STATEMENT OF REASONS

UGI UTILITIES, INC. – GAS DIVISION
2026 Base Rate Case
Docket No. R-2025-3059523

STATEMENT OF REASONS

I. INTRODUCTION

UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company") is filing Supplement No. 63 to UGI Gas Tariff – Pa. P.U.C. Nos. 7 and 7S ("Supplement No. 63"), with a proposed effective date of March 29, 2026. The rates set forth in Supplement No. 63, if approved by the Pennsylvania Public Utility Commission ("Commission"), would increase UGI Gas's annual jurisdictional revenues by $99.368 million, or by 8.05%. Supplement No. 63 also proposes additional changes to tariff rates, riders, and tariff terms and conditions as described in the filing. The following rate impact analysis applies to UGI Gas's customers.

Average Residential Heating Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
68.7 ccf	$113.64	$123.55	$ 9.91	8.7%

Average Commercial Heating Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
26.8 Mcf	$336.74	$358.17	$ 21.43	6.4%

Average Industrial Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
54.6 Mcf	$647.57	$688.65	$ 41.07	6.3%

UGI Gas makes this tariff filing principally: (1) to allow it to earn a fair return on investments used and useful to serve the public safely and reliably; (2) to support ongoing Commission-approved infrastructure replacement programs designed to enhance safety and reliability; (3) to enhance information technology ("IT") systems; (4) to recover operating expenses necessary for the provision of safe and reliable gas distribution service; (5) to extend its Weather Normalization Adjustment ("WNA") pilot; for a second five year period; and (6) to incorporate a ten year normal weather calculation in its rate design. Each of these reasons is discussed in more detail below and in the Company's testimony. As compared to current plant and base rate levels reflected in existing rates, UGI Gas projects an increase of approximately $468 million in gross plant through the Fully Projected Future Test Year ending September 30, 2027 ("FPFTY"). Accordingly, this revenue increase is essential to attract the investments necessary to operate and maintain safe, reliable and customer-focused natural gas distribution services.

II. REASONS FOR THE REQUESTED REVENUE INCREASE

Fair return on investments used to serve the public

A variety of circumstances will prevent UGI Gas from earning a fair rate of return at present rate levels. As reflected in UGI Gas Exhibit A (Fully Projected), the Company's operations are under present rates projected to produce an overall return on rate base of 6.55%, which equates to a return on common equity of only 7.70% for the FPFTY. As explained by UGI Gas witness Dylan W. D'Ascendis (UGI Gas Statement No. 8), those returns are not adequate based on applicable financial analysis and the risks confronted by UGI Gas. Unless UGI Gas receives the requested rate relief, its returns will decline. This will jeopardize its ability to attract capital necessary to support investments that ensure system reliability, safety, and quality customer service.

Support for Commission-approved infrastructure replacement programs

Significant capital investment in the distribution system is the primary driver for the requested rate relief in this proceeding. Upgrading and modernizing the distribution system facilitates the provision of safe, reliable, and reasonable service to customers. Accordingly, the Company is replacing its non-contemporary infrastructure at an accelerated pace, as described in the Company's Commission-approved Third Long Term Infrastructure Improvement Plan ("Third LTIIP").[1] Through the Third LTIIP, the Company will invest approximately $468 million through the FPFTY, which will strengthen and modernize distribution facilities, in part through its Commission-approved programmatic elimination of cast iron, bare steel and priority plastic mains on its system. In addition, UGI Gas continues to make system investments to serve new and existing residential and commercial customers, convert existing residences and commercial locations to natural gas (from other fuel sources), and improve critical information systems, as discussed in the Company's testimony.

Enhanced information technology systems, business processes and personnel effectiveness

The Company's IT projects involve hardware and software applications that will improve the Company's processes and methods across a wide range of operational needs, such as capital project management, cybersecurity, customer communications, and billing as well as other areas. Specifically, the Company is completing implementation of its Field Services Management ("FSM"). The FSM project will enhance the efficiency of planning, scheduling, dispatching, and completing field work, integrating directly with UGI Gas's existing UNITE technologies.

[1] *See Petition of UGI Utilities, Inc. – Gas Division for Approval of its Third Long Term Infrastructure Improvement Plan*, Docket No. P-2024-3050769 (Opinion and Order entered December 5, 2024).

Operating expense increases

Since its last case, UGI Gas has diligently managed its operating expenses to mitigate the impact of increases on customers. However, this case does include a minor increase to operating and maintenance expense, as well as increases in other expenses incurred by the utility, such as the assessments from the Commission.

UGI Gas has made major strides toward modernizing its operations and has seen stable customer growth over time. However, the Company's continued significant investment in modernizing its system, certain cost increases, and changes in per customer usage, which are described in the Company's testimony, will produce an inadequate rate of return on investments at present rates.

Rate Design Methodology

A portion of the rate increase is a result of anticipated customer usage reductions under normal weather reflective of recent warming trends. The Company has historically used a 15 year normal weather calculation to support its rate design for distribution rates and will now reflect a 10 year normal weather calculation. This change will impact both its distribution rates and the WNA. These changes are described in the testimony of UGI Gas witness John D. Taylor (UGI Gas Statement No. 11).

The identified initiatives and efforts, as described by the Company's witnesses, demonstrate UGI Gas's commitment to providing safe, reliable, and quality distribution service to its customers. The Company believes that its management efforts, system investments, and continued provision of safe and reliable service at reasonable rates, as detailed by the witnesses' testimony submitted in this case, all support the Company's requested rate of return, including its request for 10.75% return on common equity as discussed in the Direct Testimony of Dylan W. D'Ascendis (UGI Gas Statement No. 8).

III. OVERVIEW OF FILING

Included with UGI Gas's filing are all of the supporting data required by the Commission's regulations. This information provides data for an historic test year ended September 30, 2025 ("HTY"), a future test year ("FTY") ending September 30, 2026, and a FPFTY. In accordance with permitted ratemaking procedures, the Company has elected to use the FPFTY as the basis for its proposed revenue change.

UGI Gas has followed Commission ratemaking practice in preparing its claims for plant additions, rate base, operating revenues and operating expenses.

Capital Planning. The total budgeted plant additions for the FPFTY are made up of four main categories: (1) replacement and betterment infrastructure; (2) new business; (3) IT; and (4) other capital spending. The Direct Testimony of UGI Gas witness Vicky A. Schappell provides support for the Company's FPFTY plant additions.

Rate Base. Rate base was determined based on depreciated original cost values for projected plant in service at the end of the FTY and FPFTY, respectively. The Company's rate base claim also includes reasonable estimates for materials and supplies inventory and cash working capital, as well as standard deductions for accumulated depreciation, accumulated deferred income taxes, and customer deposits. The Company's rate base claim is shown in summary form in Schedule C-1 to Exhibit A (Fully Projected) and is principally supported by the Direct Testimony of Amy M. Keller (UGI Gas Statement No. 5).

Operating Revenues. UGI Gas's *pro forma* test year operating revenues were derived from its fiscal year 2025 operating budget. As explained in the testimony of Sherry A. Epler (UGI Gas Statement No. 10) and other witnesses, operating revenues were annualized, normalized, and

otherwise adjusted in accordance with standard ratemaking practice, as detailed in Schedules D-5 and D-5A of Exhibit A (Fully Projected) and the exhibits attached to Ms. Epler's testimony.

Operating Expenses. UGI Gas's *pro forma* test year operating expenses were derived from its fiscal year 2025 operating budget. As explained in the testimony of Tracy A. Hazenstab (UGI Gas Statement No. 2) and other witnesses, certain operating expenses were annualized, normalized, and otherwise adjusted in accordance with standard ratemaking practice, as detailed in Section D of Exhibit A (Fully Projected). UGI Gas's claim for depreciation and amortization expense is supported by Exhibit C (Fully Projected) to the filing, and exhibits developed and supported by John F. Wiedmayer of Gannett Fleming Valuation & Rate Consultants, LLC (UGI Gas Statement No. 6). Mr. Wiedmayer's calculations are based on the straight-line, remaining life method previously approved for UGI Gas's operations by the Commission.

Income Taxes. UGI Gas's income tax expense was calculated using procedures previously accepted by the Commission. The Company's filing reflects the normalization of book-tax timing differences related to the use of accelerated depreciation for federal tax purposes and for the Company's repairs allowance deductions. As it relates to accelerated depreciation for state tax purposes, the Company uses flow-through for rate making purposes. The Company's tax claims are described and supported in the Direct Testimony of Darin T. Espigh (UGI Gas Statement No. 9).

Rate Design, Revenue Allocation and Class Cost of Service. UGI Gas is proposing to allocate the revenue requirement to all customer classes based on the results of a consolidated class cost of service study. The Company's proposed revenue allocation will move all rate classes substantially toward the overall system average rate of return. UGI Gas is also proposing to renew its WNA pilot for another five year period with certain modifications. Additional details regarding

the Company's cost of service study, revenue allocation, and WNA proposal are provided in the Direct Testimony of John D. Taylor (UGI Gas Statement No. 11).

Other Tariff Changes. In this filing, the Company proposes relatively few changes to the terms and conditions approved by the Commission in the Company's most recent completed rate case. A list of all proposed changes is identified in the Company's proposed tariff, Supplement No. 63 to UGI Gas Tariff – Pa. P.U.C. Nos. 7 and 7S.

Customer Assistance and Affordability. The Company will contribute $1,000,000 annually for fiscal years 2027 to 2029 to its Operation Share Energy Fund. This contribution will assist low- and moderate-income customers with income levels up to 250% of the Federal Poverty Income Guidelines. Through Operation Share, energy assistance grants of up to $600 are provided to eligible customers who require assistance paying their heating bills. This funding for Operation Share is a donation from UGI that is not recoverable from or included in rates.

IV. CONCLUSION

The proposed revenue increase is the minimum increase necessary for UGI Gas to continue providing safe and reliable service, to maintain the integrity of its financial ratings, to attract additional capital on reasonable terms, and to have a reasonable opportunity to earn a fair rate of return on property that is used and useful in providing natural gas service to the public within its service territory. The proposals contained in this filing will provide significant benefits to all stakeholders. Moreover, the Company's proposed revenue allocation and rate design are just and reasonable and non-discriminatory, as are the proposed changes made to the Company's general terms and conditions of service. Therefore, the rates, rules, and terms and conditions of service set forth in Supplement No. 63 to UGI Gas Tariff – Pa. P.U.C. Nos. 7 and 7S should be permitted to become effective as filed.

PLAIN LANGUAGE - STATEMENT OF REASONS

UGI UTILITIES, INC. – GAS DIVISION
2026 Base Rate Case
Docket No. R-2025-3059523

PLAIN LANGUAGE STATEMENT OF REASONS

UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company") has asked the Pennsylvania Public Utility Commission ("PUC" or the "Commission") to increase UGI Gas's annual jurisdictional revenues by $99.368 million, or by 8.05%. The percentage rate increase will vary by rate class. The main reasons for this proceeding are:

- UGI Gas maintains investments in gas plant needed to provide continued safe and reliable service with plans to spend approximately $468 million in gross plant through 2027.

- Without substantial rate relief, UGI Gas will not be able to earn a fair return on its investment used to serve the public and, if not addressed, this could adversely affect the integrity of its financial ratings, increasing the cost of future safety work, potentially impacting its ability to provide safe and reliable service to its customers.

- UGI Gas proposes to extend its Weather Normalization Adjustment ("WNA") pilot for an additional 5 year period with certain modifications, which will continue to stabilize the impacts of weather variances during the heating season and permit the Company a reasonable opportunity to recover the costs of providing natural gas service for its customers.

UGI Gas designed the proposed rates for each customer class to recover its total required revenue while considering affordability impacts to customers. In allocating the revenue increase to the residential and non-residential customer classes, UGI Gas was guided by detailed studies of each rate class's cost of service. UGI Gas also considered and balanced other principles of rate design consistent with the Commission's approach to ratemaking. Furthermore, the Company will contribute $1,000,000 annually for fiscal

years 2027 to 2029 to its Operation Share program. This donation will assist qualified customers in receiving up to $600 in assistance in paying their energy bills.

Along with its rate increase, UGI Gas has filed all of the supporting data required by the Commission's regulations, as well as the written statements of twelve witnesses and numerous exhibits prepared by those witnesses. The data, testimony, and exhibits submitted by UGI Gas comply with the Commission's filing requirements. The proposed distribution revenue increase is the minimum increase necessary for UGI Gas to continue providing safe and reliable service to the public within its service territory.

SECTION 53.52 - FILING REQUIREMENTS

UGI UTILITIES, INC. – GAS DIVISION

Proposed Changes to UGI Utilities, Inc. – Gas Division, Supplement No. 63 to Original Tariff Nos. 7 and 7S

Information furnished with the filing of rate changes under
52 Pa. Code, Section 53.52

(a) Applicable to changes in terms and conditions of service.

(a)(1) The specific reason for each change.

The Company has provided a Statement of Reasons describing the necessity for the changes proposed in this filing.

(a)(2) The total number of customers served by the utility.

706,232 customers as of September 30, 2025.

(a)(3) A calculation of the number of customers, by tariff subdivision, whose bills will be affected by the change.

R/RT	634,252
N/NT	69,690
DS	1,305
LFD	638
XD	37
IS	292

(a)(4) The effect of the change on the utility's customers.

The specific effect by class is shown in UGI Gas Exhibit E – Proof of Revenue.

(a)(5) The effect, whether direct or indirect, of the proposed change on the utility's revenue and expenses.

The Company's proposal will change revenue and expenses, as shown on UGI Gas Exhibit A (Fully Projected), Schedule A-1. Individual adjustments to revenues and expenses are described in testimony and exhibits supporting the filing.

(a)(6) The effect of the change on the service rendered by the utility.

The filing will allow the Company to continue to provide safe and reliable service to its customers while maintaining high levels of customer satisfaction.

(a)(7) A list of factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement as to why these factors were chosen and the relative importance of each. This subsection does not apply to a portion of the tariff change seeking a general rate increase as defined in 66 Pa.C.S. Section 1308 (relating to voluntary changes in rates).

The Company has provided a Statement of Reasons describing the numerous factors considered in its determination to make the filing. Please also see the Direct Testimony of Hans G. Bell (UGI Gas Statement No. 1) for a summary of those factors.

(a)(8) Studies undertaken by the utility in order to draft its proposed change. This paragraph does not apply to a portion of the tariff change seeking a general rate increase as defined in 66 Pa.C.S. Section 1308.

Not applicable.

(a)(9) Customer polls taken and other documents, which indicate customer acceptance and desire for the proposed change.

The Company has not undertaken any polls.

(a)(10) Plans the utility has for introducing or implementing the change with respect to its customers.

The Company will notify customers of the proposed changes, including the modifications proposed to the existing Weather Normalization Adjustment alternative ratemaking mechanism by a bill insert using the form of notices specified by the Commission at 52 Pa. Code 53.45. A copy of the notice will be provided together with an affidavit of compliance with the notice requirements. In addition, the Company will issue a press release and paid advertisements on the date of filing as well as posting notices at the Company's headquarters and website at https://www.ugi.com/notices/.

(a)(11) F.C.C. or FERC or Commission orders or rulings applicable to the filings.

No F.C.C., FERC or Commission orders or rulings apply to this filing.

(b) Applicable to changes in rates.

(b)(1) Specific reason for each change.

The Company has provided a Statement of Reasons describing the necessity of this filing. In addition, please see the Direct Testimony of Hans G. Bell, UGI Gas Statement No. 1, Sherry A. Epler, UGI Gas Statement No. 10, and John D. Taylor, UGI Gas Statement No. 11.

(b)(2) Utility's operating income statement ending not more than 120 days prior to filing date – historic year.

Please refer to UGI Gas Exhibit A (Historic), Schedule B-2. For future test year and fully projected future test year operating income statements, please refer to UGI Gas Exhibit A (Future), Schedule B-2, and UGI Gas Exhibit A (Fully Projected), Schedule B-2.

(b)(3) Number of customers, by tariff subdivision, whose bills will be increased.

Tariff Rate	Customers
R/RT	634,252
N/NT	69,690
DS	1,305
LFD	638

(b)(4) Total increases, in dollars, by tariff subdivision, projected to an annual basis.

Please refer to UGI Gas Exhibit E – Proof of Revenue.

(b)(5) Number of customers, by tariff subdivision, whose bills will be decreased.

Tariff Rate	Customers
XD	37
IS	292

(b)(6) Total decreases, in dollars, by tariff subdivision, projected to an annual basis.

Please refer to UGI Gas Exhibit E – Proof of Revenue.

(c) Applicable to changes where increase for any tariff subdivision exceeds 3% of utility's operating revenue OR bills of more than 5% of customers will increase.

(c)(1) Rate of return for historic year and anticipated for future year.

Please refer to UGI Gas Exhibit A (Historic), Schedule A-1, UGI Gas Exhibit A (Future), Schedule A-1, and UGI Gas Exhibit A (Fully Projected), Schedule A-1.

(c)(2) Detailed balance sheet at the end of the historic year.

For the end of the historic year balance sheet, please refer to UGI Gas Exhibit A (Historic), Schedule B-1.

(c)(3) Summary, by detailed plant accounts, of book value of property of utility at end of historic year.

Please refer to UGI Gas Exhibit A (Historic), Schedule C-2, for the original cost book value of the property of the utility for the historic year.

(c)(4) Respective amount of the depreciation reserve applicable to each detailed plant account.

Please refer to UGI Gas Exhibit A (Historic), Schedule C-3, for the historic year depreciation reserve as of year-end, UGI Gas Exhibit A (Future), Schedule C-3, for the future test year depreciation reserve as of year-end, and UGI Gas Exhibit A (Fully Projected), Schedule C-3, for the fully projected future test year depreciation reserve as of year-end.

(c)(5) Statement of operating income, setting forth the operating revenues and expenses by detailed accounts – historic year.

Please refer to UGI Gas Exhibit A (Historic), Schedule B-2, for the historic year operating revenue and expenses.

(c)(6) Description of any major changes in the operating or financial condition of the utility occurring between the date of the balance sheet at end of the historic year and filing date.

None.

SECTION 53.62 - FILING REQUIREMENTS

UGI UTILITIES, INC. – GAS DIVISION

Proposed Supplement No. 63 to UGI Gas Tariff Nos. 7 and 7S

Information furnished pursuant to 52 Pa. Code, Section 53.62

§ 53.62. Additional information to be filed by gas utilities with gross annual intrastate operating revenues in excess of $40 million seeking a change in base rates.

In addition to information otherwise required to be filed by a jurisdictional natural gas distributor with gross intrastate annual operating revenues in excess of $40 million seeking a change in its base rates, each gas utility shall also file updates to the information required by § 53.64(c) (relating to filing requirements for natural gas distributors with gross intrastate annual operating revenues in excess of $40 million). In the case of a gas utility purchasing gas as defined at § 53.61(a) (relating to purpose) from an affiliated interest, it shall also file updates to the information required at § 53.65 (relating to special provisions relating to natural gas distributors with gross intrastate annual operating revenues in excess of $40 million with affiliated interests). These updates shall be made at the time the base rate case under 66 Pa.C.S. § 1308 (relating to voluntary changes in rates) is originally filed. Deficiencies in filing will be treated as set forth at § 53.51(c) (relating to general).

RESPONSE:

Please see the response to III-E-30.

SECTION 53.53 - VALUATION

I-A-1

Request:

Provide a corporate history (include the dates of original incorporation, subsequent mergers and/or acquisitions). Indicate all counties and cities and other governmental subdivisions to which service is provided (including service areas outside the state), and the total population in the area served.

Response:

UGI Utilities, Inc. began its modern corporate existence as part of a consolidation of a number of predecessor natural gas and electric public utilities into The United Gas Improvement Company, as approved by the Pennsylvania Public Utility Commission ("Commission") on June 16, 1952 at Docket No. A.78264. In 1968, The United Gas Improvement Company changed its name to UGI Corporation. In 1971, UGI Corporation's gas operations were consolidated into a gas division ("UGI Gas") located in Reading, Pennsylvania. In January 2019, UGI Gas relocated its headquarters to Denver, Pennsylvania. UGI Corporation's electric operations ("UGI Electric") operates in a separate electric division headquartered in northeastern Pennsylvania. In 1992, as part of a further corporate restructuring, UGI Corporation changed its name to UGI Utilities, and became a wholly-owned subsidiary of a new holding company which adopted the name UGI Corporation.

UGI Utilities, Inc. increased its gas operations in 2006 and 2008 with the incorporation of two subsidiary gas utilities – UGI Penn Natural Gas, Inc. ("UGI PNG") and UGI Central Penn Gas, Inc. ("UGI CPG"), respectively. UGI PNG began its operations following the close, on August 24, 2006, of UGI Corporation's purchase of the natural gas distribution assets from the former PG Energy Division of Southern Union Company, as authorized by a Commission Order entered on August 18, 2006, at Docket No. A-120011F200. UGI CPG, formerly PPL Gas Utilities Corporation ("PPL Gas"), was acquired by UGI Utilities effective October 1, 2008, as authorized by a Commission Order entered on August 21, 2008, at Docket Nos. A-2008-2034045, et al. Prior to that acquisition, PPL Gas itself was the result of several mergers and acquisitions authorized by the Commission. See, e.g., Joint application of PPL Gas Utilities Corp., North Penn Gas Company, and PFG Gas, Inc., Docket Nos. A-125127, et al. (Order entered July 12, 2004); Application of Allied Gas Company, et al., Docket No. A-120650F002 (order approving merger and restructuring entered January 27, 1995).

I-A-1 (Continued)

In accordance with authority granted in a Commission Opinion and Order entered on September 20, 2018 at Docket Nos. A-2018-3000381 et seq., UGI PNG and UGI CPG merged into UGI Gas effective October 1, 2018. The former service territories of UGI PNG, UGI Gas and UGI CPG were organized into the North, South and Central Rate Districts of UGI Gas, respectively. By a Commission Opinion and Order entered on October 4, 2019 at Docket Nos. R-2018-3006814 et seq., the Commission approved UGI Gas's proposal to eliminate the Rate District structure and move most rate classes to uniform distribution rates for a single UGI Gas service territory encompassing the aggregate service territory of the former North, South, and Central Rate Districts.

The list of communities served by UGI Gas is set forth in its tariff provided in this rate filing and which is available on the Commission's website at: https://www.puc.pa.gov/filing-resources/tariffs/natural-gas-tariffs/. UGI Gas provides natural gas distribution service to approximately 706,000 residential, commercial and industrial natural gas customers located in 46 of Pennsylvania's total 67 counties and spanning more than 700 municipalities. The populations for each of the municipalities served, based on U.S. census data, is available at the Penn State Pennsylvania State Data Center website at: https://pasdc.hbg.psu.edu/data/resources/2021-county-population-estimates

UGI Gas also provides natural gas service to approximately 500 customers in one Maryland County under authority granted by the Maryland Public Service Commission.

UGI Electric can trace its origins to the 1925 acquisition by UGI of the American Gas Co., which owned the Luzerne County Gas and Electric Corporation. In 1953, as authorized by a Certificate of Public Convenience issued by the Commission on June 16, 1952, at Docket No. A.78264, all of UGI's Pennsylvania public utility subsidiaries, including the Luzerne County Gas and Electric Company, were merged into UGI. In 1967, UGI acquired the Harveys Lake Light Company, whose 113 square mile service territory, along with the electric service territory of the former Luzerne County Gas and Electric Corporation, comprise UGI Electric's current service territory. UGI Electric provides electric distribution service to approximately 63,000 residential, commercial, and industrial electric customers in Luzerne and Wyoming Counties and 35 municipalities.

Prepared by or under the supervision of: Hans G. Bell

I-A-2

Request:

Provide a schedule showing the measures of value and the rates of return at the original cost and trended original cost measures of value at the spot, three-year and five-year average price levels. All claims made on this exhibit should be cross-referenced to appropriate exhibits. Provide a schedule similar to the one listed above, reflecting respondent's final claim in its previous rate case.

Response:

The Company's claim is based on original cost measures of value. Since Pennsylvania state law mandates the use of original cost for ratemaking, a trended cost study was not prepared.

Refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule A-1.

Refer to Attachment I-A-2 for similar schedules from the previous rate case.

I-A-3

Request:

Provide a description of the depreciation methods utilized in calculating annual depreciation amounts and depreciation reserves, together with a discussion of all factors which were considered in arriving at estimates of service life and dispersion by account. Provide dates of all field inspections and facilities visited.

Response:

The depreciation methods used in calculating annual and accrued depreciation and the factors considered in service life estimation are discussed in Exhibit C (Future) in “Part II. Methods Used in the Determination of Annual and Accrued Depreciation” and Part III. Service Life Considerations”. There have been no changes in the survivor curve estimates nor the method of depreciation. These are the same survivor curve estimates and method of depreciation as filed in the company’s most recent service life study report to the Pennsylvania Public Utility Commission, Docket No. M-2023-3041044.

Field trips and facilities visited are presented in Exhibit C (Future) in Part III in the section titled "Field Trips," beginning on page III-2.

Prepared by or under the supervision of: John F. Wiedmayer

I-A-4

Request:

Set forth, in exhibit form, charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis is utilized.

a. If any utility plant was excluded from the measures of value because it was deemed not to be "used and useful" in the public service, supply a detailed description of each item of property.

b. Provide the surviving original cost at test year end by vintage by account and include applicable depreciation reserves and annuities.

   (i) These calculations should be provided for plant in service as well as other categories of plant, including, but not limited, to contributions in aid of construction, customers' advances for construction, and anticipated retirements associated with any construction work in progress claims (if applicable).

Response:

Charts depicting the original and estimated survivor curves and a tabular presentation of the original life table plotted on the chart for each account where the retirement rate method of analysis was utilized is presented in Exhibit C (Future) in Part VI of the report.

a. No utility plant recorded in Account 101, Gas plant in Service, was excluded from the measures of value. However, gas plant owned by UGI Utilities, Inc. that serve approximately 500 Maryland customers in Frederick County near the Pennsylvania-Maryland state border were excluded from this filing. The depreciation reserve and depreciation associated with Maryland gas plant also were excluded from this filing.

b. The surviving original cost at the end of the historical year September 30, 2025, by vintage by account and the applicable depreciation reserve for gas plant are presented in Exhibit C (Historic). The tabulations are presented in Part III of the report in the section titled "Depreciation Calculations."

I-A-4 (Continued)

The surviving original cost at the end of the future test year September 30, 2026, by vintage by account and the applicable depreciation reserve for gas plant are presented in Exhibit C (Future). The tabulations are presented in Part VII of the report in the section titled "Depreciation Calculations."

The surviving original cost at the end of the fully projected future test year September 30, 2027, by vintage by account and the applicable depreciation reserve for gas plant are presented in Exhibit C (Fully Projected). The tabulations are presented in Part III of the report in the section titled "Depreciation Calculations."

Prepared by or under the supervision of: John F. Wiedmayer

I-A-5

Request:

Provide a comparison of respondent's calculated depreciation reserve v. book reserve by account at the end of the test year.

Response:

Comparisons of the calculated accrued depreciation v. the book reserve at the end of each test year are set forth in Attachment I-A-5.

Prepared by or under the supervision of: John F. Wiedmayer

I-A-6

Request:

Supply a schedule by account and depreciable group showing the survivor curve and annual accrual rate estimated to be appropriate:

a. For the purposes of this filing.

b. For the purposes of the most recent rate increase filing prior to the current proceedings.

(i) Supply a comprehensive statement of any changes made in method of depreciation and in the selection of average service lives and dispersion.

Response:

a. Refer to Table 1 in Exhibit C (Historic), Table 1 in Exhibit C (Future) and Table 1 in Exhibit C (Fully Projected) for schedules showing the estimated survivor curves and accrual rates by account and depreciable group.

b. Refer to Attachment I-A-6 for the survivor curves and annual accrual rates estimated to be appropriate in the most recent prior rate filing. UGI's most recent prior base rate case was filed in January 27, 2025 at Docket No. R-2024-3052716.

(i) The depreciation methods and procedures used in this filing are the same as those used in the previous filing.

The survivor curve estimates are based on a service life study as described in Part III of Exhibit C (Future). The service life study was updated to include company data through fiscal-year end 2022, i.e., September 30, 2022. The company's most recent 5-year service life study report was filed with the Pennsylvania Public Utility Commission on May 30, 2023. The service lives and survivor curves approved in that report were used to calculate depreciation rates as of September 30, 2025, September 30, 2026 and September 30, 2027 in the current proceeding. The charts and life tables supporting the updated service life study are presented in Part VI of Exhibit C (Future).

I-A-6 (Continued)

The Company updates its service life study every five years and submits a report to the Pennsylvania Public Utility Commission (PA PUC) in accordance with 52 Pa. Code Chapter 73.5 and 73.6. Additionally, UGI submits Annual Depreciation Reports each year in accordance with 52 Pa. Code Chapter 73.3 and 73.4.

The purpose of the regulations set forth in 52 Pa. Code Chapter 73 is to establish uniform and industry-wide reporting requirements designed to improve the Commission's ability to monitor on a regular basis the depreciation and capital planning of utilities subject to Commission jurisdiction.

Prepared by or under the supervision of: John F. Wiedmayer

I-A-7

Request:

Provide a table, showing the cumulative depreciated original cost by year of installation for utility plant in service at the end of the test year (depreciable plant only) as claimed in the measures of value, in the following form:

a. Year installed.

b. Original cost--the total surviving cost associated with each installation year from all plant accounts.

c. Calculated depreciation reserve--the calculated depreciation reserve associated with each installation year from all plant accounts.

d. Depreciated original cost--(Column B minus Column C).

e. Total--cumulation year by year of the figures from Column D.

f. Column E divided by the total of the figure in Column D.

Response:

The information is provided in Exhibit C (Fully Projected) in Part III for the fully projected test year ended September 30, 2027; in Exhibit C (Future) in Part V for the future test year ended September 30, 2026; and in Exhibit C (Historic) in Part III for the historic test year ended September 30, 2025. The information is set forth in the section titled “Cumulative Depreciated Original Cost.”

Prepared by or under the supervision of: John F. Wiedmayer

I-A-8

Request:

Provide a description of the trending methodology which was utilized. Identify all indexes which were used (include all backup workpapers) and the reasons particular indexes were chosen. If indexes were spliced, indicate which years were utilized in any splices. If indexes were composited, show all supporting calculations. Include any analysis made to "test" the applicability of any indexes.

a. Supply a comprehensive statement of any changes made in the selection of trend factors or in the methodology used in the current rate filing compared to the most recent previous rate filing.

Response:

Trended Original Cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

Prepared by or under the supervision of: John F. Wiedmayer

I-A-9

Request:

Provide an exhibit indicating the spot trended original cost at test year end by vintage by account and include applicable depreciation reserves. Include totals by account for all other trended measures of value.

Response:

Trended Original Cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

Prepared by or under the supervision of: John F. Wiedmayer

I-A-10

Request:

Supply an exhibit indicating the percentages of undepreciated original cost which were trended with the following indexes:

a. Boeckh
b. Handy-Whitman
c. Indexes developed from suppliers' prices.
d. Indexes developed from company records and company price histories.
e. Construction equipment.
f. Government statistical releases.

Response:

Trended Original Cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

Prepared by or under the supervision of: John F. Wiedmayer

I-A-11

Request:

Provide a table, showing the cumulative trended depreciated original cost (at the spot price level) by year of installation for utility plant in service at the end of the test year (depreciable plant only) as claimed in the measures of value, in the following form:

a. Year installed.

b. Trended original cost (at the spot price level)--the total surviving cost associated with each installation year from all plant accounts.

c. Trended calculated depreciation reserve--the calculated depreciation reserve associated with each installation year from all plant accounts.

d. Depreciated trended original cost--(Column B minus Column C).

e. Total--cumulation year by year of the figures from Column D.

f. Column E divided by the total of the figures in Column D.

Response:

Trended Original Cost is omitted in accordance with 52 Pa. Code Section 53.51(c).

Prepared by or under the supervision of: John F. Wiedmayer

I-A-12

Request:

If a claim is made for construction work in progress, include, in the form of an exhibit, the summary page from all work orders, amount expended at the end of the test year and anticipated in-service dates. Indicate if any of the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion date and estimated total amounts to be spent on each project.

[These exhibits should be updated at the conclusion of these proceedings.]

Response:

No claim is being made for construction work in progress.

Prepared by or under the supervision of: Amy M. Keller

I-A-13

Request:

If a claim is made for non-revenue producing construction work in progress, include, in the form of an exhibit, the summary page from all work orders, amount expended at the end of the test year and anticipated in-service dates. Indicate if any of the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion date and estimated total amounts to be spent on each project.

[These exhibits should be updated at the conclusion of these proceedings.]

Response:

No claim is being made for non-revenue producing construction work in progress.

Prepared by or under the supervision of: Amy M. Keller

I-A-14

Request:

If a claim is made for plant held for future use, supply the following

a. A brief description of the plant or land site and its cost.

b. Expected date of use for each item claimed.

c. Explanation as to why it is necessary to acquire each item in advance of its date of use.

d. Date when each item was acquired.

e. Date when each item was placed in plant held for future use.

Response:

No claim is being made for plant held for future use.

Prepared by or under the supervision of: Amy M. Keller

I-A-15

Request:

If materials and supplies comprise part of the cash working capital claim, attach an exhibit showing the actual book balances for materials and supplies by month for the thirteen months prior to the end of the test year. Explain any abrupt changes in monthly balances.

[Explain method of determining claim if other than that described above.]

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedule C-8.

Prepared by or under the supervision of: Amy M. Keller

I-A-16

Request:

If fuel stocks comprise part of the cash working capital claim, provide an exhibit showing the actual book balances (quantity and price) for the fuel inventories by type of fuel for the thirteen months prior to the end of the test year by location, station, etc.

[Explain the method of determining claim if other than that described above.]

Response:

Please refer to Attachment SDR-RR-45. The fuel represents gas inventory stored underground.

Prepared by or under the supervision of: Amy M. Keller

I-A-17

Request:

Regardless of whether a claim for net negative or positive salvage is made, attach an exhibit showing gross salvage, cost of removal, and net salvage for the test year and four previous years by account.

Response:

The information related to the historic test year is presented in Part IV of Exhibit C (Historic) in the section titled “Experienced Net Salvage.” The information related to the future test year is set forth in Part VIII of Exhibit C (Future) in the section titled “Experienced and Estimated Net Salvage.” The information related to the fully projected test year is set forth in Part IV of Exhibit C (Fully Projected) in the section titled “Experienced and Estimated Net Salvage.”

Prepared by or under the supervision of: John F. Wiedmayer

I-A-18

Request:

Explain in detail by statement or exhibit the appropriateness of claiming any additional items, not previously mentioned, in the measures of value.

Response:

All measures of value have been fully disclosed in UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedules A-1 and C-1 through C-8, as well as the Direct Testimony of Vivian K. Ressler, UGI Gas Statement No. 4 and Amy M. Keller, UGI Gas Statement No. 5.

Prepared by or under the supervision of: Amy M. Keller

I-C-1

Request:

Provide, with respect to the scope of operations of the utility, a description of all property, including an explanation of the system's operation, and all plans for any significant future expansion, modification, or other alteration of facilities.

This description should include, but not be limited to the following:

a. If respondent has various gas service areas, indicate if they are integrated, such that the gas supply is available to all customers.

b. Provide all pertinent data regarding company policy related to the addition of new consumers in the company's service area.

c. Explain how respondent obtains its gas supply, as follows:

   (i) Explain how respondent stores or manufactures gas; if applicable.
   (ii) State whether the company has peak shaving facilities.
   (iii) Provide details of coal-gasification programs, if any.
   (iv) Describe the potential for emergency purchases of gas.
   (v) Provide the amount of gas in MCF supplied by various suppliers in the test year (include a copy of all contracts).
   (vi) Provide the amount of gas in MCF supplied from company-owned wells during the test year.

d. Provide plans for future gas supply, as follows:

   (i) Supply details of anticipated gas supply from respondent's near-term development of gas wells, if any.

   (ii) Provide gas supply agreements and well development ventures and identify the parties thereto.

e. Indicate any anticipated curtailments and explain the reasons for the curtailments.

f. Provide current data on any Federal Power Commission action or programs that may affect, or tend to affect, the natural gas supply to the gas utility.

I-C-1 (Continued)

Response:

a. The UGI Gas system consists of approximately 12,000 miles of distribution main and approximately 300 miles of transmission lines served primarily from over 85 city gate stations or interconnections with interstate pipelines. The distribution system served approximately 694,000 customers as of September 30, 2025. Ninety percent of the customers are residential.

UGI Gas distributes natural gas to territories as listed in its Tariff.

UGI Gas distribution systems are fed directly by nine interstate pipelines, Tennessee Gas Pipeline Company ("Tennessee"), Columbia Gas Transmission ("Columbia"), Transcontinental Gas Pipe Line Company, LLC. ("Transco"), Texas Eastern Transmission, LP (“Texas Eastern”), UGI Sunbury, LLC (“Sunbury”), UGI Mt. Bethel Pipeline Company, LLC (“Mt. Bethel”), Eastern Gas Transmission and Storage ("EGTS"), Adelphia Gateway ("Adelphia"), and UGI Storage Company (“UGI Storage”). Some distribution systems are fed by multiple pipelines and others are isolated feeds.

b. UGI Gas pursues the addition of new and expanded load in the residential, commercial, and industrial market areas. UGI Gas follows its tariff guidelines in obtaining these additions.

UGI Gas’ tariff guidelines define the rate schedule the customer can utilize, the investment UGI Gas makes to obtain the customer, and all other aspects of the Company’s business.

Beyond the tariff provisions, the other controlling factors in obtaining new load would be the availability from interstate pipelines, gas supply, and capacity on the UGI Gas distribution system.

All customer additions are administered through the Marketing Department. All new customer requests are in the form of a gas application. Once the application has been reviewed for distribution system adequacy, credit and cost, an approval letter is sent to the customer. If a new meter, service or main is required, the work is also scheduled at the time of approval.

I-C-1 (Continued)

c. (i) UGI Gas does not manufacture gas. UGI Gas does not own gas storage facilities.

(ii) UGI Gas does not own peak shaving facilities.

(iii) UGI Gas does not own coal gasification programs.

(iv) UGI Gas does not anticipate the purchase of emergency gas.

(v) Please see Attachment III-E-36 which provides the purchases made from various producers from October 2024 through September 2025. The producer names have been replaced with alphabetic letters for confidentiality reasons. The purchases are typically made under the provision of a standard GISB (Gas Industry Standards Board) or NAESB (North American Energy Standards Board) contract. Most contracts have special provisions adding language that may not have been contemplated when the GISB or NAESB contracts were first deployed.

(vi) Not applicable. UGI Gas does not own any gas wells.

d. (i) UGI Gas does not anticipate any development of company-owned gas wells.

(ii) UGI Gas does not have well development ventures. UGI Gas' gas supply arrangements are detailed in its annual Purchased Gas Cost filings, the most recent of which was docketed at R-2025-3054938.

e. UGI Gas does not anticipate curtailments for the system.

f. UGI Gas monitors FERC activity and evaluates pending impacts to rate payers. The FERC proceedings in which UGI Gas intervened are provided in the 1307(f) Purchased Gas Cost filings for 2025 in Book 1, Section 3 at Docket No. R-2025-3054938.

Prepared by or under the supervision of: Jill E. Walter

I-C-2

Request:

Provide an overall system map, including and labeling all measuring and regulating stations, storage facilities, production facilities, transmission and distribution mains, by size, and all interconnections with other utilities and pipelines.

Response:

In light of the security concerns reflected in the Commission's Workplace Security Survey at Docket No. M-00021590, UGI Gas has not included system maps in this filing.

Prepared by or under the supervision of: Jill E. Walter

SECTION 53.53 – RATE OF RETURN

II-A-1

Request:

Provide capitalization and capitalization ratios for the last five-year period and projected through the next two years. (With short-term debt and without short-term debt.) (Company, Parent and System (consolidated)).

a. Provide year-end interest coverages before and after taxes for the last three years and at latest date. (Indenture and SEC Bases.) (Company, Parent and System (consolidated)).

b. Provide year-end preferred stock dividend coverages for last three years and at latest date (Charter and SEC bases).

Response:

Please see Attachment II-A-1 for capitalization and capitalization ratios.

For interest coverage ratios, please see the responses to II-A-7 (for Parent, UGI Corporation) and SDR-RR-23 (for Company, UGI Utilities, Inc.).

Prepared by or under the supervision of: Vivian K. Ressler

Pre-tax funded debt interest coverage	3.7	3.5	3.1	3.0	2.9
Post-tax funded debt interest coverage	3.0	3.0	2.7	2.6	2.8
Market price / Book value ratio	1.6	1.1	1.1	1.2	1.5

[(1)] Reportable segments' EBIT represents an aggregate of reportable operating segment level Earnings Before Interest and Taxes ("EBIT") as determined in accordance with U.S. generally accepted accounting principles ("GAAP").

[(2)] Management uses “adjusted net income attributable to UGI Corporation” and "adjusted diluted earnings per share," both of which are non-GAAP financial measures, when evaluating UGI's overall performance. Management believes that these non-GAAP measures provide meaningful information to investors about UGI’s performance because they eliminate the impacts of (1) gains and losses on commodity and certain foreign currency derivative instruments not associated with current-period transactions and (2) other significant discrete items that can affect the comparison of period-over-period results. Volatility in net income attributable to UGI can occur as a result of gains and losses on commodity and certain foreign currency derivative instruments not associated with current-period transactions but included in earnings in accordance with GAAP.

II-A-8

Request:

State amount of debt interest utilized for income tax calculations, and details of debt interest computations, under each of the following rate case bases:

a. Actual test year

b. Annualized test year-end

c. Proposed test year-end

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule D-33. All external debt is held at the UGI Utilities, Inc. level. For ratemaking purposes, interest expense is synchronized to the Measure of Value funded at the claimed capital structure and cost of debt.

Prepared by or under the supervision of: Darin T. Espigh

II-A-9

Request:

State amount of debt interest utilized for income tax calculations which has been allocated from the debt interest of an affiliate, and details of the allocation, under each of the following rate case bases:

a. Actual test year

b. Annualized test year-end

c. Proposed test year-end

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule D-33. All external debt is held at the UGI Utilities, Inc. level. For ratemaking purposes, interest expense is synchronized to the Measure of Value funded at the claimed capital structure and cost of debt.

Prepared by or under the supervision of: Darin T. Espigh

II-A-10

Request:

Under Section 1552 of the Internal Revenue Code and Regulations 1.1552-1 thereunder, if applicable, Parent Company, in filing a consolidated income tax return for the group, must choose one of four options by which it must allocate total income tax liability of the group to the participating members to determine each member's tax liability to the federal government. (If this interrogatory is not applicable, so state.)

a. State what option has been chosen by the group.

b. Provide, in summary form, the amount of tax liability that has been allocated to each of the participating members in the consolidated income tax return.

c. Provide a schedule, in summary form, of contributions, which were determined on the basis of separate tax return calculations, made by each of the participating members to the tax liability indicated in the consolidated group tax return. Provide total amounts of actual payments to the tax depository for the tax year, as computed on the basis of separate returns of members.

d. Provide annual income tax return for group, and if income tax return shows net operating loss, provide details of amount of net operating loss allocated to the income tax returns of each of the members of the consolidated group.

Response:

a. UGI Corporation has elected to allocate the tax liability of the consolidated group to the members in accordance with Regulation 1.1502-33(d)(2)(ii). Further, the group elects to use 100 percent as the percentage specified in Regulation 1.1502-33(d)(2)(ii)(b). This method of allocation is to be applied in conjunction with the basic allocation method provided in Regulation 1.1552-1(a)(2). UGI Corporation also elected to reflect currently the investment adjustment in earnings and profits pursuant to Regulation 1.1502-33(c)(4)(iii).

b. & c. See Attachment II-A-10.

d. See SDR-RR-55 for copies of certain pages of the 9/30/24 UGI Consolidated Federal Income Tax Return.

II-A-10 (Continued)

The tax results for the year ended 9/30/24 do not show a net operating loss. See Attachment II-A-10 for further details.

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - II-A - Rate of Return - All Utilities
Delivered on January 28, 2026

II-A-11

Request:

Provide AFUDC charged by company at test year-end and latest date, and explain method by which rate was calculated.

Response:

AFUDC totaling $3,252,575 was recorded during the historic test year. UGI Gas follows the FERC guidance for calculation of the AFUDC rate. The calculated rate for the historic test year of 4.98% was based on average construction work in process compared to short-term borrowings, long-term borrowings, and equity monthly and on an aggregated annual basis. UGI Gas is currently using the short-term debt rate for AFUDC because the average short-term borrowing balances exceeds the average construction work in process balance.

The projected short-term debt rates for the future test year (Fiscal Year 2026) and fully projected test year (Fiscal Year 2027) are 4.21% and 4.13%, respectively.

Prepared by or under the supervision of: Amy M. Keller

II-A-12

Request:

Set forth provisions of Company's and Parent's charter and indentures (if applicable) which describe coverage requirements, limits on proportions of types of capital outstanding, and restrictions on dividend payouts.

Response:

UGI Utilities, Inc. entered into an unsecured revolving credit agreement in November 2023 ("Revolving Credit Agreement") with a group of banks that provides for a loan commitment of up to $375 million. UGI Utilities, Inc. may request a $125 million increase in the amount of loan commitments under the Revolving Credit Agreement to a maximum aggregate of $500 million. Under the Revolving Credit Agreement, UGI Utilities, Inc. may borrow at various prevailing interest rates, including SOFR and the banks' prime rate, plus a margin. The margin on such borrowings ranges from 0.0% to 1.75% and is based on the credit ratings of certain indebtedness of UGI Utilities, Inc.

UGI Utilities, Inc. has various issuances of Senior Notes and Medium-Term Notes due at various times from June 2026 through November 2053. The Senior Notes and Medium-Term Notes are unsecured.

UGI Utilities, Inc. has a variable rate Term Loan with a balance of $76,562,500 as of September 30, 2025, with principal payments of $1,562,500 due quarterly and the remaining principal due July 2027. Under this Term Loan, UGI Utilities, Inc. may borrow at various prevailing market interest rates, plus an applicable margin.

The Revolving Credit Agreement, certain of the Senior Notes, and the Term Loan require UGI Utilities, Inc. not to exceed a ratio of Consolidated Debt to Consolidated Total Capital, as defined, of 0.65 to 1.00. Additionally, certain of the Senior Notes require that Consolidated Priority Debt not exceed 10% of Consolidated Total Assets.

Please refer to UGI Gas Exhibit B for a description of all other Notes, which do not have defined coverage requirements (other than that expressed above) limits on types of capital outstanding, or restrictions on dividend payouts.

Prepared by or under the supervision of: Vivian K. Ressler

II-A-13

Request:

Attach copies of the summaries of the projected 2 year's Company's budgets (revenue, expense and capital).

Response:

Please see Attachment II-A-13 for the Company's 2026 and 2027 operating budget and plan. For capital budgets, please refer to the response to II-A-5.

Prepared by or under the supervision of: Tracy A. Hazenstab

II-A-14

Request:

Describe long-term debt reacquisitions by Company and Parent as follows:

a. Reacquisitions by issue by year.

b. Total gain on reacquisitions by issue by year.

c. Accounting of gain for income tax and book purposes.

Response:

Please see the response to SDR-ROR-18.

Prepared by or under the supervision of: Vivian K. Ressler

II-A-15

Request:

Set forth amount of compensating bank balances required under each of the following rate base bases:

a. Annualized test year operations.

b. Operations under proposed rates.

Response:

Not applicable. UGI Utilities, Inc. has no compensating bank balance requirements.

Prepared by or under the supervision of: Amy M. Keller

II-A-16

Request:

Provide the following information concerning compensating bank balance requirements for actual test year:

a. Name of each bank.
b. Address of each bank.
c. Types of accounts with each bank (checking, savings, escrow, other services, etc.).
d. Average Daily Balance in each account.
e. Amount and percentage requirements for compensating bank balance at each bank.
f. Average daily compensating bank balance at each bank.
g. Documents from each bank explaining compensating bank balance requirements.
h. Interest earned on each type of account.

Response:

Not applicable. UGI Utilities, Inc. has no compensating bank balance requirements.

Prepared by or under the supervision of: Amy M. Keller

II-A-17

Request:

Provide the following information concerning bank notes payable for actual test year:

a. Line of Credit at each bank.
b. Average daily balances of notes payable to each bank, by name of bank.
c. Interest rate charged on each bank note (Prime rate, formula rate or other).
d. Purpose of each bank note (e.g., construction, fuel storage, working capital, debt retirement).
e. Prospective future need for this type of financing.

Response:

a. In November 2023, the Company entered into a five-year $375 million revolving credit facility with a consortium of banks ("2023 RCF"). The 2023 RCF is currently scheduled to expire in November 2028. Please see Attachment II-A-17 for the commitment from each bank.

b. The 2023 RCF is predominantly used to fund construction in progress and meet working capital needs and is more heavily utilized in the Fall and Winter months when inventory and receivables balances peak. The borrowings from each bank are pro rata as per their respective commitments. The average borrowing under the Company's 2023 RCF was $84.4 million for the fiscal year 2025.

c. The interest rates for the majority of borrowings under the Company's 2023 RCF are under SOFR + Applicable Margin formula. The Applicable Margin is based on public credit ratings as specified on Attachment II-A-17. The Company has two public debt ratings (Moody's and Fitch). When there is a split rating, the Moody's rating applies unless such ratings differ by two or more levels. If ratings differ by two or more levels, the applicable level will be deemed to be one level below the higher of such levels. Based on ratings at September 30, 2025, the Company's applicable margin is 0.875%.

d. The borrowings under the 2023 RCF are for working capital needs, CWIP, and general corporate purposes.

II-A-17 (Continued)

e. The 2023 RCF provides adequate liquidity for working capital needs, CWIP, and general corporate purposes and does not mature until November 2028.

Prepared by or under the supervision of: Vivian K. Ressler

UGI UTILITIES, INC. - GAS DIVISION
Line of Credit Bank Commitments and Applicable Margin
As of September 30, 2025

Lender Commitments of the UGI Gas five year, $375 million revolving credit facility:

Lender	Commitment

II-A-19

Request:

Submit details on Company or Parent common stock offerings (past 5 years to present) as follows:

a. Date of Prospectus
b. Date of offering
c. Record date
d. Offering period--dates and number of days
e. Amount and number of shares of offering
f. Offering ratio (if rights offering)
g. Per cent subscribed
h. Offering price
i. Gross proceeds per share
j. Expenses per share
k. Net proceeds per share (i-j)
l. Market price per share
    1. At record date
    2. At offering date
    3. One month after close of offering
m. Average market price during offering
    1. Price per share
    2. Rights per share--average value of rights
n. Latest reported earnings per share at time of offering
o. Latest reported dividends at time of offering

Response:

The Company has not issued stock in the last five years.

The Parent has issued stock related to the below transaction in the last five years.

On May 25, 2021, the Company's parent issued 2.2 million "Equity Units" with a total notional value of $220 million. The Equity Units were equity-linked securities and not Common Stock. Each Equity Unit was a mandatory convertible, hybrid security that combined a "Forward Contract" and a 10% undivided interest in one share "Convertible Preferred Stock" of the Parent. The Equity Units included a requirement to remarket the Convertible Preferred Stock approximately three years after issuance (May 2024).

II-A-19 (Continued)

Pursuant to the terms of the Equity Units, in May 2024, the Parent announced the unsuccessful final remarketing of its Convertible Preferred Stock. As a result, each holder of an Equity Unit received 2.2973 shares of Parent Common Stock, without par value, with cash paid in lieu of any fractional shares.

In the event of a successful remarketing of the Convertible Preferred Stock, the Parent would still have provided such Common Stock to Equity Unit holders due to the terms of the Forward Contract.

During the third quarter of Fiscal 2024, the Parent (i) made the final payment to settle the Forward Contract in full; (ii) canceled the Convertible Preferred Stock; and (iii) in a non-cash transaction, converted the Equity Units into 5,054,030 shares of Parent Common Stock and issued the shares to the holders of the Equity Units under the Forward Contract.

As noted above, the Equity Units are not common stock, although they contain terms that eventually convert a portion into Parent Common Stock.

All terms and requirements under the Equity Units are satisfied. The Equity Units are fully settled as of June 2024.

Due to the hybrid nature of these securities, the detailed requests related to Common Stock offerings do not apply.

Prepared by or under the supervision of: Vivian K. Ressler

II-A-20

Request:

Provide latest available balance sheet and income statement for Company, Parent and System (consolidated).

Response:

Please refer to UGI Gas Exhibit A (Historic), Schedules B-1 and B-2 for balance sheet and income statement of UGI Utilities, Inc. - Gas Division.

Please see the UGI Utilities, Inc. balance sheet and income statement for the year ended 9/30/25 at https://www.ugicorp.com/static-files/97e640c1-4d75-45f5-b1a9-65cbee300d94.

Also, please see UGI Corporation Report on Form 10-K for the year ended 9/30/25 at https://www.ugicorp.com/sec-filings/sec-filing/10-k/0000884614-25-000053 for Parent Company financial statements.

Prepared by or under the supervision of: Amy M. Keller

II-A-21

Request:

Provide Original Cost, Trended Original Cost and Fair Value rate base claims.

Response:

The Company's claim is based on original cost measure of value. As Pennsylvania law requires use of original cost measure of value for ratemaking, trended original cost and fair value rate base claims were not prepared.

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedule C-1.

Prepared by or under the supervision of: Amy M. Keller

II-A-22

Request:

a. Provide Operating Income claims under:

(i) Present rates
(ii) Pro forma present rates (annualized & normalized)
(iii) Proposed rates (annualized & normalized)

b. Provide Rate of Return on Original Cost and Fair Value claims under:

(i) Present rates
(ii) Pro forma present rates
(iii) Proposed rates

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedules A-1, D-1 and D-2.

Prepared by or under the supervision of: Tracy A. Hazenstab

II-A-23

Request:

List details and sources of “Other Property and Investment,” “Temporary Cash Investments” and “Working Funds” on test year-end balance sheet.

Response:

Please refer to the following responses:

Other Property and Investment - III-A-2

Temporary Cash Investments - III-A-3

Working Funds other than general operating cash - III-A-3

Prepared by or under the supervision of: Amy M. Keller

II-A-24

Request:

II-A-25

Request:

If the utility plans to make a formal claim for a specific allowable rate of return, provide the following data in statement or exhibit form:

a. Claimed capitalization and capitalization ratios with supporting data.
b. Claimed cost of long-term debt with supporting data.
c. Claimed cost of short-term debt with supporting data.
d. Claimed cost of total debt with supporting data.
e. Claimed cost of preferred stock with supporting data.
f. Claimed cost of common equity with supporting data.

Response:

a. Please see the Direct Testimony of Dylan W. D'Ascendis, UGI Gas Statement No. 8, and UGI Gas Exhibit B Rate of Return, Schedule 1, Page 1.

b. Please see the Direct Testimony of Dylan W. D'Ascendis, UGI Gas Statement No. 8, and UGI Gas Exhibit B, Rate of Return, Schedule 1, Page 1, and Attachment II-A-6.

c. No claim is being made for short-term debt.

d. Please see the Direct Testimony of Dylan W. D'Ascendis, UGI Gas Statement No. 8, and UGI Gas Exhibit B, Rate of Return, Schedule 1, Page 1, and Attachment II-A-6.

e. This subparagraph is not applicable as the Company does not have preferred stock.

f. Please see the Direct Testimony of Dylan W. D'Ascendis, UGI Gas Statement No. 8, and UGI Gas Exhibit B, Rate of Return, Schedules 1-10.

Prepared by or under the supervision of: Dylan D'Ascendis

II-A-26

Request:

Provide the following income tax data:

a. Consolidated income tax adjustments, if applicable.

b. Interest for tax purposes (basis).

Response:

a. A consolidated tax adjustment has not been flowed through as a ratemaking deduction in the calculation of UGI Gas's federal income tax expense. In addition, the Company is no longer supplying a calculation of a hypothetical consolidated tax adjustment for the purposes of satisfying Section 1301.1(b), because Section 1301.1(b) no longer applies as of December 31, 2025. Please see the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9, for a discussion on the change in the requirement.

b. The interest tax deduction for rate making purposes is synchronized with the interest component of the capital structure.

Prepared by or under the supervision of: Darin T. Espigh

Request:

Provide test year monthly balances for “Current Gas Storage” and notes financing such storage.

Response:

Refer to UGI Gas Exhibit A (Historic), Schedules B-6 and C-5, UGI Gas Exhibit A (Future), Schedules B-6 and C-5, and UGI Gas Exhibit A (Fully Projected Future), Schedules B-6 and C-5. All of the Company's notes can be used to finance gas storage.

Prepared by or under the supervision of: Tracy A. Hazenstab

SECTION 53.53 – BALANCE SHEET AND OPERATING STATEMENT

III-A-1

Request:

Provide a comparative balance sheet for the test year and the preceding year which corresponds with the test year date.

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedule B-1 for a balance sheet for each of the test years. For the preceding year which corresponds with the test year date, please refer to the response to SDR-ROR-2.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-2

Request:

Set forth the major items of Other Physical Property, Investments in Affiliated Companies and Other Investments.

Response:

Please see Attachment III-A-2.

Prepared by or under the supervision of: Amy M. Keller

UGI UTILITIES, INC. - GAS DIVISION
Other Physical Property, Investments in Affiliated Companies and Other Investments

		09/30/2025 balance
Account 121 Non-Utility Property	$	713,558
Account 123 Investment in Subsidiaries *	$	1,168,226
Account 124 Other Investments	$	14,858

* The balance in Account 123 primarily represents a residual equity investment in UGI Gas' inactive heating, ventilation and air conditioning service business ("HVAC").

III-A-3

Request:

Supply the amounts and purpose of Special Cash Accounts of all types, such as:

a. Interest and Dividend Special Deposits.

b. Working Funds other than general operating cash accounts.

c. Other special cash accounts and amounts (Temporary cash investments).

Response:

UGI Utilities, Inc. - Gas Division has no Special Cash Accounts as of September 30, 2025.

Prepared by or under the supervision of: Amy M. Keller

III-A-4

Request:

Describe the nature and/or origin and amounts of notes receivable, accounts receivable from associated companies, and any other significant receivables, other than customer accounts, which appear on balance sheet.

Response:

Please see Attachment III-A-4.

Prepared by or under the supervision of: Amy M. Keller

UGI UTILITIES, INC. - GAS DIVISION
Schedule of Accounts Receivable

FERC Account Description	(000's) 9/30/25 Balances
Accounts Receivable from Associated Companies – consisting primarily of administrative services provided to UGI Energy Services, Inc.	$ 3,176
Customer CIAC Payment Plans	5,152
Damage Repair and Other Misc. Receivables	3,507
Claims Reimbursements	8,183
Off System Sales & Delivery Service Fees	606

III-A-5

Request:

Provide the amount of accumulated reserve for uncollectible accounts, method and rate of accrual, amounts accrued, and amounts written-off in each of last three years.

Response:

Please see Attachment III-A-5.

Prepared by or under the supervision of: Vivian K. Ressler

UGI Utilities, Inc. - Gas Division
Schedule of Reserve for Uncollectible Accounts

($ in 000's except for rate of accrual)	9/30/2023	9/30/2024	9/30/2025
Account 144 - Accumulated Provision for Uncollectible Accounts	$ 17,156	$ 13,708	$ 13,881
Method [1]	Allowance	Allowance	Allowance
Rate of Accrual	1.91%	1.67%	1.57%
Amounts Accrued - Uncollectible Expense	$ 23,142	$ 17,089	$ 17,879
Amounts Written Off (net of recoveries)	$ 22,524	$ 20,528	$ 17,632

[1] The allowance method recognizes that a percentage of each month's sales will eventually prove to be uncollectible. Consequently, a percentage of each month's sales is charged to uncollectible expense in that month and the reserve is increased. When specific accounts are written off, they are charged to the reserve account, thus decreasing the reserve.

III-A-6

Request:

Provide a list of prepayments and give an explanation of special prepayments.

Response:

Please see Attachment III-A-6.

Prepared by or under the supervision of: Amy M. Keller

UGI UTILITIES, INC. - GAS DIVISION

III-A-7

Request:

Explain in detail any other significant (in amount) current assets listed on balance sheet.

Response:

Refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule B-1.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-8

Request:

Explain in detail, including the amount and purpose, the deferred asset accounts that currently operate to effect or will at a later date effect the operating account supplying:

a. Origin of these accounts.

b. Probable changes to this account in the near future.

c. Amortization of these accounts currently charged to operations or to be charged in the near future.

d. Method of determining yearly amortization for the following accounts:

--Temporary Facilities
--Miscellaneous Deferred Debits
--Research and Development
--Property Losses
--Any other deferred accounts that effect operating results.

Response:

Please see Attachment III-A-8.

Prepared by or under the supervision of: Amy M. Keller

UGI UTILITIES, INC. - GAS DIVISION
SCHEDULE OF DEFERRED ASSET ACCOUNTS

Account Description	(000) 9/30/25 Balances	Footnote
Deferred Recoverable Income Taxes	93,289	1
Pension and OPEB Benefit	89,979	2
Cost of Removal	26,934	3
Environmental Costs	21,565	4
Debt Issuance Costs	7,131	5
Excess Uncollectibles - COVID-19	5,072	6
Information Technology Program Costs (UNITE)	2,302	7
Rate Case	1,077	8
COVID-19 Emergency Relief Program	653	9
Total	$ 248,001	
Reconcilable Riders		
Deferred Fuel Under Collection (PGC Rider)	16,685	10
Universal Service Program Under Collection (USP Rider)	2,387	10
Energy Efficiency and Conservation (EEC Rider)	689	10
Total	$ 19,760	
Total Deferred Assets	$ 267,761	

Footnotes for Amortization Schedule

(1) Amortized over a period of 1-65 years dependent upon the nature of the cost.
(2) Amortized over the average remaining future service lives of plan participants.
(3) Amortized over a period of five years.
(4) Amortized based on annual environmental rate recovery.
Unrecovered costs are amortized annually at $3,028.
(5) Amortized over the term of the debt instruments.
(6) Will be amortized over 10 years, in accordance with the 2020 UGI Gas rate case settlement at Docket No. R-2019-3015162.
(7) Currently not amortizing.
(8) Amortized from November 2024 - October 2025.
(9) $922 was approved to be amortized in the 2022 UGI Gas rate case, Docket No. R-2021-3030218, to be completed in October 2032.
(10) Fully reconcilable rider

III-A-9

Request:

Explain the nature of accounts payable to associated companies, and note amounts of significant items.

Response:

Please see Attachment III-A-9.

Gas Delivery Enhancement Over Collection (GDE Rider)	$ 2	9
	$ 1,032	

Footnotes for Amortization Schedule

(1) Amortized over terms of agreements, which extend to various years through 2053.
(2) Will be applied to projects as construction is completed.
(3) Payout awarded at the end of the performance period.
(4) FIN48 liabilities are released when a tax year has been audited and settled or the tax year is closed under the statute of limitations. Generally, the statute of limitations is three years from the due date of the tax return.
(5) Amortized over the average remaining future service lives of plan participants.
(6) The valuation reflects the costs associated with all future disability payments, and will be relieved as disability payments are made.
(7) Adjusted quarterly based on the present value of the benefit costs to be paid over the disability term for an employee.
(8) Amortized over the life of the related lease.
(9) Fully reconcilable rider.

III-A-11

Request:

Supply basis for Injury and Damages reserve and amortization thereof.

Response:

The accrual for injuries and damages expense is designed to maintain the reserve at the proper level with respect to existing and probable claims, taking into account the insurance coverage available. UGI Gas currently has insurance coverage for commercial, general, automobile and property damages in excess of $1,000,000 per claim. Actual disbursements are charged against the reserve as expenditures are made.

Prepared by or under the supervision of: Amy M. Keller

III-A-12

Request:

Provide details of any significant reserves, other than depreciation, bad debt, injury and damages, appearing on balance sheet.

Response:

Please refer to Attachment SDR-RR-54 for details of significant reserves appearing on the balance sheet.

Prepared by or under the supervision of: Amy M. Keller

III-A-13

Request:

Provide an analysis of unappropriated retained earnings for the test year and three preceding calendar years.

Response:

All of the Company's retained earnings are unappropriated. Please see Attachment III-A-13, which reflects UGI Utilities, Inc. total retained earnings.

Prepared by or under the supervision of: Vivian K. Ressler

Request:

Provide schedules and data in support of the following working capital items:

a. Prepayments--List and identify all items
b. Federal Excise Tax accrued or prepaid
c. Federal Income Tax accrued or prepaid
d. Pa. State Income Tax accrued or prepaid
e. Pa. Gross Receipts Tax accrued or prepaid
f. Pa. Capital Stock Tax accrued or prepaid
g. Pa. Public Utility Realty Tax accrued or prepaid
h. State sales tax accrued or prepaid
i. Payroll taxes accrued or prepaid
j. Any adjustment related to the above items for ratemaking purposes.

Response:

Please see UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedule C-4, and the response to III-A-6. In addition, please see the Direct Testimony of Tracy A. Hazenstab, UGI Gas Statement No. 2, and the Direct Testimony of Amy M. Keller, UGI Statement No. 5.

Prepared by or under the supervision of: Amy M. Keller

III-A-15

Request:

Supply an exhibit supporting the claim for working capital requirement based on the lead-lag method.

a. Pro forma expenses and revenues are to be used in lieu of book data for computing lead-lag days.

b. Respondent must either include sales for resale and related expenses in revenues and in expenses or exclude from revenues and expenses. Explain procedures followed (exclude telephone).

Response:

Please see UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedule C-4 and the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5.

Prepared by or under the supervision of: Amy M. Keller

III-A-16

Request:

Provide detailed calculations showing the derivation of the tax liability offset against gross cash working capital requirements.

Response:

Please refer to UGI Gas Schedule C-4 within Exhibit A (Historic), Exhibit A (Future), Exhibit A (Fully Projected).

Prepared by or under the supervision of: Darin T. Espigh

III-A-17

Request:

Prepare a Statement of Income for the various time frames of the rate proceeding including:

Col. 1--Book recorded statement for the test year.
2--Adjustments to book record to annualize and normalize under present rates.
3--Income statement under present rates after adjustment in Col. 2
4--Adjustment to Col. 3 for revenue increase requested.
5--Income statement under requested rates.

a. Expenses may be summarized by the following expense classifications for purposes of this statement:

Operating Expenses (by category)
Depreciation
Amortization
Taxes, Other than Income Taxes
Total Operating Expense
Operating Income Before Taxes
Federal Taxes
State Taxes
Deferred Federal
Deferred State
Income Tax Credits
Other Credits
Other Credits and Charges, etc.
Total Income Taxes
Net Utility Operating Income
Other Income & Deductions
Other Income
Detailed listing of Other Income used in Tax Calculation
Other Income Deduction
Detailed Listing
Taxes Applicable to Other Income and Deductions
Listing Income Before Interest Charges
Listing of all types of Interest Charges and all amortization of Premiums and/or Discounts and Expenses on Debt issues

III-A-17 (Continued)

Total Interest
Net Income After Interest Charges

(Footnote each adjustment to the above statements with explanation in sufficient clarifying detail.)

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), schedules in Section D, for the Company's presentation of the requested Statements of Income and adjustments to operating revenues and expenses.

Please refer to the Direct Testimony of Tracy A. Hazenstab, UGI Gas Statement No. 2, the Direct Testimony of Vivian K. Ressler, UGI Gas Statement No. 4, and the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5, for explanations of the Statements of Income and adjustments to operating revenues and expenses depicted in the Section D schedules of UGI Gas Exhibit A (Historic), (Future) and (Fully Projected), the underlying sources of budgeted information, and the basis for the adjustments.

Please refer to the Direct Testimony of Dylan W. D'Ascendis, UGI Gas Statement No. 8, and related UGI Gas Exhibit B, for the derivation of the weighted average cost of debt used in the Company's debt interest synchronization adjustment, including the treatment of debt issuance expense, premiums and discounts used in calculating the effective cost rate for each series of long-term debt.

Please refer to the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9, for an explanation of the Company's income tax adjustments.

Please refer to the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10, for an explanation on the derivation of future test year and fully projected year sales and revenues.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-18

Request:

Provide comparative operating statements for the test year and the immediately preceding 12 months showing increases and decreases between the two periods. These statements should supply detailed explanation of the causes of the major variances between the test year and preceding year by detailed account number.

Response:

Please refer to Attachment III-A-18 for the exhibit of comparative operating statements.

Explanations of major variances (defined as amounts greater than $1,000 and 10%) are shown below in ($000's):

Gas Utility Revenues - Increase due to higher send out volume for residential and commercial classes (primarily related to colder weather) and higher purchased gas cost rates.

Other Operating Revenues - Increase primarily due to higher off system sales (FERC 4950) ($39,809), partially offset by lower customer interest revenue (FERC 4950) (-$4,471).

Operating Expense - Increase driven primarily by increases in operations wages ($4,708) and contract labor ($1,009).

Storage, Transportation and Other - Increase due to higher send out volume for residential and commercial classes (primarily related to colder weather) and higher costs related to off system sales.

Interest Income/Interest Expense - Change primarily related to PGC interest - interest expense in 2024 vs. interest income in 2025 ($4,460 variance within FERC 4190).

Miscellaneous Income/Expense - Increase due to higher environmental expense of $2,611 in 2025. This amount is related to sites outside of Pennsylvania and is not included in UGI Gas's claimed costs.

III-A-18 (Continued)

Tax Expense - Lower income tax expense primarily driven by lower income before taxes.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-19

Request:

List extraordinary property losses as a separate item, not included in operating expenses or depreciation and amortization. Sufficient supporting data must be provided.

Response:

None.

Prepared by or under the supervision of: Amy M. Keller

III-A-20

Request:

Supply detailed calculations of amortization of rate case expense, including supporting data for outside services rendered. Provide the items comprising the rate case expense claim (include the actual billings or invoices in support of each kind of rate case expense), the items comprising the actual expenses of prior rate cases and the unamortized balances.

Response:

The Company's rate case expense claim is based on the normalization of projected rate case expenditures. For details, please see UGI Gas Exhibit A (Fully Projected), Schedule D-10. Historic expenditures from the Company's last rate case at Docket No. R-2024-3052716 are shown in Attachment III-A-20.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-21

Request:

Submit detailed computation of adjustments to operating expenses for salary, wage and fringe benefit increases (union and non-union merit, progression, promotion and general) granted during the test year and six months subsequent to the test year. Supply data showing for the test year:

a. Actual payroll expense (regular and overtime separately) by categories of operating expenses, i.e., maintenance, operating transmission, distribution, other.

b. Date, percentage increase, and annual amount of each general payroll increase during the test year.

c. Dates and annual amounts of merit increases or management salary adjustments.

d. Total annual payroll increases in the test year.

e. Proof that the actual payroll plus the increases equal the payroll expense claimed in the supporting data (by categories of expenses).

f. Detailed list of employe benefits and cost thereof for union and non-union personnel. Any specific benefits for executives and officers should also be included, and cost thereof.

g. Support the annualized pension cost figures.

   (i) State whether these figures include any unfunded pension costs. Explain.

   (ii) Provide latest actuarial study used for determining pension accrual rates.

h. Submit a schedule showing any deferred income and consultant fee to corporate officers or employees.

Response:

a - f. Refer to UGI Gas Exhibit A (Fully Projected), Schedules D-7 and D-14 and the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5.

III-A-21 (Continued)

g. Refer to Attachment III-A-21 for the latest actuarial report showing pension accrual rates, which has been uploaded separately via the Commission's SharePoint site. The materials will be served upon the parties via a secure OneDrive link.

h. There are no significant deferred income and consultant fees to corporate officers or employees.

Prepared by or under the supervision of: Amy M. Keller

III-A-22

Request:

Supply an exhibit showing an analysis, by functional accounts, of the charges by affiliates (Service Corporations, etc.) for services rendered included in the operating expenses of the filing company for the test year and for the 12-month period ended prior to the test year:

a. Supply a copy of contracts, if applicable.
b. Explain the nature of the services provided.
c. Explain basis on which charges are made.
d. If charges allocated, identify allocation factors used.
e. Supply the components and amounts comprising the expense in this account.
f. Provide details of initial source of charge and reason thereof.

Response:

Refer to Attachment III-A-22.1 for listings of applicable Gas Purchase Agreements, Asset Management Agreements and Affiliated Interest Agreements which have been previously authorized by the Commission. Refer to Attachments III-A-22.2(a) - (k) for copies of the Affiliated Interest Agreements which have been previously authorized by the Commission, which have been uploaded separately via the Commission's SharePoint site. The materials will be served upon the parties via a secure OneDrive link.

See Attachment III-A-22.3 for a listing of charges from affiliates for services rendered. This listing includes the affiliate providing the service, the nature of the service, the amounts charged for Fiscal 2023 - Fiscal 2027 (Fiscal 2026 and Fiscal 2027 are planned amounts), the FERC functional account(s) where the charges are recorded, and the allocation factor (if applicable).

N/A Not Applicable

(a) United Valley Insurance is a UGI-owned Captive Insurance Company, from which UGI purchases a portion of its excess liability insurance. This insurance is reinsured through other insurance companies, and United Valley does not retain risk. United Valley portion of total insurance coverage for 2026 and 2027 is assumed to be consistent with the amount from 2025.

(b) 2026 and 2027 purchases from UGI Energy Services, LLC are estimated based on 2025 actuals.

(c) UGI Utilities, Inc. subleases building space from UGI Energy Services, LLC, as explained at Attachment III-A-22.2. This building space is used exclusively for the IT development project teams and is therefore capitalized as part of the project costs within 107 (while in progress) and 101 (when complete).

(d) Administrative services are assigned to various A&G FERC accounts, based on the nature of the underlying cost. Insurance coverage is recorded to FERC 925. For both the administrative services and the insurance coverage, a portion of the amounts shown here is capitalized.

(e) Administrative services from UGI Energy Services, LLC and AmeriGas primarily relate to IT support. Allocation factor used for these IT support costs is primarily based on the number of users of the software for which the support is provided.

(f) Allocation factor used for administrative services from UGI Corporation is primarily Modified Wisconsin Formula ("MWF"), with other allocation rates used based on the nature of the services.

III-A-23

Request:

Describe costs relative to leasing equipment, computer rentals, and office space, including terms and conditions of the lease. State method for calculating monthly or annual payments.

Response:

Please see Attachment III-A-23.

Prepared by or under the supervision of: Amy M. Keller

UGI Utilities, Inc. - Gas Division
Costs Relative to Leasing Equipment, Computer Rental and Office Space
12 Months Ended 9/30/2025
(000's)

	Annual Payments	Method of Computing Payment	Terms of Lease or Rental Agreement
Real Estate	$ 778	Monthly payments per lease or rental agreements. Percentage applied from Modified Wisconsin Formula for leases of shared properties.	2020 - 2028
Equipment	8	Monthly payments per lease or rental agreements. Percentage applied from Modified Wisconsin Formula for leases of shared assets.	2022 - 2026
Total	$ 786		

Note: Balances above include long-term leases only (Original Terms of 12 months or more)

III-A-24

Request:

Submit detailed calculations (or best estimates) of the cost resulting from major storm damage.

Response:

No major storm damages have been recorded in the last five fiscal years. Accordingly, no damages are included in the future or fully projected future test year claims.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-25

Request:

Submit details of expenditures for advertising (National and Institutional and Local media). Provide a schedule of advertising expense by major media categories for the test year and the prior two comparable years with respect to:

a. Public health and safety
b. Conservation of energy
c. Explanation of Billing Practices, Rates, etc.
d. Provision of factual and objective data programs in educational institutions
e. Other advertising programs
f. Total advertising expense

Response:

Please see Attachment III-A-25.

III-A-27

Request:

Prepare a detailed schedule for the test year showing types of social and service organization memberships paid for by the Company and the cost thereof.

Response:

None are being claimed.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-28

Request:

Submit a schedule showing, by major components, the expenditures associated with Outside Services Employed, Regulatory Commission Expenses and Miscellaneous General Expenses, for the test year and prior two comparable years.

Response:

Please see Attachment III-A-28.1 for account 930.2 - Miscellaneous General Expenses.

Please see Attachment III-A-28.2 for account 923 - Outside Services Employed.

Please see attachment III-A-28.3 for account 928 - Regulatory Commission Expenses. 2027 costs are associated with the current rate case filing and the actual claimed amount is shown at Exhibit A, Fully Projected, Schedule D-10.

Prepared by or under the supervision of: Vivian K. Ressler

UGI Utilities, Inc. - Gas Division
Schedule of Account 930.2 - Miscellaneous General Expenses
For the Fiscal Years Ending September 30, 2025 through 2027
(thousands of dollars)

Expenditure Type	**2023**	**2024**	**2025**	**2026**	**2027**

Total	**387**	**433**	**36**	**1,160**	**2,297**

III-A-29

Request:

Submit details of information covering research and development expenditures, including major projects within the company and forecasted company programs.

Response:

UGI Gas has included approximately $371,457 in the fully projected future test year claim for supporting a number of research and development program areas through membership with the Operations Technology Development Company ("OTD"), an associated company of the Gas Technology Institute. OTD is a collaborative effort to develop advanced technologies for the natural gas industry.

UGI Gas currently has an active membership agreement with OTD. This membership supports access to best practices related to the natural gas industry technologies, as well as furthering support for newer or emerging gas technologies; all of which stand to benefit natural gas customers by enhancing efficient operational and equipment standards which support the safe, reliable and efficient delivery and utilization of natural gas.

Prepared by or under the supervision of: Hans G. Bell

III-A-30

Request:

Provide a detailed schedule of all charitable and civic contributions by recipient and amount for the test year.

Response:

Please see Attachment III-A-30 for a schedule of all charitable and civic contributions made for UGI Gas for the fiscal year ending September 30, 2025. No claim is being made for charitable and civic contributions.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-31

Request:

Provide a detailed analysis of Special Services--Account 795.

Response:

Gas account 795 has no activity.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-32

Request:

Provide a detailed analysis of Miscellaneous General Expense--Account No. 801.

Response:

UGI Gas has not recorded activity to account 801 for the last five fiscal years and has no amounts allocated to this account in the FTY or FPFTY. UGI Gas does, however, capture Miscellaneous General Expense under account 930.2. For an analysis of that account's activity, please refer to the response to III-A-28.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-34

Request:

List and explain all non-recurring abnormal or extraordinary expenses incurred in the test year which will not be present in future years.

Response:

Test year expenses that are non-recurring, extraordinary or do not occur yearly, but over an extended period of years, are explained and adjusted in Section D of UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected).

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-35

Request:

List and explain all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years. (e.g.--Non-yearly maintenance programs, etc.)

[Responses shall be submitted and identified as exhibits.]

Response:

For adjustments to operating expenses, please see UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Section D, and the Direct Testimony of Tracy A. Hazenstab, UGI Gas Statement No. 2, and the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-36

Request:

Using the adjusted year's expenses under present rates as a base, give detail necessary for clarification of all expense adjustments. Give clarifying detail for any such adjustments that occur due to changes in accounting procedure, such as charging a particular expense to a different account than was used previously. Explain any extraordinary declines in expense due to such change of account use.

Response:

For adjustments to operating expenses, please see UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Section D, and the Direct Testimony of Tracy A. Hazenstab, UGI Gas Statement No. 2, the Direct Testimony of Vivian K. Ressler, UGI Gas Statement No. 4, and the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-37

Request:

Indicate the expenses that are recorded in the test year, which are due to the placement in operating service of major plant additions or the removal of major plant from operating service, and estimate the expense that will be incurred on a full-year's operation.

Response:

For a presentation of the major plant additions, cost of removal and plant retirements, refer to Schedules C-2 and C-3 in the UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected). For a presentation of depreciation expense, please refer to Schedule D-21.

Prepared by or under the supervision of: Amy M. Keller

III-A-38

Request:

Submit a statement of past and anticipated changes, since the previous rate case, in major accounting procedures.

Response:

New Accounting Standard Adopted in Fiscal 2025

Segment Reporting. In November 2023, the FASB issued ASU 2023-07, “Improvements to Reportable Segment Disclosures (Topic 280)” which requires enhanced disclosure of (1) significant segment expenses that are regularly provided to the CODM and included within each reported measure of segment profit or loss, (2) the amount and description of the composition of other segment items which reconcile to segment profit or loss, and (3) the title and position of the entity’s CODM and an explanation of how the CODM uses the reported measure(s) of segment profit or loss in assessing segment performance and allocating resources. The amendments also expand the interim segment disclosure requirements. In the fourth quarter of Fiscal 2025, the Company adopted the new guidance on a retrospective basis. The adoption of the new guidance did not have a material impact on our consolidated financial statements. See Note 22 for enhanced disclosures.

Accounting Standards Not Yet Adopted

Targeted Improvements to the Accounting for Internal-Use Software. In September 2025, the FASB issued ASU 2025-06, “Targeted Improvements to the Accounting for Internal-Use Software (Subtopic 350-40)” which, among other things, removes the prescriptive project stage requirements and allows entities to capitalize internal-use software costs when management authorizes and commits funding to the project and it is probable the software will be completed and used as intended. This new guidance is effective for the Company for annual and interim periods beginning October 1, 2028 (Fiscal 2029). Early adoption is permitted. The amendments in this ASU may be adopted using the prospective, modified, or retrospective methods. The Company is in the process of assessing the impact on its financial statements and determining the transition method and the period in which the new guidance will be adopted.

III-A-38 (Continued)

Measurement of Credit Losses for Accounts Receivable and Contract Assets. In July 2025, the FASB issued ASU 2025-05, "Measurement of Credit Losses for Accounts Receivable and Contract Assets (Topic 326)" which provides a practical expedient that allows entities to assume that current conditions as of the balance sheet date do not change for the remaining life of the asset when estimating expected credit losses for current accounts receivable and current contract assets. This new guidance is effective for the Company for annual and interim periods beginning October 1, 2026 (Fiscal 2027). Early adoption is permitted. The amendments in this ASU should be adopted using the prospective method. The Company is in the process of assessing the impact on its financial statements and the period in which the new guidance will be adopted.

Disaggregation of Income Statement Expenses. In November 2024, the FASB issued ASU 2024-03, "Disaggregation of Income Statement Expenses (Subtopic 220-40)" which requires enhanced disclosure of income statement expense categories to improve transparency and provide financial statement users with more detailed information about the nature, amount and timing of expenses impacting financial performance. This new guidance is effective for the Company for annual periods beginning October 1, 2027 (Fiscal 2028) and interim periods beginning October 1, 2028 (Fiscal 2029). Early adoption is permitted. The amendments in this ASU may be adopted using the prospective or retrospective methods. The Company is in the process of assessing the impact on its financial statements and determining the transition method and the period in which the new guidance will be adopted.

Improvements to Income Tax Disclosures. In December 2023, the FASB issued ASU 2023-09, "Improvements to Income Tax Disclosures (Topic 740)" which requires entities to disclose, among other items, disaggregated information about a reporting entity's effective tax rate reconciliation and income taxes paid. This new guidance is effective for the Company for annual periods beginning October 1, 2025 (Fiscal 2026). Early adoption is permitted. The amendments in this ASU may be adopted using the prospective or retrospective methods. This Company will adopt the new guidance effective for the year ending September 30, 2026 and provide the additional disclosures as required by the new guidance.

Prepared by or under the supervision of: Amy M. Keller

III-A-39

Request:

Identify the specific witness for all statements and schedules of revenues, expenses, taxes, property, valuation, etc.

Response:

Please see the Direct Testimony of Hans G. Bell, UGI Gas Statement No. 1, for a complete list of witnesses and areas of responsibility. The primary witness for each statement and schedule is identified on the specific document.

Prepared by or under the supervision of: Hans G. Bell

III-A-40

Request:

Adjustments which are estimated shall be fully supported by basic information reasonably necessary.

Response:

Adjustments are fully supported in UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Sections C and D, as well as the Direct Testimony of UGI Gas Statement Nos. 1 through 12.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-41

Request:

Submit a statement explaining the derivation of the amounts used for projecting future test year level of operations and submit appropriate schedules supporting the projected test year level of operations.

Response:

The schedules shown in UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Section D, reflect this information and are the supporting detail for the Fully Projected Future Test Year for the period ending September 30, 2027. Please see the Direct Testimony of Hans G. Bell, UGI Gas Statement No. 1, the Direct Testimony of Tracy A. Hazenstab, UGI Gas Statement No. 2, the Direct Testimony of Vivian K. Ressler, UGI Gas Statement No. 4, the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5, the Direct Testimony of Vicky A. Schappell, UGI Gas Statement No. 7, and the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-42

Request:

If a company has separate operating divisions, an income statement must be shown for each division, plus an income statement for company as a whole.

Response:

Please see Attachment III-A-42.

Prepared by or under the supervision of: Vivian K. Ressler

*UGI Utilities, Inc. Electric includes both Transmission and Distribution.

III-A-43

Request:

If a company's business extends into different states or jurisdictions, then statements must be shown listing Pennsylvania jurisdictional data, other state data and federal data separately and jointly (Balance sheets and operating accounts).

Response:

Please see Attachment III-A-43.1 and Attachment III-A-43.2.

Additionally, the Carverton Road gate station connects the Auburn II line to the Transco interstate pipeline. In late December 2013, a FERC 63 certificate was issued to UGI PNG.

Amounts for the year ended September 30, 2025 are as follows:

Account No.		
146404	UGI ENERGY SERVICES A/R - CARVERTON ROAD	$ 86,324
489026	OTHER REVENUE - CARVERTON ROAD (FERC ORDER 63)	$1,035,888

III-A-44

Request:

Ratios, percentages, allocations and averages used in adjustments must be fully supported and identified as to source.

Response:

Ratios, percentages, allocations and averages, where utilized, are detailed in the supporting adjustments to revenue and expenses set forth in UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Section D. Please also refer to the Direct Testimony of UGI Gas Statement Nos. 1 through 12.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-45

Request:

Provide an explanation of any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate case.

Response:

There have been no changes to the allocation methodology.

Prepared by or under the supervision of: Vivian K. Ressler

III-A-46

Request:

Supply a copy of internal and independent audit reports of the test year and prior calendar year, noting any exceptions and recommendations and disposition thereof.

Response:

Please see Attachment III-A-46 for the list of audit reports for the historic test year and prior year. The information contained in these reports is deemed confidential. Any party to the proceeding requiring access to these reports will be afforded the opportunity upon request, subject to the provisions of a Confidentiality Agreement to be entered into between such party and the Company pursuant to a Protective Order.

Prepared by or under the supervision of: Amy M. Keller

UGI Utilities, Inc. - Gas Division

III-A-47

Request:

Submit a schedule showing rate of return on facilities allocated to serve wholesale customers.

Response:

There are no facilities allocated for the provision to serve wholesale customers.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-A-48

Request:

Provide a copy of the latest capital stock tax report and the latest capital stock tax settlement.

Response:

Not applicable. The PA Capital Stock tax was eliminated for tax years beginning January 1, 2016. Last filed PA Capital Stock tax return was for tax year ending September 30, 2016.

Prepared by or under the supervision of: Darin T. Espigh

III-A-49

Request:

Submit details of calculations for Taxes, Other than Income where a company is assessed taxes for doing business in another state, or on its property located in another state.

Response:

Details of Taxes, Other Than Income where UGI Gas is assessed taxes for doing business in another state, or on its property in another state for the period ended September 30, 2025, are listed below:

1.	Maryland (Property, Franchise and PSC Tax):	$33,230
2.	Mississippi (Property Tax):	$ 4,461
	Total:	$37,691

Prepared by or under the supervision of: Darin T. Espigh

III-A-50

Request:

Provide a schedule of federal and Pennsylvania taxes, other than income taxes, calculated on the basis of test year per books, pro forma at present rates, and pro forma at proposed rates, to include the following categories:

a. social security
b. unemployment
c. capital stock
d. public utility realty
e. P.U.C. assessment
f. other property
g. any other appropriate categories

Response:

Refer to UGI Gas Exhibit A, Schedules D-31 and D-32 for the Historic, Future, and Fully Projected Future test years.

Prepared by or under the supervision of: Darin T. Espigh

III-A-51

Request:

Submit a schedule showing for the last five years the income tax refunds, plus interest (net of taxes), received from the federal government due to prior years' claims.

Response:

None.

Prepared by or under the supervision of: Darin T. Espigh

III-A-52

Request:

Provide detailed computations showing the deferred income taxes derived by using accelerated tax depreciation applicable to post-1969 utility property increases productive capacity, and ADR rates on property. (Separate between state and federal; also, rate used)

a. State whether tax depreciation is based on all rate base items claimed as of the end of the test year, and whether it is the annual tax depreciation at the end of the test year.

b. Reconcile any difference between the deferred tax balance, as shown as a reduction to measures of value (rate base), and the deferred tax balance as shown on the balance sheet.

Response:

See Schedules D-33 and D-34 in Exhibit A (Historic), Exhibit A (Future), and Exhibit A (Fully Projected) for the computation of federal and state deferred income taxes.

a. Tax depreciation subject to normalization is based on depreciable property as of the end of the test year. Further, tax depreciation is annualized as of the end of the test year period.

b. The accumulated deferred tax balance, as shown as a reduction to measures of value, represents the annualized balance based on the plant in service included in the measures of value, and then pro-rated according to the normalization rules under Treasury Regulation 1.167(l)-1(h)(6)(ii). The balance sheet represents the budgeted balance.

Prepared by or under the supervision of: Darin T. Espigh

III-A-53

Request:

Submit a schedule showing a breakdown of the deferred income taxes by state and federal per books, pro-forma existing rates, and under proposed rates.

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule D-33.

Prepared by or under the supervision of: Darin T. Espigh

III-A-54

Request:

Submit a schedule showing a breakdown of accumulated investment tax credits (3 percent, 4 percent, 7 percent, 10 percent and 11 percent), together with details of methods used to write-off the unamortized balances.

Response:

As of fiscal year ended September 30, 2025, the amount of UGI Gas' accumulated 3% investment tax credit was $402,468.

This investment credit is amortized on a straight-line basis. The annual amortization of the credit is $318,420.

Prepared by or under the supervision of: Darin T. Espigh

III-A-55

Request:

Submit a schedule showing the adjustments for taxable net income per books (including below-the-line items) and pro-forma under existing rates, together with an explanation of any difference between the adjustments. Indicate charitable donations and contributions in the tax calculation for rate making purposes.

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedules A-1, D-1, D-33 and D-34. For ratemaking purposes, charitable donations and contributions are not being claimed and are excluded from test year data.

Prepared by or under the supervision of: Darin T. Espigh

III-A-56

Request:

Submit detailed calculations supporting taxable income before state and federal income taxes where the income tax is subject to allocation due to operations in another state, or due to operation of other taxable utility or non-utility business, or by operating divisions or areas.

Response:

Please see Attachment III-A-56.

UGI Gas has established nexus for income tax purposes in other states due to having storage inventory in those states. Because of having nexus with those states, it files tax returns with income allocated to those states. Income is allocated according to the apportionment rules for each state. Attachment III-A-56 reflects that allocation of taxable income.

Prepared by or under the supervision of: Darin T. Espigh

III-A-57

Request:

Submit detailed calculations showing the derivation of deferred income taxes for amortization of repair allowance if such policy is followed.

[Note: Submit additional schedules if the company has more than one accounting area.]

Response:

Please see Exhibit A, Schedule D-33 (Historic); Exhibit A, Schedule D-33 (Future); and Exhibit A, Schedule D-33 (Fully Projected) for the repairs deferred income tax expense for each of the respective years.

Please see Exhibit A, Schedule C-6 (Historic); Exhibit A, Schedule C-6 (Future); and Exhibit A Schedule C-6 (Fully Projected) for the repairs accumulated deferred income tax balance for each of the respective years.

Also, see the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9, for an explanation of the Company's regulatory treatment of the repairs tax allowance.

Prepared by or under the supervision of: Darin T. Espigh

III-A-58

Request:

Furnish a breakdown of major items comprising prepaid and deferred income tax charges and other deferred income tax credits and reserves by accounting areas.

Response:

See UGI Gas Exhibit A, Schedule C-6 (Historic) for deferred taxes relative to plant in service.

The net value of deferred taxes on items other than plant in service at fiscal year ended 9/30/2025 is a deferred tax liability of $52,127,436.

Prepared by or under the supervision of: Darin T. Espigh

III-A-59

Request:

Provide details of the Federal Surtax Credit allocated to the Pennsylvania jurisdictional area, if applicable.

Response:

Not applicable.

Prepared by or under the supervision of: Darin T. Espigh

III-A-60

Request:

Explain the reason for the use of cost of removal of any retired plant figures in the income tax calculations.

Response:

For income tax purposes, the cost of removal is deductible in the year incurred. For book purposes, the cost is amortized over 60 months.

Prepared by or under the supervision of: Darin T. Espigh

III-A-61

Request:

Submit the corresponding data applicable to Pennsylvania Corporate Income Tax deferment.

a. Show the amounts of straight line tax depreciation and accelerated tax depreciation, the difference between which gave rise to the normalizing tax charged back to the test year operating statement.

b. Show normalization for both Federal and State Income Taxes.

c. Show tax rates used to calculate tax deferment amount.

Response:

a.& b. Refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), UGI Gas Exhibit A (Fully Projected), Schedules D-33 and D-34, which provide details of the deferred income taxes from normalized depreciation separately for Federal and State.

c. For the FPFTY, the U.S. gross federal income tax rate is 21%, but net of the federal benefit for state taxes it becomes 19.43%. The state tax rate is 7.49%.

Prepared by or under the supervision of: Darin T. Espigh

III-A-62

Request:

Provide the accelerated tax depreciation and the book depreciation used to calculate test year deferrals in amounts segregated as follows:

For:

a. Property installed prior to 1970

b. Property installed subsequent to 1969 (indicate increasing capacity additions and nonincreasing capacity additions).

Response:

a. There is no property installed prior to 1970 for tax purposes.

b. Tax depreciation related to accelerated cost recovery system (ACRS) and modified accelerated cost recovery system (MACRS) is calculated on the full taxable basis and income taxes are normalized on the difference between ACRS/MACRS depreciation and book depreciation. For property installed subsequent to 1969, see Section D, Schedule D-34 within UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected).

Prepared by or under the supervision of: Darin T. Espigh

III-A-63

Request:

State whether all tax savings due to accelerated depreciation on property installed prior to 1970 have been passed through to income. (If not, explain).

Response:

All tax savings have been passed through and UGI Gas has no remaining accelerated depreciation on property installed prior to 1970.

Prepared by or under the supervision of: Darin T. Espigh

III-A-64

Request:

Show any income tax loss/gain carryovers from previous years that may effect test year income taxes or future year income taxes. Show loss/gain carryovers by years of origin and amounts remaining by years at the end of the test year.

Response:

Not applicable.

Prepared by or under the supervision of: Darin T. Espigh

III-A-65

Request:

State whether the company eliminates any tax savings by the payment of actual interest on construction work in progress not in rate base claim.

If response is affirmative:

a. Set forth amount of construction claimed in this tax savings reduction. Explain the basis for this amount.

b. Explain the manner in which the debt portion of this construction is determined for purposes of the deferral calculations.

c. State the interest rate used to calculate interest on this construction debt portion, and the manner in which it is derived.

d. Provide details of calculation to determine tax saving reduction. State whether state taxes are increased to reflect the construction interest elimination.

Response:

No. Interest deduction for rate making purposes is synchronized with the interest component of the capital structure.

Prepared by or under the supervision of: Darin T. Espigh

III-A-66

Request:

Provide a detailed analysis of Taxes Accrued per books as of the test year date. Also supply the basis for the accrual and the amount of taxes accrued monthly.

Response:

Please see Attachments III-A-66.1 (Historic), III-A-66.2 (Future), and III-A-66.3 (Fully Projected).

Prepared by or under the supervision of: Darin T. Espigh

UGI Utilities, Inc. - Gas Division
Schedule of Taxes Accrued per Books - Historic Test Year
Twelve Months Ended September 30, 2025
(Thousands of Dollars)

Description	Amount	Basis for Accrual of Tax	Amount of Tax Accrued Monthly
PA Unemployment Tax	121	Tax based on employer's unemployment rate multiplied by a maximum of $10,000 per employee.	Accrual is computed monthly by applying the tax rate to taxable earnings.
PA Use Tax	1,676	Tax based on taxable purchases on which sales tax has not been charged at the rate of 6%.	Accrual computed monthly by applying the tax rate to applicable purchases.
Federal Unemployment Tax	31	Tax is based on the first $7,000 earned by an employee at a taxable rate of 6%.	Accrual is computed monthly by applying the tax rate to taxable earnings.
FICA	2,136	Tax for OASDI is based on the first $176,100 earned by an employee at a taxable rate of 6.2%. Tax for HI is based on all wages at a taxable rate of 1.45%	Accrual is computed monthly by applying the tax rate to taxable earnings.
PA Corporate Net Income Tax	2,259	Tax is based on taxable net income as defined by the Pennsylvania Department of Revenue at the current rate of 8.49% for the fiscal year 2025.	Accrual is computed monthly by applying the rate to taxable income for the month.
Federal Income Tax	(8,594)	Tax is based on taxable net income as defined by and reported to the IRS. Current rate is 21% of taxable income. Note, the amount reflected is negative due to cash payments exceeding accrued tax expense.	Accrual is computed monthly by applying the rate to taxable income for the month.
	$ (2,371)

	$ -		

III-A-67

Request:

For the test year as recorded on test year operating statement:

a. Supply the amount of federal income taxes actually paid.

b. Supply the amount of the federal income tax normalizing charge to tax expense due to excess of accelerated tax depreciation over book depreciation.

c. Supply the normalizing tax charge to federal income taxes for the 10% Job Development Credit during test year.

d. Provide the amount of the credit of federal income taxes due to the amortization or normalizing yearly debit to the reserve for the 10% Job Development Credit.

e. Provide the amount of the credit to federal income taxes for the normalizing of any 3% Investment Tax Credit Reserve that may remain on the utility books.

Response:

a & b. Refer to UGI Gas Exhibit A, Schedule D-33 for the Historic, Future, and Fully Projected test years.

c & d. None.

e. $318,420.

Prepared by or under the supervision of: Darin T. Espigh

III-A-68

Request:

Provide the debit and credit in the test year to the Deferred Taxes due to Accelerated Depreciation for federal income tax, and provide the debit and credit for the Job Development Credits (whatever account) for test year.

Response:

The debit and credit in the test year to the Deferred Taxes due to Accelerated Depreciation for federal income tax is as follows:

A/C #	Account Description	Debit	Credit
00410XXX	Deferred Tax Expense	$XXX,XXX	
00282XXX	Accumulated Deferred Taxes		$XXX,XXX

UGI Gas has no Job Development Credits.

Prepared by or under the supervision of: Darin T. Espigh

III-A-69

Request:

Reconcile all data given in answers to questions on income taxes charged on the test year operating statement with regard to income taxes paid, income taxes charged because of normalization and credits due to yearly write-offs of past years' income tax deferrals, and from normalization of investment tax and development credits. (Both state and federal income taxes.)

Response:

Refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Section D, Schedules D-33 and D-34. Also, refer to the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9, where the subject matter of this filing requirement is discussed in detail.

Prepared by or under the supervision of: Darin T. Espigh

III-A-70

Request:

With respect to determination of income taxes, federal and state:

a. Show income tax results of the annualizing and normalizing adjustments to the test year record before any rate increase.

b. Show income taxes for the annualized and normalized test year.

c. Show income tax effect of the rate increase requested.

d. Show income taxes for the normalized and annualized test year after application of the full rate increase.

[It is imperative that continuity exists between the income tax calculations as recorded for the test year and the final income tax calculation under proposed rates. If the company has more than one accounting area, then additional separate worksheets must be provided in addition to those for total company.]

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Section D, Schedules D-33 and D-34.

Prepared by or under the supervision of: Darin T. Espigh

III-A-71

Request:

In adjusting the test year to an annualized year under present rates, explain any changes that may be due to book or tax depreciation change and to debits and credits to income tax expense due to accelerated depreciation, deferred taxes, job development credits, tax refunds or other items.

(The above refers only the adjustments going from recorded test year to annualized test year.)

Response:

Adjustments relative to the subject matter were made to recorded data to annualize the years' data and are based on property balances at the end of the test year to reflect a full year's expense of deferral. Please see the Direct Testimony of Darin T. Espigh, UGI Gas Statement No. 9.

Prepared by or under the supervision of: Darin T. Espigh

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-1

Request:

If Unrecovered Fuel Cost policy is implemented, provide the following:

a. State manner in which amount of Unrecovered Fuel Cost on balance sheet at the end of the test year was determined, and the month in test year in which such fuel expense was actually incurred. Provide amount of adjustment made on the rate case operating account for test year-end unrecovered fuel cost. (If different than balance sheet amount, explain.)

b. Provide amount of Unrecovered Fuel Cost that appeared on the balance sheet at the opening date of the test year, and the manner in which it was determined. State whether this amount is in the test year operating account.

Response:

a. For information regarding the unrecovered purchased fuel cost, please refer to the 1307(f) filing.

b. See Attachment III-E-1.

UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-3

Request:

Submit a schedule showing a reconciliation of test year MCF sales and line losses. List all amounts of gas purchased, manufactured and transported.

Response:

The data is provided below for the Historic Year:

Throughput -	321,987,283 Mcf
Company Use Gas -	404,613 Mcf
Line Loss -	1,699,226 Mcf
Total Sendout -	324,091,122 Mcf

Prepared by or under the supervision of: Tracy A. Hazenstab

UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-4

Request:

Provide detailed calculations substantiating the adjustment to revenues for annualization of changes in number of customers and annualization of changes in volume sold for all customers for the test year.

a. Break down changes in number of customers by rate schedules.

b. If an annualization adjustment for changes in customers and changes in volume sold is not submitted, please explain.

Response:

a. Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10.

b. Not applicable.

Prepared by or under the supervision of: Sherry A. Epler

Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-7

Request:

Provide details of respondent's attempts to recover uncollectible and delinquent accounts.

Response:

The Company performs collection activities on all active accounts in accordance with applicable Commission requirements. When those collection activities are exhausted, UGI Gas refers bad debt placements to a collection agency for continuing collection action. When the service is closed, the customer receives a closing bill. Placements are sent to the collection agency within ninety (90) days after the service is closed. The day after the final bill is due, a Final Bill Reminder is mailed. The reminder states that their balance must be paid to avoid being turned over to a collection agency. Forty-five (45) days later, if the balance has not been paid, the account is sent to collections.

Prepared by or under the supervision of: Vivian K. Ressler

III-E-8

Request:

Describe how the net billing and gross billing is determined. For example, if the net billing is based on the rate blocks plus FCA and STA, and the gross billing is determined by a percentage increase (1, 3 or 5 percent), then state whether the percentage increase is being applied to all three items of revenue--rate blocks plus FCA and STA.

Response:

A. The total net bill is the sum of:

1. Tariff Amount – calculated as the volume of usage priced through the rate schedule tables.

2. Currently effective surcharges.

3. Sales Tax – calculated as the product of the current sales tax percentage (6%) and the sum of the above. Sales tax is not applied to residential customers when the purchase of natural gas is solely for the purchaser's own residential use and non-residential customers are exempt from sales tax if the purchaser is entitled to claim an exemption under Chapter 61 of the Pa. Code § 32.25 subsection (d). If a tax exemption certificate is on file for these non-residential customers, the tax base is adjusted in accordance with the exemption certificate.

B. The gross bill is the sum of:

1. Total net bill as described above.

2. Late payment charges on any unpaid previous balance, if any, as of the billing date.

3. Late payment charge for payment made after the due date (see III-E-9 for details on late payment charges applied).

III-E-8 (Continued)

C. The percentage increase (late payment charge) is applied to the base tariff rate and the State Tax Adjustment Surcharge. The late payment charge is not applied to Sales Tax or to previously applied late payment charges.

III-E-13

Request:

Provide a schedule of present and proposed tariff rates showing dollar change and percent of change by block. Also, provide an explanation of any change in block structure and the reasons therefor.

Response:

Please see UGI Gas Exhibit E – Proof of Revenue and the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10.

Prepared by or under the supervision of: Sherry A. Epler

III-E-14

Request:

Provide the following statements and schedules. The schedules and statements for the test year portion should be reconciled with the summary operating statement.

a. An operating revenues summary for the test year and the year preceding the test year showing the following (Gas MCF):

(i) For each major classification of customers

(a) MCF sales
(b) Dollar Revenues
(c) Forfeited Discounts (Total if not available by classification)
(d) Other and Miscellaneous revenues that are to be taken into the utility operating account along with their related costs and expenses.

(ii) A detailed explanation of all annualizing and normalizing adjustments showing method utilized and amounts and rates used in calculation to arrive at adjustment.

(iii) Segregate, from recorded revenues from the test year, the amount of revenues that are contained therein, by appropriate revenue categories, from:

(a) Fuel Adjustment Surcharge
(b) State Tax Surcharge
(c) Any other surcharge being used to collect revenues.
(d) Provide explanations if any of the surcharges are not applicable to respondent’s operations.

[The schedule should also show number of customers and unit of sales (Mcf), and should provide number of customers by service classification at beginning and end of test year.]

b. Provide details of sales for resale, based on periods five years before and projections for five years after the test year, and for the test year. List customers,

III-E-14 (Continued)

Mcf sold, revenues received, source of Mcf sold (storage gas, pipeline gas, manufactured gas, natural or synthetic), contracted or spot sales, whether sales are to affiliated companies, and any other pertinent information.

Response:

a. (i)(a) Please see Attachment III-E-19.

(i)(b)-(d) Please see UGI Gas Exhibit A, Schedule D-5 (Historic), UGI Gas Exhibit A, Schedule D-5 (Future), and UGI Gas Exhibit A, Schedule D-5 (Fully Projected).

(ii) Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10.

(iii) Please see UGI Gas Exhibit E, Proof of Revenue.

b. None.

Delivered on January 28, 2026

III-E-15

Request:

State manner in which revenues are being presented for ratemaking purposes:

a. Accrued Revenues
b. Billed Revenues
c. Cash Revenues

Provide details of the method followed.

Response:

Fully Projected Test Year revenues at present and proposed rates are based upon a calculation applying present rates to projected volumes and number of customers and proposed rates to projected volumes and number of customers.

Prepared by or under the supervision of: Sherry A. Epler

UGI Utilities, Inc. - Gas Division

III-E-16

Request:

If revenue accruing entries are made on the books at end of each fiscal period, give entries made accordingly at the end of the test year and at the beginning of the year. State whether they are reversed for ratemaking purposes.

Response:

The amount of unbilled revenue accrued at September 30, 2025 and September 30, 2024 for UGI Gas was $20,334,010; and $20,125,330, respectively. The Company annualizes revenue for ratemaking purposes eliminating the impacts of unbilled revenues.

Delivered on January 28, 2026

III-E-17

Request:

State whether any adjustments have been made to expenses in order to present such expenses on a basis comparable to the manner in which revenues are presented in this proceeding (i.e.--accrued, billed or cash).

Response:

No such adjustments have been made to expenses. Expenses are presented on a basis comparable to the manner in which revenues are presented.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-E-18

Request:

If the utility has a Fuel Adjustment Clause:

a. State the base fuel cost per MCF chargeable against basic customers' rates during the test year. If there was any change in this basic fuel charge during the test year, give details and explanation thereof.

b. State the amount in which the fuel adjustment clause cost per MCF exceeds the fuel cost per MCF charged in base rates at the end of the test year.

c. If fuel cost deferment is used at the end of the test year, give

   (i) The amount of deferred fuel cost contained in the operating statement that was deferred from the 12-month operating period immediately preceding the test year.

   (ii) The amount of deferred fuel cost that was removed from the test period and deferred to the period immediately following the test year.

d. State the amount of Fuel Adjustment Clause revenues credited to the test year operating account.

e. State the amount of fuel cost charged to the operating expense account in the test year which is the basis of Fuel Adjustment Clause billings to customers in that year. Provide summary details of this charge.

f. From the recorded test year operating account, remove the Fuel Adjustment Clause Revenues. Also remove from the test year recorded operating account the excess of fuel cost over base rate fuel charges, which is the basis for the Fuel Adjustment charges. Explain any difference between FAC Revenues and excess fuel costs. [The above is intended to limit the operating account to existing customers' base rate revenues and expense deductions relative thereto].

III-E-18 (Continued)

Response:

The Company does not have a Fuel Adjustment Clause. The Company recovers its purchased gas costs through purchased gas cost rates under Section 1307(f) of the Public Utility Code.

III-E-21

Request:

If a gas company is affiliated with another utility segment, such as a water or electric segment, explain the effects, if any, upon allocation factors used in the gas rate filing of current or recent rate increases allowed to the other utility segment (or segments) of the company.

Response:

UGI Utilities, Inc. owns both gas and electric divisions.

UGI Gas incurs costs for services provided by UGI Corp., and other affiliated companies, in accordance with affiliated interest arrangements authorized by the Commission. UGI Utilities also allocates or assigns costs between UGI Electric and UGI Gas. All costs which can be identified as pertaining exclusively to an operating unit are billed directly to that unit. Those costs which cannot be directly associated with the operation of an individual operating unit are allocated to the various companies benefiting from the service. Allocations are done by a methodology applicable to the cost (e.g., budgeted time allocations, number of employees, etc.) or, if no one methodology is specific to the cost, by a formula referred to as the Modified Wisconsin Formula ("MWF"). The MWF achieves an equitable distribution of common expenses based on the relative activity and size of each operating unit to the total of all operating units, which benefit from the respective activities. Activity is measured by total revenues and total operating expenses and size is measured by tangible net assets employed (excluding acquisition goodwill).

The proposed rates of UGI Gas are not based on any increase granted to any other affiliated utility segment.

Request:

Provide supporting data detailing curtailment adjustments, procedures and policies.

Response:

The Company did not have any curtailment adjustments during the historic test year ending September 30, 2025, and is not claiming any curtailment adjustments in its future test year or fully projected future test year. In addition, the Company follows curtailment procedures and policies as specified in its Gas Tariff on file with the Commission. Please refer to UGI Gas Exhibit F, Section 21, Gas Emergency Planning, of the Company's current Tariff.

Prepared by or under the supervision of: Jill E. Walter

III-E-23

Request:

Submit a schedule showing fuel cost in excess of base compared to fuel cost recovery for the period two months prior to test year and the test year.

Response:

There are no fuel costs in excess of base compared to fuel cost recovery.

All of the Company's fuel costs are recovered through its annual purchased gas cost filing made pursuant to Section 1307(f) of the Public Utility Code.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-E-25

Request:

Submit calculations supporting energy cost per MCF and operating ratio used to determine increase in costs other than production to serve additional load.

Response:

The energy cost per Mcf is developed as part of each annual and quarterly 1307(f) filing submitted to the Commission. Please refer to UGI Gas Docket No. R-2025-3054938 in the most recent Annual 1307(f) Purchased Gas Cost ("PGC") filing which can be found at URL https://www.puc.pa.gov/docket/R-2025-3054938.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-E-26

Request:

Submit detailed calculations for bulk gas transmission service costs under supply and/or interconnection agreements.

Response:

UGI Gas incurs no bulk gas transmission costs under supply and/or interconnection agreements.

Prepared by or under the supervision of: Tracy A. Hazenstab

Request:

Provide a schedule showing the determination of the fuel costs included in the base cost of fuel.

Response:

Please refer to UGI Gas Docket No. R-2025-3054938 in the most recent Annual 1307(f) Purchased Gas Cost ("PGC") filing which can be found at URL https://www.puc.pa.gov/docket/R-2025-3054938.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-E-32

Request:

Provide a schedule showing the calculation of any deferred fuel costs shown in Account 174. Also, explain the accounting, with supporting detail, for any associated income taxes.

Response:

Please see Attachment III-E-32.

Because the tax treatment for deferred fuel costs differs from the book treatment, deferred taxes are generated on the over or under-collection of deferred fuel costs. Specifically, tax follows a cash basis as it relates to deferred fuel costs. When the Company is in an over-collected position, a deferred tax asset is generated because the Company will recognize it as taxable income and pay taxes currently on the cash it collected from customers, even though this is not recognized as book revenue. Vice versa, when the Company is in an under-collected position, a deferred tax liability is generated because the Company recognizes less taxable income because it did not collect adequate cash to cover its fuel costs, but for book purposes revenue is recognized such that no margin is recognized on the purchase of gas.

Prepared by or under the supervision of: Amy M. Keller

UGI Utilities, Inc. - Gas Division
Statement of Total Over/Under Collections From the Present
Gas Cost Rate Adjustment Clause - 12 Months Ending September 30, 2025

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-35

Request:

Submit a schedule showing the Gross Receipts Tax Base used in computing Pennsylvania Gross Receipts Tax Adjustment.

Response:

Not applicable. UGI Gas is not subject to the Pennsylvania Gross Receipts Tax.

Prepared by or under the supervision of: Darin T. Espigh

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-36

Request:

State the amount of gas, in mcf, obtained through various suppliers in past years.

Response:

Please see Book I, Attachment 1-A-1 of the 2025 1307(f) Purchased Gas Cost filing for UGI Gas at Docket No. R-2025-3054938 which can be found at URL https://www.puc.pa.gov/pcdocs/1877400.pdf.

Prepared by or under the supervision of: Tracy A. Hazenstab

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-37

Request:

In determining pro forma expense, exclude cost of gas adjustments applicable to fuel adjustment clause and exclude fuel adjustment clause revenues, so that the operating statement is on the basis of base rates only.

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected), Schedule D-6.

Prepared by or under the supervision of: Tracy A. Hazenstab

III-E-38

Request:

Identify company's policy with respect to replacing customers lost through attrition.

Response:

UGI Gas has not experienced attrition on a total customer basis. The Company actively seeks opportunities to add new customers, including new construction and conversion customers, and adds these customers to the extent they meet the requirements of the Company's Tariff.

Prepared by or under the supervision of: Hans G. Bell

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Section 53.53 - III-E - Balance Sheet and
Operating Statement - Gas Utilities
Delivered on January 28, 2026

III-E-39

Request:

Identify procedures developed to govern relationship between the respondent and potential customers--i.e., basically expansion, alternate energy requirements, availability of supply, availability of distribution facilities, ownership of metering and related facilities.

Response:

Please refer to UGI Gas Exhibit F, Rule 5, Extension Regulation, of the Tariff for UGI Utilities, Inc. - Gas Division.

Prepared by or under the supervision of: Sherry A. Epler

SECTION 53.53 – RATE STRUCTURE

IV-B-1

Request:

Provide a Cost of Service Study showing the rate of return under the present and proposed tariffs for all customer classifications. The study should include a summary of the allocated measures of value, operating revenues, operating expenses and net return for each of the customer classifications at original cost and at the 5-year trended original cost.

a. (Reserved)

Response:

Please refer to UGI Gas Exhibit D.

Prepared by or under the supervision of: John D. Taylor

IV-B-2

Request:

Provide a statement of testimony describing the complete methodology of the cost of service study.

Response:

Please refer to UGI Gas Exhibit D and Direct Testimony of John D. Taylor, UGI Gas Statement No. 11.

Prepared by or under the supervision of: John D. Taylor

IV-B-3

Request:

Provide a complete description and back-up calculations for all allocation factors.

Response:

Please refer to UGI Gas Exhibit D.

Prepared by or under the supervision of: John D. Taylor

IV-B-4

Request:

Provide an exhibit for each customer classification showing the following data for the test year and the four previous years:

a. The maximum coincident peak day demand.

b. The maximum coincident 3-day peak day demand.

c. The average monthly consumption in MCF during the Primary Heating Season (November-March).

d. The average monthly consumption in MCF during the Non-heating season (April-October).

e. The average daily consumption in MCF for each 12-month period.

Response:

Please see Attachments IV-B-4 (a)-(e).

Prepared by or under the supervision of: Sherry A. Epler

IV-B-5

Request:

Submit a Bill Frequency Analysis for each rate. The analysis should include the rate schedule and block interval, the number of bills at each interval, the cumulative number of bills at each interval, the Mcf or therms at each interval, the cumulative Mcf or therms at each interval, the accumulation of Mcf or therms passing through each interval, and the revenue at each interval for both the present rate and the proposed rates. The Analysis should show only those revenues collected from the basic tariff.

Response:

Please see Attachment IV-B-5 which has been uploaded separately via the Commission's SharePoint site. The materials will be served upon the parties via a secure OneDrive link.

Prepared by or under the supervision of: Sherry A. Epler

IV-B-6

Request:

Supply copies of all present and proposed Gas Tariffs.

Response:

Please see UGI Gas Exhibit F - Current Tariff and UGI Gas Exhibit F - Proposed Tariff Supplement.

Prepared by or under the supervision of: Sherry A. Epler

IV-B-7

Request:

Supply a graph of present and proposed base rates on hyperbolic cross section paper.

Response:

Please see Attachment IV-B-7.

Prepared by or under the supervision of: Sherry A. Epler

UGI Utilities, Inc. - Gas Division
Comparison of Present and Proposed Rates
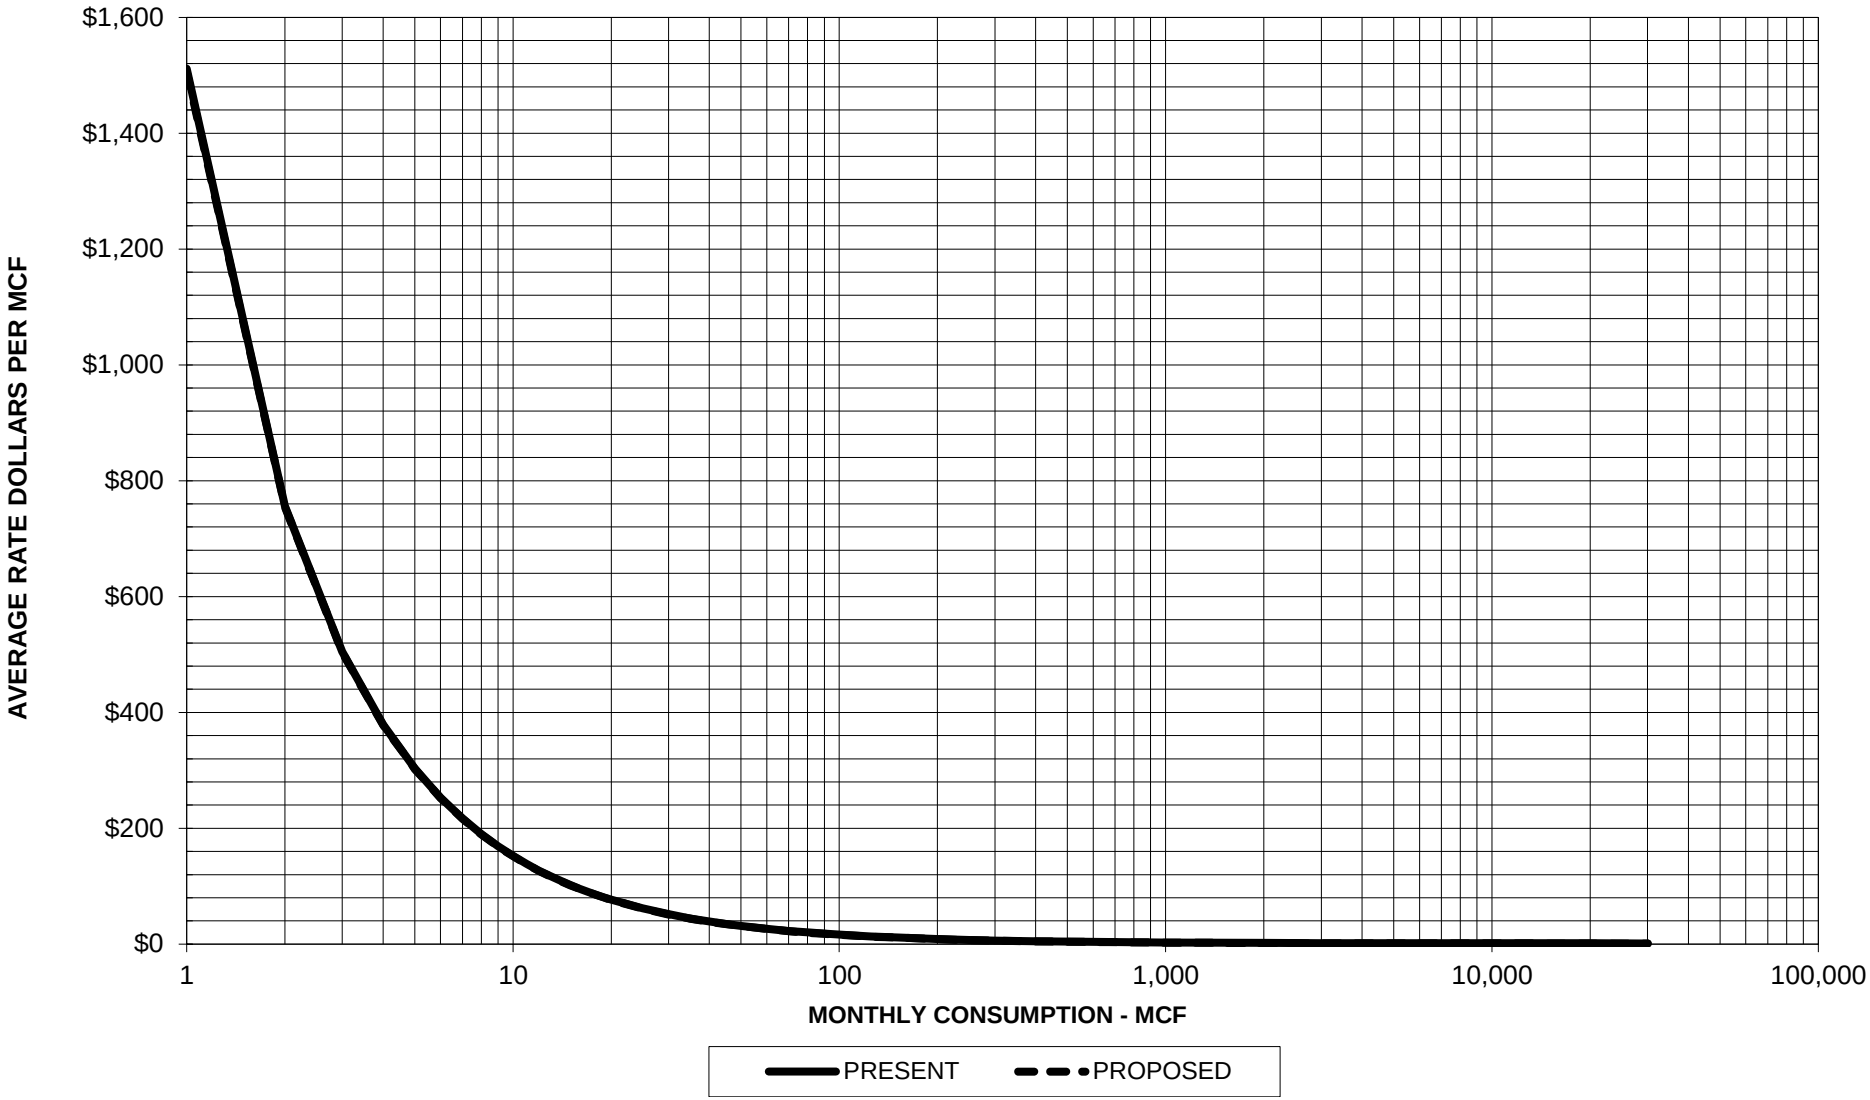
Rate Schedule IS



IV-B-8

Request:

Supply a map showing the Gas System Facilities and Gas Service Areas. The map should include transmission lines, distribution lines, other companies' lines interconnecting with the interconnecting points clearly designated, major compressor stations, gas storage areas and gas storage lines. The normal direction of gas flow within the transmission system should be indicated by arrows. Separate service areas within the system should be clearly designated.

Response:

Please see the response to I-C-2.

Prepared by or under the supervision of: Jill E. Walter

IV-B-9

Request:

Supply a cost analysis supporting minimum charges for all rate schedules.

Response:

Please refer to UGI Gas Exhibit D and the Direct Testimony of John D. Taylor, UGI Gas Statement No. 11.

Prepared by or under the supervision of: John D. Taylor

IV-B-10

Request:

Supply a cost analysis supporting demand charges for all tariffs which contain demand charges.

Response:

Please refer to UGI Gas Exhibit D and the Direct Testimony of John D. Taylor, UGI Gas Statement No. 11.

Prepared by or under the supervision of: John D. Taylor

IV-B-11

Request:

Supply the net fuel clause adjustment by month for the test year.

Response:

The Company does not have a net fuel clause adjustment.

Prepared by or under the supervision of: Tracy A. Hazenstab

IV-B-12

Request:

Supply a tabulation of base rate bills for each rate schedule comparing the existing rates to proposed rates. The tabulation should show the dollar difference and the per cent increase or decrease.

Response:

Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10, and the responses to IV-B-5 and IV-B-7.

Prepared by or under the supervision of: Sherry A. Epler

IV-B-13

Request:

Submit the projected demands for all customer classes for both purchased and produced gas for the three years following the test year filing.

Response:

Please reference Attachment 4-1 of UGI Gas Docket No. R-2025-3054938 in the most recent Annual 1307(f) Purchased Gas Cost ("PGC") filings which can be found at URL https://www.puc.pa.gov/pcdocs/1877400.pdf.

Prepared by or under the supervision of: Tracy A. Hazenstab

IV-B-14

Request:

Supply an exhibit showing the gas deliveries to each customer class for the most recent 24 month period. The exhibit should identify the source of the gas, such as “purchased” (pipeline), “production” (includes purchases from local producers), “storage withdrawal,” “propane/air,” and “unaccounted for.”

Response:

Please see Attachment IV-B-14.

Prepared by or under the supervision of: Sherry A. Epler

INDEX OF CONTENTS ON ONEDRIVE

UGI UTILITIES, INC. – GAS DIVISION
2026 BASE RATE CASE
DOCKET NO. R-2025-3059523

INDEX OF CONTENTS ON ONEDRIVE

BOOK I - Indexes, Statements and Standard Filing Requirements
- Attachment III-A-21
- Attachments III-A-22.2(a) through III-A-22.2(k)
- Attachment IV-B-5

BOOK II - Supplemental Data Requests – Cost of Service, Rate of Return and Revenue Requirements
- Attachments SDR-COS-14(a) and SDR-COS-14(b)
- Attachments SDR-ROR-4.1 through SDR-ROR-4.4
- Attachments SDR-ROR-10.1 through SDR-ROR-10.14
- Attachments SDR-RR-11(a) and SDR-RR-11(b) (Excel)
- Attachments SDR-RR-27.1 through SDR-RR-27.7

BOOK III - UGI Gas Statements No. 1 through Statement No. 6

BOOK IV - UGI Gas Statements No. 7 through Statement No. 12

BOOK V - UGI Gas Exhibit A – Revenue Requirement
- (Fully Projected, Future and Historic)

UGI Gas Exhibit B – Rate of Return
UGI Gas Exhibit E – Proof of Revenue

BOOK VI - UGI Gas Exhibit C – Depreciation Study – Fully Projected

BOOK VII - UGI Gas Exhibit C – Depreciation Study – Future

BOOK VIII - UGI Gas Exhibit C – Depreciation Study – Historic

BOOK IX - UGI Gas Exhibit D – Allocated Cost of Service Study

BOOK X - UGI Gas Exhibit F – Current Tariffs

BOOK XI - UGI Gas Exhibit F – Proposed Supplement No. 63 to UGI Utilities, Inc. – Gas Division – Pa. P.U.C. Nos. 7 & 7S Clean and Redlined Versions

BOOK II

UGI UTILITIES, INC. – GAS DIVISION

BEFORE

THE PENNSYLVANIA PUBLIC UTILITY COMMISSION

Information Submitted Pursuant to

Section 53.51 et seq of the Commission's Regulations

SUPPLEMENTAL DATA REQUESTS – COST OF SERVICE
SUPPLEMENTAL DATA REQUESTS – RATE OF RETURN
SUPPLEMENTAL DATA REQUESTS – REVENUE REQUIREMENTS

UGI UTILITIES, INC. – GAS DIVISION
PA P.U.C. NOS. 7 & 7S
SUPPLEMENT NO. 63

DOCKET NO. R-2025-3059523

Issued: January 28, 2026 **Effective: March 29, 2026**

SUPPLEMENTAL DATA REQUESTS

COST OF SERVICE

SDR-COS-1

Request:

Please explain the Company's policy with regard to when customer advances and contributions in aid of construction must be made.

Response:

An advance or contribution in aid of construction is required from an Extension Applicant or Customer when insufficient revenues will be derived from the Extension Applicant or Customer to warrant the investment by UGI Gas. Please see UGI Gas Exhibit F, Section 5, Extension Regulation, of the UGI Gas Tariff.

Prepared by or under the supervision of: Jill E. Walter

SDR-COS-2

Request:

Please provide a detailed explanation describing how contributions in aid of construction and customer advances are reflected in the Company's cost of service study.

Response:

Contributions in aid of construction, including amounts collected to cover the Company's tax obligations on certain project investments, are reflected as a deduction to rate base and included in UGI Gas Exhibit D. UGI Gas does not have any customer advances and no claim is made for customer advances.

Prepared by or under the supervision of: Amy M. Keller

SDR-COS-3

Request:

Please provide a breakdown of contributions in aid of construction by customer class and plant account number for the most recent year available.

Response:

Please see Attachment SDR-COS-3.

Prepared by or under the supervision of: Amy M. Keller

SDR-COS-8

Request:

Please provide the Company's rate design models and cost of service study on an IBM PC-compatible computer disk in Lotus 1-2-3 or Quattro format. If the models consist of more than one file, please include information on all files on the disk and what they contain. If not available in Lotus 1-2-3 or Quattro format, please provide in ASCII format.

Response:

Please refer to UGI Gas Exhibit D, Cost of Service Allocation, provided in electronic format and uploaded to the Commission’s SharePoint site. Those materials will be served upon the parties via a secure OneDrive link.

Prepared by or under the supervision of: John D. Taylor

SDR-COS-9

Request:

Please provide a copy of the Company's current customer extension policy. Provide a representative sample of the analyses conducted by the Company when deciding whether service to a new customer qualifies under the Company's customer extension policy.

Response:

The current customer extension policy is contained in UGI Gas Exhibit F, Rule 5, Extension Regulation, of the Company's current Tariff. Rules 5.1-5.4 and 5.7 describe the methodology to evaluate whether service to a new customer qualifies under the current extension policy and when to apply or require a contribution in aid of construction.

Prepared by or under the supervision of: Sherry A. Epler

SDR-COS-10

Request:

Please provide a detailed supply and requirement schedule for the Company's three most recent annual peak days and for design day. The schedules should include deliveries by source and requirements by rate schedule. Identify sources and requirements for transportation customers separately. Also include the Company's daily sendout sheet for each peak day and applicable weather data.

Response:

Please see Attachment SDR-COS-10.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-COS-12

Request:

Please provide a copy of the load duration curve used by the Company for capacity planning purposes. Please also identify the numerical data points shown for each day on the curve.

Response:

Please see Book I, Attachment 14-2, of the 2025 1307(f) Purchased Gas Cost filing for UGI Gas at Docket No. R-2025-3054938 which can be found at https://www.puc.pa.gov/pcdocs/1877400.pdf.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-COS-13

Request:

Please provide the following for the Company's ten largest transportation customers during peak month of the most recent heating season:

a. actual consumption

b. volume delivered to the Company on their behalf, if applicable

c. daily nomination

Response:

Please see Attachment SDR-COS-13.

Prepared by or under the supervision of: Sherry A. Epler

SDR-COS-14

Request:

Please provide a summary identifying the salient features of each of the following. Salient features include contract party, effective term and applicable contract quantities (daily, annual, seasonal, etc.).

a. All firm transportation agreements by type greater than one month in length. Indicate whether the capacity is available at the Company's citygate to meet design day requirements or is upstream capacity. Identify the downstream pipeline for each upstream arrangement.

b. All firm storage, gathering and exchange agreements. Indicate if each agreement provides design day capacity at the citygate or requires separate transportation (identify) service to effectuate delivery. Include on-system storage and peak shaving facilities used by the Company and identify all ratcheting provisions applicable to the Company's contractual and on-system storage arrangements.

Response:

Please see Attachments SDR-COS-14(a) and SDR-COS-14(b) included in print and uploaded to the Commission’s SharePoint site. Those materials will be served upon the parties via a secure OneDrive link. The contracts are reflected as of November 1, 2025.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-COS-15

Request:

For the most recent annual period available, please identify the applicable monthly volumes and revenues under each rate schedule which were:

a. Sold under a negotiated or market-based rate

b. Transported under a negotiated or market based rate

c. Transported at full margin transportation rates

Response:

Please see Attachment SDR-COS-15.

Prepared by or under the supervision of: Sherry A. Epler

SDR-COS-16

Request:

Please provide the following for each curtailment during the last three years:

a. Dates of curtailment

b. Type of curtailment (firm service, interruptible service, both)

c. Whether curtailment was related to amount of capacity on the Company's system, other capacity or supply related

d. Rate schedule that curtailed volumes would have been billed under

e. Curtailed volumes by rate schedule

f. Actual volumes moved by rate schedule

Response:

The Company has had no curtailments of firm service during the last three years.

Prepared by or under the supervision of: Jill E. Walter

SDR-COS-17

Request:

Please identify the Company's design day planning criteria and the probability of design day occurrence. Include any available documentation supporting the Company's claimed probability of occurrence.

Response:

Please see Book I, Section 11 of the 2025 1307(f) Purchased Gas Cost filing for UGI Gas at Docket No. R-2025-3054938 which can be found at https://www.puc.pa.gov/pcdocs/1877400.pdf.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-COS-18

Request:

For each customer class contained in the cost of service study, please provide monthly throughput by class.

Response:

Please see Attachment SDR-COS-18.

Request:

Please provide workpapers showing the development of each allocation factor reflected in the Company's cost of service study. Include a description of each allocation factor, all calculations performed to develop the allocators and all supporting documentation, studies or other information relied upon to determine the allocators.

Response:

Please refer to UGI Gas Exhibit D.

Prepared by or under the supervision of: John D. Taylor

SDR-COS-20

Request:

Please provide all workpapers, calculations and supporting documentation for the functionalization and classification performed for the Company's cost of service study.

Response:

Please refer to UGI Gas Exhibit D.

Prepared by or under the supervision of: John D. Taylor

SDR-COS-21

Request:

If not provided elsewhere, please provide a detailed proof of revenues at both present and proposed rates.

Response:

Please see UGI Gas Exhibit E - Proof of Revenue.

Prepared by or under the supervision of: Sherry A. Epler

SUPPLEMENTAL DATA REQUESTS

RATE OF RETURN

SDR-ROR-1

Request:

Please supply copies of the following documents for the Company and, if applicable, its parent:

a. Most recent Annual Report to shareholders (including any statistical supplements);

b. Most recent SEC Form l0K,

c. All SEC Form l0Q reports issued within last year.

Response:

a. Please refer to the UGI Corporation website for the most recent UGI Corporation Annual Report to shareholders at the following link: https://www.ugicorp.com/investors/financial-reports/annual-reports

b. Please refer to the response to request II-A-3 for the UGI Corporation SEC Form 10-K.

c. Please refer to the SEC website for copies of all SEC Form 10Q reports for UGI Corporation issued within the last year. These can be found at:

- Quarter ended December 31, 2024: https://www.sec.gov/ix?doc=/Archives/edgar/data/0000884614/000088461425000008/ugi-20241231.htm

- Quarter ended March 31, 2025: https://www.sec.gov/ix?doc=/Archives/edgar/data/0000884614/000088461425000017/ugi-20250331.htm

Request:

Please supply copies of all presentations by the Company's and, if applicable, its parent's management to securities analysts during the past 2 years. This would include presentations of financial projections.

Response:

Copies of securities analysts presentations for 2024 and 2025 can be found at the following link: https://www.ugicorp.com/investors/financial-reports/events-and-presentations

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-7

Request:

Please provide a listing of all securities issuances for the Company and, if applicable, its parent projected for the next two years. The response should identify for each projected issuance the date, dollar amount, type of security, and effective cost rate.

Response:

UGI Utilities, Inc. does not have publicly traded stock. UGI Corp ("the Parent"), the parent company of UGI Utilities, Inc., does have publicly traded stock.

On May 25, 2021, the Parent issued 2.2 million “Equity Units” with a total notional value of $220 million. The Equity Units were equity-linked securities and not Common Stock. Each Equity Unit was a mandatory convertible, hybrid security that combined a “Forward Contract” and a 10% undivided interest in one share “Convertible Preferred Stock” of the Parent. The Equity Units included a requirement to remarket the Convertible Preferred Stock approximately three years after issuance (May 2024).

Pursuant to the terms of the Equity Units, in May 2024, the Parent announced the unsuccessful final remarketing of its Convertible Preferred Stock. As a result, each holder of an Equity Unit received 2.2973 shares of Parent Common Stock, without par value, with cash paid in lieu of any fractional shares.

In the event of a successful remarketing of the Convertible Preferred Stock, the Parent would still have provided such Common Stock to Equity Unit holders due to the terms of the Forward Contract.

During the third quarter of Fiscal 2024, the Parent (i) made the final payment to settle the Forward Contract in full; (ii) canceled the Convertible Preferred Stock; and (iii) in a non-cash transaction, converted the Equity Units into 5,054,030 shares of Parent Common Stock and issued the shares to the holders of the Equity Units under the Forward Contract.

As noted above, the Equity Units are not common stock, although they contain terms that eventually convert a portion into Parent Common Stock.

All terms and requirements under the Equity Units are satisfied. The Equity Units are fully settled as of June 2024.

SDR-ROR-7 (Continued)

Please reference Schedule B-6 of Exhibit A (Fully Projected) for details of expected debt issuances for UGI Utilities, Inc. through Fiscal 2027.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-8

Request:

Please identify all of the Company's and, if applicable, its parent's publicly underwritten common stock issuances written in the last five years. Identify which such issuances were related to mergers or acquisitions, and which were undertaken to fund facility investments in utility plant and equipment.

Response:

The Company has not issued stock in the last five years.

The Parent (UGI Corporation) has issued stock related to the below transaction in the last five years.

On May 25, 2021, the Parent issued 2.2 million “Equity Units” with a total notional value of $220 million. The Equity Units were equity-linked securities and not Common Stock. Each Equity Unit was a mandatory convertible, hybrid security that combined a “Forward Contract” and a 10% undivided interest in one share “Convertible Preferred Stock” of the Parent. The Equity Units included a requirement to remarket the Convertible Preferred Stock approximately three years after issuance (May 2024).

Pursuant to the terms of the Equity Units, in May 2024, the Parent announced the unsuccessful final remarketing of its Convertible Preferred Stock. As a result, each holder of an Equity Unit received 2.2973 shares of Parent Common Stock, without par value, with cash paid in lieu of any fractional shares.

In the event of a successful remarketing of the Convertible Preferred Stock, the Parent would still have provided such Common Stock to Equity Unit holders due to the terms of the Forward Contract.

During the third quarter of Fiscal 2024, the Parent (i) made the final payment to settle the Forward Contract in full; (ii) canceled the Convertible Preferred Stock; and (iii) in a non-cash transaction, converted the Equity Units into 5,054,030 shares of Parent Common Stock and issued the shares to the holders of the Equity Units under the Forward Contract.

As noted above, the Equity Units are not common stock, although they contain terms that eventually convert a portion into Parent Common Stock.

SDR-ROR-8 (Continued)

All terms and requirements under the Equity Units are satisfied. The Equity Units are fully settled as of June 2024.

The issuance of Equity Units was in conjunction with an acquisition by the Parent.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-9

Request:

Please identify any plan by the Company to refinance high cost long-term debt or preferred stock.

Response:

Please see the response to SDR-ROR-7.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-10

Request:

Please provide copies of all securities analysts' reports relating to the Company and/or its parent issued within the past 2 years.

Response:

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-11

Request:

If applicable, please supply a listing of all common equity infusions from the parent to the Company over the past five years. In each case, identify date and dollar amount.

Response:

The following schedule represents common equity infusion from UGI Corporation to UGI Utilities, Inc. for each of the last five fiscal years:

	(000's)
2021	$0
2022	$35,000 (April)
2023	$0
2024	$0
2025	$15,000 (April)

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-12

Request:

If applicable, please identify the Company's common dividend payments to its parent for each of the last five years.

Response:

The following schedule represents common dividend payments from UGI Utilities, Inc. to UGI Corporation for each of the last five fiscal years:

	(000's)
2021	$35,000
2022	$0
2023	$0
2024	$135,000
2025	$79,000

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-13

Request:

Please provide the latest year-by-year financial projections for the Company for the next five years. Also, please indicate the date these projections were prepared; whether approved by management; and whether the projections have been submitted to bond rating agencies. (Information should be treated in a confidential manner.)

Response:

UGI Gas prepares an annual Budget and three-year Plan. The Budget and Plan were approved in September 2025. These projections will be included in consolidated UGI Utilities, Inc. financial projections to be presented to bond rating agencies.

Please refer to the response to II-A-13 for a schedule of financial projections for Fiscal Years 2026 and 2027.

The projections for Fiscal Years 2028 and 2029 are confidential and will be made available to parties upon request and the entry of an acceptable Protective Order.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-ROR-14

Request:

Please provide the Company's five-year construction budget.

Response:

The Company prepares a budget for the upcoming fiscal year and a plan for the three future years. The actual plant placed in service for the Fiscal Years ended September 30, 2024 and September 30, 2025, as well as the projected plant placed in service for the Fiscal Years ending September 30, 2026 and September 30, 2027, are provided on Attachment SDR-ROR-14.

The projection for Fiscal Year 2028 is confidential and will be made available to parties upon request and upon the entry of an acceptable Protective Order.

SDR-ROR-17

Request:

If applicable, please provide the currently authorized returns on equity for each of the parent's utility subsidiaries of the same industry type as the Company. In each case identify the approximate date when the current return on equity was approved by the state commission.

Response:

UGI Utilities, Inc. – Gas Division's most recent base rate case filing was approved by the Pennsylvania Public Utility Commission on September 11, 2025, with no definitive return on equity.

Mountaineer Gas Company's most recent base rate case filing was approved by the West Virginia Public Service Commission on December 21, 2023, with no definitive return on equity.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-18

Request:

Has the Utility reacquired or repurchased any debt within the last five years? If so, provide a summary of each gain or loss on reacquired debt, the date on which the utility commenced amortization of such a gain or loss, the regulatory commission decision addressing the treatment of such gain or loss on reacquired debt, if any, on interest expense.

Response:

In accordance with prudent corporate management practices, in November 2025, the Company repurchased $175 million in outstanding debt several months in advance of the due date. There was no gain or loss associated with the repurchase.

The repurchased debt was replaced with new debt. This debt refinancing was contemplated within the claimed debt cost in the Company's prior base rate filing at Docket No. R-2024-3052716 and is also reflected in the claimed debt cost in the Company's current base rate filing.

See Attachment SDR-ROR-18 for details of the debt refinancing.

SDR-ROR-19

Request:

Fully identify all debt (other than instruments traded in public markets) owed to all shareholders, corporate officers, or members of the board of directors, its affiliates, parent company, or subsidiaries.

Response:

UGI Gas does not owe any debt to shareholders, corporate officers, or members of the board of directors, its affiliates, parent company, or subsidiaries.

Prepared by or under the supervision of: Amy M. Keller

SDR-ROR-20

Request:

Provide a summary statement of all stock dividends, splits, or par value changes during the two (2) year calendar period preceding the rate case filing.

Response:

UGI Gas does not have publicly traded common stock and has not issued stock as a dividend to UGI Corporation, its 100% common equity owner. There were no stock splits or par value changes in the previous two calendar years.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-ROR-21

Request:

If a claim of the filing utility is based on utilization of the capital structure or capital costs of the parent company and system--consolidated, the reasons for this claim must be fully stated and supported.

Response:

UGI Utilities, Inc. - Gas Division is not basing its filing on the parent company or system - consolidated capital structures or capital costs.

SDR-ROR-22

Request:

To the extent not provided in SDR III-A.13, supply projected capital requirements and sources of the filing utility, its parent and system-¬consolidated--for the test year and each of three (3) comparable future years.

Response:

Please refer to Attachment II-A-5 for the projected capital expenditures for Fiscal Years ending September 30, 2026 and September 30, 2027. The sources of funds may be internally generated contributions from the parent or from outside financing, as needed.

The projection for Fiscal Year 2028 is confidential and will be made available to parties upon request and the entry of an acceptable Protective Order.

Prepared by or under the supervision of: Vicky A. Schappell

SDR-ROR-23

Request:

To the extent not provided elsewhere, supply financial data of Company and/or parent for the last five (5) years.

a. Times interest earned ratio — pre and post tax basis.
b. Preferred stock dividend coverage ratio — post tax basis.
c. Times fixed charges earned ratio — pre tax basis.
d. Dividend payout ratio.
e. AFUDC as a percent of earnings available for common equity.
f. Construction work in progress as a percent of net utility plant.
g. Effective income tax rate.
h. Internal cash generations as a percent of total capital requirements.

Response:

Please refer to Attachment SDR-ROR-23 for the requested information of UGI Utilities, Inc. - Consolidated.

Prepared by or under the supervision of: Vivian K. Ressler

UGI Utilities, Inc. - Gas Division
Select Financial Data for UGI Utilities, Inc. - Consolidated
For the Year Ended September 30,

	2021	2022	2023	2024	2025
a. Times Interest Earned Ratio - pre tax	4.42	5.26	4.76	4.52	4.11
Times Interest Earned Ratio - post tax	3.64	4.36	3.91	3.72	3.44
b. Preferred Stock Dividend Coverage ratio	N/A	N/A	N/A	N/A	N/A
c. Times Fixed Charges Earned Ratio	4.29	5.03	4.48	4.30	3.92
d. Dividend Payout Ratio	24%	0%	0%	62%	37%
e. AFUDC as a % of Net Utility Plant	0.025%	0.057%	0.095%	0.087%	0.085%
f. CWIP as a % of Net Utility Plant	2.46%	3.12%	1.84%	1.87%	2.41%
g. Effective Income Tax rate	22.83%	20.97%	22.46%	22.97%	21.65%
h. Internal Cash Generation as a % of Total Capital Requirements	69.5%	80.3%	71.7%	70.1%	73.8%

SUPPLEMENTAL DATA REQUESTS

REVENUE REQUIREMENTS

SDR-RR-1

Request:

Please provide a copy of the Company's detailed quarterly balance sheet and monthly income statements for the historic test year through the most recent month available.

Response:

Please see Attachment SDR-RR-1 for monthly income statements from October 2024 through November 2025. Please see Attachment SDR-ROR-2 for quarterly balance sheets.

SDR-RR-5

Request:

If past weather normalized sales or sales trends are used in models or otherwise relied on in reaching sales projections, please provide actual and normalized throughput by rate schedule as of December 31 for the last three years. Where applicable, separately identify sales and transportation throughput.

Response:

Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10, as well as the responses to SDR-RR-9, SDR-RR-10, and SDR-RR-11 for a description of the UGI Gas model used for forecasting sales for the Residential Heating ("RH") and Commercial Heating ("CH") rate groups, including supporting data.

Use per customer values for rate classes and class subgroups were established pursuant to the following:

The projected RH use per customer was established on a combined Rate R/RT - Heating total basis per the UGI Gas model detailed in Attachment SDR-RR-11(a). Weather normalized sales for Rate RT - Heating customers were then utilized to derive the separate Rate RT - Heating and Rate R - Heating use per customer values from the combined Rate R/RT - Heating value. Please see Attachment SDR-RR-5(a) for the actual and normalized sales utilized for Rate RT - Heating. Please see UGI Gas Exhibit SAE-7(a) for the derivation of the Rate R - Heating use per customer value.

Actual sales were normalized for combined Residential Non-Heating – Rate R and Rate RT in order to project combined use per customer in total. Please see Attachment SDR-RR-5(b) for the actual and normalized sales utilized for the combined Rate R/RT-Non-Heating value. Weather normalized sales for Non-Heating Rate RT were then utilized to derive the separate Rate RT and Rate R – Non-Heating customer values from the combined Rate R/RT – Non-Heating value. Please see Attachment SDR-RR-5(c) for the actual and normalized sales utilized for Rate RT- Non-Heating. Please see UGI Gas Exhibit SAE-7(a) for the derivation of the Rate R – Non-Heating use per customer value.

Please see UGI Gas Exhibit SAE-7(a) for the derivation of the total Rate RT (Heating and Non-Heating) use per customer value.

SDR-RR-5 (Continued)

The projected CH use per customer was established on a combined Rate N/NT/DS - Heating total basis per the UGI Gas model detailed in Attachment SDR-RR-11(b). Weather normalized sales for Rate NT – Commercial Heating customers and budgeted sales for Rate DS – Commercial Heating were then utilized to derive the separate Rate NT – Commercial Heating, Rate N – Commercial Heating and Rate DS – Commercial Heating use per customer values from the combined Rate N/NT/DS – Commercial Heating value. Please see Attachment SDR-RR-5(d) for the actual and normalized sales utilized for Rate NT – Commercial Heating and Attachment SDR-RR-5(e) for the budget sales for Rate DS – Commercial Heating. Please see UGI Gas Exhibit SAE-7(a) for the derivation of the Rate N – Commercial Heating use per customer value.

Actual sales were normalized for combined Rate N – Commercial Non-Heating, Rate NT - Commercial Non-Heating and Rate DS – Commercial Non-Heating in order to project combined Rate N/NT/DS – Commercial Non-Heating use per customer in total. Please see Attachment SDR-RR-5(f) for the actual and normalized sales utilized for the combined Rate Commercial N/NT/DS-Non-Heating value. Weather normalized sales for Rate NT – Commercial Non-Heating and budgeted sales for Rate DS – Commercial Non-Heating were then utilized to derive the separate Rate NT – Commercial Non-Heating, Rate N – Commercial Non-Heating and Rate DS – Commercial Non-Heating use per customer values from the combined Rate N/NT/DS – Commercial Non-Heating value. Please see Attachment SDR-RR-5(g) for the actual and normalized sales utilized for Rate NT – Commercial Non-Heating and Attachment SDR-RR-5(h) for the budget sales for Rate DS - Commercial Non-Heating. Please see UGI Gas Exhibit SAE-7(a) for the derivation of the Rate N – Commercial Non-Heating use per customer value.

Please see UGI Gas Exhibit SAE-7(a) for the derivation of the total Rate NT (Heating and Non-Heating) use per customer value.

Actual sales were normalized for combined Rate N – Industrial, Rate NT - Industrial and Rate DS – Industrial in order to project combined Rate N/NT/DS – Industrial use per customer in total. Please see Attachment SDR-RR-5(i) for the actual and normalized sales utilized for the combined Rate N/NT/DS - Industrial value. Weather normalized sales for Rate NT – Industrial and budgeted sales for Rate DS – Industrial were then utilized to derive the separate Rate NT – Industrial, Rate N – Industrial and Rate DS – Industrial use per customer values from the combined Rate N/NT/DS – Industrial value. Please see Attachment SDR-RR-5(j) for the actual and normalized sales utilized for Rate NT – Industrial and Attachment SDR-RR-5(k) for the budget sales for Rate DS - Industrial. Please see UGI Gas Exhibit SAE-7(a) For the derivation of the Rate N – Industrial use per customer value.

SDR-RR-5 (Continued)

Please see UGI Gas Exhibit SAE-7(a) for the derivation of the total Rate DS (Heating and Non-Heating) use per customer value.

SDR-RR-6

Request:

If past weather normalized sales or sales trends are used in models or otherwise relied on in reaching sales projections, please provide actual and normalized throughput by month by rate schedule from the beginning of the historic test year and the future test year through the most recent month available and update as additional data become available. Separately identify sales and transportation throughput and provide the work papers which develop normalized sales.

Response:

Please see the response to SDR-RR-5.

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-7

Request:

Please provide the work paper developing the Company's FTY load growth adjustment.

Response:

Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10.

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-8

Request:

Please provide a complete copy of the computer output generated by the Company's statistical analysis package for all residential, commercial, public authority and industrial econometric models of gas demand estimated by the Company, but not presented in the filing.

Response:

None.

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-9

Request:

Identify the historical data source(s) for each dependent and independent variable utilized to develop the econometric models of gas demands for each forecasted customer group.

Response:

The variables noted below were utilized for the development of normalized and annualized usage for the Residential Heating ("RH") and Commercial Heating ("CH") customer groups, except as noted. Budgeting representing normalized and annualized usage was performed on an individual customer basis for Rate DS, Rate LFD, Rate XD and Rate IS by UGI Marketing personnel, with the exception of any new customer additions or losses for Rates LFD, XD and IS. The RH customer group is comprised of heating customers within Rates R and RT and the CH customer group is comprised of heating customers within Rates N, NT and DS.

(1) Monthly Use Per Customer ("UPC") – Monthly UPC is a dependent variable in the econometric model. The use per customer was developed from reported monthly sales (in MCF) and customer counts.

(2) Monthly Heating Degree Days – Actual monthly Heating Degree Days ("HDD") is an independent variable. HDD are calculated on a 65 degree Fahrenheit temperature base using the daily average temperature of a Gas Day and then summed by month to arrive at the Monthly Heating Degree Days. Each Gas Day is based upon the North American Standards Board definition of a Gas Day which encompasses the 24 hour period from 10:00 a.m. to 10:00 a.m. The recording locations for temperature weather data used to calculate HDD for UGI Gas are the NOAA recording stations at: Wilkes-Barre/Scranton, PA (KAVP); Allentown, PA (KABE); Reading, PA (KRDG); Lancaster, PA (KLNS); Harrisburg, PA (KMDT), Altoona, PA (KAOO), Clearfield, PA (KFIG), and Bradford, PA (KBFD). Weighting of stations is based on historical throughput within geographic delivery regions to produce a composite HDD combined value.

(3) Lagged Monthly Heating Degree Days – Monthly Heating Degree Days lagged by one month.

SDR-RR-9 (Continued)

(4) Weighted Time Trend – Weighted Time Trend is an independent variable. This variable captures trends in customer usage which include both known and unknown factors such as structural conservation related to more efficient building envelop construction, regular cycle appliance change-outs to more efficient units, upgrades to more efficient units, installation of energy conservation measures such as set-back thermostats and manual consumer behavior changes such as lowering thermostat settings in response to higher energy prices. This numeric variable represents the passage of time by assigning each monthly time period a sequential numeric value. This variable is weighted by the HDD and lagged HDD, equally, in order to capture trend impacts occurring across billing periods. This variable is used for the RH group forecasting (Rates R and RT) but is excluded for the CH group forecasting (including Rates N, NT and DS).

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-10

Request:

Identify the source(s) and supporting documentation for the FTY value of each independent variable which required forecasting in the Company's gas demand models.

Response:

(1) Monthly Customers – Monthly customer counts utilized are produced by a Marketing department forecast through the Fully Projected Future Test Year. Attachment SDR-RR-11 provides the supporting data.

(2) Monthly Heating Degree Days – Normal Monthly Heating Degree Days ("HDD") are utilized for forecasting. UGI Gas now utilizes a 10-year Normal HDD which is based on officially recorded daily temperatures (on a Gas Day basis) over the period January 1, 2015 to December 31, 2024. The Normal HDD are scheduled to be recalculated upon each rate case based upon the most recent calendar period data ending 12 months prior to the rate case filing date. The actual system HDD is calculated using temperature data as identified in SDR-RR-9. Please see the Direct Testimony of Sherry A. Epler, UGI Gas Statement No. 10, UGI Gas Exhibit SAE-2 for Normal HDD values. Please see the Direct Testimony of John D. Taylor, UGI Gas Statement No. 11, for supporting detail on the determination of Normal HDD values and the frequency of Normal HDD updates.

(3) Lagged Monthly Heating Degree Days – Lagged Monthly Heating Degree Days are equal to the Monthly Heating Degree Days and are representative of the prior month's Heating Degree Days.

(4) Weighted Time Trend – The Weighted Time Trend variable is sequenced a unit value of 1 each month through the regression period and forecast based on a continuation of that same sequence for each forecast month (e.g., 100, 101, 102, etc.). A weighting of the time trend is accomplished by multiplying the trend value by the applicable monthly average of HDD and lagged HDD and dividing that product by a value of 10,000 in order to normalize to a smaller sequential value for display. This variable is used for the RH group forecasting (Rates R and RT) but is excluded for the CH group forecasting (including Rates N, NT and DS).

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-11

Request:

Please provide in hard copy and on a computer diskette in Lotus 1-2-3, QuattroPro or other spreadsheet format, the dependent and independent variable databases relied upon to produce the Company's gas demand models. For variables based on averages, include the observations which comprise the average (e.g., gas prices).

Response:

Please see Attachments SDR-RR-11(a) and SDR-RR-11(b) which have been provided in print and electronic (Excel) format and uploaded to the Commission’s SharePoint site. Those materials will be served upon the parties via a secure OneDrive link.

SDR-RR-12

Request:

In the form identical to the previous question, please provide a database for all independent variables which were analyzed by the Company, but exclude from the filed gas demand models.

Response:

None.

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-13

Request:

For each customer receiving service at less than the maximum applicable tariff rate, please provide:

a. actual consumption for the two most recent calendar years;

b. actual consumption for the HTY and the most recent twelve month period for which data is available;

c. the currently applicable rate;

d. an explanation for the rate discount.

Response:

None.

Prepared by or under the supervision of: Sherry A. Epler

SDR-RR-14

Request:

Please provide a copy of the Company's detailed capital budgets for the preceding and current calendar years which underlie the projected test year capital additions in this case.

Response:

Please see the response to SDR-ROR-14.

Prepared by or under the supervision of: Vicky A. Schappell

SDR-RR-15

Request:

Please provide a variance or other similar report comparing actual and budgeted construction expenditures at the conclusion of each budget period for the past three years and as of the most recent date available.

Response:

Please see Attachment SDR-RR-15 for a three-year comparison of the actual and budgeted plant in service additions.

Prepared by or under the supervision of: Vicky A. Schappell

SDR-RR-20

Request:

Please state whether the future test year budgeted labor includes any increases or decreases in the number of employees during the future test year. If increases have been budgeted, please state whether the future test year includes budgeted positions which have not been filled.

Response:

During the historic test year ("HTY"), UGI Gas completed a review of labor to determine the required base positions needed for the ongoing operations of the business, as well as additional positions needed in the future. The future test year ("FTY") budgeted labor as of September 30, 2026 includes additions of 11 Gas Operations positions, 5 IT positions, 4 Customer Service positions, 2 Supply positions, and 1 Accounting position.

The fully projected future test year ("FPFTY") labor budget as of September 30, 2027 includes no additional gas operations positions beyond those added in the FTY.

As of October 27, 2025, filled positions include: 4 Gas Operations positions, 1 Customer Service position, 1 Supply position and 1 Accounting position. The additional positions are expected to be filled throughout the course of Fiscal 2026, and before September 30, 2026.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-RR-21

Request:

Please explain how the Company has treated routine or normal position vacancies which occur as a result of terminations or retirements in its budgeted labor projections.

Response:

During the budgeting process, currently open positions are reviewed to determine if they should be excluded or carried forward into the upcoming budget year. In addition to reviewing individual open positions, vacancy rates are also reviewed across the various functional groups throughout the organization. An appropriate overall vacancy rate is then built into the labor budget, thereby reducing total budgeted headcounts and associated expenses to take these vacancies into account. Vacancy rates are reflected in both the Future Test Year (FTY) and the Fully Projected Future Test Year (FPFTY) labor projections.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-RR-22

Request:

Please provide the most recent insurance premiums for each type of insurance coverage (i.e., employee benefit and those purchased by the Company) reflected in the Company's filing. If available, please provide estimated premiums for the subsequent calendar year.

Response:

Please see Attachment SDR-RR-22.1 for insurance premiums paid and expected.

Please see Attachment SDR-RR-22.2 for employee medical and related benefit costs paid and expected.

Benefit Program Effective January 1, 2026

Employee Medical Plan

All employees and their dependents have the option to participate in a health care program that provides three options: an Independence Blue Cross Preferred Provider Option Plan, an Independence Blue Cross Preferred Provider Basic Plan, and an Independence Blue Cross High Deductible Plan with a Health Savings Account. Employees who elect medical coverage receive the Prescription Drug coverage at no additional cost. Employees share in the cost of medical plans.

A brief summary of each is listed below:

	IBX PPO Preferred	IBX PPO Basic	IBX HDHP
Annual Deductible	$600 Individual $1,500 Family	$1,500 Individual $3,750 Family	$2,500 Individual $3,400 employee and Spouse or Employee and Child(ren) $5,000 Family
Coinsurance after deductible	15%	30%	10%
UGI HSA Annual Funding	N/A	N/A	$1,000 Individual $2,000 Family
Out of Pocket Maximum	$3,500 Individual $8,750 Family	$4,500 individual $9,000 family	$4,000 Individual $8,000 Family
Office Visit / Specialist (incl Telehealth) Copay	$25 / $40	$30 / $40	10% after deductible
Pharmacy Deductible (through CVS)	$150 Individual $350 Family	$150 Individual $350 Family	Subject to medical deductible

A summary of prescription copays is below:

	30-Day Supply at Participating Pharmacy	90-Day Supply at CVS	Mail Order 90-Day Supply
Generic	$10 copay	$20 copay	$20 copay
Brand Name Formulary	$20 copay	$40 copay	$40 copay
Brand Name Non-Formulary	$35 copay	$70 copay	$70 copay

CVS – Weight Management Program

UGl offers a Weight Management program through CVS to support members on their weight loss journey. Members enrolled in a UGI medical plan may now be eligible for the weight loss management program upon meeting specific criteria. Members who are on a GLP1 medication are required to participate in this program.

Dental Plan

All employees have access to the following dental plans:

Benefit – In network	Basic Dental	Buy Up Dental
Annual Deductible:	$50 Individual/$150 Family	No deductible
Diagnostic and Preventive, to include cleanings, fluoride treatments, sealants, x- rays	100%; no deductible	100%; no deductible
Basic Restorative, oral surgery, endodontics	50% after deductible	90% after deductible
Major Restorative, Prosthodontics	50% after deductible	60% after deductible
Repairs of crowns, inlays, onlays, bridges, dentures, endodontics, general anesthesia, and periodontal	50% after deductible	90% after deductible
Annual Maximum for covered services	$1,000	$2,500
Orthodontics	50% with $1,000 lifetime per individual	60% with $2,500 lifetime per individual

The employee only premium for the Basic Dental coverage is paid for by UGI.
UGI's contribution for the Buy-Up plan is slightly higher than the cost for the Basic Plan.

Vision Plans

All employees have access to the following vision plans:

Benefit	Vision Base	Vision Buy Up
Exam for glasses	100%	100%
Clear Standard/Single Vision/Bifocal/Blended Bifocal/Trifocal	$20 copay	$20 copay
Custom Progressive Lenses	$150 - $175	$150 - $175
Standard Progressive Lenses	100%	100%
Elective contact lenses in lieu of glasses	Up to $140	Up to $150

Both Vision plans are 100% employee paid.

Flexible Spending Accounts

All employees are eligible to participate in Health Care or Dependent Day Care Spending Accounts. The annual maximum election for a Health Care Account is $3,300 and the minimum is $104. The annual maximum election for the Dependent Day Care is $7,500 ($3,750 if married and filing separate tax returns) and the minimum is $104. Employees who enroll in the Blue Cross High Deductible Health Plan are eligible for a Limited Purpose Heath Care spending account per IRS regulations.

Group Life Insurance

All employees receive company paid basic life in the amount of one times their annual salary (including certain bonuses) rounded to the next highest $1,000. Part-time employees receive $10,000.

Employees may elect additional employee voluntary life insurance of 1, 2, 3, 4, or 5 times annual salary rounded to the nearest $1,000. This coverage is 100% employee paid. Employee may also elect voluntary life insurance for a spouse in amounts from $10,000 to $100,000 in increments of $10,000. Child(ren) life insurance is also available in the amount of $10,000, Both spouse and child(ren) life insurance are 100% employee paid.

Accidental Death & Dismemberment (AD&D) and Business Travel Accident (BTA) Insurance

All employees are covered under AD&D insurance 24 hours per day, 365 days per year. The maximum benefit is one times annual salary to a maximum of $2 million. Employee may elect voluntary AD&D at 1, 2, 3, 4, or 5 times salary to a maximum of $2 million. Spouse only equals 50% of employee coverage. Child(ren, only equals 15% of employee coverage; Spouse and Child(ren) equals 40% for Spouse and 10% for Child(ren) of employee coverage.

All voluntary AD&D coverage is paid 100% by employees.

All employees are covered by Business Travel Accident with a maximum benefit of 4 times annual salary to a maximum of $2 million.

Teladoc

Telemedicine available 7 days a week, 24 hours a day from a mobile device or computer. Any needed prescriptions are sent to the pharmacy of your choice. Medical and mental health services are available for no copay for those enrolled in one of the PPO plans and nominal copays for those employees who have elected HDHP plan. Must be enrolled in one of UGI medical plans.

- **Diabetes and Hypertension Management** – Both are covered through Teledoc at no additional cost to the employee if enrolled in one of UGI medical plans.

Sleep and Anxiety Program

At no additional cost to the employee if they are enrolled in one of UGI medical plans, employees have access to tools to help them manage their sleep and anxiety.

Musculoskeletal Care Digital Physical Therapy – Sword Thrive

At no additional cost to the employee if they are enrolled in one of UGI medical plans, employees have access to tools to help them manage physical therapy to support their musculoskeletal health.

Additional Voluntary Benefits – Employee paid:

- **Critical Illness** provides a lump sum payment upon diagnosis of Cancer, Heart Attack, Stroke or Major Organ Transplant. Coverage available: Employee $5,000, $10,000 or $20,000; Spouse $5,000, $10,000 or $20,000; Children $5,000 or $10,000.
- **Hospital Indemnity** provides a daily benefit for a covered stay, in a hospital, critical care unit, or rehabilitation facility which can be used to help pay for expenses not paid for my medical plan, lost wages, childcare, travel, or other regular household expenses. This is a fixed indemnity policy, not health insurance.
- **Accident Insurance** provides cash for covered injuries that occur on and off the job. Benefits include emergency room visits, fractures and dislocation, ambulance transportation, intensive care, surgeries, and more.
- **Identify Theft Protection** provides two different levels of coverage: credit monitoring/digital footprint/locking TransUnion credit or $2M in ransomware expense reimbursement/active threat detection, and safety VPN.
- **Pet Insurance** coverage will reimburse eligible veterinary expenses relating to accidents, illnesses, and injuries for pets, like dogs and cats. There are two levels of coverage, one provides pets with wellness coverage.
- **Whole Life Insurance with Long-Term Care** provides whole life insurance that an employee can purchase now and take with them when they leave the company at the same rate, as long as they continue to pay. Also provides employees a way to build cash value at a guaranteed rate to be used later in life for long-term care.

Short Term Disability

The Company provides a self-insured pay continuation illness plan for all employees. The percentage of pay continued and the number of weeks at 100% and 50% are based on years of service. Short term disability is available for a maximum of 6 months of disability.

Long Term Disability

Employees who exhaust short term disability benefits are eligible to apply for long term disability which is an insured program. Employees who qualify receive 60% of base monthly income offset by other disability income such as Social Security. Maximum benefit is $20,000 per month. Minimum benefit is the greater of $100 or 10% of the gross disability payment per month.

Savings Plan – 401(k)

All employees are eligible to participate in the deferred savings plan which is a tax qualified 401(k) program. The Plan offers pre-tax, after-tax and Roth contributions up to the IRS limit. For 2026 the total contribution for pre-tax, after-tax, Roth and company match is $69,000. If over 50 years of age, the catch-up contribution is $7,500 for a total maximum contribution of $76,500. The Company match is before, after or on Roth contributions at 50% of the first 3% and 25% of the next 3% of salary deferred for those employees who participate in the defined benefit pension plan. Participants are immediately vested in the Company match.

Employees hired on or after January 1, 2009 are eligible for an enhanced company match of 100% of 6% effective January 1, 2019 because they are not eligible for the defined benefit pension plan. Vesting is immediate.

401k ROTH Catch-up IRS Secure 2.0 Change

The IRS has added a new ruling under the SECURE 2.0 Act for employees who are over 50 and would like to elect a catch-up contribution. If you earned $145,000+ in the prior year (2025 wages for 2026 contributions), and would like to elect the catch-up, it must be elected as a Roth catch-up, not pre-tax.

Educational Assistance

Full-time employees with a summary performance rating of "Met Objectives" or higher on their most recent annual review may be eligible to participate in the Company's tuition reimbursement program for courses offered by approved educational institutions. To be eligible for reimbursement studies selected must be related to some phase of the employee's current job, or be a direct benefit to the Company's operation, or be part of a required course for a degree (associates, bachelors or masters) or certificate related to the Company's operation. PhD programs are excluded.

The Company will reimburse 80% of tuition costs only, excluding the cost of books, supplies and other associated fees at qualified educational institutions. The maximum reimbursement per calendar year is limited to $6,300 for undergraduate courses and $10,000 for graduate level courses. In order to receive reimbursement, the employee must provide evidence of satisfactory completion of the course. For courses with letter grades, "satisfactory completion" is defined as follows:

- a grade of "C" or better for undergraduate classes
- a grade of "B" or better for graduate level classes

UGI financially supports employees to retain certification and/or licensure that is required in their current role; or, to obtain certification/licensure which will increase their knowledge and skills as it relates to their current work responsibilities. Oftentimes a course provides valuable assistance in preparing for a certification/licensure exam. This policy enables financial support for reimbursement of approved courses that prepare those who will take an exam to have a greater opportunity for success. This policy also provides financial support for the renewal/maintenance fees for job-related certification/licensure.

This policy applies to all full-time employees and part-time employees 20 hours or more weekly, with "Met Objectives" or higher on their most recent annual review. For employees who have not yet received formal reviews, supervisor approval of application signifies confirmation of "Met Objectives" to date. The professional certification/licensure must be considered by the Company to be directly related to the employee's current job and must be of direct benefit to the Company's operation unless approved by the departmental Vice President and Human Resources.

Paid Time Off

The Company provides all employees with 10 paid holidays and 3 personal days per calendar year. Employees are provided vacation allowances based on years of service ranging from 3 weeks during the first calendar year of employment on a prorated basis up to 6 weeks after 35 years of service.

Severance Program

Exempt employees, in levels M2 – M6 and P3 – P5 are eligible for a severance allowance of two weeks of compensation for each year of service with a minimum of two months of compensation and a maximum of 12 months of compensation. Severed employees will also receive a lump sum payment equal to the COBRA cost of continued medical and dental coverage for the period of severance less the active employee contribution amount.

Exempt employees, in levels M1, P1 - P2 and non-bargaining non-exempt employees, are eligible for a severance allowance of one week of compensation for each year of service with a minimum of two weeks of compensation and a maximum of 12 months of compensation.
Severed employees will also receive a lump sum payment equal to the COBRA cost of continued medical and dental coverage for the period of severance less the active employee contribution amount.

Post-Retirement Benefits

Retirement Plan – UGI Utilities, Inc. Employees Hired Prior to 1/1/2009

The Plan is a noncontributory defined benefit plan covering substantially all employees of UGI Utilities, Inc. hired prior to January 1, 2009. Effective January 1, 2009, the Plan was closed to new hires, rehires or transfers occurring on or after that date.

Substantially all employees of the UGI Employers hired prior to January 1, 2009 who complete five years of vesting service, as defined, or who reach normal retirement age, as defined, while in the employ of the UGI Employers, are entitled to benefits upon reaching normal retirement age, generally age 65.

The annual pension benefits shall generally be the greatest of:

- 1.9% of final average earnings, as defined, times years of credited service, as defined, (which amount cannot exceed 60% of the average monthly earnings for the highest consecutive 12-month period during the 120 consecutive month period prior to the date of retirement or termination), less (b) 1% of the primary Social Security benefit, as defined, times the years of credited service at age 65 (maximum of 35 years) and in the case of early retirement, multiplied further by the ratio of actual credited service to projected credited service at normal retirement date; or
- 25% of earnings during the last 12 months prior to retirement multiplied by the ratio (not to exceed 1.0) of years of projected credited service to normal retirement date to 15, and in the case of early retirement, multiplied further by the ratio (not to exceed 1.0) of years of credited service earned to the projected years of credited service at normal retirement date.

The Plan permits early retirement benefits at a reduced level at age 55 and completion of ten years of vesting service. Unreduced early retirement benefits are available for employees retiring from age 62 to age 65, who have completed 10 years of vesting service.

Retirement Plan – UGI Utilities, Inc. Employees That Are Former Non-Union Employees of UGI Central Penn Gas, Inc. Hired Prior to 1/1/2009 or Former Union Employees of UGI Central Penn Gas, Inc. Hired Prior to 1/1/2012

The Plan is a non-contributory defined benefit plan covering employees of UGI Central Penn Gas, Inc. hired prior to January 1, 2009. Effective January 1, 2009, the Plan was closed to new hires, rehires or transfers occurring on or after that date except for employees subject to a collective bargaining agreement. The plan closed for those employees on January 1, 2012.

Substantially all CPG employees of the UGI Employers hired prior to January 1, 2009, or January 1, 2012 for those covered under a collective bargaining unit, who complete five years of vesting service, as defined, or who reach normal retirement age, as defined, while in the employ of the UGI Employers, are entitled to benefits upon reaching normal retirement age, generally age 65.

The annual pension benefits shall generally be:

- 1.08% of average monthly earnings up to covered monthly earnings times years of credited service up to 35 years

Plus

- 1.35% of average monthly earnings that are more than the covered monthly earnings times years of credited service up to 35 years

There is a group of CPG employees whose pension benefits are calculated under a grandfathered pension formula. Their annual pension benefits shall generally be:

- 1.65% of the first $833.34 of monthly earnings, plus 2% of monthly earnings in excess of $833.34 for each year of credited service.

The Plan permits early retirement benefits at a reduced level at age 55 and completion of ten years of vesting service. Unreduced early retirement benefits are available for employees retiring from age 60 to age 65, who have completed 10 years of vesting service.

Retirement Plan – UGI Utilities, Inc. Employees That Are Former Employees of UGI Penn Natural Gas, Inc. Hired Prior to 1/1/2009

The Plan is a noncontributory defined benefit plan covering substantially all employees hired prior to January 1, 2009. Effective January 1, 2009, the Plan was closed to new hires, rehires or transfers occurring on or after that date.

Substantially all employees hired prior to January 1, 2009 who complete five years of vesting service, as defined, or who reach normal retirement age, as defined, are entitled to benefits upon reaching normal retirement age, generally age 65.

The annual pension benefits shall generally be:

A. (1.25% of Final Average Earnings up to the Base Amount) times (your years of Credited Service up to 30 years)

Plus

B. (1.65% of Final Average Earnings over the Base Amount) times (your years of Credited Service up to 30 years)

In no event will the benefit be less than the ratio of years of Credited Service (maximum of 30) divided by 30 and multiplied by $1,800.

The Plan permits early retirement benefits at a reduced level at age 55 and completion of 10 years of vesting service. Unreduced early retirement benefits are available for employees retiring from age 62 to age 65, who have completed 10 years of vesting service.

Retiree Subsidy Medical Program – UGI Utilities, Inc. Employees

An eligible employee is any full-time employee of UGI Utilities, Inc. Who, as of January 1, 1989, was at least 55 years of age and had completed at least 10 years of service with UGI or an affiliated corporation or whose age and years of service equaled at least 80 and who immediately following his retirement from UGI commences receipt of an early, normal or late retirement pension.

Effective January 1, 2014, retiree medical for Medicare-eligible retirees (age 65 or over) was outsourced to a third party and the benefit was changed to a health reimbursement account. In addition, the Retiree Plan covers Medicare-eligible disabled employees who are receiving long term disability benefits. Retirees and spouses who retired on or after 1/1/1986 receive $500 per calendar year and those who retired prior to 1/1/1986 receive $700 per calendar year. (Retirees and spouses is a closed group)

Retiree Medical Insurance –UGI Utilities, Inc. Employees Previously Employed by UGI Central Penn Gas, Inc.

Any employees who previously retired from the employment of UGI Central Penn Gas, Inc. (or a predecessor employer ("CPG") before the October 1, 2008 acquisition of CPG by UGI, an Eligible Retired Employee shall mean: any retired employee who was at least 55 years of age, had completed at least 10 years of service with CPG, had retired and commenced receipt of his retirement pension under the PPL Gas Retirement Plan immediately following his retirement from CPG and was receiving benefits under the PPL Gas Retiree Medical Plan as of October 1, 2008.

Any full-time employees of CPG who retired from the employment of CPG on or after the October 1, 2008 acquisition of CPG by UGI, an Eligible Retired Employee shall mean: any full- time employee of CPG who is at least 55 years of age, has completed at least 10 years of service with CPG, retires and commences receipt of his retirement pension under the PPL Gas Retirement Plan immediately following his retirement from CPG and retired from CPG on or after the October 1, 2008 acquisition of CPG by the Company, but on or before January 1, 2009;

Any full-time employee who was covered under the terms of a collective bargaining agreement between a collective bargaining representative and CPG and who is at least 55 years of age, has completed 10 years of service with CPG and retired prior to January 1, 2012.

Retiree Life Insurance

Pension-eligible employees who retire are eligible for retiree life insurance in the amount of 25% of their pre-retirement amount with a maximum coverage amount of $50,000. There is no cost to the retiree.

SDR-RR-25

Request:

Please provide a description of the Company's merit and cost of living wage rate increase policies.

Response:

The Company does not provide wage adjustments based on the changes in the cost of living index.

Non-Union Employees:

The Company maintains a salary structure which is comprised of salary grades and ranges. All non-union positions are assigned a salary range based on the competitive value of the job. The salary structure is reviewed periodically and adjusted, at the discretion of management, to remain externally competitive and internally equitable in order to attract, motivate, and retain quality employees.

Funds are budgeted for merit increases based on prevailing market rates. Performance reviews are scheduled annually with employees. Merit increase guidelines are established, and individual performance ratings determine individual merit increases. Please see Attachment SDR-RR-25 for a summary of merit guidance provided to UGI Utilities, Inc. People Leaders for the Fiscal 2026 merit process.

Union Employees:

Employees who are represented by bargaining units are paid according to the rates negotiated in their labor agreements.

Prepared by or under the supervision of: Vivian K. Ressler

UGI UTILITIES, INC. – GAS DIVISION
Merit and Cost of Living Wage Rate Increase
For 2026 Plan Year

This document provides a summary of the FY26 Salary Planning Memo provided to People Leaders:

Salary Planning Guidelines:

Managers are required to stay within their respective merit budgets. Any request to exceed the budget require next-level Manager and HR Business Partner confirmation and verification of available funding within the function.

Merit Eligibility:

All Regular full-time (FT) and part-time (PT) employees in an Active status are eligible for merit review. The following groups are excluded from merit review:

- Employees hired on or after July 1
- Union Employees

Merit Guidelines:

Annual Salary Planning is the time to reward employees based on the outcome of their performance review. Managers will be provided with "Merit Guidelines" based on the approved merit budget, the employee's performance rating, and current salary position in range (Merit Matrix).

- Merit Matrix recommended range details will be shown for each employee but will not pre-populate a merit increase recommendation by person. Managers are required to populate this field for each employee,
- Merit increases for employees hired after the start of the prior fiscal year are prorated based on hire date.
- Managers have discretion to recommend a deviation from guidelines while remaining within overall budget

FY26 Merit Matrix (for FY25 Performance Year)

• Performance Ratings	Lower Third	Middle Third	Upper Third	Above Maximum
Exceeded Objectives	4.2% - 6.2%	3.7% -5.7%	3.2% - 5.2%	2.7% - 4.7%
Exceeded Some Objectives	3.2% - 5.2%	2.7% - 4.7%	2.2% - 4.2%	1.2% - 3.2%
Met Objectives	2.2% - 4.2%	1.7% - 3.7%	1.2% - 3.2%	0.0% - 2.2%
Met Some Objectives	1.0% - 2.0%	1.0% - 2.0%	0.0%	0.0%
Did Not Meet Objectives	0.0%	0.0%	0.0%	0.0%

Additional Pay Guidelines:

- At or Above Max: Employee with current salary at or above pay range max may receive an above max one-time merit payment in lieu of a base pay merit increase for this fiscal year
- Non-Merit Salary Adjustments: On-cycle non-merit salary adjustments (e.g., promotions, market adjustments, etc.) are permitted to be processed throughout the merit cycle with effective dates other than October 1; all merit and non-merit records are subsequently reconciled
- Terminations: If, prior to completion of the annual salary planning process, an employee gives notice of an intent to separate from the Company, guidance is not to award a merit increase

SDR-RR-26

Request:

Please provide the following monthly labor data for the year prior to the HTY, the HTY and the FTY through the most recent date available.

a. number of actual employees broken down between type (e.g., salaried, union, non-union, temporary, etc.);

b. regular payroll broken down between expensed, capitalized and other;

c. overtime payroll broken down between expensed, capitalized and other;

d. temporary payroll broken down between expensed, capitalized and other; and

e. other payroll (specify).

Response:

a. Please see Attachment SDR-RR-26, page 1. Headcount is provided on a full time equivalent (FTE) basis. Consistent with the method of payroll cost allocation, shared service employees who provide services to both UGI Gas and UGI Electric are counted as 90%, 88%, and 89% of an FTE within this analysis for the year prior to the HTY, HTY, and FTY respectively.

b. & c. Please see Attachment SDR-RR-26, page 2.

d. Not available.

e. Not applicable.

UGI Utilities, Inc. - Gas Division
Docket No. R-2025-3059523
UGI Gas 2026 Base Rate Case
Responses to Standard Data Requests - Revenue Requirement
Delivered on January 28, 2026

SDR-RR-29

Request:

Please provide an analysis (description, dates and amounts) of any gains or losses on utility property sold for the lesser of the last three years or since the Company's last rate case or anticipated during the FTY. Explain how such amounts have been treated for ratemaking purposes.

Response:

There has not been a gain/loss recorded since the last UGI Gas Base Rate Case.

We anticipate proceeds from sales of vehicles during Fiscal Year 2026 (FTY) and Fiscal Year 2027 (FPFTY) of $600,000 each year. For ratemaking purposes, these proceeds are treated as net salvage.

Prepared by or under the supervision of: Amy M. Keller

SDR-RR-30

Request:

Please provide the level of each of the following which is included in the Company's cost of service by separate type and/or payee, which are incurred directly by the Company or are allocated or billed to the Company by affiliates or its parent company.

a. fines and penalties

b. contributions and donations

c. membership dues

d. lobbying expense

e. employee activity costs (e.g., picnics, parties, awards)

f. investor relations expenses

Response:

a. No costs for fines and penalties are included.

b. No costs for contributions and donations are included.

c. Please refer to Attachment SDR-RR-30.

d. No lobbying expenses are included.

e. The cost of service includes employee activity costs (e.g., picnics, parties, safety awards) in the amount of $583,036 for the fully projected future test year.

f. The cost of service includes allocated investor relations expenses in the amount of $232,572 for the fully projected future test year.

Request:

Please provide a description and the purpose for membership for each organization listed in the previous response.

Response:

Refer to response SDR-RR-32 for the purpose of memberships in industry organizations. The purpose of the Company's membership in other organizations is to improve the welfare, educational, social and economic climate in the Company's local communities, as well as to sponsor memberships for employees whose active participation in these organizations would be in the best interests of the Company, its customers, and the communities within which the Company serves.

SDR-RR-32

Request:

Please provide the level of payments made to industry organizations included in cost of service along with a description of each payee organization or project.

Response:

Please refer to Attachment SDR-RR-32 for the industry organization payments included in the cost of service. The description of each payee organization is provided below.

- The American Gas Association (AGA) is a trade association that represents more than 200 local energy companies that deliver clean natural gas throughout the United States.

- The Energy Association of Pennsylvania (EAP) is a trade association whose members include the electric and natural gas utilities operating in Pennsylvania.

- The Energy Solutions Center, Inc. (ESC) is a non-profit organization of energy utilities and equipment manufacturers that promotes energy efficient natural gas solutions and systems for use by residential, commercial, and industrial energy users.

- The Gas Technology Institute membership provides for participation in the Operations Technology Development Company (“OTD”), an associated company of the Gas Technology Institute. OTD is a collaborative effort to develop advanced technologies for the natural gas industry.

- The Northeast Gas Association (NGA) is a regional trade association that focuses on education and training, technology research and development, operations, planning, and increasing public awareness of natural gas in the Northeast U.S.

- The Pipeline Association for Public Awareness is a nonprofit corporation established in 2004 to provide pipeline safety and emergency preparedness information to residents, businesses, farmers, excavators, emergency responders and public officials.

SDR-RR-32 (Continued)

- The Pennsylvania Chamber of Business and Industry (PA Chamber) is the state's largest business advocacy association, representing a wide range of businesses across all sectors.

From: **The NARUC Staff Subcommittee on Accounting and Finance**

Re: **Transmittal of the 2002 Report on the Expenditures of the American Gas Association**

Dear State Regulatory Commissions:

This is the annual report on the expenditures of the American Gas Association (AGA) provided for your review and consideration. Hopefully you will find the information contained herein to be useful in helping you to decide which, if any, of the costs of the association you should approve for inclusion in utility rates. Often, state commissioners review the costs of the association charged or allocated to the utilities in their jurisdiction in accordance with the policies of their commission for treatment of costs directly incurred by the state's utilities for similar activities.

With the possible exception of expenses directly related to research and development relevant to utility operations, and a proportional amount of associated administrative overhead expense, these expense categories may be viewed by some State commissions as potential vehicles for charging ratepayers with such costs as lobbying, advocacy or promotional activities which may not be to their benefit.

The Staff Subcommittee on Accounting and Finance is pleased to provide you with the AGA report for 2002 to allow you to review the information contained therein and to utilize it in a manner consistent with your commission's regulatory policies and practices.

Sincerely,

Thomas J. Ferris

Thomas J. Ferris
Chair
Staff Subcommittee on Accounting and Finance

Calculation of Lobbying Expenses Pursuant to
Internal Revenue Code Section 162(e)

The American Gas Association incurred lobbying expenses, as defined under IRC Section 162, of 2.28% of total member dues during calendar year 2002.

IRC Section 162 Definition of Lobbying

(e) Denial of deduction for certain lobbying and political expenditures
- (1) In general no deduction shall be allowed under subsection (a) for any amount paid or incurred in connection with -
  - (A) influencing legislation,
  - (B) participation in, or intervention in, any political campaign on behalf of (or in opposition to) any candidate for public office,
  - (C) any attempt to influence the general public, or segments thereof, with respect to elections, legislative matters, or referendums, or
  - (D) any direct communication with a covered executive branch official in an attempt to influence the official actions or positions of such official.
- (2) Exception for local legislation - In the case of any legislation of any local council or similar governing body -
  - (A) paragraph (1)(A) shall not apply, and
  - (B) the deduction allowed by subsection (a) shall include all ordinary and necessary expenses (including, but not limited to, traveling expenses described in subsection (a)(2) and the cost of preparing testimony) paid or incurred during the taxable year in carrying on any trade or business -
    - (i) in direct connection with appearances before, submission of statements to, or sending communications to the committees, or individual members, of such council or body with respect to legislation or proposed legislation of direct interest to the taxpayer, or
    - (ii) in direct connection with communication of information between the taxpayer and an organization of which the taxpayer is a member with respect to any such legislation or proposed legislation which is of direct interest to the taxpayer and to such organization, and that portion of the dues so paid or incurred with respect to any organization of which the taxpayer is a member which is attributable to the expenses of the activities described in clauses (i) and (ii) carried on by such organization.
- (3) Application to dues of tax-exempt organizations - No deduction shall be allowed under subsection (a) for the portion of dues or other similar amounts paid by the taxpayer to an organization which is exempt from tax under this subtitle which the organization notifies the taxpayer under section 6033(e)(1)(A)(ii) is allocable to expenditures to which paragraph (1) applies.
- (4) Influencing legislation - For purposes of this subsection -
  - (A) In general The term "influencing legislation" means any attempt to influence any legislation through communication with any member or employee of a legislative body, or with any government official or employee who may participate in the formulation of legislation.
  - (B) Legislation - The term "legislation" has the meaning given such term by section 4911(e)(2).
- (5) Other special rules
  - (A) Exception for certain taxpayers - In the case of any taxpayer engaged in the trade or business of conducting activities described in paragraph (1), paragraph (1) shall not apply to expenditures of the taxpayer in conducting such activities directly on behalf of another person (but shall apply to payments by such other person to the taxpayer for conducting such activities).
  - (B) De minimis exception
    - (i) In general Paragraph (1) shall not apply to any in-house expenditures for any taxable year if such expenditures do not exceed $2,000. In determining whether a taxpayer exceeds the $2,000 limit under this clause, there shall not be taken into account overhead costs otherwise allocable to activities described in paragraphs (1)(A) and (D).
    - (ii) In-house expenditures for purposes of clause (i), the term "in-house expenditures" means expenditures described in paragraphs (1)(A) and (D) other than -
      - (I) payments by the taxpayer to a person engaged in the trade or business of conducting activities described in paragraph (1) for the conduct of such activities on behalf of the taxpayer, or
      - (II) dues or other similar amounts paid or incurred by the taxpayer which are allocable to activities described in paragraph (1).
  - (C) Expenses incurred in connection with lobbying and political activities - Any amount paid or incurred for research for, or preparation, planning, or coordination of, any activity described in paragraph (1) shall be treated as paid or incurred in connection with such activity.
- (6) Covered executive branch official - For purposes of this subsection, the term "covered executive branch official" means -
  - (A) the President,
  - (B) the Vice President,
  - (C) any officer or employee of the White House Office of the Executive Office of the President, and the 2 most senior level officers of each of the other agencies in such Executive Office, and
  - (D) (i) any individual serving in a position in level I of the Executive Schedule under section 5312 of title 5, United States Code, (ii) any other individual designated by the President as having Cabinet level status, and (iii) any immediate deputy of an individual described in clause (i) or (ii).
- (7) Special rule for Indian tribal governments - For purposes of this subsection, an Indian tribal government shall be treated in the same manner as a local council or similar governing body.
- (8) Cross reference - For reporting requirements and alternative taxes related to this subsection, see section 6033(e).

Internal Revenue Service Form 990

The American Gas Association is a non-profit and tax exempt organization required to file informational returns with the U.S. Internal Revenue Service (IRS). Public inspection of the completed American Gas Association Exempt Organization Return (IRS Form 990) may be made in accordance with IRS regulation by request directly to the Internal Revenue Service, Attention: FOI Reading Room, 1111 Constitution Avenue, N.W., Washington, D.C. 20224. The American Gas Association makes its Exempt Organization Return available for public inspection during normal business hours (9:00 a.m. - 5:00 p.m.) at the Association's principal office, 400 N. Capitol St., N.W., Washington, D.C. 20001, preferably by written request directed to Joseph L. Martin, AGA's Controller, at the same address. State public utility commissions that wish to receive a copy of AGA's Exempt Organization Return should also direct their request to Joseph Martin. Internal Revenue Service Form 4506-A may also be used to request copies of the return from the Internal Revenue Service if public inspection is not desired by the requestor. IRS may make a charge for its photocopying service.

AMERICAN GAS ASSOCIATION

Notes to Financial Statements

(1) Continued

Revenue Recognition

Membership dues are recognized as revenue in the year to which the membership applies. Dues received in advance are deferred. Publications revenue is recognized upon the sale of the related publication and meetings revenue is recognized when the related meetings are held.

Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Functional Allocation of Expenses

The costs of providing the various programs and other activities have been summarized on a functional basis in the statements of activities. Accordingly, certain costs have been allocated among the programs and supporting services benefited. Salaries are charged directly to the programs and supporting services served. Fringe benefits are allocated to the programs and supporting services proportionate to salaries charged, and certain expenses benefiting all programs and supporting services are allocated based on the number of staff supporting each service.

Income Taxes

The Association is recognized as exempt from federal income tax under Section 501(c)(6) of the Internal Revenue Code, except for taxes on unrelated business income. Income tax expense on unrelated business activities totaled approximately $25,000 and $20,500 for the years ended December 31, 2002 and 2001, respectively.

The Association has elected to pay the federal proxy tax on behalf of its members on expenses related to lobbying activities. The proxy tax approximates $125,000 for both years ended December 31, 2002 and 2001.

Reclassifications

Certain reclassifications of prior year balances have been made to conform to the current year presentation.

Notes to Financial Statements

(2) Cash and Cash Equivalents and Marketable Securities

At December 31, 2002 and 2001, the components of cash and cash equivalents and marketable securities were as follows:

	2002	2001
Cash	$ 482,603	$ 461,013
Cash equivalents:		
Money market accounts	1,432,064	2,204,914
U.S. government agency obligations	599,760	-
Commercial paper	749,102	347,584
Total cash and cash equivalents	$ 3,263,529	$ 3,013,511
U.S. government agency obligations	$ 4,053,550	$ 4,322,497
Mortgage-backed securities	-	255,117
Corporate obligations	1,737,602	1,544,019
Other debt securities	9,128,124	9,968,957
Equity mutual funds and securities	5,757,285	6,980,682
Total marketable securities	$ 20,676,561	$ 23,071,272

(3) Property, Plant, and Equipment

Property, plant, and equipment are composed of the following as of December 31, 2002 and 2001:

	2002	2001
Leasehold improvements	$ 986,148	$ 949,311
Equipment	3,267,192	3,624,270
Furniture and fixtures	1,199,761	1,199,761
	5,453,101	5,773,342
Less accumulated depreciation and amortization	(2,844,837)	(2,557,526)
Property, plant, and equipment, net	$ 2,608,264	$ 3,215,816

(Continued)

AMERICAN GAS ASSOCIATION

Notes to Financial Statements

(4) Pension and Other Postretirement Benefits

The Association has the following noncontributory defined benefit pension plans:

- a qualified plan which covers substantially all Association employees,
- a non-qualified plan which is for employees who were determined to be eligible by the Association's Compensation Committee when the plan was created in 1985 (plan was frozen to new participants in 1986), and
- a non-qualified "excess" plan for those employees whose compensation exceeds the IRS limits for the qualified plan. This plan was approved by the Compensation Committee and is effective January 1, 2003.

These plans provide retirement benefits based on employees' years of services and compensation prior to retirement. In addition, there is an unfunded, nonqualified supplemental retirement benefit plan for the President and CEO that was approved by the Board of Directors in February 2001.

The funded plan's assets consist primarily of common stocks and U.S. government and corporate bonds.

The following provides a reconciliation of benefit obligations, plan assets, and funded status of the plans at December 31, 2002 and 2001:

	Pension Benefits		Other Postretirement Benefits	
	2002	2001	2002	2001
Benefit obligation	$ 25,592,012	$ 23,168,922	$ 8,489,792	$ 7,554,951
Fair value of plan assets	19,832,983	23,282,900	4,203,939	5,037,630
Funded status	$ (5,759,029)	$ 113,978	$ (4,285,853)	$ (2,517,321)
Accrued benefit cost recognized in the statements of financial position	$ 1,531,068	$ 1,045,369	$ 850,289	$ 854,771
Intangible asset recognized in the statements of financial position	$ 98,428	$ -	$ -	$ -

(Continued)

AMERICAN GAS ASSOCIATION

Notes to Financial Statements

(4) Continued

Weighted-average assumptions:	Pension Benefits		Other Postretirement Benefits	
	2002	2001	2002	2001
Discount rate	6.75%	7.25%	6.75%	7.25%
Expected return on plan assets	8.50%	8.50%	8.50%	8.50%
Rate of compensation increase	4.50%	4.50%	N/A	N/A

Net periodic pension and other postretirement costs for 2002 and 2001 include the following components:

	Pension Benefits		Other Postretirement Benefits	
	2002	2001	2002	2001
Pension (benefit) cost	$ 461,488	$ 139,626	$ 205,763	$ 23,285
Employer contribution	443,191	211,414	218,476	-
Plan participants' contributions	-	-	47,554	123,910
Benefits paid	1,576,467	1,341,069	545,110	594,492

In accordance with Statement of Financial Accounting Standard (SFAS) No. 87, *"Employers' Accounting for Pensions"*, the Association has recognized the required minimum liability represented by the excess of the accumulated benefit obligation over the plan assets at December 31, 2002 and 2001, which totaled $827,925 and $360,522, respectively. An intangible pension asset of $98,428, representing the unamortized prior service cost of the defined benefit plan, has been recognized within prepaid expenses and other assets in the accompanying statement of financial position as of December 31, 2002. The change in the total minimum liability of $368,975 is being recognized as a reduction to unrestricted net assets.

American Gas Association (AGA)

Source: https://www.aga.org/about/

About:

The American Gas Association, founded in 1918, represents more than 200 local energy companies that deliver clean natural gas throughout the United States. There are more than 78 million residential, commercial and industrial natural gas customers in the U.S., of which 95 percent — more than 74 million customers — receive their gas from AGA members. Today, natural gas meets one-third of the United States' energy needs.

Mission:

The American Gas Association (AGA) develops and advocates for informed, innovative, and durable policy that fulfills our nation's energy needs, environmental aspirations and economic potential. Additionally, the AGA provides state-of-the-art solutions for AGA members to safely and securely deliver reliable and affordable natural gas and advanced fuels to homes and businesses across the nation.

Vision:

Provide America with essential life-sustaining energy.

Washington, DC 20426

RE: UGI Utilities, Inc.
Docket No. FA20-3-000
Implementation Plan in Response to January 14, 2021 Audit Report

Dear Ms. Fleet:

In conjunction with UGI Utilities, Inc.'s ("UGIU's") January 8, 2021 response to the Federal Regulatory Commission (the "Commission") audit report dated January 14, 2021 ("Audit Report"), please accept UGIU's plan of implementing the audit recommendations contained in the Audit Report.

As set forth in the attached implementation plan, UGIU accepts many of the Division of Audit and Accounting's ("DAA's") audit findings and recommendations in the Audit Report and provides documented corrective action plans and timelines for each of the 50 recommendations. UGIU will make quarterly submissions to DAA describing the progress made with respect to each recommendation, beginning within 30 days after the end of the first calendar quarter, and continuing until all the corrective actions are completed. UGIU's submission of its implementation plan is without prejudice to, or waiver of its rights, including its right to contest the Commission's authority generally to make retroactive changes to, or require refunds for, rates that have been allowed to go into effect.

Should you have any questions concerning UGIU's response, please direct your questions to [redacted], or me, at [redacted].

Sincerely,

[redacted]

Controller

INTRODUCTION

UGI Utilities, Inc. ("UGIU" or "the Company") hereby submits the following Implementation Plan ("Plan") in response to the Division of Audits and Accounting ("DAA") within the Office of Enforcement ("OE") of the Federal Energy Regulatory Commission's ("FERC") audit covering the period January 1, 2017 through July 29, 2020.

The Plan is organized to address each finding and recommendation contained in the OE'S audit report dated January 14, 2021. For each finding, the Plan states the Company's response, and for each recommendation, the Plan states the action to be taken, the individual responsible, and the expected completion date.

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

1. EXCESS ACCUMULATED DEFERRED INCOME TAX

UGIU improperly recorded the excess Accumulated Deferred Income Taxes (ADIT) related to the 2017 Tax Cuts and Jobs Act in Account 282, Accumulated Deferred Income Taxes – Other Property and Account 190, Accumulated Deferred Income Taxes. In addition, UGIU improperly excluded excess and deficient ADIT, created as a result of the 2017 Tax Cuts and Jobs Act, from its wholesale transmission formula rate computation. As a result, UGIU overstated its annual transmission revenue requirement by approximately $357,476 and overbilled wholesale transmission customers in 2018.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 1

Implement procedures to ensure that deficient and excess ADIT asset and liability amounts are included in rate base for the computation of the annual transmission revenue requirement.

Action: On May 15, 2020, UGIU submitted an Order No. 864 Compliance Filing making updates to its formula rate to encompass the impacts of the TCJA relates to such items as excess ADIT and its subsequent amortization. Further, in filing its 2019 FERC formula rate, the Company included the excess ADIT in its wholesale transmission formula rate computation. Lastly, the Company made correcting entries to reclass the deferred tax asset associated with the excess ADIT from account 190 to account 282.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: Completed

RECOMMENDATION NO. 2

Revise its accounting policies and procedures to ensure that the effect of changes in tax laws or tax rates are implemented in accordance with the Commission's accounting guidance in Docket No. AI93-5.

Action: UGIU will internally develop and deliver training to its staff to ensure that the effect of changes in tax laws or tax rates are implemented in accordance with the Commission's accounting guidance. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 3

Submit correcting journal entries, within 60 days of issuance of this audit report, with proposed accounting entries and supporting documentation to DAA that reflect corrections to recorded excess and deficient ADIT in the appropriate USofA accounts.

Action: UGIU will submit correcting journal entries reflecting corrections to recorded excess and deficient ADIT in the appropriate USofA accounts to DAA.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 4

Submit a refund analysis, within 60 days of issuance of the audit report, to DAA for review that explains and details the following: (1) calculation of refunds that include the amount of excess and deficient ADIT asset and liability amounts excluded from the transmission formula rates in 2018, plus interest; (2) determinative components of the refund; (3) refund method; and (4) period(s) refunds will be made.

Action: UGIU will complete and submit a refund analysis to DAA that explains and details all items listed in recommendation no. 4.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 5

File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

Action: UGIU will file a consolidated refund report with the Commission after receiving DAA's assessment of the submitted refund analysis.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

Expected Completion Date: Within 60 days of receiving DAA's assessment of the submitted refund analysis.

RECOMMENDATION NO. 6

Refund amounts disclosed in the refund report to wholesale transmission customers with interest calculated in accordance with section 35.19a of the Commission's regulations.

Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 6.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

2. ALLOWANCE FOR FUNDS USED DURING CONSTRUCTION

UGIU's method for computing its AFUDC rate was deficient. Specifically, UGIU improperly excluded short-term debt, as the first source of financing construction, in calculating its AFUDC rate. In addition, UGIU improperly included Account 216.1, Unappropriated Undistributed Subsidiary Earnings, and Account 219, Accumulated Other Comprehensive Income, in the equity component to compute its AFUDC rate. Also, UGIU improperly used its fiscal year-end book balance for long-term debt and common equity amounts when computing its AFUDC rate rather than the calendar year-end balances reported in its FERC Form No. 1 during the audit period. As a result, UGIU overaccrued AFUDC amounts included in utility plant accounts by approximately $436,000 from 2017 to 2019 and overbilled wholesale transmission customers.

UGIU Response

UGIU accepts this finding and the recommendations. The Company has calculated the overaccrued amount related to transmission customers to be approximately $58,000.

RECOMMENDATION NO. 7

Revise and implement procedures to ensure that AFUDC rate calculations are consistent with Order Nos. 561 and 561-A, EPI No. 3 (A)(17), and other applicable Commission requirements.

Action: During 2019, UGIU revised its procedures to ensure that the AFUDC rate calculations are consistent with applicable Commission requirements.

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: Completed

RECOMMENDATION NO. 8

Revise its procedures to ensure that it includes short-term debt in the computation of the AFUDC rate for its electric utility business.

Action: During 2019, UGIU revised its procedures to ensure that short-term debt is included in the computation of the AFUDC rate for its electric utility business.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: Completed

RECOMMENDATION NO. 9

Revise its procedures to exclude Account 216.1 and Account 219 balances from the equity components used to derive its AFUDC rate.

Action: During 2019, UGIU revised its procedures to exclude Account 216.1 and Account 219 balances from the equity components used to derive its AFUDC rate.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: Completed

RECOMMENDATION NO. 10

Revise its procedures to ensure that it computes AFUDC rates using the calendar year-end balances reported in its FERC Form No. 1 for common equity, preferred stock, and long-term debt.

Action: UGIU will file a request for waiver to continue its practice of using its fiscal year-end balances for common equity, preferred stock and long-term debt balances in its AFUDC rate computation.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: December 31, 2021

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 11

Provide training to its staff on the revised procedures implemented under Recommendation Nos. 7, 8, 9, and 10. Provide periodic training in these areas as needed.

Action: UGIU will internally develop and deliver training to its staff on the revised procedures implemented under Recommendation Nos. 7, 8, 9, and 10. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 12

Recalculate its accrued AFUDC, in a manner consistent with EPI No. 3(A)(17) that corrects for the improper exclusion of short-term debt, improper inclusion of Account 216.1 and 219 balances, and improper use of fiscal year-end book balances for common equity, preferred stock, and long-term debt from 2012 through the date of issuance of the audit report.

Action: UGIU will recalculate its accrued AFUDC, as specified in recommendation no. 12.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 13

Submit proposed accounting entries and supporting documentation to DAA that reflect the correction of the CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC within 60 days of issuance of the audit report.

Action: UGIU will submit proposed accounting entries and supporting documentation as specified in recommendation no. 13 to DAA.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: March 15, 2021

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 14

Submit a refund analysis, within 60 days of issuance of the audit report, to DAA for review that explains and details the following: (1) calculation of refunds that include the amount of excess AFUDC included in the transmission formula rates since 2017, plus interest; (2) determinative components of the refund; (3) refund method; and (4) period(s) refunds will be made.

Action: UGIU will complete and submit a refund analysis to DAA that explains all items listed in recommendation no. 14.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 15

Revise CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC after receiving DAA's assessment of the proposed accounting entries per Recommendation No. 13 and restate and footnote the FERC Form No. 1 for current and comparative years as necessary.

Action: UGIU will revise CWIP, electric plant in service, accumulated depreciation, ADIT, and other accounts impacted by over-accrual of AFUDC and restate and footnote the FERC Form No. 1 for current and comparative years as necessary.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: FERC Form No. 1 will be updated as necessary as described in recommendation No. 15 in the Company's first FERC Form No. 1 dated after the receipt of the DAA's assessment of the submitted proposed accounting entries.

RECOMMENDATION NO. 16

File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

Action: UGIU will file a consolidated refund report with the Commission after receiving DAA's assessment of the submitted refund analysis.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

Expected Completion Date: Within 60 days of receiving DAA's assessment of the submitted refund analysis.

RECOMMENDATION NO. 17

Refund the amounts disclosed in the refund report to wholesale customers, with interest calculated in accordance with section 35.19a of Commission regulations.

Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 17.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

3. POSTRETIREMENT BENEFITS OTHER THAN PENSIONS

UGIU improperly included ADIT related to SFAS 106, Employers' Accounting for Postretirement Benefits Other Than Pensions, as an input to its wholesale transmission formula rate contrary to the directives of its tariff. As a result, UGIU overstated the ADIT balances included in its wholesale transmission formula rate, which led to overstating its annual transmission revenue requirements and overbilling its wholesale transmission customers.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 18

Revise and implement procedures, policies, and controls to track and review the transmission formula rate inputs and calculations for accuracy, completeness, and compliance with UGIU's Commission approved formula rate.

Action: UGIU corrected this inadvertent formula error in filing its 2020 FERC formula rate.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: Completed

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR

OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 19

Provide training to staff on the revised wholesale transmission formula rate procedures. Also, develop a training program that supports the provision of periodic training in this area, as needed.

Action: UGIU will internally develop and deliver training to its staff on the revised wholesale transmission formula rate procedures. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 20

Submit a refund analysis to DAA, within 60 days of issuance of this audit report, that explains and details the following: (1) calculation of refunds that include the amount of inappropriate recoveries during the audit period that resulted from the inclusion SFAS 106 amounts plus interest; (2) determinative components of the refund; (3) refund method; and (4) period(s) refunds will be made.

Action: UGIU will complete and submit a refund analysis to DAA that explains and details all items listed in recommendation no. 20.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 21

File a refund report with the Commission after receiving DAA's assessment of the refund analysis.
Action: UGIU will file a consolidated refund report with the Commission after receiving DAA's assessment of the submitted refund analysis.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: Within 60 days of receiving DAA's assessment of the submitted refund analysis.

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.

OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 22

Refund the amounts disclosed in the refund report to wholesale transmission customers with interest calculated in accordance with section 35.19a of the Commission's regulations.

Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 22.

Individual Responsible: Senior Manager Natural Gas Tax Accounting

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

4. COMMON PLANT O&M EXPENSES

UGIU improperly included common plant O&M expenses, that were also included as A&G expenses, in its wholesale transmission formula rate. As a result, UGIU double counted expenses associated with common plant, and consequently, overstated its wholesale transmission revenue requirement by approximately $423,454 during the audit period. This led UGIU to overbill its wholesale transmission customers.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 23

Develop and implement procedures, policies, and controls to ensure expenses included in the transmission formula rate are not included in multiple areas.

Action: UGIU will develop and implement procedures, policies, and controls, focusing on coding of the Company's natural chart of accounts, mapping to the FERC chart of accounts, and how those amounts are inputted to the Company's formula rate. This will ensure expenses included in the transmission formula rate are not included in multiple areas.

Individual Responsible: Assistant Controller

Expected Completion Date: May 15, 2021

RECOMMENDATION NO. 27

Refund the amounts disclosed in the refund report to wholesale transmission customers with interest calculated in accordance with section 35.19a of the Commission's regulations.
Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 27.

Individual Responsible: Assistant Controller

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

5. TRANSMISSION REVENUE CREDITS

UGIU understated its revenue credits that were used to reduce the annual transmission revenue requirements calculated by its wholesale transmission formula rate by improperly excluding certain transmission- related revenues recorded in Account 454, Rent from Electric Property. Additionally, UGIU improperly accounted for rental revenue associated with third parties' usage of its utility assets by recording such revenue in Account 418, Nonoperating Rental Income. As a result, UGIU understated the revenue credits includible in its wholesale transmission formula rate, which led to an overstatement of its annual transmission revenue requirements.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 28

Develop and implement procedures and policies to track, report, review, and account for wholesale transmission revenues consistent with Commission accounting and ratemaking requirements.

Action: UGIU will develop and implement procedures and policies to track, report, review, and account for wholesale transmission revenues consistent with Commission accounting and ratemaking requirements. This will include proper identification of wholesale transmission revenues at recognition and adjustments to the coding, as necessary, as well as review checks to ensure that all revenues are recorded to the proper FERC accounts.

Individual Responsible: Assistant Controller

Expected Completion Date: May 15, 2021

RECOMMENDATION NO. 29

Provide training to staff on the revised accounting and wholesale transmission revenue procedures. Also, develop a training program that supports the provision of periodic training in this area, as needed.

Action: UGIU will internally develop and deliver training to its staff on the revised accounting and wholesale transmission formula rate procedures. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Assistant Controller

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 30

Perform an analysis of rental income accounts to identify revenues that were not properly credited to wholesale transmission customers through UGIU's transmission formula rates for the audit period. Provide the results of the analysis to audit staff within 60 days of the date of issuance of the audit report.

Action: UGIU will perform and submit the results of the analysis of rental income as specified in recommendation no. 30 to audit staff.

Individual Responsible: Assistant Controller

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 31

Submit a refund analysis to DAA, within 60 days of receiving the audit report, that explains and details the following: (1) calculation of refunds that include the amount of inappropriate recoveries during the audit period that resulted from the exclusion of revenue credits plus interest; (2) determinative components of the refund; (3) refund method; (4) period(s) refunds will be made.

Action: UGIU will complete and submit a refund analysis to DAA that explains and details all items listed in recommendation no. 31.

Individual Responsible: Assistant Controller

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 32

File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

Action: UGIU will file a consolidated refund report with the Commission after receiving DAA's assessment of the submitted refund analysis.

Individual Responsible: Assistant Controller

Expected Completion Date: Within 60 days of receiving DAA's assessment of the submitted refund analysis.

RECOMMENDATION NO. 33

Refund the amounts disclosed in the refund report to wholesale transmission customers with interest calculated in accordance with section 35.19a of the Commission's regulations.
Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 33.

Individual Responsible: Assistant Controller

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

6. ACCOUNTING FOR AFFILIATE TRANSACTIONS

UGIU misclassified various expenses associated with services provided by its parent company in Account 923, Outside Services Employed. Also, UGIU did not consistently apply its internally calculated, cost allocation percentages used to allocate costs between UGIU's electric utility business and its gas utility business. These allocation errors resulted in improper amounts being included in UGIU's wholesale transmission formula rate.

UGIU Response

UGIU accepts this finding and the recommendations.

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

UGI UTILITIES, INC.
IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 34

Revise and implement procedures and policies to track, report, review, and account for UGI Corporation allocated expenses consistent with Commission accounting requirements.

Action: UGIU will revise and implement procedures and policies to track, report, review, and account for UGI Corporation allocated expenses consistent with Commission accounting requirements. This will include getting detail of all allocated expenses and properly assigning those to respective FERC accounts.

Individual Responsible: Assistant Controller

Expected Completion Date: May 15, 2021

RECOMMENDATION NO. 35

Revise and implement procedures, policies and controls to ensure the correct allocation factors are used to calculate and allocate common expenses recorded in the A&G accounts for the electric utility business.

Action: UGIU has revised its procedures, policies and controls to ensure the correct allocation factors are used to calculate and allocate common expenses recorded in the A&G accounts for the electric utility business. With the Company's implementation of a new ERP system, SAP, in July of 2019, employees are instructed to code common A&G costs to shared cost centers, which are then systematically allocated to the electric utility business based on the Company's annual MWF allocation. No manual allocation should be completed going forward. This methodology is also documented in UGIU's updated 2020 Cost Allocation Manual. Accounting also performs periodic checks to ensure that all costs coded to the shared cost centers are properly allocated.

Individual Responsible: Assistant Controller

Expected Completion Date: Completed

RECOMMENDATION NO. 36

Train staff on the procedures and policies and provide periodic training, as needed.

Action: UGIU will internally develop and deliver training to its staff specifying how UGI Corporation allocated expenses and UGIU common expenses should be coded to ensure that they are properly allocated and consistent with the Commission accounting requirements. In addition, UGIU will formalize future periodic training with internal and external counsel to

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Assistant Controller

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 37

Perform an analysis of A&G expense accounts to identify common expenses that were allocated using the incorrect allocation percentages during the audit period. Provide the results of the analysis to audit staff within 60 days of the date of issuance of the audit report.

Action: In conjunction with its response to recommendation no. 43, UGIU will perform an analysis of A&G expense accounts to identify expenses that were incorrectly allocated or improperly recorded. UGIU's analysis will consist of a reasonable sample of A&G expenses during the audit period. UGIU will submit the results of the analysis of A&G expense accounts to audit staff.

Individual Responsible: Assistant Controller

Expected Completion Date: March 15, 2021

RECOMMENDATION NO. 38

Submit a refund analysis to DAA, within 60 days of receiving the audit report, that explains and details the following: (1) calculation of refunds that include the amount of inappropriate recoveries during the audit period that resulted from the improper allocation of common expenses recorded in A&G accounts as identified pursuant to the analysis performed in response to Recommendation No. 43, plus interest; (2) determinative components of the refund; (3) refund method; and (4) period(s) refunds will be made.

Action: UGIU will complete and submit a refund analysis to DAA that explains and details all items listed in recommendation no. 38.

Individual Responsible: Assistant Controller

Expected Completion Date: March 15, 2021

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

IMPLEMENTATION PLAN FOR
FEDERAL ENERGY REGULATOR COMMISSION AUDIT
OFFICE OF ENFORCEMENT DOCKET NO. FA20-3-000

RECOMMENDATION NO. 39

File a refund report with the Commission after receiving DAA's assessment of the refund analysis.

Action: UGIU will file a consolidated refund report with the Commission after receiving DAA's assessment of the submitted refund analysis.

Individual Responsible: Assistant Controller

Expected Completion Date: Within 60 days of receiving DAA's assessment of the submitted refund analysis.

RECOMMENDATION NO. 40

Refund the amounts disclosed in the refund report to wholesale transmission customers with interest calculated in accordance with section 35.19a of the Commission's regulations.
Action: UGIU will refund amounts disclosed in the refund report as specified in recommendation no. 40.

Individual Responsible: Assistant Controller

Expected Completion Date: Amounts will be refunded as a reduction of UGIU's transmission rates, reflected in its first formula rate filing following the filing of the related refund report.

7. ACCOUNTING FOR ADMINISTRATIVE AND GENERAL EXPENSES

UGIU improperly recorded various A&G expenses in a manner contrary to the Commission's accounting regulations. As a result, UGIU overbilled wholesale transmission customers.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 41

Revise policies and procedures to ensure that UGIU properly accounts for expenditures in its books and records.

Action: UGIU will revise its policies and procedures to ensure that expenditures are properly accounted for. This will include proper coding of invoices, as well as policies to periodically

DocuSign Envelope ID: DFB35F31-A2D0-40C6-A912-C7A5D3949B6D

review the Company's mapping from its natural chart of accounts to the FERC chart of accounts.

Individual Responsible: Assistant Controller

Expected Completion Date: May 15, 2021

RECOMMENDATION NO. 42

Provide training to its staff on the revised procedures for properly accounting for expenditures in UGIU's books and records. Also, develop a training program that supports the provision of periodic training in this area, as needed.

Action: UGIU will internally develop and deliver training to its staff on the revised procedures for properly accounting for expenditures in UGIU's books and records. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Assistant Controller

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

RECOMMENDATION NO. 43

Perform an analysis of A&G expense accounts to identify expenses that were inappropriately recovered through UGIU's transmission formula rate and the related customer billings, such as advertising, donations, lobbying, distribution O&M costs, legal costs, and asset insurance improperly charged to accounts included in the transmission formula rate during the audit period. Provide the results of the analysis to audit staff within 60 days of the date of issuance of the audit report.

Action: In conjunction with its response to recommendation no. 37, UGIU will perform an analysis of A&G expense accounts to identify expenses that were incorrectly allocated or improperly recorded. UGIU's analysis will consist of a reasonable sample of A&G expenses during the audit period. UGIU will submit the results of the analysis of A&G expense accounts to audit staff.

Individual Responsible: Assistant Controller

Expected Completion Date: March 15, 2021

8. FILING OF DEPRECIATION RATES WITH THE COMMISSION

UGIU did not file its depreciation rate schedule with the Commission when depreciation rates were changed. This hindered the Commission's and other interested parties' ability to timely review and monitor UGIU's depreciation rates, which impact prices charged for wholesale transmission services through the formula rate.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 47

Develop and implement processes and procedures to ensure that depreciation rates and related studies are filed with the Commission when depreciation rates are changed.

Action: UGIU will develop and implement a process to ensure that depreciation rates and related studies are filed with the Commission when depreciation rates are changed.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: May 15, 2021

RECOMMENDATION NO. 48

File current depreciation studies with the Commission relating to UGIU's current annual transmission revenue requirement within 60 days of issuance of this audit report.

Action: UGIU will file current depreciation studies with the Commission relating to UGIU's current annual transmission revenue requirement.

Individual Responsible: Senior Manager, SOX, Plant Accounting & AP

Expected Completion Date: March 15, 2021

9. FERC FORM NO. 1 REPORTING

UGIU did not properly follow the FERC Form No. 1 instructions and, therefore, did not report all required information in its FERC Form No. 1 filings.

UGIU Response

UGIU accepts this finding and the recommendations.

RECOMMENDATION NO. 49

Revise and strengthen documented policies, procedures, and practices to ensure information reported in the FERC Form No. 1 is correct, accurate, and consistent with the instructions of the form.

Action: UGIU will revise and strengthen policies, procedures, and practices to ensure information reported in the FERC Form No. 1 is correct, accurate and consistent with the instructions.

Individual Responsible: Assistant Controller

Expected Completion Date: Time of filing UGIU's December 31, 2020 FERC Form No. 1.

RECOMMENDATION NO. 50

Provide training to staff on the revised FERC Form No. 1 policies, procedures, and practices. Also, develop a training program that supports the provision of periodic training in this area, as needed.

Action: UGIU will internally develop and deliver training to its staff on the revised FERC Form No. 1 policies, procedures, and practices. In addition, UGIU will formalize future periodic training with internal and external counsel to ensure that the proper accounting individuals are knowledgeable on any FERC accounting and tax updates.

Individual Responsible: Assistant Controller

Expected Completion Date: The internal training will be conducted by May 15, 2021. The training with counsel will be conducted within 12 months of issuance of the audit report.

Purposes of valuation

UGI Utilities, Inc. (the Company) engaged Willis Towers Watson US LLC ("WTW") to value the Company's other postretirement benefit plans.

As requested by the Company, this report documents the results of an actuarial valuation of the Plans:

- UGI Utilities Postretirement Welfare Plan (Utilities)
- Central Penn Gas Postretirement Welfare Plan (CPG)
- Penn Natural Gas Postretirement Welfare Plan (PNG)

The primary purpose of this valuation is to determine the Net Periodic Postretirement Benefit Cost/(Income) (Benefit Cost), in accordance with FASB Accounting Standards Codification Topic 715 (ASC 715) for the fiscal year ending September 30, 2025. It is anticipated that a separate report will be prepared for year-end financial reporting purposes. This report also includes plan reporting information in accordance with FASB Accounting Standards Codification Topic 965 (ASC 965) and the estimated maximum tax-deductible contribution for the tax year in which the 2024 plan year ends as allowed by the Internal Revenue Code. The maximum tax-deductible contribution should be finalized in consultation with UGI Utilities, Inc.'s tax advisor.

Limitations

This valuation has been conducted for the purposes described above and may not be suitable for any other purpose. In particular, please note the following:

1. The expected contribution to the other postretirement benefits plan(s) has been set at $0. Note that any significant change in the amounts contributed or expected to be contributed in 2025 from what is disclosed at September 30, 2024 may require disclosure in the interim financial statements, but should not affect the expected return on plan assets absent a remeasurement for another purpose.
2. There may be certain events that have occurred since the valuation date that are not reflected in the current valuation. See Subsequent Events in the Basis for Valuation section below for more information.
3. This report does not present liabilities on a plan termination basis, for which a separate extensive analysis would be required. No funded status measure included in this report is intended to assess, and none may be appropriate for assessing, the sufficiency of plan assets to cover the estimated cost of settling benefit obligations, as all such measures differ in some way from plan termination obligations. In addition, funded status measures shown in this report do not reflect the current costs of settling obligations by offering immediate lump sum payments to participants and/or purchasing annuity contracts for the remaining participants (e.g., insurer profit, insurer pricing of contingent benefits and/or provision for anti-selection in the choice of a lump sum vs. an annuity).
4. The comparisons of plan obligations as determined for accounting and financial reporting purposes to plan assets presented in this report cannot be relied upon to determine the need for nor the amount of required future plan contributions. Nevertheless, such comparisons may be useful to assess the need for future contributions because they reflect current interest rates at the measurement date in determining benefit obligations. However, asset gains and losses, demographic

experience different from assumed, changes in interest rates, future benefit accruals, if any, and other factors will all affect the need for and amount of future contributions. In addition, if a plan is not required by law to be funded, benefit payments may also be paid directly by the plan sponsor as they come due.

Section 1 : Summary of key consolidated results

1.1 Benefit cost, plan assets & obligations

All monetary amounts shown in US Dollars

Fiscal Year Beginning		10/01/2024	10/01/2023
Benefit Cost/ (Income)	Net Periodic Postretirement Benefit Cost/(Income)	(1,003,524)	(549,522)
	Benefit Cost/(Income) due to Special Events	0	0
	Total Benefit Cost/(Income)	(1,003,524)	(549,522)
Measurement Date		**10/01/2024**	**10/01/2023**
Plan Assets	Fair Value of Plan Assets (FVA)	22,154,498	17,556,345
	Actual Return on Fair Value of Plan Assets during Prior Year	28.2%	14.5%
Benefit Obligations	Accumulated Postretirement Benefit Obligation (APBO)	(10,830,754)	(9,449,841)
Funded Ratio	Fair Value of Plan Assets to APBO	204.5%	185.8%
Accumulated Other Comprehensive (Income)/Loss (Pre-tax)	Net Prior Service Cost/(Credit)	(16,862)	(90,430)
	Net Loss/(Gain)	(5,716,838)	(2,975,552)
	Total Accumulated Other Comprehensive (Income)/Loss (pre-tax)	(5,733,700)	(3,065,982)
Assumptions	Discount rate		
	• Utilities	5.05%	6.05%
	• CPG	5.05%	6.02%
	• PNG	5.21%	6.13%
	Expected Long-Term Rate of Return on Plan Assets	5.25%	5.25%
Participant Data	Census Date	10/1/2024	10/1/2023

1.2 Comments on results

The consolidated actuarial gains/(losses) due to demographic experience, including any assumption changes, and investment return different from assumed during the prior year were $(1,060,488) and $3,998,588 respectively.

Change in net periodic cost and funded position

The net periodic cost decreased from $(549,522) in fiscal 2024 to $(1,003,524) in fiscal 2025 and the funded position improved from $8,106,504 to $11,323,744.

Significant reasons for these changes include the following:

- The actual return on the fair value of plan assets since the prior measurement date was greater than the expected return on plan assets, which improved the funded position.
- The discount rate used to measure APBO decreased 100 basis points for Utilities, 97 basis points for CPG, and 92 basis points for PNG compared to the prior year, which increased the net periodic cost and decreased the funded position.

Effects of Health Care Reform

This valuation reflects our understanding of the relevant provisions of the Patient Protection and Affordable Care Act (PPACA) and Health Care and Education Reconciliation Act (HCERA), and subsequent legislation (the SECURE Act of 2019) that eliminated the Cadillac tax, medical device tax and health insurance issuer tax. It also reflects our understanding of the effects of the Inflation Reduction Act of 2022 on retiree medical costs. It is possible that future guidance may conflict with our understanding of these laws based on currently available guidance and could therefore affect the results shown in this report. The valuation does not anticipate the effects of any additional possible future changes.

1.3 Basis for valuation

Appendix A summarizes the assumptions, methods and models used in the valuation. Appendix B summarizes our understanding of the principal provisions of the plans being valued. Both of these appendices include a summary of any changes since the prior valuation. Unless otherwise described below under Subsequent Events, assumptions were selected based on information known as of the measurement date.

Subsequent events

None.

Additional information

The Inflation Reduction Act (IRA) was signed on August 16, 2022. This new law includes health care provisions related to Medicare and healthcare financing. While guidance is still forthcoming, the potential effect of the new legislation has been considered in preparing these results. Based on the information available, and the specific plan provisions, changes were not made to assumptions. Additional changes may be reflected in future valuations as more guidance becomes available and actual plan experience is used to inform future expectations.

Actuarial certification

This valuation has been conducted in accordance with generally accepted actuarial principles and practices. However, please note the information described below regarding this valuation.

Reliances

In preparing the results presented in this report, we have relied on information regarding plan provisions, participants, assets, and sponsor accounting policies and methods provided by the Company and other persons or organizations designated by the Company. See the Sources of Data and Other Information section of Appendix A for further details. We have relied on all the data and information provided as complete and accurate. We have reviewed this information for overall reasonableness and consistency, but have neither audited nor independently verified this information. Based on discussions with and concurrence by the plan sponsor, assumptions or estimates may have been made if data were not available. We are not aware of any errors or omissions in the data that would have a significant effect on the results of our calculations. The results presented in this report are directly dependent upon the accuracy and completeness of the underlying data and information. Any material inaccuracy in the data, assets, plan provisions or other information provided to us may have produced results that are not suitable for the purposes of this report and such inaccuracies, as corrected by the Company, may produce materially different results that could require that a revised report be issued.

Measurement of benefit obligations, plan assets and balance sheet adjustments

Census date/measurement date

The measurement date is October 1, 2024. The benefit obligations were measured as of October 1, 2024 and are based on participant data as of the census date, which is displayed by Plan in Appendix C.

Plan assets and balance sheet adjustments

Information about the fair value of plan assets and the general ledger account balances for the other postretirement benefit plans cost at September 30, 2024, which reflect the expected funded status of the plans before adjustment to reflect the funded status based on the year-end measurements, and differences between the expected Medicare Part D subsidies and amounts received during the year was reviewed for reasonableness and consistency, but no audit was performed.

Accumulated other comprehensive (income)/loss amounts shown in the report are shown prior to adjustment for tax effects. Any tax effects in AOCI should be determined by the Company in consultation with its tax advisors and independent accountants.

Assumptions and methods under U.S. GAAP

As required by U.S. GAAP, the actuarial assumptions and methods employed in the development of the other postretirement benefit cost and other financial reporting have been selected by the Company. WTW has evaluated the assumptions used and believes that they do not significantly conflict with what would be reasonable. In addition, we believe that the combined effect of assumptions is expected to have no

significant bias. See Appendix A for a description of each significant assumption used and our rationale for concluding that it does not significantly conflict with what would be reasonable.

U.S. GAAP requires that each significant assumption "individually represent the best estimate of the plan's future experience solely with respect to that assumption."

The results shown in this report have been developed based on actuarial assumptions that, to the extent evaluated by WTW, we believe do not significantly conflict with what would be reasonable. Other actuarial assumptions could also be considered to not significantly conflict with what would be reasonable. Thus, reasonable results differing from those presented in this report could have been developed by selecting different reasonable assumptions.

A summary of the assumptions, methods and sources of data and other information used is provided in Appendix A. Note that any subsequent changes in methods or assumptions for the October 1, 2024 measurement date will change the results shown in this report.

Certain models (as described in ASOP No. 56) were used in preparing the information presented herein. Further information on these models can be found in Appendix A.

Nature of actuarial calculations

The results shown in this report are estimates based on data that may be imperfect and on assumptions about future events that cannot be predicted with any certainty. The effects of certain plan provisions may be approximated, or determined to be insignificant and therefore not valued. Reasonable efforts were made in preparing this valuation to confirm that items that are significant in the context of the actuarial liabilities or costs are treated appropriately, and are not excluded or included inappropriately. Any rounding (or lack thereof) used for displaying numbers in this report is not intended to imply a degree of precision, which is not a characteristic of actuarial calculations.

If overall future plan experience produces higher benefit payments or lower investment returns than assumed, the relative level of plan costs reported in this valuation will likely increase in future valuations (and vice versa). Future actuarial measurements may differ significantly from the current measurements presented in this report due to many factors, including: plan experience differing from that anticipated by the economic or demographic assumptions, changes in economic or demographic assumptions, increases or decreases expected as part of the natural operation of the methodology used for the measurements (such as the end of an amortization period), and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of such future measurements. Retiree group benefits models necessarily rely on the use of approximations and estimates, and are sensitive to changes in these approximations and estimates. Small variations in these approximations and estimates may lead to significant changes in actuarial measurements.

See Basis for Valuation in Section 1 above for a discussion of any material events that have occurred after the valuation date that are not reflected in this valuation.

Limitations on use

This report is provided subject to the terms set out herein and in our engagement letter dated August 28, 2023 and any accompanying or referenced terms and conditions.

The information contained in this report was prepared for the internal use of the Company and its independent accountants in connection with our actuarial valuation of the other postretirement benefit plans as described in Purposes of Valuation above. It is not intended for and may not be used for other purposes, and we accept no responsibility or liability in this regard. The Company may distribute this actuarial valuation report to the appropriate authorities who have the legal right to require the Company to provide them this report, in which case the Company will use best efforts to notify WTW in advance of this distribution. Further distribution to, or use by, other parties of all or part of this report is expressly prohibited without WTW's prior written consent. WTW accepts no responsibility for any consequences arising from any party other than UGI Corporation relying on this report or any advice relating to its contents.

Professional qualifications

The undersigned are members of the Society of Actuaries and meet the "Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States" relating to other postretirement benefit plans. Our objectivity is not impaired by any relationship between the plan sponsor and our employer, Willis Towers Watson US LLC.

Section 2 : Consolidated accounting exhibits

2.1 Balance sheet asset/(liability)

All monetary amounts shown in US Dollars

Measurement Date		10/01/2024	10/01/2023
A	**Development of Balance Sheet Asset/(Liability)[1]**		
1	Accumulated postretirement benefit obligation (APBO)	(10,830,754)	(9,449,841)
2	Fair value of plan assets (FVA) [2]	22,154,498	17,556,345
3	Net balance sheet asset/(liability)	11,323,744	8,106,504
B	**Current and Noncurrent Classification[3]**		
1	Noncurrent asset	11,323,744	8,106,504
2	Current liability	N/A	N/A
3	Noncurrent liability	N/A	N/A
4	Net balance sheet asset/(liability)	11,323,744	8,106,504
C	**Accumulated Other Comprehensive (Income)/Loss**		
1	Net prior service cost/(credit)	(16,862)	(90,430)
2	Net loss/(gain)	(5,716,838)	(2,975,552)
3	Accumulated other comprehensive (income)/loss[4]	(5,733,700)	(3,065,982)
D	**Assumptions and Dates**		
1	Discount rate		
	• Utilities	5.05%	6.05%
	• CPG	5.05%	6.02%
	• PNG	5.21%	6.13%
2	Census date	10/1/2024	10/1/2023

1 Whether any amounts in this table that differ from those disclosed at year-end must be disclosed in subsequent interim financial statements should be determined.
2 Excludes receivable contributions.
3 The current liability (for each underfunded plan) was measured as the discounted value of benefits expected to be paid over the next 12 months in excess of the fair value of the plan's assets at the measurement date.
4 Amount shown is pre-tax and should be adjusted by plan sponsor for tax effects.

2.2 Changes in plan obligations and assets

All monetary amounts shown in US Dollars

		Period Beginning	10/01/2024	10/01/2023
A	**Change in Accumulated Postretirement Benefit Obligation (APBO)**			
1		APBO at beginning of prior fiscal year	9,449,841	9,921,489
2		Employer service cost	68,450	83,845
3		Interest cost	560,757	545,715
4		Actuarial loss/(gain)	1,060,488	(743,943)
5		Plan participants' contributions	8,939	8,162
6		Benefits paid from plan assets	(317,721)	(365,427)
7		Benefits paid from Company assets	0	0
8		Medicare Part D subsidy	0	0
9		Administrative expenses paid [1]	0	0
10		Plan amendments	0	0
11		Acquisitions/(divestitures)	0	0
12		Curtailments	0	0
13		Settlements	0	0
14		Special/contractual termination benefits	0	0
15		APBO at beginning of current fiscal year	10,830,754	9,449,841
B	**Change in Plan Assets**			
1		Fair value of plan assets at beginning of prior fiscal year	17,556,345	15,668,572
2		Actual return on plan assets	4,906,935	2,245,038
3		Employer contributions	0	0
4		Plan participants' contributions	8,939	8,162
5		Benefits paid	(317,721)	(365,427)
6		Administrative expenses paid	0	0
7		Acquisitions/(divestitures)	0	0
8		Settlements	0	0
9		Fair value of plan assets at beginning of current fiscal year	22,154,498	17,556,345

[1] Only if future expenses are accrued in APBO through a load on service cost.

2.3 Summary of net balances

Refer to Appendix C for balances by plan.

2.4 Development of plan assets for benefit cost

All monetary amounts shown in US Dollars

			Fair Value	Market-Related Value
A	**Reconciliation of Plan Assets**			
	1	Plan assets at 09/30/2023	17,556,345	17,556,345
	2	Actual return on plan assets	4,906,935	4,906,935
	3	Employer contributions	0	0
	4	Plan participants' contributions	8,939	8,939
	5	Benefits paid	(317,721)	(317,721)
	6	Administrative expenses paid	0	0
	7	Acquisitions/(divestitures)	0	0
	8	Settlements	0	0

Appendix A : Statement of consolidated actuarial assumptions, methods and data sources

Actuarial Assumptions and Methods — Postretirement Welfare Cost and Funding/Tax Deductions

Economic Assumptions

	Postretirement Welfare Cost	VEBA Contributions
Discount rate		
UGI Utilities	5.05%	N/A
CPG	5.05%	N/A
PNG	5.21%	N/A
After-tax - Medical	N/A	5.25%
After-tax – Life Insurance	N/A	7.50%
After-tax rate of return on assets		
Medical	5.25%	N/A
Life	7.50%	N/A
Average salary increase rate from age 40	3.25%	3.25%

Participation Assumptions

- **Participation rates**:

		Employee	*Dependent*
– Active employees	Medical	N/A	N/A
	Life insurance	100%	N/A

- – Retirees: Based on valuation census data
- **Percent married**: 70%
- **Spouse age**: Wife three years younger than husband

Demographic Assumptions

Postretirement welfare cost:

- Mortality: Pri-2012 blue collar table with rates decreased by 4.5%, projected Scale MP-2021 on a generational basis from 2012
- Disability: None assumed
- Termination: Rates varying by age

Age	*Rate*
25	8.50%
40	3.45%
55	0.00%

- Retirement: Rates varying by age

Age	*Rate*
55	2.0%
56	2.5%
57	3.0%
58	3.5%
59	4.0%
60	6.0%
61	5.0%
62	20.0%
63	20.0%
64	20.0%
65	40.0%
66	40.0%
67	40.0%
68	40.0%
69	40.0%
70	100.0%

- Covered pay: Rate of pay as of valuation date, plus commissions paid during the prior plan year and bonuses paid in December of the current plan year
- Administrative expenses: GAAP: N/A

  VEBA: 2% of paid benefits

Methods

Postretirement welfare cost:

• Measurement date	Fiscal year-end
• Service cost and APBO	Projected unit credit actuarial cost method, allocated from the date of hire to full eligibility date
• Market-related value of assets	Fair value
• Amortization of prior service cost/(credit)	Amortization of net prior service cost/(credit) resulting from a plan change is included as a component of Net Periodic Postretirement Benefit Cost/(Income) in the year first recognized and every year thereafter until such time as it is fully amortized. The annual amortization payment is determined in the first year as the increase in Accumulated Postretirement Benefit Obligation due to the plan change divided by the average remaining service period to full eligibility for participating employees expected to receive benefits under the plans. However, when the plan change reduces the Accumulated Postretirement Benefit Obligation, existing positive prior service costs are reduced or eliminated before a new prior service credit base is established.
• Amortization of net loss (gain)	Amortization of the net gain or loss resulting from experience different from that assumed and from changes in assumptions (excluding asset gains and losses not yet reflected in market-related value) is included as a component of Net Periodic Postretirement Benefit Cost/(Income) for a year. If, as of the beginning of the year, that net gain or loss exceeds 10% of the greater of the projected benefit obligation and the market-related value of plan assets, the amortization is that excess divided by the average remaining service period of participating employees expected to receive benefits under the plan.
• Benefits not valued	All benefits described in the Plan Provisions section of this report were valued. Willis Towers Watson has reviewed the plan provisions with the Company and, based on that review, is not aware of any other significant benefits required to be valued that were not.
• Valuation date for funding	First day of plan year. Key employees are excluded from this calculation, as are life insurance benefits in excess of $50,000.
• Actuarial funding liability	Aggregate cost method
• Actuarial value of assets:	Market value

Data Sources

UGI Utilities, Inc. furnished the participant data as of October 1, 2024. Data were reviewed for reasonableness and consistency, but no audit was performed. Based on discussions with the plan sponsor, assumptions or estimates were made when data was not available. We are not aware of any errors or omissions in the data that would have a significant effect on the results of our calculations.

Change in Assumptions and Methods Since Prior Valuation

The discount rate for benefit obligations was changed from 6.05% to 5.05% for Utilities, 6.02% to 5.05% for CPG, and 6.13% to 5.21% for PNG.

Assumptions Rationale - Significant Economic Assumptions

Discount rate	As required by U.S. GAAP the discount rate was chosen by the plan sponsor based on market information on the measurement date. To accomplish this, the plan sponsor used a tool named BOND:Link which constructs a hypothetical yield curve based on yields available high quality corporate bonds as of the measurement date.
Annual rates of increase in compensation	Assumed increases were chosen by the plan sponsor and, as required by U.S. GAAP they represent an estimate of future experience.
Expected return on plan assets	We understand that the expected return on assets assumption reflects the plan sponsor's estimate of future experience for trust asset returns, reflecting the plan's current asset allocation and any expected changes during the current plan year, current market conditions and the plan sponsor's expectations for future market conditions. The analysis was informed by analysis of historical data, economists' forecasts and recent trends for CPI, GDP growth, and real returns on the various classes of assets held by the trust.

Assumptions Rationale - Significant Demographic Assumptions

Healthy Mortality	Assumption was selected by the plan sponsor and, as required by U.S. GAAP represents a best estimate of future experience, partially based on, based on a review of actual retiree experience from 2015-2019 conducted in 2020.
Termination	Termination rates were selected by the plan sponsor and, as required by U.S. GAAP represents a best estimate of future experience, based on a review of actual plan experience from 2015-2019 conducted in 2020.
Retirement	Retirement rates were selected by the plan sponsor and, as required by U.S. GAAP represents a best estimate of future experience, based on a review of actual plan experience from 2015-2019 conducted in 2020.

Model Descriptions and Disclosures (in accordance with ASOP No. 56)

Quantify

Quantify is the Willis Towers Watson centrally developed, tested and maintained Global actuarial valuation system. It is used to perform valuations of clients' benefit plans.

Quantify provides the ability to process data, calculate benefits and value benefit liabilities, develop results using applicable standards, and generate client reports.

Quantify parameters provide significant flexibility to model populations and plan designs. Various demographic, economic and benefit related assumptions exist for users to model multiple demographic and economic situations.

Plan liabilities are calculated based on standard actuarial techniques, developing actuarially reasonable results using the population and parameters entered. The calculation and presentation of liabilities in Quantify relies on the assumptions used and the reasonability of the assumptions selected.

Quantify incorporates standard liability methodologies that are intended to reasonably reflect a variety of economic or demographic conditions. The model itself does not evaluate any assumptions entered for reasonableness, consistency or probability of occurrence.

Quantify is designed specifically for these purposes, and we know of no material limitations that would prevent the system from being suitable for these intended purposes. The actuaries signing this report have relied on the actuaries who develop, test and maintain this system, and have also performed a limited review of results to ensure that system parameters have been set appropriately and plan provisions coded correctly.

Quantify FR	Quantify Financial Reporting (FR) is intended to calculate funding results, accounting results and produce the associated client reports under selected accounting standards. The calculations and reports are based on various user specified inputs including liability results and asset values. Quantify FR develops valuation results for various accounting and funding purposes using standard actuarial techniques. Calculation of disclosure liabilities and results are based on roll forward liabilities. Liability roll-forwards are used in accounting scenarios where the date as of which liabilities are valued does not coincide with the fiscal year measurement date. The roll-forwards consist of adjusting liabilities for the passage of time.
Bond:Link	U.S. **BOND:Link** is a methodology to assist with the selection of discount rates used in liability and cost measurements related to employee benefit plans. Discount rates are derived by identifying a theoretical settlement portfolio of high-quality corporate bonds sufficient to provide for a plan's projected benefit payments. The single interest rate is then determined that results in a discounted value of the plan's benefit payments that equals the market value of the selected bond portfolio. Updated BOND:Link models are developed monthly as of the last day of the month. The construction of a BOND:Link model relies on bond data collected as of the measurement date Parameters provide the user the ability to control aspects of the model. The model output allows the user to see the effect of those parameters. Information regarding quoted bond prices, yields and other bond related data is from Bloomberg Finance L.P.
Published Demographic Tables	Certain demographic tables described above are standard published tables or are based on standard published tables from models developed by organizations with the requisite expertise

Appendix B : Summary of principal other postretirement benefit plan provisions

UGI Utilities Plan

Medical Benefits	
Eligibility	Retired prior to January 1, 1989 or, as of January 1, 1989, age 55 with 10 years of service or a combination of age and service equal to 80.
Service	Years and months of service as a covered employee.
Dependent eligibility	Spouse and unmarried children under age 19 or a full-time student under age 23.
Survivor eligibility	Eligibility continues beyond death of retiree or active employee eligible to retire.
Under age 65 benefits	N/A
Age 65 and older benefits	Healthcare reimbursement account (HRA) for covered retirees in the amount of $500 per year for participants retired after 1986 and $700 per year for those retiring before 1987
Postretirement Contributions	
■ Pre-65	N/A
■ Post-65	N/A

Life Insurance Benefits	
Eligibility	Pension eligible employees retiring after age 55 with 10 years of service.
Postretirement contributions	None
Benefits	25% of pay at retirement with a maximum coverage amount of $50,000 If retired prior to January 1, 1989 or, as of January 1, 1989, age 55 with 10 years of service or a combination of age and service equal to 80: One times pay at retirement, reducing 15% for the first four years and 2.5% for the fifth year after retirement to an ultimate level of 37.5%; alternatively, may elect a flat $20,000 non-reducing benefit.

Changes in Benefits Valued Since Prior Year

There have been no changes in the benefits valued since the prior valuation.

Central Penn Gas

Medical Benefits

Covered Employees	**Nonunion** – **North Participants** Retired prior to January 1, 2009 **Nonunion** – **South Participants** **Access only -**no subsidized benefits **Union** – **North Participants** Hired prior to 1/1/2004 and retired prior to age 55 with 10 years of service **Union** – **South Participants** **Access only -**no subsidized benefits
Service	Years and months of service as a covered employee.
Dependent eligibility	Spouse and unmarried children under age 19 or a full-time student under age 23.
Survivor eligibility	Eligibility continues beyond death of retiree or active employee eligible to retire.
Under age 65 benefits	Aetna's Choice POS II plan.
Age 65 and older benefits	Healthcare reimbursement account (HRA) for covered retirees in the amount of $500 per year for participants retired after 1986 and $700 per year for those retiring before 1987
Base Postretirement Contributions	Pre-65: Aetna Choice POS II None Post-65: N/A
Annual defined dollar benefit	Pre-65: the cap levels are identified as $4,300 per person (retiree and dependent). The actual maximum employer subsidy is equal to the specified cap level minus the applicable Base Postretirement Contribution. Post-65: N/A

Life Insurance Benefits

Eligibility	Pension eligible employees retiring after age 55 with 10 years of service
Postretirement contributions	None
Benefits	25% of pay at retirement with maximum coverage of $50,000

Future Plan Changes

No future plan changes were recognized in determining postretirement welfare cost.

Changes in Benefits Valued Since Prior Year

There have been no changes in the benefits valued since the prior valuation.

Penn Natural Gas

Life Insurance Benefits

Eligibility	UGI pension eligible employees who had not attained full eligibility for benefits as of the date UGI acquired PNG and who retire after attaining age 55 with 10 years of service.
Postretirement contributions	None
Benefits	25% of pay at retirement with a maximum coverage amount of $50,000.

Changes in Benefits Valued

There have been no changes in the benefits valued since the prior valuation.

SDR-RR-39

Request:

Please reconcile the historical and future test year SFAS No. 106 expense levels with the amount identified in the actuarial report.

Response:

Please see Attachment SDR-RR-39.

Prepared by or under the supervision of: Amy M. Keller

UGI Utilities, Inc. - Gas Division
Schedule of SFAS No. 106 Expenses

		HTY 9/30/2025	FTY 9/30/2026	FPFTY 9/30/2027
Amortization of Regulatory Liability		$ (974,464)	$ (974,464)	$ -
Actual/Budget Year Expense/(Income)		(895,457)	(880,627)	(1,855,091)
Total Actual/Budget Year Expense/(Income)		$ (1,869,921)	$ (1,855,091)	$ (1,855,091)
Actuarial Expense (Income)		$ (910,742)	$ (1,329,511)	N/A
Difference		$ (959,179)	$ (525,580)	
Reconciling Items:				
Amortization of Regulatory Liability	(1)	$ (974,464)	$ (974,464)	
Actual/Budget Year Expense/(Income)	(2)	15,285	448,884	
		$ 959,179	$ 525,580	

(1) HTY and FTY expense/(income) includes $974,464 per year of amortization expense for a regulatory liability associated with the over recovery of SFAS 106 costs, which is not part of the actuarial expense (income).

(2) The reconciling items are the result of the true-up entry at year end and the annual budget (based on an estimate) being performed before the actuarial report totals for the year were available.

SDR-RR-40

Request:

Please identify the actual or projected amounts contributed to SFAS No. 106 funds for the historic and future test years. Identify the actual or projected dates and amounts of the contributions.

Response:

There are no actual or projected SFAS 106 contributions included in the historic, future or fully projected future test years.

Prepared by or under the supervision of: Amy M. Keller

SDR-RR-41

Request:

Please explain the funding options or plans which are being used for SFAS No. 106 costs. Identify the portion of the costs which are eligible for tax preferred funding.

Response:

All of the SFAS No. 106 (post-employment plan) costs are funded assets which are held in a tax advantaged VEBA trust.

Prepared by or under the supervision of: Amy M. Keller

SDR-RR-42

Request:

Is the Company studying and/or anticipating any changes to its postretirement benefits offered to employees as a result of SFAS No. 106 or for other reasons? If yes, please provide such study and/or explain the anticipated change.

Response:

The Company is not studying or anticipating any changes to its postretirement benefits offered to employees.

Prepared by or under the supervision of: Amy M. Keller

SDR-RR-43

Request:

Please state whether the Company has included expenses related to SFAS No. 112 in its test year claim. If so, please provide complete details and include a copy of the actuarial study.

Response:

The Company has included expenses related to SFAS No. 112 in its test year claim. However, in accordance with HIPAA guidelines, UGI Gas does not record or track these additional expenses separately from active employee benefit costs. For this reason, UGI Gas does not have the ability to calculate this additional post-employment benefit expense.

The Fiscal Year 2025 expenses were based on the actuarial study as of 9/30/2024. The Company's most recent SFAS 112 actuarial study will be used to support expense in Fiscal Year 2026. Refer to Attachment SDR-RR-43 for a copy of the report issued as a result of this study.

Prepared by or under the supervision of: Amy M. Keller

Dear [redacted]:

UGI ASC 712 VALUATION RESULTS AS OF SEPTEMBER 30, 2025

The purpose of this letter is to provide you with the estimated ASC 712 (formerly FAS 112) obligations for UGI Utilities and Penn Natural Gas (PNG) group as of September 30, 2025. Consistent with the September 30, 2024 results, the UGI Utilities results contain the obligations attributable to Central Penn Gas (CPG) participants as well. **New for September 30, 2025, the figures summarized herein incorporate Mountaineer Gas Company (MGC) employees; it is our understanding that MGC's STD coverage is being merged with UGI's on January 1, 2026.**

Valuation Results

Below is a summary of the estimated ASC 712 obligations as of September 30, 2025 for UGI's short-term disability (STD) income benefit and COBRA continuation of health coverage (long-term disability income, medical and life insurance continuation are estimated by UGI and are not included with the results presented in this letter). In addition, the ASC 712 obligations for PNG and MGC are provided for the STD income benefit. Each of the obligations was developed according to the standards of ASC 712 (formerly FAS 112, 5 and 43). For comparative purposes the individual plan obligations are shown relative to September 30, 2024 results.

October 7, 2025

	Obligation as of					
	September 30, 2025			September 30, 2024		
Benefit	**Current**	**Non-Current**	**Total**	**Current**	**Non-Current**	**Total**
STD income (UGI+CPG+PNG+MGC)	$1,469,000	$221,000	$1,690,000	$1,128,000	$500,000	$1,628,000
COBRA	296,000	0	296,000	275,000	0	275,000
Total	1,765,000	221,000	1,986,000	1,403,000	500,000	1,903,000

Please note the following regarding this year's valuation results:

Short-term Disability Income Continuation

The UGI+CPG+PNG+MGC obligation for the STD income benefit as of September 30, 2025 is $1,690,000 using a 5.62% discount rate for UGI+CPG+PNG and 5.63% discount rate for MGC; this compares to $1,628,000 as of September 30, 2024 using a 5.05% discount rate.

The liability amount represents the obligation for the STD income benefit to which employees are entitled as years of active service increase. The valuation reflects the costs associated with all future disabilities expected to occur after September 30, 2025. The rates of incidence and duration of STD claims are based on a blend of standard actuarial assumptions and actual experience received from UGI, CPG, PNG and MGC.

COBRA Continuation of Health Coverage

This amount represents UGI's obligation for the additional medical expense anticipated from COBRA participants above the 102% of premium UGI collects from COBRA beneficiaries. The projected cost of health coverage is based on UGI's average 2025 cost of providing these benefits for COBRA participants.

Information Related to Actuarial Standard of Practice No. 56

AGEDIST

AgeDist is a spreadsheet tool that applies relative cost factors by age to average per capita costs (pre and post 65) and census weights to produce age-graded plan costs for pre- and post-65 populations. The average per capita costs and census weights are provided as inputs to the tool which is then combined with a morbidity curve to produce a set of weighted average age-related costs that equal the average. The age-graded costs are used in the actuarial valuation.

The morbidity curve was developed from a broad set of claims data aggregated by age and blended and may not reflect your specific morbidity. The model does not evaluate the average per capita costs or census weights for reasonableness or consistency.

The model(s) used for this analysis is designed specifically for these purposes, and we know of no material limitations that would prevent the model(s) from being suitable for these intended purposes.

We are not aware of any material inconsistencies among assumptions used in this work. The model itself does not evaluate any assumptions entered for reasonableness, consistency or probability of occurrence. The calculation and presentation of results relies on the assumptions used and the reasonability of the assumptions selected. The output of the model(s) used in this analysis are considered reasonable based on the aggregation of assumptions used. However, a different set of results could also be considered reasonable based on a range of possible values used for each assumption.

The individuals signing or delivering this report have relied on other WTW employees and actuaries who develop, test and maintain each of the proprietary models used for this analysis and have also performed a basic review of assumptions and results to ensure that the models have been set up appropriately and coded correctly. We have not relied on any external experts to develop, review, or validate the model(s) used in this analysis

In preparing the results presented in this report, we have relied upon information provided to us regarding plan provisions, plan participants, participant contribution amounts and/or claims data. We have reviewed this information for overall reasonableness and consistency, but have neither audited nor independently verified this information. The accuracy of the results presented in this report is dependent upon the accuracy and completeness of the underlying information. We are aware of no errors or omissions that would have a significant effect on the results of our calculations.

October 7, 2025

Quantify

Quantify is the WTW centrally developed, tested and maintained Global actuarial valuation system. It is used to perform valuations of clients' benefit plans. Quantify provides the ability to process data, calculate benefits and value benefit liabilities, develop results using applicable standards, and generate client reports. Quantify parameters provide significant flexibility to model populations and plan designs. Various demographic, economic and benefit related assumptions exist for users to model multiple demographic and economic situations.

Plan liabilities are calculated based on standard actuarial techniques, developing actuarially reasonable results using the population and parameters entered the calculation and presentation of liabilities in Quantify relies on the assumptions used and the reasonability of the assumptions selected. Quantify incorporates standard liability methodologies that are intended to reasonably reflect a variety of economic or demographic conditions. The model itself does not evaluate any assumptions entered for reasonableness, consistency or probability of occurrence.

Quantify is designed specifically for these purposes, and we know of no material limitations that would prevent the system from being suitable for these intended purposes. The actuaries signing this report have relied on the actuaries who develop, test and maintain this system, and have also performed a limited review of results to ensure that system parameters have been set appropriately and plan provisions coded correctly.

RATE:Link

RATE:Link is a methodology to develop spot rates to be used for measurements related to employee benefit plans. The same core methodology is used to develop all RATE:Link curves. The RATE:Link process develops term structures of interest rates from corporate bond data for each covered market. The construction of RATE:Link yield curves relies on bond data collected as of the measurement date. Information regarding quoted bond prices, yields and other bond related data is from Bloomberg Finance L.P

October 7, 2025

Actuarial Certification

UGI retained WTW to perform a valuation of its postemployment benefit plans in order to determine its postemployment benefit cost in accordance with ASC 712 (formerly FAS 112). This valuation has been conducted in accordance with generally accepted actuarial principles and practices.

The consulting actuaries are members of the Society of Actuaries and other professional actuarial organizations and meet the "Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States" relating to postemployment benefit plans.

In preparing the results presented in this report, we have relied upon information provided to us regarding plan provisions, plan participants, and plan costs. We have reviewed this information for overall reasonableness and consistency, but have neither audited nor independently verified this information. The accuracy of the results presented in this report is dependent upon the accuracy and completeness of the underlying information.

The actuarial assumptions and the accounting policies and methods employed in the development of the postemployment benefit cost have been selected by the plan sponsor. WTW has evaluated the assumptions used and believes that they do not significantly conflict with what would be reasonable. ASC 712 requires that each significant assumption "individually represent the best estimate of a particular future event."

The results shown in this report are reasonable actuarial results. However, a different set of results could also be considered reasonable actuarial results, since the actuarial standards of practice describe a "best-estimate" range for each assumption, rather than a single best-estimate value. Thus, reasonable results differing from those presented in this report could have been developed by selecting different points within the best-estimate ranges for various assumptions.

The information contained in this report was prepared for the internal use of UGI and its auditors in connection with our actuarial valuation of the postemployment benefit plans. It is neither intended nor necessarily suitable for other purposes. UGI may also distribute this actuarial valuation report to the appropriate authorities who have the legal right to require UGI to provide them with this report, in which case UGI will use best efforts to notify WTW of this distribution. Further distribution to, or use by, other parties of all or part of this report is expressly prohibited without WTW's prior written consent.

Request:

Please provide all documentation supporting the uncollectible accrual rate reflected in the Company's filing.

Response:

Please refer to UGI Gas Exhibit A (Historic), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Fully Projected Future), Schedule D-11, for a calculation of the uncollectible accrual rate.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-RR-46

Request:

Please provide a comparison between actual and budgeted O&M expenses by budget cost element for the historical test year and explain any budget variances of 10 percent or more.

Response:

Please see Attachment SDR-RR-46.

Prepared by or under the supervision of: Vivian K. Ressler

UGI Utilities, Inc. - Gas Division
Actual versus Budgeted Cost Comparison
(thousands of dollars)

Comparison - Actual to Budget FY 2025

	Actual 2025	Budget 2025	Variance	% Variance
Cost of Sales (1)	415,177	377,795	(37,382)	(9.9%)
Maintenance and Other Operating Expenses	242,645	247,333	4,688	1.9%
Depreciation/Amortization	142,917	142,548	(369)	(0.3%)
Taxes Other than Income Taxes	12,660	13,138	477	3.6%
Total Operating Expenses	813,399	780,813	(32,586)	(4.17%)

Maintenance and Other Operating Expenses

	Actual 2025	Budget 2025	Variance	% Variance
Payroll and Employee Benefits	94,672	97,999	3,327	3.4%
Transportation	5,366	5,699	333	5.9%
Contracted Labor, Materials and Equipment	41,015	44,252	3,237	7.3%
Uncollectible Allowance	16,594	18,249	1,655	9.1%
Information Technology	18,700	20,222	1,522	7.5%
Other	66,299	60,912	(5,387)	(8.8%)
	242,645	247,333	4,688	1.9%

(1) Cost of Sales is shown net of Off System Sales and Capacity Release. These items are budgeted on a net basis in revenue. Actuals are posted on a gross basis in both revenue and cost of sales.

SDR-RR-47

Request:

Please provide the most recent actual number of eligible participants in each of the employee medical and dental plans reflected in the Company's filing.

Response:

Please see Attachment SDR-RR-47 for the most recent actual number of eligible participants in each of the employee medical and dental plans reflected in the Company's filing.

Includes UGI Utilities, Inc employees who provide service to UGI Gas and those that provide service to both UGI Gas and UGI Electric

SDR-RR-48

Request:

Please provide workpapers showing the derivation of future test year Social Security and Medicare FICA taxes based on future test year labor expense. Identify both the total and O&M amounts.

Response:

Please refer to UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedules D-31 and D-32.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-RR-49

Request:

Please provide work papers showing the derivation of future test year federal and state unemployment taxes. Show both the total and O&M amounts.

Response:

Please refer to UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Fully Projected), Schedules D-31 and D-32.

Prepared by or under the supervision of: Tracy A. Hazenstab

SDR-RR-50

Request:

Please provide work papers showing the derivation of future test year capital stock taxes.

Response:

Not applicable. The PA Capital Stock tax was eliminated for tax years beginning January 1, 2016.

Prepared by or under the supervision of: Darin T. Espigh

SDR-RR-51

Request:

If applicable, please provide a copy of the billing and payment terms for all contracts between the Company and its parent or an affiliated company for services. Further, to the extent that the parent or affiliated company provides service to non-affiliated companies, please provide the corresponding billing and payment terms.

Response:

Please see the response to III-A-22.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-RR-52

Request:

Please provide the annual level of outside services employed for the preceding three calendar years. Include in your response a breakdown of the test year amount indicating the service provider and the type of service performed.

Response:

Please see the response to III-A-28.

Prepared by or under the supervision of: Vivian K. Ressler

SDR-RR-53

Request:

Please describe each budgeted or planned cost savings program to be implemented during the historic or future year. Please identify the cost of implementing the program and the anticipated annual savings.

Response:

For a discussion of past cost savings programs, please see the response to SDR-RR-53 in UGI Gas's prior rate case at Docket No. R-2024-3052716, as well as the Direct Testimony of Hans G. Bell, UGI Gas Statement No. 1, in that case. There are no programmatic cost savings plans included in this case.

Prepared by or under the supervision of: Hans G. Bell

SDR-RR-54

Request:

Please explain how the Company has treated reserve accruals and balances for ratemaking purposes and provide the requested level of any self-funded reserve accruals by type of item.

Response:

Please refer to Attachment SDR-RR-54.

Prepared by or under the supervision of: Amy M. Keller

UGI Utilities, Inc. - Gas Division
Schedule of Reserve Accruals and Balances
(Thousands of Dollars)

Reserve Type	HTY Balance 9/30/25	Expense Treatment for Ratemaking Purposes	Related Adjustment Schedules (1)
Environmental	$68,876	Adjusted to a three-year historical average, plus or minus the amount of reconcilable cost differences since the last rate case (2)	Schedule D-8
Bad Debt	$13,893	Adjusted by applying the three-year historical average uncollectible percentage to adjusted revenues	Schedule D-11
Workers' Compensation	$1,312	No adjustment required (3)	None
Medical	$2,042	No adjustment required (3)	None
Injuries & Damages	$2,103	Adjusted to a three-year historical average	Schedule D-15

(1) Each respective schedule is disclosed in UGI Gas Exhibit A (Historic), Exhibit A (Future) and Exhibit A (Fully Projected).
(2) Refer to the Direct Testimony of Amy M. Keller, UGI Gas Statement No. 5 for discussion of the environmental adjustment.
(3) There are no related ratemaking adjustments required, as expenses are budgeted on a normalized basis.

SDR-RR-55

Request:

Please provide a copy of the corporate federal tax returns and supporting schedules for the preceding three years and, if applicable, a copy of the calculation work papers for the Company's consolidated tax savings adjustment.

Response:

UGI Gas is included as part of a consolidated federal income tax return. Since the complete federal tax return is a voluminous document, only excerpts from the preceding three years' returns are provided. Please see Attachment SDR-RR-55 for these excerpts. The complete tax returns are available at UGI Corporation headquarters in King of Prussia, PA.

Please also see the response to II-A-26 for a discussion of the consolidated tax savings adjustment.

Prepared by or under the supervision of: Darin T. Espigh

Schedule K Other Information (see instructions)

		Yes	No
1	Check accounting method: **a** ☐ Cash **b** ☒ Accrual **c** ☐ Other (specify) ▶		
2	See the instructions and enter the:		
a	Business activity code no. ▶ 551112		
b	Business activity ▶ HOLDING COMPANY		
c	Product or service ▶ N/A		
3	Is the corporation a subsidiary in an affiliated group or a parent-subsidiary controlled group?		X
	If "Yes," enter name and EIN of the parent corporation ▶		
4	At the end of the tax year:		
a	Did any foreign or domestic corporation, partnership (including any entity treated as a partnership), trust, or tax-exempt organization own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part I of Schedule G (Form 1120) (attach Schedule G)		X
b	Did any individual or estate own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part II of Schedule G (Form 1120) (attach Schedule G)		X
5	At the end of the tax year, did the corporation:		
a	Own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of stock entitled to vote of any foreign or domestic corporation not included on **Form 851,** Affiliations Schedule? For rules of constructive ownership, see instructions. If "Yes," complete (i) through (iv) below.	X	

(i) Name of Corporation	(ii) Employer Identification Number (if any)	(iii) Country of Incorporation	(iv) Percentage Owned in Voting Stock
See Statement 49			

b	Own directly an interest of 20% or more, or own, directly or indirectly, an interest of 50% or more in any foreign or domestic partnership (including an entity treated as a partnership) or in the beneficial interest of a trust? For rules of constructive ownership, see instructions. If "Yes," complete (i) through (iv) below.	X	

(i) Name of Entity	(ii) Employer Identification Number (if any)	(iii) Country of Organization	(iv) Maximum Percentage Owned in Profit, Loss, or Capital
See Statement 51			

6	During this tax year, did the corporation pay dividends (other than stock dividends and distributions in exchange for stock) in excess of the corporation's current and accumulated earnings and profits? See sections 301 and 316		X
	If "Yes," file **Form 5452,** Corporate Report of Nondividend Distributions. See the instructions for Form 5452. If this is a consolidated return, answer here for the parent corporation and on Form 851 for each subsidiary.		
7	At any time during the tax year, did one foreign person own, directly or indirectly, at least 25% of the total voting power of all classes of the corporation's stock entitled to vote or at least 25% of the total value of all classes of the corporation's stock? For rules of attribution, see section 318. If "Yes," enter: **(a)** Percentage owned ▶ _____ and **(b)** Owner's country ▶ _____ **(c)** The corporation may have to file **Form 5472,** Information Return of a 25% Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business. Enter the number of Forms 5472 attached ▶ _____		X
8	Check this box if the corporation issued publicly offered debt instruments with original issue discount ▶ ☐ If checked, the corporation may have to file **Form 8281,** Information Return for Publicly Offered Original Issue Discount Instruments.		
9	Enter the amount of tax-exempt interest received or accrued during the tax year ▶ $		
10	Enter the number of shareholders at the end of the tax year (if 100 or fewer) ▶		
11	If the corporation has an NOL for the tax year and is electing to forego the carryback period, check here (see instructions) ▶ ☐ If the corporation is filing a consolidated return, the statement required by Regulations section 1.1502-21(b)(3) must be attached or the election will not be valid.		
12	Enter the available NOL carryover from prior tax years (do not reduce it by any deduction reported on page 1, line 29a.) ▶ $ 23,164,154.		

UGI Corporation & Subsidiaries 23-2668356

Schedule K **Other Information** *(continued from page 4)*

		Yes	No
13	Are the corporation's total receipts (page 1, line 1a, plus lines 4 through 10) for the tax year **and** its total assets at the end of the tax year less than $250,000?		X
	If "Yes," the corporation is not required to complete Schedules L, M-1, and M-2. Instead, enter the total amount of cash distributions and the book value of property distributions (other than cash) made during the tax year ▶ $		
14	Is the corporation required to file Schedule UTP (Form 1120), Uncertain Tax Position Statement? See instructions	X	
	If "Yes," complete and attach Schedule UTP.		
15 a	Did the corporation make any payments in 2021 that would require it to file Form(s) 1099?		X
b	If "Yes," did or will the corporation file required Form(s) 1099?		
16	During this tax year, did the corporation have an 80%-or-more change in ownership, including a change due to redemption of its own stock?		X
17	During or subsequent to this tax year, but before the filing of this return, did the corporation dispose of more than 65% (by value) of its assets in a taxable, non-taxable, or tax deferred transaction?		X
18	Did the corporation receive assets in a section 351 transfer in which any of the transferred assets had a fair market basis or fair market value of more than $1 million?		X
19	During the corporation's tax year, did the corporation make any payments that would require it to file Forms 1042 and 1042-S under chapter 3 (sections 1441 through 1464) or chapter 4 (sections 1471 through 1474) of the Code?		X
20	Is the corporation operating on a cooperative basis?		X
21	During the tax year, did the corporation pay or accrue any interest or royalty for which the deduction is not allowed under section 267A? See instructions		X
	If "Yes," enter the total amount of the disallowed deductions ▶ $		
22	Does the corporation have gross receipts of at least $500 million in any of the 3 preceding tax years? (See sections 59A(e)(2) and (3))	X	
	If "Yes," complete and attach Form 8991.		
23	Did the corporation have an election under section 163(j) for any real property trade or business or any farming business in effect during the tax year? See instructions		X
24	Does the corporation satisfy one or more of the following? See instructions		X
a	The corporation owns a pass-through entity with current, or prior year carryover, excess business interest expense.		
b	The corporation's aggregate average annual gross receipts (determined under section 448(c)) for the 3 tax years preceding the current tax year are more than $26 million and the corporation has business interest expense.		
c	The corporation is a tax shelter and the corporation has business interest expense. If "Yes," complete and attach Form 8990.		
25	Is the corporation attaching Form 8996 to certify as a Qualified Opportunity Fund?		X
	If "Yes," enter amount from Form 8996, line 15 ▶ $		
26	Since December 22, 2017, did a foreign corporation directly or indirectly acquire substantially all of the properties held directly or indirectly by the corporation, and was the ownership percentage (by vote or value) for purposes of section 7874 greater than 50% (for example, the shareholders held more than 50% of the stock of the foreign corporation)? If "Yes," list the ownership percentage by vote and by value. See instructions		X
	Percentage: By Vote By Value

4 Add lines 1, 2, and 3	5,228,236,690.	8 Balance at end of year (line 4 less line 7)	5,056,796,080.

SCHEDULE M-3 (Form 1120)
(Rev. December 2019)
Department of the Treasury
Internal Revenue Service

Net Income (Loss) Reconciliation for Corporations With Total Assets of $10 Million or More

▶ **Attach to Form 1120 or 1120-C.**
▶ **Go to *www.irs.gov/Form1120* for instructions and the latest information.**

OMB No. 1545-0123

Name of corporation (common parent, if consolidated return): UGI Corporation

Employer identification number: 23-2668356

Check applicable box(es):
(1) [ ] Non-consolidated return
(2) [ ] Consolidated return (Form 1120 only)
(3) [X] Mixed 1120/L/PC group
(4) [ ] Dormant subsidiaries schedule attached

Part I Financial Information and Net Income (Loss) Reconciliation (see instructions)

1 a Did the corporation file SEC Form 10-K for its income statement period ending with or within this tax year?
[X] **Yes.** Skip lines 1b and 1c and complete lines 2a through 11 with respect to that SEC Form 10-K.
[ ] **No.** Go to line 1b. See instructions if multiple non-tax-basis income statements are prepared.

b Did the corporation prepare a certified audited non-tax-basis income statement for that period?
[ ] **Yes.** Skip line 1c and complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Go to line 1c.

c Did the corporation prepare a non-tax-basis income statement for that period?
[ ] **Yes.** Complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Skip lines 2a through 3c and enter the corporation's net income (loss) per its books and records on line 4a.

2 a Enter the income statement period: Beginning 10/01/2021 Ending 09/30/2022

b Has the corporation's income statement been restated for the income statement period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

c Has the corporation's income statement been restated for any of the five income statement periods immediately preceding the period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

3 a Is any of the corporation's voting common stock publicly traded?
[X] **Yes.**
[ ] **No.** If "No," go to line 4a.

b Enter the symbol of the corporation's primary U.S. publicly traded voting common stock . . . . . UGI

c Enter the nine-digit CUSIP number of the corporation's primary publicly traded voting common stock 902681105

4 a	Worldwide consolidated net income (loss) from income statement source identified in Part I, line 1	**4a**	1,073,289,876.
b	Indicate accounting standard used for line 4a (see instructions): (1) [X] GAAP (2) [ ] IFRS (3) [ ] Statutory (4) [ ] Tax-basis (5) [ ] Other (specify) _____		
5 a	Net income from nonincludible foreign entities (attach statement) Stmt. 96.	**5a**	(738,123,012.
b	Net loss from nonincludible foreign entities (attach statement and enter as a positive amount)	**5b**	
6 a	Net income from nonincludible U.S. entities (attach statement)	**6a**	( )
b	Net loss from nonincludible U.S. entities (attach statement and enter as a positive amount)	**6b**	
7 a	Net income (loss) of other includible foreign disregarded entities (attach statement)	**7a**	
b	Net income (loss) of other includible U.S. disregarded entities (attach statement) Stmt. 96.	**7b**	-11,587,430.
c	Net income (loss) of other includible entities (attach statement)	**7c**	
8	Adjustment to eliminations of transactions between includible entities and nonincludible entities (attach statement)	**8**	
9	Adjustment to reconcile income statement period to tax year (attach statement) Stmt. 97.	**9**	-11,402.
10 a	Intercompany dividend adjustments to reconcile to line 11 (attach statement)	**10a**	
b	Other statutory accounting adjustments to reconcile to line 11 (attach statement)	**10b**	
c	Other adjustments to reconcile to amount on line 11 (attach statement) Stmt. 98.	**10c**	-111,296.
11	**Net income (loss) per income statement of includible corporations.** Combine lines 4 through 10	**11**	323,456,736.

Note: Part I, line 11, must equal Part II, line 30, column (a), or Schedule M-1, line 1 (see instructions).

12 Enter the total amount (not just the corporation's share) of the assets and liabilities of all entities included or removed on the following lines.

		Total Assets	Total Liabilities
a	Included on Part I, line 4 ▶	17,906,031,365.	11,831,983,457.
b	Removed on Part I, line 5 ▶	2,024,855,342.	1,544,293,181.
c	Removed on Part I, line 6 ▶		
d	Included on Part I, line 7 ▶

UGI Corporation & Subsidiaries

Schedule K Other Information (see instructions)

		Yes	No
1	Check accounting method: **a** ☐ Cash **b** ☒ Accrual **c** ☐ Other (specify)		
2	See the instructions and enter the:		
a	Business activity code no. 551112		
b	Business activity HOLDING COMPANY		
c	Product or service N/A		
3	Is the corporation a subsidiary in an affiliated group or a parent-subsidiary controlled group?		X
	If "Yes," enter name and EIN of the parent corporation		
4	At the end of the tax year:		
a	Did any foreign or domestic corporation, partnership (including any entity treated as a partnership), trust, or tax-exempt organization own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part I of Schedule G (Form 1120) (attach Schedule G)		X
b	Did any individual or estate own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part II of Schedule G (Form 1120) (attach Schedule G)		X
5	At the end of the tax year, did the corporation:		
a	Own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of stock entitled to vote of any foreign or domestic corporation not included on **Form 851,** Affiliations Schedule? For rules of constructive ownership, see instructions. If "Yes," complete (i) through (iv) below.	X	

(i) Name of Corporation	(ii) Employer Identification Number (if any)	(iii) Country of Incorporation	(iv) Percentage Owned in Voting Stock
See Statement 48			

b	Own directly an interest of 20% or more, or own, directly or indirectly, an interest of 50% or more in any foreign or domestic partnership (including an entity treated as a partnership) or in the beneficial interest of a trust? For rules of constructive ownership, see instructions. If "Yes," complete (i) through (iv) below.	X		

(i) Name of Entity	(ii) Employer Identification Number (if any)	(iii) Country of Organization	(iv) Maximum Percentage Owned in Profit, Loss, or Capital
See Statement 50			

6	During this tax year, did the corporation pay dividends (other than stock dividends and distributions in exchange for stock) in excess of the corporation's current and accumulated earnings and profits? See sections 301 and 316		X
	If "Yes," file **Form 5452,** Corporate Report of Nondividend Distributions. See the instructions for Form 5452. If this is a consolidated return, answer here for the parent corporation and on Form 851 for each subsidiary.		
7	At any time during the tax year, did one foreign person own, directly or indirectly, at least 25% of the total voting power of all classes of the corporation's stock entitled to vote or at least 25% of the total value of all classes of the corporation's stock?		X
	For rules of attribution, see section 318. If "Yes," enter: **(a)** Percentage owned _____ and **(b)** Owner's country _____ **(c)** The corporation may have to file **Form 5472,** Information Return of a 25% Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business. Enter the number of Forms 5472 attached _____		
8	Check this box if the corporation issued publicly offered debt instruments with original issue discount ☐ If checked, the corporation may have to file **Form 8281,** Information Return for Publicly Offered Original Issue Discount Instruments.		
9	Enter the amount of tax-exempt interest received or accrued during the tax year $ _____		
10	Enter the number of shareholders at the end of the tax year (if 100 or fewer) _____		
11	If the corporation has an NOL for the tax year and is electing to forego the carryback period, check here (see instructions) ☐ If the corporation is filing a consolidated return, the statement required by Regulations section 1.1502-21(b)(3) must be attached or the election will not be valid.		
12	Enter the available NOL carryover from prior tax years (do not reduce it by any deduction reported on page 1, line 29a.) $ 14,686,154.		

UGI Corporation & Subsidiaries

Schedule K **Other Information** *(continued from page 4)*

		Yes	No
13	Are the corporation's total receipts (page 1, line 1a, plus lines 4 through 10) for the tax year **and** its total assets at the end of the tax year less than $250,000?		X
	If "Yes," the corporation is not required to complete Schedules L, M-1, and M-2. Instead, enter the total amount of cash distributions and the book value of property distributions (other than cash) made during the tax year $		
14	Is the corporation required to file Schedule UTP (Form 1120), Uncertain Tax Position Statement? See instructions	X	
	If "Yes," complete and attach Schedule UTP.		
15a	Did the corporation make any payments in 2022 that would require it to file Form(s) 1099?		X
b	If "Yes," did or will the corporation file required Form(s) 1099?		
16	During this tax year, did the corporation have an 80%-or-more change in ownership, including a change due to redemption of its own stock?		X
17	During or subsequent to this tax year, but before the filing of this return, did the corporation dispose of more than 65% (by value) of its assets in a taxable, non-taxable, or tax deferred transaction?		X
18	Did the corporation receive assets in a section 351 transfer in which any of the transferred assets had a fair market basis or fair market value of more than $1 million?		X
19	During the corporation's tax year, did the corporation make any payments that would require it to file Forms 1042 and 1042-S under chapter 3 (sections 1441 through 1464) or chapter 4 (sections 1471 through 1474) of the Code?		X
20	Is the corporation operating on a cooperative basis?		X
21	During the tax year, did the corporation pay or accrue any interest or royalty for which the deduction is not allowed under section 267A? See instructions		X
	If "Yes," enter the total amount of the disallowed deductions $		
22	Does the corporation have gross receipts of at least $500 million in any of the 3 preceding tax years? (See sections 59A(e)(2) and (3))		X
	If "Yes," complete and attach Form 8991.		
23	Did the corporation have an election under section 163(j) for any real property trade or business or any farming business in effect during the tax year? See instructions		X
24	Does the corporation satisfy one or more of the following? See instructions		X
a	The corporation owns a pass-through entity with current, or prior year carryover, excess business interest expense.		
b	The corporation's aggregate average annual gross receipts (determined under section 448(c)) for the 3 tax years preceding the current tax year are more than $27 million and the corporation has business interest expense.		
c	The corporation is a tax shelter and the corporation has business interest expense.		
	If "Yes," complete and attach Form 8990.		
25	Is the corporation attaching Form 8996 to certify as a Qualified Opportunity Fund?		X
	If "Yes," enter amount from Form 8996, line 15 $		
26	Since December 22, 2017, did a foreign corporation directly or indirectly acquire substantially all of the properties held directly or indirectly by the corporation, and was the ownership percentage (by vote or value) for purposes of section 7874 greater than 50% (for example, the shareholders held more than 50% of the stock of the foreign corporation)? If "Yes," list the ownership percentage by vote and by value. See instructions		X
	Percentage: By Vote By Value

Schedule M-1 Reconciliation of Income (Loss) per Books With Income per Return

Note: The corporation may be required to file Schedule M-3. See instructions.

1 Net income (loss) per books		7 Income recorded on books this year not included on this return (itemize): Tax-exempt interest $	
2 Federal income tax per books			
3 Excess of capital losses over capital gains			
4 Income subject to tax not recorded on books this year (itemize):		8 Deductions on this return not charged against book income this year (itemize):	
5 Expenses recorded on books this year not deducted on this return (itemize):		a Depreciation $	
a Depreciation $		b Charitable contributions $	
b Charitable contributions $			
c Travel and entertainment $			
		9 Add lines 7 and 8	
6 Add lines 1 through 5		10 Income (page 1, line 28) - line 6 less line 9	

Schedule M-2 Analysis of Unappropriated Retained Earnings per Books (Schedule L, Line 25)

1 Balance at beginning of year	5,056,796,079.	5 Distributions: a Cash	308,371,003.
2 Net income (loss) per books	-257,400,140.	b Stock	
3 Other increases (itemize):		c Property	
		6 Other decreases (itemize) Stmt 89	191,521,615.
See Statement 86	-1,248,342,681.	7 Add lines 5 and 6	499,892,618.
4 Add lines 1, 2, and 3	3,551,053,258.	8 Balance at end of year (line 4 less line 7)	3,051,160,640.

SCHEDULE M-3 (Form 1120) (Rev. December 2019)
Department of the Treasury
Internal Revenue Service

Net Income (Loss) Reconciliation for Corporations With Total Assets of $10 Million or More

▶ Attach to Form 1120 or 1120-C.
▶ Go to *www.irs.gov/Form1120* for instructions and the latest information.

OMB No. 1545-0123

Name of corporation (common parent, if consolidated return): UGI Corporation

Employer identification number: 23-2668356

Check applicable box(es): (1) [ ] Non-consolidated return (2) [ ] Consolidated return (Form 1120 only) (3) [X] Mixed 1120/L/PC group (4) [ ] Dormant subsidiaries schedule attached

Part I Financial Information and Net Income (Loss) Reconciliation (see instructions)

1 a Did the corporation file SEC Form 10-K for its income statement period ending with or within this tax year?
[X] **Yes.** Skip lines 1b and 1c and complete lines 2a through 11 with respect to that SEC Form 10-K.
[ ] **No.** Go to line 1b. See instructions if multiple non-tax-basis income statements are prepared.

b Did the corporation prepare a certified audited non-tax-basis income statement for that period?
[ ] **Yes.** Skip line 1c and complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Go to line 1c.

c Did the corporation prepare a non-tax-basis income statement for that period?
[ ] **Yes.** Complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Skip lines 2a through 3c and enter the corporation's net income (loss) per its books and records on line 4a.

2 a Enter the income statement period: Beginning 10/01/2022 Ending 09/30/2023

b Has the corporation's income statement been restated for the income statement period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

c Has the corporation's income statement been restated for any of the five income statement periods immediately preceding the period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

3 a Is any of the corporation's voting common stock publicly traded?
[X] **Yes.**
[ ] **No.** If "No," go to line 4a.

b Enter the symbol of the corporation's primary U.S. publicly traded voting common stock . . . . . UGI

c Enter the nine-digit CUSIP number of the corporation's primary publicly traded voting common stock 902681105

4 a	Worldwide consolidated net income (loss) from income statement source identified in Part I, line 1	**4a**	-1,502,227,039.
b	Indicate accounting standard used for line 4a (see instructions): (1) [X] GAAP (2) [ ] IFRS (3) [ ] Statutory (4) [ ] Tax-basis (5) [ ] Other (specify)		
5 a	Net income from nonincludible foreign entities (attach statement) Stmt. 92.	**5a**	(26,445,120).
b	Net loss from nonincludible foreign entities (attach statement and enter as a positive amount) Stmt. 92.	**5b**	1,274,820,228.
6 a	Net income from nonincludible U.S. entities (attach statement)	**6a**	( )
b	Net loss from nonincludible U.S. entities (attach statement and enter as a positive amount)	**6b**	
7 a	Net income (loss) of other includible foreign disregarded entities (attach statement)	**7a**	
b	Net income (loss) of other includible U.S. disregarded entities (attach statement) Stmt. 92.	**7b**	-2,373,067.
c	Net income (loss) of other includible entities (attach statement)	**7c**	
8	Adjustment to eliminations of transactions between includible entities and nonincludible entities (attach statement)	**8**	
9	Adjustment to reconcile income statement period to tax year (attach statement) Stmt. 94.	**9**	
10 a	Intercompany dividend adjustments to reconcile to line 11 (attach statement)	**10a**	
b	Other statutory accounting adjustments to reconcile to line 11 (attach statement)	**10b**	
c	Other adjustments to reconcile to amount on line 11 (attach statement) Stmt. 95.	**10c**	-1,175,142.
11	**Net income (loss) per income statement of includible corporations.** Combine lines 4 through 10	**11**	-257,400,140.

Note: Part I, line 11, must equal Part II, line 30, column (a), or Schedule M-1, line 1 (see instructions).

12 Enter the total amount (not just the corporation's share) of the assets and liabilities of all entities included or removed on the following lines.

		Total Assets	Total Liabilities
a	Included on Part I, line 4 ▶	15,768,002,697.	11,374,048,508.
b	Removed on Part I, line 5 ▶	2,404,309,812.	958,042,100.
c	Removed on Part I, line 6 ▶		
d	Included on Part I, line 7 ▶

UGI Corporation & Subsidiaries 23-2668356

Schedule K **Other Information** (see instructions)

		Yes	No
1	Check accounting method: **a** ☐ Cash **b** ☒ Accrual **c** ☐ Other (specify)		
2	See the instructions and enter the:		
a	Business activity code no. 551112		
b	Business activity HOLDING COMPANY		
c	Product or service N/A		
3	Is the corporation a subsidiary in an affiliated group or a parent-subsidiary controlled group?		X
	If "Yes," enter name and EIN of the parent corporation		
4	At the end of the tax year:		
a	Did any foreign or domestic corporation, partnership (including any entity treated as a partnership), trust, or tax-exempt organization own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part I of Schedule G (Form 1120) (attach Schedule G)		X
b	Did any individual or estate own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of the corporation's stock entitled to vote? If "Yes," complete Part II of Schedule G (Form 1120) (attach Schedule G)		X
5	At the end of the tax year, did the corporation:		
a	Own directly 20% or more, or own, directly or indirectly, 50% or more of the total voting power of all classes of stock entitled to vote of any foreign or domestic corporation not included on **Form 851,** Affiliations Schedule? For rules of constructive ownership, see instructions. If "Yes," complete (i) through (iv) below.	X	

(i) Name of Corporation	(ii) Employer Identification Number (if any)	(iii) Country of Incorporation	(iv) Percentage Owned in Voting Stock
See Statement 50			

b	Own directly an interest of 20% or more, or own, directly or indirectly, an interest of 50% or more in any foreign or domestic partnership (including an entity treated as a partnership) or in the beneficial interest of a trust? For rules of constructive ownership, see instructions If "Yes," complete (i) through (iv) below.	X	

(i) Name of Entity	(ii) Employer Identification Number (if any)	(iii) Country of Organization	(iv) Maximum Percentage Owned in Profit, Loss, or Capital
See Statement 54			

6	During this tax year, did the corporation pay dividends (other than stock dividends and distributions in exchange for stock) in excess of the corporation's current and accumulated earnings and profits? See sections 301 and 316		X
	If "Yes," file **Form 5452,** Corporate Report of Nondividend Distributions. See the instructions for Form 5452. If this is a consolidated return, answer here for the parent corporation and on Form 851 for each subsidiary.		
7	At any time during this tax year, did one foreign person own, directly or indirectly, at least 25% of the total voting power of all classes of the corporation's stock entitled to vote or at least 25% of the total value of all classes of the corporation's stock? For rules of attribution, see section 318. If "Yes," enter: **(a)** Percentage owned _____ and **(b)** Owner's country _____ **(c)** The corporation may have to file **Form 5472,** Information Return of a 25% Foreign-Owned U.S. Corporation or a Foreign Corporation Engaged in a U.S. Trade or Business. Enter the number of Forms 5472 attached _____		X
8	Check this box if the corporation issued publicly offered debt instruments with original issue discount ☐ If checked, the corporation may have to file **Form 8281,** Information Return for Publicly Offered Original Issue Discount Instruments.		
9	Enter the amount of tax-exempt interest received or accrued during this tax year $		
10	Enter the number of shareholders at the end of the tax year (if 100 or fewer)		
11	If the corporation has an NOL for the tax year and is electing to forego the carryback period, check here (see instructions) ☐ If the corporation is filing a consolidated return, the statement required by Regulations section 1.1502-21(b)(3) must be attached or the election will not be valid.		
12	Enter the available NOL carryover from prior tax years (do not reduce it by any deduction reported on page 1, line 29a) $ 6,208,154.		

UGI Corporation & Subsidiaries 23-2668356

Schedule K Other Information *(continued from page 4)*

		Yes	No
13	Are the corporation's total receipts (page 1, line 1a, plus lines 4 through 10) for the tax year **and** its total assets at the end of the tax year less than $250,000?		X
	If "Yes," the corporation is not required to complete Schedules L, M-1, and M-2. Instead, enter the total amount of cash distributions and the book value of property distributions (other than cash) made during the tax year $		
14	Is the corporation required to file Schedule UTP (Form 1120), Uncertain Tax Position Statement? See instructions	X	
	If "Yes," complete and attach Schedule UTP.		
15a	Did the corporation make any payments that would require it to file Form(s) 1099?	X	
b	If "Yes," did or will the corporation file required Form(s) 1099?	X	
16	During this tax year, did the corporation have an 80%-or-more change in ownership, including a change due to redemption of its own stock?		X
17	During or subsequent to this tax year, but before the filing of this return, did the corporation dispose of more than 65% (by value) of its assets in a taxable, non-taxable, or tax deferred transaction?		X
18	Did the corporation receive assets in a section 351 transfer in which any of the transferred assets had a fair market basis or fair market value of more than $1 million?		X
19	During the corporation's tax year, did the corporation make any payments that would require it to file Forms 1042 and 1042-S under chapter 3 (sections 1441 through 1464) or chapter 4 (sections 1471 through 1474) of the Code?	X	
20	Is the corporation operating on a cooperative basis?		X
21	During this tax year, did the corporation pay or accrue any interest or royalty for which the deduction is not allowed under section 267A? See instructions		X
	If "Yes," enter the total amount of the disallowed deductions $		
22	Does this corporation have gross receipts of at least $500 million in any of the 3 preceding tax years? (See sections 59A(e)(2) and (3).)	X	
	If "Yes," complete and attach Form 8991.		
23	Did the corporation have an election under section 163(j) for any real property trade or business or any farming business in effect during this tax year? See instructions		X
24	Does the corporation satisfy one or more of the following? If "Yes," complete and attach Form 8990. See instructions	X	
a	The corporation owns a pass-through entity with current, or prior year carryover, excess business interest expense.		
b	The corporation's aggregate average annual gross receipts (determined under section 448(c)) for the 3 tax years preceding the current tax year are more than $29 million and the corporation has business interest expense.		
c	The corporation is a tax shelter and the corporation has business interest expense.		
25	Is the corporation attaching Form 8996 to certify as a Qualified Opportunity Fund?		X
	If "Yes," enter amount from Form 8996, line 15 $		
26	Since December 22, 2017, did a foreign corporation directly or indirectly acquire substantially all of the properties held directly or indirectly by the corporation, and was the ownership percentage (by vote or value) for purposes of section 7874 greater than 50% (for example, the shareholders held more than 50% of the stock of the foreign corporation)? If "Yes," list the ownership percentage by vote and by value. See instructions		X
	Percentage: By Vote By Value		
27	At any time during this tax year, did the corporation (a) receive a digital asset (as a reward, award, or payment for property or services); or (b) sell, exchange, or otherwise dispose of a digital asset (or a financial interest in a digital asset)? See instructions		X
28	Is the corporation a member of a controlled group?	X	
	If "Yes," attach Schedule O (Form 1120). See instructions.		
29	Corporate Alternative Minimum Tax:		
a	Was the corporation an applicable corporation under section 59(k)(1) in any prior tax year?		X
	If "Yes," go to question 29b. If "No," skip to question 29c.		
b	Is the corporation an applicable corporation under section 59(k)(1) in the current tax year because the corporation was an applicable corporation in the prior tax year?		X
	If "Yes," complete and attach Form 4626. If "No," continue to question 29c.		
c	Does the corporation meet the requirements of the safe harbor method as provided under section 59(k)(3)(A) for the current tax year? See instructions	X	
	If "No," complete and attach Form 4626. If "Yes," the corporation is not required to file Form 4626.		
30	Is the corporation required to file Form 7208 relating to the excise tax on repurchase of corporate stock (see instructions):		
a	Under the rules for stock repurchased by a covered corporation (or stock acquired by its specified affiliate)?		X
b	Under the applicable foreign corporation rules?		X
c	Under the covered surrogate foreign corporation rules?		X
	If "Yes" to either (a), (b), or (c), complete Form 7208, Excise Tax on Repurchase of Corporate Stock. See the Instructions for Form 7208.		
31	Is this a consolidated return with gross receipts or sales of $1 billion or more and a subchapter K basis adjustment, as described in the instructions, of $10 million or more?		X
	If "Yes," attach a statement. See instructions.

SCHEDULE M-3 (Form 1120)
(Rev. December 2019)
Department of the Treasury
Internal Revenue Service

Net Income (Loss) Reconciliation for Corporations With Total Assets of $10 Million or More

▶ **Attach to Form 1120 or 1120-C.**
▶ **Go to *www.irs.gov/Form1120* for instructions and the latest information.**

OMB No. 1545-0123

Name of corporation (common parent, if consolidated return): UGI Corporation

Employer identification number: 23-2668356

Check applicable box(es): (1) [ ] Non-consolidated return (2) [ ] Consolidated return (Form 1120 only) (3) [X] Mixed 1120/L/PC group (4) [ ] Dormant subsidiaries schedule attached

Part I Financial Information and Net Income (Loss) Reconciliation (see instructions)

1 a Did the corporation file SEC Form 10-K for its income statement period ending with or within this tax year?
[X] **Yes.** Skip lines 1b and 1c and complete lines 2a through 11 with respect to that SEC Form 10-K.
[ ] **No.** Go to line 1b. See instructions if multiple non-tax-basis income statements are prepared.

b Did the corporation prepare a certified audited non-tax-basis income statement for that period?
[ ] **Yes.** Skip line 1c and complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Go to line 1c.

c Did the corporation prepare a non-tax-basis income statement for that period?
[ ] **Yes.** Complete lines 2a through 11 with respect to that income statement.
[ ] **No.** Skip lines 2a through 3c and enter the corporation's net income (loss) per its books and records on line 4a.

2 a Enter the income statement period: Beginning 10/01/2023 Ending 09/30/2024

b Has the corporation's income statement been restated for the income statement period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

c Has the corporation's income statement been restated for any of the five income statement periods immediately preceding the period on line 2a?
[ ] **Yes.** (If "Yes," attach an explanation and the amount of each item restated.)
[X] **No.**

3 a Is any of the corporation's voting common stock publicly traded?
[X] **Yes.**
[ ] **No.** If "No," go to line 4a.

b Enter the symbol of the corporation's primary U.S. publicly traded voting common stock . . . . . UGI

c Enter the nine-digit CUSIP number of the corporation's primary publicly traded voting common stock 902681105

4 a	Worldwide consolidated net income (loss) from income statement source identified in Part I, line 1	**4a**	268,770,689.
b	Indicate accounting standard used for line 4a (see instructions): (1) [X] GAAP (2) [ ] IFRS (3) [ ] Statutory (4) [ ] Tax-basis (5) [ ] Other (specify) _____		
5 a	Net income from nonincludible foreign entities (attach statement) Stmt. 104	**5a**	(55,432,719.
b	Net loss from nonincludible foreign entities (attach statement and enter as a positive amount) Stmt. 104	**5b**	121,513,140.
6 a	Net income from nonincludible U.S. entities (attach statement)	**6a**	( )
b	Net loss from nonincludible U.S. entities (attach statement and enter as a positive amount)	**6b**	
7 a	Net income (loss) of other includible foreign disregarded entities (attach statement)	**7a**	
b	Net income (loss) of other includible U.S. disregarded entities (attach statement) Stmt. 104	**7b**	-1,212,821.
c	Net income (loss) of other includible entities (attach statement)	**7c**	
8	Adjustment to eliminations of transactions between includible entities and nonincludible entities (attach statement)	**8**	
9	Adjustment to reconcile income statement period to tax year (attach statement)	**9**	
10 a	Intercompany dividend adjustments to reconcile to line 11 (attach statement) Stmt. 105	**10a**	-12,194.
b	Other statutory accounting adjustments to reconcile to line 11 (attach statement)	**10b**	
c	Other adjustments to reconcile to amount on line 11 (attach statement) Stmt. 105	**10c**	-169,307.
11	**Net income (loss) per income statement of includible corporations.** Combine lines 4 through 10	**11**	333,456,788.

Note: Part I, line 11, must equal Part II, line 30, column (a), or Schedule M-1, line 1 (see instructions).

12 Enter the total amount (not just the corporation's share) of the assets and liabilities of all entities included or removed on the following lines.

		Total Assets	Total Liabilities
a	Included on Part I, line 4 ▶	15,097,859,311.	10,743,768,301.
b	Removed on Part I, line 5 ▶	2,540,558,470.	2,717,742,280.
c	Removed on Part I, line 6 ▶		
d	Included on Part I, line 7 ▶

UGI GAS STATEMENT NO. 1

HANS G. BELL

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 1

Direct Testimony of
Hans G. Bell

Topics Addressed: **Purpose of Testimony and Rate Filing Overview**
Need for Rate Relief

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Hans G. Bell. My business address is 1 UGI Drive, Denver, PA 17517.

Q. By whom and in what capacity are you employed?

A. I am employed by UGI Utilities, Inc. ("UGI") as its President. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Gas Division ("UGI Gas" or the "Company") and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. Please briefly describe your responsibilities in that capacity.

A. As President, I am accountable for delivering the overall business performance to ensure adequate, efficient, safe, reliable, and reasonable natural gas and electric utility service to UGI's customers.

Q. What is your educational and professional background?

A. Please see my resume, UGI Gas Exhibit HGB-1, which is attached to my testimony.

Q. Have you testified previously before this Commission?

A. Yes. UGI Gas Exhibit HGB-1 contains a list of those proceedings.

II. PURPOSE OF TESTIMONY AND RATE FILING OVERVIEW

Q. Please describe the purpose of your testimony in this proceeding.

A. My testimony will present an overview of the rate filing, including a brief explanation of the reasons for rate relief and an outline of the testimony of each witness in this proceeding. I will also address UGI's efforts to manage the affordability of service to customers with the need to continue to undertake critical safety improvements on its distribution system.

Q. Are you sponsoring any exhibits in this proceeding?

A. I am sponsoring UGI Gas Exhibit HGB-1. Also, I am sponsoring certain responses to the Commission's standard filing requirements, as indicated on the master list accompanying this filing.

Q. Please identify the other witnesses providing direct testimony on behalf of UGI Gas in this proceeding and the subject matter of their testimony.

A. In addition to my testimony, the following witnesses are providing testimony in support of the Company's rate request:

Tracy A. Hazenstab (UGI Gas Statement No. 2) holds the position of Sr. Manager – Utility Rates for UGI Utilities, Inc. She addresses operating revenues and expenses and the revenue requirement model supporting the Company's proposed rate increase, UGI Gas Exhibit A (Fully Projected). Ms. Hazenstab also sponsors the revenue requirement models for the future and historic periods, UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Historic), respectively.

Jill W. Walter (UGI Gas Statement No. 3) holds the position of Director Operations – South Region at UGI Gas. Ms. Walter's testimony addresses UGI Gas's operations and natural gas distribution system. In addition, Ms. Walter discusses UGI Gas's Long-Term Infrastructure Improvement Plan ("LTIIP"), and the impact of the LTIIP and other initiatives on system performance, safety, and reliability, including an update on the Company's methane detection pilot that was agreed to in settlement of the 2025 Gas Base Rate Case at Docket No. R-2024-3052716. Also, Ms. Walter addresses UGI Gas's efforts and future plans to investigate and, where necessary, remediate sites in Pennsylvania where UGI Gas or corporate predecessors once owned and/or operated manufactured gas plants in connection with gas utility operations.

Vivian K. Ressler (UGI Gas Statement No. 4) holds the position of Director – Utility Financial Planning & Analysis ("FP&A") at UGI. Ms. Ressler addresses the budgeting process and certain operating expense adjustments, as well as the Company's accounting for information technology costs.

Amy M. Keller (UGI Gas Statement No. 5) holds the position of Sr. Manager – Regulatory and Plant Accounting at UGI. Ms. Keller explains UGI Gas's accounting processes used to develop the Company's actual book accounting results, which are the basis for the Historic Test Year ("HTY") ended September 30, 2025. Ms. Keller also presents UGI Gas's rate base claim for the HTY, Future Test Year ("FTY"), and Fully Projected Future Test Year ("FPFTY"). Ms. Keller further addresses certain operating expense adjustments.

John F. Wiedmayer (UGI Gas Statement No. 6) holds the position of Senior Project Manager at Gannett Fleming Valuation & Rate Consultants, LLC. Mr. Wiedmayer developed and supports UGI Gas's claim for annual depreciation expense, and the accumulated depreciation reserve. His studies are presented in UGI Gas Exhibit C (Fully Projected), UGI Gas Exhibit C (Future) and UGI Gas Exhibit C (Historic).

Vicky A. Schappell (UGI Gas Statement No. 7) holds the position of Sr. Manager, Capital Planning for UGI Gas. Ms. Schappell addresses capital expenditures and capital planning, including the planned plant in service expenditures for the FTY and FPFTY.

Dylan W. D'Ascendis (UGI Gas Statement No. 8) holds the role of Partner at ScottMadden Management Consultants. Mr. D'Ascendis presents expert testimony supporting the Company's claimed capital structure, cost of debt, cost of common equity, and overall fair rate of return. Schedules and workpapers supporting Mr. D'Ascendis's findings are set forth in UGI Gas Exhibit B (Rate of Return).

Darin T. Espigh (UGI Gas Statement No. 9) holds the position of Sr. Manager – Natural Gas Tax Accounting. Mr. Espigh addresses various tax issues, including the Company's claim for federal and state income taxes, taxes other than income taxes, the calculation of the accumulated deferred income taxes ("ADIT") offset to rate base, and the repairs allowance.

Sherry A. Epler (UGI Gas Statement No. 10) holds the position of Senior Manager Tariff and Supplier Administration for UGI. Ms. Epler's testimony addresses the development

of the Company's HTY, FTY and FPFTY test year sales and revenues. In addition, Ms. Epler addresses several proposed tariff updates. Ms. Epler sponsors UGI Gas Exhibit E (Proof of Revenue) and UGI Gas Exhibit F (Current and Proposed Tariffs).

John D. Taylor (UGI Gas Statement No. 11) is a Managing Partner of Atrium Economics LLC. Mr. Taylor prepared and sponsors UGI Gas's fully allocated cost of service study. This study is contained in UGI Gas Exhibit D. The Allocated Cost of Service Study ("ACOSS") allocates the Company's cost of service associated with Commission jurisdictional operations to the Company's customer classes. Mr. Taylor also addresses the Company's proposed revenue allocation and rate design, along with proposed changes to the Company's definition of normal weather and renewal of the Company's Weather Normalization Adjustment ("WNA") pilot.

Brian J. Meilinger (UGI Gas Statement No. 12) is the Director – Customer Programs and Public Relations at UGI. Mr. Meilinger's testimony addresses the Company's efforts to provide affordable service. Mr. Meilinger also discusses the Company's updates to its WNA customer communications.

III. NEED FOR RATE RELIEF

Q. Please discuss UGI Gas's proposed rate relief request and provide an overview of the Company's proposals in this proceeding.

A. UGI Gas is requesting an increase in its annual base rate operating revenues of $99.368 million, or 8.05 percent on a total revenue basis, with a proposed effective date of March 29, 2026. The base rate increase requested in this filing utilizes a FPFTY ending September

30, 2027. UGI Gas continues to make substantial distribution system investments that are necessary to: (1) continue the accelerated replacement of aging gas plant infrastructure; (2) upgrade and improve system segments and modernize facilities; (3) serve new residential and commercial customers, including natural gas conversions; (4) install and upgrade supporting information technology systems; and, most importantly, (5) ensure the safety of the Company's employees, customers, the communities it serves, and its distribution system. Moving forward, these system improvements and investments will require the Company to continue its efforts to attract, recruit, train, and retain those professional, technical, and field-qualified personnel and resources necessary to implement, operate, and maintain those investments, and to attract capital at a reasonable cost. These investments are all necessary to grow and continue to maintain a safe and reliable distribution system and provide quality customer service. As compared to pre-FPFTY gross plant levels, UGI Gas is projecting an increase of approximately $468 million in gross plant through the FPFTY compared to the end of the FTY, and a total of $879 million in gross plant when compared to the end of the HTY. Based on this factor alone, UGI Gas's current rates will not provide it with a reasonable opportunity to earn a fair rate of return on its increased rate base investments.

Specifically, as reflected in UGI Gas Exhibit A (Fully Projected), Schedule A-1, UGI Gas's operations are projected to produce an overall return on rate base of 6.55%, which equates to a return on common equity of only 7.70% for the twelve-month period ending September 30, 2027. As explained by UGI Gas witness Dylan W. D'Ascendis (UGI Gas Statement No. 8), those returns are inadequate based on applicable financial analysis and the risks confronted by UGI Gas. Unless UGI Gas receives the requested rate relief, those projected returns will continue to decline. This could potentially jeopardize UGI

Gas's ability to attract the capital needed to make investments that support operating a safe and reliable distribution system and enhance the reach and capacity of facilities that are required for system growth. Moreover, with its requested rate relief, UGI Gas will have the opportunity to earn a sufficient return on investments, serving as a needed source of capital to continue replacing older, more risk prone facilities, systems, and equipment, each of which is necessary to ensure continued system reliability, safety, and customer service performance.

Q. How have UGI Gas's expenses changed since its last base rate case?

A. UGI Gas has been very successful in managing its expenses, and projects only an approximate 1% increase in its overall Operations and Maintenance budget by the end of the FPFTY. The expense increases include wage and salary adjustments where necessary to maintain a productive and effective workforce, as well as increases in costs that are not within the Company's direct control, such as PUC assessments and other price increases for necessary products and services. UGI Gas continues to focus on efficient operations and has seen stable customer growth over time.

Q. Has the Company evaluated the impact of its proposed rate increase on average customer bills generally?

A. Yes. As shown in Table 1, below, the Company has evaluated the impact of its proposed rate increase on the average monthly bill of residential heating, commercial heating, and industrial customers.

Table 1 – Average Customer Bill Impact

Average Residential Heating Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
68.7 ccf	$113.64	$123.55	$ 9.91	8.7%

Average Commercial Heating Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
26.8 Mcf	$336.74	$358.17	$ 21.43	6.4%

Average Industrial Customer Bill Impact

Average Usage	Current	Proposed	Increase/ (Decrease)	% Change
54.6 Mcf	$647.57	$688.65	$ 41.07	6.3%

The average customer monthly bill impacts set forth in Table 1, above, are fair and reasonable because UGI Gas will utilize the increase in distribution rates to support its ongoing provision of safe and reliable distribution service for its customers. The proposed customer charges also reasonably reflect cost-of-service principles, while considering the rate design principle of gradualism.

Q. Is the Company making any other key proposals in this general rate increase filing?

A. Yes. As required by the Joint Petition for Settlement in Docket No. R-2021-3030218, UGI Gas must address its WNA Pilot program in a case filed before January 31, 2026. As such, UGI Gas is proposing in this proceeding to extend and modify its WNA pilot for an additional five years, ending October 31, 2032. Additionally, the Company is proposing to establish Normal Heating Degree Days ("NHDD") based on a 10-year weather history for use in both its distribution rates and the calculation of the WNA. These proposals, as

well as the rate design and revenue allocation, are discussed in more detail in the testimony of John D. Taylor (UGI Gas Statement No. 11).

Q. Please describe UGI Gas's most significant accomplishments in recent years demonstrating its commitment to customer safety, service reliability, and cost-effective infrastructure investment.

A. UGI Gas will accomplish a major safety milestone in 2026, when it completes the retirement of all known cast iron on its distribution system. The Company also remains on track to replace all of its bare steel mains by 2041. Additionally, as discussed above, UGI Gas has maintained strong Operations and Maintenance ("O&M") cost control between the FTY and FPFTY, with only a 1% budgeted increase (excluding Gas Supply and Depreciation & Amortization expenses). This discipline is best reflected in four key drivers: (1) controlled salary costs, particularly in back-office functions; (2) minimal growth in health benefits expenses; (3) an improved uncollectible rate; and (4) strategic procurement efforts that optimized vendor pricing. Finally, the Company took significant voluntary steps to protect low-income customers from the recent Federal Government shutdown and its resulting impact on LIHEAP funding. The full range of the situation, its potential impacts, and the Company's response are described in the direct testimony of Brian J. Meilinger, UGI Gas Statement No. 12. However, UGI Gas's most critical actions included making an additional $500,000 contribution to Operation Share in fiscal year 2026 and suspending terminations for LIHEAP qualifying customers.

Q. What actions has UGI taken to assist customers having difficulty paying their bills in recent years?

A. Since 2020, UGI has donated more than $7.5 million dollars to Operation Share to support customers facing economic hardship that are struggling to pay their bills. For Fiscal Year 2026, alone, UGI has donated more than $1.5 million, including the $500,000 donated in response to the delay in the funding of LIHEAP.

Q. Is UGI committing to any other actions to support the affordability of service for its customers at this time?

A. Yes. As part of this case, UGI is committing to contribute $1,000,000 annually each year for fiscal years 2027 to 2029 to its Operation Share program. These annual donations will assist thousands of qualifying customers, who may receive up to $600 in assistance in paying their energy bills. This funding for Operation Share is a donation from UGI that is not recoverable from or included in rates paid by customers, similar in nature to the many other charitable donations and community giving made by UGI each year to support the communities it operates in. Examples of the charitable donations and community giving undertaken by UGI include annual donations of $52,000 to the American Red Cross and $182,330 to 25 local organizations through United Way.

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS

EXHIBIT HGB-1

Hans G. Bell

Summary

Proven Energy Utility Executive with 29 years of gas & electric utility leadership experience including P/L accountability, transmission and distribution operations, engineering, asset integrity management, rate case / regulatory strategy, capital program management, customer service, and business development.

Experience

UGI Utilities, Inc., Denver, Pennsylvania

Utility President accountable for all aspects of business performance to ensure safe, reliable, and cost-effective natural gas & electric service for a utility serving more than 700,000 customers. Over a 12-year tenure at UGI Utilities, led the establishment of long-term infrastructure investment programs, led a 4-fold ramp up in capital investment to achieve infrastructure replacement objectives, developed internal & external capabilities and resources to execute the program, and guided the strategies needed to achieve return on investment. Consistently led team to deliver on key metrics including safety, reliability, customer service, and financial objectives.

President, UGI Utilities, Inc. *2020-present*

- Accountable for accountable for delivering overall business performance to ensure safe, reliable, and cost-effective natural gas and electric utility service
- Provides executive leadership for organization comprised of ~1,700 personnel including executives, technical professionals, and line workers engaged in gas & electric operations, engineering, financial management, rates, gas supply, environmental health & safety, capital program management, construction, and IT system implementation
- Delivers presentations to Board of Directors to secure approval of long-term strategy, annual plan, and major investments
- Maintains relationships among regulators, elected officials, customers, and trade allies
- Presents Utility segment business updates at investor conferences and meetings with shareowners

Chief Operating Officer *2017-2020*

- Consistently delivered upon increasing annual infrastructure replacement plans – on-time and on budget pipeline replacement program for 6 consecutive years
- Developed & implemented sustainability strategies into the business, including establishing methane emission reductions and integration of renewables and energy efficient technologies
- Implemented a safety culture enhancement program and initiated a Pipeline Safety Management System implementation plan
- Led delivery of a $70M pipeline of 10 miles x 24” pipeline, to serve major power plant, now UGI’s single largest customer
- Primary author of the UGI Long-Term Infrastructure Improvement Plan – a 5-year investment plan and strategy encompassing more than $1.25 Billion of safety & reliability improvements
- Achieved safety & reliability improvements including 27% reduction in hazardous leaks, 75% reduction in leaks scheduled for repair, 36% reduction in cast iron main break frequency, and consistent performance in excavation damage prevention

Vice President, Engineering and Operations Support *2013- 2017*

- Accountable for accelerated infrastructure replacement programs, capital budgeting contractor management, corrosion control, damage prevention, employee safety, engineering design, transmission & distribution integrity, regulatory compliance, training, and all related technical support functions.
- Accountable for planning and execution of annual cast iron / bare steel replacement program covering > 64 miles per year
- Primary author & regulatory witness for Long Term Infrastructure Improvement Plans, and annual asset optimization plans
- Primary witness providing written and verbal testimony to secure and increase the UGI Distribution System Improvement Charge which accelerated intra-rate case recovery of major safety & reliability investments
- Responsible for management and development of professional and technical support staff of over 110 employees
- Managed regulatory compliance activities with the PA Public Utilities Commission – Pipeline Safety Division

Nicor Gas, Naperville, Illinois

Over 17 years at Nicor Gas, a 2.1M customer gas utility, advanced through positions of increasing responsibility beginning at entry level through Managing Director of Engineering. During the AGL / Nicor merger served as functional lead for engineering & technical support on the merger integration team.

Managing Director, Engineering *2012-2013*

- Accountable for Engineering Design, Land Management, and System Planning supporting gas transmission, storage, and distribution operations spanning 11 states serving over 4.5 million customers
- Managed capital budgets of >$200M including budget development, variance reporting, and project prioritization
- Accountable for oversight of right of way acquisitions in advance of major pipeline projects
- Developed long term investment plans for infrastructure replacement, optimization, and growth

Assistant Vice President Engineering & Chief Engineer *2011- 2012*

- Accountable for all gas utility engineering support departments with over 50 professional and technical staff including Engineering Design, Transmission Integrity, Distribution Integrity, System Planning, Geographic Information Systems, Measurement, and Technical Services (Lab)
- Accountable for Transmission & Distribution Integrity Management compliance, audits, plans, program management, and project portfolio optimization.
- Accountable for Engineering Design and project management for distribution, storage, and transmission projects from initial scope, detailed design, cost estimates, sourcing, and contract negotiation
- Managed multiple interdisciplinary project teams executing complex multi-million-dollar storage and transmission projects
- Managed regulatory relationships with State (ICC) and Federal Pipeline Safety Agencies (PHMSA). Provided technical support to incident investigations
- Developed strategic approaches to addressing pipeline safety legislation including MAOP affirmation
- Developed engineering integration plans for AGL Resources– Nicor Gas merger including, organizational design, critical process mapping, accountabilities, budgeting, and staffing

General Manager System Integrity & Chief Engineer *2007 - 2011*

- Responsible for management of multiple departments including Engineering, Transmission Integrity, Distribution Integrity, System Planning, and Geographic Information Systems
- Responsible for development and management of infrastructure capital budgets of approximately $65 million
- Managed contracts with engineering consulting firms for pipeline design, construction, survey, and professional services
- Implemented a Distribution Geographic Information System including database design, data conversion of over 34,000 miles of distribution pipe, and deployment of a mobile GIS application to all front-line workers

Manager Engineering Design *2004- 2007*

- Responsible for managing departmental capital budget in excess of $20 million annually
- Provided project management oversight to pipeline projects from concept, feasibility, budgeting, approval, planning, design and implementation
- Maintained engineering consultant relationships and negotiated service contracts
- Implemented process improvements including development of Geographic Information System (GIS) based map distribution application
- Managed pipeline construction projects, negotiated construction contracts, resolved permitting issues, and delivered project approval presentations

Project Manager – Transmission Pipeline Integrity *2003 –2004*

- Responsible for development and implementation of pipeline integrity management program to maintain regulatory compliance with the Pipeline Safety Act of 2002
- Developed risk management program for prioritization of pipeline integrity assessments in high consequence areas
- Determined pipeline assessment project schedules including long term operating expense and capital budgets

Region Manager – Distribution *2001 – 2003*

- Manager responsible for construction and maintenance activities of gas distribution utility
- Managed projects involving main installations, service installations, and leak repairs
- Measured and tracked performance of 50 personnel against productivity and safety benchmarks
- Coordinated response to emergencies including gas leaks and pipeline breaks

Supervisor of Distribution Planning *2000 - 2001*

- Supervised staff of six engineers in distribution planning department
- Coordinated hydraulic modeling studies of 34,000-mile natural gas distribution system serving over 2 million customers
- Recommended capital improvement projects required to maintain uninterrupted reliable peak day service throughout entire natural gas distribution network
- Coordinated long range planning studies and forecasts used to develop capital budgets

Project Engineer *1996 –2000*

- Managed pipeline construction and maintenance projects, supervised inspectors and company maintenance crews
- Designed plans for installation and revision of gas distribution facilities
- Reviewed highway improvement plans and worked with state transportation engineers to resolve utility conflicts

Professional Activities & Affiliations

- Licensed Professional Engineer, State of Illinois, License # 62054443
- Director, Pennsylvania Chamber of Business & Industry 2023-present
- Director, Northeast Gas Association 2018- present (Chair 2025)
- Member, Society of Gas Operators – 2015 to present
- Member, Society of Gas Lighters – 2018 to present
- American Gas Association Bronze Award of Merit 2012
- Member, American Gas Association Leadership Council
- Chair, American Gas Association Distribution & Transmission Engineering Committee 2012 - 2013
- Co-chair of Southern Gas Association Distribution Engineering Committee 2007-2010

Education

Keller Graduate School of Management, Chicago, Illinois

***Master of Business Administration**, Graduated with Distinction, 2000*
Concentration in Finance

UGI GAS STATEMENT NO. 2

TRACY A. HAZENSTAB

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Gas Utilities, Inc. – Gas Division

Statement No. 2

Direct Testimony of
Tracy A. Hazenstab

Topics Addressed:	**Revenue Requirement**
	Operating Revenues and Expenses

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Tracy A. Hazenstab. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed and in what capacity?

A. I am employed by UGI Utilities, Inc. ("UGI") as Sr. Manager – Utility Rates. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Electric Division ("UGI Electric") and the Gas Division ("UGI Gas" or the "Company"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. What are your responsibilities as Sr. Manager - Utility Rates?

A. I am primarily responsible for various tariff filings and related computations for UGI Gas and UGI Electric rate and regulatory filings before federal and state regulatory commissions. As part of these responsibilities, I am responsible for preparing and supporting the Company's revenue requirement models for this base rate filing, which is included as UGI Gas Exhibit A. I report directly to the Vice President – Rates and Regulatory Affairs of UGI.

Q. What is your educational background?

A. Please see my resume, UGI Gas Exhibit TAH-1, which is attached to my testimony.

Q. Please describe your professional experience.

A. Please see my resume, UGI Gas Exhibit TAH-1, which is attached to my testimony.

Q. Have you testified previously before this Commission?

A. Yes. Attached to my direct testimony is UGI Gas Exhibit TAH-1, which contains a list of proceedings in which I previously testified. Additional exhibits that I am sponsoring are described below.

II. PURPOSE OF TESTIMONY

Q. What is the purpose of your testimony?

A. I am providing testimony on behalf of UGI Gas in support of the Company's proposed revenue requirement. First, I provide an overview of the Company's revenue requirement exhibits for the historic year ended September 30, 2025 ("HTY"), future year ending September 30, 2026 ("FTY") and the fully projected future test year ending September 30, 2027 ("FPFTY") (Section III). Second, I present UGI Gas's ratemaking presentation for the FPFTY, including its revenues and operating expenses claims, and certain pro forma adjustments (Section IV). The Company's rate proposal in this case is predicated on its FPFTY exhibit, which demonstrates the need for a revenue increase of $99.368 million.

Q. What exhibits are you sponsoring in this proceeding?

A. In addition to UGI Gas Exhibit TAH-1 mentioned above, I am sponsoring UGI Gas Exhibit A (Fully Projected), UGI Gas Exhibit A (Future), and UGI Gas Exhibit A (Historic). I am

also sponsoring certain responses to the Commission's standard filing requirements, as indicated on the master list accompanying this filing.

III. OVERVIEW OF PRINCIPAL ACCOUNTING EXHIBITS

Q. Please describe the principal accounting exhibits used to support UGI Gas's claims in this proceeding.

A. UGI Gas Exhibit A (Fully Projected) provides the calculation of the revenue requirement for the FPFTY, including principal accounting exhibits, rate base claims, revenue at present rates, operating expense claims, taxes and certain *pro forma* adjustments. The FPFTY information is derived from UGI Gas's operating and capital budgets for the 12-month period ending September 30, 2027. UGI Gas Exhibit A (Future) is the principal accounting exhibit for the FTY, including certain *pro forma* adjustments. The FTY information is derived from UGI Gas's operating and capital budgets for the 12-month period ending September 30, 2026. UGI Gas Exhibit A (Historic) is the principal accounting exhibit for the HTY, with appropriate ratemaking adjustments. The HTY information is derived from the book accounting data for the 12-month period ended September 30, 2025. The future and historic schedules are provided as a benchmark for comparison with the FPFTY claim, which, as explained above, is the basis for UGI Gas's proposed revenue increase of $99.368 million.

Q. Please provide an overview of UGI Gas's principal accounting exhibits.

A. As noted above, UGI Gas's claims in this case are based on UGI Gas Exhibit A (Fully Projected). This presentation is comprised of four sections:

Section A summarizes UGI Gas's requested *pro forma* rate base, revenues, and expenses at present rates and the calculation of its requested revenue increase.

Section B includes basic accounting data extracted from UGI Gas's financial, accounting, operating and capital budgets, and other records. This data includes a balance sheet, a statement of net operating income and test year revenues, a schedule of expense items by cost element, and a tax expense calculation. Also included are schedules showing UGI Gas's embedded cost of debt, year-end capital structure and overall claimed rate of return.

Section C provides the elements of UGI Gas's rate base claim and how each element of that claim is derived. UGI Gas's rate base includes utility plant in service, gas storage inventory, cash working capital, materials and supplies inventory, and offsets for accumulated depreciation, accumulated deferred income taxes, and customer deposits.

Section D presents UGI Gas's revenues and expenses on a *pro forma* ratemaking basis. Necessary adjustments to budgeted levels of expense items and revenues are summarized in Schedules D-1 through D-2 and detailed in the remaining schedules. The resulting FPFTY expense and revenue levels are shown on Schedule D-3 and were used to establish UGI Gas's *pro forma* income at present and proposed rates as set forth in Schedule A-1.

Q. What information is included in UGI Gas Exhibits A (Future) and A (Historic)?

A. UGI Gas Exhibits A (Future) and A (Historic) follow the format of UGI Gas Exhibit A (Fully Projected), but reflect data for the fiscal year ended September 30, 2026, and the fiscal year ending September 30, 2025, respectively. This information is provided to comply with the Commission's filing requirements and provides a basis for comparing and supporting the FPFTY claims with actual and projected results from the FTY and HTY.

Q. What are the data sources for the UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Historic)?

A. This data is derived from UGI Gas's books and records as well as its capital and operating budgets. UGI Gas Exhibit A (Future) is based on adjusted budgeted data for the FTY. UGI Gas Exhibit A (Historic) is based on adjusted experienced data for the HTY.

IV. REVENUE REQUIREMENT FOR THE FULLY PROJECTED FUTURE TEST YEAR

Q. How is your discussion of UGI Gas's FPFTY revenue requirement presentation organized?

A. In Section IV.A., I present a summary of UGI Gas's FPFTY revenue requirement. In Section IV.B., I discuss UGI Gas's proposed rate base. In Section IV.C., I explain the determination of UGI Gas's revenues and operating expenses, depreciation, taxes other than income taxes, income taxes, and the gross revenue conversion factor.

A. FPFTY REVENUE REQUIREMENT SUMMARY

Q. How were the *pro forma* revenue increase and total revenues at proposed rates established?

A. This calculation is shown at a summary level on Schedule A-1, column 3, of UGI Gas Exhibit A (Fully Projected). Lines 1-9 summarize the *pro forma* measure of value (rate base). Lines 10-19 show the following items at present rates: *pro forma* revenues, *pro forma* expenses, taxes, taxes on the revenue increase, *pro forma* net operating income, and the calculated rate of return. Lines 20-23 show the increase in net operating income required to permit UGI Gas to earn the claimed overall rate of return of 8.20%. Application of the Gross Revenue Conversion Factor establishes the revenue increase shown on line 25 needed to generate the change in operating income. Column 4 of Schedule A-1 shows the level of the revenue increase and the increase in expenses associated with the revenue increase. Column 5 of Schedule A-1 shows the revenue, expenses, and rate base at proposed rates, as well as the resulting rate of return of 8.20%.

Q. What is the overall requested increase in revenue?

A. The overall requested increase in revenue is $99.368 million. This represents the difference between the *pro forma* FPFTY revenue requirement of $1.334 billion and the annual level of operating revenues of $1.235 billion under existing rates. These figures are shown on line 13 of Schedule A-1 of UGI Gas Exhibit A (Fully Projected). Please also see the direct testimony of Hans G. Bell (UGI Gas Statement No. 1) for a discussion on certain considerations made by UGI Gas in establishing this revenue increase amount.

B. FPFTY RATE BASE

Q. With reference to UGI Gas Exhibit A (Fully Projected), please discuss how the Company's specific rate base items are determined.

A. UGI Gas's rate base presentation is shown in UGI Gas Exhibit A (Fully Projected), Schedule C-1. Schedule C-1 summarizes the UGI Gas rate base values for the FPFTY. Column 1 indicates the schedule upon which the calculation of each of the rate base elements is found. Columns 3 and 5 show the amounts at present and proposed rates, respectively. UGI Gas's total FPFTY rate base claim is $4.319 billion. Please see the direct testimony of Amy M. Keller (UGI Gas Statement No. 5) for a discussion of the rate base components.

C. FPFTY REVENUES AND EXPENSES

Q. How were revenues at present rates determined?

A. Revenues at present rates were determined by adjusting the budgeted revenues to reflect the anticipated change in the number of customers, the projected change in existing customer usage, the roll-in of revenues from the Distribution System Improvement Charge ("DSIC"), and other *pro forma* annualizing and normalizing ratemaking adjustments. The net effect of these adjustments is shown in UGI Gas Exhibit A (Fully Projected), Schedule D-5, and is discussed in the direct testimony of Sherry A. Epler (UGI Gas Statement No. 10).

Q. Please provide an overview of UGI Gas's principal accounting exhibits relative to operating expense claims.

A. UGI Gas's principal accounting exhibit is UGI Gas Exhibit A (Fully Projected), which includes a presentation for the FPFTY ending September 30, 2027. Section D of UGI Gas Exhibit A (Fully Projected) presents UGI Gas's claims and necessary adjustments to budgeted levels of expense items and revenues. The *pro forma* adjustments related to expense are summarized in Schedules D-3 and D-6 through D-34. These expense adjustments are used, in part, to derive UGI Gas's *pro forma* income at present and proposed rates as set forth in Schedule D-1.

UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Historic) follow the format of UGI Gas Exhibit A (Fully Projected) but reflect data for the appropriate test years ending September 30, 2026, and 2025, respectively. This information is provided in accordance with the Commission's filing requirements and provides a basis for comparing and supporting UGI Gas's FPFTY claims with prior results.

1. Summary

Q. Please describe Schedule D-1 of UGI Gas Exhibit A (Fully Projected).

A. Schedule D-1 presents a summary income statement that includes UGI Gas's claimed gas revenues, expenses, and taxes at present and proposed rate levels. The direct testimony of Sherry A. Epler (UGI Gas Statement No. 10) addresses the presentation of *pro forma* revenues, adjustments thereto, and the supporting schedules. Schedule D-1 also shows the proposed revenue increase of $99.368 million on line 4 in column 2.

Q. What is the level of net income at proposed rates?

A. As shown on column 3, line 21, net income at proposed rates is $354.186 million. This represents a $71.369 million increase from the level under current rates ($282.817 million), as shown on line 21 in column 1 of Schedule D-1.

Q. Please describe Schedule D-2.

A. Schedule D-2 shows the development of the various line items found on Schedule D-1. Column 2 contains the Company's budgeted level of revenues and expenses for the 12-month period ending September 30, 2027. Column 3 shows adjustments to the column 2 figures, where applicable, to reflect various annualization and/or normalization adjustments. Column 4 is the sum of columns 2-3. The amount of the revenue increase and related expenses are shown in column 5 with the resulting revenues and expenses at proposed rates shown in column 6.

Q. Are there schedules showing the derivation of the adjustments shown in Schedule D-2, column 3?

A. Yes. The derivation of the various column 3 revenue adjustments is included in UGI Gas Exhibit A (Fully Projected) in summary fashion on Schedule D-3, page 1, lines 1-13, and then listed by individual adjustment on Schedule D-5. Customer charge and distribution rate revenue adjustments for each customer class are shown on lines 1-5 of Schedule D-3. Gas cost revenue adjustments for each customer class are shown on lines 6-10 and details of other revenue adjustments are shown on lines 11-13 of Schedule D-3. Details for each revenue adjustment are shown in Schedules D-5 (including supporting Schedule D-5A)

and are discussed in the direct testimony of witness Sherry A. Epler (UGI Gas Statement No. 10). Another revenue adjustment, shown in Schedule D-5B, is sponsored by Darin T. Espigh (UGI Gas Statement No. 9). This adjustment, in the amount of $712,000, represents the amortization of the CIAC Tax Gross Up Regulatory Liability for interconnects. Regarding *pro forma* expenses, the derivation of the various adjustments is summarized individually on pages 1-2 of Schedule D-3, lines 16-55. The details for these adjustments are found in Schedules D-6 through D-31 and are sponsored by multiple witnesses, as described in the Table of Contents of UGI Gas Exhibit A (Fully Projected) and as listed on the header of each schedule.

2. Operating Expense

Q. How were the claimed operating expenses for the FPFTY determined?

A. *Pro forma* FPFTY expenses are based on the budgeted level of expenses as a starting point. The budgeted data, by FERC account, was then adjusted consistent with generally accepted ratemaking principles to reflect a normal, ongoing level of operations. Schedules supporting those adjustments are found in UGI Gas Exhibit A (Fully Projected), Section D.

Q. Were each of the *pro forma* adjustments reflected on Schedule D-3 also charged to an appropriate FERC account?

A. Yes. Each *pro forma* adjustment was calculated and then distributed to FERC accounts directly and presented on Schedule D-3 by major FERC account category.

Q. Schedule D-3 to UGI Gas Exhibit A (Fully Projected) shows an adjustment to Gas Costs in column 4. Please discuss this adjustment.

A. The detail for this adjustment is shown in Schedule D-6. This adjustment is designed to increase purchased gas cost expense by the same amount as the gas cost revenue adjustment contained in the direct testimony of Sherry A. Epler (UGI Gas Statement No. 10) and as shown on Schedule D-5, column 4, lines 7-11. UGI Gas recovers its purchased gas costs on a dollar-for-dollar basis with no profit through an automatic adjustment clause mechanism pursuant to Section 1307(f) of the Public Utility Code. Therefore, the decrease in purchased gas costs of $24.749 million equals the decrease in gas cost revenue as detailed by Ms. Epler. Thus, with this adjustment, purchased gas cost expense has no effect on the revenue requirement calculation.

Q. Please discuss the Salaries and Wages adjustment shown on Schedule D-7 in the amount of $942,000.

A. Schedule D-7, Column 4, shows a $942,000 increase to budgeted salaries and wages to reflect end of FPFTY operating conditions. This adjustment annualizes payroll expense and is distributed among the various cost accounts. Page 2 of Schedule D-7 shows the development of this adjustment.

Q. Please describe the annualization adjustment.

A. This adjustment annualizes the effect of wage increases for unionized employees that will take place during the FPFTY. Schedule D-7, page 2, line 2 reflects the increased

percentages for each classification of employee. Lines 3 through 5 indicate the percentage of the year for which the salary and wage increases are not reflected in the budget.

Q. How did you determine the split of the budgeted salaries among the various employee classifications shown on Schedule D-7?

A. The split of the budgeted salaries among the various classifications shown on Schedule D-7, page 1, was determined using the allocations of labor and headcount for Operating and Maintenance expense in the budget. These employee groupings are the same groupings utilized in developing the labor budget. These categories were used in UGI Gas's budgeting process for the operating expense portion of salaries and wages.

Q. What adjustments are shown on Schedule D-8?

A. Schedule D-8 represents an adjustment in the amount of $2.363 million for environmental remediation expense. The adjustments are described in further detail in the direct testimony of Amy M. Keller (UGI Gas Statement No. 5).

Q. Please discuss Schedule D-10, which shows an adjustment for Rate Case Expense.

A. Lines 1 through 4 show the rate case expense that UGI Gas expects to incur in this case of $1.760 million. That amount is then normalized over a one-year period given the anticipated timing related to the next UGI Gas rate case. The budgeted amount of rate case expense in the FPFTY was $2.267 million. The budget was decreased by $537,000 as shown in Column 3, line 8 to reflect more current costs.

Q. What is the nature of the adjustments shown on Schedule D-11?

A. Schedule D-11 represents adjustments in the amount of ($330,000) for uncollectible expense. The adjustments are described in further detail in the direct testimony of Vivian K. Ressler (UGI Gas Statement No. 4).

Q. Please explain the adjustment in the amount of $3.071 million shown on Schedule D-14.

A. Schedule D-14 represents an adjustment in the amount of $3.071 million for pension benefit expense. This adjustment is described in further detail in the direct testimony of Amy M. Keller (UGI Gas Statement No. 5).

Q. Please discuss the *pro forma* adjustment on Schedule D-15 for Injuries and Damages.

A. Schedule D-15, column 2, line 6, represents an adjustment in the amount of $876,000 for injuries and damages. This adjustment is described in further detail in the direct testimony of Vivian K. Ressler (UGI Gas Statement No. 4).

Q. Please discuss the Customer Accounts Expense Adjustment on Schedule D-15 in the amount of $1.624 million.

A. The Company is required to pay interest on Customer Deposits that it holds in accordance with its tariff requirements. Further discussion on customer deposits can be found in the direct testimony of Vivian K. Ressler (UGI Gas Statement No. 4).

Q. Please explain the PUC Assessment Adjustment also shown on Schedule D-15 in the amount of $875,000.

A. This adjustment reflects an update to the budgeted PUC assessment expense in the amount of $875,000, column 2, line 10. Further discussion on this adjustment can be found in Ms. Ressler's testimony (UGI Gas Statement No. 4).

Q. Please discuss the *pro forma* adjustment on Schedule D-16 for Universal Service expense.

A. This adjustment normalizes the amount of Universal Services Program ("USP") expense recovered through the Company's USP Rider based on the level of the Universal Service Rider charge effective at the time of the Company's filing in this matter. The USP Rider recovers the Company's Customer Assistance Program ("CAP") Credits, Pre-Program Arrearages, third party administrator expense, LIURP expense, and administrative costs associated with its Operation Share program. The Company's claim represents the ongoing normalized level of costs based on anticipated levels of CAP program participation. This adjustment decreases the Company's budgeted expense by $1.416 million, to align the expense with the annualized amount of the Company's current USP Rider charge. As the USP Rider is a fully reconcilable rider, the USP adjustment assures that expenses related to the existing rider are aligned with revenues and that no impact related to USP flows through to the revenue requirement calculation and into net income. Please see the direct testimony of Ms. Epler (UGI Gas Statement No. 10) for additional discussion of the USP Rider.

Q. Please explain the adjustment for Energy Efficiency and Conservation ("EE&C") Programs shown on Schedule D-19.

A. As with the PGC and USP Rider adjustments discussed above, this adjustment in the amount of $(340,000) aligns the amount of EE&C expense with the EE&C Rider charge (based on the level of the EE&C Rider charges effective at the time of the Company's filing in this matter). The EE&C Rider recovers the Labor and Administrative, Prescriptive Program, Retrofit Program, New Construction Program, Legal and Consulting, Combined Heat and Power, and other Costs associated with the Company's Energy Efficiency and Conservation Program. This adjustment decreases the Company's budgeted expense to align with the annualized amount of the Company's current EE&C charge. As the EE&C Rider is a fully reconcilable rider, the EE&C adjustment assures that expenses related to the existing rider are aligned with revenues and that no impact related to EE&C flows through to the revenue requirement calculation and into net income. Please see the direct testimony of Ms. Epler (UGI Gas Statement No. 10) for additional discussion of the EE&C Rider.

3. Depreciation Expense

Q. How was the level of depreciation expense for the FPFTY determined?

A. UGI Gas's depreciation study is set forth in UGI Gas Exhibit A (Fully Projected) and shows the determination of *pro forma* depreciation expense. This study uses the FPFTY plant in service and the applicable depreciation rates, service lives, and procedures. A summary of the budgeted depreciation expense and adjustments thereto is found in UGI Gas Exhibit A (Fully Projected), Schedule D-21, and is further explained in the direct testimony of John F. Wiedmayer (UGI Gas Statement No. 6).

Q. Please describe the depreciation expense adjustments shown on Schedule D-21.

A. UGI Gas witness Mr. Wiedmayer (UGI Gas Statement No. 6) presents the depreciation analysis that serves as the foundation of the depreciation adjustment. The adjustment for depreciation expense of ($231,000) set forth on Schedule D-21, page 2, column 3, line 64, annualizes budgeted FPFTY depreciation expense to calculate an entire year's worth of depreciation on plant in service (as of the end of the FPFTY). This schedule also shows a decrease to the net negative salvage amortization of $1.197 million. The total annualized depreciation expense for the FPFTY, net of costs charged to clearing accounts and net salvage amortization, is $170.518 million (as shown on Schedule D-3, page 2, column 13, line 53).

4. Taxes Other Than Income Taxes

Q. Please describe the taxes other than income adjustments in the amount of $950,000 shown on Schedule D-31.

A. Schedule D-31 contains the details for taxes other than income adjustments. The adjustments to the payroll tax expenses on lines 4-6 are calculated by multiplying the ratio of tax expense to payroll expense included in the FPFTY budget by the amount of the payroll adjustment derived in Schedule D-7. This produces an adjustment to the amount of social security, Federal Unemployment Tax ("FUTA") and State Unemployment Tax ("SUTA") expense in the total amount of $75,000. The calculation of these adjustments is shown in more detail on Schedule D-32. The other components of this schedule are supported in the testimony of Darin T. Espigh (UGI Gas Statement No. 9). In addition, Schedule D-31 includes an adjustment in the amount of $875,000 for the PUC Assessment, as described previously in my testimony.

5. Income Taxes

Q. What is the purpose of Schedules D-33 and D-34?

A. These schedules show the derivation of the Company's pro forma income tax expense claim, including the normalization of the effects of accelerated tax depreciation, as discussed in the direct testimony of Darin T. Espigh (UGI Gas Statement No. 9).

6. Gross Revenue Conversion Factor

Q. What is the purpose of Schedule D-35?

A. Schedule D-35 shows the calculation of the Gross Revenue Conversion Factor used on Schedule A-1 to calculate the level of revenues required to achieve the net operating income required to generate the rate of return supported by the direct testimony of Dylan W. D'Ascendis (UGI Gas Statement No. 8). These additional revenues are required to recognize that uncollectible accounts expense vary with the level of revenue and to recognize the additional state and federal income taxes attributable to the proposed rate increase.

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS STATEMENT NO. 3

JILL E. WALTER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. - Gas Division

Statement No. 3

Direct Testimony of
Jill E. Walter

Topics Addressed: Gas Safety and Operations

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Jill E. Walter. My current business address is 2121 City Line Ave Bethlehem, PA 18107.

Q. By whom are you employed and in what capacity?

A. I am employed as the Director of Operations - South Region by UGI Utilities, Inc. ("UGI"). UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two (2) operating divisions, the Gas Division ("UGI Gas" or the "Company) and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. Please describe your educational background and work experience.

A. They are set forth in my resume attached as UGI Gas Exhibit JEW-1 to my testimony.

Q. What are your responsibilities as Director of Operations - South Region?

A. As Director of Operations - South Region, I am accountable for over 400 individuals including management, clerical, and field technicians that operate and maintain the Company's gas transmission and distribution system.

Q. Have you presented testimony in proceedings before the Commission?

A. No, I have not presented testimony in any proceedings before the Commission.

Q. What is the purpose of your testimony?

A. I am providing testimony on behalf of UGI Gas. In my testimony, I will address the following topics: (1) natural gas operations; (2) regulatory compliance; (3) system safety and reliability; (4) leak reductions and emergency response; (5) safety and training initiatives; and (6) environmental programs.

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring UGI Gas Exhibit JEW-1. I am also sponsoring those responses to the Commission's standard filing requirements as stated on the master list accompanying this filing.

II. NATURAL GAS SYSTEM OPERATIONS

Q. Please provide an overview of the Company's distribution system.

A. UGI Gas provides service to more than 700,000 residential, commercial, and industrial customers located in 45 of Pennsylvania's 67 counties and spanning more than 700 municipalities. As of September 30, 2025, the Company operates more than 12,000 miles of gas distribution mains and 300 miles of natural gas transmission mains in the Commonwealth of Pennsylvania.

Q. Please describe UGI Gas's operations centers and support facilities.

A. UGI Gas has operations centers and support facilities throughout its service territory. Additionally, UGI Gas has a stand-alone centralized training center facility ("Learning Center") in Reading, PA, which includes a "safety town" for real-life indoor and outdoor training inclusive of leak pinpointing and investigation, a separate welding and tapping center, a safety lab, a service lab, a measurement and regulation lab, and a construction and maintenance lab. The UGI Gas Learning Center supports Operator Qualification training for both UGI Gas employees as well as contractors.

Q. How does UGI Gas staff its operations?

A. UGI Gas relies upon a mix of employees and contractor resources for its capital, operations, and maintenance programs to accomplish many of its initiatives, including gas main and service replacement and installation, roadway and landscape restoration, leak repairs, meter reading, new business activities, and general system operation and maintenance. Further, UGI Gas's parent company, UGI Corp., provides management, administrative, and support services (*e.g.*, executive management, human resources, legal, finance, accounting, procurement, treasury, IT, and corporate governance).

III. REGULATORY COMPLIANCE

Q. What regulations govern the safe transportation of natural gas transmission and distribution pipelines?

A. UGI Gas is subject to the minimum federal pipeline safety regulations in 49 CFR § 192 - Transportation of Natural and Other Gas by Pipeline ("Part 192"). The Company must

also follow the applicable state pipeline safety requirements found in Pennsylvania Title 52, Chapter 59 - Gas Service and Hazardous Liquid Service ("Chapter 59"). Pennsylvania natural gas pipeline safety regulations found in Chapter 59 of the Commission's regulations generally follow the Part 192 regulations.

Q. What are the regulatory topics included in Part 192 regulations?

A. Part 192 covers all aspects pertaining to the design, construction, operation, and maintenance of natural gas pipelines owned and operated by the Company. Federal natural gas pipeline safety regulations mandate that Operators have procedures and processes touching upon the following:

- Design and Construction Standards
- Operation and Maintenance Procedures
- Emergency Plans
- Integrity Management Plans
- Damage Prevention Plans
- Public Awareness Programs
- Control Room Management Plans

Q. How has the Company complied with these regulations?

A. UGI Gas has several plans and procedural manuals in place to address all required regulations found in Part 192. Due to the requirements found in Part 192, specifically Subpart M which promulgates the maintenance requirements in Part 192, UGI Gas performs a multitude of safety checks annually across its distribution system to maintain system safety and reliability.

Q. Can you provide examples of compliance safety checks UGI Gas performs annually on its distribution system to comply with Part 192?

A. The Company's Gas Operations personnel perform several activities to comply with applicable Part 192 regulations as well as internal Company procedures. Some of these activities include, but are not limited to, the following:

- Pipeline Leak Surveys and Patrols
- Valve Maintenance and Inspection
- Regulator Station Inspection and Maintenance
- Service Line Leak Survey and Meter Inspection
- Atmospheric Corrosion Inspection
- Cathodic Protection Inspection and Maintenance
- Odorant Intensity Inspection
- Transmission Integrity Management Assessments

The activities mentioned above are performed throughout the year and in certain situations, multiple times on the same distribution or transmission asset annually. This work also requires significant work planning/scheduling and record retention management. Throughout the year, the Company's Gas Operations personnel perform several thousand safety checks across its distribution system.

Q. Does the Company undertake any voluntary actions that exceed federal requirements found in Part 192?

A. Yes. UGI Gas's plans and procedures exceed federal safety standards in a number of areas. Additionally, UGI Gas voluntarily adopted and implemented programs identified as industry wide best practices. One such example includes UGI Gas's implementation of American Petroleum Institute ("API") Recommended Practice 1173 – Pipeline Safety Management Systems ("PSMS"). UGI Gas's PSMS program is still in development and continues to work toward full implementation in order to promote an enhanced safety

culture and provide safe and reliable natural gas service to its customers. In FY26, the Company is developing formal processes related to incident investigation and management of change in accordance with the standard as well as formal PSMS training within the organization. In addition, the Company completed a Safety Culture Assessment in 2025 to understand opportunities to improve safety.

In other situations, UGI Gas has elected to implement voluntary actions that arise from national events or recommendations by the National Transportation Safety Board ("NTSB") and other governmental agencies where it believes that doing so will allow it to provide safer and/or more reliable service to its customers. As noted in the Company's prior base rate case testimony at Docket No. R-2024-3052716 ("2025 Rate Case"), an example of this voluntary compliance relates to UGI Gas's evaluation of over-pressurization protection ("OPP") utilized on its low-pressure systems. As an update to this prior testimony, as of September 5, 2025, of the 73 stations identified that were not compliant with the additional OPP that was recommended by the NTSB, all of them have been addressed through the installation of supplemental OPP, station abandonment, or regulator station replacement.

Q. Does the Company have integrity management plans?

A. Yes, the Company maintains a Transmission Integrity Management Program ("TIMP") and Distribution Integrity Management Program ("DIMP") and as mandated in 49 C.F.R. § 192, Subpart O – Gas Transmission Pipeline Integrity Management, and Subpart P – Gas Distribution Integrity Management.

Under Subpart O, UGI Gas must continually identify threats to its pipelines in high consequence areas ("HCAs"), moderate consequence areas ("MCAs"), and other designated areas along transmission lines to determine the risk posed by any identified threats. UGI Gas also must schedule and perform integrity assessments to address all applicable threats, collect information about the condition of the pipelines, and take risk reduction actions to minimize and mitigate applicable threats.

Under 49 C.F.R. § 192, Subpart P, operators of gas distribution pipelines are mandated to gather information regarding their distribution pipelines and identify and evaluate relevant threats to their distribution systems. Operators are also required to assess and prioritize risks associated with the distribution system, implement accelerated action aimed at mitigating the risks of pipeline failures, and assess the effectiveness of these actions. Furthermore, operators must establish and execute a process for the regular review and enhancement of their programs, as well as report their findings to regulatory authorities. Unlike TIMP, DIMP encompasses the entire distribution system rather than focusing solely on pipelines located in select areas along transmission lines. This is due to distribution pipelines being predominantly situated in urbanized, densely populated regions to supply gas to these communities.

Q. Does the Company train and qualify its field personnel prior to performing operations and maintenance activities on natural gas pipelines?

A. Yes, UGI Gas maintains an Operator Qualification Plan ("OQ Plan") complying with the requirements of 49 CFR § 192, Subpart N. The OQ Plan establishes requirements for and management of qualifications for pipeline personnel who perform covered tasks on a

pipeline. Pipeline personnel are trained and qualified under the tasks needed to perform their various work activities on a UGI Gas pipeline. Covered tasks ensure internal and external pipeline personnel are educated, tested, and competent to perform specific natural gas activities on UGI Gas's distribution system. UGI Gas's OQ Plan was updated to incorporate industry standard ASME B31Q tasks effective December 8, 2025, and includes over 160 unique covered tasks, which ensure internal and external pipeline personnel are educated, tested, and competent to perform specific natural gas activities on UGI Gas' distribution system.

Additionally, UGI Gas is implementing a new OQ management system to track employee and contractor qualifications compliance. This system will provide digital access to OQ records. One of the key advantages of the new system is the ability for supervisors or inspectors to scan an employee or a contractor's QR code while in the field to view their OQ record status.

IV. SYSTEM RELIABILITY AND SAFETY

Q. Please describe the physical composition of UGI Gas's distribution system.

A. Due to its long-term operation, the Company's distribution system includes a mixture of pipeline materials indicative of the industry's technological advancement over time. Cast iron mains historically were found in the oldest parts of the system. UGI Gas, and the industry in general, then transitioned to bare steel and wrought iron piping, which were prevalent until the 1960s. The first generation of plastic piping was introduced in the early 1970s. Materials installed since the 1970s include various types and compositions of polyethylene ("PE") and coated steel piping. Overall, approximately ninety percent (90%)

of UGI Gas's distribution mains consist of contemporary materials, which UGI Gas defines as cathodically protected steel and modern plastic. UGI Gas's natural gas distribution system has the highest percentage of contemporary mains among major natural gas distribution companies in Pennsylvania. Additionally, as of December 31, 2025, UGI Gas only has approximately 3 miles of cast iron main left on-system.

Q. Please discuss the Company's actions to improve and enhance its distribution system.

A. UGI Gas has been identifying and repairing, improving, or replacing its distribution infrastructure on an accelerated basis pursuant to Commission-approved Long Term Infrastructure Improvement Plans ("LTIIP"). The Company's Initial LTIIP[1], Second LTIIP[2], and the first year of the Third LTIIP have resulted in UGI Gas successfully removing more than 802 miles of main over the 11-year period from 2014 to 2025 including 99% of its total cast iron mains and 48% of its total bare steel/wrought iron mains. UGI Gas continues to invest in improving and modernizing its distribution facilities serving customers throughout the Company's service territory. The Company filed its Third LTIIP on August 16, 2024, and this plan was approved by the Commission on December 5, 2024, at Docket No. P-2024-3050769. During the 12-month period from January 1, 2025, through December 31, 2025, the Company has exceeded its Third LTIIP estimate by

[1] On December 12, 2013, each of UGI Gas's three predecessor natural gas distribution companies filed Petitions, and received Commission approval, for LTIIPs at Docket Nos. P-2013-2398833, P-2013-2397056, and P-2013-2398835 (collectively referred to as the "Initial LTIIP"). In the Initial LTIIP, the Company identified its plan to replace all its cast iron main over the 13-year period ending in February 2027 and all of its bare steel and wrought iron main over the 28-year period ending September 2041. The Initial LTIIP period ended on December 31, 2019.

[2] *See Petition of UGI Utilities, Inc. – Gas Division for Approval of its Second Long Term Infrastructure Improvement Plan*, Docket No. P-2019-3012337 (Petition filed on August 21, 2019) (the "Second LTIIP"). The Second LTIIP builds off the significant acceleration in the rate of infrastructure repairs, improvements, and replacements (including the accelerated replacement of cast iron and bare steel pipe) that was achieved by the Initial LTIIP and reflects even further acceleration.

replacing approximately 71 miles of total cast iron, bare steel, wrought iron, and priority plastic mains compared to the Third LTIIP's plan of 50-60 miles. Additionally, DSIC-eligible capital placed into service in calendar year ("CY") 2025 totaled approximately $330 million compared to the Third LTIIP's plan of $298.5 million. In addition to main replacements in the Third LTIIP, the Company is pursuing other infrastructure initiatives, including replacing service lines, meter sets, valves, and farm taps, as well as addressing safety upgrades relating to measurement and regulation facilities (e.g., making improvements to over-pressure protection equipment) and remediating mechanical tees. Additionally, the Company outlined a plan for replacement of priority plastic, which includes plastic installed between 1965 and 1985. The Company retired approximately 8.5 miles of priority plastic in calendar year 2025. These initiatives will make UGI Gas's system safer and more reliable. Continuing UGI Gas's infrastructure replacement program as outlined in its Third LTIIP will allow the Company to provide safe and reliable service both now and into the future.

Q. How does UGI Gas prioritize its pipeline replacement projects?

A. In 2019, UGI Gas began using the Data-Driven risk model ("DDRM"). The DDRM is a quantitative model incorporating leak repair data, incident data, and asset population data to calculate a risk index score for facility groupings referred to as Asset Threat Groups ("ATGs"). The DDRM is utilized in conjunction with the Subject Matter Expert ("SME") driven risk model in order to validate DDRM results by incorporating SME input.

The DDRM provides a quantitative basis for evaluating risk and creates a stable foundation for comparing year-over-year changes because of the consistent quantitative

underpinning utilized. Finally, the DDRM facilitates evaluation of other risk mitigation approaches, including additional operations and maintenance, leak survey and damage prevention measures.

Q. What are the Company's current goals for main replacement?

A. UGI Gas is on track to replace all its cast iron main no later than February 2027, consistent with its initial completion plan and prior commitments. Further, the Company is on track to complete its bare steel and wrought iron main replacement no later than September 2041, also consistent with its initial completion plan. Specifically, to maintain a pace of replacement that would achieve these objectives, the Company's Third LTIIP established the objective of replacing between 60 and 70 miles of main in calendar year 2026 with an increase to 75 to 85 miles in calendar year 2027. As part of its mileage identified in calendar year 2027, the Company is planning an abandonment of a large section of a wrought iron and bare steel line in the northern part of the Company's service territory due to corrosion. This project will retire approximately 15 miles of high pressure wrought iron and bare steel. The Company plans to return to replacing 60 to 70 miles of main in CY28 and CY29.

Q. What results has UGI Gas achieved in the first year of its Third LTIIP?

A. The Company replaced or retired approximately 71 miles of main in 2025 including 23 miles of cast iron, 40 miles of bare steel, and 8 miles of vintage plastic. In addition, the Company installed 14,230 excess flow valves. The Company also replaced 11,651

services in 2025, 7,208 of which included meter sets that were moved from indoors to outdoors. The Company plans to continue replacing 10,500 to 12,500 services per year.

Q. What is UGI Gas's projection of its replacement and betterment plant in service for the future test year ("FTY") and the fully projected future test year ("FPFTY")?

A. For the FTY, the replacement and betterment budget reflects $311.5 million plant in service. The FPFTY plant placed in service for replacement and betterment is budgeted to be $383.6 million. For more detail on the Company's budgeting process related to all planned capital activities, please refer to the direct testimony of Vicky A. Schappell (UGI Gas Statement No. 7).

Q. What is the Company's basis for showing a further increase in plant placed in service in the FTY and FPFTY?

A. Foremost, the Company's annual plant additions related to replacement and betterment activities increased nearly $63 million over the 2021-2025 period, from $230 million in 2021 to $293 million in 2025. The Company anticipates that the cost of its replacement and betterment work will continue to increase through the FPFTY due to a number of different elements. The Company is further accelerating the number of miles it will accomplish in the FTY and FPFTY and has expanded work done to address safety upgrades and improvements that are not exclusively mileage-based replacements, such as meter moveouts, system reinforcement projects and regulator station rebuilds. In addition, the Company's piping projects include larger diameter bare steel pipes, and a greater focus on priority plastic in the FPFTY. For these reasons, UGI Gas's budget for the FTY and the

FPFTY reflects increased plant additions beyond the amount that the Company had accomplished during the HTY.

Q. Please discuss the Company's ongoing plans to move its indoor meter facilities outdoors.

A. UGI Gas is working to have all meters located outside by 2034 as required by the Commission's regulations at 52 Pa. Code 59.18, with limited exceptions as allowed by code. UGI Gas is taking a risk-based approach, while keeping efficiency in mind, to prioritize meters being moved outside based on the service line attributes and their associated risks and whether these services are attached to a main that will require replacement prior to 2034. As of October 1, 2025, the Company had a population of 84,554 meters inside customer's homes or businesses. UGI Gas plans to move approximately 10,500 meters outside per year or 31,500 meters between the HTY and FPFTY.

V. LEAK SURVEYS, LEAK REDUCTIONS, EMERGENCY RESPONSE AND METHANE DETECTORS

A. Leak Surveys

Q. Please discuss UGI Gas's efforts to identify, manage, and reduce system leaks.

A. UGI Gas monitors safety and reliability indicators for its natural gas distribution system on an ongoing basis to evaluate corrosion and leak identification and resolution performance, track emergency response, and pursue damage prevention – all of which will drive improvements in employee and public safety. As a part of its DIMP,[3] UGI Gas regularly

[3] 49 C.F.R. § 192.1007.

re-assesses system risks and leak trends to determine if additional or accelerated actions are required to further reduce system leaks.

Q. How does the Company perform leak surveys of its distribution system assets?

A. UGI performs both walking and mobile leak survey activities on its mains and services. UGI completes these activities using approved equipment as outlaid in the Gas Operations Manual (GOM 70.10.10). Minimum frequencies for leak surveying by material type or location are also listed in the Gas Operation Manual. UGI completes these surveys at least at the minimum required cycles with a combination of internal and external resources.

Q. Please describe the Company's leak survey practices for its priority plastic pipe.

A. Priority plastic installed in the UGI Gas system contains DuPont Aldyl-A plastic pipe, which can be susceptible to failures over time dependent upon local environmental conditions and installation practices. The total length of priority plastic mains installed on UGI Gas's distribution system between the years of 1965 and 1985 is approximately 1,100 miles. Current leak survey frequencies for this asset population are generally on a 5-year cycle in line with federal regulations, although UGI Gas typically performs these surveys on a 4-year cycle. Starting with the Calendar Year 2026 leak survey cycle, UGI Gas will perform accelerated leak surveys on an annual basis for its priority plastic mains. Importantly, this data feeds into the Company's DIMP for evaluation, risk ranking, and replacement prioritization.

Q. How has the Company implemented Advanced Mobile Leak Detection ("AMLD") Technology to date?

A. UGI Gas began its initial pilot of AMLD in 2021. The Company purchased one AMLD device and subsequently installed it on a Company vehicle. During the initial phase, the vehicle was driven along 445 miles of main in the Northern district. In subsequent years, UGI Gas continued to pilot this unit and other competing AMLD technologies within its service territory to aid in the analysis and development of its AMLD program. In CY25, UGI Gas laid forth the plan to start the execution of AMLD work in the system starting in CY26.

Q. Can you describe the results of the Company's AMLD pilots?

A. Yes. The pilot resulted in the following learnings:

- AMLD technology can survey a much wider dynamic range than conventional Cavity Ring-Down Spectroscopy ("CRDS") and Tunable Diode Laser Absorption Spectroscopy ("TDLAS") methods.
- AMLD technology allowed UGI Gas to perform mobile main-line leak survey at speeds five to ten times greater than traditional main line survey.
- AMLD identified existing/known leaks 100% of the time on the routes surveyed. 81 existing leaks were found along with 64 new system leaks.
- For 208 confirmed underground indications, 10% of the leaks found with the AMLD equipment represented around 75% of the total emissions, which prove the technology is effective at finding very low level leaks.
- This technology can undergo rapid deployment during emergencies/special surveys to ensure system resiliency (e.g. earthquake, post-flooding, or incident response.)

Q. What are UGI Gas's long-term plans for AMLD Technology?

A. In CY26, UGI Gas will utilize the Company-owned AMLD device to survey between 600 and 1,200 miles of main across its territory, equating to approximately 5-10% range of the drivable miles. The CY26 work will be done in conjunction with traditional leak survey methods which are currently still required to meet UGI Gas's compliance activity. The main driver of the work in CY26 will be data collection to share with the Commission's Safety Division to develop an approach that appropriately incorporates AMLD in future years to fulfill UGI Gas's leak survey regulatory obligations. The additional information gained from this technology will identify new environmental risk reduction opportunities while also being leveraged within UGI Gas's DIMP to provide additional knowledge on the asset populations contained within the DIMP.

B. Leak Reductions

Q. How does UGI Gas classify leaks?

A. UGI Gas uses a standardized leak classification system consistent with general industry protocols. Specifically, underground leaks are classified as 'A,' 'B,' and 'C.' Class 'C' leaks are deemed hazardous, and repair work is undertaken immediately. Class 'B' leaks are non-hazardous at the time of detection but justify a scheduled repair. Pursuant to UGI Gas's practice, Class 'B' leaks must be repaired or cleared within one calendar year, but no later than 15 months from the date of the latest Class 'B' leak classification. UGI Gas has been focused on continuous improvement for Class 'B' leak repairs. To that end, the Company repaired 98.2% of Class 'B' leaks within six months of classification in Fiscal Year 2025. These accelerated repairs reduced the leak hazards as well as methane

emissions. Class ‘A’ leaks are deemed non-hazardous and are monitored for changes in severity.

In December 2023, UGI Gas established formal classifications and procedures for aboveground leaks on UGI Gas owned facilities. Prior to this, UGI Gas did not classify aboveground leaks. These aboveground leaks are classified as Class ‘G’ and ‘H.’ Class ‘G’ leaks are defined as a minor escape of gas from aboveground UGI Gas piping or related gas facilities that is in a location that does not endanger the public and should be repaired or cleared within five calendar years, not to exceed 63 months from the date of the latest Class ‘G’ leak classification. Class ‘H’ leaks are defined as an unintentional escape of gas from aboveground UGI Gas piping or related gas facilities that requires immediate repair or make safe action.

Q. How have UGI Gas’s system leaks improved since 2018?

A. UGI Gas has seen a significant reduction in the number of leaks found on its system. This is directly attributable to its prioritization and aggressive replacement of leak-prone mains, services, and other assets. As Table 1 below demonstrates, since 2018, Class ‘C’ leak repairs have decreased by 59.9%, Class ‘B’ leak inventories have decreased by 76.0%, and Class ‘A’ leak inventories have decreased by 52.3%.

Table 1. Leak Inventories & Repairs

	Calendar Year 2015	Calendar Year 2025	Percent Change
C Leak Repairs	1,953	783	59.9% decrease
B Leak Inventory	816	196	76.0% decrease
A Leak Inventory	4,877	2,327	52.3% decrease

C. Emergency Response

Q. Please discuss UGI Gas's performance in the area of emergency response.

A. UGI Gas performs exceptionally well in the timely response to emergency notifications/calls. For the Fiscal Year ended September 30, 2025, 99% of the time, a first responder arrived on the premises within 45 minutes (or less) of receipt of an emergency call. UGI Gas utilizes a combination of shift coverage and on-call schedules to leverage internal field and supervisory resources to provide emergency response coverage 24-hours per day, 365 days per year. UGI Gas sets performance goals on a 45-minute response, which is more stringent than the benchmark response time as defined by the Commission's Safety Division.[4] Moreover, for Fiscal Year 2025, 99.8% of the time a UGI Gas first responder arrived onsite within one hour of the emergency call. UGI Gas also had an average emergency dispatch time of only 2.95 minutes for Fiscal Year 2025.

[4] The Commission's Bureau of Audits issued a Management and Operations Audit Report of the Company in October 2019 (at Docket Nos. D-2018-3002234, D-2018-3002235 and D-2018-3002236), which stated:

> The PUC Gas Safety Division defines acceptable emergency dispatch and response times as 15 minutes and 60 minutes, respectively. However, UGI has established a more stringent 45-minute emergency response key performance indicator of 97.8%. (Audit Report, p. 41).

D. Methane Detectors

Q. Provide a summary of UGI Gas's efforts to install in-home methane detection devices pursuant to the Commission-approved Settlement in the 2025 Rate Case.

A. UGI Gas is piloting the use of in-home methane detection devices as an additional layer of protection for natural gas customers. The initiative began in FY 2026 (ending September 30, 2026), and will continue through the FPFTY. This initiative is designed to evaluate the effectiveness of commercially available methane detectors in providing early warning of potential gas leaks within customer homes. The pilot will allow UGI Gas to assess device performance, installation considerations, customer engagement, and the overall impact on safety outcomes. By proactively evaluating this technology, UGI Gas aims to determine whether broader deployment could enhance public safety, reduce response times, and further strengthen the Company's comprehensive approach to leak detection and mitigation.

UGI Gas is also testing cellular and LoRaWAN remote communication as well as non-communication units. UGI Gas has deployed ~100 units as of the end of CY25. These units have been distributed to Company employees that are UGI Gas customers to act as Natural Gas Safety Ambassadors for this technology. After achieving learnings for the pilot, UGI Gas will shift to customer-focused education efforts in CY 2026. UGI Gas will look to add a dedicated Natural Gas Detector safety page to its website and also add a Natural Gas Safety section to its Energy Efficiency and Conservation website where customers can purchase Natural Gas Detectors that UGI Gas has ensured are UL 1484 approved.

VI. SAFETY AND TRAINING INITIATIVES

Q. What programs does UGI Gas have in place regarding employee, customer, and system safety?

A. In 2025, UGI Gas renewed its commitment to safety with its stand "Everyone and everything is always safe" to clearly declare who we are and how we operate. This stand reinforces safety as a core value that guides every decision, action, and interaction across the organization for our employees, customers, contractors, communities and our assets. It reflects UGI Gas's commitment to proactive risk management, disciplined operational practices, and a culture of accountability where safety is never compromised. By embedding this stand into daily operations and leadership expectations, UGI Gas continues to strengthen a consistent Company-wide approach to safe, reliable service. In addition, UGI Gas has advanced several initiatives to further develop its safety culture and drive sustainable improvements in safety performance. In FY26, UGI Gas will replace its current telematics and in-cab driver coaching system and in vehicle monitoring equipment that will further enhance and develop its safe driving program through intentional supervisory coaching of "events" triggered by the system, as well as positive recognition of safe defensive driving maneuvers. In FY26, the Company will conduct training on the new system for its drivers, supervisors, and managers. Through FY26, the Company will evaluate the system's full capabilities with plans to roll out new features in FY27. In addition, the Company is implementing a driver on-boarding training to familiarize new employees with the vehicles they will be driving. This will have the greatest impact for employees driving larger vehicles and equipment.

UGI Gas is continuing to focus on High Energy Hazard Assessment and Energy Control in line with the Edison Electric Institute's Safety & Classification Learning Model, an industry-standard approach to categorizing safety learning opportunities to reduce potentially serious or fatal injuries. The UGI Gas Safety team is continuing to train employees in use of the model for hazard assessment for job planning in FY26 and FY27.

In FY26, UGI Gas plans to initiate an Occupational Health Program pilot aimed at reducing soft-tissue injuries. The pilot focuses on proactive injury prevention through onsite ergonomic assessments, individualized conditioning programs, and early-intervention strategies to address discomfort before it progresses to an injury. The program includes employee education on proper body mechanics, stretching and warm-up routines, and techniques to safety perform high-risk tasks such as lifting, bending, and repetitive motion. By integrating occupational health expertise directly into field operations, UGI Gas is working to reduce strain-related injuries, improve employee well-being, and enhance overall operational safety and productivity. The Company will review and evaluate the findings from the pilot in CY26 to determine how to proceed with further implementation in CY27.

Q. What other ongoing safety programs does the Company have?

A. Other ongoing safety measures and tools include Smith System driver training and a 24-hour Triage Nurse Hotline. The Company has also adopted multiple programs to enhance its safety protocols. One such program is the UGI "Making a Difference by Living Our Values" incentive program, which rewards employees who demonstrate positive safety behaviors, including, but not limited to, leading safety meetings, reporting safety issues, or

participating in safety education. UGI Gas has further implemented a "Near Miss/Good Catch" program, which seeks to proactively prevent safety incidents by learning from issues that had the potential for, but did not result in, damage or harm. In addition, the Company uses EcoOnline, a safety incident software, which facilitates incident management and data collection for various types of incidents and tracks those incidents through the investigation process. Moreover, the Company utilizes ISNetworld vendor safety software to qualify contractors and monitor their performance trends. ISNetworld collects safety information from these contractors and compares them against UGI Gas's established safety standards to make sure their safety performance is at a satisfactory level to perform work for the Company. ISNetworld conducts ongoing monitoring of the contractor's safety information and alerts UGI Gas if a contractor falls below the Company's minimum safety standards – either in UGI Gas's service territory or anywhere else in the country. This helps ensure that UGI Gas's contractors provide safe and reliable service to the Company's community and customers.

Q. What training initiatives is the Company undertaking?

A. The Company has advanced its offerings at its Learning Center and continues to enhance the training program abilities there. The Learning Center is used for all new hire and employee progression field training. It is also used for ongoing training and operator re-qualification for employees and contractors. Key enhancements in Fiscal Years 2024-2025 were developing (1) training curriculum for meter and regulation field employees, incorporating Asset Data Collection ("ADC") training into existing course offerings; and (2) specialized training in medium and high pressure tapping.

The Company's OQ and technical training team has completed reorganizing, revising, and reformatting the training curriculum to enhance learning through incorporation of additional hands-on practice elements and interaction afforded at the Learning Center. The Company has aligned its operator qualification tasks with the American Society of Mechanical Engineers ("ASME") B31Q Standard. This transition to the B31Q standard aligns the Company with the latest industry best practices. This was completed in December 2025.

In FY25, UGI Gas implemented comprehensive Safety Leadership training for supervisors and above to strengthen UGI Gas' safety culture. The program focused on equipping leaders with the skills needed to model safe behaviors, conduct effective safety conversations, identify and mitigate hazards, and reinforce accountability across teams. In addition, UGI implemented human performance training to approximately 80% of its field workforce with the remaining 20% to be implemented in FY26. By enhancing leadership capability at all levels, these initiatives foster a work environment where employees feel empowered to speak up and prioritize safety in every task. As a result, UGI Gas expects long-term improvements in incident prevention, operational reliability, and overall employee engagement.

VII. ENVIRONMENTAL PROGRAMS

Q. Please discuss environmental management at UGI Gas.

A. The environmental group at UGI Gas is focused on three main areas: (1) Manufactured Gas Plant ("MGP") remediation; (2) compliance activities, such as permitting and operational improvements; and (3) sustainability and methane reduction activities.

Q. Please describe the Company's investigation and remediation of environmental impacts related to historical operations.

A. From the mid-1800s through the mid-1900s, UGI Gas and its predecessors owned and operated a number of MGPs that, prior to the general availability of natural gas, generated gas from other fuel stocks for residential, commercial, and industrial customer use. In Pennsylvania, this process generally used coal as a fuel stock. Some byproducts of this manufacturing process, including coal tars and other residues of the manufactured gas process, are today considered potentially hazardous substances under state and federal environmental laws. UGI Gas operates its environmental remediation program under a consent order and agreement ("COA") with the Pennsylvania Department of Environmental Protection ("PADEP") that covers the Company's activities through October 1, 2035.[5] This COA obligates the Company to either meet an annual minimum environmental spend commitment of $5.35 million or achieve a minimum annual point total of 9,000 points,[6] with points being issued for the completion of various designated environmental tasks under the COA through October 1, 2035.

[5] Historically, UGI Gas operated its environmental remediation programs under three COAs with PADEP. UGI Gas's former utility companies, UGI Penn Natural Gas, Inc. ("UGI PNG") and UGI Central Penn Gas, Inc. ("UGI CPG"), were each parties to separate COAs with PADEP, and a UGI Gas COA was executed in 2016. Following UGI CPG and UGI PNG's merger into UGI Gas, on October 1, 2020, the three separate UGI COAs were consolidated into the single, current COA that runs through October 1, 2035.

[6] The COA includes an "accounting system" with provisions to track progress with respect to the investigation, characterization, and remediation of the MGP properties. In any given fiscal year, the Company is required to achieve a minimum of 9,000 points, which demonstrates efforts and progress toward remediation, or exceed the minimum required spend of $5.35 million.

Q. What types of costs does UGI Gas incur with respect to addressing MGP site conditions?

A. UGI Gas incurs costs for site investigations, remediation, and site restoration as well as related PADEP oversight costs. Costs may also be incurred to obtain an environmental covenant at the site to prevent certain uses of the site, and costs associated with transferring the site to a third party (such as with a dedication for public use) once the site has been restored. Costs may also be incurred to purchase a property to secure access to investigate and remediate. Additionally, expert and legal costs are sometimes incurred in interactions with insurance carriers or other potentially responsible parties to ensure that UGI Gas's customers are only paying their equitable share of investigation and remediation costs. These costs may also be incurred to implement PADEP workplans if the Company faces opposition to the investigation or remediation of the site. Costs may also be incurred to recover compensation under historical insurance policies to offset the costs that would otherwise be recovered from customers.

Q. What is UGI Gas's projected spending on the MGP program?

A. UGI Gas has held the COA annual minimum spend of $5.35 million as the target projected spend for each year to meet the COA objectives, if minimum annual points cannot be achieved. UGI Gas's average aggregate annual spending over the past three fiscal years is $6.698 million, as shown below in Table 2.

Table 2. Environmental Spent per Fiscal Year

Fiscal Year	Total
2023	$5,441,000
2024	$7,602,000
2025	$7,052,000
Average	$6,698,000

The three-year average amount is used in the calculation of the environmental adjustment shown in UGI Gas Exhibit A, Schedule D-8, as discussed in the direct testimony of Amy M. Keller (UGI Gas Statement. No. 5).

Q. Why does environmental spend vary from the minimum environmental spend set by the COA?

A. While the Company uses the COA minimum spend as a benchmark for environmental cost budgeting, actual costs may exceed the minimum in certain years due to PADEP requirements, varied levels of investigation and remediation activity to address MGP site program priorities, addressing public concerns, changing environmental standards, and site-specific issues such as sensitive habitat and concentration of contaminants. Investigation activities tend to involve lower costs than remediation activities, which have higher costs associated with the active removal or neutralization of impacted soil or groundwater.

Q. What is UGI Gas's goal for restoration of the MGP sites?

A. UGI Gas strives to restore each site for beneficial reuse that becomes an asset to the Company or the community. Because these MGP sites are located within the Company's existing service territory, restoration of the sites for beneficial reuse, whether in the form of use by the Company, urban redevelopment, or the creation of a new public space, directly benefits the customers and communities served by the Company.

Q. Does that conclude your testimony?

A. Yes, it does.

UGI GAS

EXHIBIT JEW-1

JILL WALTER

ALLENTOWN, PA | 267-249-7808 | jillwalter17@gmail.com

Utility Operations & Safety Leader | Business Process Improvement

Dynamic and results-driven utility operations leader with over 20 years of progressive experience driving performance, leading teams, and delivering strategic initiatives in high-pressure environments. Proven expertise in business process improvement, change management, and cross-functional collaboration. Recognized for a clear, effective communication style that connects across all organizational levels to build alignment and momentum. Adept at translating customer needs into actionable strategies and fostering strong trust-based relationships. A hands-on, influential leader with a strong blend of critical thinking, problem-solving, and operational excellence. ***Areas of expertise include:***

Safety & Quality Program Management ♦ Root Cause Analysis ♦ Operations Management ♦ KPI Management
Process Improvement & Automation ♦ Budget Management ♦ Forecasting ♦ Risk Management ♦ Cost Control
Customer Service ♦ Contract Management ♦ Policy & Procedure Development ♦ Effective Communication
Data Analytics & Reporting ♦ Executive Collaboration ♦ Team Leadership Business & Financial Analysis

***Technologies*: Microsoft Office Suite, SharePoint, Oracle, Work Management Software, Accounting Software**

CAREER SUCCESS

UGI Utilities, Bethlehem, PA — January 2023 – Present

Director Operations, South Region (January 2023 – present)

Direct and lead natural gas employees within the South Region (~400 employees) in safe, reliable and efficient natural gas installation, operation, and maintenance. Ensure fiscal responsibility for the South Region while driving efficiency in work processes. Provide leadership and promote communication and collaboration between departments across the company.

INTREN, Conshohocken, PA — October 2018 – January 2023

Regional Director, East (2018-2023)

Direct and lead gas and electric employees within in the East Region driving INTREN's core values and mission (~180 employees). Primary point of contact responsible for maintaining customer relationships and satisfaction within the region. Responsible for execution of contracts and the region's operating budget performance. Responsible for developing and implementing business development strategies within the region to promote growth. Drives a culture that embraces safety and quality and ensures safety and quality procedure adherence.

- Full P&L responsibility for ~$60m budget
- Improved gross margin by 12% in 2 years
- Led region through 300% growth in revenue over 4 years
- Improved OSHA recordable incidents within the region
- INTREN representative on NECA Northeast Lines Chapter

I.B. Abel, Inc., York, PA — January 2015 – September 2018

Director of Safety & Quality (2016-2018)

Directed and led employees within the Safety & Quality Department, including hiring, training and coaching. Managed the safety & quality management system by engaging customer, field and senior leadership. Increased quality, safety and efficiency by implementing process and IT improvement initiatives. IT focus areas include mobile computing, SharePoint and the tool & equipment request system. Managed all key performance metrics for the company including safety, project management, work management, financial, backlog, and resource planning.

- Improved OSHA recordable incidents by 30% through a proactive safety and human performance program.
- Developed company SharePoint site to provide office and field employees the ability to electronically submit timesheets, access customer specifications, request tools/equipment and submit company forms. Deployed tablets to approximately 100 field leadership employees.
- Developed and implemented the company's ISO 9001:2015 compliant Quality Management Program.
- Developed a corporate scorecard as well as department level scorecards to measure business performance.

JILL WALTER ALLENTOWN, PA | 267-249-7808 | jillwalter17@gmail.com

- Implemented a standard project management delivery process across all divisions improving project communications, reporting, efficiency, and profitability.
- Single point of contact for one of the largest investor owned utilities in the northeast US.

Manager – Project Management and Controls (2015-2016)

Spearheaded project management initiatives. Directed and led a team of six professional individuals that managed various size projects. Served as the Storm/Emergency Response Management Lead.

- Ensured safe and profitable execution of a $50M project portfolio for investor-owned utilities.
- Developed project controls, metrics, resource planning and backlog reporting within the Utility Services division.
- Implemented a standard process for responding to customers' resource requests during storms and emergencies. Improved company's response time by 25%.
- Single point of contact for one of the largest investor-owned utilities in the northeast US.

PPL Electric Utilities, Corp., Allentown, PA July 2002 - January 2015

Manager – Distribution Portfolio Management (2012-2015)

Managed a portfolio of $350M capital improvement projects, maintenance programs, and service work within the company's distribution and substation system.

- Improved the budget planning and monitoring process through improved proactive reporting and analysis.
- Developed and maintained an internal and external labor resource strategy for work related to distribution, transmission, metering, and substation work.
- Maintained all Work Management reporting and metrics to ensure adherence to current work management processes. Recommended and facilitated Work Management process improvement opportunities.
- Implemented the company's Distribution System Improvements Charge process (Act 11). Developed all required reporting and analysis for the PA Public Utility Commission (PUC) to support the rate structure as supporting general rate case filings.
- Provided direction and leadership to a team of six professional individuals that developed the annual work plan, work scope adherence, detailed budget variance analysis, monthly forecasting, unit rate analysis, and resource planning.

Program Manager – Advanced Metering Development (2010-2012)

Responsible for managing a $37 million project to pilot and test advanced metering technology. Piloted the ability of the company's metering system to integrate into multiple business processes and computer systems.

- Worked closely with the PA Public Utility Commission (PUC) to ensure the company was meeting all requirements of Act 129 including bi-annual stakeholder meetings and annual status update filings.
- Provided direction and leadership to a team of three professional individuals.

Key Account Manager (2008-2010)

Serve as single point of contact for 200 key business accounts in the Lehigh Valley.

- Collaborated with internal resources to ensure the needs of Key Accounts are met in an effective, efficient and timely manner.
- Developed a communication plan and strategy for transitioning business customers into new tariff rate structures after years of rate caps.
- Maintained a strong knowledge of electric issues, tariffs, rates and service requirements.

Functional Requirements Lead – Mobile Operations Management (2007-2008)

Responsible for identifying, documenting and testing functional business requirements for the Mobile Workforce Management application. Deployed approximately 350 laptops to the field workforce.

- On-time and successful implementation of the first phase of the project (software vendor selection, hardware selection, testing and deployment).

JILL WALTER
ALLENTOWN, PA | 267-249-7808 | jillwalter17@gmail.com

Support Engineer – Distribution Asset Management (2004-2007)

Analyzed the need for distribution system reinforcements and developed large capital projects to support the need. Performed system studies for the connection of customers and non-utility generators. Evaluated and recommended changes in methods, design, and equipment

- Streamlined the process for connecting non-utility generators to the company's distribution system.
- Developed improved method for tracking non-utility generators connected to the system.

Engineer – Asset Maintenance & Reliability (2002-2004)

Provided statistical and technical analysis to develop budget requirements for maintenance programs

- Developed and managed an Underground Cable Replacement Program.
- Created a process for responding to emergency fiber optic network issues.
- Published quarterly reliability reports to the Pennsylvania Public Utility Commission (PUC).

Cooperative Associate – Transmission Engineering (Summer 2001)

Supported Transmission Design Engineers with various projects. Prepared estimates on future transmission projects. Supported Siting Coordinator in writing PA PUC reports for new transmission lines.

EDUCATION AND CERTIFICATION

Master of Business Administration, Supply Chain Management Concentration, 2009
LEHIGH UNIVERSITY, Bethlehem, PA

Professional Engineer, 2008

Power Technology Certificate, 2005
SIEMENS, Schenectady, NY

Bachelor of Science in Electrical Engineering, Business Minor, 2002
VILLANOVA UNIVERSITY, Villanova, PA

COMMUNITY ENGAGEMENT

Trustee, Da Vinci Science Center, 2024 – Present

UGI GAS STATEMENT NO. 4

VIVIAN K. RESSLER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 4

Direct Testimony of
Vivian K. Ressler

Topics Addressed: **Budgeting Process**
Operating Expense Adjustments
Capital Treatment of Certain Information Technology Costs

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vivian K. Ressler. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed and in what capacity?

A. I am employed by UGI Utilities, Inc. ("UGI") as Director – Utility Financial Planning & Analysis ("FP&A"). UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Gas Division ("UGI Gas" or the "Company") and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. What are your responsibilities as Director – Utility FP&A?

A. I have responsibility for UGI's financial budgeting, forecasting and analysis processes. I lead a team of analysts responsible for preparing the annual budget, including obtaining input from operational departments throughout the business. The team also performs analysis of budget to actual variances and completes financial forecasting and modeling to support business decisions. My duties also include the coordination of these functions with UGI's Accounting Department and the UGI Corp. Sr. Director of FP&A as well as finance and accounting personnel at UGI Corp.

Q. Please describe your educational background and work experience.

A. My full educational background and work experience are set forth in my resume attached as UGI Gas Exhibit VKR-1.

Q. Have you testified previously before this Commission?

A. Yes. UGI Gas Exhibit VKR-1 provides a list of the proceedings in which I have testified.

Q. What is the purpose of your testimony?

A. I am providing testimony on behalf of UGI Gas in support of the Company's rate case budgeting methodology and certain operating expense adjustments. First, I will discuss the budgeting process used by UGI Gas (Section II). Next, I will discuss certain operating expense adjustments (Section III). Finally, I will discuss the Company's accounting for certain Information Technology ("IT") costs (Section IV).

Q. Ms. Ressler, are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring UGI Gas Exhibit VKR-1. In addition, I am sponsoring those portions of UGI Gas Exhibit A (Fully Projected), Exhibit A (Future) and Exhibit A (Historic), which address certain adjustments to operating expenses discussed later in my testimony. I am also sponsoring those responses to the Commission's standard filing requirements as stated on the master list accompanying this filing.

II. BUDGETING PROCESS

Q. Please provide a high-level summary of UGI Gas's budgetary preparation and approval process.

A. UGI Gas's fiscal year begins on October 1 and ends on September 30 of the following year. Preparation of the UGI Gas Operating Budget for the subsequent two fiscal years begins during the spring, *i.e.*, the budget process for the October 1, 2025 through September 30, 2026 fiscal year (Fiscal 2026) and the October 1, 2026 through September 30, 2027 fiscal

year (Fiscal 2027) begins in the spring of 2025, with information being requested and incorporated from all departments. This allows UGI Gas to utilize the budget as a starting point for its FPFTY rate claim. Internal reviews and revisions occur throughout the spring and summer before the final budget for UGI Corp. is approved by the UGI Corp. Board of Directors in September – immediately prior to implementing the budget. I provide further detail regarding the preparation of the "Operating" and "Capital" Budgets below.

Q. Please describe how the Operating Budget is prepared.

A. As an initial matter, I note that the Operating Budget has both a revenue and expense component, which I will discuss in turn. In addition, each element of the UGI Gas Operating Budget is formulated by personnel with responsibilities specific to each aspect of the operation. The first and primary use of the Operating Budget is as a working tool for the management and planning of the business.

The revenue portion of the budget is a joint effort between the Marketing and FP&A departments. The Marketing department provides customer growth and attrition information by customer class along with specific large commercial and industrial sales, and revenue budget projections. The number of customers by customer class is determined using a wide range of factors, including trends in usage, the level of applications and inquiries for service from existing customers, new construction, and shifts in type of residence and customer mix. Budgeted usage per customer is developed by application of a two-year regression to historic data and incorporates normal weather on a 10-year basis (with such normal weather period being as defined by UGI Corp. for use in the budget process). The budgeted number of customers and usage per customer are combined to

produce monthly budgeted sales. The revenue budget is calculated by applying appropriate rates for each customer class to budgeted sales volumes, plus an adjustment for unbilled revenue. The sales and revenue budget is then reviewed with and approved by senior management. Normalizing and annualizing ratemaking adjustments to the budget for presentation of the FPFTY sales and revenue in this filing are discussed in the direct testimony of UGI Gas witness Sherry A. Epler (UGI Gas Statement No. 10).

Concurrent to revenue development, the expense portion of the Operating Budget is prepared. Operating and maintenance expenses are developed by functional managers based upon review of trends, monthly expenditure patterns, and new or changed programs. Employee levels are reviewed, and staffing levels are set for the upcoming fiscal years. The direct expense portion of the Operating Budget is submitted for review and approval by senior management. UGI Gas's direct expenses are then consolidated with allocated expenses from shared administrative and general functions within UGI and from other affiliated companies providing shared services to UGI Gas to develop the budgeted Statement of Operations. Allocated expenses in the Statement of Operations include functions such as accounting, rates, commodity supply, human resources, information systems, payroll, customer relations, billing, and remittance processing, which are performed in accordance with PUC-approved methods of allocation and affiliated interest arrangements or agreements.

The final Operating Budget is then submitted to UGI's President for review and approval. After this approval, the UGI budget is submitted to the Chief Financial Officer at UGI Corp. for additional review and approval and is consolidated with the budgets of other operating units of UGI Corp. The President of each UGI Corp. business unit reviews

his or her budget with the UGI Corp. Board of Directors and then the UGI Corp. Board of Directors approves the consolidated UGI Corp budget.

Q. Please describe how the Capital Budget is prepared.

A. In order to prepare the Capital Budget, operating personnel in each functional area prepare a detailed list of capital projects. Each project is identified, described, and justified along with a breakdown of the costs associated with it. These projects are presented to senior management, which reviews them in terms of priority, capital availability, and strategic alignment with the operating budget. After due consideration, the Capital Budget is set and presented, along with the Operating Budget, to senior management in a series of review meetings. This Capital Budget is subject to approval by the UGI Corp. Board of Directors in a manner similar to that described above for the Operating Budget. Additional information concerning the factors considered in establishing the UGI Gas Capital Budget is provided in the direct testimony of Vicky A. Schappell (UGI Gas Statement No. 7).

Q. Please explain how expenses from affiliated companies are treated to develop the budgeted Statement of Operations.

A. UGI Gas incurs costs for services provided by UGI Corp., and other affiliated companies, in accordance with affiliated interest arrangements authorized by the Commission. UGI also allocates or assigns applicable costs between UGI Electric and UGI Gas. Costs that can be identified as pertaining exclusively to an operating unit are billed directly to that unit. Those costs that cannot be directly associated with the operation of an individual operating unit are allocated to the various companies benefiting from the service.

Allocations are made by using a methodology applicable to the cost (*e.g.*, budgeted time allocations, number of employees, etc.) or, if no one methodology is specific to the cost, by using a formula referred to as the Modified Wisconsin Formula ("MWF") or another reasonable allocation methodology. The MWF or other allocation methodology achieves a reasonable distribution of common expenses based on the relative activity and size of each operating unit to the total of all operating units which benefit from the respective activities. Activity is measured by revenues and operating and maintenance ("O&M") expenses. Size is measured by tangible net assets employed (excluding acquisition goodwill) or by gross plant balance.

Q. How is the budget information used to support UGI Gas's requested revenue increase?

A. This budget information is the starting point for UGI Gas's claims and is adjusted as appropriate to reflect certain anticipated changes based on ongoing business activities since the completion of the budgeting process and through application of other appropriate ratemaking principles.

III. OPERATING EXPENSE ADJUSTMENTS

Q. Please describe how the Company's claimed operating expenses were determined.

A. As discussed in the direct testimony of Tracy A. Hazenstab (UGI Gas Statement No. 2), the *pro forma* FPFTY expenses were based on the budgeted level of expenses as a starting point. This budgeted level of expenses was then adjusted to comply with Commission precedent and generally accepted ratemaking principles to reflect a normal, ongoing level of operations. The supporting schedules for those adjustments are found in UGI Gas

Exhibit A (Fully Projected), Section D. Below, I will discuss the specific operating adjustments that I am sponsoring, as contained in UGI Gas Exhibit A (Fully Projected), Section D.

1. Uncollectible Accounts Expense

Q. Please explain the adjustment shown on Schedule D-11 for Uncollectible Accounts Expense.

A. This adjustment, ($0.330) million (line 8, column 5), adjusts budgeted uncollectible accounts expense to reflect a three-year average rate of uncollectible accounts expense to tariff revenue for Fiscal Years 2023, 2024, and 2025.

The amount of uncollectible expense in the budget is adjusted utilizing the three-year average uncollectible rate of 1.723 percent (line 4, column 5). The 1.723 percent is applied to the *pro forma* revenues at present rates (line 6, column 3) to calculate the *pro forma* uncollectible accounts expense of $21.139 million (line 7, column 4). This results in a decrease in the level of uncollectible accounts expense for the FPFTY from the budgeted amount of $21.469 million (line 5). The 1.723 percent uncollectible rate is then applied to determine the level of uncollectible accounts expense at *pro forma* proposed rates through the gross revenue conversion factor, as shown in column 3, line 2 of Schedule D-35.

2. Injuries and Damages Adjustment

Q. Please discuss the adjustment for Injuries and Damages shown on Schedule D-15.

A. The amount of expense incurred for injuries and damages in any one year can vary based on the quantity and severity of the claims. The Company bases its claim for injuries and

damages on a normalized amount. This is accomplished by making an adjustment on this schedule for the difference between the normalized amount and the budgeted amount. The three-year average of injuries and damages expenses of $1.863 million is calculated on lines 1 – 4 of Schedule D-15. The budgeted amount for injuries and damages, $0.987 million, is shown on line 5. The difference between these amounts, $0.876 million, was used to adjust budgeted injuries and damages expense, as shown on line 6, to reflect the normalized expense.

3. Customer Accounts Expense Adjustment

Q. Please discuss the adjustment for Customer Accounts Expense shown on Schedule D-15.

A. This adjustment includes a component to recover interest on customer deposits. The Company is required to pay interest on customer deposits that it holds in accordance with its tariff requirements. As this is a typical business expense, the Company has added this amount to its expense claim that is otherwise not reflected in the Operations Budget. It is calculated by using the average level of customer deposits anticipated for the FPFTY (*i.e.*, $23.197 million) times the required interest rate (7.0 percent) anticipated for the FPFTY, as published by the Pennsylvania Department of Revenue and as required under the Company's tariff. The total interest on customer deposits, an amount of $1.624 million, is shown on line 7.

4. PUC Assessment

Q. Please discuss the adjustment for PUC assessment shown on Schedule D-15.

A. This adjustment reflects the difference between the budgeted PUC assessment expense ($5.131 million on line 9) and the projected annual PUC assessment expense as of September 30, 2027 ($6.006 million on line 8). This adjustment of $0.875 million (line 10) is necessary to (1) adjust from the budget timing (October through September) to the timing of the PUC assessment (July through June); and (2) update the projection amount based on the most recent PUC assessment invoice (which was received subsequent to completion of the Company's budget).

IV. CAPITAL TREATMENT OF CERTAIN INFORMATION TECHNOLOGY COSTS

Q. What is the Company's policy for capital treatment of IT costs?

A. Since 2016, UGI (including UGI Gas and UGI Electric) has received authorization to capitalize certain IT costs associated with software implementation projects within various base rate proceedings. These IT costs consist of internal labor, external consulting expenses, and other expenses related to the preparation of the vendor and system integrator requests for proposals. IT costs also include current-state assessments, reengineering business processes to adapt to the new system, data conversion, cleansing and migration (including field verification and digitization of asset attributes required for accurate data and facility capture), and implementation training costs. Additionally, the Company capitalizes the above-mentioned cost items for cloud computing software implementation projects. Further, beginning in 2019, the Company began capitalizing Hypercare costs associated with large software implementation projects. Hypercare is a term for post-

implementation support following the deployment of an IT project to ensure that the newly implemented system operates as planned.

Q. Is the Company planning to continue with similar methods of IT cost capitalization in this proceeding?

A. Yes. The Company continues to capitalize such costs in line with the authorizations received previously, and all such costs which are claimed in the current case are included within the Company's budgeted capital as laid out in Exhibit A (Future) and Exhibit A (Fully Projected).

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS STATEMENT NO. 5

AMY M. KELLER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 5

Direct Testimony of
Amy M. Keller

Topics Addressed:	**Accounting Process and Historic Costs**
	Fully Projected Future Test Year
	Rate Base
	Operating Expense Adjustments

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Amy M. Keller. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed and in what capacity?

A. I am employed by UGI Utilities, Inc. ("UGI") as Senior Manager, Regulatory and Plant Accounting. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Gas Division ("UGI Gas" or the "Company") and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. What are your responsibilities as Senior Manager, Regulatory and Plant Accounting?

A. I have responsibility for UGI's plant accounting and regulatory accounting processes. I lead a team of accountants responsible for maintaining complete and accurate plant accounting records, and for preparing and submitting certain regulatory filings with the PUC and Federal Energy Regulatory Commission ("FERC"). My duties also include the coordination of these functions with UGI's Assistant Controller as well as financial accounting and reporting personnel and UGI Corp.

Q. Please describe your educational background and work experience.

A. My full educational background and work experience are set forth in my resume attached as UGI Gas Exhibit AMK-1.

Q. Have you testified previously before this Commission?

A. No, I have not.

Q. What is the purpose of your testimony?

A. I am providing testimony on behalf of UGI Gas in support of the Company's rate case accounting methodology and certain operating expense adjustments. First, I will explain UGI Gas's accounting processes, which were used to develop the actual book accounting results, which are the basis for the Company's historic test year ended September 30, 2025 ("HTY") (Section I).[1]

Q. Ms. Keller, are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring UGI Gas Exhibits AMK-1 and AMK-2. In addition, I am sponsoring those portions of UGI Gas Exhibit A (Fully Projected), Exhibit A (Future) and Exhibit A (Historic), which address rate base and certain adjustments to rate base and operating expenses discussed later in my testimony. I am also sponsoring those responses to the Commission's standard filing requirements as stated on the master list accompanying this filing.

II. ACCOUNTING PROCESS AND HISTORIC COSTS

Q. How are the accounting records of UGI Gas maintained?

A. The accounting records of UGI Gas are kept in accordance with generally accepted accounting principles ("GAAP") and the Federal Energy Regulatory Commission's

[1] The budgets for the future test year ending September 30, 2026 ("FTY") and the FPFTY are discussed in the Direct Testimony of Tracy A. Hazenstab (UGI Gas St. No. 2).

("FERC") Uniform System of Accounts ("USOA") as required under the provisions of 52 Pa. Code § 59.42. The Company also maintains a continuing property records system in accordance with the requirements of 52 Pa. Code § 59.46.

Q. Are the books and records of UGI Gas subject to audit?

A. Yes. The books and records of UGI Gas are audited by its internal auditors. In addition, UGI Gas's books and records are included in Company-wide audits of UGI, performed by its external auditor, KPMG, LLP. The Company's books and records are further subject to audit by the PUC.

Q. Do the continuing property records of UGI Gas reflect the original cost value of property?

A. Yes, they do. UGI Gas's plant in service, plant additions, retirements, and book adjustments have been recorded on an original cost basis in accordance with GAAP and the USOA requirements.

Q. What process does UGI Gas follow to assure that property reflected in its plant accounts is in service?

A. UGI Gas's capital project managers create records that document the costs of projects and/or asset purchases. When a capital project or asset is placed into service, the project manager records the in-service date and the retirement detail for any related assets that are taken out of service. Then, the record is provided to accounting personnel. This information is transferred through accounting entries into the appropriate UGI Gas plant

property accounts, subject to review by authorized individuals who approve the entries and further review by internal and external auditors.

Q How was the Company's accounting process used in preparing the Company's filing?

A. The above-described accounting process was used to prepare the principal accounting exhibits that support UGI Gas's claim in this proceeding. As discussed in the direct testimony of Company witnesses Hans G. Bell (UGI Gas Statement No. 1) and Tracy A. Hazenstab (UGI Gas Statement No. 2), the Company's claim is based on the FPFTY. The accounting data for the FPFTY was derived from UGI Gas's Operating and Capital Budgets for the 12 months ending September 30, 2027, as shown in UGI Gas Exhibit A (Fully Projected). The accounting data for the FTY was derived from UGI Gas's Operating and Capital Budgets for the 12 months ending September 30, 2026, as shown in UGI Gas Exhibit A (Future). The accounting data for the HTY was derived from UGI Gas's books and records for the 12 months ended September 30, 2025, as shown in UGI Gas Exhibit A (Historic).

III. FULLY PROJECTED FUTURE TEST YEAR RATE BASE

Q. With reference to UGI Gas Exhibit A (Fully Projected), please discuss how the Company's specific rate base items are determined.

A. UGI Gas's rate base presentation is shown in UGI Gas Exhibit A (Fully Projected), Schedule C-1. It summarizes the UGI Gas rate base values for the FPFTY. Column 1 provides the schedule where the calculations of each of the rate base elements are found. Columns 3 and 5 show the amounts at present and proposed rates, respectively. UGI Gas's total FPFTY rate base claim—net of deductions for accumulated depreciation,

accumulated deferred income taxes and customer deposits—is $4.319 billion. Except where otherwise noted, I will describe each of the rate base elements in greater detail below.

1. Utility Plant in Service

Q. Please explain how UGI Gas determined its FPFTY rate base value for net plant in service.

A. UGI Gas's claim for FPFTY rate base value for net plant in service is the sum of the gross utility plant in service claim and the accumulated depreciation claim as of September 30, 2027, as described below.

Gross utility plant in service represents the sum of the closing plant balances as of September 30, 2025, plus budgeted additions placed in service for the years ending September 30, 2026, and September 30, 2027, less expected FTY and FPFTY plant retirements. The direct testimony of Company witness Vicky A Schappell (UGI Gas Statement No. 7) discusses the capital addition planning process and the basis for the additions placed in service in the FTY and FPFTY.

UGI Gas's claim also reflects a reduction for accumulated depreciation, which is based on the closing accumulated depreciation balances as of September 30, 2025, plus depreciation expenses for the years ending September 30, 2026, and September 30, 2027, less expected FTY and FPFTY plant retirements.

Q. Please describe Schedule C-2 to UGI Gas Exhibit A (Fully Projected).

A. This schedule presents UGI Gas's FPFTY claim of $6.677 billion for used and useful gas gross utility plant in service on page 2, column 2, line 64. That amount is also reflected on

line 1 of the measure of value summary on Schedule C-1. Gas utility plant enables UGI Gas to provide safe and reliable gas service to its customers.

Q. Please describe the information included on Schedule C-2, page 3.

A. This information provides a summary of UGI Gas's *pro forma* claim for gross utility plant in service by category. Column 2 shows the FPFTY ending balances based on the placed in-service budget; column 3 shows the net effect of the various plant adjustments, if any; and column 4 provides the adjusted FPFTY plant in service.

Q. What information is included on Schedule C-2, pages 4 and 5?

A. Columns 2 and 3 on these pages show the gas plant in service balances for 2026 and 2027 at the FERC account level, based on the placed in service budget. Column 5 provides the ending FPFTY plant balance at the FERC account level.

Q. Where are plant in service additions shown?

A. Pages 6 and 7 of Schedule C-2 provide actual (for the HTY) and projected (for the FTY and FPFTY) plant in service additions. The Company categorizes plant in service additions by FERC account.

Q. Where are plant retirements shown and how were these retirements projected for the FTY and the FPFTY?

A. Pages 8 and 9 of Schedule C-2 provide actual (for the HTY) and projected (for the FTY and FPFTY) plant retirements. Retirements for most plant accounts were projected by

plant account. The Company applied the average retirement rate, as a percent of additions, for the five fiscal years 2021 through 2025, to the FPFTY and FTY plant in service additions. For certain plant accounts subject to amortization accounting, retirements are recorded when a vintage is fully amortized. For these accounts, all units are retired when the vintage is fully amortized.

2. Accumulated Depreciation

Q. Please explain how UGI Gas determined its rate base deduction for accumulated depreciation.

A. UGI Gas started with accumulated depreciation as of September 30, 2025, added the budgeted level of depreciation expense for the FTY and FPFTY, and calculated the impact of the FTY and FPFTY plant retirements and a provision for net salvage as shown on Schedule C-3. The depreciation rates and test year expense levels are discussed in the direct testimony of John F. Weidmayer (UGI Gas Statement No. 6), with the underlying FPFTY depreciation analysis provided in UGI Gas Exhibit A (Fully Projected).

Q. Please describe UGI Gas's accumulated depreciation claim.

A. UGI Gas's accumulated depreciation claim is shown on Schedule C-3 of UGI Gas Exhibit A (Fully Projected). This schedule presents the accumulated provision for depreciation as of September 30, 2027, distributed among the various FERC accounts. The total amount for accumulated depreciation, $1.736 billion, is summarized on page 2, column 2, line 64, of this schedule. That amount is reflected on line 2 of the measure of value summary on Schedule C-1 as a reduction to rate base.

Page 3 of Schedule C-3 shows the *pro forma* FPFTY level of accumulated depreciation distributed to the various plant categories. Pages 4 and 5 show the details of the accumulated depreciation by FERC account for Fiscal Years 2026 (column 2) and 2027 (column 3) based on budget plus adjustments (column 4), if any, to arrive at the FPFTY balance (column 5). Pages 6 and 7 show the cost of removal by FERC account and pages 8 and 9 show negative net salvage amortization by FERC account. Pages 10 and 11 include the salvage amounts by FERC account. These amounts are included in the FPFTY accumulated depreciation calculations. The amortization of negative net salvage was calculated using a 5-year amortization schedule in accordance with Commission precedent.

Q. Please summarize UGI Gas's net in plant in service claim.

A. UGI Gas's net plant in service claim reflects *pro forma* gross utility plant as described above of $6.677 billion at September 30, 2027, less *pro forma* accumulated depreciation of $1.736 billion at September 30, 2027. These amounts are both reflected in the measure of value summary on Schedule C-1.

3. Cash Working Capital

Q. Please explain how UGI Gas determined its rate base value for cash working capital ("CWC").

A. CWC is the capital requirement arising from the difference between (1) the lag in the receipt of revenue for rendering service and (2) the lag in the payment of cash expenses incurred to provide that service, as shown in Schedule C-1. A detailed analysis of UGI Gas's CWC requirements is provided in Schedule C-4.

Q. Where is the CWC rate base value summarized?

A. The CWC rate base value is summarized at Schedule C-4, page 1. The various components of the working capital claim are listed on this page, along with a reference to the page where the component is further detailed within Schedule C-4.

Q. What data is shown on page 2 of Schedule C-4?

A. Page 2 summarizes the derivation of UGI Gas's revenue collection lag and overall expense payment lag. The revenue lag is 57.46 days (line 1). Expense lag days include three categories of annual operating expenses: (1) payroll; (2) purchased gas costs; and (3) other expenses. The expense lag days are shown for each component (lines 3-5), which amount to 27.55 days (line 7). The net lag in the collection of revenue is 29.91 days (line 8). This number is then multiplied by the average daily operating expense balance (line 9) to arrive at a base CWC amount for Operations and Maintenance ("O&M") expense of $57.012 million (line 10). The average daily expense balance of $1.906 million (line 9) is determined by dividing the total *pro forma* annual operating expenses, excluding uncollectible accounts expense, of $695.601 million (line 6, column 2), by the number of days in the year, or 365. I will describe the other components of the CWC claim when I discuss the related schedules.

Q. Please describe the revenue lag calculation shown on Schedule C-4, page 3.

A. The Company's calculation for the total revenue lag days of 57.46 (line 23) consists of several steps. First, the annual revenue (line 18, column 3) is divided by the average month-end accounts receivable balances for the 13 months ended September 30, 2025 (line

17, column 2). This results in an accounts receivable turnover rate of 9.14 (line 19, column 4), which is equivalent to 39.93 lag days (line 20, column 5) (i.e., 365 divided by 9.14 accounts receivable turnover rate). As shown on lines 20-23, the payment portion of the revenue lag is added to: (1) the 2.32-day lag between the meter reading day and the day bills are sent out and recorded as revenue and accounts receivable by the Company (appearing on line 21); and (2) the 15.21-day service lag (i.e., midpoint lag factor), which is the time from the mid-point of the service period until the meter reading date (appearing on line 22). This calculation results in a total revenue lag of 57.46 days.

Q. How was the mid-point of the service period calculated?

A. The mid-point of the service period is equal to the number of days in an average service month (365 days divided by 12, or 30.4 days) divided by two (i.e., 15.21 days).

Q. How are the payroll expense lag days for the CWC claim calculated?

A. This calculation is shown on page 4 of Schedule C-4, lines 1-6. The payroll amounts shown there reflect the payroll for the FPFTY, which is shown on Schedule D-7. The lag periods for union and non-union payroll are shown separately on page 4 of Schedule C-4, lines 1-2, with the same bi-weekly pay period. The lag days are calculated based on 14 days in the pay period divided by 2 (for an average), with a 5-day payroll processing time period added, resulting in a 12-day lag period.

Q. How were the lag days associated with the purchased gas costs shown on Schedule C-4, page 4, line 8, calculated?

A. This calculation is shown on page 6 of Schedule C-4 and is based on a review of gas purchases during the 12-month period of October 2024 through September 2025. The total dollar amount of gas purchased during this period was $505.975 million (on line 13, column 2). The average payment lag was calculated by dividing the total dollar days for purchased gas costs ($13.199 billion) by the total dollar amount of gas purchased ($505.975 million), which equals 26.09 days (on line 14). The payment lag was determined using the midpoint of the service period for each of the payments and the payment date for each, averaged over the 12-month study period. The 26.09-day lag for purchased gas costs is then brought forward to Schedule C-4, page 4, line 8, and Schedule C-4, page 2, column 3, line 4.

Q. What are dollar days, and how were they used in the CWC calculation?

A. Dollar days are the product of a payment amount multiplied by the number of days between the invoice date or service date and the date that the payment clears the Company's bank. The dollar days calculation is used to calculate a weighted average number of lag days for both purchased gas costs (Schedule C-4, page 6) and general disbursements (Schedule C-4, page 5).

Q. How were the Other O&M Expense lag days, shown on Schedule C-4, page 4, line 22, calculated?

A. The calculation is shown on page 5 of Schedule C-4. The average payment lag for all remaining expenses was derived from data over the HTY, as shown in more detail on page 5 of Schedule C-4. A summary list of all cash disbursements, including the invoice date, the amount of the disbursement, the date the payment was made, and the type of disbursement (for capital, commodity, or expense), during each of these months was used. As shown on page 5, lines 1-24, columns 1 and 2, each month's listing contained numerous cash disbursements. Once the raw payment data was assembled, the dollar days for expense purchases were determined by multiplying the amount of the disbursement by either (i) the number of days from invoice date until bank clearance for wire and Automated Clearing House ("ACH") payments, or (ii) the number of days from the invoice date until check date, plus seven days (representing mail lag) for payments made by check. Disbursements were eliminated if they were included in another calculation (*e.g.*, gas purchases) or were paid for capital items. After these adjustments, the average of the expense lag days for each month shown on Schedule C-4, page 5, column 4, line 25, resulted in a payment lag for general disbursements of 36.55 days. The lag for other disbursements is then brought forward to Schedule C-4, page 4, line 22 and Schedule C-4, page 2, column 3, line 5.

Q. Please explain how the interest payment amount included on line 2 of Schedule C-4, page 1, was determined.

A. The calculation of this amount is shown on Schedule C-4, page 7. This calculation measures the lag associated with the payment of interest on outstanding debt. The *pro forma* annual interest expense shown on line 4 is divided by 365 to obtain the daily interest expense of $0.280 million shown on page 7, line 5. That amount is then multiplied by the net payment lag, resulting in a reduction to the working capital allowance of $9.459 million as shown on page 7, line 9 of Schedule C-4. This amount is then included on page 1, line 2 of Schedule C-4.

Q. How was the tax payment lag for the working capital requirement, shown on line 3 of Schedule C-4, page 1, determined?

A. This calculation is shown on page 8 of Schedule C-4. Separate tax payment lag calculations (for working capital) are made for federal income tax, state income tax, PA Property Tax, and the Public Utility Realty Tax Act ("PURTA"). Each of these calculations is based on anticipated FPFTY tax payments and an April 1 mid-point of annual service. The results for each of these components are shown and summed in column 10 to derive the net working capital allowance for tax payments of $4.570 million shown on page 8, line 19. This amount is then included on page 1, line 3 of Schedule C-4.

Q. How was the working capital allowance for prepaid expenses, shown on line 4 of Schedule C-4, page 1, derived?

A. That amount is calculated on page 9 of Schedule C-4 and represents the 13-month average of actual pre-paid amounts for each month ended from September 2024 through September 2025. The 13-month average of total actual pre-paid amounts during that period is $14.400 million, shown on page 9, line 18. This amount is then included on page 1, line 4 of Schedule C-4.

Q. What is the total amount of the Company's CWC claim?

A. UGI Gas's claim for CWC is $66.523 million. This amount is shown on Schedule C-4, page 1, line 5; Schedule C-1, line 4; and on Schedule A-1, line 4.

4. Gas Storage Inventory

Q. Please explain how the rate base value for gas storage inventory was determined.

A. Gas storage inventory represents gas volumes stored in facilities or in storage fields owned by interstate pipeline or storage companies with whom UGI Gas contracts for capacity. As is typical for most natural gas distribution systems, UGI Gas purchases storage gas throughout the year for use primarily during the winter heating season. Specifically, the Company pays its gas storage bills on a monthly basis once the gas is procured in the same way that it pays for gas procured from other sources. Storage inventory is a physical asset that is included in the Company's rate base claim in the same manner as materials and supplies inventory. UGI Gas's claim for gas storage inventory is based on a 13-month average book value for the period ending September 2025, as shown on Schedule C-5. The average monthly gas inventory balance for the FPFTY is $23.662 million, as shown on

Schedule C-5, line 16. This amount is also used in Schedule C-1, line 5 and Schedule A-1, line 5.

5. Accumulated Deferred Income Taxes

Q. Please explain how the rate base value for Accumulated Deferred Income Taxes ("ADIT"), including Excess Deferred Federal Income Taxes ("EDFIT"), was calculated.

A. The Company's determination of its rate base value for ADIT, including EDFIT, is shown on Schedule C-6 and is discussed in the direct testimony of Darin T. Espigh (UGI Gas Statement No. 9). This amount of $716.793 million reduces the rate base. This amount is also used in Schedule C-1, line 6 and Schedule A-1, line 6.

6. Customer Deposits

Q. Please explain how the Company calculated the rate base value for customer deposits.

A. Customer deposits offset the need for UGI Gas to provide capital. UGI Gas's claimed offset for customer deposits is based on the average customer deposit balance for the 13-month period ending September 2025, as shown on Schedule C-7.

Q. What is the amount of the rate base offset for customer deposits?

A. The customer deposit offset is $23.197 million, as shown on Schedule C-7, line 16, Schedule C-1, line 7, and on Schedule A-1, line 7.

7. Materials and Supplies Inventory

Q. What is the rate base claim for materials and supplies inventory?

A. UGI Gas maintains various materials and supplies in inventory for use in its operations. The Company's claim for materials and supplies inventory is $28.644 million, as shown on Schedule C-8, line 16, Schedule C-1, line 8, and on Schedule A-1, line 8. This amount is based on the average inventory for the 13-month period ending September 30, 2025, as shown on Schedule C-8.

IV. OPERATING EXPENSE ADJUSTMENTS

Q. Please describe how the Company's claimed operating expenses were determined.

A. As discussed in the direct testimony of Tracy A. Hazenstab (UGI Gas Statement No. 2), the *pro forma* FPFTY expenses were based on the budgeted level of expenses as a starting point. This budgeted level of expenses was then adjusted to comply with Commission precedent and generally accepted ratemaking principles to reflect a normal, ongoing level of operations. The supporting schedules for those adjustments are found in UGI Gas Exhibit A (Fully Projected), Section D. Below, I will discuss the specific operating adjustments that I am sponsoring, as contained in UGI Gas Exhibit A (Fully Projected), Section D.

1. Environmental Remediation Expenses

Q. What adjustments are shown on Schedule D-8?

A. Consistent with the methodology the Company has used in past rate cases, the two adjustments shown on Schedule D-8 are designed to reconcile past Environmental Remediation expense rate recoveries with actual incurred costs and to recover a projected

annual level of Environmental Remediation expense. These costs are incurred in connection with UGI Gas's obligations under a Consent Order Agreement ("COA") with the Pennsylvania Department of Environmental Protection ("DEP").[2] The Company's remediation activities under the COA are discussed in the direct testimony of Jill E. Walter (UGI Gas Statement No. 3).

Q. Please describe the first Environmental Remediation expense adjustment shown on Schedule D-8.

A. The adjustment (on lines 1 – 6 of Schedule D-8) is intended to provide the Company with normalized ratemaking recovery of ongoing annual cash expenditures primarily to remediate former manufactured gas plant ("MGP") sites in accordance with the COA. Because the amount budgeted is the amount UGI Gas recovered in the most recent previous base rate case, it does not properly reflect the amount that the Company is likely to incur during the FPFTY. Therefore, as in past cases, the Company has chosen to normalize the expenditure based on its recent actual experience.

The average of the last three years of cash expenditures for remediation expenses under the COA is $6.698 million and represents the amount that the Company anticipates it will spend in the FPFTY under the COA. The difference between this annual amount ($6.698 million) and the amount budgeted by the Company ($5.429 million), or $1.269 million, is the first adjustment.

[2] Effective October 1, 2020, DEP consolidated the Company's prior three COAs (which aligned with the Company's former rate districts) into one COA that covers the entire UGI Gas service territory.

Q. Please describe the second Environmental Remediation expense adjustment shown on Schedules D-8, lines 7-13.

A. The second environmental adjustment (on lines 7-13 on Schedule D-8) shows the net under-recovery of the Company's MGP remediation expense incurred in past years, and the planned amortization for this net under-recovery. This net under-recovery resulted from the combination of (1) the under-recovery in actual annual remediation costs for Fiscal 2025 versus the normalized level authorized in the 2025 Gas Rate Case at Docket No. R-2024-3052716 and (2) over-recovery of reconciliation amounts from years prior to Fiscal 2025 (projected through Fiscal 2026). Please use the detailed calculations of this net over-recovery at UGI Exhibit AMK-2.

The under-recovered expenditures of $0.967 million (line 9) will be charged to customers over a two-year amortization period through Fiscal Year 2028, at an amount of $0.483 million per year (line 11). This two-year amortization period is consistent with the period approved in the settlement of the prior rate case at Docket No. R-2024-3052716. This amount is compared to the budget amount of $0.610 million of income per year, resulting in a budget adjustment of $1.093 million (line 13).

Q. Please describe the adjustment shown on Schedule D-14.

A. The adjustment shown on Schedule D-14 reflects an adjustment from budgeted pension expenses to reflect cash to be contributed to the plan in the FPFTY. The Company's budget reflects pension expenses based on GAAP requirements to reflect service and non-service costs based on certain assumptions. However, consistent with prior ratemaking practices, the Company claims pension costs within its rates on a cash basis. The adjustment is

calculated as the total cash contributions (as provided by the Company's actuary in the most recent actuarial report), reduced to reflect only the portion attributable to UGI Gas, and then further reduced to reflect the portion of pensions that is capitalizable. This cash pension expense of $4.507 million (line 5) is compared to the budgeted pension expense of $1.437 million (line 1), also calculated for UGI Gas only and net of the capitalizable portion, resulting in an adjustment of $3.071 million (line 6).

Q. Does this conclude your direct testimony?

A. Yes, it does.

DIRECT TESTIMONY OF

JOHN F. WIEDMAYER

DOCKET NO. R-2025-3059523

I. INTRODUCTION

Q. Please state your name and address.

A. My name is John F. Wiedmayer. My business address is 1010 Adams Avenue, Audubon, Pennsylvania 19403.

Q. Are you associated with any firm and in what capacity?

A. Yes. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as Project Manager, Depreciation and Valuation Studies.

Q. How long have you been associated with Gannett Fleming?

A. I have been associated with the firm since I graduated from college in June 1986.

Q. What is your educational background?

A. I have an AB degree in Engineering from Lafayette College and a Master of Business Administration from the Pennsylvania State University.

Q. Do you belong to any professional societies?

A. Yes. I am a member of the National and Pennsylvania Societies of Professional Engineers and the Society of Depreciation Professionals ("SDP"). In 2005, I

served as President of the SDP and was a member of the SDP's Executive Board for the years 2003 through 2007.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The SDP has established national standards for depreciation professionals. The SDP administers an examination to become certified in this field. I passed the certification exam in September 1997 and have fulfilled the requirements necessary to remain a Certified Depreciation Professional.

Q. Please outline your experience in the field of depreciation.

A. I have over 35 years of depreciation experience, which includes expert testimony in numerous cases before 14 regulatory commissions, including the Pennsylvania Public Utility Commission ("PUC" or "Commission").

In June 1986, I was employed by Gannett Fleming as a Depreciation Engineer. I held that position from June 1986 through December 1995. In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In August 2004, I was promoted to Project Manager, Depreciation Studies and in January 2022 I was promoted to my present position as Senior Project Manager, Valuation and Depreciation Studies. I am responsible for conducting depreciation and valuation studies, including the preparation of testimony, exhibits, and responses to data requests for submission to the appropriate regulatory bodies. My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended

depreciation rates to management for its consideration, and supporting such rates before regulatory bodies.

During the course of my employment with Gannett Fleming, I have assisted in the preparation of numerous depreciation studies for utility companies across various industries. I assisted in the preparation of depreciation studies for the following telephone companies: Alberta Government Telephone, Commonwealth Telephone Company, Telus, United Telephone Company of New Jersey, and United Telephone of Pennsylvania. I assisted in the preparation of depreciation studies for the following companies in the railroad industry: CSX Transportation, Union Pacific Railroad, Burlington Northern Railroad, Burlington Northern Santa Fe Railway, Amtrak, Kansas City Southern Railroad, Norfolk & Western, Southern Railway, and Norfolk Southern Corporation.

I assisted in the preparation of depreciation studies for the following organizations in the electric industry: AmerenUE, Arizona Public Service Company, BGE, UGI Utilities, Inc. - Electric Division ("UGI Electric"), Penelec, Metropolitan Edison, ConEdison, ComEd, Orange and Rockland, Rockland Electric, the City of Red Deer, Nova Scotia Power, Newfoundland Power, Owen Electric Cooperative, Bangor Hydro Electric Company, Maine Public Service Company, Michigan Electric Transmission Company, PECO, Jackson Electric Cooperative Corporation, Houston Lighting and Power, Maritime Electric, Nolin Rural Electric Cooperative, AmerenCIPS, AmerenCILCO, AmerenIP, and the City of Calgary - Electric System.

I assisted in the preparation of depreciation studies for the following gas companies: BGE, PECO, UGI Utilities, Inc. – Gas Division, North Penn Gas, PFG Gas, UGI Central Penn Gas, Inc., Equitable Gas, Centra Gas Alberta, Questar Gas, Orange and Rockland, Con Edison, Dominion East Ohio, Connecticut Natural Gas, Southern Connecticut Gas, AmerenUE, AmerenCILCO, AmerenCIPS, and AmerenIP.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service lives and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies.

Q. Have you previously testified on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Kentucky Public Service Commission, the Newfoundland and Labrador Board of Commissioners of Public Utilities, the Nova Scotia Utility and Review Board, the Federal Energy Regulatory Commission, the Utah Public Service Commission, the Arizona Corporation Commission, the Missouri Public Service Commission, the Illinois Commerce Commission, the Maine Public Utilities Commission, the Maryland Public Service Commission, the New Jersey Board of Public Utilities, the New York Public Service Commission, the Connecticut Public Utilities Regulatory Authority, and the PUC.

Q. Have you received any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.: "Techniques of Life Analysis," "Techniques of Salvage and Depreciation Analysis," "Forecasting Life and Salvage," "Modeling and Life Analysis Using Simulation," and "Managing a Depreciation Study." In 2000, I became an instructor at the SDP's annual conference lecturing on "Salvage Concepts," "Depreciation Models," "Analyzing the Life of Real-World Utility Property – Actuarial Analysis," "Theoretical Reserve Imbalances and True-Up," and "Data Requirements for a Depreciation Study."

II. PURPOSE OF TESTIMONY

Q. What is the purpose of your testimony?

A. My testimony is in support of the depreciation studies conducted under my direction and supervision for the Pennsylvania gas plant of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company"). I was retained by the Company as a depreciation consultant. UGI Gas retained me to determine the book depreciation reserve as of September 30, 2027, to determine the annual depreciation expense to be included as an element of the cost of service, and to testify in support of those two determinations in this proceeding.

I am also a sponsoring witness for UGI Gas's depreciated original cost of gas plant in service included in rate base. My testimony will address my depreciation study, the appropriate depreciation reserve for ratemaking purposes, the original cost measure of value, and the appropriate annual

depreciation expense to be included in the ratemaking cost of service as of September 30, 2027.

Q. Were you responsible for the preparation of any of the Company's responses to the Commission's filing regulations that were filed in support of the Company's general rate filing?

A. Yes. I am the responsible witness for the following items in UGI Gas Exhibit I:

Item No.	Subject
I-A-3	Description of Depreciation Methods and Factors Considered in Arriving at Estimates of Service Life and Dispersion by Account
I-A-4	Survivor Curves and Surviving Original Cost Including Related Annual and Accrued Depreciation
I-A-5	Comparison of Calculated Reserve vs. Book Reserve
I-A-6	Survivor Curves and Annual Accrual Rates
I-A-7	Cumulative Depreciated Original Cost by Vintage Year
I-A-8	Trended Original Cost Methodology
I-A-9	Spot Trended Original Cost
I-A-10	Undepreciated Original Cost
I-A-11	Cumulative Trended Depreciated Original Cost
l-A-17	Net Salvage

Q. Have you previously prepared comparable studies for UGI Gas?

A. Yes. I provided testimony on depreciation matters for the Company in the prior two UGI Penn Natural Gas (“PNG”) base rate cases at Docket No. R-2016-2580030 and Docket No. R-2008-2079660, the prior two UGI Central Penn Gas

("CPG") base rate cases at Docket No. R-2010-2214415 and Docket No. R-2008-2079675 and the five most recent base rate case for UGI Utilities, Inc. – Gas Division at Docket No. R-2015-2518438, Docket No. R-2018-3006814, Docket No. R-2019-3015162, Docket No. R-2021-3030218 and Docket No. R-2024-3052716. Prior to those rate filings, I prepared exhibits for the depreciation study in UGI Gas's base rate case filed in 1995 at Docket No. R-00953297.

III. OUTLINE OF EXHIBITS C (FULLY PROJECTED), C (FUTURE) AND C (HISTORIC)

Q. Will you be sponsoring any exhibits with your direct testimony?

A. Yes, I am attaching and sponsoring the following exhibits: UGI Gas Exhibit C (Fully Projected), UGI Gas Exhibit C (Future), and UGI Gas Exhibit C (Historic). UGI Gas Exhibit C (Fully Projected) presents the summarized depreciation calculations and supporting tables related to the fully projected future test year ("FPFTY") ending September 30, 2027, for UGI Gas. UGI Gas Exhibit C (Future) presents similar summarized depreciation calculations and supporting charts and tables related to the depreciation study for the future test year ("FTY") ending September 30, 2026. UGI Gas Exhibit C (Historic) presents the summarized depreciation calculations and supporting tables related to the historic test year ("HTY") ended September 30, 2025. Each of the three exhibits is organized in a similar manner and contains information and schedules supporting the amounts applicable to each test year period. UGI Gas Exhibit C

(Future) contains additional information including the supporting life tables and life table charts related to the service life estimates.

Q. Does UGI Gas Exhibit C (Fully Projected) accurately portray the results of your depreciation study as of September 30, 2027?

A. Yes.

Q. In preparing the depreciation study, did you follow generally accepted practices in the field of depreciation?

A. Yes.

Q. Please describe the contents of the depreciation study reports, UGI Gas Exhibit C (Future), and UGI Gas Exhibit C (Fully Projected).

A. The depreciation study report in UGI Gas Exhibit C (Future) consists of eight parts including charts and tables filed in the Company's most recent service life study report prepared by me and submitted in 2023 based on plant accounting data through September 30, 2022. Part I, Introduction, includes statements related to the scope of and basis for the depreciation study. Part II, Estimation of Survivor Curves, presents detailed discussions of: (1) survivor curves; and (2) methods of life analysis, including an example of the retirement rate method. Part III, Service Life Considerations, presents the relevant factors considered for estimating service lives. Part IV, Calculation of Annual and Accrued Depreciation, sets forth a description of: (1) the group procedures used for calculating annual and accrued depreciation; and (2) an explanation of the

manner in which net salvage was incorporated in the calculations. Part V, Results of Study, includes a description of the results and summaries of the detailed depreciation calculations as of September 30, 2026. Part VI, Service Life Statistics, presents the results of the retirement rate analyses prepared as the historical bases for the service life estimates. Part VII, Detailed Depreciation Calculations, sets forth the detailed depreciation calculations related to surviving original cost as of September 30, 2026. The detailed depreciation calculations present the annual and accrued depreciation amounts by account and vintage year. The remaining life annual accrual rate is also set forth in the tables of Part VII. Part VIII, Experienced and Estimated Net Salvage, contains the net salvage amortization of experienced and estimated net salvage for the years 2022 through 2026.

UGI Gas Exhibit C (Fully Projected) includes: a description of the scope, basis, and results of the studies; summaries of the depreciation calculations; and the detailed depreciation calculations as of September 30, 2027. The descriptions and explanations presented in UGI Gas Exhibit C (Future) are also applicable to the depreciation calculations presented in UGI Gas Exhibit C (Fully Projected). The graphs and tables related to service life presented in UGI Gas Exhibit C (Future) also support the service life estimates used in UGI Gas Exhibit C (Fully Projected) inasmuch as the estimates are the same for all three test years, i.e., HTY, FTY, and FPFTY. The service life estimates set forth in UGI Gas Exhibit C (Historic) are the same estimates as those approved in the Company's Annual Depreciation Report ("ADR") submitted to the PUC in March 2025. The pro forma depreciation expense for UGI Gas at the end of the HTY,

September 30, 2025, is the sum of the three former rate districts, UGI South, UGI North, and UGI Central.

The results of the study are set forth in Part II in UGI Gas Exhibit C (Fully Projected). Table 1, pages II-3 through II-5 of UGI Gas Exhibit C (Fully Projected), presents the estimated survivor curve, the original cost and depreciation reserve as of September 30, 2027, and the calculated annual depreciation rate and amount for each account or subaccount of Gas Plant in Service. Table 2, pages II-6 through II-7 of UGI Gas Exhibit C (Fully Projected), presents the bring-forward to September 30, 2027, of the depreciation reserve as of September 30, 2026. Table 3, pages II-8 through II-9 of UGI Gas Exhibit C (Fully Projected), presents the calculation of the book depreciation amounts for the FPFTY. Table 4, pages II-10 through II-11 of UGI Gas Exhibit C (Fully Projected), presents the experienced and estimated net salvage for fiscal years 2023 through 2027. The amortization of net salvage is based on experienced and estimated net salvage during the period October 1, 2022 through September 30, 2027. The summary tables and detailed depreciation calculations set forth in UGI Gas Exhibit C (Fully Projected) as of September 30, 2027, are organized and presented in the same manner as those presented in UGI Gas Exhibit C (Future) as of September 30, 2026.

Q. Please outline the contents of Exhibit C (Historic).

A. UGI Gas Exhibit C (Historic) is organized similarly to UGI Gas Exhibit C (Fully Projected). UGI Gas Exhibit C (Historic) includes: a description of the scope, basis, and results of the studies; summaries of the depreciation calculations;

and the detailed depreciation calculations as of September 30, 2025. The service life estimates used in the HTY period were based on the survivor curve estimates set forth in the ADR submitted to the PUC in March 2025. The same survivor curve estimates were used in each of the three respective test year periods and were based on a service life study submitted to the PUC in 2023 using plant accounting data through fiscal year-end 2022. The summary tables and detailed depreciation calculations as of September 30, 2025, are organized and presented in the same manner as those as of September 30, 2027, with two exceptions. Tables 2 and 3 presented in UGI Gas Exhibit C (Fully Projected) are not necessary and, therefore, are not presented in UGI Gas Exhibit C (Historic).

IV. THE DEPRECIATION STUDY - OVERVIEW

Q. Please describe what you mean by the term "depreciation."

A. My use of the term "depreciation" is in accord with the definition set forth in the Uniform System of Accounts prescribed for Class A and Class B Natural Gas Companies. "Depreciation" refers to the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation, against which the company is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, requirements of public authorities, and the exhaustion of natural resources.

In the study that I performed, which is the basis for my testimony, I used the straight line remaining life method of depreciation, with the average service life and equal life group procedures. The annual depreciation is based on a system of depreciation accounting that aims to distribute the unrecovered cost of fixed capital assets over the estimated remaining useful life of the unit, or group of assets, in a systematic and rational manner. For clarity of presentation, the detailed depreciation calculations are presented by account, vintage year and former rate district, the sum of which totals to the consolidated PA-jurisdictional UGI Gas company which excludes a small portion of the UGI gas system located in Maryland. The depreciation summary tables present the results on a total PA-jurisdictional UGI Gas basis.

Q. Is the Company's claim for annual depreciation in the current proceeding based on the same methods of depreciation that were used in the Company's March 2025 ADR?

A. Yes, it is. For most plant accounts, the current claim for annual depreciation is based on the straight line remaining life method of depreciation, which has been used by the Company for over forty years. The depreciation methods and procedures are described further in Part II of UGI Gas Exhibit C (Future).

For General Plant Accounts 391, 393, 394, 395, 397, and 398, I used the straight line remaining life method of amortization. The annual amortization is based on amortization accounting, which distributes the unrecovered cost of fixed capital assets over the remaining amortization period selected for each account.

V. ORIGINAL COST MEASURE OF VALUE

Q. What is the original cost of gas plant to be included in rate base in this proceeding?

A. As of September 30, 2027, the original cost of gas plant in service is $6,676,559,249 as shown in column 4 of Table 1 on pages II-3 through II-5 of UGI Gas Exhibit C (Fully Projected). This amount includes $6,381,927,213 of Gas Plant and $294,632,036 of Other Utility Plant allocated to UGI Gas. Other Utility Plant is primarily comprised of plant assets included in Common Plant and Information Services ("IS"). The assets included in Common Plant and IS are assets that are shared and jointly used between UGI Gas and UGI Electric. The costs related to Common Plant and IS are allocated to UGI Gas at 89.11 percent and 84.82 percent, respectively. Also, the full cost of the buildings at the Empire Service Center ("Empire") in Wilkes Barre, PA were included in Gas Division. However, personnel of UGI Electric share portions of the buildings at that location and therefore a portion of the cost related to Empire was deducted from UGI Gas and allocated to UGI Electric for this proceeding.

VI. THE ACCRUED DEPRECIATION CLAIM

Q. Have you determined UGI Gas's accrued depreciation for ratemaking purposes as of September 30, 2027?

A. Yes. I have determined the allocated book depreciation reserve as of September 30, 2027, to be $1,736,045,978.

Q. Is the Company's claim for accrued depreciation in the current proceeding made on the same basis as has been used for over forty years?

A. Yes. The current claim for accrued depreciation is the book reserve brought forward from the book reserve set forth in the Company's financial statements and approved annually in connection with the Company's submission of its annual depreciation report each March to the Commission.

Q. How did you determine UGI Gas's allocated book depreciation reserve as of September 30, 2026?

A. The book depreciation reserve attributable to UGI Gas as of September 30, 2026, is set forth in column 5 of Table 1 of UGI Gas Exhibit C (Future). Table 2 of UGI Gas Exhibit C (Future) is an annual bring-forward of the book depreciation reserve as of September 30, 2025, using estimated accruals, retirements, salvage, and cost of removal for the twelve months from October 2025 through September 2026. The table sets forth, by plant account, the beginning book reserve balance as of September 30, 2025, the estimated reserve activity, and the ending reserve balance as of September 30, 2026. The estimated reserve activity consists of depreciation accruals (column 3), amortization of net salvage (column 4), projected retirements (column 5), projected salvage (column 6), and projected cost of removal (column 7). Table 3 of UGI Gas Exhibit C (Future) sets forth the calculation of the estimated depreciation accruals by plant account, which is carried forward to column 3 of Table 2. The book reserve as of September 30, 2025, by plant account, shown

in column 2 of Table 2, was obtained from UGI Gas's books and records and are the same amounts set forth in Table 1 of Exhibit C (Historic).

Q. Please explain the manner in which you projected the depreciation accruals for the twelve months ended September 30, 2026.

A. The depreciation accruals for the twelve months ended September 30, 2026, by plant account, were estimated by applying the annual depreciation accrual rates calculated as of September 30, 2025, to the projected average 2026 plant balance. The average balance for the twelve months ended September 30, 2026, is computed in columns 2 through 7 of Table 3 and is based on the projected additions, retirements, and transfers in columns 3 through 5.

Q. With reference to Table 2, column 4, please explain what you mean by "the amortization of net salvage" and explain the manner in which you projected it.

A. The amortization of net salvage is the annual provision for recovering experienced negative net salvage. This process for recognizing net salvage in the cost of service is in accordance with Pennsylvania ratemaking practice. The amortization of net salvage is based on experienced net salvage during the preceding five-year period, October 1, 2020, through September 30, 2025.

Q. Please explain the manner in which you projected the retirements, salvage, and removal costs that are shown in columns 5, 6, and 7 of Table 2.

A. Retirements were projected by plant account by applying the average retirement ratio, expressed as a percent of additions, for the five fiscal years 2021 through 2025, to FTY and FPFTY additions for most plant accounts. For certain General Plant accounts subject to amortization accounting, retirements are recorded when a vintage is fully amortized. All units are retired per books when the age of the vintage reaches the amortization period. Therefore, all vintages that reached or exceeded the amortization period were retired during the FTY for certain General Plant accounts subject to amortization accounting. Salvage and removal costs were projected by plant account by applying the average salvage and cost of removal ratios, expressed as a percent of retirement amounts, for the five years 2021 through 2025, to the projected retirement amounts.

Q. Was the book reserve as of September 30, 2027, estimated using the same methodology?

A. Yes, it was essentially the same methodology with one minor exception. The book depreciation accruals calculated for fiscal year 2027 were based on applying the depreciation rate to average monthly plant balances for purposes of calculating the book reserve as of September 30, 2027.

VII. THE ANNUAL DEPRECIATION EXPENSE CLAIM

Q. Have you determined UGI Gas's annual depreciation expense to be included as an element in the cost of service for purposes of this proceeding?

A. Yes, I have. The annual depreciation expense is $182,262,215 and consists of $172,559,378 of annual accruals to recover original cost and $9,702,837 of net salvage amortization. These amounts are set forth in column 8 of Table 1 in UGI Gas Exhibit C (Fully Projected).

Q. How did you determine the annual accruals of $182,262,215?

A. The determination of annual depreciation accruals consists of two phases. In the first phase, survivor curves are estimated for each plant account or subaccount. In the second phase, the composite remaining lives and annual depreciation accruals are calculated based on the service life estimates determined in the first phase.

The determination of annual amortization amounts consists of the selection of amortization periods and the calculation of amortization amounts based on the remaining amortization period and the unrecovered cost for each vintage.

Q. Please describe the manner in which you estimated the service life characteristics for each depreciable group in the first phase of the study.

A. The service life study consisted of compiling historical data from records related to UGI Gas's gas plant; analyzing these data to obtain historical trends of

survivor characteristics; obtaining supplementary information from engineering management and operating personnel concerning UGI Gas's practices and plans as they relate to plant operations; and interpreting the above data to form judgments of average service life characteristics.

Q. What historical data did you analyze for the purpose of estimating the service life characteristics of UGI Gas's gas plant?

A. The data consisted of the entries made by UGI Gas to record gas plant transactions during the period 1951 through 2022. The transactions included additions, retirements, transfers, acquisitions, and the related balances. I classified the data by depreciable group, type of transaction, the year in which the transaction took place, and the year in which the plant was installed.

Q. What method did you use to analyze these service life data?

A. I used the retirement rate method of life analysis. The retirement rate method is the most appropriate method when aged retirement data are available because it develops the average rates of retirement actually experienced during the period of study. Other methods of life analysis infer the rates of retirement based on a selected type survivor curve and were not used.

Q. Please describe the results of your use of the retirement rate method.

A. Each retirement rate analysis resulted in a life table, which, when plotted, formed an original survivor curve. Each original survivor curve, as plotted from the life table, represents the average survivor pattern experienced by the

several vintage groups during the experience band studied. Inasmuch as this survivor pattern does not necessarily describe the life characteristics of the property group, interpretation of the original curves is required in order to use them as valid considerations in service life estimation. Iowa type survivor curves were used in these interpretations. The results of the retirement rate analyses are presented in Part VI of UGI Gas Exhibit C (Future).

Q. Please explain briefly what an "Iowa type survivor curve" is and how you use it in estimating service life characteristics for each depreciable group.

A. The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type survivor curves (“Iowa curves”). The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. Iowa curves are the accepted survivor curves for Pennsylvania, as well as the remaining 49 states, and have been for many years.

Iowa curves are used to smooth and extrapolate original survivor curves determined by the retirement rate method. The Iowa curves were used in this study to describe the forecasted rates of retirement based on the observed rates of retirement and the qualitative outlook for future retirements.

The estimated survivor curve designations for each depreciable group indicate the average service life, the family within the Iowa system, and the

relative height of the mode. For example, the Iowa 35-R2 curve indicates an average service life of thirty-five years; and a Right-skewed, or R, type curve (the mode or highest frequency of retirements occurs after average life for right modal curves). It also provides a relatively low height, 2, for the mode (possible modes for R type curves range from 0.5 to 5).

Q. Did you physically observe plant and equipment in the field?

A. Yes. Field trips are conducted periodically in order to be familiar with the operation of the Company and observe representative portions of the plant. Field trips are conducted each time a service life study is performed. Service life study reports are submitted to the Commission every five years, at a minimum. UGI Gas's most recent service life study report was performed in 2023 using plant accounting data through September 30, 2022. Facilities visited during field trips generally include representative city gate stations, district regulating stations, service centers, office buildings, training centers, etc. The specific dates and locations visited during recent field trips are listed in Exhibit C (Future) in Part III. A general understanding of the function of the plant and information with respect to the reasons for past retirements and expected causes of retirements are obtained during these field trips. This knowledge and information was incorporated in the interpretation and extrapolation of the statistical analyses.

Q. Please describe the second phase of the process that you used in order to determine annual depreciation for ratemaking purposes.

A. After I estimated the service life characteristics for each depreciable group, I calculated annual depreciation accruals for each group in accordance with the straight line remaining life method, using remaining lives consistent with the average service life procedure for plant installed prior to 1982 and remaining lives consistent with the equal life group procedure for plant installed in 1982 and subsequent years. Summary tabulations of the survivor curve estimates and the annual accrual rates and amounts are set forth on Table 1 of UGI Gas Exhibit C (Historic), UGI Gas Exhibit C (Future), and UGI Gas Exhibit C (Fully Projected). The detailed tabulations of the depreciation calculations are presented in Part III of UGI Gas Exhibit C (Historic) and UGI Gas Exhibit C (Fully Projected) and in Part VII of UGI Gas Exhibit C (Future).

Q. Please briefly describe the straight line remaining life method of depreciation that you used for depreciable property.

A. The straight line remaining life method of depreciation allocates the original cost less accumulated depreciation in equal amounts to each year of remaining service life.

Q. Please briefly describe the average service life procedure that you used in conjunction with the straight line remaining life method for plant installed prior to 1982.

A. In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated survivor curve.

Q. Please briefly describe the equal life group procedure that you used in conjunction with the straight line remaining life method for plant installed in 1982 and in later years.

A. In the equal life group procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the composite remaining life for the surviving original cost of that vintage. The composite remaining life for the vintage is derived by weighting the individual equal life group remaining lives. In the equal life group procedure, the property group is subdivided according to service life. That is, each equal life group includes the portion of the property that experiences the life of that specific group. The relative size of each equal life group is determined from the property's life dispersion curve.

Q. Please briefly describe the amortization of certain General Plant accounts.

A. General Plant Accounts 391, 393, 394, 395, 397, and 398 include a very large number of units but represent a very small percent of depreciable gas plant.

Depreciation accounting is difficult for these assets, inasmuch as periodic inventories are required to properly reflect plant in service. Many utilities have changed to amortization accounting for general plant as a practical and reasonable solution that avoids significant accounting expenditures for such a small percent of plant.

In amortization accounting, units of property are capitalized in the same manner as they are in depreciation accounting. However, retirements are recorded when a vintage is fully amortized, rather than as the units are removed from service. That is, there is no dispersion of retirement. All units are retired per books when the age of the vintage reaches the amortization period.

VIII. ILLUSTRATION OF DEPRECIATION STUDY PROCEDURE

Q. Please illustrate the procedure followed in your depreciation study and the manner in which it is presented in UGI Gas Exhibit C (Future) using an account as an example.

A. I will use Account 376.1, Mains – Primarily Steel, to illustrate the manner in which the study was conducted. Account 376.1 represents 13 percent of the total depreciable gas plant. As the initial step of the service life study phase, aged plant accounting data were compiled for the years 1951 through 2022. These data have been coded in the course of UGI Gas's normal recordkeeping according to account or property group, type of transaction, year in which the transaction took place, and year in which the gas plant was placed in service. The plant additions, retirements, and other plant transactions were analyzed by the retirement rate method of life analysis.

This account includes primarily cathodically-protected, steel mains, although some bare steel mains are still in service. As detailed in UGI Gas Exhibit C (Future), the Iowa 75-R2.5 survivor curve was judged most appropriate for this account and is the survivor curve used for this filing. The 75-R2.5 is a reasonably good fit of the company's historical plant accounting data, consistent with engineering outlook and within the typical range of service lives used by other gas companies for steel mains. The original life table for the 1951-2022 experience band is set forth on pages VI-22 through VI-27.

The calculation of annual depreciation, the second phase, for the original cost of steel mains in service as of September 30, 2025, is presented by vintage in Part VII on pages VII-37 through VII-45 of UGI Gas Exhibit C (Future) for Gas Plant in Service. The detailed depreciation calculations as of September 30, 2026, are presented in Part III of Exhibit C (Fully Projected). The tabular presentations of the detailed depreciation calculations in Part VII of Exhibit C (Future) are similar in kind to those set forth in Part III of Exhibit C (Fully Projected). The expectancy and average life derived from the estimated survivor curve for each vintage were used to calculate the accrued depreciation by the average service life procedure for 1981 and prior vintages.

The accrued depreciation for vintages subsequent to 1981 was calculated by the equal life group procedure using the Iowa 75-R2.5 survivor curve. In the calculation, the surviving cost in each vintage was further subdivided, through the use of a computer program, into depreciable groups according to the expected service lives as defined by the Iowa 75-R2.5 survivor curve. The accrued depreciation was derived for each equal life group, based

on its service life, and the totals shown for the vintages are the summations of the individually derived amounts.

The book reserve was allocated to vintages based on the calculated accrued depreciation. The remaining lives of the vintages were based on the Iowa 75-R2.5 survivor curve, the attained age, and the same group procedures as were used to calculate accrued depreciation. The future book accruals (original cost less allocated book reserve) were divided by the remaining lives to derive the annual depreciation accruals by vintage.

The total depreciation accrual on page VII-45 of UGI Gas Exhibit C (Future) was brought forward to column 8 of Table 1 on page V-4 of the exhibit and divided by the total original cost in column 4 in order to calculate the annual depreciation accrual rate in column 7. A similar process was used for the FPFTY.

Q. Is the procedure you described for Account 376.1 typical of that followed for most of the plant investment?

A. Yes, it is, inasmuch as the straight line method, the average service life, and the equal life group procedures were used for most of the depreciable plant.

Q. Please illustrate the procedure followed for the amortization of certain General Plant accounts and the manner in which it is presented in UGI Gas Exhibit C (Future) using an account as an example.

A. I will use Account 394, Tools, Shop and Garage Equipment, to illustrate the amortization procedure. As the initial step of the amortization procedure, an

amortization period of 20 years was selected based on the period during which such equipment renders most of its service, the amortization periods used by other utilities, and the service life estimate previously used for depreciation accounting.

The calculation of the annual amortization as of September 30, 2026, is presented by vintage in Part VII on pages VII-148 and VII-149 of UGI Gas Exhibit C (Future). The calculated accrued amortization is based on the ratio of the vintage's age to the amortization period. The book reserve for vintages older than the amortization period was set equal to the original cost. The remaining book reserve was allocated to vintages based on the calculated accrued depreciation. The future book accruals or amortizations (original cost less assigned or allocated book reserve) were divided by the remaining amortization period to derive the annual amortizations by vintage.

The total amortization on page VII-149 of UGI Gas Exhibit C (Future) was brought forward to column 8 of Table 1 on page V-5 of UGI Gas Exhibit C (Future). A similar process was performed for UGI Gas Exhibit C (Fully Projected) and UGI Gas Exhibit C (Historic). That is, the calculation of the annual amortization related to the original cost of Tools, Shop and Garage Equipment in service as of September 30, 2027, is presented by vintage on pages III-148 and III-149 of UGI Gas Exhibit C (Fully Projected) and summarized in Table 1 on page II-4.

Q. Briefly explain the methods used for the remaining portion of the depreciable plant.

A. The life span approach was applied to major structures in Account 390. The life span approach was used for groups such as buildings in which concurrent retirement of all property in the group is expected. The life span of both the original installation and subsequent additions is the number of years between installation and final retirement of the group. The complete details, by vintage, of the accrued depreciation and remaining life accrual calculations are set forth for each structure in Part III of UGI Gas Exhibit C (Historic) and UGI Gas Exhibit C (Fully Projected) and in Part VII of UGI Gas Exhibit C (Future).

IX. THE NET SALVAGE AMORTIZATION CLAIM

Q. Please briefly describe the accounting treatment regarding net salvage for public utilities operating in Pennsylvania.

A. In accordance with the Uniform System of Accounts and the rules for recovery of net salvage established by the Pennsylvania Superior Court in *Penn Sheraton Hotel v. Pa. P.U.C.*, 198 Pa. Super. 618, 184 A.2d 324 (1962), net salvage is charged to the depreciation reserve and is amortized over a five-year period beginning with the year after net salvage is actually incurred. These accounting procedures were affirmed by the Commission in CPG's (formerly PPL Gas Utilities Corporation ("PPL Gas")) 2006 rate filing (Docket No. R-00061398) and have been utilized by UGI Gas in their rate cases ever since. This procedure is consistent with how other Pennsylvania public utilities

account for net salvage and is the method used in preparing the Company's ADR submitted each year to the Commission.

Q. Earlier in your testimony you indicated that UGI Gas's annual depreciation expense consists, in part, of $9,702,837 of net salvage amortization. How did you determine that amount?

A. The $9,702,837 is the result of determining the five-year average of net salvage experienced and estimated during the period of October 1, 2022 through September 30, 2027. Net salvage is defined in the Uniform System of Accounts as gross salvage less cost of removal. For most gas utilities, including UGI Gas, cost of removal exceeds gross salvage resulting in negative net salvage. Negative net salvage is recorded to the depreciation reserve as a debit, which reduces the depreciation reserve. Charges related to the negative net salvage amortization are recorded to the depreciation reserve as a credit in the five years subsequent to the initial recording of the negative net salvage amount. Therefore, the negative net salvage amount will have been fully amortized after five years and the net effect on the depreciation reserve is zero. Detailed data related to the experienced and estimated cost of removal and salvage are presented in Part VIII of UGI Gas Exhibit C (Future) and Part IV of UGI Gas Exhibit C (Fully Projected).

Q. Do you have any other comments on the other items which you are sponsoring in this proceeding?

A. Yes. The above testimony does not describe the responses to filing requirements set forth in Items I-A-5, I-A-6, and I-A-7. In general, these responses are self-explanatory. The response to I-A-5 is a comparison of the actual and projected book depreciation reserve with the calculated accrued depreciation as of the end of the HTY, FTY, and FPFTY, respectively. The response to I-A-6 presents the survivor curves used in the most recent general rate proceeding and the annual accrual rates that resulted from the use of these curves. The response to I-A-7 is the cumulative depreciated original cost by installation year as of the end of the test years. The amounts requested in response to I-A-7 are set forth in UGI Gas Exhibit C (Historic), UGI Gas Exhibit C (Future) and UGI Gas Exhibit C (Fully Projected) in the section titled "Cumulative Depreciated Original Cost."

Q. Does this conclude your direct testimony?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 7

Direct Testimony of
Vicky A. Schappell

Topics Addressed: **Capital Planning**

Dated: January 28, 2026

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Vicky A. Schappell. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed and in what capacity?

A. I am employed as a Senior Manager, Capital Planning by UGI Utilities, Inc. ("UGI"). UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Electric Division ("UGI Electric") and the Gas Division ("UGI Gas" or the "Company"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. Please describe your educational background and work experience.

A. They are set forth in my resume attached as UGI Gas Exhibit VAS-1 to my testimony.

Q. What are your responsibilities as Senior Manager?

A. As Senior Manager, I supervise a team of Analysts responsible for the preparation of the annual capital budgets for UGI Gas and UGI Electric. I am responsible for obtaining budget inputs from various departments including Engineering, Operations, Corrosion, Marketing, Information Technology ("IT"), and the Building and Grounds Departments. I collaborate with the Vice President of Operations, the Vice President of Global Engineering, the Director of Engineering Design, the Director Sales, the Director of Pipeline System Planning and Optimization, the Director Financial Planning and Analysis and Senior Engineering Managers to monitor annual capital budget performance and

develop strategies to limit variances in capital installations and spending. I also work closely with the President of UGI in developing the overall capital spend strategy. In this role, I have also prepared testimony with supporting exhibits and schedules, and sponsored responses to discovery requests for past base rate cases. Also, I am responsible for preparing UGI Gas's Annual Asset Optimization Plan. Additionally, I had an integral role in developing an expanded capital spending monitoring process necessary for managing the Company's accelerated capital investments programs.

Q. Have you previously presented testimony in proceedings before a regulatory agency?

A. Yes. UGI Gas Exhibit VAS-1 contains a list of those proceedings.

Q. What is the purpose of your testimony?

A. My testimony will address the capital planning process used by UGI Gas which supports the plant in service expenditures included in the proposed rates in this proceeding, specifically as related to plant additions for the future test year ending September 30, 2026("FTY"), and the fully projected future test year ending September 30, 2027 ("FPFTY" or "FY2027").

Q. Are you sponsoring any exhibits in this proceeding?

A. Yes, in addition to UGI Gas Exhibit VAS-1, I am sponsoring UGI Gas Exhibit VAS-2. I am also sponsoring certain responses to the Commission's standard filing requirements as indicated on the master list accompanying this filing.

II. CAPITAL PLANNING

Q. What is the total plant in service budget for UGI Gas for the FPFTY that is reflected in the proposed rates?

A. The total budgeted plant additions for UGI Gas for the FPFTY is $507,994,000.

Q. What are the specific project categories included in the capital budget for UGI Gas?

A. UGI Gas has four main categories that make up its capital budgets: (1) replacement and betterment infrastructure; (2) new business; (3) IT; and (4) other capital spending. I will describe each of these categories and the projects associated with them, as well as the total dollars attributable to each category below.

Q. What process does UGI Gas use to develop its capital budget?

A. UGI Gas's capital budget starts by identifying the four critical areas where the Company must make capital investments to maintain safe and reliable service to customers. For each of these budget areas, the Company then identifies all of the projects or categories of projects that are planned to occur in each fiscal year of a two-year forecast. Once those projects are determined, the Company identifies the FERC accounting treatment for each project. In this case, the Company presents them as part of the budgeted plant additions in Exhibit A, Schedule C-2. The process used to develop Exhibit A is further described in the direct testimony of Tracy A. Hazenstab (UGI Gas Statement No. 2).

Q. How does Schedule C-2 show plant additions?

A. Schedule C-2 is an accounting presentation based on FERC accounts. For purposes of developing Schedule C-2, budgeted dollars in each budget category are broken out by the

FERC account numbers that drive the accounting for depreciation. Schedule C-2 is split between Distribution Plant and General and Common Plant. The General and Common Plant includes only the distribution portion of the plant additions for UGI Gas.

Q. Have you prepared an exhibit that shows UGI Gas's plant additions broken down by budget project categories?

A. Yes, I have. UGI Gas Exhibit VAS-2 reflects the Company's plant additions broken out by the different project categories for the five-year period from fiscal year 2023 through fiscal year 2027. The exhibit splits the four budget project categories between Distribution Plant and General and Common Plant, consistent with the categories on Schedule C-2. In addition, UGI Gas Exhibit VAS-2 shows a historical comparison of the total budgeted plant placed in service versus actual plant placed in service additions for the three-year period from fiscal year 2023 through fiscal year 2025. I will describe how the Company's performance history supports the reasonableness of the Company's FTY and FPFTY plant additions in greater detail later in my testimony.

Q. Please comment on the presentations shown in UGI Gas Exhibit VAS-2 and Schedule C-2.

A. While the forecasted total plant in service figures match for the FTY and the FPFTY, there is a difference in the presentation of how UGI Gas Exhibit VAS-2 and Schedule C-2 present plant additions, and it is important to understand how these budget presentations align. Specifically, UGI Gas Exhibit VAS-2 shows how the Company's four individual budget categories constitute the Company's total Plant Additions and how they map into

the Distribution and General and Common Plant on Schedule C-2. Exhibit VAS-2 shows that three of the four budget categories fall into both of the plant categories (i.e., Distribution Plant and General & Common Plant) when describing the budget by FERC accounts. IT projects are the only budget category where projects fall exclusively into one FERC plant account – General and Common Plant – when recorded for accounting purposes.

Q. Why is it important to understand the relationship between the Company's budgeting process and the reflection of the budget in Schedule C-2?

A. When the Company plans for future plant additions, it utilizes a project-based build-up and does not directly budget using the FERC accounts, as work streams do not directly correlate to the format shown in Schedule C-2. When the Company budgets and then executes on its budget, it first looks at the total for the budget category, and then examines its overall budgeted projects on a total additions basis, because its operations and work streams are divided in the same manner to achieve core utility objectives. Ultimately, the Company manages to the total overall budget. As a result of this process, it is more reasonable to review the Distribution and General and Common Plant levels together when considering how the Company performed to its budget, rather than the accounting distinction set forth in Schedule C-2. Thus, to properly compare historical budgeted plant additions to actuals for ratemaking purposes, the Distribution and General and Common Plant additions should be reviewed in total.

Q. Turning to the capital budget categories, what are replacement and betterment projects?

A. Replacement and betterment ("R&B") projects improve or replace or repair existing infrastructure and include, but are not limited to, leak remediation, pipe relocations, material upgrades, service renewals, reliability improvements, and metering and regulation upgrades.

Q. Please describe the prioritization process that is used to evaluate R&B projects.

A. Projects are prioritized for inclusion in the budget according to the condition of, and risks associated with, existing assets, including those factors affecting safety and reliability. In determining the condition of an existing asset, the Company considers various criteria including, but not limited to the replacement of cast iron and bare steel pipe, which are more susceptible to failure from corrosion, cracks, and leakage (as compared to other pipe materials). This comprehensive approach is ultimately utilized which targets the highest risk mains first and incorporates considerations related to the efficient deployment of capital and resources. UGI Gas has also committed to replacing identified priority plastic pipe, in addition to cast iron and bare steel pipe as defined in its Third Long Term Infrastructure Improvement Plan ("LTIIP") as discussed below. Risk evaluations for mains are based on numerous factors, including condition, age, coating, type of ground cover, geographical proximity to structures and prior leak and/or break history. UGI Gas reviews these factors annually to identify the highest risk pipe segments and prioritize them

for replacement.[1] Specifically, commercial risk evaluation software is used in concert with a team of Subject Matter Experts to evaluate, prioritize, and bundle replacement projects. Furthermore, UGI Gas's Distribution Integrity Management Program ("DIMP") and Transmission Integrity Management Program ("TIMP") provide a detailed listing and weighting of factors considered in the risk-based evaluation, which may cause specific projects to be reprioritized for replacement on a more accelerated basis

UGI Gas's prioritization of projects for its capital budgets is consistent with its DIMP and LTIIP, which is described in more detail in the direct testimony of UGI Gas witness, Jill E. Walter (UGI Gas Statement No. 3). LTIIP replacement investments are identified and prioritized on a risk basis in accordance with UGI Gas's DIMP.

Q. Has there been any update in UGI Gas's priorities for its R&B investments?

A. Yes. As of the end of calendar year 2026, the Company will have completed its cast iron retirement, removing 407 miles from service since this program began in 2013. Beginning in calendar year 2027, the Company shift its R&B focus to bare steel retirement, as well as vintage plastic identification and replacement.

Q. How does UGI Gas determine which R&B projects are included in the capital budget for a given year?

A. UGI Gas's LTIIP guides the formulation of the overall R&B capital budget. Within the

[1] When replacing mains, the Company also replaces associated distribution equipment, including service lines, as well as installing or replacing safety and monitoring devices (excess flow valves), meters, risers, and meter bars. Additionally, indoor meters are relocated to an outside location, except in certain circumstances. Similarly, regulator stations and service regulators are reviewed and prioritized for replacement based on nearby main replacement projects or required upgrades due to the updated equipment installed as part of the main replacement program.

various categories of the LTIIP, R&B projects are selected and prioritized according to the risk-based evaluation process that I described above. The total anticipated budgeted plant additions associated with R&B projects in the FPFTY is $383,642,000 of which $383,135,000 is included in Distribution plant additions and $507,000 is included in General and Common Plant Additions.

Q. What are new business projects?

A. New business projects provide new or upgraded gas service to customers and may involve the installation of new gas mains and services to support conversions to natural gas service (from other heating sources).

Q. Please describe how the new business infrastructure projects are selected for inclusion in the capital budget.

A. The new business portion of the capital budget is developed according to forecasts of new business opportunities, projections of customer conversions, and plans for new construction and development projects. The total anticipated budgeted plant additions associated with new business projects in the FPFTY is $75,690,000; these additions are included in Distribution plant additions.

Q. What are IT projects?

A. IT projects enhance the Company's IT systems in a number of ways. These projects involve hardware and software applications which improve the Company's processes and methods across a wide range of operational concerns or needs, such as capital project

management, cybersecurity, customer communications, billing as well as other areas. Further, these projects facilitate the Company's ability to enter, store, retrieve, and send data and information related to such projects. The total anticipated budgeted plant additions associated with IT projects in the FTY is $43,732,000. Of this amount, $18,818,000 relates to one specific large IT project, Field Services Management ("FSM"), which has a planned in-service date of July 2026as presented in the Company's 2025 Gas Base Rate Case.[2] The total anticipated budgeted plant additions associated with IT projects in the FPFTY is $12,032,000 and these projects are included in General and Common Plant Additions.

Q. Please describe the prioritization process used to evaluate IT projects.

A. IT projects are prioritized for inclusion in the budget based on identified business needs. UGI relies on an IT Prioritization Committee to develop a prioritized budget based on overall business impact, availability of system support, and resource availability. Examples of IT projects include the Pipeline Risk Management – DIMP project that went into service in September 2025. This project focused on standardizing a tool to maintain compliance and mitigate asset risk.

Q. What are Other capital projects?

A. Other capital projects include building-related projects, corrosion control projects, capital tool purchases, and fleet purchases. Building-related projects consist of building and land

[2] See the Direct Testimony of Vicky A. Schappell, UGI Gas Statement No. 5. *See also*, *Pa. PUC v. UGI Gas*, R-2024-3052716 (Recommended Decision issued on August 8, 2025 recommending approval of the Joint Petition for Approval of All Issues without modification). No party challenged the Company's FSM and related IT Plan.

purchases, building improvements/renovations, and the purchase of furniture. Corrosion control projects include upgrades and replacements of cathodic protection systems for mains. Capital tool projects encompass new tool purchases for field use during capital projects. These tools include tapping and stopping equipment, safety tools, and leak detection equipment. Fleet purchases are needed to maintain a reliable mode of transportation for field employees along with certain specialty equipment required to perform daily functions. These acquisitions include SUVs, pickup trucks, cargo vans, service body trucks, compressor crew trucks, vacuum trucks, aerial lift trucks, dump trucks, backhoes, excavators, forklifts, and equipment trailers for backhoes and excavators. The total anticipated budgeted plant additions associated with Other projects in the FPFTY is $36,630,000 of which $5,597,000 is included in Distribution plant additions and $31,032,000 is included in General and Common Plant Additions (UGI Gas Exhibit VAS-2).

Q. Please describe the prioritization process used to evaluate Other capital projects.

A. The prioritization process for Other capital projects is specific to the need being addressed. Building-related projects are prioritized for inclusion in the budget based on safety, security, regulatory, or financial and strategic needs. Regulatory driven projects may originate from compliance requirements or certain audit observations. Physical security audits may prompt the installation of fencing, gates and access controls. Corrosion control projects involving coated steel main replacements are prioritized for inclusion in the budget according to requirements set forth in the Federal Gas Safety Regulations (49 C.F.R. Part

192).[3] Corrosion control projects also may depend on unrepairable leakages or emerging main issues. Capital tool projects are prioritized for inclusion in the budget according to the useful life of the existing assets. Fleet purchases are prioritized for inclusion in the budget based on age, condition, maintenance costs, and mileage of the existing asset.

Q. Please discuss some of the key drivers which support the increase in UGI Gas's FPFTY plant additions as compared to the HTY.

A. The planned capital for FY2027 includes cost increases in R&B associated with complexity, location and size of the remaining bare steel replacement projects, as well as general resource cost increases. It also includes priority plastic pipe as Distribution System Improvement Charge-eligible property that will be replaced through the LTIIP on an accelerated basis to reduce associated leaks and overall risks on the Company's distribution system, as defined in the Company's Third LTIIP at Docket No. P-2024-3050769. The Company's total planned 2027 replacement miles will be 75 to 85 miles. This includes a planned abandonment of a large section of a wrought iron and bare steel line in the northern part of the Company' service territory due to corrosion. This is compared to the approximately 63 miles of cast iron, bare steel and wrought iron main that were removed and replaced in FY2025.

[3] Transmission lines may be replaced due to corrosion that affects wall thickness pursuant to 49 C.F.R. § 192.485. Additionally, portions of transmission lines (with localized corrosion pitting) may be replaced pursuant to 49 C.F.R. § 192.485. Similarly, distribution lines with corrosion (or portions thereof with localized pitting corrosion) may be replaced pursuant to 49 C.F.R. § 192.487. Lines also may need to be replaced if they lack cathodic protection systems, as detailed in 49 C.F.R. § 192.463.

Q. How can UGI Gas's actual in-service plant additions be compared to budgeted in service plant additions historically in order to demonstrate Company performance?

A. As shown in UGI Gas Exhibit VAS-2, over the past three years, the Company's total budgeted in service plant additions were $1,295,956,000, while the total actual in-service plant additions were $1,280,839,000. Thus, UGI Gas's plant in service performance as viewed by variance to budget can be shown to be under 1.2% ($1,295,956,000/$1,280,839,000) over the three-year period. UGI Gas Exhibit VAS-2 also shows that over the past five years, the Company's total budgeted in service plant additions were $2,083,368, while the total actual in-service plant additions were $2,085,134. Thus, UGI Gas's plant in service performance as viewed by variance to budget can be shown to be 0.1% ($2,085,134/$2,083,368) over the five-year period. This close correlation is indicative of the Company's ability to perform in developing a plan for plant additions and reliably executing to that plan. Importantly, the Company manages its budgets in total and as any budget changes are made dollars are reallocated between the four main budget categories, described above, such that the total plant additions align as close as possible to the total plant addition actuals.

Q. What process does UGI Gas utilize when developing its capital budgets?

A. During the Company's annual capital budget process, which occurs during the summer/fall, a two-year budget is prepared. The first year of the capital budget is the basis for the FTY. The second year is a preliminary budget and is the basis for the FPFTY. During the budget process, project managers estimate the total project costs and budgeted in-service dates at the project level based on the current data available. These estimated in-service dates are

the basis for the budgeted plant additions as further discussed in the testimony of UGI Gas witness Amy M. Keller (UGI Gas Statement No. 5). As the Company transitions from one budget year to the next, and the preliminary budget year becomes the active budget year, the Company makes certain adjustments to its budget for known and measurable changes in the assumptions about operating conditions that supported the preliminary budget. For example, the Company adjusts its project lists on an annual basis based on operational demands, such as the need to reprioritize projects based on emerging service needs or unanticipated equipment condition changes.

Q. What metric is utilized by the Company to track plant addition performance?

A. Exhibit VAS-2 compares plant additions placed in service (i.e., actuals) to the budgeted plant additions between 2023 and 2025 in order to track actual plant addition performance. The exhibit provides these figures by the four above-described budget categories. It also separates them by Distribution Plant and General and Common Plant. Taken together, the Distribution and General and Common Plant categories calculate total Plant Additions. Finally, the exhibit calculates the plant in service as a percent of budget metric for each year and over the three-year period by dividing actuals by budgets.

Specifically, during this three-year period, the Company's plant additions averaged 98.8% of its budget. The percentage of plant additions is calculated by dividing the actual plant additions by the budgeted plant additions (Actual / Forecast). This close correlation between budgeted and actual plant placed in service over a three-year period shows that UGI Gas's budget process is very effective at identifying its required plant additions, and UGI Gas's capital deployment and management activities perform actual work in near

identical level to budgeted levels. In total, this comparative metric supports the Company's ability to successfully plan and execute on the claimed level of plant in service in this case.

III. CONCLUSION

Q. Does this conclude your direct testimony?

A. Yes, it does.

DIRECT TESTIMONY OF DYLAN W. D'ASCENDIS

I. POSITION AND QUALIFICATIONS

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND POSITION.

A. My name is Dylan W. D'Ascendis. My business address is 1820 Chapel Ave., W., Suite 300, Cherry Hill, N.J. 08003. I am a Partner at ScottMadden, Inc.

Q. WHAT IS YOUR PROFESSIONAL AND EDUCATIONAL BACKGROUND AND EXPERIENCE?

A. I have offered expert testimony on behalf of investor-owned utilities before over 40 state regulatory commissions in the United States, the Federal Energy Regulatory Commission, the National Energy Regulator in Canada, the Alberta Utility Commission, one American Arbitration Association panel, and the Superior Court of Rhode Island on issues including, but not limited to, common equity cost rate, rate of return, valuation, capital structure, class cost of service, and rate design.

On behalf of the American Gas Association ("AGA"), I calculate the AGA Gas Index, which serves as the benchmark against which the performance of the American Gas Index Fund ("AGIF") is measured on a monthly basis. The AGA Gas Index and AGIF are a market capitalization-weighted index and mutual fund, respectively, comprised of the common stocks of the publicly traded corporate members of the AGA.

I am a member of the Society of Utility and Regulatory Financial Analysts ("SURFA"). In 2011, I was awarded the professional designation "Certified Rate of Return Analyst" by SURFA, which is based on education, experience, and the successful completion of a comprehensive written examination.

I am also a member of the National Association of Certified Valuation Analysts ("NACVA") and was awarded the professional designation "Certified Valuation Analyst"

by the NACVA in 2015.

I am a graduate of the University of Pennsylvania, where I received a Bachelor of Arts degree in Economic History. I have also received a Master of Business Administration with high honors and concentrations in Finance and International Business from Rutgers University.

The details of my educational background and expert witness appearances are included in Appendix A.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE ANY REGULATORY COMMISSIONS?

A. Yes. The regulatory commissions before whom I have testified are identified in Appendix A.

II. PURPOSE OF DIRECT TESTIMONY

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my Direct Testimony is to present evidence and provide the Pennsylvania Public Utility Commission ("Commission") with a recommendation regarding UGI Utilities, Inc. – Gas Division's ("UGI Gas" or the "Company") return on common equity ("ROE") for its natural gas distribution operations, and to provide an assessment of the capital structure to be used for ratemaking purposes. My testimony relies upon Company records, public documents, my personal knowledge and education, and my professional experience.

Q. HAVE YOU PREPARED ANY EXHIBITS OR SCHEDULES IN CONNECTION WITH YOUR TESTIMONY?

A. Yes. My analyses and conclusions are supported by the data presented in Exhibit B as Schedules DWD-1 through DWD-10, which have been prepared by me or under my direct supervision and control.

Q. WHAT IS YOUR RECOMMENDED COMMON EQUITY COST RATE?

A. I recommend that the Commission authorize UGI Gas the opportunity to earn an ROE of 10.75% on its jurisdictional rate base, based on its actual capital structure. The Company's requested capital structure consists of 45.75% long-term debt, at an embedded debt cost rate of 5.17%, and 54.25% common equity, to which my recommended ROE of 10.75% would apply. The overall rate of return is summarized on page 1 of Schedule DWD-1 and in Table 1 below:

Table 1: Summary of Recommended Weighted Average Cost of Capital

Type of Capital	Ratios	Cost Rate	Weighted Cost Rate
Long-Term Debt	45.75%	5.17%	2.37%
Common Equity	54.25%	10.75%	5.83%
Total	100.00%		8.20%

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ROE.

A. My recommended ROE of 10.75% is summarized on page 2 of Schedule DWD-1. I have assessed the market-based common equity cost rates of companies of relatively similar, but not necessarily identical, risk to UGI Gas. Using companies of relatively comparable risk as proxies is consistent with the principles of fair rate of return established in the *Hope*[1]

[1] *Federal Power Comm'n v. Hope Natural Gas Co*., 320 U.S. 591 (1944) ("*Hope*").

and *Bluefield*[2] decisions. No proxy group can be identical in risk to any single company. Consequently, there must be an evaluation of relative risk between the Company and the proxy group to determine if it is appropriate to adjust the proxy group's indicated rate of return.

My recommendation results from the application of several cost of common equity models, specifically the Discounted Cash Flow ("DCF") model, the Risk Premium Model ("RPM"), and the Capital Asset Pricing Model ("CAPM"), to the market data of a proxy group of seven (7) natural gas utility companies ("Gas Utility Proxy Group") whose selection criteria will be discussed below. In addition, I applied the DCF model, RPM, and CAPM to a Non-Price Regulated Proxy Group similar in total risk to the Gas Utility Proxy Group. The results derived from each cost of common equity model are as follows:

Table 2: Summary of Common Equity Cost Rate

Discounted Cash Flow Model (DCF)	10.53%
Risk Premium Model (RPM)	10.41% - 10.80%
Capital Asset Pricing Model (CAPM)	10.17% - 11.30%
Cost of Equity Models Applied to Comparable Risk, Non-Price Regulated Companies	10.96% - 11.35%
Indicated Range of Common Equity Cost Rates Before Adjustments for Company-Specific Risk	10.17% - 11.35%
Business Risk Adjustment	0.05%
Flotation Cost Adjustment	0.12%
Indicated Range of Common Equity Cost Rates after Adjustment	10.34% - 11.52%
Recommended Cost of Equity	10.75%

[2] *Bluefield Water Works Improvement Co. v. Public Serv. Comm'n*, 262 U.S. 679 (1923) ("*Bluefield*").

As shown in Table 2, the indicated range of common equity cost rates applicable to the Gas Utility Proxy Group is between 10.17% and 11.35%.

After determining the Gas Utility Proxy Group ROE, one must conduct a relative risk analysis to determine whether additional adjustments to the Gas Utility Proxy Group ROE are warranted to reflect the unique risk of the Company. My relative risk analyses show that adjustments to the Gas Utility Proxy Group indicated range of ROEs to reflect the Company's unique business risks are necessary. From the indicated range of ROEs after adjustment, I recommend the Commission approve a specific ROE of 10.75% for the Company's jurisdictional rate base.

III. GENERAL PRINCIPLES

Q. WHAT GENERAL PRINCIPLES HAVE YOU CONSIDERED IN ARRIVING AT YOUR RECOMMENDED COMMON EQUITY COST RATE OF 10.75%?

A. In unregulated industries, marketplace competition is the principal determinant of the price of products or services. For regulated public utilities, regulation must act as a substitute for marketplace competition. Assuring that the utility can fulfill its obligations to the public, while providing safe and reliable service at all times, requires a level of earnings sufficient to maintain the integrity of presently invested capital. Sufficient earnings also permit the attraction of needed new capital at a reasonable cost, for which the utility must compete with other firms of comparable risk, consistent with the fair rate of return standards established by the U.S. Supreme Court in the previously cited *Hope* and *Bluefield* cases.

The U.S. Supreme Court affirmed the fair rate of return standards in *Hope*, when it stated:

> The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346 12 S.Ct. 400,402. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[3]

In summary, the U.S. Supreme Court has found a return that is adequate to attract capital at reasonable terms enables the utility to provide service while maintaining its financial integrity. As discussed above, and in keeping with established regulatory standards, that return should be commensurate with the returns expected elsewhere for investments of equivalent risk. The Commission's decision in this proceeding, therefore, should provide the Company with the opportunity to earn a return that is: (1) adequate to attract capital at reasonable cost and terms; (2) sufficient to ensure its financial integrity; and (3) commensurate with returns on investments in enterprises having corresponding risks.

Lastly, the required return for a regulated public utility is established on a stand-alone basis, i.e., for the utility operating company at issue in a rate case. Parent entities, like other investors, have capital constraints and must look at the attractiveness of the expected risk-adjusted return of each investment alternative in their capital budgeting

[3] *Hope*, 320 U.S. 591 (1944), at 603.

process. That is, utility holding companies that own many utility operating companies have choices as to where they will invest their capital within the holding company family. Therefore, the opportunity cost concept applies regardless of the source of the funding, public funding or corporate funding.

When funding is provided by a parent entity, the return still must be sufficient to provide an incentive to allocate equity capital to the subsidiary or business unit rather than other internal or external investment opportunities. That is, the regulated subsidiary must compete for capital with all the parent company's affiliates, and with other, similarly situated companies. In that regard, investors value corporate entities on a sum-of-the-parts basis and expect each division within the parent company to provide an appropriate risk-adjusted return.

It therefore is important that the authorized ROE reflects the risks and prospects of the utility's operations and supports the utility's financial integrity from a stand-alone perspective, as measured by its combined business and financial risks. Consequently, the ROE authorized in this proceeding should be sufficient to support the operational (i.e., business risk) and financing (i.e., financial risk) of the Company's utility subsidiary on a stand-alone basis.

Q. WITHIN THAT BROAD FRAMEWORK, HOW IS THE COST OF CAPITAL ESTIMATED IN REGULATORY PROCEEDINGS?

A. Regulated utilities primarily use common stock and long-term debt to finance their permanent property, plant, and equipment (i.e., rate base). The fair rate of return for a regulated utility is based on its weighted average cost of capital, in which, as noted earlier, the costs of the individual sources of capital are weighted by their respective book values.

The cost of capital is the return investors require to make an investment in a firm. Investors will provide funds to a firm only if the return that they *expect* is equal to, or greater than, the return that they *require* to accept the risk of providing funds to the firm.

The cost of capital (i.e., the combination of the costs of debt and equity) is based on the economic principle of "opportunity costs." Investing in any asset (whether debt or equity securities) represents a forgone opportunity to invest in alternative assets. For any investment to be sensible, its expected return must be at least equal to the return expected on alternative, comparable risk investment opportunities. Because investments with like risks should offer similar returns, the opportunity cost of an investment should equal the return available on an investment of comparable risk.

Whereas the cost of debt is contractually defined and can be directly observed as the interest rate or yield on debt securities, the cost of common equity must be estimated based on market data and various financial models. Because the cost of common equity is premised on opportunity costs, the models used to determine it are typically applied to a group of "comparable" or "proxy" companies.

In the end, the estimated cost of capital should reflect the return that investors require in light of the subject company's business and financial risks, and the returns available on comparable investments.

Q. IS THE AUTHORIZED RETURN SET IN REGULATORY PROCEEDINGS GUARANTEED?

A. No, it is not. Consistent with the *Hope* and *Bluefield* standards, the ratemaking process should provide the utility a reasonable opportunity to recover its return of, and return on, its reasonably incurred investments, but it does not guarantee that return. While a utility may have control over some factors that affect the ability to earn its authorized return (e.g.,

management performance, operating and maintenance expenses, etc.), there are several factors beyond a utility's control that affect its ability to earn its authorized return. Those may include factors such as weather, the economy, and the prevalence and magnitude of regulatory lag.

A. Business Risk

Q. PLEASE DEFINE BUSINESS RISK AND EXPLAIN WHY IT IS IMPORTANT FOR DETERMINING A FAIR RATE OF RETURN.

A. The investor-required return on common equity reflects investors' assessment of the total investment risk of the subject firm. Total investment risk is often discussed in the context of business and financial risk.[4]

Business risk reflects the uncertainty associated with owning a company's common stock without the company's use of debt and/or preferred stock financing. One way of considering the distinction between business and financial risk is to view the former as the uncertainty of the expected earned return on common equity, assuming the firm is financed with no debt.

Examples of business risks generally faced by utilities include, but are not limited to, the regulatory environment, mandatory environmental compliance requirements, customer mix and concentration of customers, service territory economic growth, market demand, risks and uncertainties of supply, operations, capital intensity, size, the degree of operating leverage, emerging technologies, the vagaries of weather, and the like, all of which have a direct bearing on earnings.

[4] As will be discussed later in this testimony, another definition of total risk is systematic risk plus unsystematic risk.

Although analysts, including ratings agencies, may categorize business risks individually, as a practical matter, such risks are interrelated and not wholly distinct from one another. When determining an appropriate return on common equity, the relevant issue is where investors see the subject company in relation to other similarly situated utility companies (i.e., the Gas Utility Proxy Group). To the extent investors view a company as being exposed to higher risk, the required return will increase, and vice versa.

For regulated utilities, business risks are both long-term and near-term in nature. Whereas near-term business risks are reflected in year-to-year variability in earnings and cash flow brought about by economic or regulatory factors, long-term business risks reflect the prospect of an impaired ability of investors to obtain both a fair rate of return on, and return of, their capital. Moreover, because utilities accept the obligation to provide safe, adequate, and reliable service at all times (in exchange for a reasonable opportunity to earn a fair return on their investment), they generally do not have the option to delay, defer, or reject capital investments. Because those investments are capital-intensive, utilities generally do not have the option to avoid raising external funds during periods of capital market distress, if necessary.

Because utilities invest in long-lived assets, long-term business risks are of paramount concern to equity investors. That is, the risk of not recovering the return on their investment extends far into the future. The timing and nature of events that may lead to losses, however, also are uncertain and, consequently, those risks and their implications for the required return on equity tend to be difficult to quantify. Regulatory commissions (like investors who commit their capital) must review a variety of quantitative and qualitative data and apply their reasoned judgment to determine how long-term risks weigh in their assessment of the market-required return on common equity.

B. Financial Risk

Q. PLEASE DEFINE FINANCIAL RISK AND EXPLAIN WHY IT IS IMPORTANT FOR DETERMINING A FAIR RATE OF RETURN.

A. Financial risk is the additional risk created by the introduction of debt and preferred stock into the capital structure. The higher the proportion of debt and preferred stock in the capital structure, the higher the financial risk to common equity owners (i.e., failure to receive dividends due to default or other covenants). Therefore, consistent with the basic financial principle of risk and return, common equity investors require higher returns as compensation for bearing higher financial risk.

Q. CAN BOND AND CREDIT RATINGS BE A PROXY FOR A FIRM'S COMBINED BUSINESS AND FINANCIAL RISKS TO EQUITY OWNERS (I.E., INVESTMENT RISK)?

A. Yes, similar bond ratings/issuer credit ratings reflect, and are representative of, similar combined business and financial risks (i.e., total risk) faced by bond investors.[5] Although specific business or financial risks may differ between companies, the same bond/credit rating indicates that the combined risks are roughly similar from a debtholder perspective. The caveat is that these debtholder risk measures do not translate directly to risks for common equity.

IV. UGI GAS AND GAS THE UTILITY PROXY GROUP

Q. ARE YOU FAMILIAR WITH UGI GAS'S OPERATIONS?

A. Yes. UGI Gas provides natural gas utility service to over 706,000 customers in certificated portions of 46 eastern and central Pennsylvania counties. UGI Utilities, Inc. holds an A3

[5] Risk distinctions within S&Ps bond rating categories are recognized by a plus or minus, *e.g.*, an S&P rating can be an A+, A, or A-. Similarly, risk distinction for Moody's ratings are distinguished by numerical rating gradations, *e.g.*, a Moody's rating can be A1, A2 and A3.

rating from Moody's, and is not rated by S&P. The Company is not publicly traded, as it is an indirectly owned operating subsidiary of UGI Corporation ("UGI Corp."). UGI Corp. is publicly traded on the NYSE under ticker symbol UGI.

Q. WHY IS IT NECESSARY TO DEVELOP A PROXY GROUP WHEN ESTIMATING THE ROE FOR THE COMPANY?

A. Because the Company is not publicly traded and does not have publicly traded equity securities, it is necessary to develop groups of publicly traded, comparable companies to serve as "proxies" for the Company. In addition to the analytical necessity of doing so, the use of proxy companies is consistent with the *Hope* and *Bluefield* comparable risk standards, as discussed above. I have selected two proxy groups that, in my view, are fundamentally risk-comparable to the Company: a Gas Utility Proxy Group, and a Non-Price Regulated Proxy Group, which is comparable in total risk to the Gas Utility Proxy Group.[6]

Even when proxy groups are carefully selected, it is common for analytical results to vary from company to company. Despite the care taken to ensure comparability, because no two companies are identical, market expectations regarding future risks and prospects will vary within the proxy group. Therefore, it is common for analytical results to reflect a seemingly wide range, even for a group of similarly situated companies. At issue is how to estimate the ROE from within that range. That determination will be best informed by employing a variety of sound analyses that necessarily must consider the sort of quantitative and qualitative information discussed throughout my Direct Testimony. Additionally, a relative risk analysis between the Company and the Gas Utility Proxy

[6] The development of the Non-Price Regulated Proxy Group is explained in more detail in Section V.

Group must be made to determine whether or not explicit Company-specific adjustments need to be made to the Gas Utility Proxy Group's indicated results.

Q. PLEASE EXPLAIN HOW YOU SELECTED THE COMPANIES IN THE GAS UTILITY PROXY GROUP.

A. The companies selected for the Utility Proxy Group met the following criteria:

(i) They were included in the Natural Gas Utility Group of *Value Line Investment Survey's Standard Edition* as of August 22, 2025 ("*Value Line*");

(ii) They have 60% or greater of fiscal year 2024 total operating income derived from, and 60% or greater of fiscal year 2024 total assets attributable to, regulated gas distribution operations;

(iii) At the time of preparation of this testimony, they had not publicly announced that they were involved in any major merger or acquisition activity (i.e., one publicly-traded utility merging with or acquiring another) or any other major development;

(iv) They have not cut or omitted their common dividends during the five years ended 2024 or through the time of preparation of this testimony;

(v) They have *Value Line* and Bloomberg Professional Services ("Bloomberg") adjusted Beta coefficients ("beta");

(vi) They have positive *Value Line* five-year dividends per share growth rate projections; and

(vii) They have *Value Line*, Zacks, or S&P Capital IQ consensus five-year earnings per share growth rate projections.

The following seven companies met these criteria:

Table 3: Utility Proxy Group Screening Results

Company	Ticker
Atmos Energy Corporation	ATO
Chesapeake Utilities Corp.	CPK
New Jersey Resources Corporation	NJR
NiSource Inc.	NI
Northwest Natural Holding Company	NWN
ONE Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX

V. CAPITAL STRUCTURE

Q. WHAT IS UGI GAS'S REQUESTED CAPITAL STRUCTURE?

A. UGI Gas's requested ratemaking capital structure consists of 45.75% long-term debt and 54.25% common equity.

Q. WHAT ARE THE TYPICAL SOURCES OF CAPITAL COMMONLY CONSIDERED IN ESTABLISHING A UTILITY'S CAPITAL STRUCTURE?

A. Common equity and long-term debt are commonly considered in establishing a utility's capital structure, because they are the typical sources of capital financing a utility's rate base.

Q. PLEASE EXPLAIN.

A. Long-lived assets are typically financed with long-lived securities, so that the overall term structure of the utility's long-term liabilities (both debt and equity) closely match the life of the assets being financed. As stated by Brigham and Houston:

> In practice, firms don't finance each specific asset with a type of capital that has a maturity equal to the asset's life. However, academic studies do show that most firms tend to finance short-term assets from short-term sources and long-term assets from long-term

sources.[7]

Whereas short-term debt has a maturity of one year or less, long-term debt may have maturities of thirty (30) years or longer. Although there are practical financing constraints, such as the need to "stagger" long-term debt maturities, the general objective is to extend the average life of long-term debt. Still, long-term debt has a finite life, which is likely to be less than the life of the assets included in rate base. Common equity, on the other hand, is outstanding into perpetuity. Thus, common equity more accurately matches the life of the going concern of the utility, which is also assumed to operate in perpetuity. Consequently, it is both typical and important for utilities to have significant proportions of common equity in their capital structures.

Q. HOW DOES THE COMPANY'S REQUESTED COMMON EQUITY RATIO OF 54.25% COMPARE WITH THE COMMON EQUITY RATIO MAINTAINED BY THE GAS UTILITY PROXY GROUP?

A. As shown on page 2 of Schedule DWD-2, common equity ratios range from 39.40% to 60.96% for fiscal year 2024 for the Gas Utility Proxy Group. I also considered *Value Line* projected capital structures for the utilities for 2028-2030. That analysis shows a range of projected common equity ratios between 44.00% and 60.00%.[8]

In addition to comparing the Company's requested common equity ratio with common equity ratios currently maintained by the Gas Utility Proxy Group, I also compared the Company's common equity ratio with the equity ratios maintained by the operating subsidiaries of the Gas Utility Proxy Group. As shown on page 3 of Schedule

---

[7] Eugene F. Brigham and Joel F. Houston, Fundamentals of Financial Management, Concise 4th Ed., Thomson South-Western, 2004, at 574.

[8] See, pages 2 through 8 of Schedule DWD-3.

DWD-2, common equity ratios of the operating utility subsidiaries of the companies in the Gas Utility Proxy Group range from 47.86% to 59.93% for fiscal year 2024, for the Gas Utility Proxy Group's operating subsidiaries. The Company's requested common equity ratio of 54.25% is reasonable and consistent with the range of common equity ratios maintained by the operating utility subsidiaries of the Gas Utility Proxy Group.

Q. GIVEN THE RANGE OF EQUITY RATIOS PRESENT WITHIN THE UTILITY PROXY GROUP, IS UGI GAS'S REQUESTED EQUITY RATIO OF 54.25% APPROPRIATE FOR RATEMAKING PURPOSES?

A. Yes, it is. The Company's requested equity ratio of 54.25% is appropriate for ratemaking purposes in the current proceeding because it is within the range of the common equity ratios currently maintained, and expected to be maintained, by the Gas Utility Proxy Group and its operating subsidiaries.

VI. COMMON EQUITY COST RATE MODELS

Q. IS IT IMPORTANT THAT COST OF COMMON EQUITY MODELS BE MARKET-BASED?

A. Yes. While a public utility operates a regulated business within the states in which it operates, it still must compete for equity in capital markets along with all other companies of comparable risk, which includes non-utilities. The cost of common equity is thus determined based on equity market expectations for the returns of those companies. If an individual investor is choosing to invest their capital among companies of comparable risk, they will choose a company providing a higher return over a company providing a lower return.

Q. ARE YOUR COST OF COMMON EQUITY MODELS MARKET-BASED?

A. Yes. The DCF model uses market prices in developing the model's dividend yield component. The RPM uses bond ratings and expected bond yields that reflect the market's assessment of bond/credit risk. In addition, betas (β), which reflect the market/systematic risk component of equity risk premium, are derived from regression analyses of market prices. The CAPM is market-based for many of the same reasons that the RPM is market-based (i.e., the use of expected bond yields and betas). Selection criteria for comparable risk non-price regulated companies are based on regression analyses of market prices and reflect the market's assessment of total risk.

Q. WHAT ANALYTICAL APPROACHES DID YOU USE TO DETERMINE THE COMPANY'S ROE?

A. As discussed earlier, I have relied on the DCF model, the RPM, and the CAPM, which I applied to the Gas Utility Proxy Group described above. I also applied these same models to the Non-Price Regulated Proxy Group described later in this section.

I rely on these models because reasonable investors use a variety of tools and do not rely exclusively on a single source of information or single model. Moreover, the models on which I rely focus on different aspects of return requirements and provide different insights into investors' views of risk and return. The DCF model, for example, estimates the investor-required return assuming a constant expected dividend yield and growth rate in perpetuity, while Risk Premium-based methods (i.e., the RPM and CAPM approaches) provide the ability to reflect investors' views of risk, future market returns, and the relationship between interest rates and the cost of common equity. Just as the use of market data for the Gas Utility Proxy Group adds the reliability necessary to inform expert judgment in arriving at a recommended common equity cost rate, the use of multiple

generally accepted common equity cost rate models also adds reliability and accuracy when arriving at a recommended common equity cost rate.

The use of multiple models also makes intuitive sense when we consider that market prices are set by the buying and selling behavior of multiple investors, whose circumstances, objectives, and constraints vary over time and across market conditions. We cannot assume a single method is the best measure of the factors motivating those decisions for all investors at all times. Giving undue weight to a single method runs the very real risk of ignoring important information provided by other methods.

In other words, no single model is more reliable than all others under all market conditions. Intuition suggests it is more appropriate to use as many methods as we reasonably can and to reflect the many factors motivating investment decisions as best we can. In this instance, intuition, financial theory,[9] and financial practice reach a common conclusion: we should apply and reasonably consider multiple methods when estimating the ROE.

A. Discounted Cash Flow Model

Q. WHAT IS THE THEORETICAL BASIS OF THE DCF MODEL?

A. The theory underlying the DCF model is that the present value of an expected future stream of net cash flows during the investment holding period can be determined by discounting those cash flows at the cost of capital, or the investors' capitalization rate. DCF theory indicates that an investor buys a stock for an expected total return rate, which is derived

[9] As Brigham explains: "Whereas debt and preferred stocks are contractual obligations which have easily determined costs, it is not at all easy to estimate [the ROE]. However, three methods can be used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) model, and (3) the bond-yield-plus-risk-premium approach. These methods should not be regarded as mutually exclusive – no one dominates the others, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand." Eugene F. Brigham, Louis C. Gapenski, Financial Management, Theory and Practice, 7th ed., The Dryden Press, 1994, at 341.

from the cash flows received from dividends and market price appreciation. Mathematically, the dividend yield on market price plus a growth rate equals the capitalization rate, i.e., the total common equity return rate expected by investors.

$$K_e = (D_0 (1+g))/P + g$$

where:

K_e = the required Return on Common Equity;

D_0 = the annualized Dividend Per Share;

P = the current stock price; and

g = the growth rate.

Q. WHICH VERSION OF THE DCF MODEL DID YOU USE?

A. I used the single-stage constant growth DCF model in my analyses.

Q. PLEASE DESCRIBE THE DIVIDEND YIELD YOU USED IN APPLYING THE CONSTANT GROWTH DCF MODEL.

A. The unadjusted dividend yields are based on the proxy companies' dividends as of October 31, 2025, divided by the average closing market price for the 60 trading days ended October 31, 2025.[10]

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE DIVIDEND YIELD.

A. Because dividends are paid periodically (quarterly), as opposed to continuously (daily), an adjustment must be made to the dividend yield. This is often referred to as the discrete, or the Gordon Periodic, version of the DCF model.

DCF theory calls for using the full growth rate, or D_1, in calculating the model's dividend yield component. Since the companies in the Gas Utility Proxy Group increase

[10] *See,* Column 1, page 1 of Schedule DWD-3.

their quarterly dividends at various times during the year, a reasonable assumption is to reflect one-half the annual dividend growth rate in the dividend yield component, or $D_{1/2}$. Because the dividend should be representative of the next 12-month period, this adjustment is a conservative approach that does not overstate the dividend yield. Therefore, the actual average dividend yields in Column 1, page 1 of Schedule DWD-3 have been adjusted upward to reflect one-half the average projected growth rate shown in Column 6.

Q. PLEASE EXPLAIN THE BASIS FOR THE GROWTH RATES YOU APPLY TO THE GAS UTILITY PROXY GROUP IN YOUR CONSTANT GROWTH DCF MODEL.

A. Investors are likely to rely on widely available financial information services, such as *Value Line*, Zacks, and S&P Capital IQ. Investors realize that analysts have significant insight into the dynamics of the industries and individual companies they analyze, as well as companies' abilities to effectively manage the effects of changing laws and regulations, and ever-changing economic and market conditions. For these reasons, I used analysts' five-year forecasts of earnings per share growth in my DCF analysis.

Over the long run, there can be no growth in dividends per share without growth in earnings per share. Security analysts' earnings expectations have a more significant influence on market prices than dividend expectations. Thus, using projected earnings growth rates in a DCF analysis provides a better match between investors' market price appreciation expectations and the growth rate component of the DCF.

Q. PLEASE SUMMARIZE THE CONSTANT GROWTH DCF MODEL RESULTS.

A. The results of applying the DCF model to the Gas Utility Proxy Group are shown on page 1 of Schedule DWD-3 and in Table 4, below:

Table 4: DCF Model Results for the Utility Proxy Group

Mean	10.35%
Median	10.71%
Average of Mean and Median	10.53%

In arriving at a conclusion for the constant growth DCF-indicated common equity cost rate for the Gas Utility Proxy Group, I relied on an average of the mean and the median results of the DCF, specifically 10.53% applicable to the Gas Utility Proxy Group. This approach takes into consideration all proxy company results while mitigating high and low side outliers of those results.

B. The Risk Premium Model

Q. PLEASE DESCRIBE THE THEORETICAL BASIS OF THE RPM.

A. The RPM is based on the fundamental financial principle of risk and return; namely, that investors require greater returns for bearing greater risk. The RPM recognizes that common equity capital has greater investment risk than debt capital, as common equity shareholders are behind debt holders in any claim on a company's assets and earnings. As a result, investors require higher returns from common stocks than from bonds to compensate them for bearing the additional risk.

While it is possible to directly observe bond returns and yields, investors' required common equity returns cannot be directly determined or observed. According to RPM theory, one can estimate a common equity risk premium over bonds (either historically or prospectively), and use that premium to derive a cost rate of common equity. The cost of common equity equals the expected cost rate for long-term debt capital, plus a risk premium over that cost rate, to compensate common shareholders for the added risk of being unsecured and last-in-line for any claim on the corporation's assets and earnings upon liquidation.

Q. PLEASE EXPLAIN THE TOTAL MARKET APPROACH RPM.

A. The total market approach RPM adds a prospective public utility bond yield to an average of: (1) an equity risk premium that is derived from a beta-adjusted total market equity risk premium, (2) an equity risk premium based on the S&P Utilities Index, and (3) an equity risk premium based on authorized ROEs for natural gas distribution utilities.

Q. PLEASE EXPLAIN THE BASIS OF THE EXPECTED BOND YIELD OF 5.49% APPLICABLE TO THE UTILITY PROXY GROUP.

A. The first step in the total market approach RPM analysis is to determine the expected bond yield. Because both ratemaking and the cost of capital, including the common equity cost rate, are prospective in nature, a prospective yield on similarly-rated long-term debt is essential. I relied on a consensus forecast of about 50 economists of the expected yield on Aaa-rated corporate bonds for the six calendar quarters ending with the first calendar quarter of 2027, and *Blue Chip Financial Forecast's* ("*Blue Chip*") long-term projections for 2027 to 2031, and 2032 to 2036. As shown on line 1, page 1 of Schedule DWD-4, the average expected yield on Moody's Aaa-rated corporate bonds is 5.10%. In order to adjust the expected Aaa-rated corporate bond yield to an equivalent A2-rated public utility bond yield, I made an upward adjustment of 0.39%, which represents a recent spread between Aaa-rated corporate bonds and A2-rated public utility bonds.[11] Adding that recent 0.39% spread to the expected Aaa-rated corporate bond yield of 5.10% results in an expected A2-rated public utility bond yield of 5.49%. Since the Gas Utility Proxy Group's average Moody's long-term issuer rating is A3, another adjustment to the expected A2-rated public utility bond is needed to reflect the difference in bond ratings. An upward adjustment of

[11] As shown on line 2 and explained in note 2, page 1 of Schedule DWD-4.

0.07%, which represents one-third of a recent spread between A2-rated and Baa2-rated public utility bond yields, is necessary to make the prospective bond yield applicable to an A3-rated public utility bond.[12] Adding the 0.07% to the 5.49% prospective A2-rated public utility bond yield results in a 5.56% expected bond yield applicable to the Gas Utility Proxy Group.

Table 5: Summary of the Calculation of the Gas Utility Proxy Group Projected Bond Yield[13]

Prospective Yield on Moody's Aaa-Rated Corporate Bonds (*Blue Chip*)	5.10%
Adjustment to Reflect Yield Spread Between Moody's Aaa-Rated Corporate Bonds and Moody's A2-Rated Utility Bonds	0.39%
Adjustment to Reflect the Gas Utility Proxy Group's Average Moody's Bond Rating of A3	0.07%
Prospective Bond Yield Applicable to the Gas Utility Proxy Group	5.56%

Q. PLEASE EXPLAIN HOW THE BETA-DERIVED EQUITY RISK PREMIUM IS DETERMINED.

A. The components of the beta-derived risk premium model are: (1) an expected market equity risk premium over corporate bonds, and (2) the beta. The derivation of the beta-derived equity risk premium that I applied to the Gas Utility Proxy Group is shown on lines 1 through 8, on page 6 of Schedule DWD-4. The total beta-derived equity risk premium I applied is based on an average of three historical market data-based equity risk premiums, a *Value Line*-based equity risk premium, and combined *Value Line*, Bloomberg, and S&P Capital IQ-based equity risk premium. Each of these is described below.

[12] As shown on line 4 and explained in note 3, page 1 of Schedule DWD-4.
[13] As shown on page 1 of Schedule DWD-4.

Q. HOW DID YOU DERIVE A MARKET EQUITY RISK PREMIUM BASED ON LONG-TERM HISTORICAL DATA?

A. To derive a historical market equity risk premium, I used the most recent holding period returns for the large company common stocks less the average historical yield on Moody's Aaa/Aa-rated corporate bonds for the period 1928 to 2024. The use of holding period returns over a very long period of time is appropriate because it is consistent with the long-term investment horizon presumed by investing in a going concern, i.e., a company expected to operate in perpetuity.

The long-term arithmetic mean monthly total return rate on large company common stocks was 12.05% and the long-term arithmetic mean monthly yield on Moody's Aaa/Aa-rated corporate bonds was 5.95% from 1928 to 2024. As shown on line 1 of page 6 of Schedule DWD-4, subtracting the mean monthly bond yield from the total return on large company stocks results in a long-term historical equity risk premium of 6.10%.

I used the arithmetic mean monthly total return rates for the large company stocks and yields (income returns) for the Moody's Aaa/Aa-rated corporate bonds, because they are appropriate for the purpose of estimating the cost of capital as noted in Kroll's Stocks, Bonds, Bills, and Inflation ("SBBI") Yearbook 2023 ("SBBI - 2023").[14] The use of the arithmetic mean return rates and yields is appropriate because historical total returns and equity risk premiums provide insight into the variance and standard deviation of returns needed by investors in estimating future risk when making a current investment. If investors relied on the geometric mean of historical equity risk premiums, they would have no insight into the potential variance of future returns because the geometric mean relates

[14] SBBI-2023, at 193.

the change over many periods to a constant rate of change, thereby obviating the year-to-year fluctuations, or variance, which is critical to risk analysis.

Q. PLEASE EXPLAIN THE DERIVATION OF THE REGRESSION-BASED MARKET EQUITY RISK PREMIUM.

A. To derive the regression-based market equity risk premium of 7.13% shown on line 2, page 6 of Schedule DWD-4, I used the same monthly annualized total returns on large company common stocks relative to the monthly annualized yields on Moody's Aaa/Aa-rated corporate bonds as mentioned above. I modeled the relationship between interest rates and the market equity risk premium using the observed monthly market equity risk premium as the dependent variable, and the monthly yield on Moody's Aaa/Aa-rated corporate bonds as the independent variable. I then used a linear Ordinary Least Squares ("OLS") regression, in which the market equity risk premium is expressed as a function of the Moody's Aaa/Aa-rated corporate bond yield:

$$RP = \alpha + \beta\ (R_{Aaa/Aa})$$

where:

RP = the market equity risk premium;

α = the regression intercept coefficient;

β = the regression slope coefficient; and

$R_{Aaa/Aa}$ = the Moody's Aaa/Aa rated corporate bond yield.

Q. PLEASE EXPLAIN THE DERIVATION OF THE PRPM EQUITY RISK PREMIUM.

A. The PRPM, published in the *Journal of Regulatory Economics*,[15] was developed from the work of Robert F. Engle, who shared the Nobel Prize in Economics in 2003 "for methods of analyzing economic time series with time-varying volatility" or ARCH.[16] Engle found that volatility changes over time and is related from one period to the next, especially in financial markets. Engle discovered that volatility of prices and returns clusters over time and is, therefore, highly predictable and can be used to predict future levels of risk and risk premiums.

The PRPM estimates the risk-return relationship directly, as the predicted equity risk premium is generated by predicting volatility or risk. The PRPM is not based on an estimate of investor behavior, but rather on an evaluation of the results of that behavior (i.e., the variance of historical equity risk premiums).

The inputs to the model are the historical returns on large company stocks minus the historical monthly yield on Moody's Aaa/Aa-rated corporate bonds from January 1928 through October 2025. Using a generalized form of ARCH, known as GARCH, I calculated the projected equity risk premium using Eviews© statistical software. When the GARCH model is applied to the historical return data, it produces a predicted GARCH variance series and a GARCH coefficient. Multiplying the predicted monthly variance by the GARCH coefficient and then annualizing it produces the predicted annual equity risk premium. The resulting PRPM predicted a market equity risk premium of 7.48%.[17]

[16] Autoregressive conditional heteroscedasticity; see also www.nobelprize.org.

[17] Shown on line 3, page 6 of Schedule DWD-4.

Q. PLEASE EXPLAIN THE DERIVATION OF A PROJECTED EQUITY RISK PREMIUM BASED ON *VALUE LINE* SUMMARY & INDEX DATA FOR YOUR RPM ANALYSIS.

A. As noted above, because both ratemaking and the cost of capital are prospective, a prospective market equity risk premium is needed. The derivation of the forecasted or prospective market equity risk premium can be found in note 4, page 6 of Schedule DWD-4. Consistent with my calculation of the dividend yield component in my DCF analysis, this prospective market equity risk premium is derived from an average of the three- to five-year median market price appreciation potential by *Value Line* for the 13 weeks ended October 31, 2025, plus an average of the median estimated dividend yield for the common stocks of the 1,700 firms covered in *Value Line* (Standard Edition).[18]

The average median expected price appreciation is 40%, which translates to an 8.78% annual appreciation, and when added to the average of *Value Line's* median expected dividend yields of 2.13%, equates to a forecasted annual total return rate on the market of 10.91%. The forecasted Moody's Aaa-rated corporate bond yield of 5.10% is deducted from the total market return of 10.91%, resulting in an equity risk premium of 5.81%, as shown on line 4, page 6 of Schedule DWD-4.

Q. PLEASE EXPLAIN THE DERIVATION OF AN EQUITY RISK PREMIUM BASED ON THE S&P 500 COMPANIES.

A. Using data from *Value Line*, Bloomberg, and S&P Capital IQ, I calculated an expected total return on the S&P 500 companies using expected dividend yields and long-term growth estimates as a proxy for capital appreciation. The expected total return for the S&P

[18] As explained in detail in note 4, page 6 of Schedule DWD-4.

500 is 17.67%. Subtracting the prospective yield on Moody's Aaa-rated corporate bonds of 5.10% results in a 12.57% projected equity risk premium as shown on page 6, line 5 of Schedule DWD-4.

Q. WHAT IS YOUR CONCLUSION OF A BETA-DERIVED EQUITY RISK PREMIUM FOR USE IN YOUR RPM ANALYSIS?

A. I gave equal weight to all five equity risk premiums based on each source – historical, *Value Line* Summary & Index, and aggregate *Value Line*, Bloomberg, and S&P Capital IQ Market DCF in arriving at a 7.82% equity risk premium.

Table 6: Summary of the Calculation of the Equity Risk Premium Using Total Market Returns[19]

Historical Spread Between Total Returns of Large Stocks and Aaa and Aa-Rated Corporate Bond Yields (1928 – 2024)	6.10%
Regression Analysis on Historical Data	7.13%
PRPM Analysis on Historical Data	7.48%
Prospective Equity Risk Premium using Total Market Returns from *Value Line Summary & Index* less Projected Aaa Corporate Bond Yields	5.81%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P 500 less Projected Aaa Corporate Bond Yields	12.57%
Average	7.82%

After calculating the average market equity risk premium of 7.82%, I adjusted it by beta to account for the risk of the Gas Utility Proxy Group. As discussed below, beta is a meaningful measure of prospective relative risk to the market as a whole, and is a logical way to allocate a company's, or proxy group's, share of the market's total equity risk premium relative to corporate bond yields.

[19] As shown on page 6 of Schedule DWD-4.

Q. WHAT MEASURES OF BETA DO YOU USE IN DETERMINING YOUR BETA-ADJUSTED EQUITY RISK PREMIUM?

A. I use two measures of beta to calculate my beta-adjusted equity risk premium: (1) the average of *Value Line* and Bloomberg betas; and (2) *Value Line* betas. As will be discussed in detail below, Bloomberg betas may not accurately reflect the risks of the Gas Utility Proxy Group at this time and should be viewed with caution.

Q. WHAT ARE THE BETA VALUES YOU WILL APPLY TO THE MARKET EQUITY RISK PREMIUM?

A. As shown on pages 1 and 2 of Schedule DWD-6, the Gas Utility Proxy Group's average blended beta is 0.61, and its average *Value Line* beta is 0.76. Applying these betas to the market equity risk premium of 7.82% results in equity risk premiums of 4.77% and 5.94%, respectively.

Q. HOW DID YOU DERIVE THE EQUITY RISK PREMIUM BASED ON THE S&P UTILITY INDEX AND MOODY'S A2-RATED PUBLIC UTILITY BONDS?

A. I estimated three equity risk premiums based on S&P Utility Index holding period returns, and one equity risk premium based on the expected returns of the S&P Utilities Index, using *Value Line*, Bloomberg, and S&P Capital IQ data. Turning first to the S&P Utility Index holding period returns, I derived a long-term monthly arithmetic mean equity risk premium between the S&P Utility Index total returns of 10.59% and monthly Moody's A2-rated public utility bond yields of 6.42% from 1928 to 2024, to arrive at an equity risk premium of 4.16%.[20] I then used the same historical data to derive an equity risk premium of 5.00% based on a regression of the monthly equity risk premiums. The final S&P Utility

[20] As shown on line 1, page 9 of Schedule DWD-5.

Index holding period equity risk premium involved applying the PRPM using the historical monthly equity risk premiums from January 1928 to October 2025 to arrive at a PRPM-derived equity risk premium of 4.22% for the S&P Utility Index.

I then derived expected total returns on the S&P Utilities Index of 11.89% using data from *Value Line*, Bloomberg, and S&P Capital IQ respectively, and subtracted the prospective Moody's A2-rated public utility bond yield of 5.49%.[21] This resulted in equity risk premium of 6.40%. As with the market equity risk premiums, I averaged the four risk premiums to arrive at my utility-specific equity risk premium of 4.95%.

Table 7: Summary of the Calculation of the Equity Risk Premium Using S&P Utility Index Holding Returns[22]

Historical Spread Between Total Returns of the S&P Utilities Index and A2-Rated Utility Bond Yields (1928 – 2024)	4.16%
Regression Analysis on Historical Data	5.00%
PRPM Analysis on Historical Data	4.22%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns for the S&P Utilities Index less Projected A2 Utility Bond Yields	6.40%
Average	4.95%

Q. HOW DID YOU DERIVE AN EQUITY RISK PREMIUM OF 4.84% BASED ON AUTHORIZED ROES FOR NATURAL GAS DISTRIBUTION UTILITIES?

A. The equity risk premium of 4.84% shown on page 10 of Schedule DWD-4 is the result of a regression analysis based on regulatory awarded ROEs related to the yields on Moody's A2-rated public utility bonds and contains the graphical results of a regression analysis of 852 rate cases for natural gas distribution utilities which were fully litigated during the period from January 1, 1980 through October 31, 2025. It shows the implicit equity risk

[21] Derived on line 4, page 1 of Schedule DWD-4.
[22] As shown on page 9 of Schedule DWD-4.

premium relative to the yields on A2-rated public utility bonds immediately prior to the issuance of each regulatory decision. It is readily discernible that there is an inverse relationship between the yield on A2-rated public utility bonds and equity risk premiums. In other words, as interest rates decline, the equity risk premium rises and vice versa, a result consistent with financial literature on the subject.[23] I used the regression results to estimate the equity risk premium applicable to the projected yield on Moody's A2-rated public utility bonds. Given the expected A2-rated utility bond yield of 5.49%, it can be calculated that the indicated equity risk premium applicable to that bond yield is 4.84%.

Q. WHAT IS YOUR CONCLUSION OF THE RANGE OF EQUITY RISK PREMIUMS FOR USE IN YOUR TOTAL MARKET APPROACH RPM FOR THE GAS UTILITY PROXY GROUP?

A. The range of equity risk premiums I applied to the Gas Utility Proxy Group is from 4.85% to 5.24%, which is the average of the beta-adjusted equity risk premium for the Gas Utility Proxy Group, the S&P Utilities Index, and the authorized return utility equity risk premium.

[23] *See, e.g.,* Robert S. Harris and Felicia C. Marston, "The Market Risk Premium: Expectational Estimates Using Analysts' Forecasts", Journal of Applied Finance, Vol. 11, No. 1, 2001, at 11-12; Eugene F. Brigham, Dilip K. Shome, and Steve R. Vinson, "The Risk Premium Approach to Measuring a Utility's Cost of Equity", Financial Management, Spring 1985, at 33-45.

Table 8: Summary of Conclusions for the Equity Risk Premium for the Gas Utility Proxy Group[24]

Beta-Adjusted Equity Risk Premium	4.77% - 5.94%
S&P Utilities Index Equity Risk Premium	4.95%
Authorized ROE Equity Risk Premium	4.84%
Average	4.85% - 5.24%

Q. WHAT IS THE INDICATED RANGE OF RPM COMMON EQUITY COST RATES BASED ON THE TOTAL MARKET APPROACH?

A. As shown on line 7, page 1 of Schedule DWD-4, and shown on Table 9, below, I calculated a range of indicated common equity cost rates from 10.41% to 10.80% for the Gas Utility Proxy Group based on the total market approach RPM.

Table 9: Summary of the Total Market Return Risk Premium Model[25]

Prospective Moody's Utility Bond Yield Applicable to the Gas Utility Proxy Group	5.56%
Prospective Equity Risk Premium	4.85% - 5.24%
Indicated Cost of Common Equity	10.41% - 10.80%

C. The Capital Asset Pricing Model

Q. PLEASE EXPLAIN THE THEORETICAL BASIS OF THE CAPM.

A. CAPM theory defines risk as the co-variability of a security's returns with the market's returns as measured by the beta (β). A beta less than 1.0 indicates lower variability than the market as a whole, while a beta greater than 1.0 indicates greater variability than the market.

The CAPM assumes that all non-market or unsystematic risk can be eliminated through diversification. The risk that cannot be eliminated through diversification is called market, or systematic, risk. In addition, the CAPM presumes that investors only require

[24] As shown on page 5 of Schedule DWD-4.
[25] As shown on page 1 of Schedule DWD-4.

compensation for systematic risk, which is the result of macroeconomic and other events that affect the returns on all assets. The model is applied by adding a risk-free rate of return to a market risk premium, which is adjusted proportionately to reflect the systematic risk of the individual security relative to the total market as measured by the beta. The traditional CAPM model is expressed as:

$$R_s = R_f + \beta (R_m - R_f)$$

Where:
R_s = Return rate on the common stock;
R_f = Risk-free rate of return;
R_m = Return rate on the market as a whole; and
β = Adjusted beta (volatility of the security relative to the market as a whole).

Numerous tests of the CAPM have measured the extent to which security returns and beta are related as predicted by the CAPM, confirming its validity. The empirical CAPM ("ECAPM") reflects the reality that while the results of these tests support the notion that the beta is related to security returns, the empirical Security Market Line ("SML") described by the CAPM formula is not as steeply sloped as the predicted SML.[26] The ECAPM reflects this empirical reality.

Q. WHY IS THE USE OF THE ECAPM APPROPRIATE IN DETERMINING THE ROE FOR THE COMPANY?

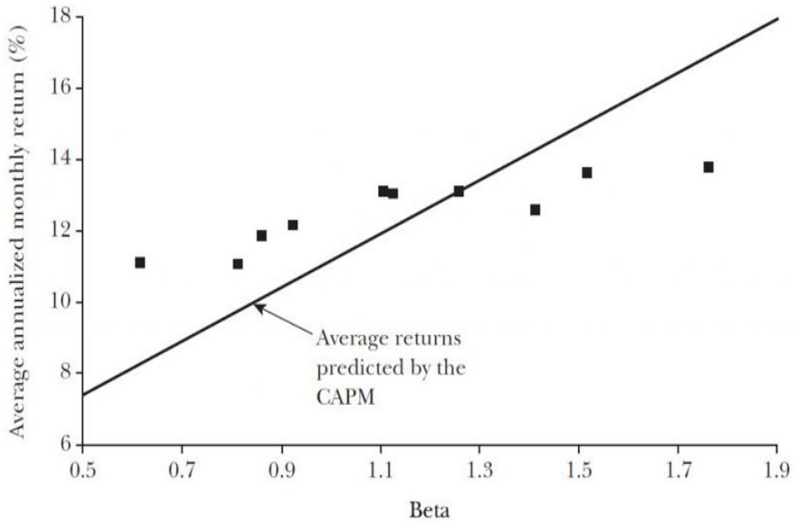
A. The ECAPM is a well-established model that has been relied on in both academic and regulatory settings. Fama & French clearly state regarding Figure 2, below, that "[t]he

[26] Roger A. Morin, Modern Regulatory Finance (Public Utility Reports, Inc., 2021), at page 223 ("Morin").

returns on the low beta portfolios are too high, and the returns on the high beta portfolios are too low."[27]

Figure 2 http://pubs.aeaweb.org/doi/pdfplus/10.1257/0895330042162430

Average Annualized Monthly Return versus Beta for Value Weight Portfolios Formed on Prior Beta, 1928–2003



In addition, Morin observes that while the results of these tests support the notion that beta is related to security returns, the empirical SML described by the CAPM formula is not as steeply sloped as the predicted SML. Morin states:

> With few exceptions, the empirical studies agree that … low-beta securities earn returns somewhat higher than the CAPM would predict, and high-beta securities earn less than predicted.[28]
>
> * * *
>
> Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:
>
> $K = RF + x\,(RM - RF) + (1-x)\ \beta(RM - RF)$
>
> where x is a fraction to be determined empirically. The value of x that best explains the observed relationship [is] Return = 0.0829 +

[27] Eugene F. Fama and Kenneth R. French, "The Capital Asset Pricing Model: Theory and Evidence", Journal of Economic Perspectives, Vol. 18, No. 3, Summer 2004 at 33 ("Fama & French").

[28] Morin, at 207.

0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = RF + 0.25(RM - RF) + 0.75\ \beta(RM - RF)$$[29]

Fama & French provide similar support for the ECAPM when they state:

> The early tests firmly reject the Sharpe-Lintner version of the CAPM. There is a positive relation between beta and average return, but it is too 'flat.'… The regressions consistently find that the intercept is greater than the average risk-free rate… and the coefficient on beta is less than the average excess market return… This is true in the early tests… as well as in more recent cross-section regressions tests, like Fama and French (1992).[30]

Finally, Fama & French further note:

> Confirming earlier evidence, the relation between beta and average return `for the ten portfolios is much flatter than the Sharpe-Linter CAPM predicts. The returns on low beta portfolios are too high, and the returns on the high beta portfolios are too low. For example, the predicted return on the portfolio with the lowest beta is 8.3 percent per year; the actual return is 11.1 percent. The predicted return on the portfolio with the t beta is 16.8 percent per year; the actual is 13.7 percent.[31]

Clearly, the justification from Morin and Fama & French, along with their reviews of other academic research on the CAPM, validate the use of the ECAPM. In view of theory and practical research, I have applied both the traditional CAPM and the ECAPM to the companies in the Gas Utility Proxy Group and averaged the results.

[29] Morin, at 221.
[30] Fama & French, at 32.
[31] Fama & French, at 33.

Q. IS THERE ADDITIONAL EVIDENCE THAT SUPPORTS THE VALIDITY OF THE ECAPM?

A. Yes, there is. The empirical issues with the CAPM have been present since the presentation of the model, as noted by Dianna R. Harrington in her text Modern Portfolio Theory & the Capital Asset Pricing Model:

> So far we have learned some very interesting things about the CAPM and reality. Some of the earliest work tested realized data (history) against data generated by simulated portfolios. Early studies by Douglas (1969) and Lintner (Douglas [1969]) showed discrepancies between what was expected on the basis of the CAPM and the actual relationships that were apparent in the capital markets. Theoretically, the minimal rate of return from the portfolios (the intercept) and the actual risk-free rate for the period should have been equal. They were not.
>
> * * *
>
> Another study, now more famous than Lintner's was done by Black, Jensen, and Scholes (1972). Lintner had used what is called a cross-sectional method (looking at a number of stock returns during one time period), whereas Black, Jensen, and Scholes used a time-series method (using returns for a number of stocks over several time periods). To make their test, Black, Jensen, and Scholes assumed that what had happened in the past was a good proxy for the investor expectations (a frequent assumption in CAPM tests). Using historical data, they generated estimates using what we call the market model:
>
> $$R_{jt} = \alpha_j + \beta_j (R_{mt}) + \varepsilon_j$$
>
> Where:
> R = total returns
> β = the slope of the line (the incremental return for risk)
> α = the intercept or a constant (expected to be 0 over time and across all firms)
> ε = an error term (expected to be random, without information)
> m = the market proxy
> j = the firm or portfolio
> t = the time period
>
> Instead of using single stocks, they formed portfolios in an effort to wash out one source of error; because betas of single firms are quite unstable.
>
> On the basis of the CAPM, they expected to find
>
> 1. That the intercept was equal to the risk-free rate (their proxy was the Treasury bill rate)

2. That the capital market line had a positive slope and that riskier (higher beta) securities provided higher return

Instead they found

1. That the intercept was different from the risk-free rate
2. That high-risk securities earned less and low-risk securities earned more than predicted by the model
3. That the intercept seemed to depend on the beta of any asset: high-beta stocks had a different intercept than low-beta stocks

* * *

Fama and MacBeth (1974) criticized the Black, Jensen, and Scholes study (hereafter called BJS). In a reformulation of the study, they supported the first of the BJS findings. They found that the intercept exceeded the risk-free proxy, but did not find the evidence to support the other BJS conclusions.[32]

Harrington discusses Black's potential solution to this phenomenon:

Black's replacement for the risk-free asset was a portfolio that had no covariability with the market portfolio. Because the relevant risk in the CAPM is systematic risk, a risk-free asset would be the one with no volatility relative to the market – that is, a portfolio with a beta of zero. All investor-perceived levels of risk could be obtained from various linear combinations of Black's zero-beta portfolio and the market portfolio… Since R_z (the rate of return of the zero-beta asset) and R_m are uncorrelated (as R_f and R_m were assumed to be in the simple CAPM), the investor can choose from various combinations of R_z and R_m. On segment R_mY, R_z, is sold short and proceeds are invested in R_m. On segment R_zR_m, portions of the zero-beta portfolio are purchased. At R_m, the investor is fully invested in the market portfolio. The equilibrium CAPM was rewritten by Black as follows:

$$E(R_i) = (1 - \beta_i)\, E(R_z) + \beta_i E(R_m)$$

Where:

E indicates expected,
$E(R_z)$ is less than $E(R_m)$, and
R_z holdings over the whole market must be in equilibrium. That is, the number of short sellers and lenders of securities must be equal.

Black's adaptation is intriguing. The result of using this model is a capital market line that has a less steep slope and a higher intercept than those of

[32] Dianna R. Harrington, Modern Portfolio Theory & the Capital Asset Pricing Model – A User's Guide, Prentice-Hall, Inc. 1983, at 43-45.

the simple CAPM. If Black's model is more correct in its description of investor behavior in the marketplace, then the use of the simple model would produce equity return predictions that would be too low for stocks with betas greater than one and too high for stocks with betas of less than one.[33]

Q. HAVE OTHER JURISDICTIONS CONSIDERED THE ECAPM?

A. Yes, it has been accepted in Alaska, Minnesota, Mississippi, Nevada, New York, and Virginia.[34]

Q. WHAT BETAS DID YOU USE IN YOUR CAPM ANALYSIS?

A. As discussed previously, I use: (1) the average of the *Value Line* and Bloomberg betas, which is consistent with prior testimony, and (2) *Value Line* betas. While both *Value Line* and Bloomberg adjust their calculated (or "raw") betas to reflect the tendency of beta to regress to the market mean of 1.00, *Value Line* calculates beta over a five-year period, while Bloomberg's calculation is based on two years of data.

[33] Dianna R. Harrington, Modern Portfolio Theory & the Capital Asset Pricing Model – A User's Guide, Prentice-Hall, Inc. 1983, at 30-31.

[34] The Regulatory Commission of Alaska, Docket P-97-7, Order Rejecting 1997, 1998, 1999 and 2000 Filed TAPS Rates; Setting Just and Reasonable Rates; Requiring Refunds and Filings; and Outlining Phase II Issues, November 27, 2002, at 146; Minnesota Public Utilities Commission, MPUC Docket No. G011/GR-15-736, In the Matter of the Application of Minnesota Energy Resources Corporation for Authority to Increase Rates for Natural Gas Service in Minnesota, Findings of Fact, Conclusions of Law, and Recommendation, August 19, 2016, at 29; Mississippi Public Service Commission, Docket No. 01-UN-0548, Notice of Intent of Mississippi Power Company to Change Rates for Electric Service in its Certificated Areas in the Twenty-Three Counties of Southeast Mississippi, Final Order, December 3, 2001, at 19; Public Utilities Commission of Nevada, Docket No. 20-02023, Application of Southwest Gas Corporation for authority to increase its retail natural gas utility service rates for Southern and Northern Nevada, Order, September 23, 2020, at 35; New York Public Service Commission, Case 16-G-0058, Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of KeySpan Gas East Corporation d/b/a National Grid for Gas Service, Order Adopting Terms of Joint Proposal and Establishing Gas Rate Plans, December 16, 2016, at 32; In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina, Docket No. E-22, Sub 562 Order Accepting Public Staff Stipulation in Part, Accepting CIGFUR Stipulation, Deciding Contested Issues, and Granting Partial Rate Increase, February 24, 2020, at 40.

Q. WHY ARE YOU PRESENTING YOUR MODEL RESULTS EXCLUSIVELY USING *VALUE LINE* BETAS ALONGSIDE YOUR TRADITIONAL ANALYSIS?

A. I am presenting my updated model results in this way because recent and historical data show that Bloomberg betas may not accurately reflect the risk of the Gas Utility Proxy Group at this time.

Q. HOW DOES BLOOMBERG CALCULATE BETA?

A. As discussed above, beta is the covariance of a stock relative to a market index divided by the variance of the market return. Bloomberg calculates its beta using two years of weekly return data relative to the S&P 500 Index.

Q. WHAT IS A COVARIANCE?

A. A covariance is comprised of two measures: (1) the relative volatility of the stock, which is the standard deviation of the weekly returns of the stock divided by the standard deviation of the weekly return of the index returns;[35] and (2) the correlation of weekly stock and market index returns.[36]

Q. WHAT HAS THE BLOOMBERG BETA BEEN FOR THE GAS UTILITY PROXY GROUP SINCE 2005?

A. As shown in Chart 1, below, the Gas Utility Proxy Group average adjusted beta generally has ranged between 0.60 and 0.90, with some high side exceptions (2007-2008 and 2020-2022) and low side exceptions (2018-2020, second half 2024 – present).

Chart 1: Bloomberg Adjusted beta for the Gas Utility Proxy Group 2005-Present[37]

[35] A relative volatility greater than 1.0 indicates that particular security is more volatile than the market during that calculation period. A relative volatility below 1.0 indicates that the security has less volatility than the market over that calculation period.

[36] Correlations range from negative one to positive one. The closer the correlation is to zero the weaker the relationship. Positive values indicate a positive correlation, where the values of both variables tend to increase together

[37] Source of Information: Bloomberg Professional Services.

Q. WHAT HAVE THE COMPONENTS OF BETA (I.E., RELATIVE VOLATILITY AND CORRELATION) SHOWN DURING THAT PERIOD?

A. As shown on Chart 2, the Gas Utility Proxy Group's relative volatility was generally above 1.0, indicating higher volatility than the S&P 500. On Chart 3, the two-year rolling correlation between the Gas Utility Proxy Group and the S&P 500 has varied over the period 2005 – 2025.

Chart 2: Relative Volatility for the Utility Proxy Group 2005-Present[38]

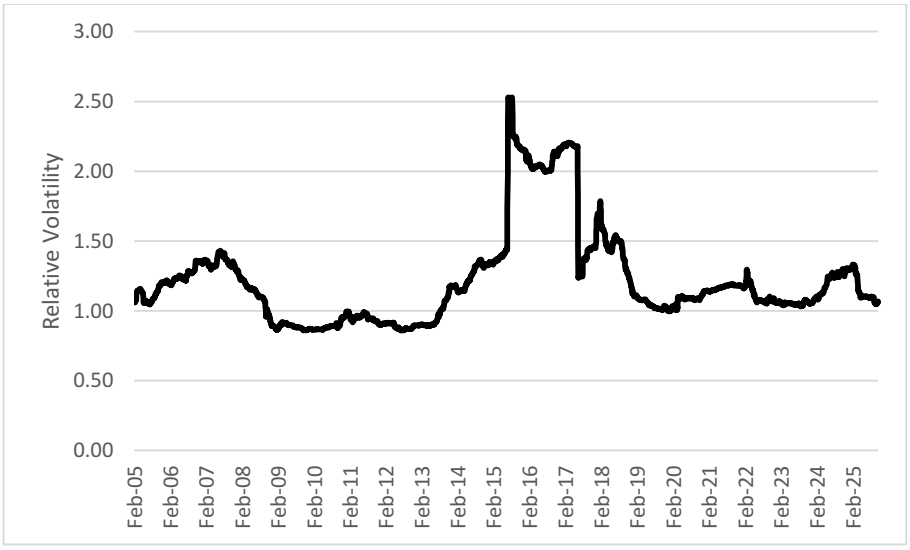


Chart 3: Correlation of the Utility Proxy Group Relative to the S&P 500 Index 2005-Present[39]

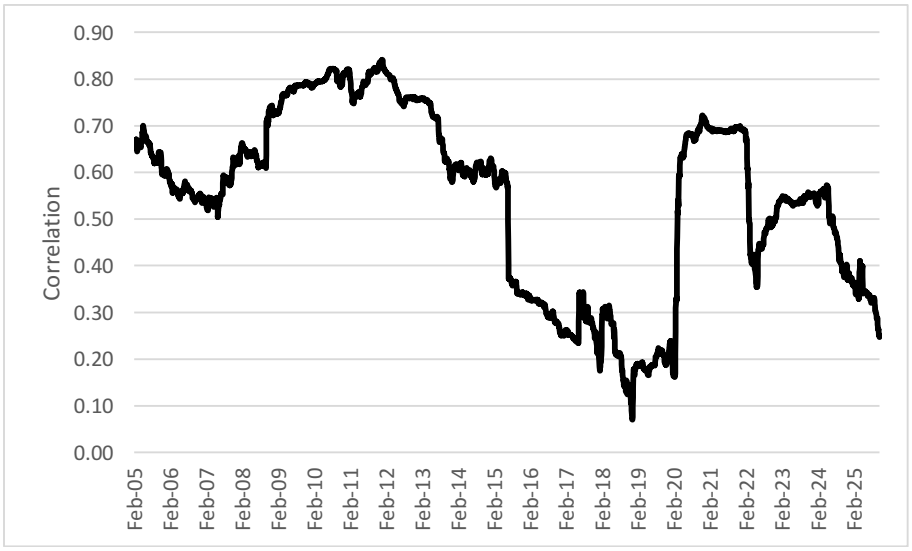


Importantly, as shown on Chart 3, during market distress (i.e., the Great Recession and the COVID-19 pandemic), the correlation of the Gas Utility Proxy Group returns and the S&P 500 returns approached 1.0, showing that utilities, as represented by the Gas

[38] Source of Information: S&P Capital IQ.
[39] Source of Information: S&P Capital IQ.

Utility Proxy Group, do not possess defensive qualities and should not be considered defensive stocks nor are they safe harbor investments in times of market distress.

Q. DOES THE LOWER CORRELATION OF THE GAS UTILITY PROXY GROUP RETURNS RELATIVE TO THE S&P 500 RETURNS ALONE NECESSITATE THE EXCLUSION OR MITIGATION OF BLOOMBERG BETAS?

A. No. Just as the investor required return varies under different market conditions, so do the model inputs. To determine whether Bloomberg's default betas calculated relative to the S&P 500 Index are accurately reflecting the risk of the Gas Utility Proxy Group, I compared them with betas calculated using two years of weekly returns relative to the New York Stock Exchange ("NYSE"). The comparison between two-year S&P 500 and NYSE betas are put forth in Chart 4, below:

Chart 4: Comparison of Two-Year S&P 500 and NYSE Betas for the Gas Utility Proxy Group 2005-Present[40]

[40] Source of Information: Bloomberg Professional Services.

As shown on Chart 4, the two-year S&P 500 and NYSE betas are generally consistent until approximately 2024, when the spread between them expanded beyond historical ranges as shown on Chart 5, below:

Chart 5: Spread Between Two-Year S&P and NYSE Betas for the Gas Utility Proxy Group 2005-Present[41]

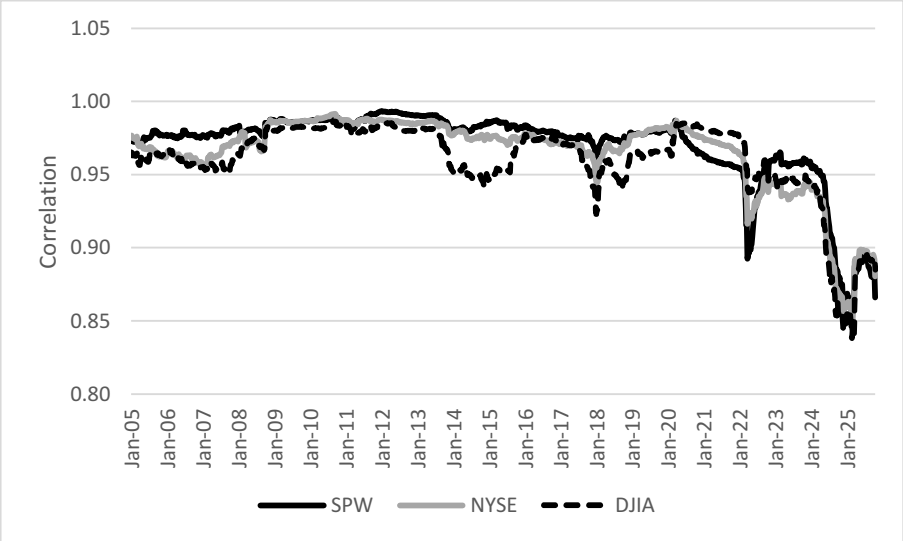
In view of Chart 5, it is clear that the relationship between the S&P 500 and NYSE is dislocated. To determine which index was distorting the risk of the Gas Utility Proxy Group, I compared the S&P 500 returns with those of the NYSE and other market indices.

Q. WHICH MARKET INDICES DID YOU USE IN YOUR COMPARISON?

A. In my comparison, I ran correlations between the returns of the S&P 500 and three other market indices: (1) the NYSE; (2) the Dow Jones Industrial Average ("DJIA"); and (3) the S&P 500 Equal Weighed Index ("SPW"). I ran the correlations for the same 2005-2025 period in the prior charts, which is put forth in Schedule DWD-5 and Chart 6, below:

[41] Source of Information: Bloomberg Professional Services.

Chart 6: Correlation between the S&P 500 Relative to Various Market Indices 2005-Present[42]



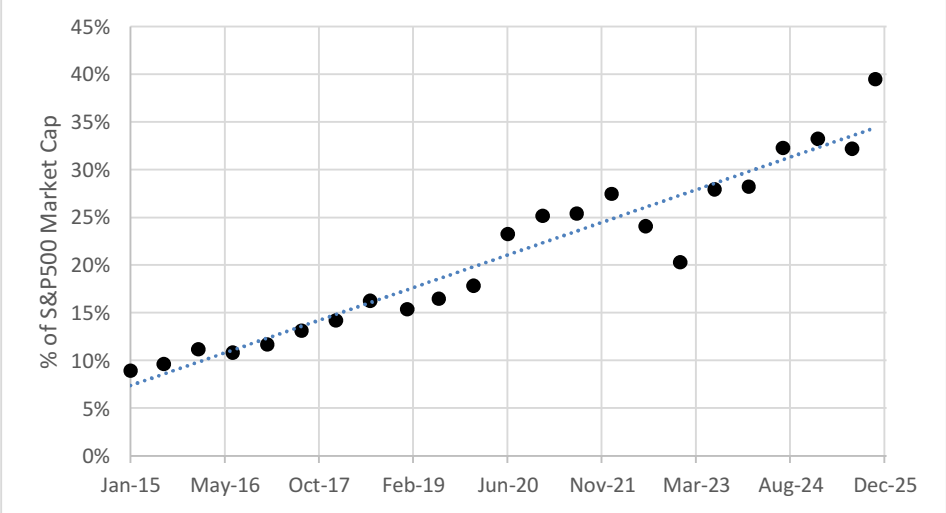
As shown in Chart 6, the two-year rolling correlation between S&P 500's returns and the other market indices' returns generally ranged between 0.95 and 1.00 for the entire period but has recently dipped below 0.85 for each of the measures, indicating that the relationship between the S&P 500 and the other market indices are strained. As shown on pages 2 through 4 of Schedule DWD-5, the two-year rolling correlations of the other market indices are within historical boundaries, whereas, as shown in Chart 6, the correlation in returns between the S&P 500 and the other three indices dropped below 0.90 for an extended period of time. Stated differently, the recent relationship between the S&P 500 Index and the other market indices is inconsistent with their historical relationships while the other market indices have maintained their historical relationships with each other.

[42] Source of Information: Bloomberg Professional Services.

Q. WHY IS THE RELATIONSHIP BETWEEN THE S&P 500 AND OTHER MARKET INDICES DEGRADING?

A. I believe that the concentration of the "Magnificent Seven"[43] ("Mag7") as a percentage of the S&P 500 market capitalization could explain why the two-year rolling correlations between the S&P 500 and the other market indices are degrading. Since 2015, the Mag7 stocks' percentage of the S&P 500 market capitalization has increased from 8.91% to 39.46% as shown on Chart 7, below:

Chart 7: Magnificent Seven Stocks Percentage of S&P 500 Market Capitalization 2015-Present[44]



Q. DOES THE CONCENTRATION AFFECT THE CALCULATION OF BETA FOR THE GAS UTILITY PROXY GROUP?

A. Yes, it does. I evaluated the two-year rolling correlation between the Utility Proxy Group's weekly returns and those returns for the Mag7 and the remaining 493 companies that comprise the S&P 500 index. As shown on Table 10, below, the Gas Utility Proxy

[43] The "Magnificent Seven" stocks are: (1) Apple, Inc.; (2) Amazon.com, Inc.; (3) Alphabet, Inc.; (4) Meta Platforms, Inc.; (5) Microsoft Corporation; (6) NVIDIA Corporation; and (7) Tesla, Inc.

[44] Source of Information: Bloomberg Professional Services.

Group's returns had a **negative** 0.1346 correlation with the Mag7 returns and a **positive** 0.1810 correlation with the rest of the S&P 500, indicating opposite relationships between the Gas Utility Proxy Group and the two subsets of the S&P 500.

Table 10: Correlation between the Gas Utility Proxy Group's Weekly Returns and those of the Magnificent Seven Stocks and the Remaining 493 Component Companies of the S&P 500 October 31, 2025[45]

	Correlation Coefficient 10/31/2025	
	Mag7	Remaining 493
Utility Proxy Group Weekly Returns	-0.1346	0.1810

Given the disconnection of the relationship between the Mag7 and the remaining members of the S&P 500 Index relative to the Gas Utility Proxy Group, the concentration of the Mag7 stocks within the S&P 500 Index, and the S&P 500's degrading relationship to other market indices, Bloomberg betas do not accurately reflect the risk of the Gas Utility Proxy Group as compared to the market, and therefore should be viewed with caution.

Q. PLEASE SUMMARIZE YOUR REASONING AS IT PERTAINS TO YOUR USE OF BETA IN YOUR ANALYSIS.

A. While the cost of capital and the inputs to cost of capital models vary based on market conditions, these variations should not lead an analyst to eliminate or mitigate a specific input. After investigating historical relationships between betas calculated relative to the S&P 500 and NYSE and the relative volatility and correlation of those betas, I discovered that these relationships are currently not within historical ranges and needed to be investigated further. I then compared returns for the S&P 500 to those of the NYSE, SPW, and DJIA, and discovered that those relationships also have departed from historical benchmarks. Importantly, the NYSE, SPW, and DJIA continue to show high levels of

[45] Source of Information: S&P Capital IQ.

correlation with each other. I then investigated the companies that comprised the S&P 500 and found that the Mag7 stocks' return now has an outsized influence on the return on the S&P 500. Looking at the correlations of Gas Utility Proxy Group returns related to Mag7 stocks and the remaining 493 stocks that comprise the S&P 500 Index, I discovered opposite relationships (i.e., negative correlation with Mag7 stocks and positive correlations with the remaining 493 stocks). Given the above, I believe that using the S&P 500 Index to calculate betas may not accurately reflect the risk of the Gas Utility Proxy Group and therefore should be viewed with caution. To reflect this in my analysis, I present my analysis using my traditional application of the models as presented in prior testimonies in Pennsylvania and elsewhere, and also present my model results exclusively using *Value Line* betas, which are calculated relative to the NYSE.

Q. PLEASE DESCRIBE YOUR SELECTION OF A RISK-FREE RATE OF RETURN.

A. As shown in Schedule DWD-6, the risk-free rate for both the applications of the CAPM is 4.53%. This risk-free rate is based on the average of the *Blue Chip* consensus forecast of the expected yields on 30-year U.S. Treasury bonds for the six quarters ending with the first calendar quarter of 2027, and long-term projections for the years 2027 to 2031 and 2032 to 2036.

Q. WHY DID YOU USE THE PROJECTED 30-YEAR TREASURY YIELD IN YOUR ANALYSES?

A. The yield on long-term U.S. Treasury bonds is almost risk-free and its term is consistent with the long-term cost of capital to public utilities measured by the yields on Moody's A2-rated public utility bonds; the long-term investment horizon inherent in utilities' common stocks; and the long-term life of the jurisdictional rate base to which the allowed

fair rate of return (i.e., cost of capital) will be applied. In contrast, short-term U.S. Treasury yields are more volatile and largely a function of Federal Reserve monetary policy.

Q. PLEASE EXPLAIN THE ESTIMATION OF THE EXPECTED RISK PREMIUM FOR THE MARKET USED IN YOUR CAPM ANALYSIS.

A. The basis of the market risk premium is explained in detail in note 1 on page 3 of Schedule DWD-6. As discussed above, the market risk premium is derived from an average of three historical data-based market risk premiums, one *Value Line* data-based market risk premium, and one *Value Line*, Bloomberg, and S&P Capital IQ data-based market risk premium.

The long-term income return on U.S. Government securities of 12.29% was deducted from the monthly historical total market return of 4.99%, which results in an historical market equity risk premium of 7.31%.[46] I applied a linear OLS regression to the monthly annualized historical returns on the S&P 500 relative to historical yields on long-term U.S. Government Securities. That regression analysis yielded a market equity risk premium of 7.96%. The PRPM market equity risk premium is 8.35% and is derived using the PRPM relative to the yields on long-term U.S. Treasury securities from January 1926 through October 2025.[47]

The *Value Line*-derived forecasted total market equity risk premium is derived by deducting the forecasted risk-free rate of 4.53%, discussed above, from the *Value Line* projected total annual market return of 10.91%, resulting in a forecasted total market equity risk premium of 6.38%.

---

[46] SBBI - 2023, at Appendix A-1 (1) through A-1 (3) and Appendix A-7 (19) through A-7 (21); Bloomberg Professional Services.

[47] As shown on page 3 of Schedule DWD-6.

The S&P 500 projected market equity risk premium using *Value Line*, Bloomberg and S&P Capital IQ data is derived by subtracting the projected risk-free rate of 4.53% from the projected total return of the S&P 500 of 17.67%. The resulting market equity risk premium is 13.14%.

These five market risk premium measures, when averaged, result in an average total market equity risk premium of 8.63%.

Table 11: Summary of the Calculation of the Market Risk Premium for Use in the CAPM[48]

Historical Spread Between Total Returns of Large Stocks and Long-Term Government Bond Yields (1926 – 2024)	7.31%
Regression Analysis on Historical Data	7.96%
PRPM Analysis on Historical Data	8.35%
Prospective Equity Risk Premium using Total Market Returns from *Value Line* Summary & Index less Projected 30-Year Treasury Bond Yields	6.38%
Prospective Equity Risk Premium using Measures of Capital Appreciation and Income Returns from for the S&P 500 less Projected 30-Year Treasury Bond Yields	13.14%
Average	8.63%

Q. WHAT ARE THE RESULTS OF YOUR APPLICATION OF THE TRADITIONAL AND EMPIRICAL CAPM TO THE GAS UTILITY PROXY GROUP?

A. As shown on page 1 and 2 of Schedule DWD-6, the average of the mean and median CAPM result using my traditional approach is 10.17%. The average of the mean and median CAPM using only *Value Line* betas is 11.30%. Given the above, a reasonable range of CAPM cost rates is from 10.17% to 11.30%.

[48] As shown on page 3 of Schedule DWD-6.

D. Common Equity Cost Rates for Proxy Group of Domestic, Non-Price Regulated Companies based on the DCF, RPM, and CAPM

Q. WHY DO YOU ALSO CONSIDER A PROXY GROUP OF DOMESTIC, NON-PRICE REGULATED COMPANIES?

A. Since the purpose of rate regulation is to be a substitute for marketplace competition, non-price regulated firms operating in the competitive marketplace make an excellent proxy if they are comparable in total risk to the Gas Utility Proxy Group being used to estimate the cost of common equity. The selection of such domestic, non-price regulated competitive firms theoretically and empirically results in a proxy group which is comparable in total risk to the Gas Utility Proxy Group, since all of these companies compete for capital in the exact same markets. Moreover, *Hope* and *Bluefield* cases do not specify that comparable risk companies had to be utilities.

Q. HOW DID YOU SELECT NON-PRICE REGULATED COMPANIES THAT ARE COMPARABLE IN TOTAL RISK TO THE GAS UTILITY PROXY GROUP?

A. In order to select a proxy group of domestic, non-price regulated companies similar in total risk to the Gas Utility Proxy Group, I relied on betas and related statistics derived from *Value Line* regression analyses of weekly market prices over the most recent 260 weeks (i.e., five years). As shown on Schedule DWD-7, these selection criteria resulted in a proxy group of thirty-two domestic, non-price regulated firms comparable in total risk to the Gas Utility Proxy Group. Total risk is the sum of non-diversifiable market risk and diversifiable company-specific risks. The criteria used in selecting the domestic, non-price regulated firms was:

(i) They must be covered by *Value Line* (Standard Edition);

(ii) They must be domestic, non-price regulated companies, i.e., not utilities;

(iii) Their unadjusted betas must lie within plus or minus two standard deviations of the average unadjusted beta of the Gas Utility Proxy Group; and

(iv) The residual standard errors of the *Value Line* regressions which gave rise to the unadjusted betas must lie within plus or minus two standard deviations of the average residual standard error of the Gas Utility Proxy Group.

Betas measure market, or systematic, risk, which is not diversifiable. The residual standard errors of the regressions measure each firm's company-specific, diversifiable risk. Companies that have similar betas and similar residual standard errors resulting from the same regression analyses have similar total investment risk.

Q. DID YOU CALCULATE COMMON EQUITY COST RATES USING THE DCF MODEL, THE RPM, AND THE CAPM FOR THE NON-PRICE REGULATED PROXY GROUP?

A. Yes. Because the DCF model, RPM, and CAPM have been applied in an identical manner as described above, I will not repeat the details of the rationale and application of each model. One exception is in the application of the RPM, where I did not use public utility-specific equity risk premiums.

Page 2 of Schedule DWD-8 derives the constant growth DCF model common equity cost rate. As shown, the indicated common equity cost rate, using the constant growth DCF for the Non-Price Regulated Proxy Group comparable in total risk to the Gas Utility Proxy Group, is 11.29%.

Pages 3 through 5 of Schedule DWD-8 contain the data and calculations that support the range of indicated RPM common equity cost rates from 10.94% to 11.64%.

As shown on line 1, page 3 of Schedule DWD-8, the consensus prospective yield on Moody's Baa2-rated corporate bonds for the six quarters ending in the first quarter of 2027, and for the years 2027 to 2031 and 2032 to 2036, is 5.89%.[49] Since the Non-Price Regulated Proxy Group has an average Moody's long-term issuer rating of A3, another adjustment to the expected Baa2-rated public utility bond is needed to reflect the difference in bond ratings. A downward adjustment of 0.19%, which represents two-thirds of a recent spread between A2-rated and Baa2-rated corporate bond yields, is necessary to make the prospective bond yield applicable to an A2-rated corporate bond.[50] Subtracting the 0.19% from the 5.89% prospective Baa2-rated corporate bond yield results in a 5.70% expected bond yield applicable to the Non-Price Regulated Proxy Group.

When beta-adjusted risk premiums of 5.24% and 5.94%[51] relative to the Non-Price Regulated Proxy Group are added to the prospective A2-rated corporate bond yield of 5.70%, the indicated range of RPM common equity cost rates are from 10.94% to 11.64%.

Pages 6 and 7 of Schedule DWD-8 contains the inputs and calculations that support my range of indicated CAPM/ECAPM common equity cost rates from 10.68% to 11.29%.

Q. WHAT IS THE INDICATED RANGE OF COMMON EQUITY COST RATES BASED ON THE NON-PRICE REGULATED PROXY GROUP COMPARABLE IN TOTAL RISK TO THE GAS UTILITY PROXY GROUP?

A. As shown on page 1 of Schedule DWD-8, the results of the common equity models applied to the Non-Price Regulated Proxy Group – which group is comparable in total risk to the Gas Utility Proxy Group – are as follows:

---

[49] *Blue Chip Financial Forecasts*, June 2, 2025 at 14 and October 31, 2025 at 2.
[50] As shown on line 2 and explained in note 2, page 3 of Schedule DWD-8.
[51] Derived on page 5 of Schedule DWD-8.

Table 12: Summary of Model Results Applied to the Non-Price Regulated Proxy Group[52]

Discounted Cash Flow Model	11.29%
Risk Premium Model	10.94% - 11.64%
Capital Asset Pricing Model	10.68% - 11.29%
Mean	10.97% - 11.41%
Median	10.94% - 11.29%
Average of Mean and Median	10.96% - 11.35%

The average of the mean and median of these models indicate a range of cost rates from 10.96% to 11.35%. While I do not consider these results in determining my recommended range of ROEs, I note that they are comparable to my Gas Utility Proxy Group indicated results.

VII. RANGE OF COMMON EQUITY COST RATES BEFORE ADJUSTMENTS

Q. WHAT IS THE RANGE OF INDICATED COMMON EQUITY COST RATES PRODUCED BY YOUR ROE MODELS?

A. The range of indicated ROEs produced from my analysis is from 10.17% to 11.35%. The indicated results of the DCF model, RPM, and CAPM fall within that indicated range. I used multiple cost of common equity models as primary tools in arriving at my recommended common equity cost rate, because no single model is so inherently precise that it can be relied on to the exclusion of other theoretically sound models. Using multiple models adds reliability to the estimated common equity cost rate, with the prudence of using multiple cost of common equity models supported in both the financial literature and regulatory precedent. Based on these common equity cost results, I conclude that a range of common equity cost rates between 10.17% and 11.35% is reasonable.

[52] As shown on page 1 of Schedule DWD-8.

VIII. ADJUSTMENTS TO THE COMMON EQUITY COST RATE

Q. IS IT NECESSARY TO CONDUCT A RELATIVE RISK ANALYSIS BETWEEN THE GAS UTILITY PROXY GROUP AND THE COMPANY?

A. Yes. After a proxy group-specific ROE is determined, one must conduct a relative risk analysis to determine whether additional adjustments need to be made to reflect the unique risk of the subject company.

A. Business Risk Adjustment

Q. DOES UGI GAS'S SMALLER SIZE RELATIVE TO THE GAS UTILITY PROXY GROUP COMPANIES INCREASE ITS BUSINESS RISK?

A. Yes. UGI Gas's smaller size relative to the Gas Utility Proxy Group companies indicates greater relative business risk for the Company because, all else being equal, size has a material bearing on risk.

Size affects business risk because smaller companies generally are less able to cope with significant events that affect sales, revenues, and earnings. For example, smaller companies face more risk exposure to business cycles and economic conditions, both nationally and locally. Additionally, the loss of revenues from a few larger customers would have a greater effect on a small company than on a bigger company with a larger, more diverse, customer base.

As further evidence illustrates that smaller firms are riskier, investors generally demand greater returns from smaller firms to compensate for less marketability and liquidity of their securities. Kroll's Cost of Capital Navigator: U.S. Cost of Capital Module ("Kroll") discusses the nature of the small-size phenomenon, providing an indication of the magnitude of the size premium based on several measures of size. In discussing "Size as a Predictor of Equity Premiums," Kroll states:

> The size effect is based on the empirical observation that companies of smaller size are associated with greater risk and, therefore, have greater cost of capital [sic]. The "size" of a company is one of the most important risk elements to consider when developing cost of equity capital estimates for use in valuing a business simply because size has been shown to be a *predictor* of equity returns. In other words, there is a significant (negative) relationship between size and historical equity returns - as size *decreases*, returns tend to *increase*, and vice versa. (footnote omitted) (emphasis in original)[53]

Furthermore, in "The Capital Asset Pricing Model: Theory and Evidence," Fama and French note size is indeed a risk factor which must be reflected when estimating the cost of common equity. On page 38, they note:

> . . . the higher average returns on small stocks and high book-to-market stocks reflect unidentified state variables that produce undiversifiable risks (covariances) in returns not captured in the market return and are priced separately from market betas.[54]

Based on this evidence, Fama and French proposed their three-factor model which includes a size variable in recognition of the effect size has on the cost of common equity.

Also, it is a basic financial principle that the use of funds invested, and not the source of funds, is what gives rise to the risk of any investment.[55] Eugene Brigham, a well-known authority, states:

> A number of researchers have observed that portfolios of small-firms (sic) have earned consistently higher average returns than those of large-firm stocks; this is called the "small-firm effect." On the surface, it would seem to be advantageous to the small firms to provide average returns in a stock market that are higher than those of larger firms. In reality, it is bad news for the small firm; **what the small-firm effect means is that the capital market demands higher returns on stocks of small firms than on otherwise similar stocks of the large firms.** (emphasis added)[56]

---

53 Kroll: Cost of Capital Navigator: U.S. Cost of Capital Module, "Size as a Predictor of Equity Returns," at 1.

54 Fama & French, at 25-43.

55 Richard A. Brealey and Stewart C. Myers, Principles of Corporate Finance (McGraw-Hill Book Company, 1996), at 204-205, 229.

56 Eugene F. Brigham, Fundamentals of Financial Management, Fifth Edition (The Dryden Press, 1989), at 623.

Consistent with the financial principle of risk and return discussed above, increased relative risk due to small size must be considered in the allowed rate of return on common equity. Therefore, the Commission's authorization of a cost rate of common equity in this proceeding must appropriately reflect the unique risks of UGI Gas's natural gas distribution operations, including its small size, which is justified and supported above by evidence in the financial literature.

Q. INTERVENING WITNESSES OFTEN CITE A STUDY BY DR. ANNIE WONG FOR THE PROPOSITION THAT THERE IS NO SIZE PREMIUM FOR UTILITIES. DOES THIS STUDY ESTABLISH THAT CONTENTION?

A. No, it does not. In the Wong study, Dr. Wong attempted to relate a change in beta to the size effect. Dr. Wong's beta study is incorrect, as beta is a measure of market risk, whereas size is a company-specific, or diversifiable risk. While betas may contain some measure of diversifiable risk, betas have low explanatory power. As shown in Schedule DWD-10, the R-Squared, which measures the variability of returns applicable to beta, is approximately 0.18 for my Gas Utility Proxy Group, which means approximately 82% of the variation of the Gas Utility Proxy Group's returns are unexplained by beta.

Q. IS THERE ALSO A PUBLISHED RESPONSE TO DR. WONG'S ARTICLE?

A. Yes, there is. In response to Professor Wong's article, *The Quarterly Review of Economics and Finance* published an article in 2003, authored by Thomas M. Zepp, which commented on the Wong article often cited by intervening witnesses. Relative to Dr. Wong's results, Dr. Zepp concluded in the Abstract on page 1 of his article: "Her weak results, however, do not rule out the possibility of a small firm effect for utilities."[57] Dr. Zepp also noted on

[57] Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-582.

page 582 that: "Two other studies discussed here support a conclusion that smaller water utility stocks are more risky than larger ones. To the extent that water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones."[58]

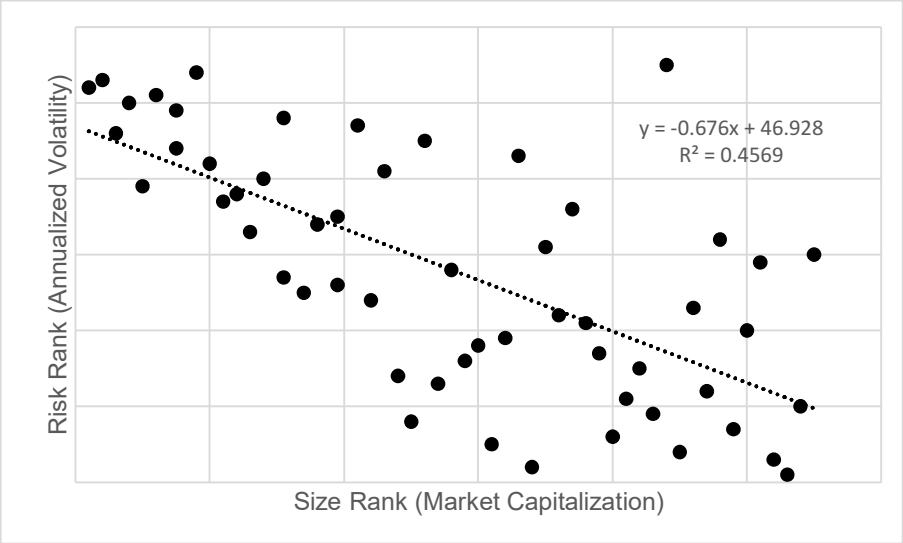
Q. HAVE YOU PERFORMED STUDIES LINKING SIZE AND RISK FOR UTILITY COMPANIES?

A. Yes, I have performed two studies that link size and risk for utility companies. My first study included the universe of electric, gas, and water companies included in *Value Line* Standard Edition. For each of the utilities, the annualized volatility (a measure of risk)[59] was calculated, and each company was ranked by its current market capitalization (a measure of size) as reported by *Value Line*. Ranking the companies by size (smallest to largest) and risk (most risky to least risky), results in the scatterplot shown on Chart 8, below:

[58] Thomas M. Zepp, "Utility Stocks and the Size Effect --- Revisited", *The Quarterly Review of Economics and Finance*, 43 (2003), at 578-583.

[59] Annualized volatility equals the standard deviation of returns over the period multiplied by the square root of 252, or the approximate number of trading days in a year.

Chart 8: Relationship Between Size and Risk for the *Value Line* Universe of Utility Companies[60]



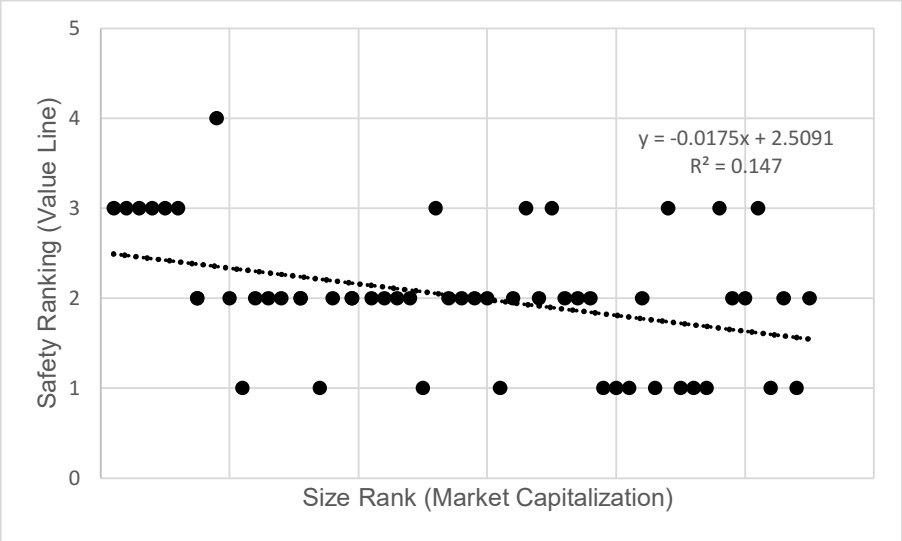
As shown in Chart 8 above, as company size decreases (increasing size rank), the annualized volatility increases, linking size and risk for utilities, which is significant at 95.0% confidence level.

The second study used the same universe of companies, but instead of annualized volatility, I used the *Value Line* Safety Ranking, which is another measure of total risk.[61] After ranking the companies by size and Safety Ranking, I made a scatterplot of those data, as shown on Chart 9, below:

[60] Source: *Value Line*

[61] *Value Line* also ranks stocks for Safety by analyzing the total risk of a stock compared to the approximately 1,700 stocks in the *Value Line* universe. Each of the stocks tracked in the *Value Line Investment Survey* is ranked in relationship to each other, from 1 (the highest rank) to 5 (the lowest rank). Safety is a quality rank, not a performance rank, and stocks ranked 1 and 2 are most suitable for conservative investors; those ranked 4 and 5 will be more volatile. Volatility means prices can move dramatically and often unpredictably, either down or up. The major influences on a stock's Safety rank are the company's financial strength, as measured by balance sheet and financial ratios, and the stability of its price over the past five years.

Chart 9: Relationship Between Size and Safety Ranking for the *Value Line* Universe of Utility Companies[62]



Similar to the first study, as company size decreases, Safety Ranking degrades, indicating a link between size and risk for utilities. This study is also significant at the 95% confidence level. The assertion that size and risk are not linked for utility companies should be dismissed by the Commission.

Q. IS THERE A WAY TO QUANTIFY A RELATIVE RISK ADJUSTMENT DUE TO UGI GAS'S GREATER BUSINESS RISK RELATIVE TO THE GAS UTILITY PROXY GROUP?

A. Yes. In the absence of other empirical methods, I compared UGI Gas's and the Gas Utility Proxy Group's relative size, as measured by market capitalization on October 31, 2025.

[62] Source: *Value Line*.

Table 13: Size as Measured by Market Capitalization for the Company and the Gas Utility Proxy Group

	Market Capitalization* ($ Millions)	Times Greater Than the Company
UGI Gas	$3,901.539	
Gas Utility Proxy Group Median	$ 4,801.525	1.2x
*From page 1 of Schedule DWD-9.		

The Company's market capitalization was at $3.90 billion as of October 31, 2025, compared with the median market capitalization of the Utility Proxy Group of $4.80 billion as of October 31, 2025. The Gas Utility Proxy Group's market capitalization is 1.2 times the size of UGI Gas's market capitalization.

As a result, it is necessary to upwardly adjust the indicated range of common equity cost rates to reflect UGI Gas's greater risk due to its smaller relative size. The determination is based on the size premiums for portfolios of New York Stock Exchange, American Stock Exchange, and NASDAQ listed companies ranked by deciles for the 1926 to 2024 period. The average size premium for the Gas Utility Proxy Group with a market capitalization of $4.80 billion falls in the 5th decile, while UGI Gas's market capitalization of $4.80 billion places the Company in the 6th decile. The size premium spread between the 5th decile and the 6th decile is 0.26%. Even though a 0.26% upward size adjustment is indicated, I conservatively applied a size premium of 0.05% to UGI Gas's indicated range of common equity cost rates.

Q. DOES THIS COMMISSION CONSIDER SIZE IN DETERMINING THE AUTHORIZED ROE?

A. Yes. In Docket No. R-2019-3008212, the Commission stated:

> Based on the evidence of record, we agree with the recommendation of the ALJs that the Company be awarded a DCF cost of common equity which

> is one standard deviation about the average of the mean and median proxy group ROE from the Company's DCF analysis. In so doing, we recognize that the Company's size is a factor in assessing its ability to attract capital. Accordingly, we shall reject Citizens' Exception No. 10, I&E's Exception No. 4, and the OCA's Exception No. 7, consistent with the following discussion.
>
> We are not convinced by the arguments of I&E and the OCA that the ALJs erred in awarding a size adjustment to Citizens'. Rather, we are of the same position as the ALJs that the Company's witness Mr. D'Ascendis offered persuasive record evidence that there is a general inverse relationship between size and risk, such that smaller utilities like Citizens' face greater risk.[63]

Q. WHAT WOULD BE THE ROE RESULT USING THE COMMISSION'S METHOD IN THIS CASE?

A. The average of the mean and median DCF model result is 10.53%, as shown on page 1 of Schedule DWD-3. The standard deviation of those results is 1.51%. Adding the standard deviation to the average of the mean and median DCF result would indicate an ROE of 12.04% for UGI Gas, which is higher than my ultimate recommendation in this case. In view of this, my size adjustment should be considered conservative.

B. Flotation Cost Adjustment

Q. WHAT ARE FLOTATION COSTS?

A. Flotation costs are those costs associated with the sale of new issuances of common stock. They include market pressure and the mandatory unavoidable costs of issuance (e.g., underwriting fees and out-of-pocket costs for printing, legal, registration, etc.). For every dollar raised through debt or equity offerings, the Company receives less than one full dollar in financing.

[63] Pennsylvania Public Utility Commission, Docket No. R-2019-3008212, Opinion and Order, at 103.

Q. WHY IS IT IMPORTANT TO RECOGNIZE FLOTATION COSTS IN THE ALLOWED COMMON EQUITY COST RATE?

A. It is important because there is no other mechanism in the ratemaking paradigm through which such costs can be recognized and recovered. Because these costs are real, necessary, and legitimate, recovery of these costs should be permitted. As noted by Morin:

> The costs of issuing these securities are just as real as operating and maintenance expenses or costs incurred to build utility plants, and fair regulatory treatment must permit the recovery of these costs….
>
> The simple fact of the matter is that common equity capital is not free…[Flotation costs] must be recovered through a rate of return adjustment.[64]

Q. SHOULD FLOTATION COSTS BE RECOGNIZED ONLY IF THERE WAS AN ISSUANCE DURING THE TEST YEAR OR THERE IS AN IMMINENT POST-TEST YEAR ISSUANCE OF ADDITIONAL COMMON STOCK?

A. No. As noted above, there is no mechanism to recapture such costs in the ratemaking paradigm other than an adjustment to the allowed common equity cost rate. Flotation costs are charged to capital accounts and are not expensed on a utility's income statement. As such, flotation costs are analogous to capital investments, albeit negative, reflected on the balance sheet. Recovery of capital investments relates to the expected useful lives of the investment. Since common equity has a very long and indefinite life (assumed to be infinity in the standard regulatory DCF model), flotation costs should be recovered through an adjustment to common equity cost rate, even when there has not been an issuance during

[64] Morin, at 329.

the test year, or in the absence of an expected imminent issuance of additional shares of common stock.

Historical flotation costs are a permanent loss of investment to the utility and should be taken into account. When any company, including a utility, issues common stock, flotation costs are incurred for legal, accounting, printing fees, and the like. For each dollar of issuing market price, a small percentage is expensed and is permanently unavailable for investment in utility rate base. Since these expenses are charged to capital accounts and not expensed on the income statement, the only way to restore the full value of that dollar of issuing price with an assumed investor required return of 10% is for the net investment, $0.95, to earn more than 10% to net back to the investor a fair return on that dollar. In other words, if a company issues stock at $1.00 with 5% in flotation costs, it will net $0.95 in investment. Assuming the investor in that stock requires a 10% return on their invested $1.00 (i.e., a return of $0.10), the company needs to earn approximately 10.5% on its invested $0.95 to receive a $0.10 return.

Q. DO THE COMMON EQUITY COST RATE MODELS YOU HAVE USED ALREADY REFLECT INVESTORS' ANTICIPATION OF FLOTATION COSTS?

A. No. All of these models assume no transaction costs. The literature is quite clear that these costs are not reflected in the market prices paid for common stocks. For example, Brigham and Daves confirm this and provide the methodology utilized to calculate the flotation adjustment.[65] In addition, Morin confirms the need for such an adjustment even when no new equity issuance is imminent.[66] Consequently, it is proper to include a flotation cost

[65] Eugene F. Brigham and Phillip R. Daves, Intermediate Financial Management, 9th Edition, Thomson/Southwestern, at p. 342.

[66] Morin, at 339.

adjustment when using cost of common equity models to estimate the common equity cost rate.

Q. WHAT IS THE IMPACT TO INVESTORS IF THE RECOVERY OF FLOTATION COSTS IS DENIED?

A. Denying recovery of issuance costs penalizes the investors that fund the utility operations. As shown on page 2 of Schedule DWD-11, because of flotation costs, an authorized return of 10.85% would be required to realize an ROE of 10.75% (i.e., a 10-basis point flotation cost adjustment). If flotation costs are not recovered, the growth rate falls and the ROE decreases to 10.65% (i.e., below the required return).[67]

Q. DO YOU AGREE THAT FLOTATION COSTS CAN BE RECOVERED AS AN EXPENSE RATHER THAN AN ADJUSTMENT TO THE ROE?

A. No, I do not. The reason being is due to opportunity cost. When an entity issues equity or debt, the net proceeds of that capital is generally used to finance rate base, which is entitled to a return of (depreciation) and a return on (the weighted average cost of capital). Because the cost of issuing the capital would otherwise go to financing rate base, the costs of that capital would need to be recovered on an ongoing basis.

Q. HAVE OTHER REGULATORY COMMISSIONS ALLOWED FLOTATION COSTS IN THE ALLOWED ROE?

A. Yes, they have. For example, in Peoples Gas System, Inc.'s ("PGS") recent 2023 rate proceeding, the Florida Public Service Commission stated the following regarding my proposed flotation cost adjustment:

> In PGS's last rate case in 2008, we did not make a specific adjustment for flotation costs, but in our order we stated that we have traditionally recognized

[67] Schedule DWD-11, page 2 is provided for illustrative purposes only. Please note that I have not relied on the results of the analysis in determining my recommended ROE or range.

> a reasonable adjustment for flotation costs in the determination of the investor required return...We find witness D'Ascendis's method to determine the flotation cost is credible and provided persuasive evidence for his recommendation to include a flotation cost of 9 basis points.[68]

Given the above, I recommend this Commission also correctly include flotation costs in the allowed ROE.

Q. HOW DID YOU CALCULATE THE FLOTATION COST ALLOWANCE?

A. I modified the DCF calculation to provide a dividend yield that would reimburse investors for issuance costs in accordance with the method cited in literature by Brigham and Daves, as well as by Morin. The flotation cost adjustment recognizes the actual costs of issuing equity that were incurred by UGI Corp. Based on the issuance costs shown on page 1 of Schedule DWD-11, an adjustment of 0.12% is required to reflect the flotation costs applicable to the Gas Utility Proxy Group.

Q. WHAT IS THE INDICATED COST OF COMMON EQUITY AFTER YOUR COMPANY-SPECIFIC ADJUSTMENTS?

A. Applying the 0.05% business risk adjustment and the 0.12% flotation cost adjustment to the indicated range of common equity cost rates between 10.17% and 11.35% results in a range of common equity cost rates between 10.34% and 11.52%.[69]

IX. CONCLUSION

Q. WHAT IS YOUR RECOMMENDED ROE FOR UGI GAS?

A. Given the discussion above and the results of my analytical models, I conclude that an appropriate ROE for the Company is 10.75%.

---

[68] *In re: Petition for rate increase by Peoples Gas System, Inc.*, Docket No. 20230023-GU, Order Granting in Part and Denying in Part Peoples Gas System, Inc.'s Petition for a Rate Increase, at 68 (December 27, 2023).

[69] A credit risk adjustment is not necessary in this proceeding, as UGI Gas's long-term issuer rating is equivalent to the average long-term issuer rating of the Gas Utility Proxy Group.

Q. IN YOUR OPINION, IS YOUR PROPOSED ROE OF 10.75% FAIR AND REASONABLE TO UGI AND ITS CUSTOMERS?

A. Yes, it is.

Q. IN YOUR OPINION, IS UGI GAS'S PROPOSED CAPITAL STRUCTURE CONSISTING OF 45.75% LONG-TERM DEBT AND 54.25% COMMON EQUITY FAIR AND REASONABLE?

A. Yes, it is.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

APPENDIX A

for

Dylan W. D'Ascendis

Dylan W. D'Ascendis, CRRA, CVA
Partner
Framingham, MA Office

Summary

Dylan is an experienced consultant and a Certified Rate of Return Analyst (CRRA) and Certified Valuation Analyst (CVA). Dylan joined ScottMadden in 2016 and is a leading expert witness with respect to cost of capital, capital structure, and valuation. He has served as a consultant for investor-owned and municipal utilities and authorities for 17 years. Dylan has testified as an expert witness on over 150 occasions regarding rate of return, cost of service, rate design, and valuation before more than 40 regulatory jurisdictions in the United States and Canada, an American Arbitration Association panel, and the Superior Court of Rhode Island. He also maintains the benchmark index against which the Hennessy Gas Utility Mutual Fund performance is measured. Dylan holds a B.A. in economic history from the University of Pennsylvania and an M.B.A. with concentrations in finance and international business from Rutgers University.

UGI GAS STATEMENT NO. 9

DARIN T. ESPIGH

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 9

Direct Testimony of
Darin T. Espigh

Topics Addressed: **Taxes and Tax Adjustments**

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your full name and business address.

A. My name is Darin T. Espigh. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed and in what capacity?

A. I am employed by UGI Corporation ("UGI Corp.") as Senior Manager Natural Gas Tax Accounting. UGI Corp. is the parent company of UGI Utilities, Inc. ("UGI"). UGI has two operating divisions, the Gas Division ("UGI Gas" or the "Company") and the Electric Division ("UGI Electric"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC").

Q. What are your principal duties and responsibilities as Senior Manager Natural Gas Tax Accounting for UGI Corp.?

A. My primary duties as Senior Manager Natural Gas Tax Accounting include the preparation of tax data to be reported in UGI Corp.'s various United States Securities and Exchange Commission and regulatory filings, as well as its various federal and state income and non-income tax related filings. Additionally, I maintain the current and deferred income tax accrual and expense accounts, perform tax research, and assist UGI with tax matters as they arise. I also manage the reporting of UGI's various tax filings with its local, state, and federal jurisdictions.

Q. Please describe your educational background and professional experience.

A. They are set forth in my resume attached as UGI Gas Exhibit DTE-1.

Q. Please describe the purpose of your testimony.

A. I am providing testimony on behalf of UGI Gas. I will explain the Company's *pro forma* tax adjustments to its principal accounting exhibits for the fully projected future test year ending September 30, 2027 ("FPFTY"). I will also explain the tax adjustments made to the results of UGI Gas's historic test year ended September 30, 2025 ("HTY") and future test year ending September 30, 2026 ("FTY").

Q. Have you testified previously before this Commission?

A. Yes. UGI Gas Exhibit DTE-1 contains a list of those proceedings.

Q. Mr. Espigh, are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring the UGI Gas Exhibits: DTE-1 and DTE-2. Together with other Company witnesses, I am sponsoring portions of UGI Gas Exhibit A (Fully Projected), UGI Gas Exhibit A (Future) and UGI Gas Exhibit A (Historic) that pertain to tax-related items. These exhibits comprise UGI Gas's principal accounting exhibits for the HTY, FTY, and FPFTY. I am also sponsoring certain responses to the Commission's filing requirements and standard data requests as indicated on the master list accompanying this filing.

II. TAX ADJUSTMENTS

Q. Please provide an overview of UGI Gas's principal accounting exhibits relative to the proposed tax adjustments.

A. As explained in the direct testimony of Ms. Tracy A. Hazenstab (UGI Gas Statement No. 2), UGI Gas's principal accounting exhibit is UGI Gas Exhibit A (Fully Projected), which

includes a presentation for the FPFTY. Section D of UGI Gas Exhibit A (Fully Projected) presents necessary adjustments to budgeted levels of expense items and revenues. The *pro forma* adjustments related to taxes are summarized in Schedules D-31 through D-34. These tax adjustments are used to derive UGI Gas's *pro forma* income at present and proposed rates as set forth in Schedule A-1 of the same exhibit.

UGI Gas Exhibit A (Historic) and UGI Gas Exhibit A (Future) follow the format of UGI Gas Exhibit A (Fully Projected) but reflect data for the HTY and the FTY. This information is provided to comply with the Commission's filing requirements and provides a basis for comparing UGI Gas's FPFTY claims with adjusted actual book results from the HTY and adjusted FTY results. UGI Gas Exhibit A (Historic), Schedule D-31, and UGI Gas Exhibit A (Future), Schedule D-31, include adjustments that share the same methodology as used in Schedule D-31 of UGI Gas Exhibit A (Fully Projected).

A. TAXES OTHER THAN INCOME TAXES

Q. How was the provision for taxes-other-than-income taxes ("TOTI") determined for the FPFTY?

A. TOTI consists of the Pennsylvania Utility Realty Tax ("PURTA"), Pennsylvania and Local taxes, Social Security taxes, Federal Unemployment tax ("FUTA"), State Unemployment tax ("SUTA") and the Company's assessed contribution to the Commission, Office of Consumer Advocate and Office of Small Business Advocate. TOTI amounts were based on the plan year budget, as adjusted for reasonably known and measurable changes to various payroll taxes as supported by the direct testimony of Ms. Tracy A. Hazenstab (UGI Gas Statement No. 2). These adjustments are shown on UGI Gas Exhibit A (Fully

Projected), Schedule D-31. The net adjustment of $950,000 is brought forward to Schedule D-3, page 2, line 54.

B. INCOME TAXES

Q. Please discuss the Company's claim for income tax expense.

A. Income tax expense for the FPFTY at present and proposed rates is set forth in UGI Gas Exhibit A (Fully Projected), Schedule D-33. Income tax expense is calculated using the procedures normally followed by the Commission, including the use of debt interest synchronization, the normalization method for accelerated depreciation used in the calculation of federal income taxes, and the flow-through of accelerated depreciation benefits for state income tax purposes. UGI Gas is continuing its practice of normalizing the tax repairs expense deduction for federal tax purposes. For state tax purposes, UGI Gas continues to flow through the repairs tax benefit over the tax useful lives of the asset that generated the benefit, which is generally 20 years. The fully adjusted claim for the FPFTY income tax expense is shown on UGI Gas Exhibit A (Fully Projected), Schedule D-1.

Q. Please describe the claim for income taxes shown on Schedule D-1, lines 19 and 20.

A. The calculation of federal and state income taxes can be found on Schedule D-33, lines 13 and 19. Schedule D-33 shows the calculation of *pro forma* income taxes for the FPFTY at present and proposed rates. Schedule D-33, line 1 shows revenue at present and proposed rates, while line 2 shows operating expenses at present and proposed rates from Schedule D-1. Line 3 reflects operating income before debt interest is deducted, by netting line 1 from line 2. Debt interest expense is synchronized using the rate base claim from Schedule C-1, with the cost of debt and the debt component of UGI Gas's capital structure

recommended in the direct testimony of Dylan A. D'Ascendis (UGI Gas Statement No. 8) and shown on Schedule B-7. The resulting interest expense on line 6 is subtracted from operating income before interest and taxes to calculate base taxable income on line 7.

In accordance with established Commission practice, lines 8 through 11 of Schedule D-33 reduce the base taxable income, for state tax purposes, by the total difference between accelerated tax depreciation shown on line 8 and the *pro forma* book depreciation shown on line 9, which appears as ($150,731) on line 10. Next, the statutory state corporate net income tax rate was applied (as further described below in Section G of my testimony) to determine the *pro forma* state income tax expense shown on line 13. Regarding the pro forma federal income tax expense, lines 14 through 19 show the calculation at current and proposed rates. Next, line 20 sums the state and federal tax expense amounts before application of Deferred Federal and State Income Taxes. At lines 21 through 28, Deferred Federal and State Income Taxes are used to increase the *pro forma* income tax expense at present and proposed rates, with the total calculated amount for income taxes, before the application of other adjustments, shown on line 29, which shows the net income tax expense. The amounts of accelerated depreciation, cost of removal, repairs tax deduction, tax basis adjustments to plant, straight line depreciation and book depreciation used in the determination of income taxes are summarized on Schedule D-34.

Q. What is the total FPFTY income tax expense for UGI Gas?

A. As shown on Schedule D-33 at line 31, the *pro forma* combined income tax expense at present rates is $50.2 million and the *pro forma* income tax expense at proposed rates for the FPFTY is $76.4 million. As explained below in Section E, this figure is not required

to be reduced by a consolidated income tax adjustment. Moreover, the pro forma income tax at present rates and the pro forma income tax revenue increase calculated in Schedule D-33 appear in Schedule D-1, which comprises the Company's claimed income tax expense.

Q. Has the Company reflected the amortization of Excess Deferred Federal Income Taxes ("EDFIT"), as a result of the 2017 Tax Cuts and Jobs Act ("TCJA"), on its income tax expense claim?

A. Yes, the Company has calculated the amount of the EDFIT that would be amortized and flowed back to ratepayers in its FPFTY. This amount is included in the overall federal deferred tax expense calculated on line 25 of Schedule D-33. The total amortization was approximately $5.2 million, calculated using the Average Rate Assumption Method ("ARAM") as required by tax normalization rules.

C. ACCUMULATED DEFERRED INCOME TAXES

Q. How are Accumulated Deferred Income Taxes ("ADIT") calculated?

A. Schedule C-6 shows the FPFTY ending balance for federal ADIT as of September 30, 2027. This amount is deducted from rate base. The total shown on line 9 reflects the difference in income tax expense for book and tax purposes attributable to the difference between the accelerated tax depreciation and straight-line book depreciation on test year plant balances, net of offsets associated with contributions in aid of construction. Rate base was further reduced by the state regulatory liability associated with UGI Gas's repairs tax method shown on line 6. As the state tax consequence of accelerated depreciation is flowed through, there is no associated state ADIT balance.

Q. What is the amount of the ADIT offset to rate base?

A. As shown on line 9 of Schedule C-6 and on line 6 of Schedule A-1, the ADIT offset is $716.8 million, which includes the amount related to EDFIT.

Q. Does the Company's reduction to rate base include EDFIT?

A. Yes, the Company has reduced its rate base by the unamortized EDFIT, which is incorporated in the ADIT balance on Line 9 of Schedule C-6.

Q. Has the Company's ADIT rate base deduction been calculated in compliance with the normalization requirements of the Internal Revenue Code?

A. Yes. The Company's calculation properly reflects the pro-rationing concept in accordance with Treasury Regulation 1.167(l)-1(h)(6)(ii) that it must follow for ratemaking purposes to comply with IRS normalization requirements. To qualify for normalization, the IRS requires utilities to pro-rate rate base deductions for ADIT to account for the fact that the Company accrues ADIT for plant additions throughout the year. See UGI Gas Exhibit DTE-2 for the calculation of the pro-rata adjustment.

D. REPAIRS TAX METHOD

Q. Please explain UGI Gas's accounting treatment of the Repairs Tax Method.

A. In its tax return for the year ended September 30, 2009, UGI Gas adopted a tax accounting method to expense as repairs certain items capitalized for book purposes in accordance with federal tax regulations. As it did in the Company's previous base rate case at Docket No. R-2025-3059523, UGI Gas chose to normalize its federal income tax expense claim, inclusive of the repairs tax deduction. The difference between accelerated tax depreciation

versus book depreciation in the calculation of federal tax expense creates ADIT. For state income tax purposes, solely with respect to the repairs tax deduction, UGI Gas has chosen to flow through the repairs tax benefit over the tax useful lives of the assets generating the tax deduction. The state ADIT balance associated with the repairs tax deduction is classified as a regulatory liability, as it represents the repairs tax benefit that ratepayers have not yet received. In both the federal and state instances, the ADIT balance amortizes or unwinds over the remaining life of the asset.

As noted previously, the Company reduces rate base by the sum of the federal ADIT balance and the state repair regulatory liability.

Q. Has UGI Gas adopted the new IRS safe harbor accounting method guidance under Revenue Procedure (Rev. Proc.) 2023-15 for determining qualified repairs deductions?

A Yes, effective for tax year September 30, 2024, UGI Gas adopted the safe harbor method under Rev. Proc 2023-15 for purposes of determining the applicable repairs deduction for tax purposes. These results are the basis for the estimated repairs deductions used in this rate case. The adoption of the new guidance only clarifies what expenditures qualify as tax deductions. There has been no change in the Company's accounting treatment of repair deductions.

E. CONSOLIDATED TAX BENEFITS

Q. Does the Company's proposed revenue requirement reflect a federal consolidated tax expense adjustment?

A. No. The Company's revenue requirement is established based on its stand-alone federal income tax attributes. It is also my understanding that Act 40 of 2016, which added 66 Pa. C.S § 1301.1 to the Public Utility Code, eliminates the need to show a consolidated tax adjustment for ratemaking purposes. Moreover, it is my understanding that the requirements of Section 1301.1(b) no longer apply pursuant to Section 1301.1(c) as of December 31, 2025. Thus, the Company has not calculated a hypothetical consolidated tax adjustment for purposes of Section 1301.1(b).

F. DEVELOPMENT TAX CREDITS

Q. Does UGI Gas claim a Development Tax Credit on its tax return?

A. Yes, UGI Gas claims a development tax credit on its federal income tax return under Internal Revenue Code Section 41. Qualifying activities for the Development Tax Credit are those that are intended to develop or improve the functionality, performance, reliability, or quality of a new or existing business product, process, technique, formula, invention or software. The activity must be technological in nature, have technical uncertainty and involve a process of experimentation. The credit was first claimed on the Company's federal income tax return for the year ended September 30, 2022, which was filed in 2023. For the purpose of this case, prior years' results were used to estimate the future benefit of the tax credit anticipated in the FPFTY. The benefit of $275,000 is included with the investment tax credit on line 30, of Schedule D-33.

G. PENNSYLVANIA TAX RATE CHANGE

Q. Are you familiar with the Pennsylvania corporate net income tax rate change?

A. Yes. On July 8, 2022, Governor Wolf signed into law Act 53, which reduced the state corporate net income tax rate from the then-current 9.99% to 4.99% over a nine-year period. The initial reduction to 8.99% was effective for tax years beginning in calendar year 2023. Thus, the initial reduction applied to Fiscal Year End September 30, 2024.

Q. How has the Company accounted for the recently enacted Pennsylvania tax rate change?

The Company's claim for income taxes reflects the applicable state tax rate in effect for the HTY (i.e., 8.49%), FTY (i.e., 7.99%) and FPFTY (i.e., 7.49%). As explained above, the initial reduction applied to our HTY. The State Tax Adjustment Surcharge ("STAS") mechanism will adjust the Company's rates as applicable for future reductions to the state corporate net income tax rate.

Q. How is the Company applying the Pennsylvania corporate net income tax rate change to its Repairs Tax method?

A. Consistent with historic treatment as described in Section D of this testimony, the Company's state regulatory liability associated with its repairs tax method will continue to represent the tax benefit, based on the rate in effect, that ratepayers have not yet received.

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS

EXHIBIT DTE-1

DARIN ESPIGH, CPA

PROFESSIONAL EXPERIENCE

UGI UTILITIES, INC., Denver, PA ***March 2022 - Present***
Senior Manager of Natural Gas Tax Accounting

Manage the accounting for income taxes in accordance with ASC 740 for Natural Gas business segment. Provide technical accounting guidance and expertise on tax accounting, planning and compliance matters. Oversee and review the preparation of information supporting various regulatory filings. Oversee and review the preparation of various tax related filings. Manage 1 direct report.

JBS USA, Greeley, CO ***2014 – March 2022***
Senior Tax Manager, Tax Accounting and Global Reporting

Manage tax accounting and reporting under ASC 740 including effective rate development, perm development, valuation allowances, ABP 23 indefinite reinvestment assertions, financial statement footnotes, management of global deferred inventory and FIN48/FAS 5 analysis for international consolidated financial statements. Responsible for IFRS adjustments and reporting package to Brazilian parent company. Interface with internal and external auditors. Managed tax accounting aspects of a large global reorganization. Design and streamline provision reporting packages to meet increased demands of public reporting.

Managed both federal and state income tax compliance. Responsible for attribution memos related to the preparation of Form 5472, R&D Credits, Sec 163(j), Schedule G and Schedule O compliance for more than 10 separate federal tax returns. Supervised income tax audits. Managed documentation and notice requirements related to the Foreign Investment in Real Property Tax Act (FIRPTA) related to distributions of U.S. real property interests by foreign corporations. Managed, trained and developed staff in tax accounting and financial reporting and compliance.

UGI UTILITIES, INC., Reading, PA ***2007 to 2014***
Senior Tax Analyst

Responsible for quarterly and annual tax accounting and reporting under ASC 740 including effective rate development, maintenance and classification of deferred inventory balances and account reconciliations. Calculate annual provision to return adjustment for year-end provision. Interface with internal and external auditors on tax related matters. Provide budget and forecast amounts for all tax related items. Preparation of tax data to support external regulatory reporting including Base Rate Case filings.

Preparation of income tax return support submitted to corporate for inclusion in the consolidated income tax return. Responsible for indirect tax compliance.

BERTZ & COMPANY, CPA's, Lancaster, PA ***2000 to 2007***
Senior Associate

Responsible for preparation of individual, corporate, partnership, nonprofit and payroll tax returns. Charged with the preparation of financial statements including required disclosures for a wide range of industries including construction, hospitality and retail food establishments. Supervised, trained and developed staff on client engagements.

Managed audit engagements of retirement plans and homeowner associations. Gained experience on a variety of other audits.

HATTER, HARRIS & BEITTEL, LLP, Lancaster, PA ***1994 to 2000***
Senior Associate

Prepared individual, corporate, partnership, nonprofit and payroll tax returns. Managed review and compilation engagements. Managed nonprofit audit. Developed significant experience in audits of school districts, retail and manufacturing businesses. Gained strong working knowledge of financial statements and related disclosures for engagements of all levels. Trained and developed new staff.

UGI GAS STATEMENT NO. 10

SHERRY A. EPLER

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 10

Direct Testimony of
Sherry A. Epler

Topics Addressed: **Test Year Sales and Revenues**
Tariff Changes

Dated: January 28, 2026

I. INTRODUCTION AND QUALIFICATIONS

Q. Please state your name and business address.

A. My name is Sherry A. Epler. My business address is 1 UGI Drive, Denver, PA 17517.

Q. By whom and in what capacity are you employed?

A. I am employed as Senior Manager, Tariff & Supplier Administration, by UGI Utilities, Inc. ("UGI"). UGI has both a Gas Division ("UGI Gas"), which is a certificated natural gas distribution company ("NGDC"), and an Electric Division ("UGI Electric"), a certificated electric distribution company ("EDC").

Q. What are your responsibilities as Senior Manager, Tariff & Supplier Administration with respect to UGI Gas?

A. My current responsibilities related to UGI Gas include: (1) all aspects of tariff and rate administration, including certain interactions with natural gas suppliers under UGI Gas's supplier tariff; and (2) revenue analysis.

Q. Please provide your educational background.

A. Please see my resume, UGI Gas Exhibit SAE-1, which is attached to my testimony.

Q. Please provide your professional experience.

A. I have worked for UGI since 1986, supporting the Accounting and Rates groups in varying capacities. Please see my resume, UGI Gas Exhibit SAE-1, for my full employment history.

Q. Please describe the purpose of your testimony.

A. I will address: (1) the development of sales and revenue for the historic test year ended September 30, 2025 ("HTY"), future test year ending September 30, 2026 ("FTY"), and fully projected future test year ending September 30, 2027 ("FPFTY"); and (2) certain proposed tariff modifications.

Q. Are any other witnesses providing testimony on the areas you identified above?

A. Yes. Company witness John D. Taylor, who is employed as Managing Partner by Atrium Economics, LLC (UGI Gas Statement No. 11), is sponsoring allocation of the proposed revenue increase and rate design, in addition to his other testimony topics, using the projected sales and revenue figures discussed in my testimony.

Q. Are you sponsoring any exhibits or filing requirements in this proceeding?

A. Yes, I am sponsoring the following Exhibits: UGI Gas Exhibit SAE-1 (Resume), UGI Gas Exhibit SAE-2 (10 year Normal Heating Degree Days), UGI Gas Exhibit SAE-3 (Normalized Multi-Year and Normalized 12-Month Ending Trends of Use Per Customer for Residential and Commercial Heating), UGI Gas Exhibit SAE-4 (Fully Projected Future Test Year Sales and Revenue Adjustments), UGI Gas Exhibit SAE-5 (Future Test Year Sales and Revenue Adjustments), UGI Gas Exhibit SAE-6 (Historic Test Year Sales and Revenue Adjustments), UGI Gas Exhibit SAE-7 (Fully Projected Future Test Year, Future Test Year, and Historic Test Year Usage Per Customer Detail by Class), UGI Gas Exhibit SAE-8 (No Notice Service ("NNS") Rate Calculation), UGI Gas Exhibit SAE-9 (Monthly Balancing Service ("MBS") Rate Calculation), UGI Gas Exhibit SAE-10 (Rider D-

Merchant Function Charge ("MFC") Calculation), certain portions of UGI Gas Exhibit F (Proposed Tariff), and UGI Gas Exhibit E (Proof of Revenue). I am also sponsoring certain responses to the Commission's standard filing requirements, as indicated on the master list accompanying this filing, that were prepared by me or under my direction.

II. TEST YEAR SALES AND REVENUE

Q. Please explain how the Company's FPFTY sales and revenues were developed.

A. FPFTY sales and revenues were developed by incorporating annualizing and normalizing adjustments to the Company's 2027 fiscal year sales and revenue budgets to reflect end of FPFTY conditions for ratemaking purposes. The development of the initial sales and revenue budgets which were utilized as the starting point prior to adjustments is described in the testimony of Vivian K. Ressler (UGI Gas Statement No. 4). Where similar adjustments are made across rate class groups, the methodology applied to develop normalized use per customer adjustments (for the FPFTY, FTY, and HTY) to budget values is the same for all three periods to present sales and revenue on a comparable ratemaking basis. A summary of projected use per customer by class group for the FPFTY, FTY, and HTY is included in UGI Gas Exhibit SAE-7. The projected Residential Heating use per customer was established for Rate R/RT-Heating per the UGI Gas model detailed in SDR-RR-11. Since, over time, switching occurs on a regular basis between residential Rates R (retail service) and RT (transportation service), the regression analysis was performed on a total Rate R/RT basis to eliminate potential switching impacts that could distort use per customer analyses. More detail on this regression analysis is provided below as part of the discussion related to the Company's "Adjustment for Normalized & Annualized

Use/Customer." Weather normalized sales for Rate RT-Heating customers for the 12 months ended September 30, 2025, were then utilized to mathematically derive the separate Rate R-Heating use per customer values (from the combined Rate R/RT-Heating use per customer regression value).

Actual sales were normalized for Rate R-Non-Heating and Rate RT-Non-Heating, in total, for the 12-month period ended September 30, 2025, to eliminate potential switching impacts that could distort use per customer analyses. These data were used to project combined Rate R/RT-Non-Heating use per customer in total. Weather normalized sales for Rate RT-Non-Heating customers for the 12 months ended September 30, 2025, were then utilized to mathematically derive the separate Rate R-Non-Heating customer values (from the combined Rate R/RT-Non-Heating use per customer value).

The projected Commercial Heating use per customer was established on a combined total basis for Rates N/NT/DS-Heating per the UGI Gas model regression techniques detailed in SDR-RR-11. Given that, over time, switching occurs on a regular basis between Rates N (retail service), NT (transportation service) and DS (transportation service), the regression analysis was performed on a total Rates N/NT/DS basis to eliminate potential switching impacts that could distort use per customer analyses. More detail on this regression analysis is provided below as part of the discussion related to the Company's "Adjustment for Normalized & Annualized Use/Customer." To separate the combined Rate N/NT/DS-Commercial Heating value into respective Rate N, Rate NT and Rate DS values, Rate NT-Commercial Heating use per customer was established on the basis of weather normalized sales for Rate NT-Commercial Heating customers, for the 12 months ended September 30, 2025, as this class is much smaller in number than the Rate

N-Commercial Heating class. Rate DS-Commercial Heating use per customer was then established based on budgeted 2027 sales for Rate DS-Commercial Heating, as Rate DS budgeting was performed on a detailed per-customer level. These Rate NT and Rate DS Commercial Heating values were then utilized to mathematically derive the Rate N-Commercial Heating use per customer values (from the combined Rates N/NT/DS-Commercial Heating use per customer value).

Actual sales were normalized for Rate N-Commercial Non-Heating, Rate NT-Commercial Non-Heating and Rate DS-Commercial Non-Heating, in total, to reflect the 12 months ended September 30, 2025, in order to project combined Rates N/NT/DS-Commercial Non-Heating use per customer in total and eliminate potential switching impacts that could distort use per customer analyses. To separate the combined Rate N/NT/DS-Commercial Non-Heating value into respective Rate N, Rate NT and Rate DS values, Rate NT-Commercial Non-Heating was based on weather normalized sales for Rate NT-Commercial Non-Heating, for the 12 months ended September 30, 2025, and Rate DS-Commercial Non-Heating was based on budgeted 2027 sales for Rate DS-Commercial Non-Heating, which were done on a per-customer level. These Rate NT and Rate DS values were then utilized to mathematically derive the Rate N-Commercial Non-Heating use per customer values (from the combined Rates N/NT/DS-Commercial Non-Heating use per customer value).

Actual sales were normalized for Rate N-Industrial, Rate NT-Industrial, and Rate DS-Industrial to reflect the 12 months ended September 30, 2025, in order to project combined Rates N/NT/DS-Industrial use per customer in total and eliminate potential switching impacts that could distort use per customer analyses. To separate the combined

Rate N/NT/DS-Industrial value into respective Rate N, Rate NT and Rate DS values, Rate NT-Industrial was based on weather normalized sales for Rate NT-Industrial for the 12 months ended September 30, 2025. Rate DS-Industrial was based on budgeted 2027 sales for Rate DS-Industrial, which were done on a per-customer level. These Rate NT and Rate DS values were then utilized to mathematically derive the Rate N-Industrial use per customer value (from the combined Rates N/NT/DS-Industrial use per customer value).

Q. How was temperature accounted for in developing sales and revenue forecasts?

A. The Company's FPFTY sales and revenue forecasts reflect annual normal heating degree days ("HDDs") of 5,218. This annual normal HDD calculation is derived from a composite, sales-weighted value (by system demand) for each of the Company's four delivery regions, and the respective normal heating degree values. As proposed in this proceeding, and discussed in the Direct Testimony of John D. Taylor, UGI Gas Statement No. 11, normal HDDs are now defined based upon an average over a 10-year period with the most recent update of the 10-year period ending December 31, 2024. UGI Gas Exhibit SAE-2 provides supporting detail by year for the 10-year normal HDDs. Please see the Direct Testimony of John D. Taylor, UGI Gas Statement No. 11 for supporting detail on the determination of Normal HDD values and the frequency of Normal HDD updates.

Q. Please describe the adjustments made to the budget for the 12 months ending September 30, 2027, to develop FPFTY sales and revenues.

A. A summary of all adjustments made to the 2027 budget to develop FPFTY sales and revenue is shown on UGI Gas Exhibit SAE-4(a). Detail for each of these adjustments is

provided on subsequent worksheets labeled 4(b) through 4(m). In total, these adjustments reflect a decrease to sales of 4,382 MMcf and a decrease to revenue of $49.761 million, inclusive of Purchased Gas Cost ("PGC") revenues.

Q. Please explain the "Adjustment for Customer/Contract Changes" shown on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for Customer/Contract Changes" annualizes customer counts to anticipated end-of-test-year levels based on the Company's most recent forecast for the FPFTY; it is inclusive of any large transportation contract customer changes related to customers served under Rates LFD, XD, and IS. In particular, among other adjustments, this adjustment includes a net decrease of 3,925 Residential Heating customers (Rate R) from budgeted levels to anticipated end-of-test-year levels and a net decrease of 1,338 Commercial Heating customers (Rate N) from budgeted levels to anticipated end-of-FPFTY levels on September 30, 2027.

Q. How were these adjustments calculated?

A. UGI Gas Exhibit SAE-4(b) provides the calculation of the associated sales and revenue adjustments for the stated customer counts. In total, these adjustments decrease sales by 834 MMcf and decrease projected revenues by $11.756 million, inclusive of PGC revenues. Additional detail for column (9) of UGI Gas Exhibit SAE-4(b) can be found on UGI Gas Exhibit SAE-4(b)(1), which provides a breakout of customer data for large transportation customer classes.

Q. Please explain the adjustment titled "Adjustment for Customer/Contract Changes – Large Transport and Interruptible Detail" as shown on UGI Gas Exhibit SAE-4(b)(1).

A. Adjustments for large transportation customers are developed by UGI Gas's marketing personnel following their review of individual large customer accounts and market segments. The adjustments reflect annualizing anticipated increases or reductions from original individual customer budgeted sales and revenues. Given there were no known changes since the development of the original budget, there are no quantified adjustments to the original budget for the Large Transport and Interruptible customers shown on UGI Gas Exhibit SAE-4(b)(1).

Q. Please explain your next adjustment, "Adjustment for Normalized & Annualized Use/Customer" shown on UGI Gas Exhibit SAE-4(a) and detailed on UGI Gas Exhibit SAE-4(c).

A. The "Adjustment for Normalized & Annualized Use/Customer" normalizes and annualizes usage per customer to projected end-of-test-year levels. Specifically, in developing usage per customer projections for the Company's core Residential Heating rate groups (Rates R and RT), the Company utilized an econometric regression model that incorporates four independent variables: (1) use per customer; (2) HDDs; (3) lagged HDDs; and (4) weighted time trend. While use per customer, HDDs, and lagged HDDs capture weather related usage factors, which can then be used to project normalized and annualized customer usage under normal weather conditions, the weighted time trend variable of this regression captures non-weather trends that underlie changes in usage per customer over time (*e.g.*,

conservation). These trends can vary, but as a comprehensive variable, "trend" will capture the impacts of conservation, including but not limited to: (1) regular appliance replacements; (2) accelerated appliance replacements; (3) high-efficiency appliance installations; (4) setback thermostat installations; (5) modifications to new and existing buildings that are designed to decrease energy consumption; and (6) changes in consumer usage behavior due to other economic influences. Given the number of variables that can influence customer usage over time, and the difficulty in identifying, quantifying, and tracking all variables over time, a trend variable is used to provide a comprehensive indicator of usage trends, which can then be used to forecast for a future period. Additionally, the trend variable is weighted by HDDs to reflect a "weighted trend," which more accurately reflects that the trends' impacts are directly related to usage during heating time periods.

For the Residential Heating groups of Rates R and RT, the multi-year period regression methodology is the same base method that the Company has utilized in prior rate cases, updated for the use of a common data set period beginning October 2003 through, now, September 2025. October 2003 is the earliest common data set available for the entire service territory, given the timing and data availability of historic service and former rate district level details for UGI Gas and its former subsidiaries, UGI PNG and UGI CPG.

For the Company's core Commercial Heating rate groups (inclusive of Rates N, NT, and DS), the Company utilized the same regression method as presented in UGI Gas's 2019, 2020, 2022, and 2025 Gas Base Rate Cases. Specifically, to forecast the Commercial Heating rate group use per customer, the Company utilized three variables: (1) use per

customer; (2) HDDs; and (3) lagged HDDs. For the Commercial Heating group, the Company used the period beginning October 2012 through, now, September 2025 for regression modeling, or the entire period during which common non-residential rate structures existed for UGI Gas and its former subsidiaries.

The forecasts for end-of-FPFTY use per customer are generated using the regression results along with a projection of regression variable inputs, including normal annual HDDs and, where applicable, a weighted trend variable. The results are presented in summary on UGI Gas Exhibit SAE-4(a) and in detail on UGI Gas Exhibit SAE-4(c). In total, the result is a net sales decrease, from the fiscal 2027 budget, of 3,308 MMcf, and a net revenue decrease, from the fiscal 2027 budget, of $37,090 million, inclusive of PGC revenues.

Q. Why did UGI Gas utilize a multi-year regression period?

A. The Company has continued to use the multi-year period because it provides a larger sample set of data to smooth out short-term variations and capture the underlying long-term use per customer trends. Consequently, the multi-year regression period more accurately projects usage per customer during the period rates are likely to be in effect. This methodology is consistent with that utilized in the last nine base rate cases of UGI Gas and its predecessor entities.

Q. Has UGI Gas compared the results of the multi-year regression method to develop normalized usage for Residential Heating and Commercial Heating customer groups with any other normalization method?

A. Yes. Please see UGI Gas Exhibits SAE-3(a) and SAE-3(b), which contain use per customer graphs that illustrate the results of both the multi-year normalized regression method I have explained above ("Normalized Multi-year") and a short-term normalized ("Normalized 12 Months ended") value for the same groups of Residential Heating and Commercial Heating customers. The short-term normalized values are computed via a simple determination of temperature sensitive load each month during the 12 month period ending September 30, 2025. As can be seen from these graphs, short-term trend fluctuations of the "Normalized 12 months ended" line occur in certain periods, but consistently revert to the long-term "Normalized Multi-year" trend which has been used to forecast FPFTY use per customer values, thus capturing the ongoing base trend in declining use per customer.

Q. Please explain the "Adjustment for PGC" shown on UGI Gas Exhibit SAE-4(a) and detailed on UGI Gas Exhibit SAE-4(d).

A. The "Adjustment for PGC" shown in summary on UGI Gas Exhibit SAE-4(a) annualizes FPFTY PGC revenues using the PGC rate in effect as of December 1, 2025. UGI Gas Exhibit SAE-4(d) provides the calculations for these adjustments. This adjustment increases PGC revenues for the FPFTY by $1.938 million.

Q. Please explain the following three adjustments shown in summary on UGI Gas Exhibit SAE-4(a): "Adjustment for MFC," "Adjustment for USP," and "Adjustment for GPC."

A. The "Adjustment for MFC" annualizes the Company's Merchant Function Charge ("MFC") revenues for the FPFTY based on the MFC surcharge rates in effect as of December 1, 2025. The MFC Adjustment increases projected revenues by $0.039 million.

The "Adjustment for USP" annualizes the Company's Universal Service Program ("USP") surcharge revenues for the FPFTY based on the USP Rider rate in effect as of December 1, 2025. The Adjustment for USP also updates the sales volume for Customer Assistance Program ("CAP") customers in the USP Revenue calculation with end of Fiscal Year 2025 data in comparison to the budgeted sales volume for CAP customers, which was calculated using end of Fiscal Year 2024 data. The USP adjustment decreases revenues by $0.480 million.

The "Adjustment for GPC" annualizes the Gas Procurement Cost ("GPC") revenues to reflect the impact of all volume adjustments to the original Fiscal Year 2027 planned budget. The GPC adjustment decreases revenues by $0.257 million. Additional details for these three adjustments are provided in UGI Gas Exhibit SAE-4(e), UGI Gas Exhibit SAE-4(f), and UGI Gas Exhibit SAE-4(g), respectively.

Q. Please explain "Adjustment for Excess Take Revenues" as shown on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for Excess Take" shown on UGI Gas Exhibit SAE-4(a) is detailed in UGI Gas Exhibit SAE-4(h) and reflects the assumption that large transportation customers will

evaluate new service elections and will make the necessary adjustments to avoid Excess Take penalties in the FPFTY. The Excess Take adjustment reduces revenue by $1.7 million.

Q. Please explain "Adjustment for STAS" as shown on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for STAS" shown on UGI Gas Exhibit SAE-4(a) is detailed in UGI Gas Exhibit SAE-4(i) and annualizes the revenue for the State Tax Adjustment Surcharge ("STAS") for the FPFTY based on the STAS Rider rate in effect as of December 1, 2025. This adjustment increases revenues by $0.116 million.

Q. Please explain the "Adjustment for EEC Rider" on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for EEC Rider" annualizes the revenue from the Energy Efficiency and Conservation ("EE&C") Rider ("EEC Rider") for the FPFTY based on the EEC Rider rate in effect as of December 1, 2025. This adjustment decreases revenues by $0.001 million and is detailed on UGI Exhibit SAE-4(j).

Q. Please explain the "Adjustment for EEC Conservation Impact" on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for EEC Conservation Impact" annualizes the impact to revenues from UGI Gas's ongoing EE&C programs and associated reduced energy consumption as a result of measures implemented as part of the EE&C programs. This adjustment decreases FPFTY sales by 240 MMcf and decreases revenues by $3.000 million as detailed on UGI Gas Exhibit SAE-4(k).

Q. Please explain the "Adjustment for GDE Rider" on UGI Gas Exhibit SAE-4 (a).

A. The "Adjustment for GDE Rider" annualized the revenue for the Gas Delivery Enhancement ("GDE") Rider for the FPFTY based on GDE Rider rate in effect as of December 1, 2025. This adjustment decreases revenues by $0.185 million and is detailed on UGI Gas Exhibit SAE-4(l).

Q. Please explain the "Adjustment for DSIC" on UGI Gas Exhibit SAE-4(a).

A. The "Adjustment for DSIC**"** annualizes Distribution System Improvement Charge ("DSIC") revenue based on the application of the 0.33% DSIC E-Factor rate in effect as of December 1, 2025, to FPFTY revenues. The FPFTY budget utilized a rate of 0.0%. This adjustment applies a 0.33% DSIC rate in order to annualize the DSIC to end of FPFTY conditions. The 0.33% rate is currently projected to be effective at the end of the FTY, and that 0.33% rate will remain in place through the FPFTY period. This allows the Company to properly quantify DSIC revenues, which will be rolled into the new base rates established in this proceeding as a result of re-setting the DSIC rate to zero pursuant to 66 Pa. C.S. § 1358(b)(1). This adjustment increases revenues by $2.615 million and is shown in detail on UGI Gas Exhibit SAE-4(m).

Q. Do the adjusted FPFTY revenues exclude revenues related to off-system sales and non-jurisdictional revenue?

A. Yes. Pursuant to the terms of the Revenue Sharing Incentive Mechanism in Section 11 of the UGI Gas tariff, these revenues are appropriately treated as below the line for ratemaking purposes and, thus, have been excluded.

III. DEVELOPMENT OF SALES AND REVENUES FOR THE FTY AND HTY

Q. How were normalized and annualized sales and revenues determined for the FTY?

A. Budgeted sales and revenues serve as the starting point for developing the normalized and annualized FTY sales and revenues, as shown in UGI Gas Exhibit SAE-5. All of the adjustments that were made in the development of the FPFTY sales and revenues were also made in the development of the FTY sales and revenues, with the exception of the adjustments for the EEC Conservation Impact that are contained in the FPFTY but not the FTY.

Q. How were normalized and annualized sales and revenues determined for the HTY?

A. Historic sales and revenues serve as the starting point for developing the normalized and annualized HTY sales and revenues shown in UGI Gas Exhibit SAE-6. All of the adjustments that were made in the development of the FPFTY were also made in the development of the HTY, with the exception of the adjustments for the Weather Normalization Adjustment ("WNA"), EEC Conservation Impact, GDE Rider, and DSIC. The "Adjustment for WNA" in the HTY removes the revenues associated with the actual WNA revenue recorded in the HTY revenues and margins in order to not double count certain weather-related impacts, as the Adjustment for Normalized & Annualized Use/Customer fully incorporates weather related usage impacts. The EEC Conservation Impact is not required, as the actual HTY sales and revenue reflect such impacts. The adjustments for the GDE Rider and the DSIC are discussed above.

Q. Is the Company proposing any change to the rate assessed under Rate NNS (No Notice Service)?

A. For the reasoning stated below, the Company is proposing to retain the current Rate NNS service rates at this time and not recalculate those rates. Rate NNS is a daily balancing service offered by the Company. It provides an alternate election of a daily balancing tolerance for transportation customers, allowing a customer to optionally elect a balancing tolerance greater than the standard basic balancing provided by the Company. A customer is able to make an election under Rate NNS up to its DFR (Daily Firm Requirement) contract demand level and pay only for the level chosen. The revenue generated by Rate NNS charges is reflected as a credit to PGC rates, because the capacity used for this service is otherwise paid for by PGC customers.

Q. How has UGI Gas historically approached the updating of Rate NNS?

A. As part of the settlement of its 2019 Gas Base Rate Case, the parties agreed to a methodology for calculating Rate NNS (see Joint Petition for Approval of Unopposed Settlement of All Issues, paragraph No. 53, filed on July 22, 2019, at Docket Nos. R-2018-3006814, *et al.*, which was approved by the Commission's Opinion and Order entered on October 4, 2019, in that proceeding). In cases since the 2019 Gas Base Rate Case, UGI Gas has used the methodology specified to calculate a rate – consistently a rate decrease – and has proposed that rate decrease in its filed case. In each of those cases, UGI Gas has met strong opposition to its proposal. If the Company were to update the tariffed Rate NNS charge to reflect current cost elements in this case, using the 2019 Gas Base Rate Case methodology, the Company would be proposing a decrease to Rate NNS. However,

as noted above, the Company is proposing to retain the current Rate NNS rate. However, as noted above, the Company is proposing to retain the current Rate NNS rate.

Q. Why is the Company proposing to retain the current Rate NNS rate in this case?

A. UGI Gas believes that the use of the service by customers over time indicates that the current rate, which has been in place since 2019, is appropriately priced for the value it delivers to participating customers, while also providing stable affordability benefits to PGC customers. Importantly, the Company's actions in this regard recognize the historic cost assignment methodology differences between the Company and certain of the public advocates. UGI Gas believes its Rate NNS approach in this proceeding balances the interests of different customer classes.

Q. Has the Company shown the development of the recalculated Rate NNS charge, even though it is not proposing to change Rate NNS?

A. UGI Gas Exhibit SAE-8 shows the recalculation of the Rate NNS charge. Again, this recalculation was developed based on the same methodology used in the Company's 2019 Gas Base Rate Case. As seen on UGI Gas Exhibit SAE-8, the proposed NNS rate would be $0.1700 per Mcf/d of an elected daily no notice allowance ("NNA") tolerance quantity. This compares to the current NNS rate of $0.2200 per Mcf/d of elected NNA, which was established in the Company's 2022 Gas Base Rate Case (see Paragraph 44 in the Recommended Decision issued on July 28, 2022 at Docket Nos. R-2021-3030218, *et al.*); the current rate was also retained in the Company's 2025 Gas Base Rate Case at Docket No. R-2024-3052716, in Paragraph 55 of the Commission-approved Joint Petition for

Settlement of All Issues dated July 10, 2025. This current rate is proposed to be retained as part of this initial filing.

Q. Will the Company continue to credit the revenues received from Rate NNS to PGC Rates?

A. Yes, revenues from Rate NNS will continue to be credited to the PGC Rates as part of the Company's annual 1307(f) proceeding.

Q. Please describe Rate MBS (Monthly Balancing Service).

A. Rate MBS is a monthly balancing service offered by the Company. Service under Rate MBS allows transportation imbalances of up to 10% for the month to be carried forward in the customer's MBS account for delivery of excess volumes, or receipt of shortfalls, in subsequent months.

Q. Has the Company proposed any changes to the Rate MBS rates?

A. Yes. UGI Gas Exhibit SAE-9 provides the basis for the MBS rate calculation. As a result of the settlement in the Company's 2019 Gas Base Rate Case, storage demand charges were included in the calculation of Rate MBS on a 100% load factor basis and the Company is continuing that inclusion in the proposed rates presented. The MBS rate is updated annually on December 1st each year, using 12 months of data ending in September, for the average monthly imbalance utilized in development of the rate. The MBS rates most recently updated for December 1, 2025, are: $0.0177/Mcf for Rates DS and IS; $0.0103/Mcf for Rate LFD; and $0.0104/Mcf for Rate XD. As seen on UGI Gas Exhibit

SAE-9, the proposed MBS rates will be: $0.0198/Mcf for Rates DS and IS; $0.0113/Mcf for Rate LFD; and $0.0116/Mcf for Rate XD. These Rate MBS increases are principally driven by increases to the average capacity charge.

Q. Will the Company continue to credit the revenues received from Rate MBS to PGC Rates?

A. Yes, revenues from Rate MBS will continue to be credited to the PGC as part of the Company's annual 1307(f) proceeding.

Q. Please describe the GPC.

A. The GPC recovers costs associated with gas procurement that were unbundled from base rates.

Q. Is the Company proposing to update its GPC in this proceeding?

A. No. The Company proposes to continue the $0.0660/Mcf blended rate that was approved in the Company's 2020 Gas Rate Case (see Joint Petition for Approval of Unopposed Settlement of All Issues, Appx. A, p. 12, filed on August 3, 2020, at Docket Nos. R-2019-3015162, *et al.*, which was approved by the Commission's Opinion and Order entered on October 8, 2020, in that proceeding).

Q. Please describe the MFC.

A. The MFC is equal to the fixed percentage of purchased gas costs that are expected to be uncollectible.

Q. Is the Company proposing to update its MFC in this proceeding?

A. Yes. The Company is updating the percentages for the MFC rates to reflect the actual uncollectible expense for the last three years. Based on this updated data, the residential MFC will be 2.37%, and the MFC for the commercial class will be 0.47%. Please see UGI Gas Exhibit SAE-10 for additional details.

Q. Please describe the USP Rider.

A. The USP Rider recovers those costs associated with the provision of universal service offerings approved by the Commission in the Company's Universal Service and Energy Conservation Plan.

Q. Is the Company proposing any changes to the USP Rider?

A. Yes. The Company is proposing changes to the annual reconciliation provisions of Rider F – Universal Service Program "USP" to update the threshold number of customers enrolled in CAP that is used in the calculation of the offset applied to recoverable CAP costs. This offset reduces the Company's recovery of CAP spending above projected enrollment to account for write-offs of bad debt that would arguably have occurred if not for CAP. The Company proposes to set the CAP enrollee threshold equal to the number of CAP participants as of September 30, 2026, to provide an enrollee figure that reflects the actual ongoing impacts on CAP enrollment. This proposal is consistent with the establishment of the CAP enrollee figure in the UGI Gas 2020 Rate Case at Docket No. R-2019-3015162.

IV. TARIFF CHANGES

Q. What tariff changes are being proposed in this case?

A. The Company is revising references to the Supplement number, Notice language, Issue and Effective dates, and page numbers as necessary per this case. Apart from the proposed rate schedule changes, a complete list of tariff modifications can be found in the List of Changes Made by the Supplement section in UGI Gas Exhibit F – Proposed Supplement No. 63 to UGI Gas Tariff No. 7 and Proposed Supplement No. 63 to UGI Gas Tariff No. 7S. More significant proposed changes to the tariffs include:

- Rule 8.4, Billing and Payment, has clarifying language added to explain that Budget Billing will be reviewed and adjusted on a quarterly basis .
- Section 8.14 was added to specify the acceptable and Applicable Forms of Payment that customers may remit to the Company for payment of public utility service.
- The State Tax Adjustment Surcharge, Rider A, has been rolled into rates and reset to 0.00%.
- Rider C, Weather Normalization Adjustment, applicability has been updated to continue as a pilot ending on October 31, 2032, in place of the existing October 31, 2027, date. In Calculation of Adjustment Amount, subsection (d), the Weather Normalization Adjustment NHDD has been changed to the Delivery Region's 10-year average in place of the existing 15-year average for the given day. Additionally, NHDD has been changed to being updated at every rate case in place of the existing 5 years.
- Rider D – MFC has been set to 2.37% for PGC Residential Customers and 0.47% for Non-Residential PGC Customers, as described above.

- Section 15. Price to Compare ("PTC") has been updated to reflect changes to the MFC.
- Rider F – Universal Service Program has been revised so that the CAP credit bad debt offset will be associated with the participants in excess of the number of CAP enrollees as of September 30, 2026, in place of the existing September 30, 2025 date.
- Rider I – DSIC has been reset to 0.00% in accordance with 66 Pa. C.S. § 1358(b)(1).
- Rule 16 – USP Rider has been updated to reflect that the 9.2% adjustment element contained in the Annual Reconciliation shall apply to the actual number of CAP enrollees as of September 30, 2026, in order to appropriately track related costs for recovery between the Rider and base rates. Additionally, language has been added to allow the USP Rider to apply on a fully negotiated basis for certain Rate XD customers to contribute to Rider USP and otherwise lower USP costs borne by the Company's residential customers.
- Rule 22 - References to outdated Effective Date in heading removed.
- Rate LFD has clarifying language added for Annual Minimum Bill, which allows the Company and customer to reach agreement on a higher Annual Minimum Bill amount. Updated residential and commercial purchase of receivables rates due to the change in the MFC.

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS STATEMENT NO. 11

JOHN D. TAYLOR

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2025-3059523

UGI Utilities, Inc. – Gas Division

Statement No. 11

Direct Testimony

of

John D. Taylor, Managing Partner
Atrium Economics, LLC

Topics Addressed:
Cost of Service
Revenue Allocation
Rate Design
Weather Normalization Adjustment

Dated: January 28, 2026

Table of Contents

I. WITNESS IDENTIFICATION AND BACKGROUND 1

II. ALLOCATED COST OF SERVICE STUDY OVERVIEW 2

III. UGI GAS'S ALLOCATED COST OF SERVICE STUDY 9

V. UGI GAS'S REVENUE APPORTIONMENT 19

VI. UGI GAS'S RATE DESIGN 23

VII. WNA MECHANISM 32

VIII. CONCLUSION 40

I. WITNESS IDENTIFICATION AND BACKGROUND

Q. Please state your name, affiliation, and business address.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Managing Partner. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. On whose behalf are you submitting this direct testimony?

A. I am submitting testimony on behalf of UGI Utilities, Inc. – Gas Division's ("UGI Gas" or the "Company") Gas Base Rate Case.

Q. What is the purpose of your testimony in this proceeding?

A. I prepared and am sponsoring UGI Gas's fully allocated cost of service study ("ACOSS"), which is found in UGI Gas Exhibit D. The ACOSS determines the embedded costs of serving UGI Gas's distribution customers associated with the Pennsylvania Public Utility Commission ("Commission") jurisdiction. I also support the apportionment, or allocation, of the class revenue increase, and the Company's rate design proposal. Finally, I am supporting the Company's Weather Normalization Adjustment ("WNA") proposal.

Q. Please describe your educational background and professional experience.

A. UGI Gas Exhibit JDT-1 contains background information summarizing my education, presentation of expert testimony, and other industry-related activities.

Q. Please summarize the content of your testimony.

A. My testimony consists of this introduction section (I) and the following six additional sections: (II) Purpose and Principles of Cost Allocation, (III) UGI Gas's Allocated Cost of Service Study, (IV) Principles of Sound Rate Design, (V) UGI Gas's Class Revenues, (VI) UGI Gas's Rate Design, and (VII) WNA Mechanism.

Q. Mr. Taylor, are you sponsoring any exhibits in this proceeding?

A. Yes. I am sponsoring Book IX, labeled as UGI Gas Exhibit D – Allocated Cost of Service Study (Fully Projected) ("Exhibit D"). Exhibit D contains three sections for which an index is provided on page 2 of Exhibit D. Also, I am sponsoring portions of Book I and Book II, Section 53.53 et seq. of the Commission's Regulations, Part IV-Rate Structure and Cost Allocation. Related to the WNA proposal, I'm sponsoring the following exhibits:

- UGI Gas Exhibit JDT-2, Normal Heating Degree Days Report;
- UGI Gas Exhibit JDT-3, WNA Data Report; and
- UGI Gas Exhibit JDT-4, WNA Mechanism Policy Factors.

II. ALLOCATED COST OF SERVICE STUDY OVERVIEW

Q. What is the general purpose and use of an ACOSS in regulatory proceedings?

A. The purpose of an ACOSS is to allocate the gas distribution utility's overall fully projected future test year ("FPFTY") costs to the various classes of service in a manner that reflects the relative costs of providing service to each class. An ACOSS represents an analysis of which customer or group of customers cause the utility to incur the costs to provide

service. The requirement to develop the ACOSS results from the nature of utility costs. Utility costs are characterized by the existence of common costs. Common costs occur when the fixed costs of providing service to one or more rate classes, or the cost of providing multiple products to the same rate class, use the same facilities and the use by one rate class precludes the use by another rate class.

In addition, utility costs may be fixed or variable in nature. Fixed costs do not change with the level of gas throughput, while variable costs change directly with changes in gas throughput. Most non-fuel related utility costs are fixed in the short run and do not vary with changes in customers' loads. This includes the cost of distribution mains, service lines, meters, and regulators.

Finally, the ACOSS provides different contributions to the development of economically efficient rates and the cost responsibility by rate class. This is accomplished through analyzing costs and assigning each rate class its proportionate share of the utility's total revenues and costs within the test year. The results of these studies can be utilized to determine the relative cost of service for each rate class to help determine the individual class revenue responsibility and provide guidance with rate design. Using the cost information per unit of demand, customer, and commodity developed in the ACOSS to understand and quantify the allocated costs in each rate class is a useful step in the rate design process to guide the development of rates.

Q. Is the preparation of an ACOSS an exact science?

A. No. The fundamental purpose of an ACOSS is to aid in the design of rates to be charged by identifying all of the capital and operating costs incurred by a utility to provide service to all of its customers and then assigning or allocating those costs to individual rate classes based on how those rate classes cause the costs to be incurred. The allocation of costs using an ACOSS is a practical requirement of utility regulation since rates are based on the cost of service for the utility under a cost-based regulatory model. As a general matter, utilities must be allowed a reasonable opportunity to earn a return of and on the assets used to serve their customers, with such return on being reflective of a fair rate of return. This is the cost of service standard and equates to the revenue requirements for utility service. The opportunity for the utility to earn its allowed rate of return depends on the rates applied to customers producing revenues that equate to the level of the revenue requirement.

Q. Is there a guiding principle that supports the appropriate allocation of costs?

A. Yes, a fundamental foundational principle, cost causation, should be followed to produce accurate and reasonable results. Cost causation addresses the need to identify which customer or group of customers causes the utility to incur particular types of costs, so the analysis results in an appropriate allocation of the utility's total revenue requirement among the various rate classes. In other words, the costs assigned or allocated to particular customers should be those costs that the particular customers caused the utility to incur because of the characteristics of the customers' usage of utility service.

Q. How do you establish the cost and utility service relationships?

A. An important element in the selection and development of a reasonable ACOSS methodology is the establishment of relationships between customer requirements, load profiles, and usage characteristics on the one hand and the costs incurred by the company in serving those requirements on the other hand. To accomplish this, I reviewed UGI Gas's expense and plant accounts, operational data, usage information, and conducted interviews with UGI Gas employees. The details and data gathered provided information on the key factors that cause the costs to vary and supported studies of the relative costs of providing facilities and services for each rate class. From the results of those analyses, methods of direct assignment and common cost allocation methodologies can be chosen for the utility's plant and expense elements.

Q. What are the steps to performing an ACOSS?

A. A three-step analysis of the utility's total operating costs must be undertaken to establish each customer class's cost responsibility. The three steps that are the basis to conduct an ACOSS are (1) cost functionalization, (2) cost classification, and (3) cost allocation.

Q. Please describe cost functionalization.

A. The first step, cost functionalization, identifies and separates plant and expenses into specific categories based on the various characteristics of utility operation. UGI Gas's primary functional cost categories associated with natural gas distribution services include gas supply, storage, transmission, distribution, and customer. Indirect costs that support

these functions, such as general plant and administrative and general expenses, are allocated to functions using allocation factors related to plant and/or labor ratios, i.e., internal allocation factors.

Q. Please describe cost classification.

A. The second step, cost classification, further separates the functionalized plant and expenses according to the primary factors that determine the amount of costs incurred. These factors are: (1) the number of customers; (2) the need to meet the peak demand requirements that customers place on the gas distribution system; and (3) the amount of gas consumed by customers. These classification categories have been identified for purposes of the ACOSS as: (1) customer costs; (2) demand costs; and (3) commodity costs, respectively.

Q. Please describe the types of costs contained in the customer, demand, and commodity costs categories.

A. Customer-related costs are incurred to attach a customer to the gas distribution system, meter any gas usage, and maintain the customer's account. Customer costs are a function of the number of customers served by the utility and continue to be incurred whether or not the customer uses any gas. They may include capital costs associated with minimum size distribution mains, services, meters, regulators, customer service, and accounting expenses.

Demand or capacity related costs are associated with plant that is designed, installed, and operated to meet maximum hourly or daily gas flow requirements, such as the utility's transmission and distribution mains, or more localized distribution facilities that are designed to satisfy individual customer maximum demands. Gas supply contracts also have a capacity related component of cost relative to UGI Gas's requirements for serving daily peak demands and the winter peaking season.

Commodity related costs are those costs that vary with the throughput sold to, or transported for, customers. Costs related to gas supply are classified as commodity because they vary with the amount of gas volumes purchased by UGI Gas for its customers.

Q. Please describe the cost allocation process.

A. The final step is to allocate each functionalized and classified cost element to the individual rate class. Costs are typically allocated on customer, demand, commodity, or revenue allocation factors. From a cost-of-service perspective, the best approach is a direct assignment of costs where costs are incurred by a customer or class of customers and can be so identified. Where costs cannot be directly assigned, the development of allocation factors by rate class uses principles of both economics and engineering. This results in appropriate allocation factors for different elements of costs based on cost causation. For example, we know from the way customers are billed that each customer requires a meter. Meters differ in size and type depending on the customer's load characteristics. These meters have different costs based on size and type. Therefore,

differences in the cost of meters are reflected by using a different average meter cost for each class of service. Notably, UGI Gas has performed direct assignment analysis of its most competitive negotiated rate customers who receive service under Rate XD, and those direct assignment results are reflected in the ACOSS presented in UGI Gas Exhibit D.

Q. Are there factors that can influence the overall cost allocation framework utilized by a gas utility when performing an ACOSS?

A. Yes. First, the fundamental and underlying philosophy applicable to all cost studies pertains to the concept of cost causation for purposes of allocating costs to customer groups. Cost causation addresses the question – which customer or group of customers causes the utility to incur particular types of costs? To answer this question, it is necessary to establish a linkage between a utility's customers and the particular costs incurred by the utility in serving those customers. The factors that can influence the cost allocation used to perform an ACOSS include: (1) the physical configuration of the utility's gas system; (2) the availability of data within the utility; and (3) the state regulatory policies and requirements applicable to the utility.

Q. Why are these considerations relevant to conducting UGI Gas's ACOSS?

A. It is important to understand these considerations because they influence the overall context within which a utility's cost study is conducted. In particular, they provide an indication of where efforts should be focused for purposes of conducting a more detailed analysis of the utility's gas system design and operations and understanding the regulatory

environment in the state the utility operates in as it pertains to cost of service studies and gas ratemaking issues.

Q. How does the availability of data influence an ACOSS?

A. The structure of the utility's books and records can influence the cost study framework. This structure relates to attributes such as the level of detail, segregation of data by operating unit or geographic region, and the types of load data available.

Q. How do state regulatory policies affect a utility's ACOSS?

A. State regulatory policies and requirements prescribe whether there are any historical precedents used to establish utility rates in the state. Specifically, state regulations and past precedents set forth the methodological preferences or guidelines for performing cost studies or designing rates which can influence the proposed cost allocation method utilized by the utility.

III. UGI GAS'S ALLOCATED COST OF SERVICE STUDY

Q. Please describe the Atrium Model used in conducting the ACOSS filed in this proceeding.

A. UGI Gas has selected the Atrium excel based model ("Atrium ACOSS Model") to conduct the ACOSS in this general base rate case. Atrium developed the Atrium ACOSS Model on a proprietary basis for its consulting engagements, and it has been used in multiple

jurisdictions. This is the same model I sponsored in the Company's last base rate case at Docket No. R-2024-3052716.

Q. Please describe the process of performing UGI Gas's ACOSS presented in this filing.

A. The detailed process description of UGI Gas's ACOSS analysis is presented in Exhibit D, providing a full scope of the process including the development of allocation factors that support various cost of service studies presented in this proceeding as discussed below.

Q. Please discuss the content of Exhibit D.

A. Exhibit D provides the information required under 52 Pa. Code § 53.53(a)(1) and, in particular, Exhibit A - Gas Utilities, by providing a cost of service study that fully distributes the Pennsylvania jurisdictional costs of providing retail distribution service to the various rate classes at both present and proposed rates. See 52 Pa. Code § 53.53(a)(1), Exhibit A.

Exhibit D consists of three sections detailing the process of developing the ACOSS. Section I – Introduction includes an introduction, the general purpose and process of the ACOSS, as well as an overview of the excel-based fully functional ACOSS model presented in this proceeding. Section II – UGI Gas's Cost of Service Procedures presents the ACOSS development process specific to the Company, including the Functionalization, Classification, and Allocation of costs. The Allocation section (Section II.3) describes all internal and external allocation factors and the allocation processes used in the ACOSS. The last section, Section III – UGI Gas's Cost of Service Results depicts the results of the ACOSS, including revenue requirement apportionment, comparison of

cost of service with revenues under current and proposed rates, and development of rate of return by customer class under current and proposed rates.

Q. Please describe the content and schedules included in Exhibit D.

A. Exhibit D contains a narrative description of the ACOSS procedures, provides details on the allocation factors, and contains the following Schedules:

- Schedule 1 – Summary of Cost of Service and Rate of Return Under Current and Proposed Rates
- Schedule 2 - Functionalized and Classified Rate Base and Revenue Requirement, and Unit Costs by Customer Class
- Schedule 3 - Cost of Service Allocation Study Detail by Account
- Schedule 4 - Account Balances and Allocation Methods
- Schedule 5 - External Allocation Factors
- Schedule 6 - Internal Allocation Factors

Q. What was the source of the cost data analyzed in UGI Gas's ACOSS?

All cost-of-service data was extracted from the Company's total cost of service (*i.e.*, total revenue requirement) and schedules contained in this general rate case filing for the FPFTY ending September 30, 2027. Where more detailed information was required to perform various analyses related to certain plant and expense elements, the data were derived from the historical books and records of the Company and information provided by Company personnel.

Q. How are UGI Gas's rate classes structured for the purposes of conducting its ACOSS?

A. For UGI Gas's ACOSS, I included six rate classes:

- Rate R - General Service – Residential & Residential Transportation
- Rate N - General Service – Non-Residential & Non-Residential Transportation
- Rate DS - Delivery Service
- Rate LFD - Large Firm Delivery Service
- Rate XD Firm - Extended Large Firm Delivery Service
- Rate IS - Interruptible Service

Q. Do you propose any modification to the current customer classes?

A. No. I am not proposing any modifications to the existing customer classes. The current class structure aligns with the Company's approved tariff schedules and is consistent with the configuration adopted in the Company's most recent general rate case, Docket No. R-2024-3052716.

Q. How did you classify and allocate the cost of distribution mains?

A. I classified distribution mains as 100% demand related and allocated their costs in two steps. First, a portion of the costs was directly assigned to Rate XD Firm based on an analysis provided by the Company. Second, I allocated the remaining balance using the Average and Excess ("A&E") method.

Q. Please describe the methodology used for the costs directly assigned to the XD customers.

A. For each customer, a distribution system analysis is performed to determine which assets (including footage, diameter, material type, and vintage year) of the distribution system are utilized to serve each Rate XD customer. Using the Company's plant records, the costs and footage for these assets are summarized based on the footage assigned to the customer as a percentage of the total footage for that asset. A portion of this cost is allocated to each Rate XD customer based on the customer's throughput on that asset as a percent of the asset total. The calculated costs for all assets assigned to each Rate XD customer are summed to determine that customer's directly allocated costs. These customer-level costs are then summed across all Rate XD customers to develop the direct assignment for the Rate XD class.

Q. Please describe the A&E method.

A. The A&E method allocates costs based on a combination of average usage and peak usage levels. This method is used to allocate costs on both the consistent usage (average demand), and the additional capacity needed during peak times (excess demand). The average demand is determined by the average daily throughput volumes per customer class. The excess demand represents the additional capacity needed to meet the peak demand or maximum usage levels for each customer class. These two factors are weighted based on the system load factor, which is the ratio of average demand to peak demand for

the entire system. This factor determines the proportion of costs attributed to average daily usage versus peak capacity requirements.

Q. Can you explain the system load factor and its significance in this method?

A. The system load factor is calculated as follows:

Load Factor = Average Daily Throughput ÷ Peak Day Demand

It indicates the efficiency of the system's utilization. A higher load factor suggests that demand is relatively stable, reducing the need for excess capacity. This metric helps balance the cost allocation between average usage and peak demand. UGI Gas's firm service load factor for the FPFTY is 40.53%, which is the system load factor excluding interruptible load. Therefore, the allocation assigns 40.53% of the costs to average daily usage and 59.47% to peak demand.

Q. Why is the interruptible load excluded from the load factor calculations?

A. Interruptible load is excluded from the load factor calculations because it does not contribute to the system's peak day demand, which is a critical driver of infrastructure. In addition, interruptible customers are not assigned any excess load. Interruptible customers agree to reduce or halt their gas usage during periods of high demand, meaning they do not place the same capacity requirements on the distribution system as firm customers. Including interruptible load would misrepresent the true cost drivers and unfairly allocate costs to customers who do not rely on guaranteed peak capacity.

Q. Has the A&E method been approved by the Commission?

A. Yes. The A&E method was approved by the Commission in PECO Energy Company's rate case at Docket No. R-2020-3018929.

Q. Did you consider other classification or allocation methods?

A. Yes. I considered the customer/demand classification method and the Peak and Average ("P&A") allocation method. However, the Commission has not traditionally recognized the customer component of gas mains, which means the customer/demand classification method is not consistent with past Commission orders.[1] The P&A allocation method has also been evaluated for use in past Pennsylvania rate cases and applies a fixed 50/50 weighting instead of relying on the system load factor.

Q. How do the allocation results differ between the A&E method and the P&A method for UGI Gas in this case?

A. The allocation results for each method are presented below in Table 1. The A&E method allocates a higher percentage of costs to Rate R (46.8% vs. 44.7%) and Rate N (31.6% vs. 28.9%), reflecting its reliance on the system load factor. On the other hand, the P&A method allocates a higher percentage of costs to Rate LFD (15.4% vs. 11.7%) and Interruptible (4.3% vs. 3.5%), due to its 50/50 weighting of average demand within the peak portion. These differences illustrate how the P&A method allocates more costs to

[1] *Pa. PUC, et al. v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2020-3018835 (Order entered February 19, 2021), p. 217.

higher-load factor customers than the A&E method, despite those customers having more efficient use of the system.

Table 1 – Comparison of Mains Allocators of the Company's ACOSS

	Rate R	Rate N	Rate DS	Rate LFD	Interruptible
A&E	46.8%	31.6%	6.4%	11.7%	3.5%
P&A	44.7%	28.9%	6.7%	15.4%	4.3%

Q. Does UGI Gas's ACOSS include gas commodity costs?

A. Yes. The gas costs reflected in the ACOSS correspond to gas cost revenues that have a neutral impact on the study's results, resulting in a net-zero effect.

Q. Please summarize the results of the Company's ACOSS.

A. Table 2 below presents a summary of the Company's ACOSS that can be reviewed in Schedule 1 of Book IX, UGI Gas Exhibit D. The ACOSS shows an overall revenue requirement of $1,234.7 million and a resulting deficiency of $99.4 million. The revenue deficiency/excess for each rate class shows revenue increases or decreases necessary to get the classes to their cost to serve.

Table 2 - Summary Results of the Company's ACOSS ($000)[2]

Customer Classes	Current Revenues	Cost to Serve	Class Revenue (Deficiency)/ Excess	Percentage Change to Cost to Serve	Current Rate of Return	Current Revenue to Cost Ratio	Current Parity Ratio
Rate R	$ 794,595	$ 895,723	$ (101,128)	12.7%	5.2%	0.89	0.96
Rate N	269,032	292,438	(23,405)	8.7%	6.5%	0.92	0.99
Rate DS	36,024	34,197	1,827	-5.1%	9.3%	1.05	1.14
Rate LFD	58,792	54,870	3,922	-6.7%	9.6%	1.07	1.16
Rate XD Firm	39,155	26,027	13,128	-33.5%	17.0%	1.45	1.56
Rate IS	22,953	16,665	6,288	-27.4%	14.3%	1.37	1.48
Total Base	**1,220,551**	**1,319,920**	**(99,369)**	**8.1%**	**6.5%**	**0.93**	**1.00**
Other Revenues	14,131	14,131	-				
Total Company	**1,234,682**	**1,334,051**	**(99,369)**				

The ACOSS shows that Rate R and Rate N classes are being charged rates that recover less than their indicated costs of service, whereas rates for other rate classes provide for recovery of more than the indicated costs of serving these other rate classes. In other words, to set each classes' revenues equal to their cost to serve indicated in the ACOSS, Rate R and Rate N would require an increase in revenues, while all other classes would require a decrease. Additionally, Table 2 provides helpful insights into UGI Gas's class financial metrics, such as the current Rate of Return and corresponding Relative Rate of Return and Current Revenue to Cost Ratio with the corresponding Parity Ratio.

Q. Have you prepared more detailed reports of UGI Gas's ACOSS results?

A. Yes, additional details are included in Exhibit D. Schedule 4 "Account Balances and Allocation Methods" of Exhibit D includes revenue requirement information by FERC account provided by UGI Gas and shows assigned functions, categories, and allocation factors. Schedule 3 "Cost of Service Allocation Study Detail by Account" of Exhibit D

[2] See Exhibit D, Schedule 1, lines 13, 52, 57, 24, 26, and 27.
Percent Change = Class Revenue (Deficiency)/Sufficiency ÷ Current Revenues

presents the resulting allocations by customer class of UGI Gas's proposed revenue requirement based on the results of the computations included in the ACOSS.

IV. PRINCIPLES OF SOUND RATE DESIGN

Q. Please identify the rate design principles utilized in developing the Company's rate design proposals.

A. The rate design principles below draw heavily upon the "Attributes of a Sound Rate Structure" developed by James Bonbright in Principles of Public Utility Rates.[3] Each of these principles plays an important role in analyzing the rate design proposals of UGI Gas and provides a roadmap that helps guide utilities and regulators when considering how to achieve utility rates that are fair, efficient, practical, and reasonable. The foundation of rates should include:

- Fairness: Rates should be fair to all customer classes, avoiding undue discrimination.
- Efficiency: Rates should promote the efficient use of resources and encourage conservation while avoiding undue restriction of economic use.
- Simplicity: Rates should be simple and understandable for customers.
- Stability/Gradualism: Rates should provide bill stability for customers and revenue stability for the utility.
- Reflective of Costs: Rates should reflect the cost of providing service to different customer classes.

[3] James Bonbright et al. Principles of Public Utility Rates, Public Utilities Reports, Inc. 2nd Edition, 1988.

- Revenue Sufficiency: Rates should generate enough revenue to cover the utility's costs, including a reasonable return on investment.

In addition, these principles are consistent with Pennsylvania practice and precedent, including the *Lloyd* decision,[4] where the Commonwealth Court indicated that cost of service is the "polestar" of ratemaking but that other factors, including those listed above, can be considered as well.

Q. How are these principles translated into the design of rates?

A. The overall rate design process, which includes both the apportionment of the revenues to be recovered among rate classes and the determination of rate structures within rate classes, consists of finding a reasonable balance between the above-described criteria or guidelines that relate to the design of utility rates. Economic, regulatory, historical, and social factors all enter the process. In other words, both quantitative and qualitative information are evaluated before reaching a final rate design determination. Out of necessity, the rate design process must be, in part, influenced by judgmental evaluations.

V. UGI GAS'S REVENUE APPORTIONMENT

Q. Please describe the approach used by UGI Gas to allocate its proposed $99.4 million revenue increase among its customer rate classes.

A. UGI Gas's proposed allocation of the revenue increase is informed by the results of the ACOSS and reflects a deliberate effort to move all rate classes closer to the overall system

[4] *Lloyd v. Pa. P.U.C.*, 904 A.2d 1010 (Pa. Cmwlth. 2006), *appeal denied*, 591 Pa. 676, 916 A.2d 1104 (2007).

rate of return, thereby reducing the subsidies that currently exist between classes. This approach is consistent with long-standing regulatory practice and precedent, including the *Lloyd* decision and the Commission's Order on remand approving the settlement in that case.

The benchmark option evaluated under UGI Gas's proposed total revenue level was to adjust the revenue level for each customer class so that the revenue-to-cost for each class was equal to 1.00. This is shown above in Table 2 where the changes in each classes' revenues would be set to their deficiency or surplus. It was decided that this fully cost-based option was not the preferred solution to the interclass revenue issue, given the large increase required to move some classes to parity. After discussions with the Company, the increase proposed in this case was allocated based on a desire to move toward full parity over time while addressing issues of gradualism. To accomplish this, the Company first reflected the slight rate decreases for competitively negotiated classes XD and IS in the mechanics of the calculations, resulting from incorporating the current Distribution System Improvement Charge ("DSIC") rider into base rates. Second, Rate N was assigned an increase to move them to parity, equivalent to 1.18 times the system increase. Finally, Rates DS and LFD were assigned increases that correct approximately two-thirds of the class's over-earning relative to the system-average rate of return. While there are various yardsticks used to measure the degree of movement toward cost of service, the Company evaluated two metrics: (1) the percentage movement towards the system rate of return; and (2) the reduction in the subsidies occurring between classes. In addition, the Company's proposal results in keeping the residential average monthly bill increase under

$10, and with these considerations, the Company is proposing the revenue changes shown in Table 3 below.

Table 3 – Proposed Class Revenue Apportionment
Base Distribution Margin ($000)[5]

Customer Classes	Current Revenues	Proposed Revenues	Proposed Revenue Change	Proposed Percentage Change	Proposed Rate of Return	Proposed Revenue to Cost Ratio
Rate R	$ 794,595	$ 869,272	$ 74,677	9.4%	7.4%	0.97
Rate N	269,032	$ 292,418	23,386	8.7%	8.2%	1.00
Rate DS	36,024	$ 36,732	708	2.0%	9.4%	1.07
Rate LFD	58,792	$ 59,528	736	1.3%	9.4%	1.08
Rate XD Firm	39,155	$ 39,090	(64)	-0.2%	16.4%	1.44
Rate IS	22,953	22,879	(73)	-0.3%	13.7%	1.37
Total Base	**$ 1,220,551**	**$ 1,319,920**	**$ 99,369**	**8.1%**	**8.2%**	**1.00**

Q. To what degree does the Company's proposed revenue apportionment move the classes toward their cost of service?

A. The Company's proposed revenue apportionment results in the reduction of the existing rate subsidies and excesses among the Company's rate classes, moving classes toward the overall system rate of return. From a class cost of service standpoint, this type of class movement and reduction in class rate subsidies is desirable, as it brings class revenues and rates closer to the indicated cost of service for each rate class.

Table 4 below compares the current and proposed rates of returns and parity ratios. The Company's proposal moves the return for all rate classes closer to the Company's proposed return. Likewise, parity ratios move closer to the desired 1.0 level.

[5] See Exhibit D, Schedule 1, lines 10, 52, 58, 61, 70, and 72.

Table 4 - Comparison of Relative Rate of Return by Rate Class
Base Distribution Margin ($000)[6]

Customer Classes	Current Revenues	Proposed Revenues	Current Return	Proposed Return	Current Parity Ratio	Proposed Parity Ratio
Rate R	$ 794,595	$ 869,272	5.2%	7.4%	0.96	0.97
Rate N	$ 269,032	$ 292,418	6.5%	8.2%	0.99	1.00
Rate DS	$ 36,024	$ 36,732	9.3%	9.4%	1.14	1.07
Rate LFD	$ 58,792	$ 59,528	9.6%	9.4%	1.16	1.08
Rate XD Firm	$ 39,155	$ 39,090	17.0%	16.4%	1.56	1.44
Rate IS	$ 22,953	$ 22,879	14.3%	13.7%	1.48	1.37
Total Base	**$ 1,220,551**	**$ 1,319,920**	**6.5%**	**8.2%**	**1.00**	**1.00**

Q. To what degree does the Company's proposed revenue apportionment decrease the existing subsidies between rate classes?

A. Table 5 below summarizes the current subsidies, proposed subsidies, and the reduction in subsidies for all customer classes resulting from the Company's proposed revenue apportionment.

Table 5 - Comparison of Current and Proposed Subsidies ($000)[7]

Customer Classes	Current Class Subsidy	Proposed Class Subsidy	Reduction in Subsidy
Rate R	$ (34,867)	$ (26,451)	$ 8,416
Rate N	(23)	(20)	3
Rate DS	4,965	2,535	2,430
Rate LFD	9,160	4,658	4,502
Rate XD Firm	13,654	13,063	590
Rate IS	7,112	6,215	897
Total Company	$ -	$ -	$ -

[6] Exhibit D, Schedule 1, lines 10, 52, 24, 70, 27, and 73.
[7] See Exhibit D, Schedule 1, lines 35 and 63. Reduction in Subsidy = Absolute difference between Proposed Subsidy and Current Subsidy.

VI. UGI GAS'S RATE DESIGN

Q. Please summarize the rate design changes UGI Gas has proposed in this rate proceeding.

A. In general, UGI Gas's rate design strategy is to make incremental movements toward reflecting the Company's relative cost of serving each rate class to provide natural gas distribution service to those customers. UGI Gas has proposed the following rate design changes to its current tariff schedules:

- Rate R – Increase in the monthly customer charge from $16.25 to $23.00, with the remaining proposed increase to be recovered in the volumetric charge.
- Rate N – Increase in the monthly customer charge from $36.42 to $39.00, with the remaining proposed increase to be recovered in the volumetric charge.
- Rate DS – Increase in the monthly customer charge from $300 to $353, with the remaining proposed increase to be recovered in the volumetric charge.
- Rate LFD – Increase in the volumetric charge from $1.3831 per Mcf to $1.4173 per Mcf.
- Rate XD Firm – Decrease equivalent to the DSIC rider amount.
- Rate IS – Decrease equivalent to the DSIC rider amount.

Q. Has the Company prepared a detailed comparison of the Company's current and proposed rates and resulting revenues by rate class?

A. Yes. UGI Gas Exhibit E – Proof of Revenue, sponsored by Company witness Sherry A. Epler, Statement No. 10, presents a detailed comparison of current and proposed revenues for each of UGI Gas's rate classes.

Q. What billing determinants were used to develop the Company's proposed base rates in this proceeding?

A. Consistent with the Settlement Agreement approved by the Commission in Docket Nos. R-2024-3052716 et al., the Company evaluated the use of a ten-year historical period and determined that a ten-year historical average of heating degree days ("HDDs") ending December 31, 2024, is a more appropriate basis for both base-rate billing determinants and WNA calculations. In support of this conclusion, I am sponsoring the Normal Heating Degree Days Report in UGI Gas Exhibit JDT-2, which evaluates long-term weather trends and normalization alternatives and recommends adoption of a ten-year historical average to reflect more recent weather conditions. Specifically, this analysis was undertaken pursuant to the settlement agreement approved by the Commission on September 11, 2025, at Docket Nos. R-2024-3052716, et al. which established the following requirement:

> UGI Gas will include in its filing a report and recommendation on the use of a rolling ten-year historical average period to be used to calculate its normal heating degree day amounts for purposes of the WNA, as well as the use of a ten-year historical average period for purposes of determining projected sales and billing determinants in base rates. (p.12)

As set forth in UGI Gas Exhibit JDT-2, the Company proposes that the 10-year normals be updated in conjunction with each future rate case filing. This would replace the Company's current practice, wherein it used 15 years of weather data updated every five years, with the last update – the one that supported the rates established in Docket R-2024-3052716 – based on data ending on December 31, 2019.

Q. What factors drove the change in billing determinants in this case compared to prior rate cases?

A. Two primary factors contributed to the change in billing determinants in this case. First, as I just described, in the prior proceedings, the Company relied on a fifteen-year historical average ending in 2019. Under the Company's current methodology, it was required to update its normal weather in this proceeding. Updating that methodology alone, by advancing the fifteen-year period to include more recent data, would have replaced approximately one-third of the historical observations with newer years that generally reflect lower heating degree days. As a result, even without a change to a ten-year historical average of HDDs, normalized billing determinants would have declined due to the inclusion of warmer recent weather.

Second, in compliance with the Settlement Agreement, the Company evaluated and ultimately is proposing the use of a ten-year historical average ending December 31, 2024. As demonstrated in Exhibit JDT-2, a ten-year period more closely aligns with observed recent weather patterns and the long-term downward trend in heating degree days, while avoiding the overstatement of heating demand that can occur when older, colder years remain embedded in the normalization period.

Q. How does the ACOSS support the proposed increases to customer charges?

A. Atrium's ACOSS model allows for developing the total revenue requirement by functions and classifications. As such, we can see directly the revenue requirement associated with the customer classification and the respective functions that form this revenue

requirement. Table 6 below provides the information related to the current and proposed customer charges for Rates R, N, and DS, compared to the customer-related unit cost per customer per month.

Table 6 - Customer Charge Current, Proposed, and ACOSS Unit Cost Results ($)[8]

Customer Classes	Current Basic Facilities Charge	Proposed Basic Facilities Charge	Customer Related Unit Cost	Demand and Customer Related Unit Cost
Rate R	16.25	23.00	54.03	79.04
Rate N	36.42	39.00	70.69	224.16
Rate DS	300.00	353.00	542.90	2,201.57

As seen in the above table, the proposed increases in customer charges are still under the customer-related unit cost identified in the ACOSS. These include the customer portion of distribution facilities, as well as customer service and billing costs.

Q. Can you please discuss the results in Table 6 above within the context of the Company's proposed customer charges and past Commission precedent?

A. Yes, past Commission precedent defines customer-related costs for inclusion in a customer charge as costs associated with meters and services and related operations and maintenance ("O&M") expenses, meter reading and billing and collection expenses, meter data management systems, and related employee benefits, administrative and general expenses. The Company is proposing a Rate R customer charge of $23.00, which is below the $54.03 within Table 6 above, and represents meter reading, customer service, and

[8] See Exhibit D, Schedule 2, lines 118 and 119.

billing and collection expenses. These are all costs historically allowed by the Commission in a customer charge. Taking into consideration past precedent in Pennsylvania and given the results of the ACOSS as shown in Table 6 above, the Company is proposing to move the Rate R customer charge to $23.00. Similarly, the Company is proposing customer charge increases to Rate N and Rate DS that are still well below the customer related unit cost for these rates.

Q. Why are setting customer charges more in alignment with the fixed cost of service an important outcome of ratemaking?

A. These proposed customer charges help to reduce customer bill volatility, alleviate a significant portion of the instability in the Company's margin recovery, are fair to customers, are easily understood, convey more appropriate price signals with respect to recovery of fixed utility costs, benefit low-income customers that have higher than average use, and are not regressive in application to low-income customers who may have little control over their use of energy and are negatively impacted when recovering more costs in volumetric charges.

Establishing higher monthly fixed charges helps to equalize the contribution each customer within a class makes towards recovery of the fixed costs attributable to this class. This method of cost recovery is preferable to including such costs in the volumetric charges, which has the effect of causing some customers to pay too much while others pay too little. The customer charges provide for recovery of a portion of the Company's fixed costs, which are incurred solely because of the existence of customers connected to the

system. These costs, such as the expense of reading meters and billing, occur regardless of whether natural gas is used and are not related to demands placed on the system. The proposed customer charge increases will also help to ensure the Company's recovery of a greater portion of its fixed costs of providing service. Inasmuch as costs are not related to usage, they should be recovered, to the extent possible, through a tariff mechanism that does not depend upon volumetric billing.

In terms of understandability, customers easily recognize fixed cost charges and are used to these pricing structures in their everyday lives. Because these costs do not vary with the customer's usage, it is perfectly understandable that the charge should not vary as well.

Q. Please expand on why an increase in the Rate R customer charge would benefit low-income customers.

A. There is often a common misconception that low-income customers are low-usage customers. This is not a correct characterization of low-income customers on the Company's system who are indeed higher-use customers. According to the Company's historical residential customer billing data[9], the average use for confirmed low-income customers not enrolled in the Customer Assistance Program ("CAP")[10] is 86.7 Mcf/year.

[9] Based on three full years (2022, 2023 and 2024) of residential customer billing data. This dataset included individual monthly usage levels for each customer, along with key identifying attributes that enabled segmentation of the residential class for comparative purposes.

[10] Customers with Confirmed Low-Income indicator as of January 2025. Confirmed Low Income indicator is applied when a customer provides proof of income and is subsequently enrolled in CAP, participated in Low Income Usage Reduction Program ("LIURP"; 200% Federal Poverty Income Guidelines ("FPIG")) or received an Operation Share grant (250% FPIG) or a Low Income Home Energy Assistance Program ("LIHEAP") grant (150% FPIG) within prior 12 months.

This is 14% higher than the average of the Company's residential non-low-income customer use of 76.0 Mcf/year.

Also, all else being equal, higher customer charges necessitate lower variable charges. The collection of costs through fixed or volumetric charges is only the means of collecting the revenue to cover costs for a specific customer class. The amount of total revenue that must be recovered does not change. Higher usage customers pay more when more fixed customer costs are embedded in the volumetric rates. This creates a social equity concern, as customers who can afford to reduce their usage through energy efficiency investments can decrease their bills by making such investments, while those customers who cannot afford to make energy efficiency investments will see increases in their bills. Examples of those who could possibly afford to reduce their usage include higher-income households who can undertake more expensive energy efficiency measures. While some environmental advocates may prefer that households stop using natural gas altogether, families still use gas as an economic energy source for basic human needs such as keeping themselves warm, cooking, and caring for themselves.

Further, recovering fixed costs in volumetric charges places regressive burdens on low-income households who have to make decisions to reduce their gas usage, which impacts their quality of life. Families use gas as an economic energy source for basic human needs such as keeping themselves warm, to cook, and care for themselves. For many households, particularly low-income customers, a substantial portion of natural gas consumption reflects non-discretionary usage necessary to meet basic human needs and

cannot be meaningfully reduced through "just use less" through price signals, absent the ability to invest in more efficient equipment or building improvements.

Lastly, considerations relating to the intersection of income and rate design would be amiss if they did not include discussions relating to UGI Gas's low-income programs. UGI Gas has available a continuum of low-income targeted programs, beyond CAP, including facilitating Low-Income Home Energy Assistance Program ("LIHEAP"), and offering Low-Income Usage Reduction Program ("LIURP") and weatherization assistance, as well as Operation Share to address customers experiencing economic hardship.

Q. Have you conducted an analysis of the difference between the current $16.25 monthly residential customer charge and the proposed $23.00 a month charge on low-income customers?

A. Yes. Table 7 compares the amount a confirmed non-CAP low-income customer with an average usage of 86.7 Mcf/year would pay between the customer charge and the volumetric charge under the Company's proposal (Scenario A) of increasing the monthly customer charge to $23.00, and Scenario B, which keeps the monthly customer charge unchanged at $16.25.

Table 7 – Comparison of Annual Charges for Average CAP Customer[11]

Average LI Customer (non-CAP)	Scenario A	Scenario B	B - A	% change
Customer Charges	$ 276.00	$ 195.00	$ (81.00)	-41.5%
Distribution Charges	592.61	680.78	$ 88.18	13.0%
Total Annual Charges	**$ 868.61**	**$ 875.78**	$ 7.18	0.8%

The comparison shows that while the Company's proposal increases the annual customer charges by $81.00 or 41.5%, the increase is offset by the $88.18 or 13.0% lower distribution charges. In other words, by not changing the current customer charge, customers may face higher overall costs because of the increase in distribution charges. This suggests that any policy or pricing adjustment leading to keeping the customer charge unchanged would shift more costs to the variable distribution component, increasing the financial burden on low-income customers, close to 1%, over a year. As previously stated, a volumetrically weighted rate design conveys improper price signals to customers because it recovers fixed costs through the volumetric components of the utility's rate structure. When this undesirable situation exists, it can: (1) increase revenue variability due to factors beyond the utility's ability to influence; (2) fail to account for cost differences between and within customer classes; (3) promote inefficient use of the utility's system; and (4) needlessly inflate bills in the winter months. The important policy point in this discussion is that it makes no economic sense to send the wrong economic price signals to all customers in order to supposedly benefit a small subset of low-income

[11] Scenario A uses a monthly customer charge of $23.00 and distribution charges of $6.8383/Mcf, as proposed by the Company. Scenario B uses the current monthly customer charge of $16.25 and distribution charges of $7.8558/Mcf, which would be necessary to recover Rate R's proposed revenue.

customers. It is far more efficient to address the issues of low-income customers directly through programs and assistance, such as the Company's CAP.

VII. WNA MECHANISM

Q. What is the Company's proposal regarding WNA in this proceeding?

A. UGI Gas is requesting the Commission to extend the current WNA pilot mechanism for an additional five (5) years after its current expiration in October 2027. This request follows the settlement agreement approved by the Commission on September 11, 2025, at Docket Nos. R-2024-3052716, et al. which established the following:

> UGI Gas's WNA Pilot will end on October 31, 2027, unless affirmatively extended or otherwise permitted by Commission order. Should UGI Gas request a continuation or modification of the WNA for the period on or after November 1, 2027, it may file a stand-alone Petition or incorporate into a base rate proceeding to be filed no later than January 31, 2026. (p.12)

Q. Has the Commission recently approved similar WNA mechanisms?

A. Yes. For example, in its most recent Final Order in the Columbia Gas of Pennsylvania ("Columbia") case, issued in December 2025, the Commission explicitly approved the continuation of Columbia's WNA mechanism "to allow it a reasonable opportunity to earn up to its Commission-authorized revenue requirement."[12]

[12] Pa. PUC v. Columbia Gas of Pa., Inc., Docket No. R-2024-3067174, Final Order at 301 (Dec. 4, 2025).

Q. Has the Company complied with the WNA stipulations from the settlement agreements in prior rate cases?

A. Yes. As mentioned above, I am sponsoring the Normal Heating Degree Days Report in UGI Gas Exhibit JDT-2, which supports utilizing a 10-year weather history, and was agreed upon in Docket No. R-2024-3052716, et al. In addition, as explained by Company witness Brian J. Meilinger, UGI Gas Statement No. 12, the Company has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716, et al. Lastly, UGI Gas Exhibit JDT-3 provides the WNA data requested by the parties in the settlement agreements in Dockets No. R-2021-3030218 and No. R-2024-3052716.[13]

Q. How does the use of a ten-year historical average for billing determinants relate to the Company's WNA?

A. The use of a ten-year historical average serves a consistent and complementary role in both base-rate development and WNA operation. Base rates are established using billing determinants normalized to the same ten-year weather baseline against which actual weather will later be compared under the WNA. Maintaining this consistency ensures that the WNA functions as intended by adjusting revenues solely for deviations between actual weather and the normalized weather assumptions embedded in rates.

[13] The Company has filed five reports with the Commission since November 30, 2023, containing WNA data from April 2023 through October 2025. These reports are available at https://www.puc.pa.gov/pcdocs/1807398.pdf, https://www.puc.pa.gov/pcdocs/1835933.pdf, https://www.puc.pa.gov/pcdocs/1857431.pdf, https://www.puc.pa.gov/pcdocs/1885030.pdf, and https://www.puc.pa.gov/pcdocs/1904492.pdf

As explained in Exhibit JDT-2, using different weather baselines for rate-setting and WNA calculations could introduce misalignment and unintended over or under recovery. By applying the same ten-year historical average for both purposes, the Company preserves methodological integrity and ensures that customers and the Company are treated fairly when weather conditions differ from normal.

Q. Does the use of a ten-year historical average eliminate the need for a WNA?

A. No. While a ten-year historical average better reflects recent weather conditions, actual heating degree days will continue to vary from year to year in ways that cannot be predicted with certainty. Accordingly, the WNA remains an important mechanism to address year-to-year weather variability by reconciling revenues to the normalized assumptions used to set rates, thereby protecting both customers and the Company from the financial effects of abnormal weather.

Using a ten-year historical average also improves the definition of "normal" weather by placing greater weight on more recent conditions. As a result, deviations between actual weather and normalized assumptions are expected to be smaller, on average, than under a longer historical period that includes older, less representative data. This improved alignment is expected to reduce the magnitude of WNA surcharges or credits over time, while preserving the WNA's role in addressing unavoidable weather variability.

Q. Please describe the Company's proposed WNA.

A. After adopting the modifications to the current WNA pilot pursuant to the Commission-approved settlement at Docket No. R-2024-3052716, UGI Gas's WNA mechanism functions as follows:

i) It adjusts the usage in customer bills based on deviations from normal weather, as measured by Heating Degree Days ("HDDs"), by comparing actual HDDs ("AHDDs") to normal HDDs ("NHDDs") based on a 15-year weather history.

ii) It includes a 3% deadband, meaning no adjustment is made unless the weather deviates by more than ±3% from normal. This prevents minor weather variations from triggering bill changes and ensures that adjustments occur only when there are material deviations.

iii) It applies to Residential (excluding CAP customers) and Small Commercial classes.

iv) It applies during the heating season months of October through April. By excluding non-heating season usage and focusing on the weather-sensitive portion of consumption, the mechanism is carefully targeted and limited in scope. Specifically, the WNA no longer applies in May.

Q. Why is a WNA mechanism necessary for UGI Gas's rate structure?

A. UGI Gas's current rate design recovers significant fixed costs through volumetric charges. Weather-driven usage swings can cause under-recovery in warm winters and over-recovery in cold winters. The WNA stabilizes this to provide the Company a reasonable

opportunity to recover its authorized revenue requirement while protecting customers from additional charges in colder than normal winters.

Q. Can you elaborate on the relationship between fixed costs and usage-based recovery in UGI Gas's current rate design?

A. UGI Gas's current rate design recovers a significant portion of its fixed costs, such as infrastructure, maintenance, and administrative expenses, through volumetric charges based on customer usage. Because revenues are recovered through volumetric rates established using billing determinants that reflect normal weather conditions, periods of warmer-than-normal weather result in lower-than-expected gas usage and corresponding under-recovery of fixed costs, even though those costs do not vary with consumption. Conversely, colder-than-normal weather can lead to over-recovery. This mismatch creates volatility for both customers and the utility. The WNA mechanism helps address this by normalizing revenues to reflect normal weather conditions, ensuring that fixed costs are recovered more consistently with what was authorized by the Commission when it approved current rates.

Q. What portion of UGI Gas's fixed costs is recovered through its current volumetric distribution charges?

A. As shown on UGI Gas Exhibit E – Proof of Revenue, at current rates, approximately 72% of base rate distribution revenues for Rate R is recovered through the volumetric distribution charge. For Rate N, approximately 81% of base rate distribution revenue is

recovered through the volumetric distribution charge. This clearly indicates that even though UGI Gas's distribution costs are fixed, there is a risk of over- or under-recovery, for the vast majority of costs, resulting in the need for the WNA.

Q. Are there alternative rate designs which more closely align fixed cost recovery with distribution charges and minimize potential under- and over-recovery due to weather?

A. Yes. Straight-Fixed-Variable ("SFV") rate design would accomplish that goal.

Q. How would a transition toward a SFV rate design help mitigate under- and over-recovery risks?

A. A transition to a SFV rate design would reduce UGI Gas's reliance on usage-based charges to recover fixed costs. Under the current structure, a significant portion of fixed costs, such as infrastructure and maintenance, are recovered through volumetric rates, making revenues highly sensitive to weather-driven consumption changes. SFV shifts recovery of fixed costs to a fixed monthly charge, ensuring that these costs are collected consistently regardless of seasonal usage fluctuations. This approach mitigates under-recovery risks during mild winters and over-recovery during colder-than-normal periods, providing greater revenue stability and aligning cost recovery with cost causation principles.

Q. How does UGI Gas's proposed WNA align with the factors the Commission may consider when evaluating this alternative ratemaking mechanism?

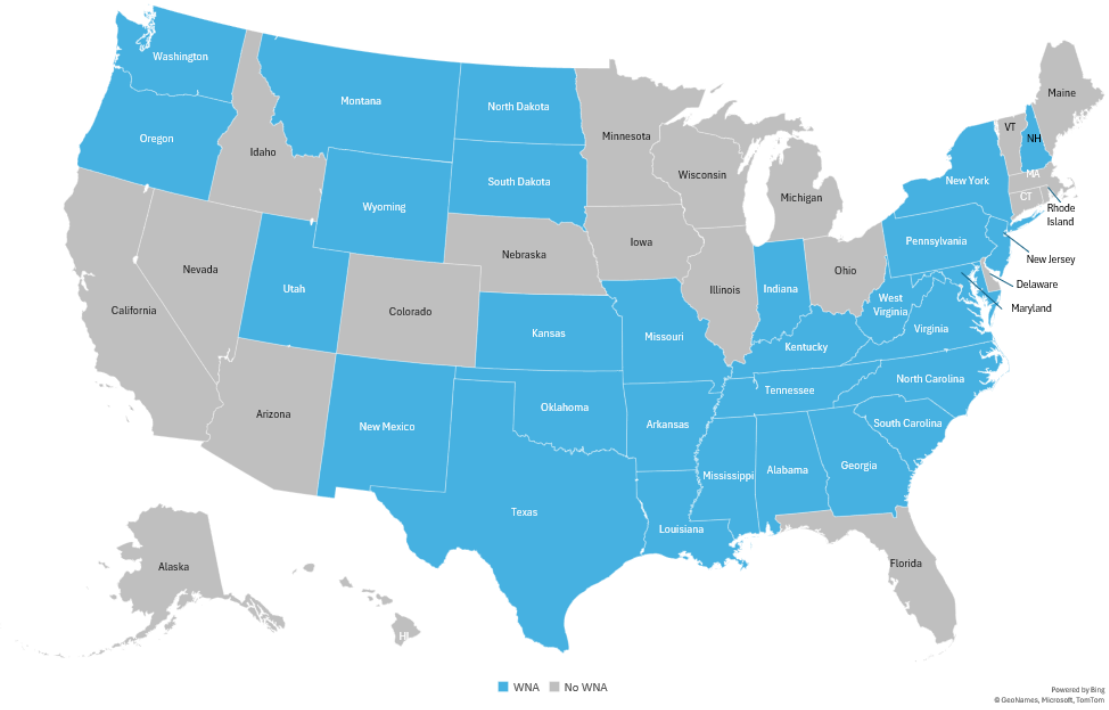
A. Exhibit JDT-4 details how UGI Gas's proposed WNA aligns with each of the fourteen items identified within the Statement of Policy as outlined by the Commission in the alternative rate making Docket No. M-2015-2518883. However, it is important to note that the Statements of Policy language[14] suggests that the Commission intends to consider these elements, but not all of them may be relevant or deemed required in order to determine whether a proposal is just and reasonable.

Q. Are WNAs common alternative ratemaking mechanisms in the utility industry?

A. Yes. WNA mechanisms are widely used across the United States to stabilize customer bills and utility revenues during weather conditions that deviate from normal. The map that follows shows that 29 states with a total of 67 gas utilities have adopted similar mechanisms.

[14] "the Commission may consider, among other relevant factors, the following:" Docket M-2015-2518883 PA Bulletin Dated July 1, 2020 (https://www.puc.pa.gov/pcdocs/1633016.pdf)

Figure 1 – WNA in the United States



Q. Why should the Commission approve the continuation of UGI Gas's WNA pilot?

A. The continuation of UGI Gas's WNA pilot is reasonable because it supports the Company's ability to recover its Commission-authorized revenue requirement, which is based on prudently planned, just and reasonable costs incurred to provide safe and reliable service. In its most recent decision in Columbia's case, issued on December 2025, the Commission has recognized the role of weather normalization mechanisms in addressing weather-related revenue volatility by allowing the continuation of Columbia's WNA pilot. Further, as designed, the Company has already taken into consideration and adopted many modifications intended to provide greater transparency and more protections to customers,

as well as reasonable limitations previously supported by the parties and the Commission. For these reasons, UGI Gas's proposed WNA should be approved as filed.

VIII. CONCLUSION

Q. Please summarize your conclusions and recommendations for UGI Gas's ACOSS, class revenues, and rate design.

A. I recommend that the Commission approve the following:

- The Company's proposed ACOSS, as a realistic reflection of cost causation and the design and operating characteristics of the Company's distribution system, and as a guide to evaluate and set UGI Gas's class revenues and rate design in this proceeding.
- The Company's proposed apportionment of revenues to its rate classes, because it reasonably balances the various criteria that the Company considered in the revenue apportionment process and moves classes towards their cost to serve.
- The rate design proposed by the Company, including the proposed customer charge increases, because it reasonably balances key rate design objectives I presented earlier in my testimony, including: (1) achieving fair and equitable rate levels that are reflective of the cost to serve; (2) avoiding undue discrimination between and within rate classes; (3) developing rates that are stable and understandable; (4) creating economically efficient pricing for delivery service; (5) encouraging conservation and efficient use; and (6) recovering the revenue requirement in a manner that maintains revenue stability and minimizes year-to-year under- or over-collections.
- The Company's proposal to extend the WNA pilot program through October 2032, along with alignment in the use of a 10-year period for defining normal weather for

the WNA, sales and billing determinants in this case, which address weather-driven revenue fluctuations, as the alternative ratemaking mechanism to recovering distribution fixed costs through a fixed charge.

Q. Does this conclude your direct testimony?

A. Yes, it does.

UGI GAS

EXHIBIT JDT-1

John D. Taylor

MANAGING PARTNER

Mr. Taylor has experience with a wide range of costing, ratemaking, and regulatory activities for gas and electric utilities. He has testified numerous times on these and other issues for clients across North America. He has extensive experience with costing and pricing rates and services, regulatory planning and strategy development, revenue recovery and tracking mechanisms, merger and acquisitions analysis, new product and service development, affiliate transaction reviews, line extension policies, market assessments, litigation support, and organizational and operations reviews. He has testified on numerous occasions as an expert witness on costing and ratemaking related issues on behalf of utilities before federal, state, and provincial regulatory bodies and has extensive experience in evaluating and implementing innovative ratemaking approaches and rate design concepts.

EDUCATION

M.A., Economics, American University

B.A., Environmental Economics, University of North Carolina at Asheville

YEARS EXPERIENCE

18

RELEVANT EXPERTISE

Utility Costing and Pricing, Expert Witness Testimony, Transaction Facilitation, Revenue Requirements, Statistics, Valuation, Market Studies, Rate Case Management, New Product and Service Development, Strategic Business Planning, Marketing and Sales

He has also testified on return on equity, electric vehicle and battery storage programs, time-of-use rates, and the appropriate use of statistical analysis during audit testing. Mr. Taylor has led engagements relating to gas supply planning and the review of midstream transportation and storage capacity resources. He has worked as the market monitor for New England ISO's capacity market, supported the negotiation of PPAs, and supported feasibility and prudence studies of generation investments. He has also been involved in selling generating assets and distribution companies, supporting due diligence efforts, financial analyses, and regulatory approval processes.

Mr. Taylor received a master's degree in Economics from American University and holds a bachelor's degree in Environmental Economics from the University of North Carolina at Asheville.

His consulting career includes Managing Partner with Atrium Economics, LLC; Principal Consultant – Advisory & Planning with Black & Veatch Management Consulting, LLC; Senior Project Manager & Principal of Concentric Energy Advisors, Inc.; and CEO of Nova Data Testing, Inc. Mr. Taylor started his career working on Capitol Hill working with NGOs that were seeking Public Private Partnerships with the Federal Government, World Bank, and International Monetary Fund to pursue various projects in developing countries.

REPRESENTATIVE EXPERIENCE

RATE DESIGN AND REGULATORY PROCEEDINGS

Mr. Taylor has worked on dozens of electric and gas rate cases including the development of revenue requirements, class cost of service studies, and projects related to utility rate design issues. Specifically, he has:

- Lead expert and witness for class costs of service studies across North America and worked on dozens of other class cost of service and rate design projects for other lead witnesses.
- Developed WNA mechanism for a gas utility including back casting results and supporting expert witness testimony and exhibits.

- Developed revenue requirement model to comply with a new performance-based formula ratemaking process for a Midwest electric utility.
- Supported the development of time of use rates, demand rates, economic development rates, load retention rates, and line extension policies.
- Analyzed and summarized allocation methodology for a shared services company.
- Assessed the reasonableness of costs through various benchmarking efforts.
- Led the effort to collect and organize plant addition documentation for six Midwest utilities associated with the state commission's audit of rate base.
- Supported lead-lag analyses and testimonies.
- Analyzed customer usage profiles to support reclassification of rate classes for a gas utility.
- Helped conduct a marginal cost analysis to support rate design testimony.

LITIGATION SUPPORT AND EXPERT TESTIMONY

Mr. Taylor has testified in several cases on class cost of service studies and statistical audit methods. He has also supported numerous other expert testimonies. Specifically, he has:

- Filed testimony as an expert witness on allocated class cost of service studies for both electric and gas utilities.
- Filed testimony as an expert witness on the application of statistical analysis.
- Filed testimony before FERC on the rate of return for an Annual Transmission Revenue Requirement and participated in FERC settlement conferences.
- Part of two-person expert witness team that provided an expert report to the British Columbia Utilities Commission on the use of facilities for transportation balancing services for Fortis BC.
- Part of two-person expert witness team that provided an expert report on affiliate transactions and capitalized overhead allocations for Hydro One on three separate occasions.
- Sole expert for expert report on affiliate allocations for Alectra utilities, the second largest publicly owned electric utility in North America. This was conducted shortly after the merger of four distinct utilities.
- Sole expert for expert report on the allocation of overhead costs between transmission and distribution businesses for EPCOR.

TRANSACTION EXPERIENCE

Mr. Taylor has been involved with several generating asset transactions supporting both buy side and sell side analysis and due diligence. His work has included:

- Worked as buy side advisor for a large water utility in the mid-Atlantic region including supporting the review of revenue requirements, rates, and forecasts.
- Helped facilitate and manage processes for a nuclear plant auction by processing Q&A, collecting relevant documentation and managing the virtual data room for auction participants.
- Supported the auction process for steam and chilled water distribution and generation assets in the Midwest.
- Supported the development of a financial model to ascertain the net present value of several competing wholesale power purchase agreements and guided the client with a decision matrix for the qualitative aspects of the offers.
- Provided research on comparable transactions, previous mergers and acquisitions, and potential transaction opportunities for several clients.

FINANCIAL ANALYSIS AND MARKET RESEARCH

Other financial analysis and market research Mr. Taylor has conducted include:

- Estimated the rate impact and costs associated with moving California energy market to 100% renewable.
- Assessed the consequences of a divestiture on the cost-of-service model for a New England gas distribution company.
- Developed LNG market studies for two separate utilities and two separate competitive market participants.
- Modeling alternative mechanisms for the allocation of overhead costs to a nuclear plant.

UGI GAS

EXHIBIT JDT-2

UGI Utilities, Inc. – Gas Division
Before The Pennsylvania Public Utility Commission
Normal Heating Degree Days Report

Normal Heating Degree Days ("NHDDs") Report and Recommendation

This report and recommendation was prepared in compliance with item D.58.e of the Settlement Agreement in Docket Nos. R-2024-3052716, et al., which established the following:

> (…) UGI Gas will include in its filing a report and recommendation on the use of a rolling ten-year historical average period to be used to calculate its normal heating degree day amounts for purposes of the WNA, as well as the use of a ten-year historical average period for purposes of determining projected sales and billing determinants in base rates.

I. Use of a ten-year historical average NHDD for base-rate billing determinants

Based on the analysis prepared by Atrium Economics of historic HDD data from 1975–2024, shown in Figure 1,[1] adopting a ten-year historical average is recommended. The long-term regression line demonstrates a persistent downward trend in HDDs, reflecting a period of ongoing warming over the last several decades, and provides useful directional context for evaluating normalization alternatives. Compared with 15-year average normals from two different recent periods (2005–2019[2] and 2010–2024) utilized by UGI Gas, the 10-year normal (2015–2024) more closely aligns with the current climate trajectory and the most recent observed weather patterns. Importantly, the 10-year historical average produces results that are closely aligned with the central tendency implied by the regression trend.

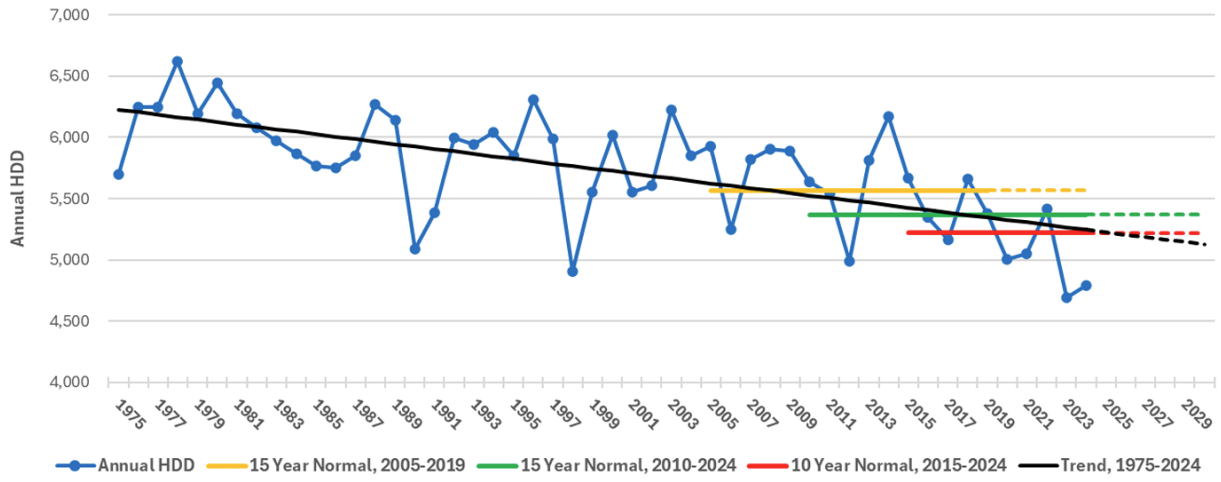
INTENTIONALLY LEFT BLANK

[1] Based on the composite average for the UGI Gas distribution system which is calculated as the weighted average of HDD data for the following weather stations: Wilkes-Barre/Scranton International Airport (KAVP) 22.2%, Bradford Regional Airport (KBFD) 16.3%, Reading Regional Airport (KRDG) 15.2%, Harrisburg International Airport (KMDT) 15.2%, Lancaster Airport (KLNS) 15.2%, Allentown Lehigh Valley International Airport (KABE) 15.2%, and Clearfield–Lawrence Airport (KFIG) 0.7%. The 50-year dataset utilized was obtained from AccuWeather.

[2] Period used to set NHDDs in the prior rate case for billing determinants as well as initial WNA NHDDs.

UGI Utilities, Inc. – Gas Division
Before The Pennsylvania Public Utility Commission
Normal Heating Degree Days Report

Figure 1 – Historic Annual HDD & Normalization Alternatives[3]



Using a longer period may overstate heating demand and inflate projected sales, leading to normalized usage assumptions that are not reflective of the conditions that customers are likely to experience during the fully projected future projected test year ("FPFTY") period. Therefore, a ten-year historical normal is more appropriate, more current, and more consistent with the observed trend of warming weather.

II. Use of a rolling ten-year historical average for WNA NHDD

Although the analysis above supports the conclusion that a ten-year average better represents recent warming trends, applying a rolling ten-year average specifically for WNA calculations is not recommended unless the same rolling approach is also used to determine base-rate billing determinants.

If base rates are set using a fixed ten-year normal (e.g., 2015–2024) while WNA calculations later transition to a different rolling ten-year period (e.g., 2016–2025), the WNA would compare actual weather to a baseline inconsistent with the rate-setting baseline. This misalignment could result in over- or under-correction relative to the assumptions embedded in customer rates, which

[3] Chart interpretation for grayscale / black-and-white printing:

- Annual HDD values are shown by the solid line with circular markers.
- The trend (1975–2024) is shown by a smooth solid line that slopes downward from left to right.
- The shorter horizontal reference lines near the right side of the chart are explained as follows:
  - The highest horizontal line corresponds to the 15-year normal for 2005–2019.
  - The middle horizontal line corresponds to the 15-year normal for 2010–2024.
  - The lowest horizontal line corresponds to the 10-year normal for 2015–2024.

is contrary to the WNA's objective of reconciling actual weather to the same normalized weather conditions used in establishing base rates.

Maintaining a consistent HDD baseline for both functions aligns with the overarching utility ratemaking "matching principle," which requires that the utility align revenue requirements and billing determinants within the same period and under the same assumptions when setting rates.[4] Therefore, rather than using a rolling period or defining a fixed frequency for recalculation, the Company recommends recalculating the NHDD ten-year average based on the most recently completed ten-year period that ended during the historic test year ("HTY"). In this case, that would be the ten-year period ending December 31, 2024.

III. Conclusion

In accordance with item D.58.e of the Settlement Agreement in Docket Nos. R-2024-3052716, et al.:

- It is recommended that the Company adopt a ten-year historical average HDD for determining projected sales and billing determinants in base rates, as the Figure 1 graph clearly demonstrates that a ten-year period reflects recent warming trends and closely tracks the directional signal indicated by the long-term regression analysis making it a reasonable and supportable normalization period.
- It is not recommended to adopt a rolling ten-year historical average for WNA calculations unless the Commission also intends to adopt the use of a rolling period for base-rate normalization between rate cases. Using different normals for rate-setting and WNA reconciliation could introduce inconsistency and unintended outcomes.

This approach maintains methodological integrity, aligns with observed weather trends, and complies with the Settlement’s reporting requirements.

UGI GAS

EXHIBIT JDT-4

UGI Utilities, Inc. – Gas Division
Before The Pennsylvania Public Utility Commission
WNA Mechanism Policy Factors

#	**Statement of Policy**	**Company's Response**
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	UGI Gas's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged. By stabilizing revenues, the WNA mechanism removes disincentives to support peak-reflective rate design and conservation initiatives that can moderate peak demand growth. Over time, this alignment supports more efficient use of existing system capacity while preserving the Company's ability to make prudent investments necessary to maintain safe and reliable service.
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 10-year

#	**Statement of Policy**	**Company's Response**
	customer's anticipated consumption levels.	average rather than a 15-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions. Please refer to UGI Gas Exhibit JDT-2.
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	UGI Gas's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures. Moreover, UGI Gas maintains a robust Energy Efficiency & Conservation ("EE&C") program, which it has voluntarily implemented for its customers and will use to continue promoting energy efficiency measures.
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	In accordance with the Settlement Agreement in Docket Nos. R-2024-3052716, et al., the current WNA mechanism does not apply to low-income customers enrolled in the Company's Customer Assistance Program ("CAP").
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are

UGI Utilities, Inc. – Gas Division
Before The Pennsylvania Public Utility Commission
WNA Mechanism Policy Factors

#	**Statement of Policy**	**Company's Response**
		called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through April, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband). It only applies to certain of the Company's customer classes (Rates R, RT, N and NT) and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	The Company's proposed WNA (appearing as Rider C – WNA in the Tariff) only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through April. Specifically, the billing for the Company's Riders, including Rider F – USP, Rider G – EE&C, and Rider B – PGC, will continue to be based on actual monthly usage.

UGI Utilities, Inc. – Gas Division
Before The Pennsylvania Public Utility Commission
WNA Mechanism Policy Factors

#	Statement of Policy	Company's Response
12	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	UGI Gas's WNA includes several consumer protections to ensure fairness and transparency, as follows: a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and outside of the deadband the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. b. No Cross-Subsidization: The WNA is customer-specific. c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency and Education: UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. As indicated above, UGI Gas has reviewed the WNA Pilot communication materials, and it has expanded its reporting as agreed upon in Docket No. R-2024-3052716 settlement. Please refer to the direct testimony of Company witness Meilinger, UGI Gas Statement No. 12, for details.
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven

UGI Utilities, Inc. – Gas Division

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Brian J. Meilinger. My business address is 1 UGI Drive, Denver, Pennsylvania 17517.

Q. By whom are you employed, and what is your current position?

A. I am employed by UGI Utilities, Inc. ("UGI") as Director, Customer Programs & Public Relations. UGI is a wholly-owned subsidiary of UGI Corporation ("UGI Corp."). UGI has two operating divisions, the Electric Division ("UGI Electric") and the Gas Division ("UGI Gas" or the "Company"), each of which is a public utility regulated by the Pennsylvania Public Utility Commission ("Commission" or "PUC"). In this role, I am responsible for directing the Company's Energy Efficiency & Conservation, Universal Service, Community Relations, and Public Relations Departments.

Q. What is your educational and professional background?

A. I graduated from Ursinus College with a B.A. in Economics & Business Administration and Saint Joseph's University with an MBA in Finance. I started my employment with UGI in 2012. My full resume is attached as UGI Gas Exhibit BJM-1.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of UGI Utilities, Inc. – Gas Division ("UGI Gas" or the "Company").

Q. What is the purpose of your direct testimony?

A. The purpose of my direct testimony is to explain the significant efforts that UGI Gas has undertaken to make sure that its customers have access to affordable utility service. Customer affordability is a core focus at UGI Gas. This is evident from the success of the Company's many customer programs, as well as the Company's commitment to voluntarily donate $1 million annually per year for the next three years (FY27, FY28, and FY29) to Operation Share. I will discuss these efforts in greater detail below.

Q. How is your direct testimony organized?

A. My direct testimony (1) describes how UGI's Universal Service Programs have helped customers afford their utility bills, (2) provides an overview of strategic initiatives to drive increased customer participation in Universal Service Programs and address customer affordability concerns, including the Company's commitment to donate $1 million annually to Operation Share for the next three years; (3) provides data regarding the Company's low-income customer counts, and (4) addresses the Company's compliance with paragraph 58(a) of the Joint Petition for Approval of Settlement of All Issues at Docket No. R-2024-3052716 ("2025 Settlement") regarding Weather Normalization Adjustment ("WNA") pilot communications.

Q. Are you sponsoring any exhibits with your direct testimony?

A. Yes, UGI Gas Exhibit BJM-1 provides a list of the proceedings in which I have testified.

II. UNIVERSAL SERVICE PROGRAMS

Q. Does UGI Gas have a Universal Service and Energy Conservation Program ("USECP")?

A. Yes. The USECP is a comprehensive plan that covers the Company's universal service programs. In accordance with the Commission's Universal Service and Energy Conservation Reporting Requirements at 52 Pa. Code §§ 54.71 – 54.78 and §§ 62.1 – 62.8, UGI Gas submits a USECP every five years for the Commission's review and approval.

Q. Did UGI Gas recently file its USECP for the five-year period January 1, 2026, through December 31, 2030?

A. Yes. The Company filed its 2026-2030 USECP on April 1, 2025, at Docket Nos. M-2025-3054362 and M-2025-3054366. The parties submitted comments on October 6, 2025, and reply comments on November 10, 2025.

Q. Is UGI Gas proposing any changes to its USECP as a part of this base rate proceeding?

A. No. However, UGI Gas intends to update its USECP with the $1 million donation to Operation Share through 2029 as described in my testimony.

Q. Can you please provide an overview of the Company's USECP?

A. The Company offers four programs under its USECP that assist low income customers: (1) Customer Assistance Program ("CAP"); (2) the Hardship Fund (i.e., Operation Share); (3) Low Income Usage Reduction Program ("LIURP"); and (4) the Customer Assistance Referral and Evaluation Services ("CARES").

CAP provides discounted monthly bills and arrearage forgiveness for low-income customers at or below 150% Federal Poverty Income Guidelines ("FPIG"). CAP payments are calculated based on a percentage of a customer's monthly income, also known as a Percentage of Income ("PIP") amount, or a CAP participant's average monthly bill, if lower. For gas heating customers, maximum monthly CAP payments are set at 4% of income for customers with household incomes between 0-50%, and 6% of income for customers with household incomes between 51-150% FPIG. CAP participants with no income are placed on the monthly minimum payment which is $25 for gas heating and $15 for non-heating gas service.

Operation Share provides grants of up to $600 for eligible customers with household incomes up to 250% FPIG who are having difficulty paying their bill. In special circumstances, the Company may provide exceptions to the maximum grant amount of $600. In order to qualify for a grant, the following criteria must be met:

- Customer must have a residential account with their premise being the customer's primary residence;
- The customer must have an active heating or non-heating account;
- A customer must not have received the maximum Operation Share grant amount in the prior 12 months, unless in situations of special circumstance as determined by the Company;
- A customer must have an outstanding balance;
- A customer must provide proof of identification and adequate information to demonstrate the inability to pay their bill;
- Customers whose service has been terminated must contact the UGI Credit Department to discuss their options as Community Based Organizations ("CBOs") cannot provide benefits on an inactive account.

The Company's LIURP offers weatherization services to low-income customers with household incomes up to 200% FPIG. To qualify, a customer must have above

average annual usage, defined as exceeding the average residential threshold by 30%, or 877 CCF. Additionally, a customer must not have received LIURP in the prior 7 years and must have twelve months of continuous service.

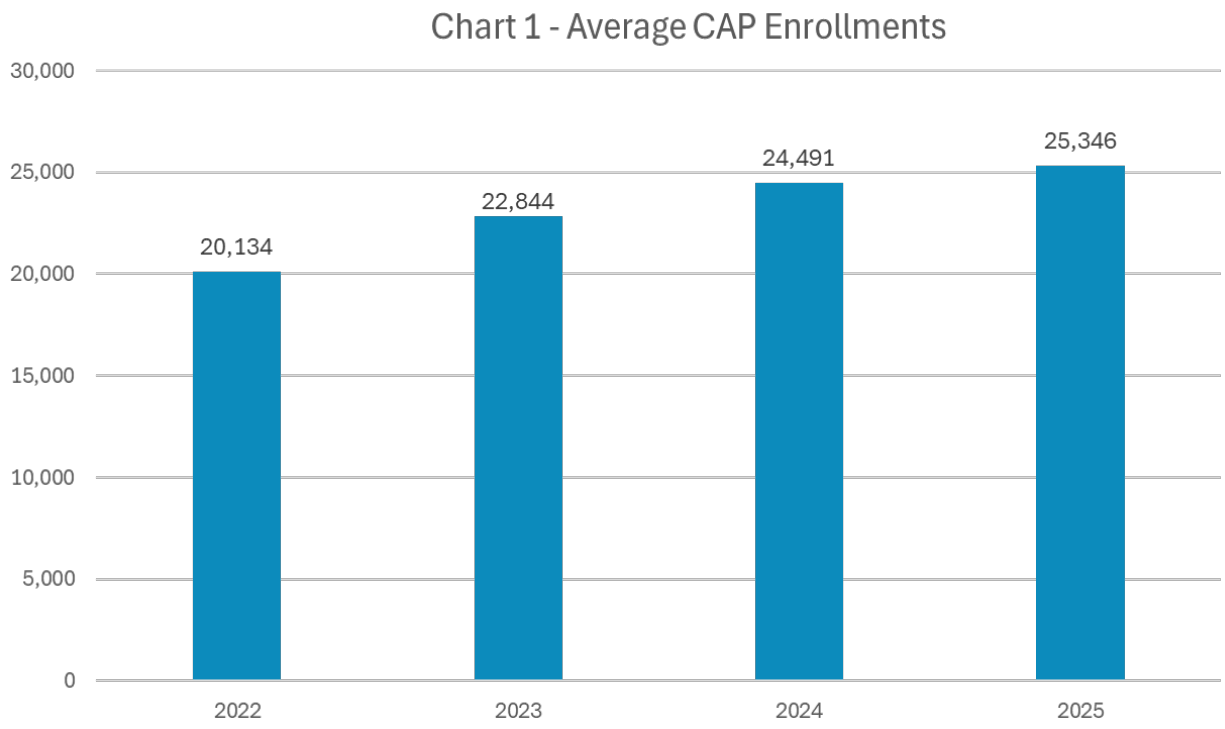
CARES offers customers referral services to other community support programs which may include, but are not limited to LIHEAP, budget counseling, State Weatherization, Office of Aging, etc. There are no income requirements to participate in CARES.

Q. Has the Company's CAP helped low-income customers afford their utility bills?

A. Yes. The Company's CAP has performed well both in terms of increasing customer enrollments and helping make customers' bills more affordable.

Q. How has the Company's CAP enrollment increased from prior years?

A. The Company's average CAP enrollment for 2025 was 25,346 customers, which represents a 3% increase over 2024, and a 26% increase over 2022 CAP average enrollment of 20,134. Please see Chart 1 below for details regarding the growth in UGI Gas CAP enrollments since 2022.



The significant growth in CAP enrollments is a direct result of the Company's efforts to reach as many low-income customers as possible. For instance, the Company undertook a project to assess, identify, and engage with low-income customers in 2023-2024. The Company utilized the services of Experian to help identify potential low-income customers and then performed targeted marketing via email and direct mail with a call to action to visit the Company's CAP landing page to screen for program eligibility. This campaign resulted in approximately 780 customers enrolling in CAP.

Q. How has CAP worked to make customers' bills more affordable?

A. In 2024, the Company provided its CAP customers with approximately $3.8 million of Pre-Program Arrearage ("PPA") forgiveness and $10.6 million CAP Shortfall and in 2025, $3.7 million and $15.9 million respectively. The PPA component of CAP is a benefit to customers, as it provides arrearage forgiveness over a 36-month time period if customers

continue making timely and in full monthly CAP payments. For instance, a customer entering CAP with $2,500 of arrearage would have $69.44 ($2,500/36) forgiven each month assuming the customer continues making monthly CAP payments in full. CAP Shortfall is another significant benefit, as customers are not responsible for monthly costs incurred above the CAP bill. For example, a CAP customer on the Percent of Income Plan with a $50 per month CAP bill that incurs a usage-based bill calculated at $150, would not be responsible for the entire bill amount, just the $50.

Q. What are the Company's plans to continue building upon the growth in CAP customer enrollments?

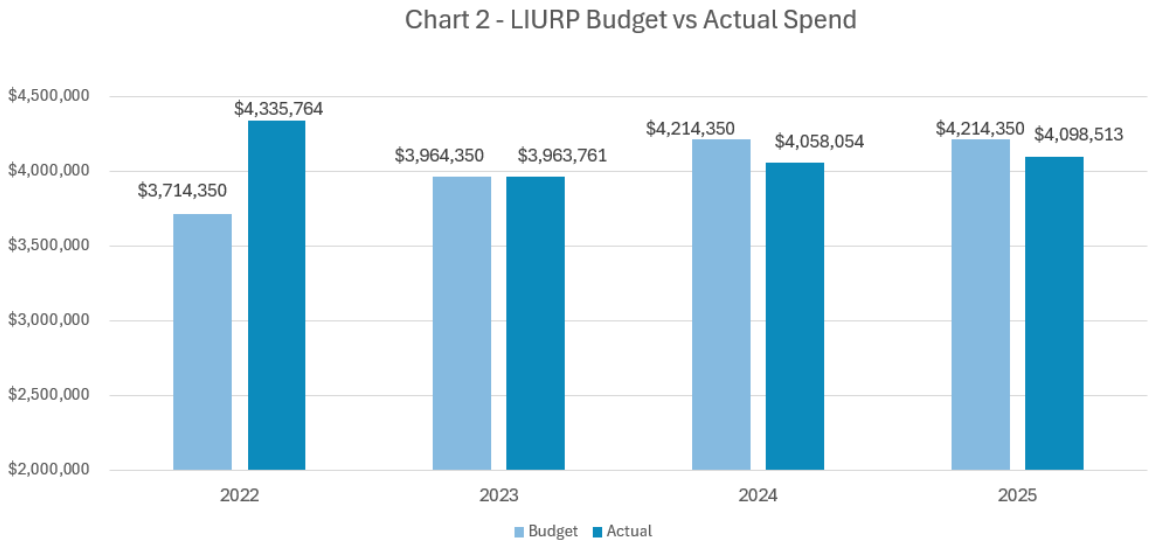
A. The Company continues to focus on increasing customer enrollment in CAP through its marketing efforts that include ongoing general outreach efforts throughout the year and twice a year personalized outreach via email and direct mail to customers who are self-certified low income and to LIHEAP recipients that are not currently enrolled in CAP. The Company is also continuing its Low Income Customer Assessment and Outreach Pilot through 2028 as further described in section III below.

Q. How has the Company's LIURP helped customers?

A. The Company has successfully partnered with 15 weatherization CBOs and contractors to maximize its PUC-approved budgets. Since 2022, the following results were achieved which indicate that UGI Gas has been highly effective at achieving spending to budget:

- 2022: 117% of budget utilization (rollover of unspent budget from prior year)
- 2023: 100% of budget utilization

- 2024: 96% of budget utilization
- 2025: 97% budget utilization



During the 2022-2025 timeframe, the Company's weatherization contractors completed 2,133 LIURP jobs, or an average of 533 per year. As part of the 2025 Settlement, Paragraph 60(a), the Company has agreed to increase its budget effective January 1, 2026, by $1,000,000 from $4,214,350 to $5,214,350 with any unspent budget rolling over to the next year wherein it will make best efforts to spend it within the first six months of the following year. In addition, UGI Gas will comply with the final order issued in the LIURP rulemaking proceeding at Docket No. L-2016-2557886.

Q. Has the Company's Operation Share Program helped customers?

A. Yes. During the 2022-2025 timeframe, the Company has issued nearly 12,000 Operation Share grants for approximately $4.2 million to customers needing assistance. Furthermore, as part of the UGI Gas 2025 Settlement, Paragraph 62(a), the Company increased its Operation Share commitment by $500,000 from $584,500 to $1,084,500 and

was permitted to increase the annual budget reallocation limitation across the geographic footprint of its former three rate districts from 5% to 50% (Paragraph 62(b)). Collectively, these settlement provisions provide an increased budget and greater flexibility to reallocate budgets and avoid stranded funding by region, which has occurred in the past.

Q. Has UGI Gas undertaken any additional voluntary efforts to support its low-income customers?

A. Yes. In November 2025, in an attempt to offset impacts to low-income customers due to LIHEAP funding delays resulting from the Federal Government shutdown, the Company made a one-time supplemental donation of $500,000, allocated between the Gas and Electric Divisions, to Operation Share for Fiscal Year 2026. I describe the LIHEAP funding delay in greater detail below. This additional donation brought UGI's contribution to Operation Share to more than $1.5 million for Fiscal Year 2026.

Q. Are there other programs available to assist payment-troubled customers?

A. Yes. In addition to the UGI Gas Universal Service Programs, there are external programs to support payment-troubled customers. These state and federally funded programs include, but are not limited to:

- The Low Income Home Energy Assistance Program ("LIHEAP") provides energy grants which help customers restore and/or maintain service, as well as repair or replace broken heating equipment. The LIHEAP season typically runs from November 1 through April 1. However, in some years, the season is extended pending funding availability. UGI Gas receives a weekly customer voucher file from the Department of Human Services ("DHS") which contains details of the grant amounts, typically up to a maximum of $1,000 per customer, who have gone through DHS's income verification processes and are determined to be at or below 150% FPIG. UGI Gas then applies these grant amounts to customer accounts.

- The Pennsylvania Weatherization Assistance Program ("WAP") reduces energy costs and increases comfort while ensuring homes are healthier and safer. WAP services include a variety of measures that are provided (when necessary) to allow the safe and effective installation of weatherization measures. It also provides client education on the proper use and maintenance of the installed weatherization measures and ways to reduce energy waste. The average expenditure per household is $7,669 depending on the results of a home audit.[1]

Q. How much assistance has LIHEAP provided over the past three seasons?

A. Over the prior three LIHEAP seasons (2022/2023, 2023/2024, 2024/2025) the Company has facilitated approximately 109,000 grants for nearly $32 million. This funding has been instrumental in assisting low-income customers in maintaining and/or restoring natural gas service as well as emergency furnace repair or replacement. For the 2025-2026 LIHEAP season that had a delayed start date of early December, the Company has already facilitated the processing of approximately 10,106 grants for $2.6 million.

Q. What actions did the Company take to help offset the customer impacts that could have resulted from the delay in LIHEAP launching for the 2025/2026 season?

A. In addition to the proactive $500,000 supplemental Operation Share Company contribution mentioned earlier, the Company's efforts described below were designed to provide additional assistance to customers and minimize terminations during the delay in LIHEAP funding until the program resumed in December 2025.

Active Income Verified Low-Income Customers (150% FPIG):

- Effective November 1, 2025, UGI temporarily suspended field terminations for non-payment for CAP customers. The Company also worked to maximize any available Operation Share grants to assist with arrears. If an Operation Share grant had already been applied during the year, consistent with its USECP, the Company provided a one-time Operation Share grant in excess of the individual

[1] https://dced.pa.gov/programs/weatherization-assistance-program-wap/.

maximum of $600 to help maintain the customer's service as active. For this initiative, if a customer was behind in CAP payments totaling $900 or less, the maximum grant issued was $900. There were 2,703 Operation Share grants for approximately $598,000 issued to customers in need during the month of November.

- Effective November 1, 2025, UGI temporarily suspended field terminations of active customers in arrears who received LIHEAP within the last 12 months and were not enrolled in CAP. The Company continued its Dunning notices during this timeframe to encourage customers to contact the Company and enroll in a Universal Service Program.
    - The Company actively solicited these customers via auto dialer and by email requesting they immediately contact UGI to enroll in CAP to keep service active.
    - For these customers that received LIHEAP in the prior season, they were offered streamlined enrollment into CAP and did not have to provide proof of income to enroll.

Inactive Income Verified Low-Income Customers (150% FPIG & Already Terminated for Non-Payment):

- For inactive income verified low-income customers (150% FPIG) that contacted the UGI Call Center about their service that had been terminated for non-payment, UGI representatives reviewed options with the customer about enrolling in CAP. If the customer agreed to and was qualified to enroll in CAP, their service was reconnected, and an Operation Share grant was applied to their account. For inactive income verified low-income CAP customers (150% FPIG) that contacted the UGI Call Center about their service that was terminated for non-payment, the Company applied an Operation Share grant to their account to help offset their arrears and turn service back on.

Q. What impacts did these actions have in November and December 2025?

A. The success of the Company's efforts during the November and December 2025 timeframe was substantial. Company representatives worked approximately 250 hours of overtime to provide additional assistance to customers who may have been impacted by the Government Shutdown. Highlights are summarized below:

- 421 confirmed low income customers were enrolled in CAP and either reconnected or not terminated;
- 3,450 Operation Share grants, totaling $905,233 were issued in November and December 2025. This can be compared to 332 grants for $110,201 during this same time period in 2024.

III. STRATEGIC INITIATIVES

Q. What actions has the Company undertaken to maximize customer enrollment in Universal Service Programs?

A. As part of the 2025 Settlement, the Company implemented several noteworthy changes to its Universal Service Programs. First, the Company increased its LIURP budget substantially by $1,000,000 or approximately 24% from $4,214,350 in calendar year 2025 to $5,214,350 in calendar year 2026. For any unspent LIURP budget, those funds will rollover to the next year to be utilized within the first six months of the following year to the extent possible. Second, the Company substantially increased its Operation Share contribution by $500,000 or approximately 86% from $584,500 in Fiscal Year 2025 to $1,084,500 in Fiscal Year 2026 and added increased flexibility to reallocate program funding from a previous maximum of only 5% to now 50% of funding between the Company's former rate districts to minimize underspending and to assist customers in need. Third, the Company is undertaking expanded outreach efforts in 2026 through additional in person Winter Assistance Relief Mobilization ("WARM") events held at targeted locations each year, with a minimum of 6 events in Lancaster, 4 events in Wilkes Barre, and 3 events in Williamsport. Each year thereafter, the Company will target a

minimum of three new cities within its service territory as set forth in its tariff, which will be identified in consultation with its Universal Service Advisory Committee. Furthermore, the Company began engaging with various Mayor's offices throughout the UGI Gas service territory to provide the Company's Universal Service brochure in an effort to promote awareness of the Company's low-income assistance programs. Locations for outreach include Allentown, Bethlehem, Easton, Harrisburg, Hazleton, Lancaster, Lock Haven, Pottsville, Reading, Scranton, Wilkes-Barre, and Williamsport. Fourth, the Company is continuing its Low Income Customer Assessment and Outreach Pilot as agreed to in the UGI Gas 2025 Settlement (Paragraph 61(a)) with an annual budget not to exceed $120,000. The purpose of this Pilot is to engage in additional outreach to the Company's estimated low-income customers up to 150% FPIG identified by third-party consumer credit reporting agency Experian. UGI Gas intends to utilize email, direct mail, and digital ads for targeted marketing to these customers. Customers will be directed to a landing page where they can learn more about the process to pursue enrollment in the Company's CAP. Fifth, UGI Gas has adopted the PUC Common Application Form as of December 2025. Finally, the Company has been participating in the DHS data sharing process and has been analyzing this data and evaluating methods to use this information to further promote the availability of the UGI Gas Universal Service Programs. Examples include outreach to data sharing participants who have not yet enrolled in CAP, as well as utilizing the data sharing file to recertify customers for CAP.

Q. What does UGI intend to do to further address affordability concerns for its customers?

A. UGI recognizes the importance of supporting the affordability of utility bills for its low-income customers. That is why the Company is committing to contribute $1,000,000 annually to Operation Share in Fiscal Years 2027, 2028, and 2029. This multi-year commitment is unprecedented in the Company's history and will provide substantial assistance to low and moderate income customers with income levels up to 250% FPIG.

IV. CONFIRMED LOW-INCOME CUSTOMER COUNTS

Q. Did UGI previously identify inconsistencies with regulatory reporting of confirmed low-income customer counts on prior Universal Service Reports ("USR")?

A. Yes. During the 2025 UGI Gas Base Rate Case, it was discovered that the Company had inadvertently reported self-certified low-income customers up to 250% FPIG on prior USR filings; however, the Company should have reported only those customers up to 150% FPIG. Therefore, the Company's confirmed low-income customer counts on prior USR were affected by unintentional data inconsistencies that increased the number of customers included.

Q. Has UGI Gas taken steps to ensure that its internal tracking of the "confirmed low-income" designation for Universal Service Reporting and USECP purposes has become more accurate?

A. Yes. In 2025, the Company made information technology ("IT") system enhancements to ensure that future Universal Service Reports will include self-certified low-income customers up to 150% FPIG, not 250% FPIG as was previously reported in prior years.

This enhancement includes leveraging a more suitable data source, which directly supports the reporting questions being asked. However, significant time and effort to thoroughly vet and cleanse the data was required, which could not be achieved retrospectively. As a result, the 2025 USR confirmed low-income count may result in an overstatement of confirmed low-income counts. The Company anticipates that the confirmed low income counts that will be included on the 2026 Universal Service Report and filed in April 2027, will accurately reflect self-certified low-income customers up to 150% FPIG. Importantly, the Company's definition of "Confirmed Low Income" is now consistent with the PUC's regulations at 52 Pa. Code § 62.2, which defines a "confirmed low-income residential account" to include "[a]ccounts where the NGDC has obtained information that would reasonably place the customer in a low-income designation. This information may include receipt of LIHEAP funds, self-certification by the customer, income source or information obtained in § 56.97(b) (relating to procedures upon ratepayer or occupant contact prior to termination)." However, 52 Pa. Code § 62.2 also defines a "low-income customer" as "[a] residential utility customer whose gross household income is at or below 150% of the Federal poverty guidelines. Gross household income does not include the value of food stamps or other noncash income."[2]

Q. How many confirmed low-income customers does UGI Gas have?

A. As of November 30, 2025, the Company had 68,867 confirmed low-income customers. This figure represents customers who have self-certified their income, participated in the

[2] https://www.pacodeandbulletin.gov/Display/pacode?file=/secure/pacode/data/052/chapter62/s62.2.html&d=reduce

Company's CAP, Operation Share, or LIURP, where income was verified to be at or below 150% FPIG, as well as those customers who have received LIHEAP in the prior 12 months. Of the 68,867 Confirmed Low Income customers referenced above, UGI Gas has 38,499 customers who have gone through the Company's income verification process, have been verified at or below 150% FPIG, and are eligible to participate in a Universal Service Program.

Regarding estimated low-income customers at or below 150% FPIG, as part of the 2026-2030 USECP filing supplemental data request[3] from the PUC, the Company reported 143,404 estimated low-income customers. This figure was developed in accordance with the PUC's Bureau of Consumer Services specified methodology, which derived the estimated number of low income customers by calculating the number of UGI Gas customers in each county of its service territory multiplied by the 2019-2023 American Community Survey 5 Year Estimates census data provided by the Bureau of Consumer Services for that county. However, this calculation methodology may overstate the estimated low-income customer counts due to the census percentages of low-income customers by county which does not necessarily correlate to UGI Gas' customer demographics. By comparison, the Company's Low Income Customer Assessment and Outreach Pilot[4] undertaken with Experian, identified an estimated low-income population of 98,785 customers at or below 150% FPIG in the fall of 2023. The Experian estimate uses actual demographic income data of UGI customers and identifies significantly less customers, at only 68% of the estimated low income customer count of 143,404.

[3] August 25, 2025, response at Docket No. M-2025-3054362
[4] UGI Gas 2022 Base Rate Case settlement paragraph 46(a).

Therefore, UGI Gas's estimated low-income customer counts based on census and published in the USR should be considered an over estimation and referenced with caution.

V. WNA COMMUNICATIONS REVISIONS

Q. Has the Company provided revisions to its communication materials as required in its 2025 Gas Rate Case Settlement?

A. Yes. Consistent with the Settlement requirements, the Company shared draft materials with the required parties, including updates to the Weather Normalization webpage on its public facing website and a new customer letter. The customer letter provides an individualized explanation of charges or credits for a specific billing month. As specified in the 2025 Settlement, the Company solicited feedback from interested USAC members and the statutory parties. All edits were consolidated and distributed, with suggestions either incorporated into the materials or feedback provided explaining why they were not included. A final meeting was held with the statutory parties to address any concerns regarding feedback. Approximately twenty website updates were completed in December 2025, including creation of a new FAQ page, and seven revisions were made to the customer letter which will be available in fiscal year 2026.

VI. CONCLUSION

Q. Does this conclude your testimony?

A. Yes, it does.

Measure of Value

Line #	Description	[1] Reference Schedule	[2] # of Pages	[3] Pro Forma Test Year Ended September 30, 2025 At Present Rates	[4] Adjustments	[5] Proposed Rates
MEASURE OF VALUE						
1	Utility Plant	C-2	9	$ 5,797,706		$ 5,797,706
2	Accumulated Depreciation	C-3	11	(1,519,282)		(1,519,282)
3	Net Plant in service			4,278,424	-	4,278,424
4	Working Capital	C-4	9	66,613		66,613
5	Gas Inventory	C-5	1	23,662		23,662
6	Accumulated Deferred Income Taxes	C-6	1	(681,366)		(681,366)
7	Customer Deposits	C-7	1	(23,197)		(23,197)
8	Materials & Supplies	C-8	1	28,644		28,644
9	TOTAL MEASURE OF VALUE			$ 3,692,780	$ -	$ 3,692,780

Notes:

(1) All capitalization and financial statistics for the group are the arithmetic average of the achieved results for each individual company in the group, and are based upon financial statements as originally reported in each year.

(2) Computed by relating actual total debt interest or preferred stock dividends booked to average of beginning and ending total debt or preferred stock reported to be outstanding.

(3) Total debt relative to EBITDA (Earnings before Interest, Income Taxes, Depreciation and Amortization).

(4) Funds from operations (sum of net income, depreciation, amortization, net deferred income tax and investment tax credits, less total AFUDC) plus interest charges as a percentage of total debt.

						Average of Mean and Median	10.53 %

NA= Not Available

Notes:

(1) Indicated dividend at 10/31/2025 divided by the average closing price of the last 60 trading days ending 10/31/2025 for each company.
(2) From pages 2 through 8 of this Schedule.
(3) Average of columns 2 through 4 excluding negative growth rates.
(4) This reflects a growth rate component equal to one-half the conclusion of growth rate (from column 5) x column 1 to reflect the periodic payment of dividends (Gordon Model) as opposed to the continuous payment. Thus, for Atmos Energy Corporation, 2.06% x (1+(1/2 x 7.31%)) = 2.14%.
(5) Column 5 + Column 6.
(6) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

BUSINESS: Atmos Energy Corporation is engaged primarily in the distribution and sale of natural gas to over 3.3 million customers through six regulated natural gas utility operations: Louisiana Division, West Texas Division, Mid-Tex Division, Mississippi Division, Colorado-Kansas Division, and Kentucky/Mid-States Division. Gas sales breakdown for fiscal 2024: 68.8%, residential; 27.1%, commercial; 2.7%, industrial; and 1.4% other. The company sold Atmos Energy Marketing, 1/17. Officers and directors own approximately .5% of common stock (12/24 Proxy). President and Chief Executive Officer: Kevin Akers. Incorporated: Texas. Address: Three Lincoln Centre, Suite 1800, 5430 LBJ Freeway, Dallas, Texas 75240. Telephone: 972-934-9227. Internet: www.atmosenergy.com.

It appears that Atmos Energy's long streak of bottom-line growth will continue in fiscal 2025 (concludes September 30th). During the first nine months, earnings per share advanced almost 7%, to $6.42, compared to the prior-year's $6.01 tally. That was driven by better performances from both the distribution unit and pipeline & storage division. But the company's results were held back, to a certain extent, by a rise in bad-debt expense, depreciation, and property taxes. Still, it seems that, for the full year, profits will finish around $7.35 a share. That would indicate a nearly 8% advance from fiscal 2024's $6.83 total. Regarding fiscal 2026, per-share profits stand to grow an additional 5% or so, to $7.75, assuming further expansion of operating margins.

Finances are sound. When the June interim ended, cash and equivalents stood at $709.4 million. Furthermore, long-term debt seemed very manageable (40% of total capital) and short-term borrowings were only $20.2 million. Also, $5.8 billion in common stock and/or debt securities remained available for issuance (out of $8.0 billion) under a shelf registration statement expiring in December, 2027. Finally, Atmos had undrawn credit facilities aggregating $3.1 billion.

Capital expenditures for fiscal 2025 are anticipated to be roughly $3.7 billion. That is some 26% higher than the previous-year level of around $2.9 billion. Similar to fiscal 2024, a meaningful portion of the resources are being utilized to enhance the safety and reliability of the company's natural gas distribution and transmission systems. Leadership adds that it projects total capital spending from fiscal 2025 through fiscal 2029 to lie in the neighborhood of $24 billion. A considerable amount of the investments will continue to be deployed to where they are currently. If the balance sheet stays in good condition, Atmos should have minimal difficulty accomplishing those objectives.

These shares hold unspectacular long-term total return potential. The dividend yield looks unexciting versus the average of *Value Line's* Natural Gas Utility Industry. Also, at the recent quotation, capital gains potential out to 2028-2030 is quite limited.

Frederick L. Harris, III *August 22, 2025*

BUSINESS: Chesapeake Utilities Corporation consists of two main units. The Regulated Energy segment distributes natural gas in Delaware, Maryland, and Florida; distributes electricity in Florida; and transmits natural gas on the Delmarva Peninsula and in Florida. The Unregulated Energy operation wholesales and distributes propane; markets natural gas; and provides other unregulated energy services, including midstream services in Ohio. Revenue breakdown for 2024: Regulated Energy, 74.1%; Unregulated Energy, 29.0%; Other, d3.1%. Officers and directors own 1.5% of common stock; BlackRock, 16.1% (3/25 Proxy). Chairman and CEO: Jeffry Householder. Inc.: DE. Address: 500 Energy Lane, Dover, DE 19901. Tel.: (302) 734-6799. Internet: www.chpk.com.

It's been a prosperous year, so far, for Chesapeake Utilities Corporation. In fact, through the first six months, earnings per share climbed 11.8%, to $3.23, relative to the $2.89 tally that was registered for the same period in 2024. One supporting factor was increased customer consumption stemming from colder temperatures across the Ohio and Mid-Atlantic service territories. Too, there were benefits from pipeline expansion projects. Other pluses included contributions from regulated infrastructure programs and rate changes associated with recent rate-case activities. If there are no major setbacks during the second half, it seems that the company's bottom line will finish in the neighborhood of $5.85 a share for the entire year. This would indicate an 11% advance from 2024's $5.26 total. Turning to 2026, per-share profits might well grow another 8%, to $6.30, as operating margins widen further.

Corporate finances are sound. When the June interim concluded, cash and equivalents resided at $1.5 million. Moreover, long-term debt appeared reasonable (45% of total capital) and short-term borrowings were not a big hurdle. Elsewhere, $197.1 million was available, out of $450.0 million, under a revolving credit facility.

This year's capital spending budget is now expected to be between $375 million and $425 million. (It was raised from the earlier $325 million-$375 million target due to advances on various projects.) The majority of the funds are being deployed to the Regulated Energy division, with a focus on the natural gas distribution and transmission segments. Also, Chesapeake looks for total capital expenditures to lie in the range of $1.5 billion and $1.8 billion for the five-year period between 2024 and 2028. All things considered, we think those goals can be reached, assuming that the balance sheet stays in good shape, of course.

The equity, ranked 4 (Below Average) for Timeliness, has unspectacular total return potential out to 2028-2030. Its dividend yield is not alluring versus those of other Natural Gas Utility stocks in the *Value Line* universe. Furthermore, long-term capital appreciation possibilities are limited at the recent quotation.

BUSINESS: New Jersey Resources Corp. is a holding company providing retail/wholesale energy svcs. to customers in NJ, and in states from the Gulf Coast to New England, and Canada. New Jersey Natural Gas had 583,000 cust. at 9/30/24. Fiscal 2024 volume: 158 bill. cu. ft. (16% interruptible, 41% residential, commercial & firm transportation, 43% other). N.J. Natural Energy subsidiary provides unregulated retail/wholesale natural gas and related energy svcs. 2024 dep. rate: 3.2%. Has 1,370 empls. Off./dir. own less than 1% of common; BlackRock, 17.3%; Vanguard, 11.9% (12/24 Proxy). CEO, President & Director: Steven D. Westhoven. Incorporated: New Jersey. Address: 1415 Wyckoff Road, Wall, NJ 07719. Telephone: 732-938-1480. Web: www.njresources.com.

New Jersey Resources posted a better-than-expected fiscal third-quarter showing. (Year ends September 30th.) During the three-month term, the company posted earnings per share of $0.06, versus a loss of $0.09 a year ago, primarily due to a strong performance from financial hedging instruments. Year-to-date earnings reached $3.12 per share, up roughly 55% on stronger regulated utility margins after a recent rate case was resolved, a one-time $0.30 per share benefit from the sale of the residential solar portfolio, improved storage and transportation results, and contributions from winter storms. The results are strong overall, with New Jersey Resources on track to deliver a record earnings year, even as some gains may not be recurring.

Growth over the next few years will likely occur on multiple fronts. Investors should watch for execution in three areas, regulated utility growth, solar build-out, and potential storage expansion projects. At New Jersey Natural Gas, steady customer additions in core NJ counties, combined with safety and reliability capital projects should continue to compound on the company's regulated earnings base. Meantime, Clean Energy Ventures maintains a deep development pipeline, though with recent policy actions, this is worth monitoring as the company will need to be more selective about its capital plan. Finally, storage additions, particularly at Leaf River, could add long-lived fee-based cash flows tied to power market balancing needs. Across the portfolio, interest-rate moves and construction market trends remain near-term factors.

New Jersey Resources is well positioned for the long-term. Looking three- to five-years out, the strategy remains anchored in regulated utility earnings. Strong regional economic trends and rising electrification demand from data centers and peak-hour fluctuations increase the need for flexible power balancing resources, which supports NJR's strategic model. These trends should be sustained adding to our growth outlook.

The stock has some investment appeal. Though untimely, the equity may well interest conservative income-oriented accounts.

Earl B. Humes *August 22, 2025*

(A) Fiscal year ends Sept. 30th.
(B) Diluted earnings. Qtly. revenues and egs. may not sum to total due to rounding and change in shares outstanding. Next earnings report due late November.
(C) Dividends historically paid in early Jan., April, July, and October. ■ Dividend reinvestment plan available.
(D) Includes regulatory assets in 2024: $612.6 million, $6.16/share.
(E) In millions, adjusted for 3/15 split.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 492,690 electric in Indiana, 3.3 million gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, through its Columbia subsidiaries. Revenue breakdown, 2024: electrical, 34%; gas, 63%; other, 3%. Generating capacity, fossil feuls 56%; renewables, 44%. 2024 reported depreciation rates: 3.0% electric, 2.6% gas. Has 7,746 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Lloyd Yates. Incorporated: Indiana. Address: 801 East 86th Avenue, Merrillville, Indiana 46410. Telephone: 877-647-5990. Internet: www.nisource.com.

NiSource posted solid second-quarter results, driven by rates, customer growth, and efficiency gains. The profit picture was mostly steady, with earnings of $0.22 per share advancing a penny over the year-ago figure, though this was below our target. Results benefited from favorable regulatory outcomes in Virginia and Indiana, as well as modest customer growth, and operational efficiencies from new technology implementations. The company's infrastructure modernization initiatives continue to advance, with leak detection and digitalization program rollouts exceeding internal targets. Broader economic tailwinds in its service territories, such as above-average population growth in Columbus, contributed nicely. However, operating costs and interest expenses offset these effects on the bottom line.

Profit comparisons through the back half of 2025 look challenging. We're expecting a mostly flat earnings performance throughout the year with almost all of the bottom line's 9% growth coming from the first quarter's strong result. The utility only has one relatively small rate case expected to be approved in the near term, while maintenance and other operating costs continue to rise. However, NiSource won't be staying idle. Much of the company's focus this year centers around continuing progress on its 5-year $19 billion capital plan, and the ongoing development of data center infrastructure. While actual contracts with data center counterparties are still being negotiated, the company is planning its efforts to meet its power delivery goals in 2025.

NiSource is well positioned for its long-term growth objectives, as a key enabler of the energy transition in the Midwest and Mid-Atlantic. The company's regulated utility businesses, diversified across six states and two energy types, provides a good foundation for steady earnings and rate base growth. And, the emergence of high-load customers is expected to reshape and supplement its market opportunities significantly in the coming years.

Much of these strengths are baked in at the recent quotation, leaving the stock's upside quite limited.

BUSINESS: Northwest Natural Holding Co. distributes natural gas to more than 800,000 customers in Oregon (88% of customers) and in southwest Washington state. Principal cities served: Portland and Eugene, OR; Vancouver, WA. Company buys gas supply from Canadian and U.S. producers; has transportation rights on Northwest Pipeline system. Owns local underground storage. Gas margin breakdown: residential, 65%; commercial, 25%; industrial, 6%; other, 4%. Also operates water and wastewater services across six states. Employs 1,452. BlackRock Inc. owns 16.1% of shares; Vanguard, 10.8%; Off./Dir., .93% (4/25 proxy). CEO: Justin B. Palfreyman. Inc.: Oregon. Address: 220 NW 2nd Ave., Portland, OR 97209. Tel.: 503-226-4211. Internet: www.nwnatural.com.

Northwest Natural has been steadily improving its operating results of late. The utility has continued its streak of top- and bottom-line advances for three consecutive quarters in June. Revenues reached $236 million, while earnings per share landed just above breakeven, at $0.01, compared to a $0.07 loss in the year before. Higher margins from new rates in Oregon, recent acquisitions, and continued customer growth all contributed. However, higher operating, depreciation and interest costs tempered some of these gains, and earnings were slightly weaker than we had expected. It's worth noting that broader market conditions were generally stable for regulated utilities, though higher financing costs and regional housing slowdowns present headwinds.

We have lowered our 2025 profit outlook slightly. Management has reaffirmed its guidance for earnings per share of $2.75 to $2.95, expecting steady contributions from its gas, water, and renewable segments. We've cut our target by $0.05 to match the top end of management's range, at $2.95, owing to the recent quarter's weaker-than-expected profitability and the likelihood of continued cost pressures. The natural gas franchise will remain a ballast for the company, with plenty of investment planned in the pipeline. To this point, we've raised our capital expenditure target to $500 million in 2025.

The next few years will be marked by strategic market expansion. The company's growth strategy hinges on a diversified regulated utility model spanning gas, water, and renewable natural gas. Continued water utility consolidation and high growth in Texas markets could meaningfully shift the earnings mix away from its traditional Oregon gas base. However, this carries greater regulatory and execution risk. The company's long-term outlook appears mostly stable, although this depends on disciplined capital deployment and future rate case outcomes.

The stock offers good total-return prospects at the current juncture, with a better overall risk profile than many of its industry peers. Income investors, in particular, may appreciate the stock's high yield. The issue is untimely, however.

The shares of ONE Gas, Inc. began trading "regular-way" on the New York Stock Exchange on February 3, 2014. That happened as a result of the separation of ONEOK's natural gas distribution operation. Regarding the details of the spinoff, on January 31, 2014, ONEOK distributed one share of OGS common stock for every four shares of ONEOK common stock held by ONEOK shareholders of record as of the close of business on January 21. It should be mentioned that ONEOK did not retain any ownership interest in the new company.

BUSINESS: ONE Gas, Inc. provides natural gas distribution services to more than two million customers. There are three divisions: Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service. The company purchased 149 Bcf of natural gas supply in 2024, compared to 160 Bcf in 2023. Total volumes delivered by customer (fiscal 2024): transportation, 60.7%; residential, 28.6%; commercial & industrial, 10.1%; other, .6%. ONE Gas has around 3,900 employees. BlackRock owns 14.5% of common stock; The Vanguard Group, 11.6%; American Century Investment, 8.0%; officers and directors, 1.2% (4/25 Proxy). CEO: Robert S. McAnnally. Incorporated: Oklahoma. Address: 15 East Fifth Street, Tulsa, Oklahoma 74103. Tel.: 918-947-7000. Internet: www.onegas.com.

ONE Gas is having a good year, thus far. Through the first half, per-share profits climbed 12.6%, to $2.51, versus 2024's $2.23 figure. That partially reflected benefits from new rates. Another supporting factor was higher residential sales, due primarily to net customer growth in both Texas and Oklahoma. But greater depreciation & amortization expense, given additional capital investments, provided somewhat of an offset to the company's solid performance. Also, employee-related costs rose stemming, to a certain extent, from planned investments in the workforce. Nonetheless, it appears that full-year earnings will advance at a low-double-digit percentage rate, to $4.35 a share, relative to 2024's $3.91 tally. Regarding 2026, the bottom line may grow at a slower (though still respectable) 5% clip, to $4.55 per share, because of the tough comparison.

Business prospects out to 2028-2030 look promising. The company is the leading natural gas distributor, as measured by number of customers, in both Kansas and Oklahoma, and holds the number-three position in Texas. Furthermore, we believe that these markets have decent growth potential and are located in one of the most active drilling areas in the United States. Also, thanks to the solid finances, ONE Gas ought to continue to meet its commitments with little trouble. So, annual earnings-per-share increases stand to range between 4% and 6% over that time frame.

There are risk factors to bear in mind, however. The company's lack of geographic diversification leaves it somewhat more vulnerable to regional economic downturns and regulations. Moreover, there's competition from other energy suppliers, such as propane dealers and electric companies. Finally, pipeline ruptures, leaks, and other unfortunate events can take a major toll on profits if not sufficiently covered by insurance.

Conservative, income-minded investors may want to take a look at the stock. Its dividend yield is decent relative to those of other equities in *Value Line's* Natural Gas Utility category. Consider, also, the 2 (Above Average) Safety rank and high score for Price Stability.

Frederick L. Harris, III *August 22, 2025*

BUSINESS: Southwest Gas Holdings, Inc. is the parent holding company of Southwest Gas. Centuri Group spun-off in IPO 4/22/24. Southwest Gas is a regulated gas distributor serving 2.3 million customers in Arizona, Nevada, and California. 2024 revenue mix: residential 68%; small commercial, 20%; large commercial and industrial, 5%; transportation, 7%. Southwest has 2,435 employees as of 12/31/24; Centuri has 8,687. Off. & dir. own .5% of common stock; Carl C. Icahn, 13.4%; BlackRock, 12.9%; The Vanguard Group, 10.1%; Corvex Management, 6.6% (3/25 Proxy). Chairman: Michael J. Melarkey. Pres. & CEO: Karen S. Haller. Inc.: DE. Addr.: 8360 S. Durango Drive, P.O. Box 98510 Las Vegas, Nevada 89193. Telephone: 702-876-7237. Internet: www.swgas.com.

Southwest Gas Holding's second quarter results reflect steady utility growth. Despite the company's bottom-line setback, operating performance was fairly strong. The operating margin expanded nicely, to 20% from 15% last year, adding $27 million to operating income, driven largely by rate relief across its jurisdictions and modest customer growth. Broader economic strength across Southwest's service territories contributed to demand growth, reflected in 40,000 new meter sets over the past year. However, higher labor, contractor costs, depreciation, and interest expense tied to infrastructure investments offset some of these gains. Too, a significant tax bill pushed the bottom-line into the red, although the adjusted figure was closer to our call.

The remainder of the year should follow a similar trajectory. We don't see a catalyst for earnings growth through rate case resolutions this year, but the company should continue to benefit from steady markets, past investments, and other ongoing corporate actions. Namely, the separation of Centuri is progressing nicely, with Southwest having reduced its stake to 52%, which has helped to further strengthen the balance sheet. Progress on rate cases, and the implementation of alternative ratemaking structures should reduce regulatory lag and improve cost recovery in the years ahead.

Southwest Gas is positioning as a streamlined pure-play regulated gas utility. The long-term demand outlook remains favorable due to continued population and industrial growth in the Southwest U.S., and there is emerging upside from power-hungry applications like AI-driven data centers and supercomputing. In addition to its base capital plan, Southwest has also announced a proposed $1.2 billion to $1.6 billion Great Basin expansion that could materially increase the rate base if executed. This move is driven by demand from large-load users that typically provide long-term stable demand.

Despite the company's solid business prospects, the stock has limited three- to five-year price upside potential. With much of Southwest's corporate shakeup now in the rearview, the utility's stock looks slightly too expensive.

UGI Utilities, Inc.
Derivation of Equity Risk Premium Based on the Total Market Approach
Using the Beta for the
Proxy Group of Seven Natural Gas Companies

Line No.	Equity Risk Premium Measure	Proxy Group of Seven Natural Gas Companies
1.	Kroll Equity Risk Premium (1)	6.10%
2.	Regression on Kroll Risk Premium Data (2)	7.13%
3.	Kroll Equity Risk Premium based on PRPM (3)	7.48%
4	Equity Risk Premium Based on Value Line Summary and Index (4)	5.81%
5.	Equity Risk Premium Based on Bloomberg, Value Line, and S&P Global Market Intelligence S&P 500 Companies (5)	12.57%
6.	Conclusion of Equity Risk Premium	7.82%
7.	Adjusted Beta	0.61 (6) 0.76 (7)
8.	Forecasted Equity Risk Premium	4.77% - 5.94%

Notes:

(1) Based on the arithmetic mean historical monthly returns on large company common stocks from Kroll 2023 SBBI® Yearbook and Bloomberg Professional Services minus the arithmetic mean monthly yield of Moody's average Aaa and Aa2 corporate bonds from 1928-2024.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of large company common stocks relative to Moody's average Aaa and Aa2 rated corporate bond yields from 1928-2024 referenced in Note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the average consensus forecast of Aaa corporate bonds of 5.10% (from page 1 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is discussed in the accompanying direct testimony. The Ibbotson equity risk premium based on the PRPM is derived by applying the PRPM to the monthly risk premiums between Ibbotson large company common stock monthly returns and average Aaa and Aa corporate monthly bond yields, from January 1928 through October 2025.

(4) The equity risk premium based on the Value Line Summary and Index is derived by subtracting the average consensus forecast of Aaa corporate bonds of 5.10% (from page 1 of this Schedule) from the projected 3-5 year total annual market return of 10.91% (described fully in note 1 on page 3 of Schedule DWD-6).

(5) Using data from Bloomberg Professional Services, Value Line, and S&P Global Market Intelligence for the S&P 500, an expected total return of 17.67% was derived based upon expected dividend yields as a proxy for income returns and long-term earnings growth estimates as a proxy for capital appreciation. Subtracting the average consensus forecast of Aaa corporate bonds of 5.10% results in an expected equity risk premium of 12.57%.

(6) Average of mean and median beta from page 1 of Schedule DWD-6.

(7) Average of mean and median beta from page 2 of Schedule DWD-6.

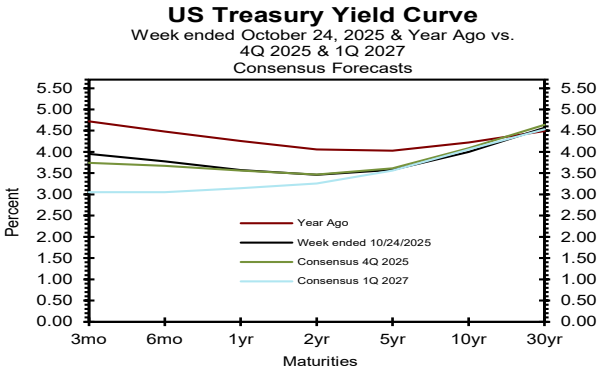
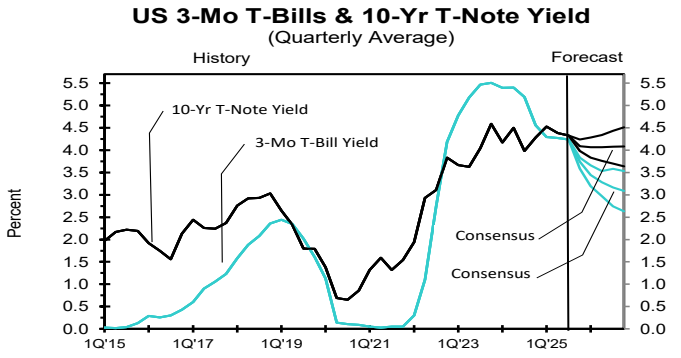
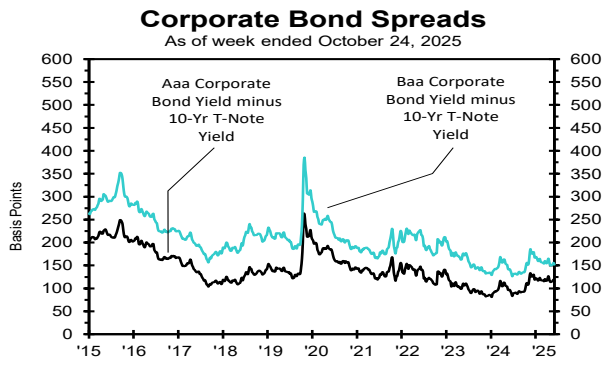
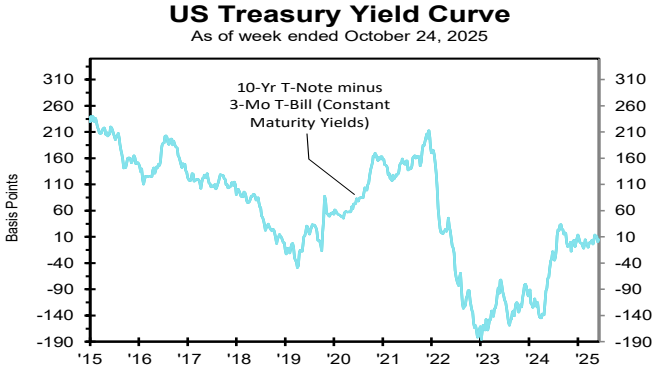
Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. *Figures for 3Q 2025 Real GDP, GDP Chained Price Index and PCE Price Index are consensus forecasts from the September 2025 survey.









Long-Range Survey:

The table below contains results of our semi-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are estimates for the years 2026 through 2031 and averages for the five-year periods 2027-2031 and 2032-2036. Apply these projections cautiously. Few economic, demographic and political forces can be evaluated accurately over such long time spans.

		Average For The Year						Five-Year Averages

Projected Market Appreciation of the S&P Utility Index
Derivation of Mean Equity Risk Premium Based Studies
Using Holding Period Returns and
Projected Market Appreciation of the S&P Utility Index

Line No.		Implied Equity Risk Premium
1.	Historical Equity Risk Premium (1)	4.16%
2.	Regression of Historical Equity Risk Premium (2)	5.00%
3	Forecasted Equity Risk Premium Based on PRPM (3)	4.22%
4.	Forecasted Equity Risk Premium based on Projected Total Return on the S&P Utilities Index (Bloomberg, Value Line, and S&P Capital IQ Data) (4)	6.40%
5.	Average Equity Risk Premium (5)	4.95%

Notes:
(1) Based on S&P Public Utility Index monthly total returns and Moody's Public Utility Bond average monthly yields from 1928-2024. Holding period returns are calculated based upon income received (dividends and interest) plus the relative change in the market value of a security over a one-year holding period.

(2) This equity risk premium is based on a regression of the monthly equity risk premiums of the S&P Utility Index relative to Moody's A2 rated public utility bond yields from 1928 - 2024 referenced in note 1 above. Using the equation generated from the regression, an expected equity risk premium is calculated using the prospective A2 rated public utility bond yield of 5.49% (from line 3, page 1 of this Schedule).

(3) The Predictive Risk Premium Model (PRPM) is applied to the risk premium of the monthly total returns of the S&P Utility Index and the monthly yields on Moody's A2 rated public utility bonds from January 1928 - October 2025.

(4) Using data from Bloomberg, Value Line, and S&P Capital IQ for the S&P Utilities Index, an expected return of 11.89% was derived based on expected dividend yields as a proxy for income returns and long-term growth estimates as a proxy for market appreciation. Subtracting the expected A2 rated public utility bond yield of 5.49%, calculated on line 3 of page 1 of this Schedule results in an equity risk premium of 6.40% (11.89% - 5.49% = 6.40%).

(5) Average of lines 1 through 4.

UGI Utilities, Inc.
Notes to Accompany the Application of the CAPM and ECAPM

Notes:

(1) The market risk premium (MRP) is derived by using five different measures from four sources: Kroll, Value Line, Bloomberg, and S&P Capital IQ as illustrated below:

Measure 1: Kroll Arithmetic Mean MRP (1926-2024)

Arithmetic Mean Monthly Returns for Large Stocks 1926-2024:	12.29 %
Arithmetic Mean Income Returns on Long-Term Government Bonds:	4.99
MRP based on Kroll Historical Data:	7.31 %

Measure 2: Application of a Regression Analysis to Kroll Historical Data

(1926-2024)	7.96 %

Measure 3: Application of the PRPM to Kroll Historical Data

(January 1926 - October 2025)	8.35 %

Measure 4: Value Line Projected MRP (Thirteen weeks ending October 31, 2025)

Total projected return on the market 3-5 years hence*:	10.91 %
Risk-Free Rate (see note 2):	4.53
MRP based on Value Line Summary & Index:	6.38 %

*Forcasted 3-5 year capital appreciation plus expected dividend yield

Measure 5: Bloomberg, Value Line, and S&P Capital IQ Projected Return on the Market based on the S&P 500

Total return on the Market based on the S&P 500:	17.67 %
Risk-Free Rate (see note 2):	4.53
MRP based on Bloomberg, Value Line, and S&P Capital IQ data	13.14 %

Average of all MRP Measures:	8.63 %

(2) For reasons explained in the Direct Testimony, the appropriate risk-free rate for cost of capital purposes is the average forecast of 30 year Treasury Bonds per the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts. (See pages 7 and 8 of Schedule DWD-4.) The projection of the risk-free rate is illustrated below:

Fourth Quarter 2025	4.60 %
First Quarter 2026	4.60
Second Quarter 2026	4.60
Third Quarter 2026	4.60
Fourth Quarter 2026	4.60
First Quarter 2027	4.50
2027-2031	4.40
2032-2036	4.30
	4.53 %

(3) Average of Column 6 and Column 7.

UGI Utilities, Inc.
Basis of Selection of the Group of Non-Price Regulated Companies
Comparable in Total Risk to the Proxy Group of Seven Natural Gas Companies

The criteria for selection of the proxy group of non-price regulated companies comparable in total risk to the proxy group of seven natural gas companies was that the non-price regulated companies be domestic and reported in Value Line Investment Survey (Standard Edition).

The proxy group of non-price regulated companies was selected based on the unadjusted beta range of 0.43 - 0.77 and residual standard error of the regression range of 2.6407 - 3.1495 of the proxy group of seven natural gas companies.

These ranges are based upon plus or minus two standard deviations of the unadjusted beta and standard error of the regression. Plus or minus three standard deviations captures 95.50% of the distribution of unadjusted betas and residual standard errors of the regression.

The standard deviation of the Utility Proxy Group's residual standard error of the regression is 0.1272. The standard deviation of the standard error of the regression is calculated as follows:

$$\text{Standard Deviation of the Std. Err. of the Regr.} = \frac{\text{Standard Error of the Regression}}{\sqrt{2N}}$$

where: N = number of observations. Since Value Line betas are derived from weekly price change observations over a period of five years, N = 259

$$\text{Thus,} \quad 0.1272 = \frac{2.8951}{\sqrt{518}} = \frac{2.8951}{22.7596}$$

						Average of Mean and Median	11.29 %

Notes:

(1) Average of columns 2 through 4 excluding negative growth rates and extreme positive values.

(2) The application of the DCF model to the domestic, non-price regulated comparable risk companies is identical to the application of the DCF to the Utility Proxy Groups. The dividend yield is derived by using the 60 day average price and the spot indicated dividend as of 10/31/2025. The dividend yield is then adjusted by 1/2 the average projected growth rate in EPS, which is calculated by averaging the 5 year projected growth in EPS provided by Value Line, www.zacks.com, and S&P Capital IQ (excluding any negative growth rates) and then adding that growth rate to the adjusted dividend yield.

(3) Results were excluded from the final average and median as they were more than two standard deviations from the proxy group's mean.

UGI Utilities, Inc.
Indicated Common Equity Cost Rate
Through Use of a Risk Premium Model
Using an Adjusted Total Market Approach

Line No.		Proxy Group of Thirty-Two Non-Price Regulated Companies
1.	Prospective Yield on Baa2 Rated Corporate Bonds (1)	5.89%
2.	Adjustment to Reflect Bond rating Difference of Non-Price Regulated Companies (2)	-0.19%
3.	Adjusted Bond Yield	5.70%
4.	Equity Risk Premium (3)	5.24% - 5.94%
5.	Risk Premium Derived Common Equity Cost Rate	10.94% - 11.64%

Notes: (1) Average forecast of Baa corporate bonds based upon the consensus of nearly 50 economists reported in Blue Chip Financial Forecasts dated June 2, 2025 and October 31, 2025 (see pages 7 and 8 of Schedule DWD-4). The estimates are detailed below.

Fourth Quarter 2025	5.80 %
First Quarter 2026	5.80
Second Quarter 2026	5.80
Third Quarter 2026	5.90
Fourth Quarter 2026	5.90
First Quarter 2027	5.90
2027-2031	6.00
2032-2036	6.00
Average	5.89 %

(2) The average yield spread of Baa2 rated corporate bonds over A2 corporate bonds for the three months ending October 2025. To reflect the A3 average rating of the Non-Price Regulated Proxy Group, the yield on the Baa corporate bond must be adjusted by 2/3 of the spread between A2 and Baa2 corporate bond yields as shown below:

	A2 Corp. Bond Yield	Baa2 Corp. Bond Yield	Spread
Oct-25	5.52 %	5.80 %	0.28 %
Sep-25	5.55	5.83	0.28
Aug-25	5.72	6.00	0.28
		Average yield spread	0.28 %
		2/3 of spread	0.19 %

*From 2025 Kroll Cost of Capital Navigator

Notes:

(1) From page 2 of this Schedule.

(2) Gleaned from Columns [B] and [C] on the bottom of this page. The appropriate decile (Column [A]) corresponds to the market capitalization of the proxy group, which is found in Column [1].

(3) Corresponding risk premium to the decile is provided in Column [D] on the bottom of this page.

(4) Line No. 1 Column [3] – Line No. 2 Column [3]. For example, the 0.00% in Column [4], Line No. 2 is derived as follows 0.00% = 0.74% - 0.74%.

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to gas plant at September 30, 2027 for the consolidated UGI gas company. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 through 4 of the attached report.

A description of the methods and procedures upon which the study was based is set forth in a companion report, UGI Gas Exhibit C (Future), "Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant at September 30, 2026".

Respectfully submitted,

GANNETT FLEMING VALUATION

PART I. INTRODUCTION

UGI UTILITIES, INC. – GAS DIVISION
DEPRECIATION STUDY

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for UGI Utilities, Inc. – Gas Division to determine the annual depreciation accrual rates and amounts for ratemaking purposes applicable to the original cost of gas plant at September 30, 2027.

BASIS OF STUDY

Depreciation

The annual depreciation accruals and accrued depreciation were calculated using the straight line method, the remaining life basis, the average service life (ASL) procedure for plant installed prior to 1982 and the equal life group procedure (ELG) for 1982 and subsequent vintages. The calculations were based on the attained ages and estimated service life characteristics for each depreciable group of gas property.

Service Life Estimates

The service life and survivor curve estimates used for the calculation of depreciation at September 30, 2027, are set forth in Table 1 and are based on company data through 2022. The service life estimates are the same estimates as submitted to the Pennsylvania Public Utility Commission (PA PUC) in May 2023 in connection with the company's most recent service life study report.

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals at September 30, 2027, the book reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation for the average service life procedure are presented in Exhibit C (Future). The detailed calculations at September 30, 2027, are set forth in Part III of this report.

Amortization of Net Salvage

In accordance with Pennsylvania rate regulation practice, under which experienced costs of negative net salvage are amortized after their occurrence, no adjustments for expected net salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for the individual accounts. The annual provision for recovering negative net salvage is based on the amortization of experienced net salvage over a five-year period.

PART II. RESULTS OF STUDY

PART II. RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 4 presented on pages II-3 through II-11 summarize the results of the depreciation study as of September 30, 2027 for the consolidated UGI gas company. Table 1 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve at September 30, 2027, future book accruals, and calculated annual accrual amount and rate. Table 2 presents the bringforward of the book reserve to September 30, 2027. Table 3 sets forth the calculation of the depreciation accruals for the twelve months ended September 30, 2027. Table 4 presents the annual amortization of experienced and estimated net salvage based on the period 2023 through 2027.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

Supporting data for the original cost depreciation calculations in account sequence are presented in Part III of this report. The tables indicate the estimated survivor curves used in the calculations and set forth, for each installation year, the original cost, calculated accrued depreciation, allocated book reserve, future book accruals, remaining life, and calculated remaining life accrual.

Detailed tabulations setting forth the experienced and estimated cost of removal and salvage amounts by year and account are presented in Part IV of this report. The net salvage amounts are carried forward to Table 4 which presents the five-year amortization.
