REBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

July 16, 2026

I. Introduction

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 3 on June 18, 2026, on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony addresses the direct testimony of D.C. Patel, who testified on behalf of the Bureau of Investigation and Enforcement ("I&E"). Specifically, I address Mr. Patel's proposed return on equity ("ROE") for Peoples Natural Gas Company LLC ("Peoples" or the "Company").

Q. Please summarize Mr. Patel's estimated cost of equity and authorized ROE proposal for the Company.

A. Mr. Patel proposes an authorized ROE of 10.2% for the Company. This recommendation is based on several model results, including (1) a Discounted Cash Flow ("DCF") Model result of 11.33%, (2) the average of two CAPM results equating to 9.57%, and (3) a national average of authorized ROEs for gas utilities of 9.69%.[1]

[1] I&E Statement No. 2, p. 7.

Q. How does Mr. Patel's estimated cost of equity and proposed ROE for the Company compare with your estimated cost of equity and proposed ROE.

A. In my direct testimony, I presented evidence supporting my estimated cost of equity of 8.8% for the Company, which is also the authorized ROE I propose for the Company. My proposed ROE was based on the results of my CAPM and DCF Models. Thus, Mr. Patel's recommended ROE and estimated cost of equity for Peoples is significantly higher than mine.

II. DCF Model

Q. Please summarize the results of your application of the DCF Model and explain how it differs from Mr. Patel's results.

A. I conducted two variations of the DCF Model. In one variation, I consider long-term annual U.S. GDP growth projections as a cap on the long-term growth rate of each individual company in the proxy group. This "sustainable" DCF Model variation is based on the fundamental principal that no domestic company can achieve annual earnings and/or dividend growth at a rate that exceeds the growth rate of the aggregate economy in which it operates over the long-run (which is measured by U.S. GDP). In the second variation of my DCF Model, I incorporate the short-term dividend growth rate projections published by Value Line. I presented this "analyst growth" variation of my DCF Model because, despite its shortcomings, it is often presented in rate proceedings and considered by regulators. The result of my sustainable growth DCF Model indicates a cost of equity of 7.1% for the Company, and the result of my analyst-growth DCF Model indicates a cost of equity of 7.6%. The average result of my two DCF Models is 7.3%. This is significantly less than Mr. Patel's DCF result of 11.33%.

Q. Why is Mr. Patel's DCF result significantly higher than your result?

A. The primary reason Mr. Patel's DCF Model produced a much higher result than mine is his use of unsustainably high growth rates. Mr. Patel used a composite growth rate for the proxy group of 8.1%.[2] In contrast, the average growth rate I used for the proxy group was only 6.2% for my analyst-growth DCF Model. The average growth rate for my sustainable growth DCF Model is equal to a projection of long-term U.S. GDP growth, which is only 3.7%.[3]

Q. Do you believe Mr. Patel's growth rate estimate is reasonable?

A. No. An average growth rate in excess of 8.10% for the proxy group is unrealistic. This growth rate suggests that the proxy group, on average, can achieve dividend (and/or earnings) growth that is more than two times the rate of annual long-term GDP growth, every year in perpetuity. Mathematically, this assumption suggests that the annual earnings of the proxy group would eventually surpass total U.S. GDP, which is obviously impossible.

Q. Are the analyst growth rates used by Mr. Patel intended to be long-term growth rate estimates?

A. No. The published growth rates used by Mr. Patel are five-year growth rate projections. For example, Mr. Patel considers a five-year annual growth rate of 12.59% for Spire, which is projected by S&P. However, it is Mr. Patel, not S&P, who is suggesting to the Commission that Spire's earnings can grow at an annual rate of more than 12% each year, every year, forever. This is not just an unreasonable assumption; rather, it is impossible.

---

[2] I&E Statement No. 2, p. 31.

[3] *See* OCA Statement No. 3, Exhibit DJG-6.

For this reason, the Commission should reject the results of Mr. Patel's DCF Model as having any bearing on a reasonable cost of equity estimate or authorized ROE for the Company.

III. CAPM Analysis

Q. Please summarize the results of Mr. Patel's CAPM applications.

A. Mr. Patel conducted two variations of the CAPM. The first variation has a result of 10.28%, and the second variation has a result of 8.86%.[4] The main difference between his two CAPM variations is the equity risk premium ("ERP") input. In the higher of the two CAPM results, Mr. Patel calculated his own ERP estimate by relying on data starting in the Great Depression. As thoroughly discussed in my direct testimony, this type of historical approach is contrary to modern academic literature and most certainly overstates the ERP.[5] In Mr. Patel's second variation of the CAPM, he relies on a current ERP estimate published by Kroll.

Q. How do Mr. Patel's CAPM results compare with yours.

A. My application of the CAPM indicates a cost of equity of 8.8% for Peoples. This means that Mr. Patel's first variation of the CAPM produces significantly higher results than mine. However, Mr. Patel's second application of the CAPM produced a substantially similar result as my application of the CAPM. My results are summarized in the following figure.

---

[4] I&E Statement No. 2, p. 36.

[5] See Direct Testimony of David J. Garrett (OCA St. 3), at pp. 36-38.

Figure 1:
My CAPM Summary

ERP	x	Beta	+	Risk-free Rate	=	Cost of Equity
4.9%	x	0.77	+	5.0%	=	**8.8%**
↑ Average ERP reported by thousands of expert survey respondents, Kroll, and Damodaran – unbiased and objective sources		↑ Average beta for the proxy group published by Value Line. These are likely overestimated		↑ Based on recent Treasury bond yields, a widely used benchmark for the risk-free rate		↑ Company's authorized ROE should be based on this number

As demonstrated in this figure, a cost of equity estimate of 8.8% is reasonable for Peoples, if not overestimated due to the use of Value Line betas. The Commission should reject Mr. Patel's first variation of the CAPM, as it overstates Peoples' cost of equity. However, Mr. Patel's second variation of the CAPM resulting in 8.86% indicates a reasonable cost of equity for Peoples in my opinion.

Q. Does this conclude your rebuttal testimony?

A. Yes.

SURREBUTTAL TESTIMONY

OF

DAVID J. GARRETT

ON BEHALF OF

THE PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE

July 31, 2026

I. Introduction

Q. State your name and occupation.

A. My name is David J. Garrett. I am a consultant specializing in public utility regulation. I am the managing member of Resolve Utility Consulting PLLC.

Q. Have you previously filed testimony in this proceeding?

A. Yes. I filed direct testimony in OCA Statement 3 on June 18, 2026, and rebuttal testimony in OCA Statement 3R on July 16, 2026, both on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). A summary of my qualifications is included in my direct testimony.

Q. What is the purpose of your surrebuttal testimony?

A. My surrebuttal testimony responds to the rebuttal testimony of Peoples Natural Gas Company LLC ("Peoples" or the "Company") witness Jennifer Nelson regarding rate of return issues. I also address the rebuttal testimony of Peoples witness John Spanos regarding depreciation issues.

Q. Did the Company's rebuttal testimony cause you to change any of your positions or recommendations discussed in your direct testimony?

A. No. Additionally, to the extent I do not specifically address a statement made in the company's rebuttal testimony filed in this case, it should not constitute my agreement with such testimony.

Q. Are you sponsoring any exhibits to your surrebuttal testimony?

A. Yes, I am sponsoring one exhibit to my surrebuttal testimony, which is the response to interrogatory OCA-IX-021.

II. Rate of Return

Q. Please summarize your surrebuttal testimony directed to the rebuttal testimony of Ms. Nelson.

A. I will address Ms. Nelson's updated ROE results and management performance adder. I also address her response to my application of the Discounted Cash Flow ("DCF") Model, the Capital Asset Pricing Model ("CAPM"), and capital structure.

A. Updated ROE Results and Management Performance

Q. Please summarize Ms. Nelson's updated ROE analysis.

A. In her rebuttal testimony, Ms. Nelson presents an updated ROE analysis that is not materially different than the one presented in her direct testimony. Based on these results, she maintains her base ROE recommendation of 11.0% in addition to a management performance adder of 0.25%, for a final ROE request of 11.25%."[1]

Q. Does Mr. Nelson's updated model results and ROE recommendation reflect a reasonable cost of equity for Peoples?

A. No. Ms. Nelson's updated ROE models suffer from the same errors and unrealistic assumptions as those that were presented in her direct testimony. For the same reasons discussed in my direct testimony, the Commission should reject these model results as having any bearing on the cost of equity of a very low risk company like Peoples. In summary of the issues discussed in my direct testimony, Ms. Nelson's growth rates in her

[1] Rebuttal Testimony of Jennifer Nelson, p. 5, lines 12-18.

DCF Model assumes that utilities, and particularly Peoples,' can outpace the growth rate of the entire U.S. economy each year in perpetuity. In her CAPM, her assumption for the critical ERP input is significantly higher than the opinions of thousands of other experts and other unbiased sources.

Q. Should a management performance adder be applied to the Company's authorized ROE in this case.

A. No. The Supreme Court's standards governing the issue are clear that a utility's authorized return should be based on cost. The cost of capital can be closely estimated through an objective and intellectually honest application of financial models such as the CAPM and DCF Model. In this case, the Company has not met its burden of proof to justify a management performance adder, as discussed in the testimony of OCA witness Brendan Larkin-Connolly. Thus, regardless of the quality of management performance, the Commission should not increase the authorized ROE because of it. Authorizing an ROE based on cost will result in a fair and reasonable ROE that meets the Supreme Court's standards and promotes fair utility rates.

B. DCF Analysis

Q. Please summarize Ms. Nelson's criticisms of your DCF Model.

A. Ms. Nelson criticizes my use of analyst's dividend growth projections in my DCF Model.[2] She claims I should have considered earnings per share rather than dividends per share to assess Peoples' long-term growth rate in the DCF Model.[3]

Q. Do you agree with Ms. Nelson's criticisms regarding your use of projected dividend growth rates?

A. No. The DCF model directly considers dividends, rather than earnings. Dividends is the "cash flow" to investors that is being discounted in the model to ultimately estimate the cost of equity. This is an undisputed fact, and even Ms. Nelson acknowledges this in her rebuttal testimony.[4] However, Ms. Nelson also relied on earnings growth rates as part of his DCF Model. I do not believe it is unreasonable to consider earnings growth rates as a proxy for a dividend growth rate in the DCF Model, as long as long-term growth rate projections are generally sustainable. However, in this case, Ms. Nelson assumes perpetual growth rates that exceed long-term projected annual U.S. GDP growth rates. Since the proxy group is used as a proxy for Peoples, this means she is effectively assuming that Peoples' annual earnings growth rate will outpace U.S. GDP in perpetuity. It is not just an

[2] Rebuttal Testimony of Jennifer Nelson, p. 29.

[3] *Id*. at 32.

[4] *Id*. at p. 24, line 8.

unreasonable assumption; it is impossible. As a result, Ms. Nelson's DCF cost of equity estimate is overstated.

C. CAPM Analysis

Q. Please summarize Ms. Nelson's rebuttal testimony regarding the CAPM that you will address.

A. I will address Ms. Nelson's rebuttal testimony regarding the equity risk premium ("ERP"). The most critical term in the CAPM is the equity risk premium ("ERP"). I used several sources in developing my ERP estimate, including expert surveys and an ERP estimate published by Kroll, a respected international corporate finance consulting firm. Ms. Nelson simply concludes that Kroll's ERP estimate "would not meet the comparable return standard as required by the *Hope* and *Bluefield* decisions." because it would lead to CAPM results that "are well below recently authorized ROEs for natural gas utilities."[5] There are several obvious problems with Ms. Nelson's arguments. The cost of equity and authorized returns are entirely different concepts. An authorized return is simply whatever a regulator says it is, whether it is 5% or 100%. In contrast, *Hope* and *Bluefield* require the authorized ROE to be based on cost. The CAPM is a Nobel-Prize winning model that is specifically designed to estimate that cost. No input to the CAPM is dependent on the decisions of regulators.

[5] Rebuttal Testimony of Jennifer E. Nelson (Peoples Statement No. 15-R), p. 78, lines 8-12.

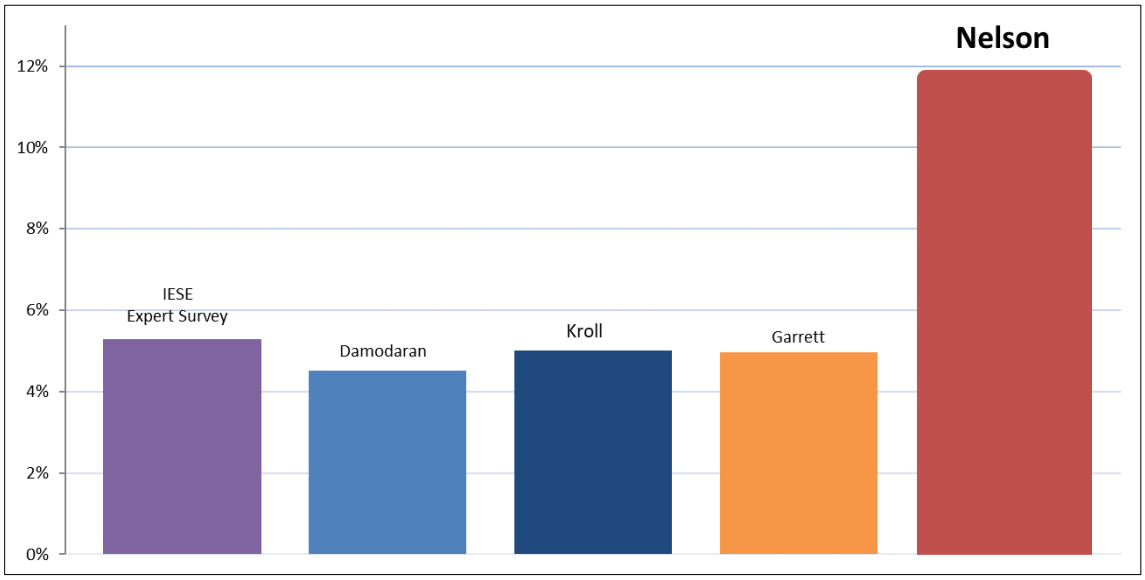
Q. Please briefly reiterate the sources you considered for the ERP estimate.

A. The ERP is an important figure for financial and market analysts in all industries, not just utility regulation. Thus, many analysts, managers, investors, and academics are constantly studying and are concerned with obtaining a reliable and accurate estimate of this important number, which can be used in a variety of financial analyses, including the CAPM. All else held constant, a higher ERP will result in a higher indicated cost of equity and apply upward pressure on the authorized ROE. I considered three reliable and objective sources to include in my overall ERP estimate, including the result of the IESE Business School survey of experts, the estimate published by Kroll, and the estimate published by one of the world's leading experts on the issue, Dr. Aswath Damodaran.[6] I also conducted and presented my own ERP estimate, the result of which is similar to those from the other sources. The figure below contrasts the ERP estimates from these sources with the ERP estimated by Ms. Nelson.[7]

[6] *See* Direct Testimony of David J. Garrett, OCA (OCA St. 3), at pp. 36-44.

[7] *See also* Exhibit DJG-10.

Figure 1:
Equity Risk Premium Comparison



When compared with other independent sources for the ERP (as well as my estimate), which do not have a wide variance, Ms. Nelson's ERP estimate is clearly not within the range of reasonableness. I would argue that investors are more likely to rely on these types of sources for the ERP than Ms. Nelson's personal ERP estimate.

D. Capital Structure

Q. Please summarize Ms. Nelson's criticisms of your capital structure adjustment.

A. Ms. Nelson spends much of her testimony on the issue of capital structure defending the operating and proposed capital structure of Peoples.[8] However, Peoples' actual operating capital structure is not at issue in this case.

Q. Please explain why the Company's operating actual capital structure is not an issue in this case.

A. Simply, Peoples' capital structure is not at issue because the Commission has no authority to dictate to the Company how it chooses a particular actual capital structure . Rather, the capital structure used for ratemaking purposes and setting a fair and reasonable rate of return is fully within the Commission's discretion. In other words, it is not possible to have a fair rate of return without a fair capital structure. My proposed ratemaking capital structure, which is substantially similar to witnesses Patel and Cicero, is based on the average capital structure of the proxy group. Each one of those companies is financially healthy and has an investment grade credit rating. A ratemaking capital structure with too much high-cost equity rather than low-cost debt does not promote the lowest reasonable cost of capital pursuant to *Hope* and *Bluefield*.

[8] Rebuttal Testimony of Jennifer E. Nelson, at pp. 16-38.

Q. Ms. Nelson argues that the utility holding companies in the proxy group should not be used to assess a fair capital structure. How do you respond?

A. Using the capital structures of the proxy group to assess a fair ratemaking capital structure is the only correct approach. Ms. Nelson and I both used the same proxy group to estimate the cost of equity for the Company. The indicated cost of equity for each proxy company is inextricably connected to the capital structures of those companies. Because the market evidence used to estimate the ROE is based on publicly traded parent holding companies, not their regulated operating subsidiaries. Investors purchase the stock of parent companies and evaluate the consolidated financial risk of those companies, including debt issued at the holding company level. That consolidated leverage is reflected in the market prices and expected returns used to estimate the Company's allowed ROE.

Ms. Nelson's erroneous approach uses parent-company data to estimate investors' required return on equity, while relying on the balance sheets of a *different group* of companies to justify a substantially higher equity ratio. That mismatch overstates the amount of costly equity that should be included in rates and is inconsistent with the financial assumptions embedded in Ms. Nelson's own proxy group.

III. Depreciation

Q. Please summarize Mr. Spanos's criticisms regarding your use of the ALG procedure.

A. Mr. Spanos maintains that the ELG procedure should be used in this case. He argues that the ELG procedure is more equitable not only for future customers, but also for current

customers.[9] Mr. Spanos disagrees with my characterization of the ELG method as being an "accelerated" form of cost recovery. Mr. Spanos also claims that the annual updates to its depreciation studies addresses concerns I raised about proper application of ELG depreciation rates.

Q. What is your response to Mr. Spanos's testimony on this issue.

A. In reading Mr. Spanos's testimony, one could get the impression that Mr. Spanos himself does not also use the ALG in most of the depreciation studies that he conducts. However, Mr. Spanos acknowledges that in jurisdictions other than Pennsylvania "he utilizes the ALG procedure more often due to the precedent in those states."[10] This fact alone should negate any of Mr. Spanos's statements or inferences throughout his rebuttal testimony that the ALG procedure might not be fair, accurate, or reasonable. In other words, his claim in this case that the ELG procedure is "more equitable"[11] would necessarily mean that he is using a *less* equitable procedure in his depreciation studies in other jurisdictions. This notion is incorrect. In reality, the ALG procedure that Mr. Spanos uses a majority of the time is very fair and reasonable (assuming reasonable estimates are made for other depreciation parameters). Furthermore, it is disingenuous for Mr. Spanos to suggest that his decisions are somehow affected by the financial well-being of customers. Mr. Spanos does not represent either present or future customers in this case, and he exclusively

[9] Rebuttal Testimony of John Spanos, p. 3, lines 12-13.

[10] Response to OCA-10-18(e).

[11] Rebuttal Testimony of John Spanos, p. 3, line 12.

represents utility companies as I understand. Also, in Mr. Spanos's rebuttal testimony, I did not see him rebut the fact that compared with the ALG procedure, the ELG procedure will result in higher depreciation rates for customers. What is clear, however, is that the ELG procedure will result in higher cash flows for Peoples relative to the ALG procedure.[12]

Q. What is the underlying premise of Mr. Spanos's narrative regarding the ALG vs ELG issue?

A. The underlying premise is that the ELG method is actually better for both current and future customers.

Q. Do you agree with this narrative?

A. No. This is a misleading narrative, at best. There are several reasons why. First, Mr. Spanos is simply testifying on what is in the best interest of the Company. There is nothing inappropriate about that, however, the Commission should easily reject the notion that his positions are in the best interest of ratepayers when the Company also has shareholder interests in mind as well. Second, accepting Mr. Spanos's narrative would mean that both he and utility commissions in the vast majority of jurisdictions around the country are promoting a depreciation methodology that is harmful to customers, though for some reasons he is being particularly charitable to the customers in Pennsylvania. Third, it is simply not reasonable to assume that the Company shares any vision of the future in which customers are paying lower rates, regardless of the depreciation methodology. Rather, the

[12] *See* Direct Testimony of David J. Garrett, OCA (OCA St. 3), at pp. 62-69.

Company is an entity that will operate exactly as it is incentivized to, which does not at all involve lower customer rates.

Mr. Spanos's narrative on this issue is something akin to a mortgage payment. That is, if someone pays off their entire mortgage today, they will certainly pay less total dollars over time than if they had made the minimum payment. However, there are several problems with this logic as it relates to utility customers. First, this argument ignores that, similar to companies and investors, utility customers also have a time value of money. Simply concluding that paying less total dollars over time is the correct approach ignores the fact that customers' current dollars are worth more than future dollars. If we were to follow Mr. Spanos's logic fully, then what would be the absolute best course of action for customers would be to completely pay off the undepreciated balance of plant today, and reduce rate base to zero. Pursuant to Mr. Spanos's logic, that is indeed the approach that would result in the least total amount of dollars paid by customers.

The approach proffered by Mr. Spanos is just as conceptually flawed as this hypothetical scenario for several reasons. First, as discussed above, it completely ignores the time value of money. Second, it results in current customers subsidizing future customers, as the ELG method does. Finally, and most importantly, the argument requires its audience to be completely naïve about basic concepts of organizational behavior and incentive structures. That is, even if customers completely paid off rate base today, it would obviously incentivize the Company to immediately start developing (creative) ways to increase rate base beyond that which is strictly necessary to provide safe and reliable

service. In other words, the zero rate base scenario will not stop investors from demanding the earnings and dividend *growth* they have become accustomed to. Certainly, they would enjoy the immediate cash flow received from customers paying down rate base, but as soon as the next quarter they would ask: "But what have you done for me lately?" Again, it is simply not possible for the Company, its representatives, and (pertinently) its ultimate shareholders to have a vision of the future in which customers are paying less. The fact of the matter is simple: the Company is proposing ELG because it is in *their* best interest to do so.

Ultimately, to the extent that anyone can argue that using the ALG method instead of the ELG method offers short term gain for long term pain, what is more accurate is to say that using the ELG method instead of the ALG method in fact provides both short term pain *and* long term pain as the rates put into effect at the conclusion of a base rate case generally never subsequently go down, but only subsequently go up. This hurts both current and future customers of the company.

Q. Did Mr. Spanos rebut the fact that current customers would pay more for the Company's assets relative to future customers under the ELG procedure?

A. No. This fact is proven mathematically in my testimony, and not disputed by Mr. Spanos.[13] Under the ELG procedure proposed by Mr. Spanos (in this jurisdiction), current customers would effectively be subsidizing future customers by paying a larger proportionate share

[13] *See* Exhibits DJG-17 through DJG-23.

of what is essentially the same asset base. This was demonstrated in an example presented in my direct testimony. In that example, there were two units being depreciated – one with an original cost of $4,000 and a 4-year life and the second with an original cost of $6,000 and an 8-year life. Thus, the average life of this group is 6.4 years. Under the ALG procedure, the depreciation rate is 15.625% per year (1/6.4 = 15.625%). Under the ELG procedure, however, there are higher rate and accrual amounts during the earlier years. In reality, Peoples has numerous units of property that are depreciated on a group basis in each account. Under the ELG procedure, customers rates (not just depreciation rates), would need to be adjusted every year in order for the ELG procedure to produce accurate depreciation rates. Since that is not practical, the vast majority of jurisdictions have adopted the ALG procedure.

Q. Using a Company account, in this case, please show how the ELG method defies basic understandings of cost allocation and recovery.

A. In this case, the account with the greatest amount of depreciation expense by far is Account 376 – Distribution Mains. Mr. Spanos proposed an average life of 72 years for this account, and I did not take issue with that estimate in this case. If the assets in this account will last 72 years, on average, then under a basic straight line depreciation formula those assets would simply be recovered over 72 years. However, after applying the ELG method, the period of time those dollars would actually be recovered over is only 43 years.[14] Which

[14] OCA-IX-003 – Attachment C, Gannett Fleming 2027 Depreciation Study for Peoples Natural Gas Company, p. 543 of 676 (Table 1).

means the cost recovery period is *nearly cut in half*. There is no better description of the ELG method using plain language than an *accelerated* depreciation method. To say that cutting a cost recovery in period to half of its undisputed service life is somehow better for current customers defies basic reasoning, ignores the time value of money, and disregards any fundamental understanding of organizational behavior. As discussed above, the ELG method is exclusively a profit maximizing tactic for the Company that has nothing to do with fairness.

Q. Do you agree with Mr. Spanos that Peoples' annual depreciation updates address your concerns about proper application of the ELG method?

A. No. In theory, annual updates to depreciation rates would make ELG depreciation rates more accurate in my opinion. However, even if depreciation studies are updated annually in Pennsylvania, it is my understanding that utility *rates* are not updated annually pursuant to any updates to a depreciation study. Thus, the unfair aspects of the ELG procedure that cause current customers to subsidize future customers are not alleviated by an annual update to a utility's depreciation study. That is, the accelerated depreciation rates that occur when rates are adopted under the ELG procedure would continue to burden customers until the utility's next rate proceeding when customer rates are actually changed.

Q. Do you have a brief response to Mr. Tufarolo's testimony regarding your proposed depreciation rates?

A. Yes. I his rebuttal testimony, Mr. Tufarolo states that he does not agree with my depreciation recommendation.[15] However, Mr. Tufarolo offers no independent technical or other analyses to support his opinion. For the same reasons I disagree with Mr. Spanos on depreciation issues, I would also disagree with Mr. Tufarolo.

Q. Does this conclude your surrebuttal testimony?

A. Yes.

[15] Peoples Statement No. 12-R, Rebuttal Testimony of Nick Tufarolo, at p. 2.

OCA Exhibit DG-3SR

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-IX-021

Witness: Spanos, John **Title:** President, Gannett Fleming Valuation and Rate Consultants, LLC

Question: Referring to the Direct Testimony of Mr. Spanos regarding the depreciation system used to develop the depreciation rates proposed in the depreciation studies:

a. Please confirm whether the ALG or ELG methods were used in developing the proposed depreciation rates.

b. If the ELG method was used, please explain whether using the ELG method results in higher depreciation rates relative to the ALG method in this case?

c. In Mr. Spanos's opinion, is it reasonable to use the ALG method?

d. Has Mr. Spanos proposed the ALG method in other jurisdictions?

e. Does Mr. Spanos use the ALG method more than the ELG method when conducting depreciation studies?

f. Please provide the remaining life calculations for each account in the depreciation studies using the ALG method only.

Answer: a. The proposed depreciation rates were developed utilizing both ALG and ELG procedures. ALG was used for vintages 1982 and prior and ELG was used for vintages 1983 and subsequent.

b. The ELG and ALG (otherwise identified as Average Service Life (ASL)) procedures produce the same overall expense over the life of all assets. The ELG procedure is the more accurate procedure for matching recovery of the assets to their utilization. Therefore, the ELG procedure will produce higher depreciation rates if the asset base is growing in the early ages.

c. Mr. Spanos has used the ELG and ALG procedure across the country for many utilities. ELG procedure is the more accurate procedure, but the ALG procedure is easier to understand. As stated in part a) if this response both ALG and ELG are being utilized.

d. Mr. Spanos has proposed the ALG and ELG procedures in other jurisdictions as both are appropriate procedures.

e. In Pennsylvania, Mr. Spanos uses the ELG procedure for almost every depreciation study he

and his colleagues perform. In other jurisdictions he utilizes the ALG procedure more often due to precedent in those states.

f. The remaining life calculations for each account using only the ALG procedure for all vintages has not been conducted as part of the depreciation studies for this case.

Colton Exhibits			88

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont MA 02478.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

A. I own the firm Fisher Sheehan & Colton, Public Finance and General Economics of Belmont, Massachusetts. In that capacity, I provide technical assistance to a variety of federal, state, and municipal agencies, consumer organizations, and public utilities on rate and customer service issues involving water/sewer, natural gas and electric utilities.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of the Pennsylvania Office of Consumer Advocate (OCA).

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND.

A. While I work primarily on low-income utility issues, my work has also incorporated an examination of how and why industries are subject to regulation. In research I did for Oak Ridge National Laboratory (ORNL), for example, I examined the underpinnings of a "duty to serve" in the electricity, health care, and insurance industries.[1] That research was carried forward in an article I co-authored and published in the *Journal of Public Health* regarding the lessons for the health industry from public utilities. The information was also reflected in my *Electricity Journal* article on lessons regarding "provider of last resort" for the utility industry derived from the insurance industry.[2] My book on the regulation of rural electric cooperatives (RECs) considered how and why RECs would be

[2] Roger D. Colton, *Provider of Last Resort: Lessons from the Insurance Industry*, 11 Electricity J. 77 (December 1998).

subject to public oversight, even if not regulated by a state utility commission. This work notes the need for regulatory constraints on the price-setting of public utilities, as monopolies, and the regulatory enforcement of public obligations of utilities as public service corporations, including, for purposes of this testimony, the obligation to provide reasonably adequate service at just and reasonable rates. My work on the recovery of investments in "excess capacity" in the electric industry involves considerations of the authority of state regulatory commissions to control the recovery of and on invested capital in the electric industry.[3]

Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A. After receiving my undergraduate degree in 1975 from Iowa State University, I received my law degree in 1981 from the University of Florida. I received my Master's Degree (Regulatory Economics) from the MacGregor School of Antioch University in 1993.

Q. HAVE YOU EVER PUBLISHED ON PUBLIC UTILITY REGULATORY ISSUES?

A. Yes. I have published three books and more than 80 articles in law and economics journals. I have published an equal number of technical reports for various clients on energy, water, telecommunications and other associated low-income utility issues. My most recent publication is a chapter in the book "Energy Justice: US and International Perspectives," published by Edward Elgar Publishing in London. My chapter was titled "The equities of efficiency: distributing usage reduction dollars." It offers an objective definition of "equity" based on legal and economic doctrine.

[3] Roger D. Colton, *Prudence, Planning and Principled Ratemaking*, 35 Hastings L. J. 721 (1984); *see also*, Roger D. Colton, *Excess Capacity: Who Gets the Charge from the Power Plant?*, 33 Hastings L. J 1133 (1983); Roger D. Colton, *Excess Capacity: A Case Study in Ratemaking Theory and Application*, 20 Tulsa L. J. 402 (1985) (reprinted VIII Public Utilities Anthology 739).

Q. HAVE YOU EVER TESTIFIED BEFORE THIS OR OTHER UTILITY COMMISSIONS?

A. I have testified before the Pennsylvania Public Utility Commission ("PUC" or "Commission") on numerous occasions regarding utility issues affecting low-income customers and customer service. I have also testified in regulatory proceedings in 43 states (in addition to Pennsylvania) and various Canadian provinces on a wide range of utility issues. A list of the jurisdictions in which I have testified is listed in OCA Exhibit RDC-1.

I have long testified about the regulatory connections, in law and economics, between inquiries into "affordability" and aspects of utility ratemaking not involving the structure and operation of universal service programs. That is the scope and purpose of my testimony in this case.

As I have noted in prior testimony to this Commission, the principles articulated in *Hope* and *Bluefield*, discussed in more detail below, are not simply directed to the interests of investors.[4] Rather, *Hope* and *Bluefield* clearly require a balancing of investor and ratepayer interests. My prior testimony has explained how it is not possible for the Pennsylvania Commission, or any commission, to balance the interests of investors and ratepayers unless they fully understand the interests of both investors and ratepayers.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR DIRECT TESTIMONY.

[4] *Federal Power Comm'n v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944); *Bluefield Water Works and Improvement Co. v. Public Serv. Comm'n of W.Va.*, 262 U.S. 679, 692-93 (1923).

A. My Direct Testimony presents a review of the Peoples Natural Gas ("Peoples" or "Company") rate increase request in the following parts:

- Part 1 examines the role of affordability in setting utility rates. "Affordability" issues are not limited to low-income payment difficulties. They extend to the residential customer population as a whole. I will examine the current and proposed rates of Peoples.

- Part 2 examines the effectiveness and efficiency of the Company's credit and collection activities. An examination of these activities is mandatory under Section 523 of the Public Utility Code;

- Part 3 examines the disparate racial impacts of the Company's nonpayment disconnections;

- Part 4 examines the need to develop and implement alternatives to the collection and retention of customer Social Security Numbers ("SSNs");

- Part 5 examines the reasonableness of certain modifications proposed to the Customer Assistance Program ("CAP") tariff, including changes to the CAP offset included in the Universal Service Program ("USP") Rider; and

- Part 6 examines the reasonableness of collecting certain new ancillary CAP expenditures through the USP Rider.

Summary of Recommendations

Q. PLEASE SUMMARIZE THE RECOMMENDATIONS YOU MAKE IN YOUR TESTIMONY BELOW.

A. Based on the data and discussion I present in my testimony below, I recommend the following with respect to the rate hike proposed by Peoples:

- That Peoples be directed to implement, as an adjustment pursuant to Section 523 of the Public Utility Code, a fifty-fifty sharing of the credit and collection expenses which Peoples most recently reported to the Commission's Bureau of Consumer Services.

- That Peoples be directed to conduct an independent root cause analysis to determine what is driving the disproportionate level of utility disconnections

within the Company's service territory. Once this root cause analysis is conducted, Peoples should commit to taking steps to address the cause with the commitment of reducing the disproportionate level of disconnections. The extent to which Peoples mitigates the disproportionate disconnection of service for nonpayment in zip codes with high penetrations of Black households should be reviewed in Peoples next base rate case.

- That Peoples be directed to develop and adopt, within 12-months after a final order in this proceeding, an alternative to the use of Social Security Numbers.

- That Peoples adopt the same process for establishing a base CAP participation as other Pennsylvania utilities have adopted. The base number should be set at the month-end participation as of the month of a Final Order in this proceeding.

- That the CAP offset be established in the same fashion it was established in the Peoples 2023 base rate case. Using that methodology, an offset of 8.1% is reasonable. The offset of 1.93% proposed by Company witness Scanlon should be rejected.

- That the specific universal service expenditures proposed by the Company should be approved, with the stipulation that those expenditures should be recovered through base rates rather than through the Universal Service Rider. The two specific expenditures addressed by this recommendation are: (1) Peoples proposal to hire a new staff person to facilitate the Company's compliance with the recent Commission rulemaking regarding the Low-Income Usage Reduction Program (LIURP); and (2) Peoples proposal to include the costs of studies to "identify zones of vulnerability" as well as miscellaneous communications costs.

- That Peoples proposal to modify its CAP rules to allow the Company to remove CAP customers for engaging in "recreational gas use" be denied.

- That Peoples proposal to reverse CAP benefits for participants who "obtain benefits" "through fraudulent means" and to rebill those reversed benefits to CAP participants should be denied.

Finally, while I agree with the Commission's "favoring" a "flat fee model based upon the Large Load Customer's peak demand as opposed to a volumetric charge," I recommend a somewhat different flat fee model because my recommendation is to allocate a portion of

universal service costs to *all* customer classes, and, while the Commission's "peak demand" methodology might easily apply to large load customers, it would not easily transfer to all customer classes. Nonetheless, I recommend incorporating the notion of allocating costs based on a "flat fee" basis into the allocation of CAP costs between customer classes. I recommend that the costs to be allocated among all customer classes by the total CAP costs (CAP Credits + Arrearage Forgiveness + Administration) reported by the Company to the Pennsylvania PUC in the most recently completed calendar year prior to the year in which the Company receives a final order in a base rate case. The interclass allocations should be based on each class's allocation of total distribution revenue requirement (excluding taxes) agreed to in a settlement of this case, or that is approved by a final PUC Order if the case is litigated.

Part 1. The Role of Affordability in Setting Rates for Peoples.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine what role assessing the affordability of Peoples' rates plays in reviewing the Company's proposed rate increase. I find that assessing the impact of the Company's rates on affordability is not confined to a review of impacts on low-income customers, nor is a review of the affordability of the Company's rates confined to a review of Universal Service Programs. Instead, a review of affordability is a fundamental step in assessing the extent to which, if at all, a utility's proposed rates are "just and reasonable." This review begins with an assessment of the affordability of Peoples' bills at existing rates and continues with a review of the impact of the Company's proposed rates on affordability.

Q. DO YOU BASE YOUR REVIEW OF THE AFFORDABILITY OF PEOPLES RATES ON ANY STATUTORY FOUNDATION?

A. Yes. The Pennsylvania Public Utility Code provides that "[e]very rate made, demanded, or received by any public utility, or by any two or more public utilities jointly, shall be just and reasonable, and in conformity with regulations or orders of the commission."[5] In Pennsylvania, the Commission has repeatedly held that one aspect of the "just and reasonable" standard is that rates are to be affordable.

In addition, the statute creating the Office of Consumer Advocate, on whose behalf I am testifying in this proceeding, explicitly provides that:

> In addition to any other authority conferred upon him (sic) by this act, the Consumer Advocate is authorized, and it *shall be his duty*, in carrying out his responsibilities under this act, to represent the interest of consumers as a party, or otherwise participate for the purpose of *representing an interest of consumers*, before the commission in any matter properly before the commission … . The Consumer Advocate may exercise discretion in determining the interests of consumers which will be advocated in any particular proceeding and in determining whether or not to participate in or initiate any particular proceeding and, in so determining, *shall consider* the public interest, the resources available and *the substantiality of the effect of the proceeding on the interest of consumers*.[6]

It would make no sense for the legislature to statutorily impose a duty ("shall be his duty") to represent the interests of consumers, and in so doing, impose the further statutory duty to consider ("shall consider") the "substantiality of the effect of the proceeding on the interest of consumers" if the exclusive authority of

[5] 66 Pa.C.S. § 1301.
[6] 71 P.S. § 309-4 (emphasis added).

the Commission is to "ensure that rates are just and reasonable based on the prudent costs of providing utility service."

Q. IS THERE ANY INDUSTRY RECOGNITION OF THE NEED TO CONSIDER AFFORDABILITY IN SETTING UTILITY RATES?

A. Yes. Affordability has increasingly become a major concern in setting the credit ratings of public utilities.[7] Citing the National Energy Assistance Directors Association ("NEADA") report that "about one in six Americans are behind on their bills," Moody's was quoted as noting that fuel prices and economic factors "raise residential customer affordability issues … ."[8] The Edison Electric Institute ("EEI") *also* publishes an annual "financial review," which includes an examination of credit agency ratings. In its review of the Fourth Quarter of 2024, EEI reported that at the start of 2025:

> S&P maintained a negative outlook for regulated utilities, which it revised from stable in February 2024. Moody's maintained a stable outlook for regulated utilities. Fitch Ratings published a neutral sector outlook for North American Utilities. The agencies cited rising levels of capital spending, *customer bill affordability*, and extreme weather activity due to climate change as key themes they are watching.[9]

Similarly, in its Annual Financial Review for 2023, EEI specifically stated: "S&P noted that effective management of regulatory risk will be key to maintaining the industry's credit quality going forward. This will require … management of customer bill

[7] *See e.g.*, *White Paper: Affordability is Emerging as a Defining Issue for the U.S. Investor-owned Electric Utility Industry*, S&P Global (March 11, 2025).
[8] Robert Walton, *Moody's adopts negative outlook for regulated utility sector, warns on gas prices, economy and cost recovery*, Utility Dive (Nov. 2022);"; *see also*, Shalini Mahajan, *Deteriorating Outlook for North American Utilities, Power and Gas in 2024*, Fitch Ratings (Dec. 2023) ("Affordability concerns for ratepayers continue to persist despite the pull back in natural gas prices and inflationary pressures.").
[9] *2024 Financial Review*, EEI at 26 (2025) (emphasis added).

impacts."[10] EEI also said that Fitch maintained its deteriorating outlook in the sector in part because "customer affordability concerns will persist despite reductions in natural gas prices and inflation."[11] While I obviously acknowledge that EEI is the industry association for electric utilities, the same observations expressed above would equally apply to a natural gas utility such as Peoples.

In light of not merely the propriety of considering affordability, but also of the need to consider affordability, in setting utility rates, I will review the affordability of Peoples rates from four different perspectives below: (1) from the perspective of Peoples' low-income customers; (2) from the perspective of Peoples' moderate-income customers; (3) from the perspective of Peoples' customer base as a whole; and (4) from the perspective of other financial challenges now facing Peoples residential customers.

Q. IS A CONSIDERATION OF AFFORDABILITY A FUNDAMENTAL ASPECT OF SETTING UTILITY RATES IN ANY OTHER FASHION?

A. Yes. A consideration of the affordability of the rates charged by a public utility is a critical aspect of establishing a utility's return on equity. The principles articulated in *Hope* and *Bluefield* are not simply directed to the interests of investors. Rather, *Hope* and *Bluefield* both explicitly require a balancing of investor and ratepayer interests. The U.S. Supreme Court decisions in *Hope*[12] and *Bluefield*[13] each state that "the fixing of 'just and reasonable' rates involves a balancing of the investor and the consumer interests." It is,

[10] *2023 Financial Review*, EEI at 22 (2024).
[11] *Id.* at 23.
[12] *Hope*, 320 U.S. 591.
[13] *Bluefield*, 262 U.S. 679.

however, not possible for the Commission to balance the interests of investors and ratepayers unless it fully understands the interests of both investors and ratepayers.

A. The Affordability of Peoples Rates to Low-Income Customers.

Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I examine the affordability of Peoples rates to low-income customers.[14] I measure the affordability of rates based on a household's Bill to Income Ratio. A Bill to Income Ratio is calculated by placing a household's energy bill in the numerator and placing the household's income in the denominator.

For purposes of this section of my testimony, I consider the affordability of Peoples bills to low-income households from two perspectives: (1) from the perspective of the First Quintile ("Q1") of income in the Peoples service territory;[15] and (2) from the perspective of absolute dollars of household income.[16] I examine data for all Peoples' zip codes for which Peoples reports having at least one (1) residential customer and for which the Census Bureau reports data.[17]

[14] As I observe above, this section of my testimony is independent of my review of the structure and operation of Peoples' Universal Service Programs. This review of the overall affordability of Peoples' rates to low-income customers does ***not*** serve as the foundation for any subsequent comments I make about Peoples' Universal Service Programs.

[15] The Census Bureau rank orders all households in a geographic area from lowest income to highest income. The Census Bureau then divides that rank ordering into five (5) equal parts, each part of which is called a "quintile." The "First Quintile" ("Q1") is that one-fifth of the population with the lowest income. The Fifth Quintile ("Q5") is that one-fifth of the population with the highest income. Average income by quintile is published annually by the Census Bureau in its American Community Survey ("ACS"), Table B19081.

[16] The ranges of income I use in this discussion are those ranges reported by the U.S. Census Bureau as published annually in the Census Bureau's American Community Survey ("ACS"), Table B19001.

[17] There may be geographic areas which are sufficiently small that the Census Bureau does not report data due to privacy concerns.

Q. PLEASE EXPLAIN WHAT YOU FIND WITH RESPECT TO THE Q1 INCOME IN THE PEOPLES SERVICE TERRITORY?

A. I consider the affordability of rates for low-income customers from two different perspectives. First, I examine the degree to which Peoples' bills for median usage in the most recent twelve months (April 2025 through March 2026) exceed an affordable bill. Second, I examine the degree to which Q1 incomes fall short of the income that would be required for a Peoples' bill (median usage, most recent twelve months). The results both at existing rates and at the rates proposed in this proceeding are set forth in the Table below.

Table 1 shows that even at existing rates, the extent to which customers with Q1 incomes face bills that exceed an affordable amount is significant. In 42 of the 402 Peoples' zip codes (shaded in yellow below), Q1 customers face bills at existing rates that exceed an affordable bill by $1,000 or more. In 233 *additional* zip codes (shaded in blue below), the amount by which Peoples' bills at existing rates exceed the affordable bill (at a Q1 income) falls between $500 and $1,000. Those are *not* the amounts of the total bills, but rather are the dollar amounts by which the total bills exceed the affordable amount.

Table 1. Excess Bill Over Affordable Bill at Q1 Income
(Existing Rates[18] and Proposed Rates[19])

Existing Rates, Median Usage		Proposed Rates, Median Usage	
Excess Bill Over Affordable Q1 Bill at Existing Rates	No. of Zip Codes	Excess Bill Over Affordable Bill at Proposed Rates	No. of Zip Codes
<$0	1	<$0	0
$0 - $100	101	$0 - $100	101
$100 - $200	5	$100 – $200	0

[18] Peoples' response to OCA-IV-46.
[19] Peoples' response to OCA-IV-47.

$200 - $300	1	$200 - $300	0
$300 - $400	5	$300 - $400	1
$400 - $500	14	$400 - $500	3
$500 - $600	25	$500 - $600	3
$600 - $700	28	$600 - $700	3
$700 - $800	63	$700 - $800	11
$800 - $900	76	$800 - $900	16
$900 - $1000	41	$900 - $1000	26
$1000 - $1100	30	$1000 - $1100	57
$1100 - $1200	11	$1100 - $1200	69
$1200 - $1300	1	$1200 - $1300	62
Grand Total	**402**	$1300 - $1400	32
		$1400 -$1500	16
		$1500 - $1600	2

The rates proposed by Peoples in this proceeding will exacerbate these affordability problems even more. At proposed rates, 238 of the 402 Peoples' zip codes (shaded in green) would have bills that exceed an affordable bill at proposed rates by $1,000 or more at the average Q1 income for each zip code.

Table 2 looks at fundamentally the same question of Q1 affordability, but from the perspective of incomes rather than bills. The Table shows the dollar amounts by which the Q1 income in Peoples' zip codes fall short of the incomes that would be needed for Peoples' bills to be affordable (at both existing and proposed rates). For example, the Table shows that, at existing rates, in 183 of Peoples 402 zip codes (shaded in yellow), Q1 households would need an additional annual income of $25,000 or more in order to afford Peoples' existing rates. The Table shows that at proposed rates, in 212 of Peoples

402 zip codes (shaded in green), Q1 households would need an additional income of $35,000 or more in order to afford the resulting bill.

Table 2. Q1 Income Deficit Below Income Needed to Afford Peoples Bill
(Existing Rates[20] and Proposed Rates[21])

Existing Rates, Median Usage		Proposed Rates, Median Usage	
Excess Bill Over Affordable Q1 Bill at Existing Rates	No. of Zip Codes	Excess Bill Over Affordable Bill at Proposed Rates	No. of Zip Codes
<$0	1	<$0	0
$0 - $4,999	102	$0 - $4,999	101
$5,000 - $9,999	5	$5,000 - $9,999	0
$10,000 - $14,999	12	$10,000 - $14,999	1
$15,000 - $19,999	32	$15,000 - $19,999	6
$20,000 - $24,999	67	$20,000 - $24,999	7
$25,000 - $29,999	100	$25,000 - $29,999	23
$30,000 - $34,999	62	$30,000 - $34,999	52
$35,000 - $39,999	20	$35,000 - $39,999	100
$40,000 - $44,999	1	$40,000 - $44,999	77
		$45,000 - $49,999	33
		$50,000 - $54,999	2

Q. HAVE YOU EXAMINED THE AFFORDABILITY OF PEOPLES BILLS TO LOW-INCOME CUSTOMERS IN ANY OTHER WAY?

A. Yes. In addition to my examination of affordability in light of relative incomes (Q1 incomes), I have also examined the affordability of Peoples rates in light of absolute dollars of income. I calculate the natural gas burden at different income ranges which are at or below $50,000. I select $50,000 because this is roughly equal to 200% of the Federal Poverty Level ("FPL") for a household with three persons in 2026 (200% FPL

[20] Peoples' response to OCA-IV-46.
[21] Peoples' response to OCA-IV-47.

for a three-person household in 2026 would be $54,640). I use the income ranges reported by the Census Bureau (with the range closest to 200% of FPL being $45,000 to $49,999). In the Peoples' zip codes, 34.6% of all households live with income at or below $49,999. The burdens at Peoples' existing and proposed rates are set forth in the Table below. The Table establishes that Peoples bills represent more than 26% of income for households with income less than $10,000 at existing rates, and nearly 33% of income at the rates proposed in this proceeding. Even with income as high as $45,000 to $49,999, Peoples' bill burdens range from 2.8% (existing rates) to 3.5% of income (proposed rates).

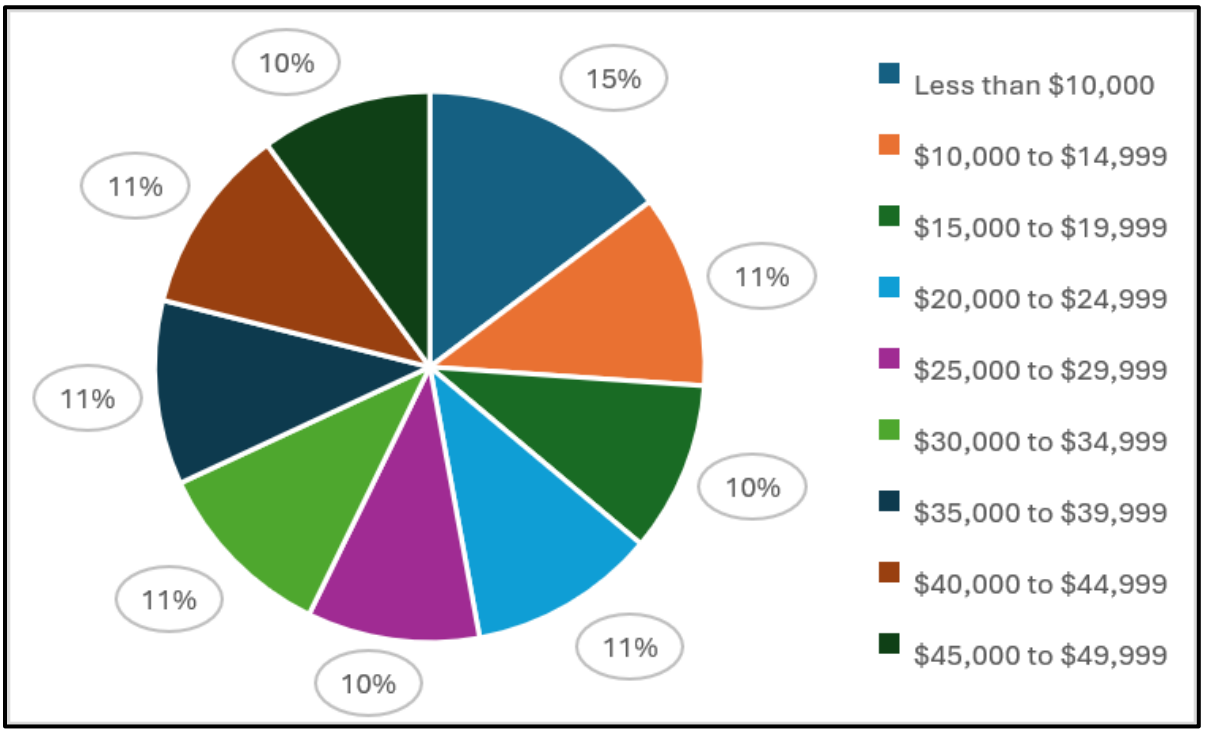
Table 3. Peoples Burdens at Existing and Proposed Rates
(Bill at Existing Rates = $1,322 / Bill at Proposed Rates = $1,658)

Income Range	Income Mid-Point	Burden at Existing Rates	Burden at Proposed Rates
Less than $10,000	$5,000	26.4%	33.2%
$10,000 - $14,999	$12,500	10.6%	13.3%
$15,000 - $19,999	$17,500	7.6%	9.5%
$20,000- $24,999	$22,500	5.9%	7.4%
$25,000 - $29,999	$27,500	4.8%	6.0%
30,000 - $34,999	$32,500	4.1%	5.1%
$35,000 - $39,999	$37,500	3.5%	4.4%
$40,000 - $44,999	$42,500	3.1%	3.9%
$45,000 - $49,999	$47,500	2.8%	3.5%

The data in my testimony not only evaluates the burden of Peoples' bills at each income level but also the distribution of households at each income level. Figure 1 below shows that more than one-of-four households (15% + 11% = 26%) with income less than $50,000 in the Peoples service territory have income less than $15,000 (with burdens ranging from 13% to 33% at proposed rates). Nearly two-in-five (15% + 11% + 10% =

36%) have income less than $20,000, while nearly half (15% + 11% + 10% + 11% = 47%) have income less than $25,000. The large financial burdens which Peoples imposes on its low-income customers, whether at existing rates or at proposed rates, is evident.

Figure 1. Distribution of Households by Income Range Less than $50,000



B. The Affordability of Peoples Rates to Moderate-Income Customers.

Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I examine the affordability of Peoples rates to moderate-income customers. In assessing the affordability to moderate-income customers, I examine data for Asset-Limited, Income Constrained, Employed ("ALICE") customers in Luzerne County.

Q. PLEASE DESCRIBE THE TERMINOLOGY YOU USE WHEN REFERENCING THE ALICE DATA.

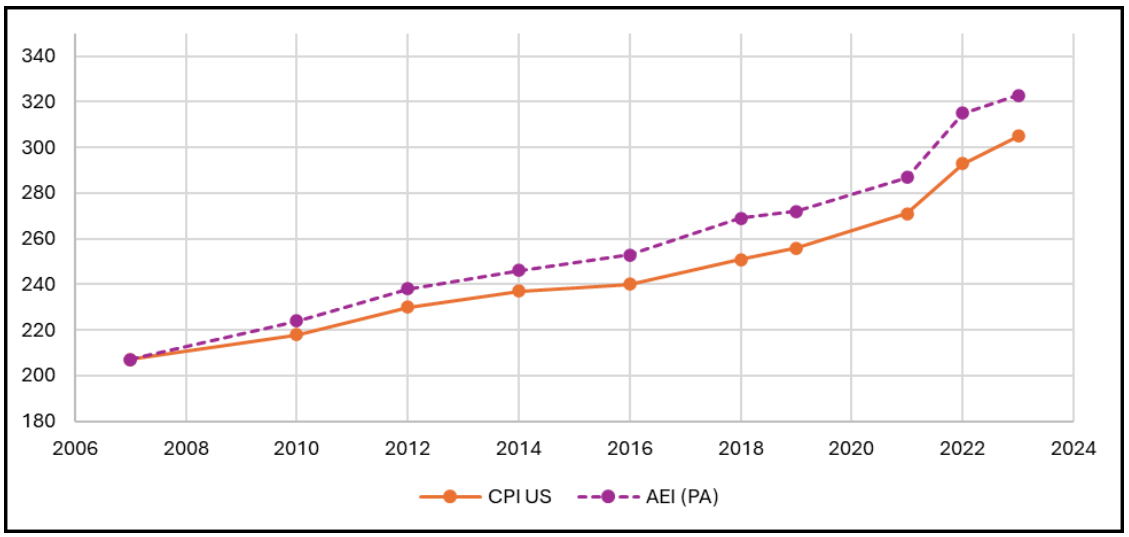
A. There are three basic terms that are used in presenting and assessing ALICE data for a particular geographic area:

- **The ALICE Survival Budget**. The ALICE Survival Budget tracks the cost of household necessities that matter most to ALICE households: housing, child care, food, transportation, health care, and basic technology. According to United for ALICE, the United Way research arm which addresses the economic issues facing ALICE households, the ALICE Budget differs from the budget used by the U.S. Bureau of Labor Statistics ("BLS") to calculate the Consumer Price Index (the traditional measure of inflation). The budget which BLS uses tracks over 200 goods and services. These include items that financially insecure households cannot afford on a regular basis (e.g., full-service meals at restaurants, wine, major appliances, flights, and jewelry). In contrast, the ALICE Budget is limited to household essentials.[22]

- **The ALICE Essentials Index:** The ALICE Essentials Index is the rate of price increases for the limited market basket of household essentials: housing, child care, food, transportation, health care, and a smartphone plan. According to the 2025 ALICE report for Pennsylvania, the ALICE Essentials Index has consistently outpaced the broader CPI nationwide.[23] Nationally, the ALICE Essentials Index has outpaced the broader CPI nationwide since 2007. Between 2021 and 2023, the ALICE Essentials Index increased at an annual rate of 7.3% compared to 6.1% for CPI. The ALICE report for Pennsylvania reported that "in Pennsylvania, the ALICE Essentials Index also tended to increase faster than CPI … ."

[22] ALICE Essentials Index, available at https://www.unitedforalice.org/essentials-index.
[23] The State of ALICE in Pennsylvania: Costs Over Time: The ALICE Essential Index, https://www.unitedforalice.org/costs-over-time/pennsylvania.

Inflation: Alice Essential Index (AEI) vs. Consumer Price Index (CPI) (Pennsylvania)



The Pennsylvania ALICE Report found that "[w]hile wages have risen substantially in recent years, so have costs. And even in occupations where wages are growing faster than costs, wages started from such a low level that many workers are still not able to cover household essentials."[24]

- **<u>The ALICE Wage</u>:** The ALICE Wage is expressed on a monthly, annual and hourly basis. The Alice Wage represents the dollar amount needed to be earned that is equivalent to the household's ALICE Survival Budget. A wage lower than the ALICE Wage means the wage-earner can *<u>not</u>* meet the ALICE Survival Budget. A wage higher than the ALICE Wage means the wage-earner is meeting the ALICE Survival Budget with some additional earning capacity left over. The ALICE Wage differs by household size and composition, as well as by the number of wage earners in the household.

Q. HAVE YOU EXAMINED THE WAGES NEEDED TO MEET THE ALICE SURVIVAL BUDGET IN THE COUNTIES SERVED BY PEOPLES?

A. Yes. I have reviewed the ALICE Wage for the sixteen largest counties served by Peoples. As I described above, the dollars needed for a household to meet the ALICE Survival Budget is known as the ALICE Wage. The ALICE Wage for the Peoples' counties I examine is set forth in Table 4 below. Five counties stand out as expensive: Allegheny,

[24] Id.

Beaver, Greene, Washington, and Westmoreland. For a two-person household (one adult/one child that requires childcare) the highest cost county, Allegheny, has a "Survival Budget" of $27.80 per hour, compared to the lowest, Jefferson, with a required budget of only $21.61. For a household with two adults and two children that requires child care, the highest hourly Survival Budget is $38.29 (Allegheny county) and the lowest is still in excess of $31 (Clarion: $31.37). Having children in childcare noticeably increases the Survival Budget in every county.

Table 4. ALICE Survival Budget (Peoples counties)

Name	Single Adult	One Adult One Child	One Adult One Childcare	Two Adults	Two Adults Two Children	Two Adults Two Childcare
Allegheny	$16.55	$23.75	$27.80	$23.41	$38.29	$47.08
Armstrong	$13.27	$19.88	$23.18	$20.03	$33.08	$40.09
Beaver	$15.92	$22.35	$25.59	$22.50	$35.80	$42.68
Blair	$13.75	$20.67	$23.11	$21.29	$33.40	$38.28
Butler	$13.75	$20.67	$23.11	$21.29	$33.40	$38.28
Cambria	$13.88	$19.45	$21.89	$20.07	$32.29	$37.18
Clarion	$13.96	$19.35	$21.89	$19.91	$31.37	$36.77
Fayette	$15.71	$22.18	$25.79	$22.11	$35.54	$43.29
Greene	$14.51	$20.69	$24.29	$20.66	$33.65	$41.39
Indiana	$13.68	$20.56	$23.80	$20.73	$33.42	$40.30
Jefferson	$12.93	$19.12	$21.61	$19.72	$31.77	$37.12
Lawence	$13.34	$20.11	$23.33	$20.30	$33.79	$40.64
Mercer	$13.77	$19.54	$22.42	$19.94	$32.44	$38.81
Somerset	$14.36	$19.91	$22.36	$20.53	$32.14	$37.05
Washington	$16.12	$22.87	$26.40	$22.84	$36.77	$44.39
Westmoreland	$16.04	$22.75	$26.30	$22.72	$36.56	$44.20

Given these high Survival Budgets in Peoples' counties, it is not surprising that a substantial number of jobs simply do not adequately support household finances. The

Table below shows "top jobs" in Pennsylvania, along with their median hourly wage. At the low end of median hourly wages are fast food and counter workers, personal care aides, cashiers, waiters and waitresses, and retail salespersons (with a combined employment of nearly 700,000). Even at the "high" end of those jobs listed, however, the median hourly wages do not substantially exceed $20 per hour.

Table 5. Top Occupations, Employment, Wages, and Percentage Below ALICE Threshold (Pennsylvania, 2023)[25]

Occupation	Total Employment	Median Hourly Wage	% Below ALICE Threshold
Personal Care Aides	213,020	$13.94	44%
Laborers And Freight, Stock, And Material Movers, Hand	150,470	$18.84	33%
Driver/Sales Workers and Truck Drivers	148,580	$20.93	27%
Fast Food and Counter Workers	139,950	$13.36	40%
Retail Salespersons	134,160	$14.51	29%
Cashiers	126,400	$14.40	42%
Office Clerks, General	122,170	$19.62	23%
Customer Service Representatives	112,850	$20.00	24%
Janitors And Building Cleaners	112,580	$16.93	43%
Stockers And Order Fillers	104,930	$17.16	34%
Cooks	87,580	$15.35	42%
Waiters And Waitresses	81,500	$14.28	36%
Secretaries And Administrative Assistants, Except Legal, Medical, And Executive	81,320	$20.20	20%
Orderlies And Psychiatric Aides	69,910	$19.65	36%
Nursing Assistants	65,220	$18.53	44%

Given these low wages, ALICE finds that there is a substantial number of households in the Peoples' counties that do not earn sufficient income to meet their hourly ALICE

[25] https://www.unitedforalice.org/labor-force/pennsylvania.

Survival Budgets. The Table below documents, for the two most recent years available, the percentage of households in each county that fall below the Poverty Level, and that fall above Poverty, but below the ALICE Survival Budget.

Table 6. Percent Households Below Poverty and Below ALICE Survival Budget (Peoples counties)

	2022			2023		
County	Below Poverty	Below ALICE	Total	Below Poverty	Below ALICE	Total
Allegheny	12%	29%	41%	12%	25%	37%
Armstrong	12%	31%	43%	12%	27%	39%
Beaver	11%	28%	39%	11%	29%	40%
Blair	14%	28%	42%	14%	34%	48%
Butler	10%	27%	37%	10%	25%	35%
Cambria	18%	28%	46%	13%	32%	45%
Clarion	15%	30%	45%	14%	28%	42%
Fayette	19%	31%	50%	19%	30%	49%
Greene	13%	29%	42%	13%	29%	42%
Indiana	15%	37%	52%	16%	32%	48%
Jefferson	13%	32%	45%	15%	38%	53%
Lawence	13%	30%	43%	24%	25%	49%
Mercer	13%	30%	43%	12%	26%	38%
Somerset	16%	37%	53%	12%	33%	45%
Washington	13%	27%	40%	10%	27%	37%
Westmoreland	10%	28%	38%	12%	27%	39%

Living with insufficient income simply is not rare in the Peoples' counties. At the lowest levels in 2023, five counties (Allegheny, Armstrong, Butler, Washington, and Westmoreland) had nearly four-of-ten households either below Poverty or below ALICE. At the highest levels, three counties (Blair, Fayette, and Jefferson) had at or above half of their households below Poverty or below ALICE.

These incomes make it difficult to pay utility bills, even at moderate income levels, as can be seen in the Table below. Table 7 documents that, in Pennsylvania, 10% to 13% of households with income between $100,000 and $200,000 were unable to pay their energy bill, or pay the full amount of their energy bill, in "almost every month," "some months" or "one or two months." The utility bill payment difficulties facing Pennsylvania customers are simply not confined to the lowest income tier. As incomes increase, the reported inability-to-pay declines.

Table 7. Household was unable to pay an energy bill or unable to pay the full bill amount (Pennsylvania)

	Almost every month	Some months	One or two months	Never	Total
Less than $25,000	7.8%	11.5%	23.4%	56.6%	99.3%
$25,000 - $34,999	15.6%	11.6%	5.0%	67.9%	100.0%
$35,000 - $49,999	14.5%	18.3%	7.6%	59.6%	100.0%
$50,000 - $74,999	2.7%	17.1%	6.1%	74.1%	100.0%
$75,000 - $99,999	2.5%	4.5%	11.6%	81.4%	100.0%
$100,000 - $149,999	3.4%	2.6%	6.6%	87.5%	100.0%
$150,000 - $199,999	4.8%	1.8%	2.7%	90.6%	100.0%
$200,000 and above	0.0%	2.1%	2.2%	95.7%	100.0%

As the Table above documents, in Pennsylvania, for households with annual income somewhat lower, but still modest ($75,000 to $100,000), the difficulties in paying home energy bills were even higher, with nearly 20% reporting that they were unable to pay an energy bill, or pay the full bill, in almost every month, some months, or one or two months

C. The Affordability of Peoples Rates to Residential Customers as a Whole.

Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I examine the affordability of Peoples' rates to residential customers as a whole. In my analysis, I use the usage and billing data requested from, and provided by, Peoples through its discovery responses. I recommend that the Commission use the methodology proposed by Patterson and Doyle.[26] Writing in the October 2021 issue of the American Water Works Association's ("AWWA") "Water Science," these researchers explored "multiple affordability metrics within and across utilities."[27] After explicitly rejecting sole reliance on the median income as being non-representative, they recommend use of an "HB Score" ("HB" representing "household burden") for the service territory. The Patterson/Doyle analysis is based on readily available public information available through the annual American Community Survey published by the Census Bureau. I calculate the "HB Score" in four steps:

- Using the average Peoples usage and bill (as reported by the Company),[28] I calculate for each zip code the Peoples burden separately for each income range for households.[29] For each income range, I use the mid-point to represent that income range (e.g., for the income range $10,000 to $14,999, I use the mid-point of $12,500).
- I calculate a weighted household water burden for each income range within a zip code by dividing the number of households in each income range by the total

[26] While the Patterson/Doyle analysis was originally applied to water companies, there is no reason that the methodology would not be equally applicable to a natural gas utility (just as similar methodologies are used to assess burdens for natural gas and electric utilities). The input data for using the Patterson/Doyle methodology is derived from Census data. That data is not unique to water utilities. Overall, no data, and no calculation, used in the Patterson/Doyle methodology is unique to a water utility.

[27] Patterson & Doyle, *Measuring Water Affordability and the Financial Capabilities of Utilities*, AWWA Water Science (October 2021).

[28] Peoples' Responses to OCA IV-44 and OCA-IV-45.

[29] Income ranges are provided in the American Community Survey (Table B19001).

number of households in that zip code and multiplying that weight with the burden for that income range.

- I calculate the weight for each zip code by dividing the number of residential Peoples customers in that zip code by the total number of Peoples residential customers.
- I finally calculate the weighted burden for each zip code by multiplying the burden for each zip code with the zip code's weight.

Given those preliminary steps, the service territory HB Score is the sum of the weighted burdens for all zip codes within the service territory. As Patterson and Coyle do, I present the service territory HB Score as the weighted average.

For Peoples, the weighted average HB Score at existing rates is a burden of 3.8%. At proposed rates, the average HB Score for the Peoples service territory increases to 4.7%. As can be seen, the rate increase sought by Peoples in this proceeding will increase the HB Score by 24%, from 0.038 to 0.47 (([0.047 – 0.038] / 0.038 = 24%. The affordability problems that I document throughout my testimony, evidenced not merely by Bill-to-Income Ratios but also by payment patterns, will degrade even further given the rate increase sought by Peoples.

Q. IS THERE ANY OTHER WAY IN WHICH YOU HAVE EXAMINED THE AFFORDABILITY OF PEOPLES RESIDENTIAL RATES?

A. Yes. The increasing unaffordability of residential utility rates has been recognized for all types of utilities, including electricity, natural gas, and water. Unaffordability is seen as an issue which manifests itself through the presence of customer payment difficulties. For example, one industry analyst for S&P explained as to water companies:

> S&P Global Ratings does not think that affordability programs directly contribute to creditworthiness nor does it have a bias toward or against specific types of programs … . Well-constructed affordability programs can improve revenue certainty and stability by helping reduce delinquency and nonpayment rates.[30]

Again, the point here does not relate to the design and operation of Peoples' Universal Service Programs. Nor am I proposing to extend Peoples' Universal Service Programs beyond their current scope. Instead, it is the fact that the S&P analyst recognizes that addressing affordability "can improve revenue certainty and stability by helping reduce delinquency and nonpayment rates." Indeed, the S&P analyst concludes by stating that, from S&P's perspective, increasing rates and charges to the customer "remains an area that [S&P] will continue to watch closely. *We believe this could be the biggest key to rating stability*."[31]

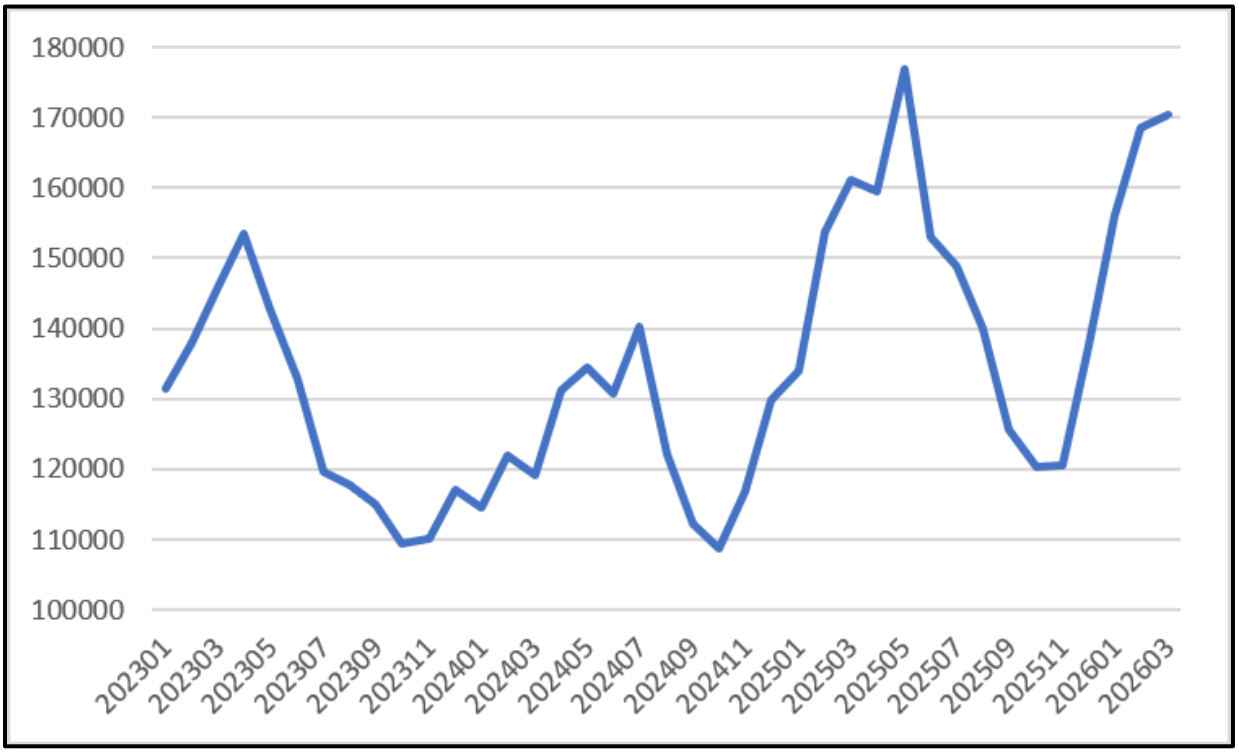
Q. HAVE YOU HAD OCCASION TO REVIEW THE "DELINQUENCY AND NONPAYMENT RATES" OF PEOPLES RESIDENTIAL CUSTOMERS?

A. Yes. The question here differs somewhat from the credit and collection question which I address elsewhere in my testimony. The issue is not whether the Company is acting effectively and efficiently in performing its credit and collection activities, or whether it is reasonably offering alternatives to those who cannot afford to pay. The issue is the extent to which, if at all, the Company's residential customers are having difficulties paying their bills. The answer is unquestionably yes.

[30] Erin Boeke Burke, Associate Director, Municipal and Cooperative Utilities, *Rates and Affordability, A Rating Agency Perspective*, S&P Global Ratings, Water Finance & Management (April 13, 2020).
[31] *Id.* (emphasis added).

I have discussed the payment difficulties of Peoples' residential customers in detail elsewhere. I further review some of that data below. The Figure below, for example, shows the total number of residential accounts in arrears for January 2023 through March 2026. The data clearly indicates not only an upward trend, but documents that, in the past year, the number of accounts has seen a substantial growth over prior years. The seasonal spikes in the number of accounts in arrears in March 2025 and March 2026 are noticeably higher on a year-over-year basis than the same seasonal increases in the two corresponding years of 2023 and 2024.

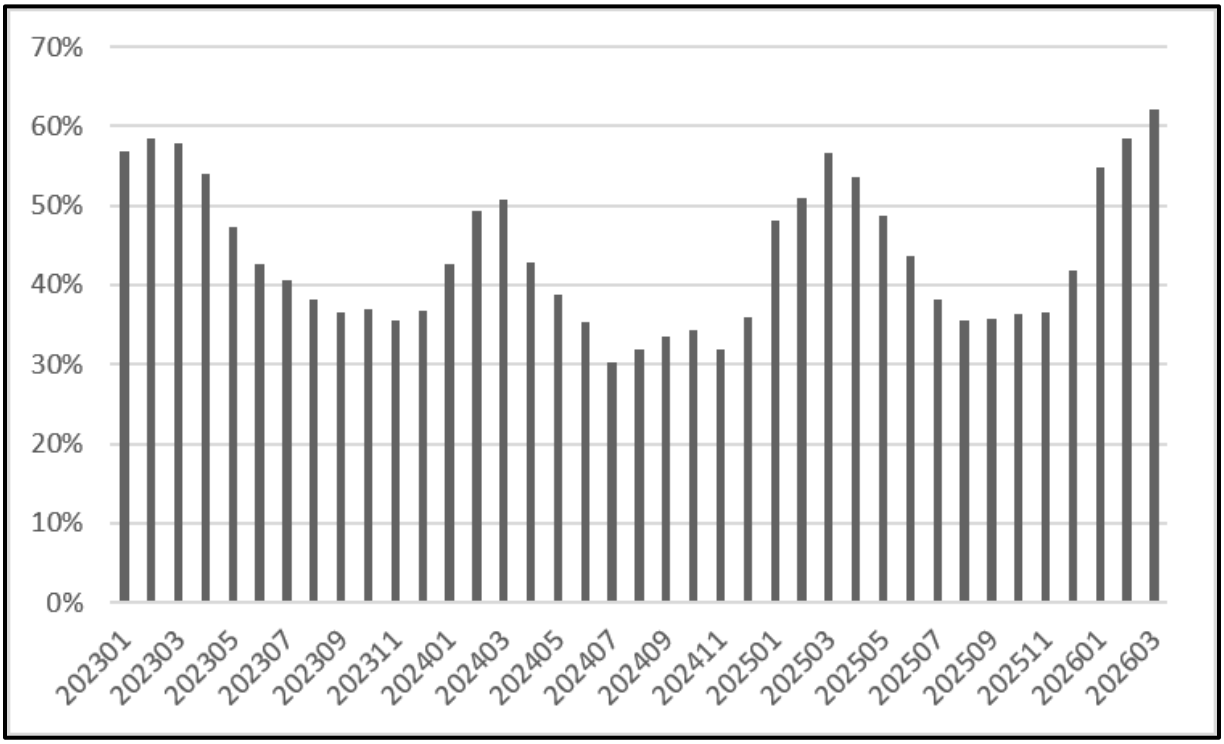
Figure 2. Peoples Total Residential Arrears ($s) (January 2023 – March 2026)



It is not merely the total number of accounts in arrears that is of concern, however. There is a level of arrears—the high number of Peoples' customers with 90-day balances of $300 or more—which gives rise to particular concern over whether the unpaid balances can and will be paid. The Figure below demonstrates that in March 2026, Peoples

reached a four-year high (March 2023, March 2024, March 2025, March 2026) in the number of such accounts that present serious payment difficulties. In March 2026, of the Peoples accounts in arrears, more than 60% had an unpaid balance of $300 or more.

Figure 3. Percentage of Peoples Residential Arrears with an Unpaid Balance of $300 or More (January 2023 – March 2026)[32]



It is not merely the level of arrears that is of concern, either, it is also the age of arrears. Just as Peoples has a high percentage of accounts with unpaid balances of $300 or more, the Company also has a high percentage of accounts that have unpaid balances that are 90 days old or older.[33] The number of accounts with 90+ day balances consistently remains between 40% and 50% of the total number of accounts in arrears. From a dollar perspective, in October 2023, the proportion of dollars in arrears that were, in fact, 90

[32] Peoples Response to OCA-IV-14.
[33] Peoples Response to OCA-IV-30.

days old or older reached 82%.[34] In October 2024, that proportion remained at 77%, while in October 2025, the proportion remained at 73%.

While I note that there was a temporary dip in 90+ arrears during 2024, overall, the Company's performance has declined on a year-over-year basis ever since. In every month January 2025 through March 2026, the percentage of accounts with an unpaid balance of $300 or more has been higher than the percentage in the corresponding month in the prior year (e.g., January 2025 is higher than January 2024, with January 2026 higher than January 2025; March 2025 higher than March 2024, with March 2026 higher than March 2025; every month in 2025 higher than the corresponding month in 2024).

Q. WAS THE INCIDENCE OF ARREARS (I.E., UNPAID BILLS) THE ONLY CONCERN WHEN YOU REVIEWED THE "DELINQUENCY AND NONPAYMENT RATES"?

A. No. I also examined those instances where nonpayment ultimately leads to the disconnection (or termination) of service. According to the Commission's Bureau of Consumer Services, "[t]ermination of public utility service is the most serious consequence of customer non-payment and is viewed as a last resort when customers fail to meet their payment obligations."[35]

Data both on the number of disconnections and on the dollars of arrears at the time of disconnection are presented in Table 8 below. When Peoples disconnects service to residential ratepayers, it places a considerable amount of funding at risk. Peoples

[34] Peoples' Response to OCA-IV-32.
[35] Bureau of Consumer Services, Universal Service Programs and Collections Performance, at 11.

continues to disconnect more than 21,000 residential accounts each year. When it disconnects service, it places customers at risk with unpaid balances that are owed at the time of disconnection. The unpaid balance at the time of disconnection for Peoples residential customers from 2023 through 2025 has averaged between $700 and $900.

Table 8. Number of Annual Disconnections and Arrears at the Time of Disconnection

	Number of Disconnections	Average Arrears at Time of Disconnection
2023	21,462	$904
2024	21,074	$691
2025	21,010	$766

Q. WHAT DO YOU CONCLUDE?

A. When measured by the "delinquency and nonpayment rates" of the Company's residential customers, it is clear that the Company faces a significant affordability problem. Although not all customers face affordability issues we must still acknowledge and weigh these concerns. Especially when one-half or more of Peoples' residential customers in arrears are, in fact, more than three months in arrears. Additionally, Peoples' assertion that bills are generally affordable to residential customers is not credible when its customers, who's service is being disconnected, have reached the point where they are $1,000+ in arrears at the time of disconnection.

D. The Affordability of Peoples Rates to Customers Facing Contemporary Financial Challenges.

Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

A. In this section of my testimony, I examine the affordability of Peoples' rates in light of financial challenges now facing residential customers in the Peoples' service territory. The reasonableness of Peoples' rates is not determined in a vacuum. Instead, the

reasonableness of rates is determined in light of current economic conditions. Requested rate increases are of particular concern when they are not only part of the economic challenges facing households, but when they actively contribute to the economic challenges facing households.

Q. PLEASE EXPLAIN HOW THE UNAFFORDABILITY OF PEOPLES' RATES ARE CONTRIBUTING TO THE HOUSING AFFORDABILITY CRISIS IN THE PEOPLES SERVICE TERRITORY.

A. One of the biggest financial challenges to households in the Peoples service territory is the high cost of housing. The unaffordability of housing is substantial in Luzerne County, in particular, and is getting worse. This lack of affordable housing is significant because Peoples cannot dismiss it as a function of macroeconomic conditions and thus beyond the purview of the Pennsylvania PUC. Instead, the increasing rates of Peoples are a direct contributor to the housing affordability crisis in the Peoples service territory. I examine the increasing unaffordability of housing by looking at "gross rent" as reported by the U.S. Census Bureau.[36] I also examine data regarding Fair Market Rents reported by the U.S. Department of Housing and Urban Development ("HUD").[37] Data on each element documents that the affordability of housing in the zip codes which Peoples reports serving is sharply declining and that this decline is not a function of just low-income households.

[36] According to the Census Glossary of terms, "gross rent" is defined as "The amount of the contract rent ***plus the estimated average monthly cost of utilities*** (electricity, gas, and water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid for by the renter (or paid for the renter by someone else)." https://www.census.gov/glossary/?term=Gross+rent (emphasis added).

[37] "FMRs are HUD-established estimates of gross rent, taking into account both rent and ***the cost of necessary utilities.***" https://www.hudexchange.info/homelessness-assistance/coc-esg-virtual-binders/coc-leasing-rental-assistance-requirements/fmr/ (emphasis added).

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT THE PEOPLES RATES ARE CONTRIBUTING TO THE DECLINE IN THE AFFORDABILITY OF HOUSING IN THE PEOPLES SERVICE TERRITORY?

A. I begin my examination with a review of the high housing burdens in the Peoples service territory (defined by the zip codes provided by Peoples as having residential customers).[38] To factor out the impact of low-income households, I examine the housing burdens in the time period 2019, 2022, 2023, and 2024 for households with three income ranges: (1) from $20,000 to $34,999; (2) from $35,000 to $49,999; and (3) from $50,000 to $74,999.[39] It is generally accepted that households with housing burdens exceeding 30% of household income are "over-burdened." To narrow my examination, I examined households with shelter burdens not merely exceeding 30% of income but exceeding 40% of income. The data is set forth in Table 9 below. I select data going back to the year before COVID and skip the two years that would be most affected by COVID (2020, 2021). The data documents that in each income range, the percentage of households with housing burdens substantially in excess of 30% is high and getting higher each year. Even households with income between $35,000 and $50,000 have burdens exceeding 40% of income in nearly one-of-four instances.

[38] Peoples' Response to OCA-IV-4.

[39] Using Census data means that I cannot examine 2025 data. The Census has yet to publish 2025 data. The most recent data available is through 2024.

Table 9. Percentage of Households in Selected Income Ranges with Gross Rent Burdens Exceeding 40% of Income (Peoples zip codes)[40]

Income	$20,000 - $34,999	$35,000 - $49,999	$50,000 - $74,999
2019	32.4%	8.0%	2.7%
2022	41.1%	12.1%	5.3%
2023	43.7%	14.7%	6.2%
2024	46.2%	16.7%	6.8%

As can be seen, in the Peoples service territory, while the percentage of renters with very high housing burdens (remembering that "housing burdens" include utility costs) increased by more than 40% from 2019 to 2024 for households falling in the income ranges of $20,000 to $34,999. Moreover, in that time frame, the proportion of households with high rental burdens increased by more than 100% for households with income from $35,000 to $50,000, and by more than 150% for households with income of $50,000 to $74,999.

Q. HAVE YOUR REVIEWED OTHER DATA THAT REINFORCES YOUR FINDING BASED ON THE CENSUS-REPORTED HOUSING BURDENS?

A. Yes. HUD publishes its annual estimate of local housing costs in its Fair Market Rents ("FMRs"). As with the "gross rents" published by the Census Bureau, HUD's FMRs include not only "contract rents" (those charges imposed on renters by the property owner) but includes utility costs as well. Using these FMRs, the National Low-Income Housing Coalition ("NLIHC") publishes an annual review of the affordability of housing by geographic jurisdictions. I again examine the impact which increasing utility costs have on renters in the sixteen study counties I identified above in the Peoples service

[40] American Community Survey, Table B25074.

territory. The NLIHC data is somewhat more recent than the Census data, given that it extends through 2025. NLIHC first reports data from the perspective of the income needed to afford a two-bedroom unit at HUD's FMR. As can be seen, even though renter wages have substantially increased between 2019 and 2025, they have not generally increased at a rate sufficient to keep up with the increase in FMRs. By 2025, the median renter wage as a percentage of the hourly wage needed to be able to afford a two-bedroom FMR had fallen in nine of the 16 counties studied. The decline was not small. In four of those nine counties, the decline was between 4.5% and 5.8% (Allegheny, Fayette, Mercer, Washington). In contrast, where there was a gain in renter housing buying power, the gain was minimal. In Butler and Cambria counties, the gain was only 0.1%, while in Somerset county, the gain was only 1.6%.

Given that utility costs are one component of the FMR calculated by HUD each year, as Peoples rates increase, so, too, the FMRs will increase throughout the Peoples service territory. When combined with rising housing prices generally, the rate increase sought by Peoples not only places the payment of future utility bills in jeopardy (as discussed in detail above), but it also places the access to housing in jeopardy.

Table 10. Hourly Wage Needed to Afford 2-Bedroom FMR vs. Median Renter Wage (Peoples study counties) (2019 – 2025)[41]

Counties	Hourly wage needed for 2 BR FMR to be affordable		Median renter wage		Ratio: Median Renter Wage to Wage Needed to Afford 2 BR FMR	
	2019	2025	2019	2025	2019	2025
Allegheny	$17.23	$24.62	$16.66	$22.68	96.7%	92.1%
Armstrong	$14.12	$19.63	$11.52	$15.39	81.6%	78.4%
Beaver	$17.23	$24.62	$11.39	$16.06	66.1%	65.2%
Blair	$15.31	$20.42	$10.52	$14.61	68.7%	71.5%
Butler	$17.23	$24.62	$12.35	$17.65	71.7%	71.7%
Cambria	$13.65	$17.98	$9.31	$12.28	68.2%	68.3%
Clarion	$13.31	$17.60	$8.47	$12.09	63.6%	68.7%
Fayette	$17.23	$24.62	$9.66	$12.65	56.1%	51.4%
Greene	$13.46	$18.67	$17.10	$20.19	127.0%	108.1%
Indiana	$14.81	$17.46	$10.84	$15.41	73.2%	88.3%
Jefferson	$13.31	$17.46	$10.11	$14.41	76.0%	82.5%
Lawence	$13.98	$18.37	$9.98	$12.63	71.4%	68.8%
Mercer	$13.65	$17.46	$11.91	$14.32	87.3%	82.0%
Somerset	$13.31	$17.46	$10.78	$14.41	81.0%	82.5%
Washington	$17.23	$24.62	$15.16	$20.21	88.0%	82.1%

E. The Affordability of Peoples Rates in Light of Declining Customer Resources.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. It would be a mistake to focus attention exclusively on household income in an examination of the affordability of Peoples' bills. In addition to looking at household income, an examination of the affordability of Peoples' bills should also consider the

[41] National Low-Income Housing Coalition (annual), Out of Reach: Why Everyday People Can't Afford Housing, available at https://nlihc.org/oor.

availability of household resources. When I reference household resources in this respect, I am referring to the availability of liquid assets that would allow a customer of Peoples to respond to large variations in either seasonal or annual bills. To the extent that a household lacks such resources, there will be an inability to respond to changes in annual or seasonal bills. My reference to a "liquid resource" is a reference, primarily, to the lack of an adequate banking or savings account from which a customer can draw dollars in order to pay a higher Peoples bill.

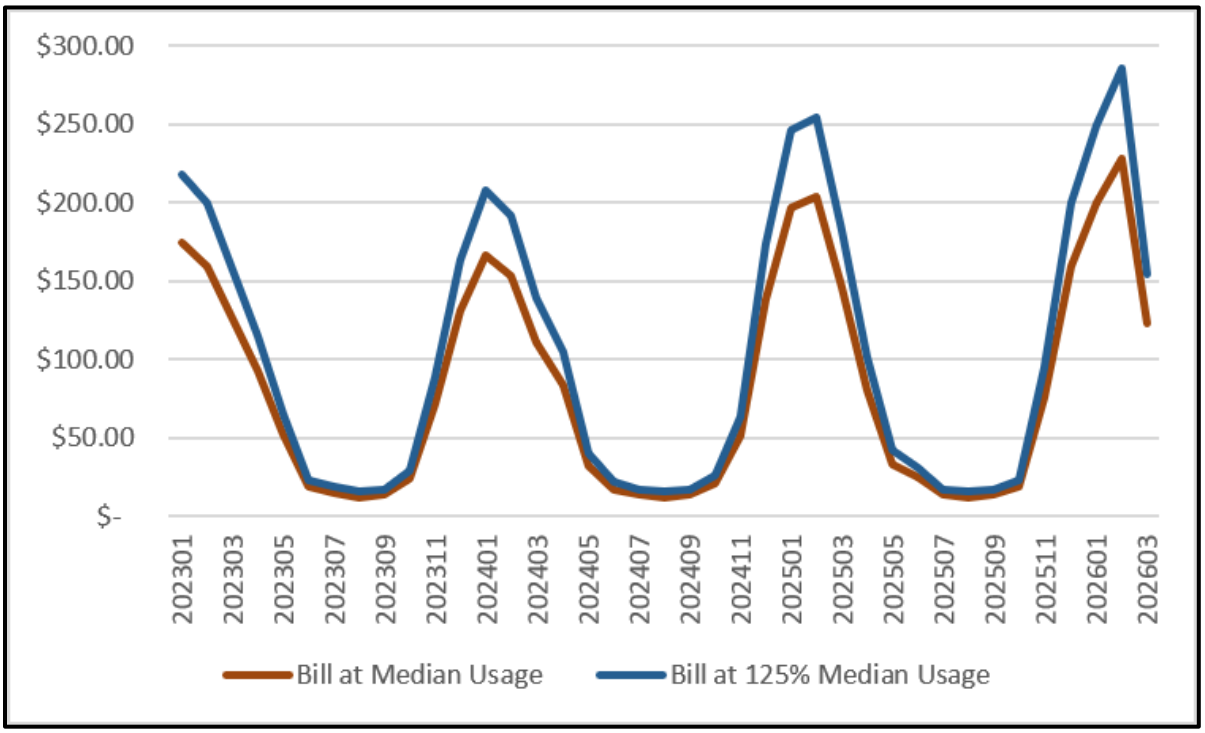
Q. DO UNEXPECTED CHANGES IN PEOPLES BILLS OCCUR FOR RESIDENTIAL CUSTOMERS?

A. Yes. However, it is not merely the size of the ***annual*** Peoples bill that poses a problem for customers. The month-to-month volatility in Peoples' bills pose particular problems to households who lack the resources to set aside an "emergency fund" to respond to these unexpectedly high expenses. The volatility cannot be prevented by investing in energy efficiency measures. Due to the very fact of their poverty, low-income households lack the discretionary income to even invest in cost-effective efficiency measures. As documented in my discussion above, Peoples customers are having difficulties in paying their bills to begin with and are being forced into tradeoffs between utility bill payment and payments for other household necessities; they lack the resources to make investments in energy efficiency measures that have uncertain future returns. Moreover, since low-income Peoples' households tend most frequently to be tenants, they lack the authority to make decisions regarding the major gas-consuming systems in their homes (what is known as "dominion interest," the authority to make decisions), even if they had the financial wherewithal to do so.

Q. HAVE YOU EXAMINED THE SEASONAL VARIATION IN PEOPLES BILLS THE RESPONSE TO WHICH MAY BE IMPEDED BY THE LACK OF HOUSEHOLD LIQUID RESOURCES?

A. Yes. There are seasonal variations in Peoples' bills that can be demonstrably shown to be associated with higher unpaid bills. In my discussion below, I consider the changes in median ***monthly*** bills. Figure 4 below presents the median monthly residential bills for the time period January 2023 through March 2026. The "median" is the point at which half of all accounts have higher values and half of all accounts have lower values. In other words, the "median" is the middle. The Figure below also includes the monthly bill at 125% of median. I include the higher bill, as well, given that low-income customers tend to be renters who live in older and less efficient housing. The data includes bills through the most recent data which Peoples has available at the time I write this testimony (May 2026).

Figure 4. Median Monthly Residential Bills (January 2023 – March 2026)[42]



The data presented in the Figure below supports the observation, not surprisingly, as a natural gas utility, that Peoples' residential customers experience substantial variation in their monthly bills. As heat-related consumption increases in the winter months and cooling related consumption increases in the hot weather months, the median bills increase correspondingly. These high seasonal bills contribute to a high annual burden as discussed in detail above. However, the high seasonality also places monthly stress on residential customers. In 2025, for example, a customer would need to have sufficient funds to pay a monthly bill $277 higher in January ($296) than they would need to have in July ($18.73). At 125% of median usage, the difference between the average bill for the months of May through October 2025 ($24.46) and the average bill for the months of December 2024 through March 2025 ($214.27) was roughly $180 a month. While

[42] Peoples' Response to OCA-IV-9.

covering only a four-month period (December through March), in other words, the household would need to have access to more than $700 in additional resources simply to cover the monthly swing in Peoples bills.

Failing to identify and recognize the inability-to-pay due to a lack of resources to respond to the monthly volatility in bills, is not merely a failure to identify payment problems from the perspective of the customer (as I have discussed in detail above), but it also represents a serious increase in the financial risk to Peoples. I discussed the changes in the average arrears owed by residential customers at the time of a nonpayment disconnection in detail above. As the rate hikes proposed in this proceeding are passed through in higher bills, it is reasonable to expect that these dollars lost at the time of disconnection will continue to get higher and higher.

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT UNPAID HOME HEATING BILLS CAN BE ATTRIBUTED, IN PART, TO THE LACK OF LIQUID RESOURCES THAT SERVE AS A CUSHION AGAINST INCREASES IN ANNUAL OR MONTHLY BILLS?

A. There is substantial research which finds that having liquid assets of as little as $1,999 plays a significant role in preventing households from experiencing "material hardships." One study by the Urban Institute, for example, reported quite explicitly that

> Based on multivariate analysis of the lowest income quintile, holding liquid assets in modest amounts (up to $1,999, compared with having no such assets) is significantly related to a lowered incidence of material hardship for six of the eight hardship outcomes studied. This suggests that liquid asset holdings provide a buffer stock of financial resources,

> enabling households to respond to circumstances that would otherwise bring hardship.[43]

Missed utility payments, as well as utility shutoffs, were two of those six hardship outcomes affected. In addition to this Urban Institute study, the U.S. Federal Reserve addresses the impacts arising from the ability of households to have modest savings each year in its annual Report on the Economic Well-Being of U.S. Households. According to the Federal Reserve, "[h]aving a buffer of savings for emergencies can help families cope with fluctuations in income and with unexpected expenses. The share of adults who would pay for an unexpected $400 expense with cash or the equivalent was unchanged from 2023, while the share who said they had rainy day funds to cover three months of expenses edged up from 2023."[44] In its most recent annual report, the Federal Reserve stated:

> Relatively small, unexpected expenses, such as a car repair or a modest medical bill, can be a hardship for many families, especially those without a financial cushion. When faced with a hypothetical expense of $400, 63 percent of all adults said they would have covered it exclusively using cash, savings, or a credit card paid off at the next statement (referred to, altogether, as "cash or its equivalent"). The remainder said they would have paid by borrowing or selling something or said they would not have been able to cover the expense.
>
> * * *
>
> Eighteen percent of adults said the largest emergency expense they could handle right now using only savings was under $100, and 13 percent said they could handle an expense of $100 to $499.[45]

[43] Mills & Amick, *Can Savings Help Overcome Income Instability, Perspective on Low-Income Working Families*, Urb. Inst., Brief 18, at 8 (2010) (internal notes omitted).
[44] *Research & Analysis: Economic Well-Being of U.S. Households in 2024*, Fed. Reserve Sys., 41 (May 2025).
[45] *Id.* at 42 (emphasis added).

The Federal Reserve found that only 24% of households with income less than $25,000 had sufficient savings to cover three months of household expenses, substantially less than households with higher incomes.[46] These 2025 findings are nearly identical to prior years.[47]

It is not the case that lower-income households simply have inadequate savings. Instead, it is reasonable to expect that these households have *no* savings. According to the U.S. Consumer Financial Protection Bureau ("CFPB"), "the level of emergency savings generally increases with the level of household income. This is not surprising as lower income households are generally more financially constrained and likely find it harder to save. Among consumers with annual household incomes of $20,000 or less, over half (60 percent) have *no* emergency savings, with the share falling to 40 percent for those with incomes between $20,001 to $50,000."[48] In 2020, based on pre-COVID data collection through the CFPB's "Making Ends Meet" survey, the CFPB reported that nearly three-quarters of households with income less than $20,000 have less than $100 in their checking or savings accounts.[49]

Q. DOES THIS NATIONAL DATA REFLECT CIRCUMSTANCES IN PENNSYLVANIA AS WELL?

[46] *Id.* at 44.
[47] *See e.g.*, *Research & Analysis: Economic Well-Being of U.S. Households in 2023*, Fed. Reserve Sys., 31-32 (May 2024); *Research & Analysis: Economic Well-Being of U.S. Households in 2022*, Fed. Reserve Sys., 31 (May 2023); *Research & Analysis: Economic Well-Being of U.S. Households in 2019*, Fed. Reserve Sys., 21 (May 2020); *Research & Analysis: Economic Well-Being of U.S. Households in 2018*, Fed. Reserve Sys., 21 (May 2019).
[48] *Emergency Savings and Financial Security, Insights from the Making Ends Meet Survey and Consumer Credit Panel*, CFPB Office of Rsch., 11 (Mar. 2022) (emphasis added); *see also*, *Making Ends Meet in 2023, Insights from the Making Ends Meet Survey*, CFPB (Dec. 2023).
[49] *Perceived Financial Preparedness, Saving Habits, and Financial Security*, CFPB Office of Rsch,4 (Sept. 2020).

A. Yes. Pennsylvania data is consistent with the detailed national data I present above. According to United for Alice, discussed above, while the emergency savings rate for *all* households in Pennsylvania reached 60% in 2022, "only 46% of households below the ALICE Threshold had emergency savings (or rainy day funds) that would cover their expenses for three months in the event of sickness, job loss, economic downturn, or another emergency … ."[50] The National Financial Capability Study (2024) found that 45% of Pennsylvania households do not have emergency funds.[51] One contributing cause to this, according to the NFCS, was that 24% of households were spending more than their income, while an additional 34% were spending about equal to their income.

Q. WHAT DO YOU CONCLUDE?

A. Based on the data and analysis above, I conclude that an exclusive focus of affordability discussions on the incomes of households is too narrow of an analysis. In addition to considering the income levels of households, to better understand the affordability of Peoples' bills, it is also necessary to consider the available resources. The data clearly shows that both from year-to-year, and from month-to-month, Peoples' bills will vary sharply. Not only do low-income households lack sufficient income to pay higher-than-expected annual bills out of regular income, but they also lack sufficient resources to absorb spikes in cold weather heating bills.

[50] *An Update on Financial Hardship in Pennsylvania*, United for ALICE, 11 (May 2024); *see also*, *The State of ALICE in Pennsylvania: 2025 Update on Financial Hardship*, United Way, 9 ("in 2023, respondents below the ALICE Threshold in the Middle Atlantic Census Division (which includes Pennsylvania) were far less likely to than those above the Threshold to have savings that could cover three months of expenses in the event of an emergency (41% vs. 74%)… .") (2025).

[51] *National Financial Capability Study (2024), Summary of Selected Findings: Pennsylvania*, FINRA Investor Education Foundation (2024).

This observation affects multiple aspects of how Peoples interacts with its customers. It is, of course, one reason why the failure of Peoples to identify its low-income customers, or to enroll those customers which have been identified into CAP, is a failure to provide reasonably adequate service. In addition, aside from CAP, Peoples should engage in a more aggressive marketing of budget billing, particularly to customers (low-income and not) who experience payment difficulties. Finally, the ongoing reliance by Peoples on traditional credit and collection techniques, such as sending shutoff notices, entering into payment arrangements, requiring high downpayments for payment arrangements, or failing to refund deposits to low-income customers (or to exempt such customers from the payment of deposits with which to begin), is both inefficient and ineffective. I will address these implications in greater detail below.

F. The Affordability of Peoples Rates to the Company's Aging Population in Particular.

Q. DO INCREASING NATURAL GAS PRICES HAVE A PARTICULAR IMPACT ON ANY SUB-POPULATION OF PEOPLES CUSTOMERS?

A. As Peoples seeks to increase its rates, the aging population in the Peoples service territory is facing particular economic struggles. Seniors, in particular, have been harmed by the rapid increases in Peoples' rates. Since 2018, while Peoples' rates have increased substantially, Social Security benefits have increased by only 26.8%.[52] Regarding ability to pay Peoples' bills, seniors are substantially worse off in 2025 than they were in 2018. This should be of concern to the Commission because, in 2024, the last year for which Census data has been publicly released, nearly half (48.8%) of all households with a

[52] Social Security Administration, *Cost of Living Adjustments*, available at https://www.ssa.gov/oact/cola/colaseries.html.

householder age 65 or older in the zip codes served by Peoples had income less than $50,000, while nearly 30% (28.1%) had incomes less than $30,000. More than one-in-ten (10.1%) senior households had an income of less than $15,000. The Peoples burdens at these income levels was presented above (Table 3).

Q. HOW DO THESE HOUSING COSTS RELATE TO THE REQUEST BY PEOPLES FOR A SUBSTANTIAL INCREASE IN NATURAL GAS RATES?

A. The Household Pulse Survey I discussed above examines the impact of unaffordable utility bills on Pennsylvania customers. Two conclusions are evident from Table 11. First, aging households in Pennsylvania have a difficult time consistently paying their home utility bills. More than 7% of households with a resident age 65 or older reported that that were "unable to pay an energy bill or unable to pay the full amount" in almost every month, some months, or one or two months.

Table 11. Actions Taken by Pennsylvania Customers (65 and older) in Order to Pay their Home Energy Bill

Almost every month	Some months	One or two months	Never	Total[53]
Household was unable to pay an energy bill or unable to pay the full bill amount				
0.3%	2.2%	4.6%	80.0%	87.2%
Household kept home at a temperature that felt unsafe or unhealthy				
2.3%	6.2%	4.4%	74.3%	87.1%
Household reduced or forwent expenses for basic household necessities, such as medicine or food, in order to pay an energy bill				
2.6%	5.1%	7.1%	72.4%	87.2%

Those aging Pennsylvania households who were unable to pay their bill, or to pay the full amount of their bill, however, present only a small part of the story regarding

[53] Total may not add to 100% due to some non-reporting.

unaffordability for Pennsylvania's aging households. Eight to nearly ten times more aging households reported keeping their home at a temperature that felt unsafe or unhealthy in almost every month, or reducing or forgoing expenditures on basic household necessities in almost every month in order to pay their utility bill, than reported being unable to pay their bill. Two to three times as many aging Pennsylvania households reported that they kept their homes at a temperature that felt unsafe or unhealthy in "some" months, or reported forgoing expenditures on basic household necessities in "some" months in order to pay their utility bill, than reported being unable to pay their bill. The extreme and dangerous actions that Pennsylvania's aging households take in order to pay their home energy bills should be of concern to Peoples and to the Commission. These are not actions that can be attributed to macro-economic conditions that are of no concern to the utility. These dangerous actions are directly attributable to the inability of Pennsylvania's aging households to pay their home energy bill.

Part 2. The Effectiveness and Efficiency of Peoples Collection Activities.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the efficiency and effectiveness of the credit and collection activities which Peoples directs towards its residential customers, including low-income customers. Given the failure of Peoples to reasonably identify its low-income customers, viewing the problems which Peoples' customers face exclusively from the perspective of Confirmed Low-Income customers would be too narrow. The activities directed toward residential customers as a whole, and the expenditures on those activities, must be incorporated into the discussion.

Q. PLEASE EXPLAIN THE BASIS FOR YOUR DISCUSSION BELOW.

A. I base my discussion below on Section 523 of Pennsylvania's Public Utility Code.

Section 523 provides:

> The commission shall consider, in addition to all other relevant evidence of record, the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this title. On the basis of the commission's consideration of such evidence, it shall give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate.[54]

Based on this statutory language, I find that it is appropriate to review the "efficiency, effectiveness, and adequacy" of the credit and collection activities of Peoples and to recommend adjustments to "specific components of the utility's claimed cost of service" to the extent that such activities are found to be ineffective and/or inefficient.[55]

Q. WHAT EXPENDITURES WILL YOU CONSIDER?

A. I base my review of expenditures primarily on the credit and collection expenditures for both residential and Confirmed Low-Income residential customers, as reported annually to BCS and published by BCS in its annual report on Collections Performance and Universal Service Programs. The Peoples credit and collection expenditures reported in the most recent BCS Report (2024) are set forth in Table 12 below.

Table 12. Peoples Credit and Collection Expenses (residential and Confirmed Low-Income [CLI])

	2024		2023		2022	
	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income
Total $s of C&C expenditures	$5,600,986	$1,058,271	$5,244,412	$951,671	$4,690,985	$894,371
CLI as percent of total	18.9%		18.1%		19.1%	

[54] 66 Pa. C.S. § 523.
[55] *Id.*

The residential credit and collection expenditures for 2025 were $6,516,518, while the Confirmed Low-Income expenditures were $1,150,487 (17.7%).[56] Using this Company data, the recommendations I make below are reflected in the Direct Testimony of OCA witness Jared Geiger.

Q. ARE A DISPROPORTIONATE NUMBER OF CONFIRMED LOW-INCOME (NON-CAP) CUSTOMERS IN ARREARS?

A. Yes. Not only are a disproportionately high number of Confirmed Low-Income customers in arrears, but they also have a large amount in arrears. The BCS report, which I have often referenced, documents that a disproportionately high number of Confirmed Low-Income customers are in arrears. The percentage of Confirmed Low-Income customers in arrears for the last three years for which data is reported has consistently run two times higher than the percentage of residential accounts in arrears. The average level of arrears (of accounts in arrears) for Confirmed Low-Income customers has been from 40% (2023) to more than 50% (2022) higher than the average level of arrears for residential customers. The level of arrears at the time of disconnection for Confirmed Low-Income customers has been from 25% (2022, 2024) to 40% higher than residential customers in general.

[56] Peoples Response to OCA-VII-4.

Table 13. Residential vs. Confirmed Low-Income Arrears
(2022 – 2024)

	Percent of Customers in Arrears		Average Arrears		Average Arrears at Time of Disconnection	
	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income	Residential	Confirmed Low-Income
2022	7.4%	14.0%	$394.22	$599.51	$904	$1,129
2023	7.3%	14.2%	$484.60	$681.02	$691	$963
2024	7.4%	14.1%	$393.34	$572.82	$766	$956

Finally, not only are the incidence and level of arrears greater for Confirmed Low-Income customers higher than for residential customers, but the rate of service disconnections is higher as well. In 2022, the disconnection rate for Confirmed Low-Income customers was lower than in other years (Residential = 2.6%; Confirmed Low-Income = 3.9%). However, in 2023 and in 2024, the disconnection rate for Confirmed Low-Income customers was three times higher than the disconnection rate for residential customers as a whole (2023: 3.5% vs. 10.5%; 2024: 3.5% vs. 10.2%).

Q. HAVE YOU EXAMINED THE EXTENT TO WHICH PEOPLES EFFECTIVELY AND EFFICIENTLY USES PAYMENT ARRANGEMENTS AS A MECHANISM THROUGH WHICH RESIDENTIAL CUSTOMERS CAN RETIRE ARREARS?

A. Yes. One of the most problematic facts I found in a review of Peoples payment arrangements is that Peoples' payment arrangements do not provide a reasonable opportunity for residential customers to retire their arrears. The Company provided aggregated three-year data for the years 2023 through 2025. This data demonstrates that 71.5% (55,172 of 71,162) of the residential payment arrangements newly entered into during that time, ended in default, while 83.7% (35,047 of 41,896) of the Confirmed

Low-Income payment arrangements, ended in default.[57] Even so, this percentage is very likely an under-count of the number of broken payment arrangements because payment arrangements entered into in more recent months will be included in the "new payment arrangement" numbers, but likely will not have reached the point of having defaulted.

Table 14. Peoples New and Defaulted Payment Arrangements (PAs)
(Residential and Confirmed Low-Income) (most recent 36 months)

	Residential	Confirmed Low-Income
New payment arrangements	71,162	41,896
Defaulted payment arrangements	55,172	35,047
Percent defaulted	71.5%	83.7%

Q. PLEASE EXPLAIN HOW ALL THIS DATA RELATES TO THE EFFICIENCY AND EFFECTIVENESS OF PEOPLES EXPENDITURES ON THE COMPANY'S CREDIT AND COLLECTION ACTIVITIES.

A. Despite these poor payment patterns, Peoples continues to substantially under-enroll low-income customers in its CAP as I describe in detail below. As documented in Table 16 below, from 2022 through 2024, the last year for which data is reported by BCS, Peoples has enrolled a small and declining percentage of its Confirmed Low-Income customers in CAP. While Peoples enrolled 27.5% of its Confirmed Low-Income customers in CAP in 2022, that percentage had declined to 22.9% by 2024.

Q. PLEASE EXPLAIN WHY ELSE ENROLLMENT IN CAP IS SIGNIFICANT?

A. Peoples' data clearly shows that CAP payment patterns are significantly better than the payment patterns of the Company's Confirmed Low-Income customers. In contrast to the arrearage and disconnection rates for Confirmed Low-Income customers discussed

[57] Peoples Response to OCA-IV-17.

above, the Company's CAP customers have a payment rate of 82.0% and 85.4% in 2024 and 2025 respectively. The "payment rates" reported to BCS are payments only by the customer. Additional payments made by LIHEAP are *not* included. In 2025, in other words, Peoples' CAP customers paid 85.4% of their bill *before* receiving LIHEAP.

Table 15. Peoples' CAP Payment Rates

	2024[58]	2025[59]
Total CAP Bills	$17,727,457	$25,157,897.49
Total CAP Payments	$14,529,472	$21,483,407.81
CAP Payment Rate	82.0%	85.4%

Q. DOES PEOPLES HAVE ALTERNATIVES TO THE COLLECTION EFFORTS WHICH IT CURRENTLY DIRECTS TOWARD ITS RESIDENTIAL CUSTOMERS?

A. Yes. Peoples seems to ignore the findings of the PUC made more than 30 years ago when the Commission first began to explore the use of CAPs by the state's utilities. According to an early Commission order regarding CAPs (sometimes referred to by a different acronym):

> We, in conjunction with utilities, and social service agencies, have all worked hard to devise ways to [e]nsure that low-income Pennsylvanians have utility services which really are necessities of life as the tragic fire deaths associated with the loss of utility service underlined.
>
> However, for the poorest households with income considerably below the poverty line, existing initiatives do not enable these customers to pay their bills in full and to keep their service … . Consequently, to address realistically these customers' problems and to stop repeating a wasteful cycle of consecutive, unrealistic payment agreements that cannot be kept, despite the best of intentions, followed by service termination, then restoration, and

[58] 2024 BCS Report, at page 63.
[59] Peoples Response to OCA-VII-18.

> then more unrealistic agreements, we believe that new approaches like PECO's CAP program and the OCA's proposed EAP program should be tried.[60]

The Commission shortly thereafter prescribed the "model" CAP, stating that such programs are "designed to be a more cost-effective approach for dealing with issues of customer inability to pay than are traditional collection methods.[61] Despite these Commission findings, Peoples is still continuing to primarily rely on "unrealistic agreements" rather than aggressively identifying its low-income customers and enrolling those customers into CAP.

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT PEOPLES DOES AN INEFFECTIVE JOB OF IDENTIFYING ITS LOW-INCOME CUSTOMERS AND ENROLLING THOSE CUSTOMERS IN CAP?

A. While Peoples reports a reasonably high percentage of Confirmed Low-Income customers, it continues to enroll a small percentage of those customers in its CAP. The data is presented in the Table below for the most recent years reported to BCS. While Peoples has identified between 73% and 78% of its estimated low-income population as being Confirmed Low-Income, it has enrolled only a fraction of those Confirmed Low-Income customers into CAP. In 2024, its CAP enrollment rate was only 22.9%.

Table 16. Estimated Low-Income, Confirmed Low-Income and CAP Participants

	2022	2023	2024
Estimated Low-Income[62]	146,971	145,831	144,472

[61] *Policy Statement on Customer Assistance Programs (CAP)*, Docket No. M-00920345, Order at 2 (July 2, 1992).
[62] 2024 BCS Report, at page 7.

Confirmed Low-Income[63]	108,055	112,886	112,624
Pct confirmed	73.5%	77.4%	78.0%
CAP participants[64]	29,760	27,236	25,738
Pct CAP participants	27.5%	24.1%	22.9%

Q. WHAT DO YOU RECOMMEND?

A. As I discuss above, Section 523 of the Public Utility Code provides that the Commission "shall" (i.e., mandatory language) consider the "efficiency, effectiveness and adequacy" of service. The statute further provides that the Commission "shall" (again using mandatory language) "give effect to this section by making such adjustments to specific components of the utility's claimed cost of service." The credit and collection expenses I discuss above are "component[s] of [Peoples] claimed cost of service." Based my findings and support above regarding the inefficiency and ineffectiveness of the Peoples expenditures, making such an adjustment is appropriate. Given the need for such an adjustment, I recommend a fifty-fifty sharing of the credit and collection expenses which Peoples most recently reported to the Commission's Bureau of Consumer Services. This adjustment is further explained in the direct testimony of OCA witness Jared Geiger.

[63] 2024 BCS Report at 6. Percent Confirmed Low-Income is Confirmed Low-Income divided by the number of estimated low-income.

[64] 2024 BCS Report at 56. Percent CAP participation is CAP participants divided by the number of Confirmed Low-Income.

Part 3. The Disparate Racial Impacts of Peoples Nonpayment Disconnections.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I examine the extent to which, if at all, the nonpayment disconnections employed by Peoples have a disparate impact on Black and African-American populations.[65] I find that they do. The distribution of nonpayment service disconnections is disproportionately weighted toward the Company's Black population.

In reaching this conclusion, I employ a disparate impact test.[66] Employing a disparate impact test differs from finding intentional discrimination. A disparate impact test finds that actions which Peoples takes (in this case the disconnection of service for nonpayment) fall more heavily on a protected class (in this case, Black and African-American customers).

Peoples is possibly not even aware of this correlation. Moreover, I make no finding that Peoples intentionally targets Black households. The lack of intentionality, however, neither addresses nor remedies the fact that Peoples disproportionately disconnects service to Black households for nonpayment. Nonetheless, it is important to shed light on to this disparate impact to ensure that it can be remedied in the near term.

[65] Hereafter, I will refer to this population as "Black."

[66] In an order filed March 24, 2026, the Commonwealth Court affirmed a prior decision of the Pennsylvania PUC declining to find racially disparate impacts for the disconnection practices of Peoples Gas. The Court did not find that no racially disparate impacts existed. Rather, the Court held that the Office of Consumer Advocate had waived its claim of "disparate impacts" on appeal. The Court held "[b]ecause the OCA did not raise its disparate impact issue before the ALJ or the Commission, we are constrained to find the issue waived on appeal." The Court made no findings as to disparate impacts. It stated: ". . .the ALJ and the Commission did not recognize the OCA's root cause analysis claim as raising a disparate impact argument and therefore made no findings as to disparate impact. . ." In this paragraph, I intend to make clear that I am employing a disparate impact analysis. *Darryl Lawrence v. Pennsylvania Public Utility Commission*, Docket No. 1346 C.D. 2024, Opinion at 15 (Mar. 24, 2026).

Peoples has previously acknowledged that its conduct could be discriminatory, even if there is a lack of any intentional discrimination and that such discrimination would be inappropriate. The Company's tariff language regarding the imposition of cash security deposits now includes language that the Company may use a "generally accepted credit scoring methodology" only "provided that the methodology does not directly, *or have the effect of*, discriminating based on a protected class as set forth in the federal Equal Credit Opportunity Act."[67] Having recognized that its actions would be objectionable if they "have the effect of discriminating," even if no "direct" or "intentional" discrimination exists, my discussion below applies this principle to an examination of the Company's nonpayment disconnections to assess whether those disconnections "have the effect of discriminating" against zip codes disproportionately comprised of Black households.

Q. UPON WHAT DO YOU BASE YOUR CONCLUSION THAT PEOPLES DISPROPORTIONATELY DISCONNECTS SERVICE TO ITS BLACK CUSTOMERS?

A. I begin by identifying two ways to identify the Black population in Peoples' service territory: (1) the number of households where the householder is Black alone;[68] and (2) the population by race (Black alone).[69] In both instances, I limit my population to Black/African-American customers alone (thus excluding multi-race households and population).

[67] Peoples Natural Gas Company, Supplement No. 2 to Gas—PA PUC No. 48, First Revised Page No. 19 (emphasis added).
[68] American Community Survey, Table B25006 (2024).
[69] American Community Survey, Table B02001 (2024).

I work with zip code data which the Company provided identifying the number of residential customers by each zip code in its service territory.[70] I matched those zip codes to Zip Code Tabulation Areas ("ZCTAs") provided by the Census Bureau. According to the Census Bureau, ZCTAs are functionally equivalent to zip codes.[71]

I calculate the percentage of households identified as having Black householders, as well as the percentage of population identified as Black, for each zip code as well as for the Peoples service territory as a whole. I identify zip codes with a percentage of Black householders and/or Black population higher than the percentage for the service territory as a whole as "Above Average Black" zip codes.[72] I also rank-ordered all zip codes from the lowest percentage to the highest percentage, and then divided that rank ordering into ten equal parts (each part of which is called a "decile"). The one-tenth of zip codes with the highest percentage Blacks (householders, population) is the "tenth decile" with the one-tenth of zip codes with the lowest percentage being the "first decile."

Q. WHAT DID YOU FIND?

A. The data shows that Above-Average Black zip codes face a disproportionately high number of nonpayment disconnections in the Peoples service territory. Table 17 below shows that:

[70] Peoples' Response to OCA-IV-4. Zip codes that did not have at least one (1) residential customer were excluded.
[71] Hereafter, I will refer to this as "zip code" data.
[72] For example, solely to illustrate, the Peoples service territory as a whole identifies 6.7% of its households as having Black householders. It identifies 7.2% of its total population as being Black. In comparison, zip code 15001 has 12.0% of its households identified as having a Black householder and 11.5% of its population as being Black. Zip code 15001 is thus identified as an "Above Average Black" zip code.

- While 30.07% of all residential customers[73] live in Above-Average Black zip codes (householders), 42.97% of all residential nonpayment disconnections[74] occur in those zip codes. Similarly, while 30.92% of all residential customers live in Above-Average Black zip codes (population), 43.80% of all residential nonpayment disconnections occur in those zip codes.
- The pattern does not change if the data is limited to Confirmed Low-Income customers (rather than extending to all residential customers). While 32.73% of all Confirmed Low-Income customers live in Above-Average Black zip codes (householders),[75] 45.42% of all Confirmed Low-Income nonpayment disconnections occur in those zip codes. Similarly, while 33.40% of all Confirmed Low-Income customers live in Above-Average Black zip codes (population), 46.13% of all Confirmed Low-Income nonpayment disconnections occur in those zip codes.

Table 17. Total Population, Disconnect Notices and Nonpayment Disconnections

	Total Residential		Confirmed Low-Income	
	Above-Average Black (householders)	Above-Average Black (population)	Above-Average Black (householders)	Above-Average Black (population)
Percentage of total customers (CLI customers)	30.07%	30.92%	32.73%	33.40%
Percentage of nonpayment disconnection	42.97%	43.80%	45.42%	46.13%

The same results are found when I examine the data based on deciles. For residential customers, I find that while 28.80% of all residential customers reside in the Tenth Decile

[73] Peoples' Response to OCA-IV-4.
[74] Peoples' Response to OCA-IV-16.
[75] Peoples' Response to OCA-IV-4.

of zip codes measured by Black householders, 41.34% of all residential nonpayment disconnections occur in those zip codes. A similar pattern presents itself when the deciles are based on Black population rather than on Black householders.

Q. IS YOUR FINDING OF DISPARATE IMPACTS REGARDING UTILITY NONPAYMENT DISCONNECTIONS UNIQUE TO PEOPLES?

A. No. A 2024 article published in The Electricity Journal[76] reported its "main finding" to be that "living in neighborhoods with a greater concentration of people of color is associated with a meaningfully higher involuntary disconnection rate, even after controlling for economic and demographic factors." According to these researchers,

> The robust statistical associations between race, utility disconnection, and long-duration service disruptions reflect a landscape of systemic inequality within the energy system. Our finding that these associations are robust to a battery of controls highlights the persistence of racial disparity that cannot be explained by observed economic and non-racial demographic factors … . Our finding of robust racial disparities in disconnections emphasizes the persistence of unequal experiences in one of the most severe forms of energy insecurity that cannot be explained by contemporary economic and non-racial demographic factors.

The researchers stated, as I also do above, that "[i]t is crucial to note that these patterns of inequality in energy insecurity do not themselves imply intentional racial bias on the part of electricity system planners or utilities, but rather, point to patterns that may have been unintentionally overlooked."[77] They concluded, as do I, that "[w]hile we do not believe that our findings necessarily imply deliberate racial bias on the energy system planners' part, this does not negate the potential for utilities and policymakers to take proactive

[76] Pradhan & Chan, *Minnesota's energy paradox: Household energy insecurity in the face of racial and economic disparities*, 37 The Electricity J. 8 (July 2024).
[77] *Id.* at 10.

steps toward fostering equity in the electric system through the principles of energy justice." They urged, as do I, that their research (as does mine):

> highlights the urgent need for policy interventions to rectify deep-seated disparities, ensuring access to reliable, high-quality utility services for all people, irrespective of their socioeconomic or racial backgrounds. Moving forward, energy justice goals suggest that energy decision makers should not merely avoid deliberate injustices but should create systems that ensure fairness and equity, particularly as the energy system is poised to see once-in-a-generation infusions of capital to decarbonize the economy.[78]

I conclude that Peoples should recognize that its disconnection of service for nonpayment has a disparate impact on its Black neighborhoods. Having, itself, recognized the legitimacy of applying an "effects test" as a means of measuring the impacts of its actions, there is no need for Peoples to take on the burden of defending against a claim of "intentional discrimination," which claim is not being levied. Nonetheless, Peoples should recognize the disparate impacts and undertake the analytic efforts to understand why those impacts exist and what can and should be done to address them.

Q. WHAT DO YOU RECOMMEND?

A. I recommend that Peoples conduct a root cause analysis to determine what is driving this disproportionate level of utility disconnections within the Company's service territory. Once this root cause analysis is conducted, Peoples should commit to taking steps to address the cause with the commitment of reducing the disproportionate level of disconnections. The extent to which Peoples mitigates the disproportionate disconnection of service for nonpayment in zip codes with high penetrations of Black households should be reviewed in Peoples' next base rate case.

[78] *Id.*

Part 4. Limiting the Collection and Retention of Social Security Numbers.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I review the practice of Peoples in collecting and retaining customer Social Security Numbers ("SSNs"). I recommend that Peoples be directed to develop and adopt, within 12-months after a final order in this proceeding, an alternative to the use of SSNs.

Q. PLEASE DESCRIBE PEOPLES PRACTICES REGARDING THE COLLECTION AND RETENTION OF SOCIAL SECURITY NUMBERS.

A. According to Peoples, while a customer may not be required to provide their Social Security Number, when requested to do so, "Peoples Natural Gas Company LLC may ask customers to provide their social security number to verify identity and check credit risk score when an applicant is applying for gas service."[79] Moreover, the Company retains those Social Security Numbers in perpetuity. When asked, Peoples stated that "Peoples Natural Gas Company LLC does maintain records with customers' social security numbers that have been used to establish utility service."[80]

Q. HOW DO YOU RESPOND TO THE COMPANY'S COLLECTION AND PERMANENT RETENTION OF SOCIAL SECURITY NUMBERS?

A. In response to the growing use of SSNs in enabling the crime of identity theft, the PUC should join the growing consensus that institutions, such as Peoples, that have collected

[79] Peoples Response to OCA-V-6.
[80] Peoples Response to OCA-V-7.

SSNs in the past refrain from, or be prohibited from, collecting such SSNs in the future, and that Peoples be directed to seek out alternatives to the collection and use of SSNs.[81]

Q. PLEASE EXPLAIN THE BASIS FOR YOUR CONCLUSION THAT PEOPLES SHOULD BE DIRECTED TO REFRAIN FROM THE COLLECTION AND RETENTION OF SOCIAL SECURITY NUMBERS AND TO DEVELOP AN ALTERNATIVE TO THE COLLECTION AND RETENTION OF SUCH PERSONAL DATA.

A. The use of SSNs by private entities is one of the leading causes of identity theft. SSNs, along with a person's date of birth and name, are the three most sought-after pieces of personal information sought by identity thieves. According to the 2007 report of the Presidential Task Force on Identity Theft, a person's SSN is the ***single*** most important piece of personally identifiable information available to identity thieves. Unlike names and addresses, which can change over a person's lifetime, it is "virtually impossible" for a person to change his/her SSN.[82]

SSNs are viewed as a "breeder document" by identity thieves. With a Social Security Number, an identity thief can create other false documents supporting a false identity,

[81] According to the FTC: "Concerns about over-use of SSNs and their role in identity theft have increased in recent years. In a recent consumer survey, 66 percent of the respondents stated that companies should stop using SSNs to identify customers and 64 percent perceived that they were more vulnerable to identity theft when a business had their SSN." *Staff Summary of Comments and Information Received Regarding the Private Sector's Use of Social Security Numbers,* FTC at 2 (Nov. 2007).

[82] Unlike a lost key, the social security number cannot be changed merely because it has been lost or stolen. "Identity Theft and Your Social Security Number," Social Security Administration, Pub. No. 05-10064, Oct. 2007, at 6, available at http://www.ssa.gov/pubs/10064.pdf. There must be evidence that (1) someone is in fact wrongfully using the number, and (2) that the individual to whom the number belongs is being disadvantaged by the wrongful use.

including a driver's license, retail credit account, credit card account, bank account, and similar papers. Indeed, given the lack of a standard protocol for truncating SSNs, even truncated SSNs are not helpful in preventing identity theft. While some businesses truncate the first five digits of an SSN, other businesses truncate the last four. Not only can SSNs thus be reformulated with information from multiple sources, but those multiple sources need also not be illicitly gained. Public documents such as tax liens, driving histories, voter registrations, bankruptcies, and the like, are all publicly available information which might be used to match all or part of an SSN obtained from a utility record with a specific individual.

Q. IS THERE GENERAL GUIDANCE TO REDUCE THE USE OF SOCIAL SECURITY NUMBERS?

A. Yes. There has been clear direction in recent years to reduce, and eliminate where possible, the unnecessary collection of SSNs. In 2007, the federal Office of Management and Budget ("OMB") issued a memo requiring federal agencies to examine their use of SSNs in systems and programs in order to identify and eliminate instances in which collection of SSNs is unnecessary. OMB required agencies to explore alternatives to their use of SSNs. Like OMB's guidance to federal agencies, the Federal Trade Commission ("FTC") has urged a reduction in the use of SSNs in the private sector. FTC testified to Congress that there was a need to eliminate the unnecessary use of SSNs. The FTC cited the observation of the Presidential Task Force on Identity Theft that it is not clear whether the use of SSNs by the private sector was a necessity, or a result of "convenience and

habit."[83] The President's Task Force stated quite simply in 2007 that "more must be done to eliminate unnecessary use of SSNs."[84] Moreover, the FTC has, in its publication, A Guide for Business: Protecting Personal Information, *explicitly* recommended with respect to private sector collection and retention of Social Security Numbers: "*Don't use* Social Security Numbers unnecessarily— for example, as an employee or *customer identification number*, or because you've always done it."[85]

The advice of Peter Swire should also be considered here. Swire was the Chief Counselor for Privacy in the Office of Management and Budget for President Bill Clinton's Administration. "Social Security Numbers," Swire said, "are an aging technology, and we have to do serious planning for what will come next."[86] Swire's comment was responding to a study published in the proceedings of the National Academy of Science by, Acquisti and Gross, researchers at Carnegie Mellon University. The Acquisti and Gross study was able to identify, through a computer statistical analysis, the first five digits of a person's SSN for 44% of persons borne after 1988, and for 7% of those born from 1973 to 1988.[87] The accuracy of the prediction system increased for smaller states and for people born after 1988. While the researchers were able to predict all nine digits of an SSN for 8.5% of those born after 1988 in fewer than 1,000 attempts (testing the data on a half million persons), they needed 10 or fewer tries to predict all nine digits for 1 out of 20 Social

[83] *Combating Identity Theft: A Strategic Plan*, President's Identity Theft Task Force, 24 (2007).
[84] *Id.*
[85] *Guide for Business: Protecting Personal Information*, FTC, 6 (Oct. 2016) (emphasis added), available at https://www.ftc.gov/system/files/documents/plain-language/pdf-0136_proteting-personal-information.pdf.
[86] John Markoff, *Weakness in Social Security Numbers is Found*, New York Times, (July 6, 2009).
[87] Knowing the first five digits of an SSN easily leads to the discovery of the entire SSN. Due to different truncation protocols, while some entities truncate the first four digits of an SSN, other entities truncate the last four digits, thus allowing partial SSNs to be easily matched.

Security numbers assigned in Delaware.[88] "Unless mitigating strategies are implemented," the Acquisti and Gross study found, "the predictability of SSNs exposes them to risks of identity theft on mass scales."[89]

The concerns raised by Acquisti and Gross were somewhat mitigated when, in 2011, the Social Security Administration began to randomly assign SSNs. Prior to that change in June 2011, however: (1) the first three digits of the SSN were called the "area number" and represented the state where a person lived when the SSN was issued; (2) the next two digits were the "group number" and grouped Social Security numbers within a state into blocks of numbers; and (3) the final four numbers were the "serial number" and identified each individual within a block. The Acquisti and Gross research, in other words, still presents cause for concern. Even today, in 2026, persons who received random-generated numbers have still not even reached the age of majority.

Q. IS THERE A NEED FOR PEOPLES TO USE SOCIAL SECURITY NUMBERS TO PREVENT FRAUD?

A. No. It has frequently been found that Social Security Numbers are not good "authenticators." It is not merely consumer advocates that have expressed concern. As early as 1995, the newsletter of the Association for Computing Machinery ("ACM"), reported on the "risks of Social Security Numbers":

> The problem with social security numbers is that some organizations are using these ubiquitous numbers for identification, others are using them for authentication, and still others are using them for both. I call up my bank, tell them my account number and ask them for a balance. Just to make sure that I

[88] Acquisti & Gross, *Predicting Social Security Numbers from Public Data*, Proc. Nat'l Acad. Sci. USA 106:10975-10980 (2009) .
[89] *Id.*

> am really who I claim to be, my bank asks for my SSN—as if this is a number that is some kind of secret that we share.
>
> But my SSN isn't secret—and there is no way to make it that way in today's increasingly cross-indexed society. That's because for every organization that thinks your SSN should be kept secret, there's another that is using it as some kind of account number, leaving it open for all of the world to see.[90]

There are three more effective and safe ways for a person to authenticate who they are: (1) by something they *know* (like a PIN or password); (2) by something they *have* (like a physical device or token); or (3) by something they *are* (like a physical characteristic such as a fingerprint, or an age and birthdate). Authenticators should not be widely known, perhaps even should be secret. The problem is that SSNs are *widely* known,[91] and even if not known, can be accurately predicted by computer statistical analysis as shown by the Carnegie Mellon research discussed immediately above. The historic use of SSNs as an authenticator by Peoples is not a sufficient reason for the Commission to approve the continued collection and use of SSNs.

Q. WHAT DO YOU CONCLUDE?

A. SSNs are an "aging technology" and private sector entities relying on SSNs, such as Peoples, need to do serious planning on what will come next. Research, including but not limited to[92] that research published in the proceedings of the National Academy of

---

[91] *See e.g.*, Given, *Uses of Social Security Numbers in the Private Sector: Why SSNs are not Appropriate for Authentication*, (Dec. 2007) (Privacy Rights Clearinghouse presentation to the Federal Trade Commission Workshop "Security in Numbers: SSNs and ID Theft").

[92] *See*, *Protecting American's Identities: Examining Efforts to Limit the Use of Social Security Numbers*, U.S. House of Representatives, Hearing Before the Committee on Oversight and Government Reform (May 23, 2017), available at ; *see also*, Chris Mack, *The Move to Eliminate Social Security Numbers,* Extract (March 3, 2020), https://www.extractsystems.com/the-move-to-eliminate-social-security-numbers/ ("At the 2020 RSA Cybersecurity Conference last week, the head of the Cybersecurity and Infrastructure Security Agency (CISA) reiterated that the country needs to move away from SSNs for identification. The past few years have seen numerous high-profile data

Science discussed above, concludes that industry and policy makers need to "reassess our perilous reliance" on SSNs. The federal government has told all federal Executive Agencies to "eliminate the unnecessary collection and use" of SSNs. The Presidential Task Force on Identity Theft concluded that "more must be done to eliminate the unnecessary use of SSNs." No reason exists for Peoples to lag behind in eliminating or minimizing the collection and retention of SSNs. There is a distinct move to find alternatives to the use of SSNs to help reduce the threat of identity theft.[93] The Commission should direct Peoples join in those efforts. Peoples should be directed to report to the Commission, within 12 months of a final decision in this docket, its plan to eliminate the collection and retention of customer Social Security Numbers. This plan should include a plan for elimination of the SSNs currently retained in Company information technology.

At a minimum, Peoples should be directed to: (1) refrain from retaining SSNs from customers for more than 30-days after the customer establishes service; (2) refrain from

breaches and we've reached a point where up to an estimated 80% of Americans' SSNs have already been exposed.").

[93] *See e.g.*, *Social Security Number Collection and Use Reduction*, U.S. Department of Homeland Security (Jan. 18, 2019) ("With this Instruction, the Department of Homeland Security (DHS) Chief Privacy Officer: (A) Requires the elimination of the unnecessary collection, use, maintenance, and dissemination of the Social Security number (SSN) by DHS programs, systems, and forms; or (B) Requires the use of a unique alternative identifier to the SSN; or (C) Requires the use of privacy-enhancing SSN alternatives when there are technological, legal, or regulatory limitations to eliminating the SSN."); *see also*, Carten Cordell, *OPM Rule Removes Social Security Numbers From Mailed Documents*, Government Executive (Apr. 12, 2024), https://www.govexec.com/management/2024/04/opm-rule-removes-social-security-numbers-mailed-documents/395700/ ("The Office of Personnel Management issued a final rule Friday that would cull Social Security numbers from any mailed document in an effort to prevent fraud. The rule, which was published in the Federal Register, is part of the implementation of the 2017 Social Security Number Fraud Prevention Act and is designed to help protect the identifiers, which can be used in various forms of identity theft. . .The federal government has been working on reducing the use of SSNs as identifiers since at least 2006, when the Identity Theft Task Force, created by a George W. Bush executive order, called for the Office of Management and Budget and OPM to find ways to eliminate, restrict or conceal SSN use.").

providing a customer SSN to any entity outside of the Company; and (3) notify the customer, at the time the customer is asked to provide his/her/their SSN that, in the absence of the first two steps outlined above, that the SSN will be retained in perpetuity and that the SSN will be provided to a multi-national credit firm, to allow the customer to take such notice into account in deciding whether to provide their SSN.

Part 5. Proposed Modifications to Peoples Universal Service Tariffs.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the proposal of Peoples tariffs regarding the Company's Customer Assistance Program ("CAP"). First, Peoples witness Rita Black proposes that the CAP regulations be modified so as to remove customers from CAP for engaging in "recreational gas use."[94] Second, witness Black proposes to modify CAP regulations to remove CAP customers for obtaining CAP benefits "through fraudulent means."[95] Third, Peoples witness Scanlon proposes to limit the CAP Rider offset both in terms of the number of customers to which it applies and in terms of the extent of the offset.[96]

The rates proposed by Peoples in this proceeding will exacerbate these affordability problems even more. At proposed rates, 238 of the 402 Peoples' zip codes would have bills that exceed an affordable bill at proposed rates by $1,000 or more at the average Q1 income for each zip code.

[94] Peoples St. 10 at 8.
[95] *Id.* at 8.
[96] Peoples St. 3 at 4-5.

A. Proposed Modifications to CAP Operation Rules.

Q. PLEASE EXPLAIN YOUR RESPONSE TO THE PROPOSAL TO REMOVE CUSTOMERS FROM CAP FOR ENGAGING IN "RECREATIONAL GAS USE."

A. In proposing to remove low-income customers from CAP for engaging in "recreational gas use," Peoples witness Black does not offer a comprehensive definition of what constitutes a "recreational gas use." Instead, she provides a list which even she indicates includes uses "such as, but not limited to," designated types of interior and exterior uses. Ms. Black's list includes "heaters and other cooking appliances," both of which she does not define what types Peoples considers "recreational." She asserts that "gas lamps" are "recreational" even if some customers might consider such lamps to be security-oriented rather than recreational.

A substantially greater problem with Ms. Black's proposal, however, has to do with enforcement. Ms. Black offers no insights into how Peoples would *suspect* a customer of engaging in "recreational gas uses," nor how the Company would *confirm* that the customer is engaging in such prohibited uses. Enforcement, also, goes unexplained when she states that "[u]njustified usage as a result of recreational gas use will be billed to the customer."[97] In order to engage in such billing, however, the Company would not only need to confirm the *presence* of the prohibited recreational appliances, but would need to confirm the *frequency and extent* of usage of those appliances. The proposal advanced by the Company is replete with speculation and presents an unreasonable risk that CAP customers in need will be unjustifiably denied access to necessary assistance.

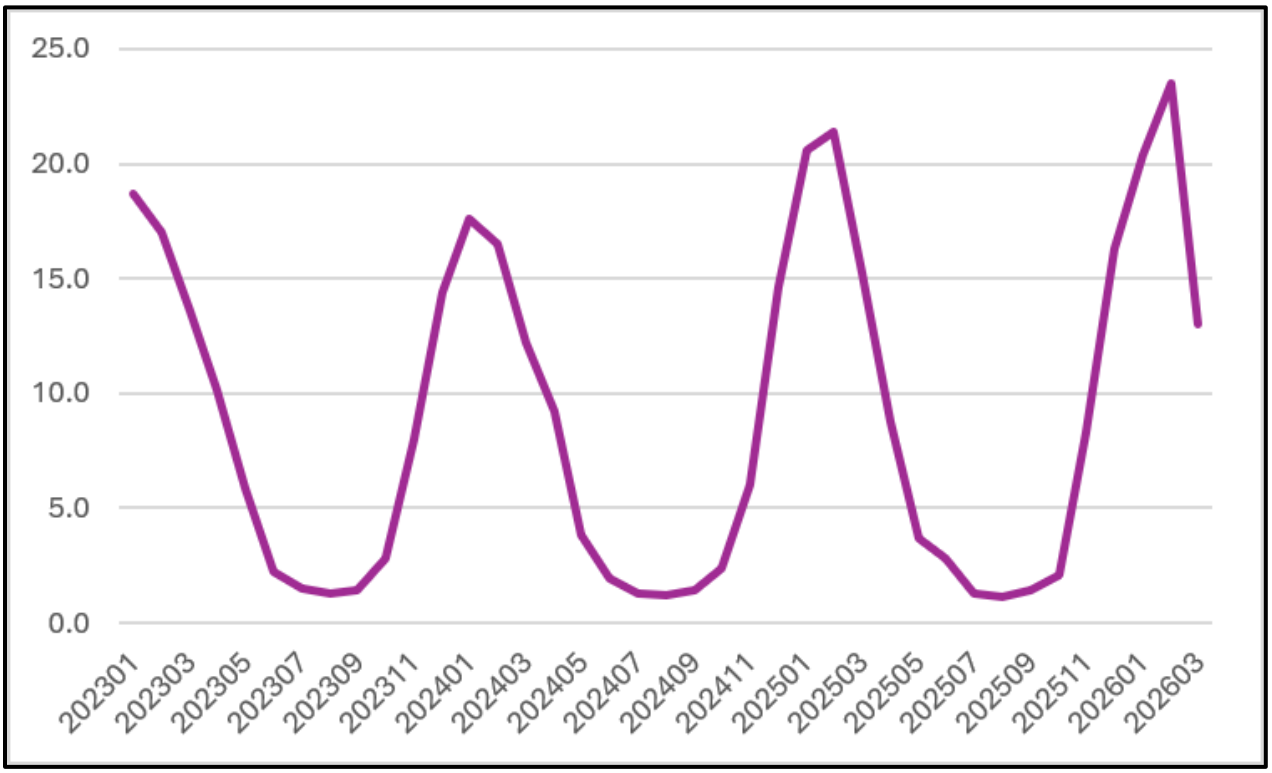
[97] Peoples St. 10 at 8.

In addition, while the tariff provides an appeals process for the "denial of eligibility," it does *not* provide for that appeals process to extend to the amount of billing for what Ms. Black refers to as "unjustified use."

Finally, Ms. Black offers no testimony on the scope of the problem which Peoples is seeking to address through its policing of whether CAP participants are using "recreational gas" for things such as gas fire places and gas grills. Confirming the presence of such use, and the extent of such use (needed, again, in order to bill the CAP participant for the "unjustified" use), would involve an unspecified cost. Ms. Black makes no effort to document that the cost of providing CAP credits for such "unjustified use" would be more than the combined cost of (1) policing CAP participants to determine whether, and to what extent, such use is occurring; (2) enforcing the ban through the removal of CAP participants and determining the appropriate amount to be billed for the "unjustified use;" and (3) collecting that billing for the unjustified use.

Ms. Black carries a burden to demonstrate that the recreational gas usage engaged in by CAP participants, of which she has not documented, is anything but de minimis. The Figure below presents the median gas use of CAP participants by month. Engaging in the not unreasonable assumption that low-income CAP participants are likely not using gas grills, hot tubs, or pool heaters during Pennsylvania's winter months, it is simply not clear where the "problem" that Ms. Black is seeking to resolve is presenting itself.

Figure 5. Median CAP Gas Use by Month (October 2023 – March 2026)



The "recreational gas" proposal advanced by Ms. Black appears to be a solution in search of a problem. It should be denied.

Q. PLEASE EXPLAIN YOUR RESPONSE TO THE PROPOSAL TO REVERSE AND REBILL CAP BENEFITS IF THE PARTICIPANT IS ALLEGED TO HAVE BEEN OBTAINING CAP BENEFITS "THROUGH FRAUDULENT MEANS" INCLUDING "FAILURE TO REPORT ALL INCOME."

A. The Peoples proposal to reverse CAP benefits for participants who "obtain benefits" "through fraudulent means" presents many of the same problems as its proposed ban on recreational gas usage. The Company does not define what entering the program "through fraudulent means" consists of, other than to provide one example: "failure to report all income."

One major problem with the Company's proposal is its failure to define "fraudulent means." A "failure to report all income" could be the result of mistake more than it is evidence of "fraud." Moreover, given the uncertainty of income sources relied upon by low-income customers, with the lack of routine recordkeeping, it cannot *ipso facto* be argued that any "failure to report all income" is necessarily engaging in "fraudulent means."

The Company's proposal represents a substantial over-reach as well. It is not limited to allegations of fraud merely at the time of application. A CAP participant "obtains benefits" throughout their participation in CAP. Under its proposal, Peoples could at any time accuse the participant of a "failure to report all income" and seek to rebill that CAP participant for the CAP credits "incorrectly received." Under the tariff language proposed, in other words, a customer who has participated in CAP for 18 months could be accused of a "failure to report all income" for the CAP benefits received in Month 9 through Month 13 due to a failure to report all income during that time period.

The Company does not explain how it will treat variable or seasonal incomes. A CAP participant may have an increase in income during certain seasons of the year, but a decline in income in other seasons. The annual income would be sufficient for the CAP participant to retain eligibility. Under the Company's proposal, their "failure to report all income," however, would subject them to being back-billed for CAP benefits "incorrectly received" during their months of increased income.

The Company's enforcement of its proposal, continuously monitoring CAP participant income to determine whether the participants have "reported all income" would largely

render the Commission's decision to expand income recertification periods moot. Rather than being able to rely on the extended recertification period, a customer would be under a continuous obligation to "report all income" at the risk of being billed for CAP benefits "incorrectly received" due to a failure to do so.

The Company's proposal is flawed, also, because of its failure to impose a period of repose the expiration of which would insulate a CAP participant from being accused of a failure to report all income. The Company's tariff leaves the time period open-ended during which it can seek to bill for CAP benefits "incorrectly received." Doing so imposes unreasonable record-keeping requirements on the CAP participant, who would never know whether they will be challenged on a failure to report all income. Even then, the CAP participant would be placed in the difficult, if not impossible, position of needing to prove a negative. If Peoples argues that the CAP participant ***did*** receive income which the participant did not report, the CAP participant would be in the position of documenting that they did ***not*** receive such income. Peoples should, at a minimum, explain how a CAP participant can prove what income they did *not* receive in a given time period.

Finally, as with its prohibition on "recreational gas use," Peoples has made no showing of the costs that it is trying to prevent or, conversely, of the costs it would incur in the process of implementing its proposal. Ms. Black offered no testimony on the scope of CAP benefits being provided to participants who are "obtaining" such benefits through fraudulent means. The Company did not even define the problem (using the "such as" language instead) let alone present the scope and cost of the problem. This proposal is yet another example of a solution in search of a problem.

The proposal advanced by Ms. Black to allow the Company to back-bill CAP participants for CAP benefits obtained "through fraudulent means" is fatally flawed. It should be rejected.

B. Proposed Modification to CAP Rider Offset.

Q. PLEASE EXPLAIN YOUR RESPONSE TO THE PROPOSAL TO MODIFY THE CAP RIDER OFFSET.

A. Witness Scanlon testifies that "The Company is proposing revisions to the bad debt offset calculation in this proceeding. . .to align both the CAP participation level and the uncollectible percentage used in the bad debt offset calculation with more recently experienced trends." Scanlon states that, Peoples proposes the threshold amount to trigger the bad debt offset calculation be increased to CAP enrollment in excess of 39,010. Moreover, Scanlon recommends setting the universal service offset at 1.93% to reflect the recent residential write-off percentage.[98]

While I do not object to updating either of the numbers that Ms. Scanlon references, neither of her proposals is appropriate.

Q. PLEASE ADDRESS MS. SCANLON'S PROPOSED BASE CAP PARTICIPATION NUMBER OVER WHICH THE OFFSET WOULD BE APPLIED.

A. Peoples has not historically been good at projecting CAP participation for purposes of setting a base over which a CAP offset will apply. For example, in its 2023, base rate case, Company witness Scanlon, in her December 2023 testimony, projected that the base

[98] Peoples St. 3 at 5.

CAP participation would reach 33,800 customers.[99] In fact, by December 2024, actual CAP participation for Peoples had reached only 26,753 customers.[100] In the twelve months ending November 2025 (the last month for which Peoples provided actual rather than projected data), the average CAP participation rate was only 35,200.[101]

Rather than relying on an estimate or projection provided by the Company, I recommend that Peoples adopt the same process for establishing a base CAP participation as other Pennsylvania utilities have adopted. The base number should be set at the month-end participation as of the month of a Final Order in this proceeding.

Q. PLEASE ADDRESS THE PERCENTAGE OFFSET WHICH MS. SCANLON PROPOSES BE APPLIED.

A. Ms. Scanlon proposes to apply a "bad debt" offset equal to the write-off percentage equal to the recent three-year average of residential uncollectible activity. She testifies that the three-year average residential uncollectible rate is 1.93%. This recommendation represents a reduction from the existing offset of 4.7% now included in the Peoples Universal Service Rider. Ms. Scanlon's proposal is a substantial change from the recommendation she made in Peoples 2023 rate case. In that proceeding, Ms. Scanlon recommended as follows:

> The Company proposes to reflect a bad debt offset amount of 4.70% in the first universal service update filing (after the initial compliance filing described above) upon approval in this case. This percentage is determined by dividing the gross write-offs in dollars for confirmed low-income customers by the annual residential revenues for confirmed low-income

[99] *Pa PUC v. Peoples Natural Gas Company LLC*, Docket No. R-2023-3044549, Peoples St. 3 at 29[hereafter "2023 Scanlon"].
[100] Peoples Response to OCA-IV-1.
[101] Peoples Response to OCA-IV-5.

customers as reported in the Commission's Universal Service Programs and Collections Performance 2022 Report.[102]

She offers no evidence in support of why she proposes to change the CAP offset from being based on Confirmed Low-Income data to being based on total residential data.

Using the same methodology here as was proposed by Ms. Scanlon in Peoples last rate case (i.e., the write-off for Confirmed Low-Income as published in the most recent BCS annual report on collections performance and universal service programs), the appropriate offset to be set in this proceeding would be 8.1%.[103] Using a two-year average would result in an offset of 7.4%. Using a three-year average to establish the CAP offset would be inappropriate. In 2022, the Company was still operating under Commission-imposed collection restrictions attributable to COVID. Even BCS noted, in its 2023 annual report, that "[b]oth EDCs and NGDCs reported the COVID-19 pandemic had impacted some of their metrics for 2022, *but the 2023 metrics are showing minimal impact*."[104] If the Company wants to use a multi-year average, it should use a two-year average for 2023/2024, for which the COVID collections restrictions "are showing minimal impact."

Q. IS THERE ANY OTHER REASON WHY MS. SCANLON'S PROPOSED OFFSET OF 1.93% IS UNREASONABLE?

A. Yes. The offset to be applied to the Universal Service Rider should reflect not merely uncollectibles, but should reflect an avoided working capital expense as well. As I described above, Peoples' own independent evaluation of its CAP program found that

[102] 2023 Scanlon, supra note 99, at 29.
[103] 2024 BCS annual Report on Universal Service Programs and Collections Performance, at 34.
[104] 2023 BCS annual Report on Universal Service Programs and Collections Performance, at 1 (emphasis added).

participation in CAP improved the payment coverage ratio (i.e., the percentage of bill actually paid) by 36% relative to the payments made by other comparison-group low-income customers. Moreover, as I discuss in detail above, in the most recent twelve months available (ending March 2026), the average Confirmed Low-Income residential arrears was $519.37.[105] In contrast, in the most recent year of data (2024), Peoples reported that its CAP customers paid 82% of their bill (even excluding payments made by energy assistance).[106] From a rate perspective, the avoided working capital associated with these improved payment patterns associated with CAP participation is important because working capital is a capital expense. As such, it has a return on equity associated with it which, in turn, has a tax component associated with it. Every $1 in reduced working capital, in other words, will yield greater than $1 in reduced total expenditures.

Based on the data above, I recommend that the CAP offset be established in the same fashion it was established in the Peoples 2023 base rate case. An offset of 8.1% is reasonable. The offset of 1.93% proposed by Company witness Scanlon should be rejected.

C. The Allocation of CAP Costs Among Customer Classes.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I explain why it is reasonable for the Commission to decide that now is the appropriate time to allocation a portion of CAP costs to all customer classes. The Commission has previously determined that allocating CAP costs

[105] Peoples Response to OCA-IV-10.
[106] 2024 BCS annual report at 64.

between all customer classes is lawful.[107] Indeed, as recently as the Commission's 2026 Order in Docket M-2025-3054271,[108] the Commission held "We agree with CAUSE-PA and TURN that the Commission has the authority to require other customer classes, not just the residential class, to contribute to the costs of universal service programs and that we do have an obligation to ensure that electric service is available to all customers on reasonable terms and conditions."[109]

The purpose of this section of my testimony is to explain why doing so is not merely lawful, but also is reasonable. The allocation of CAP costs among all customer classes involves allocating the cost of a public good, amongst all customer classes, not just the residential class.

Q. PLEASE ADDRESS WHETHER CAP COSTS ARE "CAUSED" BY THE RESIDENTIAL CLASS.

A. The cost of providing service through the Company's CAP program is not a cost that has a cost causation that can be limited to the residential class. The Commission has previously recognized that universal service costs are caused by factors endemic to society as a whole. They are not caused by factors specific to residential customers. In its 2019 Order revising the CAP Policy Statement, the Commission explicitly found that "poverty, poor housing stock, and other factors that contribute to households struggling to

[107] "We note there is no statutory or appellate prohibition that limits the recovery of CAP costs, whether specifically calculated or as part of total universal service costs, to funding from the residential class. Universal service funding from non-residential classes, while not mandatory, is permissible." *2019 Ammendments toCAP Policy Statement*, Docket No. M-2019-3012599, Order at 96 (Nov. 5, 2019).
[108] *Interconnection and Tariffs for Large Load Customers*, Docket No. M-2025-3054271, Order (April 30, 2026) [hereinafter *Large Load Final Order*].
[109] *Id.* at 107.

afford utility service are not just 'residential class problems.'" Not only did the Commission explicitly find universal service program to further not merely the interests of residential customers, but to further a broader "public purpose," but it concluded that "the *General Assembly clearly identified the public purpose of these programs* in the Competition Acts by requiring that their costs be nonbypassable"[110] The Commission explicitly found that "[c]early, there is a persuasive argument to be made that home heating and energy assistance for low-income households serves a public good whose responsibility is not merely other residential ratepayers."[111]

Q. HAVE YOU FOUND EVIDENCE THAT CONTINUES TO SUPPORT THE PRIOR COMMISSION FINDING THAT CAP ASSISTANCE "SERVES A PUBLIC GOOD WHOSE RESPONSIBILITY IS NOT MERELY OTHER RESIDENTIAL RATEPAYERS"?

A. Yes. Table 18 below the average income for CAP participants, average household size for CAP participants, and the income at 100% of Federal Poverty Level ("FPL") for a two-person household. As is evident, the average income for Peoples CAP participants is falling further and further below 100% of FPL for a two-person household. This occurs even though the average household size for a CAP participant is substantially greater than 2-persons.

Table 18. CAP Participant Characteristics[112]

	Avg HH Size	Avg CAP Income	100% FPL (2-person HH)	Pct Employed
2020	2.44	$14,754	$17,240	33%

[110] *Id.* (emphasis added).
[111] *Id.* at 94-95.
[112] Peoples' response to OCA-IV-01.

2021	2.46	$14,808	$17,420	36%
2022	2.45	$15,057	$18,310	41%
2023	2.45	$16,172	$19,720	23%
2024	2.50	$16,164	$20,440	39%
2025	2.50	$16.295	$21,150	36%

This declining income can in large part be attributed to the performance of the economy as a whole, which includes non-residential customers. Consistently over the past six years, one-third or more of the Company's CAP participants have been employed. The fact that the wages received by these households leave them with a poverty-level income can be attributed to the wage-payer as much as it is attributed to the wage-earner. The fact that CAP participants with employment income still have income less than the FPL for a two-person household is a societal problem, not a residential problem.

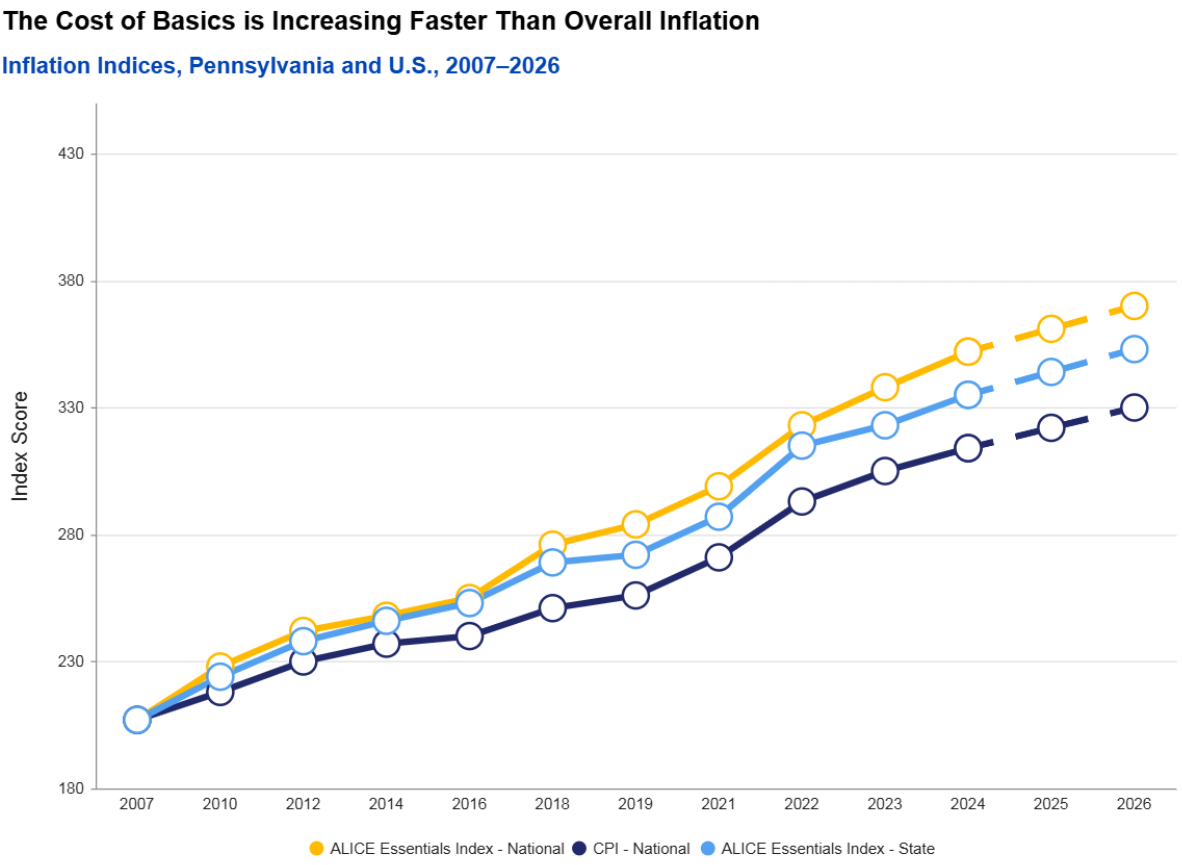
Q. IS THERE A FURTHER POLICY REASON TO BE CONCERNED ABOUT THE CONSEQUENCES OF SPREADING THE COSTS OF CAP OVER ONLY THE RESIDENTIAL CUSTOMER CLASS?

A. Yes. There are two groups of residential customers about whom the Commission should have particular concern in this period of extraordinary concern about affordability. Group 1 is that population of residential customers who may be income-eligible for CAP but who, for whatever reason, do not participate in CAP. Group 2 is that population of residential customers who have income just over the maximum income eligibility and thus do not qualify to receive CAP benefits, but whose income is insufficient to allow these households to be able to afford their basic household necessities, including their monthly utility service. This line, above maximum income eligibility but below the ability to meet necessities, is often referred to as the income "cliff."

Q. ARE THERE ECONOMIC CONSEQUENCES THAT ARE COMMON TO BOTH OF THESE TWO POPULATIONS OF CONCERN?

A. Yes. One of the society-wide factors disproportionately and adversely affecting both of these populations of concern today involves the extraordinary rate of inflation which has beset the economy. There is no question that inflation has a disproportionately harmful impact on low- and moderate-income households. In Pennsylvania, the United Way reports in its ALICE analysis that "in Pennsylvania, the ALICE Essentials Index also increased faster than the national CPI … And like the national trend, essential costs in Pennsylvania increased at a faster rate following the pandemic (5.3% annual increase in the ALICE

Essentials Index from 2021 to 2024, compared to 2.3% between 2007 and 2019)."[113]



As can be seen, the gap between the increasing cost of essentials and the rate of inflation is becoming larger each year in Pennsylvania.[114] Repeated rate cases filed by the Company, including these cases where the Company seeks an ever-increasing return on

[113] *The State of ALICE in Pennsylvania: Costs Over Time: The ALICE Essential Index,* available at https://www.unitedforalice.org/costs-over-time/pennsylvania.

[114] United for ALICE explains the difference between its "Essentials Index" and the Consumer Price Index (i.e., the "rate of inflation" as follows: "The ALICE Essentials Index measures change over time in the cost of the household essentials that matter most to ALICE and poverty-level households: housing, child care, food, transportation, health care, and basic technology. The standard measure of inflation in the U.S., the Bureau of Labor Statistics' Consumer Price Index (CPI), tracks a much larger basket of over 200 categories of goods and services--including items that financially insecure households can't afford on a regular basis, like full-service meals at restaurants, wine, major appliances, travel, and jewelry. Tracking costs over time using the CPI alone can conceal important changes in the costs of household essentials." *Id.*

equity, is one of the factors pushing the Essentials Index higher faster than the rate of inflation is increasing.

Q. IS THERE REASON TO HAVE PARTICULAR CONCERN ABOUT THE IMPACT OF THE COMPANY'S INCREASING RATES, INCLUDING ITS USP RIDER, ON THE ELIGIBLE-BUT-NOT-PARTICIPATING LOW-INCOME CUSTOMERS?

A. Yes. Failing to address the allocation of CAP costs exclusively to the residential class will create a downward spiral that will harm everyone. As universal service costs are charged to income-eligible non-participating customers, the bills to those non-participants will become increasingly unaffordable. As bills become increasingly unaffordable, more and more of those customers will enroll in CAP. As more and more customers enroll in CAP, the CAP costs charged to remaining income-eligible nonparticipants will increase even more. And the cycle thus begins anew. As CAP participation increases, CAP costs increase thus creating even more CAP participants, which creates more CAP costs, and on it continues.

Q. IS THERE REASON TO HAVE A PARTICULAR CONCERN ABOUT THE IMPACT OF THE COMPANY'S INCREASING RATES ON RESIDENTIAL CUSTOMERS WHO HAVE INCOMES JUST BEYOND THE "CLIFF" THAT YOU IDENTIFIED ABOVE?

A. Yes. As the Company's bills become increasingly unaffordable, those customers who have "too much" income to qualify for CAP, but too little money to be able to afford their utility bills, will face increasing payment difficulties. Since public purpose programs do not exist to meet the needs of these customers who have income beyond the "cliff," the

increasing inability-to-pay will create additional costs to the Company, in terms of lost revenue, credit and collection expenses, working capital expenses along with the associated return on equity and tax impacts), bad debt, and the like. Again, as a result, the utility enters into a spiral of self-reinforcing harm to everyone. As these additional costs get incorporated into standard rates, rates to all residential customers will increase, thus making bills even more unaffordable to those with income just beyond the cliff. Moreover, as rates go up, CAP costs will also go up (as the difference between bills at standard rates and bills at CAP rates increases). The increase in CAP costs not only has an impact on Population 1 (described above), but will have a spiralling impact on Population 2 as well (with hgher bills creating more inability-to-pay which causes more costs, which contribute to even higher bills, which starts the cycle anew).

Q. IS THERE A WAY TO BREAK THIS DOWNWARD CYCLE THAT YOU HAVE IDENTIFIED?

A. Yes. Allocating CAP costs to all customer classes not only interrupts the cycle that I have identified, but it does so consistent with the General Assembly's finding that universal service costs are a public good, and further consistent with the Commission's prior finding of the "public purpose" of universal service expenditures, both of which I discussed above.

Q. IF YOU HAVE A CONCERN ABOUT THE COSTS OF CAP, WHY ISN'T IT SIMPLY APPROPRIATE TO PLACE A CEILING ON CAP COSTS?

A. Placing a ceiling on CAP costs would be inconsistent with the statutory basis of Pennsylvania's universal service programs. Both the electric and natural gas competition statutes provide that the Commission has an obligation to appropriately fund utility

universal service programs.[115] Placing limits on the programs, while declining to require contributions from customer classes who both benefit from the progams and contribute to causing the need for the programs, would not be providing appropriate funding.

Q. WHAT DO YOU RECOMMEND AS A COST ALLOCATION MECHANISM?

A. I recommend that the Commission require non-residential customer classes to make an appropriate payment toward their fair share of CAP costs.[116] I recommend that the non-residential customer class payments not be "open-ended," but rather be more akin to the universal service payments which the Commission recently required of large load customers. In its recent Final Order on "large load" customers, the Commission said:

> Contributions to utility universal service programs would not only help ameliorate the impact of rising energy prices for low-income universal service program participants but will also help all residential customers by relieving some of the cost burden of these programs, which are currently borne solely by residential electric customers. However, while EDCs are free to propose what they think best in this regard, we are inclined to favor a flat fee model based upon the Large Load Customer's peak demand as opposed to a volumetric charge. Such a fee structure would be simpler for the EDCs to assess and administer and provide greater predictability and transparency for both the utility and the Large Load Customer. [117]

This Commission Order reflects much of the discussion which I present above regarding the policy reason to now adopt an allocation to all customer classes.

While I agree with the Commission's "favoring" a "flat fee model based upon the Large Load Customer's peak demand as opposed to a volumetric charge," I recommend a

[115] 66 Pa. C.S. §§ 2203(8), 2802(17).
[116] This recommendation is intentionally limited to CAP costs rather than to total "universal service" costs (which would include, also, LIURP, CARES and hardship funds.
[117] *Large Load Final Order*, *supra* note 108, at 107.

somewhat different, and somewhat easier, cost allocation. I offer this somewhat different flat fee model because my recommendation is to allocate a portion of universal service costs to *all* customer classes, and, while the Commission's "peak demand" methodology might easily apply to large load customers, it would not easily transfer to all customer classes. Nonetheless, I incorporate the notion of allocating costs based on a "flat fee" basis into my recommendation.

I recommend that the costs to be allocated among all customer classes be the total CAP costs (CAP Credits + Arrearage Forgiveness + Administration) reported by the Company to the Pennsylvania PUC in the most recently completed calendar year prior to the year in which the Company receives a final order in a base rate case. For Peoples, the total costs would be $28,873,507.78.[118] This figure is an authoritative figure, already required to be reported to the Commission, available as publicly accessible information.

I recommend that the interclass allocations be based on each class's allocation of total distribution revenue requirement (excluding taxes) agreed to in a settlement of this case, or that is approved by a final PUC Order if the case is litigated.[119] Using this figure would not involve developing a new number. The costs to be allocated between customer classes in this proceeding would thus be those as are set forth in the Table below. For non-residential customers, the universal service cost could be added on as an undesignated part of the customer charge. For residential customers, the CAP costs would continue to be collected as they have historically been collected. There would, in other words, with the exception of the charges deducted to be collected from other rate classes,

[118] Peoples' response to OCA-IV-001, at 82.
[119] *See* Peoples Ex. 11, at 28:350, 42:35.

be no change in the manner in which residential universal service charges are collected through the USP Rider (along with the periodic reconciliation).

Table 19. Inter-Class Allocation of CAP Costs (Peoples, 2026)

Customer Class	Revenue Requirement Allocation (Rev.Req. excluding taxes)	CAP Cost Allocation
Residential	74.10%	$21,395,269.26
Small General	10.90%	$3,147,212.35
Medium General	9.80%	$2,829,603.76
Large General	3.90%	$1,126,066.80
Mainline Service	1.40%	$404,229.11
Sum		$28,902,381.29

Given that I propose that the non-residential class allocations be done on a "fixed fee" basis, I recommend that the dollar amount of the non-residential allocations be fixed until the Company files its next base rate proceeding.

Q. WOULD ALLOCATING CAP COSTS TO ALL RATEPAYER CLASSES GIVE RISE TO A CONCERN THAT THESE ADDITIONAL COSTS WOULD IMPOSE UNDUE BURDENS ON THE NON-RESIDENTIAL CLASSES?

A. No. In its 2024 Report, which I have described above, BCS stated that "PGW's 2024 Universal Service Spending includes only the amount recovered from residential customers, which was 71% of PGW's $64,313,154 2024 total Universal Service Spending."[120] As can be seen, the percentage of PGW spending allocated to non-residential customers (29%) is actually somewhat more than the percentage spending that would result from the allocation I recommend above.[121] This is important in that the

[120] 2024 BCS Report, at 91.
[121] The Commission reported: "PGW recovers CAP costs from all customer classes. Allocation amounts change annually, but approximately 3/4 of these costs are recovered from residential customers. We have used a recovery

Commission has considered the economic impact which this allocation has had on the non-residential customer classes. In its Final Order adopting revisions to the CAP Policy Statement, the Commission found:

> OSBA and the Industrial Customers have argued that recovering costs of universal service programs from industrial and commercial customers may negatively impact businesses in the Commonwealth. However, we have not seen evidence that the economic climate in Philadelphia has been negatively impacted as a result of universal service costs charged by PGW. Further, as noted by multiple parties in the *Review* proceeding, many states recover the cost of utility low-income programs from all ratepayer classes, including New York, New Jersey, Ohio, Illinois, Maine, and New Hampshire. We are not aware that this practice has negatively impacted the business climate of any these states.[122]

The allocation which I recommend above does not substantively differ from the non-residential allocation which currently occurs for PGW. There is no reason to believe that the Commission should reach a different conclusion than it did when it last considered the issue.

Part 6. The Proposed Expansion of Universal Service Expenditures.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the proposals of Peoples to expand its expenditures on specified universal service support programming and to recover those expanded expenditures through the Universal Service Rider. I will explain why I recommend approval of the expanded expenditures. However, I will further explain why

allocation of 75% for residential ratepayers for 2016 through 2021." *2019 Amendments to CAP Policy Statement* at 26.

[122] *Id.* at 95-96.

those expenditures should be recovered through base rates rather than through the Universal Service Rider.

Q. WHAT EXPANDED UNIVERSAL SERVICE EXPENDITURES ARE YOU EXAMINING IN THIS SECTION OF YOUR TESTIMONY?

A. Peoples witness Wachter recommends that Peoples be allowed to hire a new staff person to facilitate the Company's compliance with the recent Commission rulemaking regarding the Low-Income Usage Reduction Program (LIURP).[123] In addition, witness Black recommends the inclusion of the costs of studies to "identify zones of vulnerability" as well as miscellaneous communications costs.[124]

Q. PLEASE EXPLAIN WHY THESE EXPENDITURES SHOULD BE RECOVERED THROUGH BASE RATES RATHER THAN THROUGH THE USP RIDER?

A. Allowing Peoples to collect these costs on a stand-alone basis through the USP Rider would isolate one element out of a multitude of elements that would be affecting Peoples customer rates. Without taking into consideration all other rate impacts of the changing level of total costs, it is not possible to determine the extent to which, if at all, Peoples *total* cost of service will increase as a result of the increased LIURP and communication costs. It is thus not possible to determine what dollar amount of cost recovery would need to be reflected in any increase in rates through the proposed USP Rider.

Consider, for example, that the increased communication costs are, by the very terms of the study, designed to identify low-income customers who are in "zones of vulnerability"

[123] Peoples St. 2 at 10.
[124] Peoples St. 10 at 12-13.

for targeted communication. However, that same increase in expenditures directed toward vulnerable customers would also result in other aspects of Peoples costs that would decline. When comparing CAP participants to Confirmed Low-Income customers overall, Peoples data documents that enrollment in CAP improves the payment patterns of the affected customer.

In fact, Peoples own independent evaluation of its CAP found that participation of low-income customers in CAP resulted in a 36% improvement in the payment coverage ratio (i.e., the percentage of bill paid) when compared to low-income customers not participating in CAP. [125]

The results show that any increase in Peoples costs due to the increased participation resulting from the proposed research and communication will be offset, in whole or part, by decreases in expenses such as the working capital associated with carrying arrears; by decreases in expenses associated with decreased credit and collection expenses; by decreased expenses associated with bad debt; or by the increased revenues associated with decreased disconnections or more frequent (and more timely) reconnections after a disconnection.

The same will be true for LIURP expenditures. Improving the effectiveness of the Company's LIURP program will be expected to improve payment performance, reduce arrears (and thus reduce working capital), reduce disconnections, and reduce bad debt write-offs. To allow the Company to include the LIURP expenditures through the USP

[125] *Peoples Natural Gas 2017 Universal Service Program, Evaluation, Final Report*, APPRISE, Inc., 77 (Aug. 2017), available at https://www.puc.pa.gov/General/pdf/USP_Evaluation-Peoples.pdf.

Rider is to allow the Company to recover changes in a single element of its cost of service in isolation from other elements of the cost-of-service that will also change (that the Company ignores in its proposal).

I conclude that the proposed recovery of these two cost elements through the USP Rider should be denied.[126]

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

[126] In contrast, I do not object to recovering the costs of the USP evaluation through the USP Rider. Since their inception, Pennsylvania CAP programs have been subject to a requirement that they be subject to a periodic independent evaluation. The future preparation of this long-mandated evaluation will not, unto itself, have an impact on the operation of CAP or on any other cost or revenue element of rates. Preparation of the evaluation is a standard administrative function that does not involve internal costs. The proposal to recover the evaluation costs through the USP Rider should be approved.

Part 7.	Response to OSBA Rebuttal Witness Mark Ewen	35

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Roger Colton. My address is 34 Warwick Road, Belmont MA 02478.

Q. ARE YOU THE SAME ROGER COLTON WHO PREVIOUSLY PREPARED PREFILED WRITTEN DIRECT TESTIMONY FOR THE OFFICE OF CONSUMER ADVOCATE IN THIS PROCEEDING?

A. Yes, I am.

Q. PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL.

A. My Surrebuttal Testimony responds to the following Peoples Natural Gas ("Peoples" or "Company") witnesses to the extent that they address my Direct Testimony

- Company witness Cynthia Fang;
- Company witness Rita Black;
- Company witness John Taylor;
- Company witness Michelle Parks;
- Company witness Andrew Wachter; and
- Company witness Carol Scanlon.

In addition, my Surrebuttal Testimony responds to the rebuttal testimony of Mark Ewen prepared on behalf of the Office of Small Business Advocate ("OSBA"). To the extent that these witnesses address issues other than those presented in my Direct Testimony, I leave the response to such rebuttal to other Office of Consumer Advocate ("OCA") surrebuttal testimony.

Before addressing the specific issues raised by each rebuttal witness, however, there is a need to address the broader issue of how, and even whether, to address affordability in a base rate case.

Overview of PUC Consideration of Affordability.

Q. WHY DO YOU ADDRESS THE ISSUE OF HOW, OR EVEN WHETHER, TO CONSIDER THE ISSUE OF AFFORDABILITY IN A BASE RATE CASE?

A. Peoples witnesses spend considerable time asserting in their rebuttal testimony that a consideration of the unaffordability of Company's rates, and the means by which to address that unaffordability, do not belong in a base rate case. Company witness Fang argues that "utility ratemaking is not a reasonable mechanism for addressing economywide inflationary pressures or other macroeconomic conditions, and that energy affordability concerns are more appropriately addressed through Pennsylvania Public Utility Commission ("PUC" or "Commission")-approved, targeted universal service programs that are the subject of separate proceedings designed to address those issues specifically."[1] Fang argues that, "To the extent broader macroeconomic conditions are driving household hardship, the most effective tools for addressing those conditions generally lie at the state or federal level through tax policy and broad-based social assistance programs designed to be income-targeted and coordinated across essential needs, including housing, food, healthcare, and energy."[2]

[1] Peoples St. 20-R at 2.

[2] *Id.* at 10-11.

Despite these assertions by Company rebuttal witnesses, the Commission disagrees. Consider the Final Order in the 2026 Pennsylvania American Water Company base rate case,[3] issued on July 27, 2026. In that Order, the Commission held:

> We preface our discussion in evaluating this rate case by acknowledging the Commission's duty to ensure that the rates PAWC proposes to charge its customers will be just and reasonable and will ensure that the Company is able to provide adequate, efficient, safe, and reasonable service to its customers. *See* 66 Pa.C.S §§ 1301, 1501. The Commission "has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates." 66 Pa.C.S. §§ 501(b) and 1301; *Pa. PUC et al. v. Columbia Gas of Pa.*, Docket Nos. R-2020-3018835, *et al*. (Order entered February 19, 2021) (*Columbia Gas 2021*) at 9 (citing *Popowsky*). When setting rates in a base rate proceeding, the Commission may consider rate affordability.[4]

The Commission specifically noted "a resounding chorus of customers who are struggling."[5] The Commission also noted that "affordability" is not simply a problem facing low-income customers, though that problem is substantial. It stated that "While PAWC responds to the affordability of its rates to low-income customers through its [Bill Discount Program], we highlight that only a small fraction of eligible low-income customers are actually enrolled in the Company's BDP."[6] The Commission went on to recognize, however, that affordability is not an issue that is solely the province of the poor. It stated that "We cannot overlook the fact that, given PAWC's history and cadence of frequent base rate increase requests, affordability is a growing

[3] *PAPUC v. PAWC,* Docket Nos. R-2025-3057983, et al. Order (July 27, 2026).

[4] *Id.* at 36.

[5] *Id.* at 37.

[6] *Id.* at 39.

issue, exacerbated by recent and current economic conditions, including increased inflation."[7] It went on to conclude:

> Because we believe that the issue of affordability must be viewed in the context of the magnitude and frequency of PAWC's rate cases, as well as the impact of recent and current economic conditions, we will give less weight to PAWC's affordability analyses. In doing so, we find that substantial record evidence demonstrates that PAWC's proposed rates are unaffordable for many PAWC water and wastewater customers. . .Affordability is an issue that must be addressed for all customers, not just for those who apply for and are found eligible to receive low-income assistance.[8]

The Company's continuing assertions throughout multiple rebuttal witnesses that affordability is not a factor to consider in decision-making in a base rate case, and that improvements to the treatment of low-income customers and the operation of universal service programs are not appropriate subjects to be addressed in a base rate case, should be rejected in light of this Commission language.

Part 1. Response to Peoples Rebuttal Witness Cynthia Fang.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the rebuttal testimony of Peoples rebuttal witness Cynthia Fang to the extent that her testimony addresses affordability issues. According to Ms. Fang:

> The Commission's statutory obligation is to ensure that utility rates are just and reasonable based on the prudent costs of providing regulated utility service. That obligation does not require utilities to offset or internalize macroeconomic conditions unrelated to the provision of regulated utility

[7] *Id.* at 40.

[8] *Id.* at 41.

> service. Expanding utility responsibility to address economywide affordability pressures through base rates would move ratemaking away from its traditional cost-of-service function and toward broader social policy objectives and more appropriately addressed through targeted programs and statewide policy processes.[9]

Ms. Fang's effort to separate the consideration of "affordability" and the establishment of "just and reasonable rates" should not be accepted.

One factor Ms. Fang does not consider, for example, is the interrelationship of "affordability" and the costs which Peoples incurs. This connection is not merely recognized in Pennsylvania; it is recognized by rating agencies as well. Rating agencies such as Moody's, for example, look at payment patterns in their assessment of affordability. Moody's considers customer ability-to-pay "as measured by delinquencies."[10] Ms Fang paid no attention to Peoples delinquencies in her analysis. Had she done so, she would have observed troubling trends that should have called her to question her conclusion about the affordability of Peoples' bills.

Ms. Fang argues that the Commission's "statutory obligation" is to "establish just and reasonable rates based on the prudent costs of providing regulated utility service while ensuring the Company can continue to provide safe, adequate, and reliable service." In asserting that this is a "statutory obligation," Ms. Fang does not cite which statute imposes this "obligation," let alone imposes this obligation while excluding the consideration of the affordability of Peoples' rates. She chooses not to respond to the

[9] Peoples St. 20-R at 4-5.

[10] *Introduction to Affordability*, Arcadis, 15 (Nov. 27, 2017).

discussion in my Direct Testimony regarding the public policy established by Pennsylvania statute requiring the Commission to consider the impacts of rates on customers in the process of ratemaking.[11]

Moreover, Ms. Fang's unsupported argument that "macroeconomic conditions" are "unrelated to the provision of regulated utility service" should be rejected. As I discuss in detail in my Direct Testimony, of which Ms. Fang chooses not to try to rebut, even credit agencies, in reviewing utility creditworthiness, take into account the types of "macroeconomic conditions" which Ms. Fang urges the Commission to ignore.[12]

Ms. Fang errs when she asserts that any consideration of affordability concerns should be confined to the Commission's consideration of universal service programs.[13] She again erroneously asserts that "broader macroeconomic conditions do not alter the Commission's statutory role. . ."[14] She argues that affordability should be considered "through targeted public programs and Commission-approved universal service mechanisms. . ."[15] This argument ignores the broader scope of affordability to be considered in utility ratemaking as compared to the appropriate design of universal service programs. It ignores the fact that without the Company's frequent requests for rate increases, there would be no need, or less of a need, for the universal service programs in

[11] OCA St. 4 at 7-8.

[12] *Id.* at 8.

[13] Peoples St. 20-R at 7-9.

[14] *Id.* at 7.

[15] *Id.* at 8.

the first place. It ignores the populations that are not served by universal service programs, including those customers who are eligible for universal service programs but who do not participate. For example, she does not respond to the facts established in my Direct Testimony that while Peoples had an estimated low-income population of nearly 150,000 customers in 2024 (the last year for which data has been published), it has a Customer Assistance Program ("CAP") participation of barely more than one-in-five of those eligible customers.[16] Moreover, she does not respond to the fact that the lack of affordability extends well beyond the scope of universal service programs, as evidenced by the extensive discussion of Asset-Limited, Income-Constrained, Employed ("ALICE") data and the Census Household Pulse Survey ("HPS") data presented in my Direct Testimony.[17] These customers are not eligible to participate in universal service programs.

Q. WHAT IS YOUR RESPONSE TO MS. FANG'S REBUTTAL TESTIMONY REGARDING YOUR AFFORDABILITY ANALYSIS?

A. Ms. Fang dismisses my affordability analysis, stating that while it "provides useful insights into customer circumstances," it "does not support a conclusion that recovery of the prudent costs of providing regulated utility service should be denied."[18] She does not acknowledge that I make no recommendation to deny the recovery of "the prudent costs of providing regulated utility service." To the extent that OCA recommends adjustments

[16] OCA St. 4 at 49-50.

[17] *Id.* at 15-21.

[18] Peoples St. 20-R at 13.

to the Company's claimed cost of service, those recommendations are supported in the testimony of other OCA witnesses.

Q. DO YOU HAVE A RESPONSE TO MS. FANG'S "GAS-BURDEN ANALYSIS"?

A. Yes. Ms. Fang presents a "gas burden analysis" based on information for 412,655 residential customers.[19] She asserts that this analysis is based on "customer specific income information" using monthly customer income information aggregated across 12 months, and "reflects the most recent income information provided by the customer to the Company."[20] That income information is compared to usage data for the period beginning January 2025 and ending December 2025.[21] She provides no information on the specifics of what income is used, saying only that Company witness Black testifies about how the Company obtains customer income. Ms. Black, however, does not describe how Peoples would obtain the customer-specific income for nearly two-thirds of its residential population (412,655 used by Ms. Fang of a total residential customer population of 652,149).[22] Instead, Ms. Black explains that "the Company asks if they would like to voluntarily provide income information that could be used to screen them for eligibility to participate in programs such as CAP, LIURP or LIHEAP."[23] More than 90% of the customers for which income was used were non-CAP customers. Ms. Fang says that she used 28,975 CAP-enrolled gas-only customers, *after* having both eliminated $0 income

[19] *Id.* at 16-20.

[20] *Id.* at 18.

[21] *Id.*

[22] Peoples response to OCA-IV-04 (documenting customer number of 652,149).

[23] Peoples St. 10-R at 13.

customers and having eliminated customers with fewer than 12 months of usage. [24] There is no basis, in other words, to determine that the income information used by Ms. Fang is accurate, let alone timely.

No information regarding the specificity of the income levels, let alone the date the income information was obtained (other than it is "the most recent income information provided by the customer to the Company") was provided by Ms. Fang. No information was provided to demonstrate that the distribution of income information Ms. Fang uses is reflective of the distribution of income throughout the Peoples service territory.

Q. IS THERE ANY OTHER REASON TO QUESTION THE VALIDITY OF MS. FANG'S AFFORDABILITY ANALYSIS?

A. Yes. Ms. Fang reports that her analysis uses a "median annual gas spend" of $1,108 in her analysis.[25] That dollar amount substantially understates what the Company otherwise has reported. When asked to provide the gas bills for the most recent twelve months at median usage and proposed rates, Peoples reported an annual bill of $1,658.31,[26] a full 50% higher than the bill used by Ms. Fang in her analysis. Remember, even according to Ms. Fang's own rebuttal testimony, while she uses 2025 data in her analysis, the conclusion she purports to draw is that "the customer level analyses sponsored with my

[24] Peoples St. 20-R at 19-20.

[25] *Id.* at 16.

[26] Peoples response to OCA-IV-47.

testimony provide the Commission with direct and more useful evidence regarding the affordability impacts of the Company's *proposed rates*. . ."[27] That statement is wrong.

Given that her under-stated bills, and unknown and unreliable income information, still results in an average gas burden of 3.40%, it would be expected that using a more accurate gas bill would result in a gas burden for residential customers that would, *on average*, exceed the Commission's 4% affordability threshold. As I demonstrated through application of the Patterson/Doyle methodology, while the weighted average energy burden at existing rates is 3.8%, at proposed rates, the average burden for the Peoples service territory increases to 4.7%.[28]

Overall, I conclude that Ms. Fang provides no useful information regarding the affordability of Peoples bills to residential customers. Both her bill data and her income data, the two critical components to calculating a natural gas burden, have serious flaws. If one were to correct those problems, what Ms. Fang asserts is "direct and more useful evidence regarding the affordability of the Company's proposed rates," in fact, documents the unaffordability of Peoples bills at proposed rates, the level of rates she, herself, purports to address.

Part 2. Response to Peoples Rebuttal Witness Rita Black.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

[27] Peoples St. 20-R at 25 (emphasis added).

[28] OCA St. 4 at 23.

A. In this section of my testimony, I respond to the Rebuttal Testimony of Peoples Witness Rita Black to the extent that Ms. Black addresses issues presented in my testimony. The fact that I do not address Ms. Black's entire rebuttal testimony should not be construed as evidencing agreement with that testimony, merely the fact that not all of her testimony addresses issues raised in my Direct Testimony.

Q. WHAT IS THE FIRST ASPECT OF MS. BLACK'S TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Ms. Black seeks to justify her proposed tariff modification to bar the use of natural gas for "recreational purposes such as, but not limited to, pool heaters"[29] by asserting that the prohibition is already included in the Company's Universal Service and Energy Conservation Plan ("USECP"). She retracted the Company's proposal to separately bill CAP participants for "unjustified use of natural gas."[30] She further modified the proposed tariff language to remove any examples of gas use which Peoples deems to be "unjustified" and "recreational" other than "pool heaters." Even then, however, she does not provide a comprehensive list of what usage would be deemed as "unjustified" because the language remains open-ended ("recreational purposes *such as, but not limited to*, pool heaters").[31]

Ms. Black does not, however, respond to, let alone rebut, any of the objections to the Company's proposal:

[29] Peoples St. 10-R at 5.

[30] *Id.*

[31] *Id.* (emphasis added).

- She does not offer any explanation of how Peoples proposes to enforce the tariff provision. Ms. Black offers no insights into how Peoples would *suspect* a customer of engaging in "recreational gas uses," nor how the Company would *confirm* that the customer is engaging in such prohibited uses.

- She does not explain how Peoples will determine that there is not merely a gas connection for a "recreational gas use," but that the customer is actually using natural gas for such recreational purposes. Her proposed tariff language does not apply to customers who have natural gas connections for recreational purposes. Rather, the language states "*use of natural gas*, while on the CAP Program, for recreational purposes. . .is prohibited."[32]

- She does not explain the extent of the problem she is seeking to solve. As I note in my Direct Testimony, confirming not merely the presence of a connection, but the actual *use* of gas for the prohibited purposes (including, *but not limited to*, pool heaters), would involve an unspecified cost.

- Ms. Black makes no effort to document that the cost of providing CAP credits for such "unjustified use" would be more than the combined cost of (1) policing CAP participants to determine whether, and to what extent, such use is occurring; (2) enforcing the ban through the removal of CAP participants.

Finally, Ms. Black reiterates objectionable language in the revised language she proposes. While the prohibition is on the "*use* of natural gas, while on the CAP Program, for recreational purposes," the only allowed action once a customer is removed from CAP is not merely to refrain from such use, but rather to provide "verification that *the natural gas connection* to the recreational appliance has been removed. . ."[33] Having the customer simply turning the shutoff valve to an "off" position would prevent the use without imposing the additional cost on the low-income customer to have a plumbing professional remove the connection, and thus would accomplish the same purpose (i.e., to prevent the "use of natural gas").

[32] *Id.* (emphasis added).

[33] *Id.*

The Company's proposed tariff regarding the removal of CAP participants based on the use of natural gas for recreational purposes should be denied.

Q. WHAT IS THE SECOND ASPECT OF MS. BLACK'S TESTIMONY TO WHICH YOU WISH TO RESPOND?

A. Ms. Black seeks to justify her recommended tariff provision regarding "fraud" by referencing one example of a household that she asserts was likely to have fraudulently obtained CAP benefits.[34] She concedes that "this type of behavior from CAP customers is not in any way a common occurrence" and "this is not a widespread issue."[35]

Ms. Black's rebuttal did not address any of the objections raised to the proposed tariff language. While she disclaims any intent to apply the proposed tariff language to customers who engage in mistakes, or to other inadvertent under-reporting of income, the tariff language must be reviewed by what it says on its face. The disclaimers articulated by Ms. Black are simply not found in the four corners of the proposed tariff language. Indeed, the very fact that Ms. Black says the Company does not intend to apply the proposed tariff language as it is currently written is evidence unto itself that the proposed language should not be approved.

Ms. Black did not respond to other inherent problems with the tariff language she proposed:

- The Company's enforcement of its proposal, continuously monitoring CAP participant income to determine whether the participants have "reported all

[34] *Id.* at 6-8.

[35] *Id.* at 6.

income" would largely render the Commission's decision to expand income recertification periods moot. Rather than being able to rely on the extended recertification period, a customer would be under a continuous obligation to "report all income" at the risk of being billed for CAP benefits "incorrectly received" due to a failure to do so.

- The Company's proposal is flawed, also, because of its failure to impose a period of repose the expiration of which would insulate a CAP participant from being accused of a failure to report all income. The Company's tariff leaves the time period open-ended during which it can seek to bill for CAP benefits "incorrectly received." Doing so imposes unreasonable record-keeping requirements on the CAP participant, who would never know whether they will be challenged on a failure to report all income.

- The Company's proposal is flawed in that it places a CAP participant in the difficult, if not impossible, position of needing to prove a negative. If Peoples argues that the CAP participant *did* receive income which the participant did not report, the CAP participant would be in the position of documenting that they did *not* receive such income. Peoples should, at a minimum, explain how a CAP participant can prove what income they did *not* receive in a given time period.

- Finally, as with its prohibition on "recreational gas use," Peoples has made no showing of the costs that it is trying to prevent or, conversely, of the costs it would incur in the process of implementing its proposal. Ms. Black offered no testimony on the scope of CAP benefits being provided to participants who are "obtaining" such benefits through fraudulent means. The Company did not even define the problem (using the "such as" language instead) let alone present the scope and cost of the problem.

Ms. Black identified a total cost of unjustified CAP credits of $6,319.39 and unjustified arrearage forgiveness of $911.88.[36] This total cost of $7,231.27 can be compared to the 2025 CAP credits of $22,145,987.40 and the 2025 arrearage forgiveness credits of $5,302,675.66,[37] a total CAP expenditure of $27,448,663.06. The identified cost of fraud presented by Ms. Black, in other words, represents 0.026% (26 one-thousandths of one

[36] *Id.*

[37] Peoples response to OCA-IV-1 at 82.

percent) of the total program cost. In light of the *de minimis* aspect of the identified problem, Ms. Black's failure to address the problems with the proposed tariff language regarding fraud calls for its disapproval at this time.

Q. WHAT DO YOU RECOMMEND?

A. There is, of course, always a need to ensure that the use of ratepayer money is undertaken wisely and prudently. Spending $1,000 to solve a problem costing $100 is not such a wise and prudent use of ratepayer money. Given the *de minimis* cost of fraud identified by Ms. Black, in combination with her own testimony that "this type of behavior from CAP customers is not in any way a common occurrence" and "this is not a widespread issue,"[38] her decision to decline to accept the recommendation of CAUSE-PA witness Patrick Cicero should be revisited. Mr. Cicero recommended that Peoples consult with its Universal Service Advisory Group ("USAG") to develop objective parameters for identifying CAP fraud. Ms. Black responded that while she was "happy to review the Company's current process and gain input from the group into any suggested modifications at a future USAG meeting," she did "not agree that approval of this tariff provision be delayed to a future proceeding in order to allow the USAG to review and discuss the Peoples' proposal."[39] She offers no explanation of why she "did not agree" with Mr. Cicero's reasonable recommendation.

[38] *Id.* at 6.

[39] *Id.* at 8.

Given the inherent flaws in the Peoples proposed tariff language, the *de minimis* costs to be avoided through its adoption, and the unspecified costs of implementing the proposal, and the presence of a reasonable proposal through which the costs of potential fraud could be identified and addressed, the proposed language should be disapproved in this proceeding.

Q. PLEASE RESPOND TO MS. BLACK'S REBUTTAL TESTIMONY REGARDING THE NONPAYMENT DISCONNECTION OF SERVICE TO CONFIRMED LOW-INCOME CUSTOMERS.

A. Ms. Black explains, quite reasonably, that Confirmed Low-Income customers have a nonpayment disconnection rate higher than residential customers "primarily due to availability of resources."[40] Her response that Confirmed Low-Income customers are also reconnected,[41] however, misses the point. The nonpayment disconnections of Confirmed Low-Income customers should not be viewed in isolation. Ms. Black, for example, does not dispute that, in addition to having service disconnected for nonpayment at a rate far higher than residential customers:

- The number of nonpayment disconnections of Peoples Confirmed Low-Income customers increased from 4,253 in 2022 to 11,502 in 2024, an increase of 170%.
- The dollars of Confirmed Low-Income gross write-offs for Peoples increased from $5,489,071 in 2022 to $7,092,816 in 2024, an increase of nearly 30%.
- The number of Confirmed Low-Income payment-troubled customers –defined by the Commission to be accounts with one or more defaulted payment

[40] *Id.* at 15.

[41] *Id.* at 15-16.

arrangements in the last twelve months—increased from 9,219 in 2022 to 12,313 in 2024, an increase of 34%.

I discussed each of these facts in my response to Peoples rebuttal witness Parks. Finally, in response to Ms. Parks, who wished to compare the performance of Peoples to the performance of other natural gas utilities, I note that in 2024 (the last year for which the Commission's Bureau of Consumer Services ("BCS") data has been published and the same data used by Ms. Black):

- While Peoples represents 21% of the total statewide Confirmed Low-Income customers in arrears, it represents 40% of the total statewide Confirmed Low-Income customers in arrears not on payment arrangements (and conversely, only 11% of the total statewide Confirmed Low-Income customers in arrears on payment arrangements).
- While Peoples represents 11% of the total statewide Confirmed Low-Income customers in arrears on payment arrangements, it represents 17% of the total statewide Confirmed Low-Income customers who are payment-troubled (defined to be those with one or more defaulted payment arrangements in the past twelve months).

The problem with these collection problems associated with Confirmed Low-Income customers is that there is a reasonable alternative which Peoples does not adequately avail itself of, enrolling customers in CAP. Despite the payment difficulties of Confirmed Low-Income customers, Peoples reports that it has a CAP participation rate of only 22.9%, the lowest participation of any natural gas utility in Pennsylvania (and substantially less than the statewide average participation rate of 35.0%). This low participation rate harms both low-income customers and the Company because Peoples reports that, in contrast to its payment difficulties identified above, its CAP participants pay 82% of their bills out-of-pocket (with LIHEAP benefits being payments in addition

to this 82%). The Peoples CAP payment rate is noticeably higher than the statewide average of 75.3%.

Q. PLEASE RESPOND TO MS. BLACK'S DISCUSSION OF THE RACIAL DISPARITIES WHICH YOU IDENTIFIED WITH PEOPLES NONPAYMENT DISCONNECTIONS.

A. The most important observation of Ms. Black's rebuttal testimony is that she does not dispute that Peoples disproportionately disconnects service for nonpayment in communities with higher than average numbers of persons of color.[42] The "heat maps" she presents "looked at both energy burdens and risk of pipe freeze."[43] Those "heat maps" "identified zip codes, and specific accounts, in which energy burdens are high and CAP participation would be a great benefit."[44] Ms. Black concedes that the goals of the heat maps are not to identify racial disparities, to understand why those disparities exist, or to develop responses to redress those disparities. She instead states that the two goals of the heat maps included: (1) to "show[] us where our time and funds are best spent in promoting programs";[45] and (2) to identify "the specific accounts at risk due to high energy burdens or under-usage of natural gas for heating so that we can provide direct outreach."[46]

---

[42] *Id.* at 16-18.

[43] *Id.* at 17.

[44] *Id.*

[45] *Id.*

[46] *Id.* at 18.

Ms. Black asserts that Peoples has no need to develop any analysis of the root cause of why Peoples engages in disproportionate nonpayment disconnections to communities of color since the Company's work "has already identified CAP eligible CLI populations in these geographical areas of concern."[47] She asserts that all Peoples needs to do to remedy the disproportionate disconnections to customers of color is "to act on the information provided. . .to inform our outreach activities, the goal of which is to connect eligible households with CAP to avoid service disconnections through an improved energy burden."[48] She does not explain why she believes improving energy burdens is the sole remedy to the disproportionate disconnection of service to communities of color; she does not explain (let alone document) that there is a relationship between the disproportionate disconnection of service to communities of color and the lack of CAP enrollment in those communities; and she does not explain how reviewing "results of our outreach activities, specifically as it pertains to the use of the heat maps," would be expected to remedy the disconnection of service for nonpayment in communities of color.[49]

Ms. Black's rebuttal testimony implicitly denies the presence of the racial discrimination which I documented in my Direct Testimony without ever engaging in the data that found disproportionate nonpayment disconnections to exist. While the preparation of the "heat maps" which Ms. Black attached to her Rebuttal Testimony is perhaps an important step

[47] *Id.*

[48] Id.

[49] *Id.*

forward in doing what she suggests (i.e., to inform outreach activities for CAP), they do not address the cause of, let alone potential mechanisms through which to redress, the presence of disproportionate nonpayment disconnections in communities of color in the Peoples service territory.

Q. PLEASE RESPOND TO MS. BLACK'S REBUTTAL TESTIMONY REGARDING BUDGET BILLING.

A. Ms. Black's rebuttal testimony does not address the need for the increased marketing of budget billing. Her only response to my Direct Testimony is that "any residential customer can enroll in the Company's budget billing plan."[50] She does not acknowledge the increased variability in Peoples month-to-month bills, nor does she acknowledge the increasing lack of savings that I document, which would help customers respond to that month-to-month variability. Simply because "any residential customer *can*" enroll in budget billing, does not mean that the Company is appropriately responding to declining affordability through a reasonable adjustment in the marketing of budget billing.

Q. DO YOU HAVE A RESPONSE TO MS. BLACK'S REBUTTAL TESTIMONY REGARDING WHAT SHE REFERS TO AS "ALTERNATIVE MEASURES OF INCOME"?

A. Ms. Black dismisses my discussion of data on ALICE customers by arguing that these "alternative measures of income" are not used in establishing eligibility for universal service programs in Pennsylvania.[51] That response, however, has nothing to do with the

[50] *Id.* at 19.

[51] *Id.* at 20.

use of ALICE data in my Direct Testimony. I did not recommend the use of ALICE data for establishing universal service program eligibility. Nor did I evaluate any other aspect of the treatment of Confirmed Low-Income customers using ALICE data. Instead, the ALICE data was used to provide insights into the overall affordability of Peoples rates to residential customers as I explained should be done in the "overview" to this surrebuttal testimony.

Q. PLEASE RESPOND TO MS. BLACK'S REBUTTAL TESTIMONY REGARDING THE ALLOCATION OF SOME PORTION OF UNIVERSAL SERVICE COSTS TO CUSTOMER CLASSES OTHER THAN RESIDENTIAL CUSTOMERS.

A. Ms. Black states in her rebuttal testimony that the Company does not object to spreading some portion of the costs of its universal service programs to customer classes other than residential customers. Ms. Black's testimony states that ". . .the Company acknowledges the desire to spread these costs over more classes than just residential."[52] Before doing so, she states, "the Company would need to evaluate the feasibility of spreading these costs taking into account potential IT changes that would be necessary for such a change."[53] The need for IT changes is acknowledged. It is, however, important that Ms. Black offers no dispute of the need to make such changes.

[52] *Id.* at 24.

[53] *Id.*

Part 3. Response to Peoples Rebuttal Witness John Taylor.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the rebuttal testimony of Peoples witness John Taylor to the extent that he addresses issues presented in my Direct Testimony. He notes that my Direct Testimony, along with the testimony of other intervenors, "raise broader affordability, low-income customer impact, and universal service policy issues."[54] Mr. Taylor does not address the issues presented in my Direct Testimony, except to the extent that he references other Peoples rebuttal witnesses. The arguments of the witnesses which he references have been addressed in my responses to each witness' specific testimony. It is, therefore, not necessary to repeat those arguments here.

Part 4. Response to Peoples Rebuttal Witness Michelle Parks.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the rebuttal testimony of Michelle Parks to the extent that she addresses collection issues. To the extent that Ms. Parks also addresses issues other than those raised in my Direct Testimony, my failure to address them should not be construed as either agreeing or disagreeing with her testimony.

Q. DOES MS. PARKS MAKE A FUNDAMENTAL ERROR IN RESPONDING TO YOUR TESTIMONY REGARDING THE EFFICIENCY AND EFFECTIVENESS OF PEOPLES COLLECTIONS?

[54] Peoples St. 17-R at 38.

A. Ms. Parks seeks to demonstrate that the Peoples collections activity is efficient and effective by presenting data on two metrics limited to Confirmed Low-Income customers.[55] This limitation represents a fundamental error. As I specifically noted in my Direct Testimony, "viewing the problems which Peoples' customers face exclusively from the perspective of Confirmed Low-Income customers would be too narrow. The activities directed toward residential customers as a whole, and the expenditures on those activities, must be incorporated into the discussion."[56] Ms. Parks makes no effort to examine the full range of factors which I examined.

If, however, Ms. Parks wishes the Commission to consider the performance of Peoples relative to Confirmed Low-Income customers, the data fails to present a complimentary picture. Using the same BCS data presented by Ms. Parks (2022 – 2024), I compare 2022 Peoples performance to 2024 Peoples performance. I note that the dollars of Confirmed Low-Income revenue in debt were roughly the same in 2022 ($9,053,121) and 2024 ($9,083,815), an increase of 0.3%. The number of Confirmed Low-Income customers in arrears increased from 15,101 in 2022 to 15,858 in 2024, an increase of only 5%. In contrast, however, the number of nonpayment disconnections of Peoples Confirmed Low-Income customers increased from 4,253 in 2022 to 11,502 in 2024, an increase of 170%. The dollars of Confirmed Low-Income gross write-offs for Peoples increased from $5,489,071 in 2022 to $7,092,816 in 2024, an increase of nearly 30%.

[55] Peoples St. 18-R at 3-4.

[56] OCA St. 4 at 43.

Similarly, the number of Confirmed Low-Income customers on payment arrangements increased from 7,015 in 2022 to 7,280 in 2024, an increase of less than 4%. In contrast, the number of payment-troubled customers–defined by the Commission to be accounts with one or more defaulted payment arrangements in the last twelve months—increased from 9,219 in 2022 to 12,313 in 2024, an increase of 34%. At the same time its collections effectiveness and efficiency directed toward Confirmed Low-Income customers was in such sharp decline, Peoples expenditures on credit and collections activities—of which does *not* include any expenditures on universal service programs—increased from $844,377 in 2022 to $1,058,271 in 2024, an increase of more than 25%.

Finally, given that Ms. Parks wishes to compare the performance of Peoples to the performance of other natural gas utilities, I will also do so. I note that in 2024 (the last year for which BCS data has been published and the same data used by Ms. Parks):

- While Peoples represents 21% of the total Confirmed Low-Income customers in arrears, it represents 25% of the total Confirmed Low-Income nonpayment disconnections;
- While Peoples represents 21% of the total statewide Confirmed Low-Income customers in arrears, it represents 40% of the total statewide Confirmed Low-Income customers in arrears not on payment arrangements (and conversely, only 11% of the total statewide Confirmed Low-Income customers in arrears on payment arrangements).
- While Peoples represents 11% of the total statewide Confirmed Low-Income customers in arrears on payment arrangements, it represents 17% of the total statewide Confirmed Low-Income customers who are payment-troubled (defined

to be those with one or more defaulted payment arrangements in the past twelve months).

Q. DO YOU HAVE A RESPONSE TO THE REBUTTAL TESTIMONY OF MS. PARKS REGARDING THE RACIAL DISPARITIES IN THE NONPAYMENT DISCONNECTIONS OF PEOPLES?

A. The rebuttal testimony of Ms. Parks regarding the disparate impacts of nonpayment disconnections to zip codes with persons of color responds to an argument that was not advanced in the first place. She argues that:

> Peoples' termination process is automated through 22 established SAP workflow controls and is based strictly on objective arrearage criteria. The process does not consider, collect, or apply customer race, ethnicity, neighborhood demographics, or any other protected characteristic in determining whether an account is eligible for nonpayment disconnection. Accordingly, Peoples does not agree that its nonpayment disconnection practices reflect disparate treatment or are administered in a manner that targets any racial or ethnic population.[57]

The reference that Ms. Parks makes to "disparate treatment" and to "target[ing] any racial or ethnic population" applies a test that I did not advance. The language used by Ms. Parks incorporates a denial of any intentional "targeting" or "disparate treatment." My testimony establishes that there are disparate impacts whether or not Peoples engages in specific targeting of any racial or ethnic population. Even Ms. Parks acknowledges that my Direct Testimony references "disparate impacts," not "disparate treatment" or "targeting."[58] While Ms. Parks states, without equivocation, that "Peoples. . .does not

[57] Peoples St. 18-R at 8-9.

[58] *Id.* at 8.

discriminate," it continues to refuse to even consider *why* its disconnections have the effect of resulting in disproportionate levels of nonpayment disconnections in neighborhoods with higher levels of Black households.

The refusal of Ms. Parks to acknowledge the difference between the application of an effects test and allegations of targeting is inconsistent with the Company's recognition of precisely this difference in other circumstances. The Company's tariff regarding cash security deposits, for example, allows Peoples to impose a cash security deposit if:

> The Applicant is unable to establish creditworthiness to the satisfaction of the Company through the use of a generally accepted credit scoring methodology which employs standards for using the methodology that fall within the range of general industry practice, *provided that the methodology does not directly, or have the effect of, discriminating based on a protected class* as set forth in the federal Equal Credit Opportunity Act.[59]

Ms. Parks' rebuttal testimony, in other words, is inconsistent with the Company's own recognition of the difference between "directly. . .discriminating" (i.e., "targeting" or "disparate treatment" in the words of Ms. Parks) and undertaking actions that "have the effect of discriminating" (i.e., "disparate impacts" as I present in my Direct Testimony).

Q. DO YOU HAVE A RESPONSE TO MS. PARKS' REBUTTAL TESTIMONY REGARDING THE USE OF SOCIAL SECURITY NUMBERS?

A. Yes. While I appreciate Ms. Parks' acknowledgment that "Peoples agrees that there may be opportunities to enhance its processes and reduce the retention of SSNs within its systems where feasible and appropriate,"[60] Ms. Parks makes the unsupported argument

[59] Peoples PA tariff, Supplement No. 2 to Gas—PA PUC No. 48, First Revised Page No. 19 (emphasis added).

[60] Peoples St. 18-R at 10.

that "[t]he SSNs remains one of the most effective and consistent identifiers available to confirm customer identity, distinguish between customers with similar names or addresses, and support the Company's ability to administer accounts accurately and responsibly."[61] She asserts, in conclusory terms, that Peoples needs to rely on SSNs to support various credit and collection processes. She argues that "Peoples is also concerned that eliminating or materially limiting the use and availability of SSNs could impair the ability to identify customers with sufficient certainty."[62] Ms. Parks response falls squarely into the concerns expressed by the Federal Trade Commission ("FTC"), when, in recommending that private companies find alternatives to the use of SSNs, it said in its publication, "A Guide for Business: Protecting Personal Information, "*Don't use* Social Security Numbers unnecessarily— for example, as an employee or *customer identification number*, or because you've always done it."[63] Moreover, Ms. Parks' testimony ignores the extensive research finding that SSNs are not effective as identity "authenticators" and that there are readily available alternatives to the use of SSNs.[64]

Contrary to what Ms. Parks might argue, public utilities such as Peoples do not present unique circumstances requiring the use and retention of SSNs. That is one reason why, in comments to the Federal Communications Commission ("FCC"), U.S. Telecom, the

[61] *Id.* at 11.

[62] *Id.* at 12.

[63] OCA St. 4 at 60.

[64] *See, e.g.*, *Digital Authentication and Identity Proofing in Public Benefits Applications*, Digital Benefits Network (May 19, 2023), https://digitalgovernmenthub.org/publications/digital-authentication-and-identity-proofing-in-public-benefits-applications (an open dataset documenting authentication and identity proofing requirements across online SNAP, WIC, TANF, Medicaid, child care (CCAP) applications, and unemployment insurance applications).

Broadband Association (U.S. Telecom) explained its opposition to requiring telecommunications providers to collect and retain SSNs as a security strategy for the federal telecommunications Lifeline program. According to U.S. Telecom:

> [T]he Commission should not require providers to collect and retain full Social Security numbers as part of the Lifeline enrollment or verification process. Doing so would create significant privacy and cybersecurity risks by increasing the volume of highly sensitive personally identifiable information held by providers. It also would be inconsistent with widely recognized industry and regulatory best practices, which emphasize minimizing the collection and retention of sensitive data to reduce the risk of unauthorized access or misuse.[65]

The observations made by U.S. Telecom closely mirror those which I made above and in my Direct Testimony.

Part 5. Response to Peoples Rebuttal Witness Andrew Wachter.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to Mr. Wachter's testimony to the extent that he addresses issues presented in my Direct Testimony. Mr. Wachter raises two issues. First, he disputes the offset which I recommend pursuant to Section 523 of the Public Utility Code.[66] In addition, he asserts that the Company should be allowed cost recovery for certain recommendations I make. I accept his first recommendation, but conclude that his second recommendation should be denied.

---

[65] *Lifeline and Link Up Reform and Modernization*, WC Docket No. 11-42 et al., Comments of U.S. Telecom—The Broadband Ass'n at 4-5 (May 4, 2026).

[66] Peoples St. 2-R at 49-50.

Mr. Wachter disputes the proposed dollar amount of the recommendation OCA witness Geiger makes (based on my recommended 50/50% sharing of credit and collection expenses). Mr. Geiger recommended a sharing of the sum of residential collection expenses ($6,516,518) and low-income collection expenses ($1,150,487). According to Mr. Wachter, however, the low-income collection expense is a subset of the residential expense and, accordingly, to sum the two dollar amounts double-counts the low-income expenses. I accept Mr. Wachter's explanation and agree that the 50/50 sharing should be of residential collection expenses without low-income expenses being independently added in. As Mr. Wachter notes, the underlying basis for the recommended adjustment is addressed by Company witness Parks. Those arguments are separately addressed in my Surrebuttal Testimony above.

Mr. Wachter further proposes that the Company should be provided separate cost recovery for particular recommendations that I made in my Direct Testimony. That proposal should be rejected. More specifically, he states that the following recommendations "could result in incurring additional costs":[67]

- My recommendation to implement a 50-50 sharing of credit and collection expenses. This, however, is a proposed cost disallowance. It does not represent a recommendation that would cause Peoples to incur additional costs.
- My recommendation that Peoples conduct an independent root cause analysis to determine the driver of the disproportionate level of utility disconnections and to take steps to reduce the level of disconnections. To provide separate cost

[67] *Id.* at 52 (internal citations omitted).

recovery for such a study, however, would be inappropriate. First, even though undertaking such a study would be a one-time expenditure, placing such an expenditure in rates would allow recurring cost recovery. Second, Mr. Wachter has not demonstrated that the cost of such a study is not already provided for in the budget for consultants within expenses already included in rates for "outside services employed." Mr. Wachter has made no showing that remedying the Company's actions having a disproportionate racial impact regarding nonpayment disconnections would not be appropriately funded out of existing rates. Finally, it would be inappropriate for Peoples to include a single cost increase without also considering the total rate impact of the actions. Understanding how to reduce the disproportionate number of disconnections to communities of color would also have the effect of reducing the associated credit and collection costs, as well as enhancing the lost revenues caused by disconnections. To take only one isolated cost into account, without considering the total revenue requirement impact (both revenues and expenses) would be inappropriate.

- My recommendation that Peoples develop and adopt an alternative to the use of SSNs. As noted above, to separately include a cost for such an action by Peoples, without considering whether it is more appropriately funded through the existing budget for outside services employed would be inappropriate.
- My recommendation for establishing a base CAP participation. What Mr. Wachter does not acknowledge is that Peoples has already proposed a base CAP participation. I simply propose a different base participation level. The Company

already is required to report monthly CAP participation to the Bureau of Consumer Services. As I explain in my Direct Testimony, my recommendation is tied directly to that pre-existing reporting.[68] There is no "new" activity that is required by this recommendation.

Part 6. Response to Peoples Rebuttal Witness Carol Scanlon.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to Peoples rebuttal witness Carol Scanlon to the extent that she addresses the recovery of universal service costs. The issues which Ms. Scanlon addresses to which I respond involves the universal service rider "bad debt offset" calculation.

Q. PLEASE EXPLAIN MS. SCANLON'S REBUTTAL TESTIMONY REGARDING THE PEOPLES BAD DEBT OFFSET CALCULATION FOR THE UNIVERSAL SERVICE RIDER.

A. Ms. Scanlon first objects to my recommendation to set the base CAP participation at the number that actually exists in the month in which a Final Order is approved in this proceeding. She argues that the Company's proposal to use the enrollment figure *projected* to set rates in this proceeding is a more appropriate number.[69] Ms. Scanlon does not dispute that the Company has not historically been accurate in its future projections of CAP participants. Nonetheless, she testifies that the data on CAP participation previously

[68] OCA St. 4 at 71-72.

[69] Peoples St. 3-R at 13-14.

provided to OCA did not include *all* CAP participants. In addition to the data provided to OCA, Peoples also has CAP participants whose annual income is greater than 150%, but less than 200%, of Federal Poverty Level ("FPL").[70]

While Ms. Scanlon perhaps overstates the significance of the CAP component addressing affordability for households with income between 150% and 200% of FPL,[71] nonetheless, I agree with her proposition that the base CAP participation should be set which incorporates all CAP participants the CAP credits to whom are recovered through the Universal Service Rider.

In addition, Ms. Scanlon argues that there is a monthly variation in CAP participation, and that, accordingly, "determining the base CAP participation level using a single data point in time is not appropriate."[72] I agree. My objection to Peoples' original proposal was to Peoples historic inaccuracies in its projection of CAP participation. However, Ms. Scanlon makes a legitimate point that the Company's CAP participation levels increase and decrease from month-to-month. Accordingly, using historic data, I would agree that the base CAP participation should be set "using an average CAP participation over a

[70] *Id.* at 13.

[71] The CAP component directed toward this income population is a *pilot* program. According to the Company's currently approved Universal Service and Energy Conservation Plan ("USECP"), there are significant additional limitations on program participants for this pilot. In addition to meeting the income guidelines, the USECP states that "Under a pilot expansion of CAP, customers with incomes between 151 and 200% of Federal Poverty Level, at least one broken payment arrangement and a significant arrearage may also participate. A significant arrearage is generally defined as a balance of $800 or more, but flexibility is given in the evaluation of individual circumstances." *Peoples USECP*, Docket No. M-2018-3003177, 7 (July 7, 2018). Moreover, in order to participate a household must have a Peoples Gas burden of more than 11% of income. *Peoples USECP*, Docket No. M-2020-3021343, 8 (Aug. 17, 2020).

[72] Peoples St. 3-R at 13.

period of time," with the 12th month of a 12-month average being the month in which a final order is issued in this proceeding.

Q. PLEASE RESPOND TO MS. SCANLON'S DISCUSSION OF THE APPROPRIATE BAD DEBT OFFSET PERCENT TO EMPLOY.

A. Ms. Scanlon agrees to "revert back to the approach the Company utilized in the 2023 base rate case proceeding" as I recommended in my Direct Testimony.[73] As she notes, using the most recent figure from BCS, doing this calculation would result in an offset of 8.1%. Using a two-year average would result in an offset of 7.4%.[74] While Ms. Scanlon states that the "Company does wish to employ" a multi-year average (using my calculated 7.4%),[75] she does not explain *why* a two-year average is more appropriate than the most recent number published by BCS. I did not recommend using a two-year average, but rather simply provided the calculation should the Commission decide a two-year average was the most appropriate.

In fact, there should be a matching of the CAP offset to the CAP participation numbers to the greatest extent possible. The CAP base participation figure is not proposed to be based on a two-year average participation, but rather on a twelve-month average. It would be inappropriate to use a twelve-month average participation, but then use a two-year average offset. While I do not disagree with the arithmetic in the calculations

[73] *Id.* at 15.

[74] *Id.* at 15-16.

[75] *Id.* at 16.

presented by Ms. Scanlon,[76] I recommend that an appropriate matching would require use of an 8.1% offset.

Part 7. Response to OSBA Rebuttal Witness Mark Ewen.

Q. PLEASE EXPLAIN THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY.

A. In this section of my testimony, I respond to the testimony of OSBA rebuttal witness Mark Ewen to the extent that Mr. Ewen addresses universal service issues raised in my Direct Testimony. Mr. Ewen's universal service testimony is limited to whether the Commission should allocate some portion of universal service costs to non-residential customers. I conclude that his recommendation that universal service costs should be allocated exclusively to residential customers should be rejected.

Q. WHAT IS THE ISSUE RAISED BY MR. EWEN TO WHICH YOU WISH TO RESPOND?

A. Mr. Ewen objects to my recommendation that a portion of universal service costs be allocated to non-residential customers. He bases his objection in part on "longstanding OSBA advocacy."[77] Whether a particular party has engaged in "long-standing advocacy" should carry no weight in deciding upon cost allocation. Moreover, Mr. Ewen argues that "OSBA generally does not expend the resources to retain the necessary specialized experts in these fields" (i.e., the design and operation of universal service programs).[78]

---

[76] *Id.* at Ex. CAS-5R.

[77] OSBA St. 2-R at 3.

[78] *Id.* at 4.

The extent to which parties "expends the resources to retain the necessary specialized experts" is a singularly inappropriate basis upon which to decide an issue presented in a base rate case.

Mr. Ewen continues to assert that small business customers should not pay a portion of the costs of universal service programs "because these customers cannot take advantage of the residential-only programs." He continues to argue that "there is no causal relationship between PNG's universal service costs and small business customers."[79]

The asserted lack of a "causal connection" is not only factually incorrect, but is not relevant to a decision in any event. The allocation of CAP costs among all customer classes involves allocating the cost of a public good, amongst all customer classes, not just the residential class. As a public good, there is not a "causal relationship" between the residential class and universal service costs, either.

The assertion that there is no "causal relationship" between small businesses and universal service costs is incorrect in that one substantial "cause" of the need for universal service programs is the failure of small businesses to pay a livable wage. Charging residential customers for all universal service costs, transfers the cost of doing business from small businesses to residential utility customers. The resulting direct financial subsidy from residential customers to small business owners is no different than

[79] *Id.* at 3.

the subsidy flowing to businesses from tax dollars that support government-funded public benefits paid to employees who do not receive an adequate wage.[80]

The benefits to small businesses arising from the Peoples universal service programs were discussed in detail in the Direct Testimony of CAUSE-PA witness Patrick Cicero.[81] Mr. Ewen did not dispute any of these benefits and that discussion is not repeated here.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission

v. Docket No. R-2026-3060855

Peoples Natural Gas Company LLC

:

VERIFICATION

I, Roger Colton, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement No. 4SR, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DATED: July 31, 2026

Exhibit BLC-2

I. Introduction

Q. PLEASE STATE YOUR NAME, POSITION, AND BUSINESS ADDRESS.

A. My name is Brendan Larkin-Connolly. I am a Managing Consultant at Exeter Associates Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044.

Q. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL QUALIFICATIONS.

A. I graduated with a Bachelor of Arts in Economics from College of the Holy Cross in 2007, and I received a Master of Science in Resource Economics from the University of Massachusetts at Amherst in 2009. Upon graduation, I started as an analyst at DHInfrastructure, where I supported domestic and international projects related to water and energy sector regulation, privatization, renewable energy, and energy efficiency. I subsequently joined the Massachusetts Department of Public Utilities ("DPU") in 2011 as a rates analyst in the Rates and Revenue Requirement Division. Following two years at the DPU, I returned to DHInfrastructure in 2013 as a Manager and Director of Utility Regulation and Litigation, where I remained until joining Exeter in April 2025.

Q. WHAT EXPERIENCE DO YOU HAVE IN THE AREA OF UTILITY RATE SETTING?

A. As a rates analyst with the DPU, I provided analytical support on various issues, such as base rates, revenue allocation, decoupling, capital cost recovery trackers, and cost reconciliations in electric and gas proceedings.

In my consulting work, I have advised on utility ratemaking in both international and domestic contexts. Since 2016, I have provided expert witness services to multiple consumer advocate agencies including: Connecticut Office of Consumer Counsel, Office of the Illinois Attorney General's Public Utilities Bureau, Maryland's Office of People's Counsel, Massachusetts Attorney General's Office of Ratepayer Advocacy, New Jersey's Rate Counsel, and Ohio's Office of Consumer Counsel. My expert advice to consumer advocates has addressed various topics related to utility regulation and policy including cost of service, customer cost allocation, affordability, rate design, capital spending, and capital investment prudence. In addition, I recently submitted testimony on capital investments, revenue requirements, and cost allocation in Oncor Electric's 2025 base rate case in Texas on behalf of the Department of Defense and Other Federal Agencies. I have also advised the District of Columbia Public Service Commission on two occasions in support of its review of requests from Washington Gas Light for approval of capital replacement plans.

At my previous employer, I worked on international utility regulation projects funded by multi-lateral and bilateral development agencies in Kyrgyzstan, Armenia, Mexico, Mongolia, Nauru, Palau, Rwanda, Sierra Leone, Timor-Leste, and Tanzania. In 2018, I prepared a ten-year rate study for the Arusha Urban Water Supply and Sanitation Authority in Tanzania used by local authorities to develop plans for maintaining affordability during a period of high capital investment. In 2016 and 2021, I advised the Government of Nauru on options for reform of electric and water rates, offering advice on cost of service, rate design, and social protection mechanisms.

Q. HAVE YOU PREPARED A SUMMARY OF YOUR QUALIFICATIONS AND EXPERIENCE?

A. Yes. Exhibit BLC-1 is a summary of my qualifications and experience.

Q. HAVE YOU PREVIOUSLY APPEARED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A. No, this is my first time presenting testimony to the Pennsylvania Public Utility Commission ("PUC" or "the Commission").

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE UTILITY REGULATORY COMMISSIONS IN OTHER STATES?

A. I have submitted testimony in 36 utility regulatory proceedings in other jurisdictions, including proceedings before the Public Utility Regulatory Authority of Connecticut, Illinois Commerce Commission, Maryland Public Service Commission, Massachusetts DPU, Public Utility Counsel of Ohio, and Texas Public Utility Commission. Exhibit BLC-1 provides a full summary of the proceedings and topics I have addressed in prior testimonies.

II. Scope and Purpose of Testimony

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. I am appearing on behalf of the Pennsylvania Office of Consumer Advocate ("OCA") in connection with the base rate increase filed by Peoples Natural Gas Company, LLC on March 27, 2026. My testimony addresses customer service performance and consumer protection issues raised by Peoples' filing. This includes an evaluation of whether the Company's customer service record supports its proposed 25 basis point

management performance adder that it has proposed to support its requested return on equity.

Q. WHAT SPECIFIC ISSUES WILL YOU ADDRESS?

A. As I define it, customer service refers to how a utility manages its day-to-day relationship with customers — how accessible it is, how it handles billing and complaints, and how it communicates with customers about their accounts and options. Consumer protection refers to the regulatory standards and requirements, principally Chapter 56 of the Commission's regulations, that govern that relationship and define the rights customers are entitled to expect.

Within that framework, I address the following issues in my testimony:

- Peoples' customer service performance, including trends in call center accessibility and the causes and customer impacts of the 2024 billing disruption resulting from the closure of the Company's bill-print vendor;
- Peoples' recent customer complaint record, including complaint rates, justified complaints, and infraction data reported by the Bureau of Consumer Services;
- The clarity and adequacy of Peoples' customer communications, including communications to customers affected by billing errors, rebills, and delayed bills, and the implications of growing enrollment in electronic billing and automatic payment for customer engagement with utility costs;
- Peoples' proposed tariff modifications affecting customer rights, including changes to nonliability limits, payment requirements, and customer assistance program eligibility;

- Whether Peoples' customer service record supports its claim of superior management performance in connection with the proposed return on equity adder.

Q. HOW DO THE TOPICS YOU COVER IN YOUR TESTIMONY FIT WITH CONSIDERATION OF THE COMPANY'S PROPOSALS UNDER REVIEW IN THIS PROCEEDING?

A. Utility customers are captive in a way that consumers of most other products are not. There is no competing provider to switch to and no market signal to send when service falls short. And unlike most business relationships, the moments that define a customer's experience with their utility are almost never routine ones. Utilities rarely hear from customers when everything is working. When someone contacts their utility it is typically because something has gone wrong: confusion over a bill, difficulty making a payment, or a service that has been or is about to be interrupted. These are not trivial transactional issues. They touch on a household's finances, its comfort, and sometimes its health and safety. Understanding how a utility has handled these moments tells us something important about how it treats the customers it is obligated to serve. Accordingly, I find the customer service issues I address are inevitably relevant to the broader questions the Commission must resolve and should be read in connection with other issues and testimony in this proceeding.

Q. PLEASE SUMMARIZE YOUR FINDINGS ON PEOPLES' RECENT CUSTOMER SERVICE AND CONSUMER PROTECTION COMPLIANCE RECORD.

A. My overall finding is that Peoples' customer service record is adequate but unexceptional. Across the indicators I reviewed, Peoples generally performs at or near the average of the other natural gas distribution companies ("NGDCs") operating in Pennsylvania, with no clear area of strength. Several satisfaction measures have declined over the past six years — most notably satisfaction with the automated phone system — and that decline has tended to move Peoples from a position of above-average service toward the middle of the peer group. Where the Company might once have pointed to results showing it outperformed its peers, the more recent data show it performing about in line with them.

Against that general picture, two areas stand out as warranting attention:

- **Property damage**. Complaints related to property damage are elevated and run above the peer average in both the informal and formal complaint records. It is the category where Peoples' complaint profile diverges most from its peers, and it recurs across both informal and formal complaints converge. There does not appear to be any systemic failures, but it is a recurring pattern that deserves monitoring and a clearer explanation from the Company.
- **2024 billing events**. Peoples experienced multiple billing problems in 2024: a bill-print vendor failure that delayed bills to roughly 183,000 accounts, and a series of rebills that exceeded 100,000 in a single month. The Company has explained these events only in general terms; it attributes the rebill increase to a cause that does not reconcile with the figures it provided, and it was not aware of the vendor failure until BCS

and a member of the Consumer Advisory Council raised it. In each case, affected customers received little or no direct communication explaining what had happened or what options were available to them.

Taken together, these findings describe a company delivering adequate service across most measures, alongside some declining satisfaction trends and a set of recurring or under-explained issues. That is not a record of exceptional performance.

Q. WHAT RECOMMENDTIONS ARE YOU MAKING BASED ON THESE FINDINGS?

A. My primary recommendation is that the Commission should deny the proposed 0.25% management performance adder. The customer service record does not demonstrate exceptional performance that would support granting such an incentive. In addition, I have the following other recommendations related to customer service:

- Reject the proposed tariff changes to nonliability limits, dishonored payment procedures, and customer assistance programs ("CAP") restrictions, each of which shifts risk or reduces customer options without adequate procedural protection.
- Peoples should be required to notify the Bureau of Consumer Services ("BCS") of any rebilling, back-billing, or billing-delivery event affecting more than 1,000 customers within a defined timeframe.
- Peoples should send a direct written explanation to every customer whose bill is rebilled or back-billed, stating the reason for the correction, the period covered, the amount, and the available payment arrangement and

dispute options. This obligation should apply to mass automated events, not only to individual cases.

- The Commission should consider, across all natural gas distribution companies, a policy requiring periodic mailed cost summaries for all residential customers, showing usage and total billed amounts over time, to preserve baseline bill visibility for customers across all billing and payment arrangements.

Q. HOW IS YOUR TESTIMONY ORGANIZED?

A. Section III addresses Peoples' customer service performance, including call center metrics and billing reliability. Section IV covers the customer complaint record, including informal complaint trends and a review of formal complaint proceedings. Section V addresses customer communications. Section VI addresses proposed tariff modifications. Section VII addresses whether Peoples' customer service record supports the proposed management performance adder. Finally, Section VIII offers a conclusion.

III. Customer Service Performance

Q. HOW DID YOU EVALUATE PEOPLES' RECENT CUSTOMER SERVICE PERFORMANCE?

A. My evaluation drew on several sources, beginning with customer service performance data published by the Commission. Pennsylvania's large electric distribution companies and natural gas distribution companies are required to annually submit data on a range of customer service performance indicators under 52 Pa. Code § 54.153 and 52 Pa. Code § 62.33. The Commission publishes this data in an annual Customer

Service Performance Report, which allows for direct comparison of each company's performance against its peers and its own historical record. I also relied on complaint data published by the Commission's Bureau of Consumer Services and on information provided by Peoples in response to discovery requests concerning customer complaints and related matters. I discuss the complaint data and discovery record in Section IV.

Q. CAN YOU ELABORATE ON HOW YOU USED THE CUSTOMER SERVICE REPORT DATA?

A. The reports tracks several categories of performance data, which I have organized into two broad groupings: call center performance, covering how accessible the company is to customers and the quality of those interactions, and billing and related operational metrics, reflecting how reliably the company fulfills its core service obligations. For each grouping I evaluated Peoples' performance against its peer NGDCs operating in Pennsylvania and examined year-over-year trends in the Company's own results. I focused particular attention on changes since 2022, the most recent full year of data available when Peoples' prior rate request was under consideration in Docket No. R-2023-3044549, as changes since that proceeding are directly relevant to the Company's current claims about its management and service quality.

A. Call Center Performance and Customer Contacts

Q. PLEASE DISCUSS YOUR REVIEW OF PEOPLES' CALL CENTER AND CUSTOMER CONTACT PERFORMANCE.

A. To evaluate Peoples' recent call center performance, I collected six years of data on the following indicators from the Commission's Customer Service Performance Reports:

- Call Abandonment Rate
- Calls Answered in 30 seconds
- Satisfaction with Reaching the Company
- Satisfaction with Automated Phone System
- Ease of Using EDC's Automated Telephone System
- Satisfaction with Choices Offered by Auto Telephone System
- Satisfaction with Wait to Speak to Representative
- Satisfaction with Reps Handling of Contact
- Satisfaction w/Call Center Reps Courtesy
- Satisfaction w/Call Center Reps Knowledge.

These indicators together capture both the accessibility and the quality of customer contacts with the Company. Peoples' record across 2019 through 2024 for these six indicators is presented in Table 1. For clarity in the table below, I present the unabandoned call rate (100% - abandonment rate) rather than the abandonment rate, so that upward movement in all indicators reflects improvement.

Table 1: Peoples Call Center and Customer Contact Indicators, 2019-2024

Indicator	2019	2020	2021	2022	2023	2024	6-year change	3-year change
*Unabandoned Call Rate**	98%	99%	99%	97%	97%	96%	-2%	-1%
Calls Answered in 30 seconds	84%	93%	87%	85%	85%	86%	2%	1%
Satisfaction with Reaching the Company	90%	92%	90%	84%	84%	86%	-4%	2%
Satisfaction with Automated Phone System	87%	85%	82%	78%	79%	76%	-11%	-2%
Ease of Using EDC's Automated Telephone System	84%	84%	78%	76%	78%	76%	-8%	0%
Satisfaction with Choices Offered by Auto Telephone System	85%	83%	81%	76%	80%	74%	-11%	-2%
Satisfaction with Wait to Speak to Representative	88%	86%	84%	78%	77%	79%	-9%	1%
Satisfaction with Reps Handling of Contact	96%	94%	93%	94%	91%	90%	-6%	-4%
Satisfaction w/Call Center Reps Courtesy	96%	97%	94%	97%	94%	94%	-2%	-3%
Satisfaction w/Call Center Reps Knowledge	96%	94%	93%	93%	91%	92%	-4%	-1%

Source: Customer Service Performance Reports for 2021 and 2024

Q. HOW DOES PEOPLES' CALL CENTER AND CUSTOMER CONTACT PERFORMANCE COMPARE TO OTHER NGDCS?

A. The table below compares Peoples' two-year performance in 2023/2024 on these same indicators to the average of all NGDCs. Evident is that Peoples, for the most part, is performing at the same level as the other major NGDCs in Pennsylvania with no noticeable area of strength or weakness.

Table 2: Call Center and Customer Contact Indicators: Peoples vs. NGDC Average (2023/2024)

Indicator	*Peoples*	*NGDC Avg*	*Difference*
Unabandoned Call Rate	97%	97%	--
Calls Answered in 30 seconds	86%	86%	--
Satisfaction with Reaching the Company	85%	84%	+1%
Satisfaction with Automated Phone System	78%	78%	--
Ease of Using EDC's Automated Telephone System	77%	78%	-1%
Satisfaction with Choices Offered by Auto Telephone System	77%	77%	--
Satisfaction with Wait to Speak to Representative	78%	80%	-2%
Satisfaction with Reps Handling of Contact	91%	91%	--
Satisfaction w/Call Center Reps Courtesy	94%	94%	--
Satisfaction w/Call Center Reps Knowledge	92%	91%	--

Source: 2024 Customer Service Performance Report

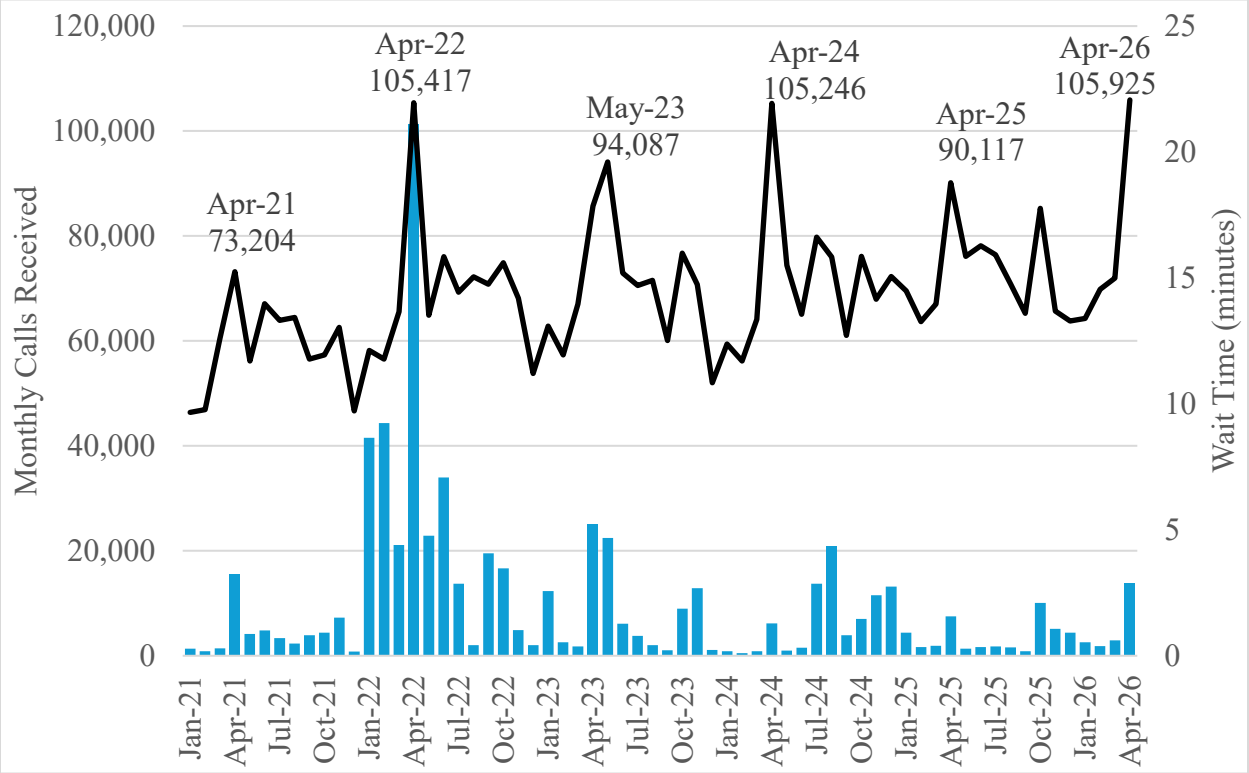
Q. WHAT ARE YOUR OVERALL TAKE AWAYS FROM ANNUAL REPORT DATA ON CALL CENTER PERFORMANCE?

A. Table 1 shows a modest decline from 2019 to 2024 in most of the customer satisfaction indicators, although these declines tended to bring People's satisfaction scores in line with the other NGDCs. The steepest drops are in the automated phone system categories, each down between 8 and 11 percentage points since 2019, suggesting a degradation in quality with the front-end call experience. Again, however, the drops in satisfaction seemed to represent movement toward the averages of the other NGDCs, rather than a fall below other utilities. These changes are still notable in that where the Company may have previously been able to point to results showing it had above average service – now it appears to be more or less right around industry average.

Q. WHAT OTHER INFORMATION DID YOU USE TO EVALUATE CALL CENTER PERFORMANCE?

A. I received monthly data through discovery on call abandonment, calls answered within 30 seconds, and related call center metrics for January 2021 through April 2026. This monthly data allows for more granular analysis of intra-year patterns than the annual snapshots reported in the Customer Service Performance Reports. Figure 1 shows customer calls offered and average wait time by month for the January 2021 through April 2026 period.

Figure 1: Monthly Call Center Customer Calls Offered and Wait Times



Source: OCA XIII-001

Q. WHAT PATTERNS EMERGE?

A. The monthly data reveals a recurring seasonal pattern: customer calls tend to peak in April. For five of six years, April was the month with the higher number of calls received. Also evident in the figure is that these peak call months have the highest average wait times (blue bars in figure) with peaks in average wait times occurring in April in four of the last six years. As I show in Table 3 below, the longer wait times in these months tend to coincide with higher rates of call abandonments. Call abandonment rates in the peak call months were above the annual averages – 1.5 to 2.5 times the annual average rate – in four of six years.

Table 3: Peak Call Month and Annual Average Call Abandonment Rates, 2021-2026

YEAR	PEAK CALL MONTH	ANNUAL AVERAGE	PEAK CALL MONTH TO ANNUAL RATIO
2021	1.83%	2.51%	0.73
2022	9.90%	3.92%	2.52
2023	7.40%	3.48%	2.13
2024	4.82%	5.84%	0.83
2025	5.43%	3.49%	1.56
2026	13.60%	6.95%	1.96

Source: OCA XIII-001

Q. DO YOU HAVE THOUGHTS ON WHAT DRIVES THIS ANNUAL PATTERN?

A. This annual pattern is not surprising. The peak in calls occurs at the end of the heating moratorium period that runs from December 1st through March 31st each year in Pennsylvania.

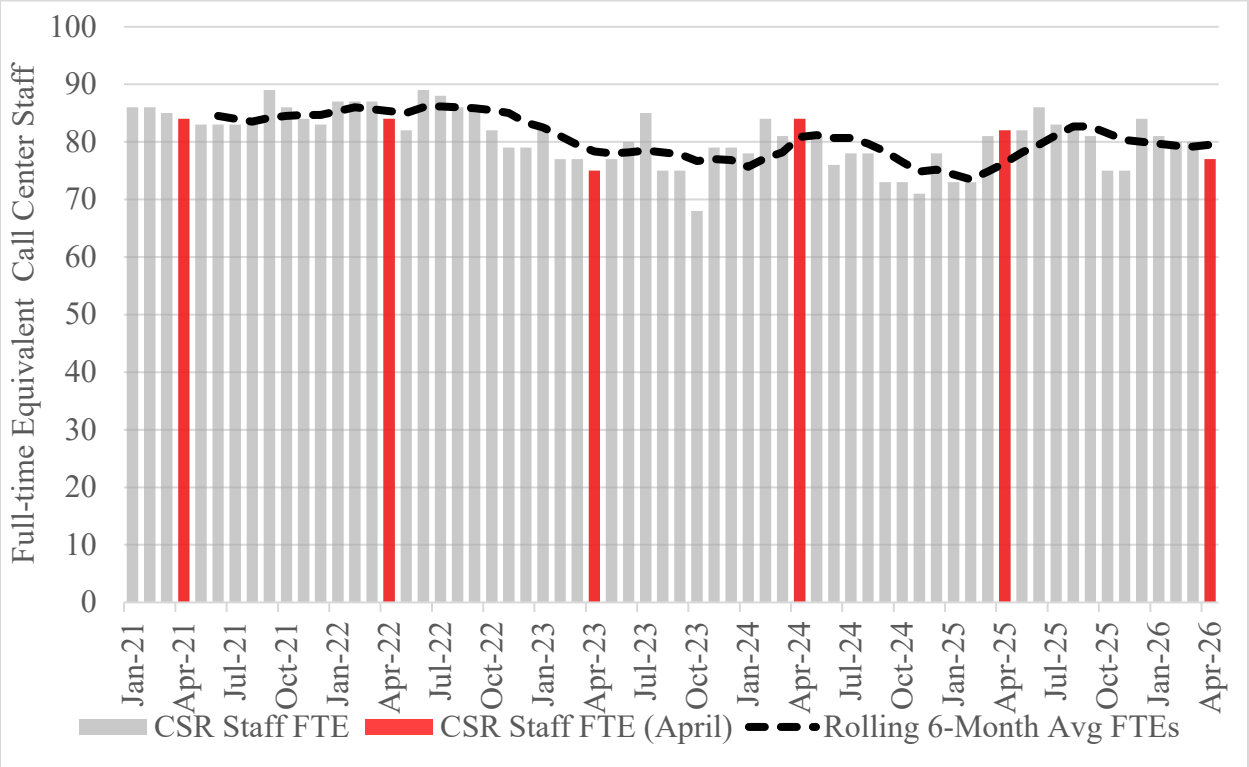
Q. WHAT CONCERNS DO THESE PATTERNS RAISE FOR YOU FROM A CUSTOMER SERVICE PERSPECTIVE?

A. Elevated wait times and call abandonment rates are direct measures of service degradation. When customers cannot reach a representative, either because they abandon a call after a long wait or because the system cannot accommodate them, they receive a lesser quality of service**.** My concern is that despite the predictability of these annual peaks in calls, Peoples does not take steps to increase the number of representatives in its call center. Staffing data provided in response to OCA-XIII-003 shows that there have been no noticeable increases in staffing levels in recent Aprils to address the influx of calls.

In fact, there have been several recent Aprils where the staffing levels represented a drop from prior months. Figure 2 shows monthly call center staffing from January

2021 through March 2026, with April months highlighted. The data reveals that in four of the six years for which data is available, April staffing was below the six-month rolling average level for the preceding period. The two exceptions are 2024 and 2025 — notably the same two years in which April's call wait times were not the highest in the year.[1]

Figure 2: Call Center Representative Staffing by Month, 2021-2026



Source: OCA XIII-003

The staffing data also reveals a longer-term gap between Peoples' actual staffing and its own approved level. According to OCA-XIII-003, the Company's approved call center staffing has been 89 customer service representatives ("CSRs") since at

[1] In 2024, the month with the highest average wait time was August (4.37 minutes) while the wait time in April was 1.28 minutes. In 2025, the month with the highest wait time was October (2.10 minutes) while the wait time in April was 1.57 minutes. The wait time in April was the highest in the year in 2021, 2022, 2023, and 2026 (Jan.-Apr.).

least 2015. Over the 64 months of data provided, staffing reached that level in only two months — September 2021 and June 2022. The Company has been operating at a chronic deficit relative to its own approved staffing levels, and April staffing has never reached 89 in any year in the data.

Q. WHAT DOES THE STAFFING DATA TELL YOU ABOUT HOW THE COMPANY HAS MANAGED THIS FORESEEABLE DEMAND PATTERN?

A. I recognize that increasing staffing for a single month presents real operational challenges. That said, the decision about how to respond to a predictable demand spike is ultimately a cost decision, and the staffing data shows that Peoples has generally chosen not to increase staffing ahead of April. The consequence of that choice is a recurring and foreseeable drop in service quality during the months when customers most need to reach their utility.

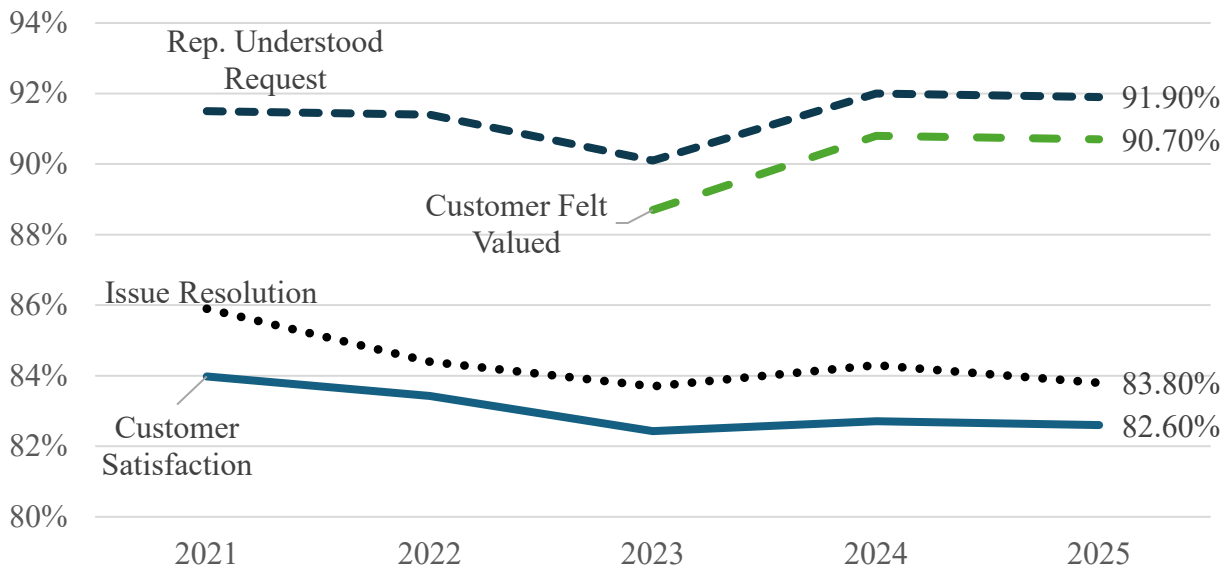
I am not making a specific recommendation here regarding call center staffing levels or how the Company should structure its workforce. Rather, I note this pattern as part of my overall assessment of Peoples' customer service record. It is one of several indicators that, taken together, inform my conclusion that the Company's performance does not rise to the level that would warrant a management performance adder.

Q. ARE THERE ANY POSITIVE TRENDS TO NOTE?

A. Figure 3 shows the results of the Company's Voice of Customer ("VOC") post-contact survey data for 2021 through 2025. These are follow up surveys sent to customers after calling the Company. The results show that while overall satisfaction and issue resolution rates have declined or stagnated – both sitting in the low-80th percentile

range – scores on how customers felt they were treated by representatives have held up better. Specifically, the measures for whether the representative understood the customer's request and whether the customer felt valued have seen slight upticks in recent years and remain in the 90th percentile range. This is a meaningful distinction. Most customer contacts with Peoples arise from concerns about affordability or confusion over bill amounts, and declining satisfaction and resolution scores are likely tied at least in part to the underlying rate trajectory rather than to how individual representatives are performing. The data suggest that frontline staff are maintaining high standards in their interactions even as systemic factors outside their control to drive overall dissatisfaction. That is worth recognizing. The monthly April call abandonment pattern I described above is a management decision; the performance of individual call center staff within those constraints reflects something different.

Figure 3: VOC Post-contact Survey Responses, 2021-2025



Source: OCA-XIII-004

Q. ANY OTHER POSITIVE FINDINGS TO NOTE?

A. Yes. Peoples' response to OCA-XIII-004 notes a change in the methodology for VOC post-contact surveys starting in late 2023 that made it easier for customers response. There has been a noticeable increase in the volume of survey responses since those changes were made with responses increasing from 5,460 in 2022 to 32,178 in 2024 and 29,745 in 2025. I raise this not as a concern but as a positive development. Customer service programs must adapt to changing customer behaviors and communication preferences, and updating the survey methodology to reach more customers is an example of that kind of evolution.

B. Billing Practices and Performance

Q. HOW HAVE YOU EVALUTED CUSTOMER BILLING PERFORMANCE?

A. To evaluate Peoples' billing and operational performance, I reviewed four indicators tracked in the Commission's Customer Service Performance Reports:

- Residential Bills Not Rendered in Billing Period
- Small Bills Not Rendered in Billing Period
- Residential Meters Not Read in 6 Months
- Residential Meters Not Read in 12 Months.

Table 4 shows Peoples' annual results on these indicators from 2019 through 2024. For presentation purposes, I am presenting the inverse of the indicators (i.e. bills rendered instead of not rendered) here such that increases in each indicator represent improvement and downward movement is decline.

Table 4: Peoples Billing and Metering Indicators, 2019-2024

Indicator	2019	2020	2021	2022	2023	2024	6-year change	3-year change
Residential Bills Rendered	100%	100%	100%	100%	100%	96.9%	-3%	-3%
Small Bus. Bills Rendered	100%	100%	100%	100%	100%	96.9%	-3%	-3%
% Residential Meters Read in Last 6 Months	99.0%	97.5%	98.8%	100%	100%	100%	1%	0%
% Residential Meters Read in Last 12 Months	99.9%	98.9%	94.8%	100%	100%	100%	0%	0%

Source: 2021 and 2024 Customer Service Performance Reports

Q. HOW DOES PEOPLES BILLING AND METERING RECORD COMPARE TO THE OTHER NGDCS?

A. Table 5 compares Peoples results for 2023/2024 to the average of the other major NGDC's over this period. While the difference is relatively minor (1%) the difference in bills rendered here aligns with the drop in bills renders in 2024 shown in Table 4.

Table 5: Billing and Metering Indicators: Peoples vs. Other NGDCs (2023/2024)

Indicator	Peoples	NGDC Avg	Difference
Residential Bills Rendered in Billing Period	98.5%	99.7%	-1%
Small Bus. Bills Rendered in Billing Period	98.5%	99.7%	-1%
% Residential Read in Last 6 Months	100.0%	99.8%	0%
% Residential Read in Last 12 Months	100.0%	99.9%	0%

Source: 2024 Customer Service Performance Report

Q. HOW DOES PEOPLES' BILLING AND METERING RECORD COMPARE TO THE OTHER NGDCS?

A. After some issues from 2019 to 2021, Peoples' meter reading performance has been consistently strong with 100% of residential meters read within both the six-month and twelve-month thresholds since 2022. Billing render rates were similarly perfect until

2024, when both residential and small business bills-rendered rates fell to 96.9%. According to the Company's count reported to BCS, the average residential bills not rendered per billing period jumped from 0 in 2021, 2022, and 2023 to 17,427 in 2024.[2]

Q. HAS THE COMPANY EXPLAINED THE REASON FOR THAT INCREASE?

A. Yes. The 2024 Customer Service Performance Report notes that Peoples' bill print vendor closed abruptly during the summer of 2024, and that while the Company was transitioning to a new vendor, files were missed in November 2024, resulting in a delay in the printing and mailing of bills for one month. Because a large number of bills were affected in November, it produced a higher annual average figure. The correspondence provided in response to OCA-XIII-008 confirms that approximately 183,000 accounts, approximately 25% of Peoples' residential customer base, received a delayed paper bill as a result of the vendor failure.[3]

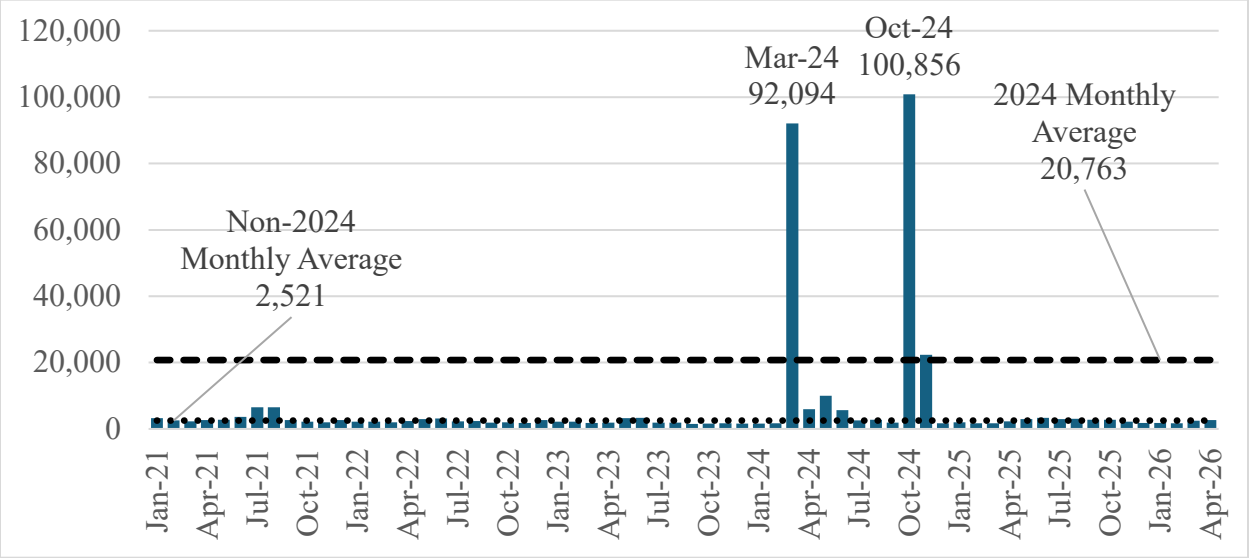
Q. HAVE THERE BEEN OTHER BILLING-RELATED ISSUES IN RECENT YEARS?

A. Reviewing monthly residential rebilling data provided in response to OCA-XIII-020, I found that 2024 also saw several months with rebill volumes far above the surrounding period. Figure 4 shows monthly residential rebill counts from January 2021 through early 2026. Outside of 2024, the monthly average is approximately 2,500 rebills. In 2024, there were several months — including March 2024 (92,094 rebills) and October 2024 (100,856 rebills) — that were orders of magnitude above that baseline.

[2] 2023 and 2024 Customer Service Performance Reports.
[3] OCA-XIII-008

As a result, the 2024 monthly average for residential rebills was approximately 20,763, roughly eight times the average for all other years in the data.

Figure 4: Monthly Residential Rebills, 2021-2026



Source: OCA-XIII-020

Q. PLEASE DEFINE REBILLING AND BACK-BILLING.

A. These terms are sometimes used interchangeably, and Peoples described both in its response to OCA-XIII-023. A back-bill is a make-up bill for service that was previously unbilled or underbilled because of a meter or meter-communication failure, a missed or estimated read later corrected by an actual read, or a billing-system or account error.[4] A rebill is the cancellation and reissuance of a bill to correct charges that were calculated incorrectly the first time.[5] From a customer's perspective, both represent a request for payment of non-current charges — that is, amounts attributable to a prior billing period. The data shown in Figure 4 is drawn from OCA-XIII-020,

[4] OCA-XIII-023
[5] *Id.*

which I requested as "residential customer billing adjustments and rebills." The Company's response labels the data as rebills, but it is unclear whether it includes back-bills as well.

Q. IS THE 2024 REBILL SPIKE CONNECTED TO THE BILL PRINT VENDOR FAILURE?

A. No. According to OCA-XVII-004, the print vendor failure did not generate any rebills, because the bills were generated correctly and on time within the billing system, meaning the "only delay" was in physical delivery by the vendor.[6] The elevated rebill volumes I identified in OCA-XIII-020 reflect a separate set of billing issues.

Q. DID THE COMPANY EXPLAIN WHAT CAUSED THE 2024 REBILL INCREASES?

A. Only in general terms. In response to OCA-XVII-006, Peoples stated that it "does not track [rebill causes] at this level of detail" but believes the 2024 escalation was associated with ERT rebills — errors related to encoder-receiver-transmitter meter-reading devices — and that the corrections involved charges dating back to 2018.[7]

Q. DO YOU HAVE ANY OBSERVATIONS ON HOW THESE BILLING INCIDENTS CAME TO LIGHT AND HOW THE COMPANY RESPONDED?

A. First, I find it notable that a company issuing over 100,000 rebills in a single month cannot attribute those rebills to a specific cause. The response to OCA-XVII-006 offers only a general belief about the probable source. That is not an adequate accounting for a billing event of that scale.

[6] OCA-XVII-004
[7] OCA-XVII-006

The Company's inference that the rebill numbers were related to the ERT issue does not align numerically. In OCA-XIII-025 CONFIDENTIAL, the Company reported that **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]** were affected.[8] Given that Peoples indicates this issue went back to 2018, and was identified in 2024, that would suggest at most there were 84 months of rebills for these affected customers which would result in total rebills of **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**. That total represents less than 2 percent of the 249,158 rebills issued in 2024. Clearly, there were other billing issues that the Company is unable to account for.

Second, the bill print vendor failure came to the Commission's attention not through any proactive disclosure by Peoples but through independent observations by BCS staff and a member of the Consumer Advisory Council.[9] Based on my reading of the email exchange it also seems that Peoples was unaware of the problem when initially contacted. This scenario points to a gap in the Company's internal monitoring of its billing operations and its obligation to proactively communicate service disruptions to regulators and customers.

Q. DO YOU HAVE ANY SPECIFIC RECOMMENDATIONS RELATED TO

A. If possible, Peoples should address these 2024 billing issues in greater detail in their rebuttal testimony. While I've tried to develop the record on these events I still find the information and details to be lacking.

Q. ARE THERE SPECIFIC CONCERNS THESE INCIDENTS RAISE FOR YOU?

[8] OCA-XIII-025 CONFIDENTIAL
[9] OCA-XIII-008

A. In aggregate, the bills not rendered, rebills, and back-bills in 2024 account for less than 10% of total bills administered by Peoples that year. I do not characterize them as systemic failures.

My concern is with how the Company treated the events. The picture that emerges from the record — a print vendor failure that Peoples was unaware of until BCS and a Consumer Advisory Council member raised it, and a rebill spike of over 100,000 in a single month that the Company cannot specifically explain — suggests these incidents were treated as operational blips rather than events warranting proactive attention and communication.

That framing understates the impact on affected customers. For households already managing tight budgets, receiving no bill for a month and then finding a past-due balance on their account is not a minor inconvenience. It creates confusion, triggers late payment concerns, and can put customers at risk of collection activity for charges they had no opportunity to pay on time. The problem is compounded when the utility has not communicated what happened or what the customer should expect. I address adequacy of Peoples' customer communications in these situations in more detail in Section V.

IV. Customer Complaint Record

Q. WHAT IS A CUSTOMER COMPLAINT?

A. A customer complaint arises when a customer contacts the PUC's Bureau of Consumer Services ("BCS") about an unresolved dispute with their utility. The Commission tracks two categories: informal complaints, which are addressed by BCS staff without a formal legal proceeding, and formal complaints, which are docketed

and adjudicated by an administrative law judge in the Office of Administrative Law Judge ("ALJ"). I discuss each in turn below.

Q. WHY ARE COMPLAINTS WORTH REVIEWING?

A. Some level of complaints is a normal feature of utility operations. The fact that complaints are filed does not by itself indicate poor performance. What matters is the trend over time, how a company's complaint rate compares to its peers, and the nature and outcomes of the complaints. A rising trend, a complaint rate that stands out among peers, or a pattern of complaints centered on a specific type of issue can each point to a performance problem worth examining. The outcome of complaints also matters: how many customers had their concerns resolved, how many formal proceedings resulted in the company being found at fault, and how many cases were effectively closed because unrepresented complainants stopped participating. I address each of these dimensions in my review of Peoples' informal and formal complaint records below.

A. Informal Complaints

Q. HOW ARE INFORMAL COMPLAINTS FILED?

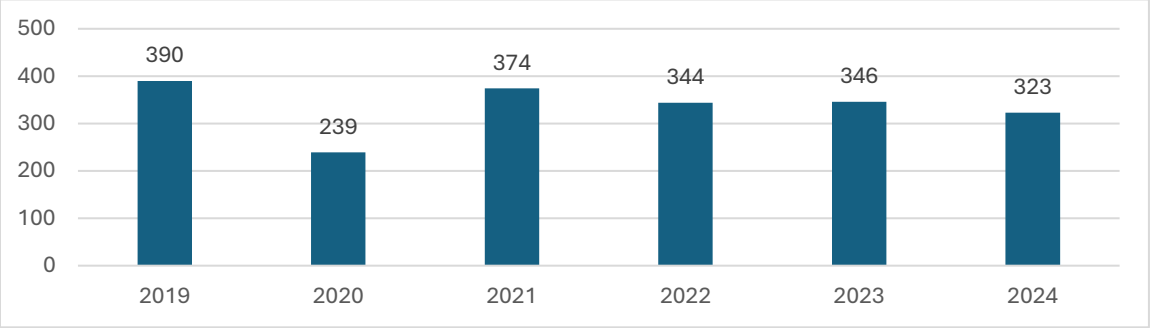
A. A customer files an informal complaint by contacting BCS directly, typically by phone or online. Not every contact with BCS generates a complaint. If the matter is resolved in the initial call, BCS records it as an "inquiry" rather than an informal complaint. BCS also separately tracks payment arrangement requests. An informal complaint is therefore a specific instance that could not be resolved at first contact and required BCS to conduct follow-up with the utility and seek a response. This is a meaningful filter: an informal complaint count reflects cases that required active engagement

between BCS and the company, not simply any customer who called BCS with a question.

Q. WHAT HAS BEEN THE TREND FOR INFORMAL COMPLAINTS FILED AGAINST PEOPLES IN RECENT YEARS?

A. Figure 5 shows informal complaints filed against Peoples from 2019 to 2024. The long-term trend is declining, from a high of 390 complaints in 2019 to 240 in 2024. The recent years have been relatively flat, with volumes holding between 240 and 271 since 2022. There is no single spike in the recent data that would indicate a concentrated customer service failure. The overall trajectory is one of gradual improvement from the 2019 peak.

Figure 5: Informal Complaints Against Peoples, 2019-2024



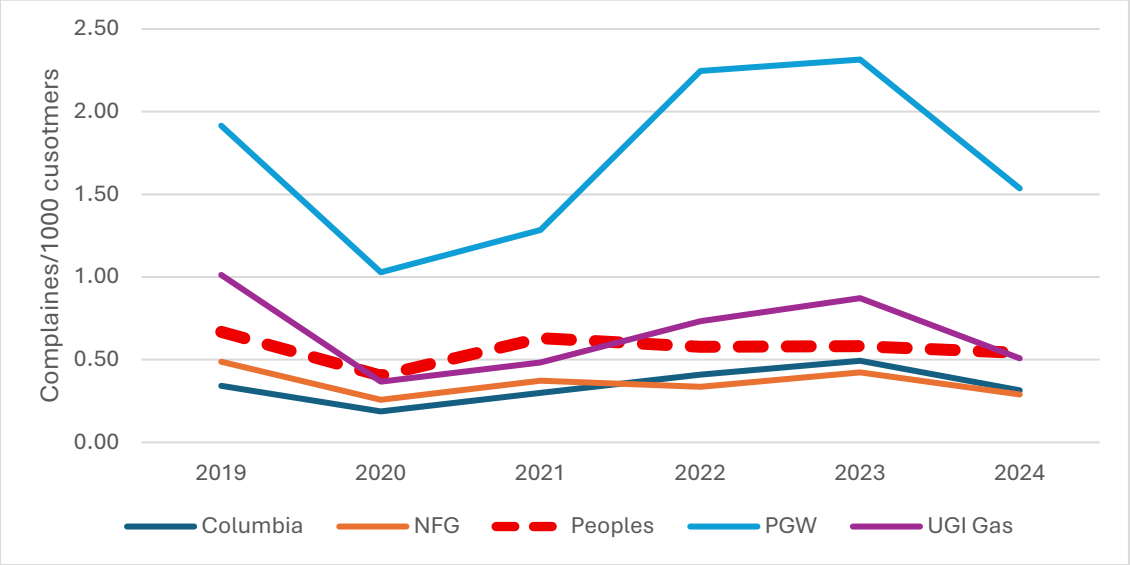
Source: Annual UCARE Reports, OCC XIII-006

Q. HOW DOES PEOPLES' RATE OF COMPLAINTS COMPARE TO THE OTHER MAJOR GAS UTILITIES IN PENNSYLVAIA?

A. Figure 6 compares complaint rates across Pennsylvania's major NGDCs from 2019 to 2024. Most companies – except Philadelphia Gas Works (PGW), which runs at a notably higher rate – are clustered together, with Peoples sitting in the middle of that

group throughout the period. This position has been stable. In other words, Peoples is not an outlier in either direction relative to comparably situated peers.

Figure 6: NGDC Informal Complaint Rate, 2019-2024



Source: UCARE Reports, 2019-2024.

Q. WHAT WERE THE REASONS FOR INFORMAL COMPLAINTS AGAINST PEOPLES?

A. Table 6 shows the composition of informal complaint reasons for Peoples from 2019 to 2024. I note that BCS evaluates reasons for a sample of complaints each year, so the table does not represent the full complaint volume. Billing disputes and termination/payment arrangement issues together account for the largest share, which is not surprising given that billing and payment concerns drive the majority of utility-customer friction.

More notable is the shift in the relative weight of personnel problems and property damage complaints between the two three-year periods. Personnel problems rose from 8% of sampled complaints in 2019-2021 to 13% in 2022-2024 – a category

where Peoples now runs above the average for other NGDCs. Property damage remained elevated and also runs above the peer average in recent years. The increase in personnel problems complaints is somewhat at odds with the VOC data showing that satisfaction with individual representative interactions has held up. One possible explanation is that the complaints reaching BCS reflect more serious individual incidents, while routine interactions measured by post-contact surveys remain at acceptable levels. Another is that rising bills have increased general tension in interactions and some of that tension spills into complaints, even if the majority of contacts are handled professionally.

Table 6: Composition of Reasons for Informal Complaints Against Peoples, 2019-2024

Reason	2019	2020	2021	2022	2023	2024	2019-2021	2022-2024	Change
Billing Disputes	49	27	43	52	39	20	14.8%	14.4%	-0.4%

Source: UCARE Reports, 2019-2024

Q. HOW DO THE REASONS COMPARE TO OTHER COMPANIES?

A. Table 7 compares the composition of complaint reasons for Peoples against the average for other major NGDCs, for the 2019-2021 and 2022-2024 periods. The most notable differences in the recent period are in personnel problems, damages, and service quality. Peoples runs above the NGDC average on all three in 2022-2024, while other companies show higher shares of billing dispute complaints. This pattern suggests that Peoples' complaint profile has shifted toward operational issues – how work is done in the field and how customers are engaged – rather than payment and billing process issues, which are more common across the peer group. This is a different kind of problem and one that warrants attention.

Table 7: Composition of Reasons for Informal Complaints: Peoples vs. Other NGDCs

	2019-2021		2022-2024		Difference	
Reason	Peoples	Other NGDCs	Peoples	Other NGDCs	2019-21	2022-24
Billing Disputes	15%	23%	14%	29%	-8%	-14%
Termination / PAR	19%	15%	13%	14%	4%	-1%
Personnel Problems	8%	13%	13%	8%	-5%	6%
Damages	13%	10%	14%	6%	3%	7%
Discontinue / Transfer	6%	8%	9%	6%	-2%	3%
Service Quality	8%	5%	9%	5%	3%	4%
Other Payment Issues	6%	5%	5%	5%	1%	0%
Credits and Deposits	6%	4%	5%	5%	2%	0%
Metering	5%	3%	1%	3%	1%	-2%

Service Extensions	1%	1%	1%	0%	0%	1%
All Other	6%	7%	11%	14%	-1%	-4%

B. Formal Complaints

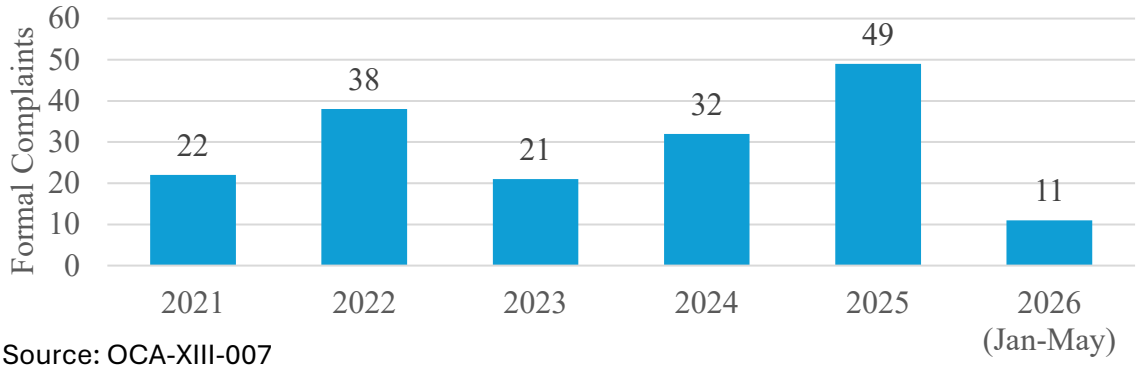
Q. WHAT ARE FORMAL COMPLAINTS?

A. A formal complaint is a legal proceeding initiated when a customer files a written complaint with the Commission. Formal cases are docketed and assigned to an ALJ, who presides over the proceeding and issues an adjudication. The formal complaint process is more structured than the informal process and requires both parties to participate in proceedings that can include hearings. Residential customers who file formal complaints are not required to have legal representation, which is a relevant practical consideration for understanding how these cases tend to resolve.

Q. HOW MANY FORMAL COMPLAINTS HAVE BEEN FILED AGAINST PEOPLES IN RECENT YEARS?

A. Unlike the informal complaint trend – which has been flat or declining – the formal complaint trajectory has been increasing. As shown in Figure 7, formal complaints filed against Peoples have grown each year since 2022. The 2025 total of 49 complaints represents more than double the 21 filed in 2023. I have not identified a single pervasive issue driving this increase, but the pattern, taken together with the informal data and the rising bill trajectory customers are experiencing, suggests growing frustration with the Company among a subset of customers who are motivated to engage in a more formal dispute process.

Figure 7: Formal Complaints Filed Against Peoples, 2021-2026



Source: OCA-XIII-007

Q. HAVE YOU REVIEWED ANY OF THE FORMAL COMPLAINTS FILED AGAINST PEOPLES IN RECENT YEARS?

A. Yes. I reviewed the docketed filings for formal complaints filed against Peoples from 2023 through 2025, focusing on complaints filed by customers rather than rate filings or requests submitted by consumer advocates such as OCA. In total, I reviewed the record of 74 formal complaint proceedings over that three-year period. As Table 7 shows, most of those proceedings ended with Peoples filing a Certificate of Satisfaction, indicating that the Company and the complainant reached some resolution. Notable, however, is that 18% of the 74 proceedings were denied, dismissed, or withdrawn, and my review of the case records suggests that many of these outcomes occurred because the complainants – most of whom lacked legal representation – stopped participating. That does not mean the underlying complaints lacked merit. Unrepresented residential customers facing the burden of continued involvement in a formal proceeding may disengage for practical reasons that have nothing to do with the strength of their case.

Table 8: Results of Formal Complaint Proceedings, 2023-2025

Year	Certificate of Satisfaction	Sustained	Denied /Dismissed	Withdrawn / Closed	Active	Year Total
2023	11	1	3	0	1	16
2024	14	1	2	0	1	18
2025	24	0	8	1	7	40
Total	49	2	13	1	9	74
%	**66%**	**3%**	**18%**	**1%**	**12%**	

Q. WHAT WERE THE REASONS LISTED FOR THE FORMAL COMPLAINTS YOU REVIEWED?

A. Many of the dockets only contained procedural related filings that did not include specifics on the nature of the dispute. Of the 74 dockets I reviewed, I could only identify specifics on the nature of the dispute for 28 complaints. Most of the complaints (15) were billing related, including disputes over rates, billed amounts, and payment arrangements. Then, there were eight (8) instances where customers contended the Company was in some way responsible for property damage. These instances mostly involved recent utility construction activities around or near their property. There were three (3) safety related issues, including one instance where a contractor did not properly mark an excavation site and a resident drover their vehicle into the ditch.[10]

Q. WHAT CONCLUSIONS CAN YOU DRAW FROM YOUR REVIEW OF THESE COMPLAINTS?

A. Property damage emerges as a recurring theme in both the informal and formal complaint records, and it is the category where Peoples' informal complaint share

[10] Frank Szymanski v. Peoples Gas Company LLC, C-2024-3051085.

diverges most from the peer average. While the Company appears to have contested fault in most of the formal cases I reviewed, the combination of an elevated informal complaint rate in this category and a growing formal complaint count points to an area that warrants ongoing attention. Whether this reflects the scale of Peoples' pipeline replacement and infrastructure work, practices around site management and restoration, or something else is a question the Company should be expected to answer. This is not a finding of systemic failure, but it is an issue that deserves monitoring and, at minimum, a clearer explanation from the Company of what steps it has taken to reduce damage-related complaints from its field operations

V. Customer Communications

Q. WHAT DOES THIS SECTION ADDRESS?

A. This section addresses two aspects of how Peoples communicates with its customers about their bills. The first is how the Company communicates with customers when it corrects or delays a bill, whether through rebills, back-bills, or delayed bills. The second is a related but broader question: how the growth of electronic billing and automatic payment affects customers' day-to-day engagement with their bills, and what that means for how billing and cost problems come to light. Both concern the conditions under which customers stay informed about their utility bills.

A. Rebilling and Back-Billing Related Communications

Q. IN SECTION III YOU RAISED CONCERNS ABOUT PEOPLES' RESPONSE TO THE 2024 BILLING INCIDENTS. HOW DO CUSTOMER COMMUNICATIONS FACTOR INTO THOSE CONCERNS?

A. Billing corrections, whether a rebill, a back-bill, or a delayed bill, can be disorienting and financially disruptive for customers. A customer who finds an unexpected balance or a charge covering prior months may not have the funds to pay, may not understand why their bill changed, and may not know what options are available. Clear, proactive communication is what converts that experience from a surprise into a manageable event. In this section I examine what Chapter 56 requires when a utility corrects a bill, what Peoples' own policy says it does, and what the discovery record shows it actually did.

Q. WHAT DOES CHAPTER 56 REQUIRE WHEN A UTILITY ISSUES A MAKE-UP BILL FOR PREVIOUSLY UNBILLED OR UNDERBILLED SERVICE?

A. Under 52 Pa. Code § 56.14, when a utility issues a make-up bill for previously unbilled service that accrued within the past four years and the make-up bill exceeds the otherwise-normal estimated bill by at least 50% or at least $50, the utility must explain the bill to the customer and make a reasonable attempt to amortize it. Where an underbilling results from an error in a remote meter-reading device, Chapter 56 directs the utility to comply with § 56.14 if the rebilling exceeds that same threshold.

Q. WHAT DOES PEOPLES' WRITTEN POLICY SAY ABOUT NOTIFYING CUSTOMERS OF A REBILL OR BACK-BILL?

A. Peoples' response to OCA-XIII-023 describes customer notice as consisting of a phone call from a customer service representative to review the rebill or back-bill, and a letter mailed to the customer stating the reason for the correction, payment-arrangement details, corrected invoices, and, if needed, a usage comparison. On its

face, that policy would satisfy the obligation in § 56.14 to explain the bill to the customer.

However, I am unsure when this policy is put into action. Peoples indicated in OCA-XVII-008 that it applies no fixed threshold — by number of customers affected, dollar amount, or otherwise — that triggers customer notification or even representative notification. Notification is left to a case-by-case judgment about expected call volume. OCA-XVII-007 similarly describes representative preparation as informal, through team huddles, talking points, and account notes where available.

Q. HAVE THERE BEEN ANY SIGNIFICANT REBILLING OR BACK-BILLING INCIDENTS IN RECENT YEARS BEYOND WHAT YOU DESCRIBED IN SECTION III?

A. In response to OCA-XIII-025, Peoples identified three instances during the past five years in which it issued back-bills or rebills to more than 100 customers arising from a common cause. Each instance either occurred in 2024 or resulted from a billing change implemented in 2024 or later. They are as follows:

- **Instance 1**: **[BEGIN CONFIDENTIAL]** [redacted] **[END CONFIDENTIAL]**
- **Instance 2**: **[BEGIN CONFIDENTIAL]** [redacted]

[redacted]

[redacted] **[END CONFIDENTIAL]**

- **Instance 3**: **[BEGIN CONFIDENTIAL]** [redacted]

[redacted]

[redacted] **[END CONFIDENTIAL]**

Q. DID PEOPLES PROVIDE DIRECT NOTICE TO CUSTOMERS DURING THESE EVENTS?

A. For the first two events, no. In response to OCA-XVII-001 (Instance 1) and OCA-XVII-002 (Instance 2), Peoples stated that there was no written or electronic communication sent to customers. Instead, communication was sent internally to representatives and a mass interaction record was added to the affected accounts. The one instance in which Peoples did send a written explanation was Instance 3 (OCA-XVII-003), in which the ERT meter programming error had caused customers to be overbilled over several years, producing a credit; there, a credit supervisor sent each affected customer a letter explaining what had happened.

Q. DID PEOPLES PROVIDE ANY DIRECT NOTICE TO CUSTOMERS IMPACTED BY THE 2024 DELAY IN PRINTED BILLS?

A. For the approximately 183,000 delayed-bill accounts resulting from the print vendor failure, Peoples likewise stated in OCA-XVII-005 that no written communication was sent to customers; it added an interaction record and a 30-day lock against late-payment charges, posted a banner on its website, and made its call center aware of the issue.[11]

Q. DOES THIS RAISE A COMPLIANCE CONCERN UNDER § 56.14?

A. I'm unsure if there were any compliance violations because the Company did not provide any specifics on the rebilled amounts, other than the ERT incident. To the extent the rebills exceeded the § 56.14 threshold of 50% or $50 above the normal estimated bill, we simply do not know.

Ultimately, my concern based on what I have reviewed is with People's policy and how when applied it seems to err on the side of no communication. I have concerns about whether the approach being followed is responsive and fair to customers.

Q. SETTING THE COMPLIANCE QUESTION ASIDE, WHY DOES COMMUNICATION DURING THESE EVENTS MATTER TO CUSTOMERS?

A. Because a corrected or delayed bill delivered without explanation lands on a customer as a sudden, and often large, change in what they owe, with no context for why. When a billing problem affects many customers at once, the correction tends to be handled in an automated, procedural way — a batch rebill, an internal account note, a website

[11] OCA-XVII-005

banner — rather than through individual outreach. That is efficient for the company, but it leaves each individual customer to discover the change on their own and to initiate contact if they want to understand it. The result can be confusion, anxiety, and payment or credit decisions the customer would not have made with full information.

Q. DO YOU HAVE DIRECT EXPERIENCE WITH THIS DYNAMIC?

A. I do, and I offer it to illustrate the customer's perspective. In March 2025, over five consecutive days, my household received one new electric bill per day from our electricity provider in Massachusetts, with charges going back to August 2024. The bills were for estimated usage covering past billing periods, and they arrived with no explanation. They totaled more than $5,000. This occurred a few days before a planned family trip to Disney World, so we called customer service to try and address the problem before we left. The representative told us our meter had not been read for months, which is why the bills were estimated. I asked whether there was a widespread problem; the representative said no. I asked how the estimates had been calculated; the representative could not explain. To resolve the matter before our trip, we enrolled in a payment plan. I knew I should look into it further, but I simply did not have the time.

The following month, we received another wave of bills. At that point I contacted my state regulator and learned that the utility had in fact experienced a widespread billing error that it had been slow to report, and that other customers were similarly affected. When we called again, we were routed to a representative handling affected accounts directly, and our balance was ultimately resolved in our favor, in part because Massachusetts limits how far back a utility may back-bill to six months. The

representatives who first took our calls had clearly not been informed of an issue that was already known within the company at the time we began receiving those bills.

Q. WHY IS THAT EXPERIENCE RELEVANT TO PEOPLES?

A. Because it shows how an automated correction, issued without a clear explanation and handled by front-line staff who have not been briefed on a known problem, plays out for the customer — and I encountered it as someone who analyzes utility billing for a living. A typical residential customer has far less ability to recognize that a bill is wrong, to question an estimate, or to know that a regulator exists to help. The risk is greater in Pennsylvania, where § 56.14 permits a make-up bill to reach back up to four years. In Massachusetts the back-billing window is limited to six months, which limits the magnitude of the surprise a customer can face. A four-year make-up bill delivered without a meaningful explanation can be a very large and destabilizing event for a household.

Q. WHAT ARE YOUR RECOMMENDATIONS REGARDING REBILLING AND BACK-BILLING COMMUNICATIONS?

A. I recommend three improvements. First, Peoples should send a direct written explanation to every customer whose bill is rebilled or back-billed, stating the reason for the correction, the period covered, the amount, and the available payment-arrangement and dispute options. This should apply to mass automated events, not only to individual cases — those are precisely the events for which Peoples currently sends nothing.

Second, every affected account should be flagged so that any representative the customer reaches has immediate and consistent information about the event and the

customer's options, rather than relying on whether talking points happen to be available at the time.

Third, Peoples should be required to notify the Commission's Bureau of Consumer Services of any rebilling, back-billing, or billing-delivery event affecting more than 1,000 bills. A clear reporting threshold would ensure the regulator learns of significant billing events promptly rather than incidentally.

B. Engagement of Auto-Pay and E-Bill Customers

Q. WHAT PROMPTED YOU TO EXAMINE AUTO-PAY AND ELECTRONIC BILLING ENROLLMENT IN THIS PROCEEDING?

A. In reflecting on my own experience with the billing error I described earlier in my testimony, I recognized that I had not regularly been paying attention to my monthly bills in the period leading up to it. I was enrolled in electronic billing and automatic payment, and as a result I was not routinely looking at what I was being charged each month. The bills arrived and the payments went out automatically.

That experience prompted me to consider whether the same dynamic is present among Peoples' customers — that is, whether a meaningful share of customers have effectively removed themselves from regular engagement with their bills by enrolling in these programs, and whether there are any noticeable patterns in who those customers are. I used this proceeding as an opportunity to explore both questions through discovery.

Q. WHAT DOES THE DATA SHOW?

A. Peoples provided residential customer counts in response to OCA-XIII-031, broken out by customer type and crossed with electronic-versus-paper billing and automatic-

versus-manual payment. From that data, approximately 10.6% of all residential customers both receive electronic bills and are enrolled in automatic payment. As I show across Table 9 and Table 10, the share of customers both receiving electronic bill and on auto-pay differs markedly by customer group: only about 1.3% of CAP customers fall into this combined category, compared with about 11.1% of non-CAP, non-budget-billing customers.

Table 9: CAP Residential Customers by Billing Type

	Number of Customers			% of CAP customers		
	Auto-Pay	Non-Auto	Total	Auto-Pay	Non-Auto	**Total**
Electronic	471	10,299	10,770	1.3%	27.3%	**28.6%**
Paper	546	26,350	26,896	1.4%	70.0%	**71.4%**
Total	**1,017**	**36,649**	**37,666**	**2.7%**	**97.3%**	**100.0%**

Source: OCA-XIII-031

Table 10: Non-CAP Residential Customers by Billing Type

	Number of Customers			% of Non-Cap customers		
	Auto-Pay	Non-Auto Pay	Total	Auto-Pay	Non-Auto Pay	**Total**
Electronic	48,146	110,814	158,960	11.1%	25.5%	**36.5%**
Paper	28,216	248,032	276,248	6.5%	57.0%	**63.5%**
Total	**76,362**	**358,846**	**435,208**	**17.5%**	**82.5%**	**100.0%**

Source: OCA-XIII-031

Q. WHY DOES THE COMBINATION OF ELECTRONIC BILLING AND AUTOMATIC PAYMENT MATTER?

A. A customer who receives a paper bill and pays it manually each month has a recurring prompt to look at what they are being charged. A customer enrolled in both electronic billing and automatic payment has, by design, removed those prompts: the bill arrives

in an inbox that may go unopened, and the payment leaves the account without any action required. That is a convenience many customers reasonably choose. But the combination tends to reduce month-to-month attention to the size and movement of the bill, and that reduced engagement has consequences for how billing or cost problems come to light.

Q. WHAT IS THE SIGNIFICANCE OF THE DIFFERENCE BETWEEN CAP AND NON-CAP CUSTOMERS?

A. It indicates that bill engagement tends to be inversely related to income. Lower-income customers in the CAP program are far less likely to be in the electronic-plus-autopay category than higher-income customers, by a factor of roughly nine. That is intuitive: a customer for whom the gas bill represents a larger share of household income has more reason to watch it closely each month. The consequence is that the customers paying the closest attention to their bills, and therefore the ones most likely to notice and report a billing or cost problem, are disproportionately the lowest-income customers. Their concerns tend to be treated as affordability matters specific to that population rather than as early indicators of problems that may affect the broader customer base.

Q. DO YOU HAVE A RECOMMENDATION ON THIS ISSUE?

A. I raise this issue not as a recommendation directed solely at Peoples, but as something the Commission may wish to consider more broadly across all utility companies. The growth of electronic billing and automatic payment is a sector-wide trend, and the question of how to maintain meaningful customer engagement with utility costs in that environment is one that warrants attention at the policy level. Peoples' data provides a

concrete illustration of the dynamic: a significant share of non-CAP customers have, in effect, opted out of their monthly billing touchpoint, while the customers most actively engaged with their bills are those least able to absorb unexpected charges. A policy requiring periodic mailed cost summaries for all residential customers, showing usage and total billed amounts over time, is one approach the Commission could consider as a way to preserve baseline visibility into utility costs for customers across all billing and payment arrangements.

VI. Tariff Modifications

Q. HAS THE COMPANY PROPOSED ANY TARIFF CHANGES THAT ARE RELEVANT TO YOUR CONSIDERATION OF CUSTOMER SERVICE AND CONSUMER PROTECTION?

A. Peoples witness Krista Snyder characterizes the tariff changes as mostly minor or clarifying, with the only "substantive" changes being rate changes. Still, I find several proposed tariff changes are relevant to my consideration of customer service and consumer protection issues. These include:

- **Nonliability / limitation of liability**. Peoples proposes to expand language limiting the Company's liability for service-related damages and emphasizing that customers are responsible for protecting their premises from damages associated with interruption of gas service, including when a property is vacant or unoccupied. The proposed language also appears to

limit recovery for incidental, indirect, special, and consequential damages and cap other damages absent willful or wanton misconduct.[12]

- **Dishonored payments**. Peoples proposes language to the Billing and Payment section (Rule 10) of the Rules and Regulation of its retail tariff, that will allow the Company to require certified funds to prevent termination or restore service where the customer has a history of returned payments or has not demonstrated a good-faith effort to pay within the prior 12 months. It also proposes authority to remove a customer from eAccount or other online payment options if it detects "abuse" of those platforms, including repeated cancellations of online payments.[13]
- **CAP restrictions on recreational gas use**. Peoples proposes to prohibit CAP customers from using natural gas for recreational purposes, including pool heaters, hot tubs, outdoor appliances, gas grills, fire pits/rings, fireplaces, gas lamps, heaters, outdoor cooking appliances, and heated outdoor buildings such as sheds, shops, or garages. The proposal would remove customers from CAP for such use, with re-enrollment permitted only after verification that the recreational gas connection has been removed.[14]
- **CAP benefit reversal for alleged fraud**. Peoples also proposes language allowing the Company to reverse CAP benefits if it determines that a CAP

[12] Exhibit KMS-1 at 28.
[13] Exhibit KMS-1 at 31.
[14] Exhibit KMS-1 at 47.

participant obtained benefits through fraudulent means, with the customer responsible for repayment of the reversed benefits.[15]

These changes all tend to push the tariff language in the favor of Company. I have issues with each of these proposed tariff language changes.

Q. WHAT ISSUE DO YOU HAVE WITH THE CHANGES TO LIABILITY LIMITS?

A. The proposed language tightens the Company's nonliability provisions at a moment when property damage complaints are trending upward and running above the peer average. The timing raises a concern: if the Company is facing more customer disputes over damage from its field operations, expanding the language that limits its exposure moves in the wrong direction from a consumer protection standpoint.

Liability limits in utility tariffs are not inherently unreasonable, but the existing tariff already contains such limits. I recommend the proposed nonliability language be rejected and that the existing provisions, which already protect the Company from open-ended liability exposure, be retained.

Q. CAN YOU ELAORATE ON THE ISSUES YOU HAVE WITH THE ADDED LANGUAGE RELATED TO DISHONORED PAYMENTS?

A. My concern is that the proposed language reserves broad discretionary authority for the Company without establishing any criteria, notice requirements, or review process. As written, it allows Peoples to require certified funds or the ability to remove a customer from electronic payment options based on its own assessment that the customer has a history of returned payments or has not demonstrated good-faith

[15] Exhibit KMS-1 at 47.

payment effort within the prior twelve months. There is no definition of what constitutes a history of returned payments, no minimum threshold before the restriction applies, no requirement that the Company notify the customer or BCS before acting, and no mechanism for the customer to contest the determination.

Requiring certified funds is not a trivial imposition — it means a customer cannot pay by check or online and must obtain a money order or cashier's check, which adds cost and inconvenience that falls hardest on customers with limited banking access. Similarly, removing a customer from eAccount eliminates a payment option they may rely on. These are consequential actions that warrant procedural guardrails. I recommend the inserted language be rejected. If adopted, it should be revised to at minimum include: a defined threshold for triggering the restriction, advance written notice to the customer and BCS, and a process for the customer to contest the determination before the restriction takes effect.

Q. WHY DO YOU QUESTION THE CAP RESTRICTIONS?

A. Two concerns. First, Peoples has not established that recreational gas use by CAP customers is a material or widespread problem. Before adding restrictive eligibility conditions to a low-income assistance program, the Company should be able to demonstrate that the problem it is trying to solve is real and of sufficient scale to justify the policy. Nothing in the filing does that.

Second, and more fundamentally, I am skeptical of the approach even if the problem were established. A common dynamic in means-tested assistance programs is that enforcement language designed to exclude ineligible participants also deters eligible ones. Provisions that threaten removal from the program, require proof of

appliance removal, or create ambiguity about what uses are permissible can make low-income customers hesitant to enroll or stay enrolled — particularly customers who have older homes, use gas for multiple purposes, or are uncertain whether a fireplace or an outdoor heater crosses the line. The cost of over-deterrence in a low-income program falls on the households the program is designed to protect.

On the fraud reversal provision specifically, the proposed language allows the Company to reverse CAP benefits and require repayment based on its own determination of fraud, again without any defined process, standard of proof, or review mechanism. A unilateral benefit reversal with repayment obligation imposed on a low-income household is a serious action that should require a more structured process than the proposed language provides. I recommend both the recreational use restriction and the fraud reversal provision be rejected, or at minimum substantially revised to include meaningful procedural protections before any CAP removal or benefit reversal takes effect.

Q. WHAT IS YOUR RECOMMENDATION ON THESE PROPOSED UPDATES?

A. I recommend the Commission reject the proposed nonliability language expansion, the dishonored payment provisions as written, and the CAP recreational use and fraud reversal provisions. If the Commission is inclined to consider any of these changes, I recommend each be conditioned on adoption of the procedural safeguards I have described — defined thresholds, advance notice, and a contestability mechanism — before taking effect.

VII. Management Performance Adder

A. PLEASE EXPLAIN YOUR UNDERSTANDING OF THE PENNSYLVANIA PUBLIC UTILITY COMMISSION'S GUIDANCE REGARDING THE USE OF AN ADDER TO RETURN ON EQUITY UNDER 66 PA. C.S. § 523.

A. Under 66 Pa. C.S. § 523, the Commission has authority to consider a utility's efficiency, effectiveness, and adequacy of service when setting just and reasonable rates. The statute directs the Commission to consider those factors along with other record evidence, and authorizes it to make proper and appropriate adjustments to specific components of the utility's claimed cost of service based on that evidence. Relevant evidence can include management audits, operating efficiency, conservation efforts, cost containment, and any other relevant and material evidence of efficiency, effectiveness, and adequacy of service. In practice, the Commission has treated this as authority for a management performance adjustment, including an adder to return on equity, but not as an automatic reward. The utility must demonstrate on the record that its performance is sufficiently exceptional to justify one.

Q. WHAT HAS PEOPLE'S REQUESTED IN THIS PROCEEDING?

A. Peoples has requested that the Commission authorize a 0.25% addition to the return on common equity proposed by its cost of capital witness.[16] Peoples claims this adder is warranted based on its asserted management effectiveness, including improvements in customer service, accelerated pipeline replacement, economic development, community involvement, and its claimed role as a valuable corporate citizen.[17]

[16] Peoples Statement No. 15 at 5.
[17] Peoples Statement No. 1 at 33.

Q. DO YOU HAVE ANY THOUGHTS ON THIS PROPOSAL?

A. I am not addressing the financial merits of this proposal; my review is limited to what the customer service record does or does not support.

Q. BASED ON YOUR REVIEW OF PEOPLE'S RECENT CUSTOMER SERVICE RECORD IN THIS PROCEEDING, DO YOU RECOMMEND THE COMMISSION GRANT THE REQUESTED ROE ADDER?

A. No. The customer service record does not support an award of a management performance adder. I do not conclude that Peoples has serious ongoing customer service failures. But the standard under Section 523 is not the absence of failure — it is exceptional performance. The record does not clear that bar. Peoples' performance is adequate in most respects. That is not a record that justifies a return on equity (ROE) premium.

Q. HOW CAN PEOPLES IMPROVE ITS CUSTOMER SERVICE?

A. When I look across the complaint data, the customer satisfaction trends, and the call center metrics, the common thread is that most of the tension between Peoples and its customers traces back to rates. Declining satisfaction with issue resolution, rising formal complaints, and increased calls each April are all consistent with a customer base that is reacting to persistent and accelerating bill increases rather than to a breakdown in service delivery. The most effective thing Peoples can do for its customers is hold the line on costs. An ROE adder would push in the opposite direction.

VIII. Conclusion

Q. WHAT IS YOUR OVERALL CONCLUSION REGARDING THE MANAGEMENT PERFORMANCE ADDER?

A. Peoples has not demonstrated that its customer service performance is sufficiently exceptional to warrant a merit-based return on equity increase. I recommend the Commission deny Peoples' request for a management performance adder.

Q. PLEASE SUMMARIZE THE OTHER RECOMMENDATIONS YOU ARE MAKING RELATED TO CUSTOMER SERVICE AND CONSUMER PROTECTION.

A. My remaining recommendations are as follows:

Billing Communications

- Peoples should be required to notify the Bureau of Consumer Services of any rebilling, back-billing, or billing-delivery event affecting more than 1,000 customers within a defined timeframe.
- Peoples should send a direct written explanation to every customer whose bill is rebilled or back-billed, stating the reason for the correction, the period covered, the amount, and the available payment arrangement and dispute options. This obligation should apply to mass automated events, not only to individual cases.
- Every affected account should be flagged so that any representative the customer reaches has immediate and consistent information about the event and the customer's options.

Tariff Modifications

- The proposed expansion of the nonliability provisions should be rejected.
- The proposed dishonored payment provisions should be rejected as written. If the Commission is inclined to consider a change, it should be conditioned on adoption of procedural safeguards.
- The proposed CAP recreational use restriction should be rejected. If the Commission considers this provision, it should be substantially revised to include procedural protections before any CAP removal takes effect.
- The proposed CAP fraud reversal provision should also be rejected. If the Commission considers this provision, it should be revised to include procedural protections before any benefit reversal takes effect.

Auto-Pay and Electronic Billing Communications

- The Commission should consider, across all natural gas distribution companies, a policy requiring periodic mailed cost summaries for all residential customers, showing usage and total billed amounts over time, to preserve baseline bill visibility for customers across all billing and payment arrangements.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes it does.

EXETER
ASSOCIATES, INC.

Columbia, Maryland 21044

BRENDAN LARKIN-CONNOLLY

Education

M.S. (Resource Economics), 2008
University of Massachusetts, Amherst
Amherst, Massachusetts

B.A. (Economics), 2007
College of the Holy Cross
Worcester, Massachusetts

Previous Employment

2013-2025	Director of Utility Regulation & Litigation DH Infrastructure Worcester, MA
2011-2013	Rate Analyst Massachusetts Department of Public Utilities Boston, MA
2008-2011	Senior Analyst DH Infrastructure Boston, MA

Professional Experience

Prior to joining Exeter Associates, Inc., Mr. Larkin-Connolly served as the Director of Utility Regulation and Litigation at DHInfrastructure, a Massachusetts-based economic consulting firm, where he provided expert witness testimony in over 25 state-level regulatory proceedings and managed over a dozen international regulatory and infrastructure advisory projects.

He also previously served as a Rate Analyst with the Massachusetts Department of Public Utilities, where he provided technical advice and analysis on various issues such as plant additions, utility bond requests, revenue allocation, decoupling, capital cost recovery trackers, purchased commodity filings, residential assistance adjustment factors, and storm cost recovery. His case work included advising Commissioners on proposed plant additions to rate base in multiple rate cases.

Mr. Larkin-Connolly has significant experience evaluating gas infrastructure replacement programs across multiple states, including Maryland's Strategic Infrastructure Development and Enhancement (STRIDE) program, Massachusetts' Gas System Enhancement Program (GSEP), Illinois' Qualifying Infrastructure Plant (QIP) program, and Washington D.C.'s PROJECTpipes. This experience has given him in-depth knowledge of how to assess the necessity, reasonableness, and prudence of capital expenditures, particularly those related to gas infrastructure replacement.

Internationally, Mr. Larkin-Connolly has advised on cost of service and rate design in the Kyrgyz Republic, Armenia, Nauru, Rwanda, Sierra Leone, Ukraine, and Tanzania. He participated in a NARUC partnership exchange program with the Rwanda Utility Regulatory Authority, providing training on how to carry out cost of service studies. He has also led comprehensive utility pricing reform initiatives, including development of Nauru's first cost-reflective electricity tariff framework.

List of Direct Testimony Experience

- Illinois American Water Company (Illinois Commerce Commission, Docket No. 26-0127), 2026. Presented testimony on revenue allocation and rate design on behalf of the Illinois Attorney General's Office.
- American Water Works Company, Inc. and Essential Utilities, Inc. (Illinois Commerce Commission, Docket No. 25-1057), 2025. Presented testimony on the proposed merger and transfer of ownership of Aqua Illinois, Inc. to American Water on behalf of the Illinois Attorney General's Office. Testimony addressed rate impacts, capital investment safeguards, and potential cost savings, and recommended conditions including a post-closing base rate freeze, capital expenditure cap, and prohibition on consolidation of service territories.
- Thurmont Municipal Light Company (Maryland Public Service Commission, Case No. 9506(t)), 2026. Presented testimony on behalf of the Maryland Office of People's Counsel on Thurmont's power procurement strategy and PCA reconciliation. Testimony found Thurmont's all-spot-market procurement approach imprudent for leaving customers entirely exposed to wholesale price volatility.
- UGI Utilities, Inc. – Gas Division (Maryland Public Service Commission, Case No. 9516(h)), 2025. Presented testimony on UGI's recovery of costs related to a Renewable Natural Gas ("RNG") pilot in the PGA reconciliation proceeding on behalf of the Maryland Office of People's Counsel.
- Oncor Electric Delivery Company LLC (Public Utility Commission of Texas, PUC Docket No. 58306), 2025. Presented testimony on behalf of the U.S. Department of Defense and other Federal Executive Agencies on cost of service and capital additions. Testimony addressed prudence review and documentation standards for transmission capital additions, including the need for enhanced project-level authorization, budgeting, and variance reporting to support capital oversight amid rapid AI/data-center-driven load growth. Cost-of-service related recommendations included adjustments related to (i) removal of merit wage increases, (ii) amortization of sales tax audit refunds, and (iii) exclusion of estimated Power Line Safety Act O&M accruals.
- Washington Gas Light Company (Maryland Public Service Commission, Case No. 9509(r)), 2024. Presented testimony on PGA gas-cost reconciliation, opposing recovery of certified natural gas procurement costs in default service and recommending an adjustment to remove potential CtNG premia on behalf of the Maryland Office of People's Counsel.
- Unitil, Berkshire Gas, National Grid, Liberty, Eversource Gas Company of Massachusetts, and NSTAR Gas Company (Massachusetts Department of Public Utilities, D.P.U. 25-GREC-01 through 25-GREC-06), 2025. Presented testimony on behalf of the Massachusetts Attorney General's Office of Ratepayer Advocacy evaluating compliance with Department-approved 2023 Gas System Enhancement Program (GSEP) plans in the 2025 GSEP Reconciliation (GREC) proceedings. Testimony addressed programmatic performance, adherence to approved

project lists, compliance with 2024 GREC Order requirements for risk-based prioritization and environmental justice considerations, and prudence of capital expenditures. Recommended corrective actions and cost disallowances for companies failing to demonstrate substantial compliance with approved plans.

- Yankee Natural Gas Company (Connecticut Public Utilities Regulatory Authority, Docket No. 24-12-01), 2024-2025. Presented testimony on capital investments and leak-prone pipe replacement program on behalf of the Connecticut Office of Consumer's Counsel.
- Columbia Gas of Maryland (Maryland Public Service Commission, Case No. 9751), 2024. Presented testimony on revised leak-prone infrastructure replacement plan, future of natural gas, and environmental and climate change policy goals on behalf of the Maryland Office of People's Counsel.
- Washington Gas Light (Maryland Public Service Commission, Case No. 9708), 2023. Presented testimony on leak-prone infrastructure replacement plan, future of natural gas, and environmental and climate change policy goals on behalf of the Maryland Office of People's Counsel.
- Illinois American Water Company (Illinois Commerce Commission, Docket No. 24-0097), 2024. Presented testimony on rate design, tracker mechanisms, low-income discount, and capital investments in acquired water systems on behalf of the Illinois Attorney General's Office.
- Aqua Illinois (Illinois Commission, Docket No. 24-0044), 2024. Presented testimony on rate design & ACOSS, low-income discount, and capital investments in acquired water systems on behalf of the Illinois Attorney General's Office.
- Connecticut Water Company (Connecticut Public Utilities Regulatory Authority, Docket No. 23-08-32), 2023-2024. Presented testimony on rate design & ACOSS and low-income discount rate on behalf of the Connecticut Office of Consumer's Counsel.
- Connecticut Natural Gas and Southern Connecticut Gas (Connecticut Public Utilities Regulatory Authority, Docket No. 23-11-02), 2023-2024. Presented testimony on capital investments and leak-prone pipe replacement program on behalf of the Connecticut Office of Consumer's Counsel.
- Northeast Ohio Natural Gas Corp (Public Utilities Commission of Ohio, Case No. 23-0154-GA-AIR et al.), 2023. Presented testimony on cost of service, rate design, and capital tracker mechanism proposals on behalf of the Office of the Ohio Consumers' Counsel.
- Columbia Gas of Maryland (Maryland Public Service Commission, Case No. 9709), 2023. Presented testimony on leak-prone infrastructure replacement plan, future of natural gas, and environmental and climate change policy goals on behalf of the Maryland Office of People's Counsel.
- Washington Gas Light (Maryland Public Service Commission, Case No. 9708), 2023. Presented testimony on leak-prone infrastructure replacement plan, future of natural gas, and environmental and climate change policy goals on behalf of the Maryland Office of People's Counsel.
- Peoples Gas and North Shore Gas (Illinois Commerce Commission, Docket Nos. 23-0068 & 23-0069), 2023. Presented testimony on rate design, fuel costs, and low-income discount on

behalf of the Illinois Attorney General's Office.

- Ameren Illinois Company (Illinois Commerce Commission, Docket No. 23-0067), 2023. Presented testimony on rate design, fuel costs, and low-income discount on behalf of the Illinois Attorney General's Office.
- Nicor Gas (Illinois Commerce Commission, Docket No. 23-0066), 2023. Presented testimony on cost allocation, rate design, fuel cost tracker, and low-income discount on behalf of the Illinois Attorney General's Office.
- Illinois American Water Company (Illinois Commerce Commission, Docket No. 22-0210), 2022. Presented testimony on revenue allocation, environmental rider, and low-income discount on behalf of the Illinois Attorney General's Office.
- Utility Services of Illinois (Illinois Commerce Commission, Docket No. 21-0198), 2021. Presented testimony on capital additions, low-income discount, and environmental rider on behalf of the Illinois Attorney General's Office.
- Elkton Gas Company (Maryland Public Service Commission, Case No. 9660), 2021. Presented testimony on leak-prone infrastructure replacement plan, future of natural gas, and environmental and climate change policy goals on behalf of the Maryland Office of People's Counsel.
- Baltimore Gas and Electric Company (Maryland Public Service Commission, Case No. 9645), 2020. Presented direct and surrebuttal testimony on BGE's proposed gas and common capital additions under its pilot multi-year rate plan (MRP), including evaluation of program vs. discrete projects, recommended removal of unsupported/placeholder budgets, and opposition to recovering STRIDE costs through base rates. Final position recommended MRP gas capital reductions focused on limiting pre-approved budgets to identified work and historic levels.
- Ameren Illinois Company (Illinois Commerce Commission, Docket No. 20-0308), 2020. Presented testimony on capital additions and PHMSA transmission rules on behalf of the Illinois Attorney General's Office.
- Maryland PSC Investigation (Maryland Public Service Commission, Case No. 9622), 2019. Presented testimony on regulatory commitments, penalties, and reporting requirements on behalf of the Maryland Office of People's Counsel.
- Washington Gas Light (Maryland Public Service Commission, Case No. 9605), 2019. Presented testimony on prudence of infrastructure investments, capital project management, and capital additions on behalf of the Maryland Office of People's Counsel.
- Ameren Illinois Company (Illinois Commerce Commission, Docket No. 19-0271), 2019. Presented testimony on capital tracker mechanism cost reconciliation, compliance with regulations, and prudence of infrastructure investments on behalf of the Illinois Attorney General's Office.
- Washington Gas Light (Maryland Public Service Commission, Case No. 9486), 2018. Presented testimony on leak-prone replacement activity performance, asset special treatment eligibility, and capital project management on behalf of the Maryland Office of People's Counsel.
- Columbia Gas of Maryland (Maryland Public Service Commission, Case No. 9479), 2018.

Presented testimony on leak-prone infrastructure replacement plan, O&M offset, and rate impacts on behalf of the Maryland Office of People's Counsel.

- Baltimore Gas Electric Company (Maryland Public Service Commission, Case No. 9468), 2018. Presented testimony on leak-prone infrastructure replacement plan, cost-benefit analysis, O&M offset, and rate impacts on behalf of the Maryland Office of People's Counsel.

- Eversource Energy (Massachusetts Department of Public Utilities, Docket No. 16-105), 2016. Presented testimony on recovery surcharge bill impacts and pre-approved costs on behalf of the Massachusetts Attorney General's Office.

Other U.S. Utility Regulatory Experience

- JXN Water Proposed Rate Increase (U.S. District Court, Southern District of Mississippi, Case No. 3:12-cv-00790-HTW-LGI), 2025-2026. Served as advisor to the Natural Resources Defense Council and intervenor plaintiffs Mississippi Poor People's Campaign and the People's Advocacy Institute. Evaluated documentation and financial plans supporting JXN Water's proposed volumetric rate increase, assessed the proposal against industry-standard ratemaking practices, and prepared an expert memorandum on alternative rate design and revenue options that was submitted to the court.

- Middlesex Water Company, Pinelands Water Company, and Pinelands Wastewater Company General Rate Case (New Jersey Board of Public Utilities, Docket No. WR25060372), 2025-2026. Advised the New Jersey Division of Rate Counsel on all matters related to class cost allocation and rate design issues through settlement of the case.

- Washington Gas Light's PIPES3 and District SAFE plans (District of Columbia Public Service Commission, Formal Case Nos. FC 1175 & 1179), 2023-2026. Provided technical support assessing compliance with Commission directives, evaluated technical merits of the proposed replacement program, and summarized key positions and issues for Commission consideration on behalf of the District of Columbia Public Service Commission staff.

- Maryland Purchased Gas Adjustment Filings (Maryland Public Service Commission, Various Dockets), 2019-2026. Conducted annual reviews of purchased commodity adjustment filings from eight gas companies, analyzed cost reconciliation charges, compared supply portfolios to market prices, and evaluated procurement strategies on behalf of the Maryland Office of People's Counsel.

- EmPower Maryland Program Filings (Maryland Public Service Commission, Various Dockets), 2020-2026. Reviewed tariff filings submitted by participating utilities including BGE, Pepco, Delmarva Power, Potomac Edison, SMECO, and WGL, verified accuracy of rates and costs, identified discrepancies in cost amortization, and developed a comprehensive Python model for verifying revenue requirements on behalf of the Maryland Office of People's Counsel.

- Gas System Enhancement Program (GSEP) Reconciliation Filings (Massachusetts Department of Public Utilities, various dockets), 2016-2018, 2021, 2023-2025. Analyzed prudence and eligibility of infrastructure replacement costs, reviewed project cost estimates and invoices, prepared cross-examination questions, and drafted sections of briefs submitted to the Department on behalf of the Massachusetts Attorney General's Office.

- Washington Gas Light's PROJECTpipes2 Plan (District of Columbia Public Service Commission, Formal Case No. FC1154), 2019-2021. Provided technical analysis evaluating program performance, validated emissions reduction claims, and developed alternative

revenue requirements and rate design options on behalf of the District of Columbia Public Service Commission staff.

- Gas Infrastructure Replacement Filings in Maryland (Maryland Public Service Commission, Various Dockets), 2018-2025. Reviewed STRIDE filings submitted by gas distribution companies, prepared discovery on identified issues, and drafted comments for submission to the PSC on behalf of the Maryland Office of People's Counsel.

- Gas System Enhancement Program (GSEP) Plans (Massachusetts Department of Public Utilities, Various Dockets), 2022. Led review of all six 2022 GSEP plans submitted in November 2021, analyzing proposed infrastructure replacements, cost recovery mechanisms, and alignment with state policy goals on behalf of the Massachusetts Attorney General's Office.

- Washington Gas Light's PROJECTpipes2 Plan (District of Columbia Public Service Commission, Formal Case No. FC1154), 2019-2021. Provided technical analysis evaluating program performance, validated emissions reduction claims, and developed alternative revenue requirements and rate design options on behalf of the District of Columbia Public Service Commission staff.

- Bay State Gas Company Rate Case (Massachusetts Department of Public Utilities, Docket No. DPU 13-75), 2013. Conducted review of operating costs over ten years to assess reasons for earnings deficiency, reviewed proposed test year and post-test year plant additions to determine prudence and used and usefulness as Rate Analyst for the Massachusetts Department of Public Utilities.

- National Grid Electric Storm Fund Replenishment (Massachusetts Department of Public Utilities, Docket No. DPU 13-59), 2013. Developed alternative recovery scenarios with varying duration and rate impact analysis, which the Commission used to determine appropriate balance between limiting ratepayer impacts and reducing overall carrying charges as Rate Analyst for the Massachusetts Department of Public Utilities.

- National Grid Electric Revenue Decoupling Mechanism (Massachusetts Department of Public Utilities, Docket No. DPU 12-115), 2012-2013. Reviewed calculation of Revenue Decoupling Mechanism and Capital Expenditure Factor for accuracy and consistency with approved tariffs as Rate Analyst for the Massachusetts Department of Public Utilities.

- Western Massachusetts Electric Company Revenue-Neutral Rate Design (Massachusetts Department of Public Utilities, Docket No. DPU 12-97), 2012-2013. Prepared analysis of two rate design proposals for Commissioners, highlighting advantages and disadvantages of each approach to address cross-subsidization between classes as Rate Analyst for the Massachusetts Department of Public Utilities.

- Bay State Gas Company Rate Case (Massachusetts Department of Public Utilities, Docket No. DPU 12-25), 2012. Reviewed proposed regulatory mechanisms including future test year, modifications to an existing capital tracker, and decoupling mechanism updates; examined 272 project reports and cost-variance analyses for plant additions greater than $50,000 as Rate Analyst for the Massachusetts Department of Public Utilities.

- National Grid Storm Costs (Massachusetts Department of Public Utilities, Docket No. DPU 11-56), 2011-2013. Validated storm cost documentation by checking all listed costs against actual invoices, leading to the removal of $33,346 in expenses from the Company's filing as Rate Analyst for the Massachusetts Department of Public Utilities

- California Electricity Crisis Proceedings (Federal Energy Regulatory Commission, Docket No. RP95-112), 2010-2011. Supported preparation of expert testimony on behalf of the California Parties (Pacific Gas and Electric Company, San Diego Gas & Electric Company, Southern California Edison Company, Attorney General of California, the Public Utilities Commission of the State of California, and California Department of Water Resources), built a database of electric market bid data to identify economic withholdings during the 2000-2001 crisis, and developed a bid-stack model to estimate competitive electricity prices absent market manipulation.

Select International Consulting Projects

- OECD Water Sector Investment Enabling Environment Scorecard, 2023. Led collection of data and completion of surveys that were used to pilot an OECD developed framework for evaluating the enabling environment for water sector investments as part of a collaboration between the Asian Development Bank and OECD.
- Economic and financial analysis of Accelerating Sustainable System Development Using Renewable Energy (ASSURE) Project (Maldives), 2022-2023. Prepared economic and financial analysis of proposed project to install solar and battery systems on 20 outer islands in the Maldives for the Asian Development Bank.
- Global Water Security & Sanitation Partnership Mid-Term Evaluation (Bangladesh, Ethiopia, Haiti, Pakistan, Vietnam), 2019-2021. Directed review of GWSP contributions across five countries, evaluated results against OECD Development Assistance Committee criteria, and prepared country-level reports for the World Bank.
- Feasibility Study for a Rural Electricity Company (India), 2021-2022. Assessed the feasibility and potential of a rural electricity supply company to enhance power supply and improve

subsidy delivery efficiency in Madhya Pradesh for the World Bank.

- Nauru Water and Electricity Tariff Study, 2021. Assisted the Nauru Utilities Corporation in preparing recommendations reflecting how the addition of solar PV and battery storage would impact tariff levels needed for cost recovery for the Asian Development Bank.
- Cost Allocation for Co-Generation Facilities (Ukraine), 2021. Assisted the National Energy and Utilities Regulatory Commission to revise cost allocation practices between thermal and power generation in cogenerating facilities for USAID's Energy Security Project.
- Toll Road Arbitration Case (Peru), 2019. Provided expert analysis for an arbitration between a municipal government and international investor regarding interpretation of a road concession contract's tariff adjustment clause.
- Developing an Africa Energy Strategy, 2017-2018. Compiled Country Engagement Notes for 26 African countries and contributed to a regional synthesis report summarizing World Bank commitments in Africa.
- Sierra Leone Regulatory Strengthening and Tariff Development, 2017-2018. Supported the development of electricity and water regulatory frameworks and provided capacity building for the Electricity and Water Regulatory Commission for the Millennium Challenge Corporation.
- Water Tariff and Affordability Study (Tanzania), 2017-2018. Developed a financial model for tariff filings and conducted a willingness-to-pay study for the Arusha Urban Water Supply and Sanitation Authority.
- Rwanda Partnership Exchange on Tariffs (Rwanda), 2017. Provided training on Excel-based tariff setting methodologies and built a tariff model for the Rwanda Utility Regulatory Authority through NARUC's partnership program.
- Abengoa KaXu Project Evaluation (South Africa), 2016-2017. Evaluated development outcomes of the first operational private sector utility-scale concentrated solar power plant with storage in the developing world for the International Finance Corporation.
- Nauru Power and Water Tariff and Subsidy Reform, 2015-2016. Led tariff reform initiative including willingness-to-pay survey and subsidy analysis for the Asian Development Bank.
- Least Economic Cost Planning of New Supply (Georgia), 2014-2015. Conducted least-cost power supply study to inform options for meeting future domestic and export power demand for the World Bank.
- Evaluation of Public-Private Partnership Transaction Advisory Program (Albania, Kazakhstan, North Macedonia, Kosovo), 2014. Evaluated operations of two donor-funded public-private partnership programs for the International Finance Corporation.
- Scaling Up Renewable Energy Investment Plan, 2014. Assisted with preparation of a renewable energy Investment Plan for funding through the Climate Investment Funds' SREP Program.
- Armenia Water Tariff Study, 2013-2014. Provided advice on end-user water and wastewater tariffs and prepared analysis of various tariff structures for the World Bank Group.
- Revision of Energy Tariff Methodologies (Kyrgyz Republic), 2013-2014. Developed sustainable, transparent, and equitable tariff methodology for electricity and heating sectors for the World

Bank.

- Transaction Advisory for Urban Services in South Gobi, 2012-2013. Supported institutional reforms in the water, sanitation, and solid waste services sectors for the Asian Development Bank.
- Development of Electricity Tariff and Subsidy Methodology (Armenia), 2012. Assessed electricity tariffs and recommended improvements to ensure efficient use for the World Bank.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XIII-001

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Provide monthly call center performance data for January 2021 through the most recent month available, including:

a. calls offered;

b. calls answered;

c. calls abandoned;

d. calls blocked;

e. average speed of answer;

f. percentage of calls answered within 30 seconds;

g. average handle time;

h. any other service level metrics reported internally or to the Commission.

Answer: See attachment, OCA Set 13 -1 a-h.

Submit Date: 5/21/2026

2025	29745	82.60%	83.80%	74.70%	90.70%	91.90%

Methodology Description- VOC

Post-contact surveys are distributed to measure customer experience following call center interactions.
Survey invitations are sent twice weekly via email to customers meeting the following criteria:

1. Customers who contacted the call center within the selected date range
2. A valid email address must be on file
3. Customers are excluded if: a leak order was created during the interaction or an appointment was scheduled

Responses are collectedand used for customer experience analysis and reporting.

Year-over-year Methodology Changes- VOC

2021-2023:
Surveys were sent via email directing customers to a survey link.
Prior to answering survey questions, customers were asked to enter their name, email address, and phone number.
Using links to send the surveys resulted in anonymous responses.

Late 2023 Relaunch-Present Methodology Updates:

1. The first survey question was embedded directly within the email invitation.
2. Survey invitations were sent from customerexperience@peoples-gas.com
3. Customers were no longer asked to enter their name or contact information.
4. Responses were no longer anonymous.
5. Surveys were made available in both English and Spanish.

These updates were put into place to streamline the customer experience and may impact comparing results between pre- and post-2023 data.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XIII-006

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Provide the Company's Bureau of Consumer Services Quality of Service rankings, justified complaint ratios, and justified payment arrangement request ratios for calendar years 2016 through the most recent full year available, along with any internal analyses of the drivers of changes in those ratios.

Answer: The published Consumer Activities Report and Evaluation for the years 2016 through 2024 are provided as attachments. The Company's rankings, justified complaint ratios and justified payment arrangement request ratios are determined by the Bureau of Consumer Services and published in these reports. As the Company receives feedback from BCS regarding citations, it reviews each individual case and takes steps to resolve the concern and prevent future occurrences. Information on citations received and actions taken are provided in response to OCA Set III Question 17.

Submit Date: 5/21/2026

Attachments excluded to minimize file size.

Attachments to OCA XIII-006 include the annual Utility Consumer Activities Report and Evaluation (UCARE) reports for 2016 through 2024. These can be found at the following link: https://www.puc.pa.gov/filing-resources/reports/consumer-activities-report-evaluation/

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XIII-008

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: Identify each Chapter 56 compliance audit, investigation, or informal inquiry conducted by BCS or other Commission staff during the past ten years and provide all related correspondence, findings, and Company responses.

Answer: The Company has not undergone a Chapter 56 compliant audit or investigation. There was an informal inquiry from Bobbi Anderson of BCS staff in 2024 regarding reported termination figures and customer correspondence. This informal inquiry was handled via email and both email strings pertaining to this are provided as attachments. This is the only informal inquiry from BCS pertaining to Chapter 56 compliance that the Company can recall.

Good morning [redacted] – I am following up regarding the scope of the delayed paper bills. Roughly 183,000 (25%) of Peoples' accounts received a delayed paper bill. We have confirmed all delayed bills were mailed on Tuesday of last week.

Please let me know if you have any other questions. Thanks,

Rita

Hi Rita,

We do have a couple of follow-up questions.

- The Consumer Advisory Council member specifically stated that she did not receive her bills for September or October. In your response you stated that some bills were not mailed in November. When your team audited the vendor, were all three months (September, October, and November) audited? If so, did you find record of bills that were not mailed in the other two months? If September and October were not audited, does Peoples plan to audit the vendor for those months as well? These two months were audited along with November given the feedback you had received. No issues were found in September or October mailings.
- Can you give us an idea of how many customers did not receive a bill in November? I will follow up with the billing manager to obtain this information.
- Are you offering PARs to customers that were impacted? It is our standard policy to always offer PARs/budget/payment options to customers who are having difficulty paying a bill by its due date. I will also mention this aspect to the billing manager so that a reminder can be shared with our call center staff to emphasize this.

Thank you for looking into this issue,

[redacted]

Subject: RE: [EXTERNAL] Peoples Terminations

Hi [redacted] -- I wanted to follow up with you regarding billing statements. I learned from our billing department that after a thorough review with our print vendor, we identified some dates in November in which bills were not printed and mailed as expected. All affected accounts have been noted and locks against late payment charges have been placed for 30 days. The bills were printed and mailed Tuesday. Electronic bills were not affected. Our communications team placed a banner message on our website to advise customers of the delay and to reassure them no late fees will be assessed. Our billing team will continue to closely monitor performance of the vendor going forward to ensure all bills are printed and mailed as expected on a daily basis.

Thank you,

Rita

Subject: FW: [EXTERNAL] Peoples Terminations

Hello [redacted] – Hope you had an enjoyable holiday weekend! [redacted] is out this week on vacation, so I wanted to respond to you about the termination data question you had.

We followed up with the customer operations data analyst and reviewed our data for both 2023 and 2024 and confirmed the reported figures are accurate. The number of termination notices mailed in those months is consistent with historical levels. The increase in actual terminations is the result of a more focused effort by the field operations team in those months to improve completion of termination work orders. Please let me know if you have any other questions on this topic.

Also, [redacted] did share your question about customers reporting they had not received bills with the billing team. The billing manager just returned from the holiday today, so I will follow up with her on

this topic and will share an update with you this week, hopefully in the next day or so.

Have a good day,

Rita

Hi [redacted],

As we reviewed the 56.231 data, we noticed that People's terminations were up year to year by 42% in September and 137% in October. Are you able to provide any insight on this? Was there an increase in the number of overdue accounts, or maybe the utility is just being more proactive with terminations? We'd just like to have an idea of what is driving the increase in case we receive questions.

I appreciate your assistance and hope you have a safe and happy Thanksgiving!

Hi [redacted]

I myself am not aware of any issues at this time. However, I will reach out to the appropriate parties to validate.

I'll be in touch as soon as I know more, which may be next week due to the holidays.

Thank you!

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi [redacted],

The Consumer Advisory Committee met this morning and after the meeting one of the members came up to me to ask if there was an issue with People's bills. She and her neighbors in Murrysville and Plumb Township did not receive gas bills for September or October. She said that when she contacted Peoples, her account was showing past due. That would indicate to me that the bills were generated, but something else happened.

We've had a couple of utilities in the last year have vendor problems where bills generated but for some reason, they either weren't printed to mail or the vendor failed to actually mail them, so this isn't the first time that I've heard a story like this.

Are you aware of any issues with the bills? She let me know that she is going to tell her neighbors to contact Peoples to let the utility know that they didn't receive bills, and she's going to encourage them to file an informal complaint. I just wanted to give you a heads up, and to see if you were aware of any issues.

Thanks again for your help,

[redacted]

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XIII-023

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Describe the Company's policies and procedures for back-billing residential and non-residential customers, including:

a. the criteria for issuing a back-bill;

b. the maximum look-back period applied;

c. notice provided to the customer prior to or contemporaneous with the back-bill;

d. payment arrangement options offered;

e. the standard amortization period;

f. the process for handling customer disputes of back-bills.

Answer: a. Criteria for issuing a back bill

- Charges applied retroactively for previously unbilled or underbilled gas service.
- Missed meter reads, meter communication failures, delayed account setup, system errors, or field investigation findings.
- SAP billing corrections, meter operations review, billing investigation process.
- Gas revenue adjustment accounts / Accounts Receivable.
- Cancellation and reissuance of a bill to correct inaccurate charges or account information.
- Incorrect rate code, wrong meter read, billing cycle issue, customer information errors, or incorrect service dates.
- SAP rebill transaction initiated by Billing, Credit, or Customer Service.
- Revenue correction accounts / Accounts Receivable adjustments.

b. Maximum of a 4 years look back period applied

c. Notification to Customer

- phone call made by CSR to customer to review the rebill/backbill
- letter mailed to customer with reason for rebill/backbill and payments arrangement details, corrected invoices, if needed a usage comparison

d. Payment arrangement options are equivalent to the number of months of the back bill

e. Offer amortization at equivalent to the number of months of the cancel rebill.

f. Customer disputes regarding a rebill are handled through the same process as all company disputes. A company dispute is opened in our system, assigned to a CSR who handles company disputes to review the account and respond within 30 days

a. the initial notice or bill explaining the back-charge or credit;

b. any letter, email, or bill message explaining the cause of the error and the customer's remediation;

c. any scripted or templated language used by customer service representatives when responding to customer inquiries about the back-bill.

(If the number of affected customers exceeds 15, provide a representative sample of at least 15 communications, selected to reflect variation in the back-bill amount.)

Answer: There was no written or electronic communication sent to customers. This affected four days worth of customers, where cancel/rebill was done. Communication was sent to representatives along with a mass interaction record added to all affected accounts (see Attachment 3). Attachment 1 shows examples of the original bill and Attachment 2 shows examples of the rebill to affected customers.

Subject: TCJA applied to Peoples customers in error
Date: Friday, March 8, 2024 9:40:03 AM

Good morning,
The TCJA rate for PG (formerly TWP) customers that went into effect on 3/1/2024 was also inadvertently applied to PNG customers. As of last night, the TCJA rate for PNG customers has been reset to zero and will no longer display on their bills. We are working with IT on a resolution for the invoices that were mailed to customers with the erroneous rate.
For customers who call in questioning the charge, please advise them it will be credited back to their account.
If you have any questions, please reach out to a CSR 3 or Supervisor – thank you.

Subject: Re: I/R for TCJA accounts that need cancel/rebilled
Hi ,
For the collective accounts, should I create the I/R at the child or parent level? Or perhaps both?
Thanks,

From:

To:
Cc:
Subject: I/R for TCJA accounts that need cancel/rebilled
March invoice cancel/rebilled due to TCJA rate applied to PNG customer. The customer will receive a corrected bill with the TCJA removed.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-002

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Refer to Peoples' confidential response to OCA-XIII-025. For the back-billing instance identified as Instance 2, provide all written or electronic communications sent to affected customers regarding the back-bill, including but not limited to:

a. the initial notice or bill explaining the back-charge or credit;

b. any letter, email, or bill message explaining the cause of the error and the customer's remediation options;

c. any scripted or templated language used by customer service representatives when responding to customer inquiries about the back-bill.

(If the number of affected customers exceeds 15, provide a representative sample of at least 15 communications, selected to reflect variation in the back-bill amount.)

Answer: There was no written or electronic communication sent to customers. This affected fourteen days worth of customers, where cancel/rebill was done. Communication was sent to representatives along with a mass interaction record added to all affected accounts. Attachment 1 shows examples of the original bill and Attachment 2 shows examples of the rebill to affected customers.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-003

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Refer to Peoples' confidential response to OCA-XIII-025. For the back-billing instance identified as Instance 3, provide all written or electronic communications sent to affected customers regarding the back-bill, including but not limited to:

a. the initial notice or bill explaining the back-charge or credit;

b. any letter, email, or bill message explaining the cause of the error and the customer's remediation options;

c. any scripted or templated language used by customer service representatives when responding to customer inquiries about the back-bill.

Answer: There is a written communication sent to each customer or call from credit supervisor explaining what happened in each situation (see attached example). The calls were not handled by customer service, only the credit supervisor.

SERVICE ADDRESS: 123 main st

We recently discovered a problem with the corrector on the gas meter. This issue has caused the account to be overbilled. The problem started when the corrector was originally installed xx/xx/xxx. The account has been overbilled for xxx.xx mcfs of gas. Based on this information, we have rebilled the account from xx/xx/xxxx – xx/xx/xxxx which results in a credit in the amount of $xx,xxxx.

The new bills are available through our online eAccount service if you have set up access. If you need copies of the bills, we can have them printed and mailed to you.

You will see the credit balance on your account. If you would like to have the credit amount refunded, please reach out to me either via telephone or email.

If you have any other questions at all, please let me know.

Thank you,

PEOPLES | An Essential Utilities Company

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-004

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Refer to Peoples' response to OCA-XIII-008. The attachment to the Company's response includes email correspondence from November–December 2024 between Company personnel and BCS staff regarding a billing vendor failure in which bills for approximately 183,000 accounts (25% of Peoples' customer base) were not printed and mailed as expected during November 2024.

a. Please clarify if this event was treated/counted as a back-bill or rebill instance.

b. If so, state whether this instance was included among the three instances identified in the Company's response to OCA-XIII-025, and if not, explain why it was not reported in response to that question.

Answer: In this instance, there was no need for a cancel or rebill, and it is not included in the company's response to OCA-XIII-025, as it does not fall under that category. The bills were generated on time in the system, within the 26-35 day period as required. The only delay was with the bill vendor delivering the invoices.

Submit Date: 6/15/2026

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-005

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Refer again to the attachment to Peoples' response to OCA-XIII-008. Regarding the billing vendor failure in which bills for approximately 183,000 accounts were not printed and mailed as expected during November 2024. Provide a sample of representative examples (at least 15 selected to reflect variation in unbilled amounts) for all written or electronic communications sent to affected customers regarding the back-bill or credit, including but not limited to:

a. the initial notice or bill explaining the reason for the missed bill;

b.any other letter, email, or bill message explaining the cause of the error and the customer's remediation options;

c. any scripted or templated language used by customer service representatives when responding to customer inquiries about the missed bill.

Answer: There are no examples – all accounts were billed within the 26-35 day guidelines. There wasn't written communication sent to customers. A mass interaction record and dunning/late payments charge lock added to all accounts (see Attachment 1). The Call Center was also made aware of the issue (see Attachment 2).

Subject: missing bills from 11/11
Date: Tuesday, December 3, 2024 7:43:00 AM
Attachments: image001.png

Hello everyone –
I know a lot of the calls coming in are due to the missing bills from 11/11. We have resent the file to Doxim for processing and the bills should be mailed and delivered to the customers w/in the next couple of days. I am going to have an interaction record along with LPC holds added to all accounts from that date. Please advise the customers that they will not receive any LPC's and that the invoices will be there shortly.
Thanks

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-006

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Refer to Peoples' response to OCA-XIII-020. The Company's data attached to the response shows residential rebill counts that are substantially elevated in several months of 2024 compared to the surrounding period:

- March 2024: 92,094 rebills
- April 2024: 5,975 rebills
- May 2024: 9,999 rebills
- June 2024: 5,629 rebills
- October 2024: 100,856 rebills
- November 2024: 22,305 rebills

a. For each of these months, identify the cause or causes of the elevated rebill volume.

b. For each cause identified, state whether it corresponds to one of the three back- billing instances reported in the Company's response to OCA-XIII-025, to the billing vendor failure described in OCA-XIII-008, or to a separate issue not previously identified in discovery responses in this proceeding.

c. For any cause not previously identified in OCA-XIII-025 or OCA-XIII-008, provide the information requested in sub-parts (a) through (f) of OCA-XIII-025.

Answer: Peoples does not track at this level of detail, however, Peoples believes the escalation of rebills in the year 2024 was due to the error found notated in original request OCA-XIII-25 regarding the ERT rebills, since these corrections date back to 2018.

Submit Date: 6/15/2026

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-007

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: Describe the Company's procedures for notifying customer service representatives (CSRs) of billing errors or system issues that may prompt customer inquiries, including:

a. the process by which CSR supervisors or management learn of a billing error or rebilling event;

b. the process by which that information is communicated to CSRs;

c. the form that communication takes (e.g., scripted talking points, system alerts, supervisor briefings);

d. Use the instances of rebilling in 2024 to describe how the process worked to prepare CSRs on how to respond to customer inquiries related to the rebilling increases that year.

Answer: When the Company becomes aware of a billing error, rebilling event, or system issue that may generate customer inquiries, the issue is escalated through the appropriate operational channels, which may include Customer Operations, Information Technology, Vendor Management, Regulatory, and Field Operations.

a) Customer Operations supervisors and management may learn of the issue through team meetings, email updates, operational calls, system issue notifications, direct communication from the business area managing the issue, or cross-functional discussions regarding customer impact.

b) Once the issue is confirmed and the expected customer impact is understood, Customer Operations leadership communicates the information to CSRs through one or more established channels, including supervisor briefings, team huddles, email updates, internal job aids or talking points, system alerts or account notes where available, and escalation instructions for affected accounts.

c) The form of communication used depends on the nature and scale of the issue, but the objective is to provide CSRs with timely guidance so they can explain the issue accurately, address routine customer questions, and escalate more complex concerns appropriately.

d) For the rebilling increases in 2024, the process followed the same framework. After the underlying issue was identified and the affected customer population and billing impact were assessed, operational leaders coordinated guidance for customer-facing teams before or as customer calls were expected. With respect to the 2024 rebilling increases, the Company followed this same process. After the issue and affected customer population were identified, operational leadership coordinated guidance to prepare representatives to address customer inquiries, explain that a bill had been corrected or reissued, review available account information, and escalate matters requiring further review.

Submit Date: 6/15/2026

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-XVII-008

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: State whether the Company has a threshold — based on number of affected customers, dollar amount, or other criteria — above which CSR notification is required, and if so, describe that threshold.

Answer: Peoples does not rely on a fixed threshold based solely on the number of affected customers, dollar amount, or other single quantitative criterion for CSR notification. Instead, CSR notification is determined based on the expected customer impact and the likelihood that the issue will generate customer inquiries. Factors considered include the number of customers affected, the dollar impact to customers, whether customers will receive delayed, corrected, or unusual bills, whether the issue may result in customer confusion or complaints, whether payment arrangements, credits, or other remediation may be warranted, and whether CSRs need specific talking points or escalation instructions. For larger events or issues expected to increase call volume, Contact Center leadership provides guidance to supervisors and CSRs so that customer inquiries can be handled consistently.

I. Introduction

Q. PLEASE STATE YOUR NAME, POSITION, AND BUSINESS ADDRESS.

A. My name is Brendan Larkin-Connolly. I am a Managing Consultant at Exeter Associates Inc. ("Exeter"). My business address is 10480 Little Patuxent Parkway, Suite 300, Columbia, Maryland 21044.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony on the topics of customer service and consumer protections was submitted as OCA Statement No. 5.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I respond to portions of the rebuttal testimony of Company witnesses Michelle Parks (Peoples Statement No. 18-R), Rita Black (Peoples Statement No. 10-R), Krista Snyder (Peoples Statement No. 13-R), and Michael Huwar (Peoples Statement No. 1-R), to the extent those witnesses addressed my direct testimony.

Q. HOW IS YOUR SURREBUTTAL TESTIMONY ORGANIZED?

A. My testimony follows the same section structure as my direct testimony:

- Section II responds to rebuttal testimony concerning customer service performance.
- Section III responds to rebuttal testimony concerning the customer complaint record.
- Section IV responds to rebuttal testimony concerning customer communications.
- Section V responds to rebuttal testimony concerning tariff modifications.

- Section VI responds to rebuttal testimony concerning the management performance adder.
- Section VII offers a conclusion.

I should note that I have not responded to every statement in the Company's rebuttal testimony. Where the rebuttal offers a different characterization of data I presented in direct testimony without disputing the underlying figures, I address that pattern generally rather than point by point, as explained in Section III below.

II. Customer Service Performance

Q. DOES THE COMPANY'S REBUTTAL TESTIMONY DISPUTE THE CUSTOMER SERVICE PERFORMANCE DATA PRESENTED IN YOUR DIRECT TESTIMONY?

A. For the most part, no. Company witness Michelle Parks does not identify any error in the figures reported in Tables 1 through 5 of my direct testimony. Instead, she offers a different characterization of the same data. For example, Ms. Parks describes Peoples' call center performance as demonstrating a "strength," pointing to low call abandonment and courtesy and knowledge scores in the 90% range.[1] She does not dispute that nine of the ten indicators in Table 1 of my direct testimony declined from 2019 through 2024, or that the pattern in that decline is one of convergence toward the peer average rather than movement above it. My conclusion that Peoples' customer service performance is adequate but unexceptional does not rest on any single indicator; it rests on that pattern, which is unchanged by how any one number is characterized.

[1] Peoples St. 18-R, pp. 13-14.

Similarly, Ms. Parks states that the Company "continuously monitors" call volumes and staffing and "takes operational steps to align resources with customer demand," including use of Back Office support staff and overtime during high-volume months.[2] She does not provide staffing counts, overtime hours, or deployment figures for any specific month to support that description, and she does not dispute the staffing data I presented showing that April staffing has never reached the Company's own approved level of 89 customer service representatives in any of the six years of data provided in response to OCA-XIII-003.[3]

III. Customer Complaint Record

Q. DOES THE COMPANY'S REBUTTAL TESTIMONY DISPUTE THE COMPLAINT DATA PRESENTED IN YOUR DIRECT TESTIMONY?

A. No. Company witness Rita Black does not dispute the figures reported in my direct testimony. Instead, she offers a different reading of that data. Ms. Black cautions that the Commission's Bureau of Consumer Services ("BCS") complaint classifications may be subjective, notes that my formal complaint analysis did not include a peer comparison, attributes the rate of formal complaint denials and dismissals to a lack of merit rather than customer disengagement, and attributes rising property damage complaints to customer misunderstanding rather than the scale of pipeline replacement work.[4]

[2] Peoples St. 18-R, pp. 14-15.
[3] OCA St. 5, pp. 15-16; OCA-XIII-003, Exhibit BLC-2 PUBLIC at 10-11.
[4] Peoples St. 10-R, pp. 24-27.

For example, in response to concerns I raised regarding a possible higher rate of issues related to Damages, Personnel Problems, and Service Quality, Ms. Black points to the "All Other" catch-all complaint category, where Peoples' 11% share is actually below the 14% reported for other natural gas distribution companies, as a reason for caution about the complaint data generally.[5] Her contention is that complaints related to Damages, Personnel Problems, and Service Quality might be getting slotted into this category for other companies but not Peoples. That could be an explanation for some differences in a single year, but I see the fact that Peoples ran above the peer average for 2022-2024 to suggest there is an established trend.

Q. DOES THE COMPANY'S REBUTTAL CHANGE ANY OF YOUR CONCLUSIONS YOU DREW FROM YOUR REVIEW OF RECENT COMPLAINT RECORDS?

A. No. As with the customer service performance data addressed in Section II, my conclusions regarding the recent complaints rest on the pattern across the record as a whole, not on any single indicator or on how the Company characterizes it, and that pattern is unchanged by Ms. Black's rebuttal.

IV. Customer Communications

A. Rebilling and Back-Billing Communications

Q. MS. PARKS STATES THAT THE COMPANY ALREADY PROVIDES CUSTOMERS WHOSE BILLS ARE REBILLED WITH NOTICE "EITHER

[5] Peoples St. 10-R, pp. 24-25.

THROUGH A PHONE CALL OR WRITTEN NOTIFICATION."[6] DOES THIS ADDRESS THE COMPLIANCE QUESTION YOU RAISED UNDER 52 PA. CODE § 56.14?

A. Only partially. My direct testimony's compliance question concerned whether Instances 1, 2, and 3 exceeded the threshold in § 56.14 that triggers a duty to explain the bill and offer amortization.[7] Peoples has not provided the customer counts or dollar amounts for Instances 1 and 2 needed to make that determination, and Ms. Parks' rebuttal testimony does not supply that information.[8] Her response instead addresses whether § 56.14 applies to the separate 2024 print-vendor delay, which is not the same question.[9] That the Company still has not supplied this information indicates it is likely not tracking these events with the detail needed to assess compliance, which is the basis for the recordkeeping recommendation discussed below.

Q. MS. PARKS STATES THE COMPANY "ALREADY SELF-REPORTS ANY LARGE-SCALE BILLING ISSUES" AND THAT REBILLED CUSTOMERS ALREADY RECEIVE NOTICE CONSISTENT WITH YOUR RECOMMENDATIONS.[10] DO YOU WITHDRAW YOUR RECOMMENDATIONS IN LIGHT OF THIS TESTIMONY?

A. I am revising them. Ms. Parks contends that Peoples already notifies affected customers and already self-reports large-scale billing issues to BCS.[11] I am willing to accept that representation at face value. Given that, I do not think the Commission needs to impose

[6] Peoples St. 18-R, p. 19.
[7] OCA St. 5, p. 37.
[8] OCA-XIII-025, Exhibit BLC-2 CONFIDENTIAL at 37-38.
[9] Peoples St. 18-R, p. 18.
[10] Peoples St. 18-R, p. 19.
[11] Peoples St. 18-R, p. 19.

a new written-notice requirement, a new account-flagging requirement, and a new BCS-notification threshold on top of a practice the Company says is already in place. What I would emphasize instead is the need for a more complete record keeping of these events going forward.

The Company still has not provided a customer count or dollar figure for Instances 1 or 2, because it "does not track [rebill causes] at this level of detail."[12] If that information existed, I would expect the Company to have provided it in this proceeding. Its absence is itself evidence that Peoples is not currently tracking these events with the detail needed to report on them after the fact, and that is what I recommend should change.

Q. WHAT IS YOUR REVISED RECOMMENDATION?

A. I will accept the contention of the Company that it already has procedures in place to report to the Commission and notify customers when a large-scale back-billing or rebilling event occurs. Instead of the formal reporting procedures I previously put forward my revised recommendation is that the Company be expected to maintain better records of such events in the future.

Specifically, I recommend that, using the same definition used in request OCA-XIII-025 — a back-billing or rebilling event affecting more than 100 customers from a common cause — the Company maintain contemporaneous records of each such event and be prepared to provide them in its next base rate case if requested.[13] These records should include: (1) complete information about the event, including the number of

[12] OCA-XVII-006, Exhibit BLC-2 PUBLIC at 116.
[13] OCA-XIII-025, Exhibit BLC-2 CONFIDENTIAL at 37-38.

customers affected and the bill impact by customer; and (2) the dates and copies of any communications with Commission staff regarding the event.

B. Auto-Pay and Electronic Billing

Q. MS. PARKS STATES THAT AUTOPAY AND E-BILL ENROLLMENT SHOULD NOT BE TREATED AS A "DIRECT PROXY" FOR REDUCED BILL ENGAGEMENT "WITHOUT ADDITIONAL SUPPORTING EVIDENCE."[14] DOES THE COMPANY DISPUTE THE UNDERLYING ENROLLMENT DATA?

A. No and it also did not provide any information to contradict my analysis. The data showing that customers on Peoples' customer assistance program ("CAP") are roughly nine times less likely than non-CAP customers to be enrolled in both electronic billing and automatic payment comes from the Company's own response to OCA-XIII-031, and Ms. Parks does not dispute it.[15] I did not offer that data as proof of what any individual customer does with their bill each month; I offered it as the kind of pattern the Commission may wish to consider in evaluating whether current billing and payment options are preserving meaningful engagement with utility costs across income levels.

V. Tariff Modifications

Q. MS. SNYDER CHARACTERIZES THE ADDED NONLIABILITY LANGUAGE AS A "CLARIFICATION" OF LONG-STANDING TARIFF TERMS RATHER

[14] Peoples St. 18-R, pp. 20-21.
[15] OCA St. 5, p. 39; OCA-XIII-031, Exhibit BLC-2 PUBLIC at 39-40.

THAN A FURTHER LIMITATION ON THE COMPANY'S LIABILITY. DO YOU AGREE WITH THAT CHARACTERIZATION?

A. No. Whatever the language is called, capping recoverable damages absent "willful or wanton misconduct" changes what a customer can recover compared to the current tariff. My plain language reading of the change is that it suggests that damages to customer property that are not due to identifiable negligence are now the responsibility of the customer.

Q. MS. SNYDER STATES THAT CUSTOMERS ALREADY RECEIVE WRITTEN NOTICE "WHEN A PAYMENT IS RETURNED," AND ARGUES THIS ADDRESSES YOUR CONCERN WITH THE PROPOSED DISHONORED-PAYMENT PROVISIONS. DOES IT?

A. No. Notice that a specific payment was returned is not notice that the customer is being placed on a certified-funds requirement or removed from eAccount going forward — those are different actions requiring different notice.[16]

Q. MS. BLACK REVISED THE COMPANY'S PROPOSED CAP RECREATIONAL-USE TARIFF LANGUAGE, REPLACING THE ITEMIZED LIST OF PROHIBITED APPLIANCES WITH A REFERENCE TO "POOL HEATERS" AND ADDING A MEDICAL-NECESSITY CERTIFICATION OPTION.[17] DOES THIS REVISION ADDRESS THE CONCERNS RAISED IN YOUR DIRECT TESTIMONY?

[16] Peoples St. 13-R, p. 6.
[17] Peoples St. 10-R, pp. 4-5.

A. In part. The addition of a medical-necessity certification option is a genuine improvement and addresses a gap in the original proposal. But the revised language still reads "such as, but not limited to, pool heaters," which preserves the same open-ended scope as the original itemized list. It other words, it removes specific examples without narrowing what is actually prohibited. If anything, removing the itemized list reduces the notice customers have about what appliances are covered, since the original list at least told a customer whether a fire pit or an outdoor heater was likely to be an issue. More importantly, the revision does not address my more fundamental concern: neither the original nor the revised language includes any notice, review, or contestability process before a customer is removed from CAP.[18] I maintain my recommendation that this provision include procedural protections before any removal from CAP takes effect.

Q. MS. BLACK DESCRIBES AN EXAMPLE OF SUSPECTED CAP FRAUD TO SUPPORT THE NEED FOR THE PROPOSED BENEFIT-REVERSAL PROVISION.[19] DOES THIS EXAMPLE RESOLVE THE CONCERN IN YOUR DIRECT TESTIMONY?

A. No, because it responds to a different question than the one I raised. My direct testimony did not dispute that fraud can occur or that ratepayers should not subsidize it; my concern was that the proposed language allows the Company to reverse benefits and require repayment based on its own determination, without any defined standard of proof, notice requirement, or review mechanism.[20] Ms. Black's rebuttal defends the need for a remedy in the abstract but does not state whether the Company would accept the procedural

[18] OCA St. 5, pp. 45-46.
[19] Peoples St. 10-R, pp. 6-7.
[20] OCA St. 5, p. 46.

safeguards I recommended: a defined standard of proof, advance notice, and a customer appeal process before any reversal or repayment obligation takes effect.

VI. Management Performance Adder

Q. MR. HUWAR STATES THAT OCA "DOES NOT CONTEMPLATE" THE COMPANY'S SAFETY AND INFRASTRUCTURE PERFORMANCE EVIDENCE, INCLUDING LEAK REDUCTION AND THE GOODWIN TOMBAUGH PIPELINE REPLACEMENT PROJECT, IN SUPPORT OF THE MANAGEMENT PERFORMANCE ADDER.[21] DOES THIS EVIDENCE AFFECT YOUR CONCLUSION?

A. No, because it addresses a different question than the one my direct testimony answered. I stated expressly that I was not addressing the financial merits of the Company's adder request generally and that my review was limited to what the customer service record does or does not support.[22] Whatever weight the Commission gives to the Company's safety and infrastructure performance, that evidence does not change my conclusion that the customer service record specifically does not support a finding of exceptional performance under Section 523, and the Company's own filing ties the requested adder in part to improvements in customer service.[23]

VII. Conclusion

Q. DOES THE REBUTTAL TESTIMONY OF COMPANY WITNESSES CHANGE ANY OF THE RECOMMENDATIONS IN YOUR DIRECT TESTIMONY?

[21] Peoples St. 1-R, p. 3.
[22] OCA St. 5, p. 47.
[23] OCA St. 5, p. 47.

A. In one respect, yes. I am revising my recommendations regarding rebilling and back-billing communications, as discussed in Section IV. Rather than a written-notice requirement, an account-flagging requirement, and a defined BCS-notification threshold, I now recommend that Peoples maintain contemporaneous records of any back-billing or rebilling event affecting more than 100 customers from a common cause and be prepared to provide, in its next base rate case, complete information about the event, including the number of customers affected and the bill impact by customer, along with the dates and copies of any communications with Commission staff regarding the event.

My other recommendations remain as stated in my direct testimony: 1) the Commission should deny Peoples' request for a management performance adder; 2) reject the proposed nonliability, dishonored-payment, CAP recreational-use, and CAP fraud-reversal tariff language, or condition adoption on the procedural safeguards described above; and 3) consider, on a policy basis, a requirement for periodic mailed cost summaries to preserve baseline bill visibility for residential customers.

Q. Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does.

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission

v. Docket No. R-2026-3060855

Peoples Natural Gas Company LLC
:

VERIFICATION

I, Brendan Larkin-Connolly, hereby state that the facts above set forth in my Surrebuttal Testimony, OCA Statement No. 5SR, are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

DIRECT TESTIMONY

of

JOSEPH KUBAS

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics:
Small General Service Customer Charge
Future Cost of Service Studies

Date Served: June 18, 2026

Date Submitted for the Record: _____

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Joseph Kubas. My business address is Forum Place, 555 Walnut Street, 1st floor, Harrisburg PA, 17101.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Office of Small Business Advocate ("OSBA") as an Economic Development Consultant.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the OSBA.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic and professional background is described in the attached Appendix A.

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY BEFORE THIS COMMISSION?

A. Yes. As described in my Appendix A, I provided testimony in many proceedings before the Commission on many occasions.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my direct testimony is to address the proposed increase in the Small General Service (SGS) customer charge for customers that use between 0 and 499 Mcf per year. I will also recommend that negotiated customers be moved to their own class in all future Cost of Service Studies (COSSs).

Q. ARE YOU MAKING A RECOMMENDATION FOR TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. While my first issue impacts proposed revenue, I am not making an overall revenue recommendation. Mr. Mark Ewen will also address other issues in this case.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On March 27, 2026, the Peoples Natural Gas Company LLC (Peoples Natural Gas Division and Peoples Gas Division (Peoples or Company)) filed a natural gas base rate case based on a FPFTY ending December 31, 2027. The total increase is approximately $163,172,000 (Peoples Volume I, Exhibit 2, Schedule 4, page 2, line 1).

Q. DID THE COMPANY SEPARATE CUSTOMERS INTO CLASSES, AND WHAT INCREASE DID THE COMPANY PROPOSE FOR EACH CLASS?

A. Yes. According to Peoples Exhibit No. 11, page 14, line 13, and page 15, line 60, the Company proposed the following increases for each class:

Customer Classes	Current Revenues	Proposed Revenue Change	Proposed Percentage Change	Proposed Rate of Return	Proposed Revenue to Cost Ratio (Parity Ratio)
Residential	$875,171,173	$118,163,447	13.50%	8.1%	0.99
Small General	$116,045,549	$21,443,151	18.48%	6.6%	0.94
Medium General	$108,167,260	$21,264,419	19.66%	8.0%	0.99
Large General	$72,051,809	$ -	0.00%	15.5%	1.38
Mainline Service	$13,178,274	$ -	0.00%	1.0%	0.74
Total	**$1,184,614,065**	**$160,871,017**	**13.58%**		

SMALL GENERAL SERVICE CLASS

Q. WHAT CUSTOMERS ARE GENERALLY INCLUDED IN THE SMALL GENERAL SERVICE CLASS?

A. The SGS class is available to commercial and industrial customers and Natural Gas Distribution Companies consuming less than 1,000 Mcf of natural gas service annually throughout the territory served by the Company with the exception of commercial customers qualifying under Rate Natural Gas Powered Vehicles (Peoples Tariff Supplement No. 2 To Gas - PA PUC No. 48, First Revised Page No. 10). Based upon the Company's definition, this class would generally include Small Business customers that use less than 300 Mcf per year (Peoples Tariff Supplement No. 2 to Gas - PA PUC No. 48 First Revised Page No. 7).

Q. WHAT RATES DO SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR CURRENTLY PAY?

A. SGS customers that use between 0 and 499 Mcf per year currently pay a customer charge of $22.00 per month, a usage rate of $3.9844 per Mcf, plus various surcharges (Volume 9, Peoples Exhibit JDT-4, page 1).

Q. WHAT RATES ARE THE COMPANY PROPOSING FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company is proposing SGS customers that use between 0 and 499 Mcf per year pay a customer charge of $32.14 per month, a usage rate of $5.7095 per Mcf, plus various surcharges (Volume 9, Peoples Exhibit JDT-4, page 1).

Q. WHAT INCREASE AND PERCENTAGE INCREASE IN THE CUSTOMER CHARGE IS THE COMPANY PROPOSING FOR THESE SGS CUSTOMERS?

A. The Company is proposing the SGS customer charge for customers that use between 0 and 499 Mcf per year be increased to $32.14 per month which equates to an increase of $10.14 ($32.14 - $22.00) per month or 46.1%.

Q. WHAT SUPPORT DID THE COMPANY PROVIDE FOR PROPOSING A MONTHLY CUSTOMER CHARGE OF $32.14 PER MONTH FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company states that its COSS model allocates costs based upon demand, usage and customers. The Company believes that the Commission can see directly the revenue requirement associated with the customer classification and the respective functions that form this revenue requirement. Peoples Exhibit No. 11, Schedule 2 provides the customer-related unit cost per customer per month, for Rates RS, SGS, MGS, LGS, MLS and provides useful insights on the fixed monthly costs of providing service to these customers, inclusive of both customer-related costs and demand-related costs (Peoples Statement No. 17, page 35).

Q. DID THE COMPANY DETERMINE A TOTAL CUSTOMER COST FOR THE SGS CUSTOMERS?

A. Yes. The Company claims $43.06 per month in total customer cost to provide service to SGS customers (Volume 4, Peoples Exhibit No. 11, page 18).

Q. DID THE COMPANY PROVIDE ANY ACTUAL USEFUL INSIGHTS FOR THE COMMISSION TO VERIFY THE $43.06 COST PER MONTH?

A. No. The Company only provided two components. The first component is Distribution On-site at $33.15 per month and Accounts and Service at $9.92 per month for a total of approximately $43.06 per month per SGS customer (Volume 4, Peoples Exhibit No. 11, page 18).

Q. IS IT POSSIBLE TO DETERMINE WHAT IS INCLUDED IN "DISTRIBUTION ON-SITE" AND "ACCOUNTS AND SERVICE" LISTED ABOVE?

A. No. Therefore, it's not possible to determine what individual expenses and utility plant are included in these accounts that should be recovered in the monthly customer charge.

Q. WHAT DO YOU RECOMMEND CONCERNING THE PROPOSED $32.14 PER MONTH SGS CUSTOMER CHARGE?

A. I recommend that the present SGS customer charge of $22.00 per month for customers that use between 0 and 499 Mcf per year not be increased.

Q. WHY DO YOU RECOMMEND NO INCREASE IN THE PRESENT SGS CUSTOMER CHARGE OF $22.00 PER MONTH?

A. As described above, the Company failed to provide a detailed customer cost analysis to support any increase in the SGS customer charge for customers that use between 0 and 499 Mcf per year. Therefore, the monthly $22.00 per month SGS customer charge should not be increased

Q. DID THE COMPANY ALSO PROVIDE OTHER REASONS FOR INCREASING CUSTOMER CHARGES?

A. Yes. According to Peoples Statement No. 17, page 36, the Company believes:

> These proposed fixed monthly customer charges help to reduce customer bill volatility, alleviate a significant portion of the instability in the Company's margin recovery, are fair to customers, are easily understood, convey more appropriate price signals with respect to recovery of fixed utility costs, benefit low-income customers that have higher than average use, and are not regressive in application to low-income customers who may have little control over their use of energy and are negatively impacted when recovering more costs in volumetric charges.

Q. DO ANY OF THESE CLAIMS SUPPORT INCREASING THE SGS CUSTOMER CHARGE TO $32.14 PER MONTH FOR CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. No. First, any customer concern about bill volatility can be addressed through a customer selecting budget billing. Second, the Company's margin recovery is stabilized each year using its weather normalization adjustment. Third, it makes no sense to suggest that a higher customer charge is fair to customers because customers understand a customer charge more than they understand a usage rate. Fourth, there is no support for claiming that customers are concerned with the Company's recovery of fixed costs. Fifth, there is no support for the claim that a higher monthly charge sends the correct "price signal" to customers. Finally, the SGS customer charge for customers that use between 0 and 499 Mcf per year is not impacted by low-income customer issues.

Q. DID THE COMPANY PROVIDE ADDITIONAL REASONS FOR INCREASING CUSTOMER CHARGES?

A. Yes. According to Peoples Statement No. 17, page 36-37, the Company believes a higher customer charge provides a more equalized contribution within each class and provides greater recovery of fixed costs. The Company also cites the recovery of actual customer related costs such as meter reading and billing in its support for increasing the monthly charge. Finally, the Company believes that fixed system costs are better recovered in the customer charge

Q. DID THE COMPANY PROVIDE ACTUAL SUPPORT FOR ANY OF THESE ADDITIONAL CLAIMS TO SUPPORT INCREASING THE SGS CUSTOMER CHARGE TO $32.14 PER MONTH FOR CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. No. First, the Company suggestion that various SGS customers provide an unequal contribution to fixed costs is not supported. Since the Company failed to properly list what it believes are direct customer related fixed costs, there is no way to determine if the Company's claims concerning intra class subsidy or the need to collect more fixed costs are accurate. Second, while it's correct that the direct expenses such as billing, meter reading costs and recovery of direct customer assets such as meters and service are properly recovered in a customer charge, as described above, the Company failed to provide any details supporting these individual customer costs. Finally, while the Company would rather recover all fixed costs in a

monthly charge, the Commission has consistently rejected this recovery claim. The Commission has repeatedly used its judgement and a detailed customer cost analysis to establish customer charges.

Q. HOW DO HIGHER CUSTOMER CHARGES AND LOWER USAGE RATES IMPACT THE BILL OF A CUSTOMER THAT LOWERS USAGE THROUGH CONSERVATION?

A. A customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate structure with a higher customer charge and lower usage rate.

<u>FUTURE COST OF SERVICE STUDIES</u>

Q. WHAT CURRENT CLASSES ARE INCLUDED IN THE COMPANY'S COST OF SERVICE STUDY?

A. The Company's COSS includes the Residential (R), Small General Service (SGS), Medium General Service (MGS), Large General Service (LGS) and Mainline Service (MLS) classes (Peoples Volume IV, Exhibit 11, page 14).

Q. WHICH CLASSES INCLUDE CUSTOMERS THAT HAVE RATES THAT ARE NEGOTIATED, TYPICALLY REFERRED TO AS COMPETITIVE DISCOUNT CUSTOMERS?

A. The SGS, MGS, LGS, and MLS classes all include customers where the rates are negotiated (Volume 9, Peoples Exhibit JDT-4, pages 1-5).

Q. DOES INCLUDING NEGOTIATED RATE CUSTOMERS IN A CLASS IMPACT THE RESULTS OF THE COSS?

A. Yes. Granting negotiated rates to customers within a class results in a revenue shortfall for that class. Then under proposed rates other customers in that class pay higher rates to make up for the revenue shortfall in that class. Under this scenario, the true cost of providing service to tariff rate customers in these classes is higher than it otherwise would be.

Q. WHAT DO YOU RECOMMEND THE COMPANY DO IN FUTURE COST OF SERVICE STUDIES?

A. I recommend that in future COSSs, the Company separate the negotiated customers and corresponding revenue into a separate "Negotiated" class.

Q. WHY DO YOU RECOMMEND THE COMPANY SEPARATE THE NEGOTIATED CUSTOMERS AND CORRESPONDING REVENUE FROM NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A As described above, this will enable the Commission and interested parties to determine the true cost of providing tariff rate service to each of the remaining

classes without the lower revenue from customers that pay negotiated rates skewing the results of each class in the COSS.

Q. DO OTHER COMPANIES ALSO SEPARATE THE REVENUE AND COST OF SERVING NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A Yes. Columbia Gas Company of Pennsylvania separates Flex Rate customers into their own class (Docket No. R-2025-3053499, Columbia Exhibit 111, Schedule 1). Also, Pennsylvania America Water currently separates Bulk Contract customers into their own class in the Sanitary Sewer System Operations (Docket R-2025-3058051, PAWC Exhibit 12-B, Schedule B).

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A Yes.

APPENDIX A

Resume & Expert Testimony List

of

Joseph Kubas

JOSEPH KUBAS
OFFICE OF SMALL BUSINESS ADVOCATE
Forum Place 555 Walnut Street 1St Floor
Harrisburg PA 17101

Education: Bachelor of Science in Civil Engineering Technology, 1985, University of Pittsburgh at Johnstown, Johnstown, PA.

Continuing Education: Legal Principles and Practices of Surveying at the University of Maryland. Economics, Accounting, 33 Credit hours of accounting at the Howard County Community College and the University of Pittsburgh at Johnstown. Managing Multiple Priorities at the Pennsylvania State University. Various PA-PUC and Utility Company Seminars.

Professional: Engineer In Training, 1985,

Exams: Uniform Certified Public Accounting Exam, 1993.

Rate School: Cost of Service - Rate Structure & Rate Design instructor at Commission's Rate School - September 2010, 2012, 2014, 2016, 2022, and 2024.

Title: **ECONOMIC DEVELOPMENT CONSULTANT**

May 2025 - Present
Office of Small Business Advocate

Duties: Provide consultation and assist the OSBA the areas of Engineering, Revenue and Rate Structure for all fixed utility types. This includes measure of value claims, rate structure and rates, revenue annualizations, depreciation claims, and economic analyses. The types of dockets reviewed by the OSBA base rate cases, applications, formal complaints, investigations, applications, and petitions. The review includes analyzing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue schedules, depreciation studies, and formal complaints.

Title: **RATE CASE REVIEW SPECIALIST - ANNUITANT**

July 2023 – December 2024
Pennsylvania Public Utility Commission

Bureau of Investigation and Enforcement

Duties: Provide consultation and assist the Bureau of I&E in the areas of Engineering, Revenue and Rate Structure for all fixed utility types. This includes measure of value claims, rate structure and rates, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included applications, formal complaints, investigations, applications, petitions and rate investigations. The review includes analyzing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue schedules, depreciation studies, and formal complaints.

Title: **FIXED UTILITY VALUATION ENGINEER SUPERVISOR**

December 2011 – June 2023
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement

Duties: Duties included the areas of Engineering, Revenue and Rate Structure for all fixed utility types. During the course of formal and informal investigations personnel under my direction were responsible for reviewing and presenting recommendations regarding tariff rate schedules, tariff rules and regulations, measures of value claims, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included: applications, formal complaints, investigations, petitions and rate investigations. The Engineering Section was also responsible for reviewing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue, depreciation studies, water quality test results and formal complaints. Duties also included reviewing default service petitions by electric distribution companies and Act 129 Filings by the seven major electric Utilities, including energy efficiency and conservation plans and Smart Meter Plans.

Title: **RATE CASE REVIEW SPECIALIST**

December 2009 - December 2011
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement and Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas

expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the I&E position in formal and informal proceedings before the Commission. Assist I&E employees with engineering and rate structure issues, including briefs and exceptions input. Participate in Commission consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER III**

December 1999 - December 2009
Pennsylvania Public Utility Commission
Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the OTS position in formal and informal proceedings before the Commission. Assist OTS employees with engineering and rate structure matters, including briefs and exceptions. Participate in Commission

consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER II**

April 1996 - December 1999
Pennsylvania Public Utility Commission
Office of Trial Staff and Bureau of Fixed Utility Services

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Office of Trail Staff (OTS) and Bureau of Fixed Utility Services.

Title: **FIXED UTILITY VALUATION ENGINEER TRAINEE, I & II**

May 1993 - March 1996
Pennsylvania Public Utility Commission
Office of Trial Staff
Telecommunications and Water Division

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Rate Structure/Engineering Section of the Telecommunications and Water Division of the Office of Trial Staff (OTS).

Title: **CIVIL ENGINEER**

May 1985 - January 1991
Clark Finefrock & Sackett Inc.
7135 Minstrel Way
Columbia, MD 21045

Duties: Engineering, Surveying, Computer, and Field Inspection work related to land development projects in Maryland.

SURREBUTTAL TESTIMONY

of

JOSEPH KUBAS

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics:
Small General Service Customer Charge
Future Cost of Service Studies

Date Served: July 31, 2026

Date Submitted for the Record: _____

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Joseph Kubas. My business address is Forum Place, 555 Walnut Street, 1st floor, Harrisburg PA, 17101.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Office of Small Business Advocate ("OSBA") as an Economic Development Consultant.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the OSBA.

Q. ARE YOU THE SAME JOSEPH KUBAS THAT PROVIDED DIRECT TESTIMONY ON JUNE 18, 2026?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. The purpose of my surrebuttal testimony is to address two issues related to the rebuttal testimony of Peoples Natural Gas Company, LLC (Peoples or Company).

Specifically, I will address the rebuttal testimony of Luke Ravenstahl, submitted on behalf of Peoples as Statement No. 8-R concerning future Cost of Service Studies (COSS), and the rebuttal testimony of John D. Taylor, submitted on behalf of Peoples as Statement No. 17-R concerning the proposed SGS customer charge, and changes in future COSSs. The fact that I did not address every argument raised by the Company does not indicate my agreement with the Company on that argument.

Q. DID YOU MAKE A RECOMMENDATION FOR TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. While my first issue did impact proposed rates, I did not make an overall revenue recommendation. Mr. Mark Ewen also addressed other issues in this case.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On March 27, 2026, Peoples filed a natural gas base rate case based on a FPFTY ending December 31, 2027. The total increase is approximately $163,172,000.[1] The Company's revised this amount upward in its rebuttal testimony to approximately $163,933,000.[2]

SMALL GENERAL SERVICE CLASS

Q. WHAT CUSTOMERS ARE GENERALLY INCLUDED IN THE SMALL GENERAL SERVICE CLASS?

A. The SGS class is available to commercial and industrial customers and Natural Gas Distribution Companies consuming less than 1,000 Mcf of natural gas service annually throughout the territory served by the Company with the exception of commercial customers qualifying under Rate Natural Gas Powered Vehicles (Peoples Tariff Supplement No. 2 To Gas - PA PUC No. 48, First Revised Page No. 10). Based upon the Company's definition, this class would generally include Small Business customers that use less than 300 Mcf per year.[3]

[1] Peoples Volume I, Exhibit 2, Schedule 4, page 2, Line 1.
[2] Peoples Revised Exhibit No. 2, Schedule 4, Page 5, Line 1.
[3] Peoples Tariff Supplement No. 2 to Gas - PA PUC No. 48 First Revised Page No. 7.

Q. WHAT RATES DO SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR CURRENTLY PAY?

A. SGS customers that use between 0 and 499 Mcf per year currently pay a customer charge of $22.00 per month, a usage rate of $3.9844 per Mcf, plus various surcharges.[4]

Q. WHAT RATES DID THE COMPANY PROPOSE FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company proposed that SGS customers that use between 0 and 499 Mcf per year pay a customer charge of $32.14 per month, a usage rate of $5.7095 per Mcf, plus various surcharges[5]

Q. WHAT INCREASE AND PERCENTAGE INCREASE IN THE CUSTOMER CHARGE DID THE COMPANY PROPOSE FOR SGS CUSTOMERS?

[4] Volume 9, Peoples Exhibit JDT-4, page 1.

[5] Volume 9, Peoples Exhibit JDT-4, page 1.

A. The Company proposed that the SGS customer charge for customers that use between 0 and 499 Mcf per year be increased to $32.14 per month, which equates to an increase of $10.14 ($32.14 - $22.00) per month or 46.1%.

Q. WHAT CUSTOMER CHARGE DID YOU RECOMMEND FOR THE SGS CLASS?

A. I recommend that the present SGS customer charge remain at $22.00 per month.[6]

Q. WHAT SUPPORT DID YOU PROVIDE FOR KEEPING THE SGS CUSTOMER CHARGE AT $22.00 PER MONTH?

A. First, the Company failed to provide a customer cost analysis that showed the individual components to support increasing the SGS customer charge.[7] Second, I described how any customer concern about bill volatility can be addressed through a customer selecting budget billing. Third, I addressed how the Company's margin recovery is stabilized each year using its weather normalization adjustment. Fourth, I addressed why it makes no sense to suggest that a higher

[6] OSBA Statement No. 1, page 6.

[7] OSBA Statement No. 1, pages 5-6.

customer charge is fair to customers because customers understand a customer charge more than they understand a usage rate. Fifth, I described how customers are not concerned with the Company's recovery of fixed costs. Sixth, I described how there is no support for the claim that a higher monthly charge sends the correct "price signal" to customers. Seventh, the Company's suggestion that various SGS customers provide an unequal contribution to fixed costs is not supported. Since the Company failed to properly list what it believes are direct customer related fixed costs, there is no way to determine if the Company's claims concerning intra class subsidy or the need to collect more fixed costs are accurate. Eighth, the Company failed to provide any details supporting these individual customer costs. Ninth, while the Company would rather recover all fixed costs in a monthly charge, the Commission has consistently rejected this recovery claim. The Commission has repeatedly used its judgement and a detailed customer cost analysis to establish customer charges. Finally, I described how low-income customer issues are not a factor in determining the SGS customer charge.[8]

[8] OSBA Statement No. 1, pages 7-9.

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE SGS CLASS CUSTOMER CHARGE RELATED TO THE COSS, REVENUE AND COST RECOVERY?

A. Yes. The Company disagrees with my recommendation to keep the SGS customer charge at $22.00 per month. First, the Company believes that its COSS provided the information necessary to evaluate the customer-related costs supporting the proposed customer charge, and the fact that it wasn't presented in a format that was easy to evaluate should not matter. Second, the Company believes that its proposal better advances more cost-reflective rates by recovering a greater portion of customer-related fixed costs through the monthly customer charge. The Company attempts to support this broad statement by claiming that a higher customer charge is reasonable because of how fixed costs are caused and incurred. Third, the Company believes that a higher customer charge represents a reasonable balance among the various objectives of rate design, including cost causation, fairness, customer impacts, and revenues. Fourth, the Company believes that the SGS customer charge is below the customer costs derived in the COSS. Fifth, the Company states that I did not identify any specific cost that is improperly included in the Company's customer cost analysis, nor did I demonstrate that the customer-

related costs reflected in the COSS are unreasonable[9].

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIRST CLAIM THAT IT PROVIDED THE NECESSARY INFORMATION TO EVALUATE CUSTOMER RELATED COSTS IN THE ORIGINAL FILING?

A. First, Mr. Taylor provided no citation for his claim regarding this information. Therefore, it's not possible for the Commission to verify Mr. Taylor's claim. Second, I am advised by counsel that the burden of proof lies with the Company. Therefore, it's not the responsibility of the OSBA or any other party to dissect the COSS and compile an appropriate customer cost analysis to verify the Company's claims. Third, given the chance to provide a one or two page customer cost summary, the Company decided that one is not necessary. With no COSS reference to any cost breakdown, the Commission is left to speculate and trust the Company as to what costs are included the two customer cost components. The first component being the Distribution On-site at $33.15 per month and the second

[9] Peoples Statement No. 17-R, pages 22-27.

component being the Accounts and Service at $9.92 per month for a total of approximately $43.06 per month per SGS customer.[10]

Q. HOW DO YOU RESPOND TO THE COMPANY'S SECOND CLAIM CONCERNING THE RECOVERY OF CUSTOMER RELATED COSTS THROUGH THE CUSTOMER CHARGE?

A. The Company provided over 7 pages of rebuttal testimony claiming that the SGS customer charge does not recover all the SGS "customer-related" costs. The Company is attempting to improperly claim that "customer-related" costs should be used to support a higher customer charge without providing a breakdown of these "customer related" costs. Just because the Company believes that a cost is "customer related" does not make that a cost recoverable in the customer charge.

Q. HOW DO YOU RESPOND TO THE COMPANY'S THIRD CLAIM THAT A HIGHER CUSTOMER CHARGE REPRESENTS A REASONABLE BALANCE AMONG THE VARIOUS OBJECTIVES, INCLUDING FAIRNESS, CUSTOMER IMPACTS, AND REVENUE STABILITY?

---

[10] Peoples Volume 4, Exhibit No. 11, page 18.

A. First, while the Company believes a higher customer charge satisfies its "reasonable balance" objectives and leads to a fairer rate structure, the Company has not demonstrated how it's reasonable and fairer to charge customers more per month before that customer uses any gas. Second, these criteria should not be the primary determination for establishing a customer charge. While customer impact is a concern, the customer charge should be based upon a customer cost analysis that if done properly will establish a reasonable balance, be fair, and limit the impact on the customer that the Company desires. Third, the Company's future revenue stability should not be a factor in determining the proposed customer charge. The Company has many opportunities to stabilize future revenue other than a higher customer charge including but not limited to the weather normalization adjustment, adding new customers, and adding new volumes. Finally, these issues or concerns are either not a factor and/or do not supersede the importance of a proper customer cost analysis to support a proposed customer charge.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FOURTH CLAIM THAT THE PROPOSED CUSTOMER CHARGE IS BELOW THE CUSTOMER COSTS?

A. As described above and in my direct testimony, since the Company failed to provide a breakdown of the appropriate customer costs, it's not possible to determine if the Company's proposed SGS customer of $32.14 per month is below the appropriate customer costs.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIFTH CLAIM THAT SINCE I DID NOT IDENTIFY ANY CUSTOMER COSTS THAT SHOULD BE EXCLUDED, THE COMPANY'S SGS CUSTOMER CHARGE SHOULD BE APPROVED?

A. As described above and in my direct testimony, it was not possible for me to determine the individual components that the Company believes are "customer related". Therefore, it was not possible for me to address individual cost components.[11].

Q. DID THE COMPANY ALSO ADDRESS YOUR RECOMMENDATION CONCERNING THE SGS CLASS CUSTOMER CHARGE RELATED TO CONSERVATION?

---

[11] OSBA Statement No. 1, page 6.

A. Yes. First, the Company believes that the proposed customer charges are not based on any single rate design objectives but consider many things including conservation. Second, the Company believes that its customer charges do not eliminate the incentives for customers to conserve. Third, the Company believes that placing too much emphasis on conservation in designing customer charges risks shifting fixed customer-related costs into volumetric delivery rates. Fourth, the Company speculates on price signals and customer behavior, stating customers will behave differently if fixed distribution costs are recovered in usage rate. Fifth, the Company believes that energy efficiency can still be promoted through volumetric delivery rates, and targeted conservation programs without compromising the appropriate recovery of customer related fixed costs. Sixth, the Company believes that conservation leaves fixed costs that will not be recovered in the future if they are not recovered in the proposed customer charges. Finally, the Company believes that the customer charge is intended to recover a portion of the costs that do not vary with usage[12].

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIRST CLAIM CONCERNING HOW THE COMPANY CONSIDERS CONSERVATION?

[12] Peoples Statement No. 17-R, pages 27-30.

A. I disagree with the Company. I believe that the Company's proposal reduces the customer's incentive to conserve. As I stated in my direct testimony: "A customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate structure with a higher customer charge and lower usage rate"[13]. It should be noted that the Company did not directly dispute this fact, only claiming other issues described below should be considered.

Q. HOW DO YOU RESPOND TO THE COMPANY'S SECOND CLAIM THAT ITS PROPOSAL DOES NOT ELIMINATE THE CUSTOMER'S INCENTIVE TO CONSERVE?

A. I never stated that the Company's higher SGS customer charge eliminates the customer's incentive to conserve. My testimony is that higher customer charges and lower usage rates provide <u>less</u> of an incentive for the customer to conserve.

Q. HOW DO YOU RESPOND TO THE COMPANY'S THIRD CLAIM CONCERNING THE RISK OF SHIFTING THE RECOVERY OF COSTS TO THE USAGE RATES?

---

[13] OSBA Statement No. 1, page 9.

A. Any perceived risk of lower usage through conservation should not be a factor in determining a proper customer charge. As described above, the Company has many ways to stabilize usage revenue.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FOURTH CLAIM CONCERNING CUSTOMER BEHAVIOR?

A. I don't believe that customers are concerned about how the Company's fixed costs are recovered. As described above, I believe that customers will have a greater incentive to conserve and achieve a lower bill through conservation, if the customer charge is lower and the usage rates are higher. Therefore, keeping the SGS customer charge at $22.00 per month will create a greater incentive for SGS customers to conserve.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIFTH CLAIM THAT ENERGY CONSERVATION CAN STIL BE ACHIEVED WITH A HIGHER CUSTOMER CHARGE AND OTHER PROGRAMS?

A. As described above, and in my direct testimony, customers will have a greater incentive to conserve with a rate structure that includes a lower customer charge since a customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate

structure with a higher customer charge and lower usage rate. A greater incentive to conserve will generally lead to a more successful conservation program.

Q. HOW DO YOU RESPOND TO THE COMPANY'S SIXTH CLAIM THAT CONSERVATION LEADS TO THE UNDER RECOVERY OF FIXED COSTS IN THE FUTURE?

A. First, a properly established customer charge will recover the appropriate customer costs. However, since the Company failed to justify its higher customer charge with a proper customer cost analysis, the Commission has no way of knowing what People's customer costs are. Therefore, if the Company does not recover "customer related" costs in the future, it's only because it failed to provide an appropriate customer cost analysis in this case. Second, as described above, the Company has various methods to stabilize usage revenue and recover fixed costs in the future. Third, the use of a Fully Projected Future Test Year in cases like this allows the Company to project usage declines in rates before the decline occurs[14]. Finally, the Company stated that it will likely file a base rate case in 2 years or less[15]. A rate

[14] Peoples Statement 17, page 9.

[15] Peoples Statement 2-R, page 39.

case that soon will allow the Company to reflect recovery of any fixed costs not being recovered in the final usage rates fairly quickly.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FINAL CLAIM THAT A CUSTOMER CHARGE SHOULD RECOVER A PORTION OF THE COSTS THAT DO NOT VARY WITH USAGE?

A. I disagree with this broad statement. I believe a customer charge should only recover the direct customer costs that vary with the addition or loss of a customer, plus some limited indirect customer costs the Commission has allowed in past cases. The overly inclusion notion that a fixed costs is automatically a customer costs should be rejected by the Commission.

Q. DO YOU CONTINUE TO RECOMMEND THE CURRENT SGS CUSTOMER CHARGE OF $22.00 PER MONTH NOT BE INCREASED

A. Yes. Since the Company failed to provide any valid reason for increasing the SGS customer charge, I continue to recommend that the present SGS customer charge of $22.00 per month for customers that use between 0 and 499 Mcf per year should not be increased.

FUTURE COST OF SERVICE STUDIES

Q. WHAT CURRENT CLASSES ARE INCLUDED IN THE COMPANY'S COST OF SERVICE STUDY?

A. The Company's COSS includes the Residential (R), Small General Service (SGS), Medium General Service (MGS), Large General Service (LGS) and Mainline Service (MLS) classes.[16]

Q. WHICH CLASSES INCLUDE CUSTOMERS THAT HAVE RATES THAT ARE NEGOTIATED, TYPICALLY REFERRED TO AS COMPETITIVE DISCOUNT CUSTOMERS?

A. The SGS, MGS, LGS, and MLS classes all include customers where the rates are negotiated.[17]

Q. DID YOU PROVIDE DIRECT TESTIMONY CLAIMING DISCOUNT CUSTOMERS IN THE CLASS SKEWS THE RESULTS OF THAT CLASS?

[16] Peoples Volume IV, Exhibit 11, page 14.

[17] Peoples Volume 9, Exhibit JDT-4 pages 1-5.

A. Yes. Granting negotiated rates to customers within a class results in a revenue shortfall for that class. Then under proposed rates other customers in that class pay higher rates to make up for the revenue shortfall in that class. Under this scenario, the true cost of providing service to tariff rate customers in these classes is higher than it otherwise would be.[18]

Q. WHAT DID YOU RECOMMEND THE COMPANY DO IN FUTURE COST OF SERVICE STUDIES?

A. I recommended that in future COSSs, the Company separate the negotiated customers and corresponding revenue into a separate "Negotiated" class[19].

Q. WHY DID YOU RECOMMEND THE COMPANY SEPARATE THE NEGOTIATED CUSTOMERS AND CORRESPONDING REVENUE FROM NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A. As described above, and in my direct testimony, this recommendation enables the Commission and interested parties to determine the true cost of providing tariff

[18] OSBA Statement No. 1, page 10.

[19] OSBA Statement No. 1, page 10.

rate service to each of the remaining classes without the lower revenue from customers that pay negotiated rates skewing the results of each class in the COSS.[20]

Q. WHAT OTHER SUPPORT DID YOU PROVIDE FOR MAKING THIS RECOMMENDATION?

A. I described how Columbia Gas Company of Pennsylvania separates Flex Rate customers into their own class.[21] I also described how Pennsylvania America Water currently separates Bulk Contract customers into their own class in the Sanitary Sewer System Operations.[22]

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE SEPARATION OF NEGOTIATED CUSTOMERS INTO THEIR OWN CLASS IN FUTURE COSSs?

---

[20] OSBA Statement No. 1, pages 10-11.

[21] Docket No. R-2025-3053499, Columbia Exhibit 111, Schedule 1.

[22] Docket R-2025-3058051, PAWC Exhibit 12-B, Schedule B, OSBA Statement No. 1, page 11.

A. Yes. Mr. Taylor believes that this is "one reasonable approach" that could be considered in future cases. However, Mr. Taylor also states that this recommendation demonstrates that the current COSS and rate design proposals in this proceeding are reasonable.[23] Mr. Ravenstahl believes that it is unlikely that flex rate customers will have the same usage patterns, making it difficult to group them into one class.[24]

Q. HOW DO YOU RESPOND TO MR. TAYLOR'S REBUTTAL TESTIMONY CONCERNING FUTURE COST OF SERVICE STUDIES?

A. It appears that the Company does not object to my recommendation concerning future COSSs. Therefore, my recommendation to require the Company to separate the negotiated customers into a separate class should be approved. Furthermore, since the Company failed to dispute or respond to my testimony describing how other utilities separate negotiated customers into their own class demonstrates that my recommendation is reasonable and should be approved.

[23] Peoples Statement No. 17-R, page 19-20.

[24] Peoples Statement No. 8-R, page 8.

Q. HOW DO YOU RESPOND TO MR. TAYLOR'S REBUTTAL TESTIMONY CONCERNING THE CURRENT COST OF SERVICE STUDY AND RATE DESIGN?

A. Mr. Taylor takes the leap that my recommendation demonstrates the current COSS and rate design are reasonable. This was not the intent of my testimony. Just because I did not recommend any changes to the current COSS does not mean that I entirely support the Company's rate design as filed. My recommendation concerning negotiated customers only addressed future COSSs.

Q. HOW DO YOU RESPOND TO MR. RAVENSTAHL'S REBUTTAL TESTIMONY CONCERNING COST CAUSATION?

A. Mr. Ravenstahl is correct that the factors in a COSS should be determined by cost causation. However, he only speculates that negotiated customers result in different cost causations.

Q. DID MR. RAVENSTAHL'S PROVIDE ANY SUPPORT FOR HIS NOTION THAT NEGOTIATED CUSTOMERS HAVE DIFFERENT COST CAUSATION PATTERNS?

A. No. First, I believe it's more reasonable to assume that negotiated customers are large customers that are not weather sensitive and have relatively stable usage

throughout the year. Second, the Company would be free to divide the negotiated customers into two or more groups such as large/small, or steady/peak if that is appropriate. This will address Mr. Ravenstahl's concern.

Q. DO YOU CONTINUE TO RECOMMEND THAT THE NEGOTIATED CUSTOMERS BE SEPARATED INTO THERE OWN CLASS IN FUTURE COST OF SERVICE STUDIES?

A. Yes. Since the Company did not state that it was not possible to separate negotiated customers into their own class, and for the reasons stated above, the Commission should approve my recommendation.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Re: Pennsylvania Public Utility Commission v. Peoples Natural Gas Company, LLC / Docket No. R-2026-3060855

Dear Judge Collins:

Enclosed please find the Direct Testimony and Exhibit of Mark D. Ewen, labeled OSBA Statement No. 2, with associated Exhibit IEc-1, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

DIRECT TESTIMONY AND EXHIBIT

of

MARK D. EWEN

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics
Customer Assistance/Affordability
Cost Allocation
Revenue Allocation
Weather Normalization Adjustment

Date Served: June 18, 2026

Date Submitted for the Record: _____

DIRECT TESTIMONY OF MARK D. EWEN

1. Introduction and Context

Q. Mr. Ewen, please state your name and briefly describe your qualifications.

A. My name is Mark D. Ewen. I am a Principal and President of Industrial Economics, Incorporated ("IEc"), a consultancy headquartered at 2067 Massachusetts Avenue, Cambridge, MA 02140. My consulting practice focuses on regulatory and energy economics, expert case management and economic damages estimation in a variety of litigation contexts, and financial analysis. I obtained a B.A. degree in Economics and Political Science from the University of North Dakota, and a Master of Public Policy degree from the University of Michigan. I have participated and provided testimony in a variety of proceedings before the Pennsylvania Public Utilities Commission ("Commission"), including electric and gas base rates cases, 1307(f) purchased gas cost filings, energy efficiency and conservation cases, merger and acquisition cases, and default service provider ("DSP") petitions. My involvement as an expert witness to utility rate cases extends to a variety of jurisdictions, including Rhode Island, New York, Pennsylvania, New Hampshire, Maryland, and Canada. My résumé and a listing of the expert testimony that I have filed in various litigation and utility regulatory proceedings are attached in Exhibit IEc-1.

Q. Please describe your assignment in this matter.

A. I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). The OSBA requested that I review the filing of Peoples Natural Gas Company, L.L.C. ("PNG" or the "Company") in this proceeding to evaluate whether the Company's revenue requirement, cost allocation, revenue allocation, and rate design proposals are consistent with sound regulatory economics and policy and are fair and reasonable to small business customers. If I have not addressed a particular issue, it cannot be inferred that I agree with the Company's proposal for that topic.

Q. Please summarize the Company's filing from a cost allocation and rate design perspective.

A. PNG proposes a base rate increase of $163.2 million, or 13.8 percent of base rate revenues, for the fully projected future test year ("FPFTY") ending December 31, 2027. The primary driver of the proposed rate increase, as asserted by the Company, is its ongoing infrastructure modernization programs, supported by significant and ongoing capital investments. The Company requests an ROE of 11.25 percent and a capital structure consisting of 45.53 percent long-term debt and 54.47 percent common equity. The Company also requests an adjustment to the method by which it calculates its Weather Normalization Adjustment ("WNA").

Q. Please summarize your recommendations.

A. I offer the following recommendations:

- The Company should implement a formal mechanism to track small business customers that experience financial difficulties. PNG should also provide the OSBA's contact information and a description of the services the OSBA offers on the Company's website.
- The Commission should carefully consider ratepayers' interest, affordability concerns, and the risk reduction benefits of a low-risk regulatory environment in evaluating the Company's cost of capital claim in this proceeding.
- The Commission should adopt my alternative revenue allocation proposal shown in Table IEc-3.
- The Commission should reject the Company's proposed WNA modification unless the Company: a) conducts a full bill impact study evaluating the proposed change, and b) increases the WNA deadband from three percent to five percent.

2. <u>Customer Assistance and Affordability</u>

Q. How does the Company address affordability concerns in its filing?

A. Peoples operates several universal service programs available to residential customers, each described in its Universal Service and Energy Conservation Plan ("USECP") and sponsored primarily through Peoples Statement No. 10: the Customer Assistance Program ("CAP"), the Low Income Usage Reduction Program ("LIURP"), the hardship fund

(administered by Dollar Energy Fund), and CARES, plus the Emergency Furnace/Service Line Repair program.

Q. Does the Company address affordability concerns for small businesses in its filing?

A. Other than general statements about designing rates that are affordable for each customer class, no.

Q. Does the Company offer financial assistance to commercial customers?

A. The Company states it strives to work with all customers, including Small General Service ("SGS") customers who experience financial difficulties, and that it evaluates both historical records (i.e., amount past due) and good faith attempted payments along with current customer information to determine eligibility for a payment plan.[1] However, PNG does not have a formal plan in place for working with SGS customers experiencing financial difficulties.[2]

Q. What are your recommendations with respect to customer assistance programs?

A. I recommend that the Company add a formal late payment plan to the SGS and MGS tariffs. In addition, the Company should continue to track interactions in which small business customers report financial difficulties (e.g., trouble paying heating bills on time), including both participation in the new formal payment plan and more informal complaints or inquiries. I also recommend that PNG provide the OSBA's contact information and a description of the services the OSBA offers on the Company's website.

The need for such programs made available to the SGS class is evident based on the Company's response to OSBA-II-009. Between January 2023 and June 2026, the monthly number of SGS bills that were 1-60 days late increased from 3,497 to 5,896 – a 69 percent increase. Over the same period, the monthly number of bills more than 60 days late grew from 661 to 971, an increase of 47 percent.

Q. How does the Company's requested ROE impact its proposed revenue requirement?

---

[1] OSBA-II-008.

[2] OSBA-II-007.

A. The importance of approving an ROE that balances the interests of shareholders and ratepayers cannot be overstated. For example, holding all other inputs in the revenue requirements model constant, if the Company assumes an ROE of 9.0 percent instead of the requested ROE of 11.25 percent, the revenue requirement would decrease by $90.8 million.[3]

Q. Do you have concerns about the Company's requested ROE?

A. Yes. My primary concern is that the Company does not adequately consider customers' interests in its ROE determination. Two United States Supreme Court cases, *Bluefield*[4] and *Hope*[5], established the standards for determining fair rates of return for utilities. Longstanding precedent holds that a utility's awarded return should be commensurate with those on investments of corresponding risk and sufficient to attract capital and maintain financial integrity. However, determining the cost of capital and rate of return cannot be considered in isolation of the full ratemaking process. Setting rates that are just, reasonable, and affordable is an important goal for the Commission.

As I discuss in detail below, PNG's WNA, as a form of revenue decoupling, insulates the Company from revenue uncertainty associated with weather and the regulatory environment. More broadly, while a WNA mechanism reduces utility risk and therefore should reduce the utility cost of capital, it is difficult to identify any reduction in allowed utility rates of return associated with adoption of WNA mechanisms in Pennsylvania. Natural gas distribution companies ("NGDCs") in Pennsylvania also file revenue requirements based on future test years that allow for prospective investments and adjustments. Accordingly, the risk of regulatory lag impacting the Company's ability to recover costs is low.

Based on the above factors, the Commission should carefully consider ratepayers' interest, affordability concerns, and the risk reduction benefits of a low-risk regulatory environment in evaluating the Company's cost of capital claim in this proceeding.

---

[3] My calculations based on Exhibit No. 2, Schedule No. 4 - 53.53 III.A.17 provided in response to OCA-I-001.

[4] *Bluefield Waterworks and Improvement Company v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

[5] *Federal Power Commission v. Hope Natural Gas Company*, 320 U.S. 591 (1944).

3. Cost Allocation

Q. What is a utility cost allocation study?

A. A utility cost allocation study, in this case the Company's gas allocated class cost of service study ("ACOSS"), is an analytical tool that assigns the utility's test year total costs (i.e., the "revenue requirement") among the various utility rate classes. Pennsylvania electric and gas utilities generally use an "embedded cost" approach to cost allocation, in which accounting book costs are directly assigned among the rate classes, rather than a marginal cost approach. It is generally agreed that costs should, to the extent practicable, be assigned among rate classes based on "cost causation," such that costs caused by a particular class of customers are assigned to that class. A cost allocation study generally involves a three-step process, in which costs are (a) segregated by function ("functionalization"): (b) further segregated by cost causation factor, notably throughput, peak demand, "excess" demand, and customer count ("classification"); and (c) allocated among the rate classes based on each class's contribution to the cost causation factor ("allocation").

Q. What purpose does the ACOSS serve in a utility rate proceeding?

A. The ACOSS informs both the assignment of the rate increase among customer classes ("revenue allocation") and the design of rates to recover the revenues assigned to each rate class. Revenue allocation is often used to move rate revenue more into line with allocated costs from the ACOSS. For rate design, classified costs, such as customer-related and demand-related costs, are used to inform the development of specific rate charges, such as monthly customer and demand charges.

Q. Please describe the Company's rate classes used in the ACOSS.

A. The Company's ACOSS includes the following rate classes:

- Rate(s) RS, CAP, E-CAP – Residential
- Rate SGS – Small General
- Rate MGS – Medium General
- Rate LGS – Large General
- Rate MLS – Mainline Service

Q. Turning to the issues of cost allocation methodology, what are the most important cost allocation issues for a NGDC like PNG?

A. An ACOSS allocates rate base and associated capital costs, distribution expense, customer accounts/service expense, expense, administrative/general ("A&G") expense, and taxes. Often, costs are allocated on a derivative basis, based on costs already allocated. For example, depreciation, income taxes, and return are often allocated in the same manner as, or in proportion to, rate base. General plant and A&G costs are typically allocated based on some combination of overall plant allocations or O&M expense or labor allocations. Thus, the overall results of an ACOSS are substantially driven by the allocation of a few large asset accounts. These "big ticket" issues for cost allocation are generally:

- Classification of mains costs, potentially into peak demand, throughput and/or customer components.
- Definition and derivation of the peak-demand allocation factor, including the treatment of interruptible load in the allocator.
- Allocation of meters and services costs.

Q. Please describe the basic issues involved in gas utility mains cost causation.

A. Gas distribution mains are installed to meet two basic objectives: (a) to interconnect the customer with the interstate pipeline system (or other gas supply sources); and (b) to be able to transport sufficient gas to meet the demand of customers downstream under extreme peak conditions.

However, it is not easy to develop an analytical model capable of reflecting these cost causation factors. Ideally, the cost of any particular segment of mains would only be allocated to those specific customers who are served downstream from that segment. In practice, undertaking such an analysis can be detailed, costly, and time consuming.

Q. What are the more traditional approaches to mains cost classification?

A. Various analytical models are used in place of the traditional detailed modeling approaches. These methods attempt to address the following questions:

- What causation factors best correlate with mains costs?
- Are mains costs causally related to the number of customers? And, if so, how should the "customer component" of mains costs be derived?

- How should mains costs that are not causally related to number of customers be allocated among the various rate classes?

Regarding the first question, the traditional cost allocation parameters include throughput, peak demand, excess peak over average demand, and number of customers. As a matter of arithmetic, a throughput allocation factor is equivalent to an "energy" allocator, a "commodity" allocator, a "volumetric" allocator, and an "average demand" allocator.[6]

Regarding the second question, one argument is that more footage of mains must be installed to interconnect many small customers than to connect one larger customer with the same aggregate load. This approach is particularly appealing for small to medium business customers who are often more geographically concentrated in commercial areas, thereby requiring less mains footage.

Commission precedent indicates that the Commission has rejected the use of a customer component for gas distribution utilities in Pennsylvania, in the most recent cases of which I am aware.

Q. If there are no customer component mains costs per Commission precedent, what methods are used generally for allocating these costs?

A. The traditional allocation methods include three general approaches: a peak demand method ("Peak Demand"); a peak-and-average ("P&A") method; and an average-and-excess ("A&E") method. In the Peak Demand method, costs are allocated in proportion to each class's share of system "design day" peak demand, which represents the capacity needed to serve the class under extreme weather conditions. The logic for this approach is that the mains must be sized to meet peak day demand.

In the P&A method, costs are allocated based on a weighted mix of design day peak demand and average day demand. The two component are typically weighted 50/50.

The A&E allocation factor is a weighted average of average demand (i.e., throughput) and "excess" demand. Excess demand is measured as the difference between peak demand and

[6] Average demand is generally measured as annual throughput divided by 365 days. As such, it is arithmetically equivalent to annual throughput when used as an allocation factor. The ratio of average demand to peak day demand is generally referred to as load factor. High load factor customers typically use gas for manufacturing process applications; low load factor customers often rely on gas primarily for heating purposes.

average demand. Because this allocation factor consists of an average demand component and a "peak minus average" demand component, it is typically closer in magnitude to a Peak Demand allocator than to a P&A allocator. However, this observation depends on the weighting factor used to derive the A&E factor. Under specific conditions, namely when the weighting factor is based on the system load factor and there is no diversity of demand across classes, the P&A allocator is arithmetically identical to the A&E factor.

Q. Please review Commission precedent with respect to mains cost allocation methods.

A. In the Columbia Gas proceeding at Docket No. R-2022-3031211, the Commission reaffirmed that the terms and conditions of settlements are not relied upon as precedential and that cost of service studies should be evaluated on a case-by-case basis:

> We note that even in cases in which the revenue allocation methodology is litigated, a determination regarding which ACCOSS should be used should be determined on a case-by-case basis. We have observed that "the inherent distinctions between utilities and rate cases may result in different methodologies to be reasonable for different reasons. In other words, the best-suited ACCOSS may depend on the circumstances of the situation on a case-by-case basis."[7]

In PECO Gas's 2020 base rates proceeding, the Commission approved the Company's proposed A&E allocation method, that produced allocation factors substantially similar to a peak demand allocator.[8]

Q. What approach does PNG use in this proceeding?

A. The Company classifies mains using an "Average Study" that equally weights two methods: a Customer-Demand study and a Demand-Commodity study. The Customer-Demand study classifies mains between customer and demand components using a Minimum Size System ("MSS") study, while the Demand-Commodity study splits costs

[7] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2022-3031211 et al., Order Entered December 8, 2022, at 107.

[8] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2020-3018929 et al., Order Entered June 17, 2021, at 228-231.

evenly between demand and commodity. Averaging the two studies results in a customer-related mains component of 24 percent, a demand-related component of 51 percent, and a commodity-related component of 25 percent.[9] The demand-related portion is in turn allocated using a Peak-and-Average factor ("P&A") weighting design-day peak demand and average demand 50/50.[10]

Q. Please summarize the ACOSS results.

A. **Table IEc-1** below reports revenue-cost ratios at the Company's current and proposed rates for those rate classes subject to cost-based rates. At current rates, every class but the Large General class is under-recovering costs based on the ACOSS results. At proposed rates, the Residential, Small General, and Medium General move towards parity, while the Large General and Mainline Service do not receive rate increases.[11]

Table IEc-1
Summary of PNG Gas ACOSS: Revenue-Cost Parity Ratios

	Current Rates	Proposed Rates
Residential	1.00	0.99
Small General	0.90	0.94
Medium General	0.94	0.99
Large General	1.57	1.38
Mainline Service	0.82	0.74
Total	**1.00**	**1.00**

4. Revenue Allocation

Q. What is revenue allocation?

A. Revenue allocation is the assignment of the dollar net increase or decrease to each of the Company's rate classes in a base rates proceeding. In contrast, *rate design* determines how

[9] PNG Statement No. 17, at 25.

[10] PNG Statement No. 11, at 7.

[11] The revenue-cost ratio for the Mainline Service class decreases at proposed rates because this class largely comprises negotiated contract customers.

the allocated revenue is recovered from individual ratepayers within each class. From a cost recovery standpoint, revenue allocation addresses *inter-class* cross-subsidization issues, while rate design addresses *intra-class* cross-subsidization issues.

Q. What are the primary economic and regulatory criteria for revenue allocation?

A. In general, allocated cost is the primary criterion used by regulators in the revenue allocation process. Most utilities and regulators adopt a policy in a base rate proceeding of attempting to move revenues more into line with allocated costs by varying the magnitude of the rate increases for the individual classes. However, regulators also subject the rate increases to other non-cost criteria of ratemaking. Of the traditional rate design criteria, the most common non-cost considerations in the revenue allocation process are:

- the *gradualism* principle (or avoidance of "rate shock"), in which large rate increases for individual customers or classes of customers are avoided; and
- the *value of service* principle, which is often used to mitigate rate increases for customers or customer classes with relatively elastic demand. [12]

Using these criteria, the utility will develop a proposal for assigning the increase in the revenue requirement among the classes that reflects both cost and non-cost considerations. With this proposal, the ACOSS can be simulated at both present and proposed rates to evaluate the magnitude of progress that has been made toward the policy of achieving cost-based rates.

Q. Please summarize the Company's proposed revenue allocation in this proceeding.

A. The Company describes its approach in Statement No. 17. The Company generally indicates a desire to move rates into line with allocated costs subject to rate gradualism constraints. In effect, this means limiting the rate increase for the Small General class to 1.5 times the system average increase. The Company evaluates its revenue allocation proposal using a revenue-to-cost ratio benchmark, where a ratio of 1.0 indicates that revenues are fully in line with allocated costs. PNG also states that its proposal reduces

[12] See, for example, Principles of Public Utility Rates, Second Edition, Bonbright, Danielsen, Kamerschen, 1988, pages 383–387. The criteria in this text apply to the overall development of a utility rate structure. The criteria that I discuss in this testimony are those that apply to the revenue allocation portion of the process, which is only one aspect of the overall development of utility rates.

subsidies between rate classes. **Table IEc-2** below summarizes the Company's revenue allocation proposal.

Table IEc-2
Summary of PNG Gas Proposed Revenue Allocation

	Increase $000	Increase %	R/C Current	R/C Proposed	Increase/System Avg. Increase
Residential	$118,163	13.5%	1.00	0.99	0.99
Small General	$21,443	18.5%	0.90	0.94	1.36
Medium General	$21,264	19.7%	0.94	0.99	1.45
Large General	$0	0%	1.57	1.38	0.00
Mainline Service	$0	0%	0.82	0.74	0.00
Total	**$160,871**	**13.58%**	**1.00**	**1.00**	**1.00**

Source: IEc WP1

Q. Do you agree with the Company's revenue allocation proposal?

A. The Company's revenue allocation is directionally consistent with the results of the ACOSS. However, in the interest of rate gradualism for the SGS and MGS classes, I propose capping the maximum rate increase at 1.25 times the system average. To achieve this, I recommend a small increase for the LGS class, rather than no increase as PNG proposes.

Q. What is your alternative revenue allocation proposal?

A. **Table IEc-3** summarizes my alternative revenue allocation proposal, as described above.

Table IEc-3 **Summary of IEc Alternative Revenue Allocation**					
	Increase $000	Increase %	R/C Current	R/C Proposed	Increase/System Avg. Increase
Residential	$118,163	13.5%	1.00	0.99	0.99
Small General	$19,699	17.0%	0.90	0.93	1.25
Medium General	$18,361	17.0%	0.94	0.97	1.25
Large General	$4,647	6.5%	1.57	1.42	0.47
Mainline Service	$0	0.0%	0.82	0.74	0.00
Total	**$160,871**	**13.6%**	**1.00**	**1.00**	**1.00**

5. <u>Weather Normalization Adjustment</u>

Q. What is the Company's proposal regarding WNA in this proceeding?

A. The Company's WNA was approved as a permanent mechanism in the last base rate case proceeding in Docket No. R-2023-3044549. The existing WNA has the following features: it applies to the Residential and Small/Medium General Service classes; operates during the October through May heating season; includes a three percent deadband; is calculated on a bills-rendered basis; is presented as a separate line item on customer bills; includes a limiter for bills rendered in May such that the WNA adjustment will not exceed 100 percent of the billed distribution amount for that same billing period; and requires annual reporting of billed WNA revenues, actual and normal HDD, and bill impact information.

In this case, the Company proposes a single change, which is to update the Normal Heating Degree Day ("NHDD") benchmark that anchors the WNA. Currently, the WNA has a blended methodology that was approved in the last case, averaging results from a 65-year regression and a 20-year average HDD normalization. PNG proposes to rely solely upon the 65-year regression methodology. The Company states it is making no other structural

changes to the WNA, and claims this change is necessary to ensure methodological consistency between the weather normalization assumptions used to establish base-rate billing determinants and those used in the WNA.[13]

Q. What is a WNA mechanism?

A. The Company's WNA mechanism is a form of a rate "decoupling," that utilities use to "weaken" or "break" the link between revenues and customer gas consumption. Decoupling mechanisms allow utilities to adjust rates and/or implement charges and credits to customer bills to ensure the utility receives a pre-established, benchmark level of revenue. A WNA reconciles revenues between those approved in the base rates case and those actually earned based on variances in the weather. If the weather is warmer than normal, the NGDC is permitted to earn supplemental revenues to make up the shortfall; if weather is colder than normal, the NGDC credits the ratepayer with a lower bill for base rates.[14]

Q. What is the apparent allure of a WNA and other decoupling mechanisms and what are the drawbacks?

A. The WNA mechanism as used in Pennsylvania is a partial rate decoupling mechanism, which has at least three advantages over broader rate decoupling mechanisms. First, the WNA provides mutual risk reduction benefits to both NGDC and ratepayer, in the form of revenue/bill stability. The NGDC gets more stable revenues; the ratepayer gets a more stable bill. In theory, the more stable NGDC revenues should reduce its risk, and thus its allowed rate of return. In extremely cold conditions, the ratepayer gets a lower base rates bill under the WNA than it would without a WNA. In contrast, revenue decoupling mechanisms for non-weather variances generally involve an increase in risk for ratepayers and reduced risk for the NGDC. Consider economic fluctuations. In an unexpected economic downturn, a broad rate decoupling mechanism will impose higher charges on ratepayers to make up for the overall downturn in load, at the same time that the ratepayers are suffering the effects of the economic downturn. The NGDC, by contrast, is insulated

[13] Peoples Statement No. 17, at 40.

[14] Gas supply charges are not subject to the WNA. Thus, weather fluctuations will continue to cause bill fluctuations with respect to gas supply.

from the effects of the economic downturn. Thus, as rate decoupling mechanisms go, the WNA is more balanced than broader mechanisms.

The second advantage is that the WNA mechanism can be adopted in "real time". WNAs can be calculated within the billing period in which the variance between actual and normal weather occurs. This avoids the intergeneration inequity problems of broader rate decoupling mechanisms.

The third advantage is that the WNA mechanism can be customer-specific. Weather normalization adjustment mechanisms can be designed to specifically reflect the weather-related usage of the individual customer. As such, it is a fairer mechanism than broader rate decoupling mechanisms, which have little or no linkage between the cause of the revenue variance and the recovery mechanism.

Q. Are there general concerns about the working of WNA mechanisms?

A. Yes, there are several.

First, use of a WNA mechanism means that a customer is being billed for a level of gas consumption that is not metered, but is only estimated. As such, it is often difficult to explain to customers why their rates appear to fluctuate up and down each month, or why there is a mysterious "WNA" charge/credit on their bills that is not related to any specific metered consumption amount.

Second, the WNA mechanism weakens price signals for energy conservation during extreme periods. Under the WNA, a ratepayer has a lower per-mcf incentive to reduce usage during unusually cold periods than it does under traditional volumetric rates. As gas distribution systems are designed, at least in part, to meet extreme weather demands, the traditional rate approach is more consistent with cost causation and with how costs are allocated in the allocated cost of service study.

Third, problems can be exacerbated in periods where actual HDDs are low, such as a warm spell in the spring. Unless protections are in place, an unadjusted WNA might produce very large multipliers, if, say, the normal HDDs are 300 and the actual HDDs are 30. For

customers who happen to have an unusual load in that period, the WNA would charge that load at a factor of 10:1.[15]

Q. Please summarize how the Company's existing WNA works.

A. A WNA is a form of partial revenue decoupling that breaks the link between a utility's distribution revenue and customers' actual weather-driven gas consumption. PNG's WNA applies to the Residential and Small/Medium General Service classes. The Company adjusts the amount billed to each customer to reflect "normal" weather, regardless of actual conditions. In technical terms, the Company compares actual heating degree day ("AHDD") variations from NHDD, adjusted for a three percent deadband. No adjustment applies to customer bills if weather falls within the three percent deadband, and the WNA mechanism only applies for variation of actual weather from normal weather outside of the deadband.

Q. Have you reviewed the Company's evidence regarding the historical performance of its WNA mechanism?

A. Yes. In response to OSBA-II-015(B) and (C), the Company provided monthly WNA results for the SGS and MGS classes for two heating seasons: 2024-2025 and the partial 2025-2026 season (through March 2026). The Company offers these data to supports its position that the WNA is operating symmetrically to protect customers when the weather is colder than normal.[16]

Q. Is two seasons of data a sufficient basis on which to evaluate whether the WNA is performing as intended?

A. No. The Company's WNA mechanism began in the last rate case (2023), so customer bills have only been affected since October 2024.[17] Thus, only two heating seasons of actual data exist, one of which is incomplete. WNAs are designed to be symmetric around a normal-weather baseline. The 2024-2025 season was warmer than normal and produced net surcharges to commercial customers of approximately $2.9 million; the

[15] The PGW mechanism did, in fact, produce such anomalous results in the spring of 2022.

[16] Peoples Statement No. 17, at 38.

[17] OSBA-II-015.

partial 2025-2026 season has been colder than normal and has produced net credits of approximately $3.0 million to date. The two seasons happen to produce a near-zero cumulative net figure, but without more data it is impossible to determine whether this reflects coincidence or a WNA mechanism performing as intended. In either case, this operating history is too short to support any conclusion about the mechanism's future effectiveness.

Q. Does the Company assess the bill impacts of its proposal to remove the 20-year average from the HDD calculation?

A. No. In supporting the WNA proposal in docket R-2023-3044549, Company Witness Scanlon stated that the Company believed the 65-year regression "provides a reasonable basis for weather normalization. However, Peoples is proposing to use the average of the 65-year regression model result with the average of the 20-year average *due to the concept of gradualism*."[18] It is unclear why methodological consistency between the base-rate billing determinants and the WNA normalization period should take precedence over protecting consumers from bill volatility. When asked in this proceeding to produce the Company's bill impacts evaluations resulting from the proposed change to rely exclusively on the 65-year regression methodology, the Company stated they had not performed such an analysis.[19]

Q. What do you recommend regarding the Company's WNA?

A. First, the Company should be directed to perform a bill-impact study showing the results of the proposed change to rely on a 65-year regression methodology to update the WNA normalization period, compared to the currently approved WNA methodology. The Company should report the same customer-impact metrics included in OSBA-II-015 Attachment B 2024-2025 and OSBA-II-015 Attachment B 2025-2026, and the analysis should cover (a) a retrospective ten-year historical period, assuming the WNA mechanism had been in effect, and (b) a prospective ten-year analysis based on usage projections.

[18] R-2023-3044549, Peoples Statement No. 3, at 5. [emphasis added]

[19] OSBA-II-015.

Second, to mitigate bill volatility for consumers, I recommend increasing the WNA deadband from three percent to five percent.

Q. Does this conclude your direct testimony?

A. Yes, it does.

EXHIBIT IEc-1

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

MARK D. EWEN

IEc

MARK D. EWEN — PRESIDENT

Overview

Mr. Ewen has a strong background in applied economics, empirical methodologies, and financial analysis. As a Principal at Industrial Economics, Incorporated (IEc), he focuses on expert case management and economic damages estimation in a variety of litigation contexts, regulatory and environmental economics, and financial analysis. Within his areas of expertise, Mr. Ewen has been qualified as an expert witness before judicial and regulatory bodies (see schedule of testimony and appearances). He has also served as a Managing Director of the firm.

Education

Master of Public Policy, University of Michigan

B.A., *summa cum laude*, Economics and Political Science, University of North Dakota

Select Project Experience

Examples of his project work include the following:

Mr. Ewen has participated in various proceedings concerning energy markets and regulated utilities. These efforts, which focus on issues related to cost allocation, revenue allocation, and rate design, include working on behalf of industry and consumer intervenor groups in rate-making cases before the public utility commissions in New York, Pennsylvania, Alberta, Canada, and the U.S. Postal Rate Commission. For example, for **New York Department of State's Utility Intervention Unit (UIU)** and the **Pennsylvania Office of Small Business Advocate (OSBA)**, he has and continues to provide consulting and analytic support relating to electricity and natural gas tariff design, revenue requirements, and other regulatory initiatives concerning electrical and natural gas distribution utilities. For the **Rhode Island Attorney General**, Mr. Ewen conducted a due diligence review of PPL's proposed acquisition of Narragansett Electric Company and its potential impacts on the state's ratepayers.

For the **New York State Energy Research and Development Authority (NYSERDA) and Department of Public Service (DPS)**, Mr. Ewen provided expert services assessing the economic impacts to municipal governments of extended electricity outages related to Tropical Storm Isaias. As part of this work, he constructed a model to estimate various costs of incremental staffing requirements for over 500 localities, including excess overtime, surge time (i.e., bringing on extra staff for outage response coordination and logistics), and idle time (e.g., crews waiting extended periods for downed lines to be de-energized). The review also included consideration of other direct costs, including, among others: effects to water systems; delivery of bottled water; operation of generators; and other constraints on the provision of essential governmental services. The litigation was settled to the satisfaction of the involved parties.

For the **NYSERDA and New York DPS**, Mr. Ewen directed the development of a Generic Environmental Impact Statement (GEIS), pursuant to the requirement of the State Environmental Quality

Review Act (SEQRA) that assessed the environmental and economic impacts of the "Reforming the Energy Vision" and "Clean Energy Fund" initiatives within the state. He also directed the preparation of a Supplemental EIS to assess the environmental and economic impacts of the newly proposed Clean Energy Standard (CES). The CES is being developed to support the state's goal of supplying 50 percent of electricity demand with renewable generation resources by the year 2030. More recently, he directed the development of a model to assess the financial viability of various waste-to-energy technologies, and related social welfare benefits. This model uses detailed capital budgeting scenarios for specific facilities to generate forecast scenarios.

For the **U.S. Department of the Interior, Bureau of Ocean Energy Management (BOEM)**, directing an assessment of the Bureau's approach to calculating and presenting the operating fee included in offshore wind leases under BOEM's jurisdiction. As part of this engagement, IEc provided a number of recommendations for simplifying the implementation of the operating fee formula and identified available data sources and approaches to estimating individual components of the fee formula. The review also addressed the structure and levels of fees associated with operations of renewable wind energy projects in the U.S. and worldwide. More recently, IEc has been supporting the development of Standard Operating Procedures for the fee calculation and lease management process. The overall goal is to provide information resources and a methodological approach that will allow lessees to derive accurate data for fee equation variables efficiently and consistently, and for BOEM to present the fee calculation clearly in the lease.

For **NYSERDA**, conducting a market analysis examining the potential economic development opportunities that could accrue in New York from hydrogen playing a role in achieving components of its Climate Leadership and Community Protection Act.

For the **U.S. Department of the Interior, Bureau of Ocean Energy Management**, managed the development of a model to assess the economic and fiscal impacts of offshore oil and gas activity in the Gulf of Mexico and other BOEM OCS regions. This model, the Lifecycle Impacts Model (LCIM), assesses the economic and fiscal impacts associated with a specific lease or group of leases, over the time horizon of the lease(s). IEc's framework for the model was to build a capital budgeting forecasting tool for lease development, yielding estimates of industry expenditures, OCS revenues, industry profits, and employment impacts for a single lease or a set of leases. A key component of model development was to dynamically simulate the complex and unique timing parameters of lease development, incorporating the influence of critical exogenous factors like market prices and lease geology.

For the **U.S. Coast Guard, National Pollution Funds Center**, Mr. Ewen provides ongoing support to the NPFC in adjudicating damages claims resulting from oil spills. These claims include damages for business interruption, lost profits, property damage or value diminution, increased costs, and lost wages or employment, among other categories. Cases have also included damages for contract delays to construction projects and shipping demurrage. Industry sectors that Mr. Ewen has evaluated include: *electricity generation (nuclear and coal); railroads; cruise ships; oil ship transport; lodging and tourism; food and beverage; gambling; fisheries; marinas; real estate development, oil and gas development; and oil refining.*

Mr. Ewen's analytic work includes expert financial analysis and economic damages estimation in the context of general litigation and environmental enforcement actions. These efforts include assessing damages in breach of contract, nuisance, and cost recovery actions, and assessing the financial capabilities and economic benefit of noncompliance of firms accused of environmental violations. Clients

in this area of his practice include the **U.S. Department of Justice, U.S. Coast Guard, U.S. Environmental Protection Agency, States**, and private parties.

Testimony and Appearances

Mr. Ewen has provided testimony or appeared in the following cases and regulatory proceedings.

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for UGI Utilities Corporation – Gas Division (Docket No. R-2025-3059523, April 2026).

On behalf of the Attorney General of the State of Rhode Island, submitted testimony before the Rhode Island Public Utilities Commission concerning revenue allocation and rate design in the matter of The Narragansett Electric Co. d/b/a Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates (Docket No. 25-45-GE, April 2026).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting remand testimony before the Pennsylvania Public Utility Commission, concerning cost allocation and revenue allocation in the base rates case for Philadelphia Gas Works (Docket No. R-2023-3037933, April 2026).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for PPL Electric Corporation (Docket No. R-2025-3057164, December 2025).

On behalf of the New Hampshire Office of Consumer Advocate (OCA), submitting testimony before the New Hampshire Public Utilities Commission concerning cost of service, revenue allocation, and rate design in the matter of Until Energy Systems, Inc. Request for Change in rates (Docket DE 25-025, December 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitting testimony before the Public Service Commission concerning cost of service, revenue allocation, and rate design in electric and gas base rates cases of New York State Electric & Gas Corporation and Rochester Gas and Electric Corporation (Docket Nos. 25-E-0375, 25-G-0380, 25-E-0379 and 25-G-0378, October 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitting testimony before the Public Service Commission, concerning revenue allocation and rate design in electric and gas base rates case of Consolidated Edison, Inc. (Docket Nos. 25-E-0072 & 25-G-0073, May 2025).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning the distribution system improvement charge (DSIC) case for PPL Electric Utilities Corporation (Docket No. R-2024-3048732, July 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for First Energy of PA (Docket No. R-2024-30447068, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for PECO Gas (Docket No. R-2024-3046932, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for Columbia Gas of Pennsylvania (Docket No. R-2024-3046519, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning the Default Service Plan for PPL Electric (Docket No. P-2024-3047290, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning the Default Service Plan for PECO Energy Company (Docket No. P-2024-3046008, April/May 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning recovery of purchased gas costs and revenue sharing for National Fuel Gas Distribution Corporation (Docket No R-2024-3045177, March 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning electricity price hedging under the default service plan for Pike County Light and Power (Docket No. P-2023-3039927; direct testimony June 2023; surrebuttal testimony August 2023).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning base tariff rate development for Columbia Gas of Pennsylvania, including issues of cost allocation, revenue allocation, and rate design. (Docket No. R-2022-3031211, June/July 2022).

On behalf of Attorney General of the State of Rhode Island, submitted testimony before the Rhode Island Division of Public Utilities and Carriers concerning due diligence and related reviews of PPL Corporation's proposed acquisition of Narragansett Electric Company from National Grid USA (Docket No. D-21-09, November 2021).

Expert report and deposition testimony concerning economic damages and related financial matters, *Seaplane Adventures, LLC, vs. County of Marin, California*; expert report filed September 2021, deposition testimony given September 2021.

Expert reports and deposition testimony on bankruptcy reorganization plan feasibility and related financial matters, *in re: First Energy Solutions Corp., et al., Debtors, Case No. 18-50757*; expert reports filed July 2019, deposition testimony given August 9, 2019.

Expert declaration concerning economic damages and related financial matters, *in re: Outer Banks Power Outage Litigation, all actions, No. 4:17-CV-141-D*, March 2018.

Expert report and deposition testimony on Economic Damages in *State of Alaska v. Williams Alaska Petroleum, Inc., et al., Case No. 4FA-14-01544 CI*; expert report filed December 2016, deposition testimony given February 15, 2017.

Expert reports and deposition testimony on Economic Benefit in *Sierra Club v. Energy Future Holdings Corp. et al., Case No. 5:10-cv-156 (E.D. Tex.)* and *Sierra Club v. Energy Future Holdings Corp. et al., Case No. 6:12-cv-108 (W.D. Tex.)*; expert reports filed in June and July 2013, deposition testimony given August 2013. Trial testimony given in Case No. *6:12-cv-108 (W.D. Tex.) in March 2014*.

Expert testimony on ability-to-pay provided, in the matter of Mercury Vapor Processing Technologies, Inc., et al. (No. RCRA-05-2010-0015), July 2011.

Expert Declaration in a patent case concerning economic and financial matters in the context of environmental credits valuation – In re Patent Application of: Jeff Andrilenas et al., Application No.: 12/328,219, For: VALUING ENVIRONMENTAL CREDITS, submitted June 2011.

Export report and deposition testimony on financial matters in *Evansville Greenway and Remediation Trust v. Southern Indiana Gas and Electric Company, Inc., et al.* (03:07-cv-0066-SEB-WGH); expert report filed July 2009, deposition testimony given January 2010.

Expert testimony on ability-to-pay provided, in the matter of Robert J. Heser, Andrew J. Heser, and Heser Farms (No. CWA-05-2006-0002), May 2007.

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning tariff design issues for Columbia Gas of Pennsylvania (Docket No. R-00049783, May 2005).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue assignment, and rate design for Pennsylvania Power and Light (Docket No. R-00049255, August 2004).

Expert report on economic damages in *United States v. Southern California Edison No. CIV. F-01-5167 OWW DLB (E.D. Cal).*, July 2004; deposition testimony provided September 2004.

Expert testimony on ability-to-pay provided in *United States v. Peter Thorson, Managed Investments, Inc., Construction Management, Inc., and Gerke Excavating, Inc.* (No. 03-C-0074), May 2004.

Expert testimony on ability-to-pay provided in *United States v. Paul A. Heinrich and Charles Vogel Enterprises, Inc.* (No. 03-C-0075-S), October 2003.

Expert testimony on ability-to-pay provided in the matter of Dearborn Refining Company (No. RCRA-05-2001-0019), February 2003.

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning recovery of purchased gas costs and revenue sharing for PFG Gas and Northern Penn Gas (Docket No. R-00027389, July 2002).

Expert report and testimony on economic damages in *Carol Marmo et al. v. IBP, Inc.*; expert report filed March 2002, deposition testimony given June 2002, September 2004, and testimony at trial given February 2005.

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning recovery of purchased gas costs and revenue sharing for National Fuel Gas Distribution Corporation (Docket No. R-00016789, March 2002).

On behalf of the Office of the Consumer Advocate, providing testimony before the United States Postal Rate Commission regarding cost allocation of city carrier street time costs. Docket No. R2000-1, July 11, 2000.

Expert report and declaration on ability-to-pay in re Indspec Chemical Corporation and Associated Thermal Services, Inc., and related testimony in U.S. EPA administrative court on February 24, 1998 (No. CAA-III-086).

REBUTTAL TESTIMONY

of

MARK D. EWEN

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Revenue Allocation
Universal Service Cost Recovery

Date Served: July 16, 2026

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF MARK D. EWEN

1. Introduction and Context

Q. Mr. Ewen, please state your name and briefly describe your qualifications.

A. My name is Mark D. Ewen. I submitted direct testimony and associated exhibits on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA") earlier in these proceedings and my qualifications were presented therein.

Q. What is the purpose of this rebuttal testimony?

A. This rebuttal testimony responds to the following witnesses and topics:

- Office of Consumer Advocate ("OCA") Witness Michael Deupree and Bureau of Investigation and Enforcement ("I&E") Witness Ethan H. Cline regarding cost allocation and revenue allocation.

- CAUSE-PA Witness Patrick M. Cicero and OCA Witness Roger Colton regarding the recovery of universal service costs.

2. Cost Allocation and Revenue Allocation

Q. Please summarize OCA Witness Deupree's alternative allocated cost of service study ("ACOSS")?

A. Witness Deupree disagrees with the Company's use of a minimum system method ("MSS") to classify a portion of distribution mains as customer-related. Witness Deupree prepared an alternative ACOSS that classifies distribution mains as 100 percent demand-related and then allocates distribution mains costs to rate classes based on the peak-and-average ("P&A") method.

Q. How do the OCA's ACOSS results differ from the Company's ACOSS results?

A. **Table IEc-1R** compares the relative rate of return at current rates between the Company's ACOSS and OCA's ACOSS.

Table IEc-1R: Summary of PNG and OCA ACOSS Results Relative Rate of Returns at Current Rates		
	PNG	OCA
Residential	0.96	1.12
Small General	0.52	0.42
Medium General	0.88	0.51
Large General	3.01	1.93
Mainline Service	0.10	0.10
Total	**1.00**	**1.00**
Source: IEc WP-1R		

Q. What is I&E's position on the Company's ACOSS?

A. Witness Cline offers the same recommendations as the OCA, namely, to classify distribution mains without a customer component and to allocate distribution mains costs based on the P&A method. Witnesses Deupree and Cline both reference the Commission's decision in the 2025 Columbia Gas base rate case, which determined that mains costs should be allocated based on throughput capacity to meet peak demand and not the number of customers.[1]

Q. What is the OCA's proposed revenue allocation?

A. Using the results of its alternative ACOSS, OCA proposes to cap the maximum rate increase for any rate class at 1.15 times the system average increase and to set a minimum rate increase of 0.50 times the system average.

Q. What is your assessment of the OCA's revenue allocation?

A. In direct testimony, my alternative revenue allocation proposal capped the rate increase to the Small General Service ("SGS") class at 1.38 times the system average, as this class is under-earning relative to allocated costs. The OCA's alternative ACOSS also indicates that the SGS class is under-earning. However, Witness Deupree's proposal is geared

[1] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, pp. 254-5 (Order Entered December 4, 2025).

more toward rate gradualism than progress toward cost-based rates. Although both goals are important, I find OCA's proposal to be reasonable given the size of the proposed rate increases in this proceeding.

3. <u>Universal Service Cost Recovery</u>

Q. Please summarize Witness Cicero's and Witness Colton's positions regarding universal service cost recovery.

A. The Company's Universal Service Program ("USP") Rider recovers the costs of the Company's Universal Service and Conservation Programs that assist low-income residential customers. As is standard practice among utilities in Pennsylvania, Peoples Natural Gas Company ("PNG") assigns the recovery of universal service costs only to residential customers. Witness Cicero argues that universal service and low-income assistance programs benefit all of PNG's customer classes because they provide economic benefits to entire communities and not just customers that receive assistance.[2] Accordingly, Witness Cicero supports a broad allocation of universal service costs to all rate classes.

Similarly, Witness Colton recommends that all rate classes should contribute to the Company's residential Customer Assistance Program ("CAP")/universal service costs, which would benefit PNG's entire service territory. He also reasons that universal service costs are caused by factors endemic to society as a whole, as opposed to by factors specific to residential customers.[3]

Q. What is your position regarding the allocation of universal service costs?

A. By longstanding OSBA advocacy and Commission precedent, I maintain that small business customers should not contribute to universal service programs because these customers cannot take advantage of the residential-only programs. There is no causal relationship between PNG's universal service costs and small business customers. Witness Colton cites the Commission's Final Order in the I*nterconnection and Tariffs for*

[2] Direct Testimony of CAUSE-PA Witness Cicero, at 78-81.

[3] Direct Testimony of OCA Witness Colton, at 74-76.

Large Load Customers (Docket No. M-2025-3054271) to describe how the Commission maintains discretion to allocate universal service costs to non-residential customers. However, small businesses are not cost causers in any comparable sense to new large load customers interconnecting to the grid. The Commission recognized the unique nature of large load customers in the above-referenced docket and did not recommend that other non-residential customer classes be burdened with universal service contributions.

In addition, assigning costs for the universal service programs to all rate classes would impose a burden on all hearing participants, including the OSBA, who would have an obligation to ensure that these programs are properly designed, effective, and necessary. Because most utilities in Pennsylvania do not assign universal service costs to all rate classes, the OSBA generally does not expend the resources to retain the necessary specialized experts in these fields.

Q. What are the practical issues if the Commission were to require all of the Company's rate classes to contribute to universal service costs?

A. The form of cost recovery is of primary importance. Witness Cicero recommends that universal service costs "should be assigned to all rate classes based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case."[4] Witness Colton provides a similar recommendation to distribute total CAP costs based on each rate class's share of the distribution revenue requirement (excluding taxes) ordered in this proceeding. Witness Colton suggests that the universal service cost could be added on as an undesignated part of the customer charge. These proposals provide minimal insight as to how universal service costs would impact small business customers, including businesses facing financial difficulties that would then need to pay another fixed monthly charge. These proposals would unfairly burden small businesses with a new tax without a cost basis. Transparency is another concern. If the Commission decides to abandon long-standing precedent and impose a new tax on small

[4] Direct Testimony of CAUSE-PA Witness Cicero, at 81.

businesses, the new charge should be separately identified on the bills for non-residential customers, simply as a matter of honesty and openness about the policy change.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does

DIRECT TESTIMONY

of

JOSEPH KUBAS

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics:
Small General Service Customer Charge
Future Cost of Service Studies

Date Served: June 18, 2026

Date Submitted for the Record: _____

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Joseph Kubas. My business address is Forum Place, 555 Walnut Street, 1st floor, Harrisburg PA, 17101.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Office of Small Business Advocate ("OSBA") as an Economic Development Consultant.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the OSBA.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE AND QUALIFICATIONS.

A. My academic and professional background is described in the attached Appendix A.

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY BEFORE THIS COMMISSION?

A. Yes. As described in my Appendix A, I provided testimony in many proceedings before the Commission on many occasions.

Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY IN THIS PROCEEDING?

A. The purpose of my direct testimony is to address the proposed increase in the Small General Service (SGS) customer charge for customers that use between 0 and 499 Mcf per year. I will also recommend that negotiated customers be moved to their own class in all future Cost of Service Studies (COSSs).

Q. ARE YOU MAKING A RECOMMENDATION FOR TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. While my first issue impacts proposed revenue, I am not making an overall revenue recommendation. Mr. Mark Ewen will also address other issues in this case.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On March 27, 2026, the Peoples Natural Gas Company LLC (Peoples Natural Gas Division and Peoples Gas Division (Peoples or Company)) filed a natural gas base rate case based on a FPFTY ending December 31, 2027. The total increase is approximately $163,172,000 (Peoples Volume I, Exhibit 2, Schedule 4, page 2, line 1).

Q. DID THE COMPANY SEPARATE CUSTOMERS INTO CLASSES, AND WHAT INCREASE DID THE COMPANY PROPOSE FOR EACH CLASS?

A. Yes. According to Peoples Exhibit No. 11, page 14, line 13, and page 15, line 60, the Company proposed the following increases for each class:

Customer Classes	Current Revenues	Proposed Revenue Change	Proposed Percentage Change	Proposed Rate of Return	Proposed Revenue to Cost Ratio (Parity Ratio)
Residential	$875,171,173	$118,163,447	13.50%	8.1%	0.99
Small General	$116,045,549	$21,443,151	18.48%	6.6%	0.94
Medium General	$108,167,260	$21,264,419	19.66%	8.0%	0.99
Large General	$72,051,809	$ -	0.00%	15.5%	1.38
Mainline Service	$13,178,274	$ -	0.00%	1.0%	0.74
Total	**$1,184,614,065**	**$160,871,017**	**13.58%**		

SMALL GENERAL SERVICE CLASS

Q. WHAT CUSTOMERS ARE GENERALLY INCLUDED IN THE SMALL GENERAL SERVICE CLASS?

A. The SGS class is available to commercial and industrial customers and Natural Gas Distribution Companies consuming less than 1,000 Mcf of natural gas service annually throughout the territory served by the Company with the exception of commercial customers qualifying under Rate Natural Gas Powered Vehicles (Peoples Tariff Supplement No. 2 To Gas - PA PUC No. 48, First Revised Page No. 10). Based upon the Company's definition, this class would generally include Small Business customers that use less than 300 Mcf per year (Peoples Tariff Supplement No. 2 to Gas - PA PUC No. 48 First Revised Page No. 7).

Q. WHAT RATES DO SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR CURRENTLY PAY?

A. SGS customers that use between 0 and 499 Mcf per year currently pay a customer charge of $22.00 per month, a usage rate of $3.9844 per Mcf, plus various surcharges (Volume 9, Peoples Exhibit JDT-4, page 1).

Q. WHAT RATES ARE THE COMPANY PROPOSING FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company is proposing SGS customers that use between 0 and 499 Mcf per year pay a customer charge of $32.14 per month, a usage rate of $5.7095 per Mcf, plus various surcharges (Volume 9, Peoples Exhibit JDT-4, page 1).

Q. WHAT INCREASE AND PERCENTAGE INCREASE IN THE CUSTOMER CHARGE IS THE COMPANY PROPOSING FOR THESE SGS CUSTOMERS?

A. The Company is proposing the SGS customer charge for customers that use between 0 and 499 Mcf per year be increased to $32.14 per month which equates to an increase of $10.14 ($32.14 - $22.00) per month or 46.1%.

Q. WHAT SUPPORT DID THE COMPANY PROVIDE FOR PROPOSING A MONTHLY CUSTOMER CHARGE OF $32.14 PER MONTH FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company states that its COSS model allocates costs based upon demand, usage and customers. The Company believes that the Commission can see directly the revenue requirement associated with the customer classification and the respective functions that form this revenue requirement. Peoples Exhibit No. 11, Schedule 2 provides the customer-related unit cost per customer per month, for Rates RS, SGS, MGS, LGS, MLS and provides useful insights on the fixed monthly costs of providing service to these customers, inclusive of both customer-related costs and demand-related costs (Peoples Statement No. 17, page 35).

Q. DID THE COMPANY DETERMINE A TOTAL CUSTOMER COST FOR THE SGS CUSTOMERS?

A. Yes. The Company claims $43.06 per month in total customer cost to provide service to SGS customers (Volume 4, Peoples Exhibit No. 11, page 18).

Q. DID THE COMPANY PROVIDE ANY ACTUAL USEFUL INSIGHTS FOR THE COMMISSION TO VERIFY THE $43.06 COST PER MONTH?

A. No. The Company only provided two components. The first component is Distribution On-site at $33.15 per month and Accounts and Service at $9.92 per month for a total of approximately $43.06 per month per SGS customer (Volume 4, Peoples Exhibit No. 11, page 18).

Q. IS IT POSSIBLE TO DETERMINE WHAT IS INCLUDED IN "DISTRIBUTION ON-SITE" AND "ACCOUNTS AND SERVICE" LISTED ABOVE?

A. No. Therefore, it's not possible to determine what individual expenses and utility plant are included in these accounts that should be recovered in the monthly customer charge.

Q. WHAT DO YOU RECOMMEND CONCERNING THE PROPOSED $32.14 PER MONTH SGS CUSTOMER CHARGE?

A. I recommend that the present SGS customer charge of $22.00 per month for customers that use between 0 and 499 Mcf per year not be increased.

Q. WHY DO YOU RECOMMEND NO INCREASE IN THE PRESENT SGS CUSTOMER CHARGE OF $22.00 PER MONTH?

A. As described above, the Company failed to provide a detailed customer cost analysis to support any increase in the SGS customer charge for customers that use between 0 and 499 Mcf per year. Therefore, the monthly $22.00 per month SGS customer charge should not be increased

Q. DID THE COMPANY ALSO PROVIDE OTHER REASONS FOR INCREASING CUSTOMER CHARGES?

A. Yes. According to Peoples Statement No. 17, page 36, the Company believes:

> These proposed fixed monthly customer charges help to reduce customer bill volatility, alleviate a significant portion of the instability in the Company's margin recovery, are fair to customers, are easily understood, convey more appropriate price signals with respect to recovery of fixed utility costs, benefit low-income customers that have higher than average use, and are not regressive in application to low-income customers who may have little control over their use of energy and are negatively impacted when recovering more costs in volumetric charges.

Q. DO ANY OF THESE CLAIMS SUPPORT INCREASING THE SGS CUSTOMER CHARGE TO $32.14 PER MONTH FOR CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. No. First, any customer concern about bill volatility can be addressed through a customer selecting budget billing. Second, the Company's margin recovery is stabilized each year using its weather normalization adjustment. Third, it makes no sense to suggest that a higher customer charge is fair to customers because customers understand a customer charge more than they understand a usage rate. Fourth, there is no support for claiming that customers are concerned with the Company's recovery of fixed costs. Fifth, there is no support for the claim that a higher monthly charge sends the correct "price signal" to customers. Finally, the SGS customer charge for customers that use between 0 and 499 Mcf per year is not impacted by low-income customer issues.

Q. DID THE COMPANY PROVIDE ADDITIONAL REASONS FOR INCREASING CUSTOMER CHARGES?

A. Yes. According to Peoples Statement No. 17, page 36-37, the Company believes a higher customer charge provides a more equalized contribution within each class and provides greater recovery of fixed costs. The Company also cites the recovery of actual customer related costs such as meter reading and billing in its support for increasing the monthly charge. Finally, the Company believes that fixed system costs are better recovered in the customer charge

Q. DID THE COMPANY PROVIDE ACTUAL SUPPORT FOR ANY OF THESE ADDITIONAL CLAIMS TO SUPPORT INCREASING THE SGS CUSTOMER CHARGE TO $32.14 PER MONTH FOR CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. No. First, the Company suggestion that various SGS customers provide an unequal contribution to fixed costs is not supported. Since the Company failed to properly list what it believes are direct customer related fixed costs, there is no way to determine if the Company's claims concerning intra class subsidy or the need to collect more fixed costs are accurate. Second, while it's correct that the direct expenses such as billing, meter reading costs and recovery of direct customer assets such as meters and service are properly recovered in a customer charge, as described above, the Company failed to provide any details supporting these individual customer costs. Finally, while the Company would rather recover all fixed costs in a

monthly charge, the Commission has consistently rejected this recovery claim. The Commission has repeatedly used its judgement and a detailed customer cost analysis to establish customer charges.

Q. HOW DO HIGHER CUSTOMER CHARGES AND LOWER USAGE RATES IMPACT THE BILL OF A CUSTOMER THAT LOWERS USAGE THROUGH CONSERVATION?

A. A customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate structure with a higher customer charge and lower usage rate.

<u>FUTURE COST OF SERVICE STUDIES</u>

Q. WHAT CURRENT CLASSES ARE INCLUDED IN THE COMPANY'S COST OF SERVICE STUDY?

A. The Company's COSS includes the Residential (R), Small General Service (SGS), Medium General Service (MGS), Large General Service (LGS) and Mainline Service (MLS) classes (Peoples Volume IV, Exhibit 11, page 14).

Q. WHICH CLASSES INCLUDE CUSTOMERS THAT HAVE RATES THAT ARE NEGOTIATED, TYPICALLY REFERRED TO AS COMPETITIVE DISCOUNT CUSTOMERS?

A. The SGS, MGS, LGS, and MLS classes all include customers where the rates are negotiated (Volume 9, Peoples Exhibit JDT-4, pages 1-5).

Q. DOES INCLUDING NEGOTIATED RATE CUSTOMERS IN A CLASS IMPACT THE RESULTS OF THE COSS?

A. Yes. Granting negotiated rates to customers within a class results in a revenue shortfall for that class. Then under proposed rates other customers in that class pay higher rates to make up for the revenue shortfall in that class. Under this scenario, the true cost of providing service to tariff rate customers in these classes is higher than it otherwise would be.

Q. WHAT DO YOU RECOMMEND THE COMPANY DO IN FUTURE COST OF SERVICE STUDIES?

A. I recommend that in future COSSs, the Company separate the negotiated customers and corresponding revenue into a separate "Negotiated" class.

Q. WHY DO YOU RECOMMEND THE COMPANY SEPARATE THE NEGOTIATED CUSTOMERS AND CORRESPONDING REVENUE FROM NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A As described above, this will enable the Commission and interested parties to determine the true cost of providing tariff rate service to each of the remaining

classes without the lower revenue from customers that pay negotiated rates skewing the results of each class in the COSS.

Q. DO OTHER COMPANIES ALSO SEPARATE THE REVENUE AND COST OF SERVING NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A Yes. Columbia Gas Company of Pennsylvania separates Flex Rate customers into their own class (Docket No. R-2025-3053499, Columbia Exhibit 111, Schedule 1). Also, Pennsylvania America Water currently separates Bulk Contract customers into their own class in the Sanitary Sewer System Operations (Docket R-2025-3058051, PAWC Exhibit 12-B, Schedule B).

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A Yes.

APPENDIX A

Resume & Expert Testimony List

of

Joseph Kubas

JOSEPH KUBAS
OFFICE OF SMALL BUSINESS ADVOCATE
Forum Place 555 Walnut Street 1St Floor
Harrisburg PA 17101

Education: Bachelor of Science in Civil Engineering Technology, 1985, University of Pittsburgh at Johnstown, Johnstown, PA.

Continuing Education: Legal Principles and Practices of Surveying at the University of Maryland. Economics, Accounting, 33 Credit hours of accounting at the Howard County Community College and the University of Pittsburgh at Johnstown. Managing Multiple Priorities at the Pennsylvania State University. Various PA-PUC and Utility Company Seminars.

Professional: Engineer In Training, 1985,

Exams: Uniform Certified Public Accounting Exam, 1993.

Rate School: Cost of Service - Rate Structure & Rate Design instructor at Commission's Rate School - September 2010, 2012, 2014, 2016, 2022, and 2024.

Title: **ECONOMIC DEVELOPMENT CONSULTANT**

May 2025 - Present
Office of Small Business Advocate

Duties: Provide consultation and assist the OSBA the areas of Engineering, Revenue and Rate Structure for all fixed utility types. This includes measure of value claims, rate structure and rates, revenue annualizations, depreciation claims, and economic analyses. The types of dockets reviewed by the OSBA base rate cases, applications, formal complaints, investigations, applications, and petitions. The review includes analyzing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue schedules, depreciation studies, and formal complaints.

Title: **RATE CASE REVIEW SPECIALIST - ANNUITANT**

July 2023 – December 2024
Pennsylvania Public Utility Commission

Bureau of Investigation and Enforcement

Duties: Provide consultation and assist the Bureau of I&E in the areas of Engineering, Revenue and Rate Structure for all fixed utility types. This includes measure of value claims, rate structure and rates, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included applications, formal complaints, investigations, applications, petitions and rate investigations. The review includes analyzing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue schedules, depreciation studies, and formal complaints.

Title: **FIXED UTILITY VALUATION ENGINEER SUPERVISOR**

December 2011 – June 2023
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement

Duties: Duties included the areas of Engineering, Revenue and Rate Structure for all fixed utility types. During the course of formal and informal investigations personnel under my direction were responsible for reviewing and presenting recommendations regarding tariff rate schedules, tariff rules and regulations, measures of value claims, revenue annualizations, depreciation claims, fuel purchasing practices and economic analyses. The types of dockets reviewed by the Bureau of I&E included: applications, formal complaints, investigations, petitions and rate investigations. The Engineering Section was also responsible for reviewing all pertinent supporting information such as cost of service studies, bill frequency analyses, proofs of revenue, depreciation studies, water quality test results and formal complaints. Duties also included reviewing default service petitions by electric distribution companies and Act 129 Filings by the seven major electric Utilities, including energy efficiency and conservation plans and Smart Meter Plans.

Title: **RATE CASE REVIEW SPECIALIST**

December 2009 - December 2011
Pennsylvania Public Utility Commission
Bureau of Investigation and Enforcement and Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas

expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the I&E position in formal and informal proceedings before the Commission. Assist I&E employees with engineering and rate structure issues, including briefs and exceptions input. Participate in Commission consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER III**

December 1999 - December 2009
Pennsylvania Public Utility Commission
Office of Trial Staff

Duties: These duties included the determination of the reasonableness of claims and proposals in the areas of plant in service, rate base, depreciation expense, cost of service, quality of service, revenues, acquisitions, purchase gas expense, rate structure, and tariff proposal submitted by Water, Sewer, Telephone, Gas and Steam Heat utilities to justify utility service rates, or alternative forms of regulation. Research, analyze, and review rate case filings, tariff filings, acquisitions and investigations. Participate in on-site inspections of utility properties to determine the used and usefulness of the plant-in service and make recommendations. Prepare interrogatories in the areas of rate base, depreciation expense, purchase gas expense, amortizations, rate structure, revenue and quality of service in order to obtain additional information regarding a utility's filing. Analyze present revenue, proposed revenue, rate structure and tariff issues. Recommend adjustments to rate base, depreciation expense, revenue, rate structure and other issues concerning fixed utilities. Prepare testimony and exhibits for the purpose of establishing the OTS position in formal and informal proceedings before the Commission. Assist OTS employees with engineering and rate structure matters, including briefs and exceptions. Participate in Commission

consultative report proceedings and collaboratives undertaken by the Commission.

Title: **FIXED UTILITY VALUATION ENGINEER II**

April 1996 - December 1999
Pennsylvania Public Utility Commission
Office of Trial Staff and Bureau of Fixed Utility Services

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Office of Trail Staff (OTS) and Bureau of Fixed Utility Services.

Title: **FIXED UTILITY VALUATION ENGINEER TRAINEE, I & II**

May 1993 - March 1996
Pennsylvania Public Utility Commission
Office of Trial Staff
Telecommunications and Water Division

Duties: Perform the duties of a Fixed Utility Valuation Engineer II in the Rate Structure/Engineering Section of the Telecommunications and Water Division of the Office of Trial Staff (OTS).

Title: **CIVIL ENGINEER**

May 1985 - January 1991
Clark Finefrock & Sackett Inc.
7135 Minstrel Way
Columbia, MD 21045

Duties: Engineering, Surveying, Computer, and Field Inspection work related to land development projects in Maryland.

Re: Pennsylvania Public Utility Commission v. Peoples Natural Gas Company, LLC / Docket No. R-2026-3060855

Dear Judge Collins:

Enclosed please find the Direct Testimony and Exhibit of Mark D. Ewen, labeled OSBA Statement No. 2, with associated Exhibit IEc-1, on behalf of the Office of Small Business Advocate ("OSBA"), in the above-referenced proceeding.

As evidenced by the enclosed Certificate of Service, all known parties will be served, as indicated.

If you have any questions, please do not hesitate to contact me.

Sincerely,

/s/ Steven C. Gray

DIRECT TESTIMONY AND EXHIBIT

of

MARK D. EWEN

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics
Customer Assistance/Affordability
Cost Allocation
Revenue Allocation
Weather Normalization Adjustment

Date Served: June 18, 2026

Date Submitted for the Record: _____

DIRECT TESTIMONY OF MARK D. EWEN

1. Introduction and Context

Q. Mr. Ewen, please state your name and briefly describe your qualifications.

A. My name is Mark D. Ewen. I am a Principal and President of Industrial Economics, Incorporated ("IEc"), a consultancy headquartered at 2067 Massachusetts Avenue, Cambridge, MA 02140. My consulting practice focuses on regulatory and energy economics, expert case management and economic damages estimation in a variety of litigation contexts, and financial analysis. I obtained a B.A. degree in Economics and Political Science from the University of North Dakota, and a Master of Public Policy degree from the University of Michigan. I have participated and provided testimony in a variety of proceedings before the Pennsylvania Public Utilities Commission ("Commission"), including electric and gas base rates cases, 1307(f) purchased gas cost filings, energy efficiency and conservation cases, merger and acquisition cases, and default service provider ("DSP") petitions. My involvement as an expert witness to utility rate cases extends to a variety of jurisdictions, including Rhode Island, New York, Pennsylvania, New Hampshire, Maryland, and Canada. My résumé and a listing of the expert testimony that I have filed in various litigation and utility regulatory proceedings are attached in Exhibit IEc-1.

Q. Please describe your assignment in this matter.

A. I am appearing in this proceeding on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA"). The OSBA requested that I review the filing of Peoples Natural Gas Company, L.L.C. ("PNG" or the "Company") in this proceeding to evaluate whether the Company's revenue requirement, cost allocation, revenue allocation, and rate design proposals are consistent with sound regulatory economics and policy and are fair and reasonable to small business customers. If I have not addressed a particular issue, it cannot be inferred that I agree with the Company's proposal for that topic.

Q. Please summarize the Company's filing from a cost allocation and rate design perspective.

A. PNG proposes a base rate increase of $163.2 million, or 13.8 percent of base rate revenues, for the fully projected future test year ("FPFTY") ending December 31, 2027. The primary driver of the proposed rate increase, as asserted by the Company, is its ongoing infrastructure modernization programs, supported by significant and ongoing capital investments. The Company requests an ROE of 11.25 percent and a capital structure consisting of 45.53 percent long-term debt and 54.47 percent common equity. The Company also requests an adjustment to the method by which it calculates its Weather Normalization Adjustment ("WNA").

Q. Please summarize your recommendations.

A. I offer the following recommendations:

- The Company should implement a formal mechanism to track small business customers that experience financial difficulties. PNG should also provide the OSBA's contact information and a description of the services the OSBA offers on the Company's website.
- The Commission should carefully consider ratepayers' interest, affordability concerns, and the risk reduction benefits of a low-risk regulatory environment in evaluating the Company's cost of capital claim in this proceeding.
- The Commission should adopt my alternative revenue allocation proposal shown in Table IEc-3.
- The Commission should reject the Company's proposed WNA modification unless the Company: a) conducts a full bill impact study evaluating the proposed change, and b) increases the WNA deadband from three percent to five percent.

2. <u>Customer Assistance and Affordability</u>

Q. How does the Company address affordability concerns in its filing?

A. Peoples operates several universal service programs available to residential customers, each described in its Universal Service and Energy Conservation Plan ("USECP") and sponsored primarily through Peoples Statement No. 10: the Customer Assistance Program ("CAP"), the Low Income Usage Reduction Program ("LIURP"), the hardship fund

(administered by Dollar Energy Fund), and CARES, plus the Emergency Furnace/Service Line Repair program.

Q. Does the Company address affordability concerns for small businesses in its filing?

A. Other than general statements about designing rates that are affordable for each customer class, no.

Q. Does the Company offer financial assistance to commercial customers?

A. The Company states it strives to work with all customers, including Small General Service ("SGS") customers who experience financial difficulties, and that it evaluates both historical records (i.e., amount past due) and good faith attempted payments along with current customer information to determine eligibility for a payment plan.[1] However, PNG does not have a formal plan in place for working with SGS customers experiencing financial difficulties.[2]

Q. What are your recommendations with respect to customer assistance programs?

A. I recommend that the Company add a formal late payment plan to the SGS and MGS tariffs. In addition, the Company should continue to track interactions in which small business customers report financial difficulties (e.g., trouble paying heating bills on time), including both participation in the new formal payment plan and more informal complaints or inquiries. I also recommend that PNG provide the OSBA's contact information and a description of the services the OSBA offers on the Company's website.

The need for such programs made available to the SGS class is evident based on the Company's response to OSBA-II-009. Between January 2023 and June 2026, the monthly number of SGS bills that were 1-60 days late increased from 3,497 to 5,896 – a 69 percent increase. Over the same period, the monthly number of bills more than 60 days late grew from 661 to 971, an increase of 47 percent.

Q. How does the Company's requested ROE impact its proposed revenue requirement?

---

[1] OSBA-II-008.

[2] OSBA-II-007.

A. The importance of approving an ROE that balances the interests of shareholders and ratepayers cannot be overstated. For example, holding all other inputs in the revenue requirements model constant, if the Company assumes an ROE of 9.0 percent instead of the requested ROE of 11.25 percent, the revenue requirement would decrease by $90.8 million.[3]

Q. Do you have concerns about the Company's requested ROE?

A. Yes. My primary concern is that the Company does not adequately consider customers' interests in its ROE determination. Two United States Supreme Court cases, *Bluefield*[4] and *Hope*[5], established the standards for determining fair rates of return for utilities. Longstanding precedent holds that a utility's awarded return should be commensurate with those on investments of corresponding risk and sufficient to attract capital and maintain financial integrity. However, determining the cost of capital and rate of return cannot be considered in isolation of the full ratemaking process. Setting rates that are just, reasonable, and affordable is an important goal for the Commission.

As I discuss in detail below, PNG's WNA, as a form of revenue decoupling, insulates the Company from revenue uncertainty associated with weather and the regulatory environment. More broadly, while a WNA mechanism reduces utility risk and therefore should reduce the utility cost of capital, it is difficult to identify any reduction in allowed utility rates of return associated with adoption of WNA mechanisms in Pennsylvania. Natural gas distribution companies ("NGDCs") in Pennsylvania also file revenue requirements based on future test years that allow for prospective investments and adjustments. Accordingly, the risk of regulatory lag impacting the Company's ability to recover costs is low.

Based on the above factors, the Commission should carefully consider ratepayers' interest, affordability concerns, and the risk reduction benefits of a low-risk regulatory environment in evaluating the Company's cost of capital claim in this proceeding.

---

[3] My calculations based on Exhibit No. 2, Schedule No. 4 - 53.53 III.A.17 provided in response to OCA-I-001.

[4] *Bluefield Waterworks and Improvement Company v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923).

[5] *Federal Power Commission v. Hope Natural Gas Company*, 320 U.S. 591 (1944).

3. Cost Allocation

Q. What is a utility cost allocation study?

A. A utility cost allocation study, in this case the Company's gas allocated class cost of service study ("ACOSS"), is an analytical tool that assigns the utility's test year total costs (i.e., the "revenue requirement") among the various utility rate classes. Pennsylvania electric and gas utilities generally use an "embedded cost" approach to cost allocation, in which accounting book costs are directly assigned among the rate classes, rather than a marginal cost approach. It is generally agreed that costs should, to the extent practicable, be assigned among rate classes based on "cost causation," such that costs caused by a particular class of customers are assigned to that class. A cost allocation study generally involves a three-step process, in which costs are (a) segregated by function ("functionalization"): (b) further segregated by cost causation factor, notably throughput, peak demand, "excess" demand, and customer count ("classification"); and (c) allocated among the rate classes based on each class's contribution to the cost causation factor ("allocation").

Q. What purpose does the ACOSS serve in a utility rate proceeding?

A. The ACOSS informs both the assignment of the rate increase among customer classes ("revenue allocation") and the design of rates to recover the revenues assigned to each rate class. Revenue allocation is often used to move rate revenue more into line with allocated costs from the ACOSS. For rate design, classified costs, such as customer-related and demand-related costs, are used to inform the development of specific rate charges, such as monthly customer and demand charges.

Q. Please describe the Company's rate classes used in the ACOSS.

A. The Company's ACOSS includes the following rate classes:

- Rate(s) RS, CAP, E-CAP – Residential
- Rate SGS – Small General
- Rate MGS – Medium General
- Rate LGS – Large General
- Rate MLS – Mainline Service

Q. Turning to the issues of cost allocation methodology, what are the most important cost allocation issues for a NGDC like PNG?

A. An ACOSS allocates rate base and associated capital costs, distribution expense, customer accounts/service expense, expense, administrative/general ("A&G") expense, and taxes. Often, costs are allocated on a derivative basis, based on costs already allocated. For example, depreciation, income taxes, and return are often allocated in the same manner as, or in proportion to, rate base. General plant and A&G costs are typically allocated based on some combination of overall plant allocations or O&M expense or labor allocations. Thus, the overall results of an ACOSS are substantially driven by the allocation of a few large asset accounts. These "big ticket" issues for cost allocation are generally:

- Classification of mains costs, potentially into peak demand, throughput and/or customer components.
- Definition and derivation of the peak-demand allocation factor, including the treatment of interruptible load in the allocator.
- Allocation of meters and services costs.

Q. Please describe the basic issues involved in gas utility mains cost causation.

A. Gas distribution mains are installed to meet two basic objectives: (a) to interconnect the customer with the interstate pipeline system (or other gas supply sources); and (b) to be able to transport sufficient gas to meet the demand of customers downstream under extreme peak conditions.

However, it is not easy to develop an analytical model capable of reflecting these cost causation factors. Ideally, the cost of any particular segment of mains would only be allocated to those specific customers who are served downstream from that segment. In practice, undertaking such an analysis can be detailed, costly, and time consuming.

Q. What are the more traditional approaches to mains cost classification?

A. Various analytical models are used in place of the traditional detailed modeling approaches. These methods attempt to address the following questions:

- What causation factors best correlate with mains costs?
- Are mains costs causally related to the number of customers? And, if so, how should the "customer component" of mains costs be derived?

- How should mains costs that are not causally related to number of customers be allocated among the various rate classes?

Regarding the first question, the traditional cost allocation parameters include throughput, peak demand, excess peak over average demand, and number of customers. As a matter of arithmetic, a throughput allocation factor is equivalent to an "energy" allocator, a "commodity" allocator, a "volumetric" allocator, and an "average demand" allocator.[6]

Regarding the second question, one argument is that more footage of mains must be installed to interconnect many small customers than to connect one larger customer with the same aggregate load. This approach is particularly appealing for small to medium business customers who are often more geographically concentrated in commercial areas, thereby requiring less mains footage.

Commission precedent indicates that the Commission has rejected the use of a customer component for gas distribution utilities in Pennsylvania, in the most recent cases of which I am aware.

Q. If there are no customer component mains costs per Commission precedent, what methods are used generally for allocating these costs?

A. The traditional allocation methods include three general approaches: a peak demand method ("Peak Demand"); a peak-and-average ("P&A") method; and an average-and-excess ("A&E") method. In the Peak Demand method, costs are allocated in proportion to each class's share of system "design day" peak demand, which represents the capacity needed to serve the class under extreme weather conditions. The logic for this approach is that the mains must be sized to meet peak day demand.

In the P&A method, costs are allocated based on a weighted mix of design day peak demand and average day demand. The two component are typically weighted 50/50.

The A&E allocation factor is a weighted average of average demand (i.e., throughput) and "excess" demand. Excess demand is measured as the difference between peak demand and

[6] Average demand is generally measured as annual throughput divided by 365 days. As such, it is arithmetically equivalent to annual throughput when used as an allocation factor. The ratio of average demand to peak day demand is generally referred to as load factor. High load factor customers typically use gas for manufacturing process applications; low load factor customers often rely on gas primarily for heating purposes.

average demand. Because this allocation factor consists of an average demand component and a "peak minus average" demand component, it is typically closer in magnitude to a Peak Demand allocator than to a P&A allocator. However, this observation depends on the weighting factor used to derive the A&E factor. Under specific conditions, namely when the weighting factor is based on the system load factor and there is no diversity of demand across classes, the P&A allocator is arithmetically identical to the A&E factor.

Q. Please review Commission precedent with respect to mains cost allocation methods.

A. In the Columbia Gas proceeding at Docket No. R-2022-3031211, the Commission reaffirmed that the terms and conditions of settlements are not relied upon as precedential and that cost of service studies should be evaluated on a case-by-case basis:

> We note that even in cases in which the revenue allocation methodology is litigated, a determination regarding which ACCOSS should be used should be determined on a case-by-case basis. We have observed that "the inherent distinctions between utilities and rate cases may result in different methodologies to be reasonable for different reasons. In other words, the best-suited ACCOSS may depend on the circumstances of the situation on a case-by-case basis."[7]

In PECO Gas's 2020 base rates proceeding, the Commission approved the Company's proposed A&E allocation method, that produced allocation factors substantially similar to a peak demand allocator.[8]

Q. What approach does PNG use in this proceeding?

A. The Company classifies mains using an "Average Study" that equally weights two methods: a Customer-Demand study and a Demand-Commodity study. The Customer-Demand study classifies mains between customer and demand components using a Minimum Size System ("MSS") study, while the Demand-Commodity study splits costs

[7] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2022-3031211 et al., Order Entered December 8, 2022, at 107.

[8] Opinion and Order, Pennsylvania Public Utility Commission, Docket No. R-2020-3018929 et al., Order Entered June 17, 2021, at 228-231.

evenly between demand and commodity. Averaging the two studies results in a customer-related mains component of 24 percent, a demand-related component of 51 percent, and a commodity-related component of 25 percent.[9] The demand-related portion is in turn allocated using a Peak-and-Average factor ("P&A") weighting design-day peak demand and average demand 50/50.[10]

Q. Please summarize the ACOSS results.

A. **Table IEc-1** below reports revenue-cost ratios at the Company's current and proposed rates for those rate classes subject to cost-based rates. At current rates, every class but the Large General class is under-recovering costs based on the ACOSS results. At proposed rates, the Residential, Small General, and Medium General move towards parity, while the Large General and Mainline Service do not receive rate increases.[11]

Table IEc-1
Summary of PNG Gas ACOSS: Revenue-Cost Parity Ratios

	Current Rates	Proposed Rates
Residential	1.00	0.99
Small General	0.90	0.94
Medium General	0.94	0.99
Large General	1.57	1.38
Mainline Service	0.82	0.74
Total	**1.00**	**1.00**

4. Revenue Allocation

Q. What is revenue allocation?

A. Revenue allocation is the assignment of the dollar net increase or decrease to each of the Company's rate classes in a base rates proceeding. In contrast, *rate design* determines how

[9] PNG Statement No. 17, at 25.

[10] PNG Statement No. 11, at 7.

[11] The revenue-cost ratio for the Mainline Service class decreases at proposed rates because this class largely comprises negotiated contract customers.

the allocated revenue is recovered from individual ratepayers within each class. From a cost recovery standpoint, revenue allocation addresses *inter-class* cross-subsidization issues, while rate design addresses *intra-class* cross-subsidization issues.

Q. What are the primary economic and regulatory criteria for revenue allocation?

A. In general, allocated cost is the primary criterion used by regulators in the revenue allocation process. Most utilities and regulators adopt a policy in a base rate proceeding of attempting to move revenues more into line with allocated costs by varying the magnitude of the rate increases for the individual classes. However, regulators also subject the rate increases to other non-cost criteria of ratemaking. Of the traditional rate design criteria, the most common non-cost considerations in the revenue allocation process are:

- the *gradualism* principle (or avoidance of "rate shock"), in which large rate increases for individual customers or classes of customers are avoided; and
- the *value of service* principle, which is often used to mitigate rate increases for customers or customer classes with relatively elastic demand. [12]

Using these criteria, the utility will develop a proposal for assigning the increase in the revenue requirement among the classes that reflects both cost and non-cost considerations. With this proposal, the ACOSS can be simulated at both present and proposed rates to evaluate the magnitude of progress that has been made toward the policy of achieving cost-based rates.

Q. Please summarize the Company's proposed revenue allocation in this proceeding.

A. The Company describes its approach in Statement No. 17. The Company generally indicates a desire to move rates into line with allocated costs subject to rate gradualism constraints. In effect, this means limiting the rate increase for the Small General class to 1.5 times the system average increase. The Company evaluates its revenue allocation proposal using a revenue-to-cost ratio benchmark, where a ratio of 1.0 indicates that revenues are fully in line with allocated costs. PNG also states that its proposal reduces

[12] See, for example, Principles of Public Utility Rates, Second Edition, Bonbright, Danielsen, Kamerschen, 1988, pages 383–387. The criteria in this text apply to the overall development of a utility rate structure. The criteria that I discuss in this testimony are those that apply to the revenue allocation portion of the process, which is only one aspect of the overall development of utility rates.

subsidies between rate classes. **Table IEc-2** below summarizes the Company's revenue allocation proposal.

Table IEc-2
Summary of PNG Gas Proposed Revenue Allocation

	Increase $000	Increase %	R/C Current	R/C Proposed	Increase/System Avg. Increase
Residential	$118,163	13.5%	1.00	0.99	0.99
Small General	$21,443	18.5%	0.90	0.94	1.36
Medium General	$21,264	19.7%	0.94	0.99	1.45
Large General	$0	0%	1.57	1.38	0.00
Mainline Service	$0	0%	0.82	0.74	0.00
Total	**$160,871**	**13.58%**	**1.00**	**1.00**	**1.00**

Source: IEc WP1

Q. Do you agree with the Company's revenue allocation proposal?

A. The Company's revenue allocation is directionally consistent with the results of the ACOSS. However, in the interest of rate gradualism for the SGS and MGS classes, I propose capping the maximum rate increase at 1.25 times the system average. To achieve this, I recommend a small increase for the LGS class, rather than no increase as PNG proposes.

Q. What is your alternative revenue allocation proposal?

A. **Table IEc-3** summarizes my alternative revenue allocation proposal, as described above.

Table IEc-3 **Summary of IEc Alternative Revenue Allocation**					
	Increase $000	Increase %	R/C Current	R/C Proposed	Increase/System Avg. Increase
Residential	$118,163	13.5%	1.00	0.99	0.99
Small General	$19,699	17.0%	0.90	0.93	1.25
Medium General	$18,361	17.0%	0.94	0.97	1.25
Large General	$4,647	6.5%	1.57	1.42	0.47
Mainline Service	$0	0.0%	0.82	0.74	0.00
Total	**$160,871**	**13.6%**	**1.00**	**1.00**	**1.00**

5. <u>Weather Normalization Adjustment</u>

Q. What is the Company's proposal regarding WNA in this proceeding?

A. The Company's WNA was approved as a permanent mechanism in the last base rate case proceeding in Docket No. R-2023-3044549. The existing WNA has the following features: it applies to the Residential and Small/Medium General Service classes; operates during the October through May heating season; includes a three percent deadband; is calculated on a bills-rendered basis; is presented as a separate line item on customer bills; includes a limiter for bills rendered in May such that the WNA adjustment will not exceed 100 percent of the billed distribution amount for that same billing period; and requires annual reporting of billed WNA revenues, actual and normal HDD, and bill impact information.

In this case, the Company proposes a single change, which is to update the Normal Heating Degree Day ("NHDD") benchmark that anchors the WNA. Currently, the WNA has a blended methodology that was approved in the last case, averaging results from a 65-year regression and a 20-year average HDD normalization. PNG proposes to rely solely upon the 65-year regression methodology. The Company states it is making no other structural

changes to the WNA, and claims this change is necessary to ensure methodological consistency between the weather normalization assumptions used to establish base-rate billing determinants and those used in the WNA.[13]

Q. What is a WNA mechanism?

A. The Company's WNA mechanism is a form of a rate "decoupling," that utilities use to "weaken" or "break" the link between revenues and customer gas consumption. Decoupling mechanisms allow utilities to adjust rates and/or implement charges and credits to customer bills to ensure the utility receives a pre-established, benchmark level of revenue. A WNA reconciles revenues between those approved in the base rates case and those actually earned based on variances in the weather. If the weather is warmer than normal, the NGDC is permitted to earn supplemental revenues to make up the shortfall; if weather is colder than normal, the NGDC credits the ratepayer with a lower bill for base rates.[14]

Q. What is the apparent allure of a WNA and other decoupling mechanisms and what are the drawbacks?

A. The WNA mechanism as used in Pennsylvania is a partial rate decoupling mechanism, which has at least three advantages over broader rate decoupling mechanisms. First, the WNA provides mutual risk reduction benefits to both NGDC and ratepayer, in the form of revenue/bill stability. The NGDC gets more stable revenues; the ratepayer gets a more stable bill. In theory, the more stable NGDC revenues should reduce its risk, and thus its allowed rate of return. In extremely cold conditions, the ratepayer gets a lower base rates bill under the WNA than it would without a WNA. In contrast, revenue decoupling mechanisms for non-weather variances generally involve an increase in risk for ratepayers and reduced risk for the NGDC. Consider economic fluctuations. In an unexpected economic downturn, a broad rate decoupling mechanism will impose higher charges on ratepayers to make up for the overall downturn in load, at the same time that the ratepayers are suffering the effects of the economic downturn. The NGDC, by contrast, is insulated

[13] Peoples Statement No. 17, at 40.

[14] Gas supply charges are not subject to the WNA. Thus, weather fluctuations will continue to cause bill fluctuations with respect to gas supply.

from the effects of the economic downturn. Thus, as rate decoupling mechanisms go, the WNA is more balanced than broader mechanisms.

The second advantage is that the WNA mechanism can be adopted in "real time". WNAs can be calculated within the billing period in which the variance between actual and normal weather occurs. This avoids the intergeneration inequity problems of broader rate decoupling mechanisms.

The third advantage is that the WNA mechanism can be customer-specific. Weather normalization adjustment mechanisms can be designed to specifically reflect the weather-related usage of the individual customer. As such, it is a fairer mechanism than broader rate decoupling mechanisms, which have little or no linkage between the cause of the revenue variance and the recovery mechanism.

Q. Are there general concerns about the working of WNA mechanisms?

A. Yes, there are several.

First, use of a WNA mechanism means that a customer is being billed for a level of gas consumption that is not metered, but is only estimated. As such, it is often difficult to explain to customers why their rates appear to fluctuate up and down each month, or why there is a mysterious "WNA" charge/credit on their bills that is not related to any specific metered consumption amount.

Second, the WNA mechanism weakens price signals for energy conservation during extreme periods. Under the WNA, a ratepayer has a lower per-mcf incentive to reduce usage during unusually cold periods than it does under traditional volumetric rates. As gas distribution systems are designed, at least in part, to meet extreme weather demands, the traditional rate approach is more consistent with cost causation and with how costs are allocated in the allocated cost of service study.

Third, problems can be exacerbated in periods where actual HDDs are low, such as a warm spell in the spring. Unless protections are in place, an unadjusted WNA might produce very large multipliers, if, say, the normal HDDs are 300 and the actual HDDs are 30. For

customers who happen to have an unusual load in that period, the WNA would charge that load at a factor of 10:1.[15]

Q. Please summarize how the Company's existing WNA works.

A. A WNA is a form of partial revenue decoupling that breaks the link between a utility's distribution revenue and customers' actual weather-driven gas consumption. PNG's WNA applies to the Residential and Small/Medium General Service classes. The Company adjusts the amount billed to each customer to reflect "normal" weather, regardless of actual conditions. In technical terms, the Company compares actual heating degree day ("AHDD") variations from NHDD, adjusted for a three percent deadband. No adjustment applies to customer bills if weather falls within the three percent deadband, and the WNA mechanism only applies for variation of actual weather from normal weather outside of the deadband.

Q. Have you reviewed the Company's evidence regarding the historical performance of its WNA mechanism?

A. Yes. In response to OSBA-II-015(B) and (C), the Company provided monthly WNA results for the SGS and MGS classes for two heating seasons: 2024-2025 and the partial 2025-2026 season (through March 2026). The Company offers these data to supports its position that the WNA is operating symmetrically to protect customers when the weather is colder than normal.[16]

Q. Is two seasons of data a sufficient basis on which to evaluate whether the WNA is performing as intended?

A. No. The Company's WNA mechanism began in the last rate case (2023), so customer bills have only been affected since October 2024.[17] Thus, only two heating seasons of actual data exist, one of which is incomplete. WNAs are designed to be symmetric around a normal-weather baseline. The 2024-2025 season was warmer than normal and produced net surcharges to commercial customers of approximately $2.9 million; the

[15] The PGW mechanism did, in fact, produce such anomalous results in the spring of 2022.

[16] Peoples Statement No. 17, at 38.

[17] OSBA-II-015.

partial 2025-2026 season has been colder than normal and has produced net credits of approximately $3.0 million to date. The two seasons happen to produce a near-zero cumulative net figure, but without more data it is impossible to determine whether this reflects coincidence or a WNA mechanism performing as intended. In either case, this operating history is too short to support any conclusion about the mechanism's future effectiveness.

Q. Does the Company assess the bill impacts of its proposal to remove the 20-year average from the HDD calculation?

A. No. In supporting the WNA proposal in docket R-2023-3044549, Company Witness Scanlon stated that the Company believed the 65-year regression "provides a reasonable basis for weather normalization. However, Peoples is proposing to use the average of the 65-year regression model result with the average of the 20-year average *due to the concept of gradualism*."[18] It is unclear why methodological consistency between the base-rate billing determinants and the WNA normalization period should take precedence over protecting consumers from bill volatility. When asked in this proceeding to produce the Company's bill impacts evaluations resulting from the proposed change to rely exclusively on the 65-year regression methodology, the Company stated they had not performed such an analysis.[19]

Q. What do you recommend regarding the Company's WNA?

A. First, the Company should be directed to perform a bill-impact study showing the results of the proposed change to rely on a 65-year regression methodology to update the WNA normalization period, compared to the currently approved WNA methodology. The Company should report the same customer-impact metrics included in OSBA-II-015 Attachment B 2024-2025 and OSBA-II-015 Attachment B 2025-2026, and the analysis should cover (a) a retrospective ten-year historical period, assuming the WNA mechanism had been in effect, and (b) a prospective ten-year analysis based on usage projections.

[18] R-2023-3044549, Peoples Statement No. 3, at 5. [emphasis added]

[19] OSBA-II-015.

Second, to mitigate bill volatility for consumers, I recommend increasing the WNA deadband from three percent to five percent.

Q. Does this conclude your direct testimony?

A. Yes, it does.

EXHIBIT IEc-1

RÉSUMÉ AND EXPERT TESTIMONY LIST

FOR

MARK D. EWEN

IEc

MARK D. EWEN — PRESIDENT

Overview

Mr. Ewen has a strong background in applied economics, empirical methodologies, and financial analysis. As a Principal at Industrial Economics, Incorporated (IEc), he focuses on expert case management and economic damages estimation in a variety of litigation contexts, regulatory and environmental economics, and financial analysis. Within his areas of expertise, Mr. Ewen has been qualified as an expert witness before judicial and regulatory bodies (see schedule of testimony and appearances). He has also served as a Managing Director of the firm.

Education

Master of Public Policy, University of Michigan

B.A., *summa cum laude*, Economics and Political Science, University of North Dakota

Select Project Experience

Examples of his project work include the following:

Mr. Ewen has participated in various proceedings concerning energy markets and regulated utilities. These efforts, which focus on issues related to cost allocation, revenue allocation, and rate design, include working on behalf of industry and consumer intervenor groups in rate-making cases before the public utility commissions in New York, Pennsylvania, Alberta, Canada, and the U.S. Postal Rate Commission. For example, for **New York Department of State's Utility Intervention Unit (UIU)** and the **Pennsylvania Office of Small Business Advocate (OSBA)**, he has and continues to provide consulting and analytic support relating to electricity and natural gas tariff design, revenue requirements, and other regulatory initiatives concerning electrical and natural gas distribution utilities. For the **Rhode Island Attorney General**, Mr. Ewen conducted a due diligence review of PPL's proposed acquisition of Narragansett Electric Company and its potential impacts on the state's ratepayers.

For the **New York State Energy Research and Development Authority (NYSERDA) and Department of Public Service (DPS)**, Mr. Ewen provided expert services assessing the economic impacts to municipal governments of extended electricity outages related to Tropical Storm Isaias. As part of this work, he constructed a model to estimate various costs of incremental staffing requirements for over 500 localities, including excess overtime, surge time (i.e., bringing on extra staff for outage response coordination and logistics), and idle time (e.g., crews waiting extended periods for downed lines to be de-energized). The review also included consideration of other direct costs, including, among others: effects to water systems; delivery of bottled water; operation of generators; and other constraints on the provision of essential governmental services. The litigation was settled to the satisfaction of the involved parties.

For the **NYSERDA and New York DPS**, Mr. Ewen directed the development of a Generic Environmental Impact Statement (GEIS), pursuant to the requirement of the State Environmental Quality

Review Act (SEQRA) that assessed the environmental and economic impacts of the "Reforming the Energy Vision" and "Clean Energy Fund" initiatives within the state. He also directed the preparation of a Supplemental EIS to assess the environmental and economic impacts of the newly proposed Clean Energy Standard (CES). The CES is being developed to support the state's goal of supplying 50 percent of electricity demand with renewable generation resources by the year 2030. More recently, he directed the development of a model to assess the financial viability of various waste-to-energy technologies, and related social welfare benefits. This model uses detailed capital budgeting scenarios for specific facilities to generate forecast scenarios.

For the **U.S. Department of the Interior, Bureau of Ocean Energy Management (BOEM)**, directing an assessment of the Bureau's approach to calculating and presenting the operating fee included in offshore wind leases under BOEM's jurisdiction. As part of this engagement, IEc provided a number of recommendations for simplifying the implementation of the operating fee formula and identified available data sources and approaches to estimating individual components of the fee formula. The review also addressed the structure and levels of fees associated with operations of renewable wind energy projects in the U.S. and worldwide. More recently, IEc has been supporting the development of Standard Operating Procedures for the fee calculation and lease management process. The overall goal is to provide information resources and a methodological approach that will allow lessees to derive accurate data for fee equation variables efficiently and consistently, and for BOEM to present the fee calculation clearly in the lease.

For **NYSERDA**, conducting a market analysis examining the potential economic development opportunities that could accrue in New York from hydrogen playing a role in achieving components of its Climate Leadership and Community Protection Act.

For the **U.S. Department of the Interior, Bureau of Ocean Energy Management**, managed the development of a model to assess the economic and fiscal impacts of offshore oil and gas activity in the Gulf of Mexico and other BOEM OCS regions. This model, the Lifecycle Impacts Model (LCIM), assesses the economic and fiscal impacts associated with a specific lease or group of leases, over the time horizon of the lease(s). IEc's framework for the model was to build a capital budgeting forecasting tool for lease development, yielding estimates of industry expenditures, OCS revenues, industry profits, and employment impacts for a single lease or a set of leases. A key component of model development was to dynamically simulate the complex and unique timing parameters of lease development, incorporating the influence of critical exogenous factors like market prices and lease geology.

For the **U.S. Coast Guard, National Pollution Funds Center**, Mr. Ewen provides ongoing support to the NPFC in adjudicating damages claims resulting from oil spills. These claims include damages for business interruption, lost profits, property damage or value diminution, increased costs, and lost wages or employment, among other categories. Cases have also included damages for contract delays to construction projects and shipping demurrage. Industry sectors that Mr. Ewen has evaluated include: *electricity generation (nuclear and coal); railroads; cruise ships; oil ship transport; lodging and tourism; food and beverage; gambling; fisheries; marinas; real estate development, oil and gas development; and oil refining.*

Mr. Ewen's analytic work includes expert financial analysis and economic damages estimation in the context of general litigation and environmental enforcement actions. These efforts include assessing damages in breach of contract, nuisance, and cost recovery actions, and assessing the financial capabilities and economic benefit of noncompliance of firms accused of environmental violations. Clients

in this area of his practice include the **U.S. Department of Justice, U.S. Coast Guard, U.S. Environmental Protection Agency, States**, and private parties.

Testimony and Appearances

Mr. Ewen has provided testimony or appeared in the following cases and regulatory proceedings.

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for UGI Utilities Corporation – Gas Division (Docket No. R-2025-3059523, April 2026).

On behalf of the Attorney General of the State of Rhode Island, submitted testimony before the Rhode Island Public Utilities Commission concerning revenue allocation and rate design in the matter of The Narragansett Electric Co. d/b/a Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates (Docket No. 25-45-GE, April 2026).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting remand testimony before the Pennsylvania Public Utility Commission, concerning cost allocation and revenue allocation in the base rates case for Philadelphia Gas Works (Docket No. R-2023-3037933, April 2026).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for PPL Electric Corporation (Docket No. R-2025-3057164, December 2025).

On behalf of the New Hampshire Office of Consumer Advocate (OCA), submitting testimony before the New Hampshire Public Utilities Commission concerning cost of service, revenue allocation, and rate design in the matter of Until Energy Systems, Inc. Request for Change in rates (Docket DE 25-025, December 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitting testimony before the Public Service Commission concerning cost of service, revenue allocation, and rate design in electric and gas base rates cases of New York State Electric & Gas Corporation and Rochester Gas and Electric Corporation (Docket Nos. 25-E-0375, 25-G-0380, 25-E-0379 and 25-G-0378, October 2025).

On behalf of New York Department of State's Division of Consumer Protection's Utility Intervention Unit (UIU), submitting testimony before the Public Service Commission, concerning revenue allocation and rate design in electric and gas base rates case of Consolidated Edison, Inc. (Docket Nos. 25-E-0072 & 25-G-0073, May 2025).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning the distribution system improvement charge (DSIC) case for PPL Electric Utilities Corporation (Docket No. R-2024-3048732, July 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for First Energy of PA (Docket No. R-2024-30447068, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for PECO Gas (Docket No. R-2024-3046932, June 2024).

On behalf of Pennsylvania's Office of Small Business Advocate, submitting testimony before the Pennsylvania Public Utility Commission, concerning cost allocation, revenue allocation, and rate design in the base rates case for Columbia Gas of Pennsylvania (Docket No. R-2024-3046519, June 2024).

REBUTTAL TESTIMONY

of

MARK D. EWEN

On Behalf of the

Pennsylvania Office of Small Business Advocate

Topics:

Cost Allocation
Revenue Allocation
Universal Service Cost Recovery

Date Served: July 16, 2026

Date Submitted for the Record: _____

REBUTTAL TESTIMONY OF MARK D. EWEN

1. Introduction and Context

Q. Mr. Ewen, please state your name and briefly describe your qualifications.

A. My name is Mark D. Ewen. I submitted direct testimony and associated exhibits on behalf of the Pennsylvania Office of Small Business Advocate ("OSBA") earlier in these proceedings and my qualifications were presented therein.

Q. What is the purpose of this rebuttal testimony?

A. This rebuttal testimony responds to the following witnesses and topics:

- Office of Consumer Advocate ("OCA") Witness Michael Deupree and Bureau of Investigation and Enforcement ("I&E") Witness Ethan H. Cline regarding cost allocation and revenue allocation.

- CAUSE-PA Witness Patrick M. Cicero and OCA Witness Roger Colton regarding the recovery of universal service costs.

2. Cost Allocation and Revenue Allocation

Q. Please summarize OCA Witness Deupree's alternative allocated cost of service study ("ACOSS")?

A. Witness Deupree disagrees with the Company's use of a minimum system method ("MSS") to classify a portion of distribution mains as customer-related. Witness Deupree prepared an alternative ACOSS that classifies distribution mains as 100 percent demand-related and then allocates distribution mains costs to rate classes based on the peak-and-average ("P&A") method.

Q. How do the OCA's ACOSS results differ from the Company's ACOSS results?

A. **Table IEc-1R** compares the relative rate of return at current rates between the Company's ACOSS and OCA's ACOSS.

Table IEc-1R: Summary of PNG and OCA ACOSS Results Relative Rate of Returns at Current Rates		
	PNG	OCA
Residential	0.96	1.12
Small General	0.52	0.42
Medium General	0.88	0.51
Large General	3.01	1.93
Mainline Service	0.10	0.10
Total	**1.00**	**1.00**
Source: IEc WP-1R		

Q. What is I&E's position on the Company's ACOSS?

A. Witness Cline offers the same recommendations as the OCA, namely, to classify distribution mains without a customer component and to allocate distribution mains costs based on the P&A method. Witnesses Deupree and Cline both reference the Commission's decision in the 2025 Columbia Gas base rate case, which determined that mains costs should be allocated based on throughput capacity to meet peak demand and not the number of customers.[1]

Q. What is the OCA's proposed revenue allocation?

A. Using the results of its alternative ACOSS, OCA proposes to cap the maximum rate increase for any rate class at 1.15 times the system average increase and to set a minimum rate increase of 0.50 times the system average.

Q. What is your assessment of the OCA's revenue allocation?

A. In direct testimony, my alternative revenue allocation proposal capped the rate increase to the Small General Service ("SGS") class at 1.38 times the system average, as this class is under-earning relative to allocated costs. The OCA's alternative ACOSS also indicates that the SGS class is under-earning. However, Witness Deupree's proposal is geared

[1] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, pp. 254-5 (Order Entered December 4, 2025).

more toward rate gradualism than progress toward cost-based rates. Although both goals are important, I find OCA's proposal to be reasonable given the size of the proposed rate increases in this proceeding.

3. <u>Universal Service Cost Recovery</u>

Q. Please summarize Witness Cicero's and Witness Colton's positions regarding universal service cost recovery.

A. The Company's Universal Service Program ("USP") Rider recovers the costs of the Company's Universal Service and Conservation Programs that assist low-income residential customers. As is standard practice among utilities in Pennsylvania, Peoples Natural Gas Company ("PNG") assigns the recovery of universal service costs only to residential customers. Witness Cicero argues that universal service and low-income assistance programs benefit all of PNG's customer classes because they provide economic benefits to entire communities and not just customers that receive assistance.[2] Accordingly, Witness Cicero supports a broad allocation of universal service costs to all rate classes.

Similarly, Witness Colton recommends that all rate classes should contribute to the Company's residential Customer Assistance Program ("CAP")/universal service costs, which would benefit PNG's entire service territory. He also reasons that universal service costs are caused by factors endemic to society as a whole, as opposed to by factors specific to residential customers.[3]

Q. What is your position regarding the allocation of universal service costs?

A. By longstanding OSBA advocacy and Commission precedent, I maintain that small business customers should not contribute to universal service programs because these customers cannot take advantage of the residential-only programs. There is no causal relationship between PNG's universal service costs and small business customers. Witness Colton cites the Commission's Final Order in the I*nterconnection and Tariffs for*

[2] Direct Testimony of CAUSE-PA Witness Cicero, at 78-81.

[3] Direct Testimony of OCA Witness Colton, at 74-76.

Large Load Customers (Docket No. M-2025-3054271) to describe how the Commission maintains discretion to allocate universal service costs to non-residential customers. However, small businesses are not cost causers in any comparable sense to new large load customers interconnecting to the grid. The Commission recognized the unique nature of large load customers in the above-referenced docket and did not recommend that other non-residential customer classes be burdened with universal service contributions.

In addition, assigning costs for the universal service programs to all rate classes would impose a burden on all hearing participants, including the OSBA, who would have an obligation to ensure that these programs are properly designed, effective, and necessary. Because most utilities in Pennsylvania do not assign universal service costs to all rate classes, the OSBA generally does not expend the resources to retain the necessary specialized experts in these fields.

Q. What are the practical issues if the Commission were to require all of the Company's rate classes to contribute to universal service costs?

A. The form of cost recovery is of primary importance. Witness Cicero recommends that universal service costs "should be assigned to all rate classes based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case."[4] Witness Colton provides a similar recommendation to distribute total CAP costs based on each rate class's share of the distribution revenue requirement (excluding taxes) ordered in this proceeding. Witness Colton suggests that the universal service cost could be added on as an undesignated part of the customer charge. These proposals provide minimal insight as to how universal service costs would impact small business customers, including businesses facing financial difficulties that would then need to pay another fixed monthly charge. These proposals would unfairly burden small businesses with a new tax without a cost basis. Transparency is another concern. If the Commission decides to abandon long-standing precedent and impose a new tax on small

[4] Direct Testimony of CAUSE-PA Witness Cicero, at 81.

businesses, the new charge should be separately identified on the bills for non-residential customers, simply as a matter of honesty and openness about the policy change.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does

SURREBUTTAL TESTIMONY

of

JOSEPH KUBAS

on behalf of the

Pennsylvania Office of Small Business Advocate

Topics:
Small General Service Customer Charge
Future Cost of Service Studies

Date Served: July 31, 2026

Date Submitted for the Record: _____

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Joseph Kubas. My business address is Forum Place, 555 Walnut Street, 1st floor, Harrisburg PA, 17101.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by the Pennsylvania Office of Small Business Advocate ("OSBA") as an Economic Development Consultant.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. My testimony is being sponsored by the OSBA.

Q. ARE YOU THE SAME JOSEPH KUBAS THAT PROVIDED DIRECT TESTIMONY ON JUNE 18, 2026?

A. Yes.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING?

A. The purpose of my surrebuttal testimony is to address two issues related to the rebuttal testimony of Peoples Natural Gas Company, LLC (Peoples or Company).

Specifically, I will address the rebuttal testimony of Luke Ravenstahl, submitted on behalf of Peoples as Statement No. 8-R concerning future Cost of Service Studies (COSS), and the rebuttal testimony of John D. Taylor, submitted on behalf of Peoples as Statement No. 17-R concerning the proposed SGS customer charge, and changes in future COSSs. The fact that I did not address every argument raised by the Company does not indicate my agreement with the Company on that argument.

Q. DID YOU MAKE A RECOMMENDATION FOR TOTAL REVENUE REQUIREMENT IN THIS CASE?

A. No. While my first issue did impact proposed rates, I did not make an overall revenue recommendation. Mr. Mark Ewen also addressed other issues in this case.

INTRODUCTION

Q. PLEASE DESCRIBE THE FILING.

A. On March 27, 2026, Peoples filed a natural gas base rate case based on a FPFTY ending December 31, 2027. The total increase is approximately $163,172,000.[1] The Company's revised this amount upward in its rebuttal testimony to approximately $163,933,000.[2]

SMALL GENERAL SERVICE CLASS

Q. WHAT CUSTOMERS ARE GENERALLY INCLUDED IN THE SMALL GENERAL SERVICE CLASS?

A. The SGS class is available to commercial and industrial customers and Natural Gas Distribution Companies consuming less than 1,000 Mcf of natural gas service annually throughout the territory served by the Company with the exception of commercial customers qualifying under Rate Natural Gas Powered Vehicles (Peoples Tariff Supplement No. 2 To Gas - PA PUC No. 48, First Revised Page No. 10). Based upon the Company's definition, this class would generally include Small Business customers that use less than 300 Mcf per year.[3]

[1] Peoples Volume I, Exhibit 2, Schedule 4, page 2, Line 1.
[2] Peoples Revised Exhibit No. 2, Schedule 4, Page 5, Line 1.
[3] Peoples Tariff Supplement No. 2 to Gas - PA PUC No. 48 First Revised Page No. 7.

Q. WHAT RATES DO SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR CURRENTLY PAY?

A. SGS customers that use between 0 and 499 Mcf per year currently pay a customer charge of $22.00 per month, a usage rate of $3.9844 per Mcf, plus various surcharges.[4]

Q. WHAT RATES DID THE COMPANY PROPOSE FOR SGS CUSTOMERS THAT USE BETWEEN 0 AND 499 MCF PER YEAR?

A. The Company proposed that SGS customers that use between 0 and 499 Mcf per year pay a customer charge of $32.14 per month, a usage rate of $5.7095 per Mcf, plus various surcharges[5]

Q. WHAT INCREASE AND PERCENTAGE INCREASE IN THE CUSTOMER CHARGE DID THE COMPANY PROPOSE FOR SGS CUSTOMERS?

[4] Volume 9, Peoples Exhibit JDT-4, page 1.

[5] Volume 9, Peoples Exhibit JDT-4, page 1.

A. The Company proposed that the SGS customer charge for customers that use between 0 and 499 Mcf per year be increased to $32.14 per month, which equates to an increase of $10.14 ($32.14 - $22.00) per month or 46.1%.

Q. WHAT CUSTOMER CHARGE DID YOU RECOMMEND FOR THE SGS CLASS?

A. I recommend that the present SGS customer charge remain at $22.00 per month.[6]

Q. WHAT SUPPORT DID YOU PROVIDE FOR KEEPING THE SGS CUSTOMER CHARGE AT $22.00 PER MONTH?

A. First, the Company failed to provide a customer cost analysis that showed the individual components to support increasing the SGS customer charge.[7] Second, I described how any customer concern about bill volatility can be addressed through a customer selecting budget billing. Third, I addressed how the Company's margin recovery is stabilized each year using its weather normalization adjustment. Fourth, I addressed why it makes no sense to suggest that a higher

[6] OSBA Statement No. 1, page 6.

[7] OSBA Statement No. 1, pages 5-6.

customer charge is fair to customers because customers understand a customer charge more than they understand a usage rate. Fifth, I described how customers are not concerned with the Company's recovery of fixed costs. Sixth, I described how there is no support for the claim that a higher monthly charge sends the correct "price signal" to customers. Seventh, the Company's suggestion that various SGS customers provide an unequal contribution to fixed costs is not supported. Since the Company failed to properly list what it believes are direct customer related fixed costs, there is no way to determine if the Company's claims concerning intra class subsidy or the need to collect more fixed costs are accurate. Eighth, the Company failed to provide any details supporting these individual customer costs. Ninth, while the Company would rather recover all fixed costs in a monthly charge, the Commission has consistently rejected this recovery claim. The Commission has repeatedly used its judgement and a detailed customer cost analysis to establish customer charges. Finally, I described how low-income customer issues are not a factor in determining the SGS customer charge.[8]

[8] OSBA Statement No. 1, pages 7-9.

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE SGS CLASS CUSTOMER CHARGE RELATED TO THE COSS, REVENUE AND COST RECOVERY?

A. Yes. The Company disagrees with my recommendation to keep the SGS customer charge at $22.00 per month. First, the Company believes that its COSS provided the information necessary to evaluate the customer-related costs supporting the proposed customer charge, and the fact that it wasn't presented in a format that was easy to evaluate should not matter. Second, the Company believes that its proposal better advances more cost-reflective rates by recovering a greater portion of customer-related fixed costs through the monthly customer charge. The Company attempts to support this broad statement by claiming that a higher customer charge is reasonable because of how fixed costs are caused and incurred. Third, the Company believes that a higher customer charge represents a reasonable balance among the various objectives of rate design, including cost causation, fairness, customer impacts, and revenues. Fourth, the Company believes that the SGS customer charge is below the customer costs derived in the COSS. Fifth, the Company states that I did not identify any specific cost that is improperly included in the Company's customer cost analysis, nor did I demonstrate that the customer-

related costs reflected in the COSS are unreasonable[9].

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIRST CLAIM THAT IT PROVIDED THE NECESSARY INFORMATION TO EVALUATE CUSTOMER RELATED COSTS IN THE ORIGINAL FILING?

A. First, Mr. Taylor provided no citation for his claim regarding this information. Therefore, it's not possible for the Commission to verify Mr. Taylor's claim. Second, I am advised by counsel that the burden of proof lies with the Company. Therefore, it's not the responsibility of the OSBA or any other party to dissect the COSS and compile an appropriate customer cost analysis to verify the Company's claims. Third, given the chance to provide a one or two page customer cost summary, the Company decided that one is not necessary. With no COSS reference to any cost breakdown, the Commission is left to speculate and trust the Company as to what costs are included the two customer cost components. The first component being the Distribution On-site at $33.15 per month and the second

[9] Peoples Statement No. 17-R, pages 22-27.

component being the Accounts and Service at $9.92 per month for a total of approximately $43.06 per month per SGS customer.[10]

Q. HOW DO YOU RESPOND TO THE COMPANY'S SECOND CLAIM CONCERNING THE RECOVERY OF CUSTOMER RELATED COSTS THROUGH THE CUSTOMER CHARGE?

A. The Company provided over 7 pages of rebuttal testimony claiming that the SGS customer charge does not recover all the SGS "customer-related" costs. The Company is attempting to improperly claim that "customer-related" costs should be used to support a higher customer charge without providing a breakdown of these "customer related" costs. Just because the Company believes that a cost is "customer related" does not make that a cost recoverable in the customer charge.

Q. HOW DO YOU RESPOND TO THE COMPANY'S THIRD CLAIM THAT A HIGHER CUSTOMER CHARGE REPRESENTS A REASONABLE BALANCE AMONG THE VARIOUS OBJECTIVES, INCLUDING FAIRNESS, CUSTOMER IMPACTS, AND REVENUE STABILITY?

---

[10] Peoples Volume 4, Exhibit No. 11, page 18.

A. First, while the Company believes a higher customer charge satisfies its "reasonable balance" objectives and leads to a fairer rate structure, the Company has not demonstrated how it's reasonable and fairer to charge customers more per month before that customer uses any gas. Second, these criteria should not be the primary determination for establishing a customer charge. While customer impact is a concern, the customer charge should be based upon a customer cost analysis that if done properly will establish a reasonable balance, be fair, and limit the impact on the customer that the Company desires. Third, the Company's future revenue stability should not be a factor in determining the proposed customer charge. The Company has many opportunities to stabilize future revenue other than a higher customer charge including but not limited to the weather normalization adjustment, adding new customers, and adding new volumes. Finally, these issues or concerns are either not a factor and/or do not supersede the importance of a proper customer cost analysis to support a proposed customer charge.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FOURTH CLAIM THAT THE PROPOSED CUSTOMER CHARGE IS BELOW THE CUSTOMER COSTS?

A. As described above and in my direct testimony, since the Company failed to provide a breakdown of the appropriate customer costs, it's not possible to determine if the Company's proposed SGS customer of $32.14 per month is below the appropriate customer costs.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIFTH CLAIM THAT SINCE I DID NOT IDENTIFY ANY CUSTOMER COSTS THAT SHOULD BE EXCLUDED, THE COMPANY'S SGS CUSTOMER CHARGE SHOULD BE APPROVED?

A. As described above and in my direct testimony, it was not possible for me to determine the individual components that the Company believes are "customer related". Therefore, it was not possible for me to address individual cost components.[11].

Q. DID THE COMPANY ALSO ADDRESS YOUR RECOMMENDATION CONCERNING THE SGS CLASS CUSTOMER CHARGE RELATED TO CONSERVATION?

---

[11] OSBA Statement No. 1, page 6.

A. Yes. First, the Company believes that the proposed customer charges are not based on any single rate design objectives but consider many things including conservation. Second, the Company believes that its customer charges do not eliminate the incentives for customers to conserve. Third, the Company believes that placing too much emphasis on conservation in designing customer charges risks shifting fixed customer-related costs into volumetric delivery rates. Fourth, the Company speculates on price signals and customer behavior, stating customers will behave differently if fixed distribution costs are recovered in usage rate. Fifth, the Company believes that energy efficiency can still be promoted through volumetric delivery rates, and targeted conservation programs without compromising the appropriate recovery of customer related fixed costs. Sixth, the Company believes that conservation leaves fixed costs that will not be recovered in the future if they are not recovered in the proposed customer charges. Finally, the Company believes that the customer charge is intended to recover a portion of the costs that do not vary with usage[12].

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIRST CLAIM CONCERNING HOW THE COMPANY CONSIDERS CONSERVATION?

[12] Peoples Statement No. 17-R, pages 27-30.

A. I disagree with the Company. I believe that the Company's proposal reduces the customer's incentive to conserve. As I stated in my direct testimony: "A customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate structure with a higher customer charge and lower usage rate"[13]. It should be noted that the Company did not directly dispute this fact, only claiming other issues described below should be considered.

Q. HOW DO YOU RESPOND TO THE COMPANY'S SECOND CLAIM THAT ITS PROPOSAL DOES NOT ELIMINATE THE CUSTOMER'S INCENTIVE TO CONSERVE?

A. I never stated that the Company's higher SGS customer charge eliminates the customer's incentive to conserve. My testimony is that higher customer charges and lower usage rates provide <u>less</u> of an incentive for the customer to conserve.

Q. HOW DO YOU RESPOND TO THE COMPANY'S THIRD CLAIM CONCERNING THE RISK OF SHIFTING THE RECOVERY OF COSTS TO THE USAGE RATES?

---

[13] OSBA Statement No. 1, page 9.

A. Any perceived risk of lower usage through conservation should not be a factor in determining a proper customer charge. As described above, the Company has many ways to stabilize usage revenue.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FOURTH CLAIM CONCERNING CUSTOMER BEHAVIOR?

A. I don't believe that customers are concerned about how the Company's fixed costs are recovered. As described above, I believe that customers will have a greater incentive to conserve and achieve a lower bill through conservation, if the customer charge is lower and the usage rates are higher. Therefore, keeping the SGS customer charge at $22.00 per month will create a greater incentive for SGS customers to conserve.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FIFTH CLAIM THAT ENERGY CONSERVATION CAN STIL BE ACHIEVED WITH A HIGHER CUSTOMER CHARGE AND OTHER PROGRAMS?

A. As described above, and in my direct testimony, customers will have a greater incentive to conserve with a rate structure that includes a lower customer charge since a customer will experience greater savings through conservation under a rate structure with a lower customer charge and higher usage rate compared to a rate

structure with a higher customer charge and lower usage rate. A greater incentive to conserve will generally lead to a more successful conservation program.

Q. HOW DO YOU RESPOND TO THE COMPANY'S SIXTH CLAIM THAT CONSERVATION LEADS TO THE UNDER RECOVERY OF FIXED COSTS IN THE FUTURE?

A. First, a properly established customer charge will recover the appropriate customer costs. However, since the Company failed to justify its higher customer charge with a proper customer cost analysis, the Commission has no way of knowing what People's customer costs are. Therefore, if the Company does not recover "customer related" costs in the future, it's only because it failed to provide an appropriate customer cost analysis in this case. Second, as described above, the Company has various methods to stabilize usage revenue and recover fixed costs in the future. Third, the use of a Fully Projected Future Test Year in cases like this allows the Company to project usage declines in rates before the decline occurs[14]. Finally, the Company stated that it will likely file a base rate case in 2 years or less[15]. A rate

[14] Peoples Statement 17, page 9.

[15] Peoples Statement 2-R, page 39.

case that soon will allow the Company to reflect recovery of any fixed costs not being recovered in the final usage rates fairly quickly.

Q. HOW DO YOU RESPOND TO THE COMPANY'S FINAL CLAIM THAT A CUSTOMER CHARGE SHOULD RECOVER A PORTION OF THE COSTS THAT DO NOT VARY WITH USAGE?

A. I disagree with this broad statement. I believe a customer charge should only recover the direct customer costs that vary with the addition or loss of a customer, plus some limited indirect customer costs the Commission has allowed in past cases. The overly inclusion notion that a fixed costs is automatically a customer costs should be rejected by the Commission.

Q. DO YOU CONTINUE TO RECOMMEND THE CURRENT SGS CUSTOMER CHARGE OF $22.00 PER MONTH NOT BE INCREASED

A. Yes. Since the Company failed to provide any valid reason for increasing the SGS customer charge, I continue to recommend that the present SGS customer charge of $22.00 per month for customers that use between 0 and 499 Mcf per year should not be increased.

FUTURE COST OF SERVICE STUDIES

Q. WHAT CURRENT CLASSES ARE INCLUDED IN THE COMPANY'S COST OF SERVICE STUDY?

A. The Company's COSS includes the Residential (R), Small General Service (SGS), Medium General Service (MGS), Large General Service (LGS) and Mainline Service (MLS) classes.[16]

Q. WHICH CLASSES INCLUDE CUSTOMERS THAT HAVE RATES THAT ARE NEGOTIATED, TYPICALLY REFERRED TO AS COMPETITIVE DISCOUNT CUSTOMERS?

A. The SGS, MGS, LGS, and MLS classes all include customers where the rates are negotiated.[17]

Q. DID YOU PROVIDE DIRECT TESTIMONY CLAIMING DISCOUNT CUSTOMERS IN THE CLASS SKEWS THE RESULTS OF THAT CLASS?

[16] Peoples Volume IV, Exhibit 11, page 14.

[17] Peoples Volume 9, Exhibit JDT-4 pages 1-5.

A. Yes. Granting negotiated rates to customers within a class results in a revenue shortfall for that class. Then under proposed rates other customers in that class pay higher rates to make up for the revenue shortfall in that class. Under this scenario, the true cost of providing service to tariff rate customers in these classes is higher than it otherwise would be.[18]

Q. WHAT DID YOU RECOMMEND THE COMPANY DO IN FUTURE COST OF SERVICE STUDIES?

A. I recommended that in future COSSs, the Company separate the negotiated customers and corresponding revenue into a separate "Negotiated" class[19].

Q. WHY DID YOU RECOMMEND THE COMPANY SEPARATE THE NEGOTIATED CUSTOMERS AND CORRESPONDING REVENUE FROM NEGOTIATED CUSTOMERS INTO A SEPARATE CLASS?

A. As described above, and in my direct testimony, this recommendation enables the Commission and interested parties to determine the true cost of providing tariff

[18] OSBA Statement No. 1, page 10.

[19] OSBA Statement No. 1, page 10.

rate service to each of the remaining classes without the lower revenue from customers that pay negotiated rates skewing the results of each class in the COSS.[20]

Q. WHAT OTHER SUPPORT DID YOU PROVIDE FOR MAKING THIS RECOMMENDATION?

A. I described how Columbia Gas Company of Pennsylvania separates Flex Rate customers into their own class.[21] I also described how Pennsylvania America Water currently separates Bulk Contract customers into their own class in the Sanitary Sewer System Operations.[22]

Q. DID THE COMPANY ADDRESS YOUR RECOMMENDATION CONCERNING THE SEPARATION OF NEGOTIATED CUSTOMERS INTO THEIR OWN CLASS IN FUTURE COSSs?

---

[20] OSBA Statement No. 1, pages 10-11.

[21] Docket No. R-2025-3053499, Columbia Exhibit 111, Schedule 1.

[22] Docket R-2025-3058051, PAWC Exhibit 12-B, Schedule B, OSBA Statement No. 1, page 11.

A. Yes. Mr. Taylor believes that this is "one reasonable approach" that could be considered in future cases. However, Mr. Taylor also states that this recommendation demonstrates that the current COSS and rate design proposals in this proceeding are reasonable.[23] Mr. Ravenstahl believes that it is unlikely that flex rate customers will have the same usage patterns, making it difficult to group them into one class.[24]

Q. HOW DO YOU RESPOND TO MR. TAYLOR'S REBUTTAL TESTIMONY CONCERNING FUTURE COST OF SERVICE STUDIES?

A. It appears that the Company does not object to my recommendation concerning future COSSs. Therefore, my recommendation to require the Company to separate the negotiated customers into a separate class should be approved. Furthermore, since the Company failed to dispute or respond to my testimony describing how other utilities separate negotiated customers into their own class demonstrates that my recommendation is reasonable and should be approved.

[23] Peoples Statement No. 17-R, page 19-20.

[24] Peoples Statement No. 8-R, page 8.

Q. HOW DO YOU RESPOND TO MR. TAYLOR'S REBUTTAL TESTIMONY CONCERNING THE CURRENT COST OF SERVICE STUDY AND RATE DESIGN?

A. Mr. Taylor takes the leap that my recommendation demonstrates the current COSS and rate design are reasonable. This was not the intent of my testimony. Just because I did not recommend any changes to the current COSS does not mean that I entirely support the Company's rate design as filed. My recommendation concerning negotiated customers only addressed future COSSs.

Q. HOW DO YOU RESPOND TO MR. RAVENSTAHL'S REBUTTAL TESTIMONY CONCERNING COST CAUSATION?

A. Mr. Ravenstahl is correct that the factors in a COSS should be determined by cost causation. However, he only speculates that negotiated customers result in different cost causations.

Q. DID MR. RAVENSTAHL'S PROVIDE ANY SUPPORT FOR HIS NOTION THAT NEGOTIATED CUSTOMERS HAVE DIFFERENT COST CAUSATION PATTERNS?

A. No. First, I believe it's more reasonable to assume that negotiated customers are large customers that are not weather sensitive and have relatively stable usage

throughout the year. Second, the Company would be free to divide the negotiated customers into two or more groups such as large/small, or steady/peak if that is appropriate. This will address Mr. Ravenstahl's concern.

Q. DO YOU CONTINUE TO RECOMMEND THAT THE NEGOTIATED CUSTOMERS BE SEPARATED INTO THERE OWN CLASS IN FUTURE COST OF SERVICE STUDIES?

A. Yes. Since the Company did not state that it was not possible to separate negotiated customers into their own class, and for the reasons stated above, the Commission should approve my recommendation.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

PREPARED DIRECT TESTIMONY OF PATRICK M. CICERO

I. Introduction and Background

Q: Please state your name, occupation, and business address.

A: My name is Patrick M. Cicero. In my role as Of Counsel at the Pennsylvania Utility Law Project (PULP), I have a broad range of responsibilities to PULP and its clients. For example, I provide analysis and testimony on utility matters for clients who are represented by members of the statewide legal aid network, including clients of PULP and other legal aid offices. PULP's business address is 118 Locust Street, Harrisburg, PA 17101. I also maintain an office in my home.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA is concerned that the terms, conditions and rates for gas service proposed by Peoples Natural Gas Company LLC (Peoples or the Company) are neither just and reasonable nor affordable for Peoples' low and moderate income customers, particularly those who are either not enrolled in Peoples' Customer Assistance Program (CAP) or whose income places them outside of CAP eligibility. CAUSE-PA retained PULP to represent its interests. While other attorneys at PULP are representing the legal interests of CAUSE-PA, I have been asked to provide testimony about Peoples' overall rate increase request, including its rate design, its existing tariff provisions, its proposed tariff changes, and the overall adequacy of its policies, procedures, and programs that

are designed to ensure that Peoples' low income customers are able to afford and maintain gas service at just and reasonable rates.

My testimony focuses on the overall unreasonableness of the Company's revenue request, its requested return on equity of 11.25%, its rate design proposals, including its proposal to increase the fixed customer charge for Residential customers from $16.80 per month to $26.00 per month, a proposed increase of 55%. In addition, I provide testimony about why the Company's tariffed Weather Normalization Adjustment (WNA) should be disallowed as it is neither just nor reasonable even though over the last two years it has produced net credits for customers. I also provide recommendations about improvements that Peoples can make to its customer service and universal service programs, its allocation of universal service costs, as well as proposed changes to its tariff.

Finally, I provide recommendations about reform to Peoples' purchase of receivables program as well as other retail market reforms for residential customers served by retail natural gas suppliers given that residential customers have paid $51.9 million more, on net, to be served by the retail markets than they otherwise would have paid had all customers paid the default service price. Of this amount, the Company's Confirmed Low Income Customers have paid $7.4 million more than they otherwise would have paid had they been charged the default service price. Customers served by retail suppliers also had higher gross write-offs, which directly affect uncollectible expenses, and demonstrate a need for significant reform to rein in retail market abuses.

Q: Have you provided testimony before the Pennsylvania Public Utility Commission in any prior cases?

A: Yes. A full list of proceedings in which I have provided testimony is included on the last several pages of my resume which is attached hereto as Appendix A. In addition to those proceedings in which I have provided testimony, I have significant prior experience before the Public Utility Commission (PUC or Commission), including in my role as the statutory representative of consumers while serving as Pennsylvania's Consumer Advocate leading the Pennsylvania Office of Consumer Advocate.

Q: What are your qualifications to provide testimony in this case?

A: I have more than 23 years of experience as an attorney, 20 years of which have been in the practice of legal aid or consumer advocacy. After 2 years clerking for a federal district court judge, I spent approximately 5 years as a staff attorney at MidPenn Legal Services in Harrisburg where I represented clients facing eviction, foreclosure, bankruptcy, and utility termination. After returning briefly to clerk at the federal district court, in early 2011, I began working at the Pennsylvania Utility Law Project – first as a staff attorney and ultimately as its Executive Director. In 2020, I was hired to lead the statewide legal aid network when I became the Executive Director of the Pennsylvania Legal Aid Network where I coordinated the work of the legal aid system in Pennsylvania that provides civil legal aid to Pennsylvania's low income households. On December 13, 2021, I was appointed as the Commonwealth's Consumer Advocate leading the Office of Consumer Advocate (OCA) and was confirmed by the Pennsylvania Senate in June 2022. I served as the Consumer Advocate until January 31, 2025. In February 2025, I returned to work with PULP as Of Counsel. My entire career has been spent in public service with

most of it spent working to ensure that low income Pennsylvanians have access to safe, affordable, and reliable utility service and have access to justice when they are mistreated by competitive markets, utility companies, and housing providers.

Throughout my tenure in each of these roles, I have had the opportunity to see firsthand the extraordinary efforts that Pennsylvanians experiencing poverty must take to remain stably housed and connected to essential utility service. Every day, low income families are forced to make complex decisions about which bills they can afford to pay and which they must forgo. I have relevant experience helping low income consumers navigate these complexities and have assisted them in understanding their utility bills and rates, why their charges are what they are, and what assistance, if any, is available to them to help pay their bills.

Furthermore, for more than 15 years at PULP and the OCA, I was instrumentally involved in the litigation of hundreds of cases before the PUC including rate cases, default service cases, universal service and energy conservation proceedings, Act 129 cases, and numerous other proceedings that require working knowledge and expertise in the issues about which I will be testifying in this proceeding. Simply put, throughout my career both in legal aid and as the Consumer Advocate, I developed specialized expertise in the needs of low income customers, the regulation of public utilities, the nuanced design and policy considerations of utility rates, and the ways that our regulatory system often fails the very consumers it is designed to protect by prioritizing the needs of public utilities over the needs of the utility's customers. There is a significant imbalance of power between utilities and consumers which has resulted in utilities increasing rates at a significant pace. It has also resulted in utilities implementing more complex rates and rate designs. Taken

together, this means that consumers, particularly low income and moderate income consumers, are now more than ever struggling to understand the complexity of their utility bills, including how they are calculated each month, and what they can do to rein in the ever-increasing costs to allow them to afford and remain connected to essential utility service.

Q: Have you prepared Appendices and Exhibits to accompany your testimony?

A: Yes. I have prepared several appendices that are attached to my testimony. As noted, Appendix A is my resume, the last several pages of which contain a list of proceedings in which I have previously provided testimony. Appendix B are the interrogatory responses that I have relied on throughout my testimony. Appendix C contains various labeled exhibits there were prepared by me or under my supervision.

Q: Do you have any preliminary matters to address?

A: Yes. Although I am an attorney, my role in this case is as a witness. I am not serving as counsel to CAUSE-PA or any other client in this proceeding. Throughout my testimony, I refer to decisions by regulatory agencies and courts as well as reference statutes and regulations, however, these statements are not my legal opinion and should not be confused with the legal opinions of the attorneys representing CAUSE-PA. Any reference or citation is merely to provide context and support for my opinion about the issues that I discuss in my testimony.

Q: Please summarize your conclusions and recommendations.

A: I recommend the Commission reject Peoples' request to increase its rates. If the Commission determines that a revenue increase is needed, the evidence shows that

Peoples would have sufficient revenue at a significantly lower rate of return than that which it requested in this case, and that it would nevertheless be able to provide safe and reliable service, cover its reasonably and prudently incurred expenses, and still have a reasonable opportunity to earn a fair rate of return on its investments. At current rates, the evidence shows that Peoples' low income and moderate income customers are significantly energy burdened, and that any rate increase will exacerbate that burden. Thus, more must be done to ensure that these households have access to affordable bills.

I also recommend that the Commission deny any increase in Peoples' fixed customer charge and recommend that the charge remains at its currently authorized level of $16.80 per month for residential customers. This recommendation is tied to the Commission accepting my recommendation that Peoples' Weather Normalization Adjustment (WNA) rider produces unjust and unreasonable rates as applied to all residential rate classes, and specifically its low income customers, and that the Commission should reject Peoples' WNA rider. If the Commission permits Peoples to continue its WNA, it should impose the additional conditions recommended in my testimony. If the WNA continues then I do not oppose a modest increase in the customer charge as recommended in my testimony. Finally, the Commission should accept my recommendations regarding necessary changes to Peoples universal service programs, changes to Peoples' purchase of receivables program and other recommendations that I am making concerning customer service and tariff changes.

II. Overview of Rate Request and Role of Regulation

A. Peoples' Rate Request

Q: Please describe Peoples' rate requests.

A: Peoples seeks to increase the rates of its customers by $163.2 million per year.[1] Of this amount, Peoples seeks to recover approximately $125 million or 76.6% of the proposed rate increase from residential customers.[2] For residential customers, this would result in an increase in rates of 14.3%.[3] On an individual customer basis, Peoples projects the monthly bill of a residential customer using 86 Mcf of gas each year would increase by $15.09 per month.[4] This would increase their monthly bill from $115.28 to $130.37 on average, which would be an annual increase of $181.13.[5]

Peoples seeks to collect its increased revenue requirement assigned to its residential customers through an increase in its residential customer charge and an increase in its volumetric charge. These increases are shown in Table 1, below.

Table 1 - Proposed Increase

Description	Current Rate	Proposed Rate	Increase ($)	Increase (%)
Customer Charge (per month)	$16.80	$26.00	$9.20	54.8%
Distribution Charge (per Mcf)	$5.3537	$6.6359	$1.2822	23.9%

In addition, Peoples seeks to update the WNA normalization methodology to rely on a 65-year regression-based method rather than its current average of 20-year

[1] Approximately $2.3 million of this amount will result from other revenue such as forfeited discounts, and additional revenue from Peoples methane gas gathering system. See Peoples' Filing Requirements, § 53.53.IV.B., Exhibit 11, Sch., 1 at 15, line 57 (herein after Allocated Cost of Service Study or ACOSS). Thus, the remaining $160.9 million Peoples proposes to allocate across its rate classes per its proposed ACOSS.
[2] Peoples Statement No. 17 at 28, Table 3; ACCOSS at 15, line 53.
[3] Id.
[4] Peoples Statement No. 17, Exhibit JDT-5 Bill Impacts.
[5] Id.

normalized weather and a 65-year regression.[6] The WNA was first authorized by the Commission in Peoples' 2023-2024 gas rate case at Docket No. R-2023-3044549.

Q: Why does Peoples indicate that it requires a rate increase?

A: According to Peoples witness Michael Huwar, Peoples requires an increase in rates so that Peoples can:

> [C]ontinue to provide safe and reliable natural gas service at a reasonable price to its customers while providing the Company with a reasonable opportunity to recover its costs and earn a fair rate of return on its capital investments in this proceeding. As such, approval of the Company's request herein will demonstrate to its investors that the Commission continues to support the Company's need for natural gas infrastructure modernization and investment, as well as the need for reasonable and predictable earnings to continue to operate its business.[7]

This statement is merely a summary of the applicable legal standard and cookie-cutter rationale that is provided in almost every utility rate case. Mr. Huwar also indicates that Peoples' projected infrastructure and investment spending necessitate this increase to allow it to replace aging and at-risk pipe, as well as deploy new meter technology.[8] However, the evidence in the record indicates that the level of the increase sought by Peoples is excessive. As I will discuss in further detail below, most of the increase sought in this case is related to the excessive and unreasonable return on equity sought by Peoples.

Peoples asserts that its current rates are inadequate given its projection of an increase to net utility plant of more than $1.4 billion, which at current rates would produce, without rate relief, an overall rate of return (ROR) of 5.99%.[9] This equates to a return on

[7] Peoples Statement No. 1 at 4:15-21.
[8] Id. at 9-11.
[9] Peoples filing requirements, Statement of Reasons. See also, Filing Requirements § 53.53III.A.17, Exhibit 2, Sch. At line 27.

common equity of 7.14% as of the end of the of the Fully Projected Future Test Year (FPFTY) on December 31, 2027. Peoples states that it requires a return on common equity of 11.25%[10], which is 411 basis points higher than what it projects to earn and which includes a twenty-five basis point (0.25%) adder for Peoples' management performance. Peoples also seeks to use its equity-skewed capital structure for purposes of setting rates comprised of 54.47% equity and 45.43% debt.[11] Combined, Peoples seeks an overall rate of return of 8.23%.[12] The combined effect of this is that the return on equity (ROE) adjustment alone equals approximately $165.5 million which means that, all other things being equal, that without increasing the ROE in this case, Peoples' revenue requirement is $2.3 million per year higher than they would otherwise need to be.[13] While I am not proposing a rate decrease in this case, this is important context as it demonstrates that this case is about increasing the ROE for Peoples' shareholders and must be balanced with the ability of Peoples customers to be able to afford any increase. I address this balance between the needs of Peoples customers and the needs to its shareholders in more detail throughout my testimony, but it is one of the core functions of the Commission's job in setting rates that are no higher than necessary.

B. Role of the Regulation

Q: What is the role of the Public Utility Commission in this case?

A: If you are a residential customer who lives in Peoples' service territory and you need gas distribution service, you must buy it from Peoples at the prices set by the

[10] Peoples Statement. No. 15 at 4-5, Figure 1.
[11] Id. at 5:10-13.
[12] Id. at 6, Figure 2.
[13] This calculation was made by inputting the calculated ROR of 5.99% into Line 2, Peoples Exhibit 2, Sch. 4, Page 4 of 5. Revenue Requirement from Line 1, (Adjustments Column) Exhibit 2, Sch. 4. Page 2 of 5.

Commission. You cannot buy it from anyone else at any other price. Because its customers do not have a choice to buy gas distribution service from anyone else or at any other price, Peoples must receive the Commission's approval to increase its distribution rates. Consumers rely on the Commission to set rates that are fair, just, and reasonable and the Commission's job is to stand in the gap for consumers to protect them from a utility's monopolistic overreach. Peoples, like all monopolies with no competitors, is inclined to seek rates that are excessive and extractive. The Commission's job is to check this tendency and balance the interests and legal rights of consumers with the interests and legal rights of the utility. Overall, the purpose of rate regulation is to determine the just and reasonable rates necessary to support prudent investment that is in the public interest, and which allows a utility to earn a fair rate of return on its investment.

In addition, consistent with the Commission's suspension order in this proceeding, the Commission and parties have been charged with examining all Peoples' proposed and existing rates, rules, and regulations.[14] To fulfill this charge, the Commission must determine not only whether all rates sought (how much) and the chosen rate designs to collect that revenue (how those rates are collected) are just and reasonable, but must also consider the impact of rates on consumers.[15] This includes whether the programs designed to assist consumers of limited economic means are sufficient to allow them to continue to afford to maintain and access service on reasonable terms and conditions.

[14] Pa. P.U.C. v. Peoples Natural Gas Company LLC – Docket No. R-2026-3060855, Order at ¶¶ 1 and 4 (Order entered April 16, 2026).
[15] Federal Power Comm'n v. Hope Nat'l Gas Co., 320 U.S. 591, 603 (1944) ("[T]he fixing of 'just and reasonable rates', involves a balance of the investor and consumer interests.").

Q: Why must the Commission consider the impact to customers in making its determination about the appropriate rate increase?

A: As noted, it is the Commission's job to restrain the monopolistic tendencies of public utilities.[16] Having only one provider of gas distribution service is an intentional system design because multiple companies running mains, pipes, and meters to deliver gas to customers within a geographic area would be inefficient, disruptive, and costly. Thus, in exchange for the right to serve customers without competition for its services, and the requirement and duty to provide service to all customers, gas utilities like Peoples submit to price regulation by the Commission, including oversight as to rates and service quality. In exchange, the Commission must permit Peoples to recover its prudently and reasonably incurred costs, including its cost of debt, and allow it the *opportunity* – though not a guarantee – to earn a fair rate of return on its shareholder investments. This is generally what is referred to as the regulatory compact.

Q: Is the regulatory compact a legal concept?

A: No, it is a public policy concept, but the Commission has statutory authority and discretion to enforce the regulatory compact through the Public Utility Code. Traditionally, this is done through cost-of-service ratemaking that allows a utility the opportunity to earn

[16] This principle, that it is the job of the PUC to restrain the monopolistic tendencies of public utilities is not new or novel, but rather foundational to the role of regulators. The PUC recently reaffirmed this principle in its Fully Projected Future Test Year Final Rulemaking Order when it said: "Inherent in the 'cost of providing service' principle of ratemaking is the recognition that public utilities are natural monopolies and that the PUC's oversight through cost-of-service ratemaking regulation serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge in the absence of price regulation." Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available at: https://www.puc.pa.gov/pcdocs/1874340.pdf (hereinafter "FPFTY Final Form Order"). (Last visited June 14, 2026).

its allowed rate of return through effective and efficient management. When done correctly, this benefits both customers and the utility.

Q: Please explain.

A: Traditional cost of service ratemaking serves as a substitute for the beneficial aspects of competition because it sets rates only on a forward-going basis.[17] In a competitive market, a business is not guaranteed a profit, instead it must operate efficiently and control its costs. With traditional ratemaking, this is the same pattern for a utility. Rates are set at a point in time, based on the known and measurable costs and need for revenue by the utility, and then only on a forward-going basis. Once set, the rates are fixed until changed by the Commission in subsequent rate cases. This practice encourages the utility to operate efficiently because it cannot increase rates again without Commission permission. As a result, a utility faces the risk of under recovery due to normal business risks and management underperformance. This lack of any guaranteed revenue is a significant and important protection that traditional cost of service ratemaking provides to consumers.

Q: Do we have traditional cost of service ratemaking in Pennsylvania?

A: In part, yes, but Pennsylvania has modified traditional cost of service ratemaking in several ways, all of which reduce lag and risk for the utility and place more of that risk onto consumers. I will discuss three which are relevant to this case:

- Use of Future Test Year or Fully Projected Future Test Year (FPFTY) for setting rates to reduce regulatory lag between plant investment and recovery;[18]

[17] See FPFTY Final Form Order at 4.
[18] 66 Pa. C.S. § 315(e).

- Utilities can propose and the Commission can approve alternative ratemaking methodologies such as the WNA;[19] and,
- Approval of a distribution system improvement charge (DSIC) to collect additional revenue over and above the authorized revenue requirement between rate cases.[20]

Each of the above modifies the traditional paradigm and shifts the risk of under recovery of the authorized revenue requirement from the utility to its customers in ways that are often subtle but cumulatively add significantly more certainty to a utility's bottom line. This shift also minimizes the incentive for a utility to operate efficiently as compared to the regulatory lag inherent in traditional ratemaking based on historic test years. Despite offloading risk, Peoples is still demanding a return that is excessive when viewed from the lens of a customer's ability to afford rates charged.

Q: Please explain your concerns.

A: In general, I am concerned that Peoples' combined use of multiple alternative rate mechanisms has a compounding negative impact on consumers. First, there is the use of the FPFTY. As applied to this case, Peoples is projecting forward into the future what it believes its expenses, capital additions, and other costs will be as of December 31, 2027,[21] but is asking that rates be set as of the end of the suspension period, which is December 26, 2026,[22] on a prospective basis.

Peoples is not better at predicting the future than any other person or business. It is making projections about what the world will be like at the end of December 2027, but it

[19] 66 Pa. C.S. § 1330.
[20] 66 Pa. C.S. § 1353.
[21] Peoples St. 2 (XX) at 2.
[22] S&I Order at Ordering Para. 2.

is permitted to charge rates ***as if*** those projections will in fact be true as of December 2026. This allows Peoples to over earn for at least a year from the date that rates are set because it sets rates based on net plant in service one year into the future. That is, it earns a return on rate both on rate base that it has placed into service ***and rate base that it projects that it will place into service.*** Because Peoples is allowed to set rates based on projections of utility plant in service by the end of December 2027, if it does not meet that goal, then customers end up paying rates for anticipated utility plant that was not actually placed into service. Either way, during at least the first year, ratepayers are overpaying. The same is true of other projections that Peoples makes in establishing its rates – such as use per customer, number of customers, operations expenses, and the whole array of issues that are decided in a rate case.

The cumulative effect of all of this is to reduce the risk of under collection for Peoples and shift it to consumers because consumers are, in effect, paying for the cost of providing gas distribution service based on the projection of those costs in the future – not as the costs exist when the rates go into effect. This reduces the lag associated with ratemaking for Peoples by placing more risk and cost onto consumers. In my view, Peoples' ability to charge rates ahead of when capital is invested and expenses are incurred should materially reduce the authorized return that the Commission allows because Peoples is already getting the benefit of its own future projections, thereby reducing regulatory lag in its collections. This reduced risk for Peoples should result in a lower ROE.

In addition, the use of WNA further reduces risk for Peoples and shares this risk with consumers. I discuss Peoples' WNA below in significant detail, but this mechanism allows Peoples to spread risks to consumers that were historically born by the Company. In the

absence of the WNA, if weather is warmer than normal and customers use less, Peoples receives less revenue. This incentivizes Peoples to accurately project usage and use an appropriate baseline for normalized weather when setting rates. However, if weather is colder than normal, Peoples bills for more revenue than it projected when setting rates. Thus, without the WNA, rates are set based on normalized weather but collected based on actual weather experienced by the customer at the time they are billed. With the WNA, rates are set based on normalized weather and billed based on normalized weather. This reduces variance for the utility and shifts risk that has traditionally been borne by the utility onto its customers. Peoples is held harmless because it always gets to collect based on normalized weather as opposed to actual weather at the time bills are rendered.

While it is true that if the weather is colder than normal, Peoples provides credit to customers because they used more gas service than was projected, this bi-directionality still means that the benefits and burdens of weather changes are shared between the utility and customers whereas in the past these risks and benefits were placed solely on the utility. Thus, the WNA allows Peoples to offload some of its risk to customers despite Peoples being the far more sophisticated party in the endeavor. In my view, like the use of an FPFTY, this lessening of risk should result in a lower ROE.

Third, Peoples has an approved Distribution System Improvement Charge (DSIC) that allows it to currently charge up to a 5% additional surcharge on billed distribution revenue once it reaches its fully projected future test year and its net plant in service number. Depending on how long Peoples stays out of rate cases in the future, this surcharge has the potential to result in significant additional dollars charged to residential customers. The ability of Peoples to charge a DSIC also shifts future risks onto consumers

because it reduces Peoples' risk that rates set in this case will be insufficient to meet its planned capital plant investments. This too should reduce the ROE required by Peoples on its overall ratemaking rate base because the DSIC surcharge will enable it to deploy capital over and above its base rates and earn a return of and return on that investment.

Taken together, each of these modifications to traditional ratemaking spread risk from Peoples to its customers and require substantial scrutiny by the Commission in its exercise of discretion in setting rates. All these modifications should result in a lower ROE than the Commission would authorize in their absence.

Q: Will you be addressing each of these issues further through this direct testimony?

A: No. I do not further address the use of an FPFTY or the DSIC. As to the projections for expenses and plant in service at the end of the fully projected future test year, I will defer to the statutory advocates and others in this case to address the prudency of those expenses and capital costs and whether they will be reasonably and foreseeably incurred. Although I am not challenging them in this case, I urge the Commission to exercise its own independent judgment and scrutinize these projections. It is imperative that the Commission only allow Peoples to recover prudently incurred expenses and rate base that is used and useful and to pay attention to the projections provided by statutory advocates and others in contrast to those of Peoples. It is critical for consumers that Peoples is not permitted to overestimate its expenses or plant in service numbers.

As to the DSIC, I do not address it further in this testimony. However, Peoples seeks to roll into rates significant amounts of DSIC spending. The Commission should not simply allow Peoples to roll this plant into rate base without a sufficient showing that

the expenditures were prudently incurred. Moreover, I would urge the Commission to remember the DSIC is a percentage-based charge and as a result, the amount Peoples collects in the future when DSIC is utilized is based on its billed distribution revenue amounts. The higher the approved rates in this proceeding, the more DSIC revenue Peoples can collect.

Q: Will you be addressing the WNA?

A: Yes. I address the WNA in Section V.B., of my testimony, as a component of People's proposed rate design and urge the Commission to discontinue the WNA.

III. Impact of the Proposed Rate Increase on Low Income Households

Q: What is the purpose of this section of your testimony?

A: To describe the impact that Peoples' existing rates and its proposed rate increase has on the ability of its low income customers to afford and maintain gas service to their homes.

A. Overview of Residential Rate Class

Q: Please summarize Peoples residential rate class.

A: Peoples has a general residential rate class Rate RS that serves both residential customers on default service and customers who have elected to receive gas commodity service from a natural gas supplier other than Peoples.[23] There is no material distinction between these two rate classes for purposes of cost allocation, either at the class level or in terms of the rate design.

[23] Peoples Natural Gas Company LLC, Tariff Gas—PA PUC NO. 49, Original Page No. 10.

Q: How do low income customers fit within this rate structure?

A: Most of Peoples' low income customers are not enrolled in its Customer Assistance Program (CAP) and thus are served under the same rates as all other general residential rate classes. Based on the data provided by Peoples in discovery, approximately 70% of its confirmed low income customers and 75% of its estimated low income customers are not enrolled in CAP, as shown in the table below:

Table 2: Low Income Customers Not Enrolled in CAP[24]

Estimated Low Income (ELI)	Confirmed Low Income (CLI)	CAP customers	Percent of ELI enrolled in CAP	Percent of CLI enrolled in CAP
144,131	120,602	32,388	22.5%	26.9%

Customers enrolled in Peoples's CAP pay a reduced bill that is the lesser of their monthly budget bill amount or a percentage of their income. CAP also provides other benefits such as the possibility of earning forgiveness of accrued arrears with each in full payment. Customers enrolled in CAP cannot be served by a competitive gas supplier and must remain on default service.[25] The difference between a CAP customer's CAP bill and a full undiscounted bill is recovered as CAP credits through Peoples' Universal Service Rider and charged to other residential customers.[26]

[24] See Peoples Response to CAUSE-PA I-010(U) (listing 144,131 estimated low income customers as of December 31, 2025); Peoples Response to CAUSE-PA I-005(U), Attachment (U) (listing 120,602 confirmed low income customers with income at or below 150%); and Peoples Response to CAUSE-I-006(U), Attachment(U) (showing 32,388 customers enrolled in CAP with income at or below 150% as of December 31, 2025).

[25] I support this policy as it protects Peoples' low income customers enrolled in CAP, as well as other residential ratepayers who pay for the CAP program, from the consistently higher commodity costs charged in the competitive market. See Section IX, infra.

[26] See Peoples Natural Gas Company LLC, Tariff Gas—PA PUC NO. 49, Original Page No. 76, Rider Universal Service.

Q: How much of Peoples' requested $163.2 million annual rate increase is it proposing to allocate to residential customers?

A: Peoples is proposing to allocate approximately 76.62% of the increase or approximately $125 million to residential customers, with the remainder assigned to small business customers and medium and large industrial customers. Of this $125 million, I estimate that Peoples is seeking to require its confirmed low income customers to pay more than $23 million of the increase based on the fact that these customers comprise almost 19% of the residential customer class as of December 31, 2025.[27] Even this may be a low estimate because of the difference in usage between low income households and all residential customers.

Q: Why does it matter what percentage of the increase is functionally assessed to Peoples' low income customers?

A: As noted later in this section, low income customers who are not enrolled in CAP cannot consistently afford to maintain gas service even at the current rates being charged by Peoples, and they certainly cannot afford to pay rates at the increase sought by Peoples. However, Peoples' CAP participation rates are insufficient relative to the need. Furthermore, Peoples' CAP costs are currently only assessed to residential customers, even though all customer classes benefit when CAP customers remain connected to service, and thus, in my view, the allocation of any revenue increase across rate classes must consider the burdens imposed on those customers bearing the heaviest increase

[27] This calculation is based on residential customer count of 652,285 and a CLI count as of December 31, 2025, and a CLI count of 123,019 as that that same date. See Peoples Response to CAUSE-PA I-005(U) (CLI Count) and Peoples Response to CAUSE-PA I-007. Both attached hereto at Appendix B.

and those most at risk of being priced out of the market for essential gas services to their home.

Q: Are you taking a specific position on Peoples allocation of the rate increase?

A: Except for my proposal in Section VII below to reallocate universal service costs, I am not taking a specific position on the allocation of the overall revenue requirement across rate classes. That is, I am not taking a position on whether the cost allocation proposed by Peoples is methodologically sound. While a cost allocation guides allocation of the granted revenue requirement increase across classes, cost of service is only a guide not a master, and the Commission must consider other factors before finally allocating any granted revenue increase across customer classes. I encourage the Commission to follow the cost allocation proposed by the Office of Consumer Advocate (OCA).

B. Low Income Customer Demographics

Q: Who qualifies as a low income customer?

A: The term "low income customer" is defined in the Commission's regulations and includes any residential customer whose household income is at or below 150% of the Federal Poverty Level (FPL).[28] Most utility assistance programs – including Peoples' standard CAP program – require households to have low income to receive assistance;

[28] See 52 Pa. Code § 54.72 (Defining low income customers for the purposes of Universal Service programs and reporting).

however, there are some exceptions, including Peoples' E-CAP pilot program and its Hardship Fund, which allow customers with income up to 200% FPL.[29]

Q: Please describe the FPL.

A: The FPL is a measure of poverty based exclusively on the size of the household and its income. It does not consider the composition of the household (i.e., whether the household consists of adults or children, and the relative associated costs) or variations in the cost of basic needs in different geographic locations. A family of four with household income of exactly 150% FPL has a gross annual income of $49,500 ($4,125/month).[30] In addition, for a household of 4 to qualify for Peoples' E-CAP which is available to households up to 200% of the FPL, the household would need to have income less than $66,000.[31] This is significantly more income than most households who are receiving utility assistance. Peoples reports that the average annual income of its confirmed low income customers is $19,011,[32] and the average annual income of CAP customers is $16,295.[33] This is less than a household needs to meet their basic expenses in any of the counties in which Peoples provides gas service.[34]

[29] Peoples Natural Gas LLC Universal Service & Energy Conservation Plan, 2019-2024, Docket Nos. M-2018-30033177 and M-2020-3021343, at 6-7, 30.
[30] See US Dept. of Health & Human Services, HHS Poverty Guidelines for 2026, available at: https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines. (Last visited March 13, 2026). Attached to my testimony at Appendix C, Exhibit C-1 is a table from U.S. HHS that shows the 2026 FPL at different household sizes and multiples.
[31] Id.

[33] Peoples Response to CAUSE-PA I-016. Attached hereto at Appendix B.
[34] Self-Sufficiency Standard, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (Last visited June 15, 2026).

Q: Please explain what you mean when you say this level of income is less than a household needs to meet their basic expenses.

A: While the Commission utilizes FPL in its definition of "low income customer," this definition does not capture household income which is necessary to afford basic needs. A more accurate benchmark meant to assess how much income a household needs to live without assistance in Pennsylvania is the Self-Sufficiency Standard.[35] This Standard is a benchmark used to assess how much income a household needs to live without assistance in Pennsylvania. It measures the income that a family must earn to meet its basic needs and consists of the combined cost of six (6) basic needs – housing, child care, food, health care, transportation, and taxes – without the help of public subsidies.[36] Unlike the FPL, which does not change based on geographic location or family composition, the Self-Sufficiency Standard accounts for the varied costs of the six basic needs in different geographic areas and for differently aged household members.[37]

Based on the 2024 Self Sufficiency Standard, a family of four (consisting of 2 adults and 2 school-aged children) living in the counties served by Peoples requires an income ranging from $70,387 to $88,547.[38] This is approximately between $20,887 (42%) and $39,047 (79%) per year *more* than a four-person household with annual income at 150% FPL ($49,500) – the maximum amount permitted to be deemed low income by Commission standards.

[36] See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (Last visited June 15, 2026).
[37] Id.
[38] See Self-Sufficiency Standard, 2024 Pennsylvania Data Set, available at: http://www.selfsufficiencystandard.org/Pennsylvania (Last visited June 15, 2026).

Q: If the Commission does not use the Self Sufficiency Standard as a measure of eligibility for assistance, why is this information important?

A: It is important for context. The Self Sufficiency Standard helps illuminate the full scope of utility insecurity and the need for utility rates and rate design to not exacerbate the precarious financial position of Peoples customers who, while not considered low income by the Commission, nevertheless struggle to make ends meet each month. There are a substantial number of households that fall into this category. For example, in 2024, the last year for which data is publicly available for all of the counties Peoples serves, approximately 29.3% of all households had income *greater than* $50,000 annually but *less than* $100,000 annually.[39] This is approximately 191,090 of Peoples' residential customers.[40] These households are not eligible for financial assistance through CAP or LIHEAP, but generally struggle to afford to pay for all necessities – including utility service. Thus, these households must rely on the Commission to exercise its core function as the economic regulator of Peoples and restrain its monopolistic tendency towards excessive rates.

The simple reality is that the number of households in need of assistance and the amount of assistance needed per household is far greater than Peoples, the Commission, or many parties have historically acknowledged. Given that households subsisting at more than double the poverty level within Peoples' service territory cannot afford necessities, there is little to no chance that households at less than 150% of the poverty

[39] See U.S. Census Bureau, U.S. Department of Commerce. "Income in the Past 12 Months (in 2024 Inflation-Adjusted Dollars)." American Community Survey, ACS 5-Year Estimates Subject Tables, Table S1901, https://data.census.gov/table/ACSST5Y2024.S1901?t=Income+and+Poverty&g=050XX00US42003,42005,42007,42013,42019,42021,42031,42033,42051,42059,42063,42065,42073,42085,42111,42121,42125,42129 (Accessed and last visited on June 15, 2026).

[40] This figure is based on 29.3% of Peoples residential customer base of 652,024.

level can afford essential utility service without significant assistance. This fact must be considered by Commission in exercising its discretion over the authorized ROE, rate design, and overall revenue requirement – as well as programs and terms and conditions of service that help ensure universal access to service, which is at the heart of the regulatory compact.

Q: How does Peoples determine how many low income customers are in its service territory?

A: Peoples is required to track its low income customer population in two ways: (1) confirmed low income customers (CLI) and (2) estimated low income customers (ELI). In its 2025 Universal Service Reporting, Peoples reported 144,131 estimated low income customers to the Commission.[41] This number is derived using the most recent Household Poverty file provided by BCS to estimate Peoples' low income customer count. The percentages of each county (< 150%) are multiplied by the company's total count of residential customers.[42] As of December 2025, Peoples reported 123,019 confirmed low income customers.[43] This number includes all customers for which Peoples has obtained information that would reasonably place the customer within a low income designation, including self-identified low income, customers receiving LIHEAP in the past 24 months, and customers participating in CAP.[44] As of December 2025, Peoples reported 652,285 residential customers.[45] Thus, approximately 19% of Peoples' customers are likely to have income at or below 150% FPL.

C. Impact of Rate Increase on Low Income Households

Q: How would Peoples' proposed rate increase impact low income households?

A: Peoples' proposed rate increase would severely and detrimentally impact the ability of low income families to afford their monthly expenses and further hinder their ability to maintain gas service. Low income families already struggle to make ends meet each month and are forced to make untenable choices between affording utility services and other necessities – such as food, medicine, and housing.

To contextualize the impact of the proposed rate increase, it is helpful to look at the relative energy burden of low income households. To be affordable, a household's total housing costs – *including utility costs* – should account for no more than 30% of a household's total income.[46] According to formal Commission policy, to be considered affordable, rates should fall below the following energy burdens:

Table 3: PUC CAP Policy Statement Maximum Energy Burdens[47]

Income Level (% FPL)	Natural Gas Heating
0-50%	4%
51-100%	6%
101-150%	6%

Peoples' low income customers ***who are not enrolled in CAP*** have burdens that are significantly higher than these, and the proposed rate increase would materially increase the portion of low income household energy burdens attributable to their gas bill.

[46] U.S. Census Bureau, Nearly Half of Renter Households Are Cost-Burdened, Proportions Differ by Race, available at: https://www.census.gov/newsroom/press-releases/2024/renter-households-cost-burdened-race.html. (Last visited April 6, 2026).
[47] Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261-69.267

The Table below uses data provided by Peoples in discovery to analyze the burden impact for confirmed low income households not in CAP (Non-CAP CLI) monthly. This table uses 2023-2025 average (mean) usage data. I compare the 3-year mean bill at current rates versus the bill at proposed rates for each month. Using this same information, the last column shows the monthly percentage of income low income customers must allocate towards their gas bills at proposed rates.

Table 4: Impact Rate Increase Impact Non-CAP CLI Customers[48]

Month/Year	3 Year Mean (2023-2025) Non-CAP CLI Customers Mcf/Month	Bill at current rates ($)	Bill at proposed rates ($)	Percentage of Monthly Income Current Rates	Percentage of Monthly Income Proposed Rates	Increase in monthly income spent on Peoples' Bill current v. proposed
January	15.9	$234.39	$257.69	14.8%	16.3%	1.5%
February	15.3	$226.20	$248.94	14.3%	15.7%	1.4%
March	11.5	$173.92	$193.06	11.0%	12.2%	1.2%
April	7.8	$123.46	$139.12	7.8%	8.8%	1.0%
May	3.8	$68.91	$80.81	4.3%	5.1%	0.8%
June	2.0	$44.82	$55.06	2.8%	3.5%	0.6%
July	1.3	$35.72	$45.34	2.3%	2.9%	0.6%

[48] See Peoples Response to OCA IV-006, Attachment, 3-year Mean by Month 2023-2025, Attached hereto at Appendix B. Peoples Response to CAUSE-PA I-015, Average annual income of CLI customers, attached hereto at Appendix B. Calculations are contained in Cicero Workpapers distributed with testimony.

As shown in Table 4, if Peoples' proposal is approved, the annual gas bill energy burden for non-CAP confirmed low income customers with average income and average usage would increase materially in the winter and shoulder months, and by almost a full percentage point from 6.5% to 7.4% over the course of the year. The energy burden for these customers during the winter months is already far above what is considered affordable, and Peoples proposes to raise it even higher. The amount a low income household pays each month varies depending on their usage – just as it would for all residential customers. In January, when usage is highest, low income (non-CAP) households with average income and mean usage are charged as much as 14.8% of their income at current rates. At proposed rates, the average energy burden for these same households would increase 1.5 percentage points - to 16.3%. Note that these percentages should be compared to the maximum recommended burden of 6%. Thus, the energy burden for low income customers not enrolled in CAP is already far above what is considered affordable, and Peoples proposes to raise it even higher.

Q: In addition to high energy burdens, discussed above, is there other evidence that Peoples' low income customers struggle to afford gas services even before any rate increase is approved?

A: Yes. Peoples' low income customers carry a disproportionate amount of customer debt and are far more likely to have their service involuntarily terminated for nonpayment. If Peoples' proposed rate increase is approved, these pronounced disparities will increase, as will the risk of consequences to the health and safety of low income customers and their households and the corresponding level of uncollectible expenses which are recovered from all ratepayers. First, Peoples' low income customers have

markedly higher rates of service terminations for nonpayment compared to Peoples residential customers, as illustrated by the following Table.

Table 5: Involuntary Termination Rates (2024-2025)[49]

Year	All Residential Term. Rate[50]	Residential Term Rate Excluding CLI[51]	CLI Term Rate[52]	CAP Term Rate[53]
2024	3.6%	2.1%	10.2%	10.6%
2025	3.2%	2.0%	8.4%	6.5%

Table 4 shows that confirmed low income customers have a utility termination rate that is approximately 500% higher than residential customers who are not low income. Even low income customers in CAP have had a termination rate more than 500% higher than non-low income customers in 2024. Further, even though Confirmed Low Income customers are approximately 19% of the total residential customer base, they accounted for approximately 54.1% of terminations in 2024 and 49.3% in 2025.[54]

Troublingly, terminations of Peoples' CAP customers spiked dramatically in 2024. I reviewed the information that was presented in Peoples 2023 rate case. In his direct testimony in Peoples 2023 rate case, CAUSE-PA witness Harry Geller provided a similar

[49] Termination rates were calculated using the termination data in Peoples Response to CAUSE-PA I-012, (U2), Attachment, applied to the average number of customers in each category for each year. The CLI and CAP percentages excluded E-CAP customers whose income is between 151%-200%.
[50] Peoples Response to CAUSE-PA I-007, Attachment (for residential customer count). Attached hereto at Appendix B.
[51] Peoples Response to CAUSE-PA I-008(a), Attachment (for residential customers, excluding confirmed low income and CAP). Attached hereto at Appendix B.
[52] Peoples Response to CAUSE-PA I-005(U), Attachment (U) (for confirmed low income customer count). Attached hereto at Appendix B.
[53] Peoples Response to CAUSE-PA I-006(U), Attachment (for CAP customers count). Attached hereto at Appendix B.
[54] Peoples Response to CAUSE-PA I-012(U2), Revised Attachment, Attached hereto at Appendix B.

breakdown of Peoples termination rates, showing that, in 2023, Peoples had 1,500 CAP terminations and a CAP termination rate of approximately 5%.[55]

In 2024 those numbers more than doubled to 3,340 CAP terminations and a CAP termination rate of 10.6%, which was even higher than non-CAP confirmed low income customers.[56] While People's CAP terminations decreased to a 6.5% termination rate in 2025, the increase in CAP terminations is troubling since enrollment in CAP should be the most significant, preventative mechanism to reduce the rate of service loss for low income customers.

Q: Are there other indicators that Peoples' low income customers struggle to afford gas service?

A: Yes. Peoples' low income customers also carry higher levels of arrears compared to non-low income residential customers.

Table 6: Peoples Customer Arrearage Levels (2024-2025)[57]

	Residential	Residential w/o CLI	CLI w/CAP	CLI No CAP	CAP
2023 Avg.	$115.64	$73.83	$283.39	$319.95	$130.78
2024 Avg.	$86.44	$52.75	$218.01	$250.66	$92.87
2025 Avg.	$95.61	$64.77	$220.00	$257.33	$103.41

This data shows that low income customers have materially higher arrearage levels than those carried by non-low income residential customers who are not enrolled in CAP, this is shown in Table 7 below.

[55] See Pa. PUC v. Peoples Natural Gas, LLC, Docket No. R-2023-3044549, Transcript Exhibits HRG 5-9-2024, Exhibit 454, CAUSE-PA St. 1 Direct Testimony of Harry Geller at 14:1-5, Table 1 (Testimony Submitted March 22, 2024; Transcript Exhibits Submitted September 10, 2024).
[56] Peoples Response to CAUSE-PA I-012(U2), Revised Attachment, Attached hereto at Appendix B.
[57] Peoples Response to CAUSE-PA I-018(U), Revised Attachment (Average of all months). Attached hereto at Appendix B.

Table 7: Percent higher Average Arrears

	Confirmed Low Income (No CAP) vs. Residential Customers	Confirmed Low Income (No CAP) vs. Residential Customers (w/o CAP)
2023 Avg.	277%	433%
2024 Avg.	290%	475%
2025 Avg.	269%	397%

Taken together, these indicators demonstrate that Peoples' low income consumers already have acute affordability concerns and excessive energy burdens. They struggle to afford gas service leading to disproportionate arrearages and terminations rates. All of this will be compounded under Peoples proposed rates.

Q: Will Peoples' Customer Assistance Program (CAP) protect low income households from the financial impact of the proposed rate increase?

A: No. While Peoples' CAP is a critically important affordability program customers who are enrolled still have difficulty maintaining access to service as evidenced above by significant rates of utility termination in 2024 and 2025 for these customers. CAP is designed to improve payment compliance and reduce collection costs, but if households are having their service disconnected at significantly high rates then even enrollment in CAP is insufficient to ensure households maintain access to bills they can afford. I make targeted recommendations about a root cause analysis concerning the increased CAP termination rate later in my testimony.

I acknowledge that CAP customers are shielded from paying more than their percentage of income payment (PIP) amount given the construct of Peoples' CAP that calculates and bills each month the more affordable of the customer's PIP amount of their

budget bill.[58] The rate increase makes it more likely that customers budget bills will be higher than their PIP amount, thus likely increasing that which they have to pay each month. This is no trivial matter. Customers enrolled in Peoples CAP have extraordinarily little income. On average, these households average 2-3 people with average income of just $16,295 per year.[59] These households are between 60%-75% of the Federal Poverty Level.[60] By any measure, they are deeply poor and cannot afford even marginal increases in their utility bills.

Additionally, Peoples' CAP only works if households are in fact enrolled and Peoples' CAP is severely undersubscribed. Even though Confirmed Low Income customers are 19% of Peoples residential customers, CAP enrollment over the past 2 years has averaged only 4.9% of residential customers.[61] Furthermore, most Confirmed Low Income customers are not enrolled in CAP. As of December 2025, Peoples CAP enrollment was 35,226 for households at or below 150% of poverty but it had 120,602 Confirmed Low Income customers as to the same date.[62] This means that 85,376 customers (71%) that Peoples knows to be low income are not enrolled in CAP. These customers will feel the full weight of the rate increase without mitigation.

[58] Peoples Natural Gas Company LLC, Universal Service and Energy Conservation Plan (USECP) 2019-2024 at 5-9. CAP customers must pay a minimum of $25 per month (minimum bill).

Q: Does LIHEAP mitigate the harm of the proposed rate increase on low income households?

A: No. LIHEAP is a federal program designed as a supplement to assist households to better afford energy services, but the program only reaches a small fraction of eligible households and is not adequately funded to address existing unaffordability – let alone increased unaffordability because of increased rates. The program is subject to annual reauthorization and allocation of funding by the federal government, a fact brought into sharp focus by the recent federal government shutdown. The shutdown delayed the opening of the 2025-26 LIHEAP season by a month, throwing low income households into uncertainty as they faced the prospect of losing critical heating assistance.[63] Although the end of the federal government shutdown enabled the release of LIHEAP funding for the 2025-2026 LIHEAP season, the reality is that LIHEAP has never been adequately funded to eliminate Peoples' excessive low income termination, arrears, and energy burden levels – let alone mitigate the impact of Peoples' proposed rate increase. For the second year in a row, LIHEAP is proposed for elimination in the federal budget.[64] In my estimation, it is inappropriate to consider the potential availability of LIHEAP funds as a factor in setting rates.

Very few of Peoples' customers receive LIHEAP cash grants and that number has declined steadily over the past three program years. In the 2023-2024 program year,

[63] See Pa. Dept. of Human Services, Due to Federal Government Shutdown, Opening of the 2025-26 Low-Income Home Energy Assistance Program (LIHEAP) Season Delayed to December, available at: https://www.pa.gov/agencies/dhs/newsroom/due-to-federal-government-shutdown--opening-of-the-liheap-season. (Last visited March 29, 2026).

[64] Nat'l Energy Assistance Directors Association (NEADA), Press Release: President's FY 2027 Budget Eliminates Federal Funding for LIHEAP (Apr. 3, 2026), https://neada.org/wp-content/uploads/2026/04/PresidentBudget2027Response.pdf.

24,317 customers received cash grants.[65] That number reduced to 22,585 in the 2024-2025 and reduced even further to 20,847 in the 2025-2026 season.[66] Further, while LIHEAP is a critically important program and provides life-sustaining assistance to those in need, the program is only intended to provide supplemental assistance and is not enough to mitigate the financial harm of a rate increase. Peoples' proposed rate increase, if authorized, will also consume a substantial portion of LIHEAP assistance currently received by its customers. In the 2025-26 LIHEAP program year, the average Cash grant received by Peoples customers was $376.74.[67] Under Peoples' proposed rate increase the average residential heating customer bill will increase by $16.03 per month per month, or $192.36 annually.[68] Thus, Peoples' proposed increase would consume 51% of the LIHEAP grant to a typical gas consumer.

Q: Do you have any proposals that could help remediate the impact of Peoples proposed rate increase on low income customers?

A: Yes. I have several recommendations to help mitigate the impact of Peoples' proposed rate increase on low income households. As outlined more fully below, the Commission should deny Peoples' requested rate increase at the level requested. The evidence shows that it has sufficient revenue at a significantly lower overall rate of return to earn and provide safe and reliable service. Based on the evidence in this case, the Commission should reduce the requested ROE. While I am not making a recommendation about the specific ROE that should be authorized, I outline several reasons why a significantly lower ROE would be reasonable. I recommend that to

[65] Peoples Response to CAUSE-PA I-009, Attachment. Attached hereto at Appendix B.
[66] Peoples Response to CAUSE-PA I-009, Attachment. Attached hereto at Appendix B.
[67] Peoples Response to CAUSE-PA I-009, Attachment. Attached hereto at Appendix B.
[68] Peoples Statement No. 1 at 3:11-12.

establish an authorized ROE, the Commission should consider the principles outlined by Governor Shapiro, as well as the specific ROE recommendations made by other parties. I also recommend that the Commission adjust the Company's capital structure for ratemaking purposes. I will explain my rationale for both recommendations below. Both would have an immediate and tangible impact on the overall revenue requirement. I make recommendations below about how to structure Peoples' rate design and how to spread the cost of the universal service programs to all ratepayers thus reducing the burden on residential ratepayers, including low and moderate income customers.

IV. Revenue Requirement and Rate of Return

Q: Please describe this section of your testimony.

A: In this section of my testimony, I am recommending that the Commission deny Peoples rate increase. The record demonstrates that even in the absence of an increase, it has sufficient revenue at present rates to maintain safe and reliable service for its customers and has a reasonable opportunity to earn a fair rate of return. Alternatively, if the Commission nevertheless determines that a rate increase is needed, it should award an increase that is significantly lower based on a reduction of Peoples authorized return on equity. While I am not making a specific ROE or revenue recommendation, I do model a return based on the principles outlined by Governor Shapiro. This would produce a required revenue *decrease* of $1.6 million or, with an imputed 50/50 capital structure, would produce an authorized revenue increase of no more than $9.5 million. Both are based on an ROE of 7.68%.

Q: Please discuss the reasons why you do not believe that a rate increase is warranted.

A: There are several metrics that demonstrate Peoples has healthy revenue, access to capital, and sufficient returns. First, over the last five years, Peoples has had healthy net income from its operations totaling approximately $1.2 billion from 2021-2025.[69] Peoples projects net income as of the end of December 2026 to be an additional $261.9 million.[70] It is not capital starved.

This income was undoubtedly fueled by the actual returns on equity that Peoples has been earning over this period. Peoples has never had an actual calculated ROE that was lower than 9.28% and often had returns that were significantly higher.[71] The Table below shows Peoples' average actual ROE for the quarters reported each year.

Table 8 Peoples' Average Calculated Return on Equity[72]

Year	Average Annual Calculated
2021	12.90%
2022	14.20%
2023	10.21%
2024	10.49%
2025	11.55%

The facts are clear: Peoples is earning year in and year out significant profits begotten by significantly high ROEs.

[69] See Peoples Response to OCA II-023, Attachment (Peoples Monthly Income Statement).
[70] Peoples Filing Requirements, §53.53.II. A, Exhibit 16, Sc. 5.
[71] See Pennsylvania Public Utility Commission, Report on Quarterly Earnings of Jurisdictional Utilities for years 2021-2025. Available at: https://www.puc.pa.gov/filing-resources/reports/quarterly-earnings-summary-reports/
[72] Id. Some quarters where not reported in 2023 and 2024 because Peoples was in for a rate case during that period.

Q: These are past results, and Peoples is making its claim based on a fully projected future test year. Why are past returns relevant?

A: Because it frames the request that is at issue here. It should be material to the Commission's decision-making that in the year immediately preceding the filing of this case, Peoples was earning a return on equity of 11.55%. Additionally, *at current rates*, Peoples projects net income of more than $261 million in the *current year* ending December 30, 2026.[73]

For its part, Peoples wants to look past the fact that it has had significant net income, profit, and high ROEs at present and over the past several years and focus only on its projections into the future. That is the nature of future-based ratemaking that is reliant on projections developed by the Company and for the benefit of the parent Company. However, given the extraordinary hardship that Peoples residential customers are facing because of acute and real affordability concerns, as outlined above in my testimony, the Commission cannot look past the present reality of Peoples' robust financial condition in deciding whether to grant a rate increase. Myopically focusing on Peoples' future profits, but not its customers' financial status and ability to pay, would skew the Commission's analysis. If one looks to December 2027 for Peoples' low income customers, the picture is as bleak financially given pending rate increases in this case.

Q: Even focusing on the end of the FPFTY, what does Peoples project to earn?

A: If rates are not increased, Peoples projects that it will yield an overall rate of return of 5.99%[74] which equates to a return of common equity (ROE) of 7.14% at current rates.[75]

[73] See Peoples Filing Requirements, §53.53.II. A, Exhibit 16, Sc. 5.
[74] See Peoples' Filing Exhibit 2, Schedule 4, Page 2 of 5, Line 27.
[75] This was calculated at the Company's capital structure.

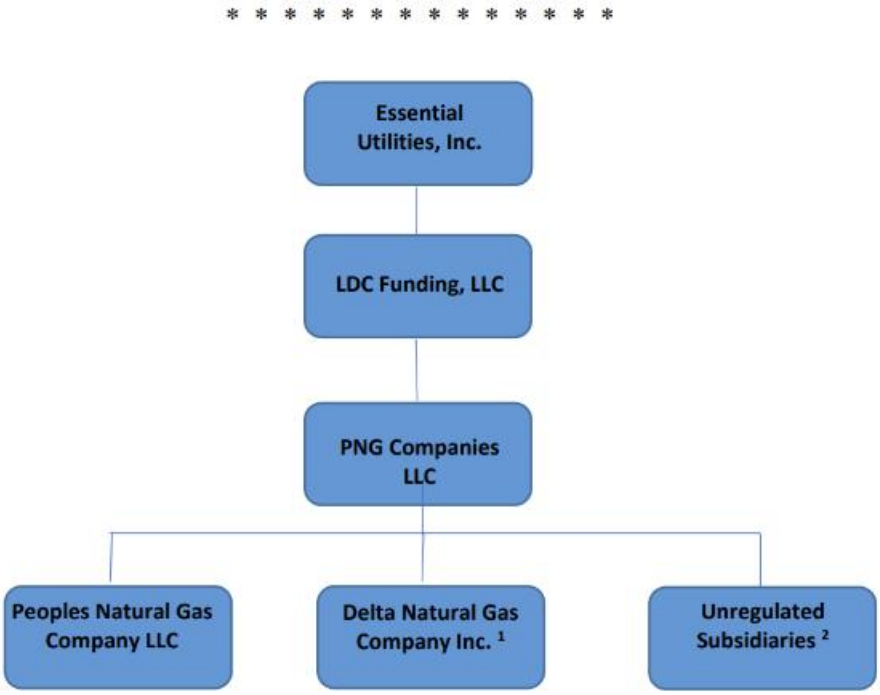
Table 9: Pro forma ROE at Present Rates without an increase

Capitalization as of December 31, 2027			
	Component as % of Capital	**Cost Rate**	**Weighted Cost Rate**
Long-Term Debt	45.53%	4.61%	2.10%
Short-Term Debt	0.00%	5.40%	0.00%
Common Equity	54.47%	7.14%	3.89%
Total Capitalization	**100.00%**		**5.99%**

Critically, Peoples appears to be well capitalized in that it has sources of capital from its parent company, PNG Companies, LLC, it has retained earnings, working capital liquidity from its parent, and long term debt from its parent.[76] It has strong cash flow and access to capital. Importantly, neither Peoples nor its direct parent is subject to capital markets.[77] Peoples' corporate structure is shown in the chart below, but its significance is that for both debt and equity, Peoples relies on its great-grandparent, Essential Utilities, which has not needed to flow equity infusions down to the Peoples operating company level since 2018.[78]

[76] Peoples Response to OCA I-011, Attached hereto at Appendix B.
[77] Peoples Response to OCA II-027, Attached hereto at Appendix B
[78] Peoples Response to OCA II-027, Attached hereto at Appendix B

Chart 1: Corporate Structure[79]



All of these metrics suggest that the internally generated cash from its operations and the ability to get revenue infusions as needed from its parents – including equity, debt, and short term liquidity – mean that Peoples has sufficient revenue and will have sufficient access to capital without a rate increase and that it can maintain safe and reliable service at existing rates.

Q: Aren't Peoples' corporate parents also entitled to the opportunity to earn a fair rate of return on its capital investment?

A: Yes, but an opportunity is not the same as a guarantee. The policy questions the Commission must address are: (1) what is a fair opportunity, and (2) what is a reasonable

[79] Peoples Filing Requirements § 53.53 II. A, Exhibit 15, Schedule No. 4, Page 1 of 1) (footnotes omitted).

rate of return? The Commission is vested with significant discretion in determining what constitutes a fair rate of return. While counsel for CAUSE-PA will fully brief the applicable legal standards as applied to this case, it is important to understand, and it is widely accepted, that there is no single way to arrive at just and reasonable rates and the Commission has broad authority on both these matters.[80]

Q: If the Commission does not reject Peoples' rate increase in its entirety, do you have an opinion about how much of an increase the Commission should authorize?

A: I am not taking a position related to the specific revenue increase the Commission should authorize if Peoples' revenue proposal is not otherwise denied in its entirety. If the Commission determines that Peoples' current revenue is insufficient, the Commission should carefully consider what is the lowest possible ROE that it should authorize. In my view, the Commission should be frugal in rewarding utilities with additional dollars from the pockets of Pennsylvania consumers, not generous.

There is often a significant divergence in ROEs that are recommended in rate cases based on the financial models deployed by parties. In addition to considering the results of these models, I also recommend that the Commission consider the approach outlined by Governor Shapiro in determining what ROE is appropriate based on objective criteria. I have modeled what this approach would dictate and believe that it merits significant consideration by the Commission.

[80] See Pa. P.U.C. et al. v UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716, Recommended Decision at 22 (August 8, 2025) (quoting Popowsky v. Pa. Pub. Util. Comm'n, 683 A.2d 958, 961 (Pa. Cmwlth. 1996) (adopted by Commission via Order dated September 11, 2025) ("2025 UGI RD"). See also 2025 UGI RD at 51 (citing Duquesne Light Co v. Barasch, 488 U.S. 299, 315-16 (1989) (quoting Federal Power Comm'n v. Hope Natural Gas Co., 320 U.S. 591 (1944), and stating "the Commission was not bound to the use of any single formula or combination of formulae in determining rates").

Q: Please explain what you are recommending.

A: I am recommending that when faced with a range of ROEs presented by financial models, the Commission should not play Goldilocks and pick the ROE that is "just right", it should pick *the lowest ROE* that the models suggest and consider whether there are other criteria to evaluate whether an even lower ROE would nevertheless be sufficient. Only after the Commission has assured itself that the ROE is as low as legally possible should it be satisfied with its results. While Peoples witness Nelson presented her various financial models that purport objectivity, I strongly suspect that other parties to this case will conduct similar analysis that will result in ROEs that are materially and significantly lower than Ms. Nelson's 11.25%. Much ink (or text) will be spilled arguing over which of these models best approximates what the financial markets demand, and the parties presenting these financial models will argue about the relevant minutiae that should be included. This will create complexity in the process and lead to a record that creates a range of possibilities from which the Commission can choose. Within that range, my recommendation is that the Commission choose the lowest ROE presented and check that against objective criteria such as that which is recommended by the Governor.

Q: Why do you recommend this approach?

A: It is the Commission's responsibility to ensure that it is authorizing rates that are *no higher than necessary* to allow Peoples a reasonable opportunity to earn a fair rate of return.[81] This requires judgment and is imprecise, but the lens through which the

[81] The Commission also must allow Peoples to recover its reasonable and prudently incurred expenses and costs, including its cost of debt, but since I am not recommending an adjustment to those specifically, I am focused here on the ROE side of the revenue requirement. Other parties to this case may have adjustments to expenses and capital projections that require scrutiny by the Commission and, thus, my recommendation should be read in coordination with those recommendations and adjusted accordingly.

Commission should judge whether it has set the lowest ROE is what is the lowest clearing price that a free and fair financial market would demand. Peoples is beholden to its corporate structure and corporate parents for access to debt and equity. Thus, there is significant incentive to control the flow of money in a way that increases returns up the corporate ladder. Because Peoples customers do not have any choice but to pay the rates set by the Commission, the Commission must set rates as low as possible in the same way that a fully fair and competitive market would. This is the Commission's fundamental purpose as Peoples' economic regulator.

Q: You mentioned that in addition to the financial models traditionally employed to establish ROE, the Commission should also consider the approach to setting ROE suggested by Governor Shapiro. Please explain.

A: In a letter to utility CEOs on April 29, 2026, Governor Shapiro outlined a set of principles for setting an adequate ROE, among other things. This approach merits significant consideration by the Commission. In this case, Governor Shapiro, through his Special Counsel for Energy Affordability Mark Szybist, testified on the record at the June 11, 2026, 1:00 pm Public Input Hearing and filed Comments. The Governor's Comments, including his April 29, 2026 letter to utility CEOs, were admitted into the record.[82] I have relied on the Governor's comments, along with Governor Shapiro's letter, in formulating my opinion in this case and informing my recommendation that the Commission consider them in establishing an acceptable and sufficient ROE and capital structure.

[82] Tr. of Proceedings at 259, Index of Exhibits, Governor Shapiro Exhibit 1. Admitted into Evidence. Index Available at: https://www.puc.pa.gov/pcdocs/1935683.pdf (last visited June 18, 2026). Hereinafter, Governor Shapiro Exhibit 1.

Specifically, I find the "commonsense principles" outlined in the Governor's letter to be compelling. In summary:

- Customers are experiencing markedly higher utility costs with core causes directly within the control of utilities that result from policy and fiscal decisions made by the utilities and their corporate parents.
- We have reached a tipping point, and this is a time when it is imperative that utilities should put their customers first. I would add, though not explicit in the letter, it is also imperative that the Public Utility Commission rebalance the scales that have caused this tipping point and prioritize the needs of utility consumers.
- Utilities should seek to raise the most cost-effective forms of capital by disfavoring expensive equity when lower cost debt is available. This is particularly true given a utility's captive rate base that is able to repay obligations over time. Specifically, the Governor recommended, and I agree, that to rebalance the scales, the equity portion of an operating utility's capital structure should generally not be more than the amount of equity employed by the utility's parent holding company.
- As for the calculation of what is an appropriate cost of equity, the Governor recommended "transparent, justifiable equity returns" and indicated a preference for use of markets to determine their true cost of equity rather than relying on captive equity from the utility's corporate parent. In the absence of actually going to financial markets to determine the cost of equity, the Governor suggested a simply calculation of an authorized return that "does not exceed the rate of the current 10 - year U.S. Treasury yield plus the five - year median of the equity risk premium as published in the Federal Reserve 's Financial Stability Reports."[83]

These principles are compelling, as applied in this case. First, the record demonstrates that acute affordability concerns for essential gas service is profound for Peoples' low and moderate income customers. These customers face extraordinary challenges and would materially benefit from lower rates due to more cost-effective capital deployment by Peoples. Affordability is not a side issue and should bear directly on the determination of both the Company's authorized return on equity and capital structure. As will be briefed by counsel, the authority of the Commission to consider these issues in rate cases is well

[83] Governor Shapiro Exhibit 1, Shapiro Letter at page 3.

known and abundantly clear.[84] Second, the notion that a utility's return on equity should be a proxy for the cost of equity in the markets is a well-recognized concept.[85] Third, the fact that the letter recommends a more fair and transparent process for establishing a return on equity and capital structure that is different from how the Commission has historically conducted this analysis does not mean that this method should be disregarded. While counsel for CAUSE-PA will fully brief these issues, I note here that it has been long established that it is the result reached, not the method employed, that matters in setting just and reasonable rates, including an overall rate of return.[86]

Q: What would application of the Governor's principals yield in terms of an authorized ROE?

A: Application of Governor Shapiro's principles would result in an authorized ROE of 7.68%. This was calculated using the methodology outlined in the Governor's letter and comments. I first determined the 10-year Treasury yield as of March 27, 2026, the date of Peoples filing, using publicly available data from the Federal Reserve Board of St. Louis.[87] This was 4.44%. I then calculated the 5-year median Equity Risk Premium for the period of April 1, 2021, through April 1, 2026, as published by the Board of Governors of

[84] See e.g., Popowsky v. Pa. Pub. Util. Comm'n, 683 A.2d 958, 961 (Pa. Cmwlth. 1996) (stating that the Commission "has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates").
[85] FPFTY Final Form Order at 4 ("Inherent in the 'cost of providing service' principle of ratemaking is the recognition that public utilities are natural monopolies and that the PUC's oversight through cost-of-service ratemaking regulation serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge in the absence of price regulation.") See e.g., Bluefield Water Works & Improvement v. Pub. Serv. Comm'n of W.Va., 262 U.S. 679, 692-93 1923) and FPC v Hope Natural Gas, 320 U.S. 591, 602 (1944).
[86] See Hope Natural Gas, 320 U.S. at 602 ("Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. It is not the theory but the impact of the rate order which counts.").

the Federal Reserve System, Financial Stability Report - May 2026.[88] That was 3.24%. The rest was simple math: 4.44%+3.24%=7.68%.

Q: What is the impact of a 7.68% ROE as compared to that which was proposed by the Company?

A: It would depend on the capital structure that is used for ratemaking purposes. I have modeled three scenarios using the following range of capital structures:

Table 10: Range of Capital Structures

Cost of Capital Component	Peoples' Proposed	Essential Utilities	50/50
Debt	45.5%	54.9%	50%
Equity	54.5%	45.1%	50%

The first is the Company's requested capital structure. The second is Essential Utilities' capital structure, which is the capital structure recommended by the Governor.[89] The third is a capital structure of 50% equity and 50% debt. Each is modeled using a ROE of 7.68%. The revenue requirement shown in the tables holds all other variables equal except the adjustment to ROE and capital structure noted and was performed using the workpapers provided by Peoples in discovery.[90] The "Difference from As Filed" in the tables below is the reduction in revenue requirement from that which was requested by Peoples.

[88] Board of Governors of the Federal Reserve System, Financial Stability Report - May 2026, Figure 1.5, Estimate of Equity Risk Premiums. Available at: https://www.federalreserve.gov/publications/2026-may-financial-stability-report-accessibility-tables.htm. (Last visited June 15, 2026).
[89] Governor Shapiro Exhibit 1 at 2.
[90] All calculations on revenue requirement were performed by inputting the calculated ROR into Line 2, Exhibit 2, Sch. 4, Page 4 of 5. Revenue Requirement from Line 1, (Adjustments Column) Exhibit 2, Sch. 4. Page 2 of 5.

Table 11: 7.68% ROE at Company Capital Structure

	Component as % of Capital	Cost Rate	Weighted Cost Rate
Long-Term Debt	45.53%	4.61%	2.10%
Short-Term Debt	0.00%	5.40%	0.00%
Common Equity	54.47%	7.68%	4.18%
Total Capitalization	**100.00%**		**6.28%**
Revenue Requirement		**$19,101,469**	
Difference from As Filed		**($144,164,551)**	

Table 12: 7.68% ROE at Essential Utilities' Capital Structure

	Component as % of Capital	Cost Rate	Weighted Cost Rate
Long-Term Debt	54.90%	4.61%	2.53%
Short-Term Debt	0.00%	5.40%	0.00%

Common Equity	50.00%	7.68%	3.84%
Total Capitalization	**100.00%**		**6.15%**
Revenue Requirement		**$9,490,499**	
Difference from As Filed		**($153,775,521)**	

As is demonstrated from these tables, the chosen ROE and ratemaking capital structure allowed have a significant impact on the necessary rate increase. The Governor's approach would set an ROE based on appropriate, objective benchmarks. His letter also recommends that utilities like Peoples hold competitive equity auctions – a recommendation that resonates because it would ensure that actual markets, not models, are setting required returns. While Peoples has not taken this common-sense, market-based approach, I am recommending that the Commission nevertheless consider the use of the Governor's objective alternative approach which would have the Commission use a risk-free rate (10-year treasury yield) and a well-recognized risk premium (the Federal Reserve's Equity Risk Premium) for determining the return that would reasonably be required by actual markets. In my view, this is reasonable and will yield a fair return since utilities are safer investments than the overall market. Thus, the Commission should consider employing the method recommended by the Governor in its ultimate analysis and, at the very least, consider it as a check on the reasonableness of the financial models that are utilized by the other parties in this proceeding.

Q: Are you recommending that the Commission impute a different capital structure in its overall determination of the ratemaking rate of return?

A: Yes. Regardless of the ROE chosen by the Commission, I am recommending a 50/50 capital structure. While the Governor's comments and letter call for a ratemaking capital structure that is 54.9% debt and 45.12% equity, which is the actual capital structure employed by Essential Utilities, I am recommending a 50/50 structure as a means recognizing the principle of gradualism to move the Company from its equity skewed capital structure to one that is more consistent with its role as a monopoly provider of essential utility service to captive customers.

Q: Must the Commission accept the capitalization ratio chosen by Peoples?

A: No. The Commission can determine that the capitalization ratio chosen by the Company places an excessive and undue emphasis on the higher return on equity at the expense of the lower cost of debt and can impute a capitalization ratio for ratemaking purposes if the evidence demonstrates a reduction would nevertheless be sufficient. I am recommending that they do so in this case.

The Commission has deferred to the capitalization recommendation of utilities, but they are certainly not required to do so. In my view, it is imprudent to defer to a utility in setting their own capital structure for purposes of ratemaking without respect to outside factors, including the parent company's capitalization and the needs of consumers. The Commission should exercise its regulatory authority and prerogative to impute a ratemaking capital structure that is more favorable to customers who have no choice but to pay the prices established by the Commission for gas distribution service.

My recommendation is a step towards the recognition that utility holding companies like Essential Utilities are in complete control of their subsidiaries' access to capital and how that subsidiary is capitalized. While Essential should be permitted to make these decisions as an exercise of its management prerogative, the Commission does not have to accept them for purposes of setting rates, and it can impute a ratemaking capital structure that is fair and market reflective. This is, after all, the Commission's responsibility – to stand in the shoes of competition where a monopoly structures itself in a manner that is unfair to its captive customers. Given that Essential's capital structure – the entity that is subject to capital markets – is the inverse of that which it seeks to require customers to bear, my recommendation of a 50/50 capital structure is a moderate and reasonable step to rebalance the scales.

Q: Please summarize your overall conclusions from this section of your testimony?

A: I encourage the Commission to consider the common-sense principles laid out by the Governor in setting Peoples' approved ROE and ROR. In addition, the Commission should review the ROE recommendations by other parties in determining what ROE to authorize. The Commission's job as Peoples's economic regulator is to ensure that, as a monopolistic enterprise, it is not taking undue and unfair advantage of its customers through an equity skewed capital structure and an ROE that is higher than what it reasonably would need to attract sufficient capital in the market. In my view, this is part of determining whether rates are just and reasonable.

Even at the Company's equity-skewed capital structure, I have calculated that every ten basis points (0.10%) reduction in the ROE at the as-filed rate base and capital

structure would reduce the overall revenue requirement by $4.4 million per year. Based on the totality of factors that have been outlined in my testimony, the Commission should approve the lowest ROE suggested by the applicable financial models and should consider whether it can reasonably be reduced further based on the objective criteria outlined by the Governor. Each of my recommendations is meant to temper the excessive rates sought by Peoples and more fairly balance the needs of Peoples with the needs of its customers, particularly its low income customers who do not have the financial margin to absorb the rate increase required from granting an excessive ROE at an equity-skewed capital structure.

V. Rate Design

Q: Please summarize Peoples's proposed rate design for its residential customers.

A: Peoples is seeking to continue collecting its total revenue allocated to residential customers by charging a fixed monthly customer charge and a volumetric charge. The increases are as follows:

Table 14: Proposed Rate Design and Increases

Description	Current Rate	Proposed Rate	Increase ($)	Increase (%)
Customer Charge (per month)	$16.80	$26.00	$9.20	54.8%
Distribution Charge (per Mcf)	$5.3537	$6.6359	$1.2822	24%

The total increase for the average residential customer using 86 Mcf of gas each year would be $15.09 per month or 13.1%[91] Over the course of the year, this increases the average customer's bill by $181.13.

[91] Peoples St. No 17, Exhibit JDT-5 Bill Impacts.

In addition, Peoples has proposed to continue its WNA rider with adjustments.[92] Specifically, People seeks to modify the formula for calculating the normalized number of heating degree days for both its billing determinants used to set base rates and its WNA calculation.[93] As explained more fully below, the WNA is a charge applied to customers in the residential and small business rate classes for bills rendered during the 8-month period from October to May. This charge was approved first in Peoples 2024 rate case and first went into effect on October 1, 2024.[94] Over the last two winters, the net result of the WNA has been a net credit to customers of $10.8 million.[95] I will discuss my concerns about the WNA below despite the fact that in the short term had produced net credits.

Q: Do you have concerns about Peoples' proposed rate design?

A: Yes. I have several concerns about Peoples' proposed increase to its fixed customer charge and its decision to maintain its WNA. In short, these proposals are geared towards shifting risk Peoples' risk of under-collecting its revenue requirement from Peoples' shareholders to its customers because they work together to lock in revenue at an established benchmark for Peoples at the long-term expense of customers and irrespective of whether a customer can or cannot afford service.

Q: Please explain what you mean when you say that the fixed customer charge and WNA rider work to lock in revenue for Peoples.

A: The combination of an increased customer charge and the WNA together work to ensure that Peoples is insulated from the risks associated with the fact that it is in the business of providing a commodity that a consumer may use less of in a given year –

[92] Peoples St. No. 17 at 37.
[93] Peoples St. No. 17 at 37:13-16.
[94] Peoples St. No. 17 at 39:9-15
[95] Peoples St. No. 17 at 43.

whether that usage reduction is driven by externalities like weather, the adoption of efficiency measures, the installation of electric appliances or supplemental heating equipment, or careful conservation. In general, residential customers use the most gas service in the winter to serve their winter heating load. If more of a customer's bill is fixed each month through the fixed monthly charge, then less of it is dependent on how much gas they use. On the other side, if the weather sensitive volumetric usage is surcharged through a WNA for 2/3rds of each the year (October – May), then Peoples is made whole when the weather is warmer than the historical average. Together, Peoples' proposed high fixed charge and WNA create a double penalty for customers because they either pay a higher fixed customer charge regardless of usage or they bear more of the risk of a warmer winter. Both are problematic for low income customers who struggle each month to be able to afford to retain gas service.

A. Monthly Customer Charge

Q: Please discuss your concerns about Peoples' proposal to increase its monthly customer charge for residential customers from $16.80 per month to $26 per month as it relates to low income households.

A: The proposed increase in the fixed monthly customer charge weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of gas they consume. The proposed fixed customer charge will result in an increase of $110.40 per year, an amount which will be unavoidable for low income households struggling to maintain service and will exacerbate an acute affordability crisis.

Q: Peoples witness Taylor asserts that the increase would benefit low income customers. Please explain his rationale.

A: Mr. Taylor asserts that this increase would benefit low income customers who tend to have higher than average use.[96] Mr. Taylor also asserts that placing more of the overall revenue requirement collection into volumetric charges harms low income customers because they have little control over their energy use.[97]

Q: Do you agree with Mr. Taylor's analysis?

A: No. First, the evidence in this case is mixed as to low income customer use. For example, based on a three-year average of the mean usage by customer, it is true that the Company's confirmed low income customers have higher usage, but for confirmed low income customers not enrolled in CAP, their usage is only minimally higher than all residential customers.

Table 14: 3-year Average of Mean Usage by Month[98]

3 Yr Avg of Mean 2023-2025	Residential Customers	CLI w/o CAP
January	15.8	15.9
February	15.1	15.3
March	11.3	11.5
April	7.6	7.8
May	3.7	3.8
June	2.1	2.0
July	1.4	1.3
August	1.3	1.2
September	1.4	1.3
October	2.3	2.3
November	6.0	6.1
December	12.7	12.8
Total	**80.7**	**81.2**

[96] Peoples St. No 17 at 36.
[97] Id.
[98] Data is from Peoples Response to OCA IV-006, Attachment. Attached hereto at Appendix B.

At the usage levels shown above, neither Peoples' residential customers as a whole nor its low income customers not enrolled in CAP would save money under the Company's proposed rate design as compared to keeping the customer charge the same and placing all the increase within volumetric rates. At the Company's proposed revenue requirement, confirmed low income customers would pay approximately $6 more per year based on the Company's rate design at 81.2 Mcf/year. The breakeven point appears to be usage of about 86 Mcf/year, if you use more than that amount, you will benefit from People's proposal. But if you use less than that, you will pay more under People's proposal. The use of averages by their very nature fails to accurately reflect the range of consumption patterns of customers. All customers have factors that influence how much or how little they use or do not use, including things like how many people live in the house, the size of the residence, the efficiency of the heating equipment, whether the customer's home is air-sealed or whether it is drafty.

Q: Would Peoples' proposed increase to the fixed charge affect the Company's Low Income Usage Reduction Program (LIURP)?

A: Yes. Peoples' proposal undermines the explicit goals of LIURP to "reduce residential energy bills." [99] By reducing the amount of bill reduction that can be obtained through LIURP measures, the proposed increase to the fixed charge threatens the continued effectiveness of ratepayer investments intended to reduce energy consumption, delinquencies, collections, and uncollectible costs. Thus, the proposed increase to the fixed charge will, in turn, impact the ability of LIURP to "decrease the

[99] 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").

incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[100] This would produce an unreasonable result. LIURP is a statutorily mandated program to be provided by the Companies to help low income customers reduce or manage their energy consumption in a cost-effective manner. Any increase to the fixed charge would both undermine the goal of LIURP and make the existing program less cost effective.

Peoples LIURP is incredibly effective at producing energy savings for customers. In 2023, the average normalized reduction in energy usage post-installation of LIURP measures was 12.70%,[101] for 2024 the reduction was 24.89%.[102] These are meaningful reductions in consumption that should produce meaningful bill savings; however, the ability to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. As more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment behavior – will erode.

Given that low income households are disproportionately at risk of termination and often lack the ability to control usage due to poor housing stock and older, less efficient appliances,[103] it is critical that they continue to have access to effective conservation tools capable of producing meaningful and lasting bill reductions.

[103] See, Nat'l Energy Assistance Directors' Ass'n (NEADA), Energy Hardship Report at 16 (Aug. 2024) (finding that low income consumers are more likely to live in housing with poor quality insulation or no insulation at all), https://neada.org/wp-content/uploads/2024/08/August-Summer-Hardship-Report-Final.pdf (Last visited April 10, 2026).and, Hernandez, Diana, Energy Insecurity and Health: America's Hidden Hardship, Health Affairs Health Policy Brief, June 29, 2023 (finding that energy insecurity is rooted

Q: Mr. Taylor also asserts that fixed monthly charges allow for greater predictability in household budgets and, thus, are preferable because low income households have less ability to control their usage[104] Do you agree with Mr. Taylor?

A: I agree with Mr. Taylor that many low income households take steps to reduce usage that are better characterized as deprivation of essential services rather than truly conservation of energy. These households do so out of necessity and poverty. As outlined more fully in my testimony above, acute energy unaffordability has a profound impact on families – causing many to forego food, medicine, and other necessities to maintain energy services to their home. However, I disagree with Mr. Taylor that the solution to this problem is to increase the fixed customer charge for these households. Additional funds for energy efficiency and weatherization, easier access for tenants to take and receive full cost LIURP services, and improvements in access to CAP are far better tools to assist low income customers and allow them to avoid the consequences of energy deprivation than a rate design that locks in more of their monthly costs regardless of usage. Wresting control from customers to reduce their bill through reducing their usage does not benefit low income customers, it weakens their ability to maintain access to service.

Finally, regarding the assertion that a fixed bill provides a more stable and predictable bill each month, I would submit that a bill that is stable but unaffordable is meaningless for low income customers. While bill stability is a helpful tool for customers, enrollment in CAP which provides a bill based on a customer's ability to pay is far more useful to create actual bill stability from one month to the next than a higher fixed customer

in the interconnection of poverty and housing deficiencies), available at: https://www.healthaffairs.org/content/briefs/energy-insecurity-and-health-america-s-hidden-hardship-1773887489273 (Last visited April 10, 2026).

[104] Peoples St. 17 at 36.

charge. Furthermore, Peoples is legally required to offer the option of budget billing which is meant to produce bill stability without decreasing incentives for conservation and energy efficiency.

Q: Should Peoples' fixed customer charge be increased?

A: No. Peoples' fixed monthly customer charges should not be increased. However, if the Commission awards any increase in the revenue requirement *and* if the Commission allows Peoples to retain its WNA, then I do not oppose an increase in the monthly customer charge that is proportionately scaled back from Peoples' proposal to any revenue requirement authorized in this case.

Q: Why does your recommendation about the customer charge depend on whether the Commission eliminates Peoples' WNA?

A: To be clear, the outcome dictated by the evidence and my analysis is that Peoples should not receive an increase of the magnitude it is requesting, the customer charge should remain at its current level, and the WNA should be eliminated. This combination places risk of under-collection on Peoples who is in the best position of all entities to manage that risk and produces the most favorable opportunity for low income customers to reduce their bills each month by reducing their usage. However, if the Commission decides to allow Peoples to retain its WNA despite its likely future impact on customers, then a higher volumetric charge (all other things being equal) will produce a higher WNA charge in the months a WNA is assessed because it is based on the volumetric charge. Thus, my alternative recommendation is that to the extent the Commission allows Peoples to retain its WNA, then a modest increase in the monthly customer charge would mitigate against the continued impact of the WNA.

B. Weather Normalization Adjustment

Q: What is Peoples proposing regarding its WNA rider?

A: Peoples proposes continuing its WNA rider but amending it to use only a 65-year regression-based framework rather than its current average of a 65-year regression and 20-year average heating degree days.[105]

Q: Please explain Peoples' WNA.

A: Peoples' WNA is a charge that Peoples currently applies to Residential, Commercial SGS, and Commercial MGS customer bills each month from October through May to account for whether the temperature for the month was warmer than normal or cooler than normal.[106] Here is an explanation of how the WNA will work based on the Company's proposal:[107]

- Peoples calculates normal weather based on a concept known as a heating degree day (HDD). An HDD is the number of degrees below 65 degrees Fahrenheit. In other words, 10 HDD would mean that, on a given day, the average measured temperature was 55 degrees Fahrenheit. Peoples intends to calculate the number of "normal" HDDs for each billing cycle based on a 65-year regression framework.

- Critically, the WNA assumes that the weather in the future – when Peoples charges its customers – will follow the Company's proposed 65-year regression model. That is, Peoples bases its WNA on the assumption that the Company should be permitted to collect normalized revenue produced by normalized temperatures rather than the revenue associated with the actual temperatures during customer billing cycles.

- In the eight months of October through May, Peoples determines what it calls a customer's Weather Normalized Billing Mcfs (WNBM). This is the amount of gas the customer ***would have used*** if weather had conformed to the "normal" pattern and there were the expected number of HDDs in the billing cycle as calculated using the Company's proposed 65-year regression framework. The WNBM is adjusted to account for a 3% cushion of HDDs on either side of "normal"– often

[105] Peoples Statement No. 17 at 37.
[106] Volume V, Peoples Exhibit 14, Current Tariff, Appendix A – Peoples Natural Gas Company LLC Retail Tariff No. 48 – effective February 12, 2026, First Revised Page No. 79.
[107] Volume V, Peoples Exhibit 14, Proposed Tariff, Appendix C – Peoples Natural Gas Company LLC Retail Tariff No. 49 – effective May 26, 2026, Original Page No. 79 ("WNA Rider").

referred to as a "deadband."[108]

- To calculate WNBM, Peoples uses a term the Company calls Base Load Monthly Mcfs (BLMM), which is calculated from the customer's usage in the summer months. Peoples asserts that this calculation allows it to isolate application of the WNA to a customer's weather sensitive usage. Peoples ultimately calculates WNBM by adding BLMM to the product of [the Normal Heating Degree Days (NHDD), adjusted for a 3% deadband, divided by the Actual Heating Degree Days (AHDD) that occurred during the billing cycle] and the [Actual Monthly Usage Mcfs (AMUM) the customer used during the billing cycle minus the BLMM].

- Peoples calculates the Weather Normalized Adjustment Mcfs (WNAM) by subtracting AMUM from WNBM. The Company asserts that this accounts for the difference between the customer's actual usage and what their "normal" usage if weather followed the Company's proposed 65-year linear regression model.

- Peoples then multiplies WNAM by the applicable rate class distribution charge to determine the WNA amount that the Company applies to the customer's bill.

As is evident from the foregoing, this is not an easy concept. However, in simplified terms, the WNA is a charge applied to residential and small business customer bills not based on their actual usage as determined by the weather, but rather on what they *would have used* had the weather conformed to the "normal" weather as calculated by Peoples WNA formula. When the weather is warmer than "normal," Peoples charges customers for service they *did not use* but would have used had temperature conformed to the Company's calculated WNA formula. When the weather is colder than "normal," Peoples credits customers for service they *did use* but would not have had the temperatures been "normal."

Q: What are your concerns about Peoples' WNA?

A: I have several concerns about the WNA that I list here and outline more fully below:

- The WNA shifts weather related risk from the utility to customers in a way that is inappropriate for a monopoly provider of essential services. The WNA improperly assumes that Peoples is entitled to revenue based on weather as it existed in the past rather than as it exists at the time the Company delivers service.

[108] Id. at (a).

- The WNA requires an overly complicated and nuanced calculation that is difficult for customers to understand. The WNA is based on a complicated calculation and operates contrary to reasonable customer expectations that lower usage will result in lower bills.
- While mathematically bi-directional, over the long term, the WNA is likely to often work to the detriment of customers and the benefit of Peoples.
- The WNA charge inflates other riders collected by Peoples including its DSIC.

Q: Please explain why the WNA shifts weather related risk from the utility to customers in a way that is inappropriate for a monopoly provider of essential services?

A: Peoples assumes that it is entitled to revenue based on its calculation of normalized weather as opposed to actual weather at the time that it bills a customer. Accordingly, the WNA shifts weather-related risk from the utility to customers. This is problematic from a consumer's perspective. The very nature of gas distribution service is that it exists to deliver a commodity that is weather dependent. Residential customers would not pay for an entire gas distribution system simply to only cook, heat water, or have fireplaces, as it would be too expensive for the system to exist solely for that purpose. We have these systems to produce heat in winter months; other uses are ancillary to this central purpose. In my view, it is inappropriate for a monopoly provider of essential utility service that is inherently weather dependent to shift weather-related risk to consumers. As a monopoly, the utility has no competition and is guaranteed a customer base. As such, the Commission needs to exercise the appropriate level of competitive restraint on the kinds of charges that it allows companies like Peoples to assess.

Q: Is Peoples better able to shoulder the risk of revenue fluctuations created by warming weather?

A: Yes. As outlined above, low income customers do not have any margin, month in

and month out, to spend more on energy costs. On average, Peoples low income customers earn just over $19,000 per year.[109] In winter months that turn out warmer than normal, these customers expect a *lower* bill—not a *weather-adjusted* bill. In stark contrast, utilities like Peoples benefit from regulatory frameworks that allow them to recover costs and earn a reasonable return on their investments from captive ratepayers. In this case, Peoples is projecting its revenue needs based on a fully projected future test year and is allowed to establish a revenue requirement based on its projections of the world as it expects it to be as of December 31, 2027. Peoples can also charge a DSIC of up to 5% of billed revenue for necessary infrastructure upgrades and capitalized costs after the end of the FPFTY. Together, these mechanisms afford Peoples the kind of financial protection that customers simply do not have and better position Peoples to absorb the effects of variable weather conditions without passing these risks down to consumers. Instead of offloading the risk to ratepayers, it would be more appropriate for Peoples to manage the risk without imposition of the WNA.

Q: Do you have other concerns about the WNA?

A: Yes, the WNA requires an overly complicated and nuanced calculation that is difficult for customers to understand because it charges customers not for their actual usage but for their hypothetical usage. It is not reasonable to assume that customers understand the WNA or why it is in place. The concept that one must pay for services that Peoples anticipates that one would use under normal weather rather than what one used under actual weather is a difficult concept to understand. Most people expect to be billed for what they use, not what the utility calculates that they should have used had the

[109] Peoples Response to CAUSE-PA I-015.

weather been “normal.”

Q: You mentioned above that the existence of credits when weather is colder than normal. Is this a benefit to customers?

A: Yes, but it is not worth the tradeoff of unexpectedly higher charges when weather is warmer than normal. Peoples has only utilized WNA since 2024.[110] The 2024-2025 heating season was warmer than “normal,” and customers paid millions of dollars for services they did not use. The initial months of the 2025-2026 heating season were generally colder than “normal,” resulting in customer credits, only for March and April 2026 to swing significantly warmer than “normal,” once again leading to unexpected and burdensome customer charges.[111] While overall, the WNA has been credit-positive for consumers since it was implemented, I submit that customers may find it of little value that they can receive a credit in months that are colder than normal because it is not as likely that these months occur with any regularity. If warming accelerates customers may very well end up paying larger and more significant WNA adjustments – charges they do not expect and may not be able to afford.

Q: Doesn’t the fact that the WNA credits some months and charges others mean that it is working?

A: Yes. Over the long term, it is likely that it will collect net revenue from customers precisely because winters are warmer and are projected to continue to warm.[112] There is no real debate about the direction that our weather is headed long term given the impacts

[110] Peoples Statement No. 17 at 43.
[111] Peoples Response to CAUSE-PA III-005, Attachment, Attached hereto at Appendix B.
[112] See Pa. Dep’t of Env’t Protection, Pennsylvania Climate Impacts Assessment 2024 at 18, https://www.pa.gov/agencies/dep/residents/climate-change/impacts.html (last visited June 2, 2026) (finding that Pennsylvania’s annual total heating degree days are anticipated to decrease by 13% by mid-century and 25% by end-of-century compared to the historical baseline).

of climate change. It is warming overall significantly and, thus, the WNA is far more likely to produce significant asymmetry and surcharge customers on net each year than it is that customers will see net credits.[113] It seems unlikely that Peoples would have proposed a WNA if the mechanism is not anticipated to work to the Company's financial benefit in the long run.

Q: Do you have any other concerns about the WNA?

A: Yes, Peoples' DSIC charge is also assessed on the WNA rider which means that Peoples receives DSIC revenue based not only on the revenue charged based on a customer's usage, but also on what Peoples determined that customer should have used had the weather been "normal." This compounds the complexity of WNA because it constitutes a surcharge on a surcharge, which works to increase Peoples' revenue at the expense of its customers.

Q: Peoples is changing its means of determining "normal" weather to a 65-year linear regression model that it intends to update in subsequent rate cases. Does this change alleviate any of your concerns?

A: No. It does not alleviate the underlying uncertainty associated with billing based on normalized weather rather than actual weather. If the WNA is to continue, as noted below, I would support changes that would make billing cycles more predictable and manageable for consumers.

[113] See id.

Q: Mr. Taylor asserts that Peoples' WNA is just and reasonable based on the factors outlined in the Commission's policy statement related to alternative ratemaking mechanisms at 52 Pa. Code § 69.3302. Do you agree?

A. Mr. Taylor outlines his responses to each of these factors in his exhibit JDT-6. I have responded to each of Mr. Taylor's assertions in Appendix C, Exhibit C-2.

Q: What is your overall conclusion about whether the WNA should continue?

A: I recommend that the Commission reject Peoples' request to continue its WNA and that the WNA cease upon implementation of rates in this case. Peoples' WNA is designed to stabilize the Company's revenue fluctuations caused by variations in weather, but it does so by creating a very real likelihood of disproportionately burdening low income customers, raising deep concerns about fairness and equity. While this mechanism protects Peoples from revenue volatility, it transfers the financial risk of warmer weather onto customers who may have already reduced their consumption to manage tight household budgets. For low income households, which often face difficult choices between heating, food, and other essentials, these additional charges undermine their ability to plan for and manage utility expenses effectively.

Additionally, the timing and unpredictability of WNA-related charges will exacerbate the financial stress experienced by low income customers. Because the WNA is applied retrospectively to account for weather variations, customers may face unexpected bill increases that are difficult to predict or budget for. These charges are also assessed in the months with the highest bills thereby compounding monthly bill unaffordability. This unpredictability is particularly harmful to low income households, where any deviation in monthly expenses can disrupt financial stability. The WNA

introduces a variable that makes it more challenging for vulnerable households to manage their limited resources effectively.

Q: If Peoples is permitted to continue the WNA, should it be reformed?

A: Yes. While my primary recommendation is that the WNA should be eliminated upon the expiration of Peoples' current tariff, if the WNA is not eliminated it should be significantly reformed in the following ways.

First, the WNA should be approved for a period of no more than three years so its effectiveness can be assessed more frequently.

Second, the months in which the WNA is operable should be reduced to the period from December through March, as these are the winter months recognized by the Commission and the General Assembly for other public policy purposes such as the winter termination rules that prevent termination of service to households with income at or below 250% FPL. If these are the months when economically vulnerable households must retain service because of the possibility of cold weather, it is unreasonable to allow Peoples to assess a weather-related charge in the months of October, November, April, or May. At the very least, the months of October and May should be eliminated to be consistent with the Commission's most recent decision in the Columbia Gas 2025 rate case where it approved Columbia's WNA only for the months November through April.[114]

Third, WNA billed revenue should be excluded from the revenue upon which the DSIC is assessed. In my view, Peoples should not be allowed to assess an up to 5% surcharge on top of the WNA surcharge. It compounds the harm to households for whom the WNA is assessed and inflates the revenue that Peoples collects through its DSIC.

[114] Pa. PUC v. Columbia Gas of Pa., Inc., No. R-2025-3053499, Final Order at 301–02, (Order Entered Dec. 9, 2025).

Fourth, the deadband should be increased to 5% rather than the current 3%. This would bring the WNA in alignment with that which was recently permitted to continue in the Columbia Gas 2025 rate case and would produce fewer months where the WNA would be charged or credited and allow for actual significant deviations in weather to be adequately addressed.[115] "It [would] also place[] more of the burden for calculating and forecasting weather variations back onto the Company as a normal part of doing business."[116]

Finally, to promote revenue stability, the WNA should be applied on a per class basis, reconciled annually, and surcharged over the full 12-months of the subsequent year rather than on a per customer basis. This change would eliminate the hardship that currently exists by imposing WNA charges during the highest usage and most expensive bills in the winter where energy burdens are at their highest.

Q: Please explain your last recommendation more fully.

A: The WNA is designed to collect revenue on a per class basis measured against an aggregate number of HDDs, but Peoples currently assesses it on a per customer basis and does so immediately as the charges are incurred. That means if December is warmer than normal outside of the deadband, Peoples will impose a WNA charge in January to account for this difference. If, in January, the weather is colder than normal outside of the deadband, the Company will apply a credit in February for this difference. While these may net out, I am concerned about the impact the WNA has on low income households' monthly abilities to afford services, especially since they already face significant bills in the winter.

[115] Id.
[116] Id.

My alternative proposal would have Peoples accrue, as a regulatory asset, all WNA charges and credits during the winter months on a per class basis. At the end of the WNA period (March, April, or May depending on how the Commission decides in this proceeding), Peoples would allocate the residential class-wide net WNA charge across all residential customers on a per MCF basis to all residential non-CAP customers over the subsequent 12-month period, with equal payments amounting to 1/12th of the total charge due each month. Spreading the WNA charges over a 12-month timeframe on a class-wide basis would, at least partially, address my concerns about higher charges during the winter months. It would also more effectively reduce the WNA's impact on a month-to-month basis and balance the adjustments over a longer timeframe.

VI. Universal Service and Energy Conservation Programs

Q: What are universal service and energy conservation programs?

A: In short, universal service and energy conservation programs are inclusive of those programs, policies, and procedures which help ensure low income households stay connected to service and reduce their usage.[117]

Q: Please briefly describe Peoples' universal service and energy conservation programs.

A: Peoples operates several Universal Service and Energy Conservation programs that assist low income customers: (1) the Customer Assistance Program (CAP); (2) the Hardship Fund; (3) the Low Income Usage Reduction Program (LIURP); (4) the Customer

[117] 66 Pa. C.S. § 2203.

Assistance Referral and Evaluation Services (CARES); Emergency Furnace/Service Line Repair Assistance Program (EFSLR).[118]

Q: Please explain how this section of your testimony is organized.

A: I will assess and offer recommendations related to Peoples' universal service programs.

A. Customer Assistance Program (CAP)

Q: Please briefly describe Peoples Customer Assistance Program (CAP).

A: Peoples Customer Assistance Program provides a discounted bill and arrearage forgiveness to low income customers at or below 150% FPL. Peoples also offers an "Extended CAP" or "E-CAP" program for customers between 151-200% FPL. Peoples' CAP rates are calculated monthly to determine the lesser of the participant's average monthly bill or percentage of income.[119] CAP accounts are subject to a minimum bill of $25.[120] Peoples' CAP percentage of income payments (PIP) are tiered based on household income as follows:

- 0 to 50% FPL - 4%
- 51 to 100% FPL - 5%
- 101 to 150% FPL - 6%
- 151 to 200% FPL - 11%[121]

Q: Has Peoples proposed changes to CAP?

A: Yes. Peoples has proposed two changes to its tariff regarding Rate CAP. First, Peoples proposes to add Provision # 9 to its Rate CAP tariff page to allow it to remove

[118] Peoples' St. 10 at 4-5
[119] Peoples St. 10 at 3-4.
[120] Id.
[121] Id. at 4.

customers from the customer assistance program if they find unjustified usage because of recreational gas use.[122] Peoples provision # 9 states:

> Use of natural gas, while on CAP, for recreational purposes such as, but not limited to, interior or exterior pool heaters and/or hot tubs, recreational appliances, outdoor appliances, such as gas grills, firepits/rings, fireplaces, gas lamps, heaters and other cooking appliances, and heated outdoor buildings, such as a shed, shop, or garage, is prohibited. Customers using gas for recreational purposes will be removed and can be reenrolled upon verification that the natural gas connection to the recreational appliance(s) has been removed. Unjustified usage as a result of recreational gas use will be billed to the customer.[123]

Second, Peoples proposes to add Provision # 10 to its Rate CAP tariff page to allow it to remove customers who are found to have obtained CAP benefits fraudulently and require them to pay back the benefits incorrectly received.[124] Peoples proposed Provision # 10 states:

> If the Company determines a CAP participant obtained benefits through fraudulent means, such as failing to report all household income, benefits previously provided may be reversed and the customer will be responsible to pay back the benefits incorrectly received.[125]

Q: Do you have concerns about Peoples' proposed Rider CAP provision #9 regarding recreational usage?

A: Yes. While I agree with Peoples' witness Rita Black that the benefits of CAP are meant to help low income customers afford heating, hot water, and other household needs, I am concerned that some of the uses identified by Peoples are not necessarily

[122] Peoples St. 10 at 10.
[123] Peoples St. 10 at 8:9-17. Peoples Natural Gas Company LLC Retail Tariff No. 49 page 43.
[124] Peoples St. 10 at 10.
[125] Peoples St. 10 at 8:18-21; Peoples Natural Gas Company LLC Retail Tariff No. 49 page 43.

“recreational” or “unjustified” and that low income customers, especially tenants, may have difficulty controlling whether those uses are included in their service.

For example, if a rental unit has a garage connected to its heating system, this would not be “recreational” usage, and the tenant would lack the ability to remove the usage to participate in CAP. Further, I do not believe that gas grills or “other cooking appliances” would qualify as recreational usage as cooking is within the realm of general household needs for which low income customers need to use their gas service. These uses are also not likely material in the overall usage by a customer.

I am also concerned that Peoples has not clearly identified or explained how it will treat customers who are alleged to have recreational or unjustified usage. Peoples’ proposed provision #9 indicates that “Unjustified usage as a result of recreational gas use will be billed to the customer.”[126] In her testimony, Peoples witness Black also confirms that, “It also states clearly that if unjustified use is identified, it will be billed back to the customer rather than being recovered from other ratepayers.”[127] However, when asked in discovery how the Company intends to calculate the amount of unjustified usage attributable to recreational usage, Peoples indicated that, “The Company does not intend to calculate the amount of "unjustified usage."[128] It is therefore unclear how exactly the Company intends on enforcing this tariff provision.

Peoples also indicated that it has not developed a way for customers to specifically dispute an allegation of recreational CAP usage other than its general dispute process.[129] Due to the complexity and potential subjectivity of identifying recreational or unjustified

[126] Peoples St. 10 at 8:16-17.
[127] Peoples St. 10 at 10:3-4.
[128] Peoples Response to CAUSE-PA VI-001(c), Attached hereto at Appendix B.
[129] Peoples Response to CAUSE-PA VI-001(d), Attached hereto at Appendix B.

usage, it is unclear whether the existing dispute process would be sufficient for customers to dispute such allegations.

In sum, while I share Peoples' concerns with ensuring that universals service costs are not inflated by recreational or unjustified usage, I do not support the Company's proposed change to its tariff, because there is too much subjectivity and room for error in Peoples' proposal. This creates the risk that low income customers could be unjustifiably removed from CAP and/or be unjustifiably billed for alleged recreational usage. Considering the unaffordable energy burdens facing non-CAP low income customers, being removed from CAP and having additional charges levied would almost certainly lead to service termination.

Q: Do you have recommendations regarding Peoples' recreational usage proposal?

A: I recommend that this tariff change be denied and that Peoples consult with its Universal Service Advisory Group (USAC) to develop more clearly defined parameters for defining recreational or unjustified usage, how the Company will calculate that usage, and how customers can dispute a finding of recreational or unjustified usage. The Company should also work with the USAC to develop guidelines for the treatment of low income tenants who do not have control over what structures or appliances are connected to their systems. If, after consulting with the USAC, Peoples still believes it needs to include this change, it can make a proposal in its next rate case or in a USECP proceeding.

Q: Do you have concerns about Peoples' proposed Rider CAP provision #10 regarding CAP fraud?

A: Yes. Like my concerns with provision #9, I am concerned that Peoples' proposed CAP fraud provision # 10 has a dangerous level of subjectivity that could lead to customers who are low income customers being unjustifiably removed from CAP, leading to service termination. These concerns are even more pronounced considering that Peoples does not conduct its own income screening of CAP applicants, because that duty is performed by its CAP administrator, Dollar Energy Fund. This adds another layer of uncertainty as to whether, if a customer is over income, whether that customer was mistaken or whether an error was made in the processing of the income documentation.

When asked how the Company intends to identify whether a customer "obtained benefits through fraudulent means," the Company indicates that:

> These situations are typically identified through a review of high usage accounts. For example, upon review, if the Company identifies the high usage is due to an large residence with significant property value and if there is no history of applying for or receiving LIHEAP and if there is undocumented income such as completion of the zero income form or 'other' income form or an appearance of unreported income, the Company will investigate further to determine if there are publicly available indications of unreported income (i.e. owns their own business, etc.).[130]

This methodology is rife with subjectivity. I am concerned that the Company would allege CAP fraud upon the "appearance of unreported income" and the indications of unreported income would include if a customer owned their own business.

I note that there are many situations where low income customers could be classified as small business owners. Low income customers are often subject to jobs that

[130] Peoples Response to CAUSE-PA VI-002(b), Attached hereto as Appendix B.

classify them as independent contractors, such as restaurants, salons, ride shares, and delivery applications, etc.

Further, there are many situations where owners of small businesses fall upon tough times and would qualify as low income customers due to decreased revenues and increased expenses. Especially for small businesses that are just starting out, a bad year or two could lead the business owner to legitimately need assistance to afford their bills. Indeed, this premise further supports my position – as outlined more fully below – that Peoples should assign it universal service costs to all customer classes, because they all derive a benefit from their existence.

This process needs to be more clearly defined and objective. Peoples also indicates that it has not developed a way for customers to dispute allegations of CAP fraud other than its existing dispute process and their ability to contact the Commission's Bureau of Consumer Services.[131]

Q: What are your recommendations regarding Peoples' proposed CAP Rider Provision # 10?

A: As I recommended above regarding Provision #9, I recommend that this tariff change be denied in this case and that Peoples consult its USAC to develop more clearly defined, objective parameters for identifying CAP fraud and distinguishing it from mistakes in the application process. The Company should also work with the USAC to develop guidelines for disputes related to allegations of CAP fraud. If, after consulting with the USAC, Peoples still believes in the need to include this change, it can make a proposal in its next rate case or USECP proceeding.

[131] Peoples Response to CAUSE-PA VI-002(c), Attached hereto as Appendix B.

Q: Do you have any recommendations about Peoples CAP?

A: Yes. I have two recommendations. First, as noted earlier in my testimony, I am concerned about the increase in CAP customer terminations – rising to 10.6% in 2024 – relative to a 10.2% termination rate for low income customers overall.[132] I would have anticipated that CAP would reduce termination rates relative to confirmed low income customers who are not enrolled in CAP. While the numbers improved in 2025, I remain concerned about these high rates of termination of CAP customers and recommend that Peoples be required to conduct a root cause analysis that seeks to address why its CAP termination rate increased so significantly in 2024 and develop a plan to ensure that it continues to decrease. I recommend that Peoples conduct this analysis within 180 days for the effective date of rates in this proceeding and discuss its results and a corrective action plan with its Universal Service Advisory Committee (USAC) within 45 days of completing its analysis. Peoples should strive to look at the overall root cause of this increase – including presenting data about the relative rates of termination by income tier, customers who are paying minimum bills, and whether there needs to be adjustments to the structure of its CAP to decrease termination rates. Peoples should seek to implement any necessary changes no later than 1 year from the effective date of rates. I also recommend that Peoples continue to report to their USAC on their efforts to decrease their CAP termination rate at each USAC meeting for at least the first two years following implementation of any necessary process changes that result from its root cause analysis.

Second, based on information obtained in discovery, a sizable number of customers are denied CAP each month in 2024, 2025, and so far in 2026 based on their

[132] See supra, Table 5.

failure to complete their CAP application. Specifically, in 2024, 68% of all denials were for incomplete applications. This number rose to 74% in 2025, and, as of April 2026, the denial rate for incomplete applications is 80%.[133]

I am concerned that a significant number of potentially eligible customers are not being enrolled in CAP because of the failure to complete the application and believe that Peoples should seek to determine whether there is a systemic basis for this failure either because of a flawed process with its vendor, with the application itself, or some other basis. As with my recommendation above regarding CAP termination rates, I recommend that Peoples be required to conduct a root cause analysis to determine why it has a significant and growing number of customers who are seeking out a CAP application but failing to complete that application. Peoples should conduct this analysis in the same time frame using the same process as my recommendation regarding its analysis concerning an increase in CAP terminations. This includes both consultation with and ongoing reporting to its USAC for the periods identified above.

VII. Universal Service Cost Recovery

Q: What issues will you discuss in this section of your testimony?

A: I will address Peoples' proposal to add the recovery of several additional costs through its Rider Universal Service. I also propose a broad reallocation of Peoples' Universal Service costs to all customers classes to mitigate the cost impact to residential customers and broaden the reach of these critical affordability programs.

Q: What changes is Peoples proposing to its Rider Universal Service?

A: Peoples proposes to add the following costs to its Rider Universal Service:

[133] See Peoples Response to CAUSE-PA II-001, Attachment. Attached hereto at Appendix B.

- Outreach costs related to CARES.
- Third-party costs associated with the Independent Evaluation of universal service programs, as required to comply with the BCS requirement to submit such evaluation on a recurrent basis.
- The salary and benefits for Peoples' proposed LIURP Compliance Specialist to be included in the recoverable LIURP budget, which is a component of the Rider Universal Service.[134]

Q: Do you have concerns about Peoples' proposal to add additional costs to its Rider Universal Service?

A: Yes. I am concerned that inclusion of these additional costs into the rider will inflate the cost of the Rider Universal Service. Specifically, I am concerned about the fact that there are a substantial number of confirmed and estimated low income customers who pay for Rider Universal Service costs because they are not enrolled in CAP. Universal service programs must be appropriately and adequately funded as is required by statute. I strongly support the funding of universal service programs to meet the needs of low income customers within Peoples' service territory and to expand the number of these customers to participate in CAP. However, because these programs are paid for by a rider – thus ensuring recovery for Peoples – there is a concern that a utility may seek to add costs into that rider that may be more appropriately assigned to base rates in general. Artificially inflating its Rider Universal Service costs will hamper the ability of the Company to fund necessary programs in the long term.

Peoples' proposals are similar to those proposed by Columbia Gas of Pennsylvania in its last rate case to recover the costs of its Energy Assistance Team (EAT) through its Rider USP rather than base rates.[135] There, the Commission concurred

[134] Peoples' St. 10 at 8:22-9-18.
[135] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., R-2025-3053499, Opinion and Order at 167-168 (Entered Dec. 4, 2025).

with the ALJs' recommendation that Columbia continue to recover its EAT costs through base rates.[136]

I recommend that Peoples continue to recover its CARES costs and its Independent Evaluation costs through base rates. Further, while I support the addition of a LIURP Compliance Specialist, the salary and benefits for that position are more appropriately recovered through base rates. These recommendations will allow the Commission to continue to review the reasonableness and prudency of these costs.

Q: Please explain the current cost recovery mechanism for Peoples Universal Service and Energy Conservation costs.

A: As noted previously in my testimony, Peoples Universal Service and Energy Conservation programs refer to a suite of assistance programs that help low income households remain connected to service. These programs are required by state law to be offered and effectively implemented by Peoples and are overseen by the Commission. The foundation of this requirement is in the Natural Gas Choice and Competition Act codified in Chapter 22 in Title 66. There, the General Assembly made several declarations of state policy regarding continued access to natural gas service. It stated:

> (6) After notice and hearings, the commission shall establish for each natural gas distribution company an appropriate nonbypassable, competitively neutral cost-recovery mechanism which is designed to recover fully the natural gas distribution company's universal service and energy conservation costs over the life of these programs. Except as provided in paragraph (10), policies, activities and services under this paragraph shall be funded and spent in each natural gas distribution company's service territory. Nothing in this chapter shall be construed to prohibit public funding or voluntary funding by third parties of a natural gas distribution company's universal service and energy conservation programs.

[136] Id.

> (7) The commission shall, at a minimum, continue the level and nature of the consumers protections, policies and services within its jurisdiction that are in existence as of the effective date of this chapter to assist low-income retail gas customers to afford natural gas services.
>
> (8) The commission shall ensure that universal service and energy conservation policies, activities and services are appropriately funded and available in each natural gas distribution service territory. The commission shall encourage the use of community-based organizations that have the necessary technical and administrative experience to be the direct providers of services or programs which reduce energy consumption or otherwise assist low-income retail gas customers to afford natural gas service. Programs under this paragraph shall be subject to the administrative oversight of the commission, which shall ensure that the programs are operated in a cost-effective manner.[137]

The term "universal service and energy conservation" as used in Chapter 22, was defined by the General Assembly as:

> **"Universal service and energy conservation**." Policies, practices and services that help residential low-income retail gas customers and other residential retail gas customers experiencing temporary emergencies, as defined by the commission, to maintain natural gas supply and distribution services. The term includes retail gas customer assistance programs, termination of service protections and consumer protection policies and services that help residential low-income customers and other residential customers experiencing temporary emergencies to reduce or manage energy consumption in a cost-effective manner, such as the low-income usage reduction programs and consumer education**.**[138]

For purposes of this case, all the programs collected through Peoples Universal Service Rider meet the definition of the public purpose costs that the General Assembly and the Commission has required Peoples to develop, offer and implement.

Under its current Universal Service Rider, Peoples assigns the costs of these programs only to residential customers.[139] In its proposed tariff, Peoples continues to only assign these costs to residential customers.

---

[137] 66 Pa. C.S. § 2203(6)-(8).
[138] 66 Pa C.S. § 2202 (definitions) ("Universal service and energy conservation") (emphasis in original).
[139] Volume V, Peoples Exhibit 14 – Peoples Natural Gas Company, LLC, Supplement No. 20 to Gas – PA.P.U.C. No. 48, Nineteenth Revised page No. 38 (Summary of Rates).

Q: Historically, these costs have only been recovered from residential customers, why should Peoples be required to recover these costs more broadly?

A: There is no rational basis for residential customers to solely bear the burden of these costs. The General Assembly has clearly recognized these costs are public purpose costs because they assist poor Pennsylvania families to be able to maintain access to essential gas service. The "cause" of the need for this program is poverty – a societal problem. Residential customers do not cause poverty. This fact was recognized by the Commission in its Final CAP Policy Statement and Order, where the Commission addressed the recovery of universal service program costs. While the Commission did not require jurisdictional utilities to propose specific allocations, the Commission indicated that it is appropriate to consider recovery of the costs of customer assistance programs from all ratepayer classes because "poverty, poor housing stock, and other factors that contribute to households struggling to afford utility service are not just 'residential class' problems."[140] The Commission explained that the provision of universal services to help low income families maintain service to their homes is "a benefit to the economic climate of a community."[141] The Commission directed utilities and stakeholders to address CAP cost recovery in utility-specific rate proceedings, indicating that "*the Commission will no longer routinely exempt non-residential classes from universal service obligations*."[142]

Even looking at a model where the "beneficiary pays" causes the conclusion that while the most obvious benefits of universal service programs are apparent to the residential rate class, this is too narrow of a view as there are a multitude of societal

[140] Final CAP Policy Statement and Order, Docket No. M-2019-3012599, at 97 (Order entered Nov. 5, 2019); see also 52 Pa. Code §§ 69.265(1), 69.266(b).
[141] Final CAP Policy Statement and Order at 7, 94-96, 107.
[142] Id. at 97 (emphasis added); see also 66 Pa. C.S. § 69.266(b).

benefits which inure to non-residential ratepayers that cannot be ignored. These programs are meant to remediate the impacts of poverty and utility insecurity with long-term and far-ranging impacts for low income households, as well as the surrounding communities in which they live and work.[143] Households who cannot afford utility services are more prone to a host of adverse consequences, including increased rates of health complications and hospitalization, eviction, and food insecurity.[144] For children in low income households, utility insecurity has been linked to adverse impacts on long-term health and developmental delays.[145] Communities of color also continue to experience utility insecurity at disproportionate and high levels.[146] Similarly, since low income customers who do not participate in these programs often have significant arrearages,[147] these costs cannot be avoided in rates. They will either be paid as a part of foregone revenue upfront through assistance programs or collected through uncollectible expenses.

[147] See Table 10, supra.

Furthermore, many low income assistance program participants are employed, but do not receive a wage that is adequate to afford basic household needs. This is evident from the self-sufficiency data that I discuss earlier in my testimony and from the fact that 30% of CAP customers, 31.7% of LIURP recipients, and 47% of customers who received a hardship fund were employed.[148] The next largest group of low income assistance program participants are retired seniors or individuals on disability who do not receive sufficient social security, disability, or retirement benefits to afford basic life necessities, including energy services.[149]

In addition to the adverse physical health impacts which result from lack of utility services, low income customers who face utility insecurity often struggle with heightened levels of stress, anxiety and depression – and must take time away from work to arrange payments, locate or apply for assistance programs, and arrange for reconnections.[150] These consequences of utility insecurity significantly undermine worker productivity, which – in turn – impacts businesses, nonprofits, governmental entities, schools, and other non-residential customer groups. In addition, low income assistance programs help utility companies to control uncollectible expenses which impact all ratepayers.

In sum, all customer classes (including industry, business, commerce, educational institutions, hospitals, local and state governments, and other residential customers) benefit from the availability and existence of universal service programs and assistance.

It is a sound policy decision for all customers to share the costs of providing these programs to Peoples's most vulnerable customers.

Q: If the Commission agrees to assign the costs of the universal service programs to all customers, how do you recommend that they do so?

A: I support a broad allocation of costs to all rate classes. These costs should be assigned to all rate classes based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case.

VIII. Fuel Switching Pilot

Q: Describe Peoples' proposed Natural Gas Hot Water Tank Rebate Pilot.

A: Peoples proposes to implement a rebate program pilot over a three-year period for interested customers to convert to natural gas hot water tanks and would run from January 2027 through December 2029 with a $500,000 per year budget ($1.5 million total).[151] The pilot is designed to provide rebate incentives for residential customers to switch from electric hot water heaters to high-efficiency natural gas hot water tank appliances.[152] The program would provide eligible residential customers with a $1,000.00 rebate to offset the costs of conversion to a natural gas hot water tank.[153]

Q: Do you support this pilot?

A: No. This is a load building program, which would add an additional 35 Mcf per year for each customer who converts from electric hot water heating to gas hot water heating

[151] Peoples St. 8 at 9-10
[152] Peoples Response to CAUSE-PA VI-011, Attached hereto at Appendix B.
[153] Peoples St. 8 at 10.

through the Pilot.[154] Additionally, Peoples has not applied any Total Resource Cost (TRC) test to determine the cost effectiveness of this Pilot.[155]

The Commission has also not traditionally allowed fuel switching that replaces fossil fuel equipment with electric equipment, because it builds load and runs counter to the objectives of reducing consumption and peak demand.[156] However, in Phase V, the Commission made an exception due to support beneficial electrification initiatives in state and federal conservation programs in the Commonwealth, but only where Act 129 measures were stacked with incentives provided by state and federal programs.[157]

Given the complicated history with fuel switching within Pennsylvania's public policy landscape, in my view, allowing Peoples to spend ratepayer funds to switch from electric hot water heaters to gas hot water heaters is not appropriate. This is especially true when rebates for remediating or replacing aging electric hot water heaters may be available from a customer's electric utility.

Q: What is your recommendation?

A: I recommend that this proposal be denied or, at the very least, it be paid for by shareholders rather than ratepayer funds.

Q: Do you have other concerns about Peoples' fuel switching practices?

A: Yes. Peoples should clarify the scope of its fuel switching through its Emergency Furnace and Service Line Repair (EFSLR) Program and Low Income Usage Repair Program (LIURP).[158] Under the finalized LIURP regulations, fuel switching is permitted in

[154] Peoples Response to CAUSE-PA VI-011(b), Attached hereto at Appendix B.

two specific scenarios: (1) for dual fuel public utilities, and (2) where inoperable or unrepairable or if the cost to repair exceeds the cost of replacement and both public utilities agree in writing that fuel switching is appropriate.[159] The regulations also require the public utility to document the conditions necessitating the fuel switch.

Peoples witness Ravenstall indicated that the Company may perform such fuel switching through these programs but did not indicate whether it has coordinated with other utilities when conducting such fuel switching.[160] Peoples should clarify whether it is coordinating these jobs with other utilities.

IX. Purchase of Receivables

Q: What will you be discussing in this portion of your testimony?

A: I will be discussing recommended changes to Peoples Purchase of Receivables (POR) program considering the significant and adverse cost impacts for residential and confirmed low income customers not enrolled in CAP who have chosen to shop with a competitive electric supplier. Specifically, I recommend that Peoples provide notice to suppliers that effective June 1, 2027, it will no longer be purchasing the receivables from participating suppliers, unless the supplier provides natural gas service at a price that is at or below Peoples's default service price.

Q: Please explain the existing POR program.

A: Because non-CAP residential customers can choose to be served by a retail natural gas supplier, Peoples has developed a POR program whereby it agrees to

[159] Initiative to Review and Revise the Existing Low-Income Usage Reduction Program (LIURP) Regulations at 52 Pa. Code §§ 58.1—58.18, Docket No. L-2016-2557886, Final Form Rulemaking Order at 190-191 (Entered March 13, 2025).
[160] Peoples St. 8 at 11:4-6.

purchase the uncollected receivables resulting from a contract between a Natural Gas Supplier (NGS) and its customer. Under Peoples' current tariff, Participating NGSs are paid 97.80% of the face value of the residential amounts billed, with this 2.20% discount representing the overall uncollectible rate.[161] The discount is updated whenever Peoples updates its uncollectible expense in rate cases through its merchant function charge. In this proceeding, Peoples seeks to increase the payment to suppliers to 98.07%.[162] In order to agree to have Peoples purchase receivables, NGSs have to agree to abide by the terms of the tariff may only be paid through the POR for "basic natural gas supply services" and not other goods, services or other products.[163] If a supplier participates in POR, then the uncollected account balance is owned by Peoples and Peoples proceeds to bill and collect those charges like it would for all charges that it bills and collects for default service customers. This includes, but is not limited to, taking steps to terminate service for non-payment.

Q: What is your concern with the POR program as it is currently structured?

A: Because suppliers are paid upfront with a discount that only reflects the overall uncollectible rate, they have very little incentive to moderate the prices that they charge customers and have no incentive to be concerned if they are charging customers prices that are significantly more than what Peoples would charge customers. From the supplier's perspective it does not matter what they charge because Peoples will buy the receivables and must manage the collection process. This is problematic because overall

[163] Rate SBS at ¶ 3.

customers served by NGSs pay significantly more than they otherwise would pay had they remained on default service.

Q: Please explain how much more residential shopping customers have paid compared to default service customers?

A: In response to discovery, Peoples provided data points for the period from January 2024 through April 2026 for residential shopping and default service customers and for the period from January 2024 through April 2026 for Confirmed Low Income Customers (non-CAP):[164]

- Total number of shopping customers
- Total billed usage of shopping customers
- Total billed commodity supply charges
- Total number of default service customers
- Total billed usage of default service customers
- Total billed commodity charges for default service customers.

Based on this information, I was able to arrive at the average cost per Mcf per customer by month for both shopping and default service customers, the dollar amount difference in the average cost per customer by month for shopping versus default service customers, the percentage difference in the average cost per customer for shopping versus default service customers, and the aggregate difference in cost per customer for shopping versus default service customers. This information is presented in Appendix C, Exhibits C-3 and C-4 attached to my testimony. In summary, over the period from January 2024 through April 2026, residential customers who were served by a retail NGS paid in aggregate **$51.9 million more** than they would have otherwise paid had they been charged the

[164] Peoples Response to CAUSE-PA IV-001, Attachment and CAUSE-PA IV-002, Attachment. Attached hereto at Appendix B.

default service rate for the same period. Of that amount, confirmed low income customers who were served by an NGS paid in aggregate **$7.4 million** more than if they had all been charged the default service rate for that same period. Furthermore, confirmed low income shopping customers paid on average higher prices than residential shopping customers for a comparable period.

Table 15: Average NGS Price v. Price to Compare[165]

Customer Type	Average Cost per Mcf Paid by Shopping Customers	Average PTC per Mcf	Difference per Mcf	Difference Shopping % higher than PTC
Residential Customers January 2024 April 2026	**$6.53**	**$3.21**	**$3.32**	**50.8%**
Confirmed Low Income (Non-CAP) January 2024 -April 2026	**$6.72**	**$3.21**	**$3.50**	**52.2%**

Q: Is there other data that shows the harm that has been caused by customers served by NGSs during this period?

A: Yes. Customers served by NGSs during this period who were in arrears had significantly higher gross write offs per customer, thus indicating that they had significantly higher uncollectible expenses. Despite this, they were paid receivables as if they had uncollectible expenses and write offs that were commensurate with residential customers. This is problematic because NGS shopping leads to higher gross write offs.

[165] See Appendix C, Exhibit C-3 through C-4.

Q: How much higher were write offs for shopping customers than those who paid the default service price?

A: They were significant, as shown in Table 16, below, write offs for shopping customers were 484% higher than for residential customers on default service, and for low income customers, write offs for those customers shopping were an astounding 856% higher than write offs for low income customers who were charged the default service rate.

Table 16: Residential Write offs: Default v. Shopping Customers

Customer Type for Period of January 2024 through April 2026	Average Amount of Write off per Customer with Debt Written off. (Shopping)	Average Amount of Write off per Customer with Debt Written off. (Default)	Amount Shopping Write Offs were higher than Default Write Offs	Percentage more that Shopping Write Offs were higher than Default
Residential Customers	**$602.13**	**$124.31**	**$477.82**	**484%**
Confirmed Low Income (Non-CAP)	**$978.89**	**$114.75**	**$864.14**	**853%**

Q: What is your concern?

A: My concern is that low income customers already face high energy burdens at exiting rates charged by Peoples. NGS rates that are more than 50% higher than Peoples' applicable rate on average for commodity costs exacerbate these households' inability to afford service as is evidenced by the divergence in write off amounts and percentages. Furthermore, I am concerned that these higher costs flow through to the uncollectible expenses paid for by all ratepayers and lead to increased debt, arrearages, and service terminations for residential customers above which would have occurred had all customers paid prices that were no higher than Peoples' default service price.

Q: What is your recommendation?

A: My recommendation is that Peoples revise its POR program to require that to participate in POR and have Peoples buy its receivables an NGS would have to certify that its rates are at or below the applicable default service price at the time of contract initiation or renewal. If a supplier wants to take advantage of Peoples' POR program, it should not be permitted to charge rates that are more than what Peoples charges. Under my proposal, NGSs would still be able to offer contracts to customers at any rate they wish, but if those rates are higher than the default service price, they would not be able to participate in POR.

Q: Would this change mean that customers would have to receive a dual bill from Peoples and the NGS?

A: No. The supplier could still participate in Peoples' consolidated billing program but would not be paid for its supply charges until or unless Peoples was paid by the customers. Furthermore, I recommend that Peoples supplier tariff clarify that suppliers who elect not to participate in POR because they wish to charge more than Peoples' charges would be responsible for their own collections if their charges go unpaid.

Q: When should this change go into effect?

A: I am proposing that Peoples issue a notice to all suppliers indicating that effective June 1, 2027 and forward all suppliers who wish to remain in the POR program will need to complete an updated POR Agreement and an affidavit that would require all charges for contracts or renewals of contracts entered after that period be at or below the default service price to compare in order to have any charges after that date be included in the POR program. If a supplier elects to participate, they will remain in POR. If a supplier

elects to charge rates higher than Peoples' charges, they could elect to remain in Peoples consolidated billing program, but their charges would be non-POR eligible. This change would be made on a forward-going basis and would provide all suppliers with notice of the change before it goes into effect.

XI. Conclusion

Q: Does this conclude your direct testimony?

A: Yes.

CAUSE-PA Statement 1, Cicero

Appendix A

Resume – Patrick M. Cicero

Patrick M. Cicero, Esq.

pcicero@pautilitylawproject.org | 717-576-2588 (mobile)

PROFESSIONAL EXPERIENCE

PENNSYLVANIA UTILITY LAW PROJECT HARRISBURG, PENNSYLVANIA
Of Counsel, February 2025 - Present
Executive Director, July 2015 - January 2020
Co-Director, January 2013 - June 2015
Staff Attorney, January 2011 - December 2012

The Pennsylvania Utility Law Project (PULP) is a specialized legal aid office and member of the Pennsylvania Legal Aid Network. PULP's mission is to promote policies that enable consumers with low and moderate income to receive and maintain affordable utility and energy services and to live in energy-efficient homes.

As Of Counsel, in cases where I am not serving as an attorney, I provide analysis and testimony for PULP's clients in administrative proceedings before relevant state and federal agencies.

When I am not serving as a policy or technical expert, I lead the legal and policy work of the office and provide high-level legal expertise and strategic guidance to the organization. I seek to ensure that PULP's legal and policy advocacy and strategies are designed to effectively and zealously represent the interests of PULP's clients before administrative, judicial, and legislative bodies.

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE HARRISBURG, PENNSYLVANIA
Consumer Advocate, December 2021 – January 2025
(*Confirmed by the Pennsylvania Senate June 7, 2022*)

The Office of Consumer Advocate (OCA) is a state agency that represents the interests of Pennsylvania utility consumers before the Pennsylvania Public Utility Commission (PUC), federal regulatory agencies, and state and federal courts. The OCA was created by the Pennsylvania General Assembly in 1976 and is an independent office within the Office of Attorney General. As Consumer Advocate, I served as the head of the office and directed all policy and legal advocacy.

PENNSYLVANIA LEGAL AID NETWORK, INC. HARRISBURG, PENNSYLVANIA
Executive Director, January 2020 – December 2021

The Pennsylvania Legal Aid Network, Inc. (PLAN, Inc.) is a client-centered organization that provides leadership, funding, training, and support to a coordinated network of independent legal aid organizations that deliver civil legal aid to low-income Pennsylvanians and victims of domestic violence. As Executive Director, I provided strategic leadership and direction to PLAN Inc.'s activities and oversaw its advocacy, fundraising, and management.

PROFESSIONAL EXPERIENCE – CONT.

HONORABLE SYLVIA H. RAMBO, DISTRICT JUDGE HARRISBURG, PENNSYLVANIA
THE UNITED STATES DISTRICT COURT FOR THE MIDDLE DISTRICT OF PENNSYLVANIA
Senior Judicial Law Clerk, May 2009 - December 2010
Judicial Law Clerk, August 2002 - August 2004

Analyzed federal and state law on civil and criminal motions in all phases of litigation. Drafted judicial opinions in response to civil and criminal motions, including motions to suppress, motions to dismiss, summary judgment, post-trial motions, and habeas corpus petitions. Drafted comments that were given by Judge Rambo at public speaking events and supervised her law clerks and judicial interns.

MIDPENN LEGAL SERVICES HARRISBURG, PENNSYLVANIA
Managing Attorney, January 2009 - April 2009
Staff Attorney, September 2004 - December 2008

MidPenn Legal Services (MidPenn) is a non-profit organization providing legal services to low-income individuals and families, the disabled, the elderly, children, and survivors of domestic violence. I led MidPenn's Consumer Unit where I focused on litigating consumer and housing cases related to anti-predatory mortgage lending and consumer bankruptcy and defended clients against unscrupulous debt collection practices.

TEACHING EXPERIENCE

MESSIAH UNIVERSITY MECHANICSBURG, PENNSYLVANIA

Adjunct Professor of Sociology and Criminal Justice (Periodic since 2015)

Courses Taught:
Social Inequality
Criminal Law and Criminal Procedure
Ethics in the Criminal Justice System

Visiting Lecturer of Sociology and Criminal Justice, August 2014 - May 2015

Courses Taught:
Introduction to Sociology
Sociocultural Theory
Social Inequality
Social Conflict, Justice and Peacemaking
Religion and Society
Evidence, Search and Seizure

Adjunct Instructor in General Education

Courses Taught: Law and Social Issues

EDUCATION

TEMPLE UNIVERSITY, BEASLEY SCHOOL OF LAW PHILADELPHIA, PENNSYLVANIA
Juris Doctor, magna cum laude, 2002

MESSIAH COLLEGE (NOW MESSIAH UNIVERSITY) MECHANICSBURG, PENNSYLVANIA
Bachelor of Arts in Sociology, magna cum laude, 1999

PUBLICATIONS

Pennsylvania Consumer Law by Carolyn Carter, Bisel Publishing Co., 2003, Supp. 2010-2012, Contributing Author.

Upper Allen Township, Sewer Advisory Board (by appointment),
- Term: September 2025-December 2029.

LIST OF PROCEEDINGS

Below is a list of proceedings in which I have provided expert testimony. Links to my testimony are provided for all complete cases. Cases listed as ongoing cases are at various stages of litigation and will be updated as completed.

COMPLETED CASES
Pennsylvania Public Utility Commission v. UGI Utilities, Inc. – Gas Division, Docket No. R-2024-3052716. • Natural gas distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Philadelphia Gas Works, Docket No. R-2025-3053112. • Natural gas distribution base rate proceeding. • Direct, Rebuttal, and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Columbia Gas of Pennsylvania, Docket No. R-2025-3053499. • Natural gas distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, and low income customer affordability.
Pennsylvania Public Utility Commission v. Pittsburgh Water Sewer Authority, Docket Nos. R-2025-3055010, 3055011, and 3055012 • Water/wastewater/stormwater distribution base rate proceeding. • Direct, Rebuttal, and Surrebuttal testimony regarding rate design, customer service, low income program design, and low income customer affordability.
Pennsylvania Public Utility Commission v. PPL Electric Utilities Corporation, Docket No. R-2025-3057164. • Electric distribution base rate proceeding. • Direct and Surrebuttal testimony regarding rate design, customer service, low income program design, energy efficiency, net metering, and low income affordability.
Pennsylvania Public Utility Commission v. UGI Utilities, Inc. Gas Division, Docket No. R-2025-3059523. • Natural gas distribution base rate proceeding. • Direct and Surrebuttal testimony regarding sufficiency of revenue requirement, rate design, customer service, low income program design, and low income customer affordability.

ONGOING CASES
Joint Application of American Water Works Company, Inc., Essential Utilities, Inc., Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., Peoples Natural Gas Company LLC and Peoples Gas Company LLC and Alpha Merger Sub, Inc. for a Certificate of Public Convenience under Sections 1102(a)(3) and 2210(c) of the Public Utility Code and All Other Necessary Approvals to Effect a Change of Control of Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., and Peoples Natural Gas Company LLC Docket Nos. A-2025-3058927; A-2025-3058928; A-2025-3058929 • Merger Application of two of the largest water and wastewater utilities in the country. • Testimony regarding whether the merger results in an affirmative public benefit and protections needed to ensure low income customers receive benefit.
Petition of FirstEnergy Pennsylvania Electric Company for Approval of Its Default Service Program for the Period June 1, 2027 to May 31, 2031, Docket No. P-2026-3060298. • Electric distribution company default service procurement plan. • Testimony regarding default service procurement and retail electric market protections for low income households.
Pennsylvania Public Utility Commission v. Peoples Natural Gas Company LLC, Docket No. R-2026-3060855. • Natural gas distribution base rate proceeding. • Testimony regarding rate design, customer service, low income program design, and low income customer affordability.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-I-004

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: How does Peoples define the term “confirmed low income customer” for purposes of reporting pursuant to 52 Pa. Code Sec. 62.5? Please list all of the ways in which a customer could be designated as “confirmed low income.” If Peoples uses a different definition or categorization criteria for “confirmed low income customer” for any purpose, please identify the alternative definition and/or criteria and explain why a different definition is used.

Answer: 'Confirmed low income' Includes all customers for which Peoples obtains information that would reasonably place the customer within a low income designation. Such information may include those who self-identified as low income, received LIHEAP in the past 24 months, or are currently participating in CAP. Self-identification includes contact prior to termination; contact to negotiate a payment arrangement; screening for assistance programs; contact at start of service and any other contact in which income is discussed with the customer. This is the only definition of low income used by Peoples.

Submit Date: 5/11/2026

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-I-005(U)

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: From January 2024 to date, disaggregated by month and year, as of the last day of the month/year, how many of Peoples' customers were/are categorized as confirmed low income? If Peoples uses multiple definitions of the term "confirmed low income", as identified in CAUSE-PA to Peoples 1-4, please separately provide the data requested for each definition.

Please provide this data in a live excel spreadsheet.

Answer: The enhanced version of the response includes the identification of ECAP or CAP Expansion participants, whose income is 151 to 200% FPL. This group of customers was included in both Confirmed Low Income and CAP customer counts in the initial responses.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-I-007

Witness: Folks, Dawn **Title:** Finance and Rates Analyst III

Question: From January 2024 to date, disaggregated by month and year, as of the last day of the month/year, how many residential customers does/did Peoples serve? Please explain how Peoples arrived at this figure and include citations and/or copies of any and all workpapers used to perform the calculation.

Please provide this data in a live excel spreadsheet.

Answer: Please refer to the attached spreadsheet. This data is pulled from our billing software by customer rate category to aggregate the number of residential customers by month.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-I-010(U)

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: As of the most recent available date, how many estimated low income customers reside within Peoples' service territory? Please explain how Peoples arrived at its estimated figures and include citation and/or copies of all workpapers used to perform the estimation.

Answer: The Company uses the most recent Household Poverty file provided by BCS to estimate it's low income customer count. The percentages of each county (< 150%) are multiplied by the company's total count of residential customers.

For 2025: 144,131

This response should replace the Company's original response to CAUSE 1-010.

Submit Date: 5/18/2026

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-I-012(U2)

Witness: Parks, Michelle **Title:** Director, Customer Operations Excellence

Question: From January 2024 to date, disaggregated by month and year (as of the last day of the month/year), how many Peoples customers had their service terminated for nonpayment each month, disaggregated by the following customer segments:

a. All residential customers;

b. Residential customers, excluding confirmed low income customers and CAP customers;

c. Confirmed low income customers;

d. Confirmed low income customers, excluding CAP customers;

e. CAP customers.

Please provide this data in a live excel spreadsheet.

Answer: The enhanced version of the response includes the identification of ECAP or CAP Expansion participants, whose income is 151 to 200% FPL. This group of customers was included in both Confirmed Low Income and CAP customer counts in the initial responses.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-II-001

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: From January 2024 to date, disaggregated by month and year, as of the last day of the month/year, please indicate:

a. How many customers applied for Peoples' CAP;

b. How many of the customers who applied for Peoples' CAP were approved;

c. How many of the customers who applied for Peoples' CAP were rejected, disaggregated by the reason for rejection.

Please provide this information in a live Excel spreadsheet.

Answer: Refer to attachment CAUSE-PA-II-1.xlsx.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-II-006

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: For the most recent three program years, what was the average annual residential bill savings per Peoples LIURP job? Please provide copies of any studies, reports, or other documents relied upon for this calculation.

Answer: Savings are calculated by reviewing one year pre-LIURP usage against one year of post-LIURP usage. Both pre and post usage amounts are normalized to remove weather impacts before comparing the two. Calculations are completed on an individual account basis within the Company's LIURP weatherization database and results are reported in the Company's annual reports to the PA PUC. Refer to attachments for the 2023 and 2024 annual reports. As noted in the 2023 program year report, savings were 12.7%. As noted in the 2024 program year report, savings were 24.89%. Savings for 2025 are not yet available as the process requires one year of post-usage to compare prior usage to calculate the savings impact.

Annual Report

2023 Program Year

April 30, 2025

TABLE I

2023 LIURP COST INFORMATION

Peoples Natural Gas

Cost Category	Total Annual Cost
Field Support	$ 11,295.00
Administration	$278,819.36
Post Inspections/ Education	$ 36,436.61
Audit Fee	$191,785.00
No Measures Installed Job Cost[1]	$176,723.21

[1] "No Measures Installed Job Cost" expenses are reported in Table I and are not included in the LIURP data set.

TABLE II

Question #1

To what extent did the use of utility-supplied energy among households receiving program services change from the year prior to weatherization to the year following weatherization?

During 2023, the Company weatherized 290 homes. Of that initial group, 228 customers showed sufficient Pre and Post consumption data for analysis. Below are the completions by month.

Month	Number of completions
January	39
February	52
March	35
April	27
May	33
June	17
July	15
August	16
September	23
October	15
November	14
December	4
Total	290

The average normalized reduction in energy usage for 2023 was 12.70 %, which is about 1.3 % lower than the prior year average of 14.00% savings.

In 2023, CLEAResult, continued to implement the program, which was carried out by eight sub-contractors: three HVAC contractors and five measures installation contractors.

Random inspection process were conducted by Peoples Energy Consultants, who performed the inspections and also maintained quality control of the program. The Company continued using an inspection form that included items related to energy education (which was provided to the customer by the contractor), budget expenditures, and other items. The Energy Consultants utilized an infrared camera for the inspections, performing 101 inspections of the 290 homes that were weatherized.

After the Post year, customers received information regarding their savings achieved and conservation tips to encourage continued conservation. Those customers who reported excess usage received a notification and are also included in the non-savers survey in this report.

In addition, those customers that had a furnace replacement received 3 additional furnace filters and received a " Change the Filters" post card reminder before the heating season.

Completions by County with sufficient Pre and Post Data

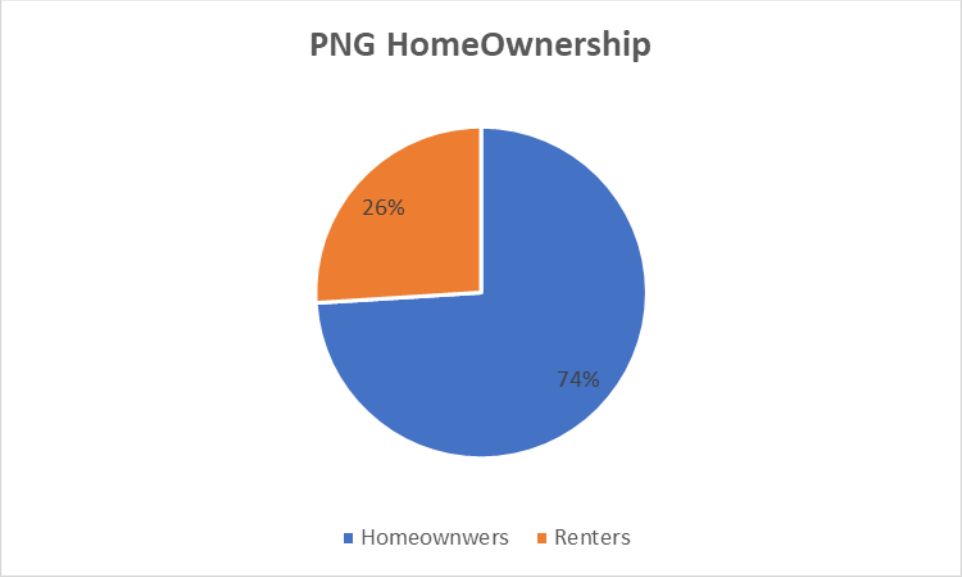
Participation by Home Ownership



Total completions	Homeowners	Renters
228	169	59

Customers with complete Pre and Post data

Question #2

How does this compare to changes in total energy use, including supplemental sources of heat?

Neither electric nor supplemental heat usage is tracked by the company.

Question #3

Electric utilities should also assess the impact of the usage reduction program on patterns of energy use. Where applicable, the financial impacts of any shifting in the use of service from time periods when service is more expensive to time periods when service is less expensive should be examined.

This question does not apply to gas utilities.

Question #4

How has the customer payment behavior changed? To what extent have customers with overdue balances changed arrearages trends that existed prior to receiving weatherization services? To what extent have customers paid more consistently following weatherization?

During 2023, 100% of LIURP participants with complete Pre and Post data were also enrolled in CAP. In the CAP program, customers pay a percentage of their

income for gas service. The payment amount may change if there is a change in income, however, Pre and Post weatherization does not have an impact on the payment amount. Payment behavior, therefore, is more directly related to participation in CAP than in the receipt of weatherization services.

Question #5

What were the general and specific goals for the program in this year (other than production and spending goals)? Did the company meet its goals related to achieving quality in the provision of program services?

Program goals for 2023 were as follows:

- Reduce consumption
- Maintain health, safety, and comfort in the home
- Comply with PUC mandates
- Continue utilization of third-party administrator, CLEAResult
- Assist special needs customers
- Partner with community-based organizations when possible
- Spend program budget wisely while maximizing quality of work
- Continue providing random inspections as a means of quality control
- Utilization of the Universal Service Advisory group to review the program processes and customer approach
- Collect customer satisfaction survey data for quality control
- Coordinate projects with other utilities and/or WAP when possible
- Educate participants regarding conservation and encourage behavioral changes
- Continue assessing best practices to achieve program success

Achieving a reduction of 12.70 %, while providing health, safety, and comfort helped meet the program goal.

Question #6

What specific steps are being taken to use either experience in managing the program or technical information to modify the program to improve its effectiveness?

In 2023, CLEAResult continued implementing the program and worked on the contractor/company interface in order to improve program goals.

Peoples Gas Energy Consultants performed the quality control, used an infrared cameras, provided education, conducted satisfaction surveys, and provided feedback to the contractors with the purpose of improving the quality and cost effectiveness of the program. The energy consultants conducted 101inpections in addition to CLEAResult completing 20 random inspections for a total of 121.

The company provides a satisfaction survey to all participants in the program. Along with the survey customers received conservation tips to emphasize conservation. This additional tool allows the company to monitor customer satisfaction and contractor performance. A total of 41% or 121 customers returned the survey. Survey reports presented overall customer satisfaction with the program and a commitment to implement energy tips.

Sidewall insulation was installed in 204 of the 228 homes with complete Pre and Post weatherization. Data showed a savings achievement of 12.7 % savings.

In 2024, the company issued a Request for Proposal (RFP) for program delivery, aiming to improve program outcomes. The company selected, an affiliate of Mincin, which also represents other utilities in the area and has strong performance record.

Wall Insulation Savings Summary Report

Agency	Customer Count	Average Normalized Savings %
CLEAResult	1	4.5
CLEAResult East	59	12.3
CLEAResult West	60	14.1
VIP Heating & Cooling	1	7.7
Weber Construction	83	12.2
Combined customer count and Savings %	204	12.7

Report only contains customers with complete Pre and Post data

During 2023, Peoples installed 90 furnaces of the 228 completed homes with complete Pre and Post data, for a savings of 18.0% was reported.

Furnace Savings Summary

Agency	Customer Count	Average Normalized Savings %
CLEAResult East	5	27.5
CLEAResult West	18	24.9
Weber Construction	67	15.7
Combined customer count and Savings %	90	18.0

Report only contains customers with complete Pre and Post data

The company attempted to complete combined jobs when possible. In 2023, the company partnered with electric companies throughout the service territory. Partnerships with the electric companies resulted in 221 completions in partnership with Duquesne Light.

In 2023, the company spent $3,587,252.55 including $250,000 in shareholder dollars. The average PNG spending was $12,369.83.

Peoples Natural Gas Company LLC

Non-Savers Survey

Program Year 2023

During the year 2023, Peoples experienced 34 customers who reported non-savings after the Post year. The average percentage of the usage increase was 5.6%.

Reviews of non-savers included the following approaches:

- Job file review
- Letter mailed explaining usage increases and emphasizing conservation tips
- Phone interview
- Contractor job review

In efforts to standardize the process, Peoples utilized a survey form during phone interviews and compiled demographic data. See attached file.

The Company had difficulty getting in touch with 25 non-saver customers after the Post year, therefore only 9 of the 34 customers were part of the survey. Below is a summary of survey responses:

- One home reported an increase in the number of occupants since receiving LIURP.

- Eleven customers had boilers and twenty-three had furnaces. Only two boilers and two furnaces were replaced.

- Seven customers reported the need to have supplemental heat. All seven customers used electric space heat.

- Thirty-three customers had gas water heaters, and one had an electric. One customer received a water heater replacement. Two customers kept their hot water setting at “hot”, and the others did not know the setting of their hot water heater.

- Six customers reported that during the day they kept their heating system thermostat at or above 70 degrees Fahrenheit, with the average temperature setting being 70 degrees.

- All the customers kept their heating system thermostat at the same temperature at night as the daytime temperature. The average thermostat temperature at night was also 70 degrees Fahrenheit.

Administration	$222,009.06
Post Inspections/ Education	$ 36,297.60
Audit Fee	$179,318.77
No Measures Installed Job Cost[1]	$250,392.91

[1] "No Measures Installed Job Cost" expenses are reported in Table I and are not included in the LIURP data set.

TABLE II

Question #1

To what extent did the use of utility-supplied energy among households receiving program services change from the year prior to weatherization to the year following weatherization?

During 2024, the Company weatherized 186 homes. Of that initial group, 179 customers showed sufficient Pre and Post consumption data for analysis. Below are the completions by month.

Month	**Number of completions**
January	30
February	25
March	11
April	17
May	15
June	11
July	22
August	8
September	8
October	17
November	8
December	14
Total	186

The average normalized reduction in energy usage for 2024 was 24.89 %, which is about 12.19% higher than the prior year average of 12.70% savings.

In 2024, CLEAResult, implemented the program, which was carried out by eleven contractors, eight of which were HVAC contractors and three were measures installation contractors.

The random inspection process was conducted independently by Energy Consultants, sub-contractors working directly for Peoples and unaffiliated with the

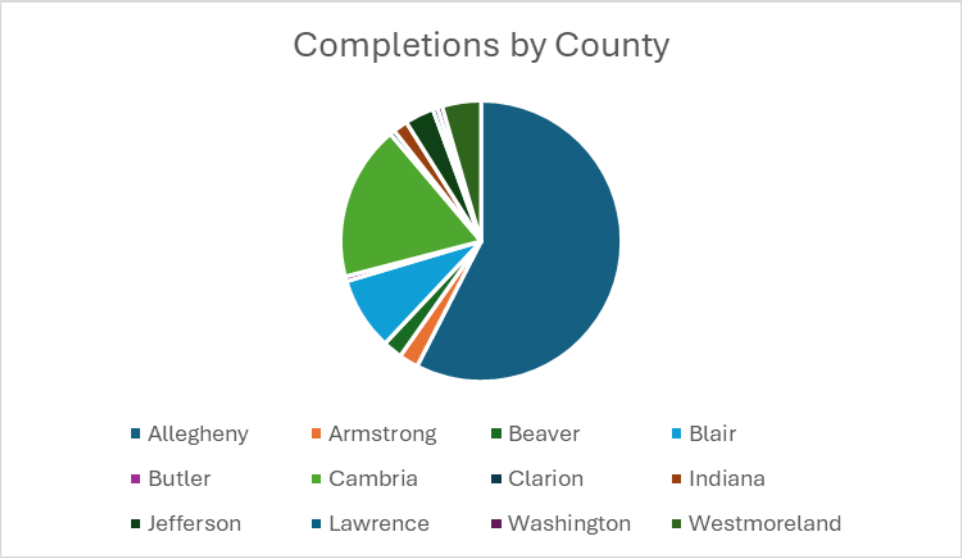
contractors who implement measures. The Company continued using an inspection form that included items related to energy education (which was provided to the customer by the contractor), budget expenditures, and other items. The Energy Consultants utilized an infrared camera for the inspections, and focused on reinforcing education, performing 107 inspections of the 186 homes that were weatherized.

After the Post year, customers received information regarding their savings achieved and conservation tips to encourage continued conservation. Those customers who reported excess usage received a notification and are also included in the non-savers survey in this report.

In addition, those customers that had a furnace replacement received 3 additional furnace filters and received a "Change the Filters" post card reminder before the heating season.

Satisfaction surveys are also a part of process; all customers receive a questionnaire with a postage -paid return envelope. In 2024, 60% of customers responded to the survey, and 7% reported issues following completion, such as dissatisfaction with the cleanliness of the work crew and incomplete work. This provided the opportunity for the contractor to address and rectify the identify concerns. The majority of the program participants provided positive feedback, including that the home felt warmer and more comfortable, satisfaction with the contractor, appreciation for the crew's responsiveness in answering questions, and general acknowledgement of the improvements made at the home.

Completions by County with sufficient Pre and Post Data



County	Completions	Average % Savings

Customers with complete Pre and Post data		

Question #2

How does this compare to changes in total energy use, including supplemental sources of heat?

Neither electric nor supplemental heat usage is tracked by the company.

Question #3

Electric utilities should also assess the impact of the usage reduction program on patterns of energy use. Where applicable, the financial impacts of any shifting in the use of service from time periods when service is more expensive to time periods when service is less expensive should be examined.

This question does not apply to gas utilities.

Question #4

How has the customer payment behavior changed? To what extent have customers with overdue balances changed arrearages trends that existed prior to receiving weatherization services? To what extent have customers paid more consistently following weatherization?

During 2024, 97% of LIURP participants with complete Pre and Post data were also enrolled in CAP. In the CAP program, customers pay a percentage of their income for gas service. The payment amount may change if there is a change in income, however, Pre and Post weatherization does not have an impact on the

payment amount. Payment behavior, therefore, is more directly related to participation in CAP than in the receipt of weatherization services.

Question #5

What were the general and specific goals for the program in this year (other than production and spending goals)? Did the company meet its goals related to achieving quality in the provision of program services?

Program goals for 2024 were as follows:

- Reduce consumption
- Maintain health, safety, and comfort in the home
- Comply with PUC mandates
- Continue utilization of third-party administrator, CLEAResult
- Explore opportunities for a new third-party administrator
- Assist special needs customers
- Partner with community-based organizations when possible
- Spend program budget wisely while maximizing quality of work
- Continue providing random inspections as a means of quality control
- Utilization of the Universal Service Advisory group to review the program processes and customer approach
- Collect customer satisfaction survey data for quality control
- Coordinate projects with other utilities and/or WAP when possible
- Educate participants regarding conservation and encourage behavioral changes
- Continue assessing best practices to achieve program success

Achieving a reduction of 24.89% compared to 12.7% in the prior year represents a significant accomplishment, achieved while maintaining a focus on health, safety, and comfort. The company is satisfied with these results.

Question #6

What specific steps are being taken to use either experience in managing the program or technical information to modify the program to improve its effectiveness?

In 2024, CLEAResult continued implementing the program and worked on the contractor/company interface to improve program goals.

Energy Consultants performed quality control visits, utilized infrared camera technology, provided customer education, conducted satisfaction surveys, and delivered feedback to contractors to improve program quality and cost-effectiveness. The Energy Consultants conducted 107 quality control visits ensuring greater consistency in contractor implementation. As inspections were completed on 57% of projects, the inspections also provided additional opportunities to reinforce customer education.

The company provided a satisfaction survey to all participants in the program. Along with the survey customers received conservation tips to emphasize conservation. This additional tool allows the company to monitor customer satisfaction and contractor performance. A total of 60% of customers returned the survey. Survey reports presented overall customer satisfaction with the program and a commitment to implement energy tips.

Attic sidewall insulation was installed in 155 of the 186 homes with complete Pre and Post weatherization. Data showed a savings achievement of 25.22% savings.

In 2024, the company issued a Request for Proposal (RFP) for program delivery, aiming to improve program outcomes and customer satisfaction. The company selected PEAK homeiQ, an affiliate of Mincin Insulation, an organization with a long record of strong savings and quality performance for other western PA utility programs.

Attic Wall Insulation Savings Summary Report

Agency	Customer Count	Average Normalized Savings %
CLEAResult East	50	20.3
CLEAResult West	51	29.7
Weber Construction	54	25.4
Combined customer count and Savings %	155	25.22

Report only contains customers with complete Pre and Post data

During 2024, Peoples installed 59 furnaces of the186 completed homes with complete Pre and Post data, resulting in savings achieved of 35.41%.

Furnace Savings Summary

Agency	Customer Count	Average Normalized Savings %
CLEAResult East	10	27.6
CLEAResult West	24	35.7
Weber Construction	25	38.1
Combined customer count and Savings %	59	35.41

Report only contains customers with complete Pre and Post data

The company attempted to complete combined jobs when possible. In 2024, the company partnered with electric companies throughout the service territory. Partnerships with the electric companies resulted in 75 in partnership with Duquesne Light (25) and First Energy (50).

During the year 2024, the company spent $2,468,889.01. The average PNG spending was $13,273.59.

Peoples Natural Gas Company LLC

Non-Savers Survey

Program Year 2024

During the 2024 year, Peoples identified six completions with post-period findings indicating no energy savings. The average increase in gas usage among these cases was 1.69%.

Reviews of non-savers included the following approaches:

- Job file review
- Letter mailed explaining usage increases and emphasizing conservation tips
- Phone interview
- Energy Consultant home visit

In efforts to standardize the process, Peoples utilized a survey form during phone interviews and compiled demographic data. See attached file.

Non-Saver Data PNG		Data
Non-Savers	Average	households
# of Owner Household	4	households
Owner Average Non-Savings %	-3.24	%
# of Renter Household	2	households
Renter Average Non-Savings %	-6.92	%
People in Household Average	4	people
House Size Average	1,908.50	Sq. ft.
Household Income Average	$19,776	per year
Spending on Measures Average	$6,821.08	per household
Spending on WX Measures Average	$6,454.54	per household
Spending on HVAC Measures Average	$1,090.85	per household
Spending on Measures Average (Owner)	$5,669.40	per household
Spending on Measures Average (Renter)	$8,024.82	per household

Key observations include:

- Renters accounted for approximately half of the non-saving cases.
- The average household size was four members.
- The majority of the non-saving cases were homeowners.
- Higher number of measures were implemented in rental properties.

- Two of the non-saving households reported using electric space heaters as supplement heat.
- All non-saving households utilized forced -air heating systems.
- All non-saving households reported using gas water heaters.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-III-005

Witness: Taylor, John **Title:** Chief Executive Officer, Atrium Economics LLC

Question: For each month of each year that the WNA has been in place, please provide the following information broken out by month:

a. The actual billed usage of all residential customers based on the Company's meter readings;

b. The weather normalized usage for all residential customers based on the Company's WNA calculation;

c. The aggregate residential WNA charge, or credit assessed for the month

d. The actual number of heating degree days

e. The weather normalized number of heating degree days based on the current WNA formula.

f. The weather normalized number of heating degree days based on PNG's proposed 65-year linear regression WNA formula.

g. The percentage deviation of the actual number of heating degree days from the weather normalized number of heating degree days based on the current WNA formula.

h. The percentage deviation of the actual number of heating degree days from the weather normalized number of heating degree days based on PNG's proposed 65-year linear regression WNA formula.

Please provide this information in a live Excel spreadsheet.

Answer: (a) Refer to CAUSE-PA-III-005 Attachment 1.

(b) Refer to the response to OSBA-II-015, Attachment B, subpart (a).

(c) Refer to the response to OSBA-II-015, Attachment B, subpart (b).

(d) – (h) Refer to CAUSE-PA-III-005 Attachment 1. Note that the response displays the actual and normal HDDs by calendar month. WNA is calculated on an individual customer basis using the actual HDDs and normal HDDs pertaining to the days in the specific customer's billing cycle.

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-VI-001

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: Please reference Peoples Statement No. 10, pages 8, 10, and Peoples Natural Gas Company LLC Retail Tariff No. 49 page 43. Regarding the proposed tariff provision to prohibit recreational gas use for CAP customers:

a. Provide a comprehensive list of all usage the Company considers as recreational.

b. Explain the specific methodology the Company will use to identify "unjustified use" and how it will differentiate between high legitimate usage (e.g., poorly insulated homes) and recreational usage.

c. Explain how the Company will calculate the amount of “unjustified usage” attributable to recreational gas use.

d. Explain how a customer can dispute allegations of recreational CAP usage and the process that the Company will follow

Answer: a. The Company considers use of natural gas in interior or exterior pool heaters, hot tubs, recreational appliances, outdoor appliances, such as gas grills, fire pits or rings, fireplaces, gas lamps, outdoor heaters and other outdoor cooking appliances, as well as heated out-buildings, such as a shed, shop or garage as recreational use. Please note this list is not all-inclusive.

b. Recreational usage is typically identified through review of billing data, which often indicates higher usage in the summer months if recreational appliances such as pool heaters or gas grills are being used, for example. Recreational usage may also be identified through routine field visits to the property or audits of the property conducted in preparation for LIURP weatherization services.

c. The Company does not intend to calculate the amount of "unjustified usage".

d. Customers are able to dispute any action taken by the Company through the normal dispute process through which the Company will respond to the customer's dispute as required by regulations.

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: Please reference Peoples Statement No. 10, pages 8, 10, and Peoples Natural Gas Company LLC Retail Tariff No. 49 page 43. Regarding the proposed tariff provision regarding CAP fraud:

a. Provide a comprehensive list of all situations the Company considers “obtaining benefits through fraudulent means.”

b. Explain the specific methodology the Company will use to identify whether a participant “obtained benefits through fraudulent means" and how it will differentiate between fraud and good faith errors on the application.

c. Explain how a customer can dispute allegations of CAP fraud and the process that the Company will follow.

Answer: a. The Company considers "obtaining benefits through fraudulent means" the participation in CAP by customers who knowingly provide income information that is untrue for the purposes of appearing qualified for CAP when they are aware their household income exceeds income guidelines.

b. This tariff language is intended to be used only in those circumstances in which the Company becomes aware of a customer with significant resources applying for CAP dishonestly. These situations are typically identified through a review of high usage accounts. For example, upon review, if the Company identifies the high usage is due to an large residence with significant property value and if there is no history of applying for or receiving LIHEAP and if there is undocumented income such as completion of the zero income form or 'other' income form or an appearance of unreported income, the Company will investigate further to determine if there are publicly available indications of unreported income (i.e. owns their own business, etc.).

c. The written notification to the customer will include dispute rights, including the ways to dispute this action with the Company as well as their ability to contact the PA PUC Bureau of Consumer Services.

Witness: Nelson, Jennifer **Title:** Vice President, Concentric Energy Advisors

Question: Please describe how the Company accesses external capital. If the Company's external capital is provided by its parent or some other related company under a credit agreement, please describe the terms of the credit agreement and the associated service fees.

Answer: Peoples receives capital through four sources:

1) retained earnings from the business that is not distributed to owners;

2) equity infusions from its parent, PNG Companies LLC;

3) working capital liquidity from its parent, PNG Companies LLC via an Intercompany Demand Note Agreement as approved by the PAPUC at Docket No. G-2021-3023978. See attachment No. 1 for the form of agreement; and

4) long-term debt from its parent, PNG Companies LLC via an Intercompany Promissory Note Agreement as approved by the PAPUC at Docket No. G-2024-3049928. See attachment No. 2 for the form of the agreement;

Submit Date: 4/21/2026

INTERCOMPANY DEMAND NOTE AGREEMENT

This Intercompany Demand Note Agreement ("Agreement") is entered into this ___ day of 2021, between PEOPLES NATURAL GAS COMPANY LLC (the "Borrower"), a limited liability company formed under the laws of the Commonwealth of Pennsylvania , and PNG COMPANIES LLC (the "Lender"), a limited liability company formed under the laws of the State of Delaware and the parent company of Borrower (collectively referred to as the "Parties").

WHEREAS, Borrower from time to time has need to borrow funds on a short-term basis, and Lender has agreed to provide such funds as are needed on a short-term basis to finance or support the capital expenditures and working capital needs of the Borrower.

NOW THEREFORE, in consideration of the mutual premises and promises set forth in this Agreement, the Parties agree as follows:

1. Lender agrees to meet the short-term borrowing needs of Borrower, to the extent funds are available. The maximum amount available to be loaned to Borrower from time to time shall be set forth in an Intercompany Demand Note ("the "Note") to be executed by Borrower, in the form set forth and attached hereto as Appendix "A".

2. The Note shall be payable ON DEMAND and may be prepaid in whole or in part at any time without any premium or penalty.

3. The Principal amount of the Note, and the interest rate under the Note shall be equal to the Principal amount and the weighted average interest rate set forth in a) such agreements entered into from time to time by Lender (as borrower thereunder), and other unaffiliated agents, banks and financial institutions or entities, which create a revolving credit agreement (the "Credit Agreement") and b) the revolving credit arrangement between Lender (as borrower thereunder) and Essential Utilities, Inc. ("Essential")(the "Essential Demand Note"). Interest shall be computed in the manner provided in the Credit Agreement and the Essential Demand Note.

The Essential Demand Note between PNG and Essential bears interest at a rate per annum equal to the applicable rate set forth in a certain Credit Agreement dated as of December 5, 2018 by and between Aqua America, Inc. (now Essential), a Pennsylvania corporation, as the borrower thereunder, and PNC Bank National Association as Administrative Agent on behalf of various lenders, as the lender thereunder, and any successor credit agreement thereto.

4. The provisions of this Agreement shall be construed and interpreted and all rights and obligations hereunder determined in accordance with the laws of the State of New York.

Title:

APPENDIX "A"

INTERCOMPANY DEMAND NOTE

$400,000,000 Execution Date: _____, 20__
Effective Date: , 2021

For Value Received, PEOPLES NATURAL GAS COMPANY LLC, a limited liability company formed under the laws of the Commonwealth of Pennsylvania (the "Borrower"), hereby promises to pay to the order of PNG COMPANIES LLC (the "Lender"), a limited liability company formed under the laws of the State of Delaware, at such place as the Lender may designate in writing, the principal sum of $400,000,000 or, if less, the then unpaid principal amount of the loans made by the Lender to the Borrower to finance or support the capital expenditures and the working capital needs of the Borrower as set forth in Schedule 1 attached hereto. This note shall be payable ON DEMAND and may be prepaid in whole or in part at any time.

This note shall bear interest at a rate per annum equal to the weighted average rate set forth in a) the Credit Agreement dated as of November 25, 2020, between the Lender (as borrower thereunder), PNC Bank, National Association as Administrative Agent on behalf of various lenders and the other agents, banks and financial institutions or entities from time to time parties thereto (the "Credit Agreement") and b) the revolving credit agreement between Lender (as borrower thereunder) and Essential Utilities, Inc. ("Essential") (the "Essential Demand Note"). Interest shall be computed in the manner provided in the Credit Agreement and the Essential Demand Note.

The Essential Demand Note between PNG and Essential bears interest at a rate per annum equal to the applicable rate set forth in a certain Credit Agreement dated as of December 5, 2018, by and between Aqua America, Inc. (now Essential), a Pennsylvania corporation, as the borrower thereunder, and PNC Bank National Association as Administrative Agent on behalf of various lenders and the other agents, banks and financial institutions or entities from time to time parties thereto and any successor credit agreement thereto (the "Essential Credit Agreement"), but in no event in excess of the maximum rate permitted by law.

Interest accruing on this note shall be payable in the manner provided in the Credit Agreement and the Essential Demand Note, as applicable. If any payment hereof becomes due and payable on a day other than a business day, such payment shall be extended to the next succeeding business day. If the date for any payment of principal is so extended, interest thereon shall be payable for the extended time.

All loans made by the Lender and all repayments of the principal thereof shall be recorded by the Lender on the schedule attached hereto, or on a continuation of such schedule attached to and made a part hereof; provided that the failure of the Lender to make any such recordation shall not limit or otherwise affect the obligations of the Borrower hereunder.

All payments hereof shall be made in lawful money of the United States of America and in immediately available funds.

This note, together with all accrued interest hereon, shall become immediately and automatically due and payable, without demand, presentment, protest or notice of any kind, upon the insolvency, general assignment, receivership, bankruptcy or dissolution of the Borrower (or the filing of any petition by or against the Borrower with respect to any of the foregoing). The Borrower does hereby forever waive presentment, demand, protest, notice of protest and notice of nonpayment or dishonor of this note.

The Borrower hereby agrees to pay all reasonable costs and expenses incurred by the Lender incidental to or in any way relating to the Lender's enforcement of the obligations of the Borrower hereunder or the protection of the Lender's rights hereunder, including but not limited to, reasonable attorneys' fees and expenses incurred by the Lender (whether or not a proceeding has been commenced).

No failure on the part of the Lender to exercise, and no delay in exercising, any right, remedy or power hereunder shall operate as a waiver thereof, nor shall any single or partial exercise by the Lender of any right, remedy or power hereunder preclude any other or future exercise thereof or the exercise of any other right, remedy or power.

Each and every right, remedy and power hereby granted to the Lender or allowed it by law or other agreement shall be cumulative and not exclusive the one of any other, and may be exercised by the Lender from time to time.

Every provision of this note is intended to be severable; if any term or provision of this note shall be invalid, illegal or unenforceable for any reason whatsoever, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired.

THE BORROWER WAIVES THE RIGHT TO TRIAL BY JURY IN ANY ACTION OR PROCEEDING ARISING OUT OF, BASED UPON, OR IN ANY WAY CONNECTED TO, THIS NOTE.

THE PROVISIONS OF THIS NOTE SHALL BE CONSTRUED AND INTERPRETED AND ALL RIGHTS AND OBLIGATIONS HEREUNDER DETERMINED IN ACCORDANCE WITH THE LAWS OF THE STATE OF NEW YORK.

INTERCOMPANY PROMISSORY NOTE

No. 2025-B December 31, 2025

$_____

For Value Received, PEOPLES NATURAL GAS COMPANY LLC, a limited liability company formed under the laws of the Commonwealth of Pennsylvania (the "Borrower"), hereby promises to pay to the order of PNG COMPANIES LLC or registered assigns (the "Lender"), a limited liability company formed under the laws of the State of Delaware, the principal sum of _____ (_____), together with interest (computed on the basis of a 360 day year of twelve 30-day months) on the unpaid balance thereof at the rate per annum from the date hereof as noted on Exhibit A.

Payments of principal of and interest on this Note are to be made in lawful money of the United States of America at the principal office of the Lender in Pittsburgh, Pennsylvania or at such other place as the Lender shall have designated by written notice to the Borrower.

This Note is subject to optional prepayment, in whole or in part, from time to time, at a redemption price of 100% or the principal amount prepaid, plus accrued interest thereon. Prepayments of this Note shall be noted on Exhibit B. attached hereto and made a part hereof; provided that the failure of the Lender to make any such recordation shall not limit or otherwise affect the obligations of the Borrower hereunder.

The Borrower represents that (a) it has full power and authority, not restricted by any law or governmental regulation, to execute and deliver this Note and to perform hereunder; (b) this Note evidences its valid and legally binding obligation, enforceable in accordance with its terms; and (c) its execution, delivery and performance of this Note do not and will not contravene any bylaw or contractual restriction binding on or affecting it.

This Note may not be changed or modified orally, nor any right or provision hereof be waived orally, but in each instance only by an instrument in writing signed by the party against which enforcement of such change, modification or waiver is sought.

No failure on the part of the Lender to exercise, and no delay in exercising, any right, remedy or power hereunder shall operate as a waiver thereof, nor shall any single or partial exercise by the Lender of any right, remedy or power hereunder preclude any other or future exercise thereof or the exercise of any other right, remedy or power.

Each and every right, remedy and power hereby granted to the Lender or allowed it by law or other agreement shall be cumulative and not exclusive the one of any other and may be exercised by the Lender from time to time.

Every provision of this note is intended to be severable; if any term or provision of this note shall be invalid, illegal or unenforceable for any reason whatsoever, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired.

This Note shall be construed and enforced in accordance with, and the rights of the issuer and holder hereof shall be governed by, the law of the Commonwealth of Pennsylvania excluding choice-of-law principles of the law such Commonwealth that would require the application of the laws of a jurisdiction other than such Commonwealth.

IN WITNESS WHEREOF, the undersigned has executed this Note as of the day and year first above written.

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OCA-II-027

Witness: Nelson, Jennifer **Title:** Vice President, Concentric Energy Advisors

Question: Please list all debt and equity raised by the parent company and the Company since January 1, 2015, to the most currently available. For bonds, please provide the CUSIP number for all securities raised over this time.

Answer: All debt received from PNG Companies ("Parent") and still outstanding is summarized in the attachment including debt issued since January 1, 2015. Peoples Natural Gas ("Company") and Parent do not have equity offerings. However, both entities do receive equity infusions, as needed. The equity infusions since 2015 for both Parent and Company are summarized in the attachment.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	Peoples's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.	There is limited connection between the WNA and cost causation. The WNA assumes that Peoples is entitled to recover its revenue requirement regardless of the usage or throughput of its customers due to variations in weather even though Peoples is in a weather sensitive business. While it is designed to ensure that Peoples recovers its authorized revenue requirement and fixed costs, it does not align cost causation with cost recovery because the WNA is applied to the variable charge in a customer's bill. The WNA also has the likelihood of disincentivizing effective management because the WNA charges customers based on normalized weather sensitive usage rather than actual weather sensitive usage.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged.	It does not. Since the WNA assesses charges on customers for throughput not consumed, due to weather conditions (i.e., customers are charged when the weather is warmer than normal when they use less of the systems' capacity – and provides them with a credit in months when they use more of the system's capacity, i.e, they receive a credit when the weather is colder than normal and they use more of the system's capacity) the WNA does not support fixed capacity utilization.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated c onsumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 65-year regression rather than the average of a 65-year regression and a 20-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions.	The WNA does not meet this criterion. because the WNA generates revenue for Peoples only when consumption is less than projected – and therefore demand is less than anticipated – it does not, in fact, reflect the level of demand that is associated with customers' anticipated usage. Furthermore, by design, the WNA is targeted to meet the revenue requirement at a fixed point in time. While that design is based on anticipated consumption at the end of the FPFTY and will change with each rate case, it fixes that revenue requirement as an entitlement despite projections of revenue loss based on weather.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	Peoples's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.	The WNA may lead to intraclass cost shifting to the extent that customers with lower use may have a larger percentage of their total bill be weather sensitive than customers with more use. I agree that as structured it will not likely lead to interclass cost shifting.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures.	The WNA does not incentivize additional energy efficiency funding and may discourage energy efficency adoption to the extent customers believe that their energy efficiency investment will be eroded.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.	The WNA does not incentivize additional energy efficiency funding and may discourage energy efficency adoption to the extent customers believe that their energy efficiency investment will be eroded.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance progr ams.	Under the current WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.	More than 75% of Peoples low income customers are not enrolled in CAP and will bear the full brunt of WNAs that are assessed. Since the WNA is assessed during the months when bills are at their highest (in winter months due to winter usage), the assessment of a WNA during the winter compounds energy insecurity and unaffordable bills for Peoples' low income customers.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.	Rates may be moderately more stable during the months that a WNA is applied compared to prior years. This is because it is assessed on a volumetric and per customer basis and seeks to normalize weather sensitve usage, however, on a long term basis there is no evidence that rates will be more stable. There is also no evidence that this is the kind of bill stability that benefits customers -- as opposed to the stability of bills achieved through budget billing on a month in and month out basis.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through May, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband and limiters). It only applies to Residential and Small/Medium General Service classes and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.	I agree that the WNA reduces weather-related variation in revenue collection for Peoples, but it does this by imposing the obligation onto residential customers who are less able to bear this risk. This is especially true of Peoples' low income customers whose average household income is approximately $19,000 per year.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor does it affect regulatory lag.	I agree that the WNA will not reduce the frequencey of rate cases, but it will reduce the overall effectiveness of the regulatory paradigm, including the effectiveness of regulatory lag. The WNA increases the likelihood over the long term that Peoples will collect its projected revenue and *decreases* the likelihood that it will operate efficiently between rate cases. The WNA is a surcharge that weakens all of the positive aspects of regulatory lag such as cost containment between rate cases.
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	The Company's proposed WNA only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through May.	Because Peoples applies the DSIC to WNA revenue, the existence of the WNA will likely have the effect in the long term of increasing the dollars that Peoples is able to collect through its WNA. In this regard, it allows a sucharge on a surcharge.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
			The WNA is neither fair nor transparent because it almost always benefits the utility and it is complicated to understand. Most people do not know what a heating degree day is, how a utility's rates are set, and most people cannot follow the complicated algebraic equation needed to determine their WNA charge.
		a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and a limiter. Outside of the deadband and the limiter, the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates.	This is a protection, but in the absence of the WNA, there would be no need for a deadband. This is merely a restraint or collar on the worst outcomes of the WNA.
12	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	b. No Cross-Subsidization: The WNA is customer-specific.	I do not agree that this is a protection because it imposes charges on customers based on normalized usage, it requires them to pay not based on what they actually used but based on what they should have used had the weather conformed to historic patterns. Because the WNA is set to achieve an overall revenue requirement for the class, it should be imposed, if at all, across the class not on an individual basis.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
		c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts.	The protections asserted by Peoples are about the regulatory system that is in place, not the WNA. There is nothing inherent about the WNA that ensures regulatory oversight or reporting.
		d. Customer Transparency and Education: Peoples provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.	I have not seen evidence that customers understand how the WNA works or how the mechanism impacts their bills.

#	Statement of Policy	Company's Response (Exhibit JDT-6)	CAUSE-PA Response
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. Link to Peoples Website → https://www.peoples-gas.com/weather-normalization-adjustment.php.	It is not understandable. Customers understand that they should pay for gas distribution service they use, but do not understand that they should pay for service they do not use, which is what the WNA demands. The WNA formula is complicated and not transparent, and it is not reasonable for customers to have to understand each of the complicated concepts used to calculate this charge. It is a multvariable algebraic equation based on an abstract concept. It is in no way straight forward. In fact, I would submit that the concept is fundamentally contrary to the common understanding that you pay for what you use.
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA helps to minimize the volatility of the recovery of these costs.	There is no basis in the record to conclude that the WNA will improve reliablity.

PREPARED SURREBUTTAL TESTIMONY OF PATRICK M. CICERO

I. INTRODUCTION AND BACKGROUND

Q: Please state your name, occupation, and business address.

A: My name is Patrick M. Cicero. I am an independent consultant and serve as Of Counsel to the Pennsylvania Utility Law Project (PULP). In my role as Of Counsel, I have a broad range of responsibilities to PULP and its clients. For example, I provide analysis and testimony on utility matters for clients who are represented by members of the statewide legal aid network, including clients of PULP and other legal aid offices. PULP's business address is 118 Locust Street, Harrisburg, PA 17101. I also maintain an office in my home.

Q: Did you previously submit testimony in this proceeding?

A: Yes. On June 18, 2026, I submitted direct testimony that was pre-marked as CAUSE-PA Statement 1 on behalf of the Coalition for Affordability Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA). On July 15th and July 31st, 2026, I submitted two separate errata to my direct testimony correcting calculation errors caused by incorrect formulas in my work papers.

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal testimony responds to the rebuttal testimony submitted by: Peoples Natural Gas Company LLC (Peoples or Company) witnesses Michael Huwar,[1] Andrew Wachter,[2] Luke Ravenstall,[3] Rita Black,[4] Jennifer Nelson,[5] John Taylor,[6] Michelle

[1] Peoples St. 1-R.
[2] Peoples St. 2-R.
[3] Peoples St. 8-R.
[4] Peoples St. 10-R.
[5] Peoples St. 15-R.
[6] Peoples St. 17-R.

Parks,[7] Cynthia Fang,[8] and Steven Kolich.[9] I will also respond to Retail Energy Supply Association (RESA) witness Francis Caliva,[10] Office of Small Business Advocate (OSBA) witness Mark Ewen,[11] and Bureau of Investigation and Enforcement (I&E) witness Vanessa Okum.[12]

My surrebuttal does not address every issue raised or discussed by these witnesses or other witnesses. The absence of any response by me to any issue raised by Peoples or other parties in rebuttal does not indicate that I agree with those parties or their positions. Also, unless necessary for framing a response to the issues raised by Peoples, RESA, OSBA, and I&E in rebuttal, I will not repeat the extensive positions that I took in direct testimony. To the extent that an argument raised by any party in rebuttal was already sufficiently addressed in direct, I do not intend to respond to it here.

Q: How is your surrebuttal organized?

A: My surrebuttal responds to the witnesses topically.

- Section II responds to general issues raised by Peoples witnesses Huwar and Fang regarding affordability and the scope of utility responsibility for addressing unaffordable utility bills.[13]
- Section III responds to Peoples witnesses Nelson regarding Peoples request for an excessive return on equity and capital structure.

[7] Peoples St. 18-R.
[8] Peoples St. 20-R.
[9] Peoples St. 21-R.
[10] RESA St. 1-R.
[11] OSBA St. 1-R.
[12] I&E St. 1-R.
[13] Section I is the Introduction.

- Section IV responds to Peoples witness Taylor regarding its proposed increase to the residential customer charge as well as its request to continue its WNA.
- Section V responds to Peoples witnesses Black and Parks and I&E witness Okum regarding Peoples Universal Service and Energy Conservation Programs.
- Section VI responds to Peoples witnesses Taylor and Black and OSBA witness Ewen regarding the recovery of Universal Service and Energy Conservation program costs.
- Section VII responds to Peoples witness Ravenstall regarding Peoples' proposed fuel switching water heater pilot.
- Section VIII responds to Peoples witness Kolich and RESA witness Caliva regarding Peoples purchase of receivables (POR) program.

Q: Has your direct testimony, or the analysis and recommendations contained therein, changed based on the rebuttal testimony of other parties in this case?

A: I address in this testimony the areas where I have accepted Peoples' revised positions on a few issues. However, unless noted herein, I stand by the recommendations outlined in my Direct Testimony. If the Commission determines that a revenue increase is needed, the evidence shows that Peoples would have sufficient revenue at a significantly lower rate of return than that which it requested in this case which would still allow it to provide safe and reliable service, cover its reasonably and prudently incurred expenses, and have a reasonable opportunity to earn a fair return on its investments. Specifically, as outlined in my direct testimony, when faced with a range of options, the Commission should choose the lowest reasonable return on equity and should adjust a utility's capital structure to ensure that the overall rate of return is sufficient but no higher

than necessary. My view is that the Commission should be exacting in this analysis and, considering the profound affordability concerns outlined in the record of this case, should balance the scales by erring on the side of the consumer and public interest rather than corporate and private interest.

Q: Please summarize those recommendations from your Direct Testimony.

A: Based on a review of the record and the need to ensure that Peoples customers, including its more than 144,000 estimated low income customers, can continue to afford to maintain their essential gas service to their homes, I made the follow recommendations:

- In determining the return on equity (ROE) to authorize in this case, the Commission should pick the lowest ROE suggested by the models and evidence. Only after the Commission is satisfied that the ROE is as low as legally possible should it be satisfied with the results.[14]
- The Commission should impute a 50/50 capital structure as a means of further moderating the rate impact associated with the requested rate increase, thus ensuring that more capital reflected in the rates is paid for at a rate that is reflective of cheaper debt than more expensive equity.[15]
- The Commission should maintain the monthly customer charge for residential customers at its current level and eliminate Peoples' Weather Normalization Adjustment (WNA) rider. If the Commission determines that it wants to allow Peoples to maintain the WNA, then I do not oppose a modest increase in the fixed

[14] CAUSE-PA Statement 1 at 40.
[15] Id. at 47-48

customer charge but recommend that the Commission adopt the recommended changes that I outline in my direct testimony.[16]

- The Commission should deny both of Peoples' requested tariff changes to its Rider CAP – the addition of language regarding recreational usage and the CAP fraud provisions – because neither is well developed nor has a factual basis to conclude that they are necessary without further limitation.[17]
- The Commission should ensure that Peoples's CAP evaluation effectively investigates that root cause of the increase in CAP terminations in 2024, as well as the reasons why it has a materially significant number of customers who begin a CAP application but fail to complete their application.[18]
- The Commission should deny Peoples request to add additional costs that more readily belong in base rates to its universal service rider and should be required to more equitably assign universal service costs to all ratepayers.[19]
- The Commission deny Peoples' request to use ratepayer funds to build load though fuel switching from electric hot water heating to gas hot water heating.[20]
- The Commission should require Peoples to modify its purchase of receivables program to ensure that Peoples ratepayers are not paying the costs of uncollectible expenses for contracts that charge rates that are higher than the rates Peoples offers. Specifically, I recommend that the Peoples provide notice that as of June 1, 2027, it will no longer allow retail suppliers to participate in the POR program

[19] Id. at 75-81.
[20] Id. at 82-83.

unless the supplier's contract is for a rate at or below the price to compare at the time of contract initiation or renewal.[21]

Each of these recommendations is rooted in the evidentiary record as outlined in my Direct Testimony and I have not changed my position on them based on the rebuttal submitted by the Company or other parties unless I specifically note that I have in this surrebuttal.

II. RATE UNAFFORDABILITY

Q: In your direct testimony, you explained that Peoples' rates are already unaffordable for low income customers at current rates and that Peoples' proposed rate increase would compound economic hardship for these customers.[22] Please summarize Peoples' rebuttal regarding the unaffordability of Peoples' rates to which you are responding?

A: Peoples witness Fang argues that my testimony, along with that of Office of Consumer Advocate (OCA) witnesses Michael Deupree and Roger Colton, improperly attempts to convert a cost-of-service rate case into a vehicle for addressing broad macroeconomic conditions or general social welfare objectives. That characterization is inaccurate and should be rejected. As outlined in my direct testimony, part and parcel of cost of service ratemaking is the fact that the Commission must exercise its discretion and authority to retrain the utility's monopolistic tendency toward extractive rates, and thus a focus on affordability of rates is paramount.[23]

---

[21] CAUSE-PA St. 1 at 83.
[22] Id. at 17-34.
[23] See CAUSE-PA St. 1 at 11, n. 16 citing Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available

The positions advanced in my direct testimony were grounded in Peoples' own data and discovery responses and present a company-specific case that Peoples does not need the rate increase it is requesting because it is already earning sufficient returns, and that any increase would create devasting economic impacts for low income customers and their continued ability to afford to remain connected to gas service.[24]

Mr. Huwar and Ms. Fang argue that the Company recognizes affordability as a priority and point to Peoples Universal Service and Energy Conservation Programs as the avenue for addressing affordability.[25] As noted in my direct testimony, and as further addressed below, these programs are essential but only work to the extent that households are financially eligible and enrolled. This is precisely why I made a series of recommendations in direct testimony to improve access to and enrollment in Peoples' universal service and energy conservation programs and to examine why CAP termination rates climbed in 2024. If Peoples intends to only address widespread affordability challenges through its universal service programs, it must seriously interrogate the effectiveness of its programs in serving demonstrated need – starting with a root cause analysis to determine the reasons driving high denial and incompletion rates as well as high termination rates for its CAP customers.

---

at: https://www.puc.pa.gov/pcdocs/1874340.pdf (hereinafter "FPFTY Final Form Order") ("Inherent in the 'cost of providing service' principle of ratemaking is the recognition that public utilities are natural monopolies and that the PUC's oversight through cost-of-service ratemaking regulation serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge in the absence of price regulation.")

[24] Id. at 26-30; 35-36;

[25] Peoples St. 1 at 7-16.

Q: Ms. Fang argues that your testimony seeks to use utility ratemaking to "address broader macroeconomic affordability pressures."[26] Is this an accurate characterization of your position?

A: No. Ms. Fang ignores the fundamental understanding that rate affordability is a core part of determining just and reasonable rates using cost of service ratemaking. Moreover, my testimony directly addresses the ability of Peoples low income customers to afford Peoples' service at current and proposed rates. Based on their disproportionate energy burdens, arrearages, and termination rates, I conclude that Peoples' low income customers cannot afford Peoples' gas service at current rates, let alone Peoples' proposed, substantially increased rates.[27] My testimony does not argue that rates should be suppressed arbitrarily or simply because inflation is high or because household budgets are broadly strained. I also do not suggest that the Commission should abandon cost of service analysis or disallow any specific cost item based on macroeconomic conditions. I have not challenged the specific expenses or capital investments that Peoples seeks to make in its Fully Projected Future Test Year (FPFTY). I merely argue that the Commission should honor its obligation to exercise the full scope of its statutory discretion in determining just and reasonable rates, including consideration of the demonstrated impact of those rates on consumers. Far from abandoning cost of service rate making, my testimony is rooted in the principle that the Commission must honor its obligation to ensure that it sets a rate that is no higher than Peoples would obtain if it were forced to go to the capital markets for equity as opposed to having its equity determined in an administrative process.

[26] Peoples St. 20-R at 9-10.
[27] CAUSE-PA St. 1 at 25-34.

Ms. Fang acknowledges the disproportionate energy burdens, termination rates, and arrearages carried by low income consumers, but argues that "these metrics should be viewed collectively and interpreted within the broader context of the Company's rates, customer assistance programs, and the Commission's statutory responsibility to establish just and reasonable rates."[28] On this point, we agree. This is precisely the type of analysis presented in my direct testimony and it conclusively demonstrates that Peoples' rates are unaffordable for its more than 144,131 thousand estimated low income customers.[29]

Q: Ms. Fang argues that affordability concerns should be addressed through a statewide proceeding, or through state and federal tax law, rather than addressed in this rate case.[30] Do you agree?

A: No. Deferring resolution of acute rate affordability issues in Peoples' service territory to an undefined future statewide proceeding would be an abdication of the Commission's responsibilities, as it would force the Commission to perform only half of the ratemaking balancing test in this case – the half that benefits Peoples. Ms. Fang's proposal ignores the consumer side of that balance entirely. In a rate case such as the current proceeding, the Commission is not only *authorized* to account for the impact of rates on consumers and to ensure that universal service programs are adequate and that low-income customers can maintain access to service on reasonable terms – it is *required* to do so.[31] As the Commission recently recognized in its Order significantly reducing the rate request of Pennsylvania American Water Company, when setting rates for "essential, non-discretionary services . . . affordability should be a central consideration when

[28] Peoples St. 20-R at 9:4-11.
[29] CAUSE-PA St. 1 at 24.
[30] Peoples St. 20-R at 9:11-14, 10:22-11:2.
[31] See e.g., 66 Pa. C.S. §§ 1301; 2203.

determining whether . . . proposed rates are 'just and reasonable.'"[32] This observation is no less true for essential gas service as it is for water and wastewater service: Affordability is central to determining the justness and reasonableness of proposed rates for essential, non-discretionary gas services. Any attempt to punt these issues to some ill-defined and unclear future proceeding should be disregarded.

Q: Ms. Fang argues that you substitute macroeconomic considerations for cost of service ratemaking, which would suppress recovery of prudent costs, erode Peoples' ability to earn a fair rate of return, and weaken the link between cost of service and rates.[33] How do you respond?

A: I disagree. My position in this case is that Peoples has not met its burden to prove that its current rates are materially insufficient to recover its reasonable and prudently incurred costs, now or into the future. The record demonstrates that Peoples can earn a fair rate of return with prudent management with only a minimal increase in rates. I did not challenge Peoples' claimed operating or capital expenditures in the context of this case. Thus, any decision about whether to delay or avoid those expenses would be Peoples' management decision to do so, presumably to allow it to make more money for its shareholders rather than investing it in the system.

As stated above, my direct testimony does not propose that the Commission evaluate rate relief based solely on external economic conditions, nor that the Commission ignore or disregard prudently incurred costs. The evidence in this case suggests that Peoples is well capitalized, has sufficient revenue, and the need for any

[32] See Pa. Pub. Utility Comm'n v. Pennsylvania American Water Co., Docket No. R-2025-3057983, Opinion and Order at 37 (Order entered July 27, 2026) ("2026 PAWC Rate Case Order"). Available at https://www.puc.pa.gov/pcdocs/1941993.pdf.
[33] Peoples St. 20-R at 9:15-10:18.

rate increase is likely minimal. The Company disagrees – not because it would be unable to meet its projected capital expenditures and provide safe and reliable service, but merely because it would earn less money doing so. Ms. Fang attempts to make this case all about the level of profit that the Commission should allow the Company to earn, without regard to whether its customers can afford to support those profits. It is my position that the Commission should consider the totality of evidence – including Peoples' robust financial health and the demonstrated inability of ratepayers to absorb further increases – in determining whether, and to what extent, a rate increase is warranted.

To be clear, my argument is that the Commission must look at underlying economic fundamentals of both Peoples *and its customers* to determine the appropriate balance of interests in deciding the appropriate level of authorized rates in this case. This is fundamentally consistent with cost of service ratemaking as the Commission reaffirmed in its FPFTY Final Form Rulemaking Order, which concluded that the Commission oversight "serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge."[34] It is also fundamentally consistent with the recent decision in 2026 PAWC Rate Case Order.[35] Exercising that restraint in light of the specific, company-level financial evidence presented in direct testimony by me and other witnesses in this case, is precisely what the Commission's statutory mandate requires.

[34] Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available at: https://www.puc.pa.gov/pcdocs/1874340.pdf

[35] 2026 PAWC Rate Case Order at 41 (recognizing the significance of both the context and frequency of rate case requests and the impact and recent and current economic conditions).

Q: Mr. Huwar and Ms. Fang point to Peoples' affordability-related activities – including its Universal Service and Energy Conservation Programs as evidence of the Company's focus on affordability. How do you respond?

A: These activities, while necessary and important, do not offset the demonstrated and quantified harm to low income customers from Peoples' proposed rate increase. There are more than 100,000 estimated low income customers who are not enrolled in the Company's assistance programs. The facts are:

- Peoples reports that the average income of its confirmed low income customers is only approximately $19,000.[36]
- Energy burdens for these households are 11%-15% during the winter heating months at existing rates and would increase to 12%-16% during these months at proposed rates.[37]
- 75% of Peoples estimated low income customers are not enrolled in its customer assistance program (CAP) and are charged the full tariff rate along with any approved increase.[38]
- Peoples' low income customers carry a disproportionate amount of customer debt and are far more likely to have their service involuntarily terminated for nonpayment than residential customers as a whole.[39] In fact, confirmed low income customers who are not enrolled in CAP have a utility termination rate that is approximately 400%-500% higher than residential customers who are not confirmed low income.[40]

While Universal Service and Energy Conservation Programs are important tools to improve affordability for low income households, these programs are undersubscribed and cannot address the overall unaffordability of rates on their own. They also cannot substitute for the Commission's mandate to ensure that rates are just and reasonable for all customers. The Commission recognized this in its recent decision in the 2026 PAWC

[36] CAUSE-PA St. 1 at 21.

[38] Id at 18.
[39] Id at 27-30.
[40] Id. at 28.

Rate Case Order, when it explained that rate cases must be viewed in context with affordability – including an assessment of "recent and current economic conditions." The Commission concluded:

> [W]e believe that the issue of affordability must be viewed in the context of the magnitude and frequency of . . . rate cases, as well as the impact of recent and current economic conditions . . . . In doing so, we find that substantial record evidence demonstrates that PAWC's proposed rates are unaffordable for many PAWC water and wastewater customers. In addition, the low penetration and enrollment among low-income eligible households in PAWC's low-income customer assistance programs is concerning. PAWC cannot point to undersubscribed customer assistance programs to justify an otherwise unaffordable base rate increase. . . . *Affordability is an issue that must be addressed for all customers, not just for those who apply for and are found eligible to receive low-income assistance*.[41]

The same facts present themselves in this case: a frequent cadence of rate cases, low enrollment in CAP, high rates of unaffordability at current rates that are projected to get significantly worse at projected rates, and a utility that points to the mere existence of programs as a justification for dismissing affordability concerns. In my view, this is why it is important for the Commission to focus on Peoples' authorized return on equity – it is an area about which the Commission has significant discretion, and it impacts the affordability of rates considerably. I agree that, for households with income at or below 150% of the federal poverty level, the best way to materially and significantly improve affordability is through enrollment in CAP. Customers with income below 150% of FPL simply have no ability to adequately maintain service on a continuous basis – at existing rates – without the significant and ongoing assistance that CAP provides.

I share Ms. Fang's position that these programs are the best way to address affordability concerns for low income eligible households. However, more than 100,000

[41] 2026 PAWC Rate Case Order at 41 (emphasis added).

estimated eligible households are not enrolled.[42] Until or unless these households enroll in CAP, Ms. Fang's position that the Commission should not address core ratemaking principles that drive unaffordable bills is patently unreasonable. Furthermore, as discussed in my direct testimony, there are a considerable number of households within Peoples' service territory that reside at incomes below the economic self-sufficiency standard but above the income level needed to qualify for CAP. As I pointed out in my direct testimony, in 2024, approximately 29.3% of all households had income greater than $50,000 annually but less than $100,000 annually, accounting for approximately 191,000 of Peoples customers.[43] These households are not eligible for financial assistance through CAP or LIHEAP but generally struggle to afford to pay for all necessities – including utility service.[44] Thus, while significant in its impact, the existence of Peoples CAP does not negate the need for significant restraint in authorizing any rate increase. Hundreds of thousands of households within Peoples' service territory must rely on the Commission to exercise its core function as the economic regulator.

Q: Do you agree with Mr. Huwar that the Peoples Weather Normalization Adjustment (WNA) improves rate affordability?[45]

A: No. As I explained in my direct testimony, over the long term, Peoples' WNA is more likely to collect net revenue from customers because winters are more likely to be warmer and are projected to continue to warm due to the impacts of climate change.[46] Over the long haul, the WNA is far more likely to produce significant asymmetry and

[42] CAUSE-PA St. 1 at 18, Table 2.
[43] Id. at 23.
[44] I am not, as Ms. Fang implies in her rebuttal testimony, recommending that the Commission adopt the Self Sufficiency Standard for universal service program eligibility. Peoples St. 20-R at 11.

[46] CAUSE-PA St. 1 at 61-62.

surcharge customers on net each year than it is to produce net credits. These additional charges not only add to the already unaffordable energy burdens for low income customers, but also needlessly increase the cost of CAP paid by residential customers through the universal service rider. For CAP customers whose CAP bills are based on their average bill, the imposition of the WNA may unreasonably increase these customers' CAP bills. I will address this issue further later in section IV.B. of my surrebuttal regarding Peoples' WNA.

Q: Ms. Fang asserts that you and OCA witness Colton do not provide accurate assessments of current energy burdens of Peoples' customers. Do you agree?

A: No. Ms. Fang's general analysis reaffirms my conclusions that Peoples' rates are unaffordable for low income customers. According to Ms. Fang, Atrium Economics conducted a customer-level "gas burden analysis."[47] Based on Atrium's analysis, Ms. Fang concluded that the estimated average income for all 412,655 residential gas customers with at least 12 months of usage data was $54,974, and the average energy burden for this group is 3.4%. These findings are in line with findings of the Commission's Bureau of Consumer Services (BCS) that the energy burden of Pennsylvania's residential customers as a whole (exclusive of those enrolled in a Customer Assistance Program (CAP)) is roughly 4%.[48] However, as I explained in my direct testimony, Peoples' low income customers far exceed these gas burdens, carrying average energy burdens of approximately 6.5% throughout the year and exceeding 14% in winter months.[49]

---

[47] Peoples St. 20-R at 15.
[48] Energy Affordability for Low income Customers, Docket No. M-2017-2587711, Order, at 8 (Jan. 17, 2019); see also Diana Hernandez, Energy Insecurity: A Framework for Understanding Energy, the Built Environment, and Health Among Vulnerable Populations in the Context of Climate Change, 103(4) Am. J. Pub. Health (2013) available at: http://www.ncbi.nlm.nih.gov/pmc/articles/PMC3673265/#bib20.
[49] CAUSE-PA St. 1 at 25-27.

Atrium's analysis of the *median* gas burden across all 412,655 customers obscures the situation for the most vulnerable households. Finding that the median gas burden is 3.4% across all customers tells us almost nothing about whether low income customers can afford service. The relevant question – and the one I addressed in my direct testimony – is what confirmed low-income customers not enrolled in CAP spend on gas service as a percentage of their monthly income. Regarding Atrium's analysis of low income customers, Atrium analyzed a group of 28,975 Peoples' CAP customers with average annual income for this population was $19,643, median annual income of $16,668.[50] Atrium found that, *without benefits*, the mean gas burden for this group was 10.5%, which are substantially higher than the gas burdens I identified for non-CAP confirmed low income customers in my direct testimony.[51] Strikingly, Atrium identified that customers in the 95th percentile of income level have average gas burdens of 26.2% without CAP benefits.[52]

Ms. Fang points out that CAP benefits bring the average energy burdens in line with the Commission's CAP policy statement and concludes that CAP substantially mitigates both typical burdens and high-burden outliers for participating customers.[53] I wholeheartedly agree; however, as noted above, 75% of Peoples' estimated low income customers (more than 100,000 customers) are <u>not</u> enrolled in its CAP and are charged the full tariff rate along with any approved increase and their gas burdens will further increase with any approved rate increase in this proceeding.[54]

---

[50] Peoples St. 20-R at 19.
[51] <u>Id.</u> at 21.
[52] <u>Id.</u>
[53] <u>Id.</u>
[54] CAUSE-PA St. 1 at 18.

Thus, I dispute that the Atrium Gas Burden Study in any way demonstrates that Peoples' rates are affordable for its low income customers. I further dispute Ms. Fang's conclusion that "Peoples' current residential gas bills are generally within reasonable affordability ranges for most customers and that the proposed increase does not materially change that overall profile."[55] As I explained in my direct testimony, Peoples' proposed rate increase will increase non-CAP low income energy burdens by almost a full percentage point.[56] The energy burden for Peoples' non-CAP low income customers is already far above what is considered affordable. Peoples' proposed rate increase would raise it even further out of reach, which will further contribute to the disproportionate terminations rates and arrearages carried by this group.

III. RETURN ON EQUITY AND CAPITAL STRUCTURE

Q: What is the purpose of this section of your testimony?

A: The purpose of this section of my testimony is to address the issues raised by Peoples witness Jennifer Nelson[57] on the cost of capital, including return on equity and capital structure.

Q: In your direct testimony, did you make a recommendation about the revenue requirement that should be permitted in this case?

A: No. I presented evidence of the significant and pervasive hardship that Peoples customers face at current rates that will be exacerbated by the requested rate increase. Specifically, I urged the Commission to heed the fact that over the last five years, Peoples has had healthy net income from its operations totaling approximately $1.2 billion from

[55] CAUSE-PA St. 1 at 27.
[56] Id. 1 at 26-27.
[57] Peoples St. 15-R.

2021-2025.[58] Peoples projects net income as of the end of December 2026 to be an additional $261.9 million.[59] Peoples is not capital starved. In fact, Peoples great-grandparent – Essential Utilities – has not had to make a capital infusion into Peoples since 2018, a period of more than 8 years.[60] This is in contrast to the more than 144,000 households in Peoples service territory who must somehow survive on approximately $19,000 per year and suffer termination rates of 8%-10%.[61] Given these disparities, I urged the Commission to reject Peoples requested rate increase.

Q: In your direct testimony, did you make a recommendation about the specific return on equity that should be authorized by the Commission?

A: No. My position in direct testimony was – and remains – that the Commission should carefully consider the full range of ROE recommendations presented by the parties through the relevant financial models, and also consider the principles articulated by Governor Shapiro in his April 29, 2026 letter to utility CEOs as a check on reasonableness in reaching a determination of what ROE to authorize.[62] Within the range of ROEs presented, my recommendation was that the Commission "should pick *the lowest ROE* that the models suggest and consider whether there are other criteria to evaluate whether an even lower ROE would nevertheless be sufficient."[63]

[58] CAUSE-PA St. 1 at 35; citing Peoples Response to OCA II-023, Attachment (Peoples Monthly Income Statement).
[59] Id. citing Peoples Filing Requirements, §53.53.II. A, Exhibit 16, Sc. 5.
[60] CAUSE-PA St. 1 at 37.
[61] Id. at 21, 28 Table 5.
[62] Id. at 39.
[63] Id. at 40.

Q: Even though you did not make a specific ROE recommendation, Ms. Nelson says that your "ROE estimates fail to meet the *Hope* and *Bluefield* fair return standards, defy any rational basis, and should be dismissed from the outset."[64] What is your response?

A: Ms. Nelson's rebuttal testimony is an attempt to enshrine her judgment about the issues she presents over the judgment of other witnesses. However, the Commission should proceed with caution in accepting the judgment of a witness for the utility that takes the position that an 11.25% ROE is the lowest reasonable ROE that is justified given the facts in the record. To be clear, neither in my direct testimony nor here do I engage in a traditional ROE analysis that looks at either a Discounted Cash Flow (DCF) or Capital Asset Pricing Model (CAPM) from a financial modeling perspective. Ms. Nelson considers that to be a fatal flaw, but I do not. As noted in my direct, the financial experts in this case have spent a considerable amount of time and energy debating the minutiae of their cost of capital models. I have taken a different approach that centers affordability and customer needs at the front of the analysis. My testimony provides a framework for the Commission to assess the reasonableness of the revenue and return requests that have been presented as viewed from the perspective of low and moderate income customers who are forced to pay the rates that the Commission authorizes. If the Commission sets rates too high, customers have no choice but to pay them and when they cannot afford to do so they cannot choose a less expensive alternative. Thus, I disagree that my analysis should be ignored on these issues.

[64] Peoples St. 15-R at 4.

Q: Ms. Nelson also states that your position defies a rational basis. What is your response?

A: To state the obvious, I disagree. My position is that within the evidence presented by the financial models, the Commission should pick the lowest ROE that is reasonably justified and then determine whether an even lower ROE is legally justified below this range based on the presentation of objective financial metrics such as the methodology outlined by Governor Shapiro in his April 29, 2026, CEO letter and as presented by his Special Counsel in the Public Input Hearings in this proceeding. This is a perfectly rational and objective basis for deciding what ROE to authorize. Furthermore, as will be briefed by CAUSE-PA, it is fundamentally consistent with applicable law and Commission precedent that requires that Commission to set an ROE that is as low as legally possible.[65]

Q: Ms. Nelson also argues that "the only reliable method for determining the cost of capital is through the application of rigorous analysis using financial models and market data from reliable sources, coupled with a comprehensive risk assessment of the regulated utility"[66] Do you agree?

A: No, I do not. One could employ financial markets to determine the ROE for a utility rather than the methods that have historically been used. The financial models employed by Ms. Nelson and others are meant to mimic what the markets would demand. While subjecting utility operating companies to the rigor of actual markets has not been employed in Pennsylvania, financial markets are likely a far more reliable determinant of the actual cost of capital that investors would demand of a relatively safe, stable monopoly

[65] See e.g., 2026 PAWC Rate Case Order at 44 (agreeing with the ALJs that customers must pay enough, "but no more than is necessary").
[66] Peoples St. No 15-R at 7:7-9.

without competitors and with captive ratepayers. However, Essential Utilities has chosen to shield Peoples from the scrutiny of actual markets, so the process we have is merely an alternative method, but it certainly is not the only reliable method.

Q: Do you agree that the Commission must consider the specific risk of Peoples in reaching its determination of an appropriate ROE?

A: Yes. This is why I presented data about the earnings, dividends, net income, and historic ROE of Peoples in my direct testimony.[67] That data shows a utility that is significantly well capitalized, with massive profit margins and net income totally $1.2 billion from its operations from 2021-2025 *with an additional net income of more than $260 million projected as of December 2026!*[68] In addition, as noted above, Peoples has not had to have a capital infusion of any capital since 2018,[69] thus raising significant concerns about whether the revenue requirement established in previous cases was materially and significantly higher than it needed to be.

Q: Ms. Nelson asserts that if your recommendation for a lower ROE is adopted that capital would flee and that Peoples would be at risk.[70] What is your response?

A: I chalk this up to general catastrophizing rather than actual risk. First, it is worth remembering that Peoples is beholden to its corporate parents and grandparents for equity capital and the "Essential family" has not had to kick capital down to Peoples for at least 8 years. Thus, it strikes me as hyperbolic to suggest that Peoples will not have access to capital – after all, it has kicked considerable income up the corporate ladder over this same period despite Essential flowing no equity down to Peoples. While

[67] CAUSE-PA St.1 at 35-36.
[68] Id. at 35.
[69] Id. at 37, n. 78.
[70] Peoples St. No. 15-R at 9.

Essential's shareholders may not like the fact that they may receive lower returns than in the past, it is not axiomatic that they would not invest – particularly given the fact that they have over earned relative over the past few years as compared as to what could reasonably be expected. This is evidenced by Essential Utilities' own financial metrics. As of June 30, 2026, Essential Utilities had a price to book ratio of 1.63,[71] which indicates that investors think that the Company is over-performing relative to what it should earn. All of this suggests that it is far from certain the investors would flee from investing if a lower ROE were authorized.

Q: Ms. Nelson, like other Peoples witnesses, argues that affordability concerns must be balanced with the ongoing system need to meet its obligation to provide customers with safe and reliable service.[72] What is your response?

A: This is a mere axiomatic statement of the law. While I agree that affordability does not trump all, neither does the desire for a utility to maximize its profit by seeking a return of 11.25%. There is no evidence in the record that Peoples will not be able to provide safe and reliable service if the increase awarded is substantially smaller and based on a more market reflective ROE. This is because the Company has tools such as DSIC as well as its other tools that reduce regulatory lag such as the WNA, as well as its ability to collect more revenue than needed when it sets rates because of the Fully Projected Future Test Year.

[71] Yahoo Finance, Essential Utilities, Inc., Valuation Measures, Quarterly Price/Book as of June 30, 2026 (shown as "Current" quarter). Available at: https://finance.yahoo.com/quote/WTRG/key-statistics/ (Last visited 7/27/2026).
[72] Peoples St. 15-R at 12.

Q: Ms. Nelson argues that the regulatory mechanisms such as DISC, the use of alternative ratemaking such as the WNA, or the FPFTY are already factored into her cost of capital recommendation. How do you respond?

A: Ms. Nelson concedes that these mechanisms reduce absolute risk and that not all the proxy group companies utilizes them, but she argues that what matters is relative risk.[73] In fact, Ms. Nelson argued in direct that Peoples is riskier than its peers because of its aggressive capital spending plan and therefore needs additional revenue.[74] This claim should be significantly scrutinized given the well-known tendency of utilities towards capital bias, it should not serve as a reason to increase the ROE because the Company wants to spend more money. To allow a utility to have an aggressive infrastructure replacement plan that then serves as a justification for an increase in a needed equity return that incentivizes even more infrastructure replacement turns the whole exercise on its head and effectively allows the utility to set the conditions for its own awarded equity. Even accepting the fact, solely for the sake of argument, that Peoples' risk factors may be similar to its peers, this does not mean that the Commission cannot and should not consider the fact that each of these tools individually and all of them collectively reduce risk. The Commission made this very determination recently in regard to Pennsylvania American Water's cost of equity when it determining that "with respect to our obligation to consider PAWC's customers and the public interest, we considered PAWC's lack of regulatory lag and the commensurate impact of the Company's nearly annual rate

[73] Peoples St. 15-R at 13.
[74] Peoples St. 15 at 47.

increases upon customers' rates as part of our determination to make a downward adjustment to the Company's cost of equity."[75]

Q: Ms. Nelson spends considerable space in her rebuttal testimony addressing capital structure. Please summarize here rebuttal testimony on this issue.

A: Ms. Nelson objects to my recommendation of a 50/50 capital structure because it is "not based on evaluation of the financial cost of the proxy group, nor any other quantitative analysis."[76] In addition, Ms. Nelson asserts that the Commission should not look to the authorized capital structure in place at other natural gas distribution companies because capital structures vary widely "based on the unique needs of each company and the assets being financed."[77] She asserts that setting Peoples' ratemaking capital structure according to a proxy group average actual capital structure presumes that Peoples should be financed with the same proportion of debt and equity as the average, and the fact that Peoples equity ratio differs from an average does not mean that it is unreasonable.[78] Ms. Nelson also spends considerable time in her testimony discussing how a utility determines its equity ratio and asserts that other utilities have faced adverse financial consequences after a Commission imputed a hypothetical capital structure.[79]

Q: What is your response to Ms. Nelson?

A: My recommendation for the Commission to impute a 50/50 capital structure is based on a concern about ensuring that the overall rate of return that the Commission authorizes considers affordability of rates as a factor and moves the Company gradually

[75] 2026 PAWC Rate Case Order at 45.
[76] Peoples St. 15-R at 17:21-22.
[77] Id. at 18:9-10.
[78] Id. at 18.
[79] Id. at 31.

towards a capital structure that is more reflective of the risk that it would bear if it were subject to actual equity markets – like its great grandparent – Essential Utilities. To be clear, Peoples and its corporate parent should be free to capitalize their business as they see fit with a mix of debt and equity, but ratepayers should not be asked to pay an overall rate of return that places undue pressure on rate affordability because the Company wants to squeeze extra leverage out of its customers. This is why I – and every other witness who presented testimony on the cost of capital – has urged the Commission to make "pragmatic adjustments"[80] to Peoples ratemaking capital structure and impute a 50/50 capital structure (CAUSE-PA and I&E) or a 49% equity to 51% debt structure (OCA).[81] It also bears noting that the Commission recently imputed a capital structure for PAWC's water utility based in part on concerns about "the substantial evidence on the record regarding the affordability issues that are present in PAWC's service territory. . ."[82]

Regarding Ms. Nelson's assertion that there could be downward adjustments to Peoples credit ratings that would increase debt costs if the Commission were to impute a capital structure for ratemaking purposes that were more fair to consumers, given that Peoples requested ROE (11.25%) is 664 basis points higher than its cost of long term debt (4.61%), the cost of debt would have to increase dramatically to have an overall upward effect on the rate or return at an imputed 50/50 capital structure. The same is true even if the Commission were to accept the ROE that results from application of the

[80] While none of the parties used this term, it is in effect what each argues as all the arguments rely on the inherent responsibility of the Commission to exercise its judgment and impose restraint to ensure that rates remain just and reasonable for consumers who are captive and cannot choose another provider. See Hope Nat'l Gas, 320 U.S. at 602 ("[The Commission's] ratemaking function . . . involves the making of 'pragmatic adjustments.'")

[81] See Peoples St. 15-R at 16, Figure 4 citing capital structure recommendations of OCA, I&E, and CAUSE-PA.

[82] 2026 PAWC Rate Case Order at 184-185.

Shapiro principles (7.68%) as that is 307 basis points higher than the company's cost of long term debt. There is no credible evidence to suggest that the cost of debt would increase by *more than* 300-660 basis points if the Commission were to impute a 50/50 capital structure for ratemaking purposes.[83]

Q: Ms. Nelson disputes your calculations – and those of Mr. Patel for I&E – contained in your direct testimony about the savings for customers that could occur if the Commission were to impose a 50/50 ratemaking capital structure because she says that you did not account for the increased debt costs.[84] What is your response?

A: As noted above, there is no credible evidence to suggest that imputing a 50/50 capital structure would increase the cost of Peoples' long term debt by the 300-660 basis points needed to cancel out the effect of increasing the percentage of debt in the capital structure. Nevertheless, even assuming an increase in debt costs of 100 basis points (the figure that Ms. Nelson cites from EEI) the reduction in rates from imputing a 50/50 capital structure – or a 49/51 structure as recommended by the OCA – is significant even assuming an increase in debt costs. The magnitude of the differences is reflected in Table 1, below. This table assumes no other adjustments from the as-filed case except for the adjustments to capital structure, ROE, and debt costs that are shown in the table. As can be seen, it is only where one assumes the Commission adjusts the capital structure to 50/50 and awards Peoples its requested ROE of 11.25% *and one assumes an increase*

[83] In her testimony, Ms. Nelson cites a 2009 report from the Edison Electric Institute (EEI) for the proposition that utilities with credit rates of "A" ranges were generally able to secure long term debt at lower premiums than utilities with "BBB" credit ratings thereby saving customers 100 basis points per year in debt costs on average. See Peoples St. 15-R at 23.
[84] Peoples St. 15-R at 35-36.

of 100 basis points in debt that the math begins to skew against ratepayers. Given the high improbability of that scenario occurring, I stand by my recommendations and analysis from direct testimony.

Table 1: ROR Difference and effect on Revenue Requirement			
	ROR	**Revenue Requirement**	**Difference from As Filed (Negative numbers are savings from the as filed revenue requirement)**
As filed	8.23%	**$163,266,020**	N/A
At 11.25% ROE but 50/50 capital structure and as filed debt	7.93%	$141,086,858	($22,179,162)
At 11.25% ROE but 50/50 capital structure and debt cost 100 basis points higher	8.43%	$178,052,128	$14,786,108
At 8.8% ROE but 49% equity/51 debt capital structure (OCA position) and debt cost 100 basis points higher	7.17%	$84,899,649	($78,366,371)
At 7.68% ROE (Shapiro) but 50/50 capital structure and debt cost 100 basis points higher	6.65%	$46,455,769	($116,810,251)

Q: Please summarize Ms. Nelson's rebuttal testimony as it relates to Governor Shapiro's cost of capital proposals.

A: Ms. Nelson disagrees with Governor Shapiro's cost of capital proposals. First, she asserts that the proposals are concerning because they are prescriptive and formulaic, they increase regulatory instability, and they would fail to meet the *Hope* and *Bluefield*

standards of comparable return, financial integrity, and capital attraction.[85] She also disputes the specific methodology of choosing a 10-year treasury yield and a "trailing equity risk premium measure".[86] She asserts that neither of these methodologies are sufficient to measure the cost of capital for a utility. As to the 10 year treasury yield, she contends that the timeframe is too short and that the 30 year treasury bond is a more commonly used benchmark of a risk free rate.[87] As for the selection of an equity risk premium, she asserts that both using the Federal Reserve Board's Financial Stability Report and a 5 year median of the equity risk premium are inappropriate.[88] She asserts that if the Commission were to adopt an ROE of 7.68% the market would react negatively and it would infuse uncertain regulatory risk into the process of setting an ROE for utilities that would result in higher cost of capital for utilities.[89] She also takes issue with Governor Shapiro's capital structure proposal that would peg Peoples' ratemaking capital structure to the capital structure of its corporate parent, She asserts that this would produce inequitable outcomes and increase the cost of capital overall.[90]

Q: What is your response to Ms. Nelson?

A: My position in this case is that the Commission should authorize the lowest legally permitted return on equity and should ensure that the ratemaking capital structure has an fair and appropriate blend of equity and debt. The Commission should look at the information presented by the witnesses who undertook a "traditional" cost of capital analysis using financial models such as DCF and CAPM, as well as what the Governor's

[85] Peoples St. 15-R at 39-40.
[86] Id. at 43.

[88] Id. at 47.
[89] Id. at 47-51
[90] Id. at 51-54.

approach would permit as a check on those models. Counsel for CAUSE-PA will fully brief the issue of whether the Governor's proposed approach would satisfy the applicable legal standard. But it is important to contextualize that the approach recommended by the Governor uses objective criteria to establish a default return that is a rebuttable through the establishment of an equity auction. While Peoples has chosen not to follow this approach, it is my position that the Governor's approach is rational and merits significant consideration.

Ms. Nelson takes issue with applying the 10 year treasury yield (4.44% as of the date of Peoples filing) and an equity risk premium that uses a 5-year median (3.24%). What she fails to acknowledge is that the median projections for the S&P 500 over the next 10 years as projected by the Federal Reserve Bank of Philadelphia's Annual Survey of 10-Year Stock Market Forecasts,[91] projects a median forecast of 7% for the overall market. Utilities are much safer investments than overall markets, thus, it would be reasonable for the Commission to conclude that Peoples' return should be *lower* than the overall projections for the markets. If the objective projection for the market for the next 10 years is around 7%, it is difficult to see how a projection for a safe investment like a utility of 7.68% is insufficient. Thus, I continue to take the position that the Governor's approach is reasonable and should inform the Commission's judgment – along with the financial models presented by the parties – about the level of equity return that should be authorized based on the record of this case.

[91] Survey of Professional Forecasters (STOCK10), Fed. Rsrv. Bank of Phila. (May 15, 2026), https://www.philadelphiafed.org/surveys-and-data/stock10 (accessed under "Median Responses").

As to capital structure, I have already addressed this issue. Simply put, a 50/50 capital structure would be more fare to ratepayers and would be a middle ground between what the Company has proposed and what its ultimate corporate parent, Essential Utilities, employs. Ms. Nelson's criticism of the Governor's approach rehashes the same arguments she made as to each of the other witnesses' testimony on capital structure. It is not credible to suggest that the increased cost of debt from a reduced ROE and imputed capital structure of at least 50/50 will overcome the more than 300 basis point delta between the Company's current actual cost of debt (4.61%) and the ROE calculated using the Governor's approach (7.68%).

Q: Please summarize your conclusions in this section of your rebuttal.

A: Based on the totality of factors outlined in my direct testimony and in this testimony, the Commission should approve the lowest ROE suggested by the applicable financial models and should consider whether it can reasonably be reduced further based on the objective criteria outlined by the Governor. Each of my recommendations is meant to temper the excessive rates sought by Peoples and more fairly balance the needs of Peoples with the needs of its customers, particularly its low income customers who do not have the financial margin to absorb Peoples' excessive ROE and equity-skewed capital structure proposals.

IV. RATE DESIGN

A. Residential Customer Charge

Q: Please summarize your position in Direct Testimony regarding Peoples' proposal to increase its fixed customer charge from $16.80 per month to $26 per month.

A: As I explained in Direct Testimony, Peoples' proposal to increase its residential customer charge by $110.40 per year weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of gas they consume.[92] This exorbitant increase would also weaken the effectiveness of weatherization measures from the Low Income Usage Reduction Program (LIURP) and the Weatherization Assistance Program (WAP), contrary to the policy goals of these programs to reduce bills for customers through usage reduction.[93] I disagreed with Peoples that bill stability without bill affordability is a benefit for low income households - or that CAP or budget billing would be better options for customer bill stability than an increase in the fixed charge.[94] Ultimately, I concluded that the fixed customer charge should not be increased and that the WNA should be discontinued.[95] However, if the Commission were to allow the WNA to continue, I did not oppose an increase in the fixed customer charge that would be proportionally scaled back to any authorized revenue increase awarded.[96]

---

[92] CAUSE-PA St. 1 at 51.
[93] Id. at 53-54.
[94] Id. at 55-56.
[95] Id. at 56.
[96] Id.

Q: What was Mr. Taylor's response to your concerns about Peoples proposed increase to the residential customer charge?

A: Mr. Taylor asserts that concerns about energy efficiency and conservation should not trump rate design where the customer charge is intended to recover Peoples' fixed costs that do not vary with usage.[97] Mr. Taylor also posits an academic theory of conservation that "should be understood as the wise and efficient use of utility resources – not merely the reduction of energy consumption.[98] Mr. Taylor disputes that the proposed increase to the fixed charge would disproportionately impact low income customers and argues that the bill impacts for low income customers are generally consistent with that of other customer groups.[99] Mr. Taylor asserts that low income households, and particularly CAP customers, benefit from an increase in the fixed customer charge due to usage patterns.[100] He argues that the Company's proposed fixed charge moderates customer bills during the highest-usage winter months, when customer struggle most to afford bills.[101]

Q: What is your response to Mr. Taylor's argument that conservation should be understood as the wise and efficient use of utility resources, rather than just reduction in consumption?

A: I disagree that the Commission should ignore the impact of distribution rate design on energy usage or narrow its examination of efficiency and conservation to focus only on the efficient use of utility distribution resources. Mr. Taylor's proposed definition of

[97] Peoples St. 17-R at 27-28.
[98] Id. at 29.
[99] Id. at 31-32.
[100] Id. at 33-34.
[101] Id. at 35-37.

conservation is rooted in economic theory but disconnected from lived reality and ignores the critical need for energy conservation to advance a multitude of issues relevant to Peoples' proposed rate increase. Energy efficiency and conservation impact both ratepayer costs and resource adequacy and is vital to customers' ability to reduce their distribution bills through usage reduction to help offset the impact of any rate increase.

While I agree that the efficient use of the distribution system is a consideration in rate design, it is important to consider that low income customers have extraordinary difficulty being able to afford service and remain connected. This difficulty should not be compounded by limiting their ability to reduce bills through usage reduction. Nothing in Mr. Taylor's testimony rebuts the notion that the ability of consumers to save money on their distribution bills through energy efficiency investment or conservation is reliant on a bill structure that bases the recovery of costs on volumetric throughput.

Q: What is your response to Mr. Taylor's argument that a low income households benefit from a higher fixed charge?

A: Mr. Taylor's conclusion is premised on the assumption that low income customers are necessarily high usage customers. Low income customers have higher average usage, as a group, driven in significant part by inequities in housing quality and efficiency, but there are many low income households with low usage.[102] While low income households are less able to afford home energy efficiency and weatherization, high usage should be addressed through increased LIURP services and coordination, not by increasing the fixed charge for all customers. Low income customers can ill afford to have more of their bill fixed without the ability to mitigate higher bills through conservation or

[102] CAUSE-PA St. 1 at 54.

energy efficiency, regardless of whether that means going without or adopting efficiency in their home. Shrinking the ability of customers to reduce their distribution bills through conservation and efficiency will only compound the already impossible choices facing low income families to forego other necessities to maintain life essential energy services to their home.

Further, while I agree that bill stability is a legitimate goal, I disagree that increasing the fixed customer charge is the appropriate mechanism to achieve bill stability for low-income customers. A bill that is stable but unaffordable does not benefit low income customers. The solution is not to lock in more of their costs within a fixed charge they cannot avoid if they are able to access LIURP or WAP. There are far better tools to provide both stability and genuine affordability for low-income customers, including: (1) increased enrollment in CAP, which provides a bill tied to a customer's ability to pay, and (2) for those not eligible for CAP, budget billing, which Peoples is legally required to offer and which smooths payments without reducing the incentive to conserve.

Q: Ms. Black argues that increasing the fixed customer charge is not an issue for low income customers and will not affect LIURP savings because 97% of LIURP participants are CAP participants as of the 2024 LIURP annual report.[103] What is your response?

A: Ms. Black's argument rests on the assumption that once someone is enrolled in CAP that they will always be enrolled in CAP. This is not the case. We know from experience that households cycle in and out of CAP for a variety of reasons – household income changes or they fail to recertify timely or properly. Thus, even though an increase

[103] Peoples St. 10-R at 20-21.

in the fixed charge does not affect the customer's overall CAP payment – and, thus, does not incentivize or disincentivize savings produced by LIURP for that customer – does not mean that the increase will not impact that customer if they are no longer in CAP. Post-CAP, an increase to the fixed charge will have the same effect as for a LIURP-eligible customer who is not enrolled in CAP: it will dilute their ability to achieve bill savings as a result of usage reduction. Moreover, since one of the benefits of providing LIURP services to CAP customers is to reduce the overall cost of CAP through reduced usage by CAP customers, any increase in the customer charge will mean that, in aggregate, the CAP program is more expensive for non-CAP customers than it otherwise would be if bill savings had been passed through as a result of a lower customer charge. Thus, I disagree with Ms. Black's position that an increase in the fixed customer charge will not negatively affect the LIURP program's goals of bill savings and usage reduction.

Q: Mr. Taylor also argues that the proposed customer charge should not be scaled back proportionately if the Commission approves a lower revenue requirement because rate design should be based on cost to serve, not on the overall revenue level.[104] Do you agree?

A: No. While I understand the theoretical argument that rate design and revenue level are analytically distinct, the practical effect of approving the proposed $26.00 customer charge, in the context of a lower overall revenue requirement, is to lock in a structural shift toward fixed cost recovery. The Company is seeking a substantial revenue increase. If the Commission concludes that the requested increase is not fully justified, approving the full customer charge increase compounds the harm to low-income and lower-use

[104] Peoples St. 17-R at 39.

customers and more quickly erodes the effectiveness of efficiency and conservation to reduce customer bills without a demonstrated need for that level of cost recovery.

Q: Has your recommendation about the customer charge changed?

A: No.

B. Weather Normalization Adjustment

Q: What was your position in your Direct Testimony regarding Peoples' Weather Normalization Adjustment (WNA)?

A: I recommended that Peoples' WNA be discontinued. I explained that, the WNA shifts the traditional weather related business risk of providing gas distribution service from the utility onto customers, whereas Peoples is in a better position to manage those risks due to many factors, including the regulatory framework.[105] I pointed out that the Commission's regulatory framework (1) allows the Company to project its own revenue needs based on a fully projected future test year (FPFTY), (2) allows Peoples to establish a revenue requirement based on its own projections, (3) allows Peoples to charge a distribution system improvement charge (DSIC). [106] I pointed out that these mechanisms better position Peoples to absorb the effects of variable weather conditions without passing these risks down to consumers. However, if the Commission disagrees and allows the WNA to continue, I also made several recommendations on ways to reform the charge to lessen the inequitable impact to residential consumers.[107]

Q: What was Mr. Taylor's response to your concerns about Peoples

A: Mr. Taylor argues that the WNA does not eliminate business risk or guarantee

[105] CAUSE-PA St. 1 at 59-60.
[106] Id. at 60.
[107] Id. at 64-66.

recovery of earnings.[108] He argues that the fully projected future test year (FPFTY) and DSIC serve a fundamentally different purpose than the WNA, and that they do not eliminate the effects of abnormal weather or diminish the need for the WNA.[109] He opposes recommendations that the WNA deadband be increased from 3% to 5% and also opposes recommendations that October and May be removed from the WNA.[110]

He states that my recommendation for a class-based mechanism that accumulates WNA adjustments during the heating season and subsequently spreads the net class-level charge or credit over a longer period is "not inherently unreasonable" but requires more detail.[111]

Q: What is your response to Mr. Taylor's assertions that the WNA does not eliminate business risk and that the FPFTY and DSIC are not relevant to the WNA?

A: I disagree. The risk of under collection due to warmer than normal weather is a traditional business risk of providing gas distribution service. While the WNA may not totally eliminate that risk, it inappropriately shifts this weather-related revenue risk onto customers, who are less equipped to absorb that risk. Peoples is a monopoly provider of essential services and is allowed to set its revenue requirement based on a fully projected future test year. It has access to financial tools and regulatory mechanisms – including the DSIC – to manage revenue uncertainty. Low income customers have none of these tools. They operate on tight monthly budgets with no margin to absorb unexpected surcharges based on energy they did not use, regardless of how well-calibrated the underlying normal may be.

[108] Peoples St. 17-R at 56-57.
[109] Id. at 56-57.
[110] Id. at 63-65.
[111] Id.

Q: What is your response to Mr. Taylor's argument that the WNA deadband should not be increased to 5%?

A: I disagree. Increasing the deadband from 3% to 5% would require more meaningful weather deviations before the mechanism activates, which would more accurately reflect "abnormal" weather. The additional buffer is appropriate for a mechanism that charges customers for service they did not consume or credits customers for service that they did consume but should not have under normal weather. Furthermore, this wider deadband would be consistent with the Commission's recent decision in the 2025 Columbia rate case.[112] The Commission reasoned that a 5% deadband improves stability of customer bills and Company revenues and better captures normal weather fluctuations in Pennsylvania.[113] The Commission also explained that the 5% deadband appropriately places more of the burden for calculating and forecasting weather variations back onto the Company as a normal part of doing business.[114] Therefore, if the Commission allows Peoples to continue to operate its WNA, it should require that the deadband be increased to 5%.

Q: What is your response to Mr. Taylor's argument that October and May should not be removed from the WNA?

A: Mr. Taylor argues that the greater weather variability in these shoulder months supports including them in the WNA rather than excluding them.[115] However, Mr. Taylor's argument runs contrary to the Commission's recent decision in the Columbia Gas 2025

[112] Pa. PUC v. Columbia Gas of Pa., Inc., Docket No. R-2024-3067174, Order at 202 (Order dated Dec. 4, 2025).
[113] Id. at 301.
[114] Id.
[115] Peoples St. 17-R at 64-65.

rate case where it approved Columbia's WNA only for the months November through April.[116] Shoulder months, such as October and May, are not traditional heating months in Pennsylvania and should be eliminated from the WNA. There is no reason that the Commission should treat Peoples' customers differently than Columbia's customer when it comes to the months that the utility is permitted to shift weather-related risk from its shareholders to its customers. Furthermore, I stand by my recommendation that, if the WNA is allowed to continue, it should be limited to December through March, which are the only winter months that are actually recognized by the Commission and the General Assembly for winter termination protections for households with income at or below 250% FPL.[117] It is inconsistent with public policy to use those months as the benchmark for customer vulnerability in the termination context while simultaneously allowing Peoples to assess weather-related surcharges on either side of that period.

Q: What is your response to Mr. Taylor's assertion that your recommendation for a class based WNA methodology requires more detail?

A: I want to be clear that my primary recommendation is that the WNA be discontinued with the effective date of rates. This is the result I believe is supported by the record in this proceeding. If the Commission determines that Peoples' WNA should continue, then I recommend that the WNA be assessed on a more equitable basis over the course of the year rather than on a one-month lag basis only in the winter months when customers face their highest bills. The mechanism that I recommend could work as

[116] Pa. PUC v. Columbia Gas of Pa., Inc., No. R-2025-3053499, Final Order at 301–02, (Order Entered Dec. 9, 2025).
[117] CAUSE-PA St. 1 at 64.

follows and assumes a WNA with a 5% deadband that is in place only for the months of November – April.

- Beginning November 2027,[118] Peoples would track the aggregate WNA charges and credits that exceed the 5% deadband for each month for the entire WNA period.
- Peoples would not assess these charges for the period of November 2027 through April 2028. Each month, any charges or credits that exceed the deadband would be added to a regulatory asset/liability account and netted against charges or credits that are already in the account.
- At the end of the WNA period (April 30th), Peoples would calculate the total net WNA charge or credit for the heating season and then would calculate a per Mcf charge that would be used to charge or credit customers.
- Based on the calculated per Mcf charge, Peoples would calculate their total credit or charge to customers based on the customer's winter usage for the period of November to April and then divide that amount by 12.
- Peoples would then assess as an additional fixed charge or credit 1/12th of each customer's to their bill for the following period from June 1st through May 31st – assuming that there would need to be a one-month lag for purposes of making the calculations.

[118] The effective date of rates in this proceeding is at the end of December 2026, which is in the middle of the 2026-2027 WNA. Peoples witness Scanlon requests that because the Company's new base rates will be effective in the middle of the heating season that any changes to the WNA be implemented at the beginning of the next heating season. Peoples St. 3-R at 17. I do not take issue with this request which is why I recommend that the changes I propose would take effect beginning in the fall of 2027 (anywhere from October to December depending on which month the Commission indicates the new WNA period would begin).

- The process would start over again the following heating season.

Q: In section II, above, you responded to Peoples witness Huwar's assertion that the WNA improves affordability, noting that WNA charges affect CAP customers and increase the cost of the universal service rider. Does this raise further concerns about the WNA mechanism itself?

A: Yes. Mr. Huwar's assertions have triggered a concern about the continued applicability of the WNA to CAP customers. Peoples currently applies its WNA to all residential customers including CAP customers.[119] This is problematic for two reasons. First, WNA charges caused by warmer weather trends will increase the bill for CAP customers who are charged according to their average bill, up to the applicable percentage of income payment. As detailed in depth in my direct testimony, these customers already lack the ability to afford their monthly expenses without assistance, including their Peoples' bill, and they should not be required to pay any more than necessary to connect to and maintain essential gas service. Second, CAP customers who are enrolled in Peoples' percentage of income payment do not pay the WNA charges directly because their bills are capped at their percentage of income bills. The difference between these customers' bills and their CAP bills is recovered through the universal service rider.[120] Since CAP customers do not pay their full tariff bill, the imposition of WNA charges on CAP bills needlessly increases the costs of the CAP program paid for by other residential customers. It is therefore unjust and unreasonable to assess the WNA

[119] Volume V, Peoples Exhibit 14, Current Tariff, Appendix A – Peoples Natural Gas Company LLC Retail Tariff No. 48 – effective February 12, 2026, First Revised Page No. 79.
[120] Volume V, Peoples Exhibit 14, Proposed Tariff, Appendix C – Peoples Natural Gas Company LLC Retail Tariff 49, Original Page No. 76, Rider Universal Service.

charges to CAP customers because it increases bills for CAP customers and drives up the cost of the universal service rider. Thus, I recommend that if the Commission permits the WNA to continue that it specifically exempt CAP customers from this charge.

V. UNIVERSAL SERVICE AND ENERGY CONSERVATION PROGRAMS

Q: What was the Company's response to your recommendation that the proposed Provision # 9 to its Rate CAP tariff page regarding recreational CAP usage be rejected?

A: Peoples witness Rita Black responded to this recommendation. She explained that the prohibition on recreational CAP usage has been in the Company's Universal Service and Energy Conservation Plan (USECP) since 2014.[121] She further explained that the Company waives this provision if the customer submits verification of a medical need.[122] Ms. Black notes that the Commission requires Peoples to ensure that the cost of recreational use is not recovered through CAP and that Peoples was previously cited by the Commission for failure to identify pool heater use by a CAP customer.[123] She also notes that it is not the Company's practice to back bill customers for this usage.[124]

Ms. Black proposes revising the proposed Provision # 9 to remove references to appliances other than pool heaters and to remove the reference to the unjustified usage being billed back to the customer.[125] She also indicates the Company will update its USECP to remove references to back billing and to specify that customers can provide a medical certificate to verify that the usage is necessary.[126]

---

[121] Peoples St. 10-R at 2-3.
[122] Id.
[123] Id.
[124] Id. at 5.
[125] Id. at 4-5.
[126] Id. at 5.

Q: Do you agree with Ms. Black's proposed revisions?

A: Yes. I believe that Ms. Black's proposed revisions to Provision # 9 are reasonable and address my concerns.

Q: Ms. Black also addresses your recommendation that Peoples proposed Provision #10 regarding CAP fraud be rejected. What is your response?

A: In my direct testimony I recommended that the Commission reject Peoples' proposed Provision # 10, which would allow Peoples to remove customers from CAP and require them to pay back CAP benefits if "the Company determines a CAP participant obtained benefits through fraudulent means, such as failing to report all household income."[127] I explained that this provision could lead to customers who are low income customers being unjustifiably removed from CAP. I recommended that this tariff change be denied in this case and that Peoples consult its USAC to develop more clearly defined, objective parameters for identifying CAP fraud and distinguishing it from mistakes in the application process.[128]

In her rebuttal testimony, Ms. Black notes that "this type of behavior from CAP customers is not in any way a common occurrence."[129] She points to a singular incident where the Company identified a CAP customer with a pool heater and reviewed the account and found the customer lived in a relatively expensive home and had very high usage.[130] Ms. Black indicates the Company took several steps to validate the customer's eligibility, and the customer eventually enrolled in a payment plan – without recertifying

[127] CAUSE-PA St. 1 at 71-74; Peoples Natural Gas Company LLC Retail Tariff No. 49 page 43.
[128] Id. at 71.
[129] Peoples St. 10-R at 6:8-9.
[130] Id. at 6.

for CAP.[131] Ms. Black argues that, while this is a singular incident, absent a tariff change, the Company will be without recourse to remediate such situations in the future.

Regarding Provision # 10, I stand by my recommendation that it be rejected, unless and until the Company develops clearly defined, objective parameters for identifying CAP fraud and distinguishing it from mistakes in the application process, including a specific dispute process for these cases. From Ms. Black's description it appears that Peoples acted reasonably in the situation she identified. However, this is a single instance of suspected CAP fraud, and nothing in Ms. Black's testimony definitively proves that this customer acted fraudulently. Nor is there any evidence that existing rules are insufficient to provide adequate recourse. The absence of information should not be presumed to indicate fraud.

My concern is that allegations of fraud must be proven before customers are punished for it and there should be a clearly defined dispute process for customers to defend themselves against such allegations. Thus, I stand by my recommendation that tariff Provision # 10 be rejected and that Peoples consult its USAC to develop more clearly defined, objective parameters for identifying CAP fraud including a clearly defined dispute process.

Q: In direct testimony, you pointed out a dramatic spike in Peoples CAP termination rate in 2024 and recommended a root cause analysis to identify the cause.[132] What was the Company's response?

A: Ms. Black points out that, in 2025, Peoples' CAP termination rate was reduced to 6.5% and argues a root cause analysis is not necessary but agrees to discuss the issue

[131] Peoples St. 10-R at 6.
[132] CAUSE-PA St. 1 at 73.

with Peoples USAG.[133] Ms. Parks similarly disagrees that Peoples' 2024 CAP termination rates were troubling and points out that the Company's CAP termination rate has reduced in 2025.[134]

Q: Do you agree?

A: No. I stand by my recommendation that it is important to identify the cause for the dramatic increase in Peoples' CAP termination rate. CAP is a significant preventative mechanism designed to reduce the rate of service loss for low income customers. In my direct testimony I acknowledged that the CAP termination rate reduced to 6.5% 2025; however, I pointed out that it still remains elevated relative to the 5% CAP termination rate the company reported in its 2023.[135] Ms. Black and Ms. Parks do not provide any explanation why the CAP termination rate increased so dramatically from 2023 to 2024. It is important to understand what caused this spike so that Peoples can ensure that its CAP termination rate continues to decline and does not have a similar spike in the future.

I note, however, that in response to discovery, Peoples indicated that it is currently undergoing a Universal Service Evaluation that will be completed in April 2027 and that as a part of the evaluation, they have requested that the evaluator look at CAP termination trends from 2019 to 2025.[136] For purposes of my recommendation, because the Company has committed to address this issue in its ongoing evaluation and because it has committed to discussing the results of the evaluation with its universal service advisory committee, I am satisfied that this reasonably meets my request for a more thorough evaluation of these issues.

[133] Peoples St. 10-R at 14.
[134] Peoples St. 18-R at 21.
[135] CAUSE-PA St. 1 at 73.
[136] Peoples Response to CAUSE-PA Set IX-002, attached hereto at Appendix A.

Q: You also recommended a root cause analysis to determine why a significant number of potentially eligible customers are not being enrolled in CAP because of the failure to complete the application.[137] What was the Company's response?

A: Ms. Black's rebuttal testimony seems to misunderstand my concerns and recommendation. It states, "Mr. Cicero is concerned that potentially eligible customers are not enrolled in CAP and suggests a root cause analysis to determine the reasons for this."[138] While I am generally concerned about the number of low income customers not enrolled in CAP, the root cause analysis that I recommend is specifically to address the increasing number of customers who affirmatively request a CAP application but do not complete the application in whole or in part.[139] I pointed out that, in 2024, 68% of all denials were for incomplete applications, which rose to 74% in 2025 and 80% in April 2026.[140] This recommendation is not based on general concerns of undersubscription, but specifically about whether there is a systemic basis for this failure either because of a flawed process with its vendor, with the application itself, or some other basis.[141]

Ms. Black argues that a root cause analysis is not necessary, because the Company is undergoing an independent evaluation of its universal service programs. In response to discovery, it appears that as of July 14, 2026, the issue of incomplete applications for CAP customers will be included in the evaluation that the Company's universal service evaluator will be addressing.[142] For purposes of my recommendation, because the Company has committed to address this issue in its ongoing evaluation and

[137] CAUSE-PA St. 1 at 73-74.
[138] Peoples St. 10-R at 13.
[139] CAUSE-PA St. 1 at 73-74.
[140] Id.
[141] Id.
[142] Peoples Response to CAUSE-PA Set IX-002, Attachment C, attached hereto at Appendix A.

because it has committed to discussing the results of the evaluation with its universal service advisory committee, I am satisfied that this reasonably meets my request for a more thorough evaluation of these issues.

Q: Are there other issues addressed in rebuttal testimony about universal services to which you wish to respond?

A: Yes. I&E witness Okum and Peoples witness Black respond to Pennsylvania Weatherization Providers Task Force (PWPTF) witness Jennifer Warabak's recommendation that Peoples increase its annual budget by $975,000 to support serving an additional 75 customers per year through LIURP.[143] Ms. Black indicates that the Company already projects to exceed the number of customers recommended by Ms. Warabak.[144] Ms. Okum does not oppose the recommendation to serve 75 additional customers through LIURP, but argues that additional funds are not necessary to serve them, because Peoples has not spent its full LIURP budget in the past few years.[145]

I agree with PWPTF witness Warabak. Peoples' LIURP underspending in recent years is not indicative of a lack of need for LIURP services in its territory. As Ms. Black explains, in 2024 and 2025, Peoples transitioned to a new program administrator, which slowed down LIURP production.[146] In 2023, prior to this transition, the Company expended 97% of its LIURP budget.[147] According to Ms. Black, since the transition has completed, the Company's LIURP production has greatly improved and is projected to exceed the number of customers previously served by the program.[148] Therefore, Ms.

[143] I&E St. 1-R at 2-4; PWPTF St. No. 1 at 6-7.
[144] Peoples St. 10-R at 21.
[145] I&E St. 1-R at 2-4.
[146] Peoples St. 10-R at 21.
[147] Peoples Response to CAUSE-PA Set II-002, Attachment. Attached hereto at Appendix A.
[148] Peoples St. 10-R at 21.

Warabak's recommended LIURP budget is appropriate to support this increased production and to help mitigate the additional need created by any approved rate increase in this proceeding.

VI. UNIVERSAL SERVICE COST RECOVERY

Q: Please summarize your position on the recovery of universal service costs.

A: In my direct testimony, I addressed Peoples' proposal to continue to assign Universal Service and Energy Conservation program costs exclusively to residential customers. I explained that the need for and costs related to Peoples' Universal Service and Energy Conservation programs are not solely "residential" problems and there is no rational basis for residential customers to solely bear the burden of these costs.[149] I proposed a broad reallocation of these costs to all customer classes to mitigate the cost impact to residential customers rather than continuing the current practice of assigning them solely to residential customers.[150] OCA witness Roger Colton similarly recommended that all rate classes should contribute to the Company's Universal Service and Energy Conservation program costs because those costs are not caused by factors specific to residential customers and benefit all customers.[151]

Q: Did other parties respond to your position in their rebuttal testimony?

A: Yes. Peoples witness Black explains that, while Peoples currently only recovers universal service costs from residential customers, this has not always been the case.[152] She explained that Peoples' CAP costs were previously recovered through a mechanism

[149] CAUSE-PA St. 1 at 78-81.
[150] Id.
[151] OCA St. 4 at 74-84.
[152] Peoples St. 10-R at 24.

that adjusted delivery base rates on a quarterly basis to align with changing gas costs and enrollment levels and 4.25% of CAP costs were allocated to non-residential customers.[153] She states that while the Company acknowledges the desire to spread the costs to nonresidential rate classes, it would need to evaluate the cost of potential IT changes to implement the change.[154]

Peoples witness Taylor agrees that "assisting low-income customers serves an important public policy objective that benefits society more broadly."[155] But, he says that if the Commission approves a broader allocation of universal service costs, it should apply that policy on a consistent, statewide basis.[156] He states my proposal would materially change the recovery of these costs and recommends that Commission evaluate whether a volumetric or fixed recovery approach would be equitable and reasonable manner.[157]

OSBA witness Mark Ewen argues that small business customers should not contribute to universal service programs because these customers cannot take advantage of "residential-only" programs.[158] He argues there is no causal relationship between PNG's universal service costs and small business customers. He argues that such charges would be an unfair "tax" on small business customers.

Q: What is your response to Ms. Black?

A: I appreciate the clarity about Peoples' previous methodology for allocating CAP costs, and I see that as a potential starting point for the Company to move forward with my recommendation. Regarding the potential for IT costs, allegations of potential costs

[153] Peoples St. 10-R at 24.
[154] Id.
[155] Peoples St. 17-R at 21-22.
[156] Id.
[157] Id.
[158] OSBA St. 1-R at 3-5.

have neither been described nor quantified so as to allow this to be an actual barrier implementation. Furthermore, I am amenable to a longer ramp up period to allow this change to be implemented during a normal IT workflow, such that it should not add material costs over and above what would occur if Peoples changes it rates.

Q: What is your response to Mr. Taylor?

A: I agree that the Commission should require the recovery of universal service costs from all customer classes on a statewide basis. However, I do not agree that the issue of whether universal service costs should be allocated more broadly than to residential customers must be decided, *again*, in a statewide proceeding as opposed to in Peoples rate case for Peoples' customers.

In the Commission's 2019 CAP Policy Statement and Order, the Commission expressly directed utilities and stakeholders to address CAP cost recovery in utility-specific rate proceedings, indicating that "the Commission will no longer routinely exempt non-residential classes from universal service obligations."[159] The Commission's formal, enumerated policy statement provides:

> "In rate cases, parties may raise the issue of recovery of CAP costs, whether specifically or as part of universal service program costs in general, from all ratepayer classes. No rate class should be considered routinely exempt from CAP and other universal service obligations.[160]

Regarding Mr. Taylor's assertion that assignment of universal service costs to other classes could affect business siting, expansion, and investment decisions, I note that there are a number of different factors that are unique to each NGDC's service territory, including variations in rates, that could affect business decisions – including the level of

[159] Final CAP Policy Statement and Order, Docket No. M-2019-3012599, at 97 (Order entered Nov. 5, 2019); see also 52 Pa. Code §§ 69.265(1), 69.266(b).
[160] 52 Pa. Code § 69.266(b).

rate increase that the Commission authorizes in this proceeding. The allocation of universal service costs is just one of these potential factors and would likely have minimal influence compared to the geographic location, existing infrastructure, and the general prices the utility charges for service, of which universal service costs would only make up a small fraction.

Regarding the choice between fixed or volumetric assignment of universal service cost among nonresidential customers, I believe the most equitable approach is a volumetric assignment after the costs have been allocated to each class. Regarding how much to allocate to each class, my recommendation in direct testimony was that these costs should be assigned to all rate classes based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case.[161] That remains my recommendation. This could be adjusted in future cases – as are all allocations – if necessary.

Q: What is your response to Mr. Ewen?

A: Mr. Ewen's argument rests on an outdated and narrow interpretation of utility cost causation. I outlined all the reasons why cross class universal service recovery is reasonable and appropriate in my direct testimony. The argument that small businesses receive no benefit from universal service programs ignores the fundamental economic realities outlined in my direct testimony that were unrebutted by Mr. Ewen. Mr. Ewen also refers to these costs as a "tax", which, of course, is an incorrect framing as Peoples is a private company and cannot assess a tax. Universal Service rider costs are no more a tax than any other rate assessed by Peoples.

[161] CAUSE-PA St. 1 at 81:5-7.

I stand by the analysis and data in my direct testimony, which demonstrate that all customer classes (including industry, business, commerce, educational institutions, hospitals, local and state governments, and other residential customers) benefit from the availability and existence of universal service programs and assistance. It is a sound policy decision for all customers to share the costs of providing these programs to Peoples' most vulnerable customers.

VII. FUEL SWITCHING PILOT

Q: Briefly describe your testimony regarding Peoples natural gas hot water tank Rebate Pilot.

A: In my direct testimony I recommended that the Commission either reject this proposal or require it to be paid for by Peoples' shareholders, because it is a load building pilot, and it would not be appropriate for the Commission to allow Peoples to spend ratepayer funds to switch customers with electric hot water heaters to gas hot water heaters.[162] I pointed out that electric water heating customers can likely get rebates for efficient electric water heaters from their EDC.[163]

Q: What was the Company's response?

A: Peoples's witness Ravenstall seemingly acknowledges that this is a load building program but argues that the increased volume into Peoples' delivery system will help keep rates low for all customers and help reduce strain on the electric grid.[164] He also

[162] CAUSE-PA St. 1 at 81-82.
[163] Id.
[164] Peoples St. 8-R at 10.

argues that my assertion that customers can get efficient hot water tank rebates from their EDC is speculative.[165]

Q: Do you agree with Mr. Ravenstall?

A: No. I stand by my recommendation that ratepayers should not pay for this program and that this proposal be denied or, at the very least, paid for by shareholders rather than ratepayer funds. Other than the axiomatic argument that all incremental throughput without incremental costs reduces rates, Mr. Ravenstall has provided no evidence to substantiate his claim that adding additional volume onto Peoples' gas system would meaningfully put downward pressure on rates. Nor has he credibly shown that reducing electric hot water heating will reduce strain on the electric grid that is caused by hyperscale data center load growth.

Regarding the high efficiency hot water tanks available from EDCs, the two EDCs with overlapping service territory are Duquesne Light and First Energy (West Penn Power), and both offer rebates for several different types of high efficiency electric hot water heaters at varying incentive levels though their respective Act 129 Phase V Energy Efficiency & Conservation Plans.[166] Thus, I stand by my recommendation that the Commission disallow this program.

[165] Peoples St. 8-R at 12.

[166] See Duquesne Light Company Phase V Energy Efficiency and Conservation Plan, Docket No. M-2025-3057325, at p.136, 143; see also FirstEnergy Pennsylvania Electric Company Phase V Energy Efficiency & Conservation Plan, Docket No. M-2025-3057327, Appendix B, Table 8: Eligible Measures.

VIII. PURCHASE OF RECEIVABLES

Q: Please summarize your direct testimony on this issue.

A: In direct testimony, I outlined how residential customers who were served by retail natural gas suppliers (NGS) paid $51.9 million between January 2024 through April 2026, more to receive service from NGSs than they would have otherwise paid had they been billed at default service rate.[167] I also demonstrated that customers who were served by NGS's during this same period had significantly higher gross write offs per customer – as much as 484% higher than customers with arrears who were served by default service.[168] As a result, I made a recommendation that Peoples revise its POR program to require that to participate in POR and have Peoples buy its receivables an NGS would have to certify that its rates are at or below the applicable default service price at the time that a contract is initiated or at the time of contract renewal.[169]

Q: Did any party respond to your recommendation?

A: Yes. Peoples witness Steven Kolich and RESA witness Francis Caliva responded to this recommendation. Mr. Kolich agreed that my recommendation could help reduce customer costs and would help reduce the risk of customers, including low-income customers, being enrolled in high cost NGS contracts.[170] He also expects that any implementation costs for my recommendation would be minimal.[171] Mr. Kolich also added important supplemental information that bolsters the need for POR reform. For example,

[167] CAUSE-PA St. 1 at 85-86. (Note that this figure has been updated by Errata submitted July 31, 2026.).
[168] Id. at 86-87.
[169] Id. at 88.
[170] Peoples St. 21-R at 4:20-5:3.
[171] Id. at 5.

Mr. Kolich agreed that my recommendation could help customers save money and reduce overall costs, and provided the following data that bolsters my recommendation:

> As of July 2026, approximately 95.8% of residential shopping customers pay more than the PTC for commodity service, and average supplier price is 82% above the PTC, with some supplier prices reaching as much as ten time the PTC.[172]

Mr. Caliva disagreed with my recommendation.[173] He incorrectly asserts that I have provided no evidence for my recommendation. He argues, generally, that POR is important to the competitive market and that my recommendation to narrow eligibility thresholds for POR participation would be anticompetitive and effectively allow Peoples to set a price ceiling on NGS contracts. He also argues that there is no link showing that the POR program has contributed to the exorbitant amounts that shopping customers have been billed at default service rates. I respond to his specific arguments in detail below.

Q: Mr. Caliva argues that, under your recommendation, if the PTC changes mid contract, the supplier could no longer access POR for that contract.[174] Is that an accurate description of your recommendation?

A: No. My direct testimony clearly states that, to participate in POR, the contract rate must be below the PTC *"at the time of contract initiation or renewal"*. If the PTC goes down mid-contract, the contract would still be eligible for POR until it expires. Thus, Mr. Caliva's concerns are unfounded. The purpose of my recommendation was to ensure that contracts can be honored for the duration of their term and not be affected by the externality of the PTC change during the term of the contract. At contract renewal, to

[172] Peoples St. 21-R at 5:3-6.
[173] RESA St. 1-R at 3-14.
[174] Id. at 11.

continue to participate in POR, the contract would have to be at or below the then applicable PTC. I recognize that, when implemented, there will be existing contracts for existing supply that are currently receiving POR. I recommend that Peoples allow that those contracts continue to be included in POR until the end of the contract term at which point to continue to receive POR any contract renewal or new contract would have to be at or below the then applicable PTC.

Q: Mr. Caliva argues that your recommendation is anticompetitive and would set a price ceiling on NGS contracts and would be a regulation of EGS rates.[175] Is that accurate?

A: No. Nothing in my testimony argues that suppliers should not be able to offer contracts with prices above the PTC, I only recommend that, for Peoples to agree to perform collections on those contracts, the NGS must certify the price is at or below the PTC at the time the contract was entered. Suppliers would be free to charge whatever price they want, and customers would be free to contract with any supplier. Suppliers would not have to send a separate bill and would still be able to utilize utility consolidated billing. The only change would be that a supplier who contracts with a customer for a rate that is higher than the PTC would not get paid for its receivable up front but would be paid only when Peoples collects on the bill. If Peoples is unable to collect on the account, then collections would revert to the supplier. This is not price regulation or anticompetitive.

[175] RESA St. 1-R at 6-7

Q: Mr. Caliva implies that POR is somehow required by Commission order. Is he correct?

A: Counsel for CAUSE-PA will fully respond to the legal arguments asserted by Mr. Caliva about POR, however, I disagree with Mr. Caliva's implication that Peoples is required to operate a POR by statute or Commission order. In fact, as will be addressed by counsel in briefing, the Public Utility Code expressly prohibits the Commission from *requiring* POR.[176] As a matter of policy, I contend that participation in the POR is a privilege, not a right, and reasonable restrictions on the POR to prevent harm to other ratepayers is not tantamount to unlawful price regulation or discrimination – it is part and parcel to People's obligation to prudently manage collections and the Commission's obligation to ensure the imposition of just and reasonable rates.

While Mr. Caliva points to the Commission's 2007 policy statement, encouraging – *but not requiring* – PORs for electric distribution companies (EDCs), I am not aware of a similar policy statement ever being issued for NGDCs. At the time that the POR policy statement was developed there was no data to assess how the mechanism would impact uncollectible expenses. Instead, the mechanism was advanced as a policy preference, with the goal of supporting healthy retail market growth. But we now have the data, and it is <u>not</u> favorable to suppliers. The data suggests that POR allows suppliers to act with impunity charging excessive rates without regard to whether the customer is ultimately able to pay. After all, collection is someone else's problem. The reality is that ratepayers are left paying the price of high charges in the form of higher gross write offs. This is eerily similar to my early years in legal aid when I represented homeowners with subprime

[176] 66 Pa C.S. § 2205(c)(5).

mortgages that were securitized as mortgage-backed securities as soon as they were made, providing the originator with quick cash and no responsibility. My proposal is a measured and iterative step in the process based on data. It would lay accountability for pricing at the feet of suppliers who wish to charge prices higher than the PTC.

Q: What is your response to Mr. Caliva's argument that you fail to provide evidence that POR leads to higher NGS charges?[177]

A: Under the current POR structure, suppliers that participate in utility consolidated billing receive the benefit of having Peoples purchase their receivables without recourse, even where the supplier's excessive pricing contributes to nonpayment, termination, and write-offs. In practical terms, that means a portion of the financial consequences of excessive supplier pricing can be shifted away from the supplier and onto other customers.

In my direct testimony, I presented substantial evidence not only of the link between the POR and higher NGS charges, but of the harms that result from those excessive charges. I explained that, since suppliers are paid upfront with a discount that only reflects the overall uncollectible rate, they have very little incentive to moderate the prices and no incentive to be concerned if their prices exceed the PTC.[178] They also have no reason to be concerned if their higher charges are unaffordable for customers because they are not responsible for collecting on those charges.

As Mr. Kolich explains, while POR helps increase NGS participation by reducing suppliers' credit and collection risks, these POR protections coupled with unrestricted

[177] RESA St. 1 at 5.
[178] CAUSE-PA St. 1 at 84.

supplier pricing results in significant market distortions.[179] The POR program insulates NGSs from much of the financial risk associated with uncollectible accounts and allows NGSs to charge prices above or substantially above the utility's default service rate.[180], leading to the disproportionate impacts I detailed in my direct testimony.

- From January 2024 through April 2026, Peoples residential shopping customers paid in aggregate $51.9 million more than they would have paid for the PTC.[181]
- Of that amount, confirmed low income customers who were served by an NGS paid in aggregate $7.4 million more than if they had all been charged the default service rate for that same period.[182]
- Write offs for shopping customers were 484% higher than for residential customers on default service, and for low income customers, write offs for those customers shopping were an astounding 856% higher than write offs for low income customers who were charged the default service rate.[183]
- Low income shopping customers had the worst outcomes, paying higher prices and suffering write-offs nearly two times higher than other residential shopping customers.[184]

Further, as pointed out by Mr. Kolich, as of July 2026, approximately 95.8% of residential shopping customers pay more than the PTC for commodity service, and the average supplier price is 82% above the PTC, with some supplier prices reaching as much as ten times the PTC.[185]

Mr. Caliva's position appears to be that there is no objective benchmark to compare prices, and the point of retail competition is simply choice itself as opposed to promoting a structure that was intended to lower retails costs for consumers. Counsel for CAUSE-PA will fully brief the legal arguments in this case, but it is undeniable that a core purpose

[179] Peoples St. 21-R at 4.
[180] Id.
[181] CAUSE-PA St. 1 at 85. (Note that this figure has been updated by Errata submitted July 31, 2026.).
[182] Id. at 86. (Note that this figure has been updated by Errata submitted July 31, 2026.).
[183] Id. at 87, Table 16.
[184] Id. at 87.
[185] Peoples St. 21-R at 5.

of competition is to promote lower rates, among other key goals. Hence the Commission's statement of purpose in section 62.221 of its regulations, implementing the Choice Act, explains that it is "essential that [retail gas shopping customers] are able to compare the price of gas purchased from their incumbent NGDCs with that offered for sale by NGSs."[186] The goal was lower prices, not just abstract notions of choice.

Q: Please respond to Mr. Caliva's argument that the PTC is not an appropriate benchmark for supplier offers.

A: He is simply incorrect. The PTC provides consumers with an appropriately relevant benchmark that constitutes an all-in price for commodity gas charges and is designed to allow consumers to compare the price of gas purchased from their incumbent NGDCs with that offered for sale by NGSs.[187] The PTC is designed to allow consumers to compare the price for default service with options available in the competitive market. The PTC allows consumers to compare prices based on an objective benchmark that seeks to not always be the lowest price at any one point in time, but that is designed to be least cost procurement without markup.

Mr. Caliva attempts to present a false dichotomy in response to my testimony, arguing that I must either acknowledge that the PTC is not an appropriate benchmark or admit that my recommendation would allow Peoples to limit the prices of its competitors.[188] This argument is absurd and both of these assertions are false. My recommendation would not allow Peoples or any other party to restrict the prices charged by NGS. To the contrary, my proposal would not deprive a consumer of the opportunity to

[186] 52 Pa. Code § 62.221.
[187] 52 Pa. Code §§ 62.221, 62.223.
[188] RESA St. 1 at 7:16-21.

pay more if they so choose, it would help address persistently higher prices in the competitive market that are having a negative impact on consumers while ensuring consumers retain direct access to retail market.

Q: Mr. Caliva claims that your recommendation would split billing and collection functions between multiple parties, which risks large numbers of customers being thrust into receiving two bills and reducing the likelihood they will pay.[189] Is he correct?

A: No. There is a difference between consolidated billing and POR. Under my recommendation, suppliers could participate in utility consolidated billing regardless of what they charge. If they charged more than the PTC at the time of contract initiation or at contract renewal, they would not be paid for their receivable they would only be paid for the amount actually collected by Peoples. This is the same construct utilized by utilities for non-basic services. Mr. Caliva provides no evidence that this would lead to error and friction.

My proposal is a measured reform that better aligns incentives. If a supplier wishes to charge a price above the PTC and a customer wishes to contract for that price then the supplier and customer remain free to do so, but the supplier should not be entitled to socialize the incremental collection risk associated with that pricing through POR treatment. Given the evidence in this case showing that shopping customers have materially higher write-offs than customers on default service, as well as strong evidence that excessive supplier pricing is contributing to broader affordability problems and uncollectible expense, my proposal is both appropriate and necessary to protect

[189] RESA St. 1 at 13.

Peoples's residential customers from unnecessary costs and should be approved in this proceeding.

Q: Mr. Caliva says you fail to address whether suppliers would be able to terminate service for contracts that are not eligible for the POR. Does this, as he asserts, remain an open question?

A: No. The ability of Peoples to terminate service for nonpayment of an NGS contract is directly tied to the POR. As will be fully briefed by Counsel for CAUSE-PA, it would be contrary to Pennsylvania law to allow any party other than Peoples to control termination of service. Commission regulations also expressly prohibit a utility from terminating service based on non-payment of non-basic service charges.[190]

As I explained in my direct testimony, low income customers already face high energy burdens at exiting rates and the addition of NGS rates that are more than 50% higher than Peoples' applicable PTC increase the likelihood of payment based termination.[191] My recommendation would help ensure that only NGS contracts that are at or below the PTC would to be eligible for inclusion on the balance leading to termination of service. Non-POR suppliers would have the full range of collection methods available to them that other unsecured creditors have who experience a breach of contract.

Q: Mr. Caliva says that relatively few supplier-originated accounts were written off. What is your response?

A: This is not material. My concern is not just the number of NGS contracts that are written off, it is the disproportionate amount per customer. Mr. Caliva fails to address that write offs for shopping customers were 484% higher than for residential customers on

[190] 52 Pa. Code § 56.83(3).
[191] CAUSE-PA St. 1 at 87.

default service, and for low income customers, write offs for those customers shopping were an astounding 856% higher than write offs for low income customers who were charged the default service rate.[192] This is a direct reflection of the exorbitant rates charged to these customers and the millions of dollars that Peoples shopping customers have been charged above the PTC.

IX. CONCLUSION

Q: Does this conclude your surrebuttal testimony?

A: Yes.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-II-002

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: For the most recent three program years, disaggregated by year, please indicate:

a. The total amount of budgeted LIURP dollars;

b. How much total LIURP funding was expended,

c. The total amount of LIURP dollars spent for service delivery (e.g. measures, installation, and weatherization services);

d. The total amount LIURP dollars spent for program administration;

e. How much total LIURP funding was rolled over to the following year.

f. How many LIURP jobs were competed.

Please provide this information in a live Excel spreadsheet.

Answer: Refer to Attachment CAUSE-PA-II-2.xlsx.

Submit Date: 5/11/2026

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-IX-002

Witness: Black, Rita **Title:** Director Community Assistance Programs

Question: Refer to Peoples Statement 10-R (Black) at 13:17-14:2 regarding the independent evaluation of Peoples' universal service programs by Three3.

(a) Please provide the full scope of services that Peoples has outlined for Three3 for its independent evaluation that will occur in April 2027.

(b) Has Peoples specifically identified for Three3 that it should study in its evaluation the causes for Peoples' increase in CAP termination rates in 2024? If yes, please provide the specific instructions provided to Three3 on this issue. If not, please explain why and how the evaluation would address the concerns raised by CAUSE-PA witness Patrick Cicero concerning the 2024 increase in CAP terminations.

(c) Has Peoples specifically identified for Three3 that it should study in its evaluation the causes for why so many Peoples customers who request a CAP application fail to complete the application? If yes, please provide the specific instructions provided to Three3 on this issue. If not, please explain why and how the evaluation would address the concerns raised by CAUSE-PA witness Patrick Cicero concerning the reasons why so many Peoples customers who request a CAP application fail to complete the application.

(d) Please provide all documentation and communications provided by Peoples to Three3 for the purposes of the independent evaluation of Peoples' universal service programs, as well as any documentation and communications provided by Three3 to Peoples regarding the independent evaluation.

Answer: a. Refer to attachment CAUSE IX.2.A. This is the scope document for the evaluation that was provided in the Request for Proposal to interested evaluators. The Company signed an agreement with Three3 in March of 2026 and work began immediately to allow sufficient time to meet the deliverables identified in the scope prior the issuance of the report which is due April 1, 2027.

b. Yes. As identified on page 1 of the scope document under the heading 'Activities', Peoples required that Three3 consider arrearage trends as well as termination and restoration activities for CAP participants. This is not limited to 2024 and is instead a more comprehensive review of monthly data for the period 2019 through 2025 as identified in the data request submitted to Peoples by Three3 and provided as attachment CAUSE.IX.2.B.xlsx. Through this more broad

approach, the evaluator will gain information on arrears for the period prior to the pandemic, the years of pandemic impact and recent history as well. As Three3's work continues, data will also be requested and provided pertaining to termination and reconnection events.

c. Yes. As shown in the scope document under the heading 'Activities' the evaluation calls for a review of the current application for ease of use/customer comprehension and gathering of appropriate data points. This section further required an evaluation of the efficiency of the process from application to grant approval. In June, the evaluators conducted an interview and received an application demo from the Company's program administrator, Dollar Energy Fund. As a follow up to that conversation, they have submitted a second data request to Dollar Energy Fund that focuses on the application process to obtain data points for evaluation. This data request is provided as attachment CAUSE IX.2.C. In addition to the data review, the customer survey component, outlined on page 2 of the scope document, includes gathering input from CAP participants and CAP-eligible non-participants to determine potential barriers. The survey is expected to be conducted in September.

d. Refer to the attachments provided in response to parts a, b and c. Peoples has a standing biweekly meeting with Three3 at which discussions occur regarding data needs, scheduling of interviews with staff, administrators and stakeholders as well as discussing the documents that Peoples has requested that Three3 evaluate as part of its process. This document review includes all customer-facing documents such as bills, letters, applications and outreach materials.

Submit Date: 7/28/2026

Independent Evaluation

Peoples Natural Gas

Universal Service Programs

Scope:

- Review of the operational standards, budgets and participation of the approved universal service programs:
    - CAP (Including Pilot CAP Expansion)
    - LIURP
    - Emergency Repair Program
    - Hardship fund
    - CARES
- Needs assessment of eligible population in Peoples' service territory.

Activities:

- CAP data analysis, including:
    - CAP affordability
        - Evaluating energy burdens under Peoples tiered CAP design.
    - Bill payment behavior
        - Analysis of payment behavior prior to enrollment and after enrollment.
    - Arrearage trends
        - Arrearages owed when entering CAP; impact of prior participation with a third-party natural gas supplier before enrollment; arrearages after CAP enrollment.
    - Termination and restoration activities for CAP participants
        - Comparison with low-income non-CAP participation group
    - Review of current application for ease of use/customer comprehension as well as gathering appropriate data points.
    - Efficiency of process from application to approval
        - Comparison between phone applications and online applications.
- LIURP
    - Utility coordination review
    - Measures review
    - Outreach/enrollment efforts

- Hardship fund
    - Review of current eligibility requirements against best practices from other utilities.
    - Review of current application for ease of use/customer comprehension as well as gathering appropriate data points.
    - Utilization trends (i.e. seasonal timing; use in response to collections activities; denial reasons)
    - Efficiency of process from application to grant approval
        - Comparison between agency applications and online applications.

Customer Survey Component:

- Survey a sample of CAP eligible customers with arrears who have not enrolled to identify barriers to participation.
- Survey a sample of CAP participants with a focus on understanding of CAP benefits and responsibilities; ease of application; ease of recertification; awareness of other qualifying programs.
- Both surveys should take account of demographics including: limited English proficiency; income source; vulnerable identities (i.e. medical conditions, seniors)

Administrator and In-House Interviews:

- CAP/hardship fund administrator
- LIURP/ERP administrator
- Peoples Community Assistance Program team members

Hello, and thank you for your help! We are interested in receiving a dataset that would allow us to see a person's participation across programs in one place. If possible, we imagine that row in the dataset would represent one person who participated in at least one of the five Universal Service Programs in the given year. We would like to request data from 2019-2025 where possible. The request is split into two tabs, one for data that are only needed annually, and one for energy use and cost data that would be ideal at the monthly level.

Data Item	Unit/Type	Notes
Premise/Meter Number	Text	The ID used to identify a unique building, premise or meter
Customer/Account Number	Text	The ID used to identify a unique customer, even if they move to a new premise
Year (from 2019 - 2025 if possible)	Numeric	
CAP participation flag	0/1 or Y/N	Did this customer participate in the CAP program during the given year?
Hardship Fund participation flag	0/1 or Y/N	Did this customer participate in the Hardship Fund program during the given year?
LIURP participation flag	0/1 or Y/N	Did this customer participate in LIURP during the given year?
LIURP Emergency Repair participation flag	0/1 or Y/N; NA if prior to start of program	Did this customer participate in the LIURP Emergency Repair program during the given year?
CARES participation flag	0/1 or Y/N	Did this customer participate in the CARES program during the given year?
Demographics	Text	People's may not collect much demographic data on their customers. If age, gender, race, employment status, etc. are available, any type of demographics would be helpful.
Address	Text	Can be one or multiple columns; possibly "Address 1" and "Address 2" if they move during the year, which might require an additional "Move Date" column to indiate when the address changed.
ZIP Code	Text	Ideally separated out from address in its own column for analysis
Other location information	Text	If People's records Census tract, county, or other geographic data that may be useful

Data Item	Unit/Type	Notes
Premise/Meter Number	Text	The ID used to identify a unique building, premise or meter
Customer/Account Number	Text	The ID used to identify a unique customer, even if they move to a new premise
Year (from 2019 - 2025 if possible)	Numeric	
Month	Text or Numeric	
Energy consumption	Numeric (MCF)	
Rate	Text	
Rate name (if applicable)	Text	
Amount that would be charged based on consumption, rate and fees	Calculated Bill Amount in Dollars	If available
Actual billed amount	CAP or Budget Amount Requested for the month	May be different from above if the person is in CAP
Amount in arrears	Dollars

To: Black, Rita F;
Subject: [EXTERNAL] DEF Data Request
Date: Tuesday, July 14, 2026 1:17:36 PM
Attachments: image.png

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi Rita and team,

I hope your day is going well! As discussed, please find our request for data from Dollar Energy Fund below:

Online Application

- Among all people who visit the application page (or begin an application), what percent make it to each stage of the process? For example, how many complete and submit the application? How many make it past the first page, make it past the income screening, etc.? Please provide data for all stages of the application that you have data for FY 2026.
    - If possible, please provide the above data disaggregated by the following demographics: race, ethnicity, age group, ZIP code, and gender as available.

Phone Application

- Similarly, how many people call in to complete an application, and what percent actually complete and submit an application subsequently? At what stages do people drop out, such as the initial screening, and in what numbers? Again, please provide data for all stages of the application process for which you have data for FY 2026.
    - If possible, please provide the above data disaggregated by the following demographics: race, ethnicity, age group, ZIP code, and gender as available.

Please let us know if you have any questions, and thank you again!

Best,

Utility bills are going up. Pennsylvania's consumer advocate wants to bring rates down to earth.

ANYA LITVAK
Pittsburgh Post-Gazette
alitvak@post-gazette.com

APR 28, 2024 | 5:30 AM

Southwestern Pennsylvania residents are paying some of their highest utility bills ever and are bracing for further increases next year.

Both electric utilities that serve the region — Downtown-based Duquesne Light and West Penn Power, a subsidiary of Akron-based FirstEnergy Corp. — have filed for rate hikes in the past few months. Duquesne is asking for what would amount to a 6.5% rise in the average monthly residential bill. West Penn Power's proposal calls for a 10.6% increase.

And North Shore-based Peoples Natural Gas and Columbia Gas of Pennsylvania, which is part of the Indiana utility conglomerate NiSource Inc., also have filed for increases, starting next year. Peoples' request, if granted, would add between 7.6% and 21.4% to monthly bills, depending

on which division of the company serves the customer. Columbia is proposing a 15.9% hike.

“Costs are outrageous for consumers,” said Patrick Cicero, Pennsylvania’s consumer advocate, whose job is to speak for utility customers and nudge the Pennsylvania Public Utility Commission to approve rates that are just.

“People can’t pay their bills. Period,” he said earlier this month during a visit to the Pittsburgh area.

In letters of opposition to some of these rate cases, Mr. Cicero has charged that the proposed rates “are an affront to the regulatory compact that has long existed in Pennsylvania to protect the public from monopolistic excess.”

It’s a preview of the kinds of arguments Mr. Cicero’s office plans to make in upcoming litigation and fold into future appeals.

Rate cases are complicated affairs. They go on for months, generate thousands of pages of documents and testimony, and involve experts pitted against each other to determine the variables facing a utility and how its investors view the risk of being part of it.

Mr. Cicero argues that the same attention isn’t given to the variables consumers face and the risks they bear.

“It has less for me to do with how well the utility is doing, as compared to how much we’re asking of consumers,” he said.

The tension in rate making centers on who should bear the risk of a utility — consumers, who are beholden to the one company available to them where they live, or the investors, who can choose from a wide variety of companies to invest in and might take their money elsewhere.

Fair rates (of return)

When utilities invite market experts to determine what constitutes a fair and just rate, they are looking at the rates of return that would entice investors to buy stock in the company, not the rates consumers pay for energy.

This is often a confusing part of the sausage-making nature of rate cases. Utilities are allowed to recover from consumers all of the cost of running

their business, but they are also capital intensive businesses that need lots of cash up front to build and repair pipelines and substations. For that, they turn to debt and equity investors, who are then repaid with the money collected through rates.

On the one hand, utilities are generally considered to be relatively safe investments — they have a captive customer base and no competition, and people will always have to light and heat their homes. On the other hand, they compete for investors not only with other utilities but also with all other stocks in the market.

For that reason, the calculation tends to have less to do with how the actual utility is doing than with the industry as a whole. Paul Moul, a managing consultant with P. Moul & Associates who was engaged by Peoples, Columbia and Duquesne Light to recommend an appropriate rate of return

on equity, did so by placing those companies among utilities and other companies on the public market.

He recommended that the utilities be allowed to recover enough revenue from ratepayers to yield an 11.75% rate of return on equity for Peoples and Columbia, and 11.5% for Duquesne Light.

Dylan D'Ascendis, a partner at ScottMadden Inc., recommended 11.3% for West Penn Power, writing that "regulated public utilities … must compete for equity in capital markets along with all other companies with commensurate risk, including non-utilities."

If an investor is looking at companies with similar risk profiles, he wrote, that investor will choose the one with the higher rate of return.

The consumer advocate's office has a different take, as previewed in its testimony in the rate case of Pennsylvania-American Water Co.

"The ability of the utility to attract capital is but one part of the rate setting process, not the only criterion," Pennsylvania Deputy Consumer Advocate Christine Hoover said. "Consumers' interests are often overlooked in both the nuts and bolts and the big picture of rate setting. If the test of the overall rates is confined to the utility's interests, then it is not a reasonable process."

The problem is, there's no motivation for a utility to be the low-return outlier in a group, and public utility commissioners — acting as price setters in lieu of a competitive market — may be reluctant to push a company in that direction.

But that's what Mr. Cicero believes should happen.

"There's a religious belief that the PUC must give equity sufficient returns to attract capital," he said. "If you listen to Wall Street, they'll be happy to get 11% returns. If all PUCs across all the land started granting 8%, that's what it would be."

To bring this discussion down to earth, the difference between an 11% return and an 8% return is millions of dollars for ratepayers.

Whose risk is it anyway?

For years, utilities have been at the mercy of how much fuel customers use.

Traditionally, utility bills have gone up when a customer uses more electricity or gas, and down when they use less. With a push toward efficiency and conservation — electric utilities in Pennsylvania have been required to decrease their peak and total demand by law, for example — utilities worried that they wouldn't have enough money to maintain their aging infrastructure systems, which don't necessarily require less care with less use.

Companies across Pennsylvania shifted more of the cost burden on fixed charges — monthly fees that must be paid regardless of how much energy is used.

Columbia Gas customers now pay $16.75 as a fixed monthly charge regardless of use. The company's current rate case proposes to raise that to $26.

Columbia is also asking for two other ways to protect its future revenue: through a weather normalization adjustment and a revenue normalization adjustment.

Both proposals would, as Columbia has written, "break the link" between how much gas a customer uses and how much that customer is charged for the delivery of that gas.

The weather normalization adjustment, which is already in effect at Columbia but limited to when the weather diverges by more than 3% from its historical trend, would make up any difference between what Columbia has traditionally collected from customers during a particular time of year and what it would be collecting in the future. The revenue normalization adjustment would also balance out what customers are paying — not based on how much gas they use, but based on how much revenue Columbia needs to run its business.

Peoples is also asking for a weather normalization mechanism in its rate case, and Mr. Moul, the consultant, has written in his testimony that controlling for weather is now a must, from the point of view of the investor.

"All of the companies in my gas group have some form of [weather normalization adjustment] mechanism that is intended to accomplish the same result," he wrote in reference to the peer group of companies.

While the companies proposing these mechanisms argue that they also benefit ratepayers by giving them more predictable bills and protection from huge swings in weather, consumer advocates see these mechanisms as a clear shift of risk to consumers from investors.

“In all of these areas, the people who have the least ability to manage risk are households and small businesses,” Mr. Cicero said.

Just as the PUC is obligated to consider the risks and circumstances that impact each utility and how that utility fits into a universe of other utilities and all other companies, the same should be true for consumers, he said.

It’s not Duquesne Light’s job to tailor its rates based on how much its customers are now paying in increased water bills, for example. But he’d like regulators to look at people more holistically — like the residents of southwestern Pennsylvania whose gas and electric bills will be rising again next year.

“I’m deeply concerned about the affordability crisis,” he said.

PENNSYLVANIA WEATHERIZATION PROVIDERS TASK FORCE

PWPTF Statement No. 1

Direct Testimony of Jennifer Warabak

In Re: Peoples Natural Gas Company, LLC

Docket Number: R-2026-3060855

Q. Please state your full name and business address.

A. Jennifer Warabak, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director. I am submitting this testimony on behalf of the Pennsylvania Weatherization Providers Task Force as a member of the Task Force.

Q. What are the interests of the Task Force in this rate case?

A. The Pennsylvania Weatherization Providers Task Force, Inc., is a Pennsylvania non-profit corporation and a statewide association of thirty-eight (38) organizations providing utility assistance and energy conservation services in each of the Commonwealth's sixty-seven counties. The Task Force, through its member agencies, a number of which are Pennsylvania community-based organizations, administers universal service programs for several utility companies. The Task Force members serve low-income ratepayers, and it is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings, and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of transmission and distribution rates, the Task Force is particularly interested in the adequacy and operation of a company's universal service program.

Q. What background and experience in energy issues qualify you to submit testimony in this case?

A. I was appointed as the acting Executive Director of the Commission on Economic Opportunity in October 2022. I have been employed at CEO for over 25 years and during my tenure I have been involved in numerous energy related programs that CEO operates. From 2004 to 2016, I was CEO's Energy Services Coordinator where I supervised CEO's energy programs. During that time, I managed eight hardship utility programs and managed the LIHEAP Crisis program for Luzerne County on behalf of the Pennsylvania Department of Human Services as well as other utility customer assistance programs for several utility companies. In 2016 I became CEO's Program and Planning Coordinator where I evaluated program effectiveness and recommended modifications and/or improvements across the spectrum of programs offered by CEO, in the areas of energy, housing, job training etc.

During my tenure in those positions, CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 27,000 homes under the U.S. Department of Energy Weatherization Assistance Program. CEO also serves as a subcontractor for universal programs operated by several Pennsylvania gas and electric utility companies. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low-Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties. CEO was also a major contractor for PPL in the Low-Income Renewable Energy Pilot, and secured funding and installed

several solar thermal water heating systems for the former PG Energy and UGI Gas Division.

Q. Before addressing the specifics of your testimony, does the Task Force take a position on whether the Company's rate increase should be granted?

A. Our focus is on the funding and availability of universal service programs and opposing rate designs that discourage conservation. In this case, we do not necessarily oppose a rate increase but do oppose any rate increase unless it is accompanied by measures that would provide additional relief to the Company's customers, particularly low-income customers, from the effects of a rate increase.

Q. Please describe the other areas of your testimony.

A. My testimony will address the Company's proposal to increase the fixed monthly charge for residential customers as well as proposals to help low-income customers deal with any resulting rate increase.

In its request for a rate increase the Company does not propose any additional increase in funding or measures that would help low-income customers deal with the proposed rate increase. Further, an increase in the fixed monthly charge, as requested by the Company, would negatively impact a customer's motive and ability to conserve energy. The company's proposal if granted would increase rates, discourage conservation and leave a customer with less ability to conserve energy and less ability to reduce their bills. Despite the impact of its proposal on residential customers, and in particular low-income

customers, the Company's proposal offers nothing in the way of changes or increases in funding to its low-income programs, programs that would help mitigate the negative impact of the Company's proposals especially considering these difficult economic times. Despite these difficult financial times for all, with the increased costs for food, health care and utilities, the Company's proposal, if approved, would provide an annual revenue increase of $163.2 million per year, a 24% increase in its distribution revenue requirement. If Peoples' request is approved, the total bill for a residential customer using 80 hundred cubic feet (Ccf) per month would see an increase in their monthly bill from $122.20 to $138.23, an increase of over 13%. Despite this substantial request for a rate increase, the Company proposes no additional help for low-income customers in its universal service programs.

Q. What rate design issue would you like to address?

A. In this case the Company is proposing to increase its fixed monthly charge for its residential customers from $18.80 to $26.00, an increase of nearly 55%. I am concerned about this proposal, and the Task Force opposes any increase to the fixed monthly customer charges.

Part of the proposed increase to a residential customer's rates will be due to this increase in the fixed monthly customer charge. This increase in the monthly fixed charge concerns me, as it has the Commission, because it discourages conservation and impacts a customer's ability to save money through conservation; as the Company moves towards charging customers based upon the Company's fixed costs and away from a customer's consumption there is less incentive, and ability, to conserve. One of the only defenses a

family, particularly a poor family, has against the sharp increases in energy costs is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, etc. The Company's proposal to increase the fixed costs greatly impacts a customer's motive to conserve and the ability to lessen the impact of any rate increase. The combined effect of an increase in rates and an increase in fixed monthly charges, without any changes to universal service funding or other measures to help low-income customers, not only results in higher rates but also lessens the ability of customers to deal with those increases. In particular, the negative impact would be particularly harsh on the Company's low-income customers and the Company's proposed request ignores the interests of its low-income customers.

Q. How does the effect of the Company's requests impact upon your testimony in this case?

A. I believe that should a rate increase be granted there should be relief offered in the form of increases to universal funding programs and other relief that would help low-income customers deal with any increase granted. For a typical residential customer, these requested increases are substantial, but for a low-income customer, the effects can be dramatic, especially in this economic climate. High utility costs are not the only challenge for a poor person. Our agencies have been helping low-income people for years and know firsthand that they face financial challenges on many fronts -- housing, energy costs, food and health care -- and a dramatic increase in any of those areas can have a devastating impact.

It is for these reasons that if an increase is granted it should be conditioned upon an increase in funding and relief to the Company's low-income customers.

Q. Should a request for a rate increase be granted what type of measures would you suggest be implemented for low-income customers?

A. In discovery responses in this case the Company indicated as of March 2026, it had 144,131 estimated low-income customers and 125,078 confirmed low-income customers. The average annual income of their confirmed low-income customers just over $19,000. As a result of this proceeding rates are likely to increase, a customer's ability to conserve will decrease (if the fixed monthly charge is increased) yet no additional relief is being provided to customers that would allow them to increase their conservation of energy and decrease their monthly bills.

Q. Turning now to universal service programs what issues would you like to address?

A. I want to address the Company's low-income usage reduction program (LIURP). Despite their large number of low-income customers, the Company served 186 customers in its LIURP program in 2024 and that number decreased to 170 customers in 2025. We are proposing increased funding for LIURP because there is an unmet need for LIURP services as indicated by the number of the Company's low-income customers relative to the number customers served.

Q: Do you have any recommendations regarding the funding level for LIURP?

A: Yes. I am recommending that should a rate increase be granted then the number of customers served annually be increased by 75. That would begin to meet the unmet need for LIURP services. The approximate average LIURP cost is just over $13,000 so to increase the number of jobs by 75 would mean an annual LIURP funding increase of $975,000.

Q. Are there any other universal service topics that you want to address?

A. Yes. The Task Force recommends that the Company's contribution to its hardship fund be increased commensurate with the percentage increase in rates to the residential class that results from this proceeding. Although modest in comparison to other universal service funding, the proposal will help customers deal with a rate increase in these difficult economic times.

I also recommend that hardship funding be distributed in accordance with the percentage of low-income customers in the counties served by the Company.

Q. Can you please summarize your recommendations?

A. Yes. The Task Force is recommending the following:

1. That the Company's request to increase its fixed residential monthly customer charge be denied;

3. That annual funding for LIURP be increased by $975,000 and that any unused funds be carried over and added to the following year's funding;

4. That the Company's contribution to its Hardship fund be increased

commensurate with the percentage increase in residential rates that result from this proceeding;

5. That Hardship funds be distributed in accordance with the percentage of low-income customers in the counties served by the Company.

Q. Does this conclude your testimony?

A. Yes

Peoples Natural Gas Company LLC	:	

REBUTTAL TESTIMONY OF FRANCIS S. CALIVA III ON BEHALF OF THE RETAIL ENERGY SUPPLY ASSOCIATION

RESA Statement No. 1-R
July 16, 2026

Q. PLEASE STATE YOUR NAME AND PROVIDE YOUR BUSINESS ADDRESS.

A. Francis S. Caliva III, 117 Broad Street, Cumberland, RI 02864.

Q. BY WHOM ARE YOU EMPLOYED AND WHAT IS YOUR TITLE?

A. I am the President and sole owner of P.R. Quinlan Associates Inc.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS MATTER?

A. The Retail Energy Supply Association, also known as RESA. I serve as the National Spokesperson for RESA.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILTITY COMMISSION?

A. Yes, I submitted testimony on behalf of RESA regarding PECO Energy Company's Petition for Approval of its Default Service Program June 1, 2025 through May 21, 2029 at Docket No. P-2024-3046008. I also submitted testimony on behalf of RESA regarding Duquesne Light Company's Petition for Approval of Default Service Plan for the Period from June 1, 2025, Through May 31, 2029 at Docket No. P-2024-3048592. A copy of my C.V. is attached hereto as **Appendix A**.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. To address the Direct Testimony submitted by Mr. Patrick Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania, also known as CAUSE-PA. Specifically, I will address CAUSE-PA Statement 1, the Direct Testimony of Patrick M. Cicero, at pages 83-89.

Q. IS THERE A PARTICULAR SUBJECT THAT YOU ADDRESS?

A. Yes. My testimony is focused on Mr. Cicero's recommendations for radically and negatively modifying Peoples' essential-service purchase of receivables ("POR") program that has been working without issue for more than 10 years.

Q. CAN YOU DESCRIBE MR. CICERO'S PROPOSAL?

A. Yes. Mr. Cicero's theory is that because of POR, suppliers are immunized from uncollectibles expense and therefore feel no pressure to price below the utility's price-to-compare ("PTC"). He provides no evidence that supports this argument. Nonetheless, his proposed "fix" for this problem is to force suppliers to price their product below the PTC or be excluded from participating in the POR program that the Commission has described as essential.

Q. LET'S STEP BACK FOR A MOMENT – WHAT EXACTLY IS PURCHASE OF RECEIVABLES OR POR?

A. POR is a service offered by Peoples (actually offered by most gas and electric utilities in Pennsylvania) whereby Peoples bills the customers for natural gas supply as required in the Natural Gas Competition Act.[1] However, rather than simply sending the bill on the supplier's behalf, Peoples buys the receivable created by the billed usage of the customer served by the supplier, at a discount that reflects the average uncollectible costs on Peoples' system. Peoples then pays the supplier within a specified timeframe and collects and retains the remittance from the customer, subject to the utility's own credit, collections, and partial/late payment processes.

[1] 66 Pa. C.S. § 2205(c).

Q. WHY IS POR CRITICAL TO THE COMPETITIVE MARKET?

A. In the restructuring of the electricity and gas markets, suppliers had requested that they be permitted to provide supplier consolidated billing, wherein the supplier would bill the customer and remit the delivery charge portion to the utility, and the supplier would take the collection risk. The objective was to allow suppliers to form better relationships with their customers and to allow more flexibility in how natural gas is priced and provided. This approach was taken in the Atlanta Gas Light (AGL) territory in the State of Georgia, for example, where natural gas marketers send the bill both for their own supply charges and AGL's distribution rates. This system has effectively functioned for decades and also exists to some extent in Illinois and Ohio. The Commission declined the suppliers' request for a number of reasons, but the Commission appears to have understood the concern raised about customers receiving multiple bills, and the inability of suppliers to shut off service for non-payment, and so insisted that utilities provide POR. It has since become an integral part of utility service, preventing the confusion that could easily arise from two entities collecting on a bill, which from the customer's perspective, would be for the same type of service. There are also efficiencies gained in the utility providing billing and collection as a service to NGSs, since they already provide the same service to the same customers for their products and services, and, as noted above, since the billing and collections systems were built at ratepayer expense – *all* ratepayers, including those currently served by suppliers. Additionally, the Commission has determined that only utilities possess shutoff authority, giving the utilities a significant advantage in managing uncollectibles rates. In short, with POR the Commission leveled the competitive playing field, putting utility and supplier receivables on equal footing.

Q. DO YOU AGREE THAT SUPPLIERS ARE INSULATED FROM THE UNCOLLECTIBLE EXPENSE BECAUSE OF POR?

A. No. On the contrary, suppliers are charged a discount on the purchased receivables that is equal to Peoples' overall uncollectible rate. The present discount is 2.20%. The discount is adjusted when Peoples adjust its merchant function charge, based on the actual uncollectibles experience and expense of the utility. Thus, I do not agree with Mr. Cicero's contention that paying a discount rate of 2.2% means a supplier is insulated from uncollectibles. That cost is directly reflected in the amount remitted to suppliers.

Q. EXPLAIN WHAT YOU MEAN WHEN YOU SAY: "MR. CICERO'S THEORY"?

A. Mr. Cicero states his premise that POR is a major cause of what he perceives as a problem – that some customers might pay more than the price to compare - and then goes on to present evidence that some customers pay prices that are higher than the price to compare. What is missing is any evidence that the existence or structure of POR causes customers to agree to enroll or to maintain service with products priced higher than the price to compare, at least during the time periods in which Mr. Cicero evaluated them. He also fails to demonstrate that customers do not perceive value for the product that they purchase, even if that price is above the price to compare. On the surface, this seems to defy common sense – who would purchase something that was *entirely* identical to another available product at a lower price? Mr. Cicero fails to take the next step and recognize that NGS products and the utility default service product are clearly *not* identical even if they share similarities (i.e., both are for gas supply), and thus he fails to provide evidence that the price to compare is an appropriate standard to use as a benchmark for a "market price," which it categorically is not. Additionally, there is no discussion of whether it is legal or

advisable to exclude suppliers from an essential infrastructure service on the basis of a comparison of their market-based rates with the price to compare. In other words, the utility is supposed to determine whether an NGS has the creditworthiness to be a participant on its system but then treat all qualifying NGSs neutrally and provide equal access. It is not supposed to pick winners and losers based on arbitrary price ceilings, claiming an authority to regulate supplier prices that even the PAPUC acknowledges it does not have. Mr. Cicero also fails to present any evidence that the uncollectible amounts attributable to NGS are substantially greater than the average uncollectibles rate for all residential ratepayers. In short, Mr. Cicero's testimony is long on theory and short on evidence. He refers to a supplier price above the price to compare as an "abuse," which strikes me as wholly unjustified. I doubt very seriously that Mr. Cicero can name a competitive market in which every price in a product category is the same. It is a basic principle of consumer shopping that different consumers find value in different aspects of even similar products and prices reflect these differences. That is how free markets operate, and Mr. Cicero should know that.

Q. WHAT IS MR. CICERO'S RECOMMENDATION?

A. "[T]hat Peoples provide notice to suppliers that effective June 1, 2027, it will no longer be purchasing the receivables from participating suppliers, unless the supplier provides natural gas service at a price that is at or below Peoples's default service price."

Q. IS PEOPLES PERMITTED TO REGULATE THE RATES THAT SUPPLIERS CAN CHARGE?

A. No, they cannot. I am advised by counsel that neither the Public Utility Commission nor any utility is authorized to regulate the prices charged by an NGS, nor is the Commission permitted to deny a critical service to an NGS based on the price that the NGS charges so long as the price is consistent with the customer's agreement with its supplier. By only permitting suppliers with a price at or below a certain level, under Mr. Cicero's plan, either Peoples or the Commission would decide to deny critical POR service to a supplier. That is the essence of rate regulation, and I am advised by counsel that NGSs are not subject to rate regulation. In another sense, this proposal undermines Mr. Cicero's entire argument. If supplier and utility offers are identical and properly comparable on a simple price basis, it would mean the supplier and the utility are direct competitors. It would be highly unreasonable to allow one competitor to set the rate ceiling for another. I do not believe Mr. Cicero would argue that one competing company should have the power to set the maximum rate for its competitors. So, we are left with one of two options. Either Mr. Cicero believes that supplier offers and the utility PTC are directly comparable but refuses to acknowledge this means he supports one company limiting the prices of its competitors OR Mr. Cicero is aware supplier and utility gas supply rates *are not* directly comparable and thus the PTC is not an appropriate benchmark for supplier offers but believes suppliers should be held to this standard anyway. Neither option seems in line with the General Assembly's and PUC's understanding of competition.

Q. AT THE BOTTOM OF PAGE 83 OF HIS DIRECT TESTIMONY MR. CICERO CLAIMS THAT "BECAUSE NON-CAP RESIDENTIAL CUSTOMERS CAN CHOOSE TO BE SERVED BY A RETAIL NATURAL GAS SUPPLIER, PEOPLES HAS DEVELOPED A POR PROGRAM WHEREBY IT AGREES TO PURCHASE THE UNCOLLECTED RECEIVABLES RESULTING FROM A CONTRACT BETWEEN A NATURAL GAS SUPPLIER (NGS) AND ITS CUSTOMER." IS THIS THE CORRECT REASON WHY POR EXISTS?

A. Mr. Cicero's characterization omits the critical underpinning of POR – namely that there is a law, the *Natural Gas Choice and Competition Act*, 66 Pa. C.S. § 2201, et seq., that allows for customers to choose their supplier of natural gas, and which enshrines the principle that it is only the customer who gets to choose who their supplier will be.[2] It was the Commission, with its superior understanding of the needs of the competitive market, that issued a policy statement in 2007, related to the electricity market, stating that the public interest would be served by purchase of receivable programs, and it was the Commission that issued orders in multiple utility proceedings extolling the virtues of POR programs.[3] Mr. Cicero is correct that suppliers are charged a discount for purchase of receivables, namely, the uncollectible bill rate. In that way suppliers are paying for the average cost of Peoples' bad debt associated with their uncollectibles. We must also acknowledge that the utilities have the strongest position from which to collect from ratepayers, because it is only they which have the "power of the wrench" – i.e., the ability to turn off a customer's service, in accordance with law and regulation, for non-payment. Suppliers do not have this ability. Additionally, the utility's billing and collection system was built at ratepayers' expense – all ratepayers, including supplier customers. Suppliers would need to raise their own supply prices to build billing and collections systems, which

[2] 66 Pa. C.S. § 2204(a).
[3] See, e.g., *PPL Electric Utilities Corporation Retail Markets*, Docket No. M-2009-2104271; (Opinion and Order entered August 11, 2009, pp. 22-30).

could price out smaller competitors from the marketplace. Among those who remain, even the most robust supplier billing and collections service is unlikely to be able to match utility success in managing uncollectibles, precisely because suppliers do not have shutoff authority. So, as long as suppliers are unable to offer supplier consolidated billing and direct shutoff of customers for nonpayment, POR is the fairest and most cost-effective way to handle billing and collections.

Q. DOES MR. CICERO PRESENT ANY EVIDENCE IN SUPPORT OF HIS THEORY?

A. Mr. Cicero sponsors two exhibits (CAUSE-PA Exhibits 3 & 4), one showing data for all shopping customers and one showing data for low-income customers. The exhibits are inherently misleading because they don't show that POR or the discount amount translates into higher prices for customers. That is, there is some indication of correlation between higher prices and higher uncollectibles, but the exhibits do not demonstrate that POR specifically has a role in causing higher prices or greater uncollectibles. That is, Mr. Cicero fails to support his contention that it is the averaging of uncollectible expenses into the discount rate across all suppliers that provides an incentive to price a certain way. Indeed, given the relatively few numbers of supplier-originated accounts that were written off relative to the utility-originated accounts that were written off, it is hard to see how supplier-originated receivables made much of a difference at all. Based on CAUSE-PA's own materials, residential receivables originating with suppliers represent less than half of one percent on average of the total average number of accounts written off by Peoples.[4]

[4] CAUSE-PA "Gross Write Offs (Table 16):", CAUSE PA - Peoples BRC_CAUSE-PA St. 1 Tables and Workpapers.xlsx.

Similarly, for low-income customer receivables, supplier-originated accounts represent less than two-tenths of one percent of the total average number of accounts written off by Peoples. Mr. Cicero fails to even demonstrate that a variable discount rate for POR payments in any way impacts the level of uncollectibles.

Q. DOES MR. CICERO PRESENT DATA ON INDIVIDUAL SUPPLIER PRICES OR WHETHER ALL SUPPLIERS CHARGE THE SAME PRICE?

A. Mr. Cicero presents no such analysis.

Q. MR. CICERO REFERS TO CUSTOMERS PAYING MORE THAN THE PRICE TO COMPARE AS HARM, AND CLAIMS THAT "LOW INCOME CUSTOMERS" PAID MORE THAN THEY WOULD HAVE IF THEY HAD BEEN ON DEFAULT SERVICE. DOES HE SHOW WHAT THE AGGREGATE PAYMENT WOULD HAVE BEEN IF THOSE SAME CUSTOMERS HAD BEEN SIGNED UP WITH THE SUPPLIER WITH THE LOWEST RATE AVAILABLE DURING THOSE MONTHS?

A. No. Mr. Cicero presents no such data.

Q. DID MR. CICERO PRESENT ANY EVIDENCE THAT SHOWS THAT SUPPLIERS RELY ON THE AVERAGED DISCOUNT AMOUNT IN SETTING PRICES?

A. No.

Q. WHY DOES RESA OPPOSE MR. CICERO'S PROPOSAL?

A. First, because it would re-write the statute to allow the utility to regulate the prices charged by suppliers, something the statute presently does not authorize. POR is an essential service associated with billing for natural gas supply services. As a utility service it cannot be provided in a discriminatory manner. In this case, Mr. Cicero is effectively proposing

the utility discriminate (by picking winners and losers) on the basis of rates which themselves are not regulated by the PUC. I am advised that the Public Utility Code does not permit discrimination in service. I also foresee the chaos that would ensue with suppliers "here one day, gone the next" under Mr. Cicero's proposal, because customers' chosen supplier suddenly would not meet the chosen benchmark (i.e., because the PTC changes on different timelines and for different reasons than supplier prices).

Q. WHAT WOULD HAPPEN IF SUDDENLY A GROUP OF SUPPLIERS WAS NO LONGER ELIGIBLE FOR POR?

A. Let us consider an example to illustrate this. Say a customer chose a 24-month fixed-rate product from a supplier because it was a price the customer could afford and it provided budget certainty. Suppliers must contract for this future supply and make appropriate financial and physical hedges in order to offer such product. They are pricing based on their expectations for future market prices. Meanwhile, the utility's PTC, based on purchased gas costs, with guaranteed cost recovery, changes at a different cadence – every quarter. It is not a true market price and may or may not be reflective of current wholesale market realities.[5] If six months into a 24-month contract, the PTC changes and the supplier can no longer use POR, the supplier will have to make some difficult decisions. Three months after that, the PTC could rise again, and over the course of a 24-month contract, the fixed rate could easily have been the better option for the customer. But Mr. Cicero's proposal allows for no longer-term evaluation horizons nor for customers' own determination of what is in their best interest.

[5] The Commission has at times allowed NGDCs to postpone implementation of changed rates if market conditions might cause dramatic increases in rates for default service.

Q. WHAT TYPE OF DIFFICULT DECISIONS WOULD A SUPPLIER, WHICH WAS NO LONGER ELIGIBLE FOR POR HAVE TO MAKE?

A. I just noted that if a supplier suddenly became ineligible for POR in the middle of a contract with a customer, per Mr. Cicero's proposal, the supplier would have to choose between a number of bad options for themselves and their customers. First, it could build a billing and collections system of its own (at no minor cost) or find a billing services provider (also not inexpensive), within a matter of days so that it could continue to offer complete service to its existing customers. Theoretically the supplier could chose to continue to take utility consolidated billing service from Peoples without POR, but the supplier would need to contract out collections, because under Mr. Cicero's plan, the utility would not pay the supplier until it received payment from a customer and it would have no incentive whatsoever to actively seek payment (as it is no longer the utility's receivable in this scenario). Indeed, the partial payments hierarchy in utility tariffs almost universally ensures that the utility will get paid when customers are struggling with bills, while suppliers are left holding their receivables uncollected. Following this logic, our example supplier's cash flow would dry up, and the supplier would soon be out of business. Another option would be for suppliers to avoid the risk of non-compliance with the POR requirement and build their own billing and collection capability entirely, moving all of their accounts off the Peoples billing platform. If large numbers of suppliers did so, it would leave Peoples with a robust billing platform and fewer customers to pay the costs of maintaining it, which it is required to do, because it is the biller of last resort. That cost would then be priced into supplier offers in the future, of course, meaning customers will have the choice of remaining with the utility and paying higher distribution rates to cover the billing system maintenance or paying higher rates for the supplier product they would

prefer than they otherwise would have. In other words, two robust billing and collections systems are in no one's interest and raise costs for everyone. If the suppliers are not allowed to build a true supplier consolidated billing system – which the Commission has said they are not – then the only alternative in the customers' best interests is a non-discriminatory, accessible, utility consolidated billing service with POR. Of course, I should mention that there is one other option – suppliers could simply eat the losses that they incur from customers who do not pay their bills. That is, not engage in collections at all. This does not appear to be a sustainable approach for most suppliers, however.

Q. MR. CICERO CLAIMS THAT HIS PROPOSAL WOULD ONLY IMPACT THE PURCHASE OF THE RECEIVABLE AND THAT PEOPLES COULD CONTINUE TO ISSUE BILLS, IS THAT ACCURATE?

A. In my estimation, splitting the necessary billing and collections functions between multiple parties does not appear to be an efficient way to run a billing and collections operation. I see the chance for error and friction to be high, both between the NGS and Peoples and between the customer and the NGS or Peoples. With the potential for large numbers of customers being thrust against their will into receiving two bills for natural gas service, the likelihood of customers not paying one or the other bill is high. Even more problematic is what Mr. Cicero does not address; the open question of whether suppliers who employ their own means of collection will be able to terminate service for non-payment. Being able to collect from customers that do not pay, on equal terms, is a serious fairness issue. Without the proven tool of termination for non-payment, uncollectibles will undoubtedly skyrocket and the market likely will collapse.

Q. WHAT RECOMMENDATION(S) DO YOU HAVE FOR THE COMMISSION?

A I recommend that CAUSE-PA's proposal to restrict access to the critical billing infrastructure known as POR to suppliers whose current prices are at or below the price to compare, with no exceptions, be rejected as presented. Cause-PA's proposal is illegal and bad policy for all the reasons stated herein.

Q. DO YOU HAVE ANYTHING ELSE TO ADD?

A. Not at this time, but I reserve the right to respond to any further testimony as may be permitted.

EXPERIENCE

RETAIL ENERGY SUPPLY ASSOCIATION, Harrisburg, PA
National Spokesperson, March 2023 – present

- Serve as the national spokesperson for the leading retail energy supplier industry association.
- Collaborating closely with members, the public relations lead, and the executive leadership of RESA,
  provide oral testimony before state legislature and regulatory commissions, draft written comments for submission in policy proceedings, represent the association in print and broadcast media appearances, advise on public relations and policy matters, and deliver remarks at public events and conferences.

P.R. QUINLAN ASSOCIATES INC., Cumberland, RI
President, July 2014 – president

- Own business advisory firm providing clients with intelligence, analysis, and advocacy services related to state and federal regulations and legislation in the retail and renewable energy sectors.
- Have assisted and advised close to 50 competitive energy suppliers and brokers on regulatory and policy issues related to retail energy.
- Developed a deep expertise in retail energy issues, including through the provision of regulatory and legislative monitoring services to retail suppliers, brokers, trade associations, and energy law firms.
- Testify in front of state legislatures and public utility commissions in markets across the country, including Maryland, New York, Pennsylvania, on behalf of individual retail suppliers as well as coalitions of suppliers.
- Participate in a wide range of state public utility commission stakeholder working groups and collaboratives. A non-exhaustive but representative sample includes:
- File comments, on behalf individual retail suppliers as well as coalitions of suppliers, in regulatory proceedings across the United States.
- Produce white papers and memos on retail energy market developments.
- Managed a national consumer education coalition of competitive energy suppliers (the American Coalition of Competitive Energy Suppliers).

STRATEGIC COMMUNICATIONS, LLC, Washington, DC
Director, January 2013 – June 2014

- Opened and led the Washington, D.C. office of Strategic Communications, LLC.
- Managed team of full-time and part-time staffers to deliver state government relations services.
- Provided strategic planning and business advisory services to clients in manufacturing, defense contracting, and higher education sectors.
- Developed innovative *Strategic Update Service* product, a biweekly regulatory and legislative monitoring service which delivered over $180,000 in new revenue in its first 18 months.

STRATEGIC COMMUNICATIONS, LLC, Syracuse, NY
Senior Consultant, January 2011 – January 2013

- Managed state government relations for clients in the retail electricity and natural gas sectors.
- Drafted and filed formal comments and testimony before state utility commissions and legislatures.
- Represented clients and industry coalitions in industry meetings and public-private working groups.

DEPARTMENT OF COMMERCE, International Trade Administration, Washington, DC
Senior International Trade Specialist, July 2009 – January 2011

- Co-led Civil Nuclear Trade Initiative, which supports U.S. nuclear energy firms through an interagency working group, an industry advisory committee, trade missions and official advocacy.
- Developed and managed innovative resources for U.S. companies, including an online civil nuclear exporters guide and a U.S. industry promotion program at the annual IAEA General Conference.
- Drafted remarks, policy memos, and research reports to support senior Department officials.
- Participated as an ITA staff representative on the U.S. climate change negotiations team in the UN Framework Convention on Climate Change process.

DEPARTMENT OF COMMERCE, International Trade Administration, Washington, DC
Office of Legislative and Intergovernmental Affairs, February 2009-July 2009

- During six-month detail, prepared senior Department officials and Administration political nominees for Congressional hearings, including drafting testimony and developing briefing materials.
- Worked with legislative affairs team to effectively respond to Congressional information requests and to actively engage with Congressional staff in support of agency strategic objectives.

DEPARTMENT OF COMMERCE, International Trade Administration, Washington, DC
Presidential Management Fellow / International Trade Specialist August 2006 – February 2009

- Selected in a highly competitive process as one of two Presidential Management Fellows.
- Responsible for developing research and analysis, industry outreach, and other activities to increase exports by U.S. clean energy companies.
- Completed a capstone project which included organizing and executing the first ever U.S. Clean Energy Trade Mission to India and China, a two-week, 17 company trade mission led by an Assistant Secretary of Commerce that contributed to over $70 million in U.S. exports.

EDUCATION

GEORGETOWN UNIVERSITY, School of Foreign Service, Washington, DC
Master of Arts, German and European Studies (*with distinction*) September 2004 – May 2006

- 3.9 GPA, Concentration in International Business-Government Relations
- Practicum with Royal Phillips Electronics' Washington, D.C. government relations office.
- Internships with Rep. Jim Walsh (New York 25th Congressional District), the Heritage Foundation, and lobbying firm Barbour Griffith and Rogers.

PROVIDENCE COLLEGE, Providence, RI
Bachelor of Arts, Political Science (*summa cum laude*) September 2000 – May 2004

- 3.9 GPA, Minor in German
- Awarded Fulbright Scholarship for study at the Frei-Universität Berlin, May 2004 *(declined for personal reasons)*
- President, Epsilon Chi chapter, Pi Sigma Alpha (national political science honor society)
- Editor-in-Chief, *The Cowl* (weekly student newspaper)

SELECTED COMMENTS & TESTIMONY

On behalf of RESA

- June 29, 2026 – oral and written testimony before the Committee on Transportation and the Environment, Council of the District of Columbia, on Subtitle E of Title VI of the Fiscal Year 2027 Budget Support Act of 2026.
- February 6, 2026 – letter to the Massachusetts House Ways & Means Committee on proposals for clean energy procurement by the Department of Energy Resources.
- January 2026 – served as RESA's Interrogatory Responsible Witness in PURA Docket No. 12-06-02RE04 in Connecticut.
- January 20, 2026 – oral testimony before the Pennsylvania House Energy and Consumer Protection, Technology, & Utilities Committees on energy affordability.
- June 25, 2025 – oral and written testimony before the Joint Committee on Telecommunications, Utilities, and Energy in Massachusetts on Governor's Energy Bill (H.4144),
- June 4, 2025 – oral and written testimony before the Joint Committee on Telecommunications, Utilities, and Energy in Massachusetts on House Bill H.3459 and Senate Bill S.2311.
- May 15, 2025 - letter to the New Jersey Assembly and Senate Telecommunications & Energy Committees on A5439/S4306 market restriction bills.
- January 28, 2025 – informational hearing on understanding electricity bills before the Pennsylvania Senate Consumer Protection and Professional Licensure Committee.
- August 2024 - testimony on behalf of RESA before the Pennsylvania PUC, regarding PECO Energy Company's Petition for Approval of its Default Service Program June 1, 2025 through May 21, 2029 at Docket No. P-2024-3046008.
- May 2024 - testimony on behalf of RESA before the Pennsylvania PUC, regarding Duquesne Light Company's Petition for Approval of Default Service Plan for the Period from June 1, 2025 Through May 31, 2029 at Docket No. P-2024-3048592
- February 2024 – written comments to the Pennsylvania Legislative Budget and Finance Committee (LBFC) on Supplier Consolidated Billing (SCB).
- September 21, 2023 – oral and written testimony before the Joint Committee on Telecommunications, Utilities and Energy in Massachusetts in support of House Bill 3155 and in opposition to House Bill 3196 and Senate Bill 2106
- September 12, 2023 – oral and written testimony before the House Consumer Protection, Technology & Utilities Committee in Pennsylvania in support of House Bill 1578.
- June 5, 2023 – oral and written testimony before the Joint Committee on Telecommunications, Utilities and Energy in Massachusetts in support of House Bill 3155 and in opposition to House Bill 3196 and Senate Bill 2106

On behalf of other clients

- Comments on behalf of the Maryland Energy Marketers Coalition in MDPSC Rulemaking No. RM62, related to changes to the regulator's retail electric and natural gas supplier regulations.
- Comments on behalf of the New York Energy Marketers Coalition in NYPSC Docket No. 18-M-0376, related to data and cybersecurity requirements.
- Comments on behalf of the Pennsylvania Energy Marketers Coalition in PAPUC Docket No. L-2015-2508421, related to delivery of utility notices to third parties.

VERIFICATION

I, Francis S. Caliva III, President of P.R. Quinlan, hereby state that the facts set forth in my attached Rebuttal Testimony are true and correct to the best of my knowledge, information, and belief and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

SURREBUTTAL TESTIMONY OF FRANCIS S. CALIVA III ON BEHALF OF THE RETAIL ENERGY SUPPLY ASSOCIATION

RESA Statement No. 1-SR
July 31, 2026

A. INTRODUCTION

Q. Have you reviewed the rebuttal testimony of Peoples Witness Steven Kolich, Peoples Statement No. 21-R?

A. Yes.

Q. What is the purpose of your surrebuttal testimony?

A. To respond to Mr. Kolich's rebuttal testimony, which endorses the purchase of receivables ("POR") eligibility restriction originally proposed by CAUSE-PA Witness Patrick Cicero, and to explain why Mr. Kolich's testimony does not cure the deficiencies in that proposal that I identified in my rebuttal testimony.

B. MR. KOLICH ADDS NO NEW ANALYSIS AND CONCEDES THE CAUSATION GAP

Q. Does Mr. Kolich's rebuttal testimony provide any new data, analysis, or evidence in support of Mr. Cicero's POR proposal?

A. No. Mr. Kolich sponsors no exhibits (Peoples St. No. 21-R at 1:21-22) and offers no independent study or analysis of his own. His testimony summarizes Mr. Cicero's recommendation (id. at 3:9-14) and Mr. Cicero's stated reasoning (id. at 3:16-23), and then adopts that reasoning as Peoples' position.

Q. Does Mr. Kolich's testimony address the evidentiary gap you identified in Mr. Cicero's direct testimony — that there is no showing the POR discount mechanism causes suppliers to price above the price to compare ("PTC")?

A. No — if anything, Mr. Kolich's testimony compounds the problem. He states that "[w]hen POR protections are coupled with unrestricted supplier pricing; the result can cause significant market distortions… [t]his structure has led to excessive commodity charges." (Peoples St. 21-R at 4:10-14.) That is a conclusion, not an analysis. Mr. Kolich identifies no data that demonstrates what actually drives an individual supplier's pricing — wholesale gas costs, credit risk, product features, contract duration or competitive market forces— and does not explain why the POR discount, rather than any of those other factors, is the cause of the pricing that he and Mr. Cicero criticize. Mr. Kolich's conclusion also appears to be based on a skewed view of the law, ignoring that it is perfectly legitimate to have prices in a competitive market that are different – some higher and some lower. The Competition Act expressly requires that customers be able to "choose among a variety of products including but not limited to different supply and pricing options."[1] Notably, the Competition Act does not authorize, as I am informed by Counsel, the Commission or NGDCs to regulate retail prices, nor does it establish the Price to Compare as a pricing cap or benchmark.

[1] *Natural Gas Choice and Competition Act ("Competition Act")*, 66 Pa.C.S. § 2203(2).

Q. Mr. Cicero's testimony states that Peoples' will have proposed a POR discount rate for suppliers to 1.93% of billed receivables. (CAUSE-PA St. 1 at 84.) What is the significance of that fact?

A. It means the uncollectible discount charged to suppliers would shrink from 2.20% to roughly 1.93% under Peoples' own rate proposal in this same case. That cuts against, not for, the theory that suppliers are "insulated" from uncollectible risk. Neither Mr. Cicero nor Mr. Kolich reconciles this proposed reduction in the discount with the claim that the discount removes suppliers' incentive to price responsibly, and that it indicates that the cost of uncollectibles is diminishing, not increasing. More importantly, it contradicts the assertion that suppliers are isolated from the uncollectible risk.

C. MR. KOLICH'S CONCESSION IS SPECULATION, NOT EVIDENCE OF BENEFIT

Q. Mr. Kolich testifies that he believes Mr. Cicero's recommendation "could help reduce customer costs." (Peoples St. 21-R at 5:2-3.) Do you agree that this establishes the proposal will benefit customers?

A. No. "Could help" is speculation, not evidence. Mr. Kolich does not say what happens to a customer whose supplier is excluded from POR — whether the customer moves to default service, moves to a different competitive supplier, or loses access to a product they affirmatively chose. Nor does he weigh that speculative benefit against the loss of customer choice, the disruption to suppliers, or the legal problems with using price as a gatekeeping criterion for an essential billing service, which I address below and in my rebuttal testimony.

D. THE STATISTICS DO NOT SHOW CAUSATION AND OMIT NECESSARY COMPARISONS

Q. Mr. Kolich states that "approximately 95.8% of residential shopping customers pay more than the PTC for commodity service, and the average supplier price is 82% above the PTC." (Peoples St. 21-R at 5:3-5.) Does this data establish that shopping customers are harmed by the POR program?

A. No. Like Mr. Cicero's Table 15 and Table 16 data (CAUSE-PA St. 1 at 86-88), Mr. Kolich's figures are aggregate, retrospective comparisons to the PTC at a point in time. Neither witness compares what these customers actually paid to what they could have paid under the lowest-cost supplier offer available in the market during the same period, and neither accounts for the value of contract term, price certainty, or other product attributes a customer may have chosen deliberately. A customer who signed a multi-year fixed contract to avoid price volatility may show up as "paying more than the PTC" in any month the PTC happens to be low, without having been harmed in any meaningful sense. Averages and point-in-time snapshots do not answer the question of whether the POR structure itself — as opposed to ordinary market variation — caused customers to pay more than they would have on default service.

E. NEITHER MR. KOLICH NOR MR. CICERO DEMONSTRATE LEGAL AUTHORITY OR THAT A REASONABLE ALTERNATIVE WAS CONSIDERED

Q. Does Mr. Kolich's testimony address whether the Commission or Peoples has authority to condition a supplier's access to POR on the price a supplier charges?

A. No. Mr. Kolich's rebuttal does not mention the question of legal authority at all. As I explain in my rebuttal testimony, neither Peoples nor the Commission is authorized to regulate the prices charged by a Natural Gas Supplier, and using price as a gatekeeping criterion for an essential billing service is price regulation by another name.

Q. Does Mr. Kolich's testimony discuss whether less restrictive alternatives to wholesale POR exclusion were considered?

A. No. He does not discuss any mechanism short of excluding a supplier from POR altogether on the basis of price which neither Peoples or the Commission have the authority to regulate. Before adopting a restriction that can determine whether a supplier remains viable on Peoples' system, the record must show that less restrictive options were considered and found inadequate. Neither Mr. Kolich nor Mr. Cicero has done that.

F. THE PROPOSAL IS NOT OPERATIONALLY DEFINED, AND THE COST ANALYSIS IS ONE-SIDED

Q. Mr. Kolich testifies that "[t]he Company has not yet fully evaluated the level of effort or potential costs associated with implementing Mr. Cicero's recommendation because the proposal does not specify how the Company would be expected to adopt it." (Peoples St. 21-R at 5:12-14.) What is the significance of that statement?

A. It confirms that what is before the Commission is a concept, not a workable rule. Mr. Kolich acknowledges that clear rules do not yet exist for "timing for entry into a POR pool and exiting a POR pool" or for "communicating with customers." (Id. at 5:16-18.) Suppliers

would be asked to restructure their pricing and business practices in Peoples' territory around a standard that has not been defined.

Q. Mr. Kolich also states that he expects "implementation costs to be minimal because [Peoples] already has the capability for suppliers to operate both POR and non-POR pools." (Id. at 5:14-16.) Does that resolve the cost question?

A. No — it answers only half of it. Mr. Kolich addresses Peoples' own internal system costs. He says nothing about the cost and disruption to suppliers who would need to build or contract for independent billing and collection capability, the risk to customer cash flow and service continuity that I describe in my rebuttal testimony, or how a certification requirement tied to "contract initiation or renewal" (CAUSE-PA St. 1 at 89) would apply to existing multi-year, fixed-price, or variable-rate contracts that move above and below the PTC over their term. A cost analysis limited to the utility's own systems is not a cost analysis of the proposal.

Q. Mr. Kolich's rebuttal describes Mr. Cicero's recommendation as applying to "participating suppliers" generally, without qualification. (Peoples St. 21-R at 3:9-14, summarizing CAUSE-PA St. 1 at 83-89.) Is that recommendation limited to confirmed low-income customers?

A. No, and Mr. Kolich does not suggest otherwise. The recommendation Mr. Kolich adopts would apply to every residential shopping customer in Peoples' territory, regardless of income. (CAUSE-PA St. 1 at 89.) Because Mr. Kolich has put this recommendation, in its full scope, at issue in his rebuttal, it is fair to test whether that scope is justified.

Q. Mr. Kolich cites Mr. Cicero's aggregated cost data as the basis for the recommendation. (Peoples St. 21-R at 3:17-18, citing CAUSE-PA St. 1 at 85-86.) What does that same data show about the share of harm attributable to confirmed low-income customers?

A. By Mr. Cicero's own figures — the same figures Mr. Kolich cites — confirmed low-income customers account for $7.9 million of the $57.3 million in alleged aggregate harm alleged for the January 2024 through April 2026 period (CAUSE-PA St. 1 at 86), or roughly 14%. A market-wide restriction on POR eligibility, applicable to all residential shopping customers, is a poor fit for an alleged harm that, on the very data Mr. Kolich relies upon, is concentrated in a small share of the affected population.

Q. Mr. Kolich adopts Mr. Cicero's reasoning that suppliers have "little incentive to moderate the prices that they charge customers" because POR removes uncollectible risk. (Peoples St. 21-R at 3:19-21, citing CAUSE-PA St. 1 at 84.) Does the material Mr. Kolich cites for that reasoning include any legal-authority or less-restrictive-alternative analysis?

A. No. The page Mr. Kolich cites for that reasoning contains no discussion of the Commission's or Peoples' authority to condition POR eligibility on price, and no discussion of any alternative short of wholesale exclusion. Further, implicit in Mr. Kolich's reasoning is that the market for natural gas supply is not competitive and, therefore, NGS pricing is not disciplined by competitive market forces. Because Mr. Kolich relies on that reasoning as the basis for his rebuttal without independently supplying either analysis, those same gaps carry into his own testimony.

G. CONCLUSION

Q. Does this conclude your surrebuttal testimony on Peoples' proposed changes to the POR program?

A. Yes, although I reserve the right to supplement my testimony as needed.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission, et al.	:	
	:	
v.	:	Docket No. R-2026-3068055
	:	
Peoples Natural Gas Company LLC	:	

Direct Testimony of Daniel J. Weaver

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: June 18, 2026

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am Daniel J. Weaver, President and Executive Director of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT IS PIOGA?

A. PIOGA is a trade association representing oil and natural gas interests throughout Pennsylvania. PIOGA is the oldest, and the largest, such trade association in the Commonwealth. PIOGA's members include oil and natural gas producers and Commission-licensed natural gas suppliers and marketers that deliver natural gas produced from Pennsylvania conventional and unconventional formations to the pipeline systems of Peoples Natural Gas Company LLC (Peoples) for system supply and for Peoples' transportation customers.

PIOGA and its producer members have a long history of working with Peoples on matters affecting local production, including the former Production Enhancement Services agreements and programs, the Peoples-Producers Cooperation Committee, Rate AGS, producer retainage, water vapor standards, meter and interconnect issues, and the Master Interconnect and Measurement Agreement (MIMA).

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. I am a Penn State University graduate with a degree in History. I was born and raised in Oil City, Pennsylvania. I served 11 years as a Museum Educator at the Drake Well Museum in Titusville and one two-year term as the Manager of the Friends of Drake Well Museum. Before becoming PIOGA President and Executive Director in 2016, I was Director of Public Outreach at PIOGA, where I was responsible for communications and public education. I

launched the PIOGA Energy Education Program, a teach-the-teachers program for educators in grades 5 through 8.

Q. WHAT DO YOU DO AS PRESIDENT AND EXECUTIVE DIRECTOR OF PIOGA?

A. I work closely with elected leaders, regulators, and the civic community to advance responsible development of Pennsylvania oil and natural gas and to promote a favorable environment for the success of the exploration, production, transportation, and downstream use of Pennsylvania natural gas. I participate in PIOGA's legislative and educational outreach activities, committee meetings, public comments, and technical training workshops. I also provide information in support of PIOGA's participation in regulatory and litigation matters affecting our producer and natural gas supplier members.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. Yes. I have provided written testimony in Peoples' purchased gas cost proceedings, in Peoples' prior base rate cases, and in other Commission proceedings affecting PIOGA and its members.

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY AND DISCOVERY RESPONSES IN THIS MATTER?

A. Yes. I am familiar with Peoples' testimony concerning gas supply, local production, gathering cost recovery, Rate AGS, rate design, and the discovery responses addressing those subjects.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to describe PIOGA's concerns with Peoples' proposal to increase the Rate Appalachian Gathering Service (Rate AGS) gathering charge from $0.24/Mcf to $0.29/Mcf, to explain why that proposal is not justified by the record, and to identify related concerns involving the MIMA and the continuing decline in local conventional production. I also identify the issues addressed by PIOGA witnesses Marc Jacobs and Shane Kriebel.

Q. WHAT PEOPLES PROPOSAL IS PIOGA ADDRESSING IN THIS TESTIMONY?

A. PIOGA is addressing Peoples' proposal to increase the Rate AGS charge paid by conventional producers from $0.24/Mcf to $0.29/Mcf. Peoples states that Rate AGS applies to conventional gas production delivered to the Peoples system and that the proposed increase is intended to provide a producer contribution toward gathering system costs. PIOGA also has concerns with the statements concerning the reduction in conventional gas supply in coming years. Finally, PIOGA will also address some concerns with application and enforcement of MIMAs.

Q. DOES PIOGA OPPOSE THE CONCEPT THAT PRODUCERS MAY MAKE A REASONABLE CONTRIBUTION TO COSTS ASSOCIATED WITH LOCAL PRODUCTION?

A. No. PIOGA has previously recognized that producers may make a reasonable contribution to the costs of facilities used to receive and move local production. But that contribution must be reasonable in relation to the value of the service actually provided to producers, the economic condition of conventional production, and the benefits that customers receive from local production. PIOGA objects to increasing the AGS charge simply because Peoples is seeking an overall base rate increase from customers.

Q. TO YOUR KNOWLEDGE, HOW DID PEOPLES DEVELOP THE PROPOSED $0.29/MCF AGS RATE?

A. Peoples' discovery responses show that Peoples evaluated several possible approaches and selected an approach that applied the overall requested base-rate increase percentage to current gathering revenue recovery. Peoples stated that it "decided it was reasonable to have PIOGA pay the same increase in their rate as customers are paying overall." Peoples then calculated an AGS rate of approximately $0.285/Mcf and rounded it to $0.29/Mcf.

Q. WHY IS THAT IMPORTANT?

A. It is important because it shows that the proposed AGS increase is not based on an AGS-specific showing that conventional producers caused or will cause an incremental $0.05/Mcf of costs. Peoples did identify a gathering cost-of-service analysis, but PIOGA's concern is with the incremental increase from $0.24/Mcf to $0.29/Mcf. The discovery record shows that the chosen method was tied to the overall revenue increase requested in the base rate case, not a producer-specific cost-causation analysis or rate-design study.

Q. DID PEOPLES IDENTIFY OTHER RATE OPTIONS IT CONSIDERED?

A. Yes. Peoples identified four options: recovering the full gathering cost of service from producers, which would produce an AGS rate of $1.506/Mcf; maintaining the cost-of-service ratio, which would produce an AGS rate of $0.324/Mcf; increasing gathering by the overall rate increase percentage, which produced $0.285/Mcf rounded to $0.29/Mcf; and recovering the same revenue as in the last case, which would produce $0.300/Mcf. Peoples selected the third option.

Q. WHAT IS PIOGA'S POSITION ON PEOPLES' SELECTED METHOD?

A. PIOGA believes the selected method is not a reasonable basis for increasing the AGS rate. Conventional producers are not retail utility customers receiving distribution service. They are suppliers whose production benefits Peoples' customers. A producer charge should be supported by the value and costs of the producer service, not by the percentage increase Peoples seeks from its retail customers in a general base rate case.

Q. HOW DOES PEOPLES' OWN TESTIMONY DESCRIBE THE VALUE OF LOCAL GAS?

A. Peoples' testimony recognizes that local gas is valuable. Peoples states that it uses local gas first as base-load supply. Peoples also states that local gas, including conventional gas, is lower cost than interstate delivered gas. For the fully projected future test year, Peoples estimates that gas delivered through the gathering system costs $3.08/Mcf compared to $3.48/Mcf for interstate systems, a savings of $0.40/Mcf for local gas purchased for on-system customers.

Q. WHY DOES THAT MATTER TO THE AGS RATE?

A. It matters because Peoples' customers benefit from local production. If the AGS rate is increased without a producer-specific justification, it increases the cost burden on the very producers whose production provides customers with lower-cost local supply. That is especially concerning in the current low-price environment for conventional gas. At the same time that Peoples is seeking to raise the AGS Rate by $0.05/mcf, it is also greatly emphasizing the reduction in local, conventional gas in its system. Raising the AGS Rate by a significant amount (as proposed in this case) may lead to smaller producers not being able to afford production, which in turn would lead to even lower amounts of local gas. This would likely increase the amount of interstate gas that Peoples would have to procure to supply its customers. As Peoples admits, interstate gas is significantly more expensive than

local gas, and that cost would likely be passed onto customers. There is certainly an unfortunate domino effect that could happen, ending with more money being taken out of consumers' pockets.

Q. WHAT DOES PEOPLES' TESTIMONY SAY ABOUT CONVENTIONAL PRODUCTION TRENDS?

A. Peoples states that conventional production delivered into its system has declined year-over-year since 2012. Peoples states that it received approximately 37.1 Bcf from conventional wells in 2020 and approximately 26.2 Bcf in 2025, a decline of 10.9 Bcf, or 29%, over that six-year period. Peoples also states that a reversal of this ongoing decline is not expected.

Q. DID PEOPLES' DISCOVERY RESPONSES PROVIDE ADDITIONAL INFORMATION ABOUT THE PRODUCTION PROJECTION?

A. Yes. Peoples stated that its FPFTY conventional production projection was created using historical monthly conventional volumes from January 2021 through November 2025 and Excel's Forecast Sheet feature to project future monthly conventional volumes through September 2030. That confirms Peoples is building its AGS revenue projection on a declining production base.

Q. WHY IS THE POTENTIAL DECLINE IN CONVENTIONAL PRODUCTION IMPORTANT TO PIOGA'S POSITION?

A. It is important because conventional production is already under economic pressure, and for the domino effect already described above. Peoples acknowledges that market prices are low by historical standards and that low prices likely contributed to the reduction in conventional production. Increasing AGS by applying a general base-rate increase adds

another cost to conventional producers without showing that producers caused the specific increase. That is inconsistent with preserving a supply source Peoples recognizes as lower cost for customers. Moreover, lower gas prices generally should encourage Peoples to purchase more locally produced, conventional natural gas, as that will help keep consumer costs down while at the same time keeping an active and well fed gathering system.

Q. HOW DOES THE MIMA RELATE TO PIOGA'S CONCERNS ABOUT RATE AGS?

A. Rate AGS requires a producer to execute and comply with a MIMA; the value of service under Rate AGS depends not only on the stated rate but also on the MIMA terms and how Peoples implements them.

Q. WHAT RATE AGS TARIFF LANGUAGE AFFECTS THE VALUE OF SERVICE TO PRODUCERS?

A. The Rate AGS character-of-service language states that Peoples' only obligation is to receive gas from a gathering receipt point and permit the gas to flow against existing pressure in Peoples' facilities. It also states that Peoples is not obligated to lower line pressure by compression or otherwise to accommodate receipts from local Appalachian producers. This language materially limits the value of the service from the producer's perspective because practical access to the system can be limited by line pressure and operational decisions.

Q. DID PEOPLES' DISCOVERY RESPONSES SHOW PRACTICAL ISSUES WITH PRODUCER ACCESS EVEN IF NO MIMAS WERE FORMALLY TERMINATED?

A. Yes. Peoples stated that no MIMAs were terminated, cancelled, not renewed, allowed to expire, or discontinued during 2024, 2025, or 2026 to date. But Peoples also identified substantial receipt-point or meter-expiration activity. For 2024, 2025, and 2026 to date,

Peoples reported total notices of 157, 163, and 59, respectively, for reasons including expired non-producing points, pipeline abandonment, and producer-expired points. This shows that formal MIMA termination is not the only way producer access can be affected. Moreover, it shows that the current reduction and potential future deduction of conventional gas flowing into the Peoples system is caused, at least in part, from Peoples' own policies.

Q. WHAT IS PIOGA'S POSITION CONCERNING THE MIMA IN THIS CASE?

A. PIOGA believes MIMA terms and implementation should preserve Peoples' ability to operate safely and reliably while also preserving practical producer access where that can be done reasonably. Producers should not face increased AGS charges while the operational terms of service allow indefinite or avoidable restrictions that reduce or eliminate the value of the service.

Q. HOW DOES PEOPLES TREAT UNCONVENTIONAL PRODUCTION DIFFERENTLY FROM CONVENTIONAL PRODUCTION FOR GATHERING RATES?

A. Peoples charges negotiated rates for unconventional production because Peoples states that it must compete with midstream and interstate pipelines to acquire that supply and because Marcellus producers generally have multiple options to get their gas to market. Conventional producers generally do not have the same alternatives. That difference is important because a tariffed AGS increase can impose a cost on conventional producers who may not have realistic market alternatives.

Q. WHAT RELIEF OR RESULT DOES PIOGA SUPPORT?

A. PIOGA recommends that the Commission reject Peoples' proposed increase in the Rate AGS charge from $0.24/Mcf to $0.29/Mcf unless Peoples provides a producer-specific justification for the increase. At a minimum, the Commission should recognize that the

proposed increase is tied to Peoples' overall base-rate increase, not to a study showing incremental producer-caused costs. PIOGA also supports reasonable MIMA and operational changes that protect system safety and reliability while reducing unnecessary barriers to conventional production.

Q. WHAT ISSUES WILL PIOGA WITNESS MARC JACOBS ADDRESS?

A. Mr. Jacobs will address Rate AGS and MIMA issues from the perspective of a conventional producer operating on the Peoples system. He will explain how MIMA terms, line pressure, meter and receipt-point requirements, low-volume issues, and operational restrictions affect producer operations and the actual value producers receive for the AGS charge.

Q. WHAT ISSUES WILL PIOGA WITNESS SHANE KRIEBEL ADDRESS?

A. Mr. Kriebel will address similar operational issues from Kriebel Energy's perspective. He will explain how producer regulator set points, Peoples' line pressures, system changes, and receipt-point issues can affect Kriebel's ability to deliver conventional production to Peoples. His testimony will also address the need for reasonable operational accommodations that allow conventional production to flow where safe and reliable.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties that affect PIOGA's interests.

Verification

I, Daniel J. Weaver, hereby state that:

The foregoing testimony, marked as PIOGA St. No. 1, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above. The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Peoples Natural Gas Company LLC	:	

Surrebuttal Testimony of Daniel J. Weaver

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: July 31, 2026

I. Introduction

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. My name is Daniel J. Weaver. I am the President and Executive Director of the Pennsylvania Independent Oil & Gas Association ("PIOGA").

Q. DID YOU PREVIOUSLY SUBMIT DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted direct testimony on behalf of PIOGA addressing Peoples Natural Gas Company LLC's ("Peoples") proposed increase to Rate Schedule Appalachian Gathering Service ("Rate AGS"), the importance of local conventional production, and operational concerns involving the Master Interconnect and Measurement Agreement ("MIMA").

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of Peoples witness Edward A. Palombo. Mr. Palombo agrees that the gathering system benefits both customers and conventional producers. He also agrees that conventional producers often depend on the existing gathering system for access to market. Those acknowledgments reinforce PIOGA's central point: the Commission should not approve a higher Rate AGS charge merely by applying Peoples' general base-rate increase to producer gathering revenues, without a producer-specific showing that the resulting charge is reasonable in light of the service actually received and the economic consequences for local conventional production.

Q. DOES YOUR SURREBUTTAL TESTIMONY QUESTION PEOPLES' OBLIGATION TO OPERATE ITS SYSTEM SAFELY AND RELIABLY?

A. No. PIOGA does not dispute that Peoples must operate its system safely, reliably, and in compliance with applicable requirements. PIOGA's position is that safety and reliability

should be preserved while Peoples also uses reasonable, practical efforts to avoid unnecessarily reducing the ability of conventional producers to deliver local gas. Those objectives are compatible.

II. Rate AGS Cost Recovery

Q. MR. PALOMBO TESTIFIES THAT BOTH PRODUCERS AND CUSTOMERS BENEFIT FROM THE GATHERING SYSTEM. DO YOU DISAGREE?

A. No. My direct testimony made the same point. Local production can provide Peoples' customers with lower-cost supply, and producers need a practical path to market. But the fact that both groups benefit does not answer the rate-design question presented here: what producer contribution is reasonable, and how should Peoples support an increase in that contribution?

Q. HOW DOES MR. PALOMBO RESPOND TO PIOGA'S CONCERN THAT THE PROPOSED INCREASE WAS DERIVED FROM PEOPLES' OVERALL REQUESTED BASE-RATE INCREASE?

A. Mr. Palombo confirms that Peoples considered four approaches and selected the approach that increased the existing gathering rate by the overall increase in rates requested in this case. He calls that approach a measured way to preserve a shared contribution. But neither the existence of other, higher possible rates nor the decision not to pursue full cost recovery establishes that applying an overall customer base-rate increase to Rate AGS is a producer-specific justification for a $0.05/Mcf increase.

Q. WHY NOT?

A. Conventional producers are not retail distribution customers. They provide supply that Peoples purchases or receives through the gathering system, and the producer charge is imposed under a distinct rate schedule with a distinct character of service. A reasonable

producer contribution should therefore be supported by the producer service, the costs properly assigned to that service, and the producer's practical ability to use it. The selected approach instead begins with the overall increase Peoples seeks from its customers and applies that percentage to the existing producer charge.

Q. DOES MR. PALOMBO'S TESTIMONY REGARDING A 25.7% PRODUCER CONTRIBUTION RESOLVE THAT CONCERN?

A. No. Mr. Palombo states that the proposed charge would recover 25.7% of gathering-system costs from conventional producers, compared with 28.4% in the 2023 base rate case. That comparison may show that Peoples is not seeking full recovery from producers. It does not explain why 25.7% is the appropriate producer contribution in this case, why the incremental $0.05/Mcf increase is cost-based, or why the increase should follow the overall requested base-rate percentage.

Q. DOES PIOGA CONTEND THAT PRODUCERS SHOULD NEVER CONTRIBUTE TO GATHERING-SYSTEM COSTS?

A. No. PIOGA has consistently recognized that producers may make a reasonable contribution to facilities used to receive and move local production. The issue is not whether producers should contribute anything. The issue is whether Peoples has justified increasing the charge by a methodology that is not tied to a demonstrated increase in producer-caused costs, the value of the producer service, or a producer-specific rate-design analysis.

Q. DO YOU ACKNOWLEDGE THAT PEOPLES SELECTED THE LOWEST OF ITS FOUR IDENTIFIED RATE OPTIONS?

A. Yes. Based on the four options described by Mr. Palombo, the selected $0.29/Mcf rate is lower than the $0.30/Mcf, $0.324/Mcf, and $1.506/Mcf results of the other identified options. PIOGA does not contend otherwise.

Q. DOES THAT CONCESSION MEAN THAT THE SELECTED METHOD IS ADEQUATELY SUPPORTED?

A. No. Selecting the lowest result from a set of alternatives does not itself establish that the selected result is just and reasonable. The question remains whether the selected $0.05/Mcf increase is supported by current, producer-specific evidence regarding the cost of providing gathering service, the costs properly associated with producer use of the system, or the value and practical availability of that service to conventional producers.

Q. WHAT ABOUT THE SECOND AND FOURTH OPTIONS, WHICH REFER TO PRODUCERS' 2023 CONTRIBUTION PERCENTAGE OR 2023 PRODUCER REVENUE?

A. Those options may use historical producer-related benchmarks from the 2023 rate design. And PIOGA is not arguing that Peoples may never consider historical producer contribution or revenue information. PIOGA's point is that those historical benchmarks do not supply the missing evidentiary link for the method Peoples actually selected. Peoples selected the third method, applying its overall requested customer-rate increase to the existing AGS rate, not a method derived from a current analysis of producer-specific cost causation, producer usage, or the service value received by producers.

Q. THEN WHAT IS PIOGA'S RATE-DESIGN POSITION?

A. PIOGA's position is not that the Company must choose the highest producer-related benchmark, nor that every input must be limited to producers. Rather, before increasing Rate AGS, Peoples should demonstrate that the increase is reasonable in relation to the

current data concerning producers on the system and the gathering service provided to them. A lower alternative does not cure the absence of that showing. The relevant comparison is not simply whether Peoples selected the lowest of four alternatives it identified; it is whether the selected charge is just and reasonable on the record.

III. Local Production and Practical Access

Q. MR. PALOMBO STATES THAT PIOGA HAS NOT SHOWN THAT THE PROPOSED $0.05/MCF INCREASE CAUSED THE HISTORICAL DECLINE IN CONVENTIONAL PRODUCTION OR THAT FREEZING THE RATE WOULD REVERSE THE TREND. IS THAT PIOGA'S POSITION?

A. No. PIOGA does not contend that this proposed increase caused the historical decline in conventional production or that maintaining the existing rate would, by itself, reverse that decline. The point is prospective and practical. Peoples acknowledges that conventional production is declining amid low commodity prices and aging wells. Adding an unsupported charge to already narrow-margin production can contribute to the economic pressure on producers and can reduce the incentive or ability to maintain marginal wells and receipt points.

Q. WHY IS THAT CONCERN RELEVANT IF PEOPLES DOES NOT SEEK FULL COST RECOVERY FROM PRODUCERS?

A. The absence of full cost recovery does not eliminate the importance of the incremental increase. As the volume from conventional production declines, fixed or embedded costs do not become less consequential to an individual low-volume producer. The Commission should consider whether the increase is adequately supported and whether it may further

burden the local supply source that Peoples acknowledges can reduce reliance on higher-cost interstate supplies.

Q. HOW DOES MR. PALOMBO'S TESTIMONY ABOUT CONVENTIONAL PRODUCERS' DEPENDENCE ON THE GATHERING SYSTEM AFFECT PIOGA'S CONCERN?

A. It reinforces it. Mr. Palombo explains that conventional wells often depend on the existing gathering system for access to market, while unconventional producers generally have more alternatives. Where a producer has limited alternatives, a tariffed increase and the operational terms governing access have greater practical significance. That is why the Commission should require an adequate producer-specific basis before approving the increase.

Q. MR. PALOMBO STATES THAT RATE AGS DOES NOT GUARANTEE DELIVERY UNDER EVERY OPERATING CONDITION. DOES PIOGA SEEK SUCH A GUARANTEE?

A. No. PIOGA does not seek a guarantee that Peoples will lower line pressure, install compression, alter its system, or accommodate every receipt point regardless of safety, reliability, customer service, or operating conditions. PIOGA's position is narrower. The practical value of Rate AGS necessarily depends on the conditions under which a producer can deliver gas, including the tariff, MIMA, line pressure, receipt-point status, and operational decisions. A higher charge for that service should be evaluated in that real-world context.

Q. WHY SHOULD THE COMMISSION CONSIDER RATE AGS AND THE MIMA-RELATED OPERATING FRAMEWORK TOGETHER?

A. The rate is the price a producer pays for access to Peoples' gathering system; the tariff and MIMA prescribe material conditions of that access. They need not be treated as the

same legal instrument to be relevant to the same ratemaking question. If a producer's practical ability to deliver gas may be limited by pressure conditions, a receipt-point expiration, or other operating requirements, the Commission should consider those limitations when evaluating the value of the producer service and the reasonableness of a higher charge.

Q. WHAT RELIEF DOES PIOGA CONTINUE TO SUPPORT?

A. PIOGA continues to recommend that the Commission reject the proposed increase from $0.24/Mcf to $0.29/Mcf unless Peoples provides a producer-specific justification for it. PIOGA also supports a safety-qualified operational approach under which Peoples uses reasonable efforts to communicate and work with producers to preserve practical access where feasible, without compromising safety, reliability, customer service, or Peoples' ability to respond to changing or emergency conditions.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Verification

I, Daniel J. Weaver, hereby state that the foregoing surrebuttal testimony was prepared by me or at my direction and under my direct supervision and, if asked the same questions at hearing, my responses would be the same as set forth above. The facts stated above are true and correct to the best of my knowledge, information, and belief, and I expect to be able to prove them at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Peoples Natural Gas Company LLC	:	

Direct Testimony of D. Marc Jacobs, Jr.

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: June 18, 2026

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. I am D. Marc Jacobs, Jr., Senior Vice President of Penneco Oil Company, Inc. (Penneco), which is a producer member of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT IS PENNECO?

A. Penneco is a conventional oil and gas operator headquartered in Delmont, Pennsylvania, with the majority of its managed assets and infrastructure located in the southwest quadrant of the Commonwealth.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. I graduated from a Midwestern State Seminary with a Bachelor of Science Degree in Pastoral Theology in 1984. Immediately following, I joined Penneco in a family-principal leadership position and have been there ever since.

Q. WHAT DO YOU DO AS SENIOR VICE PRESIDENT?

A. I manage production and infrastructure, regulatory compliance, plugging activities, UIC operations, and daily decision-making typical to a family business.

Q. WHAT IS YOUR EXPERIENCE IN THE OIL AND NATURAL GAS INDUSTRY?

A. I have approximately 40 years of experience in the industry. I have facilitated and managed drilling and completions, well site and pipeline construction, gas measurement and compression operations, and assisted in evaluation of prospects and development strategies.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. Yes. I provided written testimony on behalf of PIOGA in Peoples' prior base rate case.

Q. WHY ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am providing testimony because Penneco delivers conventional production to the Peoples Natural Gas Company LLC (Peoples) pipeline system, and I have experience with Penneco's operations on Peoples' system. I am familiar with the practical effect of Rate AGS, the Master Interconnect and Measurement Agreement (MIMA), line pressure, meter and receipt-point issues, low-volume requirements, water vapor standards, and other operational issues that affect conventional producers.

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY AND DISCOVERY RESPONSES IN THIS MATTER?

A. Yes. I am familiar with Peoples' testimony and discovery responses concerning local production, Rate AGS, MIMAs, gathering cost recovery, conventional production projections, meter and receipt-point activity, and related operational issues.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to support PIOGA's positions and proposals set forth in Dan Weaver's testimony concerning Rate AGS and the MIMA. Specifically, I explain how the proposed Rate AGS increase and MIMA requirements affect producers from an operational perspective. I also explain why the value of Rate AGS is reduced when Peoples' tariff obligation is limited to receiving gas against existing line pressure and when producers face operational uncertainty involving line pressure, receipt points, meter expirations, shut-ins, low-volume issues, system downgrades, pipeline abandonments, and compliance costs.

Q. WHAT IS YOUR UNDERSTANDING OF PEOPLES' PROPOSED CHANGE TO RATE AGS?

A. Peoples proposes to increase the Rate AGS charge from $0.24/Mcf to $0.29/Mcf for conventional production. My understanding is that Peoples selected this proposed increase by applying the overall requested base-rate increase percentage to the existing gathering

revenue recovery, rather than by showing that conventional producers caused an incremental $0.05/Mcf of costs.

Q. WHY IS THAT IMPORTANT FROM A PRODUCER'S PERSPECTIVE?

A. For conventional producers, $0.05/Mcf is meaningful. Conventional wells often have low production volumes and operate on narrow margins. Producers are already dealing with low gas prices, aging wells, water vapor requirements, line pressure issues, meter and testing costs, and the risk that a well or receipt point may become uneconomic. An increase in the AGS rate should be tied to a demonstrated increase in the value of the service or to producer-caused costs, not simply to Peoples' general base-rate increase.

Q. HOW DOES THE RATE AGS CHARACTER-OF-SERVICE LANGUAGE AFFECT PRODUCERS?

A. The Rate AGS character-language states that Peoples' only obligation is to receive gas from a gathering receipt point and allow the gas to flow against existing pressure in Peoples' facilities. It also states that Peoples is not obligated to lower line pressure by compression or otherwise to accommodate receipts from local Appalachian producers. Rather than lowering line pressure, Peoples is inclined to downgrade systems reducing the MAOP and regulator set-points further restricting flow. From an operational standpoint, that language is very important. If Peoples' line pressure is above a producer's regulator set point, the producer's gas may not flow. In that situation, the producer is paying for a service whose practical value can be limited or eliminated.

Q. WHAT IS A PRODUCER REGULATOR?

A. A producer regulator is a device designed to maintain the downstream receipt-point pressure to the specifications required by the system operator. As the downstream pressure

approaches or exceeds the regulator set point, the flow through the regulator becomes restricted or stops.

Q. WHO DETERMINES THE PRESSURE AT WHICH PRODUCER REGULATORS ARE SET?

A. Peoples determines or approves the producer regulator set points for deliveries into its system.

Q. WHAT HAPPENS WHEN PEOPLES' LINE PRESSURE IS HIGHER THAN THE PRODUCER REGULATOR SET POINT?

A. If the producer's regulator is set properly, gas flow at the receipt point is restricted or stops. That means conventional production can be shut in even though the well is capable of producing and even though the producer is willing and able to deliver gas, many times without any input from or control by the producer who is otherwise feeding the Peoples system and its customers.

Q. WHY IS THAT PROBLEMATIC FOR CONVENTIONAL PRODUCERS?

A. Many conventional wells produce at low pressure and low volumes. If they are unable to flow for long enough, the producer can lose revenue, face inactive-status or lease issues, and ultimately face the possibility of plugging a well that might otherwise continue producing. For an aging conventional well, avoidable shut-in time can be very significant and harmful, especially when initiated by the distribution system without sufficient justification.

Q. HOW DOES THIS RELATE TO THE VALUE OF RATE AGS?

A. Peoples says producers receive value from Rate AGS because it provides access to a market. But access is not fully valuable if it is subject to system downgrades or other line pressure conditions that prevent flow with a tariff that says Peoples has no obligation to lower pressure to accommodate local production. In that situation, the value of the service

depends on whether Peoples will use reasonable operational efforts to allow conventional production to flow when it can do so safely and reliably.

Q. WHAT DOES PEOPLES' DISCOVERY SHOW ABOUT MIMA TERMINATIONS AND RECEIPT-POINT ACTIVITY?

A. Peoples stated that no MIMAs were terminated, cancelled, not renewed, allowed to expire, or discontinued during 2024, 2025, or 2026 to date. But Peoples also identified substantial receipt-point or meter-expiration activity, including 157 notices in 2024, 163 notices in 2025, and 59 notices in 2026 to date, for reasons including expired non-producing points, pipeline abandonment, and producer-expired points.

Q. WHAT DOES THAT MEAN FROM A PRODUCER'S PERSPECTIVE?

A. It means that the absence of formal MIMA terminations does not mean there are no practical access issues. Producers can be affected through receipt-point expiration, meter expiration, pipeline abandonment, system downgrades, low-volume status, non-producing status, and related operational decisions. Those practical issues matter as much as formal contract termination because they affect whether a producer can actually deliver gas.

Q. WHY IS THE MIMA IMPORTANT TO RATE AGS SERVICE?

A. Rate AGS requires execution and compliance with a MIMA. Peoples has identified the MIMA as the document outlining the standard operating requirements applicable to producer-operated meter stations. Therefore, the MIMA controls many of the practical conditions under which producers can deliver gas. If the AGS rate increases, but the MIMA continues to impose broad operational requirements and unilateral rights that reduce producer access or increase producer costs, then the producer is paying more without receiving more value.

Q. WHAT TYPES OF MIMA ISSUES ARE MOST IMPORTANT TO CONVENTIONAL PRODUCERS?

A. The most important issues include provisions governing shut-ins, system downgrades, discontinuance of deliveries, receipt-point expiration, low-volume receipt points, meter testing and documentation, line pressure, gas quality, water vapor content, and the process for pipeline abandonment or alternative delivery points. These provisions can affect whether a conventional well can remain in production and whether the producer can justify continued investment in that well or receipt point.

Q. ARE YOU SAYING PEOPLES SHOULD BE REQUIRED TO COMPROMISE SYSTEM SAFETY OR RELIABILITY?

A. No. PIOGA is not asking Peoples to compromise safety or reliability. The point is that there are often reasonable operational accommodations that can help conventional production continue to flow without jeopardizing Peoples' system. Examples include reasonable notice, good-faith discussion, opportunity to confirm audit results prior to penalty, practical timelines, reasonable low-volume thresholds, and reasonable efforts to allow conventional production to flow when line pressures or other operating conditions would otherwise shut it in.

Q. HOW DO LOW-VOLUME REQUIREMENTS AFFECT CONVENTIONAL PRODUCERS?

A. Many conventional wells are low-volume wells but remain productive; and, when combined together, comprise an invaluable part of any distribution system. But, a low-volume threshold that is too high can put productive wells at risk, which can cause a domino effect for both producers and the distribution company. For a conventional producer, a well that produces less than a threshold can still have value, can still contribute local gas supply,

and can help maintain leases and avoid plugging costs. Low-volume rules should recognize the realities of conventional production.

Q. HOW DO METER TESTING AND RECORDKEEPING REQUIREMENTS AFFECT PRODUCERS?

A. Meter testing and recordkeeping are important, but they also impose costs and administrative burdens. Requirements should be tailored to preserve accurate measurement while avoiding unnecessary paperwork or automatic shut-in consequences where a producer can provide documentation or cure a deficiency. Conventional producers often operate many small receipt points, so requirements that may seem minor for one meter can become significant across a producer's system.

Q. HOW SHOULD THE COMMISSION VIEW PEOPLES' PROPOSAL TO INCREASE AGS IN LIGHT OF THESE OPERATIONAL ISSUES?

A. The Commission should consider the AGS charge and the MIMA together. The rate is not just a number; it is the price producers pay for a service whose practical value is controlled by the tariff and MIMA. If Peoples' obligations remain limited and producers continue to face operational restrictions that can prevent or reduce flow, then an increase in the AGS rate is not justified absent a clear producer-specific showing.

Q. WHAT IS YOUR RESPONSE TO PEOPLES' POSITION THAT LOCAL PRODUCTION IS DECLINING?

A. I agree that conventional production is declining, but in my view not entirely because of issues on the producer side. That is exactly why additional costs and avoidable operational restrictions are so concerning. Conventional producers are operating in a low-price environment with aging wells and increasing compliance costs. If Peoples and the

Commission value local production for its customer benefits, then the rate and operational framework should not make it harder for conventional producers to continue delivering gas.

Q. WHAT IS YOUR RESPONSE TO PEOPLES' TESTIMONY THAT LOCAL GAS IS LOWER COST THAN INTERSTATE DELIVERED GAS?

A. That testimony confirms the customer benefit of local production. Local conventional gas helps reduce reliance on interstate delivered gas and provides a lower-cost supply source where available. Preserving that supply is in the interest of both producers and customers.

Q. WHAT IS YOUR REQEUST FROM THE COMMISSION?

A. I recommend that the Commission reject the proposed AGS increase unless Peoples can provide a producer-side-specific justification for the increase. I also recommend that any approval of Rate AGS recognize the need for reasonable MIMA and operational protections that preserve producer access where safe and reliable, including reasonable treatment of line pressure issues, receipt-point expiration, low-volume wells, meter documentation, and pipeline abandonment procedures.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties' testimony that affect PIOGA's interests.

Verification

I, D. Marc Jacobs, Jr., hereby state that:

The foregoing testimony, marked as PIOGA St. No. 2, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above. The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Surrebuttal Testimony of D. Marc Jacobs, Jr.

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: July 31, 2026

I. Introduction

Q. PLEASE STATE YOUR NAME AND OCCUPATION.

A. My name is D. Marc Jacobs, Jr. I am Senior Vice President of Penneco Oil Company, Inc., a conventional oil and gas operator and a member of the Pennsylvania Independent Oil & Gas Association ("PIOGA").

Q. DID YOU PREVIOUSLY SUBMIT DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted direct testimony describing the practical effect of Rate Schedule Appalachian Gathering Service ("Rate AGS"), the Master Interconnect and Measurement Agreement ("MIMA"), line pressure, producer regulator set points, receipt-point and meter issues, low-volume requirements, and related operating conditions on conventional producers.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of Peoples witness Edward A. Palombo. Mr. Palombo correctly recognizes that line pressure can affect deliveries and that Peoples and a producer can sometimes develop an operationally feasible solution. My testimony explains why those facts support, rather than diminish, PIOGA's position that Rate AGS should be evaluated in light of the actual access producers receive and that reasonable, safety-qualified communication and accommodation are important.

II. The Practical Value of Rate AGS

Q. MR. PALOMBO SAYS THAT RATE AGS PROVIDES ACCESS TO PEOPLES' SYSTEM SUBJECT TO PHYSICAL AND OPERATIONAL CONDITIONS. DO YOU DISAGREE?

A. No. That is precisely why the operating conditions matter. My direct testimony did not say that Rate AGS has no value or that Peoples guarantees delivery under every condition. It explained that the value of the service to a conventional producer is reduced when line pressure, regulator settings, receipt-point status, or other operating conditions prevent a producing well from delivering gas.

Q. WHY DOES THAT DISTINCTION MATTER?

A. A conventional producer may pay Rate AGS and remain capable of producing gas, yet be unable to flow gas into the Peoples system because downstream line pressure equals or exceeds the approved producer regulator set point. For a low-pressure, low-volume well, the resulting shut-in can mean lost revenue and can affect whether continued operation remains economically viable. That is a practical limitation on use of the gathering service, not an assertion that Peoples must override safety or reliability requirements.

Q. DOES PIOGA ASK PEOPLES TO LOWER SYSTEM PRESSURE, ADD COMPRESSION, OR MODIFY OPERATIONS FOR EVERY RECEIPT POINT?

A. No. PIOGA does not ask Peoples to compromise safety, system integrity, or reliable customer service. Nor does PIOGA seek a universal delivery guarantee. PIOGA asks Peoples to use reasonable efforts to communicate with producers and consider practicable alternatives when conditions threaten to cause avoidable lost flow, receipt-point expiration, or shut-ins. Whether an accommodation is feasible must remain subject to safety, reliability, customer demand, and the particular operating circumstances.

Q. MR. PALOMBO CHARACTERIZES THE APPROPRIATE FRAMEWORK AS CASE-BY-CASE CONSIDERATION WITHIN SAFETY AND RELIABILITY LIMITS. DOES THAT ADDRESS YOUR CONCERN?

A. Case-by-case evaluation can be appropriate, but it should be a meaningful process rather than an unreviewable conclusion. Producers need timely notice, an opportunity to discuss the operating condition, and reasonable consideration of feasible alternatives before a receipt point is lost or flow is interrupted where circumstances permit. Those are practical safeguards that can coexist with Peoples' operational authority and its responsibility to act promptly in emergencies.

Q. WHY IS THE GREENSBURG LOOP EXAMPLE RELEVANT TO YOUR TESTIMONY?

A. It shows that a line-pressure conflict can sometimes be addressed through communication and a practical regulator-setting solution. Mr. Palombo relies on that example to show that Peoples can work with producers when feasible. I agree. The example demonstrates that producer concerns about practical access are real and that safety-qualified solutions may be available. It does not establish that every future situation will have the same solution, but it supports a reasonable-efforts approach.

III. MIMA Requirements and Receipt-Point Activity

Q. DOES YOUR TESTIMONY DISPUTE THE IMPORTANCE OF MIMA REQUIREMENTS FOR MEASUREMENT, GAS QUALITY, WATER VAPOR, DOCUMENTATION, OR METER TESTING?

A. No. Those requirements can be important to safe and reliable system operation. My testimony addresses how the requirements are implemented and the cumulative effects on conventional producers operating many small receipt points. A producer may support appropriate measurement, gas-quality, and safety standards while also seeking reasonable notice, an opportunity to cure non-emergency documentation issues, practical timelines, and proportionate treatment of low-volume wells.

Q. MR. PALOMBO SAYS THAT RECEIPT-POINT ACTIONS MAY BE NECESSARY FOR NON-PRODUCING, EXPIRED, UNECONOMIC, UNSAFE, OR ABANDONED POINTS. DO YOU DISAGREE?

A. I do not dispute that a particular receipt point may require action for legitimate reasons. My point is that the absence of formal MIMA termination does not by itself answer whether producers face practical access issues. Receipt-point expiration, meter expiration, pipeline abandonment, low-volume status, and related decisions can materially affect whether a producer can deliver gas. The Commission should therefore consider the actual operational effect of those actions, not only whether the umbrella MIMA was formally terminated.

Q. DOES PIOGA SEEK TO PREVENT PEOPLES FROM ADDRESSING UNSAFE OR NONCOMPLIANT CONDITIONS?

A. No. PIOGA does not seek to prevent Peoples from acting when safety, reliability, gas quality, or other legitimate operating needs require action. The requested approach is limited: where time and circumstances permit, Peoples should communicate with the producer and consider reasonable alternatives or corrective steps that may preserve production without compromising those obligations.

Q. WHY DOES THE MIMA-RELATED OPERATING FRAMEWORK REMAIN RELEVANT TO THE PROPOSED RATE AGS INCREASE?

A. Rate AGS is the charge paid for access to the gathering system, and the MIMA and tariff establish important conditions of that access. The Commission need not merge the rate schedule and MIMA into one instrument to recognize their practical relationship. When deciding whether to increase the producer charge, the Commission should consider

whether the producer service is subject to operating conditions that can restrict flow and impose significant costs on low-volume conventional production.

Q. DO YOU ACKNOWLEDGE THAT PEOPLES' SELECTED $0.29/MCF RATE IS THE LOWEST OF THE FOUR OPTIONS MR. PALOMBO DESCRIBES?

A. Yes. I understand that the selected rate is lower than the other three options identified by Mr. Palombo. That comparison does not resolve the issue from a producer's perspective.

Q. WHY NOT?

A. The relevant question is not merely which option produces the lowest number. It is whether the increase Peoples actually selected is supported by current evidence concerning conventional producers' use of the system, the costs associated with providing them gathering service, and the practical value of that service under the tariff and MIMA. The selected method applies Peoples' overall requested customer-rate increase to the existing AGS charge; it does not make that showing.

Q. DO THE ALTERNATIVES BASED ON THE 2023 PRODUCER CONTRIBUTION OR 2023 PRODUCER REVENUE CHANGE YOUR VIEW?

A. No. Those alternatives may refer to historical producer-related benchmarks, but they are not the methodology Peoples chose. Nor do they establish that the selected $0.05/Mcf increase reflects current producer-specific costs or current producer access to the gathering service. My position is unchanged: given the operational limits that may affect a producer's ability to use the service, the Commission should reject the increase unless Peoples provides that justification.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Verification

I, D. Marc Jacobs, Jr., hereby state that the foregoing surrebuttal testimony was prepared by me or at my direction and under my direct supervision and, if asked the same questions at hearing, my responses would be the same as set forth above. The facts stated above are true and correct to the best of my knowledge, information, and belief, and I expect to be able to prove them at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Direct Testimony of Shane Kriebel

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: June 18, 2026

Q. PLEASE STATE YOUR NAME AND BUSINESS POSITION.

A. I am Shane Kriebel, President of Kriebel Well Services, Inc, which is a related company to Kriebel Energy.

Q. PLEASE DESCRIBE KRIEBEL ENERGY AND THE KRIEBEL COMPANIES.

A. Kriebel Energy and the related Kriebel Companies are independently owned companies involved in acquiring natural gas reserves in western Pennsylvania for drilling and operating traditional shallow, or conventional, gas wells. Kriebel Energy and the related Kriebel Companies have been conducting business in western Pennsylvania for 54 Years. Kriebel Energy and the associated Kriebel Companies are members of the Pennsylvania Independent Oil & Gas Association (PIOGA).

Q. WHAT DO YOU DO AS PRESIDENT OF KRIEBEL WELL SERVICES, INC.

A. As President of Kriebel Well Services, Inc, I manage our Production group, which consists of 22 Field personnel who tend, perform maintenance, and produce our 1,950 wells within the Commonwealth of Pennsylvania. I am also involved in the marketing side of our business which encompasses our gas sales into various LDC markets, Peoples Natural Gas being our largest market. I am responsible for Environmental Compliance, such as working with PADEP, and Personnel safety within the company. I am also responsible for any Pipeline and/or Landowner issues.

Q. WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?

A. I attended Clarion University of PA earning a Bachelor of Science Degree in Business Administration in 1997. I then completed my Master of Business Administration degree at Clarion University in 1999. I joined the family business, Kriebel Energy, in May 1999 to begin learning all the facets of our family business.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A. I am testifying on behalf of PIOGA.

Q. HAVE YOU TESTIFIED PREVIOUSLY IN ANY PUC PROCEEDINGS?

A. NO

Q. WHY ARE YOU PROVIDING TESTIMONY IN THIS PROCEEDING?

A. I am providing testimony because Kriebel delivers conventional production to the Peoples Natural Gas Company LLC (Peoples) pipeline system, and I have experience with Kriebel's operations on that system. My testimony addresses the practical effect of Peoples' Rate AGS, the Master Interconnect and Measurement Agreement (MIMA), line pressure, producer regulator set points, receipt-point and meter issues, low volume requirements, water vapor standards, and other operational accommodations affecting conventional production.

Q. ARE YOU FAMILIAR WITH PEOPLES' TESTIMONY AND DISCOVERY RESPONSES IN THIS MATTER?

A. Yes. I am familiar with Peoples' testimony and discovery responses concerning Rate AGS, MIMAs, local conventional production, gathering cost recovery, line pressure, meter and receipt-point issues, pipeline abandonment, and the effect of those issues on conventional producers.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to support PIOGA's positions and proposals set forth in Dan Weaver's testimony concerning Rate AGS and the MIMA. Specifically, I explain how deliveries of gas into Peoples' pipelines at pressures higher than producer regulator set points can adversely affect the ability of conventional producers to deliver gas into the Peoples system. I also explain how receipt-point and meter issues can affect a producer's

practical ability to continue delivering conventional production, and why reasonable operational accommodations are important.

Q. WHAT ARE PRODUCER REGULATORS?

A. Producer regulators are regulators on the upstream side of producers' meters that manage/control the gas being delivered into Peoples' pipeline system via pressure. The regulator is set at a pressure determined or approved by Peoples. If Peoples' line pressure reaches or exceeds the regulator set point, the producer's gas can be restricted or shut in.

Q. WHO DETERMINES THE PRESSURE AT WHICH PRODUCER REGULATORS ARE SET?

A. Peoples determines or approves the pressure at which producer regulators are set.

Q. WHAT HAPPENS TO DELIVERIES OF CONVENTIONAL PRODUCTION WHEN PEOPLES ALLOWS GAS TO FLOW ON PIPELINES AT PRESSURES HIGHER THAN PRODUCER REGULATOR SET POINTS?

A. The producer's gas can be shut in. The well may be capable of producing, but if the line pressure downstream of the regulator is too high, the gas will not flow into Peoples' system.

Q. WHY IS THAT SIGNIFICANT FOR CONVENTIONAL PRODUCERS?

A. Many conventional wells produce at low pressure and low volumes. When those wells are shut in because of line pressure, the producer loses production, loses revenue, and may face active-status, lease, operational, or plugging concerns. For a conventional producer, a small operational accommodation can be the difference between continued production and losing a receipt point or well.

Q. WHAT IS KRIEBEL'S EXPERIENCE WITH THIS TYPE OF ISSUE?

A. In the prior Peoples base rate case, James Brant described a Kriebel experience on the Peoples Greensburg Loop. In early 2023, Kriebel was shut in during the winter months.

Kriebel understood that Peoples had adjusted regulators based on where producers were on the system, with some set at 65 psig and some at 70 psig. Kriebel contacted Peoples and learned that Peoples was bringing gas in at the Reed Station interconnect at 72 psig so as not to lose Latrobe Steel as a customer. Because that pressure was higher than Kriebel's regulator set points, Kriebel's production was being shut in.

Q. HOW WAS THAT ISSUE ADDRESSED?

A. Kriebel and Peoples developed a seasonal regulator-set-point solution. The solution allowed regulator set points to be adjusted for cold weather on or about October 30 to 75 psig and lowered again on or about April 30. In the prior testimony, Kriebel reported that this solution worked well from Kriebel's point of view and that Kriebel had not received negative feedback from Peoples.

Q. WHY IS THAT EXAMPLE IMPORTANT IN THIS CASE?

A. It shows that reasonable operational accommodations can preserve conventional production while allowing Peoples to operate its system safely and reliably. The issue is not whether Peoples should compromise service to customers. The issue is whether Peoples can work with producers to allow conventional gas to continue flowing when a practical solution is available. It also shows, however, that provisions within MIMAs must be regularly updated to comport with operational norms and to ensure compliance and consistency of application of the MIMA standards by Peoples at all times.

Q. HOW DOES THIS RELATE TO RATE AGS?

A. Peoples proposes to increase the Rate AGS charge paid by conventional producers. But the value of Rate AGS depends on whether producers can actually deliver gas. If a producer pays a higher AGS rate but its gas is shut in or restricted because of line pressure or receipt-point

issues, or otherwise shut in for issues that are on the Peoples side of the ledger as opposed to the producer's, the producer is paying more for a service that may not be able to provide at a fault that is not their own.

Q. WHAT IS YOUR UNDERSTANDING OF HOW PEOPLES DEVELOPED THE PROPOSED AGS INCREASE?

A. My understanding is that Peoples selected the proposed increase by applying the overall requested base-rate increase percentage to the current gathering revenue recovery and rounding the resulting rate to $0.29/Mcf. My understanding is also that Peoples did not identify a producer-specific study showing that conventional producers caused the incremental $0.05/Mcf increase.

Q. WHY DOES THAT MATTER TO KRIEBEL?

A. Conventional producers like Kriebel operate in a low-price environment and must manage many costs, including well operations, maintenance, compliance, measurement, drying, line work, and plugging risk. An additional AGS charge increases the cost of delivering gas. If the increase is not tied to an increase in the value of the service or to costs caused by producers, it makes continued conventional production harder to justify.

Q. WHAT DOES PEOPLES' TESTIMONY SAY ABOUT CONVENTIONAL PRODUCTION TRENDS?

A. Peoples states that conventional production delivered into its system has declined year-over-year since 2012. Peoples states that conventional deliveries declined from approximately 37.1 Bcf in 2020 to approximately 26.2 Bcf in 2025, and that Peoples does not expect the decline to reverse.

Q. IS THAT CONSISTENT WITH YOUR EXPERIENCE?

A. Yes, but with important caveats and context. Conventional production faces economic and operational challenges. Wells are aging, production is lower, and costs continue to increase. However, distribution systems are also consistently making it more difficult to bring gas to market, such as with inconsistent MIMA enforcement and application and unnecessary shut-ins and meter abandonments. Additional costs and avoidable operational restrictions can accelerate the decline, many times outside of the control of the producer.

Q. WHAT DOES PEOPLES' TESTIMONY SAY ABOUT THE VALUE OF LOCAL GAS?

A. Despite these holistic pressures, Peoples recognizes that local gas is used as base-load supply and that local gas is lower cost than interstate delivered gas. That means conventional production provides a customer benefit. The issue is how to preserve that benefit while maintaining safe and reliable service.

Q. WHAT DOES PEOPLES' DISCOVERY SHOW ABOUT MIMAS AND RECEIPT-POINT ACTIVITY?

A. Peoples stated that no MIMAs were terminated, cancelled, not renewed, allowed to expire, or discontinued in 2024, 2025, or 2026 to date. But Peoples also identified significant receipt-point and meter-expiration activity, including notices for expired non-producing points, pipeline abandonment, and producer-expired points. This matters because a producer can lose practical access to the system even if the overall MIMA remains in place.

Q. HOW SHOULD THE COMMISSION VIEW THOSE FACTS?

A. The Commission should look beyond formal MIMA termination and consider the practical effect of receipt-point, meter, and pipeline decisions on producers. If a receipt point is lost, expired, abandoned, or made uneconomic, the producer's practical ability to deliver gas is affected even though the MIMA itself may not have been formally terminated.

Q. WHAT OPERATIONAL APPROACH DO YOU RECOMMEND?

A. I recommend that Peoples be required to use reasonable efforts to work with producers before operational changes result in lost flow, receipt-point expiration, or avoidable shut-ins. That should include reasonable notice, good-faith discussions, consideration of alternative delivery points or reroutes where feasible, reasonable treatment of low-volume wells, and practical regulator-set-point adjustments where they can be made safely and reliably.

Q. ARE YOU ASKING PEOPLES TO PUT SYSTEM SAFETY OR CUSTOMER RELIABILITY AT RISK?

A. No. I am not asking Peoples to take any action that would jeopardize safety or reliability. I am asking that Peoples recognize that conventional producers need practical access to the system and that reasonable accommodations often can be made without creating safety or reliability concerns.

Q. WHAT IS YOUR POSITION ON PEOPLES' PROPOSED AGS INCREASE?

A. I oppose the proposed increase from $0.24/Mcf to $0.29/Mcf unless Peoples provides a producer-specific justification for the increase. From an operational perspective, conventional producers should not be required to pay more for AGS where the practical value of the service is limited by existing pressure, MIMA requirements, receipt-point issues, and other operational conditions.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, but I reserve the right to address issues raised by other parties that affect PIOGA's interests.

Verification

I, Shane Kriebel, hereby state that:

The foregoing testimony, marked as PIOGA St. No. 3, was prepared by me or at my direction and under my direct supervision and, if at hearing I were asked the same questions set forth in this testimony, my responses would be the same as set forth above. The facts set forth above are true and correct to the best of my knowledge, information and belief, and I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Surrebuttal Testimony of Shane Kriebel

on behalf of the

Pennsylvania Independent Oil & Gas Association

Dated: July 31, 2026

I. Introduction

Q. PLEASE STATE YOUR NAME AND BUSINESS POSITION.

A. My name is Shane Kriebel. I am President of Kriebel Well Services, Inc., which is a related company to Kriebel Energy.

Q. DID YOU PREVIOUSLY SUBMIT DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted direct testimony on behalf of the Pennsylvania Independent Oil & Gas Association ("PIOGA") concerning the practical effect of Rate Schedule Appalachian Gathering Service ("Rate AGS"), line pressure, producer regulator set points, receipt-point and meter issues, and reasonable operating accommodations for conventional production.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of Peoples witness Edward A. Palombo. Mr. Palombo relies in part on Kriebel's Greensburg Loop experience as an example that Peoples and a producer can develop an operationally feasible solution. I agree that the example is important. It confirms that a practical, safety-qualified accommodation can allow conventional production to flow while preserving reliable customer service.

II. Operational Accommodations and System Safety

Q. DOES YOUR TESTIMONY ASK PEOPLES TO PUT SAFETY, RELIABILITY, OR CUSTOMER SERVICE AT RISK TO ACCOMMODATE PRODUCER DELIVERIES?

A. No. My testimony does not ask Peoples to take any action that would jeopardize safety, reliability, system integrity, gas quality, or customer service. It recognizes that Peoples must manage its system pressures, customer loads, and unplanned conditions. My recommendation is that, where safe and feasible, Peoples use reasonable efforts to

communicate with producers and evaluate practical alternatives before an operational change causes avoidable loss of flow or loss of a receipt point.

Q. HOW DOES THE GREENSBURG LOOP EXPERIENCE SUPPORT THAT RECOMMENDATION?

A. The Greensburg Loop experience showed that Kriebel's deliveries could be restricted when Peoples' downstream line pressure exceeded the producer regulator set points. Kriebel and Peoples then developed a seasonal regulator-set-point solution that allowed production to continue flowing during the relevant period while preserving service to the customer whose needs had contributed to the line-pressure condition. From Kriebel's perspective, the solution worked well, and I understand that Peoples did not identify an adverse effect on its operations.

Q. WHAT DOES THAT EXAMPLE NOT SHOW?

A. It does not show that every pressure issue can be resolved in the same way or that any producer's requested setting must prevail over Peoples' safety and reliability obligations. Conditions differ by location, season, customer load, system configuration, and emergency circumstances. The example shows only that communication and consideration of practical alternatives can sometimes prevent unnecessary shut-ins without undermining safe and reliable service.

Q. MR. PALOMBO STATES THAT OPERATIONAL ISSUES SHOULD BE ADDRESSED CASE BY CASE WITHIN SAFETY AND RELIABILITY LIMITS. IS THAT CONSISTENT WITH YOUR RECOMMENDATION?

A. Yes, provided the case-by-case process involves reasonable communication and genuine consideration of feasible solutions. My recommendation does not prescribe a particular

engineering outcome. It asks Peoples, when circumstances permit, to give reasonable notice, engage in good-faith discussion, consider alternative delivery points or reroutes where feasible, apply practical regulator-set-point adjustments when safe and reliable, and address low-volume circumstances reasonably.

Q. WHY IS TIMELY COMMUNICATION IMPORTANT TO A CONVENTIONAL PRODUCER?

A. Conventional wells are often low-pressure and low-volume wells. When flow is interrupted, the producer loses revenue and may face operational, lease, inactive-status, or plugging concerns. Timely information about a pending change can allow the producer to supply relevant operating information, assess an alternative delivery point, or take a corrective action. It can also make clear when no safe or feasible alternative exists. That process benefits both the producer and Peoples.

III. Rate AGS and Producer Access

Q. DOES MR. PALOMBO'S TESTIMONY CHANGE YOUR VIEW THAT RATE AGS SHOULD BE EVALUATED IN LIGHT OF THE ACCESS PRODUCERS ACTUALLY RECEIVE?

A. No. Mr. Palombo confirms that conventional producers often depend on the existing gathering system for access to market and that the system is subject to physical and operating conditions. Those conditions are important to a producer. If a producer pays a higher Rate AGS charge but cannot deliver gas because line pressure exceeds the approved regulator setting, or because of a receipt-point or related issue, the practical value of the service is reduced during that period.

Q. ARE YOU SUGGESTING THAT RATE AGS HAS NO VALUE WHEN A PRODUCER EXPERIENCES A SHUT-IN OR RESTRICTION?

A. No. Rate AGS can provide important market access. My point is that the rate should be evaluated based on the real service producers receive, including the operating conditions that determine whether a low-pressure conventional well can flow. That is particularly important when Peoples seeks to increase the charge.

Q. MR. PALOMBO CHARACTERIZES PIOGA'S REQUEST AS AN OPEN-ENDED OPERATING ACCOMMODATION. IS THAT ACCURATE?

A. No. The requested approach is bounded by safety, reliability, customer service, gas-quality requirements, and operational feasibility. PIOGA does not seek to override Peoples' prudent operational judgment or to delay needed action in an emergency. We seek reasonable efforts to identify and consider alternatives where the circumstances allow it.

Q. DOES YOUR TESTIMONY QUESTION THE NEED FOR MIMA REQUIREMENTS OR FOR ACTION ON UNSAFE, NONCOMPLIANT, OR ABANDONED RECEIPT POINTS?

A. No. Appropriate MIMA requirements and action on unsafe, noncompliant, or genuinely abandoned facilities are necessary. My concern is the practical impact of implementation on conventional producers. The fact that a MIMA remains in place does not necessarily mean a producer has practical, continuing access through a particular receipt point. Communication and a reasonable opportunity to explore feasible solutions can be important before a producer loses that access.

Q. DO YOU ACKNOWLEDGE THAT THE $0.29/MCF RATE PEOPLES SELECTED IS THE LOWEST OF THE FOUR OPTIONS IDENTIFIED BY MR. PALOMBO?

A. Yes. I understand that Peoples selected the lowest of its four stated options. I do not dispute that comparison.

Q. DOES THAT MEAN THE INCREASE IS ADEQUATELY SUPPORTED FROM A PRODUCER'S OPERATIONAL PERSPECTIVE?

A. No. A lower rate is not necessarily a rate supported by the relevant facts. The selected method applies Peoples' overall requested customer-rate increase to the existing gathering charge. It does not demonstrate that the additional $0.05/Mcf corresponds to current producer-specific costs, current producer use of the gathering system, or the value of the service actually available to conventional producers under operating conditions on the system.

Q. DO THE OTHER OPTIONS' REFERENCES TO 2023 PRODUCER CONTRIBUTIONS OR REVENUES CHANGE THAT CONCLUSION?

A. No. Those options may rely on historical producer-related benchmarks, but Peoples did not select them. PIOGA's position is not that Peoples may never consider producer-related historical information. The point is that Peoples must support the increase it selected with current evidence relevant to conventional producers and the service they actually receive. My position remains that the proposed increase from $0.24/Mcf to $0.29/Mcf should not be approved absent that showing.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

Verification

I, Shane Kriebel, hereby state that the foregoing surrebuttal testimony was prepared by me or at my direction and under my direct supervision and, if asked the same questions at hearing, my responses would be the same as set forth above. The facts stated above are true and correct to the best of my knowledge, information, and belief, and I expect to be able to prove them at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

/s/ Shane Kriebel

Shane Kriebel
