Responses to Data Request OCA-7-2 and OCA-8-50.

Q. WHAT HAS BEEN THE ACTUAL IMPACT OF THE WNA ON RATEPAYERS?

A. The actual impact of the WNA on residential and non-residential customers has resulted in net bill surcharges during each of the three full heating seasons under the mechanism to date. The Company has filed WNA reports with the Commission that summarize the monthly dollar amounts of WNA charges and credits issued to customers.[50] Table 1 includes a summary of the over/under collections reported by the Company since the inception of the mechanism in November 2022. During the first three heating seasons, 2022-2023 through 2024-2025, the Company collected approximately $90.7 million in net WNA revenues from customers. Each of those heating seasons produced a net surcharge to customers. Despite the Company claiming that the mechanism is symmetrical,[51] these results to date show that customers have experienced significant net surcharges during the majority of the pilot period.

Q. ARE ONE-WAY SURCHARGE MECHANISMS CONSISTENT WITH SOUND REGULATORY POLICY?

A. No. Regulatory policy disfavors mechanisms that allow utilities to recover lost revenues or costs from customers without also exposing the utility to comparable downside risk or performance standards. The WNA, as designed and applied by the Company, operates as a one-way ratchet: it imposes surcharges but has failed to provide meaningful refunds. This violates basic ratemaking principles of fairness and reciprocity between ratepayers and shareholders.

Q. ARE THERE OTHER CONCERNS REGARDING THE WNA?

---

[50] Pennsylvania Public Utility Commission, *Weather Normalization Adjustment Pilot Reporting.* Docket No. R-2021-3030218 and R-2024-3052716.

[51] Response to Discovery Request OCA 8-62.

A. Yes. There are several concerns regarding the level of ratepayer protections included in the Company's WNA. Specifically, the WNA includes a three percent deadband and applies during an October through April heating season, both of which differ from protections that have been approved by the Commission in other Pennsylvania WNA mechanisms, including the Commission's recent decision modifying the WNA pilot mechanism for Columbia Gas in Docket No. R-2025-3053499. Exhibit MWD-2 provides a survey of recent Pennsylvania natural gas rate cases involving major investor-owned utilities that address WNA mechanisms and their related provisions.

Q. DO YOU AGREE WITH THE COMPANY'S THREE PERCENT DEADBAND?

A. No. As part of the settlement in the Company's 2022 general rate case, the Company included a three percent deadband in its WNA.[52] However, more recent Commission decision approving WNA pilot mechanisms have included a larger deadband, such as the five percent deadband approved in the recent Columbia Gas general rate proceeding.[53] Indeed, in that proceeding, the Commission explicitly held that a five percent deadband "adequately captures what could be considered normal weather fluctuations in Pennsylvania."[54] The Commission further explained that a larger deadband places more responsibility for calculating and forecasting weather variations on the utility as a normal part of doing business.[55] Consistent with this reasoning, increasing the Company's deadband from three percent to five percent would provide

[54] *Id*.

[55] *Id*.

greater protection to ratepayers and better align with the Commission's recent determination on this issue.

Q. DO YOU AGREE WITH THE COMPANY'S CURRENT WNA HEATING PERIOD OF OCTOBER THROUGH APRIL?

A. No. I disagree with the inclusion of the month of October in the Company's WNA heating season period. The Fall month of October is best represented as a shoulder month between the summer cooling season and the winter heating season which often sees little heating or cooling requirements for customers and customers only see heating use during years with early winters. The inclusion of this shoulder month within the Company's WNA heating season exposes ratepayers to unnecessary variation in the WNA by shifting the weather risk during this shoulder periods from the Company onto ratepayers.

Table 2: Analysis of Historic Weather Variability

	Standard Deviations			Coefficient
	-1	0	1	Variation
OCT	272	334	396	19%
NOV	580	679	778	15%
DEC	802	934	1,067	14%
JAN	974	1,123	1,271	13%
FEB	779	934	1,088	17%
MAR	615	770	926	20%
APR	355	436	516	18%
MAY	105	165	225	36%

Source: National Oceanic and Atmospheric Administration, National Centers for Environmental Information, GHCN-Daily.

Q. HAVE YOU EXAMINED HISTORIC WEATHER VARIABILITY IN THE COMPANY'S SERVICE AREA DURING THE PRIOR OCTOBER THROUGH MAY NORMALIZATION PERIOD?

A. Yes. Table 2 examines historical variation in monthly AHDD for the October through May period using a simple average of weather data from eight weather stations located in the Company's service territory over the 15-year period October 2010 through May 2025. This analysis finds that the coefficient of variation ("COV") for AHDD is greatest in the month of May, but also elevated during the fall month of October and some spring months.

Q. WHAT DO YOU MEAN BY THE COEFFICIENT OF VARIATION?

A. COV is mathematically the standard deviation of a data series divided by its mean and is a way to present the variance of different data series on a normalized basis as a percent of the average of the data series. For example, the COV of AHDD for the month of May is 36 percent, meaning that the average expected variance in AHDD during the month of May is 36 percent of the expected NHDD based on historic averages. Likewise, the COV of AHDD for the month of October is 19 percent of expected NHDD based on historic averages.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the three full years the mechanism has been in operation, even though the mechanism was designed to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. I recommend that the Commission increase the deadband from three percent to five percent and eliminate the month of October from the WNA period if the Commission determines that the WNA should continue. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas. WNA communications with customers should also be reformed to include a historical presentation of incremental charges and credits as recommended by Ms. Alexander.

VI. ALLOCATED COST OF SERVICE STUDY

A. Introduction

Q. WHAT IS THE PURPOSE OF AN ALLOCATED COST OF SERVICE STUDY?

A. An allocated cost of service study ("ACOSS") is a modeling approach that reconciles utility costs and revenues across different customer classes. The goal of an ACOSS is to evaluate the cost of providing service and revenue responsibility for each individual customer class. ACOSS results are used to estimate class-specific rates of return and can serve as a guidepost for class revenue responsibilities and ultimately rates.

Q. HOW IS AN ACOSS PREPARED?

A. An ACOSS utilizes a set of historic or projected cost information which is (1) "functionalized," (2) "classified," and (3) "allocated." The functionalization process simply categorizes costs based upon the functions they serve within a utility's overall operations (i.e., production, transmission, and distribution). In the specific case of a natural gas utility, a large share of a utility's investments and costs are associated with providing distribution services. The classification process characterizes costs by "type," including those that are (1) demand-related, (2) commodity-related, or (3) customer-related. The last step of the process "allocates" each of these costs to a respective jurisdiction or customer class as appropriate.

Q. PLEASE EXPLAIN DEMAND-RELATED COSTS?

A. Demand-related costs are associated with meeting maximum gas flow requirements. Transmission and large distribution mains are designed, in part, to meet peak demand day requirements such that natural gas can be delivered to households, businesses, and industries under peak load conditions. Gas supply contracts can also have a capacity component that is demand-related. The most common demand allocation factors used in an ACOSS are those related to system peak day demands.

Q. HOW ARE COMMODITY-RELATED COSTS DEFINED?

A. Commodity-related costs are defined as those that tend to change with the amount of throughput (volume) sold or transported. The investment cost of natural gas mains, for instance, can be allocated, in part, on some measure of throughput. There are also a number of other expenses, such as fuel costs themselves, that are often allocated using some measure of throughput.

Q. WHAT ABOUT CUSTOMER-RELATED COSTS?

A. Customer-related costs are those associated with connecting customers to the distribution system, metering household or business usage, and performing a variety of other customer support functions.

Q. PLEASE EXPLAIN THE ALLOCATION PROCESS.

A. The allocation process is the final step in a cost of service study and involves assigning each functionalized and classified cost component to the appropriate customer classes. In the Company's ACOSS, costs are allocated using factors that reflect the underlying cost drivers, including customer counts, peak demand contributions, commodity usage, and, in some cases, revenues. Where costs can be directly attributed to a specific customer class, they are directly assigned. For costs that cannot be directly assigned, allocation factors are developed using

economic and engineering principles to ensure that costs are distributed in a manner consistent with cost causation. The goal of the allocation process is to ensure that each customer class is assigned its proportionate share of the Company's total costs, based on how that class contributes to the need for those costs.

Q. IS THIS A RELATIVELY SIMPLE PROCESS?

A. No. Some costs can be clearly identified and directly assigned to a function or category, while other costs are more ambiguous and difficult to assign. The primary challenge in conducting an ACOSS is the treatment of what are known as "joint and common" costs. Given their shared or integrated nature, these joint and common costs can often be difficult to compartmentalize. Therefore, unique allocation factors are utilized in an ACOSS to classify joint and common costs. The process of developing these cost allocation factors can become subjective and is often imbued with policy considerations.

Q. HOW DOES AN ACOSS RELATE TO ECONOMIC PRINCIPLES?

A. An ACOSS is also referred to as a "fully allocated cost study" since it allocates test year revenues, rate base, expenses, and depreciation to various jurisdictions and customer classes based upon a series of different allocation factors. The purpose of the ACOSS is to develop cost responsibility estimates for each customer class, which in turn, can be used to develop rates. An ACOSS is based upon a set of historic utility book costs that have accumulated over decades. Rates are, therefore, based upon historic average costs; whereas economic theory suggests that the most efficient form of pricing in perfectly competitive markets should be based upon marginal costs. However, regulated utilities do not operate in perfectly competitive markets and, by their very nature, are natural monopolies. Thus, reaching the ideal pricing formula outlined in economic

theory is impossible since the nature of natural monopolies makes pricing in the presence of declining average costs, coupled with the presence of joint and common costs, difficult.

Q. WHAT CONTROVERSIES ARISE IN THE ANALYSIS AND COMPARISON OF VARIOUS ACOSS METHODOLOGIES?

A. The ACOSS process is significantly different than the revenue requirement or cost of capital phase of a typical rate case. While those activities are focused on determining the total level of revenues to be recovered, the ACOSS determines how those revenues are allocated across customer classes and ultimately recovered through rates. The primary controversies in evaluating different ACOSS methodologies for a natural gas utility generally center on which cost drivers should be emphasized in allocating distribution system costs. In particular, there is often disagreement regarding whether costs should be allocated based on customer counts, peak demand contributions, annual throughput, or some combination of these factors. For gas utilities, these issues are especially important because the system is designed to meet winter peak demand requirements, while a significant portion of costs are recovered through volumetric charges that vary with usage. As a result, different methodologies can produce materially different outcomes depending on how they treat peak demand versus throughput. For example, methodologies that rely more heavily on customer and peak demand factors tend to allocate a greater share of costs to lower load-factor customers, such as residential and small commercial classes, which place relatively high demands on the system during peak periods. Conversely, methodologies that incorporate throughput or average usage, such as Seaboard-type approaches,[56] tend to shift costs toward higher load-factor customers, such as larger commercial and industrial classes. These

[56] The Atlantic Seaboard, or Seaboard, cost allocation method allocates costs associated with distribution mains to customer classes based on a simple average of the customer classes' contribution to system peak day demands and annual throughput requirements.

differences can be significant, and they often drive the core disputes in a cost of service study. Ultimately, the key issue is whether the selected methodology appropriately reflects cost causation—that is, whether it aligns the allocation of costs with the way the natural gas distribution system is actually designed, constructed, and operated to serve customers.

Q. PLEASE EXPLAIN WHY METHODOLOGIES THAT ARE SKEWED TOWARD PEAK CONSIDERATIONS SHIFT COSTS TOWARD LOWER LOAD-FACTOR CUSTOMERS SUCH AS RESIDENTIAL AND SMALL COMMERCIAL CUSTOMERS.

A. A large portion of residential and small commercial natural gas usage is highly weather-sensitive, particularly during the winter heating season. These customers tend to have usage patterns that are concentrated during cold weather periods, when heating demand is highest. In contrast, larger commercial and industrial customers often use natural gas for process loads that are less dependent on weather and tend to be more consistent throughout the day and across seasons. As a result, their usage profiles are generally more stable and less "peaked" than those of residential and small commercial customers. Because of these differences, residential and small commercial customers typically exhibit lower load factors, meaning a greater share of their total usage occurs during peak periods. Larger customers, by comparison, tend to have higher load factors, with usage that is more evenly distributed over time. When a cost allocation methodology places significant weight on peak demand, it assigns more costs to those customer classes that contribute more heavily to system peak requirements. Since residential and small commercial customers drive a substantial portion of winter peak demand, methodologies that emphasize peak considerations will tend to allocate a greater share of costs to those classes. Conversely, methodologies that incorporate average usage or throughput, such as peak and average approaches,

tend to recognize the more consistent utilization of the system by higher load-factor customers and can result in a more balanced allocation of costs.

Q. PLEASE DEFINE WHAT IS MEANT BY A "LOAD FACTOR."

A. A load factor is defined as the ratio of the average gas usage over a given period to the maximum or peak demand experienced during that same period. It is typically expressed as a percentage. For natural gas, load factor can be calculated by dividing the total gas usage over a period (e.g., annual throughput) by the product of the peak day demand and the number of days in the period.

$$Annual\ Load\ Factor = \frac{Annual\ Throughput}{(Peak\ Day\ Demand * 365\ Days)}$$

A system or customer class with a high load factor is one that uses gas more consistently over time, with relatively smaller differences between average and peak usage. These customers tend to utilize the system more steadily. Conversely, a low load factor indicates that usage is more concentrated during peak periods—such as during cold weather—requiring the system to maintain sufficient capacity to meet those peaks, even if that capacity is not utilized for much of the year.

Q. IS IT PREFERABLE TO PROMOTE THE DEVELOPMENT OF HIGHER LOAD FACTORS?

A. Yes, generally speaking, a higher load factor can be indicative of more efficient utilization of the natural gas distribution system, all else equal. Customers with higher load factors tend to use the system more consistently over time, which can reduce the need for excess capacity that is only required during peak periods—particularly during the winter heating season when demand is highest. However, it is important to recognize that natural gas utilities inherently serve customers with different usage characteristics and load profiles. Residential and small commercial customers,

for example, tend to have more weather-sensitive usage patterns, while larger commercial and industrial customers often have more stable, process-driven loads. Additionally, gas utilities operate within a broader system that includes upstream supply, storage, and transportation arrangements, which can help manage variability in demand and mitigate some of the impacts of differing load characteristics across customer classes. While rate design should recognize and encourage efficient system utilization where appropriate, caution should be exercised in placing too much emphasis on promoting higher load factors. Overemphasizing this objective can result in shifting costs away from higher load-factor customers and onto lower load-factor customers, such as residential and small commercial classes, in a manner that may not fully reflect cost causation. Accordingly, while load factor is a relevant consideration, it should not be the primary driver of cost allocation or rate design decisions.

Q. WHAT IMPACT DOES COST ALLOCATION HAVE ON REVENUE RECOVERY?

A. Cost allocation can have a significant impact on revenue recovery because it directly affects the rates charged to different customer classes, and those rates, in turn, influence customer behavior. Higher-use customers, such as large commercial and industrial customers, are generally more price sensitive than residential and small commercial customers. This is due to the relative impact that rate increases can have on their overall operating costs and the margins of the goods or services they produce. In the natural gas context, these customers often have alternatives available, including fuel switching to other energy sources, modifying production processes, or in some cases reducing or relocating operations. As a result, they tend to be more responsive to changes in rates. By comparison, residential and small commercial customers typically have fewer practical alternatives and are therefore less able to adjust their usage in response to price changes,

particularly for essential uses such as space heating during the winter. Because of these differences in price elasticity, the way costs are allocated among customer classes can influence the stability and predictability of revenue recovery. Allocating a disproportionate share of costs to more price-sensitive customers may increase the risk of reduced usage or load migration, which can, in turn, impact the Company's ability to recover its authorized revenue requirement. Accordingly, while cost allocation should remain grounded in cost causation principles, it is also important to recognize how allocation decisions can affect customer behavior and, ultimately, revenue recovery.

Q. WHAT IS A POTENTIAL MANNER IN WHICH AN ACOSS CAN BE BIASED AGAINST LOWER LOAD-FACTOR CUSTOMERS?

A. Natural gas utilities, like electric utilities, are capital-intensive and require significant investment in infrastructure—such as distribution mains, services, and related facilities—to deliver service to customers. As a result, how those plant-related costs are allocated plays a critical role in determining the cost of service for each customer class. One potential source of bias arises when cost allocation methodologies over-emphasize certain cost drivers in a way that shifts costs away from higher load-factor, more price-sensitive customers and onto lower load-factor customers, such as residential and small commercial classes. For example, placing excessive weight on peak demand measures—particularly those that do not fully reflect system diversity—can result in allocating a disproportionate share of costs to customer classes that contribute heavily to winter peak demand. Additionally, over-reliance on minimum system or customer-related classifications for distribution plant can attribute a large share of infrastructure costs to the mere existence of customers, rather than to the demand they place on the system. This can result in cost shifts that disproportionately impact lower load-factor customers. In each of these cases, the underlying issue

is whether the selected methodology appropriately reflects cost causation. When it does not, the resulting cost allocation can create inequities among customer classes and biased outcomes against certain groups of customers.

B. Overview of the Company's ACOSS

Q. PLEASE DESCRIBE THE COMPANY'S ACOSS

A. The Company's ACOSS follows a three step process where costs are first functionalized, meaning they are grouped according to the function they serve, including gas supply, storage, transmission, distribution, and customer-related functions.[57] Second, those functionalized plant and expenses are classified into three primary factors driving associated costs, including customer-related costs, demand-related costs, and commodity-related costs.[58] Finally, these classified plant investment and expenses are directly assigned to individual customers or class of customers where possible, and where not possible are allocated based on allocation factors designed to reflect cost causation through principles of both economics and engineering.[59]

Q. HOW DOES THE COMPANY ALLOCATE MAJOR PLANT INVESTMENTS, SUCH AS DISTRIBUTION MAINS?

A. The Company classified its distribution mains as demand-related and allocated their costs in two steps. First, the Company allocated a portion of the costs associated with distribution mains directly to the Rate XD Firm customer class based on an analysis provided by the Company.

---

[57] *See,* Direct Testimony of John D. Taylor, Company Statement No. 11 at 5:19-22.

[58] *Id.* at 6:6-12.

[59] *Id.* at 7:13-18.

Second, the Company allocated the remaining balance using the Average and Excess ("A&E") cost allocation method.[60]

Q. HAVE YOU PREPARED A SUMMARY OF THE RESULTS OF THE COMPANY'S ACOSS?

A. Yes. A summary of the results of the Company's ACOSS is presented in Exhibit MWD-3. The Company finds that it will earn a system average rate of return under current rates during the fully projected future test year ("FPFTY") of approximately 6.55 percent. The Company also finds that class-based rates of return vary significantly across customer classes. For example, the Residential (Rate R) class is expected to earn a rate of return ("ROR") of approximately 5.20 percent during the FPFTY under current rates, while the Extended Large Firm (Rate XD) class is expected to earn a ROR of approximately 17.02 percent during the FPFTY under current rates.

Q. DO YOU DISAGREE WITH ANY OF THE ASSUMPTIONS OR ALLOCATION FACTORS INCORPORATED IN THE COMPANY'S PROPOSED ACOSS?

A. Yes. I disagree with the Company's allocation of distribution mains based on an A&E cost allocation methodology. The A&E cost allocation methodology appropriately recognizes that distribution mains supply both peak and non-peak service and thus perform both a demand and commodity function. However, the A&E cost allocation methodology places a disproportionate weight on customer load factor when compared against other demand and commodity cost allocation methodologies.

C. Allocation of Distribution Mains

Q. PLEASE DISCUSS HOW THE COMPANY CLASSIFIES AND ALLOCATES ITS DISTRIBUTION MAINS COSTS.

---

[60] *Id.* at 12:18-21.

A. The Company allocates distribution mains costs in two steps. First, a portion of these costs is directly assigned to certain large customers (Rate XD) based on a detailed analysis of the specific facilities used to serve those customers.[61] Second, the remaining distribution mains costs are allocated among customer classes using the A&E cost allocation methodology.

Q. DID THE COMPANY CONSIDER OTHER POTENTIAL COST ALLOCATION METHODOLOGIES FOR ALLOCATING COSTS ASSOCIATED WITH ITS INVENTORY OF DISTRIBUTION MAINS?

A. Yes. The Company states that it also considered using a customer/demand classification for distribution mains and a Peak and Average ("P&A") cost allocation methodology that applies a fixed 50-50 weighting to the peak and average components.[62] The customer/demand classification approach was rejected by the Company without further evaluation as the Commission correctly has not traditionally recognized a customer component associated with natural gas mains.[63] The Company evaluated the potential for a P&A cost allocation methodology further, and presented a comparison of this allocator compared to its chosen A&E allocator in its testimony.[64]

Q. PLEASE EXPLAIN THE P&A COST ALLOCATION METHODOLOGY.

A. P&A is a composite demand and commodity allocation factor similar to the Average and Excess ("A&E") cost allocation approach.[65] The P&A cost allocation methodology is based upon

[62] *Id.* at 15:6-11.

[63] *Id.* at 15:7-9.

[64] *Id.* at 16, Table 1.

[65] Gas Distribution Rate Design Manual (June 1989), National Association of Regulatory Utility Commissioners, pp. 27-28.

a two-component weighted average. The first component represents each rate class's share of a utility's system peak day demand, and the second represents each rate class's share of a utility's total annual throughput.[66] The exact weights used in a P&A cost allocation approach vary, including a straight 50-50 weighting of demand and commodity components, often referred to as the "Seaboard" method.

Q. PLEASE EXPLAIN THE SEABOARD COST ALLOCATION METHOD.

A. The *Atlantic Seaboard* method, (or "*Seaboard"* method), stems from a 1952 Federal Power Commission ("FPC," the predecessor agency to the Federal Energy Regulatory Commission ("FERC")) ruling establishing appropriate cost allocations for the Atlantic Seaboard natural gas pipeline.[67] In its ruling, the FPC explicitly addressed the fact that natural gas pipeline facilities are built to supply both peak and non-peak service, and thus perform both a demand and commodity function, and expressed particular concern that an over-assignment of pipeline costs (particularly transmission plant costs) to the demand or capacity function would result in an under-allocation of costs to large volume industrial customers on interruptible rates.[68]

> A natural-gas transmission facility performs both a capacity and a volumetric function. In this sense it is a joint facility, which thus presents the problem, always difficult, of allocating joint costs.
>
> … A pipeline would not normally be built to supply peak service, that is to say, service on the peak days only… pipelines are built to supply service not only on the few peak days but on all days throughout the year… Both capacity and annual use are important considerations in the conception of the project ... Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that

---

[66] *Id*.

[67] Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

[68] *Id*.

> reasonably accurate results can be achieved only by allocating the fixed expenses flowing from the capital outlay to both operating functions, viz., capacity and volume.[69]

Q. HAVE YOU ESTIMATED THE RESULTS OF AN ALTERNATIVE ACOSS USING THE COMPANY'S ESTIMATED P&A ALLOCATION WITH SEABOARD WEIGHTINGS?

A. Yes, and I have summarized these results in Exhibit MWD-4. Exhibit MWD-4 shows that an alternative ACOSS using P&A allocation of distribution mains with Seaboard weightings results in somewhat different results when compared to the Company's proposed ACOSS. In particular, under this alternative the residential service class will earn a 5.47 percent ROR during the FPFTY under current rates, or approximately 0.84 on a relative rate of return ("RROR") basis. This is compared to the results of the Company's proposed ACOSS which finds that its residential service class will earn a 5.20 percent return on ratebase during the FPFTY under current rates using its proposed A&E cost allocation methodology.

Q. PLEASE DESCRIBE THE A&E COST ALLOCATION METHODOLOGY.

A. Conceptually, A&E cost allocation methods involve developing two components that are combined by the use of a weighted average.[70] The first component, referred to as the "average" component, represents each rate class's average hourly energy consumption throughout the test year, and is calculated by simply dividing annual energy consumption for each rate class by 365 days in the year. The second component, referred to as the "excess" component, represents each

---

[69] Conkling R.L. (2011), "Energy Pricing: Economics and Principles," pp. 96-97, citing Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

[70] *See*, Electric Utility Cost Allocation Manual (January 1992), National Association of Regulatory Utility Commissioners ("NARUC") at 49-51.

class's contribution to system peak demand in excess of the class's average daily consumption. These components are combined through the use of a weighted average based on overall system load factor. Specifically, the average component is weighted by the utility's overall system load factor, while the excess component is weighted by the inverse of the system load factor (*i.e.*, 1 minus the system load factor).

Q. IS A P&A METHODOLOGY CONCEPTUALLY SIMILAR TO AN A&E METHODOLOGY?

A. Yes. The P&A methodology is similar to the A&E methodology that can also be utilized for classifying distribution mains. Conceptually, both methods involve developing a volumetric and demand component that are then combined by use of a weighted average. In other words, both methodologies are intended to be hybrid energy and demand allocators.

Q. PLEASE EXPLAIN THE DIFFERENCE BETWEEN A P&A METHODOLOGY AND AN A&E METHODOLOGY.

A. Although the P&A and A&E methodologies are conceptually similar, in practice, an A&E methodology places greater weight on a rate class's demand contribution and less weight on a rate class's annual energy usage than does a P&A methodology. This occurs because an A&E methodology values a class's peak demand, the "excess" component, relative to its average demand, thereby exaggerating the effect of a class's load factor on the relative classification of energy and peak demand elements. From a cost allocation perspective, this approach can disproportionately shift costs toward classes with lower load factors and away from classes with higher load factors, depending on how the weighting is applied. As a result, the use of an "excess" demand measure, rather than full peak demand, does not eliminate concerns regarding cost

allocation bias and may instead introduce additional distortions in how costs are assigned among customer classes.

Q. CAN YOU PROVIDE AN EXAMPLE OF HOW THE A&E COST ALLOCATION METHODOLOGY PLACES A DISTORTED EMPHASIS ON CUSTOMER LOAD FACTOR?

A. Yes. Consider a customer class with a very high load factor, where its average usage is close to its peak usage. Under the A&E cost allocation methodology, the "excess" demand component for that class would be relatively small, since there is little difference between average usage and peak demand. As a result, the methodology would assign a smaller share of demand-related costs to that class.

Q. WHY DO PROPONENTS OF THE A&E METHODOLOGY CLAIM THAT IT BETTER REFLECTS COST CAUSATION?

A. Proponents of the A&E cost allocation approach, typically large/industrial customer groups, argue that using full class peak demand "double counts" class energy use during periods. These stakeholders often argue that the use of "excess demand" rather than total demand solves this purported "double counting problem." However, in using the excess component only, the A&E methodology directly places a higher emphasis on each class's demand contribution relative to energy. Thus, the A&E method, itself, suffers from a bias that favors relatively higher load factor classes like industrial customers and at lower load factor classes' expense (such as residential and small commercial customers).

Q. DO YOU AGREE WITH CLAIMS ABOUT THE SUPERIORITY OF THE A&E METHODOLOGY?

A. No, such arguments incorrectly conflate the concepts of energy and demand and the roles each of these play in utility system planning. These arguments are also faulty since they effectively presume that utilities design systems to first meet the needs of non-weather dependent customers and only later expand system resources for customers with additional winter heating requirements. In reality demand and energy reflect separate and differing utility planning parameters and system planners develop its system to meet all of their throughput requirements, not separately to meet individual, or class-specific requirement.

D. ACOSS Recommendations

Q. PLEASE SUMMARIZE YOUR ACOSS RECOMMENDATIONS.

A. I recommend that the Commission adopt an alternative cost of service approach that better aligns with cost causation principles and the way the Company's distribution system is designed and operated. Specifically, I recommend the use of a P&A cost allocation methodology using weights based on the Company's test year system load factor in place of the Company's Average and Excess A&E approach for allocating distribution system costs. Conceptually, my proposed P&A cost allocation method is similar to the earlier Seaboard method relied on to allocate costs associated with distribution mains. However, where the Seaboard method uses a 50-50 weighting of the demand and volumetric components, my proposal would base these weights on the Company's system load factor, or the ratio of peak day system requirements to average daily system requirements. This bases the weights of the two components in a P&A cost allocation method on empirical data specific to the Company's Pennsylvania operations. The Company's test year system load factor is 42.36 percent.

Q. HAVE YOU PREPARED AN ALTERNATIVE ACOSS INCORPORATING YOUR PROPOSED CHANGES TO THE COMPANY'S ACOSS?

A. Yes. Exhibit MWD-5 presents the results of my alternative ACOSS which utilizes a P&A approach to allocate distribution-related costs in place of the Company's A&E methodology. This alternative study shows that the Company will earn a 5.36 percent ROR, or 0.82 on a RROR basis, from its residential customer class during the FPFTY using current rates. This compared to the results of the Company's proposed ACOSS which finds that its residential service class will earn a 5.20 percent ROR from its residential customer class during the FPFTY under current rates.

VII. REVENUE APPORTIONMENT

Q. PLEASE EXPLAIN THE PURPOSE OF THE REVENUE APPORTIONMENT PROCESS IN SETTING RATES.

A. The revenue distribution process allocates a utility's overall revenue deficiency across customer classes, which, in turn, is used to establish a new set of retail rates. The revenue distribution process often uses the results from the ACOSS as its starting point, but not necessarily as its ending point. Class-specific revenue responsibilities are established by allocating the system-wide revenue deficiency to classes that are under-earning, relative to their estimated ROR, and assigning, at least in theory, revenue decreases to those classes that are over-earning relative to their ACOSS-estimated class returns. The final class revenue responsibilities are then used, in conjunction with each class's billing determinants, to determine rates. In summary, the revenue distribution process can be viewed as the initial step taken in establishing rates.

Q. DOES THE REVENUE APPORTIONMENT PROCESS INCLUDE ANY POLICY CONSIDERATIONS?

A. Yes. Allocating the overall system-wide revenue deficiency entirely on a full cost of service basis can result in a very significant and adverse rate impact for certain under-earning

classes. To avoid such a result, regulators often temper the revenue responsibilities assigned to various customer classes in order to meet a set of broad ratemaking policy goals.

Q. WHAT ARE THOSE BROADER RATEMAKING POLICY GOALS?

A. There are several generally accepted ratemaking principles used in utility regulation that include:

1) Rates should be fair, just, and reasonable, and not unduly discriminatory.
2) To the extent possible, gradualism should be used to protect customers from rate shock.
3) Rate continuity should be maintained.
4) Rates should be informed by costs, but class cost of service results need not be the only factor used in rate development.
5) Rates should be understandable to customers.

Q. HOW ARE THE ABOVE PRINCIPLES APPLIED IN DEVELOPING RATES FOR A REGULATED UTILITY?

A. It is important to consider all the principles I mentioned above. However, any principle's relative weight can change depending on the importance of certain policy goals. Rate design should strike a balance between policy goals and principles that result in rates that are fair, just, and reasonable. There is no pre-set or universally accepted formula for developing rates and, as a result, sound judgment is necessary to formulate a rate design that meets these objectives.

Q. WHAT ARE THE COMPANY'S RATE DESIGN GOALS?

A. The Company states that it attempts to balance various criteria that relate to the design of utility rates.[71] The Company notes that economic, historical, and social factors all enter into its

[71] *See,* Direct Testimony of John D. Taylor, Company Statement No. 11at 19:9-12.

revenue apportionment process, and that, out of necessity, the rate design process must be partially influenced by judgmental evaluations.[72]

Q. HAVE YOU EXAMINED THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. Yes. Exhibit MWD-6 summarizes the Company's proposed revenue allocation. The Company constructed a three step process based on the results of its ACOSS to define a mitigated revenue allocation. First, the Company reflected slight rate decreases for competitively negotiated Extended Firm ("Rate XD Firm") and Interruptible Service ("IS") customers resulting from roll-in of the current Distribution System Improvement Charge ("DSIC") into base rates.[73] Second, Non-Residential General Service ("Rate N") customers were assigned a rate increase needed to move these customers to parity, equivalent to 1.18 times the system average increase.[74] Finally, the remaining Delivery Service ("Rate DS") and Large Firm ("Rate LFD") were assigned increases to remove approximately two-thirds of these classes' over-earnings going forward.[75] Remaining required revenues were fully assigned to the residential customer class.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. No. The Company's proposed revenue allocations suffer from two major deficiencies. First, the Company's proposal is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large commercial and industrial service customers

---

[72] *Id.* at 19:12-15.

[73] *Id.* at 20:10-15.

[74] *Id.* at 20:15-16.

[75] *Id.* at 20:16-18.

while understating the rate of return the Company derives from its residential service customers. Second, the Company's proposed revenue apportionment process results in a rate increase that is inconsistent with rate gradualism.

Q. WHY DO YOU SAY THAT THE COMPANY'S PROPOSED REVENUE APPORTIONMENT IS INCONSISTENT WITH RATE GRADUALISM?

A. The Company's proposed revenue apportionment process results in inconsistent rate increases between the Company's customer classes. For example, under the Company's proposed revenue apportionment, Rate XD and IS customers will receive a small rate decrease, while the residential customer class will receive a 15.05 percent rate increase, equal to 1.24 times the proposed system average increase. Indeed, under the Company's proposal residential and non-residential general service customers would receive more than 98.7 percent of the Company's $99.4 million rate increase.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT.

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limit the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the rate increase to any single customer class to no more than 1.15 times the system average increase and also remove all proposed rate decreases in the current proceeding.

Q. HAVE YOU PREPARED A SUMMARY OF THE EFFECTS OF YOUR PROPOSED REVENUE APPORTIONMENT?

A. Yes. Exhibit MWD-7 presents an illustrative summary of the effects of my proposed revenue apportionment under the Company's proposed system average rate increase of 12.18

percent. My proposed revenue apportionment would increase base rates for the residential class by 14.01 percent, compared to the Company's proposal which would increase such rates by 15.05 percent, and would increase base rates for the non-residential general service customers by 13.49 percent, compared to the Company's proposed increase to these customers of 14.39 percent.

VIII. RATE DESIGN

Q. HOW ARE NATURAL GAS RATES TYPICALLY DESIGNED?

A. Natural gas utility rates are typically comprised of three elements. The first component is the fixed monthly customer charge, or what is sometimes referred to as the basic service charge. The second is the energy-based component that is a volumetric rate applied toward a customer's monthly energy usage during a billing period, often measured in terms of therms or dekatherms (Dth). Finally, demand rates are surcharges that are assessed based upon a customer's maximum usage during a billing period. Some smaller use customer classes, such as residential and small general services classes, are not demand-metered and thus, only face customer and volumetric charges in what is commonly called a "two-part tariff." Larger, demand metered, customers face a "three-part tariff" which includes a customer, volumetric, and demand charge. A "multi-part tariff" is a term often used to generalize a set of rates that have various combinations of both fixed (customer charge) and variable charges (energy and/or demand charges).

Q. HOW SHOULD POLICY BALANCE COST ASSIGNMENTS BETWEEN FIXED CUSTOMER CHARGES AND VOLUMETRIC RATES?

A. Modern utility pricing theory is primarily concerned with the development of optimal tariff design, which over the years has become dominated by the two-part and three-part tariff form that is sometimes referred to more technically as a non-linear (or non-uniform) pricing approach. Once a class revenue requirement is established, the goal for regulators should be one that sets the most

appropriate rates based upon various efficiency and equity considerations. Balancing the weight of how costs are recovered between fixed rates, variable rates, block rates, and seasonal rates are all integrated parts of that process.

Q. WHAT IS THE APPROPRIATE ROLE OF COSTS IN SETTING RATES FOR A MULTI-PART TARIFF?

A. Costs can be instructive in establishing a baseline upon which prices may be set, but costs do not need to serve as the sole or exclusive basis for rates in order for them to be set optimally (i.e., fixed charges do not need to strictly equal fixed costs, variable rates need not strictly equal variable costs). Unfortunately, the "fixed charge-equals-fixed costs" philosophy gets repeated so often that it can often drown out meaningful discussions about other equally important considerations in setting rates in imperfect markets. In fact, appropriate rate setting in the context of a multipart tariff typically has more to do with consumer demand than it does with cost in a natural gas context given the capital-intensive nature of public utilities.

Q. DOES THE RATE DESIGN PROCESS HAVE ANY GOALS?

A. Yes. The development of utility rates, or "rate design" often has a few goals. For example, rates are sometimes designed to send certain price signals to consumers in order to influence their usage decisions.[76] Sometimes, rate design becomes a balancing act since rates must be designed to be both supply-eliciting (i.e., assist utilities in financing of capital investments) and demand-inhibiting (i.e., inhibit the growth in demand that generates the need for capital investments).[77]

Table 3: Summary of Company's Proposed Customer Charges

Rate Class	Current	Proposed	Increase
	------ $/month -----		
General Service			
Residential	$ 16.25	$ 23.00	41.5%
Non-Residential	$ 36.42	$ 39.00	7.1%
Commercial and Industrial Service			
Delivery Service	$300.00	$ 353.00	17.7%
Large Firm Delivery Service	$670.00	$ 670.00	0.0%

Source: Application, Books X and XI.

Q. PLEASE PROVIDE AN OVERVIEW OF THE COMPANY'S BASIC SERVICE CHARGE PROPOSAL.

A. The Company proposes to increase the monthly customer charge for both its residential and non-residential general service rates, as well as its standard commercial and industrial delivery service rate. Most significant of these changes is the Company's proposed increase to its residential monthly customer charge, which the Company proposes to increase from $16.25 per month to $23.00 per month, a 41.5 percent increase.[78]

Q. WHAT IS THE BASIS OF THE COMPANY'S PROPOSED RESIDENTIAL CUSTOMER CHARGE INCREASE?

A. The Company claims its ACOSS supports a customer-related unit cost of $54.03 per month.[79] The Company therefore states that its proposed customer charge of $23.00 per month moves the customer charge towards the customer related unit cost, and therefore helps align the customer charge with the Company's fixed cost of service requirements.[80]

[78] *See,* Direct Testimony of John D. Taylor, Company Statement No. 11at 23:8-9.

[79] *Id.* at 26, Table 6.

[80] *Id.* at 27:10-16.

Q. HAVE YOU PREPARED AN ANALYSIS OF COSTS COMMONLY ASSOCIATED WITH BASIC SERVICE CHARGES?

A. Yes. Exhibit MWD-8 presents an analysis of current basic service charges with the Company's customer-related expenses. "Customer-related" expense accounts for natural gas utilities are those typically allocated on the basis of customers and can include: removing and setting meters; maintenance of meters; meter reading expenses; customer records and collections; customer billing and account; and customer service and information expenses. These costs can also include the depreciation expense associated with service and meter plant accounts, as well as the carrying charges (at the Company's requested rate of return) on these plant accounts.

Q. WHAT ARE THE RESULTS OF YOUR ANALYSIS OF COMPANY CUSTOMER-RELATED COSTS?

A. My analysis finds that the Company's current customer charge of $16.25 per month recovers 42.0 percent of the estimated customer-related costs of $38.66 per month. Likewise, I find that the current non-residential general service customer charge of $36.42 per month recovers 56.2 percent of the estimated customer-related costs of $64.76 per month.

Table 4: Recent Estimates of Customer-Related Residential Costs

Utility	Docket No.	Filing Year	Monthly Customer-related Costs
National Fuel Gas Distribution Corporation	R-2022-3035730	2022	$ 26.17
Peoples Natural Gas Company	R-2023-3044549	2023	$ 22.15
PECO Energy Company	R-2024-3046932	2024	$ 33.00
Pike County Light & Power Company	R-2024-3052357	2024	$ 53.76
Columbia Gas of Pennsylvania, Inc.	R-2025-3053499	2025	$ 29.43
UGI Utilities, Inc.	R-2024-3052716	2025	$ 51.19

Q. HOW DO THE COMPANY'S CUSTOMER CHARGE REVENUES COMPARE WITH THE RESULTS OF YOUR ANALYSIS?

A. The Company's analysis includes costs that are not directly related to providing service to customers. However, more importantly, the Commission should recognize that the Company's customer-related expenses far exceed the customer-related expenses that have been provided by other natural gas companies operating in Pennsylvania. For example, in its recently filed rate case, National Fuel Gas Distribution Corporation estimated customer-related costs associated with serving residential customers of $26.17 per month, approximately half of the Company's estimated costs in this rate case.

Q. DO YOUR RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

A. No. The Company's residential and non-residential general service rate classes currently cover approximately half of their estimated monthly customer-related costs. This while the Company's customer-related expenses far exceed similar expenses that have been provided by other natural gas companies operating in Pennsylvania.

Source: Utility Tariffs

Q. HAVE YOU COMPARED THE COMPANY'S CURRENT AND PROPOSED RESIDENTIAL CUSTOMER CHARGE WITH OTHER REGIONAL PEER UTILITIES?

A. Yes. The Company's proposed residential customer charge of $23.00 would be well above the regional average of $17.25 per month charged by other investor-owned natural gas utilities. Indeed, the Company's proposed residential customer charge of $23.00 per month would be higher than that charged by any other Pennsylvania investor-owned natural gas utility. It is important to note that the average residential customer charge for investor-owned natural gas utilities operating in Pennsylvania is $16.66 per month, similar to the Company's current residential customer charge of $16.25 per month.

Q. ARE HIGHER BASIC SERVICE CHARGES CONSISTENT WITH THE PROMOTION OF ENERGY EFFICIENCY AND CONSERVATION?

A. No. The Company's proposal is inconsistent with the promotion of energy efficiency and conservation in Pennsylvania for the simple reason that it places more costs into the fixed component of rates than in the variable component. This reduces economic incentives for ratepayers to control monthly utility bills through energy efficiency and conservation efforts, because only the variable component of bills is avoidable.

Q. HAVE OTHER COMMISSIONS RECOGNIZED THE DETRIMENTAL EFFECT INCREASED FIXED CHARGES HAVE ON ENERGY EFFICIENCY?

A. Yes. In rejecting a request by Baltimore Gas and Electric to increase customer charges as part of a larger rate design proposal, the Maryland Public Service Commission (MPSC) recognized the need to allow customers the opportunity to control their monthly bills by reducing energy usage.

> Even though this issue was virtually uncontested by the parties, we find we must reject Staff's proposal to increase the fixed customer charge from $7.50 to $8.36. Based on the reasoning that ratepayers should be offered the opportunity to control their monthly bills to some degree by controlling their energy usage, we instead adopt the Company's proposal to achieve the entire revenue requirement increase through volumetric and demand charges. This approach also is consistent with and supports our EmPOWER Maryland goals.[81]

Q. CAN YOU POINT TO ANY OTHER REGULATORY EXAMPLES?

A. Yes. The Montana Public Service Commission ("MT PSC") addressed this issue in evaluating, and rejecting, a proposal by Energy West Montana to eliminate volumetric charges and

[81] Maryland Public Service Commission Case No. 9299*, In re of Baltimore Gas and Electric Company for Adjustment in its Electric and Gas Base Rates*, Order No. 85374 at 99 (Md. Pub. Serv. Comm'n, Feb. 22, 2013).

only have one fixed monthly customer charge (known as a "straight-fixed variable" or "SFV" rate design):

> The Commission agrees that most distribution costs are not avoidable, and that volumetric distribution charges may encourage conservation actions that, all other things being equal, reduce the utility's embedded cost recovery between rate cases and contribute to future rate increases.
> …
> The Commission agrees that an SFV rate design is a clean and administratively inexpensive way to decouple revenue from volume. An often-cited public policy justification for revenue decoupling is to remove the volume disincentive for cost-effective conservation investment by a gas distribution company, which through SFV and other decoupling methods is rendered indifferent to the volume of gas consumed. Yet, SFV rates decouple revenue at the cost of decreasing returns to conservation investment by customers. For this reason the net conservation benefit of revenue decoupling via SFV rates is not clear, and may be negative.[82]

Q. HAVE ANY REGULATORY RESEARCH INSTITUTES ADDRESSED THE ISSUE OF THE RELATIONSHIP BETWEEN HIGH CUSTOMER CHARGES AND ENERGY EFFICIENCY?

A. No. A research document presented for consideration by the membership of the National Association of Regulatory Utility Commissioners (NARUC) lists Straight-Fixed Variable (SFV) rate design as an alternative to delink utility revenue from sales. An SFV attaches all fixed-related costs to fixed charges while relegating only variable charges to volumetric rates. The NARUC research noted this type of rate design was problematic because of its effects on customer incentives to conserve energy:

> **Straight-Fixed Variable Rate Design.** This mechanism eliminates all variable distribution charges and costs are recovered through a

[82] In The Matter Of Energy West Montana, Application To Establish Increased Service Rates In Its Great Falls, Cascade, And West Yellowstone Service Areas, Montana Public Service Commission, Docket No. D2010.9.90, Order No, 7132c, at 29–30, rel. November 17, 2011.

> fixed delivery services charge or an increase in the fixed customer charge alone. With this approach, it is assumed that a utility's revenues would be unaffected by changes in sales levels if all its overhead or fixed costs are recovered in the fixed portion of customers' bills. This approach has been criticized for having the unintended effect of reducing customers' incentive to use less electricity or gas by eliminating their volumetric charges and billing a fixed monthly rate, regardless of how much customers consume.[83]

Q. HAS ANY NATIONAL PUBLIC POLICY ANALYSIS NOTED THE EFFICIENCY DISINCENTIVES ASSOCIATED WITH HIGHER CUSTOMER CHARGES?

A. Yes. The National Action Plan for Energy Efficiency (NAPEE), a joint venture of the U.S. Department of Energy and U.S. Environmental Protection Agency, published a whitepaper on various rate design effects on encouraging energy efficient behaviors. The NAPEE postulated that SFV had a detrimental effect on economic signals to encourage customers to change energy usage behavior and investments in energy efficiency devices, and specifically noted that such disincentives persist even when applied to individual components of a customer's utility bill, such as SFV for strictly distribution services:

> Because [SFV] tends to shift costs out of volumetric charges, it tends to reduce customers' efficiency incentive, because the marginal price of additional consumption is reduced. While SFV rates are being considered to better reflect the utility's costs behind the rate, these rates do not encourage customers to change energy usage behavior or invest in efficiency technologies. Such customer disincentives persist even when SFV rates are applied to individual components of the bill, such as charges for distribution service.[84]

[84] National Action Plan for Energy Efficiency, *Customer Incentives for Energy Efficiency Through Electric and Natural Gas Rate Design* at 13–14, prepared by William Prindle, ICF International, Inc. (Sept.2009) (emphasis added), available at https://www.epa.gov/sites/production/files/2015-08/documents/rate_design.pdf.

Q. SHOULD THE COMMISSION BE MINDFUL OF THE EFFECT OF THE COMPANY'S PROPOSED RATE DESIGN ON LOW-USE RESIDENTIAL CUSTOMERS?

A. Yes. As discussed in more detail in the Direct Testimony of OCA Witness Roger Colton, higher customer charges disproportionately impact lower use residential customers which tend to be lower income customers.[85]

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. The Company's proposed increase in customer charges comes in the immediate aftermath of an 8.3 percent increase in these same charges in the Company's prior rate case, Docket No. 2025-3059523. Furthermore, an analysis of customer-related costs finds that residential rate classes are currently recovering a significant portion of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

---

[85] *See,* Direct Testimony of Roger Colton, OCA Statement No. 6 at p. 10-11.

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.01 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.25 increase in the monthly residential customer charge, or an increase from the current $16.25 per month to $18.50 per month. I further recommend that any increase in customer charges be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

IX. CONCLUSION AND RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission should not grant UGI any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence, including statements made by its parent company, suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the three full years the mechanism has been in operation, even though the mechanism was designed to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. I recommend that the Commission increase the deadband from three percent to five percent and eliminate the month of October from the WNA period if the Commission determines that the WNA should continue. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas. WNA communications with customers should also be reformed to include a historical presentation of incremental charges and credits as recommended by Ms. Alexander.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE COMPANY'S PROPOSED ALLOCATED COST OF SERVICE STUDY?

A. I recommend that the Commission adopt an alternative cost of service approach that better aligns with cost causation principles and the way the Company's distribution system is designed and operated. Specifically, I recommend the use of a P&A cost allocation methodology using weights based on the Company's test year system load factor in place of the Company's A&E approach for allocating distribution system costs. Conceptually, my proposed P&A cost allocation method is similar to the earlier Seaboard method relied on to allocate costs associated with distribution mains. However, where the Seaboard method uses a 50-50 weighting of the demand and volumetric components, my proposal would base these weights on the Company's system load factor, or the ratio of peak day system requirements to average daily system requirements. This bases the weights of the two components in a P&A cost allocation method on empirical data specific to the Company's Pennsylvania operations. The Company's test year system load factor is 42.36 percent.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT.

A. I recommend that the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the rate increase to any single customer class to no more than 1.15 times the system average increase and also remove all proposed rate decreases in the current proceeding. My proposal would increase base rates for the residential class by 14.01 percent under the Company's proposed

revenue requirement increase, compared to the Company's proposed increase to these same customers of 14.39 percent.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. The Company's proposed increase in customer charges comes in the immediate aftermath of an 8.3 percent increase in these same charges in the Company's prior rate case, Docket No. 2024-3052716. Furthermore, an analysis of customer-related costs finds that residential rate classes are currently recovering a significant portion of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DO YOU HAVE AN ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN MONTHLY CUSTOMER CHARGES IS WARRANTED?

A. Yes. I recommend that the Commission limit its increase in the Company's monthly customer charges to the percentage rate increase class revenue requirement. In the context of my proposed revenue apportionment this would be a 14.01 percent increase for residential customers at the Company's proposed overall requested rate increase. This would correspond to a roughly $2.25 increase in the monthly residential customer charge, or an increase from the current $16.25 per month to $18.50 per month. I further recommend that any increase in customer charges be

subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

(2019). *In Re: Review of Policies Related to Customer-owned Solar Generation and Possible Modification of the Commission's Current Net Metering Rules.* On behalf of Louisiana Public Service Commission. Issues: Solar Net Metering.

26. Expert Report. (2011). *2011 Kansas Generation Planning Survey*. On behalf of the Kansas Corporation Commission Staff.

27. Expert Testimony. Docket No. 11-KCPE-581-PRE. (2011). Before the Kansas Corporation Commission. *In the Matter of the Petition of Kansas City Power & Light Company ("KCP&L") for Determination of the Ratemaking Principles and Treatment That Will Apply to the Recovery in Rates of the Costs to be Incurred by KCP&L for Certain Electric Generation Facilities Under K.S.A. 66-1239.* On Behalf of the Kansas Corporation Commission Staff. Issues: System Planning, Predetermination.

28. Expert Testimony. Docket No. 10-KCPE-795-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas City Power & Light Company for Approval to Implement a Portfolio of Demand Side Management Programs Including Affordability, Energy Efficiency, Demand Response and Educational Programs, and to Implement a Rider for Recovery of Program Costs and Incentives Associated with this Portfolio.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

29. Expert Testimony. Docket No. 10-WSEE-775-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Westar Energy, Inc. and Kansas Gas and Electric Company for an Order Authorizing them to participate in Efficiency Kansas, Approve the SimpleSavings Program Rider, and related cost recovery.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

30. Expert Testimony. Docket No. 10-BHCG-639-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Black Hills/Kansas Gas Utility Company, LLC, d/b/a Black Hills Energy for Approval to Implement Black Hills Energy's Five-Year Energy Efficiency Plan Consisting of Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate About Efficient Energy Usage, to Provide for Program Cost Recovery Through a Rider Mechanism, Permit the Implementation of a Revenue Normalization Mechanism to Replace the Weather Normalization Adjustment, a Performance Incentive Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

31. Expert Testimony. Docket No. 10-EPDE-497-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of the Empire District Electric Company for Approval to Implement its Portfolio of Energy Efficiency and Demand Response Programs for its Kansas Customers, to Provide for Program Cost Recovery and Lost Revenue Through a Rider Mechanism, to Obtain any Necessary Waivers for the Commission, and for Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

32. Expert Testimony. Docket No. 10-KGSG-421-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas Gas Service, a Division of ONEOK, Inc., for Approval to Implement the Efficiency Kansas Energy Efficiency Program, to Implement Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate about Efficient Energy Usage, To Provide for Program Cost Recovery Through a Rider Mechanism, to Establish Administrative Charges and a Program Initiation Fee, Permit the Implementation of a Revenue Decoupling Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	UGI Claim	Response
§ 69.3302(a)(1)	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	UGI Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	The WNA does not address the Commission's consideration criteria aligning revenues with cost causation. The WNA is premised on ensuring the Company will recover its annual fixed costs of providing gas distribution service; however, the WNA adjustment is applied as a variable charge to customer's bills.
§ 69.3302(a)(2)	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged. By stabilizing revenues, the WNA mechanism removes disincentives to support peak-reflective rate design and conservation initiatives that can moderate peak demand growth. Over time, this alignment supports more efficient use of existing system capacity while preserving the Company's ability to make prudent investments necessary to maintain safe and reliable service.	Proposed WNA does not impact capacity utilization, as the determining metric for the charge is weather, not utilization.
§ 69.3302(a)(3)	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions. Please refer to UGI Gas Exhibit JDT-2.	The WNA adjustment mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption. If the WNA is generating revenue, then it inherently does not reflect the level of demand associated with the customer's anticipated consumption levels, because the WNA only generates revenue if the demand is less than anticipated.
§ 69.3302(a)(4)	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	UGI Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA may have led to intraclass cost shifting to the extent that smaller use residential customers typically have a greater percentage of natural gas use that is temperature-sensitive compared to larger use residential customers.
§ 69.3302(a)(5)	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Moreover, UGI Gas maintains a robust Energy Efficiency & Conservation ("EE&C") program, which it has voluntarily implemented for its customers and will use to continue promoting energy efficiency measures.	The WNA does not limit or eliminate disincentives for the promotion of energy efficiency. The WNA is solely tied to adjustment in customer usage attributed to changes in heating requirements and is not impacted by a reduction in customer use due to energy efficiency initiatives. The Company has not demonstrated that the lack of a WNA would present a major obstacle for the promotion of energy efficiency programs.
§ 69.3302(a)(6)	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	The WNA may be perceived as a disincentive to employ energy efficiency measures for customers whose energy efficiency initiative takes place during periods of warmer than normal weather. These customers will see increased WNA charges after reducing usage through implementing energy efficiency initiatives.
§ 69.3302(a)(7)	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	In accordance with the Settlement Agreement in Docket Nos. R-2024-3052716, et al., the current WNA mechanism does not apply to low-income customers enrolled in the Company's Customer Assistance Program ("CAP").	The WNA may harm low-income customers as these customers have less ability to weatherize homes to reduce impact of weather fluctuations on consumption.
§ 69.3302(a)(8)	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	The WNA adds another surcharge to customers' bills without any showing that the WNA would reduce the frequency of base rate case filings. It therefore does not improve rate stability.

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	UGI Claim	Response
§ 69.3302(a)(9)	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through April, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband). It only applies to certain of the Company's customer classes (Rates R, RT, N and NT) and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.	While the WNA is premised on reducing risks to the Company revenue stability caused by fluctuations in weather conditions, in practice it is not a revenue neutral mechanism. None of the three full heating seasons the WNA has been in effect for (2022-2023, 2023-2024, and 2024-2025) have produced net credits for ratepayers. Indeed, over these 3 heating seasons the Company has collected on net more than $90.7 million from ratepayers through the WNA.
§ 69.3302(a)(10)	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.	Historically the Company has filed multiple rate case over the last decade, despite possessing the WNA. This is unlikely to change and the WNA does not prevent the Company from seeking additional rate increases driven by future investment needs or higher expenses and associated cost recovery. The WNA does, however, weaken the positive impacts regulatory lag has on promoting cost containment between rate cases. Regulatory lag has long been recognized as a key component of the overall regulatory compact that disciplines utility operational and investment decisions between rate cases. Regulatory lag in particular diminishes incentives for utilities to overcapitalize since the inefficiencies associated with overcapitalization are passed directly to shareholders until reviewed by the Commission in the utility's next rate case.
§ 69.3302(a)(11)	If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).	The Company's proposed WNA (appearing as Rider C – WNA in the Tariff) only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through April. Specifically, the billing for the Company's Riders, including Rider F – USP, Rider G – EE&C, and Rider B – PGC, will continue to be based on actual monthly usage.	The WNA applies only to base rates and does not impact surcharges.
§ 69.3302(a)(12)	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	UGI Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows: a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and outside of the deadband the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. b. No Cross-Subsidization: The WNA is customer-specific. c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency and Education: UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.	The WNA does not include sufficient consumer protections. These include checks on over-earnings to prevent overall rate increases through WNA reconciliations.
§ 69.3302(a)(13)	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. As indicated above, UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.	Customers have no means of anticipating future WNA changes as it is impossible for customers to forecast WNA charges in advance and likely difficult for customers to calculate even after the fact. For these reasons elements of the WNA likely not understandable to customers and effectively is viewed as just another surcharge present on the customer's bill.
§ 69.3302(a)(14)	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA would help minimize the volatility of the recovery of these costs.	The WNA has not lead to changes in the Company's quality of service, either positively or negatively. The WNA is not tied to achievement of increased service reliability performance, but has reduced the positive incentive of regulatory lag for the Company to control costs and led to customer confusion. The Company retains the ability to file rate cases using a projected future test year to address concerns associated with capital improvements required to facilitate reliable delivery of natural gas.

Survey of Approved Pennsylvania Natural Gas WNA Mechanisms

Witness: Deupree
Docket No. R-2025-3059523
Exhibit MWD-2

Utility	Docket No.	Filing Year	Decision Type	Customer Applicability	Pilot (Y/N)	Pilot Duration	Deadband	Heating Months	NHDD Methodology	Customer Education	Reporting Requirements	Other
National Fuel Gas Distribution Corporation	R-2022-3035730	2022	Settled	Residential, CAP, Commercial, and Public Authority	Y	5 years	3%	October-May	15-year average	Provide WNA and bill impact information.	Two annual WNA reports by month and customer class providing: (1) bills subject to WNA, (2) total bills, (3) volume adjustment, (4) revenue adjustment, (5) NHDDs and AHDDs.	N/A
Peoples Natural Gas Company	R-2023-3044549	2023	Partially settled	Residential, Commercial SGS, and Commercial MGS	N	N/A	3%	October-May	Based on HDDs adopted in R-2023-3044549 rate case	N/A	Annual report due September 1 providing: (1) monthly WNA billed revenues, (2) AHDD and NHDD data, (3) customer count and bill impacts by class.	(1) Separate line item on customer bills; (2) Bills rendered calculation basis; (3) May adjustment capped at 100% of billed distribution amount.
PECO Energy Company	R-2024-3046932	2024	Partially settled	---------- The Commission agreed with the ALJs' findings and denied PECO's request to implement a WNA ----------								
Pike County Light & Power Company	R-2024-3052357	2024	Partially settled	---------- The Company proposed a WNA mechanism but withdrew the proposal pursuant to settlement ----------								
Columbia Gas of Pennsylvania, Inc.	R-2025-3053499	2025	Litigated	RSS, RDS, and CAP	Y	Until final order in next base rate case	5%	November-April	10-year average	N/A	Annual report due October 1 providing: (1) monthly WNA computations and (2) all underlying supporting data.	N/A
UGI Utilities, Inc.	R-2024-3052716	2025	Settled	R, RT, N, and NT	Y	Until October 31, 2027	3%	October-April	15-year average	Review/revise WNA pilot communication materials with party input (review due 12/31/2025).	Two annual WNA reports by month and customer class providing: (1) bills subject to the WNA, (2) total bills, (3) volume and revenue adjustments, (4) NHDDs and AHDDs, (5) number and percentage of bills adjusted upward or downward due to warmer or colder than normal weather.	(1) CAP customers on percent-of-income bills exempt from WNA beginning November 1, 2025; (2) Future filing must evaluate use of rolling 10-year HDD average.

SURREBUTTAL TESTIMONY

OF

MICHAEL DEUPREE

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

May 27, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on April 13, 2026, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to elements of the rebuttal testimony of Cyndee S. Fang, Jessica R. Rogers, and John D. Taylor on behalf of UGI Utilities, Inc. – Gas Division ("UGI-G" or the "Company"). Specifically, I will respond to UGI-G's discussion of macroeconomic issues, its proposed weather normalization adjustment, as well as issues concerning its proposed allocated cost of service study ("ACOSS") and rate design.

II. MACROECONOMIC ISSUES

Q. PLEASE SUMMARIZE UGI-G WITNESS ROGERS' STATEMENTS RESPONDING TO YOUR DISCUSSION OF MACROECONOMIC ISSUES IN ITS REBUTTAL TESTIMONY.

A. UGI-G witness Rogers states that I encourage the Commission to evaluate the Company's proposed rate relief "entirely" on macroeconomic circumstances.[1] The Company argues that my testimony raising concerns related to current inflationary pressures for Pennsylvania ratepayers is contrary to OCA's long-opposed position concerning the use of general inflationary factors or

[1] Rebuttal Testimony of Jessica R. Rogers at 13:7-8.

other generic economic data as the basis for individual cost claims.[2] Finally, the Company argues that I misconstrue the scope of utility regulations, which it claims is to ensure that utility rates are just and reasonable based on the prudent costs of providing utility service.[3]

Q. DID YOU ARGUE IN YOUR DIRECT TESTIMONY THAT UTILITY REQUESTED RATE INCREASES SHOULD BE "ENTIRELY" EVALUATED ON MACROECONOMIC ISSUES?

A. No. My direct testimony explains that utility rate increases do not occur in a vacuum, a position the Company agrees with.[4] To this end, my direct testimony contains an extensive discussion of current macroeconomic conditions affecting Pennsylvanians. I specifically found that average Pennsylvanians are still struggling with lingering inflation concerns while also facing potential additional concerns due to current hostilities in the Persian Gulf.[5] This while the Company's parent company has seen increasing stock prices for its shareholders and no obvious market distress.[6] Rather than arguing that the Company's proposed rate increase, or any other proposed utility rate increase, should be "entirely" evaluated on these macroeconomic issues, I recommend that the Commission take these concerns, including consumer affordability concerns, into consideration when determining just and reasonable rates for the Company.[7]

Q. DID YOUR DIRECT TESTIMONY SUPPORT A SECONDARY POSITION OF A RATE DECREASE FOR THE COMPANY?

A. No. The Company states in its rebuttal testimony that I supported a secondary position of a rate decrease for the Company in my direct testimony, which the Company argues would be

[2] Rebuttal Testimony of Jessica R. Rogers at 15:17-20.
[3] Rebuttal Testimony of Cyndee S. Fang at 5:18-20.
[4] Rebuttal Testimony of Jessica R. Rogers at 16:9.
[5] Direct Testimony of Michael W. Deupree at 20:7-9.
[6] Direct Testimony of Michael W. Deupree at 20:9-10.
[7] Direct Testimony of Michael W. Deupree at 20:10-11.

unreasonable and confiscatory.[8] No such position was laid out in my direct testimony or here in my surrebuttal testimony. Ms. Jennifer L. Rogers presents OCA's recommended overall revenue sufficiency for UGI-G.

Q. IS IT A RECOGNIZED ELEMENT OF UTILITY REGULATION THAT POLICY MAKERS SHOULD CONSIDER MACROECONOMIC CONDITIONS WHEN DETERMINING JUST AND REASONABLE RATES?

A. Yes. Company witness Fang argues that the Commission's statutory obligation is to ensure that utility rates are just and reasonable based on prudent costs.[9] While I have been informed that OCA will address legal arguments in its brief, from a policy perspective it is generally accepted that fixing just and reasonable rates involves a balancing of utility and consumer interests, as explained by the U.S. Supreme Court in its landmark 1944 decision in *Federal Power Commission v. Hope Natural Gas Company*.[10] To this end, I argue that the Commission should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company.[11]

Q. HAVE OTHER PROMINENT FIGURES EXPRESSED SIMILAR CONCERNS IN PENNSYLVANIA SUBSEQUENT TO THE FILING OF YOUR DIRECT TESTIMONY?

A. Yes. On April 29, 2026, Governor Josh Shapiro issued an open letter to the Commission arguing that customers across the Commonwealth are experiencing higher utility costs, and that rising utility bills have become a driver of inflation.[12] Governor Shapiro stated that utilities must seek ways of procuring capital to finance investments in more affordable ways, conscious of the

[9] Rebuttal Testimony of Cyndee S. Fang at 5:18-20.
[10] *See*, *Federal Power Com'n v. Hope Natural Gas Co.,* 320 U.S. 591 (1944); The rate-making process under the [Natural Gas Act], i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interest.
[11] Direct Testimony of Michael W. Deupree at 20:10-11.
[12] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 1.

utility burdens facing many consumers across the Commonwealth.[13] In this, Governor Shapiro's message appears to mirror my general argument that the Commission should balance consumer affordability concerns with the financial interests of utilities when determining just and reasonable rates for the Company. I have attached Governor Shapiro's letter to this surrebuttal testimony as Exhibit MWD-9. Likewise, subsequent to withdrawing a proposed increase in rates for its electric and gas operations, David Vahos, the president and chief executive officer ("CEO") of PECO Energy Company ("PECO") stated that PECO's decision to withdraw was based on customer affordability considerations. I have attached PECO's press release to this surrebuttal testimony as Exhibit MWD-10.

> While our filing with the [Commission] would have provided needed improvements in safe and reliable energy delivery, we recognize that Pennsylvanians are struggling with basic necessities like gas, food, and energy and have decided to withdraw our proposal.[14]

Q. IS IT INCONSISTENT TO ASK THE COMMISSION TO CONSIDER LARGER MACROECONOMIC CONCERNS WHEN EVALUATING THE COMPANY'S PROPOSED RATE INCREASE IN LIGHT OF THE OCA'S HISTORIC OPPOSITION TO USE OF BROAD INFLATION FACTORS IN DETERMINING INDIVIDUAL COSTS?

A. No. The Company attempts to argue that historic differences of opinion on the relevance of using broad inflationary factors to determine individual cost forecasts is equivalent to recognizing that consumer price inflation negatively affects consumer affordability. The two concerns are not equivalent. The first represents differences of opinion regarding the robustness of mechanical calculations of filed utility costs. I am advised by counsel for the OCA that the use

[13] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 1.
[14] PECO Communications (April 16, 2026), "PECO Withdraws Electric and Natural Gas Regulatory Rate Review Filings to Prioritize Customer Affordability."

of inflationary factors to adjust individual, line item expenses bears directly on whether a utility has presented sufficient evidence to meet its burden of proof regarding specific expense adjustments.[15] The second merely asks the Commission to recognize the reality that average customers are facing increased costs from several segments of the economy, and that rising utility costs may negatively contribute to these already increasing costs.

Q. HOW DO YOU RESPOND TO THE COMPANY WITNESS ROGER'S CLAIM THAT THE COMPANY IS ALSO "EXPERIENCING INFLATIONARY PRESSURES THAT ARE INCREASING [ITS] COSTS"?[16]

A. As I stated in my direct testimony, increased operating costs to UGI-G caused by the current inflationary environment has not caused noticeable negative impacts on UGI-G's shareholder income or UGI-G's parent company stock price. This is partially because the Company has the opportunity to request rate increases from the Commission to account for these increased operating costs caused by inflation. Indeed, the Commission should recognize the Company's requested $99.4 million increase in revenues comes immediately on the heels of the Commission approving a $69.5 million increase in revenues in September 2025. The Commission must balance the pressure inflation places on utility operating costs with the general economic effects inflation places on customer affordability, rather than shifting all inflationary risks from utilities to ratepayers.

Q. DOES THE COMPANY HAVE COMMISSION-APPROVED MECHANISMS TO ADDRESS UTILITY AFFORDABILITY?

A. Yes. The Company references its Universal Service Programs ("USPs"), including the Consumer Assistance Program ("CAP"), as mechanisms that are designed to address utility

[15] 66 Pa. C.S. § 315(e).
[16] Rebuttal Testimony of Jessica R. Rogers at 16:9-20.

affordability by reducing arrearages and maintaining service for low-income households.[17] While USPs serve an important role in addressing affordability concerns for low-income ratepayers, the Commission should recognize that the current affordability crisis caused by years of high general inflation is impacting all Pennsylvanians, even if the effects of said crisis fall disproportionately on low-income households. Addressing affordability concerns only through increased funding of USP programs or expanded access to said programs amounts to nothing more than a Band-Aid fix to a larger problem.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I continue to recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns while also facing potential additional concerns due to fallout from the conflict in the Persian Gulf. Meanwhile, the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. Governor Shapiro's recent open letter raising similar concerns only strengthens the urgency for the Commission to recognize these larger concerns, and the broader context surrounding the Company's proposed rate increase.

III. <u>WEATHER NORMALIZATION ADJUSTMENT (WNA)</u>

Q. PLEASE SUMMARIZE THE COMPANY WITNESS TAYLOR'S RESPONSE TO INTERVENORS' CONCERNS REGARDING THE COMPANY'S WNA.

[17] Rebuttal Testimony of Cyndee S. Fang at 7:7-11.

A. The Company argues that the WNA has produced net WNA charges due to warmer than normal weather conditions since November 2022, when the WNA went into effect, and the use of a 15-year average to calculate normal weather conditions.[18] The Company argues that the fact that the presence of net WNA charges does not demonstrate that the WNA is structurally biased against customers or failing to function as designed.[19] The Company also takes issue with my arguments that the WNA is not needed in the context of other mechanisms at the Company's disposal to address regulatory lag, arguing that the WNA is not designed to address regulatory lag.[20]

Q. DO YOU AGREE WITH THE COMPANY'S CHARACTERIZATION OF THE WNA?

A. No. As discussed in my direct testimony, the WNA has produced over $63.1 million in net revenue for the Company since the mechanism was introduced by the Company in November 2022.[21] Indeed, for the period from November 2022 through February 2026, only in six of the 28 months (or 21 percent) that the WNA has been in place did ratepayers see credits under the mechanism. The Commission should furthermore recognize that this trend of WNA charges will likely continue in the remaining months of the 2025-2026 heating season (i.e. the months of March and April) due to the abnormally warm spring Pennsylvania has experienced. Rather than being a symmetric mechanism designed to produce both credits and charges for ratepayers, the WNA has functioned as an asymmetric mechanism.

Q. IS IT SURPRISING THAT THE COMPANY'S WNA MECHANISM HAS RESULTED IN DISPROPORTIONATELY PRODUCED SURCHARGES FOR RATEPAYERS?

[18] Rebuttal Testimony of John D. Taylor at 32:16-18.
[19] Rebuttal Testimony of John D. Taylor at 32:18-21.
[20] Rebuttal Testimony of John D. Taylor at 32:4-16.
[21] Direct Testimony of Michael W. Deupree at 34, Table 1.

A. No. Table 1 provides a summary of the results provided in a report prepared on the behalf of several energy advocacy groups in the Pacific Northwest by Graceful Systems that was purportedly designed to support the adoption of revenue decoupling.[22] The table provides the number of instances in which there were observed rate increases or rate decreases for electric and gas utilities under revenue decoupling over a 10-year period. The table shows 72 percent of the gas utilities in the sample and 57 percent of all the electric utilities in the same sample had reconciliations resulting in rate increases instead of rate decreases. This stands in contradiction to the typical utility assertion that decoupling will yield results that are symmetrical (i.e., will lead to equal rate increases and decreases). The results are even more prevalent when examining large reconciliations. Only three percent of all survey reconciliations associated with gas decoupling programs resulted in refunds to customers greater than three percent. This is approximately one-sixth of the 19 percent of surveyed gas decoupling reconciliations that resulted in surcharges to customers greater than three percent.

Table 1: Summary of Lesh Report

Refund/Surcharge	Number of Reconciliations			Share of All Reconciliations		
	Gas	Electric	Total	Gas	Electric	Total
Refund Percent						
Greater than 3 percent	2	0	2	3.1%	0.0%	2.3%
Less than or equal to 3 percent	1	3	4	1.5%	13.0%	4.5%
Less than or equal to 2 percent	2	1	3	3.1%	4.3%	3.4%
Less than or equal to 1 percent	13	6	19	20.0%	26.1%	21.6%

Source: Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling

[22] *See,* Pamela Lesh, Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review (2009).

Q. DO YOU AGREE WITH THE COMPANY'S ASSERTION THAT THE WNA SHOULD BE VIEWED INDEPENDENTLY OF REGULATORY LAG?

A. No. The Company argues that, since it did not explicitly tie its proposal to extend the current WNA mechanism pilot program for another five-year period, that discussions on the role regulatory lag plays in the regulatory process are somehow inappropriate.[23] However, the Commission should recognize that the WNA allows the Company to recover declines in revenues caused by falling use per customer ("UPC") between rate cases due to the growing prevalence of moderating weather. The Company itself described the WNA as helping to ensure that it recovers fixed costs independently of changes in volumetric usage,[24] and discussed moderating weather trends at length in its direct testimony.[25] Indeed, the Company argued that "even though UGI Gas' distribution costs are fixed, there is a risk of over- and under-recovery for the vast majority of costs, resulting in the need for the WNA."[26] If these risks are not symmetric, which historic recoveries through the WNA demonstrate, the WNA in practice acts as a means to shift volumetric risks between rate cases from the Company to its customers.

Q. DID THE COMPANY ADDRESS ANY OF YOUR PROPOSED ALTERNATIVE MODIFICATIONS TO THE WNA?

A. Yes. The Company opposes both expanding the WNA deadband to five percent and eliminating the month of October from the WNA. The Company argues that increasing the current WNA deadband from three to five percent would materially weaken the WNA by expanding the range of weather variation for which no adjustment is made, and as a result would harm both the customers and the Company by omitting smaller deviations in weather that still have meaningful

[23] Direct Testimony of Jessica R. Rogers at 26:6-8.
[24] *See*, Direct Testimony of John D. Taylor at 36:6 to 37:3.
[25] *See*, Direct Testimony of John D. Taylor at Exhibit JDT-2.
[26] Direct Testimony of John D. Taylor at 37:1-3.

effects.[27] Likewise, the Company opposes removing the month of October from the WNA, arguing that there are still some heating requirements during that month.[28]

Q. DO YOU AGREE THAT INCREASING THE WNA DEADBAND FROM THREE TO FIVE PERCENT WOULD HARM BOTH CUSTOMERS AND THE COMPANY BY OMITTING SMALLER DEVIATIONS IN WEATHER THAT STILL HAVE MEANINGFUL EFFECTS?

A. No. As demonstrated above, mechanisms like the WNA predominantly result in surcharges in the utility's favor. This is true for the Company as well since the WNA has resulted in more than $63.1 million in revenues for the Company since it was first implemented in November 2022. So, increasing the WNA deadband to five percent would provide for additional protection to ratepayers from minor deviations from normal weather. It would also place the WNA in-line with the recently modified WNA mechanisms for Columbia Gas.

Q. DO YOU AGREE WITH THE COMPANY THAT THE PRESENCE OF HEATING REQUIREMENTS DURING A MONTH SHOULD BE THE BASIS FOR INCLUSION IN THE WNA?

A. No. The Company's finding that there are some customer heating requirements during the months of October and April is irrelevant to the question at hand. The Commission need not, nor should it, shift all volumetric weather-related risks from the Company to customers. As shown in Table 2, very little of the annual average customer heating requirements are included in the month of October. Specifically, the month of October represents 6 percent of the total annual heating requirement in Pennsylvania as represented by HDDs. Indeed, the months of November through April contain approximately 89 percent of all Pennsylvania heating requirements.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE WNA?

A. I continue to recommend the following from my direct testimony:

- The Commission should affirmatively discontinue UGI-G's current WNA mechanism. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the three years the mechanism has been in operation, even though the mechanism was designed as a pilot to symmetrically provide both surcharges and credits to customers. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a fully projected future test year ("FPFTY") and distribution system improvement charge ("DSIC").
- If the Commission decides to continue the WNA, I recommend that it be continued as a three-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase the deadband from three percent to five percent and eliminate the month of October from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot that the Commission approved for Columbia Gas of Pennsylvania (Columbia Gas).

IV. ALLOCATED COST OF SERVICE STUDY

Q. WHAT IS THE COMPANY WITNESS TAYLOR'S RESPONSE TO YOUR RECOMMENDATIONS REGARDING THE COMPANY'S ACOSS?

A. The Company continues to argue for its proposed Average and Excess ("A&E") cost allocation method to allocate costs associated with distribution mains. Specifically, the Company argues that an A&E cost allocation recognizes that peak-related demand remains the dominant cost driver in determining how large the distribution system must be.[29] The Company furthermore argues that my proposed alternative peak and average ("P&A") cost allocation method using the Company's system load factor, "represents a fundamental misunderstanding of how distribution mains are designed and what drives their cost."[30] The Company also argues that the P&A methodology "inherently double-counts average demand."[31]

Q. DO YOU AGREE THAT PEAK-RELATED DEMAND IS THE ONLY COST DRIVER OF UTILITY SYSTEM INVESTMENTS IN DISTRIBUTION MAINS?

A. No. The Company insinuates that peak-related demand is the only, or at least represents the vast majority of, cost driver for investments into distribution mains, other than customer-related costs, which the Company correctly does not include in its allocation of the cost of mains. The reality is that natural gas facilities are used year-round, and utility system planners must consider non-peak use in addition to peak demand use when designing distribution systems. This was recognized by the Federal Power Commission ("FPC") in 1952, in its decision involving the Atlantic Seaboard Corporation.[32] Indeed, the FPC found that "both capacity and annual use are important considerations in the conception of the project," and that therefore both capacity and throughput are cost causation factors driving capital outlays for a pipeline project.[33]

> … A pipeline would not normally be built to supply peak service, that is to say, service on the peak days only… pipelines are built to

[29] Rebuttal Testimony of John D. Taylor at 11:17-18.
[30] Rebuttal Testimony of John D. Taylor at 12:4-9.
[31] Rebuttal Testimony of John D. Taylor at 13:2-12.
[32] Direct Testimony of Michael W. Deupree at 50:18-24, *citing* Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.
[33] Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

> supply service not only on the few peak days but on all days throughout the year… Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that reasonably accurate results can be achieved only by allocating the fixed expenses flowing from the capital outlay to both operating functions, viz., capacity and volume.
>
> …
>
> To reiterate – and emphasize – fixed costs or expenses are incurred for both peak use and annual use in respect to both demand and volumetric functions. They are important cost factors in respect to both services. To achieve a reasonably equitable result they must be apportioned to both services.[34]

Q. HAS THE COMMISSION ITSELF RECENTLY WEIGHED IN ON THE NEED TO INCLUDE VOLUMETRIC CONSIDERATIONS WHEN CLASSIFYING COSTS ASSOCIATED WITH DISTRIBUTION MAINS AS CUSTOMER-RELATED?

A. Yes. In its recent 2025 decision regarding proposed rates for Columbia Gas, the Commission adopted a P&A cost allocation method to classify and allocate costs associated with natural gas distribution mains.[35] In reaching its decision, the Commission directly found that investments in natural gas distribution mains are driven by both annual and peak demands.[36]

> Furthermore, distribution mains exist and are related to both annual demands and peak demands. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands as in Columbia's Customer-Demand [ACOSS]. The basic reason Columbia invests in its distribution system is to meet the annual demands for gas by customers.[37]

[34] R.L. Conkling (2011), Energy Pricing: Economics and Principles, pages 96-97; *citing* Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43, *emphasis added.*
[35] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499, Opinion and Order at 255.
[36] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499, Opinion and Order at 255.
[37] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499, Opinion and Order at 255, *emphasis added.*

Q. ARE THERE PRACTICAL CONSIDERATIONS TO INCLUDING NON-PEAK USE IN ALLOCATION OF DISTRIBUTION MAIN INVESTMENTS?

A. Yes. The Commission should recognize what excluding non-peak use considerations from allocations of costs associated with distribution mains would mean for interruptible service ("IS") customers. Cost of service analysts typically do not include any peak-day demand requirement for IS customers under the reasonable presumption that the utility would utilize its contractual ability to interrupt service to these customers during peak-day system events. Indeed, the Company in the current proceeding excluded IS from its estimation of peak-day natural gas requirements.[38] If costs associated with natural gas mains were allocated solely on the basis of contribution to peak day demand requirements, these customers would not bear any costs associated with a capital outlay comprising more than $2.5 billion of the Company's total test year ratebase of approximately $4.3 billion, including depreciation expense, return on investment, income taxes, etc. Indeed, it was partially due to concerns related to IS customers that the FPC in its 1952 decision rejected arguments to allocate costs associated with pipeline investments solely on the basis of peak demand considerations, finding it problematic that an IS customers could use a pipeline system for 360 days of the year and be excluded from any cost responsibility associated with the construction of the pipeline due to being interrupted for five or so days.[39]

> If fixed expenses are assigned wholly to the demand or capacity function, then gas service which is interrupted on peak days will not share in any of the fixed costs. Conceivably under such an allocation large quantities of natural gas could be sold to industrials 360 days of the year and interrupted on five or so peak days, and such gas would bear none of the costs incurred in constructing the pipeline facility. In other words, under a strict application of this theory [the peak-responsibility method], the interruptible service would not bear any depreciation expense, return, income taxes, or any part of

[38] Company's Response to I&E-RS-6-D.1.

[39] *Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation*, Federal Power Commission Docket No. 11. F.P.C. 43.

> the other fixed expenses associated with the capital outlay. This would be so even though the capital outlay made the interruptible service possible by providing the means of transportation used extensively by such assumed interruptible service…[40]

Q. DO YOU AGREE WITH THE COMPANY'S ARGUMENT THAT THE P&A COST ALLOCATION METHODOLOGY "DOUBLE COUNTS" VOLUMETRIC USE?

A. No. The Company states an often-repeated claim that P&A cost allocation methodologies "double counts" class average demand consumption during peak demand periods.[41] The Company, consistent with others who extol the supposed superiority of the A&E cost allocation approach, argue that the A&E cost allocation approach solves this double counting problem by using "excess demand" rather than using peak demand requirements in its construction.[42] However, in using the excess component only, the A&E methodology directly places a higher emphasis on each class's demand contribution relative to volume. Thus, the A&E method, itself, suffers from a bias that favors relatively higher load factor classes like industrial customers at lower load factor classes' expense (such as residential and small commercial customers).

Q. WHY ARE THESE DOUBLE COUNTING CLAIMS INACCURATE?

A. The double counting claim conflates the concepts of annual throughput and peak demand and the roles each of these play in utility system planning. These arguments are also faulty since they effectively presume that utilities design systems to first meet the needs of customers without significant weather considerations and only later develop resources dedicated to customers that have these seasonal peaking requirements. In reality, demand and annual throughput reflect

[40] R.L. Conkling (2011), Energy Pricing: Economics and Principles, pages 96-97; *citing* Re: Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.
[41] Rebuttal Testimony of John D. Taylor at 13:2-6.
[42] Rebuttal Testimony of John D. Taylor at 13:6-8.

separate and differing utility planning parameters and system planners develop resources to meet all of their load requirements, not separately to meet individual or class-specific requirement.

Q. CAN YOU PROVIDE AN EXAMPLE OF THIS LOGICAL ERROR?

A. Yes. Consider a firm service customer class with a 100 percent load factor. The A&E methodology will assign the "excess demand" component of the calculation a zero value, since peak demand requirements equal average demand requirements, effectively considering the class as having no peak demand requirements. However, customer classes with a 100 percent load factor utilize system resources during all hours, both peak and off-peak. Thus, the A&E methodology effectively views the utility role in system planning as first serving the needs of its high load factor customers and then serving the needs of weather-sensitive customers, placing all costs associated with excess capacity built into its system on these weather-sensitive customers.

Q. DOES YOUR PROPOSED COST ALLOCATION APPROACH RECOGNIZE THE NEED FOR THE UTILITY TO SERVE BOTH PEAK AND OFF-PEAK SYSTEM DEMANDS?

A. Yes. By weighting the average component by the Company's test year system load factor, and the peak demand component by the inverse (i.e., 1 minus) of the system load factor, my proposed P&A allocation recognizes the weight peak day demand requirements place on the Company's planning relative to annual throughput. Simply put, my proposed cost allocation recognizes that roughly 58 percent of the Company's peak day requirements are indistinguishable from its average demand requirements.

V. RATE DESIGN

Q. PLEASE SUMMARIZE THE COMPANY WITNESS TAYLOR'S POSITION REGARDING YOUR RECOMMENDATION THAT THE COMMISSION REJECT THE

COMPANY'S PROPOSED INCREASE IN ITS RESIDENTIAL BASIC SERVICE CHARGE.

A. The Company continues to advocate for its proposed increase in fixed customer charges, including the proposed 41.5 percent increase in the monthly residential customer charge from $16.25 to $23.00.[43] The Company argues that the proposed monthly residential customer charge is significantly below its finding of customer-related costs for residential customers of $54.03 per month.[44] Likewise, the Company downplays energy conservation and efficiency goals by simply pointing out that rate design must balance multiple regulatory objectives.[45]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S ARGUMENT.

A. In my direct testimony, I independently analyzed Company expenses directly related to providing service to customers and found that customer-related costs to provide service to residential customers on the Company's system of approximately $38.66 per customer per month.[46] Importantly, this means that the Company's current monthly customer charge of $16.25 per month recovers nearly 42 percent of monthly customer-related costs.[47]

Q. WHAT IS THE REASON FOR THE DIFFERENCE IN YOUR ANALYSIS OF CUSTOMER-RELATED COSTS VERSUS THE COMPANY'S?

A. The Company's analysis of customer-related costs includes costs that are not directly related to customer-related expenses, such as overhead costs related to general plant investments and administrative and general ("A&G") expenses.

[43] Rebuttal Testimony of John D. Taylor at 17:18-22.
[44] Rebuttal Testimony of John D. Taylor at 19:7-11.
[45] Rebuttal Testimony of John D. Taylor at 20:6-8.
[46] *See*, Direct Testimony of Michael W. Deupree at Exhibit MWD-8.
[47] Direct Testimony of Michael W. Deupree at 62:12-15.

Q. DOES THE COMPANY DISPUTE YOUR STATEMENT THAT LOW-INCOME CUSTOMERS ARE TYPICALLY LOW-USE CUSTOMERS?

A. Yes. The Company references its analysis finding that customers with "confirmed low-income indicators" had higher average use when compared to the average of the Company's non-low-income customers.[48] Therefore, the Company claims that higher customer charges necessitate lower variable charges which creates social equity concerns by shifting revenue responsibilities from higher income customers to lower income customers.[49]

Q. DO YOU AGREE WITH THE COMPANY'S DESCRIPTION OF CUSTOMER USE BY INCOME GROUP?

A. No. The Company's analysis is based on a very broad description of low-income. The Company's definition of "confirmed low-income indicators," includes those enrolled in the Customer Assistance Program ("CAP"), Low Income Usage Reduction Program ("LIURP"), received an Operation Share grant, or a Low Income Home Energy Assistance Program ("LIHEAP") grant within the prior 12 months.[50] Importantly, this may include households with annual incomes equal to as much as 250 percent of the Federal Poverty Income Guidelines ("FPIG").[51] In 2026, 250 percent of the FPIG in Pennsylvania would have an annual income of $68,300 for a family of three.[52] Importantly, the Census Bureau in 2024 estimated that the median household income in Pennsylvania in 2024 was $77,971,[53] or approximately 14 percent greater than the Company's definition of "confirmed low-income indicators" for a family of three. Indeed, as shown by Witness Colton, low-income households (defined as households in the bottom 20

[48] Rebuttal Testimony of John D. Taylor at 23:5-10; and Direct Testimony of John D. Taylor at 28:14 to 29:2.

[53] QuickFacts – Pennsylvania, United States Census Bureau.

percent by household income) in approximately 63 percent of zip codes the Company operates in have annual household incomes of less than $25,500.[54]

Q. DID THE COMPANY RESPOND TO YOUR ALTERNATIVE RECOMMENDATION IF THE COMMISSION DECIDES AN INCREASE IN RESIDENTIAL BASIC SERVICE CHARGES IS WARRANTED?

A. Yes. If the Commission decides that an increase in residential basic service charges is warranted, I argued that this increase should be capped at the overall allowed increase in residential rates, including scalebacks for any adjustment in the overall allowed increase in residential rates. The Company disagrees with this alternative recommendation, arguing that basic service charges should be based on the cost to serve, and that scaling back the customer charge merely to match a reduced revenue requirement would disconnect the rate design from cost causation.[55]

Q. DO YOU AGREE WITH THE COMPANY?

A. No. The Commission should recognize that increasing the customer charge disproportionately to volumetric rates increases the burden on low use customers which are typically low-income customers, as well as decreasing the incentive for customers to conserve energy. Partially for this reason, I disagree with the Company's proposed increase in the residential basic service charge. However, if the Commission believes an increase in the residential basic service charge is warranted, it should maintain the existing balance between volumetric and fixed customer charges to not increase the burden on vulnerable communities.

[54] *See* Direct Testimony of Roger D. Colton at 12, Table 3.
[55] Rebuttal Testimony of John D. Taylor, at 29:6-12.

VI. CONCLUSIONS AND RECOMMENDATIONS

A. Having reviewed the rebuttal testimony filed by the Company in this proceeding, I continue to recommend the Commission:

- Require some level of shared burden in light of recent macroeconomic challenges, balancing consumer affordability concerns with the financial interests of the Company.
- The Commission should affirmatively discontinue the current WNA. The mechanism has failed to produce balanced outcomes for ratepayers, functioning as an asymmetric surcharge on customers' bills for the three full years the mechanism has been in operation. If, in the alternative, the Commission decides to continue the WNA, I recommend the Commission increase the deadband from three percent to five percent, and eliminate the month of October from the WNA period.
- Reject the Company's proposed A&E cost allocation method to allocate costs associated with distribution mains within the Company's ACOSS. In the alternative I recommend the Commission approve an alternative allocation method of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor.
- Adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend the Commission limit the rate increase to any single customer class to no more than 1.15 times the system average increase.
- Reject the Company's proposed increase in residential and commercial customer charges. The Company's proposed increase in customer charges comes in the immediate aftermath of an 8.3 percent increase in these same charges in the Company's prior rate case, Docket No. 2024-3052716. Furthermore, an analysis of customer-related costs finds that residential rate classes are currently recovering a significant portion of customer-related costs through monthly customer charges. If the Commission decides in the alternative that an increase in monthly customer charges is warranted, these increases should be limited to the percentage increase in class revenue requirement. This would furthermore be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Open Letter from Governor Josh Shapiro dated April 29, 2026

GOVERNOR JOSH SHAPIRO

April 29, 2026

Dear Utility Leaders:

As you are no doubt aware, many of your customers across the Commonwealth are experiencing markedly higher utility costs. Rising utility bills have themselves become drivers of inflation. While there are many factors affecting those increases, several core causes are directly within your control and result from your policy and fiscal decisions, including the excessive rate requests several utilities have sought in recent years. Last year alone, 13 Pennsylvania utilities requested $975 million in higher rates after those very same utilities had earned a total of $1.4 billion in profits in 2024.

We have reached a tipping point, and this is a moment to put your customers first and change the behaviors causing rate increases. As I've expressed publicly and privately, I believe the 20th century utility model is broken—we can no longer simply prioritize corporate profitability to drive infrastructure development. Rather, we must be laser focused on delivering on the actual needs of our communities. As I stated clearly in my Budget Address in February, Pennsylvania consumers should not be asked to pay a single dollar more than is needed to support a safe and reliable utility system.

Change is needed, and my Administration stands ready to support each Pennsylvania utility in raising the capital you need to invest in your service territories and workers, both in modernizing with cost-effective new technologies and maximizing the existing infrastructure that you have developed over time. However, as we work together to implement this new approach, you must seek to procure that capital in more affordable ways, conscious of the utility burdens facing many consumers across our Commonwealth.

Open Letter from Governor Josh Shapiro dated April 29, 2026

I write today to lay out three commonsense practices to ensure the needs of Pennsylvanians come first. My Administration will use these three practices as a benchmark to evaluate rate case proposals going forward. Let me be clear: my Administration and I will vocally and forcefully oppose rate case requests from utilities that fail to adhere to these three commonsense practices.

First, utilities should seek to raise the most cost-effective forms of capital. Best practices now require you to protect consumers by disfavoring expensive equity when lower-cost debt is available. Given the low risk profile of monopolistic utilities, which maintain a captive rate base able to repay obligations over time, consumers should not be expected to bolster corporate profits through over reliance on costly equity. This means debt should normally represent a clear majority of a utility's proposed ratemaking capital structure, as it does in many other lower-risk industries. As one measure of this approach, any equity share proposed in a rate case in excess of the amount of equity employed by the utility's parent holding company will require extraordinary justification to receive my Administration's support.

For utilities looking to find low-cost sources of capital, my Administration encourages you to apply to the Department of Energy, which is currently offering loan terms as favorable as the 10-year U.S. Treasury yield plus 35 basis points. By comparison, the average Pennsylvania utility requested a return on equity a staggering 682 basis points above the 10-year U.S. Treasury yield last year. Before raising such expensive equity, you should take advantage of more affordable sources of capital, like these loans, that many of your fellow utilities across the country are pursuing. My Administration stands ready to facilitate an introduction to loan officers at the Department of Energy upon your request.

Second, whenever new revenue is sought, a utility must explain in plain, clear language why its proposed investments are necessary, using transparent data to identify a specific reliability or safety concern that will be addressed, or demonstrating with a thorough cost/benefit analysis that the investment will produce significant savings or reliability benefits for consumers. This means showing the value customers will receive in terms of discrete improvements producing tangible outcomes that are timebound, verifiable, and logically linked to the need for additional capital. Creating real value for customers also means maximizing existing grid resources in ways that control costs and defer the need for future upgrades. You must also describe explicitly what amount of your

requested rate increase will be remitted to shareholders through corporate dividends or other means, as compared to what would be used to directly advance the needs of your customers.

Third, you must provide transparent, justifiable equity returns. Pennsylvania has a long, proud tradition of trusting free markets to deliver fair, transparent pricing. In fact, this year marks the 30th anniversary of Act 138, which introduced competition into our utility sector for the first time. That bipartisan law embodies Pennsylvania's deep-seated belief that free-market competition—when properly implemented and overseen—is the best tool for delivering customers the fair value they deserve. Today, we use markets to price our wholesale power and rely on principles of competition to fairly and impartially award public contracts. Yet less accurate administrative determinations—essentially amounting to educated guesses—still govern how much utilities earn on their equity investment. And all too often the outcome of this administrative process is shrouded in "black box" settlements, that do not provide the public with transparency about costs they will have to pay. These vestiges of the past need to evolve to ensure that utilities are not seeking excessive profits but only the opportunity to earn the fair rate of return to which they are entitled.

To accomplish this, utilities can prove their need for a requested return on equity by providing a benchmark (representing at least 10% of the incremental requested equity) that is transparently derived through a public process with competitive bidding by multiple participants to establish a fair market cost of that equity. This sample offers the energy consumer and Public Utility Commission real-world evidence of the proper authorized return on equity, an amount that will allow the utility to earn reasonable equity returns under efficient operations. If a utility declines to justify its requested return on equity through a competitive, transparent process, it creates a presumption in the view of my Administration that the requested rate is higher than would have been derived from such a competitive process. Absent extraordinary and unforeseen circumstances, a utility can overcome that presumption by requesting a return on equity that does not exceed the rate of the current 10-year U.S. Treasury yield plus the five-year median of the equity risk premium as published in the Federal Reserve's Financial Stability Reports. In simple terms, this allows the filing utility to earn the same expected return as the stock market as a whole, according to Federal Reserve estimates, comfortably exceeding typical Public Utility Commission calculations of risk for the utility sector.

Open Letter from Governor Josh Shapiro dated April 29, 2026

This provides an outcome that is fair for your utility and your customers even without an auction or other market-based price discovery mechanism.

This letter is an effort to be up front with you about my Administration's approach to rate requests going forward. In directly laying out these practices, I am making clear my expectations. I stand ready to collaborate with you, the Public Utility Commission, and other stakeholders in advancing thoughtful rate requests that put Pennsylvania families and businesses first and control costs after years of unacceptably high rate increases. Should you wish to have my Administration's support for any future rate requests, you must submit a description of your compliance with these practices to my Special Counsel for Energy Affordability alongside your rate case filings.

I appreciate your compliance with these practices and look forward to working together to control costs for ratepayers and build out the needed infrastructure for our Commonwealth.

Sincerely,

Governor Josh Shapiro

PECO Communication dated April 16, 2026

FOR IMMEDIATE RELEASE

PECO Withdraws Electric and Natural Gas Regulatory Rate Review Filings to Prioritize Customer Affordability

PHILADELPHIA | April 16, 2026

PECO Communications | PECO.Media@exeloncorp.com

PHILADELPHIA, PA (April 16, 2026) – Citing significant financial pressures facing households and businesses across southeastern Pennsylvania, PECO announced it is withdrawing its previously filed electric and natural gas distribution rate review filings with the Pennsylvania Public Utility Commission (PUC). The decision reflects a deliberate effort to prioritize customer affordability while continuing to deliver safe and reliable service.

Customers and communities across the region are facing sustained financial strain driven by rising costs for housing, food, healthcare, transportation, energy supply costs, and other everyday essentials. Against that broader economic backdrop, and taking into consideration conversations with Governor Josh Shapiro, as well as input from customers, community partners, and stakeholders, PECO reassessed the cumulative impact of the proposed rate changes on customers and determined now is not the right time to move forward.

"Keeping bills as low as possible through efforts like PECO's $12.5 million Customer Relief Fund to help low- and middle-income customers struggling with high energy costs is a top priority," said David Vahos, PECO president and CEO. "While our filing with the PUC would have provided needed improvements in safe and reliable energy delivery, we recognize that Pennsylvanians are struggling with basic necessities like gas, food, and energy and have decided to withdraw our proposal. We look forward to working with stakeholders across the region to find long-term solutions to high energy costs and to make needed investments at another time."

The withdrawn filings were intended to support near- and long-term electric and natural gas system modernization. However, it was determined that advancing those longer-term investments at this time would place additional strain on customers who are already managing significantly higher energy supply costs and broader cost-of-living challenges.

This decision reflects a careful balance between customer affordability and the company's responsibility to deliver high-quality service for the long term. PECO is committed to putting customers and communities first and acting responsibly when making major decisions. The company will continue near-term investments focused on system safety, essential maintenance, operational integrity, and reliability standards customers depend on every day. Customers can expect continued strong reliability performance as PECO continues to manage costs responsibly.

At the same time, PECO will continue evaluating longer-term grid modernization investments that support economic growth, job creation, and evolving energy needs across southeastern Pennsylvania. Withdrawing the filings gives the company the flexibility to better assess the timing, scope, and sequencing of those investments in the context of affordability and system priorities.

The company will also refocus on efforts to enact changes that will help to drive down energy supply prices – costs that the company does not control or profit from – to ensure adequate energy supply is available to meet rising demand. This continued "**all-of-the-above**" strategy is essential to continued affordability and reliability.

Safety remains non-negotiable. This strategic pivot does not change how PECO operates or protects its electric and natural gas systems, its employees, or the communities it serves.

PECO remains committed to a strong, transparent partnership with the PUC and will continue engaging regulators and stakeholders as it evaluates the appropriate path forward.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission

v. Docket No. R-2025-3059523

UGI Utilities, Inc. - Gas Division
:

VERIFICATION

I, Michael Deupree, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement No. 1SR, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

Schedules Accompanying Direct Testimony:

- Appendix A – Resume of Jennifer L. Rogers
- Schedules JLR-1 Through JLR-23

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jennifer L. Rogers. My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. I am a Principal and Vice President at Exeter Associates, Inc. ("Exeter"). Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND QUALIFICATIONS.

A. I received a Master of Arts degree in Economics from Northeastern University. I also have a Bachelor of Arts degree in Economics with a minor in Environmental Studies from St. Mary's College of Maryland. I attended the 42nd Eastern National Association of Regulatory Utility Commissioners ("NARUC") Utility Rate School. I have also completed the Institute of Public Utilities Accounting and Ratemaking Course and the Advanced Course: Regulatory Accounting and Auditing, as well as EUCI's Electric Cost-of-Service Course.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. I have been employed with Exeter since 2009, initially as a Research Assistant before being promoted to Economist, then Senior Economist, and then Lead Economist. I am now a Principal and Vice President for the firm. At Exeter, I review utility rate filings and provide analysis of revenue requirement issues. I also evaluate and forecast power supply requirements, costs, and renewable energy needs; provide bill and rate analysis; and review energy use, scheduling, and scheduling deviation data for clients. In addition, I conduct utility service assessments to identify areas for potential utility cost savings, providing detailed analysis of supply contracts, energy use, and a review of billing practices.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS ON UTILITY RATES?

A. Yes. I have previously presented testimony before the Pennsylvania Public Utility Commission; the Philadelphia Water, Sewer, and Storm Water Rate Board; the Maryland Public Service Commission; the State of Rhode Island Public Utilities Commission; the Public Utility Commission of Texas; the Maine Public Utilities Commission; the State Corporation Commission of the State of Kansas; and the Arizona Corporation Commission. My resume is attached as Appendix A.

Q. ON WHOSE BEHALF ARE YOU APPEARING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. Exeter has been retained by the OCA to assist in the evaluation of the application of the UGI Utilities, Inc. – Gas Division ("UGI" or "Company") to increase base rates for gas service. My direct testimony presents my findings with respect to UGI's revenue requirements and its proposed rate increases. I calculate UGI's rate base, pro forma operating income under present rates, and overall revenue deficiency based upon my recommended adjustments

II. SUMMARY AND RECOMMENDATIONS

Q. PLEASE SUMMARIZE THE RATE RELIEF REQUESTED BY UGI IN ITS FILING.

A. On January 28, 2026, UGI filed an application with the Pennsylvania Public Utility Commission ("Commission") to increase its base rates for gas service. UGI is requesting an overall rate increase of $99.368 million. The Company's proposed rate

increase is based upon the fully projected future test year ("FPFTY") ending September 30, 2027.[1] The Company's requested rate increase reflects an overall rate of return ("ROR") of 8.20%.[2]

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

A. I have been advised by OCA counsel that due to substantial consumer affordability concerns, the OCA will be arguing in its legal briefs that the Commission should keep UGI's rates at their current levels at this time. My testimony will address the alternative OCA position if any rate increase is ultimately ordered by the Commission.

As discussed in OCA witness David Garrett's testimony, OCA is presenting a primary ROE and debt ratio recommendation, and an alternative recommendation in the event the Commission adopts UGI's capital structure. As shown on Schedule JLR-1 (CONFIDENTIAL), based on the OCA's primary recommendation of 8.8% authorized ROE and 51% debt ratio, I have determined that UGI's proposed revenue increase should be reduced to reflect a decrease of $15.8 million for the FPFTY. This is $115.2 million less than the Company's requested increase of $99.368 million. This is the amount by which revenues exceed those required to generate an overall ROR on rate base of 6.95%, which is per the primary recommendation detailed in the Direct Testimony of OCA witness David Garrett, after accounting for the OCA's adjustments to UGI's claimed rate base and operating income.

However, if the Commission adopts UGI's capital structure, then utilizing the OCA's alternative recommendation of an 8.5% ROE, I have determined that UGI's proposed revenue increase should be reduced to reflect a decrease of $9.5 million for the FPFTY, as shown on Schedule JLR-18 (CONFIDENTIAL).

[1] Direct Testimony of Hans G. Bell, 5:22 through 6:1.
[2] Direct Testimony of Tracy A. Hazenstab, 6:13-14.

Q. WHAT PERIOD HAVE YOU USED IN MAKING YOUR DETERMINATION OF UGI'S REVENUE REQUIREMENT?

A. I have determined my revenue requirement recommendations based on the FPFTY ending September 30, 2027. This is the same period used by the Company to develop its revenue requirement.

Q. IN CONNECTION WITH THIS PROCEEDING, WHAT DOCUMENTS HAVE YOU EXAMINED AND REVIEWED IN MAKING YOUR RECOMMENDATIONS?

A. I have reviewed UGI's rate filing, testimony, and exhibits. I also reviewed the Company's responses to data requests propounded by the OCA, the Bureau of Investigation and Enforcement ("I&E"), RESA, and CAUSE-PA.

Q. HAVE YOU PREPARED SCHEDULES TO ACCOMPANY YOUR TESTIMONY?

A. Yes. I have prepared Schedules JLR-1 through JLR-23. As discussed earlier, OCA witness David Garrett's testimony is presenting a primary ROE and debt ratio recommendation, and an alternative recommendation in the event the Commission adopts UGI's capital structure (referred to as the "alternative recommendation" below). Schedules JLR-1 through JLR-17 reflect the primary recommendation, while Schedules JLR-18 through JLR-23 reflect the alternative recommendation.

Schedule JLR-1 (CONFIDENTIAL) provides a summary of the calculation of the increase in revenues after reflecting the adjustments proposed by the OCA. Schedule JLR-2 provides my recommended rate base. Schedule JLR-3 (CONFIDENTIAL) presents the summary of the cost of service (revenues and operating expenses) adjustments. My adjustments to UGI's claimed revenues and operating expenses are presented on Schedules JLR-4 through JLR-17. Schedule JLR-18 (CONFIDENTIAL)

is the alternative recommendation version of Schedule JLR-1 (CONFIDENTIAL). Schedule JLR-19 is the alternative recommendation version of Schedule JLR-2. Schedule JLR-20 (CONFIDENTIAL) is the alternative recommendation version of Schedule JLR-3 (CONFIDENTIAL). Schedule JLR-21 is the alternative recommendation version of Schedule JLR-4. Schedule JLR-22 is the alternative recommendation version of Schedule JLR-16. Schedule JLR-23 is the alternative recommendation version of Schedule JLR-17.

Q. PLEASE EXPLAIN HOW THE REMAINING SECTIONS OF YOUR TESTIMONY ARE ORGANIZED.

A. The discussion of my findings and recommendations is presented in the following section, Section III. In that section, I address the revenue requirement issues (rate base and operating income) that I identified in this proceeding. Where I recommend an adjustment to a particular component of the rate base, revenues, or expenses, I document and explain the reason for the adjustment and note the related schedule in which the detailed calculations can be found. An outline of the topics within the section is set forth in the Table of Contents of my testimony.

III. ADJUSTMENTS

A. Allowance for Cash Working Capital

Q. HOW DO YOU DEFINE CASH WORKING CAPITAL?

A. For ratemaking purposes, cash working capital is the investment that a utility needs to have on hand to fund its day-to-day operations. Positive cash working capital represents funds provided by investors that should be included in rate base so that the utility earns a return on it. Negative cash working capital represents funds supplied by ratepayers

that should be recognized as a rate base offset to reflect funds advanced for operations by ratepayers.

Q. HOW DOES THE COMPANY REFLECT CASH WORKING CAPITAL IN ITS FILING?

A. The Company's cash working capital allowance has been determined based upon the results of a lead/lag study. A lead/lag study is an in-depth analysis that measures the difference between the lapse of time when a company receives revenue for the provision of service and the lapse of time when a company pays for the costs of providing service. This difference is expressed as a number of days and is used to calculate the level of investor-supplied funds advanced for operations, or the funds advanced by customers for operations.

Q. WHAT CHANGES HAVE YOU MADE TO THE ALLOWANCE FOR CASH WORKING CAPITAL?

A. I have incorporated the adjustments to operations and maintenance ("O&M") expenses and taxes that I am recommending below, as these serve as the basis upon which the cash working capital is calculated. I have also flowed through the OCA's recommended long-term debt ratio and cost of long-term debt into the calculation of the interest payments portion of the cash working capital requirement. I have therefore made an adjustment to cash working capital to reduce rate base by $3.76 million, as shown on Schedule JLR-4.[3]

B. Depreciation Expense

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO DEPRECIATION EXPENSE.

[3] Schedule JLR-21 is the alternative recommendation version of Schedule JLR-4, in which case the adjustment to cash working capital would reduce rate base by $2.38 million.

A. I have applied the depreciation recommendations per the direct testimony of OCA witness James Garren to the calculation of depreciation expenses. As shown on Schedule JLR-5, this decreases depreciation expenses by $21.8 million. I have also made the corresponding adjustment to accumulated depreciation, increasing rate base by $21.8 million, also shown on Schedule JLR-5. If the Company is able to calculate the related ADIT adjustment based on the difference between book depreciation for the FPFTY plant and the tax depreciation, and provide this in Rebuttal, I may update my recommendation in Surrebuttal to incorporate this flow through adjustment as well.

C. Rate Case Expense

Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO RATE CASE EXPENSE?

A. The Company presented a total rate case expense of $1.76 million, normalized over one year, resulting in an annual recovery of $1.76 million for the FPFTY rate case expense.[4] I recommend that the normalization period be increased to two years because the recovery of rate case expense should be spread over the period that benefits from incurring the rate case expense. The benefit period is typically measured as the period between rate cases. As explained in *A Guide to Utility Ratemaking*, "The Commission's practice is to recognize all prudently-incurred rate case expense and set a normalization period based upon historic filing frequency."[5] The Company's last three filings prior to the current 2026 filing were in 2025, 2022, and 2020.[6] The average length of time between filings is two years, and therefore is the basis of my recommendation. This recommendation decreases O&M expenses by $880,000 as shown on Schedule JLR-6.

[4] Company Exhibit A, Fully Projected, Schedule D-10.

[6] Company response to OCA-14-8.

D. Incentive Compensation Expense

Q. PLEASE DESCRIBE UGI'S INCENTIVE COMPENSATION PLANS.

A. The Company offers several incentive plans, including UGI Utilities Inc.'s Management Incentive Plan, Executive and Non-Executive Annual Bonus Plans, Sales Commission Plan, Discretionary Bonus Policy, Inside Sales Group Incentive Plan, Customer Care Scorecard and Incentive Plan, and Equity Compensation Plans.[7]

Q. DO FINANCIAL PERFORMANCE MEASURES REPRESENT A COMPONENT OF UGI'S INCENTIVE COMPENSATION STRUCTURE?

A. Yes. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

Q. IS IT APPROPRIATE FOR RATEPAYERS TO BEAR THE COST OF INCENTIVE COMPENSATION TIED TO FINANCIAL METRICS?

A. No, it is not. A fundamental principle of ratemaking is that costs should be assigned to those who benefit from them. In the case of incentive compensation tied to financial

[7] UGI Company Filing Book II, SDR-RR-27, and Attachments SDR-RR-27.1 through SDR-RR-27.7.

[redacted]

performance, such as earnings per share, stock price, and total shareholder return, the primary beneficiaries are shareholders. These incentives are specifically designed to increase shareholder value, which is realized through higher stock prices, increased dividends, and enhanced company valuation. The equity compensation plans detail this explicitly, with the Incentive Award Plan stating:

> "The purpose of the Plan is to provide designated Employees, Consultants and Non-Employee Directors with the opportunity to receive Awards hereunder in order to encourage such individuals to contribute materially to the growth of the Company, thereby benefiting the Company's shareholders, and to more closely align the economic interests of such individuals with those of the Company's shareholders."[10]

Ratepayers, by contrast, do not receive these benefits. They do not participate in equity ownership and do not share in financial market gains. Therefore, it is not appropriate to require ratepayers to fund compensation programs that are structured to benefit shareholders.

Q. WHY IS IT IMPORTANT TO CONSIDER THE DIFFERENCE BETWEEN SHAREHOLDER AND RATEPAYER INTERESTS?

A. The interests of shareholders and ratepayers are not always aligned and can at times be directly opposed. Shareholders benefit from increased earnings and returns, while ratepayers benefit from cost control and stable or lower rates. Incentive structures that emphasize financial performance can encourage management to prioritize profitability over affordability or operational efficiency.

Q. ARE YOU RECOMMENDING THAT ALL INCENTIVE COMPENSATION BE EXCLUDED FROM RATES?

A. No, I am not. It is important to distinguish between incentive compensation tied to operational performance and that tied to financial performance. Incentives related to

[10] Company response to SDR-RR-27, Attachment SDR-RR-27.6.

safety, reliability, or customer satisfaction may provide direct benefits to customers and can be appropriate for recovery in rates. However, incentives tied to financial outcomes primarily serve to align management with shareholder interests rather than customer interests. My recommendation is limited to excluding the portion of incentive compensation that is tied to financial metrics, not those tied to operational performance.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO INCENTIVE COMPENSATION.

A. For the reasons explained above, I recommend disallowing incentive compensation expenses related to financial metrics. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

E. Employee Activity Expense

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED EMPLOYEE ACTIVITY EXPENSE.

A. The Company has proposed including costs totaling $583,036 in the cost of service related to employee activities. These expenses are related to items such as picnics, parties, and safety awards.[11]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO INCLUDE EMPLOYEE ACTIVITY EXPENSES IN THE COST OF SERVICE?

A. No, I do not. This expense item relates to costs that do not aid in the provision of service but rather are for items such as a picnic and awards. Ratepayers should not be responsible for expenses which do not relate to the provision of safe and reliable utility service. I am therefore recommending the Commission disallow this expense from

[11] UGI Company Filing Book II, SDR-RR-30(e).

inclusion in the cost of service. This adjustment reduces expenses by $583,036, as presented in Schedule JLR-8.

F. Vacancy Reserve

Q. HAS THE COMPANY INCORPORATED A VACANCY RATE INTO CALCULATIONS OF WAGES AND SALARIES FOR THE FPFTY?

A. Yes, the Company incorporated a vacancy rate within its FPFTY claim. The Company applied a vacancy rate adjustment of 4.7 percent to its labor expense.[12]

Q. DO YOU AGREE WITH THE COMPANY'S VACANCY RATE ADJUSTMENT?

A. No, I do not. In examining historical data, it is clear this proposed vacancy rate is abnormally low compared to the actual level of vacancies experienced over the past three years, as shown in the table below.

Total Vacancy Percentage (%)[1]			
	2022-2023	2023-2024	2024-2025
October	8.3	5.7	4.2
November	8.2	6.2	4.5
December	7.9	6.4	4.8
January	7.5	6.6	5.4
February	7.2	6.8	5.7
March	6.3	7.4	5.7
April	6.1	8.0	5.6
May	3.8	8.6	4.6
June	3.1	9.6	4.4
July	2.9	9.6	4.3
August	3.0	10.2	4.4
September	3.8	10.6	3.9

[1] Company response to I&E-RE-24, Attachment I&E-RE-24(C).

The average vacancy rate across the three-year period is 6.15 percent. Utilizing an abnormally low vacancy rate risks overcollection from ratepayers.

[12] Company response to I&E-RE-25.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE VACANCY RATE.

A. Vacancy rates are a variable element, that may increase or decrease month to month. I therefore believe it is necessary to normalize the vacancy rate as the average value of the last three years to reflect a normalized year. The Company has had an average vacancy rate of 6.15 percent over the past three years, which is the basis of my recommendation. I have applied this value to the salaries value, after adjusting the salaries downward to reflect the incentive compensation adjustment previously recommended in the "Incentive Compensation Expense" section of my testimony to determine the OCA recommended adjustment to salaries for vacancy rate. This adjustment reduces O&M expenses by $1.1 million as shown on Schedule JLR-9 (CONFIDENTIAL). The vacancy rate adjustment also flows through to result in a reduction in payroll taxes of $87,663 as shown on Schedule JLR-10, and employees benefits expense by $265,685 as shown on Schedule JLR-11.

G. Advertising Expense – Conservation of Energy

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED ADVERTISING EXPENSE RELATED TO CONSERVATION OF ENERGY.

A. The Company has stated that it expects to have $272,515 in expenses related to Conservation of Energy in the FPFTY.[13] The Company has indicated that the FPFTY includes costs associated with a marketing campaign promoting the use of natural gas as a more energy efficient and affordable alternative to other competitive fuels.[14]

[13] UGI Company Filing Book I, Section 53.53-III-A-25.

[14] Company response to I&E-RE-43.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED ADVERTISING EXPENSE FOR CONSERVATION OF ENERGY?

A. No, I do not. The Company is showing a significant increase in this expense item over recent years, increasing from $73,040 in FY 2024 to $272,515 in FY 2027.[15] The Company explains in response to discovery that the increase is due to a UGI fuel conversion marketing campaign in FY 2025, which was not run in FY 2023 and 2024.[16] These costs represent an intermittent advertising campaign, rather than a normal, recurring annual expense. Accordingly, it is inappropriate to include these costs in rates as a recurring annual expense, as doing so would result in over-collection from customers in years when such expenses are not incurred.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE PROPOSED ADVERTISING EXPENSE FOR CONSERVATION OF ENERGY.

A. I am recommending isolating the non-recurring portion of the expense and normalizing it for recovery over two years, consistent with the normalization period I have recommended in the "Rate Case Expense" portion of my direct testimony. As FY 2024 did not incur this abnormal periodic expense and FY 2025 did, I have used the difference between the FY 2024 value and FY 2025 value to calculate the non-recurring portion of expense, which I normalized over two years to adjust the FPFTY. This adjustment is presented on Schedule JLR-12, and results in a decrease to O&M expenses of $81,187.

[15] Company response to I&E-RE-43, Attachment I&E-RE-43.
[16] Company response to OCA-14-26.

H. Advertising Expense - Other

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED "OTHER ADVERTISING PROGRAMS" EXPENSES.

A. The Company expects to have $380,397 in expenses related to Other Advertising Programs in the FPFTY, of which $191,149 is attributed to community event sponsorships and $189,249 is attributed to stakeholder newsletters.[17]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO INCLUDE EXPENSES RELATED TO COMMUNITY EVENT SPONSORSHIPS IN COST OF SERVICE?

A. No, I do not. Community event sponsorships are largely promotional in nature and do not relate to the provision of safe, reliable, and adequate utility service to ratepayers, and therefore should not be ratepayer responsibility. I am therefore recommending the Commission disallow this expense from inclusion in the cost of service. This adjustment reduces expenses by $191,149, as presented in Schedule JLR-13.

I. PUC Assessment

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED PUC ASSESSMENT EXPENSE.

A. The Company has derived its PUC Assessment expense projection by taking the 2025 invoice amount and multiplying it by a 14.9% increase to reach a projected 2026 invoice amount, and then again to reach a 2027 invoice amount. The Company derived the 14.9% increase as the average percentage increase over 2022 to 2025. This results in an increase in PUC Assessment expenses from the HTY amount of $4.551 million to $6.006 million in the FPFTY. [18]

[17] Company response to I&E-RE-43, Attachment I&E-RE-43.

[18] Company response to I&E-RE-39, Attachment I&E-RE-39(B-C).

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED PUC ASSESSMENT EXPENSE?

A. No, I do not. In examining the historical data, it is apparent that the PUC Assessment charge does not consistently grow year over year, with no growth at all between 2024 and 2025.

	2022 Invoice	2023 Invoice	2024 Invoice	2025 Invoice
PUC Assessment[1] ($000)	$3,051	$3,523	$4,550	$4,552

[1] Company response to I&E-RE-39, Attachment I&E-RE-39(B-C)

Applying a linear percentage increase to an expense item that may not increase risks overcollection from customers. I believe it is necessary to normalize the expected PUC Assessment expenses by taking the average of the most recent three years to determine a representative annual cost for ratemaking.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE PUC ASSESSMENT EXPENSE.

A. For the reasons detailed above, I am recommending normalizing the annual expense level using the average of the most recent three years. This adjustment reduces O&M expenses by $1.8 million, as shown on Schedule JLR-14.

J. Residential Collection Expense

Q. PLEASE EXPLAIN YOUR RESIDENTIAL COLLECTION EXPENSE ADJUSTMENT.

A. I have applied the recommendation per the direct testimony of OCA witness Roger Colton, removing 50 percent of the residential collection expenses. In response to discovery, the Company was unable to provide the exact dollar amount of residential collection expenses included in the FPFTY, stating the expense is embedded in a

FERC Account which includes other costs as well.[19] I have therefore utilized the 2025 residential collection expense value as a proxy. As shown on Schedule JLR-15, this adjustment decreases O&M expenses by $3.097 million.

K. Interest Synchronization

Q. PLEASE EXPLAIN YOUR INTEREST SYNCHRONIZATION ADJUSTMENT.

A. To determine the tax-deductible interest for ratemaking, I multiplied the OCA's recommended rate base by the weighted cost of debt included in the capital structure. This procedure synchronizes the interest deduction for tax purposes with the interest component of the return on rate base to be recovered from ratepayers. As shown on Schedule JLR-16, this adjustment decreases state income taxes by $909,000 and federal income taxes by $2.4 million.[20]

Q. DOES THIS COMPLETE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[19] Company response to OCA-15-5.
[20] Schedule JLR-22 is the alternative recommendation version of Schedule JLR-16, in which case this adjustment decreases state income taxes by $34,000 and federal income taxes by $89,000.

PUBLIC SCHEDULES ACCOMPANYING THE DIRECT TESTIMONY OF JENNIFER L. ROGERS

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

April 13, 2026

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

APPENDIX A – Resume of Jennifer L. Rogers

JENNIFER L. ROGERS

Ms. Rogers is a Principal and Vice President at Exeter Associates, Inc., with over fifteen years of experience in the energy industry. At Exeter, Ms. Rogers reviews and analyzes utility rate filings, and presents testimony focusing primarily on revenue requirements determination. She also evaluates and forecasts power supply requirements, costs, and renewable energy needs; provides bill and rate analysis; and reviews energy use, scheduling, and scheduling deviation data for clients. In addition, Ms. Rogers conducts utility service assessments to identify areas for potential utility cost savings, providing detailed analysis of supply contracts, energy use, and a review of billing practices.

Education

B.A. (Economics) – Saint Mary's College of Maryland, 2007

M.A. (Economics) – Northeastern University, Boston, MA, 2009

Previous Employment

2009-Current Exeter Associates, Inc.
Columbia, MD

- Principal and Vice President 2025-Current
- Lead Economist 2023-2024
- Senior Economist 2018-2022
- Economist 2011-2017
- Research Assistant 2009-2010

2007-2008 Economics Research and Teaching Assistant
Northeastern University
Boston, MA

Professional Experience

Ms. Rogers' work at Exeter is primarily related to analysis of revenue requirement issues in utility rate filings, analysis power supply acquisition, bill and rate analysis and forecasting, and utility service assessment. Ms. Rogers provides support to the U.S. Department of Energy's Northern California national laboratories, generating cost simulations and power procurement models to forecast future power supply requirements and costs. In addition, Ms. Rogers reviews and tracks the Laboratories' billing, energy use, scheduling, and scheduling deviation data. Ms. Rogers works with the U.S. Air Force Civil Engineer Center to complete utility service assessments to identify areas for potential utility cost savings, providing detailed analysis of energy usage, supply contracts, and a review of billing practices. Ms. Rogers also assists clients in reviewing utility rate filings, providing analysis on revenue requirement issues. Ms. Rogers' work at Exeter has also included assisting in studies of variable generation forecasting, feed-in tariffs for renewable energy generation, and transmission cost allocation methodologies.

As a Research Assistant at Northeastern University, Ms. Rogers worked in the fields of industrial organization and labor economics, while her studies focused on economic modeling and policy analysis. Ms. Rogers developed surveys to be used in a longitudinal labor economics study, tutored undergraduate economics students, and provided research on a variety of economics-related topics.

Expert Testimony

Before the Arizona Corporation Commission, Docket No. E-01933A-25-0103, Tuscon Electric Power Company, 2026, on behalf of the United States Department of Defense and all other Federal Executive Agencies. Testimony addressed revenue requirement issues.

Before the State of Rhode Island Public Utilities Commission, Docket No. 25-30-WW, Veolia Water Rhode Island, Inc., 2026, on behalf of the Division of Public Utilities and Carries. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2024-3052716, UGI Utilities, Inc. – Gas Division, 2025, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2025-3053112, Philadelphia Gas Works, 2025, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Regulatory Commission of Alaska, Docket Nos. U-24-030 and U-24-031, Golden Heart Utilities, Inc. and College Utilities Corporation, 2025, on behalf of the United States Department of Defense and all other Federal Executive Agencies. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2024-3052359, Pike County Light & Power Company – Electric Division, 2025, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2024-3052357, Pike County Light & Power Company – Gas Division, 2025, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2024-3050208, Newtown Artesian Water Company, 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Maryland Public Utility Commission, Case No. 9744, Hagerstown Light Department, 2024, on behalf of the Maryland Office of People's Counsel. Testimony addressed revenue requirement issues.

Before the Maryland Public Utility Commission, Case No. 9719, Easton Utilities Commission, 2024, on behalf of the Maryland Office of People's Counsel. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket Nos. R-2023-3042804 and R-2023-3042805, Community Utilities of Pennsylvania Inc., 2024, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the State Corporation Commission of the State of Kansas; Docket No. 23-EKCE-775-RTS; Evergy Kansas Central, Inc., Evergy Kansas South, Inc. and Evergy Metro, Inc.; 2023; on behalf of the United States Department of Defense and all other Federal Executive Agencies. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2023-3040258, Columbia Water Company, 2023, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Maine Public Utilities Commission, Docket No. 2023-00065, Maine Water Company – Biddeford & Saco Division, 2023, on behalf of the Maine Office of the Public Advocate. Testimony addressed revenue requirement issues.

Before the Philadelphia Water, Sewer, and Storm Water Rate Board, Fiscal Years 2024-2025 Rate Proceeding, Philadelphia Water Department, 2023, on behalf of the Public Advocate. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2022-3032764, Leatherstocking Gas Company, LLC., 2022, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Before the Public Utility Commission of Texas, Docket No. 53601, Oncor Electric Delivery Company LLC, 2022, on behalf of the United States Department of Defense and the Federal Executive Agencies. Testimony addressed revenue requirement issues.

Before the Maryland Public Service Commission, Case No. 9680, Columbia Gas of Maryland, Inc., 2022, on behalf of the Maryland Office of People's Counsel. Testimony addressed revenue requirement issues.

Before the Pennsylvania Public Utility Commission, Docket No. R-2015-2462723, United Water Pennsylvania, Inc., 2015, on behalf of the Pennsylvania Office of Consumer Advocate. Testimony addressed revenue requirement issues.

Schedules Accompanying Surrebuttal Testimony:

- Surrebuttal Schedules JLR-1 Through JLR-23

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jennifer L. Rogers. My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. I am a Principal and Vice President at Exeter Associates, Inc. ("Exeter"). Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. ARE YOU THE SAME JENNIFER L. ROGERS WHO SUBMITTED DIRECT TESTIMONY ON APRIL 13, 2026 IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my Surrebuttal Testimony is to address issues discussed in the Rebuttal Testimony of UGI Utilities, Inc. – Gas Division ("UGI" or "Company") witnesses Tracy A. Hazenstab, Vivian K. Ressler, Daniel V. Adamo, and Amy M. Keller, which was filed on May 13, 2026.

Q. ARE YOU INCLUDING UPDATED SCHEDULES SUMMARIZING THE OCA'S CURRENT REVENUE REQUIREMENT POSITION IN THIS PROCEEDING?

A. Yes. I have attached Surrebuttal Schedules JLR-1 to JLR-23 to this testimony which present the OCA's updated position after taking the Company's rebuttal position into account. My Surrebuttal Schedules utilize the Company's Rebuttal Filing Schedules as the basis of Company data, as these reflect the Company's updated position in this case. In this testimony, I respond to the Company's witnesses' Rebuttal Testimonies on various adjustments I recommended in my Direct Testimony. I have considered the issues addressed in Rebuttal Testimony and discuss these in the Section below. I have determined my revised recommendation that UGI's proposed revenue increase should

be reduced to reflect a decrease of $15.4 million for the FPFTY, based on the OCA's primary recommendation of 8.8% authorized ROE and 51% debt ratio, which is per the recommendation detailed in the Direct Testimony of OCA Witness David Garrett.

As discussed in my Direct Testimony, OCA Witness Garret has proposed this as his primary recommendation. If, however, the Commission adopts UGI's capital structure, then utilizing the OCA's alternative recommendation of an 8.5% ROE, I have determined that UGI's proposed revenue increase should be reduced to reflect a decrease of $9.1 million for the FPFTY, as shown on Surrebuttal Schedule JLR-18.

To the extent that a Company witness's Rebuttal Testimony has addressed my position on an issue developed in my Direct Testimony, but I do not address it in this Surrebuttal Testimony, it should not be construed that I agree with the Company.

II. ADJUSTMENTS

A. Energy Efficiency and Conservation

Q. PLEASE ADDRESS THE REBUTTAL TESTIMONY OF COMPANY WITNESS HAZENSTAB RELATED TO ENERGY EFFICIENCY AND CONSERVATION ("EE&C").

A. In Rebuttal, Company Witness Hazenstab addresses a proposed adjustment to EE&C and attributes it to "OCA witness Walker".[1] To clarify, OCA has not proposed an adjustment to EE&C. Mr. Walker is an I&E witness.

B. Allowance for Cash Working Capital

Q. PLEASE ADDRESS THE REBUTTAL TESTIMONY OF COMPANY WITNESS HAZENSTAB RELATED TO CASH WORKING CAPITAL.

A. As Company Witness Hazenstab notes in Rebuttal, we agree on the methodology used to calculate the cash working capital. However, as expenses serve as the basis upon

[1] Rebuttal Testimony of Tracy A. Hazenstab, 7: 1.

which the cash working capital is calculated, we continue to differ on the final calculated amount.[2] I have incorporated the adjustments to O&M expenses that I am recommending in this Surrebuttal. I have therefore made an adjustment to cash working capital to decrease the Company's rebuttal position rate base by $3.5 million, as shown on Surrebuttal Schedule JLR-4.

C. Depreciation Expense

Q. PLEASE EXPLAIN COMPANY WITNESS KELLER'S REBUTTAL TESTIMONY RELATING TO THE DEPRECIATION EXPENSE ADJUSTMENTS ACCUMULATED DEPRECIATION AND ADIT.

A. In my Direct Testimony, I applied the depreciation recommendations per the direct testimony of OCA witness Garren to the calculation of depreciation expenses.[3] In discovery, I acknowledged the need for an additional adjustment to ADIT, which I stated would be addressed in Surrebuttal.[4] In Rebuttal, Company Witness Keller noted that while the Company did not recommend the depreciation adjustment, if it is accepted, they calculated a $257 million adjustment to accumulated depreciation, and $37 million for the related ADIT adjustment, based on a restatement of accumulated depreciation from 1982 through the present.[5]

Q. DO YOU AGREE WITH THE COMPANY'S CALCULATION OF THE ADJUSTMENT TO ACCUMULATED DEPRECIATION AND ADIT?

A. No, I do not. While I do agree there would be a related adjustment to ADIT in addition to the depreciation expense and accumulated depreciation adjustments shown in my Direct Testimony, the changes should be prospective. It is my understanding that OCA Witness Garren is not recommending a restatement of past depreciation. The

[2] Rebuttal Testimony of Tracy A. Hazenstab, 8: 14-18.
[3] Direct Testimony of Jennifer L. Rogers, 6: 19-24, 7:1-5.
[4] Direct Testimony of Jennifer L. Rogers, 7: 2-5.
[5] Rebuttal Testimony of Amy M. Keller, 3: 8-21, 4: 1-18, and UGI Gas Exhibit AMK-2R.

Company is calculating an accumulated depreciation change from 1982 to present. However, to align with Witness Garren's recommendation, only the FPFTY values would be impacted, not the existing depreciation reserve. Rates would be revised going forward.

Q. WHAT IS YOUR RECOMMENDATION?

A. I continue to reflect the recommendations of OCA Witness Garren, as detailed in his Direct and Surrebuttal Testimonies. These adjustments are shown on Surrebuttal Schedule JLR-5. The information provided in Rebuttal by the Company related to ADIT does not reflect the prospective change OCA has recommended, and I have therefore continued to exclude it, given the lack of available information on the appropriate amount.

D. Rate Case Expense

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO RATE CASE EXPENSE.

A. In its initial filing, the Company presented a total rate case expense of $1.76 million, normalized over one year, resulting in an annual recovery of $1.76 million for the FPFTY rate case expense.[6] In my Direct Testimony, I recommended normalizing the Company's proposed rate case expense over the average length of time between its three most recent filings, consistent with the Commission's policy to set a normalization period based upon historic filing frequency.[7] In Rebuttal, Company witness Hazenstab disagrees with this adjustment on the basis that the Company expects to file its next case in one year.[8]

[6] Company Exhibit A, Fully Projected, Schedule D-10.
[7] Direct Testimony of Jennifer L. Rogers, 7: 7-19.
[8] Rebuttal Testimony of Tracy A. Hazenstab, 6: 9-19.

Q. DO YOU AGREE WITH COMPANY WITNESS HAZENSTAB'S RECOMMENDATION TO USE A NORMALIZATION PERIOD THAT IS LESS THAN THE AVERAGE TIME BETWEEN RATE CASES?

A. No, I do not. While the Company states that it believes it will file its next case sooner than two years, timelines for a Company's rate case filings are subject to any number of factors and variabilities. To use the historical filing frequency of recent cases to determine the normalization period is a method to base costs applied to ratepayers on actual data and evidence rather than a Company's supposition on their general intended timing which would be unreliable. It is also, as I explained in my Direct Testimony, the method in line with established Commission practice.[9] The recovery of rate case expense should be spread over the period that benefits from incurring the rate case expense, which would be typically measured as the historical period between rate cases. I therefore continue to recommend that the normalization period be increased to two years. This results in a decrease to O&M expenses of $880,000, as shown on Surrebuttal Schedule JLR-6.

E. Incentive Compensation Expense

Q. PLEASE EXPLAIN COMPANY WITNESS RESSLER'S REBUTTAL TESTIMONY RELATED TO INCENTIVE COMPENSATION.

A. The Company offers several incentive plans, including UGI Utilities Inc.'s Management Incentive Plan, Executive and Non-Executive Annual Bonus Plans, Sales Commission Plan, Discretionary Bonus Policy, Inside Sales Group Incentive Plan, Customer Care Scorecard and Incentive Plan, and Equity Compensation Plans.[10] In my Direct Testimony, I recommended disallowing the inclusion of the portion of the incentive compensation which primarily benefits shareholders. In the

[9] Reference Direct Testimony of Jennifer L. Rogers, 7: 14-16.
[10] UGI Company Filing Book II, SDR-RR-27, and Attachments SDR-RR-27.1 through SDR-RR-27.7.

FPFTY, I therefore recommended **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** In Rebuttal, Company Witness Ressler disagreed with my recommendation and presented several arguments in response, which I address below.

Q. MS. RESSLER ARGUES THAT INCENTIVE COMPENSATION MUST BE EVALUATED "AS A WHOLE" AND THAT BREAKING OUT A COMPONENT OF THE PLANS IS INAPPROPRIATE.[13] DO YOU AGREE?

A. No, I do not. First, this is at odds with the rate setting process itself, wherein the Commission determines the appropriate costs to include in rates. To be barred from challenging an individual cost element simply because it exists within a larger category would undermine the Commission's ability to set just and reasonable rates. Further, the Commission recently confirmed in a 2025 Columbia Gas proceeding that it is entirely appropriate to allow recovery of the portion of incentive compensation tied to operational safety and customer experience metrics while disallowing the portion tied to financial metrics.[14]

[redacted]

[13] Rebuttal Testimony of Vivian K. Ressler, 6: 17-26 and 8: 5-15.
[14] *Pa. PUC, et al. v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Opinion and Order entered December 4, 2025), at pp. 123, 126

Q. MS. RESSLER CITES SEVERAL COMMISSION ORDERS - INCLUDING PPL ELECTRIC, AQUA PENNSYLVANIA, AND PENNSYLVANIA-AMERICAN WATER COMPANY - AS PRECEDENT FOR THE COMMISSION ALLOWING FULL RECOVERY OF THE COMPANY'S INCENTIVE COMPENSATION.[15] DO THOSE ORDERS REQUIRE THAT RESULT HERE?

A. No, the Commission has decided to allow and disallow such adjustments in the past – it is not a uniform precedent. In each of those cases cited by the Company, the Commission allowed recovery because the utility demonstrated that its incentive compensation program provided a benefit to ratepayers, per the evidence presented in each unique case. That evidence is what drives the result, not the existence of an incentive compensation program itself. In the recent Columbia Gas proceeding, the Commission adopted OCA's recommended disallowance of the portions of the Company's incentive compensation tied to financial metrics, finding that Columbia Gas had not explained why those portions were necessary to provide adequate service to ratepayers.[16]

Q. MS. RESSLER ARGUES THAT THE PORTIONS OF INCENTIVE COMPENSATION I HAVE TARGETED BENEFIT RATEPAYERS THROUGH THE FINANCIAL SUCCESS OF THE COMPANY AND SHOULD THEREFORE BE ALLOWED.[17] DO YOU AGREE?

A. No. Any incidental overlap between financial success and ratepayer benefit does not mean ratepayers should fund employee compensation that is designed to drive outcomes that primarily benefit shareholders. As explained in my Direct Testimony,

[15] Rebuttal Testimony of Vivian K. Ressler, 5: 21-23, 6: 1-16 and 27-28, 7: 1-20.
[16] *Pa. PUC, et al. v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499 (Opinion and Order entered December 4, 2025), at pp. 123, 126.
[17] Rebuttal Testimony of Vivian K. Ressler, 5: 6-19.

the primary beneficiaries of financial metrics are shareholders, not ratepayers, and the interests of shareholders and ratepayers are not always aligned. Incentive structures that emphasize financial performance can encourage management to prioritize profitability over affordability or operational efficiency. In my opinion, Ms. Ressler incorrectly generalizes that any increased financial performance ultimately benefits the ratepayers, however a company act can adversely impact the interests of ratepayers while being favorable to shareholders. For example, a company could defer necessary infrastructure maintenance to reduce costs and boost earnings, which would benefit shareholders in the short term while leaving ratepayers with a degraded, less reliable system.

Q. MS. RESSLER ARGUES THAT DISALLOWING THE FINANCIAL COMPONENTS OF THE COMPANY'S INCENTIVE COMPENSATION PROGRAM WOULD UNDERMINE UGI'S ABILITY TO ATTRACT AND RETAIN QUALIFIED EMPLOYEES AND EXECUTIVES.[18] HOW DO YOU RESPOND?

A. My position is not that the Company should eliminate its incentive compensation. The issue is whether ratepayers must fund every element of that compensation package regardless of who primarily benefits from it - who bears the cost of particular components. As explained in my Direct Testimony, shareholders are the primary beneficiaries of the outcomes from the portions of the incentive compensation plans I recommend disallowing. Ratepayers should not be obligated to subsidize the shareholder-oriented portions of those packages. If desired, the Company can continue to offer incentives to promote shareholder benefit, at shareholder expense.

[18] Rebuttal Testimony of Vivian K. Ressler, 4: 19-23.

Q. MS. RESSLER ARGUES THAT IF THE COMMISSION DISALLOWS THE FINANCIAL COMPONENTS OF THE COMPANY'S INCENTIVE COMPENSATION, THE COMPANY WOULD NEED TO REPLACE THEM WITH ALTERNATIVE INCENTIVE COMPENSATION OR HIGHER BASE SALARIES.[19] DO YOU AGREE?

A. No, I do not. This argument is speculative and, if accepted, would effectively immunize any incentive compensation structure from scrutiny. The premise assumes any disallowance would automatically be offset by equivalent increases elsewhere. The Company has not provided evidence that base salaries would in fact be increased, or by how much, if this adjustment is adopted. Regulatory proceedings routinely involve adjustments to components of a utility's cost of service without the assumption that the company will immediately replace the disallowed cost with an equivalent expenditure.

Q. DO YOU HAVE ANY OTHER RESPONSE TO MS. RESSLER'S REBUTTAL OF YOUR INCENTIVE COMPENSATION ADJUSTMENT?

A. Yes. Ms. Ressler states that "…the plans for which OCA Witness Rogers proposes to disallow 80% of the claimed compensation … are all goals-based incentive compensation which motivate the Company's talent."[20] Per the Company's own discovery responses, **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** - meaning they are designed to motivate employees to achieve outcomes that benefit shareholders. Ratepayers should not be required to fund that portion of the motivation. **[BEGIN**

[19] Rebuttal Testimony of Vivian K. Ressler, 8:1-3.
[20] Rebuttal Testimony of Vivian K. Ressler, 19: 15-18.

CONFIDENTIAL] [redacted] **[END CONFIDENTIAL]**[21]

Q. WHAT IS YOUR RECOMMENDATION?

A. As explained in my Direct Testimony, a fundamental principle of ratemaking is that costs should be assigned to those who benefit from them. In the case of incentive compensation tied to financial performance, the primary beneficiaries are shareholders. I continue to recommend disallowing incentive compensation expenses related to financial metrics. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

F. Employee Activity Expense

Q. PLEASE EXPLAIN COMPANY WITNESS RESSLER'S REBUTTAL TESTIMONY RELATED TO EMPLOYEE ACTIVITY EXPENSE.

A. In its filing, the Company proposed including costs totaling $583,036 in the cost of service related to employee activities, which are for items such as picnics, parties, and safety awards.[22] In my Direct Testimony, I recommended disallowing these expenses as they do not relate to the provision of safe and reliable utility service.[23] In Rebuttal, the Company disagreed with this disallowance, citing the various functions of each award.[24]

[21] Company response to I&E-RE-32, CONFIDENTIAL Attachment I&E-RE-32.7 and CONFIDENTIAL Attachment I&E-RE-32.8
[22] UGI Company Filing Book II, SDR-RR-30(e).
[23] Direct Testimony of Jennifer L. Rogers, 10: 17-22.
[24] Rebuttal Testimony of Vivian K. Ressler, 20: 12-24 and 21: 1-34.

Q. ARE YOU REVISING YOUR RECOMMENDATION REGARDING EMPLOYEE ACTIVITY EXPENSE?

A. Yes, in part. Upon further consideration and review, I am revising my recommended disallowance from $583,036 to $195,000, limiting my recommendation to disallow only the cost of the Company picnic. With respect to the picnic expenses, in Rebuttal, Company Witness Ressler cites a 2018 Commission order *Pa. PUC, et al. v. UGI 4 Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Opinion and Order entered 5 October 25, 2018) as precedent to allow the picnic in expenses. It is important to note, however, that the Order goes on to say:

> In *York Water*, the Commission granted the utility's expense claim for a company banquet but did not grant the utility's expense claim for a company picnic. The distinction made in *York Water* between the company picnic and the company banquet, was based upon the conclusion that the company picnic did not stand on the same footing as the company banquet, since it involved no element of employee recognition. Similarly, in *Columbia Water*, the ALJ disallowed employee recognition expenses because the utility did not provide specific information about the year-end banquet to demonstrate that it qualifies as an employee recognition dinner.[25]

Witness Ressler gave a general characterization in Rebuttal that the picnic has the goal of recognizing and celebrating employees but provided no evidence that it does so or specific detail regarding the event to support the comment.[26]

Regardless, a company picnic is not an expense that relates to the provision of safe and reliable utility service to ratepayers and should therefore not be ratepayer responsibility. I therefore maintain my recommendation to disallow the $195,000

[25] *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, Opinion and Order entered October 25, 2018, at pp. 70-71.
[26] Rebuttal Testimony of Vivian K. Ressler, 21: 29-34.

picnic expense from the cost of service. This adjustment is shown on Surrebuttal Schedule JLR-8.

G. Vacancy Reserve

Q. PLEASE ADDRESS COMPANY WITNESS RESSLER'S REBUTTAL TESTIMONY RELATED TO VACANCY RATE.

A. In its filing, the Company applied a vacancy rate of 4.7% to its labor expense.[27] In my Direct Testimony, I noted that this was abnormally low compared to the actual level of vacancies experienced over the past three years and recommended the Company utilize a vacancy rate of 6.15%, which is the average of the most recent three years, to avoid over collecting from customers. In Rebuttal, Company Witness Ressler accepted the use of a 6.15% vacancy rates to limit the scope of issues in dispute. The Company applied the adjustment per I&E Witness Walker's calculations.[28] I&E Witness Walker's calculation of the related adjustments to payroll, payroll tax, and employee benefits varies slightly from mine (e.g., I flowed through my incentive compensation adjustment to the payroll calculation). While I believe my calculations are correct, I accept the Company's proposed adjustment utilizing I&E Witness Walker's figures to reduce the contested issues in this case. This issue is therefore resolved.

H. Advertising Expense – Conservation of Energy

Q. PLEASE ADDRESS COMPANY REBUTTAL PERTAINING TO ADVERTISING EXPENSE RELATED TO CONSERVATION OF ENERGY.

A. In their filing, the Company stated it expects to have $272,515 in expenses related to Conservation of Energy in the FPFTY, related to a fuel campaign run in FY 2025 that was not run in 2024 or 2023. In my Direct Testimony, I explained that the costs

[27] Company response to I&E-RE-25.
[28] Rebuttal Testimony of Vivian K. Ressler, 3:14-23.

represent an intermittent advertising campaign, rather than a normal, recurring annual expense. I therefore recommended isolating the non-recurring portion of the expense and normalizing it for recovery over two years.[29] Accordingly, it is inappropriate to include these costs in rates as a recurring annual expense. In Rebuttal, the Company states these campaigns will be continued regularly, on at least an annual basis.[30]

Q. DO YOU STILL RECOMMEND REMOVING THESE COSTS FROM THE COST OF SERVICE?

A. No, I do not. Given that the expenses will be incurred annually, I am withdrawing the adjustment of $81,187. This change has been incorporated into my attached Surrebuttal Schedules.

I. Advertising Expense - Other

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO "OTHER ADVERTISING PROGRAMS" EXPENSES.

A. In its filing, the Company included an Other Advertising Programs expense of $380,397 for the FPFTY of which $191,149 is attributed to community event sponsorships and $189,249 is attributed to stakeholder newsletters.[31]. In my Direct Testimony, I recommended disallowing the expense associated with community event sponsorships, as this advertising expense is largely promotional in nature and does not relate to the provision of safe, reliable, and adequate utility service to ratepayers, and therefore should not be ratepayer responsibility.[32] In rebuttal, the Company disagreed with this adjustment on the basis that community event sponsorships connect them with communities and home builders.[33]

[29] Direct Testimony of Jennifer L. Rogers, 12: 14-23 and 13: 1-20.
[30] Rebuttal Testimony of Tracy A. Hazenstab, 4: 19-23.
[31] Company response to I&E-RE-43, Attachment I&E-RE-43.
[32] Direct Testimony of Jennifer L. Rogers, 14: 10-14.
[33] Rebuttal Testimony of Vivian K. Ressler, 24: 5-23 and 25:1-12.

Q. DO YOU AGREE WITH THE COMPANY'S ASSERTION IN REBUTTAL THAT IT IS APPROPRIATE TO APPLY COMMUNITY EVENT SPONSORSHIP EXPENSES TO RATEPAYERS?

A. No, I do not. The Company asserts that community event sponsorship is a means of connecting with communities, however the messaging once connected is the distinguishing element for whether an advertising expense is appropriate to recover from ratepayers. Expenses related to image building should not be passed on to ratepayers. Below is an example of this type of advertising, which the Company provided in Attachment I&E-RE-44:

The Company states these events allow customers to connect to the company and "receive information about billing, customer programs, safety, or utility services."[34] There is no apparent link between the advertising and providing safe and reliable service to ratepayers, and I find it unlikely that such events are the most effective method of informing members of the public about natural gas. I do not believe the Company has sufficiently justified applying this expense to ratepayers, and I therefore continue to recommend disallowing the expense. This reduces expenses by $191,149, as shown in Surrebuttal Schedule JLR-13.

J. PUC Assessment

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO THE PUC ASSESSMENT EXPENSE.

A. In its filing, the Company derived its PUC Assessment expense projection by taking the 2025 invoice amount and multiplying it by a 14.9% increase to reach a projected 2026 invoice amount, and then again to reach a 2027 invoice amount. The Company derived the 14.9% increase as the average percentage increase over 2022 to 2025. This results in an increase in PUC Assessment expenses from the HTY amount of $4.551 million to $6.006 million in the FPFTY. [35] In my Direct Testimony, I explained that the PUC Assessment charge was variable, and applying a linear increase to an expense item that may not increase risked overcollection from customers. I recommended normalizing the expense by taking the average of the most recent three years to determine a representative annual cost for ratemaking.[36] In Rebuttal, the Company agreed the expense is varied, but argued that the Company's methodology was more accurate for projecting the FPFTY expenses.[37]

[34] Rebuttal Testimony of Vivian K. Ressler, 24: 5-10.
[35] Company response to I&E-RE-39, Attachment I&E-RE-39(B-C).
[36] Direct Testimony of Jennifer L. Rogers, 15: 3-10.
[37] Rebuttal Testimony of Vivian K. Ressler, beginning 30: 18, ending 33: 19.

Q. DO YOU AGREE WITH THE COMPANY THAT THEIR APPROACH IS MORE REASONABLE?

A. No, I do not. Company Witness Ressler presents Exhibit VKR-3R to demonstrate that the Company's trending methodology more accurately projected the 2025 PUC assessment invoice than the OCA's three-year average approach. I do not find this argument persuasive. The Company's assertions that this expense will grow are speculative. Indeed, Company Witness Ressler concedes that this expense is variable from year to year, increasing and decreasing over time.[38] The year-over-year percentage changes underlying the Company's methodology reflect exactly that variability, swinging from approximately +24.8 percent, to -13.2 percent, to +15.5 percent in the three sample years utilized in Exhibit VKR-3R. This series does not reflect a stable underlying trend. When the inputs to a trending methodology are this inconsistent, the resulting growth rate is not a meaningful basis for projecting future expense levels.

Q. WHY IS THE OCA'S THREE-YEAR AVERAGE A MORE APPROPRIATE METHODOLOGY GIVEN THAT VOLATILITY?

A. The three-year average methodology is more appropriate because the volatility itself is the reason to average actuals rather than trend. When an expense moves unpredictably from year to year, the appropriate ratemaking approach is to normalize it using recent actual experience - not to project it using a growth rate derived from that same unpredictable history. The OCA's three-year average of 2023, 2024, and 2025 invoices reflects what ratepayers have actually been assessed in recent years and provides a reasonable, normalized annual cost for ratemaking purposes.

[38] Rebuttal Testimony of Vivian K. Ressler, 30: 22-23 and 31: 16.

As shown in the Company's own rebuttal testimony, the PUC assessment invoice was essentially flat from 2024 to 2025, increasing by only $1,000 on a base of $4,550,000 - effectively zero growth. The Company nonetheless projects the 2027 invoice at $6,006,000, an increase of approximately 32 percent above the 2025 actual. That projection assumes a resumption of steep growth that is directly contradicted by the most recent data.

Q. HAVE YOU REVISED YOUR RECOMMENDATION RELATED TO THE PUC ASSESSMENT EXPENSES?

A. No, I have not. For the reasons explained above, I maintain my recommendation to reduce the Company's claimed PUC assessment expense by $1.8 million, as shown on Surrebuttal Schedule JLR-14.

K. Residential Collection Expense

Q. PLEASE ADDRESS THE COMPANY'S REBUTTAL RELATED TO RESIDENTIAL COLLECTION EXPENSE.

A. I have applied the recommendation per the direct and surrebuttal testimonies of OCA witness Roger Colton, removing 50 percent of the residential collection expenses. In Direct Testimony, I stated the Company was unable to provide the exact dollar amount of residential collection expenses included in the FPFTY, stating the expense is embedded in a FERC Account which includes other costs as well. I therefore used the 2025 residential collection expense value as a proxy.[39] In Rebuttal, Company Witness Adamo states the dollar amount was provided in Attachment OCA-15-7.[40] Per OCA witness Colton's Surrebuttal, I have continued to use the value provided in response to OCA-15-4. As shown on Surrebuttal Schedule JLR-15, this adjustment decreases O&M expenses by $3 million.

[39] Direct Testimony of Jennifer L. Rogers, 15: 19-22 and 16: 1-2.
[40] Rebuttal Testimony of Daniel V. Adamo, 19: 20-21 and 20: 1.

L. Interest Synchronization

Q. PLEASE ADDRESS THE COMPANY'S REBUTTAL RELATED TO INTEREST SYNCHRONIZATION.

A. While the Company does not disagree with my method of calculation, we disagree on the rate base and weighted cost of debt values on which it is based, and therefore we continue to disagree on the resulting flow through amount. Further, the Company states it has incorporated an adjustment to the average cost of long-term debt in the Rebuttal calculation of the interest deduction.[41] I have calculated the interest synchronization based on OCA witness Garrett's recommendations, as detailed in his Direct and Surrebuttal Testimonies. This adjustment decreases state income taxes by $845,000 and federal income taxes by $2.2 million, as shown in Surrebuttal Schedule JLR-16.

Q. DOES THIS COMPLETE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

[41] Rebuttal Testimony of Tracy A. Hazenstab, 10: 1-17.

DIRECT TESTIMONY

BARBARA R. ALEXANDER
BARBARA ALEXANDER CONSULTING LLC

ON BEHALF OF

OFFICE OF CONSUMER ADVOCATE

OCA Statement 5

PUBLIC - REDACTED VERSION

Date Served: April 13,2026

I. INTRODUCTION AND SUMMARY

Q. **PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION**.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. **WHAT IS YOUR BACKGROUND AND EXPERIENCE WITH RESPECT TO THE ISSUES ON WHICH YOU ARE PROVIDING TESTIMONY IN THIS PROCEEDING?**

A. I opened my consulting practice in March 1996, after nearly ten years as the Director of the Consumer Assistance Division of the Maine Public Utilities Commission. While there, I testified as an expert witness on consumer protection, customer service, and low-income issues in rate cases and other investigations before the Commission. My consulting practice is directed to consumer protection, customer service and low-income programs and policies relating to the regulation of the telephone, electric, and gas industries. My practice has included policy issues relating to the adoption of retail energy markets and the regulation of public utility distribution service, particularly relating to reliability of service, rate programs, customer service performance, as well as default service programs and policies. I have appeared in over 30 U.S. and Canadian jurisdictions as an expert witness on behalf of state utility consumer advocates and national and state non-profit consumer organizations.

I am a graduate of the University of Michigan (B.A. 1968) and the University of Maine School of Law (J.D. 1976).

I have appeared before the Pennsylvania Public Utility Commission (PUC or Commission) many times on behalf of the OCA. I filed testimony on consumer education, consumer protection, supplier licensing, customer enrollment, default service, and Code of Conduct issues for the OCA in the Commission's electric restructuring proceedings in 1997 and 1998, as well in all in the natural gas restructuring cases beginning in 1999. With respect to issues relating to retail market competition policies, I have filed testimony on behalf of the OCA on policies that should govern the planning and acquisition of Default Service for residential customers and on proposals to adopt Purchase of Receivables (POR) programs, Customer Referral Programs, and other "retail market enhancement" programs for electric and natural gas utilities. I have provided testimony submitted on behalf of the OCA on customer service, consumer protection and low-income program issues associated with recent electric and natural gas distribution company mergers and base rate cases for electric utilities, water and sewer utilities, and natural gas utilities, including In Re Application of UGI Utilities, Inc., UGI Utilities Newco, Inc., and Southern Union Co., Docket Nos. A-120011F2000, A-125146, A-125146F5000 (June 2006), Petition of UGI Utilities, Inc.—Gas Division for Approval to Voluntarily Implement a Purchase of Receivables Program and Merchant Function Charge and of a Potential Affiliated Interest Agreement Between UGI Utilities, Inc.—Gas Division And Affiliated Entities, Docket No. P-2009-2145498 (April and May 2010), and Petition of UGI Utilities, Inc.—Electric Division for Approval of a Default Service Plan and Retail Market Enhancement Programs for 2014-2017, Docket Nos. P-2013-235703 (June 2013). A complete identification of my relevant proceedings attached as my C.V. as Exhibit BA-1.

Q. **DID YOU TESTIFY ON BEHALF OF THE OCA IN UGI-GAS' MOST RECENT BASE RATE CASE?**

A. Yes. I submitted Direct Testimony (Public and Confidential) in Docket No. 2024-3052716 on April 18, 2025, and Surrebuttal Testimony on May 30, 2025. I will discuss the settlement adopted in that base rate case in more detail below. The Commission adopted the proposed settlement in its Order entered September 11, 2025.

Q. **PLEASE SUMMARIZE THE UGI UTILITIES, INC.-GAS DIVISION (UGI-GAS) PROPOSAL TO INCREASE RATES IN THIS PROCEEDING.**

A. UGI-Gas provides natural gas distribution service to approximately 706,000 residential, commercial, and industrial customers in portions of 46 counties across Pennsylvania. On January 28, 2026, UGI Utilities, Inc. – Gas Division (UGI-Gas or the Company) filed Supplement No. 63 to UGI Gas Tariff – PA. P.U.C. Nos. 7 and 7S with the Commission. The Company proposes to increase rates to produce additional overall revenues of $99.368 million per year, an 8.05% increase in overall distribution revenue requirement. Under the Company's proposal, the total bill for a residential customer purchasing 68.7 cubic feet (CCF) per month would increase by $9.91 from $113.64 to $123.55, or by approximately 8.7%. The Company has proposed increasing the monthly residential customer charge from $16.25 to $23, or by 41.5%. The Company proposes a return on equity of 10.75% resulting in an overall rate of return of 8.20%, in conjunction with an equity-rich capital structure of 54% equity and 46% debt. Additionally, the filing requests approval of a continued weather normalization adjustment (WNA).

Q. **HOW DOES UGI-GAS JUSTIFY ITS RATE INCREASE IN THIS PROCEEDING?**

A. The President of UGI Utilities, the corporate owner of UGI-Electric and UGI-Gas, Mr.

Hans G. Bell states, "UGI Gas continues to make substantial distribution system investments that are necessary to: (1) continue the accelerated replacement of aging gas plant infrastructure; (2) upgrade and improve system segments and modernize facilities; (3) serve new residential and commercial customers, including natural gas conversions; (4) install and upgrade supporting information technology systems; and, most importantly, (5) ensure the safety of the Company's employees, customers, the communities it serves, and its distribution system. Moving forward, these system improvements and investments will require the Company to continue its efforts to attract, recruit, train, and retain those professional, technical, and field-qualified personnel and resources necessary to implement, operate, and maintain those investments, and to attract capital at a reasonable cost. These investments are all necessary to grow and continue to maintain a safe and reliable distribution system and provide quality customer service."[1] Mr. Bell links the proposed investments and rate increase to, among other objectives, "system reliability, safety, and customer service performance."[2] In his attached qualifications, Mr. Bell asserts that he has "[c]onsistently led team to deliver on key metrics including safety, reliability, customer service, and financial objectives."[3] Unlike the last base rate case filing that was filed in December 2024 and litigated and resolved in 2025, UGI-Gas does not seek an upward adjustment in its equity return for management performance.

Q. **WHAT ISSUES WILL YOU ADDRESS IN YOUR TESTIMONY?**

A. I will address the following issues in this proceeding:

[1] UGI Gas Statement No. 1, page 6, lines 1-12.
[2] Ibid., page 7, lines 6-7.
[3] UGI Gas Exhibit HGB-1.

- The Company's compliance with certain settlement conditions ordered in the 2025 rate case.
- Additional customer service performance and compliance issues that should be adopted in this rate case.
- I will address the significantly higher charges appearing on UGI Gas residential bills on behalf of Natural Gas Suppliers (NGS) and recommend additional consumer communications and bill content to assist customers in understanding the impact of these higher charges on their bills.
- Additional service quality and operational performance metrics and promises that UGI Gas Witness Walter identifies and that should be adopted in this rate case.

Q. **IS YOUR TESTIMONY EXCLUSIVE ON THESE ISSUES?**

A. No. While I am the primary witness on customer service and consumer protection policies and programs, my testimony supplements and contributes to the overall recommendations of other OCA witnesses.

Q. **WILL YOU PROPOSE CHANGES TO THE REVENUE REQUIREMENT OR RATES PROPOSED BY UGI-GAS?**

A. Not directly. My testimony concerning customer service and reliability of service performance is intended to provide context on the reasonableness of UGI-Gas' proposed revenue requirement, as well as the adjustments made by other OCA witnesses.

Q. **DO YOU HAVE EXHIBITS ATTACHED TO YOUR TESTIMONY?**

A. Yes. I attach the following Exhibits:

- Exhibit BA-1: C.V. of Barbara R. Alexander
- Exhibit BA-2: UGI Gas Response to OCA-3-1(a) with 2025 average calculations

- Exhibit BA-3: UGI's proposed field operations training materials (CONFIDENTIAL)
- Exhibit BA-4: UGI Gas Response to OCA-6-12
- Exhibit BA-5: UGI Gas Response to OCA-3-10.2.
- Exhibit BA-6: UGI Gas Response to OCA-3-8.
- Exhibit BA-7: UGI Gas Response to CAUSE PA-5-10.

Q. **AS AN OVERALL INTRODUCTION TO YOUR RECOMMENDATIONS, PLEASE COMMENT ON UGI-GAS' JUSTIFICATION FOR ITS RATE INCREASE IN THIS PROCEEDING.**

A. My primary concern is that is that no UGI Gas witness describes or references the Company's customer service performance or compliance related issues as measured and reported to the Commission or its performance in relationship to other Pennsylvania natural gas utilities with respect to the operation of its customer call center, complaints, Chapter 56 compliance, or customer satisfaction measurements. The lack of any presentation or reference to the key customer service performance indicators that are routinely relied upon and published by the Commission in its Consumer Activities Report and Evaluation and Customer Service Performance Reports is a troubling omission. Nor did Mr. Bell or any corporate manager for customer service operations describe how the Company provides these vital services to its captive customers. My concern is also a reflection of UGI's lack of recognition or discussion about the ongoing implementation of numerous consumer protection and service quality conditions ordered in the last rate case.

Q. PLEASE COMMENT ON THE INTERNAL OPERATIONAL AND SAFETY RELATED OBJECTIVES IDENTIFIED IN UGI WITNESS JILL WALTER'S TESTIMONY.

A. Ms. Walter identifies a wide range of internal objectives for operational service quality, employee safety, and environmental goals in her Direct Testimony (UGI Statement No. 3). None of these objectives or internal goals reflect customer service or affordability issues that I and other OCA Witnesses address in our testimony. Nor does Ms. Walter link these objectives and goals to firm commitments or conditions to any increase in rates. Nor does she explain why these objectives and goals should be required of the Company whether or not any rate increase is granted in this proceeding.

Q. **WHAT IS THE CONNECTION BETWEEN YOUR DISCUSSION OF SERVICE QUALITY AND CUSTOMER SERVICE PERFORMANCE AND THE RATE INCREASE PROPOSED BY UGI?**

A. A public utility in Pennsylvania is statutorily obligated to provide adequate and reasonable service to its customers. A public utility must justify its rates based on, among other things, its ability to perform its essential quality of service and customer service functions at an adequate and reasonable performance level. Accordingly, where a public utility is seeking a rate increase – especially a significant one – it is appropriate to review the performance of that utility and to compare such performance to other Pennsylvania utilities. Therefore, my evaluation of UGI's customer service and consumer protection policies is directly related to the Commission's consideration of the Company's general rate increase. In effect, it is part of the consideration by the Commission to determine whether UGI Gas is

upholding its end of the bargain. My focus on these issues and response to my findings reflect the statutory guidelines of Section 523 of the Public Utility Code governing public utility rate cases in which the Commission must evaluate the "efficiency, effectiveness, and adequacy of service."[4]

Q. **PLEASE SUMMARIZE YOUR OVERALL CONCLUSIONS AND RECOMMENDATIONS.**

A. I recommend the following conclusions and recommendations that should be taken into account when considering reasonable and affordable rates and earnings mechanisms for UGI Gas. My recommendations support the overall recommendations of other OCA witnesses to either reject the Company's rate increase, or substantially lower any rate increase in this proceeding. The following summarize my recommendations that are documented and presented in more detail throughout my testimony:

- UGI Gas has not completed many of the agreed upon service quality and customer service conditions ordered in the last rate case and, at a minimum, the Commission should monitor and ensure compliance with those conditions prior to considering any further rate increases.
- UGI has adopted internal performance and compliance related performance indicators for its third party call contractors that I support. The Commission should require UGI to implement and report on these performance indicators to avoid any deterioration of service and to properly monitor third party call centers.

[4] 66 Pa. C.S. § 523(a).

- UGI should adopt additional and more targeted customer communications to assist customers in ensuring affordability for basic natural gas service due to high NGS charges that appear on the customer bill that UGI collects under threat of termination of service. In addition, UGI's bill should be reformed to more directly link the presentation of NGS charges with the PTC.

II. EVALUATION OF UGI GAS' COMPLIANCE WITH THE CUSTOMER SERVICE AND CONSUMER PROTECTION REQUIREMENTS OF THE 2025 BASE RATE CASE ORDER.

Q. **PLEASE IDENTIFY THE COMMITMENTS MADE IN THE APPROVED SETTLEMENT IN UGI GAS' MOST RECENT BASE RATE CASE THAT YOU WILL REVIEW IN YOUR TESTIMONY.**

A. I will review compliance with the following provisions of the settlement provisions approved and ordered in UGI's most recent base rate case filed in early 2025 and litigated and included in the final order issued in September 2025:

1) "UGI Gas will work to maintain its call center performance at levels consistent with its 2024 performance as reported to the Commission. In working to maintain a quality level of service, UGI Gas will meet with the Parties to discuss areas of challenge and its plans to improve its service levels."[5]

2) "UGI Gas will provide its annual performance reports to the USAC when its annual

[5] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2024-3052716 (Aug. 8, 2025) Recommended Decision, 126 (summarizing Joint Petition for Settlement ¶ 82) (*R.D. 2025)*.

reporting data is compiled and submitted to the Commission. UGI Gas is committed to continuously reviewing and attempting to improve the level of service provided to its customers."[6]

3) "UGI Gas will develop additional training materials for its field representatives by April 1, 2026, including making personal contact with customers prior to termination, and will incorporate these materials into the training of its field representatives."[7]

4) "As recommended by OCA, UGI Gas will also provide for two modifications of its website: It will disclose that products such as HomeServe are optional (and that failing to pay for such will not result in termination of utility service); and it will remove the term "affordable" from those types of non-required products."[8]

5) "OCA recommended an implementation of a root cause analysis of customer disputes, and UGI Gas has agreed to this implementation under the Settlement. UGI Gas will categorize, track, review and remediate Justified Complaints and Verified Infractions issued by the Commission's Bureau of Consumer Services."[9] "Once the process is formalized and implemented, the Company will conduct a monthly review of Justified Complaints and Verified Infractions and the resulting RCAs' and ACEs' causal factors and corrective actions. UGI Gas will provide a report to CAUSE-PA, CEO, I&E, the OCA, and the OSBA annually, describing its progress

[6] *Id.* (summarizing Joint Petition for Settlement ¶ 83).
[7] *Id.* at 127 (summarizing Joint Petition for Settlement ¶ 84).
[8] *Id.* (summarizing Joint Petition for Settlement ¶ 85).
[9] *Id.* (summarizing Joint Petition for Settlement ¶ 86).

and the results of its review and implementation of the RCA and/or ACE process, with the first report being provided on or before October 1, 2026, until a final Commission order is entered in UGI Gas' next base rate proceeding."[10]

6) "By April 1, 2026, UGI Gas will develop a written communication to confirm the terms of modified payment agreements upon conclusion of a customer's verbal agreement."[11]

7) The Company will review its existing WNA customer communications with the intent to further enhance customer communication materials in support of customer education related to the WNA. The review will consult the interested parties and will conclude by December 31, 2025.[12]

8) "The Company will move the Price to Compare ("PTC") from the back of the bill to the front of the bill. This update will be implemented on or before April 1, 2026."[13]

9) "The Company will provide online payment options for Apple Pay and Venmo, which will be implemented by end of September 30, 2025. Google Pay, PayPal, PayPal Credit, and Amazon Pay will be implemented on a phased-in approach to allow time for proper testing of each option."[14]

10) "By no later than April 1, 2026, UGI Gas will begin covering the transaction costs

[10] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2024-3052716 (Aug. 8, 2025) Joint Petition for Settlement ¶ 86).

for payments made in cash by customers through the Company's current partnerships that allow customers to pay in cash at authorized retail establishments."[15]

Q. **AS A RESULT OF THE FILING OF THIS BASE RATE CASE FOUR MONTHS AFTER THE FINAL ORDER IN ITS PRIOR BASE RATE CASE, CAN YOU PROVIDE ANY CONCLUSIVE OPINION ABOUT HOW UGI GAS HAS COMPLIED WITH THESE SETTLEMENT COMMITMENTS APPROVED IN SEPTEMBER 2025?**

A. No. UGI Gas filed a base rate case in January 2026, prior to many of the April 1, 2026 or later deadlines for the commitments negotiated in its prior rate case. The Company provided no testimony or evidence in this pending base rate case filing that demonstrates compliance with these customer service and consumer protection commitments with the exception of a reference to the ongoing progress for one of these commitments.[16] I will evaluate the Company's compliance to date in my testimony based on discovery responses received to date.

Q. **HAS UGI GAS MAINTAINED ITS 2024 PERFORMANCE FOR ITS CUSTOMER CALL CENTER?**

A. UGI Gas' call center performance in 2024 was reported to the Commission as achieving an annual percentage of calls answered within 30 seconds of 86% and an annual abandonment rate of 4%.[17] The call answering percentage included IVR calls and, as a result, does not measure the answering performance of those customers who entered the

[15] *Id.* at ¶ 69.
[16] *See* UGI Statement No. 12, Brian Meilinger on the ongoing development of revised WNA communications.
[17] https://www.puc.pa.gov/media/3762/2024-customer-service-performance-report-final.pdf at 5, 7.

IVR and then selected to speak to a customer service representative.[18] While the overall performance reflects a significant improvement since 2022, a result that is typical of other Pennsylvania natural gas utilities, UGI's performance has not improved as much as other utilities. For example, the 4% abandonment rate is the highest of the Pennsylvania gas utilities and Columbia Gas, NFG, and PGW reported a 2% abandonment rate.[19] In addition, most other gas utilities reported a higher percentage of answering calls within 30 seconds than UGI.[20]

UGI has increased its annual average abandonment rate from 4% in 2024 to 4.7% in 2025 and equaled the 2024 86% call answering metric. I attach the monthly results from January 2023 through January 2026 with my calculation of the average 2025 results as Exhibit BA-2.[21] I am particularly concerned that the monthly abandonment rate reflects a wide range of customer call performance experience, reflecting a significantly deterioration with abandonment rates of 6.14% in February, 9.57% in October, and 7.51% in November 2025. Customers also experienced call answering percentages of below 80% during these same months. As a result, it is fair to state that the Company has not complied with the "soft" obligation to continue its 2024 performance results, particularly with respect to the annual abandonment rate, and that customers experienced a lower level of performance in several months.

Q. **HAS UGI GAS COMPLIED WITH ITS REPORTING REQUIREMENTS TO THE USAC?**

[18] *Id.* at 7.
[19] *Id.* at 5.
[20] *Id*. at 7.
[21] UGI Response to OCA-3-1(a).

A. Not yet. The Company did not yet provide the reporting requirements to the USAC at either the December 2025 or the February 24, 2026 USAC meeting. It is my understanding that the Company reviewed the status of the Company's progress on the 2025 base rate Settlement commitments at the February 24, 2026 USAC meeting. I would anticipate that the annual data for 2025 would be presented to the USAC at a later 2026 meeting.

Q. **PLEASE DISCUSS UGI GAS' COMPLIANCE WITH REVISED TRAINING MATERIALS FOR ITS FIELD PERSONNEL TO ENSURE COMPLIANCE WITH THE OBLIGATION TO ATTEMPT PERSONAL CONTACT PRIOR TO TERMINATION OF SERVICE.**

A. The Company submitted proposed revised training materials to the parties for comment in February 2026. In response to numerous comments from OCA and other parties, UGI revised these materials and submitted them to the parties in late March 2026. I attach the revised training materials provided to the parties in late March 2026 as Exhibit BA-3 (CONFIDENTIAL[22]). In reviewing the proposed training materials that I presume have now been implemented as a result of the obligation to implement changes by April 1, 2026, I have a number of outstanding concerns that need additional reforms: [**BEGIN CONFIDENTIAL]**

[redacted]

[22] The basis for the Confidential label is due to the internal UGI operations information included in these materials.

[redacted]

[redacted] **[END CONFIDENTIAL]**

As a result, I do not consider the materials and their format developed to date to be a sufficient response to the settlement condition.

Q. **HAS UGI MADE THE REQUIRED MODIFICATIONS TO ITS WEBSITE WITH REGARD TO ITS PROMOTION OF NON-BASIC SERVICES BY HOMESERVE?**

A. Yes.[23]

Q. **HAS UGI GAS IMPLEMENTED ITS COMMITMENT TO A ROOT CAUSE ANALYSIS FOR CERTAIN COMPLAINTS?**

A. I am not yet able to provide any definitive information to conclude that the Company has taken the appropriate steps to implement this requirement, but I acknowledge that UGI is developing internal tracking of key data to allow for a subsequent RCA analysis. The settlement required UGI Gas to categorize, track, review and remediate Justified Complaints and Verified Infractions issued by the Commission's Bureau of Consumer Services. The Company has not yet completed this commitment. Rather, according to responses to discovery, the Company "is working to document and implement a formalized process using Root Cause Analysis (RCA) or Apparent Cause Evaluation (ACE), as circumstances warrant."[24] Several internal processes to update the categorization and coding of formal and informal complaint records with system enhancements are in process, as well as standardization of tracking employee errors through justified complaints.[25] "As a result of these efforts, the Company has identified some scenarios that warrant further analysis and is now positioned to begin formalizing the RCA and ACE process."[26] The Company states that an RCA report to the parties is on track to be provided by October 1,

[23] https://ugi.com/optional-home-repair-plans/
[24] UGI Response to OCA-6-12.
[25] *Id.*
[26] *Id.*

2026.[27] I attach the Company's complete response to a request to describe progress to date as Exhibit BA-4 (UGI Response to OCA-6-12).

Q. **HAS UGI DEVELOPED A WRITTEN CONFIRMATION OF PAYMENT ARRANGEMENT?**

A. Yes. I attach the written confirmation of a payment arrangement provided in UGI's response to OCA-3-10.2 as Exhibit BA-5. However, this document as presented is defective in that it does not include any notice of customer rights and should be revised to do so, including the right to a dispute the terms of the payment arrangement with UGI and, if not satisfied, how to file an informal complaint to the Commission.

Q. **HAS UGI GAS REVISED AND IMPLEMENTED ITS CUSTOMER COMMUNICATIONS AND TRAINING MATERIALS ON THE WEATHERIZATION NORMALIZATION ADJUSTMENT?**

A. UGI has solicited the parties' comments on revised customer communications relating to the WNA, including its website explanation and communications to customers who seek more information on their WNA adjustment. The website revisions were implemented in late 2025, including a new FAQ page. The revised customer letter will be available in "Fiscal Year 2026."[28] Training materials for customer service representatives will be implemented with the revised customer letter.[29] Therefore, I have not reviewed the training materials or the final version of the customer letter. A significant omission in these communications is a presentation of the historical incremental charges and/or credits imposed on customers as a result of this program. UGI Gas has refused to include such

[27] *Id.*
[28] UGI Response to OCA-6-3.
[29] UGI Response to OCA-7-18.

information in its customer education materials. The WNA is complicated in that it changes the customer's distribution portion of the UGI Gas bill with a formula that is highly technical and based on the customer's usage and weather based on a s15-year historical experience. However, the educational materials do not inform customers about the ultimate result of its complicated formulas, that is, the increased charges from WNA have far outweighed any balanced approach in the form of lower charges or credits since the onset of this "pilot" in November 2022. OCA Witness Michael Deupree will testify on whether this method of changing customer rates for UGI Gas' regulated distribution service outside of base rate cases should continue, particularly since UGI Gas has filed frequent rate cases that allow for a reset of its distribution rates to reflect actual costs and expenses that are impacted, if at all, by weather.

Q. **HAS THE UGI GAS CUSTOMER BILL MOVED THE PRESENTATION OF THE PRICE TO COMPARE TO THE FRONT OF THE BILL?**

A. Yes. I attach UGI Gas' response to OCA-3-8 that provides a bill for an RT customer being served by a Natural Gas Supplier (NGS) as Exhibit BA-6. The price to compare is stated as $0.69874/CCF and the customer's supplier on this bill is charging $1.57020/CCF.[30] While this presentation does comply with the settlement's requirement about the placement of the PTC on the customer bill, I note that the terms used to describe the PTC as the "natural gas Price to Compare" is not the same term used to label the supplier's "commodity charge." These terms should be the same so that the customer can more directly relate the PTC to the NGS's charges on the customer bill. Either the PTC should

[30] UGI Attachment OCA-3-8 at 1.

be labeled as the UGI Gas "commodity charge" or both NGS and PTC charges should be labeled as "natural gas supply charge." I also have additional testimony below with respect to the significant overcharging by NGSs to UGI's residential customers.

Q. **HAS UGI GAS IMPLEMENTED THE ALTERNATIVE METHODS FOR BILL PAYMENT BY THE SEPTEMBER 2025 DATE?**

A. No. The public website does not mention the ability to pay via Venmo or ApplePay. UGI Gas states that Google Pay, Pay Pal, and Pay Pal Credit methods are deployed in the Company's "test environment" and that the Company is "completing User Acceptance Testing for these payment methods."[31] Furthermore, Amazon Pay will not be offered. [32] As a result, it is not clear if the required date for implementation was met for all these new payment options. However, I acknowledge that ongoing implementation is underway.

Q. **HAS THE COMPANY IMPLEMENTED ITS COMMITMENT TO ELIMINATE PAYMENT FEES?**

A. Yes. The Company's website states that customers can pay through the customer's checking account or by credit or debit card without fee. At this time there is no mention of alternative payment options such as Venmo and ApplePay on the public facing website.

Q. **AS A RESULT OF YOUR REVIEW OF UGI'S COMPLIANCE WITH THE ABOVE LISTED CUSTOMER SERVICE AND CONSUMER PROTECTION SETTLEMENT PROVISIONS IN ITS 2025 BASE RATE CASE, WHAT DO YOU RECOMMEND?**

[31] UGI Response to OCA-6-9.
[32] *Id.*

A. Based on my analysis to date, the Commission should find that the Company has not complied with its intent to meet the 2024 call center performance standards, that the revised training materials for field representatives are defective as I have documented, that the Root Cause Analysis has not been completed, that the confirmation of payment arrangement communication is defective, that the bill presentation of the PTC should be reformed to use the same terms as reflected in the NGS charges, that the WNA communications should be reformed to include an historical presentation of incremental charges and credits, and that the Company is still in the process of implementing its promised alternative bill payment options by the promised deadline. My findings support the position of other OCA witnesses that reject the Company's proposed revenue requirement because it is unreasonable for the Company to ignore these commitments while seeking a significant new rate increase. If there is any rate increase ordered in this proceeding, I recommend that the Commission require a complete documentation of the prior conditions I have identified in my testimony with my required reforms prior to any implementation of increased rates.

III. ADDITIONAL CUSTOMER SERVICE PERFORMANCE AND CONSUMER PROTECTION CONDITIONS SHOULD BE REQUIRED

Q. **PLEASE DESCRIBE HOW UGI GAS PROVIDES CUSTOMER CALL CENTER SERVICES TO PENNSYLVANIA CUSTOMERS.**

A. The call centers handle calls from UGI-Electric and UGI-Gas and the results do not distinguish between the two operating companies.[33] The call centers are the only means by

[33] UGI Gas Response to OCA-3-1(a).

which customers can speak to an individual about their service needs, file a complaint, ask for a payment plan, or otherwise engage in negotiations since there is no in-person office available to UGI-Gas or UGI-Electric customers.[34]

Q. **HOW ARE THE CALL CENTER SERVICES STAFFED?**

A. The Company operates a virtual call center with 107 Call Service Representatives (CSRs) staffed to work remotely.[35] In addition, there are currently two third party call centers providing additional call center support to the Company with one located in Arkansas staffed with approximately 30 call center reps, 2 supervisors, 1 quality assurance, and 1 trainer representative.[36] The second third party call center is located in Texas and staffed with 1 supervisor and 2 employees supporting quality assurance and training needs.[37]

Q. **DOES UGI HAVE INTERNAL CALL CENTER PERFORMANCE STANDARDS AND METRICS?**

A. Yes. According to UGI, [**BEGIN CONFIDENTIAL**] [redacted] **END CONFIDENTIAL**] UGI has [**BEGIN CONFIDENTIAL**] [redacted]

[34] UGI Gas Response to OCA-3-5.
[35] UGI Gas Response to OCA-3-4.
[36] *Id.*
[37] *Id.*
[38] [redacted]

[redacted], [redacted]

[redacted] **[END CONFIDENTIAL]**

Q. **WHAT IS YOUR RECOMMENDATION WITH RESPECT TO UGI'S OVERSIGHT AND COMPLIANCE MONITORING OF ITS CALL CENTERS?**

A. I find the overall contractual provisions and specific efforts to track compliance with Pennsylvania consumer protection regulations and the Company's training documents are reasonable. In comparing this specific level of oversight with other Pennsylvania utilities with third party call centers, the UGI Gas contracts are a model I support. With regard to this base rate case, I recommend that the current internal UGI performance metrics for its call centers that I have identified be formally adopted and required by the Commission to ensure that UGI Gas' internal performance requirements are maintained and not allowed to deteriorate.

[redacted]

IV. UGI GAS SHOULD TAKE ADDITIONAL CUSTOMER COMMUNICATION INITIATIVES TO RESPOND TO THE HIGHER NGS CHARGES COMPARED TO THE PTC THAT UGI GAS BILLS AND COLLECTS FROM RESIDENTIAL CUSTOMERS

Q. HAS UGI GAS CALCULATED WHAT RESIDENTIAL CUSTOMERS PAY FOR ESSENTIAL NATURAL GAS SUPPLY SERVICE WHEN SERVED BY AN NGS COMPARED TO WHAT THE CUSTOMER WOULD HAVE PAID WITH THE PRICE TO COMPARE?

A. Yes. From January 2025 through December 2025, Residential Transportation (RT) customers paid $17,044,378.67 more to their NGS compared to the PTC.[41] 76.7% of these customers paid more than the PTC.[42] I attach the UGI compilation of this data as Exhibit BA-7 (UGI Gas Response to CAUSE PA-5-10).

Q. DOES UGI GAS PROVIDE ANY CUSTOMER SPECIFIC COMMUNICATIONS ABOUT COMPARING THEIR NGS CHARGES TO THE PTC?

A. No.[43] The Company's website provides standardized information about retail choice[44] and, as described above, does include the PTC on customer bills but using terms that are not those used to label the NGS "commodity charge" on the bill. The Company also has a box on its "UGI Connections" bill inserts that advertises the right to choose an alternative

[41] UGI Gas Response to CAUSE PA-5-10, attachment.
[42] *Id.*
[43] UGI Gas Response to OCA-11-5.
[44] https://www.ugi.com/choice/supplier-information/

supplier and specifically notes "customers may save money by shopping for a supplier."[45]

Q. **HAS UGI GAS DOCUMENTED THE INCREMENTAL COSTS TO BILL AND COLLECT NGS CHARGES THAT CREATE HIGHER BILLS COMPARED TO THE PTC?**

A. No.

Q. **WHY SHOULD THIS BASE RATE PROCEEDING ADDRESS THIS ISSUE?**

A. UGI should prioritize the adverse impact on customer bills due to high NGS charges to address affordability for basic and essential natural gas service. UGI purchases the NGS receivables and bills and collects the NGS charges as if they were regulated and subject to the Commission's regulations on disconnections, payment plans, late fees, and other collection actions. Therefore, the results of higher bills charged to RT customers flows through base rates for distribution service and the adverse impact on customers paying significantly more for basic natural gas supply service is directly reflected in UGI's collection activities in terms of customer calls, payment plans, premise visits to disconnect service, all of which results in higher costs imposed on all residential customers. UGI has an obligation and the discretion to address this issue now.

Q. **WHAT DO YOU RECOMMEND TO BETTER INFORM CUSTOMERS ABOUT THE CLEAR EVIDENCE THAT CUSTOMERS ARE LIKELY TO PAY MORE TO AN NGS COMPARED TO THE PTC?**

[45] UGI Gas Response to OCA-11-7, attachment.

A. First, I recommend that UGI eliminate their prominent statement in the bill insert materials that retail choice may have the potential to "save" since that is not the actual experience for the vast majority of residential customers that choose an NGS. The Company should include information in its FAQs and customer bill inserts about the right to choose and explain that the risk of higher prices is documented and how to avoid higher prices and bills. UGI should explain how to shop and compare NGS prices during the entire term of the contracts and alert customers to the potential for a change in the NGS price after any initial promotional price and how NGS variable rates can reflect volatile changes in the wholesale market. This fact-based content is justified by the actual results of residential customer shopping as documented both historically and most recently in UGI's analysis provided in this proceeding. Second, I recommend that UGI develop targeted communication to customers with NGS charges that increase significantly over the PTC to alert them to compare that price to the PTC and include a calculation that documents this difference in the customer's recent bill(s).

Q. **DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?**

A. Yes.

UGI Gas Response to OCA-6-12

OCA-6-12

Request:

Refer to Joint Petition for Approval of Settlement of All Issues in UGI's most recent general rate increase request at Docket Nos. R-2024-3052716, Paragraph 86.

a. Please provide UGI Gas's documented and formalized processes using root cause analyses or apparent cause evaluations.

b. Has UGI Gas conducted an RCA or ACE using this documented and formalized process, yet?

Response:

The Company is currently working to document and implement a formalized process using Root Cause Analyses ("RCA") or Apparent Cause Evaluations ("ACE"), as circumstances warrant. The progress toward this objective is described below.

The Company has aggregated and manually analyzed historical records to identify how to categorize and code formal and informal complaint records. This consistent coding will enable the company to identify and track trends and potential areas needed for investigation. Development of system enhancements to capture this data is in progress. In the near term, the Company continues to code complaints manually and has developed a dashboard to monitor complaints and compare year-over-year and formalized the process to review this data with all internal stakeholders each month.

Additionally, the Company is in the process of standardizing internal documentation of identified justified complaints to ensure all critical details are readily available, should an RCA or ACE be required.

The Company has also standardized the process to communicate and track employee errors found through justified complaints to better identify potential gaps in training and coaching.

As a result of these efforts, the Company has identified some scenarios that warrant further analysis and is now positioned to begin formalizing the RCA and ACE process.

In alignment with settlement requirement paragraph 86, "UGI Gas will provide a report to CAUSE-PA, CEO, I&E, the OCA, and the OSBA annually, describing its progress and

OCA-6-12 (Continued)

the results of its review and implementation of the RCA and/or ACE process, with the first report being provided on or before October 1, 2026, until a final Commission order is entered in UGI Gas's next base rate proceeding." The Company is on track to provide a report to CAUSE-PA, CEO, I&E, OCA and OSBA, the results of its review and implementation of the RCA and/or ACE process, on or before October 1, 2026.

Account: <ACCOUNT NUMBER>
<SERVICE ADDRESS 1>
<SERVICE ADDRESS 2>

Hello,
This letter is to confirm that you spoke with a representative of UGI Utilities and agreed to the Payment Arrangement terms shown below. By accepting this arrangement, you accepted the charges that are included.

Date of Arrangement:	<DATE ARRANGEMENT MADE>
Total Arrangement:	$<INSTALLMENT PLAN TOTAL>
Installment Term:	<MONTHLY TERM> months
Installment Amount:	$<MONTHLY INSTALLMENT AMOUNT>
Estimated Due Date:	**<DUE DATE OF NEXT PAYMENT>**

Starting with your next bill, you will be responsible for the Installment Amount plus your full current monthly charges.

If you do not pay the amount agreed upon by the due date and your service is disconnected due to non-payment, your Payment Arrangement will be canceled and you may be required to pay the full overdue amount to reconnect.

If you have any questions, please contact UGI at 800-276-2722, Monday through Friday from 8:00 a.m. and 5:00 p.m.

Thank you,
UGI Utilities

GENERAL INFORMATION

Bill Questions?

If you have a question about the bill, please call UGI before the bill's due date. UGI's phone number, your due date and billing rate can be found on the front of the bill. A detailed rate schedule can be requested. You may also contact UGI at our web site, www.ugi.com

Hearing or speech impaired customers. TDD only, call 1-800-654-5988. To discuss an overdue account, call 1-800-276-2722, weekdays 8AM to 5PM.

Bill Payments

Paying your bill by mail is convenient. Simply use the envelope provided with your bill. You may also pay at one of your payment centers. A list of the payment centers is available upon request. UGI offers a plan where your bank deducts your payment automatically from your checking or savings account. Please call us if you are interested in this service. To pay by phone, please call 800-276-2722.

Need Your Natural Gas Service Turned Off?

To ensure that your Natural Gas service is turned off on the day that you want, please contact UGI seven days in advance.

Third Party Notification - Budget Billing Plan — Operation Share — Customer Assistance Program (CAP) Call us to discuss these UGI Programs.

EXPLANATION OF TERMS

Bill Proration — If there are rate changes during a billing cycle, the customer's bill will include prorated charges based on the timing of the rate changes within the billing period.

CCF — 100 cubic feet of gas. **MCF** — 1,000 cubic feet of gas. This is a measure of gas usage.

Commodity Charges or Purchased Gas Adjustment — The amount billed each month for gas supply service sold by volume (CCF or MCF).

Customer Charge — A monthly charge to cover natural gas distribution company (NGDC) costs such as maintaining the gas lines, meter reading and billing.

Distribution Charges — The charges for delivery of natural gas from the point of receipt into the NGDC's system.

Estimated Bill — A bill based on your previous use and weather conditions. UGI may need to estimate your bill due to extreme weather conditions, emergencies, or any other circumstances that prevent UGI from taking a meter reading.

Heat Value Correction — A correction factor applied to metered usage to adjust for gas heating values that locally differ from system average heating values. Not applicable to Maryland customers.

Late Payment Charge — Fee that UGI charges if you do not pay your bill on time. It is a fixed monthly percentage of the amount owed.

Maryland Franchise Tax — A tax surcharge for the recovery of the Maryland Franchise Tax. Not applicable to Pennsylvania customers.

Price to Compare — The dollar amount charges by the NGDC, used by consumers to compare prices and potential savings with other natural gas suppliers. Not applicable to Maryland customers.

State Tax Surcharge — A charge approved by the Pennsylvania Public Utility Commission. It is a special charge to recover state taxes UGI pays. Not applicable to Maryland customers.

System Improvement Charge — A charge used to recover costs for repairing, improving or replacing distribution facilities in order to provide safe, reliable and efficient service. Not applicable to Maryland customers.

Weather Normalization Adjustment (WNA) — Is a method of billing distribution charges based on "normal" weather approved by the Pennsylvania Public Utility Commission. Not applicable to Maryland customers.

EMERGENCIES: to report a **Gas Leak,** call **1-800-276-2722, 24 hours a day**

Energy to do more®

SURREBUTTAL TESTIMONY

BARBARA R. ALEXANDER
BARBARA ALEXANDER CONSULTING LLC

ON BEHALF OF

OFFICE OF CONSUMER ADVOCATE

OCA Statement 5-SR

Date Served: May 27,2026

Q. **PLEASE STATE YOUR NAME, ADDRESS AND OCCUPATION**.

A. My name is Barbara R. Alexander. I am the sole member manager of Barbara Alexander Consulting LLC. My address is 44 Beech St., Hallowell, ME 04347. I appear in this case as a witness on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. **HAVE YOU PREVIOUSLY TESTIFIED IN THIS PROCEEDING?**

A. Yes. I submitted direct testimony on behalf of the OCA on April 13, 2026.

Q. **WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?**

A. I will respond to the Rebuttal Testimony of UGI-Gas Witnesses Daniel Adamo (Statement No. 13-R), Jill Walter (Statement No. 3-R), John Taylor (Statement No. 11-R), and Jessica Rogers (Statement No. 15-R). I will organize my response based on each of my recommendations.

Q. **DO YOU HAVE EXHIBITS ATTACHED TO YOUR TESTIMONY?**

A. Yes. I attach the following Exhibits:

- Exhibit BA-8: Workpaper, UGI Gas Witness Adamo, Table 1.
- Exhibit BA-9: Supplemental Response to OCA-3-1(a) and accompanying spreadsheet attachment.

Q. **DID UGI WITNESSES ADAMO AND WALTER PROVIDE UPDATED INFORMATION ON COMPLIANCE WITH THE PRIOR RATE CASE SETTLEMENT REQUIREMENTS THAT YOU DISCUSSED IN DETAIL IN YOUR DIRECT TESTIMONY?**

A. Yes. It is important to point out that Mr. Adamo did not submit testimony in UGI-Gas' filing for this base rate case and no UGI witness discussed all the customer service settlement conditions in the initial filing. My overarching concern about the lack of any

comprehensive presentation of those conditions and the status of compliance with those customers was correct. Furthermore, while Mr. Adamo and Ms. Walter did update more current developments in their Rebuttal, in most cases my description of the status of those requirements was correct at the time of my testimony. Finally, it is a fact that UGI Gas filed its current base rate case prior to many of the deadlines set forth in the 2025 rate case settlement, thus preventing a comprehensive analysis of compliance with those commitments.

Q. **DO YOU HAVE ANY CHANGES TO YOUR CONCLUSIONS AND RECOMMENDATIONS?**

A. No. My recommendations support the overall recommendations of other OCA witnesses to either reject the Company's rate increase, or substantially lower any rate increase in this proceeding. The following summarize my recommendations that were documented and presented in more detail throughout my testimony:

- UGI Gas has not completed many of the agreed upon service quality and customer service conditions ordered in the last rate case and, at a minimum, the Commission should monitor and ensure compliance with those conditions prior to considering any further rate increases.
- UGI has adopted internal performance and compliance related performance indicators for its third party call contractors that I support. The Commission should require UGI to implement and report on these performance indicators to avoid any deterioration of service and to properly monitor third party call centers.
- UGI should adopt additional and more targeted customer communications to assist customers in ensuring affordability for basic natural gas service due to high NGS charges

that appear on the customer bill that UGI collects under threat of termination of service. In addition, UGI's bill should be reformed to more directly link the presentation of NGS charges with the PTC.

Q. **IS YOUR PROPOSAL THAT UGI GAS MEET ITS OWN INTERNAL CALL CENTER PERFORMANCE STANDARDS AS A CONDITION OF ANY RATE INCREASE INTENDED TO BE A PERFORMANCE BASED RATE?**

A. Absolutely not. My proposal relates directly to the Company's proposal to raise rates and is intended to ensure that any rate increase does not result in any deterioration of customer service during the rate effective year. The internal management call center performance standards are directly related to the expenses and rates proposed in this proceeding. It is entirely proper and reasonable to consider the link between management's own internal objectives to operate its call center at a high level and the rate increase sought in this proceeding.

Q. **PLEASE SUMMARIZE MR. ADAMO'S REBUTTAL TESTIMONY ON THE UGI CALL CENTER PERFORMANCE.**

A. Mr. Adamo states, "…there is no question that the Company met its call center metrics when comparing 2024 to 2025."[1] His Exhibit DVA-3R presents the UGI Gas 2024 performance and 2025 performance and then compares those results with 2024 results for Columbia, National Fuel, Peoples, and PGW. He asserts that UGI Gas results should properly be compared to Peoples due to the size of customer base. With regard to the UGI Abandonment Rate, he states that the Company responds to high call months with staffing

[1] St. No. 13-R, page 4, lines 5-6.

changes.[2] He states that I identified an "alleged variability in call abandonment rates." He then provides a Table 1 that compares the Abandonment Rate Selected Months for 2024-2026 with Fiscal Year data. His Table provides the Abandonment Rate for "Fiscal Year" 2024, 2025, and 2026 for October, November, February and "Full Calendar Year" Rate for 2024 and 2025. Based on this data, he states that the actual results showing any increase in the Abandonment Rate are not statistically meaningful and the Abandonment Rate has not "meaningfully changed."

Q. **PLEASE RESPOND TO MR ADAMO'S PRESENTATION OF THE UGI GAS CALL CENTER PERFORMANCE RESULTS.**

A. Mr. Adamo's presentation suffers from several defects. First, he compares "fiscal year" with "calendar year" information. The correct comparison is between the calendar year 2024 performance with the calendar year 2025 performance as required by the 2025 base rate case settlement. Second, he provided information in Table 1 that was not provided in discovery. Mr. Adamo's Rebuttal was filed on May 13. UGI did not provide any workpapers associated with his testimony until May 18 after a request by OCA for the workpapers associated with his Table 1. I attach the workpaper UGI provided on May 18 as Exhibit BA-8. As stated in this document:

> Note: The Abandonment Rate data provided for the months of October, November, and December 2023 do not match response to OCA-3-1(a). The data shown for those three months have been revised to align with more accurate telephony reporting available data and presented in Table 1 of Statement No. 13-R, Rebuttal Testimony of Daniel V. Adamo.

As a result, Mr. Adamo has submitted information that differs from that provided

[2] Ibid., page 4, line 12 through page 5, line 12.

in discovery in response to OCA-3-1(a) without any disclosure of that change in his rebuttal testimony. In response to discovery issued on the OCA on May 19, UGI filed an updated response to OCA-3-1(a) on May 20. I attach that supplemental data response as Exhibit BA-9. Additional discovery is now pending to explore the underlying basis for this change in results. Based on the updated data filed on May 20, UGI has made corrections to the 2023 Abandonment Rate that reflects worse performance than previously reported. There is no change in the data provided for 2024 and 2025 that I relied upon in my direct testimony when discussing the implementation of the 2025 base rate case settlement. The impact of the 2023 data is only relevant when included in Mr. Adamo's presentation of the "fiscal year" data in his Rebuttal and is not relevant to the 2025 rate case settlement at issue.

Q. **PLEASE SUMMARIZE YOUR RESPONSE TO MR. ADAMO'S ATTEMPT TO EXCUSE THE DETERIORATION IN THE 2025 ABANDONMENT RATE RESULT.**

A. My testimony is correct. The 2025 calendar year result reflects a higher Abandonment Rate result compared to 2024. I recognize that this result is relatively small but does reflect as well the higher Abandonment Rates for months in which the call volume is highest. Mr. Adamo's claim that the Company alters staffing to reflect the months of higher call volumes has not prevented poor customer experience in attempting to reach the Company to handle vital transactions related to disconnection of service in those very months he claims the Company has taken steps to improve call performance.

Q. **BASED ON THE INFORMATION YOU HAVE AVAILABLE TO DATE, HAS UGI GAS MET OR IMPROVED ITS 2025 CALL CENTER PERFORMANCE METRICS COMPARED TO 2024?**

A. No. The annual average Abandonment Rate increased from 4% in 2024 to 4.7% in 2025. This data confirms that customers experienced poor service in several months, a pattern that was also reflected in the 2024 data. Finally, while not required by the prior settlement, UGI Gas' performance is below that of other Pennsylvania natural gas utilities, a performance that should be taken into account in this base rate case results and supports my recommendation for the call center performance results that should be required in this base rate case. Mr. Adamo's attempt to present data to show a different result or excuse their actual results should be rejected.

Q. **HAS UGI GAS COMPLIED WITH THE REQUIREMENT TO PROVIDE CUSTOMER SERVICE RESULTS TO THE UNIVERSAL SERVICE ADVISORY COMMITTEE?**

A. Mr. Adamo correctly states that the required data has been provided as of the end of April 2026.[3] This occurred after the submittal of my direct testimony. He states that the Committee is scheduled to review this data in its June 2026 meeting. I acknowledge that this data submittal requirement has now been complied with.

[3] Ibid., page 6, lines 1-12

Q. **HAS UGI GAS COMPLIED WITH THE REQUIREMENT TO CONDUCT A ROOT CAUSE ANALYSIS FOR CERTAIN COMPLAINTS?**

A. No. UGI Gas is in the process of conducting such an analysis as I stated in my direct testimony. As a result, it is not possible to determine if UGI Gas has complied with this 2025 base rate case order and settlement.

Q. **HAS UGI GAS COMPLIED WITH THE REQUIREMENT TO REVISE ITS COMMUNICATIONS AND TRAINING RELATED TO ITS WEATHER NORMALIZATION ADJUSTMENT (WNA)?**

A. Yes, in part. Several communication and training related commitments are not yet implemented. However, as I stated in my direct testimony, the resulting customer communications continue to struggle to provide useful information on a very complicated formula and program details. A discussion with stakeholders and solicitation of input that may or may not be accepted by the utility is not dispositive of any review of the final results in this request for higher rates and continuation of the WNA. Most importantly, I find that these communications fail to properly inform customers about the historical result of this billing adjustment which has consistently resulted in higher charges compared to charges that provide a credit due to the WNA formula. The actual implementation of the changes that the Company intends to implement is in the process of being implemented but was not yet completed at the time of my direct testimony. In the context of this base rate case, I made recommendations to further improve the content of these customer communications.

Q. **PLEASE RESPOND TO UGI WITNESS TAYLOR'S STATEMENT THAT THE COMMISSION SHOULD CONSIDER THE LACK OF CUSTOMER COMPLAINTS AS A SIGNAL OF CUSTOMER ACCEPTANCE OF THE WNA.**

A. Mr. Taylor's assertion that the lower number of customer complaints can be interpreted as either customer understanding of the WNA or acceptance of its impact on their bills[4] is not reasonable. He provides no evidence to support this interpretation to explain a lower number of customer complaints about the WNA. Rather, it may well be that customers have "given up" in complaining about a charge on their customer bill because of the repeated Commission approval of the mechanism and frustration with lack of response to their concerns. It is not appropriate to make a conclusion about this complaint trend without further analysis which Mr. Taylor has not done.

Q. **HAS UGI GAS MOVED THE PRESENTATION OF THE PRICE TO COMPARE TO THE FRONT PAGE OF ITS BILL?**

A. Yes. I acknowledged that change as required by the 2025 settlement in my direct testimony. I then made further recommendations due to the now obvious difference in the nomenclature that appear on the customer bill to refer to the Natural Gas Supplier's (NGS) "commodity charge" with the "price to compare" (PTC), suggesting that these different terms may confuse customers who need to compare the NGs charges to the PTC as promoted by the Commission's and the UGI customer shopping educational materials. I continue to recommend that UGI's bill should explicitly inform the customer of this

[4] UGI St. No. 11-R, at 41.

linkage. I agree that the term PTC should not change,[5] but my recommendation should be interpreted to require that the PTC presentation should tell the customer to compare this rate to the NGS "commodity charge."

Q. **HAS UGI GAS NOW DISCLOSED THAT THE CUSTOMER CAN USE PAYMENT METHODS VENMO AND APPLE PAY ON ITS PUBLIC FACING WEBSITE?**

A. Yes. The current version of its public facing website now includes a reference to the use of Venmo and Apple Pay methods.[6] However, when I reviewed the website at the time of preparing my direct testimony, the information about the use of Venmo and Apple Pay was not included on this website. I acknowledge this disclosure is now available and agree that this provision of the 2025 rate case settlement has been complied with. I support the Company's expansion of widely used customer payment methods for UGI bills.

Q. **MR. ADAMO REJECTS YOUR RECOMMENDATION THAT ITS NEWLY DEVELOPED PAYMENT ARRANGEMENT CONFIRMATION LETTER SHOULD INCLUDE A NOTICE OF CUSTOMER RIGHTS. DO YOU AGREE?**

A. No. Mr. Adamo correctly states that UGI has developed (and I acknowledged) a written communication to the customer upon entering into a payment arrangement as per the 2025 rate case settlement. Having now reviewed that letter, I pointed out a serious omission, that is, no information on the customer's rights to dispute the terms or contact the Commission to initiate an informal complaint. Mr. Adamo testifies that unless the prior

[5] UGI St. No. 13-R, page 7, line 18 to page 8, line 2.
[6] Ibid., page 9, lines 8-17.

settlement required that this communication include a notice of customer rights, no such requirement should be implemented.[7] Mr. Adamo's refusal to include the required customer rights in this communication should be rejected for the reasons set forth in my Direct Testimony. As a condition of any rate increase in this proceeding, UGI Gas should be required to promptly add the standard disclosures about customer rights to this communication.

Q. **MR. ADAMO COMPLAINS THAT IN SOME CASES I HAVE INCLUDED NEW RECOMMENDATIONS IN RESPONSE TO UGI'S COMPLIANCE ACTIVITIES FOR THE 2025 BASE RATE CASE ORDER AND SETTLEMENT. DO YOU AGREE?**

A. I understand that the compliance with the prior settlement is separate from any recommendations I make in this proceeding based on my evaluation of the results of the prior settlement as well as my review of UGI's more recent customer service performance. It is reasonable to not only review the prior settlement but to review and evaluate the actual customer service performance results in this base rate case proceeding. The Company has made this dual charge difficult by filing a new base rate case prior to the completion of the settlement conditions in the 2025 order and settlement.

Q. **SHOULD THE COMMISSION ADOPT ADDITIONAL CALL CENTER PERFORMANCE REQUIREMENTS IN THIS BASE RATE CASE?**

A. Yes. Whether or not UGI has complied with the prior settlement commitments, this base

[7] Ibid., page 7, lines 14-16.

rate case requires consideration of future performance beyond 2025. Mr. Adamo's reference to "compliance" in recent audits[8] is not dispositive of the obligation to consider customer service performance in the context of a proposal to raise rates in a base rate case. My recommendation is that any rate increase ordered in this proceeding be accompanied by a requirement that the Company's own internal call center performance standards be met in the rate effective year. This recommendation is directly linked to the request for higher rates to ensure that there is no deterioration in performance in the future.

Q. **TURNING TO YOUR FINDINGS AND RECOMMENDATIONS CONCERNING THE IMPACT OF NGS CHARGES THAT ARE COLLECTED BY UGI GAS, PLEASE SUMMARIZE MR. ADAMO'S REJECTION OF YOUR RECOMMENDATIONS.**

A. Mr. Adamo rejects my proposal to adopt additional and more targeted customer communications in light of my evidence that UGI Gas residential customers regularly pay more to retain essential natural gas service compared to the applicable PTC. His Rebuttal relies on his statements that the Company complies with current billing and customer communication "regulations."[9] He then identifies costs that would be required to implement the more targeted communications.

[8] Ibid., at 11-12.
[9] Statement No. 13-R, at 13, line 5.

Q. **HOW DO YOU RESPOND TO MR. ADAMO'S REBUTTAL TESTIMONY THAT REFUSES ANY NEW INITIATIVES TO CONFRONT THE EVIDENCE OF HIGHER NGS CHARGES?**

A. Mr. Adamo does not rebut the evidence that I included in my testimony that documents the higher prices charged by NGSs to UGI's residential customers. Those higher prices are collected by UGI with collection actions adverse to the customer, including payment arrangements and threats of and actual disconnection of service. Whether or not the Commission has authorized retail shopping or the Purchase of Receivables agreement between UGI and NGSs that allows UGI to bill and collect NGS charges, I recommend that UGI Gas confront the adverse impact on its residential customers of higher charges for the same commodity that UGI provides via its default service obligation and take steps to communicate more targeted educational messages. My recommendations also directly impact the costs of collecting high NGS charges that flow through base rates. My primary recommendation is to eliminate the notion of "saving" as a primary motivation to shop since that is factually incorrect in terms of what UGI knows is the actual result. With regard to additional communications I recommend, UGI Gas has the discretion to develop those messages in addition to any required messaging pursuant to Commission guidance. I recommend that UGI Gas agree to develop more targeted messages to customers whose NGS charges are in excess of the PTC either on the bill or via email to affected customers. Such messaging should identify the dollar amount of difference being paid by the customer and identify options that the customer may want to consider such as choosing a different supplier, returning to default service, and referring the customer to offers presented on the

Commission's PaPowerSwitch web portal. Such messaging should be the subject to stakeholder review and input and finalized within six months after a final order in this proceeding. With respect to costs that may be incurred, those costs should be compared to the additional costs incurred by UGI Gas to collect charges higher than the PTC from its customers and only incurred if the additional messaging costs are in excess of those currently incurred collection costs.

Q. **DO YOU AGREE WITH THE RECOMMENDATION OF CAUSE-PA WITNESS PATRICK CICERO THAT UGI WITNESS ROGERS REJECTS AS TO MODIFYING THE PURCHASE OF RECEIVABLES (POR) PROGRAM?**

A. I support Mr. Cicero's recommendation to modify the POR program that is the vehicle for allowing NGSs to charge higher prices than the default service supply of commodity natural gas. Ms. Rogers herself has opened the door to consideration of such a proposal: "The Commission can and should evaluate whether UGI Gas's policies and practices adequately meet the needs of customers across income and operational demographics, and whether more can be done to support customer affordability through modifications to programs or policies."[10] The modification of this policy would directly improve the affordability of UGI's bills and impact its collection costs incurred to collect higher NGS charges for the same commodity natural gas that is provided through the default service mechanism.

[10] UGI St. No. 15-R, at 22, lines 3-6.

Q. **HOW DOES UGI WITNESS JILL WALTER RESPOND TO YOUR TESTIMONY ON THE TRAINING MATERIALS FOR UGI FIELD REPRESENTATIVES THAT ADDRESS THE REGULATORY REQUIREMENTS TO ATTEMPT PERSONAL CONTACT IMMEDIATELY PRIOR TO DISCONNECTION OF SERVICE?**

A. UGI Witness Walker's responds to my evaluation of the training materials developed by UGI Gas pursuant to the mandate of the 2025 rate case settlement by stating, "Specifically, it is her belief that these employees should be trained to solicit or inquire about customer rights. Finally, Witness Alexander believes that door knocks should be required during terminations. OCA 13 St. 5, at pp. 14-15."[11] She further states that these employees are not trained in the full range of customer rights and remedies and so, "they are not the appropriate resources to solicit or evaluate this information." [12] She rejects my recommendations to improve and revise the training materials.

Q. **PLEASE RESPOND TO UGI WITNESS WALTER'S BASIS FOR REJECTING YOUR RECOMMENDATIONS TO IMPROVE THE COMPANY'S TRAINING MATERIALS TO EFFECTUATE THE COMMISSION'S REGULATIONS**.

A. First, I remind Ms. Walter about the explicit requirement of the 2025 rate case settlement: "UGI Gas will develop additional training materials for its field representatives by April 1, 2026, including making personal contact with customers prior to termination, and will incorporate these materials into the training of its field representatives."[13] The purpose of

[11] Statement No. 3-R, page 8, lines 11-13.
[12] Ibid., page 8, lines 20-21.
[13] *Pa. PUC v. UGI Utilities, Inc. – Gas Division*, Docket No. R-2024-3052716 (Aug. 8, 2025) Recommended Decision, 127 (summarizing Joint Petition for Settlement ¶ 84) (*R.D. 2025)*.

this obligation is to attempt to make personal contact. Of course, the primary obligation is that the field technician attempts such contact by knocking on the door and be prepared to intelligently engage with the customer or responsible adult about the termination. In my review of compliance with this provision for other Pennsylvania electric, gas, and water utilities I have never encountered any suggestion in opposition to the assumption that this requires at a minimum a knock on the customer's door. Furthermore, the field representative must be prepared to recognize and properly identify and react to the customer rights that have been provided in writing. UGI Gas must train its personnel on the existence of these rights and how to respond if the customer or responsible adult (who may not have received the notice if the customer of record is another adult to whom the mail is directed) raises any objection or concern about the termination of service. If the field agents are not trained on what these rights are and how they must be responded to when encountering the customer or responsible adult, the agents may not properly respond when these rights are invoked or when there is evidence that a conversation about these rights and recognition of these rights should occur. I acknowledge that it may be appropriate for the field representative to engage the UGI customer service office to discuss what the adult has stated and initiate the process of implementation of the customer rights. The purpose of the attempt at contact should require the field technician to at least refer the customer to their rights as stated in the most recent notice and solicit customer statements. If there is visible evidence of criteria that would trigger these rights, such as medical equipment, the field technician should be required to affirmatively inquire as to the existence of a medical emergency. Finally, to suggest that these field representatives do not have to knock on the door and be prepared to intelligently talk about the customer's

rights is contrary to the Commission's regulations and good customer service. I continue to recommend that the training materials developed to date are insufficient and need to be revised as I have set forth in my direct testimony, including the obligation for a written training manual. Based on my review of the training materials provided to date, I conclude that UGI Gas has not made a sufficient effort to comply with the 2025 settlement obligation and should be required as a condition of this rate case to develop the required training materials with the reforms that I have identified and that are consistent with my understanding of prior feedback given by the OCA.

Q. **AS A RESULT OF YOUR REVIEW OF UGI'S COMPLIANCE WITH THE ABOVE LISTED CUSTOMER SERVICE AND CONSUMER PROTECTION SETTLEMENT PROVISIONS IN ITS 2025 BASE RATE CASE, WHAT DO YOU RECOMMEND?**

A. Based on my analysis to date, the Commission should find that the Company has not complied with its intent to meet the 2024 call center performance standards, that the revised training materials for field representatives are defective as I have documented, that the Root Cause Analysis has not been completed, that the confirmation of payment arrangement communication is defective, that the bill presentation of the PTC should be reformed to use the same terms as reflected in the NGS charges, that the WNA communications should be reformed to include an historical presentation of incremental charges and credits, and that the Company is still in the process of implementing its promised alternative bill payment options by the promised deadline. My findings support the position of other OCA witnesses that reject the Company's proposed revenue requirement because it is unreasonable for the Company to ignore these commitments while seeking a significant

new rate increase. If there is any rate increase ordered in this proceeding, I recommend that the Commission require a complete documentation of the prior conditions I have identified in my testimony with my required reforms prior to any implementation of increased rates.

Q. **DOES THIS CONCLUDE YOUR TESTIMONY AT THIS TIME?**

A. Yes.

Table 1 Data - UGI Utilities
Abandonment Rates

	Month	Aband. %
*	October-2023	**12.0%**

* **Note: The Abandonment Rate data provided for the months of October, November, and December 2023 do not match response to OCA-3-1(a). The data shown for those three months have been revised to align with more accurate telephony reporting available data and presented in Table 1 of Statement No. 13-R, Rebuttal Testimony of Daniel V. Adamo**

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to OCA (Supplemental Responses)
Delivered on May 20, 2026

OCA-3-1(a) (Supplemental Response)

Request:

Provide the following monthly and annual average information in an Excel spreadsheet with any formulas intact for the calendar years 2023 through the most recent month for which data is available in 2026:

NOTE: Where available, distinguish customer class for results requested.

a. Call Center Performance: calls received; calls answered by a customer service representative; percentage of calls answered within 30 seconds by a customer service representative; average speed of answer for call answered by a customer service representative, busy out rate; abandonment rate.

Response:

Attachment OCA-3-1(a) was originally compiled using data submitted to the PUC in the annual Customer Service Performance Reports. The Company recently recognized the volume of abandoned calls was found to be inadvertently included twice in the value of Calls Received for Calendar Year 2023 and not adjusted for in the calculation of Abandonment Rate. The Supplemental Attachment OCA-3-1(a) has the revised Calls Received and corrected calculated Abandonment Rate.

Prepared by or under the supervision of: Daniel V. Adamo

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA, 02478.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I own the firm Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal and state agencies, consumer organizations, and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Office of Consumer Advocate.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. I work primarily on low-income utility issues. This involves regulatory work on rate and customer service issues, as well as research into low-income usage, payment patterns, and affordability programs. At present, I am working on various projects in the states of Rhode Island, New Jersey, Maryland, Pennsylvania, Ohio, Illinois, Wisconsin, Minnesota, and Missouri. My clients include state agencies (*e.g.*, Pennsylvania Office of Consumer Advocate, Maryland Office of People's Counsel, Massachusetts Office of Attorney General), federal agencies (*e.g.*, the U.S. Department of Health and Human Services), community-based organizations (*e.g.*, Cleveland Legal Aid Society, Legal Action of Chicago, Consumers Council of Missouri), and public and private utilities (*e.g.*, Toledo Water, Xcel Energy, BC Hydro). Examples of my work include assisting the Connecticut Office of Consumers Counsel (OCC) in the annual generic review of the

low-income affordability initiatives of that state's utilities by the Public Utilities Regulatory Authority. I also assisted the Massachusetts Attorney General's Office (AGO) in the generic investigation by the Department of Public Utilities (DPU) into the design of low-income affordability programs. In addition to state-specific and utility-specific work, I engage in national work throughout the United States. For example, I have completed a project with the Natural Resources Defense Council to develop a tool by which to assess the financial impact of differing types of low-income bill assistance. A brief description of my professional background is provided in Attachment RDC-1.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 (Iowa State University), I received my law degree in 1981 (University of Florida). I received my Master's Degree (Regulatory Economics) from the MacGregor School of Antioch University in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have published three books and more than 80 articles in scholarly and trade journals, primarily on low-income utility and housing issues. I have published an equal number of technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. A summary of my publications is included in Attachment RDC-1.

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. Yes. I have testified before the Pennsylvania PUC on numerous occasions regarding utility issues affecting low-income customers and customer service. My testimony has specifically included testimony in various proceedings involving low-income program design and operation, along with various rate design issues as they affect low-income customers. Overall, I have testified in regulatory proceedings in 43 states (other than Pennsylvania) and various Canadian provinces on a wide range of utility issues. A list of the jurisdictions in which I have testified is presented in Attachment RDC-1.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

A. The purpose of my Direct Testimony is to review the impact of UGI Gas (UGI Gas or Company) rates on low-income customers. More specifically, I will examine the following topics:

- The overall affordability of the rates for current service of UGI Gas;
- How to enhance the identification of low-income customers;
- The efficiency and effectiveness of UGI Gas credit and collection expenditures;
- The need for and measures to improve the identification of low-income customers and enrollment of those customers in the Company's CAP;
- The need for UGI Gas' compliance with PUC regulations exempting low-income customers from cash security deposits; and
- The need for restraints on the collection and retention of customer Social Security Numbers by UGI Gas.

Summary of Recommendations

Q. CAN YOU PLEASE SUMMARIZE THE RECOMMENDATIONS YOU MAKE IN YOUR TESTIMONY BELOW?

A. Based on the data and discussion I present below, I make the recommend the following:

1. In the event that OCA's recommendation that the UGI Gas rate request be denied in its entirety, that UGI Gas adopt a more aggressive policy of extended "stay-outs" between base rate case filings. Repeating the filing of one rate case on top of another in short order is not in the best interests of ratepayers.

2. That there be a fifty-fifty sharing of the credit and collection expenses which UGI Gas proposes to include in its cost of service. This adjustment is dollarized and explained in more detail in the direct testimony of OCA witness Jennifer Rogers.

3. That UGI Gas, at a minimum, accept either a printout or a screenshot of the State of Pennsylvania's COMPASS application as adequate documentation to establish Confirmed Low-Income status.

4. That Confirmed Low-Income customers who are negotiating a deferred payment agreement (DPA) with the Company, as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% FPL, should be provided a stand-alone written Plain Language notice informing those customers of their right, in the alternative, to enroll in the Company's Customer Assistance Program (CAP) (along with an explanation of the advantages of CAP's arrearage forgiveness provisions).

5. That UGI Gas be directed to modify its processes and procedures regarding the low-income exemption from deposits. UGI Gas should be directed to accept ***any*** information beyond information on income and household size that would "attest to" the household's eligibility for a state benefit that is consistent with CAP income requirements. Use of COMPASS information as described above should be included in that acceptable information.

6. That UGI Gas be directed to eliminate the requirement that a customer must apply for CAP in order to establish their eligibility for a deposit exemption.

7. That within three months of a final order in this proceeding, and every three months thereafter, UGI Gas undertake a review of the cash security deposits it currently holds, and report the results of such review to interested stakeholders in this proceeding.

8. That UGI Gas be directed to develop and adopt, within 12-months after a final order in this proceeding, an alternative to the use of SSNs.

9. That UGI Gas be directed to provide its Low-Income Advisory Committee regular three month reports on the operation and effectiveness of its Low-Income Customer Assessment and Outreach Pilot.

Part 1. Assessing the Affordability of UGI Gas Rates.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the affordability of UGI Gas bills for current service. I consider bill affordability from four different perspectives. First, I examine the history of rate increases for UGI Gas since 2016 and compare those increases to the changes in the income of low-income households during that same time period. Second, I examine bill affordability to low-income customers in particular. Third, I examine bill affordability to more moderate-income customers. Fourth, I examine the lack of resources available to low- and moderate-income customers to respond to the volatility in UGI Gas bills over time.

A. UGI Gas Rates Over Time.

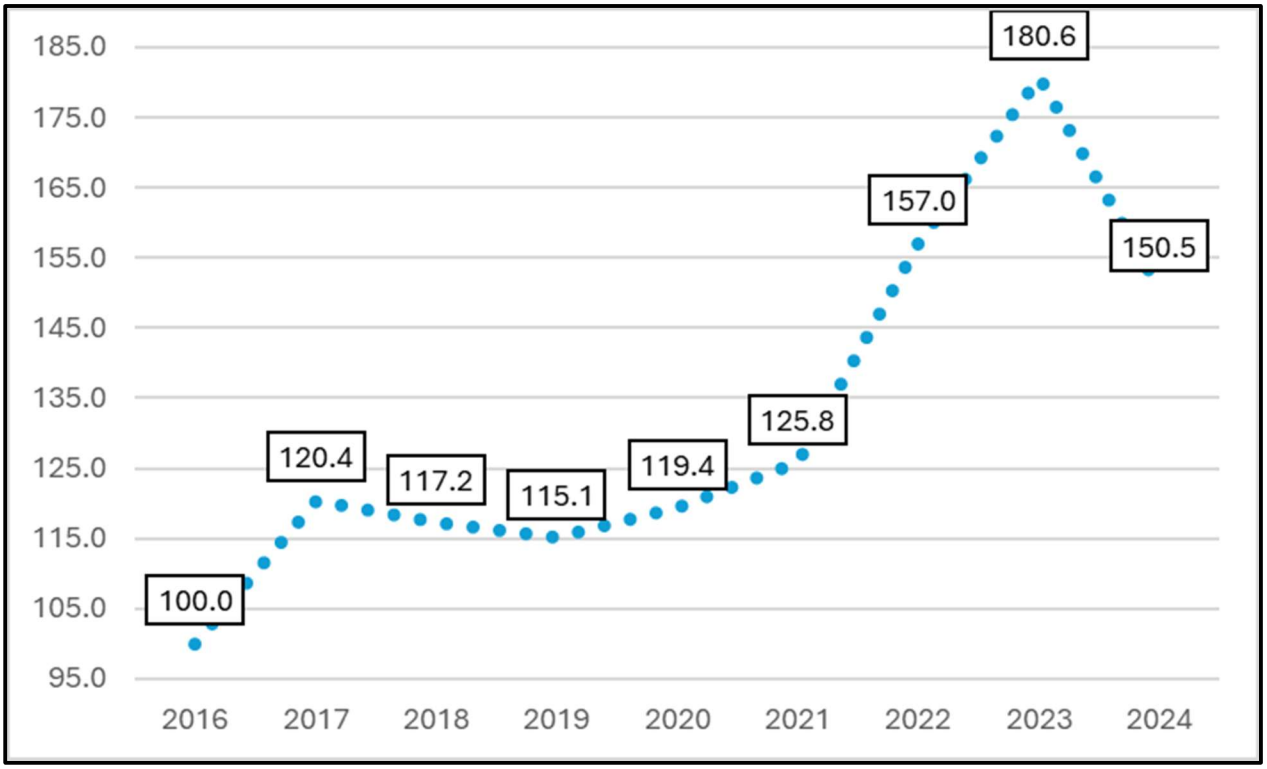
Q. PLEASE DESCRIBE THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the impact of the changes in rates for UGI Gas from 2016 through 2024.[1] I determined the average residential revenue per therm by dividing the total residential revenue reported by UGI Gas in its Annual Report to the

[1] By starting in 2019, I begin before COVID.

Pennsylvania Commission by the total residential sales. I track the changes in UGI Gas rates through the calculation of a "Price Index." In calculating that Price Index, I assign 2016 a base case value of 100. The changes from that base case value represent the rate by which the values increased or decreased. Creating an index such as this is a common way to measure changes in prices. It is, for example, the way that the U.S. Bureau of Labor Statistics presents the rate of inflation.

Figure 1. UGI Gas Price Index (2016 – 2024)



The data in the Figure above shows that increases in UGI Gas rates have been substantial since 2020. While rates were relatively constant in the years 2017 through 2020, since 2020, there has been a sharp spike in the Company's prices. UGI Gas rates increased nearly 40% from 2020 through 2022 and more than 60% from 2020 through 2023. While they dipped somewhat in 2024, they remain well above 2020 levels. Notably, the Company has not even been able to fully account for or demonstrate the impacts of its

most recent rate increase, as those rates only went into effect for service rendered on and after October 28, 2025. The price hikes proposed in this proceeding will increase prices even further.

Q. ISN'T THE INCREASE IN PRICE PRIMARILY ATTRIBUTABLE TO INCREASES IN NATURAL GAS SUPPLY COSTS?

A. No. I have examined the PUC's "Rate Comparison Reports" for the years 2016 through 2025.[2] Those reports present the monthly bill for natural gas heating service at a usage of 15 MCF.[3] I examined both the bill for "distribution" costs and the "total" bill for UGI Gas. The Table below shows that the UGI Gas distribution bill has increased as a percentage of the total bill since the years 2016 through 2020. Even in 2022 and 2023, when the distribution price hikes were a smaller percentage, that occurred not because the distribution bill moderated but rather because the total bill spiked.

Table 1. UGI Gas: Distribution Monthly Bill vs. Total Monthly Bill (15 MCF)

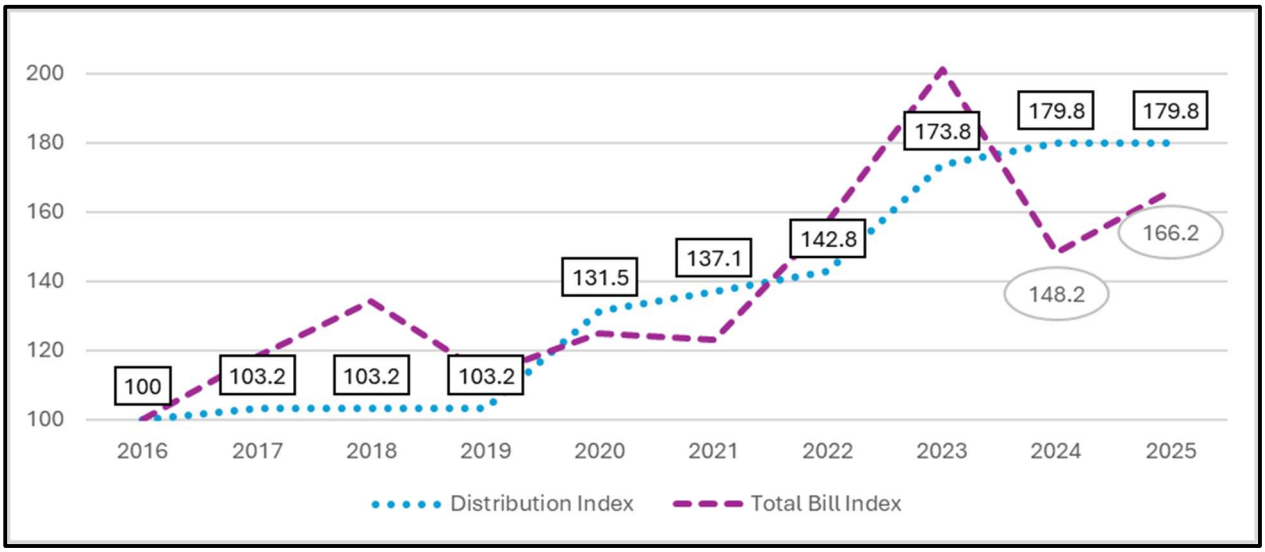
	Distribution Bill	Total Bill	Distribution as Pct of Total
2016	$43.18	$118.23	36.5%
2017	$44.58	$139.95	31.9%
2018	$44.58	$158.72	28.1%
2019	$44.58	$133.89	33.3%
2020	$56.79	$147.86	38.4%
2021	$59.20	$145.69	40.6%
2022	$61.66	$186.12	33.1%
2023	$75.04	$237.99	31.5%
2024	$77.65	$175.20	44.3%
2025	$77.65	$196.45	39.5%

[2] Available at https://www.puc.pa.gov/filing-resources/reports/rate-comparison-reports/

[3] In years prior to 2020, I use the rates for UGI Utilities – Gas Division as the rates for the Company. I do not consolidate the three UGI divisions in any way.

Calculating an Index for both the Distribution component of a UGI Gas bill since 2016 and the total UGI Gas bill for that same time period, as shown in Figure 2, since 2020, the UGI Gas distribution bill has increased faster than the UGI Gas total bill in every year but two (2022, 2023).

Figure 2. Distribution Bill Index and Total Bill Index (2016 – 2025) (UGI Gas)



The Figure above shows that while UGI Gas distribution bills have increased by 80% from 2016 to 2024 and 2025, UGI Gas total bills have increased by only 48% (2024) and 66% (2025).

Q. HAVE YOU EXAMINED HOW THE INCREASE IN UGI GAS PRICES COMPARES TO INCREASES IN THE INCOMES OF LOW-INCOME HOUSEHOLDS OVER THE SAME TIME PERIOD?

A. Yes. I compare the increase in UGI Gas bills from 2016 through 2024 as documented in the PUC's Rate Comparison Reports to the changes in the average First Quintile (Q1)

Income[4] for 353 of the 427 zip codes for which the Census Bureau reports income by Quintile in both 2026 and 2024.[5] Using the Total Bill Index of 166.2, it is evident that the incomes of low-income households are falling further and further behind increases in UGI prices/bills. Table 2 below shows that of the 353 UGI Gas zip codes for which Q1 income is published, only one-in-seven (n=51) experienced an increase in the Q1 Income Index of 165.5 or more (roughly equal to the Total Bill Index of 166.2). In contrast, 31 zip codes had a Q1 Index of less than 100, indicating that incomes actually declined during the same time period UGI bill increased by 65%. An additional 137 zip codes experienced an increase in income during this time period, but an increase of only 30% or less (i.e., an index of 100.5 – 130.5).

As with the Total Bill Index, the Q1 Index sets the base year (in this instance, 2016) equal to 100. The Index then documents the percentage change in the dollar value over time relative to that base year. A Q1 Index of "100"in 2024 would mean there was no change in the First Quintile (Q1) incomes from 2016 to 2024. A Q1 Index of 125 (for example) in 2024 would mean that the First Quintile incomes in 2024 were 25% higher in 2024 than they were in 2016. A Q1 Index of 80 (for example) in 2024 would mean that the First Quintile incomes in 2024 were 20% lower in 2024 than they were in 2016. In sum, an Index of less than 100 means that the value decreased relative to the base year, while an Index of more than 100 means that the value increased relative to the base year.

[4] The Census Bureau rank orders all households by income from lowest to highest. It then divides that ranking into five equal parts, each part of which is called a "quintile." The one-fifth of households with the lowest income is the "First Quintile" (Q1), sometimes known as the "lowest quintile." The one-fifth of households with the highest income is the "Fifth Quintile" (Q5).

[5] Some zip codes have sufficiently small populations that the Census Bureau does not report income by quintile due to privacy concerns.

If the Index is calculated for two different values are being compared (in this instance, UGI Gas Bills and Q1 Income), the significance is that the Index with the higher value increased the most.

Table 2. Count of UGI Gas Zip Codes by Index of Changes in First Quintile Income (2016 – 2024)[6] (Index of 100 means no change)

Q1 Income Index (2024 vs. 2016)	Count of UGI Gas Zip Codes
40.5-100.5	31
100.5-130.5	137
130.5-140.5	52
140.5-150.5	37
150.5-155.5	25
155.5-160.5	14
160.5-165.5	6
165.5-170.5	5
170.5-180.5	13
180.5-190.5	11
190.5-200.5	7
200.5 or more	15
Grand Total	353

Q. WHAT DO YOU CONCLUDE?

A. Based on the data and discussion I present below, I recommend that UGI Gas adopt a policy of aggressively pursuing more extended "stay-outs" between base rate case filings. Repeating the filing of one rate case on top of another in short order is not in the best interests of ratepayers.

B. The Unaffordability of UGI Gas Bills to Low-Income Customers.

[6] Changes in income are available only through 2024. Census data for 2025 has not yet been published.

Q. HAVE YOU EXAMINED THE AFFORDABILITY OF UGI GAS BILLS TO LOW-INCOME HOUSEHOLDS IN PARTICULAR?

A. Yes. The difference in the spiraling UGI Gas rates and the changes in the incomes of low-income households ultimately leads to consistently unaffordable UGI Gas burdens to low-income customers throughout its service territory. At an affordable burden of 4% for natural gas, a UGI Gas customer receiving the average bill of $1,010 in 2024[7] would have required an income of $25,250. Of the 427 UGI Gas zip codes for which Q1 incomes are reported for 2024, fewer than one-in-five (n=83) had a Q1 income that would have resulted in an affordable UGI Gas bill. The rate hike sought in this proceeding, of course, would increase bills (and thus increase the income needed to have an affordable burden) even further.

Q. HAVE YOU BEEN ABLE TO EXAMINE THE DISTRIBUTION OF INCOME IN THE TOTAL UGI GAS POPULATION IN ADDITION TO THE LOWEST QUINTILE OF INCOME?

A. Yes. I have examined the distribution of UGI Gas burdens for households with income less than $30,000 in the UGI Gas service territory. Nearly one-in-five (17.4%) households in the UGI Gas service territory have annual income less than $30,000. Households with income at or below $25,000 would have experienced a natural gas burden of more than 4%, while households with income between $25,000 and $30,000 would nearly reach that 4% limit of affordability.[8]

---

[7] UGI Gas Annual Report to PUC, at Schedule 600, page 43.

[8] In Pennsylvania, the Commission specified its definitions of an "affordable burden." Pennsylvania PUC, Final Policy Statement and Order, at page 4, 2019 Amendments to Policy Statement on Customer Assistance Program, 52

Table 3. Distribution of UGI Gas Zip Codes by Average Q1 Incomes (2024)	
Average Q1 Income	Count of UGI Gas Zip Codes
$9,500 or less	13
$9,500 - $17,500	120
$17,500 - $23,500	115
$23,500 - $25,499	22
>$25,500	83
Grand Total	427

It would be incomplete, however, to simply consider income at $30,000 without considering the households falling in the "or below" part of the phrase. Households with income less than $10,000 would experience a UGI Gas burden (at 2024 bills) of more than 20% of income, while households with income between $10,000 and $15,000 would have experienced a UGI burden of more than 8%, twice the demarcation of affordability.

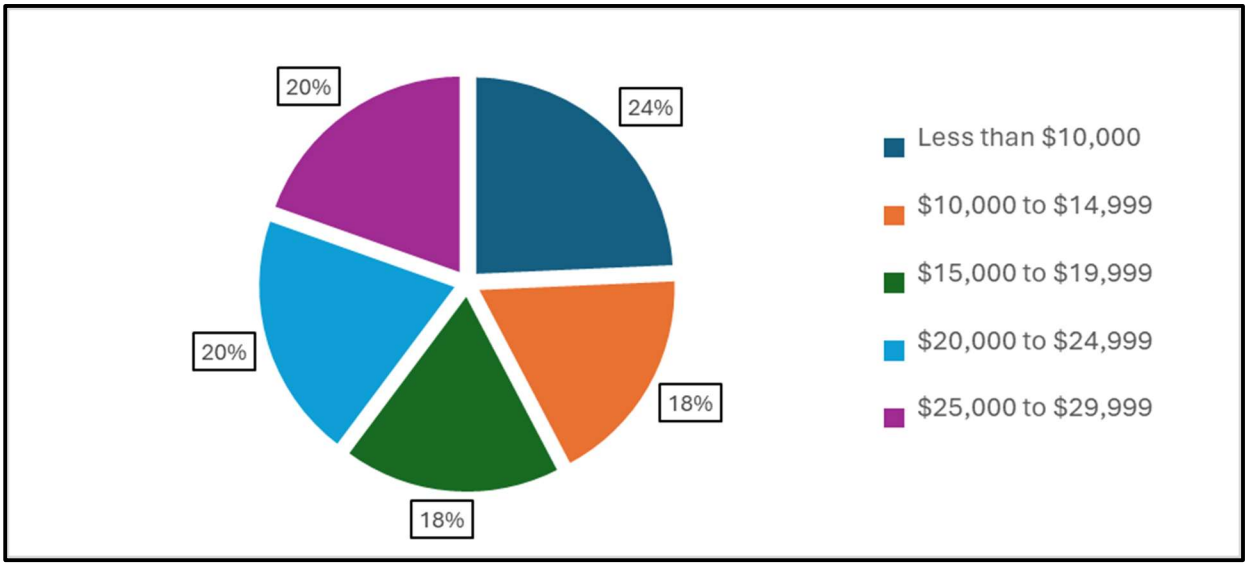
Pa. Code § 69.261–69.267, M-2019-3012599 (September 19, 2019). I choose the 4% burden prescribed by the PUC for households at or below 50% of Federal Poverty Level since that income level most closely aligns with Q1 incomes. The affordable burdens were prescribed after an extensive inquiry into the impacts of unaffordable bills, including payment impacts and household impacts associated with inability-to-pay. In deciding upon specific burdens, the Commission further balanced the adverse impacts on low-income households against the rate impacts of providing CAP subsidies to achieve the affordable burdens.

Table 4. UGI Gas Burdens at 2024 Residential Bill of $1,010 at Annual Income Below $30,000

Income Range	Income Mid-Point	Burden at 2024 Bill of $1,010
Less than $10,000	$5,000	20.2%
$10,000 - $14,999	$12,500	8.1%
$15,000 - $19,999	$17,500	5.8%
$20,000- $24,999	$22,500	4.5%
$25,000 - $29,999	$27,500	3.7%

Figure 3 below shows that of the UGI Gas population with annual income less than $30,000, nearly one-quarter (24%) in fact have income less than $10,000. More than four-of-ten (24% + 18% = 42%) have income less than $15,000, with a UGI Gas burden two times higher than the affordable burden of 4%.

Figure 3. Distribution of Households with Annual Income Below $30,000 by Income



When the data above is read together in its entirety, it is clear that UGI Gas has a significant rate affordability problem even before taking into account the increase in rates sought by the Company in this proceeding.

Q. IN ADDITION TO THE UNAFFORDABILITY OF UGI GAS BILLS, PLEASE DESCRIBE THE IMPACT OF INFLATION ON LOW-INCOME CUSTOMERS.

A. In addition to examining the specific unaffordability of UGI Gas rates to low-income households, I also examine the disproportionate adverse impact that inflation has on low-income customers.

The process of setting reasonable rates does not exclusively consider the interests of the utility and its investors. The courts, for example, have noted that setting a reasonable return on equity must involve a balancing of the interests of investors and ratepayers. In addition, under Pennsylvania law, in setting rates, the Public Utility Commission must give "due consideration to the interests of consumers."[9] To the extent that the impacts of inflation on investor interests are considered, therefore, the impacts of inflation on ratepayer interests must be considered as well.

Inflation is disproportionately affecting lower-income households. The Return on Equity (ROE) sought by the Company in this proceeding, which would have the impact of driving up rates, will exacerbate this problem. Given the PUC's obligation to balance the interests of investors and ratepayers in setting a reasonable ROE, the PUC should consider the greater adverse impacts that inflation has imposed on low-income ratepayers when setting rates.

[9] 71 Pa. Stat. Ann. §309-5(2).

Q. HOW DOES INFLATION HAVE A PARTICULARLY ADVERSE IMPACT ON LOWER INCOME HOUSEHOLDS?

A. The impact of inflation is felt most severely by low-income households. Research by the U.S. Department of Labor's Bureau of Labor Statistics,[10] reports that "consumers with different incomes experience inflation quite differently."[11] According to this research, the lowest earning households spend a disproportionately higher share of their household budget on household necessities such as rent, food and medical care.

Table 5. Household budget shares of expenditure items for lowest and highest income quartiles, 2017–2018[12]

Expenditure	Lowest Income Quartile	Highest Income Quartile
Rent (including owner's equivalent rent	34.93%	27.93%
Food at home	9.44%	6.58%
Medical care	8.36%	8.09%
Household utilities	4.36%	2.73%
Motor fuels	3.46%	3.42%
Motor vehicle operation	3.44%	3.40%
Telephone service	2.32%	2.00%

While low-income households pay more of their budgeted income for this basket of essential goods, it is also important to note that the BLS researchers found that, "prices for motor fuel, medical care, fuel and utilities, and shelter rose faster than the overall average.

[10] BLS is the agency that calculates and reports the "rate of inflation" (i.e., the Consumer Price Index [CPI]) each month.

[11] Klick and Stockburger (December 2022). Spotlight on Statistics: Inflation Experiences for Lower and Higher Income Households, U.S. Department of Labor, Bureau of Labor Statistics, available at https://www.bls.gov/spotlight/2022/inflation-experiences-for-lower-and-higher-income-households/home.htm

[12] Id.

. .”[13] Thus, “[b]ecause the lowest income households dedicate more of their spending on these categories,” the BLS researchers found, “their overall inflation rates grew faster than highest income households.”

Q. WHAT IMPACT DO INFLATION PRICES HAVE ON HOUSEHOLDS?

A. The Federal Reserve researchers found that the “stress” being placed on households by high inflation is much greater for low-income households as low-income households have fewer resources and fewer options to mitigate the impact of inflation. They explained:

> Prior research suggests that inflation hits low-income households hardest for several reasons. They spend more of their income on necessities such as food, gas and rent—categories with greater-than-average inflation rates—leaving few ways to reduce spending. When prices rise, middle-income households may react by consuming cheaper goods and buying more generic brands. Low-income households do not have the same flexibility; in many cases, they are already consuming the cheapest products.
>
> Additionally, many low-income households lack the ability of higher-income households to stock up when prices are discounted, buy in bulk and save, delay purchases if there is an opportunity to save in the future or buy more cheaply online. Low-income households are also likely to have smaller cash buffers to tide them over a period of high inflation.[14]

The data is clear and consistent. Lower income families expend a greater share of their income on necessities (which, as a whole, tend to have higher inflation rates); have smaller financial cushions to mitigate the impact of inflation; and may have less of an ability to switch to lower-priced alternatives. As Lael Brainard, a member of the Board of Governors

[13] Id.

[14] Jayashankar and Murphy (January 2023). High inflation disproportionately hurts low-income households, Federal Reserve Bank of Dallas, available at https://www.dallasfed.org/research/economics/2023/0110#:~:text=Low%2Dincome%20households%20most%20stressed,few%20ways%20to%20reduce%20spending%20.

of the Federal Reserve System, concluded, "All Americans are confronting higher prices, but the burden is particularly great for households with more limited resources."[15]

C. The Unaffordability of UGI Gas Bills to More Moderate Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the ability-to-pay of more moderate income households using the ALICE Threshold. "ALICE" is the acronym used to describe Asset-Limited, Income-Constrained, Employed ("ALICE") households, who have income above the Federal Poverty Level but below the cost of basics included in the ALICE Household Survival Budget described below.

Q. PLEASE DESCRIBE THE TERMINOLOGY YOU USE IN USING THE ALICE DATA.

A. There are three basic terms that are used in presenting and assessing ALICE data for a particular geographic area:

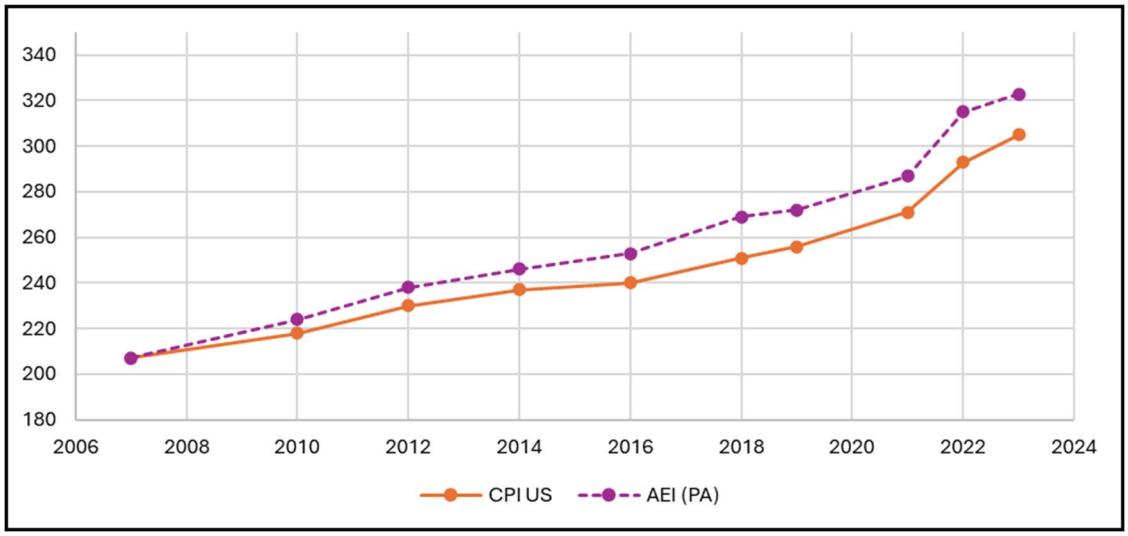
- **The ALICE Survival Budget**. The ALICE Survival Budget tracks the cost of household necessities that matter most to ALICE households: housing, child care, food, transportation, health care, and basic technology. According to United for ALICE, the United Way research arm which addresses the economic issues facing ALICE households, the ALICE Budget differs from the budget used by the U.S. Bureau of Labor Statistics (BLS) to calculate the Consumer Price Index (the traditional measure of inflation). The budget which BLS uses tracks over 200 goods and services. These include items that financially insecure households cannot afford on a regular basis (*e.g.*, full-service meals at restaurants, wine, major appliances, flights, and jewelry). In contrast, the ALICE Budget is limited to household essentials.[16]

[15] Brainard (April 2022). Variations in the inflation experiences of households, available at https://www.federalreserve.gov/newsevents/speech/brainard20220405a.htm

[16] ALICE Essentials Index, available at https://www.unitedforalice.org/essentials-index

- **The ALICE Essentials Index:** The ALICE Essentials Index is the rate of price increase for the limited market basket of household essentials: housing, child care, food, transportation, health care, and a smartphone plan. According to the 2025 ALICE report for Pennsylvania, the ALICE Essentials Index has consistently outpaced the broader CPI nationwide.[17] Nationally, the ALICE Essentials Index has outpaced the broader CPI nationwide since 2007. Between 2021 and 2023, the ALICE Essentials Index increased at an annual rate of 7.3% compared to 6.1% for CPI. The ALICE report for Pennsylvania reported that "in Pennsylvania, the ALICE Essentials Index also tended to increase faster than CPI. . ."

Inflation: Alice Essential Index (AEI) vs. Consumer Price Index (CPI) (Pennsylvania)



The Pennsylvania ALICE Report found that "[w]hile wages have risen substantially in recent years, so have costs. And even in occupations where wages are growing faster than costs, wages started from such a low level that many workers are still not able to cover household essentials."[18]

- **The ALICE Wage:** The ALICE Wage is expressed on a monthly, annual and hourly basis. The Alice Wage represents the dollar amount needed to be earned that would exactly equal the household's ALICE Survival Budget. A wage lower than the ALICE Wage means the wage-earner can *not* meet the ALICE Survival Budget. A wage higher than the ALICE Wage means the

[17] The State of ALICE in Pennsylvania: Costs Over Time: The ALICE Essential Index, https://www.unitedforalice.org/costs-over-time/pennsylvania

[18] Id.

wage-earner is meeting the ALICE Su15 rvival Budget with some additional earning capacity left over. The ALICE Wage differs by household size and composition, as well as by the number of wage earners in the household.

Q. HAVE YOU EXAMINED THE WAGES NEEDED TO MEET THE ALICE SURVIVAL BUDGET IN THE COUNTIES SERVED BY UGI GAS?

A. Yes. I have reviewed the ALICE Wage for a selection of UGI Gas counties representing a diversity in geographic locations. The counties I selected are the 15 UGI Gas counties with the largest populations of UGI Gas residential customers. As I described above, the dollars needed for a household to meet the ALICE Survival Budget is known as the ALICE Wage. The ALICE Wage for the UGI Gas counties I examine is set forth in Table 6 below.

Table 6 demonstrates how the cost-of-living varies across Pennsylvania. For example:

- Bucks, Lehigh, and Northampton counties have noticeably higher ALICE wages than do the other UGI Gas counties, followed closely by Lancaster.
- In contrast, Northumberland and Tioga counties have noticeably lower ALICE wages than do other counties.
- Overall, the ALICE Wage (for a one-adult, one child family) throughout these 15 UGI Gas counties differ by more than $8 per hour, from a low of $19.27 (Northumberland County) to a high of $27.74 (Bucks County).

It is evident from the data presented in the Table that the cost-of-living for these moderate income households, and thus the ability of these UGI Gas customers to absorb the rate increase sought in this proceeding, varies widely across the Company's service territory.

Table 6. Hourly Wage Needed to Meet ALICE Threshold (by Family Composition)
(15 Counties with Largest Number of UGI Gas Customers)

Name	Single Adult	One Adult One Child	One Adult One Childcare	Two Adults	Two Adults Two Children	Two Adults Two Childcare
Berks	$15.20	$22.51	$25.76	$22.64	$36.58	$43.40
Bucks	$19.15	$27.74	$32.29	$27.05	$43.61	$52.96
Columbia	$14.38	$21.62	$24.91	$21.76	$34.90	$41.81
Cumberland	$16.06	$23.55	$26.95	$23.60	$38.09	$45.91
Dauphin	$15.94	$23.35	$26.76	$23.38	$37.71	$45.59
Lackawanna	$14.71	$21.83	$24.85	$22.12	$35.38	$41.76
Lancaster	$16.53	$23.92	$26.98	$24.17	$38.42	$45.16
Lebanon	$15.38	$22.01	$25.44	$22.06	$36.26	$44.17
Lehigh	$17.33	$24.94	$28.41	$24.92	$39.97	$48.50
Luzerne	$14.71	$21.92	$25.20	$22.06	$35.57	$42.46
Lycoming	$14.83	$21.11	$23.58	$21.72	$34.09	$39.31
Northampton	$17.39	$25.17	$28.60	$25.18	$40.47	$48.91
Northumberland	$13.26	$19.27	$21.68	$19.90	$31.96	$36.97
Potter	$14.05	$20.10	$22.48	$20.77	$33.77	$38.87
Tioga	$13.39	$19.66	$22.13	$20.26	$32.78	$38.03

Q. HAVE YOU EXAMINED ANY SUBSET OF ALICE HOUSEHOLDS IN PARTICULAR?

A. Yes. The Table below documents what hourly wage would be required to meet the ALICE Survival Budget for *senior* households based on data up to 2023. As with the households discussed above, Bucks and Northampton counties also have the highest ALICE Wages for both a household with a single senior person, and a household with two seniors. Dauphin and Lancaster Counties also have relatively high wages required to meet the necessary household expenses for UGI Gas seniors.

Table 7. Hourly Wage Needed to Meet ALICE Threshold for Senior Households
(15 Counties with Largest Numbers of UGI Gas Customers)

Name	Single Senior	Two Seniors
Berks	$17.59	$27.91
Bucks	$21.53	$32.41
Columbia	$16.62	$26.75
Cumberland	$16.06	$23.55
Dauphin	$18.38	$28.78
Lackawanna	$16.78	$26.76
Lancaster	$18.50	$28.64
Lebanon	$17.46	$26.73
Lehigh	$17.33	$24.94
Luzerne	$16.87	$26.89
Lycoming	$16.90	$26.37
Northampton	$19.66	$30.28
Northumberland	$15.64	$25.15
Potter	$15.97	$25.09
Tioga	$15.14	$24.26

The ALICE wages are important to consider in this UGI Gas rate case given the high percentage of households who do not earn sufficient wages to meet the ALICE Survival Budget. Table 8 presents, for the same fifteen largest UGI Gas counties,[19] the percentage of households who live with an annual income below the ALICE Threshold. Potter, Luzern, and Columbia counties have 45% to 46% of households with incomes below the ALICE Threshold, while Lackawanna County has more than half of its households (51%)

[19] These 15 counties include 91.4% of all UGI Gas customers. CAUSE-PA-1-8.

with incomes below the ALICE Threshold. In addition, Berks (40%), Lancaster (40%), Lehigh (42%), Lycoming (43%), Northumberland (42%), and Tioga (42%) all have between 40% and 45% of their households earning insufficient income to meet the ALICE Threshold. None of the 15 counties with the largest UGI Gas customer base have fewer than 30% of their households failing to meet the ALICE Threshold.

Table 8. Percent Households Below ALICE Threshold
(15 Counties with Largest Number of UGI Gas Customers)

Name	Total Households	% Below ALICE Threshold
Berks	163,307	40%
Bucks	249,189	32%
Columbia	25,929	45%
Cumberland	107,981	36%
Dauphin	121,773	39%
Lackawanna	88,871	51%
Lancaster	211,669	40%
Lebanon	58,012	35%
Lehigh	147,524	42%
Luzerne	136,046	46%
Lycoming	46,849	43%
Northampton	123,536	39%
Northumberland	37,343	42%
Potter	6,757	45%
Tioga	16,639	42%

As is evident from this discussion, the unaffordability of UGI Gas bills is not a problem that inheres exclusively in the low-income population of UGI Gas. As demonstrated by the Census Bureau's Household Pulse Survey (HPS) discussed in detail below, the insufficiency of income is increasingly resulting in the inability to pay household utility

bills, or to pay such bills in full, by even more moderate-income customer base(see, Table 10, supra). In addition to this inability-to-pay, however, the HPS documents that even more moderate income Pennsylvania households are also being forced to engage in dangerous efforts to reduce their energy bills when they find that they cannot afford to pay these bills. The cells in Table 9 below show that even households with income between $35,000 and $75,000, well above 50% of Federal Poverty Level, have been forced to make trade-offs in order to pay their utility bills. Indeed, only 68% to 77% of households with income between $50,000 and $150,000 report "never" needing to make such tradeoffs.

Table 9. Household reduced or forwent expenses for basic household necessities, such as medicine or food, in order to pay an energy bill (HPS, Housing Table 4)

	Almost every month	Some months	1 or two months	Never	Total
Less than $25,000	13.3%	26.3%	15.1%	44.1%	98.8%
$25,000 - $34,999	15.6%	12.4%	8.6%	63.4%	100.0%
$35,000 - $49,999	14.6%	15.7%	11.1%	58.5%	100.0%
$50,000 - $74,999	7.1%	20.4%	4.3%	68.3%	100.0%
$75,000 - $99,999	3.5%	14.4%	7.7%	74.3%	99.9%
$100,000 - $149,999	3.6%	7.2%	12.3%	77.0%	100.0%
$150,000 - $199,999	5.2%	3.1%	1.4%	90.3%	100.0%
$200,000 and above	1.9%	0.0%	5.4%	92.7%	100.0%

Again, the problems that arise as a result of the increasing unaffordability of UGI Gas bills for more moderate income UGI Gas households will be exacerbated even further by the rate hike sought by UGI Gas in this proceeding.

D. The Lack of Household Resources as Contributing to the UGI Gas Affordability Problem.

Q. IS THERE AN ADDITIONAL HOUSEHOLD ATTRIBUTE THAT CONTRIBUTES TO THE UNAFFORDABILITY OF UGI GAS BILLS?

A. Yes. It would be a mistake to focus attention exclusively on household income in an examination of the affordability of UGI Gas bills. In addition to looking at household income, an examination of the affordability of UGI Gas bills should also consider the availability of household resources. When I reference household resources in this respect, I am referring to the availability of liquid assets that would allow a customer of UGI Gas to respond to large variations in either seasonal or annual bills. To the extent that a household lacks such resources, there will be an inability to respond to changes in annual or seasonal bills. My reference to a "liquid resource" is a reference, primarily, to the lack of an adequate banking or saving account from which a customer can draw dollars in order to pay a higher UGI Gas bill.

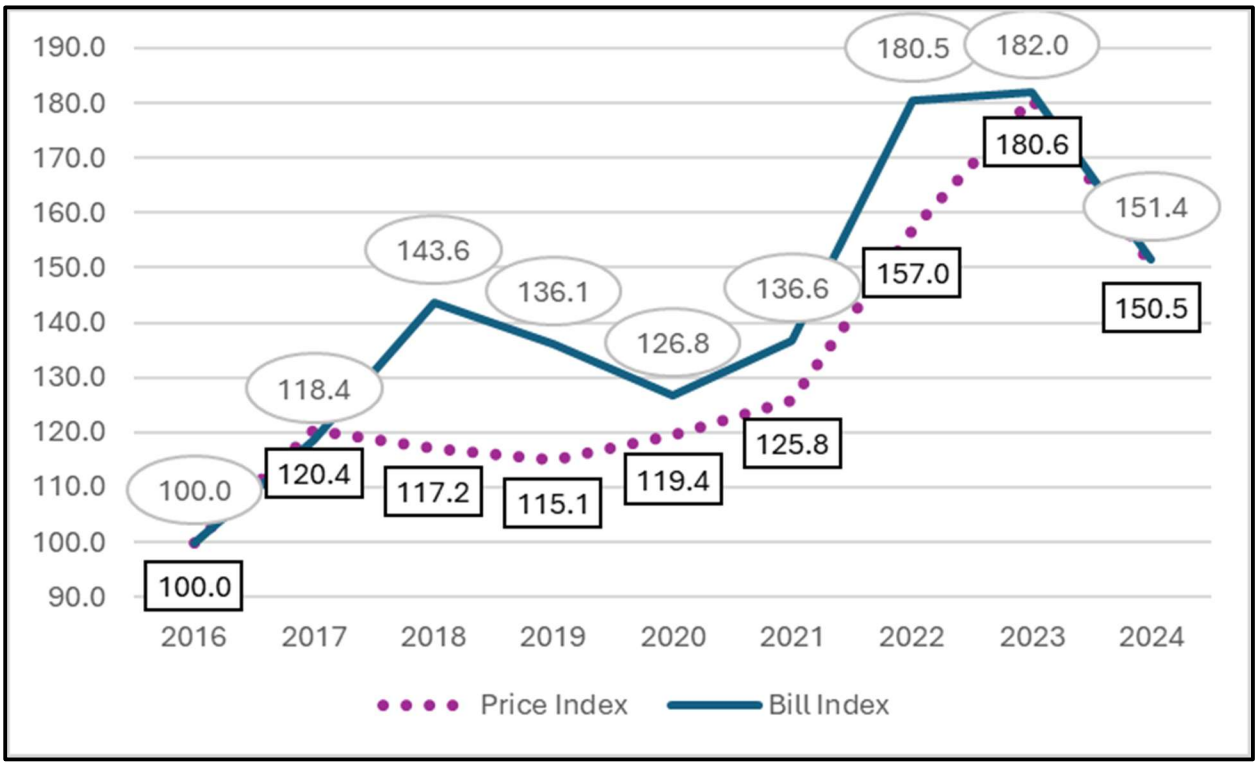
Q. HAVE UNEXPECTED CHANGES IN ANNUAL BILLS OCCURRED FOR UGI GAS CUSTOMERS?

A. Yes. Figure 4 presents a comparison of the changes in UGI Gas prices relative to the changes in average annual UGI Gas bills for the years 2016 through 2024. While the Figure shows, as discussed in detail above, the recent spike in UGI Gas prices to residential customers, the importance for purposes here is a comparison of the relative changes in prices and bills. Even in years when prices declined, UGI Gas customers could face increased bills due to the need for increased consumption. From 2017 to 2018, for example, while the Price Index declined (from 120.4 to 117.2), the Bill Index saw a

substantial increase (from 118.4 to 143.6), largely due to the fact that average residential consumption in 2017 was 71 MCF while the average residential consumption in 2018 was 88 MCF. Prices remained relatively steady in 2019 (Price Index of 115.1), but the Bill Index remained high (136.1) because average residential consumption in 2019 remained high (85 MCF). Similarly, while prices increased substantially from 2021 to 2022 (from a Price Index of 125.8 to a Price Index of 157.0), bills increased even more (from a Bill Index of 136.6 to a Bill Index of 180.5). This occurred because annual residential usage jumped to 82 MCF in 2022, before moderating back to 72 MCF in 2023 and 2024.

As is evident, it is not merely the size of the UGI Gas bill that poses a problem for customers. The year-to-year volatility in UGI Gas bills pose particular problems to households who lack the resources to set aside an "emergency fund" to respond to these unexpectedly high expenses. The volatility cannot be prevented by investing in energy efficiency measures. Due to the very fact of their poverty, low-income households lack the discretionary income to invest even in cost-effective efficiency measures. As documented in Table 9 and Table 10, low-income Pennsylvania households are having difficulties in paying their bills with which to begin, as well as being forced into tradeoffs between utility bill payment and payments for other household necessities; they lack the resources to make investments with an uncertain future return. Moreover, since low-income UGI Gas households tend most frequently to be tenants, they lack the authority to make decisions regarding the major gas-consuming systems in their homes (what is known as "dominion interest," the authority to make decisions), even if they had the financial wherewithal to do so.

Figure 4. Bill Index Compared to Price Index (2016 – 2024)



Q. IS THERE A SEASONAL VARIATION IN UGI GAS BILLS THE RESPONSE TO WHICH MAY BE IMPEDED BY THE LACK OF HOUSEHOLD LIQUID RESOURCES?

A. Yes. In addition to there being unexpected annual variations in UGI Gas bills, there are seasonal variations in UGI Gas bills as well that can be demonstrably shown to be associated with higher unpaid bills. In my discussion below, I consider both the changes in mean *monthly* usage/bills/arrears and the changes in *median* monthly usage/bills/arrears and explain the significance of the difference between those two results.

Figure 5 below begins with a presentation of the median monthly residential usage, median monthly bills, and median monthly arrears for the time period October 2023

through January 2026. The "median" is the point at which half of all accounts have higher values and half of all accounts have lower values. In other words, the "median" is the middle. I begin the data set in October in order to keep complete winter heating seasons together, and continue through the most recent data which UGI Gas has available at the time I write this testimony (January 2026).

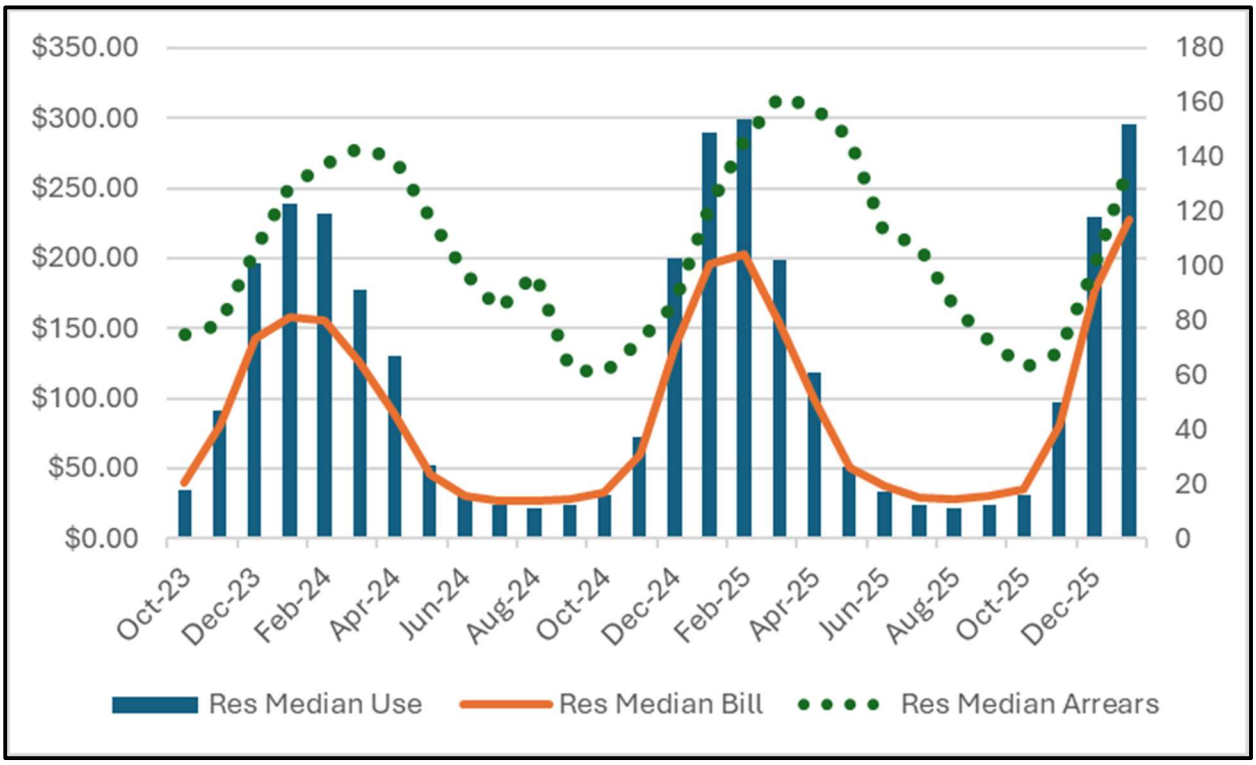
The data presented in Figure 5 below supports four important observations for purposes here.

- First, not surprisingly, as a natural gas utility, UGI Gas is seen as having a substantial variation in its monthly bills. As heat-related median consumption increases in the winter months (i.e., the bars), the median bills increase correspondingly.
- Second, the Figure shows that as bills increase on a monthly basis, median arrearages increase as well. As would be expected, the level of arrearages lags the bills by a month. A higher December bill, in other words, is reflected in a higher arrears in January; a higher January bill is reflected in a higher arrears in February. This impact is seen going both ways. As bills decline in the warm weather months, the level of arrears can be seen to decline as well. The lower usage, and thus the lowest bills, are seen in the warm weather months, and the median arrears decline further in each of those months.
- Third, it is evident that despite higher levels of cold weather arrears, those arrears get paid down in warm weather months. Going into the 2023/2024 winter season, arrears are moving from a lower amount in October 2023 to higher levels in the cold weather months. The higher median arrears in the

2023/2024 winter heating season get reduced in the warm weather months of 2024, while the higher median arrears in the 2024/2025 winter heating season get reduced in the warm weather months of 2025.

- Fourth, it is evident that the cold weather arrears that are paid off are not limited to the smaller amounts of arrears. If there were a population of customers with arrears, and only the smaller arrears were subsequently being retired, the median would actually *increase*. The fact that the median arrears declines in the warm weather months in a pattern consistent with bills (and usage) demonstrates that arrears are being retired across the full spectrum of balances high-to-low. This happens as a matter of arithmetic. Assume that you have seven numbers: 1, 3, 5, 7, 11, 17, 19. The median is 7. If you were to eliminate the two smallest numbers (1, 3), the median of the remaining numbers would increase to 11.

Figure 5. Median Monthly Residential Usage, Bills and Arrears (October 2023 – January 2026)[20]



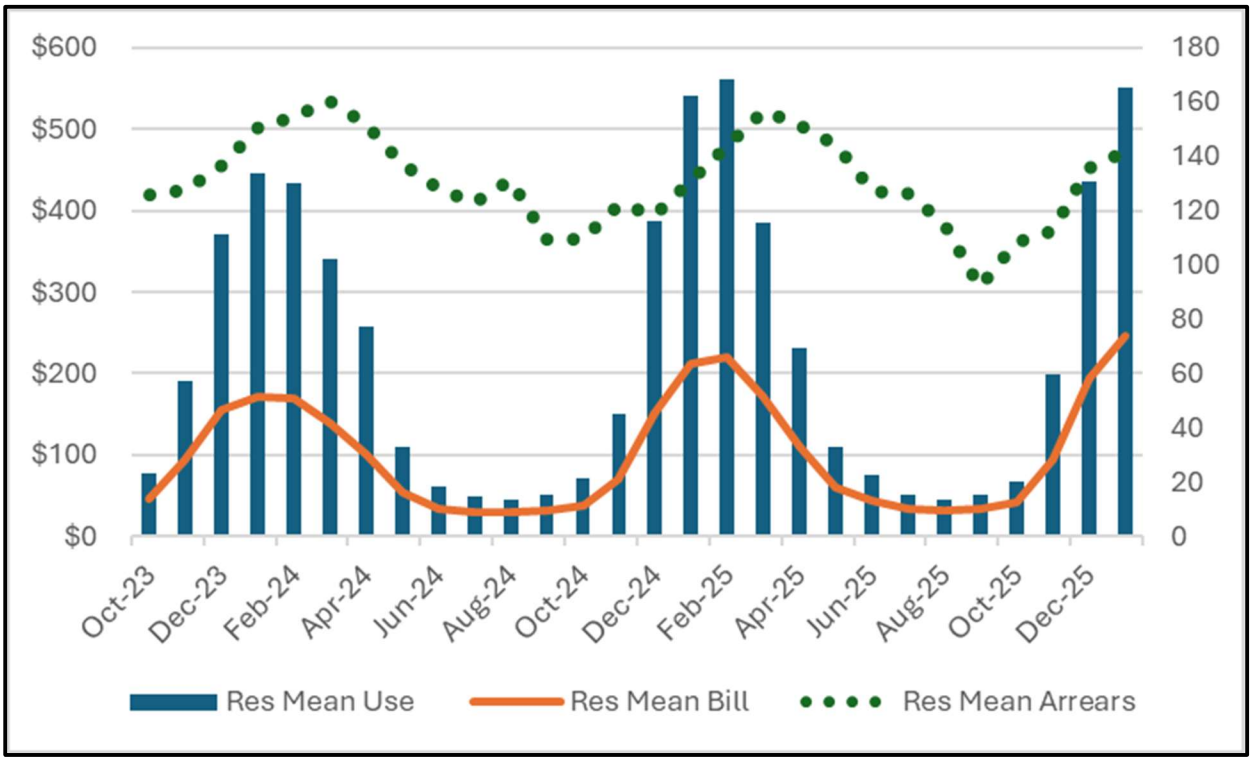
In contrast to the data above, Figure 6 shows the data for the same time period, but instead of looking at the median (i.e., the middle), it looks at the mean (average) data. The obvious observation from an examination of this data is that the pattern of mean monthly usage, bills, and arrears follows the same pattern as the pattern of median monthly usage, bills, and arrears.

Figure 6 When compared to Figure 5, Figure 6 shows that UGI Gas has a significant number of residential customers who incur high consumption, have correspondingly high bills, and have even higher arrearage balances. When the mean of a population is substantially higher than the median, that indicates that the population has a "right skew"

[20] OCA-4-7, OCA-4-9, OCA-4-11.

(i.e., a significant number of accounts with higher values). That "right skew" occurs for arrearages in particular. While the *mean* arrears ranges between $300 and $500 (Figure 6), for example, the *median* arrears ranges between $150 and $300 (Figure 5). While the mean bill ranges

Figure 6. Mean Monthly Residential Usage, Bills and Arrears: October 2023 – January 2026)[21]



Unless UGI Gas addresses the volatility in monthly bills, the Company places at risk substantial seasonal billings. Figure 7 shows the mean and median arrears by month for the period October 2023 through January 2026.

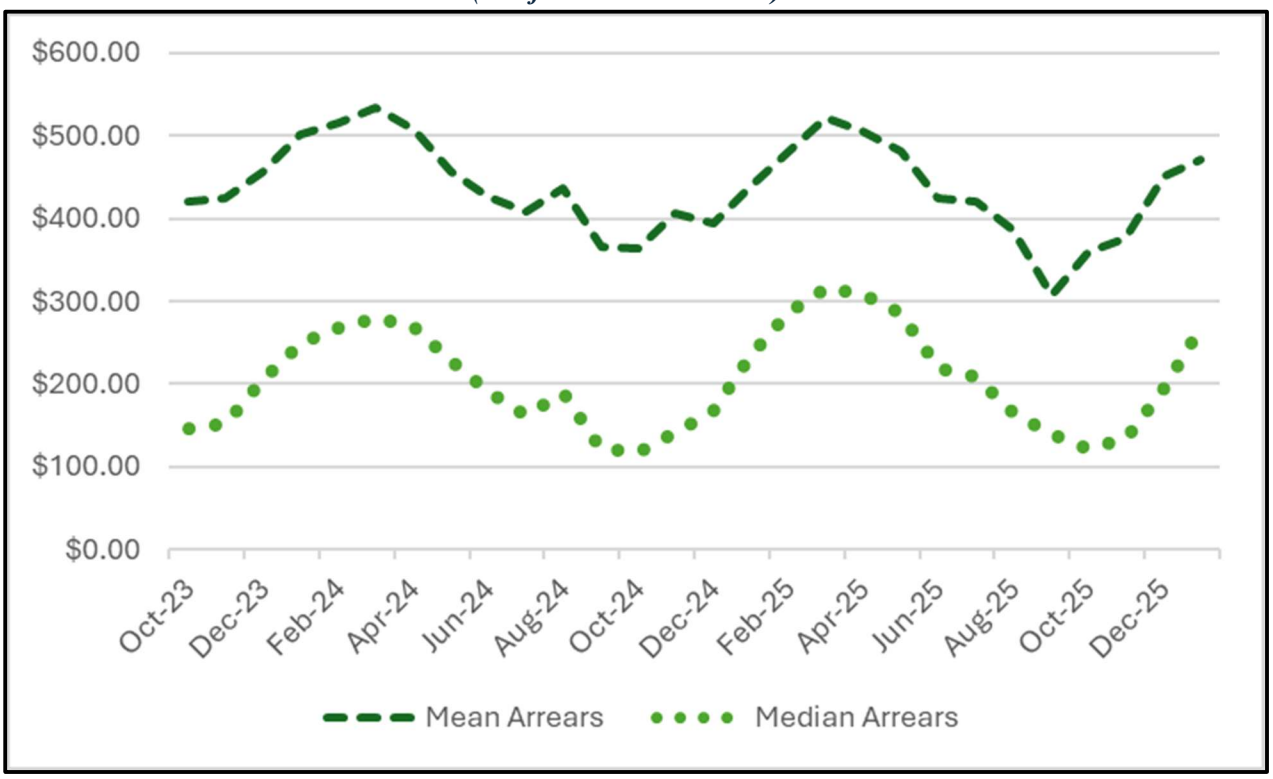
The data in the Figure provides important insights into the affordability of UGI Gas bills to both low- and moderate-income households, when affordability is viewed not merely

[21] OCA-4-6, OCA-4-8, OCA-4-10.

from the perspective of "income" but from the perspective of "resources" as well. The Figure supports several observations:

- There is a population of low-income customers for whom the lack of resources, as well as income, will make it highly unlikely that their past-due account balances can or will be retired. Given a monthly arrearage balance consistently in excess of $400, low-income customers lack the liquid resources to be able to respond to these unpaid bills.
- As discussed above, the fact that the mean is substantially higher than the median demonstrates that there the distribution of low-income customers with arrears is skewed toward a high incidence of customers with higher-than-average arrears. In the absence of enrollment in CAP, these customers would be required not only to pay their past-due balances, but required also to pay their full current bills over and above retiring their arrears. Increasing bills for current service even higher, as would result from the rate increase requested in this proceeding, would make the required total bill payment even that much less attainable.

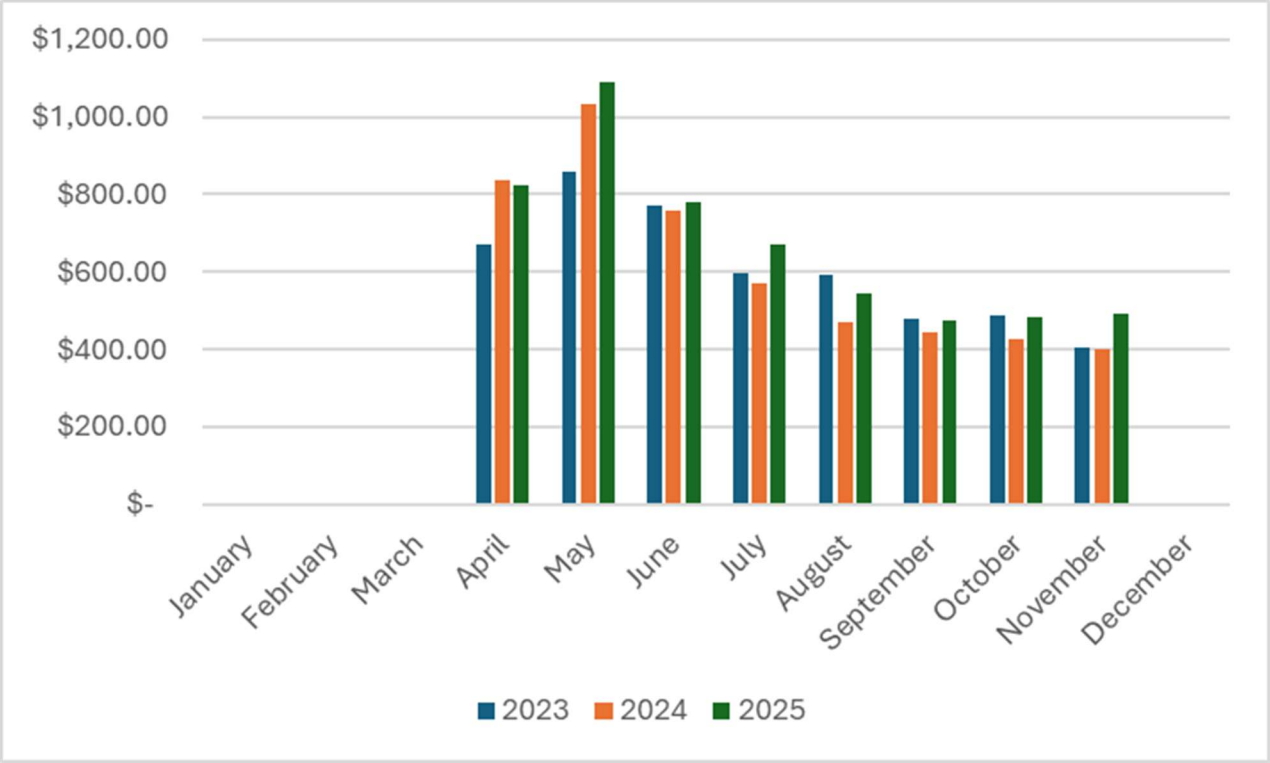
Figure 7. Difference Between Monthly Mean Arrears and Monthly Median Arrears (Confirmed Low-Income)



Failing to identify and recognize the inability-to-pay due to a lack of resources to respond to the monthly volatility in bills, is not merely a failure to identify payment problems from the perspective of the customer (as I have discussed in detail above), but it also represents a serious increase in the financial risk to UGI Gas. Figure 8 shows the increasing balances owed by Confirmed Low-Income customers at the time of a nonpayment disconnection.[22] As the 2025 rate hikes are passed through in higher winter bills, combined with future rate increases (if any) associated with the rates which UGI Gas proposes in this proceeding, it is reasonable to expect that these dollars lost at the time of disconnection will continue to get higher and higher.

[22] OCA-4-23(b).

Figure 8. Average Arrears at the Time of Disconnection (Confirmed Low-Income)[23].



Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT UNPAID HOME HEATING BILLS CAN BE ATTRIBUTED, IN PART, TO THE LACK OF LIQUID RESOURCES THAT SERVE AS A CUSHION AGAINST INCREASES IN ANNUAL OR MONTHLY BILLS?

A. The first foundation of my conclusion lies with Pennsylvania data reported in the Census Bureau's 2023 Household Pulse Survey (HPS). While the HPS does not provide data specific to utility service territories, it does provide information specific to Pennsylvania. The HPS documents that Pennsylvania households frequently have difficulties in paying

[23] Given PUC regulations, UGI Gas does not disconnect service to Confirmed Low-Income customers during the cold weather months of December through March. Hence, this figure shows no average arrears at the time of disconnection since there are no disconnections.

their utility bills. When they face such difficulties, low-income households lack the resources to respond to the unaffordability of bills.

The Table below documents that, in Pennsylvania, from 20% to more than 30% of households with income less than $75,000 reported being unable to pay an energy bill, or unable to pay the full bill amount, either "almost every month" or in "some months." The utility bill payment difficulties facing Pennsylvania customers are simply not confined to the lowest income tier. As incomes increase, the reported inability-to-pay declines.

Table 10. Household was unable to pay an energy bill or unable to pay the full bill amount

	Almost every month	Some months	1 or two months	Never	Did not report
Less than $25,000	7.8%	11.5%	23.4%	56.6%	99.3%
$25,000 - $34,999	15.6%	11.6%	5.0%	67.9%	100.0%
$35,000 - $49,999	14.5%	18.3%	7.6%	59.6%	100.0%
$50,000 - $74,999	2.7%	17.1%	6.1%	74.1%	100.0%
$75,000 - $99,999	2.5%	4.5%	11.6%	81.4%	100.0%
$100,000 - $149,999	3.4%	2.6%	6.6%	87.5%	100.0%
$150,000 - $199,999	4.8%	1.8%	2.7%	90.6%	100.0%
$200,000 and above	0.0%	2.1%	2.2%	95.7%	100.0%

Assuming this data reflects UGI's service territory, it is reasonable to conclude that nearly three-of-ten UGI Gas residential customers in 2024 (more than 197,000) could not pay the full bill, in almost every, some, or one or two, months.[24]

[24] UGI Gas had 630,288 residential customers in 2024. BCS 2024 Annual Report, at page 5. Applying HPS data to this number, 31.3% could not pay their home energy bill, or could not pay the full bill, in almost every, some, or one or two, months. Nonetheless, since that time, UGI Gas sought and received a rate hike in 2025 and is seeking yet another rate hike in 2026.

The question here, however, is the degree to which, if at all, a lack of resources contributes to this inability to pay. In 2023, the HPS inquired into what resources households turned to "meet their spending needs in the last seven days." The HPS tracked responses by income. I examined these resources for households with income less than $25,000 for eight time periods, four which were in cold weather months and four of which were in warm weather months. The data shows:

- In all eight months, households in the lowest income bracket had the lowest percentage of households able to meet their spending needs out of "regular income sources." With one exception, roughly six-of-ten of these low-income households could meet their spending needs with regular income sources.

- These low-income households did not have assets or "money from savings" to help them meet their spending needs. In the "week"[25] with the greatest use of selling assets or using money from savings, only 25% of low-income households were able to do so. In seven of the eight periods, only households with income of $200,000 or more used their savings, or sold assets, to meet spending needs, but for this income range, between 95% and 97% of households reported meeting their spending needs out of regular income.

- Borrowing from friends or family was the most common method used by low-income households to meet spending needs when the regular income sources were not available or sufficient. Consistently between one-quarter and nearly

[25] While the HPS labels each survey period a "week," each survey actually covered a two-week period.

one-third of low-income households relied upon such loans from friends or family.

Table 11. Methods Used to Meet Spending Needs in Last Seven Days
(Income <$25,000)
(Census Household Pulse Survey) (2023)

Time Period	Regular Income Sources	Money from Savings or Selling Assets	Borrowing from Friends or Family
Week 52 (12/9-12/19)	59%	23%	29%
Week 53 (1/4-1/16)	64%	16%	27%
Week 54 (2/1-2/13)	58%	18%	25%
Week 55 (3/1-3/13)	58%	21%	22%
Week 58 (6/7-6/19)	63%	19%	29%
Week 59 (6/28-7/10	55%	14%	25%
Week 60 (7/26-8/7)	73%	19%	27%
Week 61 (8/23-9/4)	62%	25%	30%

The data that is presented in Table 11 is further expanded by the information set forth in Exhibit RDC-2. Exhibit RDC-2 begins with the methods used in last seven days to meet spending needs and distributes those methods by the extent to which, if at all, households using particular "methods" have difficulty in paying their home energy bills.

The data shows that, for Pennsylvania, households there is a relationship between people who rely on their savings accounts (or who sell assets or possessions) and those who have difficulty in paying their home energy bills. Over all eight survey periods, only roughly 60% of households who said they used a savings account (or who sold assets or possessions to meet their spending needs) also said they "never" were unable to pay their utility bill (or to pay their utility bill in full). People who turned to borrowing from friends or family to meet their spending needs had even greater difficulties. Consistently

over all survey periods, only one-in-four households borrowing from friends or family said they "never" were unable to pay their utility bill or to pay their utility bill in full.

Q. IS THERE ANY OTHER ASPECT OF THIS USE OF RESOURCES TO MEET HOUSEHOLD SPENDING NEEDS WHICH YOU HAVE EXAMINED?

A. There is substantial research which finds that having liquid assets of as little as $1,999 plays a significant role in preventing households from experiencing "material hardships." One study by the Urban Institute, for example, reported quite explicitly that

> Based on multivariate analysis of the lowest income quintile, holding liquid assets in modest amounts (up to $1,999, compared with having no such assets) is significantly related to a lowered incidence of material hardship for six of the eight hardship outcomes studied. This suggests that liquid asset holdings provide a buffer stock of financial resources, enabling households to respond to circumstances that would otherwise bring hardship.[26]

Missed utility payments, as well as utility shutoffs, were two of those six hardship outcomes affected. In addition to this Urban Institute study, the U.S. Federal Reserve addresses the impacts arising from the ability of households to have modest savings each year in its annual Report on the Economic Well-Being of U.S. Households. According to the Federal Reserve, "Having a buffer of savings for emergencies can help families cope with fluctuations in income and with unexpected expenses. The share of adults who would pay for an unexpected $400 expense with cash or the equivalent was unchanged from 2023, while the share who said they had rainy day funds to cover three months of

[26] Mills and Amick (2010). Can Savings Help Overcome Income Instability, Perspective on Low-Income Working Families, Brief No. 18, at page 8 (internal notes omitted).

expenses edged up from 2023."[27] In its most recent annual report, the Federal Reserve stated:

> Relatively small, unexpected expenses, such as a car repair or a modest medical bill, can be a hardship for many families, especially those without a financial cushion. When faced with a hypothetical expense of $400, 63 percent of all adults said they would have covered it exclusively using cash, savings, or a credit card paid off at the next statement (referred to, altogether, as "cash or its equivalent"). The remainder said they would have paid by borrowing or selling something or said they would not have been able to cover the expense.
>
> * * *
>
> Eighteen percent of adults said the largest emergency expense they could handle right now using only savings was under $100, and 13 percent said they could handle an expense of $100 to $499.[28]

The Federal Reserve found that only 24% of households with income less than $25,000 had sufficient savings to cover three months of household expenses, substantially less than households with higher incomes.[29] These 2025 findings are nearly identical to prior years.[30]

[28] Id., at 42 (emphasis added).

[29] Id., at 44.

[30] See, e.g., Federal Reserve System, Research and Analysis (May 2024). Economic Well-Being of U.S. Households in 2023, at 31-32; Federal Reserve System, Research and Analysis (May 2023). Economic Well-Being of U.S. Households in 2022, at 31; Federal Reserve System, Research and Analysis (May 2020). Economic Well-Being of U.S. Households in 2019, at 21; Federal Reserve System, Research and Analysis (May 2020). Economic Well-Being of U.S. Households in 2019, at 21; Federal Reserve System, Research and Analysis (May 2019). Economic Well-Being of U.S. Households in 2018, at 21.

It is not the case that lower-income households simply have inadequate savings. Instead, it is reasonable to expect that these households have *no* savings. According to the U.S. Consumer Financial Protection Bureau (CFPB), "the level of emergency savings generally increases with the level of household income. This is not surprising as lower income households are generally more financially constrained and likely find it harder to save. Among consumers with annual household incomes of $20,000 or less, over half (60 percent) have *no* emergency savings, with the share falling to 40 percent for those with incomes between $20,001 to $50,000."[31] In 2020, based on pre-COVID data collection through the CFPB's "Making Ends Meet" survey, the CFPB reported that nearly three-quarters of households with income less than $20,000 have less than $100 in their checking or savings accounts.[32]

Q. DOES THIS NATIONAL DATA REFLECT CIRCUMSTANCES IN PENNSYLVANIA AS WELL?

A. Yes. Pennsylvania data is consistent with the detailed national data I present above. According to United for Alice, discussed above, while the emergency savings rate for *all* households in Pennsylvania reached 60% in 2022, "only 46% of households below the ALICE Threshold had emergency savings (or rainy day funds) that would cover their expenses for three months in the event of sickness, job loss, economic downturn, or

[31] CFPB Office of Research (March 2022). Emergency Savings and Financial Security, Insights from the Making Ends Meet Survey and Consumer Credit Panel, at 11,et seq. (emphasis added); see also, CFPB (December 2023). Making Ends Meet in 2023, Insights from the Making Ends Meet Survey.

[32] CFPB Office of Research (September 2020). Perceived Financial Preparedness, Saving Habits, and Financial Security, at 4.

another emergency. . .”[33] The National Financial Capability Study (2024) found that 45% of Pennsylvania households do not have emergency funds.[34] One contributing cause to this, according to the NFCS, was that 24% of households were spending more than their income, while an additional 34% were spending about equal to their income.

Q. WHAT DO YOU CONCLUDE?

A. Based on the data and analysis above, I conclude that an exclusive focus of affordability discussions on the incomes of households is too narrow of an analysis. In addition to considering the income levels of households, to better understand the affordability of UGI bills, it is also necessary to consider the available resources. The data clearly shows that both from year-to-year, and from month-to-month, UGI bills will vary sharply. Not only do low-income households lack sufficient income to pay higher-than-expected annual bills out of regular income, they also lack sufficient resources to absorb spikes in cold weather heating bills. This observation affects multiple aspects of how UGI Gas interacts with its customers. It is, of course, one reason why the failure of UGI Gas to identify its low-income customers, or to enroll those customers which have been identified into CAP, is a failure to provide reasonably adequate service. In addition, aside from CAP, UGI Gas should engage in a more aggressive marketing of budget billing, particularly to customers (low-income and not) who experience payment difficulties. Finally, it is one reason why

[33] United for ALICE (2024 Update). An Update on Financial Hardship in Pennsylvania, at page 11; see also, The State of ALICE in Pennsylvania: 2025 Report, at page 9 (“in 2023, respondents below the ALICE Threshold in the Middle Atlantic Census Division (which includes Pennsylvania) were far less likely to than those above the Threshold to have savings that could cover three months of expenses in the event of an emergency (41% vs. 74%). . .”)

[34] FINRA Investor Education Foundation (2024). National Financial Capability Study (2024), Summary of Selected Findings: Pennsylvania.

the ongoing reliance by UGI Gas on traditional credit and collection techniques, such as sending shutoff notices, entering into payment arrangements, requiring high downpayments for payment arrangements, or failing to refund deposits to low-income customers (or to exempt such customers from the payment of deposits with which to begin), are both inefficient and ineffective. I will address these implications in greater detail below.

Part 2. The Effectiveness and Efficiency of UGI Gas Credit and Collection Expenditures.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the efficiency and effectiveness of the credit and collection activities which UGI Gas directs towards its residential customers, including low-income customers. Given the failure of UGI Gas to reasonably identify its low-income customers, viewing the problems which UGI Gas faces exclusively from the perspective of Confirmed Low-Income customers would be too narrow. The activities directed toward residential customers as a whole, and the expenditures on those activities, must be incorporated into the discussion.

Q. PLEASE EXPLAIN THE BASIS FOR YOUR DISCUSSION BELOW.

A. I base my discussion below on Section 523 of Pennsylvania's Public Utility Code. Section 523 provides:

> The commission shall consider, in addition to all other relevant evidence of record, the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this title. On the basis of the commission's consideration of such evidence, it shall give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate.

Based on this statutory language, I find that it is appropriate to review the "efficiency, effectiveness, and adequacy" of the credit and collection activities of UGI Gas and to recommend adjustments to "specific components of the utility's claimed cost of service" to the extent that such activities are found to be ineffective and/or inefficient.

Q. WHAT EXPENDITURES WILL YOU CONSIDER?

A. I base my review of expenditures primarily on the credit and collection expenditures for both residential and Confirmed Low-Income residential customers, as reported annually to BCS and published by BCS in its annual report on Universal Service Programs and Collections Performance.[35] The credit and collection expenditures of UGI Gas, as reported in the most recent BCS report, are set forth in Table 12 below.

Table 12. UGI Gas Credit and Collection Expenses (residential and Confirmed Low-Income [CLI])

	2024		2023		2022	
	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income
Total $s of C&C expenditures	$8,115,946	$2,759,422	$9,366,647	$2,634,185	$6,455,365	$1,860,969
CLI as percent of total	34.0%		24.0%		16.1%	

How these dollar figures were included in the Company's cost-of-service study (COSS) was subsequently provided by UGI Gas in response to discovery.[36] Using the Company's responses, and its COSS, the proposed adjustments I recommend below are reflected in the Direct Testimony of OCA witness Jennifer Rogers.

[35] The BCS annual reports are available at https://www.puc.pa.gov/filing-resources/reports/universal-service-programs-and-collections-performance-reports/

[36] OCA-15-4 – OCA-15-7.

Q. PLEASE PROVIDE THE BACKGROUND FOR YOUR REVIEW OF THE EFFECTIVENESS OF UGI GAS COLLECTION ACTIVITIES.

A. Table 13 presents background data demonstrating the lack of effectiveness of collection activities directed toward the Company's Confirmed Low-Income customers. The data shows, for example, that in 2024, while Confirmed Low-Income customers represented 9.0% of the total residential revenue, Confirmed Low-Income customers represented 71.8% of the total residential dollars in debt. Similarly, while Confirmed Low-Income customers represented only 14.1% of all residential customers, they represented 44.3% of residential accounts in arrears. As I will discuss further below, the fact that the Confirmed Low-Income dollars in debt is a higher percentage of the total than the percentage of Confirmed Low-Income accounts in debt indicates that low-income customers in debt are facing higher than average bills.

Table 13. Collection Outcomes for Confirmed Low-Income (CLI) Accounts

	2024	2023	2022
Percent CLI Revenue of Tot Res Revenue	9.0%	10.1%	5.9%
Pct CLI $s in debt of Total Res Revenue. In Debt	71.8%	71.0%	70.4%
Pct CLI customers of total customers	14.1%	14.4%	13.7%
Pct CLI accts in debt of total res. accts in debt	44.3%	43.2%	47.5%

Q. HAVE YOU HAD THE OPPORTUNITY TO FURTHER REVIEW THE EFFECTIVENESS OF UGI GAS COLLECTIONS DIRECTED TOWARD RESIDENTIAL AND CONFIRMED LOW-INCOME RESIDENTIAL CUSTOMERS?

A. Yes. Table 14 below presents the collection outcomes for residential and Confirmed Low-Income customers of UGI Gas for the three years most recently reported by BCS. The data demonstrates that UGI Gas does a poor job of responding to the unaffordability problems faced by low-income customers, instead allowing those customers to fall into

debt, having service disconnected for nonpayment, failing to reconnect service to customers having once disconnected their service, and ending up writing off a far higher percentage of revenue. The data shows that:

- A far higher percentage of UGI Gas' Confirmed Low-Income customers are in arrears than residential customers as a whole. In 2024, for example, three times more Confirmed Low-Income customers (29.6%) than residential customers (9.4%) were in debt. While the underlying absolute numbers varied somewhat by year, the ratio of Confirmed Low-Income to Residential customers in debt remained consistent from year to year over the past three years.

- An even higher percentage of Confirmed Low-Income dollars are in debt. The implication of this is that the Confirmed Low-Income accounts which are in debt have higher bills than Confirmed Low-Income accounts in general. If the average bill of customers in debt was equal to the average bill generally, the percentage of customers in debt and percentage of revenue in debt would be identical. The fact that the percentage of revenue in debt is higher means that each account in debt has a higher than average bill.

- The average arrears for a Confirmed Low-Income customer is more than 60% higher than the average arrears of a residential customer generally. In 2024, the most recent year, the average Confirmed Low-Income arrears of $798.34 was 62% higher than the average residential debt generally. Whatever collection activity UGI Gas is directing toward Confirmed Low-Income customers is evidently not working.

- One impact of the higher percentage of customers (and revenue) in debt, along with higher arrearage balances, is that UGI Gas resorts to nonpayment service disconnections more frequently for Confirmed Low-Income customers. BCS notes that "Termination of public utility service is the most serious consequence of customer non-payment and *is viewed as a last resort* when customers fail to meet their payment obligations."[37] Given the failure to collect, in other words, UGI Gas is forced into a use of the "last resort" from one quarter (2023) to one-third (2022, 2024) more frequently for Confirmed Low-Income customers.

[37] 2024 BCS annual Report, supra, at 11 (emphasis added).

- One problem with the over-reliance on service disconnections when other collection activities have failed is that UGI Gas frequently does not reconnect service after it has disconnected service. More than one-quarter of disconnections are not followed-up by a reconnection of service. Given the disproportionate number of disconnections with which to begin, this means that a disproportionate number of Confirmed Low-Income customers are losing their service and not being reconnected.

- Finally, one impact of this disproportionate share of disconnections, with one-of-four disconnected customers never being reconnected, is that the gross write-off of Confirmed Low-Income revenues is much higher than it is for residential customers as a whole. The gross write-off of Confirmed Low-Income revenue is from 65% to 165% higher than it is for residential revenue. Most recently, the gross write-off of confirmed Low-Income revenue was 81% higher than it was for residential customers.

Table 14. UGI Gas Credit and Collection Outcomes
(Confirmed Low-Income [CLI] versus Total Residential)

	2024		2023		2022	
	Residential	Confirmed LI	Residential	Confirmed LI	Residential	Confirmed LI
Percent customers in debt	9.4%	29.6%	10.6%	32.0%	10.2%	30.5%
Pct revenue in debt	4.8%	38.4%	5.1%	35.6%	4.7%	56.2%
Average arrears balance	$492.15	$798.34	$538.37	$884.22	$523.84	$896.65
DNP percent	4.8%	6.4%	5.0%	6.2%	4.3%	5.7%
Pct RNPs of DNPs	75.5%	74.3%	73.5%	74.7%	74.1%	71.8%
Gross write-off pct	6.7%	12.1%	5.1%	8.4%	3.9%	10.3%

In each of the instances discussed above, given that the Confirmed Low-Income customer data is a subset of the total residential data, the difference between the non-low-income "residential" numbers and the "Confirmed Low-Income" numbers would be even higher than is presented.

Q. HAVE YOU HAD AN OPPORTUNITY TO CONSIDER THE EFFICIENCY OF UGI GAS COLLECTION ACTIVITIES?

A. Yes. Table 15 below presents data on the efficiency of UGI Gas collection activities. The Table examines payment arrangements in particular. I consider payment arrangements because, as BCS notes, "debt that is on a payment arrangement is considered active and is often easier to collect than debt not on a payment arrangement."[38] Citing payment arrangements in particular, BCS asserts that one "purpose of the Chapter 56 regulations is to 'provide functional alternatives to termination.'"[39] UGI Gas is neither effectively nor efficiently serving that purpose.

Table 15. UGI Gas Deferred Payment Arrangement (DPA) Outcomes
(Confirmed Low-Income [CLI] vs. Total Residential)

	2024	2023	2022
# of UGI Gas CLI accts in arrears	26,338	28,770	25,946
Industry total # CLI accounts in arrears	76,701	78,779	67,958
UGI Gas as percent of industry total	34%	37%	38%
# of UGI Gas CLI Deferred Payment Arrangements	14,498	17,221	19,913
Industry total # of DPAs	92,950	98,133	69,437
UGI Gas as percent of industry total	16%	18%	29%
CLI # UGI Gas Payment Troubled accounts	18,002	19,270	17,139
Industry total # of Payment Troubled accts	73,066	73,008	58,929
UGI Gas as percent of industry total	25%	26%	29%

The data shows that while UGI Gas had 34% of Confirmed Low-Income accounts in arrears in 2024, it had only 16% of the confirmed low-income deferred payment arrangements. This difference was not unique to 2024. UGI Gas lagged in its percentage of Confirmed Low-Income accounts on payment arrangements in 2023 and 2022 as well.

[38] 2024 BCS Annual Report, at 15.

[39] Id. (internal notes omitted).

Moreover, the data shows that even when UGI Gas enters into a payment arrangement with Confirmed Low-Income customers, it has a disproportionate number of the payment-troubled customers amongst Pennsylvania natural gas utilities. According to BCS, PUC regulations define "payment-troubled" as "a customer who has failed to maintain one or more payment arrangements in a 1-year period."[40] The BCS data shows that while UGI Gas had 16% of all Confirmed Low-Income payment arrangements amongst Pennsylvania natural gas utilities in 2024, it had 25% of all payment-troubled Confirmed Low-Income customers. Not only is UGI Gas enrolling a disproportionately small percentage of Confirmed Low-Income customers in payment arrangements, of those who it does enroll, there are a disproportionately high percentage which have defaulted on at least one arrangement in the past twelve months. Standing on its own, but particularly when viewed in conjunction with the payment outcomes of Confirmed Low-Income customers discussed above, the ineffectiveness and inefficiency of the collection efforts directed by UGI Gas toward Confirmed Low-Income customers is evident.

Q. DOES UGI GAS HAVE ALTERNATIVES TO THE COLLECTION EFFORTS WHICH IT CURRENTLY DIRECTS TOWARD ITS CONFIRMED LOW-INCOME CUSTOMERS?

A. Yes. UGI Gas seems to ignore the findings of the PUC made more than 30 years ago when the Commission first began to explore the use of CAPs by the state's utilities. According to an early Commission order regarding CAPs (sometimes referred to by a different acronym):

[40] BCS 2024 annual Report, at 10, citing 52 Pa. Code §§ 54.72, 62.2

> We, in conjunction with utilities, and social service agencies, have all worked hard to devise ways to [e]nsure that low-income Pennsylvanians have utility services which really are necessities of life as the tragic fire deaths associated with the loss of utility service underlined. .
>
> However, for the poorest households with income considerably below the poverty line, existing initiatives do not enable these customers to pay their bills in full and to keep their service. . .Consequently, to address realistically these customers' problems and to stop repeating a wasteful cycle of consecutive, unrealistic payment agreements that cannot be kept, despite the best of intentions, followed by service termination, then restoration, and then more unrealistic agreements, we believe that new approaches like PECO's CAP program and the OCA's proposed EAP program should be tried.[41]

The Commission shortly thereafter prescribed the "model" CAP, stating that such programs are "designed to be a more cost-effective approach for dealing with issues of customer inability to pay than are traditional collection methods.[42] Despite these Commission findings, here we are with UGI Gas still continuing to primarily rely on "unrealistic agreements" rather than aggressively identifying its low-income customers and enrolling those customers into CAP.

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT IDENTIFYING LOW-INCOME CUSTOMERS AND ENROLLING THOSE CUSTOMERS INTO CAP WOULD RESULT IN EFFECTIVE AND EFFICIENT COLLECTIONS?

A. UGI Gas' data demonstrates that enrollment in CAP will enhance the collection of revenue from low-income customers. Table 16 below shows the CAP payment

[41]Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, R-891468, Final Order, at 159 (September 19, 1990).

[42] Policy Statement on Customer Assistance Programs (CAP), Docket No. M-00920345, at 2 (July 2, 1992).

outcomes reported by UGI Gas for the years 2022 through 2024. The UGI Gas data shows that in contrast to the 29.6% of Confirmed Low-Income accounts in arrears, and 38.4% of Confirmed Low-Income revenue in arrears, in 2024, UGI Gas CAP customers paid 84.3% of their bills in-full, and 56% of their CAP bills not only in-full, but on-time. In 2024, of the CAP bills paid, 85% of the payments were made by the CAP customers, not including energy assistance payments such as LIHEAP.

Table 16. Payment Outcomes of UGI Gas CAP Participation[43]

	2024	2023	2022
Pct paid by CAP customers	85.0%	75.7%	93.3%
Pct CAP bill paid in full	84.3%	79.7%	92.0%
Pct CAP bill paid on-time	55.8%	79.7%	61.3%

This BCS data is also consistent with the most recent independent evaluation of the UGI Gas CAP.[44] The UGI Gas Evaluation found that enrollment in CAP resulted in a 17% improvement in the number of accounts who missed zero (0) payments.[45] Moreover, the Evaluation found that the percentage of UGI Gas CAP customers who paid 100% or more of their bill increased from 33% (pre-CAP) to 66% (in-CAP), compared to an actual decrease in the percentage of low-income comparison group customers paying 100% or more of their bill.[46] In contrast, the percentage of CAP participants who paid less than

[43] BCS 2024 annual Report, at 66.

[44] APPRISE, Inc. (April 2024). UGI Universal Service Programs, Final Evaluation Report.

[45] Id., at page 75.

[46] Id., at page 74.

80% of their bills declined from 51% (pre-CAP) to 19% (in-CAP), compared to a decline in the low-income comparison group of 10% (pre-CAP) to 9% (in-CAP).[47]

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT UGI GAS DOES AN INEFFECTIVE JOB OF IDENTIFYING ITS LOW-INCOME CUSTOMERS AND ENROLLING THOSE CUSTOMERS IN CAP?

A. I discuss the identification of low-income customers, and the enrollment of low-income customers in the Company's CAP, in detail in the next section.

Q. WHAT DO YOU RECOMMEND?

A. As I discuss above, Section 523 of the Public Utility Code provides that the Commission "shall" (i.e., mandatory language) consider the "efficiency, effectiveness and adequacy" of service. The statute further provides that the Commission "shall" (again using mandatory language) "give effect to this section by making such adjustments to specific components of the utility's claimed cost of service." The credit and collection expenses reported by BCS are just such a "component of the (UGI Gas) claimed cost of service." Based on the findings I make and support above regarding the inefficiency and ineffectiveness of the UGI Gas expenditures, making such an adjustment is appropriate. Given the need for such an adjustment, I recommend a fifty-fifty sharing of the credit and collection expenses which UGI Gas proposes to include in its cost of service. This adjustment is dollarized and explained in more detail in the direct testimony of OCA witness Jennifer Rogers.

[47] Id., at pages 74 - 75.

Part 3. Enhancing UGI Gas Identification of its Low-Income Customers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain the failure of UGI Gas to reasonably and adequately identify its Confirmed Low-Income customer base and to enroll those customers in its CAP. I make specific recommendations on how that identification and enrollment can and should be improved.

Q. PLEASE EXPLAIN THE EXTENT TO WHICH UGI GAS IDENTIFIES ITS LOW-INCOME CUSTOMERS AND ENROLLS THOSE CUSTOMERS INTO ITS CAP.

A. UGI Gas has identified fewer than 60% of its estimated low-income population as "Confirmed Low-Income" according to data which it reports to BCS. According to the BCS data, in 2024, UGI Gas identified only 58% of its estimated low-income population as "Confirmed Low-Income," an increase from 54% in 2023, but still missing more than two-of-five low-income customers.[48]

UGI does a poor job of then enrolling its Confirmed Low-Income customers into CAP. UGI Gas data documents that consistently more than 40,000 Confirmed Low-Income customers are *not* enrolled in CAP.

[48] BCS 2024 annual Report, at page 6.

Table 17. Confirmed Low-Income Customers Not Enrolled in CAP by Month[49]				
Month	2023	2024	2025	2026
January	35,614	37,218	41,424	42,561
February	36,640	38,457	43,371	
March	35,767	38,447	41,956	
April	37,115	38,434	42,602	
May	36,148	38,386	42,444	
June	36,182	38,844	42,556	
July	36,128	38,290	42,165	
August	35,528	38,204	41,827	
September	35,966	38,988	42,103	
October	35,680	39,121	41,606	
November	36,533	41,163	42,501	
December	37,440	41,108	42,897	

UGI Gas also does a poor job of enrolling its Confirmed Low-Income customers into the federal energy assistance program (LIHEAP). While the most recent count of Confirmed Low-Income customers was 66,139,[50] in the 2024-2025 LIHEAP program year, only 24,682 received any type of LIHEAP assistance.

Table 18. Number of CLI Customers Received Grant by Grant Type (2024/2025)	
Cash Only	7,036
Crisis Only	1,907
Both Cash & Crisis	1,668
Supplemental	14,071

Of those, 3,575 low-income customers received LIHEAP Crisis assistance. Generally, Crisis assistance is provided to prevent a disconnection of service for nonpayment. This Crisis participation can be compared to the 12,495 Confirmed Low-Income customers for whom UGI Gas disconnected service for nonpayment in 2025 (a Crisis participation of

[49] CAUSE-PA-1-9(b).

[50] CAUSE-PA-1-8(b).

only 28%). More than seven-of-ten disconnected customers that UGI Gas had a reasonable belief to be low-income were not enrolled in LIHEAP Crisis, the federal program designed to prevent such disconnections. As can be seen in the Company's data, low-income customers can receive both Cash and Crisis grants, but do not.

Q. IS THERE A COMPARABLE PROGRAM TO WHICH YOU CAN COMPARE THE ENROLLMENT OF UGI GAS CUSTOMER LIHEAP ENROLLMENT?

A. Yes. The UGI Gas LIHEAP enrollment of 24,682, for example, can be compared to the SNAP participation rate in Pennsylvania in 2022 (the last year for which data is available), which exceeded 98% of SNAP-eligible low-income households in Pennsylvania.[51] While not suggesting that UGI Gas could achieve a 98% LIHEAP enrollment rate, the comparison shows how far short the performance of UGI Gas is in identifying and enrolling its low-income customers in beneficial energy assistance programs such as LIHEAP and CAP.

Q. DO YOU HAVE A SPECIFIC RECOMMENDATION THAT UGI GAS SHOULD ADOPT?

A. Yes. There are easily accessible means for a customer to provide a reasonable basis for UGI Gas to conclude that a customer is "low-income" without the customer enrolling in CAP or receiving a LIHEAP grant. Consider, for example, that a customer could establish that they are receiving means-tested public assistance by providing either a printout or a

[51] See, https://fns-prod.azureedge.us/sites/default/files/resource-files/ear-snap-Reaching-Those-in-Need-2022.pdf

screenshot through the State of Pennsylvania's COMPASS app.[52] In the alternative, customers could provide a printout of their welfare verification from the county assistance office.. Not only is verifying actual income more challenging for a variety of reasons (such as uncooperative employers when wages are paid under the table, or inconsistent pay statements), but customers may also have legitimate concerns about sharing information regarding the children in their household. Providing actual income, as well as specific information about children, to UGI Gas is certainly not required to create a reasonable expectation by the Company of a customer's low-income status. My first recommendation, therefore, is that UGI Gas, at a minimum, accept either a printout or a screenshot of the COMPASS application as adequate documentation to establish Confirmed Low-Income status.

My second recommendation relates to CAP enrollment, not merely to establishing Confirmed Low-Income status. My recommendation is that Confirmed Low-Income customers who are negotiating a deferred payment agreement (DPA) with the Company, as well as customers from whom the Company receives information placing them in an income tier of 0% to 150% FPL, should be provided a stand-alone written Plain Language notice informing those customers of their right, in the alternative, to enroll in the Company's CAP (along with an explanation of the advantages of CAP's arrearage forgiveness provisions). Through that opportunity, rather than needing to agree to retire their arrears over an extended period of time, the Confirmed Low-Income customer would be allowed to enroll in CAP (if income-qualified) and, upon making appropriate

[52] COMPASS is an online tool for Pennsylvanians to apply for many health and human service programs and manage benefit information. See, compass.dhs.pa.gov/home/#/

payments, receive a forgiveness of their underlying arrearages. This written communication would be provided to Confirmed Low-Income customers, those customers from whom UGI had previously received sufficient information to reasonably establish their low-income status. A Confirmed Low-Income customer should be enrolled in a deferred payment arrangement only with their informed consent that they would prefer to retire their arrears in installments paid in addition to their undiscounted monthly bill rather than enrolling in CAP and receiving both a substantial discount and the forgiveness of their arrears.

There is a statutory basis for this requirement. Pennsylvania statutes provide that:

> No public utility shall, directly or indirectly, by any device whatsoever, or in anywise, demand or receive from any person, corporation, or municipal corporation a greater or less rate for any service rendered or to be rendered by such public utility than that specified in the tariffs of such public utility applicable thereto. The rates specified in such tariffs shall be the lawful rates of such public utility until changed, as provided in this part. *Any public utility, having more than one rate applicable to service rendered to a patron, shall, after notice of service conditions, compute bills under the rate most advantageous to the patron*.[53]

(emphasis added). UGI Gas should not, in other words, require a customer, known to be a Confirmed Low-Income customer, to pay off arrears through a payment arrangement which arrears would be subject to forgiveness under the Company's CAP. The Recommended Decision in the 2025 Columbia Gas rate proceeding agreed, stating that "Both CAUSE-PA and OCA propose that the Commission should require Columbia to implement routine screening of its applicants and customers to determine eligibility for

[53] 66 Pa. Stat. and Cons. Stat. Ann. § 1303 (West)(emphasis added).

CAP and other universal service programs. . .We agree with both CAUSE-PA and OCA on this issue. Improved screening and referrals could help ensure households are receiving the most advantageous available rate and is a statutory requirement."[54]

Q. HAS THIS OR ANY SIMILAR ISSUE OF THIS "INFORMED CONSENT" BEEN RECENTLY ADDRESSED BY THE COMMISSION?

A. Yes. In the April 4, 2024 decision regarding the Universal Service and Energy Conservation Plan (USECP) of Columbia Gas, the PUC considered whether Columbia could apply an existing deposit against a low-income customer's outstanding arrears before refunding the difference pursuant to statute and regulation. The PUC held that the Company could *not* do so, stating:

> Commission regulations also state that a public utility must "refund a deposit, along with any applicable interest, within 60 days upon determining that the customer or applicant from whom a deposit was collected is not subject to a deposit…." *See* 52 Pa. Code § 56.53(f). The regulations do not permit the public utility to apply a deposit to a delinquent account balance if it is determined the customer was not responsible for paying the deposit prior to accruing the balance.
>
> Accordingly, we direct Columbia to refund security deposits, with applicable interest, collected from customers who are income–eligible for CAP. Columbia may apply the security deposit to the account balance only with the customer's informed consent. As part of obtaining this informed consent, Columbia must explain to the customer how applying the security deposit to the account balance would impact the customer's monthly bill.[55]

[54] Pennsylvania PUC v. Columbia Gas of Pennsylvania, Docket R-2025-3053499, Recommended Decision, at page 549 (October 3, 2025).

[55] Columbia Gas of Pennsylvania, Inc. Universal Service and Energy Conservation Plan for 2024 - 2028 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2023-3039487, Order, at 31 (April, 2024). (hereafter 2024 Columbia USECP Order).

While that decision related to Columbia, the application of the legal principles would be the same. In a similar fashion, UGI Gas should be allowed to require a Confirmed Low-Income customer to pay off arrears through a payment arrangement "only with the customer's informed consent." Moreover, as the PUC stated with respect to applying deposits against arrearage balances, "as part of obtaining this informed consent," the Company must explain to the customer how enrolling in CAP and making the customer's arrearage subject to arrearage forgiveness "would impact the customer's monthly bill." The customer should know, prior to entering into a payment arrangement, that under a payment arrangement, the customer would pay a monthly installment over and above their regular monthly bill in contrast to bills under CAP, which would provide substantial discounts along with arrearage forgiveness.

Q. HAVE YOU REVIEWED THE RESULTS OF THE UGI GAS LOW-INCOME CUSTOMER ASSESSMENT AND OUTREACH PILOT IN REACHING YOUR CONCLUSIONS AND FORMULATING RECOMMENDATIONS?

A. Yes, to the extent available. In the July 2025 Settlement of its 2025 base rate case, UGI Gas agreed to "continue its Low-Income Customer Assessment and Outreach Pilot established by Paragraph 46 of the Commission-approved settlement at Docket No. R-2021-3030218. . ."[56] In turn, in the 2021 Settlement, UGI Gas had agreed to engage a third party consultant, selected through a competitive bid process, to engage in a low-income identification and outreach program. When asked for "details on the current

[56] Joint Petition for Settlement, Docket No. R-2024-3052716, at para. 61 (July 9, 2025).

status" of that outreach pilot, and any "interim or final findings, conclusions, or lessons learned as a result of this pilot," UGI Gas responded:

> UGI Gas launched the Low Income Customer Assessment and Outreach Pilot on March 3, 2026. The Company utilized email and direct mail campaigns, which included 2 postcards mailed to approximately 45,000 customers and 3 emails sent to approximately 67,000 customers. Additionally, the Company initiated paid search and social media advertising. As of April 2, 2026, 385 customers have enrolled in CAP as a result of this pilot.[57]

UGI did not explain how it determined that the 385 new CAP enrollees were "as a result of this pilot." Over the past three years, UGI Gas experienced a enrollment of 1,198 new CAP participants (2023), 1,089 new CAP participants (2024), and 1,084 new CAP participants (2025).[58] If the 385 is an incremental (or additional) enrollment over the enrollment levels that would ordinarily occur in March in any event (as evidence by the last three years), that is a substantial improvement.

Nor did UGI Gas explain how it selected the 45,000 customers to receive postcards and the 67,000 customers to receive emails. Nonetheless, given the fact that the launch of this Pilot occurred fewer than six weeks prior to the time this testimony is being written, there has been insufficient time to assess the effectiveness or efficiency of the Pilot. Based on this discussion, I recommend that UGI Gas be directed to provide its Low-Income Advisory Committee regular three month reports on the operation and effectiveness of its Low-Income Customer Assessment and Outreach Pilot.

Part 4. Low-Income Deposit Exemptions.

[57] CAUSE-PA-8-1.

[58] CAUSE-PA-2-1(B).

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the extent to which UGI Gas appropriately complies with statutory and regulatory requirements to exempt low-income customers from being required to post and/or maintain cash security deposits. I find that UGI Gas is in substantial non-compliance with the PUC's low-income deposit exemption requirements.

Q. WHAT DOES THE PUC'S REGULATION PROVIDE?

A. The PUC's regulations require that:

> . . .a public utility may not require a cash deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program. An applicant is confirmed to be eligible for a customer assistance program by the public utility if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program.[59]

In addition, aside from being applicable to "applicants," the Commission has further extended this prohibition to existing customers as well.[60]

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT UGI GAS DOES NOT COMPLY WITH THIS REQUIREMENT?

A. UGI Gas does not comply with this prohibition on requiring deposits from low-income customers. When asked to describe "all instances where UGI informs low income

[59] 52 Pa. Code § 56.32(e).

[60] 52 Pa. Code § 56.41(B)(4).

customers about the availability of the exemption from security deposit collection and ability to receive a refund of their security deposit," UGI Gas responded:

> UGI Gas informs low-income customers about the availability of the security deposit exemption and the ability to receive a refund of their security deposit through several touchpoints. When a customer is identified as verified low-income through enrollment in a qualifying program, the customer's account is automatically updated and any held security deposit is released at that time. Customers are notified of this action via their account statement reflecting the deposit return.[61]

The UGI response continued on to state that "For self-reported low income customers, customers are advised that they will be sent a CAP application/waiver letter."[62] That CAP application/waiver letter, however, states that "To have this deposit waived, you must have your income verified by completing the enclosed assistance application form. . . You do not have to enroll in CAP for the security deposit and any reconnection fees to be waived, but your stated income must still be verified through this process. . . If you choose not to have your income verified through this process, you must pay the security deposit shown on your bill and any reconnection fees, if you were shut off for nonpayment."[63]

UGI Gas states that it does not track the number of deposits held from Confirmed Low-Income customers, the number Confirmed Low-Income customers from whom the Company is holding a cash security deposit, the dollars of cash security deposits the

[61] CAUSE-PA-6-1.

[62] Id.

[63] CAUSE-PA-6-1 and CAUSE-PA-6-9 (Attachment 1).

Company is holding from Confirmed Low-Income customers, or the dollars of deposits that have been returned to Confirmed Low-Income customers.[64]

UGI Gas will not return a deposit to a customer unless and until that customer has applied for CAP and had their income confirmed to make them income-eligible for CAP.[65] The Company does not routinely or periodically review the accounts from whom it has collected a cash security deposit to determine whether the account is eligible for a deposit exemption.[66]

Q. PLEASE EXPLAIN HOW UGI GAS RETURNS DEPOSITS?

A. UGI Gas will not return a deposit to a customer unless and until that customer has applied for CAP and had their income confirmed to make them income-eligible for CAP.[67] The Company does not routinely or periodically review the accounts from whom it has collected a cash security deposit to determine whether the account is eligible for a deposit exemption.[68]

Q. DOES THE PUC REGULATION REQUIRE A CUSTOMER TO PROVIDE ACTUAL INCOME TO QUALIFY FOR A DEPOSIT EXEMPTION?

A. No. Indeed, the PUC's regulation explicitly states to the contrary. According to the PUC regulation, a customer or applicant is exempt from deposits "if the applicant provides

[64] CAUSE-PA-6-3.

[65] CAUSE-PA-6-5.

[66] CAUSE-PA-6-6.

[67] CAUSE-PA-6-5.

[68] CAUSE-PA-6-6.

income documents *or other information* attesting to his or her eligibility for state benefits based on household income eligibility requirement that are consistent with those of the public utility's Customer Assistance Program." UGI's procedures completely ignore the language in the regulation that I have highlighted ("or other information"). Moreover, by requiring customers or applicants to be found income-eligible for CAP as a prerequisite to being exempt from a deposit, UGI Gas completely writes out of the PUC's regulation the exemption of customers who have provided information "attesting to" their eligibility for "state benefits."

Q. WHAT DO YOU RECOMMEND?

A. I recommend that UGI Gas be directed to modify its processes and procedures regarding the low-income exemption from deposits. UGI Gas should be directed to accept *any* information beyond information on income and household size that would "attest to" the household's eligibility for a state benefit that is consistent with CAP income requirements. Use of COMPASS information, such as I describe above to establish Confirmed Low-Income status, is one example of such information. I further recommend that UGI Gas be directed to eliminate the requirement that a customer must apply for CAP in order to establish their eligibility for a deposit exemption. I finally recommend that within three months of a final order in this proceeding, and every three months thereafter, UGI Gas undertake a review of the cash security deposits it currently holds and report the results of such review to interested stakeholders in this proceeding. To the extent that cash security deposits are held for Confirmed Low-Income customers, those deposits should be refunded in accordance with PUC precedent.

Q. DO YOU HAVE ANY FINAL CONCERNS ABOUT THE UGI GAS PROCESSES FOR DEPOSIT EXEMPTIONS AND REFUNDS?

A. Yes. The UGI Gas description of its deposit refunds, as quoted above, states that when customers are found to be eligible for a deposit exemption, "customers are notified of this action via their account statement reflecting the deposit return." This language seems to indicate that deposits are only returned as a credit on the customer's account. That process violates numerous PUC decisions holding that such a process is inappropriate.

The Commission has explicitly held the procedure outlined in the UGI Gas description to be unlawful. In the April 4, 2024 decision regarding the Universal Service and Energy Conservation Plan (USECP) of Columbia Gas, the PUC considered whether Columbia Gas could apply an existing deposit against a low-income customer's outstanding arrears before refunding the difference pursuant to statute and regulation. The PUC held that the Company could *not* do so, stating:

> Commission regulations also state that a public utility must "refund a deposit, along with any applicable interest, within 60 days upon determining that the customer or applicant from whom a deposit was collected is not subject to a deposit…." *See* 52 Pa. Code § 56.53(f). The regulations do not permit the public utility to apply a deposit to a delinquent account balance if it is determined the customer was not responsible for paying the deposit prior to accruing the balance.
>
> Accordingly, we direct Columbia to refund security deposits, with applicable interest, collected from customers who are income–eligible for CAP. Columbia may apply the security deposit to the account balance only with the customer's informed consent. As part of obtaining this informed consent, Columbia must explain to the customer how applying the security deposit to the account balance would impact the customer's monthly bill.[69]

[69] Columbia Gas of Pennsylvania, Inc. Universal Service and Energy Conservation Plan for 2024 - 2028 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2023-3039487, Order, at 31 (April, 2024). (hereafter 2024

While that decision related to Columbia Gas, the application of the legal principles would be the same for UGI Gas.

Part 5. Reducing the Collection and Retention of Social Security Numbers by UGI Gas.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the practice of UGI Gas in collecting and retaining customer Social Security Numbers (SSNs). I recommend that UGI Gas be directed to develop and adopt, within 12-months after a final order in this proceeding, an alternative to the use of SSNs.

Q. PLEASE DESCRIBE THE UGI GAS PRACTICES REGARDING THE COLLECTION AND RETENTION OF SOCIAL SECURITY NUMBERS.

A. According to UGI Gas:

> The Company collects and stores tax IDs — Social Security Numbers (SSNs) for individuals and Employer Identification Numbers (EINs) for organizations — to verify the identity and creditworthiness of service applicants. However, a driver's license number is accepted in lieu of a tax ID.
>
> * * *
>
> The tax ID further serves as a unique, persistent link between a customer and their account history. For this reason, it is retained on the customer record even after service is discontinued, preventing billing errors, duplicate accounts, and confusion arising from common names.[70]

Columbia USECP Order). See also, Philadelphia Gas Works Universal Service and Energy Conservation Plan for 2023-2027 Submitted in Compliance with 52 Pa. Code § 62.4, Docket M-2021-3029323, Order on Reconsideration, at 17 – 18 (also appropriate to refund deposits directly to customer without seeking customer consent on whether to refund or to credit deposit toward bill).

[70] OCA-10-1. The complete response to OCA-10-1 is provided in Exhibit RDC-3.

Q. HOW DO YOU RESPOND TO THE COMPANY'S COLLECTION AND PERMANENT RETENTION OF SOCIAL SECURITY NUMBERS?

A. In response to the growing use of Social Security Numbers (SSNs) in enabling the crime of identity theft, the PUC should join the growing consensus that institutions such as UGI Gas that have collected SSNs in the past refrain from, or be prohibited from, collecting such SSNs in the future, and that UGI Gas be directed to seek out alternatives to the collection and use of SSNs.[71]

Q. PLEASE EXPLAIN THE BASIS FOR YOUR CONCLUSION THAT UGI GAS SHOULD BE DIRECTED TO REFRAIN FROM THE COLLECTION AND RETENTION OF SOCIAL SECURITY NUMBERS AND TO DEVELOP AN ALTERNATIVE TO THE COLLECTION AND RETENTION OF SUCH PERSONAL DATA.

A. The use of SSNs by private entities is one of the leading causes of identity theft. SSNs, along with a person's date of birth and name, are the three most sought-after pieces of personal information sought by identity thieves. According to the 2007 report of the Presidential Task Force on Identity Theft, a person's SSN is the ***single*** most important piece of personally identifiable information available to identity thieves. Unlike names and

[71] According to the FTC: "Concerns about over-use of SSNs and their role in identity theft have increased in recent years. In a recent consumer survey, 66 percent of the respondents stated that companies should stop using SSNs to identify customers and 64 percent perceived that they were more vulnerable to identity theft when a business had their SSN." FTC (November 2007). "Staff Summary of Comments and Information Received Regarding the Private Sector's Use of Social Security Numbers," at 2.

addresses, which can change over a person's lifetime, it is "virtually impossible" for a person to change his/her SSN.[72]

SSNs are viewed as a "breeder document" by identity thieves, a fact that UGI conceded it is aware of.[73] With a Social Security Number, an identity thief can create other false documents supporting a false identity, including a driver's license, retail credit account, credit card account, bank account, and similar papers. Indeed, given the lack of a standard protocol for truncating SSNs, even truncated SSNs are not helpful in preventing identity theft. While some businesses truncate the first five digits of an SSN, other businesses truncate the last four. Not only can SSNs thus be reformulated with information from multiple sources, but those multiple sources need also not be illicitly gained. Public documents such as tax liens, driving histories, voter registrations, bankruptcies, and the like, are all publicly available information which might be used to match all or part of an SSN obtained from a utility record with a specific individual.

Q. IS THERE GENERAL GUIDANCE TO REDUCE THE USE OF SOCIAL SECURITY NUMBERS?

[72] Unlike a lost key, the social security number cannot be changed merely because it has been lost or stolen. "Identity Theft and Your Social Security Number," Social Security Administration, Pub. No. 05-10064, Oct. 2007, at 6, available at http://www.ssa.gov/pubs/10064.pdf. There must be evidence that (1) someone is in fact wrongfully using the number, and (2) that the individual to whom the number belongs is being disadvantaged by the wrongful use.

[73] OCA-10-24.

A. Yes. There has been clear direction in recent years to reduce, and eliminate where possible, the unnecessary collection of SSNs. In 2007, the federal Office of Management and Budget (OMB) issued a memo requiring federal agencies to examine their use of SSNs in systems and programs in order to identify and eliminate instances in which collection of SSNs is unnecessary. OMB required agencies to explore alternatives to their use of SSNs. Like OMB's guidance to federal agencies, the Federal Trade Commission (FTC) has urged a reduction in the use of SSNs in the private sector. FTC testified to Congress that there was a need to eliminate the unnecessary use of SSNs. The FTC cited the observation of the Presidential Task Force on Identity Theft that it is not clear whether the use of SSNs by the private sector was a necessity, or a result of "convenience and habit."[74] The President's Task Force stated quite simply in 2007 that "more must be done to eliminate unnecessary use of SSNs." UGI concedes that it is aware of the guidance of OMB,[75] the Federal Trade Commission,[76] and the President's Task Force on Identity Theft.[77]

Consider, also, the advice of Peter Swire. Swire was the Chief Counselor for Privacy in the Office of Management and Budget for President Bill Clinton's Administration,. "Social Security Numbers," Swire says, "are an aging technology, and we have to do

[74] President's Identity Theft Task Force (2007). Combating Identity Theft: A Strategic Plan, at 24

[75] OCA-10-25.

[76] OCA-10-26.

[77] OCA-10-27.

serious planning for what will come next."[78] Swire's comment was responding to a study published in the proceedings of the National Academy of Science by, Acquisti and Gross, researchers at Carnegie Mellon University. The Acquisti and Gross study was able to identify, through a computer statistical analysis, the first five digits of a person's SSN for 44% of persons borne after 1988, and for 7% of those born from 1973 to 1988.[79] The accuracy of the prediction system increased for smaller states and for people born after 1988. While the researchers were able to predict all nine digits of an SSN for 8.5% of those born after 1988 in fewer than 1,000 attempts (testing the data on a half million persons), they needed 10 or fewer tries to predict all nine digits for 1 out of 20 Social Security numbers assigned in Delaware.[80]"Unless mitigating strategies are implemented," the Acquisti and Gross study itself found, "the predictability of SSNs exposes them to risks of identity theft on mass scales."[81]

The concerns raised by Acquisti and Gross were somewhat mitigated when, in 2011, the Social Security Administration began to randomly assign SSNs. Prior to that change in June 2011, however: (1) the first three digits of the SSN were called the "area number" and represented the state where a person lived when the SSN was issued; (2) the next two digits were the "group number" and grouped Social Security numbers within a state into

[78] New York Times, "Weakness in Social Security Numbers is Found," July 6, 2009.

[79] Knowing the first five digits of an SSN easily leads to the discovery of the entire SSN. Due to different truncation protocols, while some entities truncate the first four digits of an SSN, other entities truncate the last four digits, thus allowing partial SSNs to be easily matched.

[80] Acquisti and Gross (2009). "Predicting Social Security Numbers from Public Data," Proc. Natl Acad. Sci. USA 106:10975-10980.

[81] Predicting Social Security Numbers, supra.

blocks of numbers; and (3) the final four numbers were the "serial number" and identified each individual within a block. The Acquisti and Gross research, in other words, still presents cause for concern. Even today, in 2026, persons who received random-generated numbers have still not even reached the age of majority. Despite this Carnegie Mellon study, and the frequently recognized role of the use of Social Security Numbers in enabling identity theft, UGI Gas has undertaken no effort to examine the use of Social Security Numbers in enabling identity theft.[82]

Q. HOW DO YOU RESPOND TO THE UGI GAS ASSERTION THAT IT HAS A NECESSITY TO USE SOCIAL SECURITY NUMBERS TO PREVENT FRAUD?

A. UGI Gas asserts, but provides no supporting data or analysis, that it needs to use SSNs in order to prevent fraud, by identifying the identity and creditworthiness of service applicants.[83] Moreover, UGI Gas consistently argues that "The Company disagrees that its practice of collecting SSNs for the limited purpose of credit verification in connection with establishing utility service is improper and/or not in compliance with applicable legal and regulatory requirements."[84]

Despite this UGI Gas assertion, it has frequently been found that Social Security Numbers are not good "authenticators." It is not merely consumer advocates that have expressed concern. As early as 1995, the newsletter of the Association for Computing Machinery (ACM), reported on the "risks of Social Security Numbers":

---

[82] OCA-10-22.

[83] OCA-10-1, attached as Exhibit RDC-3.

[84] See, e.g., OCA-10-23 through OCA-10-27.

> The problem with social security numbers is that some organizations are using these ubiquitous numbers for identification, others are using them for authentication, and still others are using them for both. I call up my bank, tell them my account number and ask them for a balance. Just to make sure that I am really who I claim to be, my bank asks for my SSN—as if this is a number that is some kind of secret that we share.
>
> But my SSN isn't secret—and there is no way to make it that way in today's increasingly cross-indexed society. That's because for every organization that thinks your SSN should be kept secret, there's another that is using it as some kind of account number, leaving it open for all of the world to see.[85]

There are three ways for a person to authenticate who they are: (1) by something they *know* (like a PIN or password); (2) by something they *have* (like a physical device or token); or (3) by something they *are* (like a physical characteristic such as a fingerprint, or an age and birthdate). Authenticators should not be widely known, perhaps even should be secret. The problem is that SSNs are *widely* known,[86] and even if not known, can be accurately predicted by computer statistical analysis as shown by the Carnegie Mellon research discussed immediately above. The historic use of SSNs as an authenticator by UGI Gas is not a sufficient reason for the Commission to approve the continued collection and use of SSNs.

Q. DOES UGI GAS LACK INFORMATION ABOUT RECOMMENDED BEST PRACTICES WITH RESPECT TO THE COLLECTION AND RETENTION OF SOCIAL SECURITY NUMBERS?

[85] Garfinkel (October 1995). "Risks of Social Security Numbers," Vol. 38, No. 10, Communications of the ACM.

[86] See e.g., Given (December 2007). "Uses of Social Security Numbers in the Private Sector: Why SSNs are not Appropriate for Authentication," Privacy Rights Clearinghouse presentation to the Federal Trade Commission Workshop "Security in Numbers: SSNs and ID Theft."

A. Yes. When asked whether the Company was "aware that the Federal Trade Commission ("FTC") has urged, in guidance or public statements, a reduction in the use of Social Security Numbers in the private sector," UGI Gas responded that it "is unable to admit or deny that the FTC has 'urged,' in guidance or public statements, a reduction in the use of Social Security Numbers (SSNs) in the private sector because the Company is unaware of any currently applicable guidance issued by the FTC on this topic." Despite this blindness to FTC guidance, the FTC has, in its publication "A Guide for Business: Protecting Personal Information," in fact ***explicitly*** recommended with respect to private sector collection and retention of Social Security Numbers: "***Don't use*** Social Security Numbers unnecessarily— for example, as an employee or ***customer identification number***, or because you've always done it."[87]

Despite this FTC guidance –"don't use Social Security Numbers. . .as [a]. . .customer identification number," that is precisely what UGI Gas ***does*** do. The Company explicitly states that "UGI has not considered any plans to move away from the use of Social Security Numbers."[88] This failure to act in light of the FTC's recommendation occurs even though UGI has undertaken no studies that examine the effectiveness of the use of Social Security Numbers as an identifier or other indicator of an individual's identity.[89]

[87] U.S. Federal Trade Commission, "Guide for Business: Protecting Personal Information," at page 6 (emphasis added), available at https://www.ftc.gov/system/files/documents/plain-language/pdf-0136_proteting-personal-information.pdf

[88] OCA-10-18.

[89] OCA-10-20.

UGI Gas collects SSNs from 99.3% of its customers.[90] The Company collects SSNs for the express purpose of providing them to a third party ("The Company asks for a new customer's SSN when they apply for service *so an Experian check can be run* to verify their identity.")[91] Experian's use of, and protection of, SSNs is not subject to the jurisdiction of the Pennsylvania PUC. Indeed, UGI Gas has no control over how Experian protects Social Security Numbers.

In addition, not only does the Company collect these SSNs, but it also retains them in perpetuity ("The tax ID further serves as a unique, persistent link between a customer and their account history. For this reason, it is retained on the customer record *even after service is discontinued*, preventing billing errors, duplicate accounts, and confusion arising from common names.")[92] The Company's assertion, in other words, that it collects SSNs "for the limited purpose of credit verification in connection with establishing utility service" is not an accurate statement.

Q. DOES UGI GAS INFORM OR NOTIFY CUSTOMERS AT THE TIME SOCIAL SECURITY NUMBERS ARE REQUESTED OF THEIR INTENDED RETENTION AND USE?

[90] OCA-10-3.

[91] OCA-5-6. (emphasis added).

[92] OCA-10-1 (emphasis added).

A. No. When customers are asked to provide their SSNs at the time they apply for UGI Gas service, they are neither informed, nor notified, of the Company's intended retention and expansive use of the personal data. UGI Gas:[93]

- Does not inform or notify customers that their SSN will be retained in perpetuity, including after the time the household is no longer a customer of the Company;
- Does not inform or notify customers that their SSN will be provided to a third party (Experian), an international credit agency operating in North America, Central America, South America, Europe, the Middle East, Asia, and Australia. According to Experian, itself, its business purpose involves "transforming complex data into actionable insights. From credit risk assessment to fraud prevention and market analysis. . ."[94]
- Does not inform customers of the fact that Experian will also appear to be authorized to retain customer Social Security Numbers. If Experian is not so authorized, there would be nothing for UGI Gas to match a customer SSN to in an "Experian Connect Check" in order to "verify the applicant's identity." UGI Gas states: "to establish service, a Customer Care Representative (CCR) will run an Experian Connect Check to verify the applicant's identity. If the Connect Check

[93] OCA-10-2 ("When an applicant calls to request service, a Social Security Number (SSN) is requested for identity and creditworthiness verification. Applicants who prefer not to provide an SSN are verbally informed that a driver's license number is an acceptable alternative."). See also, OCA-10-9 ("The Company accepts a Driver's License number as an alternate form of identification, to verify identity and creditworthiness of a service applicant. If an applicant declines to provide either Social Security Number or Driver's License number, they are informed that they must supply one government-issued photo ID or two alternative forms of identification, at least one of which must include a photo.").

[94] Available at https://www.experianplc.com/about-us/experian-at-a-glance

returns a result that indicates an identity issue, the CCR will deny service until valid identification is provided."[95]

Q. DO YOU HAVE REASON TO BELIEVE THAT CUSTOMER DATA WILL BE SHARED WITHIN THE UGI CORPORATE STRUCTURE BEYOND UGI GAS?

A. Yes. In response to discovery, UGI Gas stated that:

> UGI maintains a comprehensive, defense-in-depth program for safeguarding Customer Personal Information, including Social Security Numbers, from unauthorized access, disclosure, or use. This program is governed by a suite of *enterprise information security standards and procedures applicable across all business units, including UGI Utilities*.[96]

UGI's response goes on to state:

> UGI's Global Information Security Group (GISG) maintains an enterprise information security program anchored to the NIST Cybersecurity Framework (CSF). Formal policies governing the acceptable use of information systems, data classification, access control, incident response, and third-party risk management *apply to all employees, contractors, and temporary workers across all UGI business units and geographic locations*.[97]

Note several things that are important in this response. The security program is not operated and maintained by UGI Gas but rather is an "enterprise information security program" maintained by "UGI's Global Information Security Group (GISG)." The "security standards and procedures" are not specific to UGI Gas, but rather are "enterprise. . .standards and procedures applicable *across all business units*. . ." The reference to "all business units" is not limited to UGI Gas, and only "*include[es]* UGI

[95] OCA-10-5.

[96] OCA-10-6 (emphasis added). A complete copy of the response to OCA-10-6 is appended to my Direct Testimony as Attachment RDC-4.

[97] Id. (emphasis added).

Utilities." Remember, UGI Utilities includes not only its gas operations, but its electric operations as well in Pennsylvania; it also operates in Maryland. UGI Utilities also has, as a wholly owned subsidiary, Mountaineer Gas Company, which is the largest gas utility in West Virginia. UGI owns AmeriGas Propane, the largest retail propane gas marketer in the United States, operating in all 50 states.

Q. WHAT DO YOU CONCLUDE?

A. SSNs are an "aging technology" and private sector entities relying on SSNs, such as UGI Gas, need to engage in serious planning on what will come next. Research, including but not limited to[98] that research published in the proceedings of the National Academy of Science discussed below, concludes that industry and policy makers need to "reassess our perilous reliance" on SSNs. The federal government has told all federal Executive Agencies to "eliminate the unnecessary collection and use" of SSNs. The Presidential Task Force on Identity Theft concluded that "more must be done to eliminate the unnecessary use of SSNs." No reason exists for UGI Gas to lag behind in eliminating or minimizing the collection and retention of SSNs. There is a distinct move to find

[98] See, U.S. House of Representatives, Hearing Before the Committee on Oversight and Government Reform (My 23, 2017). Protecting American's Identities: Examining Efforts to Limit the Use of Social Security Numbers, available at https://oversight.house.gov/hearing/protecting-americans-identities-examining-efforts-limit-use-social-security-numbers/

See also, Mack (March 3, 2020). The Move to Eliminate Social Security Numbers ("At the 2020 RSA Cybersecurity Conference last week, the head of the Cybersecurity and Infrastructure Security Agency (CISA) reiterated that the country needs to move away from SSNs for identification. The past few years have seen numerous high-profile data breaches and we've reached a point where up to an estimated 80% of Americans' SSNs have already been exposed.") available at https://www.extractsystems.com/the-move-to-eliminate-social-security-numbers/

alternatives to the use of SSNs to help reduce the threat of identity theft.[99] The Commission should direct UGI Gas join in those efforts. UGI should be directed to report to the Commission, within 12 months of a final decision in this docket, its plan to eliminate the collection and retention of customer Social Security Numbers. This plan should include a plan for elimination of the SSNs currently retained in Company information technology.

Part 6. Reviewing the 2025 UGI Gas Rate Case Settlement Commitments.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the commitments which UGI Gas agreed to as part of the Settlement of its 2025 base rate case proceeding. In that Settlement, UGI Gas agreed in relevant part:

- To implement the Commission's Common Application Form for enrollment in CAP, increased flexibility for confirmed low income customers to enroll in

[99] See, e.g., U.S. Department of Homeland Security (January 18, 2019). Social Security Number Collection and Use Reduction. "With this Instruction, the Department of Homeland Security (DHS) Chief Privacy Officer: (A) Requires the elimination of the unnecessary collection, use, maintenance, and dissemination of the Social Security number (SSN) by DHS programs, systems, and forms; or (B) Requires the use of a unique alternative identifier to the SSN; or (C) Requires the use of privacy-enhancing SSN alternatives when there are technological, legal, or regulatory limitations to eliminating the SSN."

See also, Government Executive (April 12, 2024). "The Office of Personnel Management issued a final rule Friday that would cull Social Security numbers from any mailed document in an effort to prevent fraud. The rule, which was published in the Federal Register, is part of the implementation of the 2017 Social Security Number Fraud Prevention Act and is designed to help protect the identifiers, which can be used in various forms of identity theft. . .The federal government has been working on reducing the use of SSNs as identifiers since at least 2006, when the Identity Theft Task Force, created by a George W. Bush executive order, called for the Office of Management and Budget and OPM to find ways to eliminate, restrict or conceal SSN use." available at https://www.govexec.com/management/2024/04/opm-rule-removes-social-security-numbers-mailed-documents/395700/#:~:text=The%20Office%20of%20Personnel%20Management,an%20effort%20to%20prevent%20fraud

varying programs by and through data sharing, and quarterly working group meetings dedicated to increasing enrollment to CAP.[100]

- To automatically recertify CAP customers who consent to sharing income by checking the LIHEAP data sharing box on the LIHEAP application;[101]
- To no longer require applicants for CAP, LIURP, or Operation Share programs to produce income documentation if the applicant received LIHEAP within the current or prior LIHEAP season and are included within the LIHEAP data shared by DHS;[102]
- Through 2026, to host quarterly working group meetings with interested parties and members of its Advisory Committee to identify considerations for utilizing LIHEAP data to facilitate auto-enrollment in CAP;[103]
- To increase its LIURP budget by $1,000,000 annually, effective January 1, 2026;[104]
- To roll-over any unspent LIURP funds at the end of the calendar years and add that amount of money to the budget for the following year;[105]
- To continue its Low-Income Customer Assessment and Outreach Pilot for a term of three years beginning April 1, 2026;[106]
- To increase its outreach efforts through additional in-person Winter Assistance Relief Mobilization (WARM) events held at targeted locations each calendar year;[107]

---

[100] See, Joint Petition for Settlement, Docket Nos. R-2024-3052716, et al., at paragraphs 59(a) (July 9, 2025).

[101] Id., at para. 59(b).

[102] Id., at para. 59(c).

[103] Id., at para. 59(d).

[104] Id., at para. 60(a).

[105] Id., at para. 60(c).

[106] Id., at para. 61.

[107] Id., at para. 61(b).

- To "engage with local officials" and provide its USP brochure in English and Spanish to the Mayor's offices in selected cities;[108]

- To commence tracking beginning in 2026 and continuing for a period of three years, "annual progress" for resulting reductions related to: (1) low-income nonpayment disconnections; (2) payment-troubled customers (as defined by the PUC); (3) the number of Confirmed Low-Income customers who are living in occupied housing units without heating at the time of the PUC's Cold Weather Survey, and, in the absence of reductions in any of the above metrics, to develop a plan to generate such reductions;[109]

- To increase its annual shareholder donation to Operation Share by $500,000;[110] and

- To waive reconnection fees for any Confirmed Low-Income customers who provide verification of household income and to develop a "clear process" for households to verify their income in order to waive the reconnection fee.[111]

Q. HAS UGI GAS COMPLIED WITH EACH ASPECT OF THE SETTLEMENT THAT YOU JUST LISTED?

A. In general, there has been insufficient time since approval of the 2025 Settlement to determine the extent to which UGI Gas is complying with the Settlement terms. UGI Gas has proposed a $1,000,000 LIURP budget in accord with the Settlement,[112] and is using LIHEAP data to recertify CAP customers.[113] As of December 2025, UGI Gas has adopted

[108] Id., at para. 61(c).

[109] Id., at para. 61(d).

[110] Id., at para. 62(a).

[111] Id., at para. 64.

[112] UGI Gas Statement 12, at page 8.

[113] CAUSE-PA-6-16.

the PUC's Common Application Form for purposes of CAP enrollment.[114] It has acknowledged its commitment to increase its Operation Share funding by $500,000.[115] The dollar amount of Operation Share grants in November 2025 through January 2026 ($862,136) was substantially higher than the dollar amount in the equivalent time periods for 2024-2025 ($162,575) or 2023-2024 ($267,370).[116] While total spending in 2025-2026 was up, the average per-household Operation Share grant amount in those months declined.[117]

It is, however, simply too early to assess the Company's compliance with the outreach and public engage aspects of the 2025 Settlement. For example, UGI committed to increasing Low-Income Customer Assessment and Outreach through a continued pilot program for the next three years, which include but are not limited to Winter Assistance Relief Mobilization (WARM) events and increased engagement with local officials to provide its USP brochure in English and Spanish at local city halls. The Company is proposing no changes to any of its Universal Service programs in this proceeding.[118] What is evident, however, is the number of new CAP enrollees was somewhat higher in October 2025 through January 2026 (3,917) than it had been in the same months in 2024-

[114] UGI Gas Statement 12, at page 15.

[115] Id., at page 8.

[116] CAUSE-PA-2-17(B). Part of this, however, may be attributable, at least in part, to a one-time supplemental grant made by UGI (gas and electric) to Operation Share in response to delays in LIHEAP funding in the Fall of 2025 caused by the government shutdown at that time.

[117] CAUSE-PA-2-17(A).

[118] CAUSE-PA-1-2.

2025 (3,663) or 2023-2024 (3,237).[119] The total number of net additions to CAP enrollment (the "net" is new program enrollment minus program exits)[120] in the period October 2025 through January 2026 (884) did not differ sharply from prior years. The number of customers removed from CAP due to a "failure to recertify" was somewhat lower in the period October 2025 through January 2026 (1,414) than the same months in 2024-2025 (1,516), but modestly higher than in the same months in 2023-2024 (1,1118). There has, in other words, simply been too little time since the Settlement of the 2025 UGI Gas rate case to assess the extent to which UGI Gas is meaningfully pursuing the types of outreach and engagement that were included in the 2025 Settlement or the impacts on CAP enrollment from the 2025 Settlement agreements regarding recertification processes.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[119] CAUSE-PA-2-1(B).

[120] The total CAP enrollment is set forth in response to CAUSE-PA-1-6; the number of new CAP enrollees is set forth in response to CAP-2-1. The number of CAP exists, including the number of exists due to a "failure to recertify" is set forth in response to CAUSE-1-13.

Exhibit RDC-3 (OCA-10-1)

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to OCA Set 10 (1-28)
Delivered on March 30, 2026

OCA-10-1

Request:

State whether the Company currently collects, stores, or otherwise maintains Social Security numbers or other Customer Personal Information that has been used historically or currently to establish, verify, or maintain utility service. If so, identify the categories of information collected, the purposes for which such information is collected, and the period of time such information is retained.

Response:

The Company collects and stores tax IDs — Social Security Numbers (SSNs) for individuals and Employer Identification Numbers (EINs) for organizations — to verify the identity and creditworthiness of service applicants. However, a driver's license number is accepted in lieu of a tax ID.

A tax ID is an established and reliable method to confirm an applicant's identity. This helps the Company detect fraud and protect other customers from bad actors seeking service under false identities to avoid outstanding balances. Because utility service is delivered before payment is received, credit verification also allows the Company to assess whether a deposit is warranted.

The tax ID further serves as a unique, persistent link between a customer and their account history. For this reason, it is retained on the customer record even after service is discontinued, preventing billing errors, duplicate accounts, and confusion arising from common names.

SSN was previously requested for enrollment for the Company's Universal Service Plans. However, pursuant to the Joint Petition for Settlement at Docket No. R-2024-3052716, Paragraph 59(a), the Company agreed to implement the PUC's Common Application Form and is utilizing it for its Customer Assistance Program and Operation Share as of December 2025. This form does not include a request for SSN. The Low Income Usage Reduction Program application does request, but not require the SSN, which is used for validation, if the Company finds that the same household members are listed in applications for separate properties. The Company is in the process of revising this application and the SSN will not appear on future versions.

Prepared by or under the supervision of: Daniel V. Adamo

Exhibit RDC-4 (page 1 of 3) (OCA-10-6)

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to OCA Set 10 (1-28)
Delivered on March 30, 2026

OCA-10-6

Request:

Describe in general terms the policies, practices, and procedures utilized by the Company to identify and address suspicious activity, fraudulent account creation, or unauthorized use of Customer Personal Information in connection with the establishment or maintenance of utility service. Without disclosing confidential or security-sensitive information, describe the overall approach to monitoring and detection (including whether such activities are conducted through automated processes, manual review, or a combination thereof), the general process for evaluating and escalating potential issues, and the manner in which the Company reviews, updates, and assesses the effectiveness of such policies and procedures over time.

Response:

UGI maintains a comprehensive, defense-in-depth program for safeguarding Customer Personal Information, including Social Security Numbers, from unauthorized access, disclosure, or use. This program is governed by a suite of enterprise information security standards and procedures applicable across all business units, including UGI Utilities. These controls address the prevention and detection of external cybersecurity threats, unauthorized intrusions, and internal misuse, and are subject to regular review, testing, and independent assessment.

I. Administrative Safeguards

Policies and Standards. UGI's Global Information Security Group (GISG) maintains an enterprise information security program anchored to the NIST Cybersecurity Framework (CSF). Formal policies governing the acceptable use of information systems, data classification, access control, incident response, and third-party risk management apply to all employees, contractors, and temporary workers across all UGI business units and geographic locations. All personnel with access to Customer Personal Information are subject to these policies as a condition of employment or engagement.

Training and Awareness. All UGI employees and contractors receive security awareness training covering the recognition and reporting of phishing, social engineering, and suspicious activity. Personnel with access to Customer Personal Information receive role-appropriate training on data handling requirements, acceptable use obligations, and reporting procedures. Ongoing awareness communications supplement formal training throughout the year.

Exhibit RDC-4 (page 2 of 3) (OCA-10-6)X

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to OCA Set 10 (1-28)
Delivered on March 30, 2026

OCA-10-6 (Continued)

Third-Party Risk Management. Vendors, suppliers, and business partners with access to UGI systems or Customer Personal Information are subject to security assessments prior to engagement and to contractual obligations governing data protection, acceptable use, and breach notification. Third-party breaches involving known or suspected impact to UGI customer data must be reported to the GISG immediately upon notification.

II. Technical Safeguards

Identity and Access Management. Access to systems and data containing Customer Personal Information is governed by the principle of least privilege. Access rights are assigned based on defined roles and business need and are subject to periodic review and recertification. Privileged access to critical systems and data repositories is subject to enhanced controls and oversight. Multi-factor authentication is enforced for remote access and access to sensitive systems. Terminated or transferred employees are subject to timely access revocation procedures.

Endpoint Protection. UGI deploys enterprise endpoint detection and response (EDR) technology to detect, contain, and remediate threats including malware, ransomware, and unauthorized execution. Endpoint security policies enforce configuration standards and restrict unauthorized software installation.

Data Protection. Customer Personal Information, including Social Security Numbers, is protected through encryption controls applied to data in transit across public and internal networks. Data handling and retention requirements are defined in UGI's information security standards and apply to all systems and personnel that store, process, or transmit customer data.

Security Monitoring — SIEM and SOC. UGI operates a security information and event management (SIEM) platform that aggregates and correlates log and alert data from across the enterprise technology environment. A managed security operations center (SOC) provides around-the-clock monitoring, alert triage, and escalation. Detection rules and threat indicators are continuously updated based on intelligence from sector-specific information sharing organizations and government partners.

Email and Collaboration Security. Anti-phishing and email filtering controls are deployed to detect and block malicious messages before they reach end users. Employees are provided with mechanisms to report suspicious emails, which are reviewed and actioned by the security team.

OCA-10-6 (Continued)

Fraud-Specific Technical Controls. Please see the response to OCA-5-7.

Customer Operations Front-End Controls. Please see the response to OCA-5-7.

III. Physical Safeguards

Physical access to UGI facilities housing systems that store or process Customer Personal Information is controlled through layered physical security measures. Data center and server room environments are subject to access controls that restrict entry to authorized personnel. Physical security controls are incorporated into UGI's broader security planning and preparedness program. Physical security incidents with potential cyber implications — including unauthorized physical access to network infrastructure or computing equipment — are subject to the same incident escalation and response procedures as cybersecurity incidents.

Surrebuttal Testimony of Roger Colton

on behalf of

Pennsylvania Office of Consumer Advocate

OCA Statement 6SR

Date Served: May 27, 2026

Table of Contents

Summary of Recommendations		1
Part 1.	Response to UGI Gas Rebuttal Witness Meilinger	2
Part 2.	Response to UGI Gas Rebuttal Witness Adamo	19
Part 3.	Response to UGI Gas Rebuttal Witness Taylor	25
Part 4.	Response to UGI Gas Rebuttal Witness Fang	26

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger D. Colton. My business address is 34 Warwick Road, Belmont, MA, 02478.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED PRE-FILED WRITTEN DIRECT TESTIMONY ON BEHALF OF THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY.

A. The purpose of my Surrebuttal Testimony is to review and respond to the Rebuttal Testimony of the following UGI Gas witnesses to the extent that those witnesses address issues which I raise in my Direct Testimony:

- UGI Gas rebuttal witness Brian Meillinger;
- UGI Gas rebuttal witness Daniel Adamo;
- UGI Gas rebuttal witness John Taylor; and
- UGI Gas rebuttal witness Cyndee Fang.

Q. HAS THE REBUTTAL TESTIMONY OF UGI GAS WITNESSES CAUSED YOU TO MODIFY OR DROP ANY OF THE RECOMMENDATIONS BASED ON YOUR DIRECT TESTIMONY?

A. No. I stand by each of the recommendations I made based on the data and discussion presented in my Direct Testimony.

Part 1. Response to UGI Gas Rebuttal Witness Brian Meilinger.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the Rebuttal Testimony of UGI Gas rebuttal witness Brian Meilinger.

Q. DO YOU HAVE ANY OVER-ARCHING OBSERVATIONS ABOUT THE REBUTTAL TESTIMONY OF BRIAN MEILINGER?

A. Yes. Mr. Meilinger concedes the unaffordability of UGI Gas rates to low- and moderate-income households. He explicitly states that he "does not dispute the income data" which I presented, or the Asset Limited, Income Constrained, Employed" figures which I cite in my testimony.[1] His dispute is limited to whether it is appropriate to consider this data in a rate proceeding to review the affordability of UGI Gas rates or to review the Company's Universal Service Programs.

As to Universal Service Programs, Mr., Meilinger asserts that the Company's programs "have been successfully assisting low-income customers, resulting in positive affordability outcomes for *many* participants."[2] Mr. Meilinger sets the bar far too low for what the obligations of UGI Gas are. The purpose of the Company's Universal Service Programs is not merely to generate positive affordability outcomes "for many participants." As the Commission's Bureau of Consumer Services (BCS) states:

> The Electricity Generation Customer Choice and Competition Act and the Natural Gas Choice and Competition Act opened the electric generation and

[1] UGI Gas Statement 12-R, at 2.

[2] Id. (emphasis added).

> natural gas supply markets to competition. In doing so, the General Assembly wanted to ensure that electric and natural gas service remain universally available to all customers in the state. Both Acts contain provisions that require utilities to make universal service and energy conservation programs available to assist low-income customers to afford electric and gas service. The Acts also require the PUC to ensure that utilities appropriately fund their assistance programs.[3]

The purpose of Universal Service Programs, in other words, is to "assist low-income customers to afford gas and electric service," not merely to generate "positive outcomes" for "many" participants.

While Mr. Meilinger states that UGI Gas is working to "ensure that payment troubled customers are provided with the necessary assistance to maintain utility service," he does not dispute the data showing that UGI Gas has three times more low-income customers in debt than residential customers; disconnects service for nonpayment at a rate 50% higher for low-income customers than for residential customers; writes-off low-income customer accounts at a rate two times higher than its writes off residential accounts; had more than 18,000 low-income customers default on payment arrangements in the most recent year for which data is reported; and has an average low-income arrearage balance nearly two times higher than the average residential balance. Mr. Meilinger does not dispute that UGI Gas has identified fewer than 60% of its low-income population and then, *of those*,

[3] Bureau of Consumer Services (January 2026). Universal Service Programs & Collections Performance, 2024, at page 2,, available at https://www.puc.pa.gov/filing-resources/reports/universal-service-programs-and-collections-performance-reports/ (internal notes omitted).

has more than 40,000 confirmed low-income customers that it has not enrolled in its Customer Assistance Program (CAP), its primary Universal Service Program.[4]

In short, generating "positive outcomes" for "many" participants does not achieve the statutory objective identified in the 2024 BCS Report.

Q. DO YOU HAVE A SECOND RESPONSE TO MR. MEILINGER'S REBUTTAL TESTIMONY?

A. Mr. Meilinger presents a red herring argument when he testified that the Commission "should not be holding a regulated utility, such as UGI Gas, solely accountable for participation rates in assistance programs that are administered by the Commonwealth of Pennsylvania."[5] Of course, no-one has proposed to hold UGI-Gas "solely accountable" for the low participation rate in LIHEAP. Nonetheless, when UGI Gas claims credit for LIHEAP participation,[6] and the financial benefits provided by the federal government which UGI Gas has claimed to have "facilitated" (in its own words),[7] it is legitimate to

---

[4] Mr. Meilinger objects to using ALICE data to address the performance of the Company's Universal Service Programs. (UGI-Gas Statement 12-R, at page 6.) No-one, including myself, has done that, or proposed to do that. Indeed, the ALICE data was presented to support the proposition that affordability problems extend beyond the Company's low-income population. Accordingly, Mr. Meilinger's "objection" will not be further addressed.

[5] UGI Gas Statement 12-R, at page 21.

[6] UGI Statement 11-R, at page 30 ("considerations relating to the intersection of income and rate design would 3 be amiss if they did not include discussions relating to UGI Gas's low-income programs. 4 UGI Gas has available a continuum of low-income targeted programs, beyond CAP, 5 including facilitating Low-Income Home Energy Assistance Program ("LIHEAP"). . .") See also, UGI Gas Statement 12, at page 10 ("Over the prior three LIHEAP seasons (2022/2023, 2023/2024, 2024/2025) the Company has facilitated approximately 109,000 grants for nearly $32 million.")

[777] Note that UGI Gas claims to have "facilitated" not merely *some* LIHEAP grants, but it claims credit for facilitating *all* of the LIHEAP grants received by the Company over the three-year period. ("Over the prior three LIHEAP seasons (2022/2023, 2023/2024, 2024/2025) the Company has facilitated approximately 109,000 grants for nearly $32 million.") UGI Gas Statement 12-R, at page 11. The fact that Mr. Meilinger claims credit for

question whether the Company is also creating barriers to LIHEAP participation. In all of the ways I identified in my Direct Testimony, none of which Mr. Meilinger disputed, the Company does fail to do all it can, and does, indeed, create barriers.

Q. IS THERE A THIRD ASPECT OF MR. MEILINGER'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Yes. Mr. Meilinger seeks to divert attention from the Company's failures regarding its Universal Service Programs, identified both by myself and by CAUSE-PA witness Cicero, by citing government assistance programs regarding food, housing and housing, which address "the costs of basic needs. . .which are asserted by OCA and CAUSE-PA to put strain on household budgets."[8] Nothing in my Direct Testimony raises questions about how, if at all, UGI Gas should be involved with addressing the "costs of basic needs such as the food" outside of the context that there is documented data which I discuss about the extent to which households in Pennsylvania have reduced or forwent expenses for basic household necessities, such as medicine or food, *in order to pay an energy bill*. When utility bills become so unaffordable that customers make trade-offs with other household necessities in order to pay those bills, contrary to Mr. Meilinger's rebuttal testimony that it is of no concern to the utility, it falls squarely within Pennsylvania's statutory mandate for Universal Service Programs as I identified above.

"facilitating" *all* LIHEAP grants received by the Company is evident by comparing his claim at page 11 to the data presented by UGI Gas in response to OCA-IV-34(a) and 34(b). In fact, his claim that "the Company has facilitated approximately 109,000 grants" is suspect. According to the Company's data, only 72,659 LIHEAP Cash and Crisis grants were received by the Company *in total* in the three years Mr. Meilinger cites. (OCA-IV-34(a)).

[8] UGI Gas Statement 12-R< at page 5.

Q. WHAT IS THE FOURTH ASPECT OF MR. MEILINGER'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Mr. Meilinger presents extensive argument about how well UGI Gas is doing to provide "a concerted focus on continued marketing and customer outreach to increase CAP enrollment."[9] His testimony, however, misses the point. Quite aside from CAP enrollment, the Company has a responsibility to provide certain protections –identified in my Direct Testimony—to "confirmed low-income customers." The standard for being identified as a Confirmed Low-Income customer" is much lower than the standard for enrolling in CAP. While CAP enrollment requires a customer to apply for the program, and have their income-eligibility be verified, to be identified as a "Confirmed Low-Income customer" requires, by virtue of Commission regulation, *only* that UGI Gas have "a reasonable expectation reasonable expectation by the Company of a customer's low-income status."[10] Having a "reasonable expectation" that a customer is low-income is much different from establishing income-eligibility through an application and income verification process.

Mr. Meilinger argues that an OCA discovery response "suggests SNAP's guidelines differ from CAP's guidelines and are not based solely on gross income as a percentage of the Federal Poverty Level."[11] To assert that *that* was the OCA response to the cited discovery request is so misleading as to be willfully deceptive. The complete request, and the OCA

[9] UGI Statement 12-R, at 7 – 8.

[10] OCA Statement 6, at page 54.

[11] UGI Gas Statement 12-R, at 19 – 20.

response to that request, is attached to this Surrebuttal Testimony as OCA Exh. RDC-1SR. The part of the OCA response which Mr. Meilinger cites[12] stated in relevant part:

> SNAP income eligibility, of course, is not based exclusively on gross income as a percent of Poverty Level as asserted in the question. In addition, a household's net income must be less than 100% of Poverty Level. Households must meet both gross and net income limits to income-qualify for SNAP. The closer gross countable income comes to 200% of the Federal Poverty Level, the less likely it is that net income will fall below the additional income-qualifying guideline.

In addition, the OCA response which Mr. Meilinger so misleadingly cites, stated:

> The ***maximum*** income limits presented above, however, do not demonstrate whether or not demonstrating Food Stamp income participation is "consistent with" the income eligibility requirements for CAP. The Table below shows the distribution of Pennsylvania SNAP recipients by Federal Poverty Level in Pennsylvania for the three most recent years available (USDA, Characteristics of Supplemental Nutrition Assistance Program Households):

Distribution of SNAP participating households
by gross countable income as percent of poverty status: Pennsylvania

	Zero gross income	% to 50% FPL	% to 100% FPL	% or more FPL
2020	16.1%	10.2%	48.6%	25.0%
2021***			Not Published	
2022	17.4%	11.3%	39.9%	31.4%
2023###	16.9%	9.4%	37.7%	36.0%

***Due to a lack of data collection caused by the COVID health pandemic, no 2021 data was published.
###Most recent year available (published April 2025).

While USDA does not disaggregate SNAP recipient households into Poverty ranges of 100% to 150% and 150% or more, the disaggregation nonetheless documents that any reasonable distribution of SNAP recipients with income

[12] UGI Discovery to OCA, Set III, No. 1.

100% or more would demonstrate the consistency of Food Stamp eligibility with CAP eligibility.

Even the distribution presented above does not fully document the extent to which Food Stamp income eligibility is consistent with CAP income eligibility. The Table below shows the *average* Poverty Level of Food Stamp recipients in Pennsylvania by year for the years 2020 through 2023 (USDA, Characteristics of Supplemental Nutrition Assistance Program Households).

Gross Countable Income as Average Percent of Poverty Level of SNAP Recipient Households: Pennsylvania	
2020	74.8%
2021	***
2022	78.4%
2023###	85.9%

***Due to a lack of data collection caused by the COVID health pandemic, no 2021 data was published.
###Most recent year available (published April 2025).

As can be seen, rather than saying what Mr. Meilinger states the OCA response said, the response documents that a demonstration of SNAP participation would create a reasonable expectation that a UGI Gas customer is low-income. It may not be sufficient to certify income for purposes of CAP enrollment, but the PUC's regulations regarding Confirmed Low-Income status does not require that. Mr. Meilinger's need to so deceptively represent an OCA discovery response is, unto itself, evidence of the weakness of his argument.

Mr. Meilinger argues further that I over-state the significance of the fact that fewer than 40% of the Company customers which UGI Gas has reason to believe are low-income (24,682 of 66,139 = 37%) receive LIHEAP. He notes that some customers may receive LIHEAP but assign their benefits to their electric provider rather than to UGI Gas. In that situation, UGI Gas would not know that the customer had received LIHEAP. While

Pennsylvania does allow low-income households to assign LIHEAP to their secondary heating provider, it is not reasonable for Mr. Meilinger to assert that more than three-of-five LIHEAP recipients actually do so. His speculation as to what utility is the beneficiary of a household's LIHEAP grant is not a sound basis to conclude that engaging in two marketing initiatives a year to promote enrollment in CAP[13] is a sufficient alternative to the additional education and outreach directed to customers at a time they would most benefit from CAP enrollment.

Q. IS THERE A FIFTH ASPECT OF MR. MEILINGER'S TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Yes. While Mr. Meilinger concedes that he does "not dispute the ALICE data presented," he "disagree[s] that it is appropriate to use this data to analyze the impacts of the Company's rate case and/or its Universal Service Programs."[14] He argues that eligibility for the Company's universal service programs are based on Federal Poverty Level and that a rate case is not an appropriate forum to consider other alternatives.[15] In this regard, Mr. Meilinger's rebuttal testimony states that "Witness Colton's recommendation to analyze ALICE data would be better suited outside of a rate case proceeding, where various stakeholders, including the Commission and other community partners, would have the opportunity to provide input on his recommendations and consider the impacts of those recommendations. A base rate case, which involves a host of other issues and is

[13] UGI Gas Statement 12-R, at page 20.

[14] UGI Gas Statement 12-R, at page 6.

[15] Id.

on an expedited time frame for resolution, is simply not the appropriate time to consider such a recommendation."[16]

The problem with Mr. Meilinger's rebuttal is that I offered no proposal to use ALICE data as an alternative to the use of FPL to establish universal service program eligibility. Nor did I use the ALICE data to evaluate the UGI Gas universal service programs. I used ALICE data in the same way I used American Community Survey (ACS) data from the Census Bureau and data from the Census Bureau's Household Pulse Survey (HPS), to evaluate the affordability of UGI Gas rates, and to inform the Commission of consumer interests in decisions regarding return on equity, capital structure, rate design, and revenue requirement.

A basic tenet of utility ratemaking is that the Commission's decision should take into account not merely investor interests, but consumer interests as well. I specifically observed that under Pennsylvania law, in setting rates, the Public Utility Commission must give "due consideration to the interests of consumers."[17] In order to give "due consideration to the interests of consumers" as required by statute, the Commission must fully understand what comprise the "interests of consumers," including not merely the interests of low-income customers, but the interests of more moderate income customers as well.[18] Mr. Meilinger's assertion that "a base rate case. . .is simply not the appropriate

[16] Id.

[17] OCA Statement 6, at page 14, quoting 71 Pa. Stat. Ann. §309-5(2).

[18] Id., at pages 22, 23. ("As is evident from this discussion, the unaffordability of UGI Gas bills is not a problem that inheres exclusively in the low-income population of UGI Gas.") ("the problems that arise as a result of the

time to consider such a recommendation" is facially unreasonable and should be dismissed.

Q. WHAT IS YOUR NEXT RESPONSE TO MR. MEILINGER'S REBUTTAL TESTIMONY?

A. Mr. Meilinger objects to the use of a customer's access to COMPASS in order to establish a reasonable expectation that the customer is low-income. He offers a series of misleading objections that should be dismissed. First, he states that "for purposes of enrollment in the Company's Universal Service Programs, customers need to have their income verified."[19] That's true, but irrelevant. My recommendation on the use of a COMPASS screenshot was not for purposes of CAP enrollment, but rather for purposes of establishing Confirmed Low-Income status. Irrespective of the need for verified income for CAP enrollment, that is *not* needed to establish Confirmed Low-Income status.

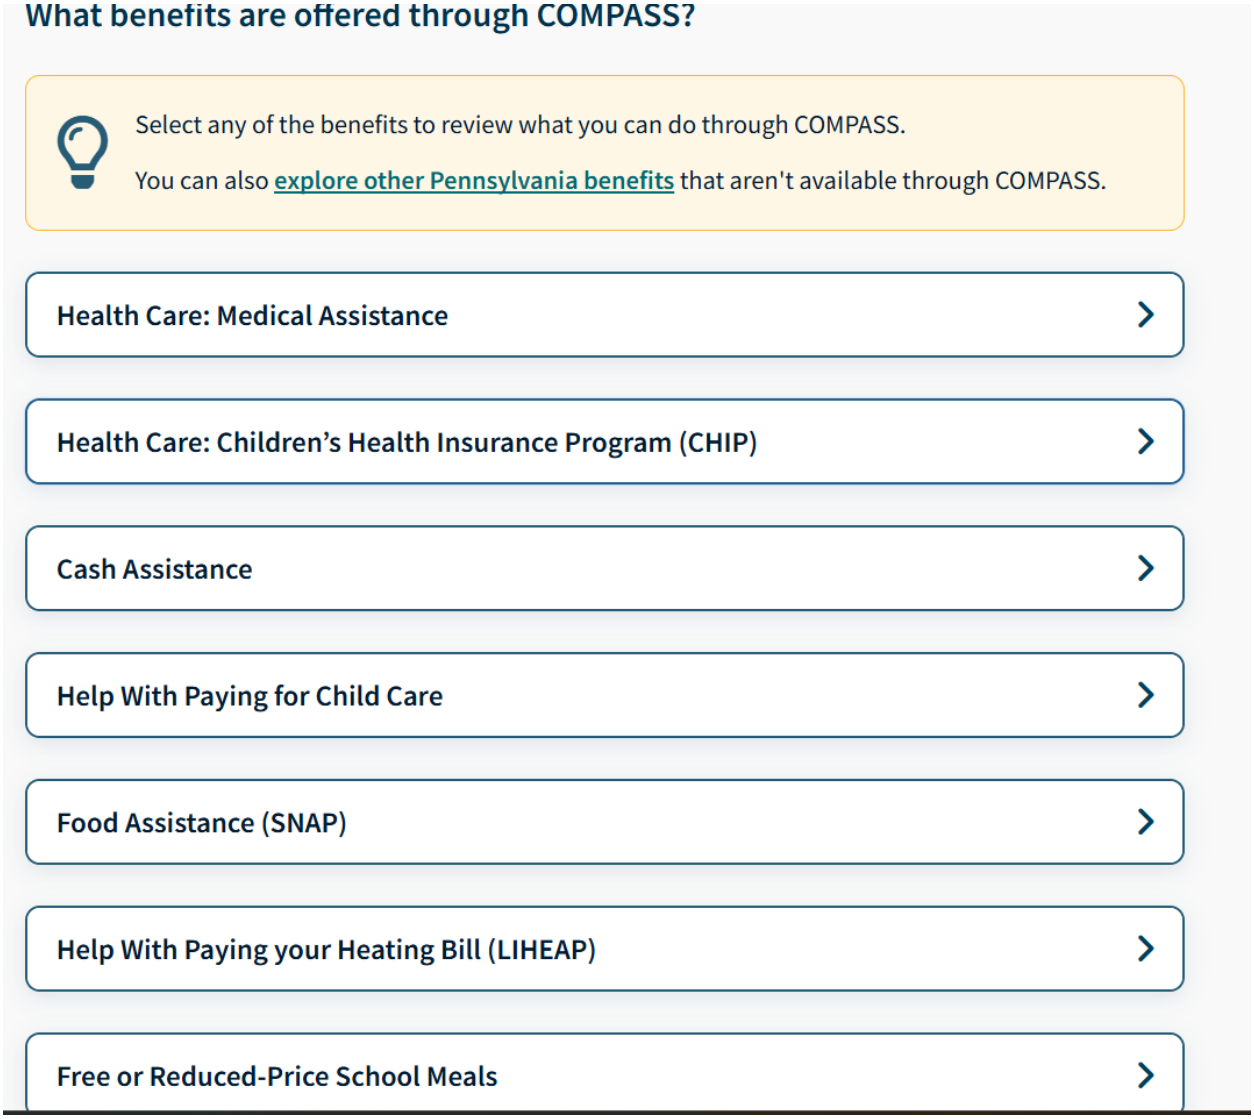
Second, Mr. Meilinger refers to a "screenshot of a COMPASS application."[20] It is not clear what Mr. Meilinger is referencing (or whether Mr. Meilinger even understands the proposal which he is objecting to). One does not apply for COMPASS. One instead can use COMPASS to apply for a range of benefits administered by the Pennsylvania

increasing unaffordability of UGI Gas bills for more moderate income UGI Gas households will be exacerbated even further by the rate hike sought by UGI Gas in this proceeding.").

[19] UGI Gas Statement 12-R, at page 21.

[20] Id. See also, UGI Gas Statement 12-R, at page 26 ("regarding Witness Colton's recommendation to use a screenshot or printout of the COMPASS application as part of the income verification process. . .").

Department of Human Services. The screenshot below is a partial listing of those benefits.



For purposes here, however, it is the additional services which COMPASS provides that would be helpful to UGI Gas if the Company would use it. As the screenshot below of the COMPASS website shows, one of the COMPASS "quick actions" is the ability of a household to track, in one place, their benefit application. Through this tracking, a household can establish what benefit programs they have been qualified for. A screenshot,

not of the COMPASS application, but of the list of programs for which the household has been qualified, would provide quick access to the list of programs. Contrary to Mr. Meilinger's testimony, use of COMPASS is the exact opposite of being "unnecessarily complicated." It would allow a customer to keep their actual income confidential, should they choose to do so, while still establishing their Confirmed Low-Income status.

Finally, Mr. Meilinger states that UGI Gas' acceptance of a COMPASS printout or screenshot is "unnecessary" because a household can "self-certify" their income. Again, intentionally or otherwise, his argument mixes up two different things. If a customer wishes to "self-certify" their income to their local utility, they should be allowed to do so to establish Confirmed Low-Income status. However, many households do *not* wish to provide a third party with information on their income, self-certified or otherwise. For *those* households, who for reasons of their own choosing, may wish to keep their income confidential, providing a COMPASS printout or screenshot would allow them to establish their Confirmed Low-Income status while keeping their income confidential.

The distinction here which UGI Gas seeks to draw is simply not permitted by Commission regulation. The distinction is between: (1) a customer demonstrating the *fact* of their low-income status without being required to disclose their actual income; and

(2) a customer being required to disclose, either through a certification process or through self-certification, what their actual dollar level of income is. UGI requires the latter, which is a requirement that cannot be found in the Commission regulation. A customer, for whatever reason of their choosing, may decide they do not wish to disclose their actual dollars of income to a third party.

Q. WHAT IS THE NEXT ASPECT OF MR. MEILINGER'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Mr. Meilinger misleads and mixes up –whether this is intentional or not does not detract from the fact that he is misleading and mixing up—the objections to what UGI Gas requires of a low-income customer in order for that customer to receive a deposit waiver or refund. First, he states that my testimony was wrong when I asserted that a customer must enroll in CAP to have their deposit waived. I made no such assertion. In fact, my Direct Testimony specifically quoted the UGI letter to a customer stating that "To have this deposit waived, you must have your income verified by completing the enclosed assistance application form. . . You do not have to enroll in CAP for the security deposit and any reconnection fees to be waived, but your stated income must still be verified through this process. . ."[21]

Having said that, nonetheless, UGI Gas *does require* a customer to apply for CAP and have their income verified as being eligible for CAP in order to qualify for the deposit exemption. The UGI letter could not be clearer: "to have this deposit waived, *you must*

[21] OCA Statement 6, at page 60. In addition, if a person receives LIHEAP, they qualify for a deposit waiver or refund. UGI Gas Statement 12-R, at 26.

have your income verified by completing the enclosed assistance application form." (emphasis added).

The prerequisite that UGI Gas imposes to qualify for a deposit refund or waiver simply cannot be clearer. The Company's shutoff notice, for example, state unequivocally: "If, based upon household income, *you are confirmed to be eligible for a customer assistance program*, a deposit is not required."[22] The fact that the Company might allow a customer to apply for, and be confirmed to be eligible for, enrollment in CAP, without actually deciding to enrollment after that application process, is offering, at best, a hyper-technical distinction. In imposing the requirement that a customer must apply for CAP and be certified as eligible for the program, UGI Gas goes beyond the scope of the regulation and in so doing violates the regulation.

In addition, Mr. Meilinger objects to what he references as my "recommendation to use a screenshot or printout of the COMPASS application as part of the income verification process. . ."[23] He argues that "screenshots and/or printouts of the COMPASS application are not available to customers."[24]As I explain above, there are two problems with his objection. First, it is not the "COMPASS application" which I propose be accepted as giving UGI Gas a reasonable expectation that a customer is low-income. Second, I do not propose to use the COMPASS screenshot or printout as part of an "income verification" process. To establish Confirmed Low-Income status, a customer is not, under the

[22] OCA-3-10 (emphasis added).

[23] UGI Gas Statement 12-R, at page 26.

[24] Id.

Commission's regulation, required to "verify" their income through an income verification process.

The question of using a COMPASS printout or screenshot should not be relegated to the UGI Gas USECP. Identifying a customer as being eligible for a waiver or exemption from a cash security deposit is not a "Universal Service Program." It is instead a consumer protection *mandated* by Commission regulation. Whether UGI Gas is unreasonably (and unlawfully) denying that consumer protection is not an issue which requires "various stakeholders" to "provide input on." It is not a matter of policy, it is a matter of compliance, which is unquestionably an appropriate issue for a rate case.

Finally, Mr. Meilinger argues that the current UGI Gas refund process is appropriate. He argues that "the Company has already implemented IT system processes to automatically release a security deposit once a customer has *gone through the income verification process*."[25] Having explained the impropriety of the required "income verification process," Mr. Meilinger's reliance on the inappropriate (and unlawful) process falls as well.

Q. DO YOU HAVE ANY FINAL OBSERVATION ABOUT MR. MEILINGER'S REBUTTAL TESTIMONY?

A. For reasons that are not clear, Mr. Meilinger takes exception to my observation that "there has not been sufficient time to determine whether UGI is complying" with the July

[25] UGI Gas Statement 12-R, at 27 (emphasis added).

2025 Settlement provisions of the previous UGI Gas base rate case.[26] My Direct Testimony was prefiled in April of 2026. He notes that I "do[…] not accuse UGI Gas of failing to comply with the settlement" and that my comments were "that is simply too early to assess the Company's compliance. . ." His response to my testimony regarding the rate case settlement addresses a non-issue. I will not further address whether actions taken less than two months ago are or are not in compliance with the settlement.[27] As I stated in my Direct Testimony, and as Mr. Meilinger acknowledges at some level, it is "simply too early" to assess what UGI Gas is or is not doing with respect to the July 2025 Settlement.

I note that UGI Gas seeks to have it "both ways" in the testimony of its rebuttal witnesses. On the one hand, Mr. Meilinger seeks to argue that the program implementation pursuant to the Settlement has been both adequate and meaningful. On the other hand, UGI Gas witness Fang acknowledges that:

> As Mr. Colton explains, participation barriers can materially limit affordability outcomes even where assistance programs exist, and Mr. Cicero similarly points to customers who remain unenrolled and exposed to payment difficulty. Read together, their testimony supports the conclusion that enrollment challenges are programmatic and structural in nature, not evidence that current rates are unjust or unreasonable. These concerns indicate the need for a broader examination of assistance program design and

[26] UGI Gas Statement 12-R, at pages 27 – 29.

[27] While Mr. Meilinger cross-references the Rebuttal Testimony of UGI Gas witness Adamo (UGI Gas Statement 13-R) as discussing settlement compliance, what he does ***not*** state is that Mr. Adamo's rebuttal testimony regarding settlement compliance is limited to a discussion of OCA witness Alexander's Direct Testimony. Mr. Adamo does not reference or respond to any testimony of mine regarding the 2025 Settlement.

> administration, which is more appropriately addressed through universal service program review rather than through base rate determinations. . .[28]

In this regard, the conclusions in Ms. Fang's testimony are closer to mine that the "don't look, there's nothing to see here" approach of Mr. Meilinger. Given the abbreviated time period between the Settlement of its last rate case, and the date on which UGI Gas filed yet another rate case, it is not possible. . .yet. . .to determine whether UGI Gas actions taken pursuant to the 2025 settlement are adequate or meaningful. No conclusions should be drawn about the implementation of those settlement provisions in this proceeding. In reaching this conclusion, I specifically limit my observations to the Settlement provisions regarding universal service outreach and enrollment. The Settlement provisions regarding customer service –e.g., the "updated field technician manual"—are addressed by OCA witness Barbara Alexander. I offer no opinions on that aspect of the 2025 Settlement.

Q. DO YOU HAVE A RESPONSE TO MR. MEILINGER'S REBUTTAL TESTIMONY WITH RESPECT TO ANY "INPUT" PROVIDED WITH RESPECT TO THE UGI GAS OUTREACH PLAN?

A. Mr. Meilinger criticizes my non-involvement with the review of the Company's presentation of its customer outreach plan developed pursuant to the July 2025 Settlement of the 2025 UGI Gas rate case.[29] His criticism, however, presents the Settlement provisions as though they organically arose. That criticism should be viewed in light of what really happened. There was a *reason* that there was a provision in the Settlement

[28] UGI Gas Statement 16-R, at page 28.

[29] UGI Gas Statement 13-R, at 23 – 24.

agreement regarding a need for UGI Gas to engage in more aggressive outreach to its low-income customers. The Settlement provision arose out of my testimony presented on behalf of the Office of Consumer Advocate documenting the need for additional action and more particular targeting. UGI Gas should not now be heard to assert that the basis for the Settlement Agreement can be ignored unless OCA again presents the factual foundation underlying the Settlement with which to begin. The testimony that gave rise to the Settlement should be the foundation of future discussions occurring pursuant to the Settlement.

Part 2. Response to UGI Gas Rebuttal Witness Daniel Adamo.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review and respond to the Rebuttal Testimony of UGI Gas witness Daniel Adamo as his testimony relates to my Direct Testimony.

Q. WHAT IS THE FIRST ASPECT OF MR. ADAMO'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Mr. Adamo responds to my testimony about the need for UGI Gas to eliminate its collection, use and retention, of customer Social Security Numbers (SSNs). His rebuttal testimony, however, is more notable for what it does *not* dispute than for what it does dispute. Mr. Adamo makes the explicit representation that "the Company does not share customers' SSNs with affiliates or corporate entities."[30] While UGI Gas shares "standards and policy programs for safeguarding customer personal information" across business

[30] UGI Gas Statement 13-R, at 15.

units, that sharing evidently does not imply that SSNs are also shared. Based upon Mr. Adamo's explicit unambiguous, unqualified statement that "the Company does not share customers SSNs with affiliates or corporate entities," my concerns on that single aspect of the use of SSNs has been addressed.

However, what Mr. Adamo did *not* dispute were my observations that UGI Gas:

- UGI Gas collects SSNs from 99.3% of its customers.
- The Company collects SSNs for the express purpose of providing them to a third party ("The Company asks for a new customer's SSN when they apply for service *so an Experian check can be run* to verify their identity."
- Experian's use of, and protection of, SSNs is not subject to the jurisdiction of the Pennsylvania PUC. Indeed, UGI Gas has no control over how Experian protects Social Security Numbers.
- Not only does the Company collect these SSNs, but it also retains them in perpetuity ("The tax ID further serves as a unique, persistent link between a customer and their account history. For this reason, it is retained on the customer record *even after service is discontinued*, preventing billing errors, duplicate accounts, and confusion arising from common names.")[31]

As I concluded in my Direct Testimony, which remains a valid conclusion, the Company's assertion that it collects SSNs "for the limited purpose of credit verification in connection with establishing utility service" is not an accurate statement.

[31] OCA Statement 6, at pages 71 – 72 (internal citations omitted).

Neither did Mr. Adamo dispute that when customers are asked to provide their SSNs at the time they apply for UGI Gas service, they are neither informed, nor notified, of the Company's intended retention and expansive use of the personal data. Mr. Adamo did not dispute the facts that UGI Gas:

- Does not inform or notify customers that their SSN will be retained in perpetuity, including after the time the household is no longer a customer of the Company;
- Does not inform or notify customers that their SSN will be provided to a third party (Experian), an international credit agency operating in North America, Central America, South America, Europe, the Middle East, Asia, and Australia.
- Does not inform customers of the fact that Experian will also appear to be authorized to retain customer Social Security Numbers. If Experian is not so authorized, there would be nothing for UGI Gas to match a customer SSN to in an "Experian Connect Check" in order to "verify the applicant's identity."[32]

Q. DID MR. ADAMO OBJECT TO YOUR RECOMMENDATIONS REGARDING THE COLLECTION, RETENTION, AND USE OF CUSTOMER SSNS?

A. Mr. Adamo's response was that I "provide[d] no specific recommendation about what should replace the use of SSNs. Thus, his recommendation is incomplete and does not require Commission action."[33] It is not OCA's responsibility to supply a "specific recommendation about what should replace the use of SSNs." The recommendation included in my Direct Testimony was specific and complete: that the Commission should direct UGI Gas to join in efforts to eliminate the collection, use and retention of SSNs.

[32] OCA Statement 6, at pages 72 – 73 (internal citations omitted).

[33] UGI Gas Statement 13-R, at page 15.

My recommendation was specifically that "UGI should be directed to report to the Commission, within 12 months of a final decision in this docket, its plan to eliminate the collection and retention of customer Social Security Numbers. This plan should include a plan for elimination of the SSNs currently retained in Company information technology."[34]

Mr. Adamo did not dispute, and indeed was aware of, the facts that:

- The National Academy of Science has concluded that industry and policy makers need to "reassess our perilous reliance" on SSNs.
- The Presidential Task Force on Identity Theft concluded that "more must be done to eliminate the unnecessary use of SSNs."
- The Federal Trade Commission (FTC) has urged a reduction in the use of SSNs in the private sector. FTC testified to Congress that there was a need to eliminate the unnecessary use of SSNs. The FTC cited the observation of the Presidential Task Force on Identity Theft that it is not clear whether the use of SSNs by the private sector was a necessity, or a result of "convenience and habit."[35]

Q. WHAT IS THE SECOND ASPECT OF MR. ADAMO'S REBUTTAL TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Mr. Adamo disputes my recommendation that the Company's inclusion of its full set of claimed credit and collection expenditures be reduced to reflect a 50/50 sharing of those

[34] OCA Statement 6, at pages 75 – 76.

[35] OCA Statement 6, at page 67.

expenditures with ratepayers pursuant to Section 523 of the Public Utility Code. Section 523 states in relevant part: "The commission ***shall*** consider, in addition to all other relevant evidence of record, the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this title. On the basis of the commission's consideration of such evidence, it ***shall*** give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate." (emphasis added). Note that the statute is set forth in mandatory terms ("shall consider", "shall give effect").

Mr. Adamo presents no evidence that its credit and collection activity directed toward low-income customers is efficient, effective and adequate. The most that he asserts is that "the Company has repeatedly explained that collection practices are consistent with the requirements of 52 Pa. Code § 56.93—56.100."[36] In advancing this argument, however, Mr. Adamo seeks to change the statute. The mandatory "adjustments" referenced by the statute are not based on a need for the Commission to find non-compliance with specific statutory and/or regulatory requirements. Rather, the statute mandates ("shall give effect") an adjustment upon after a consideration ("shall consider") of the "efficiency, effectiveness and adequacy of service."

Moreover, Mr. Adamo attempts to write Section 523 out of the Public Utility Code by arguing that OCA's regulation would "ignore costs that are substantiated by record evidence and legitimately incurred."[37] This argument again ignores both the substance of

[36] UGI Gas Statement 13-R, at 18.

[37] UGI Gas Statement 13-R, at page 20

Section 523 and the mandatory language of Section 523. Mr. Adamo's argument would eliminate the very review which Section 523 makes mandatory. By arguing that costs are *ipso facto* "substantiated by record evidence and legitimately incurred," Mr. Adamo would preclude a Commission review of whether those costs are consistent with a finding of "the efficiency, effectiveness and adequacy of service. . ." Rather than making a showing of "efficiency, effectiveness and adequacy," and rather than seeking to rebut my showing to the contrary, Mr. Adamo argues that the very fact that costs were incurred makes them recoverable. The statute, however, provides otherwise. The statute provides that more must be shown, a showing that UGI Gas has not made.

In sum, Mr. Adamo's argument is insufficient to meet the showing that an adjustment is appropriate pursuant to Section 523.

Moreover, Mr. Adamo presents no information indicating that the 50/50 split used by OCA witness Jennifer Rogers is in error. Even though the UGI Gas data about its cost-of-service study presents a bigger dollar figure upon which to base an adjustment,[38] that number does not appear to be comparable to the number we propose to adjust. Elsewhere, UGI Gas states that the BCS dollars are merely "embedded" in its cost-of-service study.[39] Moreover, UGI Gas asserts that "a line-item correspondence to the specific BCS figures cited in the interrogatory cannot be made."[40] It further states that the BCS dollar figures are "not directly comparable to the Company's cost of service study,

[38] OCA-IV-7.

[39] OCA-IV-5.

[40] Id.

prepared on a fiscal-year basis."[41] I recommend continuing to use the number first presented by OCA witness Rogers.

Part 3. Response to UGI Gas Rebuttal Witness John Taylor.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine and respond to the rebuttal testimony of UGI Gas witness John Taylor as he purports to respond to my Direct Testimony.

Q. WHAT ASPECT OF MR. TAYLOR'S REBUTTAL TESTIMONY DO YOU WISH TO RESPOND TO?

A. The rebuttal testimony of UGI Gas witness John Taylor states in relevant part:

> Neither Witness Deupree nor Witness Colton provides Company-specific data or analysis demonstrating that lower-use residential customers are generally lower-income customers. Their criticism rests on a generalized assumption rather than evidence concerning the Company's actual customer population.[42]

Q. HOW DO YOU RESPOND?

A. It is not clear what part of my Direct Testimony in this proceeding Mr. Taylor is seeking to rebut. In my Direct Testimony, not only did I not provide "Company-specific data or analysis demonstrating that lower-use residential customers are generally lower-income customers," I provided no testimony at all on the extent to which lower-use customers are or are not generally also lower-income customers. Mr. Taylor states that my "criticism

[41] Id.

[42] UGI Gas Statement 11-R, at page 23.

rests on a generalized assumption rather than evidence concerning the Company's actual customer population." It is not clear what "criticism" of mine he is referencing. Not only did I present no "criticism rest[ing] on a generalized assumption rather than evidence," I presented no criticism at all regarding the relationship of usage and income. Mr. Taylor does not make the basis of his response any clearer by providing a citation to the part of my testimony to which his Rebuttal is responding.

In making this observation, I reserve the right to further respond to Mr. Taylor's "rebuttal" in the event that he identifies some specific aspect of my Direct Testimony to which his Rebuttal is responding.

Part 4. Response to UGI Gas Rebuttal Witness Cynthia Fang.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine and respond to the rebuttal testimony of UGI Gas witness Cynthia Fang to the extent that she addresses issues presented in my Direct Testimony. The Rebuttal Testimony of Ms. Fang has both methodological and policy problems with it.

Q. PLEASE EXPLAIN THE POLICY PROBLEMS YOU HAVE IDENTIFIED IN THE REBUTTAL OF UGI GAS WITNESS FANG?

A. Ms. Fang repeatedly states that the Commission should not consider the extent to which, if at all, UGI Gas rates result in unaffordable bills to residential customers. She asserts numerous times that the *only* purpose of utility ratemaking is to allow UGI Gas to recover

its prudently incurred costs.[43] She categorically dismisses bill affordability considerations as involving "macro-economic conditions"[44] which, she asserts, are beyond the purview of ratemaking.[45] In advancing this statement, she ignores the clear mandate of Pennsylvania statute. The Pennsylvania Public Utility Code provides that "Every rate made, demanded, or received by any public utility, or by any two or more public utilities jointly, shall be just and reasonable, and in conformity with regulations or orders of the commission."[46] In Pennsylvania, the Commission has repeatedly held that one aspect of "just and reasonable" is that rates are to be affordable as well.

Q. CAN AFFORDABILITY ISSUES BE DIVORCED FROM RATESETTING AS PROPOSED BY UGI GAS WITNESS FANG?

A. No. UGI Gas witness Fang urges that "broader macroeconomic affordability issues" are "more appropriately addressed through state and federal public policy tools that extend

[43] See e.g., UGI Gas Statement 16-R, at page 5 ("The Commission's statutory obligation is to ensure that utility rates are just and reasonable based on the prudent costs of providing utility service. . ."); see also, UGI Gas Statement 16-R, at page 11 ("The Commission should apply the established just-and-reasonable standard by evaluating whether the Company's rates are supported by the prudent costs of providing regulated service and are sufficient to allow the Company to continue providing safe, reliable, and compliant service to the public.").

[44] Ms. Fang refers to "macroeconomic conditions" 14 times in her 21 pages of Rebuttal Testimony.

[45] See e.g., UGI Gas Statement 16-R, at 21 (". . .the appropriate role of this proceeding remains to set just and reasonable rates based on the prudent cost of providing safe and reliable service, while broader macroeconomic affordability issues are more appropriately addressed through state and federal public policy tools that extend beyond utility regulation.")

[46] 66 Pa.C.S.A. Public Utilities § 1301.

beyond utility regulation."[47] Her effort to separate the consideration of "affordability" and the establishment of "just and reasonable rates" should not be accepted.

One factor Ms. Fang does not consider, for example, is the interrelationship of "affordability" and the costs which UGI Gas incurs. This connection is not merely recognized in Pennsylvania; it is recognized by rating agencies as well. Rating agencies such as Moody's, for example, look at payment patterns in their assessment of affordability. Moody's, for example, considers customer ability-to-pay "as measured by delinquencies."[48] Ms Fang paid no attention to UGI Gas delinquencies in her analysis. Had she done so, she would have observed troubling trends that should have called her to question her conclusion about the affordability of UGI Gas bills.

Indeed, affordability has increasingly become a major concern in setting the credit ratings of public utilities.[49] Citing the National Energy Assistance Directors Association (NEADA) report that "about one in six Americans are behind on their bills," Moody's was quoted as noting that fuel prices and economic factors "raise residential customer affordability issues. . ."[50] The Edison Electric Institute (EEI) ALSO publishes an annual

[47] UGI Gas Statement 16-R, at page 21.

[48] Arcadis (2017). Introduction to Affordability, at page 15.

[49] See e.g., S&P Global (March 11, 2025). White Paper: Affordability is Emerging as a Defining Issue for the U.S. Investor-owned Electric Utility Industry.

[50] Walton (Nov. 2022). "Moody's adopts negative outlook for regulated utility sector, warns on gas prices, economy and cost recovery," Utility Dive. See also, Mahajan (December 2023). Deteriorating Outlook for North American Utilities, Power and Gas in 2024 ("Affordability concerns for ratepayers continue to persist despite the pull back in natural gas prices and inflationary pressures.")

"financial review," which review includes an examination of credit agency ratings.[51] Likewise, in its review of the Fourth Quarter of 2024, EEI reported that at the start of 2025:

> S&P maintained a negative outlook for regulated utilities, which it revised from stable in February 2024. Moody's maintained a stable outlook for regulated utilities. Fitch Ratings published a neutral sector outlook for North American Utilities. The agencies cited rising levels of capital spending, *customer bill affordability*, and extreme weather activity due to climate change as key themes they are watching.[52]

Similarly, in its Annual Financial Review for 2023, EEI specifically stated: "S&P noted that effective management of regulatory risk will be key to maintaining the industry's credit quality going forward. This will require. . . management of customer bill impacts."[53] EEI also said that Fitch maintained its deteriorating outlook in the sector in part because "customer affordability concerns will persist despite reductions in natural gas prices and inflation."[54]

In sum, Ms. Fang errs when she asserts, conceptually, that a ratemaking concern about affordability presents a threat to UGI Gas equity returns. Current concerns about affordability instead are common.

Q. IS MS. FANG'S TESTIMONY IN CONFLICT WITH ANY OTHER REBUTTAL TESTIMONY OFFERED BY UGI GAS?

---

[51] While EEI is the industry association of electric utilities, similar concerns would apply to natural gas utilities as well.

[52] EEI (2025). 2024 Financial Review, at 26 (emphasis added).

[53] EEI (2024). 2023 Financial Review, at 22.

[54] Id., at 23.

A. Yes. Ms. Fang's testimony is in conflict with the rebuttal testimony of UGI Gas witness Meilinger. Mr. Meilinger testifies that:

> I disagree that it is appropriate to use [ALICE] data to analyze the impacts of the Company's rate case and/or its Universal Service Programs. The FPL guidelines are the standard indicator of a customer's income status and are used as such by the Commission and the Company. The FPL guidelines have also been used as a verification process to enroll customers into the Company's USECP. Witness Colton's recommendation to analyze ALICE data would be better suited outside of a rate case proceeding where various stakeholders, including the Commission and other community partners, would have the opportunity to provide input on his recommendations and consider the impacts of those recommendations.[55]

Unlike the ALICE data which Mr. Meilinger objected to, which data was not used to assess the Company's Universal Service Programs, or to evaluate impacts on low-income customers, the MHI data propounded by Ms. Fang is explicitly used to address the Company's Universal Service Programs and the affordability of UGI Gas rates to low-income households. Neither Ms. Fang nor Mr. Meilinger explain why my use of data not tied to Federal Poverty Level is inappropriate while Ms. Fang's use of data not tied to Federal Poverty Level is not. One difference in the use of the ALICE data which I present, and the MHI data which Ms. Fang presents, is that Mr. Meilinger specifically stated that he "{does] not dispute the ALICE data presented,"[56] while I find that the use of MHI data presented by Ms. Fang is inappropriate for all the reasons I discuss below.

[55] UGI Gas Statement 12-R, at page 6.

[56] UGI Gas Statement 12-R, at page 6.

Q. HAVE YOU BEEN ABLE TO COMPARE THE MEDIAN HOUSEHOLD INCOME FOR THE CENSUS BLOCK GROUPS IN THE UGI GAS SERVICE TERRITORY TO FEDERAL POVERTY LEVEL?

A. I have compared the Median Household Income for the Census Block Groups[57] in the counties served by UGI Gas to the Federal Poverty Level. I do so to assess the extent to which use of Median Household Income, at the Census Block Group level, reasonably reflects the population of households that would be eligible for UGI Gas Universal Service Programs. I matched data for 4,132 Census Block Groups.[58] For those Census Block Groups, the Median Household Income as a percent of Federal Poverty Level is set forth in the Table below.

The data in the Table above shows that the use of Median Household Income, even at the Census Block Group level, is an inappropriate metric to use to assess affordability for low-income customers. In only 131 Census Block Groups, was the MHI at or below 150% of Federal Poverty Level. In more than 4,000 CBGs, in other words, the MHI for the CBG would exceed the maximum eligibility level of the Company's Universal Service Programs (150% FPL). In more than 1,000 Census Block Groups, the MHI for

[57] Witness Fang testified: "Atrium Economics conducted a customer-level "gas burden" study, defining gas burden as the percentage of household income spent on the UGI gas bill, with household income proxied using American Community Survey ("ACS") data by mapping each customer to the median household income of the Census block group in which the customer resides. The analysis used customer billing and usage information for the period August 2024–July 2025 for gas only customers. Customers were then mapped to ACS 2024 5-year 3 block-group median income, and gas burden was calculated as annual gas bill divided by that income proxy." UGI Gas Statement 16-R, at pages 15 – 16.

[58] The Census Bureau does not report data for a Census Block Group if the population is sufficiently small that reporting data might present privacy concerns.

the Census Block Group would be more than 4.5 times higher than the maximum USP income eligibility.

Table 1. Count of Census Block Groups by Ratio of CBG Median Household Income to Federal Poverty Level

MHI as Percent of FPL	Number of CBGs with MHI at Ratio of MHI to FPL
<150%	131
150 % - 250%	636
250% - 350%	1334
350% - 450%	981
450% - 550%	503
550% - 650%	234
650% - 750%	140
750% - 850%	77
850% - 950%	50
>950%	46
Grand Total	4132

The data in the Table above shows how inappropriate it is to use Median Household Income to assess low-income affordability.

Q. PLEASE EXPLAIN THE "METHODOLOGICAL" PROBLEMS YOU HAVE IDENTIFIED IN MS. FANG'S ALTERNATIVE AFFORDABILITY ANALYSIS.

A. Ms. Fang states that she has undertaken an analysis of affordability using 454,815 gas-only UGI Gas customers. She states that based on her review of those customers, she identified a median gas usage of 723 ccf and a median bill of $1,105.[59] Those inputs, however, differ sharply from the data provided earlier by UGI Gas. When asked for the median UGI Gas bills for the most recent twelve months, provided in sufficient detail to

[59] UGI Gas Statement 16-R, at page 16.

allow replication, UGI Gas provided monthly residential bills that summed to a total of $1,215 (April 2025 through March 2026). Moreover, the "median use" underlying the bills provided by UGI Gas was 62.75 ccf per month (753 ccf per year).[60] UGI's previous data, in other words, reported higher bills at lower consumption than the results used by Ms. Fang. I will explain the significance of this difference in detail below.

Q. DOES MS. FANG'S "AFFORDABILITY ANALYSIS" INCORPORATE ANY OTHER FUNDAMENTAL METHODOLOGICAL FLAW?

A. Yes. Ms. Fang presents what she describes as an alternative affordability analysis of UGI Gas bill burdens throughout its service territory. She states that she matches UGI Gas customers with the Median Household Income (MHI) of the Census Block Group in which the customers in her sample reside. She does not attempt to justify the use of MHI as the income level by which she measures affordability.

Q. IS THERE REASON NOT TO RELY ON MEDIAN HOUSEHOLD INCOME AS THE FOUNDATION FOR AN AFFORDABILITY ANALYSIS?

A. Yes. Median Household Income was never intended to be used as the basis for assessing the affordability of utility service. Where it is used, it is a variation on MHI, not MHI itself. What the Environmental Protection Agency (EPA) recommends to assess water affordability is not Median Household Income but rather Median Household Effective Buying Income (MHHEBI). The MHHEBI sets forth the household median income after

[60] OCA-IV-44(a).

adjusting for taxes, residents face a combined federal/state/local tax rate of 19.82%.[61] Ms. Fang starts her analysis, in other words, with an income that is nearly 20% higher than what the MHHEBI would indicate is appropriate.

It is not merely the EPA, however, which use the "Effective Buying Income" as the appropriate metric by which to measure affordability. Credit rating agencies do so as well. For example, S&P uses MHHEBI in calculating its "Market Position Score" for utilities.[62] Indeed, one analyst for S&P Global Ratings writes that not only does S&P use Effective Buying Income,[63] but the use of this metric "should feel familiar" to those who follow the recommendations of the American Water Works Association (AWWA) and the Water Environmental Federation (WEF), given that these two water industry organizations use this metric as well.[64] In sum, where discussions have occurred in the utility industry –water, natural gas or electricity makes no difference—about which income is appropriate to use to perform an affordability analysis, it is the Effective Buying Income, not an unadjusted MHI, which has been used.

[64] AWWA/WEF (2019). Developing a New Framework for Household Affordability and Financial Capability Assessment in the Water Sector."

Q. ARE THERE OTHER PROBLEMS WITH MS. FANG'S USE OF MEDIAN HOUSEHOLD INCOME AS THE BASIS FOR HER AFFORDABILITY ANALYSIS?

A. Yes. There are several additional problems. First, Ms. Fang uses a single number (the MHI) to represent income for everyone in each Census Block Group she uses to represent the UGI Gas service territory as a whole. This is wholly unhelpful and reveals very little, if anything, about the burdens felt by any people actually residing in the service territory. Use of the median for a geographic area not only hides the substantial differences between the residents of that geographic area, but also results in using the higher incomes of some persons to pull up the lower incomes of other persons, thus resulting in the wrong conclusion that rates are affordable throughout the area.

Ms. Fang's use of MHI for the entire population of each CBG implies that that income level encompasses the entire residential customer base in that area. MHI, however, does not encompass the entire residential customer base in a geographic area, CBG or otherwise. The "median" is a single point. It is the point at which half of the population has income that is greater than that point, with the other half of the population having income that is less.

The median of a geographic area, whether a state, a county, or a Census Block Group, is certainly not representative of the entire population in that area. It does not account for the inequality of incomes throughout the geographic area. The inequality of income is

measured by what is known as the "Gini Index."[65] A Gini Index of greater than 0.40 is considered to be an indicator of a substantial level of income inequality.[66] A high Gini Index is generally driven by a concentration of wealth in the upper incomes.

Ms. Fang may well have believed that CBGs are sufficiently small so that they would not have significant income disparities. However, the data demonstrates to the contrary. I have examined the GINI Index for all Census Block Groups in the counties served by UGI Gas. Of those 5,159 CBGs, 1,949 (38%, or nearly two-of-five) have a Gini Index of greater than 0.40.[67] An additional 1,698 CBGs in the UGI Gas counties have a GINI Index of between 0.35 and 0.40. Within the UGI Gas service territory, in other words, even within individual CBGs, use of the Median Household Income is an inaccurate representation of the total population given that the level of income is driven by a concentration of wealth in upper incomes. Even though the "median" may be the "middle" in terms of numbers, the middle is artificially high in terms of dollars of income.

[65] "The Gini Index is a summary measure of income inequality. The Gini coefficient incorporates the detailed shares data into a single statistic, which summarizes the dispersion of income across the entire income distribution. The Gini coefficient ranges from 0, indicating perfect equality (where everyone receives an equal share), to 1, perfect inequality (where only one recipient or group of recipients receives all the income). The Gini is based on the difference between the Lorenz curve (the observed cumulative income distribution) and the notion of a perfectly equal income distribution." https://www.census.gov/topics/income-poverty/income-inequality/about/metrics/gini-index.html

[66] https://blogs.worldbank.org/en/opendata/inside-the-world-bank-s-new-inequality-indicator--the-number-of-#:~:text=The%20new%20indicator,Saharan%20Africa%20and%20Latin%20America.

[67] American Community Survey (2024, 5-year data). Table B19083.

Q. IS THE INCOME INEQUALITY THAT YOU DESCRIBE SIMPLY A MATTER OF THE "RICH GETTING RICHER"?

A. No. The disproportionate growth of income at the highest income levels certainly contributes to an increase in the Median Household Income over time. However, that disproportionate growth is not the exclusive trend which is affecting the problem which I identify in the use of MHI for the purposes which Ms. Fang wants to use it.

The Federal Reserve Bank of Cleveland recently prepared an analysis of the seeming growth in Median Household Income.[68] According to these Federal Reserve researchers, households today are smaller, older, and more educated than they used to be, with higher incomes which pull the MHI up. The Federal Reserve researchers reported: "Because older and more educated people tend to have higher incomes than younger and less-educated people, these demographic shifts could raise the median income, without necessarily indicating that any particular group is better off."[69] Thus, the Federal Reserve recognizes the impact that I noted above that households with higher income – in this case households that are older and more educated – pull the MHI upwards even though that income growth is not generally shared. Ms. Fang's MHI certainly does not encompass the entire residential customer base as she would have us believe from her analysis.

[68] Dohrman and Fallick (2020). Is the Middle Class Worse Off than it Used to Be?, Federal Reserve Bank of Cleveland, available at https://www.clevelandfed.org/publications/economic-commentary/2020/ec-202003-is-middle-class-worse-off.

[69] Id., at 2.

Q. HAVE YOU HAD AN OPPORTUNITY TO PREPARE AN AFFORDABILITY ANALYSIS FOR THE RESIDENTIAL CUSTOMER BASE FOR UGI GAS AS A WHOLE?

A. Yes. In my analysis, I use the usage and billing data requested from, and provided by, UGI Gas through its discovery responses. I recommend that the Commission use the methodology proposed by Patterson and Doyle. Writing in the October 2021 issue of the American Water Works Association's (AWWA) "Water Science", they explored "multiple affordability metrics within and across utilities."[70] After explicitly rejecting sole reliance on the median income as being non-representative, they recommend use of an "HB Score" ("HB" representing "household burden") for the service territory. The Patterson/Doyle analysis is based on readily available public information available through the annual American Community Survey published by the Census Bureau. I calculate the "HB Score" in four steps:

- Using the average UGI Gas usage and bill (as reported by UGI Gas),[71] I calculate for each zip code the UGI Gas burden separately for each income range for households.[72] For each income range, I use the mid-point to represent that income range (e.g., for the income range $10,000 to $14,999, I use the mid-point of $12,500).

[70] Patterson and Doyle (October 2021). Measuring water affordability and the financial capability of utilities, AWWA Water Science.

[71] OCA IV-44(a).

[72] Income ranges are provided in the American Community Survey (Table B19001).

- I calculate a weighted household water burden for each income range within a zip code by dividing the number of households in each income range by the total number of households in that zip code and multiplying that weight times the burden for that income range.
- I calculate the weight for each zip code by dividing the number of residential UGI Gas customers in that zip code by the total number of UGI Gas residential customers.
- I finally calculate the weighted burden for each zip code by multiplying the burden for each zip code times the zip code's weight.

Given those preliminary steps, the service territory HB Score is the sum of the weighted burdens for all zip codes within the service territory.[73] As Patterson and Coyle do, I present the service territory HB Score as the weighted average.

For UGI Gas, the weighted average HB Score at existing rates is a natural gas burden of 3.3%, nearly two-and-a-half times higher than what Ms. Fang reported finding. Contrary to what Ms. Fang argues, this data, in I find that there are serious affordability problems facing UGI Gas customers, even at current rates. The rates sought by UGI Gas in this proceeding would increase those problems even more.

Q. DOES USE OF THE PATTERSON AND DOYLE APPROACH HAVE ANY ADDITIONAL ADVANTAGE OVER MS. FANG'S TESTIMONY?

[73] This is nearly identical to Ms. Fang's calculation. While Ms. Fang uses data for Census Block Groups, I use zip codes because, while Ms. Fang did not identify which CBGs she used to define the UGI Gas service territory, UGI Gas has previously provided the zip codes which comprise its service territory.

A. Yes. Ms. Fang concedes that her review of affordability excludes an entire population for whom affordability presents the greatest issue, the population reporting an income of $0.[74] Ms. Fang's proposed methodology simply cannot arithmetically address the affordability issue of this population. Rather than seeking to accommodate those households, Ms. Fang simply excludes them entirely. In contrast, the Patterson/Doyle approach I use above takes into account households at all income levels.

Q. DO YOU HAVE ANY FINAL COMMENTS ABOUT MS. FANG'S REBUTTAL TESTIMONY?

A. UGI Gas witness Fang presented an affordability analysis specific to low-income customers. Using the CAP Credits and CAP Bills as the basis for determining what low-income UGI Gas burdens would exist in the absence of CAP, and what impacts CAP has in addressing those unaffordable burdens, Ms. Fang's testimony found that:

> CAP benefits materially reduce gas burden, shifting the distribution downward: mean gas burden falls from 13.02% without benefits to 5.85% with benefits, with similar reductions at the median (7.60% to 5.47%) and the upper tail (95th percentile 26.39% to 7.18%). Overall, the with-benefits distribution is more concentrated at lower burden levels, indicating that CAP benefits substantially mitigate both typical burdens and high-burden outliers, although a small number of customers still experience high gas burdens.[75]

Despite these substantial benefits provided through CAP, Ms. Fang argued that every single proposed improvement in CAP outreach and enrollment for UGI Gas should be denied. She opposed every recommendation for improved outreach and targeting despite

[74] UGI Gas Statement 16-R, at page 20.

[75] UGI Gas Statement 16-R, at pages 21 -22. These benefits were found even after excluding 10% of the total CAP population because they reported $0 in income.

the fact that her own Rebuttal Testimony concluded that her analysis "support continued focus on the effectiveness accessibility, and coordination of the Commission's universal service programs for customers most in need."[76] The grounds for her opposition was her assertion that the concerns raised by myself and CAUSE-PA witness Cicero "indicate the need for a broader examination of assistance program design and administration, which is more appropriately addressed through universal service program review. . ."[77] In Pennsylvania, however, the Commission has repeatedly made clear that the operation of universal service programs, with a specific emphasis on CAP, are appropriate issues to be addressed in a base rate proceeding. In fact, the low-income affordability analysis presented by Ms. Fang in her rebuttal testimony supports, and does not rebut, the need for the improvements I recommend in my Direct Testimony. Her personal belief that such issues would be "more appropriately addressed" in a different forum is at odds with Commission precedent and should be rejected as a grounds for opposing the recommendations which I advance.

Q. DO YOU HAVE ANY COMMENTS ABOUT THE REGULATORY COMPACT BETWEEN RATEPAYERS AND THEIR LOCAL UTILITY?

A. Yes. Ms. Fang testifies that "the parties misconstrue the scope of utility regulation." She then makes two references to "state law." First, Ms. Fang asserts that "the Commission's *statutory obligation* is to ensure that utility rates are just and reasonable based on the

[76] UGI Gas Statement 16-R, at page 26.

[77] UGI Gas Statement 16-R, at page 28.

prudent costs of providing utility service."[78] In making this statement, Ms. Fang does not cite the state statute which imposes this "statutory obligation," let alone a state statute which provides that this is the sole or exclusive obligation of the Commission. In fact, in Pennsylvania, as I note above, state law explicitly provides that, in setting rates, the Public Utility Commission must give "due consideration to the interests of consumers."[79] In addition, the statute creating the Office of Consumer Advocate, on whose behalf I am testifying in this proceeding, explicitly provides that

> In addition to any other authority conferred upon him (sic) by this act, the Consumer Advocate is authorized, and it *shall be his duty*, in carrying out his responsibilities under this act, to represent the interest of consumers as a party, or otherwise participate for the purpose of *representing an interest of consumers*, before the commission in any matter properly before the commission. . . The Consumer Advocate may exercise discretion in determining the interests of consumers which will be advocated in any particular proceeding and in determining whether or not to participate in or initiate any particular proceeding and, in so determining, *shall consider* the public interest, the resources available and *the substantiality of the effect of the proceeding on the interest of consumers*.[80]

It would make no sense for the legislature to statutorily impose a duty ("shall be his duty") to represent the interests of consumers, and in so doing, impose the further statutory duty ("shall consider") to consider the "substantiality of the effect of the proceeding on the interest of consumers" if, as opined by Ms. Fang, the exclusive authority of the Commission is to "ensure that rates are just and reasonable base don the prudent costs of providing utility service."

---

[78] UGI Gas Statement 16-R, at 5 (emphasis added).

[79] OCA Statement 6, at page 14, quoting 71 Pa. Stat. Ann. §309-5(2).

[80] 71 P.S. § 309-4 (emphasis added).

Aside from the explicit statutory language, utilities and the commissions that regulate them, have a far broader mandate than that asserted by Ms. Fang. Aside from the comments of Ms. Fang, historically, public utility companies such as UGI Gas have had imposed upon them by common law an "obligation to serve." This obligation to serve arises from a utility's dedication of its property to a public use. Declarations in the corporate charter and other words or actions which represent a dedication to the public use would result in the creation of an obligation to serve. So, too, would actions such as accepting franchises from state and local governments or making a commitment by contract (such as by accepting public funds or other perquisites).

Persons who seek universal service can not rely upon a competitive market to deliver such results. By its nature, a competitive market tends not only to exclude those most in need, but tends to increase prices to those least able to pay. The essential characteristic of the marketplace is that it allocates goods and services on the basis of the ability to pay rather than on the basis of the need for the service. The market, therefore, excludes those who are unable to afford the service being sold. By the nature of markets, those who are unable or unwilling to pay the price of the commodity are left out. The harm arises not from a market that does not work, but rather from a market that *does*. Inclusiveness of customers through the pursuit of universal service is not a goal which a competitive market recognizes. Conversely, exclusion is not necessarily considered a market failure.

This is not to indicate that industry participants in a competitive market harbor ill will or caprice toward consumers unable to pay. Instead, the failure to pursue

universal service is based on decisionmaking considered to be not only rational by the industry, but dictated by the economics of the industry and its consumers.

The role of a state utility commission is to stand between the utility and consumers, thus preventing these unfettered impacts of an unregulated public utility.

One key element of a utility's common law duty to serve is its total independence from any statutory basis. The duty of a public utility is one implied at common law and need not be expressed by statute, or contract, or in the charter of the public utility. The duty to serve is an integral aspect of public utility status. American courts imposed such a duty long before the establishment of comprehensive regulation of utilities pursuant to statutes.

It is for these reasons that Pennsylvania statutes explicitly provide that the Public Utility Commission, in setting rates, must give "due consideration to the interests of consumers."[81] It is for these reasons that Pennsylvania statutes created the Office of Consumer Advocate, mandated that the OCA to "represent the interest of consumers" and further mandated that, in pursuing that representation, the OCA, "shall consider. . .the substantiality of the effect of the proceeding on the interest of consumers."[82]

Ms. Fang's testimony to the contrary should be rejected.

IV. REVIEW OF WRITTEN COMPLAINTS 12

OCA Exhibit ZT-1 – Curriculum Vitae of Zach Teti

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND BUSINESS DESCRIPTION.

A. My name is Zach Teti. I am a Senior Regulatory Analyst at the Pennsylvania Office of Consumer Advocate ("OCA"). My office is located at 555 Walnut St, Harrisburg, PA 17101. The OCA is a state agency that represents the interests of Pennsylvania utility consumers before the Pennsylvania Public Utility Commission ("PUC"), federal regulatory agencies, and state and federal courts. The OCA was created by the Pennsylvania General Assembly in 1976 and is an independent office within the Office of Attorney General.

Q. PLEASE STATE YOUR EDUCATIONAL BACKGROUND.

A. I received a B.A. degree in Economics from Millersville University (Millersville, PA) in 2013 and an M.S. in Energy Economics from Pennsylvania State University (University Park, PA) in 2021.

Q. WHAT IS YOUR PROFESSIONAL BACKGROUND?

A. I have twelve years of experience in the banking and energy industries, most recently specializing in organized wholesale and retail electricity markets. My background comprises energy market design and analysis; econometric research in an academic setting; and financial planning, analysis, and control in a banking setting. I was employed as a Senior Regulatory Analyst serving as a representative of the NEPOOL Markets Committee between 2021 and 2024, analyzing wholesale electricity market design and its impact on default service procurement of electricity. Since joining the OCA as a Senior Regulatory Analyst in April 2025, I have been focusing on a variety of topics including the wholesale electricity markets of PJM, utility rate cases, and default service plans for electricity procurement.

Q. ON WHOSE BEHALF ARE YOU OFFERING THIS TESTIMONY?

A. I am offering this testimony on behalf of the OCA. My testimony is intended to address issues from the standpoint of residential customers of gas services.

Q. DO YOU HAVE ANY APPENDICES OR EXHIBITS TO YOUR TESTIMONY?

A. Yes, my Curriculum Vitae is included herein as Exhibit ZT-1.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. My testimony amplifies the concerns and lived experiences of residential customers and government officials expressed during public input hearings regarding the proposed rate increase requested by UGI Utilities, Inc. – Gas Division ("UGI" or "Company") slated for implementation in 2026. These voices consistently underscore serious affordability challenges associated with the increase. Participants also raised credible concerns about a perceived imbalance favoring shareholder interests over those of customers, as well as related issues including the burden placed on residential customers by rising data center demand, construction mismanagement, the need for meaningful consideration of climate change, and ongoing customer service shortcomings.

Q. DID THE PENNSYLVANIA PUBLIC UTILITY COMMISSION (PUC OR COMMISSION) CONDUCT PUBLIC INPUT HEARINGS FOR THIS PROCEEDING?

A. Yes, the Pennsylvania Public Utility Commission (PUC) conducted twelve Public Input Hearings to gather testimony from ratepayers and public officials to better

understand the impact of the proposed rate increase.[1] On Monday, March 30, 2026, two in-person Public Input Hearings were held at the Manheim Township Public Library in Lancaster, PA. On Wednesday, April 1, 2026, two in-person Public Input Hearings were held at the Wilkes Barre Township Fire Department Fire Hall in Wilkes Barre, PA. On Monday, April 6, 2026, two in-person Public Input Hearings were held at the City of Allentown Council Chambers in Allentown, PA. On Tuesday, April 7, 2026, two in-person Public Input Hearings were held at the Dunn Community Center in Reading, PA. Additionally, two telephonic hearings were held on Friday, April 3, 2026. At the public input hearings, a total of 16 customers and 8 public officials testified. My testimony focuses on public input hearing testimony that may be pertinent to the OCA's overall recommendations set forth in the OCA's Direct Testimony filed on April 13, 2026.

Q. HOW IS THE REMAINDER OF YOUR TESTIMONY ORGANIZED?

A. Section I is an introduction. Section II presents a summary of testimony related to the affordability issue. Section III presents a summary of other issues, such as the adverse impact of data center demand on residential customers, mismanagement of construction, climate change, and customer service.

Q. OVERALL, DOES THE PUBLIC RECOMMEND THAT THE COMPANY'S PROPOSED RATE INCREASE BE APPROVED BY THE PUC?

No. The public's overall sentiment is one of clear and genuine concern. On a personal note, as an economist focused on energy market structure and policies that affect rate-paying customers, reviewing this input has been eye-opening. It has meant stepping

[1] My testimony focuses on the first ten, attended public input hearings to date and for which transcripts have been made available. I will be supplementing my direct testimony on or about April 21, 2026 and upon receipt of further transcripts.

back from my usual reliance on data and abstract analysis and instead taking the time to listen to—and understand—the very real concerns and reactions people have to this proposed rate increase and just how untenable another rate increase is for the service territory.

II. AFFORDABILITY: CUSTOMERS ARE STRUGGLING TO PAY THEIR BILLS

Q. HOW MANY PEOPLE FROM THE PUBLIC TESTIFIED ON THE TOPIC OF AFFORDABILITY?

A. Among the twenty-four people from the public who testified, affordability concerns were raised twenty-one times. The ability to afford utility bills is a problematic issue raised by three out of five people who spoke in Lancaster, eleven out of twelve people who spoke in Wilkes-Barre, each of the two people who spoke in Reading, and each of the five people who testified telephonically. For some and perhaps many, living in the areas served by the Company is either difficult to afford or unaffordable. As stated by Witness William Davis, "You can only wring so much water out of a wet rag before there's nothing left to get out of it and we would also find ourselves in a situation of where we may have to consider selling our home and maybe even moving out the of state with family because the cost of living has become too prohibitive." (Transcript P. 233-234)

Q. PLEASE SUMMARIZE THE REMARKS OF THE WILKES BARRE CITY CONTROLLER REGARDING AFFORDABILITY.

A. Witness Tony Thomas is the Wilkes Barre City Controller, tasked with financial oversight of the local government and its municipal operations. Witness Thomas remarked, "When you consider the income levels of an area like Wilkes Barre City, the poverty levels, $10 on top of other mounting costs in this Commonwealth, in this

country, whether that be rising gas prices, rising costs of other utilities, $10 might be a lot of money to certain individuals." (Transcript P. 233-234) The estimated residential customer charge is expected to increase by $10 per month.

Q. HOW ARE RESIDENTIAL CUSTOMERS RESPONDING TO THE COMPANY'S PROPOSED AVERAGE $10 PER MONTH INCREASE?

A. In my reading of remarks made by the various residential customers, consumers are:

- **Frightened:** "The thought of the pricing going up eight percent. I'm starting to look at what being unemployed in retirement looks like and it's very scary actually. I thought I was fine. I am finding I'm not as fine as I thought." (Transcript P. 62)
- **Perplexed and Bothered:** "What is their normal revenue? How much money do they need? I mean this is inflicting some hardship on people, especially retired people like myself." (Transcript P. 64)
- **Dismayed:** "So, what are we supposed to do? And I don't understand why we need this increase. And that's pretty much what I would like to say, because we work and work with all the other bills, and it's too much. The cost of living is too much for us." (Transcript P. 118)

Q. RELATEDLY, HOW DO CUSTOMERS FEEL ABOUT THE COMPANY'S RELATIONSHIP WITH CUSTOMERS VERSUS SHAREHOLDERS?

A. Public input reflects a growing sense of financial strain, fear, and frustration among customers facing rising costs. Many individuals—particularly those on fixed or limited incomes—describe deep anxiety about their ability to remain financially secure, with some questioning whether they can sustain basic living expenses into retirement. Across testimonies, there is a strong perception of unfairness: customers feel burdened by increasing rates while companies report substantial profits, shareholder payouts, and

high executive compensation. This has led to a broad sense of distrust with many questioning whether corporate priorities are aligned with the needs of the public. Taken together, these voices underscore not only the economic pressure households are experiencing, but also a growing concern that the system is leaving ordinary consumers behind.

- **Used: "**You know, if [the Company] is giving all these dividends out, they're not giving the dividends out, we're giving the dividends out, because we're the ones stuck paying for all this stuff. And we just cannot afford no more." (Transcript P. 134)
- **Jaded:** "And the cost of living right now is so extremely high that I believe that maybe, just me, their shareholders might miss a dividend payout. So that way the average person can pay their bills and feel a little bit safer in the winter." (Transcript P. 170)
- **Agitated: "**Meanwhile, their own press releases, 2024 press releases that they made record profits. In fact, they sent $318 million to their shareholders while their average executives make $1.15 million. They say that they need this increase for upgrades and improvement. Why aren't there upgrades and improvements baked into their business model? Why weren't these profits put back into their own business? Why are they being passed on to us, the consumer?" (Transcript P. 164)

Q. PLEASE NOTE THE REMARKS OF THE MAYOR OF SCRANTON REGARDING AFFORDABILITY.

A. Mayor Paige Cognetti of Scranton, PA, discussed the additive and substantial nature of this proposed rate case compounding alongside other very recent utility rate increases. Looking back as near as 2021, "total [rate increases] represented an increase of $426.75 million for those utilities represent an increase average about $78 per month for a residential customer or more than $900 a year." (Transcript P. 128) Mayor Cognetti

also discussed pending requests to offer a total of "$1,746 annually for a household to bear these increased costs if all of these rate increases are approved from this last five years." (Transcript P. 129) Later that evening, Witness Christina Daniels spoke to the same five-year timeframe, "I myself, I can't speak for others, but I'm blessed. I'm married. My husband works 60 hours a week to help provide, but I too have to work 65 hours a week to provide for our family. And these costs are just getting out of hand every month. We're making it and we don't have savings. We have one car payment. We're blessed to have one paid off. Every one of our utilities is going up and we just can't absorb the cost anymore. I mean, if we haven't been on a vacation in five years." (Transcript P. 128) Witness Daniels thankfulness is a humble surrender, an unfortunate submission; to me, it seems she is requesting relief just so she can keep up the existence of her and her family – and this request is not unique. Mayor Cognetti continued, "You've heard from residents and certainly, as Mayor of the city, I speak with residents all the time who are really, really struggling to make ends meet. We cannot bear these increases." (Transcript P. 129)

Q. PLEASE SUMMARIZE THE REMARKS OF OTHER PUBLIC OFFICIALS AND SERVANTS.

A. The testimony presented at the public input hearings paints a consistent strain, frustration, and inequity among customers. The public officials and servants who testified describe households forced into impossible tradeoffs—choosing between food, medication, and heat—not as rare exceptions, but as everyday realities for their neighbors. These accounts make clear that many customers are already beyond their financial limits, with even modest increases pushing them further toward crisis.

At the same time, speakers question whether the Company's cost structures and reliance on assistance programs reflect prudent decision-making or instead shift

burdens in ways that mask the true unaffordability of service. Others point to a growing sense of anger and distrust, with ratepayers feeling treated as an "open checkbook" while struggling to meet basic needs.

Finally, testimony highlights a perceived disconnect between strong financial outcomes for shareholders and the lived experience of customers who see little of that benefit. Collectively, these voices call into question not only the timing of the proposed increase, but also whom the utility ultimately serves—and whether sufficient weight is being given to the communities that bear its costs.

The public officials who testified at the public input hearings had this to say:

- Witness Kimberly Krupsha, Public-Facing Civil Servant: "I hear people tell me about impossible choices they face. Food versus medications, medications versus heating the homes. I hear from people who are on the verge of eviction not because of their irresponsibility but because of the cumulative weight of housing costs, food costs, rising utility bills that simply are more than any fixed or modest income can bear. These are not edge cases or statistical outliers. These people are my neighbors, and I encounter them every day." (Transcript P. 172-173)

- **Witness Chris Belles, Luzerne County Council:** "There are a lot of families that rely on essentially what is a commodity that can't afford any percent increase. They can't even afford it as it is. And yes, there are government programs to help them, but then that is just socialism that's keeping the price is, you know, afloat for UGI to charge everybody else more." (Transcript P. 158)
- **Witness Jamie Walsh, Representative:** "Every time we do a rate increase, the people that are on a fixed income are having a really, really difficult time making ends meet. And we're not talking about spending that they can just go out to dinner. This is food

on the table… Let me be clear. People in our region are extremely angry right now. They're angry at all the utility companies, because they just feel like the ratepayers are an open checkbook for them." (Transcript P. 120-121)

- **Witness Nikki Rivera, State Representative:** After reading the financial report of the Company, "Yay, shareholders. However, those who are paying the bill each month would like some of that same benefit in their pockets. So, I ask that you reject the proposal and side with our UGI customers." (Transcript P. 86)
- **Witness Judith Schwank, State Senator: "**We're living in a time of economic turmoil and uncertainty, and I know very many of my constituents are concerned. Frankly, I know that very many of my constituents are afraid of what is in store economically, to say the least. I'm extremely concerned that we're discussing substantial rate increase during such trying times." (Transcript P. 284)

III. OTHER CONCERNS

A. Data Center Demand

Q. PLEASE NOTE THE CONCERNS REGARDING DATA CENTERS SHARED BY WITNESS NATHAN EACHUS.

A. Witness Nathan Eachus provided cogent fears about the contemporary state of affairs in the energy-industry as it pertains to data centers. Witness Eachus stated, "Residents have described an eight percent rate increase as colossal and unaffordable, especially for retirees and fixed income households who are already making difficult choices just to get by. This is immediate and real. At the same time, Pennsylvania is seeing rapid expansion of high energy users, particularly data centers. These facilities require massive amounts of diesel, methane gas, electricity infrastructure and evidence that shows data center demand is driving up energy costs systemwide, including capacity prices and grid expansion costs. Without proper safeguards, those costs are shifted onto

the ratepayers." (Transcript P. 179-180) After articulating the exacerbated stresses of the industry by data canter demand, Witness Eachus continued, "This raises a fundamental fairness issue. Why are residents being asked to pay more while large industrial users like data centers are increasing demand? Recent policy discussions in Pennsylvania recognize this imbalance and are moving toward requiring data centers to pay their own way rather than passing costs onto households." (Transcript P. 181)

Q. PLEASE NOTE THE CONCERNS REGARDING DATA CENTERS SHARED BY WITNESS FERN LEARD.

A. Witness Fern Leard observed, "We are also seeing growing energy demands from AI data center developments and we know it is not just electricity that powers these facilities. They also rely on natural gas. That means more pressure on both systems and more infrastructure being built to support them. This proposal feels like families are being asked to pay first while massive new energy users get to come online later." (Transcript P. 185-186)

Q. PLEASE NOTE THE CONCERNS REGARDING DATA CENTERS SHARED BY REPRESENTATIVE JAMIE WALSH.

A. Representative Jamie Walsh requested, "One of the things that I would like the Commission to look into as well is what percentage of this increase is being allocated to support the data center industry, because I think that is extremely important. Ratepayers should not be supporting any infrastructure that is going to supply energy to these data centers. They need to provide their own and they need to pay their own way." (Transcript P. 138-139)

B. Mismanagement of Construction and Customer Service

Q. PLEASE SUMMARIZE THE INCIDENT SHARED BY WITNESS IVAN RITZ.

A. Witness Ivan Ritz discussed a localized nightmare, a calamitous anecdote of construction mismanagement and customer inconsideration. “Five months of noise, dirt, debris, trying to find a parking space and the constant pounding of vehicles going over settling trenches,” he stated. (Transcript P. 89) When the project was initiated, the work did not come as a surprise, “We knew it was coming,” but the style of work was unfortunately not commendable, “The great American work ethic was never on display.” (Transcript P. 88-89) The anecdote involves major mishaps, “[A supervisor from Verizon] responded that the contractor for UGI had severed [Verizon’s] fiber optic cables and they were trying to determine where and how often. He explained to me that it was very difficult to locate the cable breaches because the cables do not carry any electrical current.” (Transcript P. 90) The second mishap feels inexcusable, “One of the cable ruptures was caused by the installation of my new gas line. They opened the trench out front and determined - and also determined that my new gas line was leaking.” (Transcript P. 90) To fix this, “They had to shut off the gas to the house while they replaced the line. And when they were finished, they didn't have time to relight the pilots because their shift had ended.” (Transcript P. 91) In the aftermath, Witness Ritz wonders who will bear the cost, “Someone really dropped the ball here. Maybe this happens often, I do not know. But if UGI is responsible for the cost. I prefer not to help them pay for it.” (Transcript P. 92)

C. Climate Change

Q. PLEASE NOTE THE CONCERNS REGARDING CLIMATE CHANGE SHARED BY WITNESS ELISABETH HOFFMAN.

A. Witness Elisabeth Hoffman is concerned that, "Utilities finance the spending and they collect the cost plus profit from the customers over many decades. And the more money the utilities spend on these capital assets, profit they stand to earn. And so, the gas companies end up having a powerful profit motive to maintain the status quo of accelerated spending on gas infrastructure. And that in turn is going to wed us for decades to using more gas when we need to be shifting to renewable energy. So, I'm wondering if the PUC can require that UGI prioritize replacement of aging pipelines based on their risk to the public and can they require evaluation of alternatives to replacement like leak detection or something else? I realize that we need to keep pipelines safe, but overspending on new infrastructure doesn't make sense when we need to be moving off of fossil fuels because of climate destruction and health reasons and cost reasons. Every dollar spent on new infrastructure is a dollar we're not spending on renewable energy." I agree that progressing sustainable, renewable energy infrastructure should be a considered topic in each utility rate case.

IV. REVIEW OF WRITTEN COMPLAINTS

Q. WHAT IS THE COMMON CONCERN RAISED IN WRITTEN COMPLAINTS?

A. There were thirty-three written complaints filed regarding UGI's proposed rate increase. The common concern raised in formal complaints is consistent with the common concern raised at the public input hearings: affordability. For example, Richard and Kandie Hambidge said, "If we have to make repairs or update our home

we can't go to our boss and demand a raise. We have to go to our savings, get a loan, or take on an additional job. As senior citizens, we have a fixed income but we each have a job just to keep up with constantly increasing utility prices."

More desperately, Susette Higdon stated, "Last month's bill, $463 – thermostat on 72 degrees. I'm 78 years old and I freeze. I wear two sweatshirts, heavy sweatpants, socks and gloves…sometimes a coat and I freeze. Can't afford to raise temp and can't afford $463, more. No increase please, not 8.7%."

Q. WHAT DO YOU CONCLUDE FROM YOUR REVIEW OF ALL OF THE PUBLIC INPUT HEARING TESTIMONY?

A. In my opinion, UGI's customers and public officials are clearly opposed to any rate increases at this time.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

SUPPLEMENTAL DIRECT TESTIMONY

OF

ZACH TETI

ON BEHALF OF THE

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

April 21, 2026

TABLE OF CONTENTS

Page

I. INTRODUCTION 2

II. AFFORDABILITY: CUSTOMERS ARE STRUGGLING TO PAY THEIR BILLS 4

I. INTRODUCTION

Q. WHAT IS THE PURPOSE OF YOUR SUPPLEMENTAL DIRECT TESTIMONY IN THIS PROCEEDING?

A. My testimony updates the figures provided in my Direct Testimony, which was submitted on April 13, 2026, following my review of additional transcripts from public input hearings that have been published since that time. The concerns raised by residential customers and a government official during these subsequent hearings further underscore the affordability issues discussed in my Direct Testimony.

Q. DID THE PENNSYLVANIA PUBLIC UTILITY COMMISSION (PUC OR COMMISSION) CONDUCT PUBLIC INPUT HEARINGS FOR THIS PROCEEDING?

A. Yes, the Pennsylvania Public Utility Commission (PUC) conducted twelve Public Input Hearings to gather testimony from ratepayers and public officials to better understand the impact of the proposed rate increase.[1] Since the filing of my direct testimony on April 13, 2026, I am in receipt of additional transcripts that capture the testimonies of those who participated in the telephonic Public Input Hearings on April 10, 2026. This Supplemental Direct Testimony only addresses the 1 p.m. and 6 p.m. telephonic public input hearings on April 10, 2026, and supplements my Direct Testimony served on April 13. 2026. At the twelve public input hearings, a total of 18 customers and 9 public officials testified. My testimony focuses on public input hearing testimony that may be pertinent to the OCA's overall recommendations set forth in the OCA's Direct Testimony filed on April 13, 2026.

[1] My direct testimony as filed on April 13, 2026 focuses on the first ten, attended public input hearings to date and for which transcripts have been made available. I will be supplementing my direct testimony on or about April 21, 2026 and upon receipt of further transcripts.

Q. IN REVIEW OF THE ADDITIONAL PEOPLE WHO TESTIFIED TELEPHONICALLY, DOES THE PUBLIC RECOMMEND THAT THE COMPANY'S PROPOSED RATE INCREASE BE APPROVED BY THE PUC?

No.

Q. WHO TESTIFIED ON APRIL 10, 2026?

A. Witness Sickler of Dallas, Pennsylvania.

Q. WHAT KEY INSIGHTS DOES THIS WITNESS' TESTIMONY PROVIDE?

A. Witness Sickler describes a household of two retired women living on fixed incomes who already take deliberate steps to limit energy costs, such as keeping their home at 62°F in winter and carefully managing shared expenses. Despite these efforts, they report that repeated rate increases have made it increasingly difficult to maintain a manageable budget. This witness' testimony emphasizes that even with frugal habits, rising utility costs creates financial strain, and she believes that others in their community may be in even more vulnerable situations. (Transcript P. 353-354)

Q. WHAT DOES THIS TESTIMONY DEMONSTRATE ABOUT THE REAL-WORLD IMPACT OF CURRENT RATES AND THE POTENTIAL EFFECT OF ADDITIONAL RATE INCREASES ON CUSTOMERS?

A. This testimony demonstrates that financial pressure in UGI Gas' service territory is not hypothetical, as it is already affecting real customers who are actively conserving energy and still struggling. It shows that additional rate increases would not simply encourage efficiency but would, instead, burden customers who have little remaining flexibility to reduce usage or absorb higher costs. The fact that retirees on fixed incomes are already limiting basic comfort, such as heating, underscores the risk that further increases could force households to make even more difficult tradeoffs.

II. AFFORDABILITY: CUSTOMERS ARE STRUGGLING TO PAY THEIR BILLS

Q. PLEASE PROVIDE AN UPDATED COUNT OF THE NUMBER OF PEOPLE FROM THE PUBLIC WHO TESTIFIED ON THE TOPIC OF AFFORDABILITY.

A. Among the twenty-seven people from the public who testified, affordability concerns were raised twenty-four times. The ability to afford utility bills is a problematic issue raised by three out of five people who spoke in Lancaster, eleven out of twelve people who spoke in Wilkes-Barre, each of the two people who spoke in Reading, and each of the eight people who testified telephonically. In my opinion, UGI's customers and public officials are clearly opposed to any rate increases at this time.

Q. WHAT IS YOUR RECOMMENDATION TO THE COMMISSION BASED ON THE EVIDENCE PRESENTED?

A. I respectfully urge the Commission to refrain from approving higher rates. The record demonstrates that current rates are already pushing some customers to the edge of affordability, and that additional increases would disproportionately harm those least able to pay, without providing meaningful opportunities for cost mitigation.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

OCA AMENDED HEARING EXHIBIT 1

LIST OF EVIDENCE TO BE MOVED INTO THE EVIDENTIARY RECORD BY THE OFFICE OF CONSUMER ADVOCATE

The Office of Consumer Advocate (OCA) intends to submit the following evidence into the evidentiary record in the above captioned proceedings at the scheduled evidentiary hearings in this proceeding.

DIRECT TESTIMONY

OCA Statement No. 1: Direct Testimony of Michael Deupree consisting of written testimony with signed verification of Michael Deupree, Senior Research Consultant, Acadian Consulting Group, and the following:

- Appendix A
- Exhibit MWD-1 through Exhibit MWD-8

OCA Statement No. 2: Direct Testimony of Jennifer L. Rogers consisting of written testimony with signed verification of Jennifer L. Rogers, Principal and Vice President, Exeter Associates, Inc., and the following:

- Appendix A
- Schedule JLR – 2, JLR – 4 through JLR – 6, JLR – 8, JLR – 10 through JLR – 17, JLR – 19, JLR – 21 through Schedule JLR – 23

CONFIDENTIAL
OCA Statement No. 2: CONFIDENTIAL Direct Testimony of Jennifer L. Rogers consisting of written testimony with signed verification of Jennifer L. Rogers, Principal and Vice President, Exeter Associates, Inc., and the following:

- Appendix A

- Schedule JLR – 1 through Schedule JLR – 23

OCA Statement No. 3: Direct Testimony of David J. Garrett consisting of written testimony with signed verification of David J. Garrett, Managing Member, Resolve Utility Consulting PLLC, and the following:

- Exhibit DJG-1 through Exhibit DJG-16
- Appendix A through Appendix B

OCA Statement No. 4: Direct Testimony of James S. Garren consisting of written testimony with signed verification of James S. Garren, Senior Manager, NewGen Strategies and Solutions LLC, and the following:

- Exhibit JSG-1 through Exhibit JSG-3

OCA Statement No. 5: Direct Testimony of Barbara R. Alexander consisting of written testimony with signed verification of Barbara Alexander, Sole Member, Barbara Alexander Consulting, LLC, and the following:

- Exhibit BA-1 through BA-2, Exhibit BA-4 through BA-7

CONFIDENTIAL
OCA Statement No. 5: CONFIDENTIAL Direct Testimony of Barbara R. Alexander consisting of written testimony with signed verification of Barbara Alexander, Sole Member, Barbara Alexander Consulting, LLC, and the following:

- Exhibit BA-1 through Exhibit BA-7

OCA Statement No. 6: CORRECTED Direct Testimony of Roger Colton consisting of written testimony with signed verification of Roger Colton, Owner, Fisher Sheehan & Colton, and the following:

- Appendix A
- Exhibit RDC-1 through Exhibit RDC-4

OCA Statement No. 7: Direct Testimony of Zachary Teti consisting of written testimony with signed verification of Zachary Teti, Senior Regulatory Analyst, Pennsylvania Office of Consumer Advocate, and the following:

- Exhibit ZT-1

SUPPLEMENTAL DIRECT TESTIMONY

OCA Statement No. 7-Supp: Supplemental Direct Testimony of Zachary Teti consisting of written testimony with signed verification of Zachary Teti, Senior Regulatory Analyst, Pennsylvania Office of Consumer Advocate.

SURREBUTTAL TESTIMONY

OCA Statement No. 1SR: Surrebuttal Testimony of Michael Deupree consisting of written testimony with signed verification of Michael Deupree, Senior Research Consultant, Acadian Consulting Group, and the following:

- Exhibits MWD-9 through MWD-10

OCA Statement No. 2SR: Surrebuttal Testimony of Jennifer L. Rogers consisting of written testimony with signed verification of Jennifer L. Rogers, Principal and Vice President, Exeter Associates, Inc., and the following:

- Appendix A
- Surrebuttal Schedule Schedule JLR – 2, JLR – 4 through JLR – 6, JLR – 8 through JLR – 17, JLR – 19, JLR – 21 through Schedule JLR – 23

CONFIDENTIAL
OCA Statement No. 2SR: CONFIDENTIAL Surrebuttal Testimony of Jennifer L. Rogers consisting of written testimony with signed verification of Jennifer L. Rogers, Principal and Vice President, Exeter Associates, Inc., and the following:

- Surrebuttal Schedule JLR-1 through Schedule JLR-23

OCA Statement No. 3SR: Surrebuttal Testimony of David J. Garrett consisting of written testimony with signed verification of David J. Garrett, Managing Member, Resolve Utility Consulting PLLC.

OCA Statement No. 4SR: Surrebuttal Testimony of James S. Garren consisting of written testimony with signed verification of James S. Garren, Senior Manager, NewGen Strategies and Solutions LLC.

OCA Statement No. 5SR: Surrebuttal Testimony of Barbara R. Alexander consisting of written testimony with signed verification of Barbara Alexander, Sole Member, Barbara Alexander Consulting, LLC, and the following:

- Exhibit BA-8 through Exhibit BA-9

OCA Statement No. 6SR: Surrebuttal Testimony of Roger Colton consisting of written testimony with signed verification of Roger Colton, Owner, Fisher Sheehan & Colton.

1.0 SUMMARY

[1] The Nova Scotia Energy Board is keenly aware that electricity rates are already challenging for many customers, and any rate increase will be difficult, especially for those with low or fixed incomes. However, the Board does not have the authority to provide special rates for these customers and, as noted by the Nova Scotia Court of Appeal, the Board's regulatory power under the *Public Utilities Act* is not an instrument of social policy.

[2] The *Public Utilities Act* entitles a utility the opportunity to recover its prudently incurred costs in providing a service to the public and an opportunity to earn a reasonable profit. While the Board can disallow costs found to be imprudent or unreasonable, absent such a finding, a utility's costs must be reflected in the rates paid by customers. The Board does not have the legal authority to disallow the recovery of legitimate costs to make rates more affordable.

[3] On September 18, 2025, NS Power filed a general rate application (GRA) with the Energy Board to change its rates for 2026 and 2027. The company proposed average rate increases across all customer classes effective on each of January 1, 2026, and January 1, 2027 (1.8% in 2026 and 2.4% in 2027). However, proposed rate increases vary across different customer classes, with residential customer rates proposed to increase 3.8% and 4.1% in 2026 and 2027, respectively. Some of the general and industrial customer classes will have more modest increases or even reductions in the proposed rates.

[4] NS Power previously advised the Board that the application was the "result of an extensive collaborative process involving NS Power and customer representatives

and it is being filed with the support of those representatives for the outcomes of the GRA". NS Power filed the settlement agreement on November 5, 2025.

[5] NS Power proposes changes to both its fuel and non-fuel costs. The rate increases are to cover the costs of providing service to its customers, including the generation, transmission and distribution of electricity as well as providing other services to its customers such as connection requests and customer service. NS Power outlined in its application that it is operating in complex circumstances. Indeed, NS Power is immersed in a multifaceted energy transition. The challenges include retiring its coal plants by 2030; providing 80% of its electricity from renewable resources on the same timeline; handling the worsening impact of climate conditions; and applying new technologies both on its grid and in providing innovative rates and service solutions to its customers.

[6] While the settlement agreement with the utility's customer representatives meant that these intervenors did not present evidence in the hearing to oppose the application, Board Counsel did engage various expert consultants to review the application. These included the proposed operating, maintenance and general (OM&G) costs, fuel costs, the cost of capital (including return on equity), depreciation, cost-of-service and other rate design issues. Additionally, intervenors, Board staff and Board Counsel consultants asked hundreds of information requests and received thousands of pages of additional information from NS Power about the application. The Board held its public hearing from January 7 to 9, 12 and 13, 2026. Written closing submissions were completed on February 6, 2026. The Board also received many letters of comment from customers.

[7] The general rate application contemplated securitization as an important new element, which NS Power described as the “centerpiece” of its application. The utility said it wishes to securitize about $704 million of its coal plants and thermal-related assets. Securitization is a complex commercial transaction that has the effect of reducing financing costs, thereby mitigating rate increases for customers. If securitization had occurred by January 1, 2026, as originally intended by NS Power, the utility estimated that costs would be reduced for customers by about $90 million over 2026 and 2027. Given that the securitization did not occur by year-end 2025, NS Power requested a “securitization deferral”. It asked that this regulatory account be used to defer financing costs and depreciation expense from January 1, 2026, onwards, related to the $704 million in coal-related assets it intends to retire. The amount collected in the deferral is proposed to be added to the total securitized amount.

[8] Morrison Park Advisors, a consultant firm engaged by Board Counsel to review the credit rating elements of the rate application, noted that NS Power had suffered a credit rating downgrade in November 2022 to BBB-, which is the lowest investment grade status and just one level above “junk bond” status. Morrison Park cautioned that the Board needs to be mindful of the risk of the utility dropping to “junk bond” status. It said a further downgrade would have “potentially significant consequences”, noting the importance of NS Power maintaining a minimum target of 10% funds from operations to debt (FFO:Debt), that being a key credit metric monitored by credit rating agencies. It concluded that if both the securitization proceeds and the proposed rate increases in this application are approved, the utility’s credit metrics should improve from their current precarious levels. Any delay in completing the securitization, or a partial approval of the

proposed rate increases, or both, would further limit the utility's ability to meet the credit metrics required by the rating agencies. However, Morrison Park stated that absent both the rate increases and the securitization, there was a likelihood that NS Power's credit rating could be downgraded even further. This would result in higher financing costs, which could amount to at least $25 million more each year in borrowing costs that would have to be included in customer rates.

[9] Securitization requires legislative action by the Province to allow it to proceed, something the Province has indicated it is not prepared to do, at least at this time. While it enacted a provision allowing securitization in the *Public Utilities Act*, the section is not yet in force and regulations still need to be developed. The Province's primary concern is that the coal plant assets proposed to be securitized are overvalued because insufficient depreciation was taken on the assets in the past and NS Power continued to invest in these assets despite nearer term retirement obligations. Settlement agreements in past rate applications in 2011 and 2014, kept depreciation rates lower than NS Power proposed. As a result, the value of the coal plant assets on which NS Power was able to earn a return was higher than it otherwise would have been if higher depreciation expenses had been applied.

[10] However, as canvassed in this decision, the settlement agreements in prior general rate applications had the effect of mitigating the rate impacts for customers at the time by avoiding accelerated depreciation on coal assets to be retired. Further, utility investors provide the upfront capital required to purchase or construct utility infrastructure to serve customers, and customers who use that infrastructure repay those costs over time as they receive the benefits of service. To attract and retain this investment, investors

are given the opportunity to earn a fair return on the capital invested, as well as ultimately recoup the amounts invested. The rate base value (including the value of the coal plant assets) presented in this general rate application follows generally accepted regulatory practice and the default method explicitly referenced in the *Public Utilities Act*. As described by the Supreme Court of Canada, a fair return means “the company will be allowed as large a return on the capital invested in its enterprise (which will be net to the company) as it would receive if it were investing the same amount in other securities possessing an attractiveness, stability and certainty equal to that of the company's enterprise”. A low return on rate base may discourage investment in the utility. It may also lead to a poor credit rating, which would cause debt markets to increase the rate of interest on funds used by the utility to provide service. This may result in the utility’s rates increasing just to cover additional borrowing costs. It may even cause it to be excluded from participating in some debt markets altogether. Morrison Park reiterated these concerns in the present matter.

[11] NS Power and representatives of most of its customer classes presented a settlement agreement in this matter. The Nova Scotia Utility and Review Board (NSUARB) has considered settlement agreements in past matters, stating that the Board’s ultimate duty under the *Public Utilities Act* is to ensure that the terms of such an agreement are just, reasonable and in the public interest. As part of this exercise, the Board must ensure that "only those costs which are fair, justifiable and prudently incurred" by the utility are ultimately approved. There is no doubt that a settlement agreement concluded between the utility and most of its customer classes should attract significant weight.

[12] However, the circumstances leading to the settlement agreement in the present matter are different than in prior applications in that the parties negotiated the settlement agreement before the application was filed, rather than after a full evidentiary record was presented to the Board, including an independent review by various Board Counsel consultants about different components of the application. This is a factor that affects the weight the Board assigns to the settlement agreement. While the agreement is still entitled to some deference, this does change the Board's perspective on the settlement. It does not have the full benefit of the parties' views of the application, and the value assigned to various compromises reached in achieving a negotiated settlement. In some instances, the Board was left uncertain about whether certain perspectives had been analyzed or considered.

[13] Following its review of the evidence, the submissions and the law, while the settlement agreement does contain many terms that are appropriate and should be adopted, the Board concludes that some amendments to the application are required to ensure just and reasonable rates. The Board finds that the amendments to the application outlined in the remainder of this decision are appropriate and are necessary in the public interest.

[14] The Board finds that securitization could prove beneficial for customers by potentially reducing financing costs on the securitized amount, compared to reflecting the assets on the company’s balance sheet. Whether securitization ultimately proceeds is a policy matter for the Province to decide. In the interim, the Board approves the securitization deferral to address costs that NS Power removed from rates in this application because it expected securitization to proceed. In terms of the Province’s

concerns about the value of coal plant assets to be securitized, the Board finds that the past settlements noted by the Province in 2011 and 2014 were made at the time to lower customer rates. Further, under the *Public Utilities Act*, and consistent with generally accepted utility ratemaking principles across North America, the utility is entitled to recover its prudently incurred costs along with a reasonable return on and of its invested capital. To find otherwise could have significant negative financial implications for NS Power in the form of increased costs, leading to higher rates for its customers.

[15] NS Power's proposed return on equity was also an issue raised at the hearing. There was extensive expert evidence on this issue from two sources. Concentric Energy Advisors, NS Power's expert, recommended an average return on equity of 9.4% from its models (Undertaking U-14), while the same models applied by Dr. Sean Cleary, the Board Counsel's consultant, yielded an average recommended return on equity of 7.6%. Each of their models, inputs and assumptions had strengths and weaknesses. The Board finds that neither of the experts' recommended averages meet the "fair return standard", described above, with Dr. Cleary's recommendation being too low and Concentric's being too high. The appropriate return on equity is somewhere in between the two. In its application, NS Power asked to maintain its current return on equity of 9.0% for ratemaking purposes, with an earnings band of 8.75% to 9.25%. This request was supported by the customer classes in the settlement agreement.

[16] Dr. Cleary acknowledged in a recent proceeding before the Board that if the return was set at 7.6%, it would be the lowest recommended return on equity for a utility in Canada. Setting a return on equity at 7.6% would materially reduce NS Power's funds from operations and make its 10% FFO:Debt target more difficult to achieve. NS Power's

current credit rating from Standard & Poors (S&P) already places it in the bottom 10% of utilities in North America. A reduction in the return on equity below that proposed in the application would aggravate the situation. In the circumstances, the Board finds it would not be in the public interest to approve a return on equity that does not meet the fair return standard and deviates materially from the range of equity returns authorized for similar utilities across Canada. It finds that the current return on equity and capital structure should be maintained.

[17] Accordingly, the Board finds that most components of the settlement agreement appropriately resolve issues raised in the application. As a result, subject to its findings below that amend the application, the Board approves the following:

- Maintaining NS Power's current return on equity of 9.0%, with an earnings band of 8.75% to 9.25%. The equity thickness for rate setting purposes remains at 40.0%;

- The establishment of the securitization deferral to defer depreciation expenses and financing costs related to the coal plants and thermal-related assets within the scope of the Decarbonization Deferral Account, but only effective from the date the rate increases in this application are implemented;

- NS Power's proposed depreciation rates;

- The proposed cost-of-service methodology and cost allocation among the various customer classes, except that NS Power is directed to implement a load carrying capability adjustment to account for the demand component served by the minimum system used to classify distribution system costs and to address other cost-of-service issues as noted in this decision;

- The PHP Deferral account, based on the assumptions in the settlement agreement, to track any variances in revenue between that which would occur based on the assumptions in the cost-of-service study treating PHP as an Above-the-Line customer versus that which results from the eventual Board-approved tariff for PHP. NS Power estimated $18.2 million would accrue in the deferral if PHP remains as a Below-the-Line customer for the entirety of 2026 (Undertaking U-2), and there would also be a $5.7 million fuel balance captured under the FAM;

- The EIFEL deferral, allowing NS Power to defer incremental tax expense of about $7 million if an exemption is not enacted by the Government of Canada as it has announced;

- The inclusion of four Maritime Link transmission capital projects in rate base. The amount to be included in rate base is the net book value of these assets as of the date of the Board's Order;

- Continuing the Storm Cost Recovery Rider pilot in 2026 and 2027, but on a symmetrical basis, which allows for underspent Level 3 and 4 costs to be returned to customers;

- The change to the tariff language for the Demand Side Management Cost Recovery Rider;

- Revising the Open Access Transmission Tariff (OATT) rates to reflect changes in the generation and transmission asset mix and costs, changes in system usage since the last update in the 2023-2024 GRA, Board directives from the 2023-2024 GRA, and the revised methodology from the 2024 Cost of Service proceeding; and

- Other miscellaneous fee changes under the Schedule of Charges, such as for connection, reconnection, returned cheques, installation of recording equipment, contribution for three-phase service, load research charges, and pole attachment fees.

[18] While the Board is satisfied that many of the elements of the settlement agreement can be accepted, it has made several adjustments in this decision to reduce NS Power’s proposed revenue requirement or adjust the allocation of costs among customer classes, including:

- A further reduction of $8 million in Operating, Maintenance and General expenses in each of 2026 and 2027 (over and above the $9 million outlined in the settlement agreement);
- A reduction in NS Power’s proposed executive compensation in both 2026 and 2027 to be consistent with the *Nova Scotia Power Incorporated Regulations*;
- The denial of NS Power’s proposed deferral of general rate application OM&G costs (GRA deferral) for collection over the 2026-2027 period;
- A reduction of $1.8 million in fuel and purchased power costs in 2026 to reflect the present estimate for Maritime Link assessment costs, and to update the current 2027 estimate;

- A peak load carrying capability adjustment of 0.4 kW per customer applied as a credit to the non-coincidental peak demand for determining the minimum system demand allocators for the distribution system costs (this change transfers the related costs from domestic, small general and unmetered customers to other rate classes) (Undertaking U-6); and
- The denial of the proposed AMI opt-out fee.

[19] Other issues were raised in this application which could also have impacted the proposed rate increases. These issues included considering a different depreciation treatment for the utility's assets and applying different cost-of-service procedures for the allocation of costs among the various customer classes.

[20] Under a cost-of-service model, the objective is to fairly allocate costs to customers based on cost causation. A change in the cost-of-service methodology for classifying distribution system costs (using the basic customer method) would have reallocated costs from domestic, small general and unmetered customer classes to other rate classes (Undertaking U-5). This change alone would have reduced the proposed rate increases for domestic customers from 3.8% and 4.1% in 2026 and 2027, respectively, to 2.2% and 2.8%. Larger reductions would have occurred for the small general class. However, this would have resulted in opposite rate impacts on other customer classes.

[21] It would be inappropriate to direct the use of the basic customer method simply to reduce the rate increase for residential, small general and unmetered customers. It would be just as inappropriate not to do so because of the impact that would have on other customers (with or without rate rider impacts). However, the parties did not fully press this issue in this proceeding due to the settlement agreement and the Board requires more information to further assess the cost causation basis for adopting the basic customer method. These issues will be brought before the Board for further consideration in a cost-of-service proceeding later this year.

[22] Similar considerations apply to the potential implementation of depreciation related issues. Assuming securitization were to proceed, the Board received evidence that a change from the Equal Life Group (ELG) to Average Life Group (ALG) depreciation methodology would have reduced NS Power's revenue requirement in each of 2026 and 2027, thereby reducing rates for all classes. Further, the Board considers such a change may be a more appropriate reflection of depreciation over the service lives of the company's assets. However, given the failure of securitization to occur by year-end 2025, the Board is not inclined to apply these changes because of the continued risk of a credit downgrade. A change in NS Power's depreciation expense from what is proposed in the application would negatively affect its FFO:Debt credit metrics and risk a credit downgrade. As Morrison Park noted, a further credit downgrade would have serious long-term cost consequences resulting in higher costs for ratepayers.

[23] The Board has also issued several directives to NS Power, summarized as follows, and set out in more detail at the end of this decision:

- To file an updated depreciation study with its next general rate application, with several directives to address a comparison of the ALG and ELG methodologies, and certain specified asset service life accounts;
- To report the results of its consultation process with interested parties about the decommissioning of hydro plants, no later than October 1, 2026, and every six months thereafter;
- To address the additional cost-of-service concerns raised by Synapse in its application to the Board later this year, in addition to the review of the minimum system v. basic customer method for allocating distribution system costs;

- To address the issues raised by Renewall in its closing submissions, if the utility brings forward any application relating to the OATT tariff or charges before responsibility for the transmission tariff is transferred to the Nova Scotia Independent Energy System Operator;
- To address the setting of customer charges in its next general rate application;
- To file a revised Climate Change Adaptation Plan by October 1, 2026, outlining climate related impacts on the utility's resources, activities and assets; actions to address the issues identified; potential and likely adaptation measures; and any challenges to mitigating risks; and
- Unless NS Power is able to provide a compelling reason in its compliance filing demonstrating that it is not possible to use AMI data to avoid prorating bills to accommodate its proposed rate increase, the Board directs that the bills covering the time that the new rates come into effect be prepared on the basis that the energy consumed in the billing period is charged at the actual rate that was in effect when the energy was actually used.

[24] The Board is satisfied that its findings in this decision result in just and reasonable rates for NS Power and that where it has departed from the terms of the settlement agreement it was in the public interest to do so. With the approval of the application, as amended, the Board concludes that NS Power will have a fair opportunity to recover its prudently incurred costs for the service it provides to its customers and to earn a fair return that allows it to attract new capital investment and maintain the financial integrity of the utility. Based on the evidence in this matter, this should also support the

company's credit metrics above target levels and avoid the negative consequences from a credit downgrade, which would impose further costs on NS Power and its customers.

2.0 BOARD'S AUTHORITY UNDER THE *PUBLIC UTILITIES ACT*

[25] The Board is an administrative body, established under the *Energy and Regulatory Boards Act*, SNS 2024, c 2, Schedule A. It must follow legislative requirements and administrative law principles. The Board's decisions may be appealed to the Nova Scotia Court of Appeal on any question of law or its jurisdiction. The Supreme Court of Nova Scotia may also judicially review aspects of its decisions.

[26] The Board is what has sometimes been referred to as a "creature of statute". In *Administrative Law in Canada*, 7th ed, p. 137 (LexisNexis Canada, 2022), Sara Blake described the powers of such entities:

> An administrative tribunal is created by statute and has only those powers conferred on it by statute. It has no inherent power to undertake proceedings or to make an order that affects a person's substantive rights or obligations. Most Interpretation Acts confer on tribunals all powers that are necessary to enable them to make the decisions and do the things they are expressly empowered to do. The powers that exist by necessary implication may be deduced from the wording of the Act, its structure, and its purpose. A tribunal's powers should be interpreted so as to enable the tribunal to fulfil the purposes of the statute rather than sterilized by overly technical interpretation, but statutory powers may not be expanded to accomplish what the tribunal thinks it ought to do to further its mandate in the public interest. If a tribunal has broad authority to make any order to remedy a violation of the Act, the remedy must be related to the violation, its consequences and the purposes of the Act.

[27] The NSUARB summarized the application of these principles in *Re Nova Scotia Power Incorporated* [2018 NSUARB 45]:

> [47] The UARB is a creature of statute and can only obtain jurisdiction from two sources: one, express grant of jurisdiction under the *PUA* and under other statutes (express powers); and two, from common law by application of the doctrine of jurisdiction by necessary implication (implicit powers).
>
> [48] In *ATCO Gas & Pipelines Ltd. v. Alberta (Energy & Utilities Board)*, [2006] SCC 4, the majority decision stated, at paragraph 51, that:

> …the powers conferred by an enabling statute are construed to include not only those expressly granted but also, by implication, all powers which are practically necessary for the accomplishment of the object intended to be secured by the statutory regime created by the legislature.

[49] The majority also held, at paragraph 74 of the *ATCO Gas* decision, that:

> …the doctrine of jurisdiction by necessary implication will be of less help in the case of broadly drawn powers than for narrowly drawn ones. Broadly drawn powers will necessarily be limited to only what is rationally related to the purpose of the regulatory framework.

[28] The Board's general functions, power, duties and jurisdiction are expressly addressed in the *Energy and Regulatory Boards Act*:

> **Powers and duties**
> **5 (1)** The Energy Board has those functions, powers and duties that are conferred or imposed upon it
>
> (a) by this Act;
>
> (b) by the *More Access to Energy Act*;
>
> (c) respecting the production, transmission, delivery or furnishing of electrical energy for the purpose of heat, light and power or steam heat, geothermal heat, geothermal resources and electricity efficiency and conservation, by the *Public Utilities Act*;
>
> (d) by the *Gas Distribution Act*, the *Electricity Act*, the *Petroleum Products Pricing Act* or any other enactment; and
>
> (e) as the Governor in Council prescribes by the regulations.
>
> **(2)** The Governor in Council may assign to the Energy Board the powers, functions and duties of any board, commission or agency and while the assignment is in effect, that board, commission or agency is discontinued and Section 43 applies with necessary changes respecting that board, commission or agency.
>
> **Approving and fixing rates, regulatory powers**
> **6 (1)** In approving or fixing just and reasonable rates, tolls, charges or tariffs pursuant to this Act or any other enactment, the Energy Board may adopt any method or technique that it considers appropriate, including an alternative form of regulation.
>
> **(2)** In approving or fixing rates, tolls, charges, tariffs, capital applications and all other matters over which the Energy Board has authority, the Board shall give appropriate consideration to the extent to which such rates, tolls, charges, tariffs, capital applications or other matters
>
> (a) support competition and innovation in the provision of energy resources in the Province;

(b) support the development of a competitive electricity market;

(c) ensure the provision of safe, secure, reliable and economical energy supply in the Province;

(d) support sustainable development and sustainable prosperity; and

(e) support such other factors as prescribed by the regulations,

with the goal of approving rates, tolls, charges, tariffs, capital applications or other matters that are consistent with the purpose of this Act, the *More Access to Energy Act* and the regulations.

(3) Subject to subsection (4), the Energy Board shall regulate

(a) the Independent Energy Systems Operator, transmitters and all matters relating to public utilities that perform the functions of production, transmission, delivery or furnishing of electrical energy to or for the public for the purpose of heat, light and power, geothermal resources, geothermal energy, geothermal heat or steam heat;

(b) the franchise holder granted a franchise pursuant to Section 79C of the *Public Utilities Act*;

(c) the Halifax Water district energy project;

(d) any holder of the franchise to construct and operate a gas delivery system in the Province pursuant to the *Gas Distribution Act*; and

(e) any other entity or service prescribed by the regulations.

(4) The Governor in Council may make regulations

(a) prescribing factors for the Energy Board to consider when approving rates, tolls, charges or tariffs, capital applications and all other matters over which the Energy Board has authority respecting the production, transmission, delivery or furnishing of electrical energy for the purpose of heat, light and power or steam heat, including combined heat and power;

(b) excluding any entity or service from the jurisdiction of the Energy Board.

(5) The exercise by the Governor in Council of the authority contained in subsection (4) is a regulation within the meaning of the *Regulations Act*.

(6) The Energy Board shall endeavour to issue fair decisions in relation to all matters in a manner that is efficient, effective and as timely as possible.

> **(7)** The Energy Board shall make public all approved rates, tolls, charges, tariffs and capital applications on its website and update these documents as required.
>
> …
>
> **Jurisdiction of Board**
> **30 (1)** A Board has exclusive jurisdiction in all cases and in respect of all matters in which jurisdiction is conferred on the Board.
>
> **(2)** The Boards, as to all matters within their jurisdiction pursuant to this Act, may hear and determine all questions of law and of fact.

[29] Public utilities tend to be natural monopolies. As such, the impact of competitive forces on those entities may be muted or non-existent. In the absence of these forces, the Board's ratemaking function is designed to allow the utility to recover its legitimate costs of providing service and an opportunity to earn a reasonable profit at rates that are fair for its customers. This ratemaking function has been described by the Nova Scotia Court of Appeal as a surrogate for competition and not a tool for implementing social policy:

> [32] The Board sets rates for a utility that has a virtual monopoly on the supply of electric power. The Board's decision discusses this process: (2005 NSUARB 27)
>
> > [17] … NSPI is not like an unregulated retailer. It is a virtual monopoly which operates its business on a cost-of-service basis. Providing electricity to all communities in the Province was not (and likely still is not) financially feasible for private, competitive companies. For that reason, the Province's electric service supplier is a cost-of-service monopoly. In return for undertaking and continuing the costs of electrification of the Province, the utility is permitted, under the ***Act***, to recover the reasonable and prudent costs of providing the service. Because it is a monopoly, regulation operates as a surrogate for competition. <u>One of the regulator's tasks is to balance the need for the Utility to recover its reasonable and prudent costs with the need to ensure that ratepayers are charged fair and reasonable rates.</u>
> >
> > <u>[18] It is in the interests of all Nova Scotians to ensure that NSPI continues to be a stable and financially sound company. This is a reality which the Board must consider when determining what, if any, rate increase is warranted.</u>
> >
> > [19] In short, rates charged to customers are based on costs incurred by the Utility in providing service. If the Board finds certain costs to be imprudent or unreasonable, it can (and has) disallowed such expenditures and reduced proposed rate increases accordingly.

> [33] I agree with this portrayal of the background to the Board's rate-making function. The Board's regulatory power is a proxy for competition, not an instrument of social policy. [Emphasis added]
>
> [*Dalhousie Legal Aid Service v Nova Scotia Power Inc.*, 2006 NSCA 74]

[30] As noted already, the Board's powers are defined by legislation. Section 45 of the *Public Utilities Act,* RSNS 1989, c 380 (*PUA*) requires the Board to use a cost-of-service methodology to set rates and entitles the utility to a just and reasonable return:

> **Amount utility entitled to earn annually**
>
> **45 (1)** Every public utility shall be entitled to earn annually such return as the Board deems just and reasonable on the rate base as fixed and determined by the Board for each type or kind of service furnished, rendered or supplied by such public utility, provided, however, that where the Board by order requires a public utility to set aside annually any sum for or towards an amortization fund or other special reserve in respect of any service furnished, rendered or supplied, and does not in such order or in a subsequent order authorize such sum or any part thereof to be charged as an operating expense in connection with such service, such sum or part thereof shall be deducted from the amount which otherwise under this Section such public utility would be entitled to earn in respect of such service, and the net earnings from such service shall be reduced accordingly.
>
> **(2)** Such return shall be in addition to such expenses as the Board may allow as reasonable and prudent and properly chargeable to operating account, and to all just allowances made by the Board according to this Act and the rules and regulations of the Board. [Emphasis added]

[31] In legislation, the word "shall" is mandatory. However, the phrases "just and reasonable" and "reasonable and prudent" allow the Board to exercise some discretion. Additionally, the Board's mandate under the *PUA* encompasses a significant public interest component (*Nova Scotia (Attorney General) v Nova Scotia (Utility and Review Board*), 2019 NSCA 66, paras 113-116). But as considered above, the Board's implicit powers are tied to the purposes of the statute.

[32] The Nova Scotia Supreme Court, Appeal Division decision in *Nova Scotia (Public Utilities Board) v Nova Scotia Power Corporation*, (1976) 18 NSR (2d) 692 (the *Contracts Case*) is often referenced for its consideration of the scheme of regulation under the *PUA*:

17 The scheme of regulation established by the Act envisages and indeed compels control by the Board of all aspects of a utility's operation in providing a controlled service. Two great objects are enshrined - that all rates charged must be just, reasonable and sufficient and not discriminatory or preferential, and that the service must be adequately, efficiently and reasonably supplied to the public. Almost all provisions of the Act are directed toward securing these two objects - that a public utility give adequate service and charge only reasonable and just rates.

18 The service requirement is expressed in s. 48, as follows:

> 48 Every public utility is required to furnish service and facilities reasonably safe and adequate and in all respects just and reasonable.

… 20 Rates must be "just" (s. 41) and must not be "unreasonable or unjustly discriminatory" (s. 18 and s. 78(1)), or "unjust, unreasonable, insufficient or unjustly discriminatory, or . . . preferential" (s. 82(1)). The "justness" of rates has two aspects - rates of a utility as a whole must be "reasonable" and just for the public it serves and just and "sufficient" for the utility itself - and the rates for the various customers or classes of customer of a utility must not as between each other be "unjustly discriminatory" or "preferential".

21 The control of the over-all level of rates has its keystone in s. 42(1) which states:

> 42 (1) Every public utility shall be entitled to earn annually such return as the Board deems just and reasonable on the rate base as fixed and determined by the Board.

…

23 The concept of a utility securing a reasonable return on its rate base automatically makes specific the apparently vague standard that rates be "just". The utility's economic health and its ability to supply adequate service and to finance capital expansion are assured by giving it a "just and reasonable" return. Overall rates must thus be sufficient to produce that return after allowing operating expenses and other "just allowances" (s. 42(2)). The rates must thus be "sufficient" to produce that return, no less and no more.

24 The public interest charges the Board with the duty of ensuring no extravagance by a utility in either capital or operating expenditure. The rate base is to include only assets "used and useful" in providing service (s. 29 (1)). Additions to it are controlled by the requirement that Board approval be secured for any new construction project of more than $5,000 (s. 34 as amended). The expenses for rate-making purposes are only those the Board allows "as reasonable and prudent and properly chargeable to operating account" (s. 42(2)). Other "just allowances" are prescribed by the Act and Regulations, *e.g*. annual depreciation charges (ss. 35-38).

…

26 The Board has on occasion summarized its duty in terms which, accurately I believe, emphasize the comprehensive nature of its control of the rates and services of a utility. Its decision of February 25, 1970, in respect of an application of Maritime Telegraph and Telephone Company Limited, contains the following at p. 25 of the Board's Report for 1970:

> A public utility is obligated to provide services that are reasonably safe and adequate and is entitled to compensation therefor by the charging of rates

> that are not unjustly discriminatory and will provide the public utility with sufficient revenue to enable it to pay its operating expenses including depreciation and income taxes, and have net earnings sufficient to enable it to obtain and service normal and needed capital requirements. It is expected to meet reasonable demands for additional services and to conduct its affairs with efficiency. When an application is made to this Board for approval of revisions in rates, tolls and charges designed to produce additional revenue the public utility is required to produce evidence showing the needs and purposes for which such additional revenue is required. And upon any such application the Board inquires into and examines the adequacy and reasonableness of existing services, the efficiency of the public utility, the nature and extent of the needs and purposes upon which the application is grounded and the propriety of the proposed rate changes.
>
> 27 The "propriety" of the rates involves not only the propriety of their over-all level as adjudged by rate base return, but also their propriety for the various classes of customer. The Board's twofold duty is to ensure that the rates as a whole are reasonable and that they are reasonable to all customers *inter se*. This latter aspect of its duty is imposed by the various provisions prohibiting unjust discrimination and requiring equal rates in substantially similar circumstances. [Emphasis added]

[33] In exercising its ratemaking function, following the statutory requirements and mindful of the purposes of the legislation, the Board is also guided by the following long-established, fundamental ratemaking principles, which the NSUARB noted in its decision for NS Power's rate application in 2002 and a number of rate applications since:

> [21] In utility regulation, there are generally accepted principles which govern the rate-making exercise. The object of rate-making under a cost-of-service-based model is that, to the extent reasonably possible, rates should reflect the cost to the utility of providing electric service to each distinct customer class. In regulating NSPI, the Board is guided by these generally accepted principles as well as by case law.
>
> [22] A widely-accepted publication written by Dr. James Bonbright entitled **Principles of Public Utility Rates**, sets out the following guidelines for determining appropriate rates:
>
> **CRITERIA OF A SOUND RATE STRUCTURE**
>
> 1. The related, "practical" attributes of simplicity, understandability, public acceptability, and feasibility of application.
> 2. Freedom from controversies as to proper interpretation.
> 3. Effectiveness in yielding total revenue requirements under the fair-return standard.
> 4. Revenue stability from year to year.
> 5. Stability of the rates themselves, with a minimum of unexpected changes seriously adverse to existing customers. (Compare "The best tax is an old tax.")
> 6. Fairness of the specific rates in the apportionment of total costs of service among the different consumers.
> 7. Avoidance of "undue discrimination" in rate relationships.

> 8. Efficiency of the rate classes and rate blocks in discouraging wasteful use of service while promoting all justified types and amounts of use:
> (a) in the control of the total amounts of service supplied by the company;
> (b) in the control of the relative uses of alternative types of service (on-peak versus off-peak electricity, Pullman travel versus coach travel, single-party telephone service versus service from a multi-party line, etc.).
> (Exhibit N-92) (James Bonbright, **Principles of Public Utility Rates**, Columbia University Press, 1961, p. 291)
>
> [23] These principles are well established and form the background against which the current application must be assessed.
>
> [2002 NSUARB 59, paras. 21-23]

[34] The principles of statutory interpretation apply in determining the intent of any particular statute, including in the Board's interpretation of the statutory provisions in the *Public Utilities Act*, and other legislation relevant to this matter, to determine the scope of the powers conferred upon the Board.

[35] As discussed in the reasons of the majority in the Supreme Court of Canada's decision in *Canada (Minister of Citizenship and Immigration) v Vavilov*, 2019 SCC 65, administrative decision makers are required to consider the text, context and purpose in interpreting legislation. The Board must also have regard to the *Interpretation Act*, RSNS 1989, c 235.

3.0 ANALYSIS AND FINDINGS

3.1 Should the Settlement Agreement be Approved?

[36] On September 2, 2025, NS Power wrote to the Board to advise that it would be filing a general rate application for the 2026 and 2027 test years. It stated that it had reached a consensus with the customer representatives which was the "result of an extensive collaborative process involving NS Power and customer representatives and it is being filed with the support of those representatives for the outcomes of the GRA".

However, it did not file its general rate application until September 18, 2025. NS Power only filed the settlement agreement on November 5, 2025, when asked to do so in information requests (IRs) by Board staff.

[37] The terms of the settlement agreement are set out in a schedule to the agreement and provide as follows:

GRA Element	Settlement Terms
Rates	a) Rates are proposed to be effective January 1, 2026 and the Parties will make all reasonable efforts to facilitate and support a process that will result in this outcome. b) Subject to the terms set out herein being fully incorporated into the 2026-2027 GRA, the average rate increase across all customer classes (inclusive of non-fuel and Base Cost of Fuel costs) is anticipated to be approximately 2.1% in 2026 and 2.1% in 2027.
Depreciation	a) The Parties agree to reduce depreciation rates in accordance with Appendix "A" in order to achieve a reduction in depreciation and accretion expense of approximately $20M/year over the 2026-2027 test period, as compared to the depreciation rates included in the Draft GRA.
O&M	a) The Parties agree to the operation and maintenance expense amounts included in the Draft GRA, subject to the reductions in O&M set out in the attached Appendix "B".
Storm Cost Recovery Rider	a) The Storm Cost Recovery Rider will be implemented as described in the Draft GRA, subject to the following: (a) the Storm Cost Recovery Rider will not be implemented on a permanent basis as proposed, rather it will continue on a pilot basis with costs in 2026 and 2027 eligible for the rider; and (b) the threshold for making an application to return an

GRA Element	Settlement Terms
	underspend to customers will be changed from $5 million to $2.5 million.
Cost of Capital and Earnings Band	a) An overall return on equity of 9% for rate setting purposes retained, as well as an earnings band of 8.75% to 9.25%.
Capital Structure	a) An equity thickness of 40% for rate setting purposes will be retained.
DSM Rider	a) The DSM Rider will be amended as set out in Appendix "C". NS Power will make best efforts to negotiate necessary revisions to its Supply Agreement with EfficiencyOne, if any, or otherwise bring such revisions forward in the relevant proceeding to ensure that the End of Approved DSM Term Adjustment is implemented for the 2023-2026 term.
Weather Normalization Mechanism	a) The request for approval of a Weather Normalization Mechanism will be removed; however, the parties agree to participate in an information session to gain a better understanding of Weather Normalization Mechanisms.
Cost of Service ("COS")	a) The COS as set out in the Draft GRA will be included in the 2026-2027 GRA and put forward for approval, subject to the following: (a) use of the Minimum System methodology after the 2026-2027 test period will be subject to a future proceeding and determination by the Board, for which an application will be made in 2026 and in which parties are free to take any position they so choose; (b) NS Power will collect and disclose the data outlining the extent to which PHP uses, relies upon and/or benefits from the High Voltage transmission system and in any proceeding to determine rates for PHP after the 2026-2027 test period, Parties may make submissions regarding the extent to which PHP is to be responsible for any costs of the High Voltage transmission system; and (c) the appropriate apportionment of assessment costs from the Maritime Link as between generation and transmission will remain open to be addressed as Parties see fit in any proceeding to determine rates after the 2026-2027 test period.
MEU Treatment	a) The MEUs will be included as taking service under the Municipal Tariff in calculating the Municipal Tariff rates for the 2026-2027 GRA and the MEUs commit to taking partial service under the Municipal Tariff in the years 2026 and 2027 .

GRA Element	Settlement Terms
	b) NS Power and the MEUs will work collaboratively and in good faith to determine and attempt to agree, by no later than December 1, 2025 on (1) the timeline by which the MEUs will pay NS Power the full amounts of outstanding fuel costs and Maritime Link Assessment costs, and (2) the implementation of the BUTU Tariff service arrangements in conjunction with service under the Municipal Tariff in 2025, 2026, and 2027.
OATT	a) In calculating the OATT rate, NS Power will cap the contribution of Wreck Cove to the 32 MW Spinning Reserve requirement in the calculation of the rate for Spinning Reserve service. b) The 2-standard deviation methodology will be used for ratemaking purposes for the load following requirement. c) For the 2026-2027 GRA period, the costing approach will utilize 50 percent of the estimated average hourly demand of LIIR interruptible load as 10-minute operating reserve on a day ahead basis.
PHP Treatment	a) NS Power's 2026/2027 cost of service study includes PHP as an above-the-line customer based on the forecast of receiving Board approvals for a new PHP tariff in time to implement for January 1, 2026. b) The COS has been prepared on the basis of the following PHP load characteristics: a) PHP's firm load at 8MW at the three coincident peaks; b) PHP's firm, plus interruptible load, at a forecast of 65 MW based on prior actual PHP metered load at the time of NSP's 3CP; and c) PHP energy will be based on PHP's forecast usage for the test years, net of the amount forecast to be provided by the Goose Harbour Lake Wind Farm. The same load characteristics are applicable to the base cost of fuel model as well. c) The dollar value of the Interruptible credit to be applicable to PHP's interruptible load shall be the same as the credit for Large Industrial Interruptible customers, plus the value of priority interruption service provided, if any. The priority interruptibility service that may be provided by PHP is modelled at an additional 10% credit. d) PHP and NS Power will complete discussions and analysis of the value of Active Demand Control ("ADC"), which shall be proposed to be a rider to the cost-based rate. The value of ADC, and the proposal for cost recovery, if any, shall be

GRA Element	Settlement Terms
	brought forward for approval by the Board later this year to be effective January 1, 2026. For clarity, any payment approved by the Board for Active Demand Control services will be collected from above the line customers. e) NS Power and PHP shall reflect the foregoing in a written tariff which shall also include a proposal for priority interruptibility to be brought forward for approval by the Board later this year to be effective January 1, 2026 and PHP commits to taking service under such a tariff on January 1, 2026, or such later date as the Board approves the tariff as being effective, whether on a permanent or interim basis, subject to satisfactory conclusion of the resolution of the PHP ADC and tariff processes. f) In the PHP ADC and tariff processes that will be brought forward for approval by the Board later this year, it remains open for all Parties to take any position they so choose, including whether each of the PHP ADC and tariff filing(s) is inconsistent with the load characteristics and basic tariff structure as set out above. g) NS Power may seek Board approval for a deferral account to account for any NS Power revenue variances that may arise in 2026 or 2027 from the following scenarios, which costs would be collected/refunded from/to above the line customers: (a) where a Board decision on the PHP tariff, including the Active Demand Control Rider, differs from the above the line PHP tariff assumptions included in the 2026-2027 GRA; (b) where, for any reason, the PHP tariff is not available for PHP to take service under it as of January 1, 2026; and/or (c) PHP determines the PHP ADC and tariff processes outcome is not satisfactory.
Securitization	a) NS Power will make best efforts to finalize and apply prior to January 1, 2026 for approval of its proposed securitization of assets, cost of service treatment and the Securitization Rider. It remains open for all Parties to take any position they so choose in relation to such an application.
ML Transmission Assets	a) Inclusion of CI 43324, CI 43678, CI 45066, and CI 45067 in rate base, subject to the Board being satisfied that the threshold test it articulated in paragraph 405 of its decision in M10431 has been met.

GRA Element	Settlement Terms
EIFEL	a) If the excessive interest and financing expenses limitation ("EIFEL") exemption is not enacted, the Parties agree to defer the incremental tax expense over the 2026-2027 GRA period, which is anticipated to be approximately $7.5 million.
NS Power Future Deliverables	a) Within a reasonable amount of time following the execution of this Settlement Agreement, NS Power will provide: (a) confirmation that radial to generation lines being allocated to the generation function do not also serve any load; and (b) the methodology that NS Power is proposing to functionalize storage assets.

[Exhibit N-27, NSEB IR-1, pp. 9-13]

[38] Previous decisions by the NSUARB set out the principles it applied in its consideration of settlement agreements. Those principles are still relevant and bear repeating. In its decision dated November 5, 2008, about a prior NS Power general rate application, the NSUARB outlined its general approach to settlement agreements submitted to it for approval:

> [12] The Board's *Regulatory Rules* facilitate settlement discussions. The Board welcomes and appreciates the efforts of parties to, in good faith, settle issues, even where, as sometimes happens, a settlement cannot be ultimately achieved.
>
> [13] Where, as here, the Agreement is supported by representatives of all of the customer classes, the Board can have confidence that the Agreement is in the public interest.
>
> [14] Customers of NSPI and members of the public are, perhaps understandably, wary of the settlement process. Many of those customers and members of the public may not appreciate that by the time the hearing commences 80% of the rate hearing process has already happened. NSPI filed extensive evidence, as required by the Board, to support its rate request. Interested parties and Board Staff asked NSPI many hundreds of written questions (Information Requests), to which responses were filed.
>
> [15] All of the parties who chose to do so filed evidence, including expert evidence. Written questions (Information Requests) have been asked of and answered by interested parties who filed evidence. NSPI filed reply evidence. As noted, all of this happened before the hearing was scheduled to begin so that the parties and the Board are well informed about the case in advance of any oral public hearing.

> [16] The public can rest assured that the Board Members hearing the matter have also thoroughly reviewed all of the material in advance of coming to a decision as to whether to approve the Agreement as being in the public interest.
>
> [17] Settlement agreements, while relatively new in regulatory matters before the Board, are common in the litigation process. Within the Board's adjudicative mandate, for example, assessment appeals, planning appeals and other matters are often settled. In the civil courts of Nova Scotia, a much higher percentage of cases are settled than go to trial.
>
> [18] That is not to say that the Board would hesitate to reject a settlement agreement it did not consider to be in the public interest, however, it should be understood that a properly supported settlement is a success of the regulatory process, not a failure.
>
> [2008 NSUARB 140]

[39] The Board remains mindful that in its consideration of settlement agreements its ultimate duty is to ensure that the terms of the agreement are just, reasonable and in the public interest:

> [23] … Settlement agreements do not, however, diminish the Board's duty and obligation to ensure that the terms of any such agreement result in approval of only those costs which are fair, justifiable and prudently incurred by the Utility. Further, the Board must ensure that these costs result in customer rates that are just, reasonable and in the public interest. In addition, when deciding whether to approve a settlement agreement, the Board must be satisfied that the outstanding concerns of all intervenors are adequately considered by the Board and the terms and conditions under which they consent to a settlement agreement are honored.
>
> [*NS Power 2007 GRA* decision, 2007 NSUARB 8]

[40] The Board agrees with the following submission in the NSUARB's *2023-2024 GRA* Decision about the important role of settlement negotiations in such proceedings:

> … It is in the public interest to approve settlement agreements in these circumstances in order to encourage a collaborative approach to ratemaking. Doing so provides incentive to parties to be reasonable and promotes the reduction of controversy in rate applications coming to the Board.
>
> [Board Decision, M10431, para. 60]

3.1.1 Findings

[41] As noted above, the NSUARB has considered settlement agreements in past matters. The Board appreciates the efforts of parties to resolve contested issues in matters coming before it and encourages such initiatives to continue. Notwithstanding

that, the Board reiterates that its ultimate duty in considering settlement agreements is to ensure that the terms of such agreements are just, reasonable and in the public interest. As part of this exercise, the Board must ensure that “only those costs which are fair, justifiable and prudently incurred” by the utility are ultimately approved.

[42] There is no doubt that a settlement agreement between the utility and most of its customer classes should attract significant weight. The Board recognizes that significant efforts were called upon in canvassing the complex myriad of issues that were ultimately concluded in their settlement. The Board is mindful that the discussions and negotiations involved compromises by all parties in the final result. The customer representatives actively participate in numerous NS Power proceedings before the Board. The Board recognizes that by negotiating a settlement agreement, parties tried to reduce hearing costs and achieve some certainty over the results.

[43] However, there is a distinction between what occurred in prior general rate applications and what transpired in the current proceeding. Previously, settlement agreements were concluded after an extensive evidentiary record had been filed with the Board, including many information requests and evidence filed by intervenors (among them the very customers who signed a settlement agreement) and Board Counsel consultants. In the current matter, the settlement agreement was concluded even before the application was filed. While this does not negate the efforts of the parties to reach a settlement, the Board concludes that it is a factor that affects the weight it assigns to the settlement agreement. The agreement is still entitled to some deference but, given the circumstances, it does change the Board’s perspective on the settlement. It does not have the full benefit of the parties’ views of the application, and the value assigned to various

compromises reached in achieving a negotiated settlement. In some instances, the Board was left uncertain about whether certain perspectives had been analyzed or considered. Further, the Board does have the benefit of having the evidence of the Board Counsel consultants, who did not participate in the settlement discussions but were able to conduct an independent review of the application.

[44] A general rate application is a very complex proceeding which raises a multitude of difficult issues. The Board is left with the very difficult duty to ensure that the terms of the settlement agreement are just, reasonable and in the public interest. Following its review, the Board finds that the settlement agreement does contain many terms that are appropriate and should be adopted. However, the Board also concludes that some amendments to the application, as described in the remainder of this decision, are required to ensure just and reasonable rates.

3.2 Fuel and Purchased Power

[45] Fuel and purchased power expenditures are direct pass-through costs paid by NS Power's customers. Under the Fuel Adjustment Mechanism (FAM), those costs are identified as the Base Cost of Fuel (BCF). Actual fuel and purchased power costs will be tracked, but actual costs will differ from forecast costs. Any over or under recoveries will be refunded or collected through the FAM Actual Adjustment (AA) and Balance Adjustment (BA) riders. Throughout each year, NS Power provides monthly, quarterly and annual updates of its fuel costs and the recoveries from customers. In addition, an independent auditor appointed by the Board conducts fuel cost audits every two years and those audits are reviewed in public regulatory proceedings.

3.2.1 Base Cost of Fuel

[46] Fuel and purchased power costs comprise the largest portion of NS Power's revenue requirement. During the two-year test period, NS Power has forecast those costs to be $918.6 million for 2026 and $918.4 million for 2027. This represents about 47.4% and 46.1% of the annual revenue requirements, respectively.

[47] However, in this application NS Power is seeking approval of new BCF amounts of $927.3 million for 2026 and $850.9 million for 2027. With those BCF adjustments, NS Power proposes to smooth the overall increases (combined BCF and non-fuel rates) for each rate class during the 2026-2027 GRA period. This results in setting rates that over-collect fuel costs in 2026 but under-collect in 2027.

[48] Board Counsel engaged a consultant, Bates White, to review NS Power's fuel and purchased power costs, which included the BCF, load forecast report, the accuracy of NS Power's commodity price forecasts, and determining whether the NS Power application adequately represents the fuel component.

[49] As seen in Figure 5-2 below, based on the two-year BCF forecast, NS Power applied for an average annual increase in FAM customer rates of 2.3% in 2026 and a reduction of 1.7% in 2027. Bates White noted that in contrast with the 2023-2024 GRA, NS Power did not include any files supporting the AA/BA calculations. When asked in NSEB IR-36 about the anticipated rate impacts from the AA/BA, NS Power stated that it did not complete the rate impact analyses, but those details would be provided in the FAM AA/BA application anticipated to be filed prior to the end of 2025. The AA/BA amounts are subject to revision and finalization during a separate regulatory proceeding near the end of each year. On December 18, 2025, NS Power applied to the Board to extend the existing AA/BA riders on an interim basis, effective January 1, 2026, pending

a decision in this GRA and a subsequent AA/BA application which it intended to file in January 2026. The Board granted that request in Matter M12640 on December 23, 2025.

Figure 5-2 – 2026-2027 Fuel Rate Percentage Changes with Smoothing

Customer Class	2026	2027
Residential	1.2	(0.4)
Small General	2.7	(0.8)
General	3.5	(3.2)
Large General	3.8	(5.7)

Interruptible Distribution Service	4.5	(7.5)
Large industrial Total	4.6	(7.6)
Municipal	9.6	(0.4)
Unmetered	(0.7)	2.8
Total	2.3	(1.7)

[Exhibit N-3, p. 28]

[50] In its response to Bates White IR-10, NS Power stated that it is forecasting a FAM liability of $10.2 million at the end of 2026 and $0.8 million at the end of 2027. NS Power also stated that at its weighted average cost of capital (WACC), the FAM deferral will incur interest expense of $1.0 million in 2026 and $1.3 million in 2027.

[51] In assessing whether NS Power has adequately represented the fuel and purchased power component in the application, Bates White noted that in some cases, NS Power was unable to provide all requested data due to a cybersecurity incident which made data retrieval impossible. However, Bates White stated that NS Power used

reasonable, publicly available forecasts of prices for fuels, including natural gas, coal, and heavy fuel oil, as well as purchased power.

[52] Although Bates White considered that the forecasts appeared reasonable, they noted those forecasts were dated. NS Power used PLEXOS, a commercially available hourly economic dispatch model, to forecast its fuel and purchased power consumption over the 2026-2027 period. In its evidence, Bates White stated:

> The original PLEXOS forecast was run in November 2024 using a 30-day average of prices as of October 29, 2024. In March 2025, following receipt of the Sulphur Dioxide ("SO_2") Certificate of Variance ("CoV"), the forecast was rerun. The results of the March 2025 run were used in the September 2025 filing.
>
> NSPI's decision to use the October 29, 2024 commodity price forecasts is likely reasonable, given that NSPI has reached settlement with several parties and that FAM costs are included in the Settlement Agreement. Using more updated commodity price forecasts would be optimal, given that more updated forecasts would represent the best and most updated expectations of fuel and purchased power prices in 2026 and 2027, but we acknowledge NSPI's point that updating rates could upset the Settlement Agreement. Still, using a more updated forecast could be warranted if there were major changes in the forecast of either energy [or] demand for the 2026 or 2027 period.
>
> … some commodity price movement has been observed since the time of the GRA commodity price forecasts (October 2024). Monthly coal futures for the 2026-2027 period, as measured by the API-2 index, are lower by an average of 2.8%. Monthly natural gas price futures, as measured at Henry Hub, are higher by an average of 12.4%.
>
> … Given the timing of the settlement discussions, NSPI's reliance on commodity price forecasts from October 29, 2024 appears reasonable, despite some moderate movement in commodity price forecasts. We observe no major changes regarding commodity futures prices that would require an update to the rates, which could potentially negatively impact the nature and status of the Settlement Agreement reached by the parties in this proceeding. [Emphasis added]
>
> [Exhibit N-35, pp. 14-15]

[53] In reviewing NS Power's load forecast, Bates White noted that the GRA forecast was an update to NS Power's 2024 Load Forecast, and the 2026 and 2027 GRA represented settlement agreement outcomes based on rates developed in 2024 and early 2025, before the 2025 Load Forecast Report was issued. Bates White also stated:

> NSPI's decision to use the September 2024 GRA Forecast is reasonable. The GRA Forecast uses the same methodology as the Board-approved 2024 Load Forecast and provides an interim update of energy demand and peak load in its settlement discussions with customer representatives. Using the 2025 Load Forecast data would be optimal, given that the 2025 Load Forecast represents the best and most updated expectations of energy

> [and] demand in 2026 and 2027, but we acknowledge NSPI's point that updating rates could upset the Settlement Agreement. Still, using a more updated forecast could be warranted if there were major changes in the forecast of either energy [or] demand for the 2026 or 2027 period.
>
> … The GRA Forecast expectations for energy demand in 2026 and 2027 is within 1% of the forecast values for both the 2024 and 2025 Load Forecasts.
>
> ... Given the timing of the settlement discussions, NSPI's reliance on the September 2024 GRA Forecast appears reasonable, and we observe no major changes between the 2024 and [*sic*] GRA Load Forecasts and the 2025 Load Forecast that would warrant an update to the rates, which could potentially negatively impact the nature and status of the Settlement Agreement reached by the parties in this proceeding. [Emphasis added]
>
> [Exhibit N-35, pp. 33-35]

[54] During the hearing, NS Power was asked about the amount included in its revenue requirement for the NSP Maritime Link Inc. (NSPML) assessment relating to the interest and principal for repayment of the $500 million Federal Loan Guarantee (FLG). NS Power included $41.5 million for 2026, but a subsequent NSPML application identified that cost to be $1.8 million lower at $39.7 million. The cost included in its 2027 revenue requirement may also be inflated by a similar amount:

> **Q.** So in this case, it refers to Appendix 5A and it says:
>
> On page 34 of Appendix 5A, the application states that NSPML's forecast assessments for the Maritime Link against Nova Scotia Power are $200.5 million in 2026 and $203.9 million in 2027 (including $41.5 million and $40.6 million for ['26 and '27 to pay the] interest and principal on the... Federal Loan Guarantee.
>
> So in relation to the federal loan guarantee portion of it, I note -- and you can take it subject to check, hopefully -- that we currently have an assessment before the Board, the 2026 NSPML assessment, and instead of the 200.5 million assessment in '26, the actual request was 198.7, which is a difference of 1.8 million. And one of the major differences in that is that the amount included for the federal loan guarantee, instead of being 41.5 million, was actually 39.7. So it was actually almost a difference of 2 million there.
>
> And so -- and because that balance will be reducing -- well, the balance they had, 39.7 for 2026, is already lower than what you had projected for -- or what was in the Application for 2027. So it's 1.8 -- the actual assessment, if it's approved, will actually be -- and probably won't be higher than that. It might be lower. But the assessment would be at least 1.8 million less than what's in your base cost of fuel. And I suspect that the same would happen for 2027. So that's 2 million over two years.
>
> I'm just wondering whether the – I don't know -- I've gone through the '26 assessment. I haven't found a reference to what a projected '27 assessment would be, but I suspect it's pretty close. So that would be 2 million over two years.

Is there some way we could -- I could ask you for an undertaking if you could check with NSPML what their projection is for at least the federal loan guarantee part and we could take that difference. But that's $2 million right there off of both years on the base cost of fuel.

So I'm just -- do you have any comment or solution in terms of adjusting the base cost of fuel for those amounts?

And I suspect there's a schedule -- I just couldn't put my hand on it -- for the federal loan guarantee, but I know they're going down. You're paying less every year. So I suspect it's probably low 39 to approximately high 38 million for '27.

A. (Willett) I can't speak to the 2027 latest projection. But what I would mention is these estimates were obviously taken at a point in time and to the best estimates at that time, just like any ---

Q. Oh, I agree.

A. (Willett) --- commodity or just like coal, the numbers will fluctuate, and the AA/BA process is there to true those up, so customers only pay the actual cost of the assessment and the FLG.

The other item, just to note as well, with rates not going into place January 1, those rates currently are set below cost so there will be or there is expected to be under-recoveries until those rates are in place to match the true cost. So those items will be trued up through the AA/BA, but we will be seeing under-recovery of -- until those rates are in place for the base cost of fuel.

Q. Right. Except that we know the 200.5 million is not a projection any more. It's actually -- for '26, it's only 198.7. So we know that number.

It's not a projection any more. We actually know it. Two million dollars, you know, is $2 million over two years would be -- you know, it's $4 million.

A. (Williams) Mr. Deveau, if I may -- and I agree. So in terms of the volatility discussion, volatility, uncertainty until you've -- you've got certainty, which with commodities very rarely do you ever get certainty until you've actually made the purchase, whereas with this there is certainty in terms of the price.

I think more to the point, though, is the $2 million difference that you're speaking to will not actually be $2 million because, as Mr. Willett was indicating, rates won't be in effect as of January 1, 2026. So you'll have that shortfall that will need to be made up in any event. So the $2 million is likely made up as a result of that regardless.

Q. Right. This is not a commodity, though. These are costs.

A. (Williams) No, agreed...

[Transcript, January 9, 2026, pp. 840-845]

[55] In its closing submissions, Renewall Energy Inc. (REI) raised a concern with the accuracy of NS Power's fuel forecasts. REI noted that average fuel cost forecasts in each of the past five years were significantly lower than actual costs, and that increased

accuracy is essential for encouraging competition in Nova Scotia, as well as to avoid interest on fuel cost deferrals. REI further stated:

> This means that NSPI's customer rates have been lower than required in each of the last 5 years. If NSPI's retail rates are consistency [*sic*] lower than needed to recover the appropriate revenue, it creates an unfair market condition for retail competition in two ways. It sets an unrealist benchmark of posted retail rates for comparison purposes, and it creates an ongoing fuel liability for customers looking to leave NSPI bundled service.
>
> …
>
> REI respectfully requests that the Board direct NSPI to establish more accurate fuel cost forecasts, and to follow the FAM POA that outlines that fuel cost overages from one year be recovered in the following year (rather than deferred over multiple years).…
>
> [REI Closing Submissions, p. 5]

[56] On pages 28-29 of its reply submissions, NS Power responded to REI's concern:

> NS Power submits that no such directive is warranted or necessary. The Plan of Administration (POA) outlines the approved process for forecasting of fuel and purchased power expenses. As the Board is aware, NS Power is audited bi-annually by the Board-appointed Fuel Adjustment Mechanism (FAM) Auditor, Bates White. The Auditor specifically evaluates and opines on the Company's adherence with the POA. Further, as noted in the Company's closing submission, Bates White submitted evidence in this proceeding on behalf of Board Counsel and indicated that NS Power used reasonable methods and resources in its forecast of fuel and purchased power costs included in this GRA.

3.2.1.1 Findings

[57] The Board notes that NS Power's proposed BCF was deemed acceptable to customer representatives who signed the settlement agreement. The Board also notes Bates White's statements that, although the commodity prices and load forecast used by NS Power were dated, they were reasonable. Bates White said they did not observe any major changes regarding commodity futures prices that would require an update to the fuel rates, nor did they observe any major changes between the 2024 GRA Load Forecast and the 2025 Load Forecast that would warrant an update to the rates.

[58] As noted above, the cost included in NS Power's Base Cost of Fuel for NSPML's 2026 assessment is about $1.8 million greater than the FLG interest and principal amount identified by NSPML in its recent 2026 assessment application. In its compliance filing, NS Power is directed to remove that additional $1.8 million from its revenue requirement for 2026. NS Power is also directed to obtain an updated amount for the FLG interest and principal from NSPML for 2027 and remove any excess amount that was included in its 2027 revenue requirement.

[59] On the issue raised by REI, the Board recognizes that a pattern of actual fuel costs being higher than forecasted could present some challenges to participants in the Renewable to Retail market. NS Power's forecasts and results are reviewed by parties during related proceedings and by the Board's fuel auditor to identify any errors or inaccuracies. Despite those reviews, it is incumbent upon NS Power to continually refine its forecasting to minimize cost variances and the impact on customers and market participants. The Board expects NS Power will continue to work towards that objective.

3.2.2 FAM Plan of Administration and Fuel Manual

3.2.2.1 Plan of Administration

[60] In its application, NS Power requested approval of amendments to the FAM Plan of Administration as described in Section 6 and Appendix 6A and set out in Appendix 6B. On page 32 of the application, NS Power listed the proposed changes:

> Requested changes to the FAM Plan of Administration (POA) for the 2026-2027 GRA Period are described in **Appendix 6A** and set out in **Appendix 6B** (Redline and Clean versions). Proposed changes to the POA include cost of service changes to fuel costs to align with NS Power's COSS, the addition of customer renewable program credits (community solar energy credit rider) as an allowable fuel cost, the change related to the migration of customers to and from the FAM classes (as set out in section 13.10 [*sic*] below), and movement of some costs previously included in OM&G expenses to the FAM. There are also administrative changes to the main document to reflect the GRA period and a request to discontinue Appendix D, the calendar of FAM-related filings and events during the GRA Period. The dates for filings are set by the NSEB, and the FAM Small Working Group sessions are set a year in advance by NS Power. The timetable of events is no

> longer a useful part of the POA, as all the deadlines (except FAM Small Working Group meetings) are prescribed in the POA main document.
>
> [Exhibit N-3, p. 32]

[61] Regarding the proposed amendment to include costs associated with renewable energy programs in s. 3.2.8 of the Plan of Administration (POA), NSEB IR-33 requested comment on the appropriateness of including certain additional language in the proposed change. In its response, NS Power stated that adding "*when such costs cannot be recovered from program participants*" to part b) is helpful clarification which aligns with the underlying intent of that provision.

[62] In its response to NSEB IR-34, NS Power elaborated on some of the OM&G expenses proposed to be moved to the FAM, which were previously identified in its 2023 application to revise the POA (M11127). In that matter, the Board indicated that those OM&G costs could be given consideration for movement to the FAM during a subsequent GRA.

[63] In addition, NS Power noted that the Board's Decision and Order in the 2024 FAM AA/BA proceeding directed it to amend the FAM Tariff to account for both customers moving out of the FAM class and back into the FAM class since the previous FAM Tariff was only amended to account for customers moving out of the FAM classes. NS Power stated that it has amended Special Condition 3 of the FAM Tariff, included in PR-01 Attachments 1s and 2s, and Section 3.1 of the Plan of Administration as set out in Appendix 6B.

3.2.2.2 Fuel Manual and Hedging Plan

[64] On page 29 of its application, NS Power stated:

> NS Power's currently approved version of the Confidential Fuel Manual, which sets out the requirements for fuel and purchased power procurement, is included in Standardized Filing **OE-01F** and the Hedging Plan with a minor language change is included in **Appendix 5B**. The language of the preamble to Appendix Q (which is an overview of the Hedging Plan)

> in the Fuel Manual has been updated to refer to the plan in a generic way, rather than referencing specific years and filings which need to be updated. This is an administrative change only and does not affect the substantive content of the Fuel Manual or the Hedging Plan. NS Power seeks the Board's approval of this change in **Section 17** [*sic*] below.
>
> [Exhibit N-3, p. 29]

[65] Also, on pages 21 and 98 of its application, NS Power sought Board approval of administrative changes to the introduction to Appendix Q (the Hedging Plan) of the Fuel Manual.

[66] In NSEB IR-27 and IR-28, NS Power confirmed that it is responsible to prudently manage its fuel portfolio in the best interests of its customers, and the Board does not normally approve the Fuel Manual (including Appendix Q) and its Hedging Plan. Instead, it said that the changes were filed for informational purposes and that the changes are intended to continue beyond the prior “rate stability period”.

3.2.2.3 Findings

[67] NS Power is directed to make the change to s. 3.2.8 of the FAM POA discussed in NSEB IR-33. The Board approves NS Power’s other proposed amendments to the FAM POA and to the FAM Tariff.

[68] As noted above, the Board does not provide approval of the Fuel Manual nor the Hedging Plan, and again confirms that it is NS Power’s responsibility to ensure that it manages its fuel portfolio in a prudent manner, in the best interests of its customers.

3.3 Operating, Maintenance and General Costs

3.3.1 Overall Costs

[69] NS Power applied for an increase in its OM&G expenses in the test years. The OM&G expenses represent costs for operating and maintaining the utility’s generation, transmission, and distribution facilities; delivering service to customers; and providing corporate support to these functions.

[70] Compared to the amount of $297.4 million currently in rates for the restated 2024 compliance filing (2024CR), NS Power requests OM&G expenses of $351.8 million in 2026 and $357.9 million in 2027. This is an increase of $54.4 million (18.3%) from the 2024CR to 2026 and a further $6.1 million (1.7%) from 2026 to 2027.

[71] These operating costs are broken down by category in the following table for the 2024CR and the 2026 and 2027 test years:

Figure 9 – Operating costs by groups - 2024CR and 2026-2027 Forecast

	2024CR	2026F	2027F
Total Corporate Groups	95,897	115,182	118,683
Total Power Production	98,674	109,699	112,882
EAM & Project Implementation	8,087	10,014	10,316
Environmental Services & Policy	2,783	3,056	3,140
Total Energy Delivery	94,641	131,274	131,277
Total Customer Experience and Innovation	32,144	41,014	42,290
Corporate Adjustments	(46,435)	(63,897)	(68,215)
Pension	11,631	5,461	7,559
Total regulated OM&G	297,421	351,803	357,932
Annual change ($)		54,382	6,129
Annual change (%)		18.3%	1.7%
2024CR - 2027F change (%)			20%

[Exhibit N-33, p. 22]

[72] While not subject to review in this application because it is beyond the test period, NS Power forecasts OM&G costs to increase again from 2027 to 2028 by a further $22.1 million (i.e., 6.2%).

[73] The proposed 2026 and 2027 amounts already reflect a reduction of $9 million per year that NS Power agreed to deduct from OM&G costs in the settlement agreement. The utility agreed to reduce costs in the following amounts and categories:

- Energy Delivery - $5 million;
- Customer experience and Innovation - $2 million; and
- Corporate - $2 million.

[74] NS Power engaged its consultant, ScottMadden Inc., to prepare a benchmarking report to review how the utility is performing compared to its peers. ScottMadden concluded that NS Power's "OM&G costs compare favorably to the peer group" and that the utility "is in the first quartile for most metrics despite low usage per customer compared to peers".

[75] The proposed increases to OM&G expenses are due to various reasons, but a major cause for the increased costs arises from staffing increases. NS Power was asked in a Board IR to show a break down of the forecast full-time equivalent employees (FTEs) in the 2026-2027 test years in each operating expense category compared to the 2024CR. While the company cautioned that it had restructured parts of its operations since the 2023-2024 GRA filing and it was unable to directly correlate the FTEs in 2024 to match the updated structure, it confirmed there is a forecast net increase of 507 FTEs from the 2024CR to 2026, a 24% increase:

	2024 Compliance	2026 GRA	2027 GRA	2026 GRA vs. 2024 Compliance	% Change	Explanation
Executive Management	4	4	4	-	0	
Legal and Corporate Secretary	12	11	11	(1)	-8	
Corporate Finance	33	33	33	-	0

NS Power Total	**2115**	**2622**	**2597**	**507**	**24**	

[Exhibit N-27, NSEB IR-42, p. 2]

[76] NS Power noted that its current number of FTEs is 2,478 (as of the date of the IR response, November 5, 2025). It noted that the figures in the above table do not reflect the $9 million reduction in OM&G costs that the utility committed to remove in the settlement agreement. The utility also noted it had made a vacancy adjustment of $5.7

million in 2026 to recognize that not all these positions would always be filled. Further, in response to questioning from Port Hawkesbury Paper (PHP) counsel, the company acknowledged that the increase of FTEs in the above table reflects a net variance after accounting for the estimated transfer of 22 NS Power employees to the Nova Scotia Independent Energy System Operator (IESO Nova Scotia) in December 2025 in Phase 1 of the transition and 32 employees in 2027 in Phase 2 (Transcript, January 12, 2026, pp. 1056-1058).

[77] Doane Grant Thornton LLP was engaged by Board Counsel to review, among other matters, NS Power's proposed OM&G costs. Doane Grant Thornton stated that it analyzed the company's financial information and investigated variances between the 2024CR amounts and the 2026 to 2027 forecasts. It also reviewed "the methodology and assumptions used in the OM&G forecast for reasonableness" and reviewed the benchmarking studies for NS Power against its peers. However, in questioning by the Board at the hearing, the Doane Grant Thornton panel confirmed that it did not conduct an organizational review to determine whether there was a different operational structure that would be more cost-effective and efficient.

[78] The Nova Scotia Department of Energy said in its closing submissions that the proposed increase in FTEs was not reasonable in light of affordability issues faced by NS Power's customers and that the proposed staffing increase was not justified:

> 102. From the evidence in this proceeding, the Department submits that NS Power has not clearly justified the need for the number of staff it forecasts for 2026. Although NS Power indicated that cuts would be difficult from the company's perspective, the Company intends to reduce labour costs in some undefined areas to comply with commitments made in the Consensus Agreement.
>
> 103. The Department's position is that NS Power has not sufficiently justified the Company's departure from industry standards and asks that the Board critically consider reductions to NS Power's staffing request to eliminate any unnecessary burden on ratepayers.

> 104. Considering NS Power's large growth in overall FTEs since the last rate application, the Department asks that the Board critically consider reductions to NS Power's staffing request to eliminate any unnecessary burden on ratepayers.
>
> 105. The Department submits that NS Power, like other organizations operating in the current economic environment, should be required to demonstrate cost management and operational efficiency. Section 34A of the *Act* allows the Board to order a "Savings Review" of NS Power and that the savings review be conducted by an independent party. Considering the concerns identified in this proceeding about NS Power's increased spending with no clear justification, the Department submits that the Board should order a Savings Review.
>
> [Department of Energy Closing Submissions, January 30, 2026, p. 16]

[79] In its opening statement, the New Democratic Party Caucus asked the Board to examine the costs that the company is passing on to customers to ensure they are just and reasonable. It urged the Board "to do everything in its power to ensure Nova Scotians have affordable, reliable power and that Nova Scotia Power is held to the standard of ensuring they work in the interest of the public". In its closing submissions, the Liberal Caucus submitted that "an independent, comprehensive review of Nova Scotia Power's operations, governance, and long-term planning is warranted".

[80] NS Power noted that some of the proposed increases in OM&G costs are to address increased service requests by customers. For example, in the Regional Operations cost category, NS Power explained that population growth, an increasing number of customers, and load growth are reasons for a proposed $4.8 million increase from the 2024CR:

> Increased labour costs in Regional Operations in the 2026 forecast compared to the 2024 compliance are primarily due to additional resources required to complete customer requested work. The population growth in Nova Scotia has exceeded recent historical rates with 1-year average growth rates averaging 2.2 percent in 2021-2024 as compared to 0.5 percent in the preceding decade of 2011-2020. <u>This population growth has contributed to increased customer-requested work, which has increased by over 40 percent over the 2021-2024 period. There were 27,000 wiring permits, 44,000 electrical inspections, 4,400 renovations, and 8,400 new customer connection requests in 2024 alone. Also, additional resources are required for execution of the $1.3B Five-Year Reliability Plan and additional substations construction due to load growth.</u>
>
> …

> These additional labour costs were determined through a review of all field work that Regional Operations performed from 2020-2024. The population growth and electrification have led to a 40% increase in customer-requested work, and the Five-Year Reliability Plan has resulted in a $400M increase in transmission and distribution investment over the five-year period ($900M compared to $1.3B), which is an $80M per year increase. [Emphasis added]
>
> [Exhibit N-23, Doane Grant Thornton IR-34, pp. 1-2]

[81] In response to NSEB IR-12, NS Power stated that 65 community meetings were held across the province to discuss reliability and understand customer expectations. It said that no formal notes were taken during the sessions. At the hearing, it stated that these community meetings were conducted by NS Power's reliability team and supported by the communications group (Transcript, January 9, 2026, pp. 873-876).

[82] NS Power requested approval to increase its operational support for community and customer engagement. It has requested an increase in the Reliability Implementation group (Energy Delivery) of $2.5 million from the 2024CR to 2026, with a further $300,000 increase in 2027. Most of the increase (i.e., $2.1 million) is for increased labour costs for the Reliability Implementation department which was formed after the 2023-2024 GRA. This centralized the utility's resources focused on improving system reliability. The largest cost is for additional staff on the Standards & Community Engagement team to engage with customers to improve customer consultation, centralized reliability planning, and execution of the 5-Year Reliability Plan. The company indicated that the reliability team is comprised of 59 employees, who support both the operational and capital parts of this initiative.

[83] There is also a requested increase in OM&G costs for "Communications and Public Affairs" of $2.0 million from the 2024CR to 2026. This represents a 131% increase. NS Power explained that this is largely due to increased labour costs ($900,000) to create a new Communication and External Engagement department for increased

engagement with interested parties and communities across the province to receive input and feedback, and to share more information on priorities, projects, and initiatives undertaken by the company in response to customer feedback. In response to NSEB IR-61, the company said that through “more engagements such as community meetings and open houses, NS Power can gather feedback that can be incorporated into plans for work in the community”. It said it can use these sessions to provide updates on hydro projects and reliability upgrades and its 5-Year Reliability Plan. There are also additional proposed costs related to communications and community engagement for consulting fees ($700,000) and advertising expenses ($300,000).

[84] Similarly, in “Grid Modernization and Customer Integration” there is a proposed increase of $4.1 million from the 2024CR to 2026 (i.e., 68%) and a further $400,000 increase in 2027. According to its response to NSEB IR-69, part of the increase is related to activities of the Smart Meter Operations Center for data analytics support to provide operational reporting on Smart Meter Operations, respond to customer inquiries on billing and usage, and support the design and evaluation of customer programs. However, there is also a proposed increase for customer engagement and communications:

> The incremental labour for Customer Experience supports the maintenance of the expanding portfolio of digital solutions such as Green Button, My Energy Insights, the customer-facing website, and the large complex customer portal planned for 2026. In addition to the expanded digital channel support, the Customer Experience team is delivering a Customer First, role-specific training program to educate employees in delivering exceptional customer experience. The Customer Experience team is expanding its communication initiatives with customers via media campaigns and in-person engagements such as home shows to ensure customers have access to information and expertise in managing their energy needs.
>
> [Exhibit N-27, NSEB IR-69, p. 2]

[85] In NSEB IR-12, NS Power was asked whether it had measured customer satisfaction about reliability to establish a baseline against which to test the 5-Year Reliability Plan. It was also asked about any quantitative measures it had identified as it planned to begin to implement the Reliability Plan, including any data it had collected about how the company's reliability initiatives would impact customer satisfaction:

> While customer expectations provide valuable insights, NS Power does not anticipate using CSAT as a measure of the effectiveness of its Five-Year Reliability Plan. As detailed in the plan itself, NS Power is focused on the achievement of performance standards and has designed its investment tracks accordingly. NS Power anticipates that CSAT related to reliability concerns will be positively impacted by such investments by delivering decreased outage frequency and duration, but CSAT is not considered a consistent and repeatable reliability metric for benchmarking.
>
> [Exhibit N-27, NSEB IR-12, p. 2]

[86] NS Power's witness panel reiterated this position at the hearing:

> **Q.** So Nova Scotia Power is not intending to use a customer satisfaction metric in its reliability plan?
>
> **A.** (MacIntosh) Yes, Mr. Mahody, if you consider the CSAT metric and then how the Five-Year Reliability Plan was created, the Five-Year Reliability Plan was created based on meeting the Nova Scotia Power Performance Standards. So CSAT is not a performance standard; … Mr. Williams will add some additional context.
>
> **A.** (Williams) Yes, Mr. Mahody, I think the CSAT outcomes are certainly -- it's valuable data. It's customers' perspectives, which I've expressed already is something we take very seriously and that we attempt to address. But as Mr. MacIntosh has described, we have -- in the regulatory context, we have the performance standards, which we would view as, in part, being responsive to or aligned with customers' expectations in relation to reliable service. And so we believe that the performance standards -- I mean, the performance standards allow for there to be an objective benchmark. The CSAT outcomes are, like I said, certainly valuable, but much more difficult to have an objective benchmark with those, as opposed to the performance standards. And so that's why the performance standards are being used as the point in which we're measuring our success in relation to reliability. [Emphasis added]
>
> [Transcript, January 9, 2026, pp. 757-758]

[87] In support of the need for the Communications team to help other departments in their public engagement on reliability or other matters, NS Power stated:

> **A.** (Williams) … As I said, the groups we've discussed are all specialized groups, and so it's helpful when you go out to talk to the public to have -- just as when we appear before this Board -- to have the people that can respond to the questions that we anticipate receiving. So while we have a comms team that provides a communications and public affairs function and service to the company. They're not necessarily subject matter experts. And so while we could prepare those people to go out, it's more effective to provide the

> people that know the material more intimately and can provide the detailed responses that often times are customers are asking. And I think that's important, just as it is in this room, to instill confidence in those who are asking the questions that the company has commanded the subject matter and has a definitive direction on it.
>
> [Transcript, January 9, 2026, pp. 885-886]

[88] NS Power was also asked by the Board about its proposed increase of $3.4 million from the 2024CR to 2026 for Corporate Human Resources, and an additional increase of $200,000 in 2027. It said this is primarily due to increased labour costs for staffing level increases and salary escalation ($2.3 million). In response to Doane Grant Thornton IR-14, the company said it needed a larger Human Resource team to support the increased number of employees. It stated that the Human Resource and Safety teams have grown by a total of 10 employees, with more Safety Specialists, additional employees to support Diversity, Equity and Inclusion programs and Labour Relations, and more "Human Resource Business Partners to support talent acquisition and new employees". NS Power said that there is also $400,000 more for "talent management" which is handled by its parent Emera and allocated to the utility under the Affiliate Code of Conduct and Cost Allocation Manual (Doane Grant Thornton IR-16). There are also increased consulting costs of $300,000 due to the increased staffing levels, mostly for medical consulting expense.

[89] On the issue of shared services with its parent Emera, at the hearing the NS Power panel acknowledged that it had not evaluated whether it was more economic to provide the human resource functions with internal staff or to outsource them to a third party and operate on a shared service model (Transcript, January 12, 2026, pp. 1000-1001). Further, the ScottMadden benchmarking study filed by NS Power indicated that the utility's total human resource costs per FTE (as of 2023) was 21% higher than the industry group median.

3.3.1.1 Findings

[90] NS Power's proposed increase in OM&G costs is significant. It represents a 20% increase in 2027 (18.3% in 2026) from the OM&G costs included in rates approved in the 2023-2024 GRA. The burden is on NS Power to show that the proposed OM&G costs are just and reasonable and needed to provide the required service to customers.

[91] The Board is satisfied that some of the increased OM&G costs are warranted. One such example is in "Energy Delivery" for Regional Operations ($4.8 million) and Control Center ($3.3 million). This includes increased costs to deliver connection and inspection services to customers and operating new grid-scale battery sites. The Board accepts NS Power's evidence that there has been a significant increase in customer requests for such services. NS Power noted that there has been a 40% increase in customer-requested work in its Regional Operations field work, including for such services as wiring permits, electrical inspections, renovations and new customer connections. Further, it said additional resources are required for execution of the $1.3 billion 5-Year Reliability Plan and the construction of additional substations due to load growth. These services require more power line technicians, substation technicians, related apprentices, and supervisory staff.

[92] Further, NS Power's Regional Operations' costs must also increase to accommodate the three new grid-scale battery sites that are expected to be in service by 2026. This is required to allow the utility to meet renewable electricity standards (RES) requirements and to help integrate renewable generation on the grid and maintain reliability. Forecast costs to maintain these grid-scale batteries are $970,583 in 2026 and $1,247,406 in 2027 [Exhibit N-23, Doane Grant Thornton IR-35].

[93] There is also a 42% forecast increase in the Control Center category for labour expense in 2026 over 2024 actuals. However, NS Power explained that these additional resources are required immediately in the Control Center due to the significant increase in Independent Power Producer (IPP) interconnection requests and resulting from the FAM Audit Dispatch Study. NS Power noted that these additional employees are anticipated to transfer to the IESO Nova Scotia as part of the Phase 2 transition in 2027.

[94] In the circumstances, the Board finds the increased costs related to services like connection, inspection and interconnection requests are needed for the utility to provide the level of service expected by customers. Given the significant increase in customer requests for these specific services, the Board is satisfied that NS Power has responded appropriately by planning to add the required staff to meet the increased customer demand for these services so they can be provided within a reasonable time. As noted above, some increased operational costs also result from Board proceedings involving various customer representatives, including the FAM Audit Dispatch Study and the Interconnection processes matter.

[95] NS Power has also proposed increased OM&G costs related to addressing technology and cyber security matters. It proposed a total increase of $10.2 million from the 2024CR to 2026 and a further $1.8 million increase in 2027. These costs include a $6.6 million increase for more consulting fees to support the cyber security program for both its Operational Technology (OT) and Information Technology (IT). The additional costs also include $3.8 million for an incremental number of employees to support cyber security, the replacement of end-of-life legacy technology, and the introduction of new customer service. There is also $3.2 million more for increased rental and maintenance

equipment and software as new vendor tools and capabilities are added to the utility's information technology. The Board accepts the utility's evidence that these costs are necessary to keep its IT systems updated and that they are reasonable. The reality is that this is an issue all companies must address. However, the Board recognizes that there are currently proceedings underway about NS Power's cyber incident in the Spring of 2025 (Matters M12273 and M12600). While the Board approves the operational costs proposed in this GRA related to updating and operating the utility's technology, this approval does not foreclose a finding of imprudence in those cyber incident matters, if that is warranted, following the Board's review of NS Power's cyber preparedness and response.

[96] The Board has concerns about the transition of system operator staffing from NS Power to IESO Nova Scotia, including the potential for overlap and duplication. IESO Nova Scotia has forecast some transition costs for NS Power employees in its recent 2025-2026 (M12412) and 2026-2027 (M12663) revenue requirement applications. The Board will closely monitor this issue to ensure that ratepayers are not impacted by unnecessary costs incurred by these respective entities.

[97] However, the Board finds that NS Power has not demonstrated the need for its proposed increase in customer engagement and communications staff. First, the Board notes that NS Power appears to have been able to conduct its customer and community engagement with its present staffing complement, having conducted 65 community meetings recently across the province. The Board finds that adding more staff on these initiatives would be redundant.

[98] Secondly, and more importantly, despite the assertion that more staff is needed for customer engagement about issues like reliability, NS Power's witnesses confirmed that the company has not conducted formal surveying to measure customer satisfaction about reliability to establish a baseline against which to test its 5-Year Reliability Plan. The company confirmed it did not take any formal notes at its 65 community meetings to record the customers' expectations about reliability, although it did follow up on general action items with customers. However, company officials confirmed it will not measure customer satisfaction to determine the effectiveness of its Reliability Plan. Rather, NS Power is planning to rely on the achievement of performance standards and has designed its investments accordingly. It said measuring customer expectations "is not considered a consistent and repeatable reliability metric for benchmarking".

[99] Against this backdrop, the Board does not consider it reasonable to approve the company's request for additional staffing to conduct customer engagement, particularly about reliability issues, when it has no intention to measure customer satisfaction on the topic. Instead, it intends to base its conclusions about the success of the Reliability Plan on its performance metrics. Further, NS Power was unable to adequately explain how more costs were needed to support existing digital programs such as the My Energy Insights platform under the Grid Modernization and Customer Integration group. The utility also acknowledged in its testimony that it did not conduct any cost-benefit analysis about its customer engagement and communication initiatives or provide a plan outlining the measures or targets it hoped to achieve.

[100] To be clear, the Board considers it reasonable for the company to measure the success of its actions on issues like reliability by satisfactorily meeting its performance standards. That is likely one of the best methods to measure its success on such initiatives. However, the Board recognizes that customer engagement is beneficial. Nevertheless, an appropriate balance must be struck. Given the affordability concerns expressed in many letters of comment filed in this matter, the Board concludes that ratepayers consider the balance lies in not increasing engagement and communications costs at this time. Based on these letters of comment, customers do indeed care about reliability, but the Board concurs with the utility that achieving the performance metrics provides an objective measure of success on that initiative. Like many are forced to do in their daily lives, members of the public want NS Power to do everything possible to keep costs down where possible.

[101] The Board also finds that NS Power has not demonstrated that the addition of human resource staffing, and related costs, are warranted. The Board notes that the ScottMadden benchmarking study indicated that NS Power's OM&G costs per FTE were 21% higher than the industry group median (as of 2023). In questioning by the Board, the utility was unable to adequately explain why additional employees were required to support its Diversity, Equity and Inclusion programs. Further, in response to questions from the Board, NS Power acknowledged that it has not evaluated whether it is more economic to provide these services internally versus a third party or the shared services model it now has with its parent Emera. In the circumstances, the Board finds that the requested $3.4 million increase in 2026 (and $200,000 more in 2027) is not warranted.

[102] Based on the foregoing, the Board denies NS Power's proposed OM&G costs related to customer engagement, communications and human resource functions in the following amounts in the associated categories, with the reductions to be applied in each test year:

- Reliability Implementation (Energy Delivery) - $2,000,000;
- Communications and Public Affairs (Corporate Groups) - $2,000,000;
- Grid Modernization and Customer Integration (Customer Experience and Innovation) - $2,000,000; and
- Corporate Human Resources (Corporate Groups) - $2,000,000.

[103] The Board directs that the above $8,000,000 per test year reduction is to be reflected in a compliance filing. Further, the Board directs that these reductions are to be applied in addition to the OM&G reductions agreed to by NS Power in the settlement agreement. The Board notes that its directed reduction of OM&G costs in this decision does not deny NS Power's recovery of costs it has incurred. Rather, the effect of the Board's finding is to set the OM&G cost envelope that the utility is expected to operate within. The OM&G cost amount approved in this decision is what the Board has determined are reasonable costs for NS Power in 2026 and 2027.

[104] The Department of Energy submitted that the Board should order an independent savings review for NS Power under s. 34A of the *Public Utilities Act*, which would be conducted by a third party. The New Democratic Party and Liberal Party caucuses asked the Board to ensure that the costs requested by the utility are reasonable. They all highlighted affordability, as did most of the letters of comment received by the

Board. While the Board seriously considered the Department of Energy's request, it has decided, for reasons that follow, that such a review should not occur at this time.

[105] First, this general rate application has served as a thorough review of NS Power's operations. In terms of the Board's process, several expert consultants were engaged by Board Counsel to review different aspects of the application. This included Doane Grant Thornton, which conducted a thorough review of the OM&G costs, including a review of the methodology and assumptions used in the forecast of these costs. The Board also had the benefit of reviewing the benchmarking study prepared by NS Power's consultant, ScottMadden, which confirmed that the utility's OM&G costs compare favourably to its peer group and it "is in the first quartile for most metrics despite low usage per customer compared to peers". In one instance where the benchmark did not meet its peers (i.e., the human resource function), the Board has ordered a reduction in costs. Second, the application was preceded by lengthy negotiations between the utility and most of its customer groups, which resulted in a settlement agreement. Finally, the Board observes that different parts of NS Power's operations are reviewed on a regular basis, including the FAM audit every two years and the utility's annual performance standards report. In addition, there is a 5-year review of the performance metrics currently underway. There is also a separate review underway of NS Power's $1.3 billion 5-Year Reliability Plan. Also, since the last general rate application, the Board initiated a comprehensive inquiry under s. 30(5) of the *Public Utilities Act* into the extent, condition and value of the utility's property and assets. An independent study was conducted by Board Counsel consultant EA Technologies, who reviewed among other matters, the

utility's asset management practices. Accordingly, while the Board does not rule out a future savings review, it has decided not to order one at this time.

[106] Another issue raised at the hearing was the issue of executive compensation. While this is a matter relating to OM&G costs, it is dealt with separately in the next section of this decision.

[107] NS Power has forecast OM&G costs of $8.9 million at Trenton Unit 5 and Lingan Unit 2 during the test period due to a change in the retirement assumptions for these coal units and increased hours of operation. Given a number of issues related to these coal units, this item is also canvassed separately in this decision.

3.3.2 Executive Compensation

[108] The *Public Utilities Act* prohibits NS Power from recovering bonuses and incentives paid to an executive employee. Other remuneration may only be recovered as prescribed by regulation:

> **64B (8)** Nova Scotia Power Incorporated shall not recover from any rate, charge or fee approved by the Energy Board
>
> (a) any bonus or incentive compensation; or
>
> (b) any other remuneration, except remuneration that is prescribed by the regulations,
>
> paid to an executive employee of Nova Scotia Power Incorporated as identified in an approved report or determined by the Energy Board.

[109] The *Nova Scotia Power Incorporated Regulations,* NS Reg 231/2012, enacted on December 21, 2012, allow for the recovery of remuneration paid to executives as follows:

> **Salary and compensation recoverable from rates, charges or fees**
> **3** For the purpose of subsection 64B(8) of the Act, Nova Scotia Power Incorporated may recover the following remuneration from its rates, charges or fees approved by the Board:

> (a) for the Chief Executive Officer, no more than a salary equaling a 110% compa-ratio as provided for in the pay plan and no more than an additional 13% of the amount of that salary representing other benefits and compensation;
>
> (b) for each executive other than the Chief Executive Officer, no more than a salary equaling a 100% compa-ratio as provided for in the pay plan and no more than an additional 13% of the amount of that salary representing other benefits and compensation.

[110] The "pay plan" referenced in s. 3 of the regulations is the "Senior Officials Pay Plan approved by the Governor in Council by Order in Council 2007-85…as amended from time to time".

[111] By Order in Council 2023-138, dated May 9, 2023, the Governor in Council revoked the Senior Officials Pay Plan approved by Order in Council 2007-85 and approved a new Senior Officials Pay Plan. The new Senior Officials Pay Plan is materially different than the former plan.

[112] The former plan included two pay scales; one specifically designated for Associate Deputy Ministers and the other specifically designated for Deputy Ministers. Both scales on the former pay plan ranged from compa-ratios of 80% to 110%.

[113] The new Senior Officials Pay Plan includes five pay scales, all of which range from compa-ratios of 80% to 100%. None of these pay scales are specifically designated as applying to Associate Deputy Ministers, Deputy Ministers or a new class of Executive Deputy Ministers that was created around the same time that the pay plan was changed.

[114] In applying the *Nova Scotia Power Incorporated Regulations* to the new pay plan to determine the amount of executive remuneration it could recover through the rates that it charges to its customers, NS Power decided that the amount payable to executives other than the chief executive officer under s. 3(b) was the maximum amount payable

under the pay plan. NS Power calculated the amount recoverable for remuneration to its Chief Executive Officer as 10% more than the maximum amount payable under the new pay plan.

3.3.2.1 Findings

[115] Although the *Nova Scotia Power Incorporated Regulations* have not been amended and continue to refer to a repealed Order in Council, the *Interpretation Act* says the regulations continue to apply with reference to the replacement provisions relating to the same subject matter or to the repealed enactment as far as is necessary to give them effect:

> **Repeal and substitution by amendment or revision**
> **24 (1)** Where an enactment is repealed and other provisions are substituted by way of amendment, revision or consolidation,
>
> (b) a reference, in an unrepealed enactment to the repealed enactment, shall, as regards a subsequent transaction, matter or thing, be read as a reference to the provisions of the substituted enactment relating to the same subject-matter as the repealed enactment, but where there are no provisions in the substituted enactment relating to the same subject-matter, the repealed enactment shall be read as unrepealed as far as is necessary to maintain or give effect to the unrepealed enactment.

[116] The difficulty in this case is that, although the replaced provisions relate to the same subject matter, the pay plan is different enough that the regulations cannot be directly applied. At the same time, the pay scales in the former pay plan were also subject to periodic updates and, since the pay plan has been repealed, there have been no updates to the old pay scales. The guiding language in the *Interpretation Act* seeks to maintain or give effect to the unrepealed enactment.

[117] Under the former pay plan, NS Power was entitled to recover remuneration paid to its Chief Executive Officer at the maximum pay available to Deputy Ministers. As mentioned, NS Power's application of the new pay plan would allow the recovery of an

amount exceeding the maximum pay available to Deputy Ministers. As such, it is inconsistent with the previous intent. The maximum salary set out in the new pay plan is 100% of the SO5 scale. The Board finds that NS Power may recover this amount for remuneration paid to its Chief Executive Officer.

[118] Pending any amendments to the *Nova Scotia Power Incorporated Regulations*, the Board considers it appropriate to maintain the 10% differential between the remuneration allowed to be recovered for the Chief Executive Officer and other executive officers. The Board finds that NS Power may recover an amount equal to 90% of the SO5 scale for its other executive employees. NS Power is directed to make these changes in a compliance filing.

3.4 Depreciation

[119] Depreciation, in public utility regulation, is the loss in service value of an asset not restored by current maintenance, incurred in connection with the consumption or prospective retirement of the asset. As used in accounting, it is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Depreciation expense is an estimate of the consumption of the economic value of an asset over its expected service life. Assets with an expected service life greater than one year are typically capitalized and depreciated over their expected lives.

[120] Determination of an appropriate approach to depreciation requires significant judgement to be exercised by an expert in the selection of a depreciation procedure, method, and technique. To calculate depreciation expense, at least one procedure, one method, and one technique must be selected:

- Procedures are employed to systematically allocate an asset or assets into subgroups.

- The depreciation method determines how the depreciation expense will be allocated over the life of the asset. The simplest and most common example is straight-line depreciation, which provides for an even charge each year.
- Finally, a technique is selected to determine the specific asset life to be used in the depreciation formula. The two techniques most frequently employed by depreciation experts are the whole life and remaining life techniques. The whole life technique calculates depreciation expense over the entire life of the asset from inception to retirement. The remaining life technique calculates depreciation expense over the expected remaining life. Generally speaking, both techniques should arrive at the same level of depreciation expense, all else being equal.

[121] As it relates to regulation of depreciation, s. 38 of the *PUA* states:

> **Annual depreciation**
> **38** **(1)** Every public utility shall make provision for proper and adequate annual depreciation of its property and assets used and useful in furnishing, rendering or supplying each type or kind of service, and shall in respect thereof keep necessary and proper accounts.
>
> **(2)** Such annual depreciation shall be calculated by the straight line method or by such other method as the Board may from time to time prescribe.
>
> **(3)** Every public utility shall report to the Board the annual rates of depreciation from time to time applied to the several classes of property in such public utility.
>
> **(4)** The Board may ascertain and determine what are proper and adequate annual rates of depreciation of the several classes of property in any public utility, and such public utility shall thereupon and thereafter conform its depreciation account to the rates so ascertained and determined.
>
> **(5)** The Board may revise such rates of depreciation from time to time as it deems necessary or expedient.

Further, Sections 40 and 41 of the *PUA* state:

> **Regulations respecting depreciation**
> **40** The Board may also prescribe rules, regulations and forms of accounts regarding depreciation which a public utility is required to observe, carry into effect and follow.

Rates of utility to include allowance for depreciation
41 In fixing rates, tolls and charges to be paid to a public utility for any service, the Board shall include proper allowances for depreciation.

[122] NS Power owns significant assets, referred to as Plant, which were placed into service at different times. Due to the size and scope of the company's asset base, NS Power tracks its assets in pools at the mass property or location level. This methodology is standard in the electric utility industry, as tracking a significant number of assets on an individual asset basis is not practical and is cost prohibitive. NS Power's asset pools are depreciated over a period that approximates their estimated remaining useful lifespan. A fraction of each asset pool's original cost is treated as a depreciation expense each year until the asset investment and expected removal costs are fully recovered. Per the *PUA*, NS Power is permitted to recover its prudently incurred costs, which include depreciation costs over the estimated useful life of the assets. Depreciation expenses are included in customer rates, and the cost of the assets are thereby recovered from customers over the expected useful life of the assets.

[123] Depreciation expense for NS Power is comprised of both a depreciation and net salvage component. Depreciation recovers the original cost of any investment added into the utility's rate base, such recovery occurring over the expected useful life of the assets. Net salvage recovers the expected future costs to salvage and remove those assets, including any salvage proceeds, such recovery also occurring over the expected useful life of the assets.

[124] In its 2023-2024 general rate application, NS Power noted that a depreciation study would typically precede or coincide with a GRA process. However, prior to the 2023-2024 GRA, NS Power did not complete a depreciation study. NS Power stated the reason for this was the uncertainty surrounding the timing of retirement of the

coal plants having such a material impact on depreciation rates. As such, the company's depreciation rates had not been updated by way of a depreciation study since 2011 when intervenors and NS Power entered into a black box settlement agreement which was approved by the Board at that time. The black box agreement set depreciation rates to achieve an overall desired result of mitigating rate pressures without specifying the exact underlying means used to calculate the rates.

[125] As a result, in its *2023-2024 GRA* Decision, the Board directed NS Power to complete a depreciation study prior to filing its next GRA. NS Power complied with this directive by filing a new depreciation study as Appendix 8A [Exhibit N-7] in the current GRA. The depreciation study was completed by NS Power's consultant, Gannett Fleming.

[126] For most of NS Power's Plant accounts, the Gannett Fleming depreciation study, and the related proposed NS Power depreciation rates, are based on using the Equal Life Group (ELG) procedure, the straight-line method and the remaining life technique. For certain General Plant accounts, the proposed annual and accrued depreciation amounts are based on amortization accounting, which is discussed later in this decision.

[127] To meet federal and provincial decarbonization legislation, NS Power expects it will have to retire some of its existing coal-fired generating assets and associated marine unloading and fuel delivery facilities by 2030. However, NS Power has not yet fully recovered its investment in these assets, nor has it fully recovered the costs it will incur to decommission these facilities. While NS Power could seek Board approval to accelerate the recovery of depreciation expenses and decommissioning costs to match the remaining useful lives of the assets, doing so would cause a substantial increase in

rates. Therefore, to recover these energy transition costs in a more affordable manner, as part of its 2023-2024 GRA, NS Power proposed to transfer them to a regulatory asset, which is called a Decarbonization Deferral Account (DDA). To the extent that costs transferred to the DDA are not offset by governments (to recognize the various policy choices reflected in the laws leading to the premature retirement of assets and the broader social benefits from a decarbonized electricity system), they would be recovered from customers over an undetermined future period.

[128] In a settlement reached between NS Power and representatives of all its major customer classes, the parties agreed in principle to a DDA that was narrower in scope than originally proposed by NS Power in its 2023-2024 GRA. As part of this agreement, NS Power was to develop policies and procedures for this DDA through a consultative process after the general rate application. The Board agreed with this approach in its *2023-2024 GRA* Decision and approved the DDA in principle.

[129] In Matter M11220, NS Power filed a DDA Manual, which set out the policies and procedures it proposed to follow to account for the unrecovered net book value (NBV) of assets and unrecovered decommissioning costs transferred to the DDA for future recovery. In that matter, NS Power sought formal Board approval of the DDA, as outlined in its DDA Manual. In its decision for the matter (2024 NSUARB 67), the Board approved the DDA with modifications. As part of the current GRA proceeding, NS Power said it intends to securitize the net book value of the assets within the scope of the DDA. This issue is addressed in a subsequent section of this decision.

[130] In the DDA matter (M11220), the Board did not direct NS Power to accelerate depreciation of coal generation assets currently in-service or to accelerate

amortization of any of the retired assets that will be transferred to the DDA. Instead, the Board directed NS Power to continue using existing depreciation rates for these assets until its next GRA proceeding when a new depreciation study would be filed. In effect, the Board's decision approved the future transfer of costs to the DDA, but the amortization of those costs remained to be determined. Therefore, in the interim there would have been no change to the revenue required from customers upon transferring costs to the DDA.

[131] Further, in Matter M11220, NS Power noted if its next depreciation study were to include the company's thermal assets, it would effectively require the acceleration of depreciation of those assets in a manner sufficient to recover the unrecovered costs over the expected remaining useful lives. NS Power believed that the accelerated depreciation expense required to recover these costs over this period would introduce significant rate increases for customers in the near term. The company also noted that it was continuing to seek funding from the federal government for some of its decarbonization costs. As such, increasing the depreciation expense to recover the costs over the expected remaining useful lives of the assets would not allow for consideration of any federal funding that may be received. NS Power, therefore, proposed that the thermal assets to be transferred to the DDA be excluded from the company's next depreciation study. All other assets not included in the scope of the DDA would be considered within the company's upcoming depreciation study.

[132] The Board agreed with NS Power's proposed depreciation study approach in Matter M11220 (DDA Manual). However, given the relatively small undepreciated balances of the Trenton 5, International Coal Pier, and Steam General Plant assets, the Board noted potential merit in accelerating depreciation of these assets so that they are

fully depreciated upon retirement. Therefore, while not directing accelerated depreciation of those particular assets at that time, the Board directed NS Power to include these assets in its next depreciation study.

[133] In the current GRA, NS Power has included all assets within its updated depreciation study for information purposes. However, consistent with the Board's finding in Matter M11220, NS Power did not update the depreciation rates associated with the assets within the scope of the DDA. The assets include Point Aconi, Trenton (including units 5 and 6 and common Plant), the Point Tupper Marine Terminal, Sydney International Coal Pier, and Steam General Assets. These assets are all intended to be retired before 2030 and, as such, are within the scope of the DDA. As noted previously, and as addressed in a later section of this decision, NS Power intends to securitize these assets. NS Power's remaining thermal assets, including Lingan, Point Tupper, Tufts Cove and Port Hawkesbury Biomass, are currently envisioned to provide service beyond 2030. They have, therefore, been included in NS Power's updated depreciation study complete with updated depreciation rates.

[134] The proposed depreciation rates in the updated depreciation study would result in NS Power having an annual depreciation expense of $385.2 million when applied to depreciable Plant balances as of December 31, 2023. The depreciation rates developed from NS Power's updated depreciation study, with consideration of the settlement agreement, are provided per asset account in Appendix "A" of the settlement agreement. The depreciation rates resulting from consideration of the settlement agreement produce an annual NS Power depreciation expense of $365.7 million when applied to depreciable Plant balances as of December 31, 2023. A summary table of

depreciation rates and expense resulting from the settlement agreement is presented in Figure 8-1 of the GRA, and reproduced as follows:

Function	GBV- Studied Plant (December 31, 2023) ($)	Accrual Rate	Total Accrual Amount ($)
Steam Production	2,616,967,386	6.47	169,219,037
Hydro Production	614,021,913	2.08	12,801,477
Solar	1,582,854	3.89	61,606
Other Production	492,589,726	4.50	22,182,232
Transmission	1,254,616,801	2.70	33,825,592
Distribution	2,137,686,386	3.45	73,717,352
General	740,996,013	7.27	53,887,702
Total	**7,858,461,079**	**4.65**	**365,694,997**

[Exhibit N-3, pp. 40-41]

[135] The figures in the table above include annual accruals calculated for all thermal assets, including those within the scope of the DDA. However, NS Power is not proposing to increase the depreciation rates for the assets included within the scope of the DDA, as the company intends to securitize those assets. This is summarized in the following table:

Function	GBV- Studied Plant (December 31, 2023) ($)	Accrual Rate	Total Accrual Amount ($)
Steam Production	2,616,967,386	2.62	68,461,258
Hydro Production	614,021,913	2.08	12,801,477
Solar	1,582,854	3.89	61,606
Other Production	492,589,726	4.50	22,182,232
Transmission	1,254,616,801	2.70	33,825,592
Distribution	2,137,686,386	3.45	73,717,352
General	740,996,013	7.27	53,887,702
Total	**7,858,461,079**	**3.37**	**264,937,219**

[Exhibit N-3, p. 41]

[136] Applying the proposed depreciation rates in the preceding Table to forecast monthly balances of depreciable Plant throughout the test period results in a forecast depreciation and accretion expense of $282.4 million in 2026 and $300.8 million in 2027.

If securitization of the assets included within the scope of the DDA had not been assumed by NS Power in its application, the depreciation and accretion expense to be paid by ratepayers would have increased annually by $26.6 million, resulting in totals of $309.0 million in 2026 and $327.4 million in 2027.

[137] In 2026, the depreciation and accretion expense is forecast to increase by $2.5 million over the 2024 GRA Compliance Filing. In 2027, the depreciation and accretion expense is forecast to increase by $18.4 million from the 2026 forecast amount. These increases result from updated depreciation rates and capital additions to Plant in service, as filed in the approved Annual Capital Expenditure Plans (ACE) and other capital expenditures approved by the Board. NS Power's average NBV was $4.456 million in the 2024 GRA Compliance forecast. In the updated test period forecast, the NBV has increased to $4.895 million in 2026 and $5.186 million in 2027.

[138] Dustin Madsen of Emrydia Consulting Corporation was engaged by Board Counsel to provide expert analysis, recommendations and testimony about NS Power's depreciation practices, including reviewing and assessing Gannett Fleming's depreciation study and proposed depreciation rates.

3.4.1 Settlement Agreement Reduction in Depreciation and Accretion Expense

[139] As noted above, the depreciation rates from the settlement agreement, result in annual NS Power depreciation expense being approximately $19.5 million lower than that calculated by the Gannett Fleming study, when applied to depreciable Plant balances as of December 31, 2023. This reduction results from changes to a) some of the estimated net salvage costs and rates in the Gannett Fleming study and b) some of the estimated asset service lives in the Gannett Fleming study. The Board must determine

whether these changes and the related reduction in depreciation and accretion expense are appropriate.

3.4.1.1 Net Salvage Costs

[140] Depreciation expense for NS Power includes both a depreciation and net salvage component. Net salvage recovers the expected future costs to salvage and remove/decommission assets, including any salvage proceeds. Gannett Fleming's depreciation study uses the Traditional Method for recovery of net salvage costs. This method of recovering net salvage costs embeds the recovery of net salvage costs over the life of the assets based on the approved depreciation parameters. The net salvage parameter in this case is expressed as either a positive or negative percentage based on the original cost of the asset.

[141] In his evidence, Mr. Madsen stated that the Traditional Method is the most technically correct and reasonable method of recovering net salvage costs from customers. He noted that linking the recovery of the cost to the depreciation of the assets ensures that the costs to salvage those assets are recovered over the lives of the same assets. Thus, it similarly ensures that the customers who benefit from the currently installed assets pay to remove those assets.

3.4.1.1.1 Production Plant

[142] As it relates to its generation assets, NS Power's depreciation study requires it to estimate the future cost of decommissioning its generation sites, as depreciation rates are generally set to recover the unrecovered decommissioning costs over the estimated remaining useful lives of the assets. In its current depreciation study, NS Power's net salvage estimates for production Plant reflect estimated

decommissioning costs associated with each generating station, including its hydro systems, based on site-specific decommissioning studies for each location.

[143] For Steam and Other Production Plant, the decommissioning studies were conducted by Stantec, Inc., an international engineering consulting firm. For Hydro Production Plant, the decommissioning studies were conducted by Hatch Ltd., a global, multidisciplinary management and consulting engineering company; Boreas Heritage Consulting Inc. reviewed archaeological costs; and J.B. Yates Engineering Limited reviewed partial decommissioning costs. The Hatch and Boreas studies were filed in this Matter in Exhibit N-7, while the Yates report was filed as Undertaking U-10.

[144] Generally, the collection of net salvage values in rates is based on current dollars at the time of the depreciation study and then inflated forward to the future years in which the costs are forecast to occur. However, per the GRA settlement agreement, decommissioning cost estimates for all production Plant have been calculated in 2024 dollars only (i.e., inflation to the forecast years of decommissioning has been removed). The settlement agreement also removes contingency costs from all production Plant decommissioning cost estimates. These settlement agreement changes result in NS Power’s proposed production Plant depreciation rates being lower than those calculated in the Gannett Fleming depreciation study.

[145] For NS Power’s Hydro Plant, the hydro decommissioning studies provided decommissioning cost estimates for full and partial decommissioning. A summary of these costs was presented in Exhibit N-7, Appendix 8E. Gannett Fleming’s depreciation study and NS Power’s proposed depreciation rates have been set using hydro decommissioning estimates based on the partial decommissioning scenario. Estimated

costs for partial decommissioning include removal and site remediation of buildings and structures, turbines, generators and auxiliaries, electrical services, and common services. The partial decommissioning estimated costs exclude costs for removal of structures required for water management, such as dams, spillways and gates.

[146] NS Power estimated the future cost to partially decommission the Wreck Cove, Mersey and Tusket hydro systems as $27 million, $228 million and $293 million, respectively, for a total of $548 million. However, given the magnitude of these costs and the broad policy, societal, and environmental considerations and factors that would need to be considered to decommission such sites, NS Power believes that removing these costs from customer rates, at this time, is a reasonable approach to balancing cost recovery and rate pressure for customers. As such, Gannett Fleming's depreciation study and NS Power's proposed depreciation rates further exclude any decommissioning costs for the Wreck Cove, Mersey and Tusket hydro systems. NS Power is only proposing to do so to the extent that it does not prejudice its ability to recover such costs in the future should they be prudently incurred.

[147] Finally, as per the GRA settlement agreement, archaeological reconnaissance costs have been removed from NS Power's hydro Plant partial decommissioning cost estimates. This settlement agreement change results in NS Power's proposed hydro Plant depreciation rates being further lowered from those calculated in the Gannett Fleming depreciation study.

3.4.1.1.2 Transmission, Distribution and General Plant

[148] Gannett Fleming's net salvage estimates for transmission, distribution and general Plant accounts were based in part on historical data compiled for the years 1993 through 2023. The net salvage estimates by account are expressed as a percent of the

original cost of Plant retired. Further, the historical net salvage data for the years 1976 through 1992 were available only in total for each of the transmission, distribution and general Plant functions. Therefore, though not considered as the statistical basis for the net salvage estimates, the data provided Gannett Fleming with some probative value.

[149] Specifically for NS Power's transmission and distribution Plant, the net salvage estimates were developed based primarily on Gannett Fleming's judgement, which considered a number of factors. The primary factors included an analysis of historical data; the net salvage characteristics of other electric utility properties; a knowledge of management's plans and operating policies; and net salvage estimates from previous studies of NS Power and other electric companies.

[150] The GRA settlement agreement made the following changes to Gannett Fleming's recommended net salvage rates:

- Reduced the Net Salvage Rate for Account 354.00 - Transmission Towers and Fixtures from 40% to 20%,
- Reducing the Net Salvage Rate for Account 355.00 - Transmission Poles and Fixtures from 60% to 20%, and
- Reducing the Net Salvage Rate for Account 365.00 - Distribution Overhead Conductors and Devices from 30% to 26%.

These settlement agreement changes result in NS Power's proposed depreciation rates for the related accounts being lower from those calculated in the Gannett Fleming depreciation study.

3.4.1.2 Estimated Average Asset Service Lives

[151] Key elements influencing the determination of depreciation expense are average asset service lives and survivor curves. Survivor curves (also referred to as Iowa curves) are a series of curves that have been developed to provide a statistical fit to the various lives of assets assessed in a depreciation study. These curves are broadly accepted and tested in North America and have been consistently accepted by regulators for determining reasonable depreciation expense. A survivor curve illustrates over time the percentage of the assets that are expected to continue to be in service. The selection of a specific survivor curve is informed by a depreciation expert's judgement regarding the visual and mathematical fit to a set of data points, peer data and discussions with utility company management and operations staff.

[152] In Gannett Fleming's depreciation study, the average asset service lives were estimated based on compiling historical data for the Plant accounts, analyzing this data through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group based on interpretations of the historical data analyses and the probable future.

[153] Gannett Fleming's service life estimates were based on informed judgement which considered a number of factors. The primary factors included statistical analyses of data; current company policies and outlook as determined during field reviews of the property and other conversations with management; and the survivor curve estimates from previous studies and other electric companies.

[154] The GRA settlement agreement made the following changes to Gannett Fleming's estimated average asset service lives:

- Increasing the estimated service life of Account 353 – Transmission Station Equipment from Survivor Curve 45-R2.5 to Survivor Curve 48-R2.5, which represents a service life increase of three years, and
- Increasing the estimated service life of Account 390.10 – General Plant Structures and Improvements from Survivor Curve 42-R2.5 to Survivor Curve 43-R3, which represents a service life increase of one year.

[155] These settlement agreement changes result in NS Power's proposed depreciation rates for the related accounts being lower than those calculated in the Gannett Fleming depreciation study.

[156] In his evidence, Mr. Madsen took issue with the recommended survivor curve for Account 353. As an alternative, he recommended a 50-R2.5 survivor curve for this account. This is discussed in more detail in section 3.4.3 of this decision. Mr. Madsen also recommended no change from the 42-R2.5 survivor curve for Account 390.10.

3.4.1.3 Findings

3.4.1.3.1 Exclusion of Wreck Cove, Mersey and Tusket Hydro System Decommissioning Costs from Proposed Depreciation Rates

[157] NS Power believes that removing the Wreck Cove, Mersey and Tusket hydro system decommissioning costs from customer rates, at this time, is a reasonable approach to balancing cost recovery and rate pressure for customers. The utility further emphasized that decommissioning these systems would entail extraordinary environmental, cultural, commercial, and social impacts, including large-scale habitat disruption, exposure of extensive shorelines, risks to hundreds of archaeological sites, loss of waterfront property and associated economic value, and potential impacts on potable water supplies. In addition, Wreck Cove plays a critical role in system reliability,

providing peak capacity, operating reserves, black start capability, and support for integrating renewable generation, making decommissioning particularly unlikely in the foreseeable future.

[158] Mr. Madsen identified a concern related to NS Power's proposed exclusion of these hydro system decommissioning costs from proposed depreciation rates. Specifically, he stated that under the proposal, future customers may be required to either pay a disproportionate amount of the costs to salvage the assets while they are still in use, or customers that no longer benefit from those assets will be required to pay for those assets. In effect, the proposal presents an intergenerational equity concern.

[159] This notwithstanding, Mr. Madsen supported NS Power's proposal to exclude these decommissioning costs from the proposed depreciation rates. In coming to this determination, he stated:

> … it is important to remember that the collection of net salvage in rates is based on a forward-looking estimate of the cost to salvage the installed assets. That estimate is often based on historical costs to salvage assets, inflated forward to the future years the costs will be incurred. The issue in this case as noted by NS Power in its Application, is that there is significant uncertainty whether the costs will actually be incurred. Indeed, having reviewed the detailed salvage studies and the policy, societal, and environmental reasons for why full salvage of the installed assets would not be in the public interest, I agree that the likelihood that the assets will be fully salvaged is low. [Emphasis added]
>
> [Exhibit N-34, pp. 111-112]

[160] In its response to NSEB IR-85, NS Power stated that it shared the intergenerational equity concern related to removing Wreck Cove, Mersey and Tusket hydro system decommissioning costs from proposed depreciation rates. However, until there is greater certainty about whether these costs will occur, the company believes the proposed approach to remove them from revenue requirement is a measured and responsible approach that helps to ensure rates are just and reasonable.

[161] Per NS Power's *2025 10-Year System Outlook Report* (Matter M12386), the Board notes that Wreck Cove is NS Power's largest hydro system. It has the ability to quickly provide 212 MW of peak capacity from two operating units and average annual generation of 300 GWh (soon to increase to 315 GWh). This represents approximately 8% of NS Power's forecast 2035 system peak, and roughly 3% of NS Power's forecast 2035 net system requirements. As NS Power noted, Wreck Cove also plays a critical role in providing required operating reserves, black start capability, and support for integrating renewable generation. In this context, the Board agrees with NS Power and Mr. Madsen that Wreck Cove is likely to be maintained indefinitely. Therefore, for the purposes of the current GRA, the Board finds that it is appropriate to exclude Wreck Cove decommissioning costs from the proposed depreciation rates.

[162] The Mersey Hydro System has a capacity of 42.5 MW, and an annual contribution of approximately 220 GWh toward NS Power's renewable energy targets. As noted in NS Power's 2026 ACE Plan, NS Power's 2020 Integrated Resource Plan (IRP) analysis compared the cost of rebuilding Mersey versus decommissioning it and replacing its energy and capacity contributions with alternative resources. Across all scenarios, redeveloping Mersey was more economic than decommissioning. The 2023 Evergreen IRP process reaffirmed these findings. The 2025/2026 IRP will provide an updated framework for evaluating the Mersey system, incorporating refreshed assumptions on load growth, emissions targets, resource costs and system integration. No final decisions on decommissioning or redevelopment of the Mersey system will be made until direction is received from the 2025/2026 IRP. With this in mind, the Board finds that it is appropriate to exclude Mersey decommissioning costs from the proposed depreciation rates for the

purposes of the current GRA. This can be reconsidered for NS Power's next depreciation study, should the 2025/26 IRP determine that decommissioning of Mersey is the preferred option.

[163] The Tusket system has a total capacity of 2.7 MW, and annual generation of approximately 12,000 MWh. This system is small compared to Mersey, and very small compared to Wreck Cove. As such, it may be questionable whether future refurbishment of this system is favourable compared to decommissioning and replacement with other less expensive renewable generation. However, the Board is aware that in the near term, NS Power intends to file an updated capital approval application for the Tusket Main Dam refurbishment. At that time, the decision to proceed with refurbishment or decommissioning will be tested by the Board. In the interim, for the purposes of the current GRA, the Board finds that it is appropriate to exclude Tusket decommissioning costs from the proposed depreciation rates.

[164] As noted previously, NS Power is only proposing to exclude decommissioning costs for the Wreck Cove, Mersey and Tusket hydro systems from customer rates to the extent that it does not prejudice its ability to recover such costs in the future should they be prudently incurred. The Board approves the exclusion of these costs for the 2026 and 2027 test years; however, its decision is limited to those years. How NS Power proceeds after the test years may be subject to further review.

[165] The above notwithstanding, the Board takes note of Mr. Madsen's evidence where he states NS Power's change in approach to recovering net salvage costs for these assets warrants that the company undertake an effort to fully reconcile all net salvage and actual salvage costs that have been recovered and paid for by customers. He

indicated that this information is important as NS Power will continue to seek to recover certain salvage costs for these assets and it is critical for parties to understand how much has been collected to date for the final (or terminal) salvage of the assets. He therefore recommended that NS Power provide a reconciliation showing the annual collection of interim and final net salvage in rates since the date the assets were installed. He also recommended that this same information be presented for actual interim salvage costs that have been incurred each year for each of the hydro assets where NS Power has proposed to cease collection of the final net salvage costs for the assets.

[166] During the hearing, NS Power was asked if it could provide this information. In response, Craig Flemming, Senior Director of Finance for NS Power, indicated that the utility has only been collecting the data required to facilitate the reconciliations recommended by Mr. Madsen since 2009. As such, he stated that the company could provide the information recommended by Mr. Madsen from 2009 onwards. The Board agrees with Mr. Madsen's recommendations and directs NS Power to provide this information from 2009 onwards in its next depreciation study filed with the Board.

3.4.1.3.2 Adjustments to Net Salvage Rates

[167] Mr. Madsen completed a detailed review of the net salvage rates proposed in Appendix "A" of the settlement agreement. Based on this review, Mr. Madsen did not recommend any changes to the proposed net salvage rates. Mr. Madsen stated that there were two primary reasons he reached this conclusion. First, he noted that while some of the proposed net salvage rates may be over or understated, there does not appear to be a clear directional bias in the proposed rates. In effect, he believes that the proposed net salvage rates are within a range of reasonably expected results.

[168] Second, as will be discussed in following sections of this decision, Mr. Madsen has recommended that NS Power adopt the Average Life Group (ALG) depreciation procedure, and that the company make changes to the estimated service lives for several of its asset accounts. If these recommended changes were to be directed by the Board, Mr. Madsen stated that they would result in a gradual and moderate, but not inconsequential, reduction of depreciation expense for NS Power. As such, he recommended that the Board allow the "dust to settle" from those proposed changes and then potentially reassess the proposed net salvage rates as part of NS Power's next depreciation study.

[169] For the most part, the Board agrees with Mr. Madsen's conclusion that the proposed settlement agreement net salvage rates are within a range of reasonably expected results. The Board's agreement applies to all Plant accounts for which settlement agreement adjustments were not made to Gannett Fleming's estimated net salvage rates, and to the three transmission and distribution Plant accounts to which net salvage rates were adjusted in the settlement agreement. The Board finds the proposed net salvage rates for those Plant accounts to be acceptable. However, for the reasons that follow, the Board has some concerns about the settlement agreement net salvage rate adjustments for Power Production Plant accounts.

[170] The settlement agreement removes archaeological reconnaissance costs from hydro system decommissioning estimates. Based on NS Power's response to NSEB IR-85, this results in a significant reduction in the related decommissioning cost estimates (when Mersey, Tusket and Wreck Cove are excluded) compared to the estimates upon which Gannett Fleming based its study. The Boreas archaeology report included in

Exhibit N-7 states that in developing archaeological cost estimates associated with decommissioning NS Power's hydro systems, it assumed archaeological reconnaissance would be undertaken for all systems "to identify and delineate real areas exhibiting high archaeological potential, to confirm the results of the background research and archaeological potential modelling, and to document any archaeological resources identified during the background study and/or encountered during the visual assessment, as per existing standards and best practice". In the event that an area was considered to exhibit low archaeological potential, archaeological monitoring could be recommended for the purpose of obtaining additional information and/or to confirm the results of the assessment.

[171] In the case of hydro system partial decommissioning, where removal of structures required for water management is not required, perhaps the related archaeological potential is likely low. If so, an assumption that archaeological reconnaissance costs would not be required might make some sense. However, beyond the settlement agreement itself, there is nothing in the current evidentiary record before the Board to provide justification for such an assumption. Further, Gannett Fleming certainly included archaeological reconnaissance costs in its study to estimate appropriate depreciation rates. This suggests that Gannett Fleming, as NS Power's depreciation expert, believes it is appropriate to include these costs in the related decommissioning cost estimates.

[172] As it relates to the settlement agreement adjustment to remove contingency costs from generation decommissioning cost estimates, the Board refers to NS Power's 2018 Hydro Asset Study (HAS) (filed in NS Power's 2019 ACE Plan proceeding, Matter

M08984). The 2018 HAS is the information upon which Hatch relied upon to update its hydro system decommissioning cost estimates in the current GRA. On page 73 of Appendix B of the 2018 HAS, Hatch states “Contingencies are included in the estimates to provide for costs which cannot be specifically identified at the time of estimate preparation, but which can be foreseen with varying degrees of probability throughout the life of the project – i.e., contingencies are costs that are expected to be incurred”. Based on this statement alone, the Board sees no valid reason why contingency costs should be removed from generation decommissioning cost estimates.

[173] In addition, the Board notes that the thermal Plant, gas turbine Plant, wind production Plant and marine terminal and associated infrastructure decommissioning cost estimates included in the Gannett Fleming depreciation study were developed to an Association for the Advancement of Cost Engineering (AACE) Class 4 level. This Class level aligns with a level of project definition between 1% and 15%. As such, the related decommissioning costs estimates include a contingency allowance of 20% for wind production Plant and 25% for the others. Similarly, the hydro system partial decommissioning cost estimates included in the Gannett Fleming depreciation study were developed to a Class 5 level (per the Yates report filed as Undertaking U-10). This level estimate is typically based on a 0% to 2% level of project definition. The document upon which those cost estimates were developed does not identify the amount of contingency included in the estimates.

[174] Beyond the settlement agreement itself, there is nothing in the current evidentiary record before the Board to provide support to exclude costs of such magnitude from generation Plant decommissioning cost estimates. Further, Gannett Fleming

certainly included contingency costs in its study to estimate appropriate depreciation rates. This suggests that Gannett Fleming, as NS Power's depreciation expert, believes it is appropriate to include these costs in the related decommissioning cost estimates.

[175] The settlement agreement also reflects forecast decommissioning costs for all generation Plant in 2024 dollars (i.e., it removes the effect of inflation to forecast years of decommissioning). In his evidence, Mr. Madsen notes that the collection of net salvage in rates is based on a forward-looking estimate of the cost to salvage the installed assets. That estimate is typically based on historical costs to salvage assets, inflated forward to the future years the costs will be incurred. As stated on page IV-3 of Gannett Fleming's depreciation study, this is, in fact, the methodology employed by Gannett Fleming in the current GRA. This suggests that Gannett Fleming, as NS Power's depreciation expert, believes it is appropriate to include these inflation costs in the related decommissioning cost estimates. Further, beyond the settlement agreement itself, there is nothing in the current evidentiary record before the Board to provide support to exclude inflation costs beyond 2024 from generation Plant decommissioning cost estimates.

[176] The Board also has other concerns about the settlement agreement adjustments made to net salvage rates for NS Power's production Plant assets. First, as identified in Mr. Madsen's evidence, NS Power currently has a significant reserve deficiency in its production Plant asset accounts. A reserve deficiency exists when the book accumulated depreciation reserve balance is below the calculated accumulated depreciation reserve balance. The book accumulated depreciation reserve balance reflects the amount of depreciation already collected in rates from customers, while the calculated accumulated depreciation reserve balance is the amount that NS Power

should have recovered in rates based on the applied depreciation and net salvage parameters.

[177] As identified by Mr. Madsen, NS Power has a $572,266,492 depreciation reserve deficiency in its production Plant accounts. This suggests that depreciation rates for production Plant assets have already been too low in the past. This difference will eventually need to be recovered from future customers, putting further upward pressure on rates in later years and potentially leading to intergenerational inequity. This is a concern.

[178] The Board is also concerned about the hydro system decommissioning cost estimates included in the depreciation study. As noted previously in this decision, Gannett Fleming's depreciation study and NS Power's proposed depreciation rates have been set using hydro decommissioning cost estimates based on partial decommissioning rather than full decommissioning. NS Power believes this approach is measured and responsible and helps to ensure rates are just and reasonable until there is greater certainty as to whether there is a realistic possibility that decommissioning of the assets, whether full or partial, will actually occur. The Board does not necessarily disagree with this premise. However, even under this approach, the Board is concerned about the accuracy of the hydro system partial decommissioning cost estimates upon which the depreciation study relied.

[179] NS Power stated in response to NSEB IR-85 that its proposed approach represents the lowest estimate of partial decommissioning costs, as it does not include any work on the civil aspects of the hydro systems, which tend to drive most of the decommissioning costs. This is concerning to the Board for two reasons. First, as the

“lowest estimates”, the partial decommissioning costs included in the depreciation study represent the minimum that current customers will pay for the related net salvage values. If partial decommissioning of any of NS Power’s hydro facilities is eventually undertaken, it is very likely that these “minimum” decommissioning costs will increase. If this occurs, the increased costs will be pushed on future ratepayers, resulting in intergenerational inequity and perhaps future ratepayers paying decommissioning costs for assets they may have never used.

[180] Second, the Board notes that the partial decommissioning cost in the Yates report for the Tusket hydro system was approximately $1.9 million. The Yates report is the document upon which NS Power relied to develop its hydro system partial decommissioning cost estimates for inclusion in its depreciation study. However, because of work currently being undertaken on the Tusket hydro system, NS Power developed a more detailed and updated partial decommissioning cost estimate for Tusket. This updated estimate is roughly $127.5 million, which is significantly higher than the estimate from the Yates report. This was discussed further during the hearing:

> **Q.** (Murphy) …There's a big gap in the difference between -- let's just talk about the partial decommissioning costs. There is a big gap in the partial decommissioning costs for Tusket that Nova Scotia Power has developed versus the partial decommissioning costs that the [Yates] Report developed.
>
> I can call up the page if you'd like from the [Yates] Report to show Tusket, but it's a big gap. Do you agree?
>
> **A.** (MacIntosh) Yes, sir. And I can elaborate on why that is.
>
> **Q.** Well, I — just let me ask my question first and then ——
>
> **A.** (MacIntosh) Sure.
>
> **Q.** —— you'll see where it goes.
>
> Given that there's a big gap in Tusket between the decommissioning costs that Nova Scotia Power says it's advanced further than all the other costs, how can the Board have any confidence that those other decommissioning costs that are based on the [Yates] Report are appropriate or accurate enough to include in depreciation rates?

> **A.** (MacIntosh) Yes, it's a good point, Mr. Murphy. We did respond to this in IR-85, Part B that's in 27, Board IR, it's that same IR we had up, but we did recognize that the partial decommissioning costs that were included would be the minimum. So in the terms of Tusket, the scope of work for partial decommissioning was a different scope of work than we would have included in the scope of work for the partial decommissioning estimates of the other sites.
>
> So in terms of Tusket, the Tusket partial decommissioning estimate includes civil works, so includes work with water retaining structures, dispatches associated. The partial decommissioning estimates that we've submitted for the GRA purposes have a much minimum — a smaller scope of work.
>
> So your point is that, yes, it is smaller based on the scope of work that we did include.
>
> **Q.** So it'd be fair to say that the partial decommissioning costs for these other smaller assets would probably be a lot higher.
>
> **A.** (MacIntosh) If there was the requirement to expand the scope of work beyond the generator and the turbine and the runner. So if you could just decommission the site and the powerhouse without having to expand the footprint in the civil structures, then it could be reasonable. But if there was a requirement to expand the scope like Tusket, then obviously the investment would be higher.
>
> [Transcript, January 7, 2026, pp. 299-302]

[181] The Board understands the position expressed by NS Power during this exchange. However, given the experience at Tusket, the Board takes no comfort that other hydro systems will not encounter similar issues as Tusket under a decommissioning scenario. In that event, partial decommissioning costs for other hydro systems would be much higher than the costs currently included in NS Power's depreciation study. Again, the increased costs would be pushed on future ratepayers, resulting in intergenerational inequity and perhaps future ratepayers paying decommissioning costs for assets they may never have used.

[182] Another issue of concern to the Board relates to the aftermath of a partial decommissioning scenario. In the partial decommissioning approach put forward by NS Power, structures required for water management, such as dams, spillways and gates, would remain in place while the related hydro system would no longer generate power. These structures would continue to incur sustaining capital upgrade costs and continued

maintenance costs to ensure they remain safe. However, the assets themselves would no longer be considered “used and useful” from a ratepayer perspective. This raises the issue of who would be responsible for the on-going costs for assets no longer used and useful – ratepayers, NS Power shareholders or others who may benefit from maintaining this infrastructure? This was discussed during the hearing:

> **Q.** (Murphy) Would it be fair to say in the partial decommissioning scenario that there would be ongoing O&M costs and capital sustaining costs associated with any of the assets that are not decommissioned, particularly the dams, spillways, water retaining structures?
>
> **A.** (Williams) Yes, even if there wasn't any generation coming from those sites, Nova Scotia Power, if they owned those assets were still required to maintain the safe operation of those assets and there would be an OM&G costs associated with it.
>
> **Q.** And ongoing sustaining capital costs as well.
>
> **A.** (Williams) Correct.
>
> **Q.** And would you agree that once those assets are partially decommissioned they are no longer used and useful?
>
> **A.** (Williams) Yes, I think generally speaking, sir, we would agree with that, and I think that gets to the point of where we're going with some of these hydro discussions, that there needs to be a broader discussion of how these are handled in the future, and if they are to be decommissioned whose responsibility ultimately that would be both as in the decommissioning phase of them, but also after that in maintaining them.
>
> So I would agree that there’s a — an inconsistency, perhaps, with traditional or normal utility practice if those were to be partially decommissioned and retained as assets of the utility.
>
> **Q.** Right. If they were no longer used and useful and there was any further costs, ongoing O&M costs, capital sustaining costs as a no longer used and useful asset, any of those costs would typically be the responsibility of Nova Scotia Power and shareholders. Correct?
>
> **A.** (Williams) And that's why I say I think traditionally our normal course, but I think there would need to be a recognition that those assets are not the same as -- and this is the discussion I think mainly with some of the larger assets, where if those structures were to be retained whose responsibility ought those to be. It's not the same as a generation asset in the middle of a field where you just reclaim it and it becomes brownfield and you can walk away from it, or sell the land, it's different than that. I think there would need to be a broader discussion of how those assets were handled.
>
> **Q.** So you're suggesting that perhaps ratepayers should be on the hook for some costs associated with assets that they get absolutely no benefit from.
>
> **A.** (Williams) So I wouldn't put it like that, sir, but that probably doesn't surprise you. I think in that scenario there would be a benefit to ratepayers, which is we would be doing

> something that, you know, otherwise if we fully decommissioned it, the partial decommissioning would be a lower cost to customers. So there would be a benefit to customers, but not in the sense of it's providing a service to customers, but the benefit would be there.
>
> And I think when I say, you know, a broader discussion, I think it's a broader discussion within the province of how those would be handled if we were in a position where we were partially decommissioning assets, and to your point, which is a good point, no longer producing electricity or providing a traditional utility function, but there would be a benefit.
>
> [Transcript, January 7, 2026, pp. 305-308]

[183] Finally, the Board understands NS Power's rationale for including partial rather than full hydro system decommissioning costs in its depreciation study. Whether full decommissioning is even possible or feasible at some of NS Power's hydro systems is uncertain. Nonetheless, there is no certainty that partial decommissioning for some systems will prove to be the preferred choice over full decommissioning. In Undertaking U-11, NS Power provided a copy of its depreciation calculations under the assumption that full decommissioning of hydro systems would be required. The Undertaking reveals that under a full decommissioning scenario for all hydro systems excluding Mersey, Tusket and Wreck Cove, depreciation rates would be approximately $65 million higher than those in the settlement agreement.

[184] In the Board's opinion, the settlement agreement adjustments to production Plant net salvage rates appear simply as a means to reduce the effect of depreciation on revenue requirement in the short term, which by implication is at the expense of future customers. The self-interest of some parties to the agreement in deferring costs to future customers is understandable, but it does create intergenerational inequity concerns.

[185] As identified in NS Power's response to NSEB IR-87, the net effect of settlement agreement adjustments to NS Power production Plant net salvage rates results in a revenue requirement reduction of $10.6 million in 2026 and $11.7 million in

2027. If the Board were not to approve these adjustments, it would result in an average rate increase of roughly 0.5% to the rates filed in the settlement agreement. This would be an unfortunate impact, but the Board believes it could address intergenerational concerns.

[186] The Board notes that implementation of other depreciation related issues it is addressing in this decision could more than offset this increase. However, all of this must be considered in the context of the status of NS Power's intended securitization of assets within the scope of the DDA. With securitization remaining uncertain, as explained later in this decision, a change in NS Power's proposed depreciation expense from what is proposed in the application would affect its funds from operations: debt credit metrics even further. This could increase the risk of having credit rating agencies lower NS Power's credit rating to "junk" status. As noted in Morrison Park's evidence, this would have serious long-term cost consequences resulting in higher costs for ratepayers.

[187] Further, at this point there remains considerable uncertainty related to current decommissioning cost estimates for these assets. This is particularly true for NS Power's hydro assets, where it remains uncertain whether these assets will eventually undergo partial or full decommissioning, or even be decommissioned at all. As noted above, the Board has directed NS Power to address this issue before its next GRA. Given this uncertainty, the potential impact, if any, of assumed production Plant net salvage rates on future ratepayers is unclear. In this circumstance, the Board accepts the proposed settlement agreement adjustments to net salvage rates for NS Power's production plant accounts. Therefore, for the purposes of the current GRA, the Board also

finds that the proposed settlement agreement changes to the net salvage rates and decommissioning costs are appropriate.

[188] This notwithstanding, as NS Power rightly noted in its closing submissions, there currently remains no settled policy or a multi-stakeholder framework for determining whether, when, or how full or partial decommissioning of hydro facilities should occur, nor who would ultimately bear responsibility. NS Power further stated:

> … NS Power views the present proceeding as a necessary first step in advancing the conversation of the future of hydro in the province and the Company acknowledged its responsibility to initiate a broader, structured discussion involving regulators, government, and other relevant stakeholders. At the same time, the Company was clear that neither the outcome nor the timeline of that process is within its sole control. Further, in the Nova Scotia Independent Energy System Operator-led Integrated Resource Plan (IRP), NS Power's existing hydroelectric units will be evaluated based on historical hydrology, operational and environmental constraints, physical limitations, and their energy and capacity contributions which will help inform this important discussion.
>
> In these circumstances, NS Power submits that the prudent course is to proceed on the basis proposed in this Application, while establishing a forward process, including appropriate Board oversight and reporting, to ensure that this important and complex issue impacting all Nova Scotians is addressed in an orderly, transparent, and coordinated manner.
>
> [NS Power Closing Submissions, pp. 53-54]

[189] The Board agrees with NS Power's proposed approach to address this issue. If this broader interested party engagement demonstrates decommissioning of hydro assets is a potential path or option, then the relevant costs can be included in the revenue requirement to be approved in NS Power's next general rate application. The Board directs NS Power to undertake this interested party engagement process, with an ideal target completion date in advance of NS Power's next GRA. During this process, the Board directs NS Power to file regular update reports with the Board every six months, beginning October 1, 2026.

3.4.1.3.3 Adjustments to Estimated Asset Average Service Lives

[190] In his evidence, Mr. Madsen proposed a number of changes to Gannett Fleming's recommended estimated asset average service lives. This is discussed in more detail in section 3.4.3 of this decision. For the reasons described in that section, the Board does not approve Mr. Madsen's proposed service life adjustments. This notwithstanding, the Board notes that the proposed settlement agreement change for Account 353 (Transmission Station Equipment) moves the estimated average asset service life for that account closer to that recommended by Mr. Madsen. The Board also notes that although Mr. Madsen recommended no change to the average asset service life for Account 390.10 (General Plant Structures and Improvements), he did state that peer data supports a life extension to some degree. The Board observes that the proposed settlement agreement change for this account does, in fact, extend the service life slightly.

[191] Considering the above, for the purposes of the current GRA, the Board finds that the proposed settlement agreement changes to the average service lives for NS Power's asset Account 353 and Account 390.10 are appropriate.

3.4.2 Calculation of Depreciation Expense (ELG vs. ALG)

[192] As noted previously, NS Power's updated depreciation study has used the Equal Life Group procedure to calculate proposed depreciation rates. NS Power has used the ELG procedure for the past 32 years, and Gannett Fleming has recommended its continued use. The ELG procedure calculates depreciation of individual assets or subgroups of assets within the same account that share the same or similar expected service life. The procedure relies on estimating retirement dispersion patterns and applying Iowa curves to model when assets are expected to retire, with depreciation rates

reflecting those expected retirement patterns. Under ELG, assets that are expected to retire sooner are depreciated more quickly, while longer-lived assets are depreciated more slowly.

[193] An alternative to the ELG procedure is the ALG procedure (also known as the Average Service Life procedure). ALG is a procedure that calculates depreciation using a single average service life for all assets within an account or asset group, rather than assigning different lives to individual assets or subgroups. Depreciation for the asset group is calculated using the straight-line method over the estimated average service life. The estimated average service life is typically derived from a combination of engineering judgement, historical experience, and the use of accepted Iowa survivor curves. Using ALG, each asset in the group is treated as contributing equally, on average, to the overall consumption of service value.

[194] Regardless of the depreciation procedure selected, the purpose of the exercise is to depreciate the same amount of investment over the expected life of an asset. While the amount charged in any one period may vary by virtue of the procedure selected, the total amount of depreciation recovered over the full life of the asset will not vary regardless of which procedure is used.

[195] Gannett Fleming's depreciation study states that the ELG procedure provides a better match of depreciation expense and loss in service value than the ALG procedure. In Gannett Fleming's opinion, ELG seeks to align depreciation expense more closely with the forecast retirement pattern of assets as a means of trying to match cost recovery with estimated asset consumption. In comparison, Gannett Fleming notes that a characteristic of the ALG procedure is that the cost of Plant retired prior to average life

is not fully recouped at the time of retirement, whereas the cost of Plant retired after average life is more than fully recouped. However, over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

[196] In his evidence, Mr. Madsen acknowledged that both ELG and ALG are acceptable and appropriate procedures to determine depreciation expense. However, he argued that ALG provides for a more gradual, moderate and equitable recovery of depreciation. He believes this is important, as it allows for some moderation of potential changes in the depreciation recovered over the life of the assets, particularly as lives are lengthening. Mr. Madsen believes this “lengthening” is becoming common, particularly for transmission and distribution assets, where utilities are replacing significantly older assets with much newer assets that often have much longer service lives.

[197] Mr. Madsen contends that ELG front-loads depreciation expense and is highly sensitive to changes in asset lives and retirement assumptions. He stated that a common argument against ELG, which he agrees with, is that it ignores that the benefits of most electric utility assets with regular maintenance do not decline considerably in later years as the ELG procedure suggests. As asset lives lengthen over time, Mr. Madsen argued that ELG will over-recover depreciation early, requiring later corrections. He stated that this can create intergenerational inequity, where current customers pay more than their fair share of depreciation costs while future customers pay less.

[198] Mr. Madsen's evidence describes what he believes to be the pros and cons of the ALG and ELG procedures. The Board has summarized this evidence as follows:

Procedure	Pros	Cons
Average Life Group (ALG)	**Simplicity**: Simple to apply and easy to understand.	**Lower early-period cash flows**: Depreciation expense is lower in earlier years compared to ELG, with higher depreciation occurring notionally in later years.
	Less potential volatility: Year-to-year changes in retirement data are less likely to materially affect depreciation expense unless they indicate a change in average service life.	**Accuracy:** Because ALG is less sensitive to survivor curve selection, incremental refinements to depreciation estimates are not as easily implemented.
Equal Life Group (ELG)	**Accuracy**: • Can appear more precise where asset lives are known and do not change. • May provide for more refined depreciation expense and increased accuracy, thereby allowing more variation in depreciation expense than charged under ALG.	**Greater sensitivity and variability**: Results are more heavily influenced by retirement data, which increases the risk that depreciation estimates deviate from actual retirement experience.
	Improved cashflow: Accelerates depreciation expense, improving near-term cash flow metrics and reducing reliance on near-term debt and equity financing.	**Complexity**: ELG is a complex procedure which can continue to be difficult for some parties to understand if they are unfamiliar with depreciation procedures, the derivation of Iowa curves, and the importance of retirement data.
		Potential incentive effects: Accelerated recovery may alter utility incentives, including the timing of capital replacement decisions.

[199] Mr. Madsen does not accept that NS Power's use of the ELG procedure inherently provides a better match between depreciation expense and loss in service value than the ALG procedure. Therefore, Mr. Madsen has recommended that NS Power

move to using the ALG procedure for all assets. He is supportive, however, of NS Power continuing to use the remaining life technique. Mr. Madsen contends that ALG is preferred to ELG because it better protects against over-collection, reduces volatility, and avoids unfair cost shifting between customer generations. In response to Emrydia IR-27, NS Power provided the following table depicting the change in 2026 and 2027 depreciation rates if it used the ALG procedure rather than ELG:

Depreciation and Accretion Expense

($ Millions)	Per GRA Settlement Agreement		Per Depreciation Rates calculated under ALG	
	2026	2027	2026	2027
Steam	48.0	49.9	48.7	50.6
Gas Turbine	9.9	10.6	8.9	9.6
Wind Turbine	13.3	13.3	13.3	13.3
Hydro	16.6	17.3	17.9	19.1
Solar	0.1	0.1	0.1	0.1
Transmission	47.7	52.1	46.7	51.1
Distribution	85.4	89.6	64.6	67.8
General Property	61.5	67.9	59.0	65.0
Total	**282.4**	**300.8**	**259.1**	**276.5**

[Exhibit N-31, Response to IR-27]

[200] During the hearing, however, Mr. Flemming confirmed that the above table does not provide a true “apples to apples” comparison. Specifically, he noted that the ALG rates do not reflect the depreciation related adjustments made in the settlement agreement. These adjustments would further increase the difference between the two methodologies by approximately $20 million in each of 2026 and 2027. As such, including the settlement agreement adjustments, Mr. Flemming noted the ALG rates would be approximately $40 to $45 million lower than those under the ELG. The rates for both procedures also assume the securitization of the assets within the scope of the DDA will proceed.

[201] During the hearing, Mr. Flemming indicated that a $20 million reduction in annual depreciation expense would equate to a one-time pre-tax decrease of roughly 1% in average rates.

3.4.2.1 Findings

[202] John Wiedmayer, of Gannett Fleming, and Mr. Madsen agree that ELG and ALG are both acceptable and appropriate procedures to determine depreciation expense. They also agree that both procedures require the use of significant judgement by depreciation experts. In addition, they have no dispute that although the timing of depreciation recovery varies, the total amount of depreciation recovered over the full life of an asset will be the same regardless of which procedure is used.

[203] Mr. Wiedmayer and Mr. Madsen also agree that the majority of North American electric utilities use the ALG procedure. However, both also noted that ELG is an accepted procedure by a number of utility regulators. Mr. Madsen stated that the ALG procedure is much more common in the United States. He also referenced several recent cases where requests to convert from the ALG to ELG have been denied. These include Manitoba, Ontario, New York, Mississippi, as well as other jurisdictions. Mr. Wiedmayer stated that ALG has a longer acceptance primarily due to the fact that it offered a simpler means to complete depreciation related calculations. However, with the advent of today's modern computers, ELG calculations have become easier to complete, resulting in more use of the procedure. He also noted that ELG is currently used in Alberta and Newfoundland. His evidence also indicated that ALG is used by Maritime Electric in Prince Edward Island.

[204] For this GRA, NS Power submitted that it has appropriately applied the ELG procedure using the straight-line method, as it has done previously for over 30 years. The

company believes ELG is superior to ALG as its use has and continues to lower NS Power's rate base and thus, financing costs at a more accelerated pace, and the data used reflects real retirement data experienced by the company. In its closing submissions, NS Power has framed the argument over which procedure is most appropriate as follows:

> Overall, the difference between the witnesses is not whether judgment is required, but whether a calculation procedure that explicitly incorporates utility-specific retirement experience by asset age is preferable, on balance, to one that relies on averages, and further the degree to which the resulting impact on rate base ought to be a consideration in choosing the appropriate calculation procedure.
>
> [NS Power Closing Submissions, p. 19]

The Board will first address the issues raised in NS Power's framing. The Board will then address intergenerational equity, which it believes is also an important issue in assessing ALG vs. ELG.

[205] As it relates to a procedure that uses utility-specific retirement experience, in his hearing testimony Mr. Wiedmayer stated that his depreciation analysis relied on NS Power's actual retirement and aged data wherever reliable records exist. He identified this period as beginning approximately in 2009, when NS Power started recording age-at-retirement information. He explained that retirements from that time forward include both vintage year and retirement year and, therefore, constitute true aged data that is used directly to inform survivor curve selection and service life estimates. For earlier years and older vintages where fully aged data records do not exist, he testified that standard "simulated aging" techniques were used to supplement the record. He characterized this as a common and unavoidable feature of long-lived utility Plant.

[206] Mr. Wiedmayer emphasized that simulation techniques are designed to reasonably approximate asset age distributions and retirement patterns when direct data are unavailable. In addition, he noted that simulated data do not displace actual NS Power

aged or retirement data where it exists but instead fill unavoidable gaps in the historical record. He asserted that the combined use of observed and simulated data is consistent with accepted depreciation practice and sufficient to support the application of the ELG procedure.

[207] In his testimony, Mr. Madsen acknowledged that the use of simulated data is preferable to relying solely on unaged data, and he cited the National Association of Regulatory Utility Commissioners (NARUC) Manual to confirm that statistical aging techniques are widely accepted in regulatory practice. However, he also emphasized that simulated data is inherently an approximation, depends heavily on assumptions about initial age distributions and survivor curve shapes, and may smooth or predetermine results in ways that mask true retirement behavior. Mr. Madsen's core concern was not that Gannett Fleming's use of simulated data is improper, but that placing significant weight on that simulated data, particularly combined with the ELG procedure, increases the risk of error.

[208] While acknowledging that ELG is often described as aligning depreciation more closely with retirement patterns, Mr. Madsen argued that this claim depends on the reliability of retirement data. Specifically, he contends that when retirement ages are simulated rather than observed, as is the case for much of NS Power's Plant data, ELG's greater sensitivity to this data can create an appearance of precision that is not grounded in actual service value loss. Mr. Madsen testified that in such circumstances, ALG's smoother allocation of depreciation may provide an equally reasonable and, in his view, more prudent approximation of service value consumption. This is because it avoids over-weighting of assumptions embedded in simulated data and because ALG is less sensitive

to the shape and timing of assumed retirement curves. In effect, Mr. Madsen does not accept “better matching” as an advantage of ELG. Instead, he framed it as a conditional claim that weakens when based on simulated plant data rather than long-standing observed experience.

[209] Considering the above, the Board does not believe that Mr. Madsen’s is suggesting that ALG offers a theoretically superior mathematical calculation of depreciation expense vs ELG. Instead, he argues that in the absence of a solid foundation of actual observed aged asset data, the ELG procedure exacerbates the potential error in calculating depreciation expense when simulated aged data is relied upon. This was discussed further in the hearing:

> **BY MEMBER MURPHY: …**can you tell me why the ALG procedure doesn’t exacerbate the potential errors associated with using simulated age data in the same way that the -- that you claim the ELG procedure does?
>
> **A.** (MADSEN) Certainly. So again, if the simulated age data does not accurately reflect the actual retirement pattern of those assets -- and they wouldn’t because the simulated data is a guess, is a best guess. And again, going back to the example we just walked through, it -- the ELG procedure’s going to be based off of those specific datapoints that are simulated.
>
> If those datapoints are incorrect, the ELG procedure is going [to] accelerate depreciation based on the assumption that those datapoints are correct, and that is where the error comes in. Whereas the Average Life Group, again, does not depreciate based on that curve; it depreciates on the assumption that there will be an average amount of depreciation taken in each year.
>
> And that’s why when there’s a variation from year to year in those datapoints, the Average Life Group procedure tends not to overemphasize or put undue reliance on that variation, particularly if there is a risk that the age data that you’re relying upon in this case, the simulated age data, might be incorrect.
>
> I know during the hearing, Mr. Murphy, you looked at some examples in other cases and other jurisdictions. I filed some depreciation studies. And I think the big question that comes to mind is, when you look at the experience in other jurisdictions, why is Nova Scotia Power based on its simulated data seeing significantly lower lives than all the other utilities, at least than I have been reviewing, and across many accounts.
>
> And you need to ask yourself, and I’ve asked myself the same question, is there any underlying force of retirement in Nova Scotia Power that is so great that makes it just tough to do business in Nova Scotia for an electric utility, greater forces of retirement that are all negative rather than some that are positive. I can’t come up with any, and that leads

> me to believe that the simulated retirement data that the company's relying upon which is informing the ELG estimates is potentially causing this exacerbated error.
>
> [Transcript, January 12, 2026, pp. 1142-1145]

[210] In this exchange, Mr. Madsen refers to how NS Power's estimated average asset service lives for many accounts, based on its simulated data, are much lower than other peer utilities. This is discussed in more detail in section 3.4.3 of this decision. Nevertheless, a summary of the analysis completed by Mr. Madsen shows NS Power's applied for average service lives are generally lower than those used in New Brunswick, Prince Edward Island and Newfoundland, jurisdictions that are generally subject to similar climate and operating conditions as Nova Scotia.

[211] In his testimony, Mr. Wiedmayer outlined a number of reasons why a peer utility can have survivor characteristics and average service lives that are different than NS Power's. These include differences in capitalization policies, differences in maintenance practices, and differences in the type of structures that are in specific asset accounts. The Board understands these differences but still finds Mr. Madsen's evidence persuasive. Specifically, the Board remains concerned that NS Power's lack of a solid underpinning of true aged data, and related use of simulated data in combination with ELG, is perhaps leading NS Power to arrive at certain conclusions that would not be supported if actual true aged data were present. In particular, the simulated data may be skewing calculations to result in shorter estimated asset service lives, particularly when compared to NS Power's peers. If this is occurring, the use of lower service lives alongside the use of the ELG procedure will result in more aggressive depreciation estimates. In turn, this can lead to intergenerational equity concerns and the need to update depreciation rates more frequently.

[212] NS Power has also submitted that when choosing an appropriate depreciation procedure, the impact on rate base should be a consideration. In their hearing testimony, both Mr. Wiedmayer and Mr. Madsen addressed the interaction between depreciation and return on rate base.

[213] Mr. Wiedmayer testified that while ELG produces higher annual depreciation expense and revenue requirements than ALG in earlier periods, it also reduces rate base more quickly than ALG. Over time this results in lower return on rate base in later periods and a crossover point when depreciation and return on rate base are considered together. For periods beyond this crossover point, the annual revenue requirement under ELG becomes lower than under ALG. In Undertaking U-12 [Exhibit 59(i)], Mr. Wiedmayer filed a copy of an Excel model that he prepared to provide an example demonstrating this crossover point concept between ELG and ALG. The model was created using company-specific (UGI Utilities, Inc.) data. UGI Utilities, Inc. is a combined electric/gas utility with operations in Pennsylvania, Maryland and West Virginia.

[214] Mr. Madsen did not dispute the underlying mechanics described by Mr. Wiedmayer. Under questioning from NS Power counsel, he acknowledged that changes in depreciation expense necessarily affect rate base and related return, and that lower depreciation increases rate base and the return component of revenue requirement. He further acknowledged that collection of lower depreciation expense under ALG would also increase debt costs to finance the rate base differential. Mr. Madsen also confirmed that the analysis presented in his evidence regarding ALG vs. ELG only considered the impact on depreciation expense (i.e., it did not consider the impact on rate base and financing costs). As Mr. Madsen noted, the sole purpose of his testimony is to provide a

recommendation to the Board that "gets depreciation right", recognizing there are going to be other impacts regardless of which depreciation procedure is selected.

[215] Nevertheless, under questioning from the Board, Mr. Madsen provided the following commentary on his analysis of Mr. Wiedmayer's ALG vs. ELG crossover model filed in Exhibit 59(i):

> **MADSEN:** … The more important issues are the fact that the analysis is not based on Nova Scotia Power evidence. When I looked at the more detailed spreadsheet and the USA accounts that were informing the spreadsheet the main USA accounts are 376.1, 376.3, and I could name them, there's six accounts, they're all gas utility accounts. They make up roughly 84 percent of the total asset base, and those are services, gas mains, and things of that sort. They're not electric utility assets akin to what Nova Scotia Power operates. So it's like comparing apples to oranges. And I couldn't, based on my review, actually identify any accounts in this analysis that were electric utility accounts like a tower conductor or even production plant.
>
> The example also assumes a return of 8 percent. A return of 8 percent is not reflective of Nova Scotia Power's weighted average cost of capital, which is somewhere just above 6 percent. A higher return in this analysis is going to dramatically -- quite dramatically overstate the revenue requirement related to this difference that you're seeing in the difference on rate base.
>
> The starting point of the analysis again is for utilities gross plant in service that is not Nova Scotia Power's. If I were to update that starting point to be Nova Scotia Power's gross plant in service of I think roughly eight point something billion dollars and then used the growth rate that I've seen for Nova Scotia Power over the last three years, which has been averaging roughly 3 percent since close to 2024, the rate of growth in that cost increases quite significantly. That's another issue.
>
> The other -- the analysis also ignores income tax sometimes, which can, in several ways, cause the ALG procedure to look like it is creating more revenue than it actually is. Depreciation, when included in revenue, is a taxable item, and the ELG procedure has a higher level of depreciation expense.
>
> I apologize. There's a number of issues. The other issue is the exhibit includes a very, very low composite depreciation rate, somewhere in the range of about 2 percent. While I appreciate that might reflect the gas utility assets that were being studied by Gannett Fleming in this limited example, the applied-for depreciation rate for Nova Scotia Power is somewhere closer to 3.37 percent on a composite basis. So quite a lot higher than 2 percent. When you use that rate, as well as the actual applied-for or recalculated average life group rate, it again materially alters the results of this analysis by changing the amount of depreciation expense calculated.
>
> And I'm almost done.
>
> The composite remaining life is also incorrect in this analysis based on what is the composite remaining life for Nova Scotia Power. So fundamentally the analysis is not a Nova Scotia Power focused analysis and is providing a result that makes -- that is, in my mind, misleading.

> The final point that I would make before I kind of conclude is that the analysis is out over to 2050. Whenever I do an analysis that extends beyond two, to three, to four or five years I do a net present value calculation. So if you look at it on a -- and ignoring the net present value with future cash flows it suggests that based on the two scenarios the ALG procedure will recover $20.3 million more in revenues. Ignoring all of the issues that I just outlined, $20.3 million more revenues than the ELG procedure. But on a net present value basis, using Nova Scotia Power's weighted average cost of capital it is actually unfavourable to the equal life group procedure to the amount of $83.5 million. So it swings by about $100 million the other way. And again if you're looking out into the future at the future impacts that customers are going to pay then you need to analyze that scenario on a net present value basis.
>
> Changing the various variables -- and again my big caveat would be I did not do one of these analysis for the reasons I stated in questioning earlier. It is very difficult to present an analysis like this that is going to be perfectly accurate and reflect the future. If you have -- if you hold several assumptions though true, if you assume a growth rate of 2 percent for Nova Scotia Power, if you assume a weighted average cost of capital of about 6.15 percent, around that range, which reflects the applied-for average cost of capital, and if you assume the growth rate -- or sorry, the depreciation rate in this analysis and change the variables to reflect what Nova Scotia Power actually has invested, there is no crossover point between the ALG and ELG procedures in the next -- between now and 2050. There's not.
>
> If you increase that growth rate to three percent, which again is more closely reflecting the Nova Scotia growth rate in recent years, there will not be a crossover point for a very long time. I don't know when, but it won't be -- certainly well beyond 2050. [Emphasis added]
>
> [Transcript, January 12, 2026, pp. 1171-1176]

[216] In essence, Mr. Madsen does not dispute that over the long-term the total amount of revenue requirement that is collected under ALG will be higher than the total amount of revenue requirement that is collected under ELG, due to increased financing costs. What he does dispute, however, is the timing of when the crossover point happens, as well as the magnitude and relevance of the difference on a net present value (NPV) basis.

[217] The Board recognizes that Mr. Madsen did not complete a formal NPV analysis of Mr. Wiedmayer's ALG vs. ELG crossover model. Nonetheless, the Board finds his related hearing testimony to be convincing. First, even with the model's shortcomings as they relate to the lack of relevant NS Power specifics, the Board notes that the additional $20.3 million collected under ALG would represent only 0.15% of total revenue

collected over the model's 25-year period. So even if the Board were to accept the model as a valid example representing the impact of ALG vs. ELG on NS Power (which it does not), the Board would find this difference immaterial.

[218] The Board agrees with Mr. Wiedmayer that there is a crossover point between ALG and ELG after which the annual revenue requirement under ELG becomes lower than under ALG. However, the Board also agrees with Mr. Madsen that as NS Power continues to grow its rate base (which it certainly intends to do at least over the current GRA test period), depreciation expense will increase to a greater extent than the associated increase in return on rate base. As such, as long as NS Power's rate base continues to grow, the crossover point between ALG and ELG will occur further into the future. The Board does not generally set rates based on long-term convergence of illustrative models. Instead, the Board sets rates on the revenue requirements that customers face in the periods immediately ahead over the test period. Nevertheless, on an NPV basis, the shifting of the crossover point more into the future will further favour the ALG procedure by having a lower NPV of revenue requirements than ELG.

[219] Another issue that the Board considers important when deciding whether it is best to use ELG or ALG is the related impact of each on intergenerational equity. Generally, the selection of a reasonable depreciation expense is heavily dependent on an assessment of intergenerational equities between generations of customers to try and ensure, as best as possible, that the customers who use the assets pay for the assets.

[220] Mr. Wiedmayer addressed intergenerational equity in the context of matching depreciation expense to the pattern of service value consumption reflected in observed retirement dispersion. He acknowledged that ELG and ALG produce different

timing profiles in earlier and later periods. However, he stated that the ELG procedure is designed to allocate depreciation in a manner consistent with the statistical pattern of retirements within a life group, and that doing so promotes equity by aligning cost recovery with the period over which assets provide service. As such, he does not characterize ELG as shifting costs unfairly to current customers. Instead, he noted that ELG distributes depreciation consistent with retirement behavior and accepted depreciation practice, which he views as supporting appropriate cost allocation across customer generations.

[221] Mr. Madsen believes that ELG front-loads depreciation expense relative to ALG, resulting in higher depreciation rates in earlier periods and lower rates in later periods. His primary intergenerational equity concern, therefore, is that it accelerates cost recovery, meaning current customers pay more than they should and future customers pay less. This concern mainly stems from his assertion that ELG's earlier-period expense recognition does not appropriately reflect NS Power's actual consumption of asset service value, which for a number of asset accounts is not based on true aged data. He also noted that as asset lives lengthen over time, which he stated is generally occurring in the electric utility industry, ELG will over-recover depreciation early, creating similar intergenerational equity concerns. Considering the context of the ALG/ELG crossover point, Mr. Madsen also expressed concern that customers paying higher rates in the early years under ELG may not be the same customers who benefit after the crossover. Overall, he argued that the ALG procedure is less aggressive on the front end and provides a more stable depreciation recovery pattern, thereby lessening the risk of intergenerational inequity.

[222] During the hearing, the NS Power depreciation panel raised a further point related to potential intergenerational equity concerns under the ALG procedure. Specifically, the panel noted that under ALG, ratepayers may end up paying for assets that are no longer used and useful. Mr. Madsen acknowledged that this premise could be true, but that it could also occur under ELG when the amount of depreciation expensed does not perfectly reflect the actual consumption of assets over time. He then walked through an example of how this could happen, referencing Figure 17 in his evidence [Exhibit N-34]. Mr. Madsen noted that the distinguishing features between ALG and ELG are that ELG accelerates depreciation in the early years compared to ALG, and then at the other end potentially draws it out for a longer period, although at a much smaller rate.

[223] Based on the discussion above, the Board finds that the ALG procedure produces a more gradual and stable pattern of depreciation expense and related revenue requirement. This, in turn, reduces the risk of intergenerational cost shifting compared to the use of ELG. The Board finds that this is particularly relevant in circumstances where asset service lives are extending over time. The Board believes this is a trend that is occurring in the electric utility industry given technological advances in assets themselves, as well as improving asset management measures undertaken by utilities. Indeed, in recent ACE Plan proceedings, NS Power has touted its asset management plans, procedures and mechanism, the use of which often result in the lives of assets being extended to the benefit of customers.

[224] Overall, the Board believes that the most appropriate depreciation procedure should set asset lives (and related depreciation expense) that best reflect the expected loss of service value of NS Power’s assets over time while minimizing

intergenerational equity risks. The Board also recognizes, however, that no single depreciation procedure will be perfect, and no single procedure can ensure that forecast depreciation expense will be perfectly representative of actual depreciation expense. Further, consistent with the evidence in this proceeding, the Board notes that the advantages of one procedure correspond to the disadvantages of the other. The appropriate choice of depreciation procedure must also, therefore, balance these competing considerations. This effort to achieve an appropriate balance of interests can also be characterized as a matter between present and future customers.

[225] In this context, in assessing the choice between ALG and ELG for NS Power, the Board finds Mr. Madsen's evidence and testimony persuasive. Mr. Madsen acknowledged that both methods are accepted depreciation procedures and recover the same total depreciation over the full-service life of the utility's assets. However, he also identified material differences in timing, sensitivity, and risk between the procedures. He explained that ALG is less sensitive to short-term fluctuations in retirement assumptions and simulated plant data, while the use of ELG for NS Power places greater weight on such data. He also noted the intergenerational equity risks associated with ELG accelerated recovery in earlier periods. Mr. Wiedmayer characterized these effects as neutral timing differences that can be addressed through ongoing depreciation studies.

[226] The Board does not necessarily disagree with Mr. Wiedmayer. However, based on the evidentiary record before it, the Board gives more weight to Mr. Madsen's position that greater sensitivity and front-loaded recovery under ELG increases uncertainty and volatility for NS Power customers, particularly where long-term, true aged plant data is not yet available for a number of NS Power accounts. In these

circumstances, the Board considers ALG to be an approach that better balances accuracy, gradualism, rate stability, depreciation vs return on rate base interactions, and intergenerational equity fairness. Notwithstanding this, the Board is not making a finding that ELG is inappropriate.

[227] The change to the ALG procedure recommended by Mr. Madsen would result in lower rate increases for NS Power ratepayers over the 2026/2027 test period. If all other things remain per the settlement agreement, the change would result in a one-time pre-tax decrease of roughly 1% in average rates. However, the reduction in related depreciation expense resulting from any change to ALG must also be considered in the context of the status of NS Power's intended securitization of assets within the scope of the DDA. With securitization remaining uncertain, as explained later in this decision, a change in NS Power's proposed depreciation expense from what is proposed in the application would affect its FFO:Debt credit metrics even further. This could increase the risk of having the credit rating agencies lower NS Power's credit rating to "junk" status. As noted in Morrison Park's evidence, this would have serious long-term cost consequences resulting in higher costs for ratepayers.

[228] Therefore, for the purposes of the current GRA, the Board will not direct NS Power to adjust its depreciation procedure from ELG to ALG. Nevertheless, as noted previously, based on the evidence in the current proceeding, the Board is persuaded that the ALG procedure likely offers a more appropriate means for NS Power to determine depreciation expense. The Board believes this needs to be further considered.

[229] To give some historical context, in April 2003, NS Power filed a depreciation study with the NSUARB that recommended an increase in annual depreciation expense.

A consultation process followed, which culminated in the development of a settlement agreement that was unanimously supported by the intervenors in that proceeding. The settlement agreement on future depreciation rates was adopted as a “black box” settlement. In that type of agreement, parties settled on an amount without fully agreeing to the way the amount was derived. The settlement agreement was approved by the NSUARB in its Decision dated November 21, 2003. Similarly, in November 2010, NS Power filed an updated depreciation study with the NSUARB and requested approval of new depreciation rates. The parties to that proceeding once again reached a “black box” settlement agreement that the NSUARB approved in May 2011.

[230] In both proceedings, the settlement agreements were reached in due course after a full evidentiary record was filed with the Board. Those records included information requests filed by parties, evidence filed by Board Counsel consultants, and, in the 2010 depreciation proceeding, evidence filed by experts retained by intervenors. Specifically in the 2010 depreciation proceeding, the issue of ALG vs. ELG was raised by Board Counsel consultants and the expert hired by NewPage Port Hawkesbury Corp. and Bowater Mersey Paper Company Limited. Both these experts recommended that NS Power move to using the ALG procedure. However, given the nature of the “black box” settlement agreements in those matters, and the Board’s subsequent approvals, the Board did not opine on the use of ALG vs. ELG in those proceedings.

[231] In the current proceeding, NS Power submitted that it has appropriately applied the ELG procedure for over 30 years. However, as Mr. Wiedmayer acknowledged during the hearing, there is a correlation between NS Power using ELG over this period and the lack of depreciation studies that have been filed by NS Power over the same

timeframe. Further, given the nature of the current GRA settlement agreement approach, the Board is unaware of the extent to which ALG vs. ELG was discussed, or even considered, by the parties to the agreement.

[232] The current GRA is the first time the ALG vs. ELG issue has been put before the Board since the 2010 depreciation study. In addition, the Board's approval of the "black box" settlement agreement in that proceeding did not result in a specific Board finding on whether ALG or ELG was the most appropriate depreciation procedure for NS Power to use moving forward. Nor did the Board's approval of the 2003 depreciation study "black box" settlement agreement result in such a finding. Further, as it relates to NS Power's assets and their related depreciation expense, a lot has changed since 2003. These include such items as legislative changes requiring certain assets to be retired by 2030, technological advancements to improve/extend asset lives, climate change and an evolving NS Power generation asset mix.

[233] Given this background, the Board believes that further testing of ALG vs. ELG, to confirm which methodology is most appropriate for use by NS Power, needs to be addressed as part of the company's next depreciation study. NS Power agreed to this in its reply submissions. Generally, the Board would expect NS Power to file a new depreciation study every five years. However, in this case, the Board believes that waiting five additional years to further examine the use of ALG vs. ELG is too long. As such, the Board directs NS Power to file an updated depreciation study with its next general rate application. The Board believes this earlier study is further warranted by the changing make-up of NS Power's generation assets, as well as its plans to construct significant new transmission assets in the near future. The timing will align more closely with

completion of the IESO Nova Scotia's currently underway IRP. It will also allow NS Power to build up several more years of true aged asset data.

[234] Within the next depreciation study, the Board fully expects that the use of ALG will be more closely examined and assessed in detail by NS Power. As part of its ALG vs. ELG assessment, the Board expects NS Power to address issues including, but not limited to:

- The interaction between depreciation expense and return on rate base;
- The extent to which actual true aged data has been used;
- A NS Power specific ALG vs. ELG cross-over point analysis;
- Comparison to other peer utility data, particularly related to actual age data, the retirement patterns experienced by those utilities, recommended asset service lives, and a description of what forces of retirement those utilities have that are consistent with those of NS Power;
- Identification of specific factors in Nova Scotia that differ from other peer utilities that would lead to a higher rate of retirement or greater forces of retirement;
- The book accumulated depreciation reserve balance and calculated accumulated reserve balance under both the ALG and ELG procedure;
- An evaluation of whether a change to the ALG procedure would violate the principles of gradualism and moderation, and whether a "phasing-in" of ALG would be appropriate; and
- The proposed depreciation by asset account under both ELG and ALG procedures.

3.4.3 Asset Average Service Lives

[235] Section 3.4.1.2 of this decision describes Gannett Fleming's approach to estimating average asset group service lives in its depreciation study. Mr. Madsen described a similar approach in his evidence:

> Both the ALG and ELG procedures rely on the selection of an Iowa curve based on several factors, including but not limited to:
>
> - Visual and mathematical fit of the observed retirement data to the selected survivor curves.
> - Peer data on the average service lives and survivor curves used in other jurisdictions.
> - Discussions with management and operational personnel to understand the life characteristics of the assets and other relevant operating, technical and maintenance details that may impact the lives of the assets.
>
> [Exhibit N-34, p. 59]

[236] As described by Mr. Madsen, when determining a visual fit to a specific Iowa curve, asset account retirement data is reviewed against an Iowa curve to assess how that data fits against the curve relative to alternatives. Visual fitting helps narrow curve types but must consider whether the underlying retirement data is limited or not representative of broader retirement data. Mr. Madsen stated that this is why mathematical curve fitting is also important. Mathematical fitting measures differences between observed retirement data points and the selected Iowa curve to help determine a best fit curve.

[237] Mr. Madsen also stated that peer analysis and comparison is especially important for NS Power, because its data relies heavily on simulated plant data, while peer utilities typically provide actual aged data across similar assets, allowing for a broader and more reliable comparison. As such, he opined that mathematical curve fitting for NS Power should be given less weight, since its reported simulated retirement data

may not reflect true historical patterns, especially where proposed asset lives differ significantly from peers. Finally, Mr. Madsen noted that discussions with company management and operational staff are essential to understand asset life characteristics and to assess whether historical retirement patterns are likely to change in the future.

[238] Mr. Madsen completed a review of Gannett Fleming's recommended asset average service lives for each of NS Power's Plant accounts. For transmission, distribution and general Plant accounts, Mr. Madsen generally followed the process described above. While he did not conduct discussions with NS Power personnel, he did review notes of discussions between company management and Gannett Fleming to help inform his analysis.

[239] Mr. Madsen's peer analysis compared NS Power's proposed average asset service lives to those of the peers used in Gannett Fleming's depreciation study. He also provided a second peer analysis by comparing NS Power's proposed average asset service lives to those noted in recent depreciation studies for NB Power, Maritime Electric (Prince Edward Island), and Newfoundland Power. Except for five Plant accounts, Mr. Madsen's analysis shows that NS Power has applied for average service lives lower than the Gannett Fleming peer average. Similarly, his analysis shows NS Power's proposed average service lives are generally lower than those used in New Brunswick, Prince Edward Island and Newfoundland. Mr. Madsen noted that when lower lives are considered alongside the ELG procedure, the combined result is more aggressive depreciation estimates and lives than are utilized by NS Power's peers.

[240] Based on his curve fitting, peer analysis and management notes review, Mr. Madsen recommended adjustments to the average asset service life and Iowa curve for

several NS Power transmission and distribution Plant accounts. These recommendations are summarized in Table 8 of Mr. Madsen's evidence as follows:

Account Number	Account Name	Investment at Dec 31, 2023	Emrydia Recommended Life Estimate	Emrydia Recommended Curve Estimate
TRANMISSION ASSETS				
353	STATION EQUIPMENT	586,908,962	50	R2.5
354	TOWERS AND FIXTURES	111,028,870	No Change	No Change
355	POLES AND FIXTURES	268,176,042	50	R2.5
356	OVERHEAD CONDUCTORS AND DEVICES	178,454,463	52	R3
DISTRIBUTION ASSETS				
364	POLES, TOWERS AND FIXTURES	646,990,061	45	R1.5
365	OVERHEAD CONDUCTORS AND DEVICES	329,509,672	45	R2
367	UNDERGROUND CONDUCTORS AND DEVICES	75,012,364	No Change	No Change
368	LINE TRANSFORMERS	555,455,934	36	R1
GENERAL PLANT ASSETS				
390.1	STRUCTURES AND IMPROVEMENTS	184,609,960	No Change	No Change

[Exhibit N-34, p. 73]

[241] For NS Power's production Plant accounts, Mr. Madsen conducted a slightly different review process, as NS Power's IRP served as the formative document related to production Plant service lives. For this review, Mr. Madsen reviewed the detailed assumptions and Iowa curves proposed by Gannett Fleming, reviewed the IRP and related materials to confirm the life span dates align with the most recent planning information, and reviewed the information obtained by Gannett Fleming from management to support its decisions.

[242] Based on his review, Mr. Madsen did have some concerns about the proposed retirement dates for some of NS Power's production Plant. Nevertheless, he did not recommend any changes to the proposed service lives. In reaching this conclusion, he was mindful of the other depreciation related changes he recommended. He also noted the risks associated with NS Power's forward-looking generation forecast, including the use of small modular reactors, significant reliance on wind and batteries, and other considerations. As such, he suggested that a wait and see approach through

to the next depreciation study and the next IRP would be a more pragmatic approach to addressing production Plant service lives.

3.4.3.1 Findings

[243] In Undertaking U-8, NS Power provided calculations showing the dollar effect of implementing the changes recommended in Table 8 of Mr. Madsen's evidence. NS Power performed the analysis using both the ALG and ELG depreciation procedures. The ALG calculations show a reduction in depreciation expenses (as compared to NS Power's GRA filing) of $25.7 million and $27.3 million in 2026 and 2027, respectively. The ELG calculations show a reduction of $6.1 million in 2026 and $6.5 million in 2027.

[244] The ALG calculations show a significant decrease in depreciation expense if Mr. Madsen's average service life recommendations are approved in combination with NS Power switching to the ALG depreciation procedure. These reductions would result in lower average rate increases for NS Power customers over the 2026 and 2027 test period (although they would be offset partially by the related increase in return on rate base). However, the ALG calculations are moot at this point, given the Board's findings elsewhere in this decision that it will not require NS Power to switch to ALG for the 2026/2027 test period.

[245] The ELG calculations also show a decrease in depreciation expense if Mr. Madsen's average service life recommendations are approved. These reductions too would result in lower average rate increases for NS Power customers over the 2026 and 2027 test period (although they would also be offset partially by the related increase in return on rate base). The issue for the Board to decide is whether Mr. Madsen's recommendations are warranted.

[246] During the hearing, Mr. Wiedmayer was questioned about the average service life changes recommended by Mr. Madsen:

> **MEMBER MURPHY:** This is my last question. It's related to asset service lives and retirement dates. And in Mr. Madsen's evidence he referenced a number of your curves, I suppose, and how they fit with the data, the actual retirement data. And there was one in particular where it was related to transmission poles and fixtures, and Mr. Madsen had recommended a 50-R2.5 curve, and you have a 45-R1.5. And when you look at the curve -- I could call it up. When you look at the curve Mr. Madsen suggests that beyond year 30.5 the data doesn't fit very well, and that's part of the reason I think why he's suggesting a different curve. I can call the curve up if you want. But it does look like ---
>
> **A.** (Wiedmayer) Yes, I would like to see that, because that is a good example of one that I think we should look at.
>
> **Q.** Okay. It's -- Jeff, it's Exhibit N-34, PDF page 83.
>
> **MEMBER MURPHY:** And Mr. Madsen made the same comment, Mr. Wiedmayer, this particular curve is just for transmission poles and fixtures, but he also made similar comments related to some of the other asset groups where the curves that you suggested don't fit that well.
>
> In this particular case when I look at the curve it does look to me that it's not a great fit after year 30 or so. So my question was, you know, in this particular case, why do you think that 45-R1.5 is better than the one that Mr. Madsen suggested?
>
> **A.** (Wiedmayer) Okay. Yeah, so here's a really good example, in the sense that the historical data is represented by those squares, black squares on the chart. So Nova Scotia's historical retirement experience indicates, when I look at this chart -- I know not everybody in the room is a depreciation expert, but what it indicates to me that the 45-year average service life indicated by that smooth black line is above or to the right of the black squares. So really the best fit IOWA types or R curve for this account probably is more like a 41- or a 42-year average service life from a historical basis.
>
> So I had in the previous study recommended a 47-year average service life. However, Nova Scotia with, I think, tropical storms becoming more and more prevalent and some other reasons for earlier retirements, your actual retirement experience is indicating shorter lives than what I have proposed. Mr. Madsen's 50-year average service life would be even further above and to the right of my 45-R-1.5. So Mr. Madsen's 50-year recommendation is based, I would suspect, purely on industry data and judgment and not based on the company's actual retirement experience, which is a shorter life -- an even shorter life than what I've recommended.
>
> **Q.** So in your opinion I guess, from what I'm hearing, the curves that are recommended by -- in this particular case anyway, the curve recommended by Mr. Madsen would be even a worse fit to that actual data; correct?
>
> **A.** (Wiedmayer) Correct. That's exactly correct, yes.
>
> [Transcript, January 7, 2026, pp. 323-326]

[247] Mr. Madsen responded to the points raised in this exchange during his own hearing testimony:

> **BY MEMBER MURPHY: …**this is the curve that I walked through with Mr. Wiedmayer the other day, and this is for account 355. And Nova Scotia Power is recommending using the Iowa 45-R1.5 curve, and I think you were recommending the — I think it was the R50.
>
> …
>
> **A.** (Madsen) Fifty (50)-R2.5.
>
> **Q.** That's right, yeah. And when I asked Mr. Wiedmayer about this, he indicated that [if] the Iowa 50-R2.5 curve was used here, it would be further to the right than the curve you suggested, or the curve that Nova Scotia Power suggested, and that would seem to indicate that the curve you recommended is a worse fit to that, I guess, simulated data, those squares, than Gannett Fleming had recommended. I'm just wondering if you have any comment on that.
>
> **A.** (Madsen) Yes. So he is correct. The curve that I recommend would have a worse fit to the retirement data. Again, this is simulated retirement data. And it would not represent the actual retirement data that would be present for Nova Scotia Power had it had that historical information.
>
> I think if it's — it may not be helpful, but if you look at some of the other reports, Mr. Murphy, that I filed, for example Newfoundland Power, and the similar data for this account where there is actual aged data, not simulated age data, you see that there is a very different trend in the aged data relative to what is shown here on a simulated basis.
>
> And that is why when I recommended the curve that I did, I recommended a curve with a longer life, which does not fit this aged data as well, because I can't devise a reason why Nova Scotia Power would have retirements for account 355, which is poles and fixtures, which would suggest a life of 40 to 41 years, and I think that's what Mr. Wiedmayer confirmed as well. And when I modelled it, I figure — I noted that best-fit curve would be similar along a 41-R1 curve to that data.
>
> A 41-year life for this account would be well below the range of peers, well below what I have seen in other jurisdictions. And if I were to simply rely on the simulated data, again keeping my simulated data, and run a conclusion, the conclusion that that is the best curve to select, then I think that would result in a recommendation that is incorrect, and that's why I did not recommend it.
>
> **Q.** Okay. The other curves you recommended for the other accounts, if I look at them all in general, they would all tend to fall to the right of the curves that Gannett Fleming had recommended. So I guess if I was to ask you the same question about all those other accounts I would get the same answer; correct?
>
> **A.** (Madsen) Same answer, sir. Maybe it would be helpful if we had before us actual retirement data, and I describe this is in my report. If this curve that we were looking at was actual retirement data, I'd probably be asking myself why Gannett Fleming did not recommend a 41-R1 curve, and I would probably start with recommending a 41-R1 curve because that would best reflect the actual retirement data for Nova Scotia Power. We're not looking at actual retirement data, which is why I need to assign the weight to the simulated data that I can, and in my opinion, I would not assign significant weight.

> Now again, if the simulated data was showing that — the best guess was showing that for this account Nova Scotia Power was dead set right in the middle of its — the recommended peer range, say somewhere around 50 years, and management's notes suggested that that was consistent with their expectations of the life of the asset, I would likely be again recommending that the simulated data provided more weight because it is consistent with the other data that I have reviewed. In this case, it's just so inconsistent it's hard to assign significant weight to it. [Emphasis added]
>
> [Transcript, January 12, 2026, pp. 1153-1157]

[248] There are two primary arguments that Mr. Madsen is making for his recommended changes to NS Power's average asset service lives. First, he argues that NS Power's use of simulated aged data would not represent actual NS Power retirement data if the company had that historical information. And second, he asserts that the average service lives put forward by NS Power are materially lower and inexplicably different than its peer utilities, particularly other Atlantic Canadian utilities.

[249] Throughout his hearing testimony, Mr. Wiedmayer discussed his use of peer utility comparisons as more of a reasonableness check. He uses such comparisons to make sure his estimates for average asset service lives are within the bounds used by other utilities. He noted, however, that he does not use these comparisons as a substitute for a company's actual historical asset retirement experience. If a reasonableness check shows significant differences between his recommended service lives and the bounds of other peer utilities, he would then review the material once again with utility staff to determine the reasons why and if adjustments are required. He also noted that each electric utility has its own unique survivor characteristics due to a variety of reasons, including differences in capitalization policies, differences in maintenance practices, and differences in the type of structures that are in specific asset accounts.

[250] During hearing questioning from Board Counsel, Mr. Wiedmayer also took issue with Mr. Madsen's argument about NS Power's use of simulated aged data. Mr.

Wiedmayer pointed out that he did, in fact, use actual data for NS Power, but that the retirements were not aged. Specifically, he used actual data about when assets were installed but did not know when the related retirements occurred. Then, based on the addition and retirement pattern, simulation was used to place a reasonable age on the retirements that did occur.

[251] In general, the Board agrees with NS Power in its closing submissions that calculation of depreciation rates requires professional judgement and experts can have differing opinions on the appropriate survivor curves and service lives. The Board also finds that Mr. Wiedmayer's arguments about the use of simulated data and checks against peer utilities are reasonable. However, the Board finds Mr. Madsen's evidence to be more compelling, particularly as it relates to many of NS Power's average asset service lives being much lower than those of its Atlantic Canadian peer utilities. Therefore, for the purposes of the current GRA, the Board finds that the average asset services lives recommended by Mr. Madsen for the accounts noted in Table 8 of Mr. Madsen's evidence are more reasonable than those put forward by NS Power. Nonetheless, for the reasons that follow, the Board will not direct NS Power to make the related changes to its GRA.

[252] The average service life changes recommended by Mr. Madsen would result in slightly lower average rate increases for NS Power ratepayers over the 2026/2027 test period. However, the reduction in related depreciation expense must also be considered in the context of the status of NS Power's intended securitization of assets within the scope of the DDA. With securitization remaining uncertain, as explained later in this decision, a change in NS Power's proposed depreciation expense from what is proposed in the application would affect its FFO:Debt credit metrics even further. This

could increase the risk of having the credit rating agencies lower NS Power's credit rating to "junk" status. As noted in Morrison Park's evidence, this would have serious long-term cost consequences resulting in higher costs for ratepayers.

[253] Therefore, the Board accepts the average asset services lives as presented by NS Power in the settlement agreement. As such, for the purposes of the current GRA, the Board will not direct NS Power to adjust the average service lives of the accounts recommended by Mr. Madsen.

[254] This notwithstanding, Mr. Madsen made some other recommendations related to those accounts. These recommendations include:

- Account 354 – Towers and Fixtures: NS Power should track the nature of additions to this account going forward, and to the extent practicable, break out the historical cost of new towers within the account. This information should be provided as part of NS Power's next depreciation study.
- Account 356 – Overhead Conductors and Devices: NS Power should better study the physical lives of the assets in this account and describe in detail the types of assets installed by type, quantity, and estimated age. NS Power should also segregate its overhead conductor in Account 356 into the conductor that is strung on higher dollar value steel towers with longer lives and provide NS Power's estimate of the service lives of that conductor with explanations. This information should be provided as part of NS Power's next depreciation study.
- Account 367 – Underground Conductors and Devices: In its next depreciation study, NS Power should explain the proposed life and why that life is appropriate considering NS Power's facts and circumstances.

- Account 390.10 – Structures and Improvements: For each major structure in this account, NS Power should disclose the expected useful lives of the assets, the date the asset was acquired or constructed, and identify when NS Power expects to retire each asset. This data will provide further information to better understand the likely average service life of these assets. This information should be provided as part of NS Power's next depreciation study.

The Board believes that these recommendations would be useful moving forward. Therefore, the Board directs NS Power to address each of these recommendations in its next depreciation study filed with the Board.

[255] Mr. Madsen also recommended that the Board direct NS Power to provide at minimum the following information in support of both production Plant and mass property as part of its next depreciation study, rather than wait for that information to be requested through the information request process:

- Detailed management notes for each account;
- All analysis and studies performed by management for each asset to confirm the expected life;
- All updated IRP documents;
- A reconciliation of the lives proposed in the depreciation study to the lives proposed in the IRP; and
- The peer analysis relied upon by the company in an Excel file.

The Board agrees with Mr. Madsen's recommendations. Further, during the hearing, NS Power witnesses agreed that providing this information would be reasonable. Therefore,

the Board directs NS Power to include this information in its next depreciation study filed with the Board.

3.4.4 Amortization Accounting for General Plant Assets

[256] NS Power has proposed the use of amortization accounting for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Amortization accounting is typically employed for accounts with a smaller investment balance relative to larger accounts, and where there are numerous assets without distinguishable life characteristics, such as laptops.

[257] In amortization accounting, the cost of an asset is allocated over a decided time frame, typically a period consistent with its expected service life. The asset is retired and removed from the accounting books once it has been fully amortized, regardless of whether it is rendering service.

[258] The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in the NS Power depreciation study are based on Gannett Fleming's judgement, which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

[259] NS Power has proposed the use of amortization accounting for the following General Plant accounts:

- Account 391.10 Furniture and Equipment (20-year amortization period),

- Account 391.31 Computer Equipment – Hardware (5-year amortization period),
- Account 391.32 Computer Software (10-year amortization period),
- Account 394.00 Shop Equipment (20-year amortization period), and
- Account 398.00 Miscellaneous Equipment (20-year amortization period).

[260] In response to NSEB IR-83, NS Power stated that many electric utilities in North America have received regulatory approval to adopt amortization accounting for these groups within general plant. Examples include Newfoundland Power, BC Hydro, Centra Gas Alberta Inc., UGI Utilities Inc. – Electric Division, and West Penn Power Co. The United States Federal Energy Regulatory Commission (FERC) through its Accounting Release 15 has also accepted the use of amortization accounting for these groups. Mr. Madsen also noted that the use of amortization accounting for such accounts is common for utilities.

[261] Amortization accounting for these General Plant accounts would require NS Power to retire vintaged asset balances that are assumed to be fully depreciated as determined in the depreciation study. The lower depreciation as a result of these retirements would be offset by a reserve imbalance amortization charge. A reserve imbalance is caused by Plant and reserve activity that is different than what depreciation models forecasted. It is calculated as the difference between the book reserve and the theoretical reserve for an asset. The theoretical reserve is the amount that should have been collected based on the age of the asset and the selected amortization related to these five General Plant accounts. The theoretical reserve is used as a benchmark to assess the adequacy of the NS Power's book reserve. Any difference between the two is trued up prospectively over a reasonable amortization period. Per Gannett Fleming's

recommendation, NS Power intends to amortize the reserve imbalance over a 5-year period using whole life amortization rates.

3.4.4.1 Findings

[262] In its GRA, NS Power stated that the estimated impact of adopting amortization accounting would result in annual incremental depreciation expense of $600,000 over the test years. This is primarily related to the implementation of shorter amortization periods for some assets.

[263] The Board notes that the asset groups NS Power has proposed be subject to amortization accounting consist of numerous units of property, often of modest original individual cost, particularly when compared with units in other asset groups. Property of this type tends to have a relatively short useful life. Over time, as the reserve imbalance is trued-up, the use of amortization accounting for these accounts should result in much less accounting effort to track these numerous, low unit-cost assets. This will result in lower administrative overhead costs without any material reduction in accounting accuracy. As such, the Board agrees with NS Power that the proposed amortization accounting for these accounts is a cost-effective way to manage cost recovery.

[264] The Board, therefore, approves the use of amortization accounting for the five General Plant accounts as proposed.

3.4.5 Submissions of the Nova Scotia Department of Energy

[265] The Department of Energy presented the following on page 6 its closing submissions:

> 30. The copy of the Gannet Fleming depreciation study as of December 31, 2023, does not contain any reference to the words “stranded,” “useful life,” “government” or “legislation,” which suggests that none of these factors were considered in determining appropriate depreciation. In fact, the following is an excerpt from a summary of the year in service, probable retirement year and life span for each power production facility taken from the Report:

A summary of the year in service, probable retirement year and life span for each power production facility follows:

Depreciable Group	Nameplate Capacity Rating, MW	Year in Service	Probable Retirement Year	Life Span
Steam Production Plant				
Lingan Units 1	150.5	1980	2049	69
Lingan Units 2	150.5	1981	2029	48
Lingan Units 3-4	150.5	1984	2049	65
Point Aconi	165.0	1994	2029	35
Point Tupper	150.0	1973	2048	75
Trenton 5	150.0	1970	2029	59
Trenton 6	160.0	1992	2029	37
Tufts Cove 1	100.0	1966	2049	83
Tufts Cove 2	100.0	1973	2049	76
Tufts Cove 3	150.0	1977	2049	72
Tufts Cove 6	50.0	2011	2049	38

31. The Department asks that the Board review the “Probable Retirement Year” column whilst considering existing legislation and government policy.

[266] The Board has reviewed the “Probable Retirement Year” column and finds it is acceptable and consistent with retirement dates noted in the company’s most recent 10-Year System Outlook Report. In particular, Lingan 1, 3 and 4 are currently scheduled to be converted from coal-fired to heavy fuel oil fired in 2029. Similarly, Point Tupper is scheduled to be converted from coal-fired to natural gas-fired in 2029. As such, these facilities will meet existing legislation mandating that NS Power be off coal by 2030.

[267] The Department of Energy also submitted that NS Power’s failure to diligently file updated depreciation studies may have resulted in excessive returns to the utility. The Department of Energy contends that had NS Power prepared timely, updated depreciation studies, NS Power’s overall allowable returns would likely have been reduced, resulting in lower rates for ratepayers. The Board notes that the Department of Energy’s contention would only be true if the updated depreciation studies resulted in higher depreciation rates. Further, if that was the case, this does not necessarily mean that lower overall rates would result for ratepayers. As explained previously in this

decision, higher depreciation rates result in higher rates for ratepayers which are offset by some degree by lower return on rate base.

3.4.6 Depreciation – Summary

[268] For the purposes of the current GRA, the Board finds it appropriate to exclude decommissioning costs for the Wreck Cove, Mersey, and Tusket hydro systems from proposed depreciation rates for the 2026 and 2027 test years. The Board directs NS Power to provide, in its next depreciation study, a reconciliation (from 2009 onward) of annual interim and final net salvage collections and actual salvage costs for these hydro assets.

[269] For the purposes of the current GRA, the Board accepts the inclusion of partial decommissioning costs of NS Power's other hydro Plant assets in depreciation rates for the test years. Nonetheless, the Board agrees with NS Power that no settled policy or multi-stakeholder framework currently exists to determine whether, when, or how partial or full decommissioning costs for hydro Plant should be included in depreciation rates. Similarly, no such policy or framework currently exists to identify who should bear on-going costs associated with partially decommissioned hydro assets that are no longer used and useful. As such, the Board directs NS Power to initiate a structured engagement process involving regulators, government, and other relevant parties to address this issue, with an ideal target completion in advance of NS Power's next GRA. During this process, the Board directs NS Power to file regular update reports with the Board once every six months, beginning October 1, 2026.

[270] The Board finds that the majority of the proposed net salvage rates in the settlement agreement fall within a reasonable range. The Board, therefore, approves the net salvage rates for Plant accounts not subject to settlement agreement adjustments

and for the three transmission and distribution Plant accounts which are subject to settlement agreement adjustments.

[271] The Board has intergenerational equity concerns though with the settlement agreement adjustments affecting production Plant net salvage rates, which recovers the expected future costs to salvage and remove/decommission these assets, including any salvage proceeds. Generally, the Board would be inclined to not approve these adjustments even though this would result in a slight increase in average customer rates in the current GRA. However, at this point there remains considerable uncertainty related to current decommissioning cost estimates for these assets. This is particularly true for NS Power's hydro assets, where it remains uncertain whether these assets will eventually undergo partial or full decommissioning, or even be decommissioned at all. As noted above, the Board has directed NS Power to address this issue before its next GRA. Given this uncertainty, the potential impact, if any, of assumed production Plant net salvage rates on future ratepayers is unclear. In this circumstance, the Board accepts the proposed settlement agreement adjustments to net salvage rates for NS Power's production plant accounts. Therefore, for the purposes of the current GRA, the Board also approves the settlement agreement adjustments to net salvage rates for NS Power's production plant accounts.

[272] The Board also finds that the use of the ALG depreciation procedure likely represents a more reasonable, equitable and prudent depreciation framework than continued use of ELG by NS Power. The Board further finds that the average asset services lives recommended by Mr. Madsen for the accounts noted in Table 8 of his evidence are more reasonable than those put forward by NS Power. Generally, the Board

would be inclined to direct these changes, which would result in a decrease in average customer rates in the current GRA.

[273] If the Board were to direct NS Power to change to the ALG depreciation procedure and to adopt the asset service life changes recommended by Mr. Madsen, NS Power's depreciation rates in the GRA test period would be reduced by roughly $45 million. This would equate to a one-time pre-tax decrease in average customer rates of approximately 2%. However, downward adjustments to NS Power's depreciation expense included in revenue requirement would have the effect of decreasing the company's cash flow. It would also reduce recovery of capital investment thereby increasing debt. These factors would negatively impact NS Power's FFO:Debt credit metrics.

[274] In Undertaking U-7, NS Power provided estimates of forecast FFO:Debt credit metrics under both the ALG and ELG depreciation procedures with and without the settlement agreement adjustments, and under the assumption that securitization of the assets within the scope of the DDA proceeds. These estimates show that under the ELG methodology with the settlement agreement adjustments, the FFO:Debt metric will be 12.1% to 12.3% in 2026 and 12.7% to 12.8% in 2027. Under ALG with the settlement agreement adjustments, the metric estimates range from 10.9% to 11.1% in 2026 and 11.4% to 11.5% in 2027. So, if the Board were to direct NS Power to use the ALG procedure, NS Power's FFO:Debt credit metric would be reduced by roughly 1.2%. Again, this is under the assumption that securitization of the assets within the scope of the DDA proceeds.

[275] In response to NSEB IR-122, NS Power indicated that if its GRA application is approved by the Board and if securitization of the assets within the scope of the DDA does not proceed, its FFO:Debt credit metric would be 10.7% in 2026 and 11.1% to 11.2% in 2027. Therefore, if the Board directs NS Power to use the ALG depreciation procedure, and securitization of the assets within the scope of the DDA does not procced, the company's credit metric would fall below 10% in both 2026 and 2027. If the Board were to further direct NS Power to make the asset service life adjustments recommended by Mr. Madsen, these metrics would degrade further but only nominally.

[276] As Pelino Colaiacovo of Morrison Park noted is his testimony, credit metrics at this level would be problematic. This could increase the risk of having the credit rating agencies lower NS Power's credit rating to "junk" status. As noted in Morrison Park's evidence, this would have serious long-term cost consequences resulting in higher costs for ratepayers.

[277] The service life and ALG changes the Board has considered would result in lower rates for customers over the test period. Nevertheless, in the Board's opinion, the increased credit rating risk related to these changes coupled with the uncertainty of securitization of the assets within the scope of the DDA not proceeding (as indicated in the Department of Energy's closing submissions), would more than offset the benefit of the depreciation related changes considered by the Board. As noted by Morrison Park:

> A downgrade of NSPI's credit rating would have serious long-term consequences, as the company would no longer be investment grade. All new issuances of debt would be significantly more expensive than was historically the case. Immediate consequences would likely include lack of access to the commercial paper market, and the breaching of covenants in project agreements with partners like the CIB. These consequences go beyond the monetary in nature.
>
> [Exhibit N-36, p. 26]

[278] Therefore, for the purposes of the current GRA, the Board will not direct NS Power to use the ALG depreciation procedure for the current GRA. This notwithstanding, the Board directs NS Power to file an updated depreciation study with its next general rate application. The Board expects that this depreciation study will address, but not be limited to, the following issues:

- Depreciation expense and rate base interaction;
- Extent of true aged data use;
- A NS Power specific ALG vs. ELG crossover analysis;
- Peer utility comparisons;
- Analysis of forces of retirement unique to Nova Scotia;
- Accumulated depreciation reserve deficiency impacts under both methods;
- Whether a phased-in transition to ALG would be appropriate; and
- Proposed depreciation rates by asset accounts under both ELG and ALG procedures.

[279] Moreover, for the purposes of the current GRA, the Board approves the asset service lives presented in NS Power's application, including the settlement agreement adjustments made to service lives for Accounts 353 and 390.10. The Board directs NS Power to address Mr. Madsen's recommendations related to asset Accounts 354, 356, 367 and 390.10 in its next depreciation study filed with the Board, NS Power is also directed to provide the following information in its next depreciation study filed with the Board:

- Detailed management notes for each account;
- All analysis and studies performed by management for each asset to confirm the expected life;
- All updated IRP documents;

- A reconciliation of the lives proposed in the depreciation study to the lives proposed in the IRP; and
- The peer analysis relied upon by the company in an Excel file.

[280] The Board approves the use of amortization accounting for the following five General Plant accounts:

- Account 391.10 Furniture and Equipment (20-year amortization period);
- Account 391.31 Computer Equipment – Hardware (5-year amortization period);
- Account 391.32 Computer Software (10-year amortization period);
- Account 394.00 Shop Equipment (20-year amortization period); and
- Account 398.00 Miscellaneous Equipment (20-year amortization period).

3.5 Regulatory Deferrals

3.5.1 Securitization Deferral

3.5.1.1 Background

[281] Securitization was described by NS Power as the “centrepiece” of its general rate application and the settlement agreement. The practical impact of securitization in this matter is that it would result in ratepayers paying a lower financing rate on retiring certain utility coal plant and related assets as required under federal and provincial decarbonization policies. In its application, NS Power estimated that securitization could save customers about $90 million over the 2026 and 2027 period.

[282] Securitization is a complex commercial transaction which removes assets from a utility’s balance sheet and restructures the assets into debt, which is then refinanced in a bond issuance or other type of securities offered to investors in the debt markets. The purpose of securitization is to obtain the highest possible credit rating so

that the bond issuance can attract a materially lower interest rate than the return on rate base otherwise paid to the utility by ratepayers on those assets. Since the utility should be able to reduce the financing costs for the securitized assets, ratepayers will be able to pay lower financing costs over the term of the amortization period. After the securitization, the utility's shareholders no longer earn a return on the assets. Further, since the debt associated with the assets has been removed from the balance sheet, the securitization results in improved credit metrics for the utility.

[283] There are a few steps to implement a securitization. First, there must be legislation in effect authorizing a securitization process for the assets, including the issuance of a financing order by the regulator and the creation of a charge or pledge that will provide bondholders an irrevocable right to receive the bond principal and interest from ratepayers to retire the securitized debt. This is important so that the debt can attract the highest possible credit rating to obtain the lowest interest rates.

[284] Second, the regulator must issue a financing order authorizing the securitization to proceed on the identified assets. The financing order typically confirms the irrevocable nature of the charge to be paid by ratepayers. The order may also direct a true-up mechanism to adjust the charge to ensure the coverage of the principal and interest if energy sales vary from forecast. As noted in prior matters, complex commercial transactions involving the corporate structure of the utility may also be required to implement the securitization and isolate the securitized debt for the benefit of bondholders, usually through a special purpose entity. In the case of NS Power, this involves dealing with corporate items such as trust indenture and debt covenant-related

issues, together with the assessment of credit rating agency treatment and income tax treatment of the amounts to be securitized (see 2024 NSUARB 67, M11220, para. 105).

[285] NS Power intends to request approval of the securitization of $704 million of the unrecovered net book value of thermal assets within the scope of the Decarbonization Deferral Account ($500 million in 2025 and $204 million in 2026). However, since legislation has yet to be enacted in Nova Scotia to authorize securitization, NS Power requested the Board's approval of a "securitization deferral" in the event securitization was delayed and could not be completed by January 1, 2026. For this deferral, the depreciation expense and financing costs of these assets intended to be securitized on January 1, 2026, would be deferred at WACC on an interim basis until securitization is in place. The intent is to add the deferred depreciation and financing costs to the amount to be securitized. The issue to be addressed in this application is whether this deferral account should be approved. NS Power will seek Board approval of the securitization in a subsequent application, should it proceed.

[286] Securitization by utilities is more prevalent in the United States. The present case may be the first example of this mechanism being proposed by an investor-owned regulated utility in Canada. A form of securitization was applied in Ontario a few years ago for Ontario Power Generation, a Crown-owned utility.

[287] A successful securitization should reduce costs for ratepayers. For example, instead of paying NS Power's weighted average cost of capital on a deferral account (which is currently set at 6.65% for 2025), ratepayers would potentially pay a lower interest rate on a bond issuance authorized under a financing order. NS Power estimated the interest rate that could be achieved in a bond issuance at about 5%, based

on market conditions forecast in November 2025 (see Morrison Park IR-7). The result of the above is that NS Power would no longer earn a return on the securitized assets.

[288] Securitization has been raised over the past several years in proceedings involving NS Power, with the Board and intervenors urging NS Power to investigate this option as a means to mitigate rate impacts on ratepayers. A similar mechanism was used to address a significant FAM balance owed by ratepayers, and more recently in matters leading to the present application about the costs associated with the retirement of coal plants. As noted by counsel for the Municipal Electric Utilities of Nova Scotia (MEUs), NS Power appeared reluctant to pursue securitization until recently:

> It is worth noting that NS Power was initially opposed to securitization. In a May 3, 2022 response to questions in its 2022-2024 General Rate Application ("GRA"), NS Power stated: "…there are other factors which make securitization not the preferred approach for NS Power at this time."
>
> The Settlement Agreement in the 2022-2024 GRA included an agreement in principle to the DDA to recover undepreciated thermal asset NBV and unrecovered decommissioning costs. Although the Board's decision in the 2022-2024 GRA identified several items to be addressed in the subsequent filing, including potential use of securitization, NS Power's June 30, 2023 application for the DDA in Matter M11220 proposed deferring any investigation of securitization. Intervenors noted NS Power reiterated securitization was not its preferred mechanism and did not conduct any form of economic analysis to assess the cost or benefit of securitization compared to financing at NS Power's Weighted Average Cost of Capital ("WACC").
>
> At para. 111 of its April 10, 2024 decision approving the DDA in that matter, the Board agreed that NS Power was non-responsive on the issue of securitization and endorsed the intervenor comments. The Board directed a meaningful investigation of the potential use of securitization with a report due no later than April 30, 2025.
>
> [MEUs Closing Submission, January 30, 2026, p. 4]

[289] As is the case in other jurisdictions, securitization must be authorized by legislation before it can be implemented. In its final report in February 2024, the Nova Scotia Clean Electricity Solutions Task Force recommended that new legislative provisions allow the Board to have "a complete suite of tools to ensure lowest cost for utility customers in dealing with the financial consequences of the early retirement of

NSPI's coal fired facilities" (p. 46), referring to securitization, among other mechanisms. The Province accepted this recommendation and amended the *Public Utilities Act* in April 2024 to introduce a provision allowing the Board to issue a financing order authorizing a securitization: *Energy Reform (2024) Act*, SNS 2024, c 2, s 72:

> **35G (1)** The Energy Board and the Regulatory Board may approve, deny or modify an application for a financing order.
>
> **(2)** The Governor in Council may make regulations respecting all aspects of financing orders, including defining financing orders and when they may be used.
>
> **(3)** The exercise by the Governor in Council of the authority contained in subsection (2) is a regulation within the meaning of the Regulations Act.

[290] However, to date, s. 35G has not been proclaimed and no regulations have been enacted to implement the securitization process.

3.5.1.2 Present Application

[291] In this application, NS Power indicated its future intent to ask for the securitization of $704 million of the unrecovered net book value of thermal assets within the scope of the DDA ($500 million in 2025 and $204 million in 2026). At the time of its application in September 2025, it submitted that securitization would save ratepayers $90 million in the 2026-2027 test period. Later, in response to an IR from Morrison Park in November 2025, NS Power updated its forecast and the savings at that time were estimated at about $85 million over the 2026-2027 test period.

[292] However, the current application does not ask for Board approval of securitization. In its September 2025 general rate application, NS Power stated that if the securitization could not be completed by January 1, 2026, it requested the Board, in the interim, approve a "securitization deferral" to defer at WACC the depreciation expense and financing costs of the unrecovered net book value of the thermal plant assets within

the scope of the DDA, until securitization can move forward. The assets sought to be securitized would be the thermal assets related to Point Aconi, Trenton, the Point Tupper Marine Terminal, the Sydney International Coal Pier, and steam general assets. NS Power also proposes to add the deferred depreciation and financing costs accrued in the deferral account to the securitization amount. It said at the January 2026 hearing that the Province had not yet proclaimed the legislation to allow the securitization to proceed and confirmed its request for the securitization deferral.

[293] NS Power also noted in its application that it had to address some preliminary corporate items in advance of the securitization:

> … No Canadian investor-owned utility has undertaken a securitization similar to those undertaken by United States investor-owned utilities. As such, it is anticipated that a NS Power securitization will require identifying a finance structure to resolve a variety of issues including, but not limited to, credit rating, trust indenture and tax considerations. Subject to successful credit rating agency processes and the issuance of enabling regulations, NS Power intends to apply to the NSEB for approval for the securitization of approximately $700 million of DDA assets over the GRA period.
>
> [Exhibit N-3, p. 52]

[294] The settlement agreement contemplated NS Power applying to the Board for the proposed securitization, stating that “NS Power will make best efforts to finalize and apply prior to January 1, 2026, for approval of its proposed securitization of assets, cost-of-service treatment and the Securitization Rider”. It was also agreed among the parties that they could take any position they choose about such an application. Given that the parties agreed to NS Power applying for the securitization and reiterated that support in their closing submissions, the Board infers that the customer representatives reserved the opportunity to comment on cost-of-service issues, the form or operation of the rate recovery rider, etc. However, the requested securitization deferral itself was not canvassed in the settlement agreement, as NS Power acknowledged to the Small

Business Advocate in cross-examination (Transcript, January 7, 2026, p. 209, lines 11-13).

[295] Morrison Park reviewed the general rate application in the context of the company's credit rating issues and the proposed securitization. With respect to the latter, Morrison Park confirmed that securitization would help the utility in improving its credit metrics. Specifically, Morrison Park stated that in the absence of both securitization and its requested rate increase, NS Power would be unable to meet its credit metrics thresholds and its credit rating would be seriously jeopardized. Morrison Park noted that NS Power had suffered a credit rating downgrade in November 2022 to BBB-, which is the lowest investment grade status and just one level above “junk bond” status. Morrison Park cautioned that the Board needs to be mindful of the risk of the utility dropping to “junk bond” status. It said a further downgrade would have “potentially significant consequences”, noting the importance of NS Power maintaining a minimum target of 10% FFO:Debt, that being a key credit metric monitored by credit rating agencies.

[296] Morrison Park noted that matters impacting NS Power’s credit ratings can result in higher borrowing costs. It described the circumstances which occurred in late 2022:

> In November of 2022, NSPI’s rating was downgraded by two notches by S&P, to BBB-, a rating which it continues to have today. As reported by NSPI in the application, this places NSPI in the bottom 10% of utilities in North America. The vast majority of utilities have credit ratings of BBB+ or higher.
>
> In the November 21, 2022 Research Update in which S&P reported on the downgrade of NSPI’s rating, the primary cause of the ratings action was described as the enactment by the province of Nova Scotia of Bill 212, which would override the authority of the then-NSUARB, and limit the increase in electricity rates by fiat. This was described by S&P as a “political intervention” in the independence of the regulator, and caused the downgrading of the business risk profile of the utility to “strong” from “excellent”. Many other factors were addressed, but the overriding issue of government policy was clear. At the same time, because of the expectation that financial results at NSPI would deteriorate based on the legislation, S&P reduced its Financial Risk rating by one category to “aggressive”. The combination of these two changes results, based on the table in Figure 2 above, in a

> standalone credit rating of BB+, and the company would have lost its investment grade status. However, as a subsidiary of Emera, NSPI was accorded the benefit of a one notch advantage, and thus was reduced only to BBB-, instead of BB+.
>
> As of S&P's most recent report, in January of 2025, the rating of BBB- was affirmed, and a specific mention was made relating to the financial risk metric FFO:Debt, such that "We could lower our ratings on NSPI over the next 12-24 months if: Financial measures deteriorated, with FFO to debt consistently below 10%, or We lowered our rating on parent Emera." It is perhaps worth emphasizing the term "consistently below 10%", in the quote above.
>
> [Exhibit N-36, pp. 12-13]

[297] Morrison Park explained the consequences of a downgrade of NS Power's credit rating. It listed several circumstances that could lead to an additional $25 million or more in costs per year for ratepayers [see Exhibit N-36, pp. 24-25]:

- NS Power is forecasting a $250 million bond issuance in 2027. Based on Government of Canada 30-year bond rates at the time of Morrison Park's report, and recent yield spreads on the company's bonds, the consultant estimated the bond interest rate to be under 5%. If the utility suffered a downgrade, the interest rate it could achieve on the bond issuance would be at least 2% higher. The additional cost for ratepayers would be about $5 million per year.
- Similar increases would apply to additional bond issuances, if there is a downgrade, noting it may take years to improve a credit rating following a downgrade. Morrison Park stated that NS Power will have to refinance about $800 million of maturing bonds over the next 10 years, with similar increased interest costs to that described above.
- The same would apply to NS Power's debt financing for its Reliability Plan, which NS Power has forecast at $1.3 billion over five years.
- As outlined in NS Power's response to Morrison Park IR-6, a downgrade from an investment grade rating could result in a default and penalties to the beneficial

financing arrangements received from the Government of Canada for recently approved large projects to support renewables on the grid and improve reliability. It could cause a 3% increase in the interest rate on NS Power's Battery Energy Storage Project and an increase in the return paid to the Canada Infrastructure Bank from 1.15% to 9.00% on the Wasoqonatl Transmission project for the NS/NB Reliability Intertie.

[298] However, Morrison Park also noted that bond markets do indeed react favourably to positive developments affecting NS Power, which it demonstrated in its report by examining the movement in yield spreads as between corporate bonds and government bonds in NS Power's instance relative to Hydro One in Ontario. It noted that bond markets appear to react more contemporaneously with positive developments than credit rating agencies. It referred to a few developments to address NS Power's FAM balance that occurred after the credit rating downgrade in late 2022, including the Government of Nova Scotia's purchase of $117 million of FAM receivables in February 2024 and the Government of Canada providing its $500 million Federal Loan Guarantee in late 2024 to address the remaining FAM balance. Morrison Park noted that NS Power's bond yield spreads decreased (i.e., improved) after these developments:

> … the NSPI bond yields do decline from the January 2023 peak depicted in the charts, despite the fact that no improvements in credit ratings were announced throughout this period. [Emphasis in original] The various announcements about FAM arrangements with government no doubt contributed to the decline in NSPI yield spreads, as did the normalization of regulatory affairs, but in general that decline was gradual.
>
> …
>
> All of these observations suggest that the bond market reacts to events as they occur, and processes all available information, despite the lack of changes in credit ratings, or insights by credit rating agencies. <u>It is also clear that the concrete steps to solve problems at NSPI – such as the securitization of the stranded FAM balances – was rewarded by the markets with lower yields on NSPI bonds.</u> [Emphasis added]
>
> [Exhibit N-36, p. 18]

[299] Morrison Park confirmed that securitization should reduce the business risk faced by NS Power, which could improve its credit metrics and its resulting credit rating. While it noted that a positive result in both the securitization and the proposed rate increases could provide more relief than what is required to ensure NS Power does not suffer a credit downgrade, the reverse is not true:

> Given the magnitude of the impacts of each of the two initiatives separately, should NSPI's rate requests be rejected and its securitization plan not bear fruit, then it would be a certainty that the 10% FFO:Debt target would be missed in both [test] years.
>
> [Exhibit N-36, p. 23]

[300] Further, as noted above, Morrison Park indicated that NS Power must refinance about $800 million of long-term debt over the next 10 years. Morrison Park stated that interest rates are now historically low compared to the rates on existing 10, 20 or 30 year bonds coming due over the next few years. Thus, all else being equal, NS Power should be in a position to refinance maturing debt with lower cost debt. This would represent lower costs for this debt than what is currently embedded in rates.

[301] In his evidence, Mr. Madsen of Emrydia said he had no issues with NS Power's proposed securitization, but recommended the Board conduct a full review of the final securitization in a future process, including the recovery period of all costs. He noted that securitization is used to:

> … allow for lower cost recovery of costs incurred by a utility that if included in base rates would cause rate shock or negatively impact the financial integrity of the utility.
>
> The main benefit of securitization is that it provides for recovery of the costs based on low-cost debt financing, which is generally available as the cost recovery is either guaranteed or highly certain, and over a finite period of time. Absent denying recovery of the costs in rates, which has its own implications, securitization poses the lowest general cost to customers.
>
> [Exhibit N-34, p. 117]

[302] Given Morrison Park's evidence that a downgrade to NS Power's credit rating could lead to an additional $25 million or more in interest costs per year, it appears

that securitization, if allowed to proceed, could provide comfort about the utility's credit rating and potentially be a contributing factor to reduced costs for ratepayers over the long term. As noted above, bond markets have reacted favourably to positive developments impacting NS Power.

[303] NS Power had not applied for securitization as the end of 2025 approached. On December 22, 2025, NS Power wrote to the Board requesting a securitization deferral pending the legislation being proclaimed and regulations enacted:

> As stated in response to NSEB IR-89(a-c), while NS Power believes it will be able to proceed with a securitization application as soon as enabling regulations are in place, it now anticipates that securitization will be in place, at the earliest, by the end of Q1 2026. As such, and consistent with the stated intent set out in the GRA, NS Power is requesting Board approval to defer the depreciation expense and financing costs of the subject assets at WACC on an interim basis until such time as securitization is in place. As confirmed in response to NSEB IR-89(d), NS Power is proposing to add the deferred costs to the balance being securitized. NS Power anticipates that any assessment of the amount of deferred costs to be added to the securitized balance would be assessed by the Board as part of the application to approve securitization.
>
> NS Power has discussed this request with customer representatives, but they have not provided their confirmed positions on the matter.

[304] NS Power was unable to report any progress on this issue at the hearing in January 2026. It confirmed in questioning from the Board that it had not received the intervenors' views about the proposed deferral, subject to what position they would take at the hearing. Further, at the hearing, the utility's estimated timeline for completion of the securitization was extended to Q2 2026, possibly Q3 2026, depending on the enactment of the regulations. However, the NS Power panel testified that it continued to engage with the provincial government to pursue this process:

> **Q.** And I know there's been discussion through the Application other documents with respect to NSPI kind of waiting for the Regulations with respect to the securitization. What is the current status of the Regulations?
>
> **A.** (Williams) The Regulations are with government, effectively. So Regulations obviously need to be put into effect from the provincial government, and so we're waiting for that to occur.

Q. Do you have any idea of how long that might take?

A. (Williams) I don't have any specifics on that, and that's why I was kind of trying to give a general timeline in terms of front half of this year to make the application, have it determined and have securitization in place.

Nova Scotia Power certainly has made efforts and will continue to make all efforts to ensure that as soon as we're able to move forward with that application we would do so without any delay.

Q. And just to be clear, do the Regulations have to be in place and enacted prior to your making the application?

A. (Williams) Yes, I believe so. The relevant provision of the PUA, which would also need to be enacted and would -- is very broad and very general and just provides for the issuance of Regulations, and the Regulations would provide the basis for that application.

[Transcript, January 7, 2026, pp. 210-212]

[305] In questioning by PHP counsel, NS Power confirmed that a six-month delay in proceeding with the securitization (i.e., by July 1, 2026, instead of January 1, 2026), would reduce the savings for NS Power and ratepayers realized over the two-year test period by one quarter (i.e., $22.5 million in reduced savings).

[306] NS Power also confirmed that it had completed its preliminary steps to proceed with the securitization once the regulations are enacted by the Province. It stated that once s. 35G is proclaimed, the regulations are enacted, and the Board issues its financing order, the securitization could be completed in short order, on a timeline similar to what had transpired in the FLG2 debt issuance process conducted in December 2024 to refund $500 million of the FAM balance to ratepayers (Transcript, January 9, 2026, pp. 904-905).

[307] At the very close of the hearing on January 13, 2026, NS Power indicated it had received information that could impact the timing of the securitization. The company indicated it would write to the Board immediately following the hearing to report on these

new facts, based on a message agreed to by the interveners present who had signed the settlement agreement. On January 14, 2026, NS Power wrote as follows:

> In order to ensure the public record of matter M12451 is as complete as possible, NS Power writes to confirm that, as communicated during the confidential portion of the M12451 hearing on January 13, 2026, the exact timeline of securitization remains uncertain, but that NS Power continues to believe in its eventuality and that it is in the best interests of customers. [Emphasis added]
>
> [Exhibit N-65]

[308] In closing submissions, the Department of Energy indicated that the Province is not currently inclined to allow the securitization to proceed due to concerns about the value of coal plant assets that would be securitized, submitting that this amount should be reduced (as canvassed elsewhere in this decision). The Province described its position as follows:

> 92. For initiatives that demonstrably protect ratepayers, the Department is all in. However, there remains considerable uncertainty regarding the appropriate value of coal assets that would form the basis of any securitization initiative. Without a clear and comprehensive understanding of these assets' appropriate value, it would be irresponsible to lock in a price that commits ratepayers to funding them into the future and for the Province to be financially exposed to risk through NS Power's request for the province to backstop the securitization loan.
>
> …
>
> 94. The Province will not implement regulations creating a situation, securitization or otherwise, that could result in financial harm to ratepayers or fail to demonstrate clear ratepayer benefits. It could be that under certain circumstances some form of securitization makes sense. This conclusion has not been reached with respect to NS Power's proposition and as such the Province does not accept it. Until it is proven to save ratepayers money, it is a nonstarter.
>
> 95. The Department has worked with NS Power to try to develop an approach that would benefit ratepayers but to date has been unable to do so.
>
> 96. To this end, the Department also has significant concerns with assumptions NS Power made about the Province's position with respect to securitization. Specifically, the Consensus Agreement seems to suggest that NS Power and consumer representatives shared an understanding that securitization of Decarbonization Deferral Account liabilities was imminent. In fact, there has never been any firm commitment from the Province that it will change regulations to permit securitization.
>
> [Department of Energy Closing Submissions, p. 15]

[309] However, in their closing submissions, NS Power and the customer representatives continued to support securitization and highlighted the savings that would accrue to ratepayers from the securitization. NS Power noted that the Province had taken initial steps to provide a process for securitization through the enactment of s. 35G of the *Public Utilities Act* and had outlined its support of this process in a letter to the utility dated May 6, 2025, from Karen M. Gatien, Deputy Minister of Energy, who stated:

> In order to reduce electricity costs for Nova Scotians, I am writing to confirm that the Department of Energy is committed to continuing its engagement with Nova Scotia Power and other relevant stakeholders to develop an approach that would allow for the Nova Scotia Energy Board to issue a financing order. A financing order is used in section 35G of the *Public Utilities Act*, in order to facilitate the securitization of electric utility costs.
>
> Any such approach would not come at a cost to the Government of Nova Scotia. It is my hope that this work can be successfully completed within the year.
>
> [Exhibit N-7, Appendix 8F, PDF p. 650]

[310] Further, NS Power noted that the DDA approved during the 2023-2024 GRA proceeding (M10431) was identified as an initial step in the treatment of retired thermal assets, including as a preliminary step to securitization. It stated the "purpose of the DDA was to avoid the need to accelerate the recovery of the remaining costs of the coal assets and the resulting substantial increase in rates that would occur if a conventional depreciation study update was undertaken". Christine Runge, of Power Advisory LLC, a consulting firm engaged by the Province in that matter, recognized that the DDA could potentially be the best option for recovery of costs associated with the early retirement of thermal generation assets. Nevertheless, she stated that it should not be approved unless more information is provided before assets are transferred to the DDA, including proposed amortization periods and rate impacts (see *NS Power 2023-2024 GRA* Decision, pp. 113-114). The Board sees this as consistent with a process that would

ultimately implement securitization, which would have to come to the Board in a separate process for approval.

[311] In the interim, most of the customer representatives supported the securitization deferral but did not agree with NS Power that the deferral should be made effective retroactive to January 1, 2026. In their view, the securitization deferral should only take effect when new rates are implemented. Otherwise, these intervenors argued that this would amount to double recovery because, as the Small Business Advocate submitted, depreciation expense and financing costs for these assets are already embedded in NS Power's existing rates. The MEUs stated that the deferral should only take effect when any costs related to these assets are not included in rates, after new rates come into effect. MEUs' counsel suggested this would be "consistent with the intent of the settlement agreement and the GRA as filed, which contemplated new rates taking effect consistent with the start date of any potential deferral on account of a delay in securitization". Finally, the Industrial Group submitted that retroactive application of the deferral would offend a well-recognized ratemaking principle that deferrals should only apply prospectively.

[312] In its reply submissions, NS Power submitted that the intervenors' concerns about "overcollection or double recovery are unwarranted":

> • First, the current rates are based on a revenue requirement developed in a prior test year using forecasts that predate these circumstances. Attempting to retroactively attribute specific current costs to that framework would be artificial and unreliable;
>
> • Second, rates were capped in 2023 and 2024, with the result that the Company's full revenue requirement was not funded and therefore these costs have not been recovered;
>
> • Third, in recent years the Company has consistently earned below its allowed return on equity, further confirming that incremental costs of this nature are not being absorbed through existing rates;

> • Fourth, the Company is already bearing significant unrecovered costs in the period between January 1 and the issuance of the Board's decision in this proceeding – a period that coincides with peak winter sales and system stress. That burden should not be compounded by requiring the Company to absorb additional costs associated with an initiative that has broad stakeholder support, is plainly in customers' long-term interest, and whose timing is largely outside the Company's control; and
>
> • Fifth, the presence of the earnings cap requiring that anything recovered over 9.25 percent is returned to customers through the FAM provides a safeguard in the, highly unlikely, scenario where earnings reached that level as a result of a January 1, 2026 deferral effective date.
>
> [NS Power Reply Submissions, February 6, 2026, pp. 34-35]

[313] Mr. Madsen also had concerns about NS Power's proposal to defer the depreciation expenses and financing costs at WACC if the securitization is delayed:

> While I do not oppose the securitization proposal, I do oppose NS Power's proposal to defer depreciation and financing costs on the assets at its WACC if the securitization is delayed. NS Power has not adequately demonstrated why the delay occurred. Additionally, it is in the interest of all parties, including customers and NS Power, that the details of the securitization are finalized quickly to ensure rate certainty for customers. Allowing for recovery of WACC on unrecovered costs provides a weak incentive for NS Power to ensure the process is completed in a timely manner.
>
> Additionally, I note that the period of delay appears to be a matter of months. It is customary for return on such amounts to be approved by a regulator where there is a substantial delay that is outside the control of the utility. The context of this delay is one that is not substantial. The delay is also not clearly outside the control of the utility.
>
> Accordingly, I support simple deferral of any amounts related to depreciation and financing costs to the extent the securitization is delayed. Simple deferral of only the specific dollar amounts, after review of all supporting calculations for those amounts is appropriate for the above reasons. …
>
> [Exhibit N-34, p. 120]

3.5.1.2.1 Findings

[314] The approval of the potential securitization is not before the Board in this application. The sole issue in the present matter is whether the Board should approve the securitization deferral. NS Power asked for this deferral in case the securitization is delayed such that it cannot occur, "in whole or in part", by January 1, 2026. NS Power proposed that the depreciation expense and financing costs of the unrecovered net book value of the thermal assets within the scope of the DDA be deferred at WACC on an interim basis. It is now known that the securitization did not occur by January 1, 2026.

Securitization cannot currently proceed in Nova Scotia because the enabling statutory provision has not been proclaimed and regulations to implement this mechanism have not been enacted by the Province.

[315] Given the Department of Energy's submissions, the Board shares the Consumer Advocate's view that, at least at this point, "the achievement of securitization appears to be very much in question". Clearly, the Consumer Advocate is correct when he observed that the "regulatory amendments necessary to facilitate securitization will not happen without the support of the Province". Nevertheless, in their closing submissions, all the customer representatives expressed their support for the eventual securitization of the subject thermal assets:

> • Finally, the MEUs would also like to take the opportunity provided by the closing submissions to reiterate their support for NS Power's efforts to securitize approximately $700 million of assets in the Decarbonization Deferral Account ("DDA") over the GRA period. Securitization is an approach that lowers costs for customers … (MEUs, p. 4);
>
> • …the securitization of the DDA assets would result in a significant savings for current NSPI ratepayers, … While approving securitization is not before the Board today, it is important that the Board give it the appropriate consideration as the assumptions regarding securitization, and its benefits to rate payers, form an important part of the GRA. Should securitization not proceed during the test period, there could be significant financial impacts for NSPI ratepayers, which cannot be avoided. (Small Business Advocate, p. 7);
>
> • A key feature of the GRA and the Settlement Agreement is the securitization of the thermal assets of the Utility, which it values at approximately $700 million dollars. Securitization would remove the net book value of these assets from Nova Scotia Power's rate base and significantly reduce its revenue requirement for the test years. (Consumer Advocate, p. 9);
>
> • The use of securitization to achieve cost savings was a critical component of the Consensus Agreement from the ratepayer perspective. … NS Power should continue its efforts to pursue securitization. (PHP, p. 8);
>
> • … The Industrial Group has consistently supported securitization of NSPI's thermal assets, now contained within the Decarbonization Deferral Account ("**DDA**"). The evidence filed to date confirms that this proposed treatment will yield substantial savings for ratepayers: currently estimated at approximately $85 million over 2026–2027, … In the GRA negotiation process, securitization received unanimous support from customer representatives as the preferred solution for financing the DDA assets. … Not only have customer representatives viewed securitization favourably, but recent credit rating reports from S&P and DBRS Morningstar, also highlight the value of securitization mechanisms more broadly. (Industrial Group, pp. 10-11).

[316] These intervenors do not oppose the proposed securitization deferral, except in one important respect. As noted above, the intervenors do not agree that the deferral be effective retroactive to January 1, 2026.

[317] The Board accepts the evidence of NS Power, Morrison Park, Emrydia and the submissions of the customer representatives that securitization, if allowed to proceed, could benefit ratepayers by lowering financing costs related to the retirement of thermal assets. Past examples that were similar to securitization clearly showed that the result is lower costs for ratepayers. Such processes include the Government of Nova Scotia's purchase of $117 million of FAM receivables in February 2024. This transaction acted to lower NS Power's borrowing costs and avoid rate shock for customers.

[318] In turn, Morrison Park noted that positive developments affecting NS Power had a favourable impact on the utility's relative borrowing costs going forward, as measured by a reduction in NS Power's bond yield spreads compared to government bonds. Morrison Park indicated that bond markets react favourably to positive developments, typically lowering NS Power's financial and business risks. Morrison Park highlighted that "concrete steps to solve problems at NSPI – such as the securitization of the stranded FAM balances – was rewarded by the markets with lower yields on NSPI bonds".

[319] NS Power has been in a precarious financial situation since its credit rating was downgraded to BBB- in late 2022. Morrison Park confirmed that a further downgrade of NS Power's credit rating "would have serious long-term consequences, as the company would no longer be investment grade. All new issuances of debt would be significantly more expensive than was historically the case". It said this could lead to an

additional $25 million or more in interest costs per year, due to increased interest rates on new debt and on refinanced debt on maturing long-term bonds. There would also be increased rates due to defaults and penalties to the beneficial financing arrangements received from the Government of Canada for recently approved large projects to support renewables on the grid and improve reliability, such as a 3% increase on NS Power's Battery Energy Storage Project and an increase in the return paid to the Canada Infrastructure Bank from 1.15% to 9.00% on the Wasoqonatl Transmission project for the NS/NB Reliability Intertie.

[320] The Board places significant weight on Morrison Park's evidence. Mr. Colaiacovo, Managing Director at Morrison Park, was qualified as an expert to provide opinion evidence about utility financing. Morrison Park is a Canadian independent investment bank which provides advisory services for mergers, acquisitions and capital raising, and provides expert witness testimony before courts and regulators. About 40% of its work is in the energy and utilities sector. He explained the practical impact of a potential credit ratings downgrade on the borrowing costs incurred by NS Power, which are ultimately borne by ratepayers. He confirmed that prior steps taken to address issues, such as the securitization of NS Power's FAM balance, was "rewarded by the markets with lower yields on NSPI bonds".

[321] It was confirmed at the hearing that a six-month delay in securitization to July 1, 2026, would reduce the estimated $90 million savings for NS Power and its customers by about one-quarter (i.e., by $22.5 million). However, if securitization does ultimately proceed, savings could still be realized for the remaining part of the two-year test period and beyond.

[322] As noted above, the approval of the potential securitization is not before the Board in this application. Whether securitization ultimately proceeds is a policy matter for the Province to decide.

[323] NS Power requested the deferral account in case the Province delayed or was not prepared to proclaim s. 35G of the *Public Utilities Act* and enact regulations to allow the securitization to proceed. However, in its closing submissions, the Department of Energy stated that “it could be that under certain circumstances some form of securitization makes sense”. While the Province has shown support for this mechanism in the past by enacting s. 35G in 2024, and by providing a letter of support from Deputy Minister Gatien in May 2025, the Province is not prepared to allow the securitization to proceed at the present time. As canvassed elsewhere in this decision, this position is based on the valuation of the coal plant assets NS Power seeks to securitize.

[324] The only securitization related issue in this application is whether the Board should approve the securitization deferral. The Board finds that it should. The depreciation expenses and financing costs proposed to be deferred relate to assets covered by the scope of the DDA that will continue to be used and useful in the test years. These are costs that would normally have been included in NS Power’s proposed revenue requirements for the test years but, anticipating that the net book value of these assets would be removed from rate base through securitization, NS Power did not include them. While NS Power may have been overly optimistic in doing so, its decision was intended to secure an early benefit for customers from securitization in this general rate application and there is no basis to disallow the recovery of these costs for that reason.

[325] NS Power continues to be optimistic that securitization will occur at some point. However, the Board is concerned about the continuing accrual of these decommissioning and financing costs in a deferral account when they should be included in present rates. This cannot continue indefinitely. To encourage NS Power to deal with this issue on a timely basis, NS Power will only be permitted to earn WACC on this deferral during the test period. After that, subject to a further or other order of the Board, NS Power may only earn at its weighted average cost of debt and must seek leave of the Board, in advance, to continue to accrue amounts to this deferral account after December 31, 2027.

[326] Accordingly, the Board approves the securitization deferral for the thermal assets within the scope of the DDA, including the depreciation expense and financing costs related to these assets. However, the Board finds that the deferral account must only take effect when the new rates are implemented. The Board agrees that it would offend accepted ratemaking principles to retroactively apply the deferral. It would amount to double recovery to the extent that costs related to these assets are already embedded in existing rates.

[327] The Board accepts PHP's description of the problem and why it must deny NS Power's request to retroactively apply the deferral:

> Effectively, NS Power is asking to recover costs associated with to-be securitized assets differently than other similar generation assets simply because NS Power has proposed to securitize them, and did not have new rates in place before the assumed securitization period. If permitted, this would provide NS Power with the opportunity to defer and recover costs for the to-be securitized assets in advance of the Board's approval of new general rates for similar assets.
>
> The timing of securitization is not the issue. Consider what would happen in the event securitization never occurs. If NS Power's proposal is approved, it could apply for recovery of the depreciation and financing costs associated with those assets starting from January 1, 2026, even though the Board's approval for new rates associated with the 2026 test year revenue requirement did not occur until sometime later in 2026. This would result

> in customers paying more than if securitization was never put forward as a concept in the first place.
>
> In support of its proposal, NS Power attempted to argue that the costs of the assets are not necessarily included in existing rates because of the way rates were capped. But it is NS Power that is in control of the timing of its rate applications. There is no dispute that these same assets were included in the revenue requirements NS Power proposed as part of the 2022-2024 GRA that led to the establishment of existing rates. To the extent that existing rates are not sufficient to meet NS Power's revenue requirements, it remains NS Power's obligation to bring forward GRAs in a timely manner.
>
> [PHP Closing Submissions, January 30, 2026, pp. 7-8]

[328] It is up to NS Power to effectively manage its regulatory calendar. It only filed its GRA in late September 2025, practically ensuring that the matter would not be concluded before year-end. Given what is now known about the Province's position on securitization, NS Power's expectations about completing the securitization by year-end of 2025 were no doubt unrealistic. Notwithstanding its misplaced belief, if NS Power wished the deferral to be effective January 1, 2026, it should have pursued that issue diligently to ensure that it would not offend the well-recognized principle against retroactive ratemaking, as described elsewhere in this decision. The carriage of that issue was within NS Power's control if it wanted the matter resolved before year-end. Failing that, the deferral, once approved, can only become effective when new rates are set by the Board.

[329] There is also an issue about the return to be applied to the balance of the securitization deferral account. The Board notes the concerns expressed by Emrydia but finds that WACC can be applied during the test years as set out above.

3.5.1.3 EIFEL Deferral

[330] NS Power has requested the ability to create a regulatory deferral to allow it to recover an incremental tax expense if an exemption is not enacted by the

Government of Canada with respect to a tax provision entitled the “excessive interest and financing expenses limitation” (EIFEL).

[331] The EIFEL provision was enacted in Bill C-59, effective January 1, 2024. However, in August 2025, the federal government released an update to the EIFEL rules which included an exemption for regulated utilities. The Government repeated its intention in the Fall of 2025 to implement the exemption. To date it has not been enacted.

[332] NS Power elected to remove this potential expense from its forecast revenue requirement because it believes there is a “high potential” that the exemption will be granted. If not granted, it has requested the EIFEL deferral. The parties to the settlement agreement agreed to defer the incremental tax expense of about $7.5 million over the 2026-2027 test period if the exemption is not allowed.

[333] Doane Grant Thornton confirmed at the hearing that the state of the exemption remained uncertain. It stated that it is not uncommon for uncertainty over such new tax rules to continue over an extended period, including over successive fiscal periods. In the absence of the deferral, Doane Grant Thornton stated it would be appropriate for the expense to be included in the forecast revenue requirement. It agreed that the EIFEL deferral was reasonable.

3.5.1.3.1 Findings

[334] Based on the evidence of NS Power and Doane Grant Thornton, the Board finds it appropriate to approve the EIFEL deferral.

3.5.1.4 PHP Deferral

[335] PHP currently takes service from NS Power under the Extra Large Industrial Active Demand Control (ELIADC) tariff, which is a Below-the-Line (BTL) tariff. The cost-

of-service study supporting this general rate application assumed that PHP would take service under a new Above-the-Line (ATL) tariff on January 1, 2026.

[336] However, that did not occur. On March 31, 2025, NS Power applied to extend the ELIADC tariff for its third term, effective January 1, 2026, until December 31, 2026, inclusive. The Board approved the extension by decision letter dated September 22, 2025 (M12184) but ordered amendments to the tariff and further reporting. Further, in keeping with NS Power's statement that its objective was to apply for a successor tariff in 2025, to be available to PHP in 2026, prior to the PHP Goose Harbour Lake Wind Farm being commissioned, the Board directed NS Power to apply for the successor tariff by December 31, 2025.

[337] NS Power applied for the successor tariff on December 29, 2025 (M12661), requesting approval of the Extra Large Industrial Dispatchable (ELID) Tariff, an ATL tariff. It noted that the intention is that PHP will subscribe to this tariff on, or before, January 1, 2027, as the ELIADC tariff expires at the end of 2026.

[338] As noted above, NS Power's GRA was based on PHP being treated as an ATL customer in the 2026-2027 cost-of-service study. NS Power said it expected the provision of ADC (i.e., Active Demand Control) service to be proposed as a rider to the new ATL tariff and that any approved payments to PHP for ADC services were expected to be recovered from ATL customers. Other proposed features of PHP's ATL treatment included an interruptible credit (equal to the Large Industrial Interruptible Rider (LIIR) credit) and the value of priority interruption service provided, if any (modeled as a 10% premium to the LIIR credit).

[339] NS Power's GRA requested a PHP Deferral to track any revenue differences between the assumptions in the GRA cost-of-service study treating PHP as an ATL customer and the eventual ELID tariff, in the form ultimately approved by the Board. The GRA adopted a clause in the settlement agreement that the PHP Deferral account would apply in the following scenarios:

- the Board's decision on the PHP tariff or ADC rider differs from the ATL GRA tariff assumptions;
- the tariff is not available for PHP to take service under it as of January 1, 2026; or
- PHP decides the outcome of the ADC and tariff processes is not satisfactory.

[340] In response to Undertaking U-2, NS Power estimated that $18.2 million would accrue in the PHP Deferral account if PHP remains as a BTL customer for the entirety of 2026, and there would also be a $5.7 million fuel balance captured under the FAM. NS Power also assumed the PHP load in 2026 was the same as that assumed in the GRA. The Industrial Group noted that these amounts did not account for delays in PHP's Goose Harbour Wind Project.

[341] While the PHP Deferral contemplated in the settlement agreement was agreed to by the customer representatives, it is clear from the questioning at the hearing that there may be uncertainty about parts of the scope of the deferral account as between NS Power and some of the customer representatives. The settlement agreement contained a clause that the parties were free to take any position they wished during the Board's review of the PHP successor tariff.

[342] In his closing submissions, the Consumer Advocate noted that, as an ATL customer, PHP will assume significant costs that would otherwise be allocated to other

customer classes. Further, he noted that if PHP considers that the new tariff is not satisfactory, or that the Board does not approve the proposed ATL tariff, PHP could remain a BTL customer under the ELIADC tariff for all of 2026, which would impose additional costs on the other rate classes. The Consumer Advocate stated that there already appear to be areas of disagreement between NS Power and PHP about the proposed tariff. The GRA and the settlement agreement contemplates PHP's firm, plus interruptible load, at a forecast of 65 MW, while PHP takes the view that "the three coincident peak demand determinants applicable to PHP should be set at the firm demand level of 8-MW" (p. 6 of the M12661 application). The Consumer Advocate noted that these "unanswered questions bear directly on the terms of the Settlement Agreement and the resulting GRA".

[343] The Industrial Group noted that the terms about the treatment of PHP in the settlement agreement were "intentionally drafted" and are the lengthiest section of the agreement. It submitted that the PHP Deferral account was "intended to capture only specific variances ordered by the Board" and the only issue in this proceeding "is the proper scope and parameters of the PHP Deferral Account" as reflected in the three above scenarios set out in the settlement agreement. It said that there was no proposed PHP successor tariff at the time the settlement agreement was negotiated, so that the GRA's cost-of-service study made various assumptions about:

> … certain load and demand characteristics of PHP under an ATL rate. The COS embeds fuel cost savings and PHP's contribution to fixed costs but does not quantify the value of "active demand control" ("ADC") which was contemplated to be negotiated between PHP and NSPI.
>
> [Industrial Group Closing Submissions, January 30, 2026, p. 8]

[344] The Industrial Group noted that the settlement agreement was signed on August 29, 2025, but that NS Power did not file its application for a successor tariff until

December 29, 2025, despite assuming that the GRA's cost-of-service study was forecast based on receiving Board approval for the successor tariff in time for it to be implemented by year-end. Given that NS Power and PHP controlled the timing of the successor tariff application, the Industrial Group stated that it reserved the right to argue whether the costs sought to be transferred to the deferral account met a prudency test. Further, it noted that in the ELID application (M12661), NS Power appears to ask for "expanded risk mitigation parameters beyond these agreed terms [of the settlement agreement]", noting that the utility uses language such as "including but not limited to..." in referring to variances to be included in the deferral account.

[345] The Industrial Group also referred to NS Power's testimony, which it said appeared to potentially expand the scope of the deferral account:

> **Q.** (Rudderham) I guess I'm trying to clarify what exactly NSPI is looking for approval from the Board for this deferral account because there needs to be some predictability here as to what's going to be deferred and recovered at a later time versus what is not going to be deferred and recovered from other customers. So can you clarify that?
>
> **A.** (Williams) Yeah. Well, I'm trying to. And I understand the frustration, but I think the reality is that we need to ensure we're not closing the door to something that we just may not be seeing or foreseeing as a result of this tariff application.
>
> I do think we have put forward appropriately worded, appropriately stringent criteria as to what would be applicable or what would be eligible for the deferral. And it goes back to -- when I say principles, it's really those three bullets from the settlement -- or three bullets from the General Rate Application that are based on the Settlement Agreement and then we've expanded on those, expanded on those here in the PHP application to try to give a bit more clarity as to what those items could potentially be. [Emphasis added]
>
> [Transcript, January 8, 2026, pp. 591-592]

[346] The Industrial Group requests that the Board confirm the "defined and limited scope of any deferral account" as described in the settlement agreement and the GRA, asserting that the PHP Deferral should not cover "any and all variables" relating to "whether and when" PHP takes service as an ATL customer. It also asks the Board to confirm that the scope of the deferral account does not include "risks associated with

delays in the Goose Harbour Wind Farm or non-fuel cost changes arising from shifts in PHP's load".

[347] In its report, Bates White concluded that, given the uncertainty surrounding PHP's tariff mechanism for the test period, NS Power's PHP treatment in the GRA was reasonable. It stated:

> … NSPI recognizes the uncertainty regarding PHP's tariff for the GRA period, as well as the nature of any load shifting credits PHP may earn under that tariff. NSPI necessarily needs to make assumptions regarding PHP's tariff arrangements in order to complete its cost of service study and GRA Application, and it has done so. Treatment of PHP in the GRA Application also appears consistent with the terms of the Settlement Agreement, which included treatment of PHP details as a key term.
>
> NSPI's assumptions appear reasonable for purposes of the GRA Application, though as NSPI notes, the actual tariff and ADC credits may differ substantially from what NSPI assumes in the GRA.
>
> [Exhibit N-35, p. 29]

[348] However, Bates White also suggested that it would be beneficial for NS Power to confirm "that its PHP Deferral will account for treatment of the Goose Harbour Lake wind project, should the tariff provisions under which PHP ultimately takes service (and receives credits for load shifting) incorporates services, costs, or revenues from the Goose Harbour Lake wind project". While this was confirmed by NS Power on questioning by Board Counsel, the Board observes that the Industrial Group appears to oppose the possibility of this deferral. The Industrial Group said this was not explicitly agreed to by customer representatives and its inclusion in the scope of the PHP Deferral was a departure from the terms of the settlement agreement.

3.5.1.4.1 Findings

[349] NS Power requests a PHP Deferral account to track any variances in revenue between that which would occur based on the assumptions in the GRA cost-of-service study treating PHP as an ATL customer versus that which results from the eventual ELID tariff, in the form ultimately approved by the Board. This deferral account

was expressly contemplated in the settlement agreement, which also set out various assumptions incorporated into the GRA's cost-of-service study about PHP taking service under an ATL rate.

[350] The eventual balance of the proposed deferral account is material. According to NS Power's response to Undertaking U-2, $18.2 million would accrue in the deferral account if PHP remains as a BTL customer for the entirety of 2026, and there would also be a $5.7 million fuel balance captured under the FAM.

[351] While the deferral account was addressed in the settlement agreement, the scope of the account is somewhat uncertain, at least based on the Industrial Group's submissions. However, no party opposed the creation of the PHP Deferral Account. The Board recognizes that there could be significant variances to NS Power's revenue requirement depending on the final adjudication of NS Power's application for the PHP successor tariff. The creation of the proposed deferral account, and the assumptions underlying it, do provide some certainty for the utility and the customer classes. The Board finds that it is appropriate to approve the deferral account.

[352] As to the scope of the deferral account, the Board considers that it is best defined as expressly set out in the settlement agreement. There was no evidence about the scope of the deferral account except for that provided by NS Power, and a reference by Bates White. It would be appropriate for customers and other parties to provide evidence on the issue if they consider it necessary. Accordingly, as outlined in part (g) of the "PHP Treatment" section of the agreement, the Board finds that the deferral account will:

> … account for any NS Power revenue variances that may arise in 2026 or 2027 from the following scenarios, which costs would be collected/refunded from/to above the line customers:

> (a) where a Board decision on the PHP tariff, including the Active Demand Control Rider, differs from the above the line PHP tariff assumptions included in the 2026-2027 GRA;
>
> (b) where, for any reason, the PHP tariff is not available for PHP to take service under it as of January 1, 2026; and/or
>
> (c) PHP determines the PHP ADC and tariff processes outcome is not satisfactory.
>
> [Exhibit N-27, NSEB IR-1, Attachment 1, p. 12]

[353] Further, any amounts to be transferred to the deferral account will be assessed against the various assumptions agreed to by the parties as inputs to the cost-of-service study applied in the GRA, as set out in sections (a) to (f) in the "PHP Treatment" section of the settlement agreement. As with all deferrals, any transfer to the deferral account is subject to review for prudency.

3.5.1.5 GRA Deferral

[354] In its general rate application, NS Power asks for a deferral of its GRA-related costs of the present matter and to collect those costs in rates on a straight-line basis over the two-year test period. Such costs include the costs of NS Power, the consumer advocates and the Board, and the expert consultants for the parties. The amount was forecast at $4.0 million, but in the settlement agreement the parties agreed to reduce this amount to $2.0 million, with $1.0 million recovered in each of the two test years.

[355] NS Power equated the treatment of these GRA-related costs to the regulatory deferral approved by the Board in its *2023-2024 GRA* Decision, in which the Board approved the company's request to defer and create a regulatory asset for the costs of the Cost-of-Service Study, Line Loss Study, and Climate Change Adaptation Plan filed in the present application (or by December 31, 2025, whichever was sooner). In the 2023-2024 GRA Settlement Agreement, the parties had agreed to recovery of the costs

of the Cost-of-Service Study and the Line Loss Study in this GRA application, which was confirmed by the Board. The Board also approved the recovery of the costs of the Climate Change Adaptation Plan in this proceeding.

[356] In Undertaking U-9, NS Power was asked to confirm the costs of the Cost-of-Service Study and the Line Loss Study. The company replied that the Cost-of-Service Study costs were included in the total GRA costs. It stated that the cost of the 2026-2027 GRA and Cost-of-Service Study (including the Line Loss Study) was $1,332,440 as of December 2025, subject to adjustments after the close of the 2025 fiscal year.

3.5.1.5.1 Findings

[357] NS Power's costs for preparing and presenting a general rate application have not previously been allowed to be recovered in the test period of that application because they represent costs incurred before the test period. Such costs should be covered in the company's current regulatory affairs budget. Rather, costs approved in a general rate application are intended to apply to costs that are to be incurred prospectively.

[358] The Board is concerned about pushing operating costs into deferrals because they would thus attract a return. The Board has previously noted that if a utility believes it is appropriate to smooth a cyclical type of expense over a regularly recurring period, it expects the utility to explore other options, such as normalizing such costs in its expenses, rather than an option that would attract a rate of return: *NSPML 2024 Cost Assessment* Decision, 2023 NSUARB 231, para. 22.

[359] There are exceptions to the general rule against retroactive ratemaking, but there are specific criteria to justify the deferral of operating costs, which were canvassed by the Nova Scotia Regulatory and Appeals Board in *Halifax Regional Water Commission 2026-2027 General Rate Application*, 2025 NSRAB 142 (M12257):

> [185] Utility regulators in Canada routinely do not allow retroactive ratemaking. This is because traditional cost of service ratemaking involves estimating future annual utility operating expenses over test years. The revenue requirement for the test years is the sum of the allowed projected operating costs plus a rate of return on the utility's capital rate base. The entire process underpinning proposed rates is prospective. Everyone involved in the process knows that projecting expenses and revenues is not an exact science. While there will invariably be differences between projected and actual figures, provided a utility meets its overall revenue requirement, no rate increases are necessary.
>
> [186] The prohibition against retroactive ratemaking is not absolute. Certain forms of retroactive ratemaking are well recognized. They include retroactive adjustments to interim rates and established true-up mechanisms where projected costs included in rates are trued up, either up or down, after actual costs are known. An example of the latter is NS Power's Fuel Adjustment Mechanism. The rationale underpinning these types of exceptions to the rule against retroactive ratemaking is that customers are given notice up front that the rate is subject to change.
>
> [187] The Board recently considered the availability of retroactive ratemaking in situations outside the more recognized forms. NS Power sought to recover $26.4 million in operating costs incurred because of Hurricane Fiona (2024 NSUARB 116). The costs had already been incurred at the time of the application, so it was a case of retroactive ratemaking. The Board said:
>
> > [72] The Board is in general agreement with the Alberta Court of Appeal's approach to retroactive ratemaking. Where there is no express statutory prohibition against retroactive ratemaking, it is beneficial for the Board to have some flexibility to address extraordinary or novel situations by relaxing the rule against retroactive ratemaking so that the interests of both the utility and its ratepayers can be considered, without opening the door to endless rate adjustments.
>
> [188] … In the *Hurricane Fiona* Decision, the Board outlined factors that should be considered when deciding whether to exercise its discretion and allow retroactive ratemaking where the traditional exceptions were not applicable. In that case, the issue was framed as allowing a deferral account so the Hurricane Fiona operating costs could be collected over time, as opposed to expensing them in the year they were incurred. These factors can be applied to retroactive ratemaking generally. They include:
>
> - Whether the expenses are extraordinary or unusual or result from an event which is unusual or extraordinary.
>
> - Whether the expenses are beyond the utility's control and could not have been reasonably anticipated.
>
> - The expenses must be "significant".

- Whether, if not incorporated in rates, the expenses will have a material impact on the utility's financial condition.
- Whether, if granted, the recovery of expenses that have already crystalized will provide significant benefits to ratepayers.

[2025 NSRAB 142 (M12257), paras. 185-188]

[360] The Board finds that the present instance clearly does not fall within the above exceptions. The GRA-related expenses are not due to extraordinary or unusual circumstances; the costs are not significant, nor do they have a material impact on the utility's financial condition; and the costs are not beyond the utility's control. Such expenses were anticipated and should have been included in the prior GRA if they were not already.

[361] The Board denies NS Power's deferral of its GRA-related costs, except for the costs related to the Cost-of-Service Study (COSS) and the Line Loss Study. In Undertaking U-9, NS Power stated that the cost of the 2026-2027 GRA and COSS (including the Line Loss Study) totaled $1,332,440 as of December 2025. In its compliance filing, the Board directs the company to confirm the amount of costs related to the COSS and the Line Loss Study (as it was asked to do in Undertaking U-9) and to deduct the other GRA-related costs from the $1 million amounts included in each of the 2026 and 2027 revenue requirements.

3.5.1.6 Payment of Interest on Deferral Accounts

[362] The payment of interest to NS Power on its deferral accounts is subject to s. 64AB of the *Public Utilities Act*. In its *2023-2024 GRA* Decision, the Board concluded that it was appropriate to exercise its discretion under s. 64AB(3) to set interest on the deferrals at NS Power's WACC. In its subsequent decision related to the 2025 Demand Side Management Cost Recovery Rider (DCRR) (2024 NSUARB 216, M11912), the Board canvassed various issues related to s. 64AB and stated it would establish a generic

proceeding to more thoroughly address and consider issues about the application of that provision. Board Counsel has engaged London Economics International LLC to prepare a report about these issues. In the interim, the Board finds it appropriate to continue to exercise its discretion under s. 64AB(3) to set interest on deferral and variance accounts at NS Power's WACC.

3.6 Rate Base

[363] NS Power's rate base consists of the physical assets and related construction work in progress the utility has invested in to provide power to its customers, such as generating stations and transmission lines. It also includes materials and supplies inventory and a working capital allowance. Rate base further includes financial assets such as a long-term income tax receivable and regulatory deferrals, net of regulatory liabilities. Doane Grant Thornton reviewed and verified NS Power's calculations of forecasted average rate base of $5.58 billion in 2026 and $5.89 billion in 2027.

[364] The calculation of the forecasted rate base is important because it represents the invested balance used to determine NS Power's forecasted return on equity. It is also fundamental to the calculation of depreciation and amortization expenses, as these expenses are based on the invested balances.

3.6.1 Capital Additions

[365] NS Power's capital outlook for 2026-2027 for additions to Plant reflects the company's best estimate of capital investment over the test years at a point in time. The test period investment is intended to support the continued safe delivery of electricity service and ongoing environmental compliance. It is also meant to align with Renewable Electricity Standards and the requirement to phase out coal by 2030. Finally, the proposed level of capital investment over the GRA test period is also aimed at allowing

the company to continue executing on its 5-Year Reliability Plan while continuing to meet the requirements of a growing customer base.

[366] Sustaining NS Power's asset base through capital re-investment generally results in rate base growth. Similarly, capital investments required to comply with regulations and meet the needs of an expanding customer base also drive growth in rate base. In this context, NS Power's average capital assets will continue to increase over the 2026-2027 test period as the company continues to invest in its system. This increase in rate base will be partially offset by NS Power's planned securitization of the assets within the scope of the DDA, assuming of course, that securitization proceeds. If securitization does not proceed, NS Power's rate base will continue to include the assets within the scope of the DDA.

3.6.1.1 Findings

[367] NS Power's estimated capital investment for the GRA test period amounts to $671.3 million in 2026 and $556.1 million in 2027. The capital additions to rate base for the test period have generally been approved by the Board in prior ACE Plan proceedings and other capital expenditure approval applications. However, they also include projects that have not yet been approved by the Board but have been submitted for approval in NS Power's 2026 ACE Plan. In response to NSEB IR-92, NS Power provided a list of capital projects that have not yet been approved by the Board but have been included in the capital budget for the GRA application. Further, in response to NSEB IR-92, NS Power stated:

> NS Power's capital forecast is completed at a portfolio level based upon the anticipated capital investment requirements at the time of GRA forecast development. Certain investments that are included in the test period may not advance during the test period and other projects are likely to differ in the timing of investment as NS Power utilizes its asset management framework to refine the capital plan. While certain investments included in the GRA may not advance, or will advance on a differing timeline, NS Power expects that

> other capital investments will take their place and the overall level of expected capital investment will be similar to that which is included in forecast.
>
> [Exhibit N-27, NSEB IR-92]

[368] During the hearing, the Board noted that the response to NSEB IR-92 included 39 projects with a total forecast 2026 spending of $218 million. The Board also noted that NS Power's recently filed 2026 ACE Plan (M12619), shows total forecast 2026 spending for projects (excluding capital routines) yet to be approved by the Board of roughly $223 million. However, the 2026 ACE Plan includes 20 projects for approval and 47 projects for subsequent submittal in 2026 for a total of 67 projects. Therefore, even though the GRA forecast for 2026 capital spending for projects yet to be approved by the Board is close to the forecast for 2026 ACE Plan capital spending for projects yet to be approved by the Board, the actual projects appear to be quite different.

[369] NS Power explained this discrepancy as a matter of timing between when the GRA projects list was developed versus when the 2026 ACE Plan was prepared. Over this time, the company used its asset management mechanism to update its asset condition and criticality assessment, which resulted in changing priorities for a number of projects. Nevertheless, the overall expected 2026 capital spending estimates in the GRA forecast and the 2026 ACE plan forecast are fairly close. In addition, in Undertaking U-21, NS Power provided a comparison of its actual 2023 and 2024 capital spending to the 2023-2024 GRA forecast spending for those years. In total, the actual capital spending over that period was relatively consistent with the GRA forecast.

[370] During the hearing NS Power also confirmed that it will manage its capital expenditure program over the test period to match the GRA forecast. Therefore, although there is some uncertainty with the capital project additions that are included in the GRA,

because a number of projects are not yet applied for, or not yet approved, the Board finds the total forecast spending on capital additions in the test period to be reasonable.

3.6.2 Maritime Link Capital Projects

[371] NS Power has four Maritime Link transmission capital projects that, by Board Order, have historically been excluded from rate base. The original intent of these projects was primarily to facilitate Nalcor's (now Newfoundland and Labrador Hydro) intended energy export to third parties outside of Nova Scotia. NS Power's expectation when they were built was that the benefit of these projects to Nova Scotia customers, expected to be OATT fees on the exports, would offset the capital and operating costs of these projects. In the 2023-2024 GRA, NS Power requested these projects be included in rate base. It stated that rather than export this available surplus energy, it was retaining it in Nova Scotia to serve provincial requirements, but that the overall benefit of these projects, albeit not the originally expected benefits, outweighed the costs of the projects.

[372] In its *2023-2024 GRA* Decision, the Board did not approve inclusion of the projects in NS Power's rate base. However, the Board defined the test NS Power had to meet to include those assets in rate base. It had to show that the benefits of these projects outweighed the costs to ratepayers. The Board's test stipulated that for a minimum of four consecutive quarters,

(a) the wheeling tariff revenue;

(b) the net economic value of NS Power purchases of additional Nalcor surplus energy (based on actual results following the methodology used in Undertaking U-64); or

(c) a combination of wheeling tariff revenue and the economic value of purchased Nalcor surplus energy,

is at least equal to the combination of depreciation, financing costs, operating costs, and re-dispatch costs.

[373] In the current GRA, NS Power requested Board approval to include the four Maritime Link projects in its rate base, claiming that the company has met the Board test. NS Power's calculation of benefits from the projects in its quarterly benefit reports includes two types of surplus energy: "additional energy" and "bilateral sales". During the hearing in this matter, NS Power was asked to provide an undertaking to show how the Board's test was met. In Undertaking U-24, NS Power provided the calculations it used to confirm it had met the Board's test. Further, in Undertaking U-25, NS Power stated that it purchases market-priced energy from Newfoundland and Labrador Hydro through two mechanisms. NS Power defines these two types as "surplus energy transacted under the Energy Access Agreement" and "bilateral market-priced energy". NS Power asserts that both types of energy are market-priced energy and that their treatment is consistent with the approach in the 2023-2024 GRA proceeding's Undertaking U-64.

3.6.2.1 Findings

[374] The Board notes that Undertaking U-64 in the 2023-2024 GRA referred to the forecast NSP Maritime Link Incorporated surplus energy purchases. While not specifically defined, the Board agrees that, in the context of these specific projects, "surplus energy" means all surplus, including "surplus energy transacted under the Energy Access Agreement" and "bilateral market-priced energy". As such, the Board finds that NS Power has demonstrated through Undertakings U-24 and U-25 that it has met the test for inclusion of the Maritime Link transmission projects in rate base.

[375] The Board notes that inclusion of these projects in rate base is only effective on a go-forward basis. NS Power is not permitted to recover any depreciation expense

already incurred or any lost return on rate base associated with these projects from any period prior to the date of the Board's decision in this GRA. To be clear, the amount to be included in rate base for these projects is the net book value of these assets as of the date of the Board's Order in this matter.

[376] The Board also offers one further caveat. In this particular instance, the Board found that customers received benefits from surplus energy from Newfoundland and Labrador Hydro regardless of whether the energy was market-priced energy transacted under the Energy Access Agreement (EAA) or through bilateral arrangements outside of the EAA. However, there may be situations where the distinction between these two mechanisms is relevant. For example, an assessment of whether there has been compliance with rights and obligations of the parties under the EAA may require that the focus be on energy transacted under the agreement to the exclusion of other bilateral arrangements.

3.6.3 Valuation and "Writing Down" of the Rate Base

[377] The Department of Energy requests that the Board take steps to ensure that NS Power's coal assets are written down by an amount that the Board deems appropriate based on a transparent, comprehensive review of asset lives and amortization schedules, aligned with coal phase-out commitments and the public interest. The Department submits there is a solid legal and regulatory pathway for the Board to require NS Power to bear coal asset write-downs, particularly for life-extension and reinvestment decisions made in the shadow of a known 2030 coal phase-out.

[378] The Department's position is premised on a belief that the value of NS Power's coal plants is "over-inflated" and "that ratepayers should not be asked to carry the cost of outdated infrastructure". It argues:

> Nova Scotians should only be paying for infrastructure that reflects its real remaining usefulness. There remain legitimate questions around whether NS Power is employing actual *values that reflect real remaining usefulness*. [Emphasis in original.]
>
> [Department of Energy Closing Submissions, p. 7]

[379] The Department attributes this over-inflated value of rate base to NS Power's failure to conduct timely depreciation studies and the utility's imprudent investment in coal assets after the lifespans of these assets were materially shortened by government policies. The Department submits that, at least as early as 2016, NS Power knew that its coal assets must be retired by 2030 but did not take this into consideration when valuing its assets. The Department said:

> In the 2022 GRA, the Department submitted that the Company knew as of 2016 that coal must be retired by 2030 and yet it did not take this into consideration when valuing its assets. It is common that accounting and regulatory standards require impairment (write-downs) when early retirement is probable. Nova Scotia's coal-retirement trajectory has been clearly defined in legislation and federal policy for some time, making impairment not only probable but foreseeable. These regulatory changes were well known and NS Power's failure to reflect them in asset valuations has resulted in ratepayers bearing costs that should have been recognized and allocated differently.
>
> [Department of Energy Closing Submissions, p. 7]

[380] The Department submitted that the settlement agreement relating to NS Power's last depreciation study ((M03665), 2011 NSUARB 64) extended the service lives of NS Power's coal-fired generation stations and created a "regulatory obligation" to review these service lives when federal regulations in 2016 required all coal facilities to be retired by 2030. The Department also submitted that NS Power's 2020 Integrated Resource Plan referenced 2040 as the target for phasing out coal plants, which the Department said was inconsistent with this federal legislation.

[381] The Department said that NS Power continued to invest in thermal energy generation while eschewing lower cost renewable resources. The Department submitted this also exposed ratepayers to higher and volatile fuel prices. It submitted that NS Power

did so in the face of clear government policies and legislation mandating the phase-out of coal-fired generation of electricity and, therefore, the Board may properly conclude that shareholders, not ratepayers, should bear the risk of stranded assets.

[382] The Department posits that NS Power's actions were motivated by a desire to maintain a rate base that was higher than it should have been to boost its allowable returns. The Department says this resulted in higher rates for customers.

[383] The Department cites the United States Supreme Court decision in *Smyth v Ames*, 169 US 466 (1898) and the "Alberta based – Utility Asset Disposition (UAD) Line of Cases" to support its position that assets must be "used and useful" to be included in rate base, that utilities – not ratepayers – bear the risk of unrecovered costs, and that utilities can be forced to absorb losses through capital write-downs.

[384] The Department said the Board has the authority to review NS Power's depreciation practices under s. 30(2) of the *Public Utilities Act* and the authority to correct the valuation of the property under s. 33(2). These provisions read:

> **Power to determine value of property of utility**
>
> **30** **(1)** The Board may at any time, with the assistance of such engineers, accountants, valuators, counsel and others as it deems wise or advisable to employ, inquire into and determine the extent, condition and value of the whole or any portion of the property and assets of any public utility used and useful in furnishing, rendering or supplying a particular service to or for the public, as of a date to be fixed by the Board.
>
> **(2)** The Board shall determine the value of such property and assets on the basis of the prudent original cost thereof or by such other method as the Board may from time to time prescribe, deducting therefrom the amount of the accrued depreciation of such property and assets as determined by the Board.
>
> **(3)** For the purposes of this Section, annual and accrued depreciation shall be calculated by the straight line method, so called, or such other method as the Board may from time to time prescribe.
>
> **(4)** The Board may make such rules and regulations to facilitate inquiries under this Section as it may deem convenient, and the rules and regulations so made shall be binding on all public utilities.
>
> **(5)** The Energy Board shall, with the assistance of such engineers, accountants, valuators, counsel and others as it deems wise or advisable to employ,

> (a) inquire into and determine the extent, condition and value of the whole or any portion of the property and assets of Nova Scotia Power Incorporated used and useful in furnishing, rendering or supplying a particular service to or for the public, no later than March 31, 2024; and
>
> (b) set different levels of return on equity for different classes of capital assets of Nova Scotia Power Incorporated to ensure that investment incentives are aligned with ratepayer objectives as submitted to the Board in a hearing for a rate change.
>
> …
>
> **Duty of utility to furnish information**
>
> **33 (1)** Every public utility shall furnish to the Board from time to time, and as the Board may require, maps, profiles, contracts, reports of engineers and other documents, records and papers, or copies of any and all of the same in aid of any investigation and to determine the value of the property of such public utility, and every public utility shall co-operate with the Board in the work of the valuation of its property in such further particulars and to such extent as the Board may direct.
>
> **(2)** The Board shall, thereafter, in like manner, keep itself informed of all extensions and improvements or other changes in the condition of the property of the said public utilities, and from time to time may revise and correct its valuation of the property of such public utilities.
>
> **(3)** To enable the Board to make such changes and corrections in its valuation, every public utility shall report correctly to the Board changes in its property and file with the Board copies of all contracts for changes and improvements at the time the same are executed.

[385] In its reply submissions, NS Power said it is entitled to a "fair return" based on the "regulatory compact". It submitted this is a fundamental principle of public utility regulation recognized as early as a hundred years ago by the Supreme Court of Canada in *Northwestern Utilities Ltd. v Edmonton (City)*, [1929] SCR 186, and more recently in *ATCO Gas & Pipelines Ltd. v Alberta (Energy & Utilities Board)*, 2006 SCC 4. NS Power also referred to decisions of the NSUARB (2012 NSUARB 227 and 2023 NSUARB 12).

[386] NS Power noted that its application in Matter M03665, the proceeding dealing with its last filed depreciation study, assumed retirement dates by 2030 for all steam generation units (including coal units) except for Point Aconi (2039) and Trenton 6 (2037). This was because of "further carbon emissions regulations and a new anticipated

federal government framework". The application proposed to accelerate depreciation rates to account for shorter lifespans than previously estimated.

[387] NS Power further noted that expert evidence in that matter, on behalf of Board Counsel and customer representatives, "disagreed with NS Power's assumed retirement dates claiming that, despite NS Power's reliance on and reference to anticipated environmental regulations and policy, there was no support to use the accelerated retirement dates". The parties agreed to resolve these matters in a "black box" settlement agreement to lower rates for customers in the next general rate application and this was approved by the NSUARB.

[388] The approved depreciation rates were implemented in NS Power's next general rate application in 2013-2014. NS Power did not file another rate application until 2022, its most recent past general rate application. NS Power said many shifts and changes in government environmental policy related to coal-fired electricity generation occurred between these two applications.

[389] NS Power highlighted that under two different agreements, the first of which was in effect between 2015 and 2019, and the second of which came into effect on January 1, 2020, Canada and Nova Scotia agreed that federal requirements relating to coal-fired generation units would not apply in Nova Scotia. These agreements recognized a sufficient equivalency between the regulations in Nova Scotia and Canada. NS Power said because of these "Equivalency Agreements", there was no requirement in Nova Scotia to retire coal generation plants by 2030. NS Power said this requirement was not established until late 2021, when both the federal and provincial governments accelerated their decarbonization policies.

[390] In its 2023-2024 general rate application, NS Power discussed the depreciation of its coal assets and proposed a mechanism to deal with the recovery of the remaining undepreciated and decommissioning costs associated with these assets:

> … The retirement and remaining useful lives of the Company's thermal plants is the input that would drive the most material change in the Company's forecast depreciation expense. With the amendments to the Renewable Electricity Regulations, implementing the requirement for 80 percent renewable generation 2030 RES, and the passing of the EGCCRA, NS Power now has a greater degree of certainty on the timing of retirement of its coal fleet; however, for units no longer used and useful beyond 2030, the retirement timeline would result in significant increases to depreciation expense. In an attempt to mitigate rate impacts arising from these developments, the Company is seeking approval of a DDA, a regulatory asset that effectively eliminates the requirement for a depreciation study for the thermal plants that are incorporated within this regulatory asset and provides flexibility on recovery of the remaining Net Book Value (NBV) of those assets.
>
> [M10431 Exhibit N-16, p. 42]

[391] In the related settlement agreement, the parties agreed in principle to a DDA to recover the net book value and unrecovered decommissioning costs of NS Power's undepreciated thermal assets. They also agreed to engage constructively in a consultative process to confirm the practices and procedures that would be followed to establish the DDA. As with the "black box" settlement in 2011 this had the effect of mitigating the rate impact for customers at the time by avoiding the acceleration of depreciation.

[392] In its reply submissions in this proceeding, NS Power also argued that the UAD decisions and the principles those decisions extracted from the Supreme Court of Canada's precursor "Stores Block" decision (*ATCO Gas & Pipelines Ltd. v Alberta (Energy & Utilities Board)*, 2006 SCC 4) have historically had no application outside of Alberta. NS Power said the Department's reliance on the UAD decisions was "fundamentally incorrect" because its coal assets are not stranded but continue to be "used in providing utility service and are anticipated to be used in such a capacity for a number of years to come". Moreover, NS Power submitted that the UAD line of cases

was “brought to an effective end” by the Alberta Court of Appeal decision in *ATCO Electric Ltd. v Alberta Utilities Commission*, 2023 ABCA 129.

[393] Regarding the Department’s reliance on *Smyth v Ames*, NS Power said:

> Similarly, the DOE’s submissions refer to and appear to rely upon the USSC 1898 decision in *Smyth v. Ames*. That decision, somewhat ironically, relates to the USSC’s ruling that a Nebraska state law which capped railroad freight rates was unconstitutional because it was confiscatory in nature by preventing railroad companies from earning reasonable compensation for their services and, therefore, violated the 14th Amendment. As a result, *Smyth v. Ames* also is not relevant and has no applicability to the current context.
>
> [NS Power Reply Submissions, p. 19]

3.6.3.1 Findings

[394] A utility is entitled to the opportunity to recover its prudently incurred costs in providing service and an opportunity to earn a reasonable profit – no more and no less. While the Board can disallow costs found to be imprudent or unreasonable, absent such a finding, a utility’s costs must be reflected in the rates paid by customers. The Board cannot disallow the recovery of legitimate costs to make rates more affordable.

[395] Utility investors provide the upfront capital required to purchase or construct utility infrastructure to serve customers, and customers who use that infrastructure repay those costs over time as they receive the benefits of service. To attract and retain this investment, investors are given the opportunity to earn a fair return on the capital invested, as well as ultimately recoup the amounts invested.

[396] This was addressed in detail in the NSUARB’s decision in NS Power’s last general rate application (2023 NSUARB 12, paras. 36-41 and 227-237) and is discussed in more detail later in this decision.

[397] In essence:

> A public utility is obligated to provide services that are reasonably safe and adequate and is entitled to compensation therefor by the charging of rates that are not unjustly discriminatory and will provide the public utility with sufficient revenue to enable it to pay its operating expenses including depreciation and income taxes, and have net earnings

> sufficient to enable it to obtain and service normal and needed capital requirements. It is expected to meet reasonable demands for additional services and to conduct its affairs with efficiency.
>
> [*(Public Utilities Board) v Nova Scotia Power Corporation*, (1976) 18 NSR (2d) 692 (NSSC,AD), para. 26]

[398] As described by the Supreme Court of Canada in *Northwestern Utilities Ltd. v Edmonton (City)*, [1929] SCR 186, a fair return means "the company will be allowed as large a return on the capital invested in its enterprise (which will be net to the company) as it would receive if it were investing the same amount in other securities possessing an attractiveness, stability and certainty equal to that of the company's enterprise". A low return on rate base may discourage investment in the utility. It may also lead to a poor credit rating, which will increase its borrowing costs. This may result in the utility's rates increasing just to cover additional borrowing costs. It may even cause it to be excluded from participating in some debt markets altogether.

3.6.3.1.1 The Value of the Rate Base

[399] The "value" of NS Power's rate base, as framed in the Department's submissions, is based on an historic concept that has been displaced by the widely accepted prudent original cost method for valuing utility assets. The prudent original cost approach, which is explicitly referenced in s. 30(2) of the *Public Utilities Act*, is the default valuation method under the statute, and has been explicitly so since 1943 (*Public Utilities Act*, SNS 1943, c 2, s 29(2)).

[400] Two witnesses in this proceeding were qualified as experts in utility depreciation. Mr. Wiedmayer (Gannett Fleming) prepared the depreciation study filed by NS Power in support of its application. This study is based on the original cost method. Likewise, Board Counsel consultant, Mr. Madsen, noted that "Depreciation recovers the original cost of any investment added into utility rate base, such recovery occurring over

the expected useful life of the assets". Neither expert suggested in any way that the value concept advanced by the Department in its closing submissions was an appropriate method to determine the value of rate base or depreciation rates. The Department filed no evidence and conducted no cross-examination of these depreciation experts, so neither of them was provided with any opportunity to respond to or address the theory raised by the Department in its closing submissions.

[401] In *Principles of Public Utility Rates* (Second Edition; Public Utilities Reports, Inc., 1988), Professor Bonbright reviewed the historical development of the legal and regulatory principles for valuing a utility's rate base (note that his second edition dates back nearly 40 years and does not capture developments in this more recent period). He noted:

> For many years the major division of practice and opinion on these issues of asset revaluation has been between the position that as long as the assets remain "used and useful" for their intended purposes, they should stay in the rate base at their original costs, subject only to systematic annual deductions for physical and functional depreciation; and the position that the costs should be written up and down so as to take account of major changes in construction costs or in general price levels. The first position is that of the original-cost net-investment principle of ratemaking - a principle strongly espoused by the FERC (and its predecessor FPC) and FCC, and accepted, with or without qualifications, in the majority of state jurisdictions. The second position is most frequently referred to as the fair value principle – a principle no longer held legally mandatory throughout this country but still accepted in a considerable minority of states (a dozen or less at last count).
>
> [*Principles of Public Utility Rates*, p. 212]

[402] Bonbright refers to *Smyth v Ames* as the "original and most famous pronouncement of the fair value standard". The fair value standard was the subject of much criticism over the years. This included what Bonbright referred to as the "vicious-circle criticism" – the fact that the value of the assets depends on the earnings they are able to derive, which is the very question at issue in a rate case (i.e., the value of the rate base will be used to determine rates and the revenue derived from rates will inform the value of the rate base).

[403] Bonbright notes that out of this criticism sprung the cost-based approach to valuation:

> Impressed with the force of the vicious-circle argument, many writers have gone beyond the point of insisting that ratemaking value must be given a special interpretation in order to qualify it as a plausible rate base. They have also asserted that the measure of a rate base is necessarily cost and not value in any accurate sense. Consistently with this view, they have insisted that the former debates as to the merits of an original-cost rate base versus a fair-value rate base should have been converted into debates as to alternative standards of costs, including various types of replacement cost and various versions or modifications of original cost. The whole philosophy of a fair-return standard of ratemaking, they have declared, is a cost-of-service philosophy. On no account, therefore, should it be compromised or confused by a backdoor introduction of value-of-service criteria of reasonable public utility rates in the guise of value standards of the rate base.
>
> [*Principles of Public Utility Rates*, p. 217]

[404] Bonbright describes two major advantages of an original cost rate base. First, it is administratively superior as it lends itself to quicker and more definitive determinations of value, minimizing expenses to all parties and the regulator. Second, it facilitates access to capital on favourable terms and helps to maintain credit. On this later point, Bonbright states:

> For, although original costs will have become fixed costs at the time of a rate case, they are not fixed cost when first incurred, and it is at this time that investors must balance, *ex ante*, the expected future return on any proposed investment against the presently required outlay of capital. In other words, what induces investment is the expectation of a return on (and return of) costs that will have become sunk as soon as the investors have made their commitments. Whatever scheme of rate regulation will put investors in a position to draw this balance between present outlay and anticipated future return with the most confidence is the scheme most likely to permit a well-managed company to maintain sound financial health at a minimum cost of capital to the consumers.

[405] According to Bonbright (p. 216), “Fair value theory does not appear to be an especially fecund source of logic”. He states that the fair value standard pronounced in *Smyth v Ames* was renounced by the United States Supreme Court in *Federal Power Commission v Hope Natural Gas Co.*, 320 US 591 (1944) (around the same time that the prudent original cost method was first explicitly referenced in the *Public Utilities Act* in Nova Scotia).

[406] The National Association of Regulatory Utility Commissioners' (NARUC's) *Public Utility Depreciation Practices* (1996), referenced in Mr. Madsen's evidence, describes the "value concept" and the "cost allocation concept" in the context of depreciation practices:

> **Value Concept**
>
> The value concept assumes that all depreciable plant, due to forces such as obsolescence, wear and tear, and inadequacy, tends to diminish in value or worth with the passage of time. This value reduction may be dramatic-as when one purchases a new automobile. The new owner needs to do little more than drive it off the dealer's lot in order to put it in the classification of a "used car" with a value often substantially less than the purchase price. On the other hand, the reduction in value may occur much more slowly. For example, heavy duty manufacturing machinery will continue to perform the same operations in the same efficient manner for many years. Depreciation, in this sense, may not be consistent. If manufacturing machinery were producing a product that was in heavy demand for many years and suddenly lost its market, the machinery would rapidly lose value.
>
> All other things being equal, on the day before this sharp demand decrease, the machinery would be nearly as valuable in the production of goods as the day it was first installed (assuming it had been kept in good repair). However, the day after the market disappeared the machine would be practically worthless or valueless.
>
> Similarly, the installation of a new technology offering new or different services may cause existing plant to have little or no customer value. For example, a computerized supervisory control and data acquisition system (SCADA) may make the existing use of chart and pen recorders and the manual operation of gas city gate station valves unnecessary and uneconomical.
>
> This situation suggests that depreciation can be determined through a series of periodic appraisals or estimates of plant value. The decrease in value between such estimates is regarded as a measure of the depreciation attributable to the period between estimates. The estimates could be based on the reproduction cost, market value, or earnings value of the property. Estimates may recognize the changing purchasing power of the dollar or they may be confined strictly to original cost terms. In all cases, some measure of depreciation occurring between estimates can be determined. The customary method is for a competent appraiser to study the effect of factors such as obsolescence, inadequacy, and public requirements, as well as to conduct a physical inspection of the property, or a scientific sample of it, to determine its loss in value since it was first constructed. Regardless of the method employed, in order to achieve consistency, the successive estimates must be made in the same way.
>
> <u>It would, however, be a staggering undertaking to attempt such estimates on an annual basis for complex and extensive utility plant. Therefore, the practice of conducting annual estimates has found little application in the utility industry. It is particularly cumbersome and inadequate because utilities need to record depreciation on a monthly basis for earnings and expense reports. A further complication, of course, is that major technological improvements tend to make questionable any year-to-year measure of depreciation that is determined by this process.</u>

Cost Allocation Concept

This concept recognizes the original cost of the asset as a prepaid expense. As such, it must be allocated to specific accounting periods and realized on income statements during the time the asset is providing service. The unallocated amount, often called net plant or net book (gross plant less accumulated depreciation), is recorded on the asset side of the balance sheet. The cost allocation concept satisfies the accounting principle of matching expense and revenues.

On the income statement, the inflow of resources is revenue. The outflow is expense. Using up the productive capacity of assets in an accounting period is recorded in accounting records as depreciation expense.

As used above, "cost" is based on the cost valuation principle of accounting, with cost being a surrogate for value. The amount of money used to purchase the asset is the basis for the entry in accounting records. This amount is regarded as being definite and immediately determinable. The accounting objectives of verifiability and neutrality are also satisfied.

Equally important to the proper estimation of current net income is the recovery of the investment over its useful life. Depreciation accounting cannot, automatically and of itself, result in the recovery of investment in property. However, if revenues are adequate to cover depreciation expense in addition to other current expense, the investment will be recovered. On the other hand, if revenues are not sufficient to cover the depreciation expense, the investment will not be fully recovered. Recognition of depreciation merely records the fact that costs are being incurred. [Emphasis added]

[pp. 11-12]

[407] More recently, NARUC's publication for the United States Agency for International Development, *Depreciation Expense: A Primer for Utility Regulators* (May 2021), states:

The value concept for determining regulatory depreciation is based on periodic estimations of the asset value. The decrease in the estimated value of the asset can be considered as a measure of the value of depreciation for the corresponding period. The estimation can be made either in terms of the replacement cost, the market value, or the earnings value of the asset, through physical inspections or sample checks regarding obsolescence, wear and tear, and inadequacy of the asset.

However, the value concept is not commonly used for determining the value of regulatory depreciation as it is highly burdensome and creates significant uncertainty both for the regulator and the regulated utility. NARUC (1996, p.11-12) describes the significant drawbacks of the value concept approach:

> *It would (…) be a staggering undertaking to attempt such estimates on an annual basis for a complex and extensive utility plant. Therefore, the practice of conducting annual estimates has found little application in the utility industry. It is particularly cumbersome and inadequate because utilities need to record depreciation on a monthly basis for earnings and expense reports. A further complication, of course, is that major technological improvements tend to make questionable any year-to-year measure of depreciation that is determined by this process.*

> In the cost allocation concept, the original cost of an asset is treated as a prepaid expense. The value of regulatory depreciation is then determined by allocating this expense to specific accounting periods during the time the asset is providing service. The depreciation expense allocated in each accounting period is logged on the regulated entity's income statement, while the unallocated amount, the 'net asset value,' is logged as an asset in the balance sheet.
>
> The cost allocation concept is considered the most appropriate, and it is the one that regulators use for determining the value of depreciation in the context of cost-reflective tariff setting. NARUC (1996, 12) highlights the advantages of the cost allocation concept approach:
>
> > *The cost allocation concept satisfies the accounting principle of matching expense and revenues. On the income statement, the inflow of resources is revenue. The outflow is expense. Using up the productive capacity of assets in an accounting period is recorded in accounting records as depreciation expense.*
> >
> > *The amount of money used to purchase the asset is the basis for the entry in accounting records. This amount is regarded as being definite and immediately determinable. The accounting objectives of verifiability and neutrality are also satisfied.* [Emphasis added]
>
> [*Depreciation Expense: A Primer for Utility Regulators*, p. 12]

[408] In 2022, the *Public Utilities Act* was amended to add s. 30(5), which directed the Board to "inquire into and determine the extent, condition and value of the whole or any portion of the property and assets of Nova Scotia Power Incorporated used and useful in furnishing, rendering or supplying a particular service to or for the public". The Department's request that the Board exercise its authority to review the value of NS Power's assets under s. 30(2) of the *Public Utilities Act* would duplicate the proceeding recently completed under s. 30(5).

[409] In 2023, the NSUARB initiated that proceeding and engaged two consultants for this purpose. EA Technology was engaged to review NS Power's asset management processes and systems, and Doane Grant Thornton (then Grant Thornton) was engaged to review the utility's accounting policies and procedures with respect to capital assets.

[410] The NSUARB's decision in M11067 (2024 NSUARB 59) outlined how NS Power's property is valued under the *Public Utilities Act*:

> [8] Subsection 30(2) of the Act contemplates that the value of NS Power's property and assets is determined on a net book value basis. Specifically, NS Power's property and assets are valued based on their prudent original cost less accrued depreciation. Under s. 30(3) of the Act, depreciation is generally calculated on a straight-line basis.
>
> [9] The net book value of NS Power's property, plant and equipment is reported to the Board annually in the utility's regulated financial statements (e.g., M11090). In Note 1 to its 2022 financial statements in M11090, NS Power set out its accounting policies for "Property, Plant and Equipment":
>
> > **Property, Plant and Equipment**
> >
> > Property, plant and equipment ("PP&E") are recorded at original cost, including allowance for funds used during construction ("AFUDC") or capitalized interest, net of contributions received in aid of construction.
> >
> > The cost of additions, including betterments and replacements of units are included in "Property, plant and equipment". When units of regulated PP&E are replaced, renewed or retired, their cost, plus removal or disposal costs, less salvage proceeds, is charged to accumulated depreciation, with no gain or loss reflected in income.
> >
> > The cost of PP&E represents the original cost of materials, contracted services, direct labour, AFUDC for regulated property or interest for non-regulated property, ARO and overhead attributable to the capital project. Overhead includes costs related to support functions, employee benefits, insurance, procurement, and fleet operating and maintenance.
> >
> > Normal maintenance projects and major maintenance projects that do not increase the overall life of the related assets are expensed as incurred. When a major maintenance project increases the life or value of the underlying asset, the cost is capitalized.
> >
> > Depreciation is determined by the straight-line method, based on the estimated remaining service lives of the depreciable assets in each functional class of depreciable property. The service lives of assets are determined based on formal depreciation studies and are approved by the UARB. The last depreciation study was completed in 2010.
> >
> > Intangible assets, which are included in "Property, plant and equipment" consist primarily of land rights and computer software with definite lives. Amortization is determined by the straight-line method, based on the estimated remaining service lives of the assets in each category. The estimated service lives of intangible assets requires regulatory approval.
> >
> > [M11090, Exhibit N-1, Attachment 2, p. 13]

[411] The Board summarized the two consultants' findings as follows:

> EA Technology concluded that NS Power has good processes and systems that identify assets and groups of assets that represent the greatest risk to the organization, but that the processes and systems are typically aimed at the management of NS Power's assets rather than the management of the asset management system. It made several recommendations focused on developing a strategic asset management plan. Grant Thornton concluded, among other findings, that NS Power demonstrated "good utility practice" in its capital approval process, its policies and procedures for asset grouping and depreciation methodologies, as well as asset retirement, disposals, and not used and useful assets.
>
> [Board Decision M11067, p. 2]

[412] The Department (then the Department of Natural Resources and Renewables (NRR)) intervened in the M11067 proceeding and filed submissions on November 29, 2023. It raised no concerns about the longstanding approach to valuing NS Power's assets in that proceeding.

[413] As noted previously, when following the original cost method for valuing the utility's rate base, changes in the estimated lives of the assets over time do not result in write-ups or write-downs of the rate base value. Rather, these are reflected in a step-up or step-down of the depreciation rates used to go forward. Indeed, this was recognized by Christine Runge, Power Advisory, an expert retained by the Department (then NRR) as noted in the NSUARB's decision dealing with the approval of NS Power's DDA (2024 NSUARB 67, paras. 85-88).

[414] If the Board were to consider a departure from the widely recognized and applied original cost-based approach for valuing rate base and depreciation, it would be necessary to take this approach for all classes of property, not simply NS Power's coal assets. In such a case, it is quite possible that the current "value" of many of these assets would vary, upwards and downwards from the net-book value included in rate base. In some cases, the current "value" might even exceed the original cost. The original cost-

based approach ensures that ratepayers pay only the prudently incurred original cost of invested assets (no more, no less) used to provide service.

[415] If there was an overall net reduction in value of the entire rate base because of the change in the valuation method, it does not necessarily follow that the result would be a write-down to be absorbed by the utility. To avoid being confiscatory, and to be consistent with the underlying principle of providing utilities with the opportunity to realize a return of, and on, invested capital, if such a sudden and dramatic change in methodologies were to be made, it is likely a strong argument would exist for creating a reserve or regulatory asset for the transition.

[416] Furthermore, the timing of the change in value would need to be considered. If, for example, the value of the coal assets was not stable, but rapidly declining as 2030 approached, then the rapid decline would need to be reflected in the depreciation claimed in the test years. Depending on the extent of the decline, this could put significant upward pressure on the depreciation expense in the test years, and therefore the revenue requirement and proposed rates.

[417] The complexity and uncertainty associated with this approach would likely warrant a higher return on equity relative to the prudent original cost method.

[418] However, as discussed, this approach has been rejected in most jurisdictions in North America (if not more broadly) as being impractical and inappropriate for valuing a utility's rate base. The rate base value presented in this general rate application follows generally accepted regulatory practice and the default method explicitly referenced in the *Public Utilities Act*. The Board finds it would not be appropriate to depart from this longstanding and recognized approach.

3.6.3.1.2 Assets No Longer "Used and Useful" and the Decarbonization Deferral Account

[419] Referring to "core ideas" from the UAD line of cases and their relevance to Nova Scotia, the Department submitted, "Once an asset is no longer used and useful in providing regulated service, it can be removed from rate base, with associated losses potentially borne by shareholders". As NS Power noted in its reply submissions, this line of cases was impacted by the recent Alberta Court of Appeal decision in *ATCO Electric Ltd. v Alberta Utilities Commission*, 2023 ABCA 129. This was an appeal from an Alberta Utilities Commission (AUC) decision denying the recovery of assets destroyed in the Fort McMurray wildfire, which it made because it felt it was bound by the earlier decisions.

[420] The Alberta Court of Appeal emphasized that the *Stores Block* decision related only to the sale of assets previously included in rate base and was not directly concerned with setting just and reasonable tariffs for the utility. After reviewing the authorities, the Court stated:

> In short, the Commission erred in thinking that these earlier decisions dictated its treatment of assets stranded by unforeseen forces of nature. No binding authority compels relying on the accounting details underlying the predicted survival curves of the asset pools to decide how to deal with assets unexpectedly and permanently removed from active service by forces of nature.
>
> [para. 44]

[421] The Court of Appeal went on to find there was nothing in the relevant legislation that limited the AUC's discretion over depreciation or stranded assets. The Court summarized its findings as follows:

> Summary and Conclusion
>
> [60] To summarize, the issue is where the losses resulting from forces of nature should fall: on the utility's consumers or on the utility's shareholders:
>
> > (a) In legal terms the issue is where a just and reasonable tariff would place those losses, having due regard to the right of the utility to a reasonable opportunity to recover its prudent costs.

> (b) This issue was not decided by ***Stores Block*** or ***FortisAlberta***.
>
> (c) The analysis cannot start with an assumption that it is inherently fair to place the burden on one group or the other. That is the answer, not the premise of the question.
>
> (d) It is relevant that the utilities stopped buying insurance to save the consumers money. The Commission apparently decided that it was prudent for the consumers to self-insure.
>
> (e) The answer does not lie in whether the loss was or was not anticipated in the survivor curve behind the depreciation schedules, or whether the loss was therefore ordinary or extraordinary.
>
> (f) The answer also does not arise from "fundamental property and corporate law principles" or property ownership of the destroyed assets. Loss by fire is not a part of disposition law.
>
> Ultimately the question lies within the discretion of the Commission, to be exercised consistently with the words of the *Electric Utilities Act*, having regard to all relevant considerations, while disregarding irrelevant ones.
>
> [61] In conclusion, the decision under appeal is based on errors of law, particularly the conclusion that the Commission's options for treating destroyed assets were constrained by ***Stores Block***. The setting of rates is clearly within the discretion of the Commission, including the determination of what expenses can be included as recoverable costs and expenses, how to deal with depreciation, and how to deal with stranded or unpredictably destroyed assets. [Emphasis in original]

[422] The Court ultimately returned the matter to the AUC for redetermination following the appropriate principles. In its redetermination, the AUC reversed its earlier decision and allowed ATCO Electric to recover the net book value of the destroyed assets (Decision 28320-D01-2023, December 19, 2023).

[423] The Alberta Court of Appeal's conclusion in this recent appeal is not dissimilar to findings made by the NSUARB in the recent proceeding about the value of NS Power's property under s. 30(5) of the *Public Utilities Act*. There, as part of a discussion about the application of NS Power's Accounting Policy 6350, which deals with assets that are no longer used and useful, the Board discussed the contextual nature of the analysis:

> [47] As pointed out in the May 5, 2020, decision letter, Accounting Policy 6350 provides the Board with flexibility, on a case-by-case basis, to address the rate-base treatment of the undepreciated cost when such an application is made. The Board finds that this

> flexibility is important and can only be exercised when the full circumstances of the case are known. This could include the reasons why an asset must be retired early, along with NS Power's financial position and the existing regulatory scheme. It could also include the impact of early retirement on rates. These are the two sides of the equation the Board must weigh in the balance.
>
> [2024 NSUARB 59]

[424] When assets need to be retired to meet legislative decarbonization mandates requiring 80% of energy provided to customers be from renewable sources and the phasing out coal-fired generation by 2030, they will no longer be used and useful. However, it must be recognized that the NSUARB previously accepted the use of the DDA as the appropriate method of collecting any remaining net book value of the coal assets when they are retired in accordance with federal and provincial policy.

[425] That decision was made as an alternative to using either Accounting Policy 6350 or adjusting the depreciation rate to recover the undepreciated balance of the assets over their shorter remaining useful life (and the corresponding impact on rates that would have been occasioned as a result). In its decision approving the DDA in principle, the NSUARB noted:

> [299] In this context, NS Power is a utility regulated under a cost of service model. This means the Company is allowed to recover its prudently incurred costs in the provision of service to customers and may earn a reasonable return on its related invested capital. Therefore, where the Company has made an investment to the benefit of customers but related prudently incurred costs of capital have yet to be recovered, NS Power may recover these costs even after capital assets have been retired, in circumstances where the assets were retired due to changes in public policy beyond its control. Further, since the costs have yet to be recovered, there are still debt and equity financing costs associated with these investments. None of the parties in this proceeding have suggested that NS Power is not entitled to recover such costs.
>
> …
>
> [310] Based on the above, the Board finds that the proposed DDA provides a mechanism that will allow better flexibility in the recovery of investment in thermal assets that will be phased out due to the decarbonization transition. It will also effectively balance timely recovery of the related costs with customer affordability. The Board also notes that the DDA is not intended to make unrecoverable costs recoverable by NS Power. Instead, it will allow for NS Power's recovery of prudently incurred costs while making the transition to increased renewables to 2030 and beyond more affordable for customers.
>
> [2023 NSUARB 12]

[426] The decision strikes a balance between affordability for customers and the utility's entitlement to an opportunity to recover its prudently incurred costs and a fair return. In making that determination, the NSUARB considered both immediate and long-term impacts on customers. Accelerating the recovery of the net book value and decommissioning costs over the remaining life of these assets would have caused rates to sharply increase, negatively affecting customers. At the same time, holding depreciation rates and forcing NS Power to absorb a significant write-off of the value of the coal assets when they are no longer used and useful could very likely have a material negative financial impact on the financial health of NS Power. As was noted and discussed in the NSUARB's decision in the previous general rate application, negative financial impacts on the utility ultimately cost customers in the form of higher interest costs and reduced ability to raise capital.

[427] This decision was recently mentioned in Deirdre Sheehan et al, *The Push for Electrification and a Net-Zero Grid: Developments, Reactions, and Implications,* 2024 62-2 Alberta Law Review 424, 2024 CanLII Docs 3091:

> Consideration of the retirement of coal-fired assets in Nova Scotia by the Nova Scotia Utility and Review Board (NSURB) is illustrative of the potential rate implications of early asset retirement. NS Power expects it will have to retire coal-fired assets and associated infrastructure by 2030 due to its legal decarbonization obligations, prior to fully recovering its investment in these assets or its decommission costs in rates. The undepreciated costs associated with these early retirements "may be as much as $757 million." Seeking approval to accelerate the recovery of depreciation expense (that is, recovery of its remaining capital investment) and decommissioning costs over the years of operation remaining to 2030 "would cause a substantial increase in rates." Therefore, NS Power proposed, and NSURB approved with some changes, the transfer of these costs to a regulatory asset account — the Decarbonization Deferral Account (DDA) — to facilitate rate stability and affordability for customers. NSURB found that the transfer of the costs to the DDA would allow flexibility around the timing of the recovery of the costs, and stated:
>
> > To the extent that costs transferred to the DDA are not offset by governments (to recognize the various policy choices reflected in the laws leading to the premature retirement of assets and the broader social benefits from a decarbonized electricity system), they would be recovered from customers over an undetermined future period.

> As is evident from the foregoing, absent government funding and in the pursuit of affordability, regulators may need to consider novel and flexible approaches to address the financial impacts of early retirements and other energy transition costs while ensuring utilities have an opportunity to recover the return of and on their investments.
>
> [pp. 453-454]

[428] Confirming the utility's entitlement to recover its undepreciated costs through the DDA is consistent with longstanding Canadian regulatory principles and practices, including those described in the recent Alberta Court of Appeal decision. The NSUARB determined that the DDA was the most appropriate approach in the circumstances presented by the need to transition to decarbonized energy systems, consistent with federal and provincial government policies and legislation. There is no basis to revisit that decision.

3.6.3.1.3 The Requirement for Prudence

[429] Prudence is, of course, always a consideration. The language used in s. 30(2) of the *Public Utilities Act* is not simply "original cost" but "prudent original cost". A utility is entitled to the opportunity to recover its prudently incurred costs. That is, costs incurred under a standard of care that a reasonable person would expect to be made by other similarly situated utilities in the same circumstances encountered by the utility at the time decisions had to be made.

[430] The Board's approach to prudence was recently canvassed in its decision in NS Power's most recent fuel adjustment mechanism audit (2025 NSEB 10, paras. 17-49). Useful principles were helpfully outlined by the Industrial Group in its submissions in that matter, which were referenced in the decision:

> [18] The Industrial Group's closing submissions in this proceeding listed the following principles about the prudence of utility expenses, which it extracted from the legislation and case law:
>
> > 1. The Board may allow the utility's expenses which are "reasonable and prudent and properly chargeable."

> 2. NSPI benefits from an initial presumption that its decisions are prudent.
>
> 3. The presumption of prudence is rebutted when questions are raised. This is the first stage. Hindsight may be used at this stage.
>
> 4. When prudency has been called into question, NSPI must discharge its burden to satisfy the Board that it applied a reasonable standard of care in its decision-making and actions, and that its expenses were reasonable and prudent based on information known or ought to have been known at the time. This is the second stage. Hindsight may not be used at this stage.
>
> 5. If a finding of imprudence is made, the Board may disallow costs which have been imprudently incurred. [Footnotes omitted]
>
> [Industrial Group, Closing Submissions, pp. 2-3]

> [19] The Board finds this to be a helpful summary. In this case, there did not appear to be significant disagreement over these principles (except for the use of hindsight to rebut the presumption of prudence). There was considerable disagreement about how these principles applied in the context of a FAM Audit. Positions differed on the threshold for rebutting the presumption of prudence. The parties also debated when human error might amount to imprudence.

[431] The Board went on to find:

> [42] In summary, the Board finds that the threshold for rebutting the presumption of prudence is contextual. It requires a reasonable question – something that is more than a bald statement or speculation – but it should not be too onerous and may arise in hindsight. In the context of a FAM Audit, the audit report may provide context but does not increase the threshold for rebutting the presumption or reverse the onus. Questions raised in the FAM Audit may rebut the presumption of prudence. The audit report is also available as evidence to assess the ultimate issue of prudence (although hindsight may not be used in this stage of the assessment).

[432] In its closing submissions in the current matter, the Department suggests two areas where NS Power's prudence may be questioned. The first is that depreciation rates were too low, resulting in present net book values for retiring coal assets to be recovered from customers that are higher than they should have been. The second, is that NS Power unnecessarily invested in these assets in the face of impending retirements.

[433] As discussed previously in this decision, the last depreciation study presented to the regulator before the one in this proceeding was filed with the NSUARB in 2010. The depreciation rates NS Power originally sought in that application were higher

than those eventually accepted by the NSUARB. These were reduced in a “black box” settlement following the filing of evidence by experts suggesting they were too high and that some asset lives were too short. In its closing submissions, the Department recognized that the impact of the settlement agreement in Matter M03665 kept customer rates lower in the near term. As that proceeding was not a general rate application, the depreciation rates could not be immediately implemented. They were implemented in NS Power’s next general rate application, which was filed in 2011, and a decision was rendered in December 2012. The decision in that matter also accepted a settlement agreement signed by a number of intervenors.

[434] NS Power’s next general rate application was filed in January 2022. In that matter, NS Power failed to file an updated depreciation study, as the Board would have expected, but NS Power recognized that the requirement to close coal plants by 2030 challenged the recovery of undepreciated costs relating to those assets and proposed the DDA, as discussed previously in this decision.

[435] A subsequent proceeding to formally approve the DDA was initiated by NS Power. Several parties in that proceeding argued that the costs to be transferred into the DDA should be reviewed. However, none of them, including the Department (then NRR) who retained an expert to file evidence in that proceeding, suggested that the amount should be reduced because of imprudently charged depreciation rates.

[436] Regarding the issue of improper investment in the face of impending coal plant closures, the Department’s expert in the DDA matter supported NS Power’s recovery of the cost of the coal generation assets but recommended that NS Power be

allowed to recover the unamortized balances of the coal assets only where the Board has determined those costs have been prudently incurred:

> [57] Ms. Runge supports NS Power's recovery of its prudently incurred investments in its coal generation assets:
>
> > 75. The no hindsight principle should always be applied in the assessment of the return of capital to a utility. If the investment was considered prudent at the time it was made with all reasonably available knowledge applied to that assessment, then the utility should not be at risk for the recovery of those costs.
> >
> > 76. The end goal of the regulatory compact is to be fair to both the utility and the rate payers, where one party has an obligation to serve and minimum reliability standards to uphold and the other is held captive given inelastic consumer demand and monopoly utility supply. Application of the no hindsight principle to return of capital is fair to both parties. The coal generation assets were built for rate payers. At the time they were built, they were considered to be prudent. Rate payers wanted access to cost-effective electricity, which was provided to them, and NSPI had an expectation that in exchange for building long-life assets to provide that electricity, it would recover those prudently invested costs over the life of the assets.
> >
> > 77. Consistent application of the no hindsight principle to the return of capital also benefits both parties over the long run. The utility benefits from certainty of cost recovery associated with investment choices that were considered prudent at the time they were made, with no risk that costs will later be removed from rate base due to changes in government policy or technological advancements that occur. At the same time, rate payers benefit as the result is significantly lower utility risk than the application of the used and useful principle to the return of capital, which allows for a lower ROE and potentially a lower cost of debt than would be the case under a policy focused on the used and useful test. In the long run, the application of a lower ROE to the totality of a utility's rate base can be more beneficial to rate payers than small costs that may otherwise be removed from rate base from time to time due to early retirements.
> >
> > [Exhibit N-10, p. 23]

[58] She goes on to say that this only applies to costs determined to have been prudently incurred. It notes that not all costs incurred by NS Power are subject to an explicit prudence review when they are incurred and highlights the importance of such reviews to ensure that the utility is making only proper investments and not adding to its rate base to inappropriately increase its return:

> > 79. The prudency test is an important part of the regulatory compact. Due to the fact that a utility is a natural monopoly provider of service, if the utility established its own pricing in the absence of a regulator, the utility would have the ability to charge rates that include significant rents as a result of its market power in the region and high consumer demand for its product. Regulatory proceedings that test the proposed investments of a utility allow for rates that are more reflective of competitive market pricing instead of this monopolistic pricing. Given that the ROE is established in a

> regulatory proceeding and that in the case of NSPI there is no ability to earn above the approved ROE by more than 0.25%, the means by which NSPI increases its profitability is to invest in capital and increase its rate base. Accordingly, the utility has an incentive to over-invest in capital if it can get those costs approved and added to rate base. Continued testing of costs to ensure prudence of investments is, therefore, required in order to ensure just and reasonable rates.
>
> [Exhibit N-10, p. 24]

> [59] Ms. Runge recommends that NS Power be allowed to fully recover the unamortized balances associated with the early retirement of its coal assets where the Board has determined those costs to have been prudently incurred. However, she submitted that, before adding them to the DDA, the Board should evaluate the prudence of any costs NS Power proposes to transfer to the DDA that have not already been found by the Board to have been prudently incurred. Ms. Runge said NS Power should apply to the Board for this purpose when it wants to add such costs to the DDA. [Emphasis added]
>
> [2024 NSUARB 67]

[437] In its decision, the NSUARB referenced the general principles it applied to prudence questions, noting the general presumption of prudence and that it was open for parties to raise questions of imprudence. In respect of the concern about sustaining capital, the NSUARB noted:

> [72] Some parties expressed concerns about future sustaining capital and decommissioning costs. Costs of this nature may exceed the $1,000,000 threshold, providing parties with an opportunity to question their legitimacy in future capital approval applications, before they are incurred. The Board expects these concerns will be advanced and assessed in the context of the applications for these specific investments. To ensure that the Board's processes appropriately allow for such participation, particularly if the requested capital approval is not included in an approval requested in an ACE plan proceeding, the Board directs NS Power to provide specific notice to all participants in this proceeding upon filing any future capital work order applications involving assets that are forecasted to be included in the DDA and to confirm this was done in its applications to the Board.
>
> [73] The Board also notes that NS Power said the Board may choose to review costs transferred to the DDA in any given year:
>
> > … The reporting requirements outlined in the DDA Manual are intended to provide all stakeholders with transparency around transfers to or from the DDA in any given year and the Board may choose to review any of these transfers.
> >
> > [NS Power Reply to Closing Submissions, p. 5]
>
> [74] Based on this, it is possible that circumstances may arise that make it appropriate to consider the prudence of costs transferred at that time. However, as noted above, the Board has found that making the transfer of costs to the DDA dependent on mandatory applications to determine their prudency (where this has not already been determined) is not consistent with the capital approval provisions in the *Public Utilities Act*. Likewise, NS Power should understand that the Board's acceptance of any DDA reports filed following

> the processes outlined in the proposed DDA Manual would also not constitute a finding that the costs included in the report were prudent.
>
> [2024 NSUARB 67]

[438] In short, it remains open for the Department or other parties to challenge the prudence of any of NS Power's expenditures, but these are presumed prudent and there is a threshold that must be met to rebut this presumption. The Department filed no evidence in the current GRA proceeding, did not explore questions of prudence in any cross-examination, and only raised these issues in closing submissions. Additionally, the allegation of imprudent investment was only raised in a very general way. While the issue about depreciation rates was somewhat more specific, it was still quite general and also failed to address the impact of the equivalency agreements between the Province of Nova Scotia and the Government of Canada. Therefore, the Board finds that the threshold for rebutting the presumption of prudence has not been met in this proceeding.

3.6.4 Findings

[439] The Board accepts NS Power's forecasted average rate base of $5.58 billion in 2026 and $5.89 billion in 2027.

3.7 Return on Equity and Capital Structure

[440] NS Power's existing rates are set based on a current capital structure that includes 40% equity and 60% debt, with an approved return on equity of 9%. Under the current framework, NS Power may realize an annual return on equity up to 9.25% and must return any earnings above 9.25% to its customers.

[441] In this proceeding, NS Power proposed to continue to set rates based on a 9% return on equity within a range from 8.75% to 9.25%. NS Power also requested to maintain its debt-to-equity ratio, for rate-setting purposes.

3.7.1 The Fair Return Requirement

[442] NS Power operates as a natural monopoly in Nova Scotia, where the absence of meaningful competition means the competitive forces of the market do not apply. Section 45 of the *Public Utilities Act* entitles a public utility to earn a just and reasonable return on its rate base, in addition to recovering its reasonable operating expenses and other just allowances. As a result, it is the Board's responsibility to set the parameters under which the utility may earn a return from its customers.

[443] A fair return is fundamental to ensuring the utility's ongoing financial stability. Because NS Power must secure external capital to undertake necessary investments, it requires a return sufficient to attract and retain investors. If the approved return is set below levels commensurate with the utility's risk, investor confidence may erode, which could affect NS Power's access to capital on reasonable terms and could place downward pressure on its credit rating. A weak credit rating increases borrowing costs and, therefore, raises the costs paid by customers. The company could even lose access to certain debt markets altogether, with more significant cost implications for NS Power and its customers.

[444] There is a well-recognized and long-standing legal standard the Board must follow when approving a utility's return on its invested capital. A century ago, the Supreme Court of Canada described the test as follows:

> 18 The duty of the Board was to fix fair and reasonable rates; rates which, under the circumstances, would be fair to the consumer on the one hand, and which, on the other hand, would secure to the company a fair return for the capital invested. By a fair return is meant that the company will be allowed as large a return on the capital invested in its enterprise (which will be net to the company) as it would receive if it were investing the same amount in other securities possessing an attractiveness, stability and certainty equal to that of the company's enterprise. … [Emphasis added]
>
> [*Northwestern Utilities Ltd. v Edmonton (City)*, [1929] SCR 186]

[445] This test was more recently accepted by the Supreme Court of Canada in *Ontario (Energy Board) v Ontario Power Generation Inc.*, 2015 SCC 44:

> 15 This Court has had the occasion to consider the meaning of similar statutory language in *Edmonton (City) v. Northwestern Utilities Ltd.*, [1929] S.C.R. 186 (S.C.C.). In that case, the Court held that "fair and reasonable" rates were those "which, under the circumstances, would be fair to the consumer on the one hand, and which, on the other hand, would secure to the company a fair return for the capital invested" (pp. 192-93).
>
> 16 This means that the utility must, over the long run, be given the opportunity to recover, through the rates it is permitted to charge, its operating and capital costs ("capital costs" in this sense refers to all costs associated with the utility's invested capital). This case is concerned primarily with operating costs. If recovery of operating costs is not permitted, the utility will not earn its cost of capital, which represents the amount investors require by way of a return on their investment in order to justify an investment in the utility. The required return is one that is equivalent to what they could earn from an investment of comparable risk. Over the long run, unless a regulated utility is allowed to earn its cost of capital, further investment will be discouraged and it will be unable to expand its operations or even maintain existing ones. This will harm not only its shareholders, but also its customers: *TransCanada Pipelines Ltd. v. Canada (National Energy Board)*, 2004 FCA 149, 319 N.R. 171 (F.C.A.). [Emphasis added]

[446] The latter part of this passage endorsed the Federal Court of Appeal's comments in *TransCanada Pipelines Ltd. v Canada (National Energy Board)*, 2004 FCA 149, where that court said:

> 12 Even though cost of capital may be more difficult to estimate than some other costs, it is a real cost that the utility must be able to recover through its revenues. If the Board does not permit the utility to recover its cost of capital, the utility will be unable to raise new capital or engage in refinancing as it will be unable to offer investors the same rate of return as other investments of similar risk. As well, existing shareholders will insist that retained earnings not be reinvested in the utility.
>
> 13 In the long run, unless a regulated enterprise is allowed to earn its cost of capital, both debt and equity, it will be unable to expand its operations or even maintain existing ones. Eventually, it will go out of business. This will harm not only its shareholders, but also the customers it will no longer be able to service. The impact on customers and ultimately consumers will be even more significant where there is insufficient competition in the market to provide adequate alternative service. [Emphasis added]

[447] The Federal Court of Appeal also addressed a concern raised by TransCanada Pipelines that the National Energy Board set its return on equity too low because it improperly considered the impact that higher rates would have on TransCanada's customers. Although the court found the evidence did not support the conclusion that the National Energy Board had suppressed the return on equity because

of the resulting impact on customers, it accepted the impact of the return on customers was not a relevant factor under the *Northwestern Utilities* test:

> 35 In oral argument, the appellant conceded that it does not object to its customers having input into the Board's cost determinations and in particular, its cost of capital determination, provided the issues in dispute are restricted to the costs of the Mainline. However, the appellant does object to the Board taking the impact of tolls on customers and consumers into account in determining the Mainline's cost of equity capital. The appellant says that the required rate of return on equity must be determined solely on the basis of the Mainline's cost of equity capital. The impact of any resulting toll increases on customers or consumers is an irrelevant consideration in that determination. The appellant does concede that when the final tolls are being fixed, the impact on the customers and consumers may be relevant, but insists that it is irrelevant when determining the required return on equity.
>
> 36 I think that this argument is sound and in keeping with the decision of the Supreme Court in *Northwestern Utilities*. The cost of equity capital does not change because allowing the Mainline to recover it would cause an increase in tolls. Under the Board's Equity risk premium methodology, the cost of equity capital is driven by the Board's estimate of the risk-free interest rate and the degree of risk investors perceive in the "benchmark" pipeline. The higher the risk, the higher their required rate of return. The degree of risk specific to the Mainline is accounted for by adjustments to its deemed capital structure. Accordingly, the cost to the Mainline of providing that rate of return on the equity component of its deemed capital structure is unaffected by the impact of tolls on customers or consumers. [Emphasis added]

[448] The Federal Court of Appeal went on to say that although the impact on customers cannot be a factor in determining the utility's entitlement to a specific return on equity, any resulting increase in tolls may be a factor in determining the way the utility may be able to recover its costs. In particular, the court said if an increase would be so significant it would lead to "rate shock" if implemented all at once, rate increases could be phased in over time, "provided that there is, over a reasonable period of time, no economic loss to the utility in the process. In other words, the phased in tolls would have to compensate the utility for deferring recovery of its cost of capital" (para. 43).

[449] In a similar vein, a recent Ontario Energy Board decision noted that ensuring the utility has the necessary financing to carry out its operations must be the focus when setting a return on equity. The setting of the return on equity is not a tool to "balance" competing interests between the utility and its customers:

> The OEB affirms that in setting this important component of the determination of the cost of capital for regulated utilities it adopts the requirements of the [fair return standard], as set out in the 2009 Report. These requirements mandate a regulatory return that meets the market expectations derived from the review of comparable investments, ensures the financial integrity of the subject utilities and allows for compliance with the capital attraction standard: the approved return must permit incremental capital to be attracted to the enterprise on reasonable terms and conditions. The [fair return standard] does not involve the balancing of interests between the utility and its customers but is singularly focused on ensuring that a utility is furnished with the necessary financing to carry out its responsibilities of service to its customers. However, the utility is allowed the opportunity to earn its cost of capital, no more and no less. [Footnotes omitted] [Emphasis added]
>
> [OEB EB-2024-0063, p. 34]

[450] In *Energy Law and Policy* (Kaiser and Heggie, ed., 2011), Canadian authors, Gordon Kaiser and Bob Heggie, summarized the principles considered by regulators to set fair returns:

> While no legislative guidance is provided as to what a regulator is to take into account in determining a fair return, United States and Canadian courts have considered the issue. The courts have listed factors that tribunals should consider, but have not prescribed methods for calculating a fair return. To be considered fair, tribunals have taken the following principles or standards into account in determining returns:
>
> - The return must be comparable to the return available in the market on an investment of similar risk: the comparable investment or earning principle.
>
> - The return must be sufficient to attract new utility capital investment: the capital attraction principle.
>
> - The return must be sufficient to maintain the financial integrity of the utility: the financial integrity principle.
>
> The comparable investment principle is based on the idea that in order to be fair to a utility equity investor, the investor must be satisfied that the potential return on the investment is sufficient to compensate for the risk assumed in relation to the entire spectrum of comparable competitive investments available. The challenge with this principle is finding comparable companies with similar risks.
>
> The financial integrity and capital attraction principles are more straightforward and generally will be satisfied if the comparable investment principle is met. Financial integrity is satisfied if the combined effect of the allowed return and the equity thickness of a utility's capital structure results in a debt coverage ratio sufficient to support stable investment grade ratings.
>
> Debt investors need earnings to provide security for the debt capital invested. The difficulty with this principle is determining whether a particular desired rating should drive the allowed return.

> Capital attraction means that returns must be adequate to attract necessary capital on reasonable terms to build required utility infrastructure.
>
> [Energy Law and Policy, pp. 188-189]

[451] Similar principles are considered by utility regulators in the United States: *Bluefield Waterworks & Improvements Co. v Public Service Commission of West Virginia* (1923), 262 US 679 (US W. Va.) and *Federal Power Commission v Hope Natural Gas Co.* (1944), 320 US 591 (US Sup Ct.). In *Re Nova Scotia Power Inc.*, 2019 NSUARB 165, the NSUARB referenced *Northwestern Utilities*, *Bluefield* and *Hope* as "landmark decisions which set out general principles with respect to rate of return".

[452] The assessment of these principles in any matter before the Board is based on the evidence presented. In the current case, due to NS Power and customer representatives reaching a consensus agreement in advance of the general rate application, only two parties presented the Board with expert evidence, NS Power and Board Counsel.

3.7.2 Overview of Cost of Capital Evidence

3.7.2.1 Return on Equity

[453] Determining a fair return on equity generally entails the use of several well-established financial models. These include, but are not limited to, the discounted cash flow (DCF) model; the capital asset pricing model (CAPM) and the risk premium model. In practice, common approaches assess prevailing conditions in the capital markets and often validate conclusions through the application of multiple models to ensure consistency and robustness.

[454] Under the consensus agreement, the signatories agreed to a return on equity for NS Power of 9% for rate setting purposes, with an earnings band of 8.75% to

9.25%. They also agreed that an equity thickness of 40% for rate setting purposes would be retained.

[455] NS Power presented evidence from its cost of capital expert witnesses James Coyne and John Trogonoski of Concentric Energy Advisors (Concentric). Concentric reviewed the economic and financial market conditions in Canada and the United States (U.S.) to inform how those conditions affect a utility's return on equity. Concentric noted that the risk to a company's earnings is a function of its business and financial risk. Utilities obtain debt and equity in capital markets that are affected by macroeconomic indicators and central bank policies. Concentric's evidence filed with NS Power's application used market data as recent as February 2025.

[456] Concentric believes that since the interest rates on government and utility bonds have been stable since NS Power's last GRA, the cost of utility capital has been stable. However, over the long-term, Concentric expects the electric utility industry to experience structural challenges associated with climate change, cybersecurity, grid improvements and customer preferences. Therefore, Concentric says NS Power requires a return on equity that is competitive enough to attract the investment it will need to support its own energy transition.

[457] To determine a suitable return on equity for NS Power, Concentric created proxy groups of companies it considered to be comparable to NS Power in terms of business and financial characteristics. Concentric regards the nature of the financial markets in the U.S. and Canada as integrated and utility regulatory systems as similar. In total, Concentric created 3 proxy groups: a group of 5 Canadian electric utilities; a group of 10 U.S. electric utilities; and a North American group consisting of 10 U.S. proxies and

3 Canadian proxies. Its return on equity recommendations are based on its North American proxy group.

[458] Based on the average return on equity results from its DCF, CAPM and risk premium models, Concentric recommended a return on equity for NS Power of 9.9%. This is higher than the return on equity proposed under the settlement agreement, but Concentric believes this to be a reasonable return on equity for NS Power. Concentric's recommendation incorporated an adjustment for flotation costs and financing flexibility of +50 basis points, or +0.5%. Concentric made this adjustment in its DCF and CAPM models to reflect costs associated with the sale of new issues of common equity.

[459] Concentric evaluated NS Power's return on equity using current and forecast economic conditions for Canada and the United States. However, it conducted its analysis early in 2025, a year in which tariff threats and uncertainties escalated globally with geopolitical tensions testing longstanding trade relationships leading to market turmoil and repeated changes to economists' forecasts. As NS Power did not file its application until September of 2025 and the hearing was held in January 2026, some of the information used in Concentric's analysis was stale.

[460] In response to Undertaking U-14 [Exhibit N-81], Concentric updated its return on equity analysis using market data as of December 31, 2025. Based on this data, the average return on equity of the three models for Concentric's North American proxy group fell from 9.90% to 9.43%. NS Power suggested this result was due to a significant drop in utility beta values during 2025, along with a smaller reduction in Canada's forecasted GDP growth. Higher forecasted long-term government bond yields partially offset these effects.

[461] Board Counsel consultant, Dr. Cleary, was the only expert witness to provide an alternative cost of capital review. Dr. Cleary presented evidence that equity returns allowed by regulators in Canada and the U.S. have not declined in the past two decades. He believes, however, that these returns should have declined, with reductions in government and utility bond yields. He also believes that Canadian and U.S. utilities are earning excess compensation relative to their actual market-determined cost of equity. He highlighted that there is general market acceptance that utility companies are less risky than the average publicly traded company, which implies expected returns should be less than that of an average risk company.

[462] Dr. Cleary reviewed the economic and financial market conditions in Canada and the U.S., but he focused his analysis on Canadian data and forecasts. Dr. Cleary argued against using U.S. utilities as proxies for NS Power because he does not consider them to be reasonable comparators for Canadian utilities. He argued, in part, that U.S. utilities are higher risk than Canadian utilities because they are typically holding companies, they operate in the U.S. and the nature of their operations entails more risk. He did not agree that Concentric's North American proxy group was an appropriate comparator group for NS Power because he viewed the U.S. companies that made up most of this proxy group as having significantly higher average risk.

[463] Dr. Cleary supported his position that U.S. utilities were, on average, riskier than Canadian utilities with an examination of utility betas. Betas measure the volatility of a company's stock compared to the overall return in the market. He said this analysis demonstrated that, over a lengthy period, U.S. utility betas are much higher than Canadian utility betas.

[464] NSP Maritime Link's 2026 annual assessment (Matter M12394) included evidence provided by Dr. Cleary and Concentric that was similar to what they filed in this proceeding. During his testimony in that matter, Dr. Cleary also explained that Canadian institutional and fixed income investors exhibit a home-country bias, influenced in part by comparatively higher U.S. payout structures and exposure to foreign exchange risk.

[465] Dr. Cleary further noted that, following the 2024 U.S. Presidential election, economic and political developments have contributed to a divergence in the previously aligned economic relationship between the U.S. and Canada, with the potential to become more disconnected.

[466] Dr. Cleary recommended a 7.6% return on equity for NS Power based on his financial modeling using CAPM, DCF and risk premium models. Like Concentric, he included an adjustment for flotation costs of 50 basis points or 0.5%.

[467] A summary of the results derived from Concentric's and Dr. Cleary's return on equity evidence is set out in the table below, with the numbers for Concentric taken from its response to Undertaking U-14:

Summary of Return on Equity Results				
	CAPM	DCF	Risk Premium	Opinion
Concentric	9.23%	9.02%	10.04%	9.43%
Cleary	6.84%	7.86%	7.94%	7.6%

3.7.2.2 Capital Structure (Equity Ratios)

[468] Concentric determined that a common equity ratio of 45% would be appropriate for NS Power. Concentric considers the requested common equity ratio of 40% (per the settlement agreement) to be conservative given NS Power's financial and business risks from owning generation assets and a requirement to accelerate the retirement of much of its thermal generation by 2030. NS Power's request to maintain its

40% equity ratio leaves it similarly situated to other Canadian utilities but lower than American integrated electric utilities, based on Concentric's comparison of equity ratios of other electric utilities (reproduced below):

Figure 30: Authorized Electric ROEs and Equity Ratios

	Generation	ROE	Equity Ratio
NSPI (existing)	Yes	9.00%	40.0%
NSPI (Concentric analysis)	Yes	9.90%	45.0%
NSPI (proposed)	Yes	9.00%	40.0%
Newfoundland Power	Minimal	8.60%	45.0%
Maritime Electric Company Ltd	Minimal	9.35%	40.0%
Ontario Electric Utilities	None	9.00%	40.0%
Alberta Electric Utilities	None	8.97%	37.0%
FortisBC Inc.	Yes	9.65%	41.0%
Canadian Electric Average		**9.11%**	**40.6%**
U.S. Electric Utilities[59]	Yes	9.79%	52.0%
U.S. Electric Proxy Group Average[60]	Yes	9.66%	51.1%

[Exhibit N-8, Appendix 10A, p. 57 of 87]

[469] Dr. Cleary supported NS Power's requested 40% equity ratio, stating it is reasonable given its lower debt rating of BBB- and because NS Power holds a higher percentage of generation assets compared to other Canadian utilities.

3.7.3 Return on Equity Modeling

[470] In the discussion that follows, references to results from Concentric's analysis are to the update it provided in Undertaking U-14 using the analysis as generally described in its original report [Exhibit N-8, Appendix 10A] for its North American proxy group.

3.7.3.1 CAPM Models

[471] The CAPM accounts for the risk of common equity relative to risk free securities such as government bonds. The CAPM model estimates the required return of a security based on the relationship between the expected return of the market and the

systematic risk of the security. The main components of the CAPM model include the risk-free rate of return, the market risk premium and company betas.

[472] The market risk premium is measured as the difference between the expected return of the market and the risk-free rate. It represents the rate of return over and above the risk-free rate. The expected return of the market is a long-term assumption about how the market will perform over time. The risk-free rate is typically represented by the long-term government bond rate. As discussed previously, beta is a measure of a stock's risk and is measured by the changes in its price relative to changes in the overall market.

[473] Based on its assessment of its North American proxy group and adjusting for flotation costs, Concentric determined that a return on equity of 9.23% was appropriate under its CAPM analysis. Dr. Cleary estimates a 6.84% return on equity under his CAPM assessment, with adjustments.

[REMAINDER OF THIS PAGE INTENTIONALLY LEFT BLANK]

[474] A summary of the formula components used by Concentric and Dr. Cleary is set out in the table below:

	CAPM	
	Concentric	**Cleary**
Risk-free Rate	**3.87% (Canada)** **4.56% (U.S.)** *[Average long-term Consensus Forecast of 10-year government bond yields plus the average spread between 10- and 30-year bond]*	**3.66%** *[Long-term government yield of 3.66% as of November 20, 2025]*
Market Risk Premium	5.75% (Canada) 7.31% (U.S.) **6.53% (Average)** *[Kroll]*	**5.5%** *[Within historical range of 4-6%]*
Beta	**0.66 (mean)** *[Bloomberg and Value Line]*	**0.45** *[Usual point within historical range of 0.30-0.60]*
Average Yield Spread Adjustment		**-0.15%**
Debt Cost Spread		**0.35%**
Financial Flexibility	**0.50%**	**0.50%**
ROE	**9.23%**	**6.84%**

[475] For the risk-free rate of return, Concentric uses *Consensus Economics* forecasted 10-year government bond yield plus the average ten-year historical spread between the 10-year and 30-year government bonds (Canada, 3.87%; U.S., 4.56%). Dr. Cleary estimates CAPM using the actual yield on long-term government bonds at a recent point in time for his risk-free rate. In this case, he used the long-term government yield of 3.66% as of November 20, 2025.

[476] Concentric's risk-free rates are higher, particularly for the U.S. In his evidence, Dr. Cleary argued that using Consensus yield forecasts as a proxy for future 30-year Canada yields has led to an upward bias relative to the subsequent actual yields that prevail. Dr. Cleary also criticized Concentric's derivation of 30-year bond yields. The

use of spreads to adjust 10-year bond yields to 30-year bond yields introduces further assumptions and sources for error.

[477] Concentric estimated the historical market risk premium based on the arithmetic mean of the equity market returns for large company stocks minus the income only return (i.e., the bond coupon rate) on long-term government bonds using data from Kroll, LLC. The market risk premium for Canada is based on returns from 1919-2023 (5.75%) and, for the U.S., on returns from 1926-2023 (7.31%).

[478] Concentric averaged the market risk premiums for Canada and the U.S. (6.53%) and applied the average to all proxies, irrespective of the country. Concentric regarded the market risk premiums in Canada and the U.S. as highly correlated, although there was significant disagreement from Dr. Cleary throughout his evidence about the inclusion of U.S. proxies.

[479] Dr. Cleary suggests that market risk premiums lie within a “commonly used 4-6% range”. He cites academic studies to support this view. Dr. Cleary notes that A-rated Canadian utility bond yield spreads were well below their long-term average, indicating a low-risk environment that would normally lead him to use a market risk premium of 4.5% or 5%. However, citing uncertainties due to global trade tensions, which pose a risk to future economic growth, he settled on a market risk premium of 5.5%.

[480] Concentric’s market risk premium is higher than Dr. Cleary’s. Dr. Cleary attributed this to the use of U.S. data. He also noted that Concentric’s market risk premium estimates use income only returns for bonds rather than total returns, which neglects to account for both the interest and capital gains (or losses).

[481] Concentric sourced adjusted betas from Value Line and Bloomberg. These are raw betas that have been adjusted on the theory that there is a tendency for betas to revert towards the market mean of 1.0 over time and a need to account for errors associated with statistical estimates. Concentric's position is that raw betas are inferior inputs because they do not represent the expected returns or the average market returns. It said that the CAPM is a forward-looking model, therefore a forecasted beta and its tendency to perform at the average of the market over time is not limited by the historical performance of the industry beta.

[482] Dr. Cleary reviewed beta estimates in his evidence and arrived at several conclusions about appropriate beta estimates. Based on his assessment of research conducted in other cases and academic study, Dr. Cleary says that U.S. utility beta estimates are higher than those for Canadian utilities and should not be used. He submits that Canadian utility beta estimates have historically averaged between 0.2 and 0.4 (with 0.35 being the "best estimate"). He said Canadian utility beta estimates have never come close to 1.0, with maximum values being in the 0.6-0.8 range; therefore, he considered the use of "traditional adjusted betas to be totally inappropriate". He submitted that, based on historical evidence, a range of reasonable estimates for betas was between 0.3 and 0.6.

[483] Dr. Cleary noted that he has used a beta of 0.45 "in several previous utility proceedings" and that is his assessment in this proceeding as well. Although Dr. Cleary noted that beta estimates for companies can change dramatically through time, he said this demonstrated why it was appropriate to reference long-term averages and use judgement to determine the best estimates of future betas.

[484] As with the other parameters in the model, Concentric's beta estimate was higher than Dr. Cleary's. While Dr. Cleary applied his "usual" 0.45 beta, Concentric used company specific adjusted betas from Bloomberg and Value Line. These varied, but all were above Dr. Cleary's estimate. Of note, the Canadian companies in his North American proxy group had the lowest values. The mean value of all betas in the proxy group was 0.66, somewhat above Dr. Cleary's range of reasonable estimates.

[485] In addition to the adjustment for flotation costs and financing flexibility that both he and Concentric made, Dr. Cleary made other adjustments. First, he explained that government bond yields have increased recently but are still low. He said A-rated Canadian utility bond yield spreads have increased but are less than the long-term average spread. He noted that the Bank of Canada indicated that the increased spread is due to liquidity problems, but some of it still reflects increased risk premiums for low-risk firms, like utilities. He made a downward adjustment of -0.15% to account for the time varying risk premium. Second, Dr. Cleary also remarked that NS Power is paying 0.35% more on its long-term debt than the average Canadian utility. He applied this spread to adjust his CAPM estimates upward.

3.7.3.2 DCF Models

[486] The DCF model infers the required rate of return by replicating the actions of an investor in valuing the firm's securities by estimating the dividend yield and future growth rate.

[487] Based on its assessment of its North American proxy group and adjusting for flotation costs, Concentric determined that a return on equity of 9.02% was appropriate under its DCF analysis. Dr. Cleary estimated a 7.86% return on equity under his DCF (DDM) assessment, with adjustments.

[488] A summary of the formula components used by Concentric and Dr. Cleary is set out in the table below:

	DCF	
	Concentric	**Cleary**
Dividend Yield	**3.49%** *[Calculated from Bloomberg]*	**5.29%** *[Calculated from Morningstar]*
Multi-Stage Growth Rate Years 1-5	**6.62% (Mean)** *[Zacks, SNL Financial, Value Line, Seeking Alpha]*	
Multi-Stage GDP Growth (pertetuity)	**3.84% (Canada)** **4.24% (U.S.)** *[Consensus Economics]*	
DDM Sustainable Growth Rate		**1.64%** *[Calculated from Morningstar]*
Debt Cost Spread		**0.35%**
Financial Flexibility	**0.50%**	**0.50%**
ROE	**9.02%**	**7.86%**

[489] Concentric's multi-stage DCF model uses three phases of growth: near-term, reflecting the initial 5-year period; transitional growth, years 6 to 10; and long-term growth, years 11 and beyond. The near-term growth rates are based on analysts' earnings per share growth forecasts for each company in the proxy group (6.62% (mean)). Concentric's long-term growth rates are based on forecasted real GDP growth plus inflation (Canada, 3.84%; U.S., 4.24%). The medium term or transitional growth rates are pro-rated in a linear fashion.

[490] Dr. Cleary expressed concerns about Concentric's DCF model, noting its reliance on short-term earnings per share growth based on sell-side analysts' forecasts, rather than buy-side. He observed that the sell-side forecasts are typically upwardly biased and exceed nominal GDP growth rates as used in the final stage of the model. He

further stated in his evidence that using nominal GDP as a long-term growth assumption is overly optimistic for a low-risk utility, and that Concentric's model effectively assumes dividend growth above GDP for 10 years, before converging to nominal GDP thereafter.

[491] In its report, Concentric anticipated these criticisms. Concentric emphasized its use of multiple sources of earnings growth, which it says best informs the overall estimate, enhances its model and reduces the chance for arbitrary adjustments and custom calculations. Based on an historical analysis, Concentric submitted that both earnings and dividend growth have exceeded GDP growth, so analyst growth estimates should not be presumed to be upwardly biased just because they are higher than GDP growth.

[492] Using dividend yields for the companies in the proxy group (3.49% (mean)), Concentric's result was a return on equity of 9.02% after flotation costs.

[493] Dr. Cleary applied a Dividend Discount Model (DDM), which is a variation of the constant growth DCF model that assumes the market price of a stock is equal to the present value of expected future cash flows (dividends paid per share) that equity holders expect to receive. To begin his analysis, Dr. Cleary calculated the implied rate of return for the overall market and then applied the model at the industry level using values he considered to be representative of publicly traded utilities in Canada.

[494] To determine the overall return for the market in his DDM model, he uses the average real GDP growth rate from 1992 to 2024 and various estimates of forecasted GDP growth rates in 2025 and 2026. He then adds the target inflation rate to arrive at a nominal GDP estimate (3.8%). Dr. Cleary then inputs the dividend yield for the S&P/TSX

as of December 31, 2024, (2.83%) to derive an implied equity return for the market as a whole for 2024 (6.74%).

[495] Dr. Cleary notes that a limitation of the single-stage growth model he uses is the assumption of constant growth in dividends to infinity. He said this limitation may be overcome by using a multi-stage version of the DDM called the H-Model, which assumes that growth in dividends moves in linear fashion from some current short-term growth rate toward some long-term growth rate over a specified period of time. Applying this model, he uses the 2025-2026 nominal growth rate for the short term (3.2%) and the average nominal GDP growth rate from 1992 to 2024 (4.3%) to derive a market return of 7.19%.

[496] Dr. Cleary then applies his DCF (DDM) model to sample Canadian utilities using each company's sustainable growth rate by multiplying the earnings retention ratio by return on equity. He explained that growth in earnings is positively correlated to the amount of earnings reinvested and then multiplied by the return earned on those reinvested funds, measured using return on equity. Dr. Cleary noted that it is difficult to find representative Canadian regulated public-traded utilities. He applies averages and medians of historical data to arrive at an estimate of sustainable growth rates. Using an estimated sustainable growth rate of 1.64% produced an implied return of 7.01%.

[497] Due to a negative average return on equity in his dataset, and what he considered to be abnormally high payout ratios in 2024, Dr. Cleary did not apply his H-Model to his Canadian utilities sample. However, he compared the results to his results for the overall market. Adjusting for cost of debt and flotation costs, Dr. Cleary calculated a required return of 7.86% using this approach.

3.7.3.3 Risk Premium Model

[498] The risk premium model can be based on differences in the return between bonds and equity or the expected bond-equity return spread. The risk premium model accounts for equity holding more risk than debt because the equity investors bear the residual risk associated with ownership and therefore require a higher return than a bondholder. The riskier the company, the greater the difference between these returns. The standard equation for the risk premium calculates the return on equity as the sum of the yield on long-term bonds and the equity risk premium.

[499] Both Concentric and Dr. Cleary used the risk premium model, but they did so in entirely different ways. A summary of the formula components used by Concentric and Dr. Cleary is set out in the table below:

	Risk Premium	
	Concentric	**Cleary**
A-rated Utility Bond Yield (Nova Scotia Power)		**4.94% [Bloomberg]**
Government Bond Yield (Canada)	**3.82% (average)** *[Calculated from Bloomberg and Average long-term Consensus Forecast of 10-year government bond yields plus the average spread between 10- and 30-year bond]*	
Risk Premium (Canada)	**5.71% (average)** *[Calculated from Bloomberg and Average long-term Consensus Forecast of 10-year government bond yields plus the average spread between 10- and 30-year bond]*	**2.5%** [Usual range of 2-5%, with 3.5% being commonly used for average risk companies, and lower values for less risky companies]
Government Bond Yield (U.S.)	**4.68% (average)** *[Bloomberg and Blue Chip Financial]*	
Risk Premium (U.S.)	**5.96% (average)** *[Calculated from Regulatory Research Associates, Bloomberg and Blue Chip*	
Financial Flexibility		**0.50%**
ROE	9.52% (Canada) 10.63% (U.S.) **10.04% (mean)**	**7.94%**

[500] Concentric stated that “the equity risk premium is not directly observable…”. In its place, Concentric employs a regression analysis to assess the relationship between the authorized equity returns for utilities against 30-year government bonds. Data for over 700 U.S. and 60 Canadian electric utilities dating back as far as the early 1990s was input into Concentric’s analysis. Concentric also modeled variations of average long-term bond rates and then averaged the results. These results were added to the risk premium derived from the regression analysis to arrive at an overall risk premium return on equity, one for Canada, one for the U.S. and an average of the two.

[501] Dr. Cleary explained that his model examines the relationship between bond and stock markets using readily observable market-determined bond yields. He used current market long-term debt costs for A-rated utility bonds in Canada and the corresponding Bloomberg data for each utility. He noted that the yield on NS Power’s bonds maturing in 2042 was 4.94%, higher than the other utilities he analysed. He considered that this higher yield was a reflection of the other utilities holding higher credit ratings and longer maturity terms.

[502] To determine the risk premium side of the equation, Dr. Cleary contemplated that the typical range of risk premiums for utilities is between 2% and 5%. He considered that NS Power is a low risk regulated Canadian utility and suggested a low-risk premium between 2% and 3% is appropriate. He settled on 2.5%. Dr. Cleary then summed NS Power’s mid-point bond yield with this risk premium and applied an adjustment for flotation costs to arrive at 7.94%.

3.7.4 Party Submissions

[503] The Affordable Energy Coalition’s (AEC) opening statement submitted that the Board must ensure rates are sufficient to cover NS Power’s cost-of-service, while

preventing the recovery of excess spending and profits. The AEC characterized NS Power as a low risk regulated monopoly and argued that the utility should not face difficulty securing capital for its low-carbon investments. It also emphasized that many low-income Nova Scotians already experience significant cost-of-living pressures, making further rate increases untenable.

[504] The AEC's opening statement noted that Emera's annualized 10-year total shareholder returns ranged between 8.8% and 11.5% in 2022 and 2023 and questioned the justification for maintaining NS Power's 9% return on equity considering this profitability. The AEC submitted profit parameters should be adjusted to limit excess earnings and recommended reducing the return on equity to 7.6%, consistent with Dr. Cleary's evidence.

[505] In its closing submissions, NS Power argued that a fair return standard would warrant a higher return on equity and a thicker equity ratio based on Concentric's evidence, but it was maintaining its current return on equity and capital structure to balance affordability for customers:

> In sum, NS Power is aware of the need to balance affordability for customers and the financial health of the utility and, as a component of the Settlement Agreement, is therefore seeking to maintain its current ROE of 9.0 percent and an equity ratio of 40 percent. The Company's requested 9.0 percent ROE is below the market-based cost of equity provided by Concentric. For its North American proxy group, most like NS Power, the range of results with market data as of January 31, 2025 was 9.29 to 10.32 percent, and updated in response to the Board's undertaking to 9.02 to 10.43 percent with market data as of December 31, 2025. Even the lowest estimate using the multi-stage DCF model exceeds the Company's requested ROE. [Footnotes omitted]
>
> [NS Power Closing Submissions, p. 45]

[506] In addressing Dr. Cleary's evidence, NS Power contrasted the approaches taken by Concentric and Dr. Cleary. It said Concentric used proxy companies selected to match NS Power's business and operational risks, but Dr. Cleary relied on a very limited

group of companies that did not represent NS Power's business risk profile as a vertically integrated utility. It noted that in discussing the relative risk of Canadian and U.S. utilities in his evidence, Dr. Cleary focusses on utilities in Ontario and Alberta without considering how NS Power's risk profile may be different.

[507] NS Power submitted that Dr. Cleary's evidence was also undermined through his use of inputs based on his own personal judgement rather than current market data. It said other inputs and assumptions were not reasonable given the context of current and prospective economic and capital market conditions.

[508] In its closing submissions, the NDP Caucus encouraged the Board to "review the evidence presented by Dr. Cleary, who suggests Nova Scotia Power's rate of return should be set lower than the nine per cent".

[509] The Department of Energy filed closing submissions stating:

> 26. …A higher ROE is clearly in NS Power's interests, but it is not in the public's interest that ratepayers are asked to pay more. This is particularly the case where ratepayers contribute to NS Power's returns despite poor reliability performance, including continually failed SAIDI and SAIFI standards, most notably in rural Nova Scotia. Much of Nova Scotia is rural, and power outages can deprive ratepayers not only of light and heat but also access to well water. NS Power should not be permitted to earn more by delivering less.
>
> 27. NS Power did not offer any rebuttal to Dr. Cleary's evidence. Dr. Cleary offers the best evidence in this proceeding with respect to appropriate ROE, noting that NS Power has, since 2012, earned its allowed ROE on average, exceeding the allowed ROE in 8 of 12 canvassed years.
>
> [Department of Energy Closing Submissions, p. 5]

[510] In its reply submissions, NS Power addressed the Department of Energy's comments as follows:

> The DOE has offered no justification for its request that NS Power's return on equity be set at 7.6 percent, other than the mere presence of Dr. Cleary's evidence on the record. While the DOE states that NS Power did not offer any rebuttal to Dr. Cleary's evidence, again this is not true, as Dr. Cleary's evidence was rebutted by Mr. Coyne in his oral testimony and also within NS Power's Closing Submissions. What should also be seen as rebuttal of Dr. Cleary's evidence is the agreement and support from customer representatives for the use of 9 percent as the return on equity. Notably, the DOE has offered no evidence or submissions to rebut the evidence of Mr. Coyne. In fact, the DOE's submissions do not reference Mr. Coyne's evidence at all; however, the DOE submissions do provide support

> for Mr. Coyne's evidence as they only serve to further demonstrate NS Power's risk profile is higher than its peers. NS Power continues to rely on the evidence on the record in this proceeding and on its closing submissions to justify the requested, and customer representative-supported, 9 percent return on equity.

> [NS Power Reply Submissions, pp. 9-10]

3.7.5 Findings

[511] It bears repeating that for at least a century, the Supreme Court of Canada has recognized that investors in regulated utilities are entitled to a fair return that is comparable to the return they would see from other investments of similar attractiveness, stability and certainty. Without this, investment may be discouraged and the utility may not be able to expand or maintain its operations, harming both its shareholders and its customers.

[512] Factors that may be appropriately taken into account in setting a fair return are comparable returns on similar investments, the level of return needed to attract capital and the financial integrity of the utility. Factors that other cases have determined are not appropriate to consider include the impact of a fair return on rates or as a tool for balancing other interests between the utility and its customers, such as affordability or reliability. That is not to say these factors are irrelevant, just that they are not properly taken into account in setting the allowed return. There are other regulatory tools that can be used to lessen near term rate impacts and affordability issues, but they generally come at a higher long-term cost and may shift costs to other or future customers who did not receive the benefit of the service to which the costs relate.

[513] The NSUARB considered this issue directly in its decision about NS Power's request to set new rates in 2005. In that case, the start of the hearing was delayed due to an early winter storm in November 2004 that left thousands of Nova Scotians without power – some for many days. In the wake of the storm, Premier John

Hamm asked the NSUARB to conduct an independent review of the utility's state of preparedness before the storm. Many questioned why a rate increase should be considered in the circumstances. The Board said:

> [14] Just prior to November 15, 2004, the first scheduled day of the public hearing, NSPI requested that the hearing commencement be delayed until November 16, 2004. This request, which was agreed to by the Board, was as a result of significant power outages in various communities in the Province following a storm on November 13 and 14, 2004.
>
> [15] The November outages are the subject of a separate review by this Board. On November 16, 2004, the Board received the following request from Premier John Hamm:
>
> > The Government of Nova Scotia believes that the public interest would be served if the Utility & Review Board conducted an independent review. I therefore request that the Utility & Review Board, under the powers of the Public Utilities Act, begin a public review of the Company's state of preparedness for, and response to, last weekend's storm.
> >
> > This review should provide valuable insights into improvements which can be made to the overall restoration program in preparation for future outages.
>
> [16] As part of the outage review, the Board has received a number of comments from members of the public questioning, among other things, why NSPI's request for a rate increase should be considered when the service provided by NSPI is, in the view of these customers, inadequate and unsatisfactory.
>
> [17] While the Board recognizes the logic of this reaction, it is important to understand why this form of sanction cannot reasonably be applied to a regulated utility. NSPI is not like an unregulated retailer. It is a virtual monopoly which operates its business on a cost-of-service basis. Providing electricity to all communities in the Province was not (and likely still is not) financially feasible for private, competitive companies. For that reason, the Province's electric service supplier is a cost-of-service monopoly. In return for undertaking and continuing the costs of electrification of the Province, the Utility is permitted, under the Act, to recover the reasonable and prudent costs of providing this service. Because it is a monopoly, regulation operates as a surrogate for competition. One of the regulator's tasks is to balance the need for the Utility to recover its reasonable and prudent costs with the need to ensure that ratepayers are charged fair and reasonable rates.
>
> [18] It is in the interests of all Nova Scotians to ensure that NSPI continues to be a stable and financially sound company. This is a reality which the Board must consider when determining what, if any, rate increase is warranted.
>
> [19] In short, rates charged to customers are based on costs incurred by the Utility in providing service. If the Board finds certain costs to be imprudent or unreasonable, it can (and has) disallowed such expenditures and reduced proposed rate increases accordingly. The Board cannot, however, make rate decisions based solely on reliability issues or current public opinion of the Utility. There are appropriate sanctions a regulator can impose should a Utility be found to have an inadequate or unreliable system. In many cases, it is likely such sanctions would involve higher expenditures, rather than reductions in costs.

> However, the practical reality in a regulated utility environment is that sanctions for service-related issues generally do not include a moratorium on rate increases.
>
> [2005 NSUARB 27]

3.7.5.1 Return on Equity

[514] A utility's return on equity must be consistent with the fair return standard. There is no single test for determining an appropriate return on equity. Both experts in this proceeding used a variety of models and averaged the results of these models to produce a specific recommendation for an appropriate rate of return. However, the Board understands that each expert informed their opinion from the range of results from these approaches.

[515] In his evidence, Dr. Cleary said:

> I have weighted all three of my [required return on equity] estimates equally because all three methods are used in practice and provide different perspectives on [required return on equity]. As discussed previously, CAPM is more heavily relied upon in practice due to its conceptual advantages. …
>
> CAPM is also more intuitive from the point of view of a utility cost of capital hearing. In particular, it has a direct relationship to financing costs (i.e., RF and MRP). The CAPM also makes a direct adjustment for the risk of utilities relative to the market, unlike DCF models, since it has a direct measure of risk (i.e., beta) included in the model. In addition, there are uncertainties associated with determining some of DCF input estimates for pure play regulated Canadian industries, as discussed earlier.
>
> I also give equal weighting to the BYPRP [Bond Yield Plus Risk Premium] approach which is much more widely used than DCF approaches due to its intuitive nature, and because it adjusts for market-determined borrowing rates and risk. In fact, the BYPRP approach is more widely used than CAPM by Canadian CFOs, as mentioned earlier. Thus, the BYPRP approach accounts for interactions between company debt costs and equity markets, and as such it is intuitively sound.
>
> [Exhibit N-32, pp. 74-75]

[516] Dr. Cleary gives equal weighting to the three approaches he used as his "best estimate" for allowed Canadian equity returns. At the hearing, he said that, properly implemented, all of these approaches "can provide useful guidance".

[517] In its evidence, Concentric noted:

> No financial model can exactly pinpoint the correct [return on equity]; rather, each test brings its own perspective and set of inputs that inform the estimate of the [return on equity].

> Consistent with the *Hope* standard, it is "the result reached, not the method employed, which is controlling." Although each model brings a different perspective and adds depth to the analysis, each model also has its own inherent weaknesses and should not be relied upon individually without corroboration from other approaches. Regardless of which analyses are used to estimate the investor-required [return on equity], analysts must apply informed judgment to assess the reasonableness of results and to determine the appropriate weighting to apply to results under prevailing capital market conditions.
>
> Other Canadian utility regulators, including the BCUC, the OEB, and the AUC, have acknowledged the need to use multiple methodologies in determining a fair return on equity. [Footnotes omitted]
>
> [Exhibit N-8, Appendix 10A, p. 33]

[518] In addition to the inherent weakness across analytical models, it is apparent from the evidence in this proceeding that an expert's selection of model inputs and their assumptions can also vary – in some cases, quite significantly. In some instances, the Board might have cause to question or give less weight to an input or assumption. In others, differences in approaches might be better described as points over which reasonable experts can disagree. The Board can use all this information to inform its conclusions about an appropriate return on equity.

[519] In the present case, the results of Dr. Cleary's models produced a range of equity returns from 6.8% to 7.9%, with an average recommended return on equity of 7.6%. Concentric's models, based on its Undertaking U-14, produced a range of results from 9.0% to 10.0%, with an average recommended return on equity of 9.4%. The Board finds that neither of the experts' recommended averages meet the fair return standard. For reasons set out below, Dr. Cleary's recommendation is too low and Concentric's is too high. An appropriate return on equity for ratemaking purposes lies somewhere between these estimates.

[520] Before considering the strengths and weaknesses of the models, inputs and assumptions used by each expert, the inclusion of U.S. data in the assessments must be considered. This was a fundamental point of difference in the overall approaches taken

by each expert in this proceeding and fundamentally affects the results produced in their models.

[521] While the Board accepts Concentric's view that the economies of Canada and the U.S are highly integrated, the Board does not agree that this makes it appropriate to treat Canadian and U.S. data as fully interchangeable in a cost of capital analysis for a Canadian regulated utility. There are political and regulatory differences between the two countries. Dr. Cleary indicates there are corporate structural and operational differences between Canadian and U.S. regulated utilities. He submits Canadian utilities operate under more supportive regulatory environments. As noted, in his recent testimony before the Board in the NSPML 2026 cost assessment matter, he expressed the view that institutional and fixed income investors in Canada (and elsewhere) show a home-country bias for investment.

[522] The Board also observes some differences in the data filed in this proceeding. While suggesting some correlation, Concentric's response to Undertaking U-14 identified lower overall average total returns in Canada on the S&P/TSX compared to the S&P 500 in the U.S. over 25, 10 and 5 years (with a wider gap in the past 10 years); somewhat lower average real GDP growth in Canada relative to the U.S. over the past 25, 10 and 5 years; slightly lower inflation in Canada averaged over the same periods; and slightly lower 10-year government bond yields. In terms of the return on equity results, Concentric's Canadian proxy group produced the lowest results in all its models and the Canadian companies within its North American proxy group produced lower return on equity results than the U.S. companies in all its models.

[523] On the other hand, the Board does not agree with Dr. Cleary that U.S. regulated utility data should be entirely excluded. The pool of regulated utilities in Canada is far more limited than in the U.S., and in respect of fully integrated investor-owned utilities like NS Power, quite so. Comparing NS Power to regulated utilities in Canada may, in many respects, be more apt than to regulated utilities in the U.S. However, one must also be cautious about comparing NS Power to other Canadian utilities that do not share the same degree of risk, particularly risk associated with generation assets and the circumstances the utilities face in decarbonizing and the energy transition. The Board views Concentric's selection of its North American proxy group to be an attempt to address some of these other risks.

[524] Overall, the Board finds that, while it must be mindful that Concentric's use of U.S. data is likely inflating results in the analysis, Dr. Cleary's omission of U.S. utilities is likely producing results that are lower because the utility data he uses is largely comprised of a number of Canadian utilities that do not share NS Power's higher electricity generation or energy transition risks. The Board must consider and weigh the results from both experts accordingly.

[525] The Board notes the Ontario Energy Board reached a similar conclusion in its recent generic cost of capital proceeding:

> Substantial differences remain between Canadian, and U.S.-based utilities principally associated with risk, regulatory oversight and the engagement of U.S. regulated utilities in non-regulated business operations. As well, holding company structures and business holdings, operating in the U.S. and not in Canada, decrease comparability of regulatory results. The OEB concludes that the "home bias" of the Canadian investor to invest in Canadian utilities is a factor in giving less weight to U.S. comparators. These differences cannot be ignored in the OEB's efforts to set parameters to meet the FRS.
>
> …
>
> The integration of U.S. and Canadian utility markets and the potential lure of higher returns for investors is a factor to be considered in arriving at a final conclusion concerning the requisite return on equity that must be provided to meet the FRS. However, the use of U.S.

> regulated utility data as equivalent to Canadian regulated utility data in any computation is questionable.
>
> [EB-2024-0063, pp. 36-37]

[526] The Alberta Utilities Commission had similar comments in its decision in its most recent generic cost of capital proceeding:

> 103. While the Commission finds that the U.S. companies have higher business risks than the Alberta utilities, for the purpose of establishing the comparator group, the Commission accepts the utilities' evidence that it is appropriate to include U.S. utility holding companies. The reasons for this are: (i) the relatively limited number of publicly traded Canadian utility companies; (ii) the prevalence of U.S. business operations among many publicly traded Canadian utilities; and (iii) investors' tendency to consider utility investment opportunities in both the U.S. and Canada. Further, the Commission remains of the view that it is reasonable to consider the U.S. market return data given the globalization of the world economy and integration of North American capital markets. Notwithstanding these findings, none of the Alberta utilities raises capital directly in the equity market, or operates outside of Alberta unlike a number of companies in the comparator group, which are holding companies and can operate anywhere.
>
> 104. After considering the evidence presented in this proceeding, the Commission acknowledges the utilities in the comparator group are not identical to the Alberta utilities, but concludes they are sufficiently comparable for use in various financial models. However, and as set out in in this section and Section 6.4.5, the Alberta utilities are at the low end of the range of risk present in the comparator group of utilities. Accordingly, the Commission retains the view expressed in the 2018 GCOC decision that a significant amount of judgment must be applied by the Commission when interpreting data from the representative utilities to establish the return on equity required by investors in the Alberta utilities. [Footnotes omitted]
>
> [Decision 27084-D02-2023, p. 22]

[527] In the paragraphs that follow, the Board outlines its assessment of the models, inputs and assumptions advanced by the experts in this proceeding, beginning with the CAPM.

[528] Notwithstanding the statistical analysis Dr. Cleary provided in Appendix A to his evidence, it has not been sufficiently demonstrated in this proceeding that there is a systematic upward bias of Consensus Economics' forecasts of government bond yields used by Concentric to determine its risk-free rates in its CAPM. It would be surprising if any forecast of this nature matched actual results. And while Dr. Cleary's data showed several times when forecasts exceeded actuals, there were more recent periods when the reverse was true. However, the use of 10-year bond yields adjusted by historical

spreads to derive a 30-year bond yield introduces the need for other assumptions and procedures in the analysis that cause the Board to have less confidence in Concentric's results.

[529] The Board is also not satisfied that Dr. Cleary's use of 30-year government bond yields on a single day is likely to provide any better results. Aside from any issue about whether it is more appropriate to use a historical trend or a forecast, a single data point poses a greater risk of introducing an anomalous event impacting the metric on that day into the analysis.

[530] Because these witnesses tend to give similar evidence in regulatory proceedings in other jurisdictions, the Alberta Utilities Commission had similar comments on these issues relating to the evidence provided by the witnesses in its recent cost of capital proceeding:

> 110. In keeping with the prospective or forward-looking nature of the determination of the cost of capital and prior Commission practice, it is appropriate to use a forecast of the 30-year Canada bond yield submitted on the record of this proceeding. The Commission finds that a direct forecast of the 30-year Canada bond yield from Canadian major banks is simpler and more transparent than the approach recommended by Dr. Villadsen and Concentric, which uses the Consensus Economics forecast 10-year GoC bond yield and adjusts it by adding the average spread between 10- and 30-year government bonds. The need for this adjustment arises from the fact that Consensus Economics, on which Dr. Villadsen and Concentric rely, does not publish a forecast for the 30-year Canada bond yield. Similar adjustments have been used by the OEB and EUB for their formulas because of reliance on Consensus Forecasts.
>
> 111. The 30-year Canada bond yield forecasts are published by large, reputable Canadian financial institutions such as "the Big Six" banks. In the Commission's view, these forecasts are of comparable quality to the forecasts published by Consensus Economics. In fact, the Consensus Economics forecast is an average of estimates from various sources, including Canadian major banks. However, using direct forecasts of the 30-year Canada bond yield eliminates the need to make additional estimates and adjustments to the 10-year forecast for which there is no single, standardized approach. In addition, these forecasts are publicly available without cost. For simplicity, the Commission considers that averaging the forecasts from three banks, RBC, TD and Scotiabank, is sufficient. Should a forecast from one or more of these banks be unavailable, there are three additional major banks from which a forecast may be obtained as a substitute.
>
> 112. In addition to relying on bond yield forecasts published by the three banks, the Commission accepts in principle the approach of D. Madsen and Dr. Cleary to use a naïve forecast, using the actual 30-year GoC bond yield to inform an estimate of the future 30-

> year GoC bond yield. The Commission has relied on this approach in past GCOC decisions to temper published forecasts because it accepted they tend to overestimate changes in interest rates. In this proceeding, representatives of customer groups made a similar point. However, the Commission considers it is better to use the average actual long-term GoC bond yields for an entire month rather than the yield that prevailed on any a single day in that month, as was done by Dr. Cleary and D. Madsen, to smooth out the daily volatility.
>
> 113. The Commission will use the bank forecasts published in February 2023 provided by D. D'Ascendis, as they were the most recent bank forecasts of long-term GoC bond yields provided on the record. For consistency, the Commission will use the average actual long-term GoC bond yield in February 2023 for the naïve forecast. [Footnotes omitted]
>
> [Decision 27084-D02-2023, p. 24]

[531] Thus, while the risk-free rate estimates advanced by Concentric and Dr. Cleary are close (at least for the Canadian rate used with Concentric's Canadian utilities in its North American proxy group which is 3.87% compared to Dr. Cleary's 3.66%), the Board finds they are both subject to inherent weaknesses.

[532] Aside from the use of U.S. data, Dr. Cleary's other major complaint about Concentric's estimate for its market risk premium was about its use of "income only returns" rather than total returns which he said was standard for finance professionals. The Board considers there is merit in this criticism. As a result, it is likely that Concentric's market risk premium is also higher than it should be because of this issue.

[533] However, Dr. Cleary's market risk premium is not without its own vulnerability. While the Board has no specific reason to question Dr. Cleary's professional judgement and experience that market risk premiums generally fall within a range of 4%-6%, the assessment is more subjective. This is especially true about what part of the range should be used in any given case.

[534] Once again, Dr. Cleary's estimate of 5.5% is somewhat comparable to Concentric's 5.75% for its market risk premium. But because Concentric uses a blended market risk premium, its much higher U.S. estimate causes the premium it uses in its formula to be about 100 basis points higher than Dr. Cleary's market risk premium.

[535] The experts disagreed on the use of adjusted betas. To different extents, both suggested there was statistical or historical information supporting their respective positions. Given the evidence in this proceeding, a choice between these two approaches would be somewhat arbitrary. However, in the context of a return on equity analysis where the general approach is to analyse the issue using a number of different methods to better inform an overall result, using both adjusted and unadjusted betas could provide evidence of a range of results that may be reasonable. This is the approach taken by the Alberta Utilities Commission:

> 130. As expressed in several past decisions, the Commission remains unpersuaded that adjusted betas are superior to raw betas in the context of regulated utilities. Rather, it finds that both raw and adjusted betas can provide useful information with respect to utility risk. Similarly, the Commission continues to find that reliance on both weekly and monthly estimates of beta is reasonable.
>
> …
>
> 132. The Commission concludes that utility stocks are appreciably less risky and volatile than equities in the broader market, and therefore considers a reasonable range of betas for regulated gas and electric utilities to be between 0.45 (representing Dr. Cleary's unadjusted long-term beta) and 0.75 (in the range of adjusted betas recommended by D. Madsen and D. D'Ascendis). The high end of Dr. Villadsen's beta estimates were well above this range. [Footnotes omitted]
>
> [Decision 27084-D02-2023, p. 29]

[536] While the only evidence about ranges in this proceeding was the 0.3 to 0.6 range suggested by Dr. Cleary, the Board notes that Concentric's average beta in its CAPM was just a bit higher than that range, but within the range suggested in the Alberta Utility Commission decision. And as with his market risk premium assessment, Dr. Cleary's approach to estimating the beta within a generally accepted range is subjective, compared to the approach taken by Concentric.

[537] Overall, the Board's findings relating to the use of the CAPM model only reinforce the general observation that the results produced in Concentric's model are too high, and the results produced in Dr. Cleary's model are too low.

[538] The selection of growth rates was the most significant area of controversy about the application of the DCF approach by the experts. Concentric relies on analysts' earnings growth forecasts, which, Dr. Cleary said, are typically regarded as overly optimistic. While Concentric disagrees with this, it says any optimism bias was mitigated by using earnings growth forecasts from several sources.

[539] Dr. Cleary also noted that the overall growth rate implied by taking into account all stages of Concentric's multi-stage DCF exceeds nominal GDP growth. Dr. Cleary suggested this is "an ambitious target for low-risk utilities". He suggested such a rate assumes these utilities will outperform the productivity of Canada and the U.S. in perpetuity. Dr. Cleary considered this to be an unrealistic assumption for a utility. The Board finds there is merit in this criticism.

[540] On the other hand, Dr. Cleary's "sustainable growth rate" of 1.64% seems unreasonably low for a growth rate under a model that is presumed to continue to infinity. Dr. Cleary notes in his evidence around the application of his market DCF estimate, that "we are trying to estimate a 'nominal' required rate of return, so we should use nominal GDP growth". If the sustainable growth rate he uses in his Canadian utility DCF estimate is also intended to be nominal to derive a nominal required rate of return, and Dr. Cleary's assumed inflation rate is 2%, it seems especially low for a long-term assumption.

[541] Both of these points are also featured in the Alberta Utilities Commission's recent cost of capital decision:

> 153. In the 2018 GCOC decision, with reference to Dr. Cleary's evidence, the Commission recognized that the utilities are essentially monopolies in mature markets and, because of this, the use of long-term growth in excess of the long-term growth of GDP is unreasonable. Indeed, D. Madsen quoted in his evidence from a publication by Dr. Damodaran, who opined that it is questionable whether any firm is able to sustain high growth in the long term as it will eventually stop growing either due to limitations on size or to the effects of competition.

> 154. On the other hand, the sustainable growth rate Dr. Cleary used to estimate expected dividend growth rates relied on historical seven-year average dividend yields and payout ratios and used accounting data, rather than readily available, market-driven forecasts. The Commission notes that this approach produces growth estimates that are less than actual historical rates of dividend growth and less than inflation, resulting in negative real growth. As a result, the Commission is concerned that Dr. Cleary's sustainable growth rate produces results that understate dividend growth. [Footnotes omitted]
>
> [Decision 27084-D02-2023, p. 34.]

[542] As with the Board's conclusion about the CAPM, the growth rates used by the experts in their DCF models reinforce the Board's general observation that the results produced in Concentric's model are too high, and the results produced in Dr. Cleary's model are too low.

[543] The regression analysis in Concentric's risk premium model uses long-term government bond yields and equity risk premiums. The equity risk premiums in the regression analysis are obtained from the difference between regulator allowed ROEs and 30-year government bond yields. The bond yields in the Canadian version of this model use the same approach as the calculation of the risk-free rate in its CAPM model and are therefore subject to the same weaknesses.

[544] The Board is concerned about the nature of this approach. Using authorized equity returns from other jurisdictions reflects regulatory decisions shaped by legislation, policies and economic conditions that may be unique to those jurisdictions. They are not directly derived from market-based data and are only indirectly derived to the extent that the regulator approving the return on equity considered and accounted for market data.

[545] In his evidence, Dr. Cleary submitted that authorized ROEs have not declined adequately in response to reductions in government and A-rated utility bond yields over the last two decades. Based on the evidence in this proceeding, it is not clearly demonstrated to the Board that this is correct; however, to the extent that there was any

"stickiness" in allowed ROEs, following the risk premium approach used by Concentric would likely contribute to that.

[546] Dr. Cleary's risk premium approach uses utility bond yields and adds a risk premium. As with elements of his other models, the risk premium exhibits a high degree of subjectivity through the selection of a point, generally in the range of 2 to 5%, based on the deemed riskiness of the company. The evidence about this in this proceeding lacked empirical rigour.

[547] The Alberta Utilities Commission also had concerns about these approaches and refused to rely on them in its recent cost of capital decision:

> 165. In addition to relying on CAPM and DCF models, some parties used the following risk premium models to help inform their fair return on equity estimates: (i) Concentric and Dr. Villadsen used the government bond yield risk premium model; (ii) Dr. Cleary and D. D'Ascendis relied on the utility bond risk yield premium model; and (iii) D. D'Ascendis used the predictive risk premium model. The Commission determines that it will not rely on any of these models for the purposes of the present decision.
>
> 166. The government bond risk premium approach estimates the return on equity as the sum of the ERP and the yield on the 30-year U.S. Treasury bond. The ERP was calculated as the difference between authorized returns from U.S. electric and gas utilities and the then-prevailing quarterly 30-year U.S. Treasury yield. Consistent with prior GCOC decisions, the Commission continues to be of the view that the approved ROEs from other jurisdictions are not, strictly speaking, wholly market-based data and therefore, will not place any weight on the results of the government bond risk premium model.
>
> 167. Under the utility bond risk premium approach, a required return on equity is calculated by adding an equity premium to a utility bond yield. In past GCOC decisions, the Commission accepted the bond yield and utility bond yield approaches to be valid tools in estimating the cost of equity, as they are simple to use and conform to the basic principle that investors require a higher return for assets with greater risk. Although the Commission still considers the empirical basis of the utility bond yield methodology to be valid, for the purposes of this decision the Commission will not rely on the utility bond yield risk premium approaches used by Dr. Cleary and D. D'Ascendis.
>
> 168. Dr. Cleary's recommended risk premium of 2.50 per cent is subjective, not supported by any analysis and does not take into the account the changing market environment.

[548] In this case, the Board finds that the risk premium models are of quite limited value, even relative to the other models with their weaknesses, and will weigh them accordingly.

[549] Having reviewed the return on equity models in detail, the Board finds that Concentric's recommendation is too high and Dr. Cleary's is too low. The evidence in this matter does not support adopting either, but it does firmly support setting a return on equity within that range. However, evidence supporting the selection of a specific point between these two recommendations is less firm.

[550] The parties to the settlement agreement agreed to maintain NS Power's current return on equity of 9% for ratemaking purposes, with an earnings band of 8.75% to 9.25%. Under this proposal, the Board notes that any earnings above 9.25% would be returned to customers under s. 64C of the *Public Utilities Act*. However, NS Power is not entitled to any additional recovery in the event earnings are below 8.75%.

[551] The Board finds it is appropriate to accept this proposal under the settlement agreement for several reasons. As discussed, the evidence does not support adopting the recommended rates of either Concentric or Dr. Cleary, and the proposal under the settlement agreement falls within these rates which the Board considers too high and too low. In other aspects of this decision, where the Board has found that the evidence supported a departure from the settlement agreement, and the Board has determined it is in the public interest to do so, it has departed from what was proposed. But as noted, the evidence does not otherwise point to a better placement for the return on equity within the high and low points set by the expert evidence.

[552] The parties to the settlement agreement are sophisticated parties who represent the interests of all NS Power's rate classes. These parties participated in a pre-application review of NS Power's proposed rate increases that involved focussed discussions with NS Power to resolve matters of disagreement arising from NS Power's

proposed application. These parties are typically the most active in Board proceedings involving NS Power and frequently present the Board with expert evidence and submissions on matters of concern. Given this, the Board has some comfort that the public interest has been addressed.

[553] Notwithstanding his views, Dr. Cleary recognized the settlement agreement was a factor for the Board to consider in setting NS Power's return on equity:

> The settlement agreement that was reached by NS Power and customer representatives recommends [*sic*] a continuation of NS Power's currently allowed return on equity of 9% and 40% equity ratio. While remaining confident in my market-based return on equity and equity ratio recommendations, I acknowledge that reaching a settlement agreement does involve trade-offs that the Board must take into consideration.
>
> [Exhibit N-32, p. 6]

[554] While, as noted above, the Board finds it inappropriate to calculate a required return on equity using authorized equity returns, the Board finds it acceptable to reference returns awarded elsewhere in Canada in the context of assessing the overall reasonableness of the settlement agreement. Considering Figure 30 from Concentric's evidence (reproduced earlier in this decision), it is apparent that maintaining NS Power's return on equity would not make it an outlier in Canada, with most of the other Canadian electric utilities falling within a narrow range. The only utility with an appreciably lower return on equity was Newfoundland Power (8.6%), a Crown corporation with a higher equity ratio at 45%.

[555] In the hearing for NSP Maritime Link's 2026 annual assessment (Matter M12394), Dr. Cleary was asked to respond to a statement made by Concentric that a 7.6% return on equity would be the lowest authorized return on equity of an investor-owned regulated utility in North America. Dr. Cleary responded, "[t]o the best of my knowledge, 7.6% would be the lowest recommended return on equity in Canada".

[556] Setting a rate of return that low could have far reaching consequences. This was the subject of comment by the Ontario Energy Board, where Dr. Cleary recently recommended an even lower return on equity of 7.05% for utilities in that province:

> There is evidentiary support for a significant reduction to the current return on equity advanced by Dr. Cleary. Both Dr. Cleary and LEI are instructive in providing reassurance that the regulator has discharged its responsibility to the utilities it regulates in meeting the FRS for their continued operation. The remaining question is whether the current return on equity results in rates that are greater than required to meet that standard thereby generating economic rent from utility customers.
>
> Dr. Cleary's evidence endeavors to show a result that could meet that question in the affirmative. The effort produces a result that differs markedly from the other expert evidence by recommending a considerably lower estimate, with much of that difference attributable to his reluctance to accept the comparability of Canadian utilities with U.S. counterparts. His model thus engages a smaller number of comparators. As noted earlier, the OEB also has concerns about the ability to find true comparators from the U.S., which limits the number of comparators that might be definitively used.
>
> However, a significant recommended change from the results of the current formula that has been meeting the FRS for utilities must be done with caution. The submissions of the EDA and the OEA set out potential concerns regarding an return on equity reduction such as recommended in Dr. Cleary's proposal. The OEA pointed to the risk of negative credit rating impacts, which could increase the cost of debt financing for Ontario utilities and impose additional costs on ratepayers. The OEA also emphasized that setting an return on equity at an insufficient level would constrain the growth prospects of Ontario utilities by reducing projected earnings per share growth, potentially forcing utilities to offer higher dividend payouts to attract equity investment. These outcomes would create financial pressures inconsistent with the requirement that utilities earn a fair return. Dr. Cleary himself acknowledged that a steep drop in return on equity could create instability for regulated utilities from a credit rating standpoint. [Footnotes omitted]
>
> [OEB EB-2024-0063, pp. 38-39.]

[557] As noted, NS Power's current credit rating from S&P already places it in the bottom 10% of utilities in North America. The evidence in this proceeding, especially the evidence presented by Morrison Park that was discussed elsewhere in this decision, already raises concern about NS Power's ability to maintain even its current low rating. A failure to do so could cause its cost of debt (which comprises 60% of NS Power's capital structure) to increase and result in other financial consequences to the detriment of NS Power's customers. Morrison Park said, should NS Power's rate requests be rejected and its securitization plan not bear fruit, then it would be a certainty that the 10% FFO:Debt

target would be missed in both 2026 and 2027 and put NS Power at risk of further credit rating downgrades. Setting a return on equity at 7.6% would materially reduce NS Power's funds from operations and make its 10% FFO:Debt target more difficult to achieve.

[558] The Board finds it would not be in the public interest to approve a return on equity that does not meet the fair return standard and deviates materially from the range of equity returns authorized for similar utilities across Canada. This reluctance is heightened by the array of investment disincentives identified in the evidence of Morrison Park, which collectively underscore the importance of maintaining NS Power's ability to attract capital and preventing any further deterioration of the utility's credit rating that would likely result in increased costs for customers.

[559] To ensure NS Power can undertake required significant capital investments, the Board acknowledges that investors will assess the relative attractiveness of investing in NS Power compared with other Canadian utilities. The Board finds that maintaining a return on equity of 9.0% for rate-setting purposes, with an earnings band of 8.75% to 9.25%, is in the long-term interests of customers.

3.7.5.2 Capital Structure

[560] NS Power proposed to maintain its capital structure of 40% equity and 60% debt. This request was supported by its expert witness Concentric (which considered 45% would be appropriate), Board Counsel consultant, Dr. Cleary, and the signatories to the settlement agreement. No party opposed NS Power's request. The Board finds it is appropriate to accept the proposal in the settlement agreement to maintain NS Power's capital structure.

3.8 Cost of Service Study

[561] Under the *PUA*, a utility is afforded the opportunity to recover its "reasonable and prudent" costs of providing service and a "just and reasonable" return on its rate base. The total amount of these costs and the return on rate base is generally referred to as the utility's "revenue requirement".

[562] Once the revenue requirement is determined, customer rates are set to produce revenue equal to this amount. Under s. 67(1) of the *PUA*, rates charged to customers "under substantially similar circumstances and conditions in respect of service of the same description" must be charged equally to all customers.

[563] Grouping customers into classes that receive service under substantially similar circumstances and conditions requires judgement. Many factors influence this determination. In L.R. Nash, *Public Utility Rate Structures* (New York and London: McGraw-Hill Book Company Inc., 1933), p. 273, the author states:

> Discrimination is commonly understood to mean a difference in rates or service conditions relating thereto for service of substantially the same characteristics, taking into account volume, load factor, load density, time of use, character of use, and any other significant factors. Because of the many factors involved in discrimination, its precise definition is necessarily left to the judgement of the regulatory commissions in each case.

[564] In *Dalhousie Legal Aid Service v Nova Scotia Power Inc.,* 2006 NSCA 74, the Court of Appeal noted that differences in rates charged to customers may only be justified based on how they receive service from the utility. Other differences, such as a customer's ability to pay, cannot be used to establish rates in Nova Scotia (based on the legislation as it is currently written):

> [23] DLA's factum said that low income customers do not have "substantially similar circumstances" to higher income customers. So, different rates would not be barred by s. 67(1). At the appeal hearing DLA's counsel retreated somewhat from this submission.
>
> [24] With respect, the factum's submission misinterprets s. 67(1). The provision refers to "substantially similar circumstances and conditions ***in respect of service of the same description***." To justify a rate difference, the relevant dissimilarity is not in customers'

> incomes. It is in the service from NSP. The Board accepted, and there is no basis to question, that NSP provides substantially similar electrical service whatever the domestic customer's income.
>
> [25] Section 67(1) is mandatory. The rates and charges "shall always . . . be charged equally" to persons of similar circumstances and conditions in respect of service. The statute does not endow the Board with discretion to consider the social justice of reduced rates for low income customers. It is not for the Board or this court to read into s. 67(1) the words:
>
> > . . . similar circumstances and conditions in respect of ***the income level of customers and*** service of the same description,
>
> It is for the Legislature to decide whether to expand the Board's purview with the italicized words. [Emphasis in original]

[565] The same rationale applies to the request for the creation of a Mi'kmaq Rate Class, as set out in the Letter of Comment sent to the Board on behalf of the Kwilmu'kw Maw-klusuaqn Negotiation Office (KMKNO) and the Assembly of Nova Scotia Mi'kmaw Chiefs [Exhibit N-1, pp. 24-26]. The socio-economic, housing, geographic, and demographic factors discussed in the Letter of Comment do not relate to differences in the way electricity is provided to Mi'kmaq households, businesses and community buildings, which is similar to how it is provided to households, businesses and community buildings outside of Mi'kmaq communities. Rather, those differences relate to the unique circumstances and conditions of the Mi'kmaq communities themselves. The statute does not allow the Board to set a separate rate based on customer-related differences, only service-related differences.

[566] Although rates must be charged equally to customers "under substantially similar circumstances and conditions in respect of service of the same description", responsibility for the revenue requirement is not divided equally among NS Power's customer classes. This is because different classes of customers do not use the electrical system in the same way. They take service under different circumstances and conditions and impose different costs on the system. For example, to serve domestic customers, the

utility must have an extensive distribution system. Large industrial customers may not require this infrastructure and, therefore, the cost to serve these two classes of customers may be quite different.

[567] The utility's revenue requirement must be fairly divided among its customer classes based on how each class contributes to system costs. A fair allocation of costs ensures that all customer classes pay for the costs of the service they receive and their rates do not subsidize the rates of other customer classes. This allocation of costs is performed using a cost-of-service study, which is prepared by the utility and identifies the costs attributable to each customer class.

[568] Despite involving a considerable amount of system and customer data, the distribution of costs under a cost-of-service study is not an exact science. As NS Power's consultant, Andrew Blair, Elenchus Research Associates Inc., noted in response to questions at the hearing, a cost-of-service study involves a lot of judgement and, in some respects, may be considered more of an art than a science:

> **Q.** And, Mr. Blair, do you agree that the cost of service allocation it's not a pure science?
>
> **A.** (Blair) That's right. It's often said it's more of an art than a science.
>
> **Q.** Yeah, there's a lot of subjectivity, generalization, averaging, simplification that's involved in the processes?
>
> **A.** (Blair) Yes, there's a lot of judgment that goes into what the methodology should be and then it sort of turns into a science from there. But, yeah, at the first stage there's a lot of judgment.
>
> **Q.** And would you agree that as a result many regulators often recognize sort of a range of reasonableness as the outcome of cost allocations, so in this particular jurisdiction so the 95 percent to 105 as opposed to trying to precisely target 100 percent allocation under a particular method to each rate class?
>
> **A.** (Blair) Yes. I believe a range of reasonableness is used in every jurisdiction in Canada for electricity.
>
> **Q.** And in this particular model the end result is showing for the residential class a 97.18 percent under a revenue-to-cost ratio. That's -- I'm interpreting the table correctly?

A. (Blair) That's correct.

Q. Yeah. And so consistent with what you just said, we wouldn't necessarily think of that as being subsidized by other rate classes. It's within that range of reasonableness and, you know, within the range of that's appropriate costs that are allocated to that particular class?

A. (Blair) Yes, that's right.

[Transcript, January 7, 2026, pp. 163-164]

[569] In NS Power's case, costs are directly allocated to a specific rate class when this is possible because they are clearly and directly connected to that class. An example of this is the capital and maintenance related costs of streetlight fixtures, which are assigned directly to streetlight classes based on information acquired from NS Power's financial books and records or through additional analysis or studies. Shared costs that are not directly assigned are analyzed in the cost-of-service study.

[570] The first step in the process is to identify costs based on the high-level function they serve in providing overall service to customers. In NS Power's case, costs are functionalized into groups based on whether they relate to production, transmission, distribution or retail functions.

[571] After this step, the functionalized costs are classified based on their relationship with different services. Generally speaking, demand costs relate to the utility's capacity to provide service to customers, energy costs relate to the energy provided to customers, and customer costs are costs that are driven by the number of customers served.

[572] Next, various factors are developed to allocate the classified costs to NS Power's customer classes. These allocation factors may consider certain characteristics of the customer class such as the number of customers, the demand that the customer class imposes on the system, and the amount of energy used to serve the customer class.

[573] It has been more than 10 years since NS Power's cost-of-service methodology has been comprehensively reviewed in a proceeding before the regulator. The last proceeding focused on cost-of-service methodologies that was before the NSUARB occurred in 2014 (2014 NSUARB 53).

[574] Since then, there have been concerns that changes in the electricity sector warranted a review and potential updating of NS Power's cost-of-service methodologies. These changes include increasingly stringent requirements to decarbonize, the development of the Maritime Link and access to market energy, increased regional wind and solar penetration, grid scale battery storage, increased reliance on purchased power agreements and increased investment intended to support electrification and distributed energy resources. As a result, in NS Power's last general rate application, the utility and several intervenors agreed that a cost-of-service study would be completed through an engagement process before NS Power's next general rate application (or by December 31, 2025, whichever was sooner).

[575] In its decision, the NSUARB agreed that NS Power's cost-of-service study should be updated to reflect developments impacting NS Power's system since the last review of its cost-of-service study in 2013/2014. The NSUARB directed that all cost allocation methodologies should be reviewed for their continued relevance and application.

[576] In the present application, NS Power provided information about the engagement process it followed in developing the cost-of-service proposals it has put forward for approval. NS Power's summary of this process in its application stated:

> Throughout 2024, technical conferences were held to provide in-depth educational sessions on the current COS treatment at NS Power and identify the primary issues to be resolved as part of the formal regulatory process, areas requiring additional examination,

> and areas of consensus and disagreement among parties. The goal of these sessions was for the Company to determine its view of the appropriate path forward, ideally with the development of a consensus agreement. This process culminated in two full-day Resolution Sessions. These sessions were held in person with stakeholders and expert consultants present, and NS Power retained Bruce Outhouse (KC) to mediate these sessions.
>
> The process proved to be beneficial and has served to streamline COS discussions in the context of the GRA. NS Power received positive feedback from stakeholders concerning the opportunity for productive discussion and the breadth of information provided in this process. An extensive exchange of information took place through presentations, modelling, and data request (DR) cycles across the year. 67 models and iterations of models were prepared and are attached to this COSS as **Appendix 12A(1)**. In addition to that, stakeholders asked 152 DRs, these DRs and NS Power's responses to those DRs are appended to this COSS as **Appendix 12A(2)**. Other information provided included presentations and slide decks provided by NS Power and its consultants, appended as **Appendix 12A(3)**, jurisdictional scans, appended as **Appendix 12A(4)**, and memorandums, appended as **Appendix 12A(5)**. [Emphasis in original]
>
> [Exhibit N-9, p. 7]

[577] Exhibit N-9 also included information about the cost-of-service models run throughout the consultation process, responses to information requests, presentations, jurisdictional scans, memos and a formal report from NS Power's cost-of-service study consultant, Elenchus.

[578] NS Power's proposed methodologies are listed in Table 2 in Elenchus' report:

Table 2 – Summary of NS Power Proposed Methodology

	Status Quo	Change
Generation	• Allocation except for treatment of purchased power	• No initial classification to energy for environmental and fuel conversion reasons • Use system load factor[5] for classification of all generation, including purchased power • Refunctionalize radial-to-generation from Transmission • Create new storage sub-function • Allocate non-fuel, energy related costs of all purchased power monthly
Transmission	• Bulk Power substations refunctionalized to distribution • Allocation	• Refunctionalize radial-to-generation to Generation • Classify all Transmission as 100% Demand • Create new storage sub-function • No distinction between EHV and HV
Distribution	• Sub-functions • Classification • Allocation	• Create new storage sub-function
Other	• Retail classification & allocation	• General Plant review • Cost allocation applicable to PHP above-the-line[6]
		• DSM rate rider – all DSM costs assigned directly. No system benefit allocation. • DDA methodology • New line losses

[Exhibit N-9, PDF, pp. 1675-1676]

[579] The proposed changes to NS Power's cost-of-service methodologies are described in more detail in Exhibit N-9, Appendix 12A, Part 5.0 and Appendix 12B. The following is a summary of these changes:

> Classification of Generation Costs by System Load Factor
> NS Power's current approach to the classification of generation-related fixed costs such as depreciation and financing costs is to first classify environmental and fuel conversion-related capital costs to energy. A

secondary step classifies peaking assets 100% to demand, wind assets using effective load carrying capability, and categorizes the remaining generation assets using the system load factor. NS Power proposes to end the initial classification of environmental and fuel conversion-related capital costs and to classify all generation assets using the system load factor.

Fuel Adjustment Mechanism Related Cost Sub-Functionalization

Fuel adjustment mechanism related purchases that provide firm capacity will be classified between energy and demand based on the system load factor, while purchases that provide no capacity, such as non-firm imports, will be classified 100% to energy. This will align purchased power agreements providing firm capacity with the treatment of generation assets and recognizes that non-firm purchased power agreements provide energy only.

Classification of Transmission Costs 100% to Demand

NS Power currently uses the system load factor to classify transmission rate base and costs to energy and demand. To reflect anticipated need for increased investment in the transmission system, reduced dependence on coal fired generation in Cape Breton, increased wind generation and a shift away from radial to network system design, NS Power proposes to classify transmissions costs 100% to demand.

Transmission Links to Other Systems

NS Power proposes that transmission links to other systems, such as interties with the grids of other provinces, should generally be functionalized 100% to transmission and therefore classified 100% to demand. NS Power notes this does not have an immediate impact because this category of asset does not currently exist in its rate base.

Removal of the Distinction between Extra High Voltage and High Voltage

NS Power proposes to remove its current distinction between extra high voltage and high voltage and apply a single sub-function for these items. NS Power said there is no real separation between the two systems and this approach would be simpler.

Treatment of Battery Storage

Battery storage is presently functionalized to transmission, but NS Power proposes that battery storage should be considered on a case-by-case basis to determine if the asset is primarily supporting a generation, transmission or distribution function. NS Power noted that the grid scale batteries currently being developed will primarily serve generation, so they are proposed to be functionalized to generation and to be classified based on the system load factor.

Changes to Open Access Transmission Tarriff to Align Bundled and Unbundled Service

NS Power said methodological differences in how rates are set for transmission service in the unbundled market under the Open Access Transmission Tariff (OATT) and the bundled market under its cost-of-service study result in customers paying different amounts for the same transmission service. To align the cost of transmission service between the bundled and unbundled services more closely, NS Power proposes that:

- Transmission revenue requirement applicable under the OATT be set the same as under the cost-of-service study methodology.
- Cost-of-service transmission costs be classified 100% to demand.
- Transmission usage in OATT rate calculations reflect forecasted test year usage.

Radial to Generation

NS Power proposes that radial-to-generation assets, as defined under the OATT, be re-functionalized from transmission to generation in the cost-of-service study for consistent treatment of these assets under the transmission pricing methodologies in the bundled and unbundled markets and to better align with other North American utilities and the Federal Energy Regulatory Commission's pro forma OATT design that provided the foundation for NS Power's OATT.

Demand Side Management Rider

Demand side management costs are currently allocated as 75% to the cost of programs undertaken for the rate class and 25% to the system benefit of the programs. NS Power is proposing to remove the allocation to system benefit, so that 100% of the program costs will be allocated to the benefiting class.

Treatment of Port Hawkesbury Paper as an Above-the-Line Customer

Port Hawkesbury Paper is currently served under a below-the-line rate with a term ending on December 31, 2026 (2025 NSEB 16). In the cost-of-service studies for 2026 and 2027, PHP has been modeled as taking service under an above-the-line rate with the following load characteristics:

- Firm load of 8 MW at the three coincident peaks (3CP) in December, January, and February;
- Total load (firm plus interruptible) of 65 MW at the 3CP; and
- Energy set using PHP forecast net of projected supply from the PHP Goose Harbour Lake Wind Farm.

General Plant
General plant primarily consists of NS Power's investment in facilities, such as buildings structures and grounds, communication equipment, vehicles and information technology infrastructure. Currently, costs are apportioned to generation, transmission and distribution, based on the relative net book value of these three service areas. NS Power proposes that general plant in projects above $1 million be allocated to any clear and identifiable function. For example, vehicle costs are attributable to transmission and distribution far more than generation, so the utility proposes that these costs be allocated between transmission and distribution. The portion of costs to be allocated between each function would be determined by using allocators such as operating costs and rate base.

Decarbonization Deferral Account
NS Power considers its approved decarbonization deferral account to be a rate stabilization tool and proposes that it be classified and allocated in the same manner as other rate stabilization tools.

[580] Relative to NS Power's existing cost-of-service methodologies, the proposed changes negatively impact residential customers. While the costs allocated to almost every other rate class are lower under the proposed methodology, they are approximately $26 million higher for the domestic class in 2026 and $25.3 million in 2027 (NSEB IR-127 [Exhibit N-27, pp. 537-538]).

[581] The parties to the settlement agreement included the following terms relating to cost-of-service methodology used to determine rates for 2026 and 2027:

Cost of Service ("COS")	a) The COS as set out in the Draft GRA will be included in the 2026-2027 GRA and put forward for approval, subject to the following: (a) use of the Minimum System methodology after the 2026-2027 test period will be subject to a future proceeding and determination by the Board, for which an application will be made in 2026 and in which parties are free to take any position they so choose; (b) NS Power will collect and disclose the data outlining the extent to which PHP uses, relies upon and/or benefits from the High Voltage transmission system and in any proceeding to determine rates for PHP after the 2026-2027 test period, Parties may make submissions regarding the extent to which PHP is to be responsible for any costs of the High Voltage transmission system; and (c) the appropriate apportionment of assessment costs from the Maritime Link as between generation and transmission will remain open to be addressed as Parties see fit in any proceeding to determine rates after the 2026-2027 test period.

[Exhibit N-27, NSEB IR-001, Attachment 1, p. 10]

[582] Carolyn Palmer, Synapse Energy Economics, was engaged by Board counsel to review NS Power's cost-of-service study. In her evidence, Ms. Palmer expressed concern about the way that portions of NS Power's distribution system were classified as customer related. She also had concerns about other proposed changes to NS Power's proposed cost-of-service methodologies, but she did not provide specific evidence about those concerns because of the settlement agreement. Indeed, despite her recommendations, Ms. Palmer did not specifically oppose the settlement agreement but said these issues should be reviewed:

> **Q. Considering the consensus agreement in this GRA, what do you recommend regarding the Company's COSS methods?**
>
> **A.** While I do not support several of the Company's COSS methodologies, particularly the use of the minimum system method for classifying distribution system costs, I recognize that the parties have overcome their own concerns with the proposed methodologies to reach a settlement in this case and I therefore do not oppose their settlement agreement in this GRA. However, I believe that the COSS proposals contained within the settlement should be treated as case-specific and non-precedential in future cases. Therefore, I recommend that the Board find that certain COSS methodologies put forward in this case must be revisited in the next GRA. …
>
> [Exhibit N-37, pp. 17-18]

[583] In its closing submissions, Renewall Energy Inc. expressed concern about what it considered to be inconsistencies between NS Power's cost-of-service methodologies and the methods used to determine Open Access Transmission Tariff (OATT) charges.

3.8.1 Findings

[584] For the purposes of setting rates in this proceeding, the Board accepts the proposed cost-of-service changes and the cost-of-service studies presented in this proceeding, except NS Power is directed to implement a load carrying capability adjustment to account for the demand component served by the minimum system used to classify distribution system costs. This issue is discussed in more detail below.

[585] The Board also directs NS Power to address the additional cost-of-service concerns raised by Ms. Palmer in its application to the Board later this year, in addition to the minimum system versus basic customer method debated for allocating distribution system costs. NS Power is also directed to further address the issues raised by Renewall if the utility brings forward any application relating to the OATT tariff or charges before responsibility for the transmission tariff is transferred to the Nova Scotia Independent Energy System Operator. These issues are also further discussed below.

3.8.2 Minimum System v. Basic Customer Methods

[586] NS Power's cost-of-service study classifies portions of its distribution system as customer-related using the minimum system method. Under this approach, a minimum system study estimates what the cost of a distribution system would be if all poles, fixtures and wires were sized to minimum specifications. The costs of this hypothetical system are deemed to be customer-related costs. The remaining costs of the distribution system are considered to be demand-related.

[587] NS Power submitted that minimum system or zero-intercept studies are generally used for classifying distribution system costs in Canada. Two jurisdictional scans were included in the evidence before the Board in this proceeding. The first was in evidence filed by Concentric Energy Advisors on behalf of NS Power in its last general rate application, and was included in the engagement process materials for the cost-of-service study filed in this matter. The results from that assessment are reproduced below:

Figure 1: Canada Results Summary

Utility	MSS Used?	Poles, Towers and Fixtures	Conductors	Line Transformers
Nova Scotia Power (Current)		PRI: 27% Customer, 73% Demand; SEC: 50% Customer, 50% Demand	PRI Overhead/Underground: 27% Customer, 73% Demand; SEC Overhead/Underground: 50% Customer, 50% Demand	100% Demand
Nova Scotia Power (Proposed)	Yes	PRI: 76% Customer, 24% Demand; SEC: 70% Customer, 30% Demand	PRI Overhead: 38% Customer, 62% Demand; SEC Overhead: 83% Customer, 17% Demand; PRI Underground: 17% Customer, 83% Demand; SEC Underground: 82% Customer, 18% Demand	100% Demand
ATCO Electric	Yes	55% Customer, 45% Demand	Overhead: 70% Customer, 30% Demand; Underground: 70% Customer, 30% Demand	55% Customer (Non-Rural); 60% Customer (Rural); (50% Rural Allocated)
BC Hydro	No	50% Customer, 50% Demand	50% Customer, 50% Demand	50% Customer, 50% Demand
Fortis BC Energy	Yes	81% Customer, 19% Demand	65% Customer, 35% Demand	69% Customer, 31% Demand
Maritime Electric	No	50% Site (Customer), 50% Demand	50% Site, 50% Demand	40% Site; 60% Demand
New Brunswick Power	No	50% Customer, 50% Demand	50% Customer, 50% Demand	25% Customer, 75% Demand
Newfoundland Power	Yes	37% Customer, 63% Demand,	37% Customer, 63% Demand	28% Customer, 72% Demand
Ontario	No	60% Customer if Density is < 30 customers per kM of lines, 40% Customer if Density between 30 and 60 customers per kM of lines, 35% Customer if Density between > 60 customers per kM of lines, or 30% Customer if Density is between > 60 customers per kM of lines		
SaskPower	Yes	70% Customer, 30% Demand	70% Customer, 30% Demand	35% Customer, 65% Demand

[Exhibit N-9, PDF pp. 62-63]

[588] The other was prepared by Elenchus and is also found in the engagement process cost-of service materials filed in this matter:

Utility	Transformers	Primary	Secondary
BC Hydro	Judgement (50%/50%)	Judgement (100% Demand)	Judgement (50%/50%)
SaskPower	Minimum System		
Manitoba Hydro	PUB Order (100% Demand)		
Ontario Distributors	Judgement (with consideration of Minimum System analysis)		
Hydro Quebec	Minimum System		
NB Power	Judgement (with consideration of Minimum System and Zero-Intercept analyses)		
NS Power	100% Demand	Minimum System	
Maritime Electric	Judgement (60% Demand)	Judgement (50%/50%)	
NL Power	Zero-Intercept	Minimum System	

[Exhibit N-9, PDF p. 1471]

[589] Ms. Palmer agreed that NS Power's use of the minimum system method is not unique and that it is used in other jurisdictions throughout Canada. However, she did not believe this means it is a reasonable method to use for classifying distribution infrastructure.

[590] Ms. Palmer said the minimum system method does not align with NS Power's definition and treatment of customer costs because these costs do not vary directly with the number of customers. She said:

> For example, if the Company adds a new residential customer with a negligible level of demand in a populated area, the additional distribution costs to serve that customer—aside from dedicated customer infrastructure—would generally also be negligible, because no significant demand is being added by the new customer. If, however, the new customer were to add a substantial amount of additional demand, then distribution system upgrades would be required, increasing costs. Thus, these costs are primarily driven by demand, rather than by the number of customers. It is only when the distribution system must be expanded to a new geographic area that an incremental customer impacts distribution system costs independently from the customer's level of demand.
>
> This example demonstrates that the presence of a residential customer does not necessarily impose additional distribution costs (apart from costs related to that customer's demand) unless the system must be expanded to a new geographic area. Indeed, NS Power states that the customer-related portion of feeder investment "is driven by the need to bring electric service to geographically dispersed customer locations." Thus, there is little justification for classifying costs in these accounts as customer-related.
>
> [Exhibit N-37, pp. 6-7]

[591] Ms. Palmer said the number of poles and the amount of wire required to serve customers is more likely to vary based on the distance of development from other infrastructure and that geography is not necessarily well-correlated with the number of

customers. She said the minimum system method does not include a measure to account for geographic dispersion.

[592] Ms. Palmer recommended classifying distribution costs using the basic customer method, as described in the Regulatory Assistance Project's manual *Electric Cost Allocation for a New Era*. She said this method was used across North America. Following this method, only costs associated with services, meters, meter reading and billing are generally classified as customer-related.

[593] Ms. Palmer considered that the use of the minimum system method overstates the costs classified as customer-related. She also noted that because the residential class has more customers than other classes, customer-related costs are far more heavily allocated to residential customers.

[594] In response to NSEB IR-128, NS Power calculated the impact on costs allocated to customer classes using the basic customer method. The result of this analysis showed that using the basic customer method shifted about $30 million in costs away from the residential class to other rate classes, with most of that difference moving to the general service class. In response to Undertaking U-5, NS Power provided calculations showing the impact on proposed rate changes in this proceeding if the basic customer method was used instead of the minimum system method (along with certain other corrections), as set out below:

	Proposed COSS Methodology		Modified COSS Methodology as per U-5		Variance	
	Smoothed		Smoothed		Smoothed	
Customer Class	2026	2027	2026	2027	2026	2027
Domestic	3.8	4.1	2.2	2.8	(1.6)	(1.3)
Small General	3.6	3.9	1.7	2.4	(1.9)	(1.4)
General	(0.2)	0.6	3.1	3.5	3.3	2.9
Large General	(4.5)	(3.1)	(2.2)	(1.3)	2.3	1.8
Large General	(0.5)	0.3	3.0	3.3	3.5	3.0
Medium Industrial	(6.5)	(4.8)	(3.1)	(2.2)	3.4	2.5
Large Industrial	(7.0)	(4.7)	(6.0)	(3.8)	0.9	0.9
Municipal	1.7	3.1	3.0	3.9	1.3	0.8
Unmetered Classes	7.9	7.2	2.9	3.1	(5.0)	(4.1)
Total	1.7	2.4	1.7	2.4	(0.0)	(0.0)

[Exhibit N-76, p. 1]

[595] As can be seen from the table above, the change to the basic customer method would reduce the proposed increases for the domestic, small general and unmetered rate classes, but increase the rate changes for the rest of NS Power's above-the-line rate classes. However, the large general, medium industrial and large industrial classes still see overall rate reductions in both test years. The Board understands the second reference to "Large General" in the exhibit is an error and should be "Small Industrial".

[596] Mr. Blair suggested that the number of recognised methods for allocating distribution system costs was limited:

> **Q.** Is there a — I know it was referenced in Elenchus's evidence, as well as perhaps Ms. Palmer's evidence, there is reference to I think the Zero Intercept method. Is that kind of a hybrid sort of methodology that would sort of fall between the Minimum System method and the Basic Customer method?
>
> **A.** (Blair) It's really more like the Minimum System method, but instead of it being a Minimum System that has some delivery capacity it's a hypothetical system that reaches every customers but doesn't have any delivery capability at all.
>
> **Q.** Okay. And are those really the three basic methods that are primarily used in cost-of-service studies?

> **A.** (Blair) Yes, that's right. And there's often multiple ones considered and then some kind of judgmental percentage applied to them is necessarily the results of each one.
>
> [Transcript, January 7, 2026, p. 155]

[597] In response to questions from the Board at the hearing, Mr. Blair also agreed that the basic customer method would classify the smallest amount of distribution system costs as customer-related and the minimum system method would classify the highest amount.

[598] Both Mr. Blair and Ms. Palmer agreed that the classification of distribution system costs is one of the most controversial aspects of determining cost-of-service. This is likely because these costs cannot be neatly identified as being driven primarily by an increase in customers or in demand.

[599] Although Mr. Blair considered the geographic size of the distribution system to be more closely aligned with an increase in customers than Ms. Palmer, he acknowledged that this is an area where costs are "not exactly caused by one of the three usual allocators of customer, energy and demand". Similarly, in response to questions from NS Power at the hearing, Ms. Palmer agreed that costs relating to the geographic dispersion of the system were not well correlated with an allocation based on either the number of customers or demand.

[600] Professor Bonbright noted this problem in *Principles of Public Utility Rates*:

> The really controversial aspect of customer cost imputation arises because of the cost analyst's frequent practice of including, not just those costs that can be definitely earmarked as incurred for the benefit of specific customers, but also a substantial fraction of the annual maintenance and capital costs of the secondary (low-voltage) distribution system – a fraction equal to the estimated annual costs of a hypothetical system of minimum capacity. This minimum capacity is sometimes determined by the smallest sizes of conductors deemed adequate to maintain voltage while keeping them from falling of their own weight. In any case, the annual costs of this phantom, minimum-sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs to be mentioned in the following section. Their inclusion among the customer costs is defended on the ground that, since they vary directly with the area of the distribution system (or else

> with the links of the distribution lines, depending on the type of distribution system), they therefore vary directly with the number of customers. Alternatively, they are calculated by the "zero-intercept" method whereby regression equations are run relating costs to various sizes of equipment and eventually solving for the cost of a zero-sized system (Sterzinger, 1981).
>
> What this last-named cost imputation overlooks, of course, is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile square mile quote). Our casual empiricism is supported by a more systematic regression analysis in (Lessels, 1980) where no statistical association was found between distribution costs and number of customers. Thus, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatsoever in the costs of a minimum sized distribution system.
>
> While, for the reason just suggested, the inclusion of the costs of a minimum size distribution system among the customer related cost seems to us clearly indefensible, its exclusion from the demand related cost stands on much firmer ground. For this exclusion of minimum size distribution system costs makes more plausible the assumption that the *remaining* cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on the system as measured by peak load.
>
> But if the hypothetical costs of a minimum size distribution system is properly excluded from the demand related costs for the reason just given, while it is also denied a place among the customer costs for the reasons stated previously, to which cost function does it then belong? The only defensible answer, in our opinion, is that it belongs to none of them. Instead, it should be recognized as a strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But fully-distributed cost analysts dare not avail themselves of this solution, since they are the prisoners of their own assumption that "the sum of the parts equals the whole." They are therefore under impelling pressure to fudge their cost apportionments by using the category of customer costs as a dumping ground for costs that they cannot plausibly impute to any other cost categories.
>
> In actual practice the vast majority of utilities utilize some form of minimum system to classify costs, which is in line with the FERC accounts. Sterzinger (1981) is critical of this practice and recommends that to avoid the overcollection of costs from low-use residential customers, regulators should classify distribution costs as demand costs. Neither of these procedures can be justified as a cost allocation in the sense of directly assignable costs, for they are nonassignable.
>
> Allocation, in whole or in part, would be at least theoretically possible if a customer density parameter were added to the three traditional cost components. But if this factor were embodied, not only in cost analysis but in the resulting rate differentials, rates would not be uniform throughout a given community and hence would violate a generally accepted tradition (see Watkins, 1921, p. 212 and Havlik, 1938, Chapter 8 and Appendix A). [Emphasis added]
>
> [pp. 491-492]

[601] Although Ms. Palmer recommended the use of the basic customer method, she recognized that the parties to the settlement agreement had agreed to defer that matter for a more detailed consideration in 2026. On that basis, she does not oppose the

settlement agreement, although she urged the Board to direct that other proposed changes to NS Power's cost-of-service methodologies also be considered in that process. She also suggested that, if the Board were to allow the classification of distribution system costs using a minimum system study, it could consider doing so only for the secondary distribution system and classifying primary distribution system costs to demand. Additionally, she submitted an adjustment should be made to recognize the minimum system's peak load carrying capability. These issues are discussed in more detail later in this decision.

[602] In their closing submissions, parties to the settlement agreement urged the Board accept the terms of the settlement agreement and allow the proposed changes to the cost-of-service methodology to stand, pending an application later this year which would address the classification of distribution system costs under the minimum system or basic customer method for future proceedings. They emphasized the extensive nature of the engagement process leading to the settlement agreement and the fact that unresolved issues relating to this matter are going to be addressed in a another proceeding later this year.

[603] The Industrial Group submitted that Ms. Palmer's evidence was narrow and did not provide a proper basis to make the cost-of-service changes she recommended at this time. The Industrial Group also emphasized the impact such changes would have on non-residential customers:

> Synapse's evidence on the Basic Customer method was shown on cross-examination to be narrow, lacking both a jurisdictional scan and Nova Scotia–specific analysis.
>
> The record further shows that the Basic Customer approach is scarcely used in Canada—Manitoba being the only example, and even there it is now under review, with evidence filed outlining significant flaws in the method. Those criticisms include that even the smallest customer drives meaningful distribution costs, and that ignoring minimum system

> requirements distorts cost causation. While Ms. Palmer characterizes the minimum-system method as flawed, it remains recognized in the NARUC Cost Allocation Manual.
>
> …
>
> Response to Undertaking U-5 provides the rates resulting from this single proposed change. The residential class would see a reduction of 1.6% in 2026 (smoothed rates) relative to what has been applied for but each of General, Large General and Medium Industrial would increase approximately 3.5%. …
>
> The Board has been clear that rate impacts cannot be assessed in isolation. All-in customer bill effects, including base rates, the FAM AA/BA rider, and the DSM rider, should be considered together. The full scope of rates and riders were considered by the customer representatives and informed the Consensus Agreement.
>
> If the Board were to modify aspects of the COSS allocation methodology, it would have a disproportionate impact on certain rate classes. Modifications would benefit residential classes, who are experiencing a higher base rate increase in the GRA but significantly burden other classes, including the General rate class and the Medium and Large Industrial classes, which will have an overall higher rate increase for 2026 once the riders are considered.
>
> Given the incomplete record, introducing methodological changes at this time would be premature and could lead to unintended rate consequences. The parties intentionally carved out the Minimum System issue for a separate, dedicated proceeding in 2026 to allow appropriate time for expert analysis, proper collection of data, evaluation of alternative methods, and a complete evidentiary process. [Emphasis added] [Footnotes omitted]
>
> [Industrial Group Closing Submissions, pp. 7-8]

[604] These sentiments were shared by the MEUs. The MEUs also noted that the use of the minimum system method was of particular interest to them because they also used it to determine rates for their customers:

> As the Board is aware, the MEUs currently use the Minimum System methodology as part of their own COS methodologies in developing rates for their customers. Like NS Power and its consultant, Elenchus, the MEUs support the use of the Minimum System methodology. Clearly, the issue is one of the most controversial aspects in cost allocation in utility rate-making, and has been that way “forever”, as the Chair suggested in his questions to NS Power’s COS Panel. The MEUs recognize that Synapse, an American consulting firm, has repeatedly expressed its preference for use of the Basic Customer method in multiple Nova Scotia proceedings in recent years. But there is also no doubt that the Minimum System method is one of the recognized cost-of-service methods used in Canada, and it has been approved for use in Nova Scotia for all electric utilities for decades.
>
> [MEUs Closing Submissions, p. 2]

[605] In its submissions, the Consumer Advocate noted:

> The Consumer Advocate shares Ms. Palmer’s concerns regarding the Minimum System Method, and through the Settlement Agreement, and resulting GRA, NS Power has agreed that the use of the Minimum System Method after the test years will be the subject of a

> separate proceeding before the Board that will be initiated later this year by an application from Nova Scotia Power. The Consumer Advocate continues to support that approach. As with any aspect of the GRA, it is up to the Board to determine if this is a sufficient response to the issue or if some other remedy is required to provide for rates that are "just and reasonable."
>
> [Consumer Advocate Closing Submissions, p. 8]

[606] The Nova Scotia New Democratic Party Caucus and the Nova Scotia Liberal Party Caucus urged the Board to implement Ms. Palmer's recommendation to adopt the basic customer method to classify distribution system costs. The New Democratic Party submitted that this method would be "less biased against residential customers, so that Nova Scotian households don't bear an outsized burden of any increase". The Liberal Party submitted switching to the basic customer method "could reduce the increase faced by customers".

[607] NS Power submitted that the COSS filed in support of its rates in this proceeding provided the most appropriate basis for allocating costs among customer classes following cost causation principles.

3.8.2.1 Findings

[608] Under a cost-of-service model, the objective is to fairly allocate costs to customers based on cost causation. This has been a chronically difficult thing to do for distribution system costs. It would be inappropriate to direct the use of the basic customer method to classify distribution system costs simply to reduce the rate increase for residential customers. It would be just as inappropriate not to do so because of the impact that would have on other customers (with or without rate rider impacts). However, the parties did not fully press this issue in this proceeding due to the settlement agreement and the Board requires more information to further assess the cost causation basis for adopting the basic customer method. As explained below, these issues will be brought before the Board for further consideration in a cost-of-service proceeding later this year.

[609] From the evidence in this proceeding, both cost-of-service experts acknowledge that neither the minimum system method nor the basic customer method is perfect because distribution system costs are not correlated well enough with either the number of customers or the demand on the system by those customers. It is somewhat telling that the same problem discussed by Professor Bonbright nearly 40 years ago continues today.

[610] While the Board supports settlement agreements, it is very concerned that in the face of the other significant changes that have been proposed to the cost-of-service, NS Power has proposed to leave this issue unaddressed in this proceeding for what appears to the Board to be the expediency of bringing forward a consensus position to support its general rate application. Unfortunately, the Board is now in a position where it finds that neither of the proposed methods for classifying distribution system costs is wholly adequate. Based on the closing submissions filed in this proceeding, it appears there may be more that the parties would like to say.

[611] One option to address this problem would be to require this issue to be further addressed before the Board rendered a final decision in this matter. This would, of course, delay the implementation of new rates. Were it not for the concerns about NS Power's ability to maintain its credit metrics well enough to avoid a costly downgrade (discussed in more detail elsewhere in this decision), this may very well have been the result. NS Power should bear this in mind in the event it brings forward settlement agreements in the future that leave significant issues both unaddressed in the agreement and proposed to remain that way in the final decision in the matter.

[612] The Board considers that broader participation from customer groups is necessary to provide a more appropriate basis for determining this question and therefore finds it is not able to resolve this issue in this proceeding. The Board therefore accepts that this will be further considered by NS Power and brought back to the Board later this year when it can be more openly considered and debated. While this is not an entirely satisfactory result, the Board takes some comfort that, despite her position, Ms. Palmer was prepared to accept the consensus position on this point – subject to a caveat that will be addressed later in this decision.

3.8.3 Primary Distribution System

[613] If the basic customer method is not used to allocate distribution system costs between customer and demand, then Ms. Palmer recommends that the primary distribution system be classified 100% to demand. Ms. Palmer expressed concern that the minimum system methodology used in the cost-of-service study included NS Power's primary electric system distribution lines notwithstanding that the residential customer class likely does not receive service directly at primary voltage. Ms. Palmer submitted that primary infrastructure is shared, is more likely to peak at the same time as system peaks and is likely higher-voltage than the customer-specific equipment (meters and services) directly serving the majority of electricity customers.

[614] According to an analysis undertaken by Concentric in 2022, in advance of NS Power's last general rate application, nearly 65% of distribution system poles were sub-functionalized to primary distribution, while nearly 80% of overhead conductors were found to be part of the primary distribution system:

	Poles	Overhead Conductors	Underground Conductors
Primary - Demand	15%	49%	6%
Primary - Customer	49%	30%	1%
Secondary - Demand	11%	3%	17%
Secondary - Customer	25%	17%	76%

[Exhibit N-9, PDF p. 1225]

[615] Based on the jurisdictional scan that was undertaken by Elenchus and reproduced previously in this decision, NS Power submitted that Saskatchewan, Quebec, and Newfoundland and Labrador use the minimum system method for both primary and secondary distribution systems, while the approaches used in Ontario and New Brunswick are grounded in judgement with some consideration of the minimum system.

3.8.3.1 Findings

[616] As with the discussion about the use of the minimum system method or the basic customer method, the Board finds that a more satisfactory resolution of this issue would result from a broader debate about this issue. The Board therefore directs that this issue be specifically analysed and considered in the engagement process intended to address the appropriate classification of distribution system costs. To be clear, the matter should not be resolved based on a jurisdictional scan alone. The Board expects the issues identified by Ms. Palmer to be comprehensively addressed in the proceeding. In particular, this should include but not be limited to the manner in which the primary distribution system is used and shared by the various customer classes, the extent to which residential customers receive service directly at primary voltages and whether their equipment can be served at those voltages, and the demand on the primary distribution system relative to the system peak.

3.8.4 Peak Load Carrying Capability Adjustment

[617] Ms. Palmer also recommended that a peak load carrying capability adjustment be applied to account for the demand component served by the minimum system, if the basic customer method is not used to classify distribution system costs between customer and demand. She noted that poles and wires of any size have a load-carrying capacity that will necessarily serve a portion of a customer's demand and submitted this should be recognized. In response to questions from Board Counsel at the hearing, NS Power agreed that even a theoretical minimum system has load carrying capability and will necessarily serve a portion of customer demand.

[618] Ms. Palmer advised that a peak load carrying capability adjustment of 0.4 kW/customer is applied for the assumed peak load carrying capability of the minimum system in Ontario. She also said that in its most recent rate cases, Excel Energy in Minnesota and South Dakota had assumed a peak load carrying capability of 1.5 kW/customer for the minimum system and applied this adjustment to its distribution capacity cost allocation factors. She also noted that National Grid, in New York, recently proposed not allocating any demand-related costs for the minimum system distribution infrastructure to residential and small commercial customers on the premise that the minimum system would be able to meet the peak load for all or almost all customers in these classes.

[619] Ms. Palmer recommended that NS Power implement a peak load carrying capability adjustment for any infrastructure cost classified using its minimum system study. She acknowledged that a specific adjustment would require thoughtful analysis but, in the absence of a specific calculation, recommended that each customer class be

credited with 1.5 kW/customer to the non-coincidental peak demands used for determining minimum system demand allocators.

[620] Based on her pre-filed evidence and her responses to questions at the hearing, it is apparent that Ms. Palmer's recommended credit was intended to be used as a proxy until NS Power calculated a more accurate peak load carrying capability adjustment. As she explained at the hearing:

> **Q.** And you recommend 1.5 kilowatt per customer, which is outside of the range of what we reviewed from Ontario. So could you confirm, and perhaps you explained to my friend, but I'm still not clear about exactly how you came up to that number.
>
> **A.** Like I discussed with Ms. Power, there are kind of three examples that I've seen that I put in my testimony; the .4 from Ontario, the 1.5 from Minnesota and South Dakota, and then New York State's, or National Grid in New York State, proposing to simply assign no demand costs to it's residential and small commercial customers.
>
> And this seems to be kind of in the middle of that. There's the range of adjustments that I'm aware of that I presented, and this is kind of a middle route. I've acknowledged it's an approximation and that it will be superior to have Nova Scotia Power's analysis when available.
>
> [Transcript, January 13, 2026, pp. 1311-1312]

[621] In response to Undertaking U-6, NS Power calculated the impact on rates if a 1.5 kW/customer adjustment was applied as a credit to the non-coincidental peak demand for determining the minimum system demand allocators of the distribution system costs. The result was to shift responsibility for about $7 million in costs away from the residential class to other rate classes, with most of that difference moving to the general service class. As shown in the table from the undertaking response, reproduced below, applying such a peak load carrying capability adjustment would reduce the proposed increases for the domestic, small general and unmetered rate classes, but increase the rate changes for the rest of NS Power's above-the-line rate classes. However, the large general, medium industrial and large industrial classes still see overall

rate reductions in both test years. The Board understands the second reference to “Large General” in the exhibit is an error and should be “Small Industrial”.

	Proposed COSS Methodology		Modified COSS Methodology as per U-6		Variance	
	Smoothed		Smoothed		Smoothed	
Customer Class	2026	2027	2026	2027	2026	2027
Domestic	3.8	4.1	3.2	3.7	(0.6)	(0.4)
Small General	3.6	3.9	3.4	3.8	(0.2)	(0.1)
General	(0.2)	0.6	0.9	1.4	1.0	0.9
Large General	(4.5)	(3.1)	(3.7)	(2.5)	0.7	0.7
Large General	(0.5)	0.3	0.5	1.1	1.0	0.8
Medium Industrial	(6.5)	(4.8)	(5.6)	(4.0)	0.9	0.7
Large Industrial	(7.0)	(4.7)	(6.6)	(4.3)	0.4	0.4
Municipal	1.7	3.1	2.2	3.4	0.5	0.3
Unmetered Classes	7.9	7.2	7.0	6.3	(0.9)	(0.9)
Total	1.7	2.4	1.7	2.4	(0.0)	0.0

[Exhibit N-77, p. 1]

[622] In response to questions from NS Power at the hearing, Ms. Palmer agreed that the peak load carrying capability adjustment used in Connecticut was heavily influenced by the capacity adjustment associated with line transformers. The capacity adjustments for all other equipment were less than 0.4 kW/customer. Ms. Palmer also acknowledged that NS Power’s cost-of-service methodology allocates transformers as 100% demand-related.

[623] In its closing submissions, NS Power submitted that the implementation of a peak load carrying capability adjustment would have significant consequences for other rate classes and that such a change “should not be taken lightly”. NS Power emphasized that determining an appropriate peak load carrying capability adjustment for its minimum system required thoughtful analysis and that there was no basis in the evidence in this proceeding to assign an adjustment of 1.5 kW/customer at this time. As noted already, the other parties to the settlement agreement expressed concerns about implementing

Ms. Palmer's recommendations given the balance that was achieved under the settlement and the impact that these recommendations would have on non-residential customers, due to the shifting of costs and the impact of rate riders that will be applied in addition to the base rates determined in this general rate application.

3.8.4.1 Findings

[624] Notwithstanding the settlement agreement, the Board finds that it is appropriate to direct NS Power to implement a load carrying capability adjustment in this proceeding. Unlike the evidence relating to the use of the minimum system method or the basic customer method for classifying distribution system costs, where neither approach seemed sufficiently supported by the evidence in this proceeding, it appeared that both cost-of-service experts (and NS Power) agreed that a minimum system has some load carrying capability. The Board finds this should be addressed now, rather than wait for the process planned for later this year, and then not be implemented for another year or more. Further, the issue of a load-carrying capability adjustment must be decided on its own merits and not depending on whether it reduces rate increases for some customers classes or puts upward rate pressures on other classes (with or without rate rider impacts).

[625] The evidence uniformly supported that, although subject to some complexity, it was possible to determine more precisely the load carrying capability of the minimum system assessed for NS Power’s system. As noted, NS Power submitted there was no basis in the evidence in this proceeding to assign an adjustment of 1.5 kW/customer at this time. This is true because evidence of this nature was not provided by NS Power in this proceeding. At the same time, there is evidence that a minimum system has some load carrying capability, so NS Power’s election to assign no

adjustment at all would, on the limited evidence that is before the Board in this matter, appear to be the least supported approach.

[626] Based on the information provided in this proceeding, the Board directs NS Power to implement a load carrying capability adjustment of 0.4 kW/customer to its minimum system method. The Board finds that the number used in Ontario is an appropriate proxy pending a more precise determination by NS Power. In doing so, the Board accepts that the 1.5 kW/customer adjustment used by Excel Energy is influenced by the capacity associated with line transformers that are already classified fully to demand in NS Power's case, making it a less appropriate proxy. NS Power is directed to make this adjustment in a compliance filing in this matter.

[627] The Board also directs NS Power to undertake the analysis necessary to calculate the load carrying capability of its minimum system. This must be done before NS Power engages with customer representatives in the proceeding contemplated in the settlement agreement, and this analysis must be included in the application resulting from that process that NS Power will file with the Board later this year.

3.8.5 Other Cost-of-Service Issues Raised by Synapse

[628] As noted already in this decision, in addition to her concerns about the use of the minimum system method to classify distribution system costs, Ms. Palmer had concerns about certain other proposed changes to NS Power's cost-of-service methodologies. However, rather than elaborate on these concerns in her evidence, and recognizing that the settlement agreement contemplated a future proceeding before the Board to address the use of the minimum system methodology after the 2026-2027 test period, she elected instead to recommend that the Board direct that the future proceeding also include an examination of other cost-of-service changes as well. These include NS

Power's departure from its current approach to classifying generation costs, in which it now proposes to classify all generation assets using the system load factor; NS Power's departure from its current approach to classifying transmission costs, in which it now proposes to classify 100% of transmission costs to demand; and the potential for NS Power to use more granular and temporal allocators (noting that further data analysis and discussion would likely be worthwhile in considering moving away from the three coincident peak generation and transmission demand cost allocation and non-coincident peak distribution demand cost allocation).

[629] In response to questions from Board Counsel at the hearing, NS Power suggested that the settlement agreement contemplated that the only outstanding issue that would be addressed in the future proceeding noted in the agreement was the use of the minimum system method beyond the test years in the current general rate application:

> **Q.** So N-37, page 20 in the PDF, line 16. Here Ms. Palmer has identified additional Cost-of-Service Study methods that she thinks should be reviewed as part of whatever future process occurs, and she lists out the three areas here. Has Nova Scotia Power had a opportunity to consider those, and do you have a position on whether you agree with those being part of consideration in future cost-of-service matters?
>
> **A.** (Williams) Thanks, Mr. Mahody. I think what the Settlement Agreement does is it expressly identifies Minimum System as being subject to what we would see as a standalone application or matter that we would bring to the Board in 2026, and that's what's described in the Settlement Agreement. And as it says in the Settlement Agreement, any party may take any position they so choose.
>
> Subsequent to the test period, the '26-'27 test period, we would not — our expectation is not that the Settlement Agreement or the positions that parties have taken in relation to the Settlement Agreement in any way binds them, and all cost-of-service issues would be before the Board for consideration at the next General Rate Application or the next standalone cost-of-service proceeding.
>
> That said, I think there is an expectation -- I know there is an expectation from Nova Scotia Power, and I would think there's a similar expectation from all parties, that we're not redoing the same extensive cost-of-service process that we just undertook in relation to all cost-of-service matters in subsequent proceedings. I would expect that we do get some value out of what we just went through, but certainly the Minimum System is one that was identified as being for further consideration.

> **Q.** Okay. And so back to Ms. Palmer's three additional methods that she is recommending you reviewed. Do you agree that the next point, Cost-of-Service Study — a full Cost-of-Service Study is being undertaken, that those matters should be considered?
>
> **A.** (Williams) I think the next time a full Cost-of-Service Study was undertaken all matters would be out there. But as I said, no-one's bound as a result of this process or the agreement, but certainly the expectation would be that we've reached common ground on certain aspects of these.
>
> I think where my uncertainty in terms of the recommendation lies is when you read from line 9 it says:
>
> I recommend that the Board expressly state that not only should the [minimum system] methodology be subject to a future proceeding and determination...but that the same requirement should apply to several other [cost-of-service] methods...
>
> And so if Ms. Palmer's intention there is to include these other methods in the 2026 filing that's described and expressly set out in the Settlement Agreement, we would disagree with that recommendation and we would not feel that that's the expectation of Nova Scotia Power. But if she's referring to future cost-of-service studies, then, as I said, I think all issues would be subject to the Board's consideration and assessment in that setting.
>
> [Transcript, January 7, 2026, pp. 127-130]

[630] In its closing submissions, Port Hawkesbury Paper endorsed NS Power's testimony on this point. It also argued that the parties needed certainty and stability about these points:

> Based on the considerable record before the Board, PHP submits that the recommendations made by Synapse at pages 18-19 of its evidence (Ex. N-37) that "several other COSS methods" in addition to the minimum system methodology should be subject to a future proceeding and determination by the Board should not be accepted at this time. The COSS provides the underpinning costs to be collected from the various rate classes, and a level of stability is appropriate in this regard as has historically been the case in Nova Scotia.
>
> [Port Hawkesbury Paper Closing Submissions, p. 6]

3.8.5.1 Findings

[631] It is clear that Ms. Palmer has some misgivings about other aspects of NS Power's cost-of-service methods, but in light of the settlement agreement, she elected to focus on the minimum system vs. basic customer issue and leave the others to the future process she understood was contemplated under the settlement agreement. Although the Board places weight on the fact that informed participants have agreed to a resolution of these issues, when the Board is considering whether it is in the public interest to accept

the settlement agreement, the existence of a settlement agreement is certainly not dispositive of that issue.

[632] The traditional role of Board Counsel and consultants is to ensure that the Board has an appropriate record before it to render a fully informed decision. If Synapse believes these issues are worth raising for the Board to consider, the Board would prefer that it do so, precisely because cost-of-service issues have tended to remain in place for extended periods in this jurisdiction. Therefore, the Board directs NS Power to specifically address the areas of concern identified by Ms. Palmer in the application NS Power expects to file with the Board later this year.

3.8.6 Issues Raised by Renewall Energy Inc.

[633] As mentioned earlier in this decision, in its closing submissions, Renewall said there were inconsistencies between NS Power's cost-of-service methodologies and the methods used to determine OATT charges. Renewall's focus was on the impact of these inconsistencies on rates in the renewable-to-retail market, in which it is currently the only licensed retail supplier. Renewall also highlighted the Board's obligation to appropriately consider the extent to which its decisions support the development of a competitive electricity market under s. 6(2) of the *Energy and Regulatory Boards Act*.

[634] NS Power submitted:

> NS Power applied the approved OATT and COS methodologies, as amended in the Settlement Agreement, to determine the proposed bundled and OATT charges. The transmission costs are allocated to the bundled rate classes based on class contribution to the three winter month peaks of January, February, and December (three coincident peaks, 3CP) whereas allocation of these costs to the open market transmission services of point-to-point and network are done on the basis of their contribution to the twelve calendar months (12CP). The difference in approach to the allocation of transmission costs in these two markets was discussed and accepted by the intervenors to the 2005 OATT founding proceeding. [footnotes omitted]
>
> [NS Power Reply Submissions, p. 26]

[635] One of Renewall's concerns was that the system coincident factor used in the cost-of-service study (78.6%) [Exhibit N-67, Attachment 1, p. 79 of 99] did not match the system coincident factor used in the OATT rate development tables (91.66%) [Exhibit N-17(vi), Figure 5-13]. Renewall noted that using the cost-of-service system coincident factor in the calculation for the monthly billing rate for network service reduced the charge by over 14%.

[636] NS Power said the coincident factors were two different calculations serving two different purposes. It said the factor in the OATT calculations determines system non-coincident demand billing determinants on the basis that the monthly $ per MW charges under the OATT are calculated such that application of the proposed OATT charges yields the OATT revenue requirement. NS Power noted the factor of 78.6% is not used directly in rate calculations.

[637] Renewall also noted that the system peaks in the cost-of-service and OATT calculations do not match. It observed that, for 2026, the OATT calculations assume a coincident peak of 1,778 MW and a non-coincident demand of 1,939 MW [Exhibit N-17(vi), Figure 5-10] (i.e., coincidence factor of 91.7%), while COSS Exhibit 9A suggests a coincident peak of 2,095 MW and a non-coincident peak of 2,667 MW [Exhibit N-67, Attachment 1, p. 79 of 99] (i.e., coincidence factor of 78.6%).

[638] While it did not expect the differences to produce a material impact, Renewall also noted what it considered to be other inconsistencies. For example, it noted that formulas in the cells used to determine the revenue requirement for load following and 10-minute supplemental operating reserve in Exhibit N-17(vii) (Summary Rates, cells B27 and B29) did not appear to be consistent with Exhibit N-17(vi), Figure 6-8. In its reply

submissions, NS Power appeared to accept that the figures in Exhibit N-17(vii) and (ix) (Summary Rates) were incorrect, but said these pertain only to “side calculations” and do not impact the proposed OATT rates.

[639] In concluding its comments in its reply submissions in response to the issues raised by Renewall, NS Power said:

> REI suggests that coincident factors and system peaks drive the transmission and ancillary service components of the OATT, and using the updated COSS would result in lower OATT costs per MW. This is false. As indicated above, the coincidence factors from ‘Exhibit 9a Annual’ are not relevant to the calculation of the OATT rates.
>
> As demonstrated above, the proposed OATT rate calculations are accurate and consistent with the approved methodology. The OATT calculation process has been revised to better align with the COS through the COSS stakeholder consultation process conducted in 2024 and incorporated into the 2026-2027 GRA.
>
> Overall, it does not appear that REI is asking the Board to reject any aspect of the COS as proposed or that REI is challenging the OATT; however, it seems that REI is asking the Board to treat the COS as completely determinative of OATT inputs, rather than as a separate construct.
>
> It is important to note that no complete COS will ever be fully mirrored in the calculation of OATT rates. Further, in the future as outlined in the *More Access to Energy Act*, the Independent Energy System Operator of Nova Scotia (IESO Nova Scotia) will administer the OATT once relevant sections are proclaimed. It will be up to the IESO Nova Scotia to determine how it will incorporate the COS from market entities into the OATT structure.
>
> Differences between COS and OATT inputs do not, in and of themselves, indicate errors or overcollection. NS Power continues to engage with REI through its established monthly check-ins and welcomes all further opportunity to walk through the OATT methodology and assumptions in greater detail and address any remaining questions on these points. [footnotes omitted]
>
> [NS Power Reply to Closing Submissions, pp. 27-28]

3.8.6.1 Findings

[640] Because these technical issues were only raised in closing submissions, the Board has a poor record before it to make an informed decision on these points. As a result, the Board accepts the relevant calculations included in the settlement agreement.

[641] However, Renewall correctly points out that the Board must appropriately consider how its decisions support competition and innovation in the provision of energy resources in the province and the development of a competitive electricity market. In this regard, NS Power's response that "the proposed OATT rate calculations are accurate and consistent with the approved methodology" is not entirely satisfactory. The real question is whether that dated methodology continues to be appropriate.

[642] Although responsibility for the transmission tariff will, at some point, transfer to the Nova Scotia Independent Energy System Operator, it is not entirely clear when that will occur. The most recent information from IESO Nova Scotia suggests an "aspirational timeline" for this transition in the second quarter of 2027. Furthermore, under s. 83 of the *More Access to Energy Act*, SNS 2024, IESO Nova Scotia will inherit the existing transmission tariff at that time, which will remain in force until it is changed by IESO Nova Scotia. Therefore, if NS Power brings forward any application proposing any changes to the OATT between now and when it is transitioned to IESO Nova Scotia, including if NS Power files a general rate application, then NS Power is directed to more fully consider the issues raised by Renewall in that application.

[643] As a final point, the Board notes that Renewall may have been able to raise its concerns about the relationship between the cost-of-service study and the OATT earlier had it had access to information that was not confidential but was only provided in the confidentially filed Excel files marked as Exhibit N-17(C)(i) SR-01 Attachment 1 and Attachment 2. Portable document format (PDF) versions of these files were only provided after the hearing in response to Undertaking U-4. While the Board prefers Excel files with intact formulae when available, if there is confidential information in those files, PDF

versions of those files with appropriate redactions of confidential information must be filed in all cases. NS Power must ensure it does so in all future matters before the Board.

3.9 Rate Design

[644] In its application, NS Power did not propose to introduce new concepts or materially change the design of any of its rates. The parties to the settlement agreement accepted the changes to tariff language and the updating of charges that NS Power proposed. For the most part, other parties raised no concerns about these matters in the evidence or submissions filed with the Board. To the extent not otherwise addressed in this decision or not otherwise requiring changes due to directions provided in this decision, the Board accepts these items as filed.

3.9.1 Innovation

[645] In NSEB IR-132, NS Power was asked to describe any work it has done to develop new or innovative rate designs to leverage more granular data from Advanced Metering Infrastructure (AMI) meters, promote efficient use of system resources, or address emerging or anticipated electricity and energy market changes due to decarbonization, decentralisation of energy resources, or other factors. In its response, NS Power said it was continuing to develop innovative rate structures through several initiatives and remains committed to developing rate designs that promote efficient use of system resources and respond to evolving market dynamics.

[646] NS Power noted that AMI infrastructure was instrumental in supporting both cost-of-service studies and ongoing pricing innovation work. NS Power referenced its time-varying pricing (TVP) program and the development of customer energy management systems to provide customers with tools and information to better understand their energy use and evaluate rate options that may be suitable for their usage

patterns. NS Power also noted that it expanded its TVP program to include a multi-unit residential building time-of-use pilot tariff. It said it also supports programming through the provision of AMI data to EfficiencyOne (E1) for demand side management activities and demand response programming. NS Power also cited its work with Port Hawkesbury Paper to design a rate to both provide service to that customer and leverage the characteristics of that customer's energy use to benefit the system.

3.9.1.1 Findings

[647] The Board accepts that NS Power is engaged in appropriate activities relating to the development of new rate designs. However, the Board believes that more can be done and encourages NS Power to do so. For example, while NS Power refers to the development of customer energy management systems as providing tools and information to customers to better understand their energy use and evaluate rate options that may be suitable for their usage patterns, there are not many rate options for many customers to choose from. The Board is also concerned that NS Power's outdated customer information system and the recent cyber attack have or will impede its progress in this area in the short term. The Board notes, for instance, that the TVP program was effectively suspended for the 2025/2026 winter season due to the company's inability to access data after the cyber incident.

[648] As Bonbright notes, the characteristics of a sound rate structure should include designs that are dynamically efficient in promoting innovation and responding economically to changing demand and supply patterns, discourage wasteful use of service and promote all justified types and amount of use. In the context of the energy transition, these characteristics of rate design should be a focus.

3.9.2 Residential and Small General Customer Charges

[649] In its last general rate application, NS Power proposed to increase customer charges for the domestic service and small general customer classes to align those charges with costs under its cost-of-service study. Other parties in the proceeding expressed some concerns about that proposal and, in the settlement agreement in that matter, customer charges for these classes were set at 75% of the amounts proposed. In the present proceeding, NS Power proposes to increase these customer charges in the same proportion as the increases in the smoothed non-fuel cost revenues for these customer classes, as set out in Figure 13-1 in its application:

Figure 13-1 – Proposed Increases to Customer Charges

Customer Class	Current Rate ($)	Proposed Rate ($) 2026	Proposed Rate ($) 2027
Domestic Service	19.17	20.24	21.38
Small General	21.28	22.16	23.07

[Exhibit N-3, p. 81]

[650] In its response to NSEB IR-133, NS Power also calculated the customer charges that would result from a direct use of customer costs under its cost-of-service study. The results, which are reproduced below, also showed the offsetting impact on the proposed energy rates to maintain the required recovery of costs in the rates set for these customers:

Domestic Service Tariff				
	Capped Customer Charge	COSS-based Customer charge	Variance	Percent Variance
2026				
Standard Rate				
Customer Charge ($/month)	**$20.24**	**$29.32**	**$9.07**	**45%**
Energy Charge (cents/kWh)	**18.349**	**17.306**	**(1.043)**	**-6%**
Smoothed Rate				
Customer Charge ($/month)	**$20.24**	**$29.32**	**$9.07**	**45%**
Energy Charge (cents/kWh)	**18.454**	**17.411**	**(1.043)**	**-6%**
2027				
Standard Rate				
Customer Charge ($/month)	**$21.38**	**$30.25**	**$8.88**	**42%**
Energy Charge (cents/kWh)	**19.335**	**18.310**	**(1.025)**	**-5%**
Smoothed Rate				
Customer Charge ($/month)	**$21.38**	**$30.25**	**$8.88**	**42%**
Energy Charge (cents/kWh)	**19.216**	**18.191**	**(1.025)**	**-5%**

Small General Tariff				
	Capped Customer Charge	COSS-based Customer charge	Variance	Percent Variance
2026				
Standard Rate				
Customer Charge ($/month)	**$22.16**	**$31.98**	**$9.82**	**44%**
Energy Charge (First 200 kWh) (cents/kWh)	**18.918**	**17.840**	**(1.078)**	**-6%**
Energy Charge (Additional kWh) (cents/kWh)	**17.089**	**16.208**	**(0.881)**	**-5%**
Smoothed Rate				
Customer Charge ($/month)	**$22.16**	**$31.98**	**$9.82**	**44%**
Energy Charge (First 200 kWh) (cents/kWh)	**19.053**	**17.975**	**(1.078)**	**-6%**
Energy Charge (Additional kWh) (cents/kWh)	**17.224**	**16.343**	**(0.881)**	**-5%**
2027				
Standard Rate				
Customer Charge ($/month)	**$23.07**	**$33.28**	**$10.21**	**44%**
Energy Charge (First 200 kWh) (cents/kWh)	**20.100**	**18.984**	**(1.116)**	**-6%**
Energy Charge (Additional kWh) (cents/kWh)	**18.074**	**17.163**	**(0.911)**	**-5%**
Smoothed Rate				
Customer Charge ($/month)	**$23.07**	**$33.28**	**$10.21**	**44%**
Energy Charge (First 200 kWh) (cents/kWh)	**19.951**	**18.835**	**(1.116)**	**-6%**
Energy Charge (Additional kWh) (cents/kWh)	**17.925**	**17.014**	**(0.911)**	**-5%**

[Exhibit N-27, PDF pp. 550-551]

[651] As can be seen in the foregoing tables, keeping lower customer charges necessarily increases energy charges, and vice versa. Customers in these classes that use higher than average amounts of energy pay more when customer charges are lower and less when customer charges are higher. The opposite is true for customers who use less energy than the average customer in the rate class. The extent to which the energy rate is higher or lower also affects the cost effectiveness of energy efficiency and demand response programs for these customers. It may also affect the choice of alternatively designed rates.

3.9.2.1 Findings

[652] The Board accepts that there may be legitimate arguments for not setting customer charges for these classes directly from the cost-of-service study. However, given the potential impacts that the setting of customer and energy charges may have on intra-class cost shifting, efficiency and demand response, and the consideration of alternatively designed rates, there should be a principled basis for doing so. The extent of the variance should not be arbitrary. While increasing these charges based on the average increase in non-fuel revenues for these customers might be convenient, it is not clear to the Board that costs classified as customer-related under the cost-of-service study necessarily change at the same rate as other costs.

[653] The Board directs NS Power to consider this matter and address it in more detail in its next general rate application. The Board notes that the method for classifying distribution system costs to customers also affects this issue. Indeed, in the Ontario Energy Board cost allocation review staff discussion paper submitted as Exhibit N-63, it appears to be suggested that fixed monthly customer charges could conceivably be considered within a range of reasonableness bounded by a floor set using the basic

customer method and a ceiling using either the zero-intercept or minimum system methods (p. 14).

3.10 Miscellaneous Charges and Regulations

3.10.1 OATT

[654] NS Power's Open Access Transmission Tariff (OATT) includes terms, conditions and rates for Transmission Services and Ancillary Services. It also includes operating agreements under which service will be provided, and the Standards of Conduct which govern the treatment of transmission system and market information within NS Power. The OATT was initially approved in 2005 and amended on June 10, 2016.

[655] In this application, NS Power updated OATT rates to reflect changes in revenue requirement, driven by changes in generation and transmission asset mix and costs, and changes in system usage since the last update in the 2023-2024 GRA.

[656] NS Power proposed amending the OATT methodology based on consultation in the 2024 Cost of Service proceeding. Those amendments include basing OATT rates on forecasted test year usage instead of historic usage, and basing transmission rates under schedules 7, 8 and 10 on transmission-related revenue requirement as determined in Cost-of-Service studies instead of on formulaic calculations. NS Power stated those proposed amendments will help eliminate transmission revenue requirements differences used for the OATT and bundled service rates.

[657] NS Power also proposed a modification to the determination of reactive power usage, applied in rate calculations under Schedule 2, from a single system peak

hour to a multi-hour peak based on the 97th percentile usage of Reactive Power from generation.

[658] The 2023-2024 GRA (M10431) Board Order included the following directives regarding the OATT and capacity-based ancillary services (CBAS):

- To explore options with Northern Power Coordinating Council (NPCC) about alternative treatment of interruptible loads and to file its analysis of cost implications in the next GRA;
- Explore, prior to the next GRA, alternative treatment of the -16 MW requirement in Automatic Generation Control and to demonstrate that it is not double charging transmission customers;
- Demonstrate, no later than in its next GRA, how the spinning reserve and 10-minute supplementary reserve utilization for Wreck Cove is represented in its CBAS calculations; and
- Provide a more fulsome explanation, no later than in its next GRA, to justify its position to exclude combustion turbine (CT) units from its costing of 30-minute supplemental reserve for the CBAS calculations.

NS Power addressed those directives and incorporated certain changes based on its review of those issues.

[659] Ancillary Services are support services required to enable the transmission system to transmit energy while maintaining reliable operation of the system. They range from actions needed to enable and balance a transfer of electricity between buyer and seller, to services needed to maintain transmission system integrity and reliable operation at designed voltages and frequency.

[660] The OATT requires NS Power, as the Transmission Provider, to make all Ancillary Services available to all Transmission Customers, so it must be able to procure adequate generation resources to do so. Transmission Customers can purchase each of the Ancillary Services from the Transmission Provider, or they can self-supply the capacity-based ancillary services or purchase them from a third party.

[661] The capacity-based ancillary services include Regulation and Frequency Response Service, as well as Operating Reserves, which include 10-minute spinning reserve, 10-minute supplemental reserve, and 30-minute supplemental reserve. NPCC defines the requirement for Operating Reserves in the Maritimes Control Area. At all times, NS Power must have 32 MW of spare capacity available from units already online (spinning reserve), 136 MW of capacity (or load reduction) that can be made available within 10 minutes (supplemental reserve), and an additional 50 MW of capacity (or load reduction) that can be made available within 30-minutes (supplemental reserve).

[662] Regarding treatment of interruptible load, NS Power stated that LIIR interruptible load is not suitable for day-ahead reserve planning, but it does provide value when used in real time to manage through capacity scarcity events. Under the settlement agreement, it was agreed that the costing approach for 2026 and 2027 will utilize 50% of the estimated average hourly demand of LIIR interruptible load as 10-minute operating reserve on a day ahead basis. This reduces the required 10-minute supplemental reserve of 136 MW by 35 MW, to 101 MW, for pricing purposes of that service. Accordingly, LIIR interruptible load equipped with Telemetry and Control will be included in managing real-time 10-minute reserve at all times, not just when it is not available from generation resources.

[663] On the issue of alternative cost treatment of the -16 MW requirement in regulation service, as its own Balancing Authority, NS Power must balance load and generation within the province, measured by the Area Control Error on the Nova Scotia-New Brunswick (NS-NB) tie-line. To maintain transmission security limits, Area Control Error on the NS-NB tie-line must be closely controlled. Area Control Error changes can affect the stability of the transmission network, so adequate regulation capability is needed to manage deviations in net load and variable generation to ensure system stability. NS Power's analysis of net load-variable generation deviations in the NS Balancing Area determined that it needs +/- 16 MW of regulation capability to adequately manage the system with the current level of variable generation and load behaviour.

[664] NS Power noted that when a dispatchable generator is operating at or near minimum generation limits, it bottoms out on its ability to provide Regulation Down (Reg Down) service (i.e., the -16 MW component). That generator's capacity would still be supplying customer energy needs, but it cannot offer Reg Down service because its output cannot be lowered any further. NS Power submits that capacity for Reg Down service must be set aside separately from capacity used to serve the energy needs of load customers. Since that set-aside capacity is incremental to the capacity allocated to serving energy, NS Power stated that its cost must be recovered through the prescribed costing methodology of the OATT. NS Power maintains that the current costing methodology adequately and fairly allocates capacity costs to the provision of Regulation Service and submits that there is no double-counting of capacity.

[665] Regarding NS Power's treatment of spinning reserve and 10-minute supplementary reserve utilization of Wreck Cove in its CBAS calculations, NS Power

determined that capping Wreck Cove at a 32 MW capacity contribution (the current requirement for Spinning Reserve) produces a 10-Minute Spinning Reserve weighted annual cost of $139.69/kW, which is immaterially different by 0.2% as compared to the $139.98/kW rate used in the 2023-2024 GRA. NS Power has capped the contribution of Wreck Cove to the 32 MW Spinning Reserve requirement in the calculation of the rate for Spinning Reserve service.

[666] The issue of including less expensive CTs in the CBAS costing calculations for 30-minute supplemental reserve was also reviewed by NS Power. It noted that the power system is experiencing a transformation from a system with large base-loaded, dispatchable generators to one with a large and growing penetration of variable renewable energy resources. With that understanding, NS Power conducted an analysis of historical day-ahead dispatch plans for the years 2021 to 2023 and determined that CTs were dispatched to fulfill approximately 35% of the 30-Minute Supplemental Reserve requirement each hour.

[667] Given this change, NS Power adjusted the cost allocation for 30-Minute Supplemental Reserve to account for the contribution that CTs make in the provision of 30-Minute reserve, as per its analysis, and implemented the adjustment in this GRA.

3.10.1.1 Findings

[668] As noted above, OATT rates have been updated to reflect changes in the generation and transmission asset mix and costs, and changes in system usage since the last update in the 2023-2024 GRA. NS Power also amended the OATT methodology based on consultation in the 2024 Cost of Service proceeding.

[669] In addition, NS Power addressed the Board's hearing order directives from the 2023-2024 GRA (M10431) pertaining to the OATT and capacity-based ancillary services, and incorporated certain changes based on its review of those issues.

[670] The Board approves the OATT amendments as proposed by NS Power in this matter.

3.10.2 AMI Opt-Out Fee

[671] NS Power has requested Board approval to implement an opt-out fee for customers who have not agreed to the installation of an AMI smart meter for remote meter reading and billing purposes. Capital and operating costs associated with the AMI facilities are embedded in NS Power's revenue requirement and those costs are being recovered from all customers, including opt-out customers.

[672] NS Power's proposed monthly opt-out charges are provided in Table 1.

Table 1 – Proposed Schedule of AMI Opt-out Fee Monthly Charges for 2026 and 2027

Standard Customer Meter Read Frequency	Proposed Opt-out Customer Meter Read Frequency	Proposed Opt-out Charge	
		in 2026	in 2027
Bi-monthly (6 times per year)	Semi-annually (twice per year)	$3.81 per month	$4.47 per month

Standard Customer Meter Read Frequency	Proposed Opt-out Customer Meter Read Frequency	Proposed Opt-out Charge	
		in 2026	in 2027
Monthly (12 times per year)	No change (12 times per year)	$22.89 per month	$26.79 per month

[Exhibit N-8, Appendix 13A, pp. 3-4]

[673] To reduce monthly charges for opt-out customers, NS Power proposes to conduct semi-annual meter readings for customers whose meters are currently read bi-monthly (i.e., Domestic and Small General classes), and to continue monthly readings for

customer classes that include a monthly demand charge (i.e., General, Large General, Small Industrial, Medium Industrial, Large Industrial, and the Municipal Tariff). NS Power estimated that the reduced frequency of manual meter readings will lower the total required meter reading hours by 64% and result in a total estimated cost savings of $1.2 million over 2026 and 2027.

[674] When addressing the option of customer-submitted meter readings, NS Power dismissed that option as “not a reasonable proxy for NS Power meter reads”. It suggested it would be challenging for customers to provide accurate readings and that it could result in intentional misreporting:

> AMI meters are digital; they cycle through various data points, which make it challenging to accurately capture consumption readings and increase the likelihood of unintentional errors in customer-submitted readings. In 2024, approximately 177 customer accounts submitted a post card or photo meter read; this represents less than 1 percent of the 18,140 customers that have opted out of AMI meters. Customer-submitted meter readings can also result in intentional misreporting, particularly in the absence of established regular and systematic utility-led verification processes. While Regulation 5.1 allows for customer-submitted readings, NS Power still needs to receive, verify, and process these readings, along with handling disputes and correcting errors.
>
> [Exhibit N-8 Appendix 13A, p. 8]

[675] In response to Board IR-148, NS Power stated that in 2024, there were 16 postcard meter submissions and 161 photo meter submissions; however, it does not track if those submissions provided incorrect readings. When asked if instructional material is, or can be, available to assist customers to correctly record their AMI digital meter readings, NS Power stated:

> Instructional material is currently available on the Company’s website (FAQ| Nova Scotia Power). NS Power plans to update its current self-report online forms which augment the existing content. This is part of the MyAccount restoration work being conducted in response to the cybersecurity incident and is expected to be completed in 2026.
>
> [Exhibit N-27, IR-148, p. 2]

[676] Board IR-148 also asked NS Power if it had the ability to detect billing anomalies that might indicate incorrect meter readings (whether intentional or not). NS

Power said it has the ability to identify customer bills that exceed a pre-defined dollar-value threshold set for any particular rate code. This issue was further canvassed during the hearing:

> **Q.** I think the last question I asked was -- it was in response to your response, which I understood to indicate that there wasn't a specific threshold that was set once for the entire rate code, that it was more, to use your words, nimble than that. And so I asked whether each individual customer account had a threshold set for it.
>
> **A.** (Williams) Yes. I don't believe it's a specific threshold that's established and held static, if you will. My understanding is that it's -- the system will recognize when there's higher energy usage than would be expected or typical, and I believe that that occurs through the "My Energy Insights" program.
>
> **Q.** So this response refers to a pre-defined dollar value threshold. What does that mean?
>
> **A.** (Williams) So again, my understanding is that it's pre-defined through the system in terms of the historical usage, that it wouldn't be the same dollar value for every customer.
>
> [Transcript, January 12, 2026, pp. 968-969]

[677] On page 9 of Appendix 13A, NS Power stated that "Opt-out meter reading is based on the forecast incremental cost to serve opt-out customers, and informed by the company's actual experience with opt-out costs". On page 6 of that Appendix, NS Power stated that it "has explored all reasonable options to minimize or eliminate the proposed fee".

[678] Exhibit N-8, Appendix 13C shows that in 2024, there were 18,140 opt-out customers. In that year, NS Power received 650 inbound calls from opt-out customers which resulted in Customer Care expenses of $10,000. The opt-out development chart presented in Exhibit N-4, PR-02 Attachment 1 shows an estimated 18,819 opt-out customers for 2025, Customer Care Calls totalling 13,333, and Customer Care cost for opt-out only as $144,863. When questioned during the hearing about this large variance, NS Power stated that the 2025 projection was based on 0.71 calls annually per opt-out customer since NS Power assumed there would be a much greater influx of calls after

the actual meter reading frequency for domestic customers changes from six readings per year to two readings per year (i.e., from bi-monthly to semi-annual). By comparison, the actual number of calls per opt-out customer in 2024 was only 0.036, which is 20 times lower than the estimate NS Power assumed for 2025.

[679] Also, during the hearing, NS Power was questioned whether opt-out meter reading activity was separated from other manual reading activity. NS Power stated that it hired 100 meter readers to manually read meters when communication between AMI meters and its billing system was disrupted by the cyber incident. It further confirmed that those contracted meter readers were reading opt-out meters:

> **Q.** Are contracted meter readers also reading opt-out meters?
>
> **A.** (Williams) Yes.
>
> **Q.** They are?
>
> **A.** (Williams) Yes.
>
> …
>
> **Q.** And the meter readers are reading opt-out meters. Are they doing the other general work as well? Were they hired on to do the cyber work?
>
> So because presumably you had reader meters just to do opt-out meters. Are they also reading the cyber-related meters -- cyber reach?
>
> **A.** (Williams) So we would have a limited number of meter readers on staff for those opt-out meters. I can't say definitively at certain points of time whether there's delineation being drawn definitively on -- to that level of detail…
>
> [Transcript, January 9, 2026, pp.898-899]

3.10.2.1 Findings

[680] The Board has several concerns with NS Power's request to implement AMI opt-out fees at this time. Based on the responses provided during the hearing, it appears that meter reader costs associated with opt-out meters and those associated with cyber related manual meter readings are insufficiently delineated to accurately assess opt-out

fees. Also, despite NS Power's statement that opt-out costs are informed by actual experience, development of those costs appears to be based on certain questionable forecast assumptions. For example, projecting a 20-fold increase in customer care costs and opt-out calls after fees are implemented raises further concerns.

[681] Regarding potential self-reporting options for opt-out customers, NS Power has dismissed that option by suggesting it is too challenging to accurately read digital meters or that customers might intentionally (or unintentionally) submit incorrect readings. Those statements were made despite acknowledging that numerous photo meter readings have been accepted by NS Power and meter reading instructional material is currently available on the company's website.

[682] Regarding the possibility of intentionally or unintentionally submitting incorrect readings, the Board notes that NS Power currently has set certain bill thresholds against which individual bills are reviewed for anomalies, such as high bills. NS Power also stated it intends to explore additional criteria to identify bill exceptions through its Customer Information System modernization initiative. The Board questions whether NS Power has given sufficient consideration to establishing bill thresholds which could flag photo or postcard reading submissions that may be incorrect. Perhaps advancements in technology, such as artificial intelligence, could alleviate that concern.

[683] NS Power appears reluctant to consider providing opt-out customers with options such as self-reporting which could facilitate maintaining bi-monthly readings, or perhaps might require only a single manual reading for verification purposes. NS Power's meter reading regulation 5.1 states that the company may adopt a postcard meter reading system in rural areas and may consider postcard meter readings to be actual meter

readings. That regulation currently states that “Notwithstanding the foregoing, an actual reading must be taken by the Company at least once within a twelve-month period for meters which are read bi-monthly and once within a six-month period for meters which are read monthly”. NS Power has not provided any reasonable justification why a similar option could not be available to opt-out customers.

[684] The Board is not persuaded that implementing semi-annual or monthly manual meter readings and applying opt-out fees is the only option that should be made available to customers. Based on the concerns noted above, the Board denies NS Power’s request to impose opt-out fees or to amend related regulations at this time. NS Power is directed to address this in a compliance filing.

3.10.3 Revised Fees and Regulations

[685] In its application, NS Power proposed revisions to its Schedule of Charges, such as for connection, reconnection, returned cheques, installation of recording equipment, contribution for three-phase service, load research charges, and pole attachment fees. Subject to the Board’s findings above relating to the AMI opt-out fee, the Board approves these revisions.

4.0 OTHER ISSUES

4.1 Demand Side Management Cost Recovery Rider

[686] In this GRA, NS Power proposed changes to the methodology for calculating the Balance Adjustment (BA) but did not propose changes to the Demand Side Management (DSM) rider amounts for 2026 or 2027. NS Power filed its DCRR application for recovery of the 2026 DSM expenses, using the current DCRR framework, on October 22, 2025 (M12521). The Board’s Interim Order of December 22, 2025,

approved continuation of the 2025 DCRR charges commencing January 1, 2026, until further order of the Board in that matter, or as part of NS Power's ongoing general rate application. The 2026 DSM expenditure level was set at $63.75 million by legislation and in this GRA, NS Power assumed the same expenditure level for 2027. Similarly, it assumed continuation of the DCRR amounts for 2026 or 2027.

[687] In proposing the change to the BA methodology, NS Power's response to Board IR-143 referenced the flexibility for E1 to re-allocate DSM expenditures between rate classes within a DSM term, and recent legislative changes which prescribe five-year DSM terms beginning with the 2027-2031 DSM Plan. It noted that the end-of-term true-up under the current framework might result in large variances to be collected or refunded through the DCRR. The new proposal would extend the recovery or refund period for end-of-term variances, which is expected to reduce the volatility in rate impacts of DSM expenditure reallocations and better reflect the multi-year nature of DSM planning and spending.

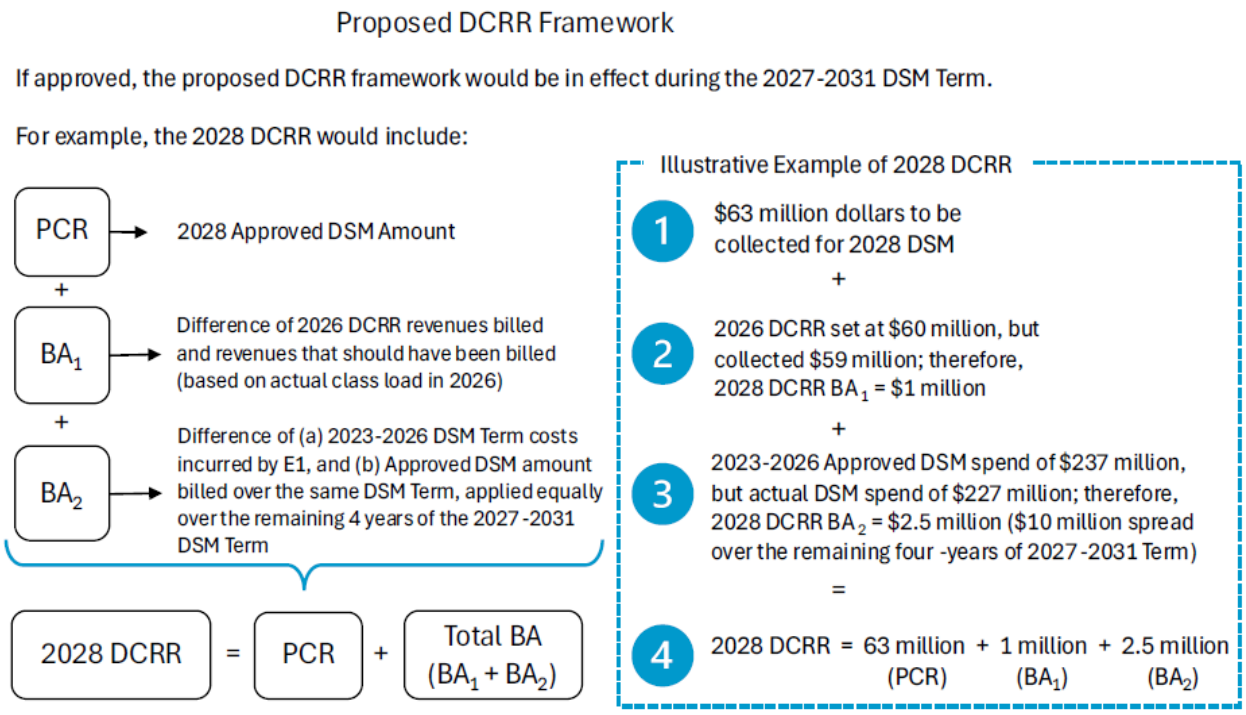
[688] The proposed DCRR framework adds a BA_2 component to the BA to reconcile, by rate class, the differences between E1's approved and actual DSM expenditures following the completion of the prior DSM Plan term. Under the current DCRR framework, those variances would be trued up and recovered over one or two years. The proposed BA_2 allocates those variances evenly over a four-year recovery period, beginning in year two of the following term, reducing the volatility in rates driven by E1 expenditure decisions.

[689] In addition, the proposed framework will allocate 100% of the DSM costs to classes in accordance with DSM program spending. This is intended to align with feedback and the recent COSS. In Matter M12521, NS Power stated:

> NS Power is proposing to amend the allocation of the Demand Side Management (DSM) Rider. Currently, the DSM Rider is allocated as 75 percent to the cost of programs undertaken for the rate class, with the remaining 25 percent allocated to the system benefit of the programs. Based on stakeholder feedback, NS Power is proposing to remove the allocation to system benefit, so that 100 percent of DSM Costs will be allocated to classes in accordance with program spending. This will more accurately align cost responsibility with the direct beneficiaries of DSM program spending. The 25 percent allocation to system benefit that was used previously was an arbitrary number, as discussed in NS Power's response to CA DR-87, which includes an analysis demonstrating that very little system benefit is provided by the DSM Rider. The change of allocation to remove system benefit, and allocation of the DSM Rider 100 percent to program costs, will also serve to place NS Power in better alignment with other jurisdictions and allow for simplification of the COS treatment of these costs. This is also described in more detail within the Elenchus Report.
>
> [M12521, Exhibit N-1, p. 5]

[690] The proposed BA methodology will include the annual volume variance adjustment (BA_1), calculated by class, for the difference between the actual revenues billed and the forecast revenues for the previous calendar year. That component will be applied on a two-year lag. An End of Approved DSM Term Adjustment (BA_2) will also be included, which trues up the differences by class between the approved and actual spending over the most recent DSM term (period governing the supply agreement). That amount will be calculated in the first year of the next DSM term and will be applied over the four following years of the DSM term. The BA will reflect the annual volume variance adjustment each year and the DSM term adjustment after the conclusion of each term.

[691] In its response to Board IR-143, NS Power provided a graphic of the proposed framework:



[Exhibit N-27, NSEB IR-143, p. 2]

[692] In the example, BA_1 reconciles volume-based variances and BA_2 adds a DSM expenditures-based reconciliation mechanism. Variances following the end of the 2023-2026 DSM term would be calculated in 2028 and allocated across the remaining four-years of the 2027-2031 DSM term (i.e. 2028, 2029, 2030, and 2031).

4.1.1 Findings

[693] The Board's Interim Order in Matter M12521 approved continuation of the 2025 DCRR charges commencing January 1, 2026, until further order of the Board in that matter, or as part of NS Power's GRA. In this current matter, NS Power is not proposing changes to the DSM rider amounts for 2026 or 2027, but it is proposing changes to how the Balance Adjustment (BA) is calculated. Updated values for the rider amounts in 2026 will be approved in a final order in Matter M12521. Rider amounts for 2027 will be determined in a subsequent DCRR annual application.

[694] The Board notes that the proposed DCRR tariff amendments are intended to address potential end-of-term variances, as well as variance associated with E1's flexibility to re-allocate DSM expenditures between rate classes within a DSM term. Since those amendments are expected to improve the DSM cost recovery process, the Board approves the amended DCRR tariff.

4.2 Storm Cost Recovery Rider

[695] During the 2023-2024 GRA process, participants raised a concern about the asymmetrical nature of the Storm Cost Recovery Rider (SCRR). The current SCRR allows for NS Power to apply to recover Level 3 and 4 storm costs it incurs above those amounts included in the approved revenue requirement. However, it does not provide a mechanism by which funds could be returned to customers if the forecast amounts included in revenue requirement were not fully spent.

[696] In this application, NS Power is requesting approval to continue the SCRR as a pilot during 2026 and 2027. It is also asking that the SCRR be in place on a symmetrical basis, which would allow it to recover Level 3 and 4 storm OM&G restoration costs above those included in revenue requirement, and for any underspend of such costs to be returned to customers in each year.

[697] The key elements of the proposed SCRR are the same as what was approved in the 2023-2024 GRA, but with the added symmetrical component. It is worthy to note that storm costs eligible to be included in the Storm Cost Recovery Rider in any given year cannot exceed 2% of that year's forecast retail revenues. Eligible storm costs in excess of the 2% cap will be deferred to the subsequent year's SCRR.

[698] A new term proposed to be included in the amended SCRR states:

> However, if the actual Level 3 and Level 4 storm costs are below the amount of Level 3 and Level 4 storm costs included in NS Power's revenue requirement as approved by the NSEB, the Company will track any underspend in a SCRR Customer Account where it will be accumulated until a threshold amount of $2.5 million is reached or a balance has been held for three consecutive years, upon which time NS Power will make an application to return the underspend amount to customers.
>
> [Exhibit N-4, PR-01, Attachment 01V, p.1]

[699] The 2026 and 2027 values for the SCRR rider are zero but NS Power's forecast expenditures for OM&G storm restoration costs in 2026 and 2027 are:

Figure 13-2 – Storm Restoration OM&G Costs (Levels 1-4)

	Level 1 & 2 ($ million)	Level 3 & 4 ($ million)
2026	9.6	10.1
2027	9.8	10.3

[Exhibit N-3, p. 85]

[700] Level 3 and 4 forecasts are similar to the previous three years, but Level 1 and 2 forecasts are more than 30% above the amounts in each of the previous three years.

4.2.1 Findings

[701] As noted above, the 2026 and 2027 values for the SCRR rider are zero. The proposed amendments are expected to correct the unbalanced asymmetrical nature of the current version of the rider. The amendments should also minimize administrative burden that could result from requiring annual applications to refund small amounts of underspent funds. Recognizing these enhancements, the Board approves the proposed version of the SCRR to continue as a pilot during 2026 and 2027.

4.3 Climate Change Adaptation Plan

[702] The NSUARB, in its decision in NS Power's last general rate application, directed the utility to develop and file a climate change adaptation plan in consultation with interested parties:

> [339] The Board also notes that in its response to Board IR-171 [Exhibit N-69], NS Power identified a number of steps it is taking to address the challenge of a changing climate, as well as to meet increasing expectations from customers to mitigate risks from severe weather events. The Board is aware that utilities in other jurisdictions have developed formal climate change adaptation plans. For example, Hydro-Québec recently released a Climate Change Adaptation Plan for 2022-2024. Additionally, the Board understands that organizations like Electricity Canada and the Electric Power Research Institute have developed guidance documents for utilities to develop such plans and climate change adaptation strategies.
>
> [340] It is not clear to the Board whether the items identified by NS Power in its response to NSUARB IR-171 are part of a formalized Climate Change Adaptation Plan adopted by the Company. The Board considers that the implementation of such a plan, through a consultative process, may be useful in demonstrating the prudency of storm restoration costs in Storm Rider cost recovery applications, would engender confidence in such a rider if NS Power seeks to implement one after the period covered by the GRA Settlement Agreement, and would enhance NS Power's capital expenditure processes and integrated resource planning. As such, NS Power is directed to engage in a consultative process to develop a Climate Change Adaptation Plan to be filed with the Board no later than the end of 2025. As with the COSS and Line Loss Study discussed later in this decision, the Board approves the deferral of the costs of developing this plan for recovery through rates after NS Power's next general rate application.
>
> [2023 NSUARB 12]

[703] NS Power filed a Climate Change Adaptation Plan and Wildfire Mitigation Plan in this proceeding [Exhibit N-5, Appendix 3B and Appendix 3C]. NS Power said it did have a climate adaptation plan before its last general rate application but noted the directive required a consultative process to develop a formal plan. It said the consultation process primarily relied on engagement with the Climate Adaptation Leadership Program and a technical conference with intervenors held before formally filing the plan as part of this general rate application.

[704] The essence of NS Power's Climate Change Adaptation Plan involves the collection and analysis of climate data and feeding this into its existing asset management system. While the plan references the identification of climate related vulnerabilities for

operational assets, it does not set out much detail about these vulnerabilities, potential mitigation measures to address them or the timelines involved. NS Power addressed this at the hearing:

> **Q.** So why doesn't this plan sort of identify what this valuable information is that you've gathered about the vulnerabilities and identify the potential mitigation measures and the timelines for the Board and interested parties? It all seems to be under the hood, as it were, in the asset management system. Why isn't it included transparently in the plan?
>
> **A.** (MacIntosh) So these factors evolve over time. The company does deploy systems asset management mechanism system, which includes the input of climate risks in our risk profiles, as well as the Climate Adaptation Management System which house those. But I appreciate your point that there are, I'll say, thousands of lines of associated data that is included in our climate modelling that's assigned to these assets. So we try to provide a sample of that inside this Climate Adaptation Plan, which is really trying to outline the methodology Nova Scotia Power used to incorporate these climate factors into our plan processes. But appreciate the point again that there's much more data that's associated with this and how those are assigned to our specific asset classes.
>
> [Transcript, January 12, 2026, pp. 1030-1031]

[705] Hydro-Québec's Climate Change Adaptation Plan (2022-2024), entered in this proceeding as Exhibit N-62, was also the subject of questions presented to NS Power's witnesses at the hearing. As outlined in the Hydro-Québec plan, that utility developed its plan in two phases. The first phase consisted of compiling a list of climate change risks that could affect assets and the second phase focused on establishing action areas, identifying potential adaptation measures and determining what actions to take to mitigate risks. NS Power appeared to agree that while it undertook a process comparable to the first phase of the development of the Hydro-Québec plan, the NS Power plan does not present information consistent with the second phase. NS Power maintains that its plan presents the method it has been and will continue to use to identify and undertake climate adaptation measures.

[706] Likewise, the Hydro-Québec plan included "fact sheets" that describe climate related impacts on utility activities or assets, provide further information for

context, list the actions to address the particular issue and the potential adaptation measures, and identify any challenges to overcoming mitigating those risks. NS Power's plan has no similar information. However, NS Power said this information is in its climate adaptation management system, a program database, and could be provided.

4.3.1 Findings

[707] The fact that NS Power compiles and analyzes climate data and uses this information in its asset management systems is positive. However, NS Power's Climate Change Adaptation Plan is more of a process than a plan per se. It also focuses specifically on assets and is less directly connected to its other resources and operations.

[708] As noted above, part of the NSUARB's intention in directing the development of a climate change adaptation plan was to assist in demonstrating the prudency of storm restoration costs, engender confidence in NS Power's storm cost recovery rider and enhance its capital expenditure and integrated resource planning processes. The Board is concerned that what NS Power has presented has not and will not fully achieve these objectives.

[709] NS Power's asset management processes were recently reviewed (2024 NSUARB 59) and there were only limited concerns raised about them, which the utility has taken steps to address. While these processes may very well be reasonable and adequate, they are not very transparent.

[710] Further, it is not apparent to the Board that regular intervenors in proceedings involving NS Power were included in the development of NS Power's plan. What was described by NS Power in the evidence in this proceeding was a more modest level of consultation with those parties than the Board would have expected.

[711] The Board finds that NS Power's Climate Change Adaptation Plan would be enhanced if, like the Hydro-Québec plan, it included information to more clearly and transparently describe and provide context around potential or anticipated climate related impacts on utility resources, activities and assets; actions to address issues identified; potential and likely adaptation measures; and any challenges to mitigating risks. NS Power is directed to file a revised Climate Change Adaptation Plan with the Board adding these elements no later than October 1, 2026.

4.4 Lingan Unit 2 and Trenton Unit 5

[712] In its general rate application, NS Power assumed sustaining capital expenses of $20,829,182 at Lingan 2 during the 2026-2027 test period, including $18,433,591 in 2026 and $2,395,591 in 2027 (Bates White IR-11, Attachment 1). At the hearing, NS Power stated that, based on the latest information, the forecast sustaining capital costs for Lingan 2 are now projected to be deferred from 2026 to 2027.

[713] Moreover, it forecasts OM&G costs of $8.9 million at Trenton Unit 5 and Lingan Unit 2 during the test period due to a change in the retirement assumptions for these coal units and increased hours of operation [Exhibit N-6, Appendix 7C, PDF p. 63]. The OM&G costs include increased labour, contracts and materials resulting from the need for these units to remain available for dispatch until at least 2027 for Lingan 2 and 2029 for Trenton 5 [Exhibit N-23, GT IR-26]. The increased OM&G labour costs for these two coal units represent an increase of 49 FTEs in 2026 compared to 2024CR [Exhibit N-27, NSEB IR-42, pp. 2-3].

[714] In its evidence, Bates White noted that the forecast sustaining capital costs at Lingan 2 marks a departure from recent experience at the coal unit and represents a relatively "substantial cost" for the modest amount of energy the unit is forecast to provide

in the test period. It recommended that the proposed large increase in sustaining capital costs for Lingan 2 “be supplemented with additional narrative support” by the company.

[715] In response to questions from Board Counsel and the Board, NS Power stated that until now the company has managed the risks of operating Lingan 2 through asset management techniques, including “operational restrictions and enhanced monitoring”. It said it has delayed major refurbishment work but now a complete turbine and generator refurbishment is needed to maintain the safe operation of the coal unit. It also noted that sustaining capital for Lingan 2 has been very low compared to other units. Failure to conduct refurbishment work could result in significant consequential damages.

[716] Jonathan MacIntosh, Director of Enterprise Asset Management for NS Power, testified that any capital projects for Lingan 2 will be “brought before this Board for approval in addition to its operating cost, so approving this GRA does not approve the Lingan Unit 2 capital”. However, he acknowledged in questioning by the Board that those costs are embedded in the proposed rates (Transcript, January 9, 2026, p. 694).

[717] NS Power stated that these coal units have been retained to serve customer load and provide system capacity, as required by the North American Electric Reliability Corporation (NERC) and Northeast Power Coordinating Council (NPCC) requirements. It explained the changes to the coal plant retirement timelines:

> (a) The retirement assumption for Lingan 2 changed in Q2 2024 following the completion of the 2024 Load Forecast (which had an increase of 108 MW in the forecast firm peak for 2024) and concurrent with the development of the 2024 10-Year System Outlook. The resource and capacity assessment developed for the 2024 10-Year System Outlook identified that due to the change in the load forecast it was necessary to extend the use of Lingan 2 until replacement firm capacity procured by IESO-NS came online. An updated retirement date of 2027 for Lingan 2 was provided in the 2024 10-Year System Outlook, which was submitted to the Board on June 27, 2024. The change in the forecast retirement date for Trenton 5 to 2027 was a finding of the 2023 Evergreen IRP. It was first reflected in the 2023 10-Year System Outlook, and is shown in subsequent reports. The decommissioning timeline for Trenton 5 was further updated in the 2024 Decarbonization Deferral Account (DDA) - 2024 Annual Report. The update in the 2024 DDA report reflects the need to maintain units available until reliable

> operation of replacement generation has been established and that decommissioning activities are not expected to begin until after 2029.
>
> [Exhibit N-23, GT IR-26, pp. 1-2].

[718] In a recent application for Lingan 2 sustaining capital costs, NS Power noted that IESO Nova Scotia is responsible for the procurement of fast-acting replacement generation, but "given the lead times seen across the industry for new combustion turbines, it is increasingly unlikely that the NSIESO's procurement process will allow new fast-acting generation units to be online by Winter 2027-28" [Exhibit N-60, p. 2]. Accordingly, it is keeping Lingan 2 in cold reserve until the reliable operation of replacement generation is available. NS Power confirmed that it has expressed its concerns to IESO Nova Scotia about the latter's procurement of fast-acting generation and its implications, including in relation to Lingan 2.

[719] In its closing submissions, the Department of Energy submitted that the Board assess the utility's need for additional investment in Lingan 2 and to deny NS Power's request for sustaining capital costs.

4.4.1 Findings

[720] NS Power's firm capacity requirements in advance of 2030 continue to be the subject of review in several matters considered by the Board, including the Evergreen IRP Action Plan and Roadmap Update, the 10-Year System Outlook Report, the Load Forecast, the annual ACE Plan and The Path to 2030. The approval of sustaining capital costs for Lingan 2 is not an issue under review in this matter. While the Board is mindful of the concerns expressed by the Department of Energy and Bates White, NS Power's request for sustaining capital costs will be considered in another proceeding. The 2026

ACE Plan matter (M12619) noted that the application will be filed as a subsequent submittal.

[721] OM&G costs of $8.9 million are forecast at Trenton Unit 5 and Lingan Unit 2 during the test period. NS Power has demonstrated in various proceedings that Lingan 2 and Trenton 5 are required to maintain adequate capacity to serve customers, including keeping a planning reserve margin required by NERC and NPCC. These detailed proceedings have included the Evergreen IRP Action Plan and Roadmap Update, as well as the 10-Year System Outlook Report and the Load Forecast which are updated annually.

[722] The Board finds that the proposed OM&G costs for Lingan 2 and Trenton 5 are required to provide customers with safe and reliable service. They are also required to support compliance with important NERC and NPCC requirements. Accordingly, the Board approves the forecast OM&G costs for these units in the test period.

4.5 Rate Setting – Alternative Form of Regulation

[723] In its closing submissions the Nova Scotia Liberal Caucus urged the Board to exercise its statutory authority to move Nova Scotia toward a five-year rate plan that delivers stability, predictability, and fairness for ratepayers. Although the Liberal Caucus specifically referenced the Board's ability to approve multiyear rate applications under s.64A(2B) of the *Public Utilities Act* in its opening statement, more recent legislation provides more flexibility.

[724] The *Public Utilities Act* was amended in 2024 to allow the Energy Board to approve an application for a rate, toll or charge that is based on a method or technique the Energy Board considers appropriate, including an “alternative form of regulation” (s.

64(3)). This is consistent with language in the *Energy and Regulatory Boards Act* (s. 6(1)), which also provides a definition of “alternative form of regulation”:

> **Interpretation**
> **2** In this Act, unless the context otherwise requires,
>
> “alternative form of regulation” means a method of establishing just and reasonable rates, tolls, charges and tariffs by performance-based regulation, including earnings sharing, price caps, price indexing formulas, ranges of authorized rates of return and the increase, reduction or suspension of regulatory requirements, without regard to methods based strictly upon cost of service, rate base and rate of return;

[725] The possibility of implementing an alternative form of regulation was canvassed at the hearing and NS Power agreed that it was worthy of discussion. NS Power revisited this in its closing submissions:

> NS Power agrees that multi-year and performance-based rate plans warrant consideration. In theory, these plans could assist with providing for more predictable rate increases and a better understanding for customers, but the practical reality of implementing such plans is a much more complicated endeavor where an improved regulatory regime is not a certainty. Consideration of such plans must include how they may work and may improve on the current regulatory regime, taking into account the vertically integrated nature of NS Power and the work needed to meet Nova Scotia’s 2030 decarbonization goals. Included in these considerations would also be the establishment of the IESO-NS and the extent to which it will alter (1) existing regulatory responsibilities, such as RES and emissions compliance, as well as development, implementation, and oversight of wholesale and renewable to retail market tariffs, and (2) existing regulatory mechanisms, such as the FAM. NS Power would welcome the opportunity to continue such discussions with the Board and regulatory stakeholders to help the Board determine whether more detailed consideration would be appropriate.
>
> [NS Power Closing Submissions, p. 54]

4.5.1 Findings

[726] While the Board appreciates the complexity and challenges, a transition to performance-based rates should be explored. Key goals in such a transition would be the development of more predictable rate setting processes, the reduction of regulatory burden and the better alignment of utility incentives and customer interests. The Board will further consider how this may be moved forward.

4.6 Implementation of New Rates (Cyber Incident Impact)

[727] At the hearing, NS Power said that it now has communication with roughly 400,000 of its customer meters and has targeted the end of March to have all meters (approximately 555,000) communicating. It noted, however, that it was going to take time to get data from new meter reads and input that data into bills.

[728] NS Power explained that when a rate increase is implemented, it prorates the application of the new rates based upon the amount of time in the billing period that they were in effect. It also agreed that there was a potential that a longer period of time between actual meter readings might exist because of the cyber attack and that higher usage in a colder period could be charged at a higher than approved rate for that period of time given the impact of prorating rate changes:

> **THE CHAIR**: Isn't the potential now, though, right now, that there is customers who have gone on for a longer period of time between actual reads than would have been the case with prior rate increases?
>
> **MR. WILLIAMS**: There is — I do believe there is that potential, but I think it's certainly much more reduced than it would have been two or three months ago for sure.
>
> **THE CHAIR**: Okay. But still some customers who have larger than you would want periods where you're in between actual reads, you might be proportionately estimating for purposes of rate changes across potential seasons in terms of use?
>
> **MR. WILLIAMS**: I don't know that would be estimating across potential seasons at this point, but I think there is the potential there that it's longer than it would have been in some instances. But I would note that, I mean, prior to AMI technology we would have been in a very similar situation. We would have meter readers out there more regularly, and more meter readers on staff. But the issue is not a new one, in terms of having to estimate — the potential to have to estimate a bill despite the fact that there's been a rate increase.
>
> **THE CHAIR**: Well, it's colder now. So if a customer is using more electricity now, and we don't get a decision now and effective rates don't come in [‘till] March, April, whenever, part of the period is going to be an early colder period where it should be a lower rate, and part would be a higher rate but would be warmer when they're, perhaps, using less electricity. But your response is to prorate that across all of them, which would in effect have the customer really paying a little bit higher than they would otherwise. Correct?

> **MR. WILLIAMS**: Yes, sir, I agree. I mean, that is a reality in -- anytime there has been an increase in the past. And I'm going to keep going back, I suppose, to the fact that we've got 400,000 communicating at this point in time, and we do believe we're on track for March.
>
> [Transcript, January 9, 2026, pp. 788-790]

[729] NS Power also stated that when it is able to read data from the meters, it can recover stored data about historical use in the range of 60 to 90 days. However, the data is only stored for that finite period and does not include some information, such as interval usage (e.g., 15-minute interval usage).

4.6.1 Findings

[730] The Board is concerned that customers who have higher usage during the recent colder period of the year might end up paying more than the approved current rate for the electricity they are currently using because of the impact of prorating. This concern is exacerbated in cases where the period of time between actual meter reads has been prolonged because of the cyber attack.

[731] The Board understands that before the implementation of AMI meters, the implementation of a new rate in the middle of a billing cycle might mean that the bill for that period would need to be prorated. However, it is not clear to the Board why any bill rate change needs to be prorated if an AMI meter is used. As the Board understands it, an AMI meter would be able to precisely determine the amount of energy used before a new rate came into effect and after the new rate came into effect. In such circumstances, the Board would expect the approved rates at the time the energy is consumed would be used.

[732] Unless NS Power is able to provide a compelling reason in its compliance filing demonstrating that it is not possible to use AMI data to avoid prorating bills to accommodate its proposed rate increase, the Board directs that the bills covering the time

that the new rates come into effect be prepared on the basis that the energy consumed in the billing period is charged at the actual rate that was in effect when the energy was actually used.

5.0 SUMMARY OF MAJOR FINDINGS AND DIRECTIVES

[733] The Board approves most components of the settlement agreement, subject to its findings below that amend the application. The following are approved:

- Maintaining NS Power's current return on equity of 9.0%, with an earnings band of 8.75% to 9.25%. The equity thickness for rate setting purposes remains at 40.0%;

- The establishment of the securitization deferral to defer depreciation expenses and financing costs related to the coal plants and thermal-related assets within the scope of the Decarbonization Deferral Account, but only effective from the date the rate increases in this application are implemented;

- NS Power's proposed depreciation rates. The depreciation study is approved, including the exclusion of decommissioning costs for the Wreck Cove, Mersey and Tusket hydro plants; the inclusion of partial decommissioning costs for NS Power's other hydro plants; the net salvage rates for plant accounts both within and outside the settlement agreement; and the asset service lives presented in the application;

- The proposed cost-of-service methodology and cost allocation among the various customer classes, except that NS Power is directed to implement a load carrying capability adjustment to account for the demand component served by the minimum system used to classify distribution system costs and to address other cost-of-service issues as noted in this decision;

- The PHP Deferral account, based on the assumptions in the settlement agreement, to track any variances in revenue between that which would occur based on the assumptions in the cost-of-service study treating PHP as an Above-the-Line customer versus that which results from the eventual Board-approved tariff for PHP. NS Power estimated $18.2 million would accrue in the deferral if PHP remains as a Below-the-Line customer for the entirety of 2026 (Undertaking U-2), and there would also be a $5.7 million fuel balance captured under the FAM;

- The EIFEL deferral, allowing NS Power to defer incremental tax expense of about $7 million if an exemption is not enacted by the Government of Canada as it has announced;

- The inclusion of four Maritime Link transmission capital projects in rate base. The amount to be included in rate base is the net book value of these assets as of the date of the Board's Order;

- Continuing the Storm Cost Recovery Rider pilot in 2026 and 2027, but on a symmetrical basis, which allows for underspent Level 3 and 4 costs to be returned to customers;

- The change to the tariff language for the Demand Side Management Cost Recovery Rider;

- Revising the Open Access Transmission Tariff (OATT) rates to reflect changes in the generation and transmission asset mix and costs, changes in system usage since the last update in the 2023-2024 GRA, Board directives from the 2023-2024 GRA, and the revised methodology from the 2024 Cost of Service proceeding; and

- Other miscellaneous fee changes under the Schedule of Charges, such as for connection, reconnection, returned cheques, installation of recording equipment, contribution for three-phase service, load research charges, and pole attachment fees.

[734] However, the Board has made findings amending the general rate application and parts of the settlement agreement. It has made several adjustments in this decision to reduce NS Power’s proposed revenue requirement or adjust the allocation of costs among customer classes, including:

- A further reduction of $8 million in Operating, Maintenance and General expenses in each of 2026 and 2027 (over and above the $9 million outlined in the settlement agreement);
- A reduction in NS Power’s proposed executive compensation in both 2026 and 2027 to be consistent with the *Nova Scotia Power Incorporated Regulations*;
- The denial of NS Power’s proposed deferral of general rate application OM&G costs (GRA deferral) for collection over the 2026-2027 period;
- A reduction of $1.8 million in fuel and purchased power costs in 2026 to reflect the present estimate for Maritime Link assessment costs, and to update the current 2027 estimate;
- A peak load carrying capability adjustment of 0.4 kW per customer applied as a credit to the non-coincidental peak demand for determining the minimum system demand allocators for the distribution system costs (this change transfers the related costs from domestic, small general and unmetered customers to other rate classes) (Undertaking U-6); and

- The denial of the proposed AMI opt-out fee.

[735] The Board has issued the following directives to NS Power:

- To provide a reconciliation showing the annual collection of interim and final net salvage in rates from 2009 onwards in its next depreciation study. This information is to be presented for actual interim salvage costs that have been incurred each year for each of the hydro assets where NS Power has proposed to cease collection of the final net salvage costs for the assets (para. [166]);

- To undertake a consultation process with interested parties about the decommissioning of hydro plants and to report on the results of the consultation every six months, starting no later than October 1, 2026 (para. [189]);

- To file an updated depreciation study with its next general rate application, with several directives to address a comparison of the ALG and ELG methodologies, including, but not limited to:

    - The interaction between depreciation expense and return on rate base;

    - The extent to which actual true aged data has been used;

    - A NS Power specific ALG vs. ELG cross-over point analysis;

    - Comparison to other peer utility data, particularly related to actual age data, the retirement patterns experienced by those utilities, recommended asset service lives, and a description of what forces of retirement those utilities have that are consistent with those of NS Power;

    - Identification of specific factors in Nova Scotia that differ from other peer utilities that would lead to a higher rate of retirement or greater forces of retirement;

    - The book accumulated depreciation reserve balance and calculated accumulated reserve balance under both the ALG and ELG procedure;

    - An evaluation of whether a change to the ALG procedure would violate the principles of gradualism and moderation, and whether a “phasing-in” of ALG would be appropriate; and

    - The proposed depreciation by asset account under both ELG and ALG procedures (paras. [233-234]);

- In its next depreciation study, to address Mr. Madsen’s recommendations related to asset service life accounts 354, 356, 367, and 390.10 (para. [254]);

- In its next depreciation study, provide at minimum the following information in support of both production Plant and mass property:

    - Detailed management notes for each account;

    - All analysis and studies performed by management for each asset to confirm the expected life;

    - All updated IRP documents;

    - A reconciliation of the lives proposed in the depreciation study to the lives proposed in the IRP; and

    - The peer analysis relied upon by the company in an Excel file (para. [255]);

- To address the additional cost-of-service concerns raised by Synapse in its application to the Board later in 2026, as required in the settlement agreement, in addition to the review of the minimum system v. basic customer method for allocating distribution system costs (para. [616]), as well as the analysis necessary to calculate the load carrying capability of its minimum system (para. [627]);

- To address the issues raised by Renewall in its closing submissions, if the utility brings forward any application relating to the OATT tariff or charges before responsibility for the transmission tariff is transferred to the Nova Scotia Independent Energy System Operator, including if NS Power files a general rate application (para. [642]);

- To address the setting of customer charges in its next general rate application (para. [653]);

- To file a revised Climate Change Adaptation Plan by October 1, 2026, outlining climate related impacts on the utility's resources, activities and assets; actions to address the issues identified; potential and likely adaptation measures; and any challenges to mitigating risks (para. [711]); and

- Unless NS Power is able to provide a compelling reason in its compliance filing demonstrating that it is not possible to use AMI data to avoid prorating bills to accommodate its proposed rate increase, the Board directs that the bills covering the time that the new rates come into effect be prepared on the basis that the energy consumed in the billing period is charged at the actual rate that was in effect when the energy was actually used (para. [732]).

6.0 COMPLIANCE FILING

[736] NS Power is to file a compliance filing based on the Board's findings in this decision. The compliance filing is to include, among other things:

- A further reduction of $8 million in Operating, Maintenance and General expenses in each of 2026 and 2027 (over and above the $9 million outlined in the settlement agreement);
- A reduction in NS Power's proposed executive compensation in both 2026 and 2027 to be consistent with the *Nova Scotia Power Incorporated Regulations*;
- The denial of NS Power's proposed deferral of general rate application OM&G costs (GRA deferral) for collection over the 2026-2027 period;
- A reduction of $1.8 million in fuel and purchased power costs in 2026 to reflect the present estimate for Maritime Link assessment costs, and to update the current 2027 estimate;
- To make the change to s. 3.2.8 of the FAM POA discussed in NSEB IR-33 and the other proposed amendments to the FAM POA and to the FAM Tariff;
- A peak load carrying capability adjustment of 0.4 kW per customer applied as a credit to the non-coincidental peak demand for determining the minimum system demand allocators for the distribution system costs (this change transfers the related costs from domestic, small general and unmetered customers to other rate classes) (Undertaking U-6); and
- The denial of the proposed AMI opt-out fee.

[737] NS Power is directed to file a compliance filing no later than two weeks after the date of this decision. Intervenors will have one week from the date that NS Power files its compliance filing to provide submissions to the Board. NS Power may file a reply within one week from the date the Intervenors file submissions.

[738] The Board approves NS Power's application, subject to the Board's findings and directives in this decision. The Board approves the rates and charges for 2026 effective the date of the Board's Order approving final rates in this matter and the rates and charges for 2027 effective January 1, 2027.

[739] Although the NSUARB approved rate increases in NS Power's last general rate application effective the date of its decision, this is not the normal practice. The normal practice, assuming an intention to implement rates on January 1st, is for NS Power to file its application early enough to allow for an appropriate process to occur and a decision to be made before January 1st. As noted earlier, NS Power did not file its application until late September 2025, practically ensuring that the matter would not be concluded before year-end.

[740] Failing that, the normal process is for rates to come into effect on the date of the Board's final Order in the matter. The exercise of the Board's discretion to do otherwise in NS Power's last general rate application was done in the unique circumstances arising at that time and it did not reflect the longstanding requirement for a compliance filing to determine the rates before they came into effect. Moreover, because new rates cannot be implemented until a final Order, if rates come into effect on the date of the Board's decision, then any bills issued after the Board's decision but before a final Order following a compliance filing would necessarily need to be retroactively adjusted. It is potentially confusing and frustrating for customers to see these sorts of adjustments on future bills. At the present time, this would only be aggravated because of recent and ongoing customer concerns about NS Power's estimation and billing practices in the wake of the cyber incident. In any event, the Board finds that allowing rates to come into effect on the date of a decision rather than when finalized in an Order should not become a customary practice.

[741] An Order will issue following the compliance filing.

DATED at Halifax, Nova Scotia, this 25th day of March 2026.

PREPARED DIRECT TESTIMONY OF PATRICK M. CICERO

I. Introduction and Background

Q: Please state your name, occupation, and business address?

A: My name is Patrick M. Cicero. In my role as Of Counsel at the Pennsylvania Utility Law Project (PULP), I have a broad range of responsibilities to PULP and its clients. For example, when I am not representing any clients as an attorney, I provide analysis and testimony on utility matters for clients who are represented by members of the statewide legal aid network, including clients of PULP and other legal aid offices. PULP's business address is 118 Locust Street, Harrisburg, PA 17101.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA filed a complaint at this docket because it was concerned that the terms, conditions and rates for gas service proposed by UGI Utilities, Inc. – Gas Division (UGI or the Company) are neither just and reasonable nor affordable for UGI's low income customers. CAUSE-PA retained PULP to represent its interests. While other attorneys at PULP are representing the legal interests of CAUSE-PA, I have been asked to provide testimony about UGI's overall rate increase request, including its rate design, its existing tariff provisions, its proposed tariff changes, and the overall adequacy of its policies, procedures, and programs that are designed to ensure that UGI's low income customers are able to afford and maintain gas service at just and reasonable rates.

My testimony focuses on the overall unreasonableness of the Company's revenue request, its requested return on equity of 10.75%, its rate design proposals, including its proposal to increase the fixed customer charge for Residential customers from $16.25 per month to $23.00 per month, a proposed increase of 41.5%. In addition, I provide testimony about why the Company's tariffed Weather Normalization Adjustment (WNA) pilot is neither just nor reasonable and propose that it should not be renewed. I also provide recommendations about improvements that UGI can make to its customer service and universal service programs, including its allocation of universal service costs, as well as proposed changes to its tariff. Finally, I provide recommendations about reform to UGI's purchase of receivables program as well as other retail market reforms for residential customers served by retail natural gas suppliers given that residential customers have paid more than $56 million since January 2023, on net, to be served by the retail markets than they otherwise would have paid had all customers remained on default service.

Q: Have you provided testimony before the Pennsylvania Public Utility Commission in any prior cases?

A: Yes. I have served as a witness in several proceedings, including UGI's last rate case. A full list of proceedings in which I previously testified is included with my resume which is attached hereto as Appendix A. In addition to those proceedings in which I have provided testimony, I have significant prior experience before the Public Utility Commission (PUC or Commission), including in my role as the statutory representative of consumers while serving as Pennsylvania's Consumer Advocate leading the Pennsylvania Office of Consumer Advocate.

Q: What are your qualifications to provide testimony in this case?

A: I have more than 23 years of experience as an attorney, 20 years of which have been in the practice of legal aid or consumer advocacy. After 2 years clerking for a federal district court judge, I spent approximately 5 years as a staff attorney at MidPenn Legal Services in Harrisburg where I represented clients facing eviction, foreclosure, bankruptcy, and utility termination. After returning briefly to clerk at the federal district court, in early 2011, I began working at the Pennsylvania Utility Law Project – first as a staff attorney and ultimately as its Executive Director. In 2020, I was hired to lead the statewide legal aid network when I became the Executive Director of the Pennsylvania Legal Aid Network where I coordinated the work of the legal aid system in Pennsylvania that provides civil legal aid to Pennsylvania households. On December 13, 2021, I was appointed as the Commonwealth's Consumer Advocate leading the Office of Consumer Advocate (OCA) and was confirmed by the Pennsylvania Senate in June 2022. I served as the Consumer Advocate until January 31, 2025. In February 2025, I returned to work with PULP as Of Counsel.

Throughout my tenure in each of these roles, I have had the opportunity to see firsthand the extraordinary efforts that low income customers take to remain stably housed and connected to essential utility service. Day in and day out, low income – almost all of whom struggle to survive at income levels that are at or below 150% of the federal poverty level (FPL)[1] – have been forced to make difficult decisions about which bills to

[1] To put this in context, the 2026 federal poverty guidelines for a family of 4 require that a household not have more than $33,000 in annual income to be considered poor (100% FPL) which translates to $49,500 at 150% FPL. The complete guidelines are available here: Office of the Assistant Secretary for Planning

pay and which they must forgo. I have relevant experience helping low income consumers understand their utility bills and rates, why their charges are what they are, and what assistance, if any, is available to them to help pay their bills.

Furthermore, for more than 15 years at PULP and the OCA, I was instrumentally involved in the litigation of hundreds of cases before the PUC including rate cases, default service cases, universal service and energy conservation proceedings, Act 129 cases, and numerous other proceedings that require working knowledge and expertise in the issues about which I will be testifying in this proceeding. Simply put, throughout my career both in legal aid and as the Consumer Advocate, I developed specialized expertise in the needs of low income customers, the regulation of public utilities, the nuanced design and policy considerations of utility rates, and the ways that our regulatory system often fails the very consumers it is designed to protect by prioritizing the needs of public utilities over the needs of the utility's customers. This imbalance of power between utilities and consumers has resulted in utilities increasing rates at a significant pace. It has also resulted in utilities implementing more complex rates and rate designs. Taken together, this means that consumers, particularly low income consumers, are now more than ever struggling to understand the complexity of their utility bills, including how they are calculated each month, and what they can do to rein in the ever-increasing costs to allow them to afford and remain connected to essential utility service.

and Evaluation (ASPE), Poverty Guidelines, available at: https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines (Last visited March 26, 2026).

Q: Have you prepared Appendices and Exhibits to accompany your testimony?

A: Yes. I have prepared several appendices that are attached to my testimony. Appendix A is my resume, the last several pages of which contain a list of proceedings in which I have previously provided testimony. Appendix B are the interrogatory responses that I have relied on throughout my testimony. Appendix C contained various labeled exhibits there were prepared by me or under my supervision.

Q: Do you have any preliminary matters to address?

A: Yes. As noted, I am an attorney but my role in this case is as a witness. I am not serving as counsel to CAUSE-PA or any other client in this proceeding. Throughout my testimony, I refer to decisions by regulatory agencies and courts as well as reference statutes and regulations, however, these statements are not my legal opinion and should not be confused with the legal opinions of the attorneys representing CAUSE-PA. Any reference or citation is merely to provide context and support for my opinion about the public policy and rate design issues that I address and discuss in my testimony.

Q: Please summarize your conclusions and recommendations.

A: I recommend the Commission reject UGI's request to increase its rates. The evidence shows that UGI has sufficient revenue at current rates to provide safe and reliable service, cover its reasonably and prudently incurred expenses, and has a reasonable opportunity to earn a fair rate of return on its investments even at the end of the fully projected future test year. The evidence also shows that UGI's low income customers are significantly energy burdened at existing rates and any rate increase will exacerbate that burden.

I also recommend that the Commission deny any increase in UGI's fixed customer charge and recommend that the charge remains at its currently authorized level of $16.25 per month for residential customers. This recommendation is contingent on the Commission accepting my recommendation that UGI's WNA rider produces unjust and unreasonable rates as applied to all residential rate classes (R and RT), and specifically its low income customers and that the Commission should require UGI to allow the pilot to end on October 31, 2027, as scheduled. If the Commission permits UGI to continue its WNA pilot, it should impose the additional conditions recommended in my testimony and, in that event, I do not oppose a modest increase in the customer charge as recommended in my testimony. Finally, the Commission should accept my recommendations regarding changes to UGI's purchase of receivables program and other recommendations that I am making concerning customer service and universal service programs and tariff changes.

II. Overview of Rate Request and Role of Regulation

A. UGI's Rate Request

Q: Please describe UGI's requests.

A: UGI seeks to increase the rates of its customers by $99.368 million per year, of which it seeks to recover approximately $74.675 million or 75.2% of the proposed rate increase from residential customers.[2] For residential customers, this would result in an increase in rates of 9.4%. On an individual customer basis, UGI projects the monthly bill of an average residential customer using 68.7 ccf of gas each month would increase by $9.91 per month.[3] This would increase their bill from $113.64 per month on average to

[2] UGI Statement No. 1 at 5:22; Filing Requirements, UGI Gas Exhibit E at 1 (Summary – Total Rev).
[3] UGI Statement No. 1 at 8, Table 1.

$123.55 per month on average.[4] According to UGI, when it looks into the future, it asserts that its current rates are inadequate as they would produce – without rate relief – a 7.7% return on equity as of the end of the of the Fully Projected Future Test Year (FPFTY) on September 30, 2027.[5] UGI states that it requires a return on common equity of 10.75%.[6] UGI also seeks to use its equity-skewed capital structure comprised of 54.25% equity and 45.75% debt with an embedded debt cost of 5.17%.[7] Combined, UGI seeks an overall rate of return of 8.20%.[8]

UGI seeks to collect its revenue requirement assigned to its residential customers through an increase in its residential customer charge and an increase in its volumetric charge.[9]

Table 1 - Proposed Increase

Description	Current Rate	Proposed Rate	Increase ($)	Increase (%)
Customer Charge (per month)	$16.25	$23.00	$6.75	41.5%
Distribution Charge (per Mcf)	$6.3317	$6.8383	$0.5066	8.0%

UGI also seeks to continue its WNA pilot for another five years through October 31, 2032. This pilot was first authorized by the Commission in its 2022 gas rate case at Docket No. R-2021-3030218, and which was modified in its 2025 rate case pursuant to a compromise settlement that was approved by the Commission in September 2025 at

Docket No. R-2024-2052716.[10] Pursuant to the terms of the Settlement, the pilot will end on October 31, 2027, unless reauthorized by the Commission.

B. Role of the Regulation

Q: What is the role of the Public Utility Commission in this case?

A: If you are a residential customer who lives in UGI's service territory and you need gas distribution service, you must buy it from UGI at the prices set by the Commission. You cannot buy it from anyone else at any other price. Because its customers do not have a choice to buy gas distribution service from anyone else or at any other price, UGI must receive the Commission's approval to increase its distribution rates. Consumers rely on the Commission to set rates that are fair, just, and reasonable and the Commission's job is to stand in the gap for consumers to protect them from a utility's monopolistic overreach. That is, UGI – like all monopolies with no competitors – is inclined to seek rates that are excessive and extractive. The Commission's job is to check this tendency and balance the interests and legal rights of consumers with the interests and legal rights of the utility. Overall, the purpose of rate regulation is to determine the just and reasonable rates necessary to support prudent investment that is in the public interest, and which allows a utility to earn a fair rate of return on its investment.

In addition, consistent with the Commission's suspension order in this proceeding, the Commission and parties have been charged with examining all UGI's proposed and existing rates, rules, and regulations.[11] To fulfill this charge, the Commission must

[10] Pa. P.U.C. et al. v UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, Order (Order entered September 11, 2025); UGI Utilities, Inc.-Gas Division Tariff, Supplement No. 37 to UGI Gas – Pa. P.U.C. No. 7, Sixth Revised page No. 54. ("WNA Rider").

[11] Pa. P.U.C. v. UGI Utilities, Inc. – Gas Division – Docket No. R-2025-3059523, Order at ¶¶ 1 and 4 (Order entered February 19, 2026). Vice Chair Barrow issued a statement at the time of suspension that

determine not only whether all rates sought (how much) and the chosen rate designs to collect that revenue (how those rates are collected) are just and reasonable, but must also consider the impact of rates on consumers.[12] This includes whether the programs designed to assist consumers of limited economic means are sufficient to allow them to continue to afford to maintain and access service on reasonable terms and conditions.

Q: Why must the Commission consider the impact to consumers in making its determination about the appropriate rate increase?

A: As noted, it is the Commission's job to restrain the monopolistic tendencies of public utilities.[13] Having only one provider of gas distribution service is an intentional system design because multiple companies running mains, pipes, and meters to deliver gas to customers within a geographic area would be inefficient, disruptive, and costly. Thus, in exchange for the right to serve customers without competition for its services, and the requirement and duty to provide service to all customers, gas utilities like UGI submit to price regulation by the Commission, including oversight as to rates and service quality. In exchange, the Commission must permit UGI the opportunity to recover its prudently and reasonably incurred costs, including its cost of debt, and allow it the

requested the parties to address "I urge the parties to take a critical look at the Company's requested rate of return and return on equity (ROE) as well as the capital structure (common equity ratio and debt capital) to ensure reasonableness. Pa. P.U.C. v. UGI Utilities, Inc. – Gas Division – Docket No. R-2025-3059523, Statement of Vice Chair Kimberly Barrow (February 19, 2026). ("Vice Chair Barrow Statement").

[12] Federal Power Comm'n v. Hope Nat'l Gas Co., 320 U.S. 591, 603 (1944) ("[T]he fixing of 'just and reasonable rates', involves a balance of the investor and consumer interests.").

[13] This principle, that it is the job of the PUC to restrain the monopolistic tendencies of public utilities is not new or novel, but rather foundational to the role of regulators. The PUC recently reaffirmed this principle in its Fully Projected Future Test Year Final Rulemaking Order when it said: "Inherent in the 'cost of providing service' principle of ratemaking is the recognition that public utilities are natural monopolies and that the PUC's oversight through cost-of-service ratemaking regulation serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge in the absence of price regulation." Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available at: https://www.puc.pa.gov/pcdocs/1874340.pdf (hereinafter "FPFTY Final Form Order"). (Last visited April 10, 2026).

opportunity – though not a guarantee – to earn a fair rate of return on its shareholder investments. This is generally what is referred to as the regulatory compact.

Q: Is the regulatory compact a legal concept?

A: No, it is a public policy concept, but the Commission has statutory authority and discretion to enforce the regulatory compact through the Public Utility Code. Traditionally, this is done through cost-of-service ratemaking that allows a utility the opportunity to earn its allowed rate of return through effective and efficient management. When done correctly, this benefits both customers and the utility.

Q: Please explain.

A: Traditional cost of service ratemaking serves as a substitute for the beneficial aspects of competition because it sets rates only on a forward-going basis.[14] In a competitive market, a business is not guaranteed a profit, instead it must operate efficiently and control its costs. With traditional ratemaking, this is the same pattern for a utility. Rates are set at a point in time, based on the known and measurable costs and need for revenue by the utility, and then only on a forward-going basis. Once set, the rates are fixed until changed by the Commission in subsequent rate cases. This practice encourages the utility to operate efficiently because it cannot increase rates again without Commission permission. As a result, a utility faces the risk of under recovery due to normal business risks and management underperformance. This lack of any guaranteed revenue is a significant and important protection that traditional cost of service ratemaking provides to consumers.

[14] See FPFTY Final Form Order at 4.

Q: Do we have traditional cost of service ratemaking in Pennsylvania?

A: Pennsylvania has modified traditional cost of service ratemaking in several ways, all of which generally reduce risk for the utility and place more of that risk onto consumers. I will discuss three which are relevant to this case:

- Use of Future Test Year or Fully Projected Future Test Year for setting rates to reduce regulatory lag between plant investment and recovery;[15]
- Utilities can propose and the Commission can approve alternative ratemaking methodologies such as the WNA proposed to be continued by UGI in this case;[16] and,
- Approval of a distribution system improvement charge (DSIC) to collect additional revenue over and above the authorized revenue requirement between rate cases.[17]

Each of the above modifies the traditional paradigm and shifts the risk of under recovery of the authorized revenue requirement from the utility to its customers in ways that are often subtle but cumulatively add significantly more certainty for a utility's bottom line. This shift also minimizes the incentive for a utility to operate efficiently as compared to the regulatory lag inherent in traditional ratemaking. Despite offloading risk, utilities still demand returns that are excessive when viewed from the lens of customer's ability to afford rates charged.

[15] 66 Pa. C.S. § 315(e).
[16] 66 Pa. C.S. § 1330.
[17] 66 Pa. C.S. § 1353.

Q: Please explain your concerns.

A: In general, I am concerned that UGI's combined use of multiple alternative rate mechanisms has a compounding negative impact on consumers. First, there is the use of the fully projected future test year or FPFTY. As applied to this case, UGI is projecting forward into the future what it believes its expenses, capital additions, and other costs will be as of September 30, 2027, but is asking that rates be set as of the end of the suspension period, which is October 29, 2026, on a prospective basis. Like all people and businesses, UGI does not know the future. It is making projections about what the world will be like as of the end of September 2027, but it is permitted to charge rates *as if* those projections will in fact be true as of October 2026. For example, UGI sets rates based on projections of utility plant in service by the end of the FPFTY but if it does not meet that goal then customers end of paying rates for anticipated utility plant that was not actually placed into service. Rather than prepaying UGI, they may end up overpaying UGI. The same is true of other projections – such as use per customer, number of customers, operations expenses, and the whole array of issues that are decided in a rate case. That is, effective with the end of the suspension, if any rate increase is granted, UGI would be collecting more revenue than it needs at that time because its rates are set to coincide with the world as UGI projects it to be in September 2027. The effect is to reduce the risk of under collection for UGI and shift it to consumers because consumers are, in effect, paying for the cost of providing gas distribution service based on the projection of those costs in the future – not as the costs exist when the rates go into effect. This reduces the lag associated with ratemaking for UGI by placing more risk – and cost – onto consumers. In my view, UGI's ability to charge rates ahead of when capital is invested and expenses

are incurred should reduce the authorized return that the Commission allows because UGI is already getting the benefit of its own future projections, thereby reducing regulatory lag in its collections. This reduced risk for UGI should result in a lower return on equity (ROE).

Second, the use of WNA further reduces risk for UGI – again shifting that risk onto consumers. I discuss UGI's WNA below in significant detail, but this mechanism allows UGI to spread risks to consumers that were historically born by UGI. In the absence of the WNA, if weather is warmer than normal and customers use less gas, UGI receives less revenue. This incentivizes UGI to accurately project usage and use an appropriate baseline for normalized weather when setting rates. If weather is colder than normal, UGI gets more revenue than it projected when setting rates. That is, UGI is held harmless because it always gets to collect based on normalized weather as opposed to actual weather at the time bills are rendered.

The WNA shifts more risk to consumers than they historically have not had to bear. While it is true that if the weather is colder than normal, UGI provides credit to customers because they used more gas service than was projected, this bi-directionality still means that the benefits and burdens of weather changes are shared between the utility and customers whereas in the past these risks and benefits were placed solely on the utility. Moreover, as discussed in more detail below, the issuance of credits has occurred relatively infrequently since 2022 when the WNA was first put into place. Thus, while bi-directional, the WNA rarely works to the benefit of consumers and allows UGI to offload some of its risk to customers despite UGI being the far more sophisticated party in the

endeavor. In my view, like the use of an FPFTY, this lessening of risk should result in a lower ROE.

Third, UGI has an approved Distribution System Improvement Charge (DSIC) that allows it to currently charge up to 5% additional surcharge on billed distribution revenue once it reaches its fully projected future test year and its net plant in service number. Depending on how long UGI stays out of rate cases in the future, this surcharge has the potential to result in significant additional dollars charged to residential customers. The ability of UGI to charge a DSIC also shifts future risks onto consumers because it reduces PPL's risk that rates set in this case will be insufficient to meet its planned capital plant investments. This too should reduce the ROE required by UGI on its overall ratemaking rate base because the DSIC will enable it deploy capital over and above its rates and earn a return of and on that investment.

Taken together, each of these modifications to traditional ratemaking spread risk from UGI to its customers and require substantial scrutiny by the Commission in its exercise of discretion in setting rates. All of them should result in a lower ROE than the Commission would authorize in their absence.

Q: Will you be addressing each of these issues further through this direct testimony?

A: No. I do not further address the use of an FPFTY or the DSIC. As to the projections for expenses and plant in service at the end of the fully projected future test year, the statutory advocates and others in this case will address the prudency of those expenses and capital costs and whether they will be reasonably and foreseeably incurred. I simply urge the Commission to pay attention to the projections provided by statutory advocates

and others in contrast to those of UGI, as it is critical for consumers that UGI is not permitted to overestimate its expenses or plant in service numbers. As to the DSIC, I do not address it further in this testimony. However, I would urge the Commission to remember the DSIC is a percentage-based charge and as a result, the amount UGI collects in the future when DSIC is utilized is based on its billed distribution revenue amounts. The higher the approved rates in this proceeding, the more DSIC revenue UGI can collect.

Q: Will you be addressing the WNA?

A: Yes. I address the WNA in Section V.B., of my testimony, as a component of UGI's proposed rate design.

III. Impact of the Proposed Rate Increase on Low Income Households

Q: What is the purpose of this section of your testimony?

A: To describe the impact that UGI's existing rates and its proposed rate increase has on the ability of its low income customers to reasonably afford and maintain gas service to their homes.

A. Overview of Residential Rate Class

Q: Please summarize UGI's residential rate class.

A: UGI has a general residential rate class Rate R that serves both residential customers on default service (Rate R) and customers who have elected to receive gas commodity service from a natural gas supplier other than UGI (Rate RT). There is no material distinction between these two rate classes for purposes of cost allocation, either at the class level or in terms of the rate design.

Q: How do low income customers fit within Rate R and RT?

A: The vast majority of UGI's estimated low income customers – 82% – are not enrolled in UGI's Customer Assistance Program (CAP) and thus are served under the same rates as all other general residential rate classes – Rate R or RT.[18] Some of UGI's low income customers are enrolled in UGI's CAP, which provides a reduced bill based on the household's income and ability to pay and provides other benefits such as the possibility of earning forgiveness of accrued arrears with each in full payment. Customers enrolled in CAP cannot be served by a competitive gas supplier and must remain on default service.[19] All CAP customers have discounted bills but are otherwise served under Rate R. The difference between a CAP customer's CAP bill and a full undiscounted bill is recovered as CAP credits through UGI's Rider F-Universal Service Program and charged to other residential customers.[20]

Q: How much of UGI's requested $99.4 million annual rate increase is it proposing to allocate to residential customers?

A: UGI is proposing to allocate approximately 75.2% of the increase or $74.7 million to residential customers, with the remainder assigned to small business customers, a small amount charged to Rate classes DS and LFD. UGI is proposing a rate *decrease* for all other rate classes.[21] Of this $74.7 million, I estimate the UGI is seeking to require

[18] As of January 2026, UGI reports that 26,250 customers were enrolled in its CAP. As of August 2025, UGI witness Brian Meilinger reports that UGI serves 143,404 estimated low income customers. UGI Statement No. 12 at 16. Thus, as of January 2026, 117,154 estimated low income customers – or 82% – were not enrolled in CAP. See UGI Response to CAUSE-PA 1-6, Attachment, Attached hereto at Appendix B.

[19] I support this policy as it protects UGI's low income customers enrolled in CAP, as well as other residential ratepayers who pay for the CAP program, from the consistently higher commodity costs charged in the competitive market. See Section IX, infra.

[20] See UGI Tariff Supplement No. 63 to UGI Gas – Pa. P.U.C. No. 7, Seventeenth Revised Page No. 58, Rider F – Universal Service Program.

[21] UGI Exhibit E, Proof of Revenues, Page 1 of 7.

its confirmed low income customers to pay approximately $7 million of the increase based on the fact that these customers comprise 9.4% of the residential customer class on average between 2023-2025.[22] Even this may be a low estimate because of the difference in usage between low income households and all residential customers.

Q: Why does it matter what percentage of the increase is functionally assessed to UGI's low income customers?

A: As noted later in this section, low income customers who are not enrolled in CAP cannot consistently afford to maintain gas service even at the current rates being charged by UGI, and they certainly cannot afford to pay rates at the increase sought by UGI. However, UGI's CAP participation rates are insufficient relative to the need. Furthermore, UGI's CAP costs are currently only assessed to residential customers, even though all customer classes benefit when CAP customers remain connected to service, and thus, in my view, the allocation of any revenue increase across rate classes must consider the burdens imposed on those customers bearing the heaviest increase and those most at risk of being priced out of the market for essential gas services to their home.

Q: Please explain what you mean when you state that the allocation of any revenue increase must consider the burdens imposed by customers within rate classes?

A: First, I want to note that except for my proposal in Section VII below to reallocate universal service costs, I am not taking a specific position on the allocation of the overall revenue requirement across rate classes. That is, I am not taking a position on whether

[22] This calculation is based on an average of 620,818 residential customers from 2023-2025 and average of 58,170 Confirmed Low Income Customers over that same period. See UGI Response to CAUSE-PA 1-5, Attachment, attached hereto at Appendix B and Attachment SRR-RR-3, UGI Filing Requirements. Calculations provided in Cicero Miscellaneous Workpapers, Tab 4.

the cost allocation proposed by UGI is methodologically sound. While a cost allocation guides allocation of the granted revenue requirement increase across classes, cost of service is only a guide not a master, and the Commission must consider other factors before finally allocating any granted revenue increase across customer classes.

UGI itself articulates a similar principle through its choice of allocation and its decision to propose to move all rate classes closer to the overall system rate of return.[23] UGI argues that this reduces subsidies occurring between classes[24] and thus, is a form of the argument that I make above that any rate allocation process must consider relative burdens between classes when apportioning the proposed revenue increase to its rate classes. While UGI prioritizes cost of service as the "polestar" of cost allocation,[25] thus moving rate classes closer to their relative cost of service, this is not the only consideration when determining whether rates are just and reasonable.

Notwithstanding UGI's assertions that it is adhering to principles of cost causation in its prioritization of relative rates of return, the Commission should look with suspicion at UGI's cost allocation because it is proposing to provide some rate classes (XD - Firm and Interruptible) a rate decrease based on the fact that the other rate classes are paying higher relative rates of return and thus, according to UGI, overpaying their cost of service.[26] It is my view that if an increase is approved, all rate classes should share the associated pain keeping in mind principles of cost causation and gradualism. This is particularly true when a utility seeks to impose on the most vulnerable customers – those

[23] UGI Statement No. 10 (Taylor) at 20:10-12.
[24] Id. at 20:10.
[25] See Lloyd v. Pa. P.U.C., 904 A.2d 1010 (Pa. Cmwlth. 2006), appeal denied, 591 Pa. 676, 916 A.2d 1104 (2007).
[26] UGI Exhibit E, Proof of Revenues, Total Revenue, page 1 of 7.

households experiencing poverty – a significant increase while at the same time providing a rate decrease to far more sophisticated customers with far more economic resources to bear an increase.

B. Low Income Customer Demographics

Q: Who qualifies as a low income customer?

A: The term "low income customer" is defined in the Commission's regulations and includes any residential customer whose household income is at or below 150% of the Federal Poverty Level (FPL).[27] Most utility assistance programs – including UGI's CAP – require households to have low income to receive assistance; however, there are some exceptions, including UGI's hardship fund which allows customers with income up to 250% FPL.[28]

Q: Please describe the FPL.

A: The FPL is a measure of poverty based exclusively on the size of the household and its income. It does not consider the composition of the household (i.e. whether the household consists of adults or children, and the relative associated costs) or variations in the cost of basic needs in different geographic locations. A family of four with household income of exactly 150% FPL has a gross annual income of $49,500 ($4,125/month).[29] This is significantly more income than most households who are receiving utility assistance. UGI reports that the average annual income of confirmed low income

[27] See 52 Pa. Code § 54.72 (Defining low income customers for the purposes of Universal Service programs and reporting).
[28] 2020-2025 UGI Universal Service & Energy Conservation Plan, 2022-2025, Docket Nos. M-2017-2598190; M-2019-3014966 (2020-2025 USECP) at 5, 22-23.
[29] See US Dept. of Health & Human Services, HHS Poverty Guidelines for 2026, available at: https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines. (Last visited March 13, 2026). Attached to my testimony at Appendix C, Cicero Exhibit C-1 is a table from U.S. HHS that shows the 2026 FPL at different household sizes and multiples.

customers is $20,146,[30] and the average annual income of CAP customers is $17,208.[31] This is substantially less than a household needs to meet their basic expenses in any of the counties that UGI serves.[32]

Q: Please explain what you mean when you say this level of income is less than a household needs to meet their basic expenses.

A: While the Commission utilizes FPL in its definition of "low income customer", this definition does not capture household income which is necessary to afford basic needs. A more accurate benchmark meant to assess how much income a household needs to live without assistance in Pennsylvania is the Self-Sufficiency Standard.[33] This Standard is a benchmark used to assess how much income a household needs to live without assistance in Pennsylvania. It measures the income that a family must earn to meet its basic needs and consists of the combined cost of six (6) basic needs – housing, child care, food, health care, transportation, and taxes – without the help of public subsidies.[34] Unlike the FPL, which does not change based on geographic location or family composition, the Self-Sufficiency Standard accounts for the varied costs of the six basic needs in different geographic areas and for differently aged household members.[35]

Based on the 2024 Self Sufficiency Standard, a family of four (consisting of 2 adults and 2 school-aged children) living in the counties served by UGI requires an income ranging from $69,077 to $104,762. This is approximately between $19,577 (140%) and

[30] UGI Response to CAUSE-PA 1-17. Attached hereto at Appendix B.
[31] UGI Response to CAUSE-PA 1-18. Attached hereto at Appendix B.

[35] Id.

$55,262 (211%) per year *more* than a four-person household with annual income at 150% FPL – the maximum amount permitted to be eligible for CAP.[36]

Q: If the Commission does not use the Self Sufficiency Standard as a measure of eligibility for assistance, why is this information important?

A: It is important for context. The Self Sufficiency Standard helps illuminate the full scope of utility insecurity and the need for utility rates and rate design to not exacerbate the precarious financial position of those UGI customers who, while not considered low income by the Commission nevertheless struggle to make ends meet each month.

The simple reality is that the number of households in need of assistance and the amount of assistance needed per household is far greater than UGI, the Commission, or many parties have historically acknowledged. Given that households subsisting at more than double the poverty level within UGI's service territory cannot afford necessities, there is little to no chance that households at less than 150% of the poverty level can afford essential utility service without significant assistance. This fact must be considered by Commission in exercising its discretion over the authorized ROE, rate design, and overall revenue requirement – as well as programs and terms and conditions of service that help ensure universal access to service, which is at the heart of the regulatory compact.

Q: How does UGI determine how many low income customers are in its service territory?

A: UGI is required to track its low income customer population in two ways: (1) confirmed low income customers and (2) estimated low income customers.

[36] See Id. (2024 Pennsylvania Data Set).

Q: How many confirmed low income customers does UGI report?

A: As of January 2026, UGI reported 68,289 customers (or 11% of residential customers) confirmed low income customers.[37] As I explain later, I believe this number should be much higher based on additional data that UGI has collected that would reasonably place additional customers in a low income designation.

Q: How many estimated low income customers does UGI report?

A: As of August 2025, UGI reported 143,404 estimated low income customers to the Commission (or 23% of residential customers).[38] This estimate was developed in accordance with the Commission's Bureau of Consumer Services (BCS) specified methodology, which "derived the estimated number of low income customers by calculating the number of UGI Gas customers in each county of its service territory multiplied by the 2019-2023 American Community Survey 5 Year Estimates census data provided by the Bureau of Consumer Services for that county."[39]

Q: Does UGI provide another estimated low income customer count in its testimony?

A: Yes. UGI witness Brian Meilinger asserts that the Commission's methodology used to calculate estimated low income customers "should be considered an over estimation and referenced with caution."[40] He argues that the Company's Low Income Customer Assessment and Outreach Pilot undertaken with a proprietary Experian-developed method identified an "estimated" low income population of 98,785 customers at or below

[37] UGI Response to CAUSE-PA 1-5, Attachment; see also UGI Response to CAUSE-PA 1-7, Attachment (UGI reported 636,412 residential customers as of Jan. 2026). Attached hereto at Appendix B.
[38] UGI Statement No. 12 at 16. see also UGI Response to CAUSE-PA 1-7, Attachment (UGI reported 621,606 residential customers as of Aug. 2025). Attached hereto at Appendix B.
[39] UGI Statement No. 12 at 16.
[40] Id.

150% FPIG in the fall of 2023. He further argues that the Experian estimate "uses actual demographic income data of UGI customers and identifies significantly less customers."[41] In discovery, UGI indicated that the updated Experian number is 96,137 as of January 2026.[42]

Q: Do you agree with Mr. Meilinger?

A: No. Mr. Meilinger's testimony makes it clear that for the 96,137 low income customers identified through the Pilot as of January 2026, the Company used Experian to obtain actual demographic information for the households that would reasonably place them in a low income designation. UGI explained in discovery that, while it does not have actual income data for all customers, "[f]or the January 2026 data assessment, there was a 90% match rate on name and address."[43] In other words, the Company now has information that reasonably places 90% of the households included in the Experian survey in the low income category. Thus, under the Commission's regulatory definitions, these households should be classified as **confirmed** low income households, not estimated low income households. As part of the Settlement in its last rate case, UGI adopted the definition of "confirmed low income" consistent with 52 Pa. Code § 62.2.[44] The Commission defines "Confirmed low-income residential account" as:

> Accounts **where the NGDC has obtained information that would reasonably place the customer in a low-income designation**. This information may include receipt of LIHEAP funds (Low-Income Home Energy Assistance Program), self-certification by the customer, income source or information obtained in § 56.97(b) (relating to procedures upon rate-payer or occupant contact prior to termination).[45]

[41] Id.
[42] UGI Response to CAUSE-PA 6-17. Attached hereto at Appendix B.
[43] Id.
[44] UGI Response to CAUSE-PA 1-4. Attached hereto at Appendix B.
[45] 52 Pa. Code § 62.2 (emphasis added).

The Commission has explained that section 62.2 defines the "Confirmed Low-Income Customers" designation in broad terms, and while it provides examples of information that a utility may rely upon when making such designation, this is not an exhaustive list.[46] The enumerated examples given do not imply the exclusion of others if the information is obtained by the Company and would reasonably place the customer in a low income designation.[47]

If UGI has used Experian to collect **actual demographic information** for the household indicating that they are at or below 150% FPL, this information would reasonably place the customer in a low income designation, and these accounts should be designated as confirmed low income. At the very least, this should be the case for the 90% of households for whom UGI matched names and addresses with demographic income data. If this correction is made, then UGI's confirmed low income customer count would increase from 68,289 (11% of residential customers) to 96,137 (~15% of residential customers).

Furthermore, I disagree with Mr. Meilinger that the Commission's estimated low income customer count is over inclusive. It uses reasonable and consistent methodologies to ensure accurate comparisons across the state and thus should be relied on for assessing the number of eligible customers and the effectiveness of UGI's universal service program participation and outreach.[48] Therefore, for purposes of evaluating the impact of UGI's rates and terms and conditions of service – including the

[46] See Pa. PUC v. PGW, Docket No. R-2023-3037933, Final Order at 221 (Entered Nov. 9, 2023) ("Section 62.2 of our Regulations defines the "Confirmed Low-Income Customers" designation in broader terms, as it provides examples of information . . . and not an exhaustive list. In other words, the enumeration of these examples of information in the regulation does not imply the exclusion of others if the information is obtained by the Company and would reasonably place the customer in a low-income designation.")
[47] Id.
[48] See Id. at 222.

adequacy of its universal service programs – it is more accurate to utilize the census-based estimated low income customer counts.[49] Which would be an estimated low income customer count of 143,404.

C. Impact of Rate Increase on Low Income Households

Q: How would UGI's proposed rate increase impact low income households?

A: UGI's proposed rate increase would severely and detrimentally impact the ability of low income families to afford their monthly expenses and further hinder their ability to maintain gas service. Low income families already struggle to make ends meet each month and are forced to make untenable choices between affording utility services and other basic necessities – such as food, medicine, and housing.

To contextualize the impact of the proposed rate increase, it is helpful to look at the relative energy burden of low income households. To be affordable, a household's total housing costs – *including utility costs* – should account for no more than 30% of a household's total income.[50] According to formal Commission policy, to be considered affordable, rates should fall below the following energy burdens:

Table 2: PUC CAP Policy Statement Maximum Energy Burdens[51]

Income Level (% FPL)	Natural Gas Heating	Natural Gas Heating and Electric Baseload Combined
0-50%	4%	6%
51-100%	6%	10%
101-150%	6%	10%

[49] See Id. at 222.
[50] U.S. Census Bureau, Nearly Half of Renter Households Are Cost-Burdened, Proportions Differ by Race, available at: https://www.census.gov/newsroom/press-releases/2024/renter-households-cost-burdened-race.html. (Last visited April 6, 2026).
[51] Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261-69.267

UGI's low income customers who are not enrolled in CAP have burdens that are significantly higher than these, and the proposed rate increase would materially increase the portion of low income household energy burdens attributable to their gas bill. The table below uses data provided by UGI in discovery to analyze the burden impact for confirmed low income households not in CAP (Non-CAP CLI) monthly. This table uses 2023-2025 average usage data. I then compare the bill at current rates versus the bill at proposed rates. Using this same information, the last column shows the monthly percentage of income low income customers must allocate towards their gas bills at proposed rates.

Table 3: Impact Rate Increase Impact Non-CAP CLI Customers[52]

Month/Year	3 Year Mean Non-CAP CLI Customers Mcf/Month	Bill at current rates ($)	Bill at proposed rates ($)	Percentage of Monthly Income Current Rates	Percentage of Monthly Income Proposed Rates
Jan-25	16.5	$250.20	$264.61	15%	16%
Feb-25	16.3	$247.36	$261.68	15%	16%
Mar-25	12.8	$197.75	$210.43	12%	13%
Apr-25	8.4	$135.38	$146.00	8%	9%
May-25	3.9	$71.59	$80.11	4%	5%
Jun-25	2.2	$47.49	$55.21	3%	3%
Jul-25	1.6	$38.99	$46.43	2%	3%
Aug-25	1.4	$36.15	$43.50	2%	3%
Sep-25	1.6	$38.99	$46.43	2%	3%
Oct-25	2.4	$50.33	$58.14	3%	3%
Nov-25	6.2	$104.19	$113.79	6%	7%
Dec-25	13.6	$209.09	$222.15	12%	13%
Annual Avg/Month	*7.2*	*$118.96*	*$129.04*	*7%*	*8%*

[52] See UGI Response to OCA 4-6, Attachment, 3-year Mean by Month 2023-2025, Attached hereto at Appendix B. UGI Response to CAUSE-PA 1-17, Attached hereto at Appendix B. Calculations are contained in Cicero Workpapers distributed with testimony.

As shown here, if UGI's proposal is approved, the annual gas bill energy burden for non-CAP confirmed low income customers with average income and average usage would increase by a full percentage - from approximately 7% to approximately 8% over the course of the year. The energy burden for these customers **during the winter months** is already far above what is considered affordable, and UGI proposes to raise it even higher. The amount a low income household pays each month varies depending on their usage – just as it would for all residential customers. In January, when usage is highest, low income (non-CAP) households with average income and median usage are charged as much as 15% of their income at current rates. At proposed rates, the average energy burden for these same households would increase two full percentage points - to 16%. Note that these percentages should be compared to the maximum recommended burden of 6% as they do not include a household's electric bill burden. Thus, the energy burden for low income customers not enrolled in CAP is already far above what is considered affordable, and UGI proposes to raise it even higher.

Q: In addition to high energy burdens, discussed above, is there other evidence that UGI's low income customers are struggling to afford gas services even before any rate increase is approved?

A: Yes. UGI's low income customers carry a disproportionate amount of customer debt and are far more likely to have their service involuntarily terminated for nonpayment. If UGI's proposed rate increase is approved, these pronounced disparities will increase, as will the risk of consequences to the health and safety of low income customers and their households and the corresponding level of uncollectible expenses which are recovered from all ratepayers.

First, UGI low income customers have markedly higher rates of service terminations for nonpayment compared to UGI's residential customers as a whole, as illustrated by the following Table:

Table 4: Involuntary Termination Rate (2023-2025)[53]

Year	All Residential Term. Rate[54]	Residential Term Rate Excluding CLI[55]	All CLI Term Rate[56]	Non-CAP CLI Term Rate[57]	CAP Term Rate[58]
2023	5%	4%	18%	20%	8%
2024	5%	4%	18%	21%	10%
2025	5%	3%	19%	26%	7%

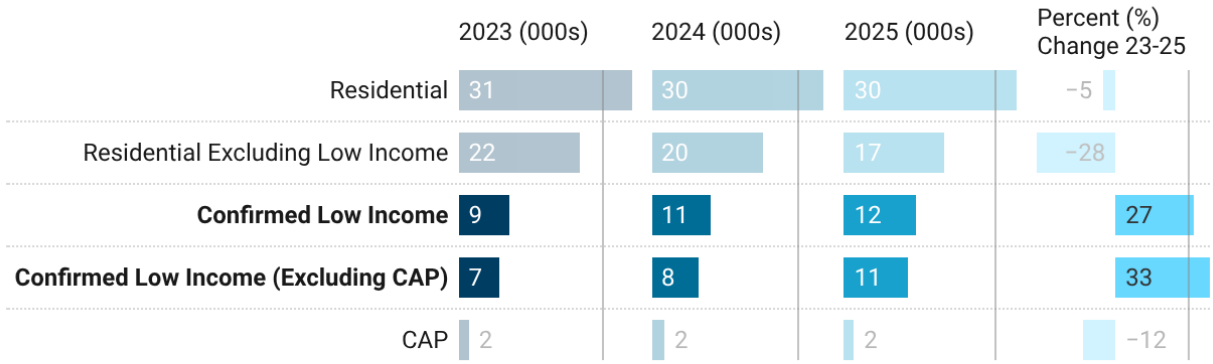
Table 4 shows that confirmed low income customers who are not enrolled in CAP have a utility termination rate that is 400%-500% higher than all residential customers and 500%-850% higher than residential customers who are not low income. Even low income customers in CAP have rates that are more than 200% higher than non-low income customers. Critically, however, for low income customers, enrollment in CAP reduces termination rates significantly as compared to paying full tariff rates.

The overall termination trends for UGI's service territory from 2023 through 2025 reveal another significant and concerning shift: while total residential terminations have remained relatively stable, including terminations of customers enrolled in CAP (even

[53] Termination rates were calculated using the termination data in UGI Response to CAUSE-PA 1-14, Attachment, applied to the average number of customers in each category for each year.
[54] UGI Response to CAUSE-PA 1-7, Attachment (for residential customer count). Attached hereto at Appendix B.
[55] UGI Response to CAUSE-PA 1-9(a), Attachment (for residential customers, excluding confirmed low income and CAP). Attached hereto at Appendix B.
[56] UGI Response to CAUSE-PA 1-5, Attachment (for confirmed low income customer count). Attached hereto at Appendix B.
[57] UGI Response to CAUSE-PA 1-9(b), Attachment (for confirmed low income customers, excluding CAP). Attached hereto at Appendix B.
[58] UGI Response to CAUSE-PA 1-6, Attachment (for CAP customers count). Attached hereto at Appendix B.

slightly decreasing), terminations specifically for CLI customers in general and those not enrolled in CAP specifically have increased sharply. This is shown in the visual below:

Chart 1: Terminations (2023-2025)



Termination Numbers and Percentages Rounded

Source: Created by Patrick Cicero from UGI Discovery Responses • Created with Datawrapper

As can be seen from the above chart,[59] terminations for the poorest customers *increased* by 27% during the last three-year period – and for those not enrolled in CAP the increase was 33% – even though terminations for all other groups decreased during this period. The financial burden of rates and risk of termination are becoming increasingly concentrated within the UGI's low income customer base who are not receiving program assistance. This is the group of households who are most affected by the increase proposed by UGI.

In fact, in 2025, more than one-third (36.4%) of all residential gas shut-offs were of confirmed low income customers not enrolled in CAP,[60] despite these customers only

[59] The data sources used to create Chart 1 were various responses provided by UGI is discovery and are outlined and provided as a part of my workpapers. The underlying interrogatory responses are UGI's Response to CAUSE-PA 1-7, Attachment, UGI Response to CAUSE-PA 1-9(a) attachment, and UGI Response to CAUSE-PA 1-9(b), attachment. All are attached hereto at Appendix B.

[60] In 2025 UGI reported 29,715 residential payment based terminations, 10,825 of which affected low income customers not enrolled in CAP. See UGI Response to CAUSE-PA 1-14, Attachment. Attached hereto at Appendix B.

accounting for 7% of customers.[61] These facts, in addition to the stark disparities in termination rates for low income families shown in Table 4, especially those not enrolled in CAP, will deepen if UGI is permitted to increase its basic rates of gas service without addressing the unaffordability of rates.

Simply put, there is a growing need for more targeted and strategic outreach to these high-risk customers to ensure that they have every opportunity to enroll in CAP before they experience service loss. Enrollment in CAP is the most significant, preventative thing that UGI can do to reduce the rate of service loss for low income customers, but the ability of UGI's CAP to mitigate unaffordability is immaterial if families are not enrolled. This makes UGI's significant and pervasive undersubscription to the program, as I discuss in Section VI.B., below, even more critical.

Q: Are there other indicators that UGI's low income customers struggle to afford gas service?

A: Yes. UGI's low income customers also carry substantially higher levels of arrears compared to non-low income residential customers. Table 5 demonstrates that the average arrearages carried by CLI customers are consistently higher than the average arrears carried by non-low income customers:

Table 5: UGI Customer Arrearage and Debt Levels (2024-2025)[62]

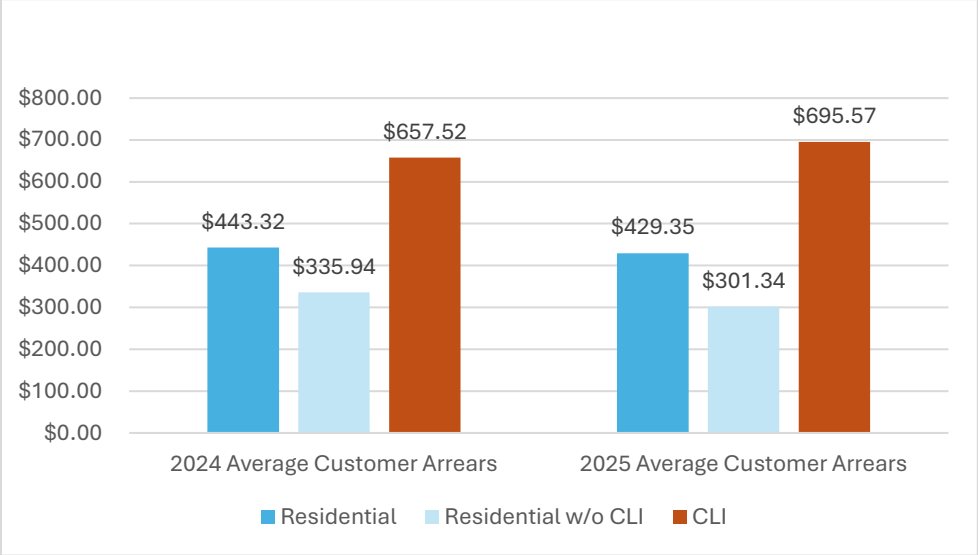
	2024 Average Arrears	2025 Average Arrears
Residential	$443.32	$429.35
Res. w/o CLI	$335.94	$301.34
CLI	$657.52	$695.57

[61] UGI reported a monthly average of 627,819 residential customers and 42,288 non-CAP CLI customers (7%) in 2025. See UGI Response to CAUSE-PA 1-14, Attachment; UGI Response to CAUSE-PA 1-7, Attachment. Both attached hereto at Appendix B.

[62] UGI Response to CAUSE-PA 1-22, Attachment (Average of all months). Attached hereto at Appendix B.

This same information is presented in Chart 2, below.

Chart 2: UGI Customer Average Arrears (2024-2025)[63]



This data demonstrates that the average arrearages carried by confirmed low income customers are approximately twice as high as those carried by non-low income residential customers. Notably, in 2025, total confirmed low income arrears comprised more than half (51%)[64] of total residential debt, despite only accounting for only 10% of all residential customers reported in 2025.[65]

These indicators demonstrate that UGI's low income consumers already have excessive energy burdens and struggle to pay for gas service leading to disproportionate arrearages and terminations rates. Low income customers will likely experience increased arrears, increased termination, and increased payment trouble if the proposed rate increase is approved.

[63] UGI Response to CAUSE-PA 1-22, Attachment. Attached hereto at Appendix B.
[64] UGI Response to CAUSE-PA 1-22, Attachment ($30,138,452.10 of $58,701,299.07 residential debt was attributed to confirmed low income customers in 2025). Attached hereto at Appendix B.
[65] UGI reported a monthly average of 627,819 residential customers and 65,636 (10%) CLI customers in 2025. See UGI response to CAUSE-PA 1-5, Attachment; UGI Response to CAUSE-PA 1-7, Attachment. Attached hereto at Appendix B.

Q: Will UGI's Customer Assistance Program (CAP) protect low income households from the financial impact of the proposed rate increase?

A: Not entirely. UGI's CAP is a critically important affordability program and is successful in reducing low income termination rates and arrearage levels by providing a fixed payment amount (based on a percentage of income, average bill, or minimum payment); arrearage forgiveness over 36 months; and exemption from late payment fees.[66] However, the program will not fully shield the Company's low income customers from the impact of the proposed rate increase because the program is severely undersubscribed, and thousands of CAP customers receive average bills and will bear the full impact of the proposed rate increase. Specifically:

- Approximately 82% of UGI's estimated low income customers are not enrolled in CAP, limiting the ability of CAP to mitigate unaffordability at present and proposed rates.[67]

- As of March 2026, 7,291 out of 26,641 reported accounts – or 27% -- had their CAP amounts calculated based on their average monthly bills.[68] These customers will experience an increase (up to their respective percentage of income payment amount) in their bills immediately upon their next quarterly budget bill adjustment.

Q: Does LIHEAP mitigate the harm of the proposed rate increase on low income households?

A: No. LIHEAP is a federal program designed as a supplement to assist households to better afford energy services, but the program only reaches a small fraction of eligible households and is not adequately funded to address existing unaffordability – let alone increased unaffordability because of increased rates. The program is subject to annual

[66] UGI USECP 2020-2025 at 22-24.
[67] UGI Response to CAUSE-PA 1-6, Attachment (As of January 2026, UGI reports that 26,250 customers were enrolled in its CAP), Attached hereto at Appendix B; UGI Statement No. 12 at 16 (UGI's most recent estimated low income customer count was143,404 estimated low income customers).
[68] UGI Response to CAUSE-PA 1-3. Attached hereto at Appendix B.

reauthorization and allocation of funding by the federal government, a fact brought into sharp focus by the recent federal government shutdown. The shutdown delayed the opening of the 2025-26 LIHEAP season by a month, throwing low income households into uncertainty as they faced the prospect of losing critical heating assistance.[69] Although the end of the federal government shutdown enabled the release of LIHEAP funding for the 2025-2026 LIHEAP season, the reality is that LIHEAP has never been adequately funded to eliminate UGI's excessive low income termination, arrears, and energy burden levels – let alone mitigate the impact of UGI's proposed rate increase. For the second year in a row, LIHEAP is proposed for elimination in the federal budget.[70] In my estimation, it is inappropriate to consider the potential availability of LIHEAP funds as a factor in setting rates.

Further, while LIHEAP is a critically important program and provides life-sustaining assistance to those in need, the program is only intended to provide supplemental assistance and is not enough to mitigate the financial harm of a rate increase. UGI's proposed rate increase, if authorized, will also consume a substantial portion of LIHEAP assistance currently received by UGI's customers. In the 2025-26 LIHEAP program year, the minimum Cash grant is just $200.[71] The average statewide LIHEAP cash grant for PY

[69] See Pa. Dept. of Human Services, Due to Federal Government Shutdown, Opening of the 2025-26 Low-Income Home Energy Assistance Program (LIHEAP) Season Delayed to December, available at: https://www.pa.gov/agencies/dhs/newsroom/due-to-federal-government-shutdown--opening-of-the-liheap-season. (Last visited March 29, 2026).
[70] Nat'l Energy Assistance Directors Association (NEADA), Press Release: President's FY 2027 Budget Eliminates Federal Funding for LIHEAP (Apr. 3, 2026), https://neada.org/wp-content/uploads/2026/04/PresidentBudget2027Response.pdf.
[71] Pa. LIHEAP State Plan, FY 2026, at ii, available at: https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/services/assistance/documents/heating-assistance_liheap/2026-liheap-state-plan.pdf *(Last accessed March 29, 2026).*

2025-26 as of April 2, 2026 is $275 for gas utilities.[72] Under UGI's proposed rate increase the average residential heating customer bill will increase by $9.91 per month, or 118.92 annually.[73] Thus, UGI's proposed increase would consume 43% of the LIHEAP grant to a typical gas consumer.

Q: Do you have any proposals that could help remediate the financial impact of UGI's proposed rate increase on low income customers?

A: Yes. I have several recommendations to help mitigate the financial impact of UGI's proposed rate increase on low income households. As outlined more fully below, the Commission should deny UGI's rate increase in its entirety as the record evidence shows that it has sufficient revenue to earn a fair rate or return and provide safe and reliable service. If the Commission is inclined to grant an increase, it should reduce the requested ROE and adjust the Company's capital structure for ratemaking purposes. Both would have an immediate and tangible impact on the overall revenue requirement. I make several recommendations below about how to structure UGI's rate design and how to spread the cost of the universal service programs to all ratepayers thus reducing the burden on residential ratepayers, including low- and moderate-income customers. Also, as described later in my testimony, UGI should implement additional routine screening to identify low income customers and enroll them in CAP.

[72] Pennsylvania Department of Human Services Energy Assistance Summary report, p. 68 of 136, dated April 4, 2026, attached hereto at Appendix C, Exhibit Cicero C-2.
[73] UGI Statement No. 1 at 8, Table 1.

IV. Revenue Requirement and Rate of Return

Q: Please describe this section of your testimony.

A: In this section of my testimony, I am recommending that the Commission deny UGI's rate increase in its entirety because the record demonstrates that even in the absence of an increase, UGI has sufficient revenue at present rates to maintain safe and reliable service to its customers and has a reasonable opportunity to earn a fair rate or return.

Q: Please discuss the reasons why you do not believe that a rate increase is warranted.

A: Simply put, UGI does not need the increase. For important context:

- UGI last filed for a rate increase in January 2025 that sought $110 million and was permitted to increase its rates by $69.5 million effective October 28, 2025 after the Commission approved a settlement in that proceeding.[74]
- In its 2025 case, UGI projected its needs in its 2025 rate case through its fully projected future test year as of September 30, 2026.
- Even though UGI got the benefit of projecting its needs through that date when it agreed to the settlement, it chose to file this case a mere three months after its rate increase went into effect seeking an additional $99.4 million increase with an effective date of October 29, 2026.

This illustrates the very issue that I highlighted above about the fully projected future test year. In its last rate case, UGI was able to set rates based on its projections about the world as they thought it would be in September 2026 – when their FPFTY in the last case ended. UGI settled a case based on those projections and other compromises with

[74] Pa. P.U.C. et al. v UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, Order (Order entered September 11, 2025) (Adopting Joint Petition for Settlement allowing a $69.5 million annual rate increase). The 2025 settlement also extended UGI's WNA only through October 31, 2027, unless it is affirmatively extended by the Commission. Pa. P.U.C. et al. v UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, Joint Petition for Settlement, ¶ 58(e), approved by Final Order entered September 11, 2025).

the parties, yet it apparently decided that it made a bad deal because it chose to file this case three months later. Customers have no such protection and thus bear most of the risk. If UGI determined that it was over-collecting revenue it could choose to remain out of a rate case, but when it determined that it wanted to collect additional revenue, it came in for this filing.

Q: Does the evidence in this case show that UGI is earning significant profits based on its current rates?

A: Yes. There are several metrics that demonstrate UGI has healthy revenue, access to capital, and sufficient returns. First, in the last 5 years (2021-2025) UGI has returned $249 million in dividend payments to its single owner/corporate parent UGI Corporation,[75] and received only $50 million in common equity infusions from its corporate parent. This is shown in Table 6, below.

Table 6: Common Equity Payments and Dividends

Year	Common Equity from UGI Corp to UGI Utilities[76]	Dividend Payment from UGI Utilities to UGI Corp.[77]
2021	$0	$35,000,000
2022	$35,000,000	$0
2023	$0	$0
2024	$0	$135,000,000
2025	$15,000,000	$79,000,000
Total	**$50,000,000**	**$249,000,000**

That is, in the two years during which its last rate case was pending and when this rate case was filed, UGI sent more than $214 million back to its corporate parent in profits.

[75] UGI Response to Standard Data Request – SDR-ROR-20 (stating that UGI Gas does not have publicly traded common stock and has not issued stock as a dividend to UGI Corporation, its 100% common equity owner).
[76] UGI Response to Standard Data Requests – SDR-ROR-11.
[77] UGI Response to Standard Data Requests – SDR-ROR-12.

This is hardly surprising given that ***every quarter since 2021,*** UGI has had net income from its operations totaling more than $2 billion as shown in Table 7, below.

Table 7: UGI Utilities, Inc. – Net Income.[78]

Quarter Ending	Net Income
Mar-21	$ 99,000,000
Jun-21	$ 9,000,000
Sep-21	$ 146,000,000
Dec-21	$ 57,000,000
Mar-20	$ 115,000,000
Jun-22	$ 19,000,000
Sep-22	$ 195,000,000
Dec-22	$ 73,000,000
Mar-23	$ 129,000,000
Jun-23	$ 13,000,000
Sep-23	$ 206,000,000
Dec-23	$ 80,000,000
Mar-24	$ 135,000,000
Jun-24	$ 14,000,000
Sep-24	$ 219,000,000
Dec-24	$ 79,000,000
Mar-25	$ 142,000,000
Jun-25	$ 8,000,000
Sep-25	$ 213,000,000
Dec-25	$ 88,000,000
Total	**$2,039,000,000**

This income was undoubtedly fueled by the actual returns on equity that UGI has been earning over this period. In the last three years alone (2023-2025), UGI has had net profit of more than $613 million.[79] This is not surprising given that over the last three years, UGI has ***never*** had a calculated ROE that was lower than 10.43% and often had returns that were significantly higher. In discovery, UGI provided its calculated ROEs for each of the

[78] UGI Response to OCA 2-18(B), Attachment. Attached hereto at Appendix B.
[79] UGI Response to CAUSE-PA 6-11. Attached hereto at Appendix B.

last three calendar years. They show that UGI is earning significant returns for its sole corporate owner UGI Corporation as shown in Table 8, below.

Table 8 UGI Gas Calculated Return on Equity[80]

Twelve Months Ended	Calculated ROE
12/31/2025	10.43%
9/30/2025	10.43%
6/30/2025	10.85%
3/31/2025	11.32%
12/31/2024	11.12%
9/30/2024	11.17%
6/30/2024	12.11%
3/31/2024	12.39%
12/31/2023	12.19%
9/30/2023	11.43%
6/30/2023	12.94%
3/31/2023	13.45%

This is consistent with what UGI has disclosed in response to discovery from I&E, in which it admitted that for each of the last three fiscal years, its ROE was never below 10.4%:

Table 9: Fiscal Year ROE UGI Utilities, Inc. – Gas Division[81]

	Fiscal 2025	Fiscal 2024	Fiscal 2023
Return on Equity	10.4%	11.2%	11.4%

In discovery, UGI also admitted that "UGI's ability to attract capital needed to make investments that support operating a safe and reliable distribution system was not jeopardized during any quarter in the period from January 1, 2023 through December 31, 2025."[82] The facts are clear: UGI is earning year in and year out significant profits

[80] UGI Response to CAUSE-PA 3-1(a), Attachment. Attached hereto at Appendix B.
[81] UGI Response to I&E-RR-6-D, Attachment. Attached hereto at Appendix B.
[82] UGI Response to CAUSE-PA 3-1(b), Attached hereto at Appendix B.

begotten by significantly high ROEs, and has returned hundreds of millions in dividends to its corporate parent. Yet, it wants its customers to pay more.

Q: All of these are past results, and UGI is making its claim based on a fully projected future test year, why is all this relevant?

A: Because it frames the request that is at issue here. It should be material to the Commission's decision making that ***less than 30 days before it filed this rate case***, UGI was earning a return on equity of 10.43% and had $88 million in net income, and at no point over the last several years – including when it was in its last rate case – did it earn a return less than that percentage or did it have a quarter where it did not have millions of dollars in net income. Additionally, *at current rates*, UGI projects net income of more than $236 million in the current year ending September 30, 2026, and anticipates returning dividends of $60 million to its parent company.[83]

For its part, UGI wants to look past the fact that it has had significant net income, profit, and high ROEs at present and over the past several years and focus only on its projections into the future. That is the nature of future-based ratemaking that is reliant wholly on projections developed by the Company and for the benefit of the parent Company. However, given the extraordinary hardship that UGI's residential customers are facing because of acute and real affordability concerns as outlined above in my testimony, the Commission cannot look past the present reality of UGI's robust financial condition in deciding whether to grant a rate increase. Myopically focusing on the FPFTY for UGI, but not its customers' financial status and ability to pay, would skew the Commission's analysis. If one looks to September 2027 for UGI's low income customers,

[83] See UGI Filing Requirements, Book I, Attachment III-A-13.

the picture is as bleak financially given pending rate increases in this case, as well as overlapping electric, water, and wastewater service territories.

Q: Even focusing on the end of the FPFTY, do you have an opinion about whether UGI's projected ROE is sufficient?

A: Yes, it is sufficient. If rates are not increased, UGI projects that it would yield an overall rate of return of 6.55% which equates to a return of common equity (ROE) of 7.70% for the twelve-month period ending September 30, 2027.[84] UGI witness Bell asserts – without further explanation – that this return "***could*** jeopardize UGI Gas's ability to attract the capital needed to make investments that support operating a safe and reliable distribution system and enhance the reach of capacity of facilities that are required for system growth."[85] When asked about the analysis he relied on to support this conclusion, Mr. Bell indicated that he did no independent analysis and relied on the analysis of UGI Witness Dylan D'Ascendis in his testimony and UGI Gas Exhibit B.[86]

For his part, Mr. D'Ascendis' analysis in testimony and responses to discovery relies on his own cost of capital calculations, which appear geared towards ensuring that the recommended ROE is as high as possible within the range of outcomes that he projects. When asked whether UGI would be able to raise capital in the capital markets at ROEs that were at 8.75% or 9.75%, as opposed to his recommended 10.75%, Mr. D'Ascendis admitted that it was possible, but he did not think that it could be done under "reasonable costs" – by which he meant a "return that is sufficient to maintain the integrity

[84] UGI Statement No. 1 at 6:18-21.
[85] UGI Statement No.1 at 6:24-7:3 (emphasis added).
[86] UGI Response to CAUSE-PA 3-1(d). Attached hereto at Appendix B.

of presently invested capital and permits the attraction of needed new capital at a cost that is competitive with other firms of comparable risk."[87]

Despite these circular answers by Mr. Bell and Mr. D'Ascendis, the reality is that even UGI's own expert concedes that UGI could attract capital without a rate increase.[88] Critically, it is important to note that UGI's source of capital is its parent company, to which is has returned $249 million in dividends in the last few years. Moreover, as shown above, quarter in and quarter out, UGI has earned net income to the tune of more than $2 billion over the last 5 years. Finally, in response to discovery, UGI indicated that despite getting a rate increase in 2025, UGI has not had to have an actual infusion of external capital from the equity markets.[89]

All of these metrics suggest to me that the internally generated cash from its operating subsidiaries – including UGI Gas – is more than sufficient given that UGI's parent company has not had to go to the capital markets in recent years, it would appear that UGI has well capitalized sources to ensure that it continues to have access to sufficient capital and fair rates to ensure that it can maintain safe and reliable service.

Q: Isn't UGI also entitled to the opportunity to earn a fair rate of return on its capital investment?

A: Yes, but an opportunity is not the same as a guarantee. The policy questions the Commission must address are: (1) what is a fair opportunity, and (2) what is a reasonable rate of return? The Commission is vested with significant discretion in determining what constitutes a fair rate of return. While counsel for CAUSE-PA will fully brief the applicable

[87] UGI Response to CAUSE-PA 3-4 and 3-5. Attached hereto at Appendix B.
[88] Id.
[89] UGI Response to CAUSE-PA 3-1(h). Attached hereto at Appendix B.

legal standards as applied to this case, it is important to understand, and it is widely accepted, that there is no single way to arrive at just and reasonable rates and the Commission has board authority on both these matters.[90]

Q: If the Commission does not completely reject UGI's rate increase, do you have an opinion about how much the Commission should authorize?

A: I do not have a recommendation about an increase that the Commission should authorize, because it is my opinion that the Commission should not authorize any increase. However, if the Commission authorizes any increase in rates, it should ensure that the ROE is no higher than necessary and it should impute a ratemaking capital structure that is fairer to consumers. I am making this recommendation because this is one of the many areas where the Commission has an abundance of discretion that it can and should exercise in restraining the monopolistic tendencies of UGI who has captive ratepayers.

Q: What is the impact to the revenue requirement of UGI's request to increase its projected ROE from 7.70% to 10.75%?

A: It is significant. Per my calculations, the dollar impact on the overall revenue requirement for every 10 basis points (0.10%) is approximately $3,000,000.[91] This means that every basis point (0.01%) results in a revenue requirement increase of approximately $300,000 to UGI's customers. At the 305 points that UGI is asking for in this case to take

[90] See Pa. P.U.C. et al. v UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, Recommended Decision at 22 (August 8, 2025) (quoting Popowsky v. Pa. Pub. Util. Comm'n, 683 A.2d 958, 961 (Pa. Cmwlth. 1996) (adopted by Commission via Order dated September 11, 2025) ("2025 UGI RD"). See also 2025 UGI RD at 51 (citing Duquesne Light Co v. Barasch, 488 U.S. 299, 315-16 (1989) (quoting Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944), and stating "the Commission was not bound to the use of any single formula or combination of formulae in determining rates").

[91] See UGI Gas Exhibit A – Fully Projected, changing tab B-7, line 3 (common equity) to 10.65% and holding all else equal reduces the required revenue increase to $96.361 million from the requested $99.368 million. (99.368 at 10.75% vs. 96.361 at 10.65% = 3.007).

its ROE from 7.70% to 10.75%, UGI is asking the Commission to require customers to pay an additional $91.5 million each year.[92]

Q: Are you saying that out of the $99.4 million increase that UGI is requesting in this case that $91.5 million of that is driven by the Company's request to increase its projected ROE from 7.70% to 10.75%?

A: Yes. The extent of the increase sought by UGI in this case appears to be driven almost entirely by its desire to increase its shareholder return. This is reflected in both its choice of an equity skewed capital structure as outlined above and its decision to present a case that argues that it is entitled to 10.75% return on equity.

Q: Are you recommending a specific lower ROE in this case?

A: As noted above, I am not making a recommendation about the specific cost of equity that should be used to determine UGI's ROE in this case. I encourage the Commission to look at the ROE recommendations by other parties – including those recommended by the OCA – in determining what ROE to authorize. However, the Commission's job as UGI's economic regulator is to ensure that, as a monopolistic enterprise, UGI is not taking undue and unfair advantage of its customers through an ROE that is higher than what it reasonably would need to attract sufficient capital in the market. In my view, this is part and parcel of determining whether rates are just and reasonable. Given that every 10 basis points at the as-filed rate base and capital structure takes $3,000,000 annually from the pockets of ratepayers and puts it into the coffers of UGI and, eventually, net income and profit to shareholders, the Commission should

[92] 10.75% less 7.70% equals 3.05% or 305 basis points. 305 times $300,000 = $91,500,000. Expressed differently, 3o.5 times $3,000,000 = $91,500,000

seriously consider what is a sufficient but not excessive ROE is in its determination of setting rates in this proceeding.

Q: Are there other ways in which the Commission could exercise discretion and protect ratepayers?

A: Yes, it could impute a fairer capitalization ratio. The capitalization ratio is how the overall rate of return is calculated. It consists of debt and equity. Debt is determined by the actual debt issued by the Company at the weighted average cost of debt. The Company places an excessive and undue emphasis on the higher return on equity at the expense of the lower cost of debt and the PUC should impute a capitalization ratio for ratemaking purposes that the evidence demonstrates would be sufficient. In this case, UGI's requested ROE of 10.75% is more than two times higher than its cost of debt at 5.17%. and is at a rate that is significantly higher than the overall return that the major U.S. stock markets have earned over the last 50 or 100 years.[93] UGI has chosen a capitalization ratio for these two costs of 45.75% debt and 54.25% equity. This means that the embedded cost of debt at 5.17% counts less in the overall calculation of the rate of return than the embedded cost of equity at 10.75%.

[93] The Consumer Price Index inflation adjusted return of the Dow Jones Industrial Average from March 1976 to October 2026 (50 years) is 7.52% if all dividends were reinvested. For the past 100 years (March 1926 to March 2026) the return is 6.90%. See DQYDJ Dow Jones Industrial Average Return Calculator, available at: https://dqydj.com/dow-jones-return-calculator/. (Last visited March 30, 2026). There are similar results when looking at the S&P 500. Over the last 50 years, the S&P 500 earned an inflation adjusted return of 7.75% and over the last 100 years, the return was 7.30% See S&P 500 Return Calculator, with Dividend Reinvestment, available at: https://dqydj.com/sp-500-return-calculator/ (Last visited March 30, 2026). I recognize that the calculation of the cost of capital for purposes of setting a return on equity is forward focused not backward looking, I make this observation about the overall stock market returns over the past 50 to 100 years as a real life gut check on UGI's requested ROE. It defies logic, common sense, and reason that one should reasonably expect to earn 10.75% on a safe investment like utilities over a long period of time.

Q: Must the Commission accept the capitalization ratio chosen by UGI?

A: No. The Commission can determine that the capitalization ratio chosen by the Company places an excessive and undue emphasis on the higher return on equity at the expense of the lower cost of debt and can impute a capitalization ratio for ratemaking purposes if the evidence demonstrates a reduction would nevertheless be sufficient.

Q: Please explain the impact of the chosen capitalization ratio on UGI's requested overall revenue requirement.

A: UGI Gas Exhibit A, Schedule B-7 to the rate case presents various schedules that show that the impact of the chosen capitalization ratio at the Company's desired ROE of 10.75% and cost of debt of 5.17% is an overall rate or return of 8.2%. If the Commission were to impute a ratemaking capitalization ratio of 50% equity and 50% debt, the overall rate of return at the Company's desired ROE of 10.75% would be 7.97% as shown in Table 10, below:

Table 10 – Rate of Return at 50/50 Capitalization Ratio.[94]

Description	Capitalization Ratio	Cost	Return %
Long-Term Debt	50.00%	5.17%	2.59%
Common Equity	50.00%	10.75%	5.38%
Total	**100.00%**		**7.97%**

The effect of this reduction in overall Rate of Return from 8.2% to 7.97% in the overall revenue requirement is $17.4 million which is the difference between the $99.4 million sought by UGI in this case and the $82 million that would be required if the PUC were to

[94] Derived from UGI Gas Exhibit A – Fully Projected Future Test Year, Schedule B-7 changing capitalization ratio to 50/50. This reduces the overall needed change in revenues displayed on Schedule A-1 from $99.4 million to $82 million all other factors held constant. $99.4-$82 is $17.4 million annual reduction to revenue requirement.

impute a 50/50 capital structure.[95] This means that merely by re-weighing the capitalization ratio to have 50% of the return weighted at UGI's calculated cost of debt and 50% weighted at its requested ROE of 10.75%, the PUC could save ratepayers $17.4 million annually.

Q: Are you recommending that the Commission adopt a 50/50 capital structure?

A: Yes. The Commission should consider imposing a mitigated/imputed ratemaking capital structure. This is important for several reasons. First, as noted above, a 50/50 capital structure for ratemaking purposes would save $17.4 million annually in rates. Second, the Commission should consider the fact that UGI is not a publicly traded company, and its corporate parent is entirely in control of its capital structure and equity contributions. This matters because there are layers between UGI and the actual capital markets. This is the Commission's job as UGI's economic regulator: to ensure that as a monopolistic enterprise UGI is not taking undue and unfair advantage of its customers through its choice to skew its capital structure more favorably towards equity than its cost of debt. Given that even without any other changes to the case as presented by UGI, the Commission could shave $17.4 million from the requested revenue requirement simply by requiring UGI to use a 50/50 capital structure for ratemaking purposes, the Commission should seriously consider this in its setting of rates in this proceeding.

[95] Id.

Q: Please summarize your overall conclusions from this section of your testimony?

A: Based on the record evidence in this proceeding, the Commission should not increase UGI's rates. This conclusion is based on the totality of factors, including:

- The hardship that this rate increase would cause of UGI's customers is significant as outlined thoroughly in my testimony above.
- The fact that UGI appears to be sufficiently well capitalized earning a return that provides sufficient revenue for UGI to be able to provide safe and reliable service.
- Specifically, less than one month before UGI filed this rate increase, its calculated ROE was 10.43%[96]
- For each of the last 5 years, it has had actual ROEs that were never lower than 10.43% and were as high as 13.45%[97]
- Additionally, *at current rates*, UGI projects net income of more than $236 million in the current year ending September 30, 2026, and anticipates returning dividends of $60 million to its parent company.[98] This is in *addition to* the more than $249 million that it paid in dividends to its parent company since 2023.[99]

It is not readily believable that UGI's financial condition will deteriorate so rapidly between the end of the Future Test Year (September 30, 2026) when it projects $236 million in net income and dividends of $60 million to its parent that it requires rate relief in the amount requested in this case. While it *projects* that it will only earn 7.7% ROE as of the end of its FPFTY, the Commission should scrutinize this claim carefully given the above and, in my view, should reject UGI's rate increase request in its entirety.

If the Commission decides to allow a rate increase, it should carefully measure the amount of increase needed and follow the recommendations of the OCA regarding a recommended rate or return and should impute a capital structure for ratemaking

[96] See supra, Tables 8-9
[97] See Id.
[98] See UGI Filing Requirements, Book I, Attachment III-A-13.
[99] See supra, Table 6.

purposes that equally values equity and debt at 50%. These recommendations are meant to temper the excessive rates sought by UGI and more fairly balance the needs of UGI with its customers, particularly its low income customers.

V. Rate Design

Q: Please summarize UGI's proposed rate design for its residential customers.

A: UGI is seeking to continue collecting its total revenue allocated to residential customers by charging a fixed monthly customer charge and a volumetric charge. The increases are as follows:

Table 11: Proposed Rate Design and Increases

Description	Current Rate	Proposed Rate	Increase ($)	Increase (%)
Customer Charge (per month)	$16.25	$23.00	$6.75	41.5%
Distribution Charge (per Mcf)	$6.3317	$6.8383	$0.5066	8.0%

UGI is seeking to assess $74.7 million of its total increase of $99.4 million to residential customers. Of this amount, the increase to the fixed customer charge would generate $51.4 million additional dollars each year at proposed rates and the remaining $25.6 million would be collected through volumetric charges.[100] The total increase for the average residential customer using 68.7 ccf of gas each month would be $9.94 per month or 8.7% after accounting for the removal of the Distribution System Improvement Charge.[101] Over the course of the year, this increases the average customer's bill by $119.

[100] UGI Exhibit E, Proof of Revenues, page 2 of 7. The total amount of the increase equals $74.7 million after accounting for a reduction in certain riders and zeroing out of the DSIC.
[101] UGI Gas Statement No.1 at 8, Table 1.

In addition, UGI has proposed to continue its Weather Normalization Adjustment (WNA) rider[102] with modest adjustments. As explained more fully below, the WNA Rider is a charge applied to customers in the residential (R and RT) and small business rate classes (N and NT) for bills rendered during the 7-month period from October to April. This charge was approved first in UGI's 2021 rate case and first went into effect on November 1, 2022. The net result is not positive for customers. As discussed more fully below and shown in Table 12, residential customers paid more than $44.2 million in WNA charges since November 2022.

Q: Do you have concerns about UGI's proposed rate design?

A: Yes. I have several concerns about UGI's proposed increase to its fixed customer charge and its decision to maintain its WNA. In short, these proposals are geared towards shifting risk of UGI under collecting its revenue requirement from UGI's shareholders to its customers because they work together to lock in revenue for UGI at the expense of customers and irrespective of whether a customer can or cannot afford service.

Q: Please explain what you mean when you say that the fixed customer charge and WNA rider work to lock in revenue for UGI.

A: The combination of an increased customer charge and the WNA together work to ensure that UGI is insulated from the risks associated with the fact that they are in the business of providing a commodity that a consumer may use less of in a given year – whether that usage reduction is driven by externalities like weather, the adoption of efficiency measures, the installation of electric appliances or supplemental heating equipment, or careful conservation. In general, residential customers use the most gas

[102] Book XI, UGI Utilities, Inc.-Gas Division Tariff, Supplement No. 63 to UGI Gas – Pa. P.U.C. No. 7, Fifth Revised page No. 53. ("Proposed WNA Rider").

service in the winter to serve their winter heating load. If more of a customer's bill is fixed each month through the fixed monthly charge, then less of it is dependent on how much gas they use. On the other side, if the weather sensitive volumetric usage is surcharged through a WNA for 60% of each the year (October – April), then UGI is made whole when the weather is warmer than the historical average. Together, UGI's proposed high fixed charge and WNA create a double penalty for customers because they either pay a higher fixed customer charge regardless of usage or they bear more of the risk of a warmer winter. Both are problematic for low income customers who struggle each month to be able to afford to retain gas service.

A. Monthly Customer Charge

Q: Please discuss your concerns about UGI's proposal to increase its monthly customer charge for residential customers from $16.25 per month to $23 per month as it relates to low income households.

A: The proposed increase in the fixed monthly customer charge weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of gas they consume. The proposed fixed customer charge will result in an increase of $81 per year, an amount which will be unavoidable for low income households struggling to maintain service and will exacerbate an acute affordability crisis.

Q: UGI witness Taylor asserts that the increase would benefit low income customers. Please explain his rationale.

A: Mr. Taylor asserts that this increase would benefit low income customers who tend to have higher than average use.[103] Mr. Taylor also asserts that placing more of the overall revenue requirement collection into volumetric charges harms low income customers because it requires them to have to make decisions to reduce their gas usage that may impact their quality of life.[104] He further states that he conducted an analysis that shows, based on the Company's requested revenue requirement, that an average UGI non-CAP low income customer with a usage of 86.7 Mcf/year would save $7.18 per year, or 0.8% of their annual bill, if the fixed customer charge is increased to $23 per month than if it remains at $16.25 per month.[105]

Q: Do you agree with Mr. Taylor's analysis?

A: I agree with his math and that at 86.7 Mcf/year at UGI's proposed revenue requirement, a customer would make out marginally better (~$7/year) at a $23 monthly customer charge and a volumetric rate of $6.8383/Mcf as compared to a $16.25 fixed customer charge and a volumetric rate of $7.8558/Mcf. The breakeven point appears to be usage of about 78.6 Mcf/year. If you use more than that amount, you will benefit from UGI's proposal. But if you use less than that, you will pay more under UGI's proposal. The use of averages by their very nature fails to accurately reflect the range of consumption patterns of customers. All customers have factors that influence how much or how little they use or do not use, including things like how many people live in the house, the size

[103] UGI Statement No 10 at 28-29.
[104] Id. at 29.
[105] Id. at 31, Table 7. Although Table 7 is labeled "Average CAP Customer" annual charges, the text of Mr. Taylor's testimony and the data make it clear that he uses the average usage of non-CAP CLI customers.

of the residence, the efficiency of the heating equipment, whether the customer's home is air sealed or whether it is drafty.

Q: Would UGI's proposed increase to the fixed charge affect the Company's Low Income Usage Reduction Program (LIURP)?

A: It could. UGI's proposal undermines the explicit goals of LIURP to "reduce residential energy bills." [106] By reducing the amount of bill reduction that can be obtained through LIURP measures, the proposed increase to the fixed charge threatens the continued effectiveness of ratepayer investments intended to reduce energy consumption, delinquencies, collections, and uncollectible costs. Thus, the proposed increase to the fixed charge will, in turn, impact the ability of LIURP to "decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[107] This would produce an unreasonable result. LIURP is a statutorily mandated program to be provided by the Companies to help low income customers reduce or manage their energy consumption in a cost-effective manner. Any increase to the fixed charge would both undermine the goal of LIURP and make the existing program less cost effective.

The ability to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. But as more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment

[106] 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").
[107] Id.

behavior – will erode. The ability to achieve bill savings through energy efficiency and conservation measures is especially important for households with income above 150% but less than 200% of poverty who are ineligible for CAP or LIHEAP but are eligible for energy efficiency and conservation services through LIURP or the federal Weatherization Assistance Program (WAP) – both of which have income guidelines of up to 200% of the Federal Poverty Level (FPL).[108] These households need to retain the ability to reduce their monthly energy costs through adoption of comprehensive energy efficiency and conservation programming.

Given that low income households are disproportionately at risk of termination and often lack the ability to control usage due to poor housing stock and older, less efficient appliances,[109] it is critical that they continue to have access to effective conservation tools capable of producing meaningful and lasting bill reductions.

Q: Mr. Taylor also asserts that fixed monthly charges allow for greater predictability in household budgets and, thus, are preferable because low income households have less ability to control their usage[110] Do you agree with Mr. Taylor?

A: I agree with Mr. Taylor that many low income households take steps to reduce usage that are better characterized as deprivation of essential services rather than truly

[108] While generally available only to customers up to 150% of poverty, up to 20% of LIURP participants may have household income up to 200% of poverty on a first come, first served basis. [110] UGI Statement No. 11 at 29-30.

conservation of energy. These households do so out of necessity and poverty. As outlined more fully in my testimony above, acute energy unaffordability has a profound impact on families – causing many to forego food, medicine, and other necessities to maintain energy services to their home. However, I disagree with Mr. Taylor that the solution to this problem is to increase the fixed customer charge for these households. Additional funds for energy efficiency and weatherization, easier access for tenants to take and receive full cost LIURP services, and improvements in access to CAP are far better tools to assist low income customers and allow them to avoid the consequences of energy deprivation than a rate design that locks in more of their monthly costs regardless of usage. Wresting control from customers to reduce their bill through reducing their usage does not benefit low income customers, it weakens their ability to maintain access to service.

Finally, regarding Mr. Taylor's assertion that a fixed bill provides a more stable and predictable bill each month, I would submit that a bill that is stable but unaffordable is meaningless for low income customers. While bill stability is a helpful tool for customers, enrollment in CAP which provides a bill based on a customer's ability to pay is far more useful to create actual bill stability from one month to the next than a higher fixed customer charge. Furthermore, UGI is legally required to offer the option of budget billing which is meant to produce bill stability without decreasing incentives for conservation and energy efficiency.

Q: Should UGI's fixed customer charge be increased?

A: No. UGI's fixed monthly customer charges should not be increased because I do not recommend an increase in the revenue requirement, and I recommend that the WNA end with the current pilot. These recommendations are inextricably entwined. If the

Commission awards any increase and if the Commission allows UGI to retain its WNA, then I would do not oppose an increase in the monthly customer charge that is proportionately scaled back from the proposed $23 to any revenue requirement authorized in this case.

Q: Why does your recommendation about the customer charge depend on whether the Commission eliminates UGI's WNA?

A: To be clear, the outcome dictated by the evidence and my analysis is that UGI should not receive any increase, the customer charge should remain $16.25, and the WNA should be eliminated. This combination places risk of under-collection on UGI who is in the best position of all entities to manage that risk and produces the most favorable opportunity for low income customers to reduce their bills each month by reducing their usage. However, if the Commission decides to allow UGI to retain its WNA despite its impacts on customers, then a higher volumetric charge (all other things being equal) will produce a higher WNA charge in the months a WNA is assessed because it is based on the volumetric charge. Thus, my secondary recommendation is that to the extent the Commission allows UGI to retain its WNA, then a modest increase in the monthly customer charge would mitigate against the continued impact of the WNA.

B. Weather Normalization Adjustment

Q: What is UGI proposing regarding its WNA rider?

A: Under the terms of UGI's current tariff, the Company's 5-year WNA pilot will end on October 31, 2027, unless affirmatively extended or otherwise permitted by

Commission order.[111] UGI proposes to continue the WNA as a pilot for an additional 5 years, through October 31, 2032, with the modification that the charge be calculated using a 10-year average of heating degree days that will be updated at each rate case.[112]

Q: Please explain UGI's WNA.

A: UGI's WNA is a charge that currently UGI applies to residential and small business customers bills each month from October to April to account for whether the temperature for the month was warmer than normal or colder than normal. Here is an explanation of how the WNA will work based on the Company's proposal:[113]

- UGI calculates normal weather based on a concept known as a heating degree day (HDD). An HDD is the number of degrees below 65 degrees Fahrenheit. In other words, 10 HDD would mean that on a given day the average measured temperature was 55 degrees Fahrenheit. UGI calculates the number of "normal" HDDs for each day of the year based on the 10-year average number of HDDs in the delivery region. UGI has three delivery regions.
- The WNA assumes that the weather in the future – when bills are charged – will reasonably approximate this 10 year daily average HDDs. That is, the WNA is set based on the presumption that UGI should be permitted to collect normalized revenue produced by normalized temperatures rather than the revenue associated with the actual temperatures at the time service is delivered.
- In the 7 months of October through April, UGI calculates what it calls a customer's weather normalized billing Ccfs (WNBC). This is the amount that the customer ***would have used*** if weather had conformed to the "normal" pattern (e.g., the average weather over the past 10 years) and there were the same number of HDDs for the billing period. This WNBC is adjusted to account for a 3% cushion of HDDs on either side of normal – often referred to as a 'dead band'.[114]

[111] See Book X, UGI Exhibit F, Current Tariff, Supplement No. 59 to UGI Gas – Pa P.U.C. No 7, Fourth Revised Page No. 53.
[112]UGI Statement No. 11 at 33-34.
[113] Book XI, UGI Gas Exhibit F – Proposed Tariff, UGI Utilities, Inc.-Gas Division Tariff, Supplement No. 63 to UGI Gas – Pa. P.U.C. No. 7, Fifth Revised Page 53 No. 53. ("WNA Rider").
[114] See id. at (g) ("A deadband of 3% shall apply. The WNA for a billing cycle will apply only of the [Actual HDD] for the billing cycle are lower than 97% of higher than 103% of the [Normal HDD] for the billing cycle.")

- UGI subtracts from the WNBC the usage that it considers to be baseload monthly Ccfs (BLMC), which is calculated from the customer's usage in the summer months. UGI asserts that this calculation allows it to isolate application of the WNA to apply to a customer's weather sensitive usage.
- During the WNA months of October through April, UGI calculates a customer's actual monthly Ccfs (AMC), which is their actual metered usage.
- To determine the WNA, UGI then subtracts the weather normalized bills Ccfs (WNBC) (i.e., what they should have used under "normal weather") from the actual monthly Ccfs (AMC) less their baseload monthly Ccfs (BLMC) to arrive at their Weather Normalized Adjustment Ccfs (WNAC).
- The WNAC is then multiplied by the applicable distribution charge for the rate class to determine the WNA amount that is applied to the bill.
- These are the amounts, in aggregate, that are reflected in Table 12, above and have resulted in $53.5 million in net WNA charges over the period from November 2022 through January 2026.

In simplified terms, the WNA is a charge applied to residential and small business customers' bills not based on what they use but based on what they *would have used* had the weather been outside of 97% - 103% of the "normal" weather, as calculated by UGI's tariff reflected in HDDs. When the weather is warmer than 103% of normal as reflected in HDDs, UGI charges customers for service they <u>did not use</u> but that they would have used had the temperature been "normal" per UGI's calculation. When the weather is colder than 97% of normal as reflected in HDDs, it credits them for service that they <u>did use</u> but would not have used had the temperature been "normal" per UGI's calculation.

Q: What are your concerns about the WNA?

A: I have several concerns that I list here and outline more fully below:

- The WNA shifts weather related risk from the utility to customers in a way that is inappropriate for a monopoly provider of essential services because the WNA improperly assumes that UGI is entitled to revenue based on weather as it existed in the past rather than as it exists as the time service is delivered.

- The WNA requires an overly complicated and nuanced calculation that is difficult for customers to understand because it charges customers not for their actual usage but their hypothetical usage.
- While mathematically bi-directional, in practice, the WNA more often works to the detriment of customers and the benefit of UGI as it results in millions of dollars of additional charges each year that customers pay for service they did not use.
- The WNA charge inflates other riders collected by UGI including its DSIC.

Q: Please explain why the WNA shifts weather related risk from the utility to customers in a way that is inappropriate for a monopoly provider of essential services?

A: The WNA shifts weather-related risk from the utility to customers by assuming that UGI is entitled to revenue based on its calculation of normalized weather as opposed to actual weather at the time that it bills a customer. This is problematic from a consumer's perspective. The very nature of gas distribution service is that it exists to deliver a commodity that is weather dependent. Residential customers would likely not pay for *an entire gas distribution system* simply to only cook, heat water, or have fireplaces, as it would be too expensive for the system to exist solely for that purpose. We have these systems because it produces heat in winter months, these other uses are ancillary. In my view, it is inappropriate for a monopoly provider of essential utility service that is inherently weather dependent to shift weather-related risk to consumers. As a monopoly, the utility has no competition and is guaranteed a customer base. As such, the Commission needs to exercise the appropriate level of competitive restraint on the kinds of charges that it allows companies like UGI to assess.

Q: Is UGI better able to shoulder the risk of revenue fluctuations created by warming weather?

A: Yes. As outlined by above, low income customers do not have any margin month in and month out to spend more on energy costs. In winter months that are warmer than normal, these customers are expecting a lower bill not a weather adjusted bill. In contrast, utilities like UGI benefit from regulatory frameworks that allow them to recover costs and earn a reasonable return on their investments from captive ratepayers. In this case, UGI is projecting its revenue needs based on a fully projected future test year and is allowed to establish a revenue requirement based on its projections of the world as it expects it to be as of September 30, 2027. UGI also will be permitted to charge a DSIC after September 20, 2027, of up to 5% of billed revenue for necessary infrastructure upgrades and operational expenses. Both built-in alternative rate mechanisms offer the kinds of financial protection to UGI that customers simply do not have and allow UGI to be better positioned to absorb the effects of variable weather conditions without passing these risks down to consumers. Instead of offloading the risk to ratepayers, it would be more appropriate for the utility to manage the risk.

Q: Do you have other concerns about the WNA?

A: Yes, the WNA requires an overly complicated and nuanced calculation that is difficult for customers to understand because it charges customers not for their actual usage but for their hypothetical usage. It is not reasonable to assume that customers understand the WNA or why it is in place. While UGI recently revised its WNA scripting to improve the information that it provides, the concept that one must pay for usage that UGI anticipates that they would use under normal weather rather than what you did use under

actual weather is a difficult concept to understand. Most people expect to be billed for what they use, not what the utility calculates that they should have used had the weather been an average winter.

Q: You mentioned above that the existence of credits when weather is colder than normal. Is this a benefit to customers?

A: Yes, but it is not worth the tradeoff because it happens so inconsistently. I do not dispute that under the WNA formula when weather is colder than normal customers get a bill credit that they would not otherwise have received in the absence of the WNA charge. The problem is that this rarely happens. The WNA has been in effect since November 2022. In the months between November 2022 through February 2026, there have only been 6 months (January-February 2025 and November 2025-February 2026) in which the WNA was assessed where customers in aggregate were provided with credits. The remaining months, customers were charged. On net, the WNA has simply not been positive for customers.

Table 12 – Net WNA Charge to R and RT Customers[115]

Year	WNA Revenue
2022	$1,797,324.60
2023	$24,315,727.00
2024	$30,472,835.86
2025	$1,766,165.42
Jan. 2026	($3,857,593.80)
Feb. 2026	($10,281,879.00)
Total	**$44,212,580.08**

As shown above, the WNA has surcharged customers a total of $44.2 million based on what UGI calculated they should have used had the weather conformed to normal. While

[115] WNA Calculation derived from UGI Response to OCA 7-2, Attachment and 8-50, Attachment. Attached hereto at Appendix B.

this winter was significantly colder than normal and customers saw significant credits in aggregate in early 2026, this comes after several years of paying more each winter because of significantly warmer weather than normal. I submit that customers would overall find it of little value that they can receive a credit in months that are colder than normal because, based on the history, while it happened recently, it does not appear that these months occur with any regularity.

Q: Doesn't the fact that the WNA credits some months and charges others mean that it's working how UGI intended it?

A: Yes. The WNA is working exactly like UGI intended to it to work: It collects substantial net revenue from customers precisely because, over the long term, winters are warmer and they are projected to continue to warm.[116] There is no real debate about the direction that our weather is headed long term given the impacts of climate change. It is warming overall significantly and, thus, the WNA is far more likely to produce significant asymmetry and surcharge customers on net each year than it is that customers will see net credits.[117] Thus, it is no accident that the WNA shows very few months where there is a bill credit. I doubt very much that UGI would have proposed a WNA if it did not work to its financial benefit. In fact, shortly after this case was filed, UGI Utilities, Inc. – Electric division filed a rate case.[118] These companies are owned by the same corporate parent; however, UGI Electric did not file a reciprocal adjustment mechanism to account

[116] See Pennsylvania Department of Environmental Protection, Pennsylvania Climate Impacts Assessment 2024 at 18 (finding that Pennsylvania's annual total heating degree days are anticipated to decrease by 13% by mid-century and 25% by end-of-century compared to the historical baseline). Available for download at: https://www.pa.gov/agencies/dep/residents/climate-change/impacts.html (Last visited March 30, 2026).
[117] See id.
[118] UGI Utilities, Inc. – Electric Division PA P.U.C. No. 6, Supplement No. 92, Docket No. R-2025-3059430 (Filed Mar. 27, 2026).

for weather sensitive electric usage (i.e., air conditioning usage in the summer) that would credit customers for warmer than normal summer temperatures and more cooling degree days than a 10 year normal.

Q: Do you have other concerns about the WNA?

A: Yes, UGI's DSIC charge is also assessed on the WNA rider which means that UGI receives DSIC revenue based not only on the revenue charged based on a customer's usage but also based on what UGI calculated that the customer should have used had the weather been "normal." This compounds the irrationality of the WNA because it charges a surcharge on a surcharge, which works to increase UGI's billed revenue at the expense of its customers.

Q: Does UGI appear to need the WNA charge to generate sufficient overall revenue?

A: No, not in my judgment. There are a few factors upon which I base this determination. First, UGI admitted in response to discovery that the WNA has no bearing on whether it can provide safe and reliable service, instead it is about whether it can meet its authorized revenue requirement.[119] Thus, there is no basis in the record to conclude that the WNA is necessary for the safety or reliability of UGI's service to customers, which would include its compliance with its long term infrastructure improvement plan (LTIIP) and any other capital replacement and improvement plan that is about the safe and efficient operation of its system. As such, I am left to conclude that more revenue is not at all driven by the operational needs of the system. Instead, the WNA is all about whether UGI can maximize its revenue for the benefit of its shareholders.

[119] UGI Response to CAUSE-PA 4-7, Attached hereto at Appendix B.

Second, with the WNA in place, UGI loses a significant incentive to operate efficiently. As noted at the beginning of my testimony, under the framework of traditional ratemaking, once rates are set the utility can earn at or above its authorized revenue requirement through operating efficiencies that generate fewer expenses than projected leading to higher retained earnings. With the WNA in place, there is one less variable for the Company to concern itself with and UGI hits its projected revenue targets for the end of the fully projected future test year regardless of the efficiency of its operations. While UGI may see this as a net positive, in my view, because it works to discourage efficient operations, the WNA effectively works as a wealth transfer from UGI's customers to UGI's shareholders for services that were not used by UGI customers.

Q: UGI is changing its definition of normal weather to a 10-year normalization period that it proposes to adjust at each rate case. Does this change alleviate any of your concerns?

A: No. While I support this change if the WNA is to continue as it will more closely align normal weather for establishing rates in a rate case with normal weather under the WNA, it does not alleviate the underlying uncertainty associated with billing based on normalized weather rather than actual weather. Although I anticipate under this change the WNA charges and credits will be lower, my objection to the WNA is that is shifts the risk of under collection from the utility where it belongs to its far less sophisticated customers – many of whom simply cannot bear this risk financially.

Q: Mr. Taylor asserts that its WNA is just and reasonable based on the factors outlined in the Commission's policy statement related to alternative ratemaking mechanisms at 52 Pa. Code § 69.3302. Do you agree?

A: Mr. Taylor outlines his responses to each of these factors in his exhibit JDT-4. I have responded to each of Mr. Taylor's assertions in Appendix C, Cicero Exhibit C-3.

Q: What is your overall conclusion about whether the WNA should continue?

A: I recommend that the Commission reject UGI's request to continue its WNA and that the WNA cease, effective October 31, 2027, as is set out in its current tariff. UGI's WNA is designed to stabilize UGI's revenue fluctuations caused by variations in weather, but it does so by disproportionately burdening low income customers, raising deep concerns about fairness and equity. While this mechanism protects UGI from revenue volatility, it transfers the financial risk of warmer weather onto customers who may have already reduced their consumption to manage tight household budgets. For low income households, which often face difficult choices between heating, food, and other essentials, these additional charges undermine their ability to plan for and manage utility expenses effectively.

Additionally, the timing and unpredictability of WNA-related charges exacerbate the financial stress experienced by low income customers. Because the WNA is applied retrospectively to account for weather variations, customers may face unexpected bill increases that are difficult to predict or budget for. These charges are also assessed in the months with the highest bills thereby compounding monthly bill unaffordability. This unpredictability is particularly harmful to low income households, where any deviation in monthly expenses can disrupt financial stability. The WNA introduces a variable that

makes it more challenging for vulnerable households to manage their limited resources effectively.

Q: If UGI is permitted to continue the WNA, should it be reformed?

A: Yes. While my primary recommendation is that the WNA should be eliminated at the conclusion of the current pilot, if the WNA is not eliminated it should be significantly reformed in the following ways.

First, UGI's proposal to change its WNA to normalized 10-year period that it updates at each rate case should be accepted. As noted above, this is better than the status quo and will more readily conform normalized weather to actual weather.

Second, the WNA should remain a pilot but should be approved for a period of no more than 3 years rather than 5 years so that its effectiveness can be assessed more frequently.

Third, the months in which the WNA is operable should be reduced to the period from December through March, as these are the winter months recognized by the Commission and the General Assembly for other public policy purposes such as the winter termination rules that prevent termination of service to households with income at or below 250% FPL. If these are the months when economically vulnerable households must retain service because of the possibility of cold weather, it is unreasonable to allow UGI to assess a weather-related charge in the months of October, November, April, or May. At the very least, the month of October should be eliminated to be consistent with the Commission's most recent decision in the Columbia Gas 2025 rate case where it approved Columbia's WNA only for the months November through April.[120]

[120] Pa. PUC v. Columbia Gas of Pa., Inc., Docket No. R-2024-3067174, Final order at 202 (Dec. 4, 2025).

Fourth, WNA billed revenue should be excluded from the revenue upon which the DSIC is assessed. In my view, UGI should not be allowed to assess an up to 5% surcharge on top of the WNA surcharge. It compounds the harm to households for whom the WNA is assessed and inflates the revenue that UGI collects through its DSIC.

Fifth, the deadband should be increased to 5% rather than the current 3%. This would bring the WNA in alignment with that which was recently permitted to continue in the Columbia Gas 2025 rate case and would produce fewer months where the WNA would be charged or credited and allow for actual significant deviations in weather to be adequately addressed.

Finally, to promote revenue stability, the WNA should be applied on a per class basis, reconciled annually, and surcharged over the full 12-months of the subsequent year rather than on a per customer basis. This change would eliminate the hardship that currently exists by imposing WNA charges during the highest usage and most expensive bills in the winter where energy burdens are at their highest.

Q: Please explain more fully your last recommendation.

A: The WNA is designed to collect revenue on a per class basis measured against an aggregate number of heating degree days using a 10-year time frame, but UGI currently assesses it on a per customer basis and does so immediately as the charges are incurred. This means that if December is warmer than normal by 5 HDDs UGI will impose a WNA charge in January to account for this 5 HDD difference. If in January, the weather is colder by 5 HDDs, they will apply a credit in February for this difference. While these net out, I am concerned about the impact the WNA has on low income households' monthly ability to afford service as they already face significant bills in the winter and have energy

burdens that are as high as 16% during these months. My alternative proposal would have UGI accrue as a regulatory asset all WNA charges and credits during the winter months on a per class basis. At the end of the WNA period (March or April depending on whether the Commission accepts my recommendation to narrow the WNA months for December – March), UGI would allocate the residential class wide net WNA charge across all residential customers on a per ccf basis to all residential non-CAP customers over the subsequent 12-month period. Spreading the WNA out over a 12-month timeframe on a class wide basis would, at least partially, address my concerns about higher charges occurring during the winter months. It would also be a more effective means of reducing the impact of the WNA on a month-to-month basis and balancing the adjustments over a longer timeframe.

VI. Universal Service and Energy Conservation Programs

Q: What are universal service and energy conservation programs?

A: In short, universal service and energy conservation programs are inclusive of those programs, policies, and procedures which help ensure low income households stay connected to service and reduce their usage.[121]

Q: Please briefly describe UGI's universal service and energy conservation programs.

A: UGI operates four Universal Service and Energy Conservation programs that assist low income customers: (1) the Customer Assistance Program (CAP); (2) the

[121] 66 Pa. C.S. § 2203.

Hardship Fund (Operation Share); (3) the Low Income Usage Reduction Program (LIURP); and (4) the Customer Assistance Referral and Evaluation Services (CARES).[122]

As a threshold matter, I note that on April 1, 2025, UGI filed its proposed Universal Service and Energy Conservation Plan for 2026-2030 (Proposed 2026 USECP), which remains pending before the Commission.[123] I also note that in the Settlement of its most recent rate case, UGI made several commitments related to its Universal Service and Energy Conservation programs that it is still in the process of implementing.[124] I am not seeking to disrupt those processes, but have several additional recommendations that are not accounted for by either its pending USECP or its prior rate case settlements.

Q: Is UGI proposing any substantive changes to its Universal Service and Energy Conservation Programs in the context of the present proceeding?

A: No.

Q: Please explain how this section of your testimony is organized.

A: I will assess and offer recommendations related to UGI's universal service programs. I will also assess and offer recommendations related to UGI's overall policies and processes for universal service program outreach and enrollment.

A. Customer Assistance Program (CAP)

Q: Please briefly describe UGI's CAP.

A: UGI's CAP provides discounted monthly bills and arrearage forgiveness to low income customers at or below 150% FPL. UGI's CAP rates are calculated each month

[122] 2020-2025 USECP at 1-2.
[123] UGI Utilities, Inc. - Gas Division and UGI Utilities, Inc. - Electric Division Universal Service and Energy Conservation Plan for 2026-2030, Docket No. M-2025-3054362 and M-2025-3054366. (Proposed 2026-2030 USECP)
[124] Pa. PUC v. UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, et al., Joint Petition for Settlement of All Issues (Submitted July 9, 2025).

based on the lower of a percentage of customer's monthly income (Percentage of Income Payment (PIP) amount), or a CAP participant's average monthly bill.[125] For gas heating customers, maximum monthly CAP payments are set at 4% for customers with household incomes between 0-50% FPL, and 6% for customers with household incomes between 51-150% FPL.[126] CAP participants with no income are responsible for making a minimum monthly CAP payment, which is set at $25 for gas heating customers and $15 for non-heating customers.[127]

Q: How many customers are enrolled in UGI's CAP?

A: As of January 2026, UGI reports that 26,250 customers were enrolled in its CAP.[128] As of August 2025, UGI witness Brian Meilinger reports that UGI serves 143,404 estimated low income customers.[129] Thus, in January 2026, 117,154 estimated low income customers – or 82% – were not enrolled in CAP.

Q: Do you have concerns about the number of low income customers not enrolled in UGI's CAP?

A: Yes. CAP is a critically important affordability program, helps to reduce low income termination rates and arrearage levels of participants. However, most customers eligible for CAP assistance are not enrolled, limiting the ability of CAP to mitigate unaffordability for its broader low income customer population at proposed and present rates. This under enrollment is especially concerning in the face of UGI's proposed rate increase, the effects of which will fall hardest on low income households who are not enrolled in CAP.

[125] 2020-2025 USECP at 22.
[126] 2020-2025 USECP. at 23.
[127] 2020-2025 USECP. at 24.
[128] UGI Response to CAUSE-PA 1-6, Attachment. Attached hereto at Appendix B.
[129] UGI Statement No.12 at 16.

Q: Has UGI made efforts to improve its CAP enrollment?

A: Yes. In his testimony, UGI witness Brian Meilinger indicates that UGI's average CAP enrollment for 2025 was 25,346 customers, representing a 3% increase over 2024, and a 26% increase over 2022 CAP average enrollment of 20,134.[130] He addresses efforts that UGI has undertaken to increase CAP enrollment.[131] He indicates that the Company undertook a project to assess, identify, and engage with low income customers in 2023-2024, and that UGI's Low Income Customer Assessment and Outreach Pilot utilized Experian to help identify potential low income customers and performed targeted marketing via email and direct mail.[132] Mr. Meilinger indicates that UGI will continue its general outreach efforts, as well as a twice a year personalized outreach via email and direct mail to customers who are self certified low income and to LIHEAP recipients that are not currently enrolled in CAP. UGI is also undertaking expanded outreach efforts through additional in person Winter Assistance Relief Mobilization ("WARM") events held at targeted locations each year.[133] UGI also has been participating in the DHS data sharing process conducting outreach to data sharing participants who have not yet enrolled in CAP, and utilizing the data sharing file to recertify customers for CAP.[134]

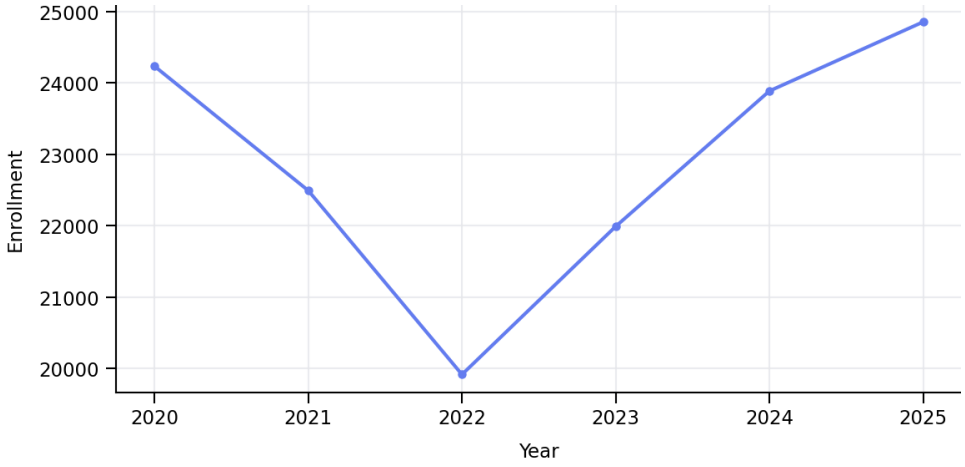
Q: Are UGI's initiatives adequate to address the undersubscription of its CAP program?

A: No. While I appreciate that UGI has made efforts to improve its CAP enrollment in recent years, it is important to consider the longer term trend. UGI witness Brian Meilinger

[130] UGI Statement No.12 at 5.
[131] UGI Statement No.12 at 6.
[132] UGI Statement No.12 at 6.
[133] UGI Statement No.12 at 12.
[134] UGI Statement No.12 at 13.

argues that UGI's average CAP enrollment for 2025 was 25,346 customers, representing a 3% increase over 2024, and a 26% increase over 2022 CAP average enrollment of 20,134.[135] However, he fails to acknowledge that UGI's CAP enrollment dropped off dramatically between 2020 and 2022; thus, the improvement from 2022 to 2024 essentially returned UGI's CAP enrollment to its prior levels – when its rates, and the corresponding need for rate assistance, were substantially lower than they are now. The following chart shows UGI's CAP enrollment since 2020:

Chart 3 UGI CAP enrollment 2020-2025[136]



While I acknowledge that enrollment has continued to increase in the past few years, it remains troubling that a large majority of UGI's estimated low income customers (82%) and a majority of UGI's reported confirmed low income customers (62%) remain

[135] UGI Statement No.12 at 5.
[136] 2023-2025 average CAP enrollment was derived from UGI's response to CAUSE-PA 1-6 Attachment. 2020-2022 CAP enrollment is reported in [136] Pa. PUC Bureau of Consumer Services, Report on Universal Service Programs & Collections Performance (2020), at p. 58 (Published Nov. 2021); Pa. PUC Bureau of Consumer Services, Report on Universal Service Programs & Collections Performance (2021), at p. 60 (Published Dec. 2022); Pa. PUC Bureau of Consumer Services, Report on Universal Service Programs & Collections Performance (2022), at p. 59 (Published Sep. 2023); available at: https://www.puc.pa.gov/filing-resources/reports/universal-service-programs-and-collections-performance-reports/

unenrolled in CAP.[137] These non-CAP low income customers will be disproportionately impacted by any rate increase approved in this proceeding as they will be forced to shoulder the full impact of any rate increase on top of their already unaffordable energy burdens.

Q: Do you have recommendations to improve UGI's CAP enrollment?

A: Yes. I recommend a more systematic and comprehensive approach to identifying eligible customers and enrolling them in CAP. To that end, the Commission should require UGI to implement routine screening of its applicants and customers to determine eligibility for CAP and other universal service programs.

While I am supportive of UGI's ongoing outreach efforts to connect customers with assistance, it is imperative that increased efforts are made to routinely and proactively connect customers with assistance before payment difficulties occur. Improving the identification of UGI's low income customers – and better matching these customers to critical rate assistance and usage reduction services at the earliest opportunity – is essential to providing just and reasonable rates and service to low income households, and to ensuring all consumers, including those eligible for CAP, are receiving the most advantageous available rate. Proactive CAP enrollment strategies, such as routine screening, also serves as a critical collections and cost containment tool – helping to reduce the accrual of unmanageable debts, reduce uncollectible expenses and other collections costs, and reduce the cost of the CAP arrearage management program.

[137] UGI Response to CAUSE-PA 1-6, Attachment (68,289 confirmed low income customers as of Jan. 2026); UGI Response to CAUSE-PA 1-6, Attachment (26,250 CAP customers as of Jan. 2026). Attached hereto at Appendix B.

To more accurately identify CAP eligible customers and enroll these customers in available assistance, I recommend that UGI be required to:

- Screen all new and moving customers for income level at the time their service is established and ask whether they would like information about income qualified programs that may reduce their rate.
- Screen existing customers for household income level on any non-emergency calls and inquire whether there have been any updates to household income information.
- Develop a process for routine income screening through UGI's online account portal.

Customers identified as low income through these regular screening processes should be referred for enrollment in CAP and other universal service programs – as well as LIHEAP. While UGI customers should be able to opt out of providing household income information, they should first be informed that if they choose to disclose this information, they may be eligible for lower rates or energy efficiency measures. I recommend that UGI develop and implement screening and referral recommendations within 90 days of the final order in this proceeding.

Q: Do you have recommendations about UGI's Universal Service Outreach in general?

A: Yes. I understand that, pursuant to the agreement in last year's UGI rate case, UGI is undertaking expanded outreach efforts in 2026 through additional in person WARM events held at targeted locations each year.[138] I also understand that each year thereafter, the Company will target a minimum of three new cities within its service territory as set forth in its tariff, which will be identified in consultation with its Universal Service Advisory

[138] UGI Statement No.12 at 12.

Committee.[139] I believe it is appropriate to utilize some of the geographic data provided by UGI in this proceeding to help inform the targeting of future outreach events, such as the WARM events. In response to discovery, UGI provided breakdowns of their confirmed low income customers and CAP customers by Zip code.[140]

According to this data, a majority (22,929 out of 41,697) of UGI's confirmed low income customers not enrolled in CAP are in 10 urban centers. The areas with the most confirmed are primarily in the following urban centers:

Table 13: UGI Service Territory
Areas with the Most Confirmed Low Income Customers Not Enrolled in CAP[141]

Area (Zip Codes)	**Number of Non-CAP CLI Customers**
Reading[142] (19601, 19602, 19604, 19605, 19606, 19607)	3,908
Wilkes Barre (18701, 18702, 18704, 18705, 18706)	3,666
Scranton (18504, 18505, 18507, 18508, 18509, 18510, 18512)	3,019
Allentown[143] (18101, 18102, 18103, 18104, 18106, 18109)	2,910
Harrisburg[144] (17101, 17102, 17103, 17104, 17110, 17111)	2,461
Lancaster (17601, 17602, 17603)	2,178
Bethlehem (18015, 18017, 18018)	1,506
Easton (18042, 18045, 18040)	1,181
Hazelton (18201, 18202)	1,343
Williamsport (17701)	1,025
Total	**23,197**

These areas all ranked among the highest in volume of low income service terminations.[145] These areas represent effective locations for targeted outreach and enrollment efforts for the Customer Assistance Program.

[139] Id.
[140] UGI Response to OCA 4-4, Attachment. Attached hereto at Appendix B.
[141] UGI Response to OCA 4-4(c), Attachment. Attached hereto at Appendix B.
[142] 2,817 of these customers are concentrated in Zip Codes 19601, 19602, 19604 (Central Reading, Southeast Reading, Northeast Reading).
[143] 1,580 of these customers are concentrated in 18102 Zip Code (Central Allentown).
[144] Notably, UGI also has an additional 758 Non-CAP CLI customers in the neighboring communities of Steelton (17113) and Colonial Park/Progress (17109)
[145] See UGI Response to OCA 4-16 (b), Attachment. Attached hereto at Appendix B.

I understand that UGI has already agreed to hold multiple outreach events in Lancaster, Wilkes Barre, and Williamsport.[146] I recommend that UGI prioritize scheduling additional future events, at a similar scale and frequency, in the other areas identified in Table 13.

Q: Are there other areas that UGI should target for outreach?

A: Yes, while the highest volume of terminations is in the urban centers listed above, the most aggressive growth in low income terminations is occurring in rural and smaller market areas. Several rural and mid-sized community ZIP codes have seen their confirmed low income terminations nearly double in the last two years. These areas represent a growing high risk tier outside of the major cities:

- Lebanon (17042, 17046): This area has seen the largest rural increase, with terminations jumping from 102 to 206 (+102%).
- Berwick (18603): Terminations rose from 60 to 113 (+88%).
- Pittston/West Pittston (18640): Significant growth from 68 to 114 terminations (+67%).
- Sunbury (17801): Terminations increased from 69 to 108 (+56%).[147]

These areas are reaching termination levels previously only seen in much larger urban centers. I also recommend that UGI target these areas for Universal Service Outreach.

[146] UGI Statement No.12 at 12.
[147] UGI Response to OCA 4-16(b), Attachment. Attached hereto at Appendix B.

B. Hardship Fund

Q: Please briefly describe UGI's Hardship Fund, Operation Share.

A: Operation Share is administered by UGI's universal service program staff.[148] It provides eligible customers with grants up to $600.[149] To qualify for an Operation Share grant, residential customers must:

- Have household income at or below 250% FPL and meet the following requirements:
  - Not have received an Operation Share grant in the last 12 months;
  - Have an outstanding balance on their utility bill;
  - Provide adequate information to demonstrate inability to pay energy bills; and,
  - Have contacted UGI's credit department to discuss their options.[150]

Q: Has UGI made proposals in this proceeding regarding its Operation Share program?

A: While UGI has not proposed changes to the program structure as part of this case, UGI is committing to contribute $1,000,000 annually each year for fiscal years 2027 to 2029 to its Operation Share program.[151]

Q: Does UGI's commitment constitute an overall increase to the Operation Share contribution?

A: No. While I strongly support UGI's proposal to contribute $1,000,000 annually to the Operation Share program, the Operation Share contribution will nonetheless be a reduction for years 2027 to 2029 compared to the 2026 budget. As part of the UGI Gas 2025 Settlement, Paragraph 62(a), the Company increased its Operation Share

[148] 2020-2025 USECP at 13.
[149] Id. at 14.
[150] Id.
[151] UGI Statement No.1 at 10; UGI Statement No.12 at 2.

commitment by $500,000 from $584,500 to $1,084,500 total.[152] In addition, in November 2025, UGI donated an additional $500,000, bringing the total donated to Operation Share to more than $1.5 million for fiscal year 2026.[153] The Settlement provision required that UGI maintain this donation level "until the effective date of rates established in the next base rate case."[154] Thus, the increased contribution will expire upon the effective date of rates in this proceeding and UGI's overall contribution will reduce by $584,500 per year.

While I strongly support UGI's proposed commitment to its Operation Share Program, I recommend that UGI, **at a minimum**, continue its $1,584,500 total contributions to prevent a reduction in available funding for this vital program. However, if any rate increase is approved in this proceeding, I believe it would be appropriate for UGI to contribute additional funds over and above this $1.5 million to account for the additional hardships caused by the impact of such an increase.

VII. Universal Service Cost Recovery

Q: What issues will you discuss in this section of your testimony?

A: I will address UGI's proposal to assign, on a voluntary and negotiated basis, Universal Service and Energy Conservation program costs to Rate XD customers. I propose a broad reallocation of these costs to all customers classes to mitigate the cost impact to residential customers and broaden the reach of these critical affordability programs.

[152] UGI Statement No.12 at 8; UGI.
[153] UGI Statement No.12 at 9
[154] UGI 2025 Rate Case Settlement at ¶ 62(a)

Q: Please explain the current cost recovery mechanism for UGI's Universal Service and Energy Conservation costs.

A: As noted previously in my testimony, UGI's Universal Service and Energy Conservation programs refer to a suite of assistance programs that help low income households remain connected to service. These programs are required by state law to be offered and effectively implemented by UGI and are overseen by the Commission. The foundation of this requirement is in the Natural Gas Choice and Competition Act codified in Chapter 22 in Title 66. There, the General Assembly made several declarations of state policy regarding continued access to natural gas service. It stated:

> (6) After notice and hearings, the commission shall establish for each natural gas distribution company an appropriate nonbypassable, competitively neutral cost-recovery mechanism which is designed to recover fully the natural gas distribution company's universal service and energy conservation costs over the life of these programs. Except as provided in paragraph (10), policies, activities and services under this paragraph shall be funded and spent in each natural gas distribution company's service territory. Nothing in this chapter shall be construed to prohibit public funding or voluntary funding by third parties of a natural gas distribution company's universal service and energy conservation programs.
>
> (7) The commission shall, at a minimum, continue the level and nature of the consumers protections, policies and services within its jurisdiction that are in existence as of the effective date of this chapter to assist low-income retail gas customers to afford natural gas services.
>
> (8) The commission shall ensure that universal service and energy conservation policies, activities and services are appropriately funded and available in each natural gas distribution service territory. The commission shall encourage the use of community-based organizations that have the necessary technical and administrative experience to be the direct providers of services or programs which reduce energy consumption or otherwise assist low-income retail gas customers to afford natural gas service. Programs under this paragraph shall be subject to the administrative oversight of the commission, which shall ensure that the programs are operated in a cost-effective manner.[155]

[155] 66 Pa. C.S. § 2203(6)-(8).

The term "universal service and energy conservation" as used in Chapter 22, was defined by the General Assembly as:

> **"Universal service and energy conservation**." Policies, practices and services that help residential low-income retail gas customers and other residential retail gas customers experiencing temporary emergencies, as defined by the commission, to maintain natural gas supply and distribution services. The term includes retail gas customer assistance programs, termination of service protections and consumer protection policies and services that help residential low-income customers and other residential customers experiencing temporary emergencies to reduce or manage energy consumption in a cost-effective manner, such as the low-income usage reduction programs and consumer education**.**[156]

For purposes of this case, all the programs collected through UGI's existing and proposed Universal Service Rider meet the definition of the public purpose costs that the General Assembly has required UGI to develop, offer and implement.

Under its current Universal Service Rider, UGI assigns the costs of these programs only to residential customers.[157] In its proposed tariff, UGI continues only assign these costs to residential customers, but also proposes to add that the "rider may also apply to customers receiving service under Rate XD on a negotiated basis,"[158] and that :[t]he USP rate for customers receiving service under Rate XD, if applicable, may differ from the USP rate stated below and may be applied on a volumetric, fixed, charge, percentage or other basis."[159] UGI witness Epler states that the reason for this change is to allow the assignment to Rate XD and "otherwise lower USP costs borne by the Company's residential customers."[160]

---

[156] 66 Pa C.S. § 2202 (definitions) ("Universal service and energy conservation") (emphasis in original).
[157] Book X, UGI Exhibit F - UGI Utilities, Inc. – Gas Division., Supplement No. 62 to UGI Gas – PA.P.U.C. No. 7, Seventeenth Revised page No. 58. ("USP Rider (Current")).
[158] Book XI, UGI Exhibit F – UGI Utilities, Inc. – Gas Division, Supplement 63 to UGI Gas – PA P.U.C. No. 7, Eighth Revised Page No. 59.
[159] Id.
[160] UGI Statement No.10 at 22:13-14.

In the Fully Projected Future Test Year, UGI projects these costs to be approximately $30.5 million annually.[161] This amount is simply a projection, and UGI flows the actual costs of the programs, plus reconciliation for under or over collection. It resets its rate quarterly at the same time as it makes a change in its purchased gas costs. Currently, the cost per Mcf imposed for residential customers is $0.06363/Mcf[162].

Q: Historically, these costs have only been recovered from residential customers, why should UGI be required to recover these costs more broadly?

A: There is no rational basis for residential customers to solely bear the burden of these costs. The General Assembly has clearly recognized these costs are public purpose costs because they assist poor Pennsylvania families to be able to maintain access to essential natural gas service. The "cause" of the need for this program is poverty – a societal problem. Residential customers do not cause poverty. This fact was recognized by the Commission in its Final CAP Policy Statement and Order, where the Commission addressed the recovery of universal service program costs. While the Commission did not require jurisdictional utilities to propose specific allocations, the Commission indicated that it is appropriate to consider recovery of the costs of customer assistance programs from all ratepayer classes because "poverty, poor housing stock, and other factors that contribute to households struggling to afford utility service are not just 'residential class' problems."[163] The Commission explained that the provision of universal services to help low income families maintain service to their homes is "a benefit to the economic climate

[161] Book V, UGI Gas Exhibit E – Proof of Revenue, Page 2 of 7.
[162] USP Rider (Current).
[163] Final CAP Policy Statement and Order, Docket No. M-2019-3012599, at 97 (Order entered Nov. 5, 2019); see also 52 Pa. Code §§ 69.265(1), 69.266(b).

of a community."[164] The Commission directed utilities and stakeholders to address CAP cost recovery in utility-specific rate proceedings, indicating that "*the Commission will no longer routinely exempt non-residential classes from universal service obligations*."[165]

Even looking at a model where the "beneficiary pays" causes the conclusion that while the most obvious benefits of universal service programs are apparent to the residential rate class, this is too narrow of a view as there are a multitude of societal benefits which inure to non-residential ratepayers that cannot be ignored. These programs are meant to remediate the impacts of poverty and utility insecurity with long-term and far-ranging impacts for low income households, as well as the surrounding communities in which they live and work.[166] Households who cannot afford utility services are more prone to a host of adverse consequences, including increased rates of health complications and hospitalization, eviction, and food insecurity.[167] For children in low income households, utility insecurity has been linked to adverse impacts on long-term health and developmental delays.[168] Communities of color also continue to experience

[164] Final CAP Policy Statement and Order at 7, 94-96, 107.

[168] See Diana Hernández, Yumiko Aratani, and Yang Jiang, Energy Insecurity Among Families with Children (January 2014), available at http://www.nccp.org/publications/pdf/text_1086.pdf (Last visited April 10, 2026). (while the author discusses energy insecurity, parallels exist related to utility insecurity as a whole)

utility insecurity at disproportionate and high levels.[169] Similarly, since low income customers who do not participate in these programs often have significant arrearages,[170] these costs cannot be avoided in rates. They will either be paid as a part of foregone revenue upfront through assistance programs or collected through uncollectible expenses.

Furthermore, many low income assistance program participants are employed, but do not receive a wage that is adequate to afford basic household needs. This is evident from the self-sufficiency data that I discuss earlier in my testimony and from the fact that 30% of CAP customers, 31.7% of LIURP recipients, and 47% of customers who received a hardship fund were employed.[171] The next largest group of low income assistance program participants are retired seniors or individuals on disability who do not receive sufficient social security, disability, or retirement benefits to afford basic life necessities, including energy services.[172]

In addition to the adverse physical health impacts which result from lack of utility services, low income customers who face utility insecurity often struggle with heightened levels of stress, anxiety and depression – and must take time away from work to arrange payments, locate or apply for assistance programs, and arrange for reconnections.[173]

[173] Diana Hernandez, Understanding 'energy insecurity' and why it matters to health, Social Science & Medicine, Volume 167, October 2016, available at: https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5114037/ (similar utility insecurity stress with energy). (Last visited Apr. 10, 2026)

These consequences of utility insecurity significantly undermine worker productivity, which – in turn – impacts businesses, nonprofits, governmental entities, schools, and other non-residential customer groups. In addition, low income assistance programs help utility companies to control uncollectible expenses which ultimately impact all ratepayers.

In sum, all customer classes (including industry, business, commerce, educational institutions, hospitals, local and state governments, and other residential customers) benefit from the availability and existence of universal service programs and assistance. It is a sound policy decision for all customers to share the costs of providing these programs to UGI's most vulnerable customers.

Q: If the Commission agrees to assign the costs of the universal service programs to all customers, how do you recommend that they do so?

A: I support a broad allocation of costs to all rate classes. Ultimately, these costs should be assigned to all rate classes based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case.[174]

Q: If the Commission rejects broad allocation of universal service costs, do you have an alternative recommendation for allocation?

A: Yes, although I support broad allocation of costs because of the public purpose nature of these programs, the Commission's policy statement, and because all utility ratepayers benefit from the existence of these programs, if the Commission rejects this proposal then, at the very least, these costs should be assessed consistent with UGI's proposal to assign them to Rate class XD, but with the modification that such assignment should be required rather than permissive.

[174] See UGI Utilities, Inc. – Gas Division, Gas Class Cost of Service Study, Schedule 6 – Internal Allocation Factors, Line 44.

VIII. Security Deposits

Q: What are UGI's policy regarding the collection and return of security deposits relative to its low income customers and applicants?

A: UGI's tariff acknowledges that the Company may not require a cash deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program.[175] UGI's policy states that an applicant is "confirmed to be eligible for a customer assistance program" if the applicant "provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the Company's customer assistance programs."[176] For existing customers that already have monies paid against a security deposit, UGI will only return their deposit if they "become enrolled in the Company's customer assistance programs."[177]

Q: Do you have concerns about this policy?

A: Yes. Section 56.32(e) of the Commission's regulations prohibits utilities from collecting security deposits from customers who are confirmed to be income eligible for its customer assistance programs.

The Commission has issued explicit guidance on this issue and was clear that a low income household does not need to enroll in CAP or another universal service program for the prohibition on security deposits to apply.[178] In its Attachment A to its Ch. 56 Rulemaking Order, the Commission clarified that the prohibition on collecting security

[175] UGI Gas Exhibit F, Current Tariff, Supplement 59 to UGI Gas-PA. PUC No. 7 First Revised Page No. 30.
[176] Id.
[177] Id.
[178] 52 Pa. Code § 56.32(e).

deposits from low income customers is "referring to eligibility based upon the customer's household income – *not on other miscellaneous eligibility criteria that can vary by utility*."[179] The Commission also stated:

> Regarding the concerns expressed about this same section by LICRG that it is eligibility and not actual enrollment into CAP that determines the customer's exemption from deposit requirements, we agree and point out that ***this section specifies "eligible," not "enrolled" or "participating."*** We think this language is sufficient direction that the customer only has to be "eligible" and not actually enrolled in CAP to be exempt from a deposit request.[180]

The Commission also requires both verbal notice of the exemption to be provided to applicants and customers *at the time the security deposit is assessed*, as well as instructions for how the applicant or customer can verify income.[181]

The imposition of a security deposit can pose a significant barrier to low income customers who are already struggling to connect to and maintain service. UGI's security deposit collection policies that are reflected in its current tariff are overly restrictive and do not comport with the Commission's guidance.

Q: Does UGI's policy in its tariff conflict with information provided in discovery?

A: Yes. In response to discovery, UGI indicated that it "releases security deposits on accounts automatically through the Company's customer information and billing systems once they are identified as income verified"[182] In response to confidential discovery, UGI

[179] Rulemaking to Amend the Provisions of 52 Pa. Code, Chapter 56 to Comply with the Amended Provisions of 66 Pa. C.S. Ch. 14, L-2015-2508421, Final Rulemaking Order, Attach. One at 48 (Feb. 28, 2019).
[180] Id. (emphasis added).
[181] Id.; see also 52 Pa. Code §§ 56.36, 56.286.
[182] UGI Response to CAUSE-PA 6-5 and 6-3. Attached hereto at Appendix B.

indicates that it releases the deposit and sends it directly to the customer.[183] However, based on my review of all of the responses and UGI's tariff it is not clear what UGI's actual practices are concerning refunds for existing customers who have paid a deposit and UGI later verifies that the customer is low income. Specifically, it is not clear whether UGI requires the customer to actually enroll in CAP before returning the security deposit and it is unclear applies returned deposits to the customer's account or allows the customer to determine whether the customer wants the security deposit refunded to them directly or whether they want it applied to their account.[184]

Q: How do you recommend UGI reform its security deposit policies?

A: I recommend that UGI amend its tariff and all its internal processes so that customers who have been confirmed to be income eligible for CAP have their security deposit refunded to them regardless of whether they enroll in CAP or not. CAP enrollment is not required and the decision whether the refund is sent directly to customer or applied to the customer's bill should belong to the customer. Both recommendations are consistent with Commission policy. This change should be made immediately and UGI should be required to make all such refunds within 90 days of the effective date of rates.

IX. Purchase of Receivables

Q: What will you be discussing in this portion of your testimony?

A: I will be discussing recommended changes to UGI's Purchase of Receivables (POR) program considering the significant and adverse cost impacts for residential and

[183] UGI Response to CAUSE-PA 6-10 (CONFIDENTIAL). This response is not attached and nothing in the text of my testimony quotes directly from the document.
[184] UGI Response to CAUSE-PA 6-1. Attached hereto at Appendix B.

confirmed low income customers not enrolled in CAP who have chosen to shop with a competitive electric supplier. Specifically, I recommend that UGI provide notice to suppliers that effective January 1, 2027, it will no longer be purchasing the receivables from participating suppliers, unless the supplier provides natural gas service at a price that is at or below UGI's default service price.

Q: Please explain the existing POR program.

A: Because non-CAP residential customers can choose to be served by a retail natural gas supplier, UGI has developed a POR program whereby it agrees to purchase the uncollected receivables the result from a contract between a Natural Gas Supplier (NGS) and its customer. Under UGI's current tariff, Participating NGSs are paid 97.30% of the face value of the residential amounts billed, with this 2.70% discount representing the overall uncollectible rate.[185] The discount is updated whenever UGI updates its uncollectible expense in rate cases through its merchant function charge. In this proceeding, UGI seeks to increase the payment to suppliers to 97.49%.[186] In order to agree to have UGI purchase receivables, NGSs have to agree to abide by the Rules and Regulations in the Choice Supplier Tariff and sign a POR Agreement and Affidavit.[187] Suppliers may only be paid through the POR for "basic natural gas supply services" and not other goods, services or other products.[188] If a supplier participates in POR, then the

[185] Book X, UGI Exhibit F - UGI Utilities, Inc. – Gas Division., Supplement No. 59 to UGI Gas – PA.P.U.C. No. 7S, Sixth Revised Page No. 115.
[186] Book XI, UGI Exhibit F - UGI Utilities, Inc. – Gas Division., Supplement No. 63 to UGI Gas – PA.P.U.C. No. 7S, Seventh Revised Page No. 115.
[187] Copies of the POR Agreement and Affidavit are available for download on UGI's Energy Management Website. See https://ugi.outsystemsenterprise.com/UGIProcedures_FO/Procedures?Division=Gas&SubMenu=Choice. Then click on "Choice Suppler Registration Information" to download copies. (Last visited March 31, 2026).
[188] Book X, UGI Exhibit F - UGI Utilities, Inc. – Gas Division., Supplement No. 59 to UGI Gas – PA.P.U.C. No. 7S, Sixth Revised Page No. 115.

uncollected account balance is owned by UGI and UGI proceeds to bill and collect those charges like it would for all charges that it bills and collects for default service customers. This includes, but is not limited to, taking steps to terminate service for non-payment.

Q: What is your concern with the POR program as it is currently structured?

A: Because suppliers are paid upfront with a discount that only reflects the overall uncollectible rate, they have very little incentive to moderate the prices that they charge customers and have no incentive to be concerned if they are charging customers prices that are significantly more than what UGI would charge customers. From the supplier's perspective it does not matter what they charge because UGI will buy the receivables and must manage the collection process. This is problematic because overall customers served by NGSs pay significantly more than they otherwise would pay had they remained on default service.

Q: Please explain how much more residential shopping customers have paid compared to default service customers?

A: In response to discovery, UGI provided the following data points for the period from January 2023 through February 2026 for residential shopping and default service customers and for the period from January 2023 through January 2026 for Confirmed Low Income Customers (non-CAP):[189]

- Total number of shopping customers
- Total billed usage of shopping customers
- Total billed commodity supply charges
- Total number of default service customers
- Total billed usage of default service customers

[189] UGI Response to CAUSE-PA 5-1, Attachment and CAUSE-PA 5-2, Attachment. Attached hereto at Appendix B.

- Total billed commodity charges for default service customers.

Based on this information, I was able to arrive at the average cost per Mcf per customer by month for both shopping and default service customers, the dollar amount difference in the average cost per customer by month for shopping versus default service customers, the percentage difference in the average cost per customer for shopping versus default service customers, and the aggregate difference in cost per customer for shopping versus default service customers. This information is presented in Appendix C, Cicero Exhibits C-5 and C-6 that is attached to my testimony. In summary, over the period from January 2023 through February 2026, residential customers who were served by a retail NGS paid in aggregate **$57.9 million more** than they would have otherwise paid had they all been on default service during that same period. Of that amount, confirmed low income customers who were served by an NGS paid in aggregate **$5 million** more than if they had all been on default service during that same period. Furthermore, confirmed low income shopping customers paid on average higher prices than residential shopping customers as a whole for a comparable period.

Table 14: Average NGS Price v. Price to Compare[190]

Customer Type	Average Cost per Mcf Paid by Shopping Customers	Average PTC per Mcf	Difference per Mcf	Difference Shopping % higher than PTC
Residential Customers January 2023-February 2026	**$9.35**	**$6.37**	**$2.98**	**46.8%**
Confirmed Low Income (Non-CAP) January 2023 - January 2026	**$9.45**	**$6.35**	**$3.10**	**48.8%**

[190] See Appendix C, Exhibit Cicero C-3 through C-5.

Q: What is your concern?

A: My concern is that low income customers already face high energy burdens at exiting rates charged by UGI. NGS rates that are almost 50% higher than UGI's applicable rate for commodity costs exacerbate these households' inability to afford service. Furthermore, I am concerned that these higher costs flow through to the uncollectible expenses paid for by all ratepayers and lead to increased debt, arrearages, and terminations for residential customers above that which would have occurred had all customers paid prices that were no higher than UGI's default service price.

Q: What is your recommendation?

A: My recommendation is that UGI revise its POR program to require that to participate in POR and have UGI buy its receivables an NGS would have to certify that its rates are at or below the applicable default service price. If a supplier wants to take advantage of UGI's POR program, it should not be permitted to charge rates that are in excess of what UGI charges. Under my proposal, NGSs would still be able to offer contracts to customers at any rate they wish, but if those rates are higher than the default service price, they would not be able to participate in POR.

Q: Would this change mean that customers would have to receive a dual bill from UGI and the NGS?

A: No. The supplier could still participate in UGI's consolidated billing program but would not be paid for its supply charges until or unless UGI was paid by the customers. Furthermore, under UGI's supplier tariff, suppliers who elect not to participate in POR

because they wish to charge more than UGI's charges would be responsible for their own collections if their charges go unpaid.[191]

Q: When should this change go into effect?

A: I am proposing that UGI issue a notice to all suppliers indicating that effective January 1, 2027 and forward all suppliers who wish to remain in the POR program will need to complete an updated POR Agreement and Affidavit that would require all charges for contracts or renewals of contracts entered after that period be at or below the default service price to compare in order to have any charges after that date be included in the POR program. If a supplier elects to participate, they will remain in POR, if a supplier elects to charge rates higher than UGI's charges, they could elect to remain in UGI's consolidated billing program, but their charges would be non-POR eligible. This change would be made on a forward going basis and would provide all suppliers with notice of the change before it goes into effect.

X. Termination Notices and Other Tariff Cleanup

Q: What will you address in this section of your testimony?

A: I will address minor changes that I believe need to be made to clean up UGI's current tariff. First, UGI should amend Rule 9 involving termination and discontinuance of service. As written, UGI's current tariff reads:

> 9.1 (a) Termination of Service. The Company may terminate service on reasonable notice and remove its equipment in case of Customer's (i) nonpayment of an undisputed delinquent account, (ii) failure to complete payment of a deposit, provide a guarantee of payment or establish credit,

[191] See Book X, UGI Exhibit F - UGI Utilities, Inc. – Gas Division., Supplement No. 59 to UGI Gas – PA.P.U.C. No. 7S, Sixth Revised Page No. 115 ("The termination and reconnection provisions of Chapter 14 and Chapter 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing.")

> (iii) failure to permit access to meters, service connections or other property for the purpose of replacement, maintenance, repair or meter reading, (iv) failure to comply with the material terms of a payment arrangement, or (v) violation of tariff Rules and Regulations. The Company may terminate service promptly and without notice for Customer's (i) Unauthorized Use of Service delivered on or about the affected dwelling or premises, (ii) fraud or material misrepresentation of the Customer's identify for the purpose of obtaining service, (iii) abuse of or tampering with the meters, connections or other equipment of the Company, (iv) violating tariff Rules and Regulations which endanger the safety of a person or the integrity of the Company's distribution system, (v) tendering payment for reconnection of service that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice, or (vi) after receiving termination notice from the Company, tendering payment which is subsequently dishonored under 13 Pa. C.S. § 3502, or, in the case of an electronic payment, that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice. Prior to restoration of service terminated for any of the foregoing reasons, the Company may require a payment in advance of all arrearages, applicable deposit, and a reconnect charge of seventy-three dollars ($73). Effective November 1, 2025, confirmed low income residential customers who provide verification of household income will not be assessed reconnection fees.

These provisions are a mix of grounds for involuntary termination of service, some of which require notice and some of which can be performed without notice. Having them all lumped together with a catchall of "reasonable notice" does not adequately inform customers of their rights. Furthermore, UGI should eliminate its tariff provision that allows it to generally terminate service for "violation of tariff Rules and Regulations." This provision is overly broad and is not authorized by existing PUC regulations of the Public Utility Code. Thus, I recommend that UGI amend its tariff to read as follows (with changes in red and underlined):

> 9.1 (a) Termination of Service. **Termination with Notice.** The Company may terminate service on at least ten (10) days written ~~reasonable~~ notice and remove its equipment in case of Customer's (i) nonpayment of an undisputed delinquent account, (ii) failure to complete payment of a deposit, provide a guarantee of payment or establish credit, (iii) failure to permit

access to meters, service connections or other property for the purpose of replacement, maintenance, repair or meter reading, or (iv) failure to comply with the material terms of a payment arrangement. ~~or (v) violation of tariff Rules and Regulations.~~

Termination without Notice. The Company may terminate service promptly and without notice for Customer's (i) Unauthorized Use of Service delivered on or about the affected dwelling or premises, (ii) fraud or material misrepresentation of the Customer's identify for the purpose of obtaining service, (iii) abuse of or tampering with the meters, connections or other equipment of the Company, (iv) violating tariff Rules and Regulations which endanger the safety of a person or the integrity of the Company's distribution system, (v) tendering payment for reconnection of service that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice, or (vi) after receiving termination notice from the Company, tendering payment which is subsequently dishonored under 13 Pa. C.S. § 3502, or, in the case of an electronic payment, that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice.

Restoration of Service. Prior to restoration of service terminated for any of the foregoing reasons, the Company may require a payment in advance of all arrearages, applicable deposit, and a reconnect charge of seventy-three dollars ($73). Effective November 1, 2025, confirmed low income residential customers who provide verification of household income will not be assessed reconnection fees.

In addition, there are several places within UGI's tariff where it mentions state agencies with their old names – such as the Department of Public Welfare as opposed to the Department of Human Services – and references statutory provisions that have expired – such as Chapter 14 of the Public Utility Code. When it files its compliance tariff in this case, UGI should eliminate all references to expired sections of the Public Utility Code and should correct all outdated references to state agency names.

XI. Conclusion

Q: Does this conclude your direct testimony?

A: Yes.

CAUSE-PA Statement 1, Cicero

Appendix A

Resume of Patrick Cicero

Patrick M. Cicero, Esq.

pcicero@pautilitylawproject.org | 717-576-2588 (mobile)

PROFESSIONAL EXPERIENCE

PENNSYLVANIA UTILITY LAW PROJECT HARRISBURG, PENNSYLVANIA
Of Counsel, February 2025 - Present
Executive Director, July 2015 - January 2020
Co-Director, January 2013 - June 2015
Staff Attorney, January 2011 - December 2012

The Pennsylvania Utility Law Project (PULP) is a specialized legal aid office and member of the Pennsylvania Legal Aid Network. PULP's mission is to promote policies that enable consumers with low and moderate income to receive and maintain affordable utility and energy services and to live in energy-efficient homes.

As Of Counsel, in cases where I am not serving as an attorney, I provide analysis and testimony for PULP's clients in administrative proceedings before relevant state and federal agencies.

When I am not serving as a policy or technical expert, I lead the legal and policy work of the office and provide high-level legal expertise and strategic guidance to the organization. I seek to ensure that PULP's legal and policy advocacy and strategies are designed to effectively and zealously represent the interests of PULP's clients before administrative, judicial, and legislative bodies.

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE HARRISBURG, PENNSYLVANIA
Consumer Advocate, December 2021 – January 2025
(*Confirmed by the Pennsylvania Senate June 7, 2022*)

The Office of Consumer Advocate (OCA) is a state agency that represents the interests of Pennsylvania utility consumers before the Pennsylvania Public Utility Commission (PUC), federal regulatory agencies, and state and federal courts. The OCA was created by the Pennsylvania General Assembly in 1976 and is an independent office within the Office of Attorney General. As Consumer Advocate, I served as the head of the office and directed all policy and legal advocacy.

PENNSYLVANIA LEGAL AID NETWORK, INC. HARRISBURG, PENNSYLVANIA
Executive Director, January 2020 – December 2021

The Pennsylvania Legal Aid Network, Inc. (PLAN, Inc.) is a client-centered organization that provides leadership, funding, training, and support to a coordinated network of independent legal aid organizations that deliver civil legal aid to low-income Pennsylvanians and victims of domestic violence. As Executive Director, I provided strategic leadership and direction to PLAN Inc.'s activities and oversaw its advocacy, fundraising, and management.

PROFESSIONAL EXPERIENCE – CONT.

HONORABLE SYLVIA H. RAMBO, DISTRICT JUDGE HARRISBURG, PENNSYLVANIA
THE UNITED STATES DISTRICT COURT FOR THE MIDDLE DISTRICT OF PENNSYLVANIA
Senior Judicial Law Clerk, May 2009 - December 2010
Judicial Law Clerk, August 2002 - August 2004

Analyzed federal and state law on civil and criminal motions in all phases of litigation. Drafted judicial opinions in response to civil and criminal motions, including motions to suppress, motions to dismiss, summary judgment, post-trial motions, and habeas corpus petitions. Drafted comments that were given by Judge Rambo at public speaking events and supervised her law clerks and judicial interns.

MIDPENN LEGAL SERVICES HARRISBURG, PENNSYLVANIA
Managing Attorney, January 2009 - April 2009
Staff Attorney, September 2004 - December 2008

MidPenn Legal Services (MidPenn) is a non-profit organization providing legal services to low-income individuals and families, the disabled, the elderly, children, and survivors of domestic violence. I led MidPenn's Consumer Unit where I focused on litigating consumer and housing cases related to anti-predatory mortgage lending and consumer bankruptcy and defended clients against unscrupulous debt collection practices.

TEACHING EXPERIENCE

MESSIAH UNIVERSITY MECHANICSBURG, PENNSYLVANIA

Adjunct Professor of Sociology and Criminal Justice (Periodic since 2015)

Courses Taught:
Social Inequality
Criminal Law and Criminal Procedure
Ethics in the Criminal Justice System

Visiting Lecturer of Sociology and Criminal Justice, August 2014 - May 2015

Courses Taught:
Introduction to Sociology
Sociocultural Theory
Social Inequality
Social Conflict, Justice and Peacemaking
Religion and Society
Evidence, Search and Seizure

Adjunct Instructor in General Education

Courses Taught: Law and Social Issues

EDUCATION

TEMPLE UNIVERSITY, BEASLEY SCHOOL OF LAW PHILADELPHIA, PENNSYLVANIA
Juris Doctor, magna cum laude, 2002

MESSIAH COLLEGE (NOW MESSIAH UNIVERSITY) MECHANICSBURG, PENNSYLVANIA
Bachelor of Arts in Sociology, magna cum laude, 1999

PUBLICATIONS

Pennsylvania Consumer Law by Carolyn Carter, Bisel Publishing Co., 2003, Supp. 2010-2012, Contributing Author.

LIST OF PROCEEDINGS

Below is a list of proceedings in which I have provided expert testimony. Links to my testimony are provided for all complete cases. Cases listed as ongoing cases are at various stages of litigation and will be updated as completed.

COMPLETED CASES
Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716. • Natural gas distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Philadelphia Gas Works, Docket No. R-2025-3053112. • Natural gas distribution base rate proceeding. • Direct, Rebuttal, and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, Docket No. R-2025-3053499. • Natural gas distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Pittsburgh Water Sewer Authority, Docket Nos. R-2025-3055010, 3055011, and 3055012 • Water/wastewater/stormwater distribution base rate proceeding. • Direct, Rebuttal, and Surrebuttal testimony regarding rate design, customer service, low income program design, and low income customer affordability.
Pennsylvania Public Utility Commission v. PPL Electric Utilities Corporation, Docket No. R-2025-3057164. • Electric distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, low income program design, energy efficiency, net metering, and low income affordability.

ONGOING CASES
Joint Application of American Water Works Company, Inc., Essential Utilities, Inc., Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., Peoples Natural Gas Company LLC and Peoples Gas Company LLC and Alpha Merger Sub, Inc. for a Certificate of Public Convenience under Sections 1102(a)(3) and 2210(c) of the Public Utility Code and All Other Necessary Approvals to Effect a Change of Control of Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., and Peoples Natural Gas Company LLC Docket Nos. A-2025-3058927; A-2025-3058928; A-2025-3058929 • Merger Application of two of the largest water and wastewater utilities in the country. • Testimony regarding whether the merger results in an affirmative public benefit and protections needed to ensure low income customers receive benefit.
Pennsylvania Public Utility Commission v. UGI Utilities, Inc. Gas Division, Docket No. R-2025-3059523. • Natural gas distribution base rate proceeding. • Testimony regarding rate design, customer service, low income program design, and low income customer affordability.
Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031, Docket No. P-2026-3060298. • Electric distribution company default service procurement plan. • Testimony regarding default service procurement and retail electric market protections for low income households.

CAUSE-PA-1-3

Request:

As of the most recent date available, please identify the number of UGI Gas CAP customers whose bills were calculated based on:

A. Average monthly bill;
B. Percentage of income (disaggregated by income tier);
C. Minimum bill; or
D. Other (please specify).

Please provide this data in a live excel spreadsheet.

Response:

Data is provided as of March 1, 2026:

A. 7,291
B. 14,305
C. 5,045
D. Not Applicable

Prepared by or under the supervision of: Brian J. Meilinger

CAUSE-PA-1-4

Request:

Refer to the Joint Petition for Approval of Settlement of All Issues in UGI Utilities, Inc. – Gas Division rate case at Docket No. R-2024-3052716, paragraph 67 (a). Please identify all categories or identifiers that UGI Gas includes when calculating its "confirmed low income customer" count for the purposes of reporting pursuant to 52 Pa. Code § 62.5. If UGI Gas uses a different definition or categorization criteria for "confirmed low income customer" for any purpose, please identify the alternative definition and/or criteria and explain why a different definition is used.

Response:

Upon receipt of the Joint Petition for Approval of Settlement of All Issues in UGI Utilities, Inc. – Gas Division rate case at Docket No. R-2024-3052716, the Company adopted the definition of "confirmed low income" consistent with 52 Pa. Code § 62.2, which includes both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines. This includes adjusting the internal reports used to tabulate data for reporting under 52 Pa. Code § 62.5.

Prepared by or under the supervision of: Brian J. Meilinger

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 1 (1-25)
Delivered on March 19, 2026

CAUSE-PA-1-5

Request:

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, how many of UGI Gas's customers were/are categorized as confirmed low income? If UGI Gas uses multiple definitions of the term "confirmed low income", as identified in CAUSE-PA to UGI 1-4, please separately provide the data requested for each definition.

Please provide this data in a live excel spreadsheet.

Response:

Please see Attachment CAUSE-PA-1-5.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided in the response includes both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, figures prior to that date may include customers whose low income status was not yet on record with the Company.

1/ Residential Monthly Customer Counts tie to month end close counts reported by Revenue Accounting, data is not specifically reported on a "snapshot" last day of month basis.

CAUSE-PA-1-9

Request:

From January 2023 to date, disaggregated by month and year (as of the last day of the month/year), please provide for UGI Gas customers:

A. Residential UGI Gas customers, excluding confirmed low income customers and CAP customers;

B. Confirmed low income UGI Gas customers, excluding CAP customers;

Please provide this data in a live excel spreadsheet.

Response:

A. Please see Attachment CAUSE-PA-1-9(a).

B. Please see Attachment CAUSE-PA-1-9(b).

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, figures prior to that date may include customers whose low income status was not yet on record with the Company.

CAUSE-PA-1-14

Request:

From January 2023 to date, disaggregated by month and year (as of the last day of the month/year), how many UGI Gas customers were terminated for nonpayment each month, disaggregated by the following customer segments:

A. All residential UGI Gas customers;
B. Residential UGI Gas customers, excluding confirmed low income customers and CAP customers;
C. Confirmed low income UGI Gas customers;
D. Confirmed low income UGI Gas customers, excluding CAP customers;
E. UGI Gas CAP customers.

Please provide this data in a live excel spreadsheet.

Response:

A-E. Please see Attachment CAUSE-PA-1-14.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, disconnections prior to that date may include customers whose low income status was not yet on record with the Company at the time of disconnection.

CAUSE-PA-1-17

Request:

What is the average annual income of UGI Gas's currently identified confirmed low income customers?

Response:

The average annual income of confirmed low income customers is $20,146.32, which has been annualized, since the Company collects income per month.

Prepared by or under the supervision of: Brian J. Meilinger

CAUSE-PA-1-18

Request:

What is the average annual income of UGI Gas's currently enrolled CAP customers?

Response:

The average annual income of CAP customers is $17,208, which has been annualized, since the Company collects income per month.

Prepared by or under the supervision of: Brian J. Meilinger

CAUSE-PA-1-22

Request:

From January 2023 to date, disaggregated by month and year, as of the last day of the month/year, please provide the total dollars in debt and the average arrearage level for each of the following UGI Gas customer segments:

A. All residential UGI Gas customers;
B. Residential UGI Gas customers, excluding confirmed low income customers and CAP customers;
C. Confirmed low income UGI Gas customers;
D. Confirmed low income UGI Gas customers, excluding CAP customers;
E. UGI Gas CAP customers.

Please provide this data in a live excel spreadsheet.

Response:

A-E. Please see Attachment CAUSE-PA-1-22.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, average and totals prior to that date may include customers whose low income status was not yet on record with the Company at the time of the reported arrearage.

Please note that tracking for the debt and arrearage level disaggregated by month and year for the subsets listed above commenced in October 2023. Consequently, data prior to this date is not available.

Prepared by or under the supervision of: Daniel V. Adamo

CAUSE-PA-3-1(a)

Request:

See UGI St. No 1. at 6:23-7:3.

a. Please provide UGI's actual calculated return on common equity (ROE) for the end each calendar quarter for the period from January 1, 2023 through December 31, 2025.

Response:

Please see Attachment CAUSE-PA-3-1(a).

ROEs provided for the twelve months ended 3/31/2023 through 9/30/2024 are those submitted to the Commission for use in the Report on the Quarterly Earnings of Jurisdictional Utilities. For subsequent periods, the ROEs were not submitted to the Commission as the Company was involved in a rate filing. ROEs for the twelve months ended 12/31/2024 through 12/31/2025 were calculated in a manner consistent with those submitted to the Commission.

Prepared by or under the supervision of: Hans G. Bell

UGI Utilities, Inc. - Gas Division
Calculated Return on Equity

Twelve Months Ended	Calculated ROE
12/31/2025	10.43%
9/30/2025	10.43%
6/30/2025	10.85%
3/31/2025	11.32%
12/31/2024	11.12%
9/30/2024	11.17%
6/30/2024	12.11%
3/31/2024	12.39%
12/31/2023	12.19%
9/30/2023	11.43%
6/30/2023	12.94%
3/31/2023	13.45%

CAUSE-PA-3-1(b)

Request:

See UGI St. No 1. at 6:23-7:3.

b. For each quarter for the same period as set forth in part a, please indicate whether UGI's "ability to attract capital needed to make investments that support operating a safe and reliable distribution system" was jeopardized by that actual return on common equity.

Response:

UGI's ability to attract capital needed to make investments that support operating a safe and reliable distribution system was not jeopardized during any quarter in the period from January 1, 2023 through December 31, 2025. However, the Company's claim is based on the forward-looking test period (for the year ended September 30, 2027), not a backward-looking period. Please see UGI Gas Statement No. 1, pages 6 and 7.

Prepared by or under the supervision of: Hans G. Bell

CAUSE-PA-3-1(d)

Request:

See UGI St. No 1. at 6:23-7:3.

d. In his statement, Mr. Bell asserts that an ROE of 7.7% "could potentially jeopardize UGI's ability to attract capital needed to make investments that support operating a safe and reliable distribution system." Other than the testimony submitted in this case by Mr. D'Ascendis regarding UGI's requested ROE, please provide all internal analysis that Mr. Bell or anyone at UGI undertook that supports this statement.

Response:

As more fully described in UGI Gas Statement No. 1, the Direct Testimony of Hans G. Bell, page 6, lines 21 – 23, Mr. Bell did not undertake any additional analysis and relied on the analysis provided by Mr. D'Ascendis in his testimony and UGI Gas Exhibit B.

Prepared by or under the supervision of: Hans G. Bell

CAUSE-PA-3-1(h)

Request:

See UGI St. No 1. at 6:23-7:3.

h. Has UGI or its parent company been unable to attract capital from the capital markets at UGI's current ROE? If yes, please explain all steps the UGI has taken to seek capital contributions within the last 12 months.

Response:

UGI Corp (ultimate parent of UGI Utilities, Inc. - Gas Division) has not issued equity since the finalization of the last UGI Gas rate case.

Prepared by or under the supervision of: Hans G. Bell

CAUSE-PA-3-4

Request:

See UGI St. 8 at 5:13:21. Mr. D'Ascendis asserts the following: "Assuring that the utility can fulfill its obligations to the public, while providing safe and reliable service at all times, requires a level of earnings sufficient to maintain the integrity of presently invested capital. Sufficient earnings also permit the attraction of needed new capital at a reasonable cost, for which the utility must compete with other firms of comparable risk." Please answer the following questions about this statement:

a. Is it Mr. D'Ascendis's contention that 10.75% return on equity is the lowest return on equity that the Public Utility Commission could authorize to allow UGI to have "sufficient earnings"? If yes, please explain why an ROE that is lower than this would not allow UGI to have sufficient earnings.

b. If the Public Utility Commission were to authorize a return on equity that was 9.75% is it Mr. D'Ascendis's position that UGI would not be able to raise capital in the capital markets at this level? If yes, please explain the basis for this conclusion.

c. If the Public Utilities Commission were to authorize a return on equity of 8.75% s it Mr. D'Ascendis's position that UGI would not be able to raise capital in the capital markets at this level? If yes, please explain the basis for this conclusion.

Response:

a. It is Mr. D'Ascendis' opinion that the range of ROEs between 10.34% and 11.52% is applicable to UGI Gas, and his specific point estimate of 10.75% represents Mr. D'Ascendis' evaluation of the Company's risk within that reasonable range. Consistent with the Hope and Bluefield comparable risk standards, a 10.75% return on equity will ensure that the Company has a level of earnings commensurate with other enterprises corresponding risks, sufficient to maintain the integrity of presently invested capital, and permit the attraction of needed new capital at a reasonable costs and terms.

CAUSE-PA's definition of "sufficient earnings" is unclear. As such, Mr. D'Ascendis is unable to answer the request.

CAUSE-PA-3-4 (Continued)

b. The appropriate ROE is needed to attract new capital at reasonable costs and terms, not simply to access the capital markets. Since the hypothetical ROE referenced above is not in Mr. D'Ascendis' reasonable range of ROEs, it is his opinion that while the Company may be able to raise capital at that level of ROE, it may not be able to do so under reasonable costs and terms.

c. Please refer to the response in part b. above.

Prepared by or under the supervision of: Dylan W. D'Ascendis

CAUSE-PA-3-5

Request:

See UGI St. 8 at 5:18. How does Mr. D'Ascendis define the term "reasonable cost" as used in this line of his testimony?

Response:

A "reasonable cost" is a return to investors that is sufficient to maintain the integrity of presently invested capital and permits the attraction of needed new capital at a cost that is competitive with other firms of comparable risk.

Prepared by or under the supervision of: Dylan W. D'Ascendis

CAUSE-PA-4-7

Request:

If the Commission were to deny UGI's request to continue its WNA, please explain whether, in Mr. Taylor's opinion, the Company would be unable to provide safe and reliable service to its customers. If the answer to this question is yes, please explain in detail the basis for this response.

Response:

The question is based on the premise that the WNA is connected to the Company's ability to provide safe and reliable service. That premise is incorrect. The WNA is a rate design mechanism intended to address weather-related volatility in customer bills and distribution revenue recovery; it does not determine whether the Company can safely and reliably operate its system. The WNA provides the Company a reasonable opportunity to recover its allowed cost of service.

Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 5 (1-15)
Delivered on March 23, 2026

CAUSE-PA-5-1

Request:

Please provide the following for January 2023 to date, disaggregated by month and by year, as of the last day of the month/year, for UGI Gas:

A. The total usage of residential customers;
B. The total dollar amount billed for generation supply charges for residential customers inclusive of both default service customers and residential shopping customers;
C. The total number of residential shopping customers;
D. The total usage of residential shopping customers;
E. The total amount billed for generation supply charges for residential shopping customers;
F. The total number of residential default service customers;
G. The total usage of residential default service customers;
H. The total amount billed for generation supply charges for residential default service customers.

Please provide this data in a live Excel spreadsheet.

Response:

Please see Attachment CAUSE-PA-5-1 provided in Excel.

*Includes dual billed residential customers

CAUSE-PA-5-2

Request:

Please provide the following for January 2023 to date, disaggregated by month and by year, as of the last day of the month/year, for UGI Gas:

A. The total usage of confirmed low income customers;
B. The total dollar amount billed for generation supply charges for all confirmed low income customers inclusive of both default service customers and residential shopping customers;
C. If different than what was provided in Part a, the total usage of all non-CAP (Customer Assistance Program) confirmed low income customers;
D. If different than what was provided in Part a, the total amount billed for generation supply charges for all non-CAP confirmed low income customers;
E. The total amount billed for generation supply charges for non-CAP confirmed low income shopping customers;
F. The total amount billed for generation supply charges for non-CAP default service confirmed low income customers.

Please provide this data in a live Excel spreadsheet.

Response:

Please see Attachment CAUSE-PA-5-2.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided includes both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines. Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, figures prior to that date may include customers whose low income status was not yet on record with the Company.

Additionally, the figures provided represent bills issued for service attributed to the requested months and years, since bills are not all generated on the last day of each month.

Prepared by or under the supervision of: Brian J. Meilinger

CAUSE-PA-6-1

Request:

Please specifically describe all instances where UGI informs low income customers about the availability of the exemption from security deposit collection and ability to receive a refund of their security deposit.

Response:

UGI Gas informs low-income customers about the availability of the security deposit exemption and the ability to receive a refund of their security deposit through several touchpoints. When a customer is identified as verified low-income through enrollment in a qualifying program, the customer's account is automatically updated and any held security deposit is released at that time. Customers are notified of this action via their account statement reflecting the deposit return.

Additionally, information regarding security deposit exemptions for low-income customers is made available through UGI Gas's CCRs. For self-reported low income customers, customers are advised that they will be sent a CAP application/waiver letter. Please see CAUSE-PA-6-9.1 (waiver letter) and CAUSE-PA-6-9.2 (email confirmation).

Please reference CONFIDENTIAL Attachment OCA-3-2.4, page 70, for additional procedures related to security deposit exemptions.

Prepared by or under the supervision of: Daniel V. Adamo

CAUSE-PA-6-3

Request:

From January 2023 to date, disaggregated by month and year, as of the last day of the month/ year, please indicate:

A. How many security deposits UGI Gas has collected from confirmed low-income customers;

B. The total number of confirmed low income customers for whom UGI Gas held/ is holding a security deposit;

C. The total dollar value of security deposits held for UGI Gas's confirmed low income customers;

D. How many of these collected security deposits have been returned to confirmed low income customers.

Please provide this data in a live Excel spreadsheet.

Response:

A - D. Please see Attachment CAUSE-PA-6-3.

Please note that data in response A includes all residential applicants that are billed to pay a security deposit. The Company does not track this information by confirmed low-income status.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided in Parts (B), (C) and (D) includes both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines. Confirmed Low Income Status is based on a snapshot of customer data as of November 30, 2025, because timestamped income data is not readily available for historical reporting. Therefore, figures prior to that date may include customers whose low-income status was not yet on record with the Company.

The Company does not require a security deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program. An applicant is confirmed to be eligible for a customer assistance

CAUSE-PA-6-3 (Continued)

program by the Company if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the Company's customer assistance programs.

A deposit is assessed for a self-certified low-income customer; however, any monies paid against the security deposit will be directly refunded, along with applicable interest, upon income verification as described above.

Prepared by or under the supervision of: Daniel V. Adamo

CAUSE-PA-6-5

Request:

Please describe the steps UGI Gas uses to investigate whether it is holding security deposits of confirmed low income customers, and the procedures related to how the security deposit is returned to a confirmed low income customer. Please also provide a copy of any and all current written policies, procedures, and/ or other documents which describe UGI Gas's existing policies related to collection and return of security deposits from confirmed low income customers.

Response:

UGI Gas releases security deposits on accounts automatically through the Company's customer information and billing system once they are identified as income verified per the process described in CAUSE-PA-6-3.

Prepared by or under the supervision of: Daniel V. Adamo

CAUSE-PA-6-11

Request:

For each calendar year ending December 31, 2023 through December 31, 2025, how much net profit did UGI Gas earn?

Response:

Net income for UGI Gas for its Fiscal Years ended September 30:

Fiscal Year 2023 – $202,282,856
Fiscal Year 2024 – $207,423,537
Fiscal Year 2025 - $203,740,613

Prepared by or under the supervision of: Vivian K. Ressler

CAUSE-PA-6-17

Request:

Reference UGI St. 12 at 16:17-21.

A. Please describe in detail the methodology used by Experian that resulted in an estimated low income count of 98,785.

B. Does UGI have demographic income data for every one of its residential customers?

C. If the answer to subpart b. above is anything other than an unequivocal yes, please describe why UGI believes that the Experian data accurately counts the number of estimated low income customers within its service territory.

Response:

A. Please see HIGHLY CONFIDENTIAL Attachment CAUSE-PA-1-11 for Experian's January 2026 data assessment and methodology which includes estimated low income counts of 96,137. The methodology used to derive this number is consistent with the methodology used to derive the 2023 figure of 98,785 reported in the Direct Testimony of Brian J. Meilinger, UGI Gas Statement No. 12, at 16:17-21.

B. No.

C. Experian accurately counts the number of estimated low-income customers because their process utilizes insights on actual UGI Gas customers. For the January 2026 data assessment, there was a 90% match rate on name and address. This is in comparison to the methodology of calculating estimated low-income customers reported annually to the Bureau of Consumer Services which is derived by using the United States Census Bureau's American Community Survey 5-year poverty level estimates by county, multiplied by the number of UGI Gas customers in that county.

Prepared by or under the supervision of: Brian J. Meilinger

OCA-2-18

Request:

Please provide the monthly (or most frequently available) balance sheet and income statements for the Company for each year from the past five years to the most currently available in live Excel format.

Response:

Please see Attachment OCA-2-18 (A) for quarterly balance sheets and Attachment OCA-2-18 (B) for quarterly income statements for UGI Utilities, Inc.

OCA-4-4

Request:

In Excel format, for each zip code identified in response to Question No. 3, please provide:

a. The number of residential customers;

b. The number of confirmed low-income customers (including CAP);

c. The number of confirmed low-income customers (excluding CAP);

d. The number of CAP participants.

Response:

For subparts a-d, please see Attachment OCA-4-4.

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided in parts (b) and (c) included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income status for the above responses is based on a snapshot of customers as of November 30, 2025.

Prepared by or under the supervision of: Brian J. Meilinger

OCA-4-6

Request:

In Excel format, for each month for the most recent 36 months available, please provide the mean usage for:

a. Residential customers as a whole;

b. Confirmed low-income customers (without CAP participants);

c. Confirmed low-income customers (with CAP participants);

d. CAP participants.

Response:

a. Please see Attachment OCA-4-6.

b. Please see the response to OCA-4-6(a).

c. Please see the response to OCA-4-6(a).

d. Please see the response to OCA-4-6(a).

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided in parts (b) and (c) included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

Confirmed Low Income status for the above responses is based on a snapshot of customers as of November 30, 2025.

Prepared by or under the supervision of: Brian J. Meilinger

OCA-4-16

Request:

For each zip code identified in response to Question 3 above, in Excel format, for the most recent 36 months available, please provide:

a. The number of nonpayment disconnections of residential customers;
b. The number of nonpayment disconnections of Confirmed Low-Income customers (without CAP);
c. The number of nonpayment disconnection notices provided to residential customers;
d. The number of nonpayment disconnection notices provided to Confirmed Low-Income customers (without CAP)
e. The number of reconnections after a nonpayment disconnection for residential customers.
f. The number of reconnections after a nonpayment disconnection for Confirmed Low-Income customers (without CAP).

Response:

a. Please see Attachment OCA-4-16(a).

b. Please see Attachment OCA-4-16(b).

c. Please see Attachment OCA-4-16(c). UGI Gas does not track this data according to zip codes.

d. Please see Attachment OCA-4-16(d). UGI Gas does not track this data according to zip codes.

e. Please see Attachment OCA-4-16(e).

f. Please see Attachment OCA-4-16(f).

Please note, consistent with 52 Pa. Code § 62.2, confirmed low-income customers provided in parts (b), (d) and (f) included both income-verified and self-certified customers with income at or below 150% of Federal Poverty Income Guidelines.

OCA-4-16 (Continued)

Confirmed Low Income status for the above responses is based on a snapshot of customers as of November 30, 2025.

Prepared by or under the supervision of: Daniel V. Adamo

OCA-7-2

Request:

Please identify the revenue of the monthly Weather Normalization Adjustment ("WNA") for each Delivery Region since November 2022 through the most recent month available for customer classes R, RT, N, and NT. Provide all calculations in Excel format with all formulas intact.

Response:

Please see Attachment OCA-7-2 provided in Excel for the monthly recorded Weather Normalized Adjustment revenue billed for each of the four Delivery Regions. The Delivery Region is referenced as Temperature Area on the attachment and includes GC (Central), GN (North), GS (South), and GW (West). The included data is the output of a billing system report and presented based on the revenue month in which the related billing activity invoices posted and were recorded. As a result, there will be data in months outside of the WNA period of October through May as related to billing adjustments.

Prepared by or under the supervision of: Tracy A. Hazenstab

WNA Summary Report

OCA-8-50

Request:

Please provide all analyses conducted by or for the Company which estimate the impact the WNA has had, or is expected to have, on customer bills since the implementation of the WNA pilot program. Please provide the requested information in electronic form with all spreadsheet links and formulas intact, source data used, and explain all assumptions and calculations used. To the extent the data requested is not available in the form requested, provide the information in the form that most closely matches what has been requested.

Response:

Attachment OCA-8-50 provides the analyses and reporting reflecting the impact of the WNA on customer bills since implementation of the WNA pilot program through February 2026. The information through October 2025 was previously provided in Exhibit JDT-3. Attachment OCA-8-50 includes that same information and adds the reporting, in draft form, for the period November 2025 through February 2026.

The file provides monthly WNA data, including billed WNA revenue adjustments, billed WNA volume adjustments, total bill counts, bill counts with WNA charges, and bill counts with WNA credits. The Company did not prepare additional analyses responsive to this request.

Prepared by or under the supervision of: John D. Taylor

Should update again before filing

I&E-RR-6-D

Request:

Identify the actual return on equity earned by UGI Utilities, Inc. – Gas Division, and separately, its parent company UGI Utilities, Inc. for calendar years 2023, 2024, and 2025.

Response:

UGI Utilities, Inc. uses a fiscal year (twelve months ended September 30) to prepare its financial statements and has presented information in this proceeding on a fiscal year basis.

Please see the calculated actual returns on equity at Attachment I&E-RR-6-D.

Prepared by or under the supervision of: Dylan W. D'Ascendis

UGI Utilities, Inc. - Gas Division
Actual Return on Equity
Twelve Months Ended September 30, 2025, 2024 and 2023

		Fiscal 2025	Fiscal 2024	Fiscal 2023
Rate of Return on Equity				
	UGI Utilities, Inc.	10.5%	11.5%	11.7%
(a)	UGI Utilities, Inc. - Gas Division	10.4%	11.2%	11.4%
(b)	UGI Utilities, Inc. - Electric Division	6.2%	6.9%	2.2%

(a) Fiscal 2024 and Fiscal 2023 are from the Quarterly Earnings Reports previously provided to the Commission by UGI Gas for those periods. UGI Gas was not required to file a report for 12 months ended September 2025; however, the return on equity shown for Fiscal 2025 is calculated in the same manner as the Fiscal 2024 and Fiscal 2023 Quarterly Earnings Report calculations.

(b) Fiscal 2025 and Fiscal 2024 are from Quarterly Earnings Reports previously provided to the Commission for UGI Electric (related to distribution only, excluding transmission). UGI Electric was not required to file a report for 12 months ended September 2023; however, the return on equity shown for Fiscal 2023 is calculated in the same manner as the Fiscal 2025 and Fiscal 2024 Quarterly Earnings Report calculations.

UGI Utilities, Inc. - Gas Division
Actual Return on Equity
Twelve Months Ended September 30, 2025, 2024 and 2023

		Fiscal 2025	Fiscal 2024	Fiscal 2023
Rate of Return on Equity				
	UGI Utilities, Inc.	10.5%	11.5%	11.7%
(a)	UGI Utilities, Inc. - Gas Division	10.4%	11.2%	11.4%
(b)	UGI Utilities, Inc. - Electric Division	6.2%	6.9%	2.2%

(a) Fiscal 2024 and Fiscal 2023 are from the Quarterly Earnings Reports previously provided to the Commission by UGI Gas for those periods. UGI Gas was not required to file a report for 12 months ended September 2025; however, the return on equity shown for Fiscal 2025 is calculated in the same manner as the Fiscal 2024 and Fiscal 2023 Quarterly Earnings Report calculations.

(b) Fiscal 2025 and Fiscal 2024 are from Quarterly Earnings Reports previously provided to the Commission for UGI Electric (related to distribution only, excluding transmission). UGI Electric was not required to file a report for 12 months ended September 2023; however, the return on equity shown for Fiscal 2023 is calculated in the same manner as the Fiscal 2025 and Fiscal 2024 Quarterly Earnings Report calculations.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	UGI Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	There is limited connection between the WNA and cost causation. The WNA assumes that UGI is entitled to recover its revenue requirement regardless of the usage or throughput of its customers due to variations in weather even though UGI is in a weather sensitive business. While it is designed to ensure that UGI recovers its authorized revenue requirement and fixed costs, it does not align cost causation with cost recovery because the WNA is applied to the variable charge in a customer's bill. The WNA also has the likelihood of disincentivizing effective management because the WNA charges customers based on normalized weather sensitive usage rather than actual weather sensitive usage.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged. By stabilizing revenues, the WNA mechanism removes disincentives to support peak-reflective rate design and conservation initiatives that can moderate peak demand growth. Over time, this alignment supports more efficient use of existing system capacity while preserving the Company's ability to make prudent investments necessary to maintain safe and reliable service.	It does not. Since the WNA assesses charges on customers for throughput not consumed, due to weather conditions (i.e., customers are charged when the weather is warmer than normal when they use less of the systems' capacity – and provides them with a credit in months when they use more of the system's capacity, i.e, they receive a credit when the weather is colder than normal and they use more of the system's capacity) the WNA does not support fixed capacity utilization.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated c onsumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions. Please refer to UGI Gas Exhibit JDT-2.	The WNA does not meet this criterion. because the WNA generates revenue for UGI only when consumption is less than projected – and therefore demand is less than anticipated – it does not, in fact, reflect the level of demand that is associated with customers' anticipated usage. Furthermore, by design, the WNA is targeted to meet the revenue requirement at a fixed point in time. While that design is based on anticipated consumption at the end of the FPFTY and will change with each rate case, it fixes that revenue requirement as an entitlement despite projections of revenue loss based on weather.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	UGI Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA may lead to intraclass cost shifting to the extent that customers with lower use may have a larger percentage of their total bill be weather sensitive than customers with more use. I agree that as structured it will not likely lead to interclass cost shifting.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Moreover, UGI Gas maintains a robust Energy Efficiency & Conservation ("EE&C") program, which it has voluntarily implemented for its customers and will use to continue promoting energy efficiency measures.	The WNA does not incentivize additional energy efficiency funding and may discourage energy efficency adoption to the extent customers believe that their energy efficiency investment will be eroded.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	The WNA does not incentivize additional energy efficiency funding and may discourage energy efficency adoption to the extent customers believe that their energy efficiency investment will be eroded.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance progr ams.	In accordance with the Settlement Agreement in Docket Nos. R-2024-3052716, et al., the current WNA mechanism does not apply to low-income customers enrolled in the Company's Customer Assistance Program ("CAP").	More than 80% of UGI's low income customers are not enrolled in CAP and will bear the full brunt of WNAs that are assessed. Since the WNA is assessed during the months when bills are at their highest (in winter months due to winter usage), the assessment of a WNA during the winter compounds energy insecurity and unaffordable bills for UGI's low income customers.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	Rates may be moderately more stable during the months that a WNA is applied given that it is assessed on a volumetric and per customer basis and seeks to normalize weather sensitve usage, however, on a long term basis there is no evidence that rates will be more stable. UGI has filed a rate case a mere 3 months after its last rate increase went into effect and there has been no showing that the presence of the WNA leads to fewer or less frequent rate cases.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through April, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband). It only applies to certain of the Company's customer classes (Rates R, RT, N and NT) and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.	I agree that the WNA reduces weather-related variation in revenue collection for UGI, but it does this my imposing the obligation onto residential customers who are less able to bear this risk. This is especially true of UGI's low income customers whose average household income is approximately $20,000 per year.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.	I agree that the WNA will not reduce the frequencey of rate cases, it will merely allow the utility to collect more revenue and reduce the overall effectiveness of the regulatory paradigm, including the effectiveness of regulatory lag. The WNA increases the likelihood that UGI will collect its projected revenue and *decreases* the likelihood that it will operate efficiently between rate cases. The WNA is a surcharge that weakens all of the positive aspects of regulatory lag such as cost containment between rate cases.
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	The Company's proposed WNA (appearing as Rider C – WNA in the Tariff) only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through April. Specifically, the billing for the Company's Riders, including Rider F – USP, Rider G – EE&C, and Rider B – PGC, will continue to be based on actual monthly usage.	Since the WNA has historically worked almost exclusively to the benefit of UGI given warming winters, and because UGI applies the DSIC to WNA revenue, the existence of the WNA has the effect of increasing the dollars that UGI is able to collect through its WNA. In this regard, it allows a sucharge on a surcharge.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
12	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	UGI Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows:	The WNA is neither fair nor transparent because it almost always benefits the utility and it is complicated to understand. Most people do not know what a heating degree day is, how a utility's rates are set, and most people cannot follow the complicated algebraic equation need to determine their WNA charge.
		a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and outside of the deadband the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates.	This is a protection, but in the absence of the WNA, there would be no need for a deadband. This is merely a restraint or collar on the worst outcomes of the WNA.
		b. No Cross-Subsidization: The WNA is customer-specific.	I do not agree that this is a protection because it imposes charges on customers based on normalized usage, it requires them to pay not based on what they actually used but based on what they should have used had the weather conformed to historic patterns. Because the WNA is set to achieve an overall revenue requirement for the class, it should be imposed, if at all, across the class not on an individual basis.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
		c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts.	The protections asserted by UGI are about the regulatory system that is in place, not the WNA. There is nothing inherent about the WNA that ensures regulatory oversight or reporting.
		d. Customer Transparency and Education: UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.	UGI's customer education and outreach on the WNA has improved but that improvement is a function of intervenor insistence and regulatory oversight, not that the WNA itself is understandable.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. As indicated above, UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.	It is not understandable. Customers understand that they should pay for gas distribution service they use, but do not understand that they should pay for service they do not use, which is what the WNA demands. The WNA formula is complicated and not transparent, and it is not reasonable for customers to have to understand each of the complicated concepts used to calculate this charge. It is a multvariable algebraic equation based on an abstract concept. It is in no way straight forward. The fact that UGI points to its tariff demonstrates the difficulty that any lay person would have: the tariff uses jargon and terms of art that are unique and in no way common. While UGI's education on its WNA is improving, the concept is fundamentally alien to the common understanding that you pay for what you use.

#	Statement of Policy	Company's Response (Exhibit JDT-4)	CAUSE-PA Response
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA would help minimize the volatility of the recovery of these costs.	There is no basis in the record to conclude that the WNA will improve reliablity. In fact, in response to discovery, Mr. Taylor stated that the WNA is not connected to the Company's ability to provide safe and reliable service. (UGI Response to CAUSE-PA 4-7, Attached at Appendix B).

PREPARED SURREBUTTAL TESTIMONY OF PATRICK M. CICERO

I. Introduction and Background

Q: Please state your name, occupation, and business address?

A: My name is Patrick M. Cicero. In my role as Of Counsel at the Pennsylvania Utility Law Project (PULP), I have a broad range of responsibilities to PULP and its clients. This includes providing analysis and testimony on utility matters for clients who are represented by members of the statewide legal aid network, including clients of PULP and other legal aid offices. PULP's business address is 118 Locust Street, Harrisburg, PA 17101. I also maintain an office at my home.

Q: Did you previously submit testimony in this proceeding?

A: Yes. On April 13, 2026, I submitted direct testimony that will be marked as CAUSE-PA Statement 1 on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA). On April 27, 2026, I submitted errata to my direct testimony correcting a typographical error.

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal testimony responds to the rebuttal testimony submitted by UGI witnesses Jessica R. Rogers,[1] Cyndee S. Fang,[2] Brian J. Meilinger,[3] John D. Taylor,[4] Dylan W. D'Ascendis,[5] Daniel V. Adamo,[6] and Jill E. Walter.[7] In addition, I will be responding to OSBA witness Mark D. Ewen.[8] My surrebuttal does not address every issue

[1] UGI Statement No. 15-R.
[2] UGI Statement No. 16-R.
[3] UGI Statement No. 12-R.
[4] UGI Statement No. 11-R.
[5] UGI Statement No. 8-R.
[6] UGI Statement No. 13-R.
[7] UGI Statement No. 3-R.
[8] OSBA Statement No. 1-R.

raised or discussed by these witnesses or other witnesses. The absence of any response by me to any issue raised by UGI or other parties in rebuttal does not indicate that I agree with those parties or their positions. Also, unless necessary for framing a response to the issues raised by UGI and OSBA in rebuttal, I will not repeat the extensive positions that I took in direct testimony. To the extent that an argument raised by any party in rebuttal was already sufficiently addressed in direct, I do not intend to respond to it here. I have not modified the positions that I have taken in this proceeding and stand firmly behind my positions, opinions, evaluation, analysis, and recommendations made in my direct testimony.

Q: How is your surrebuttal organized?

A: My surrebuttal responds to the witnesses topically. In part II, I respond to some general issues raised by UGI witnesses Rogers and Fang regarding affordability and the scope of utility responsibility for addressing unaffordable utility bills. I also discuss the overall revenue requirement and respond to UGI witness D'Ascendis in this section. In part III, I respond to UGI witness Rogers on the regulatory compact and principles of ratemaking. In part IV, I respond to UGI witness Meilinger regarding UGI's continued refusal to take reasonable measures to screen customers to ensure that they are informed of available assistance programs, and his response to my testimony on low income programs. In part V, I address UGI witness Taylor and UGI's proposed increase to the residential customer charge as well as its request to continue its WNA. In part VI, I address UGI witness Adamo's rebuttal testimony to my recommended tariff changes and to UGI witness Walter's testimony regarding termination procedures. In Part VII, I address

OSBA witness Ewen concerning recovery of universal service costs. Finally, in Part VII, I respond to Ms. Rogers testimony regarding UGI's Purchase of Receivables program.

II. General Affordability Concerns

Q: Please summarize this section of your testimony and the rebuttal of witnesses Rogers and Fang to which you are responding?

A: Both witnesses advance a common theme: that my testimony improperly attempts to convert a cost-of-service rate case into a vehicle for addressing broad macroeconomic conditions or general social welfare objectives. That characterization is inaccurate and should be rejected. My direct testimony is grounded in UGI's own data and discovery responses. It presents a company-specific case that UGI does not need the rate increase it is requesting because it is already earning sufficient returns, and that any increase would create devasting economic impacts for low income customers and their continued ability to afford to remain connected to UGI's service.

Q: Ms. Rogers characterizes your testimony as advancing a proposal that would "supplant" the Commission's detailed analytic process in favor of a "generic rejection" based on macroeconomic conditions,[9] and Ms. Fang similarly argues that CAUSE-PA seeks to use utility ratemaking as a substitute for general social welfare policy.[10] Are these accurate characterizations of your position?

A: No. Both witnesses oversimplify my analysis. My testimony does not argue that rates should be suppressed simply because inflation is high or because household budgets are broadly strained. I have not argued that the Commission should abandon

[9] UGI Statement No. 15-R at 7:8-11
[10] UGI Statement No. 16-R at 5-7.

cost-of-service analysis or disallow any specific cost item based on macroeconomic conditions. In fact, I have not challenged the specific expense or capital investments that UGI seeks to make in its Fully Projected Future Test Year (FPFTY). What I have argued – and what the Commission is empowered and obligated to do – is to exercise the full scope of its statutory discretion in determining just and reasonable rates, which includes consideration of the demonstrated impact of those rates on consumers.

Ms. Rogers and Ms. Fang would have the Commission perform only half of the ratemaking balancing test – the half that benefits UGI – but ignores the consumer side of that balance entirely. The Commission is not only authorized but required to take the impact of rates on consumers into account to ensure that universal service programs are adequate and that low-income customers can maintain access to service on reasonable terms.[11]

Q: Witness Rogers asserts that your testimony would replace the Commission's "prudency standard with an ever-shifting macroeconomic veto."[12] Do you agree?

A: No. I have not proposed that the Commission evaluate rate relief based solely on external economic conditions, nor have I proposed that Commission ignore or disregard prudently incurred costs. The evidence in this case suggests that UGI is well capitalized, has sufficient revenue, and does not need this increase. UGI disagrees – not because it would be unable to meet its projected capital expenditures, continue to provide safe and reliable service, or replace at risk pipe without the increase, but merely because it would earn less money doing so. This case is all about the level of profit that the Commission

[11] 66 Pa. C.S. § 2203
[12] UGI Statement No. 15-R at 18:20-21.

should allow UGI to earn. What I have argued is that the Commission should consider the totality of evidence – including UGI's robust financial health and the demonstrated inability of ratepayers to absorb further increases – in determining whether, and to what extent, a rate increase is warranted. Ms. Rogers herself acknowledges that the Commission should consider affordability in this proceeding, yet she then argues that all evidence of affordability and hardship should be disregarded if it does not fit neatly within the narrow ratemaking cost-of-service categories that she outlines.[13]

Q. Please explain what you mean when you say that Ms. Rogers argues that cost-of-service ratemaking is the lens through which affordability principles should be applied.

A: Ms. Rogers wants to put the Commission in a box and require it only to address affordability "as a part of cost of [UGI's] service" and cites rate design and other vague "policies and practices" to support her view.[14] This view of cost-of-service ratemaking is too narrow because it turns ratemaking into a simple math exercise – disregarding any consideration of UGI's customer base, or their ability to reasonably afford basic, life-sustaining services to their home. To be sure, the Commission must base its decision on facts – but it is not limited to considering only those facts presented by the utility. UGI seeks to divorce its needs from the needs of its customers. However, the Commission has a responsibility to ensure that rates are affordable, that service is accessible to those in need, and that UGI is not taking undue and unfair advantage of its customers. I am not arguing that the Commission should substitute macroeconomic analysis for cost-of-service ratemaking. I am arguing that the Commission must look at underlying economic

[13] UGI Statement No. 15-R at 21-22.
[14] Id. at 22:3-15.

fundamentals of both UGI and its customers to determine the appropriate authorized rates in this case. This is fundamentally consistent with cost of service ratemaking as it reaffirmed in its FPFTY Final Form Rulemaking Order, which concluded that the Commission oversight "serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge."[15] Exercising that restraint in light of the specific, company-level financial evidence I presented in direct testimony, and that has been presented by other witnesses in this case, is precisely what the Commission's statutory mandate requires.

Q: Ms. Rogers points to UGI's affordability-related activities – including donations to Operation Share and contributions to low-income programs – as evidence that UGI has "thoughtfully approached" affordability. How do you respond?

A: These activities, while necessary, do not offset the demonstrated and quantified harm to low income customers from UGI's proposed rate increase that I have outlined in my direct testimony. The facts of the matter are:

- UGI reports that the average income of UGI's confirmed low income customers is approximately $20,000.[16]
- Energy burdens for these households are 12%-15% during the winter heating months at existing rates and would increase to 13%-16% during these months at proposed rates.[17]
- 82% of UGI's low income customers are not enrolled in its customer assistance program (CAP) and are charged the full tariff rate along with any approved increase.[18]

[15] Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available at: https://www.puc.pa.gov/pcdocs/1874340.pdf
[16] CAUSE-PA Statement No. 1 at 20.
[17] Id. at 26, Table 3.
[18] Id. at 69:8-12.

- UGI's low income customers carry a disproportionate amount of customer debt and are far more likely to have their service involuntarily terminated for nonpayment than residential customers as a whole.[19] In fact, confirmed low income customers who are not enrolled in CAP have a utility termination rate that is 400%-500% higher than all residential customers and 500%-850% higher than residential customers who are not low income.[20]

Charitable donations alone will not address these issues. They are discretionary, not guaranteed, and are not calibrated to address the harm caused by this specific rate increase. Charity cannot substitute for the Commission's mandate to ensure that rates are just and reasonable for all customers. This is why it is important for the Commission to focus on UGI's authorized return on equity – it is an area about which the Commission has significant discretion, and it impacts the affordability of rates considerably.

Q: What does Ms. Roger's say about your analysis about UGI's profits, net income, and rate of return?

A: Ms. Roger's testimony is a plea for the Commission to look straight-ahead, put-on blinders, and examine only the evidence and issues that UGI puts in front of it without examining or contextualizing UGI's recent and current financial position or the needs of its customers. Ms. Roger's asserts that "[T]his case is driven by capital investments."[21] To a certain extent I would agree – it is driven by UGI's desire to invest its capital at an administratively determined equity return of 10.75% as opposed to investing its capital at its current equity return – which as of 5 months ago was 10.43% and which even in its worst possible projections at current authorized revenues will be 7.7% in September 2027.[22] As noted, I have not challenged UGI's capital or operating expenses in this case

[19] CAUSE-PA Statement No. 1 at 27.
[20] Id. at 28.
[21] UGI Statement No. 15-R at 8:3.
[22] CAUSE-PA Statement No. 1 at 38-40; UGI Statement No. 1 at 6:18-21.

and to the best of my knowledge no other party has challenged UGI's capital investment projections. The parties have either agreed with or simply not challenged those investments, but rather they have challenged whether UGI needs additional revenue above and beyond that which it is currently authorized to collect to make these investments and earn a fair rate of return. From my view, this case is about whether UGI should earn 8.22 cents on every dollar of capital investment that it makes and places into rate base or 6.55 cents on every dollar, or something in between.[23] When expressed in cents per dollar invested, the difference between what UGI wants and what it currently collects can seem small, but as noted in my direct testimony, at the 305 basis points that UGI is asking for in this case to take its ROE from 7.70% to 10.75%, UGI is asking the Commission to require customers to pay an additional $91.5 million each year.[24] This means that 92% of the increase that has been sought by UGI is driven by its requested ROE and capital structure.

This case is not at all about whether UGI will have sufficient cash or net income to ensure that it can meet its legal obligations or ensure safe and reliable service to its customers. It is not about whether UGI should make the investments, or whether it should receive recovery for doing so. It is all about the adequacy of the return that UGI will derive from those investments, and whether and to what extent its customers can afford to foot the bill.

[23] This is the difference between an 8.2% rate of return requested by UGI in this case at 10.75% ROE at its requested capital structure versus what it projects that it would earn absent a rate increase – 6.55% at 7.7% ROE and its existing authorized capital structure.
[24] CAUSE-PA Statement No. 1 at 42-43.

Q: Ms. Rogers says that it is important for UGI to earn its requested rate of return because the "Company must be able to attract capital at a reasonable cost in order to undertake the investments necessary to provide safe and reliable service."[25] Do you agree with her on this point?

A: I agree that UGI needs to be able to attract capital, I disagree that 10.75% is the required return that is needed. As noted above, this case is about how much profit the Commission will allow UGI to embed in its rates, not whether the Company's capital planning or operating expenses will be able to be recovered. While Ms. Rogers says that the magnitude of its UGI's capital expenditure plan alone "clearly indicates that rate relief is necessary"[26], no party has challenged those planned investments and UGI will be able to recover them in rates. The only relevant question is what it will cost consumers and whether UGI needs additional annual revenue to do so. As noted in my direct testimony, UGI has had robust net income and earnings over the past many years and have never earned a return lower than 10.43% since 2023.[27] UGI projects net income of $236 million through September 2026 and anticipates returning another $60 million in dividends to its parent company.[28] It is clearly not capital starved.

[25] UGI Statement No. 15-R at 10:2-3.
[26] Id. at 10:20.
[27] CAUSE-PA Statement No. 1 at 38, Table 8.
[28] Id. at 39.

Q: Ms. Rogers[29] and Mr. D'Ascendis[30] both state that you have not conducted any analysis to demonstrate that 7.70% would be a reasonable rate of return in your recommendation that UGI not be awarded a rate increase. What is your response?

A: I have not conducted a rate of return analysis using either of the traditional cost of capital methods, but that is not material. I am not recommending that rates be set at an ROE of 7.70%. Instead, based on the record, the Commission should find that UGI did not meet its burden of demonstrating that absent rate relief it would not have a reasonable opportunity to earn a fair rate of return. This is based on the totality of the evidence presented, including UGI's projected revenue at existing rates, UGI's robust financial position and the financial position of its parent company both of which have access to debt and equity financing to support UGI, and the very real, concrete and defined affordability crisis facing UGI's low income customers. Simply put, UGI has not demonstrated that it needs a rate increase.

While UGI *projects* that in September of 2027 it will be earning 7.70%, that is a mere projection and, between now and then, it is likely to earn significantly more than that rate. What UGI actually earns without rate relief will depend on a lot of factors, including the rate design approved in this case, whether the Commission continues to allow it to recover its authorized revenue requirement through the WNA, its overall sales, and how well or poorly it manages the efficiency of its operations. UGI has a reasonable opportunity to earn a fair rate of return at existing rates, and without an increase it will have appropriate incentives to operate more efficiently to earn a fair return.

[29] UGI Statement No. 15-R at 13.
[30] UGI Statement No. 8-R at 64.

To the extent that either Ms. Rogers or Mr. D'Ascendis is arguing that there is a sacred methodology the Commission must use to determine a rate of return or rates in general, this is simply inconsistent with the developed case law. As counsel for CAUSE-PA will address more fully in briefing, there is no single ratemaking method that is constitutionally or statutorily required; what matters is the end result.[31] UGI has not demonstrated that, absent rate relief, the end result would be deprive it of a reasonable opportunity to earn a fair rate of return.

Q: Ms. Rogers criticizes your observations about UGI's net operating income, recent equity returns and profit stating that you erroneously overstated UGI's net income and that focusing on net income at the exclusion of "free cash" is an error. What is your response?

A: Ms. Rogers indicates that Table 7 in my testimony overstates UGI's net operating income because the month of September reflects the entire fiscal year rather than a single quarter.[32] The data I used in Table 7 was provided by UGI in discovery. However, even with this correction to UGI's presentation of the data, UGI earned over $1 billion in net income from March 2021 through December 2025 – while at the same time residential customers experienced record terminations and carried record debt.[33] Ms. Rogers notes that UGI only sent 21.4% ($214 million) of that net revenue back to its parents as dividends and reinvested the rest in the system,[34] and that it had negative "free cash flow"

[31] See FPC v Hope Natural Gas, 320 U.S. 591, 602 (1944) ("Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. It is not the theory but the impact of the rate order which counts.")
[32] UGI Statement No. 15-R at 20.
[33] Id. at 21:1; UGI Gas Exhibit JRR-3R.
[34] UGI Statement No. 15 -R at 21:3-6. In my direct testimony, I show that UGI actually sent $249 million to its parent company as dividend payments from 2021-2025. CAUSE-PA Statement No. 1 at 36, Table 6.

for calendar years 2021 through 2025 of ($587 million).[35] Neither of these statements indicate anything of significance. Capital intensive utilities routinely have negative free cash flow because capital expenditures exceed operating cash flow. This is a function of the infrastructure investment business model, not a sign of financial distress. During this same period, UGI received equity contributions of $50 million, sent dividends of $249 million to its parent,[36] and issued debt. This is how utilities operate. They move money. Furthermore, despite this so called negative free cash flow, UGI admitted in discovery that "UGI's ability to attract capital needed to make investments that support operating a safe and reliable distribution system was not jeopardized during any quarter in the period from January 1, 2023 through December 31, 2025."[37] Nothing here indicates that UGI would not be able to do the same absent a further rate increase. It is critical to recall that UGI is a non-publicly traded utility whose sole owner exercises complete control over its capital structure and equity contributions. The Commission is entitled to scrutinize whether the level of dividends paid, combined with UGI's equity-heavy capital structure, represents a fair allocation of financial risk between shareholders and ratepayers. UGI may send less profit up to its corporate parent, but it will still have access to cash and there is no record evidence suggesting otherwise.

[35] UGI Statement No. 15-R at 21:10.
[36] See CAUSE-PA Statement No. 1 at 36, Table 6. Note that despite stating in her testimony that UGI sent $214 million to its parent from 2021 through 2025, Ms. Rogers did not dispute the $249 million figure that was in Table 6 of my testimony and which was derived from the Company's standard data requests made with their filing.
[37] CAUSE-PA Statement No. 1 at 38:7-10 (citing UGI Response to CAUSE-PA 3-1(b)).

Q: Ms. Fang argues that you misconstrue the scope of utility regulation, and that "[e]xpanding utility responsibility to address economywide affordability pressures would improperly transform ratemaking into a general social policy tool, contract to long-standing cost of service principles."[38] What is your response?

A: Ms. Fang is incorrect. Nowhere in my testimony did I suggest that UGI or any other utility is responsible for economywide affordability pressures. My direct testimony is rooted in addressing core attributes of whether UGI is already sufficiently capitalized at current rates with sufficient revenue to have a reasonable opportunity to earn a fair rate of return. However, Ms. Fang only wants to address UGI's side of the coin. A proper assessment requires consideration of whether rates are affordable, such that service will be universally accessible to customers in UGI's service territory. My testimony focused on both sides. Specifically, it focused on UGI's revenue request, capital structure, rate design and its obligation under Pennsylvania law to ensure that low income households can afford and maintain service. I submit that rates are not just and reasonable, and profits are unfair, if the result is to price low income families out of the market for basic gas services to their home. In my direct testimony, I did not seek to impose an obligation on UGI to resolve poverty. I pointed out the facts about UGI's customers to contextualize the hardships that they face to heat their home due to *UGI's choices in this case.* Those choices include:

- requesting a nearly $100 million rate increase a mere three months after its last rate increase went into effect;
- requesting a return of 10.75% a mere 30 days after it was earning 10.43% and returned $88 million in net income to itself and its corporate parent;

[38] UGI Statement No. 16-R at 5-6.

- requesting an equity skewed capital structure that unreasonably enriches UGI's shareholders at the expense of ratepayers; and,
- refusing to implement modest reforms to its screening and referral processes to ensure that more of its income eligible customers have an opportunity to enroll in programs for which they are eligible and UGI is legally required to offer.

Q: Ms. Fang also suggests that "Pennsylvania's affordability challenges are best advanced through a coordinated, statewide approach across essential utility services."[39] What is your response?

A: This is a common refrain from utilities who want to avoid accountability for their decisions and their role in having unaffordable rates and unfair rate design. The simple reality is that all the issues I presented are squarely within the responsibility of UGI as the monopoly provider of gas distribution service and all of this is properly before the Commission in this case. My testimony is consistent with the long standing framing by the Commission that it must consider the needs of consumers, including rate affordability, in setting the cost of equity and rate design.[40] The authority for the Commission to consider these issues in rate cases is well known and abundantly clear.[41] Of course, CAUSE-PA would be happy to engage in a statewide conversation about ways in which the Commission can restrain excessive ROEs and equity rich capital structures that favor utilities at the expense of consumers. Statewide reform of these issues would be a welcome achievement, as recently called for by Governor Shapiro in his April 29, 2026,

[39] UGI Statement No. 16-R at 6:20-21.
[40] See e.g., Pa. Pub. Util. Comm'n, et. al v. Twin Lakes Utilities, Inc., Docket No. R-2019-3010958, at 48, 80 (Order entered March 26, 2020) (finding that the ALJ did not err in considering evidence relating to the various quality of service and rate affordability issues in the proceeding and factoring in such evidence as part of her overall determination on which expert witnesses' cost of equity to adopt for setting just and reasonable rates).
[41] See e.g., Popowsky v. Pa. Pub. Util. Comm'n, 683 A.2d 958, 961 (Pa. Cmwlth. 1996) (stating that the Commission "has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates").

letter to utility CEOs[42] and as recently introduced in HB 2224,[43] which would reform the process of establishing equity returns to make it fundamentally more consistent with the actual cost of equity. However, even this call for more fair rates by our political leaders at a systemic level does not alleviate the obligation of the Commission to address these concerns in the context of a specific utility's request in a specific utility rate case.

Q: Ms. Fang also states that the existing Commission-approved mechanisms to address affordability – such as Customer Assistance Programs (CAP) and other Universal Service Programs – currently exist and are the appropriate framework to address concerns about unaffordable bills.[44] Do you agree?

A: I certainly agree that for income-eligible households – that is, for households with income at or below 150% of the federal poverty level – the best way to materially and significantly improve affordability is through enrollment in CAP. Customers with income below 150% of FPL[45] simply have no ability to adequately maintain service on a continuous basis without the significant and ongoing assistance that CAP provides. This is precisely why I made the recommendations that I did in my direct testimony about additional screening to identify eligible households – recommendations that UGI stubbornly insists are unnecessary.[46] Despite UGI's consistent refusal to appropriately classify and identify confirmed low income households or advance more fulsome measures to improve enrollment in these necessary programs, I share Ms. Fang's

[42] Exhibit Cicero 1-SR, Letter from Governor Josh Shapiro to Utility CEOs dated April 29, 2026, attached hereto at Appendix A.

[45] A family of 4 with income at or less than $49,500 per year has income at or below 150% of the FPL. The complete federal poverty guidelines are available at Federal Register, Vol. 91, No. 10 (January 15, 2026). Available at: https://www.govinfo.gov/content/pkg/FR-2026-01-15/pdf/2026-00755.pdf.
[46] UGI Statement No. 12-R at 15.

position that these programs are the best way to address affordability concerns for low income eligible households. However, more than 100,000 estimated eligible households are not enrolled.[47] Until or unless these households enroll in CAP, Ms. Fang's position that the Commission should not address core ratemaking principles that drive unaffordable bills is patently unreasonable.

Furthermore, as discussed in my direct testimony, there are a considerable number of households within UGI's service territory that reside at incomes below the economic self-sufficiency standard[48] but above the income level needed to qualify for CAP. For example, in 2023, the last year for which data is publicly available for all of the counties UGI serves, approximately 30.7% of all households had income *greater than* $50,000 annually but less than $100,000 annually.[49] This is approximately 195,000 of UGI's customers.[50] These households are not eligible for financial assistance through CAP or LIHEAP, but generally struggle to afford to pay for all necessities – including utility service.[51] Thus, these households must rely on the Commission to exercise its core

[47] CAUSE-PA Statement No. 1 at 69-75.
[48] See Id. at 20 for an explanation of the self-sufficiency standard. See also, Self-Sufficiency Standard, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (Last visited March 31, 2026). The Self-Sufficiency Standard defines the income working families need to meet a minimum yet adequate standard of living, considering family composition, ages of children, and geographic differences in costs. The Standard is an affordability and living wage economic security measure that provides an alternative to the official poverty measure.

[51] See CAUSE-PA Statement No. 1 at 20. ("Based on the 2024 Self Sufficiency Standard, a family of four (consisting of 2 adults and 2 school-aged children) living in the counties served by UGI requires an income ranging from $69,077 to $104,762.").

function as the economic regulator of UGI and restrain its monopolistic tendency towards excessive rates.[52]

Q: Ms. Fang states in her testimony that the effect of denying UGI rate relief in this case would be to "suppress recovery of prudent costs" and erode UGI's ability to earn its authorized return.[53] What is your response?

A: I disagree. My position in this case is that UGI has not met its burden to prove that its current rates are insufficient to recover its reasonable and prudently incurred costs, now or into the future. Moreover, I submit that the record indicates that UGI can earn a fair rate of return with prudent management at existing rates. I did not challenge either UGI's operating or capital expenditures. Thus, any decision about whether to delay or avoid those expenses – what Ms. Fang calls suppressing – would be UGI's management decision to do so, presumably to allow it to make more money for its shareholders rather than investing it in the system. That Ms. Fang and UGI seek to blame intervenors for its hypothetical future management decisions amounts to nothing more than gaslighting.

Q: Ms. Fang asserts that you and Mr. Colton for the OCA do not provide an accurate assessment of current energy burdens of UGI's customers.[54] Do you agree?

A: No. Ms. Fang's general analysis tells us nothing about the customers who struggle to pay their bills, and her analysis of low income customers reaffirms all my conclusions from my direct testimony. According to Ms. Fang, Atrium Economics conducted a

[52] I note that UGI witness Meilinger questions the use of self-sufficiency standard income information in his rebuttal testimony. See UGI Statement No. 12-R at 8. This information is relevant because it shows that the 195,000 households with income above the FPL but below the self-sufficiency standard do not qualify for assistance and thus will be materially impacted by any rate increase awarded in this case.
[53] UGI Statement No. 16-R at 11.
[54] Id. at 15.

customer-level "gas burden" survey using a proxy income from census data by mapping customers "to the median income of the Census block group in which the customer reside."[55] Based on this analysis, she concluded that the median income for all 454,815 gas-only customers was $83,026, and the median energy burden for this group as 1.34%.[56] There are several problems with using median income for this purpose.

First, using Census block group median household income as a proxy for individual customer income assigns a higher income to many customers who live in areas with moderate median incomes, but who themselves have very low incomes. My direct testimony, by contrast, relies on UGI's own discovery responses regarding the actual average annual income of its confirmed low-income customers ($20,146) and CAP customers ($17,208).[57]

Second, Atrium's analysis of the median gas burden across all 454,815 customers obscures the situation of the most vulnerable households. Finding that the median gas burden is 1.34% across all customers tells us almost nothing about whether low income customers can afford service. The relevant question – and the one I addressed in my direct testimony – is what confirmed low-income customers not enrolled in CAP spend on gas service as a percentage of their monthly income. The answer from the record is that, during winter months, these customers spend between 12% and 16% of their monthly income on gas alone.[58] This far exceeds the Commission's own 4% and 6% affordability thresholds for natural gas heating.[59]

---

[55] UGI Statement No. 16-R at 16.
[56] Id.
[57] CAUSE-PA Statement 1 at 19-20.
[58] Id. at 25-26, Table 2 and 3.
[59] 52 Pa. Code §§ 69.261-69.267

Moreover, Atrium's own analysis of CAP-enrolled customers confirms the severity of the problem. Ms. Fang models the impact that CAP has on reducing energy burdens and compares CAP customers with CAP benefits and what those customers would have paid without CAP benefits.[60] Specifically, she modeled the impact at current rates for CAP customers with income greater than $0 and with 12 months of usage.[61] Consistent with my testimony, Ms. Fang found that "CAP benefits materially reduce gas burdens".[62] Specifically she found that CAP reduces the average gas burden from 13.02% without CAP benefits to 5.85% with CAP benefits.[63] The best and most effective way to ensure rate affordability for CAP-eligible households is to enroll them in CAP. Ms. Fang agrees, but then appears to assert that any improvements to CAP and other universal service programs should occur outside of "base ratemaking"[64] and that my concerns about program enrollment are more "appropriately addressed through universal service program review, rather than through base rate determinations focused on recovery of prudent costs necessary to provide safe and reliable service."[65] This is perplexing.

Ms. Fang's argument that affordability concerns – including addressing the significant enrollment concerns presented in my direct – should be addressed exclusively through universal service proceedings, and never through base rate outcomes, misunderstands how these two mechanisms interact. Base rate levels directly determine the size of the affordability problem. The higher UGI's rates, the more customers fall into energy insecurity, the higher CAP credits must be to restore affordability, and the higher

[60] UGI Statement No. 16-R at 18.
[61] Id. at 19.
[62] Id. at 23, Table 2
[63] Id.
[64] Id. at 26.
[65] Id. at 28:11-13.

the costs that all residential ratepayers must bear to pay for these programs. There is no meaningful separation between rate case issues and universal service issues. Base rates and universal service rider costs are both rates that must be addressed in this proceeding along with mitigation measures. Statutory law and Commission decisions support this policy position and will be addressed by counsel for CAUSE-PA through briefing [66]

The record in this rate case directly demonstrates the inadequacy of current universal service programs: 82% of UGI's estimated low-income customers are not enrolled in CAP;[67] confirmed low-income terminations increased 33% between 2023 and 2025 even as terminations declined for all other customer groups;[68] and in 2025, low-income customers not enrolled in CAP accounted for 36.4% of all residential gas shut-offs despite representing only 7% of customers.[69] The Commission and UGI cannot close their eyes to these facts simply because Ms. Fang prefers they be addressed in a different docket.

Q: Ms. Fang further argues that CAP enrollment gaps reflect programmatic concerns better suited to a universal service proceeding.[70] How do you respond?

A: Ms. Fang's position would leave UGI's most vulnerable customers without any protection in this proceeding. As noted above, the Commission has recognized that the adequacy of universal service programs is a factor in evaluating rate cases – that is precisely why parties routinely submit testimony on CAP and LIURP performance in base

[66] Pa. PUC v. PGW, Order, Docket No. R-2023-3037933 at 215-216 (Order dated Nov. 9, 2023) (finding that that deferring universal service issues to another forum would unreasonably "thwart the purpose of universal service, which is to help low-income customers maintain their natural gas services. See, 66 Pa. C.S. § 8 2202").
[67] CAUSE-PA Statement No. 1 at 16.
[68] Id. at 29, Chart 1.
[69] Id at 29-30.
[70] UGI Statement No. 16 at 28-29.

rate proceedings. Atrium's own data shows that CAP benefits reduce the average gas burden, but that reduction is not applicable to the more than 100,000 estimated low-income customers who are not enrolled. Their bills increase by the full amount of any rate increase authorized in this proceeding.

Finally, as I address more fully in my response to UGI witness Meilinger, below, my recommendations to require routine income screening at the time of account establishment, on non-emergency service calls, and through UGI's online portal are straightforward measures the Commission can and should require in this proceeding not deferred to the future.

III. Regulatory Compact and Principles of Ratemaking

Q: Ms. Rogers asserts that your analysis of the compounding impacts of the FPFTY, DSIC, and Weather Normalization Adjustment on consumers is incorrect, and that these mechanisms serve legitimate public purposes.[71] Do you maintain your position?

A: Yes. My concern – which Ms. Rogers does not address – is the cumulative effect of these mechanisms on the risk allocation between the utility and its captive ratepayers. Each mechanism individually shifts risk, but taken together, they substantially reduce UGI's business risk and shift that risk to customers who have no choice of service provider. The Commission, as a proxy for competition in this monopoly environment, must account for this reduced risk in authorizing an appropriate rate of return. UGI fails to recognize this in its requested return.

[71] UGI Statement No. 15 at 27-29

Q: Ms. Rogers claims that UGI has not asserted regulatory lag as a basis for its rate relief request. Does this undercut your testimony?

A: No. Whether UGI uses the words "regulatory lag" is beside the point. The FPFTY, by design, allows UGI to set rates based on projected future costs rather than current costs, thereby minimizing the timing mismatch that constitutes regulatory lag. This is a structural benefit that accrues financially to benefit UGI. The DSIC allows UGI to recover capital expenditures that are incurred above and beyond base rates as of the end of the FPFTY. Both reduce regulatory lag. The Commission should not ignore this benefit in setting the authorized return. For its part, the WNA allows UGI to collect revenue based on normalized as opposed to actual weather, thus it reduces a mismatch in setting rates and collecting rates that also has the same effect as reducing regulatory lag. That is, the result of the WNA is that UGI is able to collect more money in rates that it would otherwise have to forgo absent the WNA.

The regulation of public utilities by the Commission is meant to ensure the provision of a public good – gas distribution service – under terms and conditions that allow UGI the ability to recover its known and prudent costs and provides an opportunity to earn a fair and reasonable return *while at the same time* protecting the public from excessive rates and unfair rate design. My direct testimony focused on the needs of the public – particularly low income consumers who are the most vulnerable and most in need of the Commission's regulatory scrutiny of UGI's rates and rate design. My testimony seeks to have the Commission allocate the risk in ways that are fair and equitable based on the relative ability to manage that risk. UGI and its more than $1 billion in net revenue is far better able to manage the risk – especially with its alternative ratemaking

mechanisms – than UGI's low income customers whose average household income is less than $20,000 per year.[72]

IV. Low Income Program Issues

Q: UGI witness Brian Meilinger disagrees with your conclusion, and that of OCA witness Roger Colton, that UGI Gas bills are consistently unaffordable for low income customers.[73] Does he cite any evidence to support this conclusion?

A: No. In fact, he indicates that he does not dispute the income data cited, but instead indicates that that UGI's programs to assist low income customers function well.[74] He then proceeds to spend several pages of his testimony describing the various offerings that UGI has to assist low income households (those with income ≤ 150% FPL) and other economically vulnerable households (up to 200% FPL).[75] None of this is responsive to either my testimony or Mr. Colton's testimony. I do not dispute that UGI has an array of programs that assist low income households and did not make recommendations in my testimony about the structure, scope or design of those programs. UGI's universal service programs provide meaningful assistance to low income households *who are enrolled in those programs*, but they do nothing for households who are not. In my direct testimony, I provided evidence that low income customers who are not enrolled in CAP face devastating consequences that are exacerbated by UGI's frequent rate increases. For example, as shown on Chart 1 in my direct testimony,[76] terminations for UGI's poorest customers *increased* by 33% during the last three-year period – and for those not enrolled

[72] CAUSE-PA Statement No. 1 at 20.
[73] UGI Statement No. 12-R at 2.
[74] Id. at 2-3.
[75] Id.
[76] CAUSE-PA Statement No. 1 at 29, Chart 1.

in CAP the increase was 27% – even though terminations for all other groups decreased during this period.

The financial burden of rates and risk of termination are becoming increasingly concentrated within the UGI's low income customers who are not receiving program assistance.[77] Unfortunately, most customers for whom UGI has information that would reasonably place that customers in a low income category (i.e., their confirmed low income customers) are not enrolled in these programs and thus face the full impact of UGI's proposed rate hike. This is why I focused on clear and tangible ways for UGI to improve its CAP enrollment. As stated in my direct testimony: "there is a growing need for more targeted and strategic outreach to these high-risk customers to ensure that they have every opportunity to enroll in CAP before they experience service loss. Enrollment in CAP is the most significant, preventative thing that UGI can do to reduce the rate of service loss for low income customers, but the ability of UGI's CAP to mitigate unaffordability is immaterial if families are not enrolled."[78]

Q: Mr. Meilinger says that UGI "has demonstrated a concerted focus on continued marketing of CAP" and that he does not believe that anything else needs to be done to increase access to these programs. Do you agree with Mr. Meilinger?

A: No, I do not. Despite the evidence presented that CAP enrollment materially improves affordability and outcomes for customers – including by UGI witness Fang – Mr. Meilinger indefensibly "takes issue with [my] assessment that CAP enrollment numbers are not sufficient and more needs to be done."[79] Mr. Meilinger's position appears to be

[77] CAUSE-PA Statement No. 1 at 29, Chart 1.
[78] Id. at 30:5-10.
[79] UGI Statement No. 12-R at 13:9-10.

that UGI has programs and that it is simply up to people to come find the program. He blames low income customers themselves for not enrolling - asserting "that approximately 30,000 of the 40,000 confirmed low income customers are self-certified low income and have not made an effort to provide the Company or its Community Based Organizations ("CBOs") with documentation in order to income verify, enroll in CAP, and receive the associated program benefits."[80] This position is problematic and representative of a culture that blames poor people for the decisions that UGI has made that result in unaffordable rates and make it difficult for eligible households to access available programs. It also ignores the fact that UGI refuses to conduct a CAP intake at the time it learns information about a household's income, and instead it simply makes a referral to a CBO.[81] While referrals are an important part of the process, low income households have severe constraints on their time and resources – especially during business hours. UGI must have simple processes in place to verify income eligibility at the time UGI learns that a household is likely eligible for assistance.

Q: Mr. Meilinger also asserts that UGI's current screening and enrollment process is sufficient, and that it conducted a poll of participants and their willingness to share income information. What does he conclude?

A: In my direct testimony, I made a simple recommendation that UGI screen customers to inform them of available assistance.[82] Mr. Meilinger rejected this recommendation because he concludes that most customers will not want to share their income information and that the average handle time for calls may increase as customers

[80] UGI Statement No. 12-R at 12:15-18.
[81] Id. at 16.
[82] CAUSE-PA Statement No. 1 at 73.

ask questions about why they are being solicited to provide their income.[83] In addition, he provides information about the results of UGI's survey of its customers.

Q: Please describe UGI's survey.

A: UGI attempted to survey 4,736 of its customers, of which just 355 customers completed the survey.[84] UGI describes its survey as an effort to assesses customer's "willingness to provide their income to a call center representative."[85] The framing of the questions in the survey do not accurately correspond to my recommendations regarding low income screening on non-emergency calls. UGI's survey asked the respondents to answer the following question among others:

> In order to assist as many customers as possible who are eligible for income-based assistance programs, UGI Utilities is evaluating whether to ask all non-emergency callers for their household income. If UGI implemented this approach, how likely would you be to provide your household income over the phone?[86]

This is not the type of call screening that I recommended in my direct testimony, and it is understandable why customers would be hesitant to share their income information under these circumstances. What I recommended was that UGI simply inform callers that they may be eligible for lower rates and/or free energy efficiency measures and ask if they would like to provide income information, not that UGI collect income information from every single caller.[87] However, despite phrasing this question in a way designed to elicit a negative response, UGI's survey results actually bolster my screening recommendations. Of the 355 customers surveyed:

[83] UGI Statement No. 12-R at 15.
[84] Id.
[85] Id. at 15:15-17.
[86] UGI Response to CAUSE-PA 9-4, Attachment.
[87] CAUSE-PA Statement No. 1 at 73:1-17.

- 31% "probably would" or "definitely would" share their income with UGI. This number increases to 37% for those customers who call UGI 1-2 times per year and 33% for those customers who call UGI more than 3 times per year.[88]
- 22% are not sure if they would share their income, and just 47% - less than half – indicate that they "definitely wouldn't" or "probably wouldn't" share their income.[89]

Interestingly, several of the reasons given by the respondents show a fundamental misunderstanding of the survey question and flaws in the process. For instance, where customers were able to provide further context for why they selected "other" as the reason why they would not provide income information, UGI received the following responses:

- One respondent stated they were a landlord paying for the gas for 5 residential apartments. This customer should have been flagged as ineligible for the survey.
- One respondent was concerned they'd be charged a higher rate based on their income.
- One respondent stated, "Instead of asking for someone's household income, why not simply ask if they'd like to learn more about income-based assistance programs? I'd never provide my income if asked simply because I'd be concerned that it would be used for other purposes." This response reflects a preference for the type of screening that I recommended in my direct testimony and demonstrates why customers would respond negatively to the framing of the question posited by UGI.
- One customer stated, "I don[']t have a problem sharing my income just not over the phone."
- Another customer expressed interest in learning about assistance: "I would like information!!! I don't want my information displayed!!"
- One respondent stated, "If I was applying for assistance, I would expect UGI to need that info."
- One respondent stated, "Cost is ridiculously high, regardless of income level"[90]

[88] UGI Gas Exhibit BJM-10R at 3 of 5.
[89] Id.
[90] All responses quoted from UGI Response to CAUSE-PA 9-4, Attachment, Column L (Other – Please Specify).

Based on UGI's survey, Mr. Meilinger concludes that there would be a "low adoption, potential customer dissatisfaction, and associated expenses" that do "not seem justified given th[e] survey results."[91] Mr. Meilinger fails to mention in his testimony that 72% of customers surveyed where either "very interested" (26%), "somewhat interested" (34%), or "not sure" if they were interested (12%) in learning more about income-based assistance programs.[92]

Q: Do you agree with Mr. Meilinger's conclusion about what the survey results demonstrate?

A: No. UGI and its survey miss the point. I am <u>not</u> recommending that UGI ask every customer who calls its call center for a non-emergency call to provide their income information. I never made that recommendation. Instead, I am requesting UGI provide the following statement (or something similar) on all calls for customers who call their call center for non-emergency calls and for new and moving customers: *UGI offers reduced rates and other assistance for income qualified customers. Would you like to provide your household income information to see if you qualify?* If the customer says that they would like to find out more about whether they qualify, then UGI would provide additional information about these programs. If the customer says no, then the inquiry ends there. This does not seem onerous and would honor the desire of the 60% of customers who UGI surveyed who indicated that they were interested in learning more about UGI's income based assistance programs.

[91] UGI Statement No. 12-R at 15:18-20.
[92] UGI Gas Exhibit BJM 10R at 5 of 5.

Q: Do you agree with Mr. Meilinger that this would be expensive to implement or lead to customer frustration or confusion?

A: It is difficult to imagine that this is the case and UGI has provided no information about what the cost to implement this additional question would be, how it would affect call times, or why it would confuse or frustrate customers.

Q: Based on the information provided by Mr. Meilinger have you changed your position or recommendation?

A: No.

Q: What was your recommendation in direct about the information that UGI has from its use of Experian data concerning its customers?

A: My recommendation was that UGI update its confirmed low income customer count to include the households for which it has actual demographic data indicating that these households are low income. This includes the information that it has about customers based on the data it received from Experian about which UGI states that there is a 90% match rate on name and address.[93] Including these customers as confirmed low income customer count is appropriate because it is "information that would reasonably place the customer in a low-income designation" which is the requirement of the Commission's regulations at 52 Pa. Code § 62.2.

Q: What is Mr. Meilinger's response?

A: Mr. Meilinger makes several contentions that are non-responsive to my recommendation and honestly quite bizarre. For example, he says my recommendation is inappropriate because it would "take data from a third party vendor and override records

[93] CAUSE-PA Statement No. 1 at 23.

in [UGI's] Customer Information System."[94] I agree the scenario invented by Mr. Meilinger would be inappropriate, but I did not suggest that this is what should occur. In addition, Mr. Meilinger states that "it is unclear whether Witness Cicero is proposing that [a] customer who has self-certified and is included in the Company's confirmed low income customer counts but is not identified in Experian's data as low income, should be removed from the Company's records as a confirmed low income customer."[95] There is nothing unclear about my testimony and I made no such suggestion. If UGI has information in its customer information system that would reasonably place a customer in a low income designation, then that customer should be counted as confirmed low income. If a UGI customer has self-certified as low income, then that customer should be counted as confirmed low income. If UGI has information from a third party – including Experian – that reasonably places a customer in a low income designation, then that customer should be counted as confirmed low income. All of this is additive and consistent with the Commission's definition of "confirmed low-income customer."[96] UGI may have more than one source of information about a customer (i.e., they self-certify, they receive LIHEAP, and they show up in UGI's Experian data) the fact that there is more than one designator does not negate anything, it only reaffirms that the customer is confirmed low income. Thus, I stand by my recommendation that UGI should update its confirmed low income customer count to include all customers for whom it has information that would reasonably place the customer in a low income designation, including customers for whom the source of information is Experian data.

[94] UGI Statement No. 12-R at 10:17-23.
[95] Id.
[96] 52 Pa. Code § 62.2.

Q: Mr. Meilinger responds to your recommendation that UGI not reduce its Operation HELP donation by $84,500, and that the donation should be increased to account for any increase in rates approved in this case.[97] He claims your analysis is "limited" because you have not spoken to any Community Based Organizations (CBOs) about whether these organizations believe that this funding would be utilized.[98] What is your response to this position?

A: It is not clear why Mr. Meilinger believes that I should have consulted with CBOs, as there is abundant evidence of the need. As shown in Table 3, below, the difference between the average monthly arrears for 2024 and 2025 of UGI's confirmed low income customers and the total amount of hardship funding awarded *for the entire year* in 2024 and 2025 is staggering.

Table 3: Average Monthly CLI Arrears vs. Total Annual Hardship Funds Awarded[99]

	Average Monthly Confirmed Low Income Customer Arrears	Total Annual Operation Share Grants Awarded
2024	**$23,696,460**	**$668,305**
2025	**$30,138,452**	**$1,390,608**

The need for more grant assistance is self-evident even without a rate increase and there is no need to "confirm" whether the assistance is needed or should be made available. I reaffirm my position stated in my direct testimony: UGI should commit no less than its current grant amount of $1,584,500 annually, and if any rate increase is approved in this proceeding, it would be appropriate for UGI to contribute additional funds over and above

[97] UGI Statement No. 12-R at 17:22-18:5.
[98] Id.
[99] See Exhibit Cicero 3-SR, attached hereto at Appendix A.

this $1.5 million to account for the additional hardships caused by the impact of such an increase.

V. Rate Design

A. Customer Charge

Q: What was your position in your Direct Testimony regarding UGI's proposal to increase its fixed customer charge from $16.25 to $23 per month?

A: My position was that the proposed increase of the customer charge by $81 per year weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of gas they consume.[100] I argued that the increase could weaken the effectiveness of weatherization measures from the Low Income Usage Reduction Program (LIURP) and the Weatherization Assistance Program (WAP) which would be contrary to the policy goals of these programs to reduce bills for customers through usage reduction.[101] I disagreed with UGI that bill stability without bill affordability is a benefit for low income households and that budget billing would be a better option for customer bill stability than an increase in the fixed charge.[102] Ultimately, I concluded that the fixed customer charge should not be increased because I was not recommending any increase in rates and was recommending that the WNA be discontinued. However, if the Commission were to conclude that the WNA was to continue, I did not oppose an increase in the fixed customer charge that would be proportionally scaled back to any authorized revenue increase awarded.[103]

[100] CAUSE-PA Statement No. 1 at 50.
[101] Id. at 52-52.
[102] Id. at 53-54.
[103] Id. at 54.

Q: What was Mr. Taylor's response?

A: Mr. Taylor asserts that concerns about energy efficiency and conservation should not trump rate design where the customer charge is intended to recover UGI's fixed costs that do not vary with usage.[104] Mr. Taylor also posits an academic theory of conservation that "should be understood as the wise and efficient use of utility resources – not merely the reduction of energy consumption.[105] Mr. Taylor asserts that low income households benefit from an increased in the fixed customer charge because they have less discretionary usage and it would help moderate seasonal bill volatility for these customers.[106] He argues that recovering more fixed costs in volumetric charges is regressive and increases the burden on some vulnerable households during the coldest months.[107]

Q: What is your response to Mr. Taylor's arguments?

A. Mr. Taylor posits a model of conservation that is rooted in economic theory but disconnected from lived reality. I disagree with his assertion that the Commission should narrow its examination of efficiency and conservation in a distribution rate case to focus only on the efficient use of utility distribution resources without consideration of the impact of distribution rate design on energy usage. Mr. Taylor's supposition ignores the critical need for energy conservation to advance a multitude of issues – from cost to resource adequacy – and occurs at the expense of customers' ability to reduce their distribution bills through conservation. I agree that the efficient use of the distribution system is a consideration in rate design, but my point, from the perspective of consumers, is that at

[104] UGI Statement No. 11-R at 20.
[105] Id. at 21.
[106] Id. at 26.
[107] Id. at 27.

current rates and at current rate design, low income customers have extraordinary difficulty being able to afford service and remain connected. This difficulty should not be compounded by increasing the fixed customer charge. Nothing in Mr. Taylor's testimony rebuts the notion that the ability of consumers to save money on their distribution bills through energy efficiency investment or conservation is reliant on a bill structure that bases the recovery of costs on volumetric throughput.

It is true that low income households are less able to afford home energy efficiency and weatherization – thus the need for increased LIURP enrollment and coordination. However, the reality is that they can ill afford to have more of their bill fixed without the ability to mitigate higher bills through conservation or energy efficiency, regardless of whether that means going without or adopting efficiency in their home. Wresting control from consumers to reduce their distribution bills through conservation and efficiency will only compound the already impossible choices facing low income families to forego other necessities to maintain life essential energy services to their home.

Regarding Mr. Taylor's arguments about bill stability, I agree that bill stability is a legitimate goal, but I disagree that increasing the fixed customer charge is the appropriate mechanism to achieve it for low-income customers. A bill that is stable but unaffordable provides no real benefit. Mr. Taylor acknowledges that many vulnerable customers cannot meaningfully reduce their winter heating usage, yet his solution is to lock in more of their costs within a fixed charge they cannot avoid if they are able to access LIURP or WAP. Far better tools to provide both stability and genuine affordability for low-income customers are: (1) expanded enrollment in CAP, which provides a bill tied to a customer's

ability to pay, and (2) for those not eligible for CAP, budget billing, which UGI is legally required to offer and which smooths payments without reducing the incentive to conserve.

Q: Mr. Taylor also argues that the proposed customer charge should not be scaled back proportionately if the Commission approves a lower revenue requirement because rate design should be based on cost to serve, not on the overall revenue level.[108] Do you agree?

A: No. While I understand the theoretical argument that rate design and revenue level are analytically distinct, the practical effect of approving the proposed $23.00 customer charge in the context of a lower overall revenue requirement is to lock in a structural shift toward fixed cost recovery. The Company is seeking a substantial revenue increase. If the Commission concludes that the requested increase is not fully justified, approving the full customer charge increase anyway compounds the harm to low-income and lower-use customers without the justification of a demonstrated need for that level of cost recovery.

Q: Has your recommendation about the customer charge changed?

A: No. My primary recommendation remains that no revenue increase is warranted and the customer charge should remain at $16.25. If the Commission awards any increase and continues the WNA, I do not oppose an increase in the monthly customer charge that is proportionately scaled to the revenue requirement authorized.

[108] UGI Statement No. 11-R at 29.

B. Weather Normalization Adjustment

Q: Mr. Taylor argues your analysis and the analysis of other witnesses about the WNA are incorrect, and that the WNA is a symmetrical, two-sided mechanism that benefits customers when weather is colder than normal, just as it protects the Company when weather is warmer than normal.[109] Do you agree?

A: While the WNA is mathematically bi-directional, the record demonstrates that in practice it has operated overwhelmingly to the financial detriment of customers. In my direct testimony, I provided evidence that since the WNA pilot began in November 2022 through February 2026, residential customers were surcharged a net total of approximately $44.2 million for gas service they did not actually use, based on UGI's calculation of what they would have used under "normal" weather.[110] UGI provided additional data for March and April 2026 that adds $4.1 million to the cumulative harm faced by its customers. This is shown in Table 4, below, which is the same as Table 12 in my direct except that it adds the months of March and April 2026.

Table 4: Net WNA charges to Residential Customers: November 2022- March 2026[111]

Year	WNA Revenue
2022	$1,797,324.60
2023	$24,315,727.00
2024	$30,472,835.86
2025	$1,766,165.42
Jan. 2026	($3,857,593.80)
Feb. 2026	($10,281,879.00)
Mar. 2026	$497,295.25
Apr. 2026	$3,613,166.60
Total	**$48,323,041.93**

[109] UGI Statement No. 11-R at 37.
[110] CAUSE-PA Statement No. 1 at 60, Table 12.
[111] UGI Response to CAUSE-PA 9-2, Attachment.

As currently constructed, the WNA is structurally more likely to generate net surcharges than net credits over its operating life, and customers — not shareholders — bear that risk. The mechanism is not truly symmetrical in its real-world impact as felt by consumers given that it has surcharged $48.3 million more than they otherwise would have paid since 2022.

Q: Mr. Taylor contends that the Company's proposal to switch to a rolling 10-year normal directly addresses concerns about the WNA producing imbalanced outcomes.[112] Does this change alleviate your concerns?

A: No. While I support the change to a 10-year normalization period if the WNA is to continue – and I acknowledge it will improve alignment of the normal weather used in ratemaking with the normal weather used in the WNA – it does not resolve my fundamental objection. My objection is not primarily about whether the WNA charges and credits are in balance over time; it is about whether it is appropriate for a monopoly provider of an essential service to shift weather-related revenue risk onto customers in the first place. The Company set its revenue requirement based on a fully projected future test year. It has access to financial tools and regulatory mechanisms – including the DSIC – to manage revenue uncertainty. Low income customers have none of these tools. They operate on tight monthly budgets with no margin to absorb unexpected surcharges based on energy they did not use, regardless of how well-calibrated the underlying normal may be. The 10-year update is a better design if the WNA exists, but it does not change who is bearing the risk, and that is the core problem.

[112] UGI Statement No. 11-R at 33-35.

Q: Mr. Taylor disagrees with you that the WNA is overly complicated and difficult to understand. He asserts that there are very few complaints about the WNA, which should be taken as proof that customers must understand the mechanism.[113] How do you respond?

A: The fact that UGI has received fewer complaints about the WNA is not an indication that consumers understand or accept the mechanism. I maintain the position that customers are not readily able to understand the complicated multi-variable algebraic equation that is necessary to calculate their WNA. Customers understand that they will be billed for what they use, they do not understand that they should be billed for what UGI has calculated they would have used had weather been consistent with normal.

Q: Mr. Taylor accuses you of making a strawman argument by pointing to his interrogatory response, where he stated that the WNA is not connected to UGI's ability to provide safe and reliable service, and then arguing that it really is only about maximizing revenue for the benefit of shareholders. How do you respond?

A: I merely relayed what Mr. Taylor stated in his interrogatory response. Here is the full question and answer:

[113] UGI Statement No. 11-R at 40-41.

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to CAUSE-PA Set 4 (1-9)
Delivered on March 19, 2026

CAUSE-PA-4-7

Request:

If the Commission were to deny UGI's request to continue its WNA, please explain whether, in Mr. Taylor's opinion, the Company would be unable to provide safe and reliable service to its customers. If the answer to this question is yes, please explain in detail the basis for this response.

Response:

The question is based on the premise that the WNA is connected to the Company's ability to provide safe and reliable service. That premise is incorrect. The WNA is a rate design mechanism intended to address weather-related volatility in customer bills and distribution revenue recovery; it does not determine whether the Company can safely and reliably operate its system. The WNA provides the Company a reasonable opportunity to recover its allowed cost of service.

Prepared by or under the supervision of: John D. Taylor

My direct testimony merely pointed out that UGI has asserted no basis for its WNA that is rooted in its ability to provide safe and reliable service. While UGI's rebuttal is chock full of claims that it needs additional revenue to ensure that it can maintain its system, this is belied by the fact that at current rates it could make all of the investments that it is planning to make in capital and operating expenses and still projects to earn a return on equity of at least 7.7% as of September 30, 2027. The existence of the WNA only increases the likelihood that UGI will recover this level of revenue and, thus, is about its revenue not its ability to safely and reliably operate its system.

Q: Mr. Taylor disagrees with you that the WNA causes UGI to lose a significant incentive to operate efficiently because it cannot control for weather and it merely reduces a source of revenue volatility.[114] He also disagrees that it shifts weather-related risk to customers.[115] What is your response?

A: UGI is in the business of selling gas to people to heat their homes. The amount of gas that a person needs to heat their homes will vary depending on how hot or cold it is. Since the weather is warming – as evidenced by the $48 million in net WNA charges assessed to customers – and is projected to continue to warm[116] – UGI is seeking to shift the risk of its weather sensitive business that it has historically borne onto customers. This means that UGI has less concern about whether it will meet its revenue target, which creates incentives for UGI to be less efficient in its management as it otherwise would be. The fact that weather is an externality that UGI cannot control is immaterial. Customers cannot control the weather either. UGI has historically borne the risk of weather variation, and the WNA shifts that risk to customers. The fact of that matter is that through its WNA, UGI has shifted more than $48 million in weather-related risk onto its customers since 2022. As previously discussed, and as outlined more fully in my direct,[117] I believe this is inappropriate for a monopoly provider of an essential service and the WNA should be discontinued.

[116] See CAUSE-PA Statement No. 1 at 61, n116 (citing Pennsylvania Department of Environmental Protection, Pennsylvania Climate Impacts Assessment 2024 at 18 (finding that Pennsylvania's annual total heating degree days are anticipated to decrease by 13% by mid-century and 25% by end-of-century compared to the historical baseline).
[117] CAUSE-PA Statement No. 1 at 58-59.

Q: Mr. Taylor argues that exempting all confirmed low income customers from the WNA should not be permitted.[118] Did you make this argument?

A: No and to my knowledge no other witness made this argument in this case. I do not think that any customers should be assessed the WNA, and I support UGI's exclusion of CAP customers from the surcharge.

Q: Mr. Taylor argues that increasing the WNA deadband from 3% to 5% would materially weaken the mechanism and should be rejected.[119] How do you respond?

A: Widening the deadband to 5% would not eliminate the WNA's function. It would simply require more meaningful weather deviations before the mechanism activates, which is appropriate for a mechanism that charges customers for service they did not consume or credits customers for service that they did consume but should not have under normal weather. Mr. Taylor's objection that this is a "substantive narrowing"[120] is simply another way of saying it would reduce the frequency with which UGI collects revenue above the volumetric amounts actually billed — which is precisely the point given how overall one-directional the WNA has been historically. Furthermore, this wider deadband would be consistent with the Commission's recent decision in the 2025 Columbia rate case.[121]

[118] UGI Statement No. 11-R at 45.
[119] Id. at 46.
[120] Id.
[121] Pa. PUC v. Columbia Gas of Pa., Inc., Docket No. R-2024-3067174, Order at 202 (Order dated Dec. 4, 2025).

Q: Mr. Taylor defends applying the WNA during October and April, arguing that UGI's northern service territory experiences meaningful heating load in those months.[122] Should October and April remain months in which the WNA is charged?

A: No. While the northern part of UGI's service territory may experience meaningful heating load during those months, that fact is already embedded in UGI's rates and does not justify the imposition of the WNA in non-winter months. In my view, at an absolute minimum, October should be removed, consistent with the Commission's most recent decision in the Columbia Gas 2025 rate case. The Commission approved Columbia's WNA only for the months of November through April.

More broadly, I continue to recommend that the months during which the WNA is applied should be narrowed to December through March. These are the core winter heating months recognized by the Commission and the General Assembly for other public policy purposes, including the winter termination protections that apply to economically vulnerable households.[123] It is inconsistent with public policy to use those months as the benchmark for customer vulnerability in the termination context while simultaneously allowing UGI to assess weather-related surcharges on either side of that period.

Q: Have any of your overall recommendations regarding the WNA changed?

A: No. My primary recommendation remains that the Commission should allow the WNA to expire at the conclusion of the current pilot on October 31, 2027, as provided in UGI's current tariff. The WNA is a mechanism that transfers the financial risk of warming winters from a regulated monopoly utility — which is well-positioned to manage that risk

[122] UGI Statement No. 11-R at 47.
[123] See 52 Pa. Code § 56.100 (b) (Winter Termination Procedures for electric distribution and natural gas distribution utilities.).

— to low-income and fixed-income customers who are not. If the Commission concludes that some form of WNA is appropriate, it should be significantly reformed as outlined in my direct testimony.

VI. Tariff Changes

Q: Please describe your recommendations about UGI's Rule 9 regarding termination and discontinuance of service.

A: In my direct testimony, I reviewed UGI's Rule 9.1 (a), which provides a catchall with a mix of grounds for involuntary termination of service on "reasonable notice."[124] I explained that having theses listed under a catchall of "reasonable notice" does not adequately inform customers of their rights.[125] I recommended that UGI amend its tariff to separate out terminations that require notice and specify that at least ten days written notice is required.[126] I also recommended that UGI eliminate its tariff provision that allows it to generally terminate service for "violation of tariff Rules and Regulations," because it is overly broad and not authorized by existing PUC regulations of the Public Utility Code.[127]

Q: What was UGI's response to these recommendations?

A: UGI witness Daniel Adamo agrees with my recommendation to specify that certain involuntary terminations require 10-day notice.[128] However, he disagrees with my recommendation that UGI eliminate its tariff provision that allows it to generally terminate service for "violation of tariff Rules and Regulations."[129] He argues that "the Commission's

[124] CAUSE-PA Statement No. 1 at 91:15-93:32.
[125] Id. at 92:26-33.
[126] Id. at 92.
[127] Id.
[128] UGI Statement No. 13-R at 15.
[129] Id. at 16.

regulations do not function as an absolute limit on the grounds for which UGI Gas can terminate customers' service with notice."[130]

Q: What is your response?

A: I continue to disagree that UGI should be permitted to involuntarily terminate customers for grounds outside of those permitted by the Commission's regulations. Counsel will address this issue in briefing; however, the Commission's regulations provide an exhaustive list of permitted grounds for termination with notice.[131] UGI's tariff provision is far too wide-ranging and would permit it to terminate service with notice for any violation of its rules no matter how picayune that violation may be. I continue to stand by my recommendation that UGI should be limited to termination of service as authorized by Commission regulations and to update its tariff accordingly.

Q: Is there UGI rebuttal testimony addressing other witnesses to which you would like to respond?

A: Yes. UGI witness Jill Walter addresses OCA witness Barb Alexander's recommendation that Field Technicians performing residential termination of service should be trained to solicit or inquire about factors that would lead to suspending termination of service and whether door knocks should be required during terminations.[132] Ms. Walter argues that Field Technicians are responsible solely for physical service terminations and are not trained or suited to evaluate sensitive customer matters like income status or medical conditions.[133] She states that the company relies on

[130] Id. at 16:7.
[131] 52 Pa. Code § 56.81 et seq.
[132] UGI St. 3-R at 8.
[133] Id.

comprehensive written notifications to inform customers of their rights and protections.[134] She also points to UGI's Gatekeeper Program, which trains employees to recognize observable indicators of vulnerability (such as confusion, hoarding, or unsafe equipment) and refer them to an internal Outreach team.[135]

Q: What is your response?

A: I agree with Ms. Alexander and disagree with UGI's approach of requiring field technicians to rely strictly on "observable indicators," which introduces a dangerous element of subjectivity into a critical consumer protection process.

The Commission's regulation, colloquially known as the "Last Knock Rule," requires that, immediately prior to termination, the utility must attempt personal contact at the residence.[136] Ms. Walters asserts in her rebuttal testimony that field technicians are not trained or suited to evaluate sensitive customer matters like income status or medical conditions and should not solicit this information from customers.[137] This passive approach creates a substantial risk that vulnerable customers who do not exhibit obvious, visible signs of crisis will slip through the cracks. A standardized, direct question entirely removes the guesswork, ensuring that every customer facing termination is uniformly given the same opportunity to declare a qualifying medical or financial hardship.

Furthermore, refusing to ask a direct question about medical conditions and other factors under the guise of avoiding "half-evaluations" creates an unnecessary and inefficient bottleneck. A technician does not need advanced regulatory training to simply

---

[134] UGI St. 3-R at 8-9.
[135] Id. at 8.
[136] 52 Pa Code § 56.94 (Procedures immediately prior to termination – "Immediately preceding the termination of service, a public utility employee, who may be the public utility employee designated to perform the termination, shall attempt to make personal contact with a responsible adult occupant at the residence of the customer.).
[137] UGI St. 3-R at 9.

record a "yes" or "no" response to a straightforward inquiry regarding medical or income status. By asking the question directly, the company secures an immediate, clear data point that can instantly trigger a pause in termination and a referral to the Outreach team. Far from escalating tension, a transparent, universal question demonstrates a standardized safety check, whereas a technician silently evaluating a customer's physical appearance or living conditions can feel profoundly invasive and arbitrary. Direct communication remains the most reliable mechanism to ensure customer safety and regulatory compliance.

VII. Recovery of Universal Service Costs

Q: Please summarize your direct testimony position on the recovery of universal service costs.

A: In my direct testimony, I addressed UGI's proposal to assign Universal Service and Energy Conservation program costs to Rate XD customers. I explained that the need for, and costs related to UGI's Universal Service and Energy Conservation programs are not solely "residential" problems and there is no rational basis for residential customers to solely bear the burden of these costs.[138] I proposed a broad reallocation of these costs to all customers classes to mitigate the cost impact to residential customers rather than continuing the current practice of assigning them solely to residential customers.[139]

[138] CAUSE-PA Statement No. 1 at 80-83.
[139] Id.

Q: Did other parties respond to your position in their rebuttal testimony?

A: Yes. OSBA witness Mark Ewen argues that small business customers should not contribute to universal service programs because these customers cannot take advantage of "residential-only" programs.[140]

He argues that there is no causal relationship between UGI's universal service costs and small business customers and that assigning costs for the universal service programs to all rate classes would impose a burden on OSBA to expend resources on experts to ensure that these programs are properly designed, effective, and necessary. He states that my proposal does not specify how universal service costs would be distributed within rate classes and would unfairly burden small businesses with a "new tax" without a cost basis. He recommends that, if the Commission decides to assign a portion of universals service costs to small businesses, the new charge should be separately identified on bills.[141]

Q: What is your response?

A: Mr. Ewen's argument rests on an outdated and narrow interpretation of utility cost causation. I outlined all the reasons why cross class universal service recovery is reasonable and appropriate in my direct testimony. The argument that small businesses receive no benefit from universal service programs ignores the fundamental economic realities outlined in my direct testimony that were unrebutted by Mr. Ewen. Thus, I stand by my analysis and data in my direct testimony, which demonstrate that all customer classes (including industry, business, commerce, educational institutions, hospitals, local

[140] OSBA Statement No. 1-R. Mr. Ewen's Rebuttal testimony does not have any page or line numbers. This quote appears on page 3 of 7 of the PDF circulated to the parties.
[141] Id. at page 4 of 7 of the PDF submitted by Mr. Ewen.

and state governments, and other residential customers) benefit from the availability and existence of universal service programs and assistance. It is a sound policy decision for all customers to share the costs of providing these programs to UGI's most vulnerable customers.[142]

VIII. Purchase of Receivable Program

Q: In direct testimony, you outlined how residential customers who were served by retail natural gas suppliers (NGS) paid $57.9 million between January 2023 and February 2026 more to receive service from NGSs than they would have otherwise paid had they been billed at default service rates.[143] You made a recommendation that UGI revise its POR program to require that to participate in POR and have UGI buy its receivables an NGS would have to certify that its rates are at or below the applicable default service price.[144] Did any party respond to your recommendation?

A: Only UGI. Ms. Rogers appears to agree with me that this is "an area where many customers are paying excessive costs that do not proceed any incremental benefits in safety or service quality."[145] However, she rejected by suggestion stating that "[i]t is not clear whether a single instance of a price about the PTC should result in exclusion from the POR program, and whether such an exclusion would be temporary . . . or permanent."[146] She further indicates that "the Company would need to evaluate the time and cost of any IT programming necessary to facilitate the structure of a modified POR

[142] Mr. Ewen also repeatedly refers to these costs as a "tax" perhaps for rhetorical effect. This, of course, is an incorrect framing as a private company cannot assess a tax and Universal Service rider costs are no more a tax than any other rate assessed by UGI.
[143] CAUSE-PA Statement No. 1 at 86-90.
[144] Id.
[145] UGI Statement No. 15-R at 33:6-8.
[146] Id. at 33:9-12.

program, which could be structurally difficult to administer if it moved suppliers on and off the POR program based on monthly variations in rates."[147]

Q: What is your response?

A: I appreciate that Ms. Rogers recognizes that concerns I addressed, but I object to her suggestion to delay addressing the acute harm to all ratepayers through inflated collections costs. My recommendation would be straightforward to implement. UGI could require that any NGS that wants to participate in POR must certify that the contracts the NGS offers residential customers are at or below the price to compare at the time the contract is entered or at any contract renewal. I am not proposing that the contract always must be less – given the quarterly fluctuations in the price to compare that may be difficult to administer. But it should not be difficult for UGI to change its supplier tariff to require this certification of all suppliers as a condition to participating in the POR. Any supplier who does not or cannot do so would still be permitted to dual bill, but would not have the privilege of participating in the POR. Regarding the question of timing and cost, I recommended that UGI implement this provision as of January 1, 2027, but if additional time is necessary to implement, I am open to a different date that would allow UGI the time needed to make these changes. In terms of cost, ratepayers should no longer bear the burden of paying the collections costs associated with supplier charges. As such, I recommend that POR-related costs should be tracked by UGI and assessed to participating POR suppliers through a discount on POR or a direct fee.

[147] UGI Statement No. 15-R at 33:12-15

IX. Conclusion

Q: Does this conclude your surrebuttal testimony?

A: Yes.

CAUSE-PA Statement 1-SR, Cicero

Appendix A

Exhibit Cicero 1-SR:

Shapiro Letter

Exhibit Cicero 2-SR:

Income $50k - $100k

within UGI Service Territory

Exhibit Cicero 3-SR:

CLI Arrears vs. Operation Share Budget

GOVERNOR JOSH SHAPIRO

April 29, 2026

Dear Utility Leaders:

As you are no doubt aware, many of your customers across the Commonwealth are experiencing markedly higher utility costs. Rising utility bills have themselves become drivers of inflation. While there are many factors affecting those increases, several core causes are directly within your control and result from your policy and fiscal decisions, including the excessive rate requests several utilities have sought in recent years. Last year alone, 13 Pennsylvania utilities requested $975 million in higher rates after those very same utilities had earned a total of $1.4 billion in profits in 2024.

We have reached a tipping point, and this is a moment to put your customers first and change the behaviors causing rate increases. As I've expressed publicly and privately, I believe the 20th century utility model is broken—we can no longer simply prioritize corporate profitability to drive infrastructure development. Rather, we must be laser focused on delivering on the actual needs of our communities. As I stated clearly in my Budget Address in February, Pennsylvania consumers should not be asked to pay a single dollar more than is needed to support a safe and reliable utility system.

Change is needed, and my Administration stands ready to support each Pennsylvania utility in raising the capital you need to invest in your service territories and workers, both in modernizing with cost-effective new technologies and maximizing the existing infrastructure that you have developed over time. However, as we work together to implement this new approach, you must seek to procure that capital in more affordable ways, conscious of the utility burdens facing many consumers across our Commonwealth.

I write today to lay out three commonsense practices to ensure the needs of Pennsylvanians come first. My Administration will use these three practices as a benchmark to evaluate rate case proposals going forward. Let me be clear: my Administration and I will vocally and forcefully oppose rate case requests from utilities that fail to adhere to these three commonsense practices.

First, utilities should seek to raise the most cost-effective forms of capital. Best practices now require you to protect consumers by disfavoring expensive equity when lower-cost debt is available. Given the low risk profile of monopolistic utilities, which maintain a captive rate base able to repay obligations over time, consumers should not be expected to bolster corporate profits through over reliance on costly equity. This means debt should normally represent a clear majority of a utility's proposed ratemaking capital structure, as it does in many other lower-risk industries. As one measure of this approach, any equity share proposed in a rate case in excess of the amount of equity employed by the utility's parent holding company will require extraordinary justification to receive my Administration's support.

For utilities looking to find low-cost sources of capital, my Administration encourages you to apply to the Department of Energy, which is currently offering loan terms as favorable as the 10-year U.S. Treasury yield plus 35 basis points. By comparison, the average Pennsylvania utility requested a return on equity a staggering 682 basis points above the 10-year U.S. Treasury yield last year. Before raising such expensive equity, you should take advantage of more affordable sources of capital, like these loans, that many of your fellow utilities across the country are pursuing. My Administration stands ready to facilitate an introduction to loan officers at the Department of Energy upon your request.

Second, whenever new revenue is sought, a utility must explain in plain, clear language why its proposed investments are necessary, using transparent data to identify a specific reliability or safety concern that will be addressed, or demonstrating with a thorough cost/benefit analysis that the investment will produce significant savings or reliability benefits for consumers. This means showing the value customers will receive in terms of discrete improvements producing tangible outcomes that are timebound, verifiable, and logically linked to the need for additional capital. Creating real value for customers also means maximizing existing grid resources in ways that control costs and defer the need for future upgrades. You must also describe explicitly what amount of your

requested rate increase will be remitted to shareholders through corporate dividends or other means, as compared to what would be used to directly advance the needs of your customers.

Third, you must provide transparent, justifiable equity returns. Pennsylvania has a long, proud tradition of trusting free markets to deliver fair, transparent pricing. In fact, this year marks the 30th anniversary of Act 138, which introduced competition into our utility sector for the first time. That bipartisan law embodies Pennsylvania's deep-seated belief that free-market competition—when properly implemented and overseen—is the best tool for delivering customers the fair value they deserve. Today, we use markets to price our wholesale power and rely on principles of competition to fairly and impartially award public contracts. Yet less accurate administrative determinations—essentially amounting to educated guesses—still govern how much utilities earn on their equity investment. And all too often the outcome of this administrative process is shrouded in "black box" settlements, that do not provide the public with transparency about costs they will have to pay. These vestiges of the past need to evolve to ensure that utilities are not seeking excessive profits but only the opportunity to earn the fair rate of return to which they are entitled.

To accomplish this, utilities can prove their need for a requested return on equity by providing a benchmark (representing at least 10% of the incremental requested equity) that is transparently derived through a public process with competitive bidding by multiple participants to establish a fair market cost of that equity. This sample offers the energy consumer and Public Utility Commission real-world evidence of the proper authorized return on equity, an amount that will allow the utility to earn reasonable equity returns under efficient operations. If a utility declines to justify its requested return on equity through a competitive, transparent process, it creates a presumption in the view of my Administration that the requested rate is higher than would have been derived from such a competitive process. Absent extraordinary and unforeseen circumstances, a utility can overcome that presumption by requesting a return on equity that does not exceed the rate of the current 10-year U.S. Treasury yield plus the five-year median of the equity risk premium as published in the Federal Reserve's Financial Stability Reports. In simple terms, this allows the filing utility to earn the same expected return as the stock market as a whole, according to Federal Reserve estimates, comfortably exceeding typical Public Utility Commission calculations of risk for the utility sector.

This provides an outcome that is fair for your utility and your customers even without an auction or other market-based price discovery mechanism.

This letter is an effort to be up front with you about my Administration's approach to rate requests going forward. In directly laying out these practices, I am making clear my expectations. I stand ready to collaborate with you, the Public Utility Commission, and other stakeholders in advancing thoughtful rate requests that put Pennsylvania families and businesses first and control costs after years of unacceptably high rate increases. Should you wish to have my Administration's support for any future rate requests, you must submit a description of your compliance with these practices to my Special Counsel for Energy Affordability alongside your rate case filings.

I appreciate your compliance with these practices and look forward to working together to control costs for ratepayers and build out the needed infrastructure for our Commonwealth.

Sincerely,

Governor Josh Shapiro

BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	Docket No. R-2025-3059523, et al.
	:	
UGI Utilities, Inc. - Gas Division	:	

PREPARED HEARING EXHIBIT LIST OF THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA

The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) intends to move for admission of the following evidence at the June 2-4, 2026, evidentiary hearings in the above-captioned matter:

- Direct Testimony of Patrick M. Cicero on Behalf of The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA), CAUSE-PA Statement 1 (As Corrected by Erratum and Further Corrected at the June 2, 2026 Evidentiary Hearing).
  - 93 pages of written testimony
  - Appendix A: Resume, Patrick Cicero
  - Appendix B: Cited Discovery Responses
  - Appendix C: Exhibits Cicero C-1 through C-6

- Surrebuttal Testimony of Patrick M. Cicero on Behalf of The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA), CAUSE-PA Statement 1-SR
  - 50 pages of written testimony
  - Appendix A: Exhibits Cicero 1-SR through 3-SR

- Verification of Patrick M. Cicero to CAUSE-PA Statement 1 and CAUSE-PA Statement 1-SR

Respectfully Submitted,
PENNSYLVANIA UTILITY LAW PROJECT
Counsel for CAUSE-PA

John W. Sweet, Esq., PA ID: 320182
