CPI-1 Resolution Regarding Sound Public Utility Ratemaking Principles

Whereas setting public utility rates is a core responsibility delegated to state commissions staffed with the technical expertise to perform the complex, difficult duty of balancing customers' need for safe, reliable service at reasonable rates with utilities' objective of maintaining financial integrity to support the provision of reliable, affordable service over changing conditions in the short-, mid- and long-term;

Whereas ratemaking is a major regulatory function that affects all aspects of utility operations and directly impacts the different objectives that state commissions are charged with achieving in order to promote the public interest;

Whereas rate of return ratemaking and the various iterations of this function are central to public utility regulation and the implicit compact around which it centers;

Whereas the principles reflected in *Munn v. Illinois, Bluefield Water Works & Improvement Co. v. Public Service Commission,* and *Federal Power Commission v. Hope Natural Gas Co.* recognize that utilities subject to public regulation must have a reasonable opportunity to recover prudently incurred costs and an opportunity, but not a guarantee, to earn a return sufficient to maintain financial soundness, support credit quality, and attract capital on reasonable terms to support reliable, affordable service over the long term;

Whereas public utility ratemaking must balance the need to allow utilities an opportunity to earn reasonable regulated returns while customers pay an overall just and reasonable rate, and requires informed, case-specific judgment based on record evidence, expert testimony, financial analysis, utility-specific circumstances, short-, mid- and long-term public interest considerations, and applicable law;

Whereas a utility's revenue requirement is the amount needed to provide safe, reliable service and recover reasonable operating expenses, taxes, depreciation, and a rate of return through rates that are fair, just, and reasonable to customers;

Whereas return on equity is one component of the overall rate of return and cannot appropriately be determined by a single rigid formula applied across utilities, industries, jurisdictions, and economic conditions without regard to customer impact, certain types of risk, capital structures, operating obligations, and the evidentiary record in each case;

Whereas preserving state commission discretion to evaluate all relevant facts in a transparent evidentiary record supports effective and robust state regulation and gives state regulators the ability to help ensure safe, reliable, and affordable utility service over the long-term; *now, therefore be it*

Resolved, that the Board of Directors of the National Association of Regulatory Utility Commissioners, convened at its 2026 Summer Policy Summit in Minneapolis, Minnesota, reaffirms that sound public utility ratemaking should remain grounded in the evidentiary record, governing law, and the informed judgment of state commissions, consistent with the principles reflected in *Munn, Bluefield,* and *Hope*; supports regulatory frameworks that preserve and optimize commission authority to determine return on equity and other ratemaking components based on the facts and circumstances presented in each

proceeding; maintains that under rate-of-return regulation, commissions determine appropriate returns on equity, and other rate case elements, based on case-specific analysis, expert evaluation, and record evidence rather than imposing arbitrary limits; and supports the technical expertise of commissions to resolve issues that clearly fall within their statutory jurisdiction.

REJOINDER TESTIMONY OF

JOHN J. SPANOS

ON BEHALF OF

PEOPLES NATURAL GAS COMPANY LLC

August 4, 2026

I. INTRODUCTION

Q. Please state your name and address.

A. John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania, 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania, 17011).

Q. Are you the same John J. Spanos that presented direct and rebuttal testimony in this proceeding?

A. Yes, I am.

Q. What is the purpose of your rejoinder testimony?

A. In my Rejoinder Testimony, I respond to the depreciation-related Surrebuttal Testimony of David J. Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). OCA Witness Garrett continues to propose the use of the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates. However, he has clearly misrepresented various issues in this case related to all the key depreciation concepts and most importantly equitable recovery for utilities in Pennsylvania. His continual discussion related to the Equal Life Group ("ELG") procedure being an accelerated depreciation procedure, and not straight line depreciation as all authoritative text explain, is quite disturbing. Additionally, his disregard of all of the components of determining depreciation expense beyond the depreciation procedure is equally disturbing when he comments on fairness to all ratepayers.

Q. Please summarize your rejoinder testimony.

A. Mr. Garrett continues to recommend a drastic change to depreciation expense from what has been utilized by the Company for many decades. He attempts to look at positions recommended for other utilities in other jurisdictions as justification to switch, however, he does not consider all the major drivers of depreciation expense when he makes his inappropriate comparisons. In this testimony, I will further address ALG versus ELG; intergenerational equity issues for customers and the key elements of developing depreciation rates in Pennsylvania that Mr. Garrett ignores. When reviewing reasonableness between jurisdictions, all of the individual components and their impact on depreciation as compared to other utilities cannot be ignored as Mr. Garrett has done.

II. EQUAL LIFE GROUP VERSUS AVERAGE LIFE GROUP

Q. Has Mr. Garrett presented any new depreciation issues in his surrebuttal testimony that have not already been addressed in rebuttal testimony?

A. No. However, Mr. Garrett now misrepresents my testimony related to the two depreciation procedures, erroneously addresses the incentives of Peoples Natural Gas and disregards the value of annual updates in Pennsylvania.

Q. Are both the ALG and ELG procedures utilized in depreciation studies you conduct?

A. Yes. Additionally, there is nothing in any testimony that I have prepared that implies that the ALG procedure is not fair, accurate or reasonable. However, the ELG procedure is more accurate and precise, which I have continually explained and illustrated in this case. The ELG procedure does require more complex

calculations than the ALG procedure, but both procedures require periodic reviews. Both procedures are impacted by the reserve to plant ratio as well as the service life and net salvage parameters. In Pennsylvania, there is no net salvage accrual which cannot be ignored when comparing to other jurisdictions and intergenerational equity. With the use of computer models, there is no adverse impact from the use of the ELG procedure as Mr. Garrett claims, and with the thousands of assets in each account of various vintages, there are no swings in expense from year to year due to the procedure.

Q. Do you typically provide the results of the ELG procedure in all jurisdictions when conducting depreciation studies?

A. Yes. When conducting depreciation studies, calculations using the ELG procedure are typically performed and discussed as an alternative procedure and in some jurisdictions, like Pennsylvania, the controlling procedure.

Q. What are some of the reasons for not switching depreciation procedures that Mr. Garrett does not recognize or ignores to support his position?

A. First and foremost, creating a drastic increase or decrease in depreciation expense leads to intergenerational inequity. In this case, switching from ELG to ALG procedure will result in a major swing in depreciation expense that will contradict the concept of systematic and rational recovery that is foundational to depreciation. I have already explained and illustrated that the ELG procedure is more precise for matching asset utilization to asset recovery, and we already know that the net salvage component in Pennsylvania is a deferral mechanism;

therefore, switching to ALG would simply create further intergenerational inequity. Second, as I have explained in rebuttal testimony, Mr. Garrett does not appear to understand that rate base is affected by accumulated depreciation, and higher accumulated depreciation means lower rate base. Given this fact, Mr. Garrett's assertion that utilities are incentivized by higher depreciation is not accurate. Additionally, utilities are continually compared to others within a jurisdiction and across jurisdictions. Each jurisdiction has their standards and precedents that support fairness, and clearly the current depreciation practices for Peoples Natural Gas show they are reasonably recovering their investment compared to others with similar depreciation procedures in place.

Q. Mr. Garrett states that the 72-year service life for Account 376 is reduced to a 43-year recovery period under the ELG procedure. Is that an accurate representation?

A. No. Mr. Garrett is comparing an average total service life with a composite remaining life for an existing, aged population of assets. The 72-year average service life measures the expected period from placement to retirement for the assets in the account. The shorter composite remaining life reflects that a substantial portion of the existing plant has already consumed part of its service life as of the study date. The ELG procedure does not assign a 43-year life to every asset or recover every asset over 43 years. Each equal life group continues to be depreciated on a straight line basis over its own expected service life. Mr. Garrett's example does not demonstrate accelerated depreciation, it attempts to equate two different depreciation measurements that are not the same.

Q. Mr. Garrett compares the ELG procedure to paying a mortgage early and states that ELG ignores customers' time value of money. Is that analogy appropriate?

A. No. Depreciation is a cost-allocation process that provides for the return of capital over the service lives of utility assets. The time value of money is addressed separately through the authorized return on the undepreciated investment included in rate base. Delaying depreciation does not eliminate a cost. It leaves larger balances in rate base for a longer period, on which customers continue to pay a return. Mr. Garrett's analogy considers only the timing of depreciation expense and ignores the corresponding effect on accumulated depreciation, rate base, and return on rate base. The appropriate comparison is the total revenue requirement over time, not depreciation expense viewed in isolation.

Q. How do you respond to Mr. Garrett's claim that you are disingenuous in your discussion related to fairness for all generations of customers?

A. I take offense to this claim from a professional standpoint. It is true that I conduct depreciation studies for utilities to represent in rate cases, however, I do not develop depreciation results that artificially increase depreciation expense for the best interest of the utility. I stand by every depreciation study that my firm and I have conducted as representing the most appropriate depreciation rates of the assets on an account basis that match the recovery of the assets to their utilization on a systematic and rational basis. My studies are based on all the key information of how the company operates, the nature of the assets in each account, any

regulatory requirements, the full life cycle of the assets, past, present and future and the practices of other companies across the United States.

Q. Is there anything Mr. Garrett has presented that explains why switching to the ALG procedure would be more appropriate in this case?

A. No. All Mr. Garrett has presented is a one-time drastic reduction in depreciation expense by switching procedures. Nothing that he has proposed in switching to the ALG procedure is more accurate. His comparisons to other jurisdictions are inappropriate, because he does not consider all of the components of a depreciation rate. His large decrease in expense is simply the result of the change in procedures after 40 plus years and nothing of any value. This swing in recovery affects different generations of customers even though the assets are not changing consistently with the change in expense. His proposal would reduce recovery from current customers and defer additional recovery to future customers. Mr. Garrett's example that he discusses on page 14 of his surrebuttal testimony is misleading when accounting for all the assets in the account of various ages. The ELG rates, as shown in the annual depreciation reports each year, are just as stable as the ALG-developed rates.

Q. Does this complete your Prepared Rejoinder Testimony?

A. Yes, it does.

III. CONCLUSION 19

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Cynthia ("Cyndee") S. Fang. I am employed by Atrium Economics, LLC as a Director. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, South Carolina 29926.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My rebuttal testimony is set forth in **Peoples Statement No. 20-R**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my rejoinder testimony is to respond to the surrebuttal testimony of OCA witnesses Michael Deupree and Roger Colton and CAUSE-PA witness Patrick Cicero to the extent they address my rebuttal testimony regarding affordability, macroeconomic conditions, customer-level gas-burden analysis, and the role of Universal Service Programs in this base rate proceeding.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I first address the threshold question of how affordability should be considered in a base rate proceeding. I then respond to claims concerning the recent Pennsylvania-American

Water Company order, the Company's customer-level gas-burden analysis, the effectiveness and limits of CAP, and the implications of those issues for the Commission's evaluation of the Company's proposed rates.

II. RESPONSE TO SURREBUTTAL TESTIMONY

A. AFFORDABILITY AND THE SCOPE OF BASE RATEMAKING

Q. DO OCA AND CAUSE-PA ACCURATELY CHARACTERIZE YOUR REBUTTAL TESTIMONY REGARDING THE ROLE OF AFFORDABILITY IN A BASE RATE CASE?

A. No. My rebuttal testimony did not state that affordability is irrelevant to the Commission's evaluation of just and reasonable rates. To the contrary, I expressly acknowledged that affordability is an important consideration in a base rate proceeding involving an essential utility service and that the Commission should consider the potential impact of proposed rates on customers, particularly customers with limited income. My point was narrower: affordability evidence should be evaluated within the Commission's broader statutory framework, together with cost recovery, financial integrity, customer equity, and the Company's obligation to provide safe, adequate, and reliable service.

For example, OCA witness Colton states that Company witnesses spend considerable time asserting that affordability does not belong in a base rate case, and CAUSE-PA witness Cicero similarly characterizes my testimony as an attempt to defer affordability issues to other forums. Those characterizations overstate my position. My rebuttal testimony recognized affordability as a relevant consideration but distinguished

that consideration from using base rates to solve broader macroeconomic affordability pressures or to deny recovery of otherwise prudent utility costs.

Q. IF THE PARTIES AGREE THAT AFFORDABILITY MATTERS, WHAT IS THE PRINCIPAL DIFFERENCE BETWEEN YOUR APPROACH AND THE APPROACH ADVANCED BY OCA AND CAUSE-PA?

A. The principal difference is not whether affordability matters. It does. The principal difference is whether affordability evidence should be used to replace the Commission's cost-of-service analysis, or whether it should be considered as one part of the Commission's overall ratemaking balance, together with prudent cost recovery, financial integrity, rate design, customer impacts, and targeted assistance programs. My testimony supports the latter approach.

Q. DOES YOUR TESTIMONY ASK THE COMMISSION TO IGNORE CUSTOMER HARDSHIP?

A. No. I recognize that many customers face real financial hardship and that higher utility bills can be difficult for customers with limited household resources. But recognizing that hardship does not mean that a base rate case should be converted into a broad proceeding to resolve economywide inflation, housing costs, healthcare costs, or other household budget pressures that are not caused by the provision of regulated utility service. The appropriate question in this proceeding is whether the Company's proposed rates, after reasonable adjustments supported by the record, are just and reasonable and allow the

Company a reasonable opportunity to recover its prudent costs while maintaining safe and reliable service.

Q. HOW SHOULD THE COMMISSION CONSIDER AFFORDABILITY EVIDENCE IN THIS CASE?

A. The Commission should consider affordability evidence as part of the overall balancing required in setting just and reasonable rates. That balancing should not be used to deny recovery of prudent costs solely because customers are experiencing broader economic pressure. Instead, the Commission should evaluate customer impacts, the availability and performance of targeted assistance programs, rate design considerations, and the Company's cost-of-service showing on a complete record. That approach preserves the integrity of cost-based ratemaking while ensuring that customer impacts are not ignored.

The surrebuttal testimony also confirms that the parties are debating broader questions about affordability measurement, available data, program participation, and program design. Those questions are important, but they are broader than the specific revenue-requirement determination in this case and would benefit from focused review in the appropriate program or policy forum.

Q. DID ANY OTHER WITNESS DISCUSS AFFORDABILITY?

A. Yes. Michael Huwar discussed affordability in both his Direct Testimony (**Peoples Statement No. 1)** and his Rebuttal Testimony (**Peoples Statement No 1-R**).

Q. DID ANY WITNESS ADDRESS MR. HUWAR'S REBUTTAL TESTIMONY REGARDING PEOPLES NATURAL GAS EXHIBIT NO. MAH-1R[1] AND THE COMPARISON OF PEOPLES' DELIVERED RESIDENTIAL ENERGY COSTS TO OTHER PA-PUC REGULATED ENERGY COMPANIES?

A. They did not. Mr. Huwar explained in his rebuttal testimony[2] that Peoples prepared **Peoples Natural Gas Exhibit No. MAH-1R**, which compares the per-MMBtu price of PA-PUC regulated energy companies in Pennsylvania. He further explained that the exhibit presents a comparative analysis of residential delivered energy costs on a BTU-equivalent basis and evaluates the implications of those costs for customer affordability.

As summarized by Mr. Huwar, Peoples is:

- 80% less than the most expensive electric utility in Pennsylvania.
- 70% less than the average electric utility in Pennsylvania.
- 34% less than the most expensive gas utility in Pennsylvania.
- 12% less than the average gas utility in Pennsylvania.[3]

The utilities reflected in Peoples Natural Gas Exhibit No. MAH-1R have rates approved by the Pennsylvania Public Utility Commission. As mentioned by Peoples Witness Huwar even if the entire rate increase were granted, Peoples would still cost less than the average gas utility in Pennsylvania. In addition to the analysis I presented above and in my rebuttal testimony, the comparison presented by Mr. Huwar is another clear indicator that Peoples rates are affordable.

[1] Please note that this testimony and Exhibit MAH-1R were revised via an Errata filing.

[2] Michael Huwar Rebuttal, at pages 10-11.

[3] As of January 31, 2026.

B. RECENT PAWC ORDER AND OTHER POLICY REFERENCES

Q. DO OCA AND CAUSE-PA RELY ON THE RECENT PENNSYLVANIA-AMERICAN WATER COMPANY ("PAWC") ORDER TO SUPPORT A DIFFERENT RESULT HERE?

A. Yes. OCA and CAUSE-PA cite the PAWC order for the proposition that the Commission may consider rate affordability in a base rate proceeding. I do not disagree with that general proposition. The order confirms that affordability may be considered, but it does not establish that affordability concerns automatically justify denying recovery of prudent utility costs, nor does it eliminate the Commission's responsibility to evaluate each utility's record evidence, cost structure, proposed rates, and available customer assistance mechanisms on a case-specific basis.

OCA witness Deupree and OCA witness Colton cite the PAWC order for the proposition that the Commission may consider rate affordability in setting just and reasonable rates, while CAUSE-PA witness Cicero relies on that order to argue that affordability should be central to the Commission's review of this case. I agree that the Commission may consider affordability, but that general proposition does not determine the outcome of this separate Peoples proceeding.

Q. DOES THE PAWC ORDER CHANGE YOUR CONCLUSIONS?

A. No. The PAWC order reinforces that affordability is one factor in the Commission's ratemaking judgment. It does not support treating broad macroeconomic conditions as a substitute for the record-based determination of the Company's revenue requirement or the

prudence of its costs. The Commission should consider affordability in this case, but it should do so in a way that is tied to the evidence specific to Peoples, including customer-level data, bill impacts, existing assistance tools, and the Company's obligation to maintain safe and reliable service.

C. CUSTOMER-LEVEL GAS-BURDEN ANALYSIS

Q. DID OCA AND CAUSE-PA CHALLENGE YOUR CUSTOMER-LEVEL GAS-BURDEN ANALYSIS?

A. Yes. OCA witness Colton questions the income and bill data used in the analysis, and CAUSE-PA witness Cicero argues that the overall residential results obscure the circumstances of low-income customers who are not enrolled in CAP. Those criticisms do not undermine the usefulness of the analysis. The analysis was not intended to be the only affordability evidence in the record, and I did not claim that a single metric resolves all affordability questions. Rather, the analysis uses available customer-level data to provide direct evidence regarding Peoples customers, and it supplements representative and population-level analyses offered by other parties.

Q. HOW DO YOU RESPOND TO OCA WITNESS COLTON'S SPECIFIC CRITIQUE OF THE INCOME DATA USED IN THE GAS-BURDEN ANALYSIS?

A. OCA witness Colton's critique identifies data limitations that should be understood, but it does not support disregarding customer-level evidence. All affordability methodologies require assumptions and data judgments. The appropriate use of the Atrium analysis is to

supplement—not replace—other record evidence concerning customer impacts, CAP effectiveness, arrearages, payment behavior, and representative affordability measures. To the extent further detail is needed regarding the Company's available income data, how that information is obtained, and the Company's customer assistance data practices, those issues are addressed by Company witness Black.

Nor are data limitations unique to the Atrium analysis. Representative burden studies, ZIP-code analyses, and population-level methods also require assumptions about income, household composition, usage, geography, and customer circumstances. The relevant question is not whether a methodology has limitations; all do. The relevant question is whether the analysis provides useful evidence when its purpose, data inputs, and limitations are properly understood.

That point is consistent with the Commission's Energy Affordability Study, which identified limitations and inconsistencies in utility-reported data and noted that utilities generally could not provide income information for low-income customers who were not participating in CAP or other universal service programs. See Home Energy Affordability for Low-Income Customers in Pennsylvania, Docket No. M-2017-2587711, at 4, 16-17.

Those limitations do not warrant disregarding affordability analysis. Instead, they underscore the need to use the best available data responsibly to provide the Commission with useful context regarding customer impacts, while clearly identifying the assumptions and limitations of each analysis. That is why the Atrium analysis should be treated as supplemental evidence to be weighed with other affordability evidence in the record.

Q. WHY IS CUSTOMER-LEVEL ANALYSIS STILL USEFUL?

A. Customer-level analysis is useful because it evaluates actual Peoples customers using customer billing and usage data rather than relying solely on representative households or generalized demographic assumptions. Representative methods can provide broad context, but they necessarily depend on assumptions about household income, usage, and customer characteristics. Customer-level analysis helps the Commission understand the distribution of burdens across the actual customer population for which sufficient data are available. That evidence should be weighed with other affordability evidence rather than dismissed.

Q. DOES THE ANALYSIS IGNORE LOW-INCOME CUSTOMERS WHO ARE NOT ENROLLED IN CAP?

A. No. The analysis should be read together with the record evidence regarding low-income customers, CAP participation, and the benefits produced by CAP. CAUSE-PA is correct that customers who are eligible for CAP but not enrolled may face higher burdens than customers who are enrolled in CAP and are then receiving CAP benefits. That fact supports continued attention to broader program design issues such as enrollment, outreach, customer communications, verification requirements, and program effectiveness; it does not support the conclusion that customer-level evidence for the broader residential population is irrelevant or that the Company's proposed rates should be evaluated outside traditional ratemaking principles.

Q. HOW DO YOU RESPOND TO CAUSE-PA WITNESS CICERO'S CRITICISM THAT YOUR ANALYSIS DOES NOT FOCUS SPECIFICALLY ON CUSTOMERS WHO MAY BE ELIGIBLE FOR CAP BUT ARE NOT ENROLLED?

A. Mr. Cicero's criticism concerns the way the analysis is framed, rather than the calculations underlying the analysis. The residential gas-burden analysis was calculated for the broader residential population for which sufficient customer-level billing, usage, and available income data were available. That broader population necessarily includes customers with a range of income levels and program participation statuses, including customers who may be income-eligible for CAP but are not enrolled. I separately evaluated CAP-enrolled customers to assess the effectiveness of CAP for customers who receive those benefits. Those analyses answer different but complementary questions: the residential analysis provides broader customer-level affordability context, while the CAP analysis evaluates how targeted assistance affects burdens for participating customers. The fact that some customers may be eligible for CAP but not enrolled does not make either analysis invalid; rather, it underscores the importance of continued outreach, enrollment efforts, and evaluation of participation barriers. That is an enrollment and program-administration issue, not a basis for discounting the usefulness of the customer-level analysis or changing how that evidence should be weighed in this base rate case. The Commission's CAP Policy Statement treats enrollment and customer awareness as program-administration issues to be addressed through outreach plans and USECP-related processes. See 52 Pa. Code § 69.265(8)(i) and (vi); 2019 Amendments to Policy Statement on Customer Assistance Program, Docket No. M-2019-3012599. Those issues are better addressed through focused Universal Service Program review, the Company's Consumer Education and Outreach

Plan ("CEOP") review, program administration processes, or other appropriate policy forums outside this base rate case.

Q. SHOULD THE COMMISSION RELY ON A SINGLE AFFORDABILITY METRIC?

A. No. Energy burden, arrears, payment behavior, household resources, and bill volatility each provide useful information, but each has limitations. The Commission should consider those measures together, along with customer-level data, program participation, bill-impact evidence, and the Company's cost-of-service showing. The Commission's Energy Affordability Study likewise considered multiple indicators, including energy burden levels, LIHEAP impacts, pre-program arrears, in-program arrears, payment behavior, CAP default and termination rates, confirmed low-income customer debt, CAP costs, and other state programs. See Home Energy Affordability for Low-Income Customers in Pennsylvania, Docket No. M-2017-2587711, Table of Contents and Executive Summary. That is the approach I recommended in rebuttal testimony, and nothing in the surrebuttal testimony changes that recommendation.

Q. HAVE YOU UPDATED THE CUSTOMER-LEVEL GAS-BURDEN ANALYSIS TO COMPARE CURRENT AND PROPOSED RATES?

A. Yes. In response to the concerns raised in surrebuttal, Atrium updated the customer-level gas-burden analysis to compare estimated gas burdens under current rates and proposed rates using the same general customer-level framework. This update is intended to provide additional context for the Commission's review of proposed-rate impacts and to address

the concern that customer-level analysis should not be limited to current-rate conditions. The updated analysis should be understood as supplemental to the analysis presented in my rebuttal testimony and should be considered together with the other affordability evidence in the record.

Figure CSF-RJ-1: Gas Burden for Residential Customers — Current and Proposed Rates

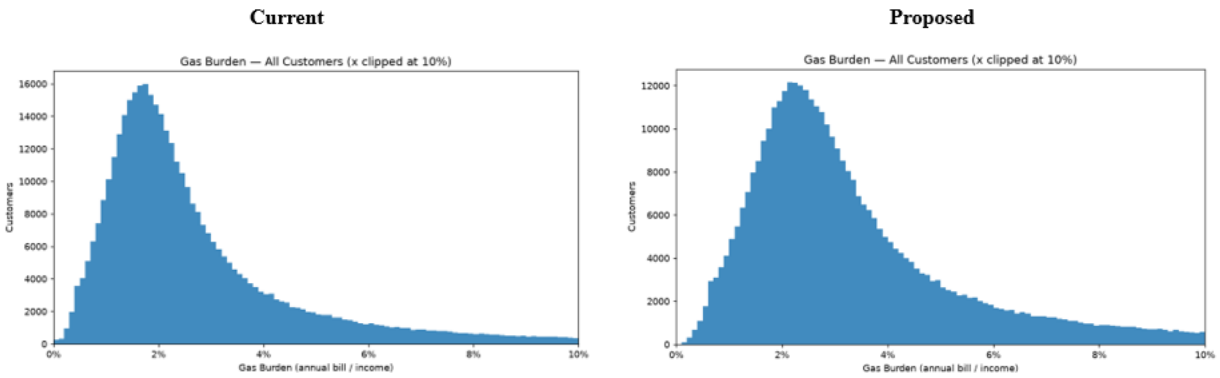

Table CSF-RJ-1: Gas Burden for Residential Customers — Current and Proposed Rates

	Residential Customers	
	Current	**Proposed**
Number of Customers included in analysis	**412,655**	**412,655**
Average	**3.40%**	**4.60%**
First Quartile – 25% of population	**1.50%**	**2.00%**
Second Quartile/Median – 50% of population	**2.20%**	**2.90%**
Third Quartile – 75% of population	**3.50%**	**4.70%**
90% of population	**6.30%**	**8.60%**
95% of population	**9.20%**	**12.60%**
99% of population	**19.20%**	**26.20%**
Maximum	**544.20%**	**713.10%**

Source: *Atrium analysis of Peoples customer billing, usage, and available income data.*

Q. WHAT DOES THE UPDATED RESIDENTIAL CUSTOMER ANALYSIS SHOW?

A. As shown in Table CSF-RJ-1, for the 412,655 residential customers included in the analysis, the average gas burden increases from 3.40 percent under current rates to 4.60 percent under proposed rates. The median gas burden increases from 2.20 percent to 2.90 percent. The third quartile increases from 3.50 percent to 4.70 percent, while the 90th percentile increases from 6.30 percent to 8.60 percent. These results show that proposed rates increase measured gas burdens, as would be expected, but the updated distribution also provides a more complete record-based view of the magnitude and distribution of those impacts across the customers included in the analysis.

Q. WHAT DOES THE UPDATED CAP ANALYSIS SHOW?

A. As shown in Table CSF-RJ-2, the updated analysis continues to show that CAP materially reduces gas burdens for enrolled customers. Under current rates, the average burden for CAP-enrolled customers is 10.50 percent without CAP benefits and 4.00 percent with CAP benefits. Under proposed rates, the average burden without CAP benefits increases to 14.80 percent, while the average burden with CAP benefits remains at 4.00 percent for the customers included in the analysis. Similarly, the median burden without CAP benefits increases from 7.40 percent under current rates to 10.40 percent under proposed rates, while the median burden with CAP benefits remains at 4.00 percent for the customers included in the analysis. These results reinforce that CAP is a targeted affordability tool that materially mitigates bill burdens for participating customers.

Figure CSF-RJ-2: Gas Burden for CAP-Enrolled Customers With and Without CAP Benefits — Current and Proposed Rates

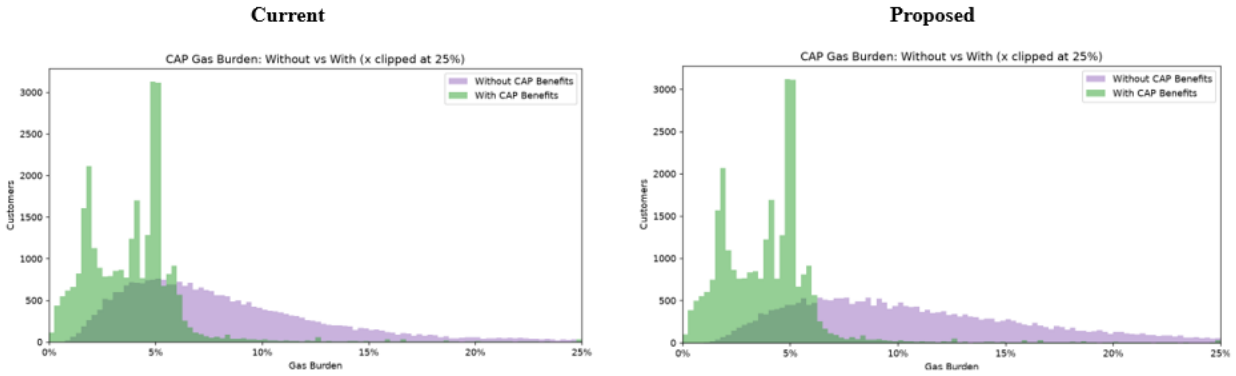

Table CSF-RJ-2: Gas Burden for CAP-Enrolled Customers With and Without CAP Benefits — Current and Proposed Rates

	Without CAP Benefits	With CAP Benefits	Without CAP Benefits	With CAP Benefits
	Current		**Proposed**	
Number of Customers included in analysis	**28,975**	**28,975**	**28,310**	**28,310**
Average	**10.50%**	**4.00%**	**14.80%**	**4.00%**
First Quartile – 25% of population	**4.80%**	**2.10%**	**6.80%**	**2.10%**
Second Quartile/Median – 50% of population	**7.40%**	**4.00%**	**10.40%**	**4.00%**
Third Quartile – 75% of population	**11.30%**	**5.00%**	**16.00%**	**5.00%**
90% of population	**17.50%**	**5.90%**	**24.70%**	**5.90%**
95% of population	**26.20%**	**6.6%**	**36.60%**	**6.60%**
99% of population	**74.10%**	**16.20%**	**103.40%**	**16.20%**
Maximum	**250.2%**	**48.80%**	**370.50%**	**48.80%**

Source: *Atrium analysis of Peoples CAP-enrolled customer billing, usage, available income, and CAP benefit data.*

Q. HOW DOES THIS UPDATE RESPOND TO THE SURREBUTTAL TESTIMONY?

A. The updated comparison responds directly to the concern that the customer-level gas-burden analysis should reflect proposed-rate impacts. This update addresses the surrebuttal concern that proposed-rate impacts should be evaluated directly, rather than inferred from current-rate burden results. It shows both the increase in burdens under proposed rates and

the continuing role of CAP in mitigating those burdens for enrolled customers. At the same time, the updated comparison relies on the same available customer-level income and usage data and should be read with the same limitations discussed above. The updated comparison therefore does not change my broader conclusion: affordability evidence should be considered as part of the Commission's overall ratemaking balancing, and the Atrium analysis should supplement—not replace—other evidence concerning customer impacts, arrearages, payment behavior, program participation, and the Company's cost-of-service showing.

In short, the surrebuttal testimony identifies issues for the Commission to weigh, but it does not undermine the usefulness of the customer-level analysis or the conclusion that targeted assistance remains the most effective tool for income-based hardship.

D. CAP AND TARGETED AFFORDABILITY TOOLS

Q. DO YOU AGREE WITH OCA AND CAUSE-PA THAT CAP PARTICIPATION AND PROGRAM EFFECTIVENESS ARE IMPORTANT?

A. Yes. CAP and related Universal Service Programs are important tools for addressing income-based utility hardship. My rebuttal testimony showed that CAP materially reduces gas burdens for participating customers. I agree that continued focus on enrollment, accessibility, outreach, and program performance is appropriate. Those issues are directly relevant to whether targeted affordability tools are reaching the customers they are designed to serve.

This targeted-program framework is consistent with the Commission's CAP Policy Statement, which describes CAPs as programs designed to help low-income customers maintain utility service through regular monthly payments, reduced bills, arrearage forgiveness, and related program design elements, while also recognizing the need for cost-effective administration and Commission review through USECP and related processes. See 52 Pa. Code §§ 69.261, 69.265 and 69.266.

Q. HOW DOES CAUSE-PA WITNESS CICERO'S SURREBUTTAL RELATE TO YOUR CAP ANALYSIS?

A. CAUSE-PA witness Cicero's surrebuttal does not appear to dispute the central result of my CAP analysis: CAP materially reduces gas burdens for participating customers. Thus, the remaining difference concerns the policy implications of enrollment levels, rather than the economic result shown by the CAP analysis. That circumstance supports that the Company continue its targeted outreach, enrollment efforts, and program-focused evaluation. Those issues are best addressed through the Company's Universal Service Program processes, program evaluations, or other focused policy proceedings where enrollment barriers, customer communications, documentation requirements, and administrative feasibility can be examined directly. They do not change my conclusion that customer-level evidence remains useful and should be weighed within traditional cost-of-service ratemaking principles in this base rate case.

Q. IF CAP PARTICIPATION RATES ARE A CONCERN TO PARTIES IN THIS CASE, DOES THIS MEAN THAT BASE RATES SHOULD BE USED AS THE PRIMARY AFFORDABILITY TOOL?

A. No. If eligible customers are not enrolled in CAP, the appropriate response is to improve program access, outreach, enrollment processes, and evaluation of barriers to participation. Across-the-board reductions in cost recovery provide benefits to all customers regardless of financial need and may not efficiently target relief to the customers experiencing the greatest hardship. Targeted programs remain the more effective and appropriate mechanism for addressing income-based utility affordability while preserving the Company's opportunity to recover prudent costs.

Q. HOW SHOULD THE COMMISSION ADDRESS PROGRAM-SPECIFIC RECOMMENDATIONS RAISED BY OTHER WITNESSES?

A. Program-specific issues, including eligibility, enrollment procedures, outreach, tariff revisions, program funding, and Universal Service Rider cost recovery, should be evaluated based on the testimony of the Company witnesses responsible for those programs and the program-specific record. My testimony addresses the broader regulatory and economic framework. Within that framework, targeted assistance and program improvement remain preferable to using base rates as a generalized tool to address broader macroeconomic affordability pressures. This division is consistent with the CAP Policy Statement, which places many program design and administration questions—such as intake and verification, recertification, account monitoring, outreach, and evaluation—within USECP and program-specific processes, while recognizing that rate cases may address recovery of CAP and other universal service costs. See 52 Pa. Code §§ 69.263, 69.265 and 69.266.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes, it does.

Peoples Natural Gas Company LLC – Docket No. R-2026-3060855

CAUSE-PA RESPONSE TO PEOPLES INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION – SET III

PEOPLES TO CAUSE -PA III-10:

Reference CAUSE-PA Statement No. 1, p. 41 regarding the April 29, 2026 letter from Governor Shapiro to utility CEOs.

a) Please identify and provide all communications regarding the Governor's letter between CAUSE-PA and:

(i) the Governor's Office;

(ii) the Pennsylvania Public Utility Commission; or

(iii) the Special Counsel for Energy Affordability

b) Was Mr. Cicero ever consulted about the letter? If yes, please identify who Mr. Cicero consulted with and describe the content of those consultations.

c) Did Mr. Cicero provide an opinion, feedback, or advice to the Governor's Office or the Special Counsel for Energy Affordability about the letter? If yes, please explain and provide any opinion, feedback, or advice given by Mr. Cicero.

d) Did Mr. Cicero review the letter prior to it being issued to utilities? If yes, please explain.

e) Is Mr. Cicero aware of whether any other representative of CAUSE-PA was consulted about the letter? If yes, please explain

RESPONSE:

a) Please identify and provide all communications regarding the Governor's letter between CAUSE-PA and:

(i) the Governor's Office;

Response: None

(ii) the Pennsylvania Public Utility Commission; or

Response: None

Peoples Natural Gas Company LLC – Docket No. R-2026-3060855

CAUSE-PA RESPONSE TO PEOPLES INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION – SET III

(iii) the Special Counsel for Energy Affordability

Response: None

b) Was Mr. Cicero ever consulted about the letter? If yes, please identify who Mr. Cicero consulted with and describe the content of those consultations.

Response: Yes. Mr. Cicero had several conversations about the Governor's letter before it was issued. Those conversations were with:

- Jacob Finkel, Deputy Secretary of Policy, Office of Governor Josh Shapiro.
- Samuel Robinson, Deputy Chief of Staff, Office of Governor Josh Shapiro.
- Mr. Cicero was consulted by Mr. Finkel and Mr. Robinson about the Governor's letter in mid-to-late April 2026. Generally, the conversations were about the need for ROE reform, including specifics about both the need to adjust an operating utility's capital structure for ratemaking purposes, as well as the need to rein in excessive ROEs. Mr. Cicero was asked for his opinion with respect to calculating the cost of capital, appropriate debt to equity ratio for ratemaking purposes, and methodologies for determining an authorized ROE.
- Mr. Cicero was asked by Mr. Finkel to review a draft of the Governor's letter on or about April 22, 2026, and provided feedback on the above topics. Mr. Cicero does not have a copy of his feedback; it was provided via an online version of the document, and he did not retain a copy. In general, Mr. Cicero supported the contents of the letter and its framing.

c) Did Mr. Cicero provide an opinion, feedback, or advice to the Governor's Office or the Special Counsel for Energy Affordability about the letter? If yes, please explain and provide any opinion, feedback, or advice given by Mr. Cicero.

Response: Yes. See Response to 10(b). All of Mr. Cicero's conversations about the letter with the Governor's Special Counsel for Energy Affordability occurred after the letter was issued.

Peoples Natural Gas Company LLC – Docket No. R-2026-3060855

CAUSE-PA RESPONSE TO PEOPLES INTERROGATORIES, REQUESTS FOR PRODUCTION OF DOCUMENTS AND REQUESTS FOR ADMISSION – SET III

d) Did Mr. Cicero review the letter prior to it being issued to utilities? If yes, please explain.

Response: Yes. See Response to 10(b).

e) Is Mr. Cicero aware of whether any other representative of CAUSE-PA was consulted about the letter? If yes, please explain

Response: The framing of this question implies that Mr. Cicero was consulted about this letter as a representative of CAUSE-PA. He was not. Mr. Cicero was consulted about this letter in his capacity as Of Counsel of the Pennsylvania Utility Law Project (PULP) and because of his former role as Pennsylvania Consumer Advocate. Mr. Cicero is not aware of any individuals that were consulted about the letter in their capacity as a representative of CAUSE-PA. Also see Response to 10(a), above.

Responses to Question 10(a) was prepared by or under the supervision of Elizabeth R. Marx

Responses to Question 10(b)-(e) were prepared by or under the supervision of Patrick M. Cicero.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. PLEASE DESCRIBE YOUR EDUCATION AND PROFESSIONAL BACKGROUND.

A. Appendix A, which is attached to my testimony, describes my educational and professional background.

Q. DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of Peoples Natural Gas Company LLC (Peoples or Company), and make recommended adjustments to Peoples' proposed operating and maintenance (O&M) expenses and cash working capital for the fully projected future test year (FPFTY) ending December 31, 2027.[1]

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 1 contains schedules that support my direct testimony.

Q. WHAT ARE THE TEST YEARS USED BY PEOPLES IN THIS PROCEEDING?

A. The Company uses the fiscal year ended November 30, 2025 as the historic test year (HTY), the fiscal year ending November 30, 2026 as the future test year (FTY), and the year ending December 31, 2027 as the FPFTY in this proceeding.[2]

Q. WHAT IS THE COMPANY'S REQUESTED REVENUE INCREASE?

A. Peoples is requesting a revenue increase of $163,171,938 to its claimed present rate revenues of $1,184,614,065, resulting in a total overall revenue requirement of $1,347,786,003.[3]

1 Peoples Statement No. 2, p. 2.
2 Peoples Statement No. 2, p. 2.
3 Peoples Exhibit No. 2, Schedule 4, p. 2.

I&E OPERATING AND MAINTENANCE EXPENSE ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS.

A. The following table summarizes my recommended adjustments.

	Company Claim	Recommended Allowance	I&E Adjustment
O&M Expenses:			
Labor	$68,149,464	$64,934,501	($3,214,963)
Incentive Compensation	$6,125,473	$5,176,025	($949,448)
Payroll Taxes	$5,951,013	$5,617,354	($333,659)
Pension Expense	$3,164,136	$0	($3,164,136)
Other Employee Benefits	$19,531,394	$18,608,795	($922,599)
Outside Services - Contracted	$22,002,493	$19,947,180	($2,055,313)
Outside Services - IT	$7,623,113	$7,336,408	($286,705)
Outside Services - A&G	$6,333,184	$5,406,725	($926,459)
Building Leases	$4,693,640	$3,908,207	($785,433)
Corporate Insurance	$5,929,933	$6,265,643	$335,710
Travel Expense	$1,139,305	$1,030,648	($108,657)

OVERALL I&E RECOMMENDED REVENUE REQUIREMENT

Q. WHAT IS I&E'S TOTAL RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total recommended revenue requirement is $1,282,151,403. This recommended revenue requirement represents an increase of $97,537,338 to the Company's present rate revenues of $1,184,614,065. This total recommended allowance incorporates my adjustments made in this direct testimony and those recommended adjustments made in the direct testimony of I&E witness D.C. Patel.[4]

[4] I&E Statement No. 2.

LABOR EXPENSE

Q. WHAT IS INCLUDED IN LABOR EXPENSE?

A. The labor expense claim includes amounts for regular wages and overtime wages.[5]

[5] Peoples Exhibit No. 4, Schedule 1, p. 6.

Q. WHAT IS PEOPLES' CLAIM FOR LABOR EXPENSE?

A. The Company is claiming total FPFTY labor expense of $164,275,474, which is projected to be capitalized at a rate of 58.52% resulting in an O&M labor expense claim of $68,149,464 and a rate base claim of $96,126,010.[6]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. Peoples' claim is based on the HTY per book amount with adjustments made for annualization, merit increases, progression and promotions, and to address routine vacancies in the HTY, FTY, and FPFTY.[7]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR LABOR EXPENSE?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR LABOR EXPENSE?

A. I recommend a total FPFTY allowance of $156,525,749 for labor expense, or a reduction of $7,749,725 ($164,275,474 - $156,525,749) to Peoples' claim broken down as follows:

[6] Peoples Exhibit No. 4, Schedule 1, pp. 2-3. Amounts shown are as reported in Peoples' Exhibit No. 4 and likely include rounding errors.

[7] Peoples Statement No. 2, pp. 7-10.

	Company Claim	I&E Recommendation	Recommended Adjustment
Total Labor	$164,275,474	$156,525,749	($7,749,725)
Capitalization Rate	58.52%	58.52%	58.52%
O&M Labor	$68,149,464	$64,934,501	($3,214,963)
Rate Base Labor	$96,126,010	$91,591,248	($4,534,762)

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on two main aspects: (1) applying a vacancy rate based on historic vacancies; and (2) adding the salary for the Low-Income Usage Reduction Program (LIURP) compliance specialist that the Company proposed to include in the Universal Service Program (USP) Rider.[8]

Q. DID PEOPLES TAKE VACANCIES INTO CONSIDERATION WHEN DEVELOPING ITS CLAIM?

A. Yes.

[8] Peoples Statement No. 2, p. 10-11.

Q. EXPLAIN HOW PEOPLES INCORPORATED VACANCIES WHEN CALCULATING ITS CLAIM FOR LABOR EXPENSE.

A. Peoples states that a vacancy reserve of eight positions was included when calculating its FPFTY claim.[9] The Company has assigned a value of $45,273 per vacancy for a total of $362,184 excluded from the claim.[10]

Q. DO YOU AGREE WITH PEOPLES' VACANCY RESERVE OF EIGHT POSITIONS?

A. No. The Company's assumptions around vacancies are speculative and do not consider historic vacancies. Based on my analysis of historic vacancy levels, Peoples did not factor in enough vacancies when developing its claim.

Q. WHAT LEVEL OF VACANCIES DO YOU RECOMMEND?

A. I recommend a vacancy rate of 4.98% based on the Company's average level of vacancies during the three most recent historic fiscal years.[11] The Company's vacancy reserve of eight employees equates to a vacancy rate of only 0.54% even though the past three fiscal years have had consistently higher vacancy rates at 4.05% in the fiscal year ended November 30, 2023, 5.78% in the fiscal year ended November 30, 2024, and 5.12% in the fiscal year ended November 30, 2025. My calculated vacancy rate is an average of these three rates, resulting in a vacancy

[9] Peoples Statement No. 2, p. 10.
[10] I&E Exhibit No. 1, Schedule 1, p. 2.
[11] I&E Exhibit No. 1, Schedule 2.

rate of 4.98% ((4.05% + 5.78% + 5.12%) ÷ 3), and provides a more reasonable and appropriate vacancy rate to be used for ratemaking purposes.

Q. EXPLAIN HOW YOU DETERMINED YOUR TOTAL RECOMMENDATION FOR LABOR.

A. First, I added back the value of the eight positions left vacant by the Company. I did this because my vacancy calculation uses a percentage rather than a specific number of employees, so for clarity it is best to start with a total number that does not include any vacancies. Next, I added the value of the LIURP compliance specialist[12] to the Company's claim, because as I will explain later in my testimony, all labor costs should be claimed in labor expense rather than recovered through the USP Rider and this position was not included in the Company's claim. Next, I determined the average historic vacancy level using data provided by the Company by comparing average budgeted positions to average vacancies over the three most recent fiscal years as explained above. Finally, I applied the vacancy rate to the I&E modified claim as shown below:

[12] I&E Exhibit No. 1, Schedule 3.

1. Peoples' Total FPFTY Labor Claim	$164,275,474
2. Add 8 Vacant Positions	$362,184
3. Add LIURP Compliance Specialist	$91,609
4. I&E Modified Amount (1+2+3)	$164,729,267
5. Apply Vacancy Rate (4 x 4.98%)	$8,203,518
6. I&E Recommended Total Labor Allowance (4-5)	$156,525,749

INCENTIVE COMPENSATION

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR INCENTIVE COMPENSATION?

A. Incentive compensation is a component of total compensation that includes various short-term incentive compensation plans.[13]

Q. WHAT IS THE COMPANY'S CLAIM FOR INCENTIVE COMPENSATION?

A. The Company is claiming total FPFTY incentive compensation expense of $11,170,683 which is projected to be capitalized at a rate of 45.16% resulting in an

[13] I&E Exhibit No. 1, Schedule 4.

incentive compensation expense claim of $6,125,473 and a rate base incentive compensation claim of $5,045,210.[14]

Q. WHAT IS THE BASIS FOR THE COMPANY'S INCENTIVE COMPENSATION CLAIM?

A. The Company's incentive compensation claim is based on the normalized and annualized HTY expense, with adjustments in the FTY and FPFTY for increases in salary levels and employee counts.[15]

Q. DO YOU AGREE WITH THE COMPANY'S INCENTIVE COMPENSATION CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND FOR INCENTIVE COMPENSATION?

A. I recommend an incentive compensation expense allowance of $5,176,025, or a reduction of $949,448 ($6,125,473 - $5,176,025) to the Company's expense claim and capitalized incentive compensation of $4,263,202, or a reduction of $782,008 ($5,045,210 - $4,263,202) to the Company's rate base claim.

[14] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 5. Amounts shown are as reported in Peoples' Exhibit No. 4 and likely include rounding errors.
[15] Peoples Statement No. 2, p. 11.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the portion of the Company's claim related to financial metrics. According to the Company's response to OCA-XII-015,[16] several of the Company's short-term incentive compensation plans include financial goals that are weighted at 50-55% of the total metrics, which also include safety, customer satisfaction, and environmental stewardship goals. Financial metrics do not align employee interests with customer interests, but rather with shareholder interests; therefore, payment of related financial benefits to employees should not be funded by ratepayers.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION FOR PERFORMANCE PAY?

A. In response to I&E-RE-52, the Company provided **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** to find the portion of each claim affected by financial

[16] I&E Exhibit No. 1, Schedule 4, p. 2.
[17] I&E Exhibit No. 1, Schedule 5, p. 2.

metrics. Finally, I approximated that one-half of that portion is based on financial metrics. The recommended allowance is calculated by removing the portion of incentive compensation based on financial metrics from the total claim as shown below:

{BEGIN PROPRIETARY}

{END PROPRIETARY}

Q. HAS THE COMMISSION RECENTLY ADJUSTED A COMPANY'S CLAIM FOR INCENTIVE COMPENSATION BASED ON THE REMOVAL OF INCENTIVE COMPENSATION RELATED TO FINANCIAL GOALS?

A. Yes. In the most recent Columbia Gas of Pennsylvania, Inc. (Columbia Gas) base rate proceeding, the Commission removed 70% of Columbia Gas' total incentive compensation claim, equal to the portion related to financial goals, finding that it was not necessary in providing safe and reliable service to ratepayers. The Commission stated:

> We shall deny Columbia's Exception Nos. 3 and 4. We agree with the ALJs' recommendation to adopt the OCA's proposed downward adjustment of $1,798,165, to the Company's cash-based STI compensation expense claim of $2,568,807. As

noted by the ALJs and the OCA, Columbia did not explain why 70% of the incentive compensation expense is necessary to provide adequate service to ratepayers, given that only 30% of this claimed expense is related to operational safety and customer experience. *See* OCA St. 2 at 18-19. Accordingly, we shall adopt the ALJs' recommendation to apply a downward adjustment of $1,798,165, [$2,568,807 x 70% = $1,798,165], to reflect a total allowance for cash-based STI compensation expense of $770,642. [$2,568,807 – $1,798,165 = $770,642].

We also agree with the ALJs and the OCA that Columbia failed to present credible evidence that the totality of its LTI compensation plan is reasonable, given that only 30% of the plan is related to safety, customer care, customer satisfaction, or other benefits to ratepayers. Accordingly, we shall adopt the ALJs' recommendation that only 30% of the Company's LTI compensation expense claim of $754,446, or $226,334, [$754,446 x 30% = $226,334], be allowed for ratemaking purposes, resulting in a downward adjustment of $528,112. [$754,446 – $528,112 = $226,334].[18]

Q. DO YOU HAVE ANY COMMENTS ON THE COMPANY'S LONG-TERM INCENTIVE COMPENSATION CLAIM?

A. Yes. I am unable to make a specific recommendation at this time regarding the Company's long-term incentive compensation claim because it is unclear exactly what this claim is and where it is located among the Company's O&M expense claims. The Company labeled Peoples Exhibit No. 4, Schedule 1, p. 5 as STI & LTI (short-term incentive and long-term incentive), but that claim does not appear to include the long-term incentive compensation. However, I would like to point out that the Company provided a copy of the long-term incentive plan which is

[18] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Incentive Compensation, p. 123.

70% based on financial metrics.[19] Therefore, I would recommend an allowance of only 30% of that claim. I have submitted an interrogatory[20] to the Company regarding this issue and may update this recommendation in surrebuttal testimony.

PAYROLL TAXES

Q. WHAT ARE PAYROLL TAXES?

A. Payroll taxes represent taxes imposed on employers and employees that are usually calculated as a percentage of the salaries paid to staff. Payroll taxes generally fall into two categories: (1) deductions from an employee's wages; and (2) taxes paid by the employer based on the employee's wages. Peoples has made a claim in this filing for its employer share of those payroll taxes.

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYROLL TAX EXPENSE?

A. Peoples' FPFTY claim for payroll tax expense is $5,951,013 ($5,660,396 + $290,617).[21] Additionally, it is implied that, because labor and incentive compensation are partially capitalized to rate base, a portion of payroll taxes will also be capitalized to rate base. I have calculated that amount to be $8,106,040 by adding capitalized labor and capitalized incentive compensation ($96,126,010 + $5,045,210) and applying the payroll tax experience factor of 8.0122%.

[19] I&E Exhibit No. 1, Schedule 4, p. 11.
[20] I&E Exhibit No. 1, Schedule 5, p. 3-5.
[21] Peoples Exhibit No. 6, Schedule 2, Attachment 1.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. Peoples' claim consists of Social Security and Medicare taxes (together FICA), federal unemployment tax (FUTA), state unemployment tax (SUTA), and the City of Pittsburgh payroll tax, which are calculated by applying the tax rates experienced in the HTY to the FPFTY claim.[22]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYROLL TAXES?

A. I recommend a payroll tax expense allowance of $5,617,354, or a reduction of $333,659 ($5,951,013 - $5,617,354) to the Company's expense claim and capitalized payroll taxes of $7,679,994, or a reduction of $426,046 ($8,106,040 - $7,679,994) to the Company's rate base claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. This recommendation is based on my recommended adjustments to labor expense and incentive compensation.

[22] Peoples Exhibit No. 6, Schedule 2, Attachments 2 and 3.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION?

A. I added the recommended allowances for labor expense and incentive compensation and then applied the appropriate experience factor as provided by the Company. The calculation is shown below:

	O&M Expense	Rate Base
I&E Labor Allowance	$64,934,501	$91,951,248
I&E Incentive Comp. Allowance	$5,176,025	$4,263,202
Total Payroll Costs	$70,110,526	$95,854,450
Experience Factor	8.0122%	8.0122%
I&E Payroll Tax Allowance	$5,617,354	$7,679,994

PENSION EXPENSE

Q. WHAT IS INCLUDED IN PENSION EXPENSE?

A. Peoples' claim for pension expense includes the employees' pension costs determined on a cash contribution basis.[23]

Q. WHAT IS THE COMPANY'S CLAIM FOR PENSION EXPENSE?

A. Peoples' FPFTY pension expense claim is $3,164,136.[24]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on a four-year average of net contributions.[25]

[23] Peoples Statement No. 2, p. 12.
[24] Peoples Volume 1, Exhibit No. 4, Schedule 1, pp. 2 and 8.
[25] Peoples Statement No. 2, p. 12.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PENSION EXPENSE?

A. I recommend disallowance of the entire FPFTY claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** The Company's claim is based on a four-year average of net contributions, but cash contributions have been decreasing dramatically over that time **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** despite that the Company did not make any cash contributions in 2025. It is questionable whether the Company will need to make a cash contribution in 2026 or 2027, therefore, I recommend disallowance of the entire amount.

[26] I&E Exhibit No. 1, Schedule 6.

OTHER EMPLOYEE BENEFITS

Q. WHAT IS OTHER EMPLOYEE BENEFITS EXPENSE?

A. Other employee benefits expense represents medical, dental, vision, life insurance, long-term disability insurance, 401(k) plans, and other programs.[27]

Q. WHAT IS THE COMPANY'S CLAIM FOR OTHER EMPLOYEE BENEFITS EXPENSE?

A. The Company is claiming total FPFTY other employee benefits expense of $44,245,324, which is projected to be capitalized at a rate of 55.86% resulting in an other employee benefits expense claim of $19,531,394 and a rate base claim for other employee benefits of $24,713,929.[28]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY amount for other employee benefits expense with adjustments for the cost of benefits from filling vacant positions, annualized changes in costs, increases in medical and other benefits based on information provided by third-party benefit consultants, and an increase in 401(k) benefits due to merit increases.[29]

[27] Peoples Statement No. 2, p. 13.
[28] Peoples Exhibit No. 4, Schedule 1, p. 10.
[29] Peoples Statement No. 2, p. 13.

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR OTHER EMPLOYEE BENEFITS EXPENSE?

A. I recommend a total FPFTY allowance of $42,155,320 for other employee benefits expense, or a reduction of $2,090,004 ($44,245,324 - $42,155,320) to Peoples' claim broken down as follows:

	Company Claim	I&E Recommendation	Recommended Adjustment
Total Other Employee Benefits	$44,245,324	$42,155,320	$2,090,004
Capitalization Rate		55.86%	
O&M Expense Portion	$19,531,394	$18,608,795	$922,599
Rate Base Portion	$24,713,929	$23,546,525	$1,167,404

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on two main aspects: (1) applying a vacancy rate consistent with the labor expense adjustment; and (2) adding the employee benefits for the LIURP compliance specialist that the Company proposed to include in the USP Rider.[30]

[30] Peoples Statement No. 2, pp. 10-11.

Q. DID PEOPLES TAKE VACANCIES INTO CONSIDERATION WHEN DEVELOPING ITS CLAIM?

A. Yes.

Q. EXPLAIN HOW PEOPLES INCORPORATED VACANCIES WHEN CALCULATING ITS CLAIM FOR OTHER EMPLOYEE BENEFITS EXPENSE.

A. As explained in the Labor Expense section above, Peoples states that a vacancy reserve of eight positions was included when calculating its FPFTY claim. The Company has assigned a value of $12,482 per vacancy for a total of $99,854 excluded from the claim.[31]

Q. DO YOU AGREE WITH PEOPLES' VACANCY RESERVE OF EIGHT POSITIONS?

A. No. The Company's assumptions around vacancies are speculative and do not consider historic vacancies. Based on my analysis of historic vacancy levels, the Company does not include an adjustment for enough vacancies in its claim.

[31] I&E Exhibit No. 1, Schedule 1.

Q. WHAT LEVEL OF VACANCIES DO YOU RECOMMEND?

A. Consistent with my labor expense recommendation, I applied a vacancy rate of 4.98% based on the Company's average level of vacancies during the three most recent historic years.[32]

Q. EXPLAIN HOW YOU DETERMINED YOUR ADJUSTMENT.

A. First, I added back the value of the eight positions left vacant by the Company. I did this because my vacancy calculation uses a percentage rather than a specific number of employees, so for clarity it is best to start with a number that does not include any vacancies. Next, I added the benefits for the LIURP compliance specialist to the Company's claim because, as I will explain later in my testimony, all benefit costs should be claimed in benefits expense rather than recovered through the USP Rider, and this position was not included in the Company's claim. Next, I applied the vacancy rate to the I&E modified claim as shown below:

1. Peoples' Total FPFTY Benefits Claim	$44,245,324
2. Add 8 Vacant Positions	$99,854
3. Add LIURP Compliance Specialist	$19,503
4. I&E Modified Amount (1+2+3)	$44,364,681
5. Apply Vacancy Rate (4 x 4.98%)	$2,209,361

[32] I&E Exhibit No. 1, Schedule 2.

I&E Recommended Other Employee Benefits Allowance (4-5)	$42,155,320

OUTSIDE SERVICES – CONTRACTED

Q. WHAT IS INCLUDED IN OUTSIDE SERVICES – CONTRACTED?

A. Outside services – contracted includes claims for items such as integrity testing, bridge work, a smart pig run, CIS, and other outside labor.[33]

Q. WHAT IS THE COMPANY'S CLAIM FOR OUTSIDE SERVICES – CONTRACTED?

A. The Company's FPFTY claim for outside services – contracted is $22,002,493.[34]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes anticipated changes in spending levels for various projects,[35] as well as a 4.94% increase year-over-year for the FTY and FPFTY.[36]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[33] I&E Exhibit No. 1, Schedule 7, p. 2.
[34] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 11.
[35] I&E Exhibit No. 1, Schedule 7, p. 2.
[36] Peoples Statement No. 2, p. 14.

Q. WHAT IS YOUR RECOMMENDATION FOR OUTSIDE SERVICES – CONTRACTED?

A. I recommend an FPFTY allowance of $19,947,180 for outside services – contracted or a reduction of $2,055,313 ($22,002,493 - $19,947,180) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 4.94% annual increase from the FTY and FPFTY claims. Increases in expenses should be based on known and measurable changes and not based on speculative percentage increases.

This proposed increase is inappropriate for several reasons. First, the Company looks at five years of data (2020 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[37] Second, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[38] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given

[37] I&E Exhibit No. 1, Schedule 7, p. 2.
[38] I&E Exhibit No. 1, Schedule 8.

other than the Company has determined that the proposed percentage was the best indicator of future amounts.[39]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I calculated my recommendation by starting with HTY outside services – contracted expense and adding the Company's project-specific adjustments to FTY and FPFTY which are itemized in parts B and C of its response to I&E-RE-17[40] as shown below:

HTY Actual Expense	$19,781,638
FTY Adjustment	$1,090,063
FPFTY Adjustment	($924,520)
FPFTY Total Claim	$19,947,180

OUTSIDE SERVICES – IT

Q. WHAT IS THE COMPANY'S CLAIM FOR OUTSIDE SERVICES – IT?

A. The Company's FPFTY claim for outside services – IT is $7,623,113.[41]

[39] I&E Exhibit No. 1, Schedule 7, p. 2.
[40] I&E Exhibit No. 1, Schedule 7, p. 2.
[41] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 12.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes anticipated changes in spending levels for various projects,[42] as well as a 2.06% increase year-over-year for the FTY and FPFTY.[43]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR OUTSIDE SERVICES – IT?

A. I recommend an FPFTY allowance of $7,336,408 for outside services – IT or a reduction of $286,705 ($7,623,113 - $7,336,408) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 2.06% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at four years of data (2021 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[44] Second, the data used to calculate the increase does not match the

[42] I&E Exhibit No. 1, Schedule 9, p. 2.
[43] Peoples Statement No. 2, p. 14.
[44] I&E Exhibit No. 1, Schedule 9, p. 2.

historical data provided in response to I&E-RE-1,[45] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the Company has determined that the proposed percentage was the best indicator of future amounts.[46]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I calculated my recommendation by starting with HTY outside services – IT expense and adding the Company's project-specific adjustments to FTY and FPFTY which are itemized in parts A and B of its response to I&E-RE-18[47] as shown below:

HTY Actual Expense	$6,651,408
FTY Adjustment	$465,000
FPFTY Adjustment	$220,000
FPFTY Total Claim	$7,336,408

[45] I&E Exhibit No. 1, Schedule 8.
[46] I&E Exhibit No. 1, Schedule 9, p. 2.
[47] I&E Exhibit No. 1, Schedule 9, p. 2.

OUTSIDE SERVICES – A&G

Q. WHAT IS THE COMPANY'S CLAIM FOR OUTSIDE SERVICES – A&G?

A. The Company's FPFTY claim for outside services – A&G is $6,333,184.[48]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on HTY expense and includes removing a one-time reimbursement that occurred during the HTY[49] as well as adding an 8.23% increase year-over-year for the FTY and FPFTY.[50]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR OUTSIDE SERVICES – A&G?

A. I recommend an FPFTY allowance of $5,406,725 for outside services – A&G or a reduction of $926,459 ($6,333,184 - $5,406,725) to the Company's claim.

[48] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 13.
[49] I&E Exhibit No. 1, Schedule 10, p. 2.
[50] Peoples Statement No. 2, p. 14.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 8.23% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at historic data to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[51] Second, I was not able to reproduce the result of 8.23% from the data provided which did not show the specific calculation used to achieve this result. The Company provided six years of data but stated in response to I&E-RE-19 that four years of data were used.[52] Contrarily, Peoples witness Andrew Wachter states that five years of data were used.[53] Third, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[54] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Fourth, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the

[51] I&E Exhibit No. 1, Schedule 10, p. 2.
[52] I&E Exhibit No. 1, Schedule 10, p. 2.
[53] Peoples Statement No. 2, p. 14.
[54] I&E Exhibit No. 1, Schedule 8.

Company has determined that the proposed percentage was the best indicator of future amounts.[55]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I calculated my recommendation by starting with HTY outside services – A&G expense and adding the Company's one-time adjustment to HTY as shown below:

HTY Actual Expense	$4,335,821
HTY Adjustment	$1,070,904
FPFTY Total Claim	$5,406,725

BUILDING LEASES

Q. WHAT IS THE COMPANY'S CLAIM FOR BUILDING LEASES?

A. The Company's FPFTY claim for building leases is $4,693,640.[56]

Q. DID THE COMPANY PROVIDE ANY UPDATES TO THIS CLAIM?

A. Yes. In response to I&E-RE-20, **{BEGIN PROPRIETARY}** [redacted]

[redacted]

[55] I&E Exhibit No. 1, Schedule 10, p. 2.
[56] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 14.

[redacted] {END PROPRIETARY}

Q. DO YOU ACCEPT THE COMPANY'S CHANGE TO BUILDING LEASES EXPENSE?

A. Yes. I accept the change and will verify that this is updated in Peoples' rebuttal testimony.

CORPORATE INSURANCE

Q. WHAT IS INCLUDED IN THE COMPANY'S CORPORATE INSURANCE EXPENSE CLAIM?

A. The Company's claim for corporate insurance expense includes liability insurance for directors and officers, excess liability, general property, and workers' compensation.[58]

Q. WHAT IS PEOPLES' CLAIM FOR CORPORATE INSURANCE EXPENSE?

A. The Company's FPFTY claim for corporate insurance is $5,929,933.[59]

[57] I&E Exhibit No. 1, Schedule 11.
[58] I&E Exhibit No. 1, Schedule 12, p. 2.
[59] Peoples Exhibit No. 4, Schedule 1, p. 2.

Q. DID THE COMPANY PROVIDE ANY FURTHER INFORMATION RELATED TO THIS CLAIM?

A. Yes. In response to I&E-RE-21, **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** but the Company's original claim on Peoples Exhibit No. 4, Schedule 1, p. 2 ($5,929,933) does not match the supporting calculations shown on Peoples Exhibit No. 4, Schedule 1, p. 15 ($7,819,341). However, the lower amount on Exhibit No. 4, Schedule 1, p. 2 is the amount that ties to the Company's overall requested revenue increase.

Q. WHAT IS THE BASIS FOR THE COMPANY'S UPDATED CLAIM?

A. The Company's updated claim for corporate insurance is based on annualizing the most recent premium invoices and adding an increase in premiums of 10.6% for the FTY and FPFTY.[61]

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM FOR CORPORATE INSURANCE?

A. No.

[60] I&E Exhibit No. 1, Schedule 12, p. 2.
[61] Peoples Statement No. 2, p. 15.

Q. WHAT IS YOUR RECOMMENDATION?

A. I recommend an FPFTY allowance of $6,265,643 for corporate insurance. This represents an increase of $335,710 ($6,265,643 - $5,929,933) to the Company's original claim, but **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}**

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. I recommend an allowance equal to **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}** My recommendation is based on disallowance of the 10.6% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This 10.6% annual increase is inappropriate for several reasons. First, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[63] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Additionally, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given.[64]

[62] I&E Exhibit No. 1, Schedule 12, p. 2.
[63] I&E Exhibit No. 1, Schedule 8.
[64] I&E Exhibit No. 1, Schedule 12, p. 2.

Finally, and most importantly, the 10.6% increase is speculative because it is not based on contractual terms or any other known variable.

TRAVEL EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR TRAVEL EXPENSE?

A. The Company's FPFTY claim for travel expense is $1,139,305.[65]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on HTY expense and includes a 5.14% increase year-over-year for the FTY and FPFTY.[66]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR TRAVEL EXPENSE?

A. I recommend an FPFTY allowance of $1,030,648 or a reduction of $108,657 ($1,139,305 - $1,030,648) to the Company's claim.

[65] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 17.
[66] Peoples Statement No. 2, p. 15.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 5.14% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at six years of data (2019 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[67] Second, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[68] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the Company has determined that the proposed percentage was the best indicator of future amounts.[69]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

[67] I&E Exhibit No. 1, Schedule 13, p. 2.
[68] I&E Exhibit No. 1, Schedule 8.
[69] I&E Exhibit No. 1, Schedule 13, p. 2.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

MEMBERSHIPS

Q. WHAT IS THE COMPANY'S CLAIM FOR MEMBERSHIPS?

A. The Company's FPFTY claim for memberships expense is $1,220,436.[70]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on HTY expense and includes a 7.17% increase year-over-year for the FTY and FPFTY.[71]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR MEMBERSHIPS EXPENSE?

A. I recommend an FPFTY allowance of $1,062,518 or a reduction of $157,918 ($1,220,436 - $1,062,518) to the Company's claim.

[70] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 18.
[71] Peoples Statement No. 2, pp. 15-16 and I&E Schedule 13, p. 2.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 7.17% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at a three-year period of its two largest membership invoices to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY, as well as all other memberships. Second, the data used to calculate the increase does not match the historical membership data provided. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the Company has determined that the proposed percentage was the best indicator of future amounts.[72]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

[72] I&E Exhibit No. 1, Schedule 14, p. 2.

LICENSES AND PERMITS

Q. WHAT IS THE COMPANY'S CLAIM FOR LICENSES AND PERMITS?

A. The Company's FPFTY claim for licenses and permits is $738,885.[73]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes a 2.44% increase year-over-year for the FTY and FPFTY.[74]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR LICENSES AND PERMITS?

A. I recommend an FPFTY allowance of $704,167 or a reduction of $34,718 ($738,885 - $704,167) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 2.44% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

[73] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 19.
[74] Peoples Statement No. 2, p. 16.

This increase is inappropriate for several reasons. First, the Company looks at four years of data (2021 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[75] Second, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[76] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the Company has determined that the proposed percentage was the best indicator of future amounts.[77]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

[75] I&E Exhibit No. 1, Schedule 15, p. 2.
[76] I&E Exhibit No. 1, Schedule 8.
[77] I&E Exhibit No. 1, Schedule 15, p. 2.

UTILITIES AND FUEL

Q. WHAT IS THE COMPANY'S CLAIM FOR UTILITIES AND FUEL?

A. The Company's FPFTY claim for utilities and fuel is $3,084,199.[78]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense, is adjusted for gas costs recoverable through 1307(f) proceedings, and includes a 4.03% increase year-over-year for the FTY and FPFTY.[79]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR UTILITIES AND FUEL?

A. I recommend an FPFTY allowance of $2,849,895 or a reduction of $234,304 ($3,084,199 - $2,849,895) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 4.03% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative or percentage increases.

[78] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 20.
[79] Peoples Statement No. 2, p. 16 and I&E Schedule 15, p. 2.

This increase is inappropriate for several reasons. First, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[80] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Additionally, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given.[81]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I calculated my recommendation by starting with HTY utilities and fuel expense and removing the recoverable gas costs as shown below:

HTY Actual Expense	$2,908,985
HTY Adjustment	($59,090)
FPFTY Total Claim	$2,849,895

[80] I&E Exhibit No. 1, Schedule 8.
[81] I&E Exhibit No. 1, Schedule 16, p. 2.

ADVERTISING EXPENSE

Q. WHAT IS INCLUDED IN ADVERTISING EXPENSE?

A. Advertising expense includes claims for the communication of information such as public health and safety, explanation of billing practices, rates, etc., and other advertising programs via broadcast, digital, print, and other methods.[82]

Q. WHAT IS THE COMPANY'S CLAIM FOR ADVERTISING EXPENSE?

A. Peoples' FPFTY claim for advertising expense is $1,458,032.[83]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on expenses that it asserts meet at least one of the criteria in Section 1316(a) of the Public Utility Code during the HTY[84] and includes an inflation adjustment.[85]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[82] Peoples Exhibit No. 4, Schedule 4, p. 2.
[83] Peoples Exhibit No. 4, Schedule 1, p. 2 and 21.
[84] Peoples Statement No. 2, p. 16.
[85] I&E Exhibit No. 1, Schedule 17, p. 2.

Q. WHAT IS YOUR RECOMMENDATION FOR ADVERTISING EXPENSE?

A. I recommend an allowance of $259,746 for advertising expense, or a reduction of $1,198,286 ($1,458,032- $259,746) to Peoples' claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on the removal of advertising related to sponsorships and sports partnerships, as well as the removal of the inflation adjustment included in the Company's claim. In response to I&E-RE-51,[86] the Company provided a breakdown and descriptions of each of its advertising programs. The majority of Peoples' claim relates to sponsorships of professional sports teams including Pittsburgh Steelers LLC of $918,791, Pittsburgh Penguins LP of $262,182, and Lozinak Professional Baseball LLC of $203,462. Additionally, the Company has included sponsorship of a holiday market of $125,000.[87]

This type of advertising in sports venues and other events is more representative of promotional advertising that provides little (if any) benefit to ratepayers. Ratepayers should not be required to finance Peoples' decision to pay for such promotional advertising. Additionally, not all customers who attend sporting events at these venues are Peoples ratepayers, and many Peoples ratepayers may never attend sporting events. So, even if the Company is framing

[86] I&E Exhibit No. 1, Schedule 18, p. 2.
[87] I&E Exhibit No. 1, Schedule 19, p. 2.

these payments as safety promotions, there would be more effective and less costly ways to reach its ratepayers with these messages.

Q. WHAT IS THE BASIS FOR REMOVING THE COMPANY'S INFLATION ADJUSTMENT?

A. It is inappropriate to increase expenses using a general inflation percentage. An inflation factor is speculative and does not meet the standard of known and measurable and should therefore be rejected.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION?

A. I calculated my recommendation by beginning with the Company's per book expenditures in the HTY[88] and removed the items identified by the Company as inappropriate[89] as well as the items I identified as inappropriate.[90] I then removed 31.58% of the remaining amount for capitalization, which is consistent with the percentage of the Company's HTY expenditures which were capitalized ($631,694 / $1,999,984). My calculation is detailed below.

Company HTY Expenditures	$1,999,984
Less Other Advertising Programs	$47,309
Less Other	$63,605
Less Holiday Market	$125,000
Less Lozinak Professional Baseball LLC	$203,462
Less Pittsburgh Penguins LP	$262,182

[88] Peoples Exhibit No. 4, Schedule 4, p. 2.
[89] I&E Exhibit No. 1, Schedule 19, p. 2.
[90] I&E Exhibit No. 1, Schedule 18, p. 2.

Less Pittsburgh Steelers LLC	$918,791
Total Before Capitalization	$379,365
Less Capitalization of 31.58%	$119,889
Total I&E Allowance	$259,746

FLEET MAINTENANCE

Q. WHAT IS THE COMPANY'S CLAIM FOR FLEET MAINTENANCE?

A. The Company's FPFTY claim for fleet maintenance is $836,976.[91]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes a 5.89% increase year-over-year for the FTY and FPFTY.[92]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR FLEET MAINTENANCE?

A. I recommend an FPFTY allowance of $746,507 or a reduction of $90,469 ($836,976 - $746,507) to the Company's claim.

[91] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 22.
[92] Peoples Exhibit No. 4, Schedule 1, p. 22.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 5.89% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative or percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at five years of data (2020 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[93] Second, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[94] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given.[95]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

[93] I&E Exhibit No. 1, Schedule 20, p. 2.
[94] I&E Exhibit No. 1, Schedule 8.
[95] I&E Exhibit No. 1, Schedule 20, p. 2.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

MATERIALS AND SUPPLIES EXPENSE

Q. WHAT IS THE COMPANY'S CLAIM FOR MATERIALS AND SUPPLIES EXPENSE?

A. The Company's FPFTY claim for materials and supplies expense is $11,324,992.[96]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes a 5.45% increase year-over-year for the FTY and FPFTY.[97]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

[96] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 23.
[97] Peoples Exhibit No. 4, Schedule 1, p. 17.

Q. WHAT IS YOUR RECOMMENDATION FOR MATERIALS AND SUPPLIES EXPENSE?

A. I recommend an FPFTY allowance of $10,183,664 or a reduction of $1,141,328 ($11,324,992 - $10,183,664) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing the 5.45% annual increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

This increase is inappropriate for several reasons. First, the Company looks at five years of data (2020 through 2024) to calculate the average percentage increase year-over-year during that period but ignores the most recent actual data, the HTY.[98] Second, the data used to calculate the increase does not match the historical data provided in response to I&E-RE-1,[99] which I assume is because the data includes the capitalized portion of the expense. It would be more accurate to base any such calculation on the expensed portion only because that is the portion actually incurred in this expense category and would account for any changes in the capitalization rate. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the

[98] I&E Exhibit No. 1, Schedule 21, p. 2.
[99] I&E Exhibit No. 1, Schedule 8.

Company has determined that the proposed percentage was the best indicator of future amounts.[100]

Finally, and most importantly, the increase is speculative because it is not based on contractual terms or any other known variable.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

PAYMENT PROCESSING

Q. WHAT IS INCLUDED IN THE COMPANY'S CLAIM FOR PAYMENT PROCESSING?

A. The Company's claim includes costs associated with various payment methods such as web, telephone, and walk-in payments.[101]

Q. WHAT IS THE COMPANY'S CLAIM FOR PAYMENT PROCESSING?

A. The Company's FPFTY claim for payment processing is $2,939,659.[102]

[100] I&E Exhibit No. 1, Schedule 21, p. 2.
[101] Peoples Statement No. 2, p. 18.
[102] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 26.

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. The Company's claim is based on the HTY expense and includes a 22.00% increase year-over-year for the FTY and FPFTY[103] as well as an inflation adjustment in the FPFTY.[104]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT IS YOUR RECOMMENDATION FOR PAYMENT PROCESSING?

A. I recommend an FPFTY allowance of $1,923,122 or a reduction of $1,016,537 ($2,939,659 - $1,923,122) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on removing both the 22.00% annual increase and the 2.70% inflation increase from the FTY and FPFTY claims. Increases to expenses should be based on known and measurable changes and not based on speculative percentage increases.

The calculated annual increase is inappropriate for several reasons. First, the Company looks at three years of data (2023 through 2025) but did not provide enough data to support the calculation, as only two years of data were provided.[105]

[103] Peoples Statement No. 2, p. 18.
[104] I&E Exhibit No. 1, Schedule 17, p. 2.
[105] I&E Exhibit No. 1, Schedule 22, p. 2.

Second, the data used to calculate the increase represents credit card payment fees only, even though they are only a portion of the expenses in this category. Third, the Company's chosen time period is inconsistent across the adjusted expense categories, with no explanation given other than the Company has determined that the proposed percentage was the best indicator of future amounts.[106]

Finally, and most importantly, the calculated annual increase is speculative because it is not based on contractual terms or any other known variable.

Additionally, it is also inappropriate to increase expenses using a general inflation percentage. Similar to a calculated increase based on Company data, an inflation adjustment is speculative and does not meet the standard of known and measurable and should therefore be rejected.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR RECOMMENDATION.

A. I used HTY data for my recommendation because the Company did not have any known and measurable changes.

[106] I&E Exhibit No. 1, Schedule 22, p. 2.

RATE CASE EXPENSE

Q. BRIEFLY DESCRIBE THE NATURE AND TYPES OF EXPENDITURES TYPICALLY ALLOWED AS A PART OF A REGULATED UTILITY'S OVERALL RATE CASE EXPENSE.

A. The nature and types of expenditures that comprise a utility's allowable claim for rate case expense are those directly incurred to compile, present, and defend a utility's request for a base rate increase before the Commission. The actual expenditures and estimated costs typically found in an allowable rate case expense claim include legal fees for outside counsel, fees to outside consultants, and the cost of printing, document assembly, and postage.

Q. HOW HAS THE COMMISSION TRADITIONALLY TREATED RATE CASE EXPENSE FOR RATEMAKING PURPOSES?

A. The Commission has historically stated that it considers prudently incurred rate case expense as an ongoing expense, occurring at irregular intervals, related to the rendering of utility service. The Commission has also cited the importance of considering the involved utility's history regarding the frequency of rate case filings as an essential element to determine the normalized level of rate case expense for ratemaking purposes.[107]

[107] "A Guide to Utility Ratemaking," by James H. Cawley and Norman J. Kennard (2018 Edition), p. 112, https://www.puc.pa.gov/General/publications_reports/pdf/Ratemaking_Guide2018.pdf, accessed May 21, 2026.

Q. HOW IS THE FREQUENCY OF RATE CASE FILINGS DETERMINED?

A. The frequency is determined by calculating the average number of months between the utility's most recent previous rate case filings.

Q. WHAT IS THE COMPANY'S CLAIM FOR RATE CASE EXPENSE?

A. Peoples' FPFTY claim for rate case expense is $960,000.[108]

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIM?

A. Peoples has estimated its total rate case expense amount to be $1,920,000 and is requesting a normalization period of two years (24 months).[109] This produces a normalized claim of $960,000 ($1,920,000 ÷ 2).

Additionally, the Company claims that unique circumstances caused longer-than-usual intervals in two of its three most recent base rate cases filed; therefore, the most recent interval between the current rate case and its 2023 case is the most appropriate period and a two-year period should be used.[110]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No. I disagree with the Company's claimed two-year normalization period.

[108] Peoples Exhibit No. 4, Schedule 1, pp. 2 and 27.
[109] Peoples Exhibit No. 4, Schedule 1, p. 27.
[110] Peoples Statement No. 2, pp. 19-20.

Q. WHAT IS YOUR RECOMMENDATION FOR RATE CASE EXPENSE?

A. I recommend that Peoples' rate case expense be normalized over a period of 56 months resulting in an annual expense of $411,429 [($1,920,000 ÷ 56 months) x 12 months], or a reduction of $548,571 ($960,000 - $411,429) to the Company's claim.

Q. WHY DO YOU DISAGREE WITH THE PROPOSED TWO-YEAR NORMALIZATION PERIOD?

A. I disagree with the claimed two-year normalization period because it is not supported by the Company's historic filing frequency. The proposed recovery period fails to properly rely upon Peoples' historic filing frequency and is speculative in nature. As such, it should not be used to determine the appropriate normalized claim.

Q. HOW DID YOU CALCULATE YOUR RECOMMENDED 56-MONTH NORMALIZATION PERIOD?

A. The Company's three most recent base rate case filing dates are as follows:[111]

Docket No.	Date Filed	Interval
R-2026-3060855	March 26, 2026	27 months
R-2023-3044549	December 29, 2023	59 months
R-2018-3006818	January 29, 2019	83 months
R-2012-2285985	February 28, 2012	

[111] I&E Exhibit No. 1, Schedule 23, p. 2.

Using the Company's last three base rate case filing dates and the date of the current filing, an average interval is computed to be 56 months [(27 mo. + 59 mo. + 83 mo.) ÷ 3 intervals]. Peoples' requested 24-month recovery period is unsupported by the Company's historic filing record. Thus, its proposed two-year normalization period should be rejected as it would result in an unreasonable and unsupported increase in rates. If Peoples continues to file base rate cases with greater frequency, its normalization period will be shortened in future rate proceedings. However, the Company should not be granted a 24-month period in this proceeding because it is not supported by the Company's filing history.

Q. HAVE OTHER UTILITIES BEEN GRANTED A NORMALIZATION PERIOD BASED ON SPECULATION OF FUTURE FILINGS, AND IF SO, WHAT WAS THE RESULT?

A. Yes. In 2012, the Commission granted PPL Electric Utilities Corporation (PPL) permission to normalize its rate case expense over a 24-month period based on PPL's representations regarding its expected timing of future base rate case filings.[112] That base rate case was filed on March 30, 2012; however, despite PPL's representations, PPL did not file its next rate case until March 31, 2015, which was 36 months after the 2012 rate case filing. It should be noted that I&E's recommended normalization period in the 2012 PPL proceeding was a 32-month

[112] *Pa. PUC v. PPL Electric Utilities Corporation*, Docket No. R-2012-2290597, pp. 47-48 (Order Entered December 28, 2012).

interval based on PPL's historic filing frequency.[113] The I&E recommendation in that instance produced a much more accurate result than relying on PPL's stated future intention to file a rate case.

Q. ARE THERE ANY COMMISSION DECISIONS THAT SUPPORT YOUR RECOMMENDATION FOR A RATE CASE FILING INTERVAL BASED ON HISTORIC FILING FREQUENCY?

A. Yes. The following seven cases resulted in the Commission using the utility's historic average filing frequency rather than the utility's requested period.

First, in a base rate case filed by Emporium Water Company, the Commission adopted the I&E recommended historic filing frequency finding in favor of I&E's recommended five-year normalization period based on a historic average filing frequency that was rounded down from 64 months.[114]

Second, in a base rate case filed by the City of DuBois, the Commission agreed with I&E's recommendation to use a historic filing frequency finding in favor of I&E's recommended 64-month normalization period, which matched the actual historic filing frequency.[115]

---

[113] I&E Statement No. 2, pp. 13-14 at Docket No. R-2012-2290597.

[114] *Pa. PUC v. Emporium Water Company*, Docket No. R-2014-2402324, p. 50 (Order Entered January 28, 2015).

[115] *Pa. PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, pp. 65-66 (Order Entered March 28, 2017); *Pa. PUC v. City of DuBois - Bureau of Water*, Docket No. R-2016-2554150, p. 13 (Order Entered May 18, 2017).

Third, in a base rate case filed by Columbia Gas, the Commission held that the normalization period should align with the historic data rather than the Company's intent to file its next rate case.[116]

Fourth, in a base rate case filed by PECO Energy Company – Gas Division (PECO), the Commission granted I&E's recommended five-year normalization period rather than PECO's claim based on a three-year period because the Commission determined a normalization period based on actual historic filing frequency is more reliable than future speculation.[117]

Fifth, in a base rate case filed by Philadelphia Gas Works (PGW), the Commission agreed with I&E's recommended 53-month normalization period rather than PGW's claim based on a three-year period because the Commission determined a normalization period based on actual historic filing frequency and not based on PGW's future intention to file a rate case.[118]

Sixth, in the 2023 base rate case filed by Columbia Water Company, the Commission held that the normalization period should align with the historic filing frequency rather than that company's intent to file its next rate case and the intent to file a base rate case does not justify deviating from the Commission's practice of relying on historical filing frequency.[119]

---

[116] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2020-3018835, Opinion and Order, pp. 78-79 (Order Entered February 19, 2021).

[117] *Pa. PUC v. PECO Energy Company - Gas Division*, Docket No. R-2020-3018929, Opinion and Order, pp. 117-19 (Order Entered June 22, 2021).

[118] *Pa. PUC v. Philadelphia Gas Works*, Docket No. R-2023-3037933, Opinion and Order, pp. 65-66 (Order Entered November 9, 2023).

[119] *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, Opinion and Order, p. 34 (Order Entered January 18, 2024).

Finally, in the recent 2025 Columbia Gas base rate proceeding, the Commission agreed with the Administrative Law Judge (ALJ) and the Office of Consumer Advocate (OCA) that "fourteen months is a more appropriate and reasonable length of time for normalization, as it more closely aligns with Columbia's actual history and frequency of rate case filings."[120]

UNIVERSAL SERVICE PROGRAM (USP) RIDER

Q. IS THE COMPANY PROPOSING ANY CHANGES TO THE USP RIDER?

A. Yes. The Company is proposing to recover three incremental costs through the USP Rider: (1) costs associated with a new Low Income Usage Reduction Program (LIURP) Compliance Specialist; (2) costs associated with the recurring Independent Program Evaluation; and (3) costs associated with the Company's Cares program.

Q. DO YOU AGREE WITH THE PROPOSED CHANGES?

A. No. I do not agree that the costs associated with the LIURP Compliance Specialist should be recovered through the USP Rider. All labor costs should continue to be included in base rates as the Company has done in the past.[121]

[120] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499, Opinion and Order, p. 138 (Order Entered December 9, 2025).
[121] I&E Exhibit No. 1, Schedule 3.

Q. HAVE YOU ADDRESSED THIS ISSUE ANYWHERE ELSE IN YOUR TESTIMONY?

A. Yes. I added the cost of labor and employee benefits for this employee to the respective sections of my direct testimony.

Q. DID THE COMPANY DISCUSS ANY OTHER CHANGES TO THE USP RIDER?

A. Yes. Peoples witness Carol Scanlon proposes a defined credit that would partially offset universal service charges from January 1, 2027 through March 31, 2027.[122] The credit totals $5,168,768 and includes amounts from an excess book contingency reserve[123] as well as proposed changes to the tax repairs deduction collar.[124]

Q. DO YOU AGREE WITH MS. SCANLON'S PROPOSAL TO CREDIT CUSTOMERS BY PARTIALLY OFFSETTING UNIVERSAL SERVICE COSTS?

A. No. The USP Rider is included only on residential invoices of customers who are not participants in any of the Company's universal service programs. This means that only specific residential customers would benefit from the credit, whereas all customers are affected by the expenses that generated this credit.

[122] Peoples Statement No. 3, pp. 5-9.
[123] Peoples Statement No. 2, pp. 21-22.
[124] Peoples Statement No. 2, pp. 22-26.

Q. WHAT DO YOU RECOMMEND REGARDING THE APPROXIMATELY $5 MILLION CREDIT DUE TO CUSTOMERS?

A. I recommend that the credit be treated as a regulatory liability and credited back to all customers accordingly, not simply the Company's proposal of reducing the burden on residential customers. Particularly when the original tax-related expense was funded also by all customer classes.

CASH WORKING CAPITAL

Q. WHAT IS A CASH WORKING CAPITAL (CWC) ALLOWANCE FOR RATEMAKING PURPOSES?

A. CWC includes the amount of funds necessary to operate a utility during the interim period between the rendition of service, including the payment of related expenses, and the receipt of revenue in payment for services rendered by the utility.

Q. HOW DOES THE COMPANY CALCULATE ITS CWC CLAIM?

A. The Company calculates its CWC claim by using a lead/lag study. Briefly, the CWC requirement is calculated by multiplying the net leg days (revenue lag days less expense lag days) by the average operating expense per day (total operating expenses ÷ 365 days). A lead/lag study measures the differences in time between: (1) the time services are rendered until payment of those services is received; and (2) the time between the point when a utility has incurred an expense and the

actual payment of the expense. Stating this in a different way, the lead/lag study measures how many days exist on average between the midpoint of the service period and the date the payment is made.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF A LEAD/LAG METHOD?

A. Yes. I agree with the Company's use of this method.

Q. WHAT IS THE COMPANY'S CWC CLAIM?

A. The Company's claim for CWC is $47,681,867.[125]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM?

A. No.

Q. WHAT DO YOU RECOMMEND?

A. I recommend a total allowance of $45,745,893 or a decrease of $1,935,974 ($47,681,867 - $45,745,893) to the Company's claim.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. All O&M expense adjustments that are cash-based expense claims are included

[125] Peoples Exhibit AR-1, p. 1.

when determining each operating unit's overall CWC requirement. My CWC recommendation is based on my recommended adjustments to O&M expenses as discussed in this direct testimony. Additionally, the Company has included uncollectible expense in its CWC calculation. Uncollectible expense is a non-cash expense and should not be included in the CWC calculation.

I subtracted all my recommended O&M expense adjustments from the tables above in the I&E Operating and Maintenance Expense Adjustments section that correspond to the Company's CWC calculation. I also subtracted the entire uncollectible expense amount from the calculation. I did this using the Company's electronic CWC workpapers. An I&E-modified CWC schedule reflects my changes for the CWC allowance calculation.[126]

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to Peoples' claims for revenues, expenses, taxes, and rate base must be continually brought together in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claim.

[126] I&E Exhibit No. 1, Schedule 24.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XII-022

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: With respect to open positions included in the determination of salaries and wages and benefits in the cost of service:

a. Please state how many open positions are included. When does the Company expect these positions to be filled?

b. Please state if the Company is actively recruiting for the positions stated in part a of this question.

c. Please provide the dollar values of each cost included in the cost of service associated with each open position (e.g., salaries, benefits, etc.), for the HTY, FTY, and FPFTY, in Excel format with formulas intact. Please be specific where each value is represented in the cost of service.

Answer: A. The company has a total 60 open positions and expects to fill 30 during the FTY and an additional 22 during the FPFTY. The company expects to have 8 vacant positions due to normal turnover.

B. The company is actively recruiting for open positions.

C. Please refer to Attachment 1. The company uses an average cost per FTE to determine the salary and benefit cost of projected filled positions. There is no cost for open positions included in the cost of service in the HTY.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-046

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Statement No. 2, p. 10 concerning the Company's proposal to add a LIURP specialist position to be recovered through the Universal Service Plan (USP) Rider. Identify a specific breakdown for any labor or labor-related costs, such as FPFTY salaries, payroll taxes, and benefits, currently included in the USP Rider.

Answer: The current universal service rider does not contain labor or labor-related costs for salaries, payroll taxes, or benefits. However, the company has included salary of $91,609 and benefits of $195,03 for a total of $111,112 in the FPFTY Universal Service Program claims. Refer to Exhibit No. 4, Schedule No. 1, page 29. These are offset by projected Universal Service Program revenues.

2025 PSU Agreement

ESSENTIAL UTILITIES, INC.
AMENDED AND RESTATED EQUITY COMPENSATION PLAN

PERFORMANCE-BASED SHARE UNIT GRANT
TERMS AND CONDITIONS

1. Grant of Performance Units.

These Performance-Based Share Unit Grant Terms and Conditions (the "Grant Conditions") shall apply and be part of the grant made by Essential Utilities, Inc., a Pennsylvania corporation (the "Company"), to the Grantee named in the Performance-Based Share Unit Grant (the "Performance-Based Unit Grant") to which these Grant Conditions are attached (the "Grantee"), under the terms and provisions of the Essential Utilities, Inc. Amended and Restated Equity Compensation Plan, as amended and restated (the "Plan"). The applicable provisions of the Plan are incorporated into the Grant Conditions by reference, including the definitions of terms contained in the Plan (unless such terms are otherwise defined herein). The Grantee is an employee of the Company, its subsidiaries, or its Affiliates (collectively, the "Employer").

Subject to the terms and vesting conditions hereinafter set forth, the Company, with the approval and at the direction of the Executive Compensation Committee (the "Committee") of the Company's Board of Directors (the "Board"), has granted to the Grantee a target award (the "Target Award") of performance-based share units as specified in the Performance-Based Share Unit Grant (the "Performance Units"). The Performance Units are contingently awarded and shall be earned, vested and payable if and to the extent that the performance goals described on Schedule A (the "Performance Goals"), employment conditions and other conditions of these Grant Conditions are met. The Performance Units are granted with Dividend Equivalents (as defined in Section 6).

2. Vesting.

Except as otherwise set forth in these Grant Conditions, the Grantee shall earn and vest in a number of Performance Units based on the attainment of the Performance Goals as of the end of the Performance Period, provided that the Grantee continues to be employed by the Employer through the Vesting Date stated on the Performance-Based Share Unit Grant (the "Vesting Date"). The "Performance Period" is the performance period beginning and ending on the applicable dates stated on the Performance-Based Share Unit Grant. The "Vesting Period" is the period beginning on the Grant Date and ending on the Vesting Date.

(a) Except as otherwise set forth in these Grant Conditions, at the end of the Performance Period, the Committee will determine whether and to what extent the Performance Goals have been met and the amount earned with respect to the Performance Units. The Grantee can earn up to two hundred percent (200%) of the Target Award based on the attainment of the Performance Goals.

(b) Except as described in Section 3 below, the Grantee must continue to be employed by the Employer throughout the Vesting Period in order for the Grantee to vest and receive payment with respect to the earned Performance Units.

(c) Except as specifically provided below, no Performance Units shall vest prior to the Vesting Date, and if the Performance Goals are not attained at the end of the Performance Period, the Performance Units shall be immediately forfeited and shall cease to be outstanding.

3. Termination of Employment on Account of Retirement, Death, or Disability.

(a) Except as described below, if the Grantee ceases to be employed by the Employer prior to the Vesting Date, the Performance Units shall be forfeited as of the termination date and shall cease to be outstanding.

(b) If the Grantee ceases to be employed by the Employer during the Vesting Period on account of the Grantee's death or Disability, the Grantee's outstanding Performance Units shall remain outstanding through the Vesting Period and the Grantee shall earn Performance Units based on the attainment of the Performance Goals, as determined following the end of the Performance Period (or as described in Section 4, if applicable). The earned Performance Units shall be paid as described in Section 5.

(c) If the Grantee ceases to be employed by the Employer during the Vesting Period on account of Retirement (defined below), the Grantee shall earn a pro-rata portion of the outstanding Performance Units based on attainment of the Performance Goals, as determined following the end of the Performance Period (or as described in Section 4, if applicable). The pro-rated portion shall be determined based on the number of Performance Units earned based on the attainment of the Performance Goals during the Performance Period, multiplied by a fraction, the numerator of which is the number of completed full months following the Grant Date and prior to the Retirement Date in which the Grantee was employed by the Employer and the denominator of which is thirty-six (36). The pro-rated earned Performance Units shall be paid as described in Section 5.

(d) For purposes of these Grant Conditions, "Retirement" shall mean the Grantee's voluntary termination of employment after the Grantee has attained age fifty-five (55) and has five (5) full years of service with the Employer.

4. Change in Control.

(a) If a Change in Control occurs during the Vesting Period, the Grantee shall earn outstanding Performance Units as of the date of the Change in Control (the "Change in Control Date") as follows:

(i) If the Change in Control occurs before the end of the Performance Period, the Grantee shall earn the greater of (x) the number of Performance Units earned based on the attainment of the Performance Goals from the beginning of the Performance Period to the Change in Control Date, or (y) the Target Award.

(ii) If a Change in Control occurs after the end of the Performance Period but before the Vesting Date, the Grantee shall earn Performance Units based on the attainment of the Performance Goals as of the end of the Performance Period.

Performance Units earned as of the Change in Control Date, as described above in subsection (a)(i) or (ii), are referred to as the "CIC Earned Units." All reference in this Agreement to "Performance Units" includes CIC Earned Units on and after a Change in Control.

(b) The Grantee shall vest in the CIC Earned Units on the Vesting Date if the Grantee continues to be employed by the Employer through the Vesting Date. Except as described below, the CIC Earned Units shall only vest if the Grantee continues to be employed by the Employer through the Vesting Date.

(c) If prior to the Vesting Date, a Change in Control occurs and the Grantee ceases to be employed by the Employer upon or following a Change in Control on account of (i) the Grantee's Retirement, (ii) the Grantee's termination by the Company without Cause, or (iii) the Grantee's Disability or death, the CIC Earned Units shall vest as of the termination date.

(d) If the Grantee ceases to be employed by the Employer for any other reason before the Vesting Date, they shall forfeit Grantee the CIC Earned Units as of the date of termination.

5. Payment with Respect to Performance Units.

(a) Except as otherwise set forth in Section 4, if the Committee certifies that the Performance Goals and other conditions to payment of the Performance Units have been met, shares of Company Stock equal to the vested earned Performance Units shall be issued to the Grantee within sixty (60) days after the Vesting Date, subject to applicable tax withholding and Section 16 below.

(b) If, prior to the Vesting Date, a Change in Control occurs and the Grantee continues to be employed by the Employer through the Vesting Date, shares of Company Stock (or other consideration, as described below) equal to the vested CIC Earned Units shall be issued to the Grantee within sixty (60) days after the Vesting Date, subject to applicable tax withholding and Section 16 below.

(c) If, prior to the Vesting Date, a Change in Control occurs and the Grantee ceases to be employed by the Employer on or after the Change in Control on account of (i) the Grantee's Retirement, (ii) the Grantee's termination by the Employer without Cause, or (iii) the Grantee's Disability or death, shares of Company Stock (or other consideration, as described below) equal to the vested CIC Earned Units shall be issued to the Grantee within sixty (60) days following the Grantee's date of termination, subject to applicable tax withholding and Section 16 below.

(d) If the Grantee terminates employment on account of the Grantee's Disability, death or Retirement before a Change in Control, any outstanding Performance Units under Section 3(b) or 3(c) may be earned as CIC Earned Units pursuant to Section 4(a), but in the event such termination is on account of Retirement, such outstanding Performance Units shall be prorated by applying the fraction in Section 3(c), and such CIC Earned Units shall vest on the date of the Change in Control. Shares of Company Stock (or such other consideration, as

described below) equal to the vested CIC Earned Units shall be issued to the Grantee within sixty (60) days after the Change in Control, subject to applicable tax withholding and Section 16 below.

(e) If, in connection with a Change in Control, shares of Company Stock are converted into the right to receive a cash payment or other form of consideration, the vested CIC Earned Units shall be payable in such form of consideration, as determined by the Committee.

(f) Any fractional shares with respect to vested earned Performance Units shall be paid to the Grantee in cash.

6. Dividend Equivalents with Respect to Performance Units.

(a) Dividend Equivalents shall accrue with respect to Performance Units and shall be payable subject to the same vesting terms and other conditions as the Performance Units to which they relate. Dividend Equivalents shall be credited when dividends are declared on shares of Company Stock from the Grant Date until payment date for the vested earned Performance Units. If and to the extent that the underlying Performance Units are forfeited, all related Dividend Equivalents shall also be forfeited.

(b) While the Performance Units are outstanding, the Company will keep records in a bookkeeping account for the Grantee. On each date on which a dividend is declared by the Company on Company Stock, the Company shall credit to the Grantee's account an amount equal to the Dividend Equivalents associated with the Performance Units held by the Grantee on the record date for the dividend. No interest will be credited to any such account.

(c) Dividend Equivalents shall be paid in cash at the same time as the underlying vested earned Performance Units are paid.

(d) Notwithstanding the foregoing, if shares of Company Stock are converted to cash as described in Section 5(f) above in connection with a Change in Control, Dividend Equivalents shall cease to be credited with respect to the Performance Units.

7. Certain Corporate Changes.

If any change is made to the Company Stock (whether by reason of merger, consolidation, reorganization, recapitalization, stock dividend, stock split, combination of shares, or exchange of shares or any other change in capital structure made without receipt of consideration), then unless such event or change results in the termination of all the Performance Units, the Committee shall adjust, in an equitable manner and as provided in the Plan, the number and class of shares underlying the Performance Units to reflect the effect of such event or change in the Company's capital structure in such a way as to preserve the value of the Performance Units, and the Committee shall adjust the Performance Goals as necessary to reflect the effect of such event or change in the Company's capital structure. Any adjustment that occurs under the terms of this Section 7 or the Plan will not change the timing or form of payment with respect to any Performance Units and will be consistent with Section 409A of the Code, to the extent applicable.

8. No Stockholder Rights.

No shares of Company Stock shall be issued to the Grantee at the time the grant is made, and the Grantee shall not be, nor have any of the rights or privileges of, a shareholder of the Company with respect to any Performance Units recorded in the account, including no voting rights and no rights to receive dividends (other than Dividend Equivalents).

9. No Right to Continued Employment.

Neither the award of Performance Units, nor any other action taken with respect to the Performance Units, shall confer upon the Grantee any right to continue to be employed by the Employer or shall interfere in any way with the right of the Employer to terminate the Grantee's employment at any time, consistent with the terms of any written employment agreement between the Grantee and the Employer and applicable law.

10. Termination or Amendment.

These Grant Conditions and the award made hereunder may be terminated or amended by the Committee, in whole or in part, in accordance with the applicable terms of the Plan.

11. Notice.

Any notice to the Company provided for in these Grant Conditions shall be addressed to it in care of the Company's Chief Human Resources Officer, and any notice to the Grantee shall be addressed to the Grantee at the current address shown on the payroll system of the Company, or to such other address as the Grantee may designate to the Company in writing. Any notice provided for hereunder shall be delivered by hand, sent by telecopy or electronic mail, or enclosed in a properly sealed envelope addressed as stated above, registered, and deposited, postage and registry fee prepaid in the United States mail or other mail delivery service. Notice to the Company shall be deemed effective upon receipt. By receipt of these Grant Conditions, the Grantee hereby consents to the delivery of information (including without limitation, information required to be delivered to the Grantee pursuant to the applicable securities laws) regarding the Company, the Plan, and the Performance Units via the Company's electronic mail system or other electronic delivery system.

12. Incorporation of Plan by Reference.

The Performance-Based Share Unit Grant and these Grant Conditions are made pursuant to the terms of the Plan, the terms of which are incorporated herein by reference, and shall in all respects be interpreted in accordance therewith. The decisions of the Committee shall be conclusive upon any question arising hereunder. The Grantee's receipt of the Performance Units constitutes the Grantee's acknowledgment that all decisions and determinations of the Committee with respect to the Plan, these Grant Conditions, and/or the Performance Units shall be final and binding on the Grantee, his or her beneficiaries and any other person having or claiming an interest in the Performance Units. The settlement of any award with respect to the Performance Units is subject to the provisions of the Plan and to interpretations, regulations and determinations concerning the Plan as established from time to time by the Committee in

accordance with the provisions of the Plan. A copy of the Plan will be furnished to each Grantee upon request.

13. Income Taxes; Withholding Taxes.

The Grantee is solely responsible for the satisfaction of all taxes and penalties that may arise in connection with the award or settlement of Performance Units and Dividend Equivalents pursuant to these Grant Conditions. At the time of taxation, the Employer shall have the right to deduct from other compensation, or to withhold shares of Company Stock, in an amount equal to the federal (including FICA), state, local and foreign taxes and other amounts as may be required by law to be withheld with respect to the Performance Units, as approved in advance by the Committee.

14. Governing Law; Enforcement.

The validity, construction, interpretation and effect of the Performance-Based Share Unit Grant and these Grant Conditions shall be governed by, and determined in accordance with, the applicable laws of the Commonwealth of Pennsylvania, excluding any conflicts or choice of law rule or principle. The resolution of any dispute regarding, or the enforcement of, this Performance-Based Share Unit Grant and these Grant Conditions shall take place in a court of competent jurisdiction located within the Commonwealth of Pennsylvania, notwithstanding any dispute resolution terms that may exist under any employment agreement between the Grantee and the Company.

15. Assignment.

The Performance-Based Share Unit Grant and these Grant Conditions shall bind and inure to the benefit of the successors and assignees of the Company. The Grantee may not sell, assign, transfer, pledge or otherwise dispose of the Performance Units, except to a successor grantee in the event of the Grantee's death.

16. Section 409A.

The Performance-Based Share Unit Grant and these Grant Conditions are intended to comply with Code Section 409A or an exemption, and payments may only be made under these Grant Conditions upon an event and in a manner permitted by Code Section 409A, to the extent applicable. Notwithstanding anything in these Grant Conditions to the contrary, if required by Code Section 409A, if the Grantee is considered a "specified employee" for purposes of Code Section 409A and if any payment under these Grant Conditions is required to be delayed for a period of six (6) months after separation from service pursuant to Code Section 409A, such payment shall be delayed as required by Code Section 409A, and the accumulated payment amounts shall be paid in a lump sum payment within ten (10) days after the end of the six (6)-month period. If the Grantee dies during the postponement period prior to payment, the amounts withheld on account of Code Section 409A shall be paid to the personal representative of the Grantee's estate within sixty (60) days after the date of the Grantee's death. Notwithstanding anything in these Grant Conditions to the contrary, if the Performance Units are subject to Code Section 409A and if required by Code Section 409A, any payments to be made upon a termination of employment under these Grant Conditions may only be made upon a "separation

from service" under Code Section 409A. In no event may the Grantee, directly or indirectly, designate the calendar year of a payment, except in accordance with Code Section 409A. Notwithstanding anything in these Grant Conditions to the contrary, if required by Code Section 409A, if CIC Earned Units are subject to Code Section 409A, and if a Change in Control is not a "change in control event" under Code Section 409A or the payment event does not occur upon or within two years following a "change in control event" under Code Section 409A, any vested CIC Earned Units shall be paid to the Grantee upon the Vesting Date and not on account of an earlier termination of employment.

17. Company Policies.

This Performance-Based Unit Grant and all shares issued pursuant to this grant shall be subject to any applicable recoupment or clawback policies and other policies implemented by the Board, as in effect from time to time.

* * *

Schedule A

Performance Goals for 2025 Performance Units

1. Performance Goals.

An employee's performance-based grants shall be earned based on Essential Utilities Inc.'s (the "Company") achievement of three performance goals, as follows:

- 40.00% of the employee's target performance-based award shall be earned based on the TSR (as defined below) rank as compared to the TSR of the other companies in the peer group described in Section 1 below.

- 30.00% of the employee's target performance-based award shall be earned based on the achievement of the budgeted three-year average return on earnings ("ROE") target from January 1, 2025 up to and through December 31, 2027, as described in Section 2 below.

- 30.00% of the employee's target performance-based award will be earned based on the achievement of maintaining Operating and Maintenance expenses ("Regulated O&M") over the three-year measurement period of 2025-2027, as described in Section 4 below.

2. Calculation of TSR.

(a) Relative total shareholder return ("TSR") means the Company's TSR relative to the TSR of each Peer Company in the Peer Group (as defined below) as applicable. At the end of the Performance Period, the TSR for the Company and each Peer Company in the Peer Group shall be calculated by dividing the Closing Average Share Value (as defined below) by the Opening Average Share Value (as defined below).

(b) The term "Closing Average Share Value" means the average value of the common stock for the trading days during the two calendar months ending on the last trading day of the Performance Period, which shall be calculated as follows: (i) determine the closing price of the common stock on each trading date during the two-month period, (ii) multiply each closing price as of that trading date by the applicable share number described below, and (iii) average the amounts so determined for the two-month period. The Closing Average Share Value shall take into account any dividends on the common stock for which the ex-dividend date occurred during the Performance Period, as if the dividend amount had been reinvested in common stock at the closing price on the ex-dividend date. The share number in clause (ii) above, for a given trading day, is the sum of one share plus the cumulative number of shares deemed purchased with such dividends. Notwithstanding the foregoing, if the Closing Average Share Value is calculated as of a Change in Control, then the Closing Average Share Value shall be based on the two-month period ending immediately prior to the Change in Control.

(c) The term "Opening Average Share Value" means the average value of the common stock for the trading days during the two calendar months ending on the last trading day prior to the beginning of the Performance Period, which shall be calculated as follows: (i)

determine the closing price of the common stock on each trading date during the two-month period, (ii) multiply each closing price as of that trading date by the applicable share number described below, and (iii) average the amounts so determined for the two-month period. The Opening Average Share Value shall take into account any dividends on the common stock for which the ex-dividend date occurred during the two-month period, as if the dividend amount had been reinvested in common stock at the closing price on the ex-dividend date. The share number in clause (ii) above, for a given trading day, is the sum of one share plus the cumulative number of shares deemed purchased with such dividends.

3. Performance Units Earned Based on Comparative TSR to the Peer Group. 40.00% (Forty percent) of the Target Award of Performance Units (the "Peer Group Portion") shall be earned based on the Company's TSR as compared to the TSR of the companies in the Peer Group for the Performance Period, in accordance with the following:

(a) The Peer Group for this purpose consists of:

Evergy, Inc	NiSource, Inc	Southwest Gas Holdings, Inc
American Water Works Co.	Atmos Energy Corp.	Alliant Energy Corp.
Portland General Electric Co.	OGE Energy Corp.	New Jersey Resources Corp.
ONE Gas, Inc.	Black Hills Corp.	Spire, Inc.
Avista Corp.	Northwestern Corp.	California Water Service Group
American States Water Co.		

(b) The Peer Group shall be subject to change as follows:

(i) In the event of a merger, acquisition, or business combination transaction of a Peer Company in which the Peer Company is the surviving entity and remains publicly traded, the surviving entity shall remain a Peer Company.

(ii) In the event of a merger, acquisition or business combination transaction of a Peer Company, a "going private" transaction or similar event involving a Peer Company or the liquidation of a Peer Company, in each case where the Peer Company is not the surviving entity or is no longer publicly traded, the TSR for the Peer Company shall be calculated by dividing the Closing Average Share Value (as defined below) using the date immediately prior to the merger, acquisition, or business combination transaction by the Opening Share Value (as defined below).

(iii) In the event of an announced merger, acquisition or business combination transaction of a Peer Company, a "going private" transaction or similar event involving a Peer Company or the liquidation of a Peer Company, or the announcement of an intention to enter into a merger, acquisition or business combination of a Peer Company, a "going private"

transaction or similar event, in each case where the Peer Company is not the surviving entity or is no longer publicly traded, the TSR for the Peer Company shall be calculated by dividing the Closing Average Share Value (as defined below) using the date immediately prior to the announcement of the merger, acquisition, or business combination by the Opening Share Value (as defined below).

(c) The term "Closing Average Share Value" means the average value of the common stock for the trading days during the two calendar months ending on the last trading day of the Performance Period, which shall be calculated as follows: (i) determine the closing price of the common stock on each trading date during the two-month period, (ii) multiply each closing price as of that trading date by the applicable share number described below, and (iii) average the amounts so determined for the two-month period. The Closing Average Share Value shall take into account any dividends on the common stock for which the ex-dividend date occurred during the Performance Period, as if the dividend amount had been reinvested in common stock at the closing price on the ex-dividend date. The share number in clause (ii) above, for a given trading day, is the sum of one share plus the cumulative number of shares deemed purchased with such dividends. Notwithstanding the foregoing, if the Closing Average Share Value is calculated as of a Change in Control, then the Closing Average Share Value shall be based on the two-month period ending immediately prior to the Change in Control.

(d) The term "Opening Average Share Value" means the average value of the common stock for the trading days during the two calendar months ending on the last trading day prior to the beginning of the Performance Period, which shall be calculated as follows: (i) determine the closing price of the common stock on each trading date during the two-month period, (ii) multiply each closing price as of that trading date by the applicable share number described below, and (iii) average the amounts so determined for the two-month period. The Opening Average Share Value shall take into account any dividends on the common stock for which the ex-dividend date occurred during the two-month period, as if the dividend amount had been reinvested in common stock at the closing price on the ex-dividend date. The share number in clause (ii) above, for a given trading day, is the sum of one share plus the cumulative number of shares deemed purchased with such dividends.

(e) The Peer Group Portion shall be earned based on how the Company's TSR ranks in comparison to the TSRs of the Peer Group in accordance with the following schedule, depending on how many companies remain in the Peer Group at the end of the Performance Period:

TSR Ranking Payout Schedule		
16 Peers + Essential (N=17, in total)		
Rank (including Essential)	Percentile Ranking	Payout as % of Target
1	100.0%	200.0%
2	93.7%	200.0%
3	87.5%	193.8%
4	81.2%	178.0%
5	75.0%	162.5%
6	68.7%	146.8%
7	62.5%	131.3%
8	56.2%	115.5%
9	50.0%	100.0%
10	43.7%	84.3%
11	37.5%	68.8%
12	31.2%	53.0%
13	25.0%	35.0%
14	18.7%	0.0%
15	12.5%	0.0%
16	6.2%	0.0%
17	0.0%	0.0%

4. Performance Units Earned Based on Return on Earnings. 30.00% (Thirty percent) of the employee's target performance-based award (the "ROE") shall be earned based on the Company's budgeted three-year average Return on Earnings target. The ROE Portion shall be calculated measured from January 1, 2025 up to and through December 31, 2027, according to the following schedule:

Average 3 Year ROE Budgeted Target	Attainment
8.50%	50%
8.73%	60%
8.97%	70%
9.21%	80%
9.45%	90%
9.69%	100%
9.75%	120%
9.81%	140%
9.87%	160%
9.93%	180%
10.00%	200%

If the ROE falls between the measuring points on the foregoing schedule, the percentage earned will be based on linear interpolation between the applicable measuring points.

Performance Units Earned Based on the Achievement of Targeted Operating and Maintenance Expenses. 30.00% (Thirty-point percent) of the employee's target performance-based award shall be earned based on the Company's achieving targets for the consolidated operations and maintenance expenses of the Company and its subsidiaries, but excluding operations and maintenance expenses from all market based activities from January 1, 2025 up to and through December 31, 2027 (the "Regulated O&M"). The Regulated O&M shall be calculated according to the following schedule:

O&M 3 Year Budget Target $000s	Attainment
$ 1,984,000	50%
$ 1,974,000	60%
$ 1,964,000	70%
$ 1,954,000	80%
$ 1,944,000	90%
$ 1,934,000	100%
$ 1,929,000	110%
$ 1,924,000	120%
$ 1,919,000	130%
$ 1,914,000	140%
$ 1,909,000	150%
$ 1,904,000	160%
$ 1,899,000	170%
$ 1,894,000	180%
$ 1,889,000	190%
$ 1,884,000	200%

If the Company's Regulated O&M falls between the measuring points on the foregoing schedule, the percentage vesting will be based on linear interpolation between the applicable measuring points.

(a) Performance shares awarded based on market conditions (the Company's relative TSR metrics) will be valued using a Monte Carlo simulation model.

(b) For performance shares awarded based on the internal metrics (Rate Base Growth & Target O&M Expenses), the grant date accounting value will equal the Company's share price assuming dividend equivalents as provided in shares actually earned.

5. General Terms. Any portion of the Performance Units that is not earned as of the end of the Performance Period shall be forfeited as of the end of the Performance Period (or as provided above upon an earlier Change in Control). In no event shall the maximum number of Performance Units that may be payable pursuant to these Grant Conditions exceed 200% of the Target Award.

Instructions For Answers To Bureau of Investigation and Enforcement Interrogatories

1. These Bureau of Investigation and Enforcement (I&E) Interrogatories shall be deemed to be continuing. The Respondent is obliged to change, supplement and correct all answers to these interrogatories to conform to reasonably available information, including such information as becomes available to the Respondent after answers are filed.

2. Each answer should first restate the question asked and should also identify the person(s) supplying the information that constitutes any and all portions of the subject answer. If more than one person is listed, the primary sponsoring witness, for purposes of potential cross-examination at hearing, should be specifically identified.

3. All requested information within the knowledge, possession, control or custody of Respondent or that which may be reasonably ascertained by Respondent is to be provided. Specific references to the company or corporate name(s) or "the Company," or "you," as used herein includes agents, employees or other representatives.

4. As used herein, the word "document" or "workpaper" includes, but is not limited to, the original and/or all copies of memoranda, reports, books, manuals, instructions, directives, records, forms, notes, letters, notices, confirmations, telegrams, pamphlets, notations of any sort concerning conversations, telephone calls, e-mail messages, meetings or other communications, bulletins, transcripts, diaries, analyses, summaries, correspondence and enclosures, circulars, opinions, studies, investigations, questionnaires and surveys, worksheets, and all drafts, preliminary versions, alterations, modifications, revisions, changes, amendments and written comments concerning the foregoing, in whatever form, stored or contained in or on whatever medium including electronic hard disks, floppy disks, CD, internet resources and/or magnetic media.

EFILING - FILING DETAIL

Date Created	Filing Number
6/11/2026	3070604

Your filing has been electronically received. Upon review of the filing for conformity with the Commission's filing requirements, a notice will be issued acknowledging acceptance or rejection (with reason) of the filing. The matter will receive the attention of the Commission and you will be advised if any further action is required on your part.

The date filed on will be the current day if the filing occurs on a business day before or at 4:30 p.m. (EST). It will be the next business day if the filing occurs after 4:30 p.m. (EST) or on weekends or holidays.

Docket Number: R-2026-3060855
Case Description:
Transmission Date: 6/11/2026 2:13 PM
Filed On: 6/11/2026 2:13 PM
eFiling Confirmation Number: 3070604

File Name	Document Type	Upload Date
R-2026-3060855 (Peoples BRC) I&E Interrogatories Set RE (no 54) - Okum CL&COS FINAL.pdf	Certificate of Service	6/11/2026 2:12:49 PM

For filings exceeding 250 pages, the PUC is requiring that filers submit one paper copy to the Secretary's Bureau within three business days of submitting the electronic filing online. Please mail the paper copy along with copy of this confirmation page to Secretary, Pennsylvania Public Utility Commission, 400 North Street, Harrisburg PA 17120 a copy of the filing confirmation page or reference the filing confirmation number on the first page of the paper copy.

No paper submission is necessary for filings under 250 pages.

You can view a record of this filing and previous filings you have submitted to the PUC by using the links in the Filings menu at the top of the page. Filings that have been submitted within the last 30 days can be viewed by using the Recent Filings link. Older filings can be viewed by using the search options available in the Filing History link.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-017

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume I, Exhibit No. 4, Schedule 1, p. 11, Volume I, Exhibit No. 4, Schedule 22, and Peoples Statement No. 2, p. 14 concerning Outside Services – Contracted. Provide the following:

A. Reconciliation between the $19,781,638 provided in Schedule 1 versus the $21,704,759 provided in Schedule 22 for the fiscal year ended November 30, 2025.

B. Explanation of the FTY adjustment in line 6 of $1,090,063.

C. Explanation of the FPFTY adjustment in line 10 of ($924,520).

D. Documentation to support the 4.94% increase in the FTY and FPFTY.

E. Justification for use of a five-year annualized increase in costs.

Answer: Please see attached PDF concerning Outside Services - Contracted.

Submit Date: 5/1/2026

Peoples Natural Gas Company LLC
Docket No. R-2026-3060855
I&E-RE-17

A)

Schedule 1	19,781,638
+ Payment Processing	1,923,122
Schedule 22	21,704,759

The amount listed in Exhibit 4, Schedule 1 broke out Payment Processing onto it's own line item (Page 2, line 21). In Exhibit 4, Schedule 22, Payment Processing was included on the Outside Services-Contracted line item.

B) The FTY adjustment of $1,090,063 consists of the following:

1. Integrity Testing	300,000	
2. Bridge Work	(12,000)	Less spend in 2026 from 2025
3. Smart Pig Run	350,000	
4. CIS	230,357	
5. Bottle to bottle/CTC	101,706	
6. River Crossing Survey	120,000	
Total FTY Adjustment	**1,090,063**	

C) The FPFTY adjustment of ($924,520) consists of the following:

1. Integrity Testing	(100,000)	Less spend in 2027 from 2026
2. Bridge Work	(270,000)	Less spend in 2027 from 2026
3. Smart Pig Run	(450,000)	Less spend in 2027 from 2026
4. CIS	145,188	
5. Bottle to bottle/CTC	(129,708)	Less spend in 2027 from 2026
6. River Crossing Survey	(120,000)	Less spend in 2027 from 2026
Total FPFTY Adjustment	**(924,520)**	

D) The 4.94% annualized adjustment was an average of the prior 5 years

	CM YTD Actual (01 - 12) (2024)	CM PYTD Actual (01 - 12) (2023)	CM YTD Actual (01 - 12) (2022)	CM PYTD Actual (01 - 12) (2021)	CM YTD Actual (01 - 12) (2020)		2024 v 2023	2023 v 2022	2022 v 2021	2021 v 2020	AVG YoY Adjustment - 5 years
Outside Services-Other	$ 35,373,346.81	$ 41,471,010.10	$ 37,227,352.31	$ 32,209,825.57	$ 29,969,625.25		-14.70%	11.40%	15.58%	7.47%	4.94%

D) Based upon a review of the information provided in C, the Company determined that the proposed percentage was the best indicator of future amounts.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-028

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume I, Exhibit No. 4, Schedule 1, p. 2, Volume I, Exhibit No. 4, Schedule 1, p. 25, Volume I, Exhibit No. 4, Schedule 22, and Peoples Statement No. 2, p. 21 concerning Materials & Supplies expense. Provide the following:

A. Detailed breakdown by category for the fiscal years ended November 30, 2023, 2024, 2025, and budgeted for the FTY and FPFTY claims.

B. Documentation to support the 5.45% increase in the FTY and FPFTY.

C. Justification for use of a five-year annualized increase in costs.

Answer: Refer to the attachment.

Rebuttal Testimony

of

Vanessa Okum

Bureau of Investigation and Enforcement

Concerning:

LOW-INCOME PROGRAMS

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME VANESSA OKUM WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted I&E Statement No. 1 Proprietary, I&E Statement No. 1 Non-Proprietary, I&E Exhibit No. 1 Proprietary, and I&E Exhibit No. 1 Non-Proprietary.

Q. DOES YOUR REBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. Yes. I&E Exhibit No. 1-R supports my rebuttal testimony.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to the direct testimony of Pennsylvania Weatherization Providers Task Force (PWPTF) witness Jennifer Warabak,[1] which addresses concerns regarding the base rate case filing of Peoples Natural Gas Company LLC (Peoples or Company).

Q. SUMMARIZE MS. WARABAK'S RECOMMENDATION REGARDING THE COMPANY'S LOW-INCOME USAGE REDUCTION PROGRAM (LIURP).

A. Ms. Warabak points out that despite the Company's large number of low-income customers, Peoples has served a decreasing number of customers over the last several years with its LIURP program, totaling 170 customers in 2025. Ms. Warabak recommends that the number of LIURP customers served should be increased by 75. She asserts that the approximate average LIURP cost per job is just over $13,000, therefore a $975,000 increase in annual LIURP funding would be needed to accommodate the additional 75 customers.[2]

[1] PWPTF Statement No. 1.
[2] PWPTF Statement No. 1, pp. 6-7.

Q. DO YOU OPPOSE MS. WARABAK'S RECOMMENDATION TO SERVE AN ADDITIONAL 75 LIURP CUSTOMERS?

A. No, I do not oppose her recommendation that 75 additional customers should be served by LIURP.

Q. DO YOU AGREE WITH MS. WARABAK'S ASSERTION THAT A $975,000 INCREASE IN LIURP FUNDING IS NEEDED TO SERVE AN ADDITIONAL 75 CUSTOMERS?

A. No. While Ms. Warabak is correct in pointing out the declining number of customers served by the LIURP, I disagree that an increase of 75 customers would require an increase in LIURP funding of $975,000.

Q. WOULD ANY INCREASE IN LIURP FUNDING BE NECESSARY TO ACCOMMODATE AN INCREASE OF 75 LIURP CUSTOMERS?

A. No. Ms. Warabak recommends the Company serve an additional 75 LIURP customers, or a total of 245 (170 + 75) customers. At Ms. Warabak's assumed average of $13,000 per job, this requires a total budget of $3,185,000 (245 x $13,000), which is less than the Company's minimum annual LIURP budget of $3,500,000 agreed to in the Low-Income Stipulation at Docket No. R-2023-3044549.[3] My calculation shows a slightly higher average job cost of $13,841,[4]

[3] *Pa. PUC v. Peoples Natural Gas Company LLC,* Docket No. R-2023-3044549, Opinion and Order, p. 63 (Order Entered September 12, 2024).

[4] I&E Exhibit No. 1-R, Schedule 1.

resulting in a total cost of $3,391,045 for 245 LIURP jobs, which is still less than the Company's minimum budget of $3,500,000.

Additionally, the Company states that all unspent funds are rolled into the budget for the following year.[5] The information provided by the Company for the years 2023 through 2025 shows that funds were carried over each year during that period because the Company did not spend its entire budget in any of those years.[6] Therefore, Ms. Warabak's recommendation to serve an additional 75 LIURP customers annually does not require an increase to the LIURP budget.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

[5] I&E Exhibit No. 1-R, Schedule 2.
[6] I&E Exhibit No. 1-R, Schedule 1.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-II-005

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: If Peoples does not fully expend its LIURP budget, does it carry over all unspent funds and add those funds to its LIURP budget for the following year? If not, please explain in detail how and to what extent Peoples carries over unspent LIURP funding.

Answer: Peoples carries over any unspent funds and adds those funds to the LIURP budget for the new budget period on an annual basis. The only deviation from this procedure is the recently approved Petition to stabilize funding of the Company's EFSLR by re-purposing $500,000 of 2025's LIURP carryover to supplement EFSLR funding for the current budget year. (Refer to Dockets P-2026-3060819, M-2020-3021343 and M-2018-3003177).

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Vanessa Okum. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as a Fixed Utility Financial Analyst in the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E).

Q. ARE YOU THE SAME VANESSA OKUM WHO SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted I&E Statement No. 1 Proprietary, I&E Statement No. 1 Non-Proprietary, I&E Exhibit No. 1 Proprietary, I&E Exhibit No. 1 Non-Proprietary, I&E Statement No. 1-R, and I&E Exhibit No. 1-R.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN ACCOMPANYING EXHIBIT?

A. Yes. I&E Exhibit No. 1-SR contains schedules related to my surrebuttal testimony.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of the following witnesses for Peoples Natural Gas Company LLC (Peoples or Company):

- Andrew P. Wachter – Peoples Statement No. 2-R
- Carol A. Scanlon – Peoples Statement No. 3-R
- Rita F. Black – Peoples Statement No. 10-R
- Rudolph Hanechak – Peoples Statement No. 11-R
- Anton Ribich – Peoples Statement No. 14-R

Note that I do not intend for my surrebuttal testimony to address every issue raised or otherwise discussed by the witnesses in this proceeding. My lack of response to any recommendation, position, or assertion of any witness does not necessarily indicate agreement with their rebuttal testimony.

Q. HAS PEOPLES UPDATED ITS OVERALL REVENUE REQUIREMENT CLAIM IN REBUTTAL TESTIMONY?

A. Yes. The Company updated its overall revenue requirement claim from $1,347,786,003 to $1,348,753,583 based upon the revised fully projected future test year (FPFTY) pro forma revenue requirement calculation that reflects a total revenue increase of $163,933,339 compared to the original increase of $163,171,938. The updated revenue requirement also reflects present rate revenue

of $1,184,820,244 compared to the original $1,184,614,065.[1]

Q. DOES PEOPLES EXPLAIN THE REVISIONS TO ITS ORIGINAL FILING?

A. Yes. Peoples witness Andrew Wachter provides a summary of the revisions.[2]

Q. HAS THE COMPANY ACCEPTED ANY OF YOUR RECOMMENDATIONS FROM DIRECT TESTIMONY?

A. Yes. Peoples witness Anton Ribich has accepted my recommendation to remove uncollectible expense from the Company's cash working capital (CWC) calculation. However, he disagrees with my other adjustments to cash working capital as discussed below.[3] Additionally, the Company has made the two revisions discussed in my direct testimony regarding building leases[4] and corporate insurance.[5] My further recommendations regarding corporate insurance are discussed below.

Q. DO ANY WITNESSES MAKE ANY GENERAL COMMENTS REGARDING YOUR DIRECT TESTIMONY?

A. Yes. Mr. Wachter provides a general response to my arguments against using

---

1 Peoples Exhibit No. 2, Schedule 4, p. 2 Revised (Rebuttal) and Peoples Exhibit No. 2, Schedule 4, p. 2.
2 Peoples Statement No. 2-R, pp. 3-4.
3 Peoples Statement No. 14-R, pp. 4-5.
4 I&E Statement No. 1, pp. 29-30.
5 I&E Statement No. 1, pp. 30-33.

average annual increases or inflation adjustments to adjust certain historic test year (HTY) expenses. He states that using a multi-year average increase methodology utilizes known and recently incurred activity for each specific expense account, and that the Company's proposed expense adjustments are known and measurable. Mr. Wachter asserts that it is unrealistic to think that inflation is not going to continue related to the Company's expenses. He adds that by not allowing this methodology to project increases, I&E is effectively reverting to utilization of historic test year balances, which is contrary to the FPFTY methodology widely accepted in Pennsylvania base rate cases and authorized by law.

Mr. Wachter explains that the Company did not use HTY data to calculate the average annual increases due to availability of data at the time the base rate case was being prepared. He also explains that the Company generally utilized a five-year average increase, except in cases where abnormal items within the historical period caused specific years to be excluded.[6]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S ASSERTIONS?

A. While I accept that Mr. Wachter's annual increases are based on known data, I disagree that this translates into known and measurable increases for the FPFTY. I maintain that these increases are speculative.

I also accept that inflation does impact expenses on a general level over time; however, when we look at the account level, it is not an accurate predictor of

[6] Peoples Statement No. 2-R, pp. 4-11.

future expenses. It is unreasonable to assume that each expense will increase both in the future test year (FTY) and in the FPFTY when the Company's historic data for many of these expenses do not show consistent growth year over year. Regardless of the inconsistency in time periods used or the number of periods used to calculate the average annual increases, the increases are still speculative and should not be used to project FPFTY expense levels.

Finally, I disagree with Mr. Wachter's argument that using HTY balances is contrary to the FPFTY methodology used in base rate cases. The FPFTY methodology is based on HTY data and then incorporates known and measurable changes to the Company's expenses, revenues, and rate base. In the absence of any known and measurable changes, the HTY is used. When the Company has proposed known and measurable adjustments, such as merit increases, new projects, ending projects, contractual increases in rent or other expenses, these adjustments have been largely accepted in this base rate case.

I&E OPERATING AND MAINTENANCE EXPENSE ADJUSTMENTS

Q. PLEASE SUMMARIZE YOUR RECOMMENDED ADJUSTMENTS AS UPDATED IN THIS SURREBUTTAL TESTIMONY.

A. The following table summarizes my updated recommendations operating and maintenance (O&M) expense claims and rate base claims as discussed in this surrebuttal testimony:

	Company Claim	Recommended Allowance	I&E Adjustment
O&M Expenses:			
Labor	$68,149,464	$65,135,919	($3,013,545)
Incentive Compensation	$10,423,930	$5,813,777	($4,610,153)
Payroll Taxes	$5,951,013	$5,581,270	($369,743)
Pension Expense	$3,164,136	$0	($3,164,136)
Other Employee Benefits	$19,531,394	$18,661,800	($869,594)
Outside Services - Contracted	$22,002,493	$19,947,180	($2,055,313)
Outside Services - IT	$7,623,113	$7,336,408	($286,705)
Outside Services - A&G	$6,333,184	$5,406,725	($926,459)
Corporate Insurance	$7,668,379	$6,265,643	($1,402,736)
Travel Expense	$1,139,305	$1,030,648	($108,657)
Memberships	$1,220,436	$1,062,518	($157,918)
Licenses and Permits	$738,885	$704,167	($34,718)
Utilities & Fuel	$3,084,199	$2,849,895	($234,304)
Advertising	$1,458,032	$259,746	($1,198,286)
Fleet Maintenance	$836,976	$746,507	($90,469)
Materials & Supplies	$11,324,992	$10,183,664	($1,141,328)
Payment Processing	$2,939,659	$1,923,122	($1,016,537)
Rate Case Expense	$960,000	$411,429	($548,571)
Sales and Use Tax Credit	$0	($975,000)	($975,000)
Total O&M Expense Adjustments			**($22,204,172)**
Rate Base:			
Labor	$96,126,010	$91,875,353	($4,250,657)
Incentive Compensation	$5,045,210	$3,726,363	($1,318,847)
Payroll Taxes	$8,106,040	$7,659,744	($446,296)
Other Employee Benefits	$24,713,929	$23,613,594	($1,100,335)
Cash Working Capital	$46,932,677	$45,570,205	($1,362,472)
Total Rate Base Adjustments			**($8,478,607)**

1

OVERALL I&E UPDATED POSITION

Q. WHAT IS I&E'S TOTAL UPDATED RECOMMENDED REVENUE REQUIREMENT?

A. I&E's total updated recommended revenue requirement is $1,277,670,962. This recommended revenue requirement represents an increase of $92,850,718 to the Company's updated present rate revenues of $1,184,820,244. This total recommended allowance incorporates my adjustments made in this surrebuttal testimony and those recommended adjustments made in the surrebuttal testimony of I&E witness D.C. Patel.[7]

Peoples Natural Gas Company LLC		TABLE I			
R-2026-3060855		INCOME SUMMARY			
	12/31/27	INVESTIGATION & ENFORCEMENT

[7] I&E Statement No. 2-SR.

LABOR EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR LABOR EXPENSE.

A. I recommended a total FPFTY allowance of $156,525,749 for labor expense, or a reduction of $7,749,725 ($164,275,474 - $156,525,749) to Peoples' claim broken down as follows:

	Company Claim	I&E Recommendation	Recommended Adjustment
Total Labor	$164,275,474	$156,525,749	($7,749,725)
Capitalization Rate	58.52%	58.52%	58.52%
O&M Labor	$68,149,464	$64,934,501	($3,214,963)
Rate Base Labor	$96,126,010	$91,591,248	($4,534,762)

My recommendation was based on two main aspects: (1) applying a vacancy rate based on historic vacancies; and (2) adding the salary for the Low-Income Usage Reduction Program (LIURP) compliance specialist that the Company proposed to include in the Universal Service Program (USP) Rider.[8]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation. Specifically, he disagrees with my recommended vacancy rate and makes a correction to my calculation.

[8] I&E Statement No. 1, pp. 6-10.

Q. PLEASE SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter states that the Company's expectation that employee vacancies will decline during the forecast period is reasonable and is supported by recent Company experience and broader market trends. To support this argument, Mr. Wachter points to recent Company data from December 2025 through March 2026 which show a decrease in vacancy rate from the twelve months ended November 30, 2025. Mr. Wachter also states that labor market conditions that contributed to elevated vacancy levels following the COVID-19 pandemic have moderated significantly and that external labor market research similarly demonstrates that hiring conditions have become more favorable for employers. Additionally, Mr. Wachter claims that the Company's forecasted vacancy level reflects implementation of specific recruiting and retention initiatives.

Furthermore, Mr. Wachter opines that although historical vacancy rates are an important consideration, a forecast is intended to estimate future conditions and not merely replicate historical averages.

Finally, Mr. Wachter claims that my calculated recommendation uses a post-capitalization number where it should have used a pre-capitalization number, and in correcting this error my claim would be increased by $211,950 for the O&M portion and $299,019 for the rate base portion.[9]

[9] Peoples Statement No. 2-R, pp. 11-14.

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S ASSERTIONS?

A. I disagree that the Company has demonstrated a decrease in vacancy rate sufficient to warrant the vacancy rate of 0.54% that the Company has estimated for the FPFTY. Mr. Wachter points to a four-month period of recent data in which the vacancy rate averaged 4.38%, which he claims demonstrates a downward trend. However, in the twelve months ended November 30, 2023, which was only a few years after the pandemic, the Company had an average vacancy rate of 4.05%[10] which has subsequently risen to well above 5%, so a four-month period of 4.38% vacancy is not necessarily an indication of a downward trend as Mr. Wachter claims. Additionally, Mr. Wachter claims that labor market trends, implementation of recruiting and retention initiatives, and other future conditions should be considered when forecasting future vacancies. However, these factors are speculative and do not necessarily translate into the low vacancy rate the Company has projected. The Company must demonstrate an ability to recruit and retain employees at a vacancy rate of 0.54% before being granted such a vacancy rate.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Although I maintain my vacancy rate recommendation, I accept Mr. Wachter's assertion that my direct testimony used a post-capitalization number

[10] I&E Exhibit No. 1, Schedule 2.

when removing the Company's vacancy assumptions where it should have used a pre-capitalization number.

Q. WHAT IS YOUR UPDATED RECOMMENDATION?

A. I recommend an O&M expense amount for labor expense of $65,135,919 or a reduction of $3,013,545 ($68,149,464 - $65,135,919) to the Company's claim and a rate base allowance of $91,875,353 or a reduction of $4,250,657 ($96,126,010 - $91,875,353) to the Company's claim.

Q. PLEASE EXPLAIN HOW YOU CALCULATED YOUR UPDATED RECOMMENDATION.

A. I have updated my calculation below to reflect reversal of the total value of the vacancy adjustment (line 2) used by Company, resulting in a total labor allowance of $157,011,272. This represents an O&M allowance of $65,135,919 ($157,011,272 x (1.00 – 0.5852, or 0.4148)[11] and a rate base allowance of $91,875,353 ($157,011,272 x 0.5852).

[11] The O&M percentage of 41.48% and the capitalized percentage of 58.52% match the Company's claimed percentages and what was used in my direct testimony at I&E Statement No. 1, pp. 6-7. Note that dollar amounts are off slightly due to rounding.

1. Peoples' Total FPFTY Labor Claim	$164,275,474
2. Add 8 Vacant Positions	$873,153
3. Add LIURP Compliance Specialist	$91,609
4. I&E Modified Amount (1+2+3)	$165,240,236
5. Apply Vacancy Rate (4 x 4.98%)[12]	$8,228,964
6. I&E Recommended Total Labor Allowance (4-5)	$157,011,272

INCENTIVE COMPENSATION

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR INCENTIVE COMPENSATION.

A. I recommended an incentive compensation expense allowance of $5,176,025, or a reduction of $949,448 ($6,125,473 - $5,176,025) to the Company's expense claim and capitalized incentive compensation of $4,263,202, or a reduction of $782,008 ($5,045,210 - $4,263,202) to the Company's rate base claim.

My recommendation was based on removing the portion of the Company's claim related to financial metrics.[13]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.

[12] This 4.98% is the same vacancy rate as used in my direct testimony at I&E Statement No. 1, pp. 8-10, which produces a different dollar adjustment for the reason explained above.

[13] I&E Exhibit No. 1, pp. 11-15.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter states that my comparison in direct testimony to the Commission's recent Columbia Gas of Pennsylvania, Inc. (Columbia) rate case order[14] is inappropriate because I misconstrued the Commission's ruling. He states that Columbia was denied the financial portion of incentive compensation because they failed to provide sufficient evidence of the benefit to ratepayers. He opines that his testimony provides sufficient evidence of the benefit to ratepayers and thus it is appropriate to recover 100% of incentive compensation costs.

Mr. Wachter provides three reasons why he believes my recommendation should be rejected: (1) financial metrics incentivize employees to be good financial stewards of the Company; (2) the overall level of incentive compensation claimed is part of a fair, market-based level of total compensation; and (3) there are no regulations that prohibit utilities from recovery of incentive compensation tied to financial metrics.[15]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S STATEMENTS?

A. I disagree that Mr. Wachter's testimony provides sufficient evidence of the benefit of financial goals in incentive compensation to ratepayers, and I maintain that the primary beneficiary of these goals is shareholders. All the financial goals within the Company's incentive compensation plan refer to earnings, which directly

[14] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally*, Disposition of Incentive Compensation, p. 123.

[15] Peoples Statement No. 2-R, pp. 16-22.

benefit shareholders. While there may be some indirect benefits to customers, prioritizing maximization of earnings is primarily aligned with the benefit of shareholders and is not necessary to provide safe and reliable service. A utility's primary objective should be the provision of safe and reliable service to its customers, rather than maximizing earnings for shareholders. Therefore, ratepayers should not be required to fund the payout of such objectives.

Q. HAVE THERE BEEN ANY OTHER RECENT CASES SUPPORTING THIS ARGUMENT?

A. Yes. On July 16, 2026, the Commission agreed with the Recommended Decision of the Administrative Law Judges in the most recent Pennsylvania American Water Company (PAWC) rate case that PAWC failed to demonstrate the benefit to ratepayers of financial metrics in incentive compensation, and it denied the portion of PAWC's claim related to financial metrics.[16]

Q. DID MR. WACHTER MENTION ANYTHING ELSE IN REGARD TO YOUR DIRECT TESTIMONY ON THIS TOPIC?

A. Yes. Mr. Wachter states that I&E did not file supplemental testimony after receiving the interrogatory response regarding total long-term incentive compensation. Therefore, he claims that any further recommendations for an

[16] *Pa. PUC v. Pennsylvania American Water Company*, Docket Nos. R-2025-3057983 and R-2025-3058051, p. 114 (Order Entered July 27, 2026).

adjustment should be rejected, as the Company would not have sufficient time to rebut the adjustment and would raise due process concerns.[17]

Q. WHAT IS YOUR RESPONSE TO THIS ASSERTION?

A. I disagree that the Company would not have sufficient time to rebut the adjustment, as I clearly stated my intention to recommend an allowance of 30% of the claim as well as my intention to update the claim in surrebuttal testimony.[18] The Company had the opportunity to rebut that adjustment in its rebuttal testimony.

Further, I am advised by counsel that the Company has further opportunity to respond in rejoinder testimony. The Company was on notice of my intent to make this adjustment and in possession of the information requested in my interrogatory; therefore, I continue to recommend the Commission adopt this adjustment.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR INCENTIVE COMPENSATION?

A. Yes. My updated recommendation is as follows:

	O&M Claim	Rate Base Claim
Total Company Claim	$10,423,930	$5,045,210
I&E Allowance	$5,813,777	$3,726,363
I&E Adjustment	($4,610,153)	($1,318,847)

[17] Peoples Statement No. 2-R, p. 22.
[18] I&E Statement No. 1, p. 14.

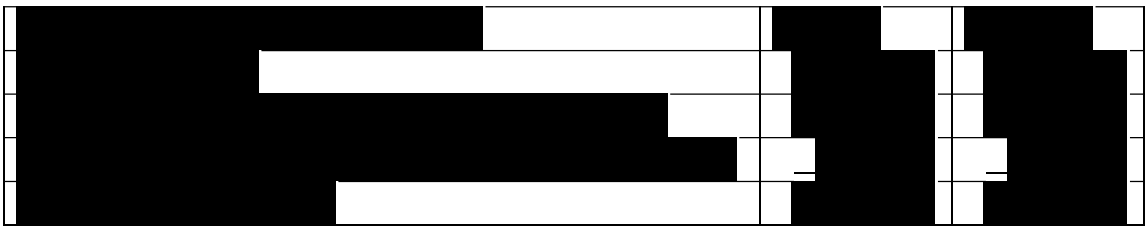
Q. HOW DID YOU CALCULATE YOUR RECOMMENDATION?

A. The Company clarified its long-term incentive compensation claim in response to I&E-RE-54.[19] According to my calculation, the Company's claim for incentive compensation is broken down as follows:

	O&M Claim	Rate Base Claim
Short-Term	$4,929,537[20]	$4,060,185
Long-Term	$1,195,936[21]	$985,025
Total	$6,125,473[22]	$5,045,210[23]

In direct testimony, I calculated that 31% of the total compensation paid in the HTY was paid to plans that included financial metrics. I also approximated that 50% of those plans were related to financial metrics. Thus, my updated calculation for short-term incentive compensation is as follows:

{BEGIN PROPRIETARY}



{END PROPRIETARY}

My calculation for long-term incentive compensation within this claim is shown below and excludes 70% of the long-term incentive compensation claim:

[19] I&E Exhibit No. 1-SR, Schedule 1.
[20] This figure is calculated by subtracting Total Long-Term amount from Total below.
[21] I&E Exhibit No. 1-SR, Schedule 1.
[22] Peoples Exhibit No. 1, Schedule 4, p. 5.
[23] Capitalized amount was estimated using 45.16% rate similar to my direct testimony at I&E Statement No. 1, p. 10. The capitalized short and long-term amounts above were estimated using ratio for short and long-term O&M amounts in the preceding column.

Long-Term Incentive Compensation	Expense	Rate Base
1. Company Claim	$1,195,936	$985,025
2. Portion of Plan Based on Financial Metrics (1. x 70%)	$837,155	$689,518
3. I&E Allowance (1 - 2)	$358,781	$295,507

This results in a reduction of $1,601,233 ($764,078 + $837,155) for the expense portion and $1,318,847 ($629,329 + $689,518) for the rate base portion. However, the Company has also identified expenses in its Other O&M category that represent long-term incentive compensation allocated from the parent company.

Q. TO UPDATE YOUR POSITION IN DIRECT TESTIMONY, HOW ARE YOU ADDRESSING THE ALLOCATED PORTION OF INCENTIVE COMPENSATION?

A. To keep it simple, I have discussed this directly incurred expense above and am now adjusting the Company's allocated incentive compensation expense claim to include this amount as shown below. These expenses are not capitalized, so the total allocated expense of $4,298,457 provided in response to I&E-RE-54[24] increases the expense portion of the claim from $6,125,473 to $10,423,930 ($6,125,473 + $4,298,457), and my recommendation would be to allow 30% of the claim, or $1,289,537 ($4,298,457 x 0.30). To summarize, my total

[24] I&E Exhibit No. 1-SR, Schedule 1.

recommended incentive compensation adjustment for directly incurred and allocated incentive compensation is shown below:

	O&M Claim	Rate Base Claim
Total Company Claim	$10,423,930	$5,045,210
I&E Allowance	$5,813,777	$3,726,363
I&E Adjustment	($4,610,153)[25]	($1,318,847)

PAYROLL TAXES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYROLL TAXES.

A. I recommended a payroll tax expense allowance of $5,617,354, or a reduction of $333,659 ($5,951,013 - $5,617,354) to the Company's expense claim and capitalized payroll taxes of $7,679,994, or a reduction of $426,046 ($8,106,040 - $7,679,994) to the Company's rate base claim.

This recommendation is based on my recommended adjustments to labor expense and incentive compensation.[26]

Q. DID ANY WITNESSES RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witnesses Andrew Wachter[27] and Rudolph Hanechak[28] disagree with my recommendation because they disagree with the underlying

[25] Reduction of $1,601,233 for direct expense plus a reduction of $3,008,920 ($4,298,457 - $1,289,537) for the allocated portion equals $4,610,153.
[26] I&E Statement No. 1, pp. 16-17.
[27] Peoples Statement No. 2-R, pp. 15-16.
[28] Peoples Statement No. 11-R, pp. 3-4.

recommended adjustments to labor and incentive compensation, as discussed above.

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE IN REBUTTAL TESTIMONY CONCERNING OTHER EMPLOYEE BENEFITS?

A. No. I disagree with Mr. Wachter about the payroll-related adjustments; thus, I also disagree with his response to my recommendation for payroll taxes.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Because I have updated my recommendations for labor and incentive compensation, there is a corresponding change to my recommended payroll expense as shown below:

	O&M Expense	Rate Base
I&E Labor Allowance	$65,135,919	$91,875,353
I&E Incentive Comp. Allowance	$4,524,240[29]	$3,726,363
Total Payroll Costs	$69,660,159	$95,601,716
Experience Factor	8.0122%	8.0122%
I&E Payroll Tax Allowance	$5,581,270[30]	$7,659,744[31]

This updated recommendation results in a reduction of $369,743 ($5,951,013 - $5,581,270) to the Company's payroll tax expense claim and a reduction of $446,296 ($8,106,040 - $7,659,744) to the Company's capitalized payroll taxes.

[29] This expense amount is the directly incurred short-term incentive compensation expense of $4,165,459 and the long-term incentive compensation expense of $358,781, producing a total direct expense amount of $4,524,240 ($4,165,459 + $358,781).

[30] Math is slightly off due to rounding.

[31] Math is slightly off due to rounding.

It should also be noted that the incentive compensation allowance applicable to payroll tax includes only the portion of incentive compensation paid directly by the Company and not the allocated portion, as shown in the above table.

PENSION EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PENSION EXPENSE.

A. I recommended disallowance of the entire FPFTY claim of $3,164,136. My recommendation was based on **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}**

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter states that the Company utilized the same methodology as in prior cases and use of this method was also previously proposed by I&E. Mr. Wachter also states that the existence of an overfunded pension position does not mean that future pension contributions are unnecessary or imprudent and that funding status

[32] I&E Statement No. 1, p. 18.

is highly sensitive to outside factors. Mr. Wachter asserts that the Company's claim is fair to ratepayers.[33]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S ASSERTIONS?

A. Mr. Wachter's asserts that future contributions may be necessary due to external factors, however he provides no evidence of any of these external factors changing in the short term. If the status quo remains **{BEGIN PROPRIETARY}** [redacted] **{END PROPRIETARY}**[34] it is unlikely that the Company will need to make a cash contribution in the FPFTY. Ratepayers should not be charged for possible changes in external factors when Mr. Wachter doesn't even speculate about what these changes may be, nor provide any evidence that these changes are expected to occur.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend disallowance of the entire $3,164,136 claim. However, should the Commission decide to grant the Company this expense, the Commission should only allow a three-year average of net cash contributions for 2023, 2024, and 2025, or $2,328,848 (($5,670,000 + $1,316,545 + $0) / 3),[35] or a reduction of $835,288 to Peoples' claim, rather than the Company's four-year

[33] Peoples Statement No. 2-R, pp. 41-43.
[34] I&E Statement No. 1, p. 18.
[35] Peoples Exhibit No. 4, Schedule 1, p. 8.

average of $3,164,136 that inappropriately includes 2022 to capture an older historic amount of $5,670,000 which serves only to inflate the claim.

OTHER EMPLOYEE BENEFITS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OTHER EMPLOYEE BENEFITS EXPENSE.

A. I recommended a total FPFTY allowance of $42,155,320 for other employee benefits expense, or a reduction of $2,090,004 ($44,245,324 - $42,155,320) to Peoples' claim broken down as follows:

	Company Claim	I&E Recommendation	Recommended Adjustment
Total Other Employee Benefits	$44,245,324	$42,155,320	$2,090,004
Capitalization Rate	55.86%	55.86%	55.86%
O&M Expense Portion	$19,531,394	$18,608,795	$922,599
Rate Base Portion	$24,713,929	$23,546,525	$1,167,404

My recommendation was based on two main aspects: (1) applying a vacancy rate consistent with the labor expense adjustment; and (2) adding the employee benefits for the LIURP compliance specialist that the Company proposed to include in the USP Rider.[36]

[36] I&E Statement No. 1, pp. 20-23.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation for the same reasons he disagrees with my labor expense adjustment as discussed above.[37]

Q. DO YOU AGREE WITH MR. WACHTER'S RESPONSE IN REBUTTAL TESTIMONY CONCERNING OTHER EMPLOYEE BENEFITS?

A. No. I disagree with Mr. Wachter on the payroll-related adjustments; thus, I also disagree with his response to my recommendation for other employee benefits.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. Like my labor expense claim above, I have updated my calculation below to reflect the reversal of the total, pre-capitalized value of the vacancy adjustment (line 2) used by Company, resulting in a total other employee benefits allowance of $42,275,394. This represents an O&M allowance of $18,661,800 or a reduction of $869,594 ($19,531,394 - $18,661,800) to the Company's claim and a rate base allowance of $23,613,594 or a reduction of $1,100,335 ($24,713,929 - $23,613,594) to the Company's claim.

Q. HOW DID YOU CALCULATE YOUR UPDATED RECOMMENDATION?

A. My updated recommendation is calculated as follows:

[37] Peoples Statement No. 2-R, p. 23.

1. Peoples' Total FPFTY Benefits Claim	$44,245,324
2. Add 8 Vacant Positions	$226,221
3. Add LIURP Compliance Specialist	$19,503
4. I&E Modified Amount (1+2+3)	$44,491,048
5. Apply Vacancy Rate (4 x 4.98%)	$2,215,654
I&E Recommended Allowance (4 - 5)	$42,275,394

This recommended allowance is broken down between the expensed and capitalized portions using the Company's 55.86% capitalization rate similar to how I broke it down in my recommendation in direct testimony producing a recommended expense allowance of $18,661,800[38] ($42,275,394 x (1.00 - 0.5586)) and a capitalized recommendation of $23,613,594[39] ($42,275,394 x 0.5586)

OUTSIDE SERVICES – CONTRACTED

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OUTSIDE SERVICES – CONTRACTED.

A. I recommended an FPFTY allowance of $19,947,180 for outside services – contracted or a reduction of $2,055,313 ($22,002,493 - $19,947,180) to the Company's claim. My recommendation was based on removing the 4.94% annual increase from the FTY and FPFTY claims. Increases in expenses should be based

[38] Calculation slightly off due to rounding.
[39] Calculation slightly off due to rounding.

on known and measurable changes and not based on speculative percentage increases.[40]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[41] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[42]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $19,947,180 for outside services – contracted or a reduction of $2,055,313 ($22,002,493 - $19,947,180) to the Company's claim for the reasons explained above.

<u>OUTSIDE SERVICES – IT</u>

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OUTSIDE SERVICES – IT.

A. I recommended an FPFTY allowance of $7,336,408 for outside services – IT or a reduction of $286,705 ($7,623,113 - $7,336,408) to the Company's claim. My

[40] I&E Statement No. 1, pp. 24-25.
[41] Peoples Statement No. 2-R, pp. 5 and 44.
[42] I&E Statement No. 1-SR, pp. 3-5 above.

recommendation was based on removing the 2.06% annual increase from the FTY and FPFTY claims.[43]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[44] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[45]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $7,336,408 for outside services – IT or a reduction of $286,705 ($7,623,113 - $7,336,408) to the Company's claim for the reasons explained above.

OUTSIDE SERVICES – A&G

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR OUTSIDE SERVICES – A&G.

A. I recommended an FPFTY allowance of $5,406,725 for outside services – A&G or a reduction of $926,459 ($6,333,184 - $5,406,725) to the Company's claim. My

[43] I&E Statement No. 1, pp. 26-27.
[44] Peoples Statement No. 2-R, p. 5.
[45] I&E Statement No. 1-SR, pp. 3-5.

recommendation was based on removing the 8.23% annual increase from the FTY and FPFTY claims.[46]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[47] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[48]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $5,406,725 for outside services – A&G or a reduction of $926,459 ($6,333,184 - $5,406,725) to the Company's claim for the reasons explained above.

CORPORATE INSURANCE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CORPORATE INSURANCE.

A. I recommended an FPFTY allowance of $6,265,643 for corporate insurance. This represents a decrease of $1,402,736 ($7,668,379 - $6,265,643) to the Company's updated claim as discussed in my direct testimony. My recommendation was

[46] I&E Statement No. 1, pp. 28-30.
[47] Peoples Statement No. 2-R, pp. 5 and 44.
[48] I&E Statement No. 1-SR, pp. 3-5.

equal to the Company's corrected HTY premiums claim and was based on disallowance of the 10.6% annual increase from the FTY and FPFTY claims.[49]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[50] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[51]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $6,265,643 for corporate insurance or a reduction of $1,402,736 ($7,668,379 - $6,265,643) to the Company's updated claim for the reasons explained above.

TRAVEL EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR TRAVEL EXPENSE.

A. I recommended an FPFTY allowance of $1,030,648 or a reduction of $108,657 ($1,139,305 - $1,030,648) to the Company's claim. My recommendation was based on removing the 5.14% annual increase from the FTY and FPFTY claims.[52]

[49] I&E Statement No. 1, pp. 33-34.
[50] Peoples Statement No. 2-R, pp. 5 and 23-24.
[51] I&E Statement No. 1-SR, pp. 3-5.
[52] I&E Statement No. 1, pp. 34-36.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[53] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[54]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $1,030,648 or a reduction of $108,657 ($1,139,305 - $1,030,648) to the Company's claim for the reasons explained above.

MEMBERSHIPS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR MEMBERSHIPS EXPENSE.

A. I recommended an FPFTY allowance of $1,062,518 or a reduction of $157,918 ($1,220,436 - $1,062,518) to the Company's claim. My recommendation was based on removing the 7.17% annual increase from the FTY and FPFTY claims.[55]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[56] I

[53] Peoples Statement No. 2-R, pp. 5 and 26.
[54] I&E Statement No. 1-SR, pp. 3-5.
[55] I&E Statement No. 1, pp. 36-37.
[56] Peoples Statement No. 2-R, pp. 5 and 28.

have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[57]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $1,062,518 or a reduction of $157,918 ($1,220,436 - $1,062,518) to the Company's claim for the reasons explained above.

LICENSES AND PERMITS

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR LICENSES AND PERMITS.

A. I recommended an FPFTY allowance of $704,167 or a reduction of $34,718 ($738,885 - $704,167) to the Company's claim. My recommendation was based on removing the Company's 2.44% annual increase from the FTY and FPFTY claims.[58]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[59] I have summarized his generalized arguments in the first section of this surrebuttal

[57] I&E Statement No. 1-SR, pp. 3-5.
[58] I&E Statement No. 1, pp. 38-39.
[59] Peoples Statement No. 2-R, pp. 5 and 30.

testimony in addition to my response to his arguments.[60]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $704,167 or a reduction of $34,718 ($738,885 - $704,167) to the Company's claim for the reasons explained above.

UTILITIES AND FUEL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR UTILITIES AND FUEL.

A. I recommended an FPFTY allowance of $2,849,895 or a reduction of $234,304 ($3,084,199 - $2,849,895) to the Company's claim. My recommendation is based on removing the Company's 4.03% annual increase from the FTY and FPFTY claims.[61]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[62] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[63]

60 I&E Statement No. 1-SR, pp. 3-5.
61 I&E Statement No. 1, pp. 40-41.
62 Peoples Statement No. 2-R, pp. 5 and 30.
63 I&E Statement No.1-SR, pp. 3-5.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $2,849,895 or a reduction of $234,304 ($3,084,199 - $2,849,895) to the Company's claim for the reasons explained above.

ADVERTISING EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR ADVERTISING EXPENSE.

A. I recommend an allowance of $259,746 for advertising expense, or a reduction of $1,198,286 ($1,458,032- $259,746) to Peoples' claim. My recommendation is based on the removal of advertising related to sponsorships and sports partnerships, as well as the removal of the inflation adjustment included in the Company's claim.[64]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. I have summarized his general inflation-related arguments in the first section of this surrebuttal testimony in addition to my response to these arguments.[65]

[64] I&E Statement No. 1, pp. 43-45.
[65] I&E Statement No. 1-SR, pp. 3-5.

Additionally, Mr. Wachter argues that the Company's sponsorships and sports partnerships create a direct benefit for customers and should therefore be allowed to be recovered through base rates. Mr. Wachter states that through these relationships, Peoples is able to share information about customer services and safety with large, concentrated groups of customers and with the public. Mr. Wachter claims that these costs fit the statutory requirements for recovery because they are "for the promotion of community service or economic development" as major league sports franchises are catalysts for economic development and are regional leaders in community service. He asserts that by sponsoring these franchises, Peoples helps to spur economic development and creates a positive community brand, making the region more attractive for businesses which directly benefits customers.[66]

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S CLAIMS REGARDING THE RECOVERABILITY OF THESE TYPES OF ADVERTISING EXPENSES?

A. While there may be some downstream benefits to customers through these sponsorships, these are not prudently incurred costs, and the costs far exceed any benefits to customers. Although these franchises have a positive economic impact on the region, they will continue to do so with or without the advertising dollars

[66] Peoples Statement No. 2-R, pp. 31-36.

from Peoples and the ratepayers should not be expected to pay for such promotions.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an allowance of $259,746 for advertising expense, or a reduction of $1,198,286 ($1,458,032 - $259,746) to Peoples' claim.

FLEET MAINTENANCE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR FLEET MAINTENANCE.

A. I recommended an FPFTY allowance of $746,507 or a reduction of $90,469 ($836,976 - $746,507) to the Company's claim. My recommendation was based on removing the Company's 5.89% annual increase from the FTY and FPFTY claims.[67]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[68] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[69]

[67] I&E Statement No. 1, pp. 45-47.
[68] Peoples Statement No. 2-R, pp. 5 and 36.
[69] I&E Statement No. 1-SR, pp. 3-5.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $746,507 or a reduction of $90,469 ($836,976 - $746,507) to the Company's claim for the reasons explained above.

MATERIALS AND SUPPLIES EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR MATERIALS AND SUPPLIES EXPENSE.

A. I recommended an FPFTY allowance of $10,183,664 or a reduction of $1,141,328 ($11,324,992 - $10,183,664) to the Company's claim. My recommendation was based on removing the Company's 5.45% annual increase from the FTY and FPFTY claims.[70]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.[71] I have summarized his generalized arguments in the first section of this surrebuttal testimony in addition to my response to his arguments.[72]

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $10,183,664 or a reduction

[70] I&E Statement No. 1, pp. 48-49.
[71] Peoples Statement No. 2-R, pp. 5 and 37.
[72] I&E Statement No. 1-SR, pp. 3-5.

of $1,141,328 ($11,324,992 - $10,183,664) to the Company's claim.

PAYMENT PROCESSING

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PAYMENT PROCESSING.

A. I recommended an FPFTY allowance of $1,923,122 or a reduction of $1,016,537 ($2,939,659 - $1,923,122) to the Company's claim. My recommendation is based on removing both the Company's 22.00% annual increase and the 2.70% inflation increase from the FTY and FPFTY claims.[73]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter cites national payment trends, advancements in digital payment technology, and the Company's expansion of electronic payment options as reasons to expect an increasing share of customers to utilize credit cards for utility bills.[74]

[73] I&E Statement No. 1, pp. 50-51.
[74] Peoples Statement No. 2-R, pp. 45-47.

Q. WHAT IS YOUR RESPONSE TO MR. WACHTER'S CLAIMS?

A. I do not dispute Mr. Wachter's claims regarding the popularity of electronic payments, but I dispute the method of projecting FPFTY expense used by the Company. Using an average of past increases is speculative given that at some point new customers signing up for electronic payment methods will top off, and compounding that with a general inflation increase is even more speculative. In the absence of known and measurable changes, HTY data should be used.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend an FPFTY allowance of $1,923,122 or a reduction of $1,016,537 ($2,939,659 - $1,923,122) to the Company's claim for the reasons stated above and in my direct testimony.

RATE CASE EXPENSE

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR RATE CASE EXPENSE.

A. I recommended that Peoples' rate case expense be normalized over a period of 56 months resulting in an annual expense of $411,429 [($1,920,000 ÷ 56 months) x 12 months], or a reduction of $548,571 ($960,000 - $411,429) to the Company's claim. My recommendation was based on a normalization period consistent with the Company's recent rate case filing frequency.[75]

[75] I&E Statement No. 1, pp. 54-58.

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Andrew Wachter disagrees with my recommendation.

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter discusses the extenuating circumstances leading to the long delays between the Company's 2012, 2019, and 2023 rate cases. Mr. Wachter also explains that Peoples' Long-Term Infrastructure Improvement Plan (LTIIP) will require the Company to file another rate case within two years. Mr. Wachter identifies these as significant factors that should not be ignored when calculating a normalization period for rate case expense.[76]

Q. ARE YOU PERSUADED BY MR. WACHTER'S ASSERTIONS THAT OTHER FACTORS SHOULD OUTWEIGH FILING HISTORY WHEN CALCULATING A NORMALIZATION PERIOD?

A. No. I disagree that a two-year normalization period is appropriate because it does not reflect the Company's recent filing frequency, which the Commission has cited as an essential element in determining the normalized level of rate case expense for ratemaking purposes. If the Company begins to consistently file more frequent rate cases, at that time its rate case filing history will reflect these frequent filings and allow the Company to shorten its normalization period. Furthermore, the estimated timing of the next base rate filing is speculative and

[76] Peoples Statement No. 2-R, pp. 37-41.

should not be relied upon to determine an appropriate rate case filing interval for rate case expense.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. No. I continue to recommend that Peoples' rate case expense be normalized over a period of 56 months resulting in an annual expense of $411,429 [($1,920,000 ÷ 56 months) x 12 months], or a reduction of $548,571 ($960,000 - $411,429) to the Company's claim.

UNIVERSAL SERVICE PROGRAM (USP) RIDER

Q. SUMMARIZE YOUR RECOMMENDATIONS IN DIRECT TESTIMONY REGARDING THE COMPANY'S PROPOSED CHANGES TO THE USP RIDER.

A. First, I recommended that the costs associated with the LIURP Compliance Specialist should be recovered through base rates rather than through the USP Rider. Second, I recommended that the defined credit as described by Peoples witness Carol Scanlon be treated as a regulatory liability and credited back to all customers rather than be applied as a credit to offset the USP Rider which would only benefit residential customers.[77]

[77] I&E Statement No. 1, pp. 58-60.

Q. DID ANY WITNESSES RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witnesses Rita Black, Andrew Wachter, and Carol Scanlon disagree with my recommendations.

Q. SUMMARIZE MS. BLACK'S RESPONSE.

A. Ms. Black states that all costs associated with the operation of the Company's universal service plan should be recoverable through riders that are designed to recover universal service costs. She also states that the LIURP budget is already included in the USP rider and that administrative costs, such as this LIURP specialist position, are permitted to be up to 15% of the annual LIURP budget and may include externally provided services as well as internal dedicated costs.[78]

Q. SUMMARIZE MR. WACHTER'S RESPONSE.

A. Mr. Wachter states that it is appropriate to recover labor costs for the LIURP specialist through the rider because they are solely associated with the universal service programs and would not be incurred without these programs. He also states that I&E has not provided a sufficient basis to deny this request other than a need for consistency to past practices.[79]

[78] Peoples Statement No. 10-R, pp. 9-10.
[79] Peoples Statement No. 2-R, pp. 48-49.

Q. DO YOU AGREE WITH MS. BLACK AND MR. WACHTER'S ASSERTIONS THAT USP-RELATED LABOR COSTS SHOULD BE RECOVERED THROUGH THE USP RIDER?

A. No.

Q. WHAT IS YOUR RESPONSE TO MS. BLACK AND MR. WACHTER CONCERNING LABOR COST RECOVERY VIA THE USP RIDER?

A. I reiterate my position from direct testimony that these costs should continue to be included in base rates. When these costs are included in a rider, the parties lose the ability to review these costs in the context of a rate case. It is important to have transparency around labor and labor-related costs like merit increases, promotions, bonuses, and employee benefits. If the parties are unable to review these costs in isolation and ensure no potential duplicative recovery, it hinders the parties' ability to verify that such costs are prudently incurred. Additionally, the Company could easily make unverified changes to such costs without the ability of the parties to review them for prudency if the labor costs are recovered through the USP rider.

Q. SUMMARIZE MS. SCANLON'S RESPONSE.

A. Ms. Scanlon asserts that, while the Company understands my stance on this matter, Peoples' proposal to partially offset universal service costs as a measure toward maintaining affordability for customers is an optimal approach in this

unique circumstance. She asserts that this measure would specifically target income eligible customers who are not participating in in Peoples' customer assistance program and customers with incomes that exceed eligibility but that still struggle to make ends meet. Finally, she states that if the Commission supports my position that all customers should receive the credit, Peoples proposes that the credit amount flow through the existing Tax Repairs Surcharge Credit.[80]

Q. WHAT IS YOUR RESPONSE TO MS. SCANLON?

A. I reiterate my position from direct testimony that because all customer classes contributed to the expenses paid, all customers should benefit from the credit. However, Ms. Scanlon and I agree that the credit amount should flow through the existing Tax Repairs Surcharge Credit to all customers that paid the tax in the first place. This is a fair way to treat the portion of the credit that is generated from the tax repairs deduction collar, or $1,000,000 before the gross-up for taxes.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION?

A. Yes. As I stated above, I agree that the credit generated from the tax repair deduction collar should flow through the Tax Repairs Surcharge Credit within 90 days following the effective date of new rates in the proceeding. However, I continue to recommend that the remaining $3,900,000 generated by the sales and use tax refund be treated as a regulatory liability but need to clarify the monetary

[80] Peoples Statement No. 3-R, pp. 3-5.

impact of this recommendation. The regulatory liability should be amortized over a period of four years, which is consistent with my recommended normalization period for rate case expense, but rounded down to the nearest year. This creates an annual amortization of ($975,000), a credit to ratepayers, over the four-year period ($3,900,000 / 4 years = $975,000). This refund results due to the over-recovery of a typical O&M related expense that would not logically flow through the Tax Repairs Surcharge Credit mechanism. I also recommend that Peoples be required to show an annual accounting of the progress for refunding this credit in its next base rate case filing.

Q. IS THERE ANYTHING ELSE YOU WOULD LIKE TO CLARIFY ABOUT YOUR POSITION REGARDING THE TAX REPAIR DEDUCTION?

A. Yes. The Company also proposed to refund an unknown amount (estimated at $15,000,000 or more) related to the tax repair deduction collar after the FPFTY, between January 1, 2028 and March 31, 2028 through the USP rider. I disagree with this treatment, because the money should be returned to all customers who paid the tax in the first place. I recommend that this amount be tracked throughout the year and returned via the Tax Repairs Surcharge Credit within 90 days of January 1, 2027. I also recommend that Peoples be required to show an annual accounting of the credit in its next base rate case filing.

CASH WORKING CAPITAL

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR CASH WORKING CAPITAL.

A. I recommended a total allowance of $45,745,893 or a decrease of $1,935,974 ($47,681,867 - $45,745,893) to the Company's claim. My CWC recommendation was based on my recommended adjustments to O&M expenses as discussed in direct testimony, as well as removing uncollectible expense from the CWC calculation.[81]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes. Peoples witness Anton Ribich partially agrees with my recommendation.

Q. SUMMARIZE MR. RIBICH'S RESPONSE.

A. Mr. Ribich agrees with my recommendation to remove uncollectible expense from the Company's CWC calculation. However, he disagrees with my other CWC recommendations due to the Company's rejection of my O&M expense adjustments. He provides an updated CWC claim of $46,932,677, that incorporates the Company's updated claims for building leases and corporate insurance and removes uncollectible expense.[82]

[81] I&E Statement No. 1, pp. 61-62.
[82] Peoples Statement No. 14-R, pp. 3-5.

Q. DO YOU AGREE WITH THE COMPANY'S UPDATED CLAIM?

A. No. I continue to recommend a reduction to the CWC claim based on the O&M adjustments I continue to recommend in this surrebuttal testimony.

Q. BASED ON THE ABOVE SURREBUTTAL TESTIMONY, WHAT IS YOUR UPDATED RECOMMENDED ALLOWANCE FOR CWC?

A. Reflecting all of I&E's recommended adjustments as discussed above, my updated recommendation for CWC is $45,570,205, or a reduction of $1,362,472 ($46,932,677 - $45,570,205) to the Company's updated claim. I calculated this using the Company's cash working capital workpapers and incorporating all my recommendations.[83]

Q. IS YOUR RECOMMENDED CWC ALLOWANCE A FINAL RECOMMENDATION?

A. No. All adjustments to the Company's claims for revenues, expenses, taxes, and rate base must be continually brought together for each operating unit in the Administrative Law Judge's Recommended Decision and again in the Commission's Final Order. This process, known as iteration, effectively prevents the determination of a precise calculation until all adjustments have been made to the Company's claims.

[83] I&E Exhibit No. 1-SR, Schedule 2.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-054

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference the Company's response to OCA-XII-15 and I&E-RE-52 regarding incentive compensation. Provide the following:

A. Total amount of long-term incentive compensation claimed in the FPFTY.

B. Identify the expense line on Peoples Exhibit No. 4, Schedule 1, p. 2 containing the long-term incentive compensation claim.

C. Identify which employees are eligible for long-term incentive compensation and whether they are employees of Peoples or a parent Company.

Answer: A&B - The total long-term incentive compensation claimed in the FPFTY is $5,494,393 broken down a follows:

$1,195,936 - PNG cost included in Peoples Vol I, Exhibit No. 4, Schedule No. 1 pg. 2 ln 2

$4,298,457 - Allocated from the parent company and included in Peoples Vol I, Exhibit No. 4, Schedule No. 1 pg. 2 ln 19

C - Long-term incentive eligibility is determined at the position level based on compensation market data and the prevalence of LTI programs for comparable roles within the utility industry. Positions are selected to ensure competitive alignment and to support retention.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel, and my business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT BACKGROUND?

A. An outline of my education and employment background is set forth in the attached Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires balancing the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to review the base rate filing of Peoples Natural Gas Company LLC (Peoples or Company), and make recommendations regarding the Company's rate of return, including capital structure, cost of long-term debt, the cost of equity, and the overall fair rate of return for the fully projected future test year (FPFTY) ending December 31, 2027. Additionally, I am recommending the effective date of new rates beginning January 1, 2027 as opposed to the Company's claimed new rates effective date of December 27, 2026.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 2 contains schedules that support my direct testimony.

BACKGROUND

Q. WHAT IS THE GENERAL DEFINITION OF RATE OF RETURN IN THE CONTEXT OF A BASE RATE CASE?

A. Rate of return is one of the components of the revenue requirement formula. Rate of return is the amount of revenue an investment generates in the form of net income. It is typically expressed as a percentage of the amount of an asset base at a particular point in time, which in base rate proceedings, is the projected rate base balance at the end of the test year and in this case the end of the FPFTY.

Q. WHAT IS THE REVENUE REQUIREMENT FORMULA?

A. The revenue requirement formula used in base rate cases is as follows:

RR = E + D + T + (RB x ROR)

Where:

RR	=	Revenue Requirement
E	=	Operating Expenses
D	=	Depreciation Expense
T	=	Taxes
RB	=	Rate Base
ROR	=	Overall Rate of Return

In the above formula, the rate of return is expressed as a percentage. The calculation of that percentage is independent of the determination of the appropriate rate base value for ratemaking purposes. As such, the appropriate total dollar return is dependent upon the proper computation of the rate of return and the proper valuation of the company's rate base.

Q. WHAT CONSTITUTES A FAIR AND REASONABLE OVERALL RATE OF RETURN?

A. A fair and reasonable overall rate of return is one that will allow the utility an *opportunity* to recover those costs, which are reasonable and prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect. The Commission has the authority to determine

the fair revenue requirement and rate of return, which the utility has the opportunity to earn, but is not guaranteed to earn.

The *Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923), and the *Federal Power Commission et al v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944) cases set forth the principles that are generally accepted by regulators throughout the country as the appropriate criteria for measuring a fair rate of return:

1. A utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.
2. A utility is entitled to a return level reasonably sufficient to assure financial soundness.
3. A utility is entitled to a return sufficient to maintain and support its credit and raise necessary capital.
4. A fair return can change (increase or decrease) along with economic conditions and capital markets.

Q. EXPLAIN HOW THE OVERALL RATE OF RETURN IS TRADITIONALLY CALCULATED IN BASE RATE PROCEEDINGS.

A. In base rate proceedings, the overall rate of return is traditionally calculated using the weighted average cost of capital method. To calculate the weighted average cost of capital, a company's capital structure must first be determined by

comparing the percentage of each capitalization component, which has financed rate base, to total capital. In Peoples' case, the capital components consist of long-term debt and common equity. Next, the effective cost rate of each capital structure component must be determined. The historical component of the debt cost rate can be computed accurately, and any future debt issuances are based on estimates. The cost rate of common equity is not fixed and is more difficult to measure. Because of this difficulty, a proxy group is used as discussed later in this testimony. Next, each capital structure component percentage is multiplied by its corresponding effective cost rate to determine the weighted capital component cost rate. The I&E table in the *"I&E Position"* section below demonstrates the interaction of each capital structure component and its corresponding effective cost rate. Finally, the sum of the weighted cost rates produces the overall rate of return. This overall rate of return is multiplied by the rate base to determine the return portion of a company's revenue requirement.

COMPANY'S RATE OF RETURN CLAIM

Q. WHO IS THE COMPANY'S RATE OF RETURN WITNESS?

A. Peoples witness Jennifer E. Nelson, Vice President at Concentric Energy Advisors, is the primary witness addressing the cost of common equity and overall rate of return for the Company.[1] Ms. Nelson provides her analysis for the proxy group selection, capital structure, cost of long-term debt, cost of common equity,

[1] Peoples Statement No. 15.

and the overall rate of return. Additionally, Micheal Huwar, President of Peoples and Peoples' direct parent, PNG Companies LLC (PNG), provides testimony regarding the Company's management effectiveness or performance to support the Company's claim for management performance reward or adder of 0.25% to the cost of equity.[2]

Q. PLEASE SUMMARIZE THE COMPANY'S RATE OF RETURN CLAIMS.

A. Ms. Nelson recommends the following rate of return for the Company based on the FPFTY ending December 31, 2027:[3]

Peoples Natural Gas Company, LLC Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	45.53%	4.61%	2.10%
Common Equity	54.47%	11.25%	6.13%
Total	**100.00%**		**8.23%**

I&E POSITION

Q. PLEASE SUMMARIZE YOUR RATE OF RETURN RECOMMENDATION FOR PEOPLES.

A. I recommend the following rate of return for the Company:[4]

[2] Peoples Statement No. 1.
[3] Peoples Statement No. 15, p. 6, lines 1-2.
[4] I&E Exhibit No. 2, Schedule 1.

Peoples Natural Gas Company, LLC Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	50.00%	4.61%	2.31%
Common Equity	50.00%	10.20%	5.10%
Total	**100.00%**		**7.41%**

Q. HOW DID YOU CALCULATE YOUR RECOMMENDED RETURN ON EQUITY (ROE)?

A. My recommended return on equity of 10.20% for Peoples is based on the average of the following results:

Discounted Cash Flow (DCF) Model	11.33%
Average of I&E calculated traditional Capital Asset Pricing Model (CAPM) Result and Kroll CAPM Result	9.57%
National Average of Gas Distribution Utilities Authorized ROE Complied by S&P Global	9.69%
Average ROE ((11.33% + 9.57% + 9.69%) ÷ 3)	**10.20%**

As summarized above and explained later, my ROE recommendation is calculated using the DCF method, the average of two variations of the CAPM method, and the recent national average authorized return on common equity for rate cases involving gas distribution utilities.

PROXY GROUP

Q. WHAT IS A PROXY GROUP AS USED IN BASE RATE CASES?

A. A proxy group is a set of companies that have similar traits in comparison to the subject utility. This group of companies acts as a benchmark for determining the subject utility's rate of return in a base rate case.

Q. WHAT ARE THE REASONS FOR USING A PROXY GROUP?

A. A proxy group's cost of equity is used as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility with the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties.

A proxy group is typically utilized since the use of data exclusively from one company may be less reliable. The lower reliability occurs because the data for one company may be subject to events that can cause short-term anomalies in the marketplace. The rate of return on common equity for a single company could become distorted in these circumstances and would therefore not be representative of similarly situated companies. Therefore, a proxy group has the effect of smoothing out potential anomalies associated with a single company.

Q. WHAT CRITERIA DID YOU USE IN SELECTING YOUR GAS UTILITY PROXY GROUP?

A. The criteria for my proxy group are designed to select companies that are

representative of the Company. I applied the following criteria to the Value Line Investment Survey Industry Classification as a "Natural Gas Utility" company group:

1. Fifty percent or more of the company's revenue must be generated from the regulated gas utility industry.
2. The company's stock must be publicly traded.
3. Investment information for the company must be available from more than one source, which includes Value Line.
4. The company must not be currently involved in an announced merger or the target of an acquisition.
5. The company must have four consecutive years of historic earnings data.
6. The company must be operating in a state that has a deregulated gas utility market.

Q. WHAT CRITERIA DID MS. NELSON USE IN SELECTING HER GAS PROXY GROUP COMPANIES?

A. Ms. Nelson determined her proxy group of seven gas companies by using Value Line Investment Survey Industry Classification as a "Natural Gas Utility" company group and applied the following criteria:[5]

[5] Peoples Statement No. 15, p. 18, line 12 through p. 19, line 6.

1. Pays quarterly cash dividends that have not been reduced or omitted in the last two years.
2. Maintains an investment grade long-term issuer rating (BBB- or higher from S&P or Baa3 or higher from Moody's) from both S&P and Moody's.
3. Is consistently covered by more than one equity analyst.
4. Has positive earnings growth rates published by at least two of the following sources: Value Line Investment Survey (Value Line), S&P Capital IQ (S&P), and Zacks Investment Research (Zacks).
5. Regulated net operating income must make up the majority of the consolidated company's net operating income, on average, for the three years ended 2024.
6. Natural gas distribution net operating income must make up a majority of the consolidated company's net operating income, on average, for the three years ended 2024.
7. Has not had a recent significant merger activity or transaction or a recent significant financial event that could affect its market data or financial condition.

Ms. Nelson excluded Peoples' parent company, Essential Utilities, Inc., for not meeting with her screening criterion no. 6 and circularity concerns.[6]

[6] Peoples Statement No. 15, p. 19, lines 8-11.

Q. WHAT PROXY GROUP DID YOU USE IN YOUR ANALYSIS?

A. I include the following eight companies in my proxy group:

Company	Stock Ticker
Atmos Energy Corp.	ATO
Chesapeake Utilities Corp.	CPK
New Jersey Resources Corp.	NJR
NiSource, Inc.	NI
Northwest Natural Holding Co.	NWN
One Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire, Inc.	SR

Q. WHAT PROXY GROUP DID MS. NELSON USE IN HER ANALYSIS?

A. Ms. Nelson included the following seven companies in her Gas Group:[7]

Company	Stock Ticker
Atmos Energy Corp.	ATO
New Jersey Resources Corp.	NJR
NiSource, Inc.	NI
Northwest Natural Holding Co.	NWN
One Gas, Inc.	OGS
Southwest Gas Holdings, Inc.	SWX
Spire, Inc.	SR

[7] Peoples Statement No. 15, p. 20, line 1.

Q. DO YOU AGREE WITH MS. NELSON'S GAS PROXY GROUP?

A. Not entirely. While we do have seven companies that match, I include Chesapeake Utilities Corporation and Ms. Nelson does not.

Q. PLEASE EXPLAIN WHY MS. NELSON EXCLUDED CHESAPEAKE UTILITIES CORP. FROM HER PROXY GROUP.

A. As stated above, Ms. Nelson has excluded Chesapeake Utilities Corp. from her proxy group because it does not meet with her proxy group selection criteria.

CAPITAL STRUCTURE

Q. WHAT IS A CAPITAL STRUCTURE?

A. A capital structure represents how a firm has financed its rate base with different sources of funds. The primary funding sources are long-term debt and common equity. A capital structure may also include preferred stock and/or short-term debt, which is not the case for the Company.

Q. WHAT IS THE CLAIMED CAPITAL STRUCTURE USED BY THE COMPANY?

A. Peoples is claiming a forecasted capital structure for the FPFTY, which is summarized in the table below:[8]

[8] Peoples Statement No. 15, p. 56, lines 17-18.

Type of Capital	Ratio
Long-Term Debt	45.53%
Common Equity	54.47%
Total	**100.00%**

Q. WHAT IS THE BASIS FOR THE COMPANY'S CLAIMED CAPITAL STRUCTURE?

A. Ms. Nelson explains that the requested common equity ratio of 54.47% is within the range of actual and authorized equity ratios for its peers. Therefore, she claims that the Company's proposed capital structure with 54.47% common equity and 45.53% long-term debt is reasonable and should be approved for ratemaking purposes.[9]

Q. HAS THE COMMISSION COMMENTED ON PEOPLES' CLAIMED CAPITAL STRUCTURE?

A. Yes. Vice Chair Barrow expressed concern regarding the Company's claimed overall rate of return and return on equity as well as the capital structure and its financial impact on customers. In her statement at the public meeting held on April 16, 2026, she stated, "I urge the parties to take a critical look at the Company's requested rate of return and ROE as well as the capital structure

[9] Peoples Statement No. 15, p. 60, lines 5-8 and Peoples Exhibit JEN-10 and JEN-12.

(common equity ratio and debt capital) to ensure reasonableness. Deviations in each of these items translate into millions of dollars charged to customers of all rate classes."[10]

Additionally, Vice Chair Barrow previously commented on Columbia Gas of Pennsylvania, Inc.'s (Columbia Gas) requested capital structure of 54.40% equity and 45.60% long-debt. The Office of Consumer Advocate (OCA) and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA) argued in favor of a hypothetical 50/50 capital structure ratio, citing their proxy group's average capital structure was 45% equity and 55% debt. Vice Chair Barrow stated that the discrepancy between the proxy group and Columbia Gas' capital structure made it necessary for an adjustment to the Company's capital structure, and that a 50/50 capital structure "is a better representation of the Company's **actual** financial risk and would have resulted in millions of dollars in reduced revenue requirement for the Company and resultant lower rates for Columbia Gas' customers."[11]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S CAPITAL STRUCTURE?

A. I recommend using a capital structure with long-term debt of 50.00% and common equity of 50.00% as presented in the I&E recommendation.

[10] I&E Exhibit No. 2, Schedule 2, p. 1.
[11] I&E Exhibit No. 2, Schedule 2, pp. 2-5.

Q. WHAT IS THE BASIS FOR YOUR CAPITAL STRUCTURE RECOMMENDATION?

A. A capital structure of 50% long-term debt and 50% common equity represents a reasonable ratio when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers in this proceeding. Limiting a company's capital structure from becoming too equity heavy is reasonable and necessary for a fair ratemaking process. Implementing a capital structure with 50% long-term debt and 50% common equity is currently in the interest of ratepayers considering the increased cost of living and resultant financial challenges faced by ratepayers while utility rates are ballooning and Peoples and its parent companies' profits are improving as discussed in more detail below. Therefore, it is appropriate and essential at this time to implement a hypothetical capital structure (50/50) for ratemaking purposes, which would help to strike a balance between rewarding the Company while also reducing the costs that would be passed on to ratepayers. Peoples likely has access to a cheaper long-term borrowing source as compared to the equity cost to satisfy the 4.47% (54.47% - 50.00%) shortfall in the claimed common equity ratio of 54.47%.

Importantly, my recommended 50/50 capital structure is above or very close to the overall five-year average capital structure (51.75% long-term debt and 47.24% common equity) of my proxy group companies.[12] Considering the rate impact of an equity heavy capital structure, it is inappropriate and unreasonable to

[12] I&E Exhibit No. 2, Schedule 2, pp. 6-7.

allow the Company's claimed 54.47% common equity ratio for ratemaking purposes, which is higher by 7.23% (54.47% - 47.24%) than my proxy group's average equity ratio.

Furthermore, at the Peoples' public input hearing on June 10, 2026, Mark Szybist, Special Counsel (Energy Affordability) for Governor Josh Shapiro filed comments on Peoples' base rate filing, stating:[13]

> Peoples has not proposed to raise capital in the most cost-effective form available. Relatively low-cost debt—not high-cost equity—should normally represent a clear majority of a utility's proposed ratemaking capital structure. And when a distribution utility is owned by a holding company, its equity share should be no greater than its parent's, absent extraordinary justification. Although Peoples' ultimate parent company, Essential Utilities, Inc. ("Essential"), employs a capital structure of 54.9 percent debt and 45.1 percent equity, Peoples propose a capital structure that is practically the inverse: 54.5 percent common equity and 45.5 percent long-term debt.

The sheer discrepancy identified in this statement regarding the diversion between how Peoples' parent company, Essential, finances its operations at its choice and what it has claimed for the subsidiary company in this filing lends further support to my recommendation to utilize a 50/50 capital structure in this proceeding.

[13] I&E Exhibit No. 2, Schedule 2, pp. 8-16.

Q. HAVE YOU CONSIDERED WHAT CAPITAL STRUCTURES ARE PROJECTED TO BE FOR THE GAS UTILITY INDUSTRY IN THE NEAR FUTURE?

A. Yes. According to Value Line's 2027 estimates, the projected capital structures for my proxy group companies are as follows:[14]

Value Line 2027 Capital Structure Projections			
Company	**Stock Ticker**	**Long-Term Debt Ratio**	**Common Equity Ratio**
Atmos Energy Corp.	ATO	40.00%	60.00%
Chesapeake Utilities Corp.	CPK	45.00%	55.00%
New Jersey Resources Corp.	NJR	55.50%	44.50%
NiSource Inc.	NI	58.50%	41.50%
Northwest Natural Gas Co.	NWN	61.00%	39.00%
One Gas Inc.	OGS	40.00%	60.00%
Southwest Gas Holdings, Inc.	SWX	55.00%	45.00%
Spire Inc.	SR	60.00%	40.00%
Average		**51.88%**	**48.13%**

These future projections are consistent with my proxy group's historical five-year average capital structure of 47.24% equity and 51.75% long-term debt.[15]

[14] Value Line Reports, May 22, 2026.
[15] I&E Exhibit No. 2, Schedule 2, pp. 6-7.

Q. WHAT IS THE RECENT NATIONAL AVERAGE AUTHORIZED CAPITAL STRUCTURE FOR GAS DISTRIBUTION UTILITIES ACROSS THE U.S.?

A. The report issued by Regulatory Research Associates, a group within S&P Global Market Intelligence, shows that the average authorized equity ratio for gas utility rate cases from January 2025 through 2026 was 51.64%.[16] In addition, for perspective, the average authorized return on equity in the same time frame was 9.69%. These equity ratio and authorized return figures are both well below what Peoples is requesting in this proceeding.

Q. WHAT ARE YOUR FINAL COMMENTS REGARDING PEOPLES' EQUITY HEAVY CAPITAL STRUCTURE IN THIS PROCEEDING?

A. Peoples' claimed capital structure of 54.47% equity and 45.53% debt is considerably more equity-heavy than the proxy group's five-year averages, Value Line's 2027 projections, and the recent national authorized capital structures for gas utilities.

The table below illustrates the cost savings to ratepayers if the Company were to employ a reasonable capital structure with 50% long-term debt and 50% common equity in its cost of capital using the Company's claimed return on equity, debt cost, and rate base:

[16] I&E Exhibit No. 2, Schedule 2, pp. 17-18.

PEOPLES NATURAL GAS COMPANY, LLC As-filed Capital Structure and Cost Rates			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	45.53%	4.61%	2.10%
Common Equity	54.47%	11.25%	6.13%
Total	**100.00%**		**8.23%**
50/50 Capital Structure and Cost Rates			
Long-Term Debt	50.00%	4.61%	2.30%
Common Equity	50.00%	11.25%	5.62%
Total	**100.00%**		**7.92%**
Difference in the Overall Rate of Return (8.23% - 7.92%)			0.31%
Impact Prior to Gross Up (Claimed Rate Base* x Difference in the Overall Rate of Return ($5,760,803,876 x 0.0031))			$17,858,492
Gross Revenue Conversion Factor**			1.28127517
Total Savings to Ratepayers ($17,858,492 x 1.28127517)			**$22,881,642**

* Peoples Exhibit No. 2, Schedule 4, p. 2.
** Peoples Exhibit No. 2, Schedule 4, p. 4.

In this example, if the Company were to employ a 50/50 capital structure and not change the cost of debt or requested return on equity, the cost savings to ratepayers would be $22,881,642, which is approximately 14% of the requested total revenue increase of $163,171,938.

COST OF LONG-TERM DEBT

Q. WHAT IS THE COMPANY'S CLAIM FOR THE LONG-TERM DEBT COST RATE?

A. The Company is claiming a long-term debt cost rate of 4.61% for the FPFTY.[17]

Q. WHAT IS YOUR RECOMMENDATION FOR THE COMPANY'S LONG-TERM DEBT COST RATE?

A. I recommend using the Company's claimed long-term debt cost rate of 4.61% for the FPFTY.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION TO USE THE COMPANY'S LONG-TERM DEBT COST RATE?

A. I accept the Company's claimed debt cost rate because it falls within my proxy group's implied long-term debt cost range of 2.09% to 6.54%, with an average implied long-term debt cost rate of 5.02% for 2025.[18] The Company's cost rate of long-term debt is also below the Mergent Bond Record average yield of 5.75% for the period May 2025 through April 2026 for A-rated public utility bonds.[19] I recommend that the Company's claimed cost rate of long-term debt be used since it is reasonable and falls within the metrics described above.

[17] Peoples Statement No. 15, p. 61, lines 1-3.
[18] I&E Exhibit No. 2, Schedule 3.
[19] I&E Exhibit No. 2, Schedule 3.

COST OF COMMON EQUITY

Common Methods

Q. WHAT METHODS ARE COMMONLY PRESENTED BY UTILITIES IN DETERMINING THE COST OF COMMON EQUITY?

A. Four methods commonly presented to estimate the cost of common equity are the DCF, CAPM, Risk Premium (RP) Method, and the Comparable Earnings (CE) Method.

Q. WHAT IS THE THEORETICAL BASIS FOR THE DCF METHOD?

A. The DCF method is the "dividend discount model" of financial theory, which maintains that the value (price) of any security or commodity is the discounted present value of all future cash flows. The DCF method assumes that investors evaluate stocks in the traditional economic framework, which maintains that the value of a financial asset is determined by its earning power, or its ability to generate future cash flows. The DCF method is also considered a forward-looking model to estimate the cost of common equity.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CAPM?

A. The CAPM describes the relationship between a stock's investment risk and its market rate of return. It identifies the rate of return investors expect so that it is comparable with returns of other stocks of similar risk. This method hypothesizes that the investor-required return on a company's stock is equal to the return on a

"risk free" asset plus an equity premium reflecting the company's investment risk. In the CAPM, two types of risk are associated with a stock: (1) firm-specific risk (unsystematic risk); and (2) market risk (systematic risk), which is measured by a firm's beta. The CAPM allows for investors to receive a return only for bearing systematic risk. Unsystematic risk is assumed to be diversified away, and therefore, does not earn a return.

Q. WHAT IS THE THEORETICAL BASIS FOR THE RP METHOD?

A. The theoretical basis for the RP method is a simplified version of the CAPM. The RP method's theory is that common stock is riskier than debt, thus, investors require a higher expected return on stocks than bonds. In the RP approach, the cost of equity is made up of the cost of debt and a risk premium. While the CAPM uses the market risk premium, it also directly measures the systematic risk of a company using beta. The RP method does not measure the specific risk of a company.

Q. WHAT IS THE THEORETICAL BASIS FOR THE CE METHOD?

A. The CE method utilizes the concept of opportunity cost. This means that investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Unlike the DCF, CAPM, and the RP methods, the CE method is not market-based and relies upon historic accounting data. Like the RP method, the CE method does not measure the specific risk of a

company. The most problematic issue with the CE method is determining what constitutes comparable companies.

Q. WHAT METHODS DO YOU RECOMMEND TO DETERMINE AN APPROPRIATE COST OF COMMON EQUITY FOR THE COMPANY?

A. I recommend using a combination of methods to determine the appropriate cost of common equity. I have employed the DCF, CAPM (traditional and Kroll), and have incorporated the recent national average authorized return on equity for gas distribution companies in rate cases concluded in 2025 through 2026. I have used the DCF and CAPM because they have the most wide-spread regulatory acceptance, and the Commission has more recently based its ROE decisions on a combination of the DCF and composite CAPM methods. Additionally, the average authorized returns for gas distribution utilities from across the nation in rate case decisions should be considered, as it aligns with the guidance derived from the *Hope* and *Bluefield* cases that the subject utility is entitled to a return similar to that being earned by comparable enterprises.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE DCF IN YOUR ANALYSIS TO HELP DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I have used the DCF for a variety of reasons. First, the DCF is appealing to investors as it is based upon the concept that the receipt of dividends in addition to

the expected appreciation is the total return requirement determined by the market.[20] Second, the use of a growth rate and expected dividend yield are also strengths of the DCF, as this recognizes the time value of money and is forward-looking. Third, the use of the utility's own, or in this case, the proxy group's stock prices and growth rates directly in the calculation make the DCF industry and company specific. Finally, current inflationary and economic trends are most certainly reflected in a stock's price, which is used in determining the dividend yield, and by analysts who generate forecasted earnings growth rates. Therefore, the DCF contains the most up-to-date projected information of any model and is the preferred method for determining the rate of return for the current economic market because it measures the cost of equity directly.

Q. PLEASE EXPLAIN WHY YOU CHOSE TO USE THE CAPM IN YOUR ANALYSIS TO DETERMINE YOUR RECOMMENDED RETURN ON EQUITY.

A. I have included a CAPM analysis in my recommendation as it has been the Commission's recent desire to employ more than one ROE methodology. I chose to use both the CAPM and the DCF because they include inputs that allow the results to be specific to the utility industry. The CAPM is based on the performance of U.S. Treasury bonds and the performance of the market as measured through the S&P 500 and is company-specific only through the use of

[20] David C. Parcell, "The Cost of Capital - A Practitioner's Guide," 2020 Edition, p. 153.

beta. Beta reflects a stock's volatility relative to the overall market, thereby incorporating an industry-specific aspect to the CAPM, but only as a measure of how reactive the industry is compared to the market as a whole. Although changes in the utility industry are more likely to be accurately reflected in the DCF, which uses the companies' actual prices, dividends, and growth rates, I have included the results of my CAPM analysis because changes in the market, whether as a whole or specific to the utility industry, can affect the outcome of each method in different ways.

Q. PLEASE EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE RP METHOD FROM YOUR ANALYSIS.

A. The RP method is excluded because it is a simplified version of the CAPM. The RP method has a number of underlying assumptions and the most critical one, as well as the most disputed one, is the assumption that the equity risk premium is constant over the time.[21] More importantly, unlike the CAPM, the RP method does not recognize company-specific risk through beta.

Q. EXPLAIN WHY YOU HAVE CHOSEN TO EXCLUDE THE CE METHOD IN YOUR ANALYSIS.

A. The CE method is excluded because the choice of which companies are comparable is highly subjective. Moreover, its historical usage in this regulatory

[21] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, pp. 167-168.

forum has been minimal.

SUMMARY OF THE COMPANY'S RESULTS

Q. WHAT ARE THE RESULTS OF THE COMPANY'S COST OF EQUITY ANALYSIS?

A. Ms. Nelson used the DCF, CAPM, and the Bond Yield Plus Risk Premium (BYPRP) methods in analyzing the Company's cost of equity. She used both the constant growth and quarterly growth forms of the DCF, as well as the traditional CAPM and Empirical Capital Asset Pricing Model (ECAPM) in forming her recommendation. Ms. Nelson applied these methods using her proxy group of regulated gas utilities. A summary of her analysis results for each method and the average of each method is shown in the table below:[22]

[22] Peoples Statement No. 15, p. 4, line 13 through p. 5, line 1.

Method	ROE Estimate
Constant Growth DCF	10.79%
Quarterly Growth DCF	11.03%
(a) Average of DCF Results	**10.91%**
Forward CAPM	13.09%
Forward ECAPM	13.91%
Historical CAPM	10.11%
Historical ECAPM	10.64%
(b) Average of CAPM Results	**11.94%**
(c) Risk Premium Result	**10.24%**
(d) 3-Model Average ((a+b+c)÷3)	**11.03%**
Range of Model Results (rounded)	10.20% – 11.90%
Base ROE Recommendation	**11.00%**
Management Effectiveness Adder	0.25%
Final ROR Request	**11.25%**

Finally, Ms. Nelson states that she considered the planned capital expenditures, regulatory environment, large customers bypass risk, flotation costs, financial risk and capital market environment in her cost of equity recommendation. Although she does not make or indicate a specific corresponding adjustment to her proposed cost of equity for any of these factors.[23] Ultimately, Ms. Nelson's opines that a base ROE of 11.00% before adjusting for management performance is a reasonable and conservative estimate for Peoples.[24]

[23] Peoples Statement No. 15, p. 6, lines 11-19.
[24] Peoples Statement No. 15, p. 7, lines 1-3.

I&E RECOMMENDATION

Q. WHAT IS YOUR RECOMMENDED COST OF COMMON EQUITY FOR THE COMPANY?

A. Based upon my analysis, I recommend a cost of common equity of 10.20%.[25] It is worth noting that this recommendation is within the ROE range (10.20% - 11.90%) that Ms. Nelson has presented as part of her recommendation.

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. As explained above and discussed in further detail below, my recommendation is based on the use of the DCF, two versions of the CAPM, and the recent average national authorized return on equity for gas distribution companies.

Discounted Cash Flow

Q. PLEASE EXPLAIN YOUR DCF ANALYSIS.

A. My analysis employs the constant growth DCF model as portrayed in the following formula:

$$K = D_1/P_0 + g$$

Where:

K = Cost of equity

D_1 = Dividend expected during the year

P_0 = Current price of the stock

[25] I&E Exhibit No. 2, Schedule 1.

g = Expected growth rate

When a forecast of D_1 is not available, D_0 (the current dividend) must be adjusted by one half of the expected growth rate to account for changes in the dividend paid in period one. As forecasts for each company in my proxy group were available from Value Line, no dividends were adjusted for the purpose of my analysis.

Q. PLEASE EXPLAIN HOW YOU DEVELOPED THE DIVIDEND YIELDS USED IN YOUR DCF ANALYSIS.

A. A representative dividend yield must be calculated over a time frame that avoids the problems of both short-term anomalies and stale data series. For my DCF analysis, the dividend yield calculation places equal emphasis on the most recent spot and the 52-week average dividend yields. The following table summarizes my dividend yield computations for the proxy group:[26]

Proxy Group - Average Dividend Yields	
(a) Spot Dividend Yield	3.13%
(b) 52-week Average Dividend Yield	3.32%
(c) **Average** ((a +b) ÷ 2)	**3.23%**

[26] I&E Exhibit No. 2, Schedule 4.

Q. WHAT INFORMATION DID YOU RELY UPON TO DETERMINE YOUR EXPECTED GROWTH RATE?

A. I have used five-year earnings per share projected growth rate estimates from S&P, Zacks, and Value Line.

Q. WHAT WERE THE RESULTS OF YOUR FORECASTED EARNINGS GROWTH RATES?

A. The expected average growth rates for the proxy group ranged from 6.45% to 11.25% with an overall average of 8.27%.[27] For the purpose of my DCF analysis, I eliminated Southwest Gas Holdings' outlier S&P growth estimate of 12.59% to determine a new adjusted average growth rate of 8.10% for use in my DCF analysis.[28]

Q. WHY DID YOU ELIMINATE SOUTHWEST GAS HOLDINGS' S&P PROJECTED GROWTH RATE?

A. While the use of a proxy group largely smooths out various anomalies, S&P's growth projection for Southwest Gas Holdings is extremely inconsistent and would have an unreasonable and unwarranted impact on my DCF analysis. The S&P growth estimate of 12.59% is higher by 52.24% than the originally calculated 8.27% overall average growth rate and greater than two standard deviations over

[27] I&E Exhibit No. 2, Schedule 5.
[28] I&E Exhibit No. 2, Schedule 5.

the average growth rate. This inconsistency would adversely affect my recommendation for the Company's cost of common equity by creating an unjustified increase in return on equity and consequently raising ratepayers' rates. Such an unjustified increase would be harmful to ratepayers and would not be in the public interest. Additionally, I was unable to find any explanation or justification of why this estimate was so high, while Zacks growth estimate is 9.90% and Value Line does not provide a growth estimate for Southwest Gas Holdings.

Q. WHAT IS THE RESULT OF YOUR DCF ANALYSIS BASED ON YOUR RECOMMENDED DIVIDEND YIELD AND GROWTH RATE?

A. The result of my DCF analysis is 11.33%, which is calculated as follows:[29]

K	$=$	D_1/P_0	$+$	g
11.33%	=	3.23%	+	8.10%

<u>Capital Asset Pricing Model</u>

Q. PLEASE EXPLAIN YOUR CAPM ANALYSIS.

A. My analysis employs the traditional CAPM as portrayed in the following formula:

$$K = R_f + \beta(R_m - R_f)$$

[29] I&E Exhibit No. 2, Schedule 6.

Where:

K	=	Cost of equity
R_f	=	Risk-free rate of return
R_m	=	Expected rate of return on the overall stock market
β	=	Beta measures the systematic risk of an asset
$R_m - R_f$	=	Equity Risk Premium (ERP)

Q. WHAT IS BETA AS EMPLOYED IN YOUR CAPM ANALYSIS?

A. Beta is a measure of the systematic risk of a stock in relation to the rest of the stock market. A stock's beta is estimated by calculating the linear regression of a stock's return against the return on the overall stock market. The beta of a stock with a price pattern identical to that of the overall stock market will equal one. A stock with a price movement that is greater than the overall stock market will have a beta that is greater than one and would be described as having more investment risk than the market. Conversely, a stock with a price movement that is less than the overall stock market will have a beta of less than one and would be described as having less investment risk than the overall stock market.

Q. HOW DID YOU DETERMINE BETA FOR YOUR CAPM ANALYSIS?

A. In estimating an equity cost rate for my proxy group of eight companies, I used the average of the betas for the companies as provided in the Value Line Investment

Survey. The average beta for my proxy group is 0.77.[30]

Q. WHAT RISK-FREE RATE OF RETURN HAVE YOU USED FOR YOUR FORECASTED CAPM ANALYSIS?

A. I used the risk-free rate of return (R_f) from the projected yield on 10-year Treasury Notes. While the yield on the short-term T-Bill is a more theoretically correct parameter to represent a risk-free rate of return, it can be extremely volatile. The volatility of short-term T-Bills is directly influenced by Federal Reserve policy. At the other extreme, the 30-year Treasury Bond exhibits more stability but is not risk-free. Long-term Treasury Bonds have substantial maturity risk associated with market risk and the risk of unexpected inflation. Long-term treasuries normally offer higher yields to compensate investors for these risks. As a result, I used the yield on the 10-year Treasury Note because it mitigates the shortcomings of the other two alternatives. Additionally, the Commission has historically agreed with I&E and recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return.[31]

---

[30] I&E Exhibit No. 2, Schedule 7.

[31] *Pa. PUC v. UGI Utilities, Inc. - Electric Division*, Docket No. R-2017-2640058 (Order Entered October 25, 2018). *See generally* Disposition of Capital Asset Pricing Model (CAPM), p. 99; *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket Nos. R-2021-3027385 & R-2021-3027386, p. 154 (Order Entered May 16, 2022); *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258 (Order Entered January 18, 2024). *See generally* Disposition of Cost of Common Equity, pp. 107-108; *Pa. PUC v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 & R-2023-3043190 (Order Entered July 22, 2024). *See generally* Disposition of Capital Asset Pricing Model (CAPM), pp. 171-172, and *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). See generally Rate of Return on Common Equity - Disposition, p. 234.

The forecasted yield on the 10-year Treasury Note, as seen in Blue Chip Financial Forecasts, remains steady at 4.20% - 4.30% from the third quarter of 2026 to the third quarter of 2027, and it is forecasted to be 4.20% for 2027-2031. For my CAPM analysis, I used 4.23%, which is the average of all the yield forecasts I observed.[32]

Q. HOW DID YOU DETERMINE THE RETURN ON THE OVERALL STOCK MARKET IN YOUR FORECASTED CAPM ANALYSIS?

A. To arrive at a representative expected return on the overall stock market, I observed Value Line's 1700 stocks and the historical returns of the S&P 500. Value Line expects its universe of approximately 1700 stocks to have an average yearly return of 11.83% over the next three to five years based on a forecasted dividend yield of 2.10% and a yearly index appreciation of 45%.[33] The S&P 500 Index has had an average return of 12.35% over the past 100 years (1926-2025).[34] I have averaged the S&P 500 return of 12.35% and the Value Line return of 11.83%, producing an estimated market return of 12.09%.[35]

[32] I&E Exhibit No. 2, Schedule 8.
[33] I&E Exhibit No. 2, Schedule 9, p. 1.
[34] I&E Exhibit No. 2, Schedule 9, p. 2.
[35] I&E Exhibit No. 2, Schedule 9, p. 1.

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR TRADITIONAL CAPM ANALYSIS USING A FORECASTED OVERALL MARKET RETURN?

A. The result of my traditional CAPM analysis is as follows:[36]

K	=	R_f	+	$\beta(R_m - R_f)$
10.28%	=	4.23%	+	0.77 (12.09% - 4.23%)

Q. ARE YOU PROVIDING AN ADDITIONAL CAPM ANALYSIS?

A. Yes. I am providing an additional CAPM analysis using Kroll's (formerly Duff & Phelps) recommended U.S. Equity Risk Premium (ERP) paired with the 20-year U.S. Treasury yield. Kroll is a trusted source that bases its publicly available recommended ERP on current and forecasted economic and financial market conditions.

Q. WHAT IS KROLL'S CURRENT RECOMMENDED ERP?

A. As of March 23, 2026, Kroll recommends an ERP of 5.00% when developing discount rates.[37]

[36] I&E Exhibit No. 2, Schedule 10.
[37] I&E Exhibit No. 2, Schedule 11, pp. 1-4.

Q. WHAT IS THE CURRENT 20-YEAR U.S. TREASURY YIELD?

A. Kroll recommends using 20-year U.S. Treasury yield as the proxy for the risk-free rate.[38] As of May 27, 2026, the 20-Year U.S. Treasury yield was 5.01%.[39]

Q. WHAT IS THE COST OF EQUITY RESULT FROM YOUR CAPM ANALYSIS USING KROLL'S RECOMMENDED ERP AND THE 20-YEAR U.S. TREASURY YIELD?

A. The result of my CAPM analysis using Kroll's recommended ERP and the 20-Year US Treasury yield as a risk-free rate is as follows:[40]

K	=	R_f	+	β(ERP)
8.86%	=	5.01%	+	0.77 (5.00%)

Q. WHAT IS THE RESULT OF YOUR TRADITIONAL CAPM ANALYSIS BASED ON THE AVERAGE OF USING A FORECASTED OVERALL MARKET RETURN AND USING KROLL'S RECOMMENDED ERP AND 20-YEAR TREASURY YIELD?

A. The average of my CAPM analyses is 9.57% ((10.28% + 8.86%) ÷ 2).[41]

[38] I&E Exhibit No. 2, Schedule 11, p. 4, footnote.
[39] I&E Exhibit No. 2, Schedule 11, p. 5.
[40] I&E Exhibit No. 2, Schedule 10.
[41] I&E Exhibit No. 2, Schedule 10.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS REGARDING YOUR CAPM ANALYSIS?

A. Yes. As discussed above, and as I&E has historically reasoned, the CAPM inputs are subjective, and other than beta, not company or industry specific. So, while I believe the DCF is the most reliable of the cost of equity models, I am providing a CAPM analysis as it does provide value and the Commission has recently relied on a combination of both the DCF and CAPM models.

National Average Authorized ROE

Q. WHAT IS THE RECENT NATIONAL AVERAGE AUTHORIZED ROE FOR GAS DISTRIBUTION UTILITIES ACROSS THE U.S.?

A. Data provided by S&P Global Market Intelligence shows the national average authorized ROE for gas distribution companies across the U.S. was 9.69% for rate cases decided in 2025 through 2026.[42]

Q. PLEASE EXPLAIN WHY YOU HAVE INCORPORATED RECENT NATIONAL AUTHORIZED EQUITY RETURNS FOR GAS UTILITIES IN YOUR ROE ANALYSIS.

A. This information complies with the principle derived from the *Hope* and *Bluefield* cases, previously discussed above, that a utility is entitled to a return similar to that being earned by other enterprises with corresponding risks and uncertainties,

[42] I&E Exhibit No. 2, Schedule 2, pp. 8-9.

but not as high as those earned by highly profitable or speculative ventures. Therefore, it is reasonable and logical to include in my recommendation the authorized returns of natural gas distribution companies in recently completed rate cases across the country.

As cited above, I&E Exhibit No. 2, Schedule 2, pp. 8-9 also illustrates the differences in the requested ROE and capital structure equity ratio as compared to gas distribution utilities in rate proceedings across the U.S. My recommended ROE of 10.20% for the Company in this case is comparable, yet higher than the national average authorized ROE of 9.69% for gas distribution utilities.

Q. PLEASE EXPLAIN WHY THE GROUP OF COMPANIES INCLUDED IN YOUR NATIONAL AUTHORIZED EQUITY RETURNS ANALYSIS DOES NOT ALIGN WITH THE COMPANIES IN YOUR PROXY GROUP.

A. As discussed in greater detail in the Proxy Group section above, the companies that formulate my proxy group must be publicly traded. The variables required to use in the various ROE models, such as stock price, earnings per share growth projections, projected dividends, etc. are only available for publicly traded companies. Many of the companies included in this analysis are subsidiary operating companies, and therefore, the information required to perform an ROE analysis is not readily available.

CRITIQUE OF MS. NELSON'S PROPOSED COST OF EQUITY

Q. DO YOU AGREE WITH MS. NELSON'S 11.25% PROPOSED COST OF EQUITY?

A. No. I disagree with Ms. Nelson's proposed cost of equity for several reasons. First, I disagree with the weights given to her ECAPM, and BYPRP or RP analyses results in her ROE recommendation. Second, I disagree with her reliance on the 30-year Treasury Bond for her risk-free rate in the CAPM analysis. Third, I disagree with her discussion that Peoples require a higher authorized ROE due to its planned capital expenditures, regulatory environment, large customers bypass risk, flotation costs, financial risk, and capital market environment in her cost of equity recommendation.

Ms. Nelson's DCF Analysis

Q. PLEASE COMMENT ON MS. NELSON'S DCF ANALYSIS.

A. As stated above, Ms. Nelson presents both a constant growth and quarterly growth DCF analysis. The constant growth DCF average result is 10.79% ((10.72% + 10.72% + 10.92%) ÷ 3) for the 30-day average, 90-day average, and 180-day average dividend yield calculations.[43] Similarly, the quarterly growth DCF average result is 11.03% ((10.95% + 10.96% + 11.18%) ÷ 3) for the 30-day average, 90-day average, and 180-day average dividend yield calculations.[44]

[43] Peoples Statement No. 15, p. 26, lines 1-2.
[44] Peoples Statement No. 15, p. 28, lines 1-2.

Averaging these two results produces her indicated DCF results of 10.91% ((10.79% + 11.03%) ÷ 2).

Ms. Nelson's DCF methodologies vary slightly, which produce an average DCF result of 10.91% while my DCF analysis result is 11.33%. I will not offer any specific critiques of Ms. Nelson's DCF analysis.

Weights Given to the ECAPM and BYPRP Methods

Q. DO YOU AGREE WITH MS. NELSON'S RELIANCE ON THE ECAPM AND BYPRP MODELS?

A. No. I am not opposed to including the results of the CAPM with the DCF model; however, I am opposed to giving considerable weight to the ECAPM and BYPRP model results in determining an appropriate cost of equity for Peoples. As explained further below, it is inappropriate to give the ECAPM and BYPRP models similar weight to the DCF and traditional CAPM as Ms. Nelson has done in creating her indicated cost of equity results range of 10.20% - 11.90% and base ROE recommendation of 11.00% before adjusting for management performance.[45] As discussed below, I have not used the ECAPM because it only weights the betas of the CAPM in order to flatten the Security Market Line (SML). Similarly, I have not relied on Ms. Nelson's BYPRP model for the reasons previously mentioned and discussed again below, including the fact that it is not a widely accepted method.

[45] Peoples Statement No. 15, p. 4, lines 7-10.

Empirical Capital Asset Pricing Model

Q. WHAT IS THE ECAPM?

A. The ECAPM is a modified version of the CAPM, which attempts to address the belief that the actual risk versus return correlation is flatter than what is predicted by the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and over-estimates the returns associated with higher levels of risk. ECAPM entails assigning 25% weight to the market beta (1.0) and 75% weight to the individual company (or proxy group) beta.[46]

Q. WHAT DOES MS. NELSON CLAIM IS THE BASIS FOR HER USE OF THE ECAPM?

A. Ms. Nelson opines that the ECAPM addresses the tendency of the CAPM to underestimate the cost of equity for companies with relatively low Beta coefficients.[47] She states that the SML described by the CAPM formula is not as steeply sloped as the predicted SML.[48] She uses a formula to account for the systematic risk that is not accounted for with beta in the CAPM formula. This methodology uses a factor, alpha, to account for the additional systematic risk not captured by beta.

[46] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 106.
[47] Peoples Statement No. 15, p. 35, lines 6-7.
[48] Peoples Statement No. 15, p. 36, lines 7-9.

Q. DO YOU AGREE WITH MS. NELSON'S USE OF THE ECAPM?

A. No. The use of the ECAPM in estimating the cost of capital does not increase the validity of the result, but instead it injects another measure of subjectivity to the CAPM in an attempt to make the SML more accurate. The ECAPM reduces the purpose of beta, which is the only company-specific variable in the CAPM. This additional layer of subjectivity provides an even stronger basis to rely on the DCF and CAPM without the ECAPM as I have done to calculate a utility's cost of equity.

Additionally, in response to I&E-RR-9, Ms. Nelson states that the Commission has approved settlements in proceedings where the ECAPM was presented and cites the First Energy Pennsylvania Electric Co. rate case at Docket No. R-2024-3047068.[49] However, the Commission's approval of a settlement (a compromise of the parties' positions) is not the same as its approval of the ECAPM methodology in the context of a fully litigated rate case. To the best of my knowledge, there is no instance where the Commission explicitly relied on the ECAPM when determining an appropriate cost of equity for a regulated utility in Pennsylvania.

Finally, Ms. Nelson's ECAPM results are higher than the traditional CAPM results as summarized in the table below,[50] which impacts her indicated cost of equity range.

[49] I&E Exhibit No. 2. Schedule 12.
[50] Peoples Statement No. 15, p. 39, lines 1-2.

Methods	Results
CAPM Forward Market Return	13.09%
ECAPM Forward Market Return	13.91%
CAPM Historical Market Return	10.11%
ECAPM Historical Market Return	10.64%

Bond Yield Plus Risk Premium Approach

Q. WHAT IS THE BYPRP APPROACH?

A. The BYPRP is a method that relies on the theory that common stock is riskier than debt; thus, investors require a higher expected return on stocks than bonds to be properly compensated for the additional risk of holding equity as opposed to being a bondholder.

Q. DO YOU AGREE WITH MS. NELSON'S USE OF THE BYPRP METHOD?

A. No. In response to I&E-RR-13, Ms. Nelson states that the Commission has approved numerous settlements in proceedings where the BYPRP method was presented and cites three rate cases at Docket Nos. R-2024-3046523 (Duquesne Light Co.), R-2024-3046931 (PECO Energy Co. - Electric Division), and R-2022-3037368 (UGI Utilities, Inc. - Electric Division).[51] However, as discussed above, the Commission's approval of a settlement is not the same as its approval of the BYPRP methodology in the context of a fully litigated rate case. Upon my review

[51] I&E Exhibit No. 2, Schedule 13.

of the cited rate cases, it is apparent that risk premium calculation methodologies presented by utility witnesses were not similar to Ms. Nelson's BYPRP method.

Finally, To the best of my knowledge, there is no instance where the Commission explicitly relied on the BYPRP or RP methods when determining the appropriate cost of equity for a regulated utility in Pennsylvania.

Risk-Free Rate

Q. WHAT RISK-FREE RATE DOES MS. NELSON USE IN HER CAPM ANALYSIS?

A. Ms. Nelson used the 30-day average yield on 30-year Treasury bonds (4.83%) reported by Federal Reserve Bank of St. Louis (FRED) Economic Database as of January 30, 2026, as well as a projected 30-year Treasury yield (4.68%) reported in the Blue Chip Financial Forecasts of December 1, 2025 and January 30, 2026 in her calculation of risk-free rate estimates.[52]

Q. DO YOU AGREE WITH MS. NELSON'S USE OF THE 30-YEAR TREASURY BOND YIELD TO DETERMINE THE RISK-FREE RATE?

A. No. I disagree with Ms. Nelson's risk-free rate based on the 30-year Treasury Bond yield. As discussed above, long-term Treasury Bonds have substantial maturity risk associated with the market risk and the risk of unexpected inflation and normally offer higher yields to compensate investors for these risks. Using

[52] Peoples Statement No. 15, p. 30, lines 9-11.

the 10-year Treasury Note is more appropriate to balance the short-term volatility risk and the long-term inflation risk. Further, as noted above, the Commission has traditionally recognized the 10-year Treasury Note as the superior measure of the risk-free rate of return. More particularly, in the UGI Utilities, Inc. - Electric Division case, the Commission recognized the 10-year Treasury Note as the superior measure for the risk-free rate by stating the following:

> We agree with I&E and the ALJs that using the yield on the 10-year Treasury Note provides a better measure of the risk-free rate of return than using the yield on the 30-year Treasury Bond, as recommended by UGI. In our view, using the 10-year Treasury Note balances the shortcomings of the short-term T-Bill and the 30-year Treasury Bond. Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with the market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation.[53]

<u>CAPM Market Risk Premium</u>

Q. WHAT MARKET RISK PREMIUM DID MS. NELSON USE IN HER CAPM ANALYSIS?

A. Ms. Nelson used two higher end market risk premium estimates of 11.55% using a 4.83% risk-free rate and 11.70% using a 4.83% risk-free rate along with the market risk premium of 7.40% using 4.83% risk-free rate and 7.56% using 4.83% risk-free rate in her CAPM and ECAPM analysis.

[53] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order Entered October 25, 2018), p. 99. (Disposition of Capital Asset Pricing Model (CAPM)).

Q. DO YOU AGREE WITH MS. NELSON'S USE OF A MARKET RISK PREMIUM OF 11.55% AND 11.70% IN HER CAPM AND ECAPM?

A. No. Ms. Nelson's market risk premium of 11.55% is significantly higher by 56.08% as compared to 7.40%, and the market risk premium of 11.70% is also significantly higher by 54.76% as compared to 7.56%. Use of these outlier risk premiums inappropriately inflates her average CAPM result to 13.09% and average ECAPM result to 13.91% in contrast to her average CAPM result of 10.11% and average ECAPM result of 10.64%. In contrast, Kroll's latest forecast for the equity risk premium is 5.00%, which is significantly lower and less than half of Ms. Nelson's calculated risk premiums of 11.55% and 11.70%.

<u>Capital Expenditure</u>

Q. WHAT IS MS. NELSON'S CLAIM REGARDING ADDITIONAL RISK DUE TO THE COMPANY'S CAPITAL EXPENDITURE PLAN?

A. Ms. Nelson claims that Peoples has planned a major capital investment program totaling about $4.0 billion over the period 2026 to 2030. She also claims that Peoples require a higher authorized ROE to support these expenditures, as a high level of expenditures could put pressure on the Company's ability to raise capital, cash flow, credit metrics, and credit ratings. Additionally, she claims that Peoples' ratio of projected capital expenditures to net utility plant is higher than all the proxy group companies. Finally, she concludes it is important that the authorized ROE be set at a level that allows Peoples to continue to attract both debt and

equity at favorable terms under a variety of economic and financial market conditions.[54]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S CLAIM REGARDING ADDITIONAL RISK DUE TO THE COMPANY'S CAPITAL EXPENDITURE PLAN?

A. Every gas utility faces the same issues of upgrading or replacing its pipeline infrastructure. As distribution costs increase, Peoples, like any other regulated gas utility, has the option to file a base rate case to address revenue inadequacy due to maintaining, expanding, and modernizing infrastructure. Base rate cases allow a utility to recover its costs and provide it with the *opportunity* to earn a reasonable return on capital investment. Additionally, the Commission offers risk reducing mechanisms such as the Distribution System Improvement Charge (DSIC) and the FPFTY to help reduce regulatory lag in recovery of infrastructure investment or other unforeseen expenditures. It should be noted that these mechanisms were not designed to eliminate the need for periodic base rate case filings, but only to mitigate regulatory lag and support increasing infrastructure replacement needs.

Ms. Nelson's claim regarding the high level of capital expenditures posing pressure on the Company's ability to raise capital, cash flow, credit metrics, and credit ratings are not supported because, historically, Peoples has successfully

[54] Peoples Statement No. 15, pp. 44-47.

executed and met with budgeted levels of capital expenditure plans as shown in the table below:[55]

Year	Budgeted Capex	Actual Capex
2021	$355.47M	$342.06M
2022	$377.13M	$399.07M
2023	$465.64M	$494.22M
2024	$549.15M	$564.46M
2025	$610.10M	$583.52M

Currently, Peoples receives its long-term funding from its financially strong immediate parent company, PNG, as discussed below. Additionally, the Joint Application of American Water Works Company, Inc. and Essential Utilities, Inc. seeking Commission-approval for the merger transaction at Docket Nos. A-2025-3058927 through A-2025-3058929 provides the following:[56]

> American Water also has a subsidiary, American Water Capital Corp. ("AWCC"), that was established to provide certain financial services, including short-term loans, long-term borrowings, and cash management to American Water and its regulated subsidiaries as cost effectively as possible over the long-term. PAWC is a party to a financial service agreement with AWCC that was approved by the Commission on June 22, 2000 at Docket No. G-00000763. . . .
>
> The increased scale and scope of the combined company will deliver operational efficiencies, enhanced customer service,

[55] I&E Exhibit No. 2, Schedule 14, pp. 1-4.

[56] *Joint Application of American Water Works Company, Inc., Essential Utilities, Inc., Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., Peoples Natural Gas Company LLC, and Alpha Merger Sub, Inc. for a Certificate of Public Convenience under Sections 1102(a)(3) and 2210(c) of the Public Utility Code and All Other Necessary Approvals to Effect a Change of Control of Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., and Peoples Natural Gas Company LLC*, Docket Nos. A-2025-3058927 et al., p. 12, Paragraph 28 and p. 14, Paragraph 34(a).

> broader customer reach, and a financially stronger parent company that is well-positioned to compete for and attract capital on reasonable terms for its public utility subsidiaries. The combined company benefits from diversified service areas and regulatory exposure, as well as a broader customer and revenue base that should provide more stable cash flow.

This indicates that if the merger is approved, Peoples would have additional funding support from the AWCC for its capital expenditure plan upon closure of the merger transaction, which is targeted to be effective in the first quarter of 2027.

Ms. Nelson's credit rating concern due to the capital expenditure plan is speculative and unsupported because Peoples is not rated by rating agencies and its parent company, PNG has maintained a sufficient investment grade rating for the last five years.[57]

Risk of Bypass

Q. WHAT IS UTILITY'S BYPASS RISK?

A. Bypass risk refers to the risk that certain large-volume commercial and industrial customers may reduce its reliance on the Company's distribution service or bypass it altogether by arranging an alternative means of procuring natural gas or switching to another fuel or energy option.

[57] Peoples Volume VII, Exhibit No. 18, ROR-3.

Q. WHAT IS MS. NELSON'S CLAIM REGARDING COMPETITIVE THREAT OF BYPASS?

A. Ms. Nelson claims that there is an alternative fuel competition in Western Pennsylvania relative to monopoly service for other gas utilities including gas on gas with other natural gas distribution companies, interstate pipeline bypass, and other alternative fuels. She claims that approximately twelve large customers have the ability to bypass the Company's distribution system. She asserts that the loss of large-load throughput can increase earnings and cash flow volatility and elevate the Company's risk relative to fully captive gas distribution utility peers.[58]

Q. DO YOU AGREE WITH MS. NELSON'S CLAIM REGARDING BY-PASS RISK?

A. No. I agree that the loss of large customers puts pressure on revenue, fixed cost recovery, and cash flow metrics. However, I disagree with Ms. Nelson's claim regarding potential bypass risk for the Company. In response to I&E-RR-16, the Company states that Peoples views viable interstate bypass customers to be those with an annual consumption of 500,000 Mcf or more, and given this criterion, the Company has not lost or gained any large volume customers during the period 2021-2025.[59]

[58] Peoples Statement No. 15, pp. 48-49.
[59] I&E Exhibit No. 2, Schedule 15.

To the contrary, the Company states that over the past year, Peoples has been approached by developers, consultants, data centers, and other entities to evaluate the possibility of providing natural gas service to potential new data center projects in Western Pennsylvania and had discussions with over twenty-two entities, with data center power demands ranging anywhere from 8 MW up to 4.5 GW.[60]

Capital Market Environment

Q. WHAT ARE MS. NELSON'S CLAIMS REGARDING THE CURRENT AND PROSPECTIVE CAPITAL MARKET?

A. Ms. Nelson opines that the current capital environment is being affected by: (1) the interest rate environment; (2) current and long-term inflation pressures; and (3) economic uncertainty due to geopolitical events. She opines that geopolitical events present uncertainties with respect to the near-term economic and capital market in which the Company will be raising external capital. Finally, she concludes that both inflation and long-term government and utility bond yields are expected to remain above their pre-pandemic levels.[61]

[60] I&E Exhibit No. 2, Schedule 15.
[61] Peoples Statement No. 15, pp. 62-71.

Q. PLEASE COMMENT ON THE COMPANY'S CURRENT INFLATION AND INTEREST RATE CONCERNS.

A. First, while I cannot dispute the recent economic conditions with respect to increased interest rates and government bond yields, it is important to note that all companies, including regulated utilities, are impacted by higher interest rates. The Federal Reserve has cut interest rates six times in total in 2024 and 2025. Potential future reductions in interest rates could have the effect of reducing debt cost rates in the capital costs in 2027, when the Company's new rates will be in effect.

With respect to inflation, per the recent monthly Blue Chip Financial Forecasts,[62] the Q3-2026 through Q3-2027 inflation rates by two measures are forecasted to be in the range of 2.3% to 2.5% as shown in the table below:

	Q2 2026	Q3 2026	Q4 2026	Q1 2027	Q2 2027	Q3 2027
Consumer Price Index	5.6%	2.3%	2.3%	2.4%	2.3%	2.3%
PCE Price Index	4.6%	2.4%	2.5%	2.5%	2.3%	2.3%

Lastly, it is important to note that unlike unregulated companies, public utilities may file rate cases to address unforeseen or increased expenses, increases in the costs of borrowing, and equity and/or revenue shortfalls due to changes in market conditions.

[62] Blue Chip Financial Forecasts Vol. 45, No. 5, May 1, 2026.

Q. PLEASE COMMENT ON MS. NELSON'S GEOPOLITICAL EVENT CONCERNS.

A. Peoples face the same exposure to these issues as all the other companies in our respective proxy groups. Investors voluntarily buy and hold shares of stocks in gas utility companies, indicating they are aware of these risks and the returns. The cost of equity I present for Peoples in this proceeding is adequately measured by my proxy group and adequately compensates investors for these risks.

Flotation Cost Adjustment

Q. WHAT ARE FLOTATION COSTS?

A. Flotation costs are the expenses incurred when a company issues securities such as stocks or bonds when raising capital. These expenses can include legal fees, underwriting fees, auditing fees, administrative costs, or any other necessary and justifiable cost in the issuance process.

Q. EXPLAIN THE FLOTATION COST ADJUSTMENT MS. NELSON IS PROPOSING IN THIS PROCEEDING.

A. Ms. Nelson opines that recovery of equity issuance costs is appropriate for the same reasons debt issuance costs are recoverable. Even if no new issuances are planned in the near future, she opines that failure to allow such cost recovery may deny Peoples the opportunity to earn its required rate of return going forward.[63]

[63] Peoples Statement No. 15, p. 56, lines 3-6.

Ms. Nelson does not make an explicit adjustment to her cost of equity for flotation costs.[64] However, she asserts that it would be necessary to increase the authorized ROE by 9 basis points in order to recover these costs.[65]

Q. DO YOU AGREE WITH MS. NELSON'S FLOTATION COST ADJUSTMENT?

A. No. First, Peoples and PNG do not issue common equity to the public. Second, there have been no equity infusions from PNG to Peoples within the last five years.[66] Third, I am not aware of any particular instances where the Commission has approved a flotation cost adjustment to the cost of equity analysis results to recognize issuance expenses in a base rate case for regulated utilities in Pennsylvania. Finally, flotation costs are operating expenses that should be recovered via normalization similar to the treatment of rate case expense, not factored in as an adjustment to the requested return on equity.

Considering the above and the impact of a flotation cost adjustment to the cost of common equity, it is inappropriate to seek an increase or a higher cost of equity for stock issuance flotation costs, and therefore, I recommend that the Commission reject Peoples' claim that a flotation cost should be considered in determining the cost of equity for the Company.

---

[64] Peoples Statement No. 15, p. 56, lines 13-14.
[65] Peoples Statement No. 15, p. 55, lines 2-4.
[66] Peoples Volume VII, Exhibit No. 18, ROR -11.

Management Performance

Q. DISCUSS THE COMPANY'S CLAIM SPECIFIC TO EXEMPLARY MANAGEMENT PERFORMANCE OR EFFECTIVENESS.

A. Ms. Nelson supports the Company's request for a 25-basis point (0.25%) upward adjustment to her recommended 11.00% cost of equity in recognition of the Peoples' superior management performance.[67] She primarily relies on the direct testimony of Company witness Michael Huwar[68] to support the consideration of an additional 25 basis points in the ROE for the claimed superior management performance.

Q. WHAT INFORMATION DOES MR. HUWAR PROVIDE TO SUPPORT THE COMPANY'S CLAIM FOR SUPERIOR MANAGEMENT PERFORMANCE?

A. Mr. Huwar claims that Peoples has exhibited exceptional management performance demonstrated by its efforts in improving customer service, accelerating pipeline replacement and bringing jobs to its service territory. He then claims Peoples has demonstrated it has been a valuable corporate citizen that should lead the decision makers to authorize a 0.25% addition to the return on common equity as proposed by Ms. Nelson.[69] Additionally, he states that investors have the ability and the interest to fund the necessary additional equity

[67] Peoples Statement No. 15, p. 5, lines 2-9 and p. 71, lines 18-19.
[68] Peoples Statement No. 1, pp. 33-34.
[69] Peoples Statement No. 1, p. 33, lines 10-15.

needed to modernize the critical natural gas infrastructure, and that it is critically important at this time to provide a positive message to important stakeholder groups that Pennsylvania is a good place to invest.[70]

Q. DO YOU AGREE WITH THE COMPANY'S CLAIM FOR A MANAGEMENT PERFORMANCE REWARD?

A. No. First, many of the topics presented by the Company fall within the categories of safe and reliable customer service and satisfaction required of every public utility under 66 Pa C.S. § 1501. There is no basis or support for quantification of 25 basis points for superior or exemplary management performance. Additionally, all operating and management expenses and costs to implement various programs and initiatives including infrastructure improvements are recovered from ratepayers and the Company passes capital expenditure program costs to its ratepayers via base rates or utilizes a DSIC mechanism for capital expenditure recovery. Further, if the Company is effective at controlling operating and maintenance costs, those savings should flow through to ratepayers and/or investors. These savings would likely be offset by the addition of basis points for management performance as ratepayers would have to fund the additional costs. This defeats the purpose of any cost cutting measures to benefit ratepayers.

[70] Peoples Statement No. 1, p. 34, lines 5-6 and 9-11.

Q. ARE YOU AWARE OF ANY COMPANIES THAT HAVE RECEIVED ADDITIONAL BASIS POINTS IN RECOGNITION OF MANAGEMENT PERFORMANCE?

A. Yes. The Commission awarded Aqua Pennsylvania, Inc. an addition of 25 basis points for its management performance efforts.[71] However, it is important to recognize that this addition was based specifically on Aqua Pennsylvania, Inc. rescuing troubled water and wastewater systems at the Commission's request. The Commission stated:

> We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage.[72]

Q. DOES THE COMMISSION'S PAST ISSUANCE OF ADDITIONAL EQUITY POINTS TO RECOGNIZE MANAGEMENT PERFORMANCE MEAN THAT PEOPLES SHOULD ALSO RECEIVE AN ADJUSTED RETURN ON EQUITY?

A. No. The issuance of equity points to recognize management performance should be done on a case-by-case basis. The situation in the Aqua Pennsylvania, Inc.

---

[71] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 168-173 (Order Entered May 16, 2022).

[72] *Pa. PUC v. Aqua Pennsylvania, Inc.,* Docket Nos. R-2021-3027385 & R-2021-3027386, p. 169 (Order Entered May 16, 2022).

proceeding as discussed above was very specific to Aqua Pennsylvania, Inc. rescuing troubled water and wastewater systems and preventing health and safety concerns regarding drinking water. This scenario does not apply to Peoples.

Q. DID THE COMMISSION APPROVE A MANAGEMENT PERFORMANCE ADJUSTMENT IN THE ROE IN THE MOST RECENT 2025 COLUMBIA GAS RATE CASE?

A. No. The Commission found the Administrative Law Judges' (ALJ) recommendation just and reasonable and indicated that it is supported by substantial evidence in the record and adopted the ALJs' recommendation to deny Columbia Gas' requested upward increase of 0.25% to its ROE for management effectiveness.[73]

Q. BASED ON THE COMPANY'S CLAIMED RATE BASE AND CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 25 BASIS POINTS FOR THE CONSIDERATION OF MANAGEMENT PERFORMANCE REWARD TO THE COST OF EQUITY?

A. If granted, the example below illustrates the impact of an additional 0.25% (25 basis points) to the Company's cost of equity when applied to the Company's total claimed rate base and capital structure:

[73] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Management Effectiveness - Disposition, pp. 230 and 231.

Peoples Claimed Common Equity Percentage of Capital Structure*	54.47%
Management Performance Adjustment applied to the Equity Analysis Results	0.25%
Claimed Rate Base*	$5,760,803,876
Impact Prior to Gross Up (0.5447 x 0.0025 x $5,760,803,876)	$7,844,775
Gross Revenue Conversion Factor**	1.28127517
Total Impact to Ratepayers ($7,844,775 x 1.28127517)	**$10,051,315**

* Peoples Exhibit No. 2, Schedule 4, p. 2.
** Peoples Exhibit No. 2, Schedule 4, p. 4.

In this example, an addition of 25 basis points to the cost of equity in consideration of management performance would force ratepayers to fund an unwarranted additional amount of approximately $10,051,315 annually to cover the increase of the inflated rate of return along with the associated impact resulting from increases to income taxes and uncollectibles. This additional proposed revenue recovery of $10,051,315 is 6.16% of Peoples' total revenue increase request of $163,171,938.[74]

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CONSIDERATION OF ADDITIONAL BASIS POINTS FOR THE COMPANY'S MANAGEMENT PERFORMANCE?

A. I am aware that, under 66 Pa C.S. § 523, the Commission has authority to consider a utility's performance, however, it is not mandatory that the Commission grant

[74] Peoples Exhibit No. 2, Schedule 4, p. 2.

additional basis points to the ROE. Ultimately, as alluded to above, true strong management performance is earning a higher return through efficient use of resources and cost cutting measures. The greater net income resulting from cost savings and true efficiency in management and operations is available to be passed on to both ratepayers and shareholders. I do not believe that Peoples or any utility should be gifted an additional 25 basis points for doing what they are required to do to provide adequate, efficient, safe, and reasonable service under 66 Pa C.S. § 1501.

For all the reasons discussed above, including the financial impact on ratepayers, I recommend that any addition of basis points to the cost of equity for management performance be disallowed.

Actual Net Income and Return on Equity

Q. DESCRIBE PEOPLES, PNG, AND ESSENTIAL UTILITIES INC.'S (ESSENTIAL) FINANCIAL POSITION FOR THE LAST FIVE YEARS.

A. Peoples' financial data as shown in the table below indicates consistently improving financial conditions due to its strong market presence in gas distribution service in Western Pennsylvania:[75]

[75] Document Search | PA PUC (accessed on May 6, 2026).

Year Ended December 31	Operating Revenue	Year to Year Change	Net Income	Year to Year Change	Net Utility Plant	Year to Year Change
2021	$688.24M	-	$163.01M	-	$2,501.42M	-
2022	$898.17M	30.50%	$187.44M	14.99%	$2,804.28M	12.11%
2023	$756.00M	(15.82%)	$240.52M	28.32%	$3,527.58M	25.79%
2024	$762.49M	(0.86%)	$249.45M	3.71%	$3,976.05M	12.71%
2025	$1,023.48M	34.23%	$284.90M	14.21%	$4,446.35M	11.83%
Average		**12.01%**		**15.31%**		**15.61%**

The above table shows growth in Peoples': (1) average yearly operating revenues and net income by 12.01% and 15.31% respectively for the fiscal years 2021-2025; and (2) average yearly net utility plant by 15.61% for the fiscal years 2021-2025. Peoples' growth in financial conditions is funded by ratepayers.

PNG and Essential, the parent companies of Peoples, have consistently improved their net income in the fiscal years 2021-2025 as shown in the table below:[76]

Year	PNG - Net Income	PNG - ROE	Essential - Net Income	Essential - ROE
2021	$185.64M	12.4%	$431.61	8.3%
2022	$225.60M	13.1%	$465.24	8.7%
2023	$245.58M	12.5%	$498.23	8.4%
2024	$255.36M	11.6%	$595.31	9.6%
2025	$295.15M	11.8%	$616.37	9.0%

[76] I&E Exhibit No. 2, Schedule 16, pp. 1-2.

The above table indicates that PNG's net income increased by approximately 60% and Essential's net income increased by 43% from fiscal year 2021 through 2025.

Considering these solid and seemingly ever-increasing financial metrics, any concerns over a potential credit downgrade and access to capital markets are irrational and unsupported.

OVERALL RATE OF RETURN RECOMMENDATION

Q. WHAT IS THE COMPANY'S PROPOSED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. The Company is claiming a cost of equity of 11.25% and an overall rate of return of 8.23%.[77]

Q. WHAT IS YOUR RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN?

A. I&E Exhibit No. 2, Schedule 1, shows the calculation of an appropriate cost of equity to be 10.20% for the Company with an overall rate of return of 7.41%. Peoples' requested ROE of 11.25% is higher by 1.05% or 105 basis points as compared with the my recommended ROE of 10.20%.

[77] Peoples Statement No. 15, p. 6, lines 1-2.

Q. BASED ON THE COMPANY'S AS-FILED RATE BASE AND CLAIMED CAPITAL STRUCTURE, WHAT IS THE VALUE OF AN ADDITIONAL 105 BASIS POINTS TO THE COST OF EQUITY?

A. The example below illustrates the impact of 105 additional basis points (1.05%) to the Company's cost of equity:

Peoples Claimed Common Equity Percentage of Capital Structure*	54.47%
Additional 105 basis points in the claimed ROE	1.05%
Claimed Rate Base*	$5,760,803,876
Impact Prior to Gross Up (0.5447 x 0.0105 x $5,760,803,876)	$32,948,054
Gross Revenue Conversion Factor**	1.28127517
Total Impact to Ratepayers ($32,948,054 x 1.28127517)	**$42,215,523**

* Peoples Exhibit No. 2, Schedule 4, p. 2. ** Peoples Exhibit No. 2, Schedule 4, p. 4.

In this example, an addition of 105 basis points to the cost of equity would force ratepayers to fund an unwarranted additional amount of $42,215,523.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING THE COMPANY'S PROPOSED RETURN ON EQUITY?

A. Yes. First, to reiterate, the report issued by S&P Regulatory Research Associates as cited above in the *"Capital Structure"* section, illustrates that the nation-wide average authorized return on equity in rate cases decided in 2025-2026 was 9.69%. The Company's claimed ROE of 11.25% far exceeds this average, and my

recommended ROE of 10.20% is still well above the national average authorized ROE by 0.51%.

Second, I am not aware that the Commission has authorized a return of 11.25% or higher in the last ten years.

Third, as discussed above, the Commission has recently commented on the equity heavy capital structure of other utility companies, and specifically asked that Peoples' capital structure be subject to a careful evaluation because an equity heavy capital structure puts a burden on customers' rates.

Fourth, as mentioned above, Peoples' and its parent companies' overall financial condition have significantly improved in the last five years.

Finally, I believe it is important to consider the impact of what the Company's excessive return on equity request of 11.25% would have on rates. Any additional basis points beyond the I&E recommended ROE of 10.20% would be excessive and would put an enormous burden on ratepayers during these tough economic times.

EFFECTIVE DATE OF NEW RATES

Q. WHAT IS THE FIRST DAY OF PEOPLES' CLAIMED FPFTY?

A. The first day of Peoples' FPFTY is January 1, 2027.

Q. WHAT IS THE EFFECTIVE DATE ON WHICH PEOPLES PROPOSES TO MAKE AN INCREASE IN RATES IN THIS PROCEEDING?

A. In response to I&E-RR-24, the Company indicates that the effective date of new rates will be December 27, 2026.[78]

Q. WHAT IS THE COMPANY'S RATIONALE FOR PROPOSING THAT RATES SHOULD GO INTO EFFECT ON DECEMBER 27, 2026?

A. The Company states that it used the FPFTY with a one-month bridge or gap month (December 1-31, 2026) between the end of the future test year (FTY) (November 30, 2026) and the beginning of the FPFTY (January 1, 2027). Additionally, the Company avers that the reason for this one-month gap between the end of the FTY and the beginning of the FPFTY is due to the requirements of 66 Pa. C.S. § 1308(d), which do not allow the Company to begin the FPFTY prior to the legal effective date of new rates, and pursuant to 66 Pa. C.S. § 1308(d), the filing is suspended by operation of law until December 26, 2026.[79]

Q. DO YOU AGREE THAT RATES SHOULD GO INTO EFFECT BEFORE THE BEGINNING OF THE FPFTY (JANUARY 1, 2027) IN THIS PROCEEDING?

A. No. I recommend the Commission direct Peoples to make new rates effective on

[78] I&E Exhibit No. 2, Schedule 17, p. 1.
[79] I&E Exhibit No. 2, Schedule 17, p. 2.

January 1, 2027, the first day of the FPFTY and not allow Peoples to make the new rates effective on December 27, 2026, which falls in the gap month and before the beginning of the FPFTY.

Q. WHY DO YOU BELIEVE THAT NEW RATES BECOMING EFFECTIVE ON DECEMBER 27, 2026, AND BEFORE JANUARY 1, 2027, THE BEGINNING OF THE FPFTY, WOULD BE IMPROPER?

A. It would be unjust and unreasonable for the Commission to allow Peoples to make new rates effective on December 27, 2026 because the ratemaking calculations or claims in this base rate filing are based on projected ratemaking calculations and numbers with changes that will occur in the FPFTY (January 1, 2027 through December 31, 2027) and not in the gap month of December 2026. The higher new rates should not be made effective during the period December 27, 2026 through December 31, 2026 (a 5-day period) as it is not supported by Peoples' FPFTY ratemaking calculation.

If Peoples is permitted to make new rates effective on December 27, 2026, instead of January 1, 2027, then at the full revenue increase request of $163,171,938,[80] the Company would recover an unsupported and unreasonable additional revenue increase of $2,235,232 (($163,171,938 ÷ 365) x 5) for that 5-day period from ratepayers. My recommendation is more appropriate, just, and reasonable because the ratemaking calculation (projection) for new rates includes

[80] Peoples Exhibit No. 2, Schedule 4, p. 2.

the 12-month FPFTY beginning January 1, 2027, and not December 27, 2026. If the Commission approves a new rate effective date beginning December 27, 2026, then it would represent retroactive approval of new rates for the FPFTY effective from December 27, 2026, through December 31, 2027 [a 370-day period rather than the 12-month year (365 days)] for the FPFTY.

Q. PLEASE CONTINUE.

A. It is important to note that the company has used the twelve-month period ended November 30, 2025, as the historic test year (HTY), the twelve-month period ending November 30, 2026, as the FTY, and the twelve-month period ending December 31, 2027 (January 1, 2027 through December 31, 2027) as the FPFTY. If the Company has an intention to make new rates effective in December 2026, it should have used the twelve-month period ending November 30, 2026 (December 1, 2026 - November 30, 2027) as the FPFTY consistent with the HTY ended on November 30, 2025, and FTY ending on November 30, 2026, and should have filed this base rate case accordingly.

Importantly, in a similar manner Columbia Gas in its last base rate case (Docket No. R-2025-3053499) requested a rate increase for a 13-day period prior to the beginning of its FPFTY (January 1, 2026 through December 31, 2026). I&E raised this issue and the Commission agreed with I&E's recommendation and

ordered Columbia Gas to make the new rates effective on January 1, 2026, and not Columbia Gas' requested rate increase effective December 19, 2025.[81]

Q. PLEASE SUMMARIZE YOUR RECOMMENDATION.

A. Considering the above discussion and in the interest of ratepayers, I recommend that Peoples should agree to make the new rates effective on January 1, 2027 (the first day of the FPFTY) instead of December 27, 2026, to avoid any unreasonable and unjustified impact on ratepayers.

If Peoples does not agree with the above recommendation, I recommend the Commission direct the Company: (1) to make the new rates effective January 1, 2027 (the first day of the FPFTY) instead of on December 27, 2026 and file an updated tariff rates and rules (Supplement to Tarriff Gas) pursuant to the provisions of 52 Pa. Code §§ 53.1, et seq. and 53.101, designed to produce the approved annual distribution rate/revenue increase to become effective for service rendered *on and after January 1, 2027*; and (2) to file all subsequent base rate cases that should have new rate effective dates beginning with the first day or later of the claimed FPFTY.

[81] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Effective Date of New Rates - Disposition, pp. 57-63.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony or revise my recommendations if additional issues or facts arise during this proceeding.

Pennsylvania Public Utility Commission
v.
Peoples Natural Gas Company LLC

Public Meeting of April 16, 2026
3060855-TUS
Docket No. R-2026-3060855

STATEMENT OF VICE CHAIR KIMBERLY BARROW

Before us for consideration is the proposed rate increase request by Peoples Natural Gas Company LLC (Peoples or Company). Peoples proposes an increase of $163.2 million (13.8%) in additional annual revenues to become effective May 26, 2026. The proposal will result in an increase in a residential customer's bill using 86 Mcf per month from $122.20 to $138.23, a 13.1% increase.

I vote to approve the suspension and investigation of this filing, pursuant to 66 Pa.C.S. § 1308(d). In so doing, I urge the Parties to take a critical look at the Company's requested rate of return and return on equity (ROE) as well as the capital structure (common equity ratio and debt capital) to ensure reasonableness. Deviations in each of these items translate into millions of dollars charged to customers of all rate classes. Too often, the relationship between debt and ROE to cost of debt and capital is asserted as a general matter from basic economic principle alone. However, those relationships are not established empirically and left for the Commission to assume the relationship without any supporting data. Therefore, I believe a careful and detailed review of Peoples' claimed capital structure and ROE is warranted.

Additionally, Peoples stated that the primary reason for the instant rate filing is its investment in replacing aging infrastructure. According to Peoples, the investment in net plant in service for the fully projected future test year (FPFTY) ended December 31, 2027, is projected to be $5.5 billion. When the Company requested a rate increase for the FPFTY ending September 30, 2025, the Company's investment in net plant was approximately $4.1 billion. According to Peoples, the $1.4 billion increase in net plant has largely been the result of continued investments necessary to enhance and maintain the safety and reliability of the Company's distribution system, which includes the replacement of aging gas plant infrastructure.

Section 315 of the Code, 66 Pa.C.S. § 315(e), states that whenever a utility utilizes an FPFTY as the basis for its rate increase, the utility shall provide appropriate data evidencing the accuracy of the estimates of its FPFTY. Thus, it is incumbent upon Peoples and the Parties challenging the filing to ensure that Peoples' estimates in its last and current rate filing comply with Section 315 of the Code. Specifically, Peoples should provide documentation/information showing estimates of its FPFTY in its last rate case were accurate or met expectations. If not, the Company should provide an explanation for the deviation and the appropriate adjustments made to account for such deviations in the instant rate filing.

April 16, 2026

Kimberly Barrow, Vice Chair

PENNSYLVANIA PUBLIC UTILITY COMMISSION
Harrisburg, Pennsylvania 17120

Pennsylvania Public Utility Commission, et al.	**Public Meeting of December 4, 2025**
v.	**3053499-OSA**
Columbia Gas of Pennsylvania, Inc.	**Docket No. R-2025-3053499**

STATEMENT OF VICE CHAIR KIMBERLY BARROW

Before us for consideration is the proposed rate increase request by Columbia Gas of Pennsylvania, Inc. (Columbia Gas or Company). Columbia Gas proposed an increase of $110.4 million (12.02%) in additional annual revenues based on a fully projected future test year (FPFTY) ending December 31, 2026. The proposal would have resulted in an increase in a residential customer's bill using 70 Therms per month from $138.52 to $152.29 (an increase of $15.77 or 11.38%). Columbia Gas also requested an increase in its residential customer charge from $17.25 to $31.97 (an increase of $14.72 or 85.2%).

In their Recommended Decision, Administrative Law Judges (ALJs) Jeffery A. Watson and Chad L. Allensworth recommended that the Commission deny the Company's rate increase request in its entirety or alternatively grant an increase of $66,424,574. Exceptions and Reply Exceptions were filed.[1]

Below are a few issues of concern I would like to highlight.

Frequency of Rate Increase Filings:

The record in this case indicates that since 2008 Columbia Gas has requested an increase almost on an annual basis, including five rate increase requests since 2020.[2] Columbia Gas' rates have increased by almost $500 million during this period. The record further shows that Columbia Gas has the highest rates in the state and the highest revenue per unit of natural gas in the state and the third highest for the 25 natural gas distribution companies (NGDCs) offering service in the mid-Atlantic region, surpassed only by NGDCs offering service to New York City.[3] Columbia Gas' rates outpace inflation. Over the last 20 years, Columbia's residential customer rates for average heating customers (70 therms per month) have increased by 121% (from $47.58 in 2005 to $105.09 in 2025). During this period, the household income for a family of four at 150% FPL only increased 60% (from $30,000 to $48,225 per year). Columbia Gas has also filed 12 rate

[1] The Parties to this proceeding include Columbia Gas, the Office of Consumer Advocate (OCA), The Pennsylvania State University (PSU), the Commission's Bureau of Investigation and Enforcement (I&E), the OCA, the Office of Small Business Advocate (OSBA), and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

[2] Including the instant proceeding, the Company has requested a rate increase twelve times since 2009: 2009, 2010, 2012, 2014, 2015, 2016, 2019, 2020, 2021, 2022, 2024, and now 2025. *See* OCA St. 5 at 7; OSBA M.B. at 5, Table IEc-1; Table 2, *supra*. Further, as noted in Table 2, the instant rate proceeding is the Company's thirteenth since 2008.

[3] OCA Ex. MWD-7; I&E St. 2 at 9; OCA M.B. at 36; OCA R.B. at 12; OCA Exh. MWD-7.

cases during this period totaling approved distribution rate increases of over $487 million.[4]

While I understand that Columbia Gas is entitled to recovery of the cost of investments made to its system, the Company's utilization of the FPFTY, as authorized under 66 Pa.C.S. § 315, and the availability of the distribution system improvement charge (DSIC), as authorized under 66 Pa.C.S. § 1350 and other rate recovery mechanisms, should be enough incentives to discourage Columbia Gas' current near-annual frequency of rate increase requests.

Capital Structure:

Columbia Gas requested a capital structure of 54.4% common equity and 45.60% debt (43.28% long-term debt and 2.32% short-term debt), along with a return on equity (ROE) of 11.35%. Although I&E accepts the Company's proposed capital structure, the OCA and CAUSE-PA, in opposition, argued that the Commission should instead award a hypothetical capital structure of 50% equity and 50% debt (47.68% long-term debt and 2.32% short-term debt).[5] According to the OCA, the average capital structure mix for the proxy group used in this case as shown on the Value Line consists of 55% debt and 45% equity, the inverse of the ratio proposed by Columbia.[6]

Here, the record clearly reflects that the proxy group's capital structure is composed of less equity than Columbia Gas' capital structure, highlighting reduced risk for the Company when compared to that of the proxy group, and, therefore, suggesting the need for a lower ROE for Columbia Gas. I agree with the OCA that the discrepancy between Columbia Gas' capital structure and the proxy group necessitates an adjustment to the Company's capital structure since Columbia Gas' equity profile has less financial risk than the proxy group. A 50/50 capital structure in this case is equal to the proxy group's average capital structure.[7] Also noteworthy, CAUSE-PA argued that if the Commission were to apply a hypothetical capital structure of 50% equity and 50% debt, the overall rate of return at the Company's desired ROE of 11.35% would be reduced by 0.27% (from 8.55% to 8.28%), which would have reduced the Company's overall annual revenue requirement increase by $17.7 million, or from the proposed increase of $110.5 million sought by Columbia to $92.8 million.[8] CAUSE-PA and the OCA propose an overall rate of return of 7.06%.[9]

---

[4] CAUSE-PA St. 2 at 21.
[5] OCA M.B. at 126; OCA St. 3 at 58; OCA Exh. DJG-16.
[6] OCA M.B. at OCA St. 3 at 50.
[7] Adoption of the OCA's recommended capital structure and ROE would result in a revenue requirement reduction of $54.6 million. OCA St. 3 at 3-4, 50. I agree with the OCA that in *Riverton Consol. Water Co. v. Pa. PUC, 140 A.2d 114 at 121 (Pa. Super. 1958)*, the Superior Court determined that the Commission may make adjustments to a utility's capital structure where circumstances indicate that the actual capital structure may be unfair to customers, such as when the actual capital structure may be weighted too heavily to the debt side or the equity side. See OCA M.B. at 125.
[8] CAUSE-PA M.B. at 35-38.
[9] The OCA's proposed overall rate of return was based upon a weighted average of a 5.20% rate of return on long-term debt, a 5.00% rate of return on short-term debt, and an 8.9% rate of return on common equity. OCA M.B. at 123, 127; OCA St. 3 at 58.

It is clear from the arguments put forward by the Parties in opposition to the Company's proposed capital structure that a 50% equity and 50% debt capital structure is a better representation of the Company's **actual** financial risk and would have resulted in millions of dollars in reduced revenue requirement for the Company and resultant lower rates for Columbia Gas' customers.

Rate of Return on Equity:

Columbia Gas proposed a rate of return on common equity of 11.35% inclusive of the Company's requested upward adjustment of 0.25% for management effectiveness.[10] As a result of its DCF analysis, I&E recommended a cost of common equity of 10.51%.[11] The OCA recommended a cost of common equity of 8.90%, based on its CAPM model and the use of a hypothetical capital structure. The OCA noted that an ROE of 8.90% and overall rate of return of 7.06% are sufficient to ensure Columbia Gas' ability to attract capital and continue investment to provide safe and reliable service, while guarding the interests of consumers.[12] The ALJs rejected Columbia Gas' proposed rate of return on common equity of 11.35% and adopted I&E's proposed DCF ROE of 10.51% ROE.[13]

I believe an ROE lower than the ALJs' recommended 10.51% is more appropriate in this case, given Columbia Gas' unique lack of regulatory lag, associated reduced business risk, and the commensurate impact of the Company's nearly annual rate increases in the past five years on customers' rates. Using informed judgment, an ROE of 9.6% is more appropriate. The most recent five-year average of I&E's proxy group companies' capital structure ranges from 39.33% to 57% long-term debt, 0.51% to 12.82% short-term debt, and 35.96% to 60.16% common equity, with an overall five-year average of 47.42 long-term debt, 7.85% short-term debt, and 44.73% common equity.[14] Since the proxy group's capital structure is composed of less equity than Columbia's capital structure (or the hypothetical capital structure) it is appropriate to adjust the equity return to account for the reduced risk of a capital structure that employs more equity. I&E's DCF results range from 9.06% to 11.68% (using an average dividend yield and average growth estimate for each company) with an average of 10.51% and a composite CAPM ROE of 9.935.

Based upon consideration of the competing evidence provided to the record, I believe an ROE that is in the range of the bottom of I&E's DCF range and the Composite CAPM ROE is appropriate. The 9.60% ROE is also an approximate median number between the OCA's proposed ROE of 8.90% and I&E's proposed ROE of 10.51%. With an ROE of 9.60% along with a 50/50 capital structure, the overall rate of return would be 7.40%, resulting in an overall rate increase of approximately $30,573,357. Accordingly, I would support an ROE of 9.60%.

Smart Remote Methane Detection Pilot: I&E recommended a Smart Remote Methane Detector pilot program in a region where Columbia has risky pipe for the installation of

[10] Columbia Gas St. 8 at 9-10.
[11] I&E M.B. at 40-41.
[12] OCA R. Exc. at 10-11; OCA M.B. at 137.
[13] R.D. at 337-38.
[14] I&E M.B at 37; I&E St. 2 at 20, citing I&E Exh. 2, Sch. 2.

500 to 1,000 Smart Remote Methane Detectors (SRMDs). Columbia stated that it could not commit to the Pilot as outlined by I&E, citing significant IT infrastructure costs and concerns, but was willing to evaluate technologies associated with the integration of Automated Metering Infrastructure and SRMDs for potential future deployment.

I support directing Columbia to implement an internal study to determine whether a methane detection pilot program would be feasible and how it would be implemented. With affordability always on our minds, it is very important for the company to fully understand the potential costs associated with the pilot prior to implementation. The usefulness and safety benefits of methane detectors are tremendous, allowing the ability of real-time smart reporting technology to simultaneously notify the customer and the emergency response officials of a potentially hazardous situation. I want to take the opportunity to thank I&E for putting forth this proposal and for Columbia to be willing to evaluate the pilot.

Additional CAP Screening: The OCA and CAUSE-PA proposed that Columbia conduct initial screening for all applicants applying for service or when transferring service to determine if they qualify as a low-income customer or may be eligible for assistance, such as customer assistance program (CAP). The record indicates that only 20,988 customers, or 23% of the estimated Columbia Gas' low-income customers, were enrolled in CAP and that additional screening is appropriate. I support this proposal and agree that additional screening is needed, and that any tool we can use to nudge customers into a healthy financial relationship with their utility is beneficial for everyone.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission	:	
	:	
v.	:	Docket No. R-2026-3060855
	:	
Peoples Natural Gas Company LLC	:	

COMMENTS OF GOVERNOR JOSH SHAPIRO
ON PEOPLES NATURAL GAS COMPANY LLC BASE RATE FILING

Governor Josh Shapiro respectfully submits these comments in opposition to the application of Peoples Natural Gas Company LLC ("Peoples") to raise its rates for gas distribution service. The Governor opposes Peoples' proposed revenue increase of $163.2 million annually—a 13.8 percent increase over Peoples' current revenue requirement—because it is inconsistent with principles that the Governor recently articulated as a fair barometer of whether utility rate proposals would result in excessive costs for Pennsylvania customers.[1] The Governor encourages Peoples to work with the parties to this case to revise the proposal in accordance with the principles, as described further below, and should they not, urges the Commission to reject or modify the requested increase.

Governor Shapiro has made lowering costs for Pennsylvanians a central focus of his Administration's efforts around economic development and energy and has sounded the alarm about the increasing frequency of utility requests for large base rate increases. On April 29, 2026, the Governor sent an open letter to Pennsylvania utility executives calling on them to put their customers first and change utility practices that are driving up rates. Specifically, Governor

[1] A copy of Governor Shapiro's letter is attached as Exhibit 1. The Governor acknowledges that Peoples filed its rate increase application before the publication of the Governor's letter but believes it is in the public interest to highlight the discrepancies between his principles and Peoples' proposal.

Shapiro articulated three principles for utilities to follow to ensure that rates are fair and that Pennsylvanians are not unduly harmed by unjustifiable costs. Peoples' rate proposal does not satisfy those principles.

First, Peoples has not proposed to raise capital in the most cost-effective form available. Relatively low-cost debt—not high-cost equity—should normally represent a clear majority of a utility's proposed ratemaking capital structure. And when a distribution utility is owned by a holding company, its equity share should be no greater than its parent's, absent extraordinary justification. Although Peoples' ultimate parent company, Essential Utilities, Inc. ("Essential"), employs a capital structure of 54.9 percent debt and 45.1 percent equity,[2] Peoples proposes a capital structure that is practically the inverse: 54.5 percent common equity and 45.5 percent long-term debt. If the Commission permits Peoples to maintain a higher percentage of equity than Essential does, it will be facilitating an unjust transfer of wealth from Peoples' ratepayers to Essential's shareholders.

Second, Peoples does not adequately explain in plain language why its proposed investments are necessary and cost-effective. When a utility proposes to increase its rates, it must use transparent data to show that the investments will address specific reliability or safety concerns or provide cost/benefit analysis that demonstrates significant customer savings or reliability benefits. Among other things, this means showing that customers will receive real net value from utility investments, and that the utility is controlling costs and maximizing the use of existing resources in customers' interest.

Peoples' rate increase proposal does not meet this standard. Through rates based on a fully projected future test year ("FPFTY") ending December 31, 2027, the company proposes to

[2] *See* Essential Utilities, Inc. Form 10-K (February 27, 2025) at 55, *available at* https://www.essential.co/static-files/ee8bace1-4fd7-487b-a9c7-d30d65228af1.

recover costs for—and earn a return on—new capital investments totaling around $1.5 billion in 2026 and 2027.[3] Nearly 80 percent of this investment is being made under the company's current Long-Term Infrastructure Improvement Plan ("LTIIP"), which the Commission approved in 2025.[4] But the company provides little data to support the recovery of its LTIIP investments in base rates and no cost-effectiveness analysis.

Third, Peoples proposes an exorbitant and unjustifiable return on equity. Governor Shapiro has urged utilities to demonstrate the reasonableness of their proposed returns on equity ("ROE") by providing a benchmark (representing at least 10 percent of the incremental requested equity) that is transparently derived through a public process with competitive bidding by multiple participants to establish a fair market cost of that equity. When a utility declines to use such a process, it is fair to presume that the rate is higher than what such a process would yield, but that presumption can be overcome if a utility requests a return on equity that does not exceed the rate of the current 10-year U.S. Treasury yield plus the five-year median of the equity risk premium as published in the Federal Reserve's Financial Stability Reports.

Because Peoples filed its rate case increase before Governor Shapiro sent his open letter, it is understandable that Peoples failed to adhere to the practices articulated there to reliably and competitively determine its fair market cost of equity. However, the Governor believes that Peoples' proposed ROE of 11.25 percent is exorbitant and incommensurate with the relatively low-risk nature of monopoly gas distribution service, especially given Peoples' use of Pennsylvania's fully projected future test year and distribution system improvement charge ("DSIC") mechanisms, which reduce "regulatory lag" and de-risk capital investment.

[3] Peoples also seeks to move into rate base hundreds of millions of dollars of capital investment that the company made between the filing of its previous rate case and the filing of the case at bar.
[4] *See* Peoples Statement No. 1, Direct Testimony of Michael Huwar at 4:8-9.

For all these reasons, Governor Shapiro opposes Peoples' proposed rate increase and urges the company to modify its application to ensure it does not impose unjustified rate increases on its customers. In the absence of such modification, the Governor urges the Commission to reject or modify Peoples' proposal.

Respectfully submitted:

Jennifer C. Selber

Exhibit 1

GOVERNOR JOSH SHAPIRO

April 29, 2026

Dear Utility Leaders:

As you are no doubt aware, many of your customers across the Commonwealth are experiencing markedly higher utility costs. Rising utility bills have themselves become drivers of inflation. While there are many factors affecting those increases, several core causes are directly within your control and result from your policy and fiscal decisions, including the excessive rate requests several utilities have sought in recent years. Last year alone, 13 Pennsylvania utilities requested $975 million in higher rates after those very same utilities had earned a total of $1.4 billion in profits in 2024.

We have reached a tipping point, and this is a moment to put your customers first and change the behaviors causing rate increases. As I've expressed publicly and privately, I believe the 20th century utility model is broken—we can no longer simply prioritize corporate profitability to drive infrastructure development. Rather, we must be laser focused on delivering on the actual needs of our communities. As I stated clearly in my Budget Address in February, Pennsylvania consumers should not be asked to pay a single dollar more than is needed to support a safe and reliable utility system.

Change is needed, and my Administration stands ready to support each Pennsylvania utility in raising the capital you need to invest in your service territories and workers, both in modernizing with cost-effective new technologies and maximizing the existing infrastructure that you have developed over time. However, as we work together to implement this new approach, you must seek to procure that capital in more affordable ways, conscious of the utility burdens facing many consumers across our Commonwealth.

I write today to lay out three commonsense practices to ensure the needs of Pennsylvanians come first. My Administration will use these three practices as a benchmark to evaluate rate case proposals going forward. Let me be clear: my Administration and I will vocally and forcefully oppose rate case requests from utilities that fail to adhere to these three commonsense practices.

First, utilities should seek to raise the most cost-effective forms of capital. Best practices now require you to protect consumers by disfavoring expensive equity when lower-cost debt is available. Given the low risk profile of monopolistic utilities, which maintain a captive rate base able to repay obligations over time, consumers should not be expected to bolster corporate profits through over reliance on costly equity. This means debt should normally represent a clear majority of a utility's proposed ratemaking capital structure, as it does in many other lower-risk industries. As one measure of this approach, any equity share proposed in a rate case in excess of the amount of equity employed by the utility's parent holding company will require extraordinary justification to receive my Administration's support.

For utilities looking to find low-cost sources of capital, my Administration encourages you to apply to the Department of Energy, which is currently offering loan terms as favorable as the 10-year U.S. Treasury yield plus 35 basis points. By comparison, the average Pennsylvania utility requested a return on equity a staggering 682 basis points above the 10-year U.S. Treasury yield last year. Before raising such expensive equity, you should take advantage of more affordable sources of capital, like these loans, that many of your fellow utilities across the country are pursuing. My Administration stands ready to facilitate an introduction to loan officers at the Department of Energy upon your request.

Second, whenever new revenue is sought, a utility must explain in plain, clear language why its proposed investments are necessary, using transparent data to identify a specific reliability or safety concern that will be addressed, or demonstrating with a thorough cost/benefit analysis that the investment will produce significant savings or reliability benefits for consumers. This means showing the value customers will receive in terms of discrete improvements producing tangible outcomes that are timebound, verifiable, and logically linked to the need for additional capital. Creating real value for customers also means maximizing existing grid resources in ways that control costs and defer the need for future upgrades. You must also describe explicitly what amount of your

requested rate increase will be remitted to shareholders through corporate dividends or other means, as compared to what would be used to directly advance the needs of your customers.

Third, you must provide transparent, justifiable equity returns. Pennsylvania has a long, proud tradition of trusting free markets to deliver fair, transparent pricing. In fact, this year marks the 30th anniversary of Act 138, which introduced competition into our utility sector for the first time. That bipartisan law embodies Pennsylvania's deep-seated belief that free-market competition—when properly implemented and overseen—is the best tool for delivering customers the fair value they deserve. Today, we use markets to price our wholesale power and rely on principles of competition to fairly and impartially award public contracts. Yet less accurate administrative determinations—essentially amounting to educated guesses—still govern how much utilities earn on their equity investment. And all too often the outcome of this administrative process is shrouded in "black box" settlements, that do not provide the public with transparency about costs they will have to pay. These vestiges of the past need to evolve to ensure that utilities are not seeking excessive profits but only the opportunity to earn the fair rate of return to which they are entitled.

To accomplish this, utilities can prove their need for a requested return on equity by providing a benchmark (representing at least 10% of the incremental requested equity) that is transparently derived through a public process with competitive bidding by multiple participants to establish a fair market cost of that equity. This sample offers the energy consumer and Public Utility Commission real-world evidence of the proper authorized return on equity, an amount that will allow the utility to earn reasonable equity returns under efficient operations. If a utility declines to justify its requested return on equity through a competitive, transparent process, it creates a presumption in the view of my Administration that the requested rate is higher than would have been derived from such a competitive process. Absent extraordinary and unforeseen circumstances, a utility can overcome that presumption by requesting a return on equity that does not exceed the rate of the current 10-year U.S. Treasury yield plus the five-year median of the equity risk premium as published in the Federal Reserve's Financial Stability Reports. In simple terms, this allows the filing utility to earn the same expected return as the stock market as a whole, according to Federal Reserve estimates, comfortably exceeding typical Public Utility Commission calculations of risk for the utility sector.

This provides an outcome that is fair for your utility and your customers even without an auction or other market-based price discovery mechanism.

This letter is an effort to be up front with you about my Administration's approach to rate requests going forward. In directly laying out these practices, I am making clear my expectations. I stand ready to collaborate with you, the Public Utility Commission, and other stakeholders in advancing thoughtful rate requests that put Pennsylvania families and businesses first and control costs after years of unacceptably high rate increases. Should you wish to have my Administration's support for any future rate requests, you must submit a description of your compliance with these practices to my Special Counsel for Energy Affordability alongside your rate case filings.

I appreciate your compliance with these practices and look forward to working together to control costs for ratepayers and build out the needed infrastructure for our Commonwealth.

Sincerely,

Governor Josh Shapiro

KROLL

March 24, 2026

Impact of the Middle East Conflict on Cost of Capital Assumptions – March 2026 Update

Executive Summary

Kroll regularly reviews fluctuations in global economic and financial market conditions that may warrant changes to our equity risk premium (ERP) and accompanying risk-free rate recommendations. The risk-free rate and ERP are key inputs used to calculate the cost of equity capital in the context of the Capital Asset Pricing Model (CAPM) and other models used to develop discount rates. We also update country risk data on a quarterly basis for 175+ countries using various models.

As of March 23, 2026, the **Kroll Recommended U.S. ERP is being reaffirmed at 5.0%** when developing USD-denominated discount rates. This guidance originally became effective on September 2, 2025. Similarly, **the Kroll Recommended Eurozone ERP is being reaffirmed in the range of 5.0% to 5.5%**, and we still believe that a **5.5% ERP (i.e., toward the higher end of the range)** is more appropriate when developing EUR-denominated discount rates. This guidance was originally established on January 30, 2026. Both U.S. and Eurozone recommendations will remain in place until further guidance is issued.

Notwithstanding the current recommendations, we are closely monitoring geopolitical events and related economic and financial market conditions that may affect our guidance during the first half of 2026.

First, an escalation of the ongoing armed conflict in the Middle East and a rise in related geopolitical risks could cause us to increase our ERP recommendations in the next few months. The longer the conflict continues, the more likely that higher oil and gas prices (among other commodities) will create upward inflationary pressures that will reverberate throughout the global economy. While the impact will vary significantly by country and geographic region, certain major central banks may be compelled to either hike interest rates (e.g., European Central Bank, Bank of Canada, Bank of England) or keep policy rates at elevated levels (e.g., Federal Reserve), thereby tightening financial conditions globally. A protracted conflict in the Middle East, combined with the still uncertain trade and tariff environment, could push the global economy into stagflation (i.e., stagnant growth with high inflation). Despite the U.S. economy being less exposed to oil shocks, it is not fully immune to a prolonged period of higher gasoline, fertilizers and other commodity prices. U.S. consumers are already struggling with affordability issues and a resurgence in inflation would further dampen consumer confidence, potentially leading to a retrenchment in spending.

Second, there are additional factors that could contribute to financial market disruptions in the next few months. A U.S. stock market correction driven by AI-related stocks remains a risk for 2026. In particular, recent market selloffs have centered on certain software companies (e.g., SaaS, or software-as-a-service), whose business model could be upended by AI, and financial services entities lending to those businesses. Significant exposure by some semi-liquid and evergreen private credit funds to data center and software companies is also causing jitters in markets. Certain financial institutions and alternative asset managers have already seen a significant negative impact on their share prices. For now, these risks appear to be confined to certain segments of the market and do not appear to be systemic.

Nevertheless, the combination of the risks outlined above could cause upheaval in global financial markets and might lead to a "risk-off" investor sentiment, with a corresponding increase in ERP for certain geographies (i.e., investors may demand a higher premium over the risk-free rate to induce them to invest in those equity markets).

Background

On February 28, 2026, the U.S. and Israel initiated coordinated military operations against Iran. These actions prompted Iran to retaliate by attacking Israel and several neighboring countries, with targets including U.S. military installations and critical energy infrastructure. These developments led to the suspension of navigation through the Strait of Hormuz, a major chokepoint for the world's transit of oil supply. According to the U.S. Energy Information Administration (EIA), the Strait of Hormuz accounted for 20% of the world's total oil supply and 26% of the world's maritime trade in the first half of 2025.[1] In addition, about 20% of liquefied natural gas (LNG) trade flows transited through the Strait of Hormuz in 2024.[2]

The disruption severely affected global energy supply chains and intensified commodity market volatility, particularly after Iran began targeting merchant vessels. Brent crude oil, the international oil benchmark, surged to $106 per barrel (based on closing spot prices at the time of writing), representing a 46% increase since February 27, 2026.[3] These prices are not quite as high as observed in June 2022, in the aftermath of Russia's invasion of Ukraine. Member countries of the International Energy Agency (IEA) coordinated the release of 400 million barrels of oil to stabilize markets, but this action has not helped so far.

European natural gas prices increased sharply, further exacerbated when Qatar—the world's second-largest exporter of LNG—declared "force majeure" following damage to its export facilities.[4] Unlike the U.S., which is largely energy independent, Europe is a net importer of energy, making it especially vulnerable to supply disruptions.

[1] U.S. Energy Information Administration, "World Oil Transit Chokepoints", March 3, 2026.
[2] U.S. Energy Information Administration, "About one-fifth of global liquefied natural gas trade flows through the Strait of Hormuz", June 24, 2025.
[3] Data through March 22, 2026. Source of underlying data: S&P Capital IQ. The West Texas Intermediate (WTI) was trading at approximately $95/barrel at the time of writing, a 42% increase from the February 27, 2026 close.
[4] Declaring force majeure enables Qatar to legally suspend its obligations to deliver LNG under long-term contracts. For additional details, see Qatar Energy press release titled "H.E. Minister Saad Sherida Al-Kaabi: The missile attacks reduced Qatar's LNG export capacity by 17% and caused an estimated loss of $20 billion in annual revenue", March 19, 2026.

This shock to energy supplies may drive higher inflationary pressures, increase financial market uncertainty, and weaken investor sentiment—factors that tend to widen risk premia. Both the European Central Bank and the Bank of England are now considering whether interest rate hikes are needed to tame inflationary pressures. Nevertheless, natural gas prices in Europe are still much lower than in the aftermath of the Ukraine invasion in 2022. For perspective, the Title Transfer Facility (TTF), the primary price benchmark for European natural gas, surged 86% from €32 per megawatt-hour (MWh) on February 27 to €59/MWh on March 22, 2026.[5] In contrast, at the height of the Russia-Ukraine conflict, TTF prices peaked at €349/MWh.

As the Middle East situation continues to evolve, global financial markets have begun to show signs of stress, as investors reassess the length of the conflict and the heightened geopolitical uncertainty. Equity markets have experienced substantial volatility, with major indices seeing a net decline since the conflict began. Since February 27, coincidently a record high for the STOXX® Europe 600, the index fell by 9.0% through March 23, 2026. During the same period, the VSTOXX®, the volatility index for the Euro STOXX® 50, has hovered around 30.0, which is the highest level since April 2025 (after the so-called "Liberation Day"). In the U.S., the VIX index closed at 26.2 on March 23, while the S&P 500 index declined by 4.3% over the same period (and by 5.7% since its record high on January 27, 2026). The larger decline in Europe relative to the U.S. underscores the European economy's heightened vulnerability to a potential energy crisis.

Thus far, given the ramifications of a potential global energy crisis, equity markets are reflecting weakening investor confidence, but not a sense of panic. The longer the conflict persists, however, the greater the likelihood that higher commodity prices and disrupted energy supplies will reshape negatively the expectations for economic growth and inflation. For now, elevated market volatility indicates increasingly cautious investor positioning, reinforced by a concurrent rise in long-term government yields.

Long-term yields in both the U.S. and Europe increased significantly following the beginning of hostilities, as investors priced higher inflation expectations. The 10-year U.S. Treasury yield increased from 4.0% on February 27 to 4.3% on March 23, 2026. Similarly, the 10-year German Bund yield rose from 2.7% to 3.0% over the same period. The UK has seen a sharper increase in long-term interest rates, with the 10-year government bond yield jumping from 4.3% to 5.0%, given its significant dependence on imported energy.[6] The sharp rise in oil and natural gas prices has raised concerns that inflation may remain elevated for a longer period, eroding real returns and prompting investors to require higher yields on long-dated government securities. However, should transit through the Strait of Hormuz resume in the near term, energy prices would likely stabilize and appease some of investors' concerns.

We are monitoring the situation closely, but at this time we believe current conditions do not warrant changes to our ERP recommendations for the U.S. or Eurozone. That said, circumstances can evolve quickly, and we will issue updated guidance should market conditions shift materially.

U.S. and Eurozone ERP Recommendations – Reaffirmed March 23, 2026

United States

The underlying economic conditions are still favorable for the U.S. economy. Based on recent economic indicators and financial market conditions, the **Kroll Recommended U.S. ERP remains at 5.0%**, matched with the higher of a U.S. normalized risk-free rate of 3.5% or the spot 20-year U.S. Treasury yield as of the valuation date until further notice. We last changed the Recommended U.S. ERP on September 2, 2025, and this recommendation was re-affirmed at year-end 2025.

Eurozone (From a German Investor Perspective)

Based on recent economic indicators and financial market conditions, the **Kroll Recommended Eurozone ERP remains in the range of 5.0% to 5.5%** to be used in conjunction with the higher of a German normalized risk-free rate of 2.5% or the spot 15-year German government bond yield as of the valuation date. **We believe that an ERP toward the higher end of the range (i.e., closer to a 5.5% ERP)** is still more appropriate. This guidance was originally established on January 30, 2026.

Incremental country risk adjustments for other Eurozone countries with a sovereign debt rating below AAA may be appropriate. Please note that this information does not supersede Germany's Institut der Wirtschaftsprüfer (IDW) guidance for projects that will be reviewed by German auditors or regulators.

We will continue to monitor economic and financial market conditions, as well as geopolitical events that may change our guidance in the coming months. Please contact our support team with any questions: costofcapital.support@kroll.com.

Kroll Cost of Capital Inputs

Data as of March 23, 2026

	U.S. (in USD)	Eurozone ** (in EUR)	U.K. †† (in GBP)	Canada †† (in CAD)	Australia †† (in AUD)
Normalized Risk-Free Rate	Higher of 3.5% or Spot*	Higher of 2.5% or Spot†	Higher of 4.0% or Spot‡	Higher of 3.5% or Spot§	Higher of 3.5% or Spot#
Kroll Recommended Equity Risk Premium	5.0%*	5.0% to 5.5%†	n/a	n/a	n/a

* We recommend using the spot 20-year U.S. Treasury yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our U.S. normalized risk-free rate of 3.5%. This guidance is effective when developing USD-denominated discount rates as of June 16, 2022, and thereafter. Based on current economic indicators and financial market conditions, the Kroll Recommended U.S. ERP is 5.0% when developing USD-denominated discount rates as of September 02, 2025, and thereafter.

† We recommend using the spot 15-year German government bond yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our German normalized risk-free rate of 2.5%. This guidance is effective when developing EUR-denominated discount rates as of March 31, 2024, and thereafter. Based on current economic and financial market conditions, the Kroll Recommended Eurozone ERP has decreased to a range of 5.0% to 5.5%, but we believe that an ERP towards the higher end of the range (i.e., closer to 5.5%) is likely more appropriate when developing EUR-denominated discount rates as of January 30, 2026, and thereafter.

‡ We recommend using the spot 20-year U.K. Gilt yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our U.K. normalized risk-free rate of 4.0%. This guidance is effective when developing GBP-denominated discount rates as of October 18, 2022, and thereafter.

§ We recommend using the spot Government of Canada Benchmark Long-Term Bond yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our Canada normalized risk-free rate of 3.5%. This guidance is effective when developing CAD-denominated discount rates as of October 18, 2022, and thereafter.

We recommend using the spot 10-year Australia Commonwealth Government bond yield as the proxy for the risk-free rate, if the prevailing yield as of the valuation date is higher than our Australia normalized risk-free rate of 3.5%. This guidance is effective when developing AUD-denominated discount rates as of October 31, 2022, and thereafter.

** German normalized risk-free rate and Eurozone equity risk premium (ERP) for use in EUR-denominated discount rates from a German investor perspective. Additional country risk adjustments may be warranted when estimating discount rates for other countries in the Eurozone.

†† Although currently we do not have an official Kroll Recommended ERP for the U.K., Canada and Australia, historical and other forward-looking ERP information for these countries is available in the International Cost of Capital Inputs dataset within the Cost of Capital Navigator.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RR-009

Witness: Nelson, Jennifer **Title:** Vice President, Concentric Energy Advisors

Question: Reference Peoples Statement No. 15, p. 39, lines 1-2 and Exhibit JEN-5, pp. 1-5 concerning the indicated average cost of equity of 11.94%, which is based on the combined analysis results of the traditional CAPM and ECAPM results. State whether Ms. Nelson is aware of any instances where the Commission specifically relied upon an ECAPM analysis results on a standalone basis or in combination with traditional CAPM results to determine an appropriate cost of equity in any Pennsylvania base rate proceeding in the last ten years. If so, identify the applicable cases, including the docket numbers.

Answer: The Commission has approved settlements in proceedings where the ECAPM was presented. See, e.g., Docket No. R-2024-3047068.

In Ms. Nelson's experience, regulatory commissions routinely review and consider the multiple methods presented by expert witnesses representing various parties and apply their judgment in assessing the analytical results and determining the authorized Return on Equity. The ECAPM approach has been presented by ROE witnesses representing a variety of parties across the U.S. While Ms. Nelson has not performed an exhaustive search, she is aware that the ECAPM has been accepted by commissions in Alaska, Maryland, New York, and North Carolina. In particular, the New York Public Service Commission ("NYPSC") explicitly relies on the ECAPM (referred to as the Zero Beta CAPM by the NYPSC), along with the traditional CAPM and DCF approaches.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RR-013

Witness: Nelson, Jennifer **Title:** Vice President, Concentric Energy Advisors

Question: Reference Peoples Statement No. 15, p. 42, line 1 (Figure 14) and Exhibit JEN-6, p. 1 concerning the RP analysis indicated cost of equity of 10.24% ((10.28% + 10.21%) 2). State whether Ms. Nelson is aware of any instances where the Commission specifically relied upon an RP analysis to determine an appropriate cost of equity in any Pennsylvania base rate proceeding in the last ten years. If so, identify the applicable cases, including the docket numbers.

Answer: The Commission has approved numerous settlements in proceedings where the Bond Yield Plus Risk Premium model was presented. See, e.g., Docket nos. R-2024-3046523, R-2024-3046931, and R-2022-3037368.

In Ms. Nelson's experience, regulatory commissions routinely review and consider the multiple methods presented by expert witnesses representing various parties and apply their judgment in assessing the analytical results and determining the authorized ROE. The Bond Yield Plus Risk Premium approach has been presented by ROE witnesses representing a variety of parties across the U.S. While Ms. Nelson has not performed an exhaustive search, she is aware that the Bond Yield Plus Risk Premium analysis has been accepted by commissions in North Carolina, the Texas Public Utilities Commission, Mississippi, and Virginia.

I&E Exhibit No. 2
Schedule 14
Page 4 of 4

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RR-016

Witness: Ravenstahl, Luke **Title:** Vice President Sales & Marketing

Question: Reference Peoples Statement No. 15, pp. 48-49, where Ms. Nelson discusses potential "bypass risk" due to loss of certain large-volume commercial and industrial customers:

A. Identify all "large-volume customer" accounts lost and gained by year for the fiscal years 2021, 2022, 2023, 2024, and 2025.

B. Explain future gas distribution business growth potential in general and business opportunities for data center energy demand directly or indirectly in the service territories of Peoples.

C. State whether Ms. Nelson agrees that all jurisdictional regulated utilities in Pennsylvania, regardless of business size and customers count, have the opportunity to recover all prudent expenses necessary to provide safe and reliable service via base rate case filings.

Answer: A. PNG views viable interstate bypass customers to be those with an annual consumption of 500,000 Mcf or more. Given that criteria, we have not lost or gained any large volume customers during those years. Although we have not lost any existing customers to competitors during this period, we have lost a few recent potential large-scale opportunities to bypass competitors.

B. Over the past year we have been approached by developers, consultants, data centers, and other entities, to evaluate providing natural gas service to potential new data center projects in Western Pa. We have had discussions with over 22 entities, with data center power demands ranging anywhere from 8 MW up to 4.5 GW.

C. First, Ms. Nelson emphasizes that while the utilities in Pennsylvania may have the opportunity to recover prudent expenses necessary to provide safe and reliable service, such recovery is not guaranteed, nor automatic. Recovery depends on the utility meeting its burden of proof and demonstrating prudence within the evidentiary record of the base rate case docket. The Commission retains broad discretion to determine what is prudent and may disallow costs it finds imprudent or unsupported.

Ms. Nelson did not make a risk adjustment to account for Peoples' size in this proceeding.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RR-024

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples Statement No. 1, p. 3, lines 1-5, Peoples Volume 8, Exhibit KMS-1, p. 1, and Volume V, Exhibit 14, Appendix C, p. 1 concerning the proposed Original Tariff Gas – PA PUC No. 49 showing the effective date of proposed new rates as May 26, 2026, which will be suspended until December 26, 2026:

A. Provide the targeted effective date of new rates after the rate suspension period ending on December 26, 2026, or after the Commission order approving the rate increase request.

B. If the targeted effective date of new rates is on or before December 31, 2026 and not January 1, 2027, the first day of the FPFTY 2027, state whether Peoples will refund the over recovery in rates/revenue of approximately $2,682,278 (($163,171,938 365) x 6 days) from customers plus interest for the period starting with December 26, 2026 (new rate effective date) through December 31, 2026.

Answer: A. December 27, 2026.

B. No. There is no overlap between rate periods due to the gap period between the FTY and FPFTY, and therefore no double counting or duplicate recovery. Moreover, the Company's prior FPFTY from R-2023-3044549 ended in September 2025, so no overlap between rate effective periods, either. No refund is necessary.

Submit Date: 4/28/2026

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RR-023

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Reference Peoples Volume I, Exhibit No. 2, Schedule 4, p. 2 concerning the Statement of Income at present and proposed rates showing the ratemaking calculation for the historic test year (HTY) ended November 30, 2025, future test year (FTY) ending November 30, 2026, and the fully projected future test year (FPFTY) ending December 31, 2027 (total revenue requirement of $1,347,786,003 and proposed revenue increase adjustment of $163,171,938):

A. Explain in detail why the Company projected the FPFTY for the twelve months from January 1, 2027 to December 31, 2027 when the claimed FTY is from December 1, 2025 to November 30, 2026 and the HTY is from December 1, 2024 to November 30, 2025 in the ratemaking calculation.

B. Explain why the Company filed this rate case on March 26, 2026, rather than on March 31, 2026, when Peoples has provided the supporting revenue requirement and revenue increase calculation based on the FPFTY, which covers the 12-month period January 1, 2027 to December 31, 2027 and the proposed effective date of new rates will be December 26, 2026.

Answer: A. As has been the practice from prior base rate proceedings, the Company projected its FPFTY in this proceeding with a one-month bridge or gap month between the end of its FTY and the beginning of its FPFTY. In this proceeding, December 2026 is the gap month. The reason for this one-month gap between the end of the FTY and the beginning of the FPFTY is due to the requirements of 66 Pa. C.S. §1308(d), which do not allow the Company to begin the FPFTY prior to the legal effective date of new rates. According to the Commission's Order issued April 16, 2026, "Pursuant to 66 Pa. C.S. §1308(d), the filing will be suspended by operation of law until December 26, 2026, unless permitted by Commission Order to become effective at an earlier date."

B. See Company response to I&E-RR-23, part A. Moreover, the Company could not have filed the case on March 31st as that would have been outside of the 120 day period following the HTY in this proceeding, per 52 Pa. Code 53.51(a).

INTRODUCTION OF WITNESS

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is D. C. Patel. My business address is Pennsylvania Public Utility Commission, Commonwealth Keystone Building, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation & Enforcement (I&E) as a Fixed Utility Financial Analyst.

Q. ARE YOU THE SAME D. C. PATEL WHO SUBMITTED DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 2 AND THE SCHEDULES IN I&E EXHIBIT NO. 2?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of (1) Peoples Natural Gas Company, LLC (Peoples or Company) witnesses Ms. Jennifer E. Nelson regarding rate of return topics including the proxy group, capital structure, capital market environment, business risks, cost of common equity methods and data input, flotation costs, management performance, and the

overall fair rate of return, as applied to Peoples' rate base to determine the revenue requirement;[1] (2) Michael Huwar regarding the exemplary management performance adjustment of 0.25% in the cost of equity;[2] (3) Carol S. Scanlon regarding the proposed effective date of new rates;[3] and (4) the Office of Consumer Advocate (OCA) witness David J. Garrett regarding my recommended 10.20% return on equity (ROE), the growth rate used in my discounted cash flow (DCF) analysis, the equity risk premium (ERP) used in my traditional capital asset pricing method (CAPM), and the 10.28% traditional CAPM results.[4]

It should be noted that I do not intend my surrebuttal testimony to address every topic or issue raised or otherwise discussed by the company and other parties' witnesses in rebuttal testimony as I discussed all the topics of concern at length in my direct testimony. My lack of response to any specific statement, assertion, or position of any witness in this surrebuttal testimony does not necessarily indicate my acceptance or agreement with statements, assertions, or positions expressed in rebuttal testimony.

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. Additionally, I will refer to my direct testimony and schedules contained in the corresponding exhibit[5] where necessary.

---

1 Peoples Statement No. 15-R.
2 Peoples Statement No. 1-R.
3 Peoples Statement No. 3-R.
4 OCA Statement No. 3R.
5 I&E Statement No. 2 and I&E Exhibit No. 2.

Q. WHAT WAS YOUR ORIGINAL OVERALL RATE OF RETURN RECOMMENDATION IN DIRECT TESTIMONY?

A. I recommended the following rates of return for Peoples:[6]

Peoples Natural Gas Company, LLC Summary of Cost of Capital			
Type of Capital	**Ratio**	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	50.00%	4.61%	2.31%
Common Equity	50.00%	10.20%	5.10%
Total	**100.00%**		**7.41%**

I&E POSITION

Q. HAS YOUR RETURN ON EQUITY (ROE) RECOMMENDATION CHANGED FROM YOUR DIRECT TESTIMONY?

A. No. I continue to recommend the ROE and overall rate of return for Peoples as shown in the table above.

SUMMARY OF MS. NELSON'S REBUTTAL TESTIMONY

Q. SUMMARIZE MS. NELSON'S RESPONSE IN HER REBUTTAL TESTIMONY TO YOUR RATE OF RETURN RECOMMENDATIONS.

A. First, Ms. Nelson disputes my recommendations regarding return on equity (ROE) and overall fair rate of return. Second, she takes issue with my recommendation

[6] I&E Statement No. 2, p. 7 and I&E Exhibit No. 2, Schedule 1.

regarding an appropriate capital structure for the Company. Third, she criticizes my application of the CAPM, claiming that I have incorrectly relied on the 10-year Treasury Bond for my risk-free rate, not employed the Empirical CAPM (ECAPM), and that I am incorrect in my use of the Kroll Equity Risk Premium (ERP) based CAPM model. Fourth, she disagrees with my dismissal of the Bond Yield Plus Risk Premium Method (BYPRP). Finally, Ms. Nelson claims that I fail to account for Peoples' business risk and disagrees with my dismissal of her discussion regarding a potential flotation cost adjustment to her proposed return on equity, although she does not make explicit adjustments to her recommendation for either of these issues.

Q. HAS MS. NELSON'S ROE RECOMMENDATION CHANGED FROM HER DIRECT TESTIMONY?

A. No. Although Ms. Nelson provides an updated analysis, including updated market data,[7] she continues to recommend the same base ROE of 11.00% that she recommended in her direct testimony.

[7] Peoples Statement No. 15-R, p. 15, lines 1-6 and Peoples Exhibit JEN-1R through JEN-11R.

RATEMAKING CAPITAL STRUCTURE

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING YOUR RECOMMENDED 50/50 CAPITAL STRUCTURE FOR PEOPLES.

A. Ms. Nelson opines that my recommended hypothetical (50/50) capital structure violates regulatory standards that prevail in regulatory jurisdictions across the United States, ignores Commission precedent and regulatory and utility financing principles.[8] She asserts that the hypothetical capital structure recommendation is not based on utility specific risks and financing requirements and is contrary to widely recognized regulatory principles and utility financing practices. She refers to the Commission's orders in a couple of rate cases where the Commission recognized a utility's actual capital structure in the ratemaking determinations.[9] She also refers to "A Cost of Capital and Capital Markets Primer for Utility Regulators," where NARUC advises that the actual capital structure ratios should be used unless they greatly diverge from sound industry practice.[10] Next, she contends that Peoples' requested equity ratio of 54.47% is within my proxy group equity ratio range and it adheres to the Commission's standard.[11] Finally, she disputes my reliance on nation-wide authorized equity ratios in base rate cases reported by S&P Regulatory Research Associates (S&P) and states that only 15 of 52 rate cases equity ratios were determined for companies that are included in my

[8] Peoples Statement No. 15-R, p. 17, lines 8-13.
[9] Peoples Statement No. 15-R, p. 19, line 3 through p. 20, line 3.
[10] Peoples Statement No. 15-R, p. 20, lines 7-26.
[11] Peoples Statement No. 15-R, p. 26, lines 3-8.

proxy group companies and the authorized equity ratios in 2025 and 2026 range from 43.17% to 61.05% while Peoples' claimed 54.47% is well within this range.[12] Ms. Nelson also disagrees with Vice Chair Barrow's statement that a 50/50 capital structure was a better representation of financial risk and opines that imputing a hypothetical capital structure substitutes Peoples actual financial risk with higher risk that arises from greater leverage.[13]

Ultimately, she recommends that the Commission reject the hypothetical capital structures recommended by me and other witnesses and utilize Peoples' actual capital structure.[14]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S COMMENTS REGARDING YOUR RECOMMENDED 50/50 CAPITAL STRUCTURE FOR PEOPLES?

A. As discussed in my direct testimony,[15] it is my opinion that Peoples' claimed capital structure of 54.47% common equity and 45.53% long-term debt is unreasonable for ratemaking purposes due to the equity ratio being higher than my proxy group's five-year averages, Value Line's 2027 capital structure projections, and the recent national authorized capital structures for gas distribution utilities. Regarding Ms. Nelson's reference to Commission's preference to use actual

[12] Peoples Statement No. 15-R, p. 27, line 16 through p. 29, line 20.
[13] Peoples Statement No. 15-R, p. 30, lines 4-9 and lines 12-14.
[14] Peoples Statement No. 15-R, p. 38, lines 6-10.
[15] I&E Statement No. 2, pp. 15-18.

capital structure in the past rate cases, I agree that utilities' actual capital structures were considered in prior rate cases for ratemaking determinations. However, it has now become necessary and equally important to consider rate affordability given current economic conditions and the rapidly increasing overall cost of living (inflation).

{BEGIN PROPRIETARY}

[redacted]

{END PROPRIETARY}

[16] I&E Exhibit No. 2-SR PROPRIETARY.

Additionally, as demonstrated in my direct testimony,[17] if the company were to employ a 50/50 capital structure instead of 54.47% equity and 45.53% long-term debt and not change the cost of debt or requested return on equity, the cost savings to ratepayers would be $22,881,642, which is approximately 14% of the requested total revenue increase of $163,171,938.

Regarding Ms. Nelson's reference to NARUC's article (A Cost of Capital and Capital Markets Primer for Utility Regulators), Peoples claimed equity ratio of 54.47% diverges from the nation-wide average authorized equity ratio of 51.64% for the natural gas distribution utilities (Rate Cases 2025-2026).[18] It is appropriate to consider the national average authorized equity ratio as the upper limit because this average equity ratio would be in compliance with the recognized regulatory ratemaking principles.

Additionally, the factors typically considered relative to the use of a regulated subsidiary's actual or expected capital structure, or a hypothetical capital structure, are provided by David C. Parcell in The Cost of Capital - A Practitioner's Guide (CRRA Guide) prepared for the Society of Utility and Regulatory Financial Analysts (SURFA) and provided as the study guide to candidates for SURFA's Certified Rate of Return Certification Examination. The CRRA Guide notes that there are circumstances where a hypothetical capital structure is used in place of an actual or expected capital structure as follows:

[17] I&E Statement No. 2, p. 18, line 13 through p. 19, line 7.
[18] I&E Exhibit No. 2, Schedule 2, pp. 17-18.

(1) The utility's capital structure is deemed to be substantially different from the typical or proper utility capital structure; or

(2) The utility is funded as part of a diversified organization whose overall capital structure reflects its diversified nature rather than its utility operations only.

In both these circumstances, a "reasonableness test" is generally applied in order to determine if the actual capital structure is unreasonable or produces an excessive cost of capital.[19] Considering the above statements, in my opinion, Peoples equity heavy capital structure is deemed to be substantially different from the typical or proper utility capital structure based on the average capital structure maintained by the proxy group companies and the parent company's (Essential) capital structure as discussed above.

Lastly, I disagree with Ms. Nelson relying on an S&P compiled nation-wide authorized equity ratio range (43.17% to 61.05%) for supporting Peoples 54.47% equity ratio and ignored the nation-wide average of utility regulatory authorities' authorized equity ratio of 51.64% to gain support for her equity ratio claim. Ms. Nelson's argument that only 15 of 52 rate cases' equity ratios were determined for companies that are included in my proxy group companies is irrelevant when considering the nation-wide gas distribution utilities equity ratio.

[19] David C. Parcell, The Cost of Capital - A Practitioner's Guide, Prepared for the Society of Utility and Regulatory Financial Analysts, 2020 Edition, p. 47.

Given this, in addition to Vice Chair Barrow's comments outlined in my direct testimony[20] regarding consideration of the financial impact to customers in relation to equity heavy capital structures, I continue to assert that it is necessary to use hypothetical capital structure of 50/50 for ratemaking purposes, to balance the interests of the company and ratepayers and ensure rate reasonableness without overburdening ratepayers.

Q. SUMMARIZE MS. NELSON'S CRITICISMS REGARDING THE USE OF PARENT AND HOLDING COMPANY VS. OPERATING COMPANY CAPITAL STRUCTURE DATA.

A. Ms. Nelson disputes the use of holding companies' proxy group capital structure rather than the operating companies' proxy group capital structure (equity ratios) in determining utility's capital structure. She suggests that the Commission should not ignore relevant data that accurately represents the financial risk profiles and common financing practices of regulated natural gas utility operating companies because capital at the consolidated holding company level may finance unregulated operations, and comparisons to the parent company capital structure lead to flawed analysis and do not reflect the common financing constraints faced by operating subsidiaries, resulting in misleading conclusions. Finally, she recommends that the Commission give no weight to my analyses and

[20] I&E Statement No. 2, p. 13 line 13 through p. 14, line 15.

recommendations that are based on consolidated holding company capital structures.[21]

Q. PLEASE RESPOND TO MS. NELSON'S CRITICISMS REGARDING THE USE OF PARENT AND HOLDING COMPANY VS. OPERATING COMPANY CAPITAL STRUCTURE DATA.

A. A proxy group of publicly traded parent/holding companies similar risks and uncertainties is used in ratemaking process to determine a fair and comparable return on equity for an operating utility. Information used to determine a fair return on equity from commonly used sources such as Zacks, S&P, Value Line, etc., are all based on the publicly traded parent/holding companies. In fact, Ms. Nelson herself uses data pulled from these sources.[22] These sources have historically been common practice to use by almost all parties who perform rate of return and return on equity analysis in base rate proceedings. The Commission has generally relied upon I&E methodologies, as cited at various points in my direct testimony as well as this surrebuttal testimony, which are crafted from data sourced from parent companies.

Further, it appears unfounded or disconnected to use market financial data from holding companies for every variable of the cost of equity analysis and simultaneously use the subsidiary/operating company's (which are not listed in the

[21] Peoples Statement No. 15-R, p. 24, line 7 through p. 25, line 20.
[22] Peoples Exhibit Nos. JEN-1R and JEN-2R, and JEN-4R.

stock market) debt and equity information in the ratemaking capital structure ignoring the parent/holding company's capital structure

Q. SUMMARIZE MS. NELSON'S CRITICISMS OF GOVERNOR JOSH SHAPIRO'S LETTER TO UTILITIES CONCERNING UTILITY'S RATEMAKING CAPITAL STRUCTURE TO REPRESENT A CLEAR MAJORITY OF LOW-COST DEBT AS OPPOSED TO HIGH-COST EQUITY.

A. Ms. Nelson states that the Governor's proposal would require the use of the parent company capital structure to determine the operating utility's ratemaking capital structure, which is inconsistent with ratemaking principle and may not reflect a utility's specific risks, obligations, and cost of service. She opines that the operating utility must be able to access capital in all market conditions, and therefore, it may require a capital structure with more equity than the consolidated holding company to maintain financial flexibility.[23] She discusses why using a holding company's capital structure would produce inequitable and arbitrary outcomes, imputing parent company's higher financial risks to customers, and increase in debt would not reduce overall cost of capital.[24]

[23] Peoples Statement No. 15-R, p. 52, lines 10-20.
[24] Peoples Statement No. 15-R, pp. 53-54.

Q. DO YOU AGREE WITH MS. NELSON'S CONCERNS ABOUT THE USE OR CONSIDERATION OF A PARENT COMPANY'S CAPITAL STRUCTURE IN A RATEMAKING ENVIRONMENT?

A. No. First, Ms. Nelson acknowledges that Peoples obtains capital through its ultimate parent company, Essential.[25] Peoples does not have an independent credit rating, nor does it issue common equity to the public but relies on Essential for the required funding. As discussed above, Essential has maintained historic (2021-2025) including the estimated (2026-2027) average capital structure with 53.8% long-term debt ratio and 46.2% common equity ratio, which provided and would provide a comfortable access to the capital market for financing its utility subsidiaries funding requirement. Therefore, in my opinion, it is inappropriate to conclude that using the parent company's capital structure to determine the operating utility's ratemaking capital structure is inconsistent or violates the ratemaking principles. Second, I disagree with Ms. Nelson's discussion that imputing the holding company's capital structure would produce inequitable and arbitrary outcomes and higher financial risks to customers, and the debt would not reduce overall cost of capital. Ms. Nelson does not provide support for alleged impact of higher financial risks and increase in the overall cost of capital for customers using a 50/50 capital structure. Finally, as discussed in my direct testimony,[26] my recommended 50/50 capital structure is currently in the interest of

[25] Peoples Statement No. 15-R, p. 53, lines 4-5.
[26] I&E Statement No. 2, pp. 15-19.

ratepayers and enhances the rate affordability to some extent considering the increased cost of living and resultant financial challenges faced by ratepayers while utility rates are ballooning and Peoples and its parent companies' profits are improving as shown below:

Year	PNG - Net Income	PNG - ROE	Essential - Net Income	Essential - ROE
2021	$185.64M	12.4%	$431.61	8.3%
2022	$225.60M	13.1%	$465.24	8.7%
2023	$245.58M	12.5%	$498.23	8.4%
2024	$255.36M	11.6%	$595.31	9.6%
2025	$295.15M	11.8%	$616.37	9.0%

Q. DO YOU HAVE ANY CHANGES IN YOUR RECOMMENDED CAPITAL STRUCTURE?

A. No. I continue to recommend using a capital structure with long-term debt of 50.00% and common equity of 50.00% as presented in the I&E recommendation.[27]

[27] I&E Statement No. 2, p. 14, lines 19-20.

NATIONAL AVERAGE AUTHORIZED ROE FOR NATURAL GAS UTILITIES

Q. SUMMARIZE MS. NELSON'S CRITICISM OF YOUR USE OF NATIONAL AVERAGE AUTHORIZED ROEs IN DETERMINING YOUR RECOMMENDED ROE FOR THE COMPANY.

A. Ms. Nelson states that the national average returns must be placed in the proper context in order to be useful. Authorized ROEs are established based on market conditions that existed at the time those proceedings were litigated and decided. She opines that her BYPRP analysis is an appropriate model rather than using the national-wide authorized average ROE.[28] She asserts that she believes the appropriate ROE for Peoples should be based primarily on market-based cost-of-equity analyses reflecting utility's risks. Finally, she believes her recommended 11.00% base ROE (exclusive of 0.25% management performance adjustment) is not excessive or inconsistent in comparison to the national average authorized 9.69% ROE.[29]

Q. PLEASE RESPOND TO MS. NELSON'S CRITICISM REGARDING YOUR USE OF NATIONAL AVERAGE AUTHORIZED ROEs IN DETERMINING AN APPROPRIATE ROE IN THIS PROCEEDING.

A. I agree that the nation-wide authorized ROEs are established based on market conditions that existed at the time those proceedings were litigated and decided.

[28] Peoples Statement No. 15-R, p. 58, line 17 through p. 59, line 1.
[29] Peoples Statement No. 15-R, p. 59, lines 17-22.

However, I would not consider the national gas utilities authorized ROEs used in my analysis outdated as they reflect all rate cases decided in 2025 and 2026 that considered the market conditions and economic environments and associated risks to natural gas distribution utilities. Additionally, I believe the current economic conditions are similar enough to the past approximately year and a half, which is the period that encompasses the data I employed.[30] In my opinion, average national authorized ROEs are an appropriate benchmark for the ROE to be determined in this proceeding.

Ms. Nelson admits that the authorized returns in other jurisdictions may serve as a broad reference point, but states that this cannot replace fact-specific evaluation of market evidence and Peoples' risk profile.[31] I continue to assert that my recommended ROE for Peoples does consider market-based cost-of-equity analyses reflecting utility's risks with the national authorized average ROE. Additionally, my recommended ROE of 10.20% for the Company in this case is comparable, yet higher than the national average authorized ROE of 9.69% for gas distribution utilities.

Finally, as stated in my direct testimony, this national authorized ROE information complies with the principle derived from the *Hope* and *Bluefield* cases,[32] that a utility is entitled to a return similar to that being earned by other

[30] I&E Exhibit No. 2, Schedule 2, pp. 17-18.
[31] Peoples Statement No. 15R, p. 59, lines 3-5.
[32] *See Bluefield Water Works & Improvements Co. v. Public Service Comm. of West Virginia,* 262 U.S. 679, 692-93 (1923) and *FPC v. Hope Natural Gas Co.,* 320 U.S. 591, 603 (1944).

enterprises with corresponding risks and uncertainties, but not as high as those earned by highly profitable or speculative ventures.[33] Therefore, I continue to believe it is reasonable and logical to consider authorized ROEs of comparable companies in the natural gas distribution industry from across the nation.

CURRENT CAPITAL MARKET ENVIRONMENT

Q. SUMMARIZE MS. NELSON'S RESPONSE TO YOUR COMMENTS ON THE CURRENT CAPITAL MARKET ENVIRONMENT.

A. Ms. Nelson opines that I am incorrect in my assertion that potential future reductions in interest rates could have the effect of reducing debt costs in 2027. She then discusses Federal Reserve role in combating inflation and economic growth, current financial market, treasury yields, utility bond yields, geo-political uncertainties etc. and concludes that all these factors increase risks, which in turn will increase the cost of equity. [34]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S COMMENTS REGARDING THE CURRENT CAPITAL MARKET ENVIRONMENT?

A. Ms. Nelson is correct that there is an inverse relationship between interest rates and inflation, as the Federal Reserve routinely increases interest rates to curb rising inflation. The intent of my statement is to express that potential reduction in

[33] I&E Statement No. 2, p. 4, line 3-16 and p. 37 line 21 through p. 38, line 4.
[34] Peoples Statement No. 15-R, pp. 60-64.

interest rates would ultimately lead to a reduction in debt costs in 2027, when Peoples new rates will be in effect.[35] Ms. Nelson's comments on interest rates, inflation, treasury yields, economic and geo-political risks and their impacts on the cost of equity are not new. These factors have been experienced by all utilities and their customers. All utility companies, including proxy group companies, are impacted by interest rate changes, inflation, and economic and financial risks. In order to alleviate the impact of these risks and related issues, utilities may file rate cases at any time to address issues and risks resulting from changing market conditions. Peoples faces all these risks and events which are the same risks faced by proxy group utilities, and these risks are already factored into the rate of return analyses using the proxy group data in determining the required return for investors. Investors voluntarily buy and hold shares of stocks in gas utility companies, indicating they are aware of business and financial risks and the returns available in the current capital market environment.

PROXY GROUP COMPOSITION

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING THE COMPOSITION OF OUR RESPECTIVE PROXY GROUPS.

A. Ms. Nelson disagrees with my screening criterion for the proxy group determination, which is based on the percentage of regulated gas distribution

[35] I&E Statement No. 2, p. 52, lines 7-9.

revenue rather than using the percentage of regulated operating income. She opines that the net operating income better reflects the contribution of each business segment in the company's overall earnings, which is the factor that equity investors are most focused on while making investment decisions. Ultimately, Ms. Nelson concludes that the differences in methodologies between our proxy groups are not a primary factor in driving the differences in our respective recommended ROEs. She does not specifically dispute any companies that are included in my proxy group.[36]

Q. DO YOU AGREE WITH MS. NELSON'S ASSERTION THAT THE PERCENTAGE OF REGULATED OPERATING INCOME IS A MORE APPROPRIATE PROXY GROUP CRITERION THAN REGULATED GAS DISTRIBUTION REVENUE?

A. No. Calculating the percentage of regulated utility operating income that makes up the total operating income of a company is not always a reliable way of determining whether a business is primarily a regulated utility. For example, operating income includes items such as depreciation, where it is possible for the regulated utility segment of a company to predominately have assets that are fully depreciated resulting in higher operating income. Although a utility may have assets that are significantly depreciated, it does not always indicate the level of

[36] Peoples Statement No. 15-R, p. 68, line 4 through p. 69, line 3.

business a company does. A parent company can have most of its utility assets depreciated but still do less business as a utility than it does in another business segment. Regulated gas operating revenue is the correct and first driver of operating income and cash flow generation from the business. Therefore, comparing the operating income of a gas utility segment to the total operating income of a company is not an appropriate criterion.

Q. DO YOU HAVE ANY FURTHER COMMENTS REGARDING MS. NELSON'S CLAIM THAT NET OPERATING INCOME IS A MORE APPROPRIATE PROXY GROUP CRITERION?

A. Yes. The Commission has historically recognized regulated utility revenue, and not the operating income to determine a company's validity in a proxy group. Most recently, in the 2025 Columbia Gas of Pennsylvania, Inc. (Columbia Gas) base rate case, the Commission order states, "…the generation of revenue is the first step that drives the company's net income and cash flow…Therefore, a utility's revenue composition is a more appropriate measure than is the utility's operating income or net income for establishing a proxy group, because this measure represents the percentage of cash flow a company receives from each business segment."[37] The Commission then supports I&E's methodology by stating, "Accordingly, we shall adopt the ALJs' recommendation to utilize I&E's

[37] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Proxy Groups, p. 204.

Natural Gas Utility proxy group in setting the appropriate rate of return for Columbia in this proceeding."[38]

Q. ARE THERE MORE INSTANCES OF THE COMMISSION ACCEPTING I&E'S METHODOLOGY IN DETERMINING A PROXY GROUP?

A. Yes. There are four recent instances where the Commission has accepted I&E's methodology to use percentage of operating revenues in selecting a proxy group. First, in *Pennsylvania Public Utility Commission, et. al v. Columbia Gas of Pennsylvania, Inc*., at Docket R-2020-3018835 (Order Entered February 19, 2021), pp. 110-112, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning to exclude two companies based on a percentage of revenues to yield a proxy group that most closely resembles the company.

Second, in *Pennsylvania Public Utility Commission, et. al v. PECO Energy Company - Gas Division*, at Docket R-2020-3018929 (Order Entered June 22, 2021, Public Version), pp. 137-139, the Commission again adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning to exclude two companies based on a percentage of revenues to yield a proxy group that most closely resembles the company.

[38] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Proxy Groups, p. 205.

Third, in *Pennsylvania Public Utility Commission, et. al v Columbia Water Company,* at Docket No. R-2023-3040258 (Order Entered January 18, 2024), pp. 74-77, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning stating that "In our view, comparing the net operating income of a water utility segment to the total net operating income of a company is not an appropriate criterion to use in this proceeding."

Fourth, in *Pennsylvania Public Utility Commission, et. al v. Pennsylvania-American Water Company*, Docket Nos. R-2023-3043189 and R-2023-3043190 (Order Entered July 22, 2024), pp. 149-153, the Commission adopted the ALJ's recommendation to use I&E's proxy group based on I&E's reasoning citing Commission precedent and reference to the Columbia Water Company case.

Additionally, in the most recent Pennsylvania American Water Company base rate case *Pennsylvania Public Utility Commission, et. al v. Pennsylvania-American Water Company*, Docket Nos. R-2025- 3057983 and R-2025- 305805 (Order Entered July 27, 2026), pp. 174-176, the Commission adopted the ALJ's recommendation to use I&E's proxy group noting that this conclusion mirrors the Commission's finding in the prior Pennsylvania American Water base rate case wherein the Commission rejected Pennsylvania American's proposal to include gas and electric utilities in its proxy group.

DISCOUNTED CASH FLOW

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. Ms. Nelson agrees with my use of earnings growth rate projections in the calculation of my DCF result[39] and references the 2025 Columbia Gas proceeding in which the Commission adopted an ROE that utilized I&E's DCF methodology using analysts' earnings growth rates combined with I&E's composite CAPM methodologies.[40] She agrees with my DCF results of 11.33%, which is higher by eight basis points above the claimed 11.25% ROE inclusive of management performance adder.[41] Finally, she admits that her DCF analyses results are substantially similar to my DCF results and the methodology that has been previously adopted by the Commission.[42]

Q. DO YOU HAVE ANY COMMENTS TO MS. NELSON'S REBUTTAL TESTIMONY REGARDING YOUR DCF ANALYSIS.

A. No.

[39] Peoples Statement No. 15-R, p. 69, lines 18-19.
[40] Peoples Statement No. 15-R, p. 71, lines 13-16.
[41] Peoples Statement No. 15-R, p. 69, lines 11-13.
[42] Peoples Statement No. 15-R, p. 76, lines 8-10.

CAPITAL ASSET PRICING MODEL

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING YOUR CAPM ANALYSIS.

A. Ms. Nelson disagrees with my CAPM results based on Kroll's recommended ERP and states that the Kroll market risk premium CAPM based ROE estimate is well below recently authorized ROEs for natural gas utilities, and counter to the higher interest rate environment.[43] She also disagrees with my use of the 10-year Treasury Note as the risk-free rate and claims that the 30-year Treasury Bond yield is the most appropriate risk-free rate to use in the calculation of the CAPM.[44] Ms. Nelson then requests that the Commission consider the use of the ECAPM. Finally, Ms. Nelson recommends that the Commission give no weight to my Kroll ERP based CAPM estimate.[45]

RISK-FREE RATE

Q. WHAT IS MS. NELSON'S RESPONSE TO YOUR USE OF THE YIELD ON THE 10-YEAR U.S. TREASURY NOTE AS RISK-FREE RATE?

A. Ms. Nelson claims her use of the yield on a 30-year U.S. Treasury Bond is more appropriate than my use of the yield on a 10-year Treasury Note because it better reflects the life of the underlying investment.[46] She contends that given the 30-

[43] Peoples Statement No. 15-R, p. 78, lines 7-8 and lines 10-12.
[44] Peoples Statement No. 15-R, p. 80, lines 7-8.
[45] PPL Electric Statement No. 10-R, p. 42-46.
[46] Peoples Statement No. 15-R, p. 81, lines 1-3.

year Treasury Bond is a stable security free of default risk, has minimal real interest rate risk, and aligns with the life of the underlying investment in utility assets, it serves as an appropriate security for the risk-free rate component of the CAPM.[47]

Q. IS THE LIFE OF THE INVESTMENT THE ONLY FACTOR THAT SHOULD BE CONSIDERED IN THE CHOICE OF A RISK-FREE RATE?

A. No. The risk-free rate is the return that can be earned without accepting any risk, and while the life of the investment can be considered in the choice of risk-free rates, the most important consideration is that the rate be as risk-free as possible. As explained in my direct testimony, I chose the 10-year Treasury Note as it mitigates the shortcomings of the short-term Treasury Bill and the 30-year Treasury Bond.[48] Although long-term Treasury Bonds have less risk of being influenced by federal policies, they have substantial maturity risk associated with market risk. In addition, long-term Treasury Bonds bear the risk of unexpected inflation and time value of money due to the longer investment period. As such, my choice of a 10-year Treasury Note is appropriate. Further, as also pointed out in my direct testimony,[49] the Commission has agreed with I&E that the 10-year Treasury Note is the superior measure of the risk-free rate of return in a number of rate cases cited in my direct testimony.

---

[47] Peoples Statement No. 15-R, p. 81, line 19 through p. 82, line 2.
[48] I&E Statement No. 3, p. 33, lines 5-14.
[49] I&E Statement No. 3, p. 33, lines 14-16.

Q. DOES THE PROJECTED RISK-FREE RATE NEED TO REPRESENT THE LONGEST PERIOD AVAILABLE?

A. No. The time period reflected in a projected risk-free rate should include the period in which rates will be in effect (the investment period), which is typically the Fully Projected Future Test Year (FPFTY), or the time determined by a company's rate case filing frequency. Ideally, all factors in determining an appropriate ROE, including the risk-free rate, will be reassessed during each base rate filing. Therefore, while an investor may hold a utility stock for 30 years or more, the Commission authorized return determined in the base rate filing is likely reassessed many times within that 30-year period.

CAPM - MARKET RETURN

Q. WHAT IS MS. NELSON'S RESPONSE TO VALUE LINE FORECASTED MARKET RETURN USED IN YOUR TRADITIONAL CAPM ANALYSIS?

A. Ms. Nelson disagrees with the market return of 11.83% used in my CAPM analysis, which is based on Value Lines's forecasted dividend yields and yearly index appreciation. She claims that when investors invest in the overall market, they receive the weighted average market return, not the median market return and per her calculations, the market return estimate would be 11.99% rather than 11.83%.[50]

[50] Peoples Statement No. 15-R, p. 87, lines 4-16.

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S REBUTTAL TESTIMONY CONCERNING THE MARKET RETURN USED IN YOUR CAPM ANALYSIS?

A. As discussed in my direct testimony,[51] I observed Value Line's 1700 stocks and the historical returns of the S&P 500. Value Line expects its universe of approximately 1700 stocks to have an average yearly return of 11.83% over the next three to five years based on a forecasted dividend yield of 2.10% and a yearly index appreciation of 45%. Additionally, I considered the S&P 500 Index average return of 12.35% over the past 100 years (1926-2025). I have averaged the Value Line return of 11.83% and the S&P 500 return of 12.35% producing an estimated market return of 12.09%, which represents the historical return and forward-looking estimates for the market return. The Commission has accepted I&E's CAPM results with market return calculated as discussed above in last several base rate cases.

Q. DO YOU AGREE WITH MS. NELSON'S PROPOSED ADJUSTMENTS TO YOUR CAPM INPUTS AND THE ADJUSTED TRADITIONAL CAPM RESULTS?

A. No. I disagree with Ms. Nelson's suggested/adjusted 16.29% Value Line market return estimate as opposed to 11.83% Value Line market return used in my CAPM

[51] I&E Statement No. 2, p. 34, lines 9-16.

analysis. I also disagree with her suggested projected yield on the 30-year U.S. Treasury Bond rather than using the 10-year U.S. Treasury Note yield as risk-free rate in CAPM analysis. Finally, I disagree with Mr. Nelson's suggested/adjusted CAPM results of 12.11% as opposed to my 10.28% traditional CAPM results.

KROLL ERP-BASED CAPM

Q. WHAT IS MS. NELSON'S RESPONSE TO YOUR USE OF THE KROLL ERP-BASED CAPM ANALYSIS?

A. Ms. Nelson disagrees with Kroll's recommended equity risk premium because it is not clear that Kroll develops its market premium in relation to its risk-free rate. She notes that the market risk premium and risk-free rate are not independent of each other, but they are interrelated.[52] She also disagrees with the Commission's giving weight to Kroll's recommended equity risk premium and its finding in 2025 Columbia Gas rate case order and recommends dismissing Kroll's CAPM results in estimating the CAPM based ROE estimate.[53]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S REBUTTAL TESTIMONY CONCERNING THE KROLL ERP?

A. As discussed in my direct testimony, my recommendation is based on the DCF, composite CAPM (traditional CAPM and Kroll CAPM), and the national average

[52] Peoples Statement No. 15-R, p. 84, lines 13-15 and lines 17-18.
[53] Peoples Statement No. 15-R, p. 86, lines 12-16.

authorized ROE to determine the appropriate cost of common equity. Kroll is a trusted and publicly available source that bases their recommended ERP on current and forecasted economic and financial conditions. Kroll recommends using the 20-year U.S. Treasury yield as the risk-free rate paired with their calculated ERP in a CAPM analysis.[54]

Q. HAS THE COMMISSION COMMENTED ON THE USE OF KROLL ERP-BASED CAPM ANALYSIS?

A. Yes. The Commission's 2025 Columbia Gas base rate case order states, "…we are also persuaded to use informed judgment and to apply both I&E's traditional CAPM and its Kroll ERP CAPM analysis in setting the ROE for Columbia".[55] The Commission also notes that due to their belief that the results of I&E's traditional CAPM analysis were overstated, "...we will use the average of I&E's traditional CAPM ROE of 10.51% and I&E's Kroll ERP based CAPM ROE of 9.36%."[56]

Additionally, using Kroll's methodology eliminates the potential bias of any involved parties, as I use Kroll's recommended input of the 20-year Treasury yield as the risk-free rate in my analysis.

---

[56] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.,* Docket No. R-2025-3053499 (Order Entered December 9, 2025). *See generally* Disposition of Rate of Return on Common Equity, p. 235.

EXCLUSION OF THE ECAPM METHOD

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING THE USE OF THE ECAPM METHOD.

A. Ms. Nelson reiterates that companies with lower Beta coefficients tend to have higher returns than those predicted by the traditional CAPM, and those with higher Beta coefficients tend to have lower returns than projected.[57] It appears she claims that her ECAPM analysis is a more accurate alternative to the CAPM for companies with betas that are under 1.00.

Q. WHY HAVE YOU NOT PERFORMED AN ECAPM ANALYSIS?

A. The ECAPM is a modified version of the CAPM which attempts to address the belief that the actual risk vs. return correlation is flatter than what is predicted by the CAPM. The implication is that the CAPM underestimates returns with lower levels of risk and over-estimates the returns associated with higher levels of risk. ECAPM entails assigning 25% weight to the market beta and 75% weight to the individual company or proxy group.[58]

Additionally, as discussed in my direct testimony,[59] I reiterate that the use of the ECAPM in estimating the cost of capital does not increase the validity of the result but merely adds another measure of subjectivity to the CAPM, attempting to make the Security Market Line more accurate. The ECAPM reduces

[57] Peoples Statement No. 15, p. 93, line 18 through p. 94, line 1.
[58] David C. Parcell, "The Cost of Capital – A Practitioner's Guide," 2020 Edition, p. 106.
[59] I&E Statement No. 2, p. 42, lines 2-8.

the purpose of the beta, which is the only company-specific variable in the CAPM model.

Q. DO YOU HAVE ANY FURTHER COMMENTS ON MS. NELSON'S ECAPM ANALYSIS?

A. Yes. As discussed in my direct testimony,[60] I disagree with Ms. Nelson's use of ECAPM and BYPRP methods in regulatory proceedings. Notably, the Commission is now trending towards using both the DCF and the traditional CAPM and Kroll CAPM analyses to determine an appropriate and reasonable ROE.

As for Ms. Nelson's belief that the ECAPM should also be considered by the Commission,[61] I am unaware of any instance in which the Commission has used the ECAPM method in determining an authorized ROE. Therefore, I do not recommend that the Commission consider Ms. Nelson's ECAPM method and its results in this proceeding.

Q. HAVE YOU CHANGED YOUR CAPM RESULTS ON EQUITY RECOMMENDATION AS A RESULT OF MS. NELSON'S REBUTTAL TESTIMONY?

A. No. I continue to recommend my composite/average CAPM result of 9.57% using

[60] I&E Statement No. 2, p. 40, lines 10-21.
[61] Peoples Statement No. 15-R, p. 95, line 22 through p. 96, line 4.

the 10.28% traditional CAPM results and 8.86% Kroll ERP-Based CAPM results.[62]

EXCLUSION OF THE BYPRP METHOD

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING THE USE OF THE BYPRP/RISK PREMIUM METHOD.

A. Ms. Nelson primary argument is that her Risk Premium analysis determines the appropriate risk premium based on the relationship between historical authorized ROEs for natural gas utilities and Treasury bond yields over the last 46 years.[63] Ms. Nelson goes on to state that the model is a reliable predictor of the equity risk premium at various levels of interest rates.[64] She refers to the Commission's rate case orders in 2012 PPL Electric and 2021 Aqua Pennsylvania and states that Commission concluded that methodologies other than the DCF can be used a check upon reasonableness of the DCF derived ROE calculation. She then opines that this suggests that the Risk Premium method has a place in the Commission's ROE determinations.[65]

Finally, she asserts that the Risk Premium/BYPRP analysis provides another useful perspective on investors' required return for Peoples and disagrees that the Risk Premium analysis is duplicative of the CAPM method.[66]

---

62 I&E Statement No. 2, p. 36, line 16.
63 Peoples Statement No. 15-R, p. 99, lines 6-8.
64 Peoples Statement No. 15-R, p. 99, lines 12-13.
65 Peoples Statement No. 15-R, p. 101, lines 5-13.
66 Peoples Statement No. 15-R, p. 102, lines 7-10.

Q. PLEASE EXPLAIN WHY YOU HAVE EXCLUDED A BYPRP/RISK PREMIUM METHOD IN YOUR ROE ANALYSIS.

A. I have excluded the BYPRP/Risk Premium method from my ROE analysis because it is a simplified version of the CAPM. Most importantly, unlike the CAPM, the Risk Premium method does not recognize company specific, or proxy group specific risk through a beta coefficient. Ms. Nelson admits that the Risk Premium model does not measure the specific risk of a company, and states that it provides an industry estimate of the equity risk premium and resulting cost of equity for natural gas utilities broadly.[67]

Additionally, the Commission historically did not *specifically* rely on results of the Risk Premium method in determining an appropriate return on equity in base rate proceedings. Ms. Nelson's misinterpreted the Commission orders in 2012 PPL Electric and 2021 Aqua Pennsylvania because the Commission did not *specifically* consider or recognize the results of the Risk Premium method presented by the utilities' witnesses in determining an appropriate ROE for these two utilities.

[67] Peoples Statement No. 15-R, p. 102, lines 10-12.

BUSINESS RISK

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING PEOPLES' BUSINESS RISK.

A. In her rebuttal testimony, Ms. Nelson again clarifies that she does not make an explicit adjustment to her ROE recommendation for business risk and flotation costs.[68] However, she continues to argue that Company will require access to external debt and equity capital to fund its major capital investment program from 2026-2030,[69] which would increase capital market risk, credit risk, execution risk, and cash flow pressure. She states that market bypass risk is forward-looking and reflects the potential for large-volume customers to reduce or eliminate reliance on the Company's gas distribution system through interstate pipeline alternatives, fuel switching or other competitive options and claims that approximately twelve customers representing approximately 20% of total throughput have the ability to bypass the Company's system.[70] Finally, she asserts that the cost recovery regulatory mechanisms such as the Distribution System Improvement Charge (DSIC), FPFTY, and Weather Normalization Adjustment (WNA) available to Peoples are not unique because all of the proxy group operating utilities utilize such mechanisms to mitigate risks.[71] Therefore, she opines that the existence of these mechanisms does not support reducing the authorized ROE below the level

[68] Peoples Statement No. 15-R, p. 104, lines 8-9.
[69] Peoples Statement No. 15-R, p. 105, lines 9-11.
[70] Peoples Statement No. 15-R, p. 106, lines 3-5.
[71] Peoples Statement No. 15-R, p. 107, lines 4-5.

indicated by market-based cost of equity estimates.[72]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S DISCUSSION REGARDING PEOPLES' BUSINESS RISK?

A. As discussed in my direct testimony,[73] I reiterate that every natural distribution gas utility faces the same issues of upgrading or replacing its pipeline infrastructure. As distribution costs increase, Peoples, like any other regulated gas utility, has the option to file a base rate case to address revenue inadequacy due to maintaining, expanding, and modernizing infrastructure. The Commission encourages utilities to use risk reducing mechanisms, such as the DSIC and FPFTY to help reduce regulatory lag in recovery of infrastructure investment costs. As demonstrated in my direct testimony, Peoples has been successful in procuring the required funding for meeting with its budgeted capital expenditures program in the fiscal year 2021-2025.[74] Ms. Nelson's concerns relating to capital market risk, credit risk, execution risk, cash flow pressure due to the capital expenditure plan is speculative and unsupported because Peoples is not rated by rating agencies and its parent companies, PNG and Essential have maintained a sufficient investment grade rating for the last five years.[75]

---

72 Peoples Statement No. 15-R, p. 107, lines 19-21.
73 I7e Statement No. 2, p. 47, lines 7-10.
74 I&E Statement No. 2, p. 47, line 18 through p. 48, line 3.
75 I&E Statement No. 2, p. 49, lines 10-13.

As further discussed in my direct testimony regarding *potential* bypass risk, the Company has not lost or gained any large volume customers during the period 2021-2025. However, over the past year, Peoples has been approached by developers, consultants, data centers, and other entities to evaluate the possibility of providing natural gas service to potential new data center projects in Western Pennsylvania and had discussions with over twenty-two entities, with data center power demands ranging anywhere from 8 MW up to 4.5 GW.[76]

Regarding regulatory cost recovery mechanisms (DSIC, FPFTY, PGC recovery, and WNA), I continue to assert that these mechanisms reduce regulatory lag in cost recovery and overall financial risk profile. These risk-reducing mechanisms should be considered in conjunction with the fact that regulated utilities have the opportunity to recover all prudent expenses through a base rate case. For clarity, I am not recommending that Peoples' authorized ROE be lowered due to its regulatory mechanisms; rather, I believe, no adjustment, upwards or downwards, is warranted since Peoples' risk profile is similar to that of the proxy group companies and my recommended ROE considers Peoples specific business risks.

[76] I&E Statement No. 2, p. 50, line 15 through p. 51, line 6.

FLOTATION COSTS

Q. SUMMARIZE MS. NELSON'S REBUTTAL TESTIMONY REGARDING FLOTATION COSTS.

A. Ms. Nelson again notes that she is not making an explicit adjustment to her recommended ROE for flotation costs.[77] Then, she opines that the absence of recent equity issuances does not mean that flotation costs are irrelevant.[78] Further, she notes that flotation costs are not incurred in the course of day-to-day utility operations, rather they are recorded on the balance sheet as paid-in capital and therefore, flotation costs are more appropriately reflected as an adjustment to the ROE than treated as an operating expense.[79]

Q. WHAT IS YOUR RESPONSE TO MS. NELSON'S CLAIMS REGARDING FLOTATION COSTS?

A. While Ms. Nelson disagrees with my stance on normalization of flotation costs recovery, she is not making any explicit adjustments to her recommended ROE for flotation costs. As discussed in my direct testimony,[80] (1) it is important to note that Peoples and PNG Companies do not directly issue common equity or have not recently received equity infusions, and (2) there is no particular instance to the best of my knowledge and information where the Commission has approved a

[77] Peoples Statement No. 15-R, p. 108, lines 11-12.
[78] Peoples Statement No. 15-R, p. 109, lines 6-7.
[79] Peoples Statement No. 15-R, p. 109, lines 18-20 and line 22 and p. 110, line 1.
[80] I&E Statement No. 2, p. 54, lines 7-12.

flotation cost adjustment to the cost of equity analysis results to provide recovery of a parent or holding company's equity issuance expense in a base rate case for the regulated utility in Pennsylvania. Therefore, any argument or discussion regarding the merits of flotation costs is irrelevant in this proceeding, and I continue to recommend that the Commission reject Peoples' claim that a flotation cost should be considered in determining an appropriate cost of equity.

MS. NELSON'S UPDATED ROE RESULTS

Q. HAS MS. NELSON UPDATED HER ROE ANALYSES RESULTS?

A. Yes. She updated the results of her financial models used to estimate the cost of equity for Peoples because data used in her direct testimony were as of January 30, 2026, and therefore, she updated her analyses to include market data through May 31, 2026.[81] Ms. Nelson's updated average cost of equity result for her three models (DCF, CAPM including ECAPM, and BYPRP) is 10.92% as opposed to the original average result of 11.03%. However, she is not revising her base ROE claim of 11.00% in this proceeding.[82]

Q. DO YOU HAVE ANY COMMENTS ON MS. NELSON'S UPDATED ROE ANALYSES RESULTS?

A. Yes. I am not updating or revising my analyses results because the data used in

[81] Peoples Exhibit Nos. JEN-1R through JEN-11R.
[82] Peoples Statement No. 15-R, p. 112, lines 2-7.

my analyses are through May 2026, which aligns with Ms. Nelson's updated data.

MANAGEMENT PERFORMANCE

Q. SUMMARIZE MR. HUWAR'S REBUTTAL TESTIMONY REGARDING PEOPLES' CLAIM OF 0.25% EXEMPLARY MANAGEMENT PERFORMANCE OR EFFECTIVENESS ADJUSTMENT TO THE CLAIMED BASE ROE OF 11.00%.

A. Mr. Huwar refers to 66 Pa. C.S. § 523(a) (Section 523) and states that the Commission shall consider the efficiency, effectiveness, and adequacy of service when determining just and reasonable rates.[83] He claims that I have not considered the Company's performance that is above average or exemplary, which is tantamount to disregarding the provisions of Section 523.[84] He claims that Peoples provides safe and reliable natural gas service to customers at reasonable rates for the following reasons: (1) improving its infrastructure with dedicated and knowledgeable workforce, (2) using Long-term Infrastructure Improvement Plan for keeping safe and reliable services, (3) made progress in the area of gas leak reduction, and (4) achieved operational performance in troubled Goodwin Tombaugh gathering system acquired in 2020, which serves 1,600 customers and committed a $123 million investment over seven years.[85]

---

[83] Peoples Statement No. 1-R, p. 2, lines 9-12.
[84] Peoples Statement No. 1-R, p. 2, lines 12-16.
[85] Peoples Statement No. 15-R, p. 4, line 20 through p. 7, line 5.

Finally, he states that he referenced several examples of operational performance (as listed above) and recommends that the Commission should consider Peoples exemplary operational performance to customers and communities, which is worthy of an enhanced return on equity.[86]

Q. WHAT IS YOUR RESPONSE TO MR. HUWAR'S CLAIMS REGARDING EXEMPLARY MANAGEMENT PERFORMANCE?

A. As discussed in greater detail in my direct testimony,[87] I maintain my position that Peoples or any utility, should not be entitled to any additional rewards for implementing programs funded by ratepayers or for meeting the obligations of 66 Pa C.S.A. § 1501 (Section 1501).

I am aware that under Section 523 the Commission shall consider a utility's performance, however, it is not mandatory that the Commission grant additional basis points to the ROE. Although I am not offering a legal position and I will defer to I&E counsel to address the legal aspect in briefing, I am advised by counsel that the Commission's consideration is not limited to the listing of claims made by Peoples but that it should also consider other factors including adequate record of evidence of Peoples' efficiency, effectiveness, adequacy of service to ratepayers at affordable rates. Ultimately, for any company, true management effectiveness is earning a higher return through efficient use of resources and cost-

[86] Peoples Statement No. 15-R, p. 7, lines 9-14.
[87] I&E Statement No. 2, p. 56, line 7 through p. 60, line 11.

cutting measures. The greater net income resulting from growth, cost savings, and true efficiency in management and operations is available to be passed onto shareholders. Peoples should not be granted any additional basis points for doing what it is required to do under Section 1501 to provide adequate, efficient, safe, and reliable service.

Q. PLEASE CONTINUE.

A. The Company's actions and initiatives to excel in its operating performance are not a novel effort, but it is a normal business requirement to provide adequate, efficient, safe, and reliable services to ratepayers as required under Section 1501. In fact, with Peoples' efficient operating performance, all stakeholders of the Company, including its shareholders, benefit because management effectiveness leads to a higher return through efficient use of resources and cost-cutting measures. Considering the above discussion and increase in ratepayers' rate burden, management performance or effectiveness should not be considered or recognized in determining an appropriate and reasonable ROE for Peoples. I oppose awarding Peoples' claim for management performance additional basis point adjustment of 0.25% in the claimed ROE of 11.25% (11.00% + 0.25%).

Q. PLEASE RESPOND TO MR. HUWAR'S CLAIM REGARDING EXEMPLARY OPERATIONAL PERFORMANCE IN GOODWIN AND TOMBAUGH GATHERING SYSTEM ACQUIRED IN 2020.

A. As a part of non-unanimous settlement terms in the merger proceeding,[88] Aqua America agreed to address the replacement of gathering pipe representing remediation of the bare steel within the Goodwin and Tombaugh (GT) gathering systems over a seven-year timeframe. The settlement provided that Peoples companies will receive full recovery for the actual capital spent for the complete rehabilitation of the bare steel in the system up to $120 million through a base rate case (rather than a DSIC). The replacement of GT gathering system was a part of the joint applicants' merger application proposal and not a voluntary action of Peoples. Hence, Mr. Huwar's characterization of exemplary operational performance in replacement of bare steel pipes of GT gathering system is not supported.

<u>I&E OVERALL RATE OF RETURN</u>

Q. PLEASE RESTATE I&E'S RECOMMENDED COST OF EQUITY AND OVERALL RATE OF RETURN.

A. I continue to recommend that the appropriate cost of equity is 10.20% for Peoples

[88] Commission order approving the settlement in the Joint Application of Aqua America, Inc. and its subsidiaries Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc., and Peoples Natural Gas Company LLC and its affiliate Peoples Gas Company LLC for change in control at Docket Nos. A-2018-3006061, A-2018-3006062, and A-2018-3006063, pp. (Order entered on January 24, 2020).

with an overall rate of return of 7.41%.[89] Peoples' requested ROE of 11.25% including management performance adjustment of 0.25% is higher by 1.05% or 105 basis points as compared with my recommended ROE of 10.20%. Any additional basis points beyond the I&E recommended ROE of 10.20% would be excessive and would put an enormous burden on ratepayers during these challenging economic times.

Q. DO YOU HAVE ANY FINAL COMMENTS REGARDING YOUR RETURN ON EQUITY AND OVERALL RATE OF RETURN ANALYSIS?

A. Yes. There have been current concerns regarding utility bill affordability as addressed in various statements by Commissioner Barrow and concerns raised by Governor Shapiro in a recently issued letter to Pennsylvania Utility Leaders regarding higher utility costs and enormous profits earned by utilities in 2024.[90] These concerns highlight the importance of ratepayers only being required to pay rates to fund costs that are necessary for the safe and reliable provision of electric distribution service. I believe that my recommendations allow the Company to earn a fair return while considering the cost to ratepayers. Given the current economic climate, it is important that ratepayers only be required to pay rates to fund costs that are absolutely necessary to provide safe and reliable service.

[89] I&E Exhibit No. 2, Schedule 1.
[90] I&E Exhibit No. 2, Schedule 2, pp. 1-5 and 8-16.

EFFECTIVE DATE OF NEW RATES

Q. SUMMARIZE YOUR RECOMMENDATION IN DIRECT TESTIMONY FOR PEOPLES PROPOSED EFFECTIVE DATE OF NEW RATES.

A. I recommended that Peoples should agree to make the new rates effective on January 1, 2027 (the first day of the FPFTY) instead of the proposed December 27, 2026, to avoid any unreasonable and unjustified impact on ratepayers.

If Peoples does not agree with the above recommendation, I recommended the Commission direct the Company: (1) to make the new rates effective January 1, 2027 (the first day of the FPFTY) instead of on December 27, 2026 and file an updated tariff rates and rules (Supplement to Tarriff Gas) pursuant to the 12 provisions of 52 Pa. Code §§ 53.1, et seq. and 53.101, designed to produce the approved annual distribution rate/revenue increase to become effective for service rendered *on and after January 1, 2027*; and (2) to file all subsequent base rate cases that should have new rate effective dates beginning with the first day or later of the claimed FPFTY.

Q. SUMMARIZE MS. SCANLON'S REBUTTAL TESTIMONY REGARDING THE PROPOSED EFFECTIVE DATE OF NEW RATES.

A. Ms. Scanlon disagrees with my recommendation to make new rates effective January 1, 2027, the first day of the FPFTY rather than Peoples' proposed effective date of December 27, 2026. She explains that following practice from the prior base rate proceedings, the Company projected its FPFTY in this proceeding with a

one-month bridge or gap month between the end of its future test year and the beginning of its FPFTY. She then states that per Commission's Order issued on April 16, 2026, pursuant to 66 Pa. C.S. § 1308(d) in this proceeding, the filing is suspended by operation of law until December 26, 2026, unless permitted by Commission order to become effective at an earlier date.[91] She points to Peoples 2018 and 2023 base rate cases and identifies the FPFTY period and the effective date of new rates that were before the beginning of the respective FPFTY period in these cases.[92] She explains why the Commission order in the 2025 Columbia Gas base rate case of similar situation is not relevant and applicable to Peoples instant case.[93] Finally, she explains that Peoples' last base rate case was filed on December 29, 2023 at Docket No. R-2023-3044549 and the FPFTY in that case was based on October 1, 2024, through September 30, 2025. The FPFTY in this proceeding is January 1, 2027, through December 31, 2027, and hence there is no overlap between rate effective periods or the possibility of duplicate recovery.[94]

Q. WHAT IS YOUR RESPONSE TO MS. SCANLON'S DISCUSSION REGARDING PEOPLES PROPOSED EFFECTIVE DATE OF NEW RATES?

A. As discussed at length in my direct testimony, I believe Ms. Scanlon's response

[91] Peoples Statement No. 3-R, p. 6, lines 14-16 and 19-22.
[92] Peoples Statement No. 3-R, p. 7, lines 8-9.
[93] Peoples Statement No. 3-R, p. 8, lines 11-19.
[94] Peoples Statement No. 3-R, p. 8, line 22 through p. 9, line 2.

does not invalidate my recommendation for Peoples to make the new rates effective on January 1, 2027, the first day of the FPFTY, which is appropriate and consistent with FPFTY ratemaking. As discussed in my direct testimony,[95] the Company's revenue requirement, including the revenue increase claim, is forecasted and used in the ratemaking calculation for the 12-month FPFTY (January 1, 2027, through December 31, 2027), which does not include the gap month of December 2026. The rates and the rate increase requested in this proceeding and the amounts recommended by the parties are based on the FPFTY period and not for the gap month. Ms. Scanlon's reference to Peoples' prior two rate cases does not validate her argument in this case because in the last two rate cases parties did not dispute Peoples' proposed effective date of new rates.

I disagree with Ms. Scanlon's interpretation of the Commission order in 2025 Columbia Gas rate case (Docket No. R-2025-3053499). Columbia Gas ratemaking calculation covered the 12-month FPFTY beginning January 1, 2026, through December 31, 2026, and it did not encompass the period December 19, 2025, through December 31, 2025, while Columbia Gas proposed effective date of new rates was December 19, 2025. The Commission rejected Columbia Gas' proposed effective date of December 19, 2025, and ordered to make new rate effective with the first day of Columbia Gas' FPFTY (January 1, 2026). The Commission in its order states,[96]

---

[95] I&E Statement No. 2, p. 66, lines 8-15.

[96] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499 (Order Entered December 9, 2025). See generally Effective Date of New Rates - Disposition, p. 60.

> As noted by I&E, Section 315(e), which was enacted by the legislature subsequent to Section 1308(d), was a legislative enactment intended, in part, to prevent utilities from suffering rate lag, not to create a scenario for recovery of rates in excess of the established just and reasonable rate for a given period. See, e.g., 2022 FPFTY Notice of Proposed Rulemaking at 8.
>
> Review of the language of Section 1308(d) in full context, therefore, expressly contemplates the necessity to apply the Commission's expertise in resolving timing and synchronization issues in determining just and reasonable rates - consistent with, and within, the firm seven-month period set out in the law. We note the following, in pertinent part: " . . . The Commission *shall consider the effect of such suspension in finally determining and prescribing the rates to be thereafter charged and collected by such public utility* . . ." 66 Pa. C.S. § 1308(d) (emphasis added).

Regarding the implication of Section 315(e) and 1308(d) of the Public Utility Code governing the FPFTY ratemaking, I&E's counsel will address this issue in briefs.

Q. DO YOU HAVE ANY CHANGES TO YOUR RECOMMENDATION FOR THE EFFECTIVE DATE OF NEW RATES?

A. No. I continue to recommend that the Commission direct Peoples to make the new rates effective on January 1, 2027 (the first day of the FPFTY) instead of on December 27, 2026, to avoid any unreasonable and unjustified impact on ratepayers and prevent Peoples from unsupported over recovery of revenues in new rates for the period December 27, 2026, through December 31, 2026 (a five-day period).

RESPONSE TO OCA WITNESS GARRETT'S REBUTTAL TESTIMONY

Q. SUMMARIZE OCA WITNESS GARRETT'S RESPONSE IN REBUTTAL TESTIMONY.

A. First, Mr. Garrett takes issue with my recommended 10.20% ROE as opposed to his recommended ROE of 8.80% for Peoples.[97] He disputes my proxy group average growth rate of 8.10% used in the DCF analysis.[98] Second, he takes issue with my traditional CAPM results of 10.28% and the ERP used in my CAPM analysis.[99] He opines that my second variation of the Kroll CAPM results of 8.86% indicates a reasonable cost of equity for Peoples.[100]

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S CRITICISM TO YOUR RECOMMENDED ROE OF 10.20% FOR PEOPLES?

A. I agree that my recommended ROE is higher than Mr. Garrett's ROE, however, it is important to note that we use different data points and methods in the cost of equity analysis, which produces different results.

Q. SUMMARIZE MR. GARRETT'S CRITICISMS REGARDING THE GROWTH RATE USED IN YOUR DCF ANALYSIS.

A. First, Mr. Garrett states that he considered long-term annual U.S. Gross Domestic

[97] OCA Statement No. 3R, p. 1, line 1 and p. 2, lines 2-3.
[98] OCA Statement No. 3R, p. 3, line 9.
[99] OCA Statement No. 3R, p. 4, lines 6-12.
[100] OCA Statement No. 3R, p. 5, lines 6-7.

Product (GDP) growth projections as a cap on the long-term growth rate of each individual company in his proxy group because no domestic company can achieve annual earnings and/or dividend growth at a rate that exceeds the growth rate of the aggregate economy as measured by U.S. GDP growth rate over the long-run.[101] He then states that he incorporated the short-term dividend growth rate projections published by Value Line and presented this "analyst growth" variation in his DCF model. Additionally, he states that despite its shortcomings, it is often presented in rate proceedings and considered by regulators. The result of his sustainable growth DCF Model indicates a cost of equity of 7.10% and the result of his analyst-growth based DCF Model indicates a cost of equity of 7.60%. The average result of his two DCF Models is 7.30%.[102]

Second, Mr. Garrett opines that my DCF analysis produced a much higher results because I used an unsustainably high growth rate of 8.10% in contrast to his use of an analyst growth rate of 4.30% and a sustainable growth rate (U.S. GDP Growth Rate) of 3.80% in his DCF analysis.[103]

Finally, Mr. Garrett opines that my average growth rate of 8.10% is unrealistic, which suggests that the proxy group, on average, can achieve dividend (and/or earnings) growth at a rate nearly two times projected annual GDP growth every year in perpetuity.[104] For these reasons, he suggests that the Commission

[101] OCA Statement No. 3R, p. 2, lines 11-16.
[102] OCA Statement No. 3R, p. 2, lines 11-22.
[103] OCA Statement No. 3R, p. 3, lines 2-7.
[104] OCA Statement No. 3R, p. 3, lines 9-12.

should reject my DCF results for determining a reasonable cost of equity estimate or authorized ROE for the company.[105]

Q. HOW DO YOU RESPOND TO MR. GARRETT'S CRITICISMS REGARDING THE GROWTH RATE USED IN YOUR DCF ANALYSIS?

A. First, it should be noted, in the context of recommending an appropriate ROE and overall rate of return, I&E's role is to perform an unbiased analysis using current and reputable sources. In determining an appropriate growth rate for my constant growth DCF analysis, I relied upon the forecasted earnings growth estimates from Value Line, S&P, and Zacks.[106] These sources are trusted and used industry-wide, including by most companies, advocates, and I&E witnesses who submit rate of return testimony. Mr. Garrett, Ms. Nelson, and I all utilize these independent analysts' sources for calculating an average growth rate in our respective DCF analyses.

The growth estimates I use from the sources listed above are five-year growth forecasts, which are not short-term. The five-year growth estimates are reasonable as they cover the time period of the FPFTY and rate case filing frequency of many utilities. It is inappropriate and speculative to compare and set an upper limit for a utility's growth rate with the U.S. economy nominal long-term GDP growth forecast of 3.80%. Mr. Garrett himself used an analyst forecasted

[105] OCA Statement No. 3R, p. 4, lines 1-3.
[106] I&E Exhibit No. 2, Schedule 5.

average growth rate of his proxy group utilities in his constant growth DCF analysis, which is higher than his suggested upper limit based on the GDP growth forecast of 3.80% for the gas utilities' growth rate, which resulted in his DCF result of 7.60% for his proxy group.[107] It is speculative to assume or conclude that utilities could not achieve an earnings growth rate higher than the U.S. GDP growth rate. It is important to note that share prices of utilities rely on projected earnings growth rates and not the nominal GDP growth rate threshold of 3.80% assumed by Mr. Garrett. Generally, investors assume that the companies in which they propose to make an investment would grow at a rate higher than the GDP growth rate and expect appreciation in share price.

Second, the Commission has repeatedly confirmed I&E's constant growth DCF methodology for determining a fair return on common equity in recent base rate proceedings, where the Commission agreed with the ALJ's recommendation to use I&E's cost of equity methodology, which included using analysts forecasted five-year earnings growth estimates in the DCF analysis.[108]

---

[107] OCA Exhibit DJG-6.

PECO Energy Company - Gas Division*; Docket No. R-2020-3018929 (Order Entered June 22, 2021); *Pa. PUC v. Aqua Pennsylvania, Inc*., Docket Nos. R-2021-3027385 & R-2021-3027386, pp. 154 and 178 (Order entered May 16, 2022); *Pa. PUC v. Columbia Water Company*, Docket No. R-2023-3040258, p. 105 (Order entered January 18, 2024); *Pa. PUC v. Pennsylvania-American Water Company*, Docket Nos. R-2023-30433189 & R-2023-3043190, p. 194 (Order Entered July 22, 2024); and *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499 (Order Entered December 9, 2025). See generally Rate of Return on Common Equity - Disposition, pp. 226 and 234.

Q. SUMMARIZE MR. GARRETT'S COMMENT ON YOUR TRADITIONAL CAPM AND KROLL'S CAPM RESULTS.

A. Mr. Garrett states that I conducted two variations of the CAPM analysis. The first variation has a result of 10.28%, and the second variation has a result of 8.86%. The main difference between these two CAPM variations is the ERP input. He then states that I calculated ERP estimate for the traditional CAPM analysis by relying on data starting in the Great Depression and opines that the historical approach is contrary to modern academic literature and most certainly overstates the ERP. He then opines that my traditional CAPM analysis produces significantly higher results than his CAPM analysis results of 8.80% for Peoples, which is reasonable as compared to my Kroll CAPM analysis results of 8.86%.[109]

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S COMMENT REGARDING YOUR TRADITIONAL CAPM ANALYSIS RESULTS AND THE ERP?

A. As discussed in my direct testimony,[110] I&E has been consistently using the overall market return based on the average of the S&P 500 historical equity return (in this case 1926-2026 period) and Value Line's forecasted dividend yields and price appreciation potential on its universe of stocks in the traditional CAPM analysis.[111] Using these data points produces an accurate forward-looking

[109] OCA Statement No. 3R, p. 4, line 6 through p. 5, line 7.
[110] I&E Statement No. 2, p. 34, lines 7-16.
[111] I&E Exhibit No. 2, Schedule 11.

estimate for the traditional CAPM forecasted market return as a whole, normalizing both historical negative returns and overly excessive returns due to volatile economic conditions. The Commission has repeatedly confirmed I&E's CAPM methodology for determining a fair return on common equity in recent base rate proceedings, where the Commission agreed with the ALJ's recommendation to use I&E's cost of equity methodology, which included using the traditional CAPM that uses historic and forward-looking ERP and recently in combination with I&E's Kroll CAPM analysis results.

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT BACKGROUND?

A. An outline of my education and employment is attached as Appendix A.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for representing the public interest in rate and other proceedings before the Commission. I&E's analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the utility company, and the regulated community as a whole.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. My direct testimony addresses the base rate case filed on March 27, 2026 by Peoples Natural Gas Company LLC (Peoples or Company) that requests an

increase of $163,171,938.[1] In my direct testimony I specifically address issues related to the Company's proposed rate base, present rate revenue, weather normalization adjustment, cost allocation, and rate design.

Q. DOES YOUR DIRECT TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 3 contains schedules that support my direct testimony.

FPFTY REPORTING REQUIREMENTS

Q. WHAT IS PEOPLES' CLAIM FOR ADDITIONAL RATE BASE IN THE FPFTY ENDING DECEMBER 31, 2027?

A. The Company's claimed rate base for the FPFTY ending December 31, 2027 is $5,728,767,833 and the rate base for the FTY ending November 30, 2026 is $5,042,257,469.[2] Therefore, $686,510,364 ($5,728,767,833 – $5,042,257,469) of rate base additions are associated with the thirteen months between the end of FTY and the end of the FPFTY.

[1] Peoples Gas Statement No. 3, p. 4.
[2] Peoples Ex. No. 8, Sch. No. 2, p. 1 line 17.

Q. DID THE COMPANY PROVIDE A SCHEDULE SHOWING PLANT ADDITIONS AND RETIREMENTS THAT SUPPORT THE PROJECTED LEVEL OF TOTAL PLANT IN THE FTY AND FPFTY RATE BASE?

A. Yes. The Company provided Peoples Exhibits No. 5B, pp. I-3 - I-6 and 5C, pp. I-3 – I-6 showing detailed plant additions and retirements for the FTY and FPFTY.

Q. DO YOU HAVE ANY RECOMMENDATIONS REGARDING PLANT ADDITIONS THAT PEOPLES PROJECTS TO BE IN SERVICE DURING THE FPFTY ENDING DECEMBER 31, 2027?

A. Yes. I recommend that the Company be required to provide I&E, the Office of Consumer Advocate, and Office of Small Business Advocate no later than June 1, 2027, under this docket number an update that includes actual utility plant balances, actual plant additions, and actual retirements for the twelve months ending November 30, 2026, and not later than June 1, 2028 for the twelve months ending December 31, 2027.

Q. WHY DO YOU RECOMMEND THAT PEOPLES BE REQUIRED TO PROVIDE THESE UPDATES?

A. There is value in determining how closely Peoples' projected investments in future facilities comport with the actual investments that are made by the end of the FTY and FPFTY. Determining the correlation between Peoples' projected and actual

results will help inform the Commission and the parties in Peoples' future rate cases as to the validity of the Company's projections.

Using an FPFTY, Peoples is requesting ratepayers pre-pay a return on its projected investment in future facilities that are not in place and providing service at the time the new rates take effect but also are not subject to any guarantee of being completed and placed into service. While the FPFTY provides for such projections, there should be verification of the projections. Therefore, requiring the Company to provide updates demonstrating that actual investments comport with projections used in setting rates using the FPFTY provides the Commission with actual data to gauge the accuracy of Peoples' projected investments in future proceedings.

DISCOUNT RATE CUSTOMERS

Q. DOES THE COMPANY'S TARIFF ALLOW IT TO NEGOTIATE RATES FOR CUSTOMERS WITH AN ALTERNATIVE COMPETITIVE SUPPLY?

A. Yes. The Company's tariff currently allows it to grant discount rates to certain customers who can show that they have a competitive alternative to the Company's gas supply.

Q. DOES THE COMPANY CURRENTLY HAVE ANY CUSTOMERS RECEIVING DISCOUNTED RATES?

A. Yes. The Company's existing tariff includes rate schedule Competitive Energy Rate (CER), which is a firm service available at the Company's sole discretion to residential, commercial, and industrial ratepayers that would not request service from the Company but for the availability of service under this rate and whose competitive options are not solely limited to other natural gas distribution companies (NGDC).[3]

Q. DID THE COMPANY PROVIDE A SCHEDULE SHOWING A BREAKDOWN OF DISCOUNT RATE CUSTOMERS INCLUDING THE DATE THE CUSTOMER'S ALTERNATIVE SUPPLY WAS VERIFIED?

A. Yes. The Company's HIGHLY CONFIDENTIAL response to I&E-RS-3,[4] shows **[BEGIN PROPRIETARY]** [redacted] **[END PROPRIETARY]**

[3] Peoples Supplement No. 2 to Gas – Pa PUC No. 48, First Revised Page No. 66, Cancelling Original Page No. 66.
[4] HIGHLY CONFIDENTIAL I&E Exhibit No. 3, Schedule 1.

Q. WHAT WAS THE RANGE OF THE EFFECTIVE DATES OF THE DISCOUNT AGREEMENTS?

A. The effective dates for Peoples' discount agreements range from **[BEGIN PROPRIETARY]** [redacted] **[END PROPRIETARY]**

Q. WHAT DO YOU RECOMMEND CONCERNING THE DISCOUNT RATE CUSTOMERS?

A. For any discount rate customers that have not had their competitive alternatives verified for longer than ten years at the time of the Company's next base rate case, I recommend that the Company be required to provide a competitive alternative analysis for each of those customers and justify the customers' discount rates as part of its filing in the next base rate case. Further, I recommend that the Commission order the Company to provide a competitive alternative analysis for each discount rate customer that has not been verified within ten years of each of Peoples' prospective base rate cases in perpetuity.

Q. WHY DO YOU MAKE THIS RECOMMENDATION?

A. To ensure that these customers continue to be eligible for discount rates, each alternative supply claim should be periodically analyzed. It has been an indeterminate amount of time since an alternative supply analysis has been completed for Peoples' customers, and the Company's costs to supply service and operational conditions may have changed since the initial alternative supply studies

were completed at the initiation or renewal of each of the contracts. Further, the customers' alternative source of supply and access to that alternative supply could also have changed.

Q. WHAT ARE SOME POTENTIAL CHANGES IN THE COMPANY'S ABILITY AND COST TO SUPPLY SERVICE?

A. Potential changes include situations in which the Company can no longer supply a customer utilizing the current source of gas, situations in which the Company can no longer utilize the existing capacity, or situations where the cost to supply customers has increased or will increase. As an example, a situation could arise where a larger pipeline project must be completed solely to serve both the flex-rate and tariff customers. In that case, termination of the flex-rate contract could result in the scale-back or cancellation of the larger pipeline project. This would result in avoidance of capital and operating expenses related to this project, which would result in savings for the Company and its customers.

Q. WHAT ARE SOME CHANGES IN A CUSTOMER'S ALTERNATIVE SUPPLY THAT COULD AFFECT DISCOUNT RATE CUSTOMERS?

A. Possible changes in a customer's alternative supply that could affect discount rate customers are situations where the customers may no longer have a viable alternative supply, or the customer no longer has a viable alternative source of gas or gas capacity, or the cost of the alternate supply to customers has increased or will

increase. There have been many changes in the natural gas industry in the last ten years. For example, a customer may have had access to an interstate pipeline that is no longer available. Also, the cost and difficulty a customer would face to construct interconnections to pipelines has increased due to inflation, public concerns, restoration costs, and environmental impacts, which could make access to the purported alternative supply no longer viable.

Q. WHY IS IT IMPORTANT TO PERIODICALLY ANALYZE COMPETITIVE ALTERNATIVES?

A. It is important to periodically analyze competitive alternatives to ensure that the rates charged to these discount rate customers result in the maximum possible contribution to fixed costs. Also, this analysis should be completed so that the rates are not discounted lower than would be necessary to prevent the customer from choosing the alternative supply. Providing excessive discounts to customers would be harmful to both the Company and its customers as the Company's other customers make up for the lost revenue, which results when discount rate customers pay less than tariff rates.

Q. HAS THE COMMISSION DECIDED THAT A TEN-YEAR REVIEW OF COMPETITIVE ALTERNATIVES IS REASONABLE IN A RECENT BASE RATE CASE?

A. Yes. In a recent Columbia Gas of Pennsylvania Inc. (Columbia) Order, the Commission determined the following:

> Based on our review of the record in this proceeding, we are not persuaded by the Company's arguments to reject the ALJ's recommendation. Rather, we agree with the ALJ and I&E that it is important to periodically analyze competitive alternatives to ensure that the rates of the flex-rate customers are not discounted lower than is necessary to avoid the customer choosing the alternative supply. As I&E witness Mr. Cline indicated, this analysis is needed to provide an accurate and up-to-date analysis of competitive alternatives to show the flex rate is necessary and reasonable and to ensure that flex-rate customers make the maximum contribution to fixed costs. I&E St. 3-SR at 5. We especially agree with the ALJ and I&E that providing excessive discounts to customers is not in the public interest and would be harmful to both the Company and its customers, since the other customers would be required to make up the lost revenues when flex-rate customers pay less than tariff rates. [5]

Requiring Peoples to provide an accurate, up-to-date analysis of its competitive alternatives is consistent with Commission precedent.

[5] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2020-3018835, p. 217 (Order Entered February 19, 2021) (2021 Columbia Order).

DATA CENTER AND LARGE GENERATOR OPPORTUNITIES

Q. IS THE COMPANY ADDING ANY DATA CENTER OR LARGE GENERATOR CUSTOMERS IN THE PRESENT PROCEEDING?

A. No. However, Peoples witness Ravenstahl states that the Company's new business team has received increased interest in the exploration of new potential Data Center/Power Generation projects.[6]

Q. DO YOU HAVE ANY CONCERNS REGARDING THE POTENTIAL FOR FUTURE DATA CENTER OR LARGE GENERATOR CUSTOMERS?

A. Yes. The issue of data centers remains a controversial topic in Pennsylvania regarding whether and how the costs of these large customers are spread amongst the rest of the customer classes. The potential negative impact on customer distribution and energy rates requires a thoughtful approach to adding these large customers. Some possible means to mitigate these negative effects would be to allocate the cost recovery of any plant improvements, additions, or other costs to those customers who cause them or not permitting these customers to have access to discounted rates. While I am not making any specific recommendations regarding these potential customers, it should be noted that Peoples should expect these concerns to be addressed if and when these customers are acquired.

[6] Peoples Statement No. 8, pp. 7-8.

WEATHER NORMALIZATION ADJUSTMENT

Q. WHAT IS A WEATHER NORMALIZATION ADJUSTMENT?

A. A Weather Normalization Adjustment (WNA) adjusts a customer's bill to better reflect normalized weather conditions. For billing periods that are colder than normal, a credit will be applied to the bill. For billing periods that are warmer than normal, a surcharge is applied to the bill.[7]

Q. DOES PEOPLES CURRENTLY HAVE A WNA IN EFFECT?

A. Yes. The Company currently has a Commission approved WNA program in effect.[8]

Q. WHAT IS PEOPLES PROPOSING REGARDING ITS WNA?

A. Peoples is proposing to update the WNA' s normalization period based on a 65-year regression analysis methodology.[9]

Q. ARE YOU RECOMMENDING ANY CHANGES TO THE WNA AS PROPOSED BY THE COMPANY?

A. Yes. I am opposed to Peoples using a 65-year regression analysis in determining the WNA' s normalization period, and I am recommending that the present 3% deadband be increased to 5% consistent with the Commission's Order in the most

[7] Peoples Statement No. 3, pp. 30-31.
[8] Peoples Statement No. 17, p. 37.
[9] Peoples Statement No. 17, p. 37.

recent Columbia Gas of Pennsylvania, Inc. base rate case (2025 Columbia Order).[10]

Q. HOW DOES THE COMPANY PROPOSE UPDATING THE WNA NORMALIZATION PERIOD?

A. The Company proposes normalizing billing determinants using a 65-year regression analysis framework in determining Heating Degree Days (HDD). Peoples believes that aligning the WNA normalization methodology with that same 65-year regression ensures that both base rates and subsequent WNA calculations rely on the same weather foundation.[11]

Q. WHAT IS AN HDD?

A. An HDD is the difference between the average temperature on a given day (usually rounded to the nearest degree) and a base temperature, which is 65ºF. The result correlates to the amount of energy needed to heat a building. A higher HDD indicates greater energy requirements and indicates colder weather. To calculate the HDD, the average of the day's high and low temperatures would be determined and then that result would be subtracted from the established base temperature of 65ºF. For example, if a daily temperature varied from a low of 2ºF

[10] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).
[11] Peoples St. No. 17, pp. 6-8.

to a high of 28ºF on a given day, the average temperature for that day is 15ºF ((2º + 28º) ÷ 2). Accordingly, the HDD for that day would be 50º (65º - 15º).

Q. WHAT IS NORMAL AS IT RELATES TO HDDs?

A. The National Oceanic and Atmospheric Administration (NOAA) defines normal when used in a weather normalization calculation as the level of heating or cooling degree days averaged over a period of time. The standard has historically been the 30-year average calculated and published by NOAA. The current 30-year average is based on the years 1991 through 2020.[12] For example, if 5,000 actual HDDs occurred in the HTY and the normal level of HDDs is 5,500, the test year is considered to have been warmer than normal by 500 (5,500 - 5,000) HDDs, less energy consumption necessary than in the normal year. The previous example implies that had the weather been normal from an HDD standpoint, the utility would have realized a higher level of retail sales during the HTY. Conversely, if the HTY level of actual HDDs exceeds the normal level, then the utility's HTY sales would have been higher than normal because the higher-than-normal HDD result correlates into a temperature that was colder than normal.

[12] https://www.ncei.noaa.gov/access/search/data-search/normals-hourly-1991-2020, accessed May 8, 2026.

Q. HAS THE COMMISSION RECENTLY MADE A DETERMINATION REGARDING A REASONABLE TIME PERIOD TO CALCULATE HDDS FOR THE WNA?

A. Yes. In the Columbia Order, the Commission determined that "[u]sing a twenty-year cycle rather than a ten-year cycle appears to result in an 'historical bias' that diminishes the effect of the claimed recent trends and results in providing revenue to the Company when instead, customer should be realizing savings."[13]

Q. DO YOU AGREE WITH PEOPLES PROPOSAL TO UPDATE THEIR WNA NORMALIZATION PERIOD USING A 65-YEAR REGRESSION PERIOD?

A. No. However, as I currently do not have the information to make an adjustment, I recommend that Peoples use a 10-year period to establish normal of HDD's to determine present rate revenue in future proceedings. If the information becomes available during the course of this proceeding, I will adjust this recommendation.

Q. WHAT IS A DEADBAND?

A. A deadband is a certain threshold in which the adjustment is not triggered if Actual Heating Degree Days are within the Normal Heating Degree Days.

[13] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).

Q. WHAT IS PEOPLES' PRESENT DEADBAND, AND DOES THE COMPANY PROPOSE REVISING IT?

A. Peoples present deadband is set to 3% and the Company is not proposing an update to its present deadband.[14]

Q. WHAT ARE YOU RECOMMENDING REGARDING THE DEADBAND IN THE COMPANY'S WNA?

A. I am recommending Peoples deadband be increased from the existing 3% to 5%.

Q. WHY DO YOU RECOMMEND THE DEADBAND BE INCREASED TO 5%?

A. I recommend the deadband be increased to 5% because this percentage more adequately captures what could be considered normal weather fluctuations in Pennsylvania and places more of the burden for weather variation back on the Company as a normal part of doing business, as stated by the Commission in the 2025 Columbia Order.[15]

[14] Peoples St. No. 17, p. 42.

[15] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).

PRESENT RATE REVENUE WEATHER ADJUSTMENT

Q. HOW DID THE COMPANY ADJUST ITS PROJECTED USAGE LEVELS TO ACCOUNT FOR CHANGES IN WEATHER?

A. The Company adjusted its projected usage levels to account for changes in weather on a class-specific basis. For the residential, commercial SGS, and commercial MGS classes, the Company deducted the HTY billed throughput from weather normalized volume to calculate the adjustment amount in Mcf, which is then multiplied by the delivery rate under present rates to determine the dollar amount of the adjustment.[16]

Q. HOW DID THE COMPANY FORECAST NORMAL WEATHER?

A. Peoples used 5,086 HDDs to forecast normal weather.[17]

Q. HOW DID THE COMPANY CALCULATE THE PROPOSED 5,086 HDDs?

A. The Company stated that it calculated the proposed 5,086 HDDs using a 65-year regression model for the periods ending May 31, 2025.[18]

[16] Peoples St. No. 4, pp. 5-6.
[17] Peoples St. No. 4, p, 4.
[18] Peoples St. No. 4, p. 4.

Q. WHAT METHODOLOGY DID THE COMPANY USE TO DETERMINE NORMAL HDDs IN PREVIOUS CASES?

A. Mr. Taylor stated that Peoples used a blended methodology that averaged the 65-year regression trend with a 20-year historical average to estimate the test-year level of HDDs.[19]

Q. WHAT SUPPORT DID THE COMPANY PROVIDE FOR INTRODUCING A NEW METHODOLOGY FOR DETERMINING NORMAL HDDs?

A. The Company's rationale for introducing a new methodology for determining HDDs is based on Mr. Taylor's claim that while the 20-year average reflects relatively recent conditions, it did not account for the directional trend observed across the broader historical record. As a result, he asserts that it embeds legacy weather patterns that are not representative of future expectations. The proposed 65-year regression methodology reflects both the long-term record and the directional evolution of HDD. Given the continued confirmation of the trend and the Company's use of the 65-year regression to normalize billing determinants in this proceeding, reliance solely on the regression methodology is deemed appropriate. Mr. Taylor asserts that continuation of the blended approach does not reflect the most reasonable estimate of HDD for the FPFTY in this case. He opines that the regression framework alone provides a transparent and analytically

[19] Peoples St. No. 17, p. 6.

sound estimate of normal HDD trend of decreasing HDD is inconsistent with the use of a 20-year HDD which assumes that the mean of the HDD is constant over time and will, thus, overstate the expected HDD level in the future because it fails to recognize the trend of declining HDDs.[20]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO MOVE TO INCLUDE A 65-YEAR REGRESSION ANALYSIS OF WEATHER IN ITS CALCULATION OF NORMAL HDD'S?

A. No. I do not agree with the Company's proposal to include a 65-year regression analysis of weather in its calculation of normal HDDs.

Q. WHY DO YOU NOT AGREE WITH THE USE OF A 65-YEAR REGRESSION ANALYSIS?

A. While I&E does not necessarily disagree with the concept of using a regression analysis to normalize HDDs, I disagree with the analysis performed by the Company. Specifically, I disagree with the Company's proposal to use 65-years of historic data to determine its normalized HDDs. Mr. Taylor provided no support for why he selected 65 years of data for his analysis. He also did not identify why he considers weather from as early as 1960 to be representative of weather patterns occurring today. Without any evidence to the contrary, it appears

[20] Peoples Statement No. 17, pp 6-7.

that the Company selected this methodology in order to justify a specific normalized HDD result.

Q. HAS THE COMMISSION RECENTLY APPROVED A DIFFERENT METHODOLOGY TO DETERMINE HDDs?

A. Yes. In the 2025 Columbia Order, the Commission determined that using a "twenty-year cycle rather than a ten-year cycle appears to result in an 'historical bias' that diminishes the effect of the claimed recent trends and results in providing revenue to the Company when instead, customers should be realizing savings."[21]

Q. DID YOU REQUEST THAT THE COMPANY IDENTIFY THE REVENUE IMPACT OF USING A TWENTY-YEAR OR TEN-YEAR HDD ANALYSIS?

A. Yes. I&E-RS-15 requested a schedule that shows the revenue under present and proposed rates in the FPFTY based on a ten-year HDD projections and twenty-year HDD projection.[22]

[21] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).

[22] I&E Exhibit No. 3, Schedule 2.

Q. DID THE COMPANY PROVIDE THAT ANALYSIS?

A. No. The Company responded that it did not prepare the requested analysis as it is not proposing to utilize either of these HDD methodologies in its claim.[23]

Q. WERE YOU ABLE TO DETERMINE AN ADJUSTMENT TO PRESENT RATE REVENUE BASED ON THE 10-YEAR HDD ANALYSIS?

A. I attempted to recreate the Company's revenue adjustment analysis described in Mr. Taylor's description of the calculation in his direct testimony[24] which resulted in an increase to the Company's claimed revenue requirement. However, because, as of the writing of this testimony, I am unable to verify the adjustment based on the 10-year HDD analysis, I am not recommending any present rate revenue adjustment.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that the Company provide this analysis in its rebuttal testimony. Additionally, I recommend the Company be required to provide in future base rate cases, a comparison of HDD methodologies and the resulting revenue impacts when the Company's proposed methodologies differ from what has been proposed by the Company in the past or from a methodology approved by a recent Commission order.

[23] I&E Exhibit No. 3, Schedule 2.
[24] Peoples Statement No. 17, pp. 13-14.

COST OF SERVICE

Q. WHAT IS A COST OF SERVICE STUDY (COSS)?

A. A utility provides service to a defined set of customer classes that are different in terms of demand and usage patterns. A COSS allocates or assigns a utility's revenue requirement based on those service differences. In other words, a COSS is a formalized analysis of costs that attempts to assign to each customer or rate class its proportionate share of the Company's total cost of service (i.e., the Company's total revenue requirement). The results of such a study can be utilized to determine the relative cost of service for each class and help determine the individual class revenue requirements, and to the extent a particular class is above or below the system average rate of return, show the additional revenues each class receives or conversely the additional revenues that each class contributes to the Company's overall revenues. In addition to the relative provision of revenues, a relative rate of return is also provided, which shows how the rate of return for each class compares to the system average rate of return.

Q. PLEASE DEFINE THE TERMS RATE OF RETURN AND RELATIVE RATE OF RETURN?

A. The rate of return is the Commission authorized return on rate base that is determined in a base rate proceeding. A relative rate of return indicates how the rate of return of each customer class compares to the system average rate of return.

In general, a relative rate of return that provides revenue equal to its cost to serve would have a value of 1.0.

Q. DID THE COMPANY PROVIDE A COSS IN THIS PROCEEDING?

A. Yes. The Company performed and provided a series of COSS' in its filing sponsored by Peoples witness Taylor.[25] Witness Taylor prepared COSS' under present and proposed rates. The cost classifications used by the Company in designing its COSS' are customer, demand or capacity, and commodity or energy.

Q. WHAT METHODOLOGY DID THE COMPANY USE TO ALLOCATE COSTS ACROSS THE CUSTOMER CLASSES?

A. Mr. Taylor utilized an Average of Customer Demand and a Demand Commodity Cost of Service Study in allocating costs across customer classes.[26]

Q. DESCRIBE THE COST OF SERVICE STUDY THAT WAS PROVIDED IN PEOPLES EXHIBIT NO. 11, SCHEDULE NO. 1.

A. The Company provided one cost of service study in Peoples Exhibit No. 11. The COSS combined and then averaged the minimum system / design day (design day) and Demand Commodity methodology.[27]

[25] Peoples Statement No. 17, p. 18.
[26] Peoples Statement No. 17, pp. 24-25.
[27] Peoples Statement No. 17, pp. 21-29.

Q. WHAT IS THE IMPACT ON THE RELATIVE RATE OF RETURN UNDER THE AVERAGE OF CUSTOMER DEMAND AND DEMAND COMMODITY METHODOLOGY?

A. The following table shows a summary of the rates of return and relative rates of return for the residential (RES), small general (SGS), medium general (MGS), large general (LGS), and main line (MLS) service rate classes under present rates:[28]

	Average of Customer Demand and Demand Commodity		
	Current ROR	Current Revenue to Cost Ratio	Current Parity Ratio
Total	**6.0%**	**0.88**	**1.00**
RES	5.8%	0.88	1.00
SGS	3.1%	0.79	0.90
MGS	5.3%	0.83	0.94
LGS	18.1%	1.38	1.57
MLS	0.6%	0.72	0.82

The Average of Customer Demand and Demand Commodity combines the results of a Customer-Demand study and a Demand Commodity study. It was applied separately to low-pressure and regulated pressure mains. Under the Customer Demand study, mains costs are classified between customer and demand components based on the results of a Minimum Size System (MSS) study. Under the Demand Commodity study, mains costs are classified on a 50/50 basis

[28] Peoples Statement No. 17, p. 28.

between demand and commodity components.[29] The Average Study reflects an equal weighting of these two approaches and is shown in the table below.

	Customer Demand Study	Demand-Commodity Study	Average
Customer	48.14%	0.00%	24.07%
Demand	51.86%	50.00%	50.93%
Commodity	0.00%	50.00%	25.00%
Total	100%	100%	100%

Q. HOW DID THE COSS PROPOSED BY MR. TAYLOR ALLOCATE THE PROPOSED REVENUE INCREASES?

A. The Company proposed an Average of Customer Demand and Demand Commodity allocated COSS. The results of Mr. Taylor's analysis were included in Peoples Statement No. 17[30] as Peoples Exhibit No. 11, p. 15, which shows a proposed relative ROR for each rate class. This exhibit compares the Company's proposed rate revenue allocation with the present rate revenue allocation based on the Average of Customer Demand and Demand Commodity allocation method. The result of Mr. Taylor's proposed allocation would see the residential class receive 73.8% of the total increase or ($994,520,060 / $1,347,786,003).[31]

[29] Peoples Statement No. 17, pp. 24-25.
[30] Peoples Statement No. 17, pp. 21-29.
[31] Peoples Exhibit No. 11, p. 15.

Q. DO YOU AGREE WITH PEOPLES' PROPOSED AVERAGE OF CUSTOMER DEMAND AND DEMAND COMMODITY COST OF SERVICE STUDY?

A. No. The average total allocation breakdown proposed by Peoples breaks down to 24.07% allocated for Customers, 50.93% allocated for Demand, and 25% allocated to the Commodity. This is inconsistent with a Peak-and-Average allocation of mains and mains-related accounts which allocates 50% to demand and 50% to commodity.[32]

Q. WHICH COSS DO YOU RECOMMEND THE COMMISSION USE TO ALLOCATE THE REVENUE INCREASES AMONG THE DIFFERENT CUSTOMER CLASSES IN THIS PROCEEDING?

A. I recommend the Commission base its recommended allocation on a peak and average COSS that does not allocate the cost of mains on a customer basis.

[32] Peoples Statement No. 17, p. 25, Table 2.

Q. HAS THE COMMISSION RECENTLY STATED ITS PREFERENCE FOR THE PEAK AND AVERAGE COSS AND REJECTED INCLUDING DISTRIBUTION MAINS AS A CUSTOMER COST IN A BASE RATE PROCEEDING?

A. Yes. The Commission has recently ruled in the 2021 Columbia Order that "…we remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. The existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed upon it, not by the number of customers served."[33]

Q. DID THE COMPANY PROVIDE AN EXAMPLE OF REVENUE ALLOCATION BASED ON A PEAK AND AVERAGE COSS?

A. Yes. In its response to I&E-RS-16, the Company provided a Peak and Average COSS that included an allocation of revenues that results in each rate class reaching a relative ROR of 1.0.[34] The following table summarizes the results of the Peak and Average COSS.

[33] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2020-3018835, p. 217 (Order Entered February 19, 2021).

[34] I&E Exhibit No. 3, Schedule 3.

Customer Classes	Current Revenues	Change in Revenue	Proposed Revenue	Percent Increase	Proposed Relative ROR
RES	$875,170,164	$86,089,063	$962,444,666	9.84%	1.0
SGS	$116,045,676	$34,936,602	$151,110,834	30.11%	1.0
MGS	$108,167,780	$41,714,240	$150,113,168	38.56%	1.0
LGS	$72,052,170	($6,629,057)	$65,826,187	-9.20%	1.0
Mainline	$13,178,274	$4,760,169	$18,291,147	36.12%	1.0
Total	$1,814,614,065	$160,871,017	$1,347,786,003	1.0	13.58%

Q. DOES MR. TAYLOR'S OPINION COINCIDE WITH ESTABLISHED COMMISSION PRECEDENT?

A. No. As discussed above, the Commission has established that the Peak and Average cost allocation method is the preferred method to allocate costs and revenue for natural gas distribution companies.

Q. WHAT DO YOU RECOMMEND REGARDING THE PROPOSED ALLOCATION OF REVENUES?

A. I recommend that the revenue increase be allocated based on the Peak and Average COSS at equal rates of return with the change that the LGS class should not be allocated a decrease in rates. Instead, the excess revenue from the LGS class, $6,629,057 as proposed, should be allocated across the remaining rate classes as part of the overall scale back of rates.

CUSTOMER COST ANALYSIS

Q. WHAT IS A CUSTOMER COST ANALYSIS AND HOW IS IT USED?

A. A customer cost analysis is a part of a COSS that is used to determine the appropriate fixed customer charges for the various classes and meter sizes.

Q. WHY IS IT NECESSARY TO PERFORM A CUSTOMER COST ANALYSIS?

A. A fixed customer charge represents the revenue that the Company is guaranteed to receive each month, regardless of the level of usage. As acknowledged in the seventh edition of the American Water Works Association M1 Manual, there is a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates.[35]

Q. DID PEOPLES PREPARE A CUSTOMER COST ANALYSIS TO SUPPORT ITS PROPOSED CUSTOMER CHARGE INCREASES IN THIS PROCEEDING?

A. Yes. The Company prepared a customer cost analysis that is presented on Peoples Exhibit 11, pp. 14-42. The Company's fully allocated Cost of Service Study averages the combined results of a Customer-Demand and a Demand-Commodity

[35] AWWA Manual of Water Supply Practices M1 Principles of Water Rates, Fees, Charges, Seventh Edition. pp. 154-155.

Cost of Service Study.[36] The results of each customer cost analysis are presented in the table below:

Customer Class	Average of Customer-Demand and Demand-Commodity Unit Costs 18, (Peoples Ex. No. 11, p. 18, lines 117 &119)	
Customer Cost Study:	Fully Allocated	Excluding Distribution
RES	$39.95	$25.95
SGS	$56.91	$43.06
MGS	$124.77	$112.32
LGS	$431.84	$428.12
MLS	$313.06	$313.06

Q. HOW DOES THE COMPANY'S USE OF THE AVERAGING OF CUSTOMER-DEMAND AND DEMAND-COMMODITY-COST OF SERVICE STUDY WORK?

A. Under the Customer–Demand study, mains costs are classified between customer and demand components based on the results of a Minimum Size System (MSS) study. Under the Demand–Commodity study, mains costs are classified on a 50/50 basis between demand and commodity components. The Average Study reflects an equal weighting of these two approaches.[37]

[36] Peoples Statement No. 17, pp. 24-25.
[37] Peoples Statement No. 17, pp. 24.

Q. DO YOU AGREE WITH THE COMPANY'S USE OF THE AVERAGING OF CUSTOMER-DEMAND AND DEMAND-COMMODITY-COST OF SERVICE STUDY'S IN DETERMINING THE CUSTOMER CHARGE?

A. No. The Company's averaging allocation of customer-demand and demand-commodity proposal is inconsistent with long-standing Commission precedent that was reaffirmed in the 2025 Columbia Order. In it, the Commission stated the following:

> In light of the above, we remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. As the Commission stated in *Columbia Gas 2021*, the existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed upon it, not by the number of customers served. *Columbia Gas 2021* at 217.
>
> Furthermore, distribution mains exist and are related to both annual demands and peak demands. Both annual and peak demands must be recognized in the allocation of distribution mains cost if the allocation is to be in accord with the principle of cost-causality. It is not reasonable to allocate distribution mains investment based solely on design peak day demands as in Columbia's Customer-Demand ACCOSS. The basic reason Columbia invests in its distribution system is to meet the annual demands for gas by customers. Additionally, a portion of the total cost of distribution service is related to installing a system with enough throughput capacity to meet design peak demands in excess of annual demands. For all these reasons, we find that the Peak & Average allocation methodology is the most appropriate allocation methodology to use in this proceeding because it is based on the premise of load-based investment.[38]

[38] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 254-5 (Order Entered December 4, 2025).

The Company has not provided any reason to support its proposal and for the Commission to reverse its precedent and allow the cost of mains to be allocated based on number of customers.

Q. WHAT DO YOU RECOMMEND REGARDING THE AVERAGE COST OF SERVICE STUDY (ACOSS)?

A. I recommend that cost allocation and rates should be designed based on the Peak and Average methodology and that the costs associated with distribution mains are not considered customer costs.

CUSTOMER CHARGE

Q. WHAT CUSTOMER CHARGES IS THE COMPANY PROPOSING FOR EACH RATE CLASS?

A. The present and proposed customer charges for each Peoples rate class are listed below.[39]

Rate Schedule	Present Rate	Change	Proposed Rate	Percent Increase
Residential Service - All	$16.80	$9.20	$26.00	54.8%
Small General Retail Service - SGS (0 -499 Mcf)	$22.00	$10.14	$32.14	46.1%
SGS (500 – 999 Mcf)	$44.00	$20.28	$64.28	46.1%
Medium General Retail Service (1,000 – 2,499 Mcf)	$101.00	$9.00	$110.00	8.9%

[39] Peoples Statement No. 17, p. 34.

Medium General Retail Service (2,500 – 24,999 Mcf)	$145.00	$13.00	$158.00	9.0%
Large General Retail Service (25,000 – 49,999 Mcf)	$940.00	$47.00	$987.00	5.0%
Large General Retail Service (50,000 – 99,999 Mcf)	$1,465.00	$73.00	$1,538.00	5.0%
Large General Retail Service (100,000 – 199,999 Mcf)	$2,130.00	$107.00	$2,237.00	5.0%
Large General Retail Service (>200,000 Mcf)	$5,630.00	$282.00	$5,912.00	5.0%
Mainline Service MLS (>500,000 Mcf)	$5,630.00	$282.00	$5,912.00	5.0%

Q. DO YOU RECOMMEND ANY ADJUSTMENTS TO THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. No. However, as discussed below, I recommend that the proposed customer charges be included in any scale back of rates.

PROPOSED REVENUE ALLOCATION

Q. HOW IS THE COMPANY PROPOSING TO DISTRIBUTE ITS REQUESTED ANNUAL REVENUE INCREASES AMONG THE DIFFERENT CUSTOMER CLASSES IN THIS PROCEEDING?

A. Peoples is recommending allocating the requested annual revenue increases among the different customer classes based on an average of the customer demand and demand commodity allocation method.[40] The Company's proposed

[40] Peoples Statement No. 17, p. 39.

allocation of non-gas revenue on a total Company basis is presented as Peoples Exhibit JDT-3, p. 1 and summarized in the table below.

Rate Class	Revenue at Current Rates	Increase	Revenue at Proposed Rates	Percent Change	Relative ROR	Percent of Total Increase
RES	$875,171,173	$119,348,887	$ 994,520,060	13.6%	.99	73.79%
SGS	$116,045,549	$21,571,706	$ 137,617,255	18.6%	.94	10.21%
MGS	$108,167,260	$21,495,566	$ 129,662,826	19.9%	.99	9.62%
LGS	$72,051,809	$403,075	$ 72,454,884	0.6%	1.38	5.38%
MLS	$13,178,274	$352,704	$ 13,530,978	2.7%	.74	1.0%
Total:	$1,184,614,065	$163,171,938	$1,347,786,003	13.8%	1.00	100.0%

Q. WHAT ASPECTS OF RATE STRUCTURE SHOULD THE COMMISSION CONSIDER WHEN ESTABLISHING PROPOSED RATES?

A. Generally, the primary goal in establishing proposed rates is the resulting rate of return by customer class and the corresponding relative rate of return, which indicates how the rate of return of each customer class compares to the system average rate of return. Additionally, the principle of cost causation dictates that proposed rates be established so that the revenue received from a particular class is equal to the corresponding costs of providing service to that class. Generally, a relative rate of return above 1.00 for a class indicates that revenue received from that class is more than the cost of providing service to that class. Conversely, a relative rate of return below 1.00 for a class indicates that the revenue received from that class is less than the cost of providing service to that class. The Company provided

the following allocation of proposed non-gas revenue based solely on the Average of Customer-Demand-and Demand Commodity on Peoples Exhibit No. 11, p. 15:

Rate Class	Revenue at Current Rates	Relative ROR	Increase	Revenue at Proposed Rates	% Change	Relative ROR	Percent of Total Increase
RES	$875,171,173	0.96	$119,348,887	$ 994,520,060	13.6%	0.98	73.79%
SGS	$116,045,549	0.52	$21,571,706	$ 137,617,255	18.6%	0.80	10.21%
MGS	$108,167,260	0.88	$21,495,566	$ 129,662,826	19.9%	0.97	9.62%
LGS	$72051809	3.01	$403,075	$ 72,454,884	0.6%	1.88	5.38%
MLS	$13,178,274	0.10	$352,704	$ 13,530,978	2.7%	0.12	1.0%
Total:	$1,184,614,065	1.00	$163,171,938	$1,347,786,003	13.8%	1.00	100.0%

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED ALLOCATION BASED ON THE AVERAGE OF CUSTOMER-DEMAND AND DEMAND-COMMODITY ALLOCATIONS PRESENTED BY THE COMPANY SHOWN ABOVE?

A. No.

Q. WHY ARE YOU NOT RECOMMENDING THE ALLOCATION PRESENTED BY THE COMPANY?

A. The proposed COSS allocation is based on an average of customer demand and demand commodity which includes the allocation of a portion of the cost of mains based on number of customers.

Q. WHAT ALLOCATION METHODOLOGY DO YOU RECOMMEND?

A. As I discussed above, I recommend that the Commission reject the customer-demand ACOSS and allocate rates based solely on the Company's commodity-demand, or Peak and Average, ACOSS.

Q. WHY DO YOU RECOMMEND AN ALLOCATION BASED ON A PEAK AND AVERAGE ACOSS?

A. As I discussed above, the Commission has consistently determined that the costs of mains should be allocated based on throughput capacity to meet design peak demands in excess of annual demands and not the number of customers.[41]

Q. HOW SHOULD THE COMPANY'S RATES BE DETERMINED?

A. The Company's rates should be set based on the cost of service study the Commission determines is the most reasonable method of allocation in the present base rate proceeding. As discussed above, the Peak and Average methodology is consistent with Commission precedent and the most reasonable method of allocation.

[41] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 254-5 (Order Entered December 4, 2025).

SCALE BACK OF RATES

Q. WHAT SCALE BACK METHODOLOGY DO YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants less than the Company's requested increase, I recommend that the Commission scale-back rates based upon the cost of service study that it approves in a proportional manner.

Q. DO YOU RECOMMEND ANY RESTRICTIONS TO SPECIFIC RATE SCALE BACKS?

A. No. All customer charges and usage rates for each rate class that received a proposed increase should be scaled back and the excess revenue from the LGS class should be included in the scale back amount, as discussed above.

Q. WHY DO YOU RECOMMEND THAT CUSTOMER CHARGES BE INCLUDED IN THE SCALE BACK OF RATES?

A. As discussed above, selecting a reasonable customer charge is a balance between the need for stable revenues on the side of the utility (a higher customer charge) and affordability and conservation through the ability to adjust costs via the usage charge. Therefore, if the Commission does not agree with my recommendation above, including the customer charges in the scale back of rates is a reasonable method to ensure that the customer charge levels do not skew too far towards the

Company's desire for stable revenues and too far from customer concerns of conservation and affordability.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

ETHAN H. CLINE

PROFESSIONAL EXPERIENCE AND EDUCATION

EXPERIENCE:

03/2009 - Present
Bureau of Investigation and Enforcement, Pennsylvania Public Utility Commission - Harrisburg, Pennsylvania

Fixed Utility Valuation Engineer – Assists in the performance of studies and analyses of the engineering-related areas including valuation, depreciation, cost of service, quality and reliability of service as they apply to fixed utilities. Assists in reviewing, comparing and performing analyses in specific areas of valuation engineering and rate structure including valuation concepts, original cost, rate base, fixed capital costs, inventory processing, excess capacity, cost of service, and rate design.

06/2008 – 09/2008
Akens Engineering, Inc. - Shiremanstown, Pennsylvania

Civil Engineer – Responsible, primarily, for assisting engineers and surveyors in the planning and design of residential development projects

10/2007 – 05/2008
J. Michael Brill and Associates - Mechanicsburg, Pennsylvania

Design Technician – Responsible, primarily, for assisting engineers in the permit application process for commercial development projects.

01/2006 – 10/2007
CABE Associates, Inc. - Dover, Delaware

Civil Engineer – Responsible, primarily, for assisting engineers in performing technical reviews of the sewer and sanitary sewer systems of Sussex County, Delaware residential development projects.

EDUCATION:

Pennsylvania State University, State College, Pennsylvania
Bachelor of Science; Major in Civil Engineering, 2005

- Attended NARUC Rate School, Clearwater, FL
- Attended Society of Depreciation Professionals Annual Conference and Training

I&E Exhibit No. 3
Witness: Ethan H. Cline

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

PEOPLES NATURAL GAS COMPANY LLC

Docket No. R-2026-3060855

Exhibit to Accompany

the

Direct Testimony

of

Ethan H. Cline

Bureau of Investigation and Enforcement

Concerning:

Fully Projected Future Test Year Reporting Requirements
Discount Rate Customers
Weather Normalization Adjustment
Present Rate Revenue
Cost of Service Allocation
Customer Cost Analysis
Customer Charge
Proposed Revenue Allocation
Scale Back of Rates

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RS-015

Witness: Folks, Dawn **Title:** Finance and Rates Analyst III

Question: Reference the Company's response to I&E-RS-11 and I&E-RS-12 regarding 10 and 20 year HDD analysis. Provide a schedule that shows the revenue under present and proposed rates in the FPFTY based on the following:

A. 10 year HDD projection; and

B. 20 year HDD projection.

Answer: The Company has not prepared the requested analysis as the Company is not proposing to utilize either of these HDD methodologies in its claim.

Submit Date: 5/26/2026

Interrogatory Response

Confidential: Yes

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RS-016

Witness: Taylor, John **Title:** Chief Executive Officer, Atrium Economics LLC

Question: Reference the Company's response to I&E-RS-11 regarding the table summarizing the cost-based non-gas revenue apportionment based on the Demand-Commodity study results using the Peak and Average cost allocation method. Provide the underlying Peak and Average cost allocation study used to generate the above referenced table.

Answer: Please see CONFIDENTIAL attachment I&E-RS-16.xlsx.

Submit Date: 5/27/2026

Peoples Natural Gas Company LLC
Gas Class Cost of Service Study: Demand-Commodity Allocation of Distribution Mains

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Ethan H. Cline. My business address is 400 North Street, Harrisburg, PA 17120.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Public Utility Commission (Commission) in the Bureau of Investigation and Enforcement (I&E) as a Fixed Utility Valuation Engineer.

Q. ARE YOU THE SAME ETHAN H. CLINE THAT SUBMITTED I&E STATEMENT NO. 3 AND I&E EXHIBIT NO. 3?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to make corrections to my direct testimony and address the rebuttal testimony of Peoples Natural Gas Company LLC (Peoples or Company) witnesses Carol A. Scanlon,[1] Luke Ravenstahl,[2] Nick

[1] Peoples Statement No. 3-R.
[2] Peoples Statement No. 8-R.

Tufarolo,[3] and John D. Taylor.[4] I am also responding to the rebuttal testimony of Office of Consumer Advocate (OCA) witness Michael Deupree.[5]

Q. DOES YOUR SURREBUTTAL TESTIMONY INCLUDE AN EXHIBIT?

A. No.

FPFTY REPORTING REQUIREMENTS

Q. WHAT DID YOU RECOMMEND REGARDING PLANT ADDITIONS THAT PEOPLES PROJECTS TO BE IN SERVICE DURING THE FPFTY ENDING DECEMBER 31, 2027?

A. I recommended that the Company be required to provide I&E, the Office of Consumer Advocate, and Office of Small Business Advocate no later than June 1, 2027, under this docket number an update that includes actual utility plant balances, actual plant additions, and actual retirements for the twelve months ending November 30, 2026, and not later than June 1, 2028 for the twelve months ending December 31, 2027.[6]

[3] Peoples Statement No. 12-R.
[4] Peoples Statement No. 17-R.
[5] OCA Statement No. 1-R.
[6] I&E Statement No. 3, pp. 2-4.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Peoples witnesses Scanlon and Tufarolo each stated that the Company agrees with my recommendation.[7]

DISCOUNT RATE CUSTOMERS

Q. WHAT DID YOU RECOMMEND CONCERNING THE DISCOUNT RATE CUSTOMERS?

A. For any discount rate customers that have not had their competitive alternatives verified for longer than ten years at the time of the Company's next base rate case, I recommended that the Company be required to provide a competitive alternative analysis for each of those customers and justify the customers' discount rates as part of its filing in the next base rate case. Further, I recommended that the Commission order the Company to provide a competitive alternative analysis for each discount rate customer that has not been verified within ten years of each of Peoples' prospective base rate cases in perpetuity.[8]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDAITION?

A. Yes. The Company stated that it is willing to accept my recommendation on a going forward, prospective basis and that it has engaged in the practice of limiting any new

[7] Peoples Statement No. 3-R, pp. 9-10 and Peoples Statement No. 12-R, p. 3.
[8] I&E Statement No. 3, p. 6.

contract terms to 10 years and that it has reduced its number of negotiated customer since the last base rate case, where this issue was also brought up, from 17 to 11.[9]

Q. IS THE COMPANY'S REPONSE TO YOUR RECOMMENDATION REASONABLE?

A. Yes. The Company's response to my recommendation is reasonable.

DATA CENTER AND LARGE GENERATOR OPPORTUNITIES

Q. DID YOU INTRODUCE ANY CONCERNS REGARDING THE POTENTIAL FOR FUTURE DATA CENTER OR LARGE GENERATOR CUSTOMERS?

A. Yes. The issue of data centers remains a controversial topic in Pennsylvania regarding whether and how the costs of these large customers are spread amongst the rest of the customer classes. The potential negative impact on customer distribution and energy rates requires a thoughtful approach to adding these large customers. Some possible means to mitigate these negative effects would be to allocate the cost recovery of any plant improvements, additions, or other costs to those customers who cause them or not permitting these customers to have access to discounted rates. While I did not make any specific recommendations

[9] Peoples Statement No. 8-R, pp. 4-7.

regarding these potential customers, it should be noted that Peoples should expect these concerns to be addressed if and when these customers are acquired.[10]

Q. DID THE COMPANY RESPOND TO YOUR CONCERNS?

A. Yes. Peoples witness Ravenstahl stated that "[t]he Company is continuing to analyze and monitor the industry and its potential need for large volumes of natural gas. We understand and agree this is a complex issue with many interested parties having questions and/or concerns. We will continue to refine our approach on these projects as opportunities arise in the future."[11]

WEATHER NORMALIZATION ADJUSTMENT

Q. ARE YOU RECOMMENDING ANY CHANGES TO THE WEATHER NORMALIZATION ADJUSTMENT (WNA) AS PROPOSED BY THE COMPANY?

A. Yes. I opposed Peoples proposal to use a 65-year regression analysis in determining the WNA's normalization period and recommended that Peoples use a 10-year period to establish normal Heating Degree Days (HDDs) to determine present rate revenue in future proceedings. I also recommended that the present 3% deadband be increased to 5% consistent with the Commission's Order in the

[10] I&E Statement No. 3, p. 10.
[11] Peoples Statement No. 8-R, p. 9.

most recent Columbia Gas of Pennsylvania, Inc. base rate case (2025 Columbia Order).[12]

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATIONS?

A. Yes. The Company did not agree with my recommendation to increase the deadband from 3% to 5%[13] and continues to support its proposed normal weather analysis using the 65-year regression analysis to determine HDDs.[14] Additionally, the Company requested that its proposed change to the WNA not be applicable until the start of the next WNA heating season after the Final Order in this proceeding, or October 1, 2027.[15]

Q. WHY DID THE COMPANY OPPOSE YOUR RECOMMENDATION TO INCREASE THE DEADBAND FROM 3% TO 5%?

A. Peoples witness Taylor opposed my recommendation to increase the deadband from 3% to 5% because he claims that the existing 3% deadband already limits the application of the WNA and he further claims that I have not demonstrated the existing 3% deadband has failed to function as intended or has produced unreasonable results.[16]

---

[12] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, pp. 301-02 (Order Entered December 4, 2025).
[13] Peoples Statement No. 17-R, pp. 63-64.
[14] Peoples Statement No. 17-R, pp. 45-46.
[15] Peoples Statement No. 3-R, p. 17.
[16] Peoples Statement No. 17-R, p. 63.

Q. WAS YOUR RECOMMENDATION TO INCREASE THE DEADBAND BASED ON THE PERFORMANCE OF THE EXISTING 3% DEADBAND?

A. No. My recommendation was based on the Commission's determination in the 2025 Columbia Order that 5% more adequately captures what could be considered normal weather fluctuations in Pennsylvania and places more of the burden for weather variations back on the Company as a normal part of doing business.[17]

Q. DID THE COMPANY ADDRESS THE COMMISSION'S DETERMINATION IN THE 2025 COLUMBIA ORDER?

A. No. Mr. Taylor did not address the 2025 Columbia Order in any way regarding the deadband.

Q. DO YOU WISH TO CHANGE YOUR RECOMMENDATION REGARDING THE DEADBAND?

A. No. I continue to recommend the deadband be increased from 3% to 5%, consistent with the 2025 Columbia Order.

[17] I&E Statement No. 3, p. 15.

Q. HOW DID MR. TAYLOR RESPOND TO YOUR POSITION REGARDING THE PROPOSED 65-YEAR REGRESSION ANALYSIS TO DETERMINE HDDS FOR THE PURPOSES OF THE WNA AND PRESENT RATE REVENUE WEATHER ADJUSTMENT?

A. Mr. Taylor disagreed with my position for two reasons. First, he claims that there is ample statistical support for the use of 65-years in the current and prior cases. Second, he claimed that the use of 65-years is consistent with the methodology relied upon in the prior case, where it was used as part of the calculation of normal HDDs.[18]

Q. IS YOUR RECOMMENDATION BASED UPON THE STATISICAL ANALYSIS OR RESULTS OF THE 65-YEAR ANALYSIS?

A. No. My recommendation is based on the Commission's determination in the 2025 Columbia Order that using a 20-year cycle rather than a ten-year cycle appears to result in an "historical bias" that diminishes the effect of the claimed recent trends.[19] Extending the 20-year average analysis to a 65-year regression is not consistent with Commission precedent.

[18] Peoples Statement No. 17-R, pp. 45-46.
[19] I&E Statement No. 3, p. 14.

Q. SHOULD THE ANALYSIS FROM PEOPLES' PRIOR CASE BE USED AS PRECEDENT FOR THE CURRENT PROCEEDING?

A. No. The inclusion of the 65-year regression analysis in the determination of normal HDDs was opposed by I&E in the prior case. While the average of the 65-year regression analysis and the 20-year average was used to determine the normal HDD levels used for revenues and the WNA as part of the settlement of that case, I am advised by counsel that it is important to note that settlements do not set precedent for future cases. Furthermore, the prior case resolved prior to the 2025 Columbia Order. Therefore, Mr. Taylor's reliance on the precedent set by the prior case should be disregarded.

Q. ARE YOU CHANGING YOUR OPPOSITION TO THE USE OF THE 65-YEAR REGRESSION ANALYSIS TO DETERMINE HDDS FOR THE WNA?

A. No. I will discuss the normal HDDs for the WNA and revenue below.

Q. WHY IS THE COMPANY REQUESTING TO DELAY THE IMPLEMENTATION OF THE UPDATED HDDS TO THE WNA CALCULATION UNTIL OCTOBER 2027?

A. The Company is requesting the delay of the implementation of the updated Normal HDDs until October 2027 because its new base rates will be effective in the middle of the heating season. The Company claims that it is vital to

implement further changes at the start of the WNA period in order to effectuate the billing changes and conduct testing to ensure consistent WNA treatment to all customers during the heating season.[20]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO DELAY THE IMPLEMENTATION OF THE CHANGES TO THE NORMAL HDDS UNTIL OCTOBER 2027?

A. No. Ms. Scanlon's proposal would result in a mismatch between the Normal HDDs in the WNA and the HDDs used to calculate rates once the new base rates go into effect during the 2026-2027 WNA period. This request is contradictory to the testimony of Mr. Taylor that "[i]f different methodologies were used for rate development and WNA administration, the WNA could either over- or under-correct relative to the weather assumptions captured in base rates. Aligning both processes with the same methodology maintains internal consistency, avoids unintended distortions, preserves the matching principle, and enhances transparency for both the Commission and customers."[21]

[20] Peoples Statement No. 3-R, p. 17.
[21] Peoples Statement No. 17-R, p. 53.

Q. ARE YOU RECOMMENDING AN ALTERNATIVE SOLUTION TO THE IMPLEMENTATION PROBLEM INTRODUCED BY THE COMPANY?

A. Yes. Rather than introducing a situation in which the Normal HDDs used to calculate base rates differ from those used to calculate the WNA, which could negatively affect customer bills, as described by Mr. Taylor, a more reasonable solution would be to pause the WNA program in its entirety for the 2026-2027 WNA period. This would avoid the mismatch in HDD calculation methodologies while granting the Company the time necessary to implement the billing changes and perform the necessary testing while avoiding any negative repercussions to Peoples customer base.

PRESENT RATE REVENUE WEATHER ADJUSTMENT

Q. WHAT DID YOU RECOMMEND REGARDING THE PRESENT RATE REVENEUE WEATHER ADJUSTMENT?

A. I recommended that the Company provide an analysis showing the revenue impact of calculating HDDs using a 10-year average in its rebuttal testimony. Additionally, I recommended the Company be required to provide in future base rate cases, a comparison of HDD methodologies and the resulting revenue impacts when the Company's proposed methodologies differ from what has been proposed by the Company in the past or from a methodology approved by a recent Commission order.

Q. DID THE COMPANY PROVIDE AN ANALYSIS OF THE PROPOSED 65-YEAR TRENED METHODOLOGY AND THE 10-YEAR AVERAGE METHDOLOGY FOR CALCULATING NORMAL HDD?

A. Yes. Mr. Taylor provided an updated analysis comparing the proposed 65-year regression analysis and the 10-year average through 2025. This analysis results in a 2027 estimate of 5,105 HDD using the 65-year regression analysis and 5,115 HDD using the 10-year average methodology.

Q. BASED ON THE ANALYSIS PROVIDED BY MR. TAYLOR, WHAT LEVEL OF NORMAL HDDS DO YOU RECOMMEND THE COMMISSION USE TO DETERMINE THE WNA AND REVENUES?

A. I recommend the Commission use the normal HDD level of 5,115 based on the 10-year average analysis through 2025 to determine the WNA and revenues because it is the methodology approved by the Commission in the 2025 Columbia Order, as discussed above.

COST OF SERVICE

Q. WHAT DID YOU RECOMMEND REGARDING THE PROPOSED ALLOCATION OF REVENUES?

A. I recommended that the revenue increase be allocated based on the Peak and Average Allocated Cost of Service Study (ACOSS) at equal rates of return with the change that the LGS class should not be allocated a decrease in rates. Instead,

the excess revenue from the LGS class, $6,629,057 as proposed, should be allocated across the remaining rate classes as part of the overall scale back of rates.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Taylor opposed my recommended revenue allocation because it is based on an ACOSS that eliminates the customer-related component reflected in the Company's ACOSS.[22] I will address Mr. Taylor's rebuttal regarding the ACOSS below.

Q. DO YOU WISH TO CHANGE YOUR ALLOCATION RECOMMENDATION?

A. No. For the reasons described below, I continue to support a revenue allocation based solely on the Peak and Average ACOSS as presented in my direct testimony.

[22] Peoples Statement No. 17-R, p. 7.

CUSTOMER CHARGE

Q. DID YOU RECOMMEND ANY ADJUSTMENTS TO THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. No. However, as discussed below, I recommended that the proposed customer charges be included in any scale back of rates.

Q. DID ANY PARTIES RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Taylor disagreed with my recommendation to include the proposed customer charges in the scale back of rates. I will address Mr. Taylor's opposition to including the customer charges in the scale back of rates below. OCA witness Deupree disagreed with my acceptance of the Company's proposed increase in monthly customer charges.[23]

Q. WHAT REASON DID MR. DEUPREE PROVIDE FOR RECOMMENDING A CHANGE TO THE PROPOSED CUSTOMER CHARGE?

A. Mr. Deupree noted that based on his analysis, the existing customer charge is already recovering a majority of customer-related costs, specifically 76% of residential customer related costs and 62% of small general service customer related costs, which he cites in support for his position to reduce proposed customer charges.[24]

[23] OCA Statement No. 1-R, p. 6.
[24] OCA Statement No. 1-R, pp. 5-6.

Q. PLEASE RESPOND TO MR. DEUPREE REGARDING CUSTOMER CHARGES.

A. I neither support nor oppose the OCA's recommendations regarding changes to the customer charges. However, despite the OCA's position, I continue to recommend the customer charges be included in any scale back of rates, as I discuss further below.

PROPOSED REVENUE ALLOCATION

Q. WHAT ALLOCATION METHODOLOGY DID YOU RECOMMEND?

A. As I discussed above, I recommended that the Commission reject the customer-demand ACOSS and allocate rates based solely on the Company's commodity-demand, or Peak and Average, ACOSS. I also recommended that the Company's rates should be set based on the cost of service study the Commission determines is the most reasonable method of allocation in the present base rate proceeding. As discussed above, the Peak and Average methodology is consistent with Commission precedent and the most reasonable method of allocation.

Q. DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A. Yes. Mr. Taylor stated that he disagrees with the premise that distribution mains should be allocated exclusively on a load-related basis and that customer-related

classification of mains is inappropriate.[25] In support of his position, he claimed that I overstate the applicability of prior Commission decisions in this proceeding and that the concerns identified in those Commission decisions do not apply with the same force to the Company's blended methodology in this case.[26]

Q. DO YOU AGREE WITH MR. TAYLOR'S OPINION THAT YOU OVERSTATE THE APPLICABILITY OF THE 2025 COLUMBIA ORDER IN THIS PROCEEDING?

A. No. Mr. Taylor may be correct if the recent 2025 Columbia Order were the only case in which the Commission determined that the cost of mains do not include a customer component. However, this is not the case. The Commission's disposition in the 2023 Philadelphia Gas Works (PGW) rate case included the following statement: "Indeed, Commission precedent, including the proceeding for the *2007 PGW Rate Case*, and the recent proceeding in *Columbia 2021*, weigh against the idea that mains costs include a customer component."[27] This statement shows an ongoing precedent that the Commission does not consider the cost of mains to include a customer component. Mr. Taylor's insistence that the customer component of the cost of mains be at least partially included in the ACOSS stands in direct opposition to that long-standing Commission precedent.

[25] Peoples Statement No. 17-R, p. 11.
[26] Peoples Statement No. 17-R, pp. 15-16.
[27] *Pa. PUC v. Philadelphia Gas Works*, Docket No. R-2023-3037933, p. 137 (Order Entered November 9, 2023).

Q. DO YOU AGREE THAT THE COMPANY'S BLENDED ACOSS METHODOLOGY LESSENS THE IMPACT OF THE COMMISSION'S PRIOR DECISIONS EXCLUDING THE CUSTOMER COMPONENT IN THE ALLOCATION OF THE COST OF MAINS?

A. No. As discussed above, the Commission has been very clear that the cost of mains should not include a customer component. Simply because the Company's blended ACOSS proposal lessens the impact of the customer component of mains does not result in its inclusion becoming acceptable. It should be noted that the recommendation to allocate costs based on the Commission's preferred methodology has been proposed by both myself and OCA witness Deupree in this proceeding.

Q. DO YOU WANT TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to recommend that costs and revenues in this proceeding be allocated based on the Peak and Average ACOSS provided in I&E Statement No. 3.

<u>SCALE BACK OF RATES</u>

Q. WHAT SCALE BACK METHODOLOGY DID YOU RECOMMEND IF THE COMMISSION GRANTS LESS THAN THE FULL INCREASE?

A. If the Commission grants less than the Company's requested increase, I recommended that the Commission scale-back rates based upon the cost of service study that it approves in a proportional manner. I also recommended that customer charges and usage rates for each rate class that received a proposed

increase should be scaled back and the excess revenue from the LGS class should be included in the scale back amount, as discussed above.[28]

Q. DID THE COMPANY AGREE WITH YOUR RECOMMENDATION?

A. No. Mr. Taylor stated that customer charges should be evaluated based upon customer-related costs and sound rate design principles, not mechanically reduced in proportion to any reduction in the Company's requested revenue increase. He further stated that a mechanical scale-back of customer charges could disconnect customer charges from cost causation and shift additional fixed costs into volumetric rates.

Q. DO MR. TAYLOR'S COMMENTS ALIGN WITH COMMISSION PRECEDENT?

A. Once again, Mr. Taylor's comments do not align with Commission precedent. Specifically, in both the 2018 UGI Electric Order[29] and the 2025 Columbia Order,[30] the Commission included the customer charges in the scale back of rates. Therefore, my recommendation is consistent with Commission precedent.

---

[28] I&E Statement No. 3, p. 36.

[29] *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058, p. 176 (Order Entered October 25, 2018).

[30] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, p. 283 (Order Entered December 4, 2025).

Q. DO YOU WANT TO CHANGE YOUR RECOMMENDATION?

A. No. I continue to recommend that the Commission scale-back rates based upon the cost of service study that it approves in a proportional manner and that customer charges and usage rates for each rate class that received a proposed increase should be scaled back and the excess revenue from the LGS class should be included in the scale back amount.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I&E Statement No. 4
Witness: Robert N. Gobrecht IV
NON-PROPRIETARY

PENNSYLVANIA PUBLIC UTILITY COMMISSION

v.

Peoples Natural Gas Company LLC

Docket No. R-2026-3060855

Direct Testimony

of

Robert N. Gobrecht IV

Bureau of Investigation and Enforcement

Concerning:

PIPELINE REPLACEMENT
DAMAGE PREVENTION
METHANE DETECTOR PILOT PROGRAM

TABLE OF CONTENTS

INTRODUCTION **1**

DIMP AND LTIIP DISCUSSION **4**

PIPELINE REPLACEMENT EFFORTS **8**

DAMAGE PREVENTION **13**

METHANE DETECTION **15**

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Robert N. Gobrecht IV. I am a Civil Engineer (General) in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. WHAT IS YOUR EDUCATION AND EMPLOYMENT EXPERIENCE?

A. An outline of my education and employment history is attached as Appendix A.

Q. WHAT ARE YOUR MAJOR DUTIES AS AN ENGINEER IN THE PIPELINE SAFETY DIVISION?

A. My major duties include the inspection of natural gas infrastructure, including pipeline operation, construction, and maintenance, to ensure compliance with the Pipeline and Hazardous Materials Safety Administration's (PHMSA) federal safety regulations and the Commission's applicable regulations including Title 52, Chapter 59 of the Pennsylvania Code. On average, I conduct over 120 inspections per year.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?

A. The purpose of my direct testimony is to address Peoples Natural Gas Company LLC's (Peoples or Company) base rate filing as it relates to its continued commitment to pipeline replacement, the Company's damage prevention program and the safety benefits of methane detectors. In addition, my testimony will highlight the federal and state regulations that Peoples is required to follow.

Q. DOES YOUR TESTIMONY INCLUDE AN EXHIBIT?

A. Yes. I&E Exhibit No. 4 contains schedules that support my direct testimony.

Q. PLEASE DESCRIBE THE ROLE OF I&E IN RATE PROCEEDINGS.

A. I&E is responsible for protecting the public interest in proceedings before the Commission. The I&E analysis in this proceeding is based on its responsibility to represent the public interest. This responsibility requires the balancing of the interests of ratepayers, the regulated utility, and the regulated community as a whole.

Q. DID ANY COMPANY WITNESSES PROVIDE DIRECT TESTIMONY ON PEOPLES' PIPELINE REPLACEMENT?

A. Yes. Peoples witnesses Michael Huwar[1] and Paul Becker[2] discuss the Company's

[1] Peoples Statement No. 1, p. 2.
[2] Peoples Statement No. 6, pp. 2-3.

plans for Pipeline Replacement and Integrity Management.

Q. HAVE YOU REVIEWED PEOPLES' PLAN ON THE MODERNIZATION OF PIPELINE INFRASTRUCTURE?

A. Yes. Mr. Huwar stated that the primary drivers for this rate filing are the ongoing infrastructure modernization programs being conducted by Peoples. Peoples' Long-Term Infrastructure Improvement Plan (LTIIP) program is approximately 80% of its capital expenditures. The cost associated with the LTIIP program are used to replace the aging infrastructure that will enhance the safety, reliability, sustainability, and integrity of Peoples natural gas distribution system. Peoples filed its most recent approved LTIIP at Docket No. P-2025-3057167, which was effective January 1, 2026. Mr. Huwar also talks about how to balance the affordability of gas service to customers as well as maintaining/upgrading the safety infrastructure.[3]

Q. WHAT ARE THE PROGRAMS THAT MAKE UP MOST OF PEOPLES' OVERALL CAPITAL BUDGET?

A. According to Mr. Becker, there are four major capital projects that make up the majority of Peoples' overall capital budget. These projects include the LTIIP, the Gathering Pipeline Replacement Program (GP Replacement Program), the Goodwin Tombaugh Program (GT Program), and the Mainline Extension Program

[3] Peoples Statement No. 1, pp. 4-9.

(MLX Program). The LTIIP is a five-year replacement program that targets the replacement of bare steel and cast/wrought iron pipelines on both distribution and transmission systems. The GP Replacement Program is an annual program that involves the replacement and/or abandonment of aging gathering assets. The GT Program was a settlement requirement stemming from the 2020 acquisition of Peoples by Essential Utilities, Inc. to target the replacement and conversion of the Goodwin/Tombaugh system. Lastly, the MLX Program is an annual program for the addition of new customers that are being added to Peoples' system. This program envelops the installation of mainline, meters and other additional services. Mr. Becker states that the major reasons for the LTIIP cost increases are inflation, the Intelis Meter Program, increases in miles of pipe, and more challenging projects.[4]

DIMP AND LTIIP DISCUSSION

Q. WHAT FEDERAL AND STATE REGULATIONS CONTROL PEOPLES' PIPELINE REPLACEMENT?

A. Peoples is mandated to implement a Distribution Integrity Management Program (DIMP) under Title 49, Subpart P §§192.1001-1015 of the Code of Federal Regulations. Additionally, natural gas distribution companies like Peoples that seek to continue a previously approved Distribution System Improvement Charge

[4] Peoples Statement No. 6, pp. 4-11.

(DSIC) mechanism are required to submit a Long-Term Infrastructure Improvement Plan (LTIIP) pursuant to 52 Pa Code §121.1 and §121.3.

Q WHY MUST A NATURAL GAS DISTRIBUTION COMPANY COMPLY WITH THE DIMP REGULATIONS?

A. PHMSA created the DIMP regulations to reduce the number of U.S. Department of Transportation (U.S. DOT) Reportable Incidents.[5] DIMP is a performance-based regulatory program required of gas distribution operators and is driven by risk management.

Q. WHAT ARE THE REQUIREMENTS OF A DIMP?

A. DIMP requires gas distribution pipeline operators to:

1. Demonstrate knowledge of the gas distribution system;
2. Identify threats;
3. Evaluate and rank risks;

[5] Under 49 CFR § 191.3, a PHMSA Reportable Incident is defined as any of the following events:
(1) An event that involves a release of gas from a pipeline, gas from an underground natural gas storage facility (UNGSF), liquefied natural gas, liquefied petroleum gas, refrigerant gas, or gas from an LNG facility, and that results in one or more of the following consequences:
(i) A death, or personal injury necessitating in-patient hospitalization;
(ii) Estimated property damage of $122,000 or more, including loss to the operator and others, or both, but excluding the cost of gas lost. For adjustments for inflation observed in calendar year 2021 onwards, changes to the reporting threshold will be posted on PHMSA's website. These changes will be determined in accordance with the procedures in appendix A to part 191.
(iii) Unintentional estimated gas loss of three million cubic feet or more.
(2) An event that results in an emergency shutdown of an LNG facility or a UNGSF. Activation of an emergency shutdown system for reasons other than an actual emergency within the facility does not constitute an incident.
(3) An event that is significant in the judgment of the operator, even though it did not meet the criteria of paragraph (1) or (2) of this definition.

4. Identify and implement measures to address risk;

5. Measure performance, monitor results, and evaluate effectiveness;

6. Evaluate and improve the DIMP; and

7. Report results.[6]

DIMP requirements include the identification of threats to pipeline facilities and the requirement for operators to create plans to mitigate and reduce the risks caused by those threats. Peoples uses a risk-based prioritization process to select replacement pipelines. Peoples conducts annual evaluations of its distribution system to identify and develop risk ratings for each segment of at-risk pipeline and then replaces the pipe based on the highest risk ranking.

Q. WHY MUST A NATURAL GAS DISTRIBUTION COMPANY FILE AN LTIIP?

A. A natural gas distribution company must submit an LTIIP for Commission approval to be eligible to recover the reasonable and prudently incurred costs related to the repair, improvement, and replacement of eligible property through the DSIC. The LTIIP is intended to address the planned acceleration of the replacement of aging infrastructure by the utility and be sufficient to ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.[7]

[6] See 49 CFR § 192.1007.
[7] See 52 Pa. Code § 121.1.

Q. WHAT ARE THE REQUIREMENTS OF AN LTIIP?

A. The LTIIP must include the following elements:

1. Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery.
2. An initial schedule for planned repair and replacement of eligible property.
3. A general description of location of eligible property.
4. A reasonable estimate of quantity of eligible property to be improved or repaired.
5. Projected annual expenditures and means to finance the expenditures.
6. A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement, or replacement will ensure and maintain adequate, efficient, safe, reliable, and reasonable service to customers.
7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner.
8. A description of a utility's outreach and coordination activities with other utilities, Department of Transportation, and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

The LTIIP must address only the specific property eligible for DSIC recovery.[8]

Q. WHAT ARE THE COMMON MITIGATION MEASURES FOR HIGH-RISK PIPELINE SEGMENTS?

A. The industry's common mitigation measure to reduce pipeline risk is to replace the highest risk pipelines first. As a company replaces the pipelines calculated to represent the highest risk, the total system risk should be reduced. If enough pipe is replaced in that asset group annually to overcome the increasing risks on other segments within that group, the overall risk of the asset group will be reduced.

Q. SHOULD PIPELINE REPLACEMENT MITIGATION MEASURES BE BASED ON THE DIMP?

A. Yes. Pipeline replacement, which includes high risk wrought iron and bare steel should be based on the DIMP. The LTIIP, on the other hand, is a forward-looking plan for the replacement of DSIC eligible assets. Overall, pipeline replacement should be risk based and thus driven by the DIMP.

PIPELINE REPLACEMENT EFFORTS

Q. WHAT IS PEOPLES' STATED TIME FRAME IN THE LTIIP PLAN FOR PIPELINE REPLACEMENT?

A. Peoples stated time frame for the at-risk distribution pipeline replacement is

[8] See 52 Pa. Code § 121.3.

planned to be completed by 2038.[9]

Q. WHAT IS THE METHODOLOGY USED BY PEOPLES TO DETERMINE PIPE RISK AND RISK RANKING?

A. According to Mr. Becker, in response to I&E-PS-18, **[BEGIN PROPRIETARY]**

[redacted] **[END PROPRIETARY]**

Q. WHAT IS PEOPLES' PIPELINE REPLACEMENT TREND FROM THE PREVIOUS 5 YEARS?

A. In response to I&E-PS-17, Peoples provided the following table showing its planned replacement miles and the actual replacement miles:[11]

[9] *Petition of Peoples Natural Gas Company LLC for Approval of its Third Long-Term Infrastructure Improvement Plan for the Period of 2026-2030*, Docket Number P-2025-3057167, Third LTIIP Appendix 2, p. 1 (Order Entered December 18, 2025).

[10] I&E Exhibit No. 4, Schedule 1.

[11] I&E Exhibit No. 4, Schedule 2.

		Miles			
LTIIP Program Year	Year	Plan Miles	Actual Miles	Actual Miles	% Actual to Plan Each Year
1	2021	159	165	165	103%
2	2022	159	163	327	102%
3	2023	181	184	511	102%
4	2024	186	189	700	102%
5	2025	186	190	891	102%
Total		871	891		102%

Q. IN YOUR OPINION, WHAT ARE PEOPLES' RISKIEST ASSETS THAT SHOULD BE PRIORITIZED FOR REPLACEMENT?

A. In my opinion, Peoples' riskiest assets are bare steel, cast iron, wrought iron, Aldyl A, and unknown material pipe. As stated in response to I&E-PS-21, bare steel, cast iron, wrought iron, and known Aldyl A pipe were presented as the riskiest assets.[12]

Q. HAS THERE BEEN AN INCREASE IN COST FOR MAINS AND SERVICES ASSOCIATED WITH LTIIP REPLACEMENT?

A. Based on information provided by Mr. Becker, the actual cost of LTIIP projects have increased each year since 2021. The table below shows the increase of both miles of pipe replacement and the total annual cost of the replacement.[13]

[12] I&E Exhibit No. 4, Schedule 3.
[13] Peoples Statement No. 6, p. 7.

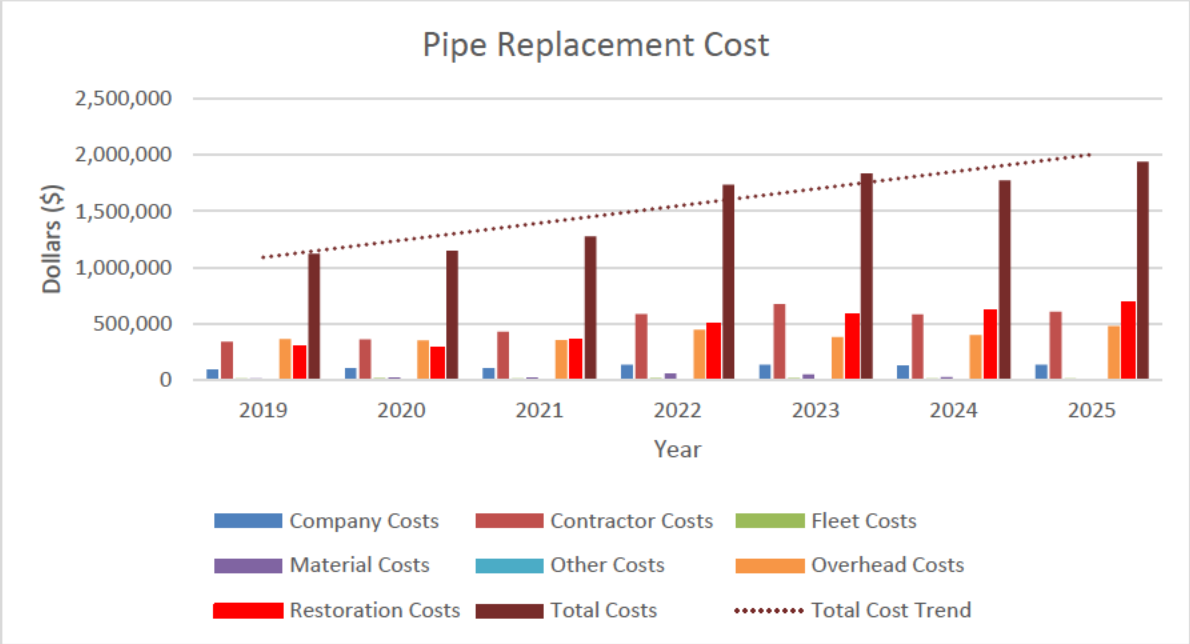
	Miles			Dollars (Millions)	
LTIIP Program Year	Year	Plan Miles	Actual Miles	Planned Costs	Actual Costs
1	2021	159	165	$247	$247
2	2022	159	163	$326	$326
3	2023	181	184	$394	$394
4	2024	186	189	$430	$455
5	2025	186	190	$446	$479
Total		871	891	$1,843	$1,901

Q. WHAT ARE THE INCLUDED CATEGORIES IN PEOPLES' REPLACEMENT COST?

A. Peoples replacement cost during pipeline replacement takes in account many different categories. These categories include, but are not limited to, contractors, materials, restoration, overhead, and other cost categories. In response to I&E-PS-16, Peoples provided a table with several categories that represent the cost associated with pipe replacement. The table and graph below show these cost categories. These demonstrate the cost per mile totals for pipeline replacement from 2019 to 2025.[14]

Per Mile	2019	2020	2021	2022	2023	2024	2025
Company Costs	93185	107366	107092	133868	134266	129388	135005
Contractor Costs	340835	359214	426401	583486	671949	581363	608309
Fleet Costs	13262	14006	11853	14002	14337	12863	12807
Material Costs	11790	21090	20018	56427	49499	23991	10311
Other Costs	7769	5895	2704	3806	5769	4559	1982
Overhead Costs	360871	352280	353599	444232	379037	399777	479236
Restoration Costs	295271	289170	352032	499113	581616	619130	689909
Total Costs	1122508	1148253	1274950	1735101	1837431	1774797	1940020

[14] I&E Exhibit No. 4, Schedule 4.



Q. HAS PEOPLES EXPLORED OPTIONS TO REDUCE THE COST OF RESTORATIONS?

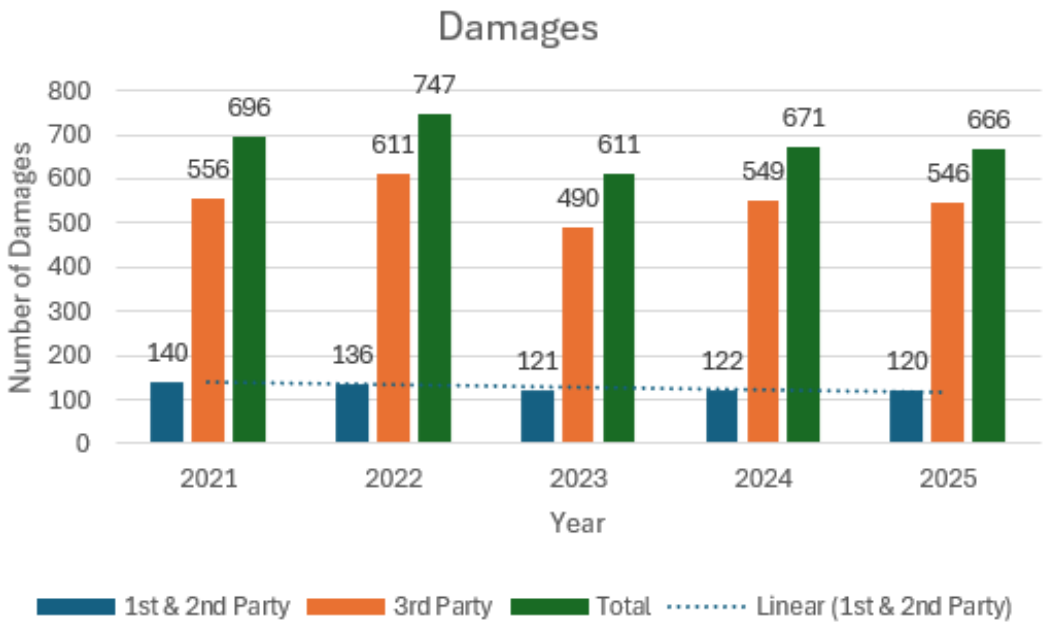
A. Yes. As noted in response to I&E-PS-24, **[BEGIN PROPRIETARY]** [redacted] **[END PROPRIETARY]**

[15] I&E Exhibit No. 4, Schedule 5.

DAMAGE PREVENTION

Q. HAS THERE BEEN AN INCREASE OF DAMAGES TO PEOPLES' FACILITIES?

A. No. In response to I&E-PS-30, Peoples' damages have been trending downwards from 2021 to 2025. Even though the trend is proceeding in the right direction, there is still concern with the total number of damages and damages caused by first and second parties. Approximately one fifth of all damages occurring on Peoples' facilities are caused by Company personnel or Company contractors. The graph below shows the number of damages on Peoples' facilities.[16]



[16] I&E Exhibit No. 4, Schedule 6.

Q. HAS THERE BEEN AN INCREASE IN DAMAGES THAT CORRELATE WITH ONE CALLS?

A. Yes. Based on the information provided in response to I&E-PS-30, the overall total when taking into account mapping errors, lines not marked, and lines marked incorrectly has been trending upwards from 2021 to 2025. Lines marked incorrectly from 2024 to 2025 has seen a significant increase. Lines marked incorrectly are Peoples fault as Peoples only uses company personnel to perform locations. The table below shows the number of damages caused by issues with Peoples records or locators.[17]

Causes of Damage	2021	2022	2023	2024	2025
Mapping Errors	88	65	63	83	58
Line Not Mark	31	52	79	50	54
Line Mark Incorrectly	63	80	59	67	94
Total	182	197	201	200	206
Overall Total	699	755	619	679	670

Q. HAS PEOPLES SEEN A DECREASE IN THE AMOUNT OF LINE HITS PER 1000 TICKETS?

A. Yes. As shown in response to I&E-PS-31, there has been a slight decrease in line hits per 1000 tickets marked.[18]

[17] I&E Exhibit No. 4, Schedule 6.
[18] I&E Exhibit No. 4, Schedule 7.

	2021	2022	2023	2024	2025
Line Hits	699	755	619	679	670
Tickets Received	220,030	225,721	239,461	238,506	243,567
Tickets Cleared	115,854	122,214	136,276	133,354	132,216
Tickets Marked (Per Karl)	104,176	103,507	103,185	105,152	111,351
LH Per 1000 Tickets Marked	6.71	7.29	6.00	6.46	6.02

Q. DO YOU HAVE ANY RECOMMENDATIONS FOR HOW PEOPLES COULD IMPROVE ITS DAMAGE PREVENTION PROGRAM?

A. Yes. I recommend that Peoples review its first and second party damages to determine the resolution to these issues. Furthermore, I recommend that Peoples' employees and contractors as well as locator personnel receive additional training to address the increasing trends of damages. Lastly, I recommend Peoples create a QA/QC program along with various metrics to analyze and assess its Damage Prevention Program for improvements to reduce damages.

METHANE DETECTION

Q. ARE YOU AWARE OF ANY OTHER JURISDICTIONAL NATURAL GAS DISTRIBUTION COMPANIES THAT HAVE IMPLEMENTED A METHANE DETECTOR PROGRAM?

A. Yes. In January of 2025, the Commission required Philadelphia Gas Works (PGW) to initiate a pilot program for the audible alarm methane detectors in the city of Philadelphia. The details of the $800,000 pilot program are available at Docket No. R-2022-3033834.

Also in 2025, the Commission required UGI Utilities, Inc. – Gas Division (UGI Gas) to initiate a pilot program for methane detectors in its distribution territory. The details of the pilot program can be viewed in Docket No. R-2024-3052716.

One example outside of Pennsylvania that is noteworthy is the State of New York Public Service Commission, in collaboration with GTI Energy, which has successfully instituted methane detector installations in New York City and other areas across the state.

Q. HOW COULD PEOPLES AND ITS CUSTOMERS BENEFIT FROM A METHANE DETECTION SYSTEM SIMILAR TO THAT OF OTHER STATES?

A. In my opinion, the installation of Smart Remote Methane Detectors (SRMDs), or real-time methane detection devices, has the potential to save lives across Peoples' service territory. As technology continues to evolve, the ability to remotely notify the operator of the presence of indoor gas readings is the next logical step for operators across Pennsylvania to drive down the probability of an explosion and lessen the consequences should an explosion occur. The benefits in areas where methane detection systems have been implemented, such as New York state, has similar operating conditions to those of Pennsylvania. These benefits include but are not limited to quicker response times, more accurate information for crew deployment, ability to track areas of concern, etc.

Q. IN YOUR OPINION, WOULD A METHANE DETECTOR PROGRAM REDUCE THE POTENTIAL THREAT OF INSIDE METER SET LEAKS?

A. Yes, I believe a program to address methane detector distribution could assist in mitigating additional risks from inside meters still present in Peoples' territory. Historically, Peoples has replaced inside meter sets during construction replacement projects as well as conducting meter move outs. As noted in response to I&E-PS-27, inside meter move outs have averaged around 1,550 per year since 2021, with inside meters totaling 73,135 remaining in Peoples' system. I note that the data received from Peoples conflicts with the number of meter move-outs provided. As of May 2026, 3,113 meters are served by a medium pressure system. The higher pressure entering the home presents an additional risk. When extrapolating the data, complete elimination of inside meters through meter move outs would be projected to occur in roughly 46 years. The table below shows Peoples' inside meter set elimination trends.[19]

Year	Inside Meters
2021	79,378
2022	78,896
2023	77,950
2024	75,478
2025	73,135

[19] I&E Exhibit No. 4, Schedule 8.

Q. HAVE FEDERAL AGENCIES PROVIDED SUPPORT FOR THE INSTALLATION OF INDOOR METHANE DETECTORS?

A. Yes. Both PHMSA and the National Transportation and Safety Board (NTSB) have provided written support for the installation of indoor methane detectors or alarms. Dating back to 2012, PHMSA provided a statement in Advisory Bulletin 2012-05, largely regarding Pennsylvania incidents stemming from cast iron main failures, asking owners and operators of cast iron distribution pipelines and state pipeline safety representatives to consider, among other items, the installation of interior/home methane gas alarms.[20]

The NTSB has repeatedly encouraged the installation of these indoor methane detector devices in final pipeline investigation reports (PIR). This includes, but is not limited to, the recent NTSB reports on West Reading Chocolate Factory[21] and Atmos Energy Corporation[22] investigations.

Q. CAN SMART METHANE DETECTION TECHNOLOGY BE USED BY OTHER OPERATORS TO IMPROVE SAFETY?

A. Yes. These detectors and technology can be instituted and provide the same early detection and safety enhancements for any operator. These detectors can alert operators of any leak by any cause, including excavation damage, corrosion,

---

[20] See Federal Register, Vol. 77, No. 57 (March 23, 2012), https://www.govinfo.gov/content/pkg/FR-2012-03-23/pdf/2012-7080.pdf.

[21] See NTSB PIR-25-01 UGI Explosion and Fire (https://www.ntsb.gov/investigations/AccidentReports/Reports/PIR2501.pdf).

[22] See NTSB PIR-26-01 Atmos Explosion and Fire (https://www.ntsb.gov/investigations/AccidentReports/Reports/PIR2601.pdf).

ruptures, material failures, or any other cause where gas escapes from a pipeline or appurtenance and accumulates in a structure. The detectors will also detect gas from leaks on non-jurisdictional piping, within proximity of the meter, and within the structure. Smart methane detectors can utilize AMI meter technology, or other wireless network technology such as LoRaWAN, to notify company officials or emergency responders of real-time methane readings. Industry research has established an alarm level at 10% LEL to be the acceptable standard for methane detection alarms.

Q. HAS PEOPLES IMPLEMENTED A PILOT PROGRAM FOR METHANE DETECTION?

A. Peoples has not determined a time frame for a future methane detector program. As stated in response to I&E-PS-25, Peoples has initiated conversation with the methane detector manufacturer New Cosmos. Peoples continues to communicate with New Cosmos on the implementation of AMI (Advanced Metering Infrastructure) with the possibility of a pilot program being introduced to the Pittsburgh area in 2027.[23]

[23] I&E Exhibit No. 4, Schedule 9.

Q. HAS PEOPLES IMPLEMENTED OTHER TECHNOLOGIES TO ENSURE CUSTOMERS' SAFETY?

A. According to Mr. Huwar, Peoples is continuing its efforts to install Intelis Meters. An Intelis Meter is an ultrasonic based meter with features that include high pressure and high flow shutoff capabilities. Intelis Meters also provide real-time monitoring of gas pressure which allows for quick detection of possible anomalies. Peoples began the installation of Intelis Meters in 2024, and as the end of 2025, over 100,000 meters have been installed. The remaining installation of the meters will continue over the coming years and cost around $200,000,000. [24]

Q. DO YOU HAVE A RECOMMENDATION REGARDING THE IMPLEMENTATION OF METHANE DETECTORS IN PEOPLES' SYSTEM?

A. Yes. Peoples has initiated conversations on the introduction of methane detectors. As shown in response to I&E-PS-27, Peoples has 73,135 inside meters with 3,113 of those being medium pressure as of May 27, 2026.[25] I recommend that Peoples implement a pilot program utilizing SRMDs in a geographic region of Peoples' choosing for the installation of 500 to 1000 SRMDs to allow Peoples to study the effectiveness of the SRMDs and monitor the related expenses. Further, I recommend Peoples consider using AMI technology and LoRaWAN or other

[24] Peoples Statement No. 1, pp. 11.
[25] I&E Exhibit No. 4, Schedule 8.

communication network technology for the notification methodology utilized by these devices as part of its pilot program. The selection of the devices and technology for this pilot will depend on available technology either compatible with or separate from Peoples' current technology. Peoples should use a risk-based approach to maximize the benefits in determining the location and rollout of a Methane Detector program. This program can be implemented geographically in sections of Peoples' service territory through a risk-based evaluation considering operational history and can include buildings or homes with inside meter sets and regulators, residences, businesses, and places of congregation.

Finally, this recommendation is not being made in response to any single specific incident or directed at any single natural gas distribution company. Rather, this recommendation is being made in response to industry-wide discussions regarding early warning safety enhancements for natural gas distribution systems. Accordingly, I&E's recommendation in this proceeding does not limit I&E's ability to make additional recommendations regarding the deployment of methane detectors in future Commission proceedings.

Q. ARE YOUR RECOMMENDATIONS STATED ABOVE COMPLETE AS OF THE WRITING OF YOUR DIRECT TESTIMONY?

A. Yes. Based on the information provided by Peoples in discovery responses to date, my recommendations are complete at this time. I reserve the right to supplement my discussion and recommendations after I receive further discovery

responses, which may be included in either rebuttal testimony or surrebuttal testimony.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

Question Number: I&E-PS-027

Witness: Becker, Paul **Title:** Vice President Construction & Engineering

Question: Provide the number of existing inside meter sets, broken out by system pressure, for the last 5 calendar years. How many meter move outs have occurred each year?

Answer: The following are the number of inside meter sets at the end of the calendar year and meter move-outs by year for the last 5 calendar years.

- 2021 – 79,378 inside meters; 2,140 move-outs
- 2022 – 78,896 inside meters; 2,622 move-outs
- 2023 – 77,950 inside meters; 3,568 move-outs
- 2024 – 75,478 inside meters; 6,040 move-outs
- 2025 – 73,135 inside meters; 2,343 move-outs

As of May 27, 2026, 3,113 of the total inside meters are served by a medium-pressure system (greater than 1 psig).

Question Number: I&E-PS-025

Witness: Becker, Paul **Title:** Vice President Construction & Engineering

Question: State if PNG has implemented, or plans to implement, pilot programs for residential methane detection installations for the audible alarm and/or for any other methane detector devices that use the communication networks. If so, please provide a detailed explanation.

Answer: Peoples has not implemented a pilot program for residential methane detection.

In the first quarter of 2025, Peoples initiated conversations with a methane detector manufacturer named New Cosmos to learn more about their products and the technical requirements for potential implementation using AMI (Advanced Metering Infrastructure). The dialogue has continued with the possibility of a pilot program located in the Pittsburgh area in 2027.

DAMAGE PREVENTION
METHANE DETECTOR PILOT PROGRAM

TABLE OF CONTENTS

INTRODUCTION **1**

DAMAGE PREVENTION **2**

METHANE DETECTION **5**

INTRODUCTION

Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.

A. My name is Robert N. Gobrecht IV. I am a Civil Engineer (General) in the Pipeline Safety Division of the Pennsylvania Public Utility Commission's (Commission) Bureau of Investigation and Enforcement (I&E). My business address is Pennsylvania Public Utility Commission, 400 North Street, Harrisburg, PA 17120.

Q. ARE YOU THE SAME ROBERT N. GOBRECHT IV WHO IS RESPONSIBLE FOR THE DIRECT TESTIMONY CONTAINED IN I&E STATEMENT NO. 4 AND THE SCHEDULES IN I&E EXHIBIT NO. 4?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to address statements made by Peoples Natural Gas Company LLC (Peoples or Company) witnesses Paul Becker[1] and Luke Ravenstahl[2] in their rebuttal testimonies regarding the Company's damage prevention and adoption of a pilot program for a methane detection system in select regions of Peoples' Pennsylvania service territory.

---

[1] Peoples Statement No. 6-R.
[2] Peoples Statement No. 8-R.

DAMAGE PREVENTION

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN DIRECT TESTIMONY REGARDING DAMAGE PREVENTION.

A. I recommended that Peoples review its first and second party damages to determine the resolution to these issues. Furthermore, I recommended that Peoples' employees and contractors as well as locator personnel receive additional training to address the increasing trends of damages. Lastly, I recommended that Peoples create a QA/QC program along with various metrics to analyze and assess its Damage Prevention Program for improvements to reduce damages.[3]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes, Mr. Ravenstahl responded to my recommendations. Mr. Ravenstahl mentioned that Peoples agrees that reviewing damages, providing training, and monitoring performance are necessary measures for a Damage Prevention Program. Peoples currently continue to perform these measures and evaluate opportunities to improve their Damage Prevention Program.

Q. DO YOU AGREE WITH MR. RAVENSTAHL'S STATEMENTS IN REGARD TO DAMAGE PREVENTION?

A. No, although Mr. Ravenstahl mentioned that Peoples will continue to review

[3] I&E Statement No. 4, pp. 13-15.

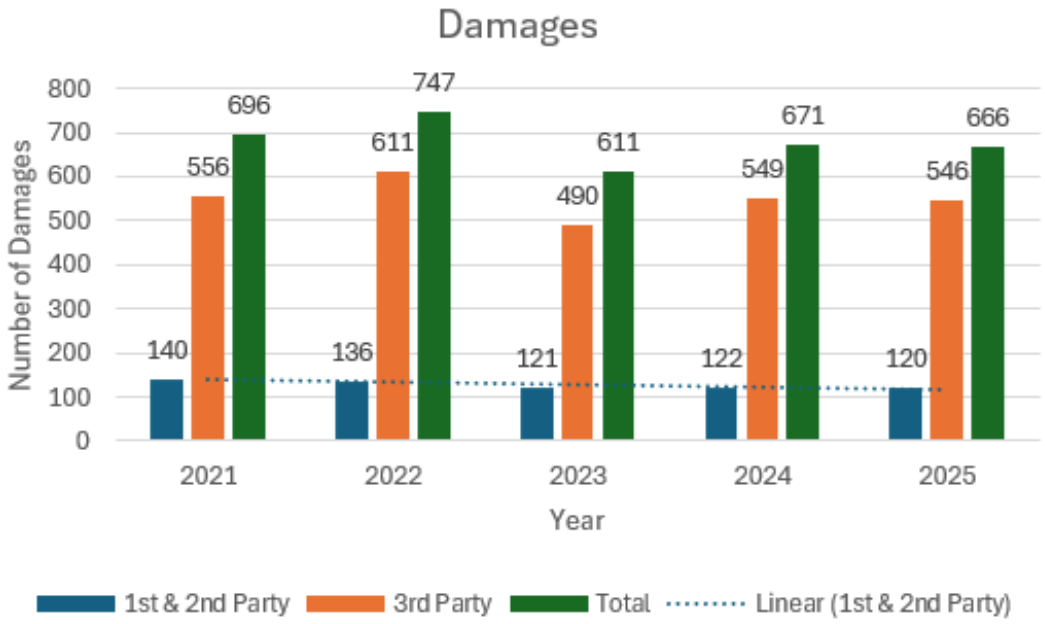
damages, provide training, monitor performance, and continue evaluating opportunities, further actions are necessary to reduce damages.[4] According to the Pipeline and Hazardous Materials Safety Administration (PHMSA), the national average for line hits per 1,000 tickets received is 2.38,[5] Peoples had a rate of 2.75 damages per 1000 tickets received in the year 2025.[6] With Peoples' damages exceeding the national average, it is my position that Peoples needs to investigate the use of additional mitigation measures to reduce damages. These measures can provide additional safety to customers and the public in Peoples' operating area.

Q. DO THE NUMBER OF DAMAGES INDICATE THAT CURRENT TRAINING, PERFORMANCE MONITORING, AND THE CONTINUING EVALUATION OF OPPORTUNITIES ARE PROVIDING RESULTS?

A. No, even though the first and second party damages are decreasing, I believe that the slight decrease in damages could be further improved with additional training and mitigations measures for company personnel and contractors. Furthermore, the Company's overall damages show inconsistent reduction. From 2021 to 2025, the Company only reduced its total damages by 30, but within those five years a peak of 747 damages in 2022 and a low of 611 damages in 2023 were observed. These two years skew the data with the remaining years showing little reduction to

[4] Peoples Statement No. 8-R, p. 14-15.
[5] See https://portalpublic.phmsa.dot.gov/analytics/saw.dll?PortalPages.
[6] I&E Exhibit No. 4, Schedule 7.

total damages. The graph below shows the trend for damages on Peoples' facilities over the last 5 calendar years.[7]



Q. HAS YOUR RECOMMENDATION AS TO HOW PEOPLES COULD IMPROVE ITS DAMAGE PREVENTION PROGRAM CHANGED?

A. No, I still recommend that Peoples adhere to the recommendations from my direct testimony to ensure safety of personnel and the public. In addition, Peoples should provide to I&E's Gas Safety Division a list of metrics and root cause procedures that Peoples will use to analyze their Damage Prevention Program by October 2026. Then, beginning in 2027, Peoples should schedule quarterly meetings with I&E's Gas Safety Division to review the root cause investigations

[7] I&E Exhibit No. 4, Schedule 6.

that were performed along with the metrics that were created to show Peoples is driving down its damage numbers on its facilities.

METHANE DETECTION

Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS IN DIRECT TESTIMONY REGARDING METHANE DETECTION.

A. I recommended that Peoples implement a pilot program utilizing 500 to 1000 Smart Remote Methane Detectors (SRMDs) to allow for a study of the devices' effectiveness as well as the use of AMI and LoRaWAN or other communication technologies for notification methodology utilized by these devices as part of its pilot program. I also recommended that Peoples should use a risk-based approach to determine the location that best maximizes the effectiveness of the Methane Detection pilot program.[8]

Q. DID ANY WITNESS RESPOND TO YOUR RECOMMENDATION?

A. Yes, Mr. Becker responded to my recommendations.

Q. WHAT IS MR. BECKER'S RESPONSE TO YOUR RECOMMENDATIONS?

A. Mr. Becker states that Peoples is willing to evaluate the feasibility of

[8] I&E Statement No. 4, pp. 15-22.

implementing SRMD and AMI technology; however, Peoples cannot agree to implement a pilot without first investigating the use of such technology and the impact to its distribution system.[9] Mr. Becker states that further analysis regarding SRMDs is needed before any SRMD program can be implemented.

Q. WHAT IS YOUR RESPONSE TO MR. BECKER'S TESTIMONY?

A. I continue to maintain that a pilot program of methane detectors, whether smart or simply audible, would benefit overall public safety, especially in those rural areas where response times may be slower. I have no changes to my recommendation in direct testimony that Peoples should commit to implementing a pilot program in Pennsylvania and, based upon research and an analysis of real-world experiences from its peers as well as its own pilot program(s), determine the most efficient, reliable and cost-effective approach for the installation of methane detectors for Peoples' Pennsylvania distribution customers. The pilot program in Pennsylvania is proposed to gather additional information as to the feasibility of large-scale implementation throughout the system.

[9] Peoples Statement No. 6-R, p. 4.

Q. HOW WOULD YOU ADDRESS MR. BECKER'S CONCERN OVER SMART REMOTE METHANE DETECTOR (SRMD) IMPLEMENTATION?

A. I recommend that the Company proposed analysis be completed in a timeframe of two years or before the next rate case to make audible alarm detectors and/or SMRDs available to customers.

Q. HAS YOUR RECOMMENDATION FOR THE PILOT PROGRAM IMPLEMENTATION AND REPORTING CHANGED?

A. No, I continue to recommend that Peoples implement a program in accordance with the recommendations made in my direct testimony as well as use the reporting recommendations, including the use of the file(s) provided for reporting results to the Commission.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. PLEASE STATE YOUR OCCUPATION AND CURRENT PLACE OF EMPLOYMENT?

A. I am a Senior Research Consultant with the Acadian Consulting Group ("ACG"), a research and consulting firm that specializes in the analysis of regulatory, economic, financial, accounting, statistical, and public policy issues associated with regulated and energy industries. ACG is a Louisiana-registered partnership, formed in 1995, and is located in Baton Rouge, Louisiana.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL QUALIFICATIONS.

A. I hold a Bachelor of Arts degree in Business Economics from Buena Vista University in Storm Lake, Iowa, and a Master of Arts degree in Economics from the University of Kansas in Lawrence, Kansas. I began my professional career with the Staff of the Kansas Corporation Commission in 2008 while in graduate school conducting analyses of topics related to energy and economy as a Research Assistant, eventually being promoted to a Research Analyst and later Senior Research Economist after graduation. I left the Kansas Corporation Commission to take a position with ACG in late 2011, where I have been promoted to positions of increasing responsibility since, including my current position which I started in mid-2021. Appendix A provides my professional resume, which includes a listing of my publications, presentations, pre-filed expert witness testimony, expert reports, and expert legislative testimony.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I have been retained by the Pennsylvania Office of Consumer Advocate ("OCA") to address matters related to the general rate case filed by Peoples Natural Gas Company ("Peoples" or the "Company"). I specifically have been asked to provide an overview of this case from a public policy perspective, and review issues related to alternative regulation and the Company's proposed Allocated Class Cost of Service Study ("ACOSS") and associated rate design.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring the following Exhibits MWD-1 through MWD-8.

- Exhibit MWD-1: Commission Alternative Regulation Consideration (§ 69.3302)
- Exhibit MWD-2: Survey of Approved Pennsylvania Natural Gas WNA Mechanisms
- Exhibit MWD-3: Summary of Results of Company's Proposed ACOSS
- Exhibit MWD-4: Correlation of Customers and Distribution Mains Additions
- Exhibit MWD-5: Summary of Results of Alternative ACOSS
- Exhibit MWD-6: Summary of Company's Proposed Revenue Allocation
- Exhibit MWD-7: Summary of Results of Alternative Revenue Allocation
- Exhibit MWD-8: Analysis of Customer-Related Costs

Q. PLEASE INTRODUCE OCA EXPERT WITNESSES AND SUMMARIZE THE TOPICS OF THEIR RESPECTIVE TESTIMONIES IN THIS PROCEEDING.

A. In addition to my testimony (OCA Statement 1), OCA is sponsoring the testimony of four additional expert witnesses in this proceeding. OCA Statement 2 includes findings regarding Peoples' revenue requirement and accounting adjustments by Mr. Jared N. Geiger; OCA Statement

3 includes findings regarding Peoples' rate of return and depreciation expense by Mr. David J. Garrett; OCA Statement 4 includes analysis of Peoples' rates on affordability, particularly in regard to low income customers by Mr. Roger Colton; and OCA Statement 5 includes a review of Peoples' customer service performance by Mr. Brendan Larkin-Connolly.

II. SUMMARY OF RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with inflation and looking at potential additional burdens placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission should not grant Peoples any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WEATHER NORMALIZATION ADJUSTMENT?

A. I recommend that the Commission affirmatively discontinue Peoples' current weather normalization adjustment ("WNA") mechanism. The WNA is not required to address regulatory lag concerns of the Company given the Company's use of a fully projected future test year ("FPFTY") and distribution system investment charge ("DSIC").

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas of Pennsylvania (Columbia Gas).

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF A MINIMUM SYSTEM STUDY IN ITS ALLOCATED COST OF SERVICE STUDY?

A. I recommend that the Commission reject the Company's proposed minimum system study ("MSS") approach. MSS and related zero-intercept studies that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a peak and average ("P&A") cost allocation method using weights based on the Company's test year system load factor. These

recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative allocated cost of service study ("ACOSS") results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the proposed rate increase to any single customer class to no more than 1.15 times the system average increase. Second, I recommend that no class receive a rate increase less than 0.50 times the system average increase.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential and commercial rate classes are currently recovering the majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

III. CURRENT MACROECONOMIC TRENDS AND CONDITIONS

Q. WHAT IS YOUR UNDERSTANDING OF THE PURPOSE OF THIS PROCEEDING?

A. The purpose of this case is to determine the "just and reasonable" rates for the Company under Chapter 13, and other provisions, of the Public Utility Code.

Q. WHAT ARE PUBLIC UTILITIES IN THE CONTEXT OF REGULATION?

A. Public utilities are considered in economics to be natural monopolies, specifically that the high capital cost associated with the establishment and operations of public utilities render having multiple competing services – as would be found in other industries – is economically inefficient and therefore not in the public interest. Regulation, therefore, is designed as a substitute for the disciplining forces that would be found in competitive markets that prevent an industry from using its unfettered monopolistic powers to set prices and conditions of service.

Q. AS A NON-LAWYER, HOW IS THE PHRASE "JUST AND REASONABLE" GENERALLY VIEWED IN THE CONTEXT OF REGULATION?

A. Regulators typically evaluate "just and reasonable" in the context of what is called a "zone of reasonableness." This inherently assumes that there is no one correct answer to the question of "just and reasonable," but instead requires regulators to balance the interest of several sectors of the public, including not only utility investors, but also the interests of the utility's customers (that itself is comprised of different classes of customers with different individual interests) and the public policy interests of local governments impacted by the utility's operations. Importantly, this framework of regulation implies that regulators must be cognizant of the larger macroeconomic conditions impacting the utility customers, and how this impacts customers' ability to afford utility service.

Q. HOW DOES THE CURRENT PROCEEDING COMPARE WITH THE COMPANY'S PREVIOUS RATE CASE?

A. On December 19, 2025, The Company requested a base rate increase of $163.2 million in the current proceeding.[1] This represents the first such requested increase since 2023, when the Company was authorized an approximate $93 million increase in rates. In the context of this prior rate increase, ratepayers will see a total rate increase of 11.1 percent.[2] Combined, Company ratepayers will have seen a $256.2 million, or nearly 30.6 percent, increase in total rate revenues in less than three years if the Company's proposed rate increase is approved as proposed.

Q. WHAT DO YOU MEAN BY AFFORDABILITY CONCERNS?

A. By affordability concerns, I mean the increasing burden on residential customers when utility costs are added to already elevated household expenses. Utility rate increases do not occur in a vacuum. Consumers experience utility rate increases alongside the ongoing price increases of food, housing, transportation, childcare, and other necessities. These concerns are especially acute for low-income households who devote a larger portion of their income to these necessities. PNG appears to recognize this concern and has adopted a Customer Assistance Program ("CAP") to reduce utility bills for participating low-income customers with high energy burdens. However, even households that do not qualify for CAP face mounting pressure as wages fail to keep pace with the cost of living. It is for this reason that broader consumer price conditions must be considered when evaluating the appropriateness of the rate increases proposed in this proceeding.

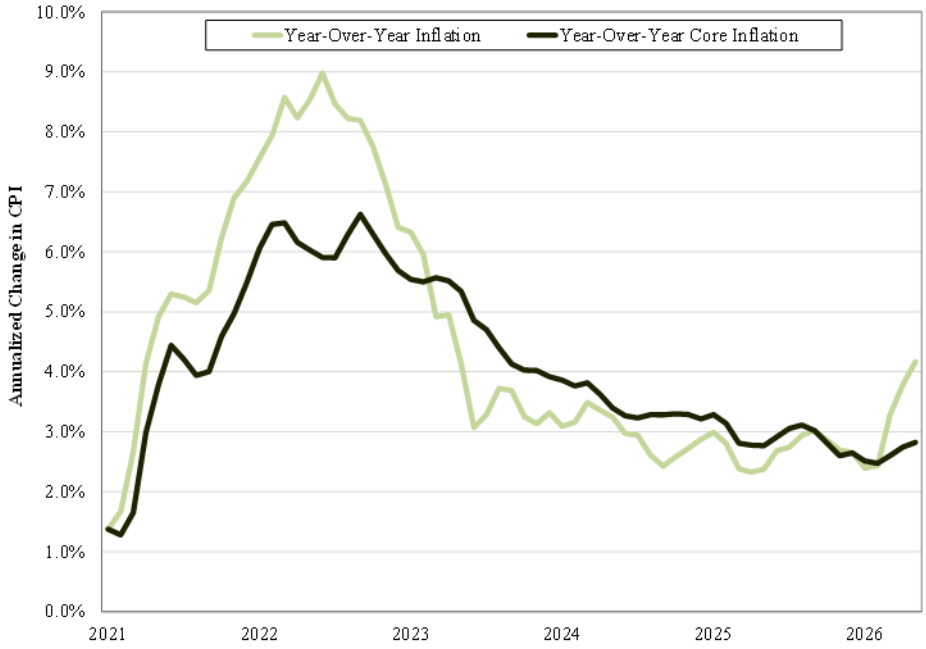
Figure 1: Monthly Growth in CPI

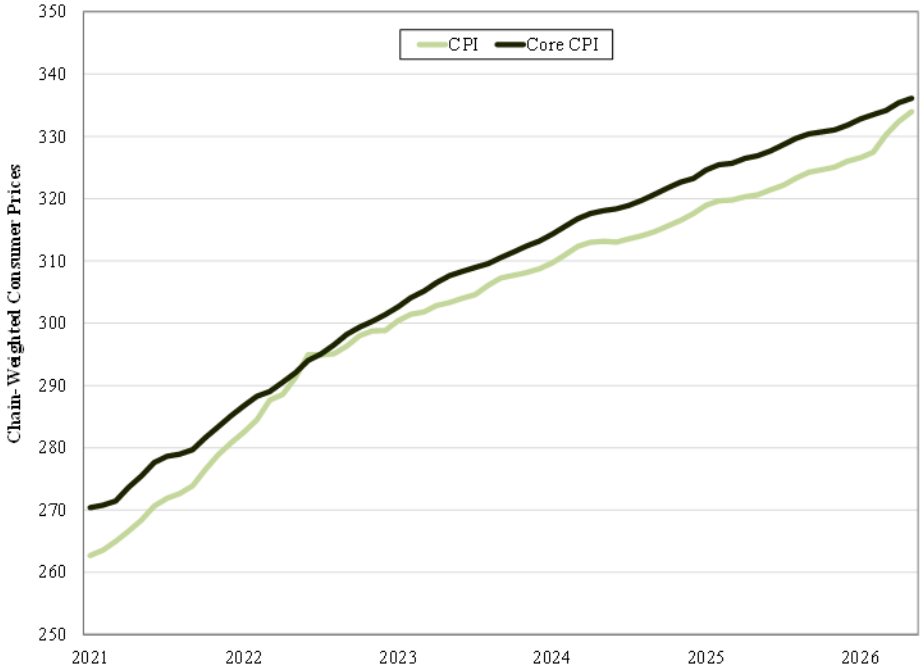


Source: Bureau of Labor Statistics

Q. IS THERE ANY EVIDENCE OF RISING PRICES IN CONSUMER PRODUCTS?

A. Yes. One commonly used measure of changes in the prices of goods and services is the Consumer Price Index ("CPI"), which is published by the U.S. Bureau of Labor Statistics ("BLS"). CPI measures changes over time in the prices consumers pay for a representative basket of goods and services, including food, energy, transportation, shelter, and other commodities. While the annualized growth in CPI has fallen from the highs that were seen in the immediate aftermath of the 2020 pandemic, it should be recognized that CPI is still elevated, reaching 4.2 percent in May 2026. This is well above the Federal Reserve's annual inflation target of 2.0 percent.

Figure 2: Consumer Price Index



Source: Bureau of Labor Statistics

Q. DOES THE MODERATING OF CPI GROWTH RATE FROM ITS HIGHS IMMEDIATELY FOLLOWING THE 2020 PANDEMIC MEAN THAT CONSUMER PRICES HAVE FALLEN?

A. No. It is important to recognize that CPI is reported monthly in terms of an annualized increase in consumer prices, meaning that a decline in the monthly 'headline' CPI (i.e. the month-to-month CPI growth rate often reported in the news) does not mean that consumer prices have decreased, but rather that the rate of growth in consumer prices has slowed. Figure 2 shows that overall, consumer prices have been continually increasing since at least 2021, even while the rate of growth has somewhat stabilized. Over the period January 2021 to January 2026, overall consumer prices increased 24.3 percent. Likewise, "core inflation" – which remove volatile energy and food prices – increased nearly 23.1 percent, indicating that growth in consumer prices since January 2021 are not driven by temporary shocks to energy and food prices, but rather represent systemic inflation that will persist for many years.

Q. HAS THE FEDERAL RESERVE MADE ANY STATEMENTS REGARDING RECENT INFLATION?

A. Yes. Former Chairman Jerome Powell addressed this in a recent press conference on March 18, 2026. The Federal Reserve's preferred measure of inflation is the Personal Consumption Expenditures Price Index ("PCE"), a related, but generally broader, measure of consumer inflation similar to CPI that is produced by the U.S. Bureau of Economic Analysis ("BEA"). Specifically, CPI is limited to out-of-pocket spending on goods and services by urban households while PCE extends this "basket of goods" to include rural households and third-party expenses on the consumer's behalf, such as employer-provided health insurance, Medicare and Medicaid.[3] Chairman Powell stated that estimates indicate that over the twelve months ending in February 2026, PCE and Core PCE prices rose by 2.8 percent and 3.0 percent, respectively.[4]

Q. HAS THE FEDERAL RESERVE RELEASED ANY INFLATION PROJECTIONS FOR 2026?

A. Yes. In the same press conference referenced above, former Chairman Powell stated that the median PCE projection for 2026 is 2.7 percent.[5] Total PCE inflation of 2.7 percent would be 70 basis points above the Federal Reserve's 2.0 percent longer-run inflation goal. This is important because the Federal Reserve's own outlook has inflation above target levels in 2026. This means that consumers are expected to continue dealing with increasing pressures on their cost of living.

[3] Inflation – Measuring the cost of living: The CPI versus the PCE price index," Cleveland Federal Reserve, Center for Inflation Research; note that changes in annual PCE inflation on average have been 0.39 percent than changes in annual CPI inflation.

[4] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

[5] *Id.*

Q. ARE THERE ANY OTHER REPUTABLE INFLATION PROJECTIONS?

A. Yes. The Federal Reserve Bank of Philadelphia releases the Survey of Professional Forecasters, which includes inflation projections. In the Second Quarter 2026 Survey, released on May 15, 2026, the forecasters project that CPI and core CPI will rise 3.5 and 2.9 percent, respectively. [6] This is measured on a fourth-quarter-over-fourth-quarter basis. This suggests that professional forecasters also expect inflation to remain elevated enough to affect affordability.

Q. WHAT IS THE EFFECT OF THIS CONTINUOUSLY INFLATIONARY PROCESS?

A. This continuous inflationary process means that when prices rise at abnormally high levels, there must be compensatory periods of lower levels for inflation to return to its long-term average. For example, if the average annual inflation rate is two percent, then a year with three percent inflation would need to be followed by a year with approximately one percent inflation to return to the average trend. Even though present inflation is below the levels seen in 2022 and 2023, it is still above two percent, so there must be periods below this target to return to the long-term average. Until the economy experiences these off-setting low inflationary periods, consumers must bear the cumulative effects of the price level rising more quickly than its average trend.

Q. HAVE ENERGY-RELATED PRICES ALSO CONTRIBUTED TO AFFORDABILITY PRESSURE?

A. Yes. Pennsylvania consumers are currently experiencing financial pressure from all aspects of the energy market. Wholesale electricity prices in the PJM western hub, for example, increased 48.8 percent on average from 2024 to 2025. Likewise, Pennsylvania citygate natural

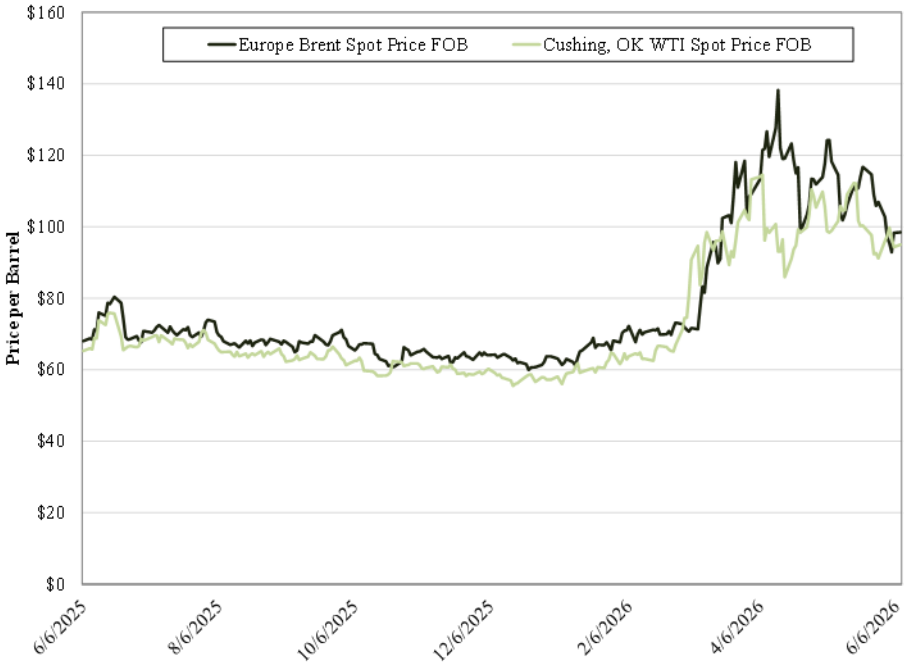
[6] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, Second Quarter 2026, released May 15, 2026, at 4.

gas prices increased 2.8 percent from December 2024 to December 2025 on the back of a nearly 41.9 percent increase in wholesale natural gas prices during the same period.

Q. HAVE ANY RECENT DEVELOPMENTS INCREASED MARKET UNCERTAINTY?

A. Yes. Recent geopolitical and macroeconomic developments have increased uncertainty in energy markets and prices in a way that is relevant to consumer affordability. The most notable of these is the geopolitical conflict in the Persian Gulf affecting energy prices. Currently it is unknown what the lasting impact of this conflict will have on global markets, as this will be heavily influenced by how long the conflict continues. However, initial impacts on international and domestic markets present a word of caution.

Figure 3: Crude Oil Prices



Source: S&P Global

Q. HOW HAS CONFLICT IN THE PERSIAN GULF AFFECTED MARKET UNCERTAINTY?

A. As shown in Figure 3 above, the conflict in the Persian Gulf has contributed to recent elevated crude oil prices in both international and domestic markets. International crude oil prices measured at the Brent hub in the North Sea has increased by more than 36.7 percent since the beginning of the recent conflict. Likewise, domestic crude oil prices measured in terms of West Texas Intermediate ("WTI") have increased by nearly 27.6 percent since the beginning of the recent conflict. Both indexes are now trading around $100 per barrel, well above the historic range of $60-$80 per barrel that is normally seen for these commodities.

Q. WHY ARE INCREASES IN CRUDE OIL PRICES IMPORTANT TO THE CONTEXT OF THE CURRENT RATE PROCEEDING?

A. The observed increase in crude oil prices shows how price shocks caused by the conflict in the Persian Gulf will likely filter through the larger macroeconomy. While the US does not purchase significant volumes of crude from the Persian Gulf anymore, the Persian Gulf is a major supplier of crude oil internationally, and crude oil is an international commodity. Therefore, domestic crude prices have already increased to reflect the knowledge that domestic supplies will be diverted in the international marketplace to take up the slack from constrained international supplies. Besides directly impacting Pennsylvanians through higher retail gasoline prices, higher crude prices will likely impact other aspects of the daily lives of Pennsylvanians already struggling under lingering inflation concerns. In fact, the Energy Information Administration recently found that domestic gasoline prices are now more closely tied to Brent Oil prices than WTI prices.[7]

Q. COULD INCREASED OIL PRICES AFFECT AFFORDABILITY CONCERNS FOR PEOPLES CUSTOMERS?

[7] U.S. Energy Information Administration, "U.S. gasoline prices move with Brent rather than WTI crude oil," Today in Energy, dated Nov. 3, 2014.

A. Yes. First, the conflict in the Persian Gulf has restricted the flow of not only crude oil, but also Liquified Natural Gas ("LNG") supplies from the Persian Gulf to consumers in Asia. It is likely that these consumers will turn to alternative supplies from the US as stored supplies dwindle. This will, in turn, place upward pressures on wholesale natural gas prices in the US as more natural gas is diverted to international supplies. Likewise, higher crude oil prices will lead to higher refined gasoline and diesel prices which themselves will lead to higher retail prices due to increased transportation costs. In the same Federal Reserve press conference discussed earlier, Chairman Powell stated that these elevated energy prices will push up overall inflation in the near term, but the scope and duration of these effects are uncertain.[8]

Q. IS THERE SIGNIFICANT UNCERTAINTY REGARDING HOW THE CURRENT CONFLICT WILL IMPACT THE ECONOMY?

A. Yes. As stated earlier, the ultimate impact of the recent conflict in the Persian Gulf is hard to predict because it is heavily determined by the ultimate length of the conflict, and how quickly international commodity markets can return to normal. There have recently been statements made that suggest that a settlement resolving the current standoff is close at hand. However, at the time of filing this testimony details regarding this settlement are not available, nor is it known if the current settlement will have sufficient longevity to allow markets to return to normal. Indeed, former Chairman Powell when asked if he believed the oil shock would be temporary, replied, "So, and the thing I really want to emphasize is that nobody knows. The economics effect could

[8] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 2.

be bigger, they could be smaller, they could be much smaller or much bigger. We just don't know."[9]

Q. WHAT DOES THE SURVEY OF PROFESSIONAL ECONOMISTS INDICATE?

A. The most recent survey presented a mixed picture. Forecasters increased their annual-average real GDP forecast for 2026 from 1.8 percent to 2.5 percent. However, they continued to assign a meaningful probability to a negative quarter of real GDP growth in 2026, with mean probabilities ranging from approximately 17.8 percent to 22.7 percent over the four quarters.[10] Assuming that each of these four probabilities is independent for illustrative purposes, this forecasts a 60.1 percent likelihood of a negative real GDP growth quarter in 2026. In my view, that does not establish that a recession is likely, but it does suggest that the outlook remains uncertain enough to support caution.

Q. HAVE TARIFFS ALSO AFFECTED AFFORDABILITY CONCERNS?

A. Although often lost in the current discussion regarding price concerns caused by the recent conflict in the Persian Gulf, it should be recognized that markets are also still dealing with uncertainty from recent tariffs placed on imports. Former Chairman Powell stated that of the Federal Reserve's 3.0 percent core inflation estimate, between .50 and .75 percentage points are due to tariffs.[11] Federal Reserve materials indicate that those effects developed gradually rather

[9] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 6.

[10] Federal Reserve Bank of Philadelphia, Survey of Professional Forecasters, First Quarter 2026, at 1, 6.

[11] Board of Governors of the Federal Reserve System, Transcript of Chair Powell's Press Conference, Mar. 18, 2026, at 4.

than as a single price spike, and that some of the tariff increases were passed through to consumers.[12]

Figure 4: Peoples Natural Gas Stock Price

Source: S&P Global

Q. HAS THE CURRENT FINANCIAL UNCERTAINTY CAUSED FINANCIAL STRUGGLES FOR THE COMPANY?

A. No, it does not appear that the Company has experienced financial struggles due to current macroeconomic uncertainty. On a weekly basis through mid-2026, Essential Utilities, Peoples' parent entity, has seen its common stock trade at approximately $37 to $38 per share, a level consistent with the range observed throughout 2024 and 2025. While the stock has declined from its peak of approximately $52 per share in early 2022, recent weekly trading data reflects a period of relative stability rather than acute market distress. This indicates that the Company is not in a position of obvious financial struggle attributable to recent economic uncertainty.

[12] Board of Governors of the Federal Reserve System, The Slow Climb: How Tariffs Gradually Raised Retail Prices in 2025, FEDS Notes, March 5, 2026.

Q. HAVE OTHER PROMINENT FIGURES EXPRESSED SIMILAR CONCERNS IN PENNSYLVANIA RECENTLY REGARDING THE NEED TO SCRUTINIZE UTILITY RATE CASE PROPOSALS IN LIGHT OF AFFORDABILITY CONCERNS?

A. Yes. On April 29, 2026, Governor Josh Shapiro issued an open letter to utility leaders and the Commission arguing that customers across the Commonwealth are experiencing higher utility costs, and that rising utility bills have become a driver of inflation.[13] Governor Shapiro stated that utilities must seek ways of procuring capital to finance investments in more affordable ways, conscious of the utility burdens facing many consumers across the Commonwealth.[14] In this, Governor Shapiro's message appears to be that utilities and the Commission should balance consumer affordability concerns with the financial interests of utilities when determining just and reasonable rates for the Company. Likewise, subsequent to withdrawing a proposed increase in rates for its electric and gas operations, David Vahos, the president and chief executive officer ("CEO") of PECO Energy Company ("PECO") stated that PECO's decision to withdraw was based on customer affordability considerations.

> While our filing with the [Commission] would have provided needed improvements in safe and reliable energy delivery, we recognize that Pennsylvanians are struggling with basic necessities like gas, food, and energy and have decided to withdraw our proposal.[15]

Q. DID GOVERNOR SHAPIRO MAKE ANY DIRECT STATEMENT REGARDING CHANGES HE BELIEVED NEEDED TO BE MADE IN UTILITY OPERATIONS?

---

[13] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 1.

[14] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 1.

[15] PECO Communications (April 16, 2026), "PECO Withdraws Electric and Natural Gas Regulatory Rate Review Filings to Prioritize Customer Affordability."

A. Yes. Governor Shapiro's open letter to utility leaders and the Commission contained three specific action items. First, the Governor argued that utilities should seek to raise the most cost-effective forms of capital available.[16] The Governor noted that, given the low risk profile of monopolistic utilities, debt should normally represent a clear majority of a utility's capital structure. The Governor specifically noted that a utility requesting a capital structure that is more equity-focused than its parent holding company should require "extraordinary justification" to receive support.[17] The Governor secondly suggested that proposals for new capital investments should be accompanied by clear language identifying why the proposed investments are necessary. In this, the Governor suggested that utilities include transparent data identifying specific reliability or safety concerns that will be addressed by the proposed investment, and cost benefit analyses demonstrating that the proposed investment will produce savings or reliability benefits in excess of costs to consumers.[18] Finally, the Governor's last action item pertained to negotiated settlements wherein the Governor asked for greater transparency and less reliance on "black box" settlements. Importantly, this last action item is not relevant in consideration of a utility rate change proposal.[19]

Q. PLEASE SUMMARIZE THE COMPANY'S REQUESTED COST OF CAPITAL IN THE CURRENT PROCEEDING.

A. OCA witness Garrett presents OCA's analysis of the Company's proposed cost of capital in detail. However, at a high level, the Company requests an allowed Return on Equity ("ROE")

[16] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 2.

[17] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 2.

[18] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 2.

[19] Open Letter dated April 29, 2026, from Governor Josh Shapiro to Utility Leaders, at 3.

of 11.25 percent[20] with a capital structure comprised of 45.43 percent long-term debt and 54.47 percent common equity.[21]

Q. IS THE COMPANY'S PROPOSED COST OF CAPITAL CONSISTENT WITH THE CONCERNS EXPRESSED BY GOVERNOR SHAPIRO IN HIS OPEN LETTER?

A. Yes. On June 4, 2026, the yield on 10-year U.S. Treasuries reached 4.47 percent, the highest rate seen in about a year.[22] Yet, the Company's proposed ROE represents a full 678 basis in excess of this already elevated rate. This is generally consistent with the Governor's observations that Pennsylvania utilities, on average, were requesting ROEs that were a "staggering" 682 basis points above 10-year Treasury rates.[23] Likewise, the Company's parent, Essential Utilities, Inc. capital structure as of December 31, 2025, was 54.4 percent long-term debt and 45.6 percent common equity.[24] This means that Essential Utilities, Inc. capital structure is far less equity focused when compared to People's proposed capital structure.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I recommend that the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are still struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to the current conflict in the

[20] Direct Testimony of Jennifer E. Nelson at 5, Figure 1.

[21] Direct Testimony of Jennifer E. Nelson at 5:11.

[24] Essential Utilities, Inc. 2025 Annual Report, Essential Utilities, Inc. and Subsidiaries: Management's Discussion and Analysis of Financial Condition and Results of Operations at 23.

Persian Gulf. At the same time, Peoples' weekly stock price has remained relatively stable in recent periods with no obvious signs of market distress. Because the Company does not appear to be in a position of financial struggle, the Commission should require some level of shared burden, balancing the financial interests of the Company against the very real affordability concerns facing its ratepayers.

IV. REGULATORY LAG

Q. PLEASE DISCUSS THE COMPANY'S REVENUE STABILITY CONCERNS.

A. The Company's testimony reflects a critical focus on improving revenue stability and predictability under a rate structure that recovers a substantial portion of fixed distribution costs through volumetric charges. The Company explains that weather-driven usage fluctuations can result in periods of under-recovery during warmer-than-normal conditions and over-recovery during colder-than-normal conditions.[25] To address this variability, the Company relies on its WNA, a Commission-approved mechanism originally established in the Company's 2023 rate case.[26] The Company also states that the primary purpose of the WNA is to stabilize the recovery of authorized distribution revenues while simultaneously moderating the bill impacts of weather variability for customers.[27]

Q. DOES THE COMPANY ALREADY HAVE MECHANISMS IN PLACE THAT REDUCE REGULATORY LAG?

A. Yes. The Company has already implemented several mechanisms that meaningfully reduce regulatory lag and support timely cost recovery. First, the Company proposed to use a

[25] Direct Testimony of John D. Taylor, Company St. 17 at 38:3-6.

[26] Direct Testimony of John D. Taylor, Company St. 17 at 39:10-12.

[27] Direct Testimony of Michael Huwar, Company St. 1 at 31:11-14.

FPFTY in this proceeding, consistent with its approach in its prior base rate case, which better aligns projected revenues with anticipated costs during the rate period.[28] Second, the Company has implemented a DSIC, which provides a vehicle for interim recovery of qualifying capital expenditures made between base rate cases, [29] thereby reducing the gap between investment and recovery. These tools provide the Company with multiple avenues to manage regulatory lag and ensure timely cost recovery. The continuation of the WNA would further enhance this framework.

Q. DO CHANGES IN CUSTOMER USAGE NECESSARILY REFLECT REGULATORY LAG?

A. No. Declines in usage can result from a range of factors, including efficiency measures, economic conditions, or customer behavior. These changes are not inherently problematic and do not, by themselves, create regulatory lag. Moreover, if usage declines are accompanied by stable or declining costs, there may be no mismatch that requires correction.

Q. PLEASE DEFINE REGULATORY LAG.

A. Regulatory lag can be defined in several different ways. One definition holds that regulatory lag is the time period between when a utility's rates go into effect, following an evidentiary hearing process and its next rate case.[30] Another definition holds that regulatory lag can be represented as the period between when a utility investment is undertaken and the time it enters into rates.[31] Yet another definition holds that regulatory lag is the time period in which a

[28] Direct Testimony of Michael Huwar, Company St. 1 at 4:2-4.

[29] Direct Testimony of Michael Huwar, Company St. 1 at 35:8-10.

[31] Elizabeth E. Bailey and Roger D. Coleman.(1971). "The Effect of Lagged Regulation in an Averch- Johnson Model." *Bell Journal of Economics and Management Sciences*. 2 (Spring): 278-292.

utility's achieved rate of return differs from that allowed by regulators.[32] At the heart of all these definitions is one theme: the frequency and timing of rate cases can impact utility earnings, positively or negatively.

Q. IN UTILITY RATE REGULATION, WHICH PARTY CONTROLS REGULATORY LAG OR THE DURATION OF TIME BETWEEN RATE CASES?

A. Typically, utilities control the duration between rate cases. In most states, utilities have the statutory ability to request rate increases if they believe that their rates are not affording them the opportunity to earn a fair return on and of their investments and prudently incurred costs. While state utility commissions and other stakeholders can, in theory, request a utility be "brought in" for a rate case, my experience is, and research indicates, that this event rarely happens. For instance, research on the topic of regulatory lag conducted in the early 1980s by Ronald Braeutigam and James Quirk, surveyed state utility rate cases during the period 1948 to 1978 and found that over 350 of the 363 surveyed rate cases (96 percent) were brought by a regulated utility, with the smaller number attributable to regulators or consumer groups.[33] While this is an older, dated study, the results are likely to ring true even over the past two decades.

Q. DOES A UTILITY'S ABILITY TO DETERMINE THE TIMING OF A RATE CASE SHIFT A CERTAIN DEGREE OF REGULATORY RISK ONTO RATEPAYERS?

A. Yes. When the timing of a rate case is left in the hands of the utility, it has the ability to effectively shift the risk of regulation and regulatory lag away from itself and onto ratepayers. The option to request higher rates by utilities, in effect, creates a price floor that buttresses a utility's

[33] Graeme Guthrie. (2006) "Regulating Infrastructure: The Impact on Risk and Investment." *Journal of Economic Literature*. 44 (December): 933.

value.[34] This price floor allows shareholders to retain benefits created by regulatory lag (*i.e.*, earning an actual rate of return that is higher than the authorized rate of return or over-earning), as well as the option to defend against challenges to those benefits through the timing of a rate case. Paul Joskow, writing as early as 1973, concluded in a frequently referenced regulatory article, that utility commissions tend to defend against rate increases, but are less aggressive in pursuing rate decreases when rates are stable or decreasing in real terms.[35] This outcome has often been thought to have occurred in the post-war period until about the late 1960s, and arguably throughout the 1990s.

Q. IS REGULATORY LAG UNFAIR OR CONFISCATORY TO UTILITIES?

A. No. The premise that regulatory lag is somehow unfair is simply antithetical to most of the research in utility regulation over the past 50 years. Regulatory lag has long been recognized as a key component of the overall regulatory compact given the discipline it can impose on utility operational and investment decisions. Regulation acts as a substitute for the disciplines of competition.[36] Regulatory lag prevents utility regulation from devolving into a "cost-plus" approach that simply passes through costs on a dollar-for-dollar basis to ratepayers and can lead to cost and investment inefficiencies. The cost-plus regulatory approach also shifts a considerable amount of performance-related risk away from utilities and onto ratepayers and leads to inefficient outcomes, which was recognized as early as the 1960s and has come to be known as the "Averch-Johnson" or "A-J" effect.

[36] Charles F. Phillips, *The Regulation of Public Utilities: Theory and Practice*, (Arlington, VA: Public Utilities Reports, Inc., 1984), p. 154.

Q. HOW ARE THE CONCLUSIONS REGARDING REGULATORY LAG RELATED TO WHAT IS COMMONLY REFERRED TO AS THE "A-J EFFECT"?

A. In the early 1960s, a seminal article was published that dramatically influenced the theory and practice of utility regulation and economic thinking regarding the optimal regulation of natural monopolies. This article, authored by Professors Harvey Averch and Leland Johnson, and published in the *American Economic Review* in 1962, posited that rate of return regulation creates an incentive for regulated utilities to overcapitalize, resulting in an inefficient utilization of resources and higher-than-optimal rates.[37] This finding; however, was premised upon a model with a number of assumptions, one of which presumed there was no regulatory lag and that rates were set on a period-to-period basis. In other words, rates were set on a "cost-plus" regulatory approach.

Q. HOW IS REGULATORY LAG RELATED TO THIS RESEARCH?

A. Soon after its publication, Averch and Johnson's article was met with a flurry of scholarly research attempting to empirically verify the A-J effect, as well as examining the conditions under which the effect would, and would not, be sustained.[38] Rejoinders to the research noted that two characteristics of the regulatory process tended to temper the likelihood and prevalence of the A-J effect: (1) the possibility of disallowances through the prudence review process[39] and (2) the

positive efficiency incentives created by regulatory lag.[40] In fact, a series of articles published soon afterwards noted that regulatory lag typically creates incentives for utilities to seek efficiency opportunities between rate cases since the gains (profits) from those investments inure to shareholders instead of ratepayers.[41]

Q. HOW DID THE FINDINGS IDENTIFYING THE BENEFITS OF REGULATORY LAG ARISE?

A. One of the earliest works on the impact of regulatory lag was published in 1971 by William Baumol and Alvin Klevorick.[42] Their work was the first of what was to become a series of articles showing that regulatory lag actually diminished incentives for overcapitalization, since the earnings gained by avoiding these inefficient actions passed directly to shareholders. Soon after, Klevorick, writing separately from Baumol, built upon this model by explaining how multi-year regulatory lags, coupled with demand and cost uncertainty, created strong incentives for efficiency to maintain profitability.[43] One of his additional findings at the time, however, was that these incentives might also discourage regulated firms from investing in research and development.

Q. HOW IS THIS DISCUSSION RELEVANT TO THE COMPANY'S CURRENT FILING?

A. The Company's filing focuses on concerns related to revenue variability and stability. However, as discussed above, regulatory lag can serve a beneficial regulatory function and does

---

[43] A.K. Klevorick. (1973). "The Behavior of a Firm Subject to Stochastic Regulatory Review," *Bell Journal of Economics and Management Science.* 4 (Spring): 82.

not, by itself, indicate a structural problem. The Company's ability to file rate cases at will, utilize a WNA, utilize FPFTYs (including allowing end-year rate base calculations as opposed to average rate base over the FPFTY), and recover infrastructure costs through the DSIC already provide mechanisms to reduce lag. As such, the insinuation that regulatory lag is a barrier to fair return is inconsistent with both its regulatory tools and academic literature.

Q. DOES REGULATORY LAG, WHILE ENCOURAGING EFFICIENCY, DISCOURAGE INNOVATION?

A. No. Interestingly, this notion is a myth that arises in the practice of public utility regulation but is debunked by several academic articles. Elizabeth Bailey, who also served as an economic researcher at Bell Laboratories, addressed this issue originally raised by Klevorick during this active period of regulatory scholarship in the 1960s and 1970s. Bailey found that regulatory lag helped to facilitate, not reduce, the incentives for cost-reducing innovations.[44] Bailey's work built upon earlier work that she did with Roger Coleman in 1971 that further supported the conclusions of Baumol and Klevorick, that regulatory lag induces profit-maximizing firms to adopt minimum-cost production alternatives.[45]

Q. ARE THERE ANY PARALLELS AMONG REGULATORY LAG, INNOVATION, RELIABILITY, AND SAFETY?

A. Yes. The Company links its increased capital investments for safety, reliability, and system modernization to concerns about revenue stability under its current rate design. However, it should be recognized that the key benefits of regulatory lag are the weakening of the natural incentive for

[44] Elizabeth E. Bailey. (1974). "Innovation and Regulation." *Journal of Public Economics*. 3: 285-295.

[45] Elizabeth E. Bailey and Roger D. Coleman.(1971). "The Effect of Lagged Regulation in an Averch- Johnson Model." *Bell Journal of Economics and Management Sciences*. 2 (Spring): 278-292.

a utility to over-capitalize and the strengthening of the natural incentive for a utility to minimize production costs in order to increase shareholder profits.

Q. PLEASE EXPLAIN THE TERM "REGULATORY COMPACT."

A. The regulatory compact, as it is generally referred to in a regulatory policy context, allows utilities the opportunity to earn a fair rate of return of and on their investments as well as their prudently incurred costs. In return, utilities are expected to provide safe, adequate, efficient, and reasonable service and facilities at just and reasonable rates.

Q. HAVE ANY STUDIES LOOKED AT THE IMPACT OF REGULATORY LAG FROM A BROAD INDUSTRY-WIDE PERSPECTIVE DURING THESE PAST PERIODS?

A. Yes, there have been a few studies that have examined regulatory lag during the inflationary period of the 1970s. The conclusions are mixed. Seth Norton, for instance, conducted empirical research examining 45 utilities over a period from 1945 to 1974. The period spans both the high-growth, high-productivity, low-cost periods for the industry prior to 1970 and the inflationary low-growth periods throughout the 1970s. According to Norton, there were no significant financial impediments or opportunities created by regulatory lag in any of these periods.[46]

Q. WILL THE COMPANY'S PROPOSALS SHIFT ANY RISKS AWAY FROM ITSELF AND ONTO RATEPAYERS?

A. Yes. The Company's proposals are designed to insulate the Company from fluctuations in weather-related variability. By guaranteeing recovery of authorized revenues regardless of actual

[46] Seth W. Norton, (1987), "In Search of Regulatory Lag," *Quarterly Journal of Business and Economics*, Vol. 26 No. 4 (Autumn): 3-16.

customer consumption, these mechanisms significantly reduce the Company's exposure to traditional business risks. As a result, the risk of revenue underperformance due to declining sales or unseasonably warm weather is shifted entirely onto ratepayers. Importantly, the Company has not proposed any corresponding ratepayer protections such as earnings tests, revenue caps, or performance incentives. This asymmetric risk allocation leaves ratepayers exposed to upward rate adjustments without any assurance of offsetting benefits or improved utility performance.

Q. PLEASE EXPLAIN HOW REGULATORY RISK IS SHIFTED TO RATEPAYERS.

A. As I discussed above, utilities typically control the timing of rate case filings. Accordingly, utilities enjoy the ability to request higher rates, as well as the protection afforded by a price floor that allows shareholders to retain benefits (*i.e.*, over-earning) created by regulatory lag. Thus, in times of over-earning, risk is shifted to ratepayers because utilities are not likely to elect to file a rate case. In times where a utility is under-earning, risk also is shifted to ratepayers because the utility can file for a rate increase.

Q. DOES THE PRESENCE OF REGULATORY LAG CREATE ANY POLICY SUPPORT FOR THE COMPANY'S PROPOSALS?

A. No. The presence of regulatory lag in and of itself does not create policy justification for the Company's proposals. Regulatory lag can lead to both costs and benefits for a regulated utility. The Company's proposals are incorrectly premised upon a presumption that regulatory lag is bad and always will be bad. Regulatory lag creates opportunities for utilities to achieve gains as well as losses. The simple fact that regulatory lag creates "opportunities" and not guarantees, is one of the reasons why regulatory lag is considered efficiency enhancing. There is a long and rich history in the practice and theory of utility regulation supporting these efficiency-enhancing conclusions. Thus, there is no inherent policy rationale supporting the Company's proposals. If anything, past

thought and practice in utility regulation supports rejection of proposals of this nature on a policy basis.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

V. WEATHER NORMALIZATION PROPOSAL

Q PLEASE DISCUSS PEOPLES' WNA.

A. Peoples' WNA is a Commission-approved adjustment mechanism that reconciles distribution revenues to the level that would have been collected under normal weather conditions.[47] It compares actual heating degree days ("AHDDs") to normal heating degree days ("NHDDs") embedded in base rates and adjusts revenues for deviations during the heating season. The mechanism operates symmetrically, producing surcharges in warmer-than-normal periods and credits in colder-than-normal periods.[48] The Company's WNA applies to the Residential and Small/General Service classes, operates during the October through May heating season, includes a three-percent deadband, is calculated on a bills-rendered basis, is presented as a separate line item on customer bills, and includes a May limiter.[49]

---

[47] *See,* Direct Testimony of John Taylor, Company Statement 17 at 37:18-19.

[48] *See,* Direct Testimony of John Taylor, Company Statement 17 at 37:19-21.

[49] *See,* Direct Testimony of John Taylor, Company Statement 17 at 39:16-40:3.

Q. WHY ARE WEATHER NORMALIZATION ADJUSTMENTS TYPICALLY USED BY GAS UTILITIES?

A. Weather normalization adjustments are generally used to reduce revenue volatility that results from fluctuations in weather which can lower customer gas usage and thus reduce a utility's recovery of fixed costs through volumetric rates. The intent is to provide more predictable revenues for the utility while smoothing customer bills. However, this goal must be balanced with customer protections to ensure the mechanism does not systematically overcharge customers or remove all utility risk.

Q. CAN UTILITIES SMOOTH CUSTOMER BILLS WITHOUT A WNA?

A. Yes. Utilities typically offer normalized billing, also referred to as budget billing, to customers interested in establishing fixed monthly bills for purposes of budgeting by averaging expected annual utility charges over twelve equal monthly payments. Normalized billing also assists the utility by providing greater certainty regarding its monthly revenue streams from customers.

Q. WHAT IS THE COMPANY PROPOSING IN THIS CASE WITH RESPECT TO THE WNA?

A. The Company is not proposing to make any structural modifications to the WNA. The Company is only proposing to update the WNA normalization period to rely on a 65-year regression-based methodology, consistent with the normalization approach the Company used to develop billing determinants in this rate case.[50]

Q. WHAT ARE THE PRACTICAL EFFECTS FOR RATEPAYERS ASSOCIATED WITH THE PROPOSED CHANGE IN WNA NORMALIZATION PERIODS?

---

[50] *See,* Direct Testimony of John Taylor, Company Statement 17 at 3.

A. The Company claims that the practical effect for ratepayers of updating the WNA normalization period from a blended methodology to a 65-year regression based methodology is to ensure methodological consistency between the weather assumptions used to set base rates and those used in the WNA reconciliation.[51] The Company states that this alignment maintains internal consistency, avoids unintended distortions that could arise from using different normalization baselines, preserves the integrity of the matching principle by ensuring that revenue assumptions and reconciliation mechanisms rely on the same weather foundation, and enhances transparency and predictability for both customers and the Commission.[52]

Q. HAS THE COMMISSION ADOPTED A STATEMENT OF POLICY REGARDING ALTERNATIVE RATEMAKING MECHANISMS LIKE THE WNA?

A. Yes. In 52 Pa. Code § 69.3302(a) the Commission established 14 separate distribution rate considerations in determining just and reasonable alternative ratemaking distribution mechanisms and rate design. Exhibit MWD-1 presents these 14 considerations, along with the relevant effect of the WNA on each consideration. My review of the Commission's consideration criteria finds that the current WNA either does not impact the Commission's areas of concern or will potentially worsen those areas of concern.

Q. WHAT DID THE COMMISSION DECIDE REGARDING THE WNA IN THE COMPANY'S PRIOR RATE CASE?

A. In its Final Order in Docket No. R-2023-3044549, the Commission approved the Company's proposed WNA as part of a non-unanimous settlement, subject to several

[51] *See,* Direct Testimony of John Taylor, Company Statement 17 at 40:21-23.

[52] *See,* Direct Testimony of John Taylor, Company Statement 17 at 41:7-17.

modifications negotiated among the settling parties.[53] Specifically, the Commission approved the WNA with a three percent deadband, required that the WNA charge or credit be presented as a separate line item on customer bills, directed that the WNA calculation be performed on a bills rendered basis, and capped the WNA adjustment for bills rendered in May so as not to exceed 100 percent of the billed distribution amount for that same period.[54] The HDD values reflected in the settlement are consistent with a blended normalization approach, which averages results from a 65-year regression and a 20-year average HDD normalization.[55] The Commission also imposed annual reporting requirements, directing the Company to file a report on or before September 1st of each year for the 12-month period ending in June, containing monthly WNA billed revenue, monthly actual and normal heating degree day data, and the number of customers and bill impacts by class for billing periods in which the ratio of normal to actual heating degree days exceed 1.50.[56]

Q. WHAT HAS BEEN THE ACTUAL IMPACT OF THE WNA ON RATEPAYERS?

[53] Pennsylvania Public Utility Commission, Docket No. R-2023-3044549, Opinion and Order at 102.

[54] Pennsylvania Public Utility Commission, Docket No. R-2023-3044549, Opinion and Order at ¶ 69-73.

[55] Direct Testimony of John Taylor, Company Statement No. 17 at 40:13-17.

[56] Pennsylvania Public Utility Commission, Docket No. R-2023-3044549, Opinion and Order at ¶ 74.

A. The WNA resulted in a net charge to residential and non-residential ratepayers during the 2024-2025 heating season but a net credit during the 2025-2026 heating season. Across both heating seasons, the WNA has produced a net credit to ratepayers of approximately $5.3 million.

Q. DO YOU BELIEVE THIS IS EVIDENCE THAT THE WNA IS WORKING AS INTENDED AND WILL CONTINUE TO PROVIDE MONETARY BENEFITS TO RATEPAYERS IN THE FUTURE?

A. No. Historic WNA revenues are heavily influenced by significantly below average temperatures that occured in late January 2026 due to Winter Storm Fern, but were recorded during the February 2026 WNA period. Excluding this anomalous event, the Company's WNA netted the Company more than $8.0 million through March 2026.

Q. PLEASE EXPLAIN WHY THE EVENTS OF WINTER STORM FERN CAN BE CONSIDERED ANOMALOUS.

A. Winter Storm Fern moved across Pennsylvania from January 23 through 27, 2026, dropping 11.2 inches of snow in the Pittsburgh area on a single day – the second heaviest snowfall in the area of the current century so far.[57] More important for the WNA, Winter Storm Fern also brought extreme cold to the region in its aftermath, such that the Pennsylvania Department of Health issued a Health Advisory for the period January 27 to February 1, 2026, due to forecasted wind chill values near negative 20 degrees Fahrenheit.[58] The Commission itself issued a statement

[57] Weather.com (January 27, 2026), "Witner Storm Fern Recap: How Much Snow, Ice in South, Midwest, Northeast.

[58] Pennsylvania Department of Health Alert (January 27, 2026), 2026-PAHAN-816-01-27-ADV, "Extreme Cold Forecasted for Pennsylvania – Practice Cold Safety."

January 23, 2026, advising consumers to prepare for the winter storm and an extended period of extreme cold.[59]

Q. ARE THERE CONCERNS REGARDING THE WNA?

A. Yes. There are several concerns regarding the level of ratepayer protections included in the Company's WNA. Specifically, the WNA includes a three percent deadband and applies to the period October through May, both of which differ from protections that have been approved by the Commission in other Pennsylvania WNA mechanisms, including the Commission's recent decision modifying the WNA pilot mechanism for Columbia Gas in Docket No. R-2025-3053499. Exhibit MWD-2 provides a survey of recent Pennsylvania natural gas rate cases involving major investor-owned utilities that address WNA mechanisms and their related provisions.

Q. DO YOU AGREE WITH THE COMPANY'S THREE PERCENT DEADBAND?

A. No. As part of the settlement in the Company's prior rate case, the Company included a three percent deadband in its WNA.[60] However, more recent Commission decisions approving WNA pilot mechanisms have included a larger deadband, such as the five percent deadband approved in the recent Columbia Gas general rate proceeding.[61] Indeed, in that proceeding, the Commission explicitly held that a five percent deadband "adequately captures what could be considered normal weather fluctuations in Pennsylvania."[62] The Commission further explained that a larger deadband places more responsibility for calculating and forecasting weather variations

[59] Public Utilities Commission Press Release (January 23, 2026), "PUC Urges Consumers to Prepare Ahead for Winter Storm Fern and Prolonged Extreme Cold."

[60] Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2022-3035730 at ¶ 41.

[61] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

[62] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

on the utility as a normal part of doing business.[63] Consistent with this reasoning, increasing the Company's deadband from three percent to five percent would provide greater protection to ratepayers and better align with the Commission's recent determination on this issue.

Q. DO YOU AGREE WITH THE COMPANY'S CURRENT WNA HEATING PERIOD OF OCTOBER THROUGH MAY?

A. No. I disagree with the inclusion of the months of October and May in the Company's WNA heating season period. The Fall month of October and the Spring month of May are best represented as shoulder months between the winter heating season and the summer cooling season which often sees little heating or cooling requirements for customers and customers only see heating use during years with early and/or late winters. The inclusion of these shoulder months within the Company's WNA heating season exposes ratepayers to unnecessary variation in the WNA by shifting the weather risk during these shoulder periods from the Company onto ratepayers.

Table 1: Analysis of Historic Weather Variability

	Standard Deviations			Coefficient
	-1	0	1	Variation
OCT	288	376	465	24%
NOV	572	672	772	15%
DEC	837	996	1,155	16%
JAN	992	1,157	1,322	14%
FEB	835	977	1,120	15%
MAR	649	775	902	16%
APR	355	435	516	19%
MAY	108	188	267	42%

[63] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

Q. HAVE YOU EXAMINED HISTORIC WEATHER VARIABILITY IN THE COMPANY'S SERVICE AREA DURING THE OCTOBER THROUGH MAY PERIOD?

A. Yes. Table 1 examines historical variation in monthly AHDD for the October through May period using weather data from the Pittsburgh, Pennsylvania weather station located in the Company's service territory over the 65-year period October 1960 through May 2025. This analysis finds that the coefficient of variation ("COV") for AHDD is greatest in the month of May but also elevated during the fall month of October.

Q. WHAT DO YOU MEAN BY THE COEFFICIENT OF VARIATION?

A. COV is mathematically the standard deviation of a data series divided by its mean and is a way to present the variance of different data series on a normalized basis as a percent of the average of the data series. For example, the COV of AHDD for the month of May is 26 percent, meaning that the average expected variance in AHDD during the month of May is 26 percent of the expected NHDD based on historic averages. Likewise, the COV of AHDD for the month of October is 22 percent of expected NHDD based on historic averages. The COV for all other months is no greater than 20 percent. Therefore, the Commission should eliminate the months of October and May from the WNA period since these months have seen high variability in weather conditions.

Q. HAS THE COMMISSION EXPRESSED SIMILAR CONCERNS REGARDING THE INCLUSION OF NON-WINTER MONTHS WITHIN WNA MECHANISMS?

A. Yes. In its recent decision involving Columbia Gas, the Commission agreed that the month of May should be removed from the WNA calculation. Specifically, the Commission explained that "May is not a winter or traditional heating month in Pennsylvania but more appropriately a shoulder month when customers can expect to start seeing their heating bills decline."[64] The

[64] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at 301.

Commission also noted that retaining May "could result in customers seeing WNA bill increases as late as June."[65]

Q. HAVE ANY OTHER PENNSYLVANIA UTILITIES LIMITED THE WNA HEATING SEASON TO EXCLUDE THE MONTH OF MAY?

A. Yes. In a 2025 general rate proceeding involving UGI Utilities, Inc. – Gas Division ("UGI Gas"), the Commission approved a settlement that modified UGI Gas's WNA pilot so that it no longer applies to May bills and instead applies only to bills rendered during the heating season October through April.[66] As shown in Exhibit MWD-2, among the Pennsylvania utilities included in the survey, National Fuel Gas Distribution Company is the only other utility with a WNA that continues to include the month of May in its heating season.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The WNA is not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC. Peoples' WNA impacts affordability as it makes it more difficult to provide customers with predictable and understandable price signals related to usage and could impede customer conservation efforts. It also shifts weather-related risks away from Peoples and onto its customers. Given the macroeconomic risks that are already shifted to customers beyond direct utility rates through increased prices due to tariffs, increased oil prices due to wars in the middle east, and rising utility rates, Peoples' WNA goes directly against affordability concerns for

[65] Pennsylvania Public Utility Commission, *Opinion and Order.* Docket No. R-2025-3053499 at pp. 301-302.

[66] Pennsylvania Public Utility Commission, *Order*. Docket No. R-2024-3052716 ¶ 1. Pennsylvania Public Utility Commission, *Recommended Decision.* Docket No. R-2024-3052716 at Section V, ¶ 58(b).

ratepayers. As the company is able to shift risk away from itself through rate filings and shift future weather related risk to customers through a WNA (as well as infrastructure risks through the DSIC), Peoples' ratepayers are made responsible for Peoples' risk through additional surcharges and are only credited when Peoples' weather-related risk does not materialize, which has not been the case generally in this pilot program.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that it be continued as a three-year pilot program rather than being adopted as a permanent mechanism. This will allow the Commission the opportunity to routinely reevaluate the WNA to ensure that the mechanism is not producing negative outcomes for ratepayers. I further recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas.

VI. ALLOCATED COST OF SERVICE STUDY

A. Introduction

Q. WHAT IS THE PURPOSE OF AN ALLOCATED COST OF SERVICE STUDY?

A. An allocated cost of service study ("ACOSS") is a modeling approach that reconciles utility costs and revenues across different customer classes. The goal of an ACOSS is to evaluate the cost of providing service and revenue responsibility for each individual customer class. ACOSS results are used to estimate class-specific rates of return and can serve as a guidepost for class revenue responsibilities and ultimately rates.

Q. HOW IS AN ACOSS PREPARED?

A. An ACOSS utilizes a set of historic or projected cost information which is (1) "functionalized," (2) "classified," and (3) "allocated." The functionalization process simply categorizes costs based upon the functions they serve within a utility's overall operations (i.e., production, transmission, and distribution). In the specific case of a natural gas utility, a large share of a utility's investments and costs are associated with providing distribution services. The classification process characterizes costs by "type," including those that are (1) demand-related, (2) commodity-related, or (3) customer-related. The last step of the process "allocates" each of these costs to a respective jurisdiction or customer class as appropriate.

Q. PLEASE EXPLAIN DEMAND-RELATED COSTS?

A. Demand-related costs are associated with meeting maximum gas flow requirements. Transmission and large distribution mains are designed, in part, to meet peak demand day requirements such that natural gas can be delivered to households, businesses, and industries under peak load conditions. Gas supply contracts can also have a capacity component that is demand-related. The most common demand allocation factors used in an ACOSS are those related to system peak day demands.

Q. HOW ARE COMMODITY-RELATED COSTS DEFINED?

A. Commodity-related costs are defined as those that tend to change with the amount of throughput (volume) sold or transported. The investment cost of natural gas mains, for instance, can be allocated, in part, on some measure of throughput. There are also a number of other expenses, such as fuel costs themselves, that are often allocated using some measure of throughput.

Q. WHAT ABOUT CUSTOMER-RELATED COSTS?

A. Customer-related costs are those associated with connecting customers to the distribution system, metering household or business usage, and performing a variety of other customer support functions.

Q. PLEASE EXPLAIN THE ALLOCATION PROCESS.

A. The allocation process is the final step in a cost of service study and involves assigning each functionalized and classified cost component to the appropriate customer classes. In the Company's ACOSS, costs are allocated using factors that reflect the underlying cost drivers, including customer counts, peak demand contributions, commodity usage, and, in some cases, revenues. Where costs can be directly attributed to a specific customer class, they are directly assigned. For costs that cannot be directly assigned, allocation factors are developed using economic and engineering principles to ensure that costs are distributed in a manner consistent with cost causation. The goal of the allocation process is to ensure that each customer class is assigned its proportionate share of the Company's total costs, based on how that class contributes to the need for those costs.

Q. IS THIS A RELATIVELY SIMPLE PROCESS?

A. No. Some costs can be clearly identified and directly assigned to a function or category, while other costs are more ambiguous and difficult to assign. The primary challenge in conducting an ACOSS is the treatment of what are known as "joint and common" costs. Given their shared or integrated nature, these joint and common costs can often be difficult to compartmentalize. Therefore, unique allocation factors are utilized in an ACOSS to classify joint and common costs. The process of developing these cost allocation factors can become subjective and is often imbued with policy considerations.

Q. HOW DOES AN ACOSS RELATE TO ECONOMIC PRINCIPLES?

A. An ACOSS is also referred to as a "fully allocated cost study" since it allocates test year revenues, rate base, expenses, and depreciation to various jurisdictions and customer classes based upon a series of different allocation factors. The purpose of the ACOSS is to develop cost responsibility estimates for each customer class, which in turn, can be used to develop rates. An ACOSS is based upon a set of historic utility book costs that have accumulated over decades. Rates are, therefore, based upon historic average costs; whereas economic theory suggests that the most efficient form of pricing in perfectly competitive markets should be based upon marginal costs. However, regulated utilities do not operate in perfectly competitive markets and, by their very nature, are natural monopolies. Thus, reaching the ideal pricing formula outlined in economic theory is impossible since the nature of natural monopolies makes pricing in the presence of declining average costs, coupled with the presence of joint and common costs, difficult.

Q. WHAT CONTROVERSIES ARISE IN THE ANALYSIS AND COMPARISON OF VARIOUS ACOSS METHODOLOGIES?

A. The ACOSS process is significantly different than the revenue requirement or cost of capital phase of a typical rate case. While those activities are focused on determining the total level of revenues to be recovered, the ACOSS determines how those revenues are allocated across customer classes and ultimately recovered through rates. The primary controversies in evaluating different ACOSS methodologies for a natural gas utility generally center on which cost drivers should be emphasized in allocating distribution system costs. In particular, there is often disagreement regarding whether costs should be allocated based on customer counts, peak demand contributions, annual throughput, or some combination of these factors. For gas utilities, these issues are especially important because the system is designed to meet winter peak demand requirements, while a significant portion of costs are recovered through volumetric charges that

vary with usage. As a result, different methodologies can produce materially different outcomes depending on how they treat peak demand versus throughput. For example, methodologies that rely more heavily on customer and peak demand factors tend to allocate a greater share of costs to lower load-factor customers, such as residential and small commercial classes, which place relatively high demands on the system during peak periods. Conversely, methodologies that incorporate throughput or average usage,[67] tend to shift costs toward higher load-factor customers, such as larger commercial and industrial classes. These differences can be significant, and they often drive the core disputes in a cost of service study. Ultimately, the key issue is whether the selected methodology appropriately reflects cost causation—that is, whether it aligns the allocation of costs with the way the natural gas distribution system is actually designed, constructed, and operated to serve customers.

Q. PLEASE EXPLAIN WHY METHODOLOGIES THAT ARE SKEWED TOWARD PEAK CONSIDERATIONS SHIFT COSTS TOWARD LOWER LOAD-FACTOR CUSTOMERS SUCH AS RESIDENTIAL AND SMALL COMMERCIAL CUSTOMERS.

A. A large portion of residential and small commercial natural gas usage is highly weather-sensitive, particularly during the winter heating season. These customers tend to have usage patterns that are concentrated during cold weather periods, when heating demand is highest. In contrast, larger commercial and industrial customers often use natural gas for process loads that are less dependent on weather and tend to be more consistent throughout the day and across seasons. As a result, their usage profiles are generally more stable and less "peaked" than those of residential and small commercial customers. Because of these differences, residential and small

[67] *See*, Atlantic Seaboard Corp., 11 F.P.C. 43 (1952); The Atlantic Seaboard, or Seaboard, cost allocation method allocates costs associated with distribution mains to customer classes based on a simple average of the customer classes' contribution to system peak day demands and annual throughput requirements.

commercial customers typically exhibit lower load factors, meaning a greater share of their total usage occurs during peak periods. Larger customers, by comparison, tend to have higher load factors, with usage that is more evenly distributed over time. When a cost allocation methodology places significant weight on peak demand, it assigns more costs to those customer classes that contribute more heavily to system peak requirements. Since residential and small commercial customers drive a substantial portion of winter peak demand, methodologies that emphasize peak considerations will tend to allocate a greater share of costs to those classes. Conversely, methodologies that incorporate average usage or throughput, such as peak and average approaches, tend to recognize the more consistent utilization of the system by higher load-factor customers and can result in a more balanced allocation of costs.

Q. PLEASE DEFINE WHAT IS MEANT BY A "LOAD FACTOR."

A. A load factor is defined as the ratio of the average gas usage over a given period to the maximum or peak demand experienced during that same period. It is typically expressed as a percentage. For natural gas, load factor can be calculated by dividing the total gas usage over a period (e.g., annual throughput) by the product of the peak day demand and the number of days in the period.

$$Annual\ Load\ Factor = {Annual\ Throughput}\Big/{(Peak\ Day\ Demand * 365\ Days)}$$

A system or customer class with a high load factor is one that uses gas more consistently over time, with relatively smaller differences between average and peak usage. These customers tend to utilize the system more steadily. Conversely, a low load factor indicates that usage is more concentrated during peak periods—such as during cold weather—requiring the system to maintain sufficient capacity to meet those peaks, even if that capacity is not utilized for much of the year.

Q. IS IT PREFERABLE TO PROMOTE THE DEVELOPMENT OF HIGHER LOAD FACTORS?

A. Yes, generally speaking, a higher load factor can be indicative of more efficient utilization of the natural gas distribution system, all else equal. Customers with higher load factors tend to use the system more consistently over time, which can reduce the need for excess capacity that is only required during peak periods—particularly during the winter heating season when demand is highest. However, it is important to recognize that natural gas utilities inherently serve customers with different usage characteristics and load profiles. Residential and small commercial customers, for example, tend to have more weather-sensitive usage patterns, while larger commercial and industrial customers often have more stable, process-driven loads. Additionally, gas utilities operate within a broader system that includes upstream supply, storage, and transportation arrangements, which can help manage variability in demand and mitigate some of the impacts of differing load characteristics across customer classes. While rate design should recognize and encourage efficient system utilization where appropriate, caution should be exercised in placing too much emphasis on promoting higher load factors. Overemphasizing this objective can result in shifting costs away from higher load-factor customers and onto lower load-factor customers, such as residential and small commercial classes, in a manner that may not fully reflect cost causation. Accordingly, while load factor is a relevant consideration, it should not be the primary driver of cost allocation or rate design decisions.

Q. WHAT IMPACT DOES COST ALLOCATION HAVE ON REVENUE RECOVERY?

A. Cost allocation can have a significant impact on revenue recovery because it directly affects the rates charged to different customer classes, and those rates, in turn, influence customer

behavior. Higher-use customers, such as large commercial and industrial customers, are generally more price sensitive than residential and small commercial customers. This is due to the relative impact that rate increases can have on their overall operating costs and the margins of the goods or services they produce. In the natural gas context, these customers often have alternatives available, including fuel switching to other energy sources, modifying production processes, or in some cases reducing or relocating operations. As a result, they tend to be more responsive to changes in rates. By comparison, residential and small commercial customers typically have fewer practical alternatives and are therefore less able to adjust their usage in response to price changes, particularly for essential uses such as space heating during the winter. Because of these differences in price elasticity, the way costs are allocated among customer classes can influence the stability and predictability of revenue recovery. Allocating a disproportionate share of costs to more price-sensitive customers may increase the risk of reduced usage or load migration, which can, in turn, impact the Company's ability to recover its authorized revenue requirement. Accordingly, while cost allocation should remain grounded in cost causation principles, it is also important to recognize how allocation decisions can affect customer behavior and, ultimately, revenue recovery.

Q. WHAT IS A POTENTIAL MANNER IN WHICH AN ACOSS CAN BE BIASED AGAINST LOWER LOAD-FACTOR CUSTOMERS?

A. Natural gas utilities, like electric utilities, are capital-intensive and require significant investment in infrastructure—such as distribution mains, services, and related facilities—to deliver service to customers. As a result, how those plant-related costs are allocated plays a critical role in determining the cost of service for each customer class. One potential source of bias arises when cost allocation methodologies over-emphasize certain cost drivers in a way that shifts costs

away from higher load-factor, more price-sensitive customers and onto lower load-factor customers, such as residential and small commercial classes. For example, placing excessive weight on peak demand measures—particularly those that do not fully reflect system diversity—can result in allocating a disproportionate share of costs to customer classes that contribute heavily to winter peak demand. Additionally, over-reliance on minimum system or customer-related classifications for distribution plant can attribute a large share of infrastructure costs to the mere existence of customers, rather than to the demand they place on the system. This can result in cost shifts that disproportionately impact lower load-factor customers. In each of these cases, the underlying issue is whether the selected methodology appropriately reflects cost causation. When it does not, the resulting cost allocation can create inequities among customer classes and bias outcomes against certain groups of customers.

B. Overview of the Company's ACOSS

Q. PLEASE DESCRIBE THE COMPANY'S ACOSS.

A. The Company's ACOSS follows a three step process where costs are first functionalized into specific categories based on the various characteristics of utility operations, specifically the utility functions of gas supply, transmission, distribution, and customer.[68] Second, these functionalized plant and expenses are classified into three primary factors driving associated costs, including customer-related costs, demand-related costs, and commodity-related costs.[69] Finally, these classified plant investment and expenses are directly assigned to individual customers or

[68] Direct Testimony of John D. Taylor, Company St. 17 at 17:20-18:2.

[69] Direct Testimony of John D. Taylor, Company St. 17 at 7-13.

class of customers where possible, and where not possible are allocated based on allocation factors designed to reflect cost causation through principles of both economics and engineering.[70]

Q. HAVE YOU PREPARED A SUMMARY OF THE RESULTS OF THE COMPANY'S ACOSS?

A. Yes. A summary of the Company's ACOSS results is presented in Exhibit MWD-3. The Company finds that it will earn a system average rate of return under current rates during the FPFTY of approximately 6.02 percent. The Company also finds that class-based rates of return vary significantly across customer classes, ranging from 0.62 percent for the Mainline Service ("MLS") class to 18.10 percent for the Large General Service ("LGS") class. The Company specifically finds that its Residential Service class will earn a 5.76 percent return on rate base during the FPFTY under current rates, or approximately 0.96 on a relative rate of return ("RROR") basis.

Q. DO YOU DISAGREE WITH ANY OF THE ASSUMPTIONS OR ALLOCATION FACTORS INCORPORATED IN THE COMPANY'S PROPOSED ACOSS?

A. Yes. I disagree with the Company's classification and allocation of costs associated with distribution mains. Specifically, I disagree with the Company's employment of a minimum system study ("MSS") to classify a portion of costs associated with distribution mains as customer-related. MSS are premised on a flawed hypothetical relationship between investments in distribution mains and customer growth that empirically does not exist. Likewise, I disagree with the Company's demand cost allocation method which fails to recognize that distribution mains supply both peak and non-peak service and thus perform both a demand and commodity function.

[70] Direct Testimony of John D. Taylor, Company St. 17 at 19:11-16.

C. Allocation of Distribution Mains

Q. PLEASE DISCUSS HOW THE COMPANY CLASSIFIES AND ALLOCATES ITS DISTRIBUTION MAINS COSTS.

A. The Company allocates distribution mains costs using an Average Study that combines results from two separate methodologies. Under the Customer-Demand study, the minimum system size ("MSS") approach is used to determine what portion of mains costs are customer-related versus demand-related.[71] Under the Demand-Commodity study, the mains costs are split evenly between demand and commodity components on a 50/50 basis.[72] The Average Study weights these two approaches equally, yielding a classification of an approximately 24 percent customer-related, 51 percent demand-related, and 25 percent commodity related. [73] This approach was applied separately to low-pressure and regulated pressure mains. [74]

Q. PLEASE EXPLAIN THE THEORETIC BASIS FOR A MSS.

A. MSS are advocated by those holding the view that investments in distribution mains are made to serve a dual nature: one consisting of meeting system peak demand requirements, and another focused on customer interconnection or access that requires a customer-based allocation component. This customer-based allocation component, also called a minimum system component, is determined through either a MSS or a related zero-intercept study ("ZIS").

Q. WHAT ARE ZIS AND MSS STUDIES?

A. ZIS and MSS studies are cost allocation methodologies that attempt to estimate separate customer-related versus load-related costs. A MSS does this by estimating the hypothetical

---

[71] Direct Testimony of John D. Taylor, Company St. 17 at 24:9-13.

[72] Direct Testimony of John D. Taylor, Company St. 17 at 24:14-15.

[73] Direct Testimony of John D. Taylor, Company St. 17 at 24:16-25:4.

[74] Direct Testimony of John D. Taylor, Company St. 17 at 24:10-11.

minimum costs of deploying distribution mains that only provide customers with connection to the Company's natural gas distribution system, but not a system sufficient to serve the customer's actual natural gas demand requirements. Likewise, a ZIS utilizes regression analysis techniques to estimate the relationship between the natural gas demand requirements on a system and costs associated with installation of new distribution mains. Using these regression analyses, a ZIS then calculates a hypothetical minimum cost by calculating the costs of the distribution mains assets given a zero-demand requirement, or likewise the costs associated with installing a hypothetical zero-diameter distribution main.

Q. ARE THERE ANY SHORTCOMINGS TO USING MSS AND ZIS BASED STUDIES FOR CLASSIFICATION OF DISTRIBUTION MAINS?

A. Yes. Both MSS and ZIS studies are flawed in that they deal in hypotheticals that often do not exist in the real world and furthermore attempt to model an empirical relationship that does not exist. Specifically, one should recognize that a zero-diameter distribution main is completely a hypothetical construct that does not, and indeed could not, exist in the real world. This makes the results of MSS and ZIS analyses difficult, if not impossible, to verify. Likewise, it should be recognized that the argument that distribution system costs are related to the number of customers on a utility's system is not a new argument, and the academic literature in utility regulation has questioned for quite some time the use of both MSS and ZIS studies.

Q. HOW HAS THE ACADEMIC LITERATURE IN UTILITY REGULATION QUESTIONED THE USE OF MSS AND ZIS STUDIES?

A. Dr. James Bonbright, in his seminal work on public utility rates published decades ago in the 1970s, raised a number of questions about the use of MSS and ZIS methodologies in classifying costs. Although Dr. Bonbright's criticisms were specifically focused on the application of MSS

and ZIS methodologies in the context of classifying costs for an electric distribution utility, his criticisms are equally applicable to a natural gas distribution utility. Bonbright's primary concern was the lack of empirical support in academic literature for a causal relationship between distribution system costs and the number of customers. The true driving factors of utility distribution system costs are much more complicated and depend on a host of other factors, such as the size of a service territory and the population density within it. The incremental costs of constructing an appropriate distribution system to serve an additional customer within an urban area with existing nearby infrastructure are substantially less than the costs to extend an existing utility system by potentially miles to serve an additional customer located in a rural area, a fact inherently ignored by MSS and ZIS methodologies.

> …the annual costs of this phantom, minimum-sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs to be mentioned in the following section. Their [minimum distribution costs] inclusion among the customer costs is defended on the ground that, since they vary directly with the area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary directly with the number of customers. Alternatively, they are calculated by the "zero-intercept" method whereby regression equations are run relating cost to various sizes of equipment and eventually solving for the cost of a zero-sized system (Sterzinger, 1981).
>
> What this last-named cost imputation overlooks, of course, is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Our casual empiricism is supported by a more systematic regression analysis in (Lessels, 1980) where no statistical association was found between distribution costs and number of customers. Thus, if the company's entire service area stays fixed, an increase in number of customers

> does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.[75]

Q. WHAT WAS DR. BONBRIGHT'S CONCLUSION REGARDING THE USE OF ZIS STUDIES?

A. Dr. Bonbright found attempts to classify costs associated with a minimum-sized distribution system, whether determined through the use of a ZIS or MSS, as something other than demand-related as potentially of merit. However, he ultimately concluded that classifying these costs as customer-related, as the Company has done in the current proceeding, is "clearly indefensible,"[76] due to the lack of a relationship between changes in the number of customers on a utility system and its distribution costs.

> While, for the reason just suggested, **the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to us clearly indefensible**, its exclusion from the demand-related costs stands on much firmer ground. For this exclusion of minimum-sized distribution system costs makes more plausible the assumption that the *remaining* cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on this system as measured by peak load.
>
> But if the hypothetical cost of a minimum-sized distribution system is properly excluded from the demand-related costs for the reason just given, while it is also denied a place among the customer costs for the reason stated previously, to which cost function does it then belong? **The only defensible answer, in our opinion, is that it belongs to none of them**. Instead, it should be recognized as a strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But fully-distributed cost analysts dare not avail themselves of this solution, since they are the prisoners of their own assumption that "the sum of the parts equals the whole." They are therefore under impelling pressure to fudge their cost apportionments **by**

[75] James C. Bonbright, et al. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 491.

[76] James C. Bonbright, et al. Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., p. 492.

using the category of customer costs as a dumping ground for costs that they cannot plausibly impute to any of their other cost categories.[77]

Q. HAVE YOU QUANTITATIVELY ASSESSED THE HISTORIC CORRELATION BETWEEN INCREASES IN COMPANY DISTRIBUTION MAINS INVESTMENT AND INCREASED NUMBER OF CUSTOMERS?

A. Yes. Exhibit MWD-4 examines trends between changes in average number of customers on the Company's system and the Company's net investment in distribution mains for the years 2016 through 2025. This analysis finds that annual net additions in the Company's distribution mains are not correlated with annual changes in the Company's customer counts, nor is the annual growth rate of the Company's booked distribution mains investment correlated with the annual growth rate of the Company's customers.

Q. IS THIS RESULT SURPRISING?

A. No. A significant portion of the Company's annual investment in distribution mains is associated with non-growth activities. For instance, the Company recovered $899,836 from ratepayers in 2025 through the Company's DSIC after reconciliation.[78] Importantly, the DSIC is restricted by statue to costs "incurred to repair, improve or replace eligible property in order to ensure and maintain adequate, efficient, safe, reliable and reasonable service," and not growth related activities like interconnecting new customers to the Company's system. Overall, the premise that changes in the Company's customer count are a significant driver of distribution mains investment is outdated and unsupported by empirical evidence.

[77] James C. Bonbright, *et al.* Principles of Public Utility Rates. 1988 Edition. Arlington, VA: Public Utilities Reports, Inc., pp. 491-492; *emphasis added.*

[78] DSIC 1307(e) reconciliation statement for the year ending December 31, 2025.

Q. DO YOU HAVE OTHER CONCERNS RELATED TO THE COMPANY'S COST ALLOCATION METHODOLOGY FOR COSTS ASSOCIATED WITH DISTRIBUTION MAINS?

A. Yes. In addition to relying on a flawed MSS to estimate a portion of costs associated with the Company's distribution mains, the Company also proposes to allocate 100 percent of costs associated with its demand-related distribution mains investments based on the relative customer class contribution to system peak day demands.

Q. PLEASE EXPLAIN THE P&A COST ALLOCATION METHODOLOGY.

A. P&A is a composite demand and commodity allocation factor similar to the Average and Excess (A&E) cost allocation approach.[79] The P&A cost allocation methodology is based upon a two-component weighted average. The first component represents each rate class's share of a utility's system peak day demand, and the second represents each rate classes share of a utility's total annual throughput.[80] The exact weights used in a P&A cost allocation approach vary, including a straight 50-50 weighting of demand and commodity components, often referred to as the "Seaboard" method.

Q. PLEASE EXPLAIN THE SEABOARD COST ALLOCATION METHOD.

A. The *Atlantic Seaboard* method, (or "*Seaboard"* method), is a specialized form of the P&A cost allocation approach that stems from a 1952 Federal Power Commission ("FPC," the predecessor agency to FERC) ruling establishing appropriate cost allocations for the Atlantic

[79] Gas Distribution Rate Design Manual (June 1989), National Association of Regulatory Utility Commissioners, pp. 27-28.

[80] Gas Distribution Rate Design Manual (June 1989), National Association of Regulatory Utility Commissioners, pp. 27-28.

Seaboard natural gas pipeline.[81] In its ruling, the FPC explicitly addressed the fact that natural gas pipeline facilities are built to supply both peak and non-peak service, and thus perform both a demand and commodity function, and expressed particular concern that an over-assignment of pipeline costs (particularly transmission plant costs) to the demand or capacity function would result in an under-allocation of costs to large volume industrial customers on interruptible rates.[82]

> A natural-gas transmission facility performs both a capacity and a volumetric function. In this sense it is a joint facility, which thus presents the problem, always difficult, of allocating joint costs.
>
> … A pipeline would not normally be built to supply peak service, that is to say, service on the peak days only… pipelines are built to supply service not only on the few peak days but on all days throughout the year… Both capacity and annual use are important considerations in the conception of the project ... Both capacity and volume, therefore, are what are known as cost factors or incidences in respect to the capital outlay for a pipeline project. It follows that reasonably accurate results can be achieved only by allocating the fixed expenses flowing from the capital outlay to both operating functions, viz., capacity and volume.[83]

Q. IS THE COMPANY WITNESS' PROPOSED ALLOCATION OF DISTRIBUTION MAINS CONSISTENT WITH HIS RECOMMENDED COST ALLOCATIONS IN OTHER PROCEEDINGS IN PENNSYLVANIA?

A. No. The Commission should recognize that the Company's expert witness is also supporting the ACOSS for UGI Utilities' Gas Division ("UGI-Gas") in Docket No. R-2025-

[81] Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

[82] *Id.*

[83] Conkling R.L. (2011), "Energy Pricing: Economics and Principles," pp. 96-97, citing Re Atlantic Seaboard Corporation and Virginia Gas Transmission Corporation, Federal Power Commission Docket No. 11. F.P.C. 43.

3059523.[84] In that proceeding, the Company's expert witness recommends use of an A&E cost allocation methodology to allocate costs associated with UGI-Gas' distribution gas mains.

Q. PLEASE DESCRIBE THE A&E COST ALLOCATION METHODOLOGY.

A. Conceptually, A&E cost allocation methods involve developing two components that are combined by the use of a weighted average.[85] The first component, referred to as the "average" component, represents each rate class's average hourly energy consumption throughout the test year, and is calculated by simply dividing annual energy consumption for each rate class by 365 days in the year. The second component, referred to as the "excess" component, represents each class's contribution to system peak demand in excess of the class's average daily consumption. These components are combined through the use of a weighted average based on overall system load factor. Specifically, the average component is weighted by the utility's overall system load factor, while the excess component is weighted by the inverse of the system load factor (*i.e.*, 1 minus the system load factor).

Q. IS A P&A METHODOLOGY CONCEPTUALLY SIMILAR TO AN A&E METHODOLOGY?

A. Yes. The P&A methodology is similar to the A&E methodology that can also be utilized for classifying distribution mains. Conceptually, both methods involve developing a volumetric and demand component that are then combined by use of a weighted average. In other words, both methodologies are intended to be hybrid energy and demand allocators.

[84] Docket No. R-2025-3059523, Statement No. 11, Direct Testimony of John D. Taylor.

[85] *See*, Electric Utility Cost Allocation Manual (January 1992), National Association of Regulatory Utility Commissioners ("NARUC") at 49-51.

Q. PLEASE EXPLAIN THE DIFFERENCE BETWEEN A P&A METHODOLOGY AND AN A&E METHODOLOGY.

A. Although the P&A and A&E methodologies are conceptually similar, in practice, an A&E methodology places greater weight on a rate class's demand contribution and less weight on a rate class's annual energy usage than does a P&A methodology. This occurs because an A&E methodology values a class's peak demand, the "excess" component, relative to its average demand, thereby exaggerating the effect of a class's load factor on the relative classification of energy and peak demand elements.

Q. HAVE OTHER COMMISSIONS ACROSS THE COUNTRY CRITICIZED MSS APPROACH?

A. Yes. The Iowa State Commerce Commission (now known as the Iowa Utilities Board or "IUB") in a 1984 decision rejected a proposed MSS approach by a natural gas utility as "improper and unacceptable,"[86] to functionalize any portion of costs associated with distribution mains as customer-related.[87]

> Distribution mains are not customer-related costs; no part of distribution costs should be allocated to customer-related costs; and the use of a minimum system study to allocate distribution costs to customer-related costs is therefore improper and unacceptable.[88]

Q. WHAT WAS THE BASIS FOR THE IUB'S DECISION?

A. The IUB reviewed a prior decision it had made in a 1981 proceeding, which was highly critical of an MSS approach on both practical and theoretical grounds. Specifically, the IUB noted

---

[86] *In Re: Peoples Natural Gas Company, Division of InterNorth Inc.,* Iowa State Commerce Commission Docket No. RPU-84-42, Proposed Decision and Order (June 6, 1985) at 48.

[87] *Id.*

[88] *Id.*

that in a true "minimum system" circumstance, there would be no need for a distribution system at all as there would be no need to supply energy to customers.[89] While admitting that its prior decision referred to a proceeding involving an electric distribution system, the IUB felt the positions expressed were equally applicable to natural gas companies as follows:[90]

> We believe that this minimum system analysis ignores the fact that if no customer were ever to use electric power or energy, there would be no need for a distribution system at all. Thus, the existence of any distribution system, including the Company's proposed minimum system, is justified not by the fact that the Company has customers which it must meter and bill, but rather because Company's customers demand that the system provide electric power and electric energy.
>
> In our opinion, **there is no logical justification for contending that the minimum distribution system cost is customer related**, while conceding that the remaining distribution costs are demand related. The explanation offered by Company – that such a minimum system is necessary to supply "service" to customers (where service is defined as the availability of power and energy whether or not used, with the expectation that customers will not use any power or energy) – ignores the real reason for the existence of the distribution system. That system exists for the sole purpose of supplying power and energy to customers. The Commission sees no reasonable justification for hypothesizing the existence of a distribution system whose purpose is to make power and energy available to customers who are assumed not to want power or energy, and which is not capable of carrying power or energy to those customers should they actually desire to make use of the service. For that reason we reject the inclusion of minimum distribution system costs in Company's proposed customer charge.[91]

[89] *Id.*, at 39-40; citing *In Re: Iowa Power and Light Company,* Iowa State Commerce Commission Docket No. RPU-78-27.

[90] *Id.*, at 39.

[91] *Id.*; citing *In Re: Iowa Power and Light Company,* Iowa State Commerce Commission Docket No. RPU-78-27, emphasis in original.

Q. HAS THE COMMISSION ITSELF RECENTLY WEIGHED IN ON THE VALIDITY OF CLASSIFYING A PORTION OF COSTS ASSOCIATED WITH DISTRIBUTION MAINS AS CUSTOMER-RELATED?

A. Yes. In its recent Columbia decision the Commission adopted a P&A cost allocation method to classify and allocate costs associated with natural gas distribution mains.[92] In reaching its decision, the Commission directly addressed the position that a portion of these costs could be classified as customer-related based on an analysis of a hypothetical minimum system, reaching much the same position as that elaborated by the IUB in the 1980s.

> In light of the above, we remain of the opinion that although mains serve customers, it is the throughput that determines the type of main investment because it is the load that determines the main investment, not the number of customers served. As the Commission stated in Columbia Gas 2021, the existence of one customer, five customers, or ten customers does not determine the amount of mains investment. Mains investment is driven by the loads placed upon it, not by the number of customers served.[93]

D. ACOSS Recommendations

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF MSS?

A. I recommend the Commission reject the Company's proposed MSS approach. MSS approaches that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A

[92] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, Opinion and Order at 255.

[93] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, Opinion and Order at 255, *emphasis added*.

cost allocation method using weights based on the Company's test year system load factor. These recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. HAVE YOU PREPARED AN ALTERNATIVE ACOSS INCORPORATING YOUR PROPOSED CHANGES TO THE COMPANY'S ACOSS?

A. Yes. Exhibit MWD-5 presents the results of my alternative ACOSS which utilizes a P&A approach to allocate distribution-related costs and removes the Company's reliance on the MSS to classify distribution mains as customer-related. This alternative study shows that the Company will earn a 6.75 percent rate of return on rate base from the residential service class, or 1.12 on a RROR basis, during the FPFTY using current rates. This is compared to the results of the Company's proposed ACOSS which finds that its residential service class will earn a 5.76 percent return on rate base, or 0.96 on a RROR basis, during the FPFTY under current rates.

VII. REVENUE APPORTIONMENT

Q. PLEASE EXPLAIN THE PURPOSE OF THE REVENUE APPORTIONMENT PROCESS IN SETTING RATES.

A. The revenue distribution process allocates a utility's overall revenue deficiency across customer classes, which in turn, is used to establish a new set of retail rates. The revenue distribution process often uses the results from the ACOSS as its starting point, but not necessarily as its ending point. Class-specific revenue responsibilities are established by allocating the system-wide revenue deficiency to classes that are under-earning, relative to their estimated rate of return ("ROR"), and assigning, at least in theory, revenue decreases to those classes that are over-earning relative to their ACOSS-estimated class returns. The final class revenue responsibilities are then

used, in conjunction with each class's billing determinants, to determine rates. In summary, the revenue distribution process can be viewed as the initial step taken in establishing rates.

Q. DOES THE REVENUE APPORTIONMENT PROCESS INCLUDE ANY POLICY CONSIDERATIONS?

A. Yes. Allocating the overall system-wide revenue deficiency entirely on a full cost of service basis can result in a very significant and adverse rate impact for certain under-earning classes. To avoid such a result, regulators often temper the revenue responsibilities assigned to various customer classes in order to meet a set of broad ratemaking policy goals.

Q. WHAT ARE THOSE BROADER RATEMAKING POLICY GOALS?

A. There are several generally accepted ratemaking principles used in utility regulation that include:

1) Rates should be fair, just, and reasonable, and not unduly discriminatory.
2) To the extent possible, gradualism should be used to protect customers from rate shock.
3) Rate continuity should be maintained.
4) Rates should be informed by costs, but class cost of service results need not be the only factor used in rate development.
5) Rates should be understandable to customers.[94]

Q. HOW ARE THE ABOVE PRINCIPLES APPLIED IN DEVELOPING RATES FOR A REGULATED UTILITY?

A. It is important to consider all the principles I mentioned above. However, any principle's relative weight can change depending on the importance of certain policy goals. Rate design should strike a balance between policy goals and principles that result in rates that are fair, just, and

[94] Author's construct based on Bonbright, James *et. al., Principles of Public Utility Rates,* Pub. Utils. R., Inc., Second Edition, at 383.

reasonable. There is no pre-set or universally accepted formula for developing rates and, as a result, sound judgment is necessary to formulate a rate design that meets these objectives.

Q. WHAT ARE THE COMPANY'S RATE DESIGN GOALS?

A. The Company states that its rate design goals are guided by the principles of sound rate structure developed by James Bonbright, including fairness, efficiency, simplicity, stability and gradualism, reflectiveness of costs, and revenue sufficiency.[95] Additionally, the Company states that its proposed fixed monthly customer charges help to reduce customer bill volatility, alleviate instability in the Company's margin recovery, convey more appropriate price signals with respect to recovery of fixed utility costs, benefit low-income customers that have higher than average use, and are not regressive in application to low-income customers.[96]

Q. HAVE YOU EXAMINED THE COMPANY'S PROPOSED REVENUE ALLOCATION?

A. Yes. Exhibit MWD-6 summarizes the Company's proposed revenue allocation. The Company's approach is informed by the results of its ACOSS and reflects an effort to move all rate classes closer to the overall system rate of return.[97] First, the Company sets Large General and Mainline Service's proposed revenue at their current levels. Second, the Company caps the increase for the Small General class at 1.5 times the overall system increase. Third, the Company targets the increase for Residential and Medium General to their cost of service, and then allocates the remaining required increase between those two classes based on relative targets, resulting in Residential's increase at 1.05 times the system average increase and Medium General's increase

[95] Direct Testimony of John D. Taylor, Company St. 17 at 29:17-30:13.

[96] Direct Testimony of John D. Taylor, Company St. 17 at 36:4-10.

[97] Direct Testimony of John D. Taylor, Company St. 17 at 31:10-12.

at 1.25 times the system average increase.[98] The Company proposes these increases in order to move rates closer to a cost parity ratio of 1.0.

Q. WHAT DO YOU MEAN BY A COST PARITY RATIO?

A. Cost parity and relative cost parity ratios are a means to standardize class-specific rate of return estimated by an ACOSS, similar to the commonly cited relative rate of return ("RROR") metric. As part of the ACOSS process, a ratio of total assigned revenue to total assigned costs is calculated for each customer class and the utility system as a whole. A cost parity ratio standardizes these various class revenue-to-cost ratios against the overall utility system revenue-to-cost ratio. For instance, assume that residential class revenues cover 80 percent of residential class costs through the ACOSS, and further assume that, system-wide, utility revenues also cover 80 percent of utility costs. In this example, the residential class has a relative cost parity ratio of 1.0 as it covers the same percentage of utility costs as the utility as a whole covers (i.e., 80 percent divided by 80 percent equals 1.0). A relative cost parity ratio greater than 1.0 indicates that a particular class covers a greater percentage of utility costs than other classes, while a relative cost parity ratio less than 1.0 indicates that a particular class is covering a lesser percentage of utility costs than other classes.

Q. DO YOU AGREE THAT A RELATIVE COST PARITY RATIO LESS THAN 1.0 IS PROBLEMATIC OR INEQUITABLE?

A. Not necessarily. Consistent with the principles identified above, there may be policy reasons to support a result that does not lead to an inequitable cross-subsidization. For example, the presence and/or continuation of a relative cost parity ratio below 1.0 could be the result of a prior agreed-upon rate freeze that prevents class rates from increasing to correct the revenue

[98] Direct Testimony of John D. Taylor, Company St. 17 at 32:5-12.

deficiency (relative to cost of service). In this example, the presence of a relative cost parity ratio below 1.0 is simply a function of a prior policy decision, not necessarily the result of some arbitrary or intentionally designed inequity.

Q. WHAT ARE THE CLASS RATE INCREASES UNDER THE COMPANY'S PROPOSED REVENUE DISTRIBUTION?

A. The Company proposes to increase base rates by 26.1 percent on a system-wide average basis. However, under the Company's proposed mitigated revenue distribution, small general service customers would all receive a base rate increase equal to 1.50 times this system-wide average rate increase, or 39.1 percent. This, compared to large general and mainline service customers which would not receive a base rate increase as a result of this proceeding.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. No. The Company's proposed revenue allocations suffer from two major deficiencies. First, the Company's proposal is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large general service customers while understating the rate of return the Company derives from its residential and small general service customers. Second, the Company's proposed revenue apportionment process results in rate increases that are inconsistent with rate gradualism. Specifically, rate gradualism refers to the general understanding that sound rate design should prevent significant rate increases for any customer group that may cause rate shock.[99]

[99] *See,* "3.1 Just and Reasonable Rates and Affordability," The NARUC Desk Reference Manual, National Association of Regulatory Utility Commissioners,

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the proposed rate increase to any single customer class to no more than 1.15 times the system average increase. Second, I recommend that no class receive a rate increase less than 0.50 times the system average increase.

Q. HAVE YOU PREPARED A SUMMARY OF THE EFFECTS OF YOUR PROPOSED REVENUE APPORTIONMENT?

A. Yes. Exhibit MWD-7 presents an illustrative summary of the effects of my proposed revenue apportionment under the Company's proposed system average rate increase of 26.09 percent. My proposed revenue apportionment would increase base rates for the residential class by 26.68 percent, compared to the Company's proposal which would increase such rates by 27.39 percent, and would also limit the increase in base rates for the small general service customer class to 30.01 percent, compared to the Company's proposed increase of 39.14 percent.

VIII. RATE DESIGN

Q. HOW ARE NATURAL GAS RATES TYPICALLY DESIGNED?

A. Natural gas utility rates are typically comprised of three elements. The first component is the fixed monthly customer charge or what is sometimes referred to as the basic service charge. The second is the energy-based component that is a volumetric rate applied toward a customer's monthly energy usage during a billing period, often measured in terms of therms or dekatherms (Dth). Finally, demand rates are surcharges that are assessed based upon a customer's maximum

usage during a billing period. Some smaller use customer classes, such as residential and small general services classes, are not demand-metered and thus, only face customer and volumetric charges in what is commonly called a "two-part tariff." Larger, demand metered, customers face a "three-part tariff" which includes a customer, volumetric, and demand charge. A "multi-part tariff" is a term often used to generalize a set of rates that have various combinations of both fixed (customer charge) and variable charges (energy and/or demand charges).

Q. HOW SHOULD POLICY BALANCE COST ASSIGNMENTS BETWEEN FIXED CUSTOMER CHARGES AND VOLUMETRIC RATES?

A. Modern utility pricing theory is primarily concerned with the development of optimal tariff design, which over the years has become dominated by the two-part and three-part tariff form that is sometimes referred to more technically as a non-linear (or non-uniform) pricing approach. Once a class revenue requirement is established, the goal for regulators should be one that sets the most appropriate rates based upon various efficiency and equity considerations. Balancing the weight of how costs are recovered between fixed rates, variable rates, block rates, and seasonal rates are all integrated parts of that process.

Q. WHAT IS THE APPROPRIATE ROLE OF COSTS IN SETTING RATES FOR A MULTI-PART TARIFF?

A. Costs can be instructive in establishing a baseline upon which prices may be set, but costs do not need to serve as the sole or exclusive basis for rates in order for them to be set optimally (i.e., fixed charges do not need to strictly equal fixed costs, variable rates need not strictly equal variable costs). Unfortunately, the "fixed charge-equals-fixed costs" philosophy gets repeated so often that it can drown out meaningful discussions about other equally important considerations in setting rates in imperfect markets. In fact, appropriate rate setting in the context of a multi-part

tariff typically has more to do with consumer demand than it does with cost in a natural gas context given the capital-intensive nature of public utilities.

Q. DOES THE RATE DESIGN PROCESS HAVE ANY GOALS?

A. Yes. The development of utility rates, or "rate design" often has a few goals. For example, rates are sometimes designed to send certain price signals to consumers in order to influence their usage decisions.[100] Sometimes, rate design becomes a balancing act since rates must be designed to be both supply-eliciting (i.e., assist utilities in the financing of capital investments) and demand-inhibiting (i.e., inhibit the growth in demand that generates the need for capital investments).[101]

Table 3: Summary of Company's Proposed Customer Charges

Rate Class	Current --------- $/month	Proposed ---------	Increase
Residential Sales	$ 16.80	$ 26.00	54.8%
Small General Service (SGS)			
0 to 499 MCF/Yr	$ 22.00	$ 32.14	46.1%
500 to 999 MCF/Yr	$ 44.00	$ 64.28	46.1%
Medium General Service (MGS)			
1,000 to 2,499 MCF/Yr	$ 101.00	$ 110.00	8.9%
2,500 to 24,999 MCF/Yr	$ 145.00	$ 158.00	9.0%
Large General Service (LGS)			
25,000 to 49,999 MCF/Yr	$ 940.00	$ 987.00	5.0%
50,000 to 99,999 MCF/Yr	$ 1,465.00	$ 1,538.00	5.0%
100,000 to 199,999 MCF/Yr	$ 2,130.00	$ 2,237.00	5.0%
Over 200,000 MCF/Yr	$ 5,630.00	$ 5,912.00	5.0%
Mainline Service (MLS)			
Over 500,000 MCF/Yr	$ 5,630.00	$ 5,912.00	5.0%

Q. PLEASE PROVIDE AN OVERVIEW OF THE COMPANY'S BASIC SERVICE CHARGE PROPOSAL.

[100] Bonbright, James *et. al., Principles of Public Utility Rates,* Pub. Utils. R., Inc., Second Edition, at 96–97.

[101] *Id.*

A. The Company proposes to increase monthly basic service charges by up to 54.8 percent. This includes a residential service schedule with a basic service charge increase of 54.8 percent. This results in a proposed increase in basic charge of $9.20 per month, from the current $16.80 to a proposed $26.00 per month.[102]

Q. WHAT IS THE BASIS OF THE COMPANY'S PROPOSED RESIDENTIAL BASIC SERVICE CHARGE INCREASE?

A. The Company claims the basis of its proposed residential basic service charge increase is that its continuing investment in infrastructure, primarily due to its Long Term Infrastructure Improvement Plan, or LTIIP, is driving the need for a base rate increase, as the DSIC mechanism currently funds only a portion of its infrastructure program between rate proceedings and will cease once new rates are granted, and without a base rate increase, Peoples' revenues would be inadequate to cover its costs to provide service and to offer an opportunity to earn a fair rate of return on its investment.[103]

Q. WHAT IS THE COMPANY'S LTIIP?

A. Act 11 of 2012 provides jurisdictional water and wastewater utilities, electric distribution utilities, and natural gas distribution companies or a city natural gas distribution operation with the ability to implement a DSIC.[104] However, a precondition to implementation of a DSIC is that a utility must file a LTIIP with the Commission.[105] The Company filed its third and most recent LTIIP with the Commission on August 29, 2025, which was subsequently approved by the

[105] 66 Pa. C.S. § 1352.

Commission on December 18, 2025.[106] The Company's LTIIP is a five-year plan spanning the years 2026 through 2030 which includes over $3 billion in capital investments to replace approximately 930 miles of targeted mains and other infrastructure.[107]

Q. HAVE YOU PREPARED AN ANALYSIS OF COSTS COMMONLY ASSOCIATED WITH BASIC SERVICE CHARGES?

A. Yes. Exhibit MWD-8 presents an analysis of current basic service charges with the Company's customer-related expenses. "Customer-related" expense accounts for natural gas utilities are those typically allocated on the basis of customers and can include: removing and setting meters; maintenance of meters; meter reading expenses; customer records and collections; customer billing and accounts; and customer service and information expenses. These costs can also include the depreciation expense associated with service and meter plant accounts, as well as the carrying charges (at the Company's requested rate of return) on these plant accounts.

Q. HOW DO THE COMPANY'S CUSTOMER CHARGE REVENUES COMPARE WITH THE RESULTS OF YOUR ANALYSIS?

A. The Company's current customer charge revenue associated with the residential class is 75.6 percent of the class's customer-related cost responsibilities. Likewise, the Company's current customer charge revenue associated with the small general service class is 62.1 percent of the class's customer-related cost responsibilities.

Q. DO THESE RESULTS INDICATE ANY PRESSING NEED TO INCREASE MONTHLY CUSTOMER CHARGE RATES?

---

[106] *Petition of Peoples Natural Gas Company, LLC for Approval of its Third Long-Term Infrastructure Improvement Plan,* Docket No. P-2025-3057167, Opinion and Order at 1-2.

[107] *Petition of Peoples Natural Gas Company, LLC for Approval of its Third Long-Term Infrastructure Improvement Plan,* Docket No. P-2025-3057167, Opinion and Order at 5-6.

A. No. All People's residential and commercial service rate classes currently cover the majority of their customer-related costs through monthly customer charges. The lowest, the residential class, still recovers nearly 76 percent of its customer-related costs through its monthly customer charge.

Table 4: Survey of Regional Customer Charges

Company	State	Residential Customer Charge ($/month)	Small Commercial Customer Charge ($/month)
Peoples Natural Gas Company LLC	**PA**	**$ 16.80**	**$ 22.00**

Peer Group Average		**$ 17.22**	**$ 38.28**

Source: Utility Tariffs.

Q. HAVE YOU COMPARED THE COMPANY'S CURRENT AND PROPOSED RESIDENTIAL CUSTOMER CHARGE WITH OTHER REGIONAL PEER UTILITIES?

A. Yes. The Company's proposed residential customer charge of $26.00 would be well above the mid-Atlantic regional average of $17.22 per month charged by other investor-owned natural gas utilities. Indeed, the Company's proposed residential customer charge of $26.00 per month would be the second-highest residential customer charge in the region.

Q. ARE HIGHER BASIC SERVICE CHARGES CONSISTENT WITH THE PROMOTION OF ENERGY EFFICIENCY AND CONSERVATION?

A. No. The Company's proposal is inconsistent with the promotion of energy efficiency and conservation in Pennsylvania for the simple reason that it places more costs into the fixed component of rates than in the variable component. This reduces economic incentives for ratepayers to control monthly utility bills through energy efficiency and conservation efforts, because only the variable component of bills is avoidable.

Q. HAVE OTHER COMMISSIONS RECOGNIZED THE DETRIMENTAL EFFECT INCREASED FIXED CHARGES HAVE ON ENERGY EFFICIENCY?

A. Yes. In rejecting a request by Baltimore Gas and Electric to increase customer charges as part of a larger rate design proposal, the Maryland Public Service Commission (MPSC) recognized the need to allow customers the opportunity to control their monthly bills by reducing energy usage.

> Even though this issue was virtually uncontested by the parties, we find we must reject Staff's proposal to increase the fixed customer charge from $7.50 to $8.36. Based on the reasoning that ratepayers should be offered the opportunity to control their monthly bills to some degree by controlling their energy usage, we instead adopt the Company's proposal to achieve the entire revenue requirement increase through volumetric and demand charges. This approach also is consistent with and supports our EmPOWER Maryland goals.[108]

Q. CAN YOU POINT TO ANY OTHER REGULATORY EXAMPLES?

A. Yes. The Montana Public Service Commission ("MT PSC") addressed this issue in evaluating, and rejecting, a proposal by Energy West Montana to eliminate volumetric charges and

[108] Maryland Public Service Commission Case No. 9299*, In re of Baltimore Gas and Electric Company for Adjustment in its Electric and Gas Base Rates*, Order No. 85374 at 99 (Md. Pub. Serv. Comm'n, Feb. 22, 2013).

only have one fixed monthly customer charge (known as a "straight-fixed variable" or "SFV" rate design):

> The Commission agrees that most distribution costs are not avoidable, and that volumetric distribution charges may encourage conservation actions that, all other things being equal, reduce the utility's embedded cost recovery between rate cases and contribute to future rate increases.
> …
> The Commission agrees that an SFV rate design is a clean and administratively inexpensive way to decouple revenue from volume. An often-cited public policy justification for revenue decoupling is to remove the volume disincentive for cost-effective conservation investment by a gas distribution company, which through SFV and other decoupling methods is rendered indifferent to the volume of gas consumed. Yet, SFV rates decouple revenue at the cost of decreasing returns to conservation investment by customers. For this reason the net conservation benefit of revenue decoupling via SFV rates is not clear, and may be negative.[109]

Q. HAVE ANY REGULATORY RESEARCH INSTITUTES ADDRESSED THE ISSUE OF THE RELATIONSHIP BETWEEN HIGH CUSTOMER CHARGES AND ENERGY EFFICIENCY?

A. Yes. A research document presented for consideration by the membership of NARUC lists Straight-Fixed Variable (SFV) rate design as an alternative to delink utility revenue from sales. An SFV attaches all fixed-related costs to fixed charges while relegating only variable charges to volumetric rates. The NARUC research noted this type of rate design was problematic because of its effects on customer incentives to conserve energy:

> **Straight-Fixed Variable Rate Design.** This mechanism eliminates all variable distribution charges and costs are recovered through a fixed delivery services charge or an increase in the fixed customer charge alone. With this approach, it is assumed that a utility's

[109] In The Matter Of Energy West Montana, Application To Establish Increased Service Rates In Its Great Falls, Cascade, And West Yellowstone Service Areas, Montana Public Service Commission, Docket No. D2010.9.90, Order No, 7132c, at 29–30, rel. November 17, 2011.

> revenues would be unaffected by changes in sales levels if all its overhead or fixed costs are recovered in the fixed portion of customers' bills. This approach has been criticized for having the unintended effect of reducing customers' incentive to use less electricity or gas by eliminating their volumetric charges and billing a fixed monthly rate, regardless of how much customers consume.[110]

Q. HAS ANY NATIONAL PUBLIC POLICY ANALYSIS NOTED THE EFFICIENCY DISINCENTIVES ASSOCIATED WITH HIGHER CUSTOMER CHARGES?

A. Yes. The National Action Plan for Energy Efficiency (NAPEE), a joint venture of the U.S. Department of Energy and U.S. Environmental Protection Agency, published a whitepaper on various rate design effects on encouraging energy efficient behaviors. The NAPEE postulated that SFV had a detrimental effect on economic signals to encourage customers to change energy usage behavior and investments in energy efficiency devices, and specifically noted that such disincentives persist even when applied to individual components of a customer's utility bill, such as SFV for strictly distribution services:

> Because [SFV] tends to shift costs out of volumetric charges, it tends to reduce customers' efficiency incentive, because the marginal price of additional consumption is reduced. While SFV rates are being considered to better reflect the utility's costs behind the rate, these rates do not encourage customers to change energy usage behavior or invest in efficiency technologies. Such customer disincentives persist even when SFV rates are applied to individual components of the bill, such as charges for distribution service.[111]

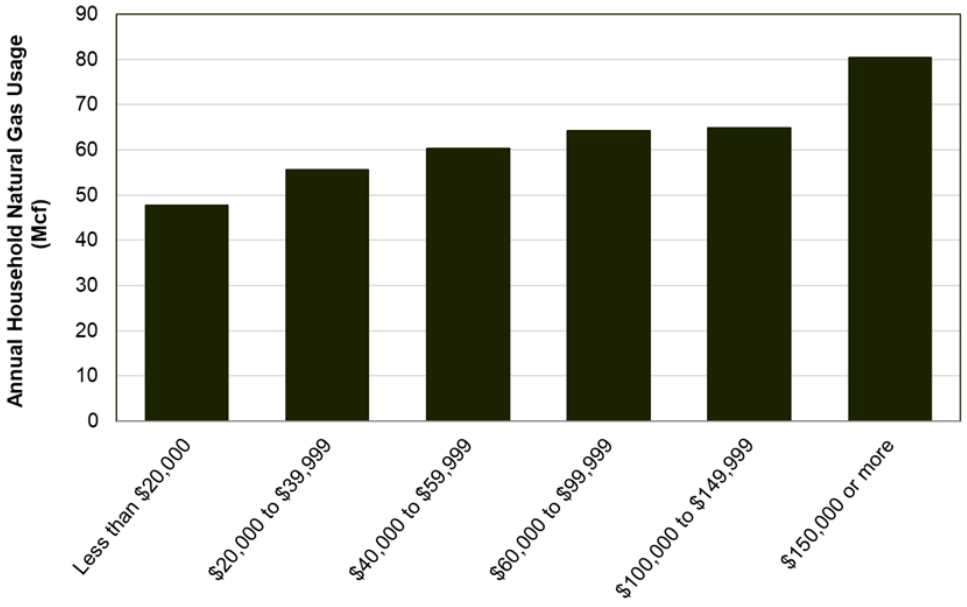
[111] National Action Plan for Energy Efficiency, *Customer Incentives for Energy Efficiency Through Electric and Natural Gas Rate Design* at 13–14, prepared by William Prindle, ICF International, Inc. (Sept.2009) (emphasis added), available at https://www.epa.gov/sites/production/files/2015-08/documents/rate_design.pdf.

Q. SHOULD THE COMMISSION BE MINDFUL OF THE EFFECT OF THE COMPANY'S PROPOSED RATE DESIGN ON LOW-USE RESIDENTIAL CUSTOMERS?

A. Yes. There are numerous studies in the academic literature supporting the hypothesis that natural gas is a "normal good."[112] That is, the consumption of natural gas is directly correlated with household income level, meaning that higher-use natural gas customers are typically higher income individuals and lower-use natural gas customers are typically lower income individuals. These are important factual considerations the Commission should bear in mind.

Figure 5: Analysis of Natural Gas Usage and Household Income



Source: EIA 2020 Residential Energy Consumption Survey

[112] *See*, Alberini, A., W. Gans, D. Velez-Lopez. 2011, "Residential consumption of gas and electricity in the U.S.: The role of prices and income," Energy Economics 33, 870-881; Dax, P. 1987, "Estimation of Income Elasticity from Cross-Section Data," Applied Economics 19 (11), 1471-1482; and Swan L.G., V. I. Ugursan, 2009, "Modeling of end-use energy consumption in the residential sector: A review of modeling techniques," Renewable and Sustainable Energy Reviews 13, 1819-1835.

Q. HAVE YOU CONDUCTED ANY ANALYSES EXAMINING THE RELATIONSHIP OF NATURAL GAS USAGE AND INCOME?

A. Yes. Figure 5 provides the results of an analysis I performed using data from the 2020 Residential Energy Consumption Survey ("RECS") produced by the United States Energy Information Administration ("EIA") and household data from the Census division in which Pennsylvania is located.[113] The results show a positive relationship between natural gas consumption (in Mcf terms) and income. This clearly shows that as income increases, natural gas consumption increases, and vice versa: as income decreases, natural gas usage decreases.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential and commercial rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

IX. CONCLUSION AND RECOMMENDATIONS

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

[113] This census division also includes the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. This is the most detailed level of aggregation available in the RECS.

A. I recommend the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns besides looking at potential additional concerns placed on them due to fallout from the conflict in the Persian Gulf. This while the Company has seen stable stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. I have been advised by counsel that the OCA will argue in their legal briefs that the Commission should not grant Peoples any increase in this proceeding due to the substantial affordability concerns that consumers are facing.

Q. WHAT IS YOUR OVERALL RECOMMENDATION REGARDING REGULATORY LAG?

A. The Company has not demonstrated that the existing regulatory framework in Pennsylvania is failing to support timely and adequate cost recovery. Rather, the evidence suggests that regulatory lag is already being effectively managed. The Commission should reaffirm the value of regulatory lag as a structural feature of traditional ratemaking and recognize that further erosion of this principle is neither necessary nor justified in this case.

Q. WHAT IS YOUR POSITION ON THE CONTINUATION OF THE COMPANY'S WNA?

A. I recommend that the Commission affirmatively discontinue the current WNA mechanism. The WNA is also not required to address regulatory lag concerns of the Company given the Company's use of a FPFTY and DSIC.

Q. DO YOU HAVE ANY ALTERNATIVE PROPOSAL IF THE COMMISSION DECIDES TO CONTINUE THE WNA?

A. If the Commission decides to continue the WNA, I recommend that the Commission increase the deadband from three percent to five percent and eliminate the months of October and May from the WNA period. This would strengthen ratepayer protections and would furthermore make the Company's WNA pilot consistent with the recent WNA pilot the Commission approved for Columbia Gas.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE CLASSIFICATION OF DISTRIBUTION MAINS INVESTMENT AND THE USE OF ZERO INTERCEPT STUDY IN ITS ALLOCATED COST OF SERVICE STUDY?

A. I recommend the Commission reject the Company's proposed MSS approach. MSS and related zero-intercept studies that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor. These recommendations better reflect cost causation principles and provide a more reasonable basis for allocating costs among customer classes.

Q. WHAT IS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED REVENUE APPORTIONMENT?

A. I recommend the Commission adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the proposed rate increase to any single customer class to no more than 1.15 times the system

average increase. Second, I recommend that no class receive a rate increase less than 0.50 times the system average increase.

Q. WHAT ARE YOUR CUSTOMER CHARGE RECOMMENDATIONS AND CONCLUSIONS?

A. I recommend that the Commission reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes.

PUBLICATIONS AND REPORTS

1. The challenges of the regulatory review of diversification mergers. With Dr. David E. Dismukes. *The Electricity Journal* 29 (2016) 8-14. (May 2016)

PROFESSIONAL AND CIVIC PRESENTATIONS

1. "Status and Future of Natural Gas Supply and Infrastructure" (2026). Prepared for the Michigan State University, Institute of Public Utilities (IPU) Grid School. April 14, 2026.

2. "Natural Gas Distribution" (2025). Prepared for the Louisiana State University, Center for Energy Studies, Energy Fundamentals 2025. June 24 and July 8, 2025.

3. "Development Trends, Issues, and Challenges with Clean Hydrogen Production" (2025). Prepared for the Michigan State University, Institute of Public Utilities, Annual Regulatory Studies Program. April 15, 2025.

4. "Status and Future of Natural Gas Supply and Infrastructure" (2025). Prepared for the Michigan State University, Institute of Public Utilities, Annual Regulatory Studies Program. April 8, 2025.

5. "Observed Impact of Formula Rate Plans Across the United States" (2024). Prepared for Arizona Corporation Commission Formula Rate Plan Workshop. October 3, 2024.

EXPERT WITNESS, LEGISLATIVE, AND PUBLIC TESTIMONY; EXPERT REPORTS, RECOMMENDATIONS, AND AFFIDAVITS

1. Expert Testimony. Docket No. 25-064-U (2026). Before the Arkansas Public Service Commission. *In the Matter of the Application of Black Hills Energy Arkansas, Inc. for Approval of a General Change in Rates and Tariffs.* On Behalf of the Office of Arkansas Attorney General. Issues: Cost of Service, Rate Design.

2. Expert Testimony. D.P.U. 26-50 (2026). Before the Commonwealth of Massachusetts Department of Public Utilities. *Petition of Boston Gas Company, doing business as National Grid, pursuant to G.L. c. 164, § 94 and 220 CMR 5.00, for Approval of a General Increase in Base Distribution Rates for Gas Service and Performance-Based Ratemaking Plan.* On Behalf of the Massachusetts Office of the Attorney General. Issues: Alternative Regulation, Cost of Service, Rate Design.

3. Expert Testimony. Docket No. R-2025-3059428. (2026). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utilities Commission v. National Fuel Gas Distribution Company.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Macroeconomy, Alternative Regulation, Regulatory Lag, Cost of Service, Rate Design.

4. Expert Testimony. Docket No. R-2025-3059523. (2026). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utilities Commission v. UGI Utilities, Inc. – Gas Division.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Macroeconomy, Alternative Regulation, Regulatory Lag, Cost of Service, Rate Design.

5. Expert Testimony. Docket No. 2025-325-E. (2026). Before the Public Service Commission of South Carolina. *In the Matter of the Application of Dominion Energy South Carolina, Inc. for Authority to Adjust and Increase its Retail Electric Rates and Charges.* On Behalf of the South Carolina Department of Consumer Affairs. Issues: Cost of Service, Rate Design, Alternative Regulation.

6. Expert Testimony. Docket No. 2025.09.072. (2026). Before the Public Service Commission of the State of Montana. *In the Matter of the Application of Montana-Dakota Utilities Co. for Authority to Establish Increased Rates for Electric Service.* Of Behalf of the Montana Consumer Counsel. Issues: Cost Trackers, Cost of Service, Rate Design.

7. Expert Testimony. Case Nos. 25-0594-WW-AIR and 25-0595-WW-ATA. (2026). Before the Public Utilities Commission of Ohio. *In the Matter of the Application of Aqua Ohio, Inc. to Increase its Rates and Charges for its Waterworks Service.* On Behalf of the Staff of the Public Utilities Commission of Ohio Rates and Analysis Department, Regulatory Service Division. Issues: Cost of Service, Rate Design.

8. Expert Testimony. Case No. 25-0593-ST-AIR. (2026). Before the Public Utilities Commission of Ohio. *In the Matter of the Application of Aqua Ohio Wastewater, Inc. to Increase Rates for Sewer Service.* On Behalf of the Staff of the Public Utilities Commission of Ohio Rates and Analysis Department, Regulatory Service Division. Issues: Cost of Service, Rate Design.

9. Expert Testimony. Docket No. UG-250610. (2026). Before the Washington Utilities and Transportation Commission. *Washington Utilities and Transportation Commission v. Northwest Natural Gas Company.* On Behalf of the Washington State Office of the Attorney General Public Counsel Unit. Issues: Cost of Service, Rate Design.

10. Expert Testimony. D.P.U. 25-85. (2025). Before the Commonwealth of Massachusetts Department of Public Utilities. *Petition of Liberty Utilities (New England Natural Gas Company) Corp. d/b/a Liberty, pursuant to G.L. c. 164, § 94 and 220 CMR 5.00 for Approval of a General Increase in Base Distribution Rates for Gas Service and a Performance-Based Ratemaking Plan.* On Behalf of the Massachusetts Office of the Attorney General. Issues: Cost Benchmarking.

11. Expert Testimony. Docket No. 2025-172-E. (2025). Before the Public Service Commission of South Carolina. *In the Matter of: Application of Duke Energy Carolinas, LLC for Authority to Adjust and Increase its Electric Rates and Charges.* On Behalf of the South Carolina Department of Consumer Affairs. Issues: Cost of Service, Rate Design, Alternative Regulation.

12. Expert Testimony. Docket No. 2025-154-E. (2025). Before the Public Service Commission of South Carolina. *In the Matter of: Application of Duke Energy Progress, LLC for Authority to Adjust and Increase its Electric Rates and Charges.* On Behalf of the South Carolina Department of Consumer Affairs. Issues: Cost of Service, Rate Design, Alternative Regulation.

13. Expert Testimony. Cause No. 46258. (2025). Before the Indiana Utility Regulatory Commission. *Petition of Indianapolis Power & Light Company D/B/A AES Indiana ("AES Indiana") for Authority to Increase Rates and Charges for Electric Utility*

Service Through a Phase-In Rate Adjustment; and For Approval of Related Relief, Including (1) Revised Depreciation Rates, Including Cost of Removal Less Salvage and Updated Depreciation Expense; (2) Accounting Relief, Including Deferrals and Amortizations, (3) Inclusion of Capital Investment, (4) Rate Adjustment Mechanism Proposal, Including a New Propoerty Tax Rider, and (5) New Schedules of Rates, Rules and Regulations for Service. On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Cost of Service, Rate Design.

14. Expert Testimony. Docket Nos. R-2025-3055010, R-2025-3055011, and R-2025-3055012. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. The Pittsburgh Water and Sewer Authority d/b/a Pittsburgh Water.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Alternative Regulation, Regulatory Lag.

15. Expert Testimony. Docket No. G-04204A-24-0237. (2025). Before the Arizona Corporation Commission. *In the Matter of the Application of UNS Gas, Inc. for the Establishment of Just and Reasonable Rates and Charges Designed to Realize a Reasonable Rate of Return on the Fair Value of the Properties of UNS Gas, Inc. Devoted to its Operations Throughout the State of Arizona and for Related Approvals.* On Behalf of the Staff of the Arizona Corporation Commission. Issues: Cost of Service, Rate Design.

16. Expert Testimony. Docket No. R-2025-3054394. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Citizens' Electric Company of Lewisburg.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

17. Expert Testimony. Docket No. R-2025-3054393. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Valley Energy, Inc.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

18. Expert Testimony. Docket No. R-2025-3054392. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Wellsboro Electric Company.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Cost of Service, Rate Design.

19. Expert Testimony. Docket No. R-2025-3053499. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, Inc.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Decoupling, Regulatory Lag.

20. Expert Testimony. Cause No. 46120. (2025). Before the Indiana Utility Regulatory Commission. *Verified Petition of NIPSCO Generation LLC for Certain Determinations by the Commission with Respect to its Jurisdiction Over Petitioner's Activities as a Non-Retail Generator of Electric Power.* On Behalf of

the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

21. Expert Testimony. Case No. U-21859. (2025). Before the Michigan Public Service Commission. *In the matter of the application of Consumers Energy Company for Ex Parte Approval of Certain Amendments to Rate GPD.* On Behalf of the Michigan Attorney General. Issues: Rate Design, Large Data Center Loads.

22. Expert Testimony. Docket No. R-2025-3053112. (2025). Before the Pennsylvania Public Utilities Commission. *Pennsylvania Public Utility Commission v. Philadelphia Gas Works.* On Behalf of the Pennsylvania Office of Consumer Advocate. Issues: Decoupling, Regulatory Lag.

23. Expert Testimony. Docket No. E-01773A-24-0220. (2025). Before the Arizona Corporation Commission. *In the Matter of the Application of Arizona Electric Power Cooperative, In. for a Hearing to Determine the Fair Value of its Property for Ratemaking Purposes, to Fix a Just and Reasonable Return Thereon and To Approve Rates Designed to Develop Such Return.* On Behalf of Arizona Corporation Commission Staff. Issues: Cost of Service, Qualifying Facilities.

24. Expert Testimony. Case No. U-21816. (2025). Before the Michigan Public Service Commission. *In the matter of Consumer Energy Company's application for the regulatory reviews, revisions, determinations, and/or approvals necessary to fully comply with Public Act 295 of 2008, as amended by Public Act 235 of 2023.* On Behalf of the Attorney General. Issues: Capital Expense, Cost Recovery

25. Expert Testimony. Cause No. 46120. (2024). Before the Indiana Utility Regulatory Commission. *Petition of Northern Indiana Public Service Company LLC Pursuant to Ind. Code §§ 8-1-2-42.4, 8-1-2-61 and 8-1-2.5-6 for (1) Authority to Modify its Retail Rates and Charges for Electric Utility Service Through a Phase in of Rates; (2) Approval of New Schedules of Rates and Charges, General Rules and Regulations, and Riders (both Existing and New); (3) Approval of Revised Common and Electric Depreciation Rates Applicable to its Electric Plant in Service; (4) Approval of Necessary and Appropriate Accounting Relief, Including, but Limited to, Authority to Capitalize as Rate Base All Expenditures for Improvements to Petitioner's Information Technology Systems through the Design, Development, and Implementation of a Work and Asset Management ("WAM") Program, to the Extent Necessary; and (5) Approval of Alternative Regulatory Plans for the Partial Waiver of 170 IAC 4-1-16(f) and Proposed Remote Disconnection and Reconnection Process and, to the Extent Necessary, Implementation of a Low Income Program.* On Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Cost of Service, Rate Design.

26. Expert Testimony. Cause No. 46097. (2024). Before the Indiana Utility Regulatory Commission. *In the Matter of the Verified Petition of Indiana Michigan Power Company for Approval of Modifications to its Industrial Power Tariff – Tariff I.P.* On

Behalf of the Indiana Office of Utility Consumer Counselor. Issues: Rate Design, Large Data Center Loads.

27. Expert Report. Docket No. AHD-00000J-23-0273. (2024). Before the Arizona Corporation Commission. *In the Matter of the Application of the Arizona Corporation Commission's Exploration of Changes to the Up to 10% Annual Reduction in the Export Rate and the 10-Year Export Rate Effective Period Under the Resource Comparison Proxy Methodology Approved in the Value and Cost of Distributed Generation Docket (E-00000J-14-0023).* On Behalf of the Arizona Corporation Commission Staff. Issues: Value of Solar.

28. Expert Testimony. Case No. U-21585. (2024). Before the Michigan Public Service Commission. *In the Matter of the Application of Consumers Energy Company for Authority to Increase its Rates for the Generation and Distribution of Electricity and Other Relief.* On Behalf of the Attorney General. Issues: Capital Expenses.

29. Expert Report. *Review of LPSC Rules Regarding Distributed Generation: Report on Phase II of Rule-Making.* Docket No. R-33929. (2019). *In Re: Review of Policies Related to Customer-owned Solar Generation and Possible Modification of the Commission's Current Net Metering Rules.* On behalf of Louisiana Public Service Commission. Issues: Solar Net Metering.

30. Expert Report. *2011 Kansas Generation Planning Survey*. (2011). On behalf of the Kansas Corporation Commission Staff.

31. Expert Testimony. Docket No. 11-KCPE-581-PRE. (2011). Before the Kansas Corporation Commission. *In the Matter of the Petition of Kansas City Power & Light Company ("KCP&L") for Determination of the Ratemaking Principles and Treatment That Will Apply to the Recovery in Rates of the Costs to be Incurred by KCP&L for Certain Electric Generation Facilities Under K.S.A. 66-1239.* On Behalf of the Kansas Corporation Commission Staff. Issues: System Planning, Predetermination.

32. Expert Testimony. Docket No. 10-KCPE-795-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas City Power & Light Company for Approval to Implement a Portfolio of Demand Side Management Programs Including Affordability, Energy Efficiency, Demand Response and Educational Programs, and to Implement a Rider for Recovery of Program Costs and Incentives Associated with this Portfolio.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

33. Expert Testimony. Docket No. 10-WSEE-775-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Westar Energy, Inc. and Kansas Gas and Electric Company for an Order Authorizing them to participate in Efficiency Kansas, Approve the SimpleSavings Program Rider, and related cost recovery.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

34. Expert Testimony. Docket No. 10-BHCG-639-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Black Hills/Kansas Gas Utility Company, LLC, d/b/a Black Hills Energy for Approval to Implement Black Hills Energy's Five-Year Energy Efficiency Plan Consisting of Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate About Efficient Energy Usage, to Provide for Program Cost Recovery Through a Rider Mechanism, Permit the Implementation of a Revenue Normalization Mechanism to Replace the Weather Normalization Adjustment, a Performance Incentive Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

35. Expert Testimony. Docket No. 10-EPDE-497-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of the Empire District Electric Company for Approval to Implement its Portfolio of Energy Efficiency and Demand Response Programs for its Kansas Customers, to Provide for Program Cost Recovery and Lost Revenue Through a Rider Mechanism, to Obtain any Necessary Waivers for the Commission, and for Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

36. Expert Testimony. Docket No. 10-KGSG-421-TAR. (2010). Before the Kansas Corporation Commission. *In the Matter of the Application of Kansas Gas Service, a Division of ONEOK, Inc., for Approval to Implement the Efficiency Kansas Energy Efficiency Program, to Implement Natural Gas Energy Efficiency Programs to Improve Building and Equipment Efficiency and to Educate about Efficient Energy Usage, To Provide for Program Cost Recovery Through a Rider Mechanism, to Establish Administrative Charges and a Program Initiation Fee, Permit the Implementation of a Revenue Decoupling Mechanism, and Appropriate Accounting Authority to Defer Expenses and Revenues Associated with the Filing.* On Behalf of the Kansas Corporation Commission Staff. Issues: Demand Side Management, Cost-Benefit Analyses.

Summary of Company's Proposed Revenue Allocation	Exhibit MWD-6
Summary of Results of Alternative Revenue Allocation	Exhibit MWD-7
Analysis of Customer-Related Costs	Exhibit MWD-8

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	Peoples's Claim	Response
§ 69.3302(a)(1)	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	Peoples's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	The WNA does not address the Commission's consideration criteria aligning revenues with cost causation. The WNA is premised on ensuring the Company will recover its annual fixed costs of providing gas distribution service; however, the WNA adjustment is applied as a variable charge to customer's bills.
§ 69.3302(a)(2)	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged.	Proposed WNA does not impact capacity utilization, as the determining metric for the charge is weather, not utilization.
§ 69.3302(a)(3)	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 65-year regression rather than the average of a 65-year regression and a 20-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions.	The WNA adjustment mechanism creates the anomaly where customers see rate increases when they reduce consumption and rate decreases when they increase consumption. If the WNA is generating revenue, then it inherently does not reflect the level of demand associated with the customer's anticipated consumption levels, because the WNA only generates revenue if the demand is less than anticipated.
§ 69.3302(a)(4)	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	Peoples's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA may have led to intraclass cost shifting to the extent that smaller use residential customers typically have a greater percentage of natural gas use that is temperature-sensitive compared to larger use residential customers.
§ 69.3302(a)(5)	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures.	The WNA does not limit or eliminate disincentives for the promotion of energy efficiency. The WNA is solely tied to adjustment in customer usage attributed to changes in heating requirements and is not impacted by a reduction in customer use due to energy efficiency initiatives. The Company has not demonstrated that the lack of a WNA would present a major obstacle for the promotion of energy efficiency programs.
§ 69.3302(a)(6)	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	The WNA may be perceived as a disincentive to employ energy efficiency measures for customers whose energy efficiency initiative takes place during periods of warmer than normal weather. These customers will see increased WNA charges after reducing usage through implementing energy efficiency initiatives.
§ 69.3302(a)(7)	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	Under the current WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.	The WNA may harm low-income customers as these customers have less ability to weatherize homes to reduce impact of weather fluctuations on consumption.
§ 69.3302(a)(8)	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	The WNA adds another surcharge to customers' bills without any showing that the WNA would reduce the frequency of base rate case filings. It therefore does not improve rate stability.

Commission Alternative Regulation Consideration (§ 69.3302)

	Commission Consideration Criteria	UGI Claim	Response
§ 69.3302(a)(9)	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through May, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband and limiters). It only applies to Residential and Small/Medium General Service classes and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.	While the WNA is premised on reducing risks to the Company revenue stability caused by fluctuations in weather conditions, in practice it is not a revenue neutral mechanism.
§ 69.3302(a)(10)	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor it effects regulatory lag.	Historically the Company has filed multiple rate case over the last decade, despite possessing the WNA. This is unlikely to change and the WNA does not prevent the Company from seeking additional rate increases driven by future investment needs or higher expenses and associated cost recovery. The WNA does, however, weaken the positive impacts regulatory lag has on promoting cost containment between rate cases. Regulatory lag has long been recognized as a key component of the overall regulatory compact that disciplines utility operational and investment decisions between rate cases. Regulatory lag in particular diminishes incentives for utilities to overcapitalize since the inefficiencies associated with overcapitalization are passed directly to shareholders until reviewed by the Commission in the utility's next rate case.
§ 69.3302(a)(11)	If or how the ratemaking mechanism and rate design interact with other revenue sources, such as Section 1307 automatic adjustment surcharges, 66 Pa.C.S. § 1307 (relating to sliding scale of rates; adjustments), riders such as 66 Pa.C.S. § 2804(9) (relating to standards for restructuring of electric industry) or system improvement charges, 66 Pa.C.S. § 1353 (relating to distribution system improvement charge).	The Company's proposed WNA only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through May.	The WNA applies only to base rates and does not impact surcharges.
§ 69.3302(a)(12)	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	Peoples's WNA includes several consumer protections to ensure fairness and transparency, as follows: a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and a limiter. Outside of the deadband and the limiter, the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. b. No Cross-Subsidization: The WNA is customer-specific. c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency and Education: Peoples provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.	The WNA does not include sufficient consumer protections. These include checks on over-earnings to prevent overall rate increases through WNA reconciliations.
§ 69.3302(a)(13)	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. Link to Peoples Website → https://www.peoples-gas.com/weather-normalization-adjustment.php	Customers have no means of anticipating future WNA changes as it is impossible for customers to forecast WNA charges in advance and likely difficult for customers to calculate even after the fact. For these reasons elements of the WNA likely not understandable to customers and effectively is viewed as just another surcharge present on the customer's bill.
§ 69.3302(a)(14)	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA helps to minimize the volatility of the recovery of these costs.	The WNA has not lead to changes in the Company's quality of service, either positively or negatively. The WNA is not tied to achievement of increased service reliability performance, but has reduced the positive incentive of regulatory lag for the Company to control costs and led to customer confusion. The Company retains the ability to file rate cases using a projected future test year to address concerns associated with capital improvements required to facilitate reliable delivery of natural gas.

Pennsylvania Public Utility Commission

v. Docket No. R-2026-3060855

Peoples Natural Gas Company LLC

:

VERIFICATION

I, Michael Deupree, hereby state that the facts above set forth in my Direct Testimony, OCA Statement No. 1, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: June 18, 2026

Signature: Michael Deupree

REBUTTAL TESTIMONY

OF

MICHAEL DEUPREE ON BEHALF OF THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

July 16, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on June 18, 2026, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my rebuttal testimony is to respond to elements of the direct testimony of Jennifer Warabak on behalf of the Pennsylvania Weatherization Providers Task Force ("PWPTF"), Mark D. Ewen on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"), and Ethan H. Cline on behalf of the Bureau of Investigation and Enforcement ("I&E"). Specifically, I will respond to PWPTF's recommendation that low-income usage reduction program ("LIURP") funding be increased commensurate with the percentage increase in rates for residential customers in this proceeding, OSBA testimony concerning Peoples National Gas Company LLC ("Peoples" or the "Company") proposed revenue allocation, and I&E's testimony regarding proposed monthly customer charges.

II. LIURP FUNDING

Q. WHAT IS PWPTF'S POSITION ON THE PROPOSED RESIDENTIAL RATE INCREASE?

A. PWPTF is generally concerned with the Company's proposed increase in residential rates in the current proceeding, particularly the Company's nearly 55 percent increase in fixed monthly

customer charges.[1] PWPTF notes that increases in fixed customer charges discourages conservation by reducing the ability of customers to control monthly utility bills through reducing consumption and thus conserving energy.[2] PWPTF argues that these rate increases particularly impact low-income households, especially in the current economic climate that is characterized by high rates of inflation across multiple sectors.[3]

Q. DO YOU SHARE PWPTF'S CONCERNS REGARDING THE CURRENT MACROECONOMIC CONDITIONS FACING PENNSYLVANIA RATE PAYERS?

A. Yes. As I discussed in detail in my direct testimony, the Pennsylvania Public Utility Commission ("Commission") should take into consideration the current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company.[4] Average Pennsylvanians are still struggling with the negative impact of inflation on household budgets and are looking at the potential for additional burdens placed on their overextended finances due to the current conflict in the Persian Gulf.[5] This is while Peoples has seen a steady rise in stock prices and no obvious market distress.[6] As noted by PWPTF, inflation disproportionately impacts low-income households and households that are on a fixed income, negatively affecting energy affordability for these communities.[7]

Q. DO YOU AGREE WITH PWPTF'S CONCERN THAT INCREASES IN THE RESIDENTIAL CUSTOMER CHARGE WILL NEGATIVELY IMPACT ENERGY EFFICIENCY AND LOW-INCOME HOUSEHOLDS?

[1] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:14-17.
[2] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:19-23.
[3] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 4:23 to 5:22.
[4] *See*, Direct Testimony of Michael W. Deupree, OCA Statement 1 at 19:15 to 20:5.
[5] *See*, Direct Testimony of Michael W. Deupree, OCA Statement 1 at 11:19 to 12:2.
[6] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 16:8-14.
[7] *See,* Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 5:14-22.

A. Yes, and I discussed these concerns at length in my direct testimony.[8] The PWPTF is especially concerned with the increased burden the Company's proposed increase in the current residential customer charge will have on the Company's LIURP, without any proposed increase in LIURP funding.[9] The PWPTF recommends that annual LIURP funding be increased at least commensurate with the percentage increase in rates for residential customers that result from this proceeding.[10]

Q. DO YOU AGREE THAT THE COMPANY'S PROPOSED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE WILL LIKELY IMPACT LIURP PARTICIPATION?

A. Yes. It is partially due to the potential impact on low-income customers, and required LIURP funding, that I recommend the Commission not approve the Company's proposed increase in residential monthly customer charges.

III. REVENUE ALLOCATION

Q. PLEASE SUMMARIZE OSBA'S DIRECT TESTIMONY RELATED TO THE COMPANY'S PROPOSED REVENUE ALLOCATION.

A. OSBA finds that the Company's revenue allocation proposal to be directionally consistent with the results of its ACOSS.[11] However, OSBA argues that, in the interest of rate gradualism any revenue allocation be capped at 1.25 times the system average.[12]

Q. DO YOU AGREE THAT THE COMPANY'S PROPOSED REVENUE ALLOCATIONS ARE DIRECTIONALLY CONSISTENT WITH COST OF SERVICE?

[8] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 73:1 to 74:8.
[9] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 7:8-12.
[10] Direct Testimony of Jennifer Warabak, PWPTF Statement 1 at 7:4-6.
[11] Direct Testimony of Mark D. Ewen, OSBA Statement 2 at 11:4-5.
[12] Direct Testimony of Mark D. Ewen, OSBA Statement 2 at 11:5-8.

A. No. As I stated in my direct testimony, the Company's classification of costs associated with distribution mains investments as both customer and demand-related are based on a fundamentally flawed minimum system study ("MSS").[13] A MSS, and the related zero-intercept study, attempt to estimate the costs associated with a minimum-sized distribution main. These approaches have been criticized in academic literature for decades as being untethered to empirical studies that have failed to establish a causal relationship between distribution system costs and the number of utility customers.[14] Professor Bonbright, in his seminal text on public utility rates ultimately found that attempting to classify costs associated with a minimum-sized distribution system as customer-related is something that is "clearly indefensible."[15]

Q. HAVE YOU EXAMINED THE POTENTIAL EMPIRICAL RELATIONSHIP BETWEEN HISTORICAL COMPANY INVESTMENTS IN DISTRIBUTION MAINS AND CHANGES IN THE COMPANY'S AVERAGE NUMBER OF CUSTOMERS?

A. As discussed in my direct testimony, I have examined trends in changes in the average number of customers taking service on the Company's system with Company net investments in distribution mains over the ten-year period 2016 through 2025. Consistent with past criticism in the academic literature, I find no statistical correlation between changes in the Company's historic net investment in distribution mains and changes in its average number of customers.[16] Likewise, this result is consistent with the understanding that a significant portion of the Company's annual investment in distribution mains are associated with non-growth activities covered by the Company's distribution system improvement charge ("DISC").[17] Overall, the premise that

[13] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 48:4 to 52:21.
[14] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 49:21 to 52:3.
[15] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 51:11 to 52:3.
[16] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 52:7-12, and Exhibit MWD-4.
[17] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 52:14-21.

changes in the Company's customer count are a significant driver of distribution mains investment is outdated and unsupported by empirical evidence.

Q. WHAT IS YOUR RESPONSE TO OSBA REGARDING REVENUE ALLOCATION?

A. OSBA's proposal, like the Company's proposed revenue allocation, is based on the results of a faulty ACOSS that overstates the current rate of return the Company derives from its large commercial and industrial service customers while understating the rate of return the Company derives from its residential service customers. Second, I disagree with OSBA's proposed revenue allocation cap of 1.25 times the system average as being inconsistent with the concept of gradualism.

Q. WHAT IS YOUR RECOMMENDED REVENUE APPORTIONMENT?

A. As stated in my direct testimony, I recommend the Commission adopt a more reasonable revenue apportionment method based on the results of my alternative ACOSS.[18] Specifically, I recommend that the Commission adopt a revenue allocation method that caps the proposed rate increase to any single customer class to no more than 1.15 times the system average increase, while ensuring that no class receives a rate increase less than 0.50 times the system average increase.

IV. MONTHLY CUSTOMER CHARGE

Q. WHAT IS I&E'S PROPOSAL REGARDING THE COMPANY'S RECOMMENDED INCREASES IN MONTHLY CUSTOMER CHARGES?

A. I&E recommends no adjustment to the Company's proposed increases in monthly customer charges,[19] including the Company's proposed 54.8 percent increase in the monthly customer

[18] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 5:5-10.
[19] Direct Testimony of Ethan H. Cline, I&E Statement 3, at 31-7-9.

charge for residential customers, and the 46.1 percent increase in the monthly customer charge for small general service customers.[20]

Q. DO YOU AGREE WITH I&E'S ACCEPTANCE OF THE COMPANY'S PROPOSED INCREASE IN MONTHLY CUSTOMER CHARGES?

A. No. As I stated in my Direct Testimony, an analysis of customer-related costs finds that residential and commercial rate classes are currently recovering a majority of customer-related costs through monthly customer charges.[21] Specifically, I find that the current residential customer charge of $16.80 per month recovers 76 percent of estimated customer-related costs equal to $21.98 per month. Likewise, the current small general service customer charge of $22.00 per month recovers 62 percent of estimated customer costs equal to $35.42 per month.[22] I also found that the proposed increase in monthly customer charges would harm public policy goals encouraging energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in this case.[23]

Q. DOES I&E PROVIDE ANY RATIONALE FOR ITS SUPPORT OF SIGNIFICANTLY HIGHER MONTHLY CUSTOMER CHARGES?

A. Yes. I&E states that the fixed customer charge represents revenue that the Company is guaranteed to receive each month, regardless of the level of usage. Therefore, I&E holds that there exists a tradeoff between revenue stability from a high customer charge, and affordability and conservation from a low customer charge and higher usage rates.[24]

[20] Direct Testimony of Ethan H. Cline, I&E Statement 3, at 31-32.
[21] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 74:12-14.
[22] Direct Testimony of Michael W. Deupree, OCA Statement 1, Exhibit MWD-8.
[23] Direct Testimony of Michael W. Deupree, OCA Statement 1, at 74:14-16.
[24] Direct Testimony of Ethan H. Cline, I&E Statement 3, at 28:8-12.

Q. DO YOU AGREE WITH I&E'S DISCUSSION REGARDING THE TRADEOFF BETWEEN THE CONSIDERATION OF REVENUE STABILITY FOR THE UTILITY AND AFFORDABILITY AND CONSERVATION CONSIDERATIONS FOR RATEPAYERS?

A. Yes, the main benefit of higher fixed customer charges is that the utility is guaranteed a certain level of revenue each month, regardless of the level of usage. In this way higher fixed customer charges reduces volumetric risks for the utility. In this the benefit to the utility from higher fixed customer charges is similar to the benefit imparted to a utility from revenue decoupling, such as the Company's Weather Normalization Adjustment ("WNA").

Q. DO YOU BELIEVE THAT THE COMPANY NEEDS PROTECTION FROM VOLUMETRIC RISKS?

A. No. As I discussed in my Direct Testimony, the Company's ability to utilize Fully Projected Future Test Years ("FPFTY") within rate cases and the Distribution System Improvement Charge ("DSIC") between rate cases mitigate a significant portion of Company risks posed by regulatory lag.[25] Specifically, the Company's ability to forecast expected changes in volumes in the current rate case using its FPFTY structure already mitigate volumetric risks to the Company. Likewise, Company volumetric risks associated with warmer than normal winters in the future mitigated further if the Commission decides to maintain the Company's current WNA. I do not see a need to further mitigate volumetric risks by increasing fixed monthly customer charges.

V. CONCLUSIONS AND RECOMMENDATIONS

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

[25] Direct Testimony of Michael W. Deupree, OCA Statement 1 at 75:20-22.

A. Having reviewed the direct testimony filed by the other non-company parties in this proceeding, I continue to recommend the Commission:

- Require some level of shared burden in light of recent macroeconomic challenges, balancing consumer affordability concerns with the financial interests of the Company.
- Reject the Company's proposed MSS approach to allocate costs associated with distribution mains within the Company's ACOSS. MSS and related zero-intercept studies that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative I recommend that the Commission approve an alternative classification of distribution mains that incorporates a peak and average ("P&A") cost allocation method using weights based on the Company's test year system load factor.
- Adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. Specifically, I recommend that the Commission cap the proposed rate increase to any single customer class to no more than 1.15 times the system average increase, while ensuring that no class receives a rate increase less than 0.50 times the system average increase.
- Reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers. If the Commission decides in the alternative that an increase in monthly customer charges is warranted, these increases should be limited to the percentage increase in class revenue requirement. This would furthermore be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

SURREBUTTAL TESTIMONY

OF

Michael Deupree

On behalf of the

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

OCA Statement No. 1SR

Date Served: July 31, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS?

A. My name is Michael W. Deupree. My business address is 5800 One Perkins Place Drive, Suite 5-F, Baton Rouge, Louisiana, 70808.

Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN THIS PROCEEDING?

A. Yes. I filed direct testimony in this proceeding on June 18, 2026, and rebuttal testimony on July 16, 2026, both on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to elements of the rebuttal testimony of Cynthia S. Fang, Andrew P. Wachter, Carol A. Scanlon, and John D. Taylor on behalf of Peoples Gas Company ("PNG" or the "Company"). Specifically, I will respond to PNG's discussion of macroeconomic issues, its proposed weather normalization adjustment ("WNA"), as well as issues concerning its proposed allocated cost of service study ("ACOSS"), and rate design. I also will address to Pennsylvania Office of Small Business Advocate ("OSBA") revenue allocation position presented in the rebuttal testimony of Mark D. Ewen.

II. MACROECONOMIC ISSUES

Q. PLEASE SUMMARIZE PNG'S WITNESS FANG'S STATEMENTS RESPONDING TO YOUR DISCUSSION OF MACROECONOMIC ISSUES IN HER REBUTTAL TESTIMONY.

A. PNG witness Fang argues that my discussion of macroeconomic conditions improperly expands the scope of this proceeding beyond traditional cost-of-service ratemaking.[1] Specifically, Ms. Fang states that the Commission's statutory responsibility is to establish just and reasonable

[1] Rebuttal Testimony of Cynthia S. Fang at 5:17-18.

rates based upon the Company's prudent costs of providing utility service, rather than broader economic conditions affecting customers.[2] The Company further argues that utilities neither create nor control macroeconomic conditions, such as inflation, and that customer affordability concerns associated with those conditions are more appropriately addressed through existing Universal Service Programs ("USPs") and other public policy initiatives rather than through base rates.[3]

Q. DID YOUR DIRECT TESTIMONY RECOMMEND THAT THE COMMISSION DEPART FROM TRADITIONAL COST-OF-SERVICE RATEMAKING OR EVALUATE THE COMPANY'S REQUESTED RATE INCREASE SOLELY ON THE BASIS OF BROADER MACROECONOMIC CONDITIONS?

A. No. My Direct Testimony did not recommend the Commission depart from traditional cost-of-service ratemaking principles, nor did I recommend that the Company's requested rate increase be evaluated solely on the basis of broader macroeconomic conditions. Rather, I recommended that the Commission recognize that utility rate increases do not occur in a vacuum.[4] As discussed in my Direct Testimony, Pennsylvania customers continue to face lingering inflationary pressures and potential additional economic uncertainty, while the Company's financial position has remained relatively stable with no obvious signs of market distress. [5] Accordingly, I recommended that the Commission take into consideration these current macroeconomic conditions, including customer affordability concerns, when determining just and reasonable rates for the Company.[6] My recommendation was intended to provide context for the Commission's evaluation of the

[2] Rebuttal Testimony of Cynthia S. Fang at 5:18 to 6:2.
[3] Rebuttal Testimony of Cynthia S. Fang at 29:18-24.
[4] Direct Testimony of Michael W. Deupree at 7:9-10.
[5] Direct Testimony of Michael W. Deupree at 19:17-20:2.
[6] Direct Testimony of Michael W. Deupree at19:15-17.

Company's proposed rate increase, not to replace the traditional ratemaking principles used to determine the Company's revenue requirement.

Q. DOES THE COMPANY HAVE COMMISSION-APPROVED MECHANISMS TO ADDRESS UTILITY AFFORDABILITY?

A. Yes. The Company references its USPs, including the Customer Assistance Program ("CAP"), as mechanisms designed to address utility affordability for qualifying low-income households.[7] While these programs serve an important role in assisting eligible customers, they do not fully address the broader affordability concerns discussed in my Direct Testimony. As I explained, the persistent inflation and broader economic uncertainty extend beyond customers who qualify for USP assistance.[8] Accordingly, while the Company's USPs provide important customer protections, they do not eliminate the need for the Commission to consider broader customer affordability concerns when determining just and reasonable rates for the Company. As discussed later in this testimony and in the testimony of OCA witness Colton, utility rates generally and the rates charged by Peoples specifically cannot be viewed in a vacuum but must be viewed in light of the overall realities faced by Peoples' customers who are paying those rates. This is an essential part of making sure that all rates charged are just and reasonable as required by the Public Utility Code.[9]

Q. HAS THE COMMISSION RECOGNIZED THE APPROPRIATENESS OF CONSIDERING RATE AFFORDABILITY IN THE SETTING OF JUST AND REASONABLE RATES?

[7] Rebuttal Testimony of Cynthia S. Fang at 27:7-10.
[8] Direct Testimony of Michael W. Deupree at 7:12-16.
[9] 66 Pa. C.S. § 1301.

A. Yes. In a recently issued Order involving Pennsylvania-American Water Company ("PAWC"), the Commission explicitly held that it had "broad discretion in determining whether rates are reasonable,"[10] and that it may consider rate affordability in base rate proceedings.[11] The Commission ultimately concluded that rate affordability was a growing issue for PAWC, exacerbated by recent and current economic conditions, including increased inflation.[12]

> The Commission "has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates." **When setting rates in a base rate proceeding, the Commission may consider rate affordability.** Such an evaluation requires the Commission to carefully consider the underlying record, including resolving conflicts in testimony and weighting evidence presented before it.[13]
>
> …
>
> **We cannot overlook the factor that, given PAWC's history and cadence of frequent base rate increase requests, affordability is a growing issue, exacerbated by recent and current economic conditions, including increased inflation.**[14]

Q. ARE THE AFFORDABILITY CONCERNS YOU HAVE DISCUSSED UNIQUE TO PENNSYLVANIA?

A. No. Recent statements by public officials in other states demonstrate that concerns regarding utility affordability and the impact of repeated utility rate increases on consumers are not unique to Pennsylvania. For example, in a letter sent to the Delaware Public Service Commission on June 29, 2026, Delaware Governor Matt Meyer urged the Commission to suspend

[10] *Pennsylvania Public Utility Commission v. Pennsylvania-American Water Company*; Docket Nos. R-2025-3057983 and R-2025-3058051, Opinion and Order dated July 16, 2026, at 36.

[14] *Pennsylvania Public Utility Commission v. Pennsylvania-American Water Company*; Docket Nos. R-2025-3057983 and R-2025-3058051, Opinion and Order dated July 16, 2026, at 40*, emphasis added.*

Delmarva Power's proposed interim rate increase.[15] Governor Meyer stated that Delaware families have been asked to absorb repeated utility rate increases while utilities continue to earn record profits and that many families are deciding between paying their utility bills, rent, or buying groceries. He further stated that repeated utility rate increase requests have contributed to an affordability crisis in Delaware.[16] Similarly, following the Indiana Utility Regulatory Commission's ("IURC") approval of an AES Indiana rate increase on June 16, 2026, Indiana Governor Mike Braun posted on the social media platform X that he was "deeply disappointed" by the IURC's approval of another utility rate increase.[17] He further stated that Indiana residents have spent years tightening their belts and making difficult financial decisions and that utility companies should likewise do the same.[18]

Q. ARE THERE OTHER RECENT EXAMPLES OF PROMINENT OFFICIALS ARGUING AGAINST RATE INCREASES IN THE CURRENT ECONOMIC ENVIRONMENT?

A. Yes. In addition to the prior examples concerning the Governors of Delaware and Indiana in June 2026, previously this year the Governor of the State of Connecticut expressed concern regarding raising utility bills in their state. Specifically, on May 21, 2026, Governor Ned Lamont issued a statement expressing concern with a proposed increase in electric rates by Eversource Energy in Connecticut.[19] Governor Lamont noted that Eversource Energy's shareholders saw a 23 percent increase in revenues in 2025, ranking among the top electric utilities in the nation for

[18] *Id.*
[19] Governor Ned Lamont, "Message From Governor Lamont to Connecticut Families" (May 21, 2026).

shareholder returns while failing to deliver similar performance in customer satisfaction and affordability.[20]

Q. DID THE COMPANY ELSEWHERE IN ITS REBUTTAL FILING DISCUSS MACROECONOMIC CONCERNS?

A. Yes. PNG Witness Wachter noted that I discussed inflation concerns in my Direct Testimony, and stated my position that higher than average consumer inflation rates are likely to continue for the near future, based on the Federal Reserve's current predictions.[21] The Company thus argues that it is appropriate to include inflation adjustments within their estimates of expense growths between the historic and future test year.[22]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY?

A. Commission recognition of current inflationary concerns when deciding upon just and reasonable rates is distinct from deciding on appropriate expense estimates in future test years. My proposal that the Commission take into consideration current macroeconomic conditions when determining just and reasonable rates merely asks that the Commission not decide rates in the current proceeding in a vacuum. Decisions on appropriate expense estimates require examination of known and measurable expected growth in expenses in order to ensure that the Company is allowed a reasonable opportunity to recover all prudent expenses while not burdening ratepayers with speculative future expenses that may never arise. Furthermore, I would note that the Federal Reserve expected inflation rates I referenced in my Direct Testimony are associated with consumer prices and therefore do not necessarily reflect inflationary pressures placed on the Company.

[20] *Id.*
[21] Rebuttal Testimony of Andrew P. Wachter at 8:11-13.
[22] Rebuttal Testimony of Andrew P. Wachter at 10:5 to 11:2.

Q. WHAT IS YOUR RECOMMENDATION BASED ON CURRENT MACROECONOMIC CONDITIONS?

A. I continue to recommend that the Commission take into consideration current macroeconomic conditions, including consumer affordability concerns, when determining just and reasonable rates for the Company. Average Pennsylvanians are struggling with lingering inflation concerns while also facing potential additional concerns due to fallout from the conflict in the Persian Gulf. Meanwhile, the Company has seen increasing stock prices for its shareholders and no obvious market distress. The Commission, in particular, should require some level of shared burden, balancing consumer affordability concerns with the financial interests of the Company. Governor Shapiro's recent open letter raising similar concerns only strengthens the urgency for the Commission to recognize these larger concerns, and the broader context surrounding the Company's proposed rate increase.

III. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE SUMMARIZE WITNESS TAYLOR'S RESPONSE TO INTERVENORS' CONCERNS REGARDING THE COMPANY'S WNA.

A. Witness Taylor argues that the Company's existing WNA remains a reasonable and appropriate mechanism for normalizing the effects of abnormal weather on weather-sensitive distribution revenues and reducing the effects of weather variability.[23] He further argues that the recent operating experience of the WNA demonstrates that the mechanism functions as intended by producing both customer credits and surcharges depending upon actual weather conditions, contrary to my suggestion that the WNA is more likely to result in customer surcharges.[24] Witness

[23] Rebuttal Testimony of John D. Taylor at 69:6-9.
[24] Rebuttal Testimony of John D. Taylor at 60:4-18.

Taylor also disagrees with my characterization of the colder-than-normal 2025-2026 heating season as anomalous, arguing that weather remains inherently volatile despite a long-term warming trend and that colder-than-normal years will continue to occur.[25] Finally, Witness Taylor argues that the Company's proposed normal weather methodology is likely to produce a more balanced distribution of WNA credits and surcharges over time and therefore supports continuation of the existing WNA.[26]

Q. DO YOU AGREE WITH THE COMPANY'S CHARACTERIZATION OF THE WNA?

A. No. As discussed in my Direct Testimony, the WNA produced a net charge to residential and non-residential ratepayers during the 2024-2025 heating season but a net credit during the 2025-2026 heating season. Across both heating seasons, the WNA produced a net credit to ratepayers of approximately $5.3 million.[27] However, those results were heavily influenced by significantly below-normal temperatures associated with Winter Storm Fern in late January 2026. Excluding this anomalous weather event, my analysis showed that the Company's WNA would have produced more than $8.0 million in net revenues for the Company through March 2026.[28] Accordingly, I continue to believe that the Company's recent operating experience does not demonstrate that the WNA will produce balanced outcomes for customers over time.

Q. IS IT SURPRISING THAT THE COMPANY'S WNA MECHANISM RESULTED IN A NET SURCHARGE FOR RATEPAYERS DURING THE 2024-2025 HEATING SEASON?

[25] Rebuttal Testimony of John D. Taylor at 61:7-15.
[26] Rebuttal Testimony of John D. Taylor at 60:19 to 61:2.
[27] Direct Testimony of Michael W. Deupree at 33:1-4.
[28] Direct Testimony of Michael W. Deupree at 33:7-10.

A. No. Table 1 provides a summary of the results provided in a report prepared on behalf of several energy advocacy groups in the Pacific Northwest by Graceful Systems that was purportedly designed to support the adoption of revenue decoupling.[29] The table provides the number of instances in which there were observed rate increases or rate decreases for electric and gas utilities under revenue decoupling over a 10-year period. The table shows that 72 percent of the gas utilities in the sample and 57 percent of all the electric utilities in the same sample had reconciliations resulting in rate increases instead of rate decreases. This stands in contradiction to the typical utility assertion that decoupling will yield results that are symmetrical (i.e., will lead to equal rate increases and decreases). The results are even more prevalent when examining large reconciliations. Only three percent of all survey reconciliations associated with gas decoupling programs resulted in refunds to customers greater than three percent. This is approximately one-sixth of the 19 percent of surveyed gas decoupling reconciliations that resulted in surcharges to customers greater than three percent.

Table 1: Summary of Lesh Report

Refund/Surcharge	Number of Reconciliations			Share of All Reconciliations		
	Gas	Electric	Total	Gas	Electric	Total
Refund Percent						
Greater than 3 percent	2	0	2	3.1%	0.0%	2.3%
Less than or equal to 3 percent	1	3	4	1.5%	13.0%	4.5%
Less than or equal to 2 percent	2	1	3	3.1%	4.3%	3.4%
Less than or equal to 1 percent	13	6	19	20.0%	26.1%	21.6%
Total				**27.7%**	**43.5%**	**31.8%**
Surcharge Percent						
Less than 1 percent	23	7	30	35.4%	30.4%	34.1%
Less than 2 percent	7	4	11	10.8%	17.4%	12.5%
Less than 3 percent	5	2	7	7.7%	8.7%	8.0%
Greater than 3 percent	12	0	12	18.5%	0.0%	13.6%
Total				**72.3%**	**56.5%**	**68.2%**
Total Decoupled Utilities	**65**	**23**	**88**	**100.0%**	**100.0%**	**100.0%**

[29] *See,* Pamela Lesh, Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling: A Comprehensive Review (2009).

Source: Rate Impacts and Key Design Elements of Gas and Electric Utility Decoupling

Q. DO YOU AGREE WITH THE COMPANY'S ASSERTION THAT THE WNA SHOULD BE VIEWED INDEPENDENTLY OF REGULATORY LAG?

A. No. The Company takes a narrow view of regulatory lag by arguing that the WNA is not intended to address regulatory lag because it does not change the Company's authorized revenue requirement or rate of return.[30] As discussed in my Direct Testimony, the Company also benefits from the use of a Fully Projected Future Test Year ("FPFTY"), which substantially reduces traditional regulatory lag by allowing rates to reflect forecasted costs rather than historical costs.[31] In my opinion, these mechanisms should not be viewed in isolation. Rather, the Commission should consider their combined effect when evaluating whether the continuation of the Company's existing WNA remains appropriate and in the public interest.

Q. DID THE COMPANY ADDRESS ANY OF YOUR PROPOSED ALTERNATIVE MODIFICATIONS TO THE WNA?

A. Yes. The Company opposes my recommendations to discontinue the existing WNA, or, if the WNA is not discontinued, to increase the WNA deadband from three percent to five percent, exclude the months of October and May from the WNA period, and continue the WNA as a three-year pilot program. The Company argues that increasing the deadband to five percent would lessen the effectiveness of the WNA by allowing more weather-related revenue variation to remain outside of the mechanism before any adjustment is made.[32] Likewise, the Company opposes removing the months of October and May from the WNA, arguing that greater weather variability during those months is not, by itself, a reason to exclude them from the WNA because weather

[30] Rebuttal Testimony of John D. Taylor at 59:3-7.
[31] Direct Testimony of Michael W. Deupree at 20:19 to 21:6.
[32] Rebuttal Testimony of John D. Taylor at 63:11-16.

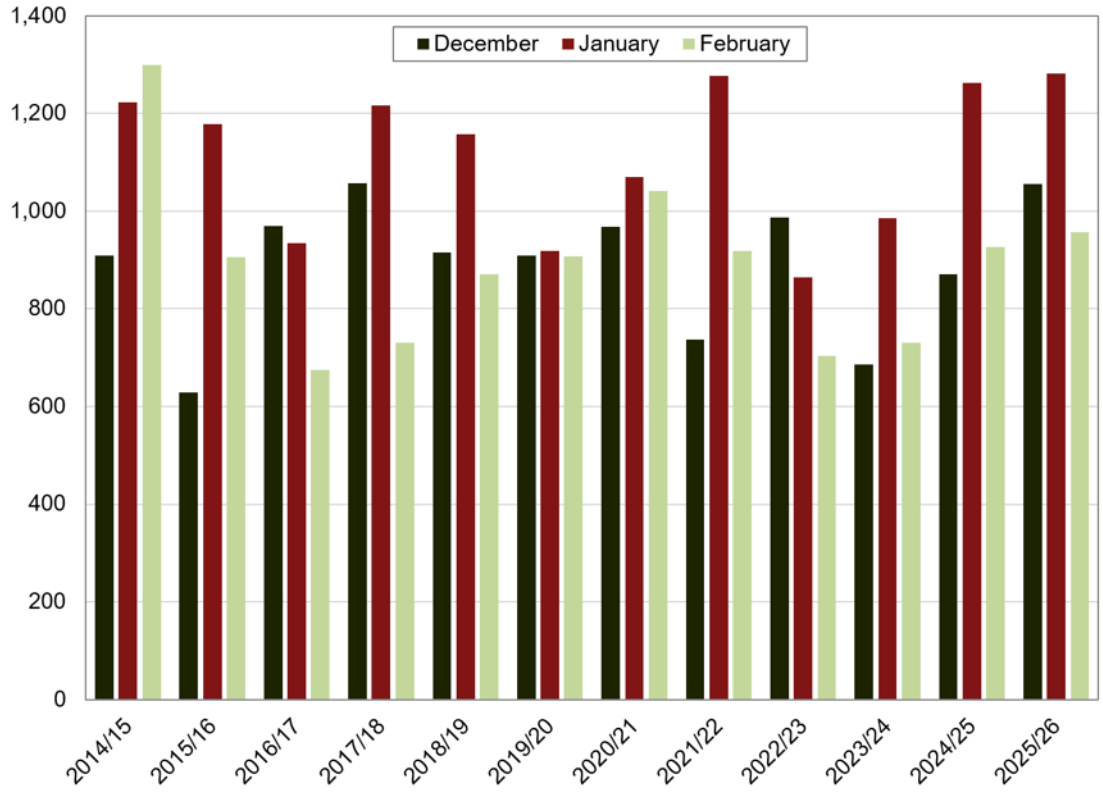
variability is precisely what the WNA is intended to address.[33] Finally, the Company argues that the Commission has sufficient evidence to evaluate the continued operation of the Company's existing WNA and that reasonable updates should not be delayed simply because additional experience may become available in the future.[34]

Q. DO YOU AGREE THAT INCREASING THE WNA DEADBAND FROM THREE TO FIVE PERCENT WOULD REDUCE THE EFFECTIVENESS OF THE WNA?

A. No. As shown in Figure 1, the Company's recent WNA experience was heavily influenced by Winter Storm Fern. Specifically, the Pittsburgh area experienced a total of 3,293 heating degree days ("HDD") during the period from December 2025 through February 2026. This was the coldest period seen in the region since the period from December 2014 through February 2015. Excluding the anomalous weather event, my analysis showed that the Company's WNA would have produced more than $8.0 million in net revenues for the Company through March 2026. Therefore, increasing the WNA deadband to five percent would provide additional protection to ratepayers from relatively minor deviations from normal weather while preserving the operation of the WNA during more significant weather events. It would also place the Company's WNA more in line with the Commission's recently modified WNA mechanism for Columbia Gas.

[33] Rebuttal Testimony of John D. Taylor at 64:11-16.
[34] Rebuttal Testimony of John D. Taylor at 65:14 to 66:10.

Figure 1: Monthly Heating Degree Days (2014/15 to 2025/26)



Source: Company Response to PNG-II-14

Q. DOES THE COMPANY MAKE ANY OTHER RECOMMENDATION REGARDING THE WNA IN ITS REBUTTAL FILING?

A. Yes. The Company recommends that, if the Commission approves changes to its existing WNA mechanism besides the Company's proposed change to Normal Heating Degree Days ("NHDD"), that these changes not be applicable until the start of the next WNA heating season covering the 2027-2028 winter.[35]

Q. DO YOU AGREE WITH THE COMPANY'S RECOMMENDATION TO DELAY IMPLEMENTATION OF ANY CHANGES TO THE COMPANY'S CURRENT WNA?

[35] Rebuttal Testimony of Carol A. Scanlon at 17:10-21.

A. No. The Company's proposal would needlessly delay needed changes to the WNA if the Commission decides such changes are needed to the existing mechanism. Indeed, one of my alternative recommendations if the Commission decides to retain the WNA is to remove the months of October and May from the mechanism. It is likely that the Commission will issue its final order in this proceeding prior to May 2027, so the Company's proposed delay would have the effect of continuing to needlessly include this non-winter month in WNA recoveries.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING THE WNA?

A. I continue to recommend that the Commission discontinue the Company's existing WNA. As discussed in my Direct Testimony, the limited operating experience under the mechanism does not demonstrate that it will consistently produce balanced outcomes for ratepayers. If the Commission decides to continue the WNA, I recommend that it do so on a three-year pilot basis so that the Commission may reevaluate its operation after additional experience is available. I further recommend that the Commission increase the deadband from three percent to five percent and exclude the months of October and May from the WNA period. These alternative modifications would provide additional protection to ratepayers while preserving the WNA's operation during periods of more significant weather variation.

IV. ALLOCATED COST OF SERVICE STUDY ("ACOSS")

Q. WHAT IS THE COMPANY WITNESS TAYLOR'S RESPONSE TO YOUR RECOMMENDATION REGARDING THE COMPANY'S ACOSS?

A. The Company argues that its proposed blended ACOSS "reasonably recognized both customer-related and load-related cost causation" and therefore provides "a sound basis for revenue apportionment and rate design."[36] Specifically, the Company argues that my

[36] Rebuttal Testimony of John D. Taylor at 3:3-5.

recommendation to rely exclusively on a Peak-and-Average ("P&A") methodology places "too much emphasis on a single dimension of cost causation while giving insufficient recognition to the customer-related characteristics of the distribution system."[37] The Company further argues that "system use is not the same as cost causation"[38] because distribution facilities are constructed not only to satisfy coincident peak-day requirements, but also connect customers to the system.[39] The Company also argues that its blended ACOSS provides a more balanced assessment of cost causation and "a more reasonable measure of class cost responsibility than the exclusive reliance on a single methodology."[40]

Q. DO YOU AGREE WITH WITNESS TAYLOR'S RESPONSE?

A. No. In my Direct Testimony I examined trends in changes in average number of customers on the Company's system and the Company's net investment in distribution mains over the 10-year period from 2016 through 2025.[41] This analysis did not find any statistically significant correlation between annual net additions in the Company's distribution mains and changes in the Company's customer counts.[42] This analysis furthermore did not find any correlation in the annual growth rate of the Company's booked distribution mains investment and the annual growth rate of the Company's customers.[43] This result implies that the Company's distribution system investments are largely unrelated to addressing customer growth needs.

Q. WHAT DO THESE RESULTS SAY ABOUT THE USE OF A MINIMUM SYSTEM STUDY TO ALLOCATE COSTS ASSOCIATED WITH DISTRIBUTION MAINS?

[37] Rebuttal Testimony of John D. Taylor at 17:5-7.
[38] Rebuttal Testimony of John D. Taylor at 17:7.

[42] Direct Testimony of Michael W. Deupree at Exhibit MWD-4.
[43] Direct Testimony of Michael W. Deupree at Exhibit MWD-4.

A. The results show the error in assuming that connecting customers to the Company's system is a meaningful driver in distribution system investments. The purpose of a cost of service study is to determine the costs of serving different customer classes in recognition that different customers use the natural gas system differently.[44] For example, large industrial customers that use natural gas as a feedstock throughout the year use the natural gas system differently than residential and small commercial customers that primarily rely on the natural gas system for space heating purposes during winter months. In analyzing the cost of service for different customer classes, analysts rely primarily on principles of cost-causation, i.e. the underlying drivers of various expenditures. The results of my analysis show that connecting customers to the Company's system is not a meaningful driver of distribution system investments and thus allocating a portion of the Company's distribution mains on the basis of customer-related classifications is inconsistent with the principles of cost-causation.

Q. DO YOU AGREE THAT A MORE REASONABLE MEASURE OF CLASS COST RESPONSIBILITY WOULD BE BASED ON THE ASSESSMENT OF MULTIPLE COST ALLOCATION METHODS?

A. No. I demonstrated in my Direct Testimony the error in attempting to allocate a portion of costs associated with the Company's distribution mains investments on the basis of customer counts.[45] Attempting to mitigate this flaw by reducing the influence of the flawed cost allocation does not render the resulting ACOSS any less flawed.

[44] Electric Utility Cost Allocation Manual (January 1992), NARUC, pp. 12-13.
[45] Direct Testimony of Michael W. Deupree at 58:21 to 59:3.

V. REVENUE ALLOCATION

Q. DID OSBA RESPOND TO YOUR RECOMMENDED REVENUE ALLOCATIONS IN ITS REBUTTAL TESTIMONY?

A. Yes. In its rebuttal testimony OSBA noted that my ACOSS results indicate that the Small General Service ("SGS") class is currently under-earning relative to the system average.[46] However, OSBA noted that my proposed revenue allocation was geared towards a more gradual progress to cost-based rates in comparison to the Company's proposed revenue allocation.[47] OSBA ultimately found my proposed revenue allocation reasonable given the size of the proposed rate increases in this proceeding.[48]

Q. HOW DO YOU RESPOND TO OSBA'S ASSESSMENT PRESENTED IN ITS REBUTTAL TESTIMONY.

A. OSBA is correct that establishing rates that reflect cost causation and rate gradualism are important goals that must be balanced by the Commission in determining just and reasonable rates.[49] I also appreciate OSBA's assessment that my proposed revenue allocation represents a reasonable proposal given the large proposed rate increases in this proceeding.

VI. RATE DESIGN

Q. PLEASE SUMMARIZE COMPANY WITNESS TAYLOR'S POSITION REGARDING YOUR RECOMMENDATION THAT THE COMMISSION REJECT THE COMPANY'S PROPOSED INCREASE IN ITS RESIDENTIAL BASIC SERVICE CHARGE.

[46] Rebuttal Testimony of Mark D Ewen at 2:15-16.
[47] Rebuttal Testimony of Mark D. Ewen at 2:16 to 3:1.
[48] Rebuttal Testimony of Mark D. Ewen at 3:1-3.
[49] *Id.*

A. The Company continues to advocate for its proposed increase in the residential customer charge. Specifically, the Company argues that the proposed customer charge remains below the customer-related costs identified for the residential class and represents a reasonable movement towards more cost-reflective rates.[50] The Company further argues that its proposed customer charge appropriately balances cost causation with other accepted rate design objectives, including customer impacts, revenue stability, and conservation, and therefore should be approved.[51]

Q. WHAT IS YOUR RESPONSE TO THE COMPANY'S ARGUMENT.

A. In my Direct Testimony, I independently analyzed the Company's expenses directly related to providing service to customers and found that customer-related costs to provide service to residential customers on the Company's system is approximately $21.98 per customer per month.[52] Importantly, this means that the Company's current monthly customer charge of $16.80 per month recovers nearly 76 percent of monthly customer-related costs.[53]

Q. DOES THE COMPANY DISPUTE YOUR STATEMENT THAT LOW-INCOME CUSTOMERS ARE TYPICALLY LOW-USE CUSTOMERS?

A. The Company does not directly dispute my statement that low-income customers are typically low-use customers. Rather, the Company argues that its bill impact analyses do not demonstrate that the proposed customer charge produces disproportionate bill impacts for representative lower-income customer groups.[54] The Company states that its representative bill impact analyses show modest benefits for lower-income customers with higher than average use.[55]

VI. CONCLUSIONS AND RECOMMENDATIONS

[50] Rebuttal Testimony of John D. Taylor at 22:13-16.
[51] Rebuttal Testimony of John D. Taylor at 22:21-23:2.
[52] Direct Testimony of Michael W. Deupree at Exhibit MWD-8.
[53] Direct Testimony of Michael W. Deupree at Exhibit MWD-8.
[54] Rebuttal Testimony of John D. Taylor at 33:7-9.
[55] Rebuttal Testimony of John D. Taylor at 33:4-7.

A. Having reviewed the rebuttal testimony filed by the Company in this proceeding, I continue to recommend the Commission:

- Require some level of shared burden in light of recent macroeconomic challenges, balancing consumer affordability concerns with the financial interests of the Company.
- Affirmatively discontinue the current WNA mechanism. If the Commission decides to continue the WNA, I recommend that it do so on a three-year pilot basis, increase the deadband from three percent to five percent, and eliminate the months of October and May from the WNA period.
- Reject the Company's proposed MSS approach to allocate costs associated with distribution mains within the Company's ACOSS. MSS and related zero-intercept studies that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in setting just and reasonable rates. In the alternative, I recommend that the Commission approve an alternative classification of distribution mains that incorporates a P&A cost allocation method using weights based on the Company's test year system load factor.
- Adopt a more reasonable revenue apportionment method based on my alternative ACOSS results that also limits the rate increase compared to the Company's proposed revenue allocation method. I also recommend that the Commission cap the proposed rate increase to no more than 1.15 times the system average increase.
- Reject the Company's proposed increase in residential and commercial customer charges. An analysis of customer-related costs finds that residential rate classes are currently recovering a majority of customer-related costs through monthly customer charges. The proposal would also negatively impact the public policy goals of energy efficiency and would burden low-use customers with a greater than average portion of any proposed increase in the case. The Commission should keep the Company's current customer charges for all customers. If the Commission decides in the alternative that an increase in monthly customer charges is warranted, these increases should be limited to the percentage increase in class revenue requirement. This would furthermore be subject to scalebacks to reflect changes in allocated class revenue increases pursuant to Commission Orders.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Schedules Accompanying Direct Testimony:

- Appendix A – Resume of Jared N. Geiger
- Schedules JNG-1 through JNG-23

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jared N. Geiger. I am a Senior Analyst at Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND QUALIFICATIONS.

A. I hold a Bachelor of Business Administration degree in Finance from the University of North Texas. Additionally, as it relates to this case, I have attended the National Association of Regulatory Utility Commissioners ("NARUC") Rate School, American Gas Association Advanced Rate School, Southern Gas Association Ratemaking Fundamentals, New Mexico State University Center for Public Utilities Practical Regulatory Training, Michigan State University Institute of Public Utilities Accounting and Ratemaking Course, Society of Utility and Regulatory Financial Analysts Financial Forum, and Roger Morin's New Regulatory Finance technical conference on rate of return regulation.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE.

A. I have been employed at Exeter since 2024. At Exeter, I specialize in utility class cost-of-service and rate design analyses, sales and rate forecasting, revenue requirement analysis, utility operations analysis, and evaluation of energy efficiency programs. Prior to joining Exeter, I worked at Atmos Energy Corp., a publicly traded natural gas utility holding company, for over 15 years, during which time I held multiple roles in the company. I began my career as an Associate Rate Analyst in Rates and Regulatory Affairs and advanced through positions of increasing responsibility. In 2012, I joined

Atmos Energy's Business Planning and Analysis group, supporting budgets and five-year planning for the Board of Directors. I later served as a Senior Rate Analyst and, following a brief role managing Colorado sales, became Vice President of Rates and Regulatory Affairs for the Colorado-Kansas Division, leading rate strategy in both states. In July 2021, I assumed the same role for the Atmos Pipeline Texas Division, overseeing rates for a 5,700-mile intrastate transmission pipeline.

Q. HAVE YOU PREVIOUSLY TESTIFIED IN REGULATORY PROCEEDINGS ON UTILITY RATES?

A. Yes. I have previously presented testimony before the Pennsylvania Public Utility Commission; Maryland Public Service Commission; Colorado Public Utilities Commission; Colorado state senate transportation and energy committee; and Kansas Corporation Commission. My resume is attached as Appendix A.

Q. ON WHOSE BEHALF ARE YOU APPEARING?

A. I am presenting testimony on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. Exeter has been retained by the OCA to assist in the evaluation of the application of the Peoples Natural Gas Company LLC ("Peoples" or "Company") to increase base rates for gas service. My direct testimony (OCA Statement 1) presents my findings with respect to Peoples' revenue requirements and its proposed rate increases. I calculate Peoples' rate base, *pro forma* operating income under present rates, and overall revenue deficiency based upon my recommended adjustments.

II. SUMMARY AND RECOMMENDATIONS

Q. PLEASE SUMMARIZE THE RATE RELIEF REQUESTED BY PEOPLES IN ITS FILING.

A. On March 23, 2026, Peoples' filed an application with the Pennsylvania Public Utility Commission ("Commission") to increase its base rates for natural gas service. Peoples is requesting an overall rate increase of $163.2 million. The Company's proposed rate increase is based upon the fully projected future test year ("FPFTY") ending November 30, 2027.[1] The Company's requested rate increase reflects an overall rate of return (ROR) of 8.23%.[2]

Q. PLEASE SUMMARIZE YOUR FINDINGS AND RECOMMENDATIONS.

A. I have been advised by OCA counsel that due to substantial consumer affordability concerns, the OCA will be arguing in its legal briefs that the Commission should keep Peoples rates at their current levels at this time. My testimony will address the alternative OCA position if any rate increase is ultimately ordered by the Commission. As discussed in OCA witness David Garrett's testimony, OCA is presenting a primary ROE and debt ratio recommendation, and an alternative recommendation in the event the Commission adopts Peoples' capital structure. As shown on Schedule JNG-1, based on the OCA's primary recommendation of 8.80% authorized ROE and 51.0% debt ratio, I have determined that Peoples' proposed revenue increase should be reduced to reflect an increase of no more than $6.3 million for the FPFTY. This is $156.9 million less than the Company's requested increase of $163.2 million. This is the amount by which revenues exceed those required to generate an overall ROR on rate base of 6.95%, which is per the recommendation detailed in the Direct Testimony of OCA

[1] Direct Testimony of Andrew P. Wachter, at 2:20 through 2:24

[2] Direct Testimony of Jennifer E. Nelson, at 6:1-2.

witness David Garrett, after accounting for the OCA's adjustments to Peoples' claimed rate base and operating income.

However, if the Commission adopts Peoples' proposed capital structure, then utilizing the OCA's alternative recommendation of an 8.50% ROE, I have determined that Peoples' proposed revenue increase should be increased to reflect an increase of $12.4 million for the FPFTY.

Q. WHAT PERIOD HAVE YOU USED IN MAKING YOUR DETERMINATION OF PEOPLES' REVENUE REQUIREMENT?

A. I have determined my revenue requirement recommendations based on the FPFTY ending December 30, 2027. This is the same period used by the Company to develop its revenue requirement.

Q. IN CONNECTION WITH THIS PROCEEDING, WHAT DOCUMENTS HAVE YOU EXAMINED AND REVIEWED IN MAKING YOUR RECOMMENDATIONS?

A. I have reviewed Peoples' rate filing, testimony, and exhibits. I also reviewed the Company's responses to data requests propounded by the OCA, the Bureau of Investigation and Enforcement ("I&E"), the Pennsylvania Office of Small Business Advocate ("OSBA"), the Pennsylvania Independent Oil & Gas Association ("PIOGA"), and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA").

Q. HAVE YOU PREPARED SCHEDULES TO ACCOMPANY YOUR TESTIMONY?

A. Yes. I have prepared Schedules JNG-1 through JNG-23. Schedule JNG-1 provides a summary of the calculation of the increase in revenues after reflecting the adjustments proposed by the OCA. Schedule JNG-2 provides my recommended rate base. Schedule

JNG-3 presents the summary of the cost of service (revenues and operating expenses) adjustments. My adjustments to Peoples' claimed revenues and operating expenses are presented on Schedules JNG-4 through JNG-23.

Q. PLEASE EXPLAIN HOW THE REMAINING SECTIONS OF YOUR TESTIMONY ARE ORGANIZED.

A. The discussion of my findings and recommendations is presented in the following section, Section III. In that section, I address the revenue requirement issues (rate base and operating income) that I identified in this proceeding. Where I recommend an adjustment to a particular component of the rate base, revenues, or expenses, I document and explain the reason for the adjustment and note the related schedule in which the detailed calculations can be found. An outline of the topics within the section is set forth in the Table of Contents of my testimony.

III. ADJUSTMENTS

A. Allowance for Cash Working Capital

Q. HOW DO YOU DEFINE CASH WORKING CAPITAL?

A. For ratemaking purposes, cash working capital is the investment a utility needs to have on hand to fund its day-to-day operations and represents the utility's investment in short-term assets necessary for operating the business. It reflects the amount of money the utility must maintain to bridge the timing gap between when it pays operating expenses and when it receives cash from customers for service. The cash working capital component specifically captures the lag associated with paying bills before customer revenues are collected. For example, utilities typically pay vendor invoices shortly after receipt, while customer bills are based on meter readings, mailed after the

billing period, and often not paid until several weeks later. This timing difference creates a financing requirement that must be supported by working capital.

Q. HOW DOES THE COMPANY REFLECT CASH WORKING CAPITAL IN ITS FILING?

A. The Company reflects cash working capital in its filing based on whether the timing of cash flows results in a funding requirement or a source of funds. Positive cash working capital represents funds provided by investors to finance the Company's operations during the period between the payment of expenses and the receipt of customer revenues. As such, positive cash working capital is included in rate base, allowing the Company the opportunity to earn a return on that investment. Conversely, negative cash working capital represents funds effectively supplied by customers through advance collections or favorable cash flow timing and is reflected as a rate base offset because those funds reduce the amount of investor-supplied capital required to support operations.

Q. WHAT CHANGES HAVE YOU MADE TO THE ALLOWANCE FOR CASH WORKING CAPITAL?

A. I have incorporated the adjustments to operations and maintenance ("O&M") expenses and taxes that I am recommending elsewhere in my testimony, as these expense levels form the basis for the calculation of the cash working capital requirement. As the underlying expense levels change, the corresponding cash working capital requirement must also be updated to maintain consistency within the revenue requirement model. In addition, I have incorporated the OCA's recommended long-term debt ratio and cost of long-term debt into the calculation of the interest-payment component of cash working capital. As a result of these adjustments, I have reduced the Company's cash working capital allowance and rate base by $957,403 million, as shown on Schedule

JNG-4. These changes do not reflect any substantive modifications to the lead-lag methodology or the calculation of revenue and expense lag days; rather, they are necessary to synchronize the cash working capital calculation with my recommended adjustments to the Company's revenue requirement.

B. Depreciation Expense

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO DEPRECIATION EXPENSE.

A. I have incorporated the depreciation recommendations presented in the direct testimony of OCA witness Garrett into my revenue requirement calculations. Specifically, I applied Mr. Garrett's recommended depreciation expense levels in place of the amounts proposed by the Company. As shown on Schedule JNG-5, this adjustment decreases depreciation expense by $36,844,273, decreases the Company's recorded accumulated depreciation by the same amount, and correspondingly reduces the Company's revenue requirement.

C. Rate Case Expense

Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO RATE CASE EXPENSE?

A. The Company proposes total rate case expenses of $1.920 million and normalizes those costs over a two-year period, resulting in an annual rate case expense of $0.960 million included in the FPFTY.[3] I recommend increasing the normalization period to five years because rate case expenses should be recovered over the period that benefits from the incurrence of those costs. The benefit period is generally measured by the interval between rate filings. As explained in *A Guide to Utility Ratemaking*, "The

[3] Company Exhibit No. 4, Schedule No. 1, at 27.

Commission's practice is to recognize all prudently incurred rate case expense and set a normalization period based upon historic filing frequency."[4] The Company's three rate filings preceding the current 2026 filing occurred in 2012, 2019, and 2023.[5] These filings reflect an average interval of approximately five years between cases, which supports a longer normalization period than the two years proposed by the Company. Based on this historical filing frequency, I recommend normalizing rate case expenses over five years. As shown on Schedule JNG-6, this adjustment decreases O&M expense by $0.576 million.

D. Materials and Supplies

Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO MATERIALS AND SUPPLIES EXPENSES?

A. The Company has proposed including $11.325 million of Materials and Supplies expenses in the FPFTY. As part of this proposal, the Company applied a 5.45% escalation factor to both the Historical Test Year ("HTY") and the Future Test Year ("FTY"), resulting in a cumulative increase of $1,141,329.[6] In its response to Interrogatory OCA-14-18, the Company explained that the 5.45% escalation factor was calculated using the average year-over-year increase in these costs for the 12-month periods ended December 31, 2020 through December 31, 2024.[7] The same response also provided cost data for the 12-month periods ended November 30, 2023 through November 30, 2025. This more recent data demonstrates significant variability in these expenses. Specifically, costs decreased by 13.9% from 2023 to 2024 and then increased by only 0.46% from 2024 to 2025.

[4] James H. Cawley and Norman J. Kennard, A Guide to Utility Ratemaking (2018 Edition), Pennsylvania Public Utility Commission, 1983, p. 112.
[5] Company response to I&E-RE-32.
[6] Company Exhibit No. 4, Schedule No. 1, at 23.
[7] Company response to OCA-14-18.

Given this volatility, I do not believe the Company's proposed 5.45% escalation factor is representative of expected future costs. Accordingly, I recommend removing the inflation adjustments of $555,513 in the FTY and $585,816 in the FPFTY. Instead, I rely on the three-year average reflected in the 12-month periods ended November 30, 2023 through November 30, 2025, which better reflects recent experience. This adjustment reduces O&M expense by $625,353, as shown on Schedule JNG-7.

E. Incentive Compensation Expense

Q. DOES PEOPLES CURRENTLY OFFER ANY INCENTIVE COMPENSATION PLANS?

A. Yes, the Company offers several incentive plans, including **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.[8]

Q. DO FINANCIAL PERFORMANCE MEASURES REPRESENT A SIGNIFICANT COMPONENT OF PEOPLES' INCENTIVE COMPENSATION STRUCTURE?

A. Yes. **[BEGIN CONFIDENTIAL]** [redacted]

[8] Company response to Standard Data Request Standard Data Request RR-27 (CONFIDENTIAL).
[9] *Id.*

[redacted] **[END CONFIDENTIAL]** Taken together, these plans demonstrate that a substantial portion of employee incentive compensation is tied to the achievement of financial and shareholder-oriented objectives. Because these measures are designed to reward financial performance and increase shareholder value, they primarily benefit shareholders and therefore should not be recovered from ratepayers.

Q. DID THE COMPANY INCLUDE ALL OF THE INCENTIVE COMPENSATION COSTS ASSOCIATED WITH FINANCIAL METRICS?

[10] *Id.*

A. Yes. The total employee incentive compensation and/or bonus expense included within the cost of service $6,125,473 for the FPFTY.[11]

Q. IS IT APPROPRIATE FOR RATEPAYERS TO BEAR THE FULL COST OF INCENTIVE COMPENSATION TIED TO FINANCIAL METRICS?

A. No. A fundamental principle of ratemaking is that costs should be assigned to those who benefit from them. In the case of incentive compensation tied to financial performance, such as earnings per share, stock price, and total shareholder return, the primary beneficiaries are shareholders. These incentives are specifically designed to increase shareholder value, which is realized through higher stock prices, increased dividends, and enhanced company valuation. Ratepayers, by contrast, do not receive these benefits. They do not participate in equity ownership and do not share in financial market gains. Therefore, it is not appropriate to require ratepayers to fund compensation programs that are structured to benefit shareholders.

Q. DO SHAREHOLDERS BENEFIT FROM PEOPLES' FINANCIAL PERFORMANCE?

A. Absolutely. Shareholders are the primary beneficiaries of improvements in the Company's financial performance. Increased earnings, enhanced cash flow, stock appreciation, and dividend growth accrue to investors rather than ratepayers. Consequently, costs incurred to motivate employees to achieve financial objectives are more appropriately viewed as costs incurred for the benefit of shareholders.

The Company argues that incentive compensation is necessary to attract and retain qualified employees and that eliminating or reducing such programs would impair its ability to compete for talent.[12] While employee recruitment and retention are legitimate business concerns, the Company has not demonstrated that ratepayers should

[11] Company Exhibit No. 4, Schedule No. 1, at 5.

[12] Direct Testimony of Andrew P. Wachter, at 11:23 through 12:7.

bear the costs of compensation programs tied to financial performance metrics. To the extent these programs are designed to improve profitability, increase shareholder value, or enhance financial results, the resulting benefits accrue primarily to shareholders.

Moreover, the Company acknowledges that it undertakes research to ensure that its compensation and incentive programs remain market-based and competitive.[13] These are ordinary business decisions made by management on behalf of investors. The costs of maintaining compensation programs intended to attract and retain employees who will generate financial returns for the Company should be evaluated in light of who receives those returns. Because shareholders receive the financial benefits associated with improved performance, they should bear the costs associated with achieving those benefits.

The Company's own rationale demonstrates that these programs are intended to create economic value. Peoples' states that incentive compensation is necessary to attract and retain employees and that eliminating or reducing such programs would impair its ability to compete for talent. Implicit in that position is the expectation that the benefits generated by those employees exceed the cost of the compensation provided. Otherwise, there would be little reason for the Company to maintain these programs. Any resulting gains—whether in the form of improved earnings, enhanced shareholder value, or increased dividend-paying capacity—accrue primarily to shareholders. If the programs are successful, shareholders receive the financial return. If they are unsuccessful, shareholders bear the risk. In either case, the costs and benefits are inherently shareholder-oriented. It is therefore unreasonable to shift those costs to ratepayers, who do not share in the financial upside.

[13] *Id.*

Q. HAS THE COMPANY DEMONSTRATED THAT INCENTIVE COMPENSATION PROVIDES MEASURABLE BENEFITS TO RATEPAYERS?

A. No. The Company has not established a direct and measurable connection between incentive compensation and customer benefits. While the Company asserts that incentive compensation helps attract and retain competent employees, it has not quantified how those programs result in lower rates, reduced operating expenses, improved service quality, enhanced reliability, or any other tangible benefit to customers. The Company's position effectively assumes that because incentive compensation may support employee retention, the associated costs should be recovered from ratepayers. However, that conclusion does not necessarily follow. The relevant question is not whether the programs provide some benefit to the Company, but whether the Company has demonstrated that the costs are reasonable for recovery from customers. The Company has not provided evidence showing that the incentive compensation at issue produces measurable customer benefits that justify ratepayer funding

Q. WHY IS IT IMPORTANT TO CONSIDER THE DIFFERENCE BETWEEN SHAREHOLDER AND RATEPAYER INTERESTS?

A. The interests of shareholders and ratepayers are not always aligned and can at times be directly opposed. Shareholders benefit from increased earnings and returns, while ratepayers benefit from cost control, stable or affordable rates, and efficient utility service. Incentive compensation tied to financial performance can encourage management to prioritize profitability over affordability or operational efficiency. This divergence means that not all compensation costs, particularly those tied to financial

outcomes, are necessary for the provision of safe and reliable utility service. As a result, such costs should not automatically be included in rates.

Q. ARE THERE JURISDICTIONS THAT EXCLUDE ALL OR A PORTION OF FINANCIAL-BASED INCENTIVES?

A. Yes. Multiple jurisdictions have recognized that incentive compensation tied to financial performance primarily benefits shareholders and should not be recovered from ratepayers, including Pennsylvania.

Q. IS THERE EVIDENCE THAT UTILITIES IN JURISDICTIONS THAT DISALLOW INCENTIVE COMPENSATION RECOVERY PERFORM FINANCIALLY WORSE THAN THOSE THAT ALLOW IT?

A. No. There is no evidence that utilities operating in jurisdictions that disallow recovery of incentive compensation experience weaker financial performance. Utilities in those jurisdictions continue to attract investment, maintain access to capital, and preserve strong credit metrics. This suggests that recovery of incentive compensation from ratepayers is not necessary to maintain a utility's financial health or ability to attract and retain capital.

Q. IS THERE EVIDENCE THAT UTILITIES OPERATING IN JURISDICTIONS THAT DISALLOW RECOVERY OF INCENTIVE COMPENSATION ARE AT A DISADVANTAGE WHEN ATTRACTING AND RETAINING QUALIFIED PERSONNEL?

A. No. Utilities in jurisdictions that limit or disallow recovery of incentive compensation continue to attract and retain qualified employees. Employee compensation is determined by competitive labor markets, and utilities remain free to offer incentive compensation when they believe it is necessary to recruit and retain talent. Disallowing recovery of these costs in rates does not prohibit such programs; it simply requires that

the costs be borne by shareholders rather than ratepayers. The Company has not demonstrated that utilities in jurisdictions with such disallowances face meaningful workforce recruitment or retention challenges as a result.

Q. DOES THE COMPANY HAVE CORPORATE ALLOCATIONS OF INCENTIVE COMPENSATION?

A. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL].**

Q. ARE YOU RECOMMENDING THAT ALL INCENTIVE COMPENSATION BE EXCLUDED FROM RATES?

A. No. It is important to distinguish between incentive compensation tied to operational performance and that tied to financial performance. Incentives related to safety, reliability, or cost control may provide direct benefits to customers and can be appropriate for recovery in rates. However, incentives tied to financial outcomes primarily serve to align management with shareholder interests rather than customer

[14] Company response to OCA-12-13(U) (CONFIDENTIAL).

interests. My recommendation is limited to excluding the portion of incentive compensation that is tied to financial metrics, not the portion tied to operational performance.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO INCENTIVE COMPENSATION.

A. For the reasons explained above, I recommend disallowing incentive compensation expenses related to earnings per share, EBITD Peoples Corporate, and EBITD Peoples State, and ROE. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**

F. Membership Costs

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED MEMBERSHIP COSTS.

A. The Company has proposed including membership dues totaling $1.220 million in the FPFTY. These expenses include fees for membership to numerous organizations related to gas associations, economic development, Chambers of Commerce, and more.[15]

Q. PLEASE EXPLAIN YOUR ADJUSTMENT RELATED TO THE COMPANY'S PROPOSED MEMBERSHIP COSTS.

A. In reviewing the benefits detailed by the Company in response to Exhibit No. 19, RR-31, of the Company's initial filing, it is apparent that several of the organizations the Company has included do not aid in the provision of safe and reliable service to ratepayers.

[15] Company response to I&E-RE-23.

For example, the African American Chamber of Commerce is a membership organization dedicated to supporting the economic empowerment and growth of African-American businesses in the Greater Philadelphia area.[16] Curate Solutions is AI-powered local legislative tracking software, while Leaderships Pittsburgh Inc.'s mission is develop leadership skills through expert-level leadership tools, community connections, and an influential community of support. [17,18] Similarly, the Downtown Neighbors Alliance was a community advocacy organization focused on downtown Pittsburgh development and neighborhood issues; however, its board voted to dissolve the organization in April 2026.[19] These organizations, along with several others included by the Company, primarily support business development, public affairs, community relations, or other non-utility activities rather than utility operations.I therefore recommend disallowing inclusion in the cost of service membership dues related to African American Chamber of Commerce, AI Horizons, Beaver County Chamber of Commerce, Curate Solutions Inc., Downtown Neighbors Alliance, Greater Pittsburgh Chamber of Commerce, Leadership Pittsburgh Inc., North Side Chamber of Commerce, Pennsylvania Chamber of Business & Industry, Pittsburgh Airport Area Chamber of Commerce, and Pittsburgh Metropolitan Area Hispanic Chamber of Commerce. This adjustment reduces membership expenses by $115,828, as presented on Schedule JNG-9.

G. Employee Activity Expense

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED EMPLOYEE ACTIVITY EXPENSE.

[18] https://vibrantpittsburgh.org/membership/meet-our-members/leadership-pittsburgh-inc/
[19] https://www.cbsnews.com/pittsburgh/news/downtown-neighbors-alliance-shuts-down/

A. The Company has proposed including costs totaling $756,875 in the cost of service related to employee activities. These expenses are related to items such as employee events and safety awards.[20]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSAL TO INCLUDE EMPLOYEE ACTIVITY EXPENSES IN THE COST OF SERVICE?

A. No, I do not. This expense item relates to costs that do not aid in the provision of service but rather are for items such as employee events, parking leases, and service awards. I do not believe these items should be included for ratemaking purposes. Ratepayers should not be responsible for expenses which do not relate to the provision of safe and reliable utility service. Whereas these activities may be good for the employees of Peoples, they are not necessarily good for the ratepayers of Peoples. I am therefore recommending the Commission disallow this expense from inclusion in the cost of service. This adjustment reduces expenses by $756,875, as presented on Schedule JNG-10.

H. Travel

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED TRAVEL EXPENSE.

A. The Company has proposed including $1.139 million of travel expenses related to (tolls, mileage, hotels, etc.), meals, and entertainment expenses in the FPFTY. As part of this proposal, the Company applied a 5.14% escalation factor to both the HTY and the FTY, resulting in a cumulative increase of $108,658.[21] In its response to Interrogatory I&E-RE-022, the Company explained that the 5.14% escalation factor was calculated using the average year-over-year increase in these costs for the 12-month periods ended December 31, 2019 through December 31, 2024. This data

[20] Company response to Standard Data Request RR-30(E).

[21] Company Exhibit No. 4, Schedule No. 1, at 17.

demonstrates significant variability in these expenses, with some years increasing and others decreasing. Despite this, the Company proposes an escalation factor of 5.45%. Applying a linear percentage escalation to an expense that may not increase annually creates a risk of over recovering costs from customers.

Additionally, the HTY amount of $1,030,648 includes $799,375 of expenses related to employee entertainment and promotional activities. These costs include, among other items, a company picnic, a company event at Lernerville Speedway, sports entertainment, involvement with the U.S. Open, service awards, merchandise, non-travel meals, and other expenses.[22]

I recommend using the HTY level of expense of $1,030,648 as the basis for ratemaking, rather than applying the Company's proposed escalation factors. However, I have reduced the HTY amount by $799,375 to remove these discretionary entertainment and promotional expenses. Based on these adjustments, I recommend a reduction to the Company's proposed expense of $908,032, as reflected on Schedule JNG-11.

I. Corporate Insurance

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED CORPORATE INSURANCE EXPENSE.

A. The Company has proposed including $7.819 million of corporate insurance expenses in the FPFTY.[23] In preparing its response to Interrogatory I&E-RE-021, the Company explained that the capitalization of insurance expense was erroneously deducted twice in the "Premiums 2024/2025 Column". Correcting this error changes the HTY adjustment from a decrease to an increase of $50,150. As a result of this correction,

[22] Company response to OCA-14-17 (C).
[23] Company Exhibit No. 4, Schedule No. 1, at 15.

Peoples' allocated corporate insurance expense included in the FPFTY is overstated by $150,963. Accordingly, I recommend reducing the Company's proposed corporate insurance expense by $150,963, as shown on Schedule JNG-12.

J. Advertising

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED ADVERTISING EXPENSE.

A. The Company has proposed including $1.458 million of advertising expense in the FPFTY. As part of this proposal, the Company applied a 2.70% escalation factor to both the HTY and the FTY, resulting in a cumulative increase of $75,656.[24] In its response to Interrogatory I&E-RE-026, the Company explained that the 2.70% escalation factor was calculated using the average year-over-year change in advertising expense for the 12-month periods ended December 31, 2023 and December 31, 2024. In my view, a single year-over-year change does not provide a sufficient basis for developing an escalation factor. Furthermore, advertising expense in the HTY declined relative to 2024, indicating that recent expense levels have not exhibited a consistent upward trend.

Additionally, the HTY amount includes $125,000 of expenses related to a PNG Holiday Market Sponsorship 2024.[25] Sponsorship expenses are promotional in nature and do not constitute a necessary utility operating expense that should be recovered from ratepayers. Therefore, I have excluded this amount from the HTY advertising expense.

Given this variability, I do not believe the Company's proposed 2.70% escalation factor is representative of expected future costs. Therefore, I recommend

[24] *Id.*, at 21.

[25] Company response to I&E-RE-026.

eliminating the escalation adjustment and using the HTY advertising expense level of $1,382,376 for ratemaking purposes. However, I have reduced the HTY amount by $125,000. This adjustment reduces the Company's proposed advertising expense by $200,656, as reflected on Schedule JNG-13.

K. Outside Services – Administrative and General Expense

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED A&G EXPENSE.

A. The Company has proposed including $6.333 million of Administrative and General ("A&G") expense in the FPFTY. As part of this proposal, the Company applied an 8.23% escalation factor to both the HTY and the FTY, resulting in a cumulative increase of $926,459.[26]

Q. PLEASE PROVIDE A BREAKDOWN OF THE INCLUDED EXPENSES.

A. Outside Services A&G consists primarily of contracted third-party services, including building and grounds maintenance, security services, accounting and auditing services, legal services, temporary labor, collection agency services, and testing services.[27]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED EXPENSE?

A. No. The Company states that its proposed adjustment is based on the five-year annualized increase in Outside Services A&G costs of 8.23%.[28] However, when requested to provide the supporting data and calculations for this adjustment in Excel format with all formulae intact, the Company did not provide the underlying calculation supporting the 8.23% escalation factor.[29] Further, in response to Interrogatory I&E-RE-001, the Company provided expense data for the 12-month periods ended November 30, 2023 through November 30, 2025. These data show that costs increased

[26] *Id.*, at 13.
[27] Company response to I&E-RE-19.
[28] Direct Testimony of Andrew P. Wachter, at 14:16-20.
[29] Company response to OCA-14-13.

from 2023 to 2024 and then decreased from 2024 to 2025, demonstrating volatility in the expense level. In addition, the Company stated that it does not have explicit multi-year contracts with the majority of vendors that include escalation provisions and, therefore, relied on a historical average as the basis for its adjustment.[30]

Q. WHAT ARE YOUR ADJUSTMENTS?

A. Given the volatility of these expenses, the lack of support for the proposed 8.23% escalation factor, and the absence of contractual escalation provisions for most vendors, I do not believe the Company's proposed adjustment is reasonable. I recommend using the three-year average level of expense based on the Company's most recent historical data and eliminating the proposed escalation adjustment. This results in a reduction to Outside Services A&G expense of $1,281,601, as shown on Schedule JNG-14.

L. Vacancy Reserve

Q. HAS THE COMPANY INCORPORATED AN ADJUSTMENT FOR EMPLOYEE VACANCIES INTO ITS CALCULATIONS OF WAGES AND SALARIES FOR THE FPFTY?

A. Yes, the Company estimates that on average, 30 full time employee (FTE) positions will be vacant during the FTY and 8 FTE positions will be vacant during the FPFTY.[31]

Q. DO YOU AGREE WITH THE COMPANY'S VACANCY ADJUSTMENT?

A. No, I do not. In examining historical vacancy data, the Company's projected vacancy rate for the FPFTY is substantially below the actual level of vacancies experienced in recent years. The Company's proposed staffing level for FPFTY is 1,463 FTEs.[32] This assumption reflects a vacancy rate of approximately 0.55 percent.[33] In examining

[30] Direct Testimony of Andrew P. Wachter, at 9:22 through 10:3.
[31] Company response to I&E-RE-07.
[32] Direct Testimony of Andrew P. Wachter, at 10:1-6.
[33] 8 / 1,463 = 0.55%

historical data, it is clear this proposed vacancy rate is abnormally low compared to the actual level of vacancies experienced over the past three years, as shown in the table below.

Total Vacancy Percentage (%)[1]			
	2022-2023	2023-2024	2024-2025
October	4.18	6.21	5.20
November	3.68	5.87	5.60
December	3.54	6.17	5.82
January	3.61	6.48	5.30
February	4.19	6.02	5.08
March	3.69	6.40	5.15
April	4.05	6.78	4.34
May	4.34	5.87	5.30
June	4.71	6.33	5.60
July	4.64	5.95	5.67
August	5.01	5.72	5.97
September	5.08	5.80	5.75

[1] Company response to Interrogatory I&E-RE-7.

The average vacancy rate across the three-year period is 5.25 percent. Utilizing an abnormally low vacancy rate risks overcollection from ratepayers.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE VACANCY RESERVE.

A. To reflect a more representative level of ongoing vacancies, I normalized the vacancy rate as the average value of the last three years to reflect a normalized year. using the Company's average number of vacant positions over the most recent three-year period. I applied this vacancy rate to salary expense after first adjusting salaries to reflect the incentive compensation adjustment discussed in the "Incentive Compensation Expense" section of my testimony. Applying the OCA-recommended vacancy rate to the adjusted salary expense results in a reduction to O&M expense of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**, as shown on Schedule JNG-15. The vacancy rate adjustment also flows through to payroll taxes and employee

benefits. As shown on Schedule JNG-16, payroll tax expense is reduced by **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**. In addition, employee benefits expense is reduced by $941,164, as shown on Schedule JNG-17.

M. PUC Assessment

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED PUC ASSESSMENT EXPENSE.

A. The Company has derived its PUC Assessment expense projection by taking the 2025 invoice amount and multiplying it by a 6.0% increase to reach a projected 2026 invoice amount, and then again to reach a 2027 invoice amount. The Company derived the 6.0% increase as the average increase value over five years.[34] This results in an increase in PUC Assessment expenses from the HTY amount of $3.435 million to $3.859 million in the FPFTY.

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED PUC ASSESSMENT EXPENSE?

A. No, I do not. In examining the historical data, it is apparent that the PUC Assessment charge is variable, and growth is sometimes flat, as shown from 2023 through 2024.

	2022 Invoice	2023 Invoice	2024 Invoice	2025 Invoice
PUC Assessment[1] ($000)	$2,682	$3,110	$3,000	$3,435

The Company has applied a linear annual increase of 6.0% but has not provided any explanation or supporting evidence demonstrating why the PUC Assessment is expected to grow at a constant rate going forward.[35] I believe it is necessary to normalize the expected PUC Assessment expenses by taking the average of the most

[34] Company response to OCA-12-25, Attachment 2 (PUC Assessment).
[35] *Id.*

recent three years to determine a representative annual cost for ratemaking and avoid overcollection from customers.

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO THE PUC ASSESSMENT EXPENSE.

A. For the reasons detailed above, I am recommending normalizing the annual expense level using the average of the most recent three years. In addition, these invoices should be reconciled to the months applicable for the FPFTY. This adjustment reduces O&M expenses by $823,737, as shown on Schedule JNG-18.

N. Payment Processing

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED PAYMENT PROCESSING EXPENSE.

A. The Company has proposed including $2.940 million of payment processing expenses in the FPFTY.[36] As part of this proposal, the Company applied a 22.00% escalation factor to both the FTY and the FPFTY, resulting in a cumulative increase of $939,253.

In response to Interrogatory OCA-14-21, the Company explained that these costs are associated with its third-party payment processor, ACI. The Company further stated that ACI payment processing expense increased from $1,493,226 for the 12-month period ended November 30, 2024 to $1,923,122 in the HTY, an increase of $429,896, or 28.8%. According to the Company, this increase was driven by a rise in the number of customer payments processed, which increased from 1,146,369 to 1,528,359, or 33.3%.

The Company also explained that a portion of this increase was attributable to Peoples' adoption of no-fee credit card payments. While this policy change resulted in a significant increase in payment processing expense during the HTY, I do not believe

[36] Company Exhibit No. 4, Schedule No. 1, at 26.

it is reasonable to assume that these costs will continue to increase at the same rate going forward. The HTY already reflects the impact of the Company's adoption of no-fee credit card payments and therefore provides a reasonable basis for estimating future payment processing expense.

Q. WHAT ADJUSTMENT DO YOU RECOMMEND?

A. I recommend using the HTY payment processing expense of $1,923,122 as the appropriate level of expense for ratemaking purposes and eliminating the Company's proposed 22.00% escalation factor. This adjustment reduces the Company's proposed FPFTY payment processing expense by $1,016,537, as reflected on Schedule JNG-19.

O. Natural Gas Hot Water Tank Rebate Pilot

Q. PLEASE EXPLAIN THE COMPANY'S PROPOSED NATURAL GAS HOT WATER TANK REBATE PILOT PROGRAM.

A. Peoples proposes a three-year Natural Gas Hot Water Tank Rebate Pilot beginning in January 2027 that would provide residential customers with a $1,000 rebate to help offset the cost of converting from an electric water heater to a high-efficiency natural gas water heater. The Company proposes an annual program budget of approximately $500,000, with any unspent funds carrying over to subsequent years. The proposed annual budget includes approximately $365,000 for customer rebates, $21,000 for program administration, and $114,000 for marketing and outreach. All program costs would be recovered from ratepayers through base rates. Peoples has included $500,000 of expense annually in the cost of service for this case.[37]

Q. DOES THE COMPANY ALREADY OFFER PROGRAMS THAT PROVIDE ASSISTANCE FOR CUSTOMERS WHO NEED TO REPLACE A WATER HEATER?

[37] Direct Testimony of Luke Ravenstahl, at 10:6–13.

A. Yes. Income-qualified customers may already receive assistance through the Company's Emergency Furnace and Service Line Repair ("EFSLR") Program and Low Income Usage Reduction Program ("LIURP"). Under those programs, eligible households may receive a replacement natural gas water heater at no cost.[38]

Q. IS THE PROPOSED HOT WATER TANK REBATE PILOT REQUIRED BY PENNSYLVANIA LAW OR COMMISSION REGULATION?

A. No. The Company has not identified any statutory or regulatory requirement to offer this rebate pilot.

Q. DO YOU AGREE WITH PEOPLES' PROPOSAL TO RECOVER THE COSTS OF THIS PILOT PROGRAM FROM RATEPAYERS?

A. No. The proposal functions primarily as a customer acquisition and fuel-switching program rather than a customer assistance program. The pilot is designed to encourage customers to convert to natural gas appliances, which increases the Company's future gas sales. The costs of attracting those additional customers should be borne by shareholders rather than recovered from captive ratepayers. In addition, the Company proposes to spend approximately $114,000 annually on marketing and outreach. Spending ratepayer funds to advertise a voluntary fuel-switching program is not a reasonable use of customer dollars.

Q. WHAT IS YOUR RECOMMENDATION?

A. I recommend that the Commission reject the proposed Natural Gas Hot Water Tank Rebate Pilot and remove the associated $500,000 annual expense from the Company's requested revenue requirement. This adjustment reduces O&M expense by $500,000, as shown on Schedule JNG-20.

[38] Direct Testimony of Luke Ravenstahl, at 10:19 through 11:6.

P. Residential Collection Expense

Q. PLEASE EXPLAIN YOUR RESIDENTAL COLLECTION EXPENSE ADJUSTMENT.

A. I have adopted the recommendation of OCA witness Roger Colton, as presented in his direct testimony, to remove 50 percent of residential collection expenses from the revenue requirement. In response to discovery, the Company reported 2025 residential collection expenses of $6,516,518 for Peoples Gas and $1,150,487 for Peoples Gas Confirmed Low-Income collections.[39] As shown on Schedule JNG-21, this adjustment reduces O&M expenses by $3,833,503.

Q. Interest Synchronization

Q. PLEASE EXPLAIN YOUR INTEREST SYNCHRONIZATION ADJUSTMENT.

A. To determine the tax-deductible interest for ratemaking, I multiplied the OCA's recommended rate base by the weighted cost of debt included in the capital structure. This procedure synchronizes the interest deduction for tax purposes with the interest component of the return on rate base to be recovered from ratepayers. As shown on Schedule JNG-20, this adjustment decreases state income taxes by $2.2 million and federal income taxes by $6.0 million. [40]

Q. DOES THIS COMPLETE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[39] Company Response to OCA-4-1 and OCA-7-4.
[40] The Company utilized a rate base of $5.761 billion rather than the $5.728 billion rate base used to determine its revenue requirement. The Company provided no explanation for this inconsistency.

Columbia, Maryland 21044

APPENDIX A – Resume of Jared N. Geiger

EXETER
ASSOCIATES, INC.
10480 Little Patuxent Parkway, Suite 300
Columbia, Maryland 21044

JARED N. GEIGER

Mr. Geiger is a Senior Analyst at Exeter Associates with over 17 years of experience in the utility industry. His work at Exeter includes natural gas, electric, and water rate case analysis in investor-owned utility general rate cases and municipality rate increase proposals. He has also assisted in the review of class cost-of-service studies, annual mechanisms, energy efficiency audits, and utility bill assessments.

Mr. Geiger's management experience includes reporting to the president of a natural gas distribution system across Colorado and Kansas and to the president of a large regulated intrastate natural gas pipeline in Texas. In these roles he was responsible for developing strategy and proposals related to rate cases and a myriad of other annual mechanisms and surcharge filings. During this time, Mr. Geiger gained a broad perspective of the dynamics of utility ratemaking; regulatory policy; external stakeholder collaboration; and public utility commission rulemakings, operations, and policy.

Education

B.A. (Finance), 2008
University of North Texas

M.B.A., expected 2026
West Texas A&M University

Previous Employment

2008-2023 Atmos Energy Corporation
- Vice President, Rates and Regulatory Affairs - Texas
- Vice President, Rates and Regulatory Affairs - Colorado and Kansas
- Manager, Sales – Colorado
- Senior Analyst, Rates and Regulatory Affairs

Professional Experience

Mr. Geiger's work at Exeter has been focused on rate case analysis and intervention support, cost allocations, revenue requirements, and rate design. He is experienced in regulatory policy and public utility commission precedent. He has performed multiple reviews of contracts, invoices, rate costs assessments, and alternate options for taking gas and power service for large federal installations and national laboratories under the U.S. Air Force Utility Rate Management Team, the U.S. Department of Energy, and several U.S. Army bases. He has participated in gas local distribution company mergers and annual transmission formula ratemaking reviews. He has performed in-depth analysis and modeling for class cost allocation as well as capital forecasts proposed in multi-year rate plans.

Prior to joining Exeter, Mr. Geiger was vice president of rates and regulatory affairs at Atmos Energy Corporation. In this role, he oversaw the preparation of rate cases, revenue requirement models,

schedules, compliance filings, and the collaboration between technical services, legal, operations, finance, accounting, treasury, and external stakeholders. He has experience as an expert witness on a variety of subjects including billing determinants studies, rate area consolidation, bill impact analysis, gas cost recovery, tariffs, and annual infrastructure replacement mechanisms. He has participated in a variety of hearings, settlement conferences, and technical conferences in general rate cases and proceedings involving system integrity programs, alternative ratemaking mechanisms, rate stabilization clauses, annual rate reviews, revenue sharing mechanisms, performance-based ratemaking, and gas demand-side management programs. Mr. Geiger has also testified on renewable natural gas policy before the Colorado state senate transportation and energy committee.

Schedules Accompanying Surrebuttal Testimony:

- Schedules JNG-1-SR through JNG-23-SR

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jared N. Geiger. I am a Senior Analyst at Exeter Associates, Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland, 21044. Exeter is a consulting firm specializing in issues pertaining to public utilities.

Q. ARE YOU THE SAME JARED N. GEIGER WHO SUBMITTED DIRECT TESTIMONY ON JUNE 18, 2026 IN THIS PROCEEDING?

A. Yes, I am.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to certain aspects of the rebuttal testimony of Peoples Natural Gas Company LLC ("Peoples" or "Company") witnesses Dawn M. Folks, Anton Ribich, Andrew P. Wachter, Luke Ravenstahl, and Rudolph Hanechak, which was filed on July 16, 2026.

Q. ARE YOU INCLUDING UPDATED SCHEDULES SUMMARIZING THE OCA'S CURRENT REVENUE REQUIREMENT POSITION IN THIS PROCEEDING?

A. Yes. I have attached Surrebuttal Schedules JNG-1-SR to JNG-23-SR to this testimony which present the OCA's updated position after taking the Company's rebuttal position into account. My Surrebuttal Schedules utilize the Company's Rebuttal Filing Schedules as the basis for Company data, as they reflect the Company's updated position in this proceeding. In this Surrebuttal Testimony, I respond to the Rebuttal Testimony of the Company's witnesses concerning the adjustments I recommended in my Direct Testimony. I have reviewed the issues raised in Rebuttal Testimony and address those matters in the sections that follow.

After considering the Company's rebuttal positions, I have revised my recommendation and conclude that Peoples' proposed revenue increase should be reduced to no more than $9.4 million for the Fully Projected Future Test Year ("FPFTY"). This recommendation reflects an overall rate of return on rate base of 6.95%, consistent with the recommendation presented in the Direct Testimony of OCA Witness David Garrett.

However, if the Commission adopts Peoples' proposed capital structure, then utilizing the OCA's alternative recommendation of an 8.50% ROE, I have determined that Peoples' proposed revenue increase should be reduced to no more than $17.8 million for the FPFTY.

To the extent that a Company witness addresses a position I presented in my Direct Testimony, but I do not specifically respond to that issue in this Surrebuttal Testimony, my silence should not be construed as agreement with the Company's position. Rather, unless expressly modified herein, I continue to rely on and incorporate by reference the positions, analyses, and recommendations set forth in my Direct Testimony.

II. ADJUSTMENTS

A. Revenues

Q. PLEASE ADDRESS THE REBUTTAL TESTIMONY OF COMPANY WITNESS FOLKS RELATED TO REVENUES.

A. Through the discovery process, the Company identified an adjustment that increases FPFTY revenues by $206,179.[1] I have incorporated this adjustment into my revenue requirement recommendation, as reflected in Surrebuttal Schedule JNG-2-SR.

B. Allowance for Cash Working Capital

Q. PLEASE ADDRESS THE REBUTTAL TESTIMONY OF COMPANY WITNESS RIBICH RELATED TO CASH WORKING CAPITAL.

A. The Company identified several revisions to its original O&M expense claims, including a $785,433 decrease to building lease expense, a $1,738,446 increase to corporate insurance expense, and the removal of $17,980,722 of uncollectible expense from the cash working capital study (without changing the Company's overall O&M revenue requirement). As a result of these and other updates, the Company contends that its cash working capital claim decreases from $47,681,867 to $46,932,677.[2] I have incorporated these revisions into my revenue requirement calculations. Based on the OCA's recommended adjustments, I recommend a cash working capital adjustment that decreases the Company's rebuttal rate base by $909,793, as shown on Surrebuttal Schedule JNG-4-SR.

C. Depreciation Expense

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO DEPRECIATION EXPENSE.

A. I have incorporated the depreciation recommendations presented in the direct testimony of OCA witness Garrett into my revenue requirement calculations. Specifically, I applied Mr. Garrett's recommended depreciation expense levels in place of the

[1] Rebuttal Testimony of Dawn M. Folks, at 2:1-14.
[2] Rebuttal Testimony of Anton Ribich, at 3:18 through 4:20.

amounts proposed by the Company. As shown on Surrebuttal Schedule JNG-5-SR, this adjustment decreases depreciation expense by $36,844,273, decreases the Company's recorded accumulated depreciation by the same amount, and correspondingly reduces the Company's revenue requirement.

D. Rate Case Expense

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO RATE CASE EXPENSE.

A. The Company proposes total rate case expenses of $1.920 million and normalizes those costs over a two-year period, resulting in an annual rate case expense of $0.960 million included in the FPFTY.[3] I recommended increasing the normalization period to five years because rate case expenses should be recovered over the period that benefits from the incurrence of those costs. The Company argues that the historical intervals between its prior rate cases are not representative of its expected future filing frequency because they were affected by unique circumstances. Specifically, the Company states that the seven-year period between its 2012 and 2019 rate cases resulted from a stay-out commitment associated with its acquisition of Equitable Gas Company. The Company also explains that the nearly five-year period between its 2019 and 2023 rate cases was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election in Docket No. P-2020-3021191.[4]

Q. DO YOU AGREE WITH COMPANY WITNESS WACHTER'S RECOMMENDATION TO USE A NORMALIZATION PERIOD THAT IS LESS THAN THE AVERAGE TIME BETWEEN RATE CASES?

[3] Company Exhibit No. 4, Schedule No. 1, at 27.
[4] Rebuttal Testimony of Andrew P. Wachter, at 38:6-13.

A. No. I recognize that this stay-out period was an extraordinary circumstance rather than part of the Company's normal rate case cycle. Stay-out provisions are commonly included in merger proceedings to protect customers by delaying rate increases and allowing customers to share in transaction benefits. Because that commitment has now expired, I agree that the 2012-to-2019 interval is less representative of the Company's expected future filing frequency.

Q. WHAT NORMALIZATION PERIOD DO YOU NOW RECOMMEND?

A. Excluding the extraordinary seven-year interval associated with the acquisition stay-out period, the Company's remaining rate case history consists of the intervals between the 2019, 2023, and current 2026 filings, an average interval of approximately 3.5 years. Accordingly, I now recommend that the Commission normalize the Company's rate case expense over 3.5 years. As shown on Schedule Surrebuttal JNG-6-SR, this adjustment decreases O&M expense by $411,429. This reflects an increase of $164,571 in O&M expense compared to the recommendation included in my Direct Testimony.

E. Materials and Supplies

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO MATERIALS AND SUPPLIES EXPENSES.

A. The Company disagrees with my recommendation to use the three-year average of actual Materials and Supplies expense. Instead, it contends that inflation is an expected component of operating expenses and that applying an inflation factor based on its historical experience is a reasonable method for projecting future Materials and Supplies costs.[5]

[5] *Id.*, at 37.

Q. HAVE YOU REVISED YOUR ADJUSTMENT RELATED TO MATERIALS AND SUPPLIES?

A. No. First, I identified an error in the Company's calculation of its proposed 5.45% escalation factor. In response to OCA-14-18, the Company explained that the escalation factor was calculated using the average year-over-year increase in Materials and Supplies expense for the twelve-month periods ended December 31, 2020 through December 31, 2024. However, the Company used an incorrect 2020 expense amount of $11,863,863. The underlying data provided by the Company shows the correct amount is $11,923,306. Correcting this error reduces the average annual escalation factor from 5.45% to approximately 5.32%.

More importantly, I continue to disagree with the Company's use of any escalation factor to forecast Materials and Supplies expense. As I explained in my Direct Testimony, the same discovery response provided more recent expense data for the twelve-month periods ended November 30, 2023, November 30, 2025. That more recent information demonstrates that these expenses do not follow a consistent inflationary trend. Rather, Materials and Supplies expense decreased by 13.9% from 2023 to 2024 and then increased by only 0.46% from 2024 to 2025.

This more recent information demonstrates that these expenses are subject to significant year-to-year variability. Given this volatility, I continue to rely on the three-year average of actual Materials and Supplies expense for the 12-month periods ended November 30, 2023 through November 30, 2025. The Company’s reliance on older cost data over a longer period of time to omit recent volatility is less representative of the costs that the Company should expect to occur for the expense item during the FPFTY. Accordingly, I continue to recommend reducing O&M expense by $625,353, as reflected on Surrebuttal Schedule JNG-7-SR.

F. Incentive Compensation Expense

Q. EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO INCENTIVE COMPENSATION PLANS?

A. In its initial filing, the Company included expenses related to numerous incentive compensation plans, including **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**.[6] Company Witness Wachter explained that Incentive Compensation is a way to retain talent.[7] In my Direct Testimony, I recommended disallowing the inclusion of incentive compensation expenses related to financial performance measures.[8] In Rebuttal, Mr. Wachter disagrees with my recommendation and advances three primary arguments: **(1)** financial performance metrics provide direct customer benefits by encouraging cost control, operational efficiency, financial strength, and access to capital; **(2)** the Company's incentive compensation program is part of a fair, market-based compensation package necessary to attract and retain qualified employees; and **(3)** there is no regulatory prohibition against recovering incentive compensation tied to financial performance metrics from ratepayers.[9]

Q. DOES THE COMPANY'S REBUTTAL TESTIMONY CHANGE YOUR RECOMMENDATION REGARDING INCENTIVE COMPENSATION?

A. No. As I explained in my Direct Testimony, incentive compensation tied to financial performance metrics, such as earnings per share, return on equity, stock price, and total shareholder return, is primarily designed to increase shareholder value. Accordingly, the primary beneficiaries of these metrics are shareholders.

[6] Company response to Standard Data Request Standard Data Request RR-27 (CONFIDENTIAL).
[7] Direct Testimony of Andrew P. Wachter, at 12:2-3.
[8] Direct Testimony of Jared. N Geiger, at 16: 6-10.
[9] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 18:6-15.

The Company's rebuttal focuses on whether customers may derive some indirect benefit from a financially successful utility. I do not dispute that financially healthy utilities benefit customers if the utility is able to contain costs in order to avoid or mitigate future rate increases. However, that is not the issue presented here. The relevant question is whether the specific financial performance metrics used in the Company's incentive compensation plans are intended to reward outcomes that primarily benefit shareholders or ratepayers.

The Company argues that financial metrics encourage employees to control costs, improve productivity, and manage Company resources efficiently. However, these are generalized assertions associated with sound financial management, not the specific performance measures at issue. The metrics I recommended disallowing—earnings per share, return on equity, stock price, and total shareholder return—are designed to measure financial performance and increase shareholder value. The Company has not established that these shareholder-oriented metrics directly measure or reward customer outcomes in the same manner as operational metrics tied to safety, reliability, customer service, or regulatory compliance.

Nor has the Company demonstrated that disallowing recovery of the financial-based portion of incentive compensation would impair its ability to attract and retain qualified employees. As I explained in my Direct Testimony, there is no evidence that utilities operating in jurisdictions that limit or disallow recovery of these costs are at a competitive disadvantage in recruiting or retaining qualified personnel. Utilities remain free to offer incentive compensation when they determine it is necessary to remain competitive in the labor market. The question before the Commission is not whether the Company may provide incentive compensation, but whether ratepayers should bear

the cost of incentive compensation tied to shareholder-oriented financial performance metrics.

My recommendation does not disallow all incentive compensation. I continue to support recovery of the portion of incentive compensation tied to operational objectives that directly benefit customers, including safety, reliability, customer service, and other operational performance measures. My recommendation is limited to the portion of incentive compensation tied to shareholder-oriented financial performance measures. Because those measures are principally intended to enhance shareholder value, the associated compensation should be borne by shareholders rather than ratepayers

Q. PLEASE EXPLAIN YOUR ADJUSTMENT TO INCENTIVE COMPENSATION.

A. For the reasons explained above, I continue to recommend disallowing incentive compensation expenses related to earnings per share, Earnings Before Interest, Taxes, and Depreciation ("EBITD") for Peoples Corporate and Peoples State, and ROE. **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL].**

G. Membership Costs

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO PROPOSED MEMBERSHIP COSTS.

A. In its original filing, the Company proposed including membership dues totaling $1.220 million in the FPFTY.[10] In my Direct Testimony I recommended disallowing $115,828 of these because they primarily support business development, public affairs,

[10] Company Exhibit No. 4, Schedule No. 1, at 18 of 32.

community relations, or other non-utility activities rather than utility operations.[11] In Rebuttal, Mr. Wachter provides a matrix identifying the basis for including each organization.[12]

Q. HAVE YOU REVISED YOUR POSITION RELATED TO MEMBERSHIP DUES?

A. Based on the additional explanation provided in rebuttal, I conclude that some of these memberships provide both customer and shareholder benefits. Accordingly, I recommend allocating responsibility equally between shareholders and ratepayers. This adjustment reduces expenses by $57,914, as shown in Surrebuttal Schedule JNG-9-SR. This reflects an increase of $57,914 in O&M expense compared to the recommendation included in my Direct Testimony.

H. Employee Activity Expense

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO EMPLOYEE ACTIVITY EXPENSE.

A. The Company has proposed including costs totaling $756,875 in the cost of service related to employee activities. These expenses are related to items such as employee events and safety awards.[13] In Rebuttal, Mr. Wachter provides further explanation of the costs included.[14]

Q. HAVE YOU REVISED YOUR POSITION RELATED TO EMPLOYEE ACTIVITY EXPENSE?

A. Yes. The expense item relating to device reimbursement reimburses employees $60 per month for use of the employee's own cell phone. Parking lease reimbursement

[11] Direct Testimony of Jared. N Geiger, at 17: 9-11.
[12] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 28-29.
[13] Company response to Standard Data Request RR-30(E).
[14] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 25.

covers the cost of parking on the North Shore for certain employees because the Company's headquarters in downtown Pittsburgh does not include a surface parking lot. These expenses are $126,820 and $203,085, respectively. I agree these costs should be included in the revenue requirement. This adjustment reduces expenses by $426,970 as presented on Surrebuttal Schedule JNG-10-SR. This reflects an increase of $329,905 in O&M expense compared to the recommendation included in my Direct Testimony.

I. Travel

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL TESTIMONY RELATED TO TRAVEL EXPENSE.

A. The Company has proposed including $1.139 million of travel expenses (tolls, mileage, hotels, etc.), meals, and entertainment expenses in the FPFTY. As part of this proposal, the Company applied a 5.14% escalation factor to both the Historic Test Year ("HTY") and the Future Test Year ("FTY"), resulting in a cumulative increase of $108,658.[15] In my Direct Testimony, I recommended disallowing the inclusion of $799,375 of expenses related to employee entertainment and promotional activities.[16] In Rebuttal, Mr. Wachter provides further explanation of the costs included.[17] However, he does not demonstrate how these discretionary travel and entertainment expenses provide a direct benefit to ratepayers or why they should be recovered through rates. Accordingly, my recommendation is unchanged. I continue to recommend reducing the Company's proposed travel expense by $908,032, as reflected on Surrebuttal Schedule JNG-11-SR.

[15] Company Exhibit No. 4, Schedule No. 1, at 17 of 32.
[16] Direct Testimony of Jared. N Geiger, at 19: 5-9.
[17] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 26.

J. Corporate Insurance

Q. PLEASE ADDRESS THE COMPANY'S REBUTTAL RELATED TO CORPORATE INSURANCE EXPENSE.

A. The Company has proposed including $7.668 million of corporate insurance expenses in the FPFTY.[18] In my Direct Testimony, I recommended reducing the Company's proposed corporate insurance expense by $0.151 million based on my understanding that the Company was proposing $7.819 million, as reflected in its response to Interrogatory I&E-RE-021. The Company's Rebuttal Testimony clarifies that its proposed corporate insurance expense is $7.668 million, which is consistent with the level I recommended in my Direct Testimony. Accordingly, I no longer recommend an adjustment to corporate insurance expense.

K. Advertising

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO ADVERTISING EXPENSE.

A. In my Direct Testimony, I recommended using the HTY advertising expense level and eliminating the Company's proposed escalation adjustment and removing $125,000 related to the Holiday Market sponsorship.[19] In Rebuttal, Mr. Wachter explains that the $125,000 was not a sponsorship expense included in the Company's revenue requirement but rather an accounting adjustment to reverse a prior accrual. According to Mr. Wachter, beginning in 2024 the Holiday Market sponsorship was funded by the Essential Foundation rather than Peoples and, therefore, no sponsorship expense was included in the Company's revenue requirement. He states that the HTY adjustment

[18] Company Exhibit No. 4, Schedule No. 1, at 15 of 32.
[19] Direct Testimony of Jared. N Geiger, at 20:22 through 21:4.

was necessary solely to eliminate the effects of the accrual reversal and ensure that no Holiday Market costs were recovered from ratepayers.[20]

Q. HAVE YOU REVISED YOUR POSITION RELATED TO ADVERTISING?

A. Yes. Based on the additional explanation provided in Rebuttal, I no longer recommend removing the $125,000 Holiday Market adjustment. However, I continue to recommend eliminating the Company's proposed escalation adjustment and using the HTY. Accordingly, this adjustment reduces the Company's proposed advertising expense by $75,656, as reflected on Surrebuttal Schedule JNG-13-SR.

L. Outside Services – Administrative and General Expense

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED A&G EXPENSE.

A. The Company has proposed including $6.333 million of Administrative and General ("A&G") expense in the FPFTY. As part of this proposal, the Company applied an 8.23% escalation factor to both the HTY and the FTY, resulting in a cumulative increase of $926,459.[21] In my Direct Testimony, I recommended eliminating the Company's proposed escalation adjustment. Given the volatility of these expenses, the lack of support for the proposed 8.23% escalation factor, and the absence of contractual escalation provisions for most vendors, I concluded that the Company's proposed adjustment was not reasonable. Instead, I recommended using the three-year average level of expense based on the Company's most recent historical data, resulting in a reduction to Outside Services A&G expense of $1,281,601.[22] In Rebuttal, Mr. Wachter contends that inflation is an expected component of operating expenses and that

[20] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 31:5-15.
[21] Company Exhibit No. 4, Schedule No. 1, at 13 of 32.
[22] Direct Testimony of Jared. N Geiger, at 20:22 through 21:4.

applying an inflation factor based on its historical experience is a reasonable method for projecting future Outside Services – A&G costs.[23]

Q. HAVE YOU REVISED YOUR POSITION RELATED TO OUTSIDE SERVICES – A&G?

A. The Company's rebuttal does not alter my conclusion that applying an 8.23% escalation factor is unsupported. Accordingly, I continue to recommend reducing O&M expense by $1.282 million, as reflected on Surrebuttal Schedule JNG-14-SR.

M. Vacancy Reserve

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO EMPLOYEE VACANCIES.

A. The Company estimated that on average, 30 full time employee (FTE) positions will be vacant during the FTY and 8 FTE positions will be vacant during the FPFTY.[24] In my Direct Testimony, I recommended using the Company's average vacancy rate over the most recent three-year period to reflect normalized vacancy levels.[25] In Rebuttal, Mr. Wachter contends that the Company's projected vacancy rate is supported by: (1) recent improvements in staffing levels; (2) normalized labor market conditions following the COVID-19 pandemic; (3) external labor market data indicating more favorable hiring conditions; and (4) Company-specific recruiting and retention initiatives designed to reduce future vacancies.[26] Mr. Wachter also suggests a correction in my vacancy calculation.

[23] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 44:7-13.
[24] Company response to I&E-RE-07.
[25] Direct Testimony of Jared. N Geiger, at 23:8-10.
[26] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 11:20 through 13:7.

Q. DO YOU AGREE WITH COMPANY WITNESS WACHTER'S ASSERTION THAT IT IS NOT REASONABLE TO RELY EXCLUSIVELY UPON HISTORICAL VACANCY PERCENTAGES?

A. No. The vacancy data provided in that response covers a period several years after the COVID-19 pandemic, yet the Company's actual vacancy levels remained substantially higher than those it now projects. In my view, the Company's recent historical experience represents the best available evidence of the vacancy levels that can reasonably be expected during the FPFTY. Accordingly, I continue to rely on the Company's historical vacancy data in developing my recommendation.

Q. HAVE YOU REVISED YOUR POSITION RELATED TO THE VACANCY RESERVE.

A. Yes. I have revised my vacancy reserve calculation to reflect the corrections identified by the Company to the historical vacancy data.[27]

Based on these revisions, I recommend a reduction to O&M expense of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** as shown on Surrebuttal Schedule JNG-15-SR. Consistent with my Direct Testimony, the vacancy adjustment also flows through to payroll taxes and employee benefits. As shown on Surrebuttal Schedule JNG-16-SR, payroll tax expense is reduced by $239,176. In addition, employee benefits expense is reduced by $887,355, as shown on Surrebuttal Schedule JNG-17-SR.

N. PUC Assessment

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO PUC ASSESSMENT EXPENSE.

[27] *Id.*, at 14.

A. The Company has derived its PUC Assessment expense projection by taking the 2025 invoice amount and multiplying it by a 6.0% increase to reach a projected 2026 invoice amount, and then again to reach a 2027 invoice amount. The Company derived the 6.0% increase as the average increase value over five years.[28] In my Direct Testimony, I normalized the annual expense level using the average of the most recent three years.[29] In Rebuttal, Mr. Hanechak contends that the five-year average increase is more appropriate because it minimizes the impact of high and low points.[30]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED PUC ASSESSMENT EXPENSE?

A. No. The Company provided historical PUC Assessment expense data showing that the assessment has both increased and decreased over the past five years. Nevertheless, the Company asserts that it is "highly unlikely" the PUC Assessment will decline during the FTY and FPFTY.[31] The Company provides no evidence or analysis to support that assertion.

Q. HAVE YOU REVISED YOUR POSITION RELATED TO THE PUC ASSESSMENT EXPENSE?

A. No. Accordingly, I continue to recommend normalizing the annual PUC Assessment using the average of the most recent three years. In addition, the invoices should be matched to the months applicable to the FPFTY. This adjustment reduces O&M expenses by $823,737, as shown on Schedule JNG-18-SR.

[28] Company response to OCA-12-25, Attachment 2 (PUC Assessment).
[29] Direct Testimony of Jared. N Geiger, at 25:5-6.
[30] Rebuttal Testimony of Testimony of Rudolph Hanechak, at 5:2-3.
[31] *Id.*, at 5.

O. Payment Processing

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO PAYMENT PROCESSING EXPENSE.

A. The Company has proposed including $2.940 million of payment processing expenses in the FPFTY.[32] In my Direct Testimony, I recommended using the HTY payment processing expense.[33] In Rebuttal, Mr. Wachter contends that it is reasonable to expect an increasing share of customers to utilize credit cards for utility bill payments.[34]

Q. DO YOU AGREE WITH THE COMPANY'S PROPOSED PAYMENT PROCESSING EXPENSE?

A. No. Mr. Wachter fails to acknowledge that, in response to OCA-14-21, the Company explained that a portion of the increase in third-party payment processing costs and customer payments processed was attributable to Peoples' adoption of no-fee credit card payments. That change resulted in a one-time increase in payment processing activity and associated costs. Therefore, it is not reasonable to assume that this elevated level of growth will continue indefinitely. Accordingly, I continue to recommend that the Company's projected payment processing expense be based on a more reasonable estimate of future costs rather than assuming continued growth at this elevated level.

Q. HAVE YOU REVISED YOUR POSITION RELATED TO PAYMENT PROCESSING EXPENSE?

A. No. I recommend using the HTY payment processing expense of $1,923,122 as the appropriate level of expense for ratemaking purposes and eliminating the Company's proposed 22.00% escalation factor. This adjustment reduces the Company's proposed

[32] Company Exhibit No. 4, Schedule No. 1, at 26 of 32.
[33] Direct Testimony of Jared. N Geiger, at 26:6-8.
[34] Rebuttal Testimony of Testimony of Andrew P. Wachter, at 46:4-6.

FPFTY payment processing expense by $1,016,537, as reflected on Surrebuttal Schedule JNG-19-SR.

P. Natural Gas Hot Water Tank Rebate Pilot

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO THE NATURAL GAS HOT WATER TANK REBATE PILOT PROGRAM.

A. Peoples proposes a three-year Natural Gas Hot Water Tank Rebate Pilot beginning in January 2027 that would provide residential customers with a $1,000 rebate to help offset the cost of converting from an electric water heater to a high-efficiency natural gas water heater. The Company proposes an annual program budget of approximately $500,000, with any unspent funds carrying over to subsequent years. In my Direct Testimony, I recommended rejecting the proposed hot water tank rebate pilot because it functions primarily as a customer acquisition and fuel-switching program. The program is designed to increase the Company's future gas sales, and the costs of acquiring new customers, including marketing and outreach, should be borne by shareholders rather than recovered from existing ratepayers.[35] The Company disagrees with my recommendation to eliminate the proposed hot water tank rebate pilot. It contends that the pilot will reduce customers' energy costs, increase system throughput to help keep rates lower for all customers, reduce strain on the electric grid, and help address long-term energy challenges.[36]

Q. DO YOU AGREE WITH PEOPLES' PROPOSAL TO RECOVER THE COSTS OF THIS PILOT PROGRAM FROM RATEPAYERS?

A. No. As I explained in my Direct Testimony, I believe this proposal functions primarily as a fuel-switching and load-building program rather than a customer assistance

[35] Direct Testimony of Jared. N Geiger, at 27:9-18.
[36] Rebuttal Testimony of Testimony of Luke Ravenstahl, at 10:14-23.

program. The costs of acquiring new customers should be borne by shareholders, not existing ratepayers. Accordingly, I continue to recommend that the Commission reject the proposed Natural Gas Hot Water Tank Rebate Pilot and remove the associated $500,000 annual expense from the Company's requested revenue requirement. As shown on Surrebuttal Schedule JNG-20-SR, this adjustment reduces O&M expense by $500,000.

Q. Residential Collection Expense

Q. PLEASE EXPLAIN THE COMPANY'S REBUTTAL RELATED TO THE RESIDENTIAL COLLECTION EXPENSE ADJUSTMENT.

A. In my Direct Testimony, I adopted the recommendation of OCA Witness Roger Colton to remove 50 percent of residential collection expenses from the Company's revenue requirement.[37] In Rebuttal, Company Witness Parks provides several reasons why she disagrees with Mr. Colton's recommendation.[38]

Q. DO YOU AGREE WITH PEOPLES' REBUTTAL POSITION?

A. No. Mr. Colton responds directly to these issues in his Surrebuttal Testimony. Accordingly, I continue to adopt his recommendation in calculating the OCA's overall revenue requirement. As shown on Surrebuttal Schedule JNG-21-SR, I continue to reflect Mr. Colton's adjustment and reduce O&M expenses by $3.834 million.

R. Interest Synchronization

Q. PLEASE ADDRESS THE COMPANY'S REBUTTAL RELATED TO INTEREST SYNCHRONIZATION.

A. In Rebuttal, Mr. Wachter identifies an error in my interest synchronization calculation. I have corrected the calculation in my Surrebuttal Schedule. Accordingly, I have

[37] Direct Testimony of Jared. N Geiger, at 28:1-9.
[38] Rebuttal Testimony of Michele Parks, at 6 through 8.

recalculated interest synchronization using the OCA's recommended rate base and weighted cost of debt. As shown on Surrebuttal Schedule JNG-22-SR, this adjustment reduces state income tax expense by $2.18 million and federal income tax expense by $6.09 million.

Q. DOES THIS COMPLETE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-021

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume I, Exhibit No. 4, Schedule 22, Peoples Volume I, Schedule No. 1, p. 15, and Peoples Statement No. 2, p. 15 concerning corporate insurance:

A. Documentation to support the 10.6% increase in the FTY and FPFTY.

B. Justification for use of a three-year average increase in costs when the HTY annualization adjustment appears to be adjusting the expense downward.

C. Provide a breakdown of corporate insurance expensed versus capitalized for the fiscal years ended November 30, 2023, 2024, 2025, and budgeted for the FTY and FPFTY claims.

D. Copies of recent statements to support the 2024/2025 premiums on Exhibit No. 4, Schedule 1, p. 15, column 2.

Answer: Refer to the attachment. For Part D, the company is currently compiling the invoices and will submit a supplemental response once they are available.

Submit Date: 5/1/2026

I&E-RE-21

A) The 10.6% annualized increase is an average of the prior 2 years of annual insurance premiums

	Essential Utility Insurance Premiums		
	2022-23 Actual	2023-24 Actual	2024-25 Actual
Actual Insurance Premiums	18,252,360	20,291,409	22,323,710
Change vs Prior Year $		2,039,049	2,032,301
Change vs Prior Year %		11.2%	10.0%

	Change v PY	Annual Premium	% Change
2023-2024	2,039,049	18,252,360	11.2%
2024-2025	2,032,301	20,291,409	10.0%
		Average	10.6%

B) While preparing this response we noted that there was an error on Exhibit 4, Schedule 1, Page 15 whereby the capitalization of insurance expense was deducted twice in the "Premiums 2024/2025 Column". The HTY adjustment is now an increase of $50,150. Below is the revised schedule. This results in a reduction of $150,963 in the overall FPFTY Insurance claim. A revised Exhibit No. 5, Schedule 1 will be separately filed.

Exhibit No. 4, Schedule No. 1

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-RE-007

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume VII, Exhibit No. 19, RR-26 concerning labor. Provide the following in Excel format:

A. Actual employee count broken down by month and by union versus non-union categories for the fiscal years ended November 30, 2023, 2024, 2025, and 2026 YTD.

B. Budgeted employee count broken down by month and by union versus non-union categories for the fiscal years ended November 30, 2023, 2024, 2025, and 2026, and the claimed FPFTY ending December 31, 2027.

C. Number of vacant positions by month and by union versus non-union for the fiscal years ended November 30, 2023, 2024, 2025, YTD 2026, and estimated for the remainder of the FTY and the FPFTY ending December 31, 2027.

Answer: A, B, & C, Please refer to Attachment A.

The union versus non-union budget data is not readily available for 2022 and 2023.

Please note that the historical counts include positions that are fully capitalized whereas the projected vacancies only includes those positions that are claimed in expense.

Submit Date: 5/1/2026

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XIV-021

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Reference Peoples Volume I Exhibit No. 4, Schedule No. 1, p. 26, Payment Processing Fee Expense and Volume VIII, Statement No. 2, the direct testimony of Andrew Wachter, p. 18. Provide the following:

a. Payment processing expenses for TME November 30, 2023, November 30, 2024, HTY 2025, FTY 2026, and FPFTY 2027.

b. Detailed breakdown of per book payment processing expenses.

c. Detailed breakdown of per book non-recurring charges.

d. Please explain how current payment processing fees are collected from customers.

e. Please provide an annual variance explanation for any annual difference over 20 percent.

Answer: Please refer to the attachment.

Submit Date: 5/22/2026

OCA - XVI - 021

A) Please refer to Exhibit 4, Schedule 22 for Payment Processing expenses for TME November 30, 2023 and November 30, 2024

Payment Processing Expense to TME November 30, 2023 and 2024 are as follows:

TME November 30, 2023	1,458,898
TME November 30, 2024	1,493,226

Please note that these costs are included in the Outside Services-Contracted line item on Exhibit 4, Schedule 22

B) The per book payment processing expenses are all related to ACI Payments, Inc. Below is a by month view of expense:

Month/Year	Amount
December 2024	136,212
January 2025	143,759
February 2025	152,195
March 2025	154,327
April 2025	171,358
May 2025	181,769
June 2025	165,550
July 2025	161,367
August 2025	163,111
September 2025	161,966
October 2025	155,348
November 2025	176,159
TOTAL	**1,923,122**

C) The Company has not identified any non-recurring charges in this category.

D) The Company's third party payment processor, ACI collects these fees directly from customers.

E) ACI Payments increased from $1,493,226 to $1,923,122 from TME November 30, 2024 to HTY 2025, for a total increase of $429,896 (28.8%). This was caused by an increase in number of payments from 1,146,369 for TME November 30, 2024 to 1,528,359 in HTY 2025, which is a 33.3% increase. Some of this is related to Peoples Gas' adoption of no fee credit cards.

The increase from HTY 2025 to FTY 2026 and FPFTY 2027 was 22% YoY. The 22% increase was determined by the average increase in such payments from TME November 30, 2023 to TME November 30, 2025.

I. INTRODUCTION

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Summarize your educational background and professional experience.

A. I received a B.B.A. with a major in Finance, an M.B.A., and a Juris Doctor from the University of Oklahoma. I worked in private legal practice for several years before accepting a position as assistant general counsel at the Oklahoma Corporation Commission in 2011. At the commission, I worked in the Office of General Counsel in regulatory proceedings. In 2012, I began working for the Public Utility Division as a regulatory analyst providing testimony in regulatory proceedings. After leaving the commission, I formed Resolve Utility Consulting PLLC, where I have represented various consumer groups and state agencies in utility regulatory proceedings, primarily in the areas of cost of capital and depreciation. I am a Certified Depreciation Professional with the Society of Depreciation Professionals. I am also a Certified Rate of Return Analyst with the Society of Utility and Regulatory Financial Analysts. A more complete description of my qualifications and regulatory experience is included in my curriculum vitae.[1]

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate ("OCA").

[1] Exhibit DJG-1.

Q. Describe the purpose and scope of your testimony in this proceeding.

A. My testimony addresses the proposed rate of return of Peoples Natural Gas Company LLC ("Peoples" or the "Company"), which is sponsored in the direct testimony of Company witness Ann Nelson. I also address Peoples' depreciation study and proposed depreciation rates in response to the direct testimony of Company witness John Spanos, who sponsors Peoples' depreciation study.

Q. Please describe the organization of your testimony.

A. In the executive summary below, I provide an overview of the cost of capital issues, my recommendations, and my response to the Company's testimony on these issues. In the sections that follow, I discuss the legal standards governing the awarded return issue as well as the general concepts involved in estimating the cost of equity. I discuss the concepts of risk and return. I provide detailed analysis of the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), including my results for these models and my responses to Ms. Nelson's results. I also address capital structure, which is a key component to the cost of capital. In addition, I discuss my recommendation to reject the Company's proposed depreciation rates, which are based on a methodology that effectively results in accelerated depreciation at the expense of customers.

II. EXECUTIVE SUMMARY

A. Rate of Return Summary

Q. Please summarize your rate of return recommendation to the Commission.

A. The key points of my testimony are as follows:

- The Commission should reject the Company's proposed return on equity ("ROE") of 11.25% because it is excessive and unsupported. An objective cost of equity analysis shows that the Company's market-based cost of equity is no higher than 8.8%. Based on this cost of equity analysis, I recommend an authorized ROE of 8.8% for Peoples.
- In order to promote a fair authorized rate of return, the Commission should also reject Peoples' proposed ratemaking capital structure, which consists of 45.53% debt and 54.47% equity (I refer to the rounded figures of 46% and 54% throughout in my testimony). The Company's proposed, equity-rich capital structure consists of much higher amounts of high-cost equity rather than low-cost debt, which contributes to an excessive authorized rate of return. By comparison, Peoples' proposed debt ratio is much lower than its parent company's debt ratio, the average rate of the proxy group, and debt ratios observed in comparable industries in the U.S. I propose a ratemaking capital structure for the Company that is equal to the proxy group average, which consists of 51% debt and 49% equity.
- Alternatively, if the Commission accepts the Company's proposed ratemaking capital structure, then Peoples' cost of equity estimate under the CAPM (and ultimate authorized ROE) must be mathematically adjusted to account for the fact that Peoples has less financial risk than the proxy group average. This mathematical adjustment under the Hamda model shows Peoples' cost of equity is only 8.5% under its equity-rich capital structure. Accordingly, if the Commission accepts Peoples' low-risk, equity-rich capital structure, then I recommend an authorized ROE of 8.5% for the Company.

- Based on the results of my financial modeling using the DCF and CAPM models, my primary recommendation results in a weighted average authorized rate of return of 6.66%. My alternative recommendation would result in an authorized rate of return of 6.73%, as summarized in the following figures.

Figure 1:
Primary Recommendation

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	51.0%	4.61%	2.35%
Common Equity	49.0%	8.80%	4.31%
Total	100.0%		6.66%

Figure 2:
Alternative Recommendation

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	45.5%	4.61%	2.10%
Common Equity	54.5%	8.50%	4.63%
Total	100.0%		6.73%

Q. Please summarize the statement of Vice Chair Barrow filed in this case regarding capital structure.

A. In her statement dated April 16, 2026, Vice Chair Barrow expressed concern regarding Peoples' proposed capital structure and its impact to the Company's proposed rate increase. As stated by Vice Chair Barrow:

> I urge the Parties to take a critical look at the Company's requested rate of return and return on equity (ROE) as well as the capital structure (common equity ratio and debt capital) to ensure reasonableness. Deviations in each of these items translate into millions of dollars charged to customers of all rate classes. Too often, the relationship between debt and ROE to cost of debt and capital is asserted as a general matter from basic economic principle alone. However, those relationships are not established empirically and left for the Commission to assume the relationship without any supporting data. Therefore, I believe a careful and detailed review of Peoples' claimed capital structure and ROE is warranted.[2]

Q. Do you share Vice Chair Barrow's concern regarding Peoples' proposed capital structure?

A. Yes. Peoples' proposed capital structure for ratemaking purposes is entirely unreasonable, and it exacerbates the unwarranted, excessive transfer of wealth from customers to Peoples' shareholders. Pursuant to Vice Chair Barrow's guidance, I conducted a critical analysis of Peoples' market based cost of equity and based my authorized ROE for Peoples on my cost of equity analysis. However, a company's cost of equity and its capital structure are inextricably and mathematically related. Since Peoples' proposed debt ratio of 46% is notably less than the proxy group's average debt ratio of 51%, in order for the cost of equity estimate of 8.8% to be accurate (or whichever cost of equity estimate the Commission ultimately adopts), the Commission should impute a capital structure for Peoples that is equal to the proxy group average, which consists of 51% debt and 49% equity. Unlike competitive companies, regulated utilities do not have a natural financial incentive to operate with sufficient amounts of low-cost debt in order to minimize capital costs. A regulator standing in the place of competition should ensure the Company's weighted average cost of capital is minimized to its lowest reasonable level. In order to accomplish

[2] Statement of Vice Chair Kimberly Barrow, April 16, 2026.

this, the Commission must impute a ratemaking debt ratio of 51%, which is equal to the proxy group average (in addition to adopting a fair ROE). Taking this approach perfectly re-establishes the empirical relationship between the Company's ratemaking capital structure, its authorized ROE, and ultimately, its approved rates, as instructed in Vice Chair Barrow's statement.

Q. Does the capital structure of Peoples' parent company also relate to Vice Chair Barrow's concerns regarding capital structure?

A. Yes. Peoples' parent company, Essential Utilities, has a long-term debt ratio of 54%, which is significantly higher than the Company's proposed ratemaking debt ratio of only 46%, and even higher than the proxy group average debt ratio. Since Peoples is a wholly owned subsidiary of Essential, the Company's "equity" on its balance sheet is funded by Essential. Since the parent company has a debt ratio of 54%, this means Peoples is using debt to finance the Company's "equity." Since the Company also issues its own debt, this strategy is known as "double leverage." While this arrangement is not problematic among competitive firms, it often results in unfair, excessive returns for regulated utilities to the extent there is not an adjustment made by the regulator. If no adjustment is made, shareholders of the parent company effectively earn a high-cost equity return on low-cost debt. In fact, Essential's projected, earned ROE for 2026 is 10.5%, which is significantly higher than the Company's cost of equity, or even the inflated ROEs typically authorized by regulators. In order to mitigate the excessive return that would otherwise occur through double leverage, the Commission should impute a capital structure that is equal to the proxy group average.

Q. Does your proposed capital structure adjustment acknowledge the issues raised in Governor Shapiro's letter to utility leaders?

A. Yes. In his letter to utility leaders dated April 29, 2026, Governor Shapiro stated:

> [D]ebt should normally represent a clear majority of a utility's proposed ratemaking capital structure, as it does in many other lower-risk industries. As one measure of this approach, any equity share proposed in a rate case in excess of the amount of equity employed by the utility's parent holding company will require extraordinary justification to receive my Administration's support.[3]

As discussed above in response to Vice Chair Barrow's statement, the double leverage strategy employed by Peoples and Essential results in an unfair boon for shareholders at the expense of customers. More specifically, it results in an even higher authorized return above the utility's market based required return (i.e., cost of equity). The following tables shows a summary of my capital structure analysis in this case, which will be discussed in more detail later in my testimony.

Figure 3:
Capital Structure Analysis Summary

Industry / Company	Debt Ratio
Cable TV Industry	65%
Power Industry	63%
Telecom Services Industry	61%
Peoples Parent Company (WTGR)	**54%**
Proxy Group of Utilities	**51%**
Company Proposed	**46%**

[3] Office of the Governor, Letter to Utility Leaders (April 29, 2026).

I agree with the Governor's assessment of this issue. In order to more fully eliminate the unfair advantage double leverage provides the utility, the subsidiary's ratemaking debt ratio would be the same as the parent company's debt ratio. In this case, that would mean Peoples' ratemaking debt ratio would be 54%. In that regard, my proposed ratemaking debt ratio in this case of only 51% (to match the proxy group average) is very reasonable and would at least partially mitigate the unfair aspects of double leverage.

B. Depreciation Summary

Q. Please summarize Peoples' proposed depreciation rates.

A. Peoples' proposed depreciation rates amount to a total annual depreciation accrual of $144 million based on plant balances at November 30, 2027.[4] Peoples' proposed depreciation rates are based on the depreciation study sponsored by Mr. Spanos, which is based on plant balances as of November 30, 2025 (the "2025 Study"), November 30, 2026 (the "2026 Study"), and November 30, 2027 (the "2027 Study"). Mr. Spanos applied the equal life group ("ELG") method to calculate his proposed remaining lives for Peoples' depreciable plant (for 1983 and subsequent vintages).

Q. Please summarize your adjustments to Peoples' proposed depreciation rates.

A. I recommend that the Commission authorize depreciation rates for Peoples' assets that are calculated using the average life group ("ALG") method for all vintage years. The key points of my testimony are as follows:

[4] Exhibit DJG-17.

- The Commission should reject Peoples continued use of the ELG method, which effectively results in an accelerated form of cost recovery from consumers. Peoples' use of the ELG method, rather than the widely applied ALG method, increases the annual depreciation accrual charged to customers by $27.1 million in the 2025 Study, by $31.5 million in the 2026 Study, and by $36.8 million in the 2027 Study. In other words, even if there are no adjustments to the net salvage rates, service life, or other depreciation parameters for any accounts in the depreciation study, using the majority-view ALG method alone will result in significantly fairer rates for customers. In addition, in the recent PPL Electric Utilities Corporation base rate case before the Commission (Docket No. R-2025-3057164), Mr. Spanos proposed ALG depreciation rates.[5] Since no party opposed the use of the ALG method in that case, the Commission will be authorizing ALG depreciation rates for PPL.
- The results of my application of the ALG method to Peoples' depreciation studies are summarized in the table below.[6]

[5] Direct Testimony of John J. Spanos, Docket No. R-2025-3057164 (Sep. 30, 2025).

[6] Exhibit DJG-17; *see also* Exhibits DJG-18 through DJG-23 for detailed depreciation rate calculations and comparisons for the 2024 Study, 2025 Study, and 2026 Study.

The evidence supporting my recommendations are discussed in more detail in my testimony.

PART ONE: RATE OF RETURN

III. REGULATORY STANDARDS

Q. Discuss the legal standards governing the awarded rate of return on capital investments for regulated utilities.

A. In *Wilcox v. Consolidated Gas Co. of New York*,[7] the Supreme Court first addressed the meaning of a fair rate of return for public utilities. The Court found that "the amount of risk in the business is a most important factor" in determining the appropriate allowed rate of return.[8] Later, in two landmark cases, the Court set forth the standards by which utilities

[7] *Wilcox v. Consolidated Gas Co. of New York*, 212 U.S. 19 (1909).

[8] *Id*. at 48.

are allowed to earn a return on capital investments. In *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*,[9] the Court held:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public . . . but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties.[10]

In *Federal Power Commission v. Hope Natural Gas Company*,[11] the Court expanded on the guidelines set forth in *Bluefield* and stated:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[12]

The cost of capital models I have employed in this case are in accordance with the foregoing legal standards.

Q. Should the awarded rate of return be based on the Company's actual cost of capital?

A. Yes. The *Hope* Court makes it clear that the allowed return should be based on the actual cost of capital. Moreover, the awarded return must also be fair, just, and reasonable under the circumstances of each case. Under the rate base rate of return model, a utility should

---

[9] *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

[10] *Id.* at 692-93.

[11] *Federal Power Commission v. Hope Natural Gas Co*., 320 U.S. 591 (1944).

[12] *Id.* at 603 (emphasis added).

be allowed to recover all its reasonable expenses, its capital investments through depreciation, and a return on its capital investments sufficient to satisfy the required return of its investors. The "required return" from the investors' perspective is synonymous with the "cost of capital" from the utility's perspective. Scholars agree that the allowed rate of return should be based on the actual cost of capital:

> Since by definition the cost of capital of a regulated firm represents precisely the expected return that investors could anticipate from other investments while bearing no more or less risk, and since investors will not provide capital unless the investment is expected to yield its opportunity cost of capital, the correspondence of the definition of the cost of capital with the court's definition of legally required earnings appears clear.[13]

The models I have employed in this case closely estimate the Company's market-based cost of equity. If the Commission sets the awarded return based on my lower, and more reasonable, rate of return, it will comply with the U.S. Supreme Court's standards, allow the Company to maintain its financial integrity, and satisfy the claims of its investors. On the other hand, if the Commission sets the allowed rate of return *higher* than the true cost of capital, it arguably results in an inappropriate transfer of wealth from ratepayers to shareholders.

Q. What does this standard mean for determining the awarded return and the cost of capital?

A. It is important to understand that the *awarded* return and the *cost* of capital are different but related concepts. The two concepts are related in that the legal and technical standards encompassing this issue require that the awarded return reflects the true cost of capital. On

[13] A. Lawrence Kolbe, James A. Read, Jr. & George R. Hall, *The Cost of Capital: Estimating the Rate of Return for Public Utilities*, p. 21 (The MIT Press 1984).

the other hand, the two concepts are different in that the legal standards do not mandate that awarded returns exactly match the cost of capital. Awarded returns are set through the regulatory process and may be influenced by factors other than objective market drivers. The cost of capital, on the other hand, should be evaluated objectively and be closely tied to economic realities. In other words, the cost of capital is driven by stock prices, dividends, growth rates, and — most importantly — it is driven by risk. The cost of capital can be estimated by financial models used by firms, investors, and academics around the world for decades. The problem is, with respect to regulated utilities, there has been a trend in which awarded returns fail to closely track with actual market-based cost of capital as further discussed below. To the extent this occurs, the results are detrimental to ratepayers and the state's economy.

Q. Describe the economic impact that occurs when the awarded return strays too far from the U.S. Supreme Court's cost of equity standard.

A. When the awarded ROE is set far above the *cost* of equity, it runs the risk of violating the U.S. Supreme Court's standards that the awarded return should be *based on the cost of capital*. If the Commission were to adopt the Company's position in this case, it would be permitting an excess transfer of wealth from customers to Company shareholders. Moreover, establishing an awarded return that far exceeds the true cost of capital effectively prevents the awarded returns from changing along with economic conditions. This is especially true given the fact that regulators tend to be influenced by the awarded returns in other jurisdictions, regardless of the various unknown factors influencing those awarded returns. This is yet another reason why it is crucial for regulators to focus on the target utility's actual *cost* of equity, rather than awarded returns from other jurisdictions.

Awarded returns may be influenced by settlements and other political factors not based on true market conditions. In contrast, the market-based cost of equity as estimated through objective models is not influenced by these factors but is instead driven by market-based factors. If regulators rely too heavily on the awarded returns from other jurisdictions, it can create a cycle over time that bears little relation to the market-based cost of equity.

IV. GENERAL CONCEPTS AND METHODOLOGY

Q. Discuss your approach to estimating the cost of equity in this case.

A. While a competitive firm must estimate its own cost of capital to assess the profitability of competing capital projects, regulators determine a utility's cost of capital to establish a fair rate of return. The legal standards set forth above do not include specific guidelines regarding the models that must be used to estimate the cost of equity. Over the years, however, regulatory commissions have consistently relied on several models. The models I have employed in this case have been the two most widely used and accepted in regulatory proceedings for many years. These models are the DCF Model and the CAPM. The specific inputs and calculations for these models are described in more detail below.

Q. Please explain why multiple models are used to estimate the cost of equity.

A. The models used to estimate the cost of equity attempt to measure the return on equity required by investors by estimating several different inputs. It is preferable to use multiple models because the results of any one model may contain a degree of imprecision, especially depending on the reliability of the inputs used at the time of conducting the model. By using multiple models, the analyst can compare the results of the models and

look for outlying results and inconsistencies. Likewise, if multiple models produce a similar result, it may indicate a narrower range for the cost of equity estimate.

Q. Please discuss the benefits of choosing a proxy group of companies in conducting cost of capital analyses.

A. The cost of equity models in this case can be used to estimate the cost of capital of any individual, publicly-traded company. There are advantages, however, to conducting cost of capital analyses on a "proxy group" of companies that are comparable to the target company. First, it is better to assess the financial soundness of a utility by comparing it to a group of other financially sound utilities. Second, using a proxy group provides more reliability and confidence in the overall results because there is a larger sample size. Finally, the use of a proxy group is often a pure necessity when the target company is a subsidiary that is not publicly traded. This is because the financial models used to estimate the cost of equity require information from publicly-traded firms, such as stock prices and dividends.

Q. Describe the proxy group you selected in this case.

A. In this case, I chose to use the same utility proxy group that Ms. Nelson used for her analysis. There could be reasonable arguments made for the inclusion or exclusion of a particular company in a proxy group; however, the cost of equity results are influenced far more by the underlying assumptions and inputs to the various financial models than the composition of the proxy group.[14] By using the same utility proxy group, we can remove

[14] *See* Exhibit DJG-2.

a relatively insignificant variable from the equation and focus on the primary factors driving the Company's cost of equity estimate in this case.

V. RISK AND RETURN CONCEPTS

Q. Please discuss the general relationship between risk and return.

A. As discussed above, risk is the most important factor for the Commission to consider when determining the allowed return. There is a direct relationship between risk and return: the more (or less) risk an investor assumes, the larger (or smaller) return the investor will demand. There are two primary types of risk: firm-specific risk and market risk. Firm-specific risk affects individual companies, while market risk affects all companies in the market to varying degrees.

Q. Discuss the differences between firm-specific risk and market risk.

A. Firm-specific risk affects individual companies, rather than the entire market. For example, a competitive firm might overestimate customer demand for a new product, resulting in reduced sales revenue. This is an example of a firm-specific risk called "project risk."[15] There are several other types of firm-specific risks, including: (1) "financial risk" — the risk that equity investors of leveraged firms face as residual claimants on earnings; (2) "default risk" — the risk that a firm will default on its debt securities; and (3) "business risk" — which encompasses all other operating and managerial factors that may result in investors realizing less than their expected return in that particular company.

[15] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, pp. 62-63 (3rd ed., John Wiley & Sons, Inc. 2012).

While firm-specific risk affects individual companies, market risk affects all companies in the market to varying degrees. Examples of market risk include interest rate risk, inflation risk, and the risk of major socio-economic events. When there are changes in these risk factors, they affect all firms in the market to some extent.[16]

Analysis of the U.S. market in 2001 provides a good example for contrasting firm-specific risk and market risk. During that year, Enron Corp.'s stock fell from $80 per share and the company filed for bankruptcy at the end of the year. If an investor's portfolio had held only Enron stock at the beginning of 2001, this irrational investor would have lost the entire investment by the end of the year due to assuming the full exposure of Enron's firm-specific risk (in that case, imprudent management). On the other hand, a rational, diversified investor who invested the same amount of capital in a portfolio holding every stock in the S&P 500 would have had a much different result that year. The rational investor would have been relatively unaffected by the fall of Enron because her portfolio included 499 other stocks. Each of those stocks, however, would have been affected by various *market* risk factors that occurred that year, including the terrorist attacks on September 11th, which affected all stocks in the market. Thus, the rational investor would have incurred a relatively minor loss due to market risk factors, while the irrational investor would have lost everything due to firm-specific risk factors.

[16] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 149 (9th ed., McGraw-Hill/Irwin 2013).

Q. Can investors minimize firm-specific risk through portfolio diversification?

A. Yes. A fundamental concept in finance is that firm-specific risk can be minimized through diversification.[17] If someone irrationally invested all their funds in one firm (such as Enron), they would be exposed to all the firm-specific risk *and* the market risk inherent in that single firm. Rational investors, however, are risk-averse and seek to eliminate risk they can control. Investors can essentially eliminate firm-specific risk by adding more stocks to their portfolio through a process called "diversification."

There are two reasons why diversification eliminates firm-specific risk. First, each stock in a diversified portfolio represents a much smaller percentage of the overall portfolio than it would in a portfolio of just one or a few stocks. Thus, any firm-specific action that changes the stock price of one stock in the diversified portfolio will have only a small impact on the entire portfolio.[18]

The second reason why diversification eliminates firm-specific risk is that the effects of firm-specific actions on stock prices can be either positive or negative for each stock. Thus, in large, diversified portfolios, the net effect of these positive and negative firm-specific risk factors will be essentially zero and will not affect the value of the overall portfolio.[19] Firm-specific risk is also called "diversifiable risk" because it can be easily eliminated through diversification.

[18] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 64 (3rd ed., John Wiley & Sons, Inc. 2012).

[19] *Id*.

Q. Do investors expect an additional return for assuming firm-specific risks?

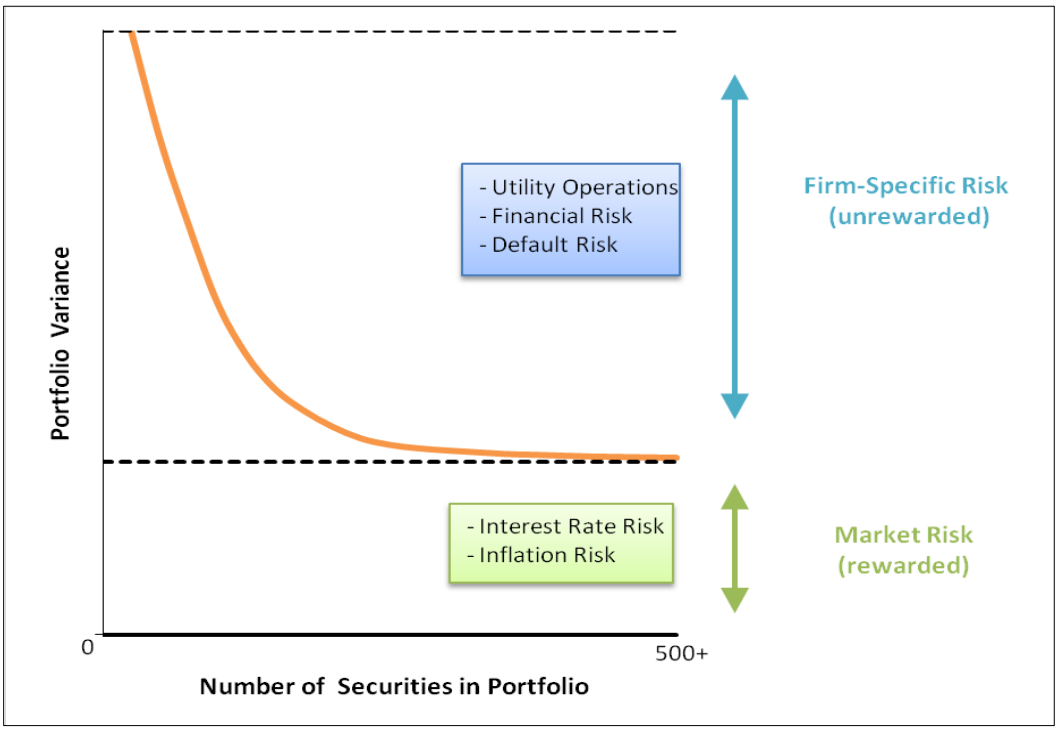
A. No. Because investors eliminate firm-specific risk through diversification, they know they cannot expect a higher return for assuming the firm-specific risk in any one company. Thus, the risks associated with an individual firm's operations are not rewarded by the market. In fact, firm-specific risk is also called "unrewarded" risk for this reason. Market risk, on the other hand, cannot be eliminated through diversification. Because market risk cannot be eliminated through diversification, investors expect a return for assuming this type of risk. Market risk is also called "systematic risk." Scholars recognize the fact that market risk, or "systematic risk," is the only type of risk for which investors expect a return for bearing:

> If investors can cheaply eliminate some risks through diversification, then we should not expect a security to earn higher returns for risks that can be eliminated through diversification. Investors can expect compensation *only* for bearing systematic risk (i.e., risk that cannot be diversified away).[20]

These important concepts are illustrated in the figure below. Some form of this figure is found in many financial textbooks.

[20] *See* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 180 (3rd ed., South Western Cengage Learning 2010).

Figure 7:
Effects of Portfolio Diversification



This figure shows that as stocks are added to a portfolio, the amount of firm-specific risk is reduced until it is essentially eliminated. No matter how many stocks are added, however, there remains a certain level of fixed market risk. The level of market risk will vary from firm to firm. Market risk is the only type of risk that is rewarded by the market and is thus the primary type of risk the Commission should consider when determining the allowed return for the utilities it regulates.

Q. Describe how market risk is measured.

A. Investors who want to eliminate firm-specific risk must hold a fully diversified portfolio. To determine the amount of risk that a single stock adds to the overall market portfolio, investors measure the covariance between a single stock and the market portfolio. The

result of this calculation is called "beta."[21] Beta represents the sensitivity of a given security to the market as a whole. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. For example, if the market increases (decreases) by 1.0%, a stock with a beta of 1.5 will, on average, increase (decrease) by 1.5%. In contrast, stocks with betas of less than one are less sensitive to market risk, such that if the market increases (decreases) by 1.0%, a stock with a beta of 0.5 will, on average, only increase (decrease) by 0.5%. Thus, stocks with low betas are relatively insulated from market conditions. The beta term is used in the CAPM to estimate the cost of equity, which is discussed in more detail later.[22]

Q. Are public utilities characterized as defensive firms that have low betas, low market risk, and are relatively insulated from overall market conditions?

A. Yes. Although market risk affects all firms in the market, it affects different firms to varying degrees. Firms with high betas are affected more than firms with low betas, which is why firms with high betas are riskier. Stocks with betas greater than one are generally known as "cyclical stocks." Firms in cyclical industries are sensitive to recurring patterns of recession and recovery known as the "business cycle."[23] Thus, cyclical firms are exposed to a greater level of market risk. Securities with betas less than one, on the other hand, are known as "defensive stocks." Companies in defensive industries, such as public utility companies, "will have low betas and performance that is comparatively unaffected

---

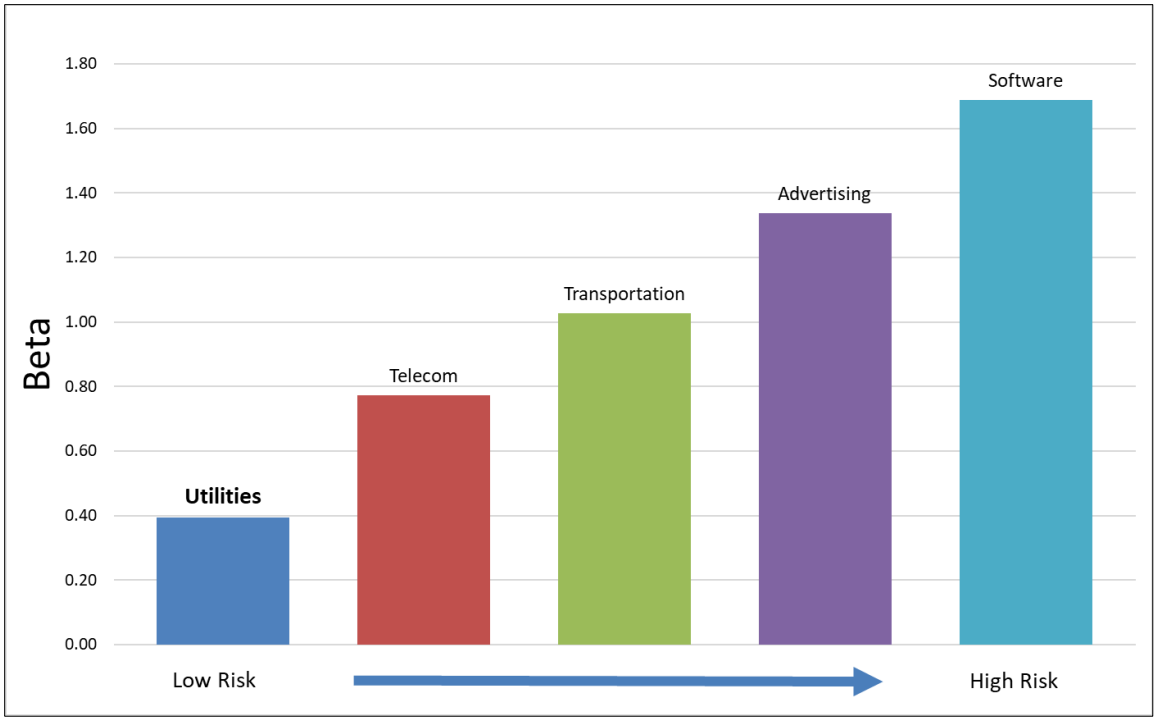
[21] *Id*. at 180-81.

[22] Though it will be discussed in more detail later, Exhibit DJG-9 shows that the average beta of the proxy group was less than 1.0. This confirms the well-known concept that utilities are relatively low-risk firms.

[23] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments*, p. 382 (9th ed., McGraw-Hill/Irwin 2013).

by overall market conditions."[24] In fact, financial textbooks often use utility companies as prime examples of low-risk, defensive firms. The figure below compares the betas of several industries and illustrates that the utility industry is one of the least risky industries in the U.S. market.[25]

Figure 8:
Beta by Industry



The fact that utilities are defensive firms that are exposed to little market risk is beneficial to society. When the business cycle enters a recession, consumers can be assured

[24] *Id*. at 383.

[25] *See* Betas by Sector (US) available at http://pages.stern.nyu.edu/~adamodar/ (2018). (After clicking the link, click "Data" then "Current Data" then "Risk / Discount Rate" from the drop down menu, then "Total Beta by Industry Sector"). The exact beta calculations are not as important as illustrating the well-known fact that utilities are very low-risk companies. The fact that the utility industry is one of the lowest risk industries in the country should not change from year to year.

that their utility companies will be able to maintain normal business operations and provide safe and reliable service under efficient management. Likewise, utility investors can be confident that utility stock prices will not widely fluctuate. So, while it is recognized and accepted that utilities are defensive firms that experience little market risk and are relatively insulated from market conditions, this fact should also be appropriately reflected in the Company's awarded return.

VI. DISCOUNTED CASH FLOW ANALYSIS

Q. Describe the DCF Model.

A. The DCF Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates.[26] Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. These versions, along with other formulas and theories related to the DCF Model, are discussed in more detail in Appendix A.

Q. Describe the inputs to the DCF Model.

A. There are three primary inputs in the DCF Model: (1) stock price; (2) dividend; and (3) the long-term growth rate. The stock prices and dividends are known inputs based on recorded data, while the growth rate projection must be estimated. I discuss each of these inputs separately below.

[26] Present value (PV) is the current value of a future sum of money or stream of cash flows given a specified rate of return. Present value takes the future value and applies a discount rate or the interest rate that could be earned if invested.

A. Stock Price

Q. How did you determine the stock price input of the DCF Model?

A. For the stock price (P_0), I used a 30-day average of stock prices for each company in the proxy group.[27] Analysts sometimes rely on average stock prices for longer periods (*e.g.*, 60, 90, or 180 days). According to the efficient market hypothesis, however, markets reflect all relevant information available at a particular time, and prices adjust instantaneously to the arrival of new information.[28] Past stock prices, in essence, reflect outdated information. The DCF Model used in utility rate cases is a derivation of the dividend discount model, which is used to determine the current value of an asset. Thus, according to the dividend discount model and the efficient market hypothesis, the value for the "P_0" term in the DCF Model should technically be the current stock price, rather than an average.

Q. Why did you use a 30-day average for the current stock price input?

A. Using a short-term average of stock prices for the current stock price input adheres to market efficiency principles while avoiding any irregularities that may arise from using a single current stock price. In the context of a utility rate proceeding, there is a significant length of time between when an application is filed and when testimony is due. Choosing a current stock price for one particular day could raise a separate issue concerning which

[28] *See* Eugene F. Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, Vol. 25, No. 2 The Journal of Finance, p. 383 (1970); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 357 (3rd ed., South Western Cengage Learning 2010). The efficient market hypothesis was formally presented by Eugene Fama in 1970 and is a cornerstone of modern financial theory and practice.

day was chosen to be used in the analysis. In addition, a single stock price on a particular day may be unusually high or low. It is arguably ill-advised to use a single stock price in a model that is ultimately used to set rates for several years, especially if a stock is experiencing some volatility. Thus, it is preferable to use a short-term average of stock prices, which represents a good balance between adhering to well-established principles of market efficiency while avoiding any unnecessary contentions that may arise from using a single stock price on a given day. The stock prices I used in my DCF analysis are based on 30-day averages of adjusted closing stock prices for each company in the proxy group.[29]

B. Dividend

Q. Describe how you determined the dividend input of the DCF Model.

A. The dividend term in the DCF Model represents dividends per share (d_0). I used forward-looking annualized dividends published by Yahoo! Finance for the dividend input to my constant growth DCF Model.[30] Dividing these dividends by the stock prices for each proxy company results in the dividend yield for each company.[31]

Q. Are the stock price and dividend inputs for each proxy company a significant issue in this case?

A. No. Although my stock price and dividend inputs are more recent than those used by Ms. Nelson, there is not a statistically significant difference between them because utility stock prices and dividends are generally quite stable. This is another reason that cost of capital

---

[29] Exhibit DJG-3. Adjusted closing prices, rather than actual closing prices, are ideal for analyzing historical stock prices. The adjusted price provides an accurate representation of the firm's equity value beyond the mere market price because it accounts for stock splits and dividends.

[30] Exhibit DJG-4.

[31] *Id*.

models such as the CAPM and the DCF Model are well-suited to be conducted on utilities. The differences between my DCF Model and Ms. Nelson's DCF Model are primarily driven by differences in our growth rate estimates, which are further discussed below.

C. Growth Rate

Q. Please Summarize the growth rate input in the DCF Model.

A. The most critical input in the DCF Model is the growth rate. Unlike the stock price and dividend inputs, the growth rate input (g) must be estimated. As a result, the growth rate is often the most contentious issue related to DCF model inputs in utility rate cases. The DCF model used in this case is based on the sustainable growth valuation model. Under this model, a stock is valued by the present value of its future cash flows in the form of dividends. Before future cash flows are discounted by the cost of equity, however, they must be "grown" into the future by a sustainable growth rate. As stated above, one of the inherent assumptions of this model is that these cash flows in the form of dividends grow at a sustainable rate forever. For young, high-growth firms, estimating the growth rate to be used in the model can be especially difficult, and may require the use of multi-stage growth models. For mature, low-growth firms such as utilities, however, estimating the sustainable growth rate is more transparent. The growth term of the DCF Model is one of the most important, yet least understood, aspects of cost of equity estimations in utility regulatory proceedings. I provide a more detailed explanation on the various determinants of growth below.

Q. Describe the various determinants of growth that can be considered for the growth rate input in the DCF Model.

A. Although the DCF Model directly considers the growth of dividends, there are a variety of growth determinants that should be considered when estimating growth rates. It should be noted that these various growth determinants are used primarily to determine the short-term growth rates in multi-stage DCF models. For utility companies, it is necessary to focus primarily on a long-term growth rate in dividends. This is also known as a "sustainable" growth rate, since this is the growth rate assumed for the company's dividends in perpetuity. That is not to say that these growth determinants cannot be considered when estimating sustainable growth; however, as discussed below, sustainable growth must be constrained much more than short-term growth, especially for young firms with high growth opportunities. Additionally, I briefly discuss these growth determinants here because it may reveal some of the sources of confusion in this area.

(1) Historical Growth

Looking at a firm's actual historical experience may theoretically provide a good starting point for estimating short-term growth. However, past growth is not always a good indicator of future growth. Some metrics that might be considered here are a historical growth in revenues, operating income, and net income. Since dividends are paid from earnings, estimating historical earnings growth may provide an indication of future earnings and dividend growth.

(2) Analyst Growth Rates

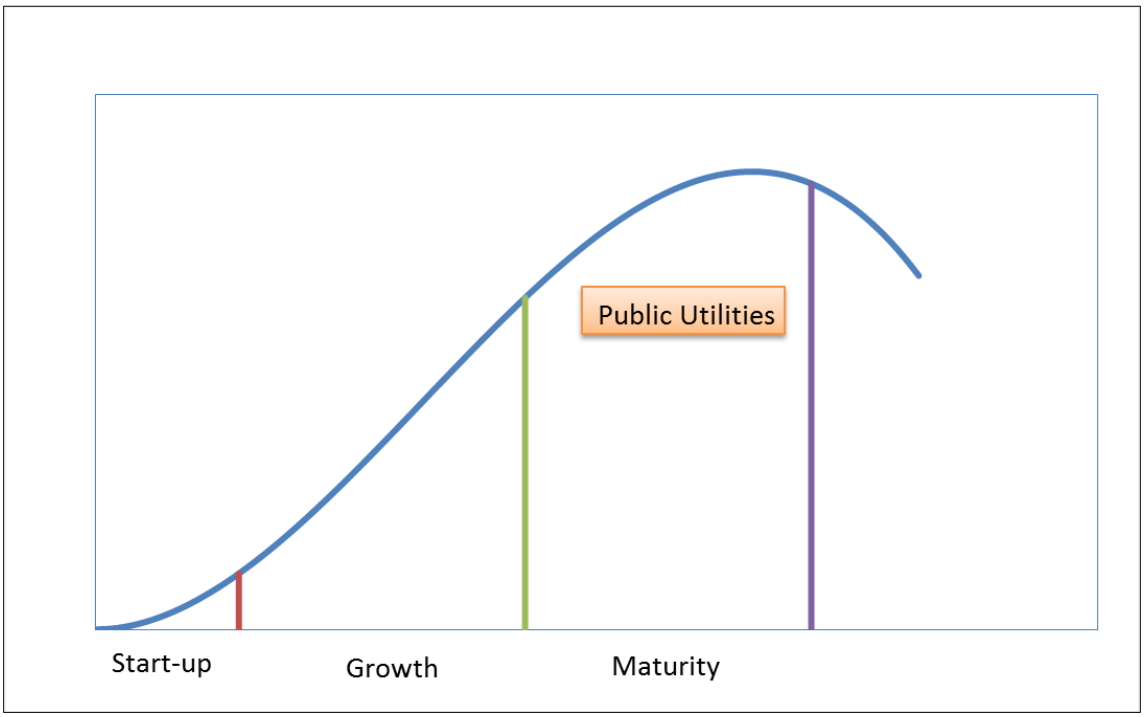
Analyst growth rates refer to short-term projections of earnings growth published by institutional research analysts such as Value Line and Bloomberg. Analyst growth rates,

including the limitations with using them in the DCF Model to estimate utility cost of equity, are discussed in more detail below.

(3) Sustainable Growth Rates

In order to make the DCF Model a viable, practical model, an infinite stream of future cash flows must be estimated and then discounted back to the present. Otherwise, each annual cash flow would have to be estimated separately. Some analysts use "multi-stage" DCF Models to estimate the value of high-growth firms through two or more stages of growth, with the final stage of growth being sustainable. However, it is not necessary to use multi-stage DCF Models to analyze the cost of equity of regulated utility companies. This is because regulated utilities are already in their "sustainable," low growth stage. Unlike most competitive firms, the growth of regulated utilities is constrained by physical service territories and limited primarily by ratepayer and load growth within those territories. The Figure below illustrates the well-known business/industry life-cycle pattern.

Figure 9:
Industry Life Cycle



In an industry's early stages, there are ample opportunities for growth and profitable reinvestment. In the maturity stage however, growth opportunities diminish, and firms choose to pay out a larger portion of their earnings in the form of dividends instead of reinvesting them in operations to pursue further growth opportunities. Once a firm is in the maturity stage, it is not necessary to consider higher short-term growth metrics in multi-stage DCF Models; rather, it is sufficient to analyze the cost of equity using a stable growth DCF Model with one sustainable growth rate.

Q. Is the aggregate growth rate of the economy typically a limiting factor for the terminal growth rate in the DCF Model?

A. Yes. A fundamental concept in finance is that no firm can grow forever at a rate higher than the growth rate of the economy in which it operates.[32] Thus, the terminal growth rate used in the DCF Model should not exceed the aggregate economic growth rate. This is especially true when the DCF Model is conducted on public utilities because these firms have defined service territories. As stated by Dr. Damodaran: "[i]f a firm is a purely domestic company, either because of internal constraints . . . or external constraints (such as those imposed by a government), the growth rate in the domestic economy will be the limiting value."[33]

In fact, it is reasonable to assume that a regulated utility would grow at a rate that is less than the U.S. economic growth rate. Unlike competitive firms, which might increase their growth by launching a new product line, franchising, or expanding into new and developing markets, utility operating companies with defined service territories cannot do any of these things to grow. Gross Domestic Product ("GDP") is one of the most widely used measures of economic production and is used to measure aggregate economic growth. According to the Congressional Budget Office's Budget Outlook, the long-term forecast for nominal U.S. GDP growth is about 4%, which includes an inflation rate of 2%.[34] For mature companies in mature industries, such as utility companies, the terminal growth rate

[33] Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 306 (3rd ed., John Wiley & Sons, Inc. 2012).

[34] Congressional Budget Office Long-Term Budget Outlook, https://www.cbo.gov/publication/59014.

will likely fall between the expected rate of inflation and the expected rate of nominal GDP growth.

Q. Did you also consider a variation of the DCF Model that incorporates analysts' growth rate projections?

A. Yes. In this case, I present the results of analyst growth variation of my DCF Model because it is commonly presented in rate proceedings and considered by regulators when assessing a utility's authorized ROE.

Q. Please describe the results of your DCF Models?

A. For my DCF Models, I considered two variations: one using a sustainable growth rate and one using analysts' growth rates. The results of these models are 7.1% and 7.6%, respectively.[35]

D. Response to Ms. Nelson's DCF Model

Q. Please summarize the results of Ms. Nelson's DCF analyses.

A. Ms. Nelson's application of the DCF Model produced an indicated cost of equity result of 10.53%.[36]

Q. Does the result of Ms. Nelson's DCF Model indicate a reasonable cost of equity estimate for Peoples?

A. No. Whether the sustainable GDP growth rate or projected dividend growth rates published by Value Line are considered, the highest DCF result I obtained was 7.6%. The primary reason Ms. Nelson's DCF results are overstated is her use of unsustainably high growth rates for some proxy companies, and average growth rates for the proxy group that are

[35] Exhibit DJG-6.

[36] Direct Testimony of Jennifer E. Nelson, p. 4, Table 2.

unsustainably high. For example, Ms. Nelson incorporated an annual long-term growth rate as high as 10.5% for Southwest Gas Holdings, Inc. ("SWX"). This means Ms. Nelson is suggesting the company's earnings will grow by more than 10.5% each year, every year, in perpetuity. This growth rate estimate published by S&P Capital IQ is a short-term growth rate. It is Ms. Nelson, not the commercial analyst, who is suggesting that this annual earnings growth rate can be achieved each year in perpetuity, which is simply unsustainable and technically impossible. As a result, the cost of equity results indicated by Ms. Nelson's DCF Model are overstated.

VII. CAPITAL ASSET PRICING MODEL ANALYSIS

Q. Please describe the CAPM.

A. The CAPM is a market-based model founded on the principle that investors expect higher returns for incurring additional risk.[37] The CAPM estimates this expected return. The various assumptions, theories, and equations involved in the CAPM are discussed further in Appendix B. Using the CAPM to estimate the cost of equity of a regulated utility is consistent with the legal standards governing the fair rate of return. The U.S. Supreme Court has recognized that "the amount of *risk* in the business is a most important factor" in determining the allowed rate of return,[38] and that "the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding

[37] William F. Sharpe, *A Simplified Model for Portfolio Analysis*, pp. 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 208 (3rd ed., South-Western Cengage Learning 2010).

[38] *Wilcox*, 212 U.S. at 48 (emphasis added).

risks."[39] The CAPM is a useful model because it directly considers the amount of risk inherent in a business and directly measures the most important component of a fair rate of return analysis: Risk.

Q. Describe the inputs for the CAPM.

A. The basic CAPM equation requires only three inputs to estimate the cost of equity: (1) the risk-free rate; (2) the beta coefficient; and (3) the equity risk premium. Each input is discussed separately below.

A. The Risk-Free Rate

Q. Please explain the risk-free rate.

A. The first term in the CAPM is the risk-free rate (R_F). The risk-free rate is simply the level of return investors can achieve without assuming any risk. The risk-free rate represents the bare minimum return that any investor would require on a risky asset. Even though no investment is technically devoid of risk, investors often use U.S. Treasury securities to represent the risk-free rate because they accept that those securities essentially contain no default risk. The Treasury issues securities with different maturities, including short-term Treasury Bills, intermediate-term Treasury Notes, and long-term Treasury Bonds.

Q. Is it preferable to use the yield on long-term Treasury bonds for the risk-free rate in the CAPM?

A. Yes. In valuing an asset, investors estimate cash flows over long periods of time. Common stock is viewed as a long-term investment, and the cash flows from dividends are assumed to last indefinitely. As a result, short-term Treasury bill yields are rarely used in the CAPM

[39] *Hope Natural Gas Co*., 320 U.S. at 603 (emphasis added).

to represent the risk-free rate. Short-term rates are subject to greater volatility and thus can lead to unreliable estimates. Instead, long-term Treasury bonds are usually used to represent the risk-free rate in the CAPM. I considered a 30-day average of daily Treasury yield curve rates on 30-year Treasury bonds in my risk-free rate estimate, which resulted in a risk-free rate of 5.02%.[40]

B. The Beta Coefficient

Q. How is the beta coefficient used in this model?

A. As discussed above, beta represents the sensitivity of a given security to movements in the overall market. The CAPM states that in efficient capital markets, the expected risk premium on each investment is proportional to its beta. Recall that a security with a beta greater than 1.0 is riskier than the market portfolio. Conversely, a security with a beta less than one is less risky than the market portfolio. An index such as the S&P 500 Index is used as a proxy for the market portfolio. The historical betas for publicly traded firms are published by various institutional analysts. Beta may also be calculated through a linear regression analysis, which provides additional statistical information about the relationship between a single stock and the market portfolio. The market portfolio of all stocks has a beta equal to one. Stocks with betas greater than one are relatively more sensitive to market risk than the average stock. In contrast, stocks with betas of less than one are less sensitive to market risk.

[40] Exhibit DJG-7.

Q. Describe the source for the betas you used in your CAPM analysis.

A. I used betas recently published by Value Line Investment Survey. The beta for each proxy company is less than 1.0, and the average beta for the total proxy group is only 0.77.[41] Thus, we have an objective measure to prove the well-known concept that utility stocks are less risky than the average stock in the market. While there is evidence suggesting that betas published by sources such as Value Line may actually overestimate the risk of utilities (and thus overestimate the CAPM), I used the betas published by Value Line in the interest of reasonableness.[42]

C. The Equity Risk Premium

Q. Describe the equity risk premium.

A. The final term of the CAPM is the equity risk premium ("ERP"), which is the required return on the market portfolio less the risk-free rate ($R_M - R_F$). In other words, the ERP is the level of return investors expect above the risk-free rate in exchange for investing in risky securities. Many experts agree that "the single most important variable for making investment decisions is the equity risk premium."[43] Likewise, the ERP is arguably the single most important factor in estimating the cost of capital in this matter. There are three basic methods that can be used to estimate the ERP: (1) calculating a historical average;

---

[41] Exhibit DJG-8.

[42] *See* Appendix B for a more detailed discussion of raw beta calculations and adjustments.

[43] Elroy Dimson, Paul Marsh & Mike Staunton, *Triumph of the Optimists: 101 Years of Global Investment Returns*, p. 4 (Princeton University Press 2002).

(2) taking a survey of experts; and (3) calculating the implied ERP. I will discuss each method in turn, noting advantages and disadvantages of these methods.

1. Historical Average

Q. Describe the historical equity risk premium.

A. The historical ERP may be calculated by simply taking the difference between returns on stocks and returns on government bonds over a certain period of time. Many practitioners rely on the historical ERP as an estimate for the forward-looking ERP because it is easy to obtain. However, there are disadvantages to relying on the historical ERP.

Q. What are the limitations of relying solely on a historical average to estimate the current or forward-looking ERP?

A. Some investors may rely on the historic ERP because it is convenient and easy to calculate. But what matters in the CAPM model is the current and forward-looking risk premium.[44] Some investors may think that a historic ERP provides some indication of what the prospective risk premium is; however, there is empirical evidence to suggest the prospective, forward-looking ERP is actually *lower* than the historical ERP. In a landmark publication on risk premiums around the world, *Triumph of the Optimists*, the authors suggest through extensive empirical research that the prospective ERP is lower than the historical ERP.[45] This is due in large part to what is known as "survivorship bias" or "success bias" — a tendency for failed companies to be excluded from historical indices.[46]

---

[44] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 330 (3rd ed., South-Western Cengage Learning 2010).

[45] Elroy Dimson, Paul Marsh & Mike Staunton, Triumph of the Optimists: 101 Years of Global Investment Returns, p. 34 (Princeton University Press 2002).

[46] *Id*. at 194.

From their extensive analysis, the authors make the following conclusion regarding the prospective ERP:

> The result is a forward-looking, geometric mean risk premium for the United States . . . of around 2½ to 4 percent and an arithmetic mean risk premium . . . that falls within a range from a little below 4 to a little above 5 percent.[47]

Indeed, these results are lower than many reported historical risk premiums. Other noted experts agree:

> The historical risk premium obtained by looking at U.S. data is biased upwards because of survivor bias. . . . The true premium, it is argued, is much lower. This view is backed up by a study of large equity markets over the twentieth century (*Triumph of the Optimists*), which concluded that the historical risk premium is closer to 4%.[48]

Regardless of the variations in historic ERP estimates, many leading scholars and practitioners agree that simply relying on a historic ERP to estimate the risk premium going forward is not ideal. Fortunately, "a naïve reliance on long-run historical averages is not the only approach for estimating the expected risk premium."[49]

Q. Did you rely on the historical ERP as part of your CAPM analysis in this case?

A. No. Due to the limitations of this approach, I primarily relied on the ERP reported in expert surveys and the implied ERP method discussed below.

---

[47] *Id*.

[48] Aswath Damodaran, *Equity Risk Premiums: Determinants, Estimation and Implications – The 2015 Edition*, p. 17 (New York University 2015).

[49] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do*, p. 330 (3rd ed., South Western Cengage Learning 2010).

2. Expert Surveys

Q. Describe the expert survey approach to estimating the ERP.

A. As its name implies, the expert survey approach to estimating the ERP involves conducting a survey of experts including professors, analysts, chief financial officers, and other executives around the country and asking them what they think the ERP is. The IESE Business School conducts such a survey each year. Its 2026 expert survey reported an average ERP of 5.3%.[50]

3. Implied Equity Risk Premium

Q. Describe the implied equity risk premium approach.

A. The third method of estimating the ERP is arguably the best. The implied ERP relies on the stable growth model proposed by Gordon, often called the "Gordon Growth Model," which is a basic stock valuation model that has been widely used in finance for many years.[51] This model is a mathematical derivation of the DCF Model. In fact, the underlying concept in both models is the same: The current value of an asset is equal to the present value of its future cash flows. Instead of using this model to determine the discount rate of one company, we can use it to determine the discount rate for the entire market by substituting the inputs of the model. Specifically, instead of using the current stock price (P_0), we will use the current value of the S&P 500 (V_{500}). Instead of using the dividends

---

[50] Pablo Fernandez, et al., *Survey: Market Risk Premium and Risk-Free Rate used for 96 countries in 2024* (IESE Business School 2024), copy available at https://papers.ssrn.com/sol3/Delivery.cfm/SSRN_ID4754347_code12696.pdf?abstractid=4754347&mirid=1 IESE Business School is the graduate business school of the University of Navarra.

[51] Myron J. Gordon and Eli Shapiro, *Capital Equipment Analysis: The Required Rate of Profit* 102-10 (Management Science Vol. 3, No. 1 Oct. 1956).

of a single firm, we will consider the dividends paid by the entire market. Additionally, we should consider potential dividends. In other words, stock buybacks should be considered in addition to paid dividends, as stock buybacks represent another way for the firm to transfer free cash flow to shareholders. Focusing on dividends alone without considering stock buybacks could understate the cash flow component of the model, and ultimately understate the implied ERP. The market dividend yield plus the market buyback yield gives us the gross cash yield to use as our cash flow in the numerator of the discount model. This gross cash yield is increased each year over the next five years by the growth rate. These cash flows must be discounted to determine their present value. The discount rate in each denominator is the risk-free rate (R_F) plus the discount rate (K). Equation 1 below shows how the implied return is calculated. Since the current value of the S&P is known, we can solve for K, the implied market return.[52]

Equation 1:
Implied Market Return

$$V_{500} = \frac{CY_1(1+g)^1}{(1+R_F+K)^1} + \frac{CY_2(1+g)^2}{(1+R_F+K)^2} + \cdots + \frac{CY_5(1+g)^5 + TV}{(1+R_F+K)^5}$$

where:

V_{500}	=	*current value of index (S&P 500)*
CY_{1-5}	=	*average cash yield over last five years (includes dividends and buybacks)*
g	=	*compound growth rate in earnings over last five years*
R_F	=	*risk-free rate*
K	=	*implied market return (this is what we are solving for)*
TV	=	*terminal value = CY_5 (1+R_F) / K*

The discount rate is called the "implied" return because it is based on the current value of the index as well as the value of free cash flow to investors projected over the next five

[52] *See* Exhibit DJG-9 for detailed calculation.

years. Thus, based on these inputs, the market is "implying" the expected return; or in other words, based on the current value of all stocks (the index price) and the projected value of future cash flows, the market is telling us the return expected by investors for investing in the market portfolio. After solving for the implied market return (K), we simply subtract the risk-free rate from it to arrive at the implied ERP as shown in the following equation.

Equation 2:
Implied Equity Risk Premium

$$Implied\ Expected\ Market\ Return - R_F = Implied\ ERP$$

Q. Discuss the results of your implied ERP calculation.

A. After collecting data for the index value, operating earnings, dividends, and buybacks for the S&P 500 over the past six years, I calculated the dividend yield, buyback yield, and gross cash yield for each year. I also calculated the compound annual growth rate (g) from operating earnings. I used these inputs, along with the risk-free rate and current value of the index to calculate a current required return on the U.S. equity market of 9.7%. I subtracted the risk-free rate to arrive at the implied equity risk premium of 5.1%.[53] Dr. Damodaran, one of the world's leading experts on the ERP, promotes the implied ERP method discussed above. He calculates monthly and annual implied ERPs with this method and publishes his results. Dr. Damodaran's average ERP estimate for June of 2024 using

[53] *Id*.

several implied ERP variations was 4.5%.[54] Additionally, Kroll (formerly Duff & Phelps) recently published an ERP estimate of 5.0%.[55]

Q. What are the results of your final ERP estimate?

A. For the final ERP estimate I used in my CAPM analysis, I considered the results of the ERP surveys, the estimated ERP reported by Kroll, the estimated ERP calculated by Dr. Damodaran, and the implied ERP based on my calculations.[56] The results are presented in the following figure:

Figure 10:
Equity Risk Premium Results

IESE Business School Survey	5.3%
Kroll (Duff & Phelps) Report	5.0%
Damodaran (average)	4.5%
Garrett	5.0%
Average	**4.9%**

I used the average ERP of 4.9% from these sources in my CAPM.

Q. Please explain the final results of your CAPM analysis.

A. Using the inputs for the risk-free rate, beta, and equity risk premium discussed above, I estimate that the Company's CAPM cost of equity is 8.8%, but only if the proxy group average debt ratio is assumed; otherwise, the Company's CAPM cost of equity estimate is

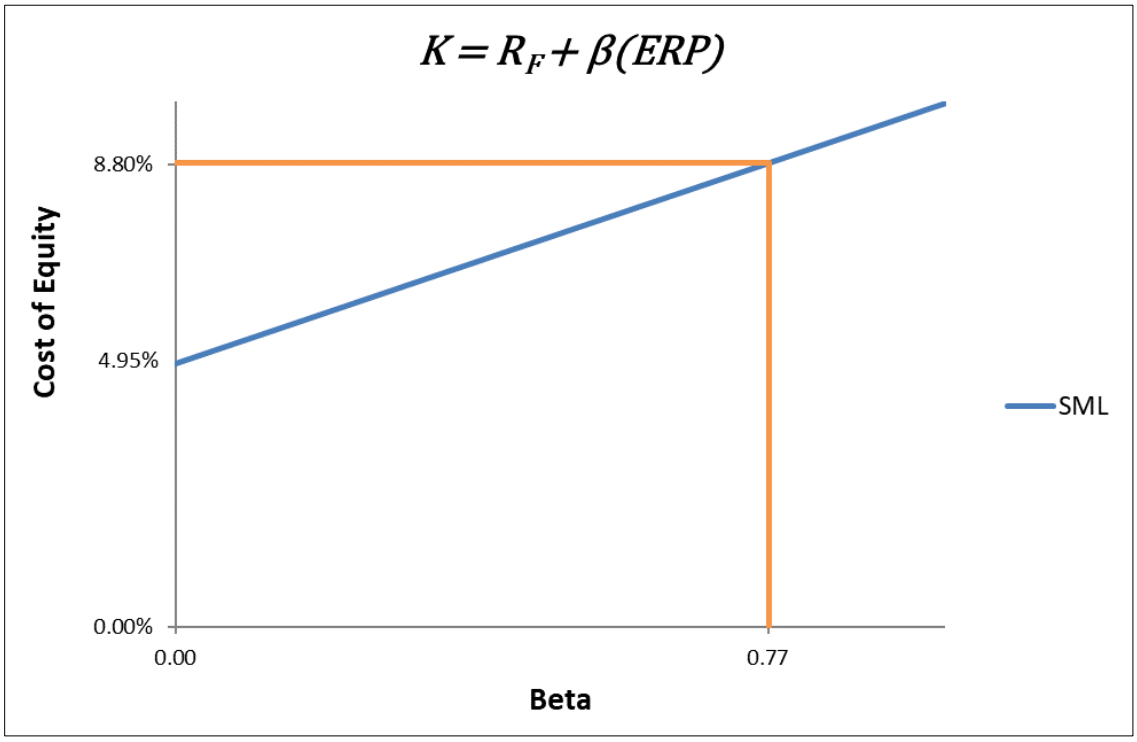
[54] http://pages.stern.nyu.edu/~adamodar/

[55] Kroll, Cost of Capital Recommendations and Potential Upcoming Changes – February 8, 2024 Update.

[56] *See also* Exhibit DJG-10.

only 8.5%.[57] The CAPM can be displayed graphically through what is known as the Security Market Line ("SML"). The figure below shows the expected return (cost of equity) on the y-axis, and the average beta for the proxy group on the x-axis. The SML intercepts the y-axis at the level of the risk-free rate. The slope of the SML is the equity risk premium.

Figure 11:
CAPM Graph



The SML provides the rate of return that will compensate investors for the beta risk of that investment. At an average beta of 0.77 for the proxy group, and assuming the proxy group's average capital structure is used, the CAPM result is 8.8%.

[57] Exhibits DJG-11 and DJG-12.

D. Response to Ms. Nelson's CAPM Analysis and Other Issues

Q. Please summarize the results of Ms. Nelson's application of the CAPM.

A. Ms. Nelson's application of the CAPM produced results ranging as high as 13.11%.[58] As part of these CAPM results, Ms. Nelson incorporated a variation of the CAPM called the "empirical CAPM" ("ECAPM"), which produced even higher results.[59] Ms. Nelson also conducted another type of risk premium analysis, which produced results as high as 10.28%.[60]

Q. Do the results of Ms. Nelson's CAPM and other risk premium analyses indicate a reasonable cost of equity estimate for Peoples?

A. No. The primary factor which causes Ms. Nelson's CAPM and ECAPM results to be unreasonably high is her use of an unreasonably high ERP estimate. I will discuss these issues below as well as the results of Ms. Nelson's other risk premium analysis.

1. Equity Risk Premium

Q. Did Ms. Nelson rely on a reasonable measure for the ERP?

A. No. The primary factor which causes Ms. Nelson's CAPM results to be unreasonably high is her use of an unreasonably high ERP estimate. Ms. Nelson considered an ERP as high as 11.7% in her analysis.[61] The ERP is one of three inputs in the CAPM equation, and it is one of the most important factors for estimating the cost of equity in this case. As discussed above, I used three widely accepted methods for estimating the ERP, including consulting

[58] Exhibit JEN-5.

[59] *Id*.

[60] Direct Testimony of Jennifer E. Nelson, p. 42, Fig. 14.

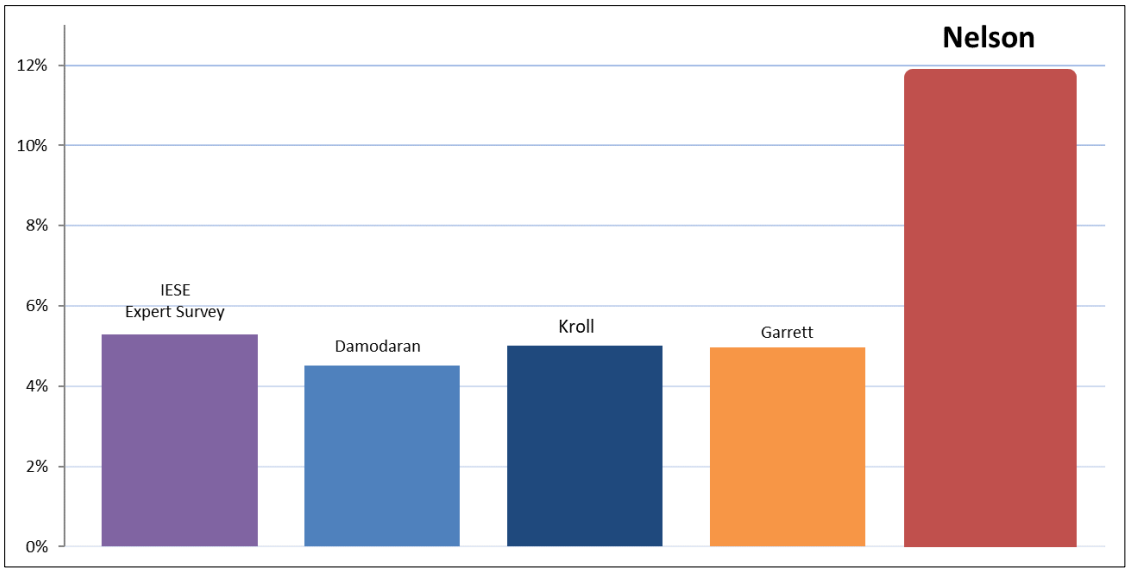
[61] Exhibit JEN-5.

expert surveys, calculating the implied ERP based on aggregate market data, and considering the ERPs published by reputable analysts. The average ERP calculated from my research is only 4.9%.

Q. Please discuss and illustrate how Ms. Nelson's ERP compares with other estimates for the ERP.

A. The 2026 IESE Business School expert survey reports an average ERP of 5.3%. Similarly, Kroll recently estimated an ERP of 5.0%. Dr. Damodaran, one of the leading experts on the ERP, recently estimated an ERP of only 4.5%.[62] The chart in the following figure illustrates that Ms. Nelson's ERP estimate higher than other reasonable, objective estimates for the ERP.[63]

Figure 12:
Equity Risk Premium Comparison



[62] Aswath Damodaran, *Implied Equity Risk Premium Update*, DAMODARAN ONLINE, http://pages.stern.nyu.edu/~adamodar/. Dr. Damodaran estimates several ERPs using various assumptions.

[63] The ERP estimated by Dr. Damodaran is the highest of several ERP estimates under slightly differing assumptions.

When compared with other independent sources for the ERP, as well as my estimate, Ms. Nelson's ERP estimate is clearly too high. This factor contributes to Ms. Nelson's CAPM results to overstate Peoples's cost of equity.

2. Empirical CAPM

Q. Please summarize Ms. Nelson's Empirical CAPM ("ECAPM") analysis.

A. Ms. Nelson offers another version of the CAPM called ECAPM. The premise of the ECAPM is that the standard CAPM underestimates the return required from low-beta securities, such as those of the proxy group. Ms. Nelson's ECAPM produced results as high as 13.93%.[64]

Q. Do you agree with Ms. Nelson's ECAPM results?

A. No. The premise of Ms. Nelson's ECAPM is that the standard CAPM underestimates the return required from low-beta securities. There are several problems with this concept, however. First, the Value Line betas both Ms. Nelson and I used in the real CAPM have already been adjusted upward to account for the theory that low-beta stocks might have a tendency to be underestimated. Second, there is empirical evidence suggesting that the type of beta-adjustment method used by Value Line actually overstates betas from consistently low-beta industries like utilities. According to this research, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average, which ultimately results in betas that are lower than those published in Value Line.[65] Finally (and most pertinently), Ms. Nelson's ECAPM still

[64] Exhibit JEN-5.

[65] *See* Appendix B for further discussion on these theories.

suffers from the same overestimated ERP input discussed above. Regardless of the differing theories regarding the mean reversion tendencies of low-beta securities, Ms. Nelson's ECAPM should be disregarded for its ERP inputs alone which were based on old, out-of-date data resulting in unreasonable ERP significantly higher than that of other experts in the industry.

3. Other Risk Premium Analysis

Q. Please describe Ms. Nelson's other risk premium analysis in addition to the CAPM.

A. In addition to the CAPM, which is a risk premium model, Ms. Nelson also conducted another type of risk premium model, which considers authorized ROEs dating back to 1980.[66]

Q. Does the result of Ms. Nelson's risk premium model indicate a reasonable cost of equity for Peoples?

A. No. Unlike the CAPM and DCF Model, Ms. Nelson's risk premium model does not even estimate the cost of equity. Ms. Nelson's risk premium model adds no marginal value to estimating cost of equity beyond the CAPM – a Nobel Prize winning risk premium model that has been used by investors, managers, and analysts around the world for decades. Ms. Nelson's risk premium model considers, in part, *authorized returns* from other jurisdictions dating back to 1980.[67] Unlike the inputs to the CAPM, authorized ROEs from other jurisdictions are not market-based.

As I described above, the Commission should focus on the Companies' actual *cost* of capital at this time, rather than *authorized* returns established by other utility

[66] Exhibit JEN-6.

[67] *Id*.

commissions in other time periods. Furthermore, relying on nearly 50-year-old data belies Ms. Nelson's characterization that the cost of capital is "forward-looking."[68] It also features the significant flaw of circularity discussed earlier in my testimony: that is, over-inflated authorized ROEs elsewhere being used as justification for an over-inflated authorized ROE in this case, in a continuation of the vicious cycle that enriches shareholders at utility customers' expense. Thus, the Commission should reject Ms. Nelson's use of the risk premium model and the questionable results it produces and focus on the results of the more credible CAPM and DCF Models presented in this case.

VIII. CAPITAL STRUCTURE

Q. Describe in general the concept of a company's "capital structure."

A. "Capital structure" refers to the way a company finances its overall operations through external financing. The primary sources of long-term, external financing are debt capital and equity capital. Debt capital usually comes in the form of contractual bond issues that require the firm to make payments, while equity capital represents an ownership interest in the form of stock. Because a firm cannot pay dividends on common stock until it satisfies its debt obligations to bondholders, stockholders are referred to as "residual claimants." The fact that stockholders have a lower priority to claims on company assets increases their risk and the required return relative to bondholders. Thus, equity capital has a higher cost than debt capital. Firms can reduce their weighted average cost of capital (WACC) by

[68] Direct Testimony of Jennifer E. Nelson, p. 11, line 6.

recapitalizing and increasing their debt financing. In addition, because interest expense is deductible, increasing debt also adds value to the firm by reducing the firm's tax obligation.

Q. Please explain the concept of the "WACC."

A. The term "cost of capital" refers to the weighted average cost of all the components of a company's capital structure, including debt and equity. Determining the cost of debt is relatively straightforward. Interest payments on bonds are contractual, "embedded costs" that are generally calculated by dividing total interest payments by the book value of outstanding debt. Determining the cost of equity, on the other hand, is more complex. Unlike the known, contractual cost of debt, there is no explicit "cost" of equity; the cost of equity must be estimated through various financial models. Thus, the overall WACC includes the cost of debt and the estimated cost of equity. It is a "weighted average" because it is based upon the Company's relative levels of debt and equity, or "capital structure." Companies in the competitive market often use their WACC as the discount rate to determine the value of capital projects, so it is important that this figure be closely estimated. The basic WACC equation used in regulatory proceedings is presented as follows:

Equation 3:
Weighted Average Cost of Capital

$$WACC = \left(\frac{D}{D+E}\right) C_D + \left(\frac{E}{D+E}\right) C_E$$

where:
$WACC$ = *weighted average cost of capital*
D = *book value of debt*
C_D = *embedded cost of debt capital*
E = *book value of equity*
C_E = *market-based cost of equity capital*

Thus, the three components of the WACC include the following:

(1) Cost of Equity

(2) Cost of Debt

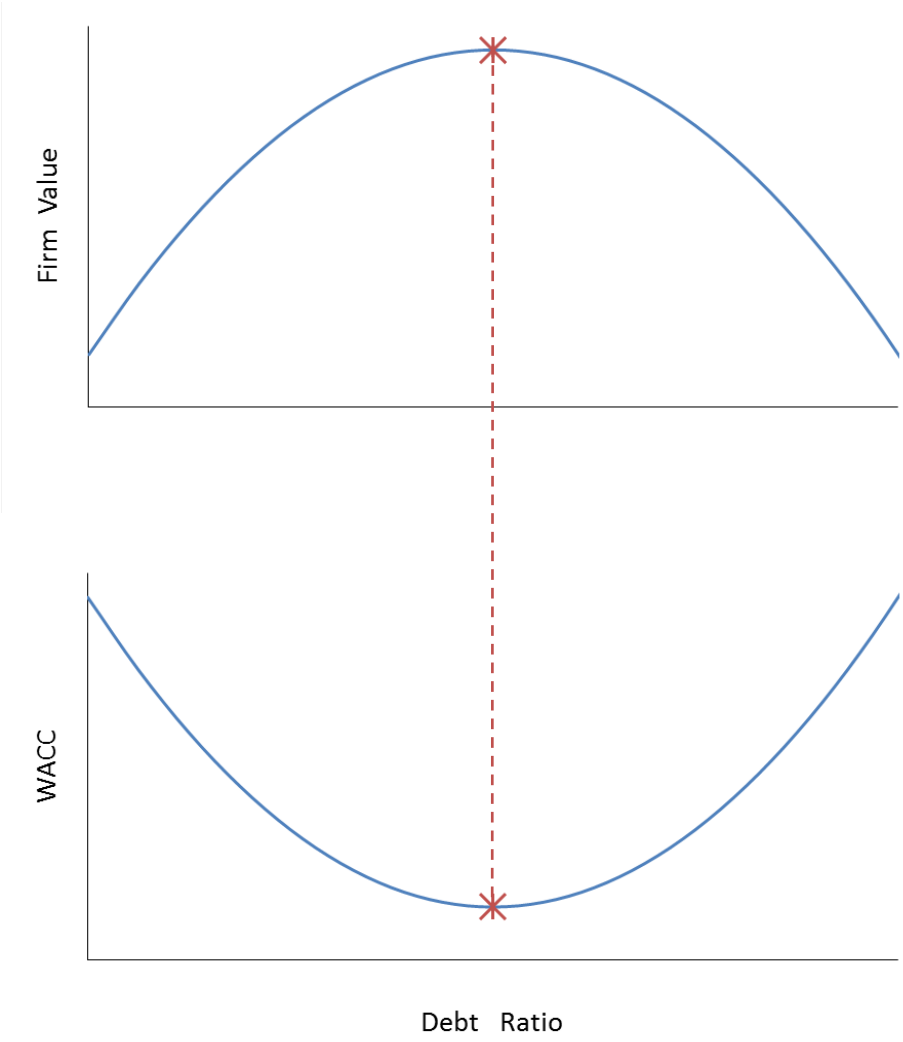
(3) Capital Structure

The term "cost of capital" is necessarily synonymous with the "WACC," and the terms are used interchangeably throughout this testimony.

Q. Is it true that, by increasing debt, competitive firms can add value and reduce their WACC?

A. Yes, it is. A competitive firm can add value by increasing debt. After a certain point, however, the marginal cost of additional debt outweighs its marginal benefit. This is because the more debt the firm uses, the higher interest expense it must pay, and the likelihood of loss increases. This also increases the risk of non-recovery for both bondholders and shareholders, causing both groups of investors to demand a greater return on their investment. Thus, if debt financing is too high, the firm's WACC will increase instead of decrease. The following Figure illustrates these concepts.

Figure 13:
Optimal Debt Ratio



As shown in this figure, a competitive firm's value is maximized when the WACC is minimized. In both graphs, the debt ratio is shown on the x-axis. By increasing its debt ratio, a competitive firm can minimize its WACC and maximize its value. At a certain point, however, the benefits of increasing debt do not outweigh the costs.

Q. Does the rate base rate of return model effectively incentivize utilities to operate at the optimal capital structure?

A. No. While it is true that competitive firms maximize their value by minimizing their WACC, this is not the case for regulated utilities. Under the rate base rate of return model, a higher WACC results in higher rates, all else held constant. The basic revenue requirement equation is as follows:

Equation 4:
Revenue Requirement for Regulated Utilities

$$RR = O + d + T + \boldsymbol{r}(A - D)$$

where:

RR	=	*revenue requirement*
O	=	*operating expenses*
d	=	*depreciation expense*
T	=	*corporate tax*
r	=	***weighted average cost of capital (WACC)***
A	=	*plant investments*
D	=	*accumulated depreciation*

As shown in this equation, utilities can increase their revenue requirement by *increasing* their WACC, not by minimizing it. Thus, because there is no incentive for a regulated utility to minimize its WACC, a Commission standing in the place of competition must ensure that the regulated utility is operating at the lowest reasonable WACC. Left unrestrained, utilities will increase their equity and decrease their debt to unreasonably increase their profits that flow through to shareholders.

Q. Can utilities generally afford to have higher debt levels than other industries?

A. Yes. Because regulated utilities have large amounts of fixed assets, stable earnings, and low risk relative to other industries, they can afford to have relatively higher debt ratios (or "leverage"). As aptly stated by Dr. Damodaran:

> Since financial leverage multiplies the underlying business risk, it stands to reason that firms that have high business risk should be reluctant to take on financial leverage. It also stands to reason that firms that operate in stable businesses should be much more willing to take on financial leverage. *Utilities*, for instance, have historically had high debt ratios but have not had high betas, mostly because their underlying businesses have been stable and fairly predictable.[69]

Note that Dr. Damodaran explicitly contrasts utilities with firms that have high underlying business risk. Because utilities have low levels of risk and operate a stable business, they should generally operate with relatively high levels of debt to achieve their optimal capital structure.

A. Proxy, Parent, and Industry Debt Ratios

Q. Please describe the debt ratios of the proxy group.

A. According to Value Line, the average capital structure mix for the proxy group consists of 51% debt and 49% equity.[70] This debt ratio is notably higher than Peoples' proposed capital structure consisting of only 46% debt. More importantly, this means that Peoples has a lower level of financial risk relative to the proxy group – a discrepancy that can be mathematically accounted for in terms of cost of equity estimation through the Hamada Model, which is discussed in more detail below.

Q. Please discuss the debt ratio of Peoples' parent company, Essential.

A. Peoples is a wholly owned subsidiary of Essential Utilities. Essential had a debt ratio of 54%, which is significantly higher than the Company's proposed debt ratio of only 46%.[71]

---

[69] *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset*, p. 196 (emphasis added).

[70] Exhibit DJG-13.

[71] *See* Value Line Investment Survey.

This discrepancy between the debt ratios of the parent and subsidiary is significant for ratemaking purposes. Since Peoples is a wholly owned subsidiary of Essential, the Company's "equity" on its balance sheet is funded by its parent company. Because Essential has a debt ratio of 54%, this means that the parent company is using debt to finance the purchase of Peoples' equity; a strategy known as "double leveraging." Effectively, the parent company is taking cheap debt, rebranding it as "equity" on Peoples' balance sheet and proposing a much higher return on that money. This arrangement amounts to financial arbitrage, and is clearly unfair to customers, as it would require them to pay a high equity return on the utility's low-cost debt. Moreover, it demonstrates that the utility is cable of operating at a debt ratio as high as 54%. Adopting my capital structure recommendation would mitigate the unfair effects of double leverage that would otherwise be imposed on customers.

Q. Please describe the debt ratios recently observed in competitive U.S. industries.

A. There are more than 2,000 firms in U.S. industries with higher debt ratios than 50%, and with an average debt ratio of about 61%.[72] The following figure shows a sample of these industries with debt ratios higher than 56%.

[72] *See* Exhibit DJG-14.

Figure 14:
Industries with Debt Ratios Greater than 56%

Industry	# Firms	Debt Ratio
Financial Svcs. (Non-bank & Insurance)	166	92%
Hotel/Gaming	65	86%
Brokerage & Investment Banking	30	80%
Retail (Automotive)	29	80%
Hospitals/Healthcare Facilities	33	76%
Air Transport	24	76%
Bank (Money Center)	15	71%
Rubber& Tires	3	67%
Recreation	50	66%
Food Wholesalers	14	66%
Transportation	21	66%
Computers/Peripherals	35	65%
Cable TV	9	65%
Advertising	54	64%
Retail (Grocery and Food)	17	64%
Retail (Special Lines)	98	64%
Telecom (Wireless)	11	63%
Power	48	62%
R.E.I.T.	192	62%
Oil/Gas Distribution	24	62%
Transportation (Railroads)	4	62%
Telecom. Services	32	62%
Chemical (Diversified)	4	61%
Auto & Truck	34	61%
Aerospace/Defense	67	60%
Broadcasting	22	60%
Packaging & Container	22	60%
Apparel	37	59%
Beverage (Soft)	29	59%
Utility (General)	14	59%
Retail (Distributors)	66	58%
Farming/Agriculture	35	57%
Green & Renewable Energy	18	57%
Information Services	16	57%
Total / Average	**1,338**	**66%**

Many of the industries shown here, like public utilities, are generally well-established industries with large amounts of capital assets. The shareholders of these industries generally prefer these higher debt ratios in order to maximize their profits. There are several notable industries that are relatively comparable to public utilities. For example, the Cable TV, Telecom, Power, and Telecom industries all have an average debt ratios of at least 60%.

Q. Are you basing your capital structure recommendation on any industry or company outside of the proxy group?

A. No. I am primarily basing my capital structure recommendation on the average capital structure of the proxy group. I present the capital structures observed in other competitive industries to show it is not uncommon for firms to operate with relatively higher amounts of leverage.

B. The Hamada Model: Capital Structure's Effect on ROE

Q. Have you considered the impact that your capital structure recommendation could have on the company's indicated cost of equity?

A. Yes. I assessed the impact of my capital structure proposal on the Company's cost of equity estimate by using the Hamada model.

Q. What is the premise of the Hamada model?

A. The Hamada formula can be used to analyze changes in a firm's cost of capital as it adds or reduces financial leverage, or debt, in its capital structure by starting with an "unlevered" beta and then "relevering" the beta at different debt ratios. As leverage increases, equity investors bear increasing amounts of risk, leading to higher betas. Before the effects of financial leverage can be accounted for, however, the effects of leverage must first be

removed, which is accomplished through the Hamada formula. The Hamada formula for unlevering beta is stated as follows:[73]

Equation 5:
Hamada Formula

$$\beta_U = \frac{\beta_L}{\left[1 + (1 - T_c)\left(\frac{D}{E}\right)\right]}$$

where: β_U = *unlevered beta (or "asset" beta)*
β_L = *average levered beta of proxy group*
T_C = *corporate tax rate*
D = *book value of debt*
E = *book value of equity*

Using this equation, the beta for the firm can be unlevered, and then "relevered" based on various debt ratios (by rearranging this equation to solve for β_L).

Q. Please summarize the results of the Hamada formula based on the average capital structure of the proxy group.

A. The average capital structure of the proxy group consists of 51% debt and 49% equity. Because Peoples' debt ratio is notably lower than that of the proxy group, when Peoples is "relevered" to match the proxy group, it results in a lower ROE than if Peoples had been operating with a capital structure equal to that of the proxy group. This makes sense because Peoples has less financial risk relative to the proxy group due to the lower amount of debt in its capital structure. The results of my Hamada model are presented in the following figure.

[73] Damodaran *supra* n. 22 at 197. This formula was originally developed by Hamada in 1972.

Figure 15:
Hamada Model ROE

Unlevering Beta		
Proxy Debt Ratio	51%	[1]
Proxy Equity Ratio	49%	[2]
Proxy Debt / Equity Ratio	1.0	[3]
Tax Rate	21%	[4]
Equity Risk Premium	4.9%	[5]
Risk-free Rate	5.0%	[6]
Proxy Group Beta	0.77	[7]
Unlevered Beta	0.42	[8]

[9]	[10]	[11]	[12]
Relevered Betas and Cost of Equity Estimates			
Debt Ratio	D/E Ratio	Levered Beta	Cost of Equity
0%	0.0	0.42	7.1%
20%	0.3	0.51	7.5%
25%	0.3	0.53	7.7%
30%	0.4	0.57	7.8%
46%	0.8	0.70	8.5%
51%	1.0	0.77	8.8%
60%	1.5	0.92	9.6%

According to the results of the Hamada model, if the Commission were to adopt the Company's proposed capital structure, its indicated cost of equity estimate (under the CAPM) would be 8.5%.[74]

[74] *See* Exhibit DJG-15.

Q. Please summarize your conclusions regarding the Hamada Model and your recommendation to the Commission.

A. Based on the results of the Hamada Model, if the Commission does not make an adjustment to Peoples' ratemaking capital structure in this case, then the Company's estimated cost of equity is only 8.5%. However, I recommend the Commission impute a ratemaking capital structure consisting of 51% debt and 49% equity for Peoples, which is equal to the proxy group average. If the Commission imputes this capital structure, then Peoples' estimated cost of equity under the CAPM is 8.8%.

IX. RATE OF RETURN CONCLUSION

Q. Please summarize your analyses and conclusions regarding Peoples' cost of equity.

A. A utility's awarded ROE should be based on its cost of equity, which can be estimated using various financial models. In estimating Peoples' cost of equity, I performed a cost of equity analysis on a proxy group of utility companies using the two most widely used and widely accepted financial models for calculating cost of equity in utility rate proceedings: the CAPM and DCF Model. I conducted two variations of both the CAPM and DCF Model. The results are shown in the figure below.

Figure 16:
Cost of Equity Model Summary

Model	Cost of Equity
CAPM (at Proxy Debt Ratio)	8.8%
Hamada CAPM (at Company-Proposed Debt Ratio)	8.5%
DCF Model (Analyst Growth)	7.6%
DCF Model (Sustainable Growth)	7.1%
Model Average	**8.0%**
Recommended ROE	**8.8%**

As shown in this figure, the average result of my models is 8.0%, and my recommended authorized ROE is 8.8%, which represents the top end of my modeling range.

PART TWO: DEPRECIATION

X. REGULATORY STANDARDS

Q. Please discuss the standard by which regulated utilities are allowed to recover depreciation expense.

A. In *Lindheimer v. Illinois Bell Telephone Co.*, the U.S. Supreme Court stated "depreciation is the loss, not restored by current maintenance, which is due to all the factors causing the ultimate retirement of the property. These factors embrace wear and tear, decay, inadequacy, and obsolescence."[75] The *Lindheimer* Court also recognized that the original

[75] *Lindheimer v. Illinois Bell Tel. Co.*, 292 U.S. 151, 167 (1934).

cost of plant assets, rather than present value or some other measure, is the proper basis for calculating depreciation expense.[76] Moreover, the *Lindheimer* Court found:

> [T]he company has the burden of making a convincing showing that the amounts it has charged to operating expenses for depreciation have not been excessive. That burden is not sustained by proof that its general accounting system has been correct. The calculations are mathematical, but the predictions underlying them are essentially matters of opinion.[77]

Thus, the Commission must ultimately determine if Peoples has met its burden of proof by making a convincing showing that its proposed depreciation rates are not excessive.

A. Depreciation System

Q. Please discuss the definition and general purpose of a depreciation system, as well as the specific depreciation system you employed for this project.

A. The legal standards set forth above do not mandate a specific procedure for conducting depreciation analysis. These standards, however, direct that analysts use a system for estimating depreciation rates that will result in the "systematic and rational" allocation of capital recovery for the utility. Over the years, analysts have developed "depreciation systems" designed to analyze grouped property in accordance with this standard. A depreciation system may be defined by several primary parameters, including: 1) a method of allocation; 2) a procedure for applying the method of allocation; 3) a technique of applying the depreciation rate; and 4) a model for analyzing the characteristics of vintage

---

[76] *Id*. (Referring to the straight-line method, the *Lindheimer* Court stated that "[a]ccording to the principle of this accounting practice, the loss is computed upon the actual cost of the property as entered upon the books, less the expected salvage, and the amount charged each year is one year's pro rata share of the total amount."). The original cost standard was reaffirmed by the Court in *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 606 (1944). The *Hope* Court stated: "Moreover, this Court recognized in [*Lindheimer*], supra, the propriety of basing annual depreciation on cost. By such a procedure the utility is made whole and the integrity of its investment maintained. No more is required."

[77] *Id*. at 169.

property groups.[78] In this case, I used the straight-line method, the average life group procedure, the remaining life technique, and the broad group model.[79]

Q. Did both Mr. Spanos and you use the same depreciation system?

A. No. Pertinently, Mr. Spanos used the equal life group ("ELG") method instead of the average life group ("ALG") method for vintages since 1983. I discuss the differences between these methods in more detail below.

B. Average Life vs Equal Life Method

Q. Explain the primary difference between the ALG and ELG methods.

A. In the ALG method, a constant accrual rate based on the average life of all property in the group is applied to the surviving property.[80] In the ELG method, property is divided into subgroups that each have a common life. Pertinently, the ELG method results in higher depreciation rates in the early years of a vintage's life. This fact is confirmed by authoritative depreciation literature. According to Wolf:

> When contrasted with the average life procedure, the equal life group procedure results in annual accruals that are higher during the early years and lower in the later years.[81]

The NARUC Public Utility Depreciation Practices also makes the same conclusion about the equal life procedure:

---

[78] *See* Wolf & W. Chester Fitch, Depreciation Systems 70, 140 (Iowa State University Press 1994).
[79] *See* Appendix C for further discussion.

[80] *Id*. at 74-75.
[81] *Id*. at 93 (emphasis added).

> [T]he ELG method results in annual accruals that are higher during the early years of a vintage's life, thereby causing an increase in depreciation expense and revenue requirements during these years.[82]

In contrast, use of the average life results in the same depreciation rate applied to each age interval.

Q. Based on your experience in other regulatory jurisdictions and knowledge of the industry, which method is more commonly used?

A. In my experience, the ALG method is used by analysts and adopted by regulators in the vast majority of jurisdiction and in the vast majority of cases.

Q. Does Mr. Spanos typically use the ALG method in other jurisdictions?

A. Yes. According to Mr. Spanos: "In other jurisdictions he utilizes the ALG procedure more due to precedent in those states."[83]

Q. Have you successfully argued for a change from the ELG method to ALG method in another jurisdiction?

A. Yes. In Duke Energy Indiana's ("DEI") 2020 rate case, the company proposed ELG depreciation rates, which had been adopted by the Indiana commission in previous cases. In that case, I and other parties argued that the ALG method should be used. The Indiana Commission found as follows:

---

[82] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices* 176 (NARUC 1996) (emphasis added).
[83] *See* response to OCA-IX-021(e).

> First, with respect to the question of whether the ELG or ALG method should be used, we find the evidence presented by OUCC witness Mr. Garrett and Industrial Group witness Mr. Andrews persuasive, as both witnesses showed that the ELG method results in unreasonably high depreciation rates. ALG depreciation rates result in systematical and rational cost recovery with near term customer rate relief and full cost recovery of utility investments. While we have determined in the past that the ELG methodology was appropriate and acknowledge the weight given to precedent in many prior decisions, we always evaluate each case as it comes before us and do not need to approve the same methodology based on prior decisions, especially in light of a changed landscape. The use of ELG in a higher than average investment cycle has the effect of unnecessarily increasing the near term depreciation expense as compared to the use of ALG.[84]

In the DEI case, the Commission correctly noted that the ELG method can result in unreasonably high depreciation rates. In order for the ELG method to be properly applied, a utility would need to revise depreciation each year. However, given the logistical realities involved with prosecuting rate cases, this would be impractical and inefficient. When a utility has made substantial, recent capital investments, depreciation expense calculated under the ELG method will always be higher than the expense calculated under the ALG method. The larger the amount of the investments, the larger the discrepancy will be between the two procedures. The Indiana commission's criticism of the ELG method would also apply here.

Q. Have you successfully argued for a change from the ELG method to ALG method in other jurisdictions?

A. Yes. More recently, in Atmos Energy's application before the Mississippi Public Service Commission, I testified on behalf of the commission staff and recommended the ALG

[84] Cause No. 45253, Order of the Commission, p. 90, (June 29, 2020).

method instead of the company-proposed ELG method. Adopting my position, the Mississippi Commission stated:

> The Commission finds that the depreciation rates as proposed by Staff, based on the standard ALG method, result in a just and reasonable depreciation expense to customers that appropriately compensates the Company for a return of its investment in plant, and Atmos is directed to adopt the ALG procedure for establishing depreciation rates in Mississippi.[85]

Q. Are you aware of other Public Utility Commissions that have rejected the use of ELG?

A. Yes. The Kentucky Public Service Commission ("Kentucky PSC") found that the ELG procedure front-loads depreciation expense in earlier years and decreases it in the later years of an asset's depreciation life, creating a mismatch of revenues and expenses. The Kentucky PSC states reasoning for rejecting the ELG is as follows:

> Duke Kentucky proposes, as part of developing its depreciation rates, the continued use of the ELG procedure. The Attorney General recommends the Commission adopt the ALG procedure in developing Duke Kentucky's depreciation rates. The Attorney General contends that the ALG methodology is the predominant method that is used in the electric industry for developing depreciation rates. The Attorney General contends that, under the ELG methodology, the capital recovery periods are accelerated and shortened and, thus, the depreciation rates are greater than if the ALG procedure was used. The Attorney General argues that the ALG procedure is as accurate as the ELG procedure and the ALG procedure smooths the data so that the depreciation rates for the group of assets tend to remain constant. Use of the ALG procedure will result in a decrease in Duke Kentucky's depreciation expense of $6.920 million.
>
> Duke Kentucky requested an increase in depreciation expense of $6.920 million, based on its request to utilize the ELG procedure for computing depreciation rates. As was discussed in the rate base section of this Order, this Commission has found that the ELG procedure does not accurately match revenues and expenses, is front-loaded, and Duke Kentucky is the

---

[85] *Application of Atmos Energy Corporation*, Order, at 20.

only Kentucky based utility that utilizes the ELG procedure for computing depreciation rates.

Regulatory accounting requires the proper matching of revenues and expense in order to produce fair, just and reasonable rates. The Commission finds Duke Kentucky's proposed ELG procedure does not meet that criteria and that Duke Kentucky's depreciation expense should be reduced by $6.920 million.[86]

Q. Please provide an example of how the ELG method results in higher depreciation rates in earlier years relative to the ALG method.

A. For the following illustration, assume a group of property containing two units, one with an original cost of $4,000 and a 4-year life and the second with an original cost of $6,000 and an 8-year life.[87] Thus, the average life of this group is 6.4 years.[88] Under the ALG method, the depreciation rate is 15.625% per year (1/6.4 = 15.625%). The following table illustrates this example.

Figure 1:
ALG Procedure

Year	Balance	Retired	Rate	Annual Accrual	Accum. Deprec.
1974	10000		15.625%	1563	0
1975	10000		15.625%	1563	1563
1976	10000		15.625%	1563	3125
1977	10000	4000	15.625%	1563	4688
1978	6000		15.625%	938	2250
1979	6000		15.625%	938	3188
1980	6000		15.625%	938	4125
1981	6000	6000	15.625%	938	5063
1982	0				0

[86] In the Matter of: Electronic Application of Duke Energy Kentucky, Inc., Kentucky PSC, Order at pages 26 27, Case No. 2017-00321, (https://psc.ky.gov/pscscf/2017%20Cases/2017-00321//20180413_PSC_ORDER.pdf).

[87] *See* Wolf & W. Chester Fitch, Depreciation Systems 82 (Iowa State University Press 1994).

[88] AL = [($4,000 x 4) + ($6,000 x 8)] / $10,000 = 6.4 years.

As shown in the annual accrual column above, the full $10,000 is depreciated after eight years. Now, considering the same assumptions presented above, the following tables illustrate the same scenario except that the rate is calculated under the ELG method.

Figure 2:
ELG Procedure

Year	Balance	Retired	Rate	Annual Accrual	Accum. Deprec.
1974	10000		17.50%	1750	0
1975	10000		17.50%	1750	1750
1976	10000		17.50%	1750	3500
1977	10000	4000	17.50%	1750	5250
1978	6000		12.50%	750	3000
1979	6000		12.50%	750	3750
1980	6000		12.50%	750	4500
1981	6000	6000	12.50%	750	5250
1982	0				0

As with the ALG example presented above, the full $10,000 investment is still fully depreciated after eight years. However, there are higher rates and accrual amounts during the earlier years. The reason there is a 17.5% depreciation rate instead of a 15.625% depreciation rate in the early years is because the two units in this group are treated separately under the ELG method. The following table shows how the rates in this example are calculated.

Figure 3:
ELG Rate Development

				Annual Accrual	
Group	Group Amount	Group Life	Group Rate	1974-77	1978-81
A	4000	4	25.00%	1000	
B	6000	8	12.50%	750	750
Annual accruals				1750	750
Balance during interval				10000	6000
Annual accrual rate %				17.50%	12.50%

This example is simplified in an attempt to explain the complexities of the ELG method. In this example, the higher rate of 17.5% stayed the same for four years because there are only two units in this simple example, and the rate drops to 12.5% after the first unit retires.

Q. Please summarize your recommendation regarding the depreciation system that should be used to calculate the Company's depreciation rates.

A. As demonstrated above, the ALG method results in a fairer application of depreciation rates compared to the ELG method given the realities of ratemaking proceedings. Thus, the Commission should reject the Company's use of the ELG method, which effectively results in an accelerated form of cost recovery from consumers. The Company's use of the ELG method increases the annual depreciation accrual charged to customers by $27.1 million in the 2025 Study, by $31.4 million in the 2026 Study, and by $36.4 million in the 2027 Study. In other words, even if there are no adjustments to the net salvage rates, service life, or other depreciation parameters for any accounts in the depreciation study, using the majority-view ALG method alone will result in significantly lower depreciation rates and expense.

XI. SERVICE LIFE ANALYSIS

Q. Describe the methodology used to estimate the service lives of grouped depreciable assets.

A. The process used to study industrial property retirement is rooted in the actuarial process used to study human mortality. Just as actuarial analysts study historical human mortality data to predict how long a group of people will live, depreciation analysts study historical plant data to estimate the average lives of property groups. The most common actuarial method used by depreciation analysts is called the "retirement rate method." In the retirement rate method, original property data, including additions, retirements, transfers, and other transactions, are organized by vintage and transaction year.[89] The retirement rate method is ultimately used to develop an "observed life table," ("OLT") which shows the percentage of property surviving at each age interval. This pattern of property retirement is described as a "survivor curve." The survivor curve derived from the observed life table, however, must be fitted and smoothed with a complete curve in order to determine the ultimate average life of the group.[90] The most widely used survivor curves for this curve fitting process were developed at Iowa State University in the early 1900s and are commonly known as the "Iowa curves."[91] A more detailed explanation of how the Iowa curves are used in the actuarial analysis of depreciable property is set forth in Appendix C.

---

[89] The "vintage" year refers to the year that a group of property was placed in service (aka "placement" year). The "transaction" year refers to the accounting year in which a property transaction occurred, such as an addition, retirement, or transfer (aka "experience" year).

[90] *See* Appendix C for a more detailed discussion of the actuarial analysis used to determine the average lives of grouped industrial property.

[91] *See* Appendix B for a more detailed discussion of the Iowa curves.

Q. Describe how you analyzed Peoples' historical retirement data in order to determine the most reasonable Iowa curve to apply to each account.

A. The Company's aged property data is used to create OLTs for each account. The data points on the OLT can be plotted to form a curve (the "OLT curve"). The OLT curve is not a theoretical curve; rather, it is actual observed data from the Company's records that indicate the rate of retirement for each property group. An OLT curve by itself, however, is rarely a smooth curve, and is often not a "complete" curve (i.e., it does not end at zero percent surviving). In order to calculate average life (the area under a curve), a complete survivor curve is required. The Iowa curves are empirically derived curves based on the extensive studies of the actual mortality patterns of many different types of industrial property. The curve-fitting process involves selecting the best Iowa curve to fit the OLT curve. This can be accomplished through a combination of visual and mathematical curve-fitting techniques, as well as professional judgment.

Q. Is mathematical fitting an important part of the curve-fitting process?

A. Yes. Mathematical curve fitting promotes objective, unbiased results. While mathematical curve-fitting is important, it may not always yield the optimum result. Simply determining which Iowa curve best fits an OLT curve ignores professional judgment that may be needed for specific situations. For example, if there is insufficient historical data in a particular account and the OLT curve derived from that data is relatively short and flat, the mathematically "best" curve may be one with a very long average life. However, when there is sufficient data available, mathematical curve fitting can be used as part of an objective service life analysis.

Q. Should every portion of the OLT curve be given equal weight?

A. Not necessarily. Many analysts have observed that the points towards the end of OLT curves may often have less analytical value than other portions of the curve. Indeed, "[p]oints at the end of the curve are often based on fewer exposures and may be given less weight than points based on larger samples. The weight placed on those points will depend on the size of the exposures."[92] In accordance with this standard, an analyst may decide to truncate the tail end of the OLT curve at a certain percent of initial exposures, such as one percent. Using this approach puts greater emphasis on the most valuable portions of the curve. For my analysis in this case, I not only considered the entirety of the OLT curve, but also conducted further analyses that involved fitting Iowa curves to the most significant part of the OLT curve for certain accounts.

Q. Are you recommending service life adjustments in this case based on the following analyses?

A. No. Arguments could be made for why several of the Company's proposed service lives could be moderately longer as demonstrated below, which would have a decreasing effect on depreciation rates; however, I am not recommending any actual service life adjustments in this case. This is because I believe it is much more important for the Commission to focus on the ALG vs ELG issue and limit the accelerated form of cost recovery that would unfairly burden customers under the ELG method proposed by Mr. Spanos.

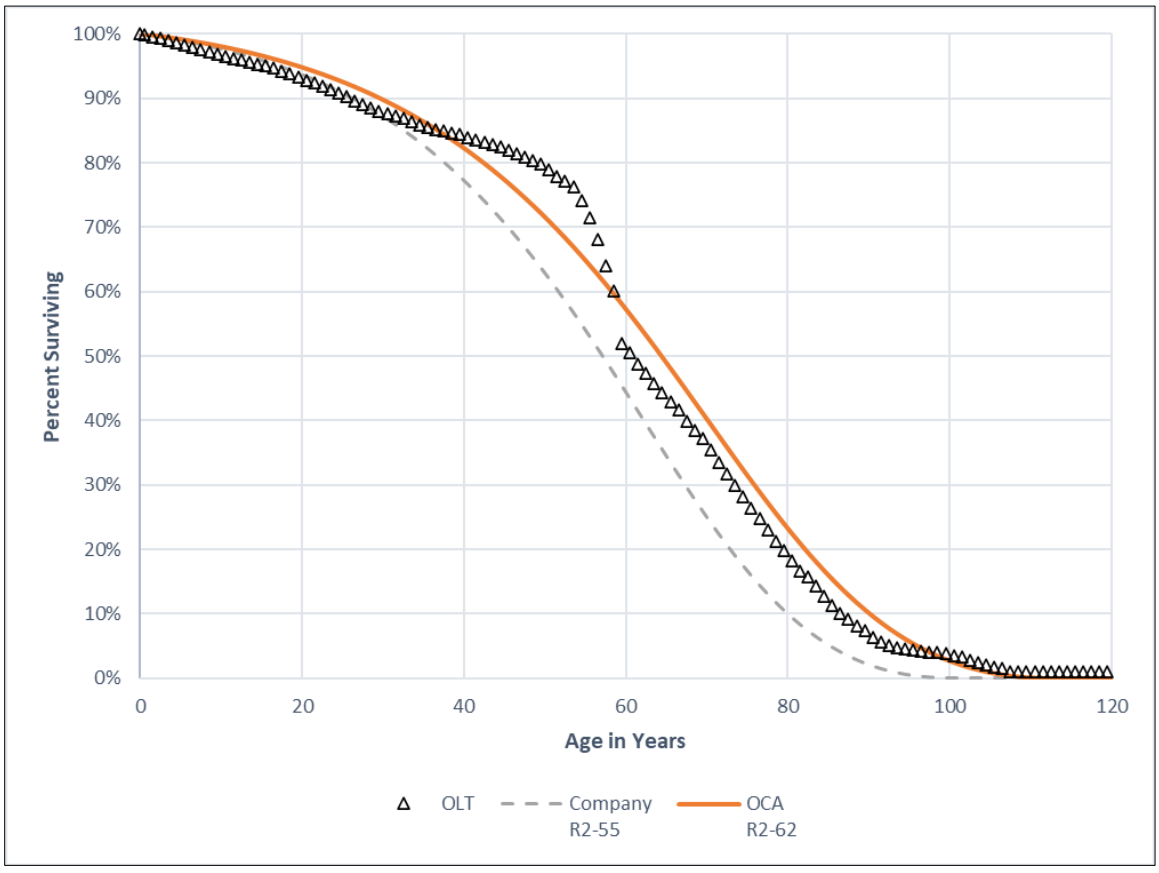
[92] Wolf & W. Chester Fitch, Depreciation Systems 46 (Iowa State University Press 1994).

A. Account 380 – Services

Q. Please describe your service life estimate for this account and compare it with the Company's estimate.

A. The observed survivor curve (OLT curve) derived from the Company's data for this account is presented in the graph below. The graph also shows the Iowa curves Mr. Spanos and I selected to represent the average remaining life of the assets in this account. For this account, Mr. Spanos selected the R2-55 Iowa curve, and I selected the R2-62 Iowa curve.

Figure 4:
Account 376.10 – Steel Mains



As shown in this graph, the Iowa curve selected by Mr. Spanos is shorter than the retirement pattern indicated in the OLT curve. Based on this evidence, the depreciation rate he

proposes for this account is arguably too high. Mathematical curve fitting techniques can be used to further assess the results.

Q. Does the R2-55 Iowa curve result in a closer mathematical fit to the OLT curve for this account?

A. Yes. While visual curve-fitting techniques can help identify the most statistically relevant portions of the OLT curve for this account, mathematical curve-fitting techniques can also help us determine which of the proposed Iowa curves results in the closest fit. In circumstances in which there is an adequate amount of retirement experience (i.e., the OLT curve is long enough) and there is no significant evidence presented beyond the statistical data to justify a meaningful deviation from the retirement pattern indicated in the OLT curve, then mathematical curve fitting results should arguably be given more consideration in the curve selection process. Mathematical curve-fitting essentially involves measuring the distance between the OLT curve and the selected Iowa curve. The best mathematically-fitting curve is the one that minimizes the distance between the OLT curve and the Iowa curve, thus providing the closest fit. Professional judgment is also used to ensure that the selected Iowa curve is not unreasonable based on industry norms. The distance between the curves is calculated using the "sum-of-squared differences" ("SSD") technique. For this account, the SSD between the Company's curve and the OLT curve is 0.7020, and the SSD between the R2-62 Iowa curve I selected and the OLT curve is 0.1503, which means it results in the closer fit.[93]

[93] Exhibit DJG-24.

XII. DEPRECIATION CONCLUSION

Q. Please reiterate your recommendation regarding the Company's proposed depreciation rates.

A. The depreciation rates proposed by the Company for the 2025 Study, 2026 Study, and 2027 Study are based in part on the ELG method, which results in a form of accelerated depreciation that unfairly burdens current customers. My proposed depreciation rates are calculated exclusively using the majority-view ALG method, and they result in fairer depreciation rates. I recommend the Commission adopt the depreciation rates presented in my exhibits.

XIII. RECOMMENDATION

Q. What is your recommendation to the Commission regarding the Company's authorized rate of return.

A. The Commission should authorize an ROE of 8.8% for Peoples. The Commission should also authorize a capital structure for ratemaking purposes consisting of 51% debt and 49% equity. Alternatively, if the Commission accepts the Company's proposed capital structure, then I recommend an authorized ROE of 8.5% for the Company. My recommendations regarding Peoples' rate of return are summarized in the following figures.

Figure 17:
Primary Recommendation

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	51.0%	4.61%	2.35%
Common Equity	49.0%	8.80%	4.31%
Total	100.0%		6.66%

Figure 18:
Alternative Recommendation

Capital Component	Proposed Ratio	Cost Rate	Weighted Cost
Long-Term Debt	45.5%	4.61%	2.10%
Common Equity	54.5%	8.50%	4.63%
Total	100.0%		6.73%

Q. What is your recommendation to the Commission regarding the Company's authorized depreciation rates?

A. I recommend that the Commission authorize depreciation rates for Peoples' assets that are calculated using the average life group ("ALG") method for all vintage years. The Commission should reject Peoples continued use of the ELG method, which effectively results in an accelerated form of cost recovery from consumers. Adopting my proposed depreciation rates under the ALG method would reduce Peoples' proposed depreciation accrual by $27.1 million in the 2025 Study, by $31.5 million in the 2026 Study, and by $36.8 million in the 2027 Study.

Q. Does this conclude your testimony?

A. Yes.

APPENDIX A:

DISCOUNTED CASH FLOW MODEL THEORY

The Discounted Cash Flow ("DCF") Model is based on a fundamental financial model called the "dividend discount model," which maintains that the value of a security is equal to the present value of the future cash flows it generates. Cash flows from common stock are paid to investors in the form of dividends. There are several variations of the DCF Model. In its most general form, the DCF Model is expressed as follows:[1]

Equation 1:
General Discounted Cash Flow Model

$$P_0 = \frac{D_1}{(1+k)} + \frac{D_2}{(1+k)^2} + \cdots + \frac{D_n}{(1+k)^n}$$

where: P_0 = *current stock price*
$D_1 \ldots D_n$ = *expected future dividends*
k = *discount rate / required return*

The General DCF Model would require an estimation of an infinite stream of dividends. Since this would be impractical, analysts use more feasible variations of the General DCF Model, which are discussed further below.

The DCF Models rely on the following four assumptions:

1. Investors evaluate common stocks in the classical valuation framework; that is, they trade securities rationally at prices reflecting their perceptions of value;
2. Investors discount the expected cash flows at the same rate (K) in every future period;

[1] *See* Zvi Bodie, Alex Kane & Alan J. Marcus, *Essentials of Investments* 410 (9th ed., McGraw-Hill/Irwin 2013).

3. The K obtained from the DCF equation corresponds to that specific stream of future cash flows alone; and

4. Dividends, rather than earnings, constitute the source of value.

The General DCF can be rearranged to make it more practical for estimating the cost of equity. Regulators typically rely on some variation of the Constant Growth DCF Model, which is expressed as follows:

Equation 2:
Constant Growth Discounted Cash Flow Model

$$K = \frac{D_1}{P_0} + g$$

where: K = *discount rate / required return on equity*
D_1 = *expected dividend per share one year from now*
P_0 = *current stock price*
g = *expected growth rate of future dividends*

Unlike the General DCF Model, the Constant Growth DCF Model solves directly for the required return (K). In addition, by assuming that dividends grow at a constant rate, the dividend stream from the General DCF Model may be essentially substituted with a term representing the expected constant growth rate of future dividends (g). The Constant Growth DCF Model may be considered in two parts. The first part is the dividend yield (D_1/P_0), and the second part is the growth rate (g). In other words, the required return in the DCF Model is equivalent to the dividend yield plus the growth rate.

In addition to the four assumptions listed above, the Constant Growth DCF Model relies on four additional assumptions as follows:[2]

[2] *Id.* at 254-56.

1. The discount rate (K) must exceed the growth rate (g);
2. The dividend growth rate (g) is constant in every year to infinity;
3. Investors require the same return (K) in every year; and
4. There is no external financing; that is, growth is provided only by the retention of earnings.

Because the growth rate in this model is assumed to be constant, it is important not to use growth rates that are unreasonably high. In fact, the constant growth rate estimate for a regulated utility with a defined service territory should not exceed the growth rate for the economy in which it operates.

APPENDIX B:

CAPITAL ASSET PRICING MODEL THEORY

The Capital Asset Pricing Model ("CAPM") is a market-based model founded on the principle that investors demand higher returns for incurring additional risk.[3] The CAPM estimates this required return. The CAPM relies on the following assumptions:

1. Investors are rational, risk-adverse, and strive to maximize profit and terminal wealth;
2. Investors make choices based on risk and return. Return is measured by the mean returns expected from a portfolio of assets; risk is measured by the variance of these portfolio returns;
3. Investors have homogenous expectations of risk and return;
4. Investors have identical time horizons;
5. Information is freely and simultaneously available to investors.
6. There is a risk-free asset, and investors can borrow and lend unlimited amounts at the risk-free rate;
7. There are no taxes, transaction costs, restrictions on selling short, or other market imperfections; and,
8. Total asset quality is fixed, and all assets are marketable and divisible.[4]

[3] William F. Sharpe, *A Simplified Model for Portfolio Analysis* 277-93 (Management Science IX 1963); *see also* John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 208 (3rd ed., South Western Cengage Learning 2010).

[4] *Id*.

While some of these assumptions may appear to be restrictive, they do not outweigh the inherent value of the model. The CAPM has been widely used by firms, analysts, and regulators for decades to estimate the cost of equity capital.

The basic CAPM equation is expressed as follows:

Equation 3:
Capital Asset Pricing Model

$$K = R_F + \beta_i(R_M - R_F)$$

where: K = *required return*
R_F = *risk-free rate*
β = *beta coefficient of asset i*
R_M = *required return on the overall market*

There are essentially three terms within the CAPM equation that are required to calculate the required return (K): (1) the risk-free rate (R_F); (2) the beta coefficient (β); and (3) the equity risk premium ($R_M - R_F$), which is the required return on the overall market less the risk-free rate.

Raw Beta Calculations and Adjustments

A stock's beta equals the covariance of the asset's returns with the returns on a market portfolio, divided by the portfolio's variance, as expressed in the following formula:[5]

Equation 4:
Beta

$$\beta_i = \frac{\sigma_{im}}{\sigma_m^2}$$

where: β_i = *beta of asset i*
σ_{im} = *covariance of asset i returns with market portfolio returns*
σ^2_m = *variance of market portfolio*

[5] John R. Graham, Scott B. Smart & William L. Megginson, *Corporate Finance: Linking Theory to What Companies Do* 180-81 (3rd ed., South Western Cengage Learning 2010).

Betas that are published by various research firms are typically calculated through a regression analysis that considers the movements in price of an individual stock and movements in the price of the overall market portfolio. The betas produced by this regression analysis are considered "raw" betas. There is empirical evidence that raw betas should be adjusted to account for beta's natural tendency to revert to an underlying mean.[6] Some analysts use an adjustment method proposed by Blume, which adjusts raw betas toward the market mean of one.[7] While the Blume adjustment method is popular due to its simplicity, it is arguably arbitrary, and some would say not useful at all. According to Dr. Damodaran: "While we agree with the notion that betas move toward 1.0 over time, the [Blume adjustment] strikes us as arbitrary and not particularly useful."[8] The Blume adjustment method is especially arbitrary when applied to industries with consistently low betas, such as the utility industry. For industries with consistently low betas, it is better to employ an adjustment method that adjusts raw betas toward an industry average, rather than the market average. Vasicek proposed such a method, which is preferable to the Blume adjustment method because it allows raw betas to be adjusted toward an industry average, and also accounts for the statistical accuracy of the raw beta calculation.[9] In other words, "[t]he Vasicek adjustment seeks to overcome one weakness of the Blume model by not applying the same adjustment to every security; rather, a security-specific adjustment is made depending on the

[8] *See* Aswath Damodaran, *Investment Valuation: Tools and Techniques for Determining the Value of Any Asset* 187 (3rd ed., John Wiley & Sons, Inc. 2012).

[9] Oldrich A. Vasicek, *A Note on Using Cross-Sectional Information in Bayesian Estimation of Security Betas* 1233-1239 (Journal of Finance, Vol. 28, No. 5, December 1973).

statistical quality of the regression."[10] The Vasicek beta adjustment equation is expressed as follows:

Equation 5:
Vasicek Beta Adjustment

$$\beta_{i1} = \frac{\sigma^2_{\beta i0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_0 + \frac{\sigma^2_{\beta 0}}{\sigma^2_{\beta 0} + \sigma^2_{\beta_{i0}}}\beta_{i0}$$

where: β_{i1} = *Vasicek adjusted beta for security i*
β_{i0} = *historical beta for security i*
β_0 = *beta of industry or proxy group*
$\sigma^2_{\beta 0}$ = *variance of betas in the industry or proxy group*
$\sigma^2_{\beta i0}$ = *square of standard error of the historical beta for security i*

The Vasicek beta adjustment is an improvement on the Blume model because the Vasicek model does not apply the same adjustment to every security. A higher standard error produced by the regression analysis indicates a lower statistical significance of the beta estimate. Thus, a beta with a high standard error should receive a greater adjustment than a beta with a low standard error. As stated in Ibbotson:

[10] 2012 Ibbotson Stocks, Bonds, Bills, and Inflation Valuation Yearbook 77-78 (Morningstar 2012).

> While the Vasicek formula looks intimidating, it is really quite simple. The adjusted beta for a company is a weighted average of the company's historical beta and the beta of the market, industry, or peer group. How much weight is given to the company and historical beta depends on the statistical significance of the company beta statistic. If a company beta has a low standard error, then it will have a higher weighting in the Vasicek formula. If a company beta has a high standard error, then it will have lower weighting in the Vasicek formula. An advantage of this adjustment methodology is that it does not force an adjustment to the market as a whole. Instead, the adjustment can be toward an industry or some other peer group. *This is most useful in looking at companies in industries that on average have high or low betas*.[11]

Thus, the Vasicek adjustment method is statistically more accurate, and is the preferred method to use when analyzing companies in an industry that has inherently low betas, such as the utility industry. The Vasicek method was also confirmed by Gombola, who conducted a study specifically related to utility companies. Gombola concluded that "[t]he strong evidence of auto-regressive tendencies in *utility* betas lends support to the application of adjustment procedures such as the . . . adjustment procedure presented by Vasicek."[12] Gombola also concluded that adjusting raw betas toward the market mean of 1.0 is *too high*, and that "[i]nstead, they should be adjusted toward a value that is less than one."[13] In conducting the Vasicek adjustment on betas in previous

[11] *Id*. at 78 (emphasis added).

[12] Michael J. Gombola and Douglas R. Kahl, *Time-Series Processes of Utility Betas: Implications for Forecasting Systematic Risk* 92 (Financial Management Autumn 1990) (emphasis added).

[13] *Id*. at 91-92.

cases, it reveals that utility betas are even lower than those published by Value Line.[14] Gombola's findings are particular important here, because his study was conducted specifically on utility companies. This evidence indicates that using Value Line's betas in a CAPM cost of equity estimate for a utility company may lead to overestimated results. Regardless, adjusting betas to a level that is *higher* than Value Line's betas is not reasonable, and it would produce CAPM cost of equity results that are too high.

[14] *See e.g.* Responsive Testimony of David J. Garrett, filed March 21, 2016 in Cause No. PUD 201500273 before the Corporation Commission of Oklahoma (the Company's 2015 rate case), at pp. 56 – 59.

APPENDIX C:

THE DEPRECIATION SYSTEM

A depreciation accounting system may be thought of as a dynamic system in which estimates of life and salvage are inputs to the system, and the accumulated depreciation account is a measure of the state of the system at any given time.[15] The primary objective of the depreciation system is the timely recovery of capital. The process for calculating the annual accruals is determined by the factors required to define the system. A depreciation system should be defined by four primary factors: 1) a *method* of allocation; 2) a *procedure* for applying the method of allocation to a group of property; 3) a *technique* for applying the depreciation rate; and 4) a *model* for analyzing the characteristics of vintage groups comprising a continuous property group.[16] The figure below illustrates the basic concept of a depreciation system and includes some of the available parameters.[17]

There are hundreds of potential combinations of methods, procedures, techniques, and models, but in practice, analysts use only a few combinations. Ultimately, the system selected must result in the systematic and rational allocation of capital recovery for the utility. Each of the four primary factors defining the parameters of a depreciation system is discussed further below.

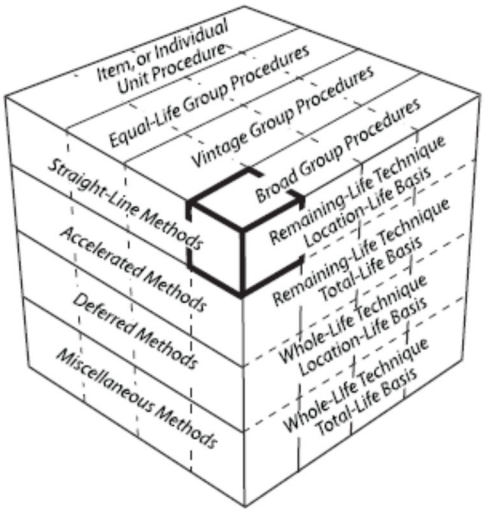
---

[15] *See* Frank K. Wolf & W. Chester Fitch, *Depreciation Systems* 69-70 (Iowa State University Press 1994).

[16] *Id.* at 70, 139-40.

[17] Edison Electric Institute, *Introduction to Depreciation* (inside cover) (EEI April 2013). Some definitions of the terms shown in this diagram are not consistent among depreciation practitioners and literature due to the fact that depreciation analysis is a relatively small and fragmented field. This diagram simply illustrates the some of the available parameters of a depreciation system.

Figure 1:
The Depreciation System Cube



1. Allocation Methods

The "method" refers to the pattern of depreciation in relation to the accounting periods. The method most commonly used in the regulatory context is the "straight-line method" — a type of age-life method in which the depreciable cost of plant is charged in equal amounts to each accounting period over the service life of plant.[18] Because group depreciation rates and plant balances often change, the amount of the annual accrual rarely remains the same, even when the straight-line method is employed.[19] The basic formula for the straight-line method is as follows:[20]

Equation 6:
Straight-Line Accrual

$$Annual\ Accrual = \frac{Gross\ Plant - Net\ Salavage}{Service\ Life}$$

[18] National Association of Regulatory Utility Commissioners, *Public Utility Depreciation Practices* 56 (NARUC 1996).

[19] *Id*.

[20] *Id*.

Gross plant is a known amount from the utility's records, while both net salvage and service life must be estimated in order to calculate the annual accrual. The straight-line method differs from accelerated methods of recovery, such as the "sum-of-the-years-digits" method and the "declining balance" method. Accelerated methods are primarily used for tax purposes and are rarely used in the regulatory context for determining annual accruals.[21] In practice, the annual accrual is expressed as a rate which is applied to the original cost of plant in order to determine the annual accrual in dollars. The formula for determining the straight-line rate is as follows:[22]

Equation 7:
Straight-Line Rate

$$Depreciation\ Rate\ \% = \frac{100 - Net\ Salvage\ \%}{Service\ Life}$$

2. Grouping Procedures

The "procedure" refers to the way the allocation method is applied through subdividing the total property into groups.[23] While single units may be analyzed for depreciation, a group plan of depreciation is particularly adaptable to utility property. Employing a grouping procedure allows for a composite application of depreciation rates to groups of similar property, rather than excessively conducting calculations for each unit. Whereas an individual unit of property has a single life, a group of property displays a dispersion of lives and the life characteristics of the group must be described statistically.[24] When analyzing mass property categories, it is important that

[21] *Id*. at 57.

[22] *Id*. at 56.

[23] Wolf *supra* n. 15, at 74-75.

[24] *Id*. at 74.

each group contains homogenous units of plant that are used in the same general manner throughout the plant and operated under the same general conditions.[25]

The "average life" and "equal life" grouping procedures are the two most common. In the average life procedure, a constant annual accrual rate based on the average life of all property in the group is applied to the surviving property. While property having shorter lives than the group average will not be fully depreciated, and likewise, property having longer lives than the group average will be over-depreciated, the ultimate result is that the group will be fully depreciated by the time of the final retirement.[26] Thus, the average life procedure treats each unit as though its life is equal to the average life of the group. In contrast, the equal life procedure treats each unit in the group as though its life was known.[27] Under the equal life procedure the property is divided into subgroups that each has a common life.[28]

3. Application Techniques

The third factor of a depreciation system is the "technique" for applying the depreciation rate. There are two commonly used techniques: "whole life" and "remaining life." The whole life technique applies the depreciation rate on the estimated average service life of a group, while the remaining life technique seeks to recover undepreciated costs over the remaining life of the plant.[29]

In choosing the application technique, consideration should be given to the proper level of the accumulated depreciation account. Depreciation accrual rates are calculated using estimates of service life and salvage. Periodically these estimates must be revised due to changing

[25] NARUC *supra* n. 18, at 61-62.

[26] *See* Wolf *supr*a n. 15, at 74-75.

[27] *Id*. at 75.

[28] *Id*.

[29] NARUC *supra* n. 18, at 63-64.

conditions, which cause the accumulated depreciation account to be higher or lower than necessary. Unless some corrective action is taken, the annual accruals will not equal the original cost of the plant at the time of final retirement.[30] Analysts can calculate the level of imbalance in the accumulated depreciation account by determining the "calculated accumulated depreciation," (a.k.a. "theoretical reserve" and referred to in these appendices as "CAD"). The CAD is the calculated balance that would be in the accumulated depreciation account at a point in time using *current* depreciation parameters.[31] An imbalance exists when the actual accumulated depreciation account does not equal the CAD. The choice of application technique will affect how the imbalance is dealt with.

Use of the whole life technique requires that an adjustment be made to accumulated depreciation after calculation of the CAD. The adjustment can be made in a lump sum or over a period of time. With use of the remaining life technique, however, adjustments to accumulated depreciation are amortized over the remaining life of the property and are automatically included in the annual accrual.[32] This is one reason that the remaining life technique is popular among practitioners and regulators. The basic formula for the remaining life technique is as follows:[33]

---

[30] Wolf *supra* n. 15, at 83.

[31] NARUC *supra* n. 18, at 325.

[32] NARUC *supra* n. 18, at 65 ("The desirability of using the remaining life technique is that any necessary adjustments of [accumulated depreciation] . . . are accrued automatically over the remaining life of the property. Once commenced, adjustments to the depreciation reserve, outside of those inherent in the remaining life rate would require regulatory approval.").

[33] *Id*. at 64.

Equation 8:
Remaining Life Accrual

$$Annual\ Accrual = \frac{Gross\ Plant - Accumulated\ Depreciation - Net\ Salvage}{Average\ Remaining\ Life}$$

The remaining life accrual formula is similar to the basic straight-line accrual formula above with two notable exceptions. First, the numerator has an additional factor in the remaining life formula: the accumulated depreciation. Second, the denominator is "average remaining life" instead of "average life." Essentially, the future accrual of plant (gross plant less accumulated depreciation) is allocated over the remaining life of plant. Thus, the adjustment to accumulated depreciation is "automatic" in the sense that it is built into the remaining life calculation.[34]

4. Analysis Model

The fourth parameter of a depreciation system, the "model," relates to the way of viewing the life and salvage characteristics of the vintage groups that have been combined to form a continuous property group for depreciation purposes.[35] A continuous property group is created when vintage groups are combined to form a common group. Over time, the characteristics of the property may change, but the continuous property group will continue. The two analysis models used among practitioners, the "broad group" and the "vintage group," are two ways of viewing the life and salvage characteristics of the vintage groups that have been combined to from a continuous property group.

The broad group model views the continuous property group as a collection of vintage groups that each has the same life and salvage characteristics. Thus, a single survivor curve and a

[34] Wolf *supra* n. 15, at 178.

[35] *See* Wolf *supra* n. 15, at 139 (I added the term "model" to distinguish this fourth depreciation system parameter from the other three parameters).

single salvage schedule are chosen to describe all the vintages in the continuous property group. In contrast, the vintage group model views the continuous property group as a collection of vintage groups that may have different life and salvage characteristics. Typically, there is not a significant difference between vintage group and broad group results unless vintages within the applicable property group experienced dramatically different retirement levels than anticipated in the overall estimated life for the group. For this reason, many analysts utilize the broad group procedure because it is more efficient.

APPENDIX D:

IOWA CURVES

Early work in the analysis of the service life of industrial property was based on models that described the life characteristics of human populations.[36] This explains why the word "mortality" is often used in the context of depreciation analysis. In fact, a group of property installed during the same accounting period is analogous to a group of humans born during the same calendar year. Each period the group will incur a certain fraction of deaths / retirements until there are no survivors. Describing this pattern of mortality is part of actuarial analysis and is regularly used by insurance companies to determine life insurance premiums. The pattern of mortality may be described by several mathematical functions, particularly the survivor curve and frequency curve. Each curve may be derived from the other so that if one curve is known, the other may be obtained. A survivor curve is a graph of the percent of units remaining in service expressed as a function of age.[37] A frequency curve is a graph of the frequency of retirements as a function of age. Several types of survivor and frequency curves are illustrated in the figures below.

1. Development

The survivor curves used by analysts today were developed over several decades from extensive analysis of utility and industrial property. In 1931 Edwin Kurtz and Robley Winfrey used extensive data from a range of 65 industrial property groups to create survivor curves representing the life characteristics of each group of property.[38] They generalized the 65 curves

[36] Wolf *supra* n. 15, at 276.

[37] *Id*. at 23.

[38] *Id*. at 34.

into 13 survivor curve types and published their results in *Bulletin 103: Life Characteristics of Physical Property*. The 13 type curves were designed to be used as valuable aids in forecasting probable future service lives of industrial property. Over the next few years, Winfrey continued gathering additional data, particularly from public utility property, and expanded the examined property groups from 65 to 176.[39] This resulted in 5 additional survivor curve types for a total of 18 curves. In 1935, Winfrey published *Bulletin 125: Statistical Analysis of Industrial Property Retirements*. According to Winfrey, "[t]he 18 type curves are expected to represent quite well all survivor curves commonly encountered in utility and industrial practices."[40] These curves are known as the "Iowa curves" and are used extensively in depreciation analysis in order to obtain the average service lives of property groups. (Use of Iowa curves in actuarial analysis is further discussed in Exhibit DJG-23, Appendix E.)

In 1942, Winfrey published *Bulletin 155: Depreciation of Group Properties*. In Bulletin 155, Winfrey made some slight revisions to a few of the 18 curve types, and published the equations, tables of the percent surviving, and probable life of each curve at five-percent intervals.[41] Rather than using the original formulas, analysts typically rely on the published tables containing the percentages surviving. This is because absent knowledge of the integration technique applied to each age interval, it is not possible to recreate the exact original published table values. In the 1970s, John Russo collected data from over 2,000 property accounts reflecting

[40] Robley Winfrey, *Bulletin 125: Statistical Analyses of Industrial Property Retirements* 85, Vol. XXXIV, No. 23 (Iowa State College of Agriculture and Mechanic Arts 1935).

[41] Robley Winfrey, Bulletin 155: Depreciation of Group Properties 121-28, Vol XLI, No. 1 (The Iowa State College Bulletin 1942); see also Wolf supra n. 15, at 305-38 (publishing the percent surviving for each Iowa curve, including "O" type curve, at one percent intervals).

observations during the period 1965 – 1975 as part of his Ph.D. dissertation at Iowa State. Russo essentially repeated Winfrey's data collection, testing, and analysis methods used to develop the original Iowa curves, except that Russo studied industrial property in service several decades after Winfrey published the original Iowa curves. Russo drew three major conclusions from his research:[42]

1. No evidence was found to conclude that the Iowa curve set, as it stands, is not a valid system of standard curves;

2. No evidence was found to conclude that new curve shapes could be produced at this time that would add to the validity of the Iowa curve set; and

3. No evidence was found to suggest that the number of curves within the Iowa curve set should be reduced.

Prior to Russo's study, some had criticized the Iowa curves as being potentially obsolete because their development was rooted in the study of industrial property in existence during the early 1900s. Russo's research, however, negated this criticism by confirming that the Iowa curves represent a sufficiently wide range of life patterns, and that though technology will change over time, the underlying patterns of retirements remain constant and can be adequately described by the Iowa curves.[43]

Over the years, several more curve types have been added to Winfrey's 18 Iowa curves. In 1967, Harold Cowles added four origin-modal curves. In addition, a square curve is sometimes used to depict retirements which are all planned to occur at a given age. Finally, analysts

[42] *See* Wolf *supra* n. 15, at 37.

[43] *Id*.

commonly rely on several "half curves" derived from the original Iowa curves. Thus, the term "Iowa curves" could be said to describe up to 31 standardized survivor curves.

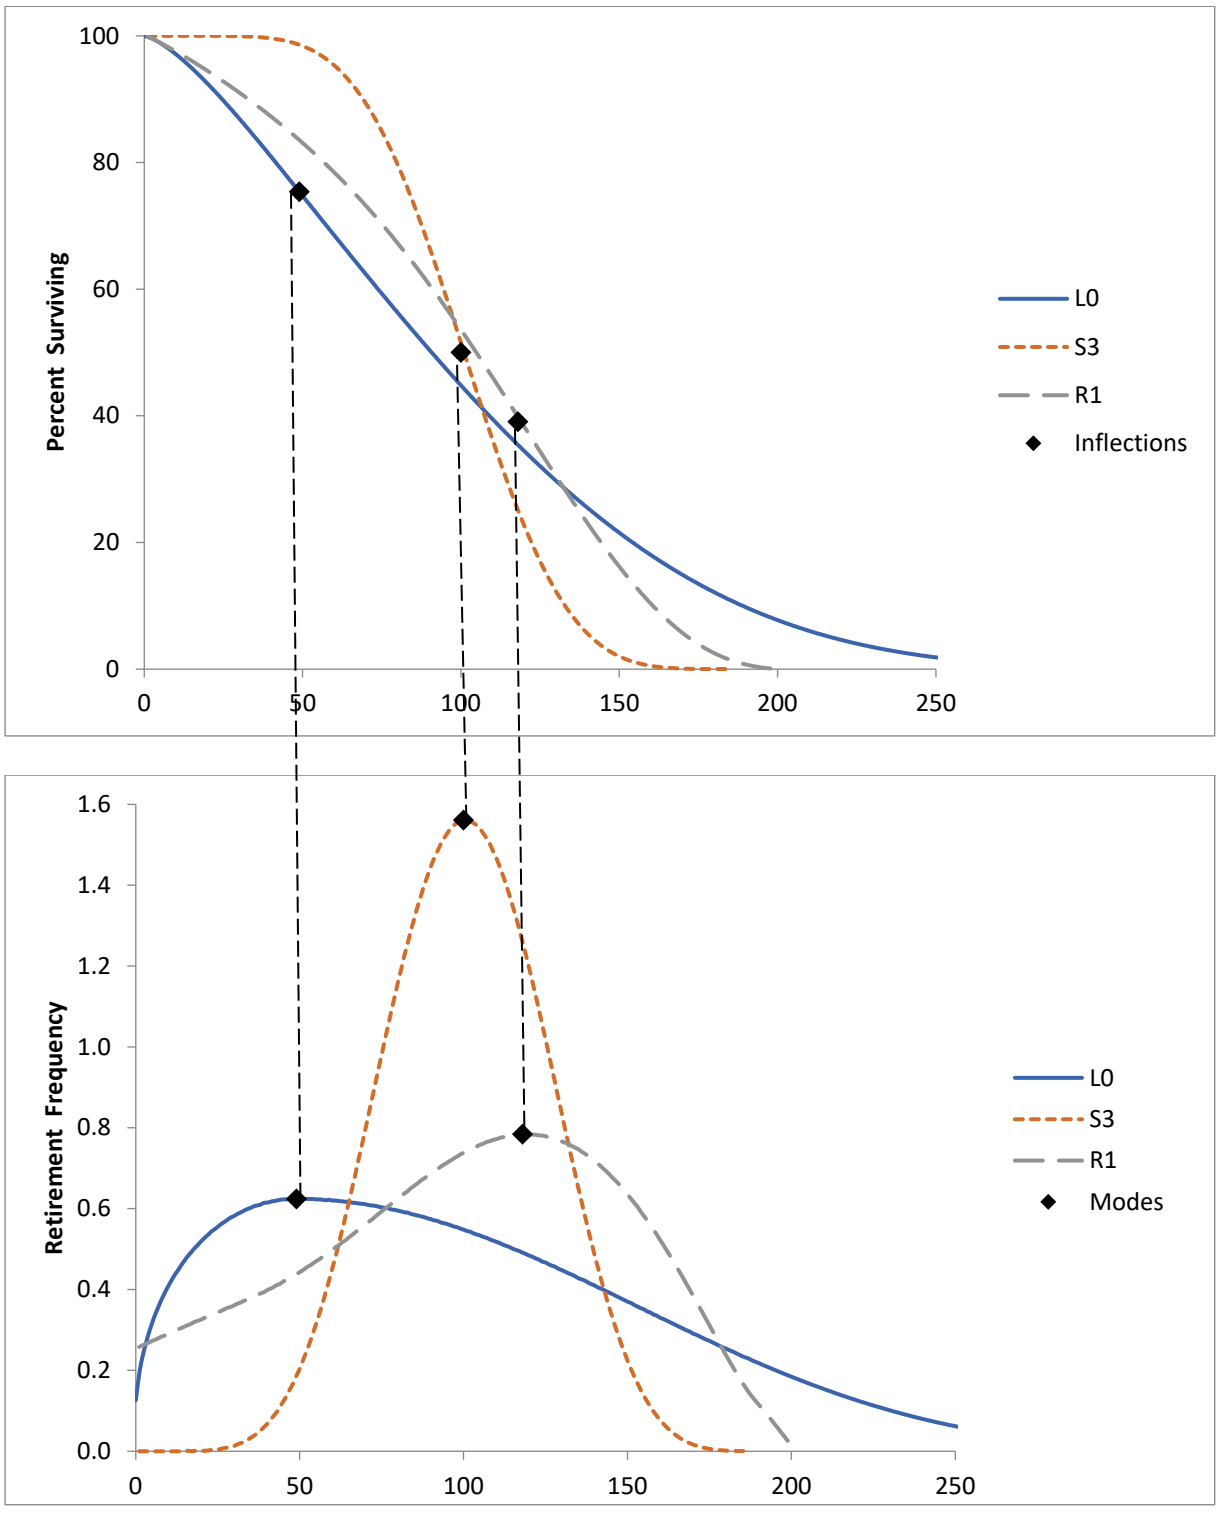
2. Classification

The Iowa curves are classified by three variables: modal location, average life, and variation of life. First, the mode is the percent life that results in the highest point of the frequency curve and the "inflection point" on the survivor curve. The modal age is the age at which the greatest rate of retirement occurs. As illustrated in the figure below, the modes appear at the steepest point of each survivor curve in the top graph, as well as the highest point of each corresponding frequency curve in the bottom graph.

The classification of the survivor curves was made according to whether the mode of the retirement frequency curves was to the left, to the right, or coincident with average service life. There are three modal "families" of curves: six left modal curves (L0, L1, L2, L3, L4, L5); five right modal curves (R1, R2, R3, R4, R5); and seven symmetrical curves (S0, S1, S2, S3, S4, S5, S6).[44] In the figure below, one curve from each family is shown: L0, S3 and R1, with average life at 100 on the x-axis. It is clear from the graphs that the modes for the L0 and R1 curves appear to the left and right of average life respectively, while the S3 mode is coincident with average life.

[44] In 1967, Harold A. Cowles added four origin-modal curves known as "O type" curves. There are also several "half" curves and a square curve, so the total amount of survivor curves commonly called "Iowa" curves is about 31 (see NARUC supra n. 119, at 68).

Figure 2:
Modal Age Illustration



The second Iowa curve classification variable is average life. The Iowa curves were designed using a single parameter of age expressed as a percent of average life instead of actual age. This was necessary in order for the curves to be of practical value. As Winfrey notes:

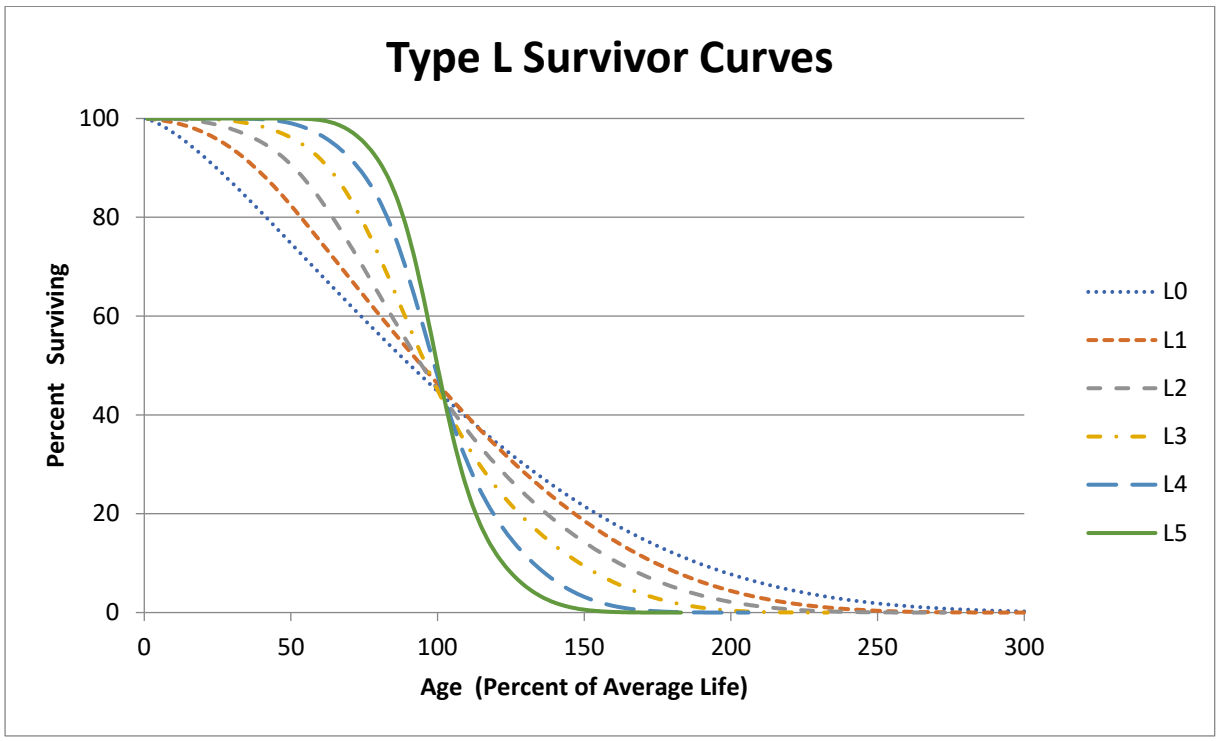
> Since the location of a particular survivor on a graph is affected by both its span in years and the shape of the curve, it is difficult to classify a group of curves unless one of these variables can be controlled. This is easily done by expressing the age in percent of average life."[45]

Because age is expressed in terms of percent of average life, any particular Iowa curve type can be modified to forecast property groups with various average lives.

The third variable, variation of life, is represented by the numbers next to each letter. A lower number (e.g., L1) indicates a relatively low mode, large variation, and large maximum life; a higher number (e.g., L5) indicates a relatively high mode, small variation, and small maximum life. All three classification variables – modal location, average life, and variation of life — are used to describe each Iowa curve. For example, a 13-L1 Iowa curve describes a group of property with a 13-year average life, with the greatest number of retirements occurring before (or to the left of) the average life, and a relatively low mode. The graphs below show these 18 survivor curves, organized by modal family.

[45] Winfrey *supra* n. 40, at 60.

Figure 3:
Type L Survivor and Frequency Curves



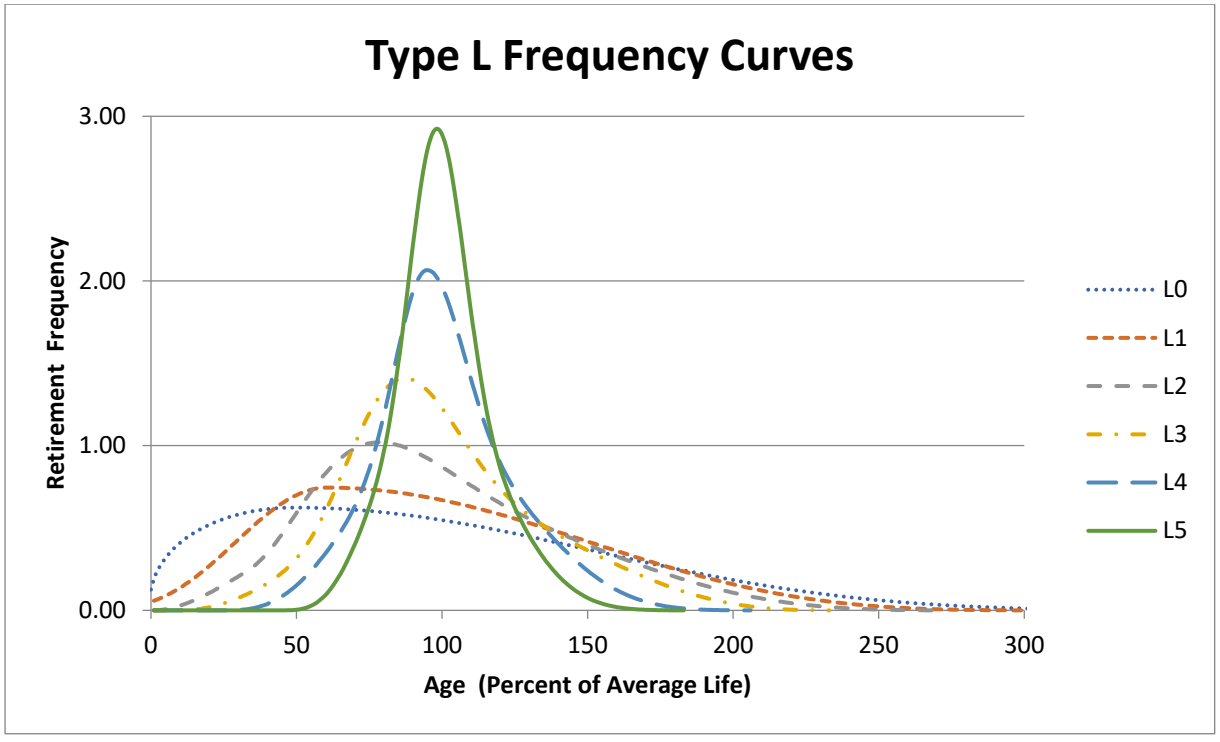


Figure 4:
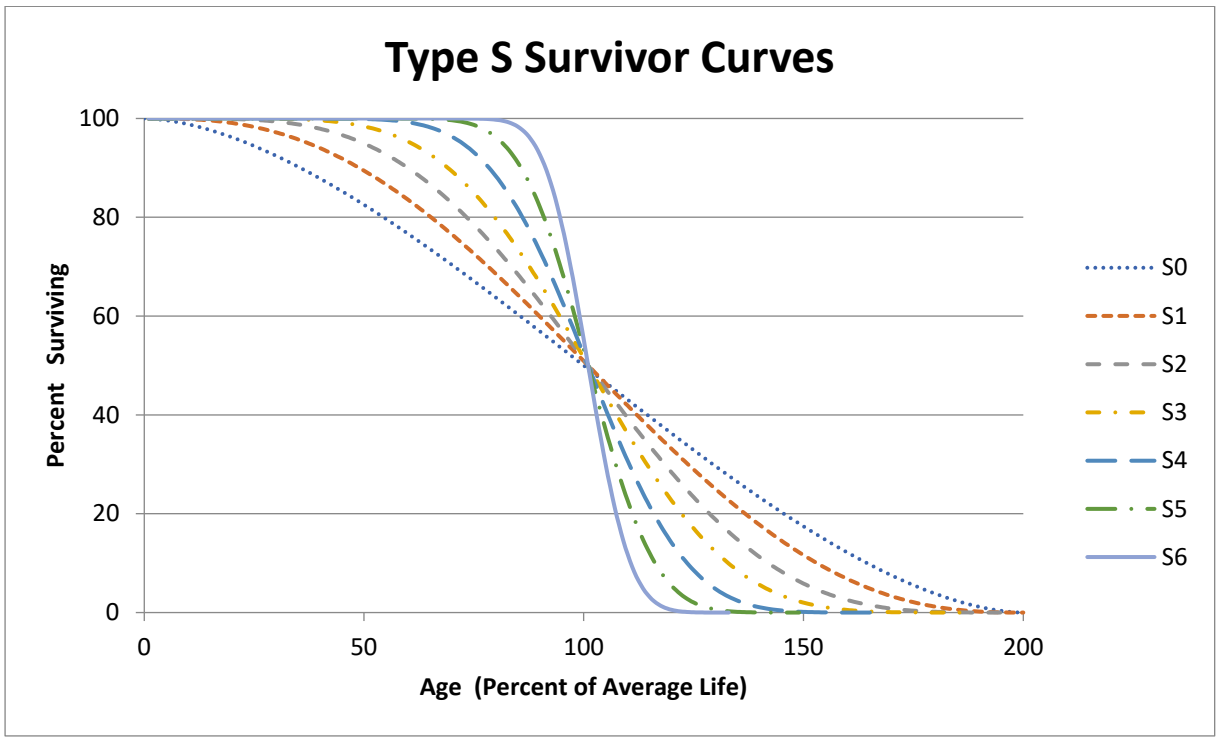
Type S Survivor and Frequency Curves



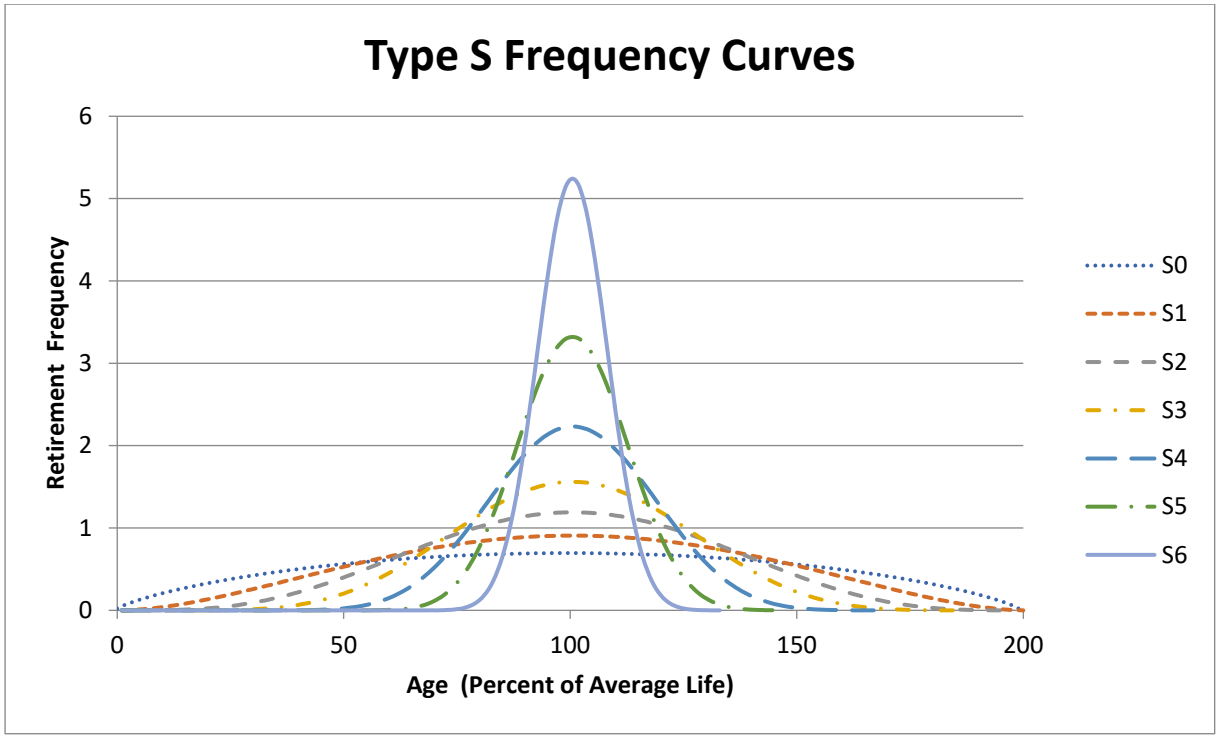


Figure 5:
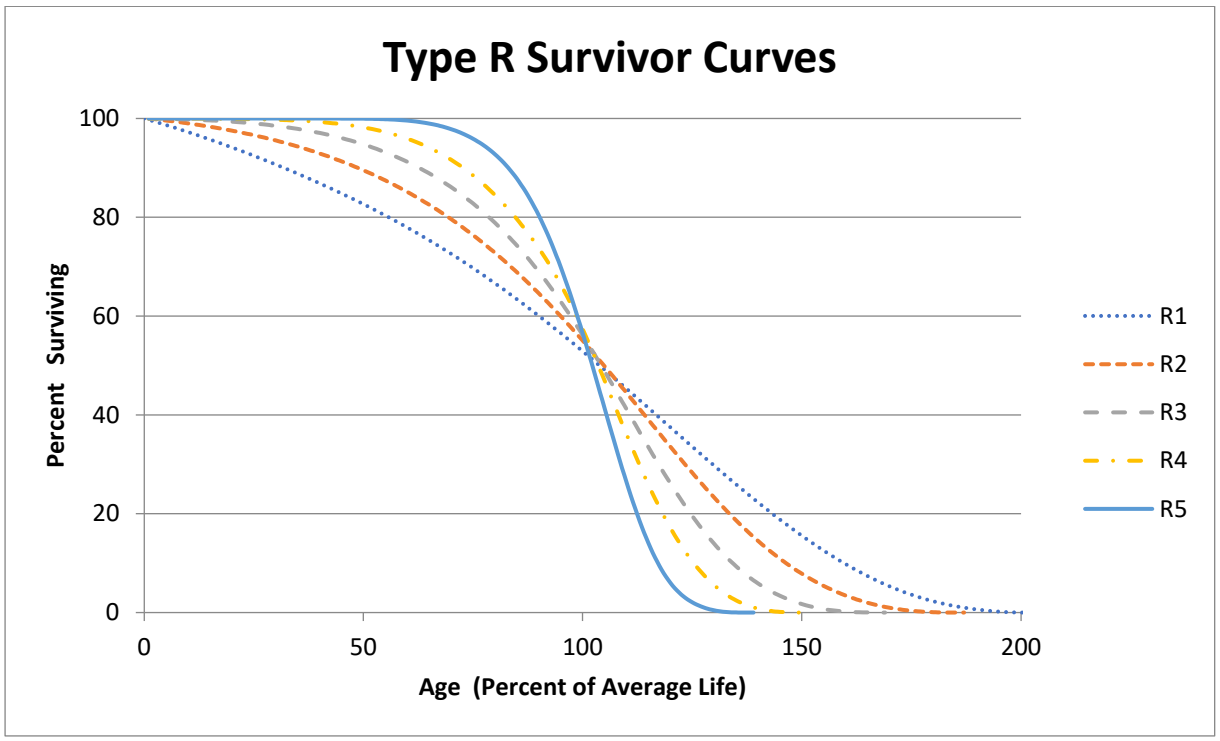
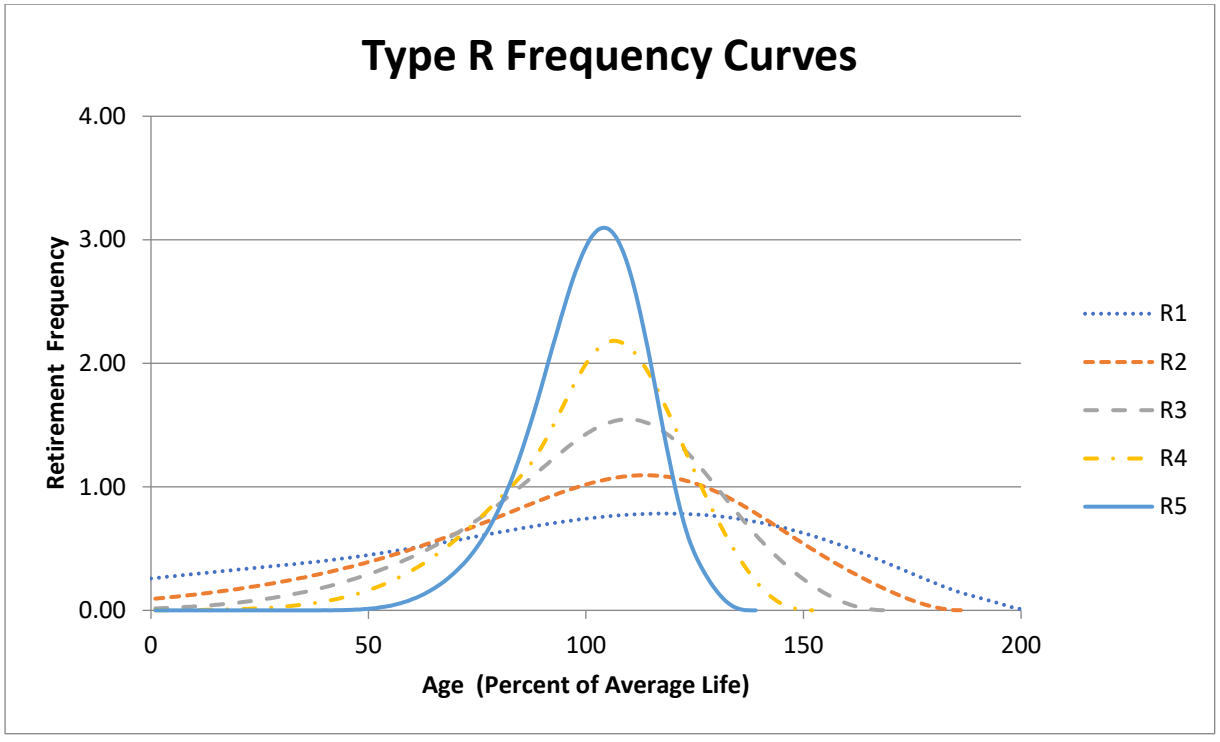
Type R Survivor and Frequency Curves





As shown in the graphs above, the modes for the L family frequency curves occur to the left of average life (100% on the x-axis), while the S family modes occur at the average, and the R family modes occur after the average.

3. Types of Lives

Several other important statistical analyses and types of lives may be derived from an Iowa curve. These include: 1) average life; 2) realized life; 3) remaining life; and 4) probable life. The figure below illustrates these concepts. It shows the frequency curve, survivor curve, and probable life curve. Age M_x on the x-axis represents the modal age, while age AL_x represents the average age. Thus, this figure illustrates an "L type" Iowa curve since the mode occurs before the average.[46]

First, average life is the area under the survivor curve from age zero to maximum life. Because the survivor curve is measured in percent, the area under the curve must be divided by 100% to convert it from percent-years to years. The formula for average life is as follows:[47]

Equation 9:
Average Life

$$Average\ Life\ = \frac{Area\ Under\ Survivor\ Curve\ from\ Age\ 0\ to\ Max\ Life}{100\%}$$

Thus, average life may not be determined without a complete survivor curve. Many property groups being analyzed will not have experienced full retirement. This results in a "stub" survivor

[46] From age zero to age M_x on the survivor curve, it could be said that the percent surviving from this property group is decreasing at an increasing rate. Conversely, from point M_x to maximum on the survivor curve, the percent surviving is decreasing at a decreasing rate.

[47] *See* NARUC *supra* n. 18, at 71.

curve. Iowa curves are used to extend stub curves to maximum life in order for the average life calculation to be made (see Exhibit DJG-23, Appendix E).

Realized life is similar to average life, except that realized life is the average years of service experienced to date from the vintage's original installations.[48] As shown in the figure below, realized life is the area under the survivor curve from zero to age RL_X. Likewise, unrealized life is the area under the survivor curve from age RL_X to maximum life. Thus, it could be said that average life equals realized life plus unrealized life.

Average remaining life represents the future years of service expected from the surviving property.[49] Remaining life is sometimes referred to as "average remaining life" and "life expectancy." To calculate average remaining life at age x, the area under the estimated future potion of the survivor curve is divided by the percent surviving at age x (denoted S_X). Thus, the average remaining life formula is:

Equation 10:
Average Remaining Life

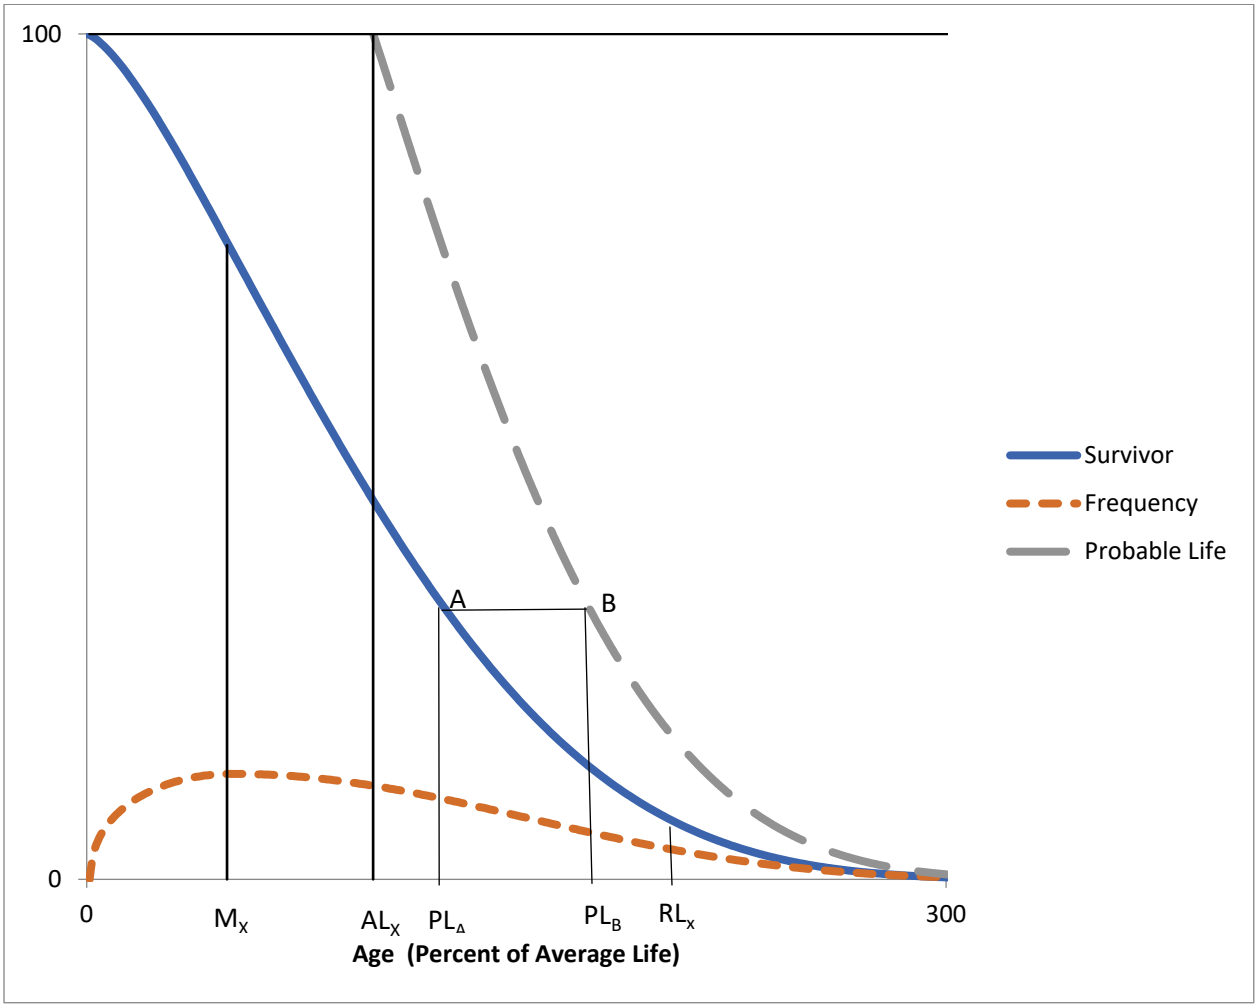
$$Average\ Remaining\ Life\ = \frac{Area\ Under\ Survivor\ Curve\ from\ Age\ x\ to\ Max\ Life}{S_X}$$

It is necessary to determine average remaining life in order to calculate the annual accrual under the remaining life technique.

[48] *Id*. at 73.

[49] *Id*. at 74.

Figure 6:
Iowa Curve Derivations



Finally, the probable life may also be determined from the Iowa curve. The probable life of a property group is the total life expectancy of the property surviving at any age and is equal to the remaining life plus the current age.[50] The probable life is also illustrated in this figure. The probable life at age PL_A is the age at point PL_B. Thus, to read the probable life at age PL_A, see the corresponding point on the survivor curve above at point "A," then horizontally to point "B" on

[50] Wolf *supra* n. 15, at 28.

the probable life curve, and back down to the age corresponding to point "B." It is no coincidence that the vertical line from AL_X connects at the top of the probable life curve. This is because at age zero, probable life equals average life.

APPENDIX E:

ACTUARIAL ANALYSIS

Actuarial science is a discipline that applies various statistical methods to assess risk probabilities and other related functions. Actuaries often study human mortality. The results from historical mortality data are used to predict how long similar groups of people who are alive will live today. Insurance companies rely of actuarial analysis in determining premiums for life insurance policies.

The study of human mortality is analogous to estimating service lives of industrial property groups. While some humans die solely from chance, most deaths are related to age; that is, death rates generally increase as age increases. Similarly, physical plant is also subject to forces of retirement. These forces include physical, functional, and contingent factors, as shown in the table below.[51]

Figure 7:
Forces of Retirement

Physical Factors	Functional Factors	Contingent Factors
Wear and tear Decay or deterioration Action of the elements	Inadequacy Obsolescence Changes in technology Regulations Managerial discretion	Casualties or disasters Extraordinary obsolescence

While actuaries study historical mortality data in order to predict how long a group of people will live, depreciation analysts must look at a utility's historical data in order to estimate the average lives of property groups. A utility's historical data is often contained in the Continuing Property Records ("CPR"). Generally, a CPR should contain 1) an inventory of property record

[51] NARUC *supra* n. 18, at 14-15.

units; 2) the association of costs with such units; and 3) the dates of installation and removal of plant. Since actuarial analysis includes the examination of historical data to forecast future retirements, the historical data used in the analysis should not contain events that are anomalous or unlikely to recur.[52] Historical data is used in the retirement rate actuarial method, which is discussed further below.

The Retirement Rate Method

There are several systematic actuarial methods that use historical data in order to calculate observed survivor curves for property groups. Of these methods, the retirement rate method is superior, and is widely employed by depreciation analysts.[53] The retirement rate method is ultimately used to develop an observed survivor curve, which can be fitted with an Iowa curve discussed in Exhibit DJG-23, Appendix D in order to forecast average life. The observed survivor curve is calculated by using an observed life table ("OLT"). The figures below illustrate how the OLT is developed. First, historical property data are organized in a matrix format, with placement years on the left forming rows, and experience years on the top forming columns. The placement year (a.k.a. "vintage year" or "installation year") is the year of placement of a group of property. The experience year (a.k.a. "activity year") refers to the accounting data for a particular calendar year. The two matrices below use aged data — that is, data for which the dates of placements, retirements, transfers, and other transactions are known. Without aged data, the retirement rate actuarial method may not be employed. The first matrix is the exposure matrix, which shows the

[52] *Id*. at 112-13.

[53] Anson Marston, Robley Winfrey & Jean C. Hempstead, *Engineering Valuation and Depreciation* 154 (2nd ed., McGraw-Hill Book Company, Inc. 1953).

exposures at the beginning of each year.[54] An exposure is simply the depreciable property subject to retirement during a period. The second matrix is the retirement matrix, which shows the annual retirements during each year. Each matrix covers placement years 2003–2015, and experience years 2008-2015. In the exposure matrix, the number in the 2009 experience column and the 2003 placement row is $192,000. This means at the beginning of 2012, there was $192,000 still exposed to retirement from the vintage group placed in 2003. Likewise, in the retirement matrix, $19,000 of the dollars invested in 2003 was retired during 2012.

Figure 8:
Exposure Matrix

	Experience Years									
	Exposures at January 1 of Each Year (Dollars in 000's)									
Placement Years	2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	**192**	173	152	131	131	11.5 - 12.5
2004	267	252	236	220	202	**184**	165	145	297	10.5 - 11.5
2005	304	291	277	263	248	232	**216**	198	536	9.5 - 10.5
2006	345	334	322	310	298	284	270	**255**	**847**	8.5 - 9.5
2007	367	357	347	335	324	312	299	286	1,201	7.5 - 8.5
2008	375	366	357	347	336	325	314	302	1,581	6.5 - 7.5
2009		377	366	356	346	336	327	319	1,986	5.5 - 6.5
2010			381	369	358	347	336	327	2,404	4.5 - 5.5
2011				386	372	359	346	334	2,559	3.5 - 4.5
2012					395	380	366	352	2,722	2.5 - 3.5
2013						401	385	370	2,866	1.5 - 2.5
2014							410	393	2,998	0.5 - 1.5
2015								416	3,141	0.0 - 0.5
Total	1919	2222	2514	2796	3070	3333	3586	3827	23,268	

[54] Technically, the last numbers in each column are "gross additions" rather than exposures. Gross additions do not include adjustments and transfers applicable to plant placed in a previous year. Once retirements, adjustments, and transfers are factored in, the balance at the beginning of the next account period is called an "exposure" rather than an addition.

Figure 9:
Retirement Matrix

Placement Years	Experience Years: Retirments During the Year (Dollars in 000's) 2008	2009	2010	2011	2012	2013	2014	2015	Total During Age Interval	Age Interval
2003	16	17	18	19	**19**	20	21	23	23	11.5 - 12.5
2004	15	16	17	17	18	**19**	20	21	43	10.5 - 11.5
2005	13	14	14	15	16	17	**17**	18	59	9.5 - 10.5
2006	11	12	12	13	13	14	15	**15**	**71**	8.5 - 9.5
2007	10	11	11	12	12	13	13	14	82	7.5 - 8.5
2008	9	9	10	10	11	11	12	13	91	6.5 - 7.5
2009		11	10	10	9	9	9	8	95	5.5 - 6.5
2010			12	11	11	10	10	9	100	4.5 - 5.5
2011				14	13	13	12	11	93	3.5 - 4.5
2012					15	14	14	13	91	2.5 - 3.5
2013						16	15	14	93	1.5 - 2.5
2014							17	16	100	0.5 - 1.5
2015								18	112	0.0 - 0.5
Total	74	89	104	121	139	157	175	194	1,052	

These matrices help visualize how exposure and retirement data are calculated for each age interval. An age interval is typically one year. A common convention is to assume that any unit installed during the year is installed in the middle of the calendar year (i.e., July 1st). This convention is called the "half-year convention" and effectively assumes that all units are installed uniformly during the year.[55] Adoption of the half-year convention leads to age intervals of 0-0.5 years, 0.5-1.5 years, etc., as shown in the matrices.

The purpose of the matrices is to calculate the totals for each age interval, which are shown in the second column from the right in each matrix. This column is calculated by adding each number from the corresponding age interval in the matrix. For example, in the exposure matrix, the total amount of exposures at the beginning of the 8.5-9.5 age interval is $847,000. This number was calculated by adding the numbers shown on the "stairs" to the left (192+184+216+255=847).

[55] Wolf *supra* n. 15, at 22.

The same calculation is applied to each number in the column. The amounts retired during the year in the retirements matrix affect the exposures at the beginning of each year in the exposures matrix. For example, the amount exposed to retirement in 2008 from the 2003 vintage is $261,000. The amount retired during 2008 from the 2003 vintage is $16,000. Thus, the amount exposed to retirement in 2009 from the 2003 vintage is $245,000 ($261,000 - $16,000). The company's property records may contain other transactions which affect the property, including sales, transfers, and adjusting entries. Although these transactions are not shown in the matrices above, they would nonetheless affect the amount exposed to retirement at the beginning of each year.

The totaled amounts for each age interval in both matrices are used to form the exposure and retirement columns in the OLT, as shown in the chart below. This chart also shows the retirement ratio and the survivor ratio for each age interval. The retirement ratio for an age interval is the ratio of retirements during the interval to the property exposed to retirement at the beginning of the interval. The retirement ratio represents the probability that the property surviving at the beginning of an age interval will be retired during the interval. The survivor ratio is simply the complement to the retirement ratio (1 – retirement ratio). The survivor ratio represents the probability that the property surviving at the beginning of an age interval will survive to the next age interval.

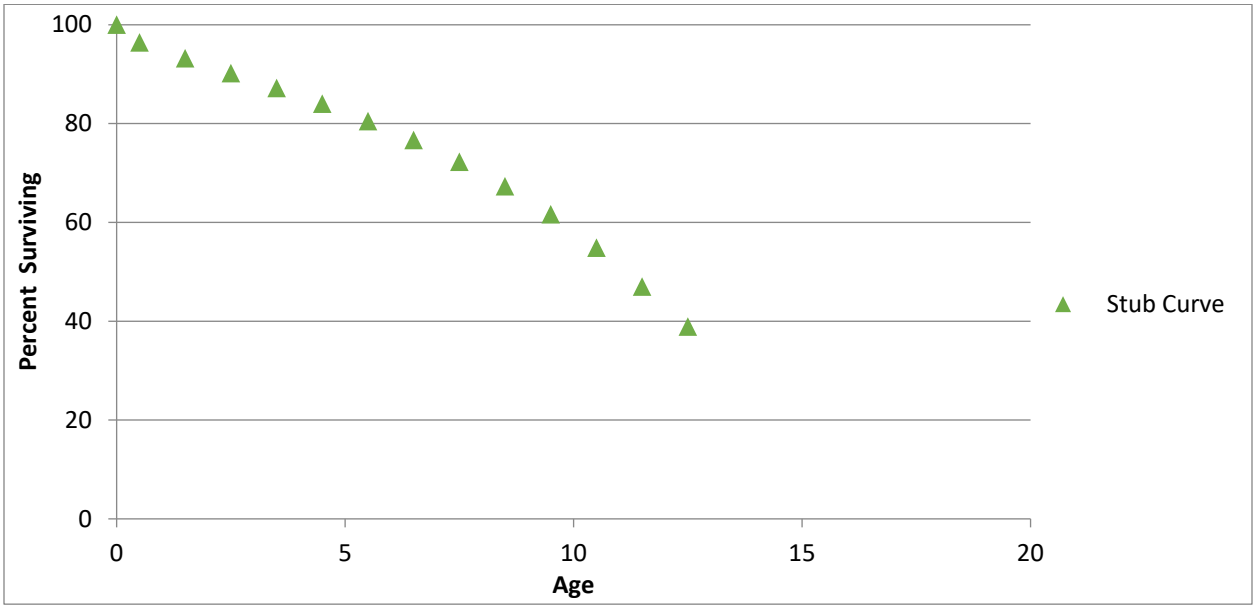
Figure 10:
Observed Life Table

Age at Start of Interval	Exposures at Start of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Start of Age Interval
A	B	C	D = C / B	E = 1 - D	F
0.0	3,141	112	0.036	0.964	**100.00**
0.5	2,998	100	0.033	0.967	**96.43**
1.5	2,866	93	0.032	0.968	**93.21**
2.5	2,722	91	0.033	0.967	**90.19**
3.5	2,559	93	0.037	0.963	**87.19**
4.5	2,404	100	0.042	0.958	**84.01**
5.5	1,986	95	0.048	0.952	**80.50**
6.5	1,581	91	0.058	0.942	**76.67**
7.5	1,201	82	0.068	0.932	**72.26**
8.5	847	71	0.084	0.916	**67.31**
9.5	536	59	0.110	0.890	**61.63**
10.5	297	43	0.143	0.857	**54.87**
11.5	131	23	0.172	0.828	**47.01**
					38.91
Total	23,268	1,052			

Column F on the right shows the percentages surviving at the beginning of each age interval. This column starts at 100% surviving. Each consecutive number below is calculated by multiplying the percent surviving from the previous age interval by the corresponding survivor ratio for that age interval. For example, the percent surviving at the start of age interval 1.5 is 93.21%, which was calculated by multiplying the percent surviving for age interval 0.5 (96.43%) by the survivor ratio for age interval 0.5 (0.967).

The percentages surviving in Column F are the numbers that are used to form the original survivor curve. This particular curve starts at 100% surviving and ends at 38.91% surviving. An observed survivor curve such as this that does not reach zero percent surviving is called a "stub" curve. The figure below illustrates the stub survivor curve derived from the OLT table above.

Figure 11:
Original "Stub" Survivor Curve



The matrices used to develop the basic OLT and stub survivor curve provide a basic illustration of the retirement rate method in that only a few placement and experience years were used. In reality, analysts may have several decades of aged property data to analyze. In that case, it may be useful to use a technique called "banding" in order to identify trends in the data.

Banding

The forces of retirement and characteristics of industrial property are constantly changing. A depreciation analyst may examine the magnitude of these changes. Analysts often use a technique called "banding" to assist with this process. Banding refers to the merging of several years of data into a single data set for further analysis, and it is a common technique associated with the retirement rate method.[56] There are three primary benefits of using bands in depreciation analysis:

[56] NARUC *supra* n. 18, at 113.

1. Increasing the sample size. In statistical analyses, the larger the sample size in relation to the body of total data, the greater the reliability of the result;
2. Smooth the observed data. Generally, the data obtained from a single activity or vintage year will not produce an observed life table that can be easily fit; and
3. Identify trends. By looking at successive bands, the analyst may identify broad trends in the data that may be useful in projecting the future life characteristics of the property.[57]

Two common types of banding methods are the "placement band" method and the "experience band" method." A placement band, as the name implies, isolates selected placement years for analysis. The figure below illustrates the same exposure matrix shown above, except that only the placement years 2005-2008 are considered in calculating the total exposures at the beginning of each age interval.

[57] *Id*.

Figure 12:
Placement Bands

Placement Years	Experience Years: Exposures at January 1 of Each Year (Dollars in 000's) 2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	192	173	152	131		11.5 - 12.5
2004	267	252	236	220	202	184	165	145		10.5 - 11.5
2005	304	291	277	263	248	232	216	198	198	9.5 - 10.5
2006	345	334	322	310	298	284	270	255	471	8.5 - 9.5
2007	367	357	347	335	324	312	299	286	788	7.5 - 8.5
2008	375	366	357	347	336	325	314	302	1,133	6.5 - 7.5
2009		377	366	356	346	336	327	319	1,186	5.5 - 6.5
2010			381	369	358	347	336	327	1,237	4.5 - 5.5
2011				386	372	359	346	334	1,285	3.5 - 4.5
2012					395	380	366	352	1,331	2.5 - 3.5
2013						401	385	370	1,059	1.5 - 2.5
2014							410	393	733	0.5 - 1.5
2015								416	375	0.0 - 0.5
Total	1919	2222	2514	2796	3070	3333	3586	3827	9,796	

The shaded cells within the placement band equal the total exposures at the beginning of age interval 4.5–5.5 ($1,237). The same placement band would be used for the retirement matrix covering the same placement years of 2005 – 2008. This of course would result in a different OLT and original stub survivor curve than those that were calculated above without the restriction of a placement band.

Analysts often use placement bands for comparing the survivor characteristics of properties with different physical characteristics.[58] Placement bands allow analysts to isolate the effects of changes in technology and materials that occur in successive generations of plant. For example, if in 2005 an electric utility began placing transmission poles with a special chemical treatment that extended the service lives of the poles, an analyst could use placement bands to isolate and analyze the effect of that change in the property group's physical characteristics. While placement

[58] Wolf *supra* n. 15, at 182.

bands are very useful in depreciation analysis, they also possess an intrinsic dilemma. A fundamental characteristic of placement bands is that they yield fairly complete survivor curves for older vintages. However, with newer vintages, which are arguably more valuable for forecasting, placement bands yield shorter survivor curves. Longer "stub" curves are considered more valuable for forecasting average life. Thus, an analyst must select a band width broad enough to provide confidence in the reliability of the resulting curve fit yet narrow enough so that an emerging trend may be observed.[59]

Analysts also use "experience bands." Experience bands show the composite retirement history for all vintages during a select set of activity years. The figure below shows the same data presented in the previous exposure matrices, except that the experience band from 2011 – 2013 is isolated, resulting in different interval totals.

[59] NARUC *supra* n. 18, at 114.

Figure 13:
Experience Bands

	Experience Years									
	Exposures at January 1 of Each Year (Dollars in 000's)									
Placement Years	2008	2009	2010	2011	2012	2013	2014	2015	Total at Start of Age Interval	Age Interval
2003	261	245	228	211	192	173	152	131		11.5 - 12.5
2004	267	252	236	220	202	184	165	145		10.5 - 11.5

Total	1919	2222	2514	2796	3070	3333	3586	3827	9,199	

The shaded cells within the experience band equal the total exposures at the beginning of age interval 4.5–5.5 ($1,237). The same experience band would be used for the retirement matrix covering the same experience years of 2011 – 2013. This of course would result in a different OLT and original stub survivor than if the band had not been used. Analysts often use experience bands to isolate and analyze the effects of an operating environment over time.[60] Likewise, the use of experience bands allows analysis of the effects of an unusual environmental event. For example, if an unusually severe ice storm occurred in 2013, destruction from that storm would affect an electric utility's line transformers of all ages. That is, each of the line transformers from each placement year would be affected, including those recently installed in 2012, as well as those installed in 2003. Using experience bands, an analyst could isolate or even eliminate the 2013 experience year from the analysis. In contrast, a placement band would not effectively isolate the

[60] *Id.*

ice storm's effect on life characteristics. Rather, the placement band would show an unusually large rate of retirement during 2013, making it more difficult to accurately fit the data with a smooth Iowa curve. Experience bands tend to yield the most complete stub curves for recent bands because they have the greatest number of vintages included. Longer stub curves are better for forecasting. The experience bands, however, may also result in more erratic retirement dispersion making the curve fitting process more difficult.

Depreciation analysts must use professional judgment in determining the types of bands to use and the band widths. In practice, analysts may use various combinations of placement and experience bands in order to increase the data sample size, identify trends and changes in life characteristics, and isolate unusual events. Regardless of which bands are used, observed survivor curves in depreciation analysis rarely reach zero percent. This is because, as seen in the OLT above, relatively newer vintage groups have not yet been fully retired at the time the property is studied. An analyst could confine the analysis to older, fully retired vintage groups in order to get complete survivor curves, but such analysis would ignore some the property currently in service and would arguably not provide an accurate description of life characteristics for current plant in service. Because a complete curve is necessary to calculate the average life of the property group, however, curve fitting techniques using Iowa curves or other standardized curves may be employed in order to complete the stub curve.

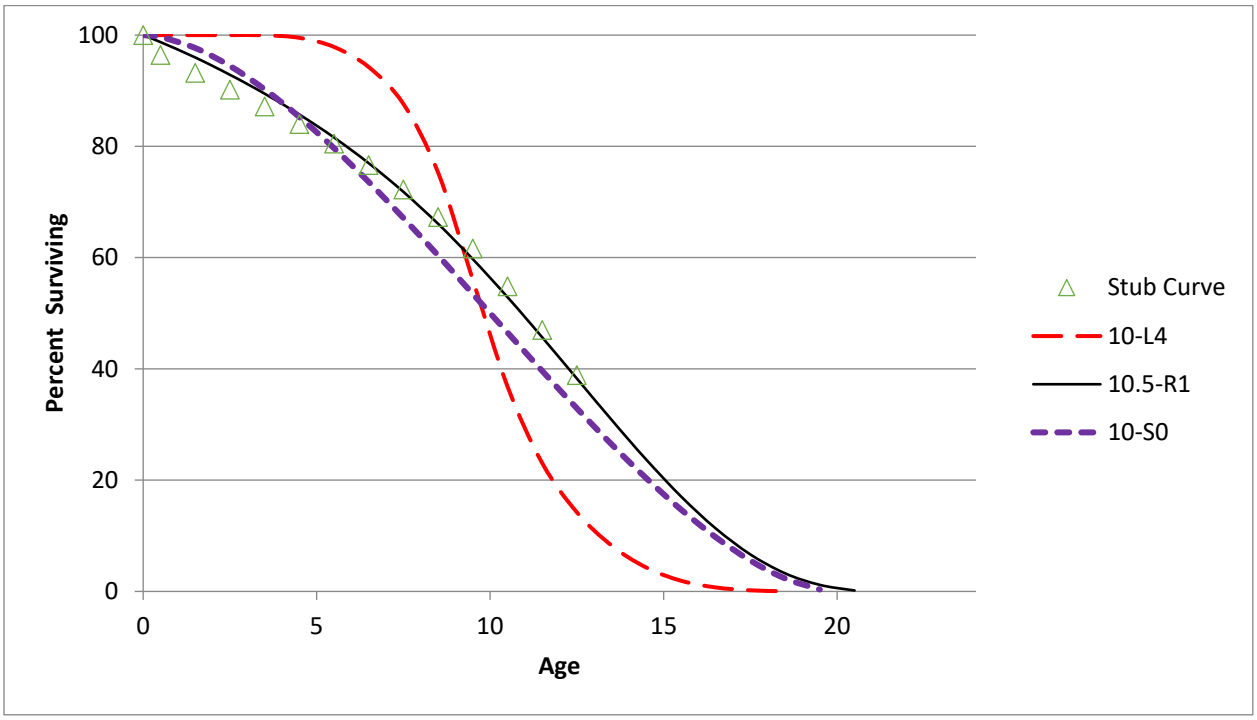
Curve Fitting

Depreciation analysts typically use the survivor curve rather than the frequency curve to fit the observed stub curves. The most commonly used generalized survivor curves used in the curve fitting process are the Iowa curves discussed above. As Wolf notes, if "the Iowa curves are

adopted as a model, an underlying assumption is that the process describing the retirement pattern is one of the 22 [or more] processes described by the Iowa curves."[61]

Curve fitting may be done through visual matching or mathematical matching. In visual curve fitting, the analyst visually examines the plotted data to make an initial judgment about the Iowa curves that may be a good fit. The figure below illustrates the stub survivor curve shown above. It also shows three different Iowa curves: the 10-L4, the 10.5-R1, and the 10-S0. Visually, it is clear that the 10.5-R1 curve is a better fit than the other two curves.

Figure 14:
Visual Curve Fitting



In mathematical fitting, the least squares method is used to calculate the best fit. This mathematical method would be excessively time consuming if done by hand. With the use of

[61] Wolf *supra* n. 15, at 46 (22 curves includes Winfrey's 18 original curves plus Cowles's four "O" type curves).

modern computer software however, mathematical fitting is an efficient and useful process. The typical logic for a computer program, as well as the software employed for the analysis in this testimony is as follows:

> First (an Iowa curve) curve is arbitrarily selected. . . . If the observed curve is a stub curve, . . . calculate the area under the curve and up to the age at final data point. Call this area the realized life. Then systematically vary the average life of the theoretical survivor curve and calculate its realized life at the age corresponding to the study date. This trial and error procedure ends when you find an average life such that the realized life of the theoretical curve equals the realized life of the observed curve. Call this the average life.
>
> Once the average life is found, calculate the difference between each percent surviving point on the observed survivor curve and the corresponding point on the Iowa curve. Square each difference and sum them. The sum of squares is used as a measure of goodness of fit for that particular Iowa type curve. This procedure is repeated for the remaining 21 Iowa type curves. The "best fit" is declared to be the type of curve that minimizes the sum of differences squared.[62]

Mathematical fitting requires less judgment from the analyst and is thus less subjective. Blind reliance on mathematical fitting, however, may lead to poor estimates. Thus, analysts should employ both mathematical and visual curve fitting in reaching their final estimates. This way, analysts may utilize the objective nature of mathematical fitting while still employing professional judgment. As Wolf notes: "The results of mathematical curve fitting serve as a guide for the analyst and speed the visual fitting process. But the results of the mathematical fitting should be checked visually and the final determination of the best fit be made by the analyst."[63]

In the graph above, visual fitting was sufficient to determine that the 10.5-R1 Iowa curve was a better fit than the 10-L4 and the 10-S0 curves. Using the sum of least squares method, mathematical fitting confirms the same result. In the chart below, the percentages surviving from

---

[62] Wolf *supra* n. 15, at 47.

[63] *Id*. at 48.

the OLT that formed the original stub curve are shown in the left column, while the corresponding percentages surviving for each age interval are shown for the three Iowa curves. The right portion of the chart shows the differences between the points on each Iowa curve and the stub curve. These differences are summed at the bottom. Curve 10.5-R1 is the best fit because the sum of the squared differences for this curve is less than the same sum of the other two curves. Curve 10-L4 is the worst fit, which was also confirmed visually.

Figure 15:
Mathematical Fitting

Age	Stub	Iowa Curves			Squared Differences		
Interval	Curve	10-L4	10-S0	10.5-R1	10-L4	10-S0	10.5-R1

EDUCATION

University of Oklahoma — Norman, OK
Master of Business Administration — 2014
Areas of Concentration: Finance, Energy

University of Oklahoma College of Law — Norman, OK
Juris Doctor — 2007
Member, American Indian Law Review

University of Oklahoma — Norman, OK
Bachelor of Business Administration — 2003
Major: Finance

PROFESSIONAL DESIGNATIONS

Society of Depreciation Professionals
Certified Depreciation Professional (CDP)

Society of Utility and Regulatory Financial Analysts
Certified Rate of Return Analyst (CRRA)

WORK EXPERIENCE

Resolve Utility Consulting PLLC — Oklahoma City, OK
Managing Member — 2016 – Present
Provide expert analysis and testimony specializing in depreciation and cost of capital issues for clients in utility regulatory proceedings.

Oklahoma Corporation Commission — Oklahoma City, OK
Public Utility Regulatory Analyst — 2012 – 2016
Assistant General Counsel — 2011 – 2012
Represented commission staff in utility regulatory proceedings and provided legal opinions to commissioners. Provided expert analysis and testimony in depreciation, cost of capital, incentive compensation, payroll and other issues.

Perebus Counsel, PLLC — Oklahoma City, OK
Managing Member — 2009 – 2011
Represented clients in the areas of family law, estate planning, debt negotiations, business organization, and utility regulation.

Moricoli & Schovanec, P.C. — Oklahoma City, OK
Associate Attorney — 2007 – 2009
Represented clients in the areas of contracts, oil and gas, business structures and estate administration.

TEACHING EXPERIENCE

University of Oklahoma — Norman, OK
Adjunct Instructor – "Conflict Resolution" — 2014 – 2021
Adjunct Instructor – "Ethics in Leadership"

Rose State College — Midwest City, OK
Adjunct Instructor – "Legal Research" — 2013 – 2015
Adjunct Instructor – "Oil & Gas Law"

PROFESSIONAL ASSOCIATIONS

Oklahoma Bar Association — 2007 – Present

Society of Depreciation Professionals — 2014 – Present
Board Member – President — 2017
Participate in management of operations, attend meetings, review performance, organize presentation agenda.

Society of Utility Regulatory Financial Analysts — 2014 – Present

Depreciation Rate Development - 2027

Account No.	Description	[1] Plant 11/30/2027	[2] Iowa Curve Type	[2] Iowa Curve AL	[3] Book Reserve	[4] Future Accruals	[5] Remaining Life	[6] Total Accrual	[7] Total Rate

[1], [3] From Company depreciation study

[2] Average life and Iowa curve shape developed through actuarial analysis and professional judgment

[4] = [1] - [3]

[5] Composite remaining life based on Iowa cuve in [2]; see remaining life exhibit for detailed calculations

[6] = [4] / [5]; (some unadjusted figures may be hard coded to match Company proposal)

[7] = [6] / [1]; (some unadjusted figures may hard coded to match Company proposal)

Sum of Squared Differences for Entire OLT Curve				[8]	0.7020	0.1503
SSD for Truncated OLT Curve				[9]	0.4280	0.0813

[1] Age in years using half-year convention

[2] Dollars exposed to retirement at the beginning of each age interval

[3] Observed life table based on the Company's property records. These numbers form the original survivor curve.

Account 380 Curve Fitting

Age (Years)	**Exposures (Dollars)**	**Observed Life Table (OLT)**	**Company R2-55**	**OCA R2-62**	**Company SSD**	**OCA SSD**

[4] The Company's selected Iowa curve to be fitted to the OLT.

[5] My selected Iowa curve to be fitted to the OLT.

[6] = ([4] - [3])^2. This is the squared difference between each point on the Company's curve and the observed survivor curve.

[7] = ([5] - [3])^2. This is the squared difference between each point on my curve and the observed survivor curve.

[8] = Sum of squared differences. The smallest SSD represents the best mathematical fit.
