Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant in service. The results of our study at September 30, 2026 are presented in the attached report labelled as UGI Gas Exhibit C (Future).

The results of our study at September 30, 2025 are presented in our report titled "Depreciation Study- Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2025". This report is identified for purposes of this filing as UGI Gas Exhibit C (Historic). The results of our study at September 30, 2027 are presented in our report titled "Depreciation Study- Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2027". This report is identified for purposes of this filing as UGI Gas Exhibit C (Fully Projected Future). The same methods, procedures and estimates are used in all three exhibits and test years.

The attached report sets forth a description of the methods and procedures upon which the studies were based, the estimates of survivor curves and the calculated annual depreciation rates at September 30, 2026.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

UGI UTILITIES, INC. - GAS DIVISION
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study conducted for UGI Utilities, Inc. - Gas Division to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant at September 30, 2026.

The depreciation accrual rates and amounts presented herein are based on estimated survivor curves and on methods and procedures set forth in previous orders approved by the Pennsylvania Public Utility Commission. The estimated survivor curves presented herein were based on the results of a service life study incorporating statistical analyses of data through 2022 for the consolidated UGI gas company. The consolidated gas company includes the former UGI Penn Natural Gas Company (UGI PNG, now UGI North), UGI Central Penn Gas Company (UGI CPG, now UGI Central) and UGI Utilities, Inc. – Gas Division (UGI Gas, now UGI South).

BASIS OF STUDY

Depreciation and Amortization

Depreciation, as defined in the Uniform System of Accounts, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action

of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

The calculation of annual and accrued depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. These subjects are discussed in the sections which follow.
For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1982 and the equal life group (ELG) procedure for 1982 and subsequent vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

Survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. Iowa type curves were used to depict the estimated survivor curves. For life span groups, the estimate of life characteristics is consistent because the calculated

lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Service Life Estimates

The method of estimating service life consisted of compiling the service life history of the plant accounts, subaccounts or depreciable groups, reducing this history to trends through the use of acceptable actuarial techniques, and forecasting the trend of survivors for each depreciable group on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend yielded a complete pattern of life characteristics from which the average service life was derived.

The Company's service life estimates used in the depreciation calculation incorporated historical data compiled through 2022 from the property records of the Company. Such data included plant additions, retirements, transfers and other activity. Generally, retirement data for the years 1951 through 2022 were used in the actuarial life table computations which were the primary statistical support of the service life estimates.

A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirement was obtained through field trips conducted during the course of the service life study. Discussions with operating and management personnel also provided information regarding plans for the future which was incorporated in the interpretation and extrapolation of the statistical analyses.

AMORTIZATION OF NET SALVAGE

Inasmuch as this report relates primarily to Pennsylvania rate regulation practices, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of experienced and estimated net salvage recorded October 1, 2021 through September 30, 2026 over a five-year period.

PART II. ESTIMATION OF SURVIVOR CURVES

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below, and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

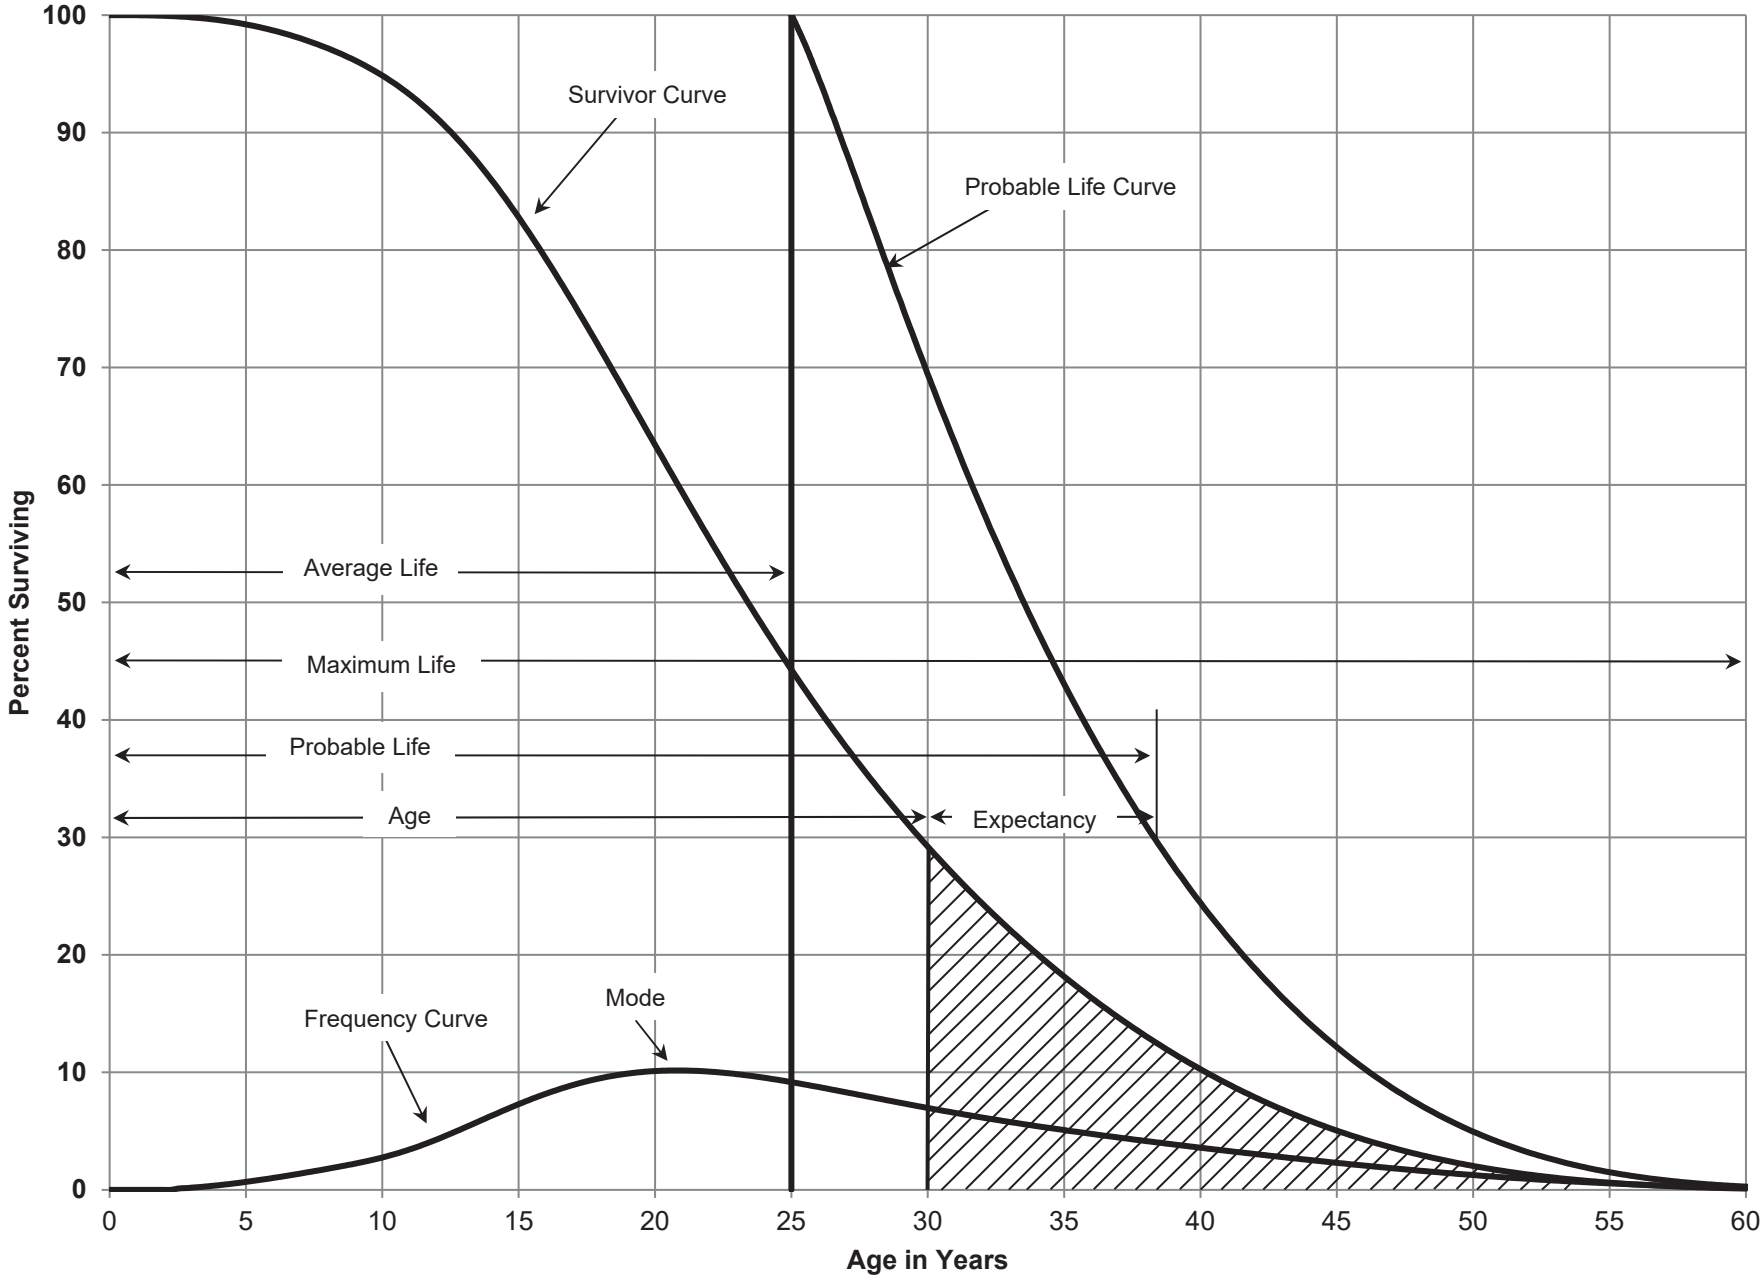

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

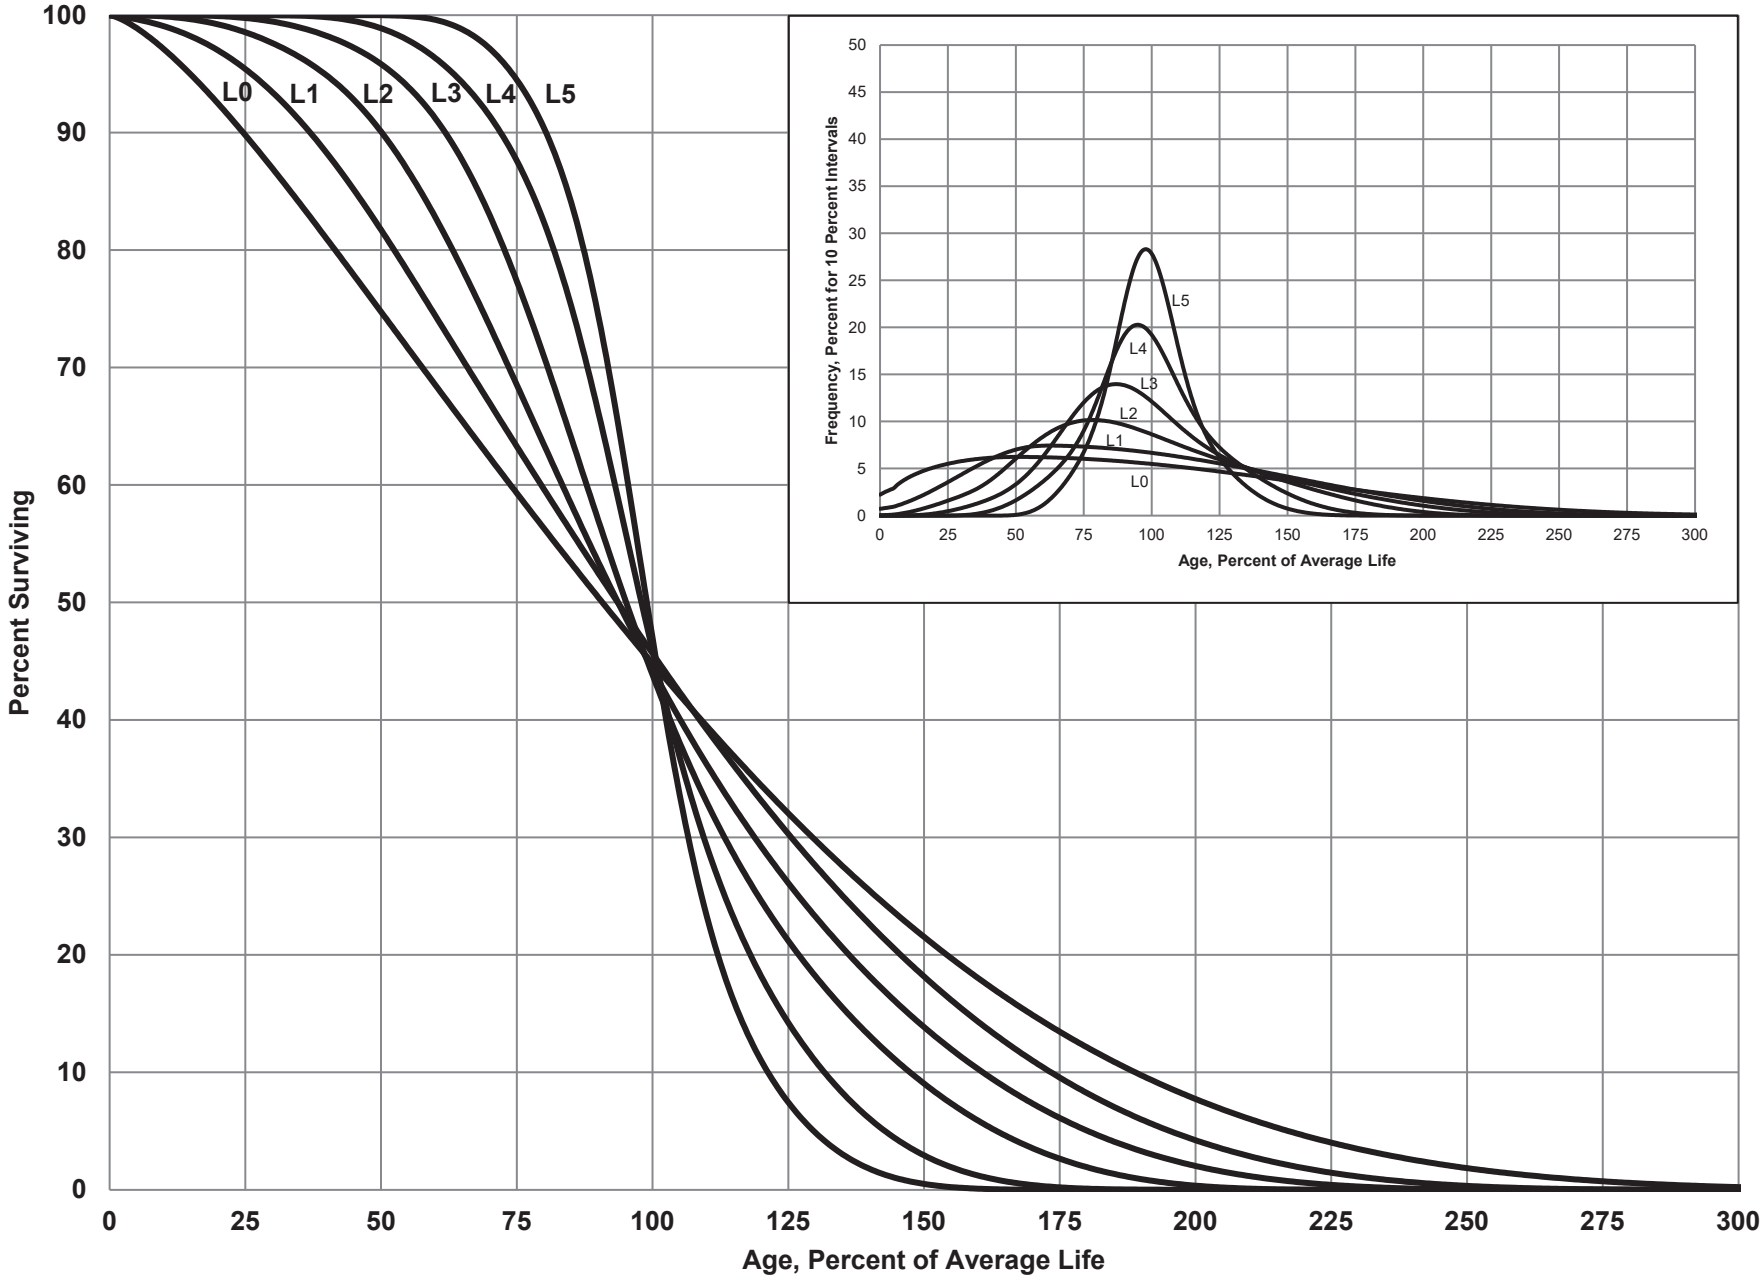

FIGURE 2.. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

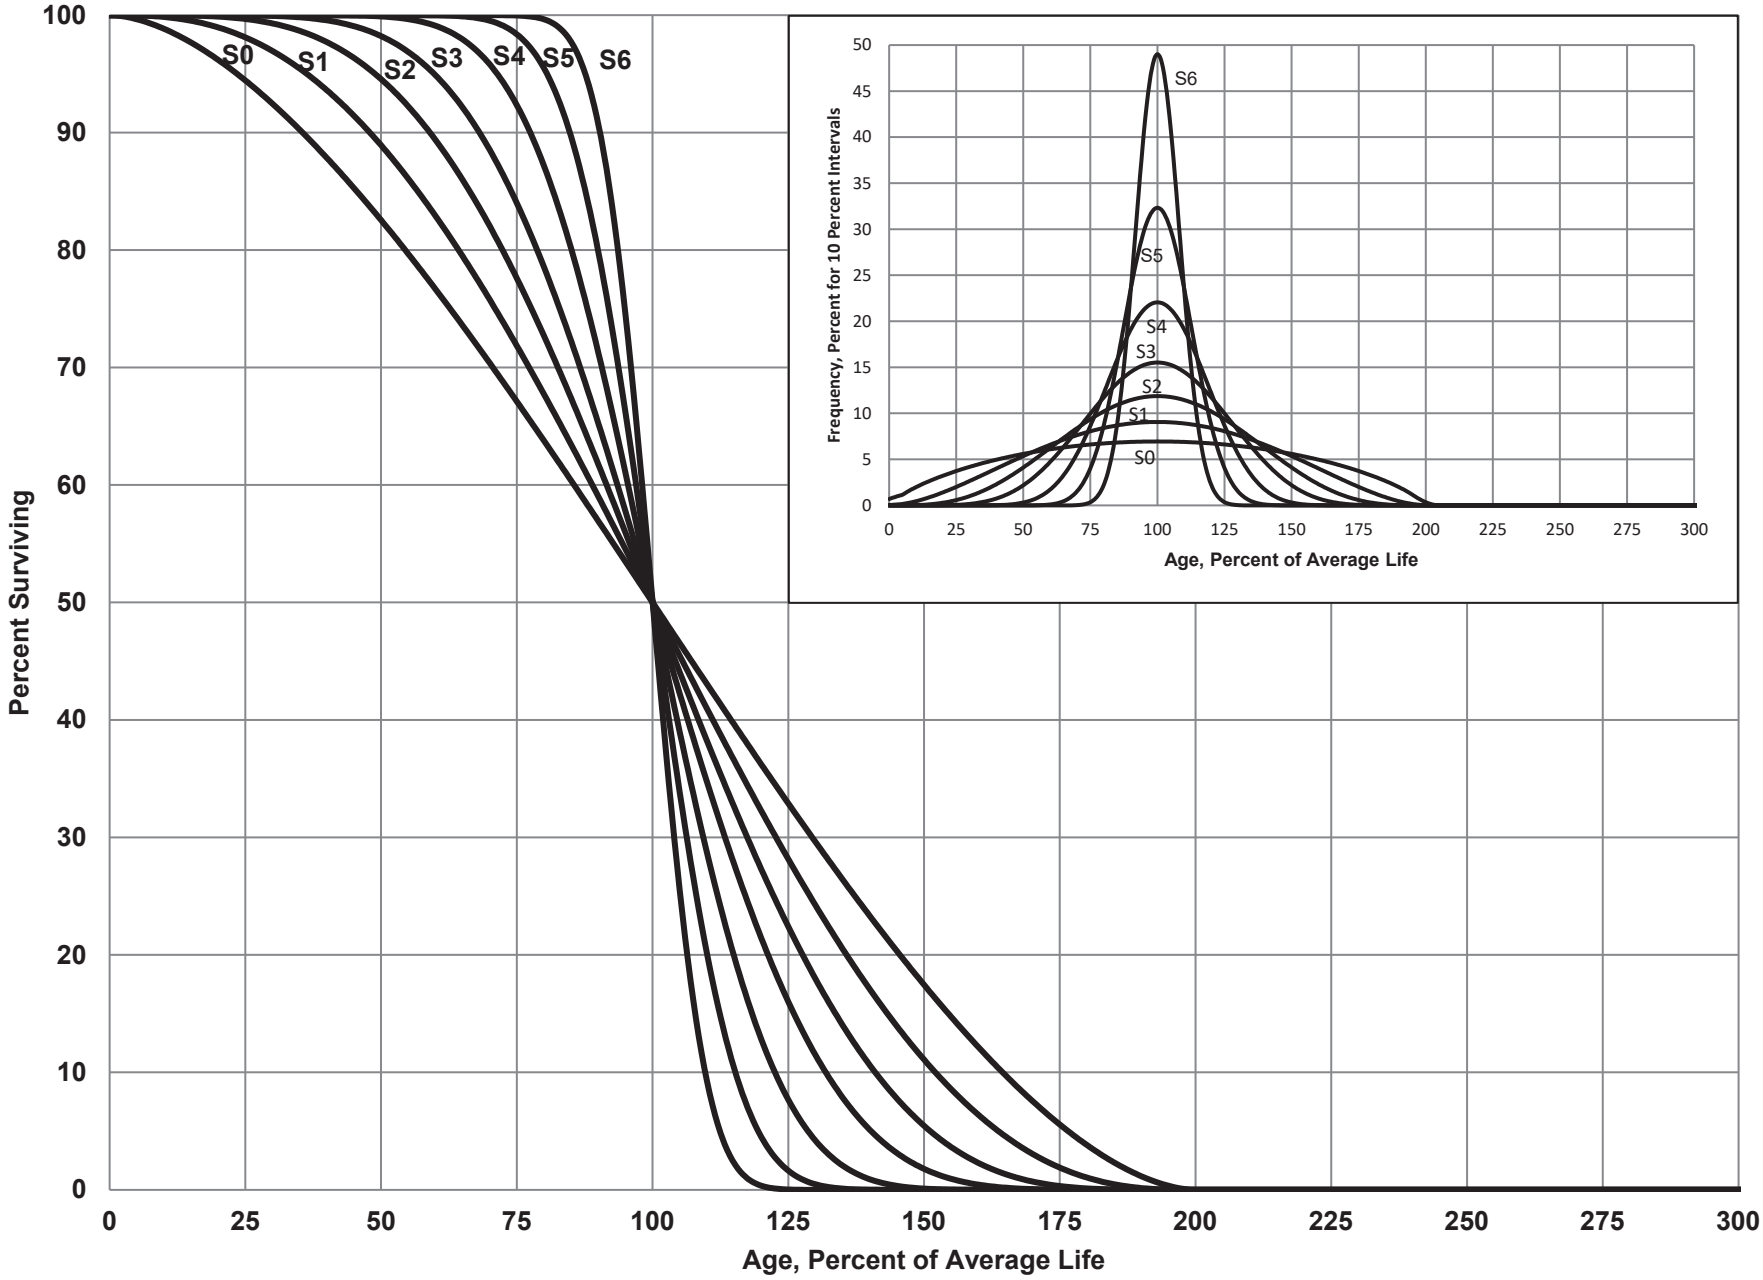

FIGURE 3.. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

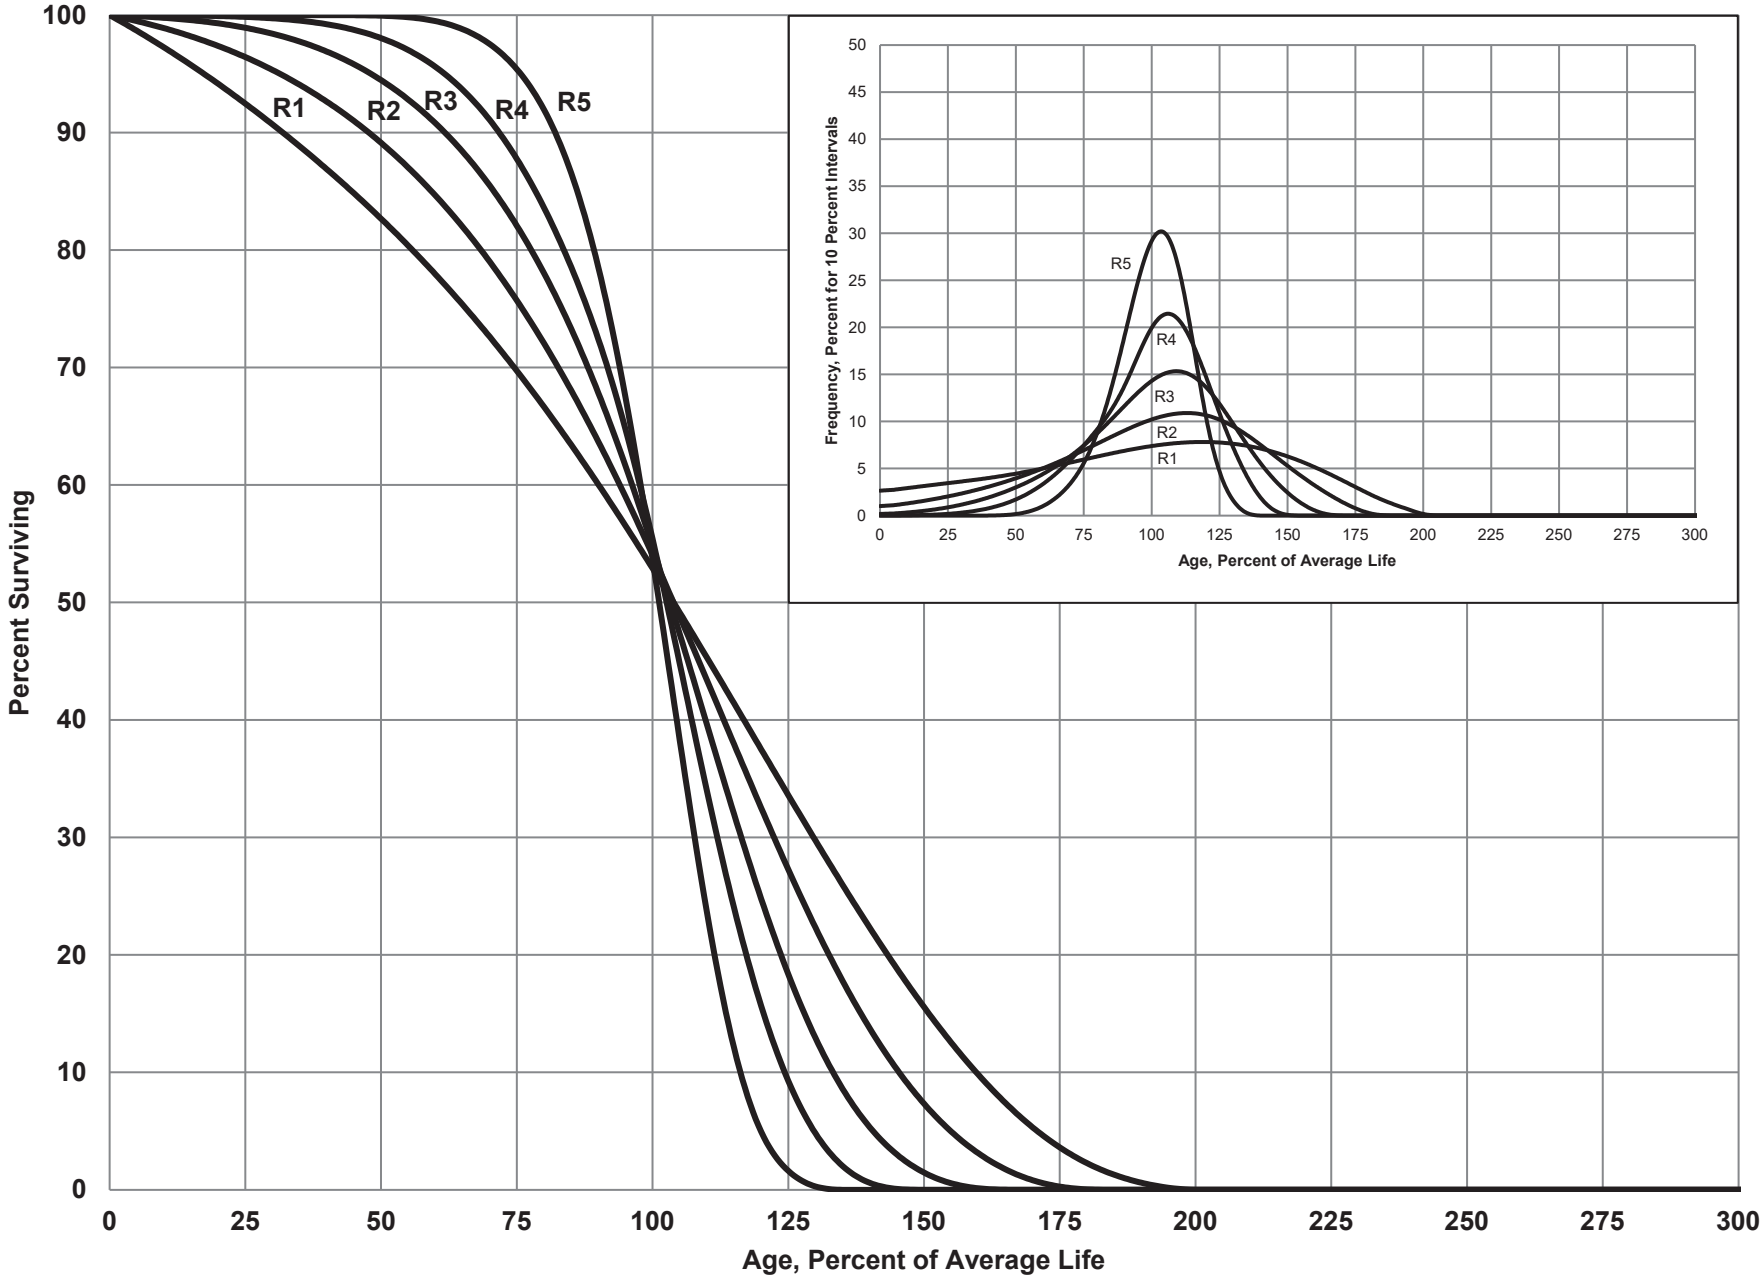

FIGURE 4.. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

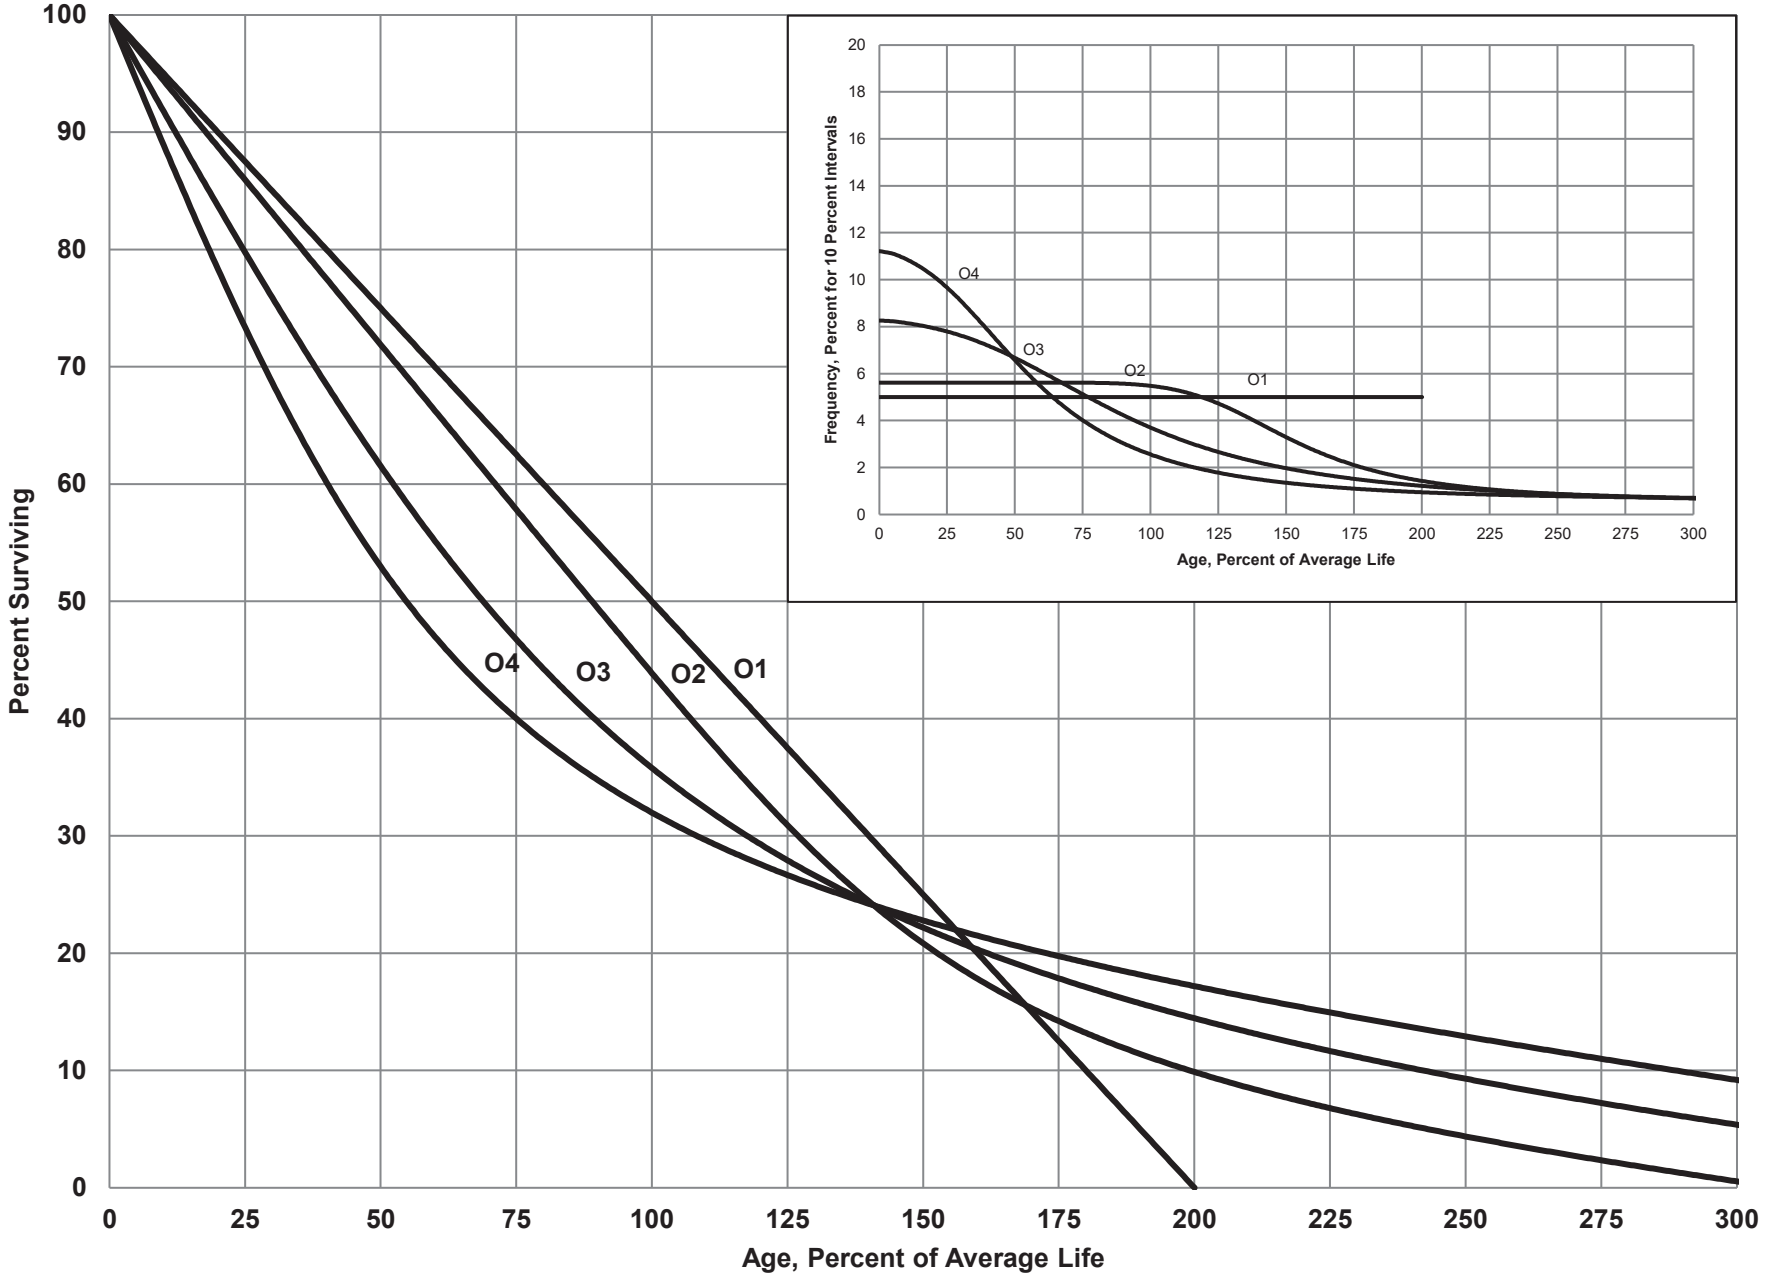

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."[1] In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"[2] "Engineering Valuation and Depreciation,"[3] and "Depreciation Systems."[4]

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2016-2025 for which there were placements during the years 2011-2025. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, $10,000 of the dollars invested in 2010 were retired in 2016. The $10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of $143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2016 retirements of 2011 installations and ending with the 2025 retirements of the 2020 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

SCHEDULE 1. RETIREMENTS FOR EACH YEAR 2016-2025

[a] Transfer Affecting Exposures at Beginning of Year

[b] Transfer Affecting Exposures at End of Year

[c] Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2016 through 2025 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2021 are calculated in the following manner:

Exposures at age 0 = amount of addition	= $750,000
Exposures at age ½ = $750,000 - $ 8,000	= $742,000
Exposures at age 1½ = $742,000 - $18,000	= $724,000
Exposures at age 2½ = $724,000 - $20,000 - $19,000	= $685,000
Exposures at age 3½ = $685,000 - $22,000	= $663,000

SCHEDULE 3. PLANT EXPOSED TO RETIREMENT
JANUARY 1 OF EACH YEAR 2016-2025
SUMMARIZED BY AGE INTERVAL

Experience Band 2016-2025

Placement Band 2011-2025

Year Placed	Exposures, Thousands of Dollars — Annual Survivors at the Beginning of the Year										Total at Beginning of Age Interval	Age Interval
	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)
2011	255	245	234	222	209	195	239	216	192	167	167	13½-14½
2012	279	268	256	243	228	212	194	174	153	131	323	12½-13½
2013	307	296	284	271	257	241	224	205	184	162	531	11½-12½
2014	338	330	321	311	300	289	276	262	242	226	823	10½-11½
2015	376	367	357	346	334	321	307	297	280	261	1,097	9½-10½

2017		460[a]	455	444	432	419	405	390	374	356	1,952	7½-8½
2018			510[a]	504	492	479	464	448	431	412	2,463	6½-7½
2019				580[a]	574	561	546	530	501	482	3,057	5½-6½
2020					660[a]	653	639	623	628	609	3,789	4½-5½
2021						750[a]	742	724	685	663	4,332	3½-4½
2022							850[a]	841	821	799	4,955	2½-3½
2023								960[a]	949	926	5,719	1½-2½
2024									1,080[a]	1,069	6,579	½-1½
2025										1,220[a]	7,490	0-½
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	

[a]Additions during the year

For the entire experience band 2016-2025, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15				
Exposures at age 4½	=	3,789,000				
Retirements from age 4½ to 5½	=	143,000				
Retirement Ratio	=	143,000	÷	3,789,000	=	0.0377
Survivor Ratio	=	1.000	-	0.0377	=	0.9623
Percent surviving at age 5½	=	(88.15)	x	(0.9623)	=	84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2016-2025 Placement Band 2011-2025

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval

12.5	323	44	0.1362	0.8638	48.90
13.5	167	26	0.1557	0.8443	42.24
					35.66
Total	44,780	1,606			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
Column 3 from Schedule 1, Column 12, Retirements for Each Year.
Column 4 = Column 3 Divided by Column 2.
Column 5 = 1.0000 Minus Column 4.
Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

Field Trips

In order to be familiar with the operation of the Company and observe representative portions of the plant, field trips have been conducted periodically. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during these field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

During the extensive period of years our firm has been conducting depreciation studies for the Company, the field trips have resulted in numerous reviews of the Company's operating areas. The following is a list of the locations visited during the most recent trips:

January 13, 2023

UGI Utilities, Inc. - Headquarters Office - Denver PA
Main Replacement Project on Wyomissing Avenue, Reading, PA
Museum Road District Regulating Station
Temple City Gate Station
UGI – Gas Training Center

August 16, 2018

Lancaster Service Center
Main Replacement Project on Conestoga St., Lancaster, PA
Main Replacement Project on W. Frederick St., Lancaster, PA
Fruitville City Gate Station
Lititz Metering Station
Lebanon Service Center
Lebanon District Regulating Station
Ono City Gate Station
Bern Church Meter Station
Leesport City Gate Station
Temple City Gate Station
Reading (Morgantown Road) Service Center

August 15, 2018

Stroudsburg Operations Center
Stroudsburg Measuring Station
Delaware Water Gap M&R Station
Bangor City Gate Station
Mount Bethel Metering Station
Main Replacement Project on Main Street, Easton, PA
Hellertown City Gate Station
Bethlehem (a.k.a., Lehigh Valley) Service Center

February 3, 2017

Reading Service Center
Reading Plant and Training Center, 4th St & Canal St.
Gas Control Center – Temple
Temple City Gate Station
Bethlehem (a.k.a., Lehigh Valley) Service Center
Route 512 Regulating Station (Temporary), S of Bath, PA
Locust Road Regulating Station
Hellertown City Gate Station
Bethlehem District Regulating Station at Bethlehem Plant

January 25, 2017

Lancaster Service Center
Lancaster District Regulating Station
West Lancaster City Gate Station
Marietta City Gate Station
Middletown (a.k.a., Stoneridge) Service Center
Main replacement, N 17th St & North St, Harrisburg, PA
Grantville City Gate Station
Lebanon City Gate Station

January 29, 2016

Empire Yard – Office and Service Center
Empire Yard District Regulating Station
Wyoming Avenue City Gate Station
Saylor Avenue City Gate Station
Archibald Service Center
Honesdale Service Center
Honesdale City Gate Station
Honesdale District Regulating Station
Watts Hill District Regulating Station

January 23, 2014
Mansfield/Wellsboro Operations Center
Port Allegheny Operations Center
Reed Run Take Station

December 20, 2011
Middletown (a.k.a., Stoneridge) Service Center
Marietta City Gate Station
Columbia City Gate Station
West Lancaster City Gate Station

December 14, 2011, cont.
Manheim District Regulating Station
Fruitville City Gate Station
Lancaster Service Center

December 14, 2011
Hazleton Service Center
West Hazleton District Regulating Station
Harleigh City Gate Station
Humboldt District Regulating Station

December 13, 2011
Lehigh Valley Service Center
4th and Emery District Regulating Station
Hellertown City Gate Station
Bethlehem District Regulating Station
Rosedale City Gate Station
Boyertown City Gate Station
Coventry City Gate Station
Morgantown Service Center
Central Gas Control (CGC)

December 7, 2010
Lewistown Operations Center
Lewistown City Gate Station
Belleville City Gate Station
Huntingdon Service Center
Huntington City Gate Station
Shippensburg Operations Center
Shippensburg City Gate Station

December 6, 2010

Stroudsburg Operations Center
Main Replacement Project, Smith St., East Stroudsburg
Smith St. District Regulator Station
Bangor City Gate Station
Wind Gap City Gate Station
East Stroudsburg City Gate Station
Delaware Water Gap City Gate Station
Palmerton City Gate Station
Palmerton District Regulating Station
Lehighton Operations Center
Frackville Operations Center
Mt. Laurel District Regulator Station
16th and Battery Street Regulator Station

June 7, 2007

Lehigh Valley Service Center
Rich Hill City Gate Regulator Station
Hellertown City Gate Regulator Station
Bally City Gate Station
Temple City Gate Station
Reading Service Center
Morgantown City Gate Station

May 15, 2007

Locust Point City Gate Station
Dauphin City Gate Regulator Station
Hershey City Gate Regulator Station
West Lancaster City Gate Station
Harrisburg Service Center and Warehouse
Lancaster Service Center

October 10, 1996
Harrisburg Service Building
Steelton LPG Plant
Marietta City Gate Station
Columbia City Gate Regulator Station
Lancaster Service Center
Lebanon Service Center

October 9, 1996
Reading Service Center
Reading LPG Plant
Temple LNG Plant and Central Gas Control

October 8, 1996
Lehigh Valley Service Center
Allentown Garage and Shop
Rich Hill City Gate Regulator Station
Hellertown City Gate Regulator Station
Bethlehem LPG Plant
Didier Plant

Judgment

The survivor curve estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during the field trips and other conversations with management; and the survivor curve estimates from previous studies of this company and other gas companies.

The current consolidated gas company service life study is based on data through 2022. For a majority of the mass plant accounts and subaccounts for which survivor

curves were estimated, the statistical analyses resulted in good to excellent indications of the survivor patterns experienced. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the following accounts:

375.00 Structures and Improvements
376.00 Mains - Primarily Steel
376.00 Mains - Cast Iron
378.00 Measuring and Regulating Station Equipment -General
379.00 Measuring and Regulating Station Equipment -City Gate
380.00 Services
381.00 Meters
385.00 Industrial Measuring and Regulating Station Equipment
387.00 Other Equipment
390.00 Structures and Improvements
396.00 Power Operated Equipment

Account 380.00, Services, is one of the largest depreciable groups and is used to illustrate the manner in which the study was conducted for the groups in the preceding list. Aged retirement and other plant accounting data were compiled for the years 1954 through 2022. These data were coded in the course of the Company's normal recordkeeping according to plant account or property group, type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The data were analyzed by the retirement rate method of life analysis. The survivor curve chart for the account is presented on page VI-52 and the life table for the experience and placement band 1971-2022 plotted on the chart immediately follows it.

The survivor curve estimate for this account is the Iowa 45-R2. The service line typically consists of a length of steel or plastic pipe. Steel was predominantly used until the mid-1960's, after which copper and plastic inserts became more predominant. Direct

buried plastic pipe began to displace steel and the inserts in the 1980's. Currently, the investment in plastic services represents over 90 percent of the total account balance.

During the 1970's, the rates of service line retirements increased causing the service life to decrease. More recent retirement history indicates a decrease in the retirement levels expressed as a percent of the beginning plant balance. Discussions with operating and management personnel disclosed several reasons for the historical changes. Prior to 1970, the retirement of inactive services often was delayed due to operating practices in effect at that time. The effect of urban renewal in the Company's service area during the 1970's caused substantially greater retirements at earlier ages, but this cause of retirement has not been as important in the more recent past. Services are often replaced in connection with a main replacement project since it is economic to do so even if the services are in reasonably good condition and not at the end of their physical life. The company during the past five years has significantly increased the miles of cast iron and bare steel main that are replaced annually. Based on the company's most recent plan as set forth in the Long-Term Infrastructure Improvement Plan (LTIIP), the accelerated replacement of cast iron mains will occur over a 15-year period ending in 2027. The accelerated replacement of bare steel mains will occur over a 30-year period ending in 2041. For steel services, the principal cause of retirement continues to be deterioration and the impact of the cast iron and bare steel main replacement program as steel service lines will be replaced in connection with the cast iron and bare steel main replacement. Steel services also will be retired when the company moves meters located indoors to outside the customer's home. The company plans to move all indoor meters, not located in a historic district, to the outside within the next 15 years. This program will

also cause increased meter and meter set retirements in other related accounts such as Accounts 381.00-384.00.

The 45-R2 survivor curve estimated for Account 380.00, Services, also is estimated for Accounts 382.00, Meter Installations; 383.00, House Regulators; 384.00, House Regulator Installations; and 386.00, Other Property on Customers' Premises. The use of the estimate developed for Account 380.00, Services, for other property on customers' premises is based on the similar nature of the facilities in these groups. The use of the services estimate for the remaining accounts is based on management's intent to retire these facilities concurrently with the future retirements of service lines.

The third largest depreciable group is Account 376.10, Mains - Primarily Steel. The survivor curve estimate for this account is the Iowa 75-R2.5. In recent years, the rates of retirements of mains have been redistributed, with lesser retirement ratios during earlier age intervals and greater ratios during older age intervals after age 35. This has resulted in a somewhat different indication of the survivor curve during the recent past and for the future. Discussions with operating and management personnel indicated that corrosion control programs, including the use of plastic for smaller size mains, is the most probable cause of fewer early retirements. In addition, highway and urban renewal projects have caused relatively few retirements in the Company's service area in recent years. Increased rates of retirement at older ages are anticipated in conjunction with leak detection programs and street improvements. That is, older mains with a history of leaks will be replaced as municipalities perform street improvements in order to avoid the high cost of repair or replacement when repaving is required. In addition, the company typically will replace service lines in connection with the main replacement. As previously

mentioned, the company has in the past five years or so significantly accelerated the rate at which bare steel mains are being replaced. Bare steel and cast iron mains were primarily installed up through 1960. The company has plans to replace all bare steel mains by 2041.

Typical service lives for mains of used by other gas companies range from 55 to 80 years. The Iowa 75-R2.5 survivor curve is within the range and is a reasonable interpretation of the significant portion of the stub survivor curve through age 70 and reflects the outlook of management.

The interim survivor curve estimate for Account 376.20, Mains – Cast Iron is the Iowa 65-R1. The 65-R1 survivor curve was based on the results of the life analysis for the experience band 1960-2022. The 65-year average service life estimate is consistent with management's expectations and estimates used by other gas companies. An estimated probable retirement date, or truncation date, was used for this account as well. The estimated probable retirement date (i.e., September 30, 2027) coincides with the date the company plans to complete its replacement of cast iron mains.

Similar studies were performed for the remaining significant mass plant accounts. The results of the statistical analyses are presented in account sequence in this report, beginning on page VI-2. The major structures included in Account 390.10, Structures and Improvements were separated from the smaller structures for purposes of the study. The major structures group consists of twelve structures or office complexes of significant size and of a nature that the life span procedure is appropriate. The life spans assigned to the major structures were typically 45 to 75 years from the date of major installation and varied within this range based on individual circumstances such as size, condition, type

of construction, location, and management's plans. Continued use is planned for most of the major structures, although the company has plans to build a new Reading Service Center and vacate the existing Reading Service Center within 3 years or so. The Bethlehem Service Center has undergone a recent modernization and refurbishment and as a result its probable retirement date has been extended accordingly.

The Iowa 90-R1.5 interim survivor curve was judged appropriate for the major structures based on the 1960-2022 interim retirement experience, our observations of the buildings, consideration of the facilities which will be retired during the estimated life spans, and a review of the interim survivor curves derived for similar structures of other gas companies.

Generally, the survivor curve estimates for the remainder of the accounts, which comprise a minor portion of the total depreciable original cost, were based on judgments which considered the nature of the plant and equipment, reviews of available historical retirement data, and a general knowledge of the service lives for similar equipment in other gas companies.

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

PART IV. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

Group Depreciation Procedures

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally, the items within a group do not have identical service lives but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group.

In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes that portion of the property which experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve. This procedure eliminates the need to base depreciation on average lives, inasmuch as each group is equivalent to a unit having a single life. The full costs of short-lived units are accrued during their lives, leaving no deferral of accruals required to be added to the annual costs associated with long-lived units. The calculated depreciation for the property group is the summation of the calculated depreciation based on the service life of each equal life group.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accrual rates as of September 30, 2026, the estimated book depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the vintages calculated by the average service life procedure and for the vintages calculated by the equal life group procedure follow. The detailed calculations are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future whole life depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account, based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life\ Expectancy}{Average\ Service\ Life}.$$

Equal Life Group Procedure

In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life is derived by compositing the individual equal life group remaining lives in accordance with the following equation:

$$\text{Composite Remaining Life} = \frac{(\frac{\text{Book Cost}}{\text{Life}} \times \text{Remaining Life})}{\frac{\text{Book Cost}}{\text{Life}}}$$

The book costs and lives of the several equal life groups which are summed in the foregoing equation are defined by the estimated future survivor curve.

Inasmuch as book cost divided by life equals the whole life annual accrual, the foregoing equation reduces to the following form:

$$\text{Composite Remaining LIfe} = \frac{\sum \text{Whole Life Future Accruals}}{\sum \text{Whole Life Annual Accruals}}$$

or

$$\text{Composite Remaining Life} = \frac{\sum \text{Book Cost - Calc. Reserve}}{\sum \text{Whole Life Annual Accrual}}.$$

The annual accrual rate for each account is equal to the sum of the remaining life annual accruals for all vintages divided by the account's total original cost. The account's "composite remaining life" is calculated by dividing the sum of the future book accruals for all vintages by the sum of the remaining life annual accruals for all vintages.

The calculated accrued depreciation in the equal life group procedure also represents that portion of depreciable cost which will not be allocated to expense through

future accruals. However, the calculation is based at the equal life group level rather than the vintage group level and does not require the use of averages. The equal life group accrued depreciation ratio is calculated as follows:

$$Ratio = \frac{Remaining\ Life}{Average\ Service\ Life}.$$

Inasmuch as service life minus remaining life equals age, when averages are not employed, the foregoing equation reduces to:

$$Ratio = \frac{Age}{Service\ Life}.$$

The table on the following page illustrates the procedure for calculating straight line equal life group accrued depreciation, using an Iowa 10-L2.5 survivor curve and a September 30, 2026 calculation date.

In the table, each equal life group is defined by the age interval shown in columns 1 and 2, which identify the ages at which the first and last retirement of each group occur. The group's designated life, shown in column 3, is the midpoint of the interval. In the calculation, the equal life groups of each vintage are arranged such that the midpoint of each one-year age interval coincides with the calculation date, e.g., September 30, in this case. This enables the calculation of annual accruals which are centered on, or as of, the same date as the calculation of accrued depreciation.

The retirement during each age interval, shown in column 4, is the size of each equal life group. It is derived from the Iowa 10-L2.5 survivor curve and is the difference between the percents surviving (not shown) at the beginning and end of the age interval.

DETAILED COMPUTATION OF ANNUAL AND ACCRUED FACTORS USING THE EQUAL LIFE GROUP PROCEDURE

Each equal life group's whole life annual accrual, shown in column 5, equals the group's size (column 4) divided by its life (column 3), except that for the first age interval, the annual accrual is set equal to the group's size.

Columns 6 through 10 show the derivation of the whole life annual factor and accrued factor for each vintage based on the data developed in the first five columns. The year installed is shown in column 6. For all vintages other than the first and last year (2026 and 1998), the summation of annual accruals for each year installed, shown in column 7, is calculated by adding one-half of the group annual accrual (column 5) for that vintage's current age interval plus the group annual accruals for all succeeding age intervals. For

example, the figure 11.78901572523 for 2025 equals one-half of 0.25324000000 plus all the succeeding figures in column 5. Only one-half of the annual accrual for the vintage's current age interval group is included in the summation because the equal life group for that interval expires at the midpoint of the current year.

The summation of annual accruals (column 7) for installations during 2026 is calculated on the basis of an in-service date at the midpoint of the first nine months, i.e., four and one-half months prior to September 30. Since the overall calculation is centered on September 30, 2026, the accrual for 2026 installations (during the first nine months) represents only 0.875 of one year, 0.375 of a year prior to September 30 plus one-half year following September 30. For this reason, the first figure in column 7, for vintage 2026, equals the group annual accrual for 2026 plus 0.875 of the group annual accruals for each of the subsequent years.

The average percent surviving, derived from the Iowa 10-L2.5 survivor curve, is shown in column 8 for each age interval. The annual factor, shown in column 9, is the result of dividing the summation of annual accruals (column 7) by the average percent surviving (column 8).

The accrued depreciation factor, shown in column 10, equals the annual factor multiplied by the age of the group at September 30, 2026.

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization, as defined in the Uniform System of Accounts, is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during

which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization periods and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is appropriate for certain General Plant accounts that represent numerous units of property, but a very small portion of depreciable gas plant in service. The accounts and their amortization periods are as follows:

Account		Amortization Period, Years
391.00	Office Furniture and Equipment	
	Furniture	20
	Equipment	10
	Computer Equipment	5
	Software	10
393.00	Stores Equipment	20
394.00	Tools, Shop and Garage Equipment	20
395.00	Laboratory Equipment	20
397.00	Communication Equipment	10
398.00	Miscellaneous Equipment	15

For the purpose of calculating annual amortization amounts at September 30, 2026, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion

to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

AMORTIZATION OF NET SALVAGE

Experienced salvage is incorporated in the results of the study, as was reported on the Company's books and records for the period October 1, 2021 through September 30, 2025, and as estimated for the twelve months ended September 30, 2026. The five-year amortization calculations are shown in Table 4.

Net salvage experienced during the five-year period is presented in this manner to determine the amount of negative net salvage to be amortized for book purposes. In developing the amount to be amortized, the data for the accounts which experienced positive net salvage have been netted with those for accounts which experienced negative net salvage.

In order to be consistent with this manner of recognizing salvage, no adjustments for salvage were made to the annual accruals and accrued depreciation calculated for each individual account. Also, there were no exclusions from the 2022 through 2026 experienced and estimated net salvage amounts that were used to determine the five-year net salvage amortization amount for each account.

PART V. RESULTS OF STUDY

PART V. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages V-4 through V-11 summarize the results of the depreciation study at September 30, 2026 for the consolidated UGI gas company. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve at September 30, 2026, future book accruals, and calculated annual accrual amount and rate. Table 2 presents the bringforward of the book reserve to September 30, 2026. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended September 30, 2026. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2022 through 2026.

DESCRIPTION OF DETAILED TABULATIONS

Supporting statistical data for the estimates of average service lives and survivor curves, the annual depreciation calculations, and salvage and cost of removal for the years 2022-2026 are presented in three sections.

The section beginning on page VI-1 sets forth, for each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. A cumulative summary, by year installed, for gas plant and the supporting data for the original cost depreciation calculations are presented in the section beginning on page VII-1. The tabulations of experienced and estimated net salvage by year by account for the five-year period, 2022-2026, are presented in the section beginning on page VIII-1.

In Part VI, the survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral

followed by the type curve designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. In cases where only a segment of the estimated curve is used in the depreciation calculation, the numeral used for identification purposes is not a designation of the average life of the group. The titles of the charts indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which the retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The tables of the calculated annual depreciation related to original cost are presented in Part VII and indicate the estimated average survivor curves used in the calculations. The tables set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life expectancy and the calculated annual accrual.

Detailed tabulations setting forth the cost of removal and salvage amounts, by plant account for each year, are presented beginning on page VIII-2. The total salvage and removal costs, by year, were used to calculate the five-year net salvage amortization presented in Table 4 in Part V.

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant at September 30, 2025 for the consolidated UGI gas company. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 and 2 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, UGI Gas Exhibit C (Future), "Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2026".

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

PART I. INTRODUCTION

UGI UTILITIES, INC. – GAS DIVISION
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for UGI Utilities, Inc. – Gas Division to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant at September 30, 2025.

BASIS OF STUDY

Depreciation

The annual depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1982 and the equal life group procedure (ELG) for 1982 and subsequent vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property.

Service Life Estimates

The service life and survivor curve estimates used for the calculation of depreciation at September 30, 2025, are set forth in Table 1 and are based on data through 2022 for the consolidated UGI gas company. The service life estimates are the same estimates as submitted to the Pennsylvania Public Utility Commission (PA PUC) in the most recent service life study report in May 2023.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals at September 30, 2025, the book reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the average service life procedure are presented in Exhibit C (Future). The detailed calculations at September 30, 2025, are set forth in Part III of this report.

Amortization of Net Salvage

In accordance with Pennsylvania rate regulation practice, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected net salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of experienced net salvage over a five-year period.

PART II. RESULTS OF STUDY

PART II. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 and 2 presented on pages II-3 through II-7 summarize the results of the depreciation study as of September 30, 2025 for the consolidated UGI gas company. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of September 30, 2025, future book accruals, and calculated annual accrual amount and rate. Table 2 presents the annual amortization of experienced net salvage based on the period 2021 through 2025.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

Supporting data for the original cost depreciation calculations in account sequence are presented in Part III of this report. The tables indicate the estimated survivor curves used in the calculations and set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life, and calculated remaining life accrual.

Detailed tabulations setting forth the experienced cost of removal and salvage amounts by year and account are presented in Part IV of this report. The net salvage amounts are carried forward to Table 2 which presents the five-year amortization.

I. INTRODUCTION

The purpose of this document is to discuss the development and results of the Allocated Cost of Service Study ("ACOSS") model and related schedules prepared for UGI Utilities, Inc. - Gas Division ("UGI Gas" or "the Company") based on the Fully Projected Future Test Year ending September 30, 2026 ("FPFTY").

The document is organized into three sections. The first section discusses the purpose of cost allocation and includes an overview of Atrium's ACOSS model used to develop the cost allocation study. The second section, UGI Gas Cost of Service Procedures, includes details of the methodologies adopted in the development of the study. The last section presents the results of the cost-of-service allocation.

1. Purpose of Cost Allocation

The purpose of an ACOSS is to determine the cost-of-service responsibilities of each customer class upon which the base rates may be established. The revenue requirement studies provide the overall level of costs of providing service, while the ACOSS is used to change the basic rate structures and/or the relative overall cost responsibility of each customer class. Based on the functionalization and classification of costs and allocation methodologies used in the ACOSS, the revenue requirement by customer class is determined and used in designing the Company's proposed base rates. In other words, the ACOSS measures each class's contribution to the Company's overall cost of service. Comparing the costs to serve any customer class with that class's rate revenues provides a measure of the return realized from that class and their associated revenue-to-cost ratio. This allows for a comparison across classes to ascertain the presence and extent of interclass subsidization (i.e., when one class pays more than its cost to serve, and another pays less than its cost to serve).

2. ACOSS Procedures

Cost of service studies utilize a three-step process: functionalization, classification, and allocation.

In the first step, the functionalization sets off with assigning the Federal Energy Regulatory Commission ("FERC") plant accounts and associated investment balances to appropriate cost of service functions, such as Production, Distribution, On-Site and Metering, Customer Services, and Gas Supply. The expenses related to particular property investments or groups of investments can often follow the same functionalization and are allocated based on the ratios of gas plant assigned to each function. These plant ratios can be used to functionalize most other cost items.

In the second step, classification, each functional cost category is further separated by cost causation. There are three basic cost-defining characteristics of natural gas services: demand, commodity, and customer.

- Demand (Capacity) related costs are associated with the peak usage of the utility system. These costs are necessary to maintain the system at a level sufficient to satisfy the greatest demand that all the customers could place upon the system.
- Commodity-related costs are variable costs that vary with the quantity of gas consumed. These costs reflect the number of units consumed or supplied during a period of time.

- Customer-related costs are associated with serving customers regardless of their usage or demand characteristics. Customer-related costs are incurred to attach a customer to the distribution system, meter any gas usage and maintain the customer's account. Customer costs are a function of the number of customers served and continue to be incurred whether or not the customer uses any gas. They generally include capital costs associated with minimum size distribution mains, services, meters, regulators and customer service and accounting expenses.

The last step is to allocate these cost components among customer classes. An analysis of the utility's records may indicate specific costs that should be isolated and directly assigned to a particular customer or group of customers in the same class of service. Direct assignments best reflect the cost causation characteristics of serving individual customers or groups of customers. Therefore, in performing an ACOSS, the cost analyst seeks to maximize the amount of plant and expense directly assigned to particular customer groups to avoid the need to rely upon other more generalized allocation methods. Where costs cannot be directly assigned, the development of allocation factors by customer class use principles of both economics and engineering. This results in appropriate allocation factors for different elements of costs based on cost causation.

3. Atrium Economics Cost of Service Study Model Overview

The ACOSS is submitted in support of the direct testimony of John D. Taylor as Schedule 1. The ACOSS model presented in this proceeding is a Microsoft Excel based model that allows the user to modify various inputs and assumptions.

ACOSS Model Capabilities

The Atrium Economics' ACOSS model provides a large range of analytical capabilities including:

- Unbundling of operations into functions: (i.e. production/supply, storage, transmission, distribution, metering, and billing services.)
- Classification and allocation of costs into customer classes.
- Reports on Rate of Return, Revenue Requirement, and Revenue-to-Cost ratio for each function and rate class.
- Development of unit costs of each functional classification for each rate class.
- Specification of the individual rate of return targets for each function or customer class.
- Provides detailed analyses of costs of gas, income taxes, working capital, depreciation reserve, and depreciation expenses.
- Use of detailed analysis of labor expenses by account to facilitate the analyses of administrative and general expenses and overhead costs.
- Facilitation of direct assignment of plant investment, expenses, and revenue dollars to individual functions, classifications, or customer classes.

Follows Standard 3-Step Allocation

The Atrium ACOSS Model follows the standard three-step analysis process: 1) functionalization of rate base and expenses into various functional categories; 2) classification of functionalized

components into demand, energy/commodity, and customer cost categories; and 3) allocation of each component among the customer classes.

As part of the functionalization process, accounts for common costs that are not specifically related to the primary functions, such as general plant and administrative and general expenses, are automatically allocated to the proper function based on internally defined allocation factors. All components of the utility's total cost of service are grouped into one of the functions.

The Atrium ACOSS Model provides unbundled functionalized and classified cost information by customer class; develops unbundled revenue requirements by functional classification for each customer class; and calculates unit costs by function for customer, commodity, and demand categories. Accounting costs are reported by the FERC account level, and the allocation of administrative and general ("A&G") expenses, general taxes, and income taxes are clearly reported.

Revenue requirements are calculated from the allocated rate base and expenses and are adjusted to reflect the user-determined target rate of return and statutory tax adjustments. The actual revenues collected are compared to the calculated cost-based revenue requirements to determine class-specific, revenue-to-cost ratios to assist in revenue allocation and pricing activities.

Unit Cost Output Functionality

The ACOSS model calculates the unit cost of each functional classification separately for each rate class based on the user-specified billing determinants. These unit cost data are among the most important outputs from an embedded cost of service analysis. They are defined as the average cost of providing service to customers per measure of service (i.e., per therm or ccf, per dekatherm or mcf of daily demand, and per customer). Unit costs are a key consideration in developing prices for bundled, unbundled, and re-bundled services.

Acceptance by Utility Regulatory Commissions

The format and presentation of the model's outputs have been used in many rate case proceedings and conform to standard utility commission requirements. Where necessary the ACOSS model outputs can be easily modified to meet specific jurisdictional filing requirements.

II. UGI GAS'S COST OF SERVICE PROCEDURES

1. Functionalization

The following functional cost categories were identified for purposes of UGI Gas's cost allocation:

- Gas Supply
- Storage
- Transmission
- Distribution
- Customer

UGI Gas's assigned functional categories are presented on Schedule 4 - Account Balances and Allocation Methods.

2. Classification

The following classification categories were identified for purposes of UGI Gas's cost allocation:

- Commodity
- Demand
- Customer

UGI Gas's assigned classification categories are presented on Schedule 4.

3. Allocation

The allocation step involves assigning classified costs to the customer classes based on cost causation. Therefore, the allocation of costs is usually based on some measure of class loads or class service characteristics. The External and Internal Allocation Factors are utilized to allocate costs among various customer classes.

3.1.1. Customer Classes and Tariff Schedules

The following customer classes were identified for purposes of cost allocation:

Rate Schedule	**ACOSS Customer Class**
Rate R - General Service – Residential Rate RT – General Service - Residential Transportation Rate GL – General Service - Gas Light Service	Rate R
Rate N - General Service – Non-Residential Rate NT - General Service - Non-Residential Transportation	Rate N
Rate DS – Delivery Service	Rate DS
Rate LFD – Large Firm Delivery Service	Rate LFD
Rate XD – Extended Large Firm Delivery Service	Rate XD Firm
Rate IS - Interruptible Service	Interruptible

3.1.2. External Allocation Factors

UGI Gas's External Allocation Factors are presented on Schedule 5. The External Allocation Factors are developed based on the special studies conducted using various detailed data.

Customer Allocation Factors

Customer-related costs are generally allocated based on the number of customers within each class of service, with appropriate weighting to recognize specific service characteristics.

MTR_381	The meters factor is based on the total cost of Meters (FERC Account 381) and Industrial Measuring and Regulating Station Equipment ("M&R equipment"; FERC Account 385) used to serve customers in different rate classes. The calculation relies upon the Company's records, which provide an inventory of each type and size of meter and M&R equipment for a specific rate schedule.
MTR_383	The house regulators factor is determined by the weighted number of customers for the rate cases R and N. Rate R assumes a 1:1 relationship customer/house regulator. The customer weighting for Rate N is determined by the average cost per service relationship between Rate R and Rate N and it relies upon the data contained in the Company's property records which provide the total cost of service lines by customer class.
MTR_385	The Industrial Measuring and Regulating Station Equipment factor is developed using the same methodology for factor MTR_381, excluding Rates R and N.
SVCS_380	The services factor is based on the total cost of Services (FERC Account 380) used to serve customers in different rate classes. The analysis calculation relies upon the Company's records, which provide an inventory of service sizes for a specific rate schedule.
CUST	The customer factor is based on the proforma customer count.
SALES_EXP_R/N	The sales expense factor is calculated using the number of customers for each classification in Rates R and N only.
R_Direct	Direct assignment to Rate R.
XD_Direct	Direct assignment to Rate XD Firm.
Uncollectibles	The Uncollectible Accounts factor (FERC Account 904) is based on a 3-year average of net write-offs by rate class.
Penalty Revenue	Based on a historical analysis of penalty revenue (forfeited discounts) by class.
Customer Deposits	Based on a historical analysis of customer deposits by class.
DIR_910.10	Direct assignment of Energy Efficiency and Conservation Program expenses.
Reconnect	Based on a historical analysis of customer reconnection fees by class.

Commodity and Revenue Allocation Factors

Costs classified as "Commodity" are allocated among customer classes based on the weather-normalized volumes for the FPFTY. The "Revenue" factors directly assign revenues to the relevant customer class.

TOTVOL	Total Volumes based on forecasted billing determinants.
Avg. PGC Volumes	Based on the average daily Purchased Gas Cost (PGC) volumes (mcf) for each service classification in the FPFTY.
Avg. PGC_Choice Volumes	Based on the average daily Purchased Gas Cost (PGC) and Choice volumes (mcf) for each service classification in the FPFTY.
Avg. Daily Throughput	Based on the average daily throughput volumes (mcf) for each service classification in the FPFTY.
Revenues	Based on the Sales Revenue under Present Rates, excluding cost of gas revenues.
GCR	Factor developed to directly assign associated gas cost revenues to the specific class in the FPFTY.

Demand Allocation Factors

Demand-related costs are generally allocated based on peak capacity demand for each customer class.

PEAKDAY_EXCESS	Peak day excess demand for each service classification, excluding interruptible.
PEAKDAY_EXCESS_Excl XD	Peak day excess demand for each service classification, excluding interruptible and XD Firm Service.
AVG_EXCESS	Weighting of the factors derived from average daily volumes and from peak day excess demand for each service classification. Weighting is based on total system load factor.
AVG_EXCESS_Excl XD	Weighting of the factors derived from average daily volumes and from peak day excess demand for each service classification, excluding XD Firm Service (direct assigned) and 100% interruptible. Weighting is based on system load factor for firm service.

3.2.Internal Allocation Factors

UGI Gas's Internal Allocation Factors are presented on Schedule 6. Internal Allocation Factors are developed within the ACOSS model based on the cost ratios of allocated cost using the external allocation factors.

INT_TOTPLT	Total Plant – The factor is based on the total plant in service by customer class.

INT_RATEBASE	Total Rate Base – The factor is based on the derived rate base by customer class.
INT_OM	Operation and Maintenance Expense excluding Administrative and General Expenses – The factor is based on the total customer class allocated O&M Expenses, excluding A&G Expenses.
INT_LABOR	Total Labor Expense – The factor is based on the total customer class allocated labor-related expenses.
INT_REVREQ	Total Revenue Requirement – The factor is based on the total FPFTY expenses at current rates and return on rate base.
INT_DISTEXP	Distribution Operation Expenses – The factor is based on the FPFTY expenses in FERC Accounts 871 through 879.
INT_DMAINT	Distribution Maintenance Expenses – The factors is based on the FPFTY expenses in FERC Accounts 886 through 893.
INT_MAINSXSML	Distribution Plant Mains, excluding small diameters (2” and under) – The factor is based on the allocated plant balances by customer class of FERC Account 376 "Mains" identified as large and direct assigned.
INT_MAINS	Distribution Plant Mains – The factor is based on the allocated plant balances by customer class of FERC Account 376 "Mains".

III. UGI GAS'S ALLOCATED COST OF SERVICE RESULTS

1. **Schedule 1 – Summary of Cost of Service and Rate of Return Under Current and Proposed Rates**
2. **Schedule 2 - Functionalized and Classified Rate Base and Revenue Requirement, and Unit Costs by Customer Class**
3. **Schedule 3 - Cost of Service Allocation Study Detail by Account**
4. **Schedule 4 - Account Balances and Allocation Methods**
5. **Schedule 5 - External Allocation Factors**
6. **Schedule 6 - Internal Allocation Factors**

NOTICE

This tariff makes changes, increases and decreases to existing rates (see Page 2).

LIST OF CHANGES MADE BY THIS SUPPLEMENT
(Page Numbers Refer to Official Tariff)

Rider B – Purchased Gas Costs, Page 52
- The Annual C-Factor has decreased.
- The Annual E-Factor has increased.
- The Total Purchased Gas Cost rate has increased.

Section 15, Price to Compare, Page 57
- The Annual C-Factor has decreased.
- The Annual E-Factor has increased.
- The Merchant Function Charge has increased.
- The Price to Compare Charge has increased.

Rider F – Universal Service Program Rider, Page 58
- The Universal Service Program Rider rate has increased.

Rider G – Energy Efficiency and Conservation Rider, Pages 60-61.
- The Energy Efficiency and Conservation Rider has been updated to include cost recovery for expenses related to the development and implementation of Phase II of the Energy Efficiency and Conservation Plan approved by the Pennsylvania Public Utility Commission by Order entered July 24, 2025 at Docket No. M-2024-3048418.
- The Energy Efficiency and Conservation Rider rate has increased for Rate Schedules R/RT and LFD and decreased for Rate Schedules N/NT and DS.

Rider J – Gas Delivery Enhancement Rider, Page 67
- The Gas Delivery Enhancement Rider rate has decreased.

Section 22, General Terms for Delivery Service for Rates DS, LFD, XD, and IS, Page 75
- The retainage rate has increased.

Rate MBS, Monthly Balancing Service, Page 98(a)
- Rates DS/IS, LFD and XD have increased.

UGI Gas – Choice Supplier Tariff No. 7S

Cover Page, UGI Utilities, Inc. – Gas Division - Gas Choice Supplier Tariff
- Issuance and effective dates are updated.

Section 5.1, Operational Requirements, Page 116
- The retainage rate has increased.

Section 7.3, - Nomination Procedure, Page 118
- Peak Day allocation percentages are updated.

LIST OF CHANGES MADE BY THIS SUPPLEMENT - Continued
(Page Numbers Refer to Official Tariff)

Rule 19, Rider I, Distribution System Improvement Charge, Page 63.
- The rate was reset to 0.00% and reference to prior rate case docket and Commission Order was removed.

Rule 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS, Pages 76-77 and 79-81.
- All references to Gas Daily have been replaced with DPP.
- All references to "index" have been replaced by "Reference Price".
- Section 22.6 was updated to include references to Rate XD.

Rate R – General Service – Residential, Page 85.
- The Customer Charge and Distribution Charge have been increased.
- References to outdated Distribution Charge step increases removed.

Rate RT – General Service – Residential Transportation, Page 86.
- The Customer Charge and Distribution Charge have been increased.
- References to outdated Distribution Charge step increases removed.

Rate GL – General Service – Gas Light Service, Page 88.
- The Distribution Charge has been increased.
- References to outdated Distribution Charge step increases removed.

Rate N – General Service – Non-Residential, Page 89.
- The Customer Charge and the Distribution Charge have been increased.
- References to outdated Distribution Charge step increases removed.

Rate NT – General Service – Non-Residential Transportation, Page 90.
- The Customer Charge and the Distribution Charge have been increased.
- References to outdated Distribution Charge step increases removed.

Rate DS – Delivery Service, Page 94.
- The Customer Charge has been increased.
- The Maximum Distribution Charge has been increased and reflects a unified rate.
- References to outdated Distribution Charge step increases removed.

Rate MBS – Monthly Balancing Service, Page 98(a).
- The Rate MBS has been recalculated and increased.

Rate LFD – Large Firm Delivery Service, Pages 100-101.
- The Maximum Demand Charge has been increased.
- The Maximum Distribution Charge has been increased and outdated references have been removed.
- Unauthorized Overrun rate has been increased and additional clarifying language added.

LIST OF CHANGES MADE BY THIS SUPPLEMENT - Continued
(Page Numbers Refer to Official Tariff)

Rate XD – Extended Large Firm Delivery Service, Pages 103-104.

- Language added for Capacity Charges, if applicable.
- The Maximum Average Delivery Charge has been increased and outdated references have been removed.
- Unauthorized Overrun rate has been increased and additional clarifying language added.

Rate IS – Interruptible Service, Page 108-110.

- Language added related to Manual Interruptible Customers' ability to manually transfer fuel source of its interruptible equipment.
- Consumption capability of a Manual Interruptible Customer was changed from an off-peak period to annual period.
- Minimum annual bill language was consolidated. Separate provisions for Automatic Temperature Control (ATC) and Manual Interruptible (MI) customers were removed.
- Language added to clarify pricing in Section 22.4 as it relates to Unauthorized Overrun charges.

Choice Supplier Tariff

Cover Page

- Updated for Supplement Number and Issue and Effective dates.

Rule 4, Choice Supplier Obligations, Page 115.

- Subsection 4.12 – The residential and commercial Purchase of Receivable rates have been updated as a result of the change to the Merchant Function Charge.

Rule 7, Nomination Procedure, Page 119.

- Reference to Platt's Gas Daily updated to reference DPP.
- Reference to Platt's Gas Daily Price Guide ("Inside FERC") updated to reference MPP.
- All references to "Index" have been replaced by "Reference Price".

Rule 10, Rate AG – Aggregation Service, Page 127.

- Reference to Platt's Gas Daily updated to reference DPP.

Rule 11, Aggregation Agreement for Rate Schedules RT and NT (Pro Forma), Pages 129-138.

- Changes and additions made to Article I. Definitions. Language added to clarify that the Nomination Procedure is available on UGI's Energy Management Website. New definitions added for Choice Aggregator, Choice Broker, and Choice Natural Gas Supplier/Licensed Supplier. Definitions were renumbered and Article number added.
- Subsections in Articles III and IV renumbered to include the Article number.
- Subsection 12.6 added to Article XII. Miscellaneous.
- Information shown on the various pages have shifted as a result of the above changes in addition to line spacing changes made for further formatting consistency. As a result of these pagination changes, there are new intentionally blank pages.

Page Intentionally Left Blank **(C)**

(C) Indicates Change

DEFINITIONS – GENERAL

Alternate Fuel:	Any fuel other than natural gas.
Applicant:	Any person, corporation or other entity that (i) desires from the Company natural gas or any other service provided for in this Tariff at a specific location, (ii) complies completely with all Company requirements for obtaining natural gas or any other service provided for in this Tariff, (iii) has filed and is awaiting Company approval of its application for service, and (iv) is not yet lawfully receiving from the Company any service provided for in this Tariff at such location.
Authorized Payment Agent:	An agent expressly authorized by Company to accept payments from Customers on behalf of Company.
Automated Meter Reading ("AMR"):	Metering using technologies that automatically read and collect data from metering devices and transfer that data to a central database for billing and other purposes and does not include a Remote Meter Reading Device. All meter readings by an AMR shall be deemed actual readings.
BTU (British Thermal Unit):	The amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit. **(C)**
Ccf:	100 cubic feet of gas. This is a measure of gas usage.
CFH:	Cubic feet per hour.
CCFD:	One Hundred Cubic feet per day.
Chapter 56:	The PUC regulations that govern metering, billing and collections for residential gas and electricity service.
City Gate:	A point of interconnection between the Company's facilities and third party source of supply.
Combined Billing:	The aggregation of the billing determinants of two or more meters of the same Customer at the same location for billing purposes. This applies to only contiguous properties with the same billing/meter read date.
Consolidated Billing:	The aggregation of two or more Customer bills to one bill from different service locations or the same service location for ease of Customer receiving one bill for multiple service locations instead of receiving multiple bills. Each meter will be billed under the applicable Tariff rate and will not be considered combined billing. Customer will be required to pay Company to perform such transactions.
Commodity:	The gas delivered to a Customer during the billing month.
Company:	UGI Utilities, Inc. – Gas Division

(C) Indicates Change

DEFINITIONS – GENERAL (Continued)

Company: UGI Utilities, Inc. – Gas Division

Commercial Customer: A Customer who is not classified as an Industrial Customer or a Residential Customer.

Confirmed Low Income Customer: A Household for which UGI has information that would make it reasonably likely that the household has income at or below 150% Federal Poverty Level ("FPL"), consistent with the Commission's definition in 52 Pa. Code 62.2 and 69.262. Household information that fits this criteria includes: **(C)**

a. Self-certification;
b. Participation in any of the Company's income verified programs, including but not limited to CAP, Operation Share, or LIURP, where income is verified to be at or below 150% FPL; and/or
c. Receipt of LIHEAP funds in the prior 12 months.

Creditworthiness: An assessment of an Applicant's or Customer's ability to meet bill payment obligations for utility service.

Critical Day: Any day, determined by company in its sole discretion, when variations in supply or demand could jeopardize the safety or reliability of Company's Gas Service.

Customer: Any person, corporation or other entity lawfully in receipt of gas service, aggregation and balancing services or interconnection coordination services from the Company under this Tariff.

Customer Charge: A monthly charge.

Daily Flow Directive ("DFD"): An order issued by the Company to address system management, including actions necessary to comply with statutory directives and obligations. DFDs will be communicated to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, by facsimile, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. Customers and NGSs must provide the Company with a 24-hour contact for DFDs.

Daily Price Publication ("DPP"): The daily price reference guide published by S&P Platts (i.e., Gas Daily) or its successor (the "Reference Price"). In any event that the daily price reference guide published by S&P Platts or its successor expires, is terminated, or is otherwise unavailable to the Company, the Company shall use a commercially reasonable alternative published daily price guide Reference Price. If at any point the Reference Price locations change published name, expire, are discontinued from publication, are terminated, or are otherwise unavailable to the Company, the closest applicable alternative price location shall be used as the Reference Price location. **(C)**

(C) Indicates Change

DEFINITIONS – GENERAL (Continued)

Discontinuance of Service:	The cessation of service with the consent of Customer.
Distribution Charges:	Charges to recover the costs the Company incurs to provide the services necessary to deliver natural gas to a Customer from the point of receipt into the Company's distribution system.
Dth ("Dekatherm"):	A measure of the heat content value of gas. Gas usage is determined by multiplying the MCF used by the heat content value of the gas.
Extension Applicant:	Any person, corporation or other entity, whether or not currently receiving from the Company any service provided for in this Tariff, who desires from the Company an extension or expansion of facilities under Section 5 of this Tariff and who complies with all Company requirements for obtaining an extension or expansion of facilities as provided for in this Tariff.
Gas or Natural Gas:	A flammable gas meeting PUC heating value and purity requirements that may include natural gas, synthetic natural gas, propane, landfill gas and any and all natural gas substitutes.
Gas Service:	The furnishing of gas by the Company at the point of delivery regardless of whether the Customer makes any use of the gas.
Gas Supply or Commodity Charge:	Charges by an NGS or Supplier of Last Resort to recover the cost of procuring natural gas and delivering it to the Company's facilities for redelivery to Customers.
Industrial Customer:	A Customer engaged in the process which creates or changes raw materials or unfinished materials into another form or product.
Interruptible Service:	Natural gas services that can be temporarily discontinued under terms and conditions specified by Tariff or contract.
MCF:	1,000 cubic feet of gas. This is a measure of gas usage.
Monthly Price Publication ("MPP"):	The monthly price reference guide published by S&P Platts (i.e., Inside FERC Gas Market Report First of Month) or its successor(the "Reference Price"). In any event that the monthly price reference guide published by S&P Platts or its successor expires, is terminated, or is otherwise unavailable to the Company, the Company shall use a commercially reasonable alternative published monthly Reference Price guide. If at any point the Reference Price locations change published name, expire, are discontinued from publication, are terminated, or are otherwise unavailable to the Company, the closest applicable alternative price location shall be used as the Reference Price location. **(C)**

(C) Indicates Change

DEFINITIONS – GENERAL (Continued) **(C)**

Natural Gas Supplier ("NGS"):	Any person, corporation or other entity that has received a license from the PUC to supply natural gas supply services to Customers in the Company's service territory and that has met the additional criteria established by the Company to permit it to provide natural gas supply service to Customers.
Non-Critical Day:	Any day determined by Company not to be a Critical Day
Non-Residential Applicant:	An Applicant not classified as a Residential Applicant.
Non-Residential Customer:	A Customer not classified as a Residential Customer, including a Commercial Customer and an Industrial Customer.
Occupant:	A natural person who resides in the premises to which gas service is provided.
Operational Flow Order ("OFO"):	A directive issued by the Company that is reasonably necessary to alleviate conditions that threaten the operational integrity of the Company's system on a critical day, including actions necessary to comply with statutory directives and obligations. OFOs will be communicated as soon as reasonably practical to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, by facsimile, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. Customers and NGSs must provide the Company with a 24-hour contact for OFOs.
Point of Delivery:	The outlet of company facilities; usually the meter or regulator outlet.
Price to Compare:	The dollar amount charged by the Company, used by Customers to compare prices and potential savings with other Natural Gas Suppliers.
PUC:	The Pennsylvania Public Utility Commission.
Remote Meter Reading Device:	A device which by electrical impulse or otherwise transmits readings from a meter, usually located within a residence, to a more accessible location outside a residence. The term does not include AMR and devices that permit direct interrogation of the meter.

(C) Indicates Change

DEFINITIONS – GENERAL (Continued) **(C)**

Residential Applicant: An Applicant who is (1) a natural person at least 18 years of age not currently receiving service who applies for residential service, or (2) an adult Occupant whose name appears on the mortgage, deed or lease of the property for which the residential utility service is requested. The term shall not include (1) a Residential Customer who seeks to transfer service within the Company's service territory, or (2) a Residential Customer who, within 30 days after Termination or Discontinuance of Service, seeks to have service reconnected at the same location or transferred to another location within the Company's service territory.

Residential Customer: A Customer who is either (1) a natural person at least 18 years of age in whose name a residential account is listed and who is primarily responsible for payment of bills rendered for the service, or (2) any adult Occupant whose name appears on the mortgage, deed or lease of the property for which residential service is requested. A Residential Customer shall be further defined to include a Customer receiving the Company's gas service to a single-family dwelling or building, through one meter to four or fewer dwelling units in a multi-family dwelling, or premises used as a single family dwelling and for one or more business uses, provided the proprietor of the business resides in the single family dwelling, and the business uses less than fifty percent of the anticipated gas usage served through a single meter. Service will be supplied only where the Company's facilities are suitable to the service desired. A Residential Customer shall remain a Customer after Discontinuance of Service or Termination of Service until the final bill for service is past due. The term includes a person who, within 30 days after Termination or Discontinuance of Service, seeks to have service reconnected at the same location o transferred to another location within the Company's service territory.

Supplier of Last Resort: The Company or another entity that provides natural gas supply services to Customers that do not elect another supplier or choose to be served by the supplier of last resort, Customers that are refused service from another natural gas supplier, or Customers whose natural gas supplier fails to deliver the required gas supplies. Currently, the Company is the supplier of last resort for all Customers under the terms of this Tariff. Each Customer may only have one supplier of last resort with one exception: The Company shall be under no obligation and shall have no duty to serve as Supplier of Last Resort to any Rate DS, IS, LFD, or XD customers.

Tariff: The rates, rules, and regulations set forth herein, as may be amended, modified or superseded from time to time. The Tariff is on file with the PUC and available on the Company's website.

(C) Indicates Change

DEFINITIONS – GENERAL (Continued) **(C)**

Termination of Service:	The cessation of service, whether temporary or permanent, without the consent of Customer.
Unauthorized Use of Service:	Unreasonable interference or diversion of service, including meter tampering (any act which affects the proper registration of service through a meter), by-passing unmetered service that flows through a device connected between a service line and customer-owned facilities and unauthorized service restoral.
User Without Contract:	A natural person who takes or accepts gas service without the knowledge or approval of the Company, other than the Unauthorized Use of Service as defined above.

(C) Indicates Change

RULES AND REGULATIONS

1. THE GAS SERVICE TARIFF

1.1 Agreements. No agent or employee of the Company has authority to make any promise, agreement or representation not consistent with this Tariff.

1.2 Waiver of Rights. The failure by the Company to enforce any of the terms of this Tariff shall not be deemed a waiver of its right to enforce any of the terms of this Tariff.

1.3 Filing and Posting. A copy of this Tariff is on file with the PUC and is available on Company's website at https://www.ugi.com/tariffs (C)

1.4 Application of Rates: The rates named in this Tariff are based upon supply to one Customer through one meter at the same or contiguous property. Each service to a different location and/or of a different rate classification shall be billed as a separate Customer. Customers who take service at two or more locations on the same or contiguous property under the same rate schedule may, by request, have their use of gas combined for billing purposes; Customers electing to take advantage of this rule shall pay the cost of all additional service connections required unless, in the Company's sole judgment, the Company's investment in such connections is warranted by the revenue anticipated from the service to be supplied. The Company will provide Customers with a written explanation regarding its analysis of the arrangement's economics. Customers may not pool together for purposes of qualifying for a rate schedule.

1.5 Liability and Legal Remedies: The Customer will indemnify, defend and hold harmless the Company against all claims, demands, costs or expenses for loss, damage, or injury to person or property in any manner either directly or indirectly connected with or growing out of the supply or use of gas service by the Customer at or on the Customer's side of the point of delivery. Neither the Company nor the Customer will be liable to each other for any act or omission caused either directly or indirectly by strikes, labor troubles, accidents, litigation, federal, state or municipal laws or interference, or other causes not a result of each party's own negligence or intentional misconduct.

(C) Indicates Change

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE

2.1 Application for Service. Every Applicant for Gas Service must apply through the Company. Non-Residential Applicants may be required to sign a contract for service consistent with this Tariff.

2.2 Right to Reject. The Company may limit the amount and character of service it will supply. It may reject applications where service is not available, or which might affect service to existing Customers, or for other good and sufficient reasons at the Company's sole discretion.

2.3 Facilities and System Access. Each Customer with a Daily Firm Requirement ("DFR"), Maximum Daily Quantity ("MDQ"), or peak usage capability of 1,000 MCF per day or greater shall provide the Company with the opportunity to review plans for the development of all gas facilities to the Customer's premises (including pipelines, mains, service lines and appurtenances), in order to assure safety and reliability, as follows: **(C)**

(a) If the Customer proposes to acquire, construct or contract for the use of service of gas facilities ("Customer gas facilities"), the Customer will provide advance notice to the Company in writing, at least sixty (60) days in advance of the earlier of the effective date of a contract or commencement date for construction of Customer gas facilities.

(b) The Customer agrees to submit all design and construction specifications and drawings to the Company in advance of construction, which demonstrate compliance with all applicable requirements as to gas main and service construction and pipeline safety. If the Company determines that Customer gas facilities will encroach upon or interconnect with Company facilities, serve common gas utilization equipment with Company facilities or are in the immediate vicinity of Company facilities such that the safety of Company facilities may be adversely affected thereby, the Company shall have the right to approve the design and location of such Customer gas facilities. The Company shall act upon its right to approve such Customer gas facilities within ninety (90) days after the later of submission of all design and construction specifications and drawings to the Company, or Customer notification required under Rule 2.3(a), provided however, if the Company fails to respond in writing within the ninety (90) day time period the Customer may move forward with its project. Customer gas facilities will be deemed to encroach upon the Company's facilities when they would interfere with or prevent the Company from accessing, maintaining or operating its facilities or when the Customer gas facilities would be configured or located in a manner that would cause safety or reliability concerns with respect to the Company's facilities.

(c) If the full sixty (60) day notice required in Rule 2.3(a) is not given by the Customer then the Customer shall be deemed to have granted the Company full authority to discontinue service upon discovery of any safety or reliability concerns. The Company will provide 24 hours' notice unless there are reliability or safety issues that must be addressed immediately. The Company shall not be liable for any costs or damages caused by such service discontinuance.

(C) Indicates Change

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE - Continued

2.4 Selection of Rate Schedules. When the characteristics of usage or service conditions of an Applicant or Customer are such that more than one rate schedule is available, the Applicant or Customer shall select the schedule to be applied. Upon request, the Company will assist to a reasonable extent in selecting the most advantageous schedule. For Customers changing schedules, the Company will bill the Customer under the selected rate beginning with the date of the next scheduled meter reading following notification of the selected rate. When service under a Demand Charge rate commences prior to the installation of equipment for determining the Customer's demand, the Customer's demand for billing purposes will be estimated by the Company.

2.5 Use of Gas. The use of gas shall only be for the purpose and in the places identified by the customer in applying for service. The gas supplied by the Company shall not be resold without the express written permission of the Company. In the event that the Customer uses the gas in an improper or unsafe manner, in violation of this Tariff or any applicable federal, state or municipal laws or codes, the Company may immediately terminate service as described in the Service Discontinuation and Termination section of this Tariff. In the event that any loss is sustained as a result of Customer's improper or illegal use of the gas, the Customer agrees to indemnify, defend and hold harmless Company. The Company will not supply gas for any additional equipment, or any increased usage for any Customer, unless request was filed with the Company prior to the connection or increased usage. The Company reserves the right to limit or discontinue Gas Service or charge Customer upgrade installation charges in order to provide additional Gas Service. Customer is responsible for any loss of Gas Service to other Customers caused by failure to register.

2.6 Distribution System Bypass. Unless otherwise provided by contract, if any Customer or potential Customer of the Company bypasses the Company for all or a portion of their Natural Gas Service needs then the Company thereafter shall have no obligation to serve or maintain the gas supply or physical capacity necessary to serve the Bypass portion of such Customer load, provided, however, that the Company will continue to serve the un-bypassed portion of a bypassing Customer's load consistent with the terms of any existing service agreement and will negotiate new service agreements to continue service so-long as the anticipated revenues justify any costs of providing the service. In addition, to the extent that such Customer returns from a total bypass, the Company shall serve such Customer as a new Customer and shall have the right to charge a negotiated rate for continued, subsequent or standby service that, at a maximum, is established solely by competitive market conditions, which shall reflect the costs of the Customer's alternatives.

2.7 Conditions Under Which Service Will Be Rendered From Transmission or Gathering Lines. The Company does not undertake or hold itself out to serve Customers from its transmission or gathering lines. Applications for service therefore may, at the election of the Company, be accepted where the lines are being operated in a manner which will permit gas to be served to the Applicant without interference with its operations. Applicants, if accepted by the Company, must agree to comply with the Rules and Regulations of the Company and more particularly the following rules applicable to this type of service:

RULES AND REGULATIONS

2. CONTRACT FOR GAS SERVICE - Continued

(a) Applicants agrees that service is only offered with the understanding that the Company's line from which gas is to be supplied is not permanent and that service to the Applicant is subject to temporary or absolute change or discontinuance at the sole discretion of the Company, which may at any time remove, repair, or change the use or manner of operating said line.

(b) Applicants agrees that the Company may at any time cancel service upon thirty (30) days' written notice to the Applicant and Applicant agrees that upon receipt of such notice of cancellation to promptly discontinue service within the said thirty (30) day period, and such cancellation and termination of service shall not be construed as an abandonment of service to such Customer within the meaning of the Pennsylvania Public Utility Code.

(c) The Applicant agrees to accept the gas at the varying pressures at which the line is operated from time to time and Applicant understands that such pressure is not governed by regulators but it is high and low and the Applicant expressly assumes the duty of regulating the flow of the pressure of gas delivered to him and he assumes all risks from variation in pressure, defects in pipe, connections and appliances, from the escape and leakage of gas, from the sticking of valves and regulators and from the burning of gas on his premises and from like causes incident to the use of gas.

(d) The Company shall not be liable for any deficiency in the supply of gas caused by the use of compressing stations, breakage of lines, variations in pressure, discontinuance of service or any other causes.

(e) The Company shall not be liable for any damage arising out of this agreement or the service supplied thereto.

(f) Service shall be at the sole risk of the Customer.

2.8 Government Identification to Establish Service. The Company will accept any current form of government-issued identification, including identification issued by a foreign government, to establish service. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT

3.1 Deposits for Non-Residential Accounts. A cash deposit may be required from a Non-Residential Applicant to secure payment of bills for regulated distribution service. In addition, the Company may require a deposit, letter of credit or other adequate assurance of payment, or any combination thereof, from a Non-Residential Customer if the Non-Residential Customer has been delinquent in payment of any bill in the preceding twelve (12) months or the Company otherwise has reasonable grounds to require security for payment of bills. The deposit shall not be more than the bill for regulated distribution service for the estimated usage for one average monthly billing period plus that for the highest billing period within the most recent twelve (12) months with a minimum fifty dollars ($50.00) deposit.

3.2 Additional Security from Large Volume Customers.

(a) Whether or not the Company could otherwise require security for payment, the Company may require a deposit, letter of credit, other adequate assurance of payment, or any combination thereof, to the extent the Customer seeks any combination of delivery or retail service for volumes in excess of 3,000 MCF per month. Such security may be established for an amount as determined by the Company.

(b) In addition, the Company may take one or more of the following actions:

(1) With the agreement of the Customer, reduce the meter reading and billing period to less than one month, require payment in no less than three calendar days from billing.

(2) Require payment by certified check or wire transfer; and

(3) Impose other procedures reasonably designed to reduce potential exposure to credit risk.

(c) The Company may, in its discretion, specify the manner in which security and payments shall be credited and applied to past due or current bills or to replenish security.

3.3 Deposits for Residential Accounts. The Company may require a cash deposit from a Residential Applicant or Residential Customer to secure payment of bills for regulated distribution service based upon the following:

(a) A Residential Applicant or Residential Customer whose service was terminated for any of the following reasons:

(1) Nonpayment of an undisputed delinquent account.

(2) Failure to complete payment of a deposit, providing a guarantee or establish credit.

(3) Failure to permit access to meters, service connections or other property of Company for the purposes of replacement, maintenance, repair, or meter reading.

(4) Unauthorized Use of Service on or about the affected dwelling.

(5) Failure to comply with the material terms of a payment arrangement.

(6) Fraud or material misrepresentation of identity for the purposes of obtaining utility service.

(7) Tampering with meters, including, but not limited to, bypassing a meter or removal of an automatic meter reading device or other Company equipment.

RULES AND REGULATIONS

3. GUARANTEE OF PAYMENT - Continued

(8) Violating tariff provisions on file with the PUC so as to endanger the safety of a person or the integrity of the Company's delivery system.

(b) Any Residential Applicant who is unable to establish creditworthiness to the satisfaction of Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that falls within the range of general industry practice and specifically assesses the risk of utility bill payment.

(c) A Residential Customer who fails to comply with the material terms or condition of a settlement or payment arrangement.

(d) A Residential Customer who has been delinquent in the payment of two (2) consecutive bills, or three (3) or more bills within the preceding twelve (12) months.

(e) The Company has established separate credit procedures and standards for Residential Applicants and Residential Customers who are victims with a protection from abuse order or for whom there is a court order from a court of competent jurisdiction in this Commonwealth, which provides clear evidence of domestic violence against the Residential Applicant or Residential Customer. These procedures shall be publicly posted on the Company's website and maintained on file in each of the business offices of the Company and made available, upon request, for inspection by members of the public.

(f) Effective November 1, 2025, the Company may not require a cash deposit from an applicant who is, based upon household income, confirmed to be eligible for a customer assistance program. An applicant is confirmed to be eligible for a customer assistance program by the Company if the applicant provides income documents or other information attesting to his or her eligibility for state benefits based on household income eligibility requirements that are consistent with those of the Company's customer assistance programs. For existing customers that already have monies paid against a security deposit and become enrolled in the Company's customer assistance programs, the Company will provide the customer a direct refund of the security deposit amount, along with applicable interest. The Company may apply the refund of the security deposit amount, with applicable interest, to the customer's account balance with the customer's informed consent. If checks providing a direct refund of the security deposit are returned as undeliverable, the Company will apply the amount as a bill credit, unless the customer contacts the Company with a corrected address. **(C)**

3.4. Amount of Deposit for Residential Accounts. For Residential Applicants, the amount of the cash deposit shall not be more than 1/6 of a Residential Applicant's estimated annual bill, with such estimated annual bill determined at the time the deposit is required. In lieu of a cash deposit from a Residential Applicant, the Company may accept a written third-party guaranty on behalf of the Residential Applicant, provided that the guarantor establishes credit with the Company under Section 3.3 and the terms of the written guaranty are approved in writing by the Company, with such approval not to be unreasonably withheld. For Residential Customers, the amount of the cash deposit shall not be more than the estimated charges for service based on the Residential Customer's prior consumption for the period equal to one average billing period plus one average month, not to exceed two (2) months. Deposit amounts for Residential Applicants and Residential Customers may include Natural Gas Supplier charges where such Supplier is a participant in the Company's Purchase of Receivables Program.

(C) Indicates Change

RULES AND REGULATIONS **(C)**

3. GUARANTEE OF PAYMENT – Continued

3.5 Payment Period for Deposits.

(a) Any Non-Residential Applicant seeking to establish service at a new or different service location or seeking to reconnect service at the same service location previously terminated or discontinued, shall pay the required deposit in full prior to the provision of service.

(b) Any Residential Applicant or Residential Customer seeking to establish service at a new or different location or seeking to reconnect service at the same service location previously terminated or discontinued shall pay the required deposit in full within 90 days. A Residential Applicant or Residential Customer may elect to pay the required deposit in three installments as follows: 50% of the required deposit billed upon the establishment or reconnection of service, within

25% of the required deposit to be billed by the Company 30 days after the establishment or reconnection of service and the remaining 25% billed 60 days after the establishment or reconnection of service. Nothing shall preclude the Residential Applicant or Residential Customer from electing to pay the deposit in full before or on the due date.

(c) Any Customer receiving service from the Company shall pay the required deposit in full on or before the due date. A Residential Customer may elect to pay the required deposit in three installments as follows: 50% of the required deposit billed upon the determination by the Company under Section 3.3(c) or (d) above that the deposit is required, with 25% to be billed by the Company 30 days after the determination and the remaining 25% billed 60 days after the determination.

3.6 Deposit Hold Period for Residential Accounts. A timely payment history is established for a Residential Customer when the Residential Customer has paid in full and on time for twelve (12) consecutive months. Company may hold a deposit on a Residential Customer's account until a timely payment history is established (the "Deposit Hold Period"). At the end of the Deposit Hold Period Company shall credit the deposit, plus accrued interest, to the Residential Customer's account. Deposits credited after the end of the Deposit Hold Period shall first be applied to any past due amounts. If service is terminated or discontinued before the end of the Deposit Hold Period, Company shall deduct any outstanding balance from the deposit and return any positive balance to the Residential Customer within sixty (60) days.

3.7 Refund Provision Non-Residential Customers. Deposits secured from Non-Residential Customers will be refunded when the Customer discontinues service and has no unpaid bills or at Company's sole discretion.

3.8 Adjustments. The amount of the deposit may be adjusted when there is a change in consumption that will significantly change the amount of the deposit as computed in Rule 3.1 and 3.4.

(C) Indicates Change

RULES AND REGULATIONS **(C)**

3. GUARANTEE OF PAYMENT - Continued

3.9 Interest on Deposits. Deposits from all Customers shall bear interest computed at the simple annual interest rate determined by the Secretary of Revenue for interest on underpayment of tax under Section 806 of the Act of April 19, 1929 (P.L. 343, No. 176), known as The Fiscal Code which will be credited annually to the Customer's deposit or account. The interest rate in effect when the deposit is required to be paid shall remain in effect until the later of the date the deposit is refunded or credited or December 31 of each year. On January 1 of each year, the new interest rate for that year will apply to the deposit. Deposits shall cease to bear interest upon termination or discontinuance of the service covered by the deposit.

3.10 Prior Debts.

(a) Non-Residential Accounts. As a condition of furnishing, transferring or reconnecting service to a Non-Residential Applicant or Non-Residential Customer, the Company may require payment of any outstanding balance on any account for which the Non-Residential Applicant or Non-Residential Customer is legally responsible.

(b) Residential Accounts. As a condition of furnishing, transferring or reconnecting service to a Residential Applicant or Residential Customer, the Company may require payment of any outstanding balance which accrued within the past four years on any account for which the Residential Applicant or Residential Customer is legally responsible. The foregoing four-year limitation shall not apply if the outstanding balance includes past due amounts that the Company was not aware of due to Unauthorized Use of Service, fraud or theft; in which case, the Company may require payment of all such past due amounts without regard to the four-year limitation. The Company may render a make-up bill to a Residential Customer for previously unbilled service which accrued within the past four (4) years resulting from billing error, meter failure, leakage that could not reasonably have been detected or loss of service. If the make-up bill exceeds the otherwise normal estimated bill for the billing period during which the make-up bill is issued by at least 50% or at least $50, whichever is greater, the Company shall, at the option of the Customer, amortize the bill at least as long as: (1) the period during which the excess amount accrued; or (2) necessary so that the quantity of service billed in any one billing period is not greater than the normal estimated quantity for that period plus 50%.

(c) The Company may utilize all means of determining an Applicant's or Customer's liability for any outstanding balances, including, but not limited to, the following: (1) use of Company records that contain confidential information previously provided to the Company, (2) information contained on a valid mortgage, lease or deed, (3) other information contained in the Company's records that indicate that the Applicant was an adult Occupant during the time the balances accrued, (4) use of commercially available consumer credit reporting service, (5) use of commercially available skip tracing software that contains records of names and addresses, and (6) use of information contained in credit reporting data utilized by the Company.

(C) Indicates Change

RULES AND REGULATIONS

4. SERVICE - SUPPLY FACILITIES

4.1 Facilities Ownership. Unless otherwise mutually agreed in writing that particular facilities are owned by the Customer, and except as provided in Sections 4.3 below, the Company will own and maintain any facilities required for the supply of Gas Service up to the outlet side of its metering equipment, including but not limited to, any mains, service lines, meters, regulators, connections or other equipment. All such equipment shall remain the exclusive property of the Company.

4.2 Facilities Location. The location of the Company's facilities shall in all cases be determined by the Company. The Customer shall provide, without charge, a suitable place for the meters, regulators or other equipment of the Company. The Customer is responsible to provide the connection point to the Customer's fuel line at a location adjacent to the terminus of Company facilities and where the connections are not concealed. Such service line, meter and connection locations shall be accessible to the Company's employees for the safe installation, operation, inspection and maintenance of the facilities and shall be, at all times, readily accessible, and if inside, free of excessive temperature variations, with ample passageway, and whether inside or outside, free of obstacles, and unsafe and hazardous conditions and, if not accessible, the Company has ability to charge the Customer to move facilities to a location acceptable to the Company. The owner of a premises receiving or capable of receiving natural gas service from Company shall be deemed to consent to the location of Company facilities on the premises.

4.3 Customer Convenience Valve. Company may, in its sole discretion, install a valve on the outlet side of its metering facilities which shall be owned by the owner of the premises ("Customer Convenience Valve"), and the owner of the premises may, under such conditions as may reasonably be established by Company, operate the Customer Convenience Valve after it is connected to the premise's fuel lines.

4.4 Fuel Line Designation. When two or more meters are installed on one premises, such as an office building or an apartment house, they shall be grouped at one common place accessible for reading and testing. In such an installation, each fuel line pipe shall bear a tag showing the apartment or area served, supplied by and maintained by the Customer. In cases where it is not possible to group meters at one accessible place, they shall be located as directed by the Company.

4.5 Facilities Relocation.

(a) Changes in location of mains, service lines, meters, regulators, connections or other equipment for the accommodation of the Customer shall be done by the Company, unless otherwise mutually agreed, at the expense of the Customer. This provision includes the relocation of facilities by the Company where obstructions limit Company access to its facilities.

RULES AND REGULATIONS

4. SERVICE - SUPPLY FACILITIES - Continued

(b) Ancillary Fuel Line Work. The Company may, in its sole discretion, when relocating its facilities, make reasonable modifications or additions to the fuel lines of a premises receiving or capable of receiving gas service for the limited purpose of connecting such fuel lines to Company's relocated facilities, and the owner of the premises shall thereafter own and have responsibility for such modified fuel lines. If Company relocates its facilities solely for its convenience or to comply with regulatory requirements it shall pay the costs of relocating or extending the fuel line; otherwise, unless otherwise agreed by Company, the person requesting or requiring the relocation shall be responsible for payment.

4.6 Right of Removal. The Company shall have the right to remove its facilities from the premises of the Customer or, where appropriate, abandon facilities in place, at any time after the termination of service, whatever may have been the reason for such termination.

4.7 Non-Standard Service. The Customer may be required to pay the cost of any special installation necessary to meet Customer's requirements for Gas Service at non-standard conditions.

4.8 Protection of Company Facilities. The Company may condition its provision or continued provision of Gas Service to a Customer on: (a) installation by Customer of equipment, such as check valves or regulation equipment, downstream from Company-owned facilities reasonably necessary to protect Company facilities or service levels, or (b) the installation by Company of equipment, such as valves designed to limit the flow of gas to levels Customer is permitted to receive, reasonable necessary to protect Company facilities or service levels. Unless otherwise agreed to by the Company, the Customer shall be responsible for the costs of such facilities required under this Section 4.8.

4.9 Excess Flow Valves. The Customer may be required to pay the cost of installation of an excess flow valve, upon a Customer's request for an excess flow valve, for a service location that had not been scheduled by the Company for a service line replacement or a new service line prior to the Customer's request for the installation of an excess flow valve.

RULES AND REGULATIONS

5. EXTENSION REGULATION

5.1 Obligation to Extend or Expand.

(a) Under the rules set forth below and under normal conditions of construction and installation, upon written application, the Company will extend or expand its facilities within its service territory, provided that (a) the requested extension or expansion will not adversely affect the availability or deliverability of gas supply to existing customers and (b) the Company's investment in facilities is warranted by the Annual Base Revenue to be derived from the extension. The costs of extending or expanding facilities beyond the Company's Allowable Investment Amount shall be paid by the Extension Applicant as a contribution. Extension contributions may be excused, in whole or in part, in accordance with Rule 5.1(b). Upon request, the Company will provide Customers with a written explanation and reasonable detail of the cost-benefit analysis used in clause (b) above including estimated project costs, the Company's maximum allowable investment, and the Company's Annual Base Revenues. In addition, the Company will provide the Customer with a written timetable for the anticipated construction of the upgrade and written notice of completion.

(b) No contribution amount shall be required for an extension of facilities if all of the following conditions, as determined by the Company, are met:

(1) Service location is directly accessible from an existing or proposed (non-high pressure) Company main that would be extended up to one hundred fifty (150) feet;

(2) Service length is one hundred fifty (150) feet or less;

(3) Customer will utilize gas service as their primary heating source and be served under Rates R, RT, N or NT;

(4) Construction does not cross third party non-public property, private right-of-way or complex obstruction (stream, culvert, excessive hillside, etc.) and does not present any abnormal or unusual construction conditions or require unusual permitting requirements.

(5) Extensions not meeting all of the above conditions (1) through (4) shall have the Customer contribution amount determined upon incremental investment amounts required beyond those permitted by the construction conditions stated above.

(6) [REMOVED] **(C)**

(C) Indicates Change

RULES AND REGULATIONS

5. EXTENSION REGULATION - Continued

(C)

5.2 General

(a) Annual Base Revenue. As used in this Section 5, the Annual Base Revenue is the anticipated annual base rate revenue from the extension or expansion, as determined by the Company, less the cost of fuel included in base rates. Where gas is used as a supplemental source of fuel for peak heating purposes, anticipated base revenues from such use shall be excluded from Annual Base Revenue.

(b) Allowable Investment Amount. The Company's Allowable Investment Amount shall be the Annual Base Revenue divided by a predetermined rate of return.

(c) Estimates and non-standard costs. Cost estimates used by the Company may be based on construction and installation conditions anticipated for the extension, including, but not limited to, the cost of installation and construction: non-street surface restoration, such as replacement or repair of sidewalks, driveways, landscaping or sod; street opening and restoration terms and fees; and any other local government fees required for the installation. The Company may determine cost estimates based on average experienced unit costs.

(d) Surface Restoration. The Company will restore the street surface in accordance with applicable local government regulations and provide rough backfilling of the installation trench from the curb to the meter. The Extension Applicant will be required to perform or pay the Company's cost of non-street surface restoration.

(e) Standard conditions of construction in a residential development, commercial park and industrial park include trenching provided by the developer.

5.3 Residential and Small Commercial Gas Service. For Gas Service to individually metered, single dwelling units, the Company will install required service facilities, including, as applicable, a meter, regulator, service-supply pipe and supply-main, provided the costs in excess of the Allowable Investment Amount shall be paid by the Extension Applicant.

5.4 Commercial and Industrial Gas Service (including apartment buildings and multi-unit housing)

(C) Indicates Change

RULES AND REGULATIONS

5. EXTENSION REGULATION –Continued

(a) For commercial and industrial Gas Service costing up to $10,000 from which the Company in its sole judgment anticipates long-term, continuous usage at projected volumes, the Company will install, required service facilities, including, as applicable, a meter, regulator, service-supply pipe and supply-main, provided that the costs in excess of the Allowable Investment amount shall be paid by the Extension Applicant.

(b) The Company may condition its agreement to extend or expand its facilities upon satisfactory long-term and short-term usage commitments and any other terms and conditions of service as are mutually agreeable to the Company and the Extension Applicant. A contribution may be required up to the amount of the Company's total investment in the extension.

5.5 Contributions and Refunds

Except as otherwise described herein, when a contribution is required by the Company, the terms and conditions of refunds and or future payments that may be required of the Extension Applicant will be governed by the service agreement between the Company and the Extension Applicant. The terms of any refund due to the Extension Applicant shall be defined in the service agreement and shall be limited to a maximum refund of the amount of the original contribution (no interest) and shall be limited to the five-year period immediately following completion of this extension.

5.6 Taxes on Contributions for Construction & Customer Advances.

Any contribution, advance or other like amounts received from the Extension Applicant which shall constitute taxable income as defined by the Internal Revenue Service, will have the income taxes recorded in a deferred account for inclusion in rate base in a future rate case proceeding. Such income taxes associated with a contribution or advance will not be included as part of the contribution or advance charged to the Extension Applicant.

5.7 Daily Metering.

The Company reserves the right as a condition of service under non-residential Tariff rate schedules to install, at the Customer’s expense, remote read devices for the purposes of monitoring and/or billing Customer volumes, at every single meter or multimeter location served under such rate schedules. The Customer shall at all times, at the discretion of the Company, maintain, at its expense, a suitable telecommunication and electric lines to the device which will allow the Company unlimited remote access to the remote read device. If the Customer fails to maintain a suitable telecommunication connection and electric lines to the device, the Company reserves the right to install and maintain telecommunication and, as applicable, electric lines to serve the remote read device and charge the Customer accordingly.

Standard access to daily usage information shall be provided by the Company to the Customer, or Customer's agent, at no additional charge in a form and manner as specified by the Company. Custom reports, access to historical data beyond one month and/or multiple user access may be provided on an as-available basis by the Company for an additional fee.

RULES AND REGULATIONS **(C)**

Page Intentionally Left Blank

(C) Indicates Change

RULES AND REGULATIONS

6. CUSTOMER'S RESPONSIBILITY FOR COMPANY'S PROPERTY

6.1 Maintenance of Company Equipment. Company shall own and maintain Company facilities through the Point of Delivery but shall not be required to install or maintain any pipes, appurtenances or equipment beyond that point, unless specifically provided for in writing.

6.2 Access to Premises. The authorized agents and/or employees of the Company shall have free access at all reasonable times to the premises of the Customer for the purpose of reading meters and disconnecting service, for installing, testing, inspecting, repairing, adjusting or removing any Company property. Authorized agents of the Company shall have immediate access to any premises whenever they believe an unsafe or hazardous condition exists.

6.3 Protection by Customer. The Customer shall be responsible at Customers expense for the protection of the Company's property on his premises and shall not permit any unauthorized person to do any work on such property. In the event of damage or destruction of Company's facilities on Customer's property, the Customer shall pay the costs of repairs, replacement, and/or related costs.

6.4 Tampering and Theft of Service

(a) Tampering. In the event the Company's meter or other equipment is tampered or interfered with, the Customer shall pay the amount which the Company may estimate is due for service used but not registered on the Company's meter, and for any repairs or replacements required, as well as for costs of inspections, investigations, and protective installations. Such tampering will be grounds for immediate termination of service without notice as specified in the Termination of Service and Disconnection section of this Tariff.

(b) Theft of service occurs when a person obtains gas, by deception, tampering with Company facilities or other means designed to avoid payment for gas provided by Company. Persons who obtain gas through such means may be subject to civil suit and/or criminal prosecution. If theft of service occurs, the Company may immediately terminate service to the location receiving the unauthorized service.

(1) Before service will be restored to the affected location, the Customer must pay (1) for all gas consumed during the period of unauthorized usage, (2) any delinquent gas service balance, including late fees, (3) reconnection fees, (4) a security deposit, and (5) the costs associated with damage to the Company's meters or equipment.

(2) In the event that the theft of service is referred for criminal prosecution, the Company may deny gas service until the case is concluded and any restitution ordered is paid.

RULES AND REGULATIONS

6. CUSTOMER'S RESPONSIBILITY FOR COMPANY'S PROPERTY - Continued

6.5 Continuity of Service. The Company will endeavor at all times to provide reasonable and continuous service to the Customer. The sole liability of the Company for failure to furnish a sufficient supply of gas or for failure to transport Customer's gas shall be limited to an amount equal to the Customer's proportionate monthly Customer charge for the period of time during which a Gas Service failure occurs during which a supply failure occurs. In no event shall the Company be liable for direct, extraordinary, special, or consequential damages arising in any manner whatsoever as a result of supply failure.

6.6 Notification of Construction. It will be the Customer's responsibility to notify the Company and any applicable federal, state or local agencies (i.e., Pennsylvania's One Call System, Inc.) prior to digging or before any construction occurs on the Customer's property that may impair or prevent access by the Company to its service line or any other equipment located on the Customer's property.

6.7 Gas Leaks. It is the responsibility of the Customer to exercise all due care in the detection of defects, leaks, or other dangerous developments incident to the handling of gas. The Customer agrees to immediately inform Company of any gas leaks and in the event of any resulting loss thereof, failure to do so may result in an evidentiary finding of contributory or comparative negligence on the part of the Customer.

6.8 Suspension of Service. For the purpose of making repairs to the mains or other parts of its system, the Company may suspend service for such periods as may in its sole judgment be necessary.

6.9 Company's Right to Inspect. Piping, fixtures and appliances on Customer's premises must be installed at the expense of the Customer or owner of the property. The Company shall have the right, but shall not be obligated, to examine the Customer's installation and appliances at the time service is first supplied or at any later time. If at any time the installation or appliance is found defective or unsafe, service may be refused or discontinued until Customer has the condition corrected. The Company's inspection, or failure to inspect or reject, shall not render the Company liable or responsible for any loss or damage, resulting from defects or inadequacies in the installation, piping, or appliances, or from violation of the Company rules, or from accidents which may occur upon the premises of the Customer.

RULES AND REGULATIONS

7. METER READING

7.1 Definition of a Cubic Foot. A cubic foot shall be the amount of gas that occupies a volume of one cubic foot at an absolute pressure of 14.73 pounds per square inch and a temperature of 60° Fahrenheit. To determine the volume at conditions other than standard pressures of gas delivered, factors such as those for pressure, temperature, specific gravity, caloric value, and deviation from the laws of ideal gases may be applied.

7.2 Method of Measurement. Gas usage shall be measured by Company owned meters.

7.3 Pressure Correction. At the Customer's request, the Company may allow delivery at an elevated pressure that exceeds the standard pressure of seven-inches water column (7" W.C.). In situations where delivery pressure is two pounds per square inch or greater, the Company may choose to use a fixed factor to account for the higher energy content of the higher pressure gas, whereby the metered volume is multiplied by the pressure factor to determine the correct energy consumed. In cases where the Company agrees to provide delivery service at such an elevated pressure without a fixed factor, a supplemental device will be installed at the Customer's expense to correct the meter reading for pressure and temperature, the cost of which shall be estimated, inclusive of overhead amounts, however, the Company and Customer may negotiate cost responsibility for installation of pressure mechanisms upon mutual agreement. The Company may reject a Customer's request for non-standard service at elevated pressure for system operational reasons, where the Customer does not agree to pay the cost for non-standard service, where applicable, under Rules 4.7, 5.3 or 5.4(a), or for any other reason that the Company may determine at its sole discretion.

7.4 Heating Value Correction. Where direct sources of natural gas, renewable natural gas, synthetic natural gas or other natural gas substituted or blended supplies delivered into the Company's distribution system may vary in heating value content (BTUs per cubic foot), the Company may apply a heating value correction factor to metered usage to adjust for heating values that differ from the Company's applicable annual system wide average value (determined excluding direct sources where heating correction is being applied). This heating correction factor will apply when heating value differences exceed a 2% difference at the customer location. This factor may be adjusted monthly. This tariff provision only applies to decreased heating value content gas entering the Company's system. **(C)**

7.5 Meter Tests. The Company may, from time to time and at its expense, inspect and test its meters. The Customer has the right to have the Company test the meter in service at the Customer's premises, and, upon written request, the Company will, as applicable, remove, seal and test the meter in accordance with the Gas Service Regulations of the Pennsylvania Public Utility Commission ("Regulations") or secure an in-person meter reading to confirm the accuracy of an automatic meter reading device when a customer disconnects service or a new service request is received. Together with the written request for a meter test, the Customer shall deposit with the Company the meter testing fee specified by the Regulations. If the meter tests within the accuracy limits specified by the Regulations, the meter shall be deemed for all purposes to have registered accurately. In such case, no billing adjustment shall be made, and the meter testing fee deposited with the Company shall be credited to the Company. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

7. METER READING (Continued)

7.6 Adjustment for Meter Error. If any meter becomes defective or fails to test accurately, an adjustment will be made to the Customer's bill in accordance with the Regulations and the meter testing fee deposited with the Company shall be refunded to the Customer. **(C)**

7.7 Meter Test Fees. The Company may assess the following service charges: **(C)**

Meter Size:	
0 - 500 CFH	$10.00
501 - 1500 CFH	$20.00
Over - 1500 CFH	$30.00

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT

8.1 Billing Month. Bills are rendered monthly. The Company normally reads meters monthly. However, at its option, the Company may read meters once every two months. In instances where meters are read every two months, the first month's bill will be based on an estimate of the consumption for the first month of the bi-monthly period. Bills are due when rendered and shall be considered as received by the Customer when left at, or mailed to, the address where service is rendered, or such other address as designated by the Customer. A billing month is the period upon which a Customer's monthly charges and consumption are computed and for which a bill is rendered. For Residential Customers, the billing month is a period of not less than 26 or greater than 35 days. An initial bill for a new Residential Customer may be less than 26 days or greater than 35 days; provided however, if an initial bill exceeds 60 days the Residential Customer shall be given the opportunity to amortize the amount over a period equal to the period covered by the initial bill without penalty. A final bill due to the discontinuance may be less than 26 days or greater than 35 days but may never exceed 42 days. In cases involving termination, a final bill may be less than 26 days. In addition, bills for less than 26 days or more than 35 days shall be permitted if they result from rebilling initiated by the Company or Customer dispute to correct a billing problem. Bills for less than 26 days or more than 35 days shall be permitted if they result from a meter reading route change initiated by the Company.

8.2 Estimated Consumption. When the Company is unable to obtain an actual meter reading because of inability to gain access to the meter, or because of extreme weather conditions, emergencies, equipment failures, work stoppages or any other circumstances, the Company will render appropriately marked estimated bills.

8.3 Application of a Rate Schedule. The Company will compute bills under the rate schedule selected by and for which the customer qualifies. In the event the customer does not select a Rate Schedule, the Company may discontinue service or place the Customer on a rate schedule for which the Customer qualifies.

8.4 Budget Billing. Residential Heating Customers may elect an optional billing procedure which averages the estimated Company regulated service costs over a revolving twelve (12) month Budget Billing plan. These Customers will be billed for the use of gas during the next eleven (11) months beginning with whatever month that they select. Company will review the Budget Billing amount upon the completion of the third (3rd), sixth (6th), and ninth (9th) billing months with budget asked to pay amounts adjusting the fourth (4th), seventh (7th) and tenth (10th) billing months annually adjusting upward or downward the Budget Billing amount based on actual charges to date and projected charges to the end of the twelve (12) month Budget Billing. The twelfth bill will be for usage for the month, with an adjustment for the difference between payments made and actual charges for gas service for the prior eleven (11) months, inclusive. At the conclusion of the budget billing year, any resulting reconciliation amount exceeding $100 may be amortized over a twelve (12) month period upon Residential Heating Customer request. **(C)**

The optional twelve (l2) month Budget Billing plan, as described above, is available to Commercial and Industrial Heating Customers provided that at least seventy-five (75) percent of the Customer's total gas consumption is for space heating. If a Customer has an unpaid balance equal to the amount of two (2) Budget Bill Plan bills, billing under this plan may be terminated by the Company.

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued **(C)**

8.5 Payment Due Date. The due date for payment of Residential Customers' bills shall not be less than twenty (20) days from the date of mailing and fifteen (15) days for a Non-Residential Customer's bill with the exception that bills to the Commonwealth of Pennsylvania, the Government of the United States, or any of their agencies, and elementary and secondary schools shall be due fifteen (15) days after the date of mailing unless otherwise extended to thirty (30) days by mutual agreement. For all billings, if the due date for payment should fall on a Saturday, Sunday, bank holiday or any other day when the offices of the Company where payments are regularly received are not open to the general public, the due date shall be extended to the next business day. Failure to receive a bill will not release the Customer from payment obligations.

8.6 Date of Payment for Residential Customers. For payments by mail, the effective date of payment shall be the date of the postmark. For payments by mail which are not postmarked or postmarked clearly, the effective date of payment shall be one day prior to receipt. For payments made through electronic transmission, the effective date of payment shall be the date of actual receipt of payment by the Company. For payments made at a branch office or an Authorized Payment Agent, the effective date of payment shall be the date of actual receipt of payment at that location.

8.7 Late Payment Charge. Late Payment Charges will be applied as follows to the balance due which is not paid by the due date including amounts billed by the Company on behalf of natural gas suppliers other than the Company. Residential Customers will be charged a late payment charge of one and one half (1 1/2) percent per month on the balance due not paid by the due date; provided that, for a Residential Customer's payment by mail, the Company shall not impose a late payment charge unless payment is received more than 5 days after the due date. Non-Residential Customers will be charged five (5) percent per month on the balance due not paid by the due date and an additional one and one half (1 1/2) percent per month for each month thereafter.

8.8 Return Check Service Charge. The Company may impose a service charge of the greater of thirty-five dollars ($35.00) or maximum allowed by Commonwealth of Pennsylvania for each check received in payment of bill(s) which is dishonored and returned by the bank upon which it is drawn. The Company may require a Customer to tender non-electronic payment after the Customer tenders two (2) consecutive electronic payments that are subsequently dishonored, revoked, canceled or otherwise not authorized.

8.9 Due Date Extension Program. Residential Customers meeting the qualification requirements of the Due Date Extension Program shall, upon written application, have the due date for payment of bills for service to their personal residence extended. To qualify, Applicants must submit proof that their sole source of support, and that of others in their household, is derived from a permanent fixed income plan, issuing monthly checks. Under the program, the due date for payment on a bill normally falling due between the sixth day of the month and the twentieth day of the month shall be extended to the first working day after the twentieth of the month. The due date for payment on a bill normally falling due between the twenty-first day of the month and the fifth day of the following month, shall be extended to the first working day after the fifth day of the latter month.

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT – Continued **(C)**

8.10 Application of Payments for Rates RT and NT. Where Company renders a bill for natural gas supply service on behalf of a Choice Supplier and a partial payment received, the partial payment shall first be applied to pre-retail access Company balances and then to post-retail access balances. In the event a customer has a pre-retail access Company balance, partial payment shall be applied in the following order of priority:

1. First to outstanding pre-retail access Company balances, or the installation amount on a payment arrangement with the Company on this balance; then to
2. Current regulated Company charges; then to
3. Choice Supplier supply charges; then to
4. Non-Basic Service charges; then to
5. Hardship Energy Fund contributions.

In the event a Customer develops a post-retail access balance, partial payment shall first be applied to the pre-retail access Company balances in the order of priority specified above. Thereafter, partial payment shall be Company applied in the following order of priority:

1. First to outstanding post-retail access Company Balances, or the installat amount on a payment arrangement with the Company on this balance; then to
2. Current regulated Company charges; then to
3. Choice Supplier service charges; then to
4. Non-Basic service charges; then to
5. Hardship Energy Fund contributions.

Where Company renders a budget bill on behalf of a Choice Supplier for Natural Gas Supply service, partial payments shall be applied on a pro rata basis after outstanding pre-retail access balances and post retail access balances have been paid in accordance with the orders of priority specified above. For purposes of this Section, pre-retail access balances means outstanding account balances incurred prior to Customer transferring to Rate RT and NT.

For purposes of this Section, post-retail access balances means outstanding account balances incurred after Customer transfers to Rate RT and NT.

8.11 Joint Billing. Joint Billing provides Customers with one combined account and a combined invoice that displays charges for both their gas and electric service and pertains to Customers that are the same class as described below and receive both gas service from the Company and electric service from UGI Utilities, Inc. – Electric Division ("UGI-ED") at the same premises. Eligible Customers shall be Residential Customers receiving service under Rate Schedules R and RT who are also Residential Customers of UGI-ED receiving electric distribution service under UGI-ED Rate Schedules R, and Commercial and Industrial Customers receiving service under Rate Schedules N and NT who are also Commercial and Industrial Customers of UGI-ED receiving electric distribution service under UGI-ED Rate Schedules GS1, GS4, and GS5, unless they elect otherwise in writing or through mutual agreement with Company. Eligible Customers shall be combined into a single Customer account for service received from the Company and UGI-ED and shall receive combined bills

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued **(C)**

separately listing charges from each company. The Company and UGI-ED shall, for such combined accounts, and subject to applicable statutory and regulatory requirements, establish a reasonable hierarchy of categories for the posting of partial payments to such joint accounts, and within each such category payments shall first be posted, as applicable, to UGI-ED or Electric Generation Supplier charges before being posted to UGI Gas Division or Natural Gas Suppler charges.

8.12 Payment Refunds. Refunds due customers greater than two dollars ($2) shall be mailed to the Customer. Refunds less than two dollars ($2) may be picked up at the office within sixty (60) days. After sixty (60) days, the refund shall be applied to Operation Share.

8.13 Unless otherwise stated in this Section 8, Billing and Payment, all billing and payment provisions of this section apply to Customers served under all Company rate schedules, including Rate Schedules RT and NT where a Customer's Choice Supplier also participates in the Company's Purchase of Receivables ("POR") program.

(C) Indicates Change

RULES AND REGULATIONS

9. TERMINATION AND DISCONTINUANCE OF SERVICE

9.1 (a) Termination of Service. The Company may terminate service on reasonable notice and remove its equipment in case of Customer's (i) nonpayment of an undisputed delinquent account, (ii) failure to complete payment of a deposit, provide a guarantee of payment or establish credit, (iii) failure to permit access to meters, service connections or other property for the purpose of replacement, maintenance, repair or meter reading, (iv) failure to comply with the material terms of a payment arrangement, or (v) violation of tariff Rules and Regulations. The Company may terminate service promptly and without notice for Customer's (i) Unauthorized Use of Service delivered on or about the affected dwelling or premises, (ii) fraud or material misrepresentation of the Customer's identify for the purpose of obtaining service, (iii) abuse of or tampering with the meters, connections or other equipment of the Company, (iv) violating tariff Rules and Regulations which endanger the safety of a person or the integrity of the Company's distribution system, (v) tendering payment for reconnection of service that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice, or (vi) after receiving termination notice from the Company, tendering payment which is subsequently dishonored under 13 Pa. C.S. § 3502, or, in the case of an electronic payment, that is subsequently dishonored, revoked, canceled or otherwise not authorized and which has not been cured or otherwise made in full payment within three business days of the Company's notice. Prior to restoration of service terminated for any of the foregoing reasons, the Company may require a payment in advance of all arrearages, applicable deposit, and a reconnect charge of seventy-three dollars ($73). Effective November 1, 2025, confirmed low income Residential customers who provide verification of household income will not be assessed reconnection fees. **(C)**

(b) For Residential Customers, in the context of service termination during the period of December 1 through March 31, the Company will use financial information fro the Customer provided within the most recent twelve (12) month period to determine if a customer exceeds the 250% federal poverty level threshold. The Company will not require customer information to verify income if the customer has established income verificatior through receipt of LIHEAP within the past twelve (12) months or if the customer is currently participating in CAP. The Company will accept the following as verification of household income in determining whether an account under Chapter 56 is protected from termination during the period of December 1 through March 31: (i) recent pay stubs or W-2 forms, (ii) access card or statement from Department of Public Welfare ("DPW"), (iii) if a source of income is rental income, then a verified copy of rent receipt(s), (iv) if the Residential Customer receives social security payments, pension payments, disability payments, Supplemental Security Income (SSI) payments, or any other source of fixed income with direct deposit, then a copy of bank statement or benefit letter, (v) child support and/or alimony support verification letter, (vi) if the Residential Customer receives payments from unemployment benefits or workers' compensation, then a copy of the determination letter or check stub, (vii) previous year's income tax statement, (viii) a filed 1099 form showing any interest income, annuity or dividends, and (ix) a verification letter from DPW of any approved cash or crisis grant applicable to the current heating season.

(C) Indicates Change

RULES AND REGULATIONS

9. TERMINATION AND DISCONTINUANCE OF SERVICE - Continued (C)

9.2 Discontinuance of Service. Any Customer who is about to vacate any premises supplied with gas service or wishes to have service discontinued for any reason shall give at least seven (7) days written notice to the Company and any non-Customer Occupant of the premises to which service is being supplied, specifying the date on which it is desired that service be discontinued. If a Residential Customer requests a Discontinuance of Service at the Residential Customer's residence, and the Residential Customer and the members of the Residential Customer's household are the only Occupants, the Company may discontinue service without additional notice to the affected premise. If a Customer (other than a landlord ratepayer) requests a Discontinuance of Service at a dwelling other than the Customer's residence or at a single meter, multi-family residence, whether or not the Customer's residence, the Customer must state in writing (under penalty of law) that the premises are unoccupied. If the premises are occupied, the Customer's written notice requesting Discontinuance of Service must be endorsed by all affected Occupants. If the foregoing conditions are not met, the Company may discontinue service at the affected premises upon notice to the affected premises in accordance with Chapter 56. The Customer shall be liable for gas consumed until transfer of the account or the meter shut off. When Discontinuance of Service by Customer is for a period of less than twelve (12) months, the Company may require a payment of customer charges for each month the service has been discontinued in order to have the service restored.

9.3 If service to any Non-Residential Customer is terminated for the reasons set forth in Sections 9.1 (Termination of Service) or discontinued in accordance with 9.2 (Discontinuance of Service) hereof, the Company shall not be under any obligation to resume service to the same Customer at the same premises within twelve months unless it shall receive payment of an amount equal to the minimum bill for each month of the intervening period.

9.4 Reconnect Charge. If service to a Customer is discontinued at the request of the Customer, the Company shall not be under any obligation to resume service to such customer, at the same premises, within twelve (12) months from the date service was discontinued, unless they shall first receive a reconnection charge of Seventy-Three Dollars ($73.00). In addition, if the Customer's service was discontinued at the Customer's request, a payment of the applicable minimum charge for each month that service was discontinued shall be required. A Customer at the same premise who requests seasonal service and has gas shut off and turned on within twelve-month period shall be billed an amount equal to the minimum charge under the applicable rate for each month service was shut off up to the twelve-month period.

RULES AND REGULATIONS

10. RIDER A

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge is applicable to the net monthly rates and minimum charges contained in this Tariff. The surcharge shown below will be recomputed when a tax rate used in the calculation changes and/or the Company implements a change in rates.

The recomputation of the surcharge will be submitted to the PUC within 10 days after the occurrence of a reason for surcharge recomputation shown above. If the recomputed surcharge is less than the one in effect the Company will, and if more may, submit a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be 10 days after the filing.

Rider A - State Tax Adjustment Surcharge is 0.01% **(I)**

This Rider applies to Rates R, RT, GL, N, NT, DS, and LFD.

(I) Indicates Increase

RULES AND REGULATIONS

11. RIDER B

SECTION 1307(F) PURCHASED GAS COSTS

Provisions for Recovery of Purchased Gas Costs

Rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R, N, and GL of this Tariff shall include purchased gas costs, calculated in the manner set forth below, pursuant to Section 1307(f) of the Public Utility Code. Such rates for gas service shall be increased or decreased, from time to time, as provided by Section 1307(f) of the Public Utility Code and the PUC's regulations, to reflect changes in the level of recovery of purchased gas costs.

Computation of Purchased Gas Costs per MCF

Purchased gas costs shall be computed to the nearest one-hundredth cent (0.01¢) per MCF in accordance with the formula set forth below:

$$PGC = \frac{(C-E)}{(S)}$$

Projected purchased gas costs, so computed, shall be included in rates charged to Customers for gas service pursuant to the rate schedules identified above for consecutive twelve-month periods. The amount of purchased gas costs per Mcf will vary, if appropriate, based upon annual filings pursuant to Section 1307(f) of the Public Utility Code and such supplemental filings as may be required or be appropriate under Section 1307(f) or the PUC's Regulations adopted pursuant thereto.

In the event a Natural Gas Supplier discontinues service or defaults before its contract with the Customer expires, any costs incurred by the Company during the period between the Natural Gas Supplier’s discontinuance of service or default and the first day of the Customer’s next regular billing cycle which cannot be recovered from the Natural Gas Supplier shall be considered a Purchased Gas Cost.

Definitions

In computing purchased gas costs pursuant to the formula above, the following definitions shall apply:

"PGC" - Purchased Gas Cost determined to the nearest one-hundredth cent (0.01¢) per Mcf to be included in rates for gas supplied under the rate schedules identified above.

"Purchased Gas" - The volume of gas purchased by the Company that is delivered to the Company's Customers, plus such portion of the Company's used and unaccounted-for gas, including, but not limited to, natural gas, synthetic gas, liquefied natural gas, and natural gas substitute, including liquefied propane and naphtha.

"C" - The current cost of gas (“C-Factor”) determined as follows: (a) for all types of purchased gas, project the cost for each purchase (adjusted for net current gas stored) for the projected period when rates will be in effect plus (b) the arithmetical sum of (1) the projected book value of noncurrent gas at the beginning of the computation year minus (2) the projected book value of noncurrent gas at the end of the computation year.

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

As applicable, to the extent such charges are not directly paid, Purchased Gas Costs shall include credits related to the use of PGC capacity by transportation customers where the Customer or NGS utilizes Company assigned or released pipeline capacity. In addition, revenues related to balancing services provided pursuant to Sections 22.2 and 22.4; Rate NNS; Rate MBS; capacity or commodity gas sales made pursuant to Customer elections under the Retail Standby Rider; Unauthorized Overrun; OFO, DFD and NGS penalty charges and bundled city gas sales made to NGSs shall be credited to the PGC. Such credits shall be reduced annually by the Economic Benefit Peaking Supply (EBPS Credit) reductions calculated pursuant to Rule 22.6 of the Rules and Regulations. **(C)**

"E" - Experienced net overcollection or undercollection of purchased gas costs ("E-Factor"). Such net overcollection or undercollection statement shall begin with the month following the last month which was included in the previous overcollection or undercollection calculation reflected in rates. Each over-under collection statement shall also provide for refund or recovery of amounts necessary to adjust for over or underrecoveries of E factor amounts under the previous 1307(f)rate.

Interest shall be computed monthly at the rate provided for in Section 1307(f)(5) of the Public Utility Code from the month that the over or undercollection occurs to the effective month such overcollection is refunded or such undercollection is recouped.

Additionally, supplier refunds will be included in the calculation of "E" with interest added at the annual rate of six percent (6%) calculated in accordance with the foregoing procedure, beginning with the month such refund is received by the Company.

Computation and Application of the E-Factor

The E-Factor shall be computed to the nearest one-hundredth cent (0.01¢) per Mcf in accordance with the formula set forth below:

$$\text{E-Factor} = (-E/S)$$

Each E-Factor so computed shall be applied to customer's bill for a one (1) year period during the Computation Year.

"S" - Projected MCF of gas to be billed to Customers during the projected period when rates will be in effect.

(C) Indicates Change

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

Revenue Sharing Incentive Mechanism: The PGC rate determined in this section may be adjusted to reflect the operation of a Revenue Sharing Incentive Mechanism as defined hereafter.

Off-system Sales: If and when the Company makes an off-system sale of natural gas, either in the Company's market area or upstream of the Company's market area with or without the use of PGC assets, the net revenues from the sale shall be shared by both the Company and the Company's retail customers served pursuant to this section of the tariff. The net revenues of the sale shall mean the total revenues from the sale of gas to a third party, less (1) the sum of the cost of natural gas, transportation commodity charges, and fuel retainage, if the sale or exchange is made upstream of the Company's market area or (2) the average city gate commodity cost of all gas purchased and flowing on the first of the month, including the natural gas, transportation commodity, and fuel, if such sale is made at the Company's city gate or in the Company's market area. The sharing of such net revenues shall be allocated in accordance with the Revenue Sharing Allocation procedure in this section.

Exchanges of Natural Gas: If and when the Company and a third party agree to make a location exchange of natural gas in which both parties receive like quantities of gas, with no adverse economic effect on the Company's Customers, any revenues received by the Company for performing this service shall be shared by the Company and the Company's retail Customers served pursuant to this section of the Tariff. Any revenues received from the exchange of natural gas, either upstream of the Company's city gate, or at the Company's city gate, shall be allocated in accordance with the Revenue Sharing Allocation procedure in this Section.

Capacity Release on Interstate Pipelines: Capacity release revenue generated by administrative releases to third parties that fill the Company's storage shall be credited 100% to PGC customers. Other revenue received by the company for off system Capacity Release of interstate pipeline capacity will be credited in accordance with the Revenue Sharing Allocation procedure in this Section.

Asset Management: If and when the Company has a third party manage gas supply assets paid for by the PGC, any revenues received from the third party ("Asset Management Fees") shall be allocated in accordance with the Revenue Sharing Allocation procedure in this Section. **(C)**

Revenue Sharing Allocation: Effective December 1, 2012, through November 30, 2026 the sum of the revenues derived from all Off-System Sales, Exchanges of Natural Gas, Capacity Release on interstate pipelines and Asset Management, will be allocated 75% to the retail customers served and 25% to the Company. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

11. RIDER B - Continued

SECTION 1307(F) PURCHASED GAS COSTS

The amount retained by the Company will be an incentive to pursue additional sales and will be treated below the line for ratemaking purposes. For purposes of calculating this margin, the cost of gas will be equal to the monthly average commodity cost of gas plus variable transportation costs to deliver the gas to the off-system customer. The monthly average commodity cost of gas shall be defined as the monthly average commodity cost of gas purchases for all supplies scheduled at the beginning of the month; provided, however, that if an additional unscheduled purchase is made during the month specifically for an off-system sale, such purchase shall be considered to be the gas used to make the off-system sale and the commodity cost of such purchase will be assigned to off-system sales up to the volume of the purchase.

Filing with the PUC: Audit, Rectification

The Company's annual reconciliation statement shall be submitted to the Commission by May 1 of each year, or such other time as the PUC may prescribe.

Quarterly Adjustments

When making the December 1, March 1, June 1 and September 1 quarterly C-factor adjustments, the Company will refund or recover all actual and projected incremental over or under collections from December 1 through November 30 over either remaining PGC year sales volumes or annual PGC year sales volumes, however the March 1 adjustment for projected over or under collections shall only utilize the remaining PGC year sales volumes. Any quarterly PGC rate change on December 1, March 1 and June 1 will be capped at 25% of the then-current PGC rate, with any amounts above this cap being brought forward for inclusion in the calculation of subsequent quarterly C-factor adjustments. Any quarterly PGC rate change on September 1 will be capped at 15% of the then-current PGC rate, with any amounts above this cap being brought forward for inclusion in the calculation of subsequent quarterly C-factor adjustments. The Company is authorized, at its sole discretion, to waive the quarterly cap on rate decreases only.

Rider B – Purchased Gas Cost (Mcf)

Annual C-Factor	$ 6.2323	**(D)**
Annual E-Factor	$ 0.5163	**(I)**
Total Purchased Gas Cost	$ 6.7486	**(I)**

RULES AND REGULATIONS

12. Rider C

WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of Residential and Non-Residential customers under Rate Schedules R, RT, N and NT, for any bills rendered during the heating season, which effective November 1, 2025 will include the months of October through April. Beginning with bills rendered on and after November 1, 2025, WNA will no longer be applied to confirmed low income residential customers who participate in the UGI Gas CAP program for CAP customers on a percent of income bill. CAP customers on average bill will continue to be billed based on an appropriate 12 month historic basis. The WNA commenced with bills rendered on and after November 1, 2022 and shall continue as a five-year pilot which will end on October 31, 2027, unless affirmatively extended or otherwise permitted by Commission Order. **(C)**

WNA is a distribution charge adjustment and is considered a basic service charge.

Calculated WNA amounts shall be subject to Rider A – State Tax Adjustment Surcharge and Rider I – Distribution System Improvement Charge. No additional riders or surcharges will be applied to the calculated WNA.

Calculation of Adjustment Amount:

The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD * 3%)) / AHDD) x (AMC-BLMC)]
WNAC = WNBC – AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD", adjusted for a 3% deadband as further discussed in subparts (i) and (j) below), divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual average daily consumption from the billing system, measured in Ccfs, using bills with read dates of June 21st thru September 20th over a thirty-six-month period multiplied by the number of days in the billing period. The average daily base load is recalculated monthly using the most recent thirty-six months of bill history. If less than twelve months of bill history is available for the premise, an average base load for the related customer class will be applied.

(c) AMC shall be measured for each customer and billing cycle and will be inclusive of any heating value corrections.

(d) NHDD shall be applied on a Delivery Region specific basis as determined by the customer's geographical location and, for any given day within a billing period, shall be based upon the Delivery Region's 15-year average for the given day. NHDD shall be updated every 5 years using the methodology established in the Company's general rate case proceeding at R-2021-3030218 with the next scheduled update of the NHDD to be effective on October 1, 2025, and thereafter every five years.

(C) Indicates Change

RULES AND REGULATIONS

12. Rider C - Continued

WEATHER NORMALIZATION ADJUSTMENT **(C)**

(e) AHDD shall be the actual experienced heating degree days during the billing cycle for the customer's assigned Delivery Region, as determined by the customer's geographical location. A Delivery Region's AHDD shall be based upon experienced actual Gas Day temperatures as reported by the National Oceanic and Atmospheric Administration (NOAA) for weather stations located within that Delivery Region pursuant to the application of the Company's established Delivery Region calculation methodology.

(f) The period for which both NHDD and AHDD will be measured for each billing period used for the WNA calculation will be based on the starting day of the customer's billing cycle minus one day through last day of billing cycle minus one day. If AHDD is unavailable for any day(s) during that period, the respective NHDD for the same day(s) will also be excluded from the calculation, thereby excluding any days missing AHDD from the WNBC calculation.

(g) AMC will be subtracted from the WNBC to compute the Weather Normalized Adjustment Ccfs ("WNAC").

(h) The WNAC shall then be multiplied by the applicable Rate Schedule Distribution Charge based on service rendered to compute the WNA amount that will be charged or credited to each Residential and Non-Residential customer served under Rate Schedules R, RT, N and NT.

(i) A deadband of 3% shall apply. The WNA for a billing cycle will apply only if the AHDD for the billing cycle are lower than 97% or higher than 103% of the NHDD for the billing cycle.

(j) The WNA factor shall be calculated by first adjusting the NHDD for the billing cycle by the deadband percentage of 3%. The deadband percentage shall be multiplied by the NHDD and then added to NHDD for the billing period when the weather is colder than normal (i.e., AHDD>NHDD) or subtracted from NHDD for the billing period when the weather is warmer than normal (i.e., AHDD<NHDD).

(k) In the event a customer's bill needs to be canceled and rebilled at any time, the WNA will be recalculated using the most recently available data for the billing period. In some cases, updates in data used in the calculation, may result in a different WNA for the billing period. Bills requiring manual processing shall not have WNA applied.

(l) The Company will file reporting detailing weather normalization information with the Commission as outlined in the Final Order at the Company's Base Rate Proceeding at Docket No. R-2021-3030218.

(C) Indicates Change

RULES AND REGULATIONS

13. RIDER D

MERCHANT FUNCTION CHARGE

Applicability and Purpose

This Rider shall be applied to rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. The Rider is equal to the fixed percentage, established by the PUC in Company's last general base rate proceeding, of purchased gas costs which are expected to be uncollectible, and shall not be reconciled to reflect actual results. Rider D is intended to make Company's Price to Compare more comparable to the gas supply service prices offered of other Natural Gas Suppliers that presumably reflect anticipated uncollectible expenses.

Rider D Charge

Rider D charges shall be equal to 2.56% for Residential PGC Customers and 0.56% for Non-Residential PGC Customers of Rider B (Purchased Gas Costs). **(I)**

The collection of the Rider D charges will be summarized by Rate Schedule sub-accounts in the Gas Operating Revenue FERC Account No. 480000 for Rate R and 481000 for Rates N. The associated costs are recorded in FERC Account Nos. 904001 and 904002.

(I) Indicates Increase

RULES AND REGULATIONS

14. Rider E

GAS PROCUREMENT CHARGE

Applicability

This non-reconcilable Rider shall be applied to rates for each Mcf (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. Rider E shall be a volumetric charge as described below and shall remain in effect until reviewed and updated in the Company's next base rate case.

Rider E, or Gas Procurement Charge ("GPC"), recovers costs associated with gas procurement that were unbundled from base rates. The GPC rate is calculated by dividing total unbundled gas procurement costs by the sales volumes for the 12 months ending September 30, 2018, for Rate R and N.

Rider E Charge

Rates: R and N:	$ 0.0660 per Mcf

RULES AND REGULATIONS

15. PRICE TO COMPARE

The Price to Compare ("PTC") is composed of the Annual C-Factor, Annual E-Factor, Gas Procurement Charge and Merchant Function Charge. The PTC rate will change whenever any components of the PTC change. The current PTC rate is detailed below:

Price to Compare

	Rate R (CCF)	**Rate N (MCF)**	
Annual C-Factor	$ 0.62323	$ 6.2323	**(D)**
Annual E-Factor	$ 0.05163	$ 0.5163	**(I)**
Gas Procurement Charge	$ 0.00660	$ 0.0660	
Merchant Function Charge	$ 0.01728	$ 0.0378	**(I)**
Total Price to Compare	$ 0.69874	$ 6.8524	**(I)**

(D) Indicates Decrease
(I) Indicates Increase

RULES AND REGULATIONS

16. RIDER F

UNIVERSAL SERVICE PROGRAM

APPLICABILITY AND PURPOSE

This Rider shall be applicable to all residential customers except customers in the Company's Customer Assistance Program ("CAP"). This Rider has been established to recover costs related to the Company's Universal Service and Conservation Programs, excluding internal administrative costs.

RATE

In addition to the charges provided in this tariff, an amount shall be added to the otherwise applicable charge for each MCF of sales volumes or distribution volumes distributed by the Company to customers receiving service under Rate Schedules R and RT.

The USP rate: $0.6363/Mcf **(I)**

CALCULATION OF RATE

The Rider USP rate shall be calculated to recover costs for the following programs: Low Income Usage Reduction Program (LIURP); Customer Assistance Program (CAP); Hardship Funds; and any other replacement or Commission-mandated Universal Service Program or low-income program that is implemented during the period that the Rider is in effect.

LIURP costs will be calculated based on the projected number of Level 1 income homes to be weatherized. Hardship Fund costs will be calculated on the projected level of an allocated share of administrative funds incurred by the UGI Operation Share Energy Fund.

CAP costs will be calculated to include
1) the projected CAP credit
2) projected CAP customer application and administrative costs; and
3) projected CAP pre-program arrearage forgiveness.

CAP Credit shall be defined as the difference between the total calculated Rate R bill, excluding Rider USP, and the CAP bill and an adjustment for unearned credit amounts based upon the current discounts at normalized annual volumes of the then-current CAP participants and the projected CAP Credit for projected customer additions to CAP during the period that the CAP Rider rate will be in effect at the average discount of current CAP participants at normalized annual volumes.

(I) Indicates Increase

RULES AND REGULATIONS

16. RIDER F - Continued

UNIVERSAL SERVICE PROGRAM

QUARTERLY ADJUSTMENT

Any time that the Company makes a change in base rates or PGC rate affecting residential customers, the Company shall recalculate the Rider USP rate pursuant to the calculation described above to reflect the Company's current data for the components used in the USP rate calculation. The Company shall file the updated rate with the PUC to be effective one (1) day after filing.

ANNUAL RECONCILIATION **(C)**

On or before November 1 of each year, the Company shall file with the PUC data showing the reconciliation of actual revenues received under this Rider and actual recoverable costs incurred for the preceding twelve months ended September. The resulting over/undercollection (plus interest calculated at 6% annually) will be reflected in the CAP quarterly rate adjustment to be effective December 1. Actual recoverable costs shall reflect actual CAP costs, actual application costs, actual pre-program arrearage forgiveness, actual LIURP and actual Hardship Administrative costs. Actual recoverable CAP credit costs and pre-program arrearage forgiveness shall be based upon actual CAP credits granted and pre-program arrearage forgiveness granted less a 9.2% adjustment for amounts granted to participants in excess of 25,404 (the number of CAP enrollees as of September 30, 2025). The 9.2% adjustment related to CAP credits and pre-program arrearage forgiveness will be based on the following:

For each reconciliation period, the average annual CAP credit per participant will be determined by dividing the total actual CAP credits granted during the reconciliation period by the average monthly number of participants receiving CAP credits during the reconciliation period. The average monthly number of participants receiving CAP credits exceeding 25,404 will be multiplied by the average annual CAP credit granted per participant and then multiplied by 0.0920 in order to determine the amount of the CAP Credits which will not be recovered through Rider USP.

For each reconciliation period, the average pre-program arrearage forgiveness per participant will be determined by dividing the total actual pre-program arrearage forgiven during the reconciliation period by the number of participants receiving pre-program arrearage forgiveness. The number of participants receiving pre-program arrearage forgiveness exceeding 25,404 will be multiplied by the average pre-program arrearage forgiveness per participant and then multiplied by 0.0920 in order to determine the amount of the pre-program arrearage forgiveness which will not be recovered through Rider USP.

(C) Indicates Change

RULES AND REGULATIONS

17. RIDER G

ENERGY EFFICIENCY AND CONSERVATION RIDER

Applicability and Purpose

The Energy Efficiency and Conservation Rider ("EEC Rider") shall recover costs related to the Company's Energy Efficiency and Conservation Plan ("EECP"). The EEC Rider shall be computed separately for each of the following four customer classes:

1. Residential customers served under Rate Schedules R/RT,

2. Non-Residential customers served under Rate Schedules N/NT,

3. Non-Residential customers served under Rate Schedule DS, and

4. Non-Residential customers served under Rate Schedule LFD.

EEC Rider Rate:

Rate R/RT	$0.1940/Mcf	**(I)**
Rate N/NT	$0.0259/Mcf	**(D)**
Rate DS	$0.0449/Mcf	**(D)**
Rate LFD	$0.0357/Mcf	**(I)**

The EEC Rider shall be subject to the State Tax Adjustment Surcharge.

Calculation

The EEC Rider shall be determined as follows:

1. Costs to be recovered shall include Company incurred costs to implement its Commission approved EECP during each plan year (October 1st through September 30th) (Plan Year), including all costs incurred to develop and administer the Company's EECP.

2. The Residential EEC Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

Residential EEC Rider = (Cr / Sr) – (Er / Sr) where

Cr = Projected Residential EECP Costs.

Sr = Projected Residential Class Sales.

Er = Net over or under collection of the Residential EEC Rider resulting from the difference between the EEC Rider revenues received and the EECP costs incurred.

(I) Indicates Increase (D) Indicates Decrease

RULES AND REGULATIONS

17. RIDER G - Continued

ENERGY EFFICIENCY AND CONSERVATION RIDER

3. The Non-Residential EEC Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

   Non-Residential EEC Rider = (Cn / Sn) – (En / Sn) where

   Cn = Projected Non-Residential EECP Costs.

   Sn = Projected Non-Residential Class Sales.

   En = Net over or under collection of the Non-Residential EEC Rider resulting from the difference between the EEC Rider revenues received and the EECP costs incurred.

4. The Residential and Non-Residential EEC Riders will be updated annually and will be filed with the Commission on one day's notice to be effective December 1 of each year. The Company reserves the right to make an interim filing to adjust the EEC Riders to be effective on sixty (60) days' notice. **(C)**

5. The Riders will be reconciled annually and will be filed with the Commission on or before November 1 of each year. **(C)**

6. If it is known that there will be a Phase III EE&C Plan at the end of the Final Reconciliation Year related to Phase II, any remaining balance will be recovered/refunded through the Phase III EEC Rider's E-Factor. If there will be no Phase III EE&C Plan, any balance remaining for a customer class at the end of the Final Reconciliation Year will be trued up through a one-time bill credit/debit issued to the applicable customers during the second full billing month following the end of the Final Reconciliation Year. The annual reconciliation and end-of-Plan reconciliation will be subject to Commission review and potential audit, as the Commission deems necessary. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

18. RIDER H

TECHNOLOGY AND ECONOMIC DEVELOPMENT RIDER

Availability. The Technology and Economic Development Rider("TED") is a negotiated rider available in the entire territory to Customers served by the Company which the Company determines, in its sole discretion, has prospective additional gas usage applicable to service under Tariff Rate Schedules N, NT, DS or LFD at the time of execution or renewal of a Service Agreement. The Rider TED is established for the purpose of adjusting the customer's overall distribution charge to address project specific or competitive issues to gain access to and expand use of natural gas within the Commonwealth of Pennsylvania. The negotiated Rider TED may be either a surcharge or credit depending on project specific customer and Company economic requirements, such that the overall economics must meet the requirements of Section 5.1 of this Tariff. Rider TED will be utilized to support the expansion of new technologies such as combined heat and power and natural gas vehicles, develop brownfields, and support economic development in Pennsylvania by facilitating business retention and attraction as well as other gas distribution system expansion activities.

General Terms. The Customer must execute a Rider TED service agreement.

Charge per Mcf:	Negotiable

RULES AND REGULATIONS

19. Rider I

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.33% will apply. **(I)**

19.A.1 Purpose. To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

19.A.2 Eligible Property.

The DSIC-eligible property will consist of the following:

- Piping, Couplings, Valves, Excess Flow Valves, Risers - Distribution & Transmission. (Accts. 374, 376, 365, 367)
- Measuring & Regulator Stations – Distribution & Transmission (Accts. 375, 378, 379, 366, 369, 370)
- Gas Service Lines and Insulated and Non-Insulated Fittings (Accts. 378, 380)
- Meters, Meter Bars, Meter Installations (Accts. 381, 382)
- House Regulators & Installations (Accts. 383, 384)
- Industrial & Farm Tap Measuring & Regulator Station Equipment (Accts. 385, 386)
- Miscellaneous Equipment and Material– Distribution & Transmission (Accts. 387, 371)
- Equipment – Electronic Systems & Software (Accts. 391)
- Vehicles, Power Equipment, Tools, Shop & Garage Equipment (Accts. 392, 394, 396)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities.
- Gathering lines (Accts. 332)
- Storage lines (Accts. 353)
- Other related capitalized costs.

19.A.3 Computation of the DSIC. The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update.

(I) Indicates Increase

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

Thus, changes in the DSIC rate will occur as follows:

Effective Date of Change	Date to which DSIC-Eligible Plant Additions Reflected
April 1	December 1 through February 28
July 1	March 1 through May 31
October 1	June 1 through August 31
January 1	September 1 through November 30

19.A.4 Determination of Fixed Costs. The fixed costs of eligible distribution system improvements will consist of depreciation and pre-tax return, calculated as follows:

1. Depreciation: The depreciation expense shall be calculated by applying the annual accrual rates employed in the Company's most recent base rate case for the plant accounts in which each retirement unit of DSIC-eligible property is recorded to the original cost of DSIC-eligible property.
2. Pre-Tax Return: The pre-tax return shall be calculated using the statutory state and federal income tax rates, the Utility's actual capital structure and actual cost rates for long-term debt and preferred stock as of the last day for the three-month period ending one month prior to the effective date of the DSIC and subsequent updates. The cost of equity will be the equity return rate approved in the last fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years shall have elapsed between the entry of such a final order and the effective date of the DSIC, then the equity return rate used in the calculation will be the equity return rate calculated by the Commission in the most recent Quarterly Report on the Earnings of the Jurisdictional Utilities released by the Commission.

19.A.5 Application of DSIC. The DSIC will be expressed as a percentage carried to two decimal places and will be applied to the total amount billed to each customer for distribution service under the otherwise applicable rates and charges, excluding amounts billed for the State Tax Adjustment Surcharge (STAS). To calculate the DSIC, one-fourth of the annual fixed costs associated with all property eligible for cost recovery under the DSIC will be divided by the projected revenue for distribution service (including all applicable clauses and riders) for the quarterly period during which the charge will be collected, exclusive of STAS.

Formula: The formula for the calculation of the DSIC is as follows:

$$DSIC = \frac{(DSI * PTRR) + STFT + Dep + e)}{PQR} \quad \textbf{(C)}$$

Where:

DSI = Original cost of eligible distribution system improvement projects net of accrued depreciation and associated accumulated deferred income taxes pertaining to property-related book/tax depreciation timing differences resulting from the use of accelerated depreciation per Internal Revenue Code, 26 U.S. Code § 168. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

PTRR = Pre-tax return rate applicable to DSIC-eligible property.

STFT = State Tax Flow Through: pre-tax flow through calculated on book-tax timing differences between accelerated tax depreciation and book depreciation net of federal tax. **(C)**

Dep = Depreciation expenses related to DSIC-eligible property.

e = Amount calculated under the annual reconciliation feature or Commission audit, as described below.

PQR = Projected quarterly revenues for distribution service (including all applicable clauses and riders) from existing customers plus netted revenue from any customers which will be gained or lost by the beginning of the applicable service period.

Revenues will be determined as one-fourth (1/4) of projected annual revenues as determined in accordance with 19.A.7.5.

19.A.6 Quarterly Updates. Supporting data for each quarterly update will be filed with the Commission and served upon the Commission's Bureau of Audits, Bureau of Investigation and Enforcement, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the update.

19.A.7 Customer Safeguards.

1. Cap: The DSIC is capped at 5.0% of the amount billed to customers for distribution service (including all applicable clauses and riders) as determined on an annualized basis.
2. Audit/Reconciliation: The DSIC is subject to audit at intervals determined by the Commission. Any cost determined by the Commission not to comply with any provision of 66 Pa C.S. § 1350, et seq., shall be credited to customer accounts. The DSIC is subject to annual reconciliation based on a reconciliation period consisting of the twelve months ending December 31 of each year or the Company may elect to subject the DSIC to quarterly reconciliation but only upon request and approval by the Commission. The revenue received under the DSIC for the reconciliation period will be compared to the Company's eligible costs for that period. The difference between revenue and costs will be recouped or refunded, as appropriate, in accordance with Section 1307(e), over a one-year period commencing on April 1 of each year, or in the next quarter if permitted by the Commission. If DSIC revenues exceed DSIC-eligible costs, such over-collections will be refunded with interest. Interest on over-collections and credits will be calculated at the residential mortgage lending specified by the Secretary of Banking in accordance with the Loan Interest and Protection Law (41 P.S. § 101, et seq.) and will be refunded in the same manner as an over-collection. The Company is not permitted to accrue interest on under collections.

(C) Indicates Change

RULES AND REGULATIONS

19. Rider I - Continued

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

1. New Base Rates: The DSIC will be reset to zero upon application of new base rates to customer billings that provide for prospective recovery of the annual costs that had previously been recovered under the DSIC. Thereafter, only the fixed costs of new eligible plant additions that have not previously been reflected in the Company's rates or rate base will be reflected in the quarterly updates of the DSIC. **(C)**
2. Customer Notice: Customers shall be notified of changes in the DSIC by including appropriate information on the first bill they receive following any change. An explanatory bill insert shall be included with the first billing
3. All Customer Classes: The DSIC shall be applied equally to all customer classes, except that the Company may reduce or eliminate the Rider DSIC to any customer with competitive alternatives who are paying flexed or discounted rates and customers having negotiated contracts with the Company, if it is reasonably necessary to do so.
4. Earnings Reports: The DSIC will also be reset to zero, if, in any quarter, data filed with the Commission in the Company's then most recent Annual or Quarterly Earnings reports show that the Company would earn a rate of return that would exceed the allowable rate of return used to calculate its fixed costs under the DSIC as described in the pre-tax return section. The Company shall file a tariff supplement implementing the reset to zero due to overearning on one-days' notice and such supplement shall be filed simultaneously with the filing of the most recent Annual or Quarterly Earnings reports indicating that the Company has earned a rate of return that would exceed the allowable rate of return used to calculate its fixed costs.
5. Residual E-Factor Recovery Upon Reset to Zero: The Company shall file with the Commission interim rate revisions to resolve the residual over/under collection or E-factor amount after the DSIC rate has been reset to zero. The Company can collect or credit the residual over/under collection balance when the DSIC rate is reset to zero. The utility shall refund any overcollection to customers and is entitled to recover any undercollections as set forth in Section 19.A.7.2. Once the Company determines the specific amount of the residual over or under collection amount after the DSIC rate is reset to zero, the Company shall file a tariff supplement with supporting data to address that residual amount. The tariff supplement shall be served upon the Commission's Bureau of Investigation and Enforcement, the Bureau of Audits, the Office of Consumer Advocate, and the Office of Small Business Advocate at least ten (10) days prior to the effective date of the supplement.

(C) Indicates Change

RULES AND REGULATIONS

20. Rider J

GAS DELIVERY ENHANCEMENT RIDER

Applicability and Purpose:
The Gas Delivery Enhancement Rider ("GDE") shall provide a mechanism to recover the portion of temporary mobile sources of gas supply and interstate pipeline demand charge enhancements (collectively "GDE Charges") that are incurred to achieve least-cost timely solutions to system reinforcement needs or for pipeline integrity management activities for customers taking service under Rate Schedules:(1) DS and (2) LFD. The allocation of GDE Charges to each of the foregoing Rate Classes will be established by the Company's annual Purchased Gas Cost Proceeding.

GDE Rider Rate:
Rate DS $0.0004 per Mcf (all volumes) **(D)**
Rate LFD $0.0004 per Mcf (all volumes) **(D)**

The GDE Rider shall be subject to the State Tax Adjustment Surcharge.

Calculation of Rate:
The GDE Rider shall be calculated in accordance with the formula below and shall be rounded to the fourth decimal:

$$\text{GDE Rider} = (F + De + Ca + EN)/(Mcf)$$

F = Fixed costs for physical infrastructure required to provide mobile sources of gas supply

DE = Demand enhancement charges

Ca = A commodity adder equal to the difference between the indexed price of natural gas for the affected portion of the service territory and the contracted price of alternative fuel that is used in lieu of natural gas during the system reinforcement.

EN = Net over or under collection of the GDE Rider resulting from the difference between the GDE Rider revenues received and the GDE Rider costs incurred.

Mcf = 1,000 cubic feet of gas supplied under Rate Schedules DS and LFD.

Annual Reconciliation:
In accordance with cost determinations in the Company's annual Purchased Gas Cost filings, GDE Rider costs and revenues will be reconciled on an annual basis that coincides with the Company's Purchased Gas Cost year for the period December 1 through November 30 and will be filed with the Commission on one day's notice to be effective December 1 of each year. Any over or under collection at the end of the period above shall be recovered or refunded through continuation of the GDE Rider until full recovery or refund has occurred.

(D) Indicates Decrease

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING

21.1 Company's Right To Reduce or Curtail Service. An emergency exists whenever the aggregate demand for firm service on the Company's system, or confined segment of the system, exceeds or threatens to exceed the gas supply or capacity that is actually and lawfully available to the Company to meet the demands, and the actual or threatened excess creates an immediate threat to the Company's system operating integrity with respect to Priority 1 Customers. In the event of a natural gas emergency, the Company shall have the right to impose a mandatory reduction or curtailment on any Customer's use of gas.

(a) Prior to taking any action under section 21.2 to curtail Customer usage, provided sufficient time exists as determined by the Company in its sole judgement, the Company shall use reasonable efforts and methods to: (1) interrupt all interruptible services, (2) issue Operational Flow Orders or Daily Flow Directives and, (3) call for voluntary usage reductions by any or all Customers.

(b) In planning for natural gas emergency situations, the Company shall make reasonable efforts to make contractual or informal arrangements with Customers and others which would allow the Company to obtain supplies or implement usage reductions in an effort to avoid or mitigate any emergency action pursuant to subsections 21.2 or 21.3 requiring firm service reductions. In making such arrangements, the Company may enter into specific negotiated terms, conditions and rates with any Customer or entity where a clear benefit exists to the Company for the management or avoidance of an emergency. Related costs, if any, may be included as gas costs for recovery under Section 11 of this Tariff.

21.2 Priority-Based Curtailments. In the event of an emergency, where the Company has mandated priority-based curtailments, the available gas supplies to the Company shall be prorated, if practicable, among Customers and NGSs according to the priorities set forth below, listed in descending order. Customers in a higher priority category shall not be curtailed until all Customers falling into a lower priority category have been curtailed to plant protection use levels, unless operational circumstances or physical limitations warrant a different result. Additionally, where only a partial restriction of a category is required, implementation shall be pro rata to the extent practical under the circumstances. Whenever possible, as determined by the Company in its sole discretion, allocation actions shall be limited to confined geographic or operational portions of the Company's system where the emergency exists.

(a) Priority 1. Service for residential and firm critical commercial essential human needs use.

(b) Priority 2. Firm service not included in Priority 1, which for purpose of curtailment shall be prioritized in the following subcategories:

(1) Firm small commercial and industrial service for plant protection under Rates N, NT, and DS.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING – Continued

(2) Firm large commercial and industrial service for plant protection under Rates LFD and XD.

(3) Firm commercial and industrial service under Rates N, NT, DS, LFD and XD, to the extent actual gas deliveries are being made to the Company's system on behalf of the Customer; all except for plant protection. **(C)**

21.3 Mandatory Reductions. In the event of an emergency under subsection 21.1, the Company may require each commercial and industrial retail and transportation Customer that is not a Priority 1 Customer to reduce its consumption of gas. In requiring mandatory reductions, the gas supplies available to the Company may be allocated to Customers in accordance with the priorities of use specified in subsection 21.2.

(1) The reduction required shall be determined by the Company without regard to priorities of use, as necessary to minimize the potential threat to public health and safety.
(2) The mandatory reduction shall be for a period specified by the Company and may be until further notice. The Company may change a Customer's authorized usage, upon notice, at any time during an emergency.
(3) Mandatory reductions shall be for a maximum duration of five (5) consecutive business days, unless extended by PUC order.
(4) Except as provided in 21.3(5), the minimum authorized usage may not be lower than the minimum usage of firm service necessary for plant protection use.
(5) When all other service has been curtailed except for Priority 1 service and the Company continues to be unable to meet Priority 1 requirements, the Company shall exercise its judgment as to any further curtailment that may be necessary and shall utilize measures designed to minimize harm to Customers if curtailments to plant protection use are found to be necessary.
(6) Consistent with its responsibility to maintain system integrity at all times, the Company shall provide periodic status updates and restore service as soon as practicable to any gas-fired electric generation facility that is deemed critical to electric system reliability by the electrical system's control area operator.
(7) Transportation Customers and NGSs are required to deliver, or cause to be delivered, natural gas supplies to the Company's system during an emergency, regardless of any mandatory gas consumption reductions imposed by the Company on such transportation Customers or NGSs' Customers. Such natural gas delivery may be required up to the Customer's or NGS's applicable DFR, MDQ, DDR or otherwise specified daily delivery quantity as determined by the Company in its discretion.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING - Continued

21.4 Notice of Restriction or Curtailment

(a) Notice of any restriction or curtailment shall be made to affected Customers or NGSs via methods and mediums most reasonably expected to accomplish such notice; these may include, but are not limited to: telephone, facsimile, website, or electronic data exchange. If necessary, the Company will make notice through the media in order to communicate specific requests to large groups of Customer categories that are affected, including any relevant geographic limitations.

(b) It is the Customer's or NGS's responsibility to provide the Company with appropriate contact information, and to keep such information updated, in order to assure timely and efficient notices can be provided.

(c) The Company shall endeavor to provide the maximum notice time possible in the event of any notice of restriction or curtailment.

(d) The Company shall provide specific restriction or curtailment notices stating gas usage reduction percentages, absolute usage allowances or other reduction actions. In addition, the Company shall specify compliance timelines and restriction or curtailment durations as appropriate for the circumstance.

21.5 Emergency Allocation. The Company reserves the sole right to authorize exemptions in cases of verified Customer emergency situations affecting health and welfare.

21.6 Definitions

(a) Residential Use - Gas usage in a residential dwelling or unit for space heating, air conditioning, cooking, water heating, or other domestic purposes; all residential Customers served under Rates R, RT, and GL and apartments served under Rate N, NT, and GL, or subsequent rates classified by the Company as residential.

(b) Firm Service – Natural gas service offered by the Company to Customers under Tariffs or contracts that anticipate no interruptions. Such schedules are Rate R, RT, GL, N, NT, DS, LFD, and XD or subsequent firm rate schedules.

(c) Commercial Use – Gas usage by Customers engaged primarily in the sale of goods or services including consumption by office buildings, institutions and government agencies, and classified as commercial class for Company accounting purposes. Commercial Customers are served under Rates GL, N, NT, DS, LFD, XD, and IS or subsequent rates classified by the Company as commercial.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING – Continued

(d) Essential Human Needs Use - Gas usage into any building where persons normally dwell, including residences, apartment houses, dormitories, hotels, hospitals and nursing homes.

(e) Industrial Use - Gas usage by Customers engaged primarily in a process which creates or changes raw or unfinished materials into another form or product including the generation of electric power and classified as industrial for Company accounting purposes. Industrial Customers are served under Rates GL, N, NT, DS, LFD, XD, and IS, or subsequent rates classified by the Company as Industrial.

(f) Plant Protection Use - Minimum usage of natural gas required to prevent physical harm to an industrial or commercial consumer's plant facilities or danger to plant personnel at the facility when the protection cannot be afforded through the use of an alternate fuel. Plant protection uses include usage necessary for the protection of the material in process as would otherwise be destroyed, but does not include deliveries required to maintain production.

21.7 Limitation of Liability.

In the event of any limitation of service or curtailment, the Company may restrict, curtail or discontinue service in accordance with this Section 21, or PUC order, without incurring any penalty or liability for any loss, injury or expense that may be sustained by the Customer except when the restriction or discontinuation of service is a result of the Company's willful or wanton misconduct.

21.8 Appropriation Liability.

(a) The Company may appropriate natural gas and/or pipeline capacity pursuant to this Section 21, a PUC policy statement, directive or order, or an emergency order issued by the Governor of Pennsylvania.

(b) The Company shall compensate the Customer or the Customer's NGS for the cost of appropriated gas supplies. The compensation, in the aggregate, shall equal but not exceed, the greater of:

(1) the city gate cost of the appropriated natural gas including all transportation charges up to the Company's city gate; or,

(2) the reasonable cost actually paid by the Customer or the Customer's NGS for delivered substitute energy, as documented by the Customer or the Customer's NGS and presented as evidence to the Company. Such compensation may be a later delivery of in-kind gas service at the sole discretion of the affected Customer or NGS.

RULES AND REGULATIONS

21. GAS EMERGENCY PLANNING - Continued

21.9 Discontinuance of Service.

The Company may discontinue service at its sole discretion, without notice, for the duration of an emergency, to any Customer that continues to take gas in violation of any rules, notice of limitation or curtailment provided for under this Section 21.

21.10 Penalties for Unauthorized Takes.

(a) The Company may, in its sole discretion, issue penalties for any unauthorized taking of gas to any Customer failing to comply with any restriction or curtailment made under this Section 21.

(b) The penalty for unauthorized takes associated with this section shall be equivalent to those for a Critical Day in Section 22.4 General Terms for Delivery Service For Rate Schedules DS, LFD, XD, and IS - Maximum Daily Excess Balancing Charge. Payment of penalties under this section shall be in addition to any liability for direct or indirect damages resulting from Customer's or Customer's NGS failure to comply.

(c) The Customer shall be liable to the Company for any costs incurred in taking action to discontinue service in accordance with actions taken under subsection 21.9.

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS (C)
Effective November 1, 2020

22.1 Application of Rates **(C)**

(a) Applicable Rates: DS, LFD, XD and IS.

(b) Notification of Delivery; Nomination Procedures. Customer shall notify the Company of any and all gas deliveries to the Company's system, including, but not limited to, the provision of nomination, revised nomination and scheduling information, in accordance with the Company's *Nomination Procedure*, as may be amended from time to time, and made available on the Company's Gas Management Website ("Nomination Procedure"). The quantity of gas received on behalf of the Customer shall be determined by allocation or other method by the Company if required in its sole discretion. It is the Customer's responsibility to arrange that any necessary billing information be provided to the Company and/or delivery gas source.

(c) Nominating Agents. A Customer shall notify the Company of its designated nominating agent ("Agent") for purposes of nominating the volumes of natural gas to be delivered to the Company's system on the Customer's behalf in accordance with the Nomination Procedures. Customer shall notify Company, on a form designated by the Company in the Nomination Procedures, of the responsibilities of the Agent, and shall provide Company with the Agent's valid e-mail address and valid 24-hour contact information. Customer shall remain liable for all charges and penalties notwithstanding Customer's designation and use of an Agent in accordance with the provisions herein.

(d) Penalties for Customer's Default. Customers failing to provide nomination, billing, scheduling, agent, supplier and/or other required information to the Company or pipeline(s)in accordance with the provisions of the Tariff, or otherwise failing to comply with the Company's *Nomination Procedure*, shall be subject to applicable imbalance charges and, in addition, be charged an Administrative Scheduling Fee in an amount no greater than $1,000 per day for every day such required information is delayed. If a Customer default of these provisions occurs and is occurring for a period of 90 days, the Company may impose retail or standby rates on the Customer's account beginning the first day after such 90-day period through and until such time as the Company deems the Customer default to have been resolved.

(e) Sequencing for Billing. Unless otherwise agreed by the Company and the Customer, customer-owned gas delivered under the transportation rate schedules shall be sequenced for billing as the first gas through the meter, and gas purchased under the Retail and Standby Rider shall be sequenced for billing purposes as the last gas through the meter. Gas billed under firm rate schedules shall be billed prior to gas billed under interruptible rate schedules. In lieu of otherwise specified tariff provisions, where the Company and Customer agree, Company shall use pipeline metering facilities for measuring and billing total deliveries to the Customer's facility.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued **(C)**

(f) Payment of Charges, Penalties. The Customer shall pay the Company for any and all additional charges incurred on the Customer's behalf or resulting from the Customer's actions or inactions which the Company can demonstrate arise out of the provision of transportation service including, but not limited to, pipeline transportation and service charges. Any such charge, penalty or obligation imposed by a pipeline transporter or supplier as result of balancing of gas delivered to the Customer shall be paid by the Customer in addition to otherwise applicable charges.

(g) The Billing Pool Agent is required to notify Company at least ten days prior to dropping a Customer from a Billing Pool. If adequate advance notice is not provided, the Company reserves the right to not drop the Customer from the Billing Pool.

(h) Billing Pools. One or more transportation Customers may join together in pooled transactions for the purchase and delivery of gas. The Company may allocate among all such customers the volumes of gas or imbalances for purposes of determining responsibility for charges, rates, penalties or other obligations imposed by the Company, or in connection with operation of the pool. A Supplier to a Billing Pool must notify the Company prior to initiating gas deliveries. A Customer is required to submit in writing a request for entry into a Billing Pool.

(1) Each Billing Pool shall appoint an Agent who will coordinate nomination, billing, reconciliation, allocation and any other necessary communication between the Billing Pool and the Company.

(2) All members of a Billing Pool shall be of like balancing service election. The Company may restrict formation or operation of any Billing Pool in order to meet like balancing service election or pipeline imposed eligibility requirements.

(3) Automated Meter Reading. The Company has the right as a condition of being a pool member, to install, at the Customer’s expense, automated meter reading (“AMR”) equipment for the purposes of daily collection or monitoring, and billing Customer volumes at each related service meter. Where AMR equipment is installed, the Customer shall maintain, at its expense, unless otherwise directed by the Company, a dedicated phone connection and electric service to the AMR equipment which will allow the Company unlimited remote access to the AMR device at all times. Failure to maintain a required phone and/or electric service may result in Customer being removed from a Billing Pool and being placed on a rate schedule not requiring daily measurement capability.

(4) Service under Rate NNS is required by, and shall be individually billed to, any and all members of a Billing Pool except when all pool members are monitored on a daily basis through the use of Company owned AMR equipment at all meter locations. Additionally, service under Rate MBS is required by, and shall be individually billed to, any and all members of a Billing Pool when the billing month for each pool member does not end on the same calendar date; Billing Pools having all customers monitored and billed through the use of Company owned AMR equipment at all meter locations shall be exempt from this requirement.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

(i) Recognition of Supplies. Volumes transported on behalf of the Customer will be recognized in the Customer's current billing month based on nominated or scheduled volumes information and may be adjusted after notification is received from the pipeline supplier(s) of the volumes transported on behalf of the Customer. Volumes scheduled shall be determined on the basis of best available actual or confirmed pipeline and/or Company information at the time of billing.

(j) Unless otherwise negotiated under Rate XD, the Company shall retain for Company use gas, and lost and unaccounted for gas, 1.5% of the total volume of gas delivered into its system for the Customer's account. **(I)**

22.2 Balancing and No-Notice Service.

(a) Each Customer shall use best efforts to balance purchases, deliveries and receipts of gas at all times. Except as specified in 22.1(f), for the purposes of balancing excess deliveries and shortfalls and purchasing services under Rates NNS and MBS, Billing Pools may be treated as a single entity. Subject to the terms and conditions set forth below, the Company shall provide no-notice and monthly balancing services under Rate Schedules NNS and MBS. Service under Rate Schedules NNS and MBS is available only for inadvertent fluctuations, limited by the terms and conditions of each Rate Schedule, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. In the event the Customer fails to use best efforts to balance deliveries and receipts, or otherwise misuses no-notice or balancing services as determined by the Company in its sole discretion, Section 22.4 shall apply for the period of such default or misuse.

(b) Daily Balancing. The Company shall allow Customer's daily demand to inadvertently vary from daily scheduled deliveries by +/-4.5% without imposing Daily Balancing Charges, provided the total daily quantity taken does not exceed Customer's Daily Firm Requirement, MDQ or otherwise specified contract demand limit. Daily imbalances in excess of the +/-4.5% tolerance, unless otherwise provided by service elected under Rate NNS, shall be assessed a Maximum Daily Excess Balancing Charge in accordance with Section 22.4 under Critical Day and Non-Critical Day criteria unless otherwise specified in Customer's contract, in addition to the charges specified in Rates DS, LFD, XD and IS, on all such quantities.

(c) Imbalance Resolution. Customer's monthly imbalances will be calculated at the end of each billing period to determine if any overdelivery (excess) or underdelivery (shortfall) condition exists for volumes scheduled versus volumes metered. If the Customer is determined to be in an imbalance condition, and has not elected service under Rate MBS or has exceeded the 10% imbalance allowance provided under Rate MBS, then the Company shall sell and the Customer shall buy, subject to the 5 percent limitation under Rate MBS, any shortfall amount according to the following cash-out pricing:

(I) Indicates Increase

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

Shortfall Percent	Cash-Out Price
Up to 5%	Shortfall Monthly Reference Price("SMRP")
Greater than 5%, but not greater than 15%	SMRP x 1.1
Greater than 15%, but not greater than 25%	SMRP x 1.3
Greater than 25%	SMRP x 1.5

(C)

Likewise, the Customer shall sell, and the Company shall buy any excess amount according to the following cash-out pricing:

Excess Percent	Cash-Out Price
Up to 5%	Excess Monthly Reference Price("EMRP")
Greater than 5%, but not greater than 15%	EMRP x 0.9
Greater than 15%, but not greater than 25%	EMRP x 0.7
Greater than 25%	EMRP x 0.5

(C)

The SMRP (Shortfall Monthly Reference Price) shall be the average of the DPP midpoint Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below: **(C)**

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The EMRP (Excess Monthly Reference Price) shall be the average of the DPP midpoint Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below: **(C)**

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C)

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

Customer Delivery Region shall be assigned to each Customer in accordance with Customer's delivery location within the Company's distribution system.

The SMRP and EMRP are applicable to the above tables only for inadvertent monthly imbalances. The HMRP (Highest Monthly Reference Price) or the LMRP (Lowest Monthly Reference Price) as defined below shall apply respectively to shortfall and excess conditions in those situations where intentional imbalances are involved. **(C)**

The HMRP shall be calculated as the highest of the DPP absolute Reference Prices for the Customer's Delivery Region during the Customer's billing month as listed below: **(C)**

Delivery Region	Reference Price	**(C)**
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.	
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.	
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.	
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.	

The LMRP shall be calculated as the lowest DPP absolute reference prices for the Customer's Delivery Region during the Customer's billing month as listed below: **(C)**

Delivery Region	Reference Price	**(C)**
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.	
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.	
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.	
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.	

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued **(C)**

(d) The Company may extend the balancing period for gas volumes and may increase volumes eligible for balancing in its discretion, but only if it determines that such action is consistent with its obligations to other customers.

(e) Supply Transfers. In order to facilitate Monthly balancing related to inadvertent imbalances in Company's sole discretion, the Company shall allow Supply Transfers among Customers and Billing Pools, Customers-to-Billing Pools and Billing Pools-to-Customers at a fee of $125 per transaction, provided however: (1) such transfer is requested prior to the end of the billing month for both the transferee and the transferor, (2) such transfer is physically possible given pipeline interconnection and delivery point limitations which require transfers to be between parties located on the same segment of the Company's distribution system, and system supplies, and reliability are not adversely affected.

(f) Competitive Volume Customers. In the case of Customers or applicants seeking service for facilities with a design volume capability allowing for direct connection to transmission or gathering lines for bypass of Company facilities, Company shall have the right to establish daily and monthly balancing tolerances at levels other than those specified in subsections (b) and (c) of this Section 22.2 to reflect specific operational limitations or to protect the interests of other Customers, as determined by the Company in its sole discretion. Additionally, the Company may establish special nomination rules, imbalance resolution rules and communication protocols that reflect the Customer's or applicant's commercial alternatives, and which are consistent with its obligations to other Customers.

22.3 Service Agreement and General. **(C)**

(a) Limitation on Liability.

(1) The Company shall not be liable for curtailment of service under Rates DS, LFD, XD and IS, or loss of the Customer's gas as a result of any steps taken to comply with any law, regulation or order of any governmental agency with jurisdiction to regulate, allocate or control gas supplies or the rendition of service hereunder, and regardless of any defect in such law, regulation or order.

(2) Gas transported and delivered by the Company to the Customer hereunder shall be and remain the property of the Customer. The Customer shall be responsible for maintaining all insurance it deems necessary to protect its property interest in such gas before, during and after receipt by the Company.

(3) The Company shall not be liable for any loss to the Customer arising from or out of service hereunder, including loss of gas in the possession of the Company or any other cause, except gross or willful negligence of the Company's own employees or agents. The Company reserves the right to commingle gas of the Customer with other supplies.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

(b) Warranty, indemnity and special provisions. The receipt of service constitutes Customer's agreement to the following representations and warranties, together with related provisions in the service agreement:

(1) clear and marketable title to the Customer's gas;
(2) delivery points, pressure, quality and other specifications acceptable to gas transmission pipeline(s) and the Company;
(3) eligibility of the Customer for service;
(4) existence of lawful authority for sale, transportation and delivery;
(5) agreement to pay all excise, sales, use, gross receipts, or other taxes (other than income taxes), all tariff charges and all penalties, charges, fees for transportation, balancing etc., associated with delivered gas, which may be levied upon or incurred by the Company at any time;
(6) agreement to indemnify and hold the Company harmless from breach of representations or warranties, and any liability associated with Customer's gas while on the Company's system.

Copy of Gas Purchase Agreements, Other Documents. When requested by the Company, the Customer shall provide the Company with a copy of Customer's gas purchase contract and any related transportation, marketing and brokerage contracts, or, in lieu of providing such contracts, certify pertinent information as required by the Company, and, in order to meet state or federal requirements, provide a sworn affidavit setting forth the Customer's cost of gas for the period requested by the Company. The Company shall endeavor to protect the confidentiality of information provided by the customer in accordance with this provision. The Company will provide such information to third parties only when required to do so by law, regulation or order and in such case, will attempt to maintain confidentiality to the extent possible.

22.4 Maximum Daily Excess Balancing Charge

The Daily Excess Balancing Charge that occurs on Critical Days shall be as follows:

The charge for exceeding daily balancing limits shall be ten times the highest price in the DPP for each delivery region as listed in the following table. This rate shall not be lower than the maximum penalty charge for unauthorized daily overruns as provided for in the FERC-approved gas tariffs of the interstate pipelines which deliver gas into Pennsylvania. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

Delivery Region	Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.
Central	The higher of 1) Transco, zone 6 non-N.Y. or 2) Transco, Leidy Line receipts plus the applicable transportation costs from Transco Zone 6 to Zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C)

The Daily Excess Balancing Charge that occurs on Non-Critical Days shall be as follows:

Daily Imbalance Percent	Penalty
Up to 15%	DRP
Greater than 15%, but not greater than 30%	DRP x 2
Greater than 30%, but not greater than 45%	DRP x 3
Greater than 45%, but not greater than 60%	DRP x 4
Greater than 60%	DRP x 5
Intentional imbalances	DRP x 5

(C)

The DRP (Daily Reference Price) shall be equal to the difference in price between the highest DPP Reference Price and the lowest DPP Reference Price for the Customer's Delivery Region as listed below but shall not be lower than $0.25/Mcf. (C)

Delivery Region	Highest Reference Price	Lowest Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.	Tennessee, zone 4- 300 leg
Central	Transco zone 6, non-N.Y.	Transco, Leidy line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C)

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
Effective November 1, 2020 – Continued

The Company shall not charge any Maximum Daily Excess Balancing Charges if the Customer's Excess Daily Imbalance is anticipated to benefit the distribution systems daily balancing position as determined by Company in its sole discretion.

22.5 Operational Flow Orders and Daily Flow Directives

The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Twenty-Five ($25) per Mcf or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater.

22.6 Cost of Assigned Capacity.

In addition to applicable interstate pipeline demand charges, the associated demand charges to customers, or their NGS, served under Rates DS, LFD, XD, and who utilize assigned PGC capacity and pay weighted average cost, will include 100% (DS) and 50% (LFD, XD) pro rata allocation of annual Peaking Supply service demand costs. The associated demand charges will be reduced by a pro rata share of the Economic Benefit of Peaking Supply (EBPS Credit). The EBPS Credit shall mean a pro rata share of (a) the value of Peaking Supply utilized in off system sales transactions and included in the PGC share of the Revenue Sharing Incentive Mechanism revenues, plus (b) the Commodity Price Differential, which shall be, as measured for the date of Peaking Supply delivery, the aggregate difference, if positive, between the DPP Reference Price applicable to the zone of delivery (i.e., Texas Eastern M3 for deliveries in the South and West Delivery Regions with the exception of deliveries from Mt. Bethel and Transco Z6 NNY for deliveries made in the North and Central Delivery Regions and deliveries from Mt. Bethel) and the actual price paid for actual Peaking Supply deliveries into the UGI distribution system. The EBPS Credit shall be applied in the calculation of associated demand charges in the second billing month after the credit has accrued (e.g., December accrued credits will be used to reduce the February associated demand charges) and shall not, on an annual basis, exceed the annual incremental demand charges for Peaking Services charged to Rate DS, LFD, and XD customers, or their NGS, as described above. **(C)** **(C)** **(C)**

RATE R

GENERAL SERVICE – RESIDENTIAL

AVAILABILITY

This rate applies to all Residential Customers in the entire gas service territory of the Company and available at one location, for the total requirements of any residential Customer. Residential Customers are customers receiving the Company's gas service to a single-family dwelling or building, or through one meter to four or fewer units in a multi-family dwelling or premises used as a single family.

MONTHLY RATE TABLE

Customer Charge: $16.25 per customer **(I)**

Plus Distribution Charge: $0.63317/Ccf **(C,I)**

Plus SURCHARGES and RIDERS

Rider A – State Tax Adjustment Surcharge
Rider B – Section 1307 (f) Purchased Gas Cost
Rider C – Weather Normalization Adjustment
Rider D – Merchant Function
Rider E – Gas Procurement Charge
Rider F – Universal Service Program
Rider G – Energy Efficiency and Conservation
Rider I – Distribution System Improvement Charge

MINIMUM CHARGE

Customer Charge as set forth above.

MINIMUM BILL PROVISION

If natural gas service is discontinued at the request of the Customer, the Company shall not be under any obligation to resume service to the same Customer at the same premise within twelve months unless it shall receive an amount equal to the minimum charge for each month up to a maximum of twelve months of the intervening period.

Customer at the same premise who requires seasonal service and has gas shut off and turned on within twelve-month period billed in an amount equal to the minimum charge under the applicable rate for each month service was shut off up to the 12-month intervening period.

PAYMENT

In accordance with Section 8.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

(I) Indicates Increase (C) Indicates Change

RATE RT

GENERAL SERVICE – RESIDENTIAL TRANSPORTATION

AVAILABILITY

This Rate applies to all Residential Customers in the entire gas service territory who are served by a qualified Choice Supplier receiving service under Rate AG and available at one location, for the total requirements of any residential Customer. Residential Customers are customers receiving the Company's gas service to a single-family dwelling or building, or through one meter to four or fewer units in a multi-family dwelling or premises used as a single family.

GENERAL SERVICE – RESIDENTIAL TRANSPORTATION

PAYMENT

In accordance with Section 8.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

RULES AND REGULATIONS

Where a Customer is returned to the Company or an alternate Supplier of Last Resort prior to the next regular meter reading date, due to the Licensed Choice Natural Gas Supplier's non-performance, Customer will receive service from Company or alternate Supplier of Last Resort for the remainder of the billing month at the contract rate between the Customer and Choice Supplier. Customer must provide evidence of the applicable contract rate, if requested by Company, to receive the contract rate price. As of the next regular meter read date, Customer will be transferred to Rate R, unless enrolled as a Rate RT customer by another Choice Supplier, effective as of the next regular meter read date.

GENERAL TERMS

Company Use and Unaccounted For gas shall be retained in accordance with Section 5, Operational Requirements, paragraph 5.1, Daily Delivery Requirements, of the Gas Choice Supplier Tariff.

RATE GL

GENERAL SERVICE - GAS LIGHT SERVICE

AVAILABILITY

This service is available for street, highway, driveway or other lighting or sign illumination, where measurement by meter of the gas consumed is not practicable or economical. As used herein, "light" means a single lamp or sign having one (1) gas-flow orifice and one (1) or more mantles, and of a type approved by the Company.

DELIVERY SERVICE

AVAILABILITY

This service applies in the entire territory served by the Company. Firm Delivery Service shall be provided for all volumes supplied by the Customer for which the Company has available on system delivery capacity, subject to Section 21 - Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

The Customer must execute a Service Agreement for not less than (1) one year. The contract shall continue in force for consecutive (1) year periods unless cancelled by the Customer upon ninety (90) days written notice to Company prior to the expiration of a contract term.

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable delivery service balancing provisions or in accordance with optionally elected and approved balancing or standby services.

Service under Rate DS is subject to the terms set forth under Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

MONTHLY RATE TABLE

The charge for each monthly billing period shall be the sum of the Customer Charge, the Capacity Charge if applicable, and the Distribution Charge as described below. The following are maximum rates.

Customer Charge: $300.00 per month **(I)**

Plus Capacity Charge: The Company's unitized weighted average cost of firm transportation capacity per elected MDQ.

Plus Maximum Distribution Charge: $3.3651/Mcf **(C,I)**

RATE NNS

NO-NOTICE SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a service agreement with Company for service under Rate NNS. The term of the service agreement shall be concurrent with that of the Customer's underlying Delivery Service Schedule.

Service under this Rate is available for inadvertent fluctuations only and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided.

Service to large volume users, such as electric generation facilities, may be limited as determined by the Company. Service under Rate NNS is subject to the terms and conditions set forth under Section 22 General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

TERMS AND CONDITIONS **(C)**

Customers shall elect a specific level of no-notice service under this Rate. Such election shall be made through the specification of a No-Notice Allowance ("NNA"), in MCF per day, of an amount no less than 4.5% and no greater than 100% of Customer's Daily Firm Requirement, Maximum Daily Quantity or otherwise specified daily contract limit. The elected NNA shall be effective for a fixed period equal to the lesser of one year or the remaining balance of the Customer's service agreement or, a lesser time period mutually agreeable to both the Customer and the Company. In no instance shall a NNA be effective for a period of less than one month. Rate NNS service elections in excess of 4.5%, are interruptible.

No-notice service shall be provided under this Rate whereby the Company shall forward or bank no-notice supplies to the Customer on a daily basis in such amounts necessary to balance the Customer's daily deliveries with the Customer's daily consumption. Forwarded amounts shall be limited in amount by the lesser of the sum of the Customer's daily nomination plus elected NNA or, the Customer's DFR, MDQ or otherwise specified contract limit except as allowed. Banked amounts shall be limited to an amount no greater than the Customer's NNA election.

Customer electing an NNA shall be billed for no-notice service according to that specific level of service.

Volumes in excess of the daily limits shall be subject to Daily Excess Imbalance Charges as set forth in Section 22.4 General Terms For Delivery Service for Rate Schedules DS, LFD, XD and IS on all such excess quantities, in addition to the charges specified in the Customer's Delivery Service Schedule.

(C) Indicates Change

RATE NNS - Continued

NO-NOTICE SERVICE

EXCESS REQUIREMENT OPTION

The Excess Requirement Option is available on an interruptible basis to any delivery service Customer served under Rates XD, LFD. This Option shall extend the no-notice provisions of Rate NNS, on solely a best efforts basis, during periods where Customer's daily requirements exceed transportation contract service limits.

Customer must nominate a Daily Excess Requirement ("DER") under this Option in an amount no less than 5 Mcf per day and no greater than 25% of Customer's DFR or otherwise specified contract limit. On days where service under the Excess Requirement Option is required, Customer will have the right, subject to the terms and conditions set forth herein, to take gas in excess of Customer's DFR or otherwise specified contract limit provided such excess is no greater than the nominated DER amount.

Service taken in excess of the sum of Customer's DFR and DER on any day shall be considered Excess Take or Unauthorized Overrun as determined by Customer's Delivery Service Schedule and service agreement.

Unauthorized gas forwarded or returned to the Company by the Customer shall be considered imbalance gas and shall be subject to either the balancing provisions set forth under Section 22.2 of General Terms for Delivery Service for Rate Schedules DS, LFD, XD and IS or the Customer's otherwise applicable transportation balancing service.

MONTHLY RATE TABLE (Basic NNS Service)

RATE MBS

MONTHLY BALANCING SERVICE

AVAILABILITY

This Rate is available upon request to any Customer served on Rate DS, LFD, XD or IS who, after review and acceptance of such request by Company, has entered into a Service Agreement with Company for service under Rate MBS. The term of the Service Agreement shall be concurrent with that of the Customer's underlying Rate Schedule.

Service under Rate MBS is available for inadvertent fluctuations only, limited to an amount not to exceed 10% of the customer's total scheduled deliveries for the month, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. Service under Rate MBS is subject to the terms set forth in Section 22 General Terms For Delivery Service for Rate Schedules DS, LFD, XD, and IS.

Rate MBS is available as a monthly banking service for Customer transportation deliveries. Service under Rate MBS allows Customer transportation imbalances (metered volumes less total scheduled nominations) which are within 10% of Customer's total scheduled nominations for the month to be carried forward in the Customer's MBS Account ("Balance Account") for redelivery of excesses or receipt of shortfalls in subsequent months.

TERMS AND CONDITIONS

Balance Account Operation. To the extent Customer's total deliveries exceed Customer's total consumption at the end of a Billing Month, the excess volumes shall be added to the Customer's Balance Account. To the extent Customer's total consumption exceeds Customer's total deliveries at the end of a Billing Month, the shortfall volumes shall be subtracted from the Customer's Balance Account.

Balance Account Limits. At no time, as calculated at the end of a Billing Month, shall a Customer exceed a Balance Account excess or shortfall balance greater than 10% of the Customer's total scheduled deliveries for the month, as determined by the Company in its sole discretion. Any such imbalance over 10% (excess or shortfall) shall be subject to the Cash-in/Cash-out pricing set forth in Section 22.2 for monthly imbalance volumes in excess of 5%, with the remaining imbalance volumes to be carried over into the calculation of the Customer’s imbalance volumes for the following month. **(C)**

The Company, in its sole discretion, may zero out the Customer's Balance Account at the end of any Billing Month by purchasing or selling such net imbalance volumes in the Customer's Balance Account at the prevailing month's Cash-In/Cash-Out pricing at set forth in Section 22.2, provided such zero out may occur only if necessitated by operational needs of the Company or as a result of a requirement of an applicable interstate pipeline.

RATE LFD

LARGE FIRM DELIVERY SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company. It is available to any Customer who executes a Service Agreement with the Company for an on system Daily Firm Requirement (DFR), as agreed to by Customer and Company in said agreement, for not less than fifty (50) MCF of gas per day of firm service. Volumes delivered under this Rate shall be metered separately from service under any of the Company's other rates, except as provided for in Rates IS, NNS, and MBS. In lieu of separate metering, the Company may accept contractual commitments specifying minimum volumes of service under Rate LFD.

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized receipt point, as determined by the Company in its sole discretion, provided Company has available on-system and/or pipeline capacity available in such quantities to meet Customer requirements. The Company shall be under no obligation to maintain on-system facilities required for service beyond the term of an executed service agreement.

Unless otherwise agreed by the Customer and Company, the Customer must enter into a Service Agreement for a minimum term of two (2) years. The Service Agreement shall continue in force for consecutive two (2) year periods unless cancelled by Customer upon one (1) year written notice to the Company prior to the expiration of the then current Service Agreement term. The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

Delivery Service shall be provided for all volumes provided by the Customer for which the Company has available delivery capacity, subject to the curtailment provisions of the Company's Tariff, applicable rules and regulations of the PUC and any other governmental mandates. **(C)**

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

The DFR shall be the Company's contracted maximum firm delivery obligation to the Customer on any day and shall be no less than fifty (50) MCF. Service in excess of the DFR is interruptible in accordance with the terms of Rate IS.

Service under Rate LFD is subject to the terms set forth under Section 22 - General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

RATE LFD - Continued

LARGE FIRM DELIVERY SERVICE

MINIMUM BILL

Monthly: The Minimum Monthly Bill shall be the Customer Charge, Demand Charge, Capacity Charge (if applicable), and Charge for Other Transportation.

Annual: The Minimum Annual Bill shall be based on the Customer maintaining a 0.50 annual load factor and shall be due and payable with the bill for the 12th month in the contract year. The Customer's actual load factor shall be determined by dividing the total volume of gas taken during the contract year (including volumes taken under the Retail and Standby Rider, and the Cash-Out provisions of Section 22.2) by the sum of the Daily Firm Requirements for the contract year. If the actual load factor is less than 0.50, then, in addition to payment for actual usage, the Customer shall pay a Minimum Annual Bill charge equal to the product of: (1) the difference between 0.50 and the actual load factor, (2) the sum of the Customer's Daily Firm Requirements for the contract year, and (3) the average delivery charge paid by the Customer over the previous 12-month period, as calculated by the Company. If the Customer's actual load factor is greater than or equal to 0.50, no Minimum Annual Bill charge will be required.

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company. Such charges related to the use of Customer elected and Company provided transportation capacity shall be reflected directly on the Customer’s bill for service rendered on and after April 1, 2024, pursuant to Commission order at Docket R-2023-3040290, with such charges labeled on the bill as Capacity Charge.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then the Customer shall be billed for such excess gas at the rate of Fifty Dollars($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Section 22.4 is primarily intended to establish applicable daily imbalance penalty charges but shall also provide for the pricing applicable to any Unauthorized Overrun volumes, which shall be subject to the same pricing as an Intentional imbalance. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun. **(I)** **(C)** **(C)**

SERVICE UNDER OTHER RATES

Volumes purchased under the Retail and Standby Rider or under the Cash-Out provisions of Section 22.2 or taken under Rate NNS shall be included for the purposes of determining Excess Take Charge and Unauthorized Overrun gas.

(C) Indicates Change (I) Indicates Increase

RATE XD

EXTENDED LARGE FIRM DELIVERY SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company on request of a Customer which the Company determines, in its sole discretion, has a prospective gas volume usage of at least 200,000 MCF per year at the time of execution or renewal of a Service Agreement.

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized receipt point, as determined by the Company in its sole discretion, provided Company has available on-system and/or pipeline capacity available in such quantities to meet Customer's requirements. The Company shall be under no obligation to maintain facilities required for service beyond the term of an executed Service Agreement.

Unless otherwise agreed to by the Customer and the Company, the Customer must enter into a service agreement for a minimum term of three (3) years. For a Customer requesting firm service, the Service Agreement shall specify an initial Daily Firm Requirement (DFR). The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

For Customers requesting firm service, Delivery Service shall be provided for all volumes provided by the Customer for which the Company has available delivery up to DFR, subject to the Section 21 – Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

Service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

The DFR shall be the Company's contracted maximum firm delivery obligation to the Customer on any day. Service in excess of the DFR is interruptible and will be provided under terms and conditions identical to those set forth under Rate Schedule IS.

Service under Rate XD is subject to the terms set forth under Section 22 - General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

RATE XD -Continued

EXTENDED LARGE FIRM DELIVERY SERVICE

MONTHLY RATE TABLE

The charge for each monthly billing period shall be negotiable and shall be the sum of the Customer Charge, Distribution Charge, Demand Charge if applicable, the Capacity Charge (if applicable), and the Minimum Annual Bill as described below. **(C)**

The following are maximum rates.

Customer Charge: Charge as determined by negotiation.

Plus
Maximum Demand Charge: Charge as determined by negotiation.

Plus **(C)**
Capacity Charge: On or after October 28, 2025 when current Rate XD contracts expire, Capacity available for Customer use, and related Capacity Charge, shall be as specified within Customer's service contract, provided Company has available capacity and Company and Customer agree to related terms. For Customers electing Company capacity, such Capacity Charge shall be charged at the Company's unitized weighted average cost of firm transportation capacity per elected DFR. However, for Customers specifically receiving assignment of Columbia Pipeline capacity via agreement with the Company and through capacity release, such Customers, or their NGS, shall pay capacity charges direct to Columbia in accordance with such release. For Customers not receiving any Company capacity, no Capacity Charge will apply.

(C) Indicates Change (I) Indicates Increase

RATE R/S

RETAIL AND STANDBY RIDER

AVAILABILITY

Retail and Standby services are available under the Retail and Standby Rider to any Customer receiving service under Rate Schedules DS, LFD, XD and IS. Service shall be supplied only where the Company's facilities are suitable and available for the service desired. Service is subject to curtailment under Tariff Rule No. 21, Emergency Gas Planning.

Retail and Standby services under this schedule may be provided on a firm and/or interruptible basis. Subject to the Company's sole discretion, services shall be provided only if, and to the extent, sufficient Company and/or Customer provided capacity exists for the transportation of available gas supplies. Unless otherwise agreed by the Company and Customer, the Customer must enter into a service agreement for a minimum term of one (1) year with monthly payments for service taken.

The Company may provide capacity, supply or a bundled service, retail or standby, to the Customer under this rate schedule as per one or more of the following:
For Customers having upstream capacity rights: Company shall provide, or stand ready to provide, gas supplies to the Customer in such amounts and at such delivery or receipt points as necessary to meet Customers' contract requirements, as specified on a daily, monthly, seasonal or annual basis.

For Customers providing, selling or forwarding gas supplies to the Company for redelivery to Customer: Company shall provide, or stand ready to provide, pipeline and/or system capacity to deliver such gas supplies to the Customer.

For Customers requiring bundled sales service: Company shall provide, or stand ready to provide, the necessary pipeline and/or system capacity, and gas supplies necessary to provide gas service to the Customer at the Customers' metered location.

Where applicable, Customer must nominate standby service requirements by specifying a Nominated Standby Requirement (NSR) in MCF and a Daily Standby Requirement (DSR) in MCF per day of amounts equal to the Customer's total and daily standby supply requirements. Unless otherwise agreed by the Company and Customer, the firm or interruptible DSR shall be equal to the NSR divided by the number of days in the standby period.

Customers served under firm Rate Schedules DS, LFD, XD and IS may take firm retail and/or standby service under this rate schedule in any amount up to their available Daily Firm Requirement (DFR) or otherwise specified contract limit. All other terms and conditions of service as specified in Customer's Rate Schedules DS, LFD and XD and/or contract shall continue to apply.

Capacity and/or supply utilization under this rate schedule shall be on an as available basis for customers requesting retail and/or standby services. Subject to the Company's sole discretion, other incrementally obtained capacity and/or supply shall be assigned according to a Customer request queue or otherwise specified auction procedure. When necessary, such request queue or auction procedure shall be established in accordance with the terms outlined in the Company's *Nomination Procedure*.

The Company, upon notice to the Customer, may specify minimum levels of retail and/or standby nominations required for service under this rate schedule.

RATE R/S - Continued

RETAIL AND STANDBY RIDER

Service under Rate R/S is subject to the terms set forth in Section 22.2.

MONTHLY RATE TABLE

The charge for each Billing Month shall be the sum of the Customer Charge

Plus
The Capacity/Reservation Charge corresponding to the Customer's service election,

Plus
The Commodity Charge as shown below,

Plus
Administrative Service Fee: $75 per month.

Capacity/Reservation Charge:

Firm Retail Option: The applicable market price for available upstream capacity, plus the applicable charge for available system capacity, less any capacity charges paid under the Customer's applicable Rate Schedule, but in no case less than zero.

Firm Standby Option: The applicable Firm Standby Reservation Charge per MCF of DSR and/or per MCF of NSR.

a) The Firm Standby Reservation Charge shall be equal to the sum of the monthly contract demand rates charge by the Company's interstate pipeline suppliers divided by the sum of the daily contract demands.
b) The Firm Standby Reservation Charge shall be subject to increase or decrease whenever any of the Company's interstate pipeline suppliers make changes in their contract demand rates. Any change in the Standby Rate shall become effective on the first day of the month following the date on which the change in pipeline contract demand rate becomes effective.
c) The Firm Standby Reservation Charge revenues will be credited to the PGC.

Interruptible Standby Option: The applicable interruptible standby reservation charge per MCF of DSR and/or per MCF of NSR.

Plus

Commodity Charge: The distribution charge applicable under the Customer's Rate Schedule plus the applicable commodity cost, which shall be the identifiable additional cost of supply necessary to serve the Customer's usage, plus any applicable reservation cost of supply.

RATE R/S - Continued

RETAIL AND STANDBY RIDER

The minimum monthly bill under this rate schedule shall be the sum of the Customer and Capacity/Reservation Charges plus any commodity reservation costs per MCF of NSR.

RATE IS

INTERRUPTIBLE SERVICE

AVAILABILITY

This Rate applies in the entire territory served by the Company. It is available to any commercial or industrial Customer using gas for any purpose when Customer has executed a Service Agreement with a term of at least one (1) year for use of gas under the terms of this Tariff.

Service under this Rate shall only be provided when, in the Company's sole discretion, sufficient system capacity is available.

Unless otherwise agreed by both Customer and Company, service under Rate IS is available only to Customer loads with documented installed capability to consume an alternate fuel, and the Customer must enter into a Service Agreement for a minimum term of one (1) year with monthly payments for service taken. The Customer shall remain liable for minimum bill requirements for the length of the Service Agreement under this Rate, including applicable penalties, in the event the Customer defaults on its Service Agreement before the end of its term.

The Customer and Company agree that a Manual Interruptible ("MI") Customer must maintain the ability to transfer the fuel source of its interruptible equipment from natural gas to an alternate fuel manually and demonstrate that they have the capability of consuming at least 5,000 MCF of gas annually. For all Automatic Temperature Control ("ATC") Customers, the Customer shall install and operate equipment to transfer the fuel source of its interruptible equipment from natural gas to an alternate fuel at a predetermined temperature setting as determined annually by the Company. **(C)** **(C)**

The Company shall verify, prior to commencement of service for new Customers that the customer load being served qualifies under these provisions. The Company shall be permitted to inspect the facilities and piping at the premises of the Customer from time to time to confirm that the load being served so qualifies. The Company, at its discretion, may require such separate metering and piping and elimination of any cross-connection to non-qualifying end use equipment as may be necessary to enforce these provisions and to ensure the interruption of service hereunder during periods of restricted service. It is the Customer's responsibility to ensure qualifying alternate fuel capability is maintained in good working order as Company shall maintain no obligation for service during periods of interruption. If the Customer fails to meet any of the applicable conditions listed below, as determined by the Company in its sole discretion, the Company may discontinue service or transfer the Customer to the otherwise applicable firm or standby rate schedule, provided sufficient on-system capacity is available:

1) ability to maintain qualified alternate fuel facilities
2) 24-hour notification capability
3) maintain operable ATC equipment

Service will be provided by the Company where the Customer provides suitable gas delivered to a Company authorized contract receipt point, as determined by the Company in its sole discretion and only when in the opinion of the Company there are sufficient facilities and gas supply. The Company maintains sole discretion to determine the appropriate allocation of gas to Customers.

(C) Indicates Change

RATE IS - Continued

INTERRUPTIBLE SERVICE

Gas service in excess of volumes delivered by the Customer shall be provided only in accordance with applicable balancing provisions or in accordance with optionally elected and approved balancing or standby services.

INTERRUPTION NOTIFICATION

MI Customers agree to maintain a twenty-four hour capability to receive notification of interruptions by the Company. When notified by the Company, the MI customer must discontinue use of natural gas for the Rate IS account until notification of Company to resume use of natural gas under Rate IS. Except in an emergency circumstance, the Company will provide reasonable notice of any interruption at least two hours prior, or upon written request of the Customer, if agreed by Company, of up to six hours.

ATC Customers agree to maintain equipment required to automatically switch fuels from natural gas to Customer's alternate fuel and from alternate fuel back to natural gas based on outside temperatures, as determined solely by the Company and noticed annually to the Customer. The ATC equipment shall meet specifications as provided by the Company and shall be in working order at all times from November through March of each year.

The Company reserves the right to periodically verify MI and ATC Customer's alternate fuel as well as to verify the proper operation of ATC equipment.

MONTHLY RATE TABLE

Customer Charge: Charge as negotiated between the Customer and the Company.

Plus,

Distribution Charge:
Charge as negotiated between the Customer and Company based upon the alternate fuels that the Customer has the economic capability of consuming, inclusive of related business factors.

MINIMUM ANNUAL BILL **(C)**

Shall be as negotiated by the Customer and Company and, unless the Company otherwise agrees, the Minimum Annual Bill shall be calculated at the end of any Service Agreement period, anniversary, or termination of service in accordance with terms of the Service Agreement. Volumes of natural gas taken under Standby Service during the Service Agreement period shall be credited to the Minimum Annual Bill volumes.

SURCHARGES and RIDERS

Rider I – Distribution System Improvement Charge

PAYMENT

In accordance with Section 8 of this Tariff.

(C) Indicates Change

RATE IS - Continued

INTERRUPTIBLE SERVICE

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then Customer shall be billed for such excess gas at the rate of Fifty Dollars ($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Section 22.4 is primarily intended to establish applicable daily imbalance penalty charges but shall also provide for the pricing applicable to any Unauthorized Overrun volumes, which shall be subject to the same pricing as an Intentional imbalance. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun. **(C)**

Gas delivered under the Rate IS or purchased under the Cash-Out provisions of Section 22.2 or the Retail and Standby Rider or taken under Rate NNS shall be included in the determination of Unauthorized Overrun gas.

RETAINAGE RATE

Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, AND IS, paragraph 22.1(j).

NOTICE

This supplement makes increases and changes to existing rates (see page 2b).

RULES AND REGULATIONS

1. THE CHOICE SUPPLIER TARIFF

1.1 Filing and Inspection. A copy of this Choice Supplier Tariff (Sections 1 – 11) (hereinafter "Supplier Tariff"), which includes the Charges and Rules and Regulations under which the Company will supply Aggregation Service to Company approved Natural Gas Suppliers (Choice Suppliers) serving customers under Rate Schedules RT and NT, is on file with the Pennsylvania Public Utility Commission and is available on the Company's website https://www.ugi.com/tariffs. (C)

1.2 Application. The provisions of the Supplier Tariff apply to all Choice Suppliers serving customers under Rate Schedules RT and NT.

1.3 Statement by Agents. No representative has authority to modify a Supplier Tariff rule or provision, or to bind the Company by any contrary promise or representation.

1.4 Rules and Regulations. The Rules and Regulations, as part of this Supplier Tariff, are a part of every Aggregation Agreement entered into by the Company pursuant to this Supplier.

1.5 Purpose of Tariff. This Supplier Tariff sets forth the basic requirements for interactions and coordination between the Company in its role as a Natural Gas Distribution Company (NGDC) and Choice Suppliers, and includes rules necessary for maintaining the delivery of gas to customers served under Rate Schedules RT and NT.

(C) Indicates Change

RULES AND REGULATIONS

2. CHOICE SUPPLIER QUALIFICATION

2.1 Service under this Tariff is contingent upon the Choice Supplier completing the Company's Choice Supplier Application Form to Serve Choice Customers (Application) and Company's approval of such Application. Choice Supplier shall include with its returned Application, payment of a non-refundable Enrollment Fee of five hundred dollars ($500). In the event the Choice Supplier submits an incomplete application, the Company shall provide written notice to the Choice Supplier of the Application's deficiencies. An incomplete Application will not be processed by the Company until it is fully completed by the Choice Supplier and received by the Company. Failure to submit a fully completed Application within thirty (30) calendar days following notice that the Application was incomplete will result in a rejection of the Application.

2.2 Choice Supplier must meet all pipeline credit standards and prove it is qualified by the pipeline to receive an assignment, release or transfer of pipeline capacity.

2.3 Processing of Application. The Company shall promptly process each Application and notify the Choice Supplier of the results of Company's review of such Application. If the Company rejects an application, the Company will provide a reason.

2.4 Approval of Application. Upon approval of Choice Supplier's Application, Company shall execute the duplicate originals of the Aggregation Agreement tendered by the Choice Supplier and return one copy to the Choice Supplier.

2.5 Supplemental Evaluations. Company may require additional periodic credit evaluations to ensure ongoing financial fitness as set forth in Section 8 of this Tariff. The Choice Supplier will be assessed a $250 fee for all credit evaluations performed by Company. The evaluation will be based on standard credit factors such as previous Choice Supplier's customer service record, Dun & Bradstreet or similar financial and credit ratings, trade references, bank information, unused line of credit, and financial information. Company shall have sole discretion to determine creditworthiness based on the above criteria but will not deny creditworthiness without reasonable cause.

2.6 A qualified Choice Supplier may opt to participate in the Purchase of Receivables ("POR") program offered by the Company by entering into a Purchase of Receivables Agreement. Upon approval of a Purchase of Receivables Agreement, the Company shall execute the duplicate originals of the Purchase of Receivables Agreement tendered by the Choice Supplier and return one copy to the Choice Supplier. A copy of the POR Agreement may be found on the Company's Energy Management website.

RULES AND REGULATIONS

3. CUSTOMER LIST

3.1 Customer Choice List. Company will maintain a list of Rate R, RT, N, and NT customers that have authorized the release of their information in a secure portion of a Web Site accessible to Choice suppliers in compliance with the requirements of Rule 3.2. When authorized by the customer, this list shall also include account number, address, rate code and / or historical usage.

3.2 Customer List Confidentiality. Such list shall only be accessible by Choice Suppliers that have executed a Confidentiality Agreement and are otherwise qualified to serve Rate RT and NT customers under this Tariff.

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.1 Unless otherwise authorized by Company, Choice Suppliers must comply with the provisions of Section 7 of the Choice Supplier Tariff.

4.2 A Choice Supplier must provide and maintain a bond or other financial guarantee in a form and amount as set forth in Section 8 that is acceptable to Company and/or other PUC-approved Supplier of Last Resort.

4.3 A Choice Supplier must acquire or agree to acquire an adequate supply of natural gas to serve Choice Supplier's Aggregation Pool and make or cause to be made arrangements by which such gas supplies can be transported to Company's city gates, as directed by Company. Such supplies must be ranked on the transporting pipeline at the pipeline's highest Predetermined Allocation ranking.

4.4 A Choice Supplier must enter into an Aggregation Agreement to serve Choice customers under Rate Schedules RT and NT.

4.5 A Choice Supplier must comply with Company system reliability requirements, including Daily Flow Directives (DFDs), Operational Flow Orders (OFOs), and notice requirements.

4.6 A Choice Supplier must comply with applicable communications standards, including approved internet based Electronic Data Interchange (EDI) procedures.

4.7 A Choice Supplier must cooperate with Company in the preparation of an annual reliability plan presented to the PUC.

4.8 A Choice Supplier must acquire and maintain a PUC license.

4.9 A Choice Supplier (including their nominating agents, if applicable) who nominates gas for delivery to the Company's system must have and maintain Internet access. The Choice Supplier shall also provide Company with a valid email address and 24-hour contact information.

4.10 The Company's provision of Aggregation Service is contingent upon the Choice Supplier paying all amounts billed to it by the Company in a timely manner.

4.11 Failure to comply with all Choice Supplier Obligations will result in the Company disqualifying the Choice Supplier from serving customers under Rate Schedules RT and NT. In the event the Company disqualifies a Choice Supplier, the Choice Supplier may appeal the disqualification to the PUC. If the PUC does not reverse the disqualification within 45 days, the Choice Supplier will be disqualified at the end of the 45-day period and its customers will be returned to sales service or switched to another Choice Supplier. Any Company disqualification will be on a non-discriminatory basis.

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.12 If a Choice Supplier elects to participate in the Company's POR Program, the Choice Supplier must enter into a POR Agreement for the rate classes that it serves that will be included in the POR. The elected Rate Classes shall be one of the following: (1) RT only, (2) NT only, or (3) RT and NT. All receivables associated with basic natural gas supply services in the specific rate class, subject to the rate class elections made above, must be sold by the participating Supplier to the Utility. For the purposes of this provision, the phrase "basic natural gas supply services" shall include charges directly related to the physical delivery of natural gas to a retail customer but shall not include charges for "carbon-neutral" products, appliance maintenance service, energy efficiency services, termination or cancellation fees, security deposits or other products or services not directly related to the physical delivery of natural gas to a retail customer. Customer accounts that are billed for non-basic natural gas supply services will not be eligible for UGI's POR program. All of the NGS' customer accounts within the elected Rate Classes (subject to the volumetric limits contained in section 5.4) must be POR eligible accounts, with the exception of customers that purchase carbon-neutral products. NGSs may choose to use UGI consolidated billing for Non-POR eligible customers who are purchasing bundled "carbon-neutral" product offerings. The termination and reconnection provisions of Chapters 14 and 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing. UGI shall support rate-ready billing, and all NGS rates must conform to supported rate designs. For Purchased Customer Accounts, Company shall pay Choice Supplier an amount equal to 97.30% for residential amounts billed (inclusive of associated sales taxes) and 99.30% of non-residential amounts billed (also inclusive of taxes). Customer participation for NT shall be subject to Volumetric Eligibility pursuant to Section 5.4. **(C)** **(C)** **(C)**

4.13 All existing customers of Choice Suppliers who elect to participate in the Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier and Company that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

All new customers enrolling with Choice Suppliers who are participating in Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier prior to enrollment, and by Company upon enrollment, that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

(C) Indicates Change

RULES AND REGULATIONS

5. OPERATIONAL REQUIREMENTS

5.1 Daily Delivery Requirements. The Company will communicate to each Choice Supplier a Daily Delivery Requirement (DDR). The DDR will be the required amount of gas to be delivered for the indicated date for each Choice Supplier's pool of customers served under Rate Schedules RT and NT and may specify the required points of delivery. The DDR includes a volume of gas that the Company will retain for Company use gas, and lost and unaccounted for gas, equal to 1.5% of total volume of gas delivered into its system for the Customer's account. Choice Suppliers who fail to deliver their DDR will be subject to penalties and imbalance charges as outlined in Rate AG. **(I)**

5.2 Daily Flow Directive. An order issued by the Company to address system management issues including actions necessary to comply with statutory directives and obligations. DFDs will be communicated to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. DFD notices shall include an explanation of the cause of the DFD. Customers and NGSs must provide the Company with a 24-hour contact for DFDs. Failure to comply with a DFD may result in the Customer or NGS being assessed the penalty charge set forth in Section 22.4 of the Company's Gas Service Tariff.

5.3 Operational Flow Orders. A directive issued by the Company that is reasonably necessary to alleviate conditions that threaten the operational integrity of the Company's system, including actions necessary to comply with statutory directives and obligations OFOs will be communicated as soon as reasonably practical to affected Customers or NGSs via e-mail if the Customer or NGSs prefer to receive notice in this manner and provide a valid e-mail address, or if no such preference is expressed, either electronically, by telephone, through the use of the media or by an alternate mutually agreed upon method between the Company and the Customer or NGS. OFO notices shall include an explanation of the cause of the DFD. Customers and NGSs must provide the Company with a 24-hour contact for OFOs. Failure to comply with an OFO may result in the Customer or NGS being assessed the penalty charge set forth in Section 22.4 of the Company's Gas Service Tariff.

5.4 POR Volumetric Eligibility Requirements for Rate NT. All Rate NT Customers with annual usage of 1,000 Mcf or less will be eligible for inclusion into a POR program.

(I) Indicates Increase

RULES AND REGULATIONS

6. BILLING AND PAYMENT

6.1 Billing Period. On or before the 15th of a month, Company shall send each Choice Supplier an invoice reflecting all charges incurred by the Choice Supplier for the prior calendar month activities. Such invoice may include charges related to adjustments for prior periods.

6.2 Payment. Payments will be due 10 days following issuance of the invoice. Choice Supplier shall make payment to the Company of such invoiced amount by wire transfer to the bank and account specified on the invoice. If the invoiced amount is less than $1,000, payment can be made by check, payable to the Company. Unpaid balances shall accrue interest at the rate of 1.5 percent per month. Unpaid balances may result in the Company accessing the financial security posted by the Choice Supplier and / or the Choice Supplier being disqualified from providing Aggregation Service.

6.3 Billing Dispute. If Choice Supplier asserts a good faith billing dispute, the Choice Supplier shall inform the Company in writing of such dispute and pay the undisputed amount. The disputed amount shall accrue interest at the effective prime rate of interest as published under "Money Rates" by "The Wall Street Journal", or the maximum contract rate permitted by law, whichever is less. The Choice Supplier and the Company shall endeavor to resolve any disputes promptly and the amount determined to be properly invoiced, plus accrued interest on such amount shall be paid to the Company within fifteen (15) days following such resolution. Unpaid amounts not subject to dispute shall accrue interest at the rate specified in 6.2.

6.4 Licensed Supplier Budget Billing. The Company will bill all budget billing amounts calculated and provided by the Licensed Supplier. The Company will not determine a Licensed Supplier's budget bill charge unless the account is being billed under the POR program.

RULES AND REGULATIONS

7. NOMINATION PROCEDURE

7.1 Customer Choice Nomination Procedure. The Nomination Procedure specifies requirements for nominating, scheduling, balancing, and communicating information relating to Choice Supplier's gas deliveries for customers served under Rates RT and NT.

7.2 Contact Persons. A list of Company contact persons will be posted on the Company's Web Site, located at https://ugi.outsystemsenterprise.com/UGIContacts_FO/, or its successor, along with their department affiliation, email address, and telephone number.

7.3 Mandatory Assignment. As used in this tariff the term "Firm Commodity Supply Alternative" shall mean a Company purchase of natural gas, delivered directly to its distribution system or at points along Company pipeline capacity routes (Commodity Delivery Points), constituting a component of Company's PGC supply portfolio and an alternative to pipeline capacity contracts upstream of the Commodity Delivery Points or other firm sources of PGC supply. Firm Commodity Supply Alternative contractual arrangements may require the payment of demand charges or minimum take requirements. Except as provided below, Choice Supplier shall be required to accept releases of Company pipeline capacity combined with bundled city gate sales and, as applicable, peaking sales of gas from Company and sales of gas associated with Firm Commodity Supply Alternative arrangements, in accordance with the following assignments:

A monthly release of interstate pipeline capacity or allocation of Firm Commodity Supply Alternative in an amount equal to thirty-eight percent (38%) of the Peak Day Delivery Requirement ("PDDR") of the Choice Customers served by the Choice Supplier during the month shall be released or allocated at a price equal to the projected weighted average demand cost of all PGC capacity, storage, peaking and Firm Commodity Supply Alternative assets, divided by 0.255. Effective November 1, 2020, to the extent the full Firm Commodity Supply Alternative is not fully nominated by Choice Supplier to satisfy its DDR, the remaining daily quantity may be nominated to a non-Choice transportation customer or pool of non-Choice transportation customers. **(C)** **(C)**

The Company shall also provide Choice Suppliers with a must-take Monthly Bundled Sale Quantity ("MBSQ") during each winter month of November through March, and the Choice Supplier would be permitted to nominate and purchase gas at the Company's city gates throughout each winter month, subject to the Maximum Daily Quantity ("MDQ") limits, up to the MBSQ. The MDQ equals twenty-four percent (24%) of the PDDR of the Choice Customers served by the Choice Supplier during the month multiplied by the percentage shown on the Company's Energy Management website. The minimum daily quantity is zero. Choice Suppliers are required to nominate to the Company a daily quantity for bundled sales no later than 2:00 P.M. Eastern Prevailing Time on each Intercontinental Exchange ("ICE") trading day for deliveries applicable to the ICE flow dates. If no nomination is received, the nomination quantity would default to zero. The Company reserves the right to issue Operational Flow Orders ("OFO") that can modify the daily bundled sale MDQ or require certain levels of deliveries from the released firm transportation contracts. These OFOs would be issued for operational reasons only. MBSQs would be based on the Company's storage withdrawal plan, to be updated annually, and communicated as a percentage of each Choice Supplier's pre-month normalized **(C)**

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

delivery requirements, which will be shown on the Company's Energy Management website.

If the full MBSQ is not nominated and purchased by the end of each such winter month, the shortfall ("Bundled Sale Cash-In quantity") would be purchased by the PGC ("Bundled Sale Cash-In amount") as follows:

~~a.~~ The DDR Variation Percentage is the sum of the actual DDRs experienced by a Choice Supplier divided by the sum of the pre-month average DDRs that was used to calculate the MBSQ, converted to a percentage. For any month where the DDR Variation Percentage is greater than ninety percent (90%), the Bundled Sale Cash-In amount would equal (1) the product of (a) 0.90 times the lowest absolute low for the Texas Eastern, M-2 receipts Reference Price as published in DPP for the applicable month of flow minus (b) the summer Reference Price used for bundled sales (the "Bundled Sale Cash-In Reference Price") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier. **(C)**

b. In recognition of the effects of extreme warm weather conditions, shortfall amounts would be purchased as follows under such conditions:

i. For any month where (a) the DDR Variation Percentage is less than or equal to ninety percent(90%) and (b) the Bundled Sale Cash-In quantity is less than or equal to the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the First of the Month Price called "Columbia Gas Transmission Corp., Appalachia" as published in the MPP for the month subsequent to the applicable month in which the Bundled Sale Cash-In quantity was created minus the summer Reference Price used for bundled sales (the "Alternate Bundled Sale Cash-In Reference Price") times (2) the Bundled Sale Cash-In quantity. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier. **(C)**

ii. For any month where (a) the DDR Variation Percentage is less than or equal ninety percent (90%) and (b) the Bundled Sale Cash-In quantity is greater than the MBSQ minus the product of the DDR Variation Percentage times the MBSQ, then the Bundled Sale Cash-In amount would equal (1) the Alternate Bundled Sale Cash-In Reference Price, as defined in Section 7.3.b.i, times the DDR Variation Percentage times the MBSQ plus(2) the Bundled Sale Cash-In Reference Price, as defined in Section 7.3.a,times the difference of the Bundled Sale Cash-In quantity minus the product of the DDR Variation Percentage times the MBSQ. If the resulting amount is positive, it would be credited to the Choice Supplier, or if negative, would be billed to the Choice Supplier. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

In addition to the bundled sales described above, Choice Suppliers shall be required to purchase from Company a separate bundled sale on peak days ("Peaking Sale") equal to an amount up to thirty-eight percent (38%) of the PDDR of the Choice Customers served by the Choice Supplier during the month. The Peaking Sale would be made on winter days when the Choice Supplier's DDR exceeds the sum of the released firm capacity and the MDQ associated with the bundled sale. The Peaking Sale quantity would be the difference of the Choice Supplier's DDR minus the sum of the released firm capacity and the MDQ associated with the bundled sale. The Peaking Sale price would be based on the commodity cost of the Company's peaking services. If weather conditions cause the Choice Supplier's DDR to exceed the Choice Supplier's PDDR, the Choice Supplier would be responsible for arranging for supplies to meet the additional delivery requirements for its Choice Customers. **(C)**

Also in addition to the bundled sales described above, to the extent Company's design cold PGC supply portfolio includes Firm Commodity Supply Alternative contractual arrangements containing minimum take requirements, Choice Supplier shall also be required to make monthly purchases of natural gas from Company in an amount and at the commodity price Company would have been required to pay under the Firm Commodity Supply Alternative contractual arrangements had the Choice Customers projected to be served by the Choice Supplier during the month received PGC service. To the extent Company's design cold PGC supply portfolio includes Firm Commodity Supply Alternative contractual arrangements not containing minimum take requirements, Choice Supplier may elect on a month-to-month basis to make monthly bundled city gate purchases of natural gas from Company in an amount and at the commodity price Company would have been required to pay had the Choice Customers projected to be served by the Choice Supplier during the month received PGC service, provided, however, that nothing in this section shall preclude the Company from issuing OFOs requiring additional purchases of natural gas in accordance with the provisions of Section 5.3 of this tariff.

7.4 Capacity Recall. All capacity assigned, released or transferred by Company is subject to recall, or in the event:

a. A Choice Supplier is disqualified as an approved Choice Supplier on Company's system; or

b. The amount of capacity assigned, release or otherwise transferred is no longer required to serve the Choice Supplier's Pool; or

c. The Choice Supplier fails to comply with Section 4 of this tariff (Supplier Obligations) and the capacity is required by the Company or PUC approved Supplier of Last Resort to meet its firm commitments; or

d. The capacity is needed to protect the Company's gas distribution system integrity or meet the Company's public utility obligations.

(C) Indicates Change

RULES AND REGULATIONS

7. NOMINATION PROCEDURE - CONTINUED

7.5 Agents. A Choice Supplier may have one or more agents who perform one or more supply obligations under this Supplier Tariff. In the event such an agent or agents are utilized, Choice Supplier shall notify Company of the responsibilities of the Agent and shall provide Company with the Agent's valid e-mail address, 24-hour contact, and phone number for contact purpose. Choice Suppliers using Agents shall remain liable for all charges and penalties.

7.6 Determination of Capacity Assignment Quantities. Assignments, releases or transfers of upstream pipeline firm transportation capacity made pursuant to Section 7.3 shall be made on the basis of and in accordance with the supply portfolio held by Company at the time of assignment and the composition of the Choice Supplier's Pool. Each month the Company will evaluate and adjust the capacity releases quantity made to the Choice Supplier from time to time, as required.

7.7 City Gate Receipt Points. For nomination purposes, all transportation volumes received on behalf of customers served under Rates RT and NT shall be nominated to the Company's City Gate receipt points. Company reserves the right to specify delivery receipt points.

7.8 Daily Nominations. Choice Suppliers serving Rate RT and NT customers shall submit daily nominations equal to the DDR, consistent with the Company's requirements.

7.9 Third Party Supply Nominations - Customer Consent. All Company Choice Customers must provide consent to any Choice Supplier nominating on their behalf. Enrollments by Choice Suppliers are deemed to constitute that the customer has provided such consent. For transportation customers served under Rates RT and NT the Choice Supplier must maintain and produce upon request by Company evidence of customer consent within one business day notice.

RULES AND REGULATIONS

8. FINANCIAL SECURITY

8.1 Financial Security. A Choice Supplier shall provide financial security to ensure that Company and/or other PUC-approved Supplier of Last Resort is able to receive, without undue delay, funds or other forms of remuneration sufficient to meet the financial consequences of a Choice Supplier's failure to perform its natural gas supply delivery service obligations hereunder. Company may also use such forms of financial security to satisfy in part or in whole a Choice Supplier's obligation to pay the penalties authorized by this Supplier Tariff. The amount and the form of the security, if not mutually agreed upon by the Company and the Choice Supplier, shall be based on the criteria established under 52 Pa. Code § 62.111(c) and as set forth in this Section 8.

8.2 Amount of Financial Security. A Choice Supplier seeking to be licensed to provide service on the Company's system shall be required to provide 1) a minimum surety level of $50,000 or 2), if higher, the sum of the surety level requirements calculated on a customer basis equal to (i)$60.00 per customer for residential customers; and ii)$94.24/Dth times the Design Day Requirement (in Dth) for Choice Supplier's pool of non-residential customers. This security level shall be subject to adjustments as provided in Section 8.5. Provided, however, the Company reserves its right to file to change that methodology after the effective date of new rates established in the proceeding if the security levels prove inadequate.

8.3 Forms of Financial Security. For purposes of satisfying the amount of financial security determined under Section 8.2 hereof, the Choice Supplier shall provide financial security in one or more of the following manners, in a form reasonably acceptable to the Company and/or other PUC-approved Supplier of Last Resort, and shall reimburse Company for attorneys' fees and all related external costs incurred by Company in implementing and enforcing the form of financial security provided by Choice Supplier:

(a) cash;

(b) performance bond;

(c) irrevocable letter of credit;

(d) guarantee from a third party;

(e) call options satisfying the requirements of Section 8.4 hereof;

(f) in the case of Choice Suppliers with annual operating revenues of less than $1 million; real or personal property placed in escrow or other arrangement that would make the property readily available to Company in the event of the Choice Supplier's non-performance or entering into bankruptcy, provided that the Choice Supplier (i) provides a verified statement, certified by a third party report, showing that the Choice Supplier has clear title to the property and that the property has not been pledged as collateral, or otherwise encumbered in regard to any other legal or financial transaction; (ii) provides a current appraisal report of the market value of the property; and (iii) grant the Company, upon request, a security interest in such property in a form acceptable to Company;

(g) accounts receivable pledged or assigned to the Company pursuant to a Company PUC-approved POR program satisfying the requirements of Section 8.6 hereof; or

RULES AND REGULATIONS

8. FINANCIAL SECURITY – CONTINUED

(h) another form of financial security mutually acceptable to Company and Choice Supplier.

8.4 Call Option Requirements. A Choice Supplier may meet some or all of its financial security obligations determined under Section 8.2 hereof by providing to Company or paying the Company to procure a Call Option for a volume equal to the monthly Design Day Requirements of the Choice Supplier's customers served under Rate Schedules RT and NT. Unless otherwise authorized by Company, the Call Option must have a strike price equal to or less than the Choice Supplier's contract price(s) with its customers served under Rate Schedules RT and NT. The Call Option shall allow Choice Supplier or Company to call on a volume equal to the Choice Supplier's Design Day Requirement on each and every day the Call Option is in place such that the exercise on any day does not preclude or impact the ability to exercise the option on a subsequent day. Call Options shall be subject to the following requirements:

(a) If procured by Choice Supplier, the Call Option must enable Company to exercise the Call Option in the event of non-performance by the Choice Supplier without obtaining the prior consent of Choice Supplier;

(b) If procured by Choice Supplier, the Call Option may be exercised by it for any reason, including economic reasons, on any day when Company and/or other PUC-approved supplier of last resort does not need to exercise it because of Choice Supplier's failure to perform its natural gas supply delivery service obligations hereunder;

(c) Company shall specify the period over which the Call Option may be exercised;

(d) The Call Option may be a direct NYMEX instrument, or it may be obtained indirectly from a third party. If the Call Option is a direct NYMEX instrument, the Choice Supplier shall assign the applicable capacity to Company. If the Call Option is obtained indirectly from a third party, then the transaction point shall be at a Company-approved city gate receipt point; and

(e) Choice Supplier shall be responsible for the cost of the Call Option.

8.5 Adjustments to Financial Security Level. From time to time, the Company shall review the financial security provided by a Choice Supplier and determine whether any adjustments are required consistent with the formula under Section 8.2 hereof. The Company shall use the following factors to determine whether any such adjustments are required:

(a) A change in the Choice Supplier's recent operating history on Company's system or on other NGDS systems has materially affected Company system operation or reliability. A change that could materially affect the Company system or reliability may occur when the Choice Supplier fails to deliver natural gas supply sufficient to meet its customers' needs on 5 separate occasions within a 30-day period or fails to comply with Company Operational Flow Orders as defined at 52 Pa. Code § 69.11.

RULES AND REGULATIONS

8. FINANCIAL SECURITY - CONTINUED

(b) A significant change in the number of customers served, in the volume of gas delivered, or in the unit price of natural gas or a change in the class of customers being served by the Choice Supplier. A change over a consecutive 30-day period of 25% in the number of customers served, in the volume of gas delivered or in the average unit price of natural gas would represent a significant change.

(c) A change in the Choice Supplier's credit reports that materially affects the Choice Supplier's creditworthiness. A Choice Supplier's creditworthiness could be materially affected when two of the following credit rating companies change the Choice Supplier's credit rating: Dun & Bradstreet, Standard & Poor's Rating Services, Inc., TransUnion LLC, EQUIFAX Inc., Experian Information Solutions, Inc.

(d) A change in operational or financial circumstances that materially affects the Choice Suppliers' creditworthiness. A Choice Supplier's creditworthiness could be materially affected when two of the following investment rating companies change the Choice Supplier's rating of its issued securities from an investment grade or good rating to a speculative or moderate credit risk rating, and vice versa: Standard and Poor's Rating Services, Inc., Moody's Investment Services, Inc., Fitch, Inc., A.M. Best Company, Inc. and DBRS, Inc.

8.6 POR Requirements. A Choice Supplier may meet part or all of its financial security obligations determined under Section 8.2 hereof utilizing the accounts receivable pledged or assigned to the Company pursuant to a Company PUC-approved POR program, provided that Choice Supplier executes a Security Agreement which, among other things: (a) grants Company a first priority security interest in the accounts payable to Choice Supplier for the purchased receivables; and (b) grants Company an immediate right of set off against any account payable to Choice Supplier for any obligation owed by Choice Supplier to Company.

To reflect the variability in the amounts owed by Company to Choice Supplier for purchased receivables given seasonal variations in customer loads, the amount of this form of security will be determined pursuant to the following formula: (The average daily Mcf volume of gas delivered by the Choice Supplier during the lowest 30 day period of volume during the past 12 months for accounts enrolled in the POR program) times (the lowest rate per Mcf charged by the Choice Supplier during the past 12 months) times (the number of days between the purchase of and payment for a Choice Supplier's receivables).

8.7 Notice. If the Company determines, based on the criteria in Section 8.5 hereof, that an adjustment in the amount or type of security that a Choice Supplier must provide is warranted, the Company shall provide notice of its determination to the Choice Supplier in writing. The Choice Supplier shall comply with the Company's determination no later than 5 business days after the date the Choice Supplier was served with notice of the Company's determination. If the Choice Supplier disagrees with the Company's determination, the Choice Supplier may file a dispute with the Company, and the Company and the Choice Supplier must attempt to resolve the dispute within 30 days after the date that the Company was notified of the dispute.

RULES AND REGULATIONS

9. ENROLLMENT OF CUSTOMERS INTO RATE SCHEDULES RT AND NT

9.1 To be served under Rate Schedules RT and NT, a Customer must be enrolled by the Choice Supplier elected by the Customer. Such enrollment by the Choice Supplier must be provided in an electronic file to the Company via an approved internet-based EDI transaction. The requirement filed shall include:

a. The customer's name;
b. The customer's address;
c. The customer's Company account number;
d. The specific transaction;
e. The elected billing option.

9.2 Company Confirmation. Company will electronically confirm receipt of the enrollment information and within one (1) business day and subsequently provide an electronic validation of the Choice Supplier's transmitted information.

9.3 Determination of Gas Flow Date. For enrollments received and processed on or before the 15th of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company's mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer's regularly scheduled meter reading date in the calendar month immediately following the month the enrollment information was received and processed. For enrollments received and processed after the 15th of any calendar month, the customer will be switched to Rate Schedule RT and NT, where the customer does not respond within 5 days from the Company's mailing of a letter confirming the election to be served by the Choice Supplier, on the Customer's regularly scheduled meter reading date in the second calendar month following the month the enrollment information was received and processed. **(C)** **(C)**

(C) Indicates Change

RULES AND REGULATIONS

10. RATE AG - AGGREGATION SERVICE

AVAILABILITY

Rate AG - Aggregation Service (AG Service) is available to and required for an approved Natural Gas Supplier (Choice Supplier) licensed by the PUC to provide natural gas supply service to customers who qualify to receive service under Rate RT (General Service - Residential Transportation) or Rate NT (General Service - Non-residential Transportation)(hereinafter a Choice Supplier).

AGGREGATION SERVICE

A Choice Supplier qualified to receive Rate AG Aggregation Service shall aggregate the load of customers served under Rates RT and NT customers in an Aggregation Pool. Such Aggregation Pool is limited to customers served under Rates RT and NT.

ASSIGNMENT OF COMPANY PIPELINE CAPACITY

Company has the right to require the Choice Supplier to accept a release, assignment or transfer of Company pipeline capacity on a recallable basis. The minimum such assignment shall be is one (1) Dth per day per pipeline path.

RATE TABLE

Balancing Fee for Choice Supplier ($/MCF) – As posted.

(Total Cost of Pipeline Assets Retained by Company for System Balancing - Balancing Related PGC Credits) divided by (Projected Annual Sales and Transportation Volumes Utilizing the Assets, as projected in each annual 1307(f) filing). This rate will be posted on Company’s Delivery Service Web Site or its successor and will be updated as required.

Pipeline Capacity and Bundled Sales:
Choice Supplier shall be responsible for applicable charges pursuant to Section 7.

RULES AND REGULATIONS

10. RATE AG – AGGREGATION SERVICE - CONTINUED

PENALTIES

Failure to Deliver DDR: **(C)**
The difference in price between the highest published Reference Price for the Texas Eastern, M-3 and the lowest published Reference Price for Texas Eastern, M-2 as published in the DPP corresponding to the date the failure to deliver occurred, plus the applicable transportation charges from Texas Eastern M-2 to M-3, but shall not be lower than $0.25/per Dth, applied to the difference between the DDR and the delivered volumes, plus all incremental costs incurred by Company as a result of the failure to deliver the DDR.

The Company may not charge for delivering in excess or under of the DDR if the overdelivery or underdelivery is anticipated to benefit the distribution system's daily balancing position as determined by Company in its sole discretion.

Failure to Comply with an OFO or DFD:
The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Fifty Dollars ($50) per Dth or the highest of the charges calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge for any delivery region, whichever is greater.

NOTICE

A Choice Supplier must provide Company, or any PUC-authorized alternative Supplier of Last Resort and its Rate RT and NT Customer(s) with ninety (90) days advance written notice of its intention to exit the market. In the event a Choice Supplier discontinues service or exits the market before its contract for natural gas supply service to a Rate RT and NT Customer expires and such Customer returns to its Supplier of Last Resort, Choice Supplier shall provide all contract billing data required by Company or other PUC-approved Supplier of Last Resort to render bills to Choice Supplier's customers for the period between Choice Supplier's default or exit from the market and the customer's next meter reading date.

BALANCING

Company will balance the daily difference, if any, between the anticipated Customer use, as communicated through the DDR, and the actual usage of Choice Supplier's customers. For this service, the Choice Supplier shall pay to Company the applicable Balancing Fees shown in this rate schedule, per MCF of Aggregation Pool usage, as measured at the meter.

(C) Indicates Change

RULES AND REGULATIONS

10. RATE AG - AGGREGATION SERVICE – CONTINUED

RECONCILIATION

Company shall calculate the difference between the actual deliveries of each Choice Supplier's Aggregation Pool, and the usage of each such Aggregation Pool. The Company shall adjust future DDRs to account for any usage differences between forecasted weather and actual weather. Where actual meter reads cannot be obtained, the Company will estimate usage and such estimate shall be deemed actual usage. At the time a Choice Supplier no longer has any Choice Customers enrolled, the cumulative difference between delivered volumes and usage of the Choice Supplier's Aggregation Pool shall be cashed out at Company's average cost of gas purchased for the most recent 12 months. The average cost of gas shall be calculated as the product of the total commodity cost of gas purchases including transportation and fuel used and accounted for the most recent 12 months, divided by tariff sales for the same 12-month period.

NATURAL GAS SUPPLY PLANS

Choice Supplier shall cooperate with Company in the preparation of such reliability plans required under Section 1317 of the Public Utility Code, and shall provide all reasonable information related to gas deliverability assets under its control required by Company including providing copies of pipeline capacity contracts or delivered supply contracts, or, in lieu of providing such contracts, warrant pertinent information as required by the Company or any regulatory authority. Choice Supplier shall also enter into any necessary contractual arrangements, or make any required regulatory filings, to ensure that contracts and assets under its control, which are relied upon in Company's reliability plan, are available to Company or PUC-authorized supplier of last resort in accordance with Choice Supplier's obligations under its Aggregation Agreement and this Tariff.

COMPLIANCE WITH THE PENNSYLVANIA PUBLIC UTILITY COMMISSION REQUIREMENTS

Choice Supplier shall at all times comply with all applicable PUC requirements and regulations.

UGI UTILITIES, INC.- GAS DIVISION **(C)**

11. AGGREGATION AGREEMENT

FOR RATE SCHEDULES RT and NT

(Pro Forma)

THIS AGGREGATION AGREEMENT for Rate Schedules RT and NT ("Aggregation Agreement") is made and entered into this _____ day of _____, 20___, by and between **UGI Utilities, Inc. – Gas Division**, a Pennsylvania Corporation ("Company"), and _____ _____, a _____ ("Choice Supplier").

WHEREAS, Company is a Pennsylvania public utility that, amongst other things, provides intrastate transportation service to Rate RT and NT customers located within its certificated service territory; and

WHEREAS, Choice Supplier is engaged in the business of selling natural gas supply services, and desires to market such services to Rate RT and NT customers located within Company's certificated service territory; and

WHEREAS, pursuant to the terms and conditions set forth in this Aggregation Agreement, Company is willing to receive natural gas supplies at specified points of interconnection situated between Company's facilities and the facilities of one or more interstate natural gas pipeline companies to serve the aggregated load of Rate RT and NT customers served by Choice Supplier, and to provide other services to facilitate the provision by Choice Supplier of natural gas supply services to customers; and

WHEREAS, pursuant to the terms and conditions set forth in this Aggregation Agreement, Choice Supplier is willing to deliver natural gas supplies for receipt by Company for subsequent transportation and redelivery at specified end-use customer locations, and to acquire aggregation services from Company.

NOW, THEREFORE, intending to be legally bound hereby, Company and Choice Supplier agree as follows:

ARTICLE I. DEFINITIONS

For the purposes of this Aggregation Agreement, in addition to any definitions set forth in Company's Gas Service Tariff and *Nomination Procedure* (which is available on UGI's Energy Management Website), which are hereby incorporated herein by reference, the following definitions apply: **(C)**

1.1. **Aggregation Service** means services provided by Company to Choice Supplier to facilitate the delivery of gas supplies to customers receiving service under Rates RT and NT. **(C)**

1.2. **Balancing** means services provided by Company to cover differences between a Choice Supplier's Daily Delivery Requirement and the actual usage of the Choice Supplier's Aggregation Pool. **(C)**

1.3. **Choice Aggregator** means an entity, licensed by the Commission, that purchases natural gas and takes title to it as an intermediary for sale to retail customers (52 Pa. Code § 62.101). **(C)**

(C) Indicates Change

1.4. **Choice Broker** means an entity, licensed by the Pennsylvania Public Utility Commission, that acts as an agent or intermediary in the sale and purchase of natural gas that does not take title to natural gas supply (52 Pa. Code § 62.101). **(C)**

1.5. **Choice Natural Gas Supplier (NGS)/Licensed Supplier** means a natural gas supplier as defined in 52 Pa. Code § 62.101, 66 Pa.C.S. § 2202, respectively. **(C)**

1.6. **Customer** means a recipient of service under Rate Schedules RT and NT that contracts for natural gas supply service from a Choice Supplier. **(C)**

1.7. **Daily Delivery Requirement (DDR)** means the daily quantities of natural gas supplies a Choice Supplier is required to deliver for an Aggregation Pool, as forecasted and communicated by Company, and may specify the required points of delivery. Such forecast shall be calculated to include volumes needed for end-use requirements, prior imbalances and Company use and unaccounted for gas. **(C)**

1.8. **Delivery Point** means a point specified by Company where Choice Supplier may deliver natural gas supplies for subsequent redelivery by Company to Choice Supplier's Rate RT and NT customers. **(C)**

1.9. **Rate Ready Billing** means the method of billing used by the Company to calculate the natural gas supply services provided by the Choice Supplier. Under this method, the Company uses actual meter readings obtained by the Company, or estimated consumption when the Company is unable to obtain an actual meter reading, and billing rate information provided by the Choice Supplier to calculate the bill. **(C)**

1.10. **Transportation** means a service provided by Company on its facilities that enables gas owned by others to be received into, moved through, and delivered out of facilities owned, leased, or operated and controlled by Company. **(C)**

1.11. **Upstream Capacity Assignment, Release or Transfer** means the process to provide access to interstate pipeline capacity and storage contracts owned by Company to Choice Supplier pursuant to Company's tariff and any applicable regulatory rules. **(C)**

ARTICLE II. TERM

This Aggregation Agreement shall become effective on _____, 20___ and shall remain in effect, unless terminated pursuant to Section 6.1 hereof, or by either party by providing ninety (90) days' prior written notice, for so long as Choice Supplier is qualified to receive Rate AG service from Company. In the event this Aggregation Agreement expires or terminates, Company shall have no obligation, as between Choice Supplier and Company, to accept any natural gas supplies tendered by Choice Supplier for receipt into Company's facilities, and Choice Supplier's payment and financial obligations shall continue until fully discharged.

ARTICLE III. CHOICE SUPPLIER'S OBLIGATIONS

3.1. **Compliance.** Choice Supplier agrees that it shall comply with all of the applicable terms and conditions of Company's Gas Service Tariff and Company's Supplier Tariff, both of which are hereby incorporated by reference. **(C)**

(C) Indicates Change

3.2. **Creditworthiness**. Choice Supplier shall establish, and maintain throughout the term of this Aggregation Agreement, and thereafter until all of Choice Supplier's payment obligations incurred under this Aggregation Agreement have been fully discharged, a satisfactory Financial Security status with Company. To enable the Company to determine credit status, Choice Supplier will provide to the Company the following: (1) relevant financial information to determine creditworthiness; (2) appropriate trade and banking references; and (3) written consent for Company to conduct a credit investigation. In addition, Choice Supplier shall comply with the Financial Security provisions of Company's Supplier Tariff, and may, based on Choice Supplier's credit standing with Company, be required to provide financial security in excess of the minimum amounts specified therein. **(C)**

3.3. **Standards of Conduct**. Choice Supplier shall abide by all standards of conduct and other legal requirements applicable to Choice Supplier's line of business, including but not limited to the standard of conduct applicable to Choice Suppliers set forth in rules and regulations established by regulatory bodies having jurisdiction over Choice Supplier's activities, and other applicable law. **(C)**

3.4. **Payments**. Choice Supplier will remit payment for all services within 10 days after receipt of Company invoice. A late payment charge of 1.50% per month will be applied to all outstanding balances as of the due date. **(C)**

3.5. **Customer List**. Choice Supplier shall execute an Electronic Trading Partner Agreement and will keep confidential any customer information acquired either directly or indirectly from Company, and use such information solely for the purpose of offering natural gas supply service to Rate RT and NT customers. In the event the Company determines the Choice Supplier impermissibly released customer information to another party, in addition to all available remedies, Company may, at its option, immediately cancel this Aggregation Agreement. **(C)**

ARTICLE IV. COMPANY'S OBLIGATIONS

4.1. **DDR**. Company shall provide Choice Supplier with its DDR for each Gas Day. Company shall accept receipt of all gas volumes up to the DDR. Company shall have the right to accept, but shall in no instance be required to accept, an Over-delivery by Choice Supplier. The acceptance of such over delivery shall not constitute any waiver of any provisions of the Company's Gas Service Tariff or *Nomination Procedure*. **(C)**

4.2. **Monthly Statement**. Company shall bill Choice Supplier by the 15th of each month for services provided by Company during the preceding month and other amounts due to Company. **(C)**

4.3. **Enrollment Notification**. Company shall generate and send a letter to all customers enrolled by a Choice Supplier indicating the supplier selected and the date service from the Choice Supplier is scheduled to commence. All customers enrolled by the 15th of each month will be transferred to their respective Choice Supplier effective with their next calendar meter read if customer does not respond within five (5) days following confirmation to challenge the enrollment. Company shall send an electronic message confirming the selection to the Choice Supplier. **(C)**

4.4. **Rate AG**. Company shall provide all of the other aggregation services applicable to Choice Supplier specified in the Rate AG provisions of its tariff. **(C)**

(C) Indicates Change

ARTICLE V. BILLING SERVICE

(C)

5.1. **Standard Billing Service.** Company shall bill Choice Supplier's Rate RT and NT customers for natural gas supply services provided by Choice Supplier on a rate-ready basis unless (a) a Choice Supplier not participating in the Company's POR program elects to provide a separate bill for its charges or (b) a Choice Supplier's customer elects to receive a separate bill for such services from its Choice Supplier. Choice Supplier must provide all billing rate information no later than fifteen (15) days prior to the effective date of such rate. Company will input all requests for new plans within a reasonable time frame based on the number of requests received.

5.2. **Standard Billing Charges.** Choice Supplier shall pay to Company the following fees for billing services:

Billing Fee:	$0.25/Bill
Billing Adjustment Fee:	Affecting One (1) Month - $3.10/Revised Bill
	Affecting More than One (1) Month - $3.60/Revised Bill

5.3. **Negotiated Billing Service.** In the event a Choice Supplier wants Company to provide a billing service other than the Standard Billing Service, such service shall be negotiated between Company and Choice Supplier.

5.4. **Choice Supplier Budget Billing.** The Company will bill all budget billing amounts calculated and provided by the Choice Supplier unless the account is being billed under the POR program, in which case the Company will provide budget billing to the customer. The Company will not determine or reconcile a Licensed Supplier's budget bill charge if the Licensed Supplier is not participating in the Company's POR program.

ARTICLE VI. REMEDIES

6.1. **Termination Upon Default.** In addition to other rights a party may have under this Aggregation Agreement, if either party fails to perform an obligation, or breaches any representation or warranty ("Defaulting Party") under this Agreement, then the other party (Non-Defaulting Party") shall have the right to terminate this Agreement by providing prior written notice thereof to the Defaulting Party. Termination pursuant to this Article shall be without waiver of any additional remedy, whether at law or in equity, to which the party not in default otherwise may be entitled for breach of this Agreement.

6.2. **Limitation of Liability.** Except as expressly permitted under this Agreement and Company's Gas Service Tariff, neither party shall be entitled to recover incidental, consequential or punitive damages, or lost profits, for any breach by the other party of an obligation, representation or warranty under this Agreement, provided such limitation shall not apply to willful or grossly negligent misconduct on the part of the Defaulting Party.

ARTICLE VII. REPRESENTATIONS, WARRANTIES AND INDEMNIFICATION

Choice Supplier warrants that (1) it shall have good title to all natural gas tendered for receipt by Company hereunder, or is authorized by the owner of such gas to tender it for delivery to Company, and (2) such gas will be free and clear of all liens, encumbrances, and claims whatsoever. Choice Supplier shall fully indemnify Company, and save it harmless from all suits, actions, debts, accounts, damages, costs, losses and expenses arising from or out of a breach of such warranties.

(C) Indicates Change

(C)

ARTICLE VIII. LIMITATION OF THIRD PARTY RIGHTS

This Agreement is entered into solely for the benefit of the Company and the Choice Supplier, and is not intended and should not be deemed to vest any rights, privileges or interests of any kind or nature to any third party, including, but not limited to the Customers that comprise Choice Supplier's Pool under this Agreement.

ARTICLE IX. SUCCESSION AND ASSIGNMENT

This Agreement shall be binding upon and inure to the benefit of the successors and assigns of the respective parties hereto. However, no assignment of this Agreement, in whole or in part, will be made without the prior written approval of the non-assigning party. The written consent to assignment shall not be unreasonably withheld.

ARTICLE X. APPLICABLE LAW AND REGULATIONS

This Agreement shall be construed under the laws of the State of Pennsylvania and shall be subject to all valid applicable State, Federal and local laws, rules, orders, and regulations. Nothing herein shall be construed as divesting or attempting to divest any regulatory body of any of its rights, jurisdiction, powers or authority conferred by law.

ARTICLE XI. NOTICES AND CORRESPONDENCE

Written notice and correspondence to Company shall be addressed as follows:

UGI Utilities, Inc. – Gas Division
1 UGI Drive
Denver, PA 17517
Attention: Manager, Tariff & Supplier Administration
Email: EDI-GAS@UGI.COM

Written notices and correspondence to Choice Supplier shall be addressed as follows:

Name: _____

Address: _____

_____

Attention: _____

Telephone: _____

Email: _____

Either party may change its address for receiving notices effective upon receipt, by written notice to the other party.

ARTICLE XII. MISCELLANEOUS

12.1. No modification of the terms and provisions of this Agreement shall be or become effective except by execution of written contracts or by modification of Company's Gas Service Tariff.

(C) Indicates Change

(C)

12.2. No waiver by any party of any one of more defaults by any other party of any provisions of this Agreement shall operate or be construed as a waiver of any subsequent or previous default or default, whether of a like or a different character.

12.3. In the event any tax or assessment is imposed, directly or indirectly, upon the gas tendered to, or received by Company for redelivery, Choice Supplier agrees to bear the amount of such tax or assessment. In the event that Company is required to pay such tax, Choice Supplier agrees to reimburse Company for such payment.

12.4. The subject heading of the articles of this Agreement are inserted for the purpose of convenient reference and are not intended to be a part of the Agreement nor considered in any interpretation of the same.

12.5. In the event of a conflict between the provisions of this Agreement and Company's Gas Service Tariff, the provisions of Company's Gas Service Tariff shall govern.

12.6. This Agreement may be executed in multiple counterparts, each of which shall be deemed an original, and all of which together shall constitute one and the same instrument. The delivery of an executed counterpart of this Agreement by e-mail delivery of a ".pdf" format data file shall be deemed to be valid delivery thereof. The parties to this agreement agree to execution of this agreement by electronic means pursuant to the Electronic Transactions Act, 73 P.S. § 2260.101 et seq. Each party agrees that electronic signatures of the parties are intended to authenticate this writing and to have the same force and effect as manual signatures. **(C)**

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the day and year first above written.

NOTICE

This tariff makes changes, increases and decreases to existing rates (see Page 2-2(a)).

LIST OF CHANGES MADE BY THIS SUPPLEMENT
(Page Numbers Refer to Official Tariff)

Cover Page
- Updated to reflect Supplement Number, Notice language, Issue and Effective dates.

Rule 8, Billing and Payment, Pages 42 & 45.
- Clarifying language added to section 8.4 as related to the timing of the periodic Budget Billing reviews.
- Formatting change to section 8.12, Payment Refunds, for consistency.
- Section 8.14 – Acceptable Forms of Payment has been added.

Rule 10, Rider A, State Tax Adjustment Surcharge, Page 48.
- The State Tax Adjustment Surcharge rate reset to 0.00%.

Rule 12, Rider C, Weather Normalization Adjustment, Page 53.
- The Weather Normalization Adjustment applicability has been updated to continue as a pilot from ending on October 31, 2027, to October 31, 2032.
- In Calculation of Adjustment Amount subsection (d), the Weather Normalization Adjustment has been changed from NHDD based upon the Delivery Region's 15-year average to 10-year average for the given day. Additionally, NHDD has been changed from being updated every 5 years to every rate case.

Rule 13, Rider D, Merchant Function Charge, Page 55.
- The rate has decreased for Residential PGC Customers to 2.37% and for Non-Residential PGC Customers to 0.47%.

Rule 15, Price to Compare, Page 57.
- The Price to Compare has changed as a result of the change to the Merchant Function Charge.

Rule 16, Rider F, Universal Service Program, Pages 58 & 59.
- The Universal Service Program applicability has added language for Rate XD customers on a negotiated basis and describes the applicability of the Rider and rate to Rate XD customers.
- The USP rate has added language to specify the rate for Rate R and Rate RT customers.
- The specific number of 25,404 has been removed and the applicability date has been updated from September 30, 2025 to September 30, 2026.

Rule 19, Rider I, Distribution System Improvement Charge, Page 63.
- The rate reset to 0.00%.

Rule 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS, Pages 73 – 81.
- References to outdated Effective Date removed from heading.

LIST OF CHANGES MADE BY THIS SUPPLEMENT - Continued
(Page Numbers Refer to Official Tariff)

Rate R – General Service – Residential, Page 85.
- The Customer Charge and Distribution Charge have been increased.

Rate RT – General Service – Residential Transportation, Page 86.
- The Customer Charge and Distribution Charge have been increased.

Rate GL – General Service – Gas Light Service, Page 88.
- The Distribution Charge has been increased.

Rate N – General Service – Non-Residential, Page 89.

Cover Page
- Updated for Supplement Number and Issue and Effective dates.

Rule 4, Choice Supplier Obligations, Page 115.
- Subsection 4.12 – The residential and commercial Purchase of Receivable rates have been updated as a result of the change to the Merchant Function Charge.

RULES AND REGULATIONS

8. BILLING AND PAYMENT

8.1 Billing Month. Bills are rendered monthly. The Company normally reads meters monthly. However, at its option, the Company may read meters once every two months. In instances where meters are read every two months, the first month's bill will be based on an estimate of the consumption for the first month of the bi-monthly period. Bills are due when rendered and shall be considered as received by the Customer when left at, or mailed to, the address where service is rendered, or such other address as designated by the Customer. A billing month is the period upon which a Customer's monthly charges and consumption are computed and for which a bill is rendered. For Residential Customers, the billing month is a period of not less than 26 or greater than 35 days. An initial bill for a new Residential Customer may be less than 26 days or greater than 35 days; provided however, if an initial bill exceeds 60 days the Residential Customer shall be given the opportunity to amortize the amount over a period equal to the period covered by the initial bill without penalty. A final bill due to the discontinuance may be less than 26 days or greater than 35 days but may never exceed 42 days. In cases involving termination, a final bill may be less than 26 days. In addition, bills for less than 26 days or more than 35 days shall be permitted if they result from rebilling initiated by the Company or Customer dispute to correct a billing problem. Bills for less than 26 days or more than 35 days shall be permitted if they result from a meter reading route change initiated by the Company.

8.2 Estimated Consumption. When the Company is unable to obtain an actual meter reading because of inability to gain access to the meter, or because of extreme weather conditions, emergencies, equipment failures, work stoppages or any other circumstances, the Company will render appropriately marked estimated bills.

8.3 Application of a Rate Schedule. The Company will compute bills under the rate schedule selected by and for which the customer qualifies. In the event the customer does not select a Rate Schedule, the Company may discontinue service or place the Customer on a rate schedule for which the Customer qualifies.

8.4 Budget Billing. Residential Heating Customers may elect an optional billing method which averages the estimated Company regulated service costs over a revolving twelve (12) month Budget Billing plan. Company will review the Budget Billing amount on a quarterly basis and adjust the Budget Billing amount upward or downward based on actual charges to date and projected charges to the end of the twelve (12) month Budget Billing plan. The twelfth bill will include a true-up adjustment for the difference between payments made and actual charges for gas service for the prior eleven (11) months, inclusive. At the conclusion of the budget billing year, any resulting reconciliation amount exceeding $100 may be amortized over a twelve (12) month period upon Residential Heating Customer request. **(C)**

The optional twelve (l2) month Budget Billing plan, as described above, is available to Commercial and Industrial Heating Customers provided that at least seventy-five (75) percent of the Customer's total gas consumption is for space heating. If a Customer has an unpaid balance equal to the amount of two (2) Budget Bill Plan bills, billing under this plan may be terminated by the Company.

(C) Indicates Change

RULES AND REGULATIONS

8. BILLING AND PAYMENT - Continued

separately listing charges from each company. The Company and UGI-ED shall, for such combined accounts, and subject to applicable statutory and regulatory requirements, establish a reasonable hierarchy of categories for the posting of partial payments to such joint accounts, and within each such category payments shall first be posted, as applicable, to UGI-ED or Electric Generation Supplier charges before being posted to UGI Gas Division or Natural Gas Suppler charges.

8.12 Payment Refunds. Refunds due customers greater than two dollars ($2) shall be mailed to the Customer. Refunds less than two dollars ($2) may be picked up at the office within sixty (60) days. After sixty (60) days, the refund shall be applied to Operation Share. **(C)**

8.13 Unless otherwise stated in this Section 8, Billing and Payment, all billing and payment provisions of this section apply to Customers served under all Company rate schedules, including Rate Schedules RT and NT where a Customer's Choice Supplier also participates in the Company's Purchase of Receivables ("POR") program.

8.14 Acceptable Forms of Payment. The Company accepts only the following forms of payment: a certified, cashier's, teller's or bank check; a personal check issued from an accredited financial institution; a money order from an official issuer; automatic bank drafting (AutoPay); wire transfer; Automated Clearing House (ACH); in cash at a third-party pay site; electronic by bank account, credit or debit card, or digital wallet through the Company's authenticated Online Account Center or Company website; electronic payment by phone through the Company's automated phone system or call center agent; electronic through a financial institution's banking system. **(C)**

10. RIDER A

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge is applicable to the net monthly rates and minimum charges contained in this Tariff. The surcharge shown below will be recomputed when a tax rate used in the calculation changes and/or the Company implements a change in rates.

The recomputation of the surcharge will be submitted to the PUC within 10 days after the occurrence of a reason for surcharge recomputation shown above. If the recomputed surcharge is less than the one in effect the Company will, and if more may, submit a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be 10 days after the filing.

Rider A - State Tax Adjustment Surcharge is 0.00% **(D)**

This Rider applies to Rates R, RT, GL, N, NT, DS, and LFD.

(D) Indicates Decrease

RULES AND REGULATIONS

12. Rider C

WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of Residential and Non-Residential customers under Rate Schedules R, RT, N and NT, for any bills rendered during the heating season, which effective November 1, 2025 will include the months of October through April. Beginning with bills rendered on and after November 1, 2025, WNA will no longer be applied to confirmed low income residential customers who participate in the UGI Gas CAP program for CAP customers on a percent of income bill. CAP customers on average bill will continue to be billed based on an appropriate 12 month historic basis. The WNA commenced with bills rendered on and after November 1, 2022 and shall continue as a pilot which will end on October 31, 2032, unless affirmatively extended or otherwise permitted by Commission Order. **(C)**

WNA is a distribution charge adjustment and is considered a basic service charge.

Calculated WNA amounts shall be subject to Rider A – State Tax Adjustment Surcharge and Rider I – Distribution System Improvement Charge. No additional riders or surcharges will be applied to the calculated WNA.

Calculation of Adjustment Amount:

The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD * 3%)) / AHDD) x (AMC-BLMC)]
WNAC = WNBC – AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD", adjusted for a 3% deadband as further discussed in subparts (i) and (j) below), divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual average daily consumption from the billing system, measured in Ccfs, using bills with read dates of June 21st thru September 20th over a thirty-six-month period multiplied by the number of days in the billing period. The average daily base load is recalculated monthly using the most recent thirty-six months of bill history. If less than twelve months of bill history is available for the premise, an average base load for the related customer class will be applied.

(c) AMC shall be measured for each customer and billing cycle and will be inclusive of any heating value corrections.

(d) NHDD shall be applied on a Delivery Region specific basis as determined by the customer's geographical location and, for any given day within a billing period, shall be based upon the Delivery Region's 10-year average for the given day. NHDD shall be updated every rate case using the methodology established in the Company's general rate case proceeding at R-2025-3059523. **(C)**

(C) Indicates Change

RULES AND REGULATIONS

13. RIDER D

MERCHANT FUNCTION CHARGE

Applicability and Purpose

This Rider shall be applied to rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. The Rider is equal to the fixed percentage, established by the PUC in Company's last general base rate proceeding, of purchased gas costs which are expected to be uncollectible, and shall not be reconciled to reflect actual results. Rider D is intended to make Company's Price to Compare more comparable to the gas supply service prices offered of other Natural Gas Suppliers that presumably reflect anticipated uncollectible expenses.

Rider D Charge

Rider D charges shall be equal to 2.37% for Residential PGC Customers and 0.47% **(D)** for Non-Residential PGC Customers of Rider B (Purchased Gas Costs).

The collection of the Rider D charges will be summarized by Rate Schedule sub-accounts in the Gas Operating Revenue FERC Account No. 480000 for Rate R and 481000 for Rates N. The associated costs are recorded in FERC Account Nos. 904001 and 904002.

(D) Indicates Decrease

RULES AND REGULATIONS

15. PRICE TO COMPARE

The Price to Compare ("PTC") is composed of the Annual C-Factor, Annual E-Factor, Gas Procurement Charge and Merchant Function Charge. The PTC rate will change whenever any components of the PTC change. The current PTC rate is detailed below:

Price to Compare

	Rate R (CCF)	**Rate N (MCF)**	
Annual C-Factor	$ 0.62323	$ 6.2323	
Annual E-Factor	$ 0.05163	$ 0.5163	
Gas Procurement Charge	$ 0.00660	$ 0.0660	
Merchant Function Charge	$ 0.01599	$ 0.0317	**(D)**
Total Price to Compare	$ 0.69745	$ 6.8463	**(D)**

(D) Indicates Decrease

RULES AND REGULATIONS

16. RIDER F

UNIVERSAL SERVICE PROGRAM

APPLICABILITY AND PURPOSE

This Rider shall be applicable to all residential customers except customers in the Company's Customer Assistance Program ("CAP"). This Rider has been established to recover costs related to the Company's Universal Service and Conservation Programs, excluding internal administrative costs. This rider may also apply to customers receiving service under Rate XD on a negotiated rate basis. **(C)**

RATE

In addition to the charges provided in this tariff, an amount shall be added to the otherwise applicable charge for each MCF of sales volumes or distribution volumes distributed by the Company to customers receiving service under Rate Schedules R and RT. The USP rate for customers receiving service under Rate XD, if applicable, may differ from the USP rate stated below and may be applied on a volumetric, fixed charge, percentage or other basis. **(C)**

The USP rate for Rate R and Rate RT: $0.6363/Mcf **(C)**

The USP rate for Rate XD: as negotiated, but no greater than the above rate. **(C)**

CALCULATION OF RATE

The Rider USP rate shall be calculated to recover costs for the following programs: Low Income Usage Reduction Program (LIURP); Customer Assistance Program (CAP); Hardship Funds; and any other replacement or Commission-mandated Universal Service Program or low-income program that is implemented during the period that the Rider is in effect.

LIURP costs will be calculated based on the projected number of Level 1 income homes to be weatherized. Hardship Fund costs will be calculated on the projected level of an allocated share of administrative funds incurred by the UGI Operation Share Energy Fund.

CAP costs will be calculated to include
1) the projected CAP credit
2) projected CAP customer application and administrative costs; and
3) projected CAP pre-program arrearage forgiveness.

CAP Credit shall be defined as the difference between the total calculated Rate R bill, excluding Rider USP, and the CAP bill and an adjustment for unearned credit amounts based upon the current discounts at normalized annual volumes of the then-current CAP participants and the projected CAP Credit for projected customer additions to CAP during the period that the CAP Rider rate will be in effect at the average discount of current CAP participants at normalized annual volumes.

(C) Indicates Change

RULES AND REGULATIONS

16. RIDER F - Continued

UNIVERSAL SERVICE PROGRAM

QUARTERLY ADJUSTMENT

Any time that the Company makes a change in base rates or PGC rate affecting residential customers, the Company shall recalculate the Rider USP rate pursuant to the calculation described above to reflect the Company's current data for the components used in the USP rate calculation. The Company shall file the updated rate with the PUC to be effective one (1) day after filing.

ANNUAL RECONCILIATION

On or before November 1 of each year, the Company shall file with the PUC data showing the reconciliation of actual revenues received under this Rider and actual recoverable costs incurred for the preceding twelve months ended September. The resulting over/undercollection (plus interest calculated at 6% annually) will be reflected in the CAP quarterly rate adjustment to be effective December 1. Actual recoverable costs shall reflect actual CAP costs, actual application costs, actual pre-program arrearage forgiveness, actual LIURP and actual Hardship Administrative costs. Actual recoverable CAP credit costs and pre-program arrearage forgiveness shall be based upon actual CAP credits granted and pre-program arrearage forgiveness granted less a 9.2% adjustment for amounts granted to participants in excess of the number of CAP enrollees as of September 30, 2026. The 9.2% adjustment related to CAP credits and pre-program arrearage forgiveness will be based on the following: (C)

For each reconciliation period, the average annual CAP credit per participant will be determined by dividing the total actual CAP credits granted during the reconciliation period by the average monthly number of participants receiving CAP credits during the reconciliation period. The average monthly number of participants receiving CAP credits in excess of the number of CAP enrollees as of September 30, 2026 will be multiplied by the average annual CAP credit granted per participant and then multiplied by 0.0920 in order to determine the amount of the CAP Credits which will not be recovered through Rider USP. (C)

For each reconciliation period, the average pre-program arrearage forgiveness per participant will be determined by dividing the total actual pre-program arrearage forgiven during the reconciliation period by the number of participants receiving pre-program arrearage forgiveness. The number of participants receiving pre-program arrearage forgiveness in excess of the number of CAP enrollees as of September 30, 2026 will be multiplied by the average pre-program arrearage forgiveness per participant and then multiplied by 0.0920 in order to determine the amount of the pre-program arrearage forgiveness which will not be recovered through Rider USP. (C)

RULES AND REGULATIONS

19. Rider I

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.00% will apply. **(D)**

19.A.1 Purpose. To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

19.A.2 Eligible Property.

The DSIC-eligible property will consist of the following:

- Piping, Couplings, Valves, Excess Flow Valves, Risers - Distribution & Transmission. (Accts. 374, 376, 365, 367)
- Measuring & Regulator Stations – Distribution & Transmission (Accts. 375, 378, 379, 366, 369, 370)
- Gas Service Lines and Insulated and Non-Insulated Fittings (Accts. 378, 380)
- Meters, Meter Bars, Meter Installations (Accts. 381, 382)
- House Regulators & Installations (Accts. 383, 384)
- Industrial & Farm Tap Measuring & Regulator Station Equipment (Accts. 385, 386)
- Miscellaneous Equipment and Material– Distribution & Transmission (Accts. 387, 371)
- Equipment – Electronic Systems & Software (Accts. 391)
- Vehicles, Power Equipment, Tools, Shop & Garage Equipment (Accts. 392, 394, 396)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities.
- Gathering lines (Accts. 332)
- Storage lines (Accts. 353)
- Other related capitalized costs.

19.A.3 Computation of the DSIC. The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update.

(D) Indicates Decrease

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS **(C)**

22.1 Application of Rates

(a) Applicable Rates: DS, LFD, XD and IS.

(b) Notification of Delivery; Nomination Procedures. Customer shall notify the Company of any and all gas deliveries to the Company's system, including, but not limited to, the provision of nomination, revised nomination and scheduling information, in accordance with the Company's *Nomination Procedure*, as may be amended from time to time, and made available on the Company's Gas Management Website ("Nomination Procedure"). The quantity of gas received on behalf of the Customer shall be determined by allocation or other method by the Company if required in its sole discretion. It is the Customer's responsibility to arrange that any necessary billing information be provided to the Company and/or delivery gas source.

(c) Nominating Agents. A Customer shall notify the Company of its designated nominating agent ("Agent") for purposes of nominating the volumes of natural gas to be delivered to the Company's system on the Customer's behalf in accordance with the Nomination Procedures. Customer shall notify Company, on a form designated by the Company in the Nomination Procedures, of the responsibilities of the Agent, and shall provide Company with the Agent's valid e-mail address and valid 24-hour contact information. Customer shall remain liable for all charges and penalties notwithstanding Customer's designation and use of an Agent in accordance with the provisions herein.

(d) Penalties for Customer's Default. Customers failing to provide nomination, billing, scheduling, agent, supplier and/or other required information to the Company or pipeline(s)in accordance with the provisions of the Tariff, or otherwise failing to comply with the Company's *Nomination Procedure*, shall be subject to applicable imbalance charges and, in addition, be charged an Administrative Scheduling Fee in an amount no greater than $1,000 per day for every day such required information is delayed. If a Customer default of these provisions occurs and is occurring for a period of 90 days, the Company may impose retail or standby rates on the Customer's account beginning the first day after such 90-day period through and until such time as the Company deems the Customer default to have been resolved.

(e) Sequencing for Billing. Unless otherwise agreed by the Company and the Customer, customer-owned gas delivered under the transportation rate schedules shall be sequenced for billing as the first gas through the meter, and gas purchased under the Retail and Standby Rider shall be sequenced for billing purposes as the last gas through the meter. Gas billed under firm rate schedules shall be billed prior to gas billed under interruptible rate schedules. In lieu of otherwise specified tariff provisions, where the Company and Customer agree, Company shall use pipeline metering facilities for measuring and billing total deliveries to the Customer's facility.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

(f) Payment of Charges, Penalties. The Customer shall pay the Company for any and all additional charges incurred on the Customer's behalf or resulting from the Customer's actions or inactions which the Company can demonstrate arise out of the provision of transportation service including, but not limited to, pipeline transportation and service charges. Any such charge, penalty or obligation imposed by a pipeline transporter or supplier as result of balancing of gas delivered to the Customer shall be paid by the Customer in addition to otherwise applicable charges.

(g) The Billing Pool Agent is required to notify Company at least ten days prior to dropping a Customer from a Billing Pool. If adequate advance notice is not provided, the Company reserves the right to not drop the Customer from the Billing Pool.

(h) Billing Pools. One or more transportation Customers may join together in pooled transactions for the purchase and delivery of gas. The Company may allocate among all such customers the volumes of gas or imbalances for purposes of determining responsibility for charges, rates, penalties or other obligations imposed by the Company, or in connection with operation of the pool. A Supplier to a Billing Pool must notify the Company prior to initiating gas deliveries. A Customer is required to submit in writing a request for entry into a Billing Pool.

(1) Each Billing Pool shall appoint an Agent who will coordinate nomination, billing, reconciliation, allocation and any other necessary communication between the Billing Pool and the Company.

(2) All members of a Billing Pool shall be of like balancing service election. The Company may restrict formation or operation of any Billing Pool in order to meet like balancing service election or pipeline imposed eligibility requirements.

(3) Automated Meter Reading. The Company has the right as a condition of being a pool member, to install, at the Customer’s expense, automated meter reading (“AMR”) equipment for the purposes of daily collection or monitoring, and billing Customer volumes at each related service meter. Where AMR equipment is installed, the Customer shall maintain, at its expense, unless otherwise directed by the Company, a dedicated phone connection and electric service to the AMR equipment which will allow the Company unlimited remote access to the AMR device at all times. Failure to maintain a required phone and/or electric service may result in Customer being removed from a Billing Pool and being placed on a rate schedule not requiring daily measurement capability.

(4) Service under Rate NNS is required by, and shall be individually billed to, any and all members of a Billing Pool except when all pool members are monitored on a daily basis through the use of Company owned AMR equipment at all meter locations. Additionally, service under Rate MBS is required by, and shall be individually billed to, any and all members of a Billing Pool when the billing month for each pool member does not end on the same calendar date; Billing Pools having all customers monitored and billed through the use of Company owned AMR equipment at all meter locations shall be exempt from this requirement.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

(i) Recognition of Supplies. Volumes transported on behalf of the Customer will be recognized in the Customer's current billing month based on nominated or scheduled volumes information and may be adjusted after notification is received from the pipeline supplier(s) of the volumes transported on behalf of the Customer. Volumes scheduled shall be determined on the basis of best available actual or confirmed pipeline and/or Company information at the time of billing.

(j) Unless otherwise negotiated under Rate XD, the Company shall retain for Company use gas, and lost and unaccounted for gas, 1.5% of the total volume of gas delivered into its system for the Customer’s account.

22.2 Balancing and No-Notice Service.

(a) Each Customer shall use best efforts to balance purchases, deliveries and receipts of gas at all times. Except as specified in 22.1(f), for the purposes of balancing excess deliveries and shortfalls and purchasing services under Rates NNS and MBS, Billing Pools may be treated as a single entity. Subject to the terms and conditions set forth below, the Company shall provide no-notice and monthly balancing services under Rate Schedules NNS and MBS. Service under Rate Schedules NNS and MBS is available only for inadvertent fluctuations, limited by the terms and conditions of each Rate Schedule, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. In the event the Customer fails to use best efforts to balance deliveries and receipts, or otherwise misuses no-notice or balancing services as determined by the Company in its sole discretion, Section 22.4 shall apply for the period of such default or misuse.

(b) Daily Balancing. The Company shall allow Customer's daily demand to inadvertently vary from daily scheduled deliveries by +/-4.5% without imposing Daily Balancing Charges, provided the total daily quantity taken does not exceed Customer's Daily Firm Requirement, MDQ or otherwise specified contract demand limit. Daily imbalances in excess of the +/-4.5% tolerance, unless otherwise provided by service elected under Rate NNS, shall be assessed a Maximum Daily Excess Balancing Charge in accordance with Section 22.4 under Critical Day and Non-Critical Day criteria unless otherwise specified in Customer's contract, in addition to the charges specified in Rates DS, LFD, XD and IS, on all such quantities.

(c) Imbalance Resolution. Customer's monthly imbalances will be calculated at the end of each billing period to determine if any overdelivery (excess) or underdelivery (shortfall) condition exists for volumes scheduled versus volumes metered. If the Customer is determined to be in an imbalance condition, and has not elected service under Rate MBS or has exceeded the 10% imbalance allowance provided under Rate MBS, then the Company shall sell and the Customer shall buy, subject to the 5 percent limitation under Rate MBS, any shortfall amount according to the following cash-out pricing:

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

Shortfall Percent	Cash-Out Price
Up to 5%	Shortfall Monthly Reference Price("SMRP")
Greater than 5%, but not greater than 15%	SMRP x 1.1
Greater than 15%, but not greater than 25%	SMRP x 1.3
Greater than 25%	SMRP x 1.5

Likewise, the Customer shall sell, and the Company shall buy any excess amount according to the following cash-out pricing:

Excess Percent	Cash-Out Price
Up to 5%	Excess Monthly Reference Price("EMRP")
Greater than 5%, but not greater than 15%	EMRP x 0.9
Greater than 15%, but not greater than 25%	EMRP x 0.7
Greater than 25%	EMRP x 0.5

The SMRP (Shortfall Monthly Reference Price) shall be the average of the DPP midpoint Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The EMRP (Excess Monthly Reference Price) shall be the average of the DPP midpoint Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

Customer Delivery Region shall be assigned to each Customer in accordance with Customer's delivery location within the Company's distribution system.

The SMRP and EMRP are applicable to the above tables only for inadvertent monthly imbalances. The HMRP (Highest Monthly Reference Price) or the LMRP (Lowest Monthly Reference Price) as defined below shall apply respectively to shortfall and excess conditions in those situations where intentional imbalances are involved.

The HMRP shall be calculated as the highest of the DPP absolute Reference Prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The LMRP shall be calculated as the lowest DPP absolute reference prices for the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

(d) The Company may extend the balancing period for gas volumes and may increase volumes eligible for balancing in its discretion, but only if it determines that such action is consistent with its obligations to other customers.

(e) Supply Transfers. In order to facilitate Monthly balancing related to inadvertent imbalances in Company's sole discretion, the Company shall allow Supply Transfers among Customers and Billing Pools, Customers-to-Billing Pools and Billing Pools-to-Customers at a fee of $125 per transaction, provided however: (1) such transfer is requested prior to the end of the billing month for both the transferee and the transferor, (2) such transfer is physically possible given pipeline interconnection and delivery point limitations which require transfers to be between parties located on the same segment of the Company's distribution system, and system supplies, and reliability are not adversely affected.

(f) Competitive Volume Customers. In the case of Customers or applicants seeking service for facilities with a design volume capability allowing for direct connection to transmission or gathering lines for bypass of Company facilities, Company shall have the right to establish daily and monthly balancing tolerances at levels other than those specified in subsections (b) and (c) of this Section 22.2 to reflect specific operational limitations or to protect the interests of other Customers, as determined by the Company in its sole discretion. Additionally, the Company may establish special nomination rules, imbalance resolution rules and communication protocols that reflect the Customer's or applicant's commercial alternatives, and which are consistent with its obligations to other Customers.

22.3 Service Agreement and General.

(a) Limitation on Liability.

(1) The Company shall not be liable for curtailment of service under Rates DS, LFD, XD and IS, or loss of the Customer's gas as a result of any steps taken to comply with any law, regulation or order of any governmental agency with jurisdiction to regulate, allocate or control gas supplies or the rendition of service hereunder, and regardless of any defect in such law, regulation or order.

(2) Gas transported and delivered by the Company to the Customer hereunder shall be and remain the property of the Customer. The Customer shall be responsible for maintaining all insurance it deems necessary to protect its property interest in such gas before, during and after receipt by the Company.

(3) The Company shall not be liable for any loss to the Customer arising from or out of service hereunder, including loss of gas in the possession of the Company or any other cause, except gross or willful negligence of the Company's own employees or agents. The Company reserves the right to commingle gas of the Customer with other supplies.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

(b) Warranty, indemnity and special provisions. The receipt of service constitutes Customer's agreement to the following representations and warranties, together with related provisions in the service agreement:

(1) clear and marketable title to the Customer's gas;
(2) delivery points, pressure, quality and other specifications acceptable to gas transmission pipeline(s) and the Company;
(3) eligibility of the Customer for service;
(4) existence of lawful authority for sale, transportation and delivery;
(5) agreement to pay all excise, sales, use, gross receipts, or other taxes (other than income taxes), all tariff charges and all penalties, charges, fees for transportation, balancing etc., associated with delivered gas, which may be levied upon or incurred by the Company at any time;
(6) agreement to indemnify and hold the Company harmless from breach of representations or warranties, and any liability associated with Customer's gas while on the Company's system.

Copy of Gas Purchase Agreements, Other Documents. When requested by the Company, the Customer shall provide the Company with a copy of Customer's gas purchase contract and any related transportation, marketing and brokerage contracts, or, in lieu of providing such contracts, certify pertinent information as required by the Company, and, in order to meet state or federal requirements, provide a sworn affidavit setting forth the Customer's cost of gas for the period requested by the Company. The Company shall endeavor to protect the confidentiality of information provided by the customer in accordance with this provision. The Company will provide such information to third parties only when required to do so by law, regulation or order and in such case, will attempt to maintain confidentiality to the extent possible.

22.4 Maximum Daily Excess Balancing Charge

The Daily Excess Balancing Charge that occurs on Critical Days shall be as follows:

The charge for exceeding daily balancing limits shall be ten times the highest price in the DPP for each delivery region as listed in the following table. This rate shall not be lower than the maximum penalty charge for unauthorized daily overruns as provided for in the FERC-approved gas tariffs of the interstate pipelines which deliver gas into Pennsylvania.

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

Delivery Region	Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.
Central	The higher of 1) Transco, zone 6 non-N.Y. or 2) Transco, Leidy Line receipts plus the applicable transportation costs from Transco Zone 6 to Zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The Daily Excess Balancing Charge that occurs on Non-Critical Days shall be as follows:

Daily Imbalance Percent	Penalty
Up to 15%	DRP
Greater than 15%, but not greater than 30%	DRP x 2
Greater than 30%, but not greater than 45%	DRP x 3
Greater than 45%, but not greater than 60%	DRP x 4
Greater than 60%	DRP x 5
Intentional imbalances	DRP x 5

The DRP (Daily Reference Price) shall be equal to the difference in price between the highest DPP Reference Price and the lowest DPP Reference Price for the Customer's Delivery Region as listed below but shall not be lower than $0.25/Mcf.

Delivery Region	Highest Reference Price	Lowest Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.	Tennessee, zone 4- 300 leg
Central	Transco zone 6, non-N.Y.	Transco, Leidy line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS – Continued **(C)**

The Company shall not charge any Maximum Daily Excess Balancing Charges if the Customer's Excess Daily Imbalance is anticipated to benefit the distribution systems daily balancing position as determined by Company in its sole discretion.

22.5 Operational Flow Orders and Daily Flow Directives

The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Twenty-Five ($25) per Mcf or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater.

22.6 Cost of Assigned Capacity.

In addition to applicable interstate pipeline demand charges, the associated demand charges to customers, or their NGS, served under Rates DS, LFD, XD, and who utilize assigned PGC capacity and pay weighted average cost, will include 100% (DS) and 50% (LFD, XD) pro rata allocation of annual Peaking Supply service demand costs. The associated demand charges will be reduced by a pro rata share of the Economic Benefit of Peaking Supply (EBPS Credit). The EBPS Credit shall mean a pro rata share of (a) the value of Peaking Supply utilized in off system sales transactions and included in the PGC share of the Revenue Sharing Incentive Mechanism revenues, plus (b) the Commodity Price Differential, which shall be, as measured for the date of Peaking Supply delivery, the aggregate difference, if positive, between the DPP Reference Price applicable to the zone of delivery (i.e., Texas Eastern M3 for deliveries in the South and West Delivery Regions with the exception of deliveries from Mt. Bethel and Transco Z6 NNY for deliveries made in the North and Central Delivery Regions and deliveries from Mt. Bethel) and the actual price paid for actual Peaking Supply deliveries into the UGI distribution system. The EBPS Credit shall be applied in the calculation of associated demand charges in the second billing month after the credit has accrued (e.g., December accrued credits will be used to reduce the February associated demand charges) and shall not, on an annual basis, exceed the annual incremental demand charges for Peaking Services charged to Rate DS, LFD, and XD customers, or their NGS, as described above.

RATE DS

DELIVERY SERVICE

AVAILABILITY

This service applies in the entire territory served by the Company. Firm Delivery Service shall be provided for all volumes supplied by the Customer for which the Company has available on system delivery capacity, subject to Section 21 - Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

The Customer must execute a Service Agreement for not less than (1) one year. The contract shall continue in force for consecutive (1) year periods unless cancelled by the Customer upon ninety (90) days written notice to Company prior to the expiration of a contract term.

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable delivery service balancing provisions or in accordance with optionally elected and approved balancing or standby services.

Service under Rate DS is subject to the terms set forth under Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

MONTHLY RATE TABLE

The charge for each monthly billing period shall be the sum of the Customer Charge, the Capacity Charge if applicable, and the Distribution Charge as described below. The following are maximum rates.

Customer Charge: $353.00 per month **(I)**

Plus Capacity Charge: The Company’s unitized weighted average cost of firm transportation capacity per elected MDQ.

PAYMENT

In accordance with Section 8 of this Tariff.

LATE PAYMENT CHARGE

Late Payment Charges shall be billed in accordance with Section 8, Billing and Payment, paragraph 8.7.

EXCESS TAKE CHARGE

Except as provided in the Company's *Nomination Procedure*, for authorized usage on any day in excess of the Daily Firm Requirement there will be a charge of $6.00 per MCF in addition to the charges specified in the rate table.

(I) Indicates Increase

RATE LFD - Continued

LARGE FIRM DELIVERY SERVICE

MINIMUM BILL

Monthly: The Minimum Monthly Bill shall be the Customer Charge, Demand Charge, Capacity Charge (if applicable), and Charge for Other Transportation.

Annual: Unless a higher amount is agreed upon by the Company and Customer, the Minimum Annual Bill shall be based on the Customer maintaining a 0.50 annual load factor and shall be due and payable with the bill for the 12th month in the contract year. The Customer's actual load factor shall be determined by dividing the total volume of gas taken during the contract year (including volumes taken under the Retail and Standby Rider, and the Cash-Out provisions of Section 22.2) by the sum of the Daily Firm Requirements for the contract year. If the actual load factor is less than 0.50, then, in addition to payment for actual usage, the Customer shall pay a Minimum Annual Bill charge equal to the product of: (1) the difference between 0.50 and the actual load factor, (2) the sum of the Customer's Daily Firm Requirements for the contract year, and (3) the average delivery charge paid by the Customer over the previous 12-month period, as calculated by the Company. If the Customer's actual load factor is greater than or equal to 0.50, no Minimum Annual Bill charge will be required. **(C)**

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company. Such charges related to the use of Customer elected and Company provided transportation capacity shall be reflected directly on the Customer’s bill for service rendered on and after April 1, 2024, pursuant to Commission order at Docket R-2023-3040290, with such charges labeled on the bill as Capacity Charge.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then the Customer shall be billed for such excess gas at the rate of Fifty Dollars($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Section 22.4 is primarily intended to establish applicable daily imbalance penalty charges but shall also provide for the pricing applicable to any Unauthorized Overrun volumes, which shall be subject to the same pricing as an Intentional imbalance. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun.

SERVICE UNDER OTHER RATES

Volumes purchased under the Retail and Standby Rider or under the Cash-Out provisions of Section 22.2 or taken under Rate NNS shall be included for the purposes of determining Excess Take Charge and Unauthorized Overrun gas.

RATE XD -Continued

EXTENDED LARGE FIRM DELIVERY SERVICE

MONTHLY RATE TABLE

The charge for each monthly billing period shall be negotiable and shall be the sum of the Customer Charge, Distribution Charge, Demand Charge if applicable, the Capacity Charge (if applicable), and the Minimum Annual Bill as described below.

The following are maximum rates.

Customer Charge: Charge as determined by negotiation.

Plus
Maximum Demand Charge: Charge as determined by negotiation.

Plus
Capacity Charge: On or after October 28, 2025 when current Rate XD contracts expire, Capacity available for Customer use, and related Capacity Charge, shall be as specified within Customer's service contract, provided Company has available capacity and Company and Customer agree to related terms. For Customers electing Company capacity, such Capacity Charge shall be charged at the Company's unitized weighted average cost of firm transportation capacity per elected DFR. However, for Customers specifically receiving assignment of Columbia Pipeline capacity via agreement with the Company and through capacity release, such Customers, or their NGS, shall pay capacity charges direct to Columbia in accordance with such release. For Customers not receiving any Company capacity, no Capacity Charge will apply.

Plus
Maximum Average Delivery Charge: $1.4173/Mcf **(I)**

Plus **(C)**
SURCHARGES and RIDERS where negotiated

(C)
Rider F – Universal Service Program
Rider I – Distribution System Improvement Charge

RETAINAGE RATE

Unless otherwise agreed between the Customer and the Company, Company Use and Unaccounted For gas shall be retained in accordance with Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS, paragraph 22.1(j)

MINIMUM BILL

Minimum Bill Volumes and terms shall be defined in the Service Agreement and determined by negotiation.

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the Customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company.

NOTICE

This supplement makes increases and changes to existing rates (see page 2(b)).

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.12 If a Choice Supplier elects to participate in the Company's POR Program, the Choice Supplier must enter into a POR Agreement for the rate classes that it serves that will be included in the POR. The elected Rate Classes shall be one of the following: (1) RT only, (2) NT only, or (3) RT and NT. All receivables associated with basic natural gas supply services in the specific rate class, subject to the rate class elections made above, must be sold by the participating Supplier to the Utility. For the purposes of this provision, the phrase "basic natural gas supply services" shall include charges directly related to the physical delivery of natural gas to a retail customer but shall not include charges for "carbon-neutral" products, appliance maintenance service, energy efficiency services, termination or cancellation fees, security deposits or other products or services not directly related to the physical delivery of natural gas to a retail customer. Customer accounts that are billed for non-basic natural gas supply services will not be eligible for UGI's POR program. All of the NGS' customer accounts within the elected Rate Classes (subject to the volumetric limits contained in section 5.4) must be POR eligible accounts, with the exception of customers that purchase carbon-neutral products. NGSs may choose to use UGI consolidated billing for Non-POR eligible customers who are purchasing bundled "carbon-neutral" product offerings. The termination and reconnection provisions of Chapters 14 and 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing. UGI shall support rate-ready billing, and all NGS rates must conform to supported rate designs. For Purchased Customer Accounts, Company shall pay Choice Supplier an amount equal to 97.49% for residential amounts billed (inclusive of associated sales taxes) and 99.39% of non-residential amounts billed (also inclusive of taxes). Customer participation for NT shall be subject to Volumetric Eligibility pursuant to Section 5.4. **(C)** **(C)**

4.13 All existing customers of Choice Suppliers who elect to participate in the Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier and Company that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

All new customers enrolling with Choice Suppliers who are participating in Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier prior to enrollment, and by Company upon enrollment, that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

- Updated for Supplement Number and Issue and Effective dates.

Rule 4, Choice Supplier Obligations, Page 115.
- Subsection 4.12 – The residential and commercial Purchase of Receivable rates have been updated as a result of the change to the Merchant Function Charge.

RULES AND REGULATIONS

8. BILLING AND PAYMENT

8.1 Billing Month. Bills are rendered monthly. The Company normally reads meters monthly. However, at its option, the Company may read meters once every two months. In instances where meters are read every two months, the first month's bill will be based on an estimate of the consumption for the first month of the bi-monthly period. Bills are due when rendered and shall be considered as received by the Customer when left at, or mailed to, the address where service is rendered, or such other address as designated by the Customer. A billing month is the period upon which a Customer's monthly charges and consumption are computed and for which a bill is rendered. For Residential Customers, the billing month is a period of not less than 26 or greater than 35 days. An initial bill for a new Residential Customer may be less than 26 days or greater than 35 days; provided however, if an initial bill exceeds 60 days the Residential Customer shall be given the opportunity to amortize the amount over a period equal to the period covered by the initial bill without penalty. A final bill due to the discontinuance may be less than 26 days or greater than 35 days but may never exceed 42 days. In cases involving termination, a final bill may be less than 26 days. In addition, bills for less than 26 days or more than 35 days shall be permitted if they result from rebilling initiated by the Company or Customer dispute to correct a billing problem. Bills for less than 26 days or more than 35 days shall be permitted if they result from a meter reading route change initiated by the Company.

8.2 Estimated Consumption. When the Company is unable to obtain an actual meter reading because of inability to gain access to the meter, or because of extreme weather conditions, emergencies, equipment failures, work stoppages or any other circumstances, the Company will render appropriately marked estimated bills.

8.3 Application of a Rate Schedule. The Company will compute bills under the rate schedule selected by and for which the customer qualifies. In the event the customer does not select a Rate Schedule, the Company may discontinue service or place the Customer on a rate schedule for which the Customer qualifies.

8.4 Budget Billing. Residential Heating Customers may elect an optional billing ~~procedure~~ method which averages the estimated Company regulated service costs over a revolving twelve (12) month Budget Billing plan. ~~These Customers will be billed for the use of gas during the next eleven (11) months beginning with whatever month that they select.~~ –Company will review the Budget Billing amount on a quarterly basis ~~upon the completion of the third (3rd), sixth (6th), and ninth (9th) billing months with budget asked to pay amounts adjusting the fourth (4th), seventh (7th) and tenth (10th) billing months annually~~ and adjust~~ing~~ the Budget Billing amount upward or downward ~~the Budget Billing amount~~ based on actual charges to date and projected charges to the end of the twelve (12) month Budget Billing plan. The twelfth bill will ~~be for usage for the month, with~~include a true-up~~n~~ adjustment for the difference between payments made and actual charges for gas service for the prior eleven (11) months, inclusive. At the conclusion of the budget billing year, any resulting reconciliation amount exceeding $100 may be amortized over a twelve (12) month period upon Residential Heating Customer request. (C)

The optional twelve (12) month Budget Billing plan, as described above, is available to Commercial and Industrial Heating Customers provided that at least seventy-five (75) percent of the Customer's total gas consumption is for space heating. If a Customer has an unpaid balance equal to the amount of two (2) Budget Bill Plan bills, billing under this plan may be terminated by the Company.

8. BILLING AND PAYMENT - Continued

separately listing charges from each company. The Company and UGI-ED shall, for such combined accounts, and subject to applicable statutory and regulatory requirements, establish a reasonable hierarchy of categories for the posting of partial payments to such joint accounts, and within each such category payments shall first be posted, as applicable, to UGI-ED or Electric Generation Supplier charges before being posted to UGI Gas Division or Natural Gas Suppler charges.

8.12 Payment Refunds. Refunds due customers greater than two dollars ($2) shall be mailed to the Customer. Refunds less than two dollars ($2) may be picked up at the office within sixty (60) days. After sixty (60) days, the refund shall be applied to Operation Share. **(C)**

8.13 Unless otherwise stated in this Section 8, Billing and Payment, all billing and payment provisions of this section apply to Customers served under all Company rate schedules, including Rate Schedules RT and NT where a Customer's Choice Supplier also participates in the Company's Purchase of Receivables ("POR") program.

8.14 Acceptable Forms of Payment. The Company accepts only the following forms of payment: a certified, cashier's, teller's or bank check; a personal check issued from an accredited financial institution; a money order from an official issuer; automatic bank drafting (AutoPay); ~~by~~ wire transfer; ~~by~~ Automated Clearing House (ACH); in cash at a third-party pay site; electronic by bank account, credit or debit card, or digital wallet through the Company's authenticated Online Account Center or Company website; electronic payment by phone through the Company's automated phone system or call center agent; electronic through a financial institution's banking system. **(C)**

RULES AND REGULATIONS

10. RIDER A

STATE TAX ADJUSTMENT SURCHARGE

The State Tax Adjustment Surcharge is applicable to the net monthly rates and minimum charges contained in this Tariff. The surcharge shown below will be recomputed when a tax rate used in the calculation changes and/or the Company implements a change in rates.

The recomputation of the surcharge will be submitted to the PUC within 10 days after the occurrence of a reason for surcharge recomputation shown above. If the recomputed surcharge is less than the one in effect the Company will, and if more may, submit a tariff or supplement to reflect such recomputed surcharge, the effective date of which shall be 10 days after the filing.

Rider A - State Tax Adjustment Surcharge is 0.~~01~~00% **(~~I~~D)**

This Rider applies to Rates R, RT, GL, N, NT, DS, and LFD.

(~~I~~D) Indicates ~~Increase~~ Decrease

RULES AND REGULATIONS

12. Rider C

WEATHER NORMALIZATION ADJUSTMENT

Applicability and Purpose:

A Weather Normalization Adjustment ("WNA") shall be applied to bills of Residential and Non-Residential customers under Rate Schedules R, RT, N and NT, for any bills rendered during the heating season, which effective November 1, 2025 will include the months of October through April. Beginning with bills rendered on and after November 1, 2025, WNA will no longer be applied to confirmed low income residential customers who participate in the UGI Gas CAP program for CAP customers on a percent of income bill. CAP customers on average bill will continue to be billed based on an appropriate 12 month historic basis. The WNA commenced with bills rendered on and after November 1, 2022 and shall continue as a ~~five-year~~ pilot which will end on October 31, ~~2027~~2032, unless affirmatively extended or otherwise permitted by Commission Order. **(C)**

WNA is a distribution charge adjustment and is considered a basic service charge.

Calculated WNA amounts shall be subject to Rider A – State Tax Adjustment Surcharge and Rider I – Distribution System Improvement Charge. No additional riders or surcharges will be applied to the calculated WNA.

Calculation of Adjustment Amount:

The WNA will be applied to October through May billing cycles and shall be calculated on a customer account specific basis in accordance with the formula below:

WNBC = BLMC + [((NHDD +/- (NHDD * 3%)) / AHDD) x (AMC-BLMC)]
WNAC = WNBC – AMC
WNA = WNAC x Distribution Charge

(a) Weather Normalized Billing Ccfs("WNBC") will be calculated as the Base Load Monthly Ccfs ("BLMC") added to the product of the Normal Heating Degree Days ("NHDD", adjusted for a 3% deadband as further discussed in subparts (i) and (j) below), divided by the Actual Heating Degree Days ("AHDD") and the Actual Monthly Ccfs ("AMC") less the BLMC. Weather Normalized Billing Ccfs (WNBC) will only be calculated if the AMC exceeds the BLMC. WNA will not be applicable for the billing period if AMC is less than the BLMC.

(b) BLMC shall be established for each customer using the customer's actual average daily consumption from the billing system, measured in Ccfs, using bills with read dates of June 21st thru September 20th over a thirty-six-month period multiplied by the number of days in the billing period. The average daily base load is recalculated monthly using the most recent thirty-six months of bill history. If less than twelve months of bill history is available for the premise, an average base load for the related customer class will be applied.

(c) AMC shall be measured for each customer and billing cycle and will be inclusive of any heating value corrections.

(d) NHDD shall be applied on a Delivery Region specific basis as determined by the customer's geographical location and, for any given day within a billing period, shall be based upon the Delivery Region's ~~15~~10-year average for the given day. **(C)** NHDD shall be updated every ~~5 years~~rate case using the methodology established in the Company's general rate case proceeding at ~~R-2021-3030218~~R-2025-3059523~~ with the next scheduled update of the NHDD to be effective on October 1, 2025, and thereafter every five years~~.

(C) Indicates Change

RULES AND REGULATIONS

13. RIDER D

MERCHANT FUNCTION CHARGE

Applicability and Purpose

This Rider shall be applied to rates for each MCF (1,000 cubic feet) of gas supplied under Rate Schedules R and N of this Tariff and shall be reflected in the Price to Compare. The Rider is equal to the fixed percentage, established by the PUC in Company's last general base rate proceeding, of purchased gas costs which are expected to be uncollectible, and shall not be reconciled to reflect actual results. Rider D is intended to make Company's Price to Compare more comparable to the gas supply service prices offered of other Natural Gas Suppliers that presumably reflect anticipated uncollectible expenses.

Rider D Charge

Rider D charges shall be equal to 2.~~56~~37% for Residential PGC Customers and 0.~~56~~47%**(~~I~~D)** for Non-Residential PGC Customers of Rider B (Purchased Gas Costs).

The collection of the Rider D charges will be summarized by Rate Schedule sub-accounts in the Gas Operating Revenue FERC Account No. 480000 for Rate R and 481000 for Rates N. The associated costs are recorded in FERC Account Nos. 904001 and 904002.

(~~I~~D) Indicates ~~Increase~~Decrease

RULES AND REGULATIONS

15. PRICE TO COMPARE

The Price to Compare ("PTC") is composed of the Annual C-Factor, Annual E-Factor, Gas Procurement Charge and Merchant Function Charge. The PTC rate will change whenever any components of the PTC change. The current PTC rate is detailed below:

Price to Compare

	Rate R (CCF)	**Rate N (MCF)**	
Annual C-Factor	$ 0.62323	$ 6.2323	~~(D)~~
Annual E-Factor	$ 0.05163	$ 0.5163	~~(I)~~
Gas Procurement Charge	$ 0.00660	$ 0.0660	
Merchant Function Charge	$ 0.~~01728~~ 01599	$ 0.~~0378~~ 0317	(~~I~~D)
Total Price to Compare	$ 0.~~69874~~ 69745	$ 6.~~8524~~ 8463	(~~I~~D)

(D) Indicates Decrease
~~**(I) Indicates Increase**~~

RULES AND REGULATIONS

16. RIDER F

UNIVERSAL SERVICE PROGRAM

APPLICABILITY AND PURPOSE

This Rider shall be applicable to all residential customers except customers in the Company's Customer Assistance Program ("CAP"). This Rider has been established to recover costs related to the Company's Universal Service and Conservation Programs, excluding internal administrative costs. This rider may also apply to customers receiving service under Rate XD on a negotiated rate basis. **(C)**

RATE

In addition to the charges provided in this tariff, an amount shall be added to the otherwise applicable charge for each MCF of sales volumes or distribution volumes distributed by the Company to customers receiving service under Rate Schedules R and RT. The USP rate for customers receiving service under Rate XD, if applicable, may differ from the USP rate stated below and may be applied on a volumetric, fixed charge, percentage or other basis. **(C)**

The USP rate for Rate R and Rate RT: $0.6363/Mcf **(~~I~~C)**

The USP rate for Rate XD: as negotiated, but no greater than the above rate. **(C)**

CALCULATION OF RATE

The Rider USP rate shall be calculated to recover costs for the following programs: Low Income Usage Reduction Program (LIURP); Customer Assistance Program (CAP); Hardship Funds; and any other replacement or Commission-mandated Universal Service Program or low-income program that is implemented during the period that the Rider is in effect.

LIURP costs will be calculated based on the projected number of Level 1 income homes to be weatherized. Hardship Fund costs will be calculated on the projected level of an allocated share of administrative funds incurred by the UGI Operation Share Energy Fund.

CAP costs will be calculated to include
1) the projected CAP credit
2) projected CAP customer application and administrative costs; and
3) projected CAP pre-program arrearage forgiveness.

CAP Credit shall be defined as the difference between the total calculated Rate R bill, excluding Rider USP, and the CAP bill and an adjustment for unearned credit amounts based upon the current discounts at normalized annual volumes of the then-current CAP participants and the projected CAP Credit for projected customer additions to CAP during the period that the CAP Rider rate will be in effect at the average discount of current CAP participants at normalized annual volumes.

(~~I~~C) Indicates ~~Increase~~Change

RULES AND REGULATIONS

16. RIDER F - Continued

UNIVERSAL SERVICE PROGRAM

QUARTERLY ADJUSTMENT

Any time that the Company makes a change in base rates or PGC rate affecting residential customers, the Company shall recalculate the Rider USP rate pursuant to the calculation described above to reflect the Company's current data for the components used in the USP rate calculation. The Company shall file the updated rate with the PUC to be effective one (1) day after filing.

ANNUAL RECONCILIATION

On or before November 1 of each year, the Company shall file with the PUC data showing the reconciliation of actual revenues received under this Rider and actual recoverable costs incurred for the preceding twelve months ended September. The resulting over/undercollection (plus interest calculated at 6% annually) will be reflected in the CAP quarterly rate adjustment to be effective December 1. Actual recoverable costs shall reflect actual CAP costs, actual application costs, actual pre-program arrearage forgiveness, actual LIURP and actual Hardship Administrative costs. Actual recoverable CAP credit costs and pre-program arrearage forgiveness shall be based upon actual CAP credits granted and pre-program arrearage forgiveness granted less a 9.2% adjustment for amounts granted to participants in excess of 25,404 (the number of CAP enrollees as of September 30, 20265). The 9.2% adjustment related to CAP credits and pre-program arrearage forgiveness will be based on the following: (C)

For each reconciliation period, the average annual CAP credit per participant will be determined by dividing the total actual CAP credits granted during the reconciliation period by the average monthly number of participants receiving CAP credits during the reconciliation period. The average monthly number of participants receiving CAP credits in excess of the number of CAP enrollees as of September 30, 2026 exceeding 25,404 will be multiplied by the average annual CAP credit granted per participant and then multiplied by 0.0920 in order to determine the amount of the CAP Credits which will not be recovered through Rider USP. (C)

For each reconciliation period, the average pre-program arrearage forgiveness per participant will be determined by dividing the total actual pre-program arrearage forgiven during the reconciliation period by the number of participants receiving pre-program arrearage forgiveness. The number of participants receiving pre-program arrearage forgiveness in excess of the number of CAP enrollees as of September 30, 2026 exceeding 25,404 will be multiplied by the average pre-program arrearage forgiveness per participant and then multiplied by 0.0920 in order to determine the amount of the pre-program arrearage forgiveness which will not be recovered through Rider USP. (C)

RULES AND REGULATIONS

19. Rider I

DISTRIBUTION SYSTEM IMPROVEMENT CHARGE (DSIC)

In addition to the net charges provided for in this Tariff, a charge of 0.~~33~~00% will apply. **(~~I~~D)**

19.A.1 Purpose. To recover the reasonable and prudent costs incurred to repair, improve, or replace eligible property which is completed and placed in service and recorded in the individual accounts, as noted below, between base rate cases and to provide the Company with the resources to accelerate the replacement of aging infrastructure, to comply with evolving regulatory requirements and to develop and implement solutions to regional supply problems.

The costs of extending facilities to serve new customers are not recoverable through the DSIC.

19.A.2 Eligible Property.

The DSIC-eligible property will consist of the following:

- Piping, Couplings, Valves, Excess Flow Valves, Risers - Distribution & Transmission. (Accts. 374, 376, 365, 367)
- Measuring & Regulator Stations – Distribution & Transmission (Accts. 375, 378, 379, 366, 369, 370)
- Gas Service Lines and Insulated and Non-Insulated Fittings (Accts. 378, 380)
- Meters, Meter Bars, Meter Installations (Accts. 381, 382)
- House Regulators & Installations (Accts. 383, 384)
- Industrial & Farm Tap Measuring & Regulator Station Equipment (Accts. 385, 386)
- Miscellaneous Equipment and Material– Distribution & Transmission (Accts. 387, 371)
- Equipment – Electronic Systems & Software (Accts. 391)
- Vehicles, Power Equipment, Tools, Shop & Garage Equipment (Accts. 392, 394, 396)
- Unreimbursed costs related to highway relocation projects where a natural gas distribution company or city natural gas distribution operation must relocate its facilities.
- Gathering lines (Accts. 332)
- Storage lines (Accts. 353)
- Other related capitalized costs.

19.A.3 Computation of the DSIC. The DSIC will be updated on a quarterly basis to reflect eligible plant additions placed in service during the three-month periods ending one month prior to the effective date of each DSIC update.

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS **(C)**
~~**Effective November 1, 2020**~~

22.1 Application of Rates ~~(C)~~

(a) Applicable Rates: DS, LFD, XD and IS.

(b) Notification of Delivery; Nomination Procedures. Customer shall notify the Company of any and all gas deliveries to the Company's system, including, but not limited to, the provision of nomination, revised nomination and scheduling information, in accordance with the Company's *Nomination Procedure*, as may be amended from time to time, and made available on the Company's Gas Management Website ("Nomination Procedure"). The quantity of gas received on behalf of the Customer shall be determined by allocation or other method by the Company if required in its sole discretion. It is the Customer's responsibility to arrange that any necessary billing information be provided to the Company and/or delivery gas source.

(c) Nominating Agents. A Customer shall notify the Company of its designated nominating agent ("Agent") for purposes of nominating the volumes of natural gas to be delivered to the Company's system on the Customer's behalf in accordance with the Nomination Procedures. Customer shall notify Company, on a form designated by the Company in the Nomination Procedures, of the responsibilities of the Agent, and shall provide Company with the Agent's valid e-mail address and valid 24-hour contact information. Customer shall remain liable for all charges and penalties notwithstanding Customer's designation and use of an Agent in accordance with the provisions herein.

(d) Penalties for Customer's Default. Customers failing to provide nomination, billing, scheduling, agent, supplier and/or other required information to the Company or pipeline(s)in accordance with the provisions of the Tariff, or otherwise failing to comply with the Company's *Nomination Procedure*, shall be subject to applicable imbalance charges and, in addition, be charged an Administrative Scheduling Fee in an amount no greater than $1,000 per day for every day such required information is delayed. If a Customer default of these provisions occurs and is occurring for a period of 90 days, the Company may impose retail or standby rates on the Customer's account beginning the first day after such 90-day period through and until such time as the Company deems the Customer default to have been resolved.

(e) Sequencing for Billing. Unless otherwise agreed by the Company and the Customer, customer-owned gas delivered under the transportation rate schedules shall be sequenced for billing as the first gas through the meter, and gas purchased under the Retail and Standby Rider shall be sequenced for billing purposes as the last gas through the meter. Gas billed under firm rate schedules shall be billed prior to gas billed under interruptible rate schedules. In lieu of otherwise specified tariff provisions, where the Company and Customer agree, Company shall use pipeline metering facilities for measuring and billing total deliveries to the Customer's facility.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS ~~Effective November 1, 2020~~ – Continued **(C)**

(f) Payment of Charges, Penalties. The Customer shall pay the Company for any and all additional charges incurred on the Customer's behalf or resulting from the Customer's actions or inactions which the Company can demonstrate arise out of the provision of transportation service including, but not limited to, pipeline transportation and service charges. Any such charge, penalty or obligation imposed by a pipeline transporter or supplier as result of balancing of gas delivered to the Customer shall be paid by the Customer in addition to otherwise applicable charges.

(g) The Billing Pool Agent is required to notify Company at least ten days prior to dropping a Customer from a Billing Pool. If adequate advance notice is not provided, the Company reserves the right to not drop the Customer from the Billing Pool.

(h) Billing Pools. One or more transportation Customers may join together in pooled transactions for the purchase and delivery of gas. The Company may allocate among all such customers the volumes of gas or imbalances for purposes of determining responsibility for charges, rates, penalties or other obligations imposed by the Company, or in connection with operation of the pool. A Supplier to a Billing Pool must notify the Company prior to initiating gas deliveries. A Customer is required to submit in writing a request for entry into a Billing Pool.

(1) Each Billing Pool shall appoint an Agent who will coordinate nomination, billing, reconciliation, allocation and any other necessary communication between the Billing Pool and the Company.

(2) All members of a Billing Pool shall be of like balancing service election. The Company may restrict formation or operation of any Billing Pool in order to meet like balancing service election or pipeline imposed eligibility requirements.

(3) Automated Meter Reading. The Company has the right as a condition of being a pool member, to install, at the Customer's expense, automated meter reading ("AMR") equipment for the purposes of daily collection or monitoring, and billing Customer volumes at each related service meter. Where AMR equipment is installed, the Customer shall maintain, at its expense, unless otherwise directed by the Company, a dedicated phone connection and electric service to the AMR equipment which will allow the Company unlimited remote access to the AMR device at all times. Failure to maintain a required phone and/or electric service may result in Customer being removed from a Billing Pool and being placed on a rate schedule not requiring daily measurement capability.

(4) Service under Rate NNS is required by, and shall be individually billed to, any and all members of a Billing Pool except when all pool members are monitored on a daily basis through the use of Company owned AMR equipment at all meter locations. Additionally, service under Rate MBS is required by, and shall be individually billed to, any and all members of a Billing Pool when the billing month for each pool member does not end on the same calendar date; Billing Pools having all customers monitored and billed through the use of Company owned AMR equipment at all meter locations shall be exempt from this requirement.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS ~~Effective November 1, 2020~~ – Continued **(C)**

(i) Recognition of Supplies. Volumes transported on behalf of the Customer will be recognized in the Customer's current billing month based on nominated or scheduled volumes information and may be adjusted after notification is received from the pipeline supplier(s) of the volumes transported on behalf of the Customer. Volumes scheduled shall be determined on the basis of best available actual or confirmed pipeline and/or Company information at the time of billing.

(j) Unless otherwise negotiated under Rate XD, the Company shall retain for Company use gas, and lost and unaccounted for gas, 1.5% of the total volume of ~~(I)~~ gas delivered into its system for the Customer's account.

22.2 Balancing and No-Notice Service.

(a) Each Customer shall use best efforts to balance purchases, deliveries and receipts of gas at all times. Except as specified in 22.1(f), for the purposes of balancing excess deliveries and shortfalls and purchasing services under Rates NNS and MBS, Billing Pools may be treated as a single entity. Subject to the terms and conditions set forth below, the Company shall provide no-notice and monthly balancing services under Rate Schedules NNS and MBS. Service under Rate Schedules NNS and MBS is available only for inadvertent fluctuations, limited by the terms and conditions of each Rate Schedule, and is not available to speculate as to fuel prices or otherwise to permit imbalances which reasonably could have been avoided. In the event the Customer fails to use best efforts to balance deliveries and receipts, or otherwise misuses no-notice or balancing services as determined by the Company in its sole discretion, Section 22.4 shall apply for the period of such default or misuse.

(b) Daily Balancing. The Company shall allow Customer's daily demand to inadvertently vary from daily scheduled deliveries by +/-4.5% without imposing Daily Balancing Charges, provided the total daily quantity taken does not exceed Customer's Daily Firm Requirement, MDQ or otherwise specified contract demand limit. Daily imbalances in excess of the +/-4.5% tolerance, unless otherwise provided by service elected under Rate NNS, shall be assessed a Maximum Daily Excess Balancing Charge in accordance with Section 22.4 under Critical Day and Non-Critical Day criteria unless otherwise specified in Customer's contract, in addition to the charges specified in Rates DS, LFD, XD and IS, on all such quantities.

(c) Imbalance Resolution. Customer's monthly imbalances will be calculated at the end of each billing period to determine if any overdelivery (excess) or underdelivery (shortfall) condition exists for volumes scheduled versus volumes metered. If the Customer is determined to be in an imbalance condition, and has not elected service under Rate MBS or has exceeded the 10% imbalance allowance provided under Rate MBS, then the Company shall sell and the Customer shall buy, subject to the 5 percent limitation under Rate MBS, any shortfall amount according to the following cash-out pricing:

(~~I~~C) Indicates ~~Increase~~Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
~~Effective November 1, 2020~~ – Continued **(C)**

Shortfall Percent	Cash-Out Price ~~(C)~~
Up to 5%	Shortfall Monthly Reference Price("SMRP")
Greater than 5%, but not greater than 15%	SMRP x 1.1
Greater than 15%, but not greater than 25%	SMRP x 1.3
Greater than 25%	SMRP x 1.5

Likewise, the Customer shall sell, and the Company shall buy any excess amount according to the following cash-out pricing:

Excess Percent	Cash-Out Price ~~(C)~~
Up to 5%	Excess Monthly Reference Price("EMRP")
Greater than 5%, but not greater than 15%	EMRP x 0.9
Greater than 15%, but not greater than 25%	EMRP x 0.7
Greater than 25%	EMRP x 0.5

The SMRP (Shortfall Monthly Reference Price) shall be the average of the DPP midpoint ~~(C)~~
Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price ~~(C)~~
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

The EMRP (Excess Monthly Reference Price) shall be the average of the DPP midpoint ~~(C)~~
Reference Prices corresponding to the Customer's Delivery Region during the Customer's billing month as listed below:

Delivery Region	Reference Price ~~(C)~~
North	Tennessee, zone 4-300 leg
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS ~~Effective November 1, 2020~~ – Continued **(C)**

Customer Delivery Region shall be assigned to each Customer in accordance with Customer's delivery location within the Company's distribution system.

The SMRP and EMRP are applicable to the above tables only for inadvertent monthly imbalances. The HMRP (Highest Monthly Reference Price) or the LMRP (Lowest Monthly Reference Price) as defined below shall apply respectively to shortfall and excess conditions in those situations where intentional imbalances are involved. ~~(C)~~

The HMRP shall be calculated as the highest of the DPP absolute Reference Prices for the Customer's Delivery Region during the Customer's billing month as listed below: ~~(C)~~

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The higher of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

~~(C)~~

The LMRP shall be calculated as the lowest DPP absolute reference prices for the Customer's Delivery Region during the Customer's billing month as listed below: ~~(C)~~

Delivery Region	Reference Price
North	Tennessee, zone 4-300 leg PLUS the applicable transportation costs from Tennessee, zone 4 to zone 4.
Central	The lower of Transco, zone 6 non-N.Y. or Transco, Leidy Line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The lower of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS
~~Effective November 1, 2020~~ – Continued **(C)**

(d) The Company may extend the balancing period for gas volumes and may increase volumes eligible for balancing in its discretion, but only if it determines that such action is consistent with its obligations to other customers.

(e) Supply Transfers. In order to facilitate Monthly balancing related to inadvertent imbalances in Company's sole discretion, the Company shall allow Supply Transfers among Customers and Billing Pools, Customers-to-Billing Pools and Billing Pools-to-Customers at a fee of $125 per transaction, provided however: (1) such transfer is requested prior to the end of the billing month for both the transferee and the transferor, (2) such transfer is physically possible given pipeline interconnection and delivery point limitations which require transfers to be between parties located on the same segment of the Company's distribution system, and system supplies, and reliability are not adversely affected.

(f) Competitive Volume Customers. In the case of Customers or applicants seeking service for facilities with a design volume capability allowing for direct connection to transmission or gathering lines for bypass of Company facilities, Company shall have the right to establish daily and monthly balancing tolerances at levels other than those specified in subsections (b) and (c) of this Section 22.2 to reflect specific operational limitations or to protect the interests of other Customers, as determined by the Company in its sole discretion. Additionally, the Company may establish special nomination rules, imbalance resolution rules and communication protocols that reflect the Customer's or applicant's commercial alternatives, and which are consistent with its obligations to other Customers.

22.3 Service Agreement and General. ~~(C)~~

(a) Limitation on Liability.

(1) The Company shall not be liable for curtailment of service under Rates DS, LFD, XD and IS, or loss of the Customer's gas as a result of any steps taken to comply with any law, regulation or order of any governmental agency with jurisdiction to regulate, allocate or control gas supplies or the rendition of service hereunder, and regardless of any defect in such law, regulation or order.

(2) Gas transported and delivered by the Company to the Customer hereunder shall be and remain the property of the Customer. The Customer shall be responsible for maintaining all insurance it deems necessary to protect its property interest in such gas before, during and after receipt by the Company.

(3) The Company shall not be liable for any loss to the Customer arising from or out of service hereunder, including loss of gas in the possession of the Company or any other cause, except gross or willful negligence of the Company's own employees or agents. The Company reserves the right to commingle gas of the Customer with other supplies.

(C) Indicates Change

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS ~~Effective November 1, 2020~~ – Continued **(C)**

(b) Warranty, indemnity and special provisions. The receipt of service constitutes Customer's agreement to the following representations and warranties, together with related provisions in the service agreement:

(1) clear and marketable title to the Customer's gas;
(2) delivery points, pressure, quality and other specifications acceptable to gas transmission pipeline(s) and the Company;
(3) eligibility of the Customer for service;
(4) existence of lawful authority for sale, transportation and delivery;
(5) agreement to pay all excise, sales, use, gross receipts, or other taxes (other than income taxes), all tariff charges and all penalties, charges, fees for transportation, balancing etc., associated with delivered gas, which may be levied upon or incurred by the Company at any time;
(6) agreement to indemnify and hold the Company harmless from breach of representations or warranties, and any liability associated with Customer's gas while on the Company's system.

Copy of Gas Purchase Agreements, Other Documents. When requested by the Company, the Customer shall provide the Company with a copy of Customer's gas purchase contract and any related transportation, marketing and brokerage contracts, or, in lieu of providing such contracts, certify pertinent information as required by the Company, and, in order to meet state or federal requirements, provide a sworn affidavit setting forth the Customer's cost of gas for the period requested by the Company. The Company shall endeavor to protect the confidentiality of information provided by the customer in accordance with this provision. The Company will provide such information to third parties only when required to do so by law, regulation or order and in such case, will attempt to maintain confidentiality to the extent possible.

22.4 Maximum Daily Excess Balancing Charge

The Daily Excess Balancing Charge that occurs on Critical Days shall be as follows:

The charge for exceeding daily balancing limits shall be ten times the highest price in the DPP for each delivery region as listed in the following table. This rate shall not be lower than the maximum penalty charge for unauthorized daily overruns as provided for in the FERC-approved gas tariffs of the interstate pipelines which deliver gas into Pennsylvania. ~~(C)~~

~~Effective November 1, 2020~~ – Continued **(C)**

Delivery Region	Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.
Central	The higher of 1) Transco, zone 6 non-N.Y. or 2) Transco, Leidy Line receipts plus the applicable transportation costs from Transco Zone 6 to Zone 6.
South	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	The higher of Texas Eastern, M-3 or Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

~~(C)~~

The Daily Excess Balancing Charge that occurs on Non-Critical Days shall be as follows:

Daily Imbalance Percent	Penalty
Up to 15%	DRP
Greater than 15%, but not greater than 30%	DRP x 2
Greater than 30%, but not greater than 45%	DRP x 3
Greater than 45%, but not greater than 60%	DRP x 4
Greater than 60%	DRP x 5
Intentional imbalances	DRP x 5

~~(C)~~

The DRP (Daily Reference Price) shall be equal to the difference in price between the highest DPP Reference Price and the lowest DPP Reference Price for the Customer's Delivery Region as listed below but shall not be lower than $0.25/Mcf. ~~(C)~~

Delivery Region	Highest Reference Price	Lowest Reference Price
North	Tennessee, zone 4- 300 leg plus the applicable transportation costs from Tennessee Zone 4 to Zone 4.	Tennessee, zone 4- 300 leg
Central	Transco zone 6, non-N.Y.	Transco, Leidy line receipts plus the applicable transportation costs from Transco zone 6 to zone 6.
South	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.
West	Texas Eastern, M3	Texas Eastern, M-2 receipts plus the applicable transportation costs from Texas Eastern M-2 to M-3.

RULES AND REGULATIONS

22. GENERAL TERMS FOR DELIVERY SERVICE FOR RATE SCHEDULES DS, LFD, XD, AND IS ~~Effective November 1, 2020~~ – Continued **(C)**

The Company shall not charge any Maximum Daily Excess Balancing Charges if the Customer's Excess Daily Imbalance is anticipated to benefit the distribution systems daily balancing position as determined by Company in its sole discretion.

22.5 Operational Flow Orders and Daily Flow Directives

The Company has the right to issue Operational Flow Orders and Daily Flow Directives at any time. Failure to comply with any OFO or DFD shall result in a penalty charge of Twenty-Five ($25) per Mcf or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater.

22.6 Cost of Assigned Capacity.

In addition to applicable interstate pipeline demand charges, the associated demand charges to customers, or their NGS, served under Rates DS, LFD, XD, and who ~~(C)~~ utilize assigned PGC capacity and pay weighted average cost, will include 100% (DS) and 50% (LFD, XD) pro rata allocation of annual Peaking Supply service demand costs. The associated demand charges will be reduced by a pro rata share of the Economic Benefit of Peaking Supply (EBPS Credit). The EBPS Credit shall mean a pro rata share of (a) the value of Peaking Supply utilized in off system sales transactions and included in the PGC share of the Revenue Sharing Incentive Mechanism revenues, plus (b) the Commodity Price Differential, which shall be, as measured for the date of Peaking Supply delivery, the aggregate difference, if positive, between the DPP Reference Price applicable to the zone of delivery ~~(C)~~ (i.e., Texas Eastern M3 for deliveries in the South and West Delivery Regions with the exception of deliveries from Mt. Bethel and Transco Z6 NNY for deliveries made in the North and Central Delivery Regions and deliveries from Mt. Bethel) and the actual price paid for actual Peaking Supply deliveries into the UGI distribution system. The EBPS Credit shall be applied in the calculation of associated demand charges in the second billing month after the credit has accrued (e.g., December accrued credits will be used to reduce the February associated demand charges) and shall not, on an annual basis, exceed the annual incremental demand charges for ~~(C)~~ Peaking Services charged to Rate DS, LFD, and XD customers, or their NGS, as described above.

RATE DS

DELIVERY SERVICE

AVAILABILITY

This service applies in the entire territory served by the Company. Firm Delivery Service shall be provided for all volumes supplied by the Customer for which the Company has available on system delivery capacity, subject to Section 21 - Gas Emergency Planning provisions of the Company's tariff, applicable rules and regulations of the PUC and any other governmental mandates.

The Customer must execute a Service Agreement for not less than (1) one year. The contract shall continue in force for consecutive (1) year periods unless cancelled by the Customer upon ninety (90) days written notice to Company prior to the expiration of a contract term.

Gas service in excess of volumes delivered by the Customer shall only be provided in accordance with applicable delivery service balancing provisions or in accordance with optionally elected and approved balancing or standby services.

Service under Rate DS is subject to the terms set forth under Section 22, General Terms for Delivery Service for Rate Schedules DS, LFD, XD, and IS.

MONTHLY RATE TABLE

The charge for each monthly billing period shall be the sum of the Customer Charge, the Capacity Charge if applicable, and the Distribution Charge as described below. The following are maximum rates.

Customer Charge: $~~300.00~~353.00 per month **(I)**

Plus Capacity Charge: The Company's unitized weighted average cost of firm transportation capacity per elected MDQ.

~~**(C) Indicates Change**~~

RATE LFD - Continued

LARGE FIRM DELIVERY SERVICE

MINIMUM BILL

Monthly: The Minimum Monthly Bill shall be the Customer Charge, Demand Charge, Capacity Charge (if applicable), and Charge for Other Transportation.

Annual: Unless a higher amount is agreed upon by the Company and Customer, the Minimum Annual Bill shall be based on the Customer maintaining a 0.50 annual load factor and shall be due and payable with the bill for the 12th month in the contract year. The Customer's actual load factor shall be determined by dividing the total volume of gas taken during the contract year (including volumes taken under the Retail and Standby Rider, and the Cash-Out provisions of Section 22.2) by the sum of the Daily Firm Requirements for the contract year. If the actual load factor is less than 0.50, then, in addition to payment for actual usage, the Customer shall pay a Minimum Annual Bill charge equal to the product of: (1) the difference between 0.50 and the actual load factor, (2) the sum of the Customer's Daily Firm Requirements for the contract year, and (3) the average delivery charge paid by the Customer over the previous 12-month period, as calculated by the Company. If the Customer's actual load factor is greater than or equal to 0.50, no Minimum Annual Bill charge will be required. **(C)**

CHARGE FOR OTHER TRANSPORTATION

If the Customer chooses to use the Company as agent in regard to transportation service by others, any costs calculated by or billed to the Company, with regard to such agency, shall be billed to the customer by the Company and may include an applicable administrative fee as agreed by the Customer and Company. Such charges related to the use of Customer elected and Company provided transportation capacity shall be reflected directly on the Customer's bill for service rendered on and after April 1, 2024, pursuant to Commission order at Docket R-2023-3040290, with such charges labeled on the bill as Capacity Charge.

CHARGE FOR UNAUTHORIZED OVERRUN

Whenever it is necessary to restrict gas supplied under this Rate, the Company will provide due notice of such restriction. If a Customer, after having received due notice of restriction, shall take gas in excess of the amount made available by such notice, then the Customer shall be billed for such excess gas at the rate of Fifty Dollars($50.00) per MCF, or the charge calculated in compliance with Section 22.4 Maximum Daily Excess Balancing Charge, whichever is greater, plus the charge specified in the monthly rate table. Section 22.4 is primarily intended to establish applicable daily imbalance penalty charges but shall also provide for the pricing applicable to any Unauthorized Overrun volumes, which shall be subject to the same pricing as an Intentional imbalance. Customer shall indemnify Company from any claims by third parties resulting from Customer's unauthorized overrun. ~~(I)~~ ~~(C)~~ ~~(C)~~

SERVICE UNDER OTHER RATES

Volumes purchased under the Retail and Standby Rider or under the Cash-Out provisions of Section 22.2 or taken under Rate NNS shall be included for the purposes of determining Excess Take Charge and Unauthorized Overrun gas.

NOTICE

This supplement makes increases and changes to existing rates (see page 2(b)).

RULES AND REGULATIONS

4. CHOICE SUPPLIER OBLIGATIONS

4.12 If a Choice Supplier elects to participate in the Company's POR Program, the Choice Supplier must enter into a POR Agreement for the rate classes that it serves that will be included in the POR. The elected Rate Classes shall be one of the following: (1) RT only, (2) NT only, or (3) RT and NT. All receivables associated with basic natural gas supply services in the specific rate class, subject to the rate class elections made above, must be sold by the participating Supplier to the Utility. For the purposes of this provision, the phrase "basic natural gas supply services" shall include charges directly related to the physical delivery of natural gas to a retail customer but shall not include charges for "carbon-neutral" products, appliance maintenance service, energy efficiency services, termination or cancellation fees, security deposits or other products or services not directly related to the physical delivery of natural gas to a retail customer. Customer accounts that are billed for non-basic natural gas supply services will not be eligible for UGI's POR program. All of the NGS' customer accounts within the elected Rate Classes (subject to the volumetric limits contained in section 5.4) must be POR eligible accounts, with the exception of customers that purchase carbon-neutral products. NGSs may choose to use UGI consolidated billing for Non-POR eligible customers who are purchasing bundled "carbon-neutral" product offerings. The termination and reconnection provisions of Chapters 14 and 56 of the Public Utility Code and PUC regulations shall not be applicable to unpaid NGS charges for non-POR eligible accounts on consolidated billing. NGSs will be responsible for collecting unpaid NGS charges on non-POR eligible accounts on consolidated billing. UGI shall support rate-ready billing, and all NGS rates must conform to supported rate designs. For Purchased Customer Accounts, Company shall pay Choice Supplier an amount equal to 97.~~30~~49% for residential amounts billed (inclusive of associated sales taxes) and 99.~~30~~39% of non-residential amounts billed (also inclusive of taxes). Customer participation for NT shall be subject to Volumetric Eligibility pursuant to Section 5.4. ~~(C)~~ (C) (C)

4.13 All existing customers of Choice Suppliers who elect to participate in the Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier and Company that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

All new customers enrolling with Choice Suppliers who are participating in Company's optional Purchase of Receivables program shall be provided notice by the Choice Supplier prior to enrollment, and by Company upon enrollment, that (a) the Company will be providing one bill for all Company and Choice Supplier charges, (b) all payments should be made to the Company, (c) any unpaid amounts shall be subject to late payment charges, (d) the Company may request a security deposit for amounts which include Choice Supplier charges and (e) the Company maintains the right to terminate service for any unpaid Company or Choice Supplier charges, pursuant to Pennsylvania Public Utility Code regulations.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 2-R

Rebuttal Testimony of
Tracy A. Hazenstab

Topics Addressed: **UGI Gas Exhibit A – Fully Projected Operating Expenses & Revenues**

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy A. Hazenstab. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 2, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony provides updates to certain components of the Company's filing, based on the information provided during the discovery phase of this proceeding. In addition, my testimony responds to certain portions of the direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission" or "PUC") Bureau of Investigation and Enforcement's ("I&E") witness Zachari Walker (I&E Statement No. 1) and the Office of Consumer Advocate's ("OCA") witness Jennifer Rogers (OCA Statement 2).

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes. As discussed below, I am sponsoring the Company's accounting exhibit, UGI Gas Exhibit A - Fully Projected (REBUTTAL), which reflects all of the updates and corrections to the Company's claim identified to date.

II. UPDATES AND CORRECTIONS TO COMPANY'S CLAIM

Q. Since the filing of your direct testimony, has the Company identified any operations and maintenance expense ("O&M") components of its filing that should be updated?

A. Yes, the Company has identified the following O&M items that required revision for the fully projected future test year ending September 30, 2027 ("FPFTY"):

- Embedded Cost of Long-Term Debt: The interest rate for the term loan to be issued in the FPFTY is increasing from 3.098% to 4.9%. The prior rate reflected expectations of Federal Reserve rate cuts reducing the Term SOFR benchmark by first quarter 2027; however, market expectations have since shifted toward a sustained elevated rate environment, resulting in an increased interest rate estimate. This revision increased the weighted cost of debt from 5.17% to 5.22% and increased the revenue requirement by approximately $870,000. In addition, a revised Schedule B-6 (Cost of Debt) and Schedule B-7 (Rate of Return) are provided to represent these increases.

- Payroll Adjustment: As explained in the rebuttal testimony of Vivian K. Ressler (UGI Gas Statement No. 4-R), the Company accepts I&E's recommended adjustment in the amount of ($1,153,000) to reflect a three-year average of the historic vacancy rate. This adjustment is reflected in Line 19, Administrative & General Expense, on Schedule D-2 and decreases the revenue requirement by ($1,201,000) after cash working capital calculations.

- Employee Benefits: As explained in the rebuttal testimony of Ms. Ressler, the Company accepts I&E's recommended adjustment in the amount of ($764,000) to reflect a three-year average of the historic vacancy rate. This adjustment is reflected in Line 19, Administrative & General Expense, on Schedule D-2 and decreases the revenue requirement by ($784,000) after cash working capital calculations.

- Payroll Taxes: The Company accepts I&E's payroll tax adjustment in the amount of ($88,000), which is due to the acceptance of the vacancy rate adjustment and is discussed in Ms. Ressler's rebuttal. This adjustment is reflected in Line 21, Taxes other than Income, on Schedule D-2 and decreases the revenue requirement by ($90,000) after cash working capital calculations.

- OPEB Expense: As explained in the Company's response to I&E-RE-29, the amortization of the regulatory liability for past over-recovery of the post-retirement welfare plan will terminate at the end of the future test year ("FTY"). In the Company's claim, this amortization income was inadvertently included in the FPFTY, creating an understatement in the Company's claim of $974,464. This adjustment is reflected in Line 19, Administrative & General Expense, on Schedule D-2 and increases the revenue requirement by $991,000 after cash working capital calculations. Further

discussion can be found in the rebuttal of Amy M. Keller (UGI Gas Statement No. 5-R).

Q. Since the filing of your direct testimony, has the Company identified any revenue components of its filing that should be updated?

A. Yes, the Company identified the following revenue item that requires revision for the FPFTY:

- Use Per Customer Adjustment: The Company is accepting the adjustment to use per customer as outlined in the Direct Testimony of Ethan H. Cline (I&E St. 3, at pp. 8-9) and explained in the rebuttal testimony of Sherry A. Epler (UGI Gas Statement No. 10-R). Total revenue is increasing by $1,037,436, margin is increasing by $483,884, and cost of commodity is increasing by $553,552. Included in the total cost of commodity adjustment is the Purchase Gas Cost ("PGC") annualization increase of $495,065 as reflected on Schedules D-5 and D-6 and increases in the adjusted budgets for Universal Service Program ("USP") expense and Energy Efficiency and Conservation ("EEC") expense of $44,255 (Schedule D-16) and $14,231 (Schedule D-19) respectively.

As with the updates to the Company's costs, these revisions to the Company's revenues, including the breakout between margin and cost elements, are reflected in UGI Gas Exhibit A – Fully Projected (REBUTTAL).

Q. Based upon the adjustment analyses conducted by the Company, what do you conclude?

A. As set forth in UGI Gas Exhibit A - Fully Projected (REBUTTAL), the overall effect of the updates and corrections to the Company's claim is that the Company supports a revenue increase of $98,693,000 (as compared to the as-filed claim of $99,368,000) using the Company's proposed capital structure, revised weighted average cost of debt, and proposed return on equity of 10.75%. The Company's revisions to accept certain adjustments recommended by I&E and OCA in particular have been adopted to decrease its overall claim.

III. REVENUE REQUIREMENT ADJUSTMENTS

Q. Do any of the other parties propose adjustments to the Company's overall revenue requirement?

A. Yes. I&E recommended a revenue requirement of $1,288,531,000, which represents an increase of $53,385,000 to I&E's adjusted present rate revenues of $1,235,146,000. I&E St. No. 1, at p. 4. OCA recommended a revenue requirement of $1,218,849,000, which represents a decrease of $15,833,000 to OCA's adjusted present rate revenues of $1,234,682,000. OCA St. 2; Schedule JLR-1. The Office of Small Business Advocate ("OSBA") did not provide any recommendation on revenue requirement.

Q. Please summarize I&E's and OCA's proposed adjustments.

A. I&E's recommended revenue requirement includes a net decrease of $14,199,000 to O&M expenses, a reduction of $88,000 to payroll taxes, a total reduction of $3,115,000 to rate base, a total increase of $464,481 to present rate revenue, the use of the capital structure proposed by the Company, and a return on equity of 9.81%. OCA's recommended revenue requirement includes a total reduction of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** to O&M expenses, a reduction of $88,000 to payroll taxes, a total decrease to depreciation expense of $21,800,000, a $18,039,000 increase to rate base, and the use of the capital structure that consists of 51% debt and 49% equity, and a return on equity of 8.80%.

Q. Does the Company agree with OCA's or I&E's proposed adjustments to the Company's revenue requirement?

A. No. As explained throughout this testimony and the other rebuttal testimony forming UGI Gas's rebuttal position, with the exception of certain updates to the Company's revised filing and the acceptance of some relatively minor operating expense and rate base adjustments, the Company believes that the various revenue, expense, and rate base adjustments proposed by the opposing parties are not reasonable and therefore should be rejected. UGI Gas Exhibit A – Fully Projected (REBUTTAL) incorporates the concessions and modifications previously noted but otherwise reflects the rejection of the proposed adjustments by the other parties.

IV. OPERATING EXPENSE ADJUSTMENTS

A. RATE CASE EXPENSE

Q. Do any of the other parties propose adjustments to the Company's claimed rate case expense?

A. Yes. Both I&E Witness Walker and OCA Witness Rogers propose adjustments to the Company's claimed rate case expense.

Q. Please summarize I&E's and OCA's proposed adjustments.

A. I&E Witness Walker recommends that the Company's rate case expense be decreased by $880,000, based on the use of a 24-month normalization period. I&E St. No. 1, at pp. 9-15. He asserts that the Company's historic filing frequency should be based on an average of its most recent cases. I&E St. No. 1, at pp. 12. Witness Keller further cites to and relies upon recent Commission decisions, where the Commission has adopted I&E's reliance on historic filing frequency to normalize rate case expense. I&E St. No. 1, at pp. 12-15.

OCA Witness. Rogers also recommends that the Company's rate case expense be decreased by $880,000, based on the use of a 24-month normalization period. OCA St. 2, at p. 7; Schedule JLR-6.

Q. Does the Company agree with either I&E's or OCA's proposed adjustment to rate case expense?

A. No.

Q. Why is the 24-month normalization period advanced by I&E and OCA not reflective of the Company's rate case filing frequency?

A. The Company's expectation that it will file another base rate case in one year is based upon an assessment of future capital requirements, continued information system improvements, and the cost of other improvements as detailed in the Company's Third Long-Term Infrastructure Improvement Plan ("LTIIP") filing.[1] Many of these improvements are important replacement and betterment investments undertaken pursuant to legal commitments that will allow the system to function safely and reliably. The Company is implementing a continued accelerated replacement and betterment program as detailed in its Third LTIIP and this sustained capital investment supports a one-year rate case cycle and a one-year normalization of rate case expenses.

B. ENERGY EFFICIENCY AND CONSERVATION EXPENSE

[1] Petition of UGI Utilities, Inc. – Gas Division for Approval of its Third Long-Term Infrastructure Improvement Plan, Docket No. P-2024-3050769 (Opinion and Order entered Dec. 5, 2024).

Q. Did any party propose an adjustment to the Company's energy efficiency and conservation ("EE&C") plan expense?

A. Yes, OCA witness Walker proposed that the Company's EE&C expense be decreased.

Q. Please summarize OCA witness Walker's proposed adjustment.

A. Witness Walker states that the "Company's budgeted EE&C Plan expenses of $12,366,000 are recovered through gas distribution base rates, reconciled to match the amount of the current EE&C Rider charge at the time of the Company's filing" and recommends a $1,193,000 reduction to the EE&C expense based on a three-year historical average cost. I&E St. No. 1, at pp. 42-45.

Q. Do you agree with Witness Walker's adjustment?

A. No. The EE&C is not recovered through base rates. It is recovered through the fully reconcilable EE&C Rider. For the presentation of the EE&C plan in the FPFTY, expenses are set to fully offset the EE&C rider revenues. Therefore, no impact related to EE&C flows through the revenue requirement calculation. I&E's adjustment ignores the nature of this rider and treats the Company's EE&C costs as if they were an O&M expense not subject to a reconcilable rider. Additionally, Witness Walker's proposal is inconsistent with the treatment of other fully reconcilable riders presented in this case, including the USP and PGC, and is inconsistent with the PGC treatment recommended by Witness Cline in his testimony. I&E St. No. 3, at pp. 13-14. For these reasons, I&E Witness Walker's adjustment should be rejected. However, should the Commission agree with Witness

Walker's adjustment, a corresponding decrease in revenue must be made to acknowledge the fully reconcilable nature of the rider.

V. CASH WORKING CAPITAL

Q. Do any other parties address the Company's claim for CWC in this case?

A. Yes. I&E Witness Walker and OCA Witness Rogers both recommend adjustments to the Company's CWC claim, based upon the other expense adjustments proposed by I&E and OCA. I&E St. No. 1, at pp. 46-48 (recommending disallowance of $832,000 derived from other adjustments to the Company's expenses); OCA St. 2, at p. 6 (recommending disallowance of $3.76 million derived from other adjustments to the Company's expenses). Neither witness disputes the Company's lead/lag study or method for determining its CWC claim.

Q. Does the Company agree with either I&E's or OCA's CWC adjustments?

A. The Company agrees with the witnesses in principle – that to the extent its other claimed expenses are adjusted the CWC should be adjusted. However, the Company disagrees with the specific proposed adjustments to CWC, to the extent that the Company disagrees with the underlying expense or tax adjustments advanced by I&E and OCA.

Q. Please provide more detail on why the Company does not agree with the CWC adjustments proposed by I&E and OCA.

A. The Company disagrees with the CWC adjustments proposed by I&E and OCA, which are based upon a number of their proposed adjustments to O&M expenses. As explained in the rebuttal testimony of other Company witnesses, the Company disagrees with many of

these proposed adjustments but has also agreed to accept certain of them. In addition, the Company has updated various aspects of its O&M expense claims based upon information produced during discovery. For these reasons, the Company submits that its updated CWC claim of $66,348,000 that is reflected in Schedule A-1, UGI Gas Exhibit A – Fully Projected (REBUTTAL), which is a decrease of $175,000 from its as-filed claim, should be approved.

VI. INTEREST SYNCHRONIZATION ADJUSTMENT TO INCOME TAX EXPENSE

Q. What was the Company's original claim for income tax expense in this proceeding?

A. The Company's claim for income tax expense in this proceeding was $76,442,000 as reported on Schedule D-33 of UGI Gas Exhibit A (FPFTY). Income taxes are calculated using the procedures normally followed by the Commission, including the use of debt interest synchronization, the normalization method for accelerated depreciation used in the calculation of Federal income taxes, and the flow through of accelerated depreciation benefits for state tax purposes. The Company's claimed interest expense deduction was $102,369,000 based on a rate base of $4,319,352,000 multiplied by the weighted cost of debt of 2.37% (45.75% x 5.17%) UGI Gas Exhibit A (FPFTY), Schedule B-7.

Q. Did any party challenge the Company's claim?

A. Yes. OCA Witness Rogers recommends a $909,000 decrease to state income taxes and a $2.4 million decrease to federal income taxes based upon OCA's recommended rate base and weighted cost of debt in its recommended capital structure. OCA St. 1, p. 16; Schedule JLR-16.

Q. Do you agree with OCA's proposed adjustment?

A. No. I note that UGI Gas witness Mr. D'Ascendis responds specifically to the OCA's proposed capital structure, cost of equity and overall rate of return in his rebuttal testimony (UGI Gas Statement No. 8-R). For the reasons fully identified in Mr. D'Ascendis's rebuttal testimony, OCA Witness Garrett's adjustments (in OCA St. 3) to the Company's actual capital structure and cost of equity should be rejected and so should Witness Rogers's adoption of that recommendation in OCA's revenue requirement model.

Q. Are there other adjustments made by the Company as part of its Rebuttal Case that impact the interest synchronization adjustment?

A. Yes. As discussed earlier, the Company has reflected an adjustment to the average cost of long-term debt, which increases the rate from 5.17% to 5.22%. This adjustment increases the interest deduction by $859,330 to $103,228,330 (based on a rate base of $4,319,177,000 multiplied by the weighted cost of debt of 2.39% (45.75% x 5.22%), UGI Gas Exhibit A – Fully Projected Future (REBUTTAL), Schedule B-7. The interest increase of $859,330, coupled with the decrease to revenue, decreases the federal income taxes by $2,000 and decreases the state income taxes by $1,000.

VII. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 3-R

Rebuttal Testimony of
Jill E. Walter

Topics Addressed:	**Pipeline Replacement Costs**
	Methane Detectors
	Training Protocols
	Public Input Hearing Testimony

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Jill E. Walter. My business address is 2121 City Line Avenue, Bethlehem, PA 18107.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 3, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to certain claims in the testimony of the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E") Witness Anna Ritchie, I&E Statement No. 4; Office of the Consumer Advocate ("OCA") Witness Barbara Alexander, OCA Statement 5; and OCA Witness Zachary Teti, OCA Statement 7.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I'm sponsoring UGI Gas Exhibit JEW-1R.

II. RESPONSE TO TESTIMONY

A. PIPELINE REPLACEMENT COSTS

Q. Did you review the testimony of I&E Witness Anna Ritchie?

A. I did.

Q. Do you have any response to her discussion of the Distribution Integrity Management Plan ("DIMP") and the Long Term Infrastructure Improvement Plan ("LTIIP")?

A. Witness Ritchie accurately describes the regulatory requirements of the DIMP and the LTIIP. I&E St. No. 4, at pp. 3-6. Her testimony states that UGI Gas determines pipeline replacements by managing the risk ranking of the different aspects of the pipeline and then replacing the pipe based on the highest risk ranking. I&E St. No. 4, pp. 6-7. I wanted to provide further clarity regarding the Company's process. UGI Gas generally prioritizes pipeline replacement to remove the highest amount of risk while taking into consideration cost efficiencies. For example, UGI Gas will reprioritize a replacement project when there is an opportunity to work in conjunction with a third party, such as a municipality that is planning paving projects, to reduce the overall cost of the project. Further, the Company may need to reorder its work based on other timing considerations. For example, municipalities often limit pipeline replacement projects after a paving project, which could impact UGI Gas's ability to replace the pipeline at a later date, making the reprioritization more cost effective and operationally necessary. Finally, while UGI Gas prioritizes its project list by the pipeline with the highest risk ranking, the Company may include pipelines of lower risk in the vicinity of the highest risk pipeline project due to cost efficiency. In these examples, in addition to the cost savings and operational efficiencies, the local community also benefits by reducing street disturbances that avoid repeated road closures and other traffic disruptions.

Q. Witness Ritchie claims that UGI Gas's annual pipeline replacement costs have been increasing due, in part, to rising restoration costs. I&E St. No. 4, at pp. 11-12. Do you agree with the way Witness Ritchie characterized the data?

A. Yes. Restoration costs associated with replacing and retiring natural gas mains have increased steadily over the life of the Company's accelerated main replacement program articulated in its LTIIP. UGI Gas has taken many active steps aimed at controlling restoration costs where it is possible to do so.

Q. Does Witness Ritchie make any recommendations?

A. Yes. Witness Ritchie recommends that UGI Gas continue to take positive steps toward reducing restoration costs by coordinating pipe replacement projects with other street projects and incorporating trenchless construction techniques where it is economically feasible. I&E St. No. 4, at p. 14. Witness Richie also states that UGI Gas should work to negotiate with state, county, and local entities to reduce restoration requirements associated with pipeline replacement. She further states that UGI Gas should analyze and consider these costs on a project-by-project basis in an effort to continue to decrease and draw down these replacement costs annually. I&E St. No. 4, at p. 14.

Q. What steps has UGI Gas taken towards reducing restoration costs?

A. The Paving & Restoration team at UGI Gas proactively engages with municipalities to develop and partner in cost-share agreements, when possible. The Company also negotiates and contests permit fees, and addresses and negotiates requests for additional restoration work. This ongoing collaboration has led to improved project outcomes and

better working relationships with local municipalities. In addition, UGI Gas seeks opportunities to replace pipelines ahead of municipality planned paving projects to reduce UGI Gas's overall project costs.

Despite these advancements with some municipalities, the team has encountered challenges, particularly in navigating the differing expectations and requirements of various municipalities regarding restoration standards and associated costs. The team's commitment to enhancing alignment and oversight remains focused. With continued development, these efforts are anticipated to refine the process of data collection and review, ultimately fostering greater transparency in restoration initiatives throughout the UGI Gas territory. Over the last year, UGI Gas has met and collaborated with various stakeholders in its North and South regions including the cities of Allentown, Bethlehem, Lancaster, Harrisburg, and Scranton as well as South Whitehall Township.

Q. What other factors contribute to the increased cost of restoration?

A. There has been a significant increase in municipal costs related to the installation of American with Disabilities Act ("ADA") ramps. These ramps are crucial for accessibility compliance but often go unaddressed by municipalities unless and until UGI Gas engages in utility projects. These ADA ramp upgrades add a tremendous cost to the restoration of UGI Gas projects and include, at times, traffic signal upgrades and pedestrian crossings, and installing ramps where no ramps previously existed to bring the intersections up to code. For example in the City of Allentown, UGI Gas completed 10 restoration projects costing approximately $1.34 million of which approximately $815,000 was related to ADA ramps (~61% of the total paving costs).

Q. Witness Ritchie claims that increasing restoration costs diverts funds from UGI Gas's pipeline replacement projects. Do you agree?

A. No. The Company will continue to meet its legal and regulatory obligations. However, in a time where customer affordability is a central concern, additional costs that are added to critical safety work – and particularly of the magnitude of the City of Allentown example – will be impactful to customers. Regardless, UGI Gas will continue looking for opportunities to manage the impact of restoration costs on its pipeline replacement work.

B. METHANE DETECTORS

Q. Does Witness Ritchie offer any testimony about the Company's deployment of methane detectors?

A. Yes. I&E St. No. 4, at pp. 7-11.

Q. Could you summarize that testimony?

A. Witness Ritchie describes UGI Gas's pilot program to deploy methane detectors, including the deployment of Smart Remote Methane Detectors (SRMDs). I&E St. No. 4, pp. 7-8. She describes the Company's Ambassador Program, where over 200 methane detectors have been placed in the homes of UGI Gas employees, who act as ambassadors to increase education and awareness of the program. I&E St. No. 4, at p. 7. She also describes how UGI Gas has taken steps to reach out to customers where a gas leak was recently detected to give them the opportunity to request a methane detector and acknowledges that UGI has sent 212 units as of March 13, 2026. I&E St. No. 4, at p. 8. She further notes that the use of indoor methane detectors are supported by both PHMSA and the National

Transportation Safety Board (NTSB). I&E St. No. 4, at pp. 8-9. It is important to note that UGI Gas has deployed standalone methane detectors that are unable to communicate in over 200 employees' homes and in 212 customers' homes. At this time, UGI Gas has deployed 8 SRMDs in employees' homes.

Q. Does I&E make any recommendation regarding the implementation of methane detectors for UGI Gas customers?

A. Yes. Witness Richie recommends that UGI Gas be required to file quarterly reports with the Commission regarding its methane detector pilot program. I&E St. No. 4, at pp. 10-11. Her testimony identifies specific metrics that should be included in those reports, such as the number of remote and smart methane detectors funded, installed, and the types of customers receiving the detectors, etc. Witness Richie also provides a report template as I&E Exhibit No. 5 with her testimony, which she proposes the Company be required to complete and file.

Q. Do you agree with I&E's recommendations?

A. No. While UGI Gas believes accurate reporting on its pilot will provide the Commission and parties with valuable insight, I&E's proposed quarterly filings are likely too frequent to reflect meaningful progress between reports. UGI Gas supports annual progress reports, and a final report at the conclusion of the pilot that reflects lessons learned over the life of the program.

Q. Does Witness Richie make any further proposals regarding the deployment of smart remote methane detectors, in particular?

A. Witness Richie proposes that UGI Gas's pilot program be expanded to require the installation of 3,000 SRMDs. I&E St. No. 4, at p. 9. Further, Witness Richie suggests that UGI Gas should work to expand its pilot deployment to all customers.

Q. Do you agree with I&E's recommendations?

A. No. UGI Gas opposes the proposal to expand its pilot at this time. Fundamentally, the pilot should be allowed to proceed as originally planned, because it was designed to collect data on efficacy, adoption rates, and cost effectiveness, as well as other information that would inform a larger, programmatic deployment of methane detectors in the future.

Q. Are there any other reasons that I&E's proposal should not be adopted at this time?

A. Yes, as described in the Company's responses to discovery (attached hereto as UGI Gas Exhibit JEW-1R), the technology and feasibility of SRMDs is still in a nascent state and may not be appropriate for more widespread deployment across UGI Gas's service territory. In addition, there are still concerns around cost effectiveness and operational issues that must be evaluated before further scaling deployment. Operational issues include incorporation of response protocols to methane detector alerts, adoption of supporting technology tools, integration of appropriate IT systems, implementation of ongoing maintenance requirements/responsibilities for the devices, as well as other key issues that will affect the successful implementation of this technology on a widespread basis. Large

scale IT upgrades to support the pilot are not prudent, at this preliminary stage, without substantial understanding of the results and potential for future expansion.

C. TRAINING PROTOCOLS

Q. Did you review the testimony submitted by OCA Witness Alexander?

A. I did.

Q. Did Witness Alexander raise any concerns regarding the Company's training materials?

A. Yes. Witness Alexander expresses concern regarding the nature of the training provided to existing and new field technicians, and the timeline for training. Specifically, it is her belief that these employees should be trained to solicit or inquire about customer rights. Finally, Witness Alexander believes that door knocks should be required during terminations. OCA St. 5, at pp. 14-15.

Q. Do you have a response to Witness Alexander's concerns?

A. Yes. Field Technicians are responsible for in-person contact and the physical termination of service in the field. However, they are not trained to function as customer service representatives or to assess sensitive customer matters such as medical conditions or income status. As such, they are not the appropriate resource to solicit or evaluate this type of information.

Customers are provided with multiple notifications outlining their rights and available protections, including written correspondence such as the initial notice, 10-day notice, and post-termination notice. These communications clearly explain customer rights,

including protections related to medical conditions, income eligibility, and protections under the Protection From Abuse Act (PFA), as applicable. These communications also provide the customer with information on who to contact to get additional assistance.

Q. Has the Company taken any proactive steps to support customers that may be in need of assistance?

A. Yes. To further support customers who may be in distress, UGI Gas has reimplemented its Gatekeeper Program, originally established in 2014. This program provides employees with a dedicated resource to report concerns when a customer appears to be in an unsafe condition. Rather than placing field technicians in the position of soliciting or evaluating sensitive personal information, employees are trained to recognize observable indicators—such as health concerns, confusion or disorientation, unsafe home or equipment conditions, or potential hoarding situations—and refer those concerns through the Gatekeeper process.

Once reported, UGI's Outreach team follows up to connect the customer with appropriate partner agencies that are properly equipped to assess needs and provide support. This approach ensures that customers receive appropriate assistance while maintaining employee safety and aligning responsibilities with trained resources and respecting the dignity of the customer.

Requiring field technicians to solicit this type of personal information in the field presents safety risks, as it may lead to escalated situations. The Gatekeeper Program provides a safer, more appropriate alternative that supports both customer care and privacy, as well as UGI employee safety.

D. PUBLIC INPUT HEARING TESTIMONY

Q. Did you review the testimony of Witness Ivan Ritz, who testified at the Lancaster Public Input Hearing?

A. Yes, I did. I also reviewed the testimony of OCA Witness Zachary Teti, OCA St. 7, describing Mr. Ritz's testimony.

Q. Mr. Ritz describes work completed in Lancaster by UGI contractors as well as the impact of that work on his neighborhood and service. Tr. at 87-94. Has the Company investigated the work at issue in Mr. Ritz's testimony?

A. Yes. In his testimony, Mr. Ritz describes a situation where UGI Gas contractors performed work near Mr. Ritz's home, and where they damaged a fiber optic cable. I have investigated this claim. During the summer of 2025, UGI Gas, through a UGI subcontractor, conducted main and service replacement work on the 700 and 800 blocks of East Orange Street in Lancaster City. Prior to construction, Verizon failed to mark its underground conduit lines after facility markout requests were made through the Pennsylvania One Call System. During construction, a piercing tool struck and damaged the unmarked conduit. The damage was reported to 811. Verizon indicated in response to the 811 report that the conduit was abandoned. Because the conduit was no longer active, work continued. At this time, there was no damage or issues with Mr. Ritz's service. Weeks later, on October 29, 2025, Verizon informed Kinsley, the UGI subcontractor, that the conduit previously struck was still active and that Verizon was experiencing service issues. Kinsley and UGI Gas responded promptly to address Verizon's service issues. It was found that Mr. Ritz's gas service was impacting Verizon's duct bank, which required his gas service to be relocated. The relocation required a temporary disconnect. The

temporary disconnect was completed at 1:20 pm on October 29, 2025 and a door hanger was placed on Mr. Ritz's door with information on how to request a relight. Mr. Ritz called for a relight at 3:26 pm. An order was dispatched, and a field technician restored Mr. Ritz's service at 4:33 pm on October 29, 2025.

Q. Based on your review of the circumstances, did UGI Gas and its contractor act with a reasonable level of professionalism?

A. Yes. The Company recognizes that construction activity over an extended period can be disruptive, and UGI Gas makes every effort to minimize impacts to our customers and communities. However, these pipeline replacement projects are essential to maintaining the safe and reliable operation of UGI's natural gas system. In this case, Verizon did not mark its conduit as required under Pennsylvania One Call Law and subsequently incorrectly advised that the facility was abandoned. UGI Gas treats service interruptions involving other utilities with the same level of urgency that we would expect for our own facilities. As a result, it was necessary to perform a temporary disconnection of service while Mr. Ritz was not at home in order to safely address the situation. But the Company responded promptly when Mr. Ritz called and restored his service expeditiously.

Q. In reviewing the operating circumstances around Mr. Ritz's experience, do you agree with Mr. Teti's characterization of the event?

A. No, I do not. UGI Gas and its subcontractors followed proper protocol, including reporting the incident and responding promptly when Verizon indicated that it was having service issues. Further, the Company was on site to restore service a mere one hour after the

customer called. If anything, this prompt response shows UGI Gas's commitment to quickly and effectively meeting the needs of its customers.

III. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit JEW-1R

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-7

Request:

Reference Direct Testimony of Jill E. Walters Statement 3, page 19, lines 15-18. Provide results for how the Natural Gas Safety Ambassador program has progressed since its implementation. Describe how UGI Gas has implemented the planned 500 Methane Detectors (MDs) and Smart Remote Methane detectors (SRMDs) and how it continues to distribute them over the two-year pilot program. Describe how many MDs and SRMDs have been implemented to date.

Response:

UGI has joined a Gas Technical Institute, GTI, project studying cellular communicating SRMDs along with other utilities across the country. As part of this project, the participating utilities were given cellular communicating units from two different manufacturers' for installation at customer premises. UGI has installed all of the SRMDs that it received from the GTI project. Both manufacturers SRMDs will notify UGI when 10% LEL is reached at the unit at which UGI will respond.

UGI targeted installation of these SRMDs in employees' homes who also had an inside gas meter. Through the work to identify and communicate with its employees to find participants for this pilot program, UGI discovered that there is a lack of awareness and education on the availability of Natural Gas Detectors.

This is when UGI initiated the Natural Gas Safety Ambassador program. This program was established to educate UGI employees on Natural Gas Detectors. UGI has used many different communication methods including emails, message boards, intranet postings, and a town hall presentation to bring awareness of these Natural Gas Detectors to its employees.

Since the start of the Natural Gas Safety Ambassador program, over 200 UGI employees, that are also UGI Gas customers, have received a Natural Gas Detector for their home and in doing so have become advocates to their family and friends in leading gas safety as a shared responsibility.

After this strong internal base of Natural Gas Safety Ambassadors had been established, UGI looked to reach out and educate its customers. UGI started the Natural Gas Detector Program in February 2026. A targeted marketing letter campaign was established to reach out to customers who have had a recent odor complaint inside their home and upon our

I&E-PS-7 (Continued)

visit, the UGI technician found natural gas readings. As of 3/13/2026, this mailing has targeted 1,355 customers. From those letters UGI has collected 228 requests and as of 3/13/26 the company has shipped out 212 units to those customers. A copy of the communication is attached as Attachement-I&E-PS-7.

In addition to this targeted marketing, UGI has either completed or is in development of other ways to contact and educate customers about the availability and importance of having Natural Gas Detectors in their homes. These activities include:

- A company website dedicated to Natural Gas Detectors education
- Updates to Call Center scripts
- 3rd party storefront to host UL 1484 tested Natural Gas Detectors for customers to purchase
- Education to 4th grade classrooms
- Educational materials accompanying the scratch and sniff mailers
- Call Center on hold messaging
- Customer newsletters

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-9

Request:

Describe the considerations for installing an MD or SRMD in the homes of UGI Gas customers.

Response:

The installation considerations for the MD and SRMD are different. For the MD, UGI has taken the approach of sending the units to the customers and providing them with the installation instructions from the manufacturer as well the manufacturer installation video. For SRMD, UGI had UGI technicians complete the installation in UGI employees' home or UGI owned facilities where UGI owned piping inside the building. During this installation, the UGI technician would complete an inside SLIP (Service Line Inspection Program) investigation to look for leaks before installation.

UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-10

Request:

Describe the considerations to determine which methane detector will be installed.

Response:

Options for testing were limited since not many units on the market are tested in accordance with UL 1484 (safety standard for residential gas detectors). This left UGI with two manufacturers with units for testing, eLichens & DeNova Detect.

Prepared by or under the supervision of: Jill E. Walter

UGI Utilities, Inc. - Gas Division

UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-11

Request:

Describe what percentage of MD/SRMDs currently use Advanced Metering Infrastructure (AMI) technology within the pilot program. Provide a summary of the geographical areas that are served by AMI technology and how UGI Gas plans to disperse more AMI technology.

Response:

None of the SRMDs will be tested on an AMI infrastructure because UGI does not have an AMI. This is why UGI is evaluating the use of SRMDs that are cellular connected, allowing for their deployment to not be tied into the presence of an AMI network.

Prepared by or under the supervision of: Jill E. Walter

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-12

Request:

Provide an estimated cost per meter and the timeframe to install the SRMD technology.

Response:

UGI is working in partnership with GTI and other peer utilities on testing cellular communicating SRMD. At the conclusion of this GTI project UGI expects to have data to develop the cost and feasibility to scale into a SRMD technology. This will include not just the cost per unit to be installed but also the background system to support the communications.

Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E (PS-1 thru PS-19)
Delivered on March 20, 2026

I&E-PS-13

Request:

Provide an estimated cost per meter and the timeframe to install audible methane detectors.

Response:

The MD that UGI has been providing to customers are available at most hardware stores and many online retailers. Prices range for the stand-alone Natural Gas detector to combined units with CO sensors for ~$90-110. UGI has currently been paying an additional $12 to ship these MDs to customers' homes.

UGI Gas 2026 Base Rate Case
Responses to I&E (RE-45-46)
Delivered on April 8, 2026

I&E-RE-45

Request:

Reference the Company's response to I&E-PS-9, I&E-PS-12, and I&E-PS-13 concerning the methane detector pilot program. Provide the following:

A. State the quantity of audible methane detectors (MDs) that have been delivered to customers since the inception of the methane detector pilot program.

B. State the total quantity, since inception of the methane detector pilot program, of Smart Remote Methane Detectors (SRMDs) expected to be fully installed by the end of the Fully Projected Future Test Year (FPFTY) and how many meters are designated to be installed in the FPFTY.

C. State what percentage of each of the following is funding the installation costs for the SRMDs pilot program: UGI Gas, Gas Technical Institute (GTI), or the UGI Gas customer.

D. Identify where the costs for the SRMD pilot program are claimed in the current filing for the FTY and the FPFTY and the associated amounts disaggregated by account and year.

E. If any of the SRMDs installation costs or hardware is capitalized, identify the accounts, the amounts, and the associated depreciation expense claimed, disaggregated by year for the FTY and FPFTY.

Response:

A. As of 3/27/26, 458 MD have been delivered to customers. This count excludes the SRMDs.

B. A total of 8 SRMDs are currently installed. At the conclusion of the pilot program with GTI, UGI will be evaluating what additional technology, resources and options there are in order to determine if SRMDs could be incorporated with UGI systems. As of today, UGI has no plans to expand the SRMD pilot program outside of the Operations Technology Development (OTD) project. The OTD project is expected to conclude in 2026. UGI will not be installing any meters in relation to the SRMD pilot.

Delivered on April 8, 2026

I&E-RE-45 (Continued)

C. The costs for the SRMDs units were covered in the membership cost to join the GTI's OTD partnership. As members of OTD, UGI has voting power to guide and select research projects that address emerging technology solutions that address common gas industry issues. The installation costs associated with the 8 SRMDs were included in the Inside SLIP inspections that occurred during the installations.

D. The costs for the SRMD pilot program are included in the GTI membership fee. Please refer to I&E-RE-46 for details.

E. The installation costs were not capitalized for the current SRMD units. There are no future planned expenses related to the SRMD pilot at this point and time.

Prepared by or under the supervision of: Jill E. Walter

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 4-R

Rebuttal Testimony of
Vivian K. Ressler

Topics Addressed: **Updates To Initial Filing**
Operating Expense Adjustments

Dated: May 13, 2026

INTRODUCTION

Q. Please state your name and business address.

A. My name is Vivian K. Ressler. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 4, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony provides updates to certain components of the Company's filing, based on the information provided during the discovery phase of this proceeding. In addition, my testimony responds to certain portions of the following direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission" or "PUC") Bureau of Investigation and Enforcement ("I&E") and the Office of Consumer Advocate ("OCA"): I&E Statement No. 1, the direct testimony of Zachari Walker; and OCA Statement 2, the direct testimony of Jennifer L. Rogers.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring UGI Gas Exhibits VKR-1R through VKR-3R.

UPDATES TO INITIAL FILING

Q. Since the filing of your direct testimony, has the Company identified any operating expense components of its filing that should be updated?

A. Yes, in addition to items discussed in detail by other Company witnesses, and summarized by Company witness Tracy A. Hazenstab in her rebuttal testimony (UGI Gas Statement No. 2-R), the Company has also identified the following operating and maintenance ("O&M") expense items that required revision for the Fully Projected Future Yest Year ("FPFTY"):

- The Company has reduced its payroll, payroll tax, and employee benefits expenses by $1,153,000, $88,000 and $764,000, respectively, to reflect an increase in its vacancy rate to 6.15%.

As with the other updates to the Company's claim, this revision to the Company's operating expenses is reflected in UGI Gas Exhibit A – Fully Projected (REBUTTAL), which is the Company's final accounting exhibit. UGI Gas witness Tracy A. Hazenstab sponsors this exhibit as part of her rebuttal testimony (UGI Gas Statement No. 2-R).

OPERATING EXPENSE ADJUSTMENTS

A. PAYROLL AND PAYROLL-RELATED EXPENSES (VACANCY RATE ADJUSTMENT)

Q. Do any of the other parties recommend an adjustment to the Company's claimed payroll expenses?

A. Yes. I&E Witness Walker and OCA Witness Rogers each propose adjustments to the Company's claimed payroll and payroll-related expense.

Q. Please describe the basis for this proposed adjustment.

A. Both I&E Witness Walker and OCA Witness Rogers propose to adjust the Company's payroll, payroll tax, and employee benefits expenses based upon the application of a 6.15% vacancy rate to the calculation of these expenses. I&E St. No. 1, at pp. 17-23; OCA St. 2, at pp. 11-12. Both I&E and OCA use an average of the actual monthly vacancy rate experienced by UGI Gas for the last three years to calculate their proposed vacancy rate of 6.15%. As a result, I&E proposes to decrease the Company's payroll, payroll tax, and employee benefits expenses by $1.15 million, $88,000, and $764,000, respectively. OCA proposes to reduce payroll, payroll tax, and employee benefits expenses by $1.1 million, $87,663, and $265,685, respectively. OCA St. 2, at p. 12; Schedule JLR-9 through 11.

Q. Does the Company agree with either I&E's and OCA's proposed adjustments to payroll, payroll taxes, and employee benefits expense based upon the use of an alternative vacancy rate?

A. While the Company believes that it appropriately accounted for vacancies as a part of its initial claim, it is willing to accept the use of a 6.15% vacancy rate as proposed by I&E and OCA in order to limit the scope of issues in dispute in this proceeding.

Q. What is the impact to the Company's claim of applying a 6.15% vacancy rate as proposed by I&E and OCA?

A. The impact to the Company's claim is a net decrease to its revenue requirement of $1,153,000 to payroll expense, $88,000 to payroll taxes expense, and $764,000 to employee benefits expense, as proposed by I&E Witness Walker. These updates are reflected in Schedule D-2 of UGI Gas Exhibit A – Fully Projected (REBUTTAL).

B. INCENTIVE COMPENSATION EXPENSE

Q. Do any of the other parties propose an adjustment to the Company's claim to recover the costs of certain of its incentive compensation plans?

A. Yes. At a high level, I&E proposes to disallow **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** I&E St. No. 1, at pp. 36-42. OCA also proposes to disallow approximately **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** OCA St. 2, at pp. 8-10.

Q. Before detailing your responses to the specific plans and amounts that I&E and OCA target for disallowance, do you have any general response to these parties' proposals?

A. Yes. The crux of I&E's and OCA's arguments appears to be that the Company has claimed incentive compensation expenses related to various plans that utilize financial performance metrics, and assert that those metrics are not meant to align the interests of the covered recipients with ratepayers. In order to provide gas service to its customers, UGI Gas must be able to attract and retain qualified employees, managers and executives. UGI Gas's ability to attract and retain qualified individuals into these positions is directly related to its ability to provide them with reasonable and competitive compensation. I&E's and OCA's attempts to disallow certain aspects of the Company's total compensation packages fundamentally undermines the Company's ability to attract qualified employees, managers and executives, and would fail to produce just and reasonable rates for the cost of providing customers with safe and reliable service.

And, relatedly, it is important to recognize that neither I&E nor OCA has asserted that the amounts claimed by UGI Gas are excessive or unreasonable due to imprudent management or decision-making by UGI Gas. I am advised by counsel that UGI Gas will further address this issue in its briefs.

Q. Do you have any response to the claim that plans or portions of plans designed to align the covered recipients' interests with shareholders should be disallowed? I&E St. No. 1, at pp. 37-38; OCA St. 1, at pp. 8-10.

A. Yes. Ultimately, UGI must attract sufficient capital at reasonable costs to fund necessary and critical infrastructure investments. All else equal, if the financial performance of UGI was to diminish or decrease, investors would likely view it as being a "higher risk" investment, which would adversely impact (i.e., increase) its cost of capital. In this regard, these incentive compensation plans are designed to ensure that the financial performance of UGI is such that it can continue to attract necessary investments at reasonable costs, for the benefit of its ratepayers. Moreover, as explained in detail below, many of the financial metrics identified by I&E and OCA actually have direct, important, and beneficial impacts upon the service provided by UGI Gas to its ratepayers. The same actions that allow the Company to be financially successful, such as managing expenses and growing customer base, help the ratepayers.

Q. Are there other reasons why the Commission should reject these arguments?

A. Yes. The Commission has previously rejected proposed adjustments to other utilities' claims for incentive compensation, including stock-based compensation. In PPL Electric

Utilities Corp.'s ("PPL Electric") 2012 base rate proceeding, witnesses on behalf of I&E and the OCA recommended disallowance of half of PPL Electric's performance compensation expense claim, thereby requiring shareholders to share equally in the cost of its performance compensation plan. The Commission rejected that proposal:

> We find that, because PPL's incentive compensation plan is reasonable, prudently incurred, and is not excessive in amount, PPL is permitted full recovery of this expense. PPL correctly notes that many of the cases the OCA and I&E rely on are distinguishable from this case because, in those cases there was not adequate evidence that the incentive compensation expense was reasonable or that there was a benefit to ratepayers. Our decision to allow this incentive compensation expense is consistent with our prior decision approving incentive compensation programs that are focused on improving operational effectiveness.

Pa. PUC v. PPL Electric Utilities Corp., Docket No. R-2012-2290597, at p. 26 (Final Order entered December 28, 2012) (internal citations omitted).

The Commission again made clear in the 2018 UGI Electric base rate proceeding that incentive compensation programs must be evaluated "as a whole," when determining whether the plan includes goals which benefit customers. *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, at pp. 73-74 (Order entered Oct. 25, 2018). By breaking apart the Company's incentive compensation program into individual components, I&E and OCA inappropriately try to single out individual aspects of the Company's total incentive compensation program, when, as a whole, the program clearly contains "both financial and operating metrics and goals which benefit customers," consistent with the Commission's order in 2018 UGI Electric base rate proceeding. *Id.*, at p. 74.

Furthermore, the Commission again applied this reasoning in *Pa. PUC, et al v. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc.*, Docket Nos. R-2021-

3027385, R-2021-3027386, et al. (Order entered May 16, 2022) ("*Aqua PA 2021 Order*"). There, the Commission affirmed a utility's total incentive compensation package because:

> Aqua has provided evidence linking the stock-based incentive compensation program with benefits to customers and improved operational efficiency….
>
> We agree with the ALJ that the stock-based compensation benefits ratepayers. We find that the stock-based compensation is linked to performance objectives that benefit consumers, including controlling costs and compliance initiatives.

Aqua PA 2021 Order, at pp. 100-101.

Moreover, the Commission again affirmed this reasoning in *Pa. PUC, et al. v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 and R-2023-3043190, et al. (Order entered July 22, 2024) ("*PAWC 2024 Order*"). In the *PAWC 2024 Order*, the Commission specifically affirmed recovery of stock-based incentive compensation expense, including expenses related to performance stock units ("PSUs") and restricted stock units ("RSUs") and allocation of such expenses from a corporate parent to a utility, because "PSUs reflect the Company's financial performance, and improved financial performance can benefit customers by encouraging operational efficiency. . . RSUs vest over a three-year period, encouraging employee retention which can benefit ratepayers by maintaining experienced employees." *PAWC 2024 Order*, at pp. 88-89.

Finally, these programs also work in conjunction with other incentive compensation programs, as well as base compensation, to incentivize and retain the talented workforce responsible for UGI Gas's operations. The Company's stock options and restricted stock awards typically become exercisable three years after being awarded and become void when an employee leaves the Company. Therefore, the stock options and restricted stock award grants serve as an incentive to retain employees, thereby

reducing transition costs. Finally, if the Company did not offer these stock compensation awards, alternative incentive compensation or base compensation (e.g., salary) would be necessary to allow the Company to retain its workforce in a competitive job market.

Q. Do you have any further general observations regarding why I&E's and OCA's proposed adjustments to the Company's incentive compensation claim should be rejected?

A. Yes. Neither I&E nor OCA has argued that UGI Gas's method of compensating its employees, managers, directors, or executives, as a whole, is unreasonable. Rather, the evidence of record demonstrates that UGI Gas compensates these individuals consistent with industry standards and in a reasonable manner that permits the Company to attract and retain qualified employees in order to provide safe and reliable service to its customers. I&E's and OCA's attempts to single out specific aspects of the Company's overall compensation program—where the evidence otherwise demonstrates the overall program is reasonable—is improper and should be rejected.

Q. Please respond to I&E's specific proposal to disallow [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] of the Company's claimed incentive compensation expense based on its argument that this amount is "unsupported." I&E St. No. 1, at p. 37.

A. I&E Witness Walker appears to have overlooked the Company's claim for equity compensation plans for UGI Corp. employees. The Company's claim for equity compensation for UGI Corp. employees is **[BEGIN CONFIDENTIAL]** [redacted]

[redacted] **[END CONFIDENTIAL]** However, this amount is not included in the list of incentive compensation at I&E St. No. 1, at p. 37. The remaining **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** which Witness Walker claims is unsupported relates to other employee compensation which consists of amounts for retention awards, signing bonuses and similar ad hoc amounts.

Q. For clarity, will you please define the plans under which equity compensation is provided?

A. Equity compensation (both to UGI Corp. employees and UGI employees) is provided under the 2004 Omnibus Equity Compensation Plan, 2013 Omnibus Incentive Compensation Plan, and 2021 Incentive Award Plan. These plans are collectively referred to as the "Long-Term Incentive Compensation Plan".

Q. Please explain the purpose of the UGI Corp. equity compensation.

A. The Long-Term Incentive Compensation Plan for UGI Corp. employees is designed to work in conjunction with the UGI Corp. Executive Bonus Plan and the UGI Corp. Non-Executive Bonus Plan (which both provide cash awards for the achievement of performance goals established annually), base salary, and the UGI Corp. employee benefit programs to attract, retain and motivate qualified employees. Retention is further encouraged through a three-year vesting period for awards. Long-Term Incentives comprised of equity compensation awards are a standard benefit for publicly-traded companies, including utility and energy companies. The lack of such an incentive would

put UGI Corp. at a distinct disadvantage to other employers, particularly with regard to key roles in which continuity is critical to operational stability.

Q. Please comment on the [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] claim for other employee compensation.

A. The other employee compensation incorporates retention awards, signing bonuses, referral bonuses and similar ad hoc awards. These types of awards are needed to attract or secure high-performing employees. Retention awards can entice key employees to stay with the Company when they are assigned to critical projects or when they have competing offers. Signing bonuses are often needed to adequately compensate a highly-skilled candidate who might otherwise not accept an offer due to the timing of payout on an existing employer's incentive award. The Company offers referral awards to existing employees for recommending a successful candidate, as this recruitment technique generally proves to be more cost-efficient and effective than using an external recruiter.

Q. Should the Commission adopt I&E's proposal to disallow all costs associated with the Sales Commission Plan ("SCP") and Inside Sales Group ("ISG")? I&E St. No. 1, at p. 37.

A. No. The SCP and ISG plans award employees who successfully onboard new customers. As the Company's customer base grows, the Company's fixed costs are spread over a larger base of customers, resulting in lower costs per customer. These growth-based incentives motivate this specific performance which benefits existing customers. Additionally, these

incentives are necessary to be competitive with non-utility sales roles where commission-based bonuses are a common practice.

Q. Please address I&E's proposal to disallow the entire [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] expense claim and entire [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] capital expenditure claim related to the Long-Term Incentive Compensation Plan. I&E St. No. 1, at pp. 37-38.

A. The awards issued under the Long-Term Incentive Compensation Plan are restricted stock awards and stock options granted to key employees of UGI based on employment contracts and in management's discretion. These awards typically have a vesting period of three years.

Q. To provide context, can you please explain the purpose of the Long-Term Incentive Compensation Plan?

A. The Long-Term Incentive Compensation Plan is designed to work in conjunction with the UGI Management Incentive Plan, the UGI Executive Bonus Plan (which both provide cash awards for the achievement of performance goals established annually), base salary, and the UGI employee benefit programs to attract, retain and motivate qualified employees. Retention is further encouraged through a three-year vesting period for awards. Long-Term Incentives comprised of equity compensation awards are a standard benefit for publicly-traded companies, including utility and energy companies. The lack of such an incentive would put UGI at a distinct disadvantage to other employers, particularly with

regard to key roles in which continuity is critical to operational stability. Examples of such roles include:

- **VP of Operations** – Leads and directs field-level activities, including emergency response and underground main marking, ensuring safe and reliable day-to-day service delivery.
- **VP of Supply and Measurement –** Oversees the procurement of natural gas supply for default customers, maintaining the uninterrupted flow of natural gas to the customers who depend on it for heating and/or industrial fuel.
- **VP of Customer Relations –** Directs all customer-facing interactions, including management of the contact center that handles emergency calls, serving as a critical link between UGI and the customers it serves.

Without a competitive compensation package, including the equity compensation component, the Company would be at risk of losing experienced employees in these critical roles. If there was unexpected turnover in these roles, the Company's ability to provide the safe and reliable natural gas service that customers rely upon would be in jeopardy.

Q. Please address I&E's claim to disallow [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] of the expense claim and [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] of the capital expenditure claim related to the FY 2026 Management Incentive Plan. I&E St. No. 1, at p. 38.

A. The claims for disallowance are based on the premise that "40% of this incentive plan's criteria are based on financial performance and thus are inappropriate for ratemaking purposes." I&E St. No. 1, at p. 38. The specific criteria which I&E Witness Walker has labeled as financial performance are related to capital investment (10%); capital placed in service (10%) and annualized margin growth (20%). For the capital placed in service goal, a minimum number of miles of pipeline must be replaced to achieve the trigger for the payout.

Q. Do you agree with I&E Witness Walker's characterization of these goals as based on financial performance and inappropriate for ratemaking purposes?

A. No.

Q. Please explain.

A. I will begin with the capital investment and capital placed in service goals. The characterization of capital investment and capital placed in service as "financial performance" metrics misapprehends the nature of these goals. Capital investment and capital placed in service measure the Company's operational execution: whether work is actually being planned, contracted, and completed in the field. These are project delivery metrics. They reflect the physical progress of infrastructure modernization that regulators and ratepayers expect the Company to achieve.

Q. How do the Company's ratepayers benefit from capital investment and capital placed in service?

A. As the Company invests in capital and places that capital into service, ratepayers benefit from a safer, more reliable distribution system, and supporting infrastructure. The Company must continue to modernize its gas distribution system, as well as its information technology platforms—such as geospatial mapping, customer information systems, and work order management systems—to serve its customers efficiently and safely. The inclusion of these goals in the management incentive compensation plan is intended to motivate employees to complete these projects which benefit ratepayers. Critically, the

capital placed in service goal is triggered only after an established mileage replacement target is met, ensuring that this goal is grounded in a measurable, operational outcome that has direct implications for customer service via improvements to the Company's distribution system.

Q. Please comment on the annualized margin growth metric from the Company's Incentive Compensation Plan.

A. While margin is a financial measure, the annualized margin growth goal should not be characterized as a purely financial metric that services shareholder interests alone. Organic customer growth allows the Company to spread fixed costs across a larger customer base, reducing the per-customer cost of service. If such growth is sufficient, it can also extend the period between base rate cases, further moderating costs for existing ratepayers. The margin growth metric also incentives adding large customers, which may bring additional contributions such as Universal Service Plan ("USP") and Distribution System Improvement Charge ("DSIC"), as proposed within the XD tariff in this proceeding. In this way, margin growth that is driven by organic customer additions serves as a proxy for the health and expansion of the system the Company is obligated to serve — a result that benefits ratepayers and shareholders alike.

Q. Please summarize your comments on I&E's proposal to disallow a portion of the expense claim and a portion of the capital claim associated with the Management Incentive Plan.

A. All of the metrics within the Management Incentive Plan are designed to motivate the Company's employees toward actions which benefit its ratepayers. Specifically:

- **OSHA Recordable Injury Rate and Accountable Vehicle Incident Rate –** A safer workforce means fewer service disruptions, lower workers' compensation and liability costs, and more consistent delivery of natural gas services to customers.

- **Gas Emergency Response Rate –** Requiring UGI Gas responders to arrive on-site within 45 minutes of an emergency call directly protects the safety of customers and the communities the Company serves. This 45 minute response time goal well exceeds the Commission's benchmark of 60 minutes.

- **Gas Total Excavation Damage Rate –** Reducing damage to underground facilities protects the safety of customers and surrounding communities by minimizing the risk of gas leaks, fires, and explosions. It also protects system integrity, lowers repair costs, and prevents service interruptions for ratepayers.

- **Customer Satisfaction (Verint CSAT) and Grade of Service** – These metrics measure the quality of direct interactions between the Company and its customers, incentivizing employees to provide responsive, high-quality service to ratepayers.

- **Capital Investment and Capital Placed-in-Service –** As discussed above, these metrics drive physical infrastructure modernization that produces a safer, more reliable system for ratepayers.

- **Aggregate Annualized Margin (Growth) –** As discussed above, organic customer growth spreads fixed costs across a larger base, reducing the per-customer cost of service and benefiting existing ratepayers.

Therefore, the entire expense claim and the entire capital claim associated with the Management Incentive Plan should be allowed for ratemaking purposes.

Q. Please address I&E's claim to disallow the entire [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] expense claim and [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] capital expenditure claim related to the FY 2026 UGI Utilities & UGI Utilities Segment Executive Annual Bonus Plan. I&E St. No. 1, at pp. 39-40.

A. The UGI Utilities & UGI Utilities Segment Executive Annual Bonus Plans provides executives with a prudent level of compensation that benefits ratepayers by enabling the Company to attract and retain the executive talent necessary to ensure the Company's long-term financial health and operational stability.

Performance-based incentive compensation at the executive level is standard practice both within the utility industry and across industries generally. To compete for experienced executives capable of leading a company of UGI's size and complexity, the Company must offer a compensation package — including an annual incentive component — that is competitive in the marketplace. Moreover, if the Company did not offer such an incentive component, it would, all else equal, likely need to increase base, non-incentive pay for these individuals to remain competitive. By structuring a portion of executive compensation as performance-based rather than fixed, the Company aligns executive interest with utility-specific outcomes that benefit ratepayers. Failing to offer a competitive compensation program — and the resulting inability to attract and retain qualified executive leadership — would expose the Company to operational and strategic risks that would ultimately fall on ratepayers.

The connection to ratepayer benefit is direct and concrete. UGI's financial strength and stability allow the Company to access debt financing at reasonable rates and to attract the investment capital necessary to fund its ongoing infrastructure modernization program. That modernization program, in turn, is what delivers the safe and reliable gas service that ratepayers depend on. Disallowing compensation expense that supports the executive leadership responsible for maintaining that financial strength would undermine the very

outcomes — infrastructure investment, system safety, and service reliability — that the regulatory framework is designed to protect.

Q. Please address I&E's claim to disallow the entire [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] expense claim related to the FY 2026 UGI Corp. Executive Annual Bonus Plan. I&E St. No. 1, at p. 39.

A. The UGI Corp. Executive Annual Bonus Plan is similar to the plans discussed previously which provide compensation to UGI Utilities' executives; however, this plan is for the executives at the UGI Corp. level. The cost of this plan is allocated to the business units owned by UGI Corp., including UGI. The cost allocated to UGI is further allocated to UGI Gas and UGI Electric.

The compensation paid under the UGI Corp. Executive Annual Bonus Plan benefits ratepayers for the same reasons as the UGI Utilities & UGI Utilities Segment Executive Annual Bonus Plan, described above.

Q. Please address I&E's claim to disallow the entire [BEGIN CONFIDENTIAL] [redacted] [END CONFIDENTIAL] of the expense claim related to the UGI Corp. Non-Executive Annual Bonus Plan. I&E St. No. 1, at p. 39.

A. The UGI Corp. Non-Executive Annual Bonus Plan is a prudently incurred compensation expense that benefits ratepayers by enabling the Company to attract and retain professional management talent necessary to ensure that UGI Corp's corporate functions are operated effectively and efficiently.

These functions include treasury, insurance, human resources, cyber security, investor relations and talent acquisition, among others. While most of these professionals do not interact directly with UGI Gas customers, they perform the essential back-office and support functions that underpin the Company's ability to operate safely, attract debt finance and investment capital, recruit and retain the employees who serve customers directly, and maintain the overall organizational stability on which reliable service depends.

To attract and retain qualified professionals in these functional roles, the Company must offer a compensation package that is competitive in the marketplace. Performance-based incentive compensation is a standard component of such packages across industries. Disallowing this expense would impair the Company's ability to staff these critical functions at a level of competence that ultimately serves ratepayer interests.

Q. What does OCA recommend regarding the Company's claim for incentive compensation expense?

A. Similar to I&E, OCA recommends disallowing portions of the Company's claimed incentive compensation expenses, claiming that 80% of certain plans are based upon financial performance metrics/criteria that it argues are designed to increase shareholder value and do not benefit ratepayers. OCA St. 2, at pp. 8-9; Schedule JLR-7. Additionally, OCA recommends complete disallowance of the Company's equity compensation claim. Schedule JLR-7. This proposal results in a reduction of $6.7 million to the Company's O&M expense claim.

Q. Do you have any initial comments regarding the construction of OCA's incentive compensation disallowance?

A. Yes. The text within OCA Witness Rogers's testimony which describes her requested disallowance was unclear to me. However, I was able to understand her requested disallowance by reviewing her Schedule JLR-7 which supports the $6.7 million disallowance that Witness Rogers mentions within the text of her testimony.

Q. Please respond to OCA's proposed adjustment related to incentive compensation expense.

A. I do not agree with OCA's proposed adjustment. For the reasons described above, I believe that the Company's incentive compensation plans do benefit ratepayers. Each of these incentive compensation plans is an integral component of the Company's comprehensive compensation program which allows the Company to attract and retain leaders who direct the provision of safe and reliable service to customers.

Further, the plans for which OCA Witness Rogers proposes to disallow 80% of the claimed compensation (Utilities and Utilities Segment Executive Annual Bonus Plans; UGI Corp. Executive Annual Bonus Plan; and UGI Corp Non-Executive Annual Bonus Plan) are all goals-based incentive compensation which motivate the Company's talent.

C. EMPLOYEE ACTIVITES EXPENSE

Q. Do any of the other parties oppose the Company's claim for expenses related to Employee Activities?

A. Yes. I&E Witness Walker recommends that Employee Activities costs be reduced by $195,000 to remove the cost of the Company picnic. I&E St. No. 1, at pp. 29-30. Witness

Walker claims that "Company picnics do not directly support the provision of safe and reliable gas service, and therefore should not be funded by ratepayers." I&E St. No. 1, at p. 30.

OCA Witness Rogers recommends disallowing the Company's entire claim of $583,036 in employee activities expense. OCA St. 2, at pp. 10-11. She claims that these costs "do not aid in the provision of service but rather are for items such as a picnic and awards." OCA St. 2, at pp. 10-11.

Q. Does the Company agree with these adjustments?

A. No.

Q. Why not?

A. Starting with OCA Witness Rogers, it is important to note that her proposal to disallow the entirety of the Company's claim for employee activities expenses seeks to disallow the costs associated with the Company picnic, but would also disallow $233,000 associated with safety, service and performance awards and $155,000 for activities such as department meetings and field employee welfare. I&E Witness Walker did not propose to disallow the costs associated with safety, service and performance awards, or department meetings and field employee welfare, presumably in recognition that these costs directly reflect or aid in the provision of quality service to customers.

In response to OCA Witness Rogers's disallowance of these service-oriented costs, I will address each category of activities and awards in turn:

- **Safety awards** recognize employees for exemplary performance in two critical areas: avoidance of personal injuries and safe vehicle operation. These safety awards are a

component of the Company's strong safety culture, directly reducing workplace incidents, which in turn reduces costs borne by ratepayers through lower workers' compensation claims, reduced service disruptions, and fewer liability exposures.

- **Service awards** recognize employment anniversary milestones and serve a dual purpose: honoring long-tenured employees for their sustained contributions, and signaling to less-experienced colleagues the value of a stable career with UGI Gas. Workforce continuity and institutional knowledge are operational assets — experienced employees perform work efficiently and safely, to the direct benefit of customers.

- **Performance Awards** recognize employees for exemplary contributions to the Company's core values and mission. Annual prestigious awards — including the President's Award and the Energy to Do More Volunteer Award for community service — are presented at a Company-wide town hall, publicly honoring employees whose conduct reflects the Company's values. Peer-nominated recognition awards reinforce those same values at the departmental level on an ongoing basis. Together, these awards foster a workplace culture in which employees are motivated to perform at a high level and embody the standards that produce safe, reliable, and efficient service — outcomes that directly benefit customers.

- **Departmental meetings** facilitate information sharing, safety briefings, procedure updates, and the development of working relationships between the field employees and Company leadership.

- **Employee welfare** provides food and hydration to field employees working outdoors in variable weather conditions and reflects a basic duty of care that supports sustained productivity. Employees who are adequately supported perform their work more effectively and safely — completing service calls, responding to emergencies, and maintaining the system that ratepayers depend on.

So, at a minimum, OCA's proposal to disallow all employee activity and award costs should be rejected.

With respect to the Company picnic, both I&E and OCA fail to recognize that the picnic is intended to recognize employee contributions, boost morale, promote team building, and foster a positive work environment. Like its other awards, and activities expenses, the picnic has the goal of recognizing and celebrating employees for meeting milestones and for outstanding performance, which leads to increased employee engagement, productivity, and retention.

Q. Has the Commission previously addressed UGI's company picnic?

A. Yes. The Commission has previously affirmed that employee activities expense, and specifically the Company picnic, can be recovered in rates. In *Pa. PUC, et al. v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Opinion and Order entered October 25, 2018) ("*UGI Electric 2018*"), the Commission concluded "that UGI's annual picnic is an employee recognition event which the utility may properly claim as an expense for inclusion in the rate base." *UGI Electric 2018*, at pp. 70-71. The Commission further discussed precedent related to this category of costs and explained that such costs are recoverable if there is an element of employee recognition at the event. *See UGI Electric 2018*, p. 71.

Each of the categories of expenses proposed to be disallowed by I&E and OCA have an element of employee recognition, as discussed above.

D. ADVERTISING EXPENSE

Q. Do any of the other parties address the Company's claim to recover certain advertising expenses?

A. Yes. Both I&E and OCA propose disallowances regarding different categories of advertising expense. I will discuss these proposals in turn.

Q. Please summarize I&E's recommendation related to the Company's claimed advertising expenses.

A. I&E Witness Walker proposes to disallow $646,000 in advertising costs, inclusive of two parts. I&E St. No. 1, at pp. 24-28. First, he proposes the use of the sum of the historical

two-year averages for the Company's advertising related to Public Health and Safety, Conservation of Energy, Explanation of Bill Practices, and Stakeholder Newsletters, which reduces the Company's claim by $455,000. Second, he proposes to disallow all costs related to Community Event Sponsorships, which reduces the Company's claim by $191,000.

Q. Please respond to the first part of I&E Witness Walker's adjustment.

A. I disagree that the use of a two-year average represents a more appropriate level of projected expenses during the FPFTY. The cost of procuring space for advertising — newspapers, radio spots, billboards, mailings, and digital ads — continues to increase.

- **Public Health and Safety -** The Company plans to continue its widespread "Smell Gas Act Fast" public safety messaging campaign. Additionally, the Company now mails scratch and sniff safety notices to all customers twice a year (an increased frequency in 2025 and future years compared to 2024 and prior). The increasing cost to expand this critical public safety message, including the mailing and postage costs, is reflected within the Company's claim.

- **Conservation of Energy –** The Company's campaign for energy conversion comprises this category of advertising spend. The costs of an energy conversion marketing campaign can vary from year to year, based on the extent of the messaging. The Company sees most effective results when it pairs direct mailings with digital ads, reaching potential customers within a short distance of existing or planned gas mains. Assisting customers in reducing their energy use, including through conversion to gas from other fuel sources, provides direct cost reduction benefits to customers that participate and long-term benefits to all ratepayers by increasing the number of customers paying into system costs and increasing the efficient use of existing infrastructure.

- **Explanation of Bill Practices -** The Company now purchases space in the main section of newspapers (rather than in the legal section) and in more widely-circulated editions (weekend, rather than weekday), increasing the effectiveness of messaging but also increasing the cost of noticing.

- **Stakeholder Newsletters -** These newsletters provide information on ongoing Company activities and initiatives, as well as educating on key utility issues. However, the cost of production continues to increase as professional design services and postage costs both continue to increase.

Q. Please respond to I&E Witness Walker's adjustment for community event sponsorships.

A. UGI Gas uses community event sponsorships as a means of connecting with the communities in which it provides services. As UGI Gas and its employees develop a presence, customers can connect with the Company and receive information about billing, customer programs, safety, or utility services. At certain events, the Company can present information about gas safety, which is important to all community members and is part of the Company's responsibility to keep the public safe. For example, UGI Gas's sponsorship of the Big Brothers Big Sisters Bowl-a-Thon opened the door to deeper community involvement through the organization's "Beyond School Walls" program, in which UGI employee mentors meet with local Cocalico high school students approximately twice a month to discuss career development topics. I personally served as a mentor during the 2025/2026 school year. During a recent session at UGI's headquarters in Denver, Company professionals from Engineering, Damage Prevention, and Communications not only showcased career opportunities within the utility industry but also delivered important safety messages—such as calling 811 before digging and recognizing the smell of natural gas—using hands-on demonstrations including pipes damaged by excavators and scratch-and-sniff brochures for the gas odorant. When the session concluded and the facilitator asked the students what number to call before digging, every student responded "811!"—a clear demonstration that community sponsorships can serve as an effective vehicle for delivering critical public safety messaging.

These sponsorship opportunities also ensure that the Company's potential customer base remains aware of the Company and the services it provides, and they serve as an attraction for potential customers and employees. UGI Gas's sponsorship of the Building Industry Association of Lancaster County provides another compelling example of ratepayer benefit. This sponsorship gives UGI access to builders who construct homes primarily across Lancaster, Lebanon, Dauphin, and Cumberland Counties, and includes participation in events such as the annual Parade of Homes Gala and a golf outing that create valuable networking opportunities with those builders. The sponsorship provides opportunities to promote the UGI brand not only to builders but also to prospective customers, supporting customer growth. As new customers connect to the UGI Gas system, the costs of the Company's operations are spread across a larger customer base—ultimately reducing the per-customer cost burden and benefiting existing ratepayers.

Q. How do these community sponsorships satisfy the requirements of 66 Pa.C.S. § 1316(a)?

A. I am advised by counsel that UGI Gas will address these legal requirements in brief. However, I would note that these sponsorships relate to organizations and events located within UGI Gas's service territory. UGI Gas regularly works to educate members of the public, including those that are not currently customers, about natural gas safety. Non-customers may visit locations which are fueled by natural gas and benefit from understanding how to respond in case of a natural gas emergency. UGI Gas also has an opportunity to inform members of the public about the benefits of using natural gas, and

some of these people may choose to convert to natural gas, thereby expanding UGI Gas's customer base with the benefits described above.

Q. Please summarize OCA's recommendation related to the Company's claimed advertising expenses.

A. OCA Witness Rogers recommends disallowance of $81,187 in advertising costs related to fuel-conversion advertisements, claiming this is a non-recurring expense. OCA St. 2, at p. 13. OCA Witness Rogers further recommends disallowance of $191,149 in advertising costs related to community event sponsorships on similar grounds as I&E. OCA St. 2, at p. 14.

Q. Do you agree with OCA's proposal to disallow fuel conversion advertisement costs?

A. No. The marketing campaigns that the Company runs focused on fuel conversion helps to attract new customers. The Company currently plans to continue these campaigns on a regular basis (at least annually) and, therefore, the costs are a normal and recurring cost for the Company.

With energy affordability top of mind for many Pennsylvanians, educating customers about the long-term cost savings available through natural gas conversion — as an alternative to fuel oil, propane, or electric heat — is more critical than ever. This focus serves as a central purpose of this campaign. The conversion campaign is designed to educate the public on the role natural gas can play in lowering their winter heating bills, and helps consumers understand this process and connect with UGI Gas professionals who can assist them with making the switch to natural gas as an affordability measure.

Particularly for those customers using fuel oil and propane, conversion to natural gas will not only save them money, but also connect them to the key consumer protections available as part of utility service.

Q. Do you agree with OCA's proposal to disallow the Company's claim for community event sponsorship costs?

A. No. I disagree with OCA Witness Rogers for the same reasons I explained regarding I&E Witness Walker's proposal for these costs.

E. MEMBERSHIP DUES EXPENSE

Q. Do any of the other parties oppose the Company's claim for recovery of certain membership dues or subscription expenses?

A. Yes. I&E Witness Walker proposes to disallow $383,000 in membership dues from the Company's claim. I&E St. No. 1, at pp. 31-34. I&E Witness Walker specifically proposes to disallow $246,000 of costs related to the Company's membership with the Gas Technology Institute (GTI). I&E St. No. 1, at pp. 31-32. The remaining $137,000 of his proposed disallowance is related to chambers of commerce and economic development agencies based upon his argument that these costs are not necessary for the provision of safe and reliable gas service. I&E St. No. 1, at pp. 32-34.

Q. Does the Company agree with I&E's proposal to disallow a portion of the costs it incurs to maintain membership in GTI?

A. No.

Q. Why not?

A. I&E focuses on the increase in the Company's dues for its membership in this organization, and his claim that the Company has not provided an explanation regarding these increases. The Company has supplemented its response to I&E-RE-13, to provide additional detail for the increases applicable to GTI since 2023. A copy of this supplemental response is attached hereto as UGI Gas Exhibit VKR-1R. As explained therein, the nature of the Company's fees paid to GTI changed significantly from 2023 to 2025, because the Company changed the type of membership it had. The 2023 and 2024 expense related to a limited and one-time membership in the Emerging Technology Program, primarily in support of its energy efficiency program. In 2025, the Company began participation with GTI's Operation Technology Development ("OTD") program. This membership allows the Company to participate in and benefit from a wide range of advanced technology research and development activities. While the payment in 2023 and the new expanded membership were both paid to vendor "GTI" in the Company's payment system, the level of membership and engagement has expanded under the current OTD program.

Importantly, I&E does not claim that UGI Gas's membership in this organization fails to provide safety and reliability benefits. As described in the testimony of UGI Gas Statement No. 1 (Hans G. Bell) in the previous UGI Gas base rate case (Docket No. R-2024-3052716), OTD's projects focus on improving the safety, reliability, and operational efficiency of natural gas projects. This program supports access to best practices related to key areas of research, information, and investments in ongoing areas of focus which are of material interest to UGI Gas in support of the ongoing efficient maintenance and operation of a safe and reliable distribution network. For example, as discussed by UGI

Gas witness Jill E. Walter in this case (UGI Gas Statement No. 3), UGI Gas has joined a project under OTD studying cellular communicating Smart Remote Methane Detectors, among other projects in which UGI Gas is involved. Involvement in this study will produce direct and tangible results that are central to current safety initiatives in Pennsylvania that I&E is focused on. I&E St. No. 4, at pp. 7-11.

Q. Does the Company agree with I&E's proposal to disallow the costs associated with the Company's membership in certain chambers of commerce and economic development agencies?

A. No.

Q. Please explain why not.

A. The Company's membership in these organizations allows it to grow its customer base, primarily by attracting new industrial and commercial customers. These organizations work primarily with large commercial companies who are making site selections, and the Company's active involvement in these organizations allows it to proactively work with these entities, promoting the benefits of natural gas for their energy needs and encouraging them to select sites that are located in close proximity to existing gas mains within the Company's service territory. Without membership and active involvement in these organizations, the Company would experience less commercial growth, resulting in higher costs passed on to individual ratepayers (including its residential customers).

Additionally, over the last decade, economic development corporations and chambers of commerce have been instrumental in attracting more than $8 million in grants

that supported the expansion of UGI Gas's distribution network. See a listing of these grants at UGI Gas Exhibit VKR-2R. While these grants are obtained by commercial customers for their service needs, the network expansions create opportunities for additional prospective customers (including residential customers) located close to UGI Gas's expanded network to connect to natural gas service affordably.

F. PUC ASSESSMENT EXPENSE

Q. Do any of the parties recommend an adjustment to UGI Gas's claim related to the annual PUC Assessment charge?

A. Yes, OCA does.

Q. Please summarize OCA's recommendation.

A. OCA Witness Rogers recommends that the Company's claim be reduced by $1.8 million. OCA St. 2, at p. 14; Schedule JLR-14. She claims that this assessment does not consistently grow year over year, which justifies the use of a three-year average of this expense. OCA St. 2, at pp. 13-14.

Q. Does the Company agree with OCA Witness Rogers' recommendation?

A. No.

Q. Why not?

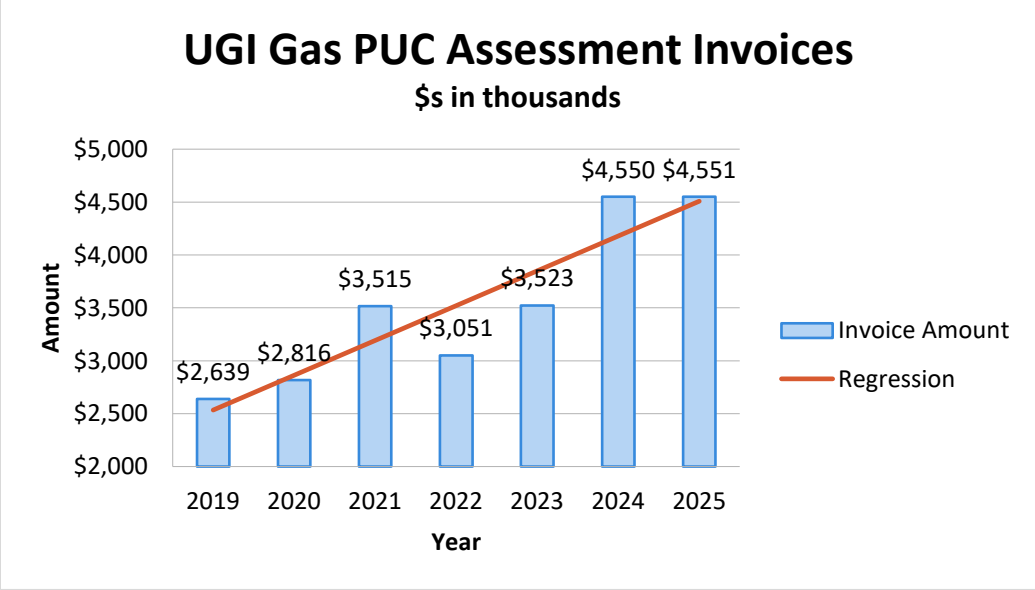
A. The Company agrees with Witness Rogers that the PUC assessment amount varies from year to year. However, the Company does not believe that using an average of the past three years is a reasonable way to calculate the FPFTY PUC assessment to UGI Gas.

Q. Please provide background information on how the PUC assessments for Pennsylvania utilities (including UGI Gas) are calculated.

A. The Commission summarizes the budgets from the Commission, Office of Small Business Advocate, Office of Consumer Advocate, and Damage Prevention Committee (collectively, the "agencies"). That budget is then allocated to each utility operating in the state under the PUC's jurisdiction via a percentage of the utility's gross intrastate operating revenues for the preceding calendar year. After completing the budget allocation process, the Commission sends general assessment invoices to the utilities to advise each utility of the amount of assessment that utility owes.

Q. Please provide a summary of the PUC assessment invoices that UGI Gas has received from 2019 through the most recent (2025).

A. The amounts of each invoice, as well as a regression line showing the trend, are shown in the chart below:



Q. What do you observe from the chart above?

A. While the amount of UGI Gas's PUC Assessment invoice has varied from year to year over the cited period, the overall trajectory shows a steep increase over this period. Specifically, the invoices have grown from $2,639,000 in 2019 to $4,551,000 in 2025 — an increase of approximately 72% over six years. The regression line shown in the chart reflects an average increase of approximately $319,000 per year over this period.

Q. Based on the trajectory in the chart above, does the Company believe that it is appropriate to project the Company's FPFTY (2027) PUC Assessment invoice based on a three-year historical average, as suggested by OCA Witness Rogers?

A. No. Based on the current trajectory, UGI Gas's 2027 PUC Assessment is likely to exceed the three-year historic average of $4,208,000 suggested by OCA Witness Rogers.

Q. Have you prepared any schedules to demonstrate how accurately OCA's method and the Company's method would have projected the 2025 UGI Gas PUC Assessment invoice?

A. Yes. Please see Exhibit VKR-3R. This schedule applies both methods as if projecting the 2025 invoice (the most recent actual invoice).

Q. What are the results of applying both OCA's method and UGI Gas's method of projecting the 2025 invoice?

A. The UGI Gas trending method projected a 2025 invoice of $4,188,000 – understating the actual $4,551,000 invoice by only $363,000, or approximately 8%. By contrast, OCA's

three-year average method projected only $3,363,000, understating the actual invoice by $1,188,000, or approximately 26%. The Company's method is thus more than three times as accurate as OCA's method when applied to the most recent available data point.

Q. Why is the Company's method of calculating its claim for the FPFTY (2027) PUC Assessment more reliable than the method used by OCA Witness Rogers?

A. The Company's method of calculating considers the reality that the PUC's and other agencies' costs will continue to increase over time. As the PUC and the other agencies continue to address the needs of Pennsylvania utility customers and the public utilities that serve them, it is reasonable to assume that the costs to maintain or expand its skilled workforce will continue to increase and that non-payroll costs will be influenced by inflation. Witness Rogers' method of calculating the cost does not take these cost pressures into account. If adopted, her adjustment would put the Company in jeopardy of not fully recovering these required PUC assessment costs that are a necessary part of providing safe and reliable service to its customers and over which the Company has no control. Based on historic performance, even the Company's methodology is likely to understate the actual expense that will be incurred in the FPFTY, but it is a more accurate forecast based on both historic trends and the anticipated future conditions in the FPFTY than what Witness Rogers has offered.

CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

UGI Gas Exhibit VKR-1R

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E-RE (Supplemental Responses)
Delivered on May 6, 2026

I&E-RE-13 (Supplemental Response)

Request:

Reference UGI Gas Book II, Attachment SDR-RR-30, concerning membership dues. Provide the following:

A. Identify the account name and number where membership dues are claimed in the FPFTY.

B. A similar schedule for FY 2023, FY 2024, the HTY, the FTY year-to-date, and the projected FTY.

C. A detailed explanation for any increases by fiscal year from FY 2023 through the FPFTY.

D. A detailed breakdown by payee and amount of the $6,823 for payments to organizations of $1,500 or under.

E. For each payee identified in response to Part C above, identify the expense amount incurred in FY 2023 through the FTY year-to-date, and forecasted for the FTY.

F. A detailed explanation for why the payment to each payee identified in Attachment SDR-RR-30 and in response to Part A above is necessary for safe and reliable natural gas distribution service.

Response:

A. The majority of memberships are claimed in 9302 - Miscellaneous General Expenses, with the exception of Pipeline Association for Public Awareness, which is claimed in 9301 - General Advertising Expenses.

B. Please see Supplemental Attachment I&E-RE-13.1.

C. Increases are generally due to costs to retain memberships. For GTI specifically, the Company purchased a limited annual membership in an Emerging Technology Program, primarily in support of its energy efficiency and conservation program. This limited membership was allowed to expire at the end of calendar 2023 (in Fiscal Year 2024).

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to I&E-RE (Supplemental Responses)
Delivered on May 6, 2026

I&E-RE-13 (Supplemental Response) (Continued)

Beginning in February 2025, the Company entered into a membership agreement with GTI for involvement in the Operations Technology Development ("OTD") R&D program. This program allows UGI Gas and other participating utilities to combine interests, expertise and resources into focused R&D projects. This OTD membership was discussed in UGI Gas's previous base rate case (Docket R-2024-3052716), on page 38 of the Direct Testimony of UGI Gas Witness No. 1 (Hans G. Bell).

To make the difference between memberships more clear, the GTI membership in the Emerging Technology Program and the membership in the OTD program are shown on separate lines on Supplemental Attachment I&E-RE-13.1.

D. Please see Supplemental Attachment I&E-RE-13.1.

E. Please see Supplemental Attachment I&E-RE-13.1. Forecast is equal to Projected for the period March - September of Fiscal 2026 (FTY). "FTY - YTD" is the first five months of Fiscal 2026 (actuals for Oct. 2025 through Feb. 2026). "FTY - Projected" is the remaining seven months of Fiscal 2026 (projected for March 2026 through Sept. 2026). Together "FPY - YTD" and "FPY - Projected" total Fiscal 2026.

F. Please see Supplemental Attachment I&E-RE-13.2.

UGI UTILITIES, INC. - GAS DIVISION
EXPLANATION OF REQUEST I&E-RE-13 PART F

Organization Name	Explanation
American Gas Association	Provides industry safety standards, engineering codes, and federal regulatory advocacy (DOT/PHMSA compliance) governing pipeline design, operation, and maintenance. Ensures the utility meets or exceeds federal pipeline safety requirements, directly reducing the risk of incidents and service disruptions for customers.
Gas Technology Institute: Emerging Technology Program	Provides access to research related to customer energy efficiency.
Gas Technology Institute: Operations Technology Development (OTD)	Funds and provides access to research and development on pipeline integrity, leak detection, system efficiency, and infrastructure modernization technologies. Enables adoption of new technologies that improve reliability, reduce outages, and lower operating costs .
Energy Association of Pennsylvania	Focuses on creating a collaborative environment to support support sharing of utility best practives and to address customer affordability matters.
Northeast Gas Association	Provides a regional forum on pipeline capacity, winter peaking reliability, emergency mutual aid, and regulatory issues specific to the Northeastern U.S. market. Strengthens regional energy security and service reliability during peak demand periods, reducing the risk of supply interruptions for PA customers.
Economic Development of Lancaster	This membership supports UGI Gas's ability to monitor and respond to business growth and development trends throughout Lancaster County. Awareness of planned commercial and industrial expansion enables the Company to proactively plan distribution system investments necessary to serve new and growing load. Broader customer base spreads fixed infrastructure costs more widely, supporting long-term rate stability for all customers.
PA Chamber of Business and Industry	Provides a statewide business advocacy forum supporting sound energy and regulatory policy in Pennsylvania's legislative and regulatory environment. Promotes a stable policy environment that supports infrastructure investment, workforce development, and reliable energy supply for businesses and residents.
Energy Solutions Center	Promotes efficient end-use natural gas technologies through demonstrations and programs for commercial and industrial customers. Helps customers access cost-effective gas equipment and efficiency improvements, lowering energy bills and supporting economic competitiveness.
Lehigh Valley Economic Development Corp	Supports commercial and industrial development in the Lehigh Valley, driving new gas customer additions and strengthening regional economic activity. Growing the customer base in the Lehigh Valley improves system economics and supports infrastructure investment that benefits all customers in the region.
Greater Reading Economic Partnership	Drives economic development and business attraction in the Greater Reading area, supporting gas customer growth and system utilization. New customer additions in the Reading area improve cost allocation and support continued infrastructure investment serving existing customers.
Lebanon Valley Economic Development Corp	Supports business development and industrial recruitment in Lebanon Valley, growing the natural gas customer base in the service territory. Increased system utilization from new customers contributes to rate stability and long-term affordability for existing customers.
Wyoming Valley Chamber of Commerce	Connects the utility with the Wyoming Valley business community, supporting customer development and community relationships in Northeastern PA. Strengthens local economic activity and new customer growth, supporting the utility's ability to invest in safe, reliable infrastructure in the region.
Penn Northeast – Gas Division	Regional economic development organization focused on attracting industrial and commercial gas customers to Northeastern Pennsylvania. Industrial and commercial load additions improve system load factors and help support cost-effective service for residential and small commercial customers.
Bethlehem Economic Development Corp	Supports economic development and business attraction in the City of Bethlehem, driving new gas service connections and system growth. New business development in Bethlehem supports customer growth that contributes to rate base health and long-term rate stability.

UGI UTILITIES, INC. - GAS DIVISION
EXPLANATION OF REQUEST I&E-RE-13 PART F

Organization Name	Explanation
Scranton Chamber of Commerce	Connects the utility with the Scranton-area business community, supporting customer retention, new business attraction, and community relationships. Active engagement in Scranton supports economic growth and new gas customer additions in one of the utility's key northeastern service areas.
Wyoming County Chamber of Commerce	Provides a forum for engaging with Wyoming County businesses and community leaders, supporting local economic development and customer relations. Supports new customer opportunities and community goodwill in Wyoming County, reinforcing the utility's commitment to rural service territories.
Greater Susquehanna Chamber of Commerce	Engages with businesses and community stakeholders in the Susquehanna region, supporting economic development and gas service growth. Promotes local business development and new customer connections in the Susquehanna Valley service area.
Pipeline Association for Public Awareness	Dedicated to pipeline safety education for customers, excavators, municipalities, and first responders; supports PA 811 'Call Before You Dig' damage prevention programs. Reduces third-party pipeline damage — the leading cause of gas incidents — directly protecting public safety, property, and service continuity for all customers.
Harrisburg Regional Chamber & CREDC	Connects the utility to Central Pennsylvania's business and economic development community, supporting new customer growth and infrastructure investment advocacy. Supports commercial and industrial development in the Harrisburg region, growing the customer base and promoting long-term rate stability.
WEDCO – Wayne Economic Development Company	Supports economic development in Wayne County, attracting businesses and supporting new gas service connections in a rural service area. Business development in Wayne County supports new customer additions, helping spread infrastructure costs and maintain service in rural communities.
Focus Central Pennsylvania – North	Promotes business development and economic growth in Central Pennsylvania's northern counties, supporting gas customer additions in the service territory. New commercial and industrial connections in north-central PA support system growth and help maintain affordable service for existing customers.
HBA of Metropolitan Harrisburg	Home Builders Association engagement supports new residential construction and gas service connections throughout the greater Harrisburg market. New residential construction drives gas service extensions and customer additions, supporting infrastructure investment and long-term system sustainability.
Lancaster Chamber of Commerce	Provides engagement with Lancaster County's large and diverse business community, supporting customer development and community relationships. Strengthens the utility's relationships with one of its major service areas, supporting business
The Greater Carbondale Chamber of Commerce	Connects the utility with businesses and community leaders in the Carbondale area, supporting local economic development and customer relationships. Promotes new customer development and community engagement in the Carbondale service area of Northeastern Pennsylvania.
Shippensburg Area Chamber of Commerce	Supports business development and community engagement in the Shippensburg area, connecting the utility with local commercial customers. Supports new customer connections and community relations in Cumberland County, reinforcing the utility's presence in south-central PA.
Williamsport/Lycoming Chamber of Commerce	Engages with the business community in the Williamsport and Lycoming County area, a key portion of the utility's northcentral PA service territory. Promotes economic development and new gas customer additions in Lycoming County, supporting system growth and long-term customer affordability.
Develop Tioga	Economic development organization for Tioga County supporting business attraction and job creation in a rural area of the service territory. Supports new customer growth in Tioga County, helping to sustain infrastructure investment and reliable service in a rural portion of the service territory.
Carlisle Chamber Membership	Connects the utility with the Carlisle business community in Cumberland County, supporting commercial customer relationships and local economic development. Promotes new business development and customer growth in the Carlisle area, contributing to system utilization and rate base health.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 5-R

Rebuttal Testimony of
Amy M. Keller

Topics Addressed: Updates to Claim
Rate Base and Expense Adjustments
PUC Annual Report

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Amy M. Keller. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 5, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. The purpose of my rebuttal testimony is to respond to the direct testimony of the Pennsylvania Public Utility Commission's ("Commission" or "PUC") Bureau of Investigation and Enforcement ("I&E"), and the Office of Consumer Advocate ("OCA"). Specifically, I address: (1) the error identified by the Company wherein the amortization income of the over-recovery of post-retirement welfare plan expense was inadvertently included in the Company's claim; (2) the direct testimony of OCA Witness Rogers (OCA Statement No. 2) regarding OCA's recommended adjustment to the depreciation expense of UGI Utilities, Inc. ("UGI") and a corresponding adjustment to UGI's accumulated depreciation; and (3) the direct testimony of I&E Witness Walker (I&E Statement No. 1) regarding I&E's recommendation that UGI should produce separate UGI Gas and UGI Utilities, Inc. – Electric Division ("UGI Electric") annual reports submitted to the PUC.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. Yes, I am sponsoring CONFIDENTIAL UGI Gas Exhibit AMK-1R and UGI Gas Exhibit AMK-2R.

II. UPDATES OR REVISIONS TO THE COMPANY'S CLAIM

Q. Before responding to the rebuttal of I&E and OCA, do you have any updates or revisions to the Company's claim?

A. Yes. In preparing the response to I&E-RE-29, which is attached hereto as CONFIDENTIAL UGI Gas Exhibit AMK-1R, the Company identified an error in its claim. The amortization of the regulatory liability for past over-recovery of post-retirement welfare plan expense will terminate at the end of the FTY (FY 2026). In the Company's claim, this amortization income was inadvertently included in the Company's claim for the FPFTY (FY 2027). Therefore, the Company is revising its claim to remove the $974,464 of amortization income.

Q. Please explain the impact of this revision to the Company's proposed revenue requirement in this matter.

A. Based on the information detailed above, the Company will reflect a downward adjustment of $974,464 as part of its updated claim in this case. This update is reflected in Schedule D-2 of UGI Gas Exhibit A – Fully Projected (REBUTTAL), which is sponsored by UGI Gas witness Tracy A. Hazenstab (UGI Gas St. No. 2-R).

III. RATE BASE ADJUSTMENTS

A. ACCUMULATED DEPRECIATION AND ACCUMULATED DEFERRED INCOME TAXES ("ADIT")

Q. Do any of the other parties propose an adjustment to the Company's claim for accumulated depreciation and ADIT?

A. OCA Witness Rogers advances an adjustment to the Company's depreciation expense, and a corresponding adjustment to its accumulated depreciation, based upon the recommendations of OCA Witness Garren. OCA St. 2, at p. 7. OCA Witness Rogers also states that "if the Company is able to calculate the related ADIT adjustment" that is required as a result of the OCA's other adjustments, that she may update her recommendation in surrebuttal testimony. OCA St. 2, at p. 7.

Q. What is UGI Gas's response to OCA's proposals regarding accumulated depreciation and ADIT?

A. The Company's response to OCA's proposal to adjust the Company's depreciation expense is inextricably intertwined with the Company's rebuttal to the depreciation expense adjustment proposed by OCA witness Mr. Garren. In summary, OCA Witness Garren proposes to change the service life method utilized by the Company, as well as adjust the service lives used for three plant accounts, which reduces the Company's depreciation expense by $20.8 million. OCA St. 4, p. 6.[1] In OCA Witness Rogers Statement 2, page 7, she noted that she applied the depreciation recommendations per Witness Garren's testimony but yielded a decrease in depreciation expenses by $21.8 million. The Company disagrees with these proposed adjustments, for the reasons explained in the rebuttal testimony of UGI Gas witness John F. Wiedmayer (UGI Gas Statement No. 6-R).

However, if adopted, Witness Garren's proposed adjustment to depreciation expense necessarily requires related adjustments to accumulated depreciation and ADIT.

[1] I note that Mr. Garren recommends this adjustment based upon "data available as of September 30, 2026 plant balances used for the future test year, which is the period on which the service life analysis was conducted." OCA St. 4, p. 5. Ms. Rogers, however, applies this adjustment to the Company's fully projected future test year ending September 30, 2027 ("FPFTY") claim for depreciation expense. OCA St. 2, p. 7.

Importantly, Witness Garren did not make these associated and necessary adjustments to accumulated depreciation and ADIT, which results in a material understatement of OCA's proposed revenue requirement in this proceeding. As explained by Mr. Wiedmayer (UGI Gas Statement No. 6-R), Witness Garren's depreciation expense adjustment would be calculated for the entire life of the assets through September 30, 2027, to restate the accumulated depreciation reserve as if Witness Garren's proposed service life method was used consistently by the Company over the entire life of the assets. While it is impractical to do a detailed year-by-year recalculation of depreciation over the more than 40 years that the Company's existing method has been in place, the Company has performed a high-level calculation indicating that the related adjustment to accumulated depreciation would decrease accumulated depreciation by an estimated $257 million and, as a result, the Company's proposed rate base would increase by an estimated $245 million. I have included this calculation with my testimony as UGI Gas Exhibit AMK-2R, where the potential accumulated depreciation impacts are reflected on page 2. Also, the Company estimates that, at a high level, ADIT as of September 30, 2027, would increase by an estimated $37 million and, as a result, the Company's proposed rate base would decrease by an estimated $37 million. The potential ADIT impacts are reflected in UGI Gas Exhibit AMK-2R, on page 3 at a high-level as well.

Q. What would the revenue requirement impacts be from OCA's adjustments to accumulated depreciation and ADIT?

A. A $25 million revenue requirement increase would be needed to offset Witness Garren's proposed adjustment. *See* UGI Gas Exhibit AMK-2R, page 1.

Q. Are you proposing that the Commission adopt these adjustments to accumulated depreciation and ADIT?

A. No. These adjustments would only be required to calculate the revenue requirement if Witness Garren's proposal is accepted. I am supplying this information to: (1) demonstrate that Witness Garren's proposed depreciation adjustment is incomplete and, if adopted, requires associated accumulated depreciation and related ADIT adjustments that OCA has failed to consider; and (2) provide a calculation estimate for the overall impacts to revenue requirement of Witness Garren's proposal once properly reflected. Specifically, the $25 million revenue requirement increase would partially offset Witness Garren's proposed downward adjustment.

Accordingly, Witness Garren's adjustment cannot be considered as complete as he has presented it and it must either be rejected or be corrected/completed. However, to be clear, the Company opposes Witness Garren's proposal that it utilize the Average Life Group ("ALG") method, his proposal to increase the service lives of assets in specific plant accounts, and his proposed adjustment to depreciation expense. Therefore, no adjustment to depreciation expense or any resulting adjustment to accumulated depreciation and/or ADIT should be adopted.

IV. PUC ANNUAL REPORT DATA

Q. Please summarize the testimony of I&E Witness Walker regarding the data UGI supplies to the PUC as a part of its annual reports.

A. I&E Witness Walker testifies that UGI should be able to produce separate gas and electric data in its PUC annual reports, and argues that how this data is currently presented is

"misleading." I&E St. No. 1, at pp. 6-8. He contends that as UGI was able to break down utility plant and related items between gas and electric operations, it stands to reason that other balance sheet accounts could be broken down at a similar level and if not, UGI should still be required to provide a breakdown of the plant-related items that it already breaks down for FERC. He further takes issue with the Company's explanation in discovery that it would need to petition the PUC for approval to provide this data separately for UGI Gas and UGI Electric.

Q. Before responding to I&E Witness Walker, can you clarify and explain how UGI develops and submits data to the PUC for purposes of its annual reports?

A. Yes. For the Annual Report filed with the PUC for the year ending December 31, 2024, the vast majority of required schedules are prepared reflecting solely UGI Gas data. This includes operating revenues, operating expenses, plant in service, depreciation, customer statistics, and all other operational and income statement-related schedules. These schedules are prepared on a UGI Gas-only basis because the underlying data is tracked, recorded, and maintained separately for UGI Gas in the ordinary course of business.

However, four sets of pages are prepared using the consolidated UGI balance sheet information rather than gas-only data:

- Page 200 — Comparative Balance Sheet (Assets and Liabilities)
- Page 213 — Accounts Receivable/Payable from/to Associated Companies
- Page 216 — Unamortized Debt Discount and Premium on Debt
- Page 231 — Long Term Debt

These pages reflect balance sheet items that exist at the legal entity level — i.e., they exist for UGI Utilities, Inc. as a whole — and cannot be meaningfully disaggregated between UGI Gas and UGI Electric operations. What this means is that this information is not divisional in nature. No gas-only balance sheet exists as an audited financial document.

It is worth noting that the Unamortized Debt Discount on Page 216 and the Interest for the Year on Page 231 are allocated between UGI Gas and UGI Electric operations. It is only the outstanding debt balances — which are obligations of the legal entity and cannot be attributed to a division — that are presented at the consolidated level.

I&E Witness Walker points to UGI Electric's FERC Form 1 dated December 31, 2023, specifically the summary of utility plant and accumulated provisions for depreciation, amortization, and depletion, as evidence that the Company is capable of separating gas and electric data for balance sheet purposes. This observation, while accurate in the narrow context of utility plant, does not support a broader conclusion that all balance sheet items can be similarly disaggregated. Utility plant accounts outside of common plant assets, are inherently gas or electric in nature — a gas main is a gas asset and a power line is an electric asset — and the Company already presents this data on a separated basis in the PUC Annual Report on Pages 205 and 205.1 (Utility Plant in Service), Pages 206 and 207 (Accumulated Depreciation of Utility Plant), and Page 208 (Construction Work in Progress). The ability to separate physical plant assets by division does not extend to financial items such as cash, long-term debt, deferred income taxes, and equity, which are maintained at the legal entity level and have no inherent gas or electric character.

Q. Does UGI Gas agree with I&E's recommendation that it submit this data separately?

A. No, it does not.

Q. Why not?

A. The Annual Report schedules that are currently presented on a consolidated basis reflect balance sheet items that exist at the legal entity level of UGI. The recommendation to separate this data presupposes that a reliable, accurate, and verifiable gas-only balance sheet can be produced. It cannot.

I&E's recommendation fails to recognize the two distinct categories of data presented in the Annual Report. As I noted in my prior response, non-common utility plant assets and related items — such as gas mains, meters, and electric distribution facilities — are inherently divisional in character and are already presented on a separated basis in the Annual Report. The Company has no objection to, and already complies with, separate reporting for those items. The balance sheet items identified by I&E in this case are categorically different.

In summary, the consolidated balance sheet data currently used for these schedules is derived directly from UGI's audited financial statements. It is objectively verifiable, consistent year over year, and subject to independent audit. A divided balance sheet produced in the manner recommended by I&E would have none of these qualities. As such, while I&E's recommendation appears to be offered for the purpose of increasing precision and transparency, it would only produce the **appearance** of additional precision and transparency but would be based on information that is not independently verified by audit and could vary depending on assumptions made in any given year.

V. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

IV. OTHER ISSUES IN WITNESS GARREN'S TESTIMONY 41
V. CONCLUSION 44

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John F. Wiedmayer. My business address is 1010 Adams Avenue, Audubon, Pennsylvania 19403.

Q. ARE YOU THE SAME JOHN WIEDMAYER THAT PRESENTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to the depreciation-related testimony of James S. Garren on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Mr. Garren has proposed the use of the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates. He also proposes alternative survivor curve estimates for Account 375, Structures and Improvements; Account 376.1, Mains – Primarily Steel; and Account 378, Measuring and Regulating Station Equipment, General. My testimony will respond to these positions.

Q. ARE YOU SPONSORING ANY EXHIBITS AS PART OF YOUR REBUTTAL TESTIMONY?

A. Yes, I am sponsoring UGI Gas Exhibits JFW-1R and JFW-2R.

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. Mr. Garren has proposed a reduction in depreciation expense of $20.8 million[1] (as of the future test year) in a manner that contradicts 44 years of Pennsylvania Public Utility Commission ("Commission" or "PUC") precedent approving use of the equal life group ("ELG") depreciation procedure for rate making purposes. UGI Utilities, Inc. – Gas Division ("UGI Gas" or "Company") has utilized the same Commission-approved process for developing depreciation rates and expense for the past 44 years. UGI Gas uses the ELG procedure for vintages 1982 and subsequent instead of the Average Life Group ("ALG") procedure. The Average Life Group procedure is most commonly identified in Pennsylvania as the Average Service Life ("ASL") procedure. The use of the ELG procedure was established with the Pennsylvania Utilities Commission ("PUC") in 1982 and has been used by most gas utilities in Pennsylvania to calculate depreciation expense and annual depreciation accrual rates since that time spanning a period of approximately 44 years.

In my testimony, I will address the following topics. First, I will address the ELG vs ALG calculations. Second, I will discuss the history of ELG and its precedent in Pennsylvania. Third, I will explain how ELG is more equitable for current and future customers. Fourth, I will address the errors in OCA Witness Garren's depreciation calculations related to his proposing an ALG procedure but using depreciation reserve balances that are based on historic and projected accruals using the ELG procedure. Fifth, I will address Mr. Garren's incorrect use of the balances at September 30, 2026, the end of

[1] Mr. Garren calculated depreciation as of the future test year based on his claim that Sep 2026 "is the period on which the service life analysis was conducted." OCA St. 4, at p. 5. This claim is incorrect. The service life analysis was conducted using accounting data through September 30, 2022, and the Company's primary proposed rates are based on the fully projected future test year of Sep 2027.

the future test year, rather than at September 30, 2027, as the basis for calculating his depreciation expense claim. And lastly, I will address Mr. Garren's alternative service life proposals.

A. Equal Life Group vs. Average Life Group

Q. WHAT IS THE EQUAL LIFE GROUP PROCEDURE?

A. For the ELG procedure, a group of property listed by vintage (e.g., a group of meters installed within the same fiscal year) is subdivided into groups having equal service lives. The size of these "equal life groups" is based on the estimated survivor characteristics of the account. For example, UGI replaces 15,000 to 20,000 meters per year. Some of these meters will experience a service life of 1 year, some 2 years, some will experience the maximum expected life of 66 years, and some will experience lives between 2 and 66 years. Depreciation can then be calculated for each equal life group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is then the summation of the calculated depreciation for each equal life group. The ELG depreciation calculation procedure mathematically estimates the life for each unit in the account and then depreciates each unit over its expected life based on the survivor curve estimate for an account. The ELG procedure is also known as the *Unit Summation* Procedure.

Q. HOW DOES THE ELG PROCEDURE DIFFER FROM THE AVERAGE SERVICE LIFE ("ASL," ALSO REFERRED TO AS "AVERAGE LIFE GROUP," OR "ALG") PROCEDURE?

While the ELG procedure calculates depreciation for each equal life group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using equal life groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better matches capital recovery with consumption of the assets's service value by depreciating assets that have shorter lives than the average, over their shorter lives (and the longer-lived assets over their longer lives) as opposed to depreciating all assets over a single average life for the group.

Q. IS ELG SUPPORTED BY DEPRECIATION AUTHORITIES?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[2]

Depreciation Systems by Wolf and Fitch, also supports the appropriateness of ELG stating, "Application of the equal life group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[3]

Q. IS MR. GARREN'S ASSERTION THAT THE "ELG METHOD IS A FORM OF ACCELERATED DEPRECIATION" CORRECT?

A. No. Mr. Garren's characterization is incorrect. The ELG method uses a straight-line approach to allocate cost over the service life of a group of assets based on expected retirements. It does not accelerate depreciation like known accelerated methods do, such

[2] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71.
[3] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75.

as sum-of-the-years' digits or declining balance methods. Instead, it provides a systematic, rational allocation of cost that matches asset usage and retirements over time using the straight-line method. The depreciation rate for each equal life group is simply determined by the following equation: *Depreciation Rate = [1 / (Life of the Equal Life Group)].* So, the depreciation rate for an equal life group with a one-year life is 100%, 50% for a 2 year equal life group, 33.33% for a 3 year equal life group, and so on, until the maximum life of the survivor curve is reached. As we will see later in the testimony related to retirement frequency curves, the maximum life expectancy for a 45-R2 survivor curve, which is the estimate for Account 380, Services, is 84 years and a 1.19% (i.e., 1/84) rate. All accruals determined from the equal life groups are summed and their group's relative weighting determined mathematically from the survivor curve to develop a composite depreciation rate for each vintage and account.

Q. PLEASE EXPLAIN HOW DEPRECIATION IS DETERMINED USING THE ELG PROCEDURE.

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for 5 years, and unit B will be in service for 15 years. There is no net salvage for these units.

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At the end of year 5, the total annual accruals for the account are $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the accumulated depreciation of $1,000. At

the start of year 6, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and $1,000, an amount equal to its full original cost, must still be recovered through future depreciation accruals.

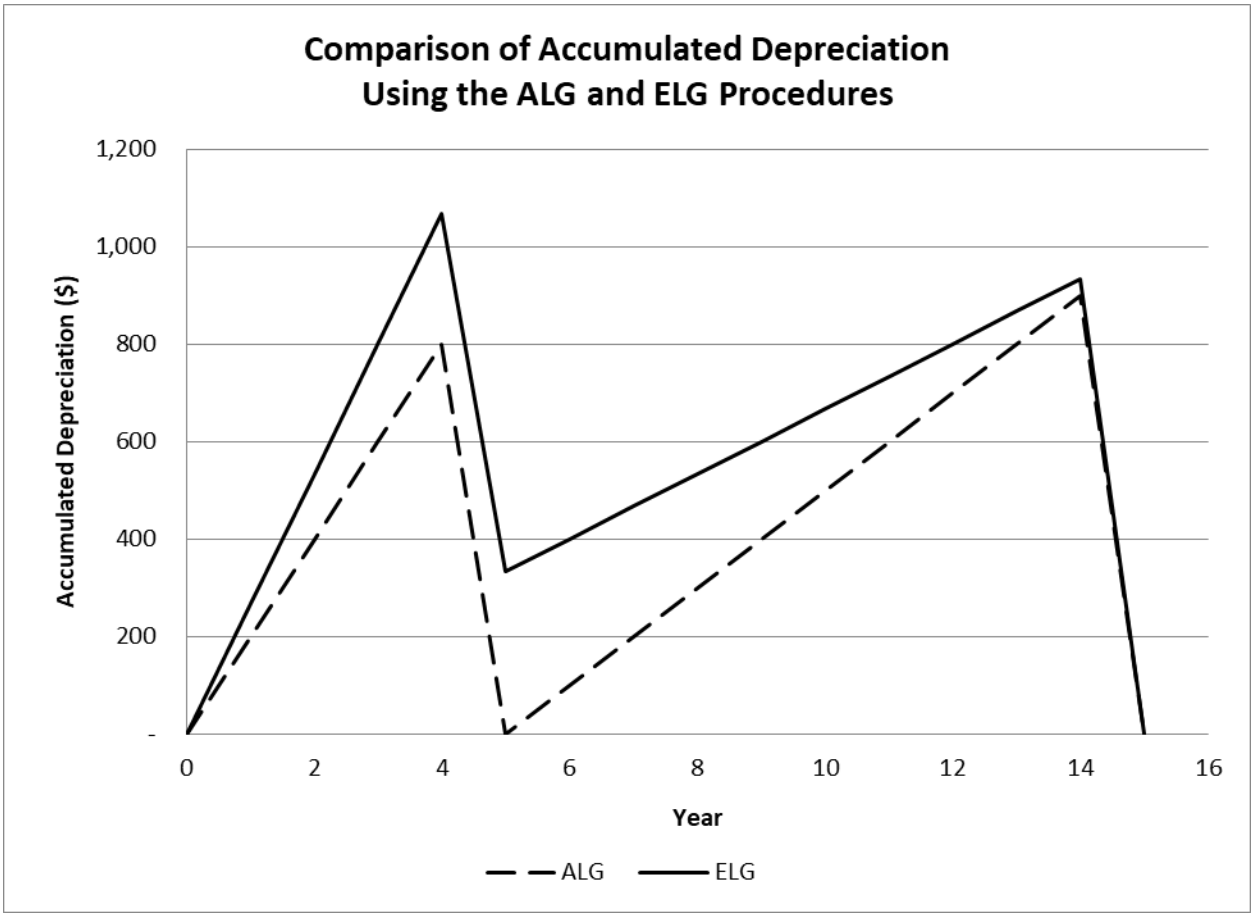
For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired at age 15. Thus, at the time of Unit B's retirement, the Company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each equal life group. In this case, there are two equal life groups – one for Unit A, which has a life of 5 years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5) and for Unit B is 6.67% (1/15). Thus, the annual accruals for years 1 through 5 will be $200 ($1,000 x 20%) for the first equal life group (Unit A) summed with $66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67 in total. At the end of year 5, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year 6, the $1,000 original cost of Unit B remains with $333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In the years 6 through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1 below provides a graph of the accumulated depreciation for both procedures. The end of year 5 provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year 5; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the end of year 5, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate base under ELG at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under ASL. This example illustrates that in order for the rate base to be correct, annual depreciation needs to be correct (which it is using the ELG model). This example illustrates why Professor Robley Winfrey stated that the equal life group procedure was "the only mathematically correct procedure."

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



See below for the accounting entries that support Figure 1:

ACCUMULATED PROVISION FOR DEPRECIATION (ALG)				
Year	Entry	Debit	Credit	Balance
1	Accrual		200	200
2	Accrual		200	400

6	Accrual		67	400
7	Accrual		67	467
8 thru 14	Accruals		466	933
15	Accrual		67	1,000
15	Retirement	1,000		0

Q. YOU HAVE PROVIDED A SIMPLE TWO-UNIT EXAMPLE DEMONSTRATING HOW ELG WORKS. DO THE SAME PRINCIPLES APPLY TO LARGER PROPERTY GROUPS WITH MANY UNITS?

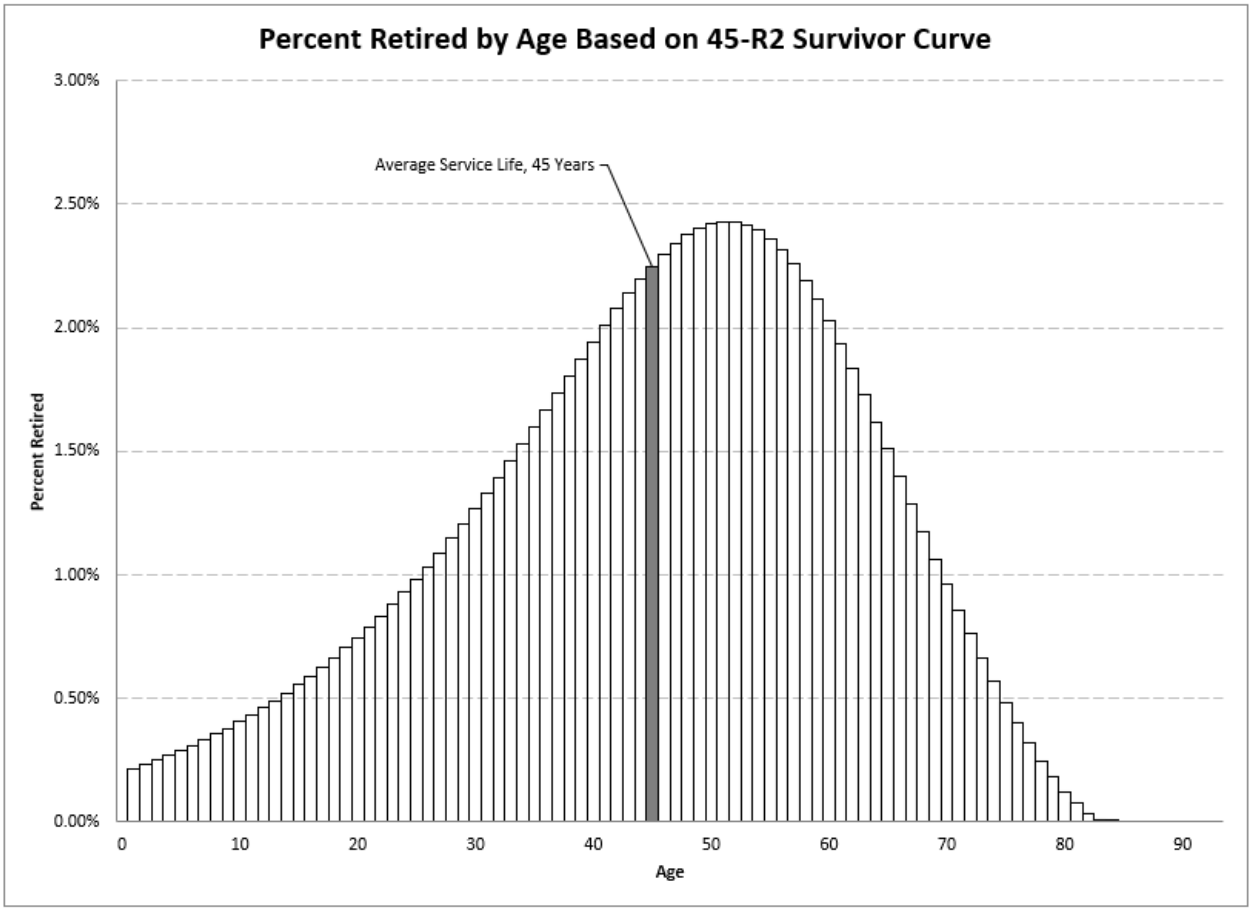
A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve estimated for each property account can be used to divide an account into equal life groups. The

survivor curve allows for the calculation of the percentage of the property account that is in each equal life group, which allows for the calculation of ELG annual depreciation accruals for the entire property group. Under the ASL procedure, the depreciation expense for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes that even homogenous utility plant, such as meters, will experience a range of service lives. This range of service lives is known as dispersion, which can be modelled using one of the 22 different Iowa curve types. Specifically, it recognizes that only an exceedingly small percentage of the account will be retired at the average service life in actual utility operations. Figure 2 listed below is a chart of the retirement frequency curve (a.k.a., frequency curve) for the 45-R2 survivor curve which will be used to illustrate a frequency curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each equal life group. The shaded bar in Figure 2 represents the percentage of property that will have a life of 45 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 2.25% of the assets will be in service for exactly 45 years. In contrast, a majority, 97.75%, of the assets will have a service life different than 45 years. All groups of assets within an account experience a range of service lives, known as dispersion. This dispersion is represented by distinct types of Iowa curves, e.g., L, S, R and O type Iowa curves. The ELG model is particularly well-suited to address the range of service lives resulting from this dispersion. For example, in the case of Account 380, Services, retirements can occur at any age due to random causes such as third-party damage, or more

systematically due to aging-related deterioration—especially in steel service lines. These examples conceptually reinforce how the frequency curve reflects a blend of unpredictable and age-related retirement causes.

Figure 2. Percent Retired by Age Based on 45-R2 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each equal life group over the expected life for that group. The service lives indicated by the 45-R2 survivor curves range from 1 year to 84 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the account's average life. The average service life for Account

380, Services is 45 years. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 97.75% of the assets.

Just as in the case for the two-unit example provided above, the ELG procedure better matches capital recovery with the actual lives forecast by the estimated survivor curve. Consequently, rate base will be higher when the ALG procedure is utilized because of the poor matching of recovery to utilization of the assets. That is, under the ALG procedure, the over-recovery on the long-lived assets is designed to make up for the under-recovery related to the short-lived assets relative to average service life as we have illustrated in the two unit example. This is not the case under ELG.

Q. ON PAGE 26 OF HIS DIRECT TESTIMONY, MR. GARREN ARGUES THAT "THE ASL PROCEDURE BETTER FITS THE ACTUAL ONGOING INVESTMENT AND RETIREMENT PATTERNS OF UTILITY PLANT OVERALL." OCA ST. 4, AT P. 26. DO YOU AGREE?

A. No. Mr. Garren mischaracterizes ELG as an accelerated method when it is simply a depreciation system that more accurately reflects the actual retirement patterns of assets. The depreciation system is a combination of selected depreciation methods, procedures and techniques used consistently by UGI Gas since 1982. The terms depreciation methods, procedures and techniques are industry terms used in depreciation parlance that have distinct meaning. Specifically, UGI Gas uses the straight-line method, equal life group procedure used in connection with the remaining life technique (SL-ELG-RL) for plant additions made 1982 and subsequent. UGI uses the Average Life Group (SL-ALG-RL) for additions made 1981 and prior.

In PA, nearly all investor-owned gas utilities use the ELG procedure. In fact, telephone companies in Pennsylvania were the first companies to adopt the ELG procedure in 1981 during the period in which they were rate-regulated and submitted depreciation studies to both the Federal Communications Commission (FCC) and PA PUC. The electric and gas companies in PA followed shortly thereafter in 1982 in adopting the ELG procedure including UGI. The water and wastewater companies followed after the energy companies using the ELG procedure in PA.

B. Pennsylvania Precedent

Q. IS THE ELG PROCEDURE SUPPORTED BY OTHER DEPRECIATION AUTHORITIES?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure." [4]

Q. ARE OTHER COMMISSIONS STARTING TO IMPLEMENT THE ELG PROCEDURE GIVEN THE CURRENT REGULATORY ENVIRONMENT?

A. Yes. The ELG procedure is being utilized for utility assets by the Texas Railroad Commission. It is also has been used for many years in Canada, in jurisdictions such as Alberta, Nova Scotia and Newfoundland and Labrador and in other provinces more recently. The FCC first adopted ELG in the U.S. in early 1980s in the context of rapid technological change in the telecommunications industry at that time.[5]

[4] Robley Winfrey, Depreciation of Group Properties, Bulletin 155, p. 71.
[5] *See* Public Utility Depreciation Practices, NARUC, 1996, pp. 172-175.

Utility clients of GFT in Oregon, Alabama, Indiana, Louisiana, and Arkansas have been approved to use ELG. ELG has also been adopted recently in Colorado in response to significant technological and regulatory changes facing the gas industry.[6] New York is also considering ELG for similar reasons in an active case in New York.[7]

Q. HAS THE ELG PROCEDURE BEEN PREVIOUSLY ADOPTED IN PENNSYLVANIA?

A. Yes. ELG is the predominant method used in Pennsylvania and has been for many years. Most Pennsylvania gas utilities have used the ELG procedure since the early 1980s. ELG was adopted for UGI Gas in 1982 and has been used for depreciation since this approval.[8] Generally, every five years beginning in the mid-1980s, the Company has filed a service life study report with the Commission for approval based on Commission regulations. In 2023, UGI – Gas submitted its most recent five-year service life study report to the Commission and all depreciation parameters and methods, including the use of the Equal Life Group procedure, were approved. In the prior rate case, Docket No. R-2024-3052716, the ELG procedure was approved as a part of a Commission-approved settlement. Additionally, UGI Gas submits annual depreciation reports to the Commission each year updating its depreciation accrual rates for book purposes as well as identifying the underlying depreciation parameters and calculation methods and procedures used to determine depreciation expense. Under the Commission's regulation 52 Pa. Code §73.9(c), once such depreciation reports are filed and accepted "*[i]n subsequent*

[6] Decision No. C22-0642 in Proceeding No. 22AL-0046G p. 51, ¶¶ 161-163.
[7] New York State Department of Public Service Cases 24-E-0322 and 24-G-0323.
[8] Docket No. R-211899. ELG was adopted for many Pennsylvania utilities on a go-forward basis. For this reason, vintages of plant subsequent to the adoption of ELG use ELG while older vintages use ASL. For UGI, vintages 1982 and subsequent use ELG and vintages 1981 and prior use ASL.

ratemaking proceedings, the most recent annual depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party." In 2023, the Company's five-year service life study report was deemed appropriate and approved by the Commission.

Q. ARE THE COMPANY'S CURRENT DEPRECIATION RATES BASED ON THE ELG PROCEDURE?

A. Yes. The Company's most recent annual depreciation report was filed on March 31, 2026 and most recent service life study was filed May 30, 2023. Both were based on the ELG procedure. The Annual Depreciation Report (ADR) submitted by UGI Gas to the Commission on March 31, 2026 is under review pending approval and is based on ELG. UGI Gas's most recently approved ADR was submitted on March 31, 2025, and it contains the depreciation rates the Company is currently using for book purposes based on the ELG procedure. All prior service life studies and ADRs submitted by UGI Gas since the mid-1980's have been approved using the ELG procedure. The ELG procedure was also adopted in UGI Gas's most recent rate case, Docket No. R-2024-3052716 as a part of a Commission-approved settlement.

Q. SINCE THE USE OF ELG IS THE PREDOMINANT AND LONGSTANDING PRACTICE IN PENNSYLVANIA, HAS MR. GARREN PROVIDED EVIDENCE FOR WHY THE COMPANY SHOULD DEVIATE FROM THIS PRACTICE?

A. No. Mr. Garren has not provided constructive evidence to support his claim that the ALG method is more appropriate than ELG. None of Mr. Garren's arguments support

overturning longstanding precedent despite having the burden of doing so under 52 Pa. Code §73.9(c). He appears to disagree with ELG simply because it can produce higher depreciation rates (relative to ALG) in assets' early years, consistent with the assets' mortality characteristics, but he provides no principled reason nor evidence for why lower depreciation rates resulting from the use of the average service life procedure are more appropriate.

He has provided minimal justification to support his claim that the Company's approved depreciation rates or calculation procedures, which are based on longstanding precedent, are unreasonable. Further, Mr. Garren ignores the issue of precedent for UGI, in effect only arguing that his proposal should be adopted because it results in lower depreciation expense and a short term reduction in rates for current customers.

However, as I will explain, Mr. Garren is incorrect that the longstanding use of ELG costs customers more than ASL would[9]. In fact, the opposite is true. Current customers benefit from the continued use of ELG, because rate base is much lower today than had ASL been used since 1982. The more precise recovery through ELG benefits customers over time because shorter-lived assets are correctly recovered over their useful lives, resulting in a lower rate base and lower return on rate base that exceeds the higher annual depreciation expense related to ELG. Further, the alleged benefit proposed by Mr. Garren, of lower short-term depreciation rates, is the result of the *change* in procedure, not from the procedure itself. Over time, the ASL depreciation rates will result in a higher rate base, and higher overall cost to customers.

[9] OCA St. No. 4, at p. 25.

C. Depreciation and Rate Base

Q. HOW DOES MR. GARREN DISCUSS THE IMPACT OF ELG ON CUSTOMER RATES?

A. Mr. Garren posits that the result of ELG is higher depreciation rates, which he argues is not in the best interest of ratepayers. However, as discussed above, not only does Mr. Garren ignore the impact of depreciation expense on rate base, but he fails to note that any benefit to current customers of his proposal to use ASL depreciation rates only results from the change from ELG to ASL – not from the overall use of the ASL procedure itself.

Q. PLEASE EXPLAIN THIS CONCEPT FURTHER.

A. Depreciation impacts customer rates in two ways. Depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation[10] is also a *reduction* to rate base. A higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation if the ALG procedure were used throughout the Company's history.

Therefore, higher depreciation expense will, over time, result in higher accumulated depreciation. Because average depreciation rates for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time.

Mr. Garren is aware of the dual nature of depreciation as it impacts revenue requirement and customer rates as described above. However, his recommendation, for

[10] Accumulated depreciation is the depreciation expense recorded to date including negative net salvage amortization, less recorded retirements and cost of removal, plus recorded gross salvage.

UGI Gas to switch depreciation calculation procedures from ELG to ALG, since its results in $20.8M less in annual depreciation (as of the future test year), without making a pro forma adjustment to *accumulated depreciation,* is one-sided and misleading. Every dollar reduction in annual depreciation will result in a corresponding increase in rate base in the first year and increasing amounts all subsequent years. That is, a $20.8M reduction in 2026 will result in a $20.8M increase in rate base in 2027, $41.6M in 2028, $63.4M in 2029 and so on. After 10 years, future rate base will be approximately $208M higher in this example using simplifying assumptions. Note, UGI has been using the ELG procedure for over 40 years. If UGI Gas had used ALG for the past 44 years instead of ELG, accumulated depreciation would have been much lower today and rate base, correspondingly, much higher today.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if ALG had been used. Customers today pay lower customer rates than if ASL had been used during the years since ELG's adoption. As a result, it has been in customers' interest, not only to use ELG but also to use it consistently.

Over time ALG will result in higher customer rates than ELG. It is correct to assume that if the Company were to switch from ELG to ALG there would be a *short*-term decrease in expenses for current customers. However, this is not because ALG is in customers' best interest in the long term, but only because current customers would benefit from both lower ALG depreciation rates and amounts, and from the lower rate base that exists due to the longstanding use of ELG.

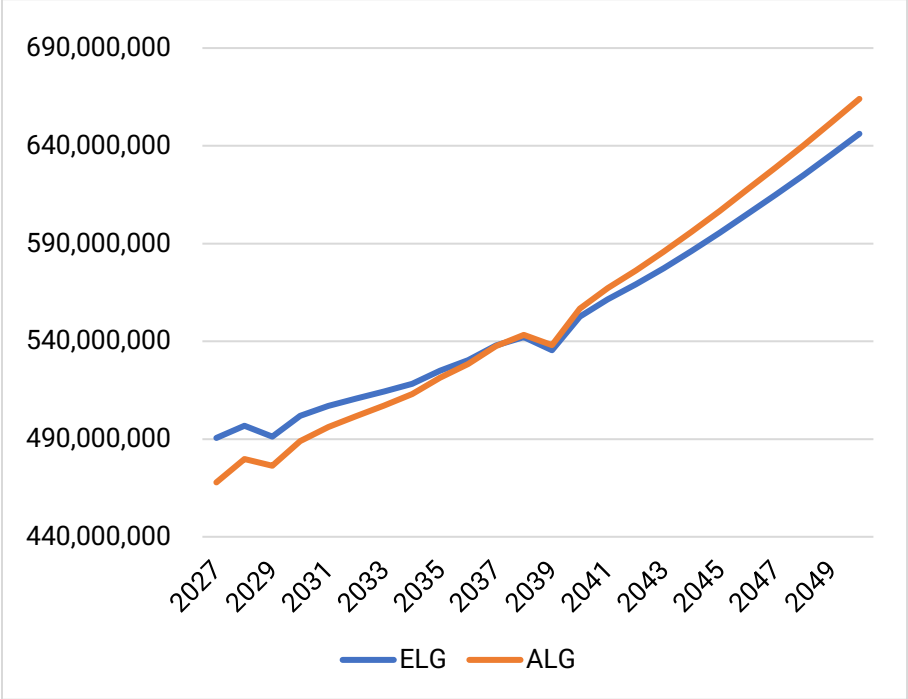
OCA Witness Garren's proposal is therefore not a recommendation that is in the long-term interest of lower customer rates. Instead, OCA Witness Garren's proposal

provides a short-term subsidy only to current customers who benefit from ELG depreciation rates paid by a previous generation of customers. The costs of a higher rate base will be paid for by future customers who will have to pay higher overall customer rates. Adopting ALG would serve as an intergenerational subsidy to current customers at the expense of future generations of customers.

Q. CAN YOU ILLUSTRATE THIS CONCEPT?

A. Yes, this concept is illustrated in UGI Gas Exhibit JFW-1R, which forecasts plant and reserve balances for UGI Gas through 2050 under two scenarios: one adopting the ALG procedure and the other maintaining the currently approved ELG procedure for vintages 1982 and newer. Figure 3 below shows a high-level estimate of the Company's revenue requirement (comprised of just depreciation expense and return) for the period 2027 through 2050 under each of these scenarios. This demonstrates that while ELG leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG approach is more beneficial to customers as it provides more stable and lower customer rates over time.

Figure 3. Comparison of Revenue Requirement



See below listing the components of the revenue requirement by year (in millions):

	EQUAL LIFE GROUP			AVERAGE LIFE GROUP		
TEST YEAR	DEPR. EXPENSE	RETURN	REV. REQMT	DEPR. EXPENSE	RETURN	REV. REQMT
2027	138.2	352.4	490.6	113.5	354.3	467.8
2028	145.0	351.8	496.8	124.3	355.4	479.7
2029	136.6	354.7	491.3	116.4	359.9	476.3
2030	144.0	357.9	501.9	124.3	364.7	489.0

D. Intergenerational Inequity

Q. PLEASE EXPLAIN THE CONCEPT OF "INTERGENERATIONAL EQUITY."

A. Intergenerational equity is a ratemaking principle in which customers receiving the benefit from the use of an asset (e.g., from gas utility property used to provide gas service) by the same customers who pay for the cost of that asset – no more, no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully depreciated, then customers subsequent to the asset's retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset from which they receive no service. Depreciation rates should be designed to avoid such an outcome. In real-world operations, circumstances can change such that assets are retired earlier than expected. However, this situation is different than designing depreciation rates to include intergenerational inequity, which should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an

asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next.

In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is greater inequity resulting from a customer paying for an asset from which they received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. HOW DOES THE EQUAL LIFE PROCEDURE CALCULATE DEPRECIATION EXPENSE?

A. The ELG procedure calculates depreciation expense for assets with like service lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to match the recovery of the assets' costs more appropriately to the period of time over which they are providing service to rate payers.

Q. HOW DOES THE AVERAGE LIFE GROUP (ALG) PROCEDURE CALCULATE DEPRECIATION EXPENSE?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like service lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior the average service life applied to the entire depreciable group and other assets will survive longer than the average service life applied to the entire depreciable group.

Continuing, the ALG procedure assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. DOES THE USE OF ELG VS. ALG OR VICE VERSA IMPACT THE TOTAL AMOUNT OF ASSET COST TO BE RECOVERED?

A. No. Both procedures, when used in conjunction with the remaining life technique, are designed to recover the total service value of an asset over the asset's service life.

Q. DOES THE USE OF THE ELG PROCEDURE PRODUCE INTERGENERATIONAL INEQUITY?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with an identical service life within a group known as an equal life group (i.e., one life for each equal life group) and sums that expense to develop an annual depreciation accrual rate applicable to the vintage. All vintages are summed, and a composite ELG accrual rate is determined for each plant account. As a result, it more appropriately matches the recovery of the assets' cost to the period of time over which it provides a service to rate payers.

In contrast, there is a stronger argument that the ALG procedure results in intergenerational *inequity*. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. ELG produces a more equitable recovery by recovering these costs over the actual service lives.

OCA Witness Garren claims the ELG procedure is an accelerated method of depreciation since it results in higher depreciation expense than the ALG procedure. OCA Witness Garren makes this observation since he is comparing the higher depreciation

expense from the ELG procedure to the results of the ALG procedure, using the ALG procedure from his perspective as the de facto benchmark. It is not. The ELG procedure is more precise and has been referred to by experts as the only mathematically correct depreciation procedure. Therefore, if there were a benchmark, it would be the ELG procedure since it is mathematically superior to the ALG procedure. If the situation, or one's perspective, were flipped and the ALG's depreciation expense were compared the depreciation expense calculated by the ELG procedure, the only mathematically correct depreciation procedure, one could make an argument that ALG procedure decelerates depreciation and defers full capital recovery until the oldest unit in the group is retired.

Q. DOES THE USE OF THE ELG PROCEDURE REQUIRE THE CALCULATION OF ANNUAL DEPRECIATION RATES TO BE UPDATED MORE FREQUENTLY THAN THE ALG PROCEDURE TO PREVENT INTERGENERATIONAL INEQUITY?

A. No. Regardless of the procedure selected, the calculation of depreciation expense and annual depreciation accrual rates determined on a remaining life basis, in particular, should be updated regularly to prevent intergenerational inequity. Both Mr. Garren and the Company recommend the use of the remaining life technique in connection with either the ALG or ELG procedure. Remaining life depreciation rates change each year regardless of whether the ALG or ELG procedure is used. Depreciation expense is determined by the future accruals, i.e., the original cost of an asset less accumulated depreciation, divided by the remaining life. All three components, i.e., plant balances, accumulated depreciation and the remaining lives, of this depreciation calculation change each year as new plant is added and existing plant is retired. Also, the assets in the following fiscal year are one year older

and one year closer to their retirement, so the composite remaining lives change each year as well. This is in addition to the change in the composition of an account's assets and their respective ages, which also impacts the composite remaining life. So Mr. Garren's criticism of the ELG procedure regarding it needs to be updated frequently to be accurate also applies to the ALG procedure when the remaining life technique is used.

Q. HOW FREQUENTLY DOES PENNSYLVANIA REGULATION REQUIRE THE CALCULATION OF DEPRECIATION RATES?

A. Pennsylvania regulation requires utilities operating within the state to calculate and file updated depreciation rates annually. In 1984, the Commission required utilities to submit annual depreciation reports (ADRs) which included updated depreciation rates and amounts using the most recent plant and reserve balances. This requirement and practice are unique to Pennsylvania and was developed, in part, over 40 years ago, to address the same concerns regarding the ELG procedure that Mr. Garren raises in this case. The annual depreciation reports provide the Commission with timely information each year and allow for effective monitoring of utility depreciation practices in Pennsylvania. The annual determination of depreciation rates and amounts in Pennsylvania addresses Mr. Garren's criticism that the ELG procedure should not be used because the depreciation rates need to be updated frequently, which is more frequent than every five years, in order to be valid. In Pennsylvania, this issue has been addressed as utilities file annual depreciation reports and update their depreciation rates accordingly, so Mr. Garren's criticisms of the ELG procedure are not applicable in Pennsylvania.

II. RATE BASE FOR FORECASTED TEST YEAR

A. Errors in OCA Witness Garren's Calculations

Q. DOES OCA WITNESS GARREN EXPLAIN WHY THERE IS JUSTIFICATION TO REDUCE DEPRECIATION EXPENSE IN THIS CASE?

A. No. The Company has followed the approved depreciation practices for over 40 years which include the use of the ELG procedure and submission of annual depreciation reports to the Commission. Customers have benefited from the ELG procedure for over 40 years, in that rate base is significantly less, i.e., ~$200M, had the ALG procedure been used during this period.

Q. IF THE ALG PROCEDURE WERE TO BE ADOPTED IN THIS CASE, IS OCA WITNESS GARREN'S STATED RATES CORRECT?

A. No. There are couple of significant problems with Mr. Garren's calculation. First, the estimated survivor curve that he has recommended and shown in Exhibit JSG-2 does not agree with the survivor curve he uses to calculate the composite remaining life in Exhibit JSG-3. Second, is that Mr. Garren's recommended depreciation expense claim is based on the future test year balances as of September 30, 2026 rather than the fully projected future test year balances as of September 30, 2027. When he was asked in discovery to explain his reason for basing his depreciation calculation on September 30, 2026, he failed to provide an explanation[11]. Third, OCA Witness Garren used the same accumulated depreciation amounts as the Company for his depreciation expense determination as of September 30, 2026, even though his recommendation to use the ALG procedure results in

[11] UGI Gas Exhibit JFW-2R [OCA Answer to UGI to OCA-II-8].

an annual reduction to depreciation expense, according to Mr. Garren, of $20.8M. His calculations are incorrect because he is using depreciation reserve balances that are too high and are based on projected book depreciation accruals using the ELG procedure. He should have projected the accumulated depreciation balances for the future test year and fully projected future test year using depreciation rates that were determined using his recommended ALG procedure and the three accounts where he recommended longer service lives. Instead he elected to use the same projected accumulated depreciation amounts as determined by the Company using the ELG procedure. Therefore, his accumulated depreciation amounts at September 30, 2027, should have been approximately $41.6M less ($20.8M less per year * 2 years = $41.6M).

Q. WHAT IS THE APPROPRIATE PROCESS FOR CALCULATING THE PROPOSED DEPRECIATION EXPENSE AND ANNUAL DEPRECIATION ACCRUAL RATES DURING A RATE CASE IN PENNSYLVANIA?

A. Pennsylvania provides for the calculation of proposed depreciation expense and annual depreciation accrual rates as of a FPFTY date. In the instant case, the FPFTY date is September 30, 2027 and not September 30, 2026 as Mr. Garren used in his determination of depreciation expense.

Q. PLEASE EXPLAIN HOW THE FPFTY LEVELS OF PLANT AND ACCUMULATED DERPECIATION (OR "RESERVE") ARE DEVELOPED?

A. The process begins with the calculation of depreciation expense and annual depreciation accrual rates as of a Historical Test Year ("HTY") which is completed using actual Plant and Reserve balances as of the end of the HTY, i.e., September 30, 2025. Once depreciation expense and annual depreciation accrual rates are calculated as of the HTY

date using the recommended depreciation procedure (i.e., ELG for the Company's proposal and ALG for the OCA's proposal), the depreciation rates are used along with projected plant and reserve activity to develop the plant and reserve balances as of the end of the Future Test Year ("FTY"), September 30, 2026. The September 30, 2026 plant and reserve balances are used to calculate depreciation accrual rates to determine book accruals in the Fully Projected Future Test Year ("FPFTY"). Similar to the FTY, the plant and reserve activity for the FPFTY are summed to determine the plant and reserve balances as of September 30, 2027, the end of the FPFTY. Once the forecasted plant and reserve balances are determined, a pro forma depreciation calculation can be performed as of September 30, 2027. The results of this depreciation calculation using the ELG procedure are the basis for the Company's depreciation expense claim.

Q. IS IT IMPORTANT TO MAINTAIN A CONSISTENT PROCESS AND CONSISTENT PROCEDURES DURING THE PROCESS DESCRIBED ABOVE?

A. Yes, it is. Maintaining a consistent process and procedures eliminates the possibility of increasing or decreasing swings in the levels of depreciation expense and annual depreciation accrual rates such as what OCA Witness Garren is proposing.

Q. HAS OCA WITNESS GARREN FOLLOWED THE ABOVE DESCRIBED PENNSYLVANIA PROCESS WHEN CALCULATING HIS PROPOSED LEVELS OF DEPRECIATION EXPENSE AND ANNUAL DEPRECIATION ACCRUAL RATES?

A. No.

Q. PLEASE DESCRIBE HOW OCA WITNESS GARREN HAS DEVIATED FROM THE PENNSYLVANIA PROCESS DESCRIBED ABOVE.

A. First, OCA Witness Garren has **NOT** calculated depreciation expense and rates as of each test period, and he does **NOT** calculate or use the results of each test year calculation to develop the forecasted reserve for each subsequent depreciation calculation. He has completely ignored and skipped portions of the process related to calculating depreciation for each test period using his recommended ALG procedure and survivor curve estimates. Instead he uses the forecasted reserve amounts developed by the Company. The Company's forecasted reserve amounts were determined using the ELG procedure and shorter service lives for 3 accounts which results in higher accruals and higher reserve balances than the ALG procedure and survivor curve estimates recommended by Mr. Garren. Finally, Mr. Garren applies his proposed ALG alternative procedure to calculate annual depreciation accrual rates and amounts as of September 30, 2026. The result of this erroneous process used by Mr. Garren is his depreciation expense claim is lower than it should have been had he determined it correctly.

III. SERVICE LIFE ANALYSIS

Q. DID OCA WITNESS GARREN PROPOSE CHANGES TO ANY OF THE SERVICE LIVES FOR ANY ASSET CLASS PROPOSED BY UGI GAS?

A. Please see Table 1 below for a summary of the service life estimates made by each party for gas plant. This table also includes the currently approved service life estimate.

Table 1: Comparison of Company Proposed and OCA Proposed Survivor Curves

Account	Currently Approved	Company Proposed	OCA Proposed
375.00, STRUCTURES AND IMP.	50-S0.5	50-S0.5	70-O1
376.10, MAINS, PRIMARILY STEEL	75-R2.5	75-R2.5	79-R2
378.00, MEAS. AND REG. EQUIPMENT	48-S0	48-S0	53-R0.5

Q. OCA WITNESS GARREN HAS PROPOSED LONGER SERVICE LIVES FOR SEVERAL ACCOUNTS. DO YOU AGREE WITH HIS PROPOSAL?

A. No. In general, the proposal of OCA Witness Garren results in unrealistic expectations of the future service lives of the Company's assets. More precisely, his proposal results in service life estimates that are unreasonably long for the actual assets studied and the Company's current and future operating environment.

Q. DOES MR. GARREN PRESENT AN INDEPENDENT SERVICE LIFE STUDY FOR UGI GAS IN THIS PROCEEDING?

A. No. Mr. Garren spends a substantial portion of his testimony describing how to perform a service life study including the relevant factors a depreciation professional should consider when forecasting the service lives of gas plant. However, Mr. Garren does not actually conduct a separate service life study comparable to the one the Company filed. Mr. Garren references the National Association of Regulatory Utility Commissioners ("NARUC") depreciation manual titled, Public Utility Depreciation Practices (a.k.a., "NARUC Manual") several times throughout his direct testimony. The NARUC Manual is an authoritative depreciation textbook on how to properly perform a service life study, and it describes the major work tasks involved. The irony is that while Mr. Garren describes the various tasks of what should be done when conducting a proper service life study, he fails to perform one. His service life analysis is mostly a mathematical curve-fitting exercise in which he selects the best fit survivor curve from a suitable curve type without the proper application of professional judgment using the combination of experience and placement bands that Mr. Wiedmayer had selected and were included in the Company's service life study and workpapers.

Q. DO YOU HAVE ADDITIONAL COMMENTS ON THE PROCESS MR. GARREN USED TO SELECT HIS RECOMMENDED SURVIVOR CURVES?

A. Yes, I do. On page 20 of OCA St. 4 (Mr Garren's testimony), he indicates that it is not appropriate to include certain statistically insignificant data points from the life table as this would skew the mathematical curve-fitting results. He states that the older accounting data may have accounting anomalies and that excluding these data points from the original life table is appropriate. He states that disregarding the oldest aged assets is called a T-cut and it occurs at the age interval containing the last statistically significant data point on the life table. I agree with all of this. Finally, Mr. Garren goes on to state that, "[t]he decision to make a T-cut, and at what point in the data set (i.e., original life table) to make the cut, is one of the most important yet subjective elements to an actuarial analysis".[12] However when I asked him in discovery for his T-cuts, he said he did not use T-cuts in the process of evaluating UGI Gas's depreciation rates.

Again Mr. Garren states in his testimony what the appropriate industry standard method is, but then once again does something else. He does not use proper professional judgment in selecting his T-cuts.

Q. WHAT FORMS THE BASIS OF THE SERVICE LIFE STUDY ON WHICH MR. GARREN BASED HIS SURVIVOR CURVE ESTIMATES?

A. It is unclear. Mr. Garren states in his testimony that the service life analysis was conducted as of the future test year, September 30, 2026. However, he provides no support for this study. He also claims to have used the results of the Company's service life study which was submitted to the Commission in 2023 using plant accounting data through September

[12] OCA St. 4, at p 21.

30, 2022. Irrespective of these items, OCA Witness Garren proposes different survivor curves for three accounts and describes those selections in narrative form.

1. <u>Account 375.00, Structures and Improvements</u>

Q. WHAT ARE THE RECOMMENDATIONS FOR THIS ACCOUNT?

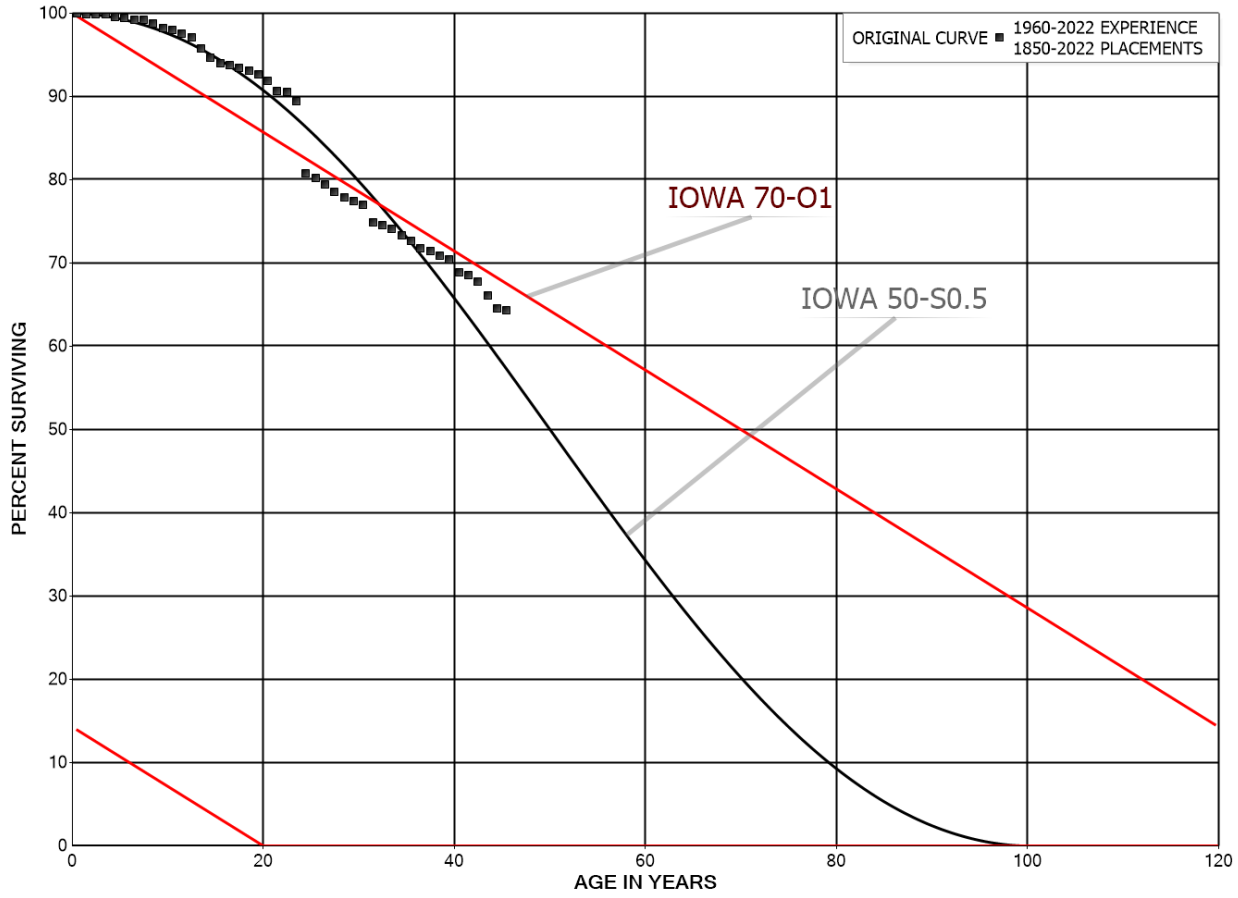
A. The currently approved estimate for Account 375.00, Structures and Improvements is a 50-S0.5 survivor curve. The Company proposes maintaining this estimate. Mr. Garren proposes a 70-O1 curve.[13]

Q. WHAT IS THE BASIS FOR MR. GARREN'S ESTIMATE?

A. Mr. Garren only discusses the statistical life analysis from the Company's service life study and industry averages in support of his estimate

[13] OCA St. 4, at p. 28.

Figure 1: Comparison of Company Proposed and OCA Proposed Survivor Curves to Historical Data for Account 375.00, Structures and Improvements



Q. IS MR. GARREN'S ESTIMATE FOR THIS ACCOUNT REASONABLE?

A. No. A 20-year life extension to the currently approved 50-year life for Account 375, Structures and Improvements is not reasonable. In general, the average service lives for gas distribution plant typically experience gradual life changes in connection with a revised service life study, in 1 to 3 year increments, over a 5 year period. A five year period is the number of years between service life studies, when there is an opportunity to make appropriate service life changes. Therefore, a twenty year increase proposed by OCA Witness Garren in the average service life for this account is unreasonable. This relatively minor account, in terms of plant investment (~$7.5M), primarily includes chain-link

fencing, concrete pads and small pre-engineered metal buildings and sheds and associated security systems at the Company's city gate and district measuring and regulating (M&R) stations. UGI operates 94 city gate stations and 1,359 district M&R stations. It is not reasonable to recommend a 70-year average service life for this account which includes small, pre-engineered buildings and chain-link fencing. Most other gas companies use average service lives in the 45-60 year range. Also, it is not reasonable to expect that the maximum life for assets in this account would extend to 140 years, as the 70-O1 survivor curve recommended by OCA Witness Garren would suggest. The 50-S0.5 survivor curve recommended by the Company indicates 10 percent of the assets surviving at age 80 and a more reasonable maximum life of 100 years. Mr. Garren does not provide sufficient support for his recommended lengthy 20-year service life extension, and a 70 year average service life estimate is outside the typical industry range of service lives used by other gas companies, and therefore his proposal should be rejected.

2. Account 376.10, Mains – Primarily Steel

Q. WHAT ARE THE RECOMMENDATIONS FOR THIS ACCOUNT?

A. The currently approved estimate for Account 376.10, Mains – Primarily Steel, is a 75-R2.5 survivor curve. The Company continues to support this estimate, and Mr. Garren proposes a 79-R2 curve.[14]

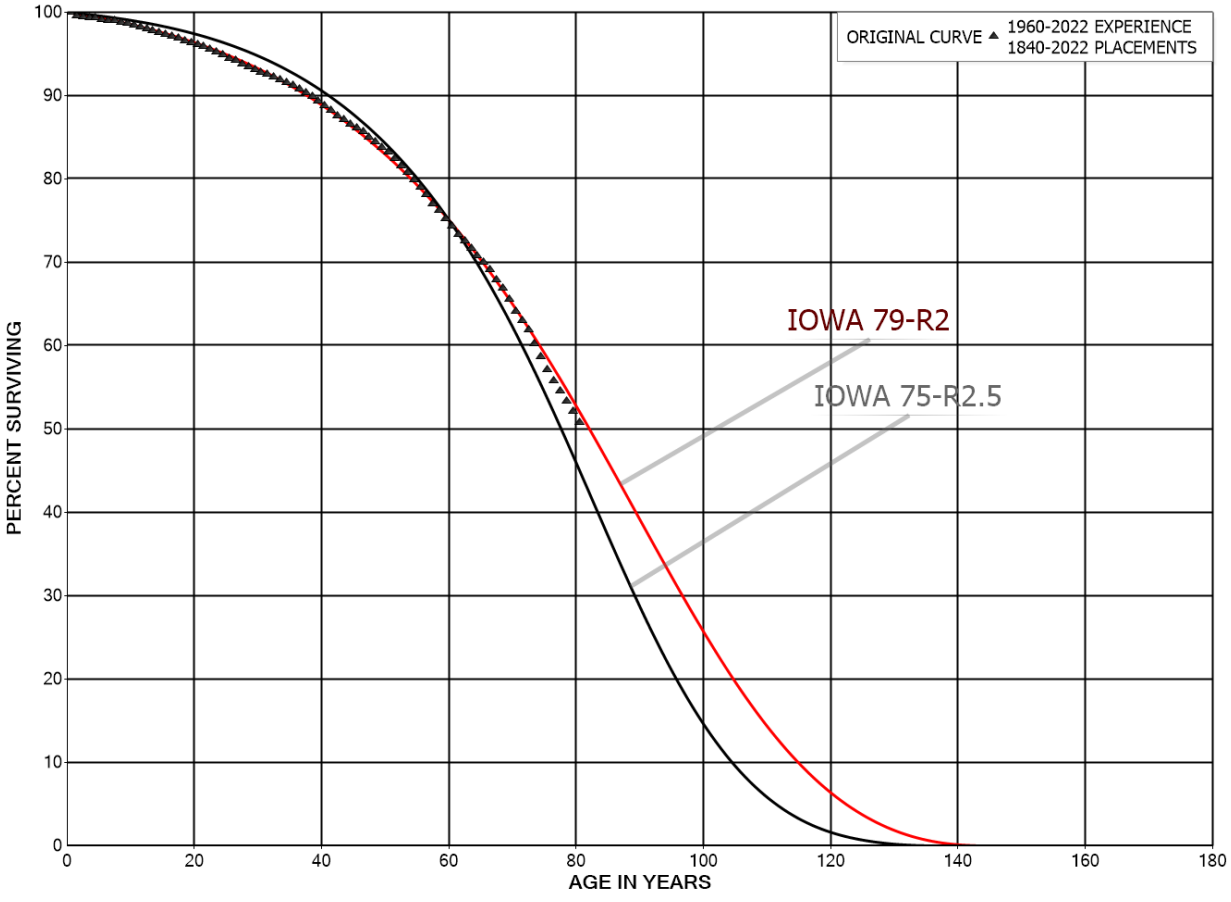
Q. WHAT IS THE BASIS FOR MR. GARREN'S ESTIMATE?

[14] OCA St. 4, at p. 29.

A. Again, Mr. Garren only discusses the statistical analysis in support of his estimate, which suggests that the 79-R2 estimate is primarily based on the mathematical curve-fitting results. The 79-R2 is the best mathematical fit to historical data and that is the basis for Mr. Garren's selection. While the 79-R2 survivor curve is the best fit curve to the historical experience, the Company's proposed survivor curve, the Iowa 75-R2.5, fits the historical data reasonably well, too. The difference in the shape of the two survivor curves primarily occurs after age 65 when the rates of retirement related to the 75-R2.5 show a greater increase than the 79-R2. In my view, rates of retirements at age 65 or more will increase in the future. This is based on my discussion with Company engineers and the Company's plan set forth in their Third Long Term Infrastructure Improvement Plan ("LTIIP"). In 2012, UGI Gas implemented a program to accelerate its replacement related to non-contemporary mains, such as cast iron, wrought iron, unprotected coated steel, certain vintage plastic and bare steel mains. Unprotected coated steel and bare steel mains are included in this account, Account 376.1, Mains - Steel. Unprotected coated steel mains were primarily installed in the late 1950's through 1970 and bare steel mains were installed during the years 1924 through 1960. The Company still has a sizable portion of bare steel mains in service. The Company's plans regarding its mains replacement program are set forth in UGI's Third LTIIP. The LTIIP indicates a significant increase in the level of bare steel mains replaced. The LTIIP will result in increased retirements of bare steel at ages 65 and greater, compared to prior periods before 2012. The survivor curve proposed by the Company, i.e., 75-R2.5, reflects this occurrence and expectation. That is, the 75-R2.5 better reflects Company plans as set forth in the LTIIP and the expectation that increased levels of bare steel main retirements will accelerate, as the Company finishes their cast iron

main replacement. The replacement of bare steel mains at UGI Gas will continue to accelerate compared to prior periods before the LTIIP was developed and approved by the Commission. UGI Gas has committed to the Commission and has a legal obligation to remove all bare steel mains by 2041. The typical range of service lives used by other gas companies for steel mains is 65 to 75 years. The Company's proposed survivor curve estimate, i.e., the 75-R2.5, falls within the typical range while the OCA's recommended survivor curve estimate, i.e., the 79-R2, does not.

Figure 2: Comparison of Company Proposed and OCA Proposed Survivor Curves to Historical Data for Account 376.10, Mains – Primarily Steel



Q. WHAT DO YOU RECOMMEND?

A. The Commission should reject Mr. Garren's proposed 79-R2 estimate. Mr. Garren does not present sufficient evidence to support an increase for this account.

3. Account 378.00, Measuring and Regulating Station Equipment - General

Q. WHAT ARE THE RECOMMENDATIONS FOR THIS ACCOUNT?

A. The currently approved estimate for Account 378.00, Measuring and Regulating Station Equipment, is a 48-S0 survivor curve, which the Company continues to support in the recent depreciation study. Mr. Garren proposes a 53-R0.5 curve.[15]

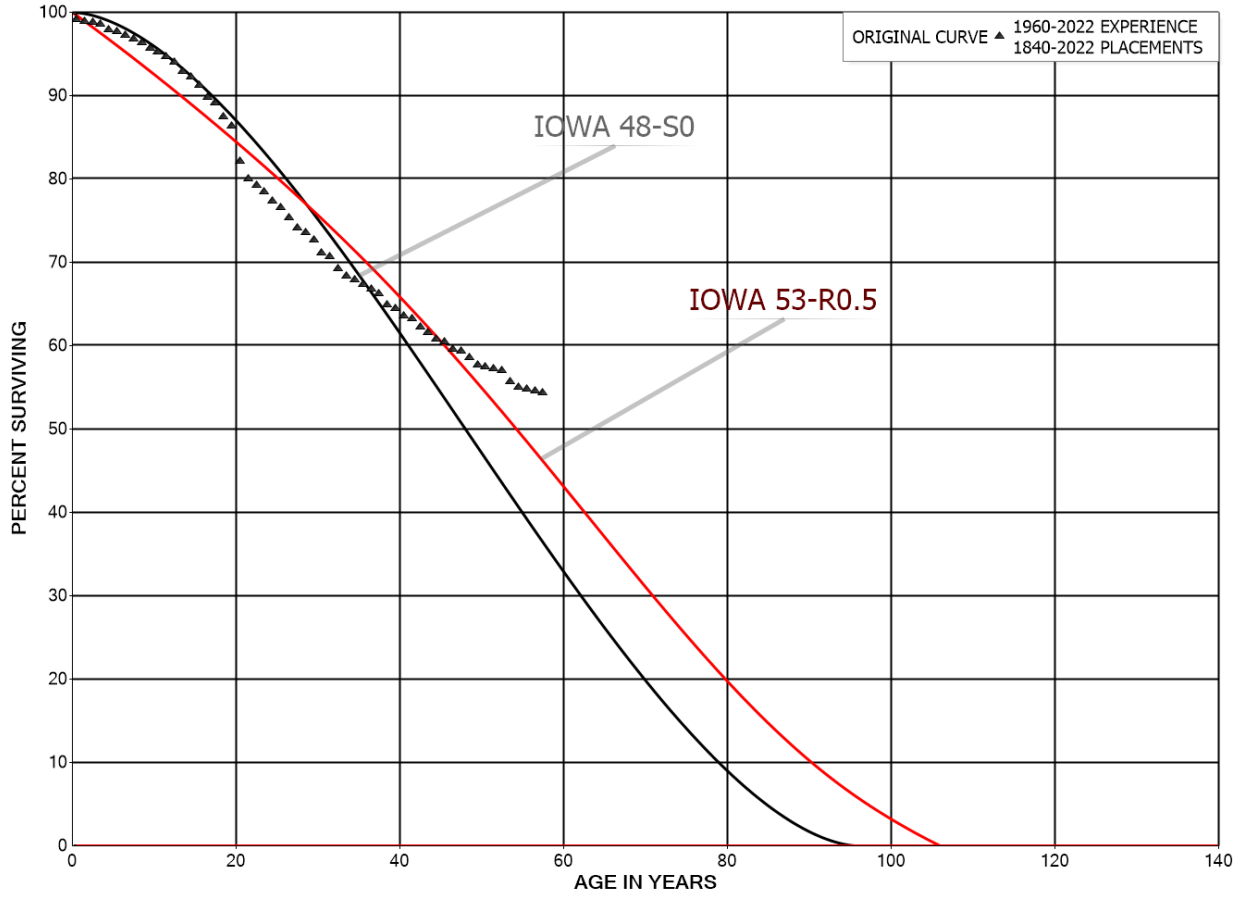
Q. WHAT IS THE BASIS FOR MR. GARREN'S ESTIMATE?

A. Again, Mr. Garren only discusses the statistical analysis in support of his estimate, which suggests that the 53-R0.5 estimate is primarily based on the mathematical curve-fitting results. That is, Mr. Garren simply reviewed the curve fitting results from the Company's service life study and workpapers and selected the best fitting R type curve. Neither of the survivor curves recommended by the parties are considered excellent fits to the historical data as shown in the chart below. Therefore, other relevant factors, such as the account content, the approved survivor curve estimate, Company plans, engineering service life outlook, and estimates used by other gas companies should be considered. In that regard, the approved estimate is the 48-S0. Given my prior comment that the average service life for gas distribution accounts typically change gradually in 1 to 3 year increments, a five year increase in service life proposed by Mr. Garren seems unreasonable. Especially since the service life study is the same one as presented in the prior UGI Gas base rate case submitted in 2025. The assets included in this account consists of metering equipment,

[15] OCA St. 4, at pp. 29-30.

gauges, SCADA and telemetry equipment, etc. These shorter lived items typically only last 20 to 30 years compared with the longer lived items in this account such as piping, valves, and regulators which can last 50 years or more. The typical range of service lives for Account 378 used by other gas companies is 40 to 50 years. In addition, as the Company completes its cast iron main replacement program, as set forth in the LTIIP, the low pressure service areas used in conjunction with cast iron mains will no longer be needed. Certain existing District M&R stations currently serving low pressure areas will no longer be needed and will be retired without replacement. Some district regulating stations will be consolidated. Therefore, the expectation is for increased retirements for Account 378, Measuring & Regulating Station Equipment. The 48-S0 survivor curve that I have recommended takes into consideration these other relevant factors while Mr. Garren's recommended 53-R0.5 survivor curve only considers the mathematical curve-fitting results from the historical life analysis.

Figure 3: Comparison of Company Proposed and OCA Proposed Survivor Curves to Historical Data for Account 378.00, Measuring and Regulating Station Equipment - General



Q. WHAT DO YOU RECOMMEND?

A. The Commission should reject Mr. Garren's proposed 53-R0.5 estimate. Mr. Garren does not present sufficient evidence to support an increase for this account.

IV. OTHER ISSUES IN WITNESS GARREN'S TESTIMONY

Q. DOES MR. GARREN SUFFICIENTLY PROVIDE SUPPORT FOR THE SERVICE LIFE STUDY HE PURPORTS TO HAVE CONDUCTED?

A. No. As stated previously, Mr. Garren does not present an independent UGI Gas service life study comparable to the one the Company filed in this proceeding. Although he devotes

substantial portions of his testimony to general service life theory, actuarial concepts, and mathematical curve fitting, he does not present the actual results of a separate UGI Gas actuarial study (including original life tables as of the FTY) showing how his proposed survivor curves were derived. He did not provide sufficient information that would allow the Commission to evaluate whether his proposed survivor curves for Accounts 375, 376.1, and 378 are supported.

This lack of support is especially problematic because Mr. Garren states that his recommendations are based on plant balances as of the FTY. Service life studies, however, are ordinarily based on actual historical retirement experience and actuarial analysis of aged data, not hypothetical future activity.

Q. HAS MR. GARREN EVER CALCULATED DEPRECIATION USING THE EQUAL LIFE GROUP PROCEDURE OR RECOMMENDED THE EQUAL LIFE GROUP PROCEDURE TO A CLIENT?

A. No. Mr. Garren has neither calculated depreciation using the ELG procedure nor has he recommended its use to a client[16]. However, he offers criticisms of the ELG procedure having never used it previously, stating the ELG procedure: 1) results in accelerated depreciation; 2) that it is too precise for utility ratemaking; 3) that the rates are erratic and will become outdated if not updated frequently; and 4) that the ELG-RL procedure requires a higher level of administrative upkeep.

I have used the ELG procedure my entire 40 year career for numerous utility clients, including UGI Gas, and have updated UGI Gas's annual depreciations reports since 1989. I am of the opinion that none of the four criticisms offered by Mr. Garren regarding the

[16] UGI Gas Exhibit JFW-2R [OCA Answer to UGI to OCA-II-1 and UGI to OCA-II-11].

ELG procedure is valid based on my experience using the ELG procedure often, over the past 40 years. The depreciation rates for UGI Gas's distribution plant are stable with only minor changes each year.

Q. HAS MR. GARREN PROVIDED A FULLY DEVELOPED SET OF PROPOSED DEPRECIATION RATES AND ACCRUALS AS OF THE FULLY PROJECTED FUTURE TEST YEAR?

A. No. Mr. Garren does not provide a fully developed set of depreciation rates and accruals as of the FPFTY. Instead, his calculations are based on FTY balances, and he does not provide a corresponding FPFTY development that carries his proposed changes through the full reserve bring forward and rate calculation process. As a result, the Commission is not presented with a complete information supporting his proposed expense and rates.

Q. IS IT STANDARD PRACTICE IN PENNSYLVANIA TO CALCULATE DEPRECIATION EXPENSE AND ANNUAL ACCRUAL RATES AS OF THE FPFTY?

A. Yes. In Pennsylvania, the proper ratemaking process is to calculate depreciation expense and annual accrual rates on a fully projected future test year basis. That process begins with actual plant and reserve balances in the historic test year ("HTY"), brings those amounts forward to the future test year ("FTY") using projected plant activity, and then brings them forward again to the FPFTY, where the proposed depreciation expense and annual accrual rates are calculated.

It is also important that the same procedures be applied consistently throughout that process. A party cannot reasonably change life characteristics or depreciation procedures and then fail to reflect those changes in the corresponding reserve (a.k.a., accumulated

depreciation) development and FPFTY calculations. That is, the Pennsylvania framework is reflected in the Company's filing, and it is the framework that should be followed by any party proposing alternative depreciation parameters in this proceeding.

Q. ARE THERE OTHER ISSUES IN MR. GARREN'S EXHIBITS AND CALCULATIONS THAT SHOULD BE NOTED?

A. Yes. First, based on my review of Exhibit JSG-2, the survivor curve shown in column 3 for the three accounts he proposes to revise appears not to match the survivor curves stated in the body of his testimony. The survivor curves shown in this exhibit for Accounts 375.00, 376.10 and 378.00 are 80-O1, 75-R2.5 and 48-S0, respectively. This does not agree with other sections and exhibits within his testimony.

V. CONCLUSION

Q. IS THERE ANYTHING IN THE TESTIMONY OF OCA WITNESS GARREN THAT SHOULD INFLUENCE THE COMMISSION TO ACCEPT HIS DEPRECIATION RECOMMENDATIONS?

A. No. Mr. Garren's testimony does not provide sufficient support for his proposed service life changes, does not present a complete FPFTY depreciation development, and does not justify replacing the Company's supported depreciation methodology and calculations that are based on long-standing Commission precedent with his alternative recommendations. OCA has presented invalid criticisms of the ELG procedure and has made a misleading recommendation to the Commission by not fully and properly addressing how depreciation affects the revenue requirement and customer rates. The Commission should continue to approve the ELG depreciation rates as recommended in the Company's filing.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

UGI Gas Exhibit JFW-2R

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

1. Has Mr. Garren ever recommended the Equal Life Group (ELG) procedure to his clients?

   a. If yes, please provide the docket number, client and jurisdiction.

OCA Response:

To the best of Mr. Garren's recollection, he has never recommended the ELG procedure to his clients.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

2. Reference OCA St. 4, page 24. Mr. Garren states that, "[t]he ELG method potentially better reflects the actual retirement patterns of a group of assets with different vintages at a specific point in time, but requires constant updating to remain accurate."

   a. Regarding the depreciation calculations using the ELG procedure and summarized in Table 1 of Book VI, Exhibit C (Fully Projected Future), what specific amounts and values change in each accounting period that support Mr. Garren's claim that the ELG procedure requires constant updating to remain accurate.

   b. In Mr. Garren's opinion, how often are depreciation calculations using the Equal Life Group (ELG) procedure needed to be updated in order for the depreciation rates to "remain accurate"?

OCA Response:

For subpart a., please see Mr. Garren's direct testimony at page 23.

For subpart b., Pennsylvania requires utilities to file annual report on depreciation and depreciation studies every five years in part to address the need for these calculations to remain accurate. If remaining lives are not calculated every five years at the maximum, there is real danger that the ELG methodology will result in large rate and expense changes from study to study.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

8. Did the OCA calculate depreciation expense using balances as of September 30, 2027?

   a. If yes, please state where in the testimony that can be found and provide the calculations to support your answer.

   b. If no, please explain why Mr. Garren did not perform the depreciation calculations using the plant and reserve balances as of September 30, 2027, the end of the fully projected future test year.

OCA Response:

No, see attachment provided in response to UGI's request to OCA II.4.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

9. Please provide the T-cuts by account used by Mr. Garren.

OCA Response:

Mr. Garren did not use T-cuts in the process of evaluating UGI-Gas's depreciation rates.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

10. Did Mr. Garren perform his own original service life analysis in the current proceeding?

    a. If yes, please provide all supporting life tables and charts for each plant account analyzed.

    b. If the answer to Question 10 above is "no", please provide an explanation why Mr. Garren did not perform his own original service life analysis?

OCA Response:

Mr. Garren did not perform his own service life analysis in the current proceeding. Mr. Garren relied upon Mr. Wiedmayer's analysis to arrive at his conclusions, and proposed adjustments where Mr. Wiedmayer deviated from the results of his own analysis without providing adequate justification for disregarding the historical analysis of service lives.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

11. Has Mr. Garren ever made depreciation calculations using the Equal Life Group procedure for any reason, such as a sensitivity analysis?

OCA Response:

No.

RESPONDENT: James Garren

Dated: May 4, 2026

UGI Utilities, Inc. – Gas Division Docket No. R-2025-3059523

INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION ON OCA – SET II

12. Has Mr. Garren taken any field trips or site visits to observe UGI Gas Division's facilities?

OCA Response:

No. Mr. Garren relied upon Mr. Wiedmayer's observations regarding UGI gas's physical plant.

RESPONDENT: James Garren

Dated: May 4, 2026

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket Nos. R-2025-3059523, et al.

UGI Utilities, Inc. – Gas Division

Statement No. 7-R

Rebuttal Testimony of
Vicky A. Schappell

Topics Addressed: **Fully Projected Future Test Year**
Reporting Requirements

Dated: May 13, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vicky A. Schappell. My business address is 1 UGI Drive, Denver, PA 17517.

Q. Did you previously submit testimony in this proceeding on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company")?

A. Yes. I submitted my direct testimony, UGI Gas Statement No. 7, on January 28, 2026.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement ("I&E"). Specifically, I respond to the direct testimony of Ethan Cline, I&E Statement No. 3.

Q. Are you sponsoring any exhibits with your rebuttal testimony?

A. No. I am not sponsoring any exhibits with my rebuttal testimony.

II. FULLY PROJECTED FUTURE TEST YEAR REPORTING REQUIREMENTS

Q. Did I&E have any recommendations regarding Plant Additions for the Future Test Year ("FTY") and Fully Projected Future Test Year ("FPFTY")?

A. Yes. I&E recommends that the Company be required to provide I&E, the Office of Consumer Advocate ("OCA"), and the Office of Small Business Advocate ("OSBA") with an update to the UGI Exhibit A – FTY, Schedule C-2 no later than February 1, 2027, which should include actual capital expenditures, plant additions, and retirements by month for

the twelve months ending September 30, 2026. He also recommends that an update to the UGI Exhibit A – FPFTY, Schedule C-2 should also be provided for actuals through September 30, 2027, no later than February 1, 2028.

Q. Does the Company agree with Mr. Cline's recommendation?

A. Yes. UGI Gas will submit an update to the UGI Gas Exhibit A, Schedule C-2 no later than February 1, 2027, for the FTY, which will include actual capital expenditures, plant additions and retirements from October 1, 2025, through September 30, 2026. An additional update will be submitted by February 1, 2028, for the FPFTY, with the actuals from October 1, 2026, through September 30, 2027.

III. CONCLUSION

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

VIII. CONCLUSION 66

I. INTRODUCTION, PURPOSE AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am a Partner at ScottMadden, Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am submitting this rebuttal testimony (referred to throughout as my "Rebuttal Testimony") before the Pennsylvania Public Utility Commission ("PA PUC" or the "Commission") on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company").

Q. ARE YOU THE SAME DYLAN W. D'ASCENDIS WHO PROVIDED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF THIS REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is two-fold. First, I update the analyses in my Direct Testimony to reflect current data. Second, I address certain aspects of the direct testimonies of Mr. Drew Breuning, witness for the PA PUC's Bureau of Investigation and Enforcement ("I&E"), Mr. David J. Garrett, witness for the Pennsylvania Office of Consumer Advocate ("OCA"), Mr. Mark D. Ewen, witness for the Pennsylvania Office of Small Business Advocate ("OSBA"), and Mr. Patrick M. Cicero, witness for The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"), (collectively referred to as the "Opposing Witnesses") as they pertain to the Company's allowed capital structure and associated cost rates, which the Company should have the opportunity to earn on its authorized jurisdictional rate base.

Q. PLEASE SUMMARIZE THE KEY ISSUES AND RECOMMENDATIONS OFFERED BY THE OPPOSING WITNESSES THAT YOU ADDRESS IN YOUR REBUTTAL TESTIMONY.

A. Due to the passage of time since my Direct Testimony analysis (which included data as of October 31, 2025), I have updated my analysis using data as of March 31, 2026. Based on these updated analyses, the reasonable range of ROEs attributable to the Company is from 10.57% to 12.07%. Given this range, my recommended ROE for the Company of 10.75% continues to be reasonable, if not conservative.[1] Conversely, recommended ROEs of 9.81% (Mr. Breuning), and 8.80% (Mr. Garrett) are inadequate at this time.[2]

My Rebuttal Testimony also responds to substantive recommendations offered by the Opposing Witnesses in their direct testimonies, which include their opinions on the appropriate rate making capital structure for the Company, applications of the Discounted Cash Flow ("DCF") model and the Capital Asset Pricing Model ("CAPM"), their consideration of authorized ROEs in other jurisdictions for the determination of the ROE in this proceeding, contentions regarding the Company's regulatory mechanisms and its relative risk, and their failure to reflect Company-specific factors such as relative size and flotation costs, in their recommendations. My Rebuttal Testimony discusses these factors and others in detail. Finally, my Rebuttal Testimony also addresses the unfounded critiques of my Direct Testimony.

---

[1] My initial analysis indicated a range of reasonable ROEs between 10.34% and 11.52%. *See* UGI Gas St. No. 8, at p. 4.

[2] While they did not conduct an independent market-based analysis of the cost of common equity, and do not provide specific ROE recommendations, Messrs. Ewen and Cicero imply that ROEs of 9.00% and 7.70% are adequate to attract capital. As explained herein, these implied ROEs are also inadequate.

Q. HAVE YOU PREPARED ANY SCHEDULES IN SUPPORT OF YOUR REBUTTAL TESTIMONY?

A. Yes. I have prepared UGI Gas Rebuttal Exhibit B, which includes Schedules DWD-1R through DWD-12R, which have been prepared by me or under my direct supervision.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

A. The remainder of my Rebuttal Testimony is organized as follows:

- Section II – Presents my updated analysis;
- Section III – Discusses the appropriate ratemaking capital structure;
- Section IV – Contains my response to Mr. Breuning;
- Section V – Contains my response to Mr. Garrett;
- Section VI – Contains my response to Mr. Ewen;
- Section VII – Contains my response to Mr. Cicero; and
- Section VIII – Summarizes my conclusions and recommendations.

II. <u>UPDATED ANALYSIS</u>

Q. HAVE YOU UPDATED YOUR COST OF CAPITAL ANALYES?

A. Yes, I have. Due to the passage of time since my Direct Testimony analysis (which included data as of October 31, 2025), I have updated my analysis using data as of March 31, 2026. I used the Company's updated cost of debt based on new information.

Q. HAVE YOU APPLIED ANY OF YOUR ROE MODELS DIFFERENTLY IN YOUR UPDATED ANALYSES?

A. No, I have not.

Q. HAVE YOU UPDATED YOUR UTILITY PROXY GROUP IN YOUR UPDATED ANALYSES?

A. Yes, I have. My second selection criteria specifies that a company must have 60% or greater of the respective fiscal year total operating income derived from, or 60% or greater of the respective fiscal year total assets attributable to regulated gas distribution operations.[3] Chesapeake Utilities Corporation ("CPK") no longer meets this criteria based on fiscal year 2025 data. Without CPK, the Utility Proxy Group consists of the following six companies:

Table 1: Utility Proxy Group Screening Results

Company	Ticker
Atmos Energy Corporation	ATO
New Jersey Resources Corporation	NJR
NiSource Inc.	NI
Northwest Natural Holding Company	NWN
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX

Q. PLEASE SUMMARIZE YOUR UPDATED COST OF COMMON EQUITY RESULTS BASED ON YOUR UPDATED ANALYSES.

A. Using data as of March 31, 2026, my updated results are presented in page 2 of Schedule DWD-1R, and in Table 2, below.

[3] UGI Gas St. No. 8, at p. 13.

Table 2: Summary of Updated Common Equity Rate

Discounted Cash Flow Model (DCF)	10.40%
Risk Premium Model ("RPM")	10.68% - 11.13%
Capital Asset Pricing Model (CAPM)	10.60% - 11.90%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	10.80% - 11.67%
Indicated Range of Common Equity Cost Rates Before Adjustments for Company-Specific Risk	10.40% - 11.90%
Business Risk Adjustment	0.05%
Flotation Cost Adjustment	0.12%
Indicated Range of Common Equity Cost Rates after Adjustment	10.57% - 12.07%
Recommended Cost of Equity	10.75%

In view of the unadjusted and adjusted ranges of ROEs, I maintain my original recommendation of 10.75% for the Company.

III. APPROPRIATE RATEMAKING CAPITAL STRUCTURE

Q. PLEASE SUMMARIZE THE OPPOSING WITNESSES POSITIONS REGARDING CAPITAL STRUCTURE.

A. Mr. Breuning accepts the Company's requested capital structure and long-term debt cost rate, noting both the Company's requested equity ratio and long-term debt cost rate is within the range set by his proxy group companies.[4] Mr. Garrett recommends a hypothetical capital structure, consisting of 51.00% long-term debt and 49.00% common equity, based on the average capital structure maintained by his proxy group.[5] Mr. Garrett

[4] I&E St. No. 2, at pp. 12, 19.
[5] OCA St. 3, at p. 3.

accepts the Company's long-term debt cost rate.[6] Mr. Cicero recommends a hypothetical capital structure consisting of 50.00% long-term debt and 50.00% common equity, but does not provide any market-based analysis as to why his recommendation is reasonable.[7]

Q. SHOULD A HYPOTHETICAL CAPITAL STRUCTURE BE CONSIDERED FOR THE COMPANY IN THIS INSTANCE?

A. No, it should not. The factors typically considered relative to the use of a regulated subsidiary's actual or expected capital structure, or a hypothetical capital structure, are provided by David C. Parcell in The Cost of Capital – A Practitioner's Guide ("CRRA Guide") prepared for the Society of Utility and Regulatory Financial Analysts ("SURFA") and provided as the study guide to candidates for SURFA's Certified Rate of Return Certification Examination. The CRRA Guide notes that there are circumstances where a hypothetical capital structure is used in favor of an actual or expected capital structure. They are:

(i) The utility's capital structure is deemed to be substantially different from the typical or "proper" utility capital structure; or

(ii) The utility is funded as part of a diversified organization whose overall capital structure reflects its diversified nature rather than its utility operations only.[8]

Phillips echoes the CRRA Guide when he states:

> Debt ratios began to rise in the late 1960s and early 1970s, and the financial condition of the public utility sector began to deteriorate. It became the common practice to use actual or expected capitalizations; actual where a historic test year is used, expected when a projected or future test year is used. (footnote omitted)

---

6 OCA St. 3, at p. 60.

7 CAUSE-PA St. No. 1, at pp. 44-46.

8 David C. Parcell, The Cost of Capital – A Practitioner's Guide, Prepared for the Society of Utility and Regulatory Financial Analysts, 2020 Edition, p. 47.

> The objective, in short, shifted from minimization of the short-term cost of capital to protection of a utility's ability "to raise capital at all times. This objective requires that a public utility make every effort to keep indebtedness at a prudent and conservative level." (footnote omitted)
>
> *A hypothetical capital structure is used only where a utility's actual capitalization is clearly out of line with those of other utilities in its industry or where a utility is diversified.* (footnote omitted) (italics added)[9]

Similarly, the use of an operating subsidiary's capital structure is consistent with the approach found in Federal Energy Regulatory Commission ("FERC") precedent, under which they use the applicant's capital structure, where possible.[10] In particular, the FERC will use the utility operating company's capital structure if it meets three criteria: (1) it issues its own debt without guarantees ; (2) it has its own bond rating; and (3) it has a capital structure within the range of capital structures approved by FERC.[11] Regarding the first two criterion, the Company issues its own debt and has a long-term issuer rating from Moody's of A3. As to the Company's actual equity ratios as compared to equity ratios authorized by regulatory commissions, I have provided a scatterplot of authorized equity ratios for natural gas utilities since 2020. As can be seen from Chart 1, below, the Company's actual equity ratio is within the range of authorized equity ratios of other natural gas utilities and should be deemed reasonable.

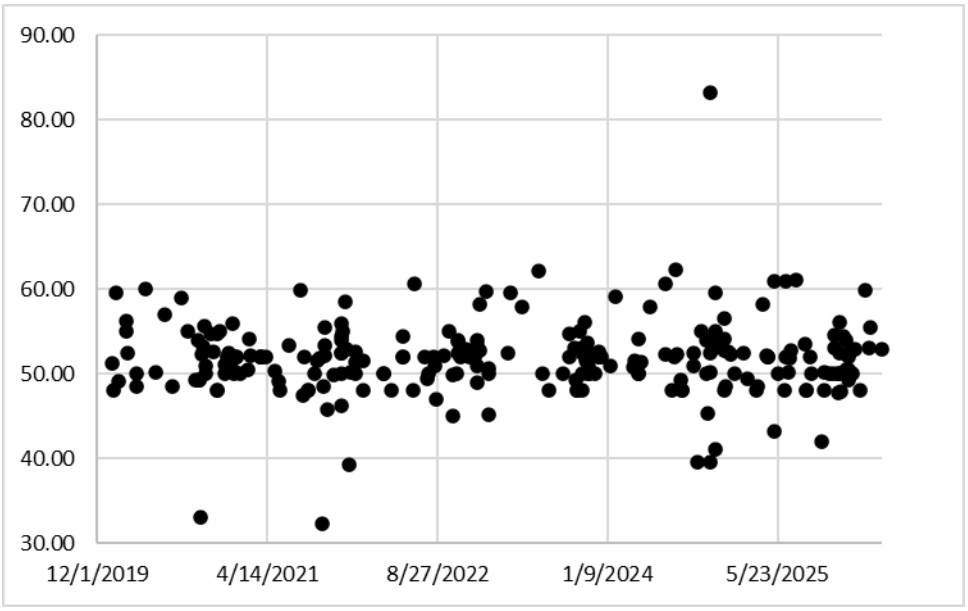
10 *See, Transcontinental Gas Pipe Line Corp,* 80 FERC ¶ 61,157, 61,657 (1997) ("Opinion No. 414").

11 148 FERC ¶ 61,049, Docket No. EL14-12-000, at 190.

Chart 1: Authorized Equity Ratios for Natural Gas Utilities – 2020 to Present[12]



As the Company's capital structure is within the range of typical utilities, as represented by the Utility Proxy Group and their operating subsidiaries, and within the range of equity ratios authorized by utility regulatory commissions, a hypothetical capital structure should not be considered for the Company at this time.

Q. MR. BREUNING AND MR. GARRETT REFER TO THE AVERAGE EQUITY RATIOS OF THEIR PROXY GROUPS AS A BENCHMARK FOR AN APPROPRIATE EQUITY RATIO FOR THE COMPANY.[13] DO YOU AGREE WITH THEM?

A. No, I do not. As noted in my Direct Testimony,[14] the cost of capital is an opportunity cost, where investors decide between a basket of alternatives with comparable risk. The Utility Proxy Group represents alternative investments, which would mean that the range of equity ratios maintained by that group would be the benchmark for a reasonable equity ratio, not

12 Source of information: Regulatory Research Associates
13 I&E St. No. 2, at pp. 12; OCA St. 3, at p. 52.
14 UGI Gas St. No. 8, at p.7-8.

the average, as theoretically, every member of the Utility Proxy Group would be considered an alternative investment to the Company.

Q. MR. BREUNING SUGGESTS THAT THE COMMISSION CONSIDER RECOGNIZING THE COMPANY'S ABOVE AVERAGE EQUITY RATIO WHEN CONSIDERING THEIR FINANCIAL RISK IN THIS PROCEEDING.[15] HAVE YOU COMPARED THE COMPANY'S FINANCIAL RISK WITH THE UTILITY PROXY GROUP IN YOUR ANALYSIS?

A. Yes, I have. As discussed in my Direct Testimony, bond ratings reflect a company's combined business and financial risk (excluding size).[16] As shown on page 15 of Schedule DWD-1R, the Company's Moody's long-term issuer rating of A3 is equivalent to the Utility Proxy Group average long-term issuer rating, indicating similar combined business and financial risk (excluding size). Mr. Breuning's concern should be dismissed.

Q. MR. GARRETT REFERS TO THE DEBT LEVELS OF INDUSTRIES THAT ARE "RELATIVELY COMPARABLE" TO PUBLIC UTILITIES.[17] DO YOU AGREE WITH THAT COMPARISON?

A. No, I do not. In assessing the Company's capital structure, Mr. Garrett reviews the debt ratios of what he determines to be comparative industries. In his comparisons of the capital structures of non-regulated industries to UGI Gas, he does not evaluate the industries' market risk in comparison to the Company. If Mr. Garrett evaluated the market risk (i.e., unadjusted beta coefficients) of those industries, he would have found that those industries are not comparable in risk to utility companies like UGI Gas. Using Mr. Garrett's own

16 UGI Gas St. No. 8, at p. 11.
17 OCA St. 3, at pp. 54-55.

source, Dr. Damodaran,[18] the average unadjusted beta coefficients of the Cable TV industry (0.74), the Power industry (0.48), and the Telecom industry (0.63) are not comparable to the Utility (General) unadjusted beta coefficient of 0.24 and as such, those industries' capital structures should not be used as a comparator to the Company's actual capital structure.

Q. ARE THERE OTHER STATEMENTS MADE BY THE OPPOSING WITNESSES REGARDING THE APPROPRIATE CAPITAL STRUCTURE THAT YOU DEEM INCORRECT OR UNSUPPORTED?

A. Yes. I do not believe that the following statements are correct or supported: (1) that a capital structure containing 50.00% long-term debt and 50.00% equity is an "optimal" capital structure;[19] and (2) the contention that the Company's parent, UGI Corporation ("UGI"), is engaging in double leverage.[20]

Q. DO YOU AGREE WITH MR. BREUNING'S PRESUMPTION THAT A CAPITAL STRUCTURE CONTAINING 50.00% LONG-TERM DEBT AND 50.00% COMMON EQUITY IS THE "OPTIMAL" CAPITAL STRUCTURE?[21]

A. No, I do not. In fulfilling their obligation to serve, utilities make large, essentially irreversible investments that are recovered over decades at a compensatory cost of capital. Unlike unregulated entities, utilities generally do not have the option to delay, defer, or reject many large capital investments due to the utility's obligation to serve its customers. Because their operations are capital-intensive and meeting their service obligations is not discretionary, utilities generally do not have the option to avoid raising external funds

21 I&E St. No. 2, at p. 14.

during periods of capital market distress. Those conditions make capital structure optimization both dynamic and complex and does not lend itself to a one-size-fits-all approach as posited by Mr. Breuning.

Q. PLEASE EXPLAIN THE DIFFERENCE BETWEEN "MINIMIZING" AND "OPTIMIZING" FINANCING COSTS.

A. The optimal capital structure recognizes that there are numerous constraints associated with financing decisions, and minimizes financing costs subject to those constraints. In practice, financing constraints are dynamic in nature, in that they continually change in response to market conditions.

For example, in February 2021, the United States was impacted by Winter Storm Uri ("Uri"). Several members of the Utility Proxy Group were affected by Uri and were forced to raise significant amounts of debt to pay for exponentially increased costs of natural gas. Atmos Energy Corporation ("ATO") and ONE Gas, Inc. ("OGS") common equity percentages for the first quarter of 2021 were significantly impacted by their need to raise capital. Both ATO and OGS collectively were required to raise $4.7 billion in debt in response to Uri. The increased risk associated with this debt issuance was reflected in the rating agency's analysis. ATO was downgraded by S&P and its outlook was downgraded to negative by both S&P and Moody's, and OGS was downgraded and given negative outlooks by both agencies. Because ATO and OGS had strong balance sheets prior to this unanticipated need for debt, both companies had access to the capital markets and were able to maintain financial stability with the downgrades. Conversely, energy providers that did not have strong balance sheets had to file for Chapter 11 protection due to the exorbitant costs (e.g., Griddy Energy, Entrust, Just Energy, Brazos) and of those,

some were unable to serve their customers and were liquidated (e.g., Griddy Energy and Entrust).

As evidenced above, the factors that must be considered in making both day-to-day, and long-term financing decisions include the availability and cost of different forms of financing at a particular time, existing and expected capital market conditions (including the availability of capital, the terms at which capital may be acquired, and the ability to subsequently "roll over" maturing financings), the level of existing and proposed debt relative to rating agency criteria, cash flow contingencies, planned and existing capital spending plans, and lead times associated with changing from short-term to long-term financing. Only by considering all such factors can the issuing company establish an optimal financing plan and implement an optimal capital structure. Given this, a generic 50%/50% debt-to-equity capital structure cannot be considered optimal in all cases.

Q. MR. GARRETT DISCUSSES UGI CORPORATION'S USE OF DEBT TO DRIVE RETURNS AT THE EXPENSE OF ITS OPERATING SUBSIDIARIES SUCH AS UGI UTILITIES, INC.[22] WHAT IS YOUR RESPONSE?

A. Mr. Garrett's position appears to suggest the Company is engaging in double leverage, to the detriment of customers.[23] My primary concern is that Mr. Garrett's position runs counter to the widely accepted "stand-alone" regulatory principle, which treats each utility subsidiary as its own company. Under the stand-alone approach, the cost of capital is determined using the subsidiary's capital structure and cost of debt and equity. The cost of common equity is generally estimated by reference to a proxy group of firms of comparable risk.

---

22 OCA St. 3, at pp. 5-6.
23 OCA St. 3, at pp. 5-6.

Consistent with the stand-alone principle as discussed previously, the ownership structure does not affect the operating utility's capital structure or cost of capital. Parent entities, like other investors, have capital constraints and must consider the attractiveness of the expected risk-adjusted return of each investment alternative as part of their capital budgeting process. This opportunity cost concept applies regardless of the source of the funding. When funding is provided by a parent entity, the return on that financing must still be sufficient to provide an incentive to the parent entity to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary must compete for capital with its affiliates and with other similarly situated utility companies.

From an external investor's perspective, the combined company must provide a return reflecting the risks of the company's constituent parts. Investors therefore value combined entities on a sum-of-the-parts basis, expecting each operating segment to provide its appropriate risk-adjusted return. That practical financial principle is consistent with the regulatory principle of treating utilities as stand-alone entities. From both perspectives, it is the utility's operating risk that defines the utility's capital structure and cost of capital, not investors' sources of funds.

Contrary to those basic principles, Mr. Garrett's double leverage argument assumes the required return depends on the source of financing, not on the risks of the underlying utility operations. The position that a company would have different cost rates depending on how its investors fund their equity investments violates the widely acknowledged economic "law of one price," which states that in an efficient market, identical assets would

have the same value.[24] In other words, two utilities, identical in all respects but for their form of ownership, should have the same common equity cost rates.

Moreover, if the common equity of a subsidiary were held by both the parent and an external investor, the equity held by the parent would have one required return, and the equity held by outside investors would have another. To the extent the required returns differ, so would the value of the equity. But in an efficient market, identical assets must have the same price (value). If not, the difference quickly would be arbitraged away. As Morin noted in New Regulatory Finance:

> Carrying the double leverage standard to its logical conclusion leads to even more unreasonable *prescriptions. If the common shares of a subsidiary were held by both the parent and by individual investors, the equity contributed by the parent would have one cost under the double leverage computation while the equity contributed by the public would have another.*[25]

The double leverage argument also requires every affiliate within the corporate family to have the same cost of capital, regardless of differences in risk. UGI Corp. contains subsidiaries that are both rate regulated and non-regulated. We can reasonably assume those subsidiaries face different risks. And because they face different risks, we reasonably may assume they require different returns. Morin further noted:

> Just as individual investors require different returns from different assets in managing their personal affairs, why should regulation cause parent companies making investment decisions on behalf of their shareholders to act any differently? A parent company normally invests money in many operating companies of varying sizes and varying risks. These operating subsidiaries pay different rates for the use of investor capital, such as long-term debt capital, because investors recognize the differences in capital structure, risk, and prospects between the subsidiaries. Yet, the double leverage calculation would assign the same return to each activity, based on the parent's cost of capital. Investors recognize that different subsidiaries are exposed to different risks, as evidenced by the different bond ratings and cost rates of operating subsidiaries. The same argument carries over to

---

[25] Roger A. Morin, Modern Regulatory Finance (Public Utility Reports, Inc., 2021), at page 523 ("Morin").

common equity. If the cost rate for debt is different because the risk is different, the cost rate for common equity is also different, and the double leverage adjustment shouldn't obscure this fact.[26]

Longstanding academic literature has thoroughly discussed the flaws associated with the double leverage approach. For example:

1. Pettway and Jordan (1983), and Beranek and Miles (1988) point out the flaws in the double leverage argument, particularly the excess return argument, and also demonstrate that the "stand-alone" method is the superior approach.[27]
2. Rozeff (1983) discusses the ratepayer cross-subsidies of one subsidiary by another when employing double leverage.[28]
3. Lerner (1973) concludes that the returns granted to equity investors must be based on the risks to which the investors' capital is exposed and not the investors' source of funds.[29]

Basic finance texts reach the same conclusions. In Principles of Corporate Finance, 8th edition, Brealey, Myers, and Allen state:

> In principle, each project should be evaluated at its own opportunity cost of capital; the true cost of capital depends on the use to which the capital is put. If we wish to estimate the cost of capital for a particular project, it is project risk that counts.[30]

Likewise, in Modern Corporate Finance, 1st edition, Shapiro states:

> Each project has its own required return, reflecting three basic elements: (1) the real or inflation-adjusted risk-free interest rate; (2) an inflation premium approximately equal to the amount of expected inflation; and (3) a premium for risk. The first two cost elements are shared by all projects and reflect

30 Richard A. Brealey, Steward C. Meyers, Franklin Allen, Principles of Corporate Finance, McGraw-Hill Irwin, 8th Ed., 2006, at 234.

> the time value of money, whereas the third component varies according to the risks borne by investors in the different projects. For a project to be acceptable to the firm's shareholders, its return must be sufficient to compensate them for all three cost components. This minimum or required return is the project's cost of capital and is sometimes referred to as a hurdle rate.[31]

The preceding paragraph bears a crucial message: the cost of capital for a project depends on the riskiness of the assets being financed, not on the identity of the firm undertaking the project. Simply put, the notion of double leverage runs counter to both financial and regulatory principles.

Lastly, double leverage arguments have been rejected by several regulatory commissions, including the Maryland Public Service Commission:

> We reject People's Counsel's proposed capital structure [reflecting a double leverage adjustment] because it suffers from numerous flaws. First, it assumes that the rate of return depends on the source of capital rather than the risks faced by the capital.[32]

In 2016, the "FERC reiterated its previous position on "double leveraging,"[33] stating that "the motivations of a parent company are irrelevant"[34] so long as the operating company passes the FERC's three-part test: (1) it issues its own debt without guarantees; (2) it has its own bond rating; and (3) it has a capital structure within the range of capital structures approved by the commission.[35] Under FERC guidance, the capital structure of UGI Corp. is not applicable to UGI Utilities, Inc.

The Washington Utilities and Transportation Commission has cited to FERC's position on the use of double leverage in support of its decision in Docket No. UE 050684:

---

31 Alan C. Shapiro, Modern Corporate Finance, Wiley, 1st Ed., 1990, at 276.

32 Maryland Public Service Commission, Order No. 81517, Case No. 9092, *In the Matter of the Application of Potomac Electric Power Company for Authority to Revise its Rate and Charges for Electric Service and for Certain Rate Design Changes*, July 19, 2007, at 73. [Clarification added]

33 *See*, *Transcontinental Gas Pipe Line Corp.*, 80 FERC ¶ 61,157, 61,657 (1997).

34 *See*, 154 FERC ¶ 61,004, Docket No. ER15-945-001, at 15.

35 *Ibid*. *See also*, *Transcontinental Gas Pipe Line Corp.*, 80 FERC ¶ 61,157, 61,657 (1997).

> The FERC does not embrace the concept of double leverage. For purposes of calculating rate of return for wholly owned subsidiaries, FERC uses the stand-alone capital structure and return on equity of the subsidiary so long as the subsidiary issues its own debt, maintains its own credit ratings and meets other standards related to equity ratio. The courts have upheld this policy. See Missouri Pub. Serv. Comm'n v. Federal Energy Reg Comm'n, 215 F.3d 1, 342 U. S. App. DC. 1 (D.C. Cir. June 27, 2000).[36]

IV. RESPONSE TO I&E WITNESS BREUNING

Q. PLEASE SUMMARIZE MR. BREUNING'S RECOMMENDATIONS REGARDING THE OVERALL COST OF CAPITAL FOR THE COMPANY.

A. Mr. Breuning accepts UGI Gas's requested capital structure and cost of long-term debt.[37] Regarding the appropriate ROE for the Company, Mr. Breuning recommends a 9.81% ROE based on the average of his DCF result of 10.47%, his average CAPM result of 9.25%, and consideration of the national average of natural gas distribution authorized ROEs of 9.70%.[38]

Q. WHAT CONCERNS DO YOU HAVE WITH MR. BREUNING'S CONCLUSIONS AND RESULTS?

A. I have concerns with: (1) his significant departure from his and I&E's consistent exclusive reliance on the DCF model; (2) his application of the CAPM; (3) his consideration of historical authorized ROEs in his recommendation; (4) his failure to reflect the unique business risk of the Company; and (5) his failure to reflect flotation costs.

---

36 Washington Utilities and Transportation Commission, Docket No. UE 050684, Order No. 4, at 117.
37 I&E St. No. 1, at pp. 14, 19.
38 I&E St. No. 1, at p. 7.

Q. HOW HAS MR. BREUNING CALCULATED HIS RECOMMENDED ROE IN THIS PROCEEDING?

A. As noted above, Mr. Breuning averages the results of his DCF (10.47%), his CAPM (9.25%), and the national average ROE (9.70%) to arrive at his recommended ROE of 9.81%. [39]

Q. WHAT APPROACH HAS I&E TRADITIONALLY USED IN DEVELOPING ITS RECOMMENDED ROE?

A. In my professional experience, I&E, to include Mr. Breuning, has always exclusively relied on the DCF model to inform their ROE recommendation, using the CAPM merely as a point of comparison to its DCF results. For example, in Docket No. R-2025-3053442, Mr. Breuning stated:

> I recommend using the DCF method as the primary method to determine the cost of common equity. Additionally, I provide a CAPM analysis to be used as a comparison to, but not as a check of, the DCF results. The DCF method has the most wide-spread regulatory acceptance, and while the Commission has more recently based its ROE decisions on a combination of methods, I still recommend primary reliance on the DCF method due to the shortcomings associated with the CAPM method.[40]

Mr. Breuning states further in the same docket:

> The DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for the current economic market because it measures the cost of equity directly.[41]

Q. WHAT IS MR. BREUNING'S POSITION REGARDING THE DCF MODEL IN THIS PROCEEDING?

A. Mr. Breuning still contends that "the DCF contains the most up-to-date projected information of any model and is the superior method for determining the rate of return for

---

39 I&E St. No. 1, at p. 7.
40 Breuning Direct Testimony, Docket No. R-2025-3053442 – The York Water Company, at 19.
41 Breuning Direct Testimony, Docket No. R-2025-3053442 – The York Water Company, at 20.

the current economic market because it measures the cost of equity directly."[42] Mr. Breuning also notes in regard to the DCF result in my Direct Testimony that "Mr. D'Ascendis' average result of 10.53% is reasonable and almost identical to my DCF result of 10.47%."[43]

Q. DOES MR BREUNING DISCUSS WHY HE CHOSE TO USE THE CAPM IN HIS ANALYSIS?

A. Yes. Mr. Breuning states that he "included a CAPM analysis in my recommendation as it has been the Commission's recent desire to employ more than one ROE methodology,"[44] not that he believes in the value of the CAPM as a model.

Regarding the CAPM, Mr. Breuning himself opines that the CAPM is far less responsive to changes in the industry. Mr. Breuning also argues that: (1) the indicated ROE is only company-specific because of the use of the Beta coefficient ("beta"); (2) the model is historical in nature because beta is calculated using historical returns; and (3) empirical analysis by Fama and French show that the relationship between predicted return and actual return is poor.[45] From his own testimony in this case and in previous cases, it is clear that Mr. Breuning does not view the CAPM as a valid model to rely on for cost of capital purposes.

Q. HAS I&E GENERALLY RELIED ON AVERAGE AWARDED ROES IN THEIR ROE ANALYSIS HISTORICALLY?

A. No, they do not. In my experience in Pennsylvania, this is the first occurrence of I&E considering authorized ROEs in other jurisdictions to inform their ROE recommendation.

---

42 I&E St. No. 1, at p. 23.
43 I&E St. No. 1, at p. 38.
44 I&E St. No. 1, at p. 24.
45 I&E St. No. 1, at pp. 25-26.

Q. WHAT IS THE IMPACT OF I&E'S SUDDEN CHANGE IN METHODOLOGY ON ITS RECOMMENDED ROE?

A. I&E's new approach substantially lowers I&E's recommendation. I&E's historical sole reliance on the DCF model would indicate an ROE of 10.47%, and its new approach indicates an ROE of 9.81%, a difference of 66 basis points. While I do agree that an ROE analysis should rely on multiple methods,[46] substantial errors in Mr. Breuning's application of the CAPM and his reliance on historical authorized ROEs without analysis as to their applicability and relevance to this proceeding serve to undermine and understate his ultimate recommendation, as will be discussed in detail below.

Q. DO YOU AGREE WITH MR. BREUNING'S REASONS FOR OMITTING THE RPM, AND COMPARABLE EARNINGS MODEL ("CEM") FROM HIS ANALYSIS?

A. No, I do not. Mr. Breuning excludes the RPM from his analysis because he claims that it is a simplified version of the CAPM**,** and subject to similar faults**,** in addition to not reflecting company-specific risks through the use of beta.[47]

Finally, Mr. Breuning omits a CEM analysis because he believes that the choice of comparable companies is highly subjective, and he does not believe that historical accounting returns are representative of future accounting returns.[48]

---

46 UGI Gas St. No. 8, at p. 17-18.
47 I&E St. No. 1, at p. 21.
48 I&E St. No. 1, at p. 27.

Q. IS YOUR RPM ANALYSIS A SIMPLIFIED VERSION OF THE CAPM AND NOT COMPANY-SPECIFIC?

A. No, it is not. My beta-derived equity risk premium RPM analysis applies beta to the indicated equity risk premium to create a proxy group-specific equity risk premium.[49]

Q. IS YOUR CEM ANALYSIS CONSISTENT WITH MR. BREUNING'S DESCRIPTION?

A. No, it is not. The selection criteria for my Non-Price Regulated Proxy Group is not subjective in nature, as it is based on ranges of two measures of risk: (1) the unadjusted beta of the Utility Proxy Group, which measures systematic, or market risk; and (2) the standard error of the regression, which gave rise to those betas, measuring non-systematic or diversifiable risk. Systematic plus non-systematic risk is one definition of total risk.[50] This is agreed upon by Mr. Breuning, who states in his testimony: "two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta."[51]

Each company I selected for my Non-Price Regulated Proxy Group was required to have an unadjusted beta (a measure of systematic risk) and a standard error of the regression (a measure of unsystematic risk) within the ranges generated by my proxy group, as explained in pages 50 and 51 of my Direct Testimony and on Schedule DWD-7.

Business and financial risks may vary between companies and proxy groups, but if the collective average betas and standard errors of the regression of the group are similar, then the total, or aggregate, non-diversifiable market risks and diversifiable risks are similar, as noted in "Comparable Earnings: New Life for an Old Precept" provided in

---

49 UGI Gas St. No. 8, at pp. 28-29, and Schedule DWD-4.
50 Business risk plus financial risk is a second definition of total risk.
51 I&E St. No. 1, at p. 18.

Schedule DWD-2R. Thus, because the non-price regulated companies are selected based on analyses of market data, they are comparable in total risk (even though individual risks may vary) to my Utility Proxy Group. This is demonstrated clearly on page 273 of Jack C. Francis' Investments: Analysis and Management (page 3 of Schedule DWD-3R), which shows that total risk can be "partitioned into its systematic and unsystematic components." Essentially, companies that have similar betas and standard errors of regression have similar total investment risk.

Lastly, I apply the DCF, CAPM, and RPM to my Non-Price Regulated Proxy Group, which is an apples-to-apples comparison of the investor-required return for non-regulated companies similar in total risk, which makes Mr. Breuning's second concern regarding the CEM moot.

Q. HAVE YOU USED OTHER MEASURES OF TOTAL RISK TO COMPARE YOUR UTILITY PROXY GROUP AND YOUR NON-PRICE REGULATED PROXY GROUP?

A. Yes, I have. I compared the average and median *Value Line* Safety Ranking, the annualized volatility of stock returns, and the Coefficient of Variation ("CoV")[52] of net profit for the Utility Proxy Group and Non-Price Regulated Proxy Group, as shown on Table 3, below:

[52] The CoV, which is a measure of relative volatility, equals the standard deviation divided by the average.

Table 3: Comparison of Safety Rankings, CoV of Net Profit, and Annualized Volatility of Mr. D'Ascendis' Utility Proxy Groups and Non-Price Regulated Proxy Groups

Group	Average Safety Ranking	Median Safety Ranking	Median CoV Net Profit	Median Annualized Volatility
Utility Proxy Group	1.83	2.00	0.14	21.82%
Non-Price Regulated Proxy Group	1.54	2.00	0.21	23.00%

As shown, the Safety Rankings, annualized volatility of their stock returns, and CoV of net profit of the Utility Proxy Groups and the Non-Price Regulated Proxy Groups are comparable, indicating comparable total risk. This, in addition to all of the above, should lead the Commission to consider the results of my Non-Price Regulated Proxy Group as another measure of the Company's ROE in this proceeding.

A. Application of the DCF Model

Q. PLEASE SUMMARIZE MR. BREUNING'S DCF ANALYSIS AND HIS INDICATED RESULTS.

A. Mr. Breuning uses spot and 52-week average stock prices and current dividends to calculate the dividend yield and forecasted earnings per share ("EPS") growth rates to calculate his indicated DCF cost rate of 10.47%.[53]

Q. DO YOU HAVE ANY CONCERNS WITH MR. BREUNING'S APPLICATION OF THE DCF MODEL?

A. No, I do not. Mr. Breuning and I generally use the same inputs and form of the constant growth DCF model.

[53] I&E St. No. 1, at pp. 29-31.

B. Application of the CAPM

Q. PLEASE BRIEFLY SUMMARIZE MR. BREUNING'S CAPM METHODOLOGY AND RESULTS.

A. Mr. Breuning produces two CAPM analyses, both of which rely on the average *Value Line* beta of his proxy group. For the first CAPM analysis, he uses a projected 10-year Treasury yield for his risk-free rate and an average of an expectational market return and a historical 1926-2025 average market return to arrive at a CAPM result of 9.95%.[54] For his second CAPM analysis, he uses a historical 20-year Treasury yield and Kroll's recommended market risk premium ("MRP") to arrive at a result of 8.55%.[55] Mr. Breuning averages the results of his two CAPM analyses for a cost of equity of 9.25%.

Q. DO YOU HAVE ANY CONCERNS WITH MR. BREUNING'S APPLICATION OF THE CAPM?

A. Yes, I do. While I agree with Mr. Breuning's use of *Value Line* betas, projected interest rates, and projections of market returns, I have concerns regarding his selection of a risk-free rate, his use of Kroll's MRP, and his failure to conduct an ECAPM.

Q. IS THE USE OF 10-YEAR OR 20-YEAR TREASURY BONDS AS A RISK-FREE RATE APPROPRIATE FOR COST OF CAPITAL PURPOSES?

A. No, it is not. As discussed below, the tenor of the risk-free rate used in the CAPM should match the life (or duration) of the underlying investment. As noted by Morningstar:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued. When valuing a business that is being treated as a going concern, the appropriate Treasury yield should be that of a long-term Treasury bond. Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a

[54] I&E St. No. 1, at pp. 32-34.
[55] I&E St. No. 1, at p. 35.

> five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[56]

Morin also confirms this when he states:

> [b]ecause common stock is a long-term investment and because the cash flows to investors in the form of dividends last indefinitely, the yield on very long-term government bonds, namely, the yield on 30-year Treasury bonds, is the best measure of the risk-free rate for use in the CAPM (footnote omitted)… The expected common stock return is based on long-term cash flows, regardless of an individual's holding time period.[57]

Pratt and Grabowski recommend a similar approach to selecting the risk-free rate: "In theory, when determining the risk-free rate and the matching ERP you should be matching the risk-free security and the ERP with the period in which the investment cash flows are expected."[58] As a practical matter, equity securities represent a perpetual claim on cash flows; 30-year Treasury bonds are the longest-maturity securities available to match that perpetual claim. The average life of UGI Gas's utility plant is approximately 39 years based on the composite depreciation rate of the components of its utility plant.[59] Thus, Mr. Breuning's use of a medium-term Treasury bond does not match the life of the assets being valued. The use of a 30-year Treasury bond is the more appropriate risk-free rate.

Q. MR. BREUNING CLAIMS THAT LONG-TERM GOVERNMENT BONDS ARE SUBJECT TO MATURITY RISK.[60] PLEASE COMMENT.

A. He is mistaken. If a long-term Treasury note is held to maturity, there is no risk (the investor will get the stated coupon rate and principal at the end). Since the cost of equity is a long-term concept, the investment horizon of an individual investor is irrelevant.

59 1 / 2.58% = 38.76
60 I&E St. No. 1, at p. 33.

Q. PLEASE DISCUSS MR. BREUNING'S PROJECTED RISK-FREE RATE.

A. Mr. Breuning and I use the same publication for our forecasted interest rate data, *Blue Chip Financial Forecasts* ("*Blue Chip*"). Mr. Breuning incorporates forecasts from the second quarter of 2026 out to the period 2027-2031, although forecasts are published by *Blue Chip* to the period 2032-2036. Mr. Breuning does not explain why he has omitted the 2032-2036 projection. Not incorporating the longest projection available is inconsistent with the application of the DCF model in which there is an assumption that the projected "g" is constant into perpetuity, creating a mismatch. It is also inconsistent with the Efficient Market Hypothesis ("EMH") on which the DCF is based.

Q. WHAT IS THE EMH?

A. According to Fama,[61] a market in which prices always "fully reflect" available information is called "efficient." There are three forms of the EMH, namely:

(1) The "weak" form asserts that all past market prices and data are fully reflected in securities prices. In other words, technical analysis cannot enable an investor to "outperform the market."

(2) The "semi-strong" form asserts that all publicly available information is fully reflected in securities prices. In other words, fundamental analysis cannot enable an investor to "outperform the market."

(3) The "strong" form asserts that all information, both public and private, is fully reflected in securities prices. In other words, even insider information cannot enable an investor to "outperform the market."

---

[61] Eugene F. Fama. "Efficient Capital Markets: A Review of Theory and Empirical Work", *The Journal of Finance*, Vol. 25, No. 2. (May 1970), pp. 383-417.

The "semi-strong" form is generally considered the most realistic because the illegal use of insider information can enable an investor to "beat the market" and earn excessive returns, thereby disproving the "strong" form. The semi-strong form of the EMH assumes that all information (including long-term forecasts of interest rates) are available to the investor, which means the 2032-2036 forecasted interest rate would be considered by investors when making investment decisions and, therefore, should be included in Mr. Breuning's CAPM analysis.

Q. IS MR. BREUNING'S USE OF THE CURRENT 20-YEAR U.S. TREASURY YIELD IN HIS SECOND CAPM APPROPRIATE?

A. No, it is not. However, given that the current 20-year Treasury bond-based risk-free rate Mr. Breuning uses is reasonably consistent with the projected 30-year Treasury-bond based risk-free rate used in my updated CAPM, to reduce the scope of this Rebuttal Testimony, I will not address Mr. Breuning's use of a current risk-free rate as his error does not impact the outcome of the analysis in this case.

Q. IS MR. BREUNING'S CALCULATION OF HIS *VALUE LINE*-BASED MARKET RETURN CONSISTENT WITH OTHER ASPECTS OF HIS ROE ANALYSIS?

A. No, it is not. Mr. Breuning's estimate of the *Value Line* expected market return is based solely on the February 27, 2026 *Value Line Summary and Index* report. In his DCF analysis, he arrives at his final dividend yield by relying on an average of the spot dividend yield and the 52-week average dividend yield.[62] If Mr. Breuning believes that the spot dividend yield should be averaged with the 52-week average dividend yield in his DCF analysis, he should calculate his *Value Line* expected market return in a consistent manner.

---

[62] I&E St. No. 1, at p. 34.

As shown on Schedule DWD-4R, page 2, doing so would result in an average *Value Line* expected market return of 11.36%, with an overall market return of 11.86%.

Q. WHAT IS YOUR POSITION ON THE 5.00% MRP QUOTED BY KROLL?

A. A forecast is only as good as its inputs, and if the assumptions within those forecasts are, by their nature, unpredictable (e.g., productivity growth forecasts), they are of little value. In addition, the determination of the MRP as calculated by Kroll is not transparent, especially in view of the historical data presented in Kroll's 2023 Stocks, Bonds, Bills, and Inflation Yearbook ("SBBI-2023"), or the composition of its supply side method, which are already well known by investors. Because of the transparency of the historical data and how to gather and use the components of the supply side model, both the historical MRP (using the long-term arithmetic mean return on large company stocks less the long-term arithmetic income returns on long-term Government bonds) and the supply side model are superior measures of the MRP, when compared to Kroll's simplistic and opaque MRP forecast.

Q. WHY IS THE KROLL MRP MORE OPAQUE THAN OTHER MEASURES OF THE MRP?

A. The MRP is calculated by subtracting a risk-free rate from the investor-required return on the market. Typically, the return on the market uses observable market measures (e.g. historical average returns), but the Kroll MRP does not define how they calculate their expected return on the market. Similarly, the risk-free rate is typically also based on market measures (e.g., historical interest rates, forecasted interest rates), but Kroll does not explain how they derive their 3.5% normalized risk-free rate. Because Kroll does not reveal how they derive their estimates, we do not know if they are indeed based on market measures.

Q. DID YOU CONDUCT A STUDY TO DETERMINE THE FORECAST ACCURACY OF THE KROLL RECOMMENDED MARKET RETURN RELATIVE TO THE HISTORICAL MARKET RETURN?

A. Yes, I did. I have calculated the forecast bias[63] of the long-term historical average return and the implied market returns from Kroll from 2008-2025 to determine the most accurate measure of the following years' market return.[64] For example, the long-term average market return from 1926-2008 was used to determine the forecasted return for 2009. The result of this analysis is shown as Schedule DWD-5R and Table 4, below:

Table 4: Comparison of Forecast Bias for Various Measures 2009-2025

Year	Observed Market Return	Long-Term Average Return	Kroll Forecasted Market Return
2009	26.46%	11.67%	10.50%
2010	15.06%	11.85%	10.08%
2011	2.11%	11.88%	9.63%
2012	16.00%	11.77%	10.00%
2013	32.39%	11.82%	9.50%
2014	13.69%	12.05%	9.00%
2015	1.38%	12.07%	9.00%
2016	11.96%	11.95%	9.50%
2017	21.83%	11.95%	9.00%
2018	-4.38%	12.06%	8.50%
2019	31.49%	11.88%	9.00%
2020	18.40%	12.09%	8.50%
2021	28.71%	12.16%	8.00%
2022	-18.11%	12.33%	8.00%
2023	26.61%	12.02%	10.14%
2024	25.62%	12.16%	10.03%
2025	18.06%	12.30%	10.06%
Sum	267.28%	204.01%	158.44%
Forecast Bias[65]		76.33%	59.28%

63 Forecast bias can be described as a tendency to either over-forecast or under-forecast a given variable.

64 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.

65 Calculated by dividing the sum of the forecast returns by the sum of the actual returns.

As shown in Table 4, while both measures understate actual performance (i.e., forecast bias measures are under 100.00%), the long-term arithmetic mean return is the more accurate predictor of the next years' return as compared to the Kroll projected market return. This result is consistent with the work of economist John Y. Campbell, who states that when returns are serially uncorrelated, the arithmetic average represents the best forecast of future returns in any randomly selected future year.[66]

Q. MR. BREUNING DID NOT PERFORM AN ECAPM ANALYSIS. PLEASE COMMENT.

A. As discussed in my Direct Testimony,[67] although numerous tests of the CAPM have confirmed its validity, it has been determined that the empirical Security Market Line ("SML") described by the traditional CAPM is not as steeply sloped as the predicted SML. Tests of the CAPM have measured the extent to which security returns and betas are related as predicted by the CAPM, thus confirming its validity. As such, Mr. Breuning should have used the ECAPM in his CAPM analysis.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUPPORTS THE VALIDITY OF THE ECAPM?

A. Yes, there is. The empirical issues with the CAPM have been present since the presentation of the model, as noted by Dianna R. Harrington in her text Modern Portfolio Theory & the Capital Asset Pricing Model:

> So far we have learned some very interesting things about the CAPM and reality. Some of the earliest work tested realized data (history) against data generated by simulated portfolios. Early studies by Douglas (1969) and Lintner (Douglas [1969]) showed discrepancies between what was expected on the basis of the CAPM and the actual relationships that were apparent in the capital markets. Theoretically, the minimal rate of return from the

---

66 John Y. Campbell, "Forecasting US Equity Returns in the 21st Century," Social Security Administration, July 2001.

67 UGI Gas St. No.8, at pp. 31-32.

portfolios (the intercept) and the actual risk-free rate for the period should have been equal. They were not.

* * *

Another study, now more famous than Lintner's was done by Black, Jensen, and Scholes (1972). Lintner had used what is called a cross-sectional method (looking at a number of stock returns during one time period), whereas Black, Jensen, and Scholes used a time-series method (using returns for a number of stocks over several time periods). To make their test, Black, Jensen, and Scholes assumed that what had happened in the past was a good proxy for the investor expectations (a frequent assumption in CAPM tests). Using historical data, they generated estimates using what we call the market model:

$$R_{jt} = \alpha_j + \beta_j (R_{mt}) + \varepsilon_j$$

Where:

R = total returns
β = the slope of the line (the incremental return for risk)
α = the intercept or a constant (expected to be 0 over time and across all firms)
ε = an error term (expected to be random, without information)
m = the market proxy
j = the firm or portfolio
t = the time period

Instead of using single stocks, they formed portfolios in an effort to wash out one source of error; because betas of single firms are quite unstable.

On the basis of the CAPM, they expected to find

1. That the intercept was equal to the risk-free rate (their proxy was the Treasury bill rate)
2. That the capital market line had a positive slope and that riskier (higher beta) securities provided higher return

Instead they found

1. That the intercept was different from the risk-free rate
2. That high-risk securities earned less and low-risk securities earned more than predicted by the model
3. That the intercept seemed to depend on the beta of any asset: high-beta stocks had a different intercept than low-beta stocks

* * *

Fama and MacBeth (1974) criticized the Black, Jensen, and Scholes study (hereafter called BJS). In a reformulation of the study, they supported the first of the BJS findings. They found that the intercept exceeded the risk-

free proxy, but did not find the evidence to support the other BJS conclusions.[68]

Harrington discusses Black's potential solution to this phenomenon:

> Black's replacement for the risk-free asset was a portfolio that had no covariability with the market portfolio. Because the relevant risk in the CAPM is systematic risk, a risk-free asset would be the one with no volatility relative to the market – that is, a portfolio with a beta of zero. All investor-perceived levels of risk could be obtained from various linear combinations of Black's zero-beta portfolio and the market portfolio… Since R_z (the rate of return of the zero-beta asset) and R_m are uncorrelated (as R_f and R_m were assumed to be in the simple CAPM), the investor can choose from various combinations of R_z and R_m. On segment R_mY, R_z, is sold short and proceeds are invested in R_m. On segment R_zR_m, portions of the zero-beta portfolio are purchased. At R_m, the investor is fully invested in the market portfolio. The equilibrium CAPM was rewritten by Black as follows:
>
> $$E(R_i) = (1 - \beta_i) E(R_z) + \beta_i E(R_m)$$
>
> Where:
>
> E indicates expected,
> $E(R_z)$ is less than $E(R_m)$, and
> R_z holdings over the whole market must be in equilibrium. That is, the number of short sellers and lenders of securities must be equal.
>
> Black's adaptation is intriguing. The result of using this model is a capital market line that has a less steep slope and a higher intercept than those of the simple CAPM. If Black's model is more correct in its description of investor behavior in the marketplace, then the use of the simple model would produce equity return predictions that would be too low for stocks with betas greater than one and too high for stocks with betas of less than one.[69]

As such, while I still find the CAPM to be appropriate, if Mr. Breuning is of the opinion that the CAPM is not reliable,[70] then he should have applied an ECAPM analysis.

Q. HAVE OTHER JURISDICTIONS CONSIDERED THE ECAPM?

A. Yes, it has been accepted in Alaska, Minnesota, Mississippi, Nevada, New York, and North Carolina.[71]

Q. DOES MR. BREUNING HAVE CONCERNS REGARDING THE ECAPM?

A. Yes, he does. Specifically, Mr. Breuning claims that the ECAPM "does not increase the validity of the result"[72] but he fails to provide evidence to that effect. Conversely, I have provided substantial evidence that the ECAPM is a necessary adjustment to the CAPM in my Direct Testimony[73] and above. Mr. Breuning's unsupported concerns should be dismissed.

Q. WHAT WOULD MR. BREUNING'S CAPM RESULTS INDICATE IF CORRECTED TO REFLECT A FULLY FORECASTED 30-YEAR TREASURY

---

71 The Regulatory Commission of Alaska, Docket P-97-7, Order Rejecting 1997, 1998, 1999 and 2000 Filed TAPS Rates; Setting Just and Reasonable Rates; Requiring Refunds and Filings; and Outlining Phase II Issues, November 27, 2002, at 146; Minnesota Public Utilities Commission, MPUC Docket No. G011/GR-15-736, In the Matter of the Application of Minnesota Energy Resources Corporation for Authority to Increase Rates for Natural Gas Service in Minnesota, Findings of Fact, Conclusions of Law, and Recommendation, August 19, 2016, at 29; Mississippi Public Service Commission, Docket No. 01-UN-0548, Notice of Intent of Mississippi Power Company to Change Rates for Electric Service in its Certificated Areas in the Twenty-Three Counties of Southeast Mississippi, Final Order, December 3, 2001, at 19; Public Utilities Commission of Nevada, Docket No. 20-02023, Application of Southwest Gas Corporation for authority to increase its retail natural gas utility service rates for Southern and Northern Nevada, Order, September 23, 2020, at 35; New York Public Service Commission, Case 16-G-0058, Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corporation d/b/a National Grid for Gas Service, Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans, December 16, 2016, at 32; In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina, Docket No. E-22, Sub 562 Order Accepting Public Staff Stipulation in Part, Accepting CIGFUR Stipulation, Deciding Contested Issues, and Granting Partial Rate Increase, February 24, 2020, at 40.

72 I&E St. No. 1, at p. 40.

73 *See* UGI Gas St. No. 8, at pp. 31-33.

BOND YIELD, A *VALUE LINE* MARKET RETURN CALCULATED IN A MANNER CONSISTENT WITH HIS DCF, AND THE USE OF THE ECAPM?

A. As shown in Schedule DWD-4R, using a fully projected 30-year Treasury bond yield, a *Value Line* market return based on the average of the spot expected return and 52-week average expected return, and employing the ECAPM would result in an indicated ROE of 10.49%.

C. Relevance of Authorized Returns

Q. DOES MR. BREUNING GIVE JUSTIFICATION FOR CONSIDERING AUTHORIZED NATURAL GAS ROES IN HIS ANALYSIS?

A. Yes. He claims that because "a utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties", he believes that "it is reasonable and logical to include in my recommendation the authorized returns of the Company's peers in recently completed rate cases across the country."[74]

Q. ARE HISTORICAL ROES A GOOD MEASURE OF PROSPECTIVE ROES?

A. While authorized ROEs may be reasonable benchmarks of acceptable ROEs in static economic conditions, they can mis-specify the investor-required return in a dynamic economic environment. The reason why historical authorized returns mis-specify the investor-required return in changing markets is because authorized ROEs are a lagging indicator of investor-required returns; i.e., authorized ROEs are based on market data presented in an evidentiary record, which spans a period before the decision, lasting over a year in some cases. Because markets are constantly changing, historical authorized returns do not completely reflect the investor required return because the economic conditions in the past are not representative of economic conditions now. That is, what

---

74 I&E St. No. 1, at p. 37.

investors require in the future may not correlate to what they required and/or received in the past. We must remember that projecting the investor required ROE is a forward-looking concept. Because this is the case, Mr. Breuning's observations regarding historically allowed ROEs are of little value.

Q. IS THERE A WAY TO USE HISTORICAL AUTHORIZED RETURNS TO DERIVE A MEASURE OF THE INVESTOR REQUIRED RETURN?

A. Yes, there is. A useful way to use historical authorized ROEs for cost of capital purposes would be to determine whether a relationship between authorized ROEs (or equity risk premiums ("ERP")) and interest rates exists so one can determine an expectational ROE or ERP given an interest rate. Studies by Harris and Marston (2001) and Brigham, Dilip, Shone, and Vinson (1985) indicate an inverse relationship between ERPs and interest rates (i.e., as interest rates move, ERPs move in the opposite direction, but not to the extent of the interest rate move).

As shown on Schedule DWD-6R, using historical authorized ROEs and interest data in regression analyses produces statistically significant inverse relationships between interest rates and ERPs, which can be used to determine expectational investor-required returns. Given an expectational A2-rated Public Utility bond yield of 5.68%, an indicated ERP of 4.85% is calculated using Mr. Breuning's natural gas historical ROE data. Adding the expectational A2-rated public utility bond yield to the ERP results in an indicated ROE of 10.53%.

Q. WHAT WOULD MR. BREUNING'S INDICATED ROE BE IF HE AVERAGED HIS DCF MODEL RESULT WITH THE CORRECTED CAPM AND RPM RESULTS OF 10.49% AND 10.53%, RESPECTIVELY?

A. It would be 10.50%, which is within my updated range of ROEs attributable to my Utility Proxy Group. However, Mr. Breuning's corrected average indicated ROE does not reflect Company-specific factors, which will be discussed in detail below.

D. Failure to Reflect the Company's Greater Relative Risk Due to its Smaller Size

Q. DOES MR. BREUNING MAKE A SPECIFIC ADJUSTMENT TO REFLECT THE SMALLER SIZE OF THE COMPANY RELATIVE TO HIS PROXY GROUP?

A. No. As discussed in my Direct Testimony,[75] relative company size is a significant element of business risk for which investors expect to be compensated through greater returns. Smaller companies are simply less able to cope with significant events which affect sales, revenues and earnings. For example, smaller companies face more exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few large customers would have a far greater effect on a smaller company than on a larger company with a more diverse customer base. Finally, smaller companies are generally less diverse in their operations and have less financial flexibility. Consistent with the financial principle of risk and return in my Direct Testimony,[76] such increased risk due to smaller size must be taken into account in the allowed rate of return on common equity.

---

75 UGI Gas St. No. 8, at pp. 54-60.
76 UGI Gas St. No. 8, at p. 11.

Q. DOES MR. BREUNING RELY ON STUDIES THAT SUPPORT THE SMALL SIZE PREMIUM?

A. Yes. In the Fama and French article cited by Mr. Breuning in his direct testimony,[77] the authors propose that their three-factor model include the "Small Minus Big" factor, which indicates that small capitalization firms are more risky than large capitalization firms,[78] confirming that size is a risk factor which must be taken into account in estimating the cost of common equity.

Q. MR. BREUNING RELIES ON A STUDY BY DR. ANNIE WONG FOR THE PROPOSITION THAT THERE IS NO SIZE PREMIUM FOR UTILITIES.[79] PLEASE COMMENT.

A. Mr. Breuning relies on the Wong Study to refute my position that the size adjustment is applicable to utilities, despite evidence to the contrary from Zepp as cited in my Direct Testimony (addressed in pages 56 through 59 of my Direct Testimony). Mr. Breuning also did not provide any rebuttal to the low level of explanatory power (i.e., R-Squared) in Beta coefficients that would be used in Wong's size study or my studies showing a link between size and risk for utility companies. The Commission should disregard Mr. Breuning's arguments that there is no size premium for utilities.

Q. MR. BREUNING POINTS TO THE COMMISSION'S DECISION AT DOCKET NO. R-2019-3008212 AND NOTES THAT THE COMMISSION DID NOT MAKE AN EXPLICIT SIZE ADJUSTMENT.[80] PLEASE COMMENT.

A. While the Commission did not make an explicit size adjustment in that proceeding, it did acknowledge that size is a factor in assessing a company's ability to attract capital (i.e., the cost required by investors).[81] Specifically, the Commission adjusted the DCF result by one standard deviation of the mean and median to account for size. Applying that same approach in my Direct Testimony resulted in a size premium of 1.51%, higher than my ultimate recommendation, making my proposed size adjustment conservative.[82]

Q. HAVE YOU CALCULATED THE STANDARD DEVIATION OF MR. BREUNING'S DCF RESULTS?

A. Yes, I have. As put forth in Schedule DWD-7R, using data from Mr. Breuning's Exhibits, I have calculated a 37-basis-point standard deviation for his DCF results. This indicated business risk adjustment is higher than my recommended business risk adjustment, suggesting that my adjustment should be considered conservative, and should continue to be considered by the Commission when determining the appropriate ROEs for the Company in this proceeding.

E. <u>Flotation Cost Adjustment</u>

Q. DOES MR. BREUNING CONSIDER A FLOTATION COST ADJUSTMENT?

A. No, he does not. Mr. Breuning does not propose a flotation cost adjustment to the ROE and claims that flotation costs should be recovered as an operating expense.[83] Denying

---

80 *See* I&E St. No. 1, at p. 48.
81 UGI Gas St. No. 8, at pp. 60-61.
82 UGI Gas St. No. 8, at p. 44.
83 I&E St. No. 1, at p. 50-51.

recovery of issuance costs penalizes the investors that fund the utility operations. As shown in page 2 of Schedule DWD-11 of my Direct Testimony, because of flotation costs, an authorized return of 10.85% would be required to realize an ROE of 10.75% (i.e., a 10-basis point flotation cost adjustment). If flotation costs are not recovered, the growth rate falls and the ROE decreases to 10.65% (i.e., below the required return).[84]

Q. HAVE OTHER REGULATORY COMMISSIONS ALLOWED FLOTATION COSTS IN THE ALLOWED ROE?

A. Yes, they have. For example, in Peoples Gas System, Inc.'s ("PGS") 2023 rate proceeding, the Florida Public Service Commission stated the following regarding my proposed flotation cost adjustment:

> In PGS's last rate case in 2008, we did not make a specific adjustment for flotation costs, but in our order we stated that we have traditionally recognized a reasonable adjustment for flotation costs in the determination of the investor required return...We find witness D'Ascendis's method to determine the flotation cost is credible and provided persuasive evidence for his recommendation to include a flotation cost of 9 basis points.[85]

Given the above, I recommend this Commission also correctly include flotation costs in the allowed ROE.

F. Response to Mr. Breuning's Criticisms of Company Testimony

Q. DOES MR. BREUNING HAVE CRITIQUES OF THE ANALYSES MADE IN YOUR DIRECT TESTIMONY?

A. Yes. Mr. Breuning has the following critiques of my analyses in my Direct Testimony: (1) that I have given weight to the ECAPM and Risk Premium models in my determination of the ROE for the Company; (2) that the predictive risk premium model ("PRPM") is not

---

[84] Direct Schedule DWD-10 is provided for illustrative purposes only. Please note that I have not relied on the results of the analysis in determining my recommended ROE or range.

[85] *In re: Petition for rate increase by Peoples Gas System, Inc.*, Docket No. 20230023-GU, Order Granting in Part and Denying in Part Peoples Gas System, Inc.'s Petition for a Rate Increase, at 68 (December 27, 2023).

commonly used or accepted; (3) that I rely on the 30-year Treasury bond in my CAPM analysis; (4) that my selection and use of a Non-Price Regulated Proxy Group similar in total risk to my Utility Proxy Group is "speculative and subjective";[86] (5) that the size adjustment I use is not applicable to utility companies; and (6) that flotation costs should not be recovered through an adjustment to the ROE.

As I addressed critiques (1), (3), (4), (5), and (6) in my response to Mr. Breuning's analyses, I will not address them again here. I will address the remaining critiques in turn.

Q. MR. BREUNING SAYS THAT THE PRPM WAS PUBLISHED IN 2011.[87] DOES THAT MEAN THAT THE METHODOLOGY BEHIND THE PRPM WAS ALSO PUBLISHED IN 2011?

A. No. As discussed in my Direct Testimony,[88] the PRPM is based on the research of Robert F. Engle, dating back to the early 1980s. Dr. Engle discovered that the volatility of market prices, returns and risk premiums clusters over time, making prices, returns and risk premiums highly predictable. In 2003, he shared the Nobel Prize in Economics for this work, characterized as "methods of analyzing economic time series with time-varying volatility ("ARCH")."[89] Dr. Engle[90] noted that relative to volatility, "the standard tools have become the ARCH / GARCH[91] models." Hence, the methodology is <u>not</u> new.

In addition, the GARCH methodology has been well tested by academia, since Engle's, *et al*. research was originally published in 1982, over 40 years ago. I use the well-established GARCH methodology to estimate the PRPM model using a standard

commercial and relatively inexpensive statistical package, Eviews,© to develop a means by which to estimate a predicted equity risk premium, that when added to a bond yield, results in a cost of common equity.

The PRPM is also in the public domain, having been published six times in academically peer-reviewed journals: Journal of Economics and Business (June 2011 and April 2015),[92] The Journal of Regulatory Economics (December 2011),[93] The Electricity Journal (May 2013 and March 2020),[94] and Energy Policy (April 2019).[95] Notably, none of these articles have been rebutted in the academic literature.

Finally, the PRPM was presented to a number of utility industry/regulatory/academic groups including the following: The Edison Electric Institute Cost of Capital Working Group; The NARUC Staff Subcommittee on Accounting and Finance; The National Association of Electric Companies Finance/Accounting/Taxation and Rates and Regulations Committees; the NARUC Electric Committee; The Wall Street Utility Group; the Indiana Utility Regulatory Commission Cost of Capital Task Force; the Financial Research Institute of the University of Missouri Hot Topic Hotline Webinar; and the Center for Research and Regulated Industries Annual Eastern Conference on two occasions.

Q. HAS THE PRPM BEEN IMPLICITLY ACCEPTED BY OTHER REGULATORY COMMISSIONS?

A. Yes. In Docket No. 2017-292-WS, the Public Service Commission of South Carolina ("PSC SC") accepted Carolina Water Services' entire requested ROE, which included the PRPM. The relevant portion states:

> The Commission finds Mr. D'Ascendis' arguments persuasive. He provided more indicia of market returns, by using more analytical methods and proxy group calculations. Mr. D'Ascendis' use of analysts' estimates for his DCF analysis is supported by consensus, as is his use of the arithmetic mean. The Commission also finds that Mr. D'Ascendis' non-price regulated proxy group more accurately reflects the total risk faced [by] price regulated utilities and CWS. Furthermore, there is no dispute that CWS is significantly smaller than its proxy group counterparts, and, therefore, it may present a higher risk. An appropriate ROE for CWS is 10.45% to 10.95%. The Company used an ROE of 10.5% in computing its Application, a return on the low end of Mr. D'Ascendis' range, and the Commission finds that ROE is supported by the evidence.[96]

In addition, in Docket No. W-354, Subs 363, 364 and 365, the State of North Carolina Utilities Commission ("NCUC") approved my RPM and CAPM analyses, which used PRPM analyses as presented in this proceeding.[97]

Q. MR. BREUNING POSITS THAT YOU USE PROPRIETARY SOFTWARE TO CONDUCT YOUR PRPM.[98] IS THAT CORRECT?

A. No. The GARCH methodology is available in various statistical packages such as EViews®, SAS, RATS, S-Plus and JMulti, which are not cost-prohibitive and provide instructions for using the various statistical methodologies in their software. I provided all parties in these proceedings with the backup data to run their own GARCH models. While the software I

V. RESPONSE TO OCA WITNESS GARRETT

Q. PLEASE PROVIDE A SUMMARY OF MR. GARRETT'S ANALYSES AND RECOMMENDATIONS REGARDING UGI GAS'S OVERALL COST OF CAPITAL.

A. Mr. Garrett applies two DCF models (analyst's growth and sustainable growth) and two CAPM analyses (traditional and Hamada), which produce a range of results from 7.60% to 8.80%. While he accepts the Company's proposed long-term debt cost rate, he rejects the Company's proposed capital structure in favor of a hypothetical capital structure consisting of 51.00% equity and 49.00% long-term debt.[100] If his proposed capital structure is accepted, Mr. Garrett recommends an 8.80% ROE, which is the result of his traditional CAPM.[101] If the Commission accepts UGI Gas's proposed capital structure, he recommends an 8.50% ROE based on his Hamada CAPM.[102]

Q. IN WHAT KEY AREAS ARE YOU CONCERNED WITH MR. GARRETT'S ANALYSES AND RECOMMENDATIONS?

A. There are several areas in which I have concerns with Mr. Garrett's analyses and conclusions, including: (1) his recommended capital structure; (2) his application of the DCF model; (3) his application of the CAPM; (4) his failure to reflect the unique business risk of the Company; and (5) his failure to reflect flotation costs incurred by the Company. As it appears that Mr. Garrett places no weight on his DCF model results in arriving at his

recommendation in this proceeding, I will not address his application of the DCF model at this time. If, in subsequent testimony, Mr. Garrett states he indeed relied on his DCF model for his recommendation, I will address his application of the DCF model at that time.

A. Application of the CAPM

Q. PLEASE SUMMARIZE MR. GARRETT'S CAPM ANALYSES AND RESULTS.

A. Mr. Garrett's primary CAPM estimate relied on a risk-free rate of 4.82%, an MRP of 5.10%, and betas as reported by *Value Line*. Those assumptions combined to produce an average CAPM estimate of 8.80%.[103] Mr. Garrett also conducts a Hamada CAPM using the same risk-free rate and MRP, but re-levers the *Value Line* beta to reflect the average equity ratio of his proxy group.[104]

Q. DO YOU AGREE WITH MR. GARRETT'S APPLICATION OF THE CAPM?

A. No, I do not. My primary concerns are Mr. Garrett's selection of his MRP and that he does not employ the ECAPM. I generally do not agree with the use of current interest rates for cost of capital purposes, but the difference between measures of our risk-free rates are immaterial at this time. I also disagree with the applicability of his Hamada CAPM as described in detail below.

Q. HOW DID MR. GARRETT DERIVE HIS MRP ESTIMATE?

A. Mr. Garrett derived his MRP estimate based upon the following: (1) a survey of expected returns from IESE Business School (5.50%); (2) an expected return reported by Kroll (Duff & Phelps) (5.00%); (3) implied MRP from Damodaran (5.00%); and (4) an "Implied Equity Risk Premium" calculation (5. 00%).[105] Based on those results, Mr. Garrett concludes that 5.10%, the average of his range, is appropriate.

---

103 Exhibit DJG-11.
104 OCA St. 3, at pp. 56-58.
105 OCA St. 3, at p. 37; Exhibit DJG-10.

Q. WHAT IS YOUR POSITION ON THE 5.00% MRP QUOTED BY KROLL?

A. As discussed previously, the Kroll MRP is opaque as compared to Kroll's historical data, and less accurate, and as such should be afforded little weight.

Q. DO ANY OF THE SURVEYS CITED BY MR. GARRETT PROVIDE SUPPORT FOR YOUR APPROACH TO ESTIMATING THE CURRENT MRP?

A. Yes. As discussed in my Direct Testimony,[106] I calculated ex-ante MRPs in a similar manner to a study by Pablo Fernandez, et al (cited by Mr. Garrett), using the market capitalization-weighted constant growth DCF calculation on the individual companies in the S&P 500 Index.[107]

Q. IS THERE ACADEMIC LITERATURE THAT SUPPORTS THE CONCLUSION THAT MRPS USING SURVEYS ARE NOT WIDELY USED BY PRACTITIONERS?

A. Yes. Damodaran, who was cited by Mr. Garrett throughout his testimony, states the following about the applicability of survey MRPs:

> While survey premiums have become more accessible, very few practitioners seem to be inclined to use the numbers from these surveys in computations and there are several reasons for this reluctance:
>
> 1. Survey risk premiums are responsive to recent stock price movements, with survey numbers generally increasing after bullish periods and decreasing after market decline. Thus, the peaks in the SIA survey premium of individual investors occurred in the bull market of 1999, and the more moderate premiums of 2003 and 2004 occurred after the market collapse in 2000 and 2001.

---

106 UGI Gas St. No. 8, at pp. 48-49.

107 *See*, Pablo Fernandez, Eduardo de Apellaniz and Javier F. Acin, *Survey: Market Risk Premium and Risk-Free Rate used for 81 countries in 2020*, IESE Business School, March 25, 2020, at 10. Specifically, the study states:[t]he [implied equity premium] is the implicit [required equity premium] used in the valuation of a stock (or market index) that matches the current market price. The most widely used model to calculate the [implied equity premium] is the dividend discount model: the current price per share (P_0) is the present value of expected dividends discounted at the required rate of return (K_e). If d_1 is the dividend per share expected to be received in year 1, and g the expected long-term growth rate in dividends per share,

$P_0 = d_1 / (Ke - g)$, which implies:[implied equity premium] = $d_1/P_0 + g - R_f$

2. Survey premiums are sensitive not only to whom the question is directed at but how the question is asked. For instance, individual investors seem to have higher (and more volatile) expected returns on equity than institutional investors and the survey numbers vary depending upon the framing of the question.[footnote omitted]. Kaustia, Lehtoranta and Puttonen (2011) surveyed 1,465 Finnish investment advisors and note that not only are male advisors more likely to provide an estimate but that their estimated premiums are roughly 2% lower than those obtained from female advisors, after controlling for experience, education and other factors.[footnote omitted]

3. Studies that have looked at the efficacy of survey premiums indicate that if they have any predictive power, it is in the wrong direction. Fisher and Statman (2000) document the negative relationship between investor sentiment (individual and institutional) and stock returns.[footnote omitted] In other words, investors becoming more optimistic (and demanding a larger premium) is more likely to be a precursor to poor (rather than good) market returns.

As technology aids the process, the number and sophistication of surveys of both individual and institutional investors will also increase. However, it is also likely that these survey premiums will be more reflective of the recent past rather than good forecasts of the future.[108]

Q. PLEASE DESCRIBE THE METHOD BY WHICH MR. GARRETT CALCULATED HIS THIRD ESTIMATE, THE IMPLIED MRP.

A. As Mr. Garrett points out, his method developed the Internal Rate of Return that sets the current value of the market index equal to the projected value of cash flows associated with owning the market index.[109] Mr. Garrett observes that Damodaran "promotes the implied ERP method."[110] Although there are some differences, Mr. Garrett's approach is similar to the model Damodaran provides on his website.[111]

Mr. Garrett's method, which is a two-stage form of the DCF model, calculated the present value of cash flows over the five-year initial period, together with the terminal price

---

108 Aswath Damodaran, Stern School of Business, *Equity Risk Determinants, Estimation and Implications – The 2025 Edition*, Updated March 5, 2025, at 30-31.

109 OCA St. 3, at pp. 34-37.

110 OCA St. 3, at p. 37.

111 *See*, http://pages.stern.nyu.edu/~adamodar.

(based on the Gordon Model [112]), to be received in the last (i.e., fifth) year. The model's principal inputs include the following assumptions:

- Over the coming five years, the S&P 500 Index (the "Index") will appreciate at a rate equal to the compound growth rate in "Operating Earnings" from 2014 through 2024;
- Cash flows associated with owning the Index will be equal to the historical average earnings, dividends, and buyback yields, applied to the projected Index value each year; and
- Beginning in the terminal year, the Index will appreciate, in perpetuity, at a rate equal to the 30-day average yield on 30-year Treasury securities, as of April 2, 2026.[113]

As discussed below, reasonable changes to those assumptions have a considerable effect on Mr. Garrett's calculated expected market return.

Q. DO YOU HAVE ANY OBSERVATIONS REGARDING MR. GARRETT'S ASSUMED FIRST-STAGE GROWTH RATE?

A. Yes. Mr. Garrett's 6.95% growth rate relates to growth in operating earnings, and does not reflect capital appreciation, growth in dividends, or buy-backs.[114] In addition, if Mr. Garrett's position is that historical growth rates are meant to reflect expected future growth, they should reflect year-to-year variation (i.e., uncertainty). That is best accomplished using the arithmetic mean. I therefore calculated the average growth (arithmetic mean) for the four metrics included in Mr. Garrett's exhibit as shown in page 2 of Schedule DWD-

---

112 Exhibit DJG-9

113 Exhibits DJG-7 and DJG-9. The model also assumes that all payments are received at year-end, rather than during the year. That assumption also tends to under-state the implied MRP.

114 Exhibit DJG-9. Whereas the compound average growth rate in operating earnings was 6.95%, dividends and buybacks grew by 6.08% and 9.00%, respectively.

8R. The average growth rate, 9.04%, produced an estimated market return of 10.28%,[115] which is still well below historical experience.

Q. WHY DID THE MARKET RETURN INCREASE BY ONLY 46 BASIS POINTS (FROM 9.83% TO 10.28%) WHEN THE FIRST-STAGE GROWTH RATE INCREASED BY 208 BASIS POINTS (FROM 6.95% TO 9.04%)?

A. Because Mr. Garrett's model assumed the first stage lasts for five years (and the terminal stage is perpetual), the results are sensitive to changes in the assumed terminal growth rate. To put that effect in perspective, the terminal value (which is directly related to the terminal growth rate) represents 78.94% of the "Intrinsic Value" in Mr. Garrett's analysis.[116]

Q. HOW DID MR. GARRETT DEVELOP HIS ASSUMED TERMINAL GROWTH RATE?

A. The terminal growth rate represents investors' expectations of the rate at which the broad stock market will grow, in perpetuity, beginning in the terminal year. Mr. Garrett assumed terminal growth is best measured by the average yield on 30-year Treasury securities over the 30 days ended April 2, 2026. That is, Mr. Garrett assumed the average 30-year Treasury yield between February 20, 2026, and April 2, 2026, is the best measure of expected earnings growth beginning five years from now and extending indefinitely into the future.

Q. DO YOU AGREE WITH MR. GARRETT'S ASSUMPTION?

A. No, I do not. I recognize Mr. Garrett followed the approach described in Damodaran's method, which Damodaran refers to as a "default" assumption.[117] In terms of historical experience, over the long-term the broad economy has grown at a long-term compound

---

115 Schedule DWD-8R, page 2.

116 Schedule DWD-8R, page 2. Please note that regardless of the assumed first and terminal-stage growth rates, the terminal stage consistently represents approximately 79.00% of the Intrinsic Value.

117 *See*, http://pages.stern.nyu.edu/~adamodar.

average growth rate of approximately 6.10%.[118] Considered from another perspective, Kroll reports the long-term rate of capital appreciation on Large Company stocks to be 8.27%.[119] Mr. Garrett's model assumes, however, that the market index will grow by a rate of about 199 basis points below that amount, 6.28%, over the coming four years.[120]

Mr. Garrett has not explained why growth beginning five years in the future, and extending in perpetuity, will be 58% of long-term historical growth.[121] From a somewhat different perspective, assuming long-term inflation will be approximately 2.00%[122] implies perpetual real growth will be approximately 2.76%.[123] Nowhere in his testimony has Mr. Garrett explained the fundamental, systemic changes that would so dramatically reduce long-term economic growth, or why they are best measured by the long-term Treasury yield over 30 days between February 20, 2026, and April 2, 2026.

Further, research by the Federal Reserve Bank of San Francisco calls into question the relationship between interest rates and macroeconomic growth. As the authors noted, "[o]ver the past three decades, it appears that private forecasters have incorporated essentially no link between potential growth and the natural rate of interest: The two data series have a zero correlation."[124]

---

118 Source: Bureau of Economic Analysis for the years 1929 to 2025. *See also*, https://www.bea.gov/data/gdp/gross-domestic-product.

119 SBBI-2023, 137.

120 Exhibit DJG-9. (8555/6704)^(1/4) - 1 = 6.28%.

121 Garrett assumed perpetual growth rate of 4.89% divided by large company capital appreciation of 8.27%. 4.82% / 8.27% = 58.25%.

122 For example, in line with the Federal Reserve's target average rate of inflation.

123 2.76% = [(1.0482/1.020)-1]. Please note that the long-term historical average rate of inflation, measured by the difference between real and nominal GDP growth, has been approximately 2.90%, which would also imply perpetual real growth of 1.87%. Similarly, the projected difference in nominal GDP and real GDP from the Congressional Budget Office as reported in Exhibit DJG-5 has been approximately 2.20%, which implies perpetual real growth of 2.66%.

124 FRBSF Economic Letter, *Does Slower Growth Imply Lower Interest Rates?*, November 10, 2014, at 3.

Q. PLEASE BRIEFLY SUMMARIZE YOUR RESPONSE TO MR. GARRETT'S IMPLIED EQUITY RISK PREMIUM CALCULATION.

A. Mr. Garrett's calculation is based on a series of questionable assumptions, to which a small set of very reasonable adjustments produces a market return estimate more consistent with (yet still below) the historical experience he considers relevant. Although the revised results still produce ROE estimates far below any reasonable measure, they do point out the sensitive nature of Mr. Garrett's analyses, and the tenuous nature of the conclusions he draws from them.

Q. DID YOU CONDUCT A STUDY TO DETERMINE THE FORECAST ACCURACY OF THE DAMODARAN AND THE FERNANDEZ SURVEY IMPLIED MARKET RETURNS RELATIVE TO THE HISTORICAL MARKET RETURNS?

A. Yes, I did. Similar to my analysis of the Kroll "recommended" market return, I have calculated the forecast bias of the long-term historical average return, and the implied market returns from Damodaran and the Fernandez Survey from 2008-2025 to determine the most accurate measure of the following years' market return.[125] The result of this analysis is also shown on Schedule DWD-5R and presented in Table 5, below:

[125] 2008 was selected as the starting year as it is the first year Kroll published its recommended MRP and risk-free rate.

Table 5: Comparison of Forecast Bias for Various Measures 2009-2025

Year	Observed Market Return	Long-Term Average Return	Damodaran Forecasted Market Return	Fernandez Forecasted Market Return
2009	26.46%	11.67%	8.64%	10.75%
2010	15.06%	11.85%	8.20%	10.25%
2011	2.11%	11.88%	8.49%	9.32%
2012	16.00%	11.77%	7.89%	7.96%
2013	32.39%	11.82%	7.54%	8.10%
2014	13.69%	12.05%	8.00%	8.81%
2015	1.38%	12.07%	7.95%	7.90%
2016	11.96%	11.95%	8.39%	7.60%
2017	21.83%	11.95%	8.14%	8.20%
2018	-4.38%	12.06%	7.49%	8.20%
2019	31.49%	11.88%	8.64%	8.30%
2020	18.40%	12.09%	7.12%	7.50%
2021	28.71%	12.16%	5.65%	7.30%
2022	-18.11%	12.33%	5.75%	8.30%
2023	26.61%	12.02%	9.82%	9.50%
2024	25.62%	12.16%	8.48%	9.60%
2025	18.06%	12.30%	8.91%	9.60%
Sum	267.28%	204.01%	135.10%	147.19%
Forecast Bias[126]		76.33%	50.55%	55.07%

As shown in Table 5, again, the long-term arithmetic mean return is the most accurate predictor of the next years' return as compared to the other measures, and the Damodaran and Fernandez projected market returns are less accurate measures of the market return. I will also note that the Damodaran and Fernandez projected market returns are even more understated than the Kroll projected market returns.

Q. DID MR. GARRETT CONDUCT AN ECAPM ANALYSIS?

A. No, he did not.

[126] Calculated by dividing the sum of the forecast returns by the sum of the actual returns.

Q. WHY IS MR. GARRETT'S HAMADA CAPM NOT APPLICABLE FOR THIS PROCEEDING?

A. As discussed previously, the Company's requested equity ratio is consistent with the range of equity ratios in place within both my updated proxy group and Mr. Garrett's proxy group. Further, while Mr. Garrett claims that the Company "is much less risky relative to the proxy group due to the decreased amount of debt in its capital structure,"[127] as discussed previously, the Company's long-term issuer rating is equivalent to that of the proxy group, indicating a comparable level of risk relative to the proxy group. As a result, there is no need for Mr. Garrett to adjust the *Value Line* betas in his CAPM for any difference in financial risk.

B. <u>Adjustments to the Cost of Equity</u>

Q. DOES MR. GARRETT CONSIDER A BUSINESS RISK ADJUSTMENT IN HIS RECOMMENDED ROE FOR UGI GAS?

A. No, he does not. Mr. Garrett argues that "[b]ecause investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company."[128]

Q. DO YOU AGREE WITH MR. GARRETT'S OBSERVATIONS?

A. No, I do not. As discussed on pages 54 through 56 of my Direct Testimony, when determining an appropriate ROE, the relevant issue is where investors see the subject company in relation to other similarly situated utility companies. To the extent investors view a company as being exposed to higher risk, the required return will increase, and vice versa. UGI Gas's smaller size relative to the Utility Proxy Group companies indicates

---

127 OCA St. 3, at p. 41.
128 OCA St. 3, at p. 15.

greater relative business risk for the Company because, all else being equal, size has a material bearing on risk.

Q. DID MR. GARRETT ADDRESS THE ISSUE OF A SIZE PREMIUM IN HIS TESTIMONY?

A. Yes. Mr. Garrett lists several reasons for his decision to not include a size premium in his recommendation, including: (1) numerous studies show that "the performance of large-cap stocks was basically equal to that of small-cap stocks,"[129] and (2) that the "discovery of the size effect phenomenon likely caused its own demise."[130]

Q. IS MR. GARRETT'S REVIEW OF THE SIZE PREMIUM CORRECT?

A. No, it is not. First, Mr. Garrett notes that after 1983, U.S. small-cap stocks underperformed large-cap stocks.[131] The issue with Mr. Garrett's position is that the size premium measures the increased risk associated with a company's smaller size; Mr. Garrett is only focused on returns. As I discussed in my Direct Testimony, smaller companies face increased business risk as they are less equipped to cope with significant events that affect sales, revenues, and earnings, as the loss of a few larger customers will have a greater effect on a smaller company than a larger company.[132]

This is further evident when we consider that increasing capital costs (i.e., risk) for one set of securities will put downward pressure on those securities as investors transition to securities with lower risk. Under this premise, the underperformance is directly tied to the increase in risk. As such, Mr. Garrett's premise that smaller companies'

---

129 OCA St. 3, at p. 44.
130 OCA St. 3, at p. 44.
131 OCA St. 3, at p. 43.
132 UGI Gas St. No. 8, at p. 54.

underperformance indicates a reduction of risk is in fact the opposite – underperformance indicates an increasing level of risk.

Q. MR. GARRETT POINTS TO A PASSAGE PUBLISHED IN 2015 BY IBBOTSON[133] THAT STATES THAT THE SIZE PREMIUM NO LONGER EXISTS. WHAT IS YOUR RESPONSE?

A. Despite their findings, Kroll (which now owns Ibbotson) continues to publish data on their findings on the presence of a size premium in the market and has provided additional measures of size and relative risk premiums. In addition to market capitalization, Kroll includes book common equity, market value of invested capital, five-year average net income, five-year average earnings before interest, taxes, depreciation and amortization, total assets, total sales, and total employees as valid measures of size from which relative size premiums are derived. If Kroll found that the size premium ceased to exist, it would not publish the size data it does.

Q. DO YOU AGREE WITH MR. GARRETT THAT THE SIZE EFFECT NO LONGER EXISTS?

A. No, I do not. While the historical returns of large companies may have outperformed small utilities over the last several years, risk is measured by volatility, not returns. A study by Clifford Ang detailed the returns and volatility of returns of companies by size, showing while larger companies out-performed smaller companies, smaller companies exhibited more risk.[134] Reviewing data from the same source as the Ang study, I replicated the study through February 2026. Table 6 presents the largest monthly gain and loss for each value-weighted decile for the period 1981 through February 2026. As shown in Table 6, small

---

133 OCA St. 3, at p. 44.

134 Clifford S. Ang, "The Absence of a Size Effect Relevant to the cost of Equity", Business Valuation Review, Volume 37, No. 3, 2018.

capitalization stocks exhibit more volatility (i.e., risk) in their returns than larger capitalization stocks.

Table 6: Size and Volatility of Returns[135]

Decile:	1	2	3	4	5	6	7	8	9	10
Largest Gain:	29.4%	25.3%	21.1%	20.0%	19.8%	16.9%	17.1%	14.5%	14.1%	13.4%
Largest Loss:	-28.8%	-30.2%	-28.8%	-29.7%	-27.8%	-26.3%	-26.0%	-23.9%	-22.5%	-19.8%

Further, SBBI-2023 shows that the total return of large-cap stocks over the 1926-2022 period has a standard deviation of 19.8%, compared to 31.2% for small-cap stocks, echoing the findings of Table 6.[136] The higher level of risk indicates a higher level of required return.

Q. WHAT ARE MR. GARRETT'S CONCERNS WITH YOUR FLOTATION COST ADJUSTMENT?

A. Mr. Garrett states that flotation costs should not have an increasing impact on UGI Gas's return on equity because: (1) flotation costs are not actual "out-of-pocket" costs; (2) the market already accounts for flotation costs; and (3) the requested ROE is already too high and increasing it further would be inappropriate.[137]

Q. WHAT IS YOUR RESPONSE?

A. Flotation costs are reflected on the balance sheet under "paid in capital" and incurred over time. As a result, flotation costs remain part of a company's cost structure during the test year and beyond even if the costs were incurred prior to the test year.[138]

---

136 SBBI-2023, at 137. Note: Utility companies are included in this data set.

137 OCA St. 3, at pp. 46-47.

138 UGI Gas St. No. 8, at pp. 62-63.

Mr. Garrett's observation that underwriter fees are not "out-of-pocket" expenses is a distinction without a meaningful difference.[139] Whether paid directly or indirectly through an underwriting discount, the cost results in net proceeds that are less than the gross proceeds. Mr. Garrett points out that under federal law, the underwriters' compensation must be disclosed in the offering prospectus.[140] I agree. In fact, those prospectuses are the source of the issuance costs included in Schedule DWD-11 to my Direct Testimony. Because those costs were incurred, the net proceeds to the issuing company were less than the gross proceeds. Whether the issuer wrote a check or received the proceeds at a discount does not matter. What does matter is that issuance costs are a permanent reduction to common equity, and absent a recovery of those costs, the issuing company will not be able to earn its required return.

Furthermore, as discussed in my response to Mr. Breuning, denying recovery of issuance costs would penalize the investors that fund the utility operations.

C. Response to Mr. Garrett's Critiques of Company Testimony

Q. DOES MR. GARRETT HAVE ANY CRITIQUES OF YOUR ANALYSES PRESENTED IN YOUR DIRECT TESTIMONY?

A. Yes, he does. Mr. Garrett's critiques of my Direct Testimony are: (1) my use of overstated DCF growth rates; (2) my use of an MRP he deems unreasonable for not being in line with his MRP estimates; and (3) my inclusion of adjustments for Company-specific factors.

I have already addressed critique (3) previously and will not address it again here. I will discuss Mr. Garrett's remaining arguments here.

---

139 OCA St. 3, at p. 46.
140 OCA St. 3, at p. 46.

Q. MR. GARRETT OPINES THAT GROWTH IN A DCF MODEL IS LIMITED BY THE LONG-TERM GROWTH IN GDP.[141] WHY IS LONG-TERM GROWTH IN GDP NOT AN UPPER LIMIT FOR TERMINAL GROWTH AS MR. GARRETT CONTENDS?

A. First, GDP is not a market measure – rather it is a measure of the value of the total output of goods and services, excluding inflation, in an economy. While I understand that EPS growth is also not a market measure, it is well established in the financial literature that projected growth in EPS is the superior measure of dividend growth in a DCF model.[142] Furthermore, GDP is simply the sum of all private industry and government output in the United States, and its growth rate is simply an average of the value of those industries. To illustrate, Schedule DWD-9R presents the compound annual growth rate of the industries that comprise GDP from 1947 to 2025. Of the 15 industries represented, seven industries (including utilities) grew faster than the overall GDP, and eight industries grew slower than the overall GDP.[143] Given that utilities have grown faster than the overall GDP over the 1947-2025 time period, I disagree with Mr. Garrett's suggestion that "it is reasonable to conclude that the long-term growth of a domestic firm cannot outpace the growth rate of the aggregate economy in which it operates (as measured by U.S. GDP in this case)"[144]

143 Source: Bureau of Economic Analysis.

144 OCA St. 3, at p. 27.

Q. DID YOU CONDUCT ANOTHER ANALYSIS THAT CALCULATES THE AMOUNT OF TIME IT WOULD TAKE AN INDUSTRY TO OVERTAKE THE ENTIRE ECONOMY?

A. Yes. I examined the value added by industry from 1947 to 2025 in Schedule DWD-9R and used the compound annual growth rates for the highest growth rate industry (i.e., Educational Services, Healthcare, and Social Assistance at 8.53% per year) to see when that industry would comprise the entire economy. In the year 2285, or 338 years from the 1947 starting point, the industry would comprise over 50% of GDP, and in the year 7964, or 6,017 years after the 1947 starting point, the industry would comprise 100% of GDP.[145] Not only have individual companies or industries consistently grown at rates beyond GDP growth, but they have done so without overtaking the entire economy. While Mr. Garrett's argument may be technically correct, it is unrealistic at best.

Q. IS THE USE OF ANALYSTS' EARNINGS GROWTH PROJECTIONS IN THE DCF MODEL SUPPORTED BY FINANCIAL LITERATURE?

A. Yes, it is. Myron Gordon, the "father" of the standard regulatory version of the DCF model widely utilized throughout the United States in rate base/rate of return regulation, recognized the significance of analysts' forecasts of growth in EPS in a speech he gave in March 1990 before the Institute for Quantitative Research and Finance,[146] stating on page 12:

> We have seen that earnings and growth estimates by security analysts were found by Malkiel and Cragg to be superior to data obtained from financial statements for the explanation of variation in price among common

---

[145] To put the amount of time that will take these two milestones to happen in perspective, approximately 300 years ago, in the year 1719, France and Spain were at war in New France (now Louisiana), and approximately 3,476 years ago, in the year 1457 BC, the first recorded battle in military history, the Battle of Megiddo, was waged between the Egyptians, led by Pharaoh Thutmose III against Kadesh, Canaanite, Mitanni, and Amurru forces. *See also* Zager and Evans, *In the Year 2525*, *on* 2525 (Exordium & Terminus) (RCA 1968).

[146] Myron J. Gordon, *The Pricing of Common Stock*, Presented before the Spring 1990 Seminar, March 27, 1990 of the Institute for Quantitative Research in Finance, Palm Beach, FL.

> stocks… estimates by security analysts available from sources such as IBES are far superior to the data available to Malkiel and Cragg.
>
> * * *
>
> Eq (7) is not as elegant as Eq (4), but it has a good deal more intuitive appeal. It says that investors buy earnings, but what they will pay for a dollar of earnings increases with the extent to which the earnings are reflected in the dividend or in appreciation through growth.

Professor Gordon recognized that the total return is largely affected by the terminal price, which is mostly affected by earnings (hence P/E multiples).

Studies performed by Cragg and Malkiel[147] demonstrate that analysts' forecasts are superior to historical growth rate extrapolations. While some question the accuracy of analysts' forecasts of EPS growth, the level of accuracy of those analysts' forecasts well after the fact does not really matter. What is important is that the forecasts reflect widely held expectations influencing investors at the time they make their pricing decisions, and hence, the market prices they pay.

In addition, Jeremy J. Siegel also supports the use of security analysts' EPS growth forecasts when he states:

> For the equity holder, the source of future cash flows is the earnings of firms.
>
> * * *
>
> Some people argue that shareholders most value stocks' cash dividends. But this is not necessarily true.
>
> * * *
>
> Since the price of a stock depends primarily on the present discounted value of all expected future dividends, it appears that dividend policy is crucial to determining the value of the stock. However, this is not generally true.
>
> * * *

---

147 John G. Cragg and Burton G. Malkiel, Expectations and the Structure of Share Prices (University of Chicago Press, 1982) Chapter 4.

> Since stock prices are the present value of future dividends, it would seem natural to assume that economic growth would be an important factor influencing future dividends and hence stock prices. However, this is not necessarily so. The determinants of stock prices are earnings and dividends on a *per-share* basis. Although economic growth may influence *aggregate* earnings and dividends favorably, economic growth does not necessarily increase the growth of per-share earnings of dividends. It is earnings per share (EPS) that is important to Wall Street because per-share data, not aggregate earnings or dividends, are the basis of investor returns. (italics in original)[148]

Q. WHAT IS YOUR CONCLUSION OF THE APPROPRIATE GROWTH RATE FOR USE IN THE DCF MODEL?

A. In view of the above, I recommend the Commission rely solely on projected EPS growth rates, as Mr. Breuning has proposed, when determining the indicated ROE for UGI Gas using the DCF model.

Q. MR. GARRETT STATES THAT YOUR MRP IS UNREASONABLE IN VIEW OF HIS MEASURES OF MRP AS PRESENTED IN HIS CAPM ANALYSIS.[149] PLEASE RESPOND.

A. Even though Mr. Garrett questions the reasonableness of my calculated market returns and MRPs, they are consistent with actual realized returns and MRPs, as shown on Table 7, below, and Schedule DWD-10R.

Table 7: Percentile Ranks of Calculated Market Returns and Risk Premiums[150]

	D'Ascendis Testimony	%	Percentile Rank
Average Market Return	Direct	13.16%	47th
Average Market Return	Rebuttal	13.46%	47th
Average Market Risk Premium	Direct	8.63%	49th
Average Market Risk Premium	Rebuttal	8.71%	49th

150 Schedule DWD-10R.

Chart 2: Frequency Distribution of Observed Market Returns, 1926 - 2025[151]

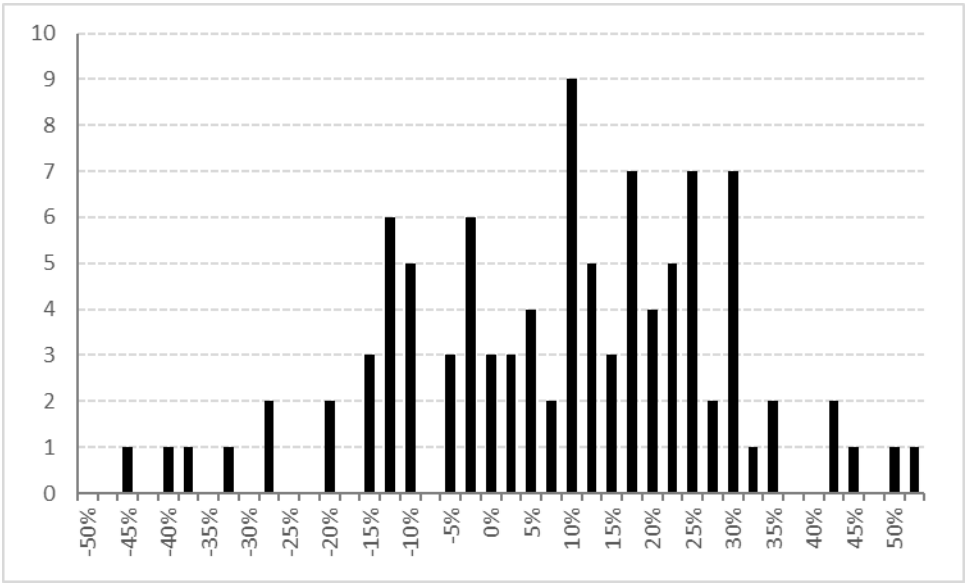

Chart 3: Frequency Distribution of Observed Market Risk Premiums, 1926 - 2025[152]

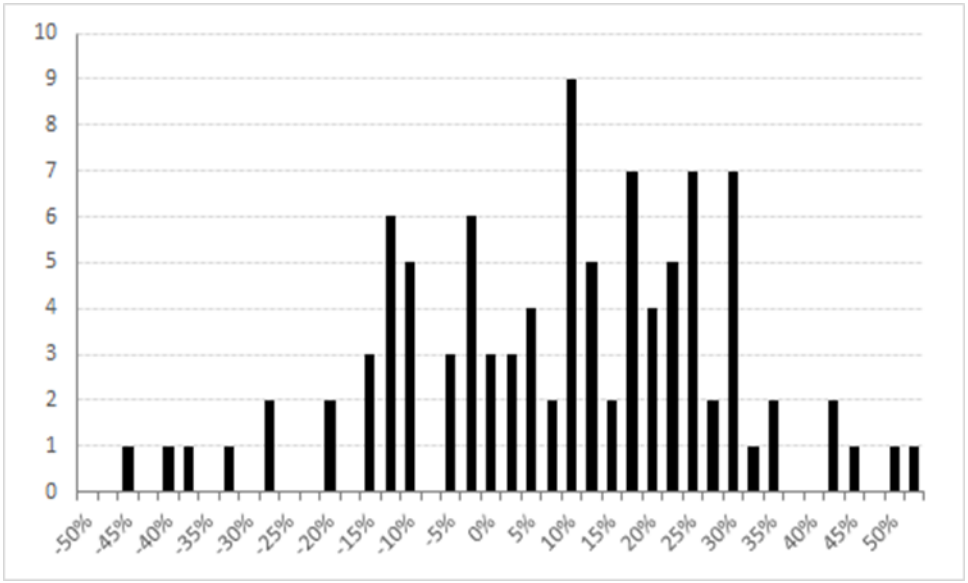

Given all of the above, the market returns and ERPs I use in my analyses are consistent with observed values. Thus, Mr. Garrett's concerns should be dismissed.

151 Schedule DWD-10R.
152 Schedule DWD-10R.

VI. RESPONSE TO OSBA WITNESS EWEN

Q. PLEASE PROVIDE A SUMMARY OF MR. EWEN'S TESTIMONY REGARDING UGI GAS'S OVERALL COST OF CAPITAL.

A. Mr. Ewen alleges that my recommended ROE ignores a key provision of the *Hope* and *Bluefield* Supreme Court decisions; specifically, that rates should balance the interests of the utility and the various stakeholders.[153] Mr. Ewen also contends that UGI Gas's proposed extension of its current WNA pilot program "reduces utility risk and therefore should reduce the utility cost of capital."[154]

Q. DO YOU AGREE WITH MR. EWEN THAT YOU IGNORED KEY COMPONENTS OF THE *HOPE* AND *BLUEFIELD* SUPREME COURT DECISIONS?

A. No, I do not. My Direct Testimony and recommendation in this proceeding balances the interests of all stakeholders – the customers receive safe and reliable service, and the Company is able to recover its costs plus a fair rate of return on its investment, which is based on current and expected market data applied to comparable risk companies. Since Mr. Ewen does not provide an independent, market-based ROE analysis, his contention that my recommended return does not balance the interests of the various stakeholders in this proceeding is unfounded.

Q. DO YOU AGREE WITH MR. EWEN THAT A WNA MECHANISM REDUCES THE COMPANY'S RELATIVE RISK?

A. No, I do not. As discussed previously, it is important to keep in mind that risk, as it relates to investor required returns, is comparative. Because returns are based on the economic

---

153 OSBA St. No. 1, at p. 4.
154 OSBA St. No. 1, at p. 5.

principle of opportunity costs, risk and return should be viewed in the context of alternative investments. That economic principle is consistent with the *Hope* and *Bluefield* "comparable risk" standard, under which the authorized return should be comparable to those available to firms of similar risk.

Consistent with those economic and regulatory principles, risk and return should not be viewed in isolation. Rather, the analytical issue is whether the mechanisms in place would reduce a utility's risk relative to its peers such that investors would specifically and measurably reduce their required return for that utility.

Exhibit DWD-11R provides a summary of WNAs and other alternative ratemaking mechanisms ("ARM") in effect at each utility subsidiary of my Utility Proxy Group. As Exhibit DWD-11R demonstrates, WNAs and other ARMs are present in every proxy company, and any risk reduction due to those mechanisms would be reflected in their market data. As such, the presence of the Company's ARMs are not unique compared to the Utility Proxy Group and, therefore, does not indicate a lower level of relative risk.

Q. ARE THERE STUDIES ADDRESSING THE RELATIONSHIP BETWEEN DECOUPLING MECHANISMS, GENERALLY, AND ROES?

A. Yes. In March 2014, The Brattle Group ("Brattle") published a study addressing the effect of revenue decoupling structures on the cost of capital for electric utilities.[155] In its report, which extended a prior analysis focused on natural gas distribution utilities, Brattle pointed out that although decoupling structures may affect revenues, net income can still vary. Brattle further noted that the distinction between diversifiable and non-diversifiable risk is important to equity investors, and the relationship between decoupling and ROE should be

[155] The Brattle Group, The Impact of Revenue Decoupling on the Cost of Capital for Electric Utilities: An Empirical Investigation, Prepared for the Energy Foundation, March 20, 2014.

examined in that context. Brattle noted that although reductions in total risk may be important to bondholders, only reductions in non-diversifiable business risk would warrant a reduction to the ROE. In November 2016, the Brattle study was updated based on data through the fourth quarter of 2015.[156]

Brattle's empirical analysis examined the relationship between decoupling and the After-Tax Weighted Average Cost of Capital for a group of electric utilities that had implemented decoupling structures in various jurisdictions throughout the United States. As with Brattle's 2014 study, the updated study found no statistically significant link between the cost of capital and revenue decoupling structures.[157] Given all of the above, it is evident that WNA or similar decoupling mechanism do not reduce relative utility risk and should have no impact on the Company's cost of capital. In light of all the above, Mr. Ewen's concerns should be dismissed.

VII. RESPONSE TO CAUSE-PA WITNESS CICERO

Q. PLEASE PROVIDE A SUMMARY OF MR. CICERO'S TESTIMONY REGARDING UGI GAS'S OVERALL COST OF CAPITAL.

A. Mr. Cicero recommends no rate increase, implying an ROE of 7.70%, which is the Company's expected ROE at present rates.[158] He claims that the Company's current rates allow them to provide safe and reliable service, recover reasonably and prudently incurred expenses, and provides the opportunity to earn a fair return on the Company's

---

156 Michael J. Vilbert, Joseph B. Wharton, Shirley Zhang and James Hall, Effect on the Cost of Capital of Innovative Ratemaking that Relaxes the Linkage between Revenue and kWh Sales – An Updated Empirical Investigation, November 2016.

157 Michael J. Vilbert, Joseph B. Wharton, Shirley Zhang and James Hall, Effect on the Cost of Capital of Innovative Ratemaking that Relaxes the Linkage between Revenue and kWh Sales – An Updated Empirical Investigation, November 2016.

158 CAUSE-PA St. No. 1, at p. 40.

investment.[159] Mr. Cicero also believes that the Company's WNA, fully projected future test year, and Distribution System Improvement Charge ("DSIC") reduces its risk and that risk reduction should be reflected in the ROE.[160] Finally, Mr. Cicero recommends an imputed capital structure containing 50.00% long-term debt and 50.00% common equity.[161]

Q. DO YOU HAVE ANY CONCERNS WITH MR. CICERO'S DIRECT TESTIMONY?

A. Yes, I do. While Mr. Cicero claims that a 7.70% ROE is a fair rate of return for UGI Gas, he does not provide any independent, market-based analysis that shows that a 7.70% ROE would be commensurate with returns for firms with comparable risk. I also disagree with Mr. Cicero's claim that the Company's ARMs lower its risk compared to the members of the Utility Proxy Group as discussed above while addressing Mr. Ewen's testimony and his recommended hypothetical capital structure, which was addressed in Section III, above.

Q. DOES MR. CICERO CONDUCT AN INDEPENDENT, MARKET-BASED ANALYSIS OF THE INVESTOR REQUIRED ROE FOR FIRMS THAT HAVE COMPARABLE RISK AS THE COMPANY?

A. No, he does not. As discussed in my Direct Testimony,[162] a fair return should be commensurate with returns on investments in other enterprises having corresponding risks and needs to be sufficient to assure confidence in the utility's financial integrity, allowing it to attract capital at reasonable costs and terms. Mr. Cicero's lack of analysis of market data or data from comparable risk companies leaves his recommendations regarding the

---

159 CAUSE-PA St. No. 1, at pp. 5, 34.
160 CAUSE-PA St. No. 1, at pp. 13-14.
161 CAUSE-PA St. No. 1, at p. 46.
162 UGI Gas St. No. 8, at pp. 5-6.

Company's appropriate capital structure and corresponding cost rates unsupported. As such, I recommend that the Commission dismiss them.

Q. MR. CICERO COMPARES YOUR RECOMMENDED ROE WITH 50- AND 100-YEAR RETURNS FOR THE DOW JONES INDUSTRIAL AVERAGE AND S&P 500, CLAIMING THAT YOUR RECOMMENDED ROE IS SIGNIFICANTLY HIGHER.[163] IS THAT COMPARISON APT?

A. No, it is not. The historical returns Mr. Cicero uses for his comparison are inflation-adjusted (i.e., real) and calculated using geometric returns whereas my recommended ROE includes inflation (i.e., nominal) and uses arithmetic returns. These returns are not comparable returns and need to be properly converted to compare them. As shown on Schedule DWD-12R, converting the real, geometric historical returns to nominal, arithmetic historical returns result in market returns ranging from 11.96% to 12.92%, which is higher than my recommended ROE and consistent with similar data from Kroll as noted above.

VIII. CONCLUSION

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY

A. Given the discussion above and my updated analysis, I continue to believe that my recommended ROE of 10.75% is reasonable for the Company at this time.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 10.75% FAIR AND REASONABLE FOR UGI GAS AND ITS CUSTOMERS?

A. Yes, it is.

---

[163] CAUSE-PA St. No. 1, at p. 44.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

Notes:

(1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group, and are based upon financial statements as originally reported in each year.

(2) Computed by relating actual total debt interest or preferred stock dividends booked to average of beginning and ending total debt or preferred stock reported to be outstanding.

(3) Total debt relative to EBITDA (Earnings before Interest, Income Taxes, Depreciation and Amortization).

(4) Funds from operations (sum of net income, depreciation, amortization, net deferred income tax and investment tax credits, less total AFUDC) plus interest charges as a percentage of total debt.

Notes:

(1) Indicated dividend at 3/31/2026 divided by the average closing price of the last 60 trading days ending 3/31/2026 for each company.
(2) From pages 7 through 12 of this Schedule.
(3) Average of columns 2 through 4 excluding negative growth rates.
(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for Atmos Energy Corporation, 2.26% x (1+(1/2 x 7.74%)) = 2.35%.
(5) Column 5 + Column 6.
(6) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to about 3.4 million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2025: residential, 68.7%; commercial, 27.2%; industrial, 2.9%; and other, 1.2%. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately .4% of common stock (12/25 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

It's been business as usual at Atmos Energy. Fiscal 2026 (ends September 30th) started on a high note, with first-quarter earnings per share climbing 9.4%, to $2.44, relative to the prior-year tally of $2.23. One contributor was the distribution division, supported partly by rate adjustments (primarily in the Mid-Tex Division) and higher consumption. Also, results of the pipeline & storage unit benefited, among other things, from the Gas Reliability Infrastructure Program filing approved in June 2025 and the System Safety and Integrity Rider filing approved in November 2024. So, full-year profits stand to grow near 10%, to $8.15 a share, versus fiscal 2025's $7.46 figure. Regarding fiscal 2027, the bottom line may advance another 7%, to $8.75 a share, as operating margins expand further.

Finances are solid. When the December interim ended, cash on hand was $367.0 million. Furthermore, long-term debt looked reasonable (40% of total capital) and short-term borrowings were minimal. Also, $5.2 billion in common stock and/or debt securities remained available for issuance (out of $8.0 billion) under a shelf registration statement expiring in December, 2027. Finally, Atmos had undrawn credit facilities totaling $3.1 billion plus a $1.5 billion commercial paper program.

The capital spending budget for fiscal 2026 is expected to be roughly $4.2 billion. That's some 18% above the prior-year level of around $3.6 billion. Similar to fiscal 2025, a major portion of the resources are being utilized to enhance the safety and reliability of the company's natural gas distribution and transmission systems. Leadership adds that it projects total capital expenditures from fiscal 2026 through fiscal 2030 to lie in the vicinity of $26 billion. A large amount of the investments will continue to be deployed to where they are presently. If the balance sheet remains sound, Atmos ought to be able to achieve those goals.

These untimely shares hold unspectacular long-term total return potential. Capital gains possibilities out to 2029-2031 are moderate at the recent quotation. Also, the dividend yield is not exciting compared to *Value Line's* Natural Gas Utility Industry average.

Frederick L. Harris, III February 20, 2026

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 589,000 cust. at 9/30/25. Fiscal 2025 revenue breakdown: (Residential, 43%, Commercial, 18%, Firm Transportation, 5%, Out of Scope, 34%). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2025 dep. rate: 3.2%. Has 1,376 empls. Off./dir. own less than 1% of common; BlackRock, 15.2%; Vanguard, 11.0% (12/25 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Internet: www.njresources.com.

New Jersey Resources' outlook for fiscal 2026 has improved. (Year ends September 30th.) The fiscal year got off to a good start as December-quarter results were solid. The company reported revenues of $604.9 million, which was a strong increase year over year. Most of its operating segments showed nice improvement, especially the New Jersey Natural Gas arm. The Energy Services unit also delivered some nice gains. Meanwhile, earnings of $1.21 per share were better than our estimate by over a dime. Some recent events will likely boost the remainder of the year as well. The Energy Services segment benefited from natural gas price volatility and the recent weather conditions. The company was able to deliver uninterrupted service during the winter storm in January. With that in mind, we have raised our full-year fiscal 2026 top- and bottom-line estimates by $200 million and $0.25 per share, to $2.2 billion and $3.40.

The company is well positioned for the long haul. The New Jersey Natural Gas unit is expected to continue to increase its customer base, especially in Monmouth, Ocean, and Morris counties. Too, heavy capital investments in the division are likely to reap rewards down the road. The expansion of the Leaf River Energy Center ought to give a nice boost to the Storage and Transportation business. A recent FERC filing could open the door for a 70% increase in working gas capacity. Also, both Leaf River and the Adelphia Gateway recently received a favorable recontracting. There is also some positive news for the Clean Energy Ventures segment, thanks to increased solar projects. The end result should be decent cash generation out to late decade.

New Jersey Resources' shares have risen one notch in our Timeliness Ranking System to 3 (Average). The stock has had a strong showing of late, rising over 10% in value since our last full-page review in November. Despite the middling near-term outlook, total return potential out to 2029-2031 is worthwhile. This issue's most attractive feature remains the above-average yield. Too, those accounts looking to avoid risk may have interest here.

Kevin P. O'Sullivan *February 20, 2026*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Qtly. revenues and egs. may not sum to total due to rounding and change in shares outstanding. Next earnings report due early May.
(C) Dividends historically paid in early Jan., April, July, and October. ■ Dividend reinvestment plan available.
(D) Includes regulatory assets in 2025: $721.4 million, $7.18/share.
(E) In millions, adjusted for 3/15 split.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 492,690 electric in Indiana, 3.3 million gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, through its Columbia subsidiaries. Revenue breakdown, 2024: electrical, 34%; gas, 63%; other, 3%. Generating capacity, fossil feuls 56%; renewables, 44%. 2024 reported depreciation rates: 3.0% electric, 2.6% gas. Had 7,746 employees as of 12/31/2024. Chairman: Richard L. Thompson. President & Chief Executive Officer: Lloyd Yates. Incorporated: Indiana. Address: 801 East 86th Avenue, Merrillville, Indiana 46410. Telephone: 877-647-5990. Internet: www.nisource.com.

NiSource, Inc. posted strong results in 2025. The company reported full-year numbers just as we were going to press. Full-year revenues and earnings improved nicely year over year. Healthy increases in gas distribution from both the Columbia and NIPSCO operating units was impressive. The electric generation and power delivery side also picked up. Meanwhile, earnings of $1.95 per share topped our target by a nickel and rose 11% over 2024.

The company is well-positioned for the near term. NiSource has been seeing healthy trends in most of its operating segments recently. Residential and commercial gas distribution has been rising at a solid clip. Too, it maintains a stable regulated electric and gas rate base. What's more, NiSource has been putting an emphasis on operating more efficiently, including increasing its technological capabilities. The use of artificial intelligence (AI) should continue to help drive down costs, resulting in income gains.

The data center business should pay dividends over the long haul. With the increased adoption of AI, the number of data centers being constructed is exploding. These data centers require massive power to operate. One of NiSource's subsidiaries, NIPSCO Generation, LLC plans to build new dispatchable generation facilities to help power data centers. The company also pledged to build two new gas turbine plants with a nominal output of 1,300 megawatts in partnership with a data center developer. These large capital investments are designed to help meet the increased energy demand, which should help drive healthy cash flow well into the next decade.

NiSource shares carry a Timeliness rank of 4 (Below Average). The stock has traded in a tight range since our last full-page review in November and is not an attractive choice for year-ahead relative price performance. Too, capital appreciation potential at the midpoint of our 18-month Target Price Range as well as out to 2029-2031 is not enticing. This issue is best suited for conservative, income-based investors. The yield is above the *Value Line* median, based on NiSource's recently raised dividend.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to more than 800,000 customers in Oregon (88% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Gas margin breakdown: residential, 65%; commercial, 25%; industrial, 6%; other, 4%. Also operates water and wastewater services across six states. Employs 1,452. BlackRock Inc. owns 16.1% of shares; Vanguard, 10.8%; Off./Dir., .9% (4/25 proxy). CEO: Justin B. Palfreyman. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural tends to do best in its first and fourth quarters. That's because these interims cover the coldest months of the year, driving up seasonal demand and use of natural gas for heat in the company's core geographic regions. Favorable utility rate structures, and a greater use of water and wastewater services supplements NWN's revenue boost during these periods.

The fourth quarter of 2025 should have been no different. This was an unusually cold quarter for residents of the utility's Oregon, and relatively newly acquired Texas territories. Higher operating expenses, depreciation, and interest costs probably kept share net slightly below the year-ago figure.

The utility is continuing its market expansion. In an attempt to further grow its revenue base, Northwest is expanding its regulated natural gas business into high population growth states like Texas. The January, 2025 SiEnergy buy was a move in this direction. The company is also acquiring small water and waste water companies in Arizona, Idaho, and California, as well as in its home state of Oregon. Too, Northwest is investing in renewable natural gas projects, as well as hydrogen and carbon capture technologies. These are all intended to reduce costs over the long haul.

The stock price hasn't fared very well since the onset of the pandemic in March, 2020. At that time, the stock reached an all-time high of $77. The issue has been falling since then due to rising interest rates. Utility stocks like NWN are similar to bonds in that their prices decline as interest rates rise. Also, the company is very capital intensive, and therefore requires a lot of debt for financing, and rising interest rates increase interest expense.

Now, however, interest rates are declining. This factor, combined with greater revenue from diversification moves, should elevate the equity's price. In addition, the reliable dividend ought to make these shares attractive to the long-term investor looking for some income. (The regulated utility boasts an impressive track record of 69 consecutive years of dividend increases.)

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 149 Bcf of natural gas supply in 2024, compared to 160 Bcf in 2023. Total volumes delivered by customer (in 2024): transportation, 60.7%; residential, 28.6%; commercial & industrial, 10.1%; other, .6%. ONE Gas has around 3,900 employees. BlackRock owns 14.5% of common stock; The Vanguard Group, 11.6%; American Century Investment, 8.0%; officers and directors, 1.2% (4/25 Proxy). CEO: Robert S. McAnnally. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Tel.: 918-947-7000. Internet: www.onegas.com.

ONE Gas probably staged a significant bottom-line turnaround in 2025. Recall that through the first nine months, earnings per share climbed nearly 15%, to $2.95, compared to the prior year's $2.57 tally. That can be traced, in part, to benefits from new rates. Another supporting factor was higher residential sales, mainly reflecting net customer growth in both Oklahoma and Texas. But greater depreciation & amortization expense, given additional capital investments, held back the company's solid performance a bit. Furthermore, employee-related costs rose attributed, to some extent, to planned investments in the workforce. Nevertheless, since it seems that the fourth quarter went fairly well for ONE Gas, full-year profits may have finished at about $4.37 a share. That would indicate a 12% recovery from 2024's $3.91 figure.

Business prospects for 2026 look promising, as well. New rates ought to be one contributing factor. Benefits arising from additional expansion of the customer base should lift results, too. Operating expenses (including those already mentioned) stand to continue to mount, but that is to be expected as the company grows. Consequently, the bottom line may advance around 6%, to $4.65 per share. Concerning 2027, we expect earnings per share to increase at a similar percentage rate, to $4.95, assuming that the business climate is generally favorable.

The quarterly dividend was raised by a penny, to $0.68 a share. ONE Gas says that it intends to keep the average annual dividend growth rate between 1% and 2% through fiscal 2030. We believe that significantly slower increase, relative to earlier this decade, is partially because of climbing operating expenses. In any event, the payout ratio for the pull to 2029-2031 should be reasonable, in the neighborhood of 50%.

ONE Gas shares, though untimely, have some investment merit. Their dividend yield looks respectable compared to the average of *Value Line's* Natural Gas Utility Industry. Too, capital appreciation possibilities over the 3- to 5-year horizon are worthwhile. Consider, also, the 2 (Above Average) Safety rank and high Price Stability score of 85 out of 100.

Frederick L. Harris, III February 20, 2026

(A) Diluted EPS. Excludes nonrecurring gain: 2017, $0.06. Next earnings report due early May. Quarterly EPS figures for 2022 don't equal total due to rounding.
(B) Dividends historically paid in early March, June, Sept., and Dec. ■ Dividend reinvestment plan. Direct stock purchase plan.
(C) In millions.
