A. First, the Company is proposing a new normalization period as its Tariff requires that it update the HDDs in its next base rate proceeding. The Company is proposing this change to ensure methodological consistency between the weather normalization assumptions used to establish base-rate billing determinants and those used in the WNA.

When rates are set, billing determinants are normalized to reflect "normal" weather conditions. The WNA then compares actual weather to that same normalized baseline. If different normalization methodologies are used for rate-setting and WNA reconciliation, the mechanism could over- or under-correct relative to the assumptions embedded in customer rates. That outcome would be inconsistent with the WNA's purpose, which is to reconcile revenues to the same weather conditions used to establish rates.

In this proceeding, the Company is normalizing billing determinants using a 65-year regression framework. Aligning the WNA normalization methodology with that same 65-year regression ensures that both base rates and subsequent WNA calculations rely on the same weather foundation. This approach:

- Maintains internal consistency between revenue requirement development and WNA reconciliation;
- Avoids unintended distortions that could arise from using different normalization baselines;
- Preserves the integrity of the matching principle by ensuring that revenue assumptions and reconciliation mechanisms rely on the same weather foundation; and
- Enhances transparency and predictability for both customers and the Commission.

Q. WHY DOES UPDATING THE NORMALIZATION PERIOD TO A 65-YEAR REGRESSION DOES NOT ELIMINATE THE NEED FOR A WNA?

A. Even when billing determinants are normalized using a statistically robust long-term regression, actual weather will continue to vary from normal conditions from year to year. The WNA remains necessary to address annual deviations between actual HDD and normal HDD assumptions embedded in rates. The regression improves the definition of

"normal," but it does not eliminate weather variability. The WNA continues to function as a symmetric mechanism that reconciles revenues for deviations from that normal baseline.

Q. WHY IS THE COMPANY NOT PROPOSING ANY MODIFICATIONS TO THE WNA AT THIS TIME?

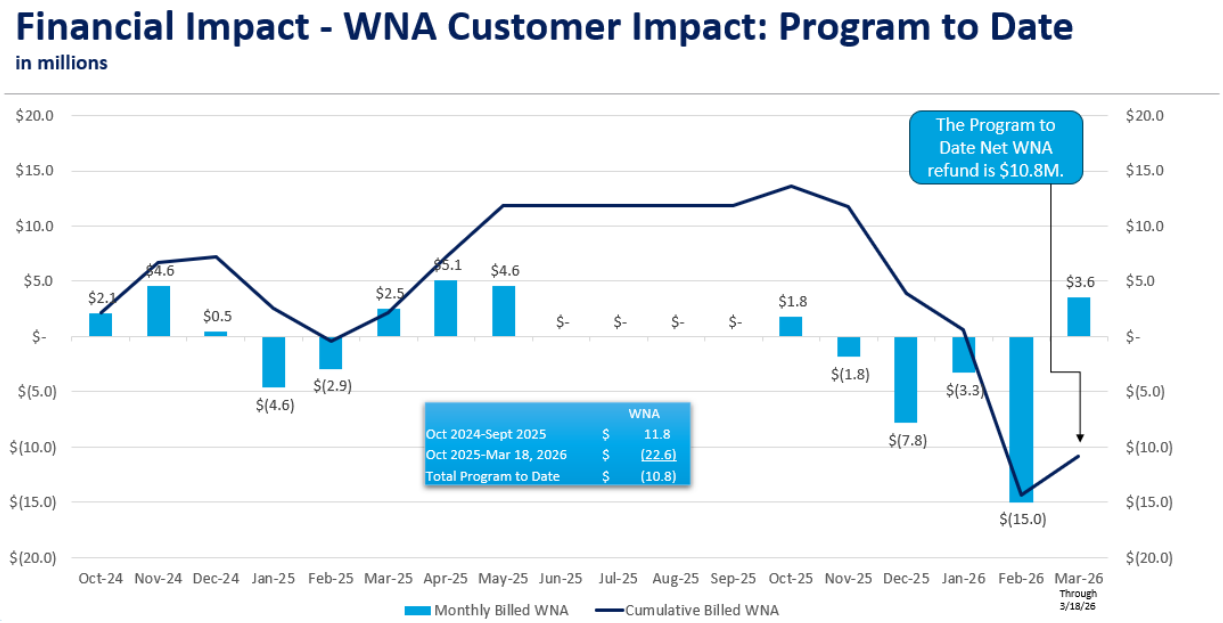
A. The Company has carefully evaluated the performance of its WNA since approval and has monitored developments in Pennsylvania regarding similar mechanisms, including the Commission's recent decision approving continuation of Columbia Gas of Pennsylvania's WNA. Based on that review and the Company's own reports, the existing WNA structure is operating as intended. Customer acceptance has been satisfactory with only two formal complaints since implementation. The mechanism has functioned symmetrically, producing charges during warmer-than-normal conditions and credits during colder-than-normal conditions, consistent with its design. Moreover, the data shows that during the current colder-than-normal heating season, low-income residential customers are receiving credits in the same proportion as other residential customers. This confirms that the mechanism operates neutrally across the residential class and does not disproportionately burden vulnerable customers. Accordingly, the Company believes that the current WNA structure, including its 3% deadband, limited class applicability, seasonal operation, and May limiter, continues to provide appropriate customer protections. For that reason, the Company is proposing only the update of the normal HDDs and is not seeking any broader structural modifications.

Q. WHAT HAS THE COMPANY'S EXPERIENCE BEEN WITH THE WNA SINCE ITS APPROVAL?

A. The Company's experience demonstrates that the mechanism operates symmetrically.

- The 2024-2025 heating season was warmer than normal, resulting in net WNA charges to customers to address weather-driven revenue shortfalls.
- The 2025-2026 heating season, through February, has been colder than normal, resulting in net WNA credits to customers.

These results illustrate that the WNA does not guarantee revenues or earnings. Rather, it adjusts for deviations from normal weather in either direction; therefore, operating symmetrically.



As noted in the table above, through mid-March 2026, the WNA has provided customers with a total net credit of $10.8 million since inception. During this past winter, which has been much colder than normal, the WNA has provided customers with a credit of $22.6 million as of mid-March 2026.

Q. HOW DOES THE PROPOSED UPDATE ALIGN WITH COMMISSION POLICY REGARDING ALTERNATIVE RATEMAKING MECHANISMS?

A. As shown in **Peoples Natural Gas Exhibit No. JDT-6**, the proposal satisfies the Commission's Statement of Policy at Docket No. M-2015-2518883, including symmetry, customer protections, transparency, limited scope, and consistency with cost recovery principles. The Company is not expanding or redesigning the mechanism; it is simply aligning normalization methodology to ensure consistency normal HDDs between base-rate (revenue requirement) development and WNA operation. All consumer protections previously approved by the Commission remain in place.

Q. ARE WNA MECHANISMS COMMON IN THE UTILITY INDUSTRY?

A. Yes. Weather normalization mechanisms are widely used across the United States to stabilize revenues and customer bills in the presence of weather variability. They are a well-established regulatory tool and have been approved for multiple Pennsylvania gas utilities.

X. CONCLUSION

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS FOR PEOPLES' ACOSS, CLASS REVENUES, AND RATE DESIGN.

A. I recommend that the Commission approve the following:

- The Company's 65-year regression-based HDD trend method, which provides a transparent, data-driven estimate of normal weather for the FPFTY and supports consistent, forward-looking normalization of weather-sensitive usage.
- The Company's customer forecasts and weather-normalized usage estimates developed for the FPFTY based on statistically sound, data-driven methods, resulting

in a reasonable set of billing determinants for use in setting just and reasonable rates.

- The Company's proposed ACOSS, as a realistic reflection of cost causation and the design and operating characteristics of the Company's distribution system, and as a guide to evaluate and set Peoples' class revenues and rate design in this proceeding.
- The Company's proposed apportionment of revenues to its rate classes, because it reasonably balances the various criteria that the Company considered in the revenue apportionment process and moves classes towards their cost to serve.
- The rate design proposed by the Company, including the proposed fixed monthly customer charge increases, because it reasonably balances key rate design objectives I presented earlier in my testimony, including: (1) achieving fair and equitable rate levels that are reflective of the cost to serve; (2) avoiding undue discrimination between and within rate classes; (3) developing rates that are stable and understandable; (4) creating economically efficient pricing for delivery service; (5) encouraging conservation and efficient use; and (6) recovering the revenue requirement in a manner that maintains revenue stability and minimizes year-to-year under- or over-collections.
- The Company's proposed WNA update for the weather normalization method, is consistent with the Company's tariff and the updated weather method is narrow, reasonable, and supported by operational experience. Peoples' WNA mechanism and the updated weather normalization method used (1) maintains all Commission-approved customer protections; (2) demonstrates symmetric operation based on actual heating season results; (3) preserves methodological consistency between billing determinant normalization and WNA calculations; and (4) supports stable recovery of authorized distribution revenues without expanding the mechanism's scope.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes, it does.

John D. Taylor

CEO

Mr. John D. Taylor is the Co-Founder and Chief Executive Officer of Atrium Economics and a senior regulatory economist with more than twenty years of experience advising electric and natural gas utilities across the United States and Canada. Mr. Taylor has served as a lead expert in rate and regulatory proceedings across more than 20 jurisdictions in the United States and Canada. His testimony has been presented before the Federal Energy Regulatory Commission, numerous state public utility commissions, provincial utility regulators, and trial courts.

He has testified on matters including revenue requirements, class cost of service, advanced rate design, revenue stabilization mechanisms, affiliate transactions, demand forecasts, return on equity, lead lag studies, audit testing, and infrastructure cost recovery. In addition to matters in which he was the lead witness, he has supported over one hundred engagements for other expert witnesses, contributing to the development and defense of analytical models, regulatory strategy, and evidentiary submissions.

Mr. Taylor's experience spans vertically integrated electric utilities, gas distribution utilities, transmission providers, pipeline operators, municipally owned utilities, and multi-state holding companies. He has also served as market monitor for ISO New England's capacity market and has supported wholesale power purchase agreement evaluations and generation feasibility and prudence analyses. He regularly advises executive leadership and boards on regulatory strategy, risk allocation, revenue stability, infrastructure investment, and long-term rate design considerations.

In addition to his consulting leadership, Mr. Taylor served as Chief Executive Officer of a non-destructive testing and industrial inspection firm serving the power generation, petrochemical, and heavy industrial sectors. That role provided direct experience in capital-intensive infrastructure operations, asset integrity management, maintenance planning, safety compliance, and operational risk oversight. This operating perspective informs his work in utility capital planning, infrastructure expansion review, and regulatory cost recovery.

REPRESENTATIVE EXPERIENCE

RATE DESIGN AND REGULATORY PROCEEDINGS

Mr. Taylor has extensive experience developing and evaluating utility revenue requirements, including review of test year construction, pro forma adjustments, operating expense normalization, capital investment recovery, depreciation and amortization treatment, and cash working capital analyses, including lead-lag studies. He has assessed prudence and regulatory treatment of major capital programs, infrastructure modernization initiatives, and incremental investment proposals. In addition, Mr. Taylor has designed and evaluated revenue stabilization mechanisms, including Weather Normalization Adjustments, Revenue Adjustment Mechanisms, and other forms of decoupling and revenue recovery tools. His work includes back-casting analyses, risk assessment modeling, and evaluation of tradeoffs between customer bill stability and utility revenue certainty. He has testified regarding both the technical design and policy implications of such mechanisms in contested regulatory proceedings.

CLASS COST OF SERVICE AND RATE DESIGN

Mr. Taylor has extensive experience developing and defending embedded and marginal class cost of service studies in contested regulatory proceedings across the United States and

Canada. His work includes functionalization, classification, and allocation of utility costs; development of jurisdictional and class revenue requirements; and evaluation of fixed-variable cost recovery methodologies. He has designed and evaluated residential, commercial, and industrial rate structures, including demand-based rates, time-of-use designs, economic development tariffs, and revenue apportionment strategies. Mr. Taylor has also assessed rate stability, equity considerations, and cost causation principles in the context of evolving load patterns, electrification, and policy-driven rate reforms.

DEMAND AND CUSTOMER FORECASTING

Mr. Taylor has extensive experience developing and evaluating demand and customer forecasting models for electric and natural gas utilities. His work includes econometric modeling of customer growth, usage normalization, peak demand forecasting, and weather-sensitive load analysis. He has assessed forecast methodologies for rate proceedings, infrastructure planning, and resource adequacy evaluations, including review of macroeconomic drivers, demographic trends, and end-use consumption patterns. Mr. Taylor has also evaluated forecast inputs used in capital planning, pipeline capacity assessments, LNG resource planning, and revenue requirement development. His experience includes back-casting analyses, scenario modeling, and sensitivity testing to assess forecast risk and regulatory defensibility. He has testified regarding forecast methodology, assumptions, and alignment with regulatory standards in contested proceedings.

RETURN ON EQUITY AND CAPITAL STRUCTURE

Mr. Taylor has provided testimony and advisory analysis regarding return on equity and capital structure for regulated electric and natural gas utilities in both transmission and distribution contexts. His work includes evaluation of regulatory capital structures, cost of capital components, and risk considerations associated with infrastructure investment, revenue stability mechanisms, and business model evolution. He has supported financial modeling in rate proceedings, including assessment of cash flow implications, earnings stability, and alignment between authorized returns and underlying business risk. Mr. Taylor has also evaluated the interaction between capital structure, revenue recovery mechanisms, and regulatory policy objectives, including the treatment of large capital programs and expansion initiatives.

TRANSACTION ADVISORY AND REGULATORY DUE DILIGENCE

Mr. Taylor has advised utilities and infrastructure stakeholders in connection with asset acquisitions, divestitures, and wholesale power supply evaluations. His transaction experience includes regulatory due diligence, evaluation of revenue requirements and rate structures, infrastructure risk assessment, and financial modeling to support investment decisions. Mr. Taylor has advised on regulated utility and energy infrastructure transactions, including buy-side and sell-side evaluation of utility operations and generation asset divestitures. His work has

included assessment of revenue requirements, rate structures, customer forecasts, regulatory risk, operational performance, and capital recovery considerations to support informed investment decisions. His advisory work has also included evaluation of comparable utility transactions, merger activity, and regulatory approval considerations affecting infrastructure investment decisions.

NATURAL GAS INFRASTRUCTURE & RESOURCE PLANNING EXPERIENCE

Mr. Taylor has extensive experience supporting natural gas utilities and pipeline operators in forecasting, peak demand planning, LNG resource evaluation, balancing mechanisms, transportation modeling, and line extension reviews. His work includes demand forecasting for local distribution companies, evaluation of peak day planning standards, LNG peaking facility analyses, storage utilization review, pipeline transport cost allocation, and balancing service design. He has evaluated integrated resource planning approaches, supply portfolio risk assessment, and incremental pipeline capacity expansion proposals. His experience includes review of expansion economics, regulatory treatment of new infrastructure investment, and cost recovery mechanisms associated with large capital programs. Mr. Taylor has also assessed alignment between demand forecasts, contracted capacity, storage strategy, and long-term system reliability objectives, providing analytical support for regulatory filings and board-level capital planning decisions.

AFFILIATE RELATIONSHIPS & PERFORMANCE REVIEWS

Mr. Taylor has led and supported affiliate transaction reviews, shared services cost allocation studies, and operational performance assessments in both U.S. and Canadian jurisdictions. His work includes evaluation of overhead allocation methodologies, overhead capitalization practices, and cost recovery treatment associated with corporate support functions, transmission-related shared assets, and early contractor engagement for major infrastructure projects. He has assessed capitalization rates, allocation between transmission and distribution functions, and cost attribution to regulated versus affiliate activities, ensuring consistency with regulatory standards and precedent. His experience includes shared assets studies, evaluation of contractor cost structures in large capital programs, and review of governance controls supporting regulatory compliance. In addition, Mr. Taylor has conducted operational audits and benchmarking analyses addressing operations and maintenance (O&M) and administrative and general (A&G) expenses. His work includes comparative peer analysis, assessment of cost drivers, and evaluation of organizational efficiency and cost discipline in regulated utility environments.

PROFESSIONAL EXPERIENCE

CO-FOUNDER & CHIEF EXECUTIVE OFFICER | ATRIUM ECONOMICS | 2020 – PRESENT

Leads a regulatory advisory firm serving electric and natural gas utilities across the United States and Canada. Serves as lead expert witness in rate and regulatory proceedings and oversees firm strategy, analytical methodology, and evidentiary quality control. Advises executive leadership and boards on revenue requirements, rate design, infrastructure investment, and regulatory risk.

CHIEF EXECUTIVE OFFICER | NOVA DATA TESTING | 2019 – 2026

Led a non-destructive testing and industrial inspection firm serving power generation and petrochemical facilities. Responsible for strategic planning, capital allocation, regulatory compliance, operational leadership, and risk oversight in asset-intensive, safety-sensitive environments. This operating experience informs his perspective on infrastructure investment and operations.

PRINCIPAL CONSULTANT | BLACK & VEATCH MANAGEMENT CONSULTING | 2015 – 2020

Led regulatory and financial advisory engagements for electric and gas utilities, including revenue requirements, class cost of service, affiliate transactions, and return on equity matters. Filed expert testimony and supported infrastructure transaction advisory and regulatory approval strategy.

SENIOR PROJECT MANAGER & PRINCIPAL | CONCENTRIC ENERGY ADVISORS | 2006 – 2015

Managed regulatory consulting engagements involving revenue requirements, cost allocation, and rate design across multiple jurisdictions. Led project teams, supported expert testimony, and contributed to business development and firm-wide analytical quality control initiatives.

EDUCATION

MASTER OF ARTS, ECONOMICS| AMERICAN UNIVERSITY | 2004 – 2006

Graduate coursework included econometrics, advanced microeconomics and macroeconomics, mathematical economics, monetary policy, and history of economic thought. Served as a teaching assistant for undergraduate microeconomics and macroeconomics courses.

BACHELOR OF ARTS, ENVIRONMENTAL ECONOMICS | UNIVERSITY OF NORTH CAROLINA AT ASHEVILLE | 2000 – 2004

Coursework emphasized the application of economic theory and quantitative analysis to environmental and resource issues, including statistics and applied modeling. Completed independent study examining the intersection of ethics and economic theory.

BOARD AND ADVISORY BOARDS

Treasurer, Board of Directors – The Outside Foundation (2023–Present)

Member – 278 Gateway Corridor Committee, Town of Hilton Head Island (2019–2022)

Richmond Advisory Board – Higher Achievement (2014–2015)

#	**Statement of Policy**	**Company's Response**
1	How the ratemaking mechanism and rate design align revenues with cost causation principles as to both fixed and variable costs.	Peoples's WNA is designed to recover distribution revenues needed to satisfy the cost-of-service requirement determined in this proceeding, while mitigating the variance between actual and projected distribution revenues due to weather. The Company recovers a significant portion of fixed costs through volumetric rates. These fixed costs do not vary with the amount of gas delivered to customers and are composed of fixed operation and maintenance expenses, administrative and general expenses, depreciation, certain taxes, a portion of working capital requirements, and return on investment. These costs also do not vary in the short-term with changes in temperature. In the absence of a rate design that affords the Company the opportunity to recover all fixed costs in a fixed monthly charge, the WNA mechanism better aligns distribution revenues with cost causation principles.
2	How the ratemaking mechanism and rate design impact the fixed utility's capacity utilization.	While the WNA mechanism does not directly alter customer usage patterns or system peak demand, it plays an important enabling role in the efficient utilization of the Company's gas distribution capacity. Gas system capacity is designed to meet peak-day requirements driven by weather-sensitive load. Traditional volumetric recovery exposes the Company to revenue volatility when conservation, or efficiency efforts reduce throughput, even though peak-driven infrastructure costs remain largely unchanged.
3	Whether the ratemaking mechanism and rate design reflect the level of demand associated with the customer's anticipated consumption levels.	Customer specific usage factors corresponding to their individual demand is continually updated through the WNA formula and reflects the level of demand associated with the customer's anticipated consumption levels. In this proceeding, the Company is also proposing to set Normal Heating Degree Days using a 65-year regression rather than the average of a 65-year regression and a 20-year average, which more accurately captures recent warming trends. Using a more current weather baseline ensures that the WNA formula better aligns normalized usage with customers' anticipated consumption levels under today's climate conditions.

#	**Statement of Policy**	**Company's Response**
4	How the ratemaking mechanism and rate design limit or eliminate interclass and intraclass cost shifting.	Peoples's WNA is applied on a customer-specific basis and is designed to be revenue-neutral within each customer class, such that it does not create or exacerbate cross-subsidization either within or across classes.
5	How the ratemaking mechanism and rate design limit or eliminate disincentives for the promotion of efficiency programs.	The Company's WNA only addresses variations due to weather and does not affect customers' ability to pursue energy efficiency measures.
6	How the ratemaking mechanism and rate design impact customer incentives to employ efficiency measures and distributed energy resources.	Customers retain strong incentives to reduce usage because the commodity and other charges remain volumetric. The proposed WNA does not eliminate these price signals, so lower usage still results in lower bills.
7	How the ratemaking mechanism and rate design impact low-income customers and support consumer assistance programs.	Under the current WNA mechanism, customers who are currently enrolled to pay their bills based on a percentage of their household income see little to no impact to their bills under the WNA mechanism.
8	How the ratemaking mechanism and rate design impact customer rate stability principles.	The American Gas Association Gas Rate Fundamentals book (Pages 152 – 156) states: "The goal of stability recognizes historical relationships among customers in terms of the proportion of system costs each customer group bears. Stability leads to a policy of gradualism in rate changes if substantial increases (or decreases) are called for in the context of a single rate case. Changes in gas utility pricing policy should be imposed gradually so that customers can adjust and any adverse impacts on the customers' operation are minimized." The WNA mechanism provides customers with more stable annual bills and directly mitigates volatility in their monthly costs. Customers would pay for the costs assigned to the volumetric

#	**Statement of Policy**	**Company's Response**
		base rate in the most recent rate case and customers would not pay more or less than that amount (outside of any established WNA deadband) solely because the actual weather for the month the customers are billed is different than the weather used to determine the rate design of the volumetric base rate.
9	How weather impacts utility revenue under the ratemaking mechanism and rate design.	The Company's WNA adjusts customers' bills due to variations from normal weather during the heating season months of October through May, and it mitigates the revenue effect of weather on the original rate design of the volumetric base rate (outside of any established deadband and limiters). It only applies to Residential and Small/Medium General Service classes and it does not ensure the utility will recover 100% of its authorized distribution revenues, but it does reduce the amount of weather-related variation in both customer bills and associated utility distribution revenues.
10	How the ratemaking mechanism and rate design impact the frequency of rate case filings and affect regulatory lag.	The WNA does not impact the Company's rate case frequency nor does it affect regulatory lag.
11	If or how the ratemaking mechanism and rate design interact with other revenue sources (e.g., surcharges).	The Company's proposed WNA only applies to distribution related charges that are recovering the base distribution revenue requirement from applicable WNA customer classes for the heating season of October through May.
12	Whether the alternative ratemaking mechanism and rate design include appropriate consumer protections.	Peoples's WNA includes several consumer protections to ensure fairness and transparency, as follows: a. No Over-Recovery of Revenue: The WNA mechanism operates with a deadband and a limiter. Outside of the deadband and the limiter, the WNA results in an adjusted bill that reflects the revenues that would be recovered under normal weather, i.e., the same normal weather used to set rates. b. No Cross-Subsidization: The WNA is customer-specific.

#	**Statement of Policy**	**Company's Response**
		c. Regulatory Oversight: The WNA is subject to Commission review and regulatory reporting requirements to ensure compliance with approved revenue stabilization objectives and to protect consumers from unintended rate impacts. d. Customer Transparency and Education: Peoples provides clear bill disclosures and customer education regarding WNA adjustments, ensuring consumers understand how the mechanism works and how it impacts their bills.
13	Whether the alternative ratemaking mechanism and rate design are understandable to consumers.	The WNA is not a new concept to the regulated utility industry and similar versions have been successfully implemented by other Pennsylvania natural gas distribution companies. The WNA tariff provides detailed information to the customer of how the mechanism would work and the adjustments are displayed separately on bills and the Company maintains a detailed FAQ related to the WNA on its website, ensuring transparency. Link to Peoples Website → https://www.peoples-gas.com/weather-normalization-adjustment.php
14	How the ratemaking mechanism and rate design will support improvements in utility reliability.	The proposed WNA targets the revenue requirement that would have been already subject to scrutiny and approved by the Commission, meaning that its prudency and reasonableness would have been reviewed and deemed appropriate to support reliability driven initiatives. The proposed WNA helps to minimize the volatility of the recovery of these costs.

Peoples Natural Gas Company LLC

§ 53.53.III.E

34. Prepare a 3-column schedule of expenses, as described below for the following periods (supply sub-accounts, if significant, to clarify basic accounts):

a. Column 1—Test Year

b. Column 2 and 3—The two previous years

Provide the annual recorded expense by accounts. (Identify all accounts used but not specifically listed below.)

REVISED

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2026-3060855
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED DIRECT TESTIMONY OF
EDWARD A. PALOMBO,
VICE PRESIDENT, RELIABILITY
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: March 27, 2026
DATE ADMITTED: _____

Peoples Statement No. 5

PREPARED DIRECT TESTIMONY OF EDWARD A. PALOMBO

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Edward A. Palombo. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as Vice President, Reliability.

Q. PLEASE STATE BRIEFLY YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE.

A. I graduated from The Pennsylvania State University in August 1983 with a Bachelor of Science Degree in Petroleum and Natural Gas Engineering. After graduation, I was hired as a Project Engineer for Washington Gas Light Corporation. I progressed to leadership roles in the Distribution, Planning, and Design department, until January 1987 when I left to join Peoples Natural Gas, and have been employed since. During this time, I've held several leadership positions in the Operations departments, with responsibilities in PA, WV, OH, and KY. Currently, I am Vice President, Reliability and am responsible for directing the activities for Gas Supply & Transportation Services, Local Production Acquisition, Gas Control, System Planning, Pipeline Safety & Compliance, Employee Safety, Technical Training, and GIS.

Q. PLEASE LIST THE FILING REQUIREMENTS THAT YOU ARE SPONSORING AS WITNESS.

A. Please refer to Appendix A for a complete list of the filing requirements for which I am the responsible witness.

Q. WHAT ARE YOUR RESPONSIBILITIES FOR PURPOSES OF THIS PROCEEDING?

A. My responsibilities which I will describe in separate sections of my testimony are:

1. Safety Programs
2. Peak Day and Annual Gas Supply Plan
3. Local Production - Gathering and Cost Recovery

SAFETY PROGRAMS

Q. PLEASE DESCRIBE SOME OF THE COMMITMENTS PEOPLES HAS MADE TO THE SAFE OPERATION OF ITS PIPELINE SYSTEM.

A. Peoples is strongly committed to safety and has established a comprehensive safety program that strives to protect employees, its customers, the public, and property. All levels of management and employees are responsible and accountable for safety and expected to continuously work together to foster and promote a healthy safety culture. This culture is integral to making safety a priority by incorporating the following into all Company activities: Management commitment at all levels of the organization; Employee engagement and accountability; Recognizing, controlling, and eliminating workplace hazards and unsafe behaviors; and Safety training and education. No employee will be

required to perform a task or job that they consider unsafe. Peoples complies with all applicable safety and health requirements and maintains occupational safety and health standards that equal or exceed best practices.

The Company demonstrates its commitment to safety by including a Safety component in the incentive compensation plan. In addition, all Operations Department employees also have a pipeline compliance component included in their individual performance expectations and incentive compensation goals.

Additionally, the Company engages our Compliance Process Managers, Safety Department, and the entire Operations leadership team on a regular basis by conducting weekly safety conference calls where injuries, accidents, operating procedures and guidelines, line hit damages, and near miss safety incidents are reviewed and discussed. Further, we have implemented procedures for ongoing safety observations of work activities by supervisors and rapid dissemination of injury details to all field leadership and union personnel. We also work closely with our unions to solve all safety-related issues and to communicate and advance safety initiatives throughout the organization. A component of this is managements and employees' commitment to operational and safety training at our Training Center where employees obtain hands-on experience through controlled simulations of emergency events and other real-life situations that enhance their safety awareness and hone their emergency response capability. We have also perfected our compliance work tracking system. This system schedules our prescribed, routine maintenance, compliance check work and provides for information system tracking of our planning and progress.

Q. PLEASE DESCRIBE THE COMPANY'S EMPLOYEE SAFETY PROGRAM.

A. Peoples' Employee Safety Program is multi-dimensional and includes numerous activities focused on accident prevention and compliance with applicable safety regulations. Safety is supported through active participation by operations leadership, a strong union management partnership, and engagement with industry organizations.

The three cornerstones of Peoples' Employee Safety Program are:

- Training and Education - where technical skills, emergency response, and specialized safety training are provided to employees, contractors, and external partners.
- Awareness and Communication – where weekly and monthly safety meetings, pre-job briefings, safety alerts, and intranet website resources are used to inform and refresh safety messaging.
- Investigations, Observations, and Safety Analysis – where safety incidents and risks are thoroughly investigated, discussed, trended, and mitigated.

Peoples continues to perform at or above the top quartile in safety performance, and received the American Gas Association ("AGA") Industry Leader Accident Prevention Award in the Very Large Gas Distribution category in 2023 and 2024. Peoples has also been recognized by the Energy Association of PA ("EAPA"), achieving several awards in 2023: the Safety Achievement Award, the Safety Improvement Award, the Safety Sustainability Award, and the Motor Vehicle Fleet Safety Achievement Award. In 2024, Peoples achieved the Safety Sustainability Award, the Motor Vehicle Fleet Improvement Award, and the Motor Vehicle Fleet Safety Achievement Award. 2025 industry metrics from AGA and EAPA have not been finalized, however Peoples achieved the best rates on

record for both Lost Time/Restricted Time ("LT/RT") injuries and Responsible Motor Vehicle Accidents ("RMVA").

Q. EARLIER YOU MENTIONED THE COMPANY'S TRAINING PROGRAM, COULD YOU DESCRIBE IT IN MORE DETAIL?

A. Peoples operates an in-house training facility in McKeesport, PA that provides multi-week introductory training for new hires, training for employees entering new job classifications, initial and refresher operator qualification ("OQ") training on covered tasks performed by each field classification for both employees and contractors, and supplemental training for field personnel. By providing training internally, as opposed to using a 3rd party vendor, Peoples is able to ensure training captures Company-specific processes and procedures, and this allows us to provide direct oversight of rigorous testing methods.

In addition to providing training to employees and contractors, the training team also conducts community outreach sessions for audiences beyond those affiliated with Peoples. These sessions include:

- First Responder Training: Emergency training for local volunteer fire departments
- Natural Gas Construction Heat Installation Training
- Natural gas utility and pipeline field skills training: This program is to prepare a new potential workforce for a career in the gas and pipeline industry.

Q. ARE THERE OTHER NOTEWORTHY SAFETY RELATED INITIATIVES THAT YOU WOULD LIKE TO DISCUSS?

A. Yes. Peoples has a well-established Corporate Safety Committee known as the CARE (Combined Accident Reduction Effort) Committee. This committee is comprised of senior leaders from Operations, Safety, and Bargaining Unit personnel whose sole purpose is to provide a cooperative forum for discussions on all safety-related issues and concerns. The main goal is to promote and support a strong safety culture, and to assure a safe and healthy work environment for all employees. Operations management meets monthly with the Salaried and Bargaining Unit CARE Coordinators to discuss safety matters that arise locally at their respective operating locations. The CARE Steering Committee meets quarterly to review and discuss more systemic issues that arise from the local shop discussions, and also Company-wide safety issues to evaluate and implement potential overall corrective actions.

Q. PLEASE PROVIDE AN UPDATE ON THE COMPANY'S SAFETY MANAGEMENT SYSTEM INITIATIVE.

A. Peoples continues to grow and expand the Pipeline Safety Management System ("PSMS") first initiated in 2018. Safety Management Systems have proven to be successful in many industries (aviation, nuclear, petrochemical to name a few) and are being widely adopted and implemented within the natural gas industry. As a result of the Merrimac, MA incident, many organizations, such as the AGA, the US Pipeline and Hazardous Materials Safety Administration ("PHMSA"), as well as state regulators, have recommended gas operators implement a safety management program related to pipeline operations. In 2020, Peoples completed a gap analysis on the API recommended practices to help develop the framework of the PSMS program. A Program Manager was hired in 2020 to lead the

implementation of the overall program, communicate the elements of the program with all operations employees, and develop the staff and resources for the program. Two QA/QC Specialists were hired in 2021 to conduct field audits of employees and contractors to ensure adherence to appropriate SOPs and Job Procedures when completing tasks and jobs.

The PSMS team has been currently focused on four primary functional areas of the operations: plastic fusions on pipeline replacement projects; working in and around live gaseous environments, construction tie-ins, and preventing/mitigating damages to meters and facilities. The PSMS team collects and compiles information from the field audits, analyzes the results for trends, and makes recommendations to the PSMS Steering Committee for revisions or additions to SOPs, Job Procedures, Training materials, etc. that may enhance pipeline safety and reliability. Peoples has targeted 2028 to reach API 1173 "mature status" on the PSMS elements, with three elements reaching maturity to date.

Q. PLEASE DESCRIBE WHAT THE COMPANY HAS DONE AND PLANS TO DO GOING FORWARD TO MANAGE THE RISKS ASSOCIATED WITH LEAKAGE.

A. Peoples has an extensive leak management and repair program with procedures and policies that are designed to ensure safe and reliable delivery of natural gas to our customers. Peoples has implemented enhanced operating procedures regarding leak mitigation to further ensure safety across its system, that also helps reduce emissions and improve the environment. These enhancements include adoption of: 1) the Gas Piping Technology Committee ("GPTC") Leak Classification and Action Criteria for Grade 1, 2, and 3 leaks; 2) operating procedures designed to identify and replace shorter sections of leak prone pipelines instead of repairing those sections; 3) procedures on the handling of

Grade 1 leaks (potentially most hazardous leaks) which require that Grade 1 leaks only be vented as a last resort, Peoples' Operations Management personnel being directly involved and consulted in Grade 1 leak situations, and vented Grade 1 leaks being monitored on a daily basis during frost/frozen ground conditions; and 4) a Leak Detection and Reduction ("LDAR") program that focuses on accelerated leak surveys on certain systems; reducing leaks on gathering pipes, and utilizing newer technologies for identifying potential leaks. Another effective leak mitigation measure is the accelerated replacement of older higher-risk bare steel pipelines under our Long Term Infrastructure Improvement Plan ("LTIIP"), that is described in more detail in **Peoples Statement No. 6 - the Direct Testimony of Paul Becker,** VP Engineering & Construction. As a result of these enhanced leak management efforts, Peoples has experienced a 66% reduction from 2022 to 2025 in outstanding unrepaired leaks at year end, and an 85% reduction since 2019.

PEAK DAY AND ANNUAL GAS SUPPLY PLAN

Q. AS THE WITNESS SUPPORTING THE ANNUAL AND PEAK REQUIREMENTS AND SUPPLY VOLUME PROJECTIONS USED IN THIS FILING, PLEASE GENERALLY DESCRIBE HOW PEOPLES FORMULATES ITS ANNUAL GAS SUPPLY PLAN.

A. Each year, Peoples projects its total system requirements and available sources of supply. On the requirements side of the analysis, Peoples develops throughput projections by various requirements categories including usage by class of customer. The Company then adds monthly projections for company use and lost and unaccounted for gas to arrive at total projected system requirements on a monthly basis.

Certain operational considerations play a role in the requirements analysis. For example, there are portions of Peoples' service territory that are not physically interconnected with the main portion of Peoples' facilities, particularly in the Grove City area. Similarly, there are portions of Peoples' service territory that require support from specific interstate pipeline delivery points at times of high demand, most notably the Punxsutawney area. As a result, Peoples analyzes alternative options in those areas to maintain adequate supplies to maintain reliable service.

On the supply side of the analysis, Peoples pursues a least-cost reliable-service strategy through a combination of local and interstate assets and supplies. Local assets include an on-system storage facility and the gathering system, which allows Peoples to enhance the delivery of gas supplies produced locally in western Pennsylvania. The Company's interstate assets are comprised of a portfolio of transportation and storage services with six interstate pipelines that provides Peoples with access to a variety of supply source locations. Using this gas supply portfolio, Peoples uses an economic dispatch approach that also takes into account reliability, operational requirements, and contractual obligations. Under that approach, Peoples reviews the cost of its various sources of supply and plans to use those that are least costly. The Company starts by base loading local supplies; that is, using local gas first. From there the Company then turns to the existing pipeline supply assets and existing gas supply agreements. These include the firm transportation and storage service agreements with interstate pipelines and the long-term firm gas supply commodity agreement with EQT Energy.

Q. HOW DOES PEOPLES TYPICALLY DETERMINE ITS CUSTOMERS' REQUIREMENTS AND ASSOCIATED GAS SUPPLIES ON A DESIGN PEAK DAY?

A. Peoples uses a regression analysis forecasting model that employs a number of variables including but not limited to temperature, and historical consumption levels. The design day average day temperature utilized in the model is minus 9 degrees Fahrenheit. The values assigned to consumption levels and the other variables change over time. Using send-out data for the four years ended May 2024 the Company calculated total system peak day design requirements of 1,487.6 MMcf per day.

Q. WILL THE COMPANY SUPPLY THE ENTIRETY OF THE 1,487.6 MMCF FOR ITS CUSTOMERS?

A. No. Peoples will supply 1,192.1 MMcf of the Company's customers' design day requirements of 1,487.6 MMcf. The supply of 1,192.1 MMcf per day includes the following components:

- Projected local gas volumes of 8.9 MMcf. This volume is based on a projection of the amount of local gas under contract to Peoples and available on a design day;
- The on-system storage design day supply of 55.3 MMcf reflects the expected volume of supplies available from the Company's on-system storage fields; and
- Interstate delivered gas of 1,127.9 MMcf projected to be received from Equitrans, Eastern Gas Transmission and Storage ("EGTS"), Tennessee Gas Pipeline Company, LLC ("Tennessee"), Texas Eastern Transmission Company ("TETCO"), Columbia Transmission ("TCO") and National Fuel Gas Supply Corporation ("NFG").

Q. WHY DOESN'T PEOPLES HAVE TO BE PREPARED TO SUPPLY ALL OF ITS CUSTOMERS' DESIGN DAY REQUIREMENTS?

A. Many of Peoples' customers, generally also its largest customers, that purchase their supplies from Natural Gas Suppliers ("NGSs") – customers whom the Company refers to as Non-Priority 1 or NP-1 – are responsible for acquiring their own design day assets at a level sufficient to deliver their average daily usage during that month. The Company expects those customers to deliver to the system 294.8 MMcf on a design day during the 1307(f)-2025 projected period.

Q. HOW DO THE DESIGN DAY REQUIREMENTS OF PEOPLES' SMALLER CUSTOMERS WHO PURCHASE THEIR SUPPLIES FROM NGSs FIT INTO PEOPLES' SUPPLY PORTFOLIO?

A. When a substantial alternative supply market for those smaller Priority 1 ("P-1"), or essential human needs customers, first began to develop on the Peoples system in 1997, Peoples addressed the design day requirements of those customers under a program of mandatory capacity assignment. Peoples' tariff requires that the P-1 customers acquire their design day capacity requirements from Peoples by means of mandatory assignment of capacity and that the P-1 customers must pay the costs of that assigned capacity through the capacity charge. The P-1 NGSs are expected to utilize the assigned capacity to deliver to the Peoples system sufficient supplies to meet the projected total usage for their P-1 customers on a design day during the 1307(f)-2025 projected period.

Q. IN ADDITION TO ITS CUSTOMERS' DESIGN DAY CAPACITY AND SUPPLY REQUIREMENTS, WHAT OTHER CUSTOMER REQUIREMENTS MUST PEOPLES GAS SUPPLY PORTFOLIO SATISFY?

A. Peoples must also satisfy the day-to-day supply requirements of Peoples customers who purchase supplies from Peoples, the day-to-day balancing requirements of NP-1 transportation customers, and the requirements for gas that either will be used in Peoples' operations (i.e., company-use gas) or that will be "lost or unaccounted for" because of various reasons.

Q. DOES PEOPLES USE ITS ANNUAL CONSUMPTION PROJECTIONS FOR THOSE CUSTOMERS WHO LIKELY WILL BUY THEIR SUPPLIES FROM NGSs FOR ANY PURPOSE IN THIS PROCEEDING?

A. Yes. Although those customers' capacity requirements are measured strictly by the demands that they will place on the Peoples system on a design peak day, Peoples recovers the costs of meeting those requirements through each Mcf that Peoples delivers to those customers throughout the year. In the case of P-1 customers, Peoples recovers the costs through a capacity charge per Mcf consumed. In the case of NP-1 customers, the recovery is through a balancing charge per Mcf consumed.

Q. HOW DO THE DESIGN DAY SUPPLY ASSETS COMPARE TO THE PROJECTED DESIGN DAY REQUIREMENTS?

A. As shown on **Peoples Natural Gas Exhibit No. EAP-1**, the Company is projecting that its design day supply assets will be within 0.73 MMcf of its design day requirements.

Q. PLEASE DESCRIBE HOW LOCAL GAS PURCHASES FROM CONVENTIONAL WELLS ARE USED TO SATISFY SYSTEM GAS SUPPLY NEEDS.

A. Peoples and NGSs operating on the Peoples system use natural gas produced from local shallow wells as a base load supply to meet customer's usage requirements. However, since 2012, local gas produced and delivered from conventional wells into the Company's system has declined year-over-year. In 2020, Peoples received supplies from conventional wells totaling approximately 37.1 BCF. In 2025, a total of approximately 26.2 Bcf of conventional production was delivered into the Peoples' systems. Over this six-year period, this represents a total decline of 10.9 Bcf, or 29%. A reversal of this ongoing decline is not expected.

Q. DOES PEOPLES HAVE A POLICY REGARDING ADDITIONAL MARCELLUS SHALE WELL PRODUCTION?

A. Peoples' current role in the development of Marcellus Shale has been to provide producers of unconventional gas with similar access to both on-system and off-system markets as provided to conventional producers. Peoples has been able to accept Marcellus Shale production into its systems on a case-by-case basis, using the same analysis for Marcellus Shale production tap requests that it uses for conventional production tap requests. The analysis includes (i) the location and quantity of gas supply, (ii) the unused pipeline capacity at the proposed injection point, (iii) the anticipated gas quality and the investment required to resolve gas quality issues, and (iv) the impact of the production on existing base load supplies from local and interstate alternatives.

Peoples' market fundamentally benefits from having access to additional direct feed local Marcellus Shale production. It provides a replacement supply for declining conventional production volumes. Also, local gas supplies, including gas produced into the Peoples' system from both conventional and Marcellus wells, represent a lower cost supply than interstate delivered gas. Peoples plans to remain involved in finding opportunities to utilize Marcellus Shale gas produced in Peoples' service territory, and is actively pursuing new interconnects with midstream systems to support this goal.

LOCAL PRODUCTION - GATHERING AND COST RECOVERY

Q. PLEASE DESCRIBE GENERALLY THE TRADITIONAL GATHERING PIPELINE SYSTEM.

A. Gathering systems are pipeline facilities that have the primary purpose of moving conventionally produced gas from production fields to transmission and distribution facilities for delivery to end use customers. In contrast, distribution pipelines generally are a system of mains and service lines that primarily function to deliver natural gas to individual homes and businesses. However, in some instances, customers and small distribution systems are connected directly to gathering systems in rural areas where it is not economical to extend pipelines from the major distribution centers because of the low density of potential customers.

In addition to gathering pipelines, gathering systems also typically include compression facilities and equipment to monitor and treat the gas. Gathering compressors are used to increase the flow of local production by raising the gathering pipeline pressure to the pressure of the pipeline that the gathering pipeline feeds into, typically a transmission pipeline

or higher pressure gathering or distribution pipeline. Gas monitoring and treatment is another part of a gathering system. Peoples requires producers to remove water and other contaminants from the gas delivered to the gathering system. In some cases, the gas is further treated by Peoples at compressor stations where dehydration facilities are installed to remove water prior to delivering gas to transmission or distribution systems.

There are also situations where Peoples receives locally produced gas directly into its distribution and transmission systems. This production can be from both conventional and unconventional sources.

Q. DO GAS PRODUCERS BENEFIT FROM GATHERING SYSTEMS?

A. Yes. Producers benefit from gathering lines because, in most cases, it is their only means to get their gas production to a market. The gas produced into the gathering systems originates from conventional wells. Generally, gathering systems cannot be used to receive and deliver higher pressure gas produced from unconventional sources such as Marcellus Shale.

Q. DO CUSTOMERS BENEFIT FROM LOCAL PRODUCTION AND GATHERING SYSTEMS?

A. Yes. Customers receive a notable cost savings benefit from local production delivered into the Peoples' systems. Production directly feeding utility pipelines avoids costly interstate pipeline charges, which typically include fixed reservation charges for interstate pipeline reservation space, usage charges to cover variable interstate pipeline costs and retainage to cover gas loss and gas used in interstate pipeline operations.

Q. HAS THE COMPANY PREPARED A COMPARISON OF THE COST PER MCF OF DELIVERING GAS THROUGH INTERSTATE PIPELINES TO THE COST OF DELIVERING GAS THROUGH THE COMPANY'S GATHERING SYSTEM?

A. Yes. **Peoples Natural Gas Exhibit No. EAP-1** provides this comparison for the projected twelve months ended December 31, 2027 ("Fully Projected Future Test Year" or "FPFTY"). It shows that gas produced into and delivered through the gathering systems is notably less costly than gas procured on and delivered from Peoples' interstate pipeline suppliers. The total average cost of gas delivered via the gathering system for the FPFTY is estimated at $4.14per Mcf. The total average cost of gas delivered via the interstate systems for the FPFTY is estimated at $5.21 per Mcf. This results in an estimated cost savings of $1.07 per Mcf for the local gas purchased by Peoples' for its on-system customers alone. Customers that purchase local gas supplies from third party marketers or NGSs can reasonably be expected to receive a similar cost per Mcf savings benefit. As noted in **Peoples Natural Gas Exhibit No. EAP-1**, this analysis reflects the various costs incurred by Peoples' ratepayers for the FPFTY which include: the projected average commodity cost of gas delivered to the Peoples' system; Peoples' costs to own and operate the gathering systems (including gathering Unaccounted For Gas ("UFG")); and interstate pipeline costs for capacity, retainage, and delivery. In **Peoples Statement No. 17 – the Direct Testimony of John Taylor,** Mr. Taylor calculated and presented testimony in support of the projected non-gas costs incurred by Peoples to own and operate the PNG gathering system.

Q. DOES INTERSTATE PIPELINE GAS AND LOCAL GAS SERVE THE SAME PURPOSES?

A. While both supply sources provide the gas supply needed by the customer, pipeline gas is much more flexible in that it is provided to the Company at significantly higher pressure which is required in peak periods of usage and for injection into storage. The amount of pipeline gas entering the Company's system can also more easily be adjusted up or down to meet the daily gas consumption swings due to weather. In addition, pipeline gas generally meets higher quality standards relating to containing impurities and water and creates fewer operational problems.

Q. HOW SHOULD THE BASE RATE COSTS OF THE GATHERING SYSTEM BE RECOVERED?

A. Gathering system costs are incurred to provide a market for supplies produced by local wells and to provide cost effective gas supplies to customers. In my opinion, it is appropriate for both producers and customers to share in paying these costs.

Q. WHAT FACTORS SHOULD BE CONSIDERED IN ALLOCATING THESE COSTS BETWEEN CUSTOMERS AND LOCAL SUPPLIERS?

A. As I have noted previously, customers benefit from obtaining local gas at a cost lower than interstate pipeline gas. The gathering system lowers the amount of interstate pipeline capacity that is required to serve customers and lowers pipeline demand costs recovered from all sales and transportation customers. In addition, customers served directly from the gathering system receive their service from gathering pipelines and not distribution

pipelines. Finally, some of Peoples' distribution areas are served only by local gas from the gathering systems.

Producers derive substantial benefit from the gathering facilities as it is their source to a market. In addition, Peoples operates its gathering and distribution systems to facilitate the introduction of lower pressure gas from conventional wells into its system.

While it is difficult to specifically quantify these benefits between producers and customers, it is clear that both producers and customers benefit from the gathering systems.

Q. ARE THERE ANY UNIQUE OPERATIONAL ISSUES AND/OR COSTS ASSOCIATED WITH GATHERING SYSTEMS?

A. Gathering systems present operational challenges uncommon to distribution. Since the facilities typically are in rural areas, and consist of many measurement delivery points, potential leaks are not as readily detectable. This can contribute to potential higher lost and unaccounted for gas than on distribution systems, as well as higher methane emissions. Peoples has attempted to mitigate this by operating and maintaining gathering assets under the same guidelines as distribution assets. While not required by federal codes, Peoples conducts leak surveys on its gathering pipelines at intervals similar to distribution pipelines, and schedules gathering line leak repairs accordingly.

Q. HOW DOES PEOPLES PROPOSE TO RECOVER THE COSTS OF THE GATHERING SYSTEMS?

A. There is a practical limit to how much of the gathering system costs can be recovered from producers. The projected average market price that producers will receive for their gas

purchased by Peoples for system supply is $3.06/Dth for the projected twelve months ended December 31, 2027 (FPFTY). These prices are low by historical standards and it is likely that this has contributed to the reduction of production from conventional wells since 2012.

Peoples currently charges a $0.24/Mcf fee to producers for gathering system costs through its existing Rate Schedule Appalachian Gathering Service ("AGS") for all conventional gas production delivered to the Peoples system. This gathering service fee covers less than one-third of the costs to operate the gathering facilities. As previously stated, both producers and customers benefit from local production suppliers and therefore both should contribute to the gathering cost of service. Also, as noted in **Peoples Statement No. 6 – the Direct Testimony of Paul Becker**, Peoples is proposing to increase the annual capital investment to replace and upgrade certain gathering pipelines beginning in 2027.

As a reasonable shared contribution to cover increase operating and maintenance costs, as well as increased capital to upgrade gathering lines, Peoples proposes to increase this gathering fee to $0.29 per Mcf. This rate was developed by taking the current gathering revenue recovery of about $7.4 million and applying an increase of 13.8% which represents the overall total increase in revenue the Company is seeking in this proceeding. This results in the need to collect about $8.4 million of revenue from customers. About $1.9 million of this will be recovered from producers under a negotiated rate and thus the remaining $6.6 million of revenue will be collected from the full tariff volumes of 23.1 Bcf which results in the $0.29 per Mcf gathering rate. This results in the gathering revenue contributing about 26% towards the gathering system cost of service which is in the range of prior cases. These producer fees help offset customers' share of gathering costs, without creating an economic

disincentive to producers to continue to produce low cost gas supplies into the Peoples' systems.

Q. HOW MUCH GATHERING REVENUE DOES THE COMPANY PROJECT TO RECOVER IN THE FULLY PROJECTED FUTURE TEST YEAR?

A. The annual volume projection of conventional production on Peoples system that will be subject to the gathering fee for the FPFTY is 23 Bcf. This volume projection was based on recent actual production levels adjusted to reflect current production decline trends. The resulting revenues to be paid for by conventional well producers for the FPFTY is projected to be $5.5 million.

Q. YOU MENTIONED EARLIER IN YOUR TESTIMONY THAT PEOPLES ALSO RECEIVES UNCONVENTIONAL SUPPLIES INTO ITS SYSTEMS. ARE THERE GATHERING FEES ASSESSED TO PRODUCERS BY PEOPLES FOR UNCONVENTIONAL SUPPLIES, AND IF SO, WHAT ARE THE EXPECTED ANNUAL REVENUES?

A. Yes. As set forth in the existing tariff rate schedule – AGS (Peoples Natural Gas Exhibit No. 14, Schedule No. 1), Peoples charges a rate for gathering natural gas produced from unconventional sources that is determined through negotiation. It's important that this rate be negotiable because Peoples needs to compete with midstream and interstate pipelines to acquire this gas supply. Marcellus producers generally have multiple options to get their gas to market. Based on the negotiated rate currently charged to existing unconventional producers and the associated expected annual volumes produced from unconventional

sources for the FPFTY, Peoples projects to generate $1.8 million in annual gathering fees from unconventional gas producers for the FPFTY period.

Q. BASED UPON THE COMPANY'S FPFTY PROJECTION OF RECOVERIES UNDER THE GATHERING CHARGES TO CONVENTIONAL AND UNCONVENTIONAL PRODUCERS, HOW MUCH OF THE GATHERING COSTS WILL BE RECOVERED?

A. The Company projects that it will recover $9.4 million, a $2.4M or 34% increase over the existing revenue of $7.0M at present rates.

Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THE REMAINDER OF THE GATHERING COSTS THAT ARE NOT PROJECTED TO BE RECOVERED FROM PRODUCERS?

A. We have directed Mr. Taylor to allocate the remaining costs to the various customer classes. He uses a volumetric allocation factor to assign gathering plant and associated expenses to customer classes based on the percentage of annual gas volumes in each class supplied by Pennsylvania gas producers. This is consistent with the methodology used in the Company's last base rate proceeding.

Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as other issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY OF MICHAEL HUWAR, PRESIDENT PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: July 16, 2026 Peoples Statement No. 1-R
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION 1

II. MANAGEMENT EFFECTIVENESS ADJUSTMENT.....2

III. AFFORDABILITY.....7

IV. CONCLUSION.....16

PREPARED REBUTTAL TESTIMONY OF
MICHAEL HUWAR

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Michael Huwar. My business address is Peoples Natural Gas Company LLC, 375 North Shore Drive, Suite 600, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples Natural Gas," "Peoples," or the "Company") as President. I am also the President of Peoples Natural Gas' direct parent, PNG Companies LLC ("PNG").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth as Peoples Statement No. 1.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to the testimony of the witnesses who raised concerns with the management efficiency adjustment component of the Company's proposed return on equity in this proceeding. Specifically, I will respond to certain issues identified by the Office of Consumer Advocate ("OCA") witness Larkin-Connolly and the Bureau of Investigation and Enforcement ("I&E") witness Patel. Secondly, I will address the issue of affordability

in this proceeding. Moreover, we have various witnesses who discuss affordability and I will summarize a number of affordability approaches they sponsor.

II. MANAGEMENT EFFECTIVENESS ADJUSTMENT

Q. WHAT IS THE COMPANY PROPOSING WITH RESPECT TO MANAGEMENT EFFECTIVENESS IN THIS PROCEEDING?

A. As outlined in my direct testimony, as well as the direct testimony of witness Nelson, the Company proposed to include an adjustment of 25 basis points to its proposed return on equity for its exemplary management performance. I note that I have been advised by counsel that, under Pennsylvania law, the Pennsylvania Public Utility Commission ("Commission") shall consider the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates. Specifically, the Commission can make "adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate." See 66 Pa. C.S. § 523(a).

In my direct testimony, as well as in the testimony of other Company witnesses, we have offered support for and evidence of above average operational performance, efficiency, effectiveness and adequacy of service such that the Commission should consider an appropriate upwards adjustment to the Company's rate of return.

Q. WHAT IS OCA'S POSITION WITH RESPECT TO THE COMPANY'S REQUEST FOR A MANAGEMENT EFFICIENCY ADJUSTMENT?

A. Overall, OCA recommends that the Commission should deny the Company's proposed 0.25% management performance adder. OCA's witness Larkin-Connolly claims that "the customer service record does not demonstrate exceptional performance that would support

granting such an incentive.[1]" Specific responses to witness Larkin-Connolly's customer service concerns are available in the rebuttal testimonies of Company witnesses Michelle Parks and Rita Black.

Q. WHAT IS YOUR RESPONSE TO OCA'S CLAIMS CONCERNING MANAGEMENT PERFORMANCE?

A. I disagree with OCA's contention that we have not demonstrated exceptional performance that supports the granting of an incentive. OCA does not contemplate the Company's demonstration of exceptional operational and safety performance as outlined in my direct testimony. Throughout pages 9-15 of my direct testimony, I provide examples of certain operational and safety metrics that warrant acknowledgement and recognition. On page 13 of my direct testimony, I include the Company's outstanding leaks metrics on its system. The Company has reduced its outstanding leaks by more than 90% since 2018[2]. Additionally, Company witnesses Palombo and Becker, in their direct testimonies, provide evidence of the Company's exemplary performance with metrics concerning safety and compliance, as well as infrastructure investment progress. The Company has provided evidence that it does show above average performance.

Q. WHAT IS I&E'S POSITION WITH RESPECT TO THE COMPANY'S REQUEST FOR A MANAGEMENT PERFORMANCE ADJUSTMENT?

A. I&E witness Patel asserts that the stated reasons the Company uses to justify its claim for management performance fall under what the Pennsylvania Public Utility Code requires of

[1] Larkin Connolly Direct, at page 7-8.
[2] Represents the year end leaks outstanding as reported in the annual DOT distribution report.

all utilities under 66 Pa C.S.A. Section 1501. Further, Mr. Patel argues that the benefits of any cost-cutting measures should be passed on to customers, not recovered through an increase in ROE[3]. Lastly, Mr. Patel notes that in Columbia's most recent base rate proceeding, the Commission did not award them an upward increase of 0.25% to ROE for management effectiveness.[4]

Q. WHAT IS YOUR RESPONSE TO I&E'S ASSERTIONS REGARDING MANAGEMENT PERFORMANCE?

A. The Company agrees with Mr. Patel in his assertion that it has used its above average performance in areas which fall under its responsibilities under 66 Pa C.S.A. Section 1501 to justify its claim for a management performance adjustment. Moreover, Mr. Patel does not refute that the Company's performance is above average or exemplary. Rather, Mr. Patel disregards the above average performance altogether and this has the effect of treating the Company's exemplary, above average performance in the same way as a company with just average performance. Mr. Patel's assertions effectively disregard the provisions of Section 523 of the Public Utility Code.

Q. PLEASE FURTHER EXPLAIN THE COMPANY'S EXEMPLARY PERFORMANCE.

A. Peoples consistently provides safe and reliable natural gas service to its customers at reasonable rates. This is the product of a dedicated and knowledgeable workforce that is constantly seeking to improve its quality of service and control costs. As part of its

[3] Patel Direct, at pages 55-60.
[4] *Id.* At 58.

commitment to providing low-cost natural gas delivery service to its customers, the Company has committed significant resources to improving its infrastructure. In his direct testimony in this proceeding, on pages 3-9, Company witness Becker provides metrics which illustrate the robust capital investments the Company has made to its system, outlining its four major capital pipeline work programs. The Company is continuing to invest in bettering its system and improving its facilities for the benefit of its customers. The Company's Long-Term Infrastructure Improvement Plan is one of the largest in the Commonwealth and it demonstrates the Company's commitment to reducing methane emissions and keeping its system safe and reliable.

In addition to its infrastructure improvement plans, and as I outline in my direct testimony, the Company has made tremendous progress in the areas of leak reduction, having reduced outstanding leaks on its system by more than 90% since 2018[5]. Reducing outstanding leaks is critical and necessary for protecting our customers and the public, preventing system incidents and minimizing methane emissions.

Additionally, another important example of operational performance is the Company's Goodwin Tombaugh project. In 2020, the Company agreed to undertake a project to replace a troubled gathering system that needed substantial improvement as it served more than 1,600 utility customers (either by direct connect to Goodwin Tombaugh or adjacent systems). The project included the replacement of more than 300 miles of bare steel gathering pipeline for the estimated budget of $120 million dollars over a seven-year

[5] Represents the year end leaks outstanding as reported in the annual DOT distribution report.

period. As we come up to the close of those seven years, we are proud to report that the project is on track to be completed by year's end and on track to be under budget as well.

Q. BUREAU OF INVESTIGATION AND ENFORCEMENT'S WITNESS PATEL MENTIONS IN HIS TESTIMONY (I&E Statement No. 2, page 57) THAT THE COMMISSION AWARDED AQUA PENNSYLVANIA 25 BASIS POINTS FOR ITS EFFORTS IN RESCUING A TROUBLED WATER AND WASTEWATER SYSTEM. DO YOU HAVE ANY RESPONSE TO THIS?

A. Yes, I do. In my opinion, the Company's project for its Goodwin Tombaugh system is comparable to "rescuing a troubled water and wastewater system", although in this case it was a "troubled natural gas gathering system." When the Company took over this system, it agreed to do an engineering assessment of the system. That assessment concluded that due to the age, state of the facilities and other factors, it was not economically viable to continue operating. However, the Company agreed to take over the distressed system and find a way to improve the facilities in a cost-effective way. The alternative would have been to abandon the system which would mean leaving more than 1,600 customers without natural gas service.

As I mentioned previously, the Company is nearing the end of 2026 and by that time it will have addressed more than 300 miles of a primarily bare steel gathering system for under the budgeted amount of $120 million. Despite the numerous permitting issues at the start of the project and throughout, the Company has worked tirelessly to retire and replace the system, converting it from gathering pipe into distribution assets and moving about 80 miles of pipe from private property into public rights of way. Perhaps the most

significant achievement in this process is that the Company did not have to abandon a single customer in completing this project. As of June 2026, for a total investment of approximately $85 million, Peoples has replaced 218 miles of bare steel with new plastic pipe and retired 106 miles of bare steel with no adverse impacts to customers as its kept over 1,600 customers in natural gas distribution service on the Goodwin Tombaugh system.

Q. PLEASE PROVIDE YOUR RECOMMENDATION REGARDING MANAGEMENT PERFORMANCE.

A. Overall, I've referenced several examples of exemplary operational performance by the team at Peoples. I respectfully recommend that the Commission evaluate the many ways that Peoples goes above and beyond for its customers and the communities it serves in its operational performance and strongly consider acknowledging that the Company's operational performance, which is above average in its efficiency, effectiveness, and adequacy, is worthy of an enhanced return on equity.

III. AFFORDABILITY

Q. WITNESSES FOR OCA, CAUSE-PA AND PUBLIC INPUT HEARING WITNESSES PRESENTED TESTIMONY REGARDING AFFORDABILITY CONCERNS, BOTH WITH RESPECT TO MACRO ECONOMIC TRENDS, UTILITY BILL COSTS AND PEOPLES PROPOSED RATE REQUEST. PLEASE RESPOND.

A. As I mentioned in my direct testimony, the Company's top priority is safety. We do recognize that affordability is a priority, as well. A balance of both affordability and

safety is extremely important to the Company, our customers and the communities we serve. I want to point to and reiterate the various strategies and measures the Company employs to address affordability as outlined in my direct testimony, pages 15-22. Overall, the Company prioritizes both safety and affordability and demonstrates its priorities through the exemplary operational performance I mentioned in Section II regarding Management Effectiveness.

Q. WHAT ARE SOME OTHER WAYS THE COMPANY DEMONSTRATES ITS FOCUS ON AFFORDABILITY? PLEASE EXPLAIN.

A. I will highlight some of the various ways that the Company demonstrates its focus on affordability and the various witnesses who offer testimony on affordability:

- **WNA** - Through this past heating (2025-2026) season, Peoples credited customers just over $10 million through its Weather Normalization Adjustment ("WNA") Mechanism. See **Peoples Statement No. 17-R** for more information about the effectiveness of the Company's WNA mechanism.
- **Customer Programs -** Over the past five (5) years, the Company has donated more than $4.8 million of non-customer funds to its hardship fund to support our customers in need of financial assistance. Further, recognizing the uncertainty of federal funding available through the Low Income Home Energy Assistance Program ("LIHEAP") to assist customers with heating system repairs, Peoples sought increases to its Emergency Furnace and Service Line Repair ("EFSLR") program twice in the past two (2) years to ensure funding remained available to repair and replace failing heating systems and replace gas

lines for vulnerable households. This proactive effort ensured that Peoples' program never closed and all eligible customers seeking assistance were able to receive the services they need. For more information on the ways in which we support our customers, see **Peoples Statement No. 10-R,** the Rebuttal Testimony of Rita Black.

- **Gas Procurement** –The Company's service footprint overlays Marcellus and Utica shales and affords the Company the ability to purchase natural gas at a discount to national indices. As a result, the Company passes on those savings to our customers. Moreover, the Company's practice of purchasing gas volumes and injecting them into storage at a lower cost during the summer months, allows for the safe and affordable delivery of natural gas to customers in the withdrawal season.

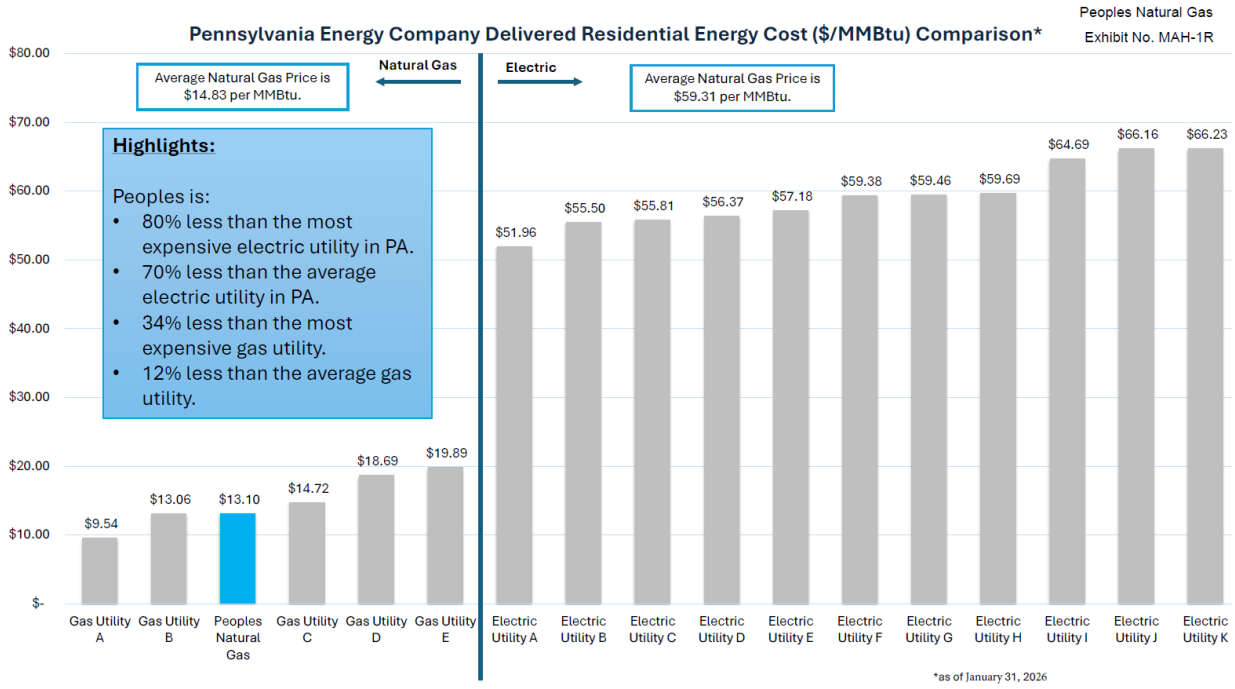
- **Unique Credit Proposal -** Peoples is proposing a unique method of crediting customers for an excess book contingency reserve and the tax repairs deduction collar refund, aimed at maintaining affordability for residential customers, particularly income eligible customers who are not participating in Peoples Customer Assistance Program ("CAP") and customers with incomes that exceed CAP eligibility but that still struggle to make ends meet. Refer to **Peoples Statement No. 3-R**, the Rebuttal Testimony of Carol Scanlon for more details.

Q. PEOPLES WITNESS FANG (Peoples Statement No. 20-R) ALSO ADDRESSES AFFORDABILITY. DO YOU HAVE ANYTHING TO ADD?

A. Yes. Overall, based upon the assessment presented below, Peoples gas service is clearly affordable. This was determined by evaluating the cost of Peoples service compared to the other Pennsylvania energy companies (natural gas distribution utilities and electric utilities).

Q. EXPLAIN THE ANALYSIS PEOPLES CREATED TO DETERMINE THAT PEOPLES' SERVICE IS AFFORDABLE.

A. The Company has prepared **Peoples Natural Gas Exhibit No. MAH-1R**, which is attached to my testimony and also shown below. This compares the per MMBtu price of all PA-PUC regulated energy companies in Pennsylvania.



Q. PLEASE SUMMARIZE HOW PEOPLES COMPARES TO THE OTHER ENERGY COMPANIES.

A. Peoples is:

- 80% less than the most expensive electric utility in Pennsylvania.
- 70% less than the average electric utility in Pennsylvania.
- 34% less than the most expensive gas utility in Pennsylvania.
- 12% less than the average gas utility in Pennsylvania.

Q. WHAT IMPACT WOULD THE PROPOSED RATE INCREASE HAVE ON THIS ANALYSIS?

A. If Peoples' entire requested residential rate increase of 13.1% (**Peoples Natural Gas Exhibit No. JDT-6**, p. 1) was granted, the price per MMBtu would increase from $13.10 per MMBtu in this analysis to $14.81 per MMBtu which is still below the average price for a natural gas utility. I also note that this analysis does not reflect the rate increases for other ongoing base rates cases such as National Fuel Gas and UGI Gas.

Q. PLEASE STATE THE PURPOSE OF THE EXHIBIT.

A. The purpose of the exhibit is to present a comparative analysis of residential delivered energy costs for electric and natural gas utilities in Pennsylvania, expressed on a BTU-equivalent basis, and to evaluate the implications of those costs for customer affordability.

Q. WHAT DATA DID YOU RELY UPON TO PERFORM THIS ANALYSIS?

A. Peoples relied on the PUC's Rate Comparison Report (2026), which was prepared by the Bureau of Technical Utility Services pursuant to 66 Pa. C.S. § 308.1(b).[1] This report

provides the Average monthly residential usage levels, and Corresponding average monthly bills for all eleven (11) electric distribution companies and six (6) large natural gas distribution companies in Pennsylvania.

Q. DOES THE PUC REPORT PROVIDE A CONSISTENT BASIS FOR COMPARISON ACROSS UTILITIES?

A. Yes. The report explicitly states that rates reflect conditions as of January 31, 2026, and usage and bill values are standardized averages to allow apples-to-apples comparisons across service territories. Accordingly, the report is an appropriate and authoritative source for cross-utility rate comparison.

Q. HOW DID YOU CONVERT ELECTRIC AND NATURAL GAS COSTS INTO A COMPARABLE METRIC?

A. To compare electric and natural gas costs on a common basis, the Peoples' team converted both forms of energy into MMBtu (million British thermal units). Specifically:

- Electric usage (kWh) was converted using 1 kWh = 0.003412 MMBtu
- Natural gas usage (Mcf) was converted using 1 Mcf ≈ 1.037 MMBtu

These are standard engineering conversion factors used in energy economics.

Q. HOW DID YOU CALCULATE THE DELIVERED COST OF ENERGY?

A. For each utility, I calculated:

- Delivered cost ($/MMBtu) = Monthly residential bill ÷ total MMBtu consumption

In addition:

- For electric utilities, we calculated cents per kWh
- For natural gas utilities, we calculated dollars per Mcf or Ccf where applicable

All inputs used in these calculations—usage and bills—were taken directly from the PUC report.

Q. WHAT DID YOUR ANALYSIS SHOW FOR NATURAL GAS UTILITIES IN PENNSYLVANIA?

A. For the six large natural gas distribution companies, the delivered residential energy costs range from about $10 per MMBtu (low end) to about $20 per MMBtu (high end) with an average of about $15 per MMBtu. I note that Peoples price of about $13 per MMBtu is the third lowest but only four cents per MMBtu higher than the second lowest natural gas utility. Further, Peoples is 34% less than the most expensive gas utility and 12% less than the average gas utility.

Q. WHAT DID YOUR ANALYSIS SHOW FOR ELECTRIC UTILITIES IN PENNSYLVANIA?

A. The analysis indicates that delivered residential energy costs for electric utilities range from about $52 per MMBtu (low end) to $66 per MMBtu (high end) with an overall average of about $59 per MMBtu across the 11 electric distribution companies.

I note that Peoples is 80% less than the most expensive electric utility in PA and 78% less than the average electric utility in PA. Further, it is 75% less than the lowest cost electric utility. These results demonstrate that electric energy costs are about 4.0 times to 5.1 times higher than natural gas energy costs, and on average, are approximately 4.5 times higher than Peoples specifically.

Q. WHAT CONCLUSIONS CAN BE DRAWN REGARDING NATURAL GAS AS AN ENERGY RESOURCE AND SPECIFICALLY PEOPLES GAS' SERVICE?

A. The analysis demonstrates that natural gas is a substantially lower-cost source of delivered energy compared to electricity when measured on an equivalent energy-content basis. This cost differential is material, persistent and system-wide across Pennsylvania.

The analysis in **Peoples Natural Gas Exhibit No. MAH-1R** also demonstrates how increased demand on local electric distribution companies, including power generation, has exacerbated supply and demand issues which ultimately drive up electric costs for consumers. As we assess affordability in the context of Peoples rate case, the analysis clearly shows that Peoples, even with a reasonable increase in rates as proposed in this case, remains an affordable energy option in Pennsylvania.

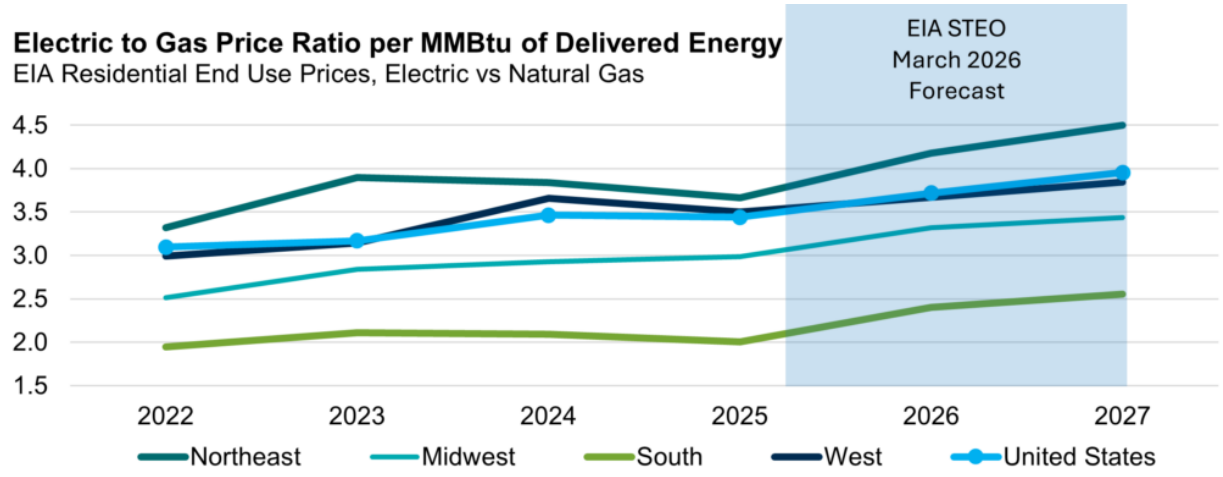
Q. WHAT ARE THE IMPLICATIONS OF THESE FINDINGS FOR CUSTOMER AFFORDABILITY?

A. The magnitude of the cost differential has direct implications for residential customers. Customers using natural gas, including Peoples service, experience

significantly lower costs per unit of energy consumed. This contributes to lower bills for comparable energy needs and greater protection against rising energy costs. Direct natural gas use remains important for households and businesses as the price gap between electric and gas continues to widen[6]. Accordingly, Peoples plays a meaningful role in supporting energy affordability in Pennsylvania.

Q. IS THE PRICE GAP BETWEEN NATURAL GAS AND ELECTRIC UTILITIES UNIQUE TO PENNSYLVANIA? PLEASE RESPOND.

A. No, this issue is not unique to Pennsylvania and the gap is going to continue to widen. The Table below[7] demonstrates that the gap will continue to rise in regions across the United States, with electricity prices reaching 4.0 times the price of natural gas by 2027.



Source: EIA Short Term Energy Outlook, March 10, 2026

[6] https://www.aga.org/research-policy/resource-library/eia-projects-rising-electricity-prices-widening-the-gap-with-natural-gas-to-4-0x-in-2027/

[7] *Id.*

Moreover, the current conditions of this price gap between gas and electrics were predicted and anticipated with federal, state and local policies aimed at electrification. In a 2018 American Gas Association ("AGA") study[8], the study concluded that the overall impact of policy-driven electrification will result in increased electricity demand and overall increased energy costs for consumers. To summarize, customers are currently realizing the impact of these policy decisions supporting electrification coupled with decreasing supply of affordable and reliable power generation.

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS.

A. Based on this analysis, Peoples service is clearly affordable as compared to the other PUC-approved (i.e. deemed just and reasonable through a legal process) tariff services provided by Energy Companies across Pennsylvania. Peoples remains a low-cost energy resource and plays a critical role in providing affordable service.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY OF
ANDREW P. WACHTER

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Andrew P. Wachter, and my business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Director, Finance and Regulation for PNG Companies LLC ("PNG"). I provide services to Peoples Natural Gas Company LLC ("Peoples" or the "Company"). As Director, Finance and Regulation, I oversee the Rates and Regulatory department and the Financial, Planning and Analysis department at Peoples and its affiliates.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 2.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am presenting testimony in rebuttal of certain expense positions and recommendations of the Bureau of Investigation and Enforcement ("I&E") witness Vanessa Okum and the Office of Consumer Advocate ("OCA") witness Jared Geiger.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my rebuttal testimony by subject matter. Where more than one witness has addressed the same subject matter with testimony that I wish to rebut, I address all of that testimony in the same section. I will address the following issues in the order listed.

- Updates to Original Filing
- Responses to Other Parties Adjustments
  - Average Annual Increases
  - Inflation Adjustments
  - Labor/Vacancy Expense
  - Incentive Compensation
  - Employee Benefits Expense
  - Corporate Insurance
  - Employee Expenses
  - Travel & Entertainment
  - Company Memberships
  - License and Permits
  - Utilities and Fuel Expense
  - Advertising Expense
  - Fleet Expense
  - Materials and Supplies Expense
  - Rate Case Expense

- Pension Expense
- Outside Services – A&G
- Payment Processing Expense
- Building Leases
- Universal Service Program Rider
- Residential Collection Expense
- Cost of Other Parties Proposals
- Interest Synchronization

II. UPDATES TO THE COMPANY'S ORIGINAL FILING

Q. HAS THE COMPANY UPDATED OR ADJUSTED THE COST OF SERVICE AS FILED?

A. Yes. The Company has identified three adjustments either through the discovery process or during rebuttal testimony preparation.

Q. CAN YOU SUMMARIZE THE ADJUSTMENTS IDENTIFIED ON THE AMOUNT OF RATE INCREASE REQUESTED?

A. Yes. Below are the adjustments:

1. Increase in existing Revenue of $206,179 as referenced in the response to OSBA-I-9 (refer to **Peoples Statement No. 4-R, the Rebuttal Testimony of Dawn Folks** for further discussion). This reduces the claim.;
2. Reduction in O&M of $785,433 related to building leases as referenced in the response to I&E-RE-20 (see Building Leases section below). This reduces the claim.; and

3. Increase in O&M of $1,738,446 related to Insurance expense referenced in the response to I&E-RE-21 (see Insurance section below). This increases the claim.

Please note that there is an increase in Cash Working Capital associated with these adjustments as well.

Q. PLEASE EXPLAIN THE IMPACT THESE ADJUSTMENTS HAVE ON THE COST OF SERVICE AS FILED?

A. The impact of these changes increases the overall claimed revenues by approximately $746,783 excluding the cash working capital amount.

III. RESPONSE TO OTHER PARTIES ADJUSTMENTS

A. AVERAGE ANNUAL INCREASES

Q. PLEASE SUMMARIZE HOW THE COMPANY USED AVERAGE ANNUAL INCREASES TO MAKE ADJUSTMENTS TO CERTAIN HISTORIC TEST YEAR ("HTY") EXPENSES.

A. In order to appropriately project how certain expenses are expected to change during the FTY and FPFTY, the Company used a multi-year historical percentage experience change for each expense type individually and applied it to the HTY balances to determine the amount of change in balance to expect.

Q. HOW IS APPLYING AVERAGE ANNUAL INCREASES DIFFERENT THAN APPLYING A STANDARD INFLATION ADJUSTMENT?

A. Utilizing a multi-year average increase methodology, as described above, utilizes known and recently incurred activity for each specific expense account. Whereas a standard

inflation adjustment often is based upon broad inflation indicators or even one over-riding inflation metric applied to different expense categories. An inflation adjustment is an approach that weights various categories into one such as CPI – the Consumer Price Index.

Q. WHAT IS I&E WITNESS OKUM RECOMMENDING WITH RESPECT TO THE APPLICATION OF THE AVERAGE ANNUAL INCREASES?

A. I&E Witness Okum is proposing to disallow any sort of percentage increases as she refers to them as inflationary adjustments that are not actually known or measurable as they do not reflect the true cost of expenses. In various places she claims that increases in expenses should be based on contractual terms or other known variables. Witness Okum also refers to such items as "speculative."

The table below summarizes all such adjustments that I&E Witness Okum proposes:

Outside Services - Contracted	$	(2,055,313)
Outside Services - IT	$	(286,705)
Outside Services - A&G	$	(926,459)
Corporate Insurance	$	(1,402,736)
Travel	$	(108,657)
Memberships	$	(157,918)
Licenses & Permits	$	(34,718)
Utilities & Fuel	$	(234,304)
Advertising	$	(75,656)
Fleet	$	(90,469)
Materials & Supplies	$	(1,141,328)
	$	(6,514,263)

Q. DO YOU AGREE WITH I&E WITNESS OKUM'S RECOMMENDATION TO DISALLOW THE APPLICATION OF THE AVERAGE ANNUAL EXPENSE ADJUSTMENTS FOR THESE EXPENSES?

A. I do not.

Q. WITNESS OKUM CLAIMS THAT THE INCREASES MUST BE KNOWN AND MEASURABLE AND NOT BASED ON SPECULATIVE OR PERCENTAGE INCREASES. ARE THE COMPANY'S PROPOSED EXPENSE ADJUSTMENTS KNOWN AND MEASUREABLE?

A. Yes, they are known and measurable. It is unrealistic to think that inflation is not going to continue related to the Company's expenses. The Company utilized its own history of such expense increases to project future costs. With OCA Witness Duepree's testimony (discussed further below), our own Company's experience and the historical trend of rising prices (see table in the next section of testimony), it is clear that the Company's proposed expense adjustments are known and measurable.

Q. WITNESS OKUM CLAIMS THAT THE COMPANY LOOKS AT HISTORIC DATA TO CALCULATE THE AVERAGE INCREASE BUT IGNORES THE MOST RECENT HTY DATA. HOW DO YOU RESPOND?

A. The Company calculated the percentage increases utilizing the most recent calendar years available when the data was being prepared. This was not done for any nefarious reason. Rather, it was more about logistics of timely completing the filing.

Q. I&E WITNESS OKUM CLAIMS THAT THE DATA USED TO CALCULATE THE ADJUSTMENTS INCLUDES THE CAPITALIZED PORTION OF THE EXPENSE; WHEREAS, ACCORDING TO WITNESS OKUM, IT WOULD BE MORE ACCURATE TO BASE THE CALCULATION ON THE EXPENSED PORTION ONLY. PLEASE EXPLAIN.

A. I&E Witness Okum is correct that the difference mentioned is due to capitalization. However, it is appropriate to base the percentage increases off of the original underlying cost prior to capitalization as the capitalization rate would then not have an impact on the underlying percentage changes over time. Since the Company normalizes/annualizes the capitalization rate based upon a more recent rate factor, changes in the percentage change calculation would skew the numbers if they included the historical capitalization rates.

Q. WITNESS OKUM CLAIMS THAT THE COMPANY'S CHOSEN TIME PERIOD IS INCONSISTENT ACROSS THE ADJUSTED CATEGORIES WITH NO EXPLANATION GIVEN. HOW DO YOU RESPOND?

A. The Company utilized a 5-year average increase for all categories except Outside Services – IT, Outside Services – A&G and Licenses and Permits where a 4-year average was utilized and Company memberships where a 2-year average was utilized. The Company utilized a shorter timeframe as there were some abnormal items in the longer historical periods, thus using a shorter period would provide a more normalized percentage increase to utilize.

Q. DOES OCA WITNESS GEIGER ALSO RECOMMEND DISALLOWING THE ADJUSTMENTS FOR AVERAGE ANNUAL INCREASES FOR ANY OF THE EXPENSE CATEGORIES?

A. The table below summarizes all adjustments that OCA Witness Geiger proposes:

Materials and Supplies	$	(625,000)
Travel Expenses	$	(108,625)
Advertising Expense	$	(75,656)
PUC Assessment	$	(823,737)
	$	(1,633,018)

Q. DO YOU AGREE WITH MR. GEIGER'S ADJUSTMENTS?

A. No, for all the reasons above when discussing I&E Witness Okum's proposals.

Q. DID ANY WITNESSES ADDRESS THE RISING COSTS AND INFLATION?

A. Yes. OCA Witness Deupree discussed that inflation is expected to continue. Witness Deupree cited the Federal Reserve's prediction that inflation will be 2.7% and cited other sources that inflation is expected to continue.

Q. DOES I&E'S AND OCA'S APPROACH TO PERCENTAGE ADJUSTMENTS EFFECTIVELY UTILIZE A HISTORIC TEST YEAR ("HTY") METHODOLOGY RATHER THAN A FULLY PROJECTED FUTURE TEST YEAR ("FPFTY") METHODOLOGY?

A. Yes. By not allowing a reasonable methodology to project increases, such as recent average Company-experienced increases by specific expense categories, they effectively revert to

utilization of historic test year balances. This approach is contrary to the FPFTY methodology widely accepted in Pennsylvania base rate cases and authorized by law.

B. INFLATION ADJUSTMENT ITEMS

Q. DID THE COMPANY APPLY A STANDARD INFLATION ADJUSTMENT TO ANY EXPENSE ITEMS?

A. Yes, the Company applied a standard inflation adjustment to both Payment Processing ($77,284 adjustment) and the Advertising ($75,656 adjustment) categories of expenses.

Q. HOW DID THE COMPANY DETERMINE THE INFLATION AMOUNT?

A. The Company utilized the CPI – Consumer Price Index for both of these categories.

Q. WHY DIDN'T THE COMPANY PROPOSE AN AVERAGE ANNUAL INCREASE FOR THESE ITEMS INSTEAD OF AN INFLATION ADJUSTMENT?

A. Due to the fluctuating nature of these categories and types of expenses it was more reasonable to use an index-based approach.

Q. WHAT DOES I&E WITNESS OKUM PROPOSE WITH RESPECT TO THE INFLATION ADJUSTMENT FOR THESE EXPENSES.

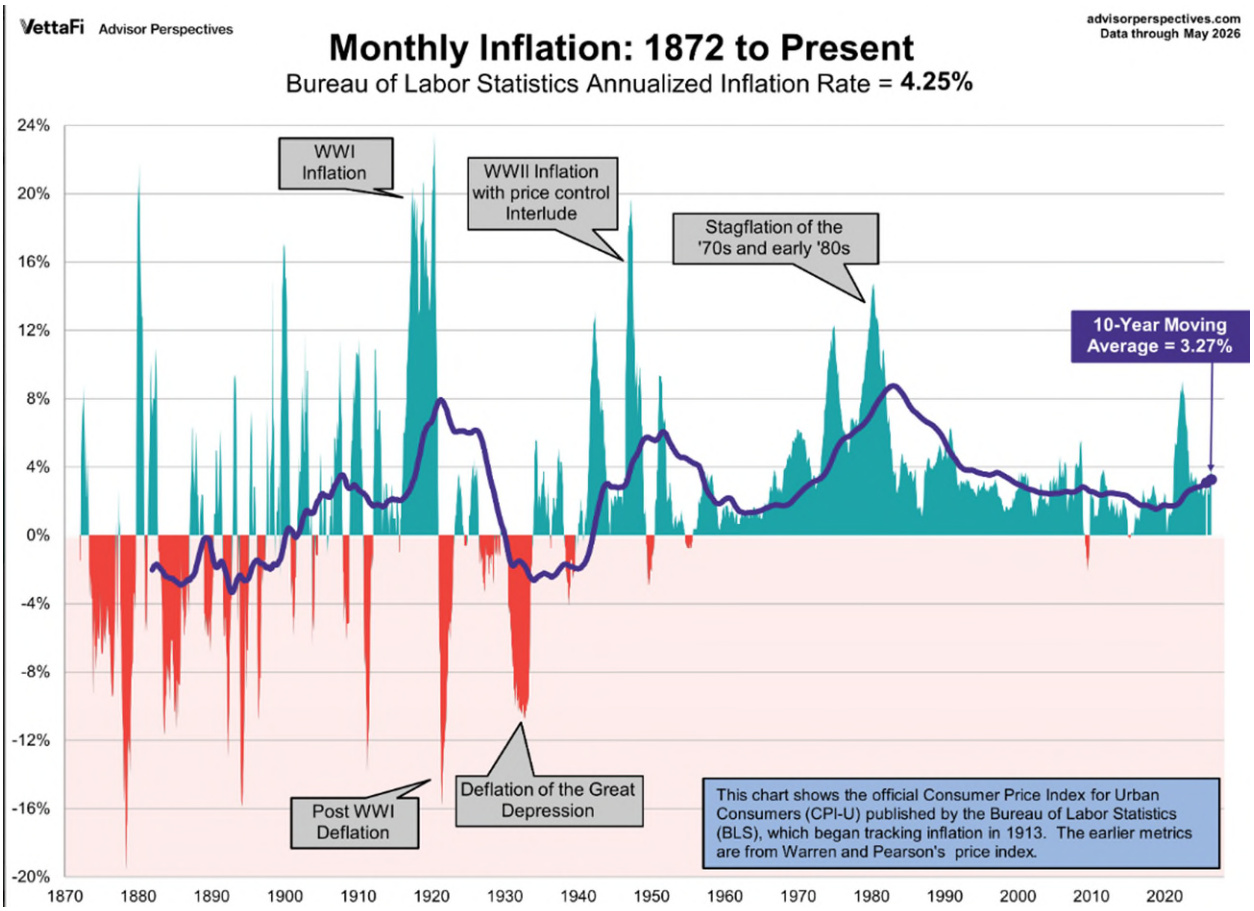
A. I&E Witness Okum recommends that these adjustments be rejected because she believes it is inappropriate to increase expenses using a general inflation percentage as it is speculative and not known or measurable.

Q. DO YOU AGREE WITH MS. OKUM'S ADJUSTMENTS?

A. I do not.

Q. WHY IS IT REASONABLE TO INCLUDE AN INFLATION FACTOR FOR THESE ITEMS?

A. As stated above, inflation is a real thing and is expected in all expense categories over time. Utilizing an actual experienced inflation factor to project these costs is a reasonable approach. The table below from VettaFi Advisor Perspectives shows the history of inflation based upon data from Bureau of Labor Statistics data which shows that inflation has occurred in most months for the last six decades.



Further, as discussed above, OCA Witness Deupree discussed that inflation is expected to continue thus validating the Company's position.

C. LABOR/VACANCY EXPENSE

Q. PLEASE EXPLAIN THE ADJUSTMENTS PROPOSED BY I&E AND OCA REGARDING LABOR AND LABOR RELATED EXPENSES.

A. Both the OCA and I&E make proposed adjustments related to increasing the level of vacant positions to be included in the FPFTY labor claim. OCA witness Geiger and I&E witness Okum proposed a vacancy rate of 5.25% and 4.98%, respectively. Both witnesses Okum and Geiger's proposals were based upon a three-year historical average of vacancies. I note that witness Geiger's calculation needs to be updated, which will be discussed later in this section. I also note that the incentive compensation adjustments will be addressed in a separate section below.

Q. DO YOU AGREE WITH THESE ADJUSTMENTS?

A. I do not.

Q. PLEASE EXPLAIN WHY THE COMPANY EXPECTS ITS EMPLOYEE VACANCY RATE TO DECLINE DURING THE FORECAST PERIOD.

A. The Company's expectation that employee vacancies will decline during the forecast period is reasonable, supported by both recent Company experience and broader labor market trends.

First, the Company has already demonstrated progress in filling open positions. For example, as provided in the Response to I&E-RE-7, the vacancy rate for the months of

December 2025 through March 2026 was 4.38% down 14% from the average during the twelve months ended November 30, 2025. This reflects a substantial improvement in recruiting effectiveness and workforce replenishment efforts.

Second, the labor market conditions that contributed to elevated vacancy levels following the COVID-19 pandemic have moderated significantly. During 2021 through 2023, utilities and other employers across the United States experienced unprecedented recruiting and retention challenges. However, more recent labor market data indicate that the labor market has normalized substantially. The U.S. Bureau of Labor Statistics reported that the national quits rate remained approximately 1.9% during 2026, significantly below the elevated turnover levels experienced during the post-pandemic "Great Resignation." The Bureau also reported that job openings have stabilized following several years of exceptionally high vacancy levels. These trends indicate that employees are changing jobs less frequently and employers are facing a more balanced labor market than existed several years ago.[1]

Third, external labor market research similarly demonstrates that hiring conditions have become more favorable for employers. Indeed Hiring Lab reported that hiring demand has largely returned to pre-pandemic levels, while job postings have moderated from their historical peaks[2]. The report characterized the current environment as a more balanced labor market than existed during the supply-constrained labor conditions of 2021 through 2023. At the same time, the ratio of vacancies to unemployed workers has declined substantially from pandemic-era highs, indicating improved availability of qualified candidates.

[1] https://www.bls.gov/news.release/jolts.nr0.htm
[2] https://www.hiringlab.org/2026/06/18/us-labor-market-snapshot-may-2026/

Fourth, the Company's forecast is not premised solely upon general economic conditions. It reflects the implementation of specific recruiting and retention initiatives, including enhanced workforce planning, targeted recruiting efforts, competitive compensation programs, employee development initiatives, and succession planning activities. These efforts are designed to improve employee retention while accelerating the filling of vacant positions. As labor market conditions normalize, these Company-specific initiatives are expected to become increasingly effective.

Q. IS IT REASONABLE TO RELY EXCLUSIVELY UPON HISTORICAL VACANCY PERCENTAGES WHEN FORECASTING FUTURE VACANCIES?

A. No. Historical vacancy rates are an important consideration, but they are not the only factor that should be considered when forecasting future workforce levels. A forecast is intended to estimate expected future conditions, not merely replicate historical averages. Historical vacancy data from the period immediately following the COVID-19 pandemic reflects extraordinary labor market disruptions, including elevated employee turnover, labor shortages, and recruiting challenges that affected employers nationwide.

If those abnormal conditions are expected to moderate, it is reasonable to forecast vacancy levels below the historical levels observed during that period. In fact, the Company would be expected to consider known and measurable changes in labor market conditions and Company recruiting performance when preparing its forecast.

For example, the vacancy rate for December 2025 through March 2026, was lower at 4.38%, showing a trend downwards.

Q. IF I&E WITNESS OKUM'S PROPOSED VACANCY ADJUSTMENT IS ACCEPTED IS THE CALCULATION CORRECT?

A. Not entirely. On page 8 of Okum's testimony, she removes out $362,184 related to the eight vacancies included in the FPFTY. The $362,184 is after capitalization whereas this should be pre-capitalization or gross similar to the other numbers in the table. As such, this amount should be $873,153 ($362,185/41.48% O&M Ratio) for a difference of $510,968 in gross labor. As a result this would increase I&E's recommended O&M claim for labor by $211,950 ($510,968 x 41.48% O&M Ratio) and increase I&E's recommended rate base claim by $299,019 ($510,968 x 58.52% Capitalization Ratio).

Q. IF OCA WITNESS GEIGER'S PROPOSED VACANCY ADJUSTMENT IS ACCEPTED IS THE CALCULATION CORRECT?

A. No. OCA Witness Geiger incorrectly calculated the vacancy rate by dividing the vacant positions by the filled positions rather than the budgeted positions. As such, the vacancy rate would be 4.98% as shown in the table below and agrees with I&E's calculation. This would increase OCA's proposed O&M claim by $181,282. This would also increase OCA's proposed benefits by $53,809 and payroll tax adjustments by $14,525. The grand total is $249,615. Please note that Mr. Geiger's noted months in his table were incorrect as well. Those were corrected in the table below.

Total Vacancy Percentage (%)			
	2022-2023	2023-2024	2024-2025
Dec	4.01%	5.85%	4.95%
Jan	3.55%	5.55%	5.30%
Feb	3.42%	5.82%	5.50%
Mar	3.49%	6.08%	5.03%
Apr	4.03%	5.68%	4.83%
May	3.56%	6.02%	4.90%
Jun	3.89%	6.35%	4.16%
Jul	4.16%	5.55%	5.03%
Aug	4.50%	5.95%	5.30%
Sep	4.44%	5.61%	5.37%
Oct	4.77%	5.41%	5.64%
Nov	4.84%	5.48%	5.44%

Q. IN ADDITION TO THE CORRECTIONS ABOVE DO YOU HAVE ANY OTHER OBSERVATIONS?

A. Yes. Peoples has about 460 positions that are fully capitalized as they 100% support the Company's capital expenditure programs. Based upon further assessment, they have a higher vacancy rate than positions that are not fully capitalized, an average of 6.19% over the three-year period compared to 4.85% for non-capitalized positions over that same period. As such, the adjustment would be even lower.

Q. DOES I&E'S AND OCA'S REDUCTION TO THE COMPANY'S EMPLOYEE HEADCOUNT AFFECT OTHER EXPENSES?

A. Yes. I&E proposed related adjustments to benefits of $922,599 and payroll taxes of $333,659 and OCA proposed related adjustments to benefits of $941,164 and payroll taxes of $253,701 (to be addressed in **Statement No. 11-R – the Rebuttal Testimony of Rudolph Hanechak**). These adjustments should also be rejected for the reasons stated above.

Q. IF I&E'S AND OCA'S EMPLOYEE HEADCOUNT ADJUSTMENTS ARE DENIED, SHOULD THESE RELATED ADJUSTMENTS ALSO BE DENIED?

A. Yes.

D. INCENTIVE COMPENSATION

Q. I&E PROPOSES TO REDUCE THE COMPANY'S CLAIM FOR INCENTIVE COMPENSATION EXPENSE BY $949,448 AND RATE BASE BY $782,008. OCA PROPOSES TO REDUCE THE COMPANY'S CLAIM FOR INCENTIVE COMPENSATION BY $2,520,984. (I&E St. No. 1, pp. 11-14; OCA St. No. 2, pp. 9-16). PLEASE SUMMARIZE THE BASIS FOR I&E'S AND OCA'S PROPOSED ADJUSTMENTS TO INCENTIVE COMPENSATION.

A. Both witnesses make these proposals to remove the incentive compensation related to financial metrics. I&E Witness Okum states that they "align with shareholder interests" and also cites the recent Columbia rate case as a basis. I&E Witness Geiger makes similar claims.

Q. I&E WITNESS OKUM CITES THE PUC'S RULING ON THE MOST RECENT COLUMBIA GAS OF PA CASE. IS THAT APPROPRIATE?

A. In my opinion I&E Witness Okum misconstrues the PUC's ruling on Columbia Gas. She states that "In the most recent Columbia Gas of Pennsylvania, Inc. (Columbia Gas) base rate proceeding, the Commission removed 70% of Columbia Gas' total incentive compensation claim, equal to the portion related to financial goals, finding that it was not necessary in providing safe and reliable service to ratepayers." However, that is not

accurate. The PUC stated "Columbia did not explain why 70% of the incentive compensation expense is necessary to provide adequate service to ratepayers, given that only 30% of this claimed expense is related to operational safety and customer experience."

Further, they stated "We also agree with the ALJs and the OCA that Columbia failed to present credible evidence that the totality of its LTI compensation plan is reasonable, given that only 30% of the plan is related to safety, customer care, customer satisfaction, or other benefits to ratepayers." As I will demonstrate below, Peoples has provided sufficient evidence of the benefit to ratepayers and thus it is appropriate to recover 100% of these costs.

Q. OCA WITNESS GEIGER STATES THAT "SHAREHOLDERS ARE THE PRIMARY BENEFICIARIES OF IMPROVEMENTS IN THE COMPANY'S FINANCIAL PERFORMANCE. INCREASED EARNINGS, ENHANCED CASH FLOW, STOCK APPRECIATION, AND DIVIDEND GROWTH ACCRUE TO INVESTORS RATHER THAN RATEPAYERS." DO YOU AGREE WITH THIS?

A. No. Whether shareholders are the primary beneficiary of this is not an appropriate assessment. The correct evaluation is whether customers benefit from these metrics which contribute to a financially sound Company. As demonstrated above, they do and thus the entire amount of incentive compensation is appropriate to recover.

Q. OCA WITNESS GEIGER CLAIMS THAT "THE COMPANY HAS NOT ESTABLISHED A DIRECT AND MEASURABLE CONNECTION BETWEEN

INCENTIVE COMPENSATION AND CUSTOMER BENEFITS." IS THIS ACCURATE?

A. It is not. There is a direct and measurable connection between incentive compensation and customer benefits as I will explain below.

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH OCA'S AND I&E's PROPOSED ADJUSTMENT TO INCENTIVE COMPENSATION.

A. OCA's and I&E's proposal on incentive compensation should be rejected for three main reasons: 1) financial metrics provide customers a direct benefit by incentivizing employees to be good financial stewards of Company and ultimately customer funds; 2) the overall level of incentive compensation claimed is part of a fair, market-based level of total compensation; and 3) there are no regulations that prohibit utilities from recovery of incentive compensation that is tied to financial metrics and a recent UGI Utilities, Inc. – Electric Division ("UGI") Commission order (Docket No. R-2017-2640058) supports this position.

Q. REGARDING YOUR FIRST REASON TO REJECT OCA'S POSITION, PLEASE EXPLAIN WHY THESE COSTS PROVIDE A DIRECT BENEFIT TO THE CUSTOMERS.

A. Financial metrics incentivize employees to be good financial stewards of Company and ultimately customer resources, thus they provide customers a direct benefit. I point out that the impact most employees have on financial targets is to achieve their O&M budgets. As such, this drives employees to be efficient with the costs they incur while still achieving

the Company's mission to "Make Customers Lives Better". Such savings have the potential to ultimately delay the need for future rate cases. Further, this compensation is also tied to and aimed at improving operational effectiveness.

Utility customers benefit from incentive compensation programs that include financial performance metrics when those metrics support the delivery of safe, reliable, and affordable utility service. Maintaining financial strength provides the utility with the ability to attract capital, invest in infrastructure, maintain credit quality and provide service at the lowest reasonable long-term cost. These outcomes can directly and indirectly benefit customers.

Financial performance metrics can encourage management and employees to focus on cost control, productivity improvements, and the efficient use of company resources. When a utility successfully manages its costs, those efficiencies can help moderate future revenue requirements and reduce upward pressure on customer rates. Company testimony in prior proceedings has recognized that financial metrics can incentivize employees to reduce costs where possible, thereby providing benefits to customers.

In addition, financial performance metrics can support the utility's ability to maintain strong creditworthiness. Utilities are capital-intensive businesses that rely heavily on access to debt and equity markets to finance system investments. A utility with stronger financial performance generally has greater access to capital and may be able to obtain financing on more favorable terms. Because financing costs are ultimately reflected in rates, maintaining financial health can contribute to lower costs for customers over time.

Q. HOW DO YOU RESPOND TO THE ARGUMENT THAT FINANCIAL PERFORMANCE METRICS BENEFIT SHAREHOLDERS RATHER THAN CUSTOMERS?

A. It is true that shareholders benefit when a utility performs well financially. However, shareholder benefits and customer benefits are not necessarily mutually exclusive. A financially healthy utility is generally better positioned to attract capital, maintain infrastructure, respond to emergencies, retain qualified employees, and support ongoing investments necessary to provide safe and reliable service.

The relevant regulatory question is not whether shareholders receive some or even a primary benefit from a financial metric. Rather, the question is whether the metric also advances legitimate utility objectives that support customer service, affordability, reliability, safety, or operational efficiency. Where such a connection exists, customers may derive meaningful benefits from the incentive program.

Q. IS IT REASONABLE TO CONCLUDE THAT CUSTOMERS CAN BENEFIT FROM INCENTIVE COMPENSATION PROGRAMS THAT INCLUDE FINANCIAL PERFORMANCE MEASURES?

A. Yes. In my opinion, incentive compensation programs that include reasonable financial performance metrics can benefit customers by encouraging efficient operations, controlling costs, supporting workforce retention, maintaining financial strength, and preserving access to capital needed to provide safe and reliable utility service. Consistent with prior Commission precedent, the existence of financial metrics within an incentive compensation program should not, by itself, determine whether the associated costs are

recoverable. Instead, the appropriate inquiry is whether the program, viewed as a whole, promotes outcomes that benefit utility customers.

Q. REGARDING YOUR SECOND REASON TO REJECT OCA'S POSITION, PLEASE EXPLAIN HOW PEOPLES INCENTIVE COMPENSATION IS PART OF A FAIR, MARKET-BASED LEVEL OF TOTAL COMPENSATION.

A. As discussed in my Direct Testimony, **Peoples Statement No. 2**, to retain talent, Peoples must offer benefits comparable to other companies. Offering Incentive Compensation is one way for Peoples to retain talent by offering market-based incentives to Company employees. The Company has undertaken research to ensure that it offers market-based compensation and incentive programs. Eliminating or reducing these programs would have a significant impact on the Company's ability to attract and retain competent employees.

Compensation programs are regularly reviewed to ensure market competitiveness to attract, retain, and reward talented employees necessary to provide safe and reliable service. The Company utilizes several compensation surveys to compare itself against market data and trends. Further, benchmarking against the market is done internally by human resources utilizing various third-party sources based upon third-party survey information.

Q. DO MS. OKUM AND MR. GEIGER OBJECT TO THE OVERALL LEVEL OF INCENTIVE COMPENSATION OR THE PROGRAMS THEMSELVES?

A. No. Neither is opposed to the existence of incentive compensation programs nor the levels of such programs rather they are only opposed to the portion tied to financial metrics.

Q. PLEASE EXPLAIN YOUR THIRD REASON WHY I&E'S AND OCA'S POSITION ON INCENTIVE COMPENSATION SHOULD BE REJECTED.

A. I am not aware of and I have been advised by counsel that there are no regulations that prohibit utilities from recovery of incentive compensation that is tied to financial metrics.

Further, as part of a prior UGI Electric base rate case proceeding (Docket No. R-2017-2640058) an argument was made to disallow recovery of certain employee compensation costs because they contained certain financial metrics beyond metrics related to duties directly related to the provision of service. The Commission rejected that argument. In particular, the Order specifically stated that "the fact that the program includes a financial metric does not disqualify it from allowance as an expense for inclusion in the rate base". (*See e.g., UGI 2018 Order* at 74.)

Q. MS. OKUM STATES THAT SHE IS UNABLE TO MAKE A SPECIFIC RECOMMENDATION REGARDING LONG-TERM INCENTIVE COMPENSATION AT THIS TIME. HOW DO YOU RESPOND?

A. I&E submitted the interrogatory on June 11, 2026, with a due date of June 22, 2026, which was four days after June 18, 2026, when other parties' direct testimony was due. Regardless, I&E has had the response for 24 days and has not filed supplemental testimony. As such, any further recommendations for an adjustment should be rejected as the Company will not have sufficient time to rebut the adjustment and allowing such an adjustment to be introduced at a later stage of the proceeding raises due process concerns.

E. EMPLOYEE BENEFITS EXPENSE

Q. WHAT ADJUSTMENT DOES I&E MAKE TO THE COMPANY'S CLAIM FOR EMPLOYEE BENEFITS EXPENSE?

A. I&E witness Okum made two adjustments related to employee benefits expense: 1) employee benefits impact of the vacancy adjustment discussed above and 2) an adjustment related to the LIURP employee add back discussed below.

Q. DO YOU AGREE WITH THIS ADJUSTMENT?

A. I do not. The employee benefits expense adjustment proposed by Ms. Okum related to the vacancy adjustment and LIURP position are both inappropriate as discussed above in the "Labor/Vacancy Expense" section.

F. CORPORATE INSURANCE

Q. EXPLAIN I&E'S PROPOSED ADJUSTMENT TO THE COMPANY'S CORPORATE INSURANCE CLAIM.

A. I&E Witness Okum accepts the Company's adjusted claim amount as presented in the response to Interrogatory No. I&E-RE-21. The corrected claim for Corporate Insurance is $7,668,379 (from I&E-RE-21, see **Exhibit No. APW-1-R**) which is a $1,738,446 increase from the original amount included in the claim of $5,929,933 (**Exhibit No. 4, Page 2, Line 10**). Please note that the response to Interrogatory No. I&E-RE-21 incorrectly stated the impact to the Company's claim. However, I&E did not accept the Company's proposed increase resulting from the historical average which amounts to a reduction of $1,430,352. The net of these adjustment is an increase of $335,710 to the Company's original claim.

Q. DO YOU AGREE WITH I&E'S RECOMMENDATIONS.

A. I agree with the adjustment to increase the Corporate Insurance claim by $1,738,446 but do not agree with the reduction of $1,430,352 as this is based upon the multi-year average increase proposal which was addressed in Section III. B. above.

Q. EXPLAIN OCA'S PROPOSED ADJUSTMENT TO THE COMPANY'S CORPORATE INSURANCE CLAIM.

A. OCA Witness Geiger proposes to reduce the Company's claim for insurance by $150,963. However, this is based upon the incorrect description of the impact of the revisions made in the response to Interrogatory No. I&E-RE-21. As noted above, I&E pointed out that the Company original claim for insurance was $5,929,933 (**Exhibit No. 4, Page 2, Line 10**) not the $7,819, 341 as shown on **Exhibit No. 4, Page 15, Line 10**. As a result of this, it appears that OCA is accepting the Company's adjusted claim amount and thus their proposed expenses should be increased by $1,889,409 ($1,738,446 – from above plus adding back the erroneous adjustment of $150,963 which is no longer necessary.)

G. <u>EMPLOYEE EXPENSES</u>

Q. THE OCA PROPOSED TO REMOVE $756,875 OF EXPENSE FOR EMPLOYEE EVENTS AND EMPLOYEE SERVICE AND SAFETY AWARDS. (OCA St. No. 2, p. 18). DO YOU AGREE WITH THIS ADJUSTMENT?

A. I do not. OCA Witness Geiger provides a generic argument against these expenses. Specifically, he states that "Ratepayers should not be responsible for expenses which do not relate to the provision of safe and reliable utility service" (OCA Stmt. No. 2, page 18).

Q. PLEASE EXPLAIN THESE PROGRAMS.

A. Below is a table for the Company's response to I&E-RE-30.

e. Employee Activity Costs:	Peoples Natural Gas Company LLC
EMPLOYEE EVENTS	51,541
MANAGEMENT LEADERSHIP MEETING	768
DEVICE REIMBURSEMENT	126,820
OTHER	74,402
PARKING LEASES	203,085
SERVICE/SAFETY AWARDS	247,078
< $500	34,305
SAFETY-RELATED	18,875
Total Employee Activity Costs	**$ 756,875**

Below is a table explaining each of these items and the basis for recovery:

Description	Reason for Inclusion
Employee Events & Management Leadership Meeting	These costs mainly relate to small employee gatherings such as the Special Olympics Polar Plunge event, team lunches and other similar costs. These costs are an integral part of the Company's employee recognition and engagement program that ensures an engaged workforce.
Device Reimbursement	This is the cost of the Company's Bring Your Own Device Program ("BYOD"). In lieu of paying for company cell phones for employees that require a cell phone as part of their core responsibilities, the Company reimburses employees $60 per month for use of the employee's own cell phone. This eliminated the need to administer cell phones and cell phone contracts for employees.
Parking Leases	These costs represent the reimbursement for parking on the North Shore for certain employees due to the location of the Company's headquarters in the city of Pittsburgh having no surface lot as part of its building. This is considered an important employee benefit to attract and retain employees. Further, this cost is in lieu of having to build and maintain a surface lot like at other company locations.
Service/Safety Awards & Safety-Related	Service Awards are another important component of the Company's recognition programs. As part of the workplace culture survey completed in mid-2018 the results revealed that employees felt the company could improve both recognition and reward program objectives and frequency. In particular, non-union employees specifically noted that the discontinuation of the service anniversary awards was one component of their dissatisfaction with recognition at the company. With a seasoned, experienced workforce capable of effectively and efficiently addressing customer needs, the company approved the

Description	Reason for Inclusion
	reinstatement of service awards to reward employees' on-going commitment of their careers to Peoples. This is intended to encourage a more frequent and broader recognition of the behaviors and achievements that reflect excellent performance and contributions to Peoples' values, mission, and vision. They report being very pleased and appreciative that Peoples is recognizing that they have committed their careers to the company.
Other, <$500	These represent various other employee activities.

Q. SHOULD THE COMMISSION ACCEPT OCA'S ADJUSTMENTS?

A. No. The Company has demonstrated that these programs are prudent costs that reflect reasonable and important costs aimed at retaining and attracting employees.

H. TRAVEL AND ENTERTAINMENT EXPENSES

Q. OCA AND I&E ALSO PROPOSE TO REMOVE CERTAIN TRAVEL AND ENTERTAINMENT EMPLOYEE EXPENSES. (OCA St. No. 2, p. 40). WHAT IS THEIR BASIS FOR THEIR ADJUSTMENTS?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above. OCA Witness Geiger proposes a reduction of $908,032 as he removes the Company's proposed FTY and FPFTY adjustments and removes $799,375 of other expenses that he asserts are "discretionary entertainment and promotional expenses".

Please note that OCA Witness Geiger has a typo on Row 2 on page 19 of his testimony. He states we used a 5.45% rate whereas we used a 5.14% rate as noted elsewhere

in his testimony. This does not impact his proposal, rather it corrects what he inadvertently stated.

Q. PLEASE EXPLAIN THE $799,375 OF EXPENSES THAT OCA WITNESS GEIGER PROPOSES TO REMOVE AND HOW THESE PROGRAMS BENEFIT CUSTOMERS.

A. First of all, these are not "discretionary entertainment and promotional expenses" as OCA Witness Geiger asserts. Below is a table describing these expenses and the benefits of incurring them.

Description	**Amount**	**Reason for Inclusion**
Employee events	$269,797	These costs mainly relate to the costs associated with an employee picnic at Kennywood, an annual employee event at Lerner Speedway and other such events. These are important employee events that act as a way to build camaraderie and reward employees for hard work. The best places to work have these types of activities.
Sports Sponsorship Related expense	$207,066	Costs represent costs related to corporate functions at sporting venues and other company events. These costs include the value of the tickets received in conjunction with the advertising partnerships the Company has with the various sports teams among other costs. These tickets are used for employee recognition and other such business purposes.
Service Awards & Related	$112,213	These costs relate to the service awards provided to employees to recognize their service anniversary and to reward them for their commitment to serving our customers. This also includes costs related to employee items such as Company shirts for the annual picnic.
Misc. Employee Spending	$210,299	Represents other employee related costs such as other reimbursable meals incurred during approved overtime, business related meals and working meals This equate to about $110 per employee.
Total	**$799,375**	

I. COMPANY MEMBERSHIPS

Q. WHAT IS I&E WITNESS OKUM'S POSITION WITH RESPECT TO COMPANY MEMBERSHIPS?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

Q. OCA PROPOSES TO DISALLOW $115,828 OF CERTAIN EXPENSES RELATED TO THE COMPANY'S CORPORATE MEMBERSHIPS. (OCA St. No. 2, pp. 16-17.) OCA ARGUES THAT THESE EXPENSES SHOULD BE DISALLOWED BECAUSE THESE MEMBERSHIPS ARE NOT RELATED TO PROVIDING UTILITY SERVICE, DO YOU AGREE?

A. I do not. Below is a matrix of the organization that he proposes disallowing along with the Company's explanation of why they should be included:

Organization	Amount	Basis for Inclusion in the Claim
AI Horizons	$28,716	This is a business development group comparable to a chamber with a focus on attracting business & industry related to artificial intelligence and data centers to Western Pennsylvania. The Company joined the group to support their economic development in the region.
African American Chamber of Commerce, Beaver County Chamber of Commerce, Greater Pittsburgh Chamber of Commerce, North Side Chamber of commerce, Pittsburgh Airport Area Chamber of commerce, Pennsylvania Chamber of Business & Industry,	$68,619	These organizations are created to serve both the companies and the individuals in these specific regions to improve the economy and quality of life through legislative and regulatory improvements. These are a "unified voice" to convey the needs and priorities of the region to local, state, and federal decision makers. Without being part of these organizations that are created for the greater good of our region, the organizations

Organization	Amount	Basis for Inclusion in the Claim
Downtown Neighbors Alliance, Pittsburgh Metropolitan Area Hispanic Chamber of Commerce, and Downtown Neighbors Alliance		lose power in their voice to do right by our region and its inhabitants.
Curate Solutions Inc.	$13,701	This is a technology that allows our business to track city and county ordinances, policies and regulations that could impact our business. This technology keeps us abreast of any policy changes that could affect Peoples Gas and its customers.
Leadership Pittsburgh Inc.	$13,324	The Company supports participation in Leadership Pittsburgh Inc. because it provides valuable leadership development, community engagement, and regional collaboration opportunities that ultimately benefit both the Company and its customers. Leadership Pittsburgh's mission is to strengthen regional leadership through programs, partnerships, and connections that bring together leaders from business, government, nonprofit, and civic organizations to address issues affecting Southwestern Pennsylvania. Participation in Leadership Pittsburgh enhances an employee's understanding of the economic, social, and infrastructure challenges facing the communities the Company serves. Through interaction with leaders from diverse sectors, participants gain broader perspectives, learn best practices, and develop relationships that can facilitate collaboration on issues affecting customers and the region. From a customer perspective, these experiences help Company leaders become more informed and effective decision-makers. Improved leadership capabilities support better strategic planning, stronger stakeholder engagement, and more responsive customer-focused policies. In addition, the program's emphasis on regional problem-solving and community impact aligns with the Company's obligation to

Organization	Amount	Basis for Inclusion in the Claim
		provide safe, reliable, and affordable utility service while contributing positively to the economic vitality of the communities it serves. The Company has numerous leaders participate in this development program.
Total	**$115,828**	

J. LICENSE AND PERMITS

Q. WHAT IS I&E WITNESS OKUM'S POSITION WITH RESPECT TO LICENSE AND PERMITS EXPENSE?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

K. UTILITIES AND FUEL EXPENSE

Q. WHAT IS I&E WITNESS OKUM'S POSITION WITH RESPECT TO UTILITIES AND FUEL EXPENSE?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

L. ADVERTISTING EXPENSE

Q. WHAT ADJUSTMENTS DO I&E AND OCA RECOMMEND TO THE COMPANY'S ADVERTISING EXPENSE AND WHAT IS THE REASONING FOR THE PROPOSED ADJUSTMENTS?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above ($75,656), the Holiday Market Costs ($150,000) and various sports related advertising items ($997,630).

OCA Witness Geiger proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above ($75,656) and an adjustment for the Holiday Market ($125,000).

Q. BOTH I&E WITNESS OKUM AND OCA WITNESS GEIGER PROPOSE TO REMOVE $125,000 RELATED TO THE HOLIDAY MARKET. DO YOU AGREE WITH THIS ADJUSTMENT?

A. I do not. OCA Witness Geiger references the response to I&E-RE-26. However, the amount shown on that schedule was related to a HTY adjustment that was necessary because the HTY included an accrual reversal credit. This positive adjustment of $125,000 was necessary to ensure the amount in the HTY related to the Holiday Market was zero. Starting in 2024 this sponsorship was funded by the Essential Foundation not by Peoples and was not claimed in this case. Exhibit 4, Schedule No. 4 illustrates these adjustments. In 2023 Peoples paid for this so the expense was removed. In late 2024 an accrual was booked and reversed in 2025 thus a credit was necessary to remove this in the 2024 amounts and a charge was necessary in 2025 to remove the reversal of the accrual.

Q. WHAT WAS THE BASIS FOR INCLUDING THE ADVERTISING COSTS THAT I&E PROPOSES TO REMOVE FROM THE CLAIM?

A. There are three main reasons. First, Peoples claim for advertising expenses reflects only expenses which satisfy at least one of the criteria set forth in Section 1316(a) of the Public Utility Code which are as follows:

1. Advertising that is required by law or regulation is addressed, for example, by costs projected for notices to ratepayers of proposed changes in our rates, pamphlets that advise them of their rights as consumers, and information on means of using their energy services more effectively and efficiently.

2. Advertising that is in support of financing.

3. Advertising that encourages energy independence is addressed, for example, by costs projected for publications that educate consumers on the use of domestic natural gas as a heating fuel instead of oil, or as a motor vehicle fuel instead of gasoline.

4. Advertising that provides important information to the public regarding the pipelines being replaced as part of our infrastructure replacement program and safety messages such as “Call before you dig” and explanations of gas odorization. Rate changes, means of reducing usage or bills, and energy conservation are addressed, for example, by costs projected for notices of changes in rates, for publications that provide maintenance tips and information on home winterization, budget payment programs, for billing and payment options as well as for the availability of public funds for payment of utility bills, and for bill inserts.

5. Advertising that provided a direct benefit to ratepayers is represented by most if not all of our projected advertising costs, in that those costs are designed to keep all of our ratepayers or targeted groups of our ratepayers well informed of issues of interest to them, including information related to our infrastructure replacement program.

6. Advertising that is for the promotion of community service or economic development.

Second, these costs are integral components of the Company's advertising and outreach program and directly benefit our customers. Peoples maintains ongoing sports partnerships with the Pittsburgh Penguins, Pittsburgh Steelers, and the Altoona Curve.

Through these relationships, Peoples is able to share information about key customer services and vital safety messages with large, concentrated groups of customers and with the public. These opportunities include digital and video ads on scoreboards and stadium televisions, on-site promotions such as banners, wraps and decals, digital advertising on widely visited team websites, print ads in sports programs, and radio spots during games. These advertising and outreach programs focus on safety, bill assistance programs, and other key messages.

Peoples uses partnerships with local professional sports teams to increase customer and public awareness of critical safety information in the seasons which most closely correspond to the potential dangers.

For example, Peoples leverages its partnerships with the Altoona Curve to promote "Call 811" safe digging practices, using print and video advertising at the ballpark as follows:

- Video ads, shown on the stadium scoreboards, promote Safe Digging with rotating messages to reinforce the importance of Calling 811, including a spot debuting in 2026 with the slogan: "Before You Dig A Hole, Make 811 Your Goal"

- Printed programs include ads promoting 811 and the Pennsylvania One Call system, informing fans why and how to call before excavation.
- The ads refer the public to valuable resources on safe digging and other gas safety priorities on Peoples' website at peoples-gas.com/safety. This web page and related Safe Digging pages accrued more than 47,000 views from 2024 – July 2026, driven by the Company's advertising efforts at these venues and in other formats.
- The campaign is supported by Peoples' social media channels, where content regularly promotes safety messages such the Locate the Locator series that educates on safe digging while spotlighting local landmarks, including the Altoona Curve stadium.

The Company also works with other partners to focus campaigns on other key safety initiatives. During the fall and winter months, Peoples' communications assets for the Pittsburgh Steelers partnership focus on regulatory messaging surrounding how to use your senses to recognize and respond to natural gas leaks, while advertising assets at Pittsburgh Penguins games educate the public about carbon monoxide poisoning and how to detect and prevent this danger.

Sharing these vital safety messages serves to directly protect Peoples customers and the public, including the customers of all other utility companies in the region. Additionally, all three partnerships are used as platforms to communicate about bill assistance programs such as LIHEAP and the Dollar Energy Fund during the winter heating seasons.

Peoples' sports partnerships deliver significant value to customers by increasing awareness of high-demand services and important safety messages in a timely manner, while also contributing to significant, holistic economic growth within Peoples' service territory. The ongoing health of the company is directly connected to this growth.

Peoples' company mission is to make lives better. By supporting popular sporting events and thoughtfully leveraging corresponding message opportunities, Peoples upholds its commitment to the customers and communities it serves and provides them a direct benefit.

Third, they provide a direct benefit to our community and thus our customers. Although these partnerships are integral aspects of our advertising campaigns related to billing practices, safety, and other messaging, these partnerships have further benefits. Section 1316(a) of the Public Utility code sets forth criteria regarding the recoverability of advertising expenses incurred by a utility. The last item listed, (6), states that advertising that "is for the promotion of community service or economic development" is recoverable.

Peoples' partnerships with the Pittsburgh Penguins, Pittsburgh Steelers and Altoona Curve fit under item (6) as these major league sports franchises are catalysts for economic development in the City of Pittsburgh and the Western Pennsylvania region, as well as are regional leaders in community service.

A 2024 study by PricewaterhouseCoopers LLC estimated that the Pittsburgh Steelers generated approximately $3.4 billion in direct or indirect contributions to Allegheny County and helped create more than 3,000 jobs in a four-year period studied, in addition to providing $140 million in tax revenue to local and state

governments[3]. The Steelers economic impact, supported by Peoples and fellow advertising partners, brought the 2026 NFL Draft to Pittsburgh, attracting 805,000 attendees during a three-day period, of which nearly half visited from more than 50 miles away. The NFL Draft also spurred unprecedented investments in public spaces throughout Pittsburgh and generated more than 14.8 billion media impressions worldwide, creating lasting positive impressions of the region that experts anticipate will lead to future investment and visitation to Western Pennsylvania. Steelers executive Dan Rooney has estimated the economic impact of the 2026 NFL Draft alone at $200 million dollars.[4]

In addition, these franchises are engaged in many community service projects throughout the region, promoting healthy lifestyles and civic pride among local residents. For example, the Pittsburgh Penguins Foundation's most recent Community Impact Report[5] cites charitable investments exceeding $6 million benefitting more than 200 local organizations in 2024 – 2025. The team has also awarded more than $250,000 in scholarship grants to hundreds of local students since the Foundation's inception.

By sponsoring the major league sports franchises, Peoples helps spur economic development in the region and creates a positive community brand for Western Pennsylvania, which makes the region a more attractive place for businesses to locate and create jobs and has a direct benefit for our customers.

M. <u>FLEET EXPENSE</u>

[3] https://www.bizjournals.com/pittsburgh/news/2024/09/19/steelers-economic-impact-new-report.html

[4] https://www.monvalleyindependent.com/2026/02/20/rooney-discusses-impact-of-nfl-draft-at-economic-forum/

[5] https://online.flippingbook.com/view/790203871/6/

Q. WHAT IS I&E WITNESS OKUM'S POSITION WITH RESPECT TO FLEET EXPENSES?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

N. MATERIALS AND SUPPLIES EXPENSE

Q. WHAT IS I&E WITNESS OKUM'S POSITION WITH RESPECT TO MATERIALS AND SUPPLIES EXPENSE?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

Q. WHAT IS OCA WITNESS GEIGER'S POSITION WITH RESPECT TO MATERIALS AND SUPPLIES EXPENSE AND DO YOU AGREE WITH THE ADJUSTMENT?

A. OCA Witness Geiger recommends utilizing a three-year average of expenses. I do not agree with this adjustment for the reasons stated in Section III. B. above.

O. RATE CASE EXPENSE

Q. BOTH OCA AND I&E PROPOSE ADJUSTMENTS TO THE COMPANY'S RATE CASE EXPENSE CLAIM. PLEASE SUMMARIZE THESE ADJUSTMENTS.

A. OCA Witness Geiger proposes a 5-year normalization of rate case expense and I&E Witness Okum proposes a 56-month amortization of rate case expense rather than the Company's two-year amortization. I note that no party objected to the underlying claim for rate case expense.

Q. DO YOU AGREE WITH EITHER OCA OR I&E'S RECOMMENDATION REGARDING THE NORMALIZATION PERIOD?

A. No. I do not.

Q. PLEASE EXPLAIN PEOPLES' BASIS FOR A TWO-YEAR AMORTIZATION PERIOD AS ORIGINALLY PROPOSED.

A. Peoples filed rate cases in 2010, 2012, 2019 and 2023. The reason seven years elapsed between the 2012 case and the 2019 case was a result of the stay out period committed to in the Company's acquisition of the Equitable Gas Company. Further, the main reason for the time that has elapsed between the 2019 and 2023 case was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election in Docket No. P-2020-3021191. Specifically, the Company changed its tax accounting method to define its unit of property under the IRS's tangible property regulations, which allowed the Company to prospectively deduct, as an operating expense on its income tax returns, the costs of certain asset improvements that otherwise would be capitalized and depreciated for tax purposes. See **Peoples Statement No. 7-** the Direct Testimony of Angela Jiang for further discussion. As a result of the above rate case history the time between this rate case and the 2023 is the most appropriate as it normalizes out the unique items discussed above. As such, the Company is utilizing a two-year amortization of rate case expenses.

Q. IS THE COMPANY'S PROPOSAL GENERALLY CONSISTENT WITH BOTH THE OCA AND I&E'S PROPOSALS?

A. Yes. The Company utilized the timeframe between its most recent case and the current case for the reasons stated above and did not use a longer history as there were extenuating circumstances that caused the longer period between cases. Neither OCA nor I&E provided reasons to ignore the Company's use of a shorter period. At worst an argument could be made that 27 months is appropriate rather than the 24 months the Company proposed as the Company's proposal rounded the 27-month period between the two most recent cases to 24 months. This would result in reducing the Company's claim by $108,889 ($1,960,000 ÷ 27 months x 12 months = 871,111 - $980,000 = ($108,889)). However, due to the Company's LTIIP commitments alone it is reasonable to round down from 27 months to 24 months as the time period between future rate cases is likely to be closer to 24 months or even less.

Q. WHAT IS THE COMPANY'S PROJECTED LTIIP SPEND FOR THE TWO CALENDAR YEARS SUBSEQUENT TO THE FPFTY?

A. The Company expects to spend $1.23 billion in 2028 and 2029.

Q. DID YOU PREPARE AN ANALYSIS REGARDING LTIIP COMMITMENTS AND SUFFICIENCY OF DSIC RECOVERY?

A. Yes. The revenue requirement on $1.23 Billion in spend would be over $100 million. 5% of proposed distribution revenue is less than $45 million. As this clearly illustrates DSIC revenue would cover less than half of the revenue requirement on this spend. This

illustrates that DSIC revenue is insufficient to provide an adequate return on two years of LTIIP capital expenditures for infrastructure replacement beyond the FPFTY. Further, this analysis does not take into account the Company's anticipated cost increases expected during 2028 and 2029 as well as further capital expenditures related to non-LTIIP needs. As such, this more than supports a two-year amortization of rate case expenses as it is more indicative of the time period between future rate cases.

Q. WHY ARE BOTH OCA AND I&E'S AMORTIZATION PERIOD FLAWED?

A. Both ignore significant factors why the historical periods chosen by each party are not an appropriate indicator of future circumstance in this instance. First, both I&E and OCA ignore the undisputed fact that the reason seven years elapsed between the 2012 case and the 2019 case was a result of the stay out period committed to in the Company acquisition of the Equitable Gas Company. Second, both I&E and OCA ignore the undisputed fact that the main reason for the time that has elapsed between the 2019 case and the 2023 case was the result of the Company receiving Accounting and Regulatory approval regarding its treatment of the tax repair election. This election alone reduced the Company's revenue requirement by over $100 million dollars.

Q. WHAT IS THE APPROPRIATE CALCULATION TO DETERMINE THE COMPANY'S RECENT RATE CASE FILING HISTORY?

A. The Company's two-year amortization is more appropriate to use and is quite frankly conservative.

Q. I&E CITES OTHER COMPANIES AS EXAMPLES TO SUPPORT ITS POSITION. ARE THESE REFERENCES RELEVANT?

A. No. They are not. The timing between base rate cases depends on many factors and is determined on a case-by-case basis by each utility. The unique facts and circumstances of Peoples should be considered rather than the facts and circumstances of the other companies that are unrelated to Peoples. Peoples has no control over the frequency at which another unrelated utility files its rate cases. The information provided above regarding the circumstances unique to Peoples supports the argument that a two-year amortization is appropriate in this case.

Q. DO YOU AGREE WITH THESE PROPOSED ADJUSTMENTS?

A. For the reasons stated above, I do not. The Company's original proposal of a two-year normalization should be accepted.

P. PENSION EXPENSE

Q. PLEASE EXPLAIN I&E'S PROPOSED ADJUSTMENTS TO THE COMPANY'S PENSION EXPENSE.

A. I&E Witness Okum recommends disallowance of the entire FPFTY claim for pension expense based on the overfunded status of the plan and because she believes that "It is questionable whether the Company will need to make a cash contribution in 2026 or 2027."

Q. DO YOU AGREE WITH I&E'S PROPOSED ADJUSTMENTS?

A. No. The Company utilized the same methodology of using a historical average of contributions that was used in prior cases and proposed in prior cases by I&E. For example,

in the Company's previous rate case at Docket No. R-2024-3044549 I&E proposed a 3-year average of contributions in a period of time where contributions were increasing. I also find this argument inconsistent with I&E Witness Okum's argument regarding rate case expense where she refused to take external factors into account.

Q. PLEASE EXPLAIN WHY A COMPANY MAY CONTINUE TO MAKE PENSION CONTRIBUTIONS DESPITE THE PENSION PLAN BEING OVERFUNDED.

A. The existence of an overfunded pension position at a particular point in time does not mean that future pension contributions are unnecessary or imprudent. Pension funding decisions are based on long-term obligations and funding policies designed to ensure that sufficient assets are available to meet promised retirement benefits over many decades.

A pension plan's funded status is highly sensitive to factors that are outside of management's control, including investment performance, discount rates, employee demographics, mortality assumptions, retirement patterns, and other actuarial factors. As a result, a funded position that appears favorable in one year can change materially in subsequent years. Consequently, prudent pension management requires the Company to evaluate funding needs on a prospective basis rather than relying solely on a snapshot of the plan's funded status at a single point in time.

The Company also seeks to maintain an appropriate funding cushion to mitigate the effects of potential market volatility and changing actuarial assumptions. Maintaining a strong funded status reduces the risk that significant future contribution requirements could arise during periods of economic stress. This approach benefits both employees and

customers by promoting long-term financial stability and reducing the likelihood of substantial swings in future pension expense.

Furthermore, pension contributions reflect cash funding requirements and funding policies that are distinct from pension accounting measurements. The accounting funded status reported on the balance sheet does not, by itself, determine the amount of prudent future contributions. Pension funding decisions are based upon actuarial evaluations of future obligations, expected benefit payments, regulatory requirements, and the Company's long-term funding objectives.

The Company's approach is consistent with sound financial management principles. A well-funded pension plan strengthens benefit security for employees, supports long-term financial stability, and reduces the potential for larger funding requirements in future periods. For these reasons, the mere existence of an overfunded pension position does not support eliminating pension expense from rates or concluding that future pension contributions are unnecessary.

Q. DO YOU BELIEVE THAT THE COMPANY'S PROPOSAL IN THIS CASE IS FAIR TO RATEPAYERS?

A. Yes. Ratepayers have received the benefit of the Company contributing more to pensions than the accrual amount over recent years. It is fair for ratepayers to include the Company's projected contribution in rates in this proceeding. Further, in recent cases multi-year averages were used as contributions were increasing. As such, the amount recovered from ratepayers likely did not match the amount the company contributed.

Q. OUTSIDE SERVICES – CONTRACTED

Q. WHAT DOES I&E PROPOSE WITH RESPECT TO THE COMPANY'S CLAIM FOR OUTSIDE SERVICES – CONTRACTED?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase adjustments which were addressed in Section III. B. above.

R. OUTSIDE SERVICES – A&G

Q. WHAT DO I&E AND OCA PROPOSE WITH RESPECT TO THE COMPANY'S CLAIM FOR OUTSIDE SERVICES – A&G?

A. I&E Witness Okum proposed to eliminate the Company's multi-year average increase and OCA Witness Geiger proposes to utilize a 3-year average of these expenses rather than the Company's proposal.

Both of these adjustments were addressed in Section III. B. above.

S. NATURAL GAS WATER TANK REBATE PILOT

Q. DOES ANY PARTY MAKE EXPENSE ADJUSTMENTS RELATED TO THE COMPANY'S PROPOSED NATURAL GAS WATER TANK REBATE PILOT?

A. Yes. OCA Witness Geiger makes an adjustment to reject this program and the proposed $500,000 expense recovery related to it. Peoples Witness Ravenstahl addresses the reasons for this program in his testimony **Peoples Statement No. 8-R**. For the reasons he outlined this program should be approved as well as the expense claim of $500,000.

T. PAYMENT PROCESSING EXPENSES

Q. PLEASE EXPLAIN OCA'S AND I&E's PROPOSED ADJUSTMENTS TO THE COMPANY'S PAYMENT PROCESSING EXPENSE?

A. Both I&E Witness Okum and OCA Witness Geiger propose using the HTY expense in the claim and rejected both of the Company's proposed adjustments to the HTY expense.

Q. PLEASE EXPLAIN THE ADJUSTMENTS TO THE HTY EXPENSE THE COMPANY PROPOSED?

A. The Company increased the FTY and FPFTY expense by 22% or $939,253 to account for the expected increased adoption of this service by customers and increased the FPFTY expense by 2.7% or $77,284.

Q. HOW DID THE COMPANY ARRIVE AT ITS PROJECTION FOR INCREASED ADOPTION OF THIS SERVICE?

A. The 22% represents the average percentage increase of payment processing fees over the last two years resulting from an increase in customer usage for these payment channels. The Company did not utilize a longer period of time because the increase prior to that would have been impacted by the adoption of no fee credit cards by the former Peoples Gas Company customers that was approved in the prior base rate case.

Q. SHOULD THE COMPANY'S CLAIM BE ACCEPTED?

A. Yes. There are numerous reasons which I will elaborate on below.

Q. PLEASE EXPLAIN WHY IT IS REASONABLE TO EXPECT A GROWING PERCENTAGE OF CUSTOMERS TO PAY THEIR UTILITY BILLS USING CREDIT CARDS.

A. Based on well-documented national payment trends, advancements in digital payment technology, and the Company's expansion of electronic payment options, it is reasonable to expect an increasing share of customers to utilize credit cards for utility bill payments.

First, national payment studies conducted by the Federal Reserve demonstrate a continuing migration toward electronic and card-based payments. The Federal Reserve's 2025 *Diary of Consumer Payment Choice* found that credit cards accounted for 35% of all consumer payments, making them the most frequently used payment instrument in the United States. The study further found that increased credit card usage, remote payments, and mobile-device payments were significant contributors to the growth in overall consumer payment activity. Consumers made an average of 48 digital payments per month in 2024, reflecting a continuation of the trend toward digital payment methods.

Second, the Federal Reserve has documented long-term growth in non-cash payment activity. Data from the Federal Reserve Payments Study show continuing increases in card payment volumes and values across the U.S. economy. The growth of general-purpose card payments has been persistent over multiple reporting periods, demonstrating widespread consumer acceptance of electronic payment methods for both recurring and discretionary expenses.

Third, utility-specific research shows that consumers increasingly view credit cards as an acceptable and convenient method for paying utility bills. A 2025 study of consumer bill-payment behavior found that 70% of consumers use credit cards to pay at least some

of their bills, including utility bills. The same study reported that 42% of respondents specifically use credit cards for utility payments and that approximately one-half of respondents believe credit cards make it easier to pay bills on time. The research also found that consumers often use credit cards to gain convenience, financial flexibility, rewards benefits, and automated payment capabilities.

Fourth, utility customers increasingly expect digital and mobile payment options. The Federal Reserve's consumer payment studies indicate that remote and mobile payments continue to grow. Remote payments have increased year after year since 2021, while mobile-phone-based payments have nearly tripled since 2018. These findings demonstrate that customers increasingly prefer payment methods that allow them to make payments electronically without mailing checks or visiting payment locations.

Accordingly, when national consumer payment trends, utility-industry payment research, and the Company's available payment technologies are viewed collectively, the expectation that a higher percentage of customers will pay their bills using credit cards is supported by objective evidence and reflects observable marketplace behavior rather than mere speculation.

U. BUILDING LEASES

Q. WHAT ADJUSTMENT DID I&E WITNESS OKUM HAVE REGARDING BUILDING LEASES?

A. I&E Witness Okum accepted the Company’s adjustment of $785,433 which was acknowledged in the response to Interrogatory No. I&E-RE-20.

V. UNIVERSAL SERVICE PROGRAM (“USP”) RIDER

Q. PLEASE SUMMARIZE THE ADJUSTMENTS THE COMPANY PROPOSED TO THE USP RIDER EXPENSE?

A. In order to normalize USP O&M both the O&M and revenue associated with these programs were removed from the claim. This adjustment has no impact on base rates. However, since the Company is proposing three incremental costs be recovered via the USP Rider they are reflected in the O&M Claim. See **Peoples Statement No. 10 - the Direct Testimony of Rita Black** for further discussion of these programs.

Q. PLEASE EXPLAIN THE INCREMENTAL COSTS YOU PROPOSE TO RECOVER IN THE UNIVERSAL SERVICE RIDER.

A. There are three incremental costs the Company proposes to recover. First is the cost associated with a new LIURP Compliance Specialist. Second is the cost associated with the recurring Independent Program Evaluation. This cost was normalized over a six-year period, which represents the frequency of this evaluation. Third is certain costs related to the Company's Cares program. Refer to **Peoples Statement No. 10 – the Direct Testimony of Rita Black** for more discussion.

Q. DID ANY PARTY OPPOSE THE COMPANY'S PROPOSAL?

A. Yes. I&E Witness Okum proposed that the costs of the new LIURP specialist should be recovered in base rates not through the USP Rider. Ms. Okum's basis for this is that "All labor costs should continue to be included in base rates as the Company has done in the past." (I&E St. No. 1, pp. 58-59)

Q. DO YOU AGREE WITH I&E'S RECOMMENDATIONS?

A. I do not. These costs are appropriate to recover through the Rider as they are solely associated with the Universal Service Programs and would not be incurred without these programs. I&E has not provided a sufficient basis other than a need for consistency to past practice as the basis.

Q. IS IT STILL THE COMPANY'S POSITION THAT THE RECOVERY OF THESE COSTS THROUGH THE USP RIDER SHOULD BE APPROVED?

A. Yes.

W. RESIDENTIAL COLLECTION EXPENSE

Q. WHAT DOES OCA WITNESS GEIGER PROPOSE WITH RESPECT TO RESIDENTIAL COLLECTION EXPENSE?

A. OCA Witness Geiger adopts OCA Witness Colton's recommendation with respect to residential collection expense. Specifically, Mr. Colton recommends an adjustment to Peoples' claimed cost of service based on his suggestion that Peoples be directed to implement a 50-50 sharing of the credit and collection expenses which Peoples most recently reported to BCS. (OCA Statement No. 4, pp. 4, 50.) This amounts to a reduction of $3,833,503. This purports to represent 50% of residential collections expense of $6,516,518 and 50% of Confirmed Low-income collection expenses of $1,150,487. However, the Confirmed Low-income collection expenses of $1,150,487 are included in the total residential collections expense of $6,516,518. Thus the adjustment proposed double counts the amount related to Confirmed Low-income collection expenses. As a

result, if Mr. Geiger and Mr. Colton's recommendation is accepted, the adjustment should be $3,258,259 rather than $3,833,503, a reduction of $575,244 in OCA's proposal.

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. I do not. First, Mr. Colton has various observations regarding the Company's collections activity. Peoples Witness Parks (Peoples Statement No. 18-R) will address those specifically. Based upon Witness Parks' testimony it is clear that is a valid recovery expense and OCA Witness Geiger's adjustment should be rejected.

Q. IF MR. COLTON'S PROPOSAL IS ACCEPTED IS THE AMOUNT MR. COLTON'S ADJUSTMENT CORRECT?

A. It is not. Even though I disagree with his adjustment, the amount of the adjustment if it were calculated correctly would be $2,800,493. Colton utilized the sum of the Residential Amount of $5,600,986 plus the confirmed low-income amount of $1,058,271 or $6,659,229 as the base for his adjustment. 50% of this is his adjustment of $3,329,615. However, the confirmed low-income amount of $1,058,271 is included in the residential amount of $6,659,229. Thus he doubled counted the low-income amount. 50% of the confirmed low-income amount is $529,135 and should be rejected. As such, if Mr. Colton's proposal is accepted it should be $2,800,493 not $3,329,615.

X. INTEREST SYNCHRONIZATION

Q. PLEASE EXPLAIN OCA'S INTEREST SYNCHRONIZATION ADJUSTMENT.

A. OCA Witness Geiger proposes a reduction in state income taxes of $2.2 million and Federal income tax expense of $6.0 million associated with the proposed adjustments to the Company's proposed capital structure.

Q. DO YOU AGREE WITH THIS ADJUSTMENT?

A. No. I note that Peoples Witness Nelson responds to OCA's proposed capital structure, cost of equity and overall rate of return in her testimony. Ms. Nelson rejects the OCA's proposals and thus this interest synchronization adjustment should be rejected. However, if the OCA's capital structure adjustment is accepted the interest synchronization adjustment itself should be rejected.

Although interest expense is tax deductible, the resulting increase in revenue is taxable. Thus, this has no impact on income taxes. In other words, a reduction in interest would create lower taxes, but there would be a corresponding increase in revenue which would increase taxes. Below is a chart that illustrates this.

in 000s	Increase Tax Expense	Flow Reduced Interest through Rate Increase	Total
Revenue		$ 31,172	$ 31,172
Interest	$ 31,172		$ 31,172
Pre-Tax Book Income	$ (31,172)	$ 31,172	$ -
Income Taxes at 21%	$ (6,546)	$ 6,546	$ -
Net Income	$ (24,626)	$ 24,626	$ -

Q. IF OCA WITNESS GEIGER'S ADJUSTMENT IS ACCPETED ARE THERE ANY CORRECTIONS?

A. Yes. Witness Geiger utilized the wrong income tax rate as the Company is not requesting nor is it currently recovering state income taxes. Further, the current federal income tax rate is 21%.

Y. COST OF OTHER PARTIES PROPOSALS

Q. DID PARTIES MAKE RECOMMENDATIONS THAT COULD RESULT IN INCURRING ADDITIONAL COSTS?

A. Yes. The following are the recommendations made by both OCA and CAUSE-PA.

OCA:

- Recommendation to implement a 50-50 sharing of credit and collection expenses (Mr. Colton Direct Testimony, p. 50)
- Recommendation to conduct an independent root cause analysis to determine the driver of the disproportionate level of utility disconnections and take steps to reduce the level of disconnections (Mr. Colton Direct Testimony, pp. 4-5 and 56)
- Recommendation to develop and adopt an alternative to the use of SSNs (Mr. Colton Direct Testimony, p. 5 and 57)
- Recommendation for establishing a base CAP participation (Mr. Colton Direct Testimony, pp. 5, 71)
- Recommendation to address call center staffing levels in April (Mr. Larkin Connolly Direct Testimony, pp. 14-18)
- Recommendation to send a direct written explanation to every customer whose bill is rebilled or back billed and flag every affected account (Mr. Larkin Connolly Direct Testimony, p. 39-40)

- Recommendation to implement a policy requiring periodically mailed cost summaries for residential customers (Mr. Larkin Connolly Direct Testimony, pp. 42-43)

CAUSE-PA:

- Recommendation to use the Self Sufficiency Standard for evaluating income (Mr. Cicero Direct Testimony, pp. 21-23)
- Recommendation to conduct a root cause analysis that seeks to address why CAP termination rate increased in 2024 and develop a plan to ensure that it continues to decrease (Mr. Cicero Direct Testimony, p. 73)
- Recommendation to conduct root cause analysis as to why there is a growing number of customers seeking CAP applications but failing to complete the application (Mr. Cicero Direct Testimony, p. 74)

Q. WERE THESE COSTS INCLUDED IN THE REVENUE REQUIREMENTS PROPOSED BY THESE PARTIES?

A. No, the parties did not identify the costs associated with these proposals. As such, the Company is proposing that certain accommodations be made for future recovery of incremental costs incurred as a result of recommendations made by the other parties in this proceeding should any of those proposals be adopted. For example, the Company should be entitled to seek recovery of the corresponding costs in rates.

Please note I am only discussing the cost implications of these proposals. Other Company witnesses will be addressing the underlying proposals.

IV. <u>CONCLUSION</u>

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY OF
CAROL A. SCANLON

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. In my position as Rates Manager, I provide rates and regulatory services to Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 3.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to portions of testimonies set forth by the Pennsylvania Public Utility Commission's ("Commission") Bureau of Investigation and Enforcement's ("I&E") Witnesses Vanessa Okum, D.C. Patel, and Ethan H. Cline, the Office of Consumer Advocate's ("OCA") Witnesses Michael Deupree and Roger Colton, and customer Garrett Ebeck from a public input hearing on June 3, 2026 at 6:00 PM in Ross Township, PA.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes, I am sponsoring Exhibits CAS-1R, CAS-2R, CAS-3R, CAS-4R. CAS-5R.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I address each witness and topic in the following order: (1) other parties' direct testimony related to the Company's proposal to credit customers for the excess book contingency reserve and tax repairs deduction collar by partially offsetting universal service costs as identified by Ms. Okum in I&E Statement No. 1 (Section I, *supra*); (2) the effective date of new rates (January 1, 2027 versus December 27, 2026), identified by Mr. Patel in I&E Statement No. 2 (Section II, *supra*); (3) the recommendation that Peoples be required to provide I&E, OCA, and the Office of Small Business Advocate ("OSBA") an update including actual utility plant balances, actual plant additions, and actual retirements for the 12 months ending 11/30/2026 (by 6/1/2027) and the 12 months ending 11/30/2027 (by 6/1/2028) raised by Mr. Cline in I&E Statement No. 3 (Section III, *supra*); (4) reference to the Governor's letter related to less reliance on black box settlements presented by Mr. Deupree in OCA Statement No. 1 (Section IV, *supra*); (5) issues with the Company's bad debt offset proposal related to both the threshold number of customers and the uncollectible percentage raised by Mr. Colton in OCA Statement No. 4, (Section V, *supra*); and (6) concern about paying both a rate increase and Distribution System Improvement Charge ("DSIC") "simultaneously," expressed by customer Garrett Ebeck at a public input hearing on June 3, 2026 (Section VI, *supra*). Finally, if the Commission were to order any changes

to the Company's Weather Normalization Adjustment ("WNA") result from this proceeding, I will address the appropriate timing of any such changes.

II. PROPOSED CREDIT PARTIALLY OFFSETTING UNIVERSAL SERVICE COSTS

Q. PLEASE EXPLAIN THE POSITION OF MS. OKUM PERTAINING TO THE COMPANY'S PROPOSAL TO PARTIALLY OFFSET THE UNIVERSAL SERVICE COSTS WITH A DEFINED CREDIT.

A. Ms. Okum states that the credit should not partially offset universal service costs, but rather should be treated as a regulatory liability and credited back to all customers. Her reason for this is that the original accumulation of the credit amount was funded by all classes and therefore should be returned to all classes. (I&E Statement No. 1, pp. 59-60.)

Q. DO YOU AGREE WITH MS. OKUM'S POSITION?

A. In part. Fundamentally, the Company understands and appreciates Ms. Okum's stance on this matter. However, as discussed in my direct testimony at Peoples Statement No. 3 and the direct testimony of Rita Black at Peoples Statement No. 10, Peoples believes that its proposal to partially offset universal service costs as a measure towards maintaining affordability for customers is the optimal approach in this unique circumstance. Reducing the costs of these universal service programs is an active measure towards maintaining affordability of these programs for residential customers, while not needing to scale back the underlying universal service programs for the most vulnerable customers. Specifically, income eligible customers who are not participating in Peoples' Customer Assistance Program ("CAP") and customers with incomes that exceed CAP eligibility but that still

struggle to make ends meet would benefit from this proposal as it would reduce the monthly bill obligations. If the credits were flowed back through base rates to all customers, the amount of credit per customer group would be less and not as impactful for residential customers, including those with the most difficulty meeting their monthly bill obligation, as demonstrated in the Company's response to CAUSE-PA-VI-007 attached as **Peoples Natural Gas Exhibit No. CAS-1R.**

Q. DO ANY OF THE OTHER PARTIES RAISE THIS SAME CONCERN ABOUT TREATMENT OF THE CREDIT?

A. No.

Q. IF THE COMMISSION DECIDES THAT ALL CUSTOMERS SHOULD RECEIVE THE CREDIT, AS IS MS. OKUM'S POSITION, HOW SHOULD THIS BE REFUNDED?

A. If the Commission supports the position that all customers receive the credit, Peoples proposes that the credit amount would flow through the existing Tax Repairs Surcredit ("TRS") mechanism rather than the Universal Service Rider mechanism.

Q. PLEASE DESCRIBE HOW THIS REFUND APPROACH WOULD BE EFFECTUATED.

A. **Peoples Natural Gas Exhibit No. CAS-2R** contains an illustrative example of the mechanics of the refund, as compared to Peoples' currently effective TRS rider rate as of April 1, 2026. **Peoples Natural Gas Exhibit No. CAS-3R** contains the same illustrative

example as shown in **Peoples Natural Gas Exhibit No. CAS-2R** but outlines the calculation of the refund amount in Year 2. The Year 2 refund amount does not include a refund for sales and use tax, but includes a larger amount related to the tax repairs deduction collar. I also note that the refund amounts in Years 1 or 2 would not be subject to interest through the rider calculation, consistent with the representation shown in **Peoples Natural Gas Exhibit Nos. CAS-2R and CAS-3R**.

Q. WHICH CUSTOMERS ARE SUBJECT TO THE TRS RIDER?

A. The TRS rider applies to all rate schedules except for customers that receive a discounted delivery charge.

Q. PLEASE EXPLAIN WHY THIS APPROACH IS REASONABLE.

A. Customers that receive a discounted delivery charge rate do not pay the otherwise applicable tariff rate for service. Since negotiated customers already receive the benefit of a discounted delivery rate for service, it is reasonable that the refund at hand is provided to all rate schedules except for customers that receive a discounted delivery charge.

III. EFFECTIVE DATE OF NEW RATES

Q. PLEASE EXPLAIN THE POSITION OF MR. PATEL IN RELATION TO THE EFFECTIVE DATE OF NEW BASE RATES.

A. Mr. Patel avers that the effective date of new rates should be January 1, 2027 rather than December 27, 2026. (I&E Statement No. 2, p. 66.) He points to the Company's Fully Projected Future Test Year ("FPFTY") period of January 1, 2027 through December 31,

2027, and states that the ratemaking claim and calculations are based upon this time period, and therefore it is unjust and unreasonable for the new rates to become effective before this time. (I&E Statement No. 2, pp. 66-68.)

Q. WHAT DOES MR. PATEL STATE THE COMPANY SHOULD HAVE DONE IN ORDER FOR RATES TO BECOME EFFECTIVE ON DECEMBER 27, 2026?

A. Mr. Patel indicates that if Peoples wanted rates effective December 27, 2026, the Company should have used December 1, 2026 through November 30, 2027 as the FPFTY period. (I&E Statement No. 2, pp. 66-68.) Instead, Peoples included a gap month and utilized January 1, 2027 through December 31, 2027 as the FPFTY period.

Q. PLEASE EXPLAIN WHY PEOPLES DID NOT USE DECEMBER 1, 2026 THROUGH NOVEMBER 30, 2027 AS THE FPFTY PERIOD.

A. As has been the practice from prior base rate proceedings, the Company projected its FPFTY in this proceeding with a one-month bridge or gap month between the end of its FTY and the beginning of its FPFTY. In this proceeding, December 2026 is the gap month. The reason for this one-month gap between the end of the FTY and the beginning of the FPFTY is due to the requirements of 66 Pa. C.S. §1308(d), which do not allow the Company to begin the FPFTY prior to the legal effective date of new rates. According to the Commission's Order issued April 16, 2026, "Pursuant to 66 Pa. C.S. §1308(d), the filing will be suspended by operation of law until December 26, 2026, unless permitted by Commission Order to become effective at an earlier date."

Q. IN YOUR PRIOR RESPONSE, YOU MENTION "AS HAS BEEN THE PRACTICE FROM PRIOR BASE RATE PROCEEDINGS." PLEASE ELABORATE.

A. Prior to this base rate case, Peoples' two most recent base rate cases were filed in 2018 at Docket No. R-2018-3006818 and in 2023 at Docket No. R-2023-3044549. As shown in the table below, new base rates became effective during the gap month, but after the suspension period, in both of these cases. The timing of new base rates reflected in this base rate case mimics that of the prior Commission approved effective dates for base rates.

Docket No.	**R-2023-3044549**	**R-2018-3006818**
Filing Date	Dec 29, 2023	Jan 28, 2019
Historic Test Year ("HTY")	Sep 2022 – Aug 2023	Oct 2017 – Sep 2018
Future Test Year ("FTY")	Sep 2023 – Aug 2024	Oct 2018 – Sep 2019
Gap Month	Sep 2024	Oct 2019
FPFTY	Oct 2024 – Sep 2025	Nov 2019 – Oct 2020
Effective Date of New Rates	Sep 27, 2024	Oct 29, 2019

Q. MR. PATEL MENTIONS A SIMILAR RECOMMENDATION IN COLUMBIA GAS OF PENNSYLVANIA, INC.'S ("COLUMBIA") LAST BASE RATE CASE AT DOCKET NO. R-2025-3053499. CAN YOU ELABORATE ON THIS?

A. Yes. Mr. Patel indicates that in Columbia's last base rate case, Columbia requested a rate increase for a 13-day period prior to the beginning of its FPFTY. He states that I&E raised this issue and the Commission agreed with I&E's recommendation to make the new rates

effective on January 1, 2026, and not Columbia's requested rate increase effective December 19, 2025.

Q. HAVE YOU REVIEWED THE COMMISSION'S FINAL ORDER IN COLUMBIA'S LAST BASE RATE CASE RELATED TO THIS TOPIC.

A. Yes.

Q. DO YOU AGREE THAT PEOPLES CASE IS SIMILAR IN MANNER TO COLUMBIA'S CASE WITH RESPECT TO THE PROPOSED EFFECTIVE DATE OF NEW RATES?

A. No, not entirely. One area specifically that the Commission discusses in their Final Order at Docket No. R-2025-3053499 is the concept of rate overlap that triggers an obvious unjust and unreasonable result. In Columbia's circumstance, Columbia filed a rate case on March 15, 2024 at Docket No. R-2024-3046519 that utilized a FPFTY based upon January 1, 2025 to December 31, 2025. As deliberated in the Commission's disposition on the matter, because the rates that the Commission approved for Columbia in their prior case already accounted for the Company's projected expenses through December 31, 2025, allowing another increase to take effect prior to January 1, 2026, would result in rates in excess of the rates established by the settlement agreement of the prior case.

Q. HOW IS PEOPLES' CIRCUMSTANCE DIFFERENT?

A. Peoples' last base rate case was filed December 29, 2023 at Docket No. R-2023-3044549. The FPFTY in that case was based on October 1, 2024 through September 30, 2025. The

FPFTY in this proceeding is January 1, 2027 through December 31, 2027. As evidenced, there is no overlap between rate effective periods or the possibility of duplicate recovery.

IV. UPDATE OF UTILITY PLANT BALANCES, ADDITIONS, AND RETIREMENTS

Q. PLEASE RECAP THE RECOMMENDATION BY MR. CLINE REGARDING PLANT ADDITIONS THAT PEOPLES PROJECTS TO BE IN SERVICE DURING THE FPFTY ENDING DECEMBER 31, 2027.

A. In his direct testimony, Mr. Cline recommends that Peoples be required to provide I&E, OCA, and OSBA an update that includes actual utility plant balances, actual plant additions, and actual retirements for the twelve months ending 11/30/2026 (by 6/1/2027) and the 12 months ending 11/30/2027 (by 6/1/2028). (I&E Statement No. 3, p. 3.)

Q. HOW DO YOU RESPOND TO MR. CLINE'S RECOMMENDATION?

A. The Company is amenable to Mr. Cline's recommendation. In Peoples' 2023 base rate case at Docket No. R-2023-3044549, the Company agreed to the following settlement condition (#47):

> *Peoples will file a Total Company Pennsylvania jurisdictional report showing capital expenditures, plant additions and retirements, by month, for the Future Test Year ("FTY") ending September 30, 2024, and the FPFTY ending October 31, 2025, by January 31 of each of the years following the test years. In Peoples' next base rate proceeding, the Company will prepare a comparison of its actual rate base additions for the twelve months ending October 31, 2025, to its projections in this case. However, it is recognized by Settlement Parties that this is a black box settlement that is a compromise of the Settlement Parties' positions on various issues.*

Attached as **Peoples Natural Gas Exhibit CAS-4R** is the report filed by the Company on January 30, 2026 in relation to the above settlement term. Peoples agrees to file a comparable report for the twelve months ending 11/30/2026 (by 6/1/2027) and the

12 months ending 11/30/2027 (by 6/1/2028) upon approval of new base rates in this proceeding.

V. BLACK BOX SETTLEMENTS

Q. PLEASE DESCRIBE THE TESTIMONY THAT MAKES REFERENCE TO LESS RELIANCE ON "BLACK BOX" SETTLEMENTS.

A. OCA Statement 1, sponsored by Witness Michael Deupree, discusses an open letter sent by Governor Shapiro to utility leaders and the Commission that outlines specific action items that he believes are necessary to combat affordability concerns. (OCA Statement 1, p. 18.) The third of three action items outlined pertains to negotiated settlements wherein the Governor asks for greater transparency and less reliance on "black box" settlements.

Q. WOULD YOU LIKE TO COMMENT ON THIS?

A. Yes. Respectfully, Peoples would like to note the long-standing precedent in relation to "black box" settlements and point out the Commission has long since encouraged "black box" settlement among parties as a means to reduce costs to customers. Specifically, in a prior base rate case for the Company's former Peoples TWP LLC entity, dating back thirteen years, a similar concern over "black box" settlements came up. In the Commission's Final Order at Docket No. R-2013-2355886, Commission stated the following, in part, in its disposition on the matter:

> *We have historically permitted the use of "black box" settlements as a means of promoting settlement among the parties in contentious base rate proceedings. See, Pa. PUC v. Wellsboro Electric Co., Docket No. R-2010-2172662 (Final Order entered January 13, 2011); Pa. PUC v. Citizens' Electric Co. of Lewisburg, PA, Docket No. R-2010-2172665 (Final Order entered January 13, 2011). Settlement of rate cases saves a significant amount of time and expense for customers, companies, and the Commission and often results in*

alternatives that may not have been realized during the litigation process. Determining a company's revenue requirement is a calculation involving many complex and interrelated adjustments that affect expenses, depreciation, rate base, taxes and the company's cost of capital. Reaching an agreement between various parties on each component of a rate increase can be difficult and impractical in many cases.

Q. DO YOU HAVE ANY FURTHER COMMENTS ON "BLACK BOX SETTLEMENTS"?

A. Yes. In terms of transparency, Peoples agrees generally in providing transparency to our customers and interested stakeholders. As such, the Company will include the following clear and transparent information as recommended by Chairman DeFrank's Statement issued February 9, 2026 in Docket No. R-2025-3059523, in the event a settlement is reached in this case:

1. The total average bill for residential, commercial, and industrial customers;

2. The exact percentage of rate increase that residential, commercial, and industrial customers will experience under the settlement rates compared to existing rates; and

3. The Recommended Decision should include the settlement rate impact information identified above.

VI. <u>UNIVERSAL SERVICE RIDER BAD DEBT OFFSET CALCULATION</u>

Q. WHAT ARE THE CONCERNS RAISED BY MR. COLTON RELATED TO PEOPLES' PROPOSED MODIFICATIONS TO THE UNIVERSAL SERVICE RIDER BAD DEBT OFFSET CALCULATION?

A. Mr. Colton does not object to modifying the universal service bad debt offset calculation in this proceeding, however, he does not agree with the Company's proposed base CAP participation level or uncollectible percentage to be used in the calculation. (OCA Statement 4, p. 70.)

Q. PLEASE DISCUSS THE PROPOSED BASE CAP PARTICIPATION LEVEL OVER WHICH THE OFFSET WOULD BE APPLIED.

A. Peoples' proposal for the threshold CAP participation level, over which the offset would be applied, is CAP enrollment in excess of 39,010. This figure is consistent with the base number of projected CAP participants used to set rates in this proceeding, as evidenced in Peoples Natural Gas Exhibit No. 3, Schedule 15 Attachment F for the FPFTY (page 5 of 6). Mr. Colton claims that Peoples has not historically been good at projecting CAP participation for purposes of setting a base over which a CAP offset will apply. (OCA Statement 4, p. 70.) He further goes on to indicate that in the 2023 base rate case, the proposed projected CAP participation level was 33,800 customers, yet by December 2024, the actual CAP participation for Peoples had only reached 26,753 customers. (OCA Statement 4, pp. 70-71.)

Q. DO YOU AGREE WITH MR. COLTON'S ASSESSMENT?

A. No, I do not. First, I note that while the Company proposed 33,800 customers as the base CAP participation level in the 2023 base rate case, Mr. Colton did not agree with the proposal in that case. His recommendation at that time was a participation level of 30,800 based upon projected CAP participation for the year starting October 2024, as presented in Peoples Exhibit No. 3, Schedule 15 Attachment E in that case (rounded to the nearest 100). Peoples accepted his proposal in rebuttal testimony in that proceeding and set the CAP participation level at 30,800. The methodology Mr. Colton recommended in that proceeding is uniform with the Company's proposal in this proceeding. Further, Mr. Colton

indicates that Peoples had only reached 26,753 customers by December 2024. This is not accurate. Mr. Colton referred to Peoples' response to OCA-IV-1 as the basis for his assertion. The response to OCA-IV-1 contains the Company's Universal Service and Collections Report data submitted to the PUC for the years 2019 through 2025. However, these reports only contain the data for customers up to 150% FPL. Peoples' program extends to the 151 to 200% FPL group. Therefore, Mr. Colton is missing these enrollments. The correct CAP participation level as of December 2024 is 31,585.

Q. WHAT DOES MR. COLTON RECOMMEND AS THE BASE CAP PARTICIPATION LEVEL IN THIS PROCEEDING?

A. Mr. Colton recommends a methodology versus a number. Specifically, he indicates the base number should be set at the month-end participation as of the month of a Final Order in this proceeding. (OCA Statement 4, pp. 4, 71.)

Q. DO YOU AGREE WITH MR. COLTON'S PROPOSAL?

A. No. The CAP participation level fluctuates from month to month. While some months remain fairly constant, others do not. The below table depicts the CAP participation levels from January 2025 through May 2026. As evidenced by the data, the CAP participation level from January 2025 to July 2025 increased by 14%. More recently, CAP participation from March 2026 to April 2026 decreased by 7%, and then from April 2026 to May 2026, increased by 3%. As a result of these variations, determining the base CAP participation level using a single data point in time is not appropriate.

Month/Year	CAP Participation
Jan-25	32,547
Feb-25	33,085
Mar-25	33,745
Apr-25	34,640
May-25	35,106
Jun-25	36,008
Jul-25	37,123
Aug-25	37,040
Sep-25	37,028
Oct-25	37,302
Nov-25	37,282
Dec-25	37,717
Jan-26	38,587
Feb-26	38,833
Mar-26	38,926
Apr-26	36,255
May-26	37,359

Q. WHAT DO YOU RECOMMEND AS THE BASE CAP PARTICIPATION LEVEL IN THIS PROCEEDING?

A. My recommendation remains the same. The threshold amount to trigger the bad debt offset calculation should be CAP enrollment in excess of 39,010. This is the base number of projected CAP participants used to set rates in this proceeding and is consistent with the methodology recommended by Mr. Colton in the 2023 base rate case proceeding. However, if the Commission decides that Mr. Colton's recommendation in this proceeding is more appropriate, the base CAP participation level should be determined using an average CAP participation over a period of time rather than a single data point for the reasons discussed above. Further, as discussed above, Peoples' program is unique in that the program extends to customers in the 151 – 200% FPL. This group of customers also needs to be a part of the established base CAP participation level.

Q. PLEASE DISCUSS THE UNCOLLECTIBLE PERCENTAGE TO BE USED IN THE BAD DEBT OFFSET CALCULATION.

A. Peoples' proposal is to use the three-year average residential uncollectible rate of 1.93%, as demonstrated in **Peoples Natural Gas Exhibit No. 19, RR-44**. This uncollectible percentage corresponds with the uncollectible percentage used to establish base rates in this proceeding. Mr. Colton disagrees with this approach and states the offset should not only reflect the uncollectibles, but should also consider avoided working capital expense.

Q. WHAT IS MR. COLTON'S PROPOSAL FOR THE UNCOLLECTIBLE PERCENTAGE?

A. Mr. Colton recommends that Peoples revert back to the approach the Company utilized in the 2023 base rate case proceeding, which is to determine the percentage by dividing the gross write-offs in dollars for confirmed low-income customers by the annual residential revenues for confirmed low-income customers as reported in the Commission's Universal Service Programs and Collections Performance Report(s). (OCA Statement 4, pp. 72-73.) He specifies the appropriate offset is 8.1%, but also offers that if the Company wants to use a multi-year average, it should use a two-year average for 2023/2024, which results in an offset of 7.4%. (OCA Statement 4, pp. 72-73.) He declines use of a three year average because he points out that 2022 data still contains COVID-19 pandemic impacts. (OCA Statement 4, p. 72.)

Q. HOW DO YOU RESPOND?

A. Peoples accepts Mr. Coltons recommendation for the uncollectible percentage and will revert back to the 2023 base rate case approach to establish the percentage offset. The Company does wish to employ a multi-year average for 2023/2024. This results in an offset of 7.4%, as stated by Mr. Colton, and shown in **Peoples Natural Gas Exhibit CAS-5R**.

VII. TIMING OF DSIC RESET

Q. PLEASE DESCRIBE THE CONCERN RAISED BY CUSTOMER GARRETT EBECK AT THE PUBLIC INPUT HEARING IN ROSS TOWNSHIP ON JUNE 3, 2026.

A. Mr. Ebeck raises concerns about the DSIC surcharge mechanism. Specifically, he expresses concerns about paying a surcharge on top of a base rate increase. (Tr. at 157.) He indicates this feels like double dipping and further states customers should not be absorbing a base rate increase and a surcharge simultaneously for the same infrastructure improvements. (Tr. at 157.) He requests that the Commission eliminate the DSIC surcharge versus resetting it to zero in this proceeding. (Tr. at 157.)

Q. PLEASE EXPLAIN WHY DSIC IS RESET TO ZERO UPON THE APPROVAL OF NEW BASE RATES.

A. DSIC is reset to zero when new base rates go into effect because the plant investments that were being recovered through the DSIC surcharge mechanism are rolled into the new base rates established through the base rate case proceeding.

Q. DOES THIS CREATE DOUBLE DIPPING?

A. No, to the contrary. Once the investments previously recovered through the DSIC mechanism are included in base rates, continuing to charge DSIC would result in double recovery. As discussed in the previous question, this is the reason why the DSIC surcharge is reset to zero upon approval of new base rates. Thereafter, the DSIC surcharge would only be utilized to begin recovering costs of new eligible plant additions placed in service after the effective date and level of spending included in the new base rates are surpassed.

VIII. TIMING OF ANY CHANGES TO WNA

Q. IS THERE ANYTHING ELSE YOU WOULD LIKE TO ADDRESS?

A. Yes. Several parties made recommendations to the Company's WNA mechanism, such as modifying the deadband percentage and changing the mechanism to be class based versus a per customer base, among other things. The Company's position on these matters is addressed by Peoples' witness John Taylor at **Peoples Statement No. 17-R**. However, the Company is requesting that if the Commission approves changes to the existing WNA mechanism, outside of the Company's proposal to update the Normal Heating Degree Days ("NHDD") to rely on a 65-year regression-based normal, that the changes not be applicable until the start of next WNA heating season after the Final Order in this proceeding (i.e. October 1, 2027). The Company's new base rates will be effective in the middle of the heating season. In order to effectuate the billing changes and conduct testing, in addition to ensuring consistent WNA treatment to all customers during the heating season, the Company believes it is vital to implement further changes at the start of the WNA period.

IX. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: CAUSE-PA-VI-007

Witness: Scanlon, Carol **Title:** Rates Manager

Question: Refer to Peoples Statement 6 at pages 6-7 and Peoples Statement 10 at pages 20-21. Regarding the tax refunds proposed to be refunded to customers through the Universal Service Rider:

a. What is the projected refund per customer under Peoples's proposal?

b. What would be the projected refund per customer if it were refunded through base rates?

c. Has Peoples considered including CAP customers who are billed according to their average bill in the refund calculation? If so, why did Peoples not include them in the proposal?

d. What would be the projected refund per customer if CAP customers who are billed according to their average bill were included in the refund calculation?

Answer: a. For a residential customer using 86 Mcf annually, the Company estimates that approximately 44 Mcf is used in the months of January through March. Under Peoples proposal, this would yield a total credit of $8.46 (44 Mcf x $0.1924) in 2027 and $24.56 (44 Mcf x $0.5582) in 2028.

b. The proposed credit adjustment per Mcf in Year 1 would change from an estimated ($0.1924) per Mcf to an estimated ($0.0389) per Mcf if refunded through base rates, assuming all customer classes are included, and providing the credit over an annual basis versus January through March as proposed.

The proposed credit adjustment per Mcf in Year 2 would change from an estimated ($0.5582) per Mcf to an estimated ($0.1129) per Mcf if refunded through base rates, assuming all customer classes are included, and providing the credit over an annual basis versus January through March as proposed.

The Company notes the above calculations are based upon spreading the proposed credit amount in each year over the FPFTY volumes versus including the proposed credit amounts in

the cost of service study and allocating the costs to each class.

c. No. Peoples' proposal focused on the two groups of non-CAP customers that would benefit most from this approach as discussed in the direct testimony of Rita Black at Peoples Statement No. 10. Further, Peoples would likely incur significant programming costs to implement such a proposal.

d. If CAP customers are included, Peoples estimates the credit adjustment per Mcf in 2027 would change from an estimated ($0.1924) per Mcf to an estimated ($0.1783) per Mcf.

If CAP customers are included, Peoples estimates the credit adjustment per Mcf in 2028 would change from an estimated ($0.5582) per Mcf to an estimated ($0.5174) per Mcf.

Notes:

(a) The Company does not expect to be able to take the deduction for State tax purposes. Thus, consistent with the Order, the Company is not required to refund a deduction it will never realize.

(b) Certain external costs were incurred to update the various tax calcualtions based upon the new IRS regulations which reduced the net benefit of the catch-up deduction.

(c) Includes actuals through December 2025.

(d) Original Refund Period was 8/1/21 through 8/1/26. The new period is extended to 8/1/31 in the Base Rate Case at Docket No. R-2023-3044549. Thus, 5.59 years remain. In accordance with Section 1307(e) of the Public Utility Code, the resulting E-Factor refund /(collection) will be adjusted annually to be effective April 1.

Notes:

(a) The Company does not expect to be able to take the deduction for State tax purposes. Thus, consistent with the Order, the Company is not required to refund a deduction it will never realize.

(b) Certain external costs were incurred to update the various tax calcualtions based upon the new IRS regulations which reduced the net benefit of the catch-up deduction.

(c) Includes actuals through December 2025.

(d) Original Refund Period was 8/1/21 through 8/1/26. The new period is extended to 8/1/31 in the Base Rate Case at Docket No. R-2023-3044549. Thus, 5.59 years remain. In accordance with Section 1307(e) of the Public Utility Code, the resulting E-Factor refund /(collection) will be adjusted annually to be effective April 1.

PREPARED REBUTTAL TESTIMONY OF
DAWN M. FOLKS
SENIOR FINANCE AND RATES ANALYST
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: July 16, 2026
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION 1

II. ADJUSTMENT TO PEOPLES NATURAL GAS EXHIBIT NO. 3 1

III. CONCLUSION.....2

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Dawn M. Folks. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as a Finance and Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 4.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am also sponsoring one exhibit, **Peoples Natural Gas Exhibit No. DMF-1R**.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am presenting testimony in rebuttal to address updates to the Company's originally filed **Peoples Natural Gas Exhibit No. 3**, a revised version of which is attached to my rebuttal testimony as **Peoples Natural Gas Exhibit No. DMF-1R**.

II. ADJUSTMENT TO PEOPLES NATURAL GAS EXHIBIT NO. 3

Q. CAN YOU SUMMARIZE THE ADJUSTMENT MADE TO PEOPLES NATURAL GAS EXHIBIT NO. 3?

A. Yes. The Company has identified an adjustment through the discovery process, which is a change in revenue of $206,179 as referenced in the Company's response to OSBA-I-9. Please see the attached **Exhibit DMF-1R**.

Q. CAN YOU EXPLAIN THIS ADJUSTMENT FURTHER?

A. Reference PNG Volume 1, Exhibit No. 3, Schedule 15, Attachment B, page 1, line 9; Rent from Gas Property in the Fully Projected Future Test Year ("FPFTY"). This revenue is rent from various towers. One of the towers was sold during the Historic Test Year ("HTY") which is why it has been excluded in future years. However, the remaining revenue was incorrectly excluded from the FPFTY and has been adjusted in the revised Exhibit 3 attached to the Company's response to OSBA-I-9. This results in additional existing revenue of $206,179.

Q. WERE THERE ANY OTHER ADJUSTMENTS PROPOSED BY OTHER PARTIES THAT WOULD IMPACT REVENUE?

A. Yes. All other proposed adjustments such as changes to Heating Degree Days will be addressed in **Peoples Statement No. 17-R**, the Rebuttal Testimony of John Taylor.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: OSBA-I-009

Witness: Folks, Dawn **Title:** Finance and Rates Analyst III

Question: Reference PNG Volume 1, Exhibit No. 3, Schedule 15, Attachment B, page 1, line 9 concerning $219,899 of Rent from Gas Property, explain why this revenue is being eliminated in the FPFTY.

Answer: This revenue is rents from various towers. One of the towers was sold during the HTY which is why it has been excluded in future years. The remaining was incorrectly excluded and has been adjusted in the attached revised Exhibit 3 attached. This results in additional existing revenue of $206,179.

Submit Date: 5/8/2026

PENNSYLVANIA PUBLIC UTILITY COMMISSION	:	
v.	:	Docket No. R-2026-3060855
PEOPLES NATURAL GAS COMPANY LLC	:	

PREPARED REBUTTAL TESTIMONY OF
EDWARD A. PALOMBO,
VICE PRESIDENT, RELIABILITY
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: July 16, 2026
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION ..... - 1 -

II. LOCAL PRODUCTION – GATHERING AND COST RECOVERY ..... - 2 -

III. CONCLUSION ..... - 14 -

PREPARED REBUTTAL TESTIMONY OF
EDWARD A. PALOMBO

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Edward A. Palombo. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as Vice President, Reliability.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 5.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to respond to the Direct Testimony of the Pennsylvania Independent Oil & Gas Association ("PIOGA") witnesses Daniel J. Weaver, Mark Jacobs, and Shane Kriebel. Those witnesses oppose Peoples' proposed increase to Rate Schedule Appalachian Gathering Service ("Rate AGS") from $0.24/Mcf to $0.29/Mcf and contend that the increase should be rejected unless Peoples provides a producer-specific justification. Their position overlooks the shared customer and producer benefits of the gathering system, the costs and operational responsibilities Peoples bears to maintain the gathering facilities, and the reasonableness of a modest, shared cost contribution by conventional producers. In my Rebuttal Testimony, I will explain why their

recommendations regarding the Company's gathering rates and service are flawed and should not be accepted.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring **Peoples Natural Gas Exhibit No. EAP-1R**.

II. LOCAL PRODUCTION – GATHERING AND COST RECOVERY

Q. DO ANY OF THE WITNESSES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS REGARDING PEOPLES' GATHERING AND COST RECOVERY AS IT RELATES TO LOCAL PRODUCTION?

A. Yes. PIOGA Witnesses Weaver, Jacobs, and Kriebel all provide comments and recommendations related to gathering and cost recovery for local producers.

Q. PLEASE SUMMARIZE PIOGA'S PRIMARY POSITION REGARDING THE RATE AGS INCREASE.

A. PIOGA's witnesses assert that the proposed $0.05/Mcf increase is not supported because it was developed by applying the overall base-rate increase percentage to the current gathering revenue recovery rather than by assigning the incremental increase to a separate producer-specific cost study. Mr. Weaver also argues that local production benefits customers, that conventional production is declining, and that an increase could further burden producers. Mr. Jacobs and Mr. Kriebel add operational concerns involving line pressure, regulator set points, receipt-point activity, meter issues, low-volume wells,

pipeline abandonment, and the Master Interconnect and Measurement Agreement ("MIMA").

Q. DO YOU AGREE THAT THESE POINTS JUSTIFY REJECTING THE PROPOSED RATE AGS INCREASE?

A. No. PIOGA's testimony confirms several important points that support, rather than challenge, Peoples' proposal. First, the gathering system provides producers with a market path that is often their only practical means of delivering conventional production. Second, customers benefit from local production because it can be lower cost than interstate delivered gas. Third, both customers and producers benefit from the continued safe and reliable operation of the gathering system. Because both groups benefit, it is reasonable for both groups to contribute to the cost of that system. Peoples' proposed increase continues to reflect that shared-cost principle and remains well below full recovery of gathering costs from conventional producers. In fact, the Company's proposal only requires the producers to contribute 25.7% of the total costs of the gathering system, which is about 10% less of a contribution than the 28.4% that rates were designed to recover in the Company's 2023 Base Rate case.

Q. WHY IS THE GATHERING SYSTEM RELEVANT TO BOTH PRODUCERS AND CUSTOMERS?

A. The gathering system is not maintained solely for customers and it is not maintained solely for producers. It performs a dual function. For producers, the system provides the connection to a market for conventional gas that generally cannot access other markets on

the same practical terms as unconventional production. For customers, the system provides access to local supplies that reduce reliance on interstate pipeline deliveries and can lower the overall cost of gas supply. PIOGA's witnesses acknowledge both sides of this equation. The disagreement is not whether the gathering system has value, but whether producers should continue to make a reasonable contribution to a system that makes their production marketable.

Q. DOES THE FACT THAT CUSTOMERS BENEFIT FROM LOCAL GAS MEAN PRODUCERS SHOULD NOT PAY THE PROPOSED RATE AGS INCREASE?

A. No. Customer benefit is already reflected in Peoples' proposal because customers continue to bear the majority of gathering system costs. The proposed Rate AGS increase does not shift all gathering costs to producers. It simply tries to maintain the producer contribution toward facilities that enable producers to deliver gas to market (as noted above, the proposed contribution from producers towards the cost of the gathering system is declining by approximately 10% as compared to the 2023 Base Rate case). PIOGA's argument would effectively treat the customer benefit of local production as a reason to freeze the producer charge, even though producers also receive benefits from the same facilities.

Q. WHAT ARE THE PIOGA WITNESSES' REASONING FOR RECOMMENDING THAT THE PROPOSED INCREASE IN THE RATE AGS BE REJECTED?

A. Mr. Weaver testifies that Peoples has proposed this increase "simply because Peoples is seeking an overall base rate increase from customers," and states that "the proposed AGS increase is not based on an AGS-specific showing that conventional producers caused or

will cause an incremental $0.05/Mcf of costs." (PIOGA St. No. 1, pp. 3-4.) Mr. Jacobs similarly opines that the proposed increase should be tied to a demonstrated increase in the value of the service or to producer-caused costs, and that the Company has not shown cost causation. (PIOGA St. No. 2, pp. 2-3.) Mr. Kriebel avers that the value of Rate AGS is dependent on whether producers can actually deliver gas and testifies that the rate should be tied to an increase in the value of the service or costs caused by producers. (PIOGA St. No. 3, pp. 4-5.)

Q. IS THE REASONING PROIVDED BY THE PIOGA WITNESSES AS A BASIS FOR THEIR RECOMMENDATION REASONABLE?

A. No. The absence of a separate incremental producer-specific study does not make the proposed rate unreasonable. Gathering system costs are incurred to maintain facilities used to receive, monitor, treat, compress, operate, and safely manage local production. Those costs are not created only by a single incremental item in a single year; they are embedded in the continued operation of the gathering system. Peoples evaluated the existing rate, the overall cost recovery level, the practical limit on producer recovery given low market prices, and the need for both producers and customers to share costs. The selected rate of $0.29/Mcf is a measured approach that increases producer contribution while still leaving most gathering costs with customers.

Further, PIOGA's testimony ignores that the Company evaluated four options for setting this rate and selected the option that had the lowest impact on the producers. Below is a summary of those options and the resulting chosen rate:

- Recover the entire gathering system cost service from producers. This results in a gathering rate of $1.506 per Mcf.
- Maintain the producers 28.4% contribution towards the entire gathering system cost service as set in the 2023 base rate case. This results in a gathering rate of $0.324 per Mcf.
- Increase the gathering rate by the overall increase in rates requested in this case. This results in a gathering rate of $0.295 per Mcf which was rounded to $0.29 per Mcf. [Option Selected]
- Recover the same total gathering revenues from producers as this rate was designed to do in the 2023 base rate case. This results in a gathering rate of $0.30 per Mcf.

For more information on each option, please see the exhibit attached to my rebuttal testimony, **Peoples Natural Gas Exhibit No. EAP-1R**.

Q. WHY IS IT REASONABLE TO CONSIDER THE COMPANY'S OVERALL COST INCREASE WHEN SETTING RATE AGS?

A. Rate AGS is a contribution toward the costs of a broader utility system function. Peoples operates and maintains gathering facilities in a manner intended to support safety, reliability, compliance, and continued receipt of local gas. Those responsibilities are affected by systemwide cost pressures, including labor, materials, compliance, maintenance, and capital requirements. Applying a modest increase consistent with the overall revenue increase is a reasonable way to maintain the shared contribution without imposing a full cost-based gathering charge on producers.

Q. DOES THE PROPOSED INCREASE CREATE AN UNREASONABLE ECONOMIC DISINCENTIVE FOR CONVENTIONAL PRODUCERS?

A. No. The increase is $0.05/Mcf. Peoples recognizes that conventional producers face low market prices and declining production, which is why Peoples did not propose to recover the full gathering cost of service from producers. The proposed $0.29/Mcf rate maintains a practical balance: producers continue to contribute to the system that provides their access to market, while customers continue to pay the majority of gathering costs because they also benefit from local supplies.

Q. DOES MR. WEAVER RAISE ANY OTHER CONERNS RELATED TO PEOPLES' PROPOSED INCREASE IN RATE AGS?

A. Yes. Mr. Weaver raises concerns related to Peoples' representation that local production is valuable but that it is also emphasizing the reduction in local, conventional gas in its system while proposing to increase Rate AGS. (PIOGA St. No. 1, p. 5.) Relatedly, Mr. Weaver testifies that the potential decline in conventional production is important to PIOGA's position because conventional production is already under economic pressure, and applying another cost to these producers without showing cost causation is inconsistent with preserving a supply source Peoples recognizes as lower cost for customers. (PIOGA St. No. 1, p. 7.)

Q. HOW DO YOU RESPOND TO PIOGA'S RELIANCE ON THE DECLINE IN CONVENTIONAL PRODUCTION?

A. The decline in conventional production is real, but it does not establish that Rate AGS should remain unchanged. Peoples' direct testimony explains that conventional volumes have declined year-over-year since 2012, including a decline from approximately 37.1 Bcf in 2020 to approximately 26.2 Bcf in 2025. That trend reflects broader market and production realities, including aging wells and low commodity prices. PIOGA's witnesses attribute part of the decline to Peoples' operational practices, but they do not show that the proposed $0.05/Mcf increase is the cause of the historical decline or that freezing the rate would reverse the trend. Peoples must still maintain and operate the gathering system safely and reliably even as volumes decline.

Q. DO THE PIOGA WITNESSES PROVIDE TESTIMONY AS TO PEOPLES' RATE AGS TARIFF LANGUAGE?

A. Yes. The PIOGA witnesses testify that the tariff language "materially limits the value of the service from the producer's perspective because practical access to the system can be limited by line pressure and operational decisions," and that under the language, a producer could "pay for a service which practical value can be limited or eliminated." (PIOGA St. No. 1, p. 7; PIOGA St. No. 2, p. 3.)

Q. IS THIS A FAIR CHARACTERIZATION OF PEOPLES' RATE AGS TARIFF LANGUAGE?

A. No it is not. The tariff language reflects the operational reality that Peoples' first obligation is to operate its system safely and reliably for customers. The Company cannot be required to lower system pressure, add compression, or modify operations in a way that could impair

customer service, system integrity, or safety simply to accommodate a particular receipt point. That does not mean Rate AGS has no value. Producers receive access to Peoples' system subject to the physical and operational conditions that govern any gas system. Rate AGS does not guarantee delivery under every operating condition, and it would be inappropriate to price the service as though Peoples assumes that obligation.

Q. DO YOU AGREE WITH MR. JACOBS' AVERMENT THAT IT IS PROBLEMATIC FOR CONVENTIONAL PRODUCERS WHEN PEOPLES' LINE PRESSURE IS HIGHER THAN THE PRODUCER REGULATOR SET POINT, AND THAT PRODUCERS' ACCESS TO THE MARKET IS NOT FULLY VALUABLE IF IT IS SUBJECT TO SYSTEM DOWNGRADES OR OTHER LINE PRESSURE CONDITIONS THAT PREVENT FLOW SUBJECT OT TARIFF LANGUAGE? (PIOGA St. No. 2, pp. 4-5.)

A. Mr. Jacobs' comments are operationally accurate in that line pressure can impact deliveries. These are basic gas flow principles. However, the comments do not have the effect of demonstrating that Peoples disregards producer operational concerns. PIOGA's own testimony identifies an example involving Kriebel on the Greensburg Loop where Peoples and the producer developed a seasonal regulator-set-point solution that allowed production to continue flowing while preserving reliable service to a customer. That example demonstrates that Peoples can and does work with producers when operationally feasible. It also demonstrates why broad claims that the Rate AGS charge lacks value are overstated. The proper framework is not to reject the rate increase, but to recognize that

operational issues should be addressed on a case-by-case basis within safety and reliability limits.

Q. DOES MR. WEAVER PROVIDE ANY TESTIMONY RELATED TO MIMAs?

A. Yes. Mr. Weaver testifies that he believes the terms of MIMAs should preserve the Company's "ability to operate safely and reliably while preserving practical producer access" where reasonable, and that producers "should not face increase AGS charges while the operational terms of service allow indefinite or avoidable restrictions that reduce or eliminate the value of service," and characterizes these as "unnecessary barriers to conventional production." (PIOGA St. No. 1, pp. 8-9.)

Q. DOES THE COMPANY AGREE WITH MR. WEAVER'S TESTIMONY RELATED TO UNNECESSARY BARRIERS TO CONVENTIONAL PRODUCTION CONTAINED WITHIN MIMAs?

A. No. The MIMA is necessary because producers deliver gas into a large utility system that serves more than 700,000 customers, and must be operated safely, reliably, and in compliance with applicable codes and regulations. Requirements concerning measurement, gas quality, water vapor, documentation, meter testing, receipt-point status, and operational coordination are not incidental burdens; they are part of the framework that protects the system and service to customers. PIOGA points to notices involving expired non-producing points, pipeline abandonment, and producer-expired points. Those categories do not show improper conduct by Peoples. Rather they show that Peoples actively manages all assets, including receipt points, prudently and operationally justified.

Q. MR. JACOBS AND MR. KRIEBEL TESTIFY THAT THE ABSENCE OF FORMAL MIMA TERMINATIONS DOES NOT MEAN THERE ARE NO PRACTICAL ACCESS ISSUES TO PEOPLES' SYSTEM, BECAUSE OF "SUBSTANTIAL RECEIPT-POINT OR METER-EXPIRATION ACTIVITY". (PIOGA St. No. 2, p. 5; PIOGA St. No. 3, p. 6.) DOES THE ABSENCE OF FORMAL MIMA TERMINATIONS SUPPORT PIOGA'S POSITION?

A. No. Peoples' statement that no MIMAs were terminated, cancelled, not renewed, allowed to expire, or discontinued during 2024, 2025, or 2026 to date demonstrates that Peoples has not broadly used the MIMA to eliminate producer access. PIOGA attempts to convert receipt-point and meter activity into evidence that practical access is being improperly restricted, but those operational actions must be evaluated with context. A non-producing, expired, uneconomic, unsafe, or abandoned receipt point may require action even if the broader MIMA remains in effect. Managing those receipt points is consistent with responsible system operation.

Q. DOES MR. JACOBS MAKE ANY RECOMMENDATIONS WITH RESPECT TO MIMAs?

A. Yes. Mr. Jacobs recommends that the Commission consider the proposed Rate AGS increase and MIMA together, as Rate AGS "is the price producers pay for a service whose practical value is controlled by the tariff and MIMA."

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. The tariff reflects Peoples' obligation to operate and provide safe and reliable service; Rate AGS is a mechanism for recovering a portion of the gathering system cost of service from producers as they utilize such system. The MIMA governs the requirements for delivering gas into the Peoples system. The Commission should not associate or combine operational accommodations and MIMA requirements with establishing a reasonable Rate AGS.

Q. DOES MR. KRIEBEL PROVIDE TESTIMONY RELATED TO MIMAs?

A. Yes. Mr. Kriebel testifies that distribution systems are "consistently making it more difficult to bring gas to market, such as with inconsistent MIMA enforcement and application and unnecessary shut-ins and meter abandonments." (PIOGA St. No. 3, p. 6.)

Q. IS THIS A FAIR CHARACTERIZATION OF PEOPLES' DISTRIBUTION SYSTEM?

A. No. The enforcement of the MIMA requirements for gas quality, operating set points, water vapor, etc. are central and critical to operate the gathering systems safely and reliably. Violations of these requirements can cause operating issues that could negatively impact pipelines and facilities, and ultimately lead to customer outages, or even worse, pipeline incidents. The fact that local gas has customer benefits does not eliminate the operational responsibilities associated with receiving it.

Q. WHAT DOES MR. KRIEBEL RECOMMEND WITH RESPECT TO PEOPLES' DISTRIBUTION SYSTEM?

A. Mr. Kriebel recommends that Peoples be required to use reasonable efforts to work with producers before operational changes result in lost flow, receipt-point expiration, or avoidable shut-ins, including: reasonable notice, good-faith discussions, consideration of alternative delivery points or reroutes where feasible, reasonable treatment of low-volume wells and practical regulator set-point adjustments where they can be made safely and reliably. (PIOGA St. No. 3, p. 7.)

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No. As previously stated, the Commission should not impose open-ended operating accommodations that could possibly conflict with safety, reliability, or the Company's overall operational judgment. Peoples is willing to communicate with producers and evaluate feasible solutions, but any requirement must preserve the Company's ability to prudently operate system pressure, gas quality, customer loads, and unplanned emergency conditions. The desire to flow gas at a specific receipt point(s) cannot override the Company's tariff obligation to provide service to customers safely and reliably.

Q. MR. WEAVER STATES THAT PEOPLES' TREATMENT OF UNCONVENTIONAL PRODUCTION DIFFERENTLY THAN CONVENTIONAL PRODUCTION CAN IMPOSE A COST TO CONVENTIONAL PRODUCERS WHO MAY NOT THEN HAVE A REALISTIC MARKET ALTERNATIVE. (PIOGA St. No. 1, p. 8.) DO YOU AGREE WITH THIS?

A. No. Peoples negotiates rates for unconventional production because those producers generally have multiple market alternatives and Peoples must compete with midstream and

interstate pipeline options. Conventional production is different. Conventional wells often depend on the existing gathering system for access to market, and the Rate AGS tariff provides a standardized framework for that access. The fact that unconventional producers may be subject to negotiated rates does not show that the conventional Rate AGS charge is unreasonable.

III. CONCLUSION

Q. WHAT SHOULD THE COMMISSION CONCLUDE REGARDING PEOPLES' PROPOSED RATE AGS INCREASE?

A. The Commission should approve Peoples' proposed Rate AGS rate of $0.29/Mcf. PIOGA's testimony confirms that the gathering system provides producers with market access and customers with lower-cost local supply. The proposed increase preserves the shared-cost approach, does not recover full gathering costs from producers, and remains sensitive to the economic conditions facing conventional production, and customer affordability. PIOGA's operational concerns should not be used to deny a reasonable rate increase where Peoples must continue to operate the system safely and reliably for customers and producers alike.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes. I reserve the right to supplement this testimony should additional issues arise.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: PIOGA-I-002

Witness: Wachter, Andrew **Title:** Finance and Regulation Director

Question: Explain how Peoples calculated the proposed $0.29/Mcf Rate AGS gathering rate, including each mathematical step, input, source, assumption, and adjustment.

Answer: Refer to the attached spreadsheet provided in Excel format that includes the various sources and referenced information. Please note that this also includes the other options considered and the support. Also, refer to the response to PIOGA-I-2 through PIOGA-I-7 for more information.

Submit Date: 5/22/2026

PREPARED REBUTTAL TESTIMONY OF
PAUL BECKER

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Becker. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President, Construction and Engineering.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 6.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In my rebuttal testimony, I respond to the direct testimony of Bureau of Investigation and Enforcement ("I&E") witness Robert Gobrecht. I also address various comments that were made during the public input hearings for this case.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring **Peoples Natural Gas Exhibit Nos. PB-1R through PB-7R**.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. First, I respond to Mr. Gobrecht's testimony regarding meter move outs and methane detection. Then I address certain issues that were raised in the public input hearing testimony.

II. RESPONSE TO I&E WITNESS GOBRECHT

A. METER MOVE OUTS

Q. PLEASE EXPLAIN HOW PEOPLES HAS BEEN TAKING STEPS TO MOVE INSIDE METERS OUTSIDE?

A. Peoples has continued its longstanding practice of relocating medium pressure indoor meters to outdoor locations, in accordance with Pennsylvania Public Utility Code Section 52 Pa. Code § 59.18.

Q. MR. GOBRECHT STATES THAT THE DATA RECEIVED FROM PEOPLES CONFLICTS WITH THE NUMBER OF METER MOVE-OUTS. (I&E STATEMENT NO. 4, p. 17.) HOW DO YOU RESPOND?

A. The Company appreciates I&E for bringing this issue to our attention. Upon review, Peoples determined that the move-out data previously provided in discovery was incorrect for calendar years 2022 through 2024. The corrected data is shown below:

Year	Inside Meters (Year-End)	Meter Move-Outs
2021	79,378	2,140
2022	78,896	482
2023	77,950	946
2024	75,478	2,472
2025	73,135	2,343

Based on the corrected data, Peoples averaged approximately **1,677** meter move-outs **per year** during the 2021–2025 period. Attached to my rebuttal testimony is an updated discovery response that was served on July 16, 2026. Refer to **Peoples Natural Gas Exhibit No. PB-1R** for the updated response.

B. METHANE DETECTION

Q. PLEASE DESCRIBE THE STEPS THAT PEOPLES IS TAKING TO IMPROVE SAFETY WITH RESPECT WITH METHANE?

A. Peoples employs a layered approach to methane risk reduction across its natural gas distribution system. This approach includes ongoing leak survey and repair programs, modernization of aging infrastructure, relocation of medium-pressure indoor meter sets where appropriate, and deployment of Intelis meters with enhanced safety functionality.

Q. HOW COULD THE INSTALLATION OF INTELIS METERS IMPROVE SAFETY?

A. Intelis meters can provide enhanced safety capabilities including high-flow alarms, high-flow shutoff capability, high-temperature alarms and shutoff functionality, pressure monitoring, enhanced diagnostics, and operational visibility. These capabilities could mitigate potential gas-related incidents. The Intelis meters improve safety by shutting off the gas if high pressure, high flow or high temperature is detected. These events can be caused by the failure of an upstream pressure regulator, a significant failure or unintentional separation of house piping, or a fire. The meter's ability to shut off the gas quickly in these circumstances potentially improves the safety of the building occupants, first responders, and the environment.

Q. MR. GOBRECHT RECOMMENDS THAT PEOPLES IMPLEMENT A PILOT PROGRAM UTILIZING SMART REMOTE METHANE DETECTORS ("SRMDs") AND MONITOR RELATED EXPENSES. HE ALSO RECOMMENDS THAT PEOPLES CONSIDER USING ADVANCED METERING INFRASTRUCTURE ("AMI") TECHNOLOGY AND LoRaWAN OR OTHER COMMUNICATION NETWORK TECHNOLOGY AS PART OF THE PILOT. (I&E Statement No. 4, pp. 20-21.) HOW DO YOU RESPOND TO THIS RECOMMENDATION?

A. Peoples generally agrees that smart methane detection technologies warrant further evaluation; however, additional analysis regarding technology maturity, communications architecture, cybersecurity, deployment costs, and measurable customer benefits is necessary before full implementation.

Q. DO YOU HAVE ANY CONCERNS ABOUT MR. GOBRECHT'S RECOMMENDATION?

A. Yes, I do. While the Company is willing to evaluate the feasibility of implementing SRMD and AMI technology, Peoples cannot agree to implement a pilot without first investigating the use of such technology and the impact to its distribution system. If the Commission orders the Company to pursue a methane detection pilot, the Company respectfully requests that it be given the opportunity to first assess the feasibility of deploying this technology and the flexibility to implement what the Company deems as the best fit for its system.

Q. IS THE COMPANY DOING ANYTHING TODAY WITH RESPECT TO THE DEPLOYMENT OF METHANE DETECTION?

A, Yes. In May of 2026, as the result of a Commission-approved settlement[1], the Company made donations to two different volunteer fire stations for the deployment of methane detectors to the residents served by those stations.

III. RESPONSE TO PUBLIC INPUT HEARING TESTIMONY

Q. WOULD YOU LIKE TO ADDRESS ANY OF THE TESTIMONY PROVIDED AT THE PUBLIC HEARINGS?

A. Yes.

Q. WHAT PORTIONS OF THE PUBLIC INPUT HEARING TESTIMONY WILL YOU ADDRESS?

A. I will respond to a statement made by Richard Culbertson regarding API 1173. I will also address several questions raised by Matthew Kaminski related to the Company's infrastructure replacement projects. Finally, I will respond to certain portions of the testimony provided by Mark Szybist.

Q. MR. CULBERTSON STATED THAT PEOPLES DOES NOT APPEAR TO ADOPT API 1173. (Tr. at 102.) WHAT IS API 1173?

A. API 1173 is the American Petroleum Institute's Recommended Practice for Pipeline Safety Management Systems ("PSMS"). It provides a structured framework for pipeline operators

[1] C-2024-3050319.

to improve safety performance by managing risk, strengthening safety culture, and continuously improving processes. Key elements include:

- Leadership commitment to safety and accountability
- Risk management through identifying, assessing, and controlling hazards
- Operational controls for safe pipeline design, construction, operation, and maintenance
- Incident investigation and learning to prevent recurrence
- Emergency preparedness and response
- Competence, training, and communication
- Performance measurement and continuous improvement

Overall, API 1173 is intended to help pipeline organizations move beyond compliance and build proactive, organization-wide safety management system.

Q. DOES THE COMPANY FOLLOW API 1173?

A. Yes. While not mandated by PHMSA or DOT, in 2021, Peoples developed a framework document under the API 1173 recommendations that is referred to as their PSMS. In 2022, Peoples created a PSMS Manager role to conduct a gap analysis of existing operating procedures and policies with API 1173 standards, and implement a full PSMS program. In 2023, two Quality Assurance/Quality Control Analyst positions were added to the team to conduct field audits of operating procedures. To date, Peoples has reached maturity in 3 of the 10 program elements, with full maturity targeted by 2029.

Q. DURING HIS TESTIMONY AT THE PUBLIC INPUT HEARING, MR. KAMINSKI RAISED SEVERAL QUESTIONS RELATED TO THE COMPANY'S

INFRASTRUCTURE REPLACEMENTS. (Tr. at 167-168.) CAN YOU PROVIDE A SUMMARY OF THE INFORMATION THAT MR. KAMINSKI IS SEEKING?

A. Mr. Kaminski states that he would like to know the following information related to the Company's infrastructure replacement projects:

- Is the proposed rate increase for future projects or projects that have already been completed?
- Does the Company perform the work or are contractors involved?
- Is there a transparent competitive bidding process to ensure cost effectiveness and what happens when a project is over or under budget?
- Has the Company implemented any operational efficiency or cost cutting measures that have resulted in savings?
- Has the Company pursued federal or state grants to fund its projects?
- What is driving the increase in costs and how does the Company make sure that costs are reasonable?

Q. CAN YOU ADDRESS THESE QUESTIONS?

A. Yes, I will address each of these questions.

A. PROJECTS

Q. PLEASE EXPLAIN WHAT PROJECTS ARE BEING INCLUDED IN THE COMPANY'S CLAIM IN THIS CASE.

A. The proposed rate case includes capital projects completed in 2026 and the projects expected to be completed through 2027. Most of these capital projects are pipeline projects and most are driven by the Company's Long Term Infrastructure Improvement Plan ("LTIIP"). The LTIIP is publicly available on the Commission's website at Docket No. P-2025-3057167. I am also attaching a copy of the LTIIP to my testimony as **Peoples Natural**

Gas Exhibit No. PB-2R. The Company's LTIIP is subject to review by the Pennsylvania Public Utility Commission ("Commission") and interested stakeholders. Each year an Annual Asset Optimization Plan or AAOP is filed with the Commission and lists projects completed and proposed. These reports are also publicly available on the Commission's website. A copy of the Company's most recently approved AAOP is attached to my testimony as **Peoples Natural Gas Exhibit No. PB-3R**.

B. CONTRACTED STAFFING

Q. PLEASE EXPLAIN HOW THE COMPANY USES OUTSIDE CONTRACTORS.

A. About 80% of the Company's capital pipeline projects are performed by third party contractors. These contractors are responsible for installing and testing the pipe and services. The Company handles the connections, customer changeovers, purging and relighting aspects of all the pipeline projects.

C. COMPETITIVE PROCESS

Q. DOES THE COMPANY HAVE A PROCESS TO ENSURE THAT CONTRACTOR COSTS REMAIN COMPETITIVE?

A. Yes. For pipeline projects the Company utilizes two processes of competitive bidding. For smaller projects, where the estimated pipeline contractor labor cost is under $300,000, the Company uses blanket/area compatible unit ("CU") based contracts. Such contracts are based on competitive bids and allow the company to award projects by area. For larger projects, where the estimated pipeline contractor labor cost is over $300,000, the company competitively bids the individual projects. Both processes ensure the contractor cost is competitive/market based.

D. PROJECT COSTS AND DRIVERS

Q. WHAT ARE THE DRIVERS OF PIPELINE REPLACEMENT COSTS?

A. On a macro level the drivers of pipeline replacement costs can include, but are not limited to, labor market, fuel/energy costs, heavy equipment availability, location, volume of work, raw material costs, interest rates, insurance costs, and unemployment levels. On a micro level, the physical drivers of pipeline replacement costs can include, but are not limited to, size, material type, pressure class, construction method (i.e. open trench, bore, directional drill) location, traffic, soil conditions, permitting requirements, restoration requirements, surface type, testing and inspection requirements, ROW width/work space, depth, number and length of crossings (road, stream, river, other utilities), the number of mainline and service connections, and weather/time of year.

Q. WHAT DOES THE COMPANY DO TO CONTROL PIPELINE REPLACEMENT COSTS?

A. The Company has the following strategies and programs in place that help minimize the replacement cost:

Synergy projects: Since 2014 when the three legacy utility companies (Peoples Natural Gas Company LLC, TWP and Equitable Gas) became affiliates, the Company has been able to avoid an estimated $60 million of pipeline projects by replacing one pipeline when two companies had facilities on the same street, by making connections and eliminating redundant company pipelines and by switching customers to one facility.

Additional Abandonments: Additional Abandonments are a significant cost saving component of the LTIIP program. Since 2021 the replacement of over 100 miles of pipeline

has been avoided by leveraging system overlap and reviewing hydraulic models. Such additional abandonments have been realized without adverse impacts to customers and saved an estimated $200 million.

Restoration Co-ops: Co-ops can take the form of partnering and coordinating work with other Utilities and entering into agreements with local municipalities that allow/require the municipality to pave a Company Pipeline Project with their local paving companies in conjunction with other local paving projects. This simplifies and streamlines the paving schedule, shifts responsibility and often results in lower cost to Peoples. Over 200 Co-op projects have been completed since 2018, with 150 of those in the last five years. Since 2023, the estimated cost savings related to Co-ops is about $3.5 million.

E. GRANT ELIGIBILITY

Q. HAS THE COMPANY BEEN ELIGIBLE FOR OR RECEIVED ANY GOVERNMENT GRANTS TO FUND ITS PIPELINE REPLACEMENT PROJECTS?

A. No. Historically, the Company has not been eligible for grants for pipeline replacement projects. The Natural Gas Distribution Infrastructure Safety and Modernization ("NGDISM") Grant Program is made available to municipality or community owned utilities and investor owned entities do not qualify.

Q. IS THERE ANYTHING THAT YOU WOULD LIKE TO ADDRESS REGARDING THE PUBLIC INPUT HEARING TESTIMONY OF MARK SZYBIST (Tr. at 250-258)?

A. Yes, I would like to respond to Mr. Szybist's statements requesting that a utility seeking a rate increase should explain in "plain, clear language" why the proposed investments are necessary and should use transparent data to ensure that the investments are cost-effective and benefit ratepayers.

Q. WHY IS THE COMPANY'S PIPELINE REPLACEMENT PROGRAM NECESSARY?

A. The Company's pipeline replacement program is necessary for the following reasons:

First, in 2011 the Federal Pipeline Hazardous Materials and Safety Administration known as PHMSA[2], in response to tragic events, urged States to review their replacement plans for the highest risk pipelines and consider what would be necessary to accelerate the plans. Bare steel and cast iron were specifically noted as high risk. The Company's LTIIP is an accelerated plan targeting bare steel, cast and wrought iron and other pipelines with integrity risks. Refer to **Peoples Natural Gas Exhibit No. PB-2R**.

Second, the Company still has approximately 2,000 miles of bare steel and cast/wrought iron distribution and transmission pipe in operation. Some of these pipes are 139 years old and the average age is 80 years. In accordance with 49 CFR Part 192, Subpart P, the Company has a Distribution Integrity Management Plan that risk ranks pipelines made of bare steel the highest. Refer to CONFIDENTIAL **Peoples Natural Gas Exhibit No. PB-4R**. Over half of this pipe is in Allegheny, Blair and Westmoreland Counties, primarily in and around the urban areas of Pittsburgh, Altoona and Greensburg.

[2] Refer to **Peoples Natural Gas Exhibit Nos. PB-5R and PB-6R.**

Third, in 2025 approximately 85% of all distribution leaks occurred on bare steel and cast/wrought iron pipelines and approximately 62% of the leaks on bare steel and cast/wrought iron were hazardous leaks.

Based on these facts, in the context of safety and reliability, continued replacement of this aging infrastructure is necessary.

Q. DO ANY PARTIES TO THE CASE RECOGNIZE PEOPLES PIPELINE REPLACEMENT PROGRAM?

A. Yes, I&E Witness Gobrecht in his direct testimony discusses DIMP, LTIIP, Peoples' capital programs, and what he deems as the top risks on our system. (I&E Statement No. 4, pp. 4-12.)

Q. WHAT HAS THE COMPANY DONE TO CONTROL COSTS RELATED TO ITS PIPELINE REPLACMENT PROGRAM?

A. As previously mentioned, the Company uses a number of tools to control costs related to its pipeline replacement program. I outline these steps above in my rebuttal. Moreover, the Company tracks and monitors municipality ordinances which detail specific requirements for various fees related to utility work. The Company uses this data to communicate with municipalities, insist on reasonable fees for its work and to negotiate when appropriate.

Q. HOW DO THE COMPANY'S CAPITAL INVESTMENTS BENEFIT RATEPAYERS?

A. As discussed above, the drivers of the capital pipeline programs are safety and reliability.

Specifically replacement/removal of high risk, 80 year old pipelines, that have historically corroded and leaked.

Q. IS THE COMPANY ABLE TO QUANTIFY THE SAFETY IMPROVEMENTS THAT HAVE RESULTED FROM ITS PIPELINE REPLACEMENT PROGRAM?

A. Yes, please refer to CONFIDENTIAL **Peoples Natural Gas Exhibit No. PB-7R**. This exhibit shows the relative risk has been declining over time.

Q. ARE THERE ADDITIONAL BENEFITS TO RATEPAYERS AND THE COMMUNITY FROM THE COMPANY'S PIPELINE REPLACEMENT PROGRAM?

A. Yes. Most importantly, the Company's pipeline replacement program benefits the public by improving the Company's provision of safe and reliable service. For example, Michael Daniher, a local fire department chief, testified in a public input hearing in this matter that investment in infrastructure improvements benefits the community by improving safety and reducing the number of natural gas related emergencies that require the response of local fire departments. (Tr. at 202-204).

Additionally, the Company's program brings jobs to the communities it serves. The Company estimates the number of people employed by its pipeline replacement programs in the areas of Design/Engineering, Pipeline Construction, and Restoration is approximately 1,100 persons.

Q. MR. SZYBIST STATES THAT THE COMPANY REFERENCES ITS LTIIP IN TESTIMONY BUT DOES NOT PROVIDE A COPY OF THE PLAN. WHAT IS YOUR RESPONSE?

A. The Company's LTIIP is publicly available on the Commission's website at Docket No. P-2025-3057167. The Company's current LTIIP is attached as **Peoples Natural Gas Exhibit No. PB-2R**.

Q. HAS THE COMMISSION APPROVED THE COMPANY'S LTIIP?

A. Yes, the LTIIP was approved by the Commission on December 18, 2025 at Docket No. P-2025-3057167.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does. I reserve the right to supplement my testimony as additional information arises. Thank you.

Interrogatory Response

Confidential: No

Case Name: 2026 Base Rate Case

Company: Peoples Natural Gas Company LLC

Docket Number: R-2026-3060855

Question Number: I&E-PS-027(U)

Witness: Becker, Paul **Title:** Vice President Construction & Engineering

Question: Provide the number of existing inside meter sets, broken out by system pressure, for the last 5 calendar years. How many meter move outs have occurred each year?

Answer: The following are the number of inside meter sets at the end of the calendar year and meter move-outs by year for the last 5 calendar years. The move-out data from 2022 through 2024 has been corrected from the original response.

	Inside Meters	Meter Move-Outs
2021 -	79,378	2,140
2022 -	78,896	482
2023 -	77,950	946
2024 -	75,478	2,472
2025 -	73,135	2,343

Re: Petition of Peoples Natural Gas Company LLC for Approval of its Third Long-Term Infrastructure Improvement Plan for the Period of 2026-2030
Docket No. P-2025-_____

Dear Secretary Homsher:

Enclosed is the Petition of Peoples Natural Gas Company LLC ("Peoples" or the "Company") seeking the Pennsylvania Public Utility Commission's ("Commission") approval of its Third Long-Term Infrastructure Improvement Plan for the Period of 2026-2030 ("Third LTIIP Plan").

Copies are being served upon the statutory advocates as well as all parties of record in Peoples' last base rate proceeding at Docket No. R-2023-3044549.

Sincerely,

Anthony D. Kanagy

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Petition of Peoples Natural Gas Company LLC for Approval of its Third Long Term Infrastructure Improvement Plan for the Period of 2026-2030	: : :	Docket No. P-2025-

---

Petition of Peoples Natural Gas Company LLC for Approval of its Third Long-Term Infrastructure Improvement Plan for the Period of 2026-2030

Pursuant to Act 11 of 2012 ("Act 11" or the "Act"), which amends Chapters 3, 13 and 33 of the Pennsylvania Public Utility Code ("Code"), Peoples Natural Gas Company LLC ("Peoples" or the "Company") hereby files this Petition seeking approval of its Third Long-Term Infrastructure Improvement Plan ("Third LTIIP" or "Third LTIIP Plan"). This filing is being made pursuant to the Final Implementation Order of the Pennsylvania Public Utility Commission (the "Commission") entered at Docket No. M-2012-2293611 on August 2, 2012[1] and the Commission's regulations at 52 Pa. Code § 121.1 *et. seq.*

Peoples' Third LTIIP (attached hereto as Appendix A) will succeed the Company's current LTIIP (its Second Combined LTIIP), which was originally approved by Commission Order entered January 14, 2021[2]. Peoples proposes to continue its significant program to evaluate, repair, improve and replace its natural gas pipeline system as reflected in its First and Second LTIIPs, which focused on the portions of its system that were constructed using cast iron and bare steel. As described in its Third LTIIP, Peoples will continue the acceleration of its infrastructure repairs,

[1] Implementation of Act 11 of 2012, Docket No. M-2012-2293611, entered on August 2, 2012. ("Implementation Order").
[2] See Petition of Peoples Natural Gas Company LLC and Peoples Gas Company LLC for Approval of a Combined Distribution Long-Term Infrastructure Improvement Plan for the Period January 1, 2021 through December 31, 2025, Docket Nos. P-2020-3021942 and P-2020-3022053.

improvements and replacements, including the accelerated replacement of its cast iron and bare steel pipelines, and will reflect acceleration from its prior LTIIPs.

During the proposed five-year term of its Third LTIIP, Peoples will invest more than $3 billion on infrastructure improvements to strengthen and modernize its facilities which service customers throughout Southwestern Pennsylvania. The Company anticipates replacing approximately 930 miles of cast iron, wrought iron, bare steel, first generation plastic and a subset of other coated steel mains and services during the term of its Third LTIIP. As detailed herein and in Appendix A, Peoples Third LTIIP contains all of the necessary elements in 66 Pa. C.S. Section 1352(a) and 52 Pa. Code Section 121.3, and therefore this proposed Third LTIIP complies with Section 1252(a)(7).

By this Petition, the Company respectfully requests that the Commission approve Peoples' Third Long-Term Infrastructure Improvement Plan for the period of 2026-2030.

I. INTRODUCTION

1. Peoples is a Commission-regulated natural gas distribution company providing sales, transportation, and supplier of last resort services to approximately 700,000 customers throughout its service territory, which includes all or portions of the following Pennsylvania counties: Allegheny, Armstrong, Beaver, Blair, Butler, Cambria, Clarion, Clearfield, Fayette, Greene, Indiana, Jefferson, Lawrence, Mercer, Somerset, Venango, Washington, and Westmoreland.

2. Peoples is a "public utility" and a "natural gas distribution company" as those terms are defined in Sections 102 and 2202 of the Code, 66 Pa. C.S. §§ 102, 2202.

3. Peoples is an indirect subsidiary of Essential, which was registered in Pennsylvania in 1968, originally as Philadelphia Suburban Corporation, and subsequently as Aqua America, Inc. Essential is a natural gas, water and wastewater utility holding company that currently provides

service throughout its operating subsidiaries in Pennsylvania, Ohio, North Carolina, Illinois, Texas, New Jersey, Indiana, Virginia, and Kentucky.

4. The names, addresses and telephone numbers of Peoples' attorneys for purposes of this filing are as follows:

Anthony D. Kanagy (ID # 85522)
Post & Schell, P.C.
17 North Second Street
12th Floor
Harrisburg, PA 17101-1601
Phone: 717-612-6034
E-mail: akanagy@postschell.com

Meagan Moore (ID # 317975)
PNG Companies LLC
375 North Shore Drive
Pittsburgh, PA 15212
Phone: 412-208-6527
E-mail: Meagan.moore@peoples-gas.com

Peoples' attorneys are authorized to receive all notices and communications regarding this filing.

5. On February 14, 2012, Governor Corbett signed into law Act 11, which amends Chapters 3, 13 and 33 of Title 66 of the Code. Pertinent to this Petition, Act 11 authorizes natural gas distribution companies ("NGDCs") to establish a distribution system improvement charge ("DSIC").

6. Act 11 provides utilities with the ability to implement a DSIC to recover reasonable and prudent costs incurred to repair, improve or replace certain eligible distribution property that is part of the utility's distribution system. Eligible property for NGDCs is defined in § 1351 of the statute. *See* 66 Pa. C.S. § 1351(2). As a precondition to the implementation of a DSIC, each utility must file an LTIIP with the Commission that is consistent with the provisions of § 1352 of the statute. *See* 66 Pa. C.S. § 1352(a).

7. On May 10, 2012, the Commission issued its Tentative Implementation Order on Act 11 and solicited comments and input. Peoples responded to the Commission's request and filed comments on the Tentative Implementation Order on June 6, 2012.

8. On August 2, 2012, the Commission issued the Final Implementation Order establishing procedures and guidelines necessary to implement Act 11. The Final Implementation Order adopts the requirements established in § 1352, provides additional standards that each LTIIP must meet, and gives guidance to utilities for meeting the Commission's standards.

9. In accordance with 52 Pa. Code § 121.3(a), a utility's LTIIP must include the following eight major elements:

> (1) Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery.
>
> (2) An initial schedule for planned repair and replacement of eligible property.
>
> (3) A general description of location of eligible property.
>
> (4) A reasonable estimate of quantity of eligible property to be improved or repaired.
>
> (5) Projected annual expenditures and means to finance the expenditures.
>
> (6) A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement or replacement will ensure and maintain adequate, efficient, safe, reliable and reasonable service to customers.
>
> (7) A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe and reliable manner.
>
> (8) A description of a utility's outreach and coordination activities with other utilities, Department of Transportation and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

10. In its Third LTIIP, Peoples addresses the elements listed above. The following sections of this Petition summarize Peoples' Third LTIIP Plan and meet the Commission standards for LTIIP approval.

II. LONG TERM INFRASTRUCTURE IMPROVEMENT PLAN

A. PEOPLES PRIOR AND CURRENT LTIIPS

11. On September 22, 2017, Peoples Natural Gas Company LLC, formerly comprised of Peoples Natural Gas Company LLC ("PNG") and Peoples Gas Company LLC ("PG") ("Peoples Companies") filed a combined distribution LTIIP for 2017-2021. The petition was a revision of PNG's and PG's then-current LTIIPs. The Combined LTIIP was approved on January 18, 2018 at Docket Nos. P-2013-2342745, P-2013-2344596 and P-2016-2563033.

12. Pursuant to a Joint Petition for Settlement authorizing Aqua America Inc. to acquire the Peoples Companies, the Peoples Companies committed to file a modified LTIIP within six months following closing of the acquisition that further accelerated the rate of replacement of higher risk pipe after closing. The Commission approved the Joint Petition for Settlement of a modified Combined LTIIP for the Peoples Companies, with certain modifications, on January 24, 2020. The closing of the transaction between Aqua and Peoples Companies occurred on March 16, 2020.

13. On September 15, 2020, the Peoples Companies filed a Second Combined Distribution LTIIP for 2021-2025 in compliance with the commitments made in the aforementioned acquisition of the Peoples Companies by Aqua America Inc., thereafter both parties are now under Essential. The Peoples Companies' Second Combined Distribution LTIIP was approved on January 14, 2021 in Docket Nos. P-2020-3021942 and P-2020-3022053.

14. On March 15, 2024, Peoples filed for a Major Modification of its Second Combined LTIIP for 2021-2025, to increase the projected capital expenditures necessary to meet its infrastructure replacement goals. The Commission approved Peoples' Major Modification on July 11, 2024. Peoples is executing its current LTIIP (Second Combined LTIIP, modified) which is due to expire December 31, 2025. The instant Petition is Peoples' request for its Third LTIIP for the period of 2026-2030.

B. SUMMARY OF PEOPLES THIRD LTIIP FOR THE PERIOD OF 2026-2030

15. In this Petition, Peoples submits its Third LTIIP for Commission review and approval. Peoples Third LTIIP provides for the identification, repair, improvement and replacement of aging and at-risk distribution infrastructure on an accelerated basis, consistent with its obligations and commitments as described in its current and prior LTIIPs. Peoples' Third LTIIP continues its process, which was established in its prior LTIIPs, to accelerate the replacement of its distribution infrastructure. The Company's efforts to address its aging and at-risk facilities are described in detail in pages 3 through 8 of its Third LTIIP (*see* Appendix A for the Company's Third LTIIP).

16. Continuing Peoples' infrastructure replacement and improvement program (as proposed in Appendix A) will allow the Company to continue to provide safe and reliable natural gas service for years to come.

17. In its Third LTIIP, Peoples is on pace to replace 930 miles of bare steel, wrought iron, cast iron and other pipelines in the years 2026 through 2030. The sequence of projects and amount of specific facilities to be addressed may be adjusted in response to changing conditions. Those changing conditions include but are not limited to system upgrades due to pressure requirements, regulatory changes, legislative changes and varying state and municipal requirements.

18. In its Third LTIIP, Peoples has committed to upgrade, replace and improve other facilities such as but not limited to plastic pipe, coated steel, meters and other facilities. Currently, Peoples has identified a subset of approximately 232 miles of first generation plastic pipe on its system. Peoples' intention is to continue to evaluate and appropriately risk-rank this subset of plastic pipe on its system. The Company addresses this subset of plastic on pages 12 and 13 of its Third LTIIP[3].

19. Peoples' Third LTIIP addresses ongoing investments in transmission infrastructure which are necessary to maintain its transmission facilities in accordance with Federal regulations. Peoples' transmission facilities are addressed on pages 6 and 8 of its Third LTIIP.

20. Peoples' Third LTIIP also addresses its plan to ensure the continued safe and reliable operation of certain other facilities which include natural gas service lines, excess flow valves, meter replacements and move-outs, regulator stations, farm taps, system reliability improvements and facility relocations, as described on pages 13 through 17 and Appendix 2.

21. Peoples' Third LTIIP includes the installation of ultrasonic meter technology for eligible customers on its system. The Company's Intelis Meter Program includes the replacement of approximately 124,000 meters annually, beginning in 2026, achieving full meter saturation in those 5 years.

22. The Company's Third LTIIP will allow it to remove aging facilities and enhance safety by replacing its aging facilities with newer, longer-lasting and safer materials ultimately lowering the risk of service disruptions.

C. ELEMENTS OF PEOPLES THIRD LTIIP

[3] See Motion of Chairman Stephen M. DeFrank, Replacement of Older Plastic Pipe in Natural Gas Distribution Systems (Public Meeting Held Aug. 1, 2024) (emphasizing the importance of focusing on the replacement of older plastic pipe simultaneously with cast iron and bare steel pipe).

1. Types and Age of Eligible Property.

23. Peoples Third LTIIP identifies the different types of property that will be improved, as well as the age of the property, where that information is available to the Company, per 52 Pa. Code §121.3(a)(1). According to its most recent US Department of Transportation reporting, Peoples owns and operates, 161 miles of transmission/storage pipeline; and 13,214 miles of distribution pipeline. As of 2025, Peoples currently operates more than 2,200 miles of at-risk LTIIP pipelines.

24. With regard to pipeline replacement, Peoples will remain consistent with its prior LTIIPs and will focus on the replacement of Distribution target pipe, predominantly bare steel and cast iron pipelines in its Third LTIIP. Cast iron and unprotected bare steel experience higher levels of corrosion than more modern pipeline materials, which makes them more vulnerable to developing leaks. Utilizing the risk-based analysis incorporated in the Company's pipeline integrity management planning processes (DIMP & TRIMP), over the last 12 years, Peoples has prioritized the replacement of more than 50 miles of cast iron pipe and more than 1,200 miles of bare steel pipe. As a category, unprotected bare steel is Peoples' next highest risk pipe. Peoples intends to focus the majority of its replacement over the next five years on bare steel pipelines.

25. In addition to addressing the bare steel, wrought iron and cast iron pipelines on its system, in its Third LTIIP, Peoples will continue to address the customer service lines that connect to the mains. Often the mains are connected to bare steel customer service lines, which are subject to the same degrading elements that affect the physical integrity of Peoples' bare steel mains and Company services. Peoples, therefore, has been replacing at risk customer service lines when it replaces its own gas lines.

26. In most of the Company's service territory, service lines are owned and maintained by customers. However, it would be inefficient for the Company to have customers replace their

failing service facilities at the time the main is being replaced. Therefore, Peoples sought and received Commission approval to replace failing customer-owned service lines as part of its LTIIP work[4]. The cost of such replacements is capitalized to the Company's mains account, just as other customer-owned property, such as sidewalks or driveways, are when replaced as part of main replacement.

27. Peoples describes the types and age of its eligible property on pages 18 and 19 of its Third LTIIP. The primary focus of the Peoples LTIIP is to replace aging pipeline facilities. The vast majority of the Company's Third LTIIP expenditures will be spent on either pipeline or meter replacements. In addition to replacement of pipelines, as part of its infrastructure upgrades, Peoples will also be replacing customer-owned service lines, upgrade measurement and regulation stations ("M&R") and installing ultrasonic meter technology. The facilities included in Peoples' LTIIP are considered "eligible property" under § 1351(2).

28. Peoples' Third LTIIP includes meter replacement expenditures totaling approximately $224 million for the five-year period covered by this LTIIP. Peoples Third LTIIP will focus on the installation of Intelis Meters. The Intelis Meter represents a significant advancement in utility safety and operational oversight, with the integration of pressure sensing technology into solid state gas meters serving as a cornerstone of this initiative. These meters are designed to provide real-time monitoring of gas pressure at the point of service, enabling early detection of anomalies that could indicate leaks, pressure drops, or other hazardous conditions. This capability greatly enhances the utility's ability to respond to potential safety issues, reducing the risk of incidents and improving overall system integrity. The pressure sensing feature supports

[4] Docket Nos. P-2013-2344596, P-2013-2342745.

compliance with regulatory safety standards and aligns with industry best practices for gas distribution monitoring.

29. Furthermore, the deployment of these meters contributes to a safer environment for both customers and field personnel. The integration of pressure sensing into the broader Intelis platform also supports data-driven decision-making, enabling us to identify trends, optimize operations, and plan infrastructure improvements with a focus on safety and reliability.

30. In August of 2024, Peoples began a meter replacement pilot with a goal of installing about 30,000 Intelis meters with pressure sensing by the end of the year. We surpassed that goal - our staff installed 31,681 meters. The pilot is ongoing in 2025 with a goal of installing 60,000 meters by the end of year. In that two year timeframe, we will have installed more than 90,000 Intelis meters in our service territory. In its Third LTIIP, Peoples will work to enhance its installation efforts with a goal to achieve full saturation of its entire customer base (eligible meter sizes are for residential and small commercial customers), approximately 620,000 customers, over the next five years.

2. Schedule for Repair and Replacement

31. Peoples discusses the schedule for its replacements on pages 19 and 20 of the Third LTIIP. Peoples has developed a schedule to replace all at-risk pipelines predominantly unprotected bare steel, by 2038. The focus throughout this Third LTIIP will be on the highest risk pipe consistent with the main objective of reducing system risk and maintaining system integrity, reliability and safety. In addition, Peoples is on pace to install 60,000 meters in 2025 and expects to double that replacement rate on an annual basis during the term of its Third LTIIP.

3. Location of Eligible Property.

32. The Company is targeting pipeline replacement projects throughout its entire service territory. Page 20 of its Third LTIIP confirms that the Company completes projects throughout its service territory as it has eligible property in all parts of its service territory.

4. Quantity of Property to be Improved.

33. Peoples has included the estimated quantity of property to be improved during each of the five years covered by this Third LTIIP in Appendix 3 of the Plan. The Company expects to replace approximately 186 miles of pipeline during each year of the five years from 2026-2030. The consistent rate over this period allows for more uniform staffing and project management, which promotes efficiency and cost effectiveness. The Company also expects that the customer service line and reliability improvement project quantities will remain constant over the 5-year period. In addition, Peoples will replace approximately 124,000 meters per year over the five-year term of the Plan.

5. Projected Annual Expenditures and Cost-Effectiveness.

34. Peoples has included projected annual expenditures during each of the five years of its Third LTIIP in Appendix 4 of the Plan. The Company anticipates spending more than $600 million per year over the five-year Plan. Peoples has adopted a number of processes that will be implemented to ensure that Peoples' infrastructure improvement expenditures are cost effective. On pages 21 and 22 of its Third LTIIP, the Company details its methods for establishing project costs which are based on actual experience. Additionally, Peoples reviews cost reports on a regular basis, which include statistics such as costs per foot, costs per service line replacement, costs per meter replacement and other relevant data. Any unique trends are investigated and the Company's practices are adjusted to ensure that cost effectiveness is achieved.

35. While Peoples will generally prioritize its projects based on the highest risk, in order to maximize cost efficiency and minimize the duration of service interruptions caused by the

replacement work, Peoples may replace facilities that are considered lower risk but that will eventually require replacement if they are in the vicinity of facilities Peoples is actively replacing. In addition, the approach proposed by Peoples in its Third LTIIP with regard to the replacement of customer service lines at the same time as bare steel mains will achieve cost and time efficiencies and minimize service down time associated with replacement activities.

36. To determine the amount of improvement in overall risk levels each year, and to ensure that its program is effective, Peoples intends to provide a comparison of the pipeline footage of the type with the highest risk scores at the beginning of the year with the amount of remaining footage of the same material at the end of the year. The annual asset optimization report will provide those results as well as an updated risk ranking of the segments which will be used for the next year's prioritization of projects and performance reporting. Peoples will utilize the information from its ongoing review of the effectiveness of its programs to determine the most cost-effective use of resources to improve its distribution system. The ongoing review process may result in the redirection of spending to help ensure Peoples' ability to best improve its system.

6. Accelerated Replacement.

37. In its Implementation Order, the Commission noted that utilities should reflect and maintain an acceleration of infrastructure replacement. The Commission also noted that some utilities have already taken substantial steps toward increasing capital investment to address the issue of aging infrastructure.

38. Since 2013, Peoples has accomplished significant acceleration in the rate of infrastructure repair, improvement and replacement over historical baseline levels. As shown on page 4 of Peoples Third LTIIP, Peoples LTIIP history began in 2013 and focused on the replacement of at risk plant. Over time, the Company's LTIIPs have evolved but generally its

investment decisions have been based on replacing the highest risk pipe segments on its system and that focus remains paramount to its LTIIP work today.

39. Since 2013, Peoples has invested over $2.4 billion dollars in the repair, improvement, evaluation and replacement of its mains and services.

40. Consistent with the Commission's order and its current and past LTIIPs, Peoples' Third LTIIP continues this accelerated pace. Peoples describes the accelerated pace of its infrastructure replacement on pages 22 and 23 of its Third LTIIP. Since 2013, Peoples has eliminated more than 1,300 miles of bare steel, cast iron and wrought iron pipe on its system, accelerating the pace of pipeline replacement with each LTIIP. For this Third LTIIP, Peoples proposes to replace a total of 930 miles of distribution pipeline, which is an increase in mileage of 7% from its current LTIIP.

7. Workforce management and training program.

41. The Commission's Implementation Order requires utilities to include a workforce management and training plan as a necessary element of the LTIIP. *Implementation Order* at 17-18. A description of workforce management and training plans are found on pages 23 through 26 of Peoples' Third LTIIP. Peoples' workforce is comprised of both those employees who work directly for Peoples, and the workers who are hired by contractors of Peoples. Peoples has developed a workforce management and training plan to ensure that it will have access to a qualified workforce to perform work in a cost-effective, safe, and reliable manner.

42. Peoples has developed a number of programs to ensure that it has a sufficient number of adequately trained employees for future operations. Peoples has participated in a variety of energy industry community outreach programs to recruit and train potential employees, including the natural gas pipeline training program at Community College of Allegheny County and the Allegheny Conference Workforce Initiative. In addition, Peoples works with local trade

schools, veterans' organizations, and other community organizations to inform skilled workers of employment opportunities with Peoples. Further, upon hiring, Peoples provides a training program to ensure that its employees are capable of doing safe and efficient field work. Peoples also has procedures that will ensure that DSIC-eligible work is performed by qualified personnel, specifically through an extensive Operator Qualification Program under which the Safety and Training Department is responsible for re-qualifying one-third of the Operations workforce each year.

43. With regard to contractors, Peoples continually verifies ongoing contractor compliance with respect to safety requirements by subjecting contractors and subcontractor employees to qualification according to the provisions of Peoples' Operator Qualification Rule, which governs Peoples' own operations. Contractors must provide Peoples with written evidence of their qualification programs. On a quarterly basis, a contractor is required to submit a list of qualified individuals that also identifies the covered tasks the individuals are qualified to perform. In addition, contractor work is inspected by Peoples personnel trained in all aspects of pipeline construction. Inspectors verify that work methods adhere to established standards. Inspectors also verify quantities and quality of installations prior to invoice payment.

44. As noted above, the replacement level of approximately 186 miles per year is in the current physical construction capacity of Peoples' internal resources and existing contractor network. Current field construction resources include approximately 80 crews between in-house full time Peoples employees and the Company's contractor network. At full capacity, more than 700 people are performing LTIIP field construction work for Peoples on a daily basis. Additionally, the Company has internal and external resources (nearly 400 people) in the following

areas of design, engineering, land, program logistics and restoration also working on LTIIP construction projects on a daily basis.

45. Peoples' Intelis Meter Program represents a strategic acceleration of meter replacements, doubling the annual volume of 60,000 installed meters projected in 2025 to 124,000 meters installed annually beginning in 2026. Peoples' meter replacement acceleration necessitates a corresponding expansion in staffing to maintain operational efficiency, ensure regulatory compliance, and support customer engagement. To meet the increased workload and maintain quality standards, the Company will need to increase staffing (internal/external) for the Intelis Meter Program in the following areas: field technicians, supervisors, logistics, and operations center support.

8. Outreach and Coordination Efforts.

46. Peoples has described its coordination and outreach activities in its Third LTIIP, consistent with 52 Pa. Code § 121.3(a)(8). Peoples has a long-standing and active outreach program with local municipalities in its service territory aimed at coordinating construction projects and contesting rising costs with restoration. The Company's municipal outreach efforts allow for clear communication of information about its construction projects as well as natural gas distribution system safety, design and operations. Collaboration and coordination with municipal governments and organizations helps to minimize disruptions to customers in the area of the construction projects, enables efficient replacement of facilities and promotes awareness of the construction projects being performed at and around Peoples' infrastructure. The Company's approach to outreach and coordination is fully described on pages 26 through 28 of its Third LTIIP.

III. SERVICE

47. Pursuant to the Commission's Final Implementation Order, Peoples is serving its LTIIP on the statutory advocates as well as all of the active parties in the utility's most recent base rate proceeding at Docket No. R-2023-3044549.

IV. CONCLUSION

WHEREFORE, Peoples Natural Gas Company LLC respectfully requests that the Pennsylvania Public Utility Commission find that its Third Long-Term Infrastructure Improvement Plan contains all necessary items identified in § 1352 and addresses only distribution property which is DSIC-eligible, as defined by § 1351(2), and that the Pennsylvania Public Utility Commission approve its Long-Term Infrastructure Improvement Plan.

Respectfully submitted,

I. INTRODUCTION

This document serves as Peoples Natural Gas Company LLC's ("Peoples" or "the Company") Third Distribution Long-Term Infrastructure Improvement Plan ("Third LTIIP") for the period January 1, 2026 through December 31, 2030. This Third LTIIP replaces the Company's current LTIIP (Peoples' Second Combined LTIIP) which was approved by the Pennsylvania Public Utility Commission's ("Commission") order entered on January 14, 2021 at Docket Nos. P-2020-3021942 and P-2020-3022053[1]. Peoples received approval for a Major Modification to its Second Combined LTIIP by Commission ordered entered July 11, 2024 at the referenced dockets.

This Third LTIIP focuses on the removal of aging bare steel, wrought iron and cast iron pipelines from the Company's natural gas distribution system, which is consistent with the Company's prior LTIIPs. In addition, and consistent with the Commission's previous orders approving prior LTIIPs for Peoples, Peoples will continue to replace all 'at-risk' customer owned service lines within the scope of its LTIIP projects. Peoples' Third LTIIP also addresses the replacement of its remaining bare steel Department of Transportation ("DOT") transmission lines, and other categories of pipe described herein. Moreover, Peoples Third LTIIP continues investment in aging Measuring and Regulating ("M&R") infrastructure to further enhance service reliability, additional investments to install Over Pressure Protection ("OPP") equipment, and investment in ultrasonic meter technology designed to improve the overall safety of Peoples' natural gas distribution system. Each of these areas is detailed in the sections below.

[1] In 2023, Peoples Gas Company LLC merged with and into Peoples Natural Gas Company LLC, with Peoples Natural Gas Company LLC as the surviving entity. Therefore, this LTIIP is being filed by Peoples Natural Gas Company LLC and includes the assets of the former Peoples Gas Company LLC.

II. PEOPLES LTIIP HISTORY

Since 2013, Peoples has accomplished significant acceleration in the rate of infrastructure repair, improvement and replacement over historical baseline levels[2]. As shown in the Table 1, Peoples LTIIP history began in 2013 and focused on the replacement of at risk plant. Over time, the Company's LTIIPs have evolved but generally its investment decisions have been based on replacing the highest risk pipe segments on its system and that focus remains paramount to its LTIIP work today.

Since 2013, Peoples has invested over $2.4 billion dollars in the repair, improvement, evaluation and replacement of its mains and services, eliminating more than 1,500 miles of pipelines. Table 1 shows the Company's LTIIP progress from its initial LTIIPs through the present LTIIP:

[2] Note that in 2013, Peoples was made up of three different natural gas utilities in Western Pennsylvania, Peoples Natural Gas Company LLC, Equitable Gas Company LLC and Peoples TWP. Over time, the three utilities have had separate or combined LTIIPs and over time each of the utilities have merged with and into each other. The remaining sole utility is now known as Peoples Natural Gas Company LLC.

Table 1 - Peoples LTIIP History from 2013-2024

	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
miles	87	85	71	81	105	148	137	137	165	163	184	189
Dollars, $M	$106	$70	$75	$83	$122	$180	$169	$198	$247	$326	$394	$455

Tables 2 and 3 further break down the history of LTIIP pipe replacement, showing the decrease in at-risk bare steel, cast and wrought iron pipelines since 2013:

Table 2 - Peoples Bare Steel Inventory from 2013-2024

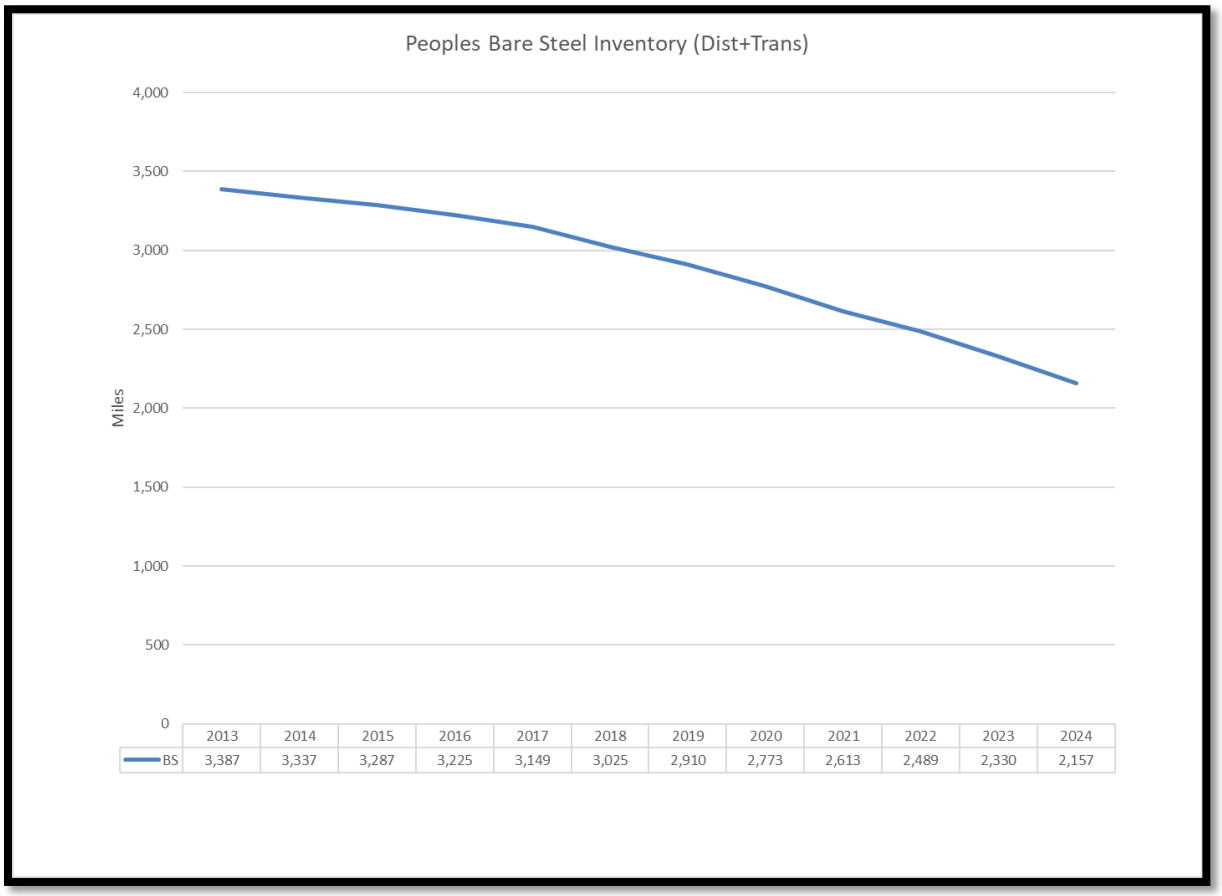

Table 3 - Peoples Cast Iron and Wrought Iron Inventory from 2013-2024

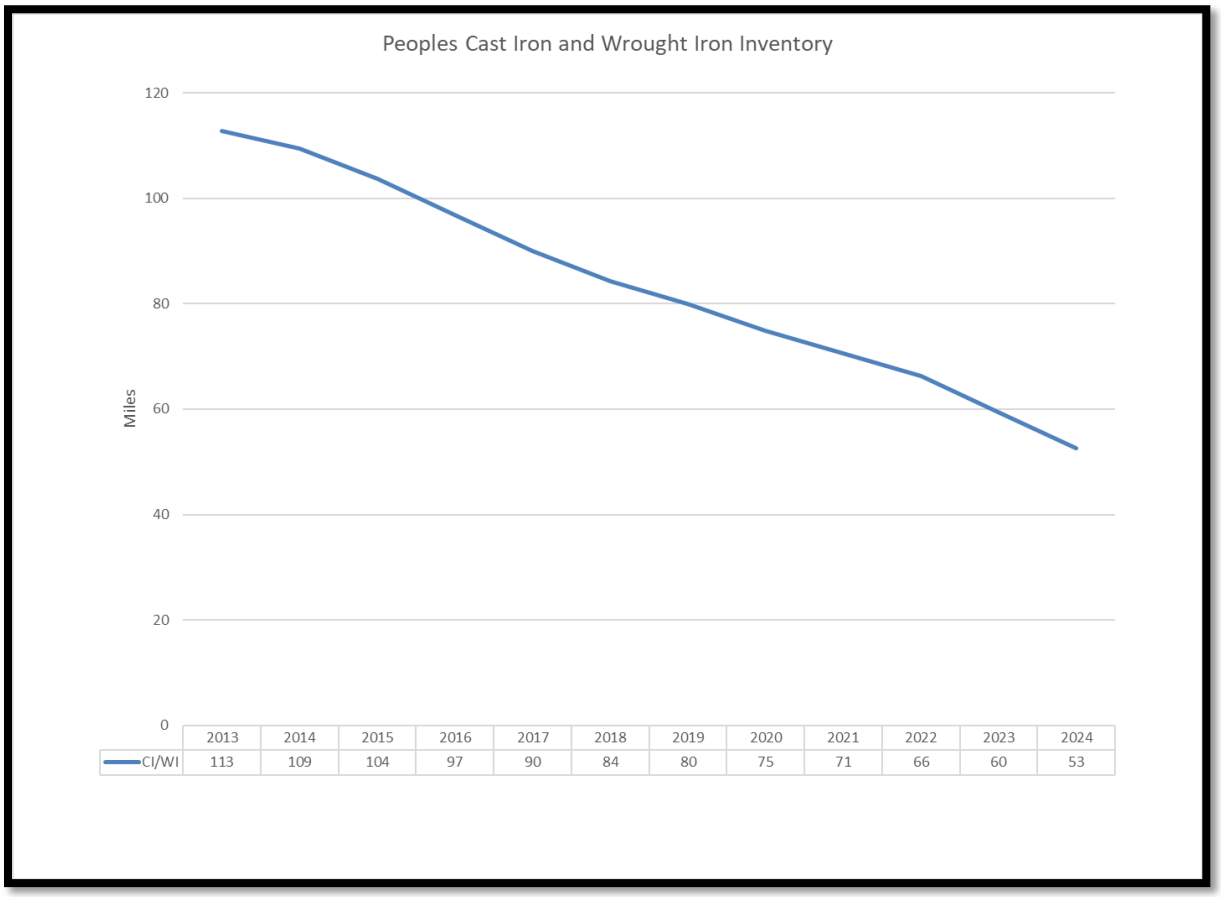


The Company has made significant progress in the last 12 years in its infrastructure repair, improvement and replacement. With its Third LTIIP, the Company strives to build on its past success and continue its goals of making its system safer and more reliable for its customers, the public and the environment.

III. PEOPLES PIPELINE AND FACILITY REPLACEMENT STRATEGY

In this Third LTIIP, Peoples will focus on the replacement of its distribution infrastructure based on a risk-ranking prioritization approach in accordance with its Distribution Integrity Management Plan ("DIMP"). Specifically, Peoples will target bare steel, cast iron, and wrought iron pipelines for

replacement, recognizing the probability and consequences of these pipeline type failures. This targeted, risk-ranking approach is consistent and compliant with the Company's DIMP and its prior LTIIPs.

In this Third LTIIP, Peoples will also target transmission line replacements based upon prioritization of the transmission asset matrix and its internal corrosion program. Moreover, as the Company conducts in-line inspections and pipeline reassessments, segments of transmission and storage pipelines will be replaced as required by the Company's Transmission Integrity Management Plan ("TRIMP").

Additionally, Peoples will include other pipelines including but not limited to a subset of first-generation plastic pipeline[3] and certain segments of coated steel pipelines as additional pipeline assets for replacement in its Third LTIIP.

Polyethylene plastic pipeline has been used commonly in the natural gas industry since the early 1970s. The use of polyethylene in these early years is commonly referred to as first generation plastic pipe. A subset of this first-generation plastic pipe has been prone to becoming brittle and susceptible to cracking. In its current LTIIP, Peoples has replaced certain first generation plastic pipe segments when they are encountered in conjunction with a pipeline replacement project or when there has been a failure. In this Third LTIIP, Peoples is proposing to more proactively replace some of the 232 mile subset of first generation plastic known as Aldyl A. Therefore, Peoples Third LTIIP will include first generation plastic replacement projects targeting about five miles of first generation plastic annually.

Through its DIMP, Peoples occasionally identifies segments/subsets of coated steel pipe that it considers relatively higher risk than other steel pipes and thus warrants consideration for replacement. For example, a subset of 2" coated steel pipelines installed in some cul-de-sacs may be more prone to failure by circumferential cracking based on material or installation techniques. Therefore, Peoples Third LTIIP proposes replacement projects for this subset of coated steel and any other similar types of coated steel

[3] Peoples has identified approximately 232 miles of known Aldyl A circa early 1970s, said pipe is referred to herein as "first generation plastic".

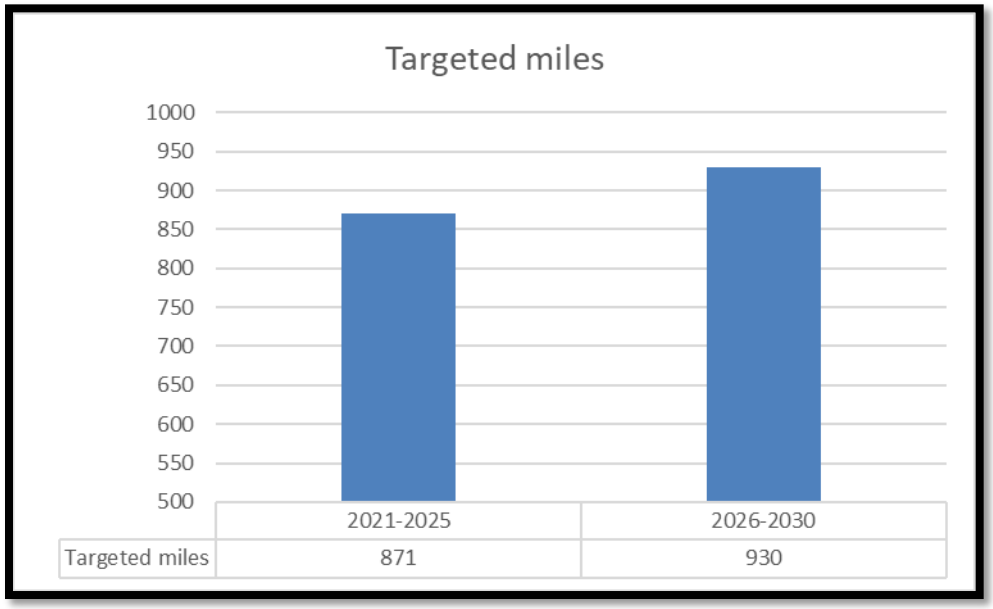
pipeline it encounters through its DIMP. Peoples estimates this program will replace approximately two miles annually of this subset of coated steel.

Peoples Third LTIIP also includes the replacement and upgrading of other plant types and facilities such as meter replacements and moveouts, measuring and regulation station upgrades and improvements, customer-owned service lines, government relocations, reliability upgrades and other related equipment and tools. These additional facilities are outlined in the attached **Third LTIIP Appendix 2**.

IV. PEOPLES THIRD LTIIP MILES

In its Third LTIIP, Peoples will increase its total main and services line investment (over the current main and service line LTIIP goals) targeting the replacement of approximately 930 total miles of LTIIP-eligible pipe and services in its Third LTIIP for 2026-2030. This Third LTIIP results in an increase of 59 total miles or nearly 7% more than the 2021-2025 LTIIP target of 871 miles (see Table 4).

Table 4 - Peoples LTIIP Targeted Miles



The average annual mileage in the proposed 2026-2030 Third LTIIP is approximately 186 miles per year. This replacement level of approximately 186 miles per year is the current physical construction

capacity of both the Company's internal resources and its existing contractor network. Thus, with the addition of the other identified segments of pipe, in addition to bare steel, cast iron and wrought iron, combined with our physical construction capacity, Peoples estimates that its LTIIP maturity date will be 2038 (as it currently has more than 2,200 miles of eligible pipe left for replacement from 2025-2038). As it has done with its prior LTIIPs, Peoples will target segments and develop projects around these segments in a manner consistent with its DIMP. Table 5 shows the anticipated breakdown of Peoples targeted pipeline inventory for 2026-2030:

Table 5 - Pipe Targeted in Third LTIIP (2026-2030)

Pipe Targeted in the 2026-2030 LTIIP				
Targets only - actual mileage will vary year to year				
Year	**BS,CI,WI**	**First Gen PE**	**Other Steel**	**Total**
2026	179	5	2	186
2027	179	5	2	186
2028	179	5	2	186
2029	179	5	2	186
2030	179	5	2	186
Total	**895**	**25**	**10**	**930**

The Company's Third LTIIP includes both distribution and transmission pipe replacement projects. Peoples operates approximately 162 total miles of Department of Transportation ("DOT") transmission pipelines, of which, as of December 31, 2024, approximately 15 miles or 9% is bare steel. The Third LTIIP has a focus on replacing large portions of the remaining bare steel transmission pipelines. During the period covered by this LTIIP, Peoples plans to replace approximately 7-10 miles of the remaining 15 miles of its bare steel transmission pipe. These transmission pipeline replacements are more expensive than distribution pipeline replacements – often costing 3 to 7 times more than the average small diameter distribution replacements.

V. PEOPLES THIRD LTIIP CAPITAL INVESTMENT

Peoples' Third LTIIP increases the five-year capital investment for Mains and Services from $1.849 billion over the 2021-2025 LTIIP to $2.922 billion over the 2026-2030 LTIIP, an increase of $1.1 billion (+58%) above the current LTIIP plan. The primary drivers of this expenditure increase include the combined impacts of the increase in miles, portfolio changes (many of the projects in the Third LTIIP located in urban areas are the more difficult, more expensive, and time-consuming projects), and increased construction and restoration costs.

Moreover, the exact number of miles replaced per year can be very challenging to target given the mix of projects, specific township and municipal requirements, availability of construction crews and a myriad of logistical challenges. Peoples' Third LTIIP builds in the flexibility to adjust the total miles replaced from year to year based on the logistical items outlined above.

VI. STAFFING PLAN

LTIIP Construction

As noted above, the replacement level of approximately 186 miles per year is in the current physical construction capacity of Peoples' internal resources and existing contractor network. Current field construction resources include approximately 80 crews between in-house full time Peoples employees and the Company's contractor network. At full capacity, more than 700 people are performing LTIIP field construction work for Peoples on a daily basis. Additionally, the Company has internal and external resources (nearly 400 people) in the following areas of design, engineering, land, program logistics and restoration also working on LTIIP construction projects on a daily basis.

The mileage level of 186 miles was successfully achieved in 2024 with similar personnel levels and is expected to be achieved in 2025. As such, Peoples is not proposing any changes in its Staffing Plan as

it relates to the replacement of its pipelines and related facilities and intends to maintain current construction and engineering staffing levels to execute its Third LTIIP.

Intelis Meters

Peoples Third LTIIP includes investment in ultrasonic meter technology known as the "Intelis Meter". An Intelis Meter is an ultrasonic meter produced by Itron that includes state-of-the-art safety features such as automatic shut off capabilities for certain operating conditions. As part of the Company's ongoing commitment to safety and reliability, Peoples developed a plan to replace eligible (based on meter size) customers' existing diaphragm meters with Intelis Meters. The Company's Intelis Meter Program goal is to replace approximately 124,000 meters annually, beginning in 2026, achieving full meter saturation in those 5 years, with the goal of transitioning to Advanced Metering Infrastructure (AMI) in the future.

Peoples' Intelis Meter Program represents a strategic acceleration of meter replacements, doubling the annual volume of 60,000 installed meters projected in 2025 to 124,000 meters installed annually beginning in 2026. Peoples' meter replacement acceleration necessitates a corresponding expansion in staffing to maintain operational efficiency, ensure regulatory compliance, and support customer engagement. The program for Intelis Meters will be executed using a three-pronged approach: Targeted, Construction, and Touchpoint. Using this approach ensures that installations are complementary and this approach allows for flexible, data-driven execution across the Company's diverse service territory.

- Targeted Approach
    - The Targeted strategy focuses on proactive meter replacements in high-priority areas/groups.
- Construction Approach
    - The Construction strategy aligns meter replacements with planned infrastructure projects.
- Touchpoint Approach
    - The Touchpoint strategy integrates meter replacements into routine field operations.

To meet the increased workload and maintain quality standards, the Company plans to add incremental staffing in the following areas: field technicians, supervisors, logistics, and operations center support.

VII. PIPE REPLACEMENT CATEGORIES

Bare Steel, Wrought Iron and Cast Iron

In its Third LTIIP, Peoples will continue to replace and remove its bare steel, wrought iron and cast iron facilities at an accelerated pace. Construction materials used for natural gas pipelines have evolved over time and since the older pipelines in the Peoples' system were first installed, many of those materials (bare steel, cast iron, wrought iron, etc.) and installation methods are requiring replacement as they age. Cast iron is susceptible to brittle breakage and cracking from ground movement, whereas bare steel and wrought iron is subject to corrosion risk. Bare steel, cast iron and wrought iron largely represent the majority of the at-risk pipe on our system and therefore, these pipeline types represent a vast majority of the mileage to be replaced in the Company's Third LTIIP.

In this Third LTIIP, Peoples will also continue to target transmission line replacements based upon prioritization of the transmission asset matrix and its internal corrosion program. Moreover, as the Company conducts in-line inspections and pipeline reassessments, segments of transmission and storage pipelines will be replaced as required by the Company's Transmission Integrity Management Plan ("TRIMP"). Peoples plans to replace approximately 7-10 miles of the remaining 15 miles of its bare steel transmission pipe in its Third LTIIP.

A Subset of First-Generation Plastic Pipelines

In this Third LTIIP and moving forward, Peoples proposes to add 232 miles as a subset of first-generation plastic property to its LTIIP targeted inventory. Specifically, some plastic pipe made of the material known as Aldyl A (herein referred to as "first-generation plastic") is more recently showing

vulnerability to stress cracking. This subset of plastic pipe is currently a subject of PHMSA Advisory Bulletins and Pennsylvania Public Utility Commission examination[4]. Both agencies are urging operators to consider inclusion of first-generation plastic pipe in their replacement programs. In its Third LTIIP, Peoples will evaluate the replacement of certain first-generation plastic pipe on a case-by-case basis. Consistent with the Company's current LTIIP, when Peoples identifies a higher risk plastic pipe, and it is replaced, Peoples will include this pipe as eligible LTIIP infrastructure replacement in terms of miles and dollars.

Other Pipe

Peoples occasionally identifies segments/subsets of coated steel pipe that it considers relatively higher risk than other steel pipes and thus warrants consideration for replacement. For example, a subset of 2" coated steel pipelines installed in some cul-de-sacs may be more prone to fail by circumferential cracking based on material or installation techniques. The rate of replacement of this pipe is not static and will be subject to change based on all pipe included in Peoples DIMP. Peoples is including this subset of coated steel pipe to specifically track and monitor its replacement and count such replacements as infrastructure investments consistent with the LTIIP.

VIII. M&R STATION REPLACEMENTS AND UPGRADES

Metering and Regulating ("M&R") stations are critical points where gas pressure and delivery volumes are regulated to ensure that gas delivered into or out of a pipeline system is maintained within a specified and safe operating pressure range. M&R stations are located at points where gas is delivered between higher- and lower-pressure pipelines. An M&R station regulates or adjusts pressure and volumes from a

[4] See Motion of Chairman Stephen M. DeFrank, Replacement of Older Plastic Pipe in Natural Gas Distribution Systems (Public Meeting Held Aug. 1, 2024) (emphasizing the importance of focusing on the replacement of older plastic pipe simultaneously with cast iron and bare steel pipe).

higher-pressure transmission or distribution pipeline for delivery into a lower-pressure distribution pipeline.

Peoples maintains more than 2,750 M&R stations strategically located on its pipeline system. In its currently approved LTIIP, Peoples will execute upgrades and improvements to approximately 51 M&R stations per year or 255 M&R stations in total.

Peoples Third LTIIP will increase its M&R replacement and upgrade program for 2026-2030 targeting the replacement or improvement of about 76 M&R Stations per year. Peoples estimates the investment required for its Third LTIIP M&R work will be $32M or about $6.4M per year. The planned improvements to these existing M&R stations are necessary in order to maintain a safe, adequate, and reliable service for Peoples' customers.

IX. OVER-PRESSURE PROTECTION ("OPP")

The Merrimack, MA Natural Gas Incident in September 2018 and the subsequent findings/ recommendations of various regulators, industry groups, and United States Senators, resulted in Pipeline Operators reviewing their regulated systems and focusing on prevention of a similar incident. The Merrimack Incident involved the over pressurization of a low-pressure distribution system. Peoples operates over 640 such low-pressure systems, comprised of over 4,500 miles of low-pressure pipe and over 1,800 regulator stations. The Company's low-pressure systems serve natural gas to over 450,000 customers.

In an effort to reduce the likelihood of a similar event, Peoples began an Over Pressure Capital Improvement Program for regulator stations in 2020. The program consists of three project types intended to mitigate over-pressurization risk: (i) adding remote pressure detection equipment, (ii) adding another form of over pressure protection such as adding relief valves or making station piping modifications

depending upon what is best suited for the individual regulator station, and (iii) relocating underground control lines[5] (which were involved in the Merrimack Incident) to above ground locations whenever possible and feasible. The targets of the program are shown Table 6 below:

Table 6 - OPP Component

Estimated balance at YE 2025	OPP Component	2026	2027	2028	2029	2030	Total
418	Remote Pressure Detection, target quantity	150	150	118	-	-	418
	Remote Pressure Detection, target investment	$ 1.8	$ 1.8	$ 1.4	$ -	$ -	$ 5.0
708	Additional OPP, target quantity	100	100	100	100	100	500
	Additional OPP, target investment	$ 12.0	$ 12.4	$ 12.7	$ 13.1	$ 13.5	$ 63.7
44	Relocate UCL, target quantity	20	24	-	-	-	44
	Relocate UCL, target investment	$ 1.0	$ 1.0	$ -	$ -	$ -	$ 2.0
							$ 70.7

For the five year period covered by this LTIIP, an estimated $70.7M is included for OPP.

X. METERS

Peoples' Third LTIIP includes meter replacement expenditures totaling approximately $224 million for the five-year period covered by its Third LTIIP. The majority of the meter expenditures are related to the Company's Intelis Meter Program. The remaining meter-related dollars are dedicated to the replacement of rotary and diaphragm meters[6].

Intelis Meter Program

As outlined in Section VI above, the Company's Intelis Meter Program includes the replacement of 124,000 meters annually, beginning in 2026. Peoples will spend approximately $40 million per year for its Intelis Meter Program.

[5] Control lines are small diameter lines that connect the regulator with the downstream system to provide pressure feedback to the regulator. In general, underground control lines can extend a few feet to 30 feet or more downstream of the regulator.
[6] Intelis meter technology for larger capacity (rotary & diaphragm) meters is not yet available.

The Intelis Meter represents a significant advancement in utility safety and operational oversight, with the integration of pressure sensing technology into solid state gas meters serving as a cornerstone of this initiative. These meters are designed to provide real-time monitoring of gas pressure at the point of service, enabling early detection of anomalies that could indicate leaks, pressure drops, or other hazardous conditions. This capability greatly enhances the utility's ability to respond proactively to potential safety issues, reducing the risk of incidents and improving overall system integrity. The pressure sensing feature supports compliance with regulatory safety standards and aligns with industry the best practices for gas distribution monitoring.

Furthermore, the deployment of these meters contributes to a safer environment for both customers and field personnel. The integration of pressure sensing into the broader Intelis platform also supports data-driven decision-making, enabling us to identify trends, optimize operations, and plan infrastructure improvements with a focus on safety and reliability.

In August of 2024, Peoples began a meter replacement pilot with a goal of installing about 30,000 Intelis meters with pressure sensing by the end of the year. Our staff surpassed that goal by installing 31,681 meters. The pilot is ongoing in 2025 with a goal of installing 60,000 meters by the end of year. In that two year timeframe, we will have installed approximately over 90,000 Intelis meters in our service territory. In its Third LTIIP, Peoples will work to enhance its installation efforts with a goal to achieve full saturation of its entire customer base (eligible meter sizes are for residential and small commercial customers), approximately 648,000 customers, over the next five years.

Other Meters

For rotary meters, the Company performs an audio and visual inspection every two years pre-1990 installation and every five years post-1990 installation and a differential test every ten years in accordance with manufacturer recommendations. The replacement of such meters occurs as a result of issues

discovered as a result of this inspection process. In addition, a spin test is performed for all turbine meters once every two years and meters are replaced accordingly.

The Company determines its annual diaphragm meter replacements based on meter test results. The meter test program that the Company follows for diaphragm meters is the statistical sampling method set forth in 52 Pa. Code § 59.21(d). A utility that elects the statistical sampling program shall remain on that program for at least four years. Under the statistical sampling program, Peoples divides meters into groups and then test samples from each group annually. For a group to remain in service, at least 80% of the meters in the sample test must meet Commission-required accuracy limits. If a group does not meet those limits, corrective action must be taken, which may consist of removing the entire group from service within four years. Should a meter family currently in use be condemned during the term of this LTIIP, meter replacements may increase beyond projected levels in order to remove those meters from service within a four year period.

XI. ELEMENTS OF PEOPLES THIRD LONG-TERM INFRASTRUCTURE IMPROVEMENT PLAN

Act 11 prescribed certain informational components for inclusion in the LTIIP, and the Commission's regulations at 52 Pa. Code § 121.3(a) specify eight specific components a utility must include in its LTIIP:

> (1) Identification of types and age of eligible property owned and operated by the utility for which it is seeking DSIC recovery.
>
> (2) An initial schedule for planned repair and replacement of eligible property.
>
> (3) A general description of location of eligible property.
>
> (4) A reasonable estimate of quantity of eligible property to be improved or repaired.
>
> (5) Projected annual expenditures and means to finance the expenditures.
>
> (6) A description of the manner in which infrastructure replacement will be accelerated and how repair, improvement or replacement will ensure and maintain adequate, efficient, safe, reliable and reasonable service to customers.

(7) A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe and reliable manner.

(8) A description of a utility's outreach and coordination activities with other utilities, Department of Transportation and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

Peoples addresses the eight elements identified in 52 Pa. Code § 121.3(a), in the following sections 1. through 8.

1. Types and Age of Eligible Property

Peoples Third LTIIP Appendix 1 details the types and age of all eligible pipeline property for which Peoples will seek DSIC recovery. With regard to pipeline replacement, Peoples will remain consistent with its prior LTIIPs and will focus on the replacement of Distribution target pipe, predominantly bare steel and cast iron pipelines. The following types of LTIIP-eligible property are included in Peoples Third LTIIP:

- Gas distribution and transmission mains and all related equipment and appurtenances;
- Gas services lines (company and customer-owned) and all related equipment and appurtenances, such as farm taps;
- Gas meter sets and all related equipment and appurtenances;
- Regulation stations, including telemetry;
- Overpressure protection equipment;
- Mandated facility relocations;
- Other related capital costs, including but not limited to equipment, tools, corrosion control equipment, vehicles and supporting information technology systems.

Regarding meter replacements, Peoples Third LTIIP will focus on the installation of Intelis Meters. Since the installation of Intelis Meters will take time and will only apply to certain classes of meters

(residential and small commercial), the Company will continue to replace rotary and diaphragm meters annually based on meter test results and statistical sampling. The meter test program that the Company follows for rotary meters, the Company performs an audio and visual inspection every two years pre-1990 installation and every five years post-1990 installation and a differential test every ten years in accordance with manufacturer recommendations. The replacement of such meters occurs as a result of issues discovered as a result of this inspection process. In addition, a spin test is performed for all turbine meters once every two years and meters are replaced accordingly.

Under the statistical sampling program, Peoples divides meters into groups and then test samples from each group annually. For a group to remain in service, at least 80% of the meters in the sample test must meet Commission-required accuracy limits. If a group does not meet those limits, corrective action must be taken, which may consist of removing the entire group from service within four years.

Peoples' Third LTIIP includes meter replacement expenditures totaling approximately $224 million for the five-year period covered by this LTIIP.

2. Schedule for planned repair and replacement of eligible property.

The Third LTIIP continues the accelerated rate of Peoples' infrastructure repair, improvement and replacement that was achieved in its prior LTIIPs. **Third LTIIP Appendix 2** contains a schedule showing Peoples' strategies for the planned repair and replacement of plant during the five-year period covered by this Third LTIIP. **Third LTIIP Appendix 2** is based on an analysis of failures, their nature, causes, locations, performance indicators, and forecasts of future reliability concerns all in accordance with the Company's DIMP and TRIMP programs. **Third LTIIP Appendix 3** provides the projected quantity of eligible property to be improved annually for this Third LTIIP.

As mentioned previously, the Third LTIIP contemplates an acceleration over the Company's prior LTIIPs, anticipating a total mileage commitment of 930 miles of planned replacement for this five year

Third LTIIP period. The specific allocation of mileage between main types to be replaced will vary depending on annual risk evaluations and other project-specific considerations, in accordance with the Company's DIMP.

Peoples includes a list of planned DSIC-eligible projects included with the Company's filed Annual Asset Optimization Plan ("AAOP"). This listing is developed and reviewed at least annually based on a reassessment of the most currently available project data. The list of planned DSIC-eligible projects is subject to change based on a number of circumstances, including but not limited to mandatory pipeline replacements or changes in state or federal codes. As previously mentioned, Peoples requests flexibility in developing its dynamic list of LTIIP projects to align with changing circumstances and emerging issues.

3. Location of Eligible Property

Peoples' Third LTIIP includes projects located throughout its service territory. Peoples' service territory spans 18 counties throughout Western and Southwestern Pennsylvania. Within its service territory, Peoples has more than 13,300 total miles of DOT pipeline assets and other facilities. Eligible property is located in all parts of the Company's service territory.

4. Estimate of quantity of eligible property to be improved.

Third LTIIP Appendix 3 shows the estimated quantity of property to be improved during each of the five years covered by this Third LTIIP. Each year, the Company plans for the replacement of 186 total miles of pipe with a five-year total of 930 miles. The anticipated breakdown of the mileage is as follows:

Table 7 - Pipe Targeted in Third LTIIP (2026-2030)

Pipe Targeted in the 2026-2030 LTIIP Targets only - actual mileage will vary year to year			
Year	**BS,CI,WI, Other**	**First Gen PE**	**Total**
2026	181	5	186
2027	181	5	186
2028	181	5	186
2029	181	5	186
2030	181	5	186
Total	**905**	**25**	**930**

5. Projected annual expenditures and means to finance the expenditures.

Since 2013, Peoples has invested over $2.6 billion dollars in the repair, improvement, evaluation and replacement of its mains, services, meters and regulators, eliminating more than 1,500 miles of at-risk pipelines. Peoples' Third LTIIP is projected to cost more than $3 billion dollars as outlined below and in its **Third LTIIP Appendix 4**. The Company finances its ongoing capital needs through a variety of sources, including short and long-term debt issuances approved by the Commission, as well as internally generated cash flows, that will be supported, in part, by the DSIC. To the extent that the infrastructure replacement work justifies additional financial relief, the Company will seek separate Commission approval at such time it is deemed necessary and appropriate.

Table 8 - Projected Annual LTIIP Expenditures

Table for LTIIP Filing, $M	2026	2027	2028	2029	2030	Total LTIIP
Distribution Lines	$ 539.5	$ 561.1	$ 583.6	$ 606.9	$ 631.2	$ 2,922.3
Meter Replacements - Intelis	$ 39.8	$ 37.3	$ 38.6	$ 39.9	$ 41.3	$ 197.0
Meter Replacements - Other	$ 5.4	$ 5.4	$ 5.4	$ 5.4	$ 5.5	$ 27.2
Meter Move Outs	$ 1.0	$ 1.1	$ 1.1	$ 1.1	$ 1.2	$ 5.5
M&R Station Upgrades	$ 6.0	$ 6.2	$ 6.4	$ 6.6	$ 6.8	$ 32.0
M&R OPP	$ 14.8	$ 15.2	$ 14.1	$ 13.1	$ 13.5	$ 70.7
Total	$ 606.6	$ 626.3	$ 649.2	$ 673.1	$ 699.5	$ 3,254.7

The Company's projected Third LTIIP expenditures (as shown in Table 8 above) are based upon current capital market and economic conditions, as well as construction-related costs such as rising labor, material, and restoration and permitting costs. Peoples projects its LTIIP expenditures by using average cost per mile estimates from actual construction project costs experienced and completed in 2019 through 2024. Average costs per mile have nearly tripled during the last 10 years. The acceleration of targeted pipeline miles, acceleration of meter replacements and the acceleration of measurement and regulation station upgrades, as well as inflation and portfolio changes all contribute to the projected annual expenditures in Peoples' Third LTIIP. Notwithstanding the increase in cost per mile, the Company employs numerous processes to ensure LTIIP project expenditures are reasonable and prudent.

6. Manner in which replacement of aging infrastructure will be accelerated and how repair, improvement or replacement will maintain adequate, efficient, safe, reliable and reasonable service.

Peoples' (and its previous utilities now merged within) infrastructure replacement programs began in mid-2011 with the accelerated replacement of cast iron pipelines and in 2012 with the accelerated removal and replacement of unprotected bare steel pipelines and associated services, and some cathodically protected bare steel pipelines and the services associated with these types of pipe. These programs continue today under the currently approved LTIIP. Peoples continued commitment to remove aging infrastructure and implement improvements to maintain adequate, efficient, safe, reliable and reasonable service is set forth throughout this Third LTIIP. An effective way for Peoples to maintain adequate, efficient, safe, reliable and reasonable service is to mitigate the concern associated with risks on its system through the replacement of bare steel, cast iron, wrought iron, and other pipeline facility types such as meters.

As part of the Company's ongoing commitment to safety and reliability, Peoples developed a plan to replace customers' meters with Intelis Meters. The Company's Intelis Meter Program includes the

replacement of approximately 124,000 meters annually, beginning in 2026, achieving full meter saturation in those 5 years.

Since 2013, Peoples has invested over $2.6 billion dollars in the repair, improvement, evaluation and replacement of its mains, services, meters and regulators. Peoples has eliminated approximately 1,300 miles of bare steel, cast iron and wrought iron pipe on its system. Peoples will continue to focus on the accelerated replacement and removal of its aging infrastructure to enhance the safety of its system by installing newer, longer-lasting and safer materials. As a result, Peoples' customers will receive safer, more reliable service with fewer interruptions.

7. A workforce management and training program designed to ensure that the utility will have access to a qualified workforce to perform work in a cost-effective, safe and reliable manner.

Workforce planning and training is an ongoing process for Peoples, focusing on a "best practices" approach to identifying current and projected staffing needs and required skill sets for the workforce. The Company maintains ongoing trainings to ensure its workforce is properly trained and qualified:

Supervisor Assessment and Development Program

Peoples requires that all supervisor candidates participate in an assessment program that compares their abilities and behavioral competencies to nationwide supervisory norms. Both internal and external hires participate in a comprehensive supervisor orientation and development program that introduces them to Peoples procedures and programs, as well as providing operator qualification ("OQ") training regarding pipeline compliance, installation, and maintenance programs.

Training

Peoples provides technical skills training and OQ training at operating locations and a training center for field workers and works to ensure that the qualifications and work quality meet regulatory and

Company expectations. Peoples believes that this helps the Company protect system integrity and reliability as well as public safety.

New employees receive seven weeks of training. Typically, the first week of training is their Safety Orientation followed by three weeks of training consisting of construction and maintenance fundamentals training. This includes OSHA compliance and accident prevention training as well as field construction techniques, tool and equipment operation, and other natural gas distribution field work exposure. The construction and maintenance training is complemented by three weeks of on the job training.

When these employees advance to Field Customer Service positions, a similar three-week course is provided that includes safe appliance inspection and maintenance procedures, Natural Fuel Gas Code compliance, and leak and odor investigation. The training department also conducts courses on specific equipment used in the gas distribution industry, including training from manufacturer staff experts.

Intelis Meter Training and Implementation

To support the successful execution of the Intelis Meter Change Program, a comprehensive training and deployment strategy has been developed. This strategy ensures that the workforce is adequately prepared and that meter installations are executed efficiently and safely across the program timeline.

The staffing plan includes the hiring of Apprentice Customer Service Technicians and/or contractors who will be dedicated to meter change-outs. These technicians and/or contractors will undergo a structured training program that covers the technical aspects of Intelis meter installation, safety protocols, and customer interaction procedures. Training will be conducted in accordance with Peoples OQ training program designed for the Field Customer Service position and will include both classroom instruction and field-based mentoring.

Logistical planning includes the procurement and distribution of meters, tools, and safety equipment. A centralized logistics team monitors inventory and coordinates deliveries to field crews, ensuring that

materials are available when and where they are needed. Additionally, a scheduling system will be implemented to optimize deployment routes and minimize customer disruption.

The Intelis Meter workforce deployment will follow a phased implementation model. Initial efforts in 2025 will focus on planning, hiring, and training. Full-scale meter installations will begin in 2026, ramping up to a peak of approximately 124,000 meters per year. The program will leverage the aforementioned three-pronged deployment strategy mentioned in Section VI of this Third LTIIP.

This structured approach to training and deployment is designed to ensure the timely and safe installation of Intelis meters, while also building a skilled workforce capable of supporting future operational needs.

OQ Training

In order to ensure that workers involved in LTIIP-eligible work are qualified, Peoples has an extensive OQ Program. The Safety and Training Department is responsible for re-qualifying one-third of the Operations' workforce each year (includes acquiring, developing, and/or providing the training that supports OQ training, maintaining qualification records, and maintaining a database of qualified individuals); tracking Role assignments and scheduling training sessions; publishing a monthly Role status report; coordinating the development and maintenance of the written OQ Program, the identification of covered tasks and abnormal operating conditions, the development of evaluation instruments, and the qualification of employees and evaluation of qualified individuals; and verifying contractor compliance.

Company hired Contractors that solely do work for Peoples are also required to adhere to federal DOT's Pipeline Safety regulations pertaining to OQ, Drug and Alcohol Testing and Program Administration, and other requirements designed to assure safe and accurate installation and operation of pipeline components.

Peoples will verify that all individuals performing covered tasks, including contractor or subcontractor employees, are qualified according to the provision of the Operator Qualification Rule. For the purposes of OQ, the term contractor includes individuals who are not Peoples employees and who perform covered tasks on Peoples facilities. Contractors recognized as "Service Line Installers" by Peoples are exempt from the requirements of this section.

Contractors shall demonstrate compliance to Peoples safety requirements by attaining qualification through Peoples programs held at the Companies' training facility. Evidence of compliance may include, but is not limited to:

1. Identification of qualified individuals.
2. Date current qualification was completed.
3. Additional information requested by Peoples pertaining to the qualification of individuals.

All applicable contracts will include provisions specifying contractor Operator Qualification requirements. Inspection of contractor qualification will occur at job sites or at contractor's facilities at the discretion of Peoples.

Contractors utilizing any non-English speaking employees must make provisions or provide for adequate translation capabilities prior to, and during, training and the performance of work.

8. A description of a utility's outreach and coordination activities with other utilities, Department of Transportation and local governments regarding the planned maintenance/construction projects and roadways that may be impacted by the LTIIP.

Peoples proactively communicates information about its planned infrastructure replacement projects and the impact to roadways to representatives from the Pennsylvania DOT ("Penn-DOT") county and local municipalities, other utilities, the media and impacted customers. Peoples actively participates in the following utility coordination and outreach activities with municipalities and other utility companies in this area:

- Penn-DOT Utility – Highway Liaison Committee (UHLC)
- Penn-DOT Annual planning and LET schedule meetings for coordination of projects
- Penn-DOT Individual Project Design/Utility Coordination site visits and meetings
- Penn-DOT Call – Coordinate PA, Complex Tickets
- PUC Public Crossings Project
- CONNECT- "Congress of Neighboring Communities"- representatives from CONNECT member municipalities and the utilities meet for planning, networking, and coordination efforts
- Allegheny County Utility Coordinating Committee
- Armstrong County Utility Coordinating Committee
- Butler County Utility Coordinating Committee
- Indiana County Utility Coordinating Committee
- Jefferson County Utility Coordinating Committee
- Johnstown County Utility Coordinating Committee
- Altoona County Utility Coordinating Committee
- Fayette County Utility Coordinating Committee
- Westmoreland County Utility Coordinating Committee
- City of Pittsburgh Department of Mobility and Infrastructure - monthly utility co-ordination meetings
- Annual- Individual City of Pittsburgh Council meetings on projects per ward
- Pittsburgh Water & Sewer Authority (PWSA) - Water/Gas co-op renewal projects
- Project Communications in local papers {i.e. print - Pittsburgh East End Newspaper)
- Allegheny County Department of Public Works- Coordination meetings for upcoming work, pending work, and active work
- Ad hoc coordination meetings with local governments
- Peoples website, https://www.peoples-gas.com/street-work/future-work.php, is updated to reflect Interactive Mapping under the "Future Work" link which can display projects that are coming up in the next two weeks and where customers can check the status of ongoing construction
- Peoples sends letters requesting local governments to share upcoming paving plans. Responses received are integrated into Peoples overall project planning
- Individual Communications - Project mailings (construction letters and door hangers)

- Individual Communications - Calls are sent to Peoples customers that are involved within the project scope. These are completed as a reminder that the Company is coming prior to construction work starting and
- Individual door to door communications

APPENDIX 2

SCHEDULE FOR PLANNED REPAIR AND REPLACEMENT
January 1, 2026 through December 31, 2030

Plant Type	**Replacement Strategy**	**Schedule**
Standard Categories		
Distribution Lines (including company owned service renewals)	Peoples Companies' distribution system and associated services based upon a risk ranking prioritization approach. Such approach will be consistent and compliant with the Company's Distribution Integrity Management Plan ("DIMP"). The approach recognizes the threat and consequences of pipeline failure as well as factors such as the population density and the density of pipelines eligible for replacement. Tracking and traceability equipment and resources will be included in these replacements.	Scheduled completion by 2038
Transmission Line Replacements	As identified, the Company will replace transmission line sections based upon prioritization of the transmission asset matrix and the internal corrosion program. In addition, as in-line inspection (i.e. smart pig runs) and pipeline reassessments are conducted, segments of transmission and storage pipelines will be replaced as required by the transmission Integrity Management Plan (TRIMP); often driven from anomalies or defects discovered during in-line inspection.	As needed
Government Relocations	Facility relocations will continue to be scheduled consistently with request from the governmental agency.	As needed
Plant Type	**Replacement Strategy**	**Schedule**
Non-Intelis (replacement & inside meters move outs)	Meters will be replaced according to a statistical sampling based methodology that involves meter type based risk assessments. Medium pressure inside meters will be moved out during normal pipeline replacement and target areas unless restricted by state or local laws.	Ongoing
Intelis	Intelis Meters installation be executed using a three-pronged approach: Targeted, Construction, and Touchpoint. The Targeted strategy focuses on proactive meter replacements in high-priority areas/groups. The Construction strategy aligns meter replacements with planned infrastructure projects. The Touchpoint strategy integrates meter replacements into routine field operations.	Projected completion 2030
Special Considerations		
Customer service line replacements	Replace all at-risk customer service lines as the Peoples Companies repair or replace its company owned facilities.	Scheduled completion by 2038
Reliability Improvements (Betterments)	As existing pipelines are replaced, we will improve system reliability in distribution areas that experience low pressure issues or have experienced considerable growth over the years. These areas typically have one main pipeline source of supply and present a reliability risk should there be an emergency within that single supply asset. In this case, the Reliability Improvement provides an additional source of gas supply by	As needed

	looping existing pipelines, (or) extending higher pressure pipelines, or enlarging the pipeline. Additionally, the Company plans to interconnect the systems of the Peoples Companies in areas where there has been service (pressure) or supply issues and areas in which a critical single feed exists.	
M&R Station and Equipment	Upgrades and improvements to M&R stations are planned to ensure continued safe and reliable services. The replacement strategy will target those stations where age, obsolescence, malfunctions, resizing, performance, reliability, pressures changes, over pressure protection, and relocations are issues. Upgrades and revisions focused on mitigating over pressurization risk include; • moving regulator sense lines above ground (excluding regulators in vaults/pits), • adding remote monitoring locations (SCADA) on low pressure systems, • relocating valves to prevent relief bypass • the addition of external reliefs to closed and dead end systems.	As needed
Coated Steel Pipelines, non-protected	Coated steel pipelines installed in 1971 and prior that were not cathodically projected shall be is eligible for replacement. The coating can disbond and become ineffective.	As needed
First Generation Plastic Pipelines	Generally defined as Polyethylene plastic pipeline line installed in the early 1970's that may become brittle and susceptible to cracking. These pipelines will be replaced compliant with the Company's Distribution Integrity Management Plan ("DIMP").	As needed
Other pipelines	Segments/subsets of pipe (albeit plastic or steel) that is considered relatively higher risk than other pipelines and thus warrants consideration for replacement.	As needed
Other Related Capitalized Costs		
Vehicles / Tools / Equipment	Purchase incremental tools and equipment specific to the projects in this LTIIP as support of an incremental increase with this filing.	As needed, with increased purchases over the 2026 - 2030 period.

Re: Peoples Natural Gas Company LLC
Annual Asset Optimization Plan Filing
Docket No. M-2026-_____

Dear Secretary Homsher:

Enclosed on behalf of Peoples Natural Gas Company LLC is the Annual Asset Optimization Plan containing actual performance for the twelve months ended December 31, 2025 and projected performance for the calendar year 2026 from the Peoples Companies' recently approved LTIIP.

Respectfully submitted,

Carol Scanlon

Matt Stewart, Bureau of Technical Utility Services (via E-mail)

Peoples Natural Gas Company LLC
2026 – 2030 Long-Term Infrastructure Improvement Plan ("LTIIP")
CY 2025 Annual Asset Optimization Plan

Background

On September 22, 2017, Peoples Natural Gas Company LLC, Peoples Natural Gas Division ("PNGD") and Peoples Gas Division ("PGD") (collectively the "Peoples or "the Company"), filed a combined distribution LTIIP for 2017-2021. The petition was a revision of Peoples Natural's and Peoples Gas' current LTIIPs. The Combined LTIIP was approved on January 18, 2018.

Per Order entered on January 24, 2020, the Commission approved, with certain modifications, a Joint Petition for Settlement authorizing Aqua America Inc. to acquire the Peoples. As part of the approved settlement, Peoples committed to file a modified LTIIP within six months following closing of the acquisition that further accelerated the rate of replacement of higher risk pipe after closing. The closing of the transaction occurred on March 16, 2020. On September 15, 2020, Peoples filed a Modified Combined Distribution LTIIP for 2021-2025 in compliance with the commitments made in the aforementioned acquisition of Peoples by Aqua America Inc., now Essential Utilities Inc. ("Essential"). The Modified Combined Distribution LTIIP was approved on January 14, 2021 at Docket Nos. P-2020-3022053 and P-2020-3021942. On March 15, 2024, Peoples filed for Approval of a Major Modification to its Combined Existing LTIIP for both PNGD and PGD. On September 3, 2024, the Major Modification was approved.

Peoples notes that with the Commission's approval of Peoples' 2023 base rate case at Docket No. R-2023-3044549 on September 12, 2024, the rates and tariffs of the divisions were merged and the requirement to maintain separate books and records for the former PNGD and former PGD was terminated. As a result, this filing is combined and encompasses both former Divisions.

On August 29, 2025, Peoples filed its Third Distribution LTIIP for 2026-2030 and was approved on December 18, 2025 at Docket No. P-2025-3057167.

Annual Asset Optimization Plan

In accordance with the requirements at 66 Pa. Code §1356, a utility with an approved DSIC must file an Annual Asset Optimization Plan ("AAOP"). The AAOP must contain:

(1) A description that specifies all eligible property repaired, improved and replaced in the immediately preceding 12-month period pursuant to the utility's long-term infrastructure improvement plan and prior year's asset optimization plan.

(2) A detailed description of all the facilities to be improved in the upcoming 12-month period.

1. **A description that specifies all eligible property repaired, improved and replaced in the immediately preceding 12-month period pursuant to the utility's long-term infrastructure improvement plan and prior year's asset optimization plan.**

The projects completed in 2025 by Peoples resulted in a reduction of 190 miles of LTIIP eligible pipeline and replacement of 12,681 company-owned services, 9,423 customer-owned service lines and 79,939 meters. Please note the significant increase in meter replacement is due to Peoples initiative to install Intelis meters. Through the duration of the Combined Distribution LTIIP (2021 – 2025), Peoples has removed/replaced 891 miles (+102%) compared to a target of 871 miles of the eligible pipelines.

Peoples Combined Distribution LTIIP included projected total spending of $468.5 million for 2025 projects. As a result of factors including: the increase of Intelis meter replacements, mix of projects and inflationary factors, Peoples spent $516 million on 2025 projects or $47.51 million (+10.1%) more than projected in the Combined Distribution LTIIP, while removing 190 miles of at-risk pipe compared to a projected replacement of 186 miles.

More detailed analysis by category can be found in the attached Table 1.

2. **A detailed description of all the facilities to be improved in the upcoming 12-month period.**

The Third Distribution LTIIP for Peoples reflects the higher spending commitments as required by the settlement commitment in the aforementioned acquisition of Peoples by Essential. The projected 2026 LTIIP expenditures are stated in the currently approved Third Distribution LTIIP in the amount of $606.6 million, respectively. Peoples estimates that it will replace approximately 186 miles of pipeline in 2026.

Attached Table 2 provides further details on the projected amounts of 2026 LTIIP facilities to be replaced and the related capital expenditures.

Re: Annual Asset Optimization Plan for Peoples Natural Gas Company LLC at Docket No. M-2026-3060802

Dear Carol Scanlon,

On March 2, 2026, Peoples Natural Gas Company LLC (Peoples) filed its Annual Asset Optimization Plan (AAOP), pursuant to 52 Pa. Code § 121.6.

The Commission's regulations require utilities with an approved Distribution System Improvement Charge (DSIC) to file annually an AAOP with the Commission. The AAOP shall be filed 60 days after the prior 12 months of the company's Long-Term Infrastructure Improvement Plan (LTIIP) has expired, and pursuant to this timeframe for each successive AAOP. 52 Pa. Code § 121.6(a).

The AAOP must include:

1) A description that specifies all of the eligible property repaired, improved, and replaced in the prior 12-month period under its LTIIP and prior year's AAOP.

2) A description of the eligible property to be repaired, improved, and replaced in the upcoming 12-month period.

The Commission is charged with reviewing each AAOP only to determine whether the utility is in substantial compliance with the repairs, improvements, or replacements of the specific eligible property in its approved LTIIP, for the corresponding 12-month timeframes. 52 Pa. Code § 121.6(d). The Commission has delegated the review of AAOPs to the Bureau of Technical Utility Services (TUS).

Timely Filing
52 Pa. Code § 121.6(a)

A utility with an approved DSIC shall file with the Commission, for informational purposes, an AAO plan. The AAO plan shall be filed annually with the Commission 60 days after the 12 months of its LTIIP has expired and under this time frame for each successive year of the term of the LTIIP.

Peoples' AAOP substantially complies with this requirement.

Content

52 Pa. Code § 121.6(b)

An AAO plan must include:

(1) A description that specifies all the eligible property repaired, improved and replaced in the prior 12-month period under its LTIIP and prior year's AAO plan.

(2) A description of the eligible property to be repaired, improved and replaced in the upcoming 12-month period.

Peoples' AAOP substantially complies with this requirement.

Substantial Adherence to LTIIP

52 Pa. Code § 121.6(d)

An AAO plan will be reviewed by the Commission only to determine whether the utility is in substantial compliance with the repairs, improvements or replacements of the specific eligible property in its approved LTIIP for the corresponding 12-month time frames.

52 Pa. Code § 121.6(e)

Absent any major modifications to the LTIIP or Commission action to reject an AAO plan within 60 days of its submission to the Commission, the AAO plan will be deemed approved. The Commission may extend its consideration period if necessary.

52 Pa. Code § 121.6(f)

If an AAO plan is rejected by the Commission, the utility will be notified of the plan's deficiencies and actions needed to repair, improve or replace eligible property to bring the utility into compliance with the work schedule in its approved LTIIP. If the utility concludes that it needs to revise its LTIIP to comply with the Commission's determinations, it shall file a petition for modification under § 121.5.

Peoples' expenditures in 2025 were $516.0 million, which is an increase of $47.5 million, or 10.1% more than the company's planned expenditures of $468.5 million in its LTIIP. Peoples replaced 190 miles of distribution main, which is 2.2% more than the 186 miles planned in Peoples' LTIIP.

Peoples reported replacing more service lines than projected in 2025 with 22,104 services replaced, which is 41.6% more than the 15,615 projected in the company's LTIIP. Peoples relocated/replaced 79,939 meters, which is 523% more than the 12,830 projected in the company's LTIIP. Peoples explains that the substantial increase in meter replacement is due to its initiative to install Intellis Meters. Much of the additional total spending in 2025 appears to be due to Peoples' substantial increase in the quantities of infrastructure replaced as compared to its LTIIP projections.

Peoples stated that its projected 2026 LTIIP expenditures match the LTIIP the LTIIP projection of $606.6 million. Peoples reported that it estimates that it will replace approximately 186 miles of pipeline in 2026.

Compliance with the LTIIP is evaluated on a multiyear basis over the life of the LTIIP. Construction and budget variations in individual years can be expected and it is reasonable to expect that over a multi-year timeframe, much of this variation will be mitigated.

The AAOP does not propose a Major Modification to the company's LTIIP.

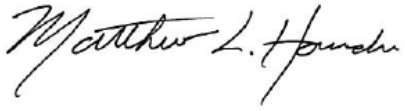
Accordingly, Peoples' AAOP appears to substantially conform to the schedule set forth in the company's LTIIP.

Conclusion

Upon review of Peoples' AAOP filed on March 2, 2026, it appears that the filing substantially complies with the requirements of 52 Pa. Code § 121.6 and it is approved. This approval is contingent upon the possibility that subsequent audits, reviews and inquiries, in any Commission proceeding, may be conducted pursuant to 52 Pa. Code § 121.

If you are dissatisfied with the resolution of this matter, you may, as set forth in 52 Pa. Code § 5.44, file a petition with the Commission within twenty (20) days after the date of this letter. Please direct any questions regarding this filing to Matthew Stewart, TUS, at mattstewar@pa.gov.

Sincerely,



Matthew L. Homsher
Secretary

CONFIDENTIAL

Peoples Natural Gas Exhibit No. 4-R

U.S. Department
of Transportation
**Pipeline and Hazardous Materials
Safety Administration**

Administrator

1200 New Jersey Avenue, SE.
Washington, DC 20590

MAR 31 2011

Dear Commissioner:

Recent tragedies involving natural gas explosions and spills of hazardous liquids highlight the need to take a hard look at the integrity of the Nation's pipelines. As you are keenly aware, some of this infrastructure is aging and requires prompt attention to ensure the safety of communities across the country.

On April 18, 2011, U.S. Transportation Secretary Ray LaHood will convene a Pipeline Safety Forum with the goal of accelerating the rehabilitation, repair, and replacement of critical pipeline infrastructure with known integrity risks. This forum will bring together pipeline safety experts, researchers, industry representatives, State partners, other Federal agency officials, and members of the public to share their expertise, experience, research, and ideas.

On behalf of the Secretary, I invite you to participate in this very important discussion. You may RSVP to pipelineforum@dot.gov with the name(s) and contact information of attending individual(s) from your organization or register on-line at our Pipeline Safety Forum website: www.phmsa.dot.gov/pipelineforum.

As a Commissioner with responsibility for safety oversight of pipelines in your state, I know you share my concern that these facilities are operated correctly and provide safe and reliable service to the American public. In preparation for the Forum, I urge you to review your State's current replacement plans for the highest risk pipelines (for example, bare steel, cast iron pipe, and pipe whose integrity is questionable or not confirmed), and consider what would be necessary to accelerate these plans. We encourage you to bring your findings to the Forum.

Please reply with this information and any related studies or reports by April 10, 2011. We will post your submissions on the Forum website, www.phmsa.dot.gov/pipelineforum. Our plan is to issue a Report to the Nation on the steps needed to achieve the Secretary's goal within the next six months.

Together, we can improve public safety through infrastructure assessment and reinvestment, open communication of concerns and creative solutions, and strong, effective oversight and

robust excavation damage prevention programs including promotion of “Safe Digging Month” this April and the national “Call Before You Dig" (811) programs.

Thank you in advance for partnering with us for public safety.

Regards,

Cynthia L. Quarterman

We believe that the timely repair, rehabilitation, and replacement of high-risk gas pipeline infrastructure are critical to ensuring public safety. A series of recent gas pipeline accidents, including the September 9, 2010 San Bruno, California accident, the January 19, 2011 Philadelphia, Pennsylvania accident, and the February 10, 2011 accident, show the terrible loss of life and property that can occur without adequate attention to the integrity of pipeline infrastructure.

PHMSA believes that an effective program for ensuring the timely rehabilitation, repair, or replacement of high-risk gas pipelines might have helped prevent these accidents. Accordingly, we recommend that State public utility commissions consider accelerating work on the following kinds of high-risk intrastate gas infrastructure in the future:

- Cast iron gas mains, which can be prone to failure as a result of graphitization or brittleness;
- Plastic pipe manufactured in the 1960s to the early 1980s, which is susceptible to premature failures as a result of brittle-like cracking;
- Mechanical couplings used for joining and pressure sealing pipe, which are prone to failure under certain conditions;
- Bare steel pipe without adequate corrosion control (i.e., cathodic protection or coating);
- Copper piping;
- Older pipe, if it is vulnerable to failure from time-dependent forces, such as corrosion, stress corrosion cracking, settlement, or cyclic fatigue factor; and
- Pipelines with inadequate construction records or assessment results to verify their integrity.

PHMSA requests your support in ensuring that State commissions implement effective programs for the timely repair, replacement, and rehabilitation of high-risk gas pipeline infrastructure.

I look forward to continuing to work with the NARUC on pipeline safety and welcome any thoughts that you have on the issues discussed in this letter. Please send your response to Jeffrey Wiese, Associate Administrator for Pipeline Safety, or to contact me if you have any questions or concerns.

Regards,

Cynthia L. Quarterman

Using Specific Ratemaking Authority to Establish Infrastructure Replacement Programs 9

Conclusions 17

Appendix I: Additional Information on State Pipeline Infrastructure Replacement Programs 19

Introduction

Under the leadership of Transportation Secretary Ray LaHood and Administrator Cynthia Quarterman, the Pipeline and Hazardous Materials Safety Administration (PHMSA) has issued a Call to Action with the goal of accelerating the rehabilitation, repair, and replacement of high-risk pipeline infrastructure. This effort comes on the heels of several high profile pipeline accidents, including two recent gas distribution line explosions in Pennsylvania that resulted in multiple deaths.

As part of Secretary LaHood's Call to Action, PHMSA has prepared this white paper to urge State public utility commissions to expand the use of pipeline infrastructure replacement programs. It includes an overview of natural gas ratemaking, a discussion of the need to take prompt action to remediate high-risk pipeline infrastructure, and a description of the various State programs that are being used for that purpose.

Executive Summary

Public safety requires prompt action to repair, remediate, and replace high-risk gas pipeline infrastructure, including cast iron mains, certain vintages of plastic pipe and mechanical coupling installations, bare steel pipe without adequate corrosion control, and copper piping. Several recent gas pipeline accidents show the terrible consequences that can occur if such action is not taken.

The Federal Energy Regulatory Commission establishes rates for interstate natural gas pipeline service under the "just and reasonable" standard provided in the Natural Gas Act of 1938. State public utility commissions (and in some cases local authorities) establish rates for intrastate natural gas pipeline service. While based on State and local laws, those determinations are generally made on the basis of a formula that is similar to the "just and reasonable" standard.

Pipeline infrastructure replacement programs for gas distribution systems exist in nearly 30 States. Some State Public utility commissions have used their traditional ratemaking authority to approve these programs, the terms and conditions of which are established under a generally applicable statutory provision. Other State public utility commissions have specific authority to approve such programs. The terms, conditions, and cost recovery mechanisms of these programs vary by statute. Whether as part of the traditional ratemaking process or in a separate proceeding, PHMSA is encouraging the States to accelerate the remediation of high-risk gas pipeline infrastructure.

PHMSA intends to focus on this issue in implementing the new Gas Distribution Pipeline Integrity Management Program Rule and as part of the annual certification process for State pipeline safety programs. PHMSA is also willing to provide other assistance to State public utility commissions who are seeking to establish or improve programs for the repair, rehabilitation, and replacement of high-risk pipeline infrastructure.

I. General Ratemaking Principles

Federal Ratemaking

The Federal Energy Regulatory Commission (FERC) regulates the interstate sale and transportation of natural gas under the Natural Gas Act of 1938 (NGA). The NGA imposes a "just and reasonable" requirement on the rates charged for interstate pipeline services, a standard that requires FERC to consider both the interests of pipeline operators and ratepayers. FERC utilizes varying ratemaking methodologies to meet the "just and reasonable" standard, such as selective discounting, market-based rates, and negotiated rates. However, the underlying premise that ratemaking should be based on the cost of providing service remains a strong principle in rate-making proceedings. Accordingly, cost-of-service ratemaking is the primary method that FERC uses to establish rates.

Cost-of-service ratemaking bases rates on the cost of service and affords the pipeline a reasonable rate of return. The Cost-of-Service:

> Includes the product of the pipeline's Rate Base (which is the pipeline's investment) and the Overall Rate of Return, plus its Operation and Maintenance Expenses (O&M), Administrative and General Expenses (A&G), Depreciation Expense, Non-Income Taxes and Income Taxes, less Revenue Credits.

In this equation, the Rate Base captures the total amount invested in the pipeline and is used to calculate the permissible return on investment. The Overall Rate of Return is a product of the pipeline's capitalization ratio, the cost of debt, and the rate of return that is allowed on the pipeline's equity. Total cost-of-service captures the amount of rate revenue that a pipeline company must charge in order to maintain profitability and remain an attractive prospect for future investment.

FERC applies cost-of-service and other rate methodologies in rate proceedings to set initial rates for new or expanding pipelines, increase rates for existing pipelines, and require prospective changes to existing rates. Applications to establish new or expanded pipeline service must be approved by FERC and are required to meet a "public convenience and necessity" standard. In a certificate proceeding, FERC authorizes initial rates that remain in effect until a further rate proceeding is held. In a general Section 4 rate case, a pipeline files to increase rates and is required to prove that its proposal is "just and reasonable." Alternatively, in a Section 5 rate proceeding, FERC may require prospective rate changes, if it is determined that a pipeline's rates no longer meet the "just and reasonable" standard.[1]

State Ratemaking

[1] Cost-of-Service Rates Manual, Federal Energy Regulatory Commission, June 1999.

State public utility commission (PUCs) regulate the intrastate sale of natural gas, which includes establishing rates for the end user. State PUCs evaluate ratemaking proposals according to a variety of legislative mandates, policy objectives, and consumer interests, but have traditionally set rates according to the "just and reasonable" standard. As articulated by the National Regulatory Research Institute, these rates share four general characteristics. First, rates are reflective of "an efficient or prudent utility" and, therefore, do not include those costs that a utility could eliminate without impairing efficiency or profitability. Second, rates incorporate the natural consequences of a utility's provision of service at different levels and to different classes of customers. Third, rates are set at a level that provides the utility with an acceptable return to ensure that it remains an attractive candidate for new capital investment. Lastly, the utility's provision of service should be nondiscriminatory. Within these general principles, the States use varying methods to establish rates, some of which are outlined below.

Rates for Investor-Owned Local Gas Distribution Companies

Local distribution companies are privately-owned utilities and are required to provide distribution of natural gas to any customer within its geographic franchise area upon reasonable request. These utilities own the natural gas being distributed for their "sales customers" and get paid a fee for the distribution service. Local distribution companies do not earn any money from the sale of the natural gas itself, whether the utility owns the natural gas or transports it on behalf of the customer. The companies simply pass the cost of the gas straight through to the customer. Customers who have purchased their natural gas from a third party supplier or market and wish the distribution company to transport the gas to their business or home, commonly referred to as "transportation customers," pay a fee for the transport of natural gas over the local distribution company's pipeline.

State PUCs regulate the rates, terms, and conditions of service for investor-owned natural gas distribution systems. Local agencies generally perform that regulatory function for publicly-owned distribution utilities. These State and local authorities are also responsible for ensuring that the operation of these utilities serves the public interest. In some cases, that may require prohibiting a utility from turning off a residential customer's gas service for nonpayment during cold weather, asking for safety-driven changes beyond those required by the Federal and State safety regulators, or requiring utilities to offer energy conservation programs.

Natural gas utilities are required to post the rates, terms, and other conditions of service with their State PUCs, and customers must pay the posted rates to obtain the applicable service. Utilities also have information on file with State PUCs on the current "purchased gas adjustment charge." These charges account for market-driven changes in the price the utility pays for the gas supplied to its customers.

Rates for Publicly-Owned Local Gas Utility Systems

Publicly-owned gas utility systems are non-profit enterprises that are owned by the citizens they serve. They include municipal gas distribution systems, public utility districts, county districts, and other public agencies that have natural gas distribution facilities. These

utilities own the natural gas that is provided to their customers and charge a fee for the distribution service. Publicly-owned utilities also pass through and recover the cost of acquiring the natural gas that is distributed.

Unlike privately-owned pipeline systems, most State PUCs do not establish rates for publicly-owned gas distribution systems. That function is typically performed by a local body, like a city or county council or utility board. There is no requirement that the rate charged by the utility be based on the cost of service, and the utility may charge whatever rate is established by its governing body.

Rates for publicly-owned utilities do not include costs for return on investment or profit, and any necessary capital is raised by issuing bonds. Customers of municipal utilities pay the purchased gas adjustment charge for the amount of gas the utility distributes during the billing period. Rate changes must be approved by the city council or the utility board.

II. Need for Repair, Rehabilitation, and Replacement of High-Risk Gas Pipeline Infrastructure

The safety of natural gas distribution systems has improved significantly since the enactment of the Natural Gas Pipeline Safety Act of 1968, which provided DOT with the authority to establish safety standards for natural gas systems. A number of serious incidents in natural gas distribution systems, however, still occur each year, and many of those incidents are caused by failures of high-risk pipeline infrastructure. Thus, there is a need to improve pipeline safety by repairing, rehabilitating and replacing high risk pipe.

High-risk pipeline infrastructure is piping or equipment that is no longer fit for service. As discussed below, that lack of fitness can be the product of a variety of factors.

- Cast iron gas mains and service lines can be prone to failure as a result of graphitization or brittleness. The installation of cast iron pipe dates to the 1830s, and remained prevalent until the post-World War II period. Many major urban areas, including Philadelphia, PA; Boston, MA; Baltimore, MD; Washington, DC; Detroit, MI; Chicago, IL; and San Francisco, CA, still have cast iron pipe in their natural gas distribution systems.[2]

- Certain vintages of plastic pipe are susceptible to premature failures as a result of brittle-like cracking. In April 1998, the National Transportation Safety Board (NTSB) released a Special Investigation Report on Brittle-Like Cracking in Plastic Pipe for Gas Service. NTSB found that the long-term strength and resistance of plastic pipe to brittle-like cracking may have been overrated for much of the plastic pipe manufactured and installed from the 1960s through the early 1980s. The NTSB

[2] http://opsweb.phmsa.dot.gov/pipelineforum/reports-and-research/cast-iron-pipeline/

also found that any potential public safety hazards from these failures are likely to be limited to locations where stress intensification exists. In response to the NTSB report and subsequent investigations, PHMSA issued four advisory bulletins on the susceptibility of certain kinds of older plastic pipe to brittle-like cracking.[3]

- Mechanical coupling installations are devices that are used for the joining and pressure sealing of two pieces of pipe. These devices are prone to failure under certain conditions. In March 2008, PHMSA issued an Advisory Bulletin (ADB) on the use of mechanical couplings in natural gas distribution systems. The ADB noted that these devices are more likely to fail when there is inadequate restraint for the potential stresses on the two pipes, when the couplings are incorrectly installed or supported, or when components experience age-related deterioration. The ADB also noted that inadequate leak surveys can fail to detect a coupling in need of repair and lead to more serious incidents.[4]

- Pipelines lacking adequate construction records or assessment results to verify their integrity. In January 2011, PHMSA issued an ADB on the need to use traceable, verifiable, and complete records in establishing the maximum allowable operating pressures and developing and implementing integrity management programs for natural gas pipelines. The ADB responded to an NTSB recommendation, which resulted from its investigation of the September 2010 intrastate natural gas transmission line rupture in San Bruno, California, which is discussed below.

- Other kinds of pipe installations, including bare steel pipe without adequate corrosion control (i.e., cathodic protection or coating) and copper piping, are also more susceptible to failure.

- Age of pipe should be considered in determining whether pipeline infrastructure is vulnerable to failure from time-dependent forces, like corrosion, stress corrosion cracking, settlement, or cyclic fatigue.

Several recent gas pipeline accidents show the grave consequences that can occur if high-risk gas pipeline infrastructure is not properly repaired, rehabilitated, or replaced. For example,

- On September 9, 2010, an intrastate natural gas transmission line ruptured in San Bruno, California. The ensuing explosion and fire resulted in 8 fatalities, multiple injuries, and destroyed 38 homes. NTSB has released a final report on the cause of the accident and concluded that the failure was the result of an improperly-welded section of pipe that had been installed in 1956 and never subjected to hydrostatic pressure testing.

---

[3] 72 FR 51301.

[4] 73 FR 11695.

- On January 19, 2011, a natural gas explosion and fire in a natural gas distribution system killed one person and injured five others in Philadelphia, Pennsylvania. The cause of the accident remains under investigation, but preliminary reports indicate that the source of the gas leak was a 12-inch cast iron gas main installed in the 1920s.

- On February 10, 2011, another natural gas explosion and fire in a natural gas distribution system killed five people and destroyed several homes in Allentown, Pennsylvania. The cause of the accident remains under investigation, but preliminary reports indicate that the source of the gas leak was an 83-year-old, 12-inch cast iron gas main.

Recognizing that prompt action to replace these high-risk gas pipelines might have prevented each of these accidents, Transportation Secretary Ray LaHood issued a Call to Action in April 2009 encouraging the States to expand and accelerate the use of such programs.[5] Twenty-two States responded to the Secretary's initiative by providing PHMSA with information on their efforts to remediate high-risk pipeline infrastructure.

After reviewing that information and performing additional research, PHMSA decided to prepare the following overview of the State pipeline infrastructure replacement programs. PHMSA urges the appropriate regulatory authorities will use this information to accelerate their efforts to repair, rehabilitate, and replace high-risk gas pipeline infrastructure in their jurisdictions. In addition to the analysis provided below, a comprehensive list of all of these programs is included in Appendix I.

III. Using Traditional Ratemaking Authority to Establish Infrastructure Replacement Programs

Several state public utility commissions have used their traditional ratemaking authority to approve pipeline infrastructure replacement programs. The examples discussed below show how that authority can be used to ensure the timely repair, rehabilitation, and replacement of high-risk pipeline infrastructure without additional legislation.

New Jersey

Originally established in 1911 as the Department of Public Utilities, the mission of the New Jersey Board of Public Utilities (BPU) is "[t]o ensure the provision of safe, adequate and proper utility and regulated service at reasonable rates, while enhancing the quality of life for the citizens of New Jersey and performing these public duties with integrity, responsiveness and efficiency."[6] The Division of Energy is responsible for regulating the State's four natural gas

[5] http://opsweb.phmsa.dot.gov/pipelineforum/

[6] http://www.nj.gov/bpu/about/index.html.

service providers: Elizabethtown Gas, New Jersey Natural Gas (NJNG), PSE&G, and South Jersey Gas.[7]

As part of then-Governor Jon Corzine's economic stimulus plan, BPU approved accelerated pipeline infrastructure replacement programs using its plenary authority to require or enable natural gas companies to provide safe, adequate, and proper service to its customer.[8] In a December 22, 2009 provisional order, BPU approved Elizabethtown Gas's petition to implement a Utility Enhancement Infrastructure Rider (i.e., a rate increase to allow for an accelerated recovery of the costs associated with performing certain gas-distribution infrastructure related projects). The list of qualifying projects included the replacement of 29 miles of 10- and 12-inch and 41.9 miles of 4-inch cast iron gas mains; the installation of 6 miles of 8-inch main and 20 miles of 12-inch main in certain locations. In a subsequent filing, Elizabethtown petitioned BPU to approve an additional rate increase to cover greater-than-anticipated costs for each of these projects.[9]

Likewise, in an April 29, 2009 order, BPU approved NJNG's petition to implement an Accelerated Infrastructure Investment Program (AIIP), i.e., a rate increase to allow for an accelerated recovery of the costs associated with performing 14 infrastructure projects. In a March 30, 2011, BPU approved NJNG's petition to add 9 additional projects to the AIIP. The total anticipated cost for these projects is approximately 130 million dollars.[10]

Kentucky

Created in 1934, the Kentucky Public Service Commission (KPSC) is a three member administrative body with authority to regulate investor-owned natural gas companies. KPSC does not regulate natural gas utilities subject to the control of cities or political subdivisions, or those served by the Tennessee Valley Authority.[11]

---

[7] http://www.state.nj.us/bpu/index.shtml

[8] Specifically, § 48: 2-23 states:

The board may, after public hearing, upon notice, by order in writing, require any public utility to furnish safe, adequate and proper service, including furnishing and performance of service in a manner that tends to conserve and preserve the quality of the environment and prevent the pollution of the waters, land and air of this State, and including furnishing and performance of service in a manner which preserves and protects the water quality of a public water supply, and to maintain its property and equipment in such condition as to enable it to do so.

The board may, pending any such proceeding, require any public utility to continue to furnish service and to maintain its property and equipment in such condition as to enable it to do so.

[9] *See* http://www.elizabethtowngas.com/Universal/RatesandTariff/RegulatoryInformation.aspx

[10] *See* http://www.njng.com/regulatory/filings.asp

[11] http://psc.ky.gov/

In a January 31, 2002 order, KPSC approved a petition filed by Duke Energy Kentucky, Inc. (Duke) for approval of an Accelerated Main Replacement Program (AMRP) Rider, which was designed to allow Duke to reduce the time for replacing its cast iron and bare steel mains from 15 years to 10 years. The Kentucky Attorney General appealed that order, arguing that KPSC lacked the authority to approve such a program outside of the confines of a general rate case. The Kentucky Supreme Court later ruled that KPSC had the power to approve the AMRP Rider under its plenary authority to ensure that rates are "fair, just and reasonable."[12]

Indiana

Established in the early 20th century, the Indiana Regulatory Utility Commission (IRUC) is comprised of five Commissioners who are appointed by the Governor to staggered four-year terms. The Gas Division is responsible for regulating the rates and terms and conditions of service for intrastate gas utilities.[13]

IRUC uses a deferred accounting alternative to allow eligible infrastructure investment costs to be diverted to a special deferred account. In the next rate case, the costs are amortized, recovered in rates, and the balance in the special deferred account is either reduced or eliminated. Gas utilities must establish, through the ratemaking proceeding, that all infrastructure investment costs in such accounts are properly accounted for. The assets in these deferred accounts may accrue interest, which isamortized and recoverable. The amount and type of infrastructure costs may be limited and are subject to state approval.

IRUC has approved Vectren Corporation's program to target 90 miles of pipeline replacements per year, as part of a broader, 20-year effort to replace 1,700 miles of aging bare steel and cast iron mains in Indiana and Ohio.[14]

IV. Using Specific Ratemaking Authority to Establish Infrastructure Replacement Programs

Several states have provided their public utility commissions with specific statutory authority to approve pipeline infrastructure replacement programs. Some states, like Missouri, Kansas, and Nebraska, have enacted statutes with detailed eligibility requirements and cost-recovery formulas. Other states, like Ohio, have adopted statutes that provide their commissions with far more flexibility and discretion. Still other states, like Texas and Virginia, fall somewhere in between.

Infrastructure Replacement Surcharge: Missouri, Kansas, and Nebraska

Missouri, Kansas, and Nebraska have adopted statutes that authorize the approval of infrastructure replacement surcharges. Local distribution companies are allowed to charge current customers for the cost of replacing existing infrastructure through the performance of certain projects. A specific formula is provided for determining the permissible amount of the surcharge; procedural requirements are also included to facilitate commission review and approval.

Missouri and Kansas

Established in 1913, the Missouri Public Service Commission (MPSC) regulates local gas distribution companies and is composed of five commissioners who are appointed by the governor.[15] Founded two decades later, the Kansas Corporation Commission (KCC) regulates natural gas companies and is composed of three commissioners who are appointed by the Governor for 4-year terms with the approval of the Senate.[16]

On July 9, 2003, the Missouri General Assembly enacted a statute allowing gas corporations to petition MPSC for approval of an infrastructure system replacement surcharge (ISRS) as of August 28, 2003. Using Missouri's ISRS statute as a model, the Kansas Legislature enacted the Gas Safety and Reliability Act (GSRA) three years later, on April 12, 2006. The GSRA provided that as of July 1, 2006, a natural gas public utility could petition the KCC to establish or change gas system reliability surcharge (GSRS) rate schedules.

These two statutes are similar in many respects and include provisions that define the kinds of gas utility projects which are eligible for a cost recovery surcharge, establish a formula for determining and limiting the amount of that surcharge, and prescribe the procedural requirements that must be met before a surcharge can be imposed.

Both statutes generally limit eligible infrastructure system replacements to gas utility plant projects that:

- Do not increase revenues by directly connecting the infrastructure replacement to new customers;
- Are in service and used and useful;
- Were not included in the gas corporation's rate base in its most recent general rate case; and
- Replace, or extend the useful life of an existing infrastructure.

The statutes also list the kinds of "gas utility plant projects" that are eligible for the surcharge:

---

[15] http://psc.mo.gov/

[16] http://www.kcc.state.ks.us/index.htm

- Mains, valves, service lines, regulator stations, vaults, and other pipeline system components installed to comply with State or Federal safety requirements as replacements for existing facilities that are in deteriorated condition;

- Main relining projects, service line insertion projects, joint encapsulation projects, and other similar projects extending the useful life, or enhancing the integrity of pipeline system components for compliance with State or Federal safety requirements; and

- Facility relocations as a result of construction or improvement of a highway, road, street, public way, or other public work by or on behalf of the United States, the State (or political subdivision thereof), or another entity having the power of eminent domain provided that the costs related to such projects have not been reimbursed to the gas corporation.

The two statutes also prescribe a formula for determining the maximum amount and duration of the surcharge:

- MPSC and KCC cannot approve a surcharge that produces a total annualized surcharge revenue below the lesser of $1,000,000 or 1/2 percent of the gas company's base revenue level or exceeds 10 percent of the base revenue approved at the gas company's most recent general rate proceeding.

- A surcharge cannot be approved for a gas company that has not had a general rate proceeding decided or dismissed within a certain number of months (the past 36 months for Missouri and the past 60 months for Kansas), unless the gas company has filed for one or is the subject of a new proceeding.[17]

Finally, there are also procedural requirements that must be met to authorize the surcharge:

- Gas companies that petition MPSC or KCC for a surcharge must submit a proposed ISRS or GSRS and supporting documentation.

- MPSC and KCC must publish notice of that filing, and their respective staffs are required to confirm underlying costs and submit a report within 60 days.

- MPSC and KCC may hold a hearing on the petition but must issue an order that is effective no later than 120 days after the filing.

---

[17] As originally enacted, the GSRA prohibited a utility from collecting a GSRS for any period exceeding 60 months unless a filing had been made or was subject to a new proceeding. However, on April 13, 2011, the Kansas Legislature amended the GSRA to allow the KCC, on motion from a natural gas public utility, to extend that 60-month deadline for up to 12 months.

- A gas company cannot effectuate a change in its rates more often than twice every 12 months.

Nebraska

The Nebraska Public Service Commission (NPSC) regulates the rates and quality of service for investor-owned natural gas public utilities and is composed of five elected commissioners who serve 6-year terms.[18] On August 30, 2009, the Nebraska legislature enacted a statute allowing a jurisdictional utility to file an application and proposed rate schedule with NPSC to establish or change "infrastructure system replacement cost recovery charge rate schedules." Through this process, utilities may request an adjustment of their rates to recover costs for eligible infrastructure system replacements. Nebraska's legislation is largely bifurcated: utilities are treated differently depending on whether or not their prior rate filings were subject to negotiation.

NPSC is specifically disallowed from approving rate schedules that produce total annualized infrastructure system cost recovery charge revenue either:

- Below the lesser of one million dollars or one-half percent of the utility's base revenue level, as approved by the commission in the most recent general rate proceeding; or

- Exceeding ten percent of the utility's base revenue level, as approved by the commission in the most recent general rate proceeding.

Furthermore, NPSC cannot approve any rate schedules for a utility that has not had a general rate proceeding decided or dismissed by order within the 60 months immediately preceding the application for a infrastructure system replacement cost recovery charge. Utilities cannot collect a recovery rate for a period exceeding 60 months after the initial approval, unless that utility has filed for or is the subject of a new general rate proceeding within the 60-month period. (The rate may be collected until the effective date of a new rate schedule established as a result of a new general rate proceeding or until the rate proceeding is otherwise decided or dismissed by issuance of a commission order without new rates being established).

Two processes exist for establishing or changing a rate schedule. If the utility's last general rate filing was not subject to negotiation, the utility must submit to NPSC:

- A list of eligible projects;

- A description of the projects;

- The location of the projects;

---

[18] http://www.psc.state.ne.us/index.htm

- The purpose of the projects;
- The dates construction began and ended;
- The total expenses for each project at completion; and
- The extent to which such expenses are eligible for inclusion in the calculation of the infrastructure system replacement cost recovery charge.

After the public advocate conducts an examination of this information to verify the underlying costs, NPSC must require a report on this examination to be prepared and filed not later than 60 days after the application. NPSC must hold a hearing on the application and issue an order that is effective not later than 120 days after the application is filed (there is a good-cause 30-day extension). If NPSC finds that an application complies with the applicable requirements, an order is issued authorizing the utility to recover appropriate pretax revenue. Utilities may apply for a change in any infrastructure system replacement cost no more than once in any 12-month period.

If a utility's last general rate filing was subject to negotiation, it must submit to NPSC the schedules, supporting documentation, and a written notice for each city that will be affected by the charge. The notice must identify the cities that will be affected by the filing and copies must be provided to each such city. Affected cities have 30 days from that filing to adopt a resolution of intent to negotiate a charge rate with the utility. A copy of the resolution in support, or a resolution of rejection, of the offer to negotiate must be provided to the utility and NPSC within seven days of adoption.

If NPSC receives timely resolutions from cities that represent more than 50 percent of the ratepayers within the affected cities, to negotiate a recovery rate with the utility, the commission will certify the case for negotiation and will take no action until the negotiation period has expired. If agreement is reached, it must be put in writing and filed with the commission, which then must enter an order either approving or rejecting the rate within 30 days of the filing of the agreement. If agreement is not reached, the affected cities and the utility must submit all documentation within 14 days after the commission receives notice that the negotiations have failed. A hearing must be held not later than 35 days after the receipt of this report. If the commission receives resolutions from cities representing more than 50 percent of ratepayers that expressly reject negotiations, the rate review proceeds immediately.

Interim Rate Adjustment: Texas and Virginia

Texas

Established in 1891, the Texas Railroad Commission (TRC) has primary regulatory authority over various aspects of the oil and natural gas industry. The Gas Services Division regulates the day-to-day activities of approximately 200 natural gas utilities and is responsible for ensuring that a continuous, safe supply of natural gas is available to local consumers at the lowest, reasonable price. TRC has exclusive authority over the rates and terms of service for gas

utilities in unincorporated areas and original jurisdiction over utilities at a city gate. TRC is composed of three members who are elected to serve 6-year terms.[19]

On May 16, 2003, the Texas Legislature enacted the Gas Reliability Infrastructure Program (GRIP) statute, which allows gas utilities to recover a return on capital expenditures made during the interim period between general rate cases.[20] Specifically, a gas utility may file a tariff or rate schedule with TRC providing for an interim rate adjustment within two years of the utility's last general rate case. That tariff or rate schedule must be filed at least 60 days before the proposed implementation date of the new rates. During that 60-day period, implementation of the new rates may be suspended by the TRC or an affected municipality for up to 45 days.

The allowable amount of the interim rate adjustment is based on values associated with the utility's return on investment, depreciation expenses, ad valorem taxes, revenue-related taxes, and incremental federal income taxes. The reasonableness and prudence of the investments recovered by an interim rate adjustment is subject to review in the utility's next general rate case. Until the TRC issues a final order approving the interim rate adjustment in that rate case, all amounts collected under the tariff or rate schedule before the filing of that rate case are subject to refund (including with interest, if appropriate). Any utility that implements an interim rate adjustment is required to file a general rate case no later than 180 days after the fifth anniversary of the date its interim rate became effective. The regulatory authority itself may also initiate a rate case at any time to review the reasonableness of the utility's rates.

It should also be noted that TRC has issued regulations mandating the removal, rehabilitation, or replacement of gas distribution pipeline facilities as part of their state pipeline safety program.[21] That includes requirements for the removal of compression couplings and, more recently, for the submission of a written risk-based program, by August 1, 2011, for the removal or replacement of all other distribution facilities.

Virginia

Established in 1902, the Virginia State Corporation Commission (VSCC) is composed of three commissioners who are elected by the General Assembly for 6-year terms. Its Division of Energy Regulation is responsible for providing assistance in regulating investor-owned natural gas utilities.[22]

On April 11, 2010, the SAVE Act (Steps to Advance Virginia's Energy Plan) was enacted, authorizing certain natural gas utilities to petition the State Corporation Commission

---

[19] http://www.rrc.state.tx.us/

[20] Tex. Util.Code Ann. § 104.301.

[21] http://info.sos.state.tx.us/pls/pub/readtac$ext.ViewTAC?tac_view=5&ti=16&pt=1&ch=8&sch=C&rl=Y

[22] http://www.scc.virginia.gov/pue/index.aspx

(SCC) for a separate rider ("SAVE rider"), allowing for the recovery of certain costs associated with eligible infrastructure replacement projects. While utilities are still required to apply for the SAVE rider, the statute places restrictions on the VSCC approval process, ostensibly to wall off this process from traditional ratemaking.

Under the Act, an eligible "natural gas utility" is any investor-owned public service company that furnishes natural gas service to the public. Natural gas utilities may apply for "eligible infrastructure replacement" projects that:

- Enhance safety or reliability by reducing system integrity risks associated with customer outages, corrosion, equipment failures, material failures, natural forces, or other outside force damage;

- Do not increase revenues by directly connecting the infrastructure replacement to new customers;

- Reduce or have the potential to avoid greenhouse gas emissions; and

- Are not included in the natural gas utility's rate base in its most recent rate case or in the rate base filed with a performance based regulation plan.

Specifically, eligible "natural gas utility facility replacement projects" are intended to replace storage, peak shaving, transmission or distribution facilities used in the delivery of natural gas, or supplemental or substitute forms of gas sources by a natural gas utility. The act specifically delineates recoverable costs, including return on investment, depreciation, property taxes, and carrying costs of the eligible infrastructure replacement projects.

In order to qualify for the SAVE rider, utilities must file a petition with VSCC to establish a plan, which must include a completion timeline, a schedule of cost recovery, and a certification that the plan is "prudent and reasonable." Prior to approval, VSCC must provide notice and an opportunity for a hearing on the plan. SAVE plans must be approved or denied within 180 days; in the case of a denial, VSCC must specifically detail the reasons for the denial and the utility may refile, without prejudice, an amended plan within 60 days, at which point the Commission has an additional 60 days to approve or deny. VSCC is specifically prohibited from requiring the filing of rate case schedules in conjunction with the consideration of a SAVE plan. In addition, no other revenue requirement or ratemaking issues may be examined in conjunction with the consideration of an application filed pursuant to the SAVE Act.

At the end of each 12-month period that a SAVE rider is in effect, the utility must reconcile the difference between the eligible replacement costs and the amounts recovered under the SAVE rider. This reconciliation provides the basis for an adjustment to the SAVE rider, which VSCC must approve or deny within 90 days, whether it is an additional recovery or a refund. Finally, the Act states that this rider is in addition to all other costs that a utility is permitted to recover and cannot be considered as an offset to other VSCC-approved cost of service or revenue requirements. In addition, the rider cannot be included in the computation of a performance based regulation plan revenue-sharing mechanism.

In summary, the Virginia SAVE Act:

- Uses a rider for the recovery of certain eligible infrastructure costs;
- Uses a statutorily prescribed process that is separated from the ratemaking process;
- Includes an amendment process to incorporate increased project costs, but also requires refunds;
- Requires approval or denial within specific timeframe; and
- Restricts VSCC from considering any costs that the utilities are already allowed to recover in the consideration of whether a utility should be able to recover infrastructure costs.

Alternative Rate Plan: Ohio

Established in 1913, the Public Utilities Commission of Ohio (PUCO) regulates various public utilities in Ohio, including more than two dozen natural gas companies. Those companies provide gas service to more than 3 million users and operate a network of approximately 54,000 miles of regulated distribution lines. PUCO is composed of 5 commissioners who are appointed by the Governor for 5 year terms.[23]

Ohio Chapter 4901: 1-19 governs the filing and consideration of an alternative rate case by a natural gas company. Alternative rate plans may include automatic adjustments based on a specified index or changes in a specified cost. In its "alternative rate plan filing," the applicant must notify the commission and the consumer services department of its intent to file at least 30 days prior to the expected date of filing. The application (sample is included in rule appendix) must include the proposed rates, a summary of the proposed plan, a comparison of the typical "before" and "after" customer bill, and any waiver requests. In addition, the applicant must fully justify any proposal to deviate from the traditional rate of return regulation, including the rationale for the alternative plan, including "how it better matches actual experience of performance of the company in terms of costs and quality of service to its regulated customers."

PUCO may grant alternative rate regulation on the basis of this application. However, PUCO may subsequently determine that the natural gas company is not in substantial compliance with state policy, or on the motion of an adversely affected party, abrogate any order when (1) the commission determines that the findings are no longer valid and that modification or abrogation is in the public interest; and (2) the modification or abrogation is not made more than eight years after the effective date of the order, unless the affected natural gas company consents.

California

---

[23] http://www.puco.ohio.gov/puco/

The California Public Utilities Commission (CPUC) is responsible for regulating intrastate natural gas pipelines in the State of California, except for municipal gas systems.[24] CPUC is composed of five commissioners who are appointed by the Governor.

On October 7, 2011, the Governor approved a package of pipeline safety bills with several new mandates for gas pipeline operators and CPUC. The relevant provisions include:

- Requiring operators of intrastate gas transmission lines to prepare and submit to CPUC a plan for pressure testing each line segment and to replace each segment that is not tested. Plans must include a timeline for completing all testing and replacements as soon as practicable with interim safety measures during implementation. Where warranted, segments must also be capable of accommodating inline inspection devices.

- Requiring gas pipeline operators to submit to CPUC for approval a plan for the safe and reliable operation of their gas pipeline facilities. Plans must be consistent with Federal pipeline safety laws and must address specific criteria, including: minimizing hazards and systemic risks; identifying safety-related systems that may be deployed; patrolling and inspecting for leaks; responding to reports of leaks; determining MAOP; ensuring qualified and adequately-sized workforce; and meeting applicable pipeline safety standards.

- Requiring gas pipeline operators to report to CPUC twice per year on the strategic planning and decisionmaking approach that is used to determine and rank pipeline safety, integrity, reliability, operations and maintenance activities, and inspections.

- Establishing that is the policy of the State and CPUC for each gas pipeline operator to place safety as its top priority. CPUC must take reasonable and appropriate action to carry out this policy, including through ratemaking.

- Requiring gas pipeline operators who recover expenses for integrity management program and related pipeline maintenance and repairs to have a balancing account, with any unspent money being returned to ratepayers at the end of each rate cycle.

In a June 2011 order, CPUC had previously used its general authority to require operators of intrastate natural gas transmission lines to submit comprehensive pressure testing implementation plans. The purpose of these plans is to achieve the orderly and cost effective replacement or testing of all natural gas transmission lines in the State. The plans permit the use of alternatives that achieve the same standard of safety, but must include a prioritized schedule based on risk assessment and maintaining service reliability, as well as cost estimates with proposed ratemaking. The plans also address the retrofitting of pipelines to accommodate the use of in-line inspection tools and, where appropriate, automated or remotely controlled shut off valves.

---

[24] CA PUB UTIL §§ 2101 *et seq.*, 4351-61, 4451-64.

V. CONCLUSIONS

Nearly 30 State public utility commissions have established pipeline infrastructure replacement programs as part of the ratemaking process. These programs play a vital role in protecting the public by ensuring the prompt rehabilitation, repair, or replacement of high-risk gas distribution infrastructure.

Several state public utility commissions, including those in New Jersey, Kentucky, and Indiana, have used their traditional ratemaking authority to approve such programs. Other States, like Missouri, Kansas, and Nebraska, have provided their public utility commissions with specific statutory authority to approve pipeline infrastructure replacement programs based on detailed eligibility requirements and cost-recovery formulas. Ohio has a statute in place that provides its commission with far more flexibility and discretion. California recently enacted a statutory scheme requiring the implementation of a comprehensive program for pressure testing and replacement of gas pipelines.

Whether as part of the traditional ratemaking process or in a separate proceeding, PHMSA urges State public utility commissions to accelerate the repair, rehabilitation, and replacement of high-risk pipeline infrastructure. The recent pipeline accidents in San Bruno, Philadelphia, and Allentown show the tremendous cost in terms of fatalities, injuries, and property damage that can result in the absence of such action.

PHMSA is focused on this issue in implementing its integrity management requirements for natural gas transmission and distribution lines and as part of the state certification process. PHMSA is willing to provide assistance to State public utility commissions who are seeking to establish or improve programs for the repair, rehabilitation, and replacement of high risk pipeline infrastructure. Such assistance could include offering testimony at legislative hearings or in state proceedings, providing technical expertise in identifying high-risk pipeline infrastructure, and ensuring that state pipeline safety regulators are effectively implementing the integrity management requirements for natural gas transmission and distribution lines.

VI. CONCLUSION 16

PREPARED REBUTTAL TESTIMONY OF
LUKE RAVENSTAHL

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Luke Ravenstahl. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company") as the Vice President of Sales and Marketing.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 8.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to respond to certain portions of the Direct Testimonies of Bureau of Investigation and Enforcement ("I&E") Witnesses Cline and Gobrecht, Office of Small Business Advocate ("OSBA") Witness Kubas, Office of Consumer Advocate ("OCA") Witness Geiger, and Coalition for Affordable Utility Service and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Cicero.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. Part I is the introduction. Part II addresses parties' proposals regarding competitive customers. Part III addresses comments regarding data centers and power generator opportunities. Part IV addresses arguments made in response to the Company's proposed Natural Gas Hot Water Tank Rebate Pilot. Part V addresses the Company's Damage Prevention Program. I conclude in Part VI.

II. COMPETITIVE CUSTOMERS

Q. DO ANY OF THE PARTIES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS RELATED TO PEOPLES' COMPETITIVE CUSTOMERS?

A. Yes. I&E Witness Cline provides a recommendation related to Peoples' competitive rate customers. OSBA Witness Kubas provides testimony regarding the Company's Cost of Service Study ("COSS") with respect to negotiated rate customers.

Q. MR. CLINE TESTIFIES THAT "[I]T IS IMPORTANT TO PERIODICALLY ANALYZE COMPETITVE ALTERNATIVES TO ENSURE THAT THE RATES CHARGED TO DISCOUNT RATE CUSTOMERS RESULT IN THE MAXIMUM POSSIBLE CONTRIBUTION TO FIXED COSTS," AND SO THAT "RATES ARE NOT DISCOUNTED LOWER THAN WOULD BE NECESSARY TO PREVENT THE CUSTOMER FROM CHOOSING THE ALTERNATIVE SUPPLY." (I&E STATEMENT NO. 3, p. 8.) DO YOU AGREE WITH THIS RECOMMENDATION?

A. Yes. Any time a discounted contract is newly negotiated or renewed, the Company performs its normal assessment, which includes an assessment and verification of a competitive alternative and a fixed cost analysis.

Q. WHAT DOES MR. CLINE RECOMMEND WITH RESPECT TO PEOPLES' DISCOUNT RATE CUSTOMERS?

A. Mr. Cline recommends that Peoples be required to provide a competitive alternative analysis for each of its discount rate customers that has not had their competitive alternatives verified for more than ten years at the time of the Company's next base rate case. (I&E Statement No. 3, p. 6) He recommends that Peoples provide this analysis and justify those customers' rates as a part of that next base rate case. (I&E Statement No. 3, p. 6.) He finally recommends that Peoples be required to provide a competitive alternative analysis for each discount rate customer that has not had their competitive alternatives verified for more than ten years at the time of each of Peoples' prospective rate cases in perpetuity. (I&E Statement No. 3, p. 6.)

Q. WHAT IS THE REASONING THAT MR. CLINE PROVIDES FOR MAKING THIS RECOMMENDATION?

A. Mr. Cline reasons that the customers' alternative supply should be periodically analyzed because Peoples' costs to supply service and operational conditions or customers' access to alternative supply may have changed since the initial alternative supply studies were completed when the contracts were initiated. (I&E Statement No. 3, pp. 6-7.)

Q. DO YOU AGREE WITH MR. CLINE'S REASONING OR WITH HIS RECOMMENDATION? PLEASE EXPLAIN.

A. Not exactly. Mr. Cline raised this issue in Peoples' prior base rate case in 2023, and Peoples maintains its stance. Given that existing negotiated customers have already agreed to terms and entered into legally binding agreements, a more appropriate solution would be to consider this issue prospectively. Further, as Peoples suggested in its prior base rate case, Peoples is engaging in the practice of limiting any new contract terms to 10 years, and prior to entering a new contract with a customer, verifying the competitive alternatives. Further, and in the spirit of that approach, we have reduced our number of negotiated contracts since the last base rate case from 17 to 11. Several discounted delivery rate customers also had their competitive options and associated discounts reviewed and approved or were unopposed in prior 1307(f) settlements. We are in support of ensuring discounts offered are appropriate and in the interests of all ratepayers.

Q. WHAT ANALYSIS IS DONE BY THE COMPANY BEFORE IT ENTERS INTO NEGOTIATED RATE AGREEMENT?

A. Prior to entering into a negotiated rate agreement, Peoples requires the customer to provide us, via a confidential affidavit, a viable competitive alternative. The customer conducts an analysis of the economic and operational viability of the alternative and shares the analysis and any supporting information with us. We then validate and confirm the viability of a competitive alternative before proceeding with or considering a negotiated rate. It should also be noted that if an alternative energy rate is negotiated, it's only valid through the term of the contract. At that point, the process starts over, and we re-evaluate to determine if the

customer's competitive alternative is still viable before we consider continuing with a negotiated rate.

In addition, the Company also performs a fixed cost analysis. The first step of the fixed cost analysis is to project the amount of annual revenue that will be received from the customer. The next step is to determine the annual incremental costs of service for the customer. The annual incremental costs of service consist of the following components: Return on Rate Base, Annual Depreciation, and Associated Income Taxes. In order to determine the return on rate base, Peoples first identifies any dedicated facilities used to serve the customer. The net book value of the facilities is calculated as the original cost of the facilities less accumulated depreciation. The net book value is then multiplied by the current return rate to arrive at the return on rate base. The current return rate is based upon the capital structure and cost of capital filed in the Company's most recent Pennsylvania Public Utility Commission earnings report at the time the analysis is prepared. The annual depreciation expense is calculated as the original cost of the dedicated facilities times the current annual depreciation rate based upon the FERC coding for the type of asset being valued. The associated income taxes are calculated as the amount of federal and state income taxes that will be assessed on the return on rate base amount less interest expense. Once the annual incremental costs of service components are calculated, the final step of the analysis is to take the projected annual revenue less the sum of the annual incremental costs of service components. If the result is a positive number, it indicates the projected annual revenues exceed the annual incremental costs to serve the customer. Therefore, the customer is contributing to the overall fixed costs, which benefits the other ratepayers. In

short, other ratepayers benefit by having the customer with a negotiated rate on Peoples' system versus Peoples' not serving that customer.

Q. PLEASE DESCRIBE THE COMMITMENTS MADE IN THE COMPANY'S PRIOR TWO RATE CASES REGARDING WHAT IS PROVIDED TO THE PARTIES WITH THE FILING OF A BASE RATE.

A. In its last two rate cases and in the instant case, Peoples filed the following materials with its base rate request as justification for each negotiated customer contract: customer number, effective date of the agreement, the reason(s) for offering a negotiated delivery agreement, supporting workpapers relied upon to substantiate the negotiated delivery agreement, and an analysis which evaluates the contribution to overall fixed costs provided by each customer.

Q. MR. CLINE ALSO STATES THAT HIS PROPOSAL IS CONSISTENT WITH THE COMMISSION'S ORDER ISSUED IN A PROCEEDING INVOLVING COLUMBIA GAS OF PENNSYLVANIA, INC ("COLUMBIA").[1] (I&E STATEMENT NO. 3, p. 9.) ARE THERE ANY DIFFERENCES BETWEEN THIS CASE AND THE COLUMBIA CASE THAT MR. CLINE REFERENCES?

A. Understandably, I am not privy to the terms of any of Columbia's negotiated contracts and as such I cannot opine on the differences between their contracts and Peoples' contracts. However, generally speaking, I would like to note that while we both may have negotiated customer contracts, we are not the same utilities. At a very basic level, we have different

[1] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2020-3018835, p. 217 (Order entered Feb. 19, 2021).

footprints, different numbers of customers, different physical system configurations and varying costs to serve. I would assume that we also have different customers, specifically, different negotiated customers with individualized contracts. Negotiated customer contracts are often unique to the customer's specific needs and utility system operational requirements. As such, it is not necessarily appropriate for one utility to perform a specific evaluation just because another utility was ordered to do so.

Yet another potential difference I would note is in the previously-asked question on page six (6) pertaining to information provided by Peoples in its base rate filings as justification for each of its negotiated customer contracts. Peoples provides highly confidential information about each of its contracts upfront and with the initial filing of its base rate proceedings. I am not aware of this being a mandate for all utilities with negotiated customer contracts.

As Peoples already mentioned, Peoples is willing to accept Mr. Cline's recommendation on a going forward, prospective basis. It is simply not appropriate to perform this analysis on legally binding, existing agreements, nor is it appropriate to apply something to Peoples just because Columbia does it.

Q. PLEASE DESCRIBE MR. KUBAS' TESTIMONY WITH RESPECT TO NEGOTIATED RATE CUSTOMERS AND PEOPLES' COSS.

A. Mr. Kubas testifies that granting negotiated rates to customers within a class results in a revenue shortfall for that class, skewing the results of the COSS, and uses this as a basis to recommend that Peoples separate the negotiated customers and corresponding revenue into

a separate class for the purpose of preparing COSSs in the future. (OSBA Statement No. 1, pp. 10-11.)

Q. DO YOU AGREE WITH THE REASONING FOR MR. KUBAS' REOMMENDATION? PLEASE EXPLAIN.

A. As I understand the basics of Cost of Service and Rate Classes, they are usually determined by cost causation. As such, it is unlikely that all discounted customers would have similar cost causation and thus it may be difficult to group them into one customer class. Company Witness Taylor addresses this issue further in his rebuttal testimony, **Peoples Statement No. 17-R**.

III. DATA CENTER & POWER GENERATOR OPPORTUNITIES

Q. DO ANY OF THE PARTIES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS RELATED TO DATA CENTER AND POWER GENERATOR OPPORTUNITIES?

A. Yes. I&E Witness Cline does not make a recommendation related to this topic but does express concern related to future data center and large generation customers.

Q. WHAT CONCERN DOES MR. CLINE EXPRESS REGARDING FUTURE DATA CENTER AND LARGE GENERATION CUSTOMERS?

A. Mr. Cline testifies that the "potential negative impact on customer distribution and energy rates" that may result from the addition of new large load customers "requires a thoughtful approach." (I&E Statement No. 3, p. 10.) He also suggests possible means to mitigate those potential negative impacts. (I&E Statement No. 3, p. 10.)

Q. DO YOU HAVE ANY RESPONSE TO THE CONCERNS IDENTIFIED BY MR. CLINE?

A. The Company is continuing to analyze and monitor the industry and its potential need for large volumes of natural gas. We understand and agree this is a complex issue with many interested parties having questions and/or concerns. We will continue to refine our approach on these projects as opportunities arise in the future.

IV. NATURAL GAS HOT WATER TANK REBATE PILOT

Q. DO ANY OF THE PARTIES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS RELATED TO PEOPLES' PROPOSED NATURAL GAS HOT WATER TANK REBATE PILOT?

A. Yes. OCA Witness Geiger and CAUSE-PA Witness Cicero provide recommendations related to the pilot program.

Q. WHAT DO THESE WITNESSES RECOMMEND?

A. Mr. Geiger and Mr. Cicero both oppose the pilot. Specifically, Witness Geiger recommends that the Commission reject the entire proposed budget of $500,000 for the pilot. (OCA St. 2, pp. 26-27.) Witness Cicero recommends that the pilot be denied, or that, at a minimum, the pilot be paid for by shareholders rather than through ratepayer funds. (CAUSE-PA Statement 1, p. 82.)

Q. UPON WHAT BASIS WAS MR. GEIGER'S RECOMMENDATION MADE?

A. It appears that Mr. Geiger has recommended that the budget for the Natural Gas Hot Water Tank Rebate Pilot be rejected based on the assumption that it is a fuel switching program that will help increase the Company's future gas sales, and therefore that it should not be paid for by ratepayers. (OCA St. 2, p. 27.) He also opines that it is not reasonable for the Company to spend "ratepayer funds to advertise a voluntary fuel-switching program." (OCA St. 2, p. 27.)

Q. UPON WHAT BASIS WAS MR. CICERO'S RECOMMENDATION MADE?

A. Similarly to Mr. Geiger, Mr. Cicero testifies that the pilot "is a load building program." (CAUSE-PA St. No. 1, p. 81.) Mr. Cicero also reasons that the pilot does not align with the Commission's historical stance as related to fuel switching. (CAUSE-PA Statement 1, p. 82.)

Q. DO YOU AGREE WITH THE RECOMMENDATIONS OF MR. GEIGER AND MR. CICERO?

A. No. The Company believes an incentive for residential customers to install high-efficiency natural gas hot water tanks is appropriate and warranted. The conversion from electric to natural gas will provide customers with financial savings, making their utility costs more affordable. Additionally, the increased volume into our delivery system will help keep rates low for all customers. A conversion from electric to natural gas also helps reduce the strain on an already challenged electric grid. The Company believes that dismissing or rejecting pilot programs like this will only add to the overall energy challenges customers face long-term.

Q. MR. CICERO CRITICIZES THE COMPANY FOR NOT APPLYING THE TOTAL RESOURCE COST ("TRC") TEST TO DETERMINE THE COST EFFECTIVENESS OF THE PILOT. (CAUSE-PA Statement 1, p. 82.) DO YOU WISH TO RESPOND?

A. Yes. Mr. Cicero's claim that we did not apply the TRC test is misapplied as the TRC is inapplicable to Peoples as it is a natural gas distribution company, not an electric distribution company. As I am advised by counsel, a total resource cost test is required for certain electric distribution utilities to implement an Energy Efficiency and Conservation ("EE&C") Plan under Act 129. I am not aware of this mandate for natural gas distribution companies in Pennsylvania. Moreover, Peoples' requested pilot is not a full-blown EE&C plan, but a simple pilot to allow customers an opportunity to choose a more cost-effective energy source to offset a small portion of their electric load. The pilot is a small step to gauge customer interest; it would allow Peoples to evaluate whether it could and should establish a full EE&C plan someday.

Q. WILL THE COMPANY'S PROPOSAL PROVIDE A BENEFIT TO CUSTOMERS?

A. Yes. As described in my direct testimony and in the instant rebuttal testimony, the customer will benefit in a number of ways. Using a natural gas tank to heat water will result in cost savings to customers (estimated savings $195-$376 annually) who would have previously heated water with electric. We want to help our customers afford their energy bills and this is one way we can help our customers' bottom line. In addition, the rebate would help

alleviate the financial burden of up-front conversion costs, thus allowing more customers to make a choice as to energy source.

Q. MR. CICERO STATES THAT THERE MAY BE A REBATE AVAILABLE FROM AN ELECTRIC UTILITY FOR A HOT WATER HEATER. (CAUSE-PA Statement 1, p. 82.) DOES THIS CHANGE YOUR RECOMMENDATION TO IMPLEMENT THE COMPANY'S PROPOSAL?

A. No. Given that no specific rebate is cited, this is speculative. Even so, the rebate does not account for the additional ongoing savings that a customer would realize.

Q. DOES MR. CICERO EXPRESS ANY OTHER CONCERNS RELATED TO FUEL SWITCHING?

A. Yes. Mr. Cicero expresses concern over Peoples' fuel switching practices and states that it should clarify the scope of its fuel switching through its Emergency Furnace and Service Line Repair Program ("EFSLR Program") and Low Income Usage Repair Program ("LIURP"). (CAUSE-PA Statement 1, pp. 82-83.) He requests that Peoples clarify whether it is coordinating the conduction of fuel switching with other utilities.

Q. HOW DO YOU RESPOND TO MR. CICERO'S REQUEST?

A. Peoples' EFSLR assists eligible customers with heating system repairs and/or replacements and gas line repairs. It also provides water heater repairs and replacements on a limited basis. It does not conduct any fuel switching activities. As noted in Mr. Cicero's testimony, LIURP does allow for limited fuel switching under the recently finalized LIURP

regulations. However, Peoples' LIURP is focused on measures that will reduce natural gas consumption in the home and its energy audit process does not identify fuel switching alternatives, but instead focuses the home treatment plan on the repairs and installations necessary to improve the health, safety and energy conservation of the home. For clarification between the requested pilot program and Peoples' EFSLR and LIURP, please see the Rebuttal Testimony of Rita Black, **Peoples Statement No. 10-R.**

V. DAMAGE PREVENTION

Q. DOES PEOPLES HAVE A DAMAGE PREVENTION PROGRAM?

A. Yes. Peoples maintains a Damage Prevention Program under its Standard Operating Procedure ("SOP") 090 – Damage Prevention and in accordance with Pennsylvania's One Call Law.

Q. PLEASE DESCRIBE THE COMPANY'S DAMAGE PREVENTION PROGRAM.

A. The Company's Damage Prevention Program includes procedures designed to prevent damages to Peoples' buried pipeline facilities and the facilities of others because of excavation activities. The objectives of the program are to reduce underground damages, minimize service interruptions, promote public safety, and protect the environment.

Q. ARE EMPLOYEES AND CONTRACTORS TRAINED ON THE COMPANY'S DAMAGE PREVENTION PROGRAM?

A. Yes. Peoples' employees and contractors receive training and communications related to the Company's Damage Prevention Program.

Q. PLEASE PROVIDE AN OVERVIEW OF THE TRAINING THAT EMPLOYEES AND CONTRACTORS RECEIVE.

A. Peoples employees receive training on damage prevention requirements, one-call requirements, locating and marking practices, excavation safety, damage reporting, and lessons learned from damages and near misses. Peoples also provides damage prevention training and communications to second-party contractors through contractor meetings, safety discussions, project oversight activities, and reviews of damage events. In 2022, Peoples added a requirement for its three Central pipeline contractors to maintain Damage Prevention programs, which has supported improvement in second-party damage performance.

Q. MR. GOBRECHT ACKNOWLEDGES THAT PEOPLES' DAMAGES HAVE BEEN TRENDING DOWNWARDS BUT NOTES THAT THERE IS STILL A CONCERN WITH THE TOTAL NUMBER OF DAMAGES CAUSED BY THE FIRST AND SECOND PARTIES. (I&E STATEMENT NO. 4, p. 13.) DO YOU WISH TO COMMENT?

A. Yes. Peoples recognizes the importance of reducing first- and second-party damages and continues to review damage events to identify contributing factors and opportunities for improvement. The Company investigates damages, provides training and communications to employees and contractors, and has implemented contractor-focused requirements intended to reduce second-party damages. Peoples will continue to evaluate and implement corrective actions, as appropriate, to support continued improvement in damage prevention performance.

Q. MR. GOBRECHT NOTES THAT PEOPLES HAS SEEN A DECREASE IN LINE HITS PER 1,000 TICKETS MARKED BUT ALSO OBSERVES THAT LINES MARKED INCORRECTLY HAVE BEEN TRENDING UPWARDS. (I&E STATEMENT NO. 4, pp. 14-15.) HOW DO YOU RESPOND?

A. Peoples takes location accuracy seriously and continuously reviews damage investigations and location performance to identify opportunities for improvement. The Company provides coaching, training, and oversight, as appropriate, to improve locating practices and reduce incorrect marks.

Q. PLEASE SUMMARIZE MR. GOBRECHT'S RECOMMENDATIONS FOR HOW TO IMPROVE THE COMPANY'S DAMAGE PREVENTION PROGRAM.

A. Mr. Gobrecht recommends that Peoples review first- and second-party damages to identify opportunities for improvement, provide additional training to employees, contractors, and locator personnel, and utilize quality assurance, quality control, and performance metrics to evaluate and improve the Company's Damage Prevention Program.

Q. DO YOU AGREE WITH MR. GOBRECHT'S RECOMMENDATIONS?

A. Peoples agrees that reviewing damages, providing training, and monitoring performance are important components of an effective Damage Prevention Program. Peoples currently performs these activities and will continue evaluating opportunities to further enhance program performance and reduce damages.

VI. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY OF
RITA F. BLACK

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 10.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I will respond to the statements made in the testimony of Witnesses Roger Colton and Brendan Larkin-Connolly on behalf of the Office of Consumer Advocate ("OCA"); Witness Patrick M. Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA"); and Witness Jennifer Warabak on

behalf of the Pennsylvania Weatherization Providers Task Force ("Task Force") regarding universal service programs, low-income issues and customer complaints filed with the Pennsylvania Public Utility Commission ("PUC" or the "Commission"). I will also respond to the public input hearing testimony of Carrie Nolan-Robson, Executive Director of the Northside Chamber of Commerce, regarding expanding eligibility of customer assistance programs.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring **Peoples Natural Gas Exhibit No. RFB-1R**.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my testimony by topic. Each topic is denoted with a heading to identify the pertinent area of focus for each section.

II. TARIFF CHANGES PERTAINING TO CUSTOMER ASSISTANCE PROGRAM ("CAP")

Q. WITNESSES COLTON AND CICERO RAISED CONCERNS REGARDING THE PROPOSED TARIFF CHANGE PROHIBITING RECREATIONAL USE OF NATURAL GAS WHILE PARTICIPATING IN CAP. IS THIS A NEW PROPOSAL REGARDING CAP PARTICIPATION?

A. No. The prohibition against recreational use of natural gas has been in the Company's Universal Service and Energy Conservation Plan ("USECP") for quite some time. This provision was present in the prior USECP filed in 2014, effective 2015 through 2017 and was maintained in the current USECP which was filed in 2018. This provision is found in

the 'Default, Termination Conditions and Requests for Removal' sub-section under the CAP section of the Plan. The language in the currently approved Plan specifically states: "Use of natural gas, while on the CAP Program, for recreational purposes such as, but not limited to pool heaters and gas grills is prohibited. Customers using gas for recreational purposes will be removed and can be re-enrolled upon verification that the natural gas connection to the recreational appliance has been removed." Peoples proposed the tariff change to align the tariff provisions with the Plan.

Q. IS THIS PROVISION ENFORCED BY THE COMPANY?

A. Yes. The Company is required to ensure the cost of using natural gas for recreational purposes is not recovered from other ratepayers through CAP. The Company does, however, waive this provision if the customer submits verification of a medical need. Customers who need a natural gas heated pool or hot tub due to a medical condition, for example, are exempted from this provision by providing a letter from their physician confirming a medical need for the appliance.

If the Company fails to identify use of a natural gas pool heater while participating in CAP, CAP credits associated with this use can be disallowed by the PUC. This occurred during the Bureau of Audits Universal Service Audit for the 12-month periods ended December 31, 2021, December 31, 2020 and December 31, 2019. Specifically, Finding 3 of the Audit identified a failure of the Company to identify the use of a pool heater by a CAP participant and required the Company to refund $3,528 to its customers through an adjustment to the E-factor in the next Universal Service Rider rate filing. It further

recommended that training for identification of recreational use among Peoples' billing team members be reinforced.[1]

Q. DOES THE PROPOSED TARIFF PROVISION ALIGN WITH THE USECP ON THIS ISSUE?

A. Generally, yes. However, the proposed language included a list of appliances that could be considered recreational in nature. It also stated that 'Unjustified usage as a result of recreational gas use will be billed to the customer', a provision that is not in the USECP.

Q. HAVE YOU CONSIDERED THE TESTIMONY OF WITNESSES COLTON AND CICERO REGARDING THE PROPOSED TARIFF LANGUAGE?

A. Yes, I have. Both witnesses make reasonable points regarding some of the specific appliances listed within the proposed tariff provision. They also raise concerns that a gas grill, for example, should not be considered recreational as it is a cooking device. Considering these viewpoints and balancing those with the desire to provide transparency regarding this long-standing CAP provision by placing it within the tariff, I would like to revise the Company's proposed language. I am providing the originally proposed language, along with a revised proposed provision for ease of comparison.

Original Proposed Tariff Provision: Use of natural gas, while on CAP, for recreational purposes such as, but not limited to, interior or exterior pool heaters and/or hot tubs, recreational appliances, outdoor appliances such as gas grills, fire pits/rings, fireplaces, gas lamps, heaters and other cooking appliances, and heated outdoor buildings such as a shed,

[1] *See* Docket D-2023-3037511.

shop or garage, is prohibited. Customers using gas for recreational purposes will be removed and can be re-enrolled upon verification that the natural gas connection to the recreational appliance(s) has been removed. Unjustified usage as a result of recreational gas use will be billed to the customer.

Revised Proposed Tariff Provision: Use of natural gas, while on the CAP Program, for recreational purposes such as, but not limited to pool heaters, is prohibited. Customers using gas for recreational purposes will be removed from CAP and can be re-enrolled upon verification that the natural gas connection to the recreational appliance has been removed or upon providing certification that the natural gas appliance is medically necessary.

Q. THE REVISED PROPOSED TARIFF PROVISION YOU ARE SUGGESTING DIFFERS FROM THE USECP LANGUAGE ON THIS ISSUE. CAN YOU PLEASE EXPLAIN THOSE DIFFERENCES?

A. The proposed tariff language does not include the statement regarding billing a customer for unjustified use of gas as is mentioned in the USECP. It is not the Company's practice to bill customers for this usage and that USECP language will be removed accordingly when the next USECP is filed with the Commission. And, the USECP version does not explicitly mention the ability of a customer to provide medical certification that the appliance is necessary in order to participate in CAP. It is the Company's practice to allow customers to re-enroll in CAP if they provide certification from their physician that their heated pool is necessary due to manage health conditions. This practice will also be updated within the USECP when the next USECP is filed.

Q. LET'S MOVE ON TO THE SECOND PROPOSED TARIFF PROVISION PERTAINING TO CAP. THAT PROVISION PERTAINS TO CUSTOMERS WHO OBTAINED BENEFITS FROM CAP THROUGH FRAUDULENT MEANS. WITNESS COLTON TESTIFIED THAT YOU DID NOT PROVIDE ANY TESTIMONY ON THE SCOPE OF THE CAP BENEFITS RECEIVED FRAUDULENTLY AND SUGGESTED THIS IS "A SOLUTION IN SEARCH OF A PROBLEM". (OCA Statement 4, p. 69.) WOULD YOU LIKE TO RESPOND?

A. Yes. I would first like to note that this type of behavior from CAP customers is not in any way a common occurrence. The Company is not seeking to identify customers who may have mistakenly excluded income in their application or those who may have gained a bit more income while participating and forgot to notify the Company of their income change. This provision is intended to both recoup the costs of benefits paid by other ratepayers for the fraudulent behavior of some, while also deterring further fraudulent behavior. This is not a widespread issue. However, when it does occur, the costs to the ratepayers for the misuse of CAP can be significant.

For example, the Company identified a CAP participant that had a pool heater through the review of high summer usage reports, as required by our USECP. The home was valued at more than $700,000 and was using in excess of 490 MCF annually, more than 5 times the average usage of a typical residential consumer. The customer was participating at a $25 CAP minimum payment and, during CAP participation of roughly 18 months, the CAP benefits provided were $6,319.39 in CAP Credits and $911.88 in arrearage forgiveness. Publicly available information indicated that both of the adults in the home appeared to have income beyond the $204 monthly income that was reported to

CAP. We attempted to work with this customer in a number of ways to validate their eligibility and allow them to remain in CAP as they had submitted a doctor's letter regarding their need for the pool heater. While Peoples had never received a LIHEAP grant for the account, we offered to accept either a letter of approval from LIHEAP for their electric account as validation that household income had been verified through the LIHEAP application process or a copy of the electric bill showing the LIHEAP payment. We offered to accept filed income tax returns as proof of income for the household. The customer chose not to provide any of these documents and, following the end of winter moratorium, instead chose to enroll in a payment plan. After enrolling in the payment plan, the customer has made payments of $1,540.87 in one month and $733.79 the following month. The account is current. It is my opinion that the unwillingness to provide documentation to support the lack of income reported, along with the ability to pay much higher monthly payments after exiting CAP, indicate the customer obtained benefits of CAP they were not eligible for. If this proposed tariff provision were in place, Peoples would have billed the customer for the benefits received, providing the opportunity for the customer to dispute these charges through submission of documentation proving eligible income during the period of CAP participation.

Q. THIS IS ONE EXAMPLE OF AN ACCOUNT THAT APPEARS TO HAVE RECEIVED BENEFITS THAT MAY HAVE BEEN INAPPROPRIATE. WHY IS A TARIFF CHANGE NECESSARY AT THIS TIME IF THIS IS NOT A COMMON ISSUE?

A. Absent this tariff provision, Peoples' ratepayers subsidized more than $7,000 in utility charges for a household that had sufficient income to pay those charges. I hope that this is the only account engaging in this type of behavior, but if it is not, it is important that there be a tariff authorized process by which these fraudulent costs can be returned to ratepayers.

Q. MR. CICERO RECOMMENDED PEOPLES CONSULT WITH ITS UNIVERSAL SERVICE ADVISORY GROUP ("USAG") TO DEVELOP OBJECTIVE PARAMETERS FOR IDENTIFYING CAP FRAUD. (CAUSE-PA Statement No. 1, p. 72.) PLEASE RESPOND TO THIS RECOMMENDATION.

A. Peoples' USAG is an engaging and collaborative group. We often take items to the USAG for their input, ideas and guidance. I am happy to review the Company's current process and gain input from the group into any suggested modifications at a future USAG meeting. However, I do not agree that approval of this tariff provision be delayed to a future proceeding in order to allow the USAG to review and discuss Peoples' process.

I would also like to note that the Company's current process does not allow for the CAP administrator to simply remove accounts from CAP for fraud. Any potential fraud is handled internally by Peoples staff as these cases involve careful review and provide more than ample time and documentation flexibility for customers to provide sufficient proof refuting their inappropriate use of CAP while working directly with Peoples. As these are sensitive situations, they are managed carefully.

III. <u>TARIFF REVISION TO EXPAND EXPENSES RECOVERED UNDER RIDER UNIVERSAL SERVICE ("RIDER US")</u>

Q. IN HIS TESTIMONY, MR. CICERO RECOMMENDS THE COMPANY'S PROPOSAL TO ADD NEW COSTS TO THE RIDER BE REJECTED. HE STATES "ARTIFICIALLY INFLATING ITS RIDER UNIVERSAL SERVICE COSTS WILL HAMPER THE ABILITY OF THE COMPANY TO FUND NECESSARY PROGRAMS IN THE LONG TERM. PLEASE RESPOND TO THIS CONCERN."

A. The Commission's Bureau of Consumer Services ("BCS") has identified four programs as required universal service programs that must be operated in accordance with the utility company's USECP. These four programs are: CAP, Low Income Usage Reduction Program ("LIURP"), hardship fund, and Customer Assistance and Referral Evaluation Services ("CARES"). All four programs are considered universal services as they are in place to ensure vulnerable households are able to remain connected to important utility services. As such, costs associated with the operation of these programs, excluding utility hardship funds which are supported through donations rather than ratepayer funds, should be recoverable through utility riders that are designed to recover universal service costs. The Company has proposed two general changes to the recoverable costs under Rider Universal Service ("Rider US") in this proceeding. First, it seeks to recover costs associated with CARES, a Commission required universal service program. Second, it seeks to clarify in language pertaining to LIURP that rider recoverable administrative costs should include the cost of a LIURP dedicated position. The Company is only seeking to recover costs that are incurred in support of CARES and LIURP and absent these programs, these costs would not exist. Therefore, as they are costs limited to promotion, enrollment and administration of universal service programs, these costs should be recoverable under Rider US.

The Company has not artificially inflated its recovery of these expenses items. In the case of CARES costs proposed to be included in Rider US, Peoples only included actual costs incurred in the historical period. Further, Peoples' LIURP annual budget is already included in Rider US and this proposed change is simply to identify that administrative costs, which are permitted to be up to 15%[2] of the LIURP annual budget, may include both externally provided services as well as internal dedicated costs.

Q. MR. CICERO STATES THAT PEOPLES PROPOSAL IS SIMILAR TO THAT OF COLUMBIA GAS OF PENNSYLVANIA, INC. ("COLUMBIA") "TO RECOVER THE COSTS OF ITS ENERGY ASSISTANCE TEAM ("EAT") THROUGH ITS RIDER USP RATHER THAN BASE RATES." (CAUSE-PA Statement 1, p. 75.) PLEASE RESPOND TO THIS STATEMENT.

A. I disagree with his characterization. Peoples is not proposing to include any labor associated or internal costs associated with its CARES support of customers within Rider US. In the case of CARES, the only costs proposed for recovery through the rider are costs of third parties engaging in work designed to identify and promote participation in the Company's programs. Further, Columbia has had an internal LIURP position for a number of years, recovered through its Rider USP, as the function of that internal role is fully dedicated to LIURP administration activities which are approved expenses under LIURP. Mr. Cicero states that the LIURP Compliance Position proposed in this case should be recovered through base rates to "allow the Commission to continue to review the reasonableness and prudency of these costs." (CAUSE-PA Statement 1, p. 76.) Any costs

[2] *See* 52 Pa. Code §58.5(a) Administrative Costs

recovered through Rider US, as the Company is proposing, are audited by the PA PUC Bureau of Audits on a regular basis. Therefore, by including these costs in Rider US, the oversight of these costs is increased and if any costs are found not to be appropriate for recovery by an audit, those costs will be disallowed.

IV. CAP PARTICIPATION

Q. IN HIS TESTIMONY, MR. CICERO RAISES A CONCERN THAT PEOPLES' CAP ENROLLMENT IS UNDERSUBSCRIBED. (CAUSE-PA Statement 1, p. 31.) WOULD YOU LIKE TO RESPOND TO THIS CONCERN?

A. Yes. I'd first like to describe a key difference between CAP participants and Confirmed Low Income ("CLI") populations that are used in Mr. Cicero's testimony. Customers may be classified as CLI based on participation in CAP or receipt of LIHEAP, but most are classified as CLI based on verbal income information provided to the Company at any point in time. This is an important distinction. If I am attending college and have only part time income when I first start service with Peoples and provide verbal information reflecting my current household income is roughly 150% of federal poverty level ("FPL"), this information will remain on my account until and unless is it modified at a later date. Therefore, I may graduate from college and obtain full time employment with an income significantly higher than I provided 5, 10 or more years ago and yet, according to Peoples' customer information system, my household is still classified as CLI. I give this example as a caution against depending too heavily on percentage of CAP participation in comparison to CLI figures as CLI figures do not reflect only current circumstance and for that reason, should be considered more of an estimate than a verified figure.

Mr. Cicero points to CAP enrollment growing by only 4.9% of residential customers over the past 2 years, citing Peoples responses to interrogatories. (CAUSE-PA Statement 1, p. 31.) However, there is strong growth in CAP enrollment. As shown in the CAP participation table provided on page 15 of **Peoples Statement No. 13-R**, the rebuttal testimony of Carol A. Scanlon, participation in CAP grew by 14.8% from January of 2025 through May of 2026. A major barrier to enrollment in CAP is the requirement to provide documented income. While Peoples has a comprehensive outreach plan and its contact center refers all potential income eligible customers to CAP, enrollment still requires submission of verified income, unless the customer has received LIHEAP. Many customers providing verbal income are sharing their net income as this is the income figure that they are most familiar with. As gross income is used for CAP, they may not be eligible. Or, they may be income-eligible, but do not wish to participate in the enrollment process because a payment arrangement, using verbal income only, is faster and easier in the moment.

Q. PLEASE DESCRIBE THE COMPANY'S PROCESSES FOR OBTAINING HOUSEHOLD INCOME GENERALLY AND ITS USE IN REFERRING CUSTOMERS TO CAP.

A. Customers are given the opportunity to voluntarily share household income on a number of occasions. The first of which is the initiation of service, at which time the applicant is asked if they would like to provide household income. Income identifying the household as low-income at this event will lead to the waiver of security deposit requirements as well as a referral to CAP. As the life of the customer continues, if the customer experiences

difficulty in paying their bill or has concerns regarding their billing amount, these are also opportunities at which the Company asks if they would like to voluntarily provide income information that could be used to screen them for eligibility to participate in programs such as CAP, LIURP or LIHEAP. Additionally, a customer contacting the Company for assistance with a failing heating appliance, for example, would be asked if they would like to share their income to determine eligibility for assistance through the Emergency Furnace and Service Line Repair ("EFSLR") program. And, importantly, each touchpoint with a customer, such as a EFSLR referral for a heating system issue, become a CAP enrollment touchpoint as well. We encourage all customers that are income eligible to participate in CAP and will use income documentation provided for one purpose, such as an EFSLR repair, to qualify the customer into CAP with simply their verbal approval.

Q. MR. CICERO IS CONCERNED THAT POTENTIALLY ELIGIBLE CUSTOMERS ARE NOT ENROLLED IN CAP AND SUGGESTS A ROOT CAUSE ANALYSIS TO DETERMINE THE REASONS FOR THIS. (CAUSE-PA Statement 1, p. 74.) PLEASE RESPOND TO THIS RECOMMENDATION.

A. Mr. Cicero's recommendation is not necessary because Peoples is currently undergoing an independent evaluation of its universal service programs by Three3 (pronounced Three Cubed), a 501(c)3 research non-profit. Enrollment, and in particular the customer experience of enrollment as well as identifying barriers to enrollment, is a key part of this evaluation. The findings and recommendations from this process will be provided to the PA PUC BCS in the form of a written report in April of 2027 and will also be shared with

the USAG. These findings and recommendations will also inform the USECP the Company will develop for filing in early 2028.

V. CAP AND CLI SERVICE TERMINATIONS

Q. WITNESSES CICERO AND COLTON ARE CONCERNED REGARDING TERMINATION OF SERVICE DUE TO NON-PAYMENT FOR CAP PARTICIPANTS. WITNESS CICERO CITES AN INCREASE IN CAP TERMINATION RATES IN 2024 AND SUGGESTS A ROOT CAUSE ANALYSIS. (CAUSE-PA Statement 1, p. 73.) PLEASE RESPOND TO HIS TESTIMONY ON THIS TOPIC.

A. Mr. Cicero mentioned that "While the numbers improved in 2025…", but does not point out that 2025's CAP termination rate was 6.5%, a significant reduction. (CAUSE-PA Statement 1, p. 73.) I think we would all agree that the ideal CAP termination rate would be zero. However, customers enrolling in CAP do not always pay their monthly CAP payment for a number of reasons. Customers in CAP do not always apply for other benefits available to them, such as LIHEAP or the Company's hardship fund. As a result, CAP customers, similar to other utility customers, may find their service terminated as a result of non-payment. Given that 2025's rate is already showing a significant improvement over 2024, I do not believe a root cause analysis within 180 days of effective rates in this case, as recommended by the witness is necessary. I do agree that reviewing this issue with the USAG has value and Peoples will commit to including this topic in its January 2027 USAG meeting for discussion.

Q. MR. COLTON POINTS OUT THAT THE RATE OF SERVICE DISCONNECTION FOR CONFIRMED LOW INCOME CUSTOMERS IS HIGHER THAN THE RESIDENTIAL CUSTOMER GROUP AS A WHOLE. (OCA Statement 4, p. 46.) ARE THERE OTHER DATA POINTS THAT SHOULD BE CONSIDERED AS WE TALK ABOUT SERVICE DISCONNECTION FOR LOW INCOME HOUSEHOLDS?

A. Yes. It is important to consider not only termination rates, but reconnection rates as well. Unfortunately, more low income households experience utility termination than higher income residential households, primarily due to availability of resources. Peoples' termination rate for CLI customers aligns with the NGDC average as shown in the table below, taken from the 2024 Universal Service Report, published by the PA PUC.

Terminations – Confirmed Low-Income Natural Gas – 2022-2024

Utility	2022		2023		2024	
	Number	Termination Rate	Number	Termination Rate	Number	Termination Rate
Columbia	6,124	8.7%	5,974	8.3%	6,277	8.9%
NFG	3,260	13.9%	3,268	13.7%	2,895	12.2%
PECO-Gas	5,531	19.1%	6,487	20.9%	570*	2.0%
Peoples	4,253	3.9%	11,815	10.5%	11,502	10.2%
PGW	9,548	8.3%	20,339	15.8%	19,806	15.0%
UGI Gas	4,810	5.7%	5,548	6.2%	5,681	6.4%
Total/Industry Average	**33,526**	**7.8%**	**53,431**	**11.6%**	**46,731**	**10.2%**

*In 2024, PECO suspended terminations for several months due to the implementation of a new operating system, which resulted in a reduction in terminations in 2024.

However, when considering reconnections, Peoples' CLI customers are more likely to restore service than the NGDC average.

Reconnections – Confirmed Low-Income Natural Gas – 2022-2024

Utility	2022		2023		2024	
	Number	Reconnection Rate	Number	Reconnection Rate	Number	Reconnection Rate
Columbia	3,273	53.4%	2,936	49.1%	3,251	51.8%
NFG	2,464	75.6%	2,509	76.8%	2,312	79.9%
PECO-Gas	5,193	93.9%	5,888	90.8%	493*	86.5%
Peoples	4,123	96.9%	9,054	76.6%	9,446	82.1%
PGW	7,401	77.5%	16,403	80.6%	16,199	81.8%
UGI Gas	3,453	71.8%	4,147	74.7%	4,219	74.3%
Total/Industry Average	**25,907**	**77.3%**	**40,937**	**76.6%**	**35,920**	**76.9%**

*In 2024, PECO suspended terminations for several months due to the implementation of a new operating system, which resulted in a reduction in terminations and reconnections in 2024.

This performance in reconnections is reflective of Peoples' efforts to assist customers in enrolling in CAP as a way to restore service. If a customer has not participated in CAP in the past and service is terminated, the customer can provide proof of household income to enroll in CAP and will not be required to make any payment towards the outstanding balance to restore service. The full account balance is frozen in pre-CAP, allowing the customer the opportunity for a fresh start and more affordable monthly bill.

Q. IN PART 3 OF HIS TESTIMONY, WITNESS COLTON DISCUSSES WHAT HE REFERS TO AS "THE DISPARATE RACIAL IMPACTS OF PEOPLES NONPAYMENT DISCONNECTIONS." (OCA Statement 4, p. 51.) IN THE CLOSING OF THAT SECTION, HE RECOMMENDS THAT PEOPLES CONDUCT A ROOT CAUSE ANALYSIS WITH THE GOAL OF REDUCING "THE DISPROPORTIONATE LEVEL OF DISCONNECTIONS." (OCA Statement 4, p. 56.) PLEASE RESPOND TO THIS RECOMMENDATION.

A. I reviewed the disconnection statistics by zip code as provided in response to discovery that Mr. Colton also utilized in his analysis[3]. I sorted the zip codes for CLI to identify those with the highest level of disconnections. These top zip codes correspond with the heat maps created by Peoples Energy Analytics ("PEA"). I have provided **Exhibit RFB-1R** which includes three heat maps of these areas: Allegheny County, Butler County and Westmoreland County, all three of which contain high disconnection zip codes. The heat maps were developed through an in-depth data analysis process that looked at both energy burdens and risk of pipe freeze. It identified zip codes, and specific accounts, in which energy burdens are high and CAP participation would be a great benefit. This work also identified pipe freeze which can occur when a household restricts energy usage in order to maintain affordability of monthly bills, leading to risk of pipe freeze in the home as well as the potential for health consequences for the household. Pipe freeze risk is also an indicator of a likely high energy burden issue, one that is being self-mitigated by a customer.

Q. WHAT WAS THE INTENTION BEHIND THE CREATION OF THESE HEAT MAPS?

A. The goal with the heat maps is two-fold. First, it provides us with planning information for community outreach activities. It shows us where our time and funds are best spent in promoting programs. This information is used in planning for out-of-home advertising, such as billboards, as well as placement of digital ads on platforms such as NextDoor. It is also used to determine where the social service agencies are, as well as community events,

[3] Peoples' response to OCA-IV-4.

that we should include in our in-person outreach event planning. The second benefit of the heat map process is the data analysis behind it identified the specific accounts at risk due to high energy burden or under-usage of natural gas for heating so that we can provide direct outreach.

Q. DO YOU AGREE WITH WITNESS COLTON'S RECOMMENDATION THAT A ROOT CAUSE ANALYSIS SHOULD BE CONDUCTED, WITH RESULTS REVIEWED IN PEOPLES' NEXT BASE RATE CASE?

A. I believe the analysis that has been completed through the work of PEA has already identified CAP eligible CLI populations in these geographical areas of concern. CAP can address the energy burden challenges experienced by this population. It is my opinion that it is a better use of the Company's resources to act on the information provided through PEA's work to inform our outreach activities, the goal of which is to connect eligible households with CAP to avoid service disconnection through an improved energy burden. I also think it appropriate that we review results of our outreach activities, specifically as it pertains to the use of the heat maps, with the USAG. One of our quarterly meetings each year is dedicated to the topic of outreach and this item will be a component of that annual review.

VI. <u>SEASONAL BILL VOLATILITY AND AFFORDABILITY</u>

Q. MR. COLTON AND MR. CICERO PROVIDE TESTIMONY REGARDING THE SEASONALITY OF BILLS AND ITS IMPACT ON LOW-INCOME HOUSEHOLDS. (CAUSE-PA Statement 1, p. 27; OCA Statement 4, p. 35.) ARE

THERE PAYMENT OPTIONS FOR RESIDENTIAL CUSTOMERS TO MITIGATE THE IMPACT OF SEASONALITY OF MONTHLY BILLS?

A. Yes. In addition to CAP, for those who are income eligible, any residential customer can enroll in the Company's budget billing plan. Budget billing smooths out this volatility by providing a monthly average bill. Customers can enroll in budget billing online through the Company's e-account, or with a customer service agent via telephone. Customers can enroll in the budget plan at any time during the year.

Q. ON PAGE 31 OF HIS TESTIMONY, WHEN DISCUSSING CAP PARTICPANTS THAT PAY THE BUDGET BILL RATHER THAN THE PERCENTAGE OF INCOME ("PIP") AMOUNT, MR. CICERO STATES, "THE RATE INCREASE MAKES IT MORE LIKELY THAT CUSTOMERS BUDGET BILLS WILL BE HIGHER THAN THEIR PIP AMOUNT, THUS LIKELY INCREASING THAT WHICH THEY HAVE TO PAY EACH MONTH." (CAUSE-PA Statement 1, p. 31.) WOULD YOU LIKE TO CLARIFY HOW CAP PAYMENTS ARE CALCULATED?

A. Yes. When participating in CAP, customers pay the lower of their calculated PIP or the budget bill for their home. The customer's CAP payment is reviewed on a monthly basis to ensure they are always on the most affordable payment amount available to them. If a CAP customer is currently paying the budget amount, because that amount is lower than the calculated PIP, and if the budget were to increase due to a rate increase, for example, the budget amount would also increase. The payment review process would compare the newly calculated budget amount to the PIP to identify which is lower and will move the

customer to the PIP if it is more affordable. In this manner, CAP participants are protected from paying anything higher than the Commission approved PIP amounts for their income level.

Q. WITNESSES CICERO AND COLTON BOTH DISCUSS ALTERNATIVE MEASURES OF INCOME AS IT PERTAINS TO OVERALL AFFORDABILITY AND HOUSEHOLD STABILIZATION. THESE ALTERNATIVES INCLUDE ASSET-LIMITED, INCOME CONSTRAINED, EMPLOYED ("ALICE") AND THE SELF SUFFICIENCY STANDARD. ARE THESE INCOME CLASSIFICATIONS USED IN ESTABLISHING ELIGIBLITY FOR UNIVERSAL SERVICE PROGRAMS IN PENNSYLVANIA?

A. No, they are not. Income eligibility for utility programs in Pennsylvania is driven by federal poverty level ("FPL"). The majority of energy utility CAPs are available only to those with incomes at or below 150% FPL. Roughly 10 years ago, Peoples recognized the need for CAP's arrearage forgiveness benefit for those with incomes between 151 and 200% FPL and initiated its Pilot CAP Expansion, sometimes referred to as 'E-CAP' to serve this need. Water and wastewater CAPs initiated in the past several years have also set income eligibility thresholds at 200% FPL, but other energy utility programs typically follow the Commission's guideline of 150% FPL.

Q. WITNESS CICERO RAISES THE CONCERN THAT THE COMPANY'S PROPOSED FIXED CHARGE WILL AFFECT LIURP. (CAUSE-PA Statement 1, pp. 53-54.) WOULD YOU LIKE TO RESPOND TO THIS CONCERN?

A. Yes, I would. I disagree with his concern. As reported in the Company's 2024 LIURP Annual Report, 97% of LIURP participants were also CAP participants. As CAP participants, the share of fixed versus variable charges on the monthly bill do not impact the CAP payment amount. Therefore, LIURP participants will not be negatively impacted by the proposed rate design.

VII. INCREASE TO PROGRAM FUNDING

Q. WITNESS WARABAK SUGGESTED AN INCREASE TO LIURP ANNUAL FUNDING OF $975,000. (PWPTF Statement No. 1, p. 7.) PLEASE RESPOND TO THIS RECOMMENDATION.

A. In her testimony, Ms. Warabak explains that she developed the recommendation by using an average job cost of $13,000 and applying this to 75 jobs. (PWPTF Statement No. 1, p. 7.) She references the Company having completed 186 jobs in 2024 and 170 jobs in 2025. (*Id*.) The years 2024 and 2025 were transitional years as the Company moved to a new program administrator. The new administrator began work in the second quarter of 2025 and the initial focus was on building out the contractor coverage of the service territory while establishing processes and setting the program up for success into the future. Through the middle of 2026, the Company has already seen 144 jobs with an average job completion rate of 24 jobs per month. Assuming this productivity continues through the end of the year, the Company will exceed the level of households that would be served through Ms. Warabak's recommendation.

Q. MS. WARABAK ALSO RECOMMENDED AN INCREASE IN SHAREHOLDER DONATIONS TO THE HARDSHIP FUND. PLEASE RESPOND.

A. Ms. Warabak recommends an increase in the Company's contribution to the hardship fund commensurate with the percentage increase in residential rates approved in this proceeding. (PWPTF Statement No. 1, p. 7.) It appears the witness may not be aware that the Company's donation to the hardship fund does not come from ratepayer funds at all. All donations to the hardship fund come from shareholder dollars. A residential rate increase does not result in a corresponding increase to its shareholders.

Q. MS. WARABAK ALSO RECOMMENDED THAT "HARDSHIP FUNDING BE DISTRIBUTED IN ACCORDANCE WITH THE PERCENTAGE OF LOW-INCOME CUSTOMERS IN THE COUNTIES SERVED BY THE COMPANY." (PWPTF Statement No. 1, p. 7.) PLEASE DESCRIBE HOW HARDSHIP FUNDS ARE DISTRIBUTED AND THE BENEFIT OF THIS ARRANGEMENT.

A. Hardship funds are available on a first-come, first-serve basis to any eligible customer of Peoples. This is an important arrangement because it ensures that those who apply are eligible to receive support from the total dollars available in the fund, regardless of where their residence is located. In the past, when we operated separate hardship funds for Peoples Natural Gas and its former affiliate Peoples Gas LLC, we often saw challenges in fund availability. As a smaller NGDC, Peoples Gas LLC had a smaller hardship fund. If that fund ran out of money and a customer was in need, they were unable to access available funds in the Peoples Natural Gas hardship fund. By combining the two funds into one, the Company was able to ensure that any customer of the broader Peoples system would have equal access to available funds. My concern with Ms. Warabak's approach is that the

Company would see similar challenges to what we experienced in the past if funding were distributed based on county.

VIII. NATURAL GAS WATER TANK REBATE PILOT

Q. IN HIS TESTIMONY, MR. CICERO STATED THAT THE COMPANY SHOULD CLARIFY HOW THE PROPOSED WATER TANK REBATE PILOT WOULD INTERACT WITH ITS EXISTING LIURP AND EFSLR PROGRAMS. (CAUSE-PA Statement 1, pp. 82-83.) WOULD YOU LIKE TO PROVIDE CLARIFICATION?

A. Yes, I would. The pilot rebate program described in **Peoples Statement No. 8**, the Direct Testimony of Luke Ravenstahl, describes the program as a $1,000 rebate provided to residential customers to offset the costs of conversion to a natural gas hot water tank. Customers receiving the rebate through this program would be homeowners choosing to install a natural gas water heater at their own expense. The rebate would assist them in covering that expense. The LIURP and EFSLR programs, however, are not self-paid programs. Customers participating in these programs are income-eligible homeowners and renters and all measures and appliances provided through the program are covered fully by the program. Both LIURP and EFSLR programs are focused on health, safety and usage reduction measures. Neither LIURP or EFSLR engage in fuel switching of appliances as a means to reduce household usage. As described in Mr. Cicero's testimony, any fuel switching that may occur within LIURP or EFSLR would fall under the LIURP regulations and would require utility coordination.

IX. RECOVERY OF RIDER UNIVERSAL SERVICE COSTS

Q. MR. CICERO RECOMMENDS THAT THE COMPANY'S RIDER USP COSTS SHOULD BE PAID BY ALL CUSTOMERS, NOT JUST RESIDENTIAL CUSTOMERS AND THAT HISTORICALLY, THESE COSTS HAVE ONLY BEEN RECOVERED FROM RESIDENTIAL CUSTOMERS. (*See* CAUSE-PA Statement 1, pp. 74-81.) CAN YOU COMMENT?

A. Mr. Cicero is correct that the Company's current Universal Service Rider is applicable to residential customers except for CAP customers. However, it has not always been the case that these costs are only recovered from residential customers. More than twenty years ago, prior to the implementation of the Rider, CAP costs were recovered through a mechanism that adjusted delivery base rates on a quarterly basis to align with changing gas costs and enrollment levels. In that mechanism, CAP costs were allocated 95.75% to the residential class and 4.25% to non-residential customers.

Q. CAN THE COMPANY AGREE TO SPREAD THESE COSTS TO OTHER RATE CLASSES?

A. While the Company acknowledges the desire to spread these costs over more classes than just residential, at this time the Company's Universal Service Rider is designed to recover costs from residential non-CAP customers only. The Company would need to evaluate the feasibility of spreading these costs taking into account potential IT changes that would be necessary for such a change.

X. <u>COMMISSION INFORMAL AND FORMAL COMPLAINTS</u>

Q. WITNESS LARKIN-CONNOLLY REVIEWED INFORMAL COMPLAINT STATISTICS FOR PEOPLES AND OTHER NGDC'S, CATEGORIZED BY

'REASON' FOR COMPLAINT. (OCA Statement 5, pp. 28-29.) PLEASE DESCRIBE AND RESPOND TO HIS CONCLUSION FROM THIS REVIEW.

A. Mr. Larkin-Connolly suggests that Peoples' complaint profile has shifted towards operational issues as he identified higher number of complaints categorized as Personnel Problems, Damages and Service Quality as compared to results for other NGDCs. (OCA Statement 5, pp. 28-29.) It is my opinion that caution must be exercised when reviewing these reported statistics. Complaint classifications are subjective as BCS staff attempt to classify cases into pre-defined categories. There is also a category entitled 'All Other'. In that particular category, other NGDCs in Mr. Larkin-Connolly's Table 7 have 14% of their cases categories in this manner as compared to 11% for Peoples. (OCA statement 5, p. 29.) It is possible that some of these All Other cases for other NGDCs may pertain to Personnel Problems, Damages or Service Quality, but again, we are relying on subjective opinions of BCS staff members in classifying these.

Q. MR. LARKIN-CONNOLLY ALSO REVIEWED FORMAL COMPLAINT STATISTICS AS SHOWN IN FIGURE 7 ON PAGE 31. (OCA Statement 5, p. 31.) WHAT IS YOUR RESPONSE TO THIS ANALYSIS?

A. Unlike the informal complaint review, which compared Peoples' informal complaints to that of other NGDCs, Mr. Larkin-Connolly does not provide any comparison of Peoples' formal case statistics with other NGDCs. Therefore, we should not conclude that the increase in formal cases is a phenomenon that is specific to Peoples. Other NGDCs may be experiencing similar increases in the number of formal cases received. Further, an increase in formal cases could occur for any number of reasons. For example, we've seen

instances in which the customer has filed a formal case without having first followed the informal case process. Customers are more aware of the formal complaint process as this information is included not only in their closing materials from their informal cases, but also on the PUC's website. And, the PUC's website information[4] regarding the formal complaint process does not indicate that a customer should first follow the informal complaint process. Formal complaints are provided as an option for the customer to raise their concern before an Administrative Law Judge ("ALJ"), without the need for an attorney, in the case of a non-corporate entity, while it is noted the utility must utilize an attorney. Therefore, customers seeking resolution through the PUC may choose the formal route in order to ensure their complaint is handled at a higher level.

Q. MR. LARKIN-CONNOLLY ALSO RAISES CONCERN ABOUT THE OUTCOMES OF FORMAL PROCEEDINGS. IN PARTICULAR, HE IS CONCERNED ABOUT 18% OF THE 74[5] FORMAL COMPLAINT PROCEEDINGS REVIEWED IN HIS ANALYSIS WERE DENIED, DISMISSED OR WITHDRAWN, SUGGESTING THIS PERCENTAGE MAY BE HIGH DUE TO CUSTOMERS DISENGAGING EVEN THOUGH THEIR CASES HAVE MERIT. (OCA Statement 5, p. 31.) PLEASE RESPOND TO THIS.

A. I disagree with the characterization that customers are unable to complete the formal complaint process due to practical concerns and a burdensome process. On the contrary, we find the ALJs to be extremely flexible to customers who are unable to attend a scheduled

[4] *See* https://www.puc.pa.gov/complaints/formal-complaints/

[5] *See* OCA Statement No. 5, page 31, Lines 5 through 17.

hearing. They are very careful to ensure customers' concerns are heard and to encourage mediation with the utility. It is Peoples' practice to agree to the granting of at least one, and sometimes more, continuances when requested to accommodate customers. According to the Company's records, only 1 formal case was withdrawn in the past 3 years, while the remaining were denied because there was not a sufficient basis for the customer's claim.

Q. MR. LARKIN-CONNOLLY CONCLUDES THAT "PROPERTY DAMAGE EMERGES AS A RECURRING THEME…WHETHER THIS REFLECTS THE SCALE OF PEOPLES' PIPELINE REPLACEMENT AND INFRASTRUCTURE WORK, PRACTICES AROUND SITE MANAGEMENT AND RESTORATION, OR SOMETHING ELSE IS A QUESTION THE COMPANY SHOULD BE EXPECTED TO ANSWER." (OCA Statement 5, pp. 32-33.) PLEASE RESPOND.

A. The Company carefully reviews all customer complaints, whether those be informal or formal, to determine the root cause of the issue. Complaints can often be attributed to lack of customer awareness of utility processes. This is particularly true regarding restoration expectations, for example. If a pipeline project is still underway on a street, repair of the street cannot begin until the project is complete, although a customer may file a complaint because they are dissatisfied with waiting for this to occur. Or, landscaping may be disturbed and given the time of year, cannot be appropriately restored until the spring season. If our team sees customer complaints regarding these types of issues, they are raised with leadership to ensure the customer receives appropriate communication and a resolution to their concern. An increase in pipeline replacement activities does not automatically cause an increase in customer complaints.

XI. PUBLIC INPUT HEARINGS

Q. CARRIE NOLAN-ROBSON, EXECUTIVE DIRECTOR OF THE NORTHSIDE CHAMBER OF COMMERCE PROVIDED TESTIMONY AT ONE OF THE PUBLIC INPUT HEARINGS. IN HER TESTIMONY, SHE RECOMMENDED THE COMPANY EXPAND ELIGIBILITY OF ITS CUSTOMER ASSISTANCE PROGRAMS TO ASSIST CUSTOMERS IN LIGHT OF THE PROPOSED RATE INCREASE[6]. WOULD YOU LIKE TO RESPOND TO HER COMMENTS?

A. Yes. I understand Ms. Nolan-Robson's concern, particularly as it regards seniors in our service territory whose income places them just above eligibility for programs such as LIHEAP and CAP. It is this concern that led Peoples to expand its CAP eligibility threshold more than a decade ago, beyond the standard definition of 150% FPL. The Company's percentage of income payments ("PIP") for those with incomes below 150% FPL align with the guidance provided by the Commission in its CAP Policy Statement and were approved in Peoples' Petition to lower them, however its proposal to also lower energy burden for its CAP participants in the expanded CAP program which serves customers with incomes between 151 and 200% FPL was rejected[7]. These customers do receive the benefit of arrearage forgiveness. In addition to the availability of expanded CAP, households in this income category are also eligible for valuable services and support through the EFSLR program, CARES, and LIURP weatherization if special needs exist in the home.

XII. CONCLUSION

[6] *See* Public Input Hearing Transcript, Ross Township 6 p.m. Hearing; p. 48, lines 3 – 6.
[7] *See* P-2020-3017641

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Peoples Energy Analytics

ZIP Code Hot-Spot Analysis (Oct 2024 - Sept 2025)

Allegheny County - Prepared for PNG on April 15, 2026

COUNT OF HOUSEHOLDS THAT ARE AT-RISK IN ZIP CODE RANGE

At Peoples Energy Analytics (PEA), one of our core offerings involves identifying locations (i.e., ZIP codes) where abnormal energy consumption patterns indicate that households are showing elevated risks of high energy burdens and pipe freeze. PEA received data for approximately 340,697 households spanning September 2020 through September 2025 across 128 ZIP codes. 14 of those ZIP codes (22 households) outside Allegheny County were also present in the dataset, but are not present in this report as they are outside the county.

Of the 330,125 cleaned and geolocated households within Allegheny County, 46,898 households are identified as having a high energy burden, which is defined as spending more than 6% of their average monthly income on natural gas bills. Of the total accounts, 274,576 had a good model, which is defined as an adjusted R-squared > 0.6. Among them, 7,707 households are classified as high pipe freeze risk (PFR). High pipe freeze risk accounts were those accounts which had temperature response function slopes of less than 0.2 MCF per degree Fahrenheit. This means their gas usage increases by less than 0.2 MCF for each 1°F drop in temperature.This threshold was determined using a previous analysis of temperature response functions. \Appendix A further breaks down the details of modeled numbers.

Figure 1. Total count of at-risk households across Allegheny County in 2024-2025 provided to PEA (~ 340,697 households). The orange scale represents the total household count with either a high energy burden OR were using so little heating that they are high energy-limiting (e.g., risk of their pipes freezing). The light grey striped ZIP codes represent locations without data (e.g., no households were identified within the dataset, but this does not indefinitely mean there is no risk).

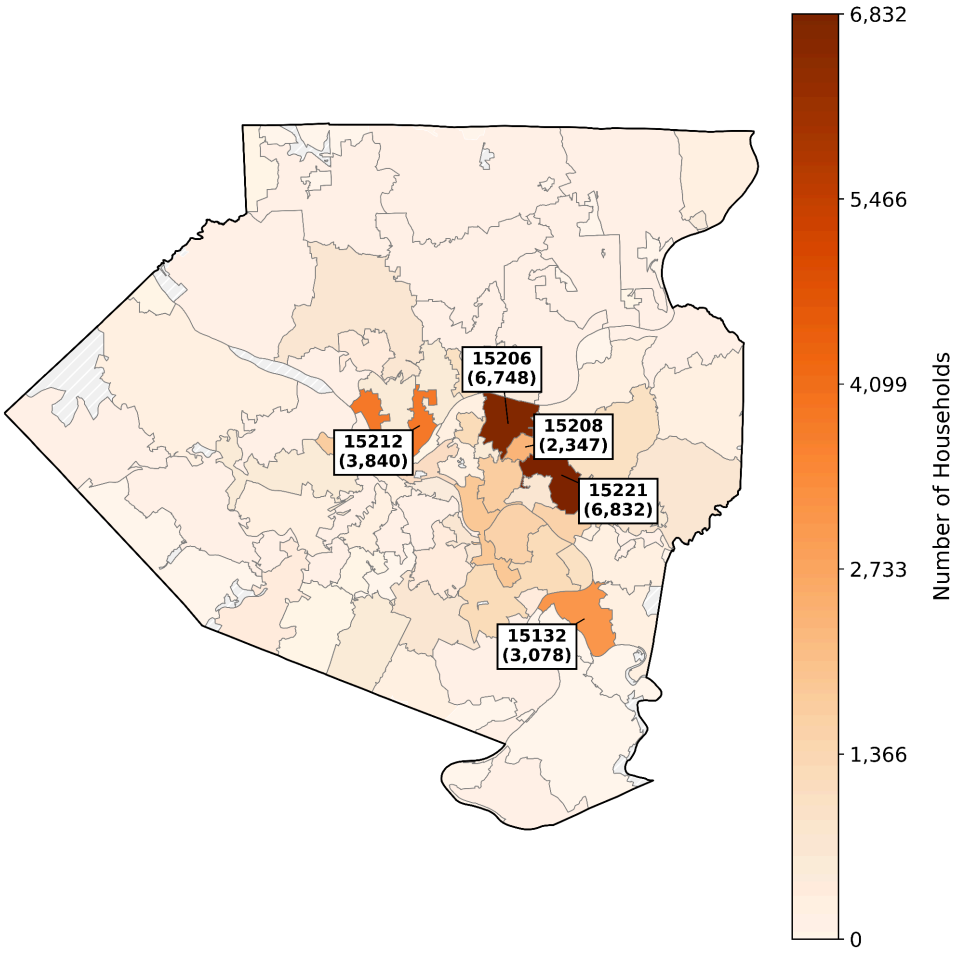

Table 1. Count of Households with either High Energy Burden or High Pipe Freeze Risk by ZIP Codes across Allegheny County.

ZIP Codes	Total Accounts[1]	High Energy Burden or High Pipe Freeze Risk (Count)	High Energy Burden or High Pipe Freeze Risk (Percent)
15221	10,089	6,832	67.71
15206	8,501	6,748	79.37
15212	8,249	3,840	46.55
15132	5,277	3,078	58.32
15208	2,930	2,347	80.10
15207	3,975	1,867	46.96
15204	2,059	1,741	84.55
15217	8,657	1,673	19.32
15120	6,665	1,483	22.25
15104	2,028	1,483	73.12

[1] Total Accounts include accounts that had a good model and enough data to calculate energy burden.

TOP LOCATIONS

There is meaningful variation across ZIP codes for both high energy burden and pipe freeze risk. Figures 2 and 3 map ZIP codes and their respective vulnerability metric. Table 2 and Table 3 show the top ZIP codes by percentage of at-risk households detected. ZIP code 15221 has the highest energy burden risk with over 6,000 households that pay over 6 percent of their income on energy bills. ZIP code 15237 has the highest number of households experiencing pipe freeze risk, with over 400 households showing a low gas usage response to temperature.

It is important to look at the counts in addition to the percentages. As seen in Tables 2 and 3, some ZIP codes report small percentages in the high risk categories, but have high absolute numbers. For example, ZIP code 15237 has 3.20% households with High Pipe Freeze risk, but one of the highest absolute numbers (453 households).

Figure 2. Count of High Energy Burden Households in each ZIP Code across Allegheny County.

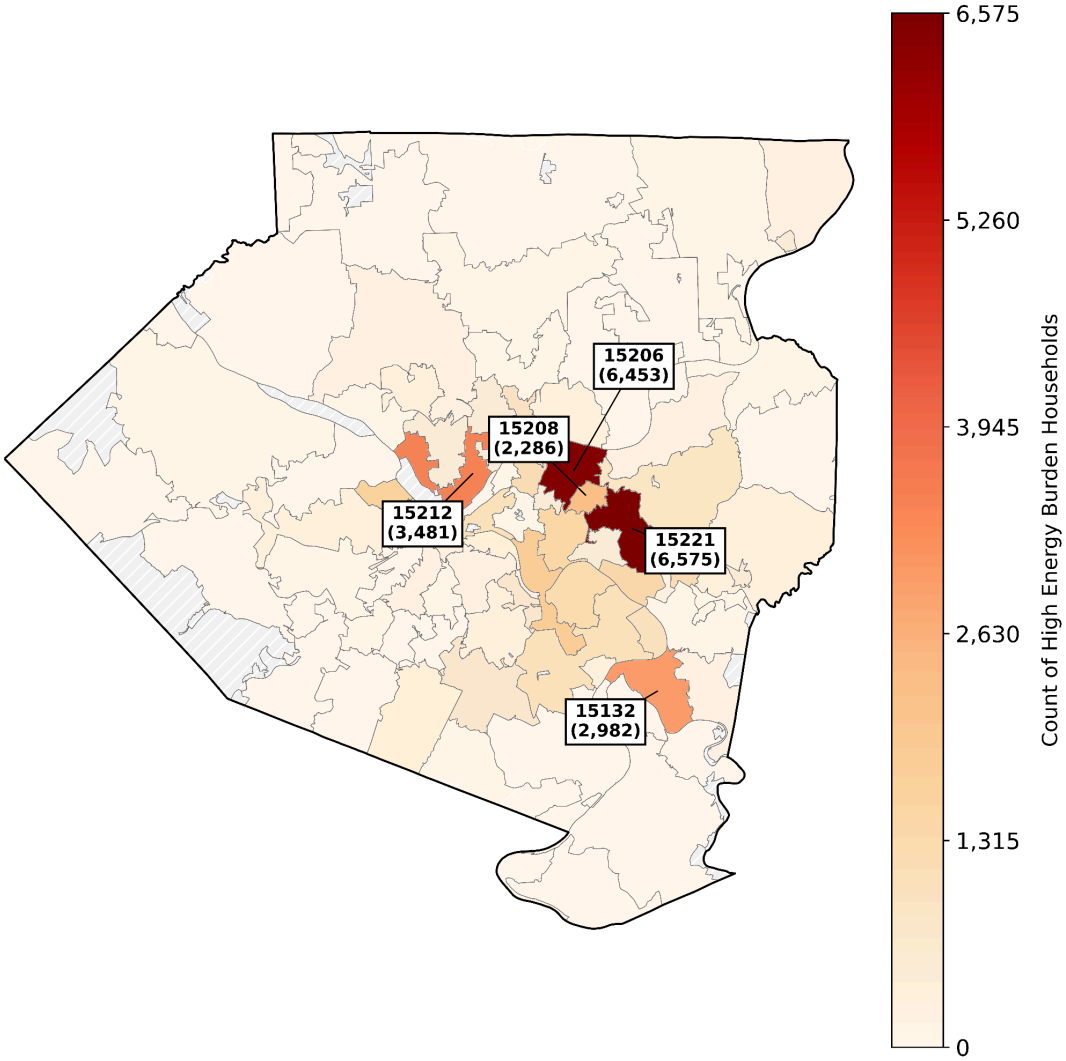

Table 2. Count of Households with High Energy Burden by ZIP Codes across Allegheny County

ZIP Codes	Total Accounts[1]	High Energy Burden (Count)	High Energy Burden (Percent)
15221	10,089	6,575	65.16
15206	8,501	6,453	75.90
15212	8,251	3,481	42.18
15132	5,277	2,982	56.50
15208	2,930	2,286	78.02
15207	3,975	1,813	45.61
15204	2,059	1,718	83.43
15217	8,657	1,513	17.47
15104	2,028	1,383	68.19
15120	6,665	1,255	18.82

[1] Total Accounts include accounts with enough data to calculate energy burden.

Figure 3. Count of High Pipe Freeze Risk Households in each ZIP Code across Allegheny County

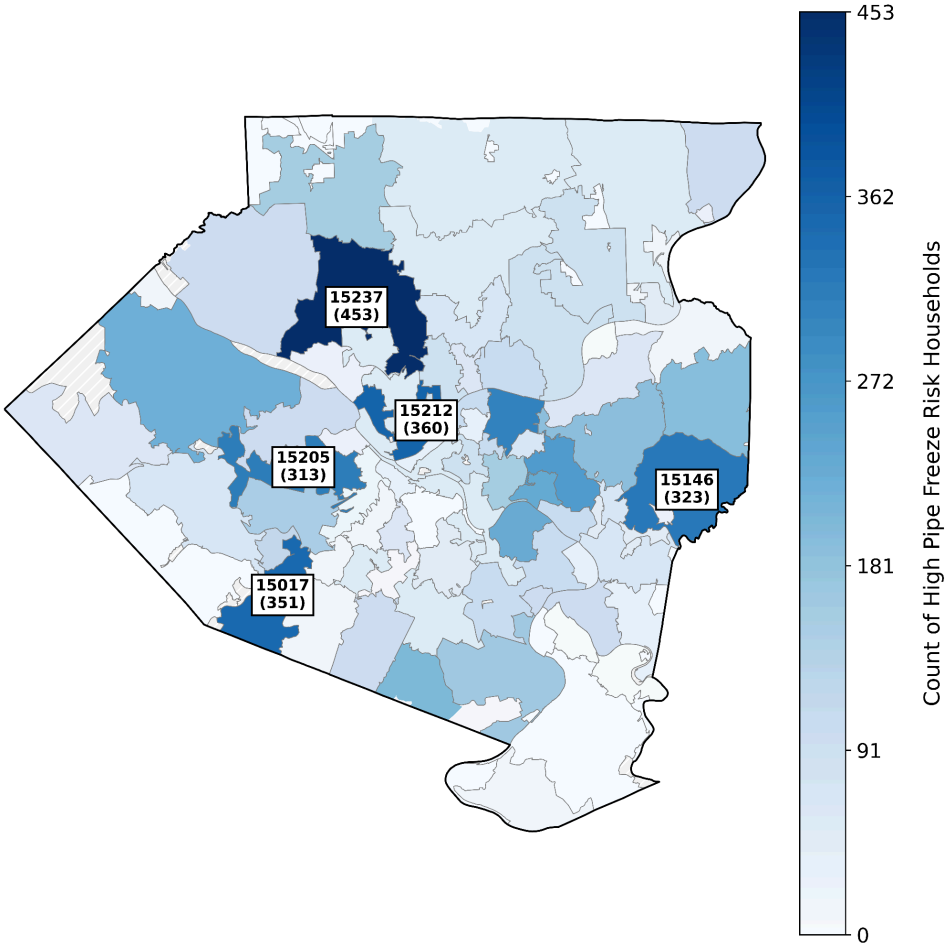

Table 3. Count of Households with Pipe Freeze Risk by ZIP Code across Allegheny County.

ZIP Codes	Total Accounts	High Pipe Freeze Risk (Count)	High Pipe Freeze Risk (Percent)
15237	14,138	453	3.20
15212	7,094	360	5.07
15017	5,325	351	6.59
15146	5,769	323	5.59
15205	6,383	313	4.90
15206	6,632	306	4.61
15221	8,686	257	2.95
15218	4,939	233	4.71
15120	5,884	228	3.87
15108	5,712	219	3.83

[1] Total Accounts include accounts that had a good model.

Two actionable insights can be drawn from the illustrations above:

1. Figures 2 and 3 do not overlap in all ZIP codes, which shows that marketing interventions should be disbursed depending on the type of risk Peoples Natural Gas (PNG) wants to tackle. Figure 2 provides insights on locations where households may already be using more than **6% of their income on their bills** (**RED**), while Figure 3 shows the ZIP codes with an estimated high pipe freeze risk (**BLUE**), which may be prime candidates for weatherization and bill assistance.

2. Figure 1 combines populations from both risk metrics and maps them by ZIP code. PNG can utilize this for maximum coverage of its resources by targeting those areas. Tables 1-3 give population numbers for those ZIP codes.

Appendix A: Households Analyzed

Certain energy-limiting behavior metrics could only be calculated for households with good models (high accuracy energy models; models with adjusted r-squared greater than 0.6 or 60%), hence not all households had data for those energy limiting behavior metrics. Households Analyzed for October 2024 - September 2025:

Key Data Points used in the ZIP Code analysis

- Count of Geolocated Households with usage data: 330,125
  - Count of Households with High Energy Burden: 46,898
  - Percentage of Households with High Energy Burden Risk: 14.20%
- Count of Households with good models (adjusted r-squared > 0.6): 274,576
  - Count of Households with High Pipe Freeze Risk: 7,707
  - Percentage of Households with High Pipe Freeze Risk: 2.80%

Additional Data Points that include households that were excluded due to extreme and zero values as well as outside county

- Count of Geolocated Households with usage data: 340,697
  - Count of Households with High Energy Burden: 46,901
  - Percentage of Households with High Energy Burden Risk: 13.76%
- Count of Households with valid models: 295,135
- Count of Households with good models (adjusted r-squared > 0.6): 274,901
  - Count of Households with High Pipe Freeze Risk: 7,719
  - Percentage of Households with High Pipe Freeze Risk: 2.80%

Peoples Energy Analytics

ZIP Code Hot-Spot Analysis (Oct 2024 - Sept 2025)

Butler County - Prepared for PNG on April 15, 2026

COUNT OF HOUSEHOLDS THAT ARE AT-RISK IN ZIP CODE RANGE

At Peoples Energy Analytics (PEA), one of our core offerings involves identifying locations (i.e., ZIP codes) where abnormal energy consumption patterns indicate that households are showing elevated risks of high energy burdens and pipe freeze. PEA received data for approximately 44,339 households spanning September 2020 through September 2025 across 57 ZIP codes. 23 of those ZIP codes (120 households) outside Butler County were also present in the dataset, but are not present in this report as they are outside the county.

Of the 43,635 cleaned and geolocated households within Butler County, 1,297 households are identified as having a high energy burden, which is defined as spending more than 6% of their average monthly income on natural gas bills. Of the total accounts, 38,818 had a good model, which is defined as an adjusted R-squared > 0.6. Among them, 1,254 households are classified as high pipe freeze risk (PFR). High pipe freeze risk accounts were those accounts which had temperature response function slopes of less than 0.2 MCF per degree Fahrenheit. This means their gas usage increases by less than 0.2 MCF for each 1°F drop in temperature.This threshold was determined using a previous analysis of temperature response functions. Appendix A further breaks down the details of modeled numbers.

Figure 1. Total count of at-risk households across Butler County in 2024-2025 provided to PEA (~ 44,339 households). The orange scale represents the total household count with either a high energy burden OR were using so little heating that they are high energy-limiting (e.g., risk of their pipes freezing). The light grey striped ZIP codes represent locations without data (e.g., no households were identified within the dataset, but this does not indefinitely mean there is no risk).

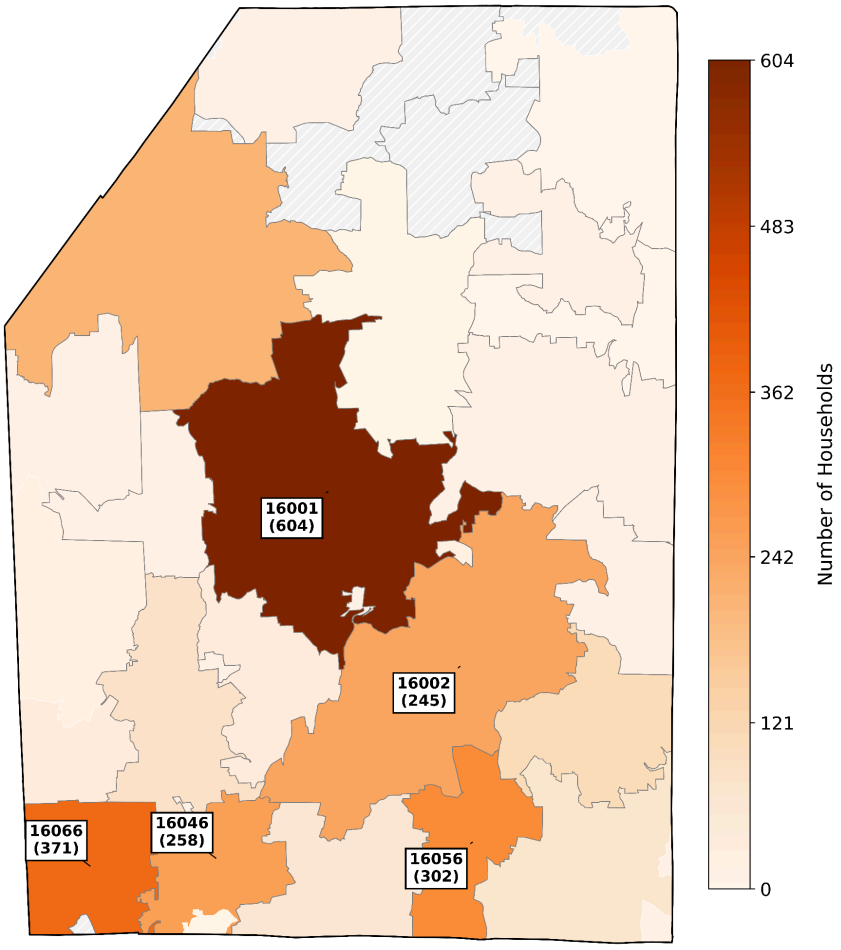

Table 1. Count of Households with either High Energy Burden or High Pipe Freeze Risk by ZIP Codes across Butler County.

ZIP Codes	Total Accounts[1]	High Energy Burden or High Pipe Freeze Risk (Count)	High Energy Burden or High Pipe Freeze Risk (Percent)
16001	13,323	604	4.53
16066	3,739	371	9.92
16056	1,623	302	18.60
16046	5,408	258	4.77
16002	2,712	245	9.03
16057	1,123	210	18.69
16023	910	106	11.64
16033	1,514	87	5.74
16055	2,435	74	3.03
16059	2,613	60	2.29

[1] Total Accounts include accounts that had a good model and enough data to calculate energy burden.

TOP LOCATIONS

There is meaningful variation across ZIP codes for both high energy burden and pipe freeze risk. Figures 2 and 3 map ZIP codes and their respective vulnerability metric. Table 2 and Table 3 show the top ZIP codes by percentage of at-risk households detected. ZIP code 16001 has the highest energy burden risk with over 400 households that pay over 6 percent of their income on energy bills. ZIP code 16066 has the highest number of households experiencing pipe freeze risk, with over 300 households showing a low gas usage response to temperature.

It is important to look at the counts in addition to the percentages. As seen in Tables 2 and 3, some ZIP codes report small percentages in the high risk categories, but have high absolute numbers. For example, ZIP code 16001 has 3.41% households with High Energy Burden risk, but one of the highest absolute numbers (455 households).

Figure 2. Count of High Energy Burden Households in each ZIP Code across Butler County.

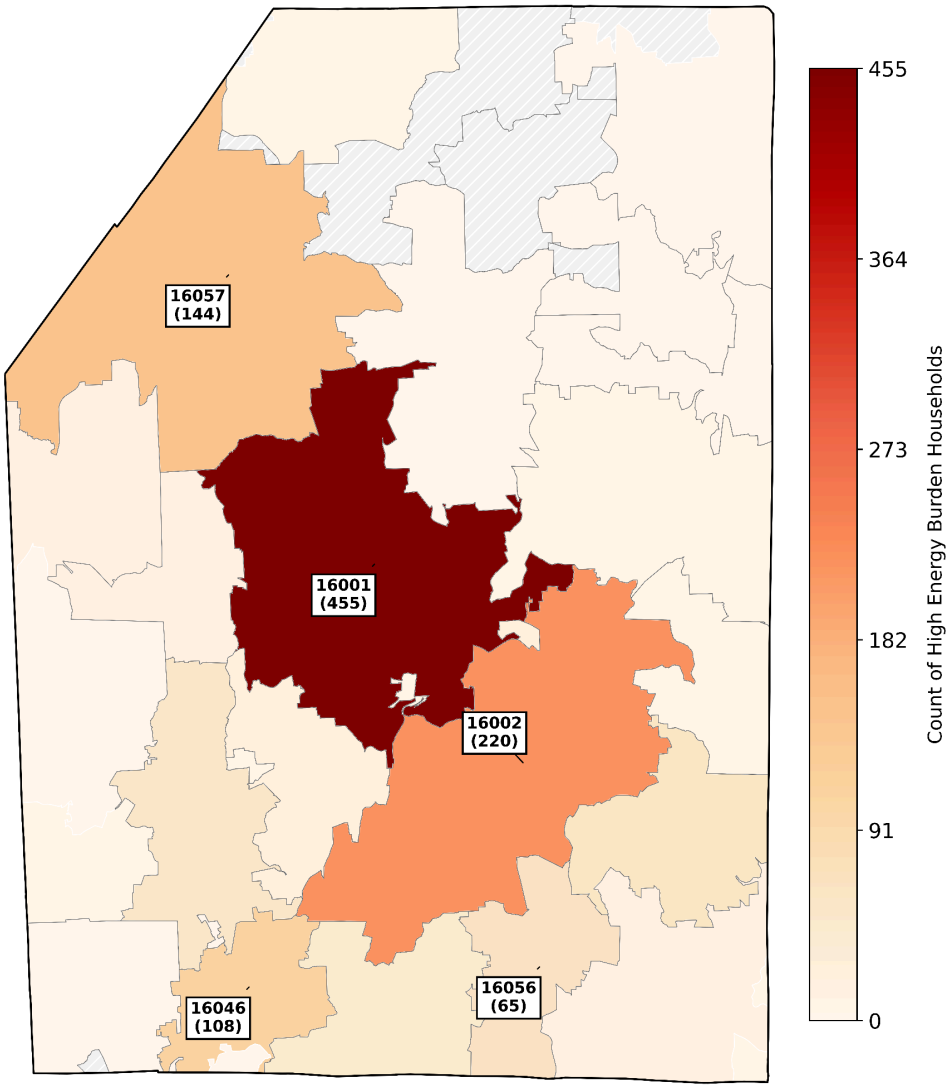

Table 2. Count of Households with High Energy Burden by ZIP Codes across Butler County

ZIP Codes	Total Accounts[1]	High Energy Burden (Count)	High Energy Burden (Percent)
16001	13,323	455	3.41
16002	2,712	220	8.11
16057	1,123	144	12.82
16046	5,408	108	1.99
16056	1,623	65	4.00
16023	910	61	6.70
16033	1,514	52	3.43
16059	2,613	44	1.68
16053	1,121	26	2.31
16029	246	23	9.34

[1] Total Accounts include accounts with enough data to calculate energy burden.

Figure 3. Count of High Pipe Freeze Risk Households in each ZIP Code across Butler County

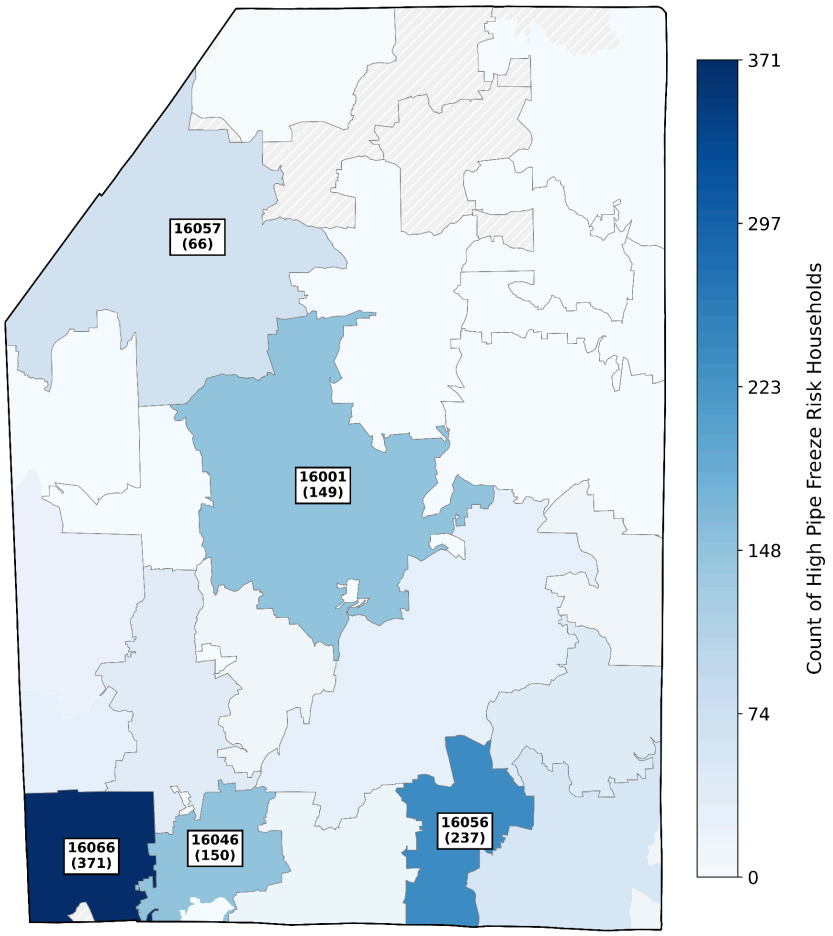

Table 3. Count of Households with Pipe Freeze Risk by ZIP Code across Butler County.

ZIP Codes	Total Accounts	High Pipe Freeze Risk (Count)	High Pipe Freeze Risk (Percent)
16066	3,351	371	11.07
16056	416	237	56.97
16046	4,916	150	3.05
16001	12,106	149	1.23
16057	987	66	6.68
16055	2,269	60	2.64
16023	827	45	5.44
16033	1,370	35	2.55
16063	2,594	30	1.156
16002	2,534	25	0.98
16037	1,380	23	1.66

[1] Total Accounts include accounts that had a good model.

Two actionable insights can be drawn from the illustrations above:

1

Figures 2 and 3 do not overlap in all ZIP codes, which shows that marketing interventions should be disbursed depending on the type of risk Peoples Natural Gas (PNG) wants to tackle. Figure 2 provides insights on locations where households may already be using more than **6% of their income on their bills** (**RED**), while Figure 3 shows the ZIP codes with an estimated high pipe freeze risk (**BLUE**), which may be prime candidates for weatherization and bill assistance.

2

Figure 1 combines populations from both risk metrics and maps them by ZIP code. PNG can utilize this for maximum coverage of its resources by targeting those areas. Tables 1-3 give population numbers for those ZIP codes.

  - Count of Households with High Pipe Freeze Risk: 1,902
  - Percentage of Households with High Pipe Freeze Risk: 4.88%

Peoples Energy Analytics

ZIP Code Hot-Spot Analysis (Oct 2024 - Sept 2025)

Westmoreland County - Prepared for PNG on April 15, 2026

COUNT OF HOUSEHOLDS THAT ARE AT-RISK IN ZIP CODE RANGE

At Peoples Energy Analytics (PEA), one of our core offerings involves identifying locations (i.e., ZIP codes) where abnormal energy consumption patterns indicate that households are showing elevated risks of high energy burdens and pipe freeze. PEA received data for approximately 79,580 households spanning September 2020 through September 2025 across 88 ZIP codes. 15 of those ZIP codes (17 households) outside Westmoreland County were also present in the dataset, but are not present in this report as they are outside the county.

Of the 78,087 cleaned and geolocated households within Westmoreland County, 5,308 households are identified as having a high energy burden, which is defined as spending more than 6% of their average monthly income on natural gas bills. Of the total accounts, 69,943 had a good model, which is defined as an adjusted R-squared > 0.6. Among them, 1,186 households are classified as high pipe freeze risk (PFR). High pipe freeze risk accounts were those accounts which had temperature response function slopes of less than 0.2 MCF per degree Fahrenheit. This means their gas usage increases by less than 0.2 MCF for each 1°F drop in temperature.This threshold was determined using a previous analysis of temperature response functions. Appendix A further breaks down the details of modeled numbers.

Figure 1. Total count of at-risk households across Westmoreland County in 2024-2025 provided to PEA (~ 79,580 households). The orange scale represents the total household count with either a high energy burden OR were using so little heating that they are high energy-limiting (e.g., risk of their pipes freezing). The light grey striped ZIP codes represent locations without data (e.g., no households were identified within the dataset, but this does not indefinitely mean there is no risk).

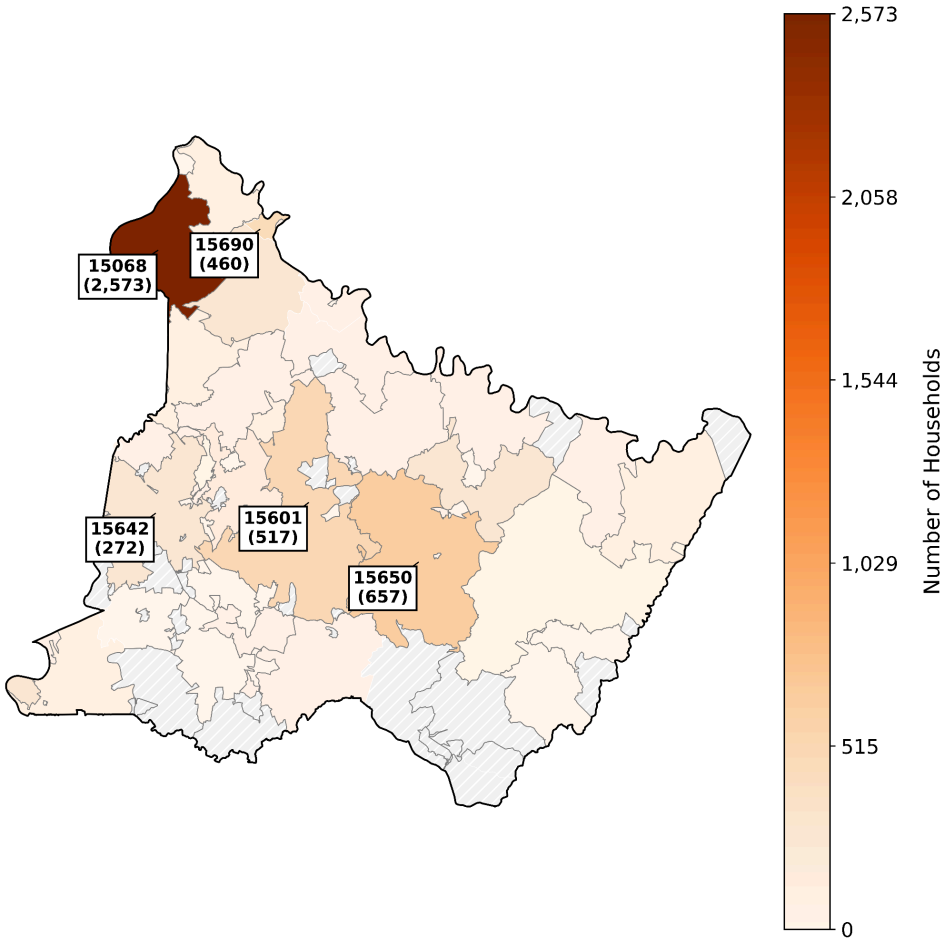

Table 1. Count of Households with either High Energy Burden or High Pipe Freeze Risk by ZIP Codes across Westmoreland County.

ZIP Codes	Total Accounts[1]	High Energy Burden or High Pipe Freeze Risk (Count)	High Energy Burden or High Pipe Freeze Risk (Percent)
15068	11,180	2,573	23.01
15650	7,278	657	9.02
15601	16,511	517	3.13
15690	1,910	460	24.08
15642	9,783	272	2.78
15062	2,627	242	9.21
15627	1,588	241	15.17
15613	2,333	237	10.15
15644	2,638	141	5.34
15656	1,632	116	7.10

[1] Total Accounts include accounts that had a good model and enough data to calculate energy burden.

TOP LOCATIONS

There is meaningful variation across ZIP codes for both high energy burden and pipe freeze risk. Figures 2 and 3 map ZIP codes and their respective vulnerability metric. Table 2 and Table 3 show the top ZIP codes by percentage of at-risk households detected. ZIP code 15068 has the highest energy burden risk with over 2,000 households that pay over 6 percent of their income on energy bills. The same ZIP code has the highest number of households experiencing pipe freeze risk, with over 150 households showing a low gas usage response to temperature.

It is important to look at the counts in addition to the percentages. As seen in Tables 2 and 3, some ZIP codes report small percentages in the high risk categories, but have high absolute numbers. For example, ZIP code 15068 has 1.90% households with High Pipe Freeze risk, but one of the highest absolute numbers (184 households).

Figure 2. Count of High Energy Burden Households in each ZIP Code across Westmoreland County.

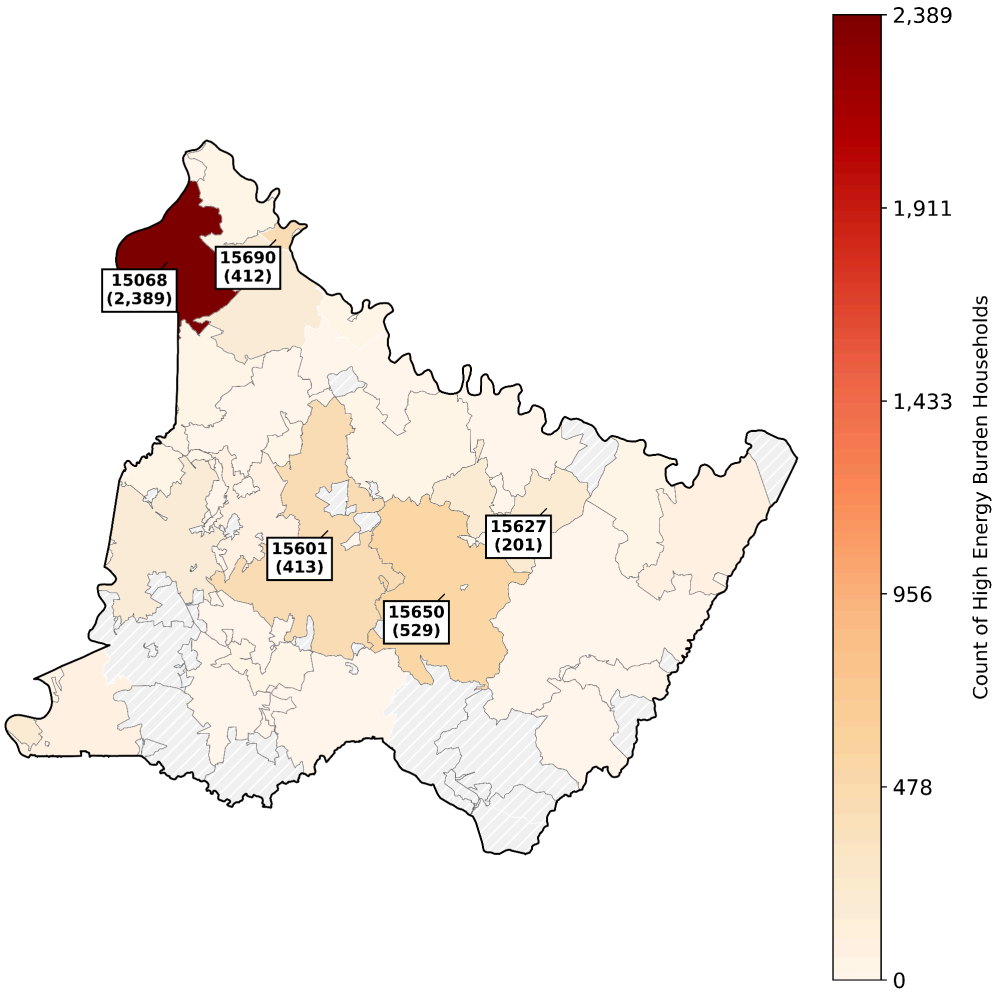

Table 2. Count of Households with High Energy Burden by ZIP Codes across Westmoreland County

Peoples Statement No. 11-R

PREPARED REBUTTAL TESTIMONY OF

RUDOLPH HANECHAK

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rudolph Hanechak. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies") as Financial Analysis and Budget Manager. PNG Companies provides various administrative functions for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company") including Budgeting.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 11.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am presenting testimony in rebuttal of certain expense positions and recommendations of the Bureau of Investigation and Enforcement ("I&E") Witness Vanessa Okum and the Office of Consumer Advocate ("OCA") Witness Jared Geiger.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. PAYROLL TAXES

Q. DO ANY OF THE PARTIES MAKE AN ADJUSTMENT TO NON-INCOME TAXES?

A. Yes. Both I&E Witness Vanessa Okum and OCA Witness Jared Geiger propose adjustments to payroll taxes as a result of a proposed change in labor expense to increase the vacancy credit. (I&E Statement No. 1, p. 16; OCA Statement 2, pp. 22-24.) I&E Witness Okum also proposes a reduction to the payroll taxes related to incentive compensation ("STI") to remove financial related metrics. (I&E Statement No. 1, p. 16.)

Q. WHAT IS THE RESULT OF THEIR PROPOSED ADJUSTMENTS?

A. Ms. Okum's proposed adjustment would reduce Operations and Maintenance ("O&M") payroll taxes by $333,659 and Mr. Geiger's proposed adjustment would reduce O&M payroll taxes by $253,701. (I&E Statement No. 1, p. 16; OCA Statement 2, pp. 22-24.) Ms. Okum also proposes to decrease payroll taxes in rate base by $426,046. (I&E Statement No. 1, p. 16.)

Q. DO YOU AGREE WITH THE PROPOSED ADJUSTMENTS TO PAYROLL TAXES?

A. No. I do not agree with the adjustments to payroll taxes on the grounds that I do not agree with the proposed change to the vacancy credit or the incentive compensation adjustment. For additional rebuttal testimony concerning the proposed adjustments to the vacancy

credit and incentive compensation please refer to **Peoples Statement No. 2-R,** the rebuttal testimony of Andrew Wachter.

Q. DO YOU AGREE WITH THEIR CALCULATIONS OF THE PROPOSED ADJUSTMENTS TO PAYROLL TAXES IF EITHER OF THEIR POSITIONS IS ACCEPTED?

A. Yes. If the additional vacancy credit and incentive adjustments are accepted, then the calculations proposed are accurate.

Q. WHAT IS THE COMPANY'S PROPOSED CHANGE TO PAYROLL TAX EXPENSE ADJUSTMENTS?

A. I propose increasing the O&M payroll taxes from Ms. Okum by $333,659, rate base payroll taxes by $426,046 and Mr. Geiger's O&M payroll taxes by $253,701 to reflect the Company's original submission.

Q. DID MR. GEIGER MAKE ANY ADDITIONAL RECOMMENDED CHANGES TO TAXES OTHER THAN INCOME?

A. Yes, Mr. Geiger proposes a reduction to the Pennsylvania Public Utility Commission ("PUC") Assessment by $823,737 based on using an average of the most recent three-year PUC Assessments instead of the five-year weighted average increase in PUC assessments the Company proposed in the case.

Q. PLEASE FURTHER EXPLAIN THE ADJUSTMENT TO THE PUC ASSESSMENT.

A. The Company does not agree with proposed adjustment to the PUC Assessment due to the fluctuations experienced in the historical periods, a five-year average increase is more appropriate to provide an estimate that minimizes the impact of high and low points. The chart below shows the last five years of invoices with increases in 2023 of 15.9% and in2025 of 14.5%, while 2024 decreased by 3.5%.

	TOTAL
2020	2,643,104
2021	3,068,198
2022	2,682,219
2023	3,109,691
2024	2,999,799
2025	3,434,911

For all the reasons that both OCA Witness Duepree and Peoples Witness Wachter state in their respective testimonies (OCA Statement 1 and Peoples Statement No. 2-R), it his highly unlikely that the PUC Assessment is going to go down over the next two years (the FTY and the FPFTY). The Mr. Geiger also ignores the fact that more of the PUC Assessment will be allocated to Peoples as a result of the rate increase in this proceeding.

Q. WHAT IS THE COMPANY'S PROPOSED CHANGE TO THE PUC ASSESSMENT ADJUSTMENTS?

A. I propose increasing the PUC Assessment from Mr. Geiger by $823,737 to reflect the Company's original submission.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

III. CONCLUSION 4

PREPARED REBUTTAL TESTIMONY OF
NICK TUFAROLO

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Nick Tufarolo. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as the Manager of Fixed Asset Accounting. I provide accounting services for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 12.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to address the Other Parties' proposed adjustments to the Company's rate base claim.

II. RATE BASE

Q. WHAT IS OCA WITNESS GARRETT'S RECOMMENDATION WITH RESPECT TO THE COMPANY'S RATE BASE CLAIM?

A. Mr. Garrett proposes depreciation rates under the ALG method, and estimates the proposed rates would reduce the Company's FPFTY accumulated depreciation by $36.8 million. (OCA St. 3, pp. 8-9.)

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S RECOMMENDATION TO ADJUST THE COMPANY'S RATE BASE CLAIM?

A. I do not agree with Mr. Garrett's recommendation. Refer to Company Witness Spanos' testimony, **Peoples Statement No. 16-R**, for further explanation on the Company's position regarding this adjustment.

Q. WHAT IS OCA WITNESS GEIGER'S RECOMMENDATION WITH RESPECT TO THE COMPANY'S RATE BASE CLAIM?

A. Mr. Geiger proposes a decrease of $957,403 million to the Company's Cash Working Capital claim based on adjustments to expenses and long-term debt interest. (OCA St. 2, pp. 6-7.)

Q. WHAT IS YOUR RESPONSE TO MR. GEIGER'S RECOMMENDATION TO ADJUST THE COMPANY'S RATE BASE CLAIM?

A I do not agree with Mr. Geiger's recommendation. Refer to Company Witness Ribich's testimony, **Peoples Statement No. 14-R**, for further explanation on the Company's position regarding this adjustment.

Q. WHAT IS I&E WITNESS OKUM'S RECOMMENDATION WITH RESPECT TO THE COMPANY'S RATE BASE CLAIM?

A. Ms. Okum proposes 1) a decrease of $1,935,974 to the Company's rate base claim based on O&M adjustments affecting Cash Working Capital, and 2) a decrease of $782,008 to the Company's rate base claim based on adjustments to capitalized incentive compensation. (I&E Statement No. 1, pp. 3-4, 11, and 61.)

Q. WHAT IS YOUR RESPONSE TO MS. OKUM'S RECOMMENDATION TO ADJUST THE COMPANY'S RATE BASE CLAIM?

A I do not agree with Ms. Okum's recommendations. Refer to 1) Company Witness Ribich's testimony, **Peoples Statement No. 14-R**, and 2) Company Witness Wachter's testimony, **Peoples Statement No. 2-R**, for further explanation on the Company's position regarding these adjustments.

Q. WHAT IS YOUR RECOMMENDATION WITH RESPECT TO I&E WITNESS CLINE'S PROPOSAL TO PROVIDE UPDATED ACTUAL PLANT ACTIVITY?

A. I can agree to Mr. Cline's request to provide actual plant balances, additions, and retirements for the 12 months ending 11/30/2026 by 6/1/2027, and to provide actual plant balances, additions, and retirements for the 12 months ending 12/31/2027 by 6/1/2028. (I&E Statement No. 3, p. 3.) Refer to Company Witness Scanlon's testimony, **Peoples Statement 3-R** for further discussion on this requirement.

Q. ARE YOU PRESENTING ANY UPDATES TO THE VALUE OF THE COMPANY'S RATE BASE AS PRESENTED ON PEOPLES NATURAL GAS EXHIBIT NO. 8, SCHEDULE NO. 2 AS A RESULT OF THE OTHER PARTIES' DIRECT TESTIMONY?

A. No.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION 1

II. PROPOSED TARIFF CHANGES 2

III. CONCLUSION.....8

PREPARED REBUTTAL TESTIMONY OF
KRISTA SNYDER

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Krista Snyder. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG") as a Financial Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in **Peoples Statement No. 13**.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to respond certain portions of the Office of Consumer Advocate ("OCA") Witness Brendan Larkin-Connolly's Direct Testimony concerning the Company's proposed tariff changes.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

II. PROPOSED TARIFF CHANGES

Q. DO ANY OF THE PARTIES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS RELATED TO THE COMPANY'S PROPOSED TARIFF CHANGES?

A. Yes. OCA Witness Larkin-Connolly identifies concerns with four of Peoples' proposed tariff changes, related to: (1) limitation of liability, (2) dishonored payments, (3) CAP restrictions on recreational gas use, and (4) CAP benefit reversal for alleged fraud. (OCA St. 5, pp. 43-45.) He broadly states that Peoples' proposed tariff changes with respect to each of the above items tends "to push the tariff language in favor of the Company." (OCA St. 5, p. 45.)

Q. IS MR. LARKIN-CONNOLLY'S TESTIMONY THAT PEOPLES' PROPOSED TARIFF CHANGES WITH RESPECT TO THE FOUR CATEGORIES IDENTIFIED IN THE ABOVE QUESTION TEND TO PUSH THE TARIFF LANGUAGE IN FAVOR OF THE COMPANY A FAIR CHARACTERIZTION OF THE PROPOSED CHANGES?

A. No, this is not a fair characterization of these proposed changes. As I will describe below, the four proposed tariff changes identified by Mr. Larkin-Connolly are reasonable and necessary and will have the effect of supporting both Peoples and its customers.

Q. PLEASE SUMMARIZE MR. LARKIN-CONNOLLY'S CONCERN AND ANY RECOMMENDATIONS WITH REGARD TO THE PROPOSED LIMITATION OF LIABILITY LANGUAGE WITHIN ITS TARIFF.

A. Mr. Larkin-Connolly testifies that he is concerned with the timing of this proposed tariff change, given the tightening of nonliability provisions "when property damage complaints are trending upward." (OCA St. 5, p. 45.) He recommends that the proposed language be rejected and states his belief that the existing language is sufficient and that it be retained. (OCA St. 5, p. 45.)

Q. DO YOU AGREE WITH MR. LARKIN-CONNOLLY'S CONCERN AND RECOMMENDATION? PLEASE EXPLAIN.

A. No, I do not. Regarding the language added to the end of the first paragraph of Section 8, this language clarifies that a customer or property owner has a responsibility to maintain and safeguard from potential damage to vacant properties or properties they are going to be away from for extended periods of time. This added language further clarifies that the Company cannot guarantee a continuous or uninterrupted supply of gas. Any damages resulting from an interruption of gas service in which a customer does not respond to have service restored are the responsibility of the customer/property owner. A customer/property owner is the party in control of maintenance and guardianship of their property. The Company is not responsible for being aware of when a property owner is absent or if a property is vacant. In instances when the gas must be interrupted, the customer/property owner needs to ensure the property is maintained and monitored by someone in their absence so that if a notice of interruption is left at the property it can be responded to in a timely manner. I have been advised by Counsel that this language is not a further limitation of the Company's liability or responsibility, it is a clarification and

further explanation of long-standing language and theories in the tariff that the Company is not liable for interruptions of service, absent negligence.

Regarding the additional language added to the second paragraph of Section 8, I have been advised by Counsel that the additional language further clarifies the long-standing language already contained in this Section of the tariff. Specifically, the added language clarifies the types of damages that are considered incidental, indirect, special or consequential and not the responsibility of the Company. These further clarifications to the long-standing terms are suggested to provide transparency and to allow the reader to easily understand what is, and what is not, covered by the Company in the case of damages. These additions do not change the substantive meaning of the long-standing provision in Section 8 of the tariff.

Regarding the fourth paragraph added to Section 8 of the tariff, this language is present in other utility tariffs, specifically the tariff of the Company's affiliate, Aqua Pennsylvania (Section 51, page 61). The addition of this language provides consistency between utility tariffs. The intent is to not hold the Company and its ratepayers responsible for incidents and claims due to changes made to a property after the Company installs facilities. The Company has not been informed or made aware of these changes, or that they possibly created a hazard that was unknown to the Company.

Q. PLEASE SUMMARIZE MR. LARKIN-CONNOLLY'S CONCERN AND ANY RECOMMENDATIONS WITH REGARD TO THE PROPOPSED ADDITION OF DISHONORED PAYMENT LANGUAGE WITHIN ITS TARIFF.

A. Mr. Larkin-Connolly expresses concern with the "broad discretionary authority" which will be afforded to the Company in light of a lack of "criteria, notice requirements, or review process" available for customers to contest a determination that certified funds or removal from electronic payment options is necessary. (OCA St. 5, pp. 45-46.)

Mr. Larkin-Connolly recommends that the proposed language be rejected, or, in the alternative, that it be adopted with revisions to include defined criteria as to when the restrictions will be made, require advance written notice to the customer and BCS, and a mechanism for review of the determination. (OCA St. 5, pp. 46-47.)

Q. DO YOU AGREE WITH MR. LARKIN-CONNOLLY'S CONCERN AND RECOMMENDATION? PLEASE EXPLAIN.

A. The proposed additions to Section 10, under "Dishonored Payments," serve a limited but important purpose. Although the provision would apply only in certain circumstances, it is necessary to address recurring payment-related issues that create operational burdens, increase collection costs, and contribute to growing arrearages

Mr. Larkin-Connolly objects that the language is overly broad, grants discretionary authority to the utility, and does not include a separate notice or review process. Peoples disagrees. The proposed language is narrowly directed at customers with a history of dishonored or stopped payments and is intended to protect the Company's ability to manage arrearages and collection activity in a reasonable and efficient manner. Moreover, the Company routinely exercises reasonable discretion in many operational processes that are not expressly detailed in the Commission's regulations.

With respect to dishonored payments, customers already receive written notice when a payment is returned. Thus, the customer is made aware of the issue before any limitation on payment method is imposed. In addition, Peoples already maintains an internal process for disallowing checks after repeated returned payments. This is a standard business practice and is not unique to Peoples or to public utilities.

Section 56.94 of the Pennsylvania Code already recognizes that utilities are not required to accept personal checks in all circumstances. 52 Pa. Code § 56.94. Specifically, the regulation provides that "[p]ayment in any reasonable manner includes payment by personal check unless the customer within the past year has tendered a check which has been returned for insufficient funds or for which payment has been stopped." *Id*. The proposed tariff language is consistent with this regulatory framework and is more limited in application because it requires a "history of returned payment," rather than a single returned or stopped payment.

The same concern arises when a customer seeks restoration of service despite a prior balance and a history of returned or stopped payments. Where a customer has not demonstrated a good-faith effort to pay and has accumulated a substantial arrearage, reconnection should be conditioned on payment in full or, if applicable, participation in a payment arrangement. Peoples has encountered situations in which a customer with a significant unpaid balance tenders a large payment to obtain restoration, only for that payment to be dishonored later. Although Section 56.94 permits the utility to disconnect service again following a dishonored payment, doing so requires an additional personal contact notification, additional scheduling, field visits, and internal resources. 52 Pa. Code § 56.94. The resulting delay may also move the account into a period when termination is

restricted, such as the winter moratorium, thereby allowing the arrearage to continue increasing.

Repeated dishonored or cancelled payments also present concerns in connection with eAccount, the Company's online payment platform. Customers may schedule payments through eAccount and then cancel those payments at the last minute to delay termination notices or actual service termination. eAccount is provided as a customer convenience and is not required by statute or regulation. Customers remain able to pay through other available methods, including phone payments, mailed payments, and bill-pay vendors. Accordingly, where a customer abuses eAccount through repeated dishonored or cancelled payments, limiting access to that platform is reasonable and does not deprive the customer of the ability to make payment.

Q. PLEASE SUMMARIZE MR. LARKIN-CONNOLLY'S CONCNERN WITH REGARD TO THE PROPOSED RESTICTION ON CAP ENROLLMENT FOR CUSTOMERS ENGAGING IN RECREATIONAL GAS USE.

A. Refer to **Peoples Statement No. 10-R**, the Rebuttal Testimony of Rita Black, wherein she addresses Mr. Larkin-Connolly's concern regarding the restriction on CAP enrollment for customers engaging in recreational gas use.

Q. PLEASE SUMMARIZE MR. LARKIN-CONNOLLY'S CONCERN REGARDNIG THE PROPOSED CAP BENEFIT REVERSAL IN CASES OF FRAUD.

A. Refer to **Peoples Statement No. 10-R**, the Rebuttal Testimony of Rita Black, wherein she addresses Mr. Larkin-Connolly's concern regarding the proposed CAP benefit reversal in cases of fraud.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does. I reserve the right to supplement my testimony as additional information arises. Thank you.

DATE ADMITTED: _____

Peoples Statement No. 14-R

TABLE OF CONTENTS

I. INTRODUCTION 2

II. CASH WORKING CAPITAL ADJUSTMENTS 3

III. CONCLUSION.....7

PREPARED REBUTTAL TESTIMONY OF
ANTON RIBICH

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Anton Ribich and my business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies") as a Finance and Rates Analyst. I provide rates and regulatory services for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 14.

Q. HAVE YOU REVIEWED THE DIRECT TESTIMONY SUBMITTED BY OTHER PARTIES?

A. Yes. I have reviewed the Direct Testimony submitted by Vanessa Okum on behalf of the Bureau of Investigation and Enforcement ("I&E") and the Direct Testimony submitted by Jared N. Geiger on behalf of the Office of Consumer Advocate ("OCA").

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In direct testimony, I&E's Witness Okum and OCA's Witness Geiger made statements and suggested modifications regarding the Cash Working Capital ("CWC") claim that I provided as part of my lead/lag study. I will rebut those claims and recommendations in this testimony.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am also sponsoring **Peoples Natural Gas Exhibit No. AR-1R**, a revised CWC claim.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. I have arranged my testimony to address updates to the Company's original filing due to O&M expense adjustments identified during discovery or testimony as well as I&E's and OCA's suggested modifications to my CWC claim. I will address the following issues in the order listed: (1) O&M adjustments to the Company's original filing; (2) revisions to the CWC claim identified in direct testimony from I&E Witness Okum; and (3) revisions to the CWC claim identified in direct testimony from OCA Witness Geiger.

II. <u>CASH WORKING CAPITAL ADJUSTMENTS</u>

Q. PLEASE EXPLAIN THE ADJUSTMENTS TO O&M EXPENSE IN RELATION TO THE COMPANY'S ORIGINAL FILING.

A. The Company has identified O&M expense adjustments and made revisions to update its original filing. The following adjustments were identified either through the discovery process or during rebuttal testimony preparation (and through intervenor direct testimony review) and will have an impact on the associated cash working capital claim:

- A reduction of $785,433 to the expense claim for building leases.
- An increase of $1,738,446 to the expense claim for Corporate Insurance.
- A reduction of $17,980,722 in uncollectible expense included in Other O&M Expenses in the company's original cash working capital calculation, **Peoples Natural Gas Exhibit No. AR-1**. Please note that this is a removal of the amount from the Cash Working Capital study, not a reduction in the Company's overall revenue requirement claim related to O&M.

Refer to **Peoples Statement No. 2-R**, the Rebuttal Testimony of Andrew P. Wachter, for further detail regarding the O&M adjustments for building leases and corporate insurance.

Q. HAVE THE AFOREMENTIONED EXPENSE ADJUSTMENTS AFFECTED THE CWC CLAIM IN THE COMPANY'S ORIGINAL FILING.

A. Yes. The expense adjustments have impacted the Company's original CWC claim and as a result they have been incorporated into my rebuttal as part of the Company's adjusted CWC claim. The Company's initial CWC claim was $47,681,867 as shown in **Peoples Exhibit No. AR-1** in the Company's original filing. The revised CWC claim in rebuttal is $46,932,677, which is presented in **Peoples Exhibit No. AR-1R.** I will provide additional detail regarding my basis for the Company's revised CWC claim in this rebuttal testimony.

Q. DO YOU AGREE WITH I&E WITNESS OKUM'S ADJUSTMENTS TO THE COMPANY'S CASH WORKING CAPITAL CLAIM?

A. Partially.

Q. WHAT DO YOU RECOMMEND?

A. I recommend an adjusted CWC allowance of $46,932,677 or an increase of $1,186,784 to I&E's proposed allowance. This represents a modest 2.6% increase over I&E's proposed CWC allowance of $45,745,893. (I&E Statement No. 1, p. 61.)

Q. WHAT IS THE BASIS FOR YOUR RECOMMENDATION?

A. My recommendation is based on specific adjustments to the Company's initial CWC claim as stated earlier in my rebuttal. I have also accepted Ms. Okum's recommendation to remove the entire uncollectible expense from the Company's initial CWC calculation. (I&E Statement No. 1, p. 62.) However, the Company does not accept I&E's other expense adjustments, and therefore, the CWC allowance of $45,745,893 recommended by I&E should not be accepted. (I&E Statement No. 1, p. 61.) The CWC adjustments shown below in **Figure 1** are incorporated into the final CWC claim presented in **Peoples Natural Gas Exhibit No. AR-1R**.

Figure 1. Peoples' Expense Adjustments for CWC

Expense	Description	Original Amt	Revised Amt	FPFTY Adjustment
O&M	Uncollectibles	$17,980,722	$ 0	$(17,980,722)
O&M	Building Leases	$4,693,640	$3,908,207	$(785,433)
O&M	Corporate Insurance	$5,929,933	$ 7,668,379	$1,738,446
			Total Adjustment	$(17,027,709)

Q. DO YOU AGREE WITH OCA WITNESS GEIGER THAT THE CWC ALLOWANCE SHOULD BE $46,724,464?

A. No.

Q. WHY DO YOU DISAGREE WITH MR. GEIGER'S ADJUSTED CWC ALLOWANCE?

A. Mr. Geiger has made different expense adjustments which impact the Company's CWC claim. The Company does not accept these adjustments and therefore the OCA's adjusted cash working capital allowance should not be accepted. Further, Mr. Geiger has incorporated the OCA's recommended long-term debt ratio and cost of long-term debt into the adjusted calculation of the interest component of cash working capital. (OCA Statement 2, p. 6.) The Company does not accept the OCA's recommended long-term debt ratio and cost of long-term debt. Therefore, Mr. Geiger's associated adjustments to the interest component of cash working capital must also be rejected. Please reference the Rebuttal Testimony of Jennifer E. Nelson, **Peoples Statement No. 15-R**, for further detail regarding Peoples' proposed capital structure. I would also note that it appears as though Mr. Geiger has a typo in his testimony. I believe Mr. Geiger inadvertently used the term "million" in conjunction with the amount stated as a reduction to the Company's cash working capital allowance. (OCA Statement 2, p. 6, line 25.) OCA's total cash working capital reduction presented in OCA Statement 2, Schedule JNG-4, is $957,403.

Q. HAVE YOU ADJUSTED YOUR CWC CLAIM TO AGREE WITH THE COMPANY'S ADJUSTED FPFTY LEVEL OF EXPENSES AT PROPOSED RATES?

A. Yes. I have included the Company's accepted revisions described above and adjusted FPFTY expenses consistent with Peoples' rebuttal testimony. The final rebuttal CWC

claim is $46,932,677 as shown on **Peoples Natural Gas Exhibit No. AR-1R**, attached hereto.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

PREPARED REBUTTAL TESTIMONY
OF JENNIFER E. NELSON

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Jennifer E. Nelson, and I am employed by Concentric Energy Advisors, Inc. ("Concentric") as a Vice President. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts, 01752.

Q. DID YOU PREVIOUSLY FILE TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted direct testimony, Statement No. 15, on behalf of Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company") on March 27, 2026.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to respond to the direct testimonies of the following witnesses as they relate to the appropriate return on equity ("ROE"), capital structure, and cost of long-term debt for Peoples:

- D.C. Patel on behalf of the Bureau of Investigation and Enforcement ("I&E", "I&E Statement No. 2");
- David J. Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA", "OCA Statement 3");
- Mark D. Ewen on behalf of the Office of Small Business Advocate ("OSBA", "OSBA Statement No. 2");
- Patrick M. Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA", "CAUSE-PA Statement 1"); and
- Michael Deupree on behalf of OCA ("OCA Statement 1").

I collectively refer to these individual witnesses as the "Witnesses." My silence on a particular issue should not be construed as agreement with respect to that issue.

Q. ARE YOU SPONSORING ANY EXHIBITS WITH YOUR REBUTTAL TESTIMONY?

A. Yes. I sponsor the following schedules:

Exhibit JEN-1R	Constant Growth DCF Results
Exhibit JEN-2R	Quarterly Growth DCF Results
Exhibit JEN-3R	Market Return Calculations
Exhibit JEN-4R	CAPM and Empirical CAPM Results
Exhibit JEN-5R	Bond Yield Plus Risk Premium Analysis
Exhibit JEN-6R	Proxy Group Capital Structure
Exhibit JEN-7R	Revisions to Mr. Patel's Authorized Equity Ratio Analysis
Exhibit JEN-8R	Proxy Group Current Authorized Equity Raito by Jurisdiction
Exhibit JEN-9R	Adjustments to Mr. Garrett's Implied Equity Risk Premium Calculation
Exhibit JEN-10R	Adjustments to Mr. Patel's CAPM Forecasted Market Return
Exhibit JEN-11R	Illustrative Flotation Cost Recovery
Exhibit JEN-12R	CAUSE-PA Response to Peoples Interrogatories, Requests for Production of Documents and Requests for Admission Set III-1

Q. WERE THESE EXHIBITS PREPARED BY YOU OR UNDER YOUR DIRECTION?

A. Yes.

Q. HOW IS THE REMAINDER OF YOUR REBUTTAL TESTIMONY ORGANIZED?

A. My Rebuttal Testimony is organized by topic/issue raised by these Witnesses, as follows:

- Section II – provides an Executive Summary of my Rebuttal Testimony;
- Section III – responds to the Witnesses' positions regarding Peoples' proposed capital structure;

- Section IV – responds to the cost of capital proposals put forth by Governor Shapiro;
- Section V – responds to the Witnesses' references to national average authorized returns for natural gas utilities as a benchmark for establishing the return for Peoples in this proceeding, and the importance of placing those authorized returns in the proper context;
- Section VI – responds to the Witnesses regarding trends in the current capital market environment;
- Section VII – responds to certain witnesses with respect to the composition of a risk-comparable proxy group for Peoples in this proceeding;
- Section VIII – addresses the proper application of the Discounted Cash Flow ("DCF") model and discusses areas of disagreement in the application of the DCF model;
- Section IX – discusses areas of disagreement in the application of the Capital Asset Pricing Model ("CAPM"), and in particular, the appropriate inputs to that model;
- Section X – responds to the Witnesses' comments and concerns with my application of the Bond Yield Plus Risk Premium ("Risk Premium") model;
- Section XI – responds to the Witnesses' positions regarding Peoples's business risks;
- Section XII – presents the results of my updated ROE analyses based on market data through May 31, 2026; and
- Section XIII – summarizes my key conclusions and recommendations.

II. EXECUTIVE SUMMARY

Q. WHAT ARE YOUR KEY CONCLUSIONS REGARDING THE ANALYSIS AND RECOMMENDATIONS PROVIDED BY THE WITNESSES REGARDING THE APPROPRIATE ROE AND CAPITAL STRUCTURE FOR PEOPLES?

A. Although there are several areas in which I disagree with the Witnesses' methods and conclusions, the key issues are:

1. *Insufficiency of Mr. Garrett's ROE recommendation and Mr. Cicero's ROE estimate*. Mr. Garrett's 8.80 percent ROE recommendation is unjustly low – below all but one authorized ROE for natural gas utilities in at least the past 46 years.[1] Although he contends that his modeled ROE of 7.68 percent is not a specific recommendation per se,[2] Mr. Cicero's ROE falls 112 basis points lower than Mr. Garrett's and below all authorized ROEs for natural gas utilities in the last 46 years. (CAUSE-PA Statement 1, p. 34.) No rational equity investor would invest in Peoples if they could earn a return hundreds of basis points higher by investing in any other natural gas utility. Mr. Garrett's and Mr. Cicero's ROE estimates fail to meet the *Hope* and *Bluefield* fair return standards, defy any rational basis, and should be dismissed from the outset.

2. *Flawed application of the ROE analyses*. The Witnesses' analyses contain flaws and inconsistencies, with some that produce results below any reasonable measure of Peoples'

[1] Source: S&P Capital IQ Regulatory Research Associates ("RRA"). Excludes limited-issue rider cases and transmission cases.
[2] Mr. Cicero modeled an ROE estimate of 7.68 percent "based on the principles outlined by Governor Shapiro."

cost of equity. I address each analytical approach and recommend adjustments where appropriate.

3. *Misunderstanding of the current capital market environment and disregard for the higher long-term capital cost environment*. The Witnesses generally do not acknowledge the higher long-term interest rate and elevated inflationary environment. Mr. Garrett in particular gives undue weight to inputs and models that bias his ROE estimates and recommendations downward and result in recommendations to materially *reduce* Peoples' authorized ROE, contrary to prevailing capital market trends. As explained in Section VI, long-term government and utility bond yields increased since I filed my Direct Testimony, Peoples Statement No. 15, and are approximately 55-100 basis points higher than the levels at the time of the Commission's order approving the non-unanimous settlement in Peoples' last rate case.[3] It is important that the return authorized in this proceeding keeps pace directionally with the increase in capital costs that Peoples faces so that the Company can compete for capital among its peers that also have significant capital needs.[4] Doing so ensures that the Company continues to provide safe and reliable service to customers at a reasonable cost.

4. *Incorrect comparison of Peoples' capital structure to the proxy group holding companies rather than the proxy group operating companies*. Under the standalone principle of ratemaking, the correct comparison when analyzing a subject company's capital structure

[3] Note that there was no ROE determination in Peoples' non-unanimous settlements in 2019 and 2023. See also, Figure 2 later in this section and Figure 7 below in Section VI.
[4] *See, e.g.,* **Peoples Natural Gas Exhibit No. JEN-7**.

is to the proxy group *operating companies*, not the proxy group *holding companies*. The Witnesses' flawed comparisons lead to equity ratio recommendations that are significantly below Peoples's projected actual equity ratio. When the comparison is performed correctly to the proxy group operating company capital structures, Peoples' requested 54.47 percent equity ratio is within the range of the proxy group companies, consistent with sound industry practice, and is consequently reasonable and appropriate.

Q. PLEASE PROVIDE AN OVERVIEW OF THE WITNESSES' ROE ANALYTICAL RESULTS AND OVERALL ROE RECOMMENDATIONS IN THIS PROCEEDING.

A. As shown in Figure 1, the Witnesses base their recommendations on analyses that range from a low of 7.10 percent to a high of 11.42 percent.

Figure 1: ROE Ranges and Recommendations of the Witnesses

	I&E Witness Patel	OCA Witness Garrett	CAUSE-PA Witness Cicero	OSBA Witness Ewen	OCA Witness Deupree
DCF Results (Range)	11.33% (11.23% - 11.42%)	(7.1% - 7.6%)	NA	NA	NA
CAPM Results (Range)	9.57% (8.86%-10.28%)	8.8% (8.7%-9.2%)	NA	NA	NA
ROE Recommendation	**10.20%**	**8.8% (49% equity); 8.5% (54% equity)[5]**	**7.68%[6]**	**NA**	**NA**
Equity Ratio Recommendation	**50%**	**49%**	**50%[7]**	**NA**	**NA**

There are several flaws and inconsistencies with the analyses conducted by these witnesses. I address each analytical approach and recommend adjustments where appropriate. At the outset, one must question analyses producing results that are below nearly every authorized ROE for other natural gas utilities in at least the past 46 years. Further, I submit that the only reliable method for determining the cost of capital is through the application of rigorous analysis using financial models and market data from reliable sources, coupled with a comprehensive risk assessment of the regulated utility. Therefore, the ROE recommendations of OCA Witness Garrett and CAUSE-PA Witness Cicero should be disregarded from the

[5] Mr. Garrett recommends a CAPM cost of equity of 8.8 percent only if his recommended 49 percent equity ratio is used. If the Company's requested equity ratio is adopted, Mr. Garrett recommends an 8.5 percent ROE. OCA St. 3 at 3.

[6] Mr. Cicero states that his modeled ROE is based on the principles outlined by Governor Shapiro, but is not an ROE recommendation *per se*. See CAUSE-PA St. No. 1 at 34.

[7] Mr. Cicero presents three capital structure scenarios combined with his 7.68 percent modeled ROE; however, he ultimately recommends a 50/50 capital structure. See CAUSE-PA St. No. 1, at 44, 47.

outset. As for I&E Witness Patel, his CAPM ROE estimate that relies on Kroll's normalized equity risk premium fails the *Hope* and *Bluefield* fair return standards and should be similarly rejected.

Q. PLEASE SUMMARIZE THE COST OF CAPITAL RECOMMENDATIONS PRESENTED BY THE VARIOUS WITNESSES IN THIS PROCEEDING.

A. Mr. Patel performs a DCF analysis that is largely similar to mine and produces ROE estimates ranging from 11.23 percent to 11.42 percent (average of 11.33 percent).[8] He also performs two CAPM analyses that produce results ranging from 8.86 percent to 10.28 percent, and average of 9.57 percent.[9] To reach his 10.20 percent ROE recommendation, Mr. Patel averages his 11.33 percent DCF and 9.57 percent CAPM results with the national average authorized ROE for natural gas utilities reported by S&P (9.69 percent). (I&E Statement No. 2, p. 7.) Mr. Garrett performs two DCF analyses and a CAPM analysis, each of which produces a result at or below 8.8 percent (i.e., below all but one authorized ROE for other natural gas utilities in at least the past 46 years). His ultimate 8.8 percent ROE recommendation is based on his CAPM result combined with his proposed 49 percent equity ratio. (OCA Statement 3, p. 3.) Mr. Cicero estimates an ROE of 7.68 percent based on his interpretation of Governor Shapiro's proposed risk premium methodology, but states that it is not an ROE recommendation in this proceeding. (CAUSE-PA St. No. 1, p. 34.) Mr. Ewen and Mr. Deupree do not give a specific ROE recommendation, though recommend that the Commission consider affordability concerns.

[8] I&E Exhibit No. 2, Schedule 6.
[9] I&E Exhibit No. 2, Schedule 10.

Regarding Peoples's capital structure, Mr. Patel and Mr. Garrett incorrectly reference the proxy group *holding company* capital structures, as opposed to the proxy group *operating company* capital structures, to arrive at their respective 50 percent and 49 percent equity ratio recommendations. Meanwhile, Mr. Cicero relies on qualitative factors to arrive at his 50 percent equity ratio recommendation.

Finally, none of the parties object to Peoples' proposed cost of debt. Therefore, I do not respond to the Witnesses on the cost of debt.

Q. WHAT ARE THE PRACTICAL IMPLICATIONS FOR A UTILITY THAT HAS AN AUTHORIZED RETURN THAT IS FAR BELOW ROES AUTHORIZED FOR OTHER NATURAL GAS UTILITIES?

A. The significant difference between Mr. Garrett's and Mr. Cicero's ROE estimates and those available to other natural gas utilities raises a very practical concern. The Company must compete with other companies, including other utilities, for the long-term capital needed to provide utility service. Given the choice between an investment in two utilities, one with a return that falls far below industry levels and a utility with a return consistent with the market, investors will choose the latter. Further, if Mr. Garrett's or Mr. Cicero's recommendations were adopted, it would introduce significant uncertainty in the stability and consistency of the regulatory environment in Pennsylvania. The market would likely react swiftly and harshly to authorized ROEs and equity ratios that were each hundreds of basis points lower than those previously authorized by the Commission without a demonstration of a corresponding decline in risk or capital costs. Such a significant departure from the Commission's practice would

not only adversely affect the Company's financial integrity, but could have severe ramifications for all Pennsylvania utilities.

Q. HOW HAS THE COST OF CAPITAL CHANGED SINCE PEOPLES' 2023 RATE CASE?

A. The cost of capital has increased. As can be seen in Figure 2 below, government and utility bond yields are, on average, approximately 55-100 basis points above where they were when the Company's most recent black-box settlement was approved by the Commission in September 2024.

Figure 2: Treasury Bond and Utility Bond Yields (Sept. 2024 vs. May 2026)[10]

	10-yr Treasury Bond	30-yr Treasury Bond	Moody's A Utility Bond	Moody's Baa Utility Bond
9/12/24 (Peoples 2023 Rate Case)	3.68%	4.00%	5.19%	5.41%
1/30/26 (Nelson Direct)	4.26%	4.83%	5.69%	5.85%
05/29/26 (Nelson Rebuttal)	4.45%	4.99%	5.80%	5.97%
05/29/26 vs. 9/12/24 Change (bps)	77 bp	99 bp	61 bp	56 bp

The Witnesses recommend an ROE that is lower than the Commission's ROE authorized for Peoples' Distribution System Improvement Charge ("DSIC," 10.25 percent) even though the cost of capital has increased. Further, none of the Witnesses demonstrate that Peoples' risk is so much lower now than in 2024.

Notably, the Gas Industry DCF and CAPM proxy group average ROEs published by the Commission in its Quarterly Earnings reports show that the Commission's average DCF

[10] Source: Federal Reserve Bank of St. Louis, FRED Economic Database (Treasury bond yields), Bloomberg Professional (Moody's utility bond yields). Spot yields as of the date referenced.

estimates have increased 131 basis points from 9.79 percent in Q3 2024 to 11.10 percent in Q4 2025; the CAPM estimates declined from 11.01 percent to 10.33 percent (-68 basis points).[11] The average of these two model estimates increased from 10.40 percent to 10.72 percent. The market evidence points to a higher cost of equity for Peoples since its last rate case, not lower.

Q. MESSRS. PATEL, CICERO, EWEN, AND DEUPREE OPPOSE YOUR RECOMMENDED ROE DUE TO AFFORDABILITY CONCERNS. WHAT IS YOUR RESPONSE?

A. I emphasize that I do not dismiss the real impact that any rate increase has on customers. I understand that the Company offers programs to assist customers who experience hardships. As discussed in Company Witness Black's Direct Testimony (Peoples St. No. 10), Peoples maintains multiple programs to address affordability challenges, including the income-based Customer Assistance Program ("CAP") rates with arrearage forgiveness, hardship grants, weatherization and energy-efficiency assistance through the Low-Income Usage Reduction Program ("LIURP"), the Emergency Furnace and Service Line Repair Assistance Program ("EFSLR"), and the Customer Assistance, Referral and Evaluation Services ("CARES") case-management services that connect customers with utility and community resources. (Peoples Statement No. 10, pp. 3, 5.) These programs are supported by extensive outreach and enrollment efforts to ensure vulnerable households can access available assistance and maintain affordable, reliable natural gas service. As Ms. Black describes, these programs are

[11] Bureau of Technical Utility Services Report on the Quarterly Earnings of Jurisdictional Utilities for the Year Ended December 31, 2025, at 24. Accessible at: https://www.puc.pa.gov/pcdocs/1936067.pdf

specifically designed to mitigate affordability challenges while supporting continued access to safe and reliable natural gas service.

Nevertheless, the Company must balance customer affordability with its need for ongoing system investment to meet its obligation to provide customers with safe and reliable service. Customers benefit from a just and reasonable ROE that reflects the market-based cost of equity. In my opinion, affordability issues are better addressed with the programs discussed by Ms. Black, rather than through an unjustly low ROE that could have significant long-term consequences on the Company's ability to access capital on cost-effective terms for the benefit of customers.

Q. PLEASE SUMMARIZE YOUR CONCERNS REGARDING THE IMPLICATIONS OF GOVERNOR SHAPIRO'S LETTER ON THE COST OF EQUITY FOR PEOPLES AND ALL PENNSYLVANIA UTILITIES.

A. My primary concern is that Governor Shapiro's letter would move the cost-of-capital analysis away from a case-specific evaluation of utility risk and toward general benchmarks that may produce returns closer to returns on utility bonds than the return required by equity investors. The proposed ROE methodology does not adequately consider utility-specific business risks, including capital investment needs, regulatory lag, credit quality, access to capital, and the obligation to provide safe and reliable service. Those concerns are not merely theoretical: Moody's has already characterized the Governor's letter as credit negative because it represents a material escalation of political involvement in Pennsylvania utility rate-setting and could weaken the predictability and consistency of the regulatory framework.[12] Historical

[12] Moody's Ratings, Sector In-Depth, "Regulated Utilities – Pennsylvania, Political intervention in rate process is

examples from Arizona, Connecticut, and other jurisdictions further demonstrate that adverse or unexpectedly restrictive regulatory outcomes can lead to credit downgrades, higher borrowing costs, reduced investor confidence, and lower levels of utility investment — outcomes that ultimately can increase, rather than reduce, long-term customer costs. In the end, Pennsylvania utilities would be at a severe disadvantage in their ability to compete for capital among other utilities that operate in more stable and constructive regulatory environments.

Q. MR. PATEL, MR. CICERO, AND MR. DEUPREE CONTEND THAT PEOPLES' REGULATORY MECHANISMS REDUCE ITS RISK. DO YOU AGREE?

A. While regulatory mechanisms can mitigate certain risks, they do not eliminate them. Further, risk is a relative concept and none of the Witnesses compare Peoples' regulatory framework components to those available to the proxy group as I have (*see* **Peoples Natural Gas Exhibit No. JEN-8**). While regulatory mechanisms such as the Distribution System Improvement Charge ("DSIC"), fully projected future test year ("FPFTY"), and Weather Normalization Adjustment ("WNA") may mitigate risk on an absolute basis, the majority of the proxy group operating companies utilize similar mechanisms, as I explain in Section XI. In other words, these mechanisms are common across the industry and Peoples' business risk is no different than its peers in that regard. Further, the market data used in my various models reflect the regulatory constructs in which the proxy companies operate and, therefore, investors' perceptions regarding the effect of these constructs on the proxy companies' risk profiles. Mr. Cicero, on the other hand, acknowledges that "[m]any other gas utilities in Pennsylvania use

credit negative for electric, gas and water utilities," May 19, 2026.

the modifications allowed by the Public Utility Code to reduce regulatory lag , including filing a rate case using a Fully Projected Future Test Year, the use of alternative ratemaking mechanisms such as a Weather Normalization Adjustment (WNA), and the use of a Distribution System Improvement Charge (DSIC) between rate cases", yet concedes that he did not rely on specific reports about these or other modifications to ratemaking in the preparation of his testimony.[13] (CAUSE-PA Statement 1, pp. 12-13.) In summary, Peoples' risk is similar to its peers; therefore, my analysis captures this effect and the Company's authorized ROE should not be lowered due to its regulatory mechanisms.

Q. WHAT ARE YOUR CONCLUSIONS?

A. As discussed in my Direct and Rebuttal Testimonies, it is critical that Peoples maintain a strong financial profile in order to provide safe, reliable service to the benefit of customers. Whereas Mr. Patel's recommended ROE overlaps with my estimates, the remaining Witnesses' recommendations are materially below industry benchmarks for a comparable return and run counter to the higher capital cost environment the Company faces, and would impede its ability to compete for the external capital it needs to fund necessary investments. As discussed above, Mr. Cicero's ROE estimate is below all authorized ROEs for other natural gas utilities since 1980, while Mr. Garrett's ROE estimate is below all but one. This highlights that both Mr. Garrett and Mr. Cicero rely on flawed ROE analytical approaches that apply unreasonable inputs and disregard current capital market conditions. Further, the results of my collective updated DCF, CAPM, ECAPM, and Risk Premium analyses have generally remained flat, on

[13] CAUSE-PA Responses to Interrogatories, Requests for Production of Documents, and Requests for Admission – Set III, Docket No. R-2026-3060855, Peoples to CAUSE-PA III-1, which is attached as **Peoples Natural Gas Exhibit No. JEN-12R**.

average, since the initial filing (see Figure 3). Based on the analyses discussed throughout my Rebuttal Testimony, my 11.00 percent base ROE recommendation remains a just and reasonable estimate of Peoples' cost of equity that appropriately reflects the increased cost of capital since its last rate case.

Figure 3: Summary of Updated Results[14]

Model	**ROE Model Results (As Filed)**	**ROE Model Results (5/29/26)**	**Change**
Constant Growth DCF	10.79%	10.93%	+0.14%
Quarterly Growth DCF	11.03%	11.14%	+0.11%
Average DCF	**10.91%**	**11.03%**	**+0.12%**
Forward CAPM	13.09%	12.17%	-0.92%
Forward ECAPM	13.91%	12.94%	-0.97%
Historical CAPM	10.11%	10.05%	-0.06%
Historical ECAPM	10.64%	10.60%	-0.04%
Average CAPM	**11.94%**	**11.44%**	-0.50%
Risk Premium	10.24%	10.30%	0.06%
3-Model Average	**11.03%**	**10.92%**	**-0.10%**
Range of Model Results (Rounded)	10.20%-11.90%	10.30%-11.40%	-
Base ROE Recommendation	**11.00%**	**11.00%**	**No change**

Lastly, Mr. Patel and Mr. Garrett present flawed arguments to compare Peoples's proposed capital structure to the proxy group *holding company* capital structure instead of the proxy group *operating company* capital structure, while CAUSE-PA Witness Cicero argues

[14] *See*, **Peoples Natural Gas Exhibit Nos. JEN-2** through **JEN-6** and **Peoples Natural Gas Exhibit Nos. JEN-1R** through **JEN-5R**. DCF and CAPM results reflect the average of the proxy group mean and median ROE estimates. Data as of May 31, 2026. Numbers may not sum due to rounding.

without evidence that the Commission should enact a 50 percent equity and 50 percent long-term debt capital structure. As I explain in Section III, Peoples' requested 54.47 percent equity ratio, is within industry standards and consistent with the Commission's precedent.

III. CAPITAL STRUCTURE

Q. PLEASE SUMMARIZE THE WITNESSES' RECOMMENDATIONS REGARDING THE APPROPRIATE CAPITAL STRUCTURE FOR PEOPLES.

A. Witnesses Patel, Garrett, and Cicero each recommend a hypothetical capital structure for Peoples that contains less common equity than the Company's requested capital structure. The Witnesses' recommendations are summarized in Figure 4 below.

Figure 4: Witnesses' Capital Structure Recommendations[15]

Witness	Common Equity	Long-term Debt
Nelson	54.47%	45.53%
Patel	50.00%	50.00%
Garrett	49.00%	51.00%
Cicero	50.00%	50.00%
Ewen	N/A	N/A
Deupree	N/A	N/A

Mr. Patel reviews the five-year historical proxy group holding company capital structures reported by S&P and projected capital structures reported by Value Line. (I&E Exhibit No. 2, Schedule 2, page 6; I&E Statement No. 2, p. 20.) Mr. Patel also reviews authorized equity ratios for natural gas distribution utilities during 2025 through May 2026.

[15] I&E St. No. 2, at 15; OCA St. No. 3, at 3; CAUSE-PA St. No. 1, at 47.

(I&E Exhibit No. 2, Schedule 2, p. 17.) He then concludes that an equity ratio of 50 percent "represents a reasonable ratio when trying to balance the financial integrity of a utility as well as trying to control costs to ratepayers in this proceeding." (I&E Statement No. 2, p. 15.) Mr. Garrett similarly examines the proxy group holding company capital structures reported by Value Line, for which he calculates an average equity ratio of 49 percent. (OCA Statement 3, p. 56; Exhibit DJG-13.) Mr. Cicero recommends a 50 percent equity ratio, and references Essential Utilities' consolidated capital structure. (CAUSE-PA Statement 1, p. 47.) Finally, Mr. Ewen and Mr. Deupree do not address the capital structure. As I explain in this section, the Witnesses' capital structure proposals violate established regulatory standards that prevail in regulatory jurisdictions across the United States. Abandoning the use of Peoples' actual capital structure as proposed by Messers. Patel, Garrett, and Cicero would ignore Commission precedent, as well as long standing and widely recognized regulatory and utility financing principles. In the end, Messers. Patel, Garrett, and Cicero have not demonstrated that Peoples' actual capital structure deviates substantially from industry standards and that an alternative or hypothetical capital structure is necessary. Peoples' requested capital structure is consistent with regulatory principles, Commission precedent, and industry practice. Therefore, I recommend Peoples' actual test year capital structure to establish a fair return for the Company in this case.

Q. IS MR. CICERO'S 50/50 CAPITAL STRUCTURE RECOMMENDATION BASED ON ANY OBJECTIVE, QUANTITATIVE ANALYSIS?

A. No. Mr. Cicero's 50/50 capital structure recommendation is not based on evaluation of the financial risk of the proxy group, nor any other quantitative analysis. Rather, Mr. Cicero

explains that his recommendation is "a means [of] recognizing the principle of gradualism". (CAUSE-PA Statement 1, p. 47.)

Q. DO YOU AGREE WITH MESSERS. PATEL'S, GARRETT'S, AND CICERO'S RECOMMENDATIONS TO IMPUTE A SIGNIFICANTLY MORE LEVERAGED CAPITAL STRUCTURE FOR PEOPLES?

A. No, I do not. Simply, Messers. Patel's, Garrett's, and Cicero's hypothetical capital structure recommendations are not based on Peoples' specific risks and financing requirements and are contrary to widely recognized regulatory principles and utility financing practices. As explained in more detail in this section, utility capital structures vary widely based on the unique needs of each company and the assets being financed. Although reviewing the actual and authorized capital structures in place at other natural gas distribution utilities may inform the reasonableness of a utility's capital structure and may be used as a broad indicator of industry practice, it is inconsistent with regulatory principles to impute a hypothetical capital structure for ratemaking purposes unless the actual capital structure deviates substantially from sound utility practice. Setting Peoples' ratemaking capital structure according to a proxy group average actual or authorized capital structure presumes that Peoples should be financed with the same proportion of debt and equity as the "average" natural gas distribution utility. It ignores the fact that each operating utility is unique, and therefore, the financing requirements for each operating company are also unique and can vary widely. The fact that Peoples' equity ratio differs from an average does not mean that it is unreasonable.

Q. WHAT HAS BEEN THE COMMISSION'S PRECEDENT FOR SETTING A UTILITY'S RATEMAKING CAPITAL STRUCTURE?

A. The Commission has routinely adopted a utility's actual capital structure so long as it falls within the range of the capital structure ratios of the proxy group.[16] Importantly, the Commission has reinforced the finding that a utility's actual capitalization forms the basis upon which the Company attracts capital."[17] Further, in rejecting recommendations to impute a hypothetical capital structure, the Commission has noted that its standard is as follows:

> Absent a finding by the Commission that a utility's actual capital structure is atypical or too heavily weighted on either the debt or equity side, we would not normally exercise our discretion with regard to implementing a hypothetical capital structure.[18]

As shown in **Peoples Natural Gas Exhibit No. JEN-6R**, Peoples' requested equity ratio of 54.47 percent is within the range of the proxy group five-year average equity ratio that ranges from 48.15 percent to 60.07 percent, and in fact, is slightly *below* the proxy group mean and median of the five-year average equity ratio of 54.63 percent and 55.04 percent, respectively.[19] Further, it is below the five-year average equity ratios of four of the seven

[19] **Peoples Natural Gas Exhibit No. JEN-6R**.

proxy companies. There is no evidence to support the finding that Peoples' requested capital structure is atypical or too heavily weighted toward debt or equity, as outlined by the Commission's standard.

Q. WHAT ARE THE REGULATORY GUIDELINES FOR DETERMINING THE REASONABLENESS OF A UTILITY'S CAPITAL STRUCTURE FOR RATEMAKING PURPOSES?

A. In a 2020 publication titled *A Cost of Capital and Capital Markets Primer for Utility Regulators,* NARUC advises that actual capital structure ratios should be used unless they "greatly diverge" from sound industry practice:

> A utility management must be permitted latitude, discretion, and flexibility in managing capital structure ratios. Since there is no practical methodology to pinpoint theoretically optimal capital structure ratios, targeted ratios can only be broadly conceptualized. Appropriate ratios may shift over time as capital market conditions or business risk characteristics change. Additionally, the timing of upcoming issuances and maturities may influence the capital structure ratios because both the size and frequency of issuances are affected by the relative cost-effectiveness of various issuance increments.
>
> Given these practical considerations, capital structure ratios cannot be deemed to be inappropriate unless the ratios greatly diverge from sound industry practice and cause a lack of financial flexibility that may lead to higher overall costs.
>
> ***
>
> As increasing financial leverage shifts the weight from common equity to lower cost debt, it also increases both the cost of debt and the cost of common equity. In practice, these offsetting impacts cancel each other out over a wide range of capital structure ratios".[20]

[20] NARUC, *A Cost of Capital and Capital Markets Primer for Utility Regulators* (April 2020), at 12 (emphasis added).

Further, James C. Bonbright explains in his seminal text *Principles of Public Utility Rates* that a hypothetical capital structure should be used only when actual capital structures are "clearly unsound" or "extravagantly conservative," reasoning that using hypothetical capital structures "substitutes an estimate of what the capital cost would be under non-existing conditions for what it actually is or will soon be under prevailing conditions."[21]

As discussed below, none of the Witnesses have demonstrated that Peoples' actual capital structure *deviates substantially* from industry standards. Rather, Peoples' capital structure is well within industry standards and the capital structures in place for its peers.

Q. BEFORE RESPONDING TO THE WITNESSES' POSITIONS REGARDING CAPITAL STRUCTURE, PLEASE EXPLAIN THE FACTORS UTILITIES GENERALLY CONSIDER IN DEVELOPING THEIR CAPITAL STRUCTURES AND WHY IT IS IMPORTANT TO REFLECT UTILITY-SPECIFIC FINANCING REQUIREMENTS WHEN DETERMINING THE APPROPRIATE RATEMAKING CAPITAL STRUCTURE.

A. Companies (including subsidiary companies) are financed considering the specific risks and funding requirements associated with their unique individual operations. Capital structure management is dynamic and complex because it must satisfy multiple objectives subject to multiple constraints. It is therefore important to understand utility financing practices, including the principles and constraints that drive utility financing decisions, and how those practices are reflected in the cost of capital. As explained below, utility financing practices reflect the nature of regulation and utilities' investments made under the regulatory compact.

[21] James C. Bonbright, Principles of Public Utility Rates, at 243-44.

Although regulated utilities face common financing principles and constraints, the unique risks and operations of each individual utility result in a broad range of capital structures.

In many respects, the nature of regulation determines the nature of utility assets, and how they are financed. In exchange for the obligation to serve, equity investors expect utilities to have a reasonable opportunity to earn a fair return on prudent investments over the life of those investments. It is the nature of regulation, therefore, that enables utilities to finance large, essentially irreversible, investments that are recovered over decades. Moreover, because the obligation to serve must be fulfilled regardless of capital market conditions, utility capital structures (and the financial strength they support) are established to ensure capital access not only during normal markets, but when markets are constrained as well. When markets are constrained, only those utilities with sufficient financial strength can attract capital at reasonable terms to customers' benefit. That financial strength provides utilities with critical financial flexibility. Relying more heavily on debt increases the risk of refinancing maturing obligations during less accommodating market environments at higher costs. Financial flexibility, therefore, has a cost. As Moody's explains:

> Liquidity and access to financing are of particular importance in this sector. Utility assets can often have a very long useful life – 30, 40 or even 60 years is not uncommon, as well as high costs…Utilities are among the largest debt issuers in the corporate universe and typically require consistent access to the capital markets to assure adequate sources of funding and to maintain financial flexibility.[22]

The requirement to access capital markets in all market conditions contrasts with the financial needs of other entities without the legal obligation to serve. Because of that

[22] Moody's Ratings, *Rating Methodology: Regulated Electric and Gas Utilities*, at 18 (August 6, 2024).

obligation, the financial flexibility required to access both long-term capital and short-term liquidity is critical to meet the obligation to serve. Unregulated companies can adjust the timing and amount of major capital expenditures to align with economic cycles and defer investments to better match market conditions, whereas utilities have limited options to do so. Reduced financial flexibility, therefore, must be compensated for by ensuring utilities have sufficient financial strength to provide safe and reliable service to customers at all times.

Q. ARE YOU AWARE OF CIRCUMSTANCES IN WHICH UTILITIES' ACCESS TO CAPITAL BECAME CONSTRAINED EVEN FOR UTILITIES WITH AN INVESTMENT GRADE CREDIT RATING?

A. Yes. For example, a 2009 report by the Edison Electric Institute ("EEI") entitled "The Financial Crisis and Its Impact on the Electric Utility Industry" discussed the effect of the 2008 Financial Crisis on utilities' ability to access capital. EEI noted that Lehman Brothers had been a major issuer of commercial paper and when it collapsed, "the commercial paper market literally evaporated."[23] EEI also observed that spreads for electric utility debt increased significantly, several hundred basis points above their normal ranges.[24] Utilities with credit ratings in the "A" range were generally able to secure long-term debt at lower premiums than utilities with "BBB" credit ratings, saving customers more than 100 basis points per year in debt costs on average. The report further explained that equity financing was also difficult to

[23] Edison Electric Institute, "The Financial Crisis and Its Impact on the Electric Utility Industry," at 5 (February 2009).

[24] Edison Electric Institute, "The Financial Crisis and Its Impact on the Electric Utility Industry," at 5-6 (February 2009).

secure during that time.[25] Given the obligation to serve and continuous need to access capital, utilities must be prepared for such events that may occur beyond their control.

Q. WHEN SETTING THE AUTHORIZED CAPITAL STRUCTURE, IS IT CORRECT TO ANALYZE THE PROXY GROUP HOLDING COMPANY CAPITAL STRUCTURE, RATHER THAN THE PROXY GROUP OPERATING COMPANY CAPITAL STRUCTURE?

A. No. Mr. Patel and Mr. Garrett reference equity ratios reported by Value Line and S&P at the holding company level. Such comparisons are apples-to-oranges comparisons and suggest that the Commission should ignore relevant data that accurately represents the financial risk profiles and common financing practices of regulated natural gas utility operating companies. Because capital at the consolidated holding company level may finance unregulated operations, comparisons to the parent company capital structure leads to flawed and misleading conclusions. As explained above, regulated utilities' obligation to serve presents a unique set of constraints that affect their financing practices compared to unregulated operations, which reduces financing flexibility that is critical for utilities.

Consolidated holding companies are financed differently than their regulated operating subsidiaries because capital at the holding company level finances a variety of business segments (both regulated and unregulated) each with different risk profiles and return requirements. For these reasons, the proper comparison of the Company's capital structure is to the capital structures that finance the proxy companies' regulated natural gas operations.

[25] Edison Electric Institute, "The Financial Crisis and Its Impact on the Electric Utility Industry," at 7 (February 2009).

My capital structure analyses presented in Exhibit JEN-10 and updated in JEN-6R calculates the capital structures in place for the proxy companies' regulated natural gas operations using FERC Form 2 data; therefore, it provides an apples-to-apples assessment of the reasonableness of Peoples' requested capital structure as a regulated natural gas operating utility. As shown in Exhibit JEN-6R, the proxy group operating companies are all financed differently and there is a range of capital structures that finance the natural gas utility operations. The Company's requested equity ratio of 54.47 percent is slightly below the proxy group three-year and five-year average equity ratios (54.51 percent and 54.63 percent, respectively), demonstrating Peoples' financial risk is typical of its peers.

In short, comparisons to the consolidated holding company capital structures simply do not reflect the common financing constraints faced by operating subsidiaries with the obligation to serve. The only appropriate apples-to-apples comparison to discern the appropriate capitalization for a regulated operating utility like Peoples is a comparison to other regulated operating utility subsidiaries.

In summary, Mr. Patel's and Mr. Garrett's analyses using consolidated holding company capital structure do not accurately reflect how natural gas distribution utilities are financed because they are at the holding company level, not the operating company level. As such, I recommend that the Commission give no weight to Mr. Patel's and Mr. Garrett's analyses and recommendations that are based on consolidated holding company capital structures.

Q. IF THE COMMISSION WERE TO RELY ON MR. PATEL'S OR MR. GARRETT'S CONSOLIDATED HOLDING COMPANY CAPITAL STRUCTURE ANALYSES, IS

THE COMPANY'S REQUESTED EQUITY RATIO WITHIN THE RANGES OF THE CONSOLIDATED HOLDING COMPANIES?

A. Yes it is. Although analyses at the consolidated holding company level are not the appropriate basis to evaluate the reasonableness of an operating subsidiary's financial risk, Peoples' requested equity ratio of 54.47 percent is within the proxy group equity ratio ranges presented by Mr. Patel and Mr. Garrett. (I&E Statement No. 2, p. 17; I&E Exhibit No. 2, Schedule 2, p. 17; Exhibit DJG-13.) Therefore, the Company's requested equity ratio adheres to the Commission's standard described earlier.

Q. MR. PATEL'S FIVE-YEAR HISTORICAL PROXY GROUP CAPITAL STRUCTURE ANALYSIS SHOWS THAT ONE GAS, INC.'S ("ONE GAS") EQUITY RATIO IN 2021 AND 2022 WAS MATERIALLY LOWER THAN ITS TYPICAL EQUITY RATIO IN 2023-2025.[26] CAN YOU EXPLAIN WHAT HAPPENED IN 2021 THAT CAUSED ONE GAS'S EQUITY RATIO TO BE ABNORMALLY LOW IN 2021 AND 2022?

A. Yes. In February of 2021, Winter Storm Uri hit Texas and the midwestern U.S., knocking out electric power to millions of customers and constraining natural gas supplies, which pushed customer demand and natural gas commodity costs to record highs. Because of their obligation to serve, natural gas utilities cannot delay or defer purchasing natural gas in the winter, as many customers rely on natural gas to heat their homes. Consequently, as Moody's noted, the surge in natural gas commodity costs "strained liquidity for utilities in Texas, Oklahoma, Kansas, and neighboring states."[27] ONE Gas, Inc., reported more than $2 billion in additional natural

[26] I&E Exhibit No. 2, Schedule 2, page 6.
[27] S&P Capital IQ, "Gas utilities 'most severely affected' by winter storm prices, Moody's says," March 8, 2021.

gas commodity costs attributed to Winter Storm Uri.[28] However, it was able to secure a $2.5 billion term loan facility,[29] which may not have been possible but for its 'A' credit rating, historically strong balance sheet with approximately 60% equity,[30] and expectation for constructive regulatory treatment to recover its extraordinary natural gas commodity costs.[31] I emphasize that despite its strong balance sheet and expectation for cost recovery, S&P downgraded ONE Gas two notches from A to BBB+ on February 23, 2021. ONE Gas ultimately received approval in 2022 to securitize Winter Storm Uri purchased gas costs for its Oklahoma and Kansas utilities.[32] Therefore, Mr. Patel's 2021 and 2022 equity ratios for ONE Gas are uncharacteristic of its typical equity ratio and are skewed by the fact that it secured significant interim financing in order to maintain safe and reliable service in an emergency until it could receive cost recovery through securitization. If ONE Gas's more typical capital structure is considered, Peoples' requested equity ratio is lower than three of eight consolidated holding company equity ratios in Mr. Patel's proxy group.

Q. DO YOU HAVE ANY CONCERNS WITH MR. PATEL'S REVIEW OF RECENT AUTHORIZED EQUITY RATIOS FOR NATURAL GAS UTILITIES?

A. Yes, I have several concerns. In I&E Exhibit No. 2, Schedule 2, Page 17-18, Mr. Patel lists authorized ROEs and equity ratios in 2025 through May 27, 2026. While I do not dispute that

[28] S&P Capital IQ, "One Gas to pay $2.2B for gas purchases, secures $2.5B term loan facility," February 22, 2021.

[29] S&P Capital IQ, "One Gas to pay $2.2B for gas purchases, secures $2.5B term loan facility," February 22, 2021. I note that the $2.5 billion term loan facility was more than twice the size of ONE Gas's outstanding debt at the end of 2020.

[30] Source: S&P Capital IQ. Excluding 2021 and 2022, ONE Gas's consolidated holding company equity ratio ranged from 56.55% to 62.35% between 2015 and 2025, and averaged 59.83%.

[31] *See, e.g.*, S&P Capital IQ, "Gas utilities face multibillion-dollar financing needs after storm price surge," February 22, 2021.

[32] ONE Gas, Inc. SEC Form 10-K for the year ended December 31, 2022, at 18.

those are the equity ratios reported by S&P's Regulatory Research Associates ("RRA"), my first concern is that only 15 of 52 rate cases (i.e., less than 30 percent) in which an equity ratio was determined were for companies included in my or Mr. Patel's proxy group. Notably, the average authorized equity ratio for those 15 companies is approximately 53.89 percent (*see* **Peoples Natural Gas Exhibit No. JEN-7R**), which is not far removed from Peoples' requested equity ratio.

My second concern is that Mr. Patel's analysis fails to acknowledge that the authorized equity ratios reported by RRA report the percentage of equity to *total capital*, which may include short-term debt and non-investor supplied sources of capital that are not included in Peoples' capital structure. In other words, the reported authorized equity ratios may not be directly comparable to Peoples' capital structure. For example, Mr. Patel's analysis reports a 48.10 percent authorized equity ratio for Florida utility Peoples Gas System and a 41.95 percent authorized equity ratio for Consumers Energy Company in Michigan. Both Florida and Michigan include non-investor supplied capital (e.g., deferred taxes, customer deposits) in the ratemaking capital structure, which are not included in the ratemaking capital structure for Pennsylvania utilities. Using only investor supplied capital sources (i.e., common equity and long-term debt), the actual authorized equity ratios for Peoples System and Consumers Energy Co. are 54.70 percent[33] and 50.00 percent,[34] respectively.

Moreover, authorized equity ratios in 2025 and 2026 range from 43.17 percent to 61.05 percent. Peoples' requested equity ratio of 54.47 percent is well within this range. As further shown in Exhibit JEN-7R, more than 61 percent of the 52 rate cases with an equity ratio

[33] Florida Public Service Commission Order No. PSC-2025-0413-S-GU, at page 7.
[34] Michigan Public Service Commission Docket No. U-21860, Order at pages 162, 181.

determination in 2025 and 2026 are above Mr. Patel's recommended equity ratio of 50 percent, and more than one-third of those above 50 percent are equal to or greater than 54 percent. When his analysis is corrected to exclude non-investor supplied capital, and the distribution of authorized equity ratios is considered, it is clear that Peoples' requested equity ratio of 54.47 percent is not an outlier. Mr. Patel's recommended equity ratio is at the lower end of those authorized for other natural gas distribution utilities and is therefore not supported by his own evidence. I note that the reported authorized equity ratios of these cases may still include short-term debt, which I have not attempted to reconcile, indicating that the reported authorized equity ratios may be understated compared to Peoples' ratemaking capital structure that does not include short-term debt.

Lastly, even if these numbers were accurately cited, referencing an industry average authorized equity ratio is not a reasonable methodology to set a utility's authorized equity ratio. Each utility is different, and the operational and financial aspects that inform a utility's appropriate capital structure vary from utility to utility. For that reason, it is important to also review the range of authorized equity ratios. For example, the authorized equity ratios referenced by Mr. Patel range from 43.17 percent to 61.05 percent.[35] This further demonstrates that Peoples' requested 54.47 percent equity ratio is well within industry standards. The correct methodology is to use the utility's actual (or projected actual) capital structure if it is reasonable and consistent with industry standards for companies with commensurate risk, as explained earlier.

[35] *See*, **Peoples Natural Gas Exhibit No. JEN-7R**.

Q. WHAT IS YOUR RESPONSE TO MR. PATEL'S AND MR. GARRETT'S REFERENCE TO VICE CHAIR BARROW'S STATEMENTS REGARDING THE CAPITAL STRUCTURE?

A. I respectfully disagree with the conclusions that they drawn from Vice Chair Barrow's statements. Mr. Patel refers to Vice Chair Barrow's statement issued in Columbia Gas of Pennsylvania's 2025 rate case (Docket No. R-2025-3053499) in which she compared Columbia Gas of Pennsylvania's capital structure to the proxy group and asserted that a 50/50 capital structure was "a better representation of [Columbia Gas of Pennsylvania's] **actual** financial risk." (I&E Statement No. 2, p. 14; I&E Exhibit No. 2, Schedule 2, p. 4 (emphasis in original).) To the extent that Mr. Patel is suggesting that a proxy group's average capital ratios represent a specific utility's actual financial risk, I respectfully disagree. A company's actual financial risk is represented by the proportions of debt and equity on its books. Imputing a significantly more leveraged hypothetical capital structure substitutes Peoples' actual financial risk with higher financial risk that arises from greater leverage.

Similarly, Mr. Garrett refers to Vice Chair Barrow's April 16, 2026 statement in this proceeding. (OCA Statement 3, pp. 4-5.) Mr. Garrett interprets Vice Chair Barrow's statement as instruction that "the Commission must impute a ratemaking debt ratio of 51%, which is equal to the proxy group average". (OCA Statement 3, pp. 5-6 (emphasis added).) I respectfully disagree with Mr. Garrett's interpretation. First, I disagree with Mr. Garrett's use of consolidated holding company capital structures as the appropriate point of comparison for the reasons described earlier. Second, I respectfully disagree with Mr. Garrett's interpretation

that Vice Chair Barrow's statement "instructs" the imputation of the proxy group average capital structure. (OCA Statement 3, p. 6.)

Q. DO THE PROXY GROUP AVERAGE CONSOLIDATED HOLDING COMPANY CAPITAL STRUCTURES REPORTED BY MR. PATEL OR MR. GARRETT ACCURATELY REPRESENT THE FINANCIAL RISK OF REGULATED NATURAL GAS DISTRIBUTION UTILITIES?

A. No, they represent the financial risk of the consolidated holding companies that do not have a legal obligation to serve. The capital structures of the operating companies represent the true financial risk of regulated natural gas distribution companies like Peoples.

Q. HAVE OTHER UTILITIES EXPERIENCED ADVERSE FINANCIAL IMPLICATIONS AFTER A COMMISSION IMPUTED A HYPOTHETICAL CAPITAL STRUCTURE WITH SIGNIFICANT REDUCTIONS TO THE EQUITY RATIO?

A. Yes, they have. For example, in Case No. 23-894-GA-AIR, East Ohio Gas ("EOG") requested its actual common equity ratio of 61.09 percent,[36] while the Public Utility Commission of Ohio approved a 51.87 percent hypothetical common equity ratio.[37] Moody's subsequently downgraded EOG's credit rating one notch and retained a negative outlook, noting that "EOG's downgrade reflects the unfavorable outcome of the rate case which will lead to

[36] EOG's requested common equity ratio was later revised to 58 percent common equity prior to the evidentiary hearing.

[37] *In The Matter of the Application of the East Ohio Gas Company D/B/A Dominion Energy Ohio for Approval to Increase Natural Gas Rates*, Case No. 23-894-GA-AIR, Opinion and Order, June 26, 2025, at 56, 59.

increased pressure on the company's balance sheet."[38] Similarly, in Docket No. 22-057-03, Dominion Energy Utah ("DEU") requested its actual common equity ratio of 53.21 percent; however, the Public Service Commission of Utah authorized a hypothetical common equity ratio of 51 percent.[39] Afterwards, Moody's downgraded DEU's[40] credit rating one notch, explaining that "[DEU's] Baa1 rating is premised on its 51% equity capitalization, which is down from 55% as a result of a December 2022 Utah Public Service Commission (UPSC) rate order. While Moody's does not view the order to be a sign of regulatory contentiousness, it will increase the utility's leverage and reduce key financial metrics."[41] As such, if the Commission authorizes a hypothetical capital structure in this case that is materially more leveraged, Peoples could potentially face a credit rating downgrade.

Q. MR. GARRETT ASSERTS THAT THE COMPANY IS ENGAGING IN DOUBLE LEVERAGE THAT RESULTS IN "EXCESSIVE RETURNS." (OCA STATEMENT 3, P. 6.) PLEASE EXPLAIN THE TERM "DOUBLE LEVERAGE" AS USED BY MR. GARRETT?

A. The concept of "double leverage" refers to the financial practice in which a parent company borrows money to invest in the equity of its subsidiary. Mr. Garrett suggest that the Company is engaging in double leverage to the benefit of Essential Utilities shareholders and,

[38] Moody's Ratings, *Moody's Ratings downgrades East Ohio Gas Company to A3; outlook remains negative*, November 5, 2025, https://www.moodys.com/research/Moodys-Ratings-downgrades-East-Ohio-Gas-Company-to-A3-outlook-Rating-Action--PR_515224.

[39] *Application of Dominion Energy Utah to Increase Distribution Rates and Charges and Make Tariff Modifications*, Docket No. 22-057-03, Order, December 23, 2022, at 11, 13. Dominion Energy Utah's authorized equity ratio at the time was 55 percent.

[40] Note that Moody's refers to DEU as Questar Gas Company; Questar Gas Company was rebranded as DEU.

[41] Moody's Ratings, *Moody's downgrades Questar Gas to Baa1; stable outlook*, February 23, 2024, https://www.moodys.com/research/Moodys-downgrades-Questar-Gas-to-Baa1-stable-outlook-Rating-Action--PR_486058 (clarification added).

therefore, that Peoples' ratemaking capital structure should reflect the higher leverage at the parent company level.

Q. IS MR. GARRETT'S "DOUBLE LEVERAGE" ARGUMENT CONSISTENT WITH FINANCIAL THEORY REGARDING HOW INVESTORS DEVELOP THEIR RETURN REQUIREMENTS?

A. No, it is not. Financial theory specifies that it is the risk inherent in an investment that determines the cost of capital, not the source of the funds used to make an investment. For example, a utility's cost of debt is based on the risk of the utility, not on the risk of the debt investor supplying the capital. The same is true for equity capital.

From an external investor's perspective, the consolidated parent company must provide a return reflecting the risks of its constituent parts. As such, investors value the consolidated entity on a "sum-of-the-parts" basis, expecting each operating segment to provide its appropriate, risk-adjusted return. This is consistent with the standalone regulatory principle that requires that the utility rates reflect the costs, risks, and financial requirements of the operating utility that provides regulated service to customers. Under both financial and regulatory principles, it is the subsidiary utility's operating risk (i.e., the *use of funds*) that defines the capital structure and cost of capital, not the parent company or *source of funds*. Mr. Garrett's double leverage arguments, however, would require every affiliate within the corporate family to have the same cost of capital, regardless of differences in risk. As Dr. Roger Morin notes in his text New Regulatory Finance:

> Just as individual investors require different returns from different assets in managing their personal affairs, why should regulation cause parent companies making investment decisions on behalf of their shareholders to act

> any differently? A parent company normally invests money in many operating companies of varying sizes and varying risks. These operating subsidiaries pay different rates for the use of investor capital, such as long-term debt capital, because investors recognize the differences in capital structure, risk, and prospects between the subsidiaries. Yet, the double leverage calculation would assign the same return to each activity, based on the parent's cost of capital. Investors recognize that different subsidiaries are exposed to different risks, as evidenced by the different bond ratings and cost rates of operating subsidiaries. The same argument carries over to common equity. If the cost rate for debt is different because the risk is different, the cost rate for common equity is also different, and the double leverage adjustment shouldn't obscure this fact.[42]

Several financial texts support these principles. For example, in Principles of Corporate Finance, Brealey, Myers, and Allen state:

> In principle, each project should be evaluated at its own opportunity cost of capital; the true cost of capital depends on the use to which the capital is put. If we wish to estimate the cost of capital for a particular project, it is project risk that counts.[43]

Mr. Garrett's position implies that one investor who buys shares in a gas utility using cash (*i.e.*, equity) has a different return requirement than an investor who buys shares funded by a bank loan or using margin in a brokerage account. That is simply illogical. In an efficient market, identical assets have the same price, or value. Assets that are not identical will be priced according to each asset's risks and returns. As Dr. Roger Morin explains in New Regulatory Finance, "[e]quity is equity, irrespective of its source, and the cost of equity is governed by its use, by the risk to which it is exposed."[44]

---

[42] Roger A. Morin, New Regulatory Finance, Public Utility Reports, Inc., at 524-525 (2006).

[43] Richard A. Brealey, Stewart C. Myers, Franklin Allen, Principles of Corporate Finance, McGraw-Hill Irwin, 8th Ed., 2006, at 234.

[44] Morin, Roger A., New Regulatory Finance, Public Utilities Reports, Inc., 2006, at 523.

Q. HAVE OTHER REGULATORS CONSIDERED AND REJECTED THE CONCEPT OF DOUBLE LEVERAGE?

A. Yes. For example, the Maryland Public Service Commission came to a similar conclusion about the imputation of parent company debt or double leverage in a 2007 rate proceeding, stating:

> We reject People's Counsel's proposed capital structure [reflecting a double leverage adjustment] because it suffers from numerous flaws. First, it assumes that the rate of return depends on the source of capital rather than the risks faced by the capital.[45]

Similarly, the Tennessee Public Utility Commission also rejected double leverage arguments in a 2019 order, while emphasizing the comparability standard:

> The Consumer Advocate's witness recommends a rate of return that is over 120 basis points beneath the average return for gas utilities and almost 100 basis points beneath the average rate of return set for electric utilities. Given the large difference between Consumer Advocate witness Dr. Klein recommended double-leverage based rate of return of 5.93% and the average recent rates of return decisions for other companies, the panel found that adopting the Consumer Advocate's methodology would run counter to the comparability requirement of the *Hope* and *Bluefield* decisions. As such, the panel rejected the double leverage capital structure and rate of return proposed by the Consumer Advocate.[46]

The Regulatory Commission of Alaska has stated that "[i]n determining capital structure for ratemaking, regulators should set a capital structure that reflects the riskiness of the project and allows the company to attract new investors. 'The capital structure ratios

[45] Maryland Public Service Commission, Order No. 81517; Case No. 9092, *In the Matter of the Application of Potomac Electric Power Company for Authority to Revise its Rate and Charges for Electric Service and for Certain Rate Design Changes*, July 19, 2007. Clarification added.

[46] Tennessee Public Utility Commission, Amended Order, Docket No. 18-00017, *In re: Petition of Chattanooga Gas Company for Approval of an Adjustment in Rates and Tariff; The Termination of the AUA Mechanism and the Related Tariff Changes and Revenue Deficiency Recovery; and an Annual Rate Review Mechanism*, January 15, 2019 [citation from Amended Order omitted].

employed should be consistent with the prospective level of business risk of the enterprise and with similar risk companies whose capital structure ratios have found acceptance in the marketplace.'"[47] In addition, "[w]ithout a reasonable matching of business activities between the parent and subsidiary, if the parent's capital structure is used in rate making it reflects the business costs of the parent, rather than those of a prudently managed and regulated pipeline company."[48] Therefore, because the source of an investor's funds is not determinative of the investor-required return, Mr. Garrett's reference to the debt that is held at Essential Utilities is irrelevant.

Q. MR. PATEL AND MR. CICERO CALCULATE SAVINGS TO CUSTOMERS BASED ON HYPOTHETICAL CAPITAL STRUCTURES. (I&E STATEMENT NO. 2, PP. 18-19; CAUSE-PA STATEMENT 1, PP. 44-46.) DO YOU AGREE WITH THEIR CALCULATIONS?

A. No, I do not. Messrs. Patel's and Cicero's calculations assume that if the debt leverage in Peoples capital structure was increased from its requested actual equity ratio, that the cost of debt and cost of equity would stay the same. This is not a sound assumption. The cost of debt depends, in part, on the amount of financial risk associated with the proportion of debt in the capital structure.[49] While these witnesses suggest increasing leverage, they do not account for the cost implications of the additional long-term debt into their proposed hypothetical capital

47 Regulatory Commission of Alaska, Order No. 151; the TAPS Proceeding, p. 69.
48 *Id*.
49 The Commission has acknowledged that "there is a direct relationship between the cost of debt and the amount of financial risk shown by the debt ratio." See e.g., *Pa. PUC v. PECO Energy Company*, R-2020-3018929, Opinion and Order, at page 145 (June 22, 2020). See also, *Pa. PUC v. Columbia Gas of Pennsylvania*, R-2020-3018835, Opinion and Order entered February 19, 2021, at 116, where the Commission noted that Columbia Gas's "actual capitalization forms the basis upon which Columbia attracts capital. For example, proposed long-term debt cost rate of 4.73%, *infra*, fully reflects the capitalization determined by the Company to be appropriate."

structures. Having higher levels of debt increases financial risk, which increases the cost of debt and equity, all else equal. As explained by NARUC, "[a]s increasing financial leverage shifts the weight from common equity to lower cost debt, it also increases both the cost of debt and the cost of common equity. In practice, these offsetting impacts cancel each other out over a wide range of capital structure ratios." (Peoples Statement No. 15, pp. 57-58.) As such, these witnesses' analyses are incomplete and do not reflect the higher costs of debt and equity that would result from significantly more debt leverage. Lastly, their acceptance of (or lack of objection to) Peoples' proposed cost of debt is incongruent with the recommendation to impute a more leveraged capital structure.

Q. MR. GARRETT CITES CAPITAL STRUCTURES OF OTHER INDUSTRIES. (OCA STATEMENT 3, PP. 54-56.) IS THIS DATA RELEVANT IN THIS PROCEEDING?

A. No, it is not. Non-regulated companies do not have an obligation to serve like regulated utilities do. While companies in other sectors have more flexibility as to when they issue debt or equity, raise or lower prices, change product offerings or even temporarily cease operations based on changing economic and capital market conditions, regulated utilities do not have those options because the obligation to serve compels utilities to provide service to all customers in their footprint without discrimination, and to meet customers' energy demands every day regardless of the prevailing economic or capital market environment. As explained in my Direct Testimony, unlike non-regulated firms, a regulated utility cannot decide to whom it provides utility service in its footprint, how much service it delivers, nor when it provides service; for these reasons, utilities require more financial flexibility than unregulated entities and the ability to access capital in all market environments. (Peoples Statement No. 15, pp. 14-

15.) Mr. Garrett acknowledges that he is not basing his capital structure recommendation on any industry or company outside of the proxy group; the Commission should similarly not give any weight to these non-utility industry capital structures. (OCA Statement 3, p. 56.)

Q. HAS YOUR RECOMMENDATION RELATED TO PEOPLES' CAPITAL STRUCTURE IN THIS PROCEEDING CHANGED?

A. No, it has not. As shown in **Peoples Natural Gas Exhibit No. JEN-6R**, the Company's proposed capital structure of 54.47 percent common equity and 45.53 percent long-term debt remains typical of its peers and meets the Commission's standard for adopting a utility's actual capital structure. The Witnesses' recommendations to impute a hypothetical capital structure should be rejected.

IV. RESPONSE TO GOVERNOR SHAPIRO'S COST OF CAPITAL PROPOSALS

Q. PLEASE SUMMARIZE GOVERNOR SHAPIRO'S LETTER TO UTILITY EXECUTIVES.

A. On April 29, 2026, Governor Shapiro issued a letter to Pennsylvania utility leaders identifying three asserted "commonsense practices" that his Administration intends to use as benchmarks in evaluating utility rate case proposals. (I&E Exhibit No. 2, Schedule 2, pp. 13-16.) First, he proposes that utilities should seek to raise capital through the most cost-effective sources, including greater reliance on debt, including Department of Energy loan guarantees, and any proposed ratemaking equity share above the equity employed by the utility's parent holding company would require "extraordinary justification." Second, when requesting new revenue, utilities should clearly explain why the proposed investments are necessary, using transparent

data to identify the specific reliability or safety concern being addressed or to demonstrate through a cost-benefit analysis that the investment will produce meaningful customer benefits. Third, he proposes that utilities should provide "transparent, justifiable equity returns", either through a public competitive process for a benchmark portion of incremental equity or by limiting the requested ROE to a formula based on the current 10-year Treasury yield plus the five-year median of the equity risk premium as published in the *Federal Reserve's Financial Stability Reports*.

Q. WHAT IS YOUR OVERARCHING REACTION TO GOVERNOR SHAPIRO'S LETTER?

A. Overall, these proposals raise a common set of concerns regarding the potential shift away from established, case-specific regulatory principles toward more prescriptive or formulaic approaches. In particular, they may constrain utilities' ability to determine appropriate capital structures based on their own risk profiles, impose additional and potentially duplicative requirements for demonstrating the prudence and benefits of investments, and rely on simplistic metrics that may not fully capture forward-looking capital market conditions or investors' return requirements. Taken together, these elements increase regulatory instability and uncertainty, and risk outcomes that may not adhere to the constitutional standards established in the *Hope* and *Bluefield* Supreme Court decisions that reinforce the regulatory compact and enable utilities to access the necessary capital to maintain safe and reliable utility service. I address these concerns in greater detail in this section.

Q. FOR CONTEXT, PLEASE REITERATE THE STANDARDS FOR SETTING A FAIR RETURN FOR A PUBLIC UTILITY ESTABLISHED BY THE *HOPE* AND *BLUEFIELD* SUPREME COURT DECISIONS.

A. As explained in my Direct Testimony, **Peoples Statement No. 15**, at pages 12 and 13, public utility regulation is grounded in the principle that utilities are entitled to a fair rate of return sufficient to attract the capital required to provide safe and reliable public utility service for customers at reasonable rates. In the seminal *Hope* and *Bluefield* decisions, the Supreme Court recognized three foundational standards for establishing a fair return for a public utility; specifically, that the fair return should be: (1) commensurate with returns investors expect to earn on other investments of similar risk (the "comparable return" standard); (2) sufficient to assure confidence in the company's financial integrity (the "financial integrity" standard); and (3) adequate to maintain and support the company's credit and to attract capital (the "capital attraction" standard). Importantly, a fair and reasonable rate of return satisfies all three standards. Mr. Patel and Mr. Garrett acknowledge these Constitutional standards for setting the fair return. (I&E Statement No. 2, p. 4; OCA Statement 3, p. 12.) In *Hope*, the Supreme Court further noted that it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business, including service on the debt and dividends on the stock.

Importantly, in *Hope,* the Supreme Court concluded that "it is the result reached not the method employed which is controlling."[50] In other words, regardless of the methodologies used to determine the just and reasonable ROE, the ultimate result must meet the three

[50] *Federal Power Company v. Hope Natural Gas*, 320 U.S., at 602.

standards established by the Supreme Court. In my opinion, the ROE estimate that would result from Governor Shaprio's proposed methodology would fail to meet each of the *Hope* and *Bluefield* "comparable return," "financial integrity," and "capital attraction" standards.

Q. DOES GOVERNOR SHAPIRO'S LETTER EXPLAIN HOW THE PROPOSAL WOULD RESULT IN AN ROE THAT IS COMPARABLE TO RETURNS AVAILABLE TO OTHER INVESTMENTS OF SIMILAR RISK AS ESTABLISHED BY THE *HOPE* AND *BLUEFIELD* DECISIONS?

A. No, it does not. Governor Shapiro's letter does not explain how his proposal meets the *Hope* and *Bluefield* "comparable return" standard. In fact, Governor Shapiro's proposal would not account for differences in risk in a Pennsylvania utility's ROE for ratemaking purposes. Instead, all utilities before the Commission at a given point in time – whether electric, natural gas, or water utilities – would receive the same ROE, assuming the same risk-free rate and five year average equity risk premium was used. In other words, utility ROEs in Pennsylvania would only differ based on timing and the corresponding level of risk-free rate and equity risk premium. Such an approach is counter to financial principle that the risk of the investment drives the cost of capital.

Q. DOES GOVERNOR SHAPIRO'S LETTER EXPLAIN HOW THE PROPOSAL WOULD RESULT IN AN ROE THAT IS SUFFICIENT TO ASSURE CONFIDENCE IN THE COMPANY'S FINANCIAL INTEGRITY AND ADEQUATE TO MAINTAIN AND SUPPORT THE COMPANY'S CREDIT AND TO ATTRACT CAPITAL?

A. No, it does not. Governor Shapiro's letter does not explain or appear to consider how his proposal would affect Pennsylvania utilities' credit profile, financial integrity, and ability to

attract capital. Reducing both the ROE and ratemaking equity ratio each by hundreds of basis points under Governor Shapiro's proposal would place significant pressure on Peoples' – and all Pennsylvania utilities – credit profile, financial integrity, and ability to attract capital. Additionally, the significant shift away from the transparent and predictable regulatory framework under which the Commission has operated for decades would substantially increase the regulatory risk for all Pennsylvania utilities, thus increasing the cost of capital to customers. As explained in my Direct Testimony, **Peoples Statement No. 15**, at pages 49 and 50, the regulatory environment weighs heavily in the assessment of a utility's risk and its credit rating. In fact, the rating agencies and the market has reacted negatively to the Governor's proposal, demonstrating that the financial community perceives that the proposal may adversely affect Pennsylvania utilities' risk, credit profile, and financial integrity.

Q. PLEASE EXPLAIN THE REACTION FROM THE FINANCIAL COMMUNITY TO GOVERNOR SHAPIRO'S LETTER.

A. In the two days following the Governor's letter, the stock prices for all major utilities providing service in Pennsylvania fell, demonstrating an increase in capital costs for utility investments in Pennsylvania, all else equal. S&P's Regulatory Research Associates expressed its view that "this most recent action further increases regulatory risk for utility investors in the state and could lead to a change in the state's ranking in the next comprehensive assessment."[51] More recently, Moody's Ratings published a report on May 19, 2026, noting that "[t]he governor's letter is credit negative because it represents a material escalation of political involvement in

[51] S&P Regulatory Research Associates, "Pa. governor tells utilities to 'change behaviors causing rate increases,'" May 1, 2026.

the utility rate-setting process that could weaken the predictability and consistency of the state's regulatory framework and the estimated $24 billion of capital investment that state utilities have planned through 2028."[52] While the intention of the policies contained in the Governor's letter is to lower costs to customers, so far, the effect has been upward pressure on capital costs.

A. Proposed ROE Methodology

Q. WHAT ARE YOUR CONCERNS WITH THE ROE BENCHMARKING PROPOSAL IN GOVERNOR SHAPIRO'S LETTER?

A. My principal concern is that the proposal would replace a rigorous, case-specific evidentiary process with a formulaic benchmark based on the 10-year Treasury yield and a trailing equity risk premium measure. I emphasize that the current regulatory process is already transparent and subject to significant scrutiny by the Commission, I&E, and other intervenors through the submission of expert testimony, multiple cost-of-equity models, discovery, and is subject to cross-examination. Further, the Commission regularly publishes its DCF and CAPM barometer estimates for each sector on a quarterly basis in its Quarterly Earnings Summary Reports, which provides a high level of transparency. A formulaic benchmark cannot substitute for a comprehensive analysis of current capital market conditions, investor expectations, utility-specific risk, and the need to maintain financial integrity and attract capital.

[52] Moody's Ratings, *Political intervention in rate process is credit negative for electric, gas and water utilities*, May 19, 2026, at 1.

Q. IS IT PRUDENT TO RELY ON A SINGLE FORMULA TO DETERMINE THE COST OF EQUITY?

A. No. The cost of equity is not observable in the market and must be estimated. Although various quantitative models have been developed to estimate the cost of equity, no single model or formula can precisely determine the cost of equity in all market environments. Cost-of-equity estimation requires judgment and it is prudent and consistent with investor practice to use multiple approaches, including the DCF model, CAPM, Risk Premium analysis, and other relevant market evidence. Each methodology has strengths and limitations, and each may become more or less informative depending on prevailing market conditions. Limiting the ROE determination to a single formula with pre-determined inputs would constrain regulatory judgment and could produce results that either understate or overstate the investor-required return at a given point in time.

Q. WHY IS THE PROPOSED EQUITY RISK PREMIUM APPROACH PROBLEMATIC?

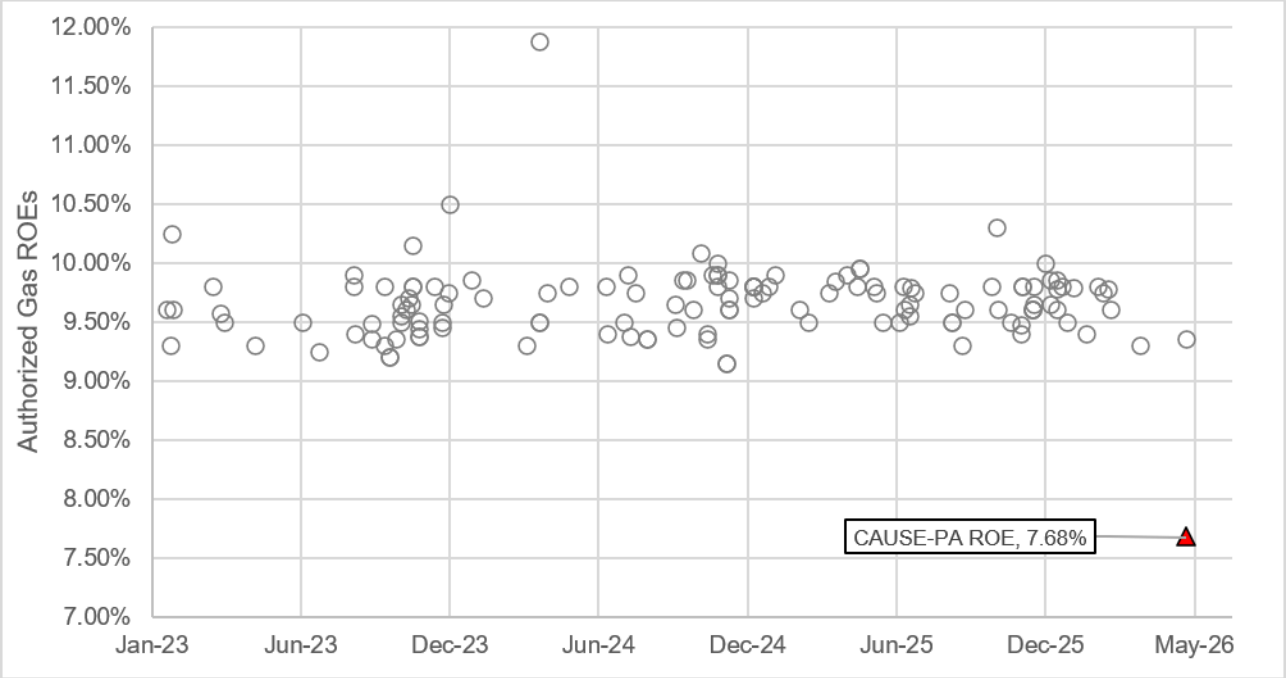
A. First, as noted earlier, the proposed approach would not distinguish differences in risk among each utility. Second, the proposed equity risk premium approach is problematic because it results in an ROE that may not necessarily reflect the return investors currently require to commit capital to a specific regulated utility, nor is comparable to returns available to other utilities as required by *Hope* and *Bluefield*. Assuming for the sake of argument Mr. Cicero's 7.68 percent ROE estimate that he asserts is calculated according to Governor Shapiro's proposed methodology, an ROE of 7.68 percent is only approximately 165 basis points (1.65

percent) above the current yield on Baa-rated utility bonds.[53] Equity investors bear greater risk than debt investors because the return to equity investors are not contractually guaranteed and are subordinate to debt investors. In my opinion, it simply is not rational to assume that equity investors would be willing to accept a premium less than the current rate of inflation for taking on the risk of utility equity investment, particularly when there are comparable investment alternatives (i.e., other natural gas utility investments) that offer significantly higher returns.

Figure 5 below illustrates the extreme departure of the 7.68 percent ROE produced by the Governor's proposed methodology as calculated by Mr. Cicero with recent authorized ROEs available for other natural gas utilities. As shown in Figure 5, the ROE produced by Governor Shapiro's proposal would not meet the *Hope* and *Bluefield* comparable return standard.

[53] Source: Bloomberg Professional. The 30-day average yield on Moody's Baa-utility bond index as of May 31, 2026 is approximately 6.04 percent.

Figure 5: Governor Shapiro's Proposed ROE Methodology vs. Authorized ROEs for Natural Gas Utilities (Jan. 2023 – May 2026)[54]



Q. WHAT CONCERNS DO YOU HAVE WITH USING THE FEDERAL RESERVE'S *FINANCIAL STABILITY REPORT* AS THE SOURCE FOR AN EQUITY RISK PREMIUM?

A. The Federal Reserve's *Financial Stability Report* is not designed to estimate the cost of equity for regulated utilities. It is a financial stability monitoring document intended to support the central bank's objectives of price stability, full employment, a safe and sound banking system, and an efficient payments system.[55] Its equity risk premium estimates are not intended to

[54] Sources: CAUSE-PA St. No. 1, at 43-44; Regulatory Research Associates. Excludes limited issue rider and transmission cases.

[55] See, May 2026 *Financial Stability Report*, page iii, accessible at: https://www.federalreserve.gov/publications/files/financial-stability-report-20260508.pdf. Past reports accessible at: https://www.federalreserve.gov/publications/financial-stability-report.htm.

represent the return required by investors to commit capital to a particular regulated utility; instead, the purpose of the *Financial Stability Report* is to identify potential vulnerabilities in the financial and banking systems. In addition, the use of a five-year median equity risk premium is backward-looking and slow to adjust to current market conditions. Because the utility cost of equity is forward-looking, a trailing median may understate the current required return in a rising-interest rate or increasing risk environment, precisely when the utility most needs access to capital. By contrast, a utility's cost of equity is forward looking and reflects the return investors currently require to commit equity capital to a particular utility. Lastly, the *Financial Stability Report* assumes that a one-year forward earnings yield[56] represents investors' long-term required return on equity for the market. However, the earnings yield is not the same as the return shareholders require. A company's value depends on earnings and cash flows far beyond the next 12 months and corporate finance theory values securities based on expected cash flows over the long-term. Investors receive value from future earnings growth expectations beyond 12 months, including returns from dividend growth and share repurchases.

Q. IS THE 10-YEAR TREASURY YIELD THE APPROPRIATE BENCHMARK FOR UTILITY ROE DETERMINATIONS?

A. No, it is not. Financial theory provides that the risk-free rate should match the life of the underlying investment. Utility assets are long-lived, often with service lives of 30 years or more. For that reason, the 30-year Treasury bond is commonly used as a benchmark risk-free

[56] The Financial Stability Report explains that it calculates its equity risk premium as the difference between the forward earnings-to-price ratio of Standard & Poor's 500 firms and the expected real Treasury yields, based on expected earnings for 12 months ahead. See, May 2026 *Financial Stability Report*, page 7.

rate in utility cost-of-capital analysis. Using the 10-year Treasury yield creates a maturity mismatch and does not appropriately reflect the long-term nature of utility infrastructure investment.

Q. WHAT ARE THE PRACTICAL IMPLICATIONS OF THE ROE LEVELS IMPLIED BY GOVERNOR SHAPIRO'S LETTER?

A. The practical implication is that the proposed benchmarks may result in ROEs substantially below returns available to other utilities. According to Mr. Cicero, the Governor's proposed formula could produce an ROE of approximately 7.68 percent. That result would be materially below all natural gas distribution utility authorized ROEs in at least the past 46 years,[57] and, is closer to returns on utility bonds without providing the protections associated with debt ownership. Such an outcome raises serious concerns under the comparable risk, capital attraction, and financial integrity standards established by *Hope* and *Bluefield*.

Q. ARE THERE RECENT EXAMPLES THAT DEMONSTRATE THE EFFECT OF ADVERSE REGULATORY OUTCOMES ON A UTILITY'S ABILITY TO ACCESS TO CAPITAL?

A. Yes. Connecticut provides a recent example. Avangrid Inc. subsidiaries Connecticut Natural Gas Corp ("CNG"), Southern Connecticut Gas ("SCG"), and United Illuminating experienced restricted access to capital and higher borrowing costs in 2024 after an adverse regulatory decision for United Illuminating in Connecticut in 2022. In testimony filed before the Connecticut Public Utilities Regulatory Authority ("PURA") in Docket No. 24-10-04, United

[57] Source: RRA.

Illuminating explained that on November 15, 2023, Avangrid attempted to place a bond issuance for five of its operating affiliates, including United Illuminating, CNG, and SCG. On the day of pricing, the subscriptions sought for SCG and CNG were only roughly 50 percent fulfilled. The Revenue Requirements Panel explained:

> After some additional negotiation, Avangrid secured the full financing level sought for SCG and CNG and priced the transaction on the following day; however, the credit spreads were wider than anticipated for all three companies, raising the financing cost by approximately 10-15 basis points, or by approximately $300,000-$450,000 annually. The bankers informed Avangrid that the difficulty in fulfilling the necessary subscription levels and the wider credit spreads attracted **were caused in part by the limited interest to invest in Connecticut utilities due to concerns over the regulatory environment impacting current ratings.**[58]

I emphasize that although CNG and SCG were ultimately able to access capital, it was at a less competitive price and higher premium that their customers will ultimately bear for the term of the loan. This example illustrates that regulatory outcomes can directly affect investor willingness to provide capital and the cost at which that capital is available.

Q. HOW HAS THE MARKET REACTED TO UNDULY LOW AUTHORIZED ROES?

A. The market has reacted adversely to unduly low authorized ROEs that are below industry benchmarks and expectations. The consequences of Connecticut's restrictive regulatory environment also extended to other Connecticut utilities. In 2024, S&P and Moody's downgraded the Avangrid utilities, as well as Eversource Energy and its subsidiaries that operate in Connecticut due to highly restrictive regulatory outcomes. In

[58] Connecticut PURA Docket No. 24-10-04, Direct Testimony of the Revenue Requirements Panel, at 23-24, accessible at: https://www.dpuc.state.ct.us/dockcurr.nsf/8e6fc37a54110e3e852576190052b64d/d3b44da492184a1285258bd30063f5d0/$FILE/17844817.pdf/Exh%20UI-RRP-1%20Revenue%20Requirement%20Testimony.pdf

discussing Eversource's downgrade, S&P noted that adverse orders for the Avangrid utilities increased Eversource Energy's regulatory risk:

> On Nov. 18, 2024, the Connecticut Public Utilities Regulatory Authority (PURA) issued final rate-case orders for Connecticut Natural Gas Corp. and Southern Connecticut Gas Co., which included material base-rate decreases for both utilities. These rate orders follow a recent pattern of adverse regulatory developments for investor-owned utilities operating in Connecticut, which we believe has increased business risk for Eversource Energy and its Connecticut-based subsidiaries.[59]

Both S&P Global Ratings and its affiliate RRA downgraded their assessment of Connecticut's regulatory environment to the lowest tier. Further, Eversource Energy announced that it would reduce investment in Connecticut by up to $500 million over five years due to a lack of alignment between state policy and regulatory decisions.[60] Similarly, Exelon announced that it would reduce capital spending at Commonwealth Edison following an adverse Illinois regulatory decision, with management explaining that the company could not invest at the same pace under an ROE that did not fairly recognize its cost of financing.[61] As a result, Eversource's Connecticut utilities and Commonwealth Edison will have reduced access to capital from its parent relative to its affiliates in more constructive jurisdictions. These examples demonstrate that regulatory decisions can affect both access to capital and the level of investment directed to a particular jurisdiction.

When commissions have authorized ROEs below 9.0 percent, it has resulted in higher capital costs that are borne by customers. For example, in November 2021, the Arizona

[59] S&P Global Ratings, RatingsDirect, "Eversource Energy Issuer Credit Rating Lowered To 'BBB+' From 'A-'; Subsidiaries Ratings Also Lowered; Outlooks Stable," December 9, 2024.
[60] See, Eversource Energy's Q1 2024 earnings transcript, accessible at: https://investors.eversource.com/static-files/9fb99d29-bfeb-408f-a44a-e63ebb5f1416
[61] See, Exelon Corporation Q4 2023 Earnings Call transcript.

Corporation Commission ("ACC") authorized an ROE of 8.70 percent for Arizona Public Service Company ("APS"), a large vertically integrated electric utility. The market's reaction to this decision was negative and immediate. All three major credit rating agencies (S&P, Moody's, and Fitch) downgraded the credit rating for APS and its parent holding company. RRA commented that the decision was "negative from an investor perspective" that imposed "numerous disallowances on the utility, and has garnered strong reactions in the investment community."[104] RRA further noted that the decision was "expected to impede APS' ability to earn its authorized return in the first year of new rates."[105] Lastly, RRA lowered the ranking of Arizona regulation to Below Average/3, its lowest ranking.

The stock price of APS's parent company, Pinnacle West Capital Corporation, declined by approximately 28 percent. Even though APS's authorized ROE was increased more recently, its credit ratings were not increased back to prior levels; lower credit ratings lead to a higher cost of debt, which ultimately results in higher bills for customers. Despite a decision in March 2024 that increased the authorized ROE to 9.55 percent, APS's credit rating has remained the same.

Further, it is notable that APS issued long-term, senior unsecured bonds at least once each year from 2014 through 2021 at coupon rates below five percent, particularly 2.20 percent on August 11, 2021, prior to the ACC authorizing APS's 8.70 percent ROE. While APS was able to issue debt afterwards, it did so at a greatly increased price, a 6.35 percent coupon rate on November 4, 2022.[62] While the Moody's A-rated utility bond yield increased from a spot rate of 3.04 percent on August 11, 2021 to 6.05 percent on November 4, 2022,[63] that 301 basis

[62] Moody's Ratings, Arizona Public Service Company.

point increase is far below the 415 basis point increase that APS experienced. Moreover, APS' customers are responsible for paying that additional 114 basis point spread through December 2032, even though APS's authorized ROE was later increased. This example demonstrates that while a utility may be able to attract capital when its ROE is set below the cost of equity, it faces increased costs of doing so, which can have long-term negative impacts on customers.

B. Capital Structure Discipline

Q. WHAT IS YOUR PRIMARY CONCERN WITH THE CAPITAL STRUCTURE PROPOSAL IN GOVERNOR SHAPIRO'S LETTER?

A. My primary concern is that the proposal would require the use of the parent holding company's capital structure to determine the operating utility's ratemaking capital structure. I explained the reasons why the operating company capital structure is the appropriate basis to set the ratemaking capital structure earlier in Section III. Setting the ratemaking capital structure based on the capital structure of the consolidated parent company is inconsistent with the standalone ratemaking principle discussed earlier and may not reflect the operating utility's specific risks, obligations, financing needs, or cost of service. The obligation to serve rests with the operating utility, not the holding company parent. Because the operating utility must be able to access capital in all market conditions to meet that obligation, it may require a capital structure with more equity than the consolidated holding company to maintain financial flexibility, as explained in Section III.

Q. DOES THE FACT THAT PEOPLES' FINANCING IS PROVIDED THROUGH ITS PARENT CHANGE YOUR VIEWS REGARDING STANDALONE RATEMAKING PRINCIPLES?

A. No. The fact that Peoples obtains capital through its ultimate parent company, Essential Utilities, Inc., does not undermine the standalone ratemaking principle. The standalone ratemaking principle requires that the utility rates reflect the costs, risks, and financial requirements of the operating utility that provides regulated service to customers. The fact Essential is the ultimate source of Peoples' capital does not justify mechanically imputing Essential's consolidated capital structure to Peoples for ratemaking purposes.

Q. COULD RELYING ON THE CONSOLIDATED HOLDING COMPANY'S CAPITAL STRUCTURE PRODUCE INEQUITABLE OUTCOMES?

A. Yes. The proposal could produce inequitable and arbitrary outcomes because two operating utilities with identical operations, customers, and risk profiles could receive different authorized capital structures solely because their parent companies have different corporate structure and financing policies at the consolidated holding company level. Under Governor Shapiro's proposal, a utility owned by a conservatively financed pure-play utility holding company could be treated differently than an identical utility owned by a more leveraged, diversified energy company. In that situation, the regulated utility's ratemaking capital structure would be driven by the parent's consolidated financing choices rather than the utility's own risk profile and service obligations. As explained earlier, the cost of capital depends on the underlying risk of the investment, not on a company's corporate structure or source of capital.

Q. HOW COULD THE USE OF A HOLDING COMPANY CAPITAL STRUCTURE AFFECT CUSTOMERS?

A. Imputing the parent company's higher financial risk to the operating utility could harm customers over time. If a regulatory regime requires an operating utility to use a capital structure with insufficient equity, credit rating agencies may view the utility as financially weaker, which can increase the risk of credit downgrades and raise the cost of both debt and equity capital. Those higher financing costs ultimately flow through to customers in future rates. Any near-term savings from a lower equity ratio may therefore be offset, or more than offset, by higher borrowing costs, increased financial risk, and reduced access to capital.

Q. DOES ENCOURAGING GREATER RELIANCE ON LOWER-COST DEBT NECESSARILY REDUCE CUSTOMER COSTS?

A. No. Although debt is typically less expensive than equity, increasing debt does not automatically reduce the overall cost of capital or customer costs over the long term. Higher leverage increases financial risk, which can weaken credit metrics, reduce financial flexibility, and place pressure on credit ratings. To compensate for greater financial risk, both debt and equity investors will then require higher returns. Debt lenders may demand higher interest rates or more restrictive terms. Similarly, equity investors will require a higher return to compensate for greater financial risk as increased debt erodes the cushion of earnings to shareholders that have a subordinate claim on earnings after debt is paid. As a result, excessive reliance on debt can increase, rather than decrease, total financing costs and can increase longer-term costs for customers.

C. Competitive Equity Auction Framework

Q. WHAT IS YOUR CONCERN WITH A PROPOSED COMPETITIVE EQUITY AUCTION FRAMEWORK?

A. The proposed competitive equity auction framework is vague, untested, and potentially disruptive to utility financing. Governor Shapiro's letter refers to a public process with competitive bidding by multiple participants to establish a fair market cost of equity. However, no details of how such an auction would function in practice were explained in the letter. It is not evident who would participate, what instrument would be sold, how ownership rights would be defined, how liquidity would be provided, or how the auction result would translate into a durable regulatory ROE for an operating utility. details are scant, and it is unlikely that a novel equity interest instrument would be equivalent to the rights bestowed to common stock ownership. Nor have the mechanics regarding how capital recovery and returns (i.e., dividends) would be distributed to investors. Further, there appears to be no established resale market, which would inhibit liquidity and price discovery and would likely reduce investor demand or require higher returns to compensate for those constraints. Investors would likely be reluctant to purchase an instrument with limited upside and uncertain liquidity when they can purchase common stock in other publicly traded utilities with defined dividend policies, market liquidity, and the potential for capital appreciation.

Q. HAS SUCH A COMPETITIVE EQUITY AUCTION BEEN TESTED IN UTILITY REGULATION?

A. To my knowledge, no competitive equity auction of this type has been implemented for a regulated utility. That absence of precedent is significant. Utility financing is not an appropriate

area for experimental mechanisms that may impair access to capital or disrupt established financing practices. Because utilities have an obligation to provide safe and reliable service and require consistent and reliable access to capital under a wide range of market conditions, introducing an untested auction framework could create unintended consequences for both utilities and customers.

D. Customer Impacts and Access to Capital

Q. DO CONCERNS REGARDING CUSTOMER AFFORDABILITY CHANGE THE ANALYSIS OF A FAIR RETURN?

A. Customer affordability is an important concern, and I do not dismiss the effect that any rate increase can have on customers. However, affordability concerns do not justify overriding the fair return standards established by *Hope* and *Bluefield*. A utility's authorized return must be sufficient to maintain financial integrity and attract capital on reasonable terms. If the allowed return is set too low, the utility may face higher financing costs, weaker credit metrics, reduced investor demand, and diminished access to capital. Those consequences ultimately harm customers through higher long-term financing costs and potential reductions in service quality or infrastructure investment. As explained by the National Association of Regulatory Utility Commissioners in an April 2020 report:

> Customers benefit by having a financially stable utility that has the earnings and cash flow sufficient to attract equity and debt on reasonable terms, and the resulting ability to provide safe, reliable, and affordable utility service. Receiving a reasonable authorized ROE and capital structure from regulators is an important contributor to financial stability. The customer benefits that result from being served by a financially healthy utility outweigh the illusory short-term "benefits" of a negative regulatory climate that heightens regulatory risk.

***

> Regulators are charged with balancing the interests of investors and customers. Utility management has a fiduciary responsibility to deploy investors' capital productively. Investors recognize the importance of regulatory and stakeholder relationships and expect utility management to provide safe, reliable, and affordable service to customers in order to preserve and enhance the value of their invested capital. In many ways, the interests of investors and customers are aligned and not in conflict and can become more aligned through regulatory policy. **Regulators are more effective at serving customers when they harness investors' desire to provide capital rather than constrain it**.[64]

E. Conclusion

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS REGARDING GOVERNOR SHAPIRO'S LETTER.

A. Although the opinion in Governor Shapiro's letter are framed as customer affordability measures, they raise concerns from a cost of capital and regulatory policy perspective. The proposals would move away from longstanding established regulatory principles and toward prescriptive formulas, and an untested competitive equity auction framework. Those approaches are inconsistent with the standalone ratemaking principle and may fail to satisfy the comparable risk, financial integrity, and capital attraction standards established by *Bluefield* and *Hope*. In particular, imputing a holding company capital structure to an operating utility would misstate the utility's cost to serve customers and could weaken the utility's financial profile. Likewise, formulaic ROE benchmarks based on the 10-year Treasury yield and an unrelated trailing equity risk premium measure may fail to reflect current market conditions, utility-specific risks, or investors' forward-looking return requirements.

[64] *Cost of Capital and Capital Markets: A Primer for Utility Regulators*, prepared for USAID by the National Association of Regulatory Utility Commissioners (NARUC), April 2020, at 8 (emphasis added).

Customer affordability is an important objective, but long-term affordability depends on regulatory policies that support financial integrity, predictable capital recovery, and continued access to capital on reasonable terms. Although an artificially low ROE may create the appearance of lower costs in the near-term, the end result would likely be an increase in costs to customers over the long term. Maintaining the established regulatory framework that relies on a rigorous, transparent, evidence-based, and case-specific review of each utility's cost of capital best balances customer affordability with the utility's obligation to provide safe and reliable service and is most consistent with the standards established by *Hope* and *Bluefield*.

V. COMPARABLE RETURNS FOR NATURAL GAS UTILITIES

Q. MR. PATEL GIVES ONE-THIRD WEIGHT TO THE NATIONAL AVERAGE AUTHORIZED RETURN FOR NATURAL GAS UTILITIES IN DEVELOPING HIS RECOMMENDED ROE. (I&E STATEMENT NO. 2, PP. 37-38.) DO YOU AGREE THAT NATIONAL AVERAGE AUTHORIZED ROES SHOULD BE GIVEN EXPLICIT WEIGHT IN DETERMINING THE APPROPRIATE ROE FOR PEOPLES IN THIS PROCEEDING?

A. No, I do not. National average returns must be placed in the proper context in order to be useful. While I agree that investors consider authorized returns in other states in assessing the reasonableness of the authorized ROE for Peoples, it is important to remember that authorized ROEs are a trailing indicator because they are established based on market conditions that existed at the time those proceedings were litigated and decided. A more robust approach would be to model the relationship between the utility equity risk premium and the prevailing

interest rate environment like I have done in my Bond Yield Plus Risk Premium analysis. Moreover, simple benchmarking against authorized returns in other jurisdictions does not reflect the specific risks facing Peoples. In short, authorized returns in other jurisdictions may serve as a broad reference point, but they cannot replace a fact-specific evaluation of current market evidence and Peoples' particular risk profile. For that reason, I continue to believe that the appropriate ROE for Peoples should be based primarily on market-based cost-of-equity analyses, considered in conjunction with the Company's specific business and financial risks.

Q. MR. PATEL ARGUES THAT YOUR RECOMMENDED ROE IS TOO HIGH RELATIVE TO AUTHORIZED RETURNS FOR NATURAL GAS UTILITIES ACROSS THE COUNTRY. (I&E STATEMENT NO. 2, P. 63.) WHAT IS YOUR RESPONSE?

A. I disagree. While authorized ROEs from other jurisdictions can provide useful context, they are not a substitute for a market-based assessment of investors' required return. The returns cited by Mr. Patel reflect different time periods, regulatory environments, capital structures, and utility-specific circumstances, and therefore do not establish the appropriate ROE for Peoples. More importantly, investors make decisions based on current and expected future conditions, not historical regulatory outcomes. My recommendation is based on market-based ROE analyses and reflects the specific risks facing Peoples, including its significant capital investment program, bypass risk, financing needs, and the importance of maintaining access to capital. Accordingly, I do not believe that comparisons to national average authorized ROEs demonstrate that my recommended ROE is excessive or inconsistent with the return required by investors today.

Q. IN SUMMARY, WHAT IS YOUR RECOMMENDATION REGARDING THE WEIGHT GIVEN TO COMPARABLE AUTHORIZED RETURNS?

A. Comparable authorized returns can provide useful context concerning industry practice broadly, but they should not be viewed in isolation or as a substitute for current market evidence of the forward-looking cost of equity. Primary weight should be given to market-based methods designed to estimate investors' required return, while also considering Peoples' specific risk profile, capital requirements, and need to maintain access to capital. Taken together, those considerations support the Company's requested return on equity.

VI. CURRENT CAPITAL MARKET ENVIRONMENT

Q. MR. PATEL DISCUSSES RECENT AND PROSPECTIVE MONETARY POLICY ACTIONS BY THE FEDERAL RESERVE. (I&E STATEMENT NO. 2, PP. 51-52.) DO REDUCTIONS IN THE FEDERAL FUNDS RATE MEAN THAT REDUCTIONS IN LONG-TERM GOVERNMENT AND UTILITY BOND YIELDS WILL AUTOMATICALLY FOLLOW?

A. Not necessarily. As a preliminary matter, Mr. Patel's contention that "potential future reductions in interest rates could have the effect of reducing debt cost rates in the capital costs in 2027, when the Company's new rates will be in effect" is incorrect. (I&E Statement No. 2, p. 52.) This assumes a direct pass-through from the Federal Funds rate to the Company's long-term cost of debt that is not supported by the record or by current market data. As a general principle, the Federal Reserve reduces the Federal Funds rate to stimulate the economy and job growth (i.e., money is cheaper to borrow, so people and businesses spend and invest more), which can increase inflation, whereas it increases rates as a means to tame inflation (i.e., people

and businesses are more likely to save and not borrow money when interest rates are higher). This is why the Federal Reserve's dual mandate to maintain price stability while maximizing employment is challenging – the two objectives are at odds with each other. As such, if the Federal Reserve were to further cut rates in 2026, it is possible that inflation could continue to increase. I note, however, that price control is not easily achieved through monetary policy alone and that high inflation can occur even if economic growth is weak and unemployment is rising (this phenomenon is commonly referred to as "stagflation").

Notwithstanding, long-term bond yields – like the 30-year Treasury yield that is applied in the ROE models and used as a benchmark for long-term debt – are less sensitive to the Federal Reserve's monetary policy. As I explained in my Direct Testimony, **Peoples Statement No. 15**, at page 65, and updated below in Figure 6, while short-term 1-year and 2-year Treasury yields have declined by 130 and 73 basis points, respectively, since the Federal Reserve first signaled in 2024 it would reduce interest rates, 10-year Treasury yields and long-term 30-year Treasury yields have actually *increased* by 9 basis points and 48 basis points, respectively. Since models used to estimate the just and reasonable ROE rely primarily on long-term yields, the market movement of short-term yields does not influence the ROE model results as the longer-term yields do. Therefore, even though the Federal Reserve cut the Federal Funds Rate by 75 basis points in 2025, the cost of equity for a regulated utility such as Peoples has not declined commensurately.

Figure 6: U.S. Treasury Yields (June 2024 vs. December 2025)[65]

	1-year Treasury	2-year Treasury	10-year Treasury	30-year Treasury
June 28, 2024	5.09%	4.71%	4.36%	4.51%
May 31, 2026	3.79%	3.98%	4.45%	4.99%
Change	-1.30%	-0.73%	0.09%	0.48%

Q. ARE THE KEY FACTORS AFFECTING THE COST OF EQUITY FOR REGULATED UTILITIES IN THE CURRENT AND PROSPECTIVE CAPITAL MARKETS THAT YOU DESCRIBED IN YOUR DIRECT TESTIMONY STILL PRESENT AT THIS TIME?

A. Yes, they are. Long-term government and utility bond yields have increased since I filed my direct testimony, inflation levels have risen and remain above the Federal Reserve's two percent target, and geopolitical uncertainty is still elevated.

As shown in Figure 7, the 30-day average long-term government and utility bond yields have increased by 16-17 basis points since I filed my direct testimony.

Figure 7: Long-Term Government and Utility Bond Yields

(January 2026 vs. May 2026)[66]

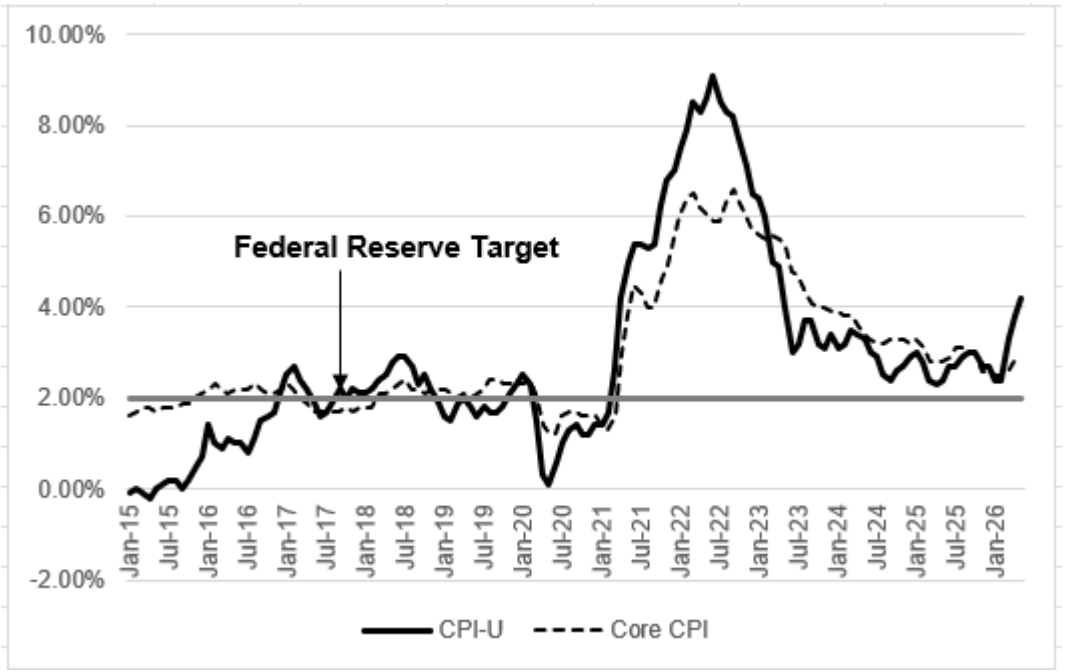
	January 30, 2026	May 31, 2026	Change
30-Year Treasury Bond	4.83%	4.99%	+0.16%
Moody's Utility 'A' Index	5.68%	5.86%	+0.17%
Moody's Utility 'Baa' Index	5.87%	6.04%	+0.17%

[65] Source: Spot yields reported by Federal Reserve Board of Governors, H15 Selected Interest Rates. https://www.federalreserve.gov/datadownload/Choose.aspx?rel=H15.

[66] Sources: Federal Reserve Bank of St. Louis FRED Economic Database, series DGS30; Bloomberg Professional. Values represent 30-day averages as of the date listed.

As shown in Figure 8 below, inflation jumped in May 2026 and remains elevated above the Federal Reserve's 2.0 percent target.

Figure 8: Year-Over-Year Inflation (2015-2026)[67]



U.S. consumers continue to expect inflation to remain elevated. As the University of Michigan's Surveys of Consumers Director Joanne Hsu explains in the June 2026 consumer sentiment report on inflation:

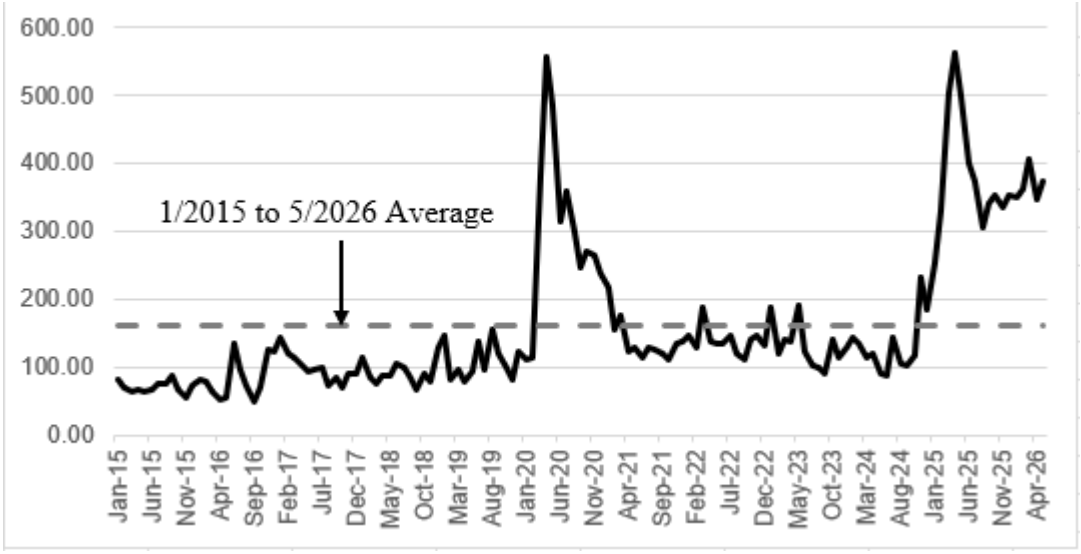
> Year-ahead inflation expectations inched down from 4.8% in May to a still-elevated 4.6% this month. The current reading substantially exceeds the 3.4% reading seen in February before the Iran conflict began, along with all 2024 readings. Long-run inflation expectations fell back from 3.9% last month to 3.3% in June, remaining a bit higher than the 2.8% to 3.2% range seen in 2024.[68]

[67] Source: U.S. Bureau of Labor Statistics.

[68] University of Michigan, Survey of Consumers, "Final Results for June 2026", accessed July 16, 2026, https://www.sca.isr.umich.edu/.

Additionally, the policy uncertainty that has resulted from the federal administration's shifting trade policies remains. As can be seen in Figure 9 below, the Federal Reserve Bank of St. Louis' Economic Policy Uncertainty Index remains elevated (372.15 as of May 2026 vs. an average level of 160.36). This indicates that there is still significant uncertainty related to international trade and the economy. The ongoing conflict between the United States and Iran adds further to the economic and geopolitical uncertainty. Uncertainty increases risk, which increases the cost of equity, all else equal.

Figure 9: Economic Policy Uncertainty Index January 2015 – May 2026[69]



Q. MR. GARRETT CONTENDS THAT BECAUSE UTILITIES ARE "DEFENSIVE FIRMS" WITH LOW BETAS, THEY ARE "RELATIVELY INSULATED FROM

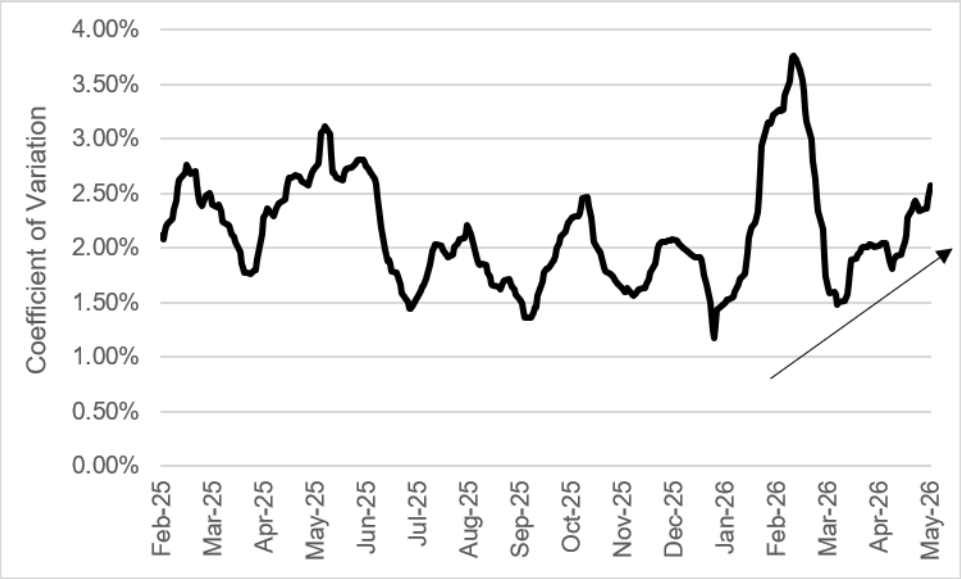
[69] Federal Reserve Bank of St. Louis Economic Database (FRED), Economic Policy Uncertainty Index for United States (USEPUINDXD), https://fred.stlouisfed.org/series/USEPUINDXD.

OVERALL MARKET CONDITIONS." (OCA STATEMENT 3, P. 22.) DO YOU AGREE?

A. No. Mr. Garrett's argument appears to be that because utilities are defensive stocks (by reference to Beta coefficients that are below 1.0), they are less volatile than the market. This argument ignores the fact that Beta coefficients not only measure volatility, but also measure correlation with the market. If the correlation in returns between a company's stock and the market declines, even as relative volatility increases, the Beta coefficient may still fall. In other words, changes in Beta coefficients may obscure absolute changes in volatility. As shown in Figure 10 below, volatility for the proxy group (as measured by the Coefficient of Variation) increased relative to February 2025 when President Trump announced the first of his executive orders implementing tariffs, and spiked considerably in 2026 due to the ongoing conflict in Iran. In other words, the proxy group has not been immune to market volatility stemming from recent geopolitical events.

Figure 10: Proxy Group Average Stock Price Volatility (February 2025-May 2026)[70]

[70] Source: S&P Capital IQ. Represents the average of Coefficient of Variation on a rolling 30-trading day basis for the proxy group.



In short, although utilities may have lower market risk than the overall market, they are not risk-free. Mr. Garrett's simple observation that utility Beta coefficients are less than 1.0 does not justify his 8.80 percent ROE recommendation.

Q. WHAT CONCLUSIONS DO YOU DRAW FROM YOUR REVIEW OF THE CURRENT CAPITAL MARKET ENVIRONMENT AND ITS IMPLICATIONS FOR THE COMPANY'S COST OF EQUITY?

A. The economic and financial market environment continues to experience elevated capital cost and inflationary environment, as well as heightened risk and uncertainty associated with geopolitical events. Although the Federal Reserve cut the level of short-term interest rates in 2024 and 2025, long-term government and utility bond yields have not followed suit and remain elevated relative to the very low-interest rate environment experienced in the prior decade, as well as compared to interest rates during Peoples' last rate case. These factors support an increase in the cost of equity and underscore the importance of using multiple models when determining the Company's cost of equity.

VII. PROXY GROUP COMPOSITION

Q. PLEASE SUMMARIZE THE WITNESSES' PROXY GROUPS.

A. Mr. Patel develops a proxy group of eight natural gas utilities based on his seven screening criteria, which consist of: (1) majority of revenues generated from regulated gas business; (2) publicly traded stock; (3) investment information must be available from more than one source, including Value Line; (4) not involved in a merger or other business transformation; (5) four consecutive years of historical earnings data; and (6) operating in a state that has a deregulated gas utility market. (I&E Statement No. 2, p. 10.) OCA Witness Garrett adopts my proxy group. (OCA Statement 3, p. 16.) The remaining witnesses do not develop proxy groups of comparable companies.

Q. HAVE YOU MADE ANY CHANGES TO YOUR PROXY GROUP?

A. No, I have not. However, to narrow the scope of contested issues and to reflect Mr. Patel's concern about the high earnings growth rate from S&P for Southwest Gas Holdings, Inc., I excluded the S&P earnings growth estimate for Southwest Gas in my DCF analyses. (I&E Statement No. 2, p. 10.) My proxy group is otherwise unchanged from what I used in my Direct Testimony. Further, while I disagree with Mr. Patel's revenue screen criterion, which I discuss below, I will not take objection to his inclusion of Chesapeake Utilities Corp. in his proxy group in an effort to narrow the scope of contested issues.

Q. DO YOU DISAGREE WITH ANY OF THE SCREENING CRITERIA THAT MR. PATEL USES TO SELECT HIS PROXY GROUP FOR PEOPLES IN THIS PROCEEDING?

A. Yes. My primary area of disagreement is that Mr. Patel relies on percentage of revenue, rather than percentage of operating income as a screening criterion. Net operating income better reflects the contribution of each business segment to a given company's earnings, which is the factor that equity investors are most focused on as they establish their return requirements and make investment decisions. Since regulated natural gas utilities pass through the cost of purchased gas without margin, regulated revenue can fluctuate materially from year-to-year with changes in weather and the cost of purchased gas, without affecting earnings or the company's financial position. In contrast, net operating income, which excludes pass-through commodity costs, more closely represents the effect of each business segment on the corporation's overall earnings, and therefore its risk profile. For that reason, the percentage of net operating income from regulated natural gas operations is more representative of the risks faced by Peoples and its investors than is the percentage of regulated revenue that Mr. Patel uses to screen his proxy group. In practice, however, this screening criterion does not affect the composition of the proxy group compared to my regulated natural gas operating income screen.

Q. WHAT ARE YOUR CONCLUSIONS REGARDING THE COMPOSITION OF THE PROXY GROUP FOR PEOPLES IN THIS PROCEEDING?

A. The composition of our respective proxy groups is not a primary factor driving the differences in my ROE recommendation for Peoples and those of the Witnesses in this proceeding. While

I maintain my screening criteria better measures the contribution of a regulated business' earnings, to narrow the scope of contested issues, I do not object to his inclusion of Chesapeake Utilities Corp. in his proxy group.

VIII. DCF MODEL

Q. PLEASE SUMMARIZE THE WITNESSES' DCF-BASED ROE ESTIMATES.

A. Both I&E Witness Patel and OCA Witness Garrett perform a Constant Growth DCF analysis to estimate the ROE for Peoples in this proceeding. Mr. Patel relies on analysts' projected earnings per share ("EPS") growth rates, while Mr. Garrett relies on projected dividend per share ("DPS") growth rates from Value Line and projected nominal GDP growth from the Congressional Budget Office. I note that Mr. Patel's DCF result of 11.33 percent is 33 basis points higher than my base ROE recommendation of 11.00 percent and eight basis points above the Company's requested 11.25 percent ROE inclusive of the management performance adder. Mr. Garrett's DCF analysis produces ROE estimates ranging from 7.1 percent to 7.6 percent, depending on his growth rate assumption.

Q. ARE THERE AREAS OF THE DCF ANALYSIS WITH WHICH YOU AND THE WITNESSES AGREE?

A. Yes. I agree with Mr. Patel's use of analysts' earnings growth rate projections in his DCF model. (I&E Statement No. 2, p. 30.) However, I disagree with Mr. Garrett's reliance on alternative measures of growth, including dividend growth and GDP growth, as discussed below. Further, while Messrs. Patel and Garrett use slightly different approaches than I use to calculate their respective forward-looking dividend yields in the DCF model, the end results

are generally similar. Finally, Mr. Patel excluded an earnings growth from S&P for Southwest Gas of 12.59 percent. (I&E Statement No. 2, p. 30.) My direct testimony relied on Southwest Gas' projected earnings growth rates from Zacks and S&P were 9.20 percent and 10.50 percent, respectively, as of January 30, 2026. As of May 31, 2026, Zacks and S&P earnings growth rates were 9.90 percent and 13.00 percent, respectively. To narrow the scope of contested issues, I also exclude the 13.00 percent growth rate for Southwest Gas in my updated DCF analyses shown in **Peoples Natural Gas Exhibit Nos. JEN-1R** and **JEN-2R**.

Q. OCA WITNESS GARRETT ASSERTS YOUR DCF RESULTS ARE OVERSTATED DUE TO YOUR USE OF "AVERAGE GROWTH RATES FOR THE PROXY GROUP THAT ARE UNSUSTAINABLY HIGH." (OCA STATEMENT 3, PP. 32-33.) WHAT IS YOUR RESPONSE?

A. I disagree. Both Mr. Patel and I have used analyst EPS growth rate projections in our DCF models to estimate the ROE for Peoples. As explained in my Direct Testimony, **Peoples Statement No. 15**, at pages 23 and 24, over the long term, dividend growth can only be sustained by earnings growth. Importantly, when providing guidance to investors regarding the overall total return targets in their investor presentations, companies define the total return as the dividend yield plus *earnings* growth, not dividend or sustainable growth.[71] As I explain in my Direct Testimony, **Peoples Statement No. 15**, at pages 23 and 24, academic research has shown that analysts' consensus earnings forecasts are better at predicting the valuation of common stocks and studies suggest that investors base their investment decisions on analysts'

[71] *See, e.g.,* PPL Corporation Earnings Presentation, May 2026 at 5; NiSource Inc., June 2026 Investor Deck, at 3; American Electric Power Company, Inc, June 2026 Investor Meetings, at 5.

expectations of growth in earnings.[72] I am not aware of any similar findings regarding dividend-based growth estimates. In addition, the only forward-looking growth rates that are available on a consensus basis are analysts' EPS growth rate projections. Because dividend growth rate projections are only reported by a single source (Value Line), they are more susceptible to potential anomalies than earnings growth rates, which are reported by many sources and generally represent a consensus view. The fact that earnings growth projections are the only widely reported and accepted estimates of growth further supports the finding that earnings growth is the most meaningful measure of growth among the investment community.

Q. HAS THE COMMISSION PREVIOUSLY RELIED ON DCF ESTIMATES THAT SOLELY RELIED ON ANALYST EPS GROWTH RATES AS THE EXPECTED LONG-TERM ANNUAL GROWTH RATE INPUT WHEN DETERMINING ITS AUTHORIZED ROE?

A. Yes. For example, in Columbia Gas of Pennsylvania, Inc.'s ("Columbia Gas") recent base rate case at Docket No. R-2025-3053499, the Commission adopted an ROE that utilized I&E's DCF methodology using analysts' earnings growth rates combined with I&E's CAPM methodologies.[73]

[72] *See*, *e.g.*, Harris and Marston, *Estimating Shareholder Risk Premia Using Analysts Growth Forecasts,* Financial Management, Summer 1992, at 65; and Vander Weide and Carleton, *Investor Growth Expectations: Analysts vs. History*, The Journal of Portfolio Management, Spring 1988, at 81. Please note that while the original study was published in 1988, it was updated in 2004 under the direction of Dr. Vander Weide. The results of that updated study are consistent with Vander Weide and Carleton's original conclusions.

[73] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket No. R-2025-3053499, Opinion and Order entered December 9, 2025, at 218, 234-235.

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH MR. GARRETT'S USE OF DIVIDEND GROWTH RATES IN THE DCF MODEL.

A. As explained above and in my Direct Testimony at pages 23 and 24, over the long term, dividend growth can only be sustained by earnings growth. Additionally, dividend growth depends on management decisions regarding the dividend payout ratio over the near term and may not necessarily reflect the long-term growth prospects of the company. As noted earlier, Value Line is the only source I am aware of that publishes dividend growth rate projections, which supports the conclusion that investors view earnings growth as the most meaningful measure of growth. In other words, if investors relied heavily on projections of dividend growth, more sources would offer that data. Further, the dividend growth rates assumed by Mr Garrett result in DCF estimates below current utility bond yields. For example, his "analyst growth" DCF results for Northwest Natural Holding Co., ONE Gas, Inc., and Southwest Gas Holdings are 4.4 percent 5.4 percent, and 5.5 percent, respectively. (OCA Statement 3, Exhibit DJG-6.) Such results defy economic logic and are below any rational estimate of Peoples' cost of equity. As such, the DCF estimate that Mr. Garrett calculated using dividend growth rates should not be given any weight.

Q. PLEASE EXPLAIN WHY YOU DISAGREE WITH MR. GARRETT'S USE OF A PROJECTED NOMINAL GDP GROWTH RATE IN THE DCF MODEL.

A. Using a uniform growth rate for each of the proxy companies is inconsistent with the DCF model's assumptions and dividend yields that differ for each proxy company. Stock prices and investors' return requirements are based on expectations of an individual company's growth,

which will differ from company to company. Relying on a uniform growth rate for all companies, as Mr. Garrett assumes, violates the assumptions of the DCF model.

In addition, other commissions have decided against using GDP growth in the DCF model. For example, the Florida Public Service Commission noted "[w]e find that [Office of Public Counsel] witness Garrett's DCF model result of 7.1 percent is not reasonable because it uses the national GDP as the growth rate and does not reflect the growth rate of regulated natural gas utilities, and shall be given little weight."[74] Similarly, the North Carolina Utilities Commission noted that "Witness Walters' 'generic' GDP-based growth rate simply does not reflect the real world expected growth of a utility like [Duke Energy Carolinas]. Accordingly, the Commission determines that neither the sustainable growth methodology nor the Multi-Stage DCF should be accorded any weight in this case."[75]

Lastly, no company, or investor, would be satisfied with growth that simply tracks the broader economy. Investors would and do shift capital to more attractive investments. Companies are constantly searching for new avenues of growth and have levers such as capital resource allocation to achieve growth greater than GDP. There is no reason to expect that an individual corporation competing for capital as a going concern will limit its future earnings to that of GDP. Limiting growth in the DCF model to long-term GDP is an unfounded constraint.

---

[74] *In re: Petition for rate increase by Florida City Gas*, Order Granting in Part and Denying in Part Florida City Gas' Petition for Certain Rate Increases, Docket No. 20220069-GU, June 9, 2023, at 41 (clarification added).

[75] *In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation*, Order Accepting Stipulations, Granting Partial Rate Increase, Requiring Public Notice, and Modifying Lincoln CT CPCN Conditions, Docket No. E-7, Sub 1276, at 203 (clarification added).

Q. IS THERE EVIDENCE TO REFUTE MR. GARRETT'S CLAIM THAT "THE AGGREGATE GROWTH RATE OF THE ECONOMY [IS] TYPICALLY A LIMITING FACTOR FOR THE TERMINAL GROWTH RATE OF THE DCF MODEL"[76]?

A. Yes, I present two analyses that illustrate utility growth is not limited by GDP growth. First, from 2010 through May 2026, the S&P 500 Utilities Index had a compound annual growth rate ("CAGR") of 7.33 percent, when looking at price-only growth (excluding dividends, which would be comparable to the analyst growth rates used in my DCF analysis, as stock prices are driven by earnings growth over the long-term). (OCA Statement 3, p. 31.) This CAGR is much more comparable to the analyst growth rates that I use in my analysis (proxy group average of 7.84 percent)[77] than Mr. Garrett's 3.8 percent GDP growth rate.

Second, utilities' earnings and consequently dividend growth are driven by increased utility investment or rate base that is not necessarily dependent on GDP growth. Utility capital expenditures have been growing at a rate that far exceeds GDP over the past 3-, 5-, and 10-year periods, as can be seen in Figure 11 below.

Figure 11: Compound Annual Growth in Capital Expenditures (2015-2025)[78]

	3-yr CAGR (2022-2025)	5-yr CAGR (2020-2025)	10-yr CAGR (2015-2025)
Peoples' Proxy Group	9.93%	9.19%	11.29%
Total Gas Utility Sector	9.47%	8.76%	8.57%

[76] OCA St. No. 3, at 31 (clarification added).
[77] **Peoples Natural Gas Exhibit No. JEN-1R**, column [8], proxy group mean.
[78] S&P Global Market Intelligence, *Utility Capex Capital Expenditures Databook – H1 2026*, April 13, 2026.

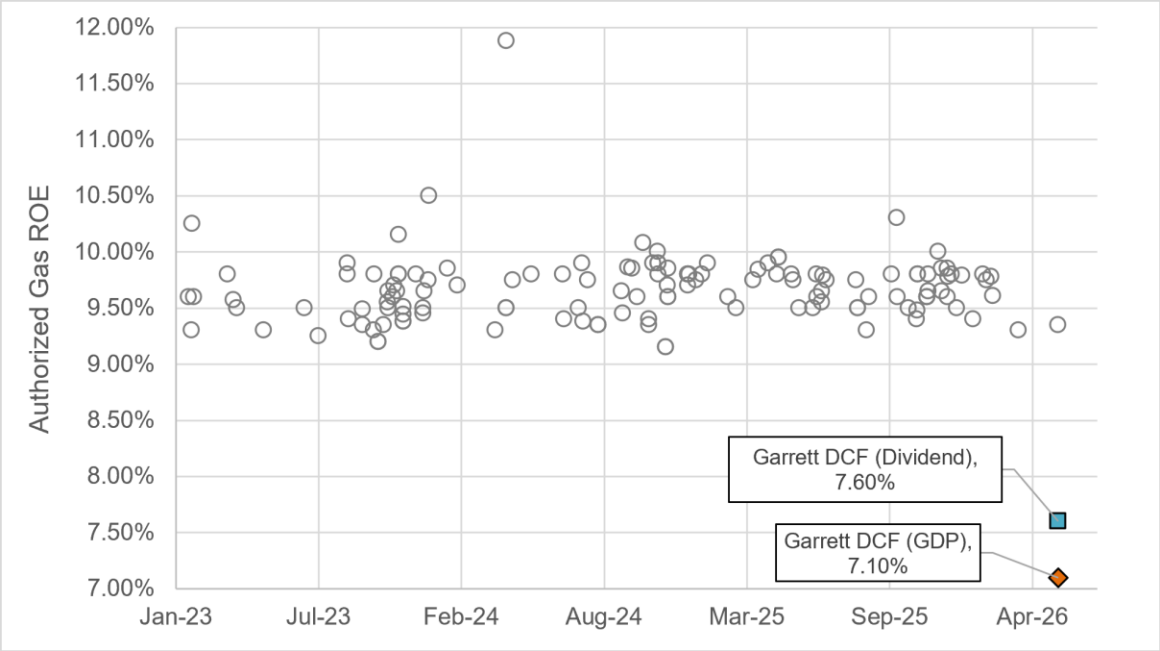
The analyst average projected EPS growth rates for the proxy group used in my and Mr. Patel's DCF analyses (7.84 percent and 8.27 percent, respectively)[79] are lower than the rate of growth in utility capital expenditures over the past 10 years and, therefore, are not overstated. Rather, they are highly consistent with rate base growth, as would be expected. Moreover, these capital expenditure growth rates indicate that utility growth is not constrained by economic growth.

Q. DO MR. GARRETT'S DCF-BASED ROE ESTIMATES SATISFY THE *HOPE* AND *BLUEFIELD* COMPARABLE RETURN STANDARD?

A. No, they do not. As can be seen in Figure 12 below, Mr. Garrett's DCF-based ROE estimates are well below the bottom of recently authorized ROEs for gas distribution utilities, which is especially problematic given the increase in interest rates that I described earlier.

[79] **Peoples Natural Gas Exhibit No. JEN-1R**, column [8]; I&E Exhibit. No. 2, Schedule 5.

Figure 12: Mr. Garrett's DCF-based ROE Estimates vs. Natural Gas Utility Authorized ROEs[80]



Q. PLEASE SUMMARIZE YOUR CONCLUSIONS REGARDING THE WITNESSES' DCF MODELS.

A. The Witnesses present several different DCF models with various inputs and results. Mr. Garrett's DCF results are unjustifiably low and below all authorized ROEs for other gas utilities in at least the past 46 years. The results of my DCF analyses are substantially similar to Mr. Patel's DCF results and the methodology that has been previously adopted by the Commission.

IX. CAPITAL ASSET PRICING MODEL

[80] Sources: Exhibit DJG-6; RRA, rate case decisions for gas utilities as of May 31, 2026. Excludes limited-issue rider cases and transmission cases, as well as states with formulaic rates.

Q. PLEASE SUMMARIZE THE WITNESSES' CAPM-BASED ROE ESTIMATES.

A. Both I&E Witness Patel and OCA Witness Garrett perform a CAPM analysis to estimate the ROE for Peoples in this proceeding. Mr. Patel uses Value Line Beta coefficients and a projected yield on the 10-year Treasury bond from Blue Chip Financial Forecasts for his estimate of the risk-free rate. To determine the equity risk premium,[81] Mr. Patel first determines the overall market return by averaging a forward-looking Value Line average return estimate and the average return of the S&P 500 over the past 100 years. Mr. Patel also provides a second CAPM-based ROE estimate, relying on Kroll's recommended equity risk premium and the 20-Year U.S. Treasury Bond yield. Mr. Patel estimates a 10.28 percent CAPM cost of equity using a forecasted and historical market return average and an 8.86 percent ROE using Kroll's recommended equity risk premium.[82] Mr. Patel averages these two results together to produce a CAPM-based ROE result of 9.57 percent.

Mr. Garrett also uses Value Line Beta coefficients, but instead uses the 30-day average yield of the 30-year U.S. Treasury bond. He arrives at his overall estimate of the equity risk premium by taking the average equity risk premium from four sources: (1) the 2026 IESE Business School Survey, (2) Kroll, (3) NYU Professor Dr. Aswath Damodaran's equity risk premium estimate, and (4) Mr. Garrett's own implied equity risk premium calculation.[83] (OCA Statement 3, p. 42.) Mr. Garrett's estimates a CAPM cost of equity of 8.8 percent if his recommended 49 percent equity ratio is used. If the Company's recommended equity ratio of

[81] In the context of the CAPM, the equity risk premium and market risk premium are synonymous.
[82] I&E Exhibit No. 2, Schedule 10.
[83] Note that Mr. Garrett references an equity risk premium of 4.5 percent from NYU as if "June of 2024." I assume that this was a typo and was meant to reference NYU's average equity risk premium as of June 2026 that averages 4.52 percent.

approximately 54 percent is used, Mr. Garrett's estimates a 8.5 percent CAPM-based ROE. (OCA Statement 3, pp. 42-43.) Figure 13 below summarizes Mr. Patel's and Mr. Garrett's ROE estimates using the CAPM model. The remaining witnesses did not provide a CAPM-based ROE estimate.

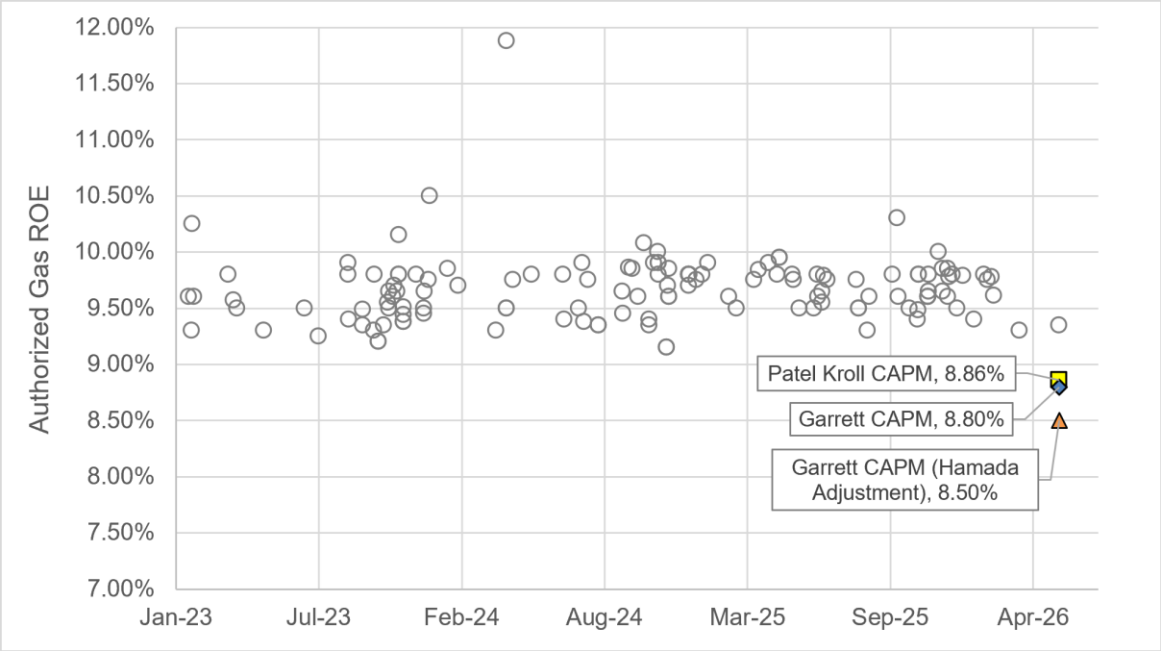
Figure 13: Witnesses' CAPM Estimates, As Filed

Witness	CAPM Range	CAPM-based ROE Estimate(s)
I&E Witness Patel[84]	8.86% - 10.28%	9.57%
OCA Witness Garrett[85]	8.5% - 8.8%	8.5%, 8.8%

From the outset, I disagree with Mr. Garrett's CAPM estimates and Mr. Patel's CAPM estimate based on Kroll's recommended equity risk premium, as those estimates would not meet the comparable return standard as required by the *Hope* and *Bluefield* decisions. As shown in Figure 14 below, Mr. Garrett's CAPM-based ROE estimates and Mr. Patel's Kroll market risk premium CAPM-based ROE estimate are well below recently authorized ROEs for natural gas utilities, and counter to the higher interest rate environment.

[84] I&E St. No. 2, at 35-36; I&E Exhibit No. 2, Schedule 10.
[85] OCA St. No. 3, Exhibits DJG-11 and DJG-12.

Figure 14: Mr. Garrett's CAPM ROE Estimates and Mr. Patel's Kroll MRP CAPM ROE Estimate vs. Natural Gas Utility Authorized ROEs (Jan. 2023-May 2026)[86]



Q. BEFORE RESPONDING TO THE WITNESSES' CRITICISMS OF YOUR CAPM ANALYSIS, ARE THERE AREAS OF AGREEMENT WITH RESPECT TO YOUR RESPECTIVE CAPM ANALYSES?

A. Yes, there are. First, I agree with Mr. Garrett that the 30-year Treasury bond yield is appropriate to use as the risk-free rate. (OCA Statement 3, p. 35.) Additionally, Mr. Patel, Mr. Garrett, and I all rely on Value Line Beta coefficients. (I&E Statement No. 2, pp. 32-33; OCA Statement 3, p. 36.)

[86] Sources: I&E St. No. 2, at 36; OCA St. No. 3, Exhibit DJG-12; RRA, rate case decisions for natural gas utilities as of May 31, 2026. Excludes limited-issue rider cases, and transmission cases.

A. Risk-Free Rate of Return

Q. MR. PATEL USES THE PROJECTED YIELD ON 10-YEAR TREASURY BONDS TO ESTIMATE THE RISK-FREE RATE, AS HE BELIEVES IT BALANCES THE SHORT-TERM VOLATILITY OF T-BILLS AND THE "SUBSTANTIAL MATURITY RISK" ASSOCIATED WITH LONG-TERM TREASURY BONDS. (I&E STATEMENT NO. 2, PP. 33-34.) WHAT IS YOUR RESPONSE?

A. I respectfully disagree with Mr. Patel's use of 10-year Treasury bonds to serve as the risk-free rate for the CAPM and his concerns surrounding the use of 30-Year Treasury bonds. In determining the security most relevant to the application of the CAPM, it is important to select the term that best matches the life of the underlying investment. As explained by Morningstar:

> The traditional thinking regarding the time horizon of the chosen Treasury security is that it should match the time horizon of whatever is being valued… Note that the horizon is a function of the investment, not the investor. If an investor plans to hold stock in a company for only five years, the yield on a five-year Treasury note would not be appropriate since the company will continue to exist beyond those five years.[87]

[87] Morningstar Inc., Ibbotson SBBI 2013 Valuation Yearbook, at 44.

Since utility assets are long-duration investments, it is appropriate to use yields on long-term Treasury bonds as the risk-free rate component of the CAPM. Therefore, the 30-year Treasury bond is the most appropriate security for that purpose.

Q. MR. PATEL CLAIMS THAT "THE 30-YEAR TREASURY BOND EXHIBITS MORE STABILITY BUT IS NOT RISK-FREE" (I&E STATEMENT NO. 2, P. 33.) WHEN DISCUSSING HIS RISK-FREE RATE ESTIMATE. WHAT IS YOUR RESPONSE?

A. I agree with Mr. Patel that the 30-year Treasury bonds exhibit more stability. As explained by Dr. Roger Morin, "On grounds of stability and consistency, the yields on long-term Treasury bonds match more closely with expected common stock returns."[88] However, Mr. Patel's claim that 30-year Treasury bonds are "not risk-free" comingles two types of risk: default risk and interest rate risk. Because long-term Treasury bonds are backed by the U.S. government, they are essentially free of default risk. Furthermore, as Dr. Morin goes on to explain, "While long-term Treasury bonds are potentially subject to interest rate risk, and are not theoretically 'risk-free,' this is only true if the bonds are sold prior to maturity. A substantial fraction of bond market participants, usually institutional investors with long-term liabilities (pension funds, insurance companies), in fact, hold bonds until they mature, and therefore are not subject to interest rate risk."[89] Given that investments in any government security will have some theoretical level of interest rate risk, as rates can change over time, it is important to consider the practical level of risk for such investments. Thus, given that the 30-year Treasury bond is a stable security free of default risk, has minimal real interest rate risk, and aligns with the life

[88] Roger A. Morin, PhD., New Regulatory Finance, Public Utility Reports, Inc., at 152 (2006).
[89] *Id.*

of the underlying investment in utility assets, as described above, it serves as an appropriate security for the risk-free rate component of the CAPM.

B. Beta Coefficient

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S ALTERNATE BETA USING THE HAMADA MODEL TO ESTIMATE AN "UNLEVERED" BETA, AND THEN "RELEVERING" THE BETA AT A DIFFERENT DEBT RATIO? (OCA STATEMENT NO. 3, PP. 56-58.)

A. Mr. Garrett developed an alternative Beta coefficient estimate by unlevering and relevering the Beta coefficient using the book value of debt and equity to arrive at a relevered Beta coefficient of 0.77, based on the capital structure of the proxy group consisting of 51 percent debt and 49 percent equity. However, Mr. Garrett's approach is incorrect. The Hamada adjustment is typically applied to the *market value* of a company's capital structure, not the *book value*.[90] Further, the Beta coefficient is a market parameter that is based on the relative volatility and correlation of a company's *market value* stock price against the overall market index (which is also priced at market value). Relevering the Beta coefficient with *book value* leverage mixes measurement bases and distorts the Beta coefficient (and thus the cost of equity and WACC). Because the proxy companies' equity on a market value basis is greater than the book values of equity,[91] a properly applied Hamada adjustment should result in an *upward*

[90] Hamada's original research relied on market values for common equity and debt. See, Hamada, Robert S., "The Effect of the Firm's Capital Structure on the Systematic Risk of Common Stocks," The Journal of Finance, vol. 27, no. 2, 1972, pp. 435–52.
[91] Source: S&P Capital IQ.

adjustment to the ROE, not a *downward* adjustment. For those reasons, Mr. Garrett's Hamada adjustment is misapplied and should be rejected.

C. Market Risk Premium

Q. PLEASE SUMMARIZE THE WITNESSES' APPROACH FOR DETERMINING THE MARKET RISK PREMIUM.

A. As described previously, Mr. Patel takes two approaches to determining the market risk premium. First, Mr. Patel averages forward-looking and historical estimates of the market return, from which he subtracts his estimate of the risk-free rate to arrive at an estimated market risk premium. To conduct the forward-looking market return approach, Mr. Patel relies on the May 22, 2026 edition of the *Value Line Investment Survey*, covering roughly 1,700 companies in the Value Line universe. From this report, he combines a 2.10 percent median forecasted dividend yield for all dividend-paying companies with a growth rate of 9.73 percent, derived from a median estimated three-to-five year stock price appreciation potential of 45 percent for all companies. Mr. Patel averages this expected market return of 11.83 percent with the average annual return of the S&P 500 over the last 100 years, 12.35 percent, to arrive at his market return estimate of 12.09 percent. Additionally, Mr. Patel provides a second market risk premium estimate, relying on Kroll's recommended equity risk premium of 5.00 percent. (I&E Statement No. 2, pp. 35-36.)

Mr. Garrett's market risk premium is determined by averaging the market risk premium from four sources: (1) the 2026 IESE Business School Survey, (2) Kroll, (3) Dr. Damodaran's equity risk premium estimate, and (4) Mr. Garrett's own implied market risk premium method. (OCA Statement 3, pp. 39-42.) As Mr. Garrett asserts, his implied market risk premium method

develops the internal rate of return that sets the current value of the market index equal to the projected value of cash flows associated with owning the market index. Mr. Garrett's method is a two-stage form of the DCF model, which calculates the present value of cash flows over the five-year initial period, together with the terminal price (based on the Gordon Model), to be received in the last (*i.e.,* terminal) year. (OCA Statement 3, p. 39.) Ultimately, Mr. Garrett calculates a market risk premium estimate of 5.0 percent from his implied MRP method. When averaged with the three additional market risk premium estimates, Mr. Garrett arrives at an overall MRP estimate of 4.9 percent. (OCA Statement 3, Exhibit DJG-10.)

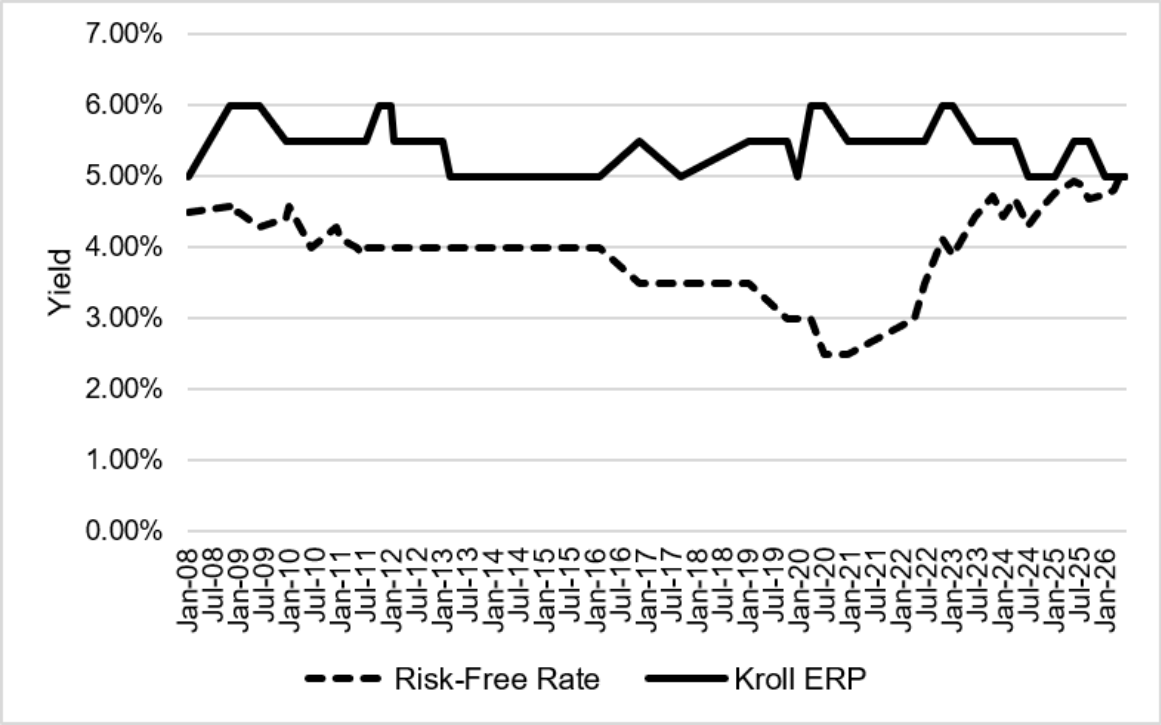
Q. DO YOU HAVE ANY CONCERNS WITH KROLL'S RECOMMENDED EQUITY RISK PREMIUM ESTIMATE THAT I&E WITNESS PATEL AND OCA WITNESS GARRETT REFERENCE? (I&E STATEMENT NO. 2, P. 35; OCA STATEMENT 3, P. 42.)

A. Yes, I do. I disagree with Kroll's recommended equity risk premium. Kroll's methodology is opaque and it is not clear that Kroll develops its market risk premium in relation to its risk-free rate. The market risk premium is calculated as the difference between the expected market return and risk-free rate; therefore, it is a function of the expected market return and risk-free rate at a point in time. Consequently, the market risk premium and risk-free rate are not independent of each other, they are interrelated. In fact, academic studies have shown that the two are inversely related.[92] As the risk-free rate decreases, the market risk premium increases and vice versa. However, as shown in Figure 15 below, there is no clear relationship between

[92] *See, e.g.*, Robert S. Harris and Felicia C. Marston, *Estimating Shareholder Risk Premia Using Analysts' Growth Forecasts*, Financial Management, (Summer 1992), at 63-70.

Kroll's recommended equity risk premium and risk-free rate. Whereas academic studies indicate that the two lines should move in opposite directions, Figure 15 shows the relationship is unclear.

Figure 15: Kroll Recommended Equity Risk Premium and Risk-Free Rate (2008-2026)[93]



The conclusion that there is no clear relationship between Kroll's variables is supported by statistical analysis. To assess whether there is a relationship, I performed a linear regression in which Kroll's recommended equity risk premium was the dependent variable and the recommended risk-free rate was the independent variable. The R-square was 0.0397, which means that Kroll's risk-free rate explains only 3.97 percent – very little - of the change in the

[93] Sources: Kroll Cost of Capital Navigator, Federal Reserve Bank of St. Louis FRED Economic Data.

Equity Risk Premium. This runs counter to the fundamental principle that the market risk premium is a function of the risk-free rate, as noted earlier. This is not to suggest that Kroll is not a valid or credible source of data. Rather, it suggests that the usefulness of Kroll's equity risk premium recommendation at the current time is questionable given that it runs counter to academic and financial theory.

Q. HAVE OTHER COMMISSIONS REJECTED KROLL'S RECOMMENDED EQUITY RISK PREMIUM AS AN INPUT TO THE CAPM?

A. Yes, they have. For example, in Order No. PSC-2023-0177-FOF-GU, the Florida Public Service Commission found that the "use of Kroll's equity risk premium and the results of the CAPM using that data are unreasonable."[94] Additionally, in docket no. E-7 Sub 1276, the North Carolina Utilities Commission similarly concluded that the "use of Kroll's 5.5% MRP fails the test of Bluefield/Hope, in that it does not meet the test of comparable return."[95] In conclusion, while I recognize that the Commission gave weight to Kroll's recommended equity risk premium in its 2025 Order for Columbia Gas,[96] I respectfully disagree with that finding and recommend dismissing Kroll's equity risk premium when calculating the CAPM-based ROE estimate in this case.

---

[94] Florida Public Service Commission Docket No. 20220069-GU, *In re: Petition for rate increase by Florida City Gas*, Order No. PSC-2023-0177-FOF-GU, at 43 (June 9, 2023).

[95] *In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation*, Docket No. E-7, Sub 1276, Order Accepting Stipulations, Granting Partial Rate Increase, Requiring Public Notice, And Modifying Lincoln CT CPCN Conditions, at 208.

[96] *Pa. PUC v. Columbia Gas of Pennsylvania, Inc*., Docket No. R-2025-3053499, Opinion and Order entered December 9, 2025, at 234-235.

Q. DO YOU AGREE WITH HOW MR. PATEL CALCULATED HIS 11.83 PERCENT VALUE LINE FORWARD-LOOKING MARKET RETURN? (I&E STATEMENT NO. 2, P. 34.)

A. No, I do not. As a preliminary matter, Mr. Patel is not correct when he notes that "Value Line expects its universe of approximately 1,700 stocks to have an *average* yearly return of 11.83% percent over the next three to five years based on a forecasted dividend yield of 2.10% and a yearly index appreciation of 45%." (I&E Statement No. 2, p. 34 (emphasis added).)As Value Line's Summary & Index report clearly states, the 2.10 percent and 45 percent are "The *Median* of Estimated Dividend Yields (next 12 months) of all dividend paying stocks" and "The *Median* Estimated Three-To-Five Year Price Appreciation Potential of all stocks in the VL Universe", respectively.[97] When an investor invests in the overall market (which is being approximated here by the Value Line universe of stocks), they receive the *weighted average* market return, not the *median* market return. If Mr. Patel were to use the average as he stated, his result would be higher, as I demonstrate in **Peoples Natural Gas Exhibit No. JEN-10R**. Adjusting Mr. Patel's CAPM analysis to use the *weighted average* market return (without any other corrections) produces an ROE estimate of 11.99 percent.[98]

Q. WHAT IS YOUR CONCERN WITH THE USE OF SURVEYS SUCH AS THE IESE BUSINESS SCHOOL SURVEY CONSIDERED BY MR. GARRETT?

A. My concern with relying on surveys is that surveys are often ambiguous and not clearly designed to have confidence that the responses are based on a uniform baseline understanding

[97] The Value Line Investment Survey, Part 1 Summary & Index, May 22, 2026, at 1 (emphasis added).
[98] As shown on **Peoples Natural Gas Exhibit No. JEN-10R**, I adjust both the dividend yield and growth rate to use the weighted average of the Value Line universe of companies rather than the median.

of what is being surveyed. Analysts are likely to give different responses regarding the expected market return or equity risk premium depending on whether they are considering short or long periods, the current market environment, the risk-free rate that is assumed, real vs. nominal returns, arithmetic vs. geometric returns, and the prevailing point in the economic cycle (expansion vs. contraction; high vs. low inflation, etc.). In other words, we cannot verify respondents' inputs and assumptions to assess whether the responses are comparable. In fact, recognizing the limitations of the survey, the authors explicitly state that the average of the distribution of survey responses "cannot be interpreted as the [Required Equity Premium ("REP")] of the market nor as the REP of a representative investor."[99]

Q. TURNING TO MR. GARRETT'S IMPLIED MARKET RISK PREMIUM METHOD, DO YOU HAVE ANY OBSERVATIONS REGARDING MR. GARRETT'S ASSUMED FIRST-STAGE GROWTH RATE?

A. Yes. Mr. Garrett's 6.95 percent growth rate relates only to geometric (or compound) growth in operating earnings and does not reflect capital appreciation or growth in dividends or stock buy backs. (OCA Statement 3, Exhibit DJG-9.) If Mr. Garrett's position is that historical growth rates are meant to reflect expected growth, they should reflect year-to-year variation (that is, uncertainty). That is best accomplished using the arithmetic average growth rate rather than the compound growth rate.

[99] Fernandez, Pablo; Habibian, Amir; and Acin, Antonio F., "Survey: Market Risk Premium and Risk-Free Rate used for 97 countries in 2026," at 11-12. IESE Business School (clarification added). Accessible at: https://papers.ssrn.com/sol3/papers.cfm?abstract_id=6570342

Q. HOW DID MR. GARRETT DEVELOP HIS ASSUMED TERMINAL GROWTH RATE?

A. The terminal growth rate represents investors' expectations of the rate at which the broad stock market will grow, in perpetuity, beginning in the terminal stage. Mr. Garrett assumes terminal growth, beginning six years from now and extending indefinitely into the future, is equal to his risk-free rate, i.e., the average yield on 30-year Treasury securities over the 30 days ended June 9, 2026.

Q. IS MR. GARRETT'S TERMINAL GROWTH RATE ASSUMPTION OF 5.02 PERCENT REASONABLE?

A. No, it is not. I understand that Mr. Garrett followed Dr. Damodaran's approach to use the risk-free rate as the terminal growth rate. (OCA Statement 3, Exhibit DJG-9.) In terms of historical experience, over the long term, the broad economy has grown at an average rate of approximately 6.34 percent.[100] For another perspective, the long-term average rate of price appreciation on large company stocks between 1928 and May 2026 is 8.14 percent.[101]

Assuming long-term inflation will be approximately 2.20 percent, Mr. Garrett's terminal growth rate based on his risk-free rate of 5.02 percent assumes that real growth will be close to just 2.76 percent[102] in perpetuity. Nowhere in his testimony has Mr. Garrett explained that investors expect real growth of 2.76 percent for riskier equities in perpetuity.

---

100 Source: Bureau of Economic Analysis for the years 1929 to 2025.

101 S&P Capital IQ.

102 For example, in line with the Federal Reserve's target rate of inflation. *See also*, Garrett Exhibit DJG-5. Inflation estimated by subtracting real GDP of 1.6 percent (row ([1]) from Nominal GDP of 3.8 percent (row [2])

Given that equities are riskier than government bonds, it is highly improbable that equity investors would only require growth equal to the risk-free rate in perpetuity.

Q. HAVE ACTUAL OBSERVED MARKET RISK PREMIA BEEN CONSISTENT WITH THE MARKET RISK PREMIA ESTIMATES PRODUCED BY NYU?

A. No, they have not. As shown in Figure 16 below, the annual implied market risk premium published by NYU has been far removed from actual observed market risk premia in recent years. Moreover, the average actual market risk premium over the past 15 years, 12.01 percent, is above the highest market risk premium that I use in my rebuttal CAPM models, 10.47 percent, and any of the market risk premia that Mr. Patel or Mr. Garrett use. (**Peoples Natural Gas Exhibit No. JEN-4R.**)

Figure 16: NYU Annual Implied vs. Observed Market Risk Premium[103]

Year	NYU Implied Market Risk Premium	Actual Market Risk Premium
2010	5.20%	10.81%
2011	6.01%	-1.71%
2012	5.78%	13.54%
2013	4.96%	29.51%
2014	5.78%	10.28%
2015	6.12%	-1.09%
2016	5.69%	9.66%
2017	5.08%	19.16%
2018	5.96%	-7.20%
2019	5.20%	28.94%
2020	4.72%	16.98%
2021	4.24%	26.98%
2022	5.94%	-20.72%
2023	4.60%	22.44%
2024	4.33%	21.28%
2025	4.23%	13.23%
Average	**5.24%**	**12.01%**

Q. WHAT IS YOUR RESPONSE TO MR. GARRETT'S POSITION THAT YOUR MARKET RISK PREMIUM ESTIMATE IS TOO HIGH? (OCA STATEMENT 3, PP. 45-46.)

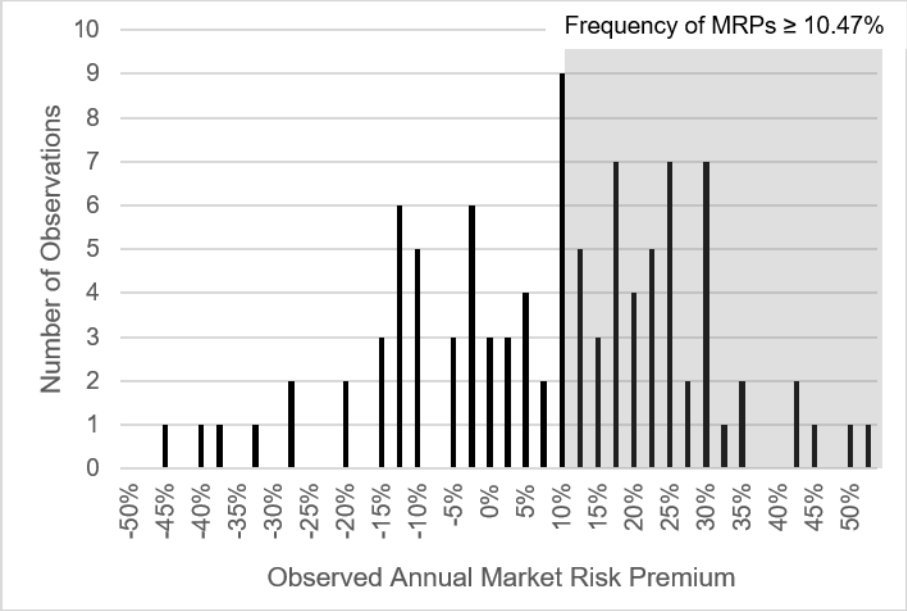
A. I disagree with that position. First, I emphasize that I do not rely solely on my forward-looking market risk premium. As shown in Figure 1 of my Direct Testimony, the low end of my recommended range is supported by the CAPM results using the long-term average historical market return. (Peoples Statement No. 15, pp. 4-5.) Nevertheless, the use of a forward-looking

[103] Sources: https://pages.stern.nyu.edu/~adamodar/New_Home_Page/home.htm; Kroll, 2023 SBBI Yearbook, Appendix A-1 and A-7 (years 1926-2022); Cost of Capital Navigator (2023-2025 data).

or projected MRP is reasonable because the cost of equity is forward-looking and each of the CAPM components is meant to be a forward-looking parameter.

Second, as discussed in my Direct Testimony, market returns in the range of my forward-looking market return estimates have occurred quite frequently. (Peoples Statement No. 15, pp. 32-33.) For an additional perspective, I also reviewed the frequency of the highest MRP presented in my Rebuttal Testimony, 10.47 percent. (**Peoples Natural Gas Exhibit No. JEN-4R.**) As shown in the shaded area in Figure 17 below, MRPs in the range of 10.47 percent or higher have occurred in 47 of the past 100 years (47.0 percent of the time). From that perspective, the forward-looking market risk premium estimates are not unreasonably high.

Figure 17: Frequency of Observed Market Risk Premia – 1926-2025[104]



Moreover, because market returns historically have been volatile, my market return estimates are statistically indistinguishable from the long-term historical arithmetic average

[104] Source: Kroll, 2023 SBBI Yearbook, Appendix A-1, A-7 (years 1926-2022); Cost of Capital Navigator (2023-2025 data)

market return.[105] As such, my projected market return estimates are reasonable and consistent with historically observed market returns. Finally, I note that I have relied on the most conservative forward market return estimate from Value Line and excluded the higher forward market return estimates from Bloomberg.

D. Empirical CAPM Analysis

Q. PLEASE SUMMARIZE THE WITNESSES' CONCERNS WITH YOUR EMPIRICAL CAPM ("ECAPM") ANALYSIS.

A. Mr. Patel objects to my use of the ECAPM, contending that the "ECAPM reduces the purpose of beta, which is the only company-specific variable in the CAPM." (I&E Statement No. 2, p. 42.) He also claims that the ECAPM is subjective and is not aware of the ECAPM being used as an accepted methodology by regulatory commissions. Mr. Patel also rejected my assertion that the Commission implicitly approved of FirstEnergy Pennsylvania Electric Company's use of the ECAPM, stating that the Commission's approval of a settlement "is not the same as its approval of the ECAPM methodology in the context of a fully litigated rate case." (*Id*.)

Q. HOW DO YOU RESPOND TO MR. PATEL'S CONCERNS?

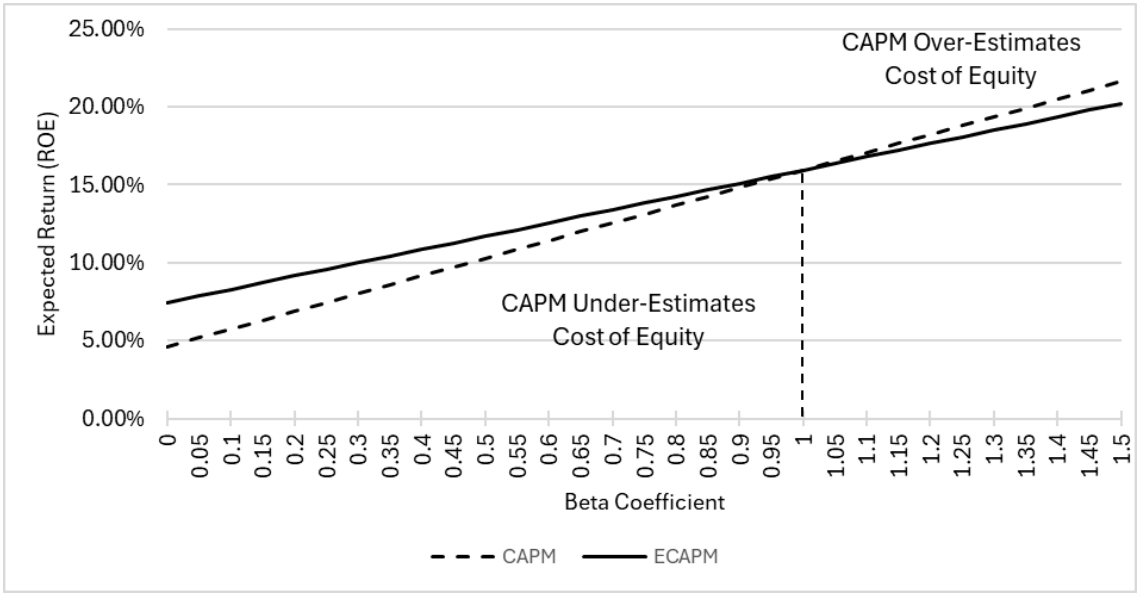
A. Mr. Patel's concerns are misplaced, and his criticism of the CAPM's performance in predicting actual returns further supports the use of the ECAPM in determining the Company's cost of equity. As explained in my Direct Testimony, the ECAPM reflects published research that companies with lower Beta coefficients tend to have higher returns than those predicted by the traditional CAPM, and those with higher Beta coefficients tend to have lower returns than

[105] The standard deviation of the observed market return and market risk premium is approximately 19.60 percent and 19.70 percent, respectively. Source: Kroll Cost of Capital Navigator.

predicted.[106] (Peoples Statement No. 15, pp. 34-35.) Beta coefficient adjustments such as those used by Value Line, on the other hand, address the tendency of "raw" Beta coefficients to regress toward the market mean of 1.00 over time. As explained below, the ECAPM is not an adjustment to the Beta coefficient; the two are different issues and are addressed with different methods.[107]

The relationship between expected returns from the CAPM and ECAPM can be seen in Figure 18, below. As an example, Figure 18 reflects my projected risk-free rate and forward-looking market risk premium and illustrates the extent to which the CAPM under-states the expected return relative to the ECAPM when Beta coefficients, whether adjusted or unadjusted, are less than 1.00.

Figure 18: CAPM and ECAPM Expected Returns



[106] *See also*, Roger A. Morin, PhD., New Regulatory Finance, Public Utility Reports, Inc., at 175-176 (2006).

[107] Roger A. Morin, PhD., New Regulatory Finance, Public Utility Reports, Inc., at 191 (2006).

The ECAPM is an adjustment to the risk/return line or "Security Market Line," which, as shown in Figure 18 above, is flatter than the CAPM assumes. The Security Market Line is the market risk premium, not the Beta coefficient. Thus, the ECAPM and Blume's adjustment to Beta coefficients are two different adjustments. Eugene F. Brigham and Joel F. Houston explain at page 198 in their textbook, Fundamentals of Financial Management (10th edition):

> The slope of the SML…reflects the degree of risk aversion in the economy – the greater the average investor's aversion to risk, then (a) the steeper the slope of the line, (b) the greater the risk premium for all stocks, and (c) the higher the required rate of return on all stocks.[108]

In a footnote the authors add: "Students sometimes confuse beta with the slope of the SML. This is a mistake. The slope of any straight line is equal to the 'rise' divided by the 'run'."

The ECAPM adjustment is required even with the use of adjusted Beta coefficients, such as those provided by Value Line. As Dr. Morin observes (emphasis added):

> Fundamentally, *the ECAPM is not an adjustment, increase or decrease, in beta*. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. *The ECAPM and the use of adjusted betas comprised two separate features of asset pricing…Both adjustments are necessary*.[109]

As for Mr. Patel's argument that the Commission's approval of a settlement is not the same as its approval of the ECAPM methodology, his argument appears to set an unnecessarily high standard for consideration of the ECAPM. The relevant question is not whether the Pennsylvania Commission has expressly stated that it relied on the ECAPM in a litigated order,

but whether the ECAPM is a reasonable and recognized financial model that may provide useful evidence regarding investor-required returns. Regulatory commissions routinely consider multiple cost-of-equity methodologies without expressly endorsing every component of every witness's analysis. To elaborate on my response to I&E-RR-9 that Mr. Patel referenced, I am aware that the ECAPM (sometimes referred to as the "Zero Beta CAPM") has been accepted by regulatory commissions in Alaska, Maryland, Mississippi, New York, and North Carolina.[110] Additionally, I am aware the ECAPM has been presented by state regulatory commission staff in Maryland and Nevada and by the Department of Commerce in Minnesota.[111]

For example, the ECAPM is the preferred CAPM methodology and is explicitly relied on by the New York Public Service Commission including the use of adjusted Beta coefficients.[112] Additionally, the North Carolina Utilities Commission accepted the ECAPM

in Duke Energy Carolinas' and Duke Energy Progress' most recent completed rate cases, including the use of adjusted Beta coefficients in the ECAPM.[113] Consequently, I believe the ECAPM is a reasonable approach and should be considered by the Commission.

E. Witness CAPM Adjustments and Conclusion

Q. DO YOU RECOMMEND ANY ADJUSTMENTS TO THE WITNESSES' CAPM ANALYSES?

A. Yes, I do. As I explained previously, Mr. Garrett's CAPM-based ROE estimates or Mr. Patel's Kroll CAPM ROE estimate should be rejected outright because they do not meet the *Hope* and *Bluefield* comparable return standard. Accordingly, I do not make adjustments to these estimates. However, modest adjustments can be made to several inputs to Mr. Patel's "forecasted CAPM analysis" to remedy weaknesses with certain of his inputs and assumptions. (I&E Statement No. 3, pp. 36-37.) First, solely replacing Mr. Patel's use of a projected yield on the 10-year U.S. Treasury Note with the projected yield on the 30-year U.S. Treasury Bond increases his CAPM ROE estimate by 12 basis points. (*See*, **Peoples Natural Gas Exhibit No. JEN-10R**.) Additionally, I revised Mr. Patel's Value Line-based estimate of the expected market return ("R_m") to combine the weighted average growth rate and dividend yield (as opposed to the median growth rate and dividend yield that Mr. Patel used) for the 1,351 Value Line companies that have available both projected 3-5 year EPS growth rates and market capitalization data. As shown in **Peoples Natural Gas Exhibit No. JEN-10R**, correctly using

[113] *In the Matter of Application of Duke Energy Carolinas, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation*, Docket No. E-7, Sub 1276, Order Accepting Stipulations, Granting Partial Rate Increase, Requiring Public Notice, And Modifying Lincoln CT CPCN Conditions, at 209-210; *In the Matter of Application of Duke Energy Progress, LLC for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina and Performance-Based Regulation*, Docket No. E-2, Sub 1300, Order Accepting Stipulations, Granting Partial Rate Increase, and Requiring Public Notice, at 162-163.

the weighted average estimates, instead of the median data that Mr. Patel uses, brings the CAPM ROE estimate from 10.28 percent to 11.99 percent. Incorporating both adjustments together, as shown below in Figure 19, raises the CAPM ROE estimate of Mr. Patel's forecasted CAPM analysis from 10.28 percent to 12.11 percent, or by 183 basis points.

Figure 19: Mr. Patel's Adjusted CAPM Results[114]

Adjusted CAPM Input(s)	As Filed[115]	Adjusted	Adjusted CAPM ROE	CAPM ROE Impact
Risk-free Rate	4.23%	4.78%	10.40%	+12 bp
Value Line Estimated R_m	11.83%	16.29%	11.99%	+171 bp
Risk-free Rate and Value Line Estimated R_m	4.08% and 11.83%	4.78% and 16.29%	12.11%	+183 bp

Q. WHAT IS YOUR CONCLUSION WITH REGARD TO THE CAPM?

A. My conclusion is that using sound inputs for the risk-free rate and market risk premium, along with current Beta estimates, the CAPM is producing reasonable results that should be considered along with the results from the DCF and Risk Premium models. In particular, Mr. Patel's Kroll CAPM analysis and Mr. Garrett's CAPM analyses have multiple flaws and produce ROE estimates below nearly all authorized ROEs for other natural gas utilities and should be disregarded.

X. BOND YIELD PLUS RISK PREMIUM MODEL

114 **Peoples Natural Gas Exhibit No. JEN-10R**.
115 I&E Exhibit No. 2, Schedules 9, 10.

Q. PLEASE ADDRESS THE WITNESSES' CONCERNS REGARDING YOUR USE OF A BOND YIELD PLUS RISK PREMIUM ("RISK PREMIUM") MODEL.

A. Mr. Garrett raises three concerns: (1) my risk premium model is not market-based or truly forward-looking; (2) the model does not actually estimate the cost of equity and adds no marginal value beyond the CAPM; and (3) the approach is circular. (OCA Statement 3, pp. 47-48.) Regarding his first concern, my Risk Premium analysis determines the appropriate risk premium based on the relationship between historical authorized ROEs for natural gas utilities and Treasury bond yields over the last 46 years. As shown in Exhibit JEN-5R, my Risk Premium analysis is supported by a regression equation that evaluates the relationship between Treasury bond yields and the equity risk premium over time. The regression equation has an R-square of 0.8252, which indicates a high degree of correlation (82.52 percent) between the change in the equity risk premium and changes in interest rates, making the model a reliable predictor of the equity risk premium at various levels of interest rates. This is a highly statistically significant and intuitive relationship, reflecting how the equity risk premium responds to changes in interest rates and economic conditions. Regarding his second concern, the CAPM is a distinct, separate model that adds value in addition to the Risk Premium analysis; the two models are not redundant, and the differences between them are summarized in Figure 20 below.

Figure 20: CAPM vs. Risk Premium Differences

CAPM	Risk Premium
Market risk premium calculated based on the market (S&P 500) return	Equity risk premium calculated by reference to natural gas utility authorized ROEs
Estimates company-specific market risk through Beta coefficients	Derives an industry-specific cost of equity estimate by using natural gas utility ROEs as the basis for calculating the equity risk premium
Does not use a statistical relationship to determine the market risk premium	Uses a statistical relationship to determine the equity risk premium
Market risk premium can be more volatile as the expected market return and risk-free rate are more variable	Equity risk premium relationship is more stable over time due to the use of nearly than 1,400 natural gas rate cases over 46 years and bond yields that are lagged over the average length of a rate case
The market risk premium estimate is often the most contentious	Fewer contentious inputs, and the inputs (e.g., authorized ROEs and bond yields) are observable and objective.

Regarding his third concern, Mr. Garrett's circularity argument assumes that authorized ROEs mechanically ratchet upward over time without regard to underlying capital market conditions. My Risk Premium analysis does not simply carry forward prior authorized returns; it models how the equity risk premium has historically moved in relation to changes in interest rates, which allows the analysis to calibrate for current capital market conditions rather than anchor to historical ROE levels in isolation.

Mr. Patel raises three primary concerns regarding my use of the Risk Premium method: (1) the settled cases I cited as precedent reflect only approval of settlements, not Commission approval of the methodology in a litigated case; (2) the risk premium methodologies in those

cited cases were not, in his view, similar to mine; and (3) to his knowledge, the Commission has never explicitly relied on the risk premium method to determine cost of equity for a Pennsylvania utility. (I&E Statement No. 2, p. 43.) In response to Mr. Patel's concerns, contrary to Mr. Patel's assertion, the Commission has considered the Risk Premium method. In its Order and Opinion in PPL Electric's 2012 rate case (Docket No. R-2012-2290597), the Commission explained "We also note that we historically have primarily relied upon the DCF methodology in arriving at previous determinations of the proper cost of equity and utilized the results of methods, such as the CAPM and RP methods, as a check upon the reasonableness of the DCF derived equity return amount, tempered by informed judgment."[116] In Docket Nos. R-2021-3027385 and R-2021-3027386 (Aqua Pennsylvania). The Commission reiterated its reference to the 2012 PPL Order concluding that "methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation."[117] This suggests that the Risk Premium method has a place in the Commission's ROE determinations. Further, other state regulators have placed weight on the results of the Risk Premium model in setting authorized returns for utilities under their jurisdiction. These include the following jurisdictions: California, Florida, Georgia, North Carolina, Texas, Virginia, West Virginia, and Wisconsin. In my view, the Risk Premium model provides another relevant perspective on investors' return requirements for gas distributors and should be used by the Commission to inform its decision on the authorized ROE for Peoples Natural Gas in this proceeding.

[116] *Pa. PUC v. PPL Electric Utilities Corp*., R-2012-2290597, Opinion and Order entered December 28, 2012, at 80-81.

[117] *Pa. PUC v. Aqua Pennsylvania, Inc*., Docket Nos. R-2021-3027385 & R-2021-3027386, Opinion and Order entered May 16, 2022, at 154-155.

Q. I&E WITNESS PATEL FURTHER CONTENDS THAT THE RISK PREMIUM METHOD SHOULD BE EXCLUDED BECAUSE IT "IS A SIMPLIFIED VERSION OF THE CAPM," RELIES ON THE ASSUMPTION THAT "THE EQUITY RISK PREMIUM IS CONSTANT OVER TIME," AND "DOES NOT RECOGNIZE COMPANY-SPECIFIC RISK THROUGH BETA." (I&E STATEMENT NO. 2, P. 25.) DO YOU AGREE?

A. No, Mr. Patel is incorrect. The Risk Premium analysis provides another useful perspective on investors' required return for Peoples. I disagree with Mr. Patel that the Risk Premium analysis is duplicative of the CAPM method and the differences between these models are summarized in Figure 20 above. While the Risk Premium model does not measure the specific risk of a company, it provides an industry estimate of the equity risk premium and resulting cost of equity for natural gas utilities broadly. Whereas both models use a risk-free rate to anchor the return estimate, the CAPM analysis applies an industry specific Beta coefficient to the total market return to estimate the risk premium required by investors in gas distribution utilities such as Peoples, whereas the Risk Premium model is based on the assumption that there is an inverse relationship between Treasury bond yields and the equity risk premium, as shown by nearly 1,400 natural gas utility authorized ROEs set by utility regulators across the country since 1980. However, the equity risk premium is not assumed to be constant over time, nor does my model a constant equity risk premium. Rather, my Risk Premium model is based on a regression equation where the equity risk premium varies with the change in yields on Treasury bonds.

Q. WHAT IS YOUR CONCLUSION REGARDING THE RISK PREMIUM ANALYSIS?

A. The Risk Premium analysis is based on a statistical analysis supported by academic literature that models the change in the equity risk premium for natural gas utilities for a given change in long-term government bond yields spanning more than four decades of varying capital markets and economic cycles. In addition, the Risk Premium approach provides stability to the CAPM and DCF results that can fluctuate based on market conditions. Therefore, I continue believe that the Risk Premium analysis provides probative value that enhances the robustness of the cost of equity estimation process and should be considered in determining Peoples' authorized ROE.

XI. BUSINESS RISK

Q. PLEASE SUMMARIZE THE WITNESSES' TESTIMONY REGARDING THE BUSINESS RISK OF PEOPLES AND THE IMPLICATIONS FOR THE COMPANY'S AUTHORIZED ROE IN THIS PROCEEDING.

A. Mr. Patel disagrees that Peoples has greater than average business risk due to the Company's elevated capital expenditure program, threat of bypass, and regulatory mechanisms, and he disagrees with the flotation cost adjustment for Peoples. (I&E Statement No. 2, pp. 46-54.) Mr. Garrett approaches business risk from the perspective that investors are compensated only for market, or systematic, risk rather than firm-specific risk, and characterizes utilities as defensive firms with low betas and low market risk that are less affected by overall market conditions than the market as a whole. (OCA Statement 3, pp. 19-21.) Mr. Cicero argues that Peoples' regulatory mechanisms shift "the risk of under recovery of the authorized revenue

requirement from the utility to its customers". (CAUSE-PA Statement 1, p. 13.) Similarly, Mr. Deupree argues that the Company's existing regulatory mechanisms provide protection against regulatory lag and that the Company's proposed ROE shifts risks from shareholders to ratepayers. (OCA Statement 1, pp. 27-29.) Finally, Mr. Ewen argues that Peoples has lower regulatory lag due to the Company's regulatory mechanisms. (OSBA Statement No. 2, p. 4.)

I respond to each of these points in this section, starting with the effect of Peoples' projected capital expenditures on its risk profile. In addition, it is important to keep in mind that I did not make an explicit adjustment to my ROE recommendation for any of these business risks or flotation costs. Rather, I considered them in developing my ROE recommendation for Peoples from within the range of reasonable results. In the end, my base ROE recommendation reflects the approximate midpoint of my recommended range. (*See*, Peoples Statement No. 15, p. 71.)

Q. MR. PATEL CHALLENGES THE NOTION THAT PEOPLES' ELEVATED CAPITAL SPENDING PROGRAM SUPPORTS A HIGHER AUTHORIZED ROE FOR THE COMPANY AND ASSERTS THAT MY CREDIT RATING CONCERNS DUE TO THE CAPITAL EXPENDITURE PROGRAM ARE "SPECULATIVE AND UNSUPPORTED". (I&E STATEMENT NO. 2, PP. 48-49.) WHAT IS YOUR RESPONSE?

A. As a preliminary matter, Mr. Patel misinterprets my testimony when he says that he disagrees with my notion "that Peoples require *[sic]* a higher authorized ROE due to its planned capital expenditures, regulatory environment, large customers bypass risk, flotation costs, financial risk, and capital market environment." (I&E Statement No. 2, p. 39.) I did not state that

Peoples requires a "higher authorized ROE" or make an adjustment to my recommended ROE due to Peoples' heightened capital expenditures or other business risks I identified. That aside, Mr. Patel asserts that all natural gas utilities are facing the issues of upgrading or replacing infrastructure, that Peoples has the opportunity to file a rate case at any time to address revenue inadequacy, and that the Commission offers risk reducing mechanisms to help reduce regulatory lag in recovery of infrastructure investments or other unforeseen expenditures. As explained below, Mr. Patel's position does not compare the Company to its peers on these points.

As discussed in my Direct Testimony, Peoples is planning a major capital investment program from 2026-2030 nearing $4.0 billion. (Peoples Statement No. 15, p. 44.) The Company will require access to external debt and equity capital to fund its capital program. Credit rating agencies have commented on the Company's heightened capital program as one of its key credit challenges, as discussed in my Direct Testimony. (Peoples Statement No. 15, p. 46.)

Q. DO YOU AGREE WITH MR. PATEL THAT BYPASS RISK IS NOT A CONCERN FOR PEOPLES?

A. No. Mr. Patel acknowledges that the loss of large customers would place pressure on revenue, fixed-cost recovery, and cash-flow metrics, but he concludes that bypass risk is not material because Peoples has not lost or gained large-volume customers during 2021–2025 under the criterion of annual consumption of 500,000 Mcf or more. That conclusion is too narrow. Bypass risk is forward-looking and reflects the potential for large-volume customers to reduce

or eliminate reliance on the Company's distribution system through physical bypass, interstate pipeline alternatives, fuel switching, or other competitive options.

As explained in my Direct Testimony, approximately 12 customers representing approximately 20 percent of total throughput, or approximately 26.6 billion cubic feet, have the ability to bypass the Company's system. (Peoples Statement No. 15, p. 48.) Because the Company's distribution system is largely fixed-cost in nature, the loss or reduction of large-load throughput could affect revenues, cash flow, earnings, fixed-cost recovery, and credit quality. The fact that this risk has not recently materialized does not mean that it is irrelevant to investors' assessment of the Company's risk profile.

Importantly, I did not make a separate upward adjustment to my recommended ROE for bypass risk. Instead, I considered bypass risk as part of the totality of company-specific risks supporting my 11.00 percent base ROE recommendation within the range of market-based model results. Therefore, Mr. Patel's testimony does not undermine my conclusion; rather, it confirms that if bypass were to occur, the financial consequences would be meaningful.

Q. MR. PATEL, MR. CICERO, MR. DEUPREE, AND MR. EWEN ARGUE THAT PEOPLES HAS LOWER RISK DUE TO ITS REGULATORY MECHANISMS. (I&E STATEMENT NO. 2, P. 47; CAUSE-PA STATEMENT 1, P. 13; OCA STATEMENT 1, PP. 27-29; OSBA STATEMENT NO. 2, P. 4.) DO YOU AGREE WITH THESE WITNESSES' POSITIONS ON THIS ISSUE?

A. No, I do not. As noted earlier, while regulatory mechanisms can mitigate certain risks, they do not eliminate them. Further, risk is relative and these witnesses overlook the fact that

determining a utility's just and reasonable ROE is a *comparative* exercise. It is necessary to compare the regulatory mechanisms available to Peoples to those that are available to the proxy group operating companies, and none of these Witnesses perform a comparative analysis as I have. These mechanisms are not unique to Pennsylvania or to other natural gas utilities, and all of proxy group operating companies utilize mechanisms that also mitigate risk.

My direct testimony reviewed the regulatory mechanisms available to the proxy group and found that similar mechanisms are common: all proxy group operating companies with a retail supply obligation have purchased gas cost recovery, 96 percent have full or partial decoupling mechanisms, 96 percent have timely capital cost recovery mechanisms, and 57 percent operate in jurisdictions that permit a full or partial forecast test year. (Peoples Statement No. 15, p. 52; Peoples Natural Gas Exhibit No. JEN-8.) Because these mechanisms are common among the proxy companies, their risk-reducing effects are already reflected in the market-based model results used to estimate investors' required return

The Witnesses therefore conflate risk mitigation with risk elimination. The DSIC, FPFTY, and WNA may reduce certain timing or volumetric risks, but they do not eliminate regulatory risk, capital market risk, credit risk, execution risk, or the need to attract external capital on reasonable terms. Moreover, regulatory mechanisms are only effective if implemented in a timely and supportive manner, including through authorization of a compensatory return. For that reason, the existence of these mechanisms does not support reducing the authorized ROE below the level indicated by market-based cost-of-equity evidence.

Q. MR. PATEL CONTESTS YOUR POSITION THAT THE AUTHORIZED ROE FOR PEOPLES SHOULD RECOGNIZE THE NEED FOR THE COMPANY TO RECOVER FLOTATION COSTS. (I&E STATEMENT NO. 2, P. 54.) HOW DO YOU RESPOND TO HIS ARGUMENTS ON THIS ISSUE?

A. Mr. Patel testifies that (1) Peoples and PNG Companies do not issue common equity, (2) PNG Companies and Peoples have not received equity infusions in the last five years, (3) he is not aware that the Commission has approved a flotation cost adjustment in previous base rate cases, and (4) argues that flotation costs are operating expenses that should be normalized and recovered through rates similar to the treatment of rate case expense, not through an adjustment to the authorized ROE. (I&E Statement No. 2, p. 54.)

As a preliminary matter, I have not recommended an adjustment to the authorized ROE for Peoples in this proceeding to account for flotation costs. Further, I disagree with Mr. Patel's conclusions. First, the fact that Peoples and PNG Companies do not directly issue common equity or have not recently received equity infusions does not eliminate flotation costs from the process of raising equity capital. Under the stand alone principle of ratemaking, the authorized ROE is intended to reflect the return required by investors supplying capital to support utility operations. Those investors incur issuance and transaction costs when capital is raised, whether directly by the utility, by a parent company, or through the capital markets more broadly. As explained in my Direct Testimony, to the extent a company is denied the opportunity to recover prudently incurred flotation costs, actual returns will fall short of expected returns, thereby diminishing the utility's ability to attract capital on reasonable terms. (Peoples Statement No. 15, p. 54.) I demonstrate this quantitively in an illustrative analysis

shown in **Peoples Natural Gas Exhibit No. JEN-11R**. As shown in **Peoples Natural Gas Exhibit No. JEN-11R**, without flotation cost recovery, retained earnings, book value, earnings pers share, and dividends per share are all lower than the scenario in which recovery of flotation costs is allowed in the ROE. The result is that utility perpetually underearns its authorized ROE.

Second, the absence of recent equity issuances does not mean that flotation costs are irrelevant. As explained in my Direct Testimony, flotation costs remain part of the cost structure long after they are incurred, even if no new issuances have occurred recently or are planned in the near future. (Peoples Statement No. 15, p. 56.) As such, recovery of equity issuance costs is appropriate for the same reasons debt issuance costs are recoverable.

Third, Mr. Patel's statement that he is unaware of prior Commission approvals of a flotation cost adjustment does not demonstrate that recovery is unwarranted. The relevant question is whether flotation costs represent a real and measurable cost of obtaining equity capital. As discussed in my Direct Testimony, finance theory and regulatory precedent recognize that flotation costs reduce the net proceeds available from capital issuances and therefore increase investors' required return. (Peoples Statement No. 15, pp. 55-56.)

Finally, I disagree with the suggestion that flotation costs should be treated as a normal operating expense and recovered in the same manner as rate case expenses. Flotation costs are not incurred in the course of day-to-day utility operations, rather they are recorded on the balance sheet as paid-in capital. Equity issuance costs are associated with obtaining long-term investor-supplied capital and are therefore directly related to the utility's cost of equity. For that reason, flotation costs are more appropriately reflected as an adjustment to the ROE than

treated as an operating expense. This approach aligns the recovery mechanism with the nature of the cost and ensures that investors have a reasonable opportunity to recover the full cost of providing equity capital to the Company.

Q. MR. GARRETT SUGGESTS FIRM-SPECIFIC RISKS SHOULD NOT BE REFLECTED IN THE COMPANY'S COST OF EQUITY BECAUSE THOSE RISKS CAN BE SUBSTANTIALLY REDUCED THROUGH DIVERSIFICATION. (OCA STATEMENT 3, P. 19.) WHAT IS YOUR RESPONSE?

A. Mr. Garrett's position that investors do not expect to be compensated for firm specific risk contradicts his position that risk is among the most important factors for the Commission to consider when "determining the allowed return." (OCA Statement 3, p. 33.) Mr. Garrett's position that diversification eliminates firm-specific risk stems from the Modern Portfolio Theory underlying the CAPM.[118] However, the objective in this proceeding is to estimate the cost of equity for one enterprise, Peoples, which necessarily requires an assessment of the Company's risk relative to a group of peers that are comparable in risk. The objective is not to evaluate the diversification attributes of adding Peoples to an investment portfolio. Within a portfolio each investment will have a unique risk profile – some higher, some lower – demonstrating that the return required for each investment will differ. The fact that investors can mitigate exposure to risk through diversification, however, does not mean they ignore firm-specific risk in their return requirements for each investment within a portfolio.

[118] Notably, the assumption regarding diversification is not an assumption underlying the DCF or Risk Premium models.

Q. HAVE YOUR CONCLUSIONS REGARDING PEOPLES' BUSINESS RISK CHANGED FROM THOSE YOU PRESENTED IN YOUR DIRECT TESTIMONY?

A. No, they have not. My research and analyses show Peoples has elevated capital spending risk relative to the proxy group, is exposed to greater risk due to bypass risk, should be allowed to recover flotation costs associated with equity issuances through the authorized ROE, and has regulatory mechanisms similar to those utilized by the proxy group operating companies. Nonetheless, my ROE recommendation does not depend on the Commission finding that Peoples has greater business risk than the proxy group. My ROE recommendation is based on the results of the financial models I have used to estimate the cost of equity and does not include an upward adjustment for business risk or for flotation costs.

XII. UPDATED ROE RESULTS

Q. PLEASE COMMENT ON THE IMPORTANCE OF USING MULTIPLE MODELS IN DETERMINING THE COST OF EQUITY.

A. As explained in my Direct Testimony, the cost of equity cannot be precisely quantified, thus driving the need to estimate the cost of equity through the use of multiple financial models. (Peoples Statement No. 15, pp. 70-71.) Each model has limiting assumptions and offers a unique perspective on investors' return requirements under varying market conditions. The use of multiple financial models is therefore crucial in providing a robust and comprehensive estimate of the cost of equity for Peoples. Accordingly, I encourage the Commission to rely on multiple models using sound inputs, to set Peoples' authorized ROE.

Q. HAVE YOU UPDATED YOUR ROE ANALYSES?

A. Yes, I have updated the results of the financial models used to estimate the cost of equity for Peoples in my Direct Testimony (data as of January 30, 2026) to include market data through May 31, 2026. The results of the updated analyses are shown in Figure 20 and **Peoples Natural Gas Exhibit Nos. JEN-1R** through **JEN-5R**.

Figure 20: Updated ROE Results[119]

Model	**January 30, 2026**	**May 31, 2026**
Constant Growth DCF	10.79%	10.93%
Quarterly Growth DCF	11.03%	11.14%
Average DCF	**10.91%**	**11.03%**
Forward CAPM	13.09%	12.17%
Forward ECAPM	13.91%	12.94%
Historical CAPM	10.11%	10.05%
Historical ECAPM	10.64%	10.60%
Average CAPM	**11.94%**	**11.44%**
Risk Premium	10.24%	10.30%
ROE Range	**10.20%-11.90%**	**10.30%-11.40%**
3-Model Average	**11.03%**	**10.92%**
Base ROE Recommendation	**11.00%**	**11.00%**
Management Adder	0.25%	0.25%
Final ROE Request	**11.25%**	**11.25%**

[119] *See,* Exhibit JEN-2 through Exhibit JEN-6 and Exhibit JEN-1R through Exhibit JEN-5R. DCF and CAPM results reflect the average of the proxy group mean and median ROE estimates.

Q. HOW DO THESE UPDATED RESULTS COMPARE WITH THOSE PRESENTED IN YOUR DIRECT TESTIMONY?

A. Using updated market data, the average DCF results increased 12 basis point from 10.91 percent to 11.03 percent on average, driven by higher analyst EPS growth rates. The high end of the CAPM using the forward-looking MRP decreased by approximately 95 basis points, driven by a lower Value Line-projected market return, while the CAPM results using the historical market return did not meaningfully change. The Risk Premium model increased slightly from 10.24 percent to 10.30 percent. The low end of my recommended range of the cost of equity in my Direct Testimony, 10.30 percent, continues to be supported by the average Risk Premium results and the low CAPM results that rely on the long-term average historical market return. The updated CAPM results confirm that the top end of my range is supported by the average CAPM results using both the forward and historical market return, narrowing the high end of my range to 11.40 percent. My 11.00 percent base ROE recommendation remains well-supported, falling comfortably within this updated range. Therefore, I do not change my recommendation.

XIII. CONCLUSION

Q. WHAT IS YOUR CONCLUSION REGARDING THE ROE AND CAPITAL STRUCTURE FOR PEOPLES?

A. As discussed throughout my Direct Testimony, it is important to consider a variety of quantitative and qualitative information in reviewing analytical results and arriving at ROE determinations. My base ROE recommendation of 11.00 percent continues to be supported by

the updated model results, as well as by Mr. Patel's DCF analysis. Further, my 11.00 percent base ROE recommendation remains only eight basis points from the three model average, before considering flotation costs (nine basis points). The base ROE recommendation does not include additional adjustments for Peoples' heightened capital expenditures, risk associated with the potential for customers to bypass its system, and flotation costs. Additionally, I continue to support the Company's requests for a 25 basis point premium to reflect its superior management performance.

As to the capital structure, the Company's requested capital structure of 54.47 percent common equity and 45.53 percent long-term debt is within the range of capital structures that finance the regulated utility operations of the proxy group and, therefore, is consistent with the Commission's precedent.

Q. DOES THIS COMPLETE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY
OF JENNIFER E. NELSON

VERIFICATION

I, Jennifer E. Nelson, under penalty of perjury, on this 16th day of July, 2026, declare that the foregoing is true and correct to the best of my knowledge and belief.

/s/ Jennifer E. Nelson

Source: Regulatory Research Associates; SEC Form 10-K for ATO and SR
If the capital structure was not determined in the most recent rate proceeding, the authorized equity ratio determined in the next most recent proceeding with a determination was used.

Notes:

[1] Atmos' Louisiana jurisdiction is authorized through rate stabilization clause (RSC) proceedings, not a general rate case

[2] Gas utilities regulated by the Texas Rail Road Commission (RRC) have a general rate case only if they are unable to reach a settlement with the cities and unincorporated areas ("environs") within their service territories. Current authorized equity ratio for Atmos Texas' territories is published in ATO's December 2025 Investor Presentation and 2024 10-K.

[3] Calculated using investor-supplied capital sources only. Columbia Gas of Virginia's authorized capital structure includes 7.316% short-term debt, 47.348% long-term debt, 2.166% preferred stock, 43.147% common equity and 0.023% Job Development Credits.

[4] Calculated using investor-supplied capital sources only. Indiana includes non-investor supplied capital in the ratemaking capital structure reported by RRA. Including non-investor supplied capital, NIPSCO's authorized equity ratio is 52.39%.

[5] Source: Spire, Inc. 2025 Investor Presentation and 2024 10-K; authorized equity ratios in Spire's AL and MS jurisdictions are authorized through rate stabilization proceedings, not general rate cases.

PEOPLES TO CAUSE -PA III-1:

Please refer to CAUSE-PA Statement No. 1, pages 13-15 (Cicero testimony). Did Mr. Cicero evaluate whether any other utility companies also have "modifications to traditional ratemaking" that mitigate regulatory lag? If so, please provide all analyses Mr. Cicero performed, or reports relied upon, regarding mechanisms that modify traditional ratemaking that are employed by other utility companies.

RESPONSE:

Many other gas utilities in Pennsylvania use the modifications allowed by the Public Utility Code to reduce regulatory lag, including filing a rate case using a Fully Projected Future Test Year, the use of alternative ratemaking mechanisms such as a Weather Normalization Adjustment (WNA), and the use of a Distribution System Improvement Charge (DSIC) between rate cases. The combination of these is common, but not universal. For example, PECO Gas does not have an approved WNA, and Columbia Gas has not historically utilized DSIC. Electric and water/wastewater utilities also use these and other methods.

Mr. Cicero's testimony outlines his analysis of these issues, and he has not relied on specific reports about these or other modifications to ratemaking in the preparation of his testimony.

Response Prepared by or under the supervision of Patrick M. Cicero.

Dated: July 10, 2026

I. INTRODUCTION

Q. Please state your name and address.

A. John J. Spanos. My business address is 300 Sterling Parkway, Mechanicsburg, Pennsylvania, 17050 (formerly 207 Senate Avenue, Camp Hill, Pennsylvania, 17011).

Q. With what firm are you associated and in what capacity?

A. I am associated with the firm of Gannett Fleming Valuation and Rate Consultants, LLC (Gannett Fleming), a subsidiary of GFT Infrastructure, Inc., as President.

Q. Are you the same John J. Spanos that submitted direct testimony in this proceeding?

A. Yes, I am.

Q. What is the purpose of your rebuttal testimony?

A. My rebuttal testimony responds to the depreciation-related testimony of David J. Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA"). Mr. Garrett has proposed the use of the Average Life Group ("ALG") procedure to calculate depreciation expense and depreciation annual accrual rates in an effort to provide what he deems "fairer depreciation rates"[1] than those based on the Equal Life Group ("ELG") method that is used in the Company's depreciation rates. Additionally, I will address Mr. Garrett's proposal for a different life estimate for Account 380.00, Services.

Q. Please summarize your rebuttal testimony.

[1] OCA Statement 3, p. 74, lines 7-8

A. Mr. Garrett has proposed a reduction in depreciation expense of $36.8 million based on an issue that the Commission has already clearly addressed and decided consistently for almost 40 years. The issue relates to the depreciation procedure that Peoples Natural Gas Company ("PNG" or "Company") has been utilizing for developing depreciation rates and expense for 40 years. Peoples Natural Gas uses the ELG procedure instead of the ALG procedure for most vintages. The Average Life Group procedure is most commonly identified in Pennsylvania as the Average Service Life ("ASL") procedure. The use of the ELG procedure was established with the Pennsylvania Public Utility Commission ("PUC") during the 1980s and has been used by most utilities within the Commonwealth of Pennsylvania to calculate depreciation expense and annual depreciation accrual rates since that time spanning a period of approximately 40 years.

In my testimony, I will address the following topics. First, I will explain Mr. Garrett's lack of understanding of how depreciation expense and annual depreciation accrual rates are calculated within the confines of a rate case in the State of Pennsylvania. Second, I will explain the impact of proposing such an excessive reduction of depreciation expense to the Company without any change in operation or practice. Third, I will address how Mr. Garrett's proposed depreciation rates and his perspective on his justification of those rates are completely misinformed. Mr. Garrett clearly ignores all of the components of how depreciation rates are established in Pennsylvania and quite disturbingly is selective on following the proper concepts of depreciation. Fourth, I will explain why the recent decisions regarding ELG in other state jurisdictions that Mr. Garrett

uses to support his ALG proposal are not applicable in this case. Fifth, I will address the proper life estimate for Account 380.00, Services. And lastly, I will show that the Company's proposed composite annual depreciation accrual rate of 2.56% calculated as of December 31, 2027 is consistent with the range of composite annual depreciation accrual rates of other gas distribution utilities within the United States regardless of the depreciation procedure utilized.

II. EQUAL LIFE GROUP VERSUS AVERAGE LIFE GROUP

Q. What is the equal life group procedure?

A. For the ELG procedure, a group of property (e.g., a vintage within a property account) is subdivided into groups having equal service lives. The size of these "equal life groups" is based on the estimated survivor characteristics of the account. Depreciation can then be calculated for each equal life group based on the straight line method, meaning that an equal amount of the group's service value is recorded as depreciation expense in each year of service. The total depreciation for an account is then the summation of the calculated depreciation for each equal life group. Based on the survivor curve estimate for an account, the ELG procedure mathematically estimates the life for each unit in the account, and then depreciates each unit over its expected life. The procedure is also known as the Unit Summation Procedure.

Q. How does the ELG procedure differ from the ASL (also referred to as ALG) procedure?

While the ELG procedure calculates depreciation for each equal life group, the ASL (or ALG) procedure depreciates every asset within an account over the average life of the entire account. Using equal life groups, rather than an average life, as the basis for depreciation provides a more precise calculation that better matches recovery with consumption of assets by depreciating assets that have shorter lives than the average over their shorter lives (and the longer-lived assets over their longer lives) rather than depreciating all assets over the average life for the group.

Q. Is ELG supported by depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. For example, Robley Winfrey, who developed the Iowa survivor curves at Iowa State University and is regarded as a pioneer of utility depreciation practices, referred to the ELG procedure as "the only mathematically correct procedure."[2]

Depreciation Systems by Wolf and Fitch, also supports the appropriateness of ELG stating, "Application of the equal life group procedure is generally considered to better match the consumption of capital with service provided than does application of the average life procedure."[3]

Q. Please explain how depreciation is determined using the ELG procedure.

[2] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[3] Frank K. Wolf and W. Chester Fitch, *Depreciation Systems* (Ames, IA: Iowa State University Press, 1994); p.75

A. A simple two-unit example will demonstrate how the ELG procedure more appropriately matches cost recovery to consumption than the ASL procedure. In this example, each unit costs $1,000. Unit A will be in service for 5 years, and unit B will be in service for 15 years. There is no net salvage for these units.

For the ASL procedure, the average service life for the two units is 10 years ([5+15]/2), so the annual depreciation rate is 10% (1/10) throughout the lives of both units. For the first five years, the total annual depreciation amount is $200 ($2,000 x 10%). At the end of year 5, the total in annual accruals for the account is $1,000 ($200 x 5). Unit A is then retired, which results in a reduction in the plant in service and accumulated depreciation of $1,000, consistent with established plant retirement procedure. At the start of year 6, Unit B remains in service with an accumulated depreciation balance of $0. At this point, one-third of Unit B's service life has expired, and its full original cost must still be recovered.

For the remaining 10 years, $100 ($1,000 x 10%) of annual expense is accumulated in depreciation, for a total of $1,000 when Unit B is retired. Thus, at the time of Unit B's retirement, the Company will have fully recovered the total depreciable cost of both units. However, at the end of year five, only one unit remained in service with two-thirds of its life expectancy left but with 100% of that unit's original investment still to be recovered. As a result, the ASL procedure is ineffective in matching cost recovery to the actual consumption of the asset. This is a characteristic deficiency of the ASL procedure.

When depreciation is determined using the ELG procedure, the pattern of cost recovery better matches actual consumption. Using the same two-unit

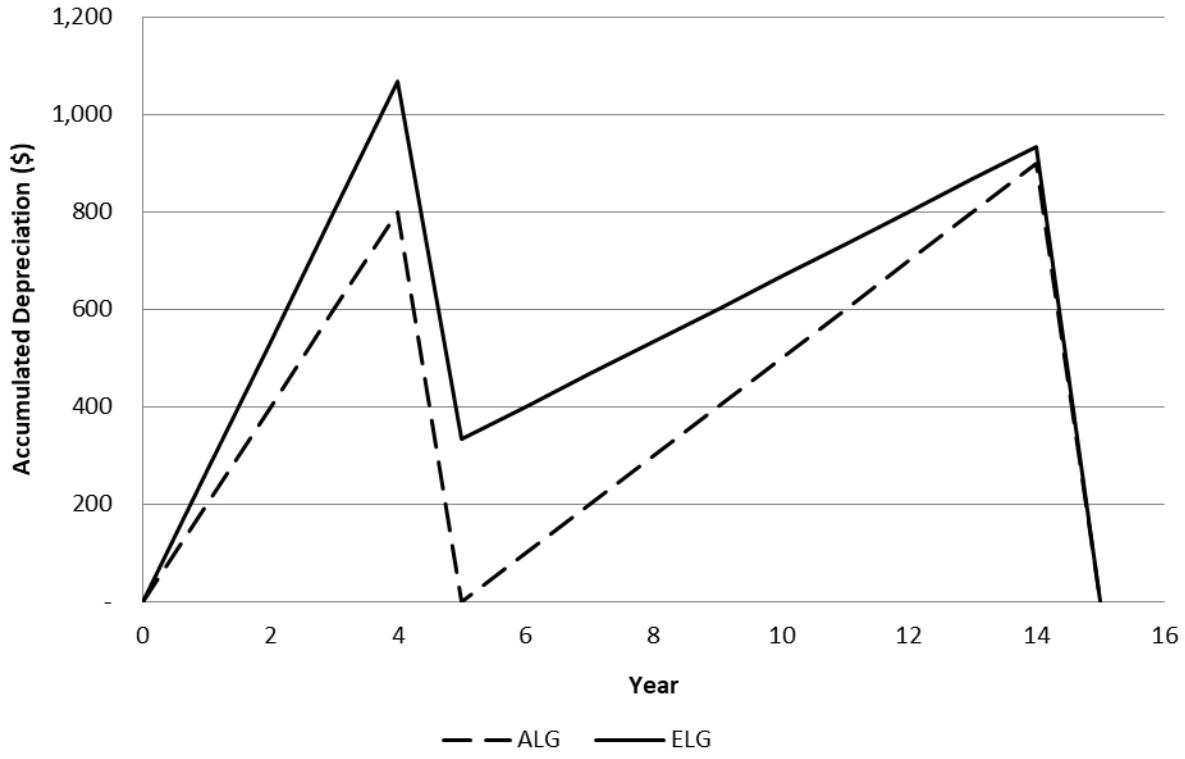
example, the annual depreciation expense under the ELG procedure is calculated by summing the annual expense for each equal life group. In this case, there are two equal life groups – one for Unit A, which has a life of 5 years, and one for Unit B, which has a life of 15 years. The annual depreciation rate for Unit A is 20% (1/5) and for Unit B is 6.67% (1/15). Thus, the annual accruals for years 1 through 5 will be $200 ($1,000 x 20%) for the first equal life group (Unit A) summed with $66.67 ($1,000 x 6.67%) for the second (Unit B), or $266.67. At the end of year 5, when Unit A is retired, the total accruals would be $1,333.33 ($266.67 x 5). The retirement of Unit A results in a reduction of $1,000 in accumulated depreciation, and at the start of year 6, the $1,000 original cost of Unit B remains with $333.33 in accumulated depreciation. Thus, with one-third of Unit B's life consumed, accumulated depreciation is exactly one-third of the original cost for this unit.

In the years 6 through 15, the annual depreciation expense is $66.67 for a total of $666.67 over the 10-year period. After the retirement of Unit B, the accumulated depreciation is $0 ($1,000 of accruals less the $1,000 retirement of Unit B), and the full recovery of both units has been obtained.

As this example shows, the ELG procedure better matches the cost recovery of both units with their actual service lives. Figure 1 below provides a graph of the accumulated depreciation for both procedures. The end of year 5 provides the best illustration of the difference between the two procedures. Under the ELG procedure, Unit A is fully recovered when retired at the end of year 5; Unit B is one-third through its service life and has had one-third of its cost recovered. This contrasts with the ASL procedure, in which accumulated depreciation is $0 at the

end of year 5, even though the only unit remaining in service has consumed one-third of its service life. Clearly, the ELG procedure provides a better match regarding the consumption of the service value for the two units. Additionally, rate base under ELG at the end of year 5 is $667 (=$1,000-$333) versus $1,000 (=$1,000 - $0) under ASL.

Figure 1. Comparison of Accumulated Depreciation Using the ALG and ELG Procedures



Q. You have provided a simple two-unit example demonstrating how ELG works. Do the same principles apply to larger property groups with many units?

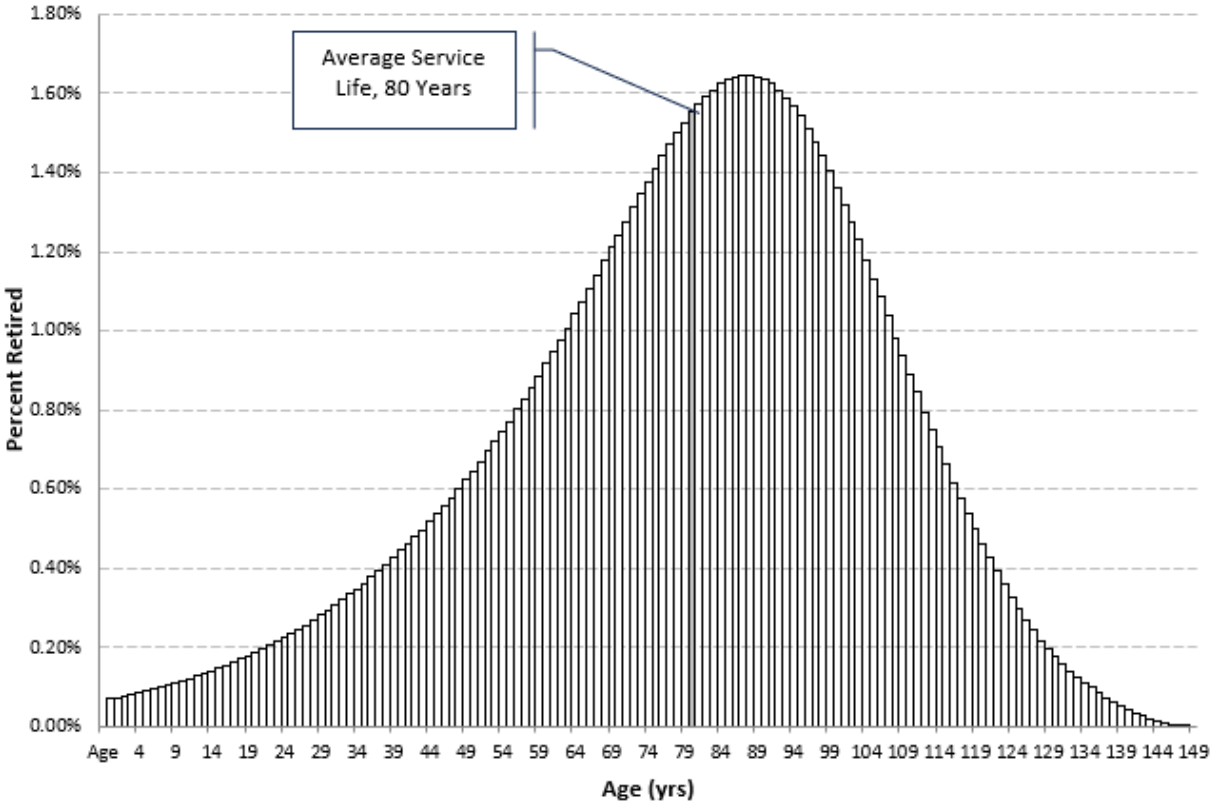
A. Yes. The same principles apply when the ELG procedure is applied to a large group of property with many units, as is typical of utility property. The survivor curve

estimated for each property account can be used to divide an account into equal life groups. The survivor curve allows for the calculation of the percentage of the property account that is in each equal life group, which allows for the calculation of ELG annual depreciation accruals for the entire property group. Under the ASL procedure, the depreciation expense for all property in the account is calculated based on the average service life for the entire group.

The ELG procedure recognizes the reality of dispersion. Specifically, it recognizes that in actual utility operations only a very small percentage of the account will be retired at the average service life. Figure 2 below is a chart of the frequency curve for the 80-R2.5 survivor curve. The frequency curve shows the percentage of property in this account that will be retired at each age, based on the estimated survivor curve. This percentage is also the size of each equal life group.

The shaded bar in Figure 2 represents the percentage of property that will have a life of 80 years. In other words, this shows the percentage of property that is expected to be in service for the average service life. Only 1.55% of the assets will be in service for exactly 80 years. In contrast, a majority, 98.45%, of the assets will have a service life different than 80 years.

Figure 2. Percent Retired by Age Based on 80-R2.5 Survivor Curve



The ELG procedure recognizes this dispersion and allocates costs for each equal life group over the expected life for that group. The service lives indicated by the 80-R2.5 survivor curves range from 1 year to 147 years. As a result, the ELG procedure allocates cost in a manner that approximates the result of each asset being depreciated over its actual life. Conversely, the ASL procedure depreciates every unit of property within an account over the same life, that is, the average life. As Figure 2 shows, this average life will be incorrect most of the time – in this example, the average life will be the wrong life for 98.45% of the individual assets.

Just as in the case for the two-unit example provided above, the ELG procedure better matches capital recovery with the actual lives forecast by the estimated survivor curve.

III. PENNSYLVANIA PRECEDENT

Q. Is the ELG procedure supported by other depreciation authorities?

A. Yes. ELG is discussed and supported in authoritative depreciation texts and academic literature. As noted previously, Robley Winfrey, who developed the Iowa survivor curves that are universally used in estimating service lives based on historical retirement data, referred to the ELG procedure as "the only mathematically correct procedure." [4]

Q. Has the ELG procedure been previously adopted in Pennsylvania?

A. Yes. ELG is the predominant method used in Pennsylvania for many years. Most Pennsylvania gas, electric and water utilities have used the ELG procedure since the 1980s. ELG was adopted for Peoples Natural Gas in the 1980s related to vintages from the previous rate case and has been used for depreciation since this approval.[5] Generally, every five years beginning in the mid-1980s, the Company has filed a service life study report with the Commission for approval based on Commission regulations. In 2023, Peoples Natural Gas submitted its most recent five-year service life study report to the Commission and all depreciation parameters and methods, including the use of the ELG procedure, were approved. Additionally, PNG submits annual depreciation reports to the Commission each year updating the Company's depreciation accrual rates for book purposes as well as identifying the underlying depreciation parameters and calculation methods

[4] Robley Winfrey, Depreciation of Group Properties, Bulletin 155 (Ames, IA: Iowa State University Press, 1942, reprinted 1969); p. 71

[5] ELG was adopted for many Pennsylvania utilities on a go-forward basis. For this reason, vintages of plant subsequent to the adoption of ELG use ELG while older vintages use ASL. For Peoples Natural Gas, vintages 1983 and subsequent use ELG and vintages 1982 and prior use ASL.

and procedures used to determine depreciation expense. Under the Commission's regulation 52 Pa. Code §73.9(c), once such depreciation reports are filed and accepted "*[i]n subsequent ratemaking proceedings, the most recent annual depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party*."

Q. Are the Company's current depreciation rates based on the ELG procedure?

A. Yes. The Company's most recent annual depreciation report was filed on June 30, 2026 and most recent service life study was filed in August 2023. All have been approved for accounting purposes using the ELG procedure. The ELG procedure was also adopted in the most recent rate case, Docket No. R-2023-3044549, for the appropriate vintages.

Q. Since the use of ELG is the predominant and longstanding practice in Pennsylvania, has Mr. Garrett provided evidentiary support for his recommendation that the Company should deviate from this practice?

A. No. None of Mr. Garrett's arguments support overturning longstanding precedent despite having the burden of doing so under 52 Pa. Code §73.9(c). He appears to disagree with ELG simply because it can produce higher depreciation rates, but he provides no evidence for why lower depreciation rates are more appropriate or "fairer" as he describes it.

Mr. Garrett has not supported his claim that the Company's approved depreciation rates or calculation procedures, which are based on longstanding precedent, are unreasonable. Further, Mr. Garrett ignores the issue of precedent, in effect only arguing that his proposal should be adopted because it results in lower depreciation expense and a short-term reduction in rates for current customers. He does not consider the other associated components of developing rates or why PNG should have considerably lower rates than other gas companies.

However, as I will explain, Mr. Garrett is incorrect that the longstanding use of ELG costs customers more than ASL. In fact, the opposite is true. Current customers benefit from the continued use of ELG, because rate base is lower than had ASL been used for this time. The more precise recovery through ELG benefits customers over time, because shorter-lived assets are correctly recovered over their useful lives, resulting in a lower rate base and lower return on rate base that exceeds the higher annual depreciation expense. Further, the alleged benefit proposed by Mr. Garrett, of lower short-term rates, is the result of the *change* in procedure, not from the procedure itself. Over time, the ASL depreciation rates will result in a higher rate base and higher overall cost to customers.

Q. Has the commission issued a recent ruling regarding the ELG versus ALG?

A. Yes. In December of 2025, the Commission issued its Opinion and Order addressing ELG versus ALG in Docket No. R-2025-3053499 and in May of 2026 in Docket No. R-2025-3057983.

Q. Please provide the excerpt from the opinion and order in Docket No. R-2025-3053499 addressing the ELG versus ALG issue.

A. In Docket No. R-2025-3053499, the Commission's Opinion and Order addressing ELG versus ALG is reflected below.

> Based on our review of the record, the ALJs' Recommended Decision, the Exceptions to the Recommended Decision, and Replies thereto, we agree with the ALJs that the Company presented evidence outweighing the evidence presented by the OCA on this issue. Therefore, we find that the ALJs properly recommended that the Commission reject the OCA's proposal to adopt the ASL procedure in this proceeding. Accordingly, we shall deny the OCA's Exception No. 1.[6]

Q. Please provide the excerpt from the opinion and order in Docket No. R-2025-3057983 addressing the ELG versus ALG issue.

A. In Docket No. R-2025-3057983, the Commission's Opinion and Order addressing ELG versus ALG is reflected below.

> Accordingly, we conclude that PAWC has supported the continued use of its long-standing ELG procedure while the OCA has failed to provide any reasonable basis – whether based on equity, accuracy or precedent – to compel a switch to the ALG procedure.[7]

Q. Was OCA Witness Garrett also the OCA Witness related to depreciation in Dockets No. R-2025-3053499 and R-2025-3057983?

A. Yes. Mr. Garrett was the OCA witness on depreciation in Docket No. R-2025-3053499 and R-2025-3057983. From these cases, he should be aware of not only

[6] Pa. PUC v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499 (Opinion and Order entered Dec. 9, 2025), p. 111.
[7] Pa. PUC, Docket No. R-2025-3057983 (Recommended Decision entered May 15, 2026), p. 222.

the precedent in Pennsylvania but also the many components of determining depreciation rates in this state jurisdiction which he ignores.

Q. Has OCA Witness Garrett offered any support for his ALG proposal in the instant case that was not provided in other cases recently in Pennsylvania?

A. No, he has not. In fact, his positions in this case clearly show he does not consider any of the factors that would properly recover depreciation expense under the guidance in this jurisdiction.

IV. DEPRECIATION AND RATE BASE

Q. How does Mr. Garrett discuss the impact of ELG on customer rates?

A. Mr. Garrett states on page 64, lines 16 and 21 of his testimony, "In order for the ELG method to be properly applied, a utility would need to revise depreciation each year. However, given the logistical realities involved with prosecuting rate cases, this would be impractical and inefficient. When a utility has made substantial, recent capital investments, depreciation expense calculated under the ELG method will always be higher than the expense calculated under the ALG method." He further asserts on page 68, lines 8 and 9, that, "the ALG method results in a fairer application of depreciation rates compared with the ELG method given the realities of ratemaking proceedings."

Q. Has PNG filed a recent rate case?

A. Yes. Including the instant rate case, PNG filed a rate case most recently in 2023.

Q. Is PNG required by Pennsylvania regulations to update its depreciation expense and annual depreciation accrual rates each year by filing an Annual Depreciation Report?

A. Yes.

Q. Do PNG's proposed ELG depreciation rates produce just and reasonable rates?"

A. Absolutely yes.

Q. Do depreciation rates based on the ELG procedure produce the most appropriate match of recovery of the assets within an account by the utilization of the assets in an account based on the survivor curve?

A. Absolutely yes.

Q. Please explain this concept further.

A. Depreciation impacts customer rates in two ways. Depreciation expense is a direct component of the revenue requirement; however, accumulated depreciation[8] is also a *reduction* to rate base. A higher level of accumulated depreciation results in a lower rate base, a lower return on rate base and, therefore, lower customer rates when compared to a lower level of accumulated depreciation.

The implication of Mr. Garrett's testimony is that a utility has an incentive for higher depreciation expense because it results in higher customer rates, and thus more cash flow for the Company. However, in the long term, his description of the rate impact is fundamentally incorrect. Higher depreciation expense will,

[8] Accumulated depreciation is the depreciation expense recorded to date, less recorded retirements and cost of removal, plus recorded gross salvage.

over time, result in higher accumulated depreciation. Because average depreciation rates for a utility are typically in the 2% to 3% range and the return on rate base is higher (typically 7% to 8% or more), higher depreciation expense tends to produce lower customer rates over time. Mr. Garrett's suggestion that a utility has an incentive to have higher rates for depreciation expense is simply incorrect and does not create an intergenerational inequity.

The longstanding use of ELG depreciation rates for Pennsylvania utilities has resulted in a lower rate base than if ASL had been used. Customers today pay lower customer rates than if ASL had been used during the years since ELG's adoption. As a result, it has been in customers' interest, not only to use ELG but also to use it consistently.

Over time ASL will result in higher customer rates than ELG. It is correct to assume that if the Company were to switch from ELG to ASL there would be a *short*-term benefit to current customers. However, this is not because ASL is in customers' best interest in the long term, but only because current customers would benefit from both lower ASL depreciation rates and from the lower rate base that exists due to the longstanding use of ELG.

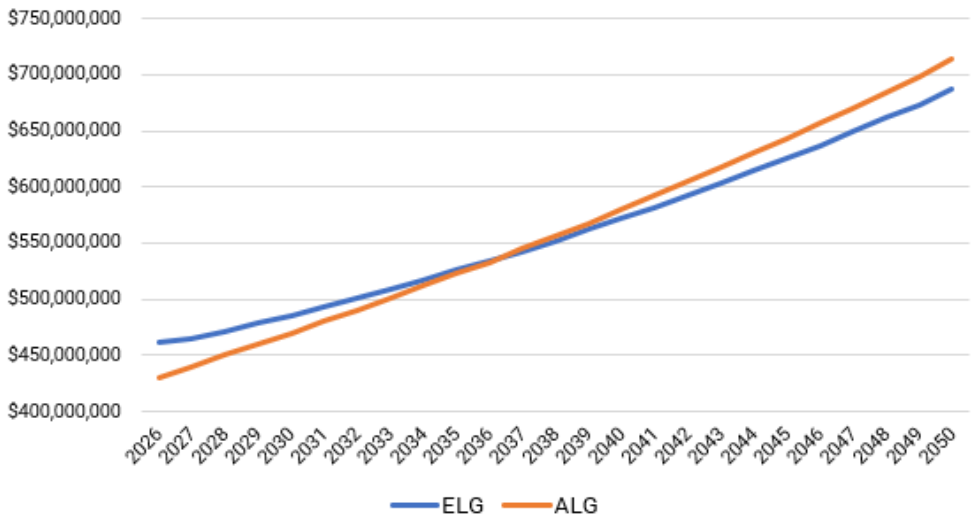
Mr. Garrett's proposal is therefore not a recommendation that is in the long-term interest of lower customer rates. It is instead a short-term subsidy only to current customers who benefit from ELG depreciation rates that were paid by a previous generation of customers. The costs of a higher rate base will be paid for by future customers who will have to pay higher overall customer rates. Adopting

ALG would serve as an intergenerational subsidy to current customers at the expense of other generations of customers.

Q. Can you illustrate this concept?

A. Yes, this concept is illustrated in **Exhibit No. JJS-1R**, which forecasts plant and reserve balances for PNG through 2050 under two scenarios: one adopting the ALG procedure and the other maintaining the currently-approved ELG procedure for vintages 1983 and newer. Figure 3 below shows a high-level estimate of the Company's revenue requirement for the period 2025 through 2050 under each of these scenarios. This demonstrates that while ELG leads to higher depreciation expenses in the short term, it results in lower revenue requirements over the long term. The ELG approach is more beneficial to customers, as it provides more stable and lower rates over time.

Figure 3. Comparison of Revenue Requirement



V. INTERGENERATIONAL EQUITY

Q. Please explain the concept of "intergenerational equity."

A. Intergenerational equity is a ratemaking principle in which customers receiving benefit from the use of an asset (e.g., from gas utility property used to provide gas service) are the same customers who pay for the cost of that asset - no more, no less. There are two related concepts when considering intergenerational equity as it pertains to depreciation. The first is the inequity that results when customers pay for assets from which they receive no service. For example, if an asset is retired before becoming fully depreciated, then customers subsequent to its retirement will have to pay for an asset from which they are not receiving service. This is less equitable, as one generation of customers bears the cost of an asset from which they receive no service. Depreciation rates should be designed to avoid such an outcome. However, in real-world operations, circumstances can change such that assets are retired earlier than expected. This results in a situation that is different than designing depreciation rates to include intergenerational inequity, which should be avoided.

The second concept is related to the distribution of depreciation charges over the life of an asset. For example, if depreciation expense is higher in the earlier years of an asset's life and lower in later years (or vice versa), this also is less equitable because one generation of customers pays a higher share than the next.

In my professional opinion, the first concept related to intergenerational equity can be more detrimental to customers than the second. That is, there is

greater inequity resulting from a customer paying for an asset from which they received no service than the inequity resulting from one generation paying a somewhat different share of the same asset than another generation.

Q. How does the ELG procedure calculate depreciation expense?

A. The ELG procedure calculates depreciation expense for assets with like lives within a depreciable group in accordance with the Iowa Survivor Curve proposed for the account and summing that depreciation expense for each similar life group of assets to develop an annual depreciation accrual rate applicable to the depreciable group. This procedure is designed to more appropriately match the recovery of the assets' costs to the period of time over which they are providing service to rate payers.

Q. How does the ALG procedure calculate depreciation expense?

A. The ALG procedure calculates depreciation expense by applying the same average service life from the proposed Iowa Survivor Curve to all assets within a depreciable group rather than grouping assets within a depreciable group by like lives. The ALG procedure operates with the assumption that some of the assets within a depreciable group will retire prior to the average service life applied to the depreciable group and other assets will survive longer than the average service life applied to the depreciable group. Continuing, the ALG procedure assumes the over-recovery of the assets surviving longer than the average service life will offset the amount of the under-recovery of the assets retiring prior to reaching the average service life of the depreciable group.

Q. Does the use of ELG versus ALG, or vice versa, impact the total amount of asset cost to be recovered?

A. No. Both procedures are designed to recover the total service value of an asset over the asset's service life.

Q. Does the use of the ELG procedure produce Intergenerational Inequity?

A. No, quite the opposite. The very nature of the ELG procedure more precisely calculates depreciation expense for assets with similar lives within a depreciable group and sums that expense to develop an annual depreciation accrual rate applicable to the depreciable group. As a result, it more appropriately matches the recovery of the asset's cost to the period of time over which it is providing service to rate payers.

In contrast, there is a stronger argument that the ASL procedure results in intergenerational inequity. Because depreciation expense on shorter-lived assets occurs over the average service life, recovery for these assets is deferred. ELG produces a more equitable recovery by recovering these costs over the actual, shorter, service lives.

Q. Does the use of the ELG procedure require the calculation of annual depreciation rates to be updated more frequently than the ALG procedure to prevent intergenerational inequity?

A. No. Regardless of the procedure selected, the calculation of depreciation expense and annual depreciation accrual rates should be updated regularly to prevent intergenerational inequity and the inherent variable of plant activity.

Q. How frequently does Pennsylvania regulation require the calculation of depreciation rates?

A. Pennsylvania regulation requires utilities operating within the state to calculate and file updated depreciation rates annually. This annual requirement alleviates concern for the development of generational inequity.[9]

VI. ALL FACTORS FOR DETERMING DEPRECIATION RATES

Q. Has Mr. Garrett considered all the key components for determining depreciation rates?

A. Absolutely not. He clearly ignores all the key factors of developing a depreciation rate in order to emphasize only one factor, which is completely improper.

Q. Please explain all of the factors that affect the development of a depreciation rate.

A. Depreciation rates are determined with many factors or key components that each affect the depreciation rate that should be used to properly recover the full service value of all assets by account. Additionally, this should be done in a systematic and rational manner. The first two key components are the service life and net salvage percentage. The service life estimate is represented by the survivor curve. The net salvage component is typically a percentage of cost of removal minus gross salvage that are applied to the accrual rate in order to recover the full service value over the life of the asset. Pennsylvania is unique to all other states in that the net salvage component is a five-year amortization of the incurred costs after the asset is

[9] Bulletin 155, p. 71

retired. Thus, a deferral. Second is the depreciation procedure and method. Procedures are ALG or ELG, and the method is either remaining life or whole life. The next component to focus on is the plant to reserve ratio at the test year dates. Finally, the age of the surviving plant at the test year dates. Each of these factors has an impact on the depreciation rate. It is not simply the depreciation procedure. Additionally, one must consider all of these factors when comparing to other utilities within the same state as well as those in other state jurisdictions.

Q. Has Mr. Garrett considered all of these factors in developing his testimony?

A. Disturbingly, it appears not. He clearly ignores the special handling of the net salvage recovery deferral in Pennsylvania. He does not consider how close the theoretical reserve to book reserve variance[10] is, which clearly shows the recovery of many years has been fair and reasonable based on the factors in place and the expected plant investment that has taken place in the past and forecasted into the future.

Q. Is Mr. Garrett selective in which depreciation factors he wants to follow when conducting his depreciation calculations?

A. Yes. He attempts to compare the depreciation procedure across other jurisdictions but none of the other factors when considering how depreciation rates are determined within each jurisdiction. Mr. Garrett continually frames ELG as an accelerated procedure and claims that in a high investment period depreciation

[10] Comparisons of the theoretical to book reserve for each test year are provided in the attachments to filing requirement Ex. 9, Sch. 3. Variances for each test year are 5% as of November 30, 2025, 3% as of November 30, 2026, and 1% as of December 31, 2027.

rates would be getting higher. However, from the historic test year to the fully projected future test year, when investments are projected to increase by over 20%, the composite rate hardly changes (increase of 0.02%) using the ELG procedure.

Q. Has Mr. Garrett provided decisions regarding ELG procedure from other jurisdictions to support his proposed use of the ALG procedure?

A. Yes. Mr. Garrett cites decisions from Indiana and Kentucky to support his proposal of the ALG procedure in this case.

Q. Why are the Indiana and Kentucky decisions not applicable to the instant case?

A. Both the decisions referenced by Mr. Garrett were cases involving electric utilities with an asset base including electric generation, transmission and distribution assets which are significantly different assets involving significantly different costs associated with them and more importantly assets that are being recovered over much shorter remaining lives than originally planned.

Q. Have there been recent cases in Indiana that have approved the use of the ELG procedure?

A. Yes. In the Citizens Energy Group and Aqua Indiana – Aboite cases the Indiana Commission accepted the ELG procedure[11].

VII. MASS PROPERTY SERVICE LIVES

Q. Has a service life study been conducted specifically for this rate case?

[11]Indiana Utility Regulatory Commission, Cause No. 45988 and Cause No. 46334.

A. No. It was not necessary to prepare a service life study for this rate case because the Commission's regulation at 52 Pa. Code Section 73.5 provides that a gas public utility with gross intrastate revenues exceeding $20 million per year "shall file a service life study report every 5 years." The most recent prior service life study was conducted by Gannett Fleming in 2023, and the service life parameters established by that service life study have been used by PNG to record depreciation expense on its regulated books of account and for financial reporting purposes since that time. Therefore, there was no need to update the service life estimates for this proceeding. The next service life study update will not be required until 2028.

Q. Please explain the difference between depreciation studies, which the Company filed with its supporting data in this case, and a service life study?

A. A service life study employs the retirement rate method to analyze historical plant data, together with professional judgment, to develop reasonable estimates of the average service life of property recorded in each mass property account. Those average service lives are used to develop depreciation rates, expressed as a percentage, for each plant account. As I previously explained, PNG completed its last service life study in 2023, which it filed with the Commission. A depreciation study, such as those filed in this case, uses the service life parameters developed in a prior service life study to calculate annual depreciation expense based on the plant balances for the applicable test year or years.

Q. What do the Commission's regulations state regarding the effect of filing a service life study pursuant to 52 Pa. Code Section 73.5?

A. The Commission's regulations at 52 Pa. Code Section 73.9(b) and (c) state as follows:

> (b) A service life study or annual depreciation report containing proposed changes to service lives or other depreciation parameters or methods, will be deemed approved by the Commission, for accounting purposes only, within 180 days from the filing date unless the Commission takes other action. The filing utility may request Commission authorization to implement proposed changes in a new service life study.
> (c) In subsequent ratemaking proceedings, the most recent depreciation report or service life study approved or deemed approved for accounting purposes only under this chapter, constitutes a rebuttable presumption as to the reasonableness of the accrued depreciation claimed for ratemaking purposes, and the burden of proving the unreasonableness of the accrued depreciation shall be on the challenging party.

Q. Was the service life study PNG filed in 2023 deemed approved by the Commission for accounting purposes?

A. Yes, it was. The Commission took no action for 180 days following the filing of the service life study and, pursuant to Section 73.9(b), the service lives were deemed approved for accounting purposes.

Q. Did PNG use the service lives from the 2023 service life study to calculate the depreciation rates used to record depreciation expense?

A. Yes. The Company used the service life estimates in its 2023 service life study to calculate the depreciation rates it employed to record depreciation expense for each fiscal year since that study was performed, including depreciation expense recorded on its financial statements for financial reporting purposes.

Q. Did OCA witness Garrett propose changes to any of the service lives for mass property proposed by PNG?

A. Yes. Although the service lives from the last service life study are still being used by PNG to record annual depreciation expense, Mr. Garrett has proposed a change to the average service life of one plant account.

Q. Please summarize the adjustment Mr. Garrett proposed.

A. Mr. Garrett has proposed an adjustment to the survivor curve for one plant account. Mr. Garrett proposes to change the survivor curve for Account 380.00, Services, from the approved 55-R2 survivor curve to a 62-R2 survivor curve. Please note that on page 72 of Garrett Testimony, the Account 380 is identified as Account 376.10, Mains, but the information supports analysis for Account 380.00.

For the Depreciation Studies presented in this case, I have continued to use the average service lives that were developed in the last (2023) service life study. In contrast, Mr. Garrett proposes to lengthen the average service life of gas services by 7 years. Mr. Garrett's proposed adjustment is a significant increase when compared to the current estimate. The 7 year average life also produces a 12 year maximum life increase. The 62 year average life for gas service is beyond the upper end of the industry ranges.

Mr. Garrett's proposed adjustment is not reasonable. His recommendation is the product of the flawed analysis Mr. Garrett used to develop his estimate, which relies primarily on mathematical curve fitting, as I explain later in my rebuttal testimony. Mr. Garrett's approach does not give adequate or appropriate consideration to the mortality characteristics of the assets he purported to study or to other factors that should be considered in developing a reasonable service life estimate.

A. <u>The Estimation of Service Lives Is Not a Purely Mathematical Exercise and Must Incorporate Informed Judgment</u>

Q. Has Mr. Garrett used the same approach to estimating service lives as you used in the last service life study?

A. No. While both Mr. Garrett and I used the retirement rate method to analyze historical data and Iowa type survivor curves to smooth and extend the observed life data, Mr. Garrett's overall approach differs from mine in several important ways. Mr. Garrett's approach also differs from the correct and proper approach to estimating service lives that is set forth in authoritative treatises on depreciation, such as the National Association of Regulatory Utility Commissioners ("NARUC") *Public Utility Depreciation Practices ("NARUC Treatise")*. Specifically, Mr. Garrett's direct testimony indicates that he believes estimating service lives is primarily a mathematical exercise in which little more than mathematical computations of historical accounting data will produce reasonable service life estimates[12]. This concept is based on his opinion that there is nothing in the recent past or into the future will be different than that overall statistical analysis through 2022. This interpretation of Mr. Garrett's testimony related to his manner of determining survivor curves is based on the fact that all of his discussion relates to mathematical curve fitting. The overall approach is incorrect. Depreciation, and particularly estimating service lives, is a forecast of the future rather than a calculation of what has happened in the past.

[12] Garrett, p. 73, lines 7-12.

Q. Please explain in more detail why Mr. Garrett's approach does not comply with the proper approach to determining reasonable service life estimates.

A. Consider, as an example, the following statement from Mr. Garrett's testimony in which he describes the curve-fitting process:

> Mathematical curve fitting promotes objective, unbiased results. While mathematical curve-fitting is important, it may not always yield the optimum result. Simply determining which Iowa curve best fits an OLT curve ignores professional judgment that may be needed for specific situations. For example, if there is insufficient historical data in a particular account and the OLT curve derived from that data is relatively short and flat, the mathematically "best" curve may be one with a very long average life. However, when there is sufficient data available, mathematical curve fitting can be used as part of an objective service life analysis[13].

Mr. Garrett's direct testimony creates the erroneous impression that mathematical results should generally be accepted, and instances in which the proper service life estimate is not a best "mathematical fit" would be a relatively unusual exception (such as, if there is insufficient data). His purported justification for relying on the results of mathematical curve fitting is that doing so promotes "objectivity." While one may desire "objective" results to remove uncertainty and presumably to make the job of estimating service lives easier, the objectivity sought by Mr. Garrett is neither realistic nor desirable in developing an accurate and reasonable forecast of the future. Further, recognized authorities on the subject of depreciation, such as NARUC, are clear that estimating service lives must include the exercise of the analyst's informed professional judgment.

[13] Garrett, p. 70, lines 15-22.

Q. Does the NARUC Treatise explain and emphasize the importance of using informed professional judgment in estimating service lives?

A. Yes. The NARUC Treatise explains the role that professional judgment plays in estimating service lives. Chapter XIII of the NARUC Treatise, entitled "Actuarial Life Analysis," discusses and emphasizes the use of informed professional judgment in the process of estimating service lives. NARUC starts this chapter by explaining that the analysis of historical data is only one part of the process of estimating service lives:

> Actuarial analysis objectively measures how the company has retired its investment. The analyst must then judge whether this historical view depicts the future life of the property in service. The analyst takes into consideration various factors, such as changes in technology, services provided, or capital budgets.[14]

NARUC further explains that the process of estimating service lives must consider more than just an allegedly "objective" measurement of past retirements. In describing the determination of a survivor curve estimate (referred to as the "projection life" in this passage), NARUC states:

> The projection life is a projection, or forecast, of the future of the property. Historical indications may be useful in estimating a projection life curve. Certainly, the observations based on the property's history are a starting point. Trends in life or retirement dispersion can often be expected to continue. Likewise, unless there is some reason to expect otherwise, stability in life or retirement dispersion can be expected to continue, at least in the near term.
>
> Depreciation analysts should avoid becoming ensnared in the mechanics of the historical life study and relying solely on mathematical solutions. The reason for making an historical life analysis is to develop a sufficient understanding of history in order to evaluate whether it is a reasonable predictor of the future. The importance of being aware of circumstances having direct bearing on

[14] NARUC Treatise (1996), p. 111.

> the reason for making an historical life analysis cannot be understated. These circumstances, when factored into the analysis, determine the application and limitations of an historical life analysis.[15]

Thus, NARUC strongly advises against the approach used by Mr. Garrett by stating clearly that "relying solely on mathematical solutions" should be avoided. NARUC further elaborates on the need for the analyst's "informed judgment" in forecasting service lives:

> A depreciation study is commonly described as having three periods of analysis: the past, present, and future. The past and present can usually be analyzed with great accuracy using many currently available analytical tools. The future still must be predicted and must largely include some subjective analysis. *Informed judgment* is a term used to define the subjective portion of the depreciation study process. It is based on a combination of general experience, knowledge of the properties and a physical inspection, information gathered throughout the industry, and other factors which assist the analyst in making a knowledgeable estimate.
>
> The use of informed judgment can be a major factor in forecasting. A logical process of examining and prioritizing the usefulness of information must be employed, since there are many sources of data that must be considered and weighed by importance. For example, the following forces of retirement need to be considered: Do the past and current service life dispersions represent the future? Will scrap prices rise or fall? What will be the impact of future technological obsolescence? Will the company be in existence in the future? The analyst must rank the factors and decide the relative weight to apply to each. The final estimate might not resemble any one of the specific factors; however, the result would be a decision based upon a combination of the components.[16]

Q. Have you incorporated the various factors discussed by NARUC into your estimates?

[15] NARUC Treatise, p. 126. Emphasis added.
[16] NARUC Treatise, p. 128. Emphasis added.

A. Yes. For the most recent service life study, I conducted site visits and discussions with Company personnel to familiarize myself with the Company's assets. I have also performed previous depreciation studies for the Company and have incorporated information obtained from those studies as well. In addition, throughout my career, I have performed hundreds of depreciation studies for numerous utilities. The information obtained from this experience has also been incorporated into my recommendations.

Q. Has Mr. Garrett incorporated these factors into his recommendations?

A. No, at least not to the degree necessary to develop a reasonable forecast. Estimating service lives is not, and should not be, a purely mathematical exercise and must include some degree of "informed judgment." Mr. Garrett's process for estimating service lives, as described in his direct testimony, does not follow the proper approach of incorporating informed judgment. Further, as I will explain later in my testimony, his actual estimate shows that he did not properly consider all of the relevant factors needed to develop reasonable service life estimates.

B. <u>The Curve Fitting Process Must Also Incorporate Informed Judgment</u>

Q. Please briefly describe the curve fitting process used in a depreciation study.

A. As described in both Mr. Garrett's direct testimony and in the Depreciation Study for the FTY (PNG Exhibit JJS-2), the statistical life analysis we both used is referred to as the retirement rate method. The retirement rate method is used when aged data are available. Specifically, the retirement rate method requires the vintage year of historical transactions so that the age of each transaction can be

accurately determined. The retirement rate method develops an original life table[17] ("OLT"), or a series of original life tables, for each depreciable group. An OLT presents calculations, based on the historical data, of the percentage of plant that has survived to a given age. The OLT can also be shown graphically with age in the x-axis and the percent surviving in the y-axis.

For the curve fitting process, the analyst can fit or match standard Iowa survivor curves to the data from an OLT. This can be performed either visually or mathematically. For visual curve matching, Iowa curves are graphed on the same graph as the OLT. For mathematical curve matching, the mathematical deviation from a given Iowa curve to the OLT is calculated for each data point using the "sum-of-squared-differences" ("SSD"). The lower the difference between a given survivor curve and the OLT (as measured by the SSD), the better the "mathematical" (i.e., statistical) fit.

Q. Are there advantages and disadvantages to both visual and mathematical curve matching?

A. Yes. Visual curve matching offers a number of advantages over mathematical curve matching. Different ranges of data points can be given more or less emphasis depending on the characteristics of the account. It is easier to identify irregularities in the data when performing visual curve matching. Visual curve matching also allows the analyst to view the full Iowa survivor curve to assess whether the full life cycle forecasted by a given Iowa curve is reasonable for the property studied. Understanding the nature of the assets within the account and

[17] Original life tables may also be referred to as "observed life tables" or the shorthand "life tables."

a reasonable full life cycle of the account is not considered by Mr. Garrett, based on the estimated full life cycle of his survivor curve.

Many years ago, a disadvantage of visual curve matching was that it was cumbersome because of the need to manually overlay standard curves on plots of original life tables. However, since the advent of computers with sophisticated graphical capabilities, visual curve matching has become easier and more efficient. As a result, in recent decades the advantages of visual curve matching have made it more prominent, and it is used by most depreciation analysts.

Mr. Garrett discusses the alleged advantages of mathematical curve matching in his direct testimony, including his opinion that it promotes "objective, unbiased results."[18] Although mathematical curve matching provides a numerical value reflecting the statistical "fit" of an Iowa curve to the OLT data, Mr. Garrett does not discuss the disadvantages of mathematical curve matching or the fact that mathematical curve matching can also introduce biases. One of the disadvantages of mathematical curve matching is that it treats every data point within a range of fit equally. Different data points are typically based on different levels of data and different ages (e.g., older data points typically are based on much smaller levels of investment than earlier data points). There is not a good way to de-emphasize the irregularities in the data when performing mathematical curve matching, other than to exclude older data points entirely. However, excluding older data points when they present a full life cycle is not appropriate either. Mathematical curve matching can also introduce biases because of the nature of the statistical

[18] Garrett, p. 70, line 15.

calculations. As previously explained, indicators of mathematical "fit" are typically calculated by squaring the differences between the OLT points and a given Iowa curve. As a result, the mathematical curve fitting routine will amplify larger differences between the Iowa curve and OLT. Because data irregularities are often common towards the end of the curve when smaller amounts of data are available, the real-world result is that mathematical curve matching will amplify less meaningful deviations towards the end or "tail" of the curve. That is, differences in curve fitting indicators are often the result of data irregularities and do not provide as meaningful an indication of the historical life characteristics. For this reason, if proper care is not taken when interpreting the results, mathematical curve fitting can mislead the analyst into selecting a curve that is not representative of the predominant mortality characteristics of the depreciable group being studied.

Q. Given all of the considerations discussed above, how do you approach the curve fitting process?

A. I believe that both mathematical and visual curve fitting should be used. Using both approaches enhances the information available to the analyst and aids in developing the most reasonable forecast. Importantly, the analyst should also understand the advantages and disadvantages of both approaches to avoid being misled by the results.

Q. Does the use of judgment also apply to the analysis of historical data curve matching process?

A. Yes. There are numerous reasons why informed judgment must also be applied to the mathematical processes of analyzing historical data, including the availability and limitations of the historical data; the interpretation of trends in the data; the interpretation of data irregularities; which data points to include or emphasize in mathematical or visual curve matching; and whether the curve fitting results are reasonable for the types of assets studied. The importance of informed judgment in evaluating the results of statistical analysis is also emphasized by NARUC. For example, when discussing a stub (or incomplete) survivor curve, the NARUC Treatise states:

> The longer the stub, the more reliable the resulting curve fit and extension. As a result, the analyst may be forced to choose between a more reliable longer stub, which by necessity reflects older data, and a less reliable shorter stub, which reflects more recent vintages and, therefore, is more likely to reflect the future.[19]

Q. Before discussing the account for which OCA witness Garrett has proposed a change to your life estimate, address what you perceive as a critical fundamental flaw in his analysis?

A As I explained previously, a service life study was not conducted specifically for this case because it is standard practice in proceedings before this Commission to conduct service life studies on a five-year cycle. Mr. Garrett has performed his life analysis on the basis of service life data through 2022. Therefore, he has not included any transactions that occurred during the period January 1, 2023, through November 30, 2025. If you primarily focus on statistical data, then you should include the most up to date transactional data in your analysis to capture

[19] NARUC Treatise, p. 129.

all the factors that affect the life estimation process, which NARUC refers to as the "forces of retirement." Moreover, if a complete analysis of all the transactional data were to be undertaken, it should be done for all the Company's accounts, not a selective subset of accounts that, based on Mr. Garrett's purely statistical analysis, appear not to exhibit the closest "mathematical" fit between an Iowa curve and the OLT for each account. In summary, PNG is entitled to rely on the results of the service life study performed and filed with the Commission in 2022, as permitted by the Commission's regulations. The 2023 service life study was a consistent analysis of all the forces of retirement acting on all the Company's plant accounts at the time it was performed, and the fact that Mr. Garrett contends that one discrete plant account does not exhibit the closest statistical "fit" between the OLT data and the Iowa curves I used is not an appropriate approach to service life estimation.

C. Account by Account Analysis

1. *Account 380 – Services*

Q. What service life estimate did you use for this account, and how does it compare to the service life estimate Mr. Garrett proposes?

A. Mr. Garrett has challenged the service life for Account 380.00, Services, from the 2023 service life study. The service life estimate from the Company's last service life study is a 55-R2 survivor curve. Mr. Garrett proposes a 62-R2 survivor curve, which would increase the average service life by seven years and the maximum life by 12 years.

Q. What reasons does Mr. Garrett give for recommending a longer service life than your estimate?

A. Mr. Garrett only discusses mathematical reasons for selected a curve that is seven years longer on average. Because Mr. Garrett has not updated the transactional data to include a more current estimate, his reliance on mathematical curve-fitting is misguided and inappropriate. Moreover, he does not consider any of the other key factors that need to be assessed in the life estimation process. He does not consider how much of the gas services will be replaced along with the change out of low pressure mains. Similarly, he does not consider service life estimates used by other gas companies. The survivor curve is a projection of the future. Therefore, any analysis that does not consider elements of growth or the on-going need for the Company to provide reliable, high-quality service under various operating conditions, lacks a proper foundation and should not be adopted.

Q. Please provide reasons why your estimate is more reasonable than that proposed by Mr. Garrett.

A. Mr. Garrett's proposal appears to be based entirely on the results of mathematical curve fitting. As I discussed previously, relying solely on mathematical curve fitting is not an appropriate way to develop service life estimates particularly when you do not consider what has occurred in the most recent three years. Instead, other factors must be considered. There are two primary factors that support my estimate over that of Mr. Garrett. Mine is the currently approved estimate and is more consistent with the mortality characteristics for the account through the entire life cycle and my estimate is more consistent with estimates for other gas

utilities. The data does not support a change in estimate for this account nor is it a reasonable basis to propose a longer service life than is typically used by other gas utilities. As a result, my estimate is more reasonable than Mr. Garrett's.

Q. Is the Company's proposed 2.56% composite depreciation rate calculated using the ELG procedure as of December 31, 2027 reasonable and consistent with comparable gas distribution utilities in the United States?

A. Yes. In fact, in reviewing the composite depreciation rate utilized by various other gas distribution utilities one can see the average exceeds 2.56%. The attached **Exhibit No. JJS-2R** sets forth composite depreciation rates of comparable gas distribution utilities from recent rate cases. In fact, Mr. Garrett never addresses this in his testimony, although he claims that his proposal is "fairer" than the Company's. This illustrates Mr. Garrett's disregard for the components of developing a fair rate for utilities in Pennsylvania.

Q. Does this complete your Prepared Rebuttal Testimony?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY
OF JOHN D. TAYLOR

I. WITNESS IDENTIFICATION AND BACKGROUND

Q. PLEASE STATE YOUR NAME, AFFILIATION, AND BUSINESS ADDRESS.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Chief Executive Officer. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC ("PEOPLES" OR THE "COMPANY")?

A. Yes. I submitted my direct testimony, Peoples Statement No. 17, on March 27, 2026.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by other parties. The areas I address are outlined below, with reference to the corresponding direct testimony of the other parties:

Revenue Apportionment

- Office of Consumer Advocate ("OCA") Statement 1 – Direct testimony of Michael Deupree ("OCA Witness Deupree" or "Witness Deupree");
- Bureau of Investigation and Enforcement ("I&E") Statement 3 – Direct Testimony of Ethan H. Cline ("I&E Witness Cline" or "Witness Cline"); and
- Office of Small Business Advocate ("OSBA") Statement No. 2 – Direct testimony of Mark D. Ewen ("OSBA Witness Ewen" or "Witness Ewen").

Allocated Class Cost of Service Study

- OCA Witness Deupree;

- I&E Witness Cline;
- OSBA Witness Ewen; and
- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1 – Direct testimony of Patrick M. Cicero ("CAUSE-PA Witness Cicero" or "Witness Cicero").

Treatment of Negotiated-Rate Customers

- Office of Small Business Advocate ("OSBA") Statement No. 1 – Direct testimony of Joseph Kubas ("OSBA Witness Kubas" or "Witness Kubas").

Rate Design

- OCA Witness Deupree;
- OCA Statement 4 – Direct testimony of Roger Colton ("OCA Witness Colton" or "Witness Colton");
- OSBA Witness Kubas;
- I&E Witness Cline;
- CAUSE-PA Witness Cicero; and
- Pennsylvania Weatherization Providers Task Force ("PWPTF") Statement No. 1 – Direct Testimony of Jennifer Warabak ("PWPTF Witness Warabak") or "Witness Warabak").

Normal Weather Methodology and Weather Normalization Adjustment

- OCA Witness Deupree;
- I&E Witness Cline;
- OSBA Witness Ewen; and
- CAUSE-PA Witness Cicero.

Q. CAN YOU PROVIDE A BRIEF SUMMARY OF YOUR PRINCIPAL RECOMMENDATIONS IN THIS REBUTTAL TESTIMONY?

A. Yes. My principal recommendations are summarized below:

• Revenue Apportionment: The Commission should approve the Company's proposed revenue apportionment because it appropriately balances the class cost responsibility

identified in the Company's Allocated Cost of Service Study ("ACOSS") while also considering rate design principles such as gradualism, rate stability, and customer impacts.

• Allocated Cost of Service Study: The Commission should approve the Company's blended ACOSS because it reasonably recognizes both customer-related and load-related cost causation and provides a sound basis for revenue apportionment and rate design.

• Negotiated-Rate Customers: While separately identifying negotiated-rate customers may be one reasonable approach for future studies, Witness Kubas has not demonstrated that any modification to the Company's ACOSS or revenue allocation is warranted in this proceeding.

• Rate Design: The Commission should approve the Company's proposed customer charges because they remain below customer-related costs, preserve meaningful conservation incentives, produce reasonable bill impacts, and reasonably balance cost causation with customer impact considerations.

• Normal Weather Methodology and Weather Normalization Adjustment: The Commission should approve the Company's proposed 65-year regression methodology and continuation of its existing WNA because they provide a consistent, objective, and analytically sound framework for estimating normal weather and normalizing weather-sensitive revenues.

II. REVENUE APPORTIONMENT

Q. PLEASE SUMMARIZE PEOPLES' PROPOSED REVENUE APPORTIONMENT.

A. As discussed in my Direct Testimony, Peoples' proposed revenue apportionment is informed by the results of the Company's ACOSS, which identifies the relative cost

responsibility of each customer class. However, revenue apportionment also requires regulatory judgment and consideration of other accepted ratemaking principles, including gradualism, rate stability, and customer impacts. The Company's proposal appropriately balances these considerations.

Q. WHAT REVENUE APPORTIONMENT RECOMMENDATIONS HAVE BEEN PRESENTED BY OTHER PARTIES?

A. OCA Witness Deupree recommends that the Commission adopt a revenue apportionment based upon his alternative ACOSS. In addition, Witness Deupree recommends that "the Commission cap the proposed rate increase to any single customer class to no more than 1.15 times the system average increase" and that "no class receive a rate increase less than 0.50 times the system average increase."[1]

I&E Witness Cline recommends that the Commission reject the Company's proposed ACOSS and instead base revenue apportionment on "a peak and average COSS that does not allocate the cost of mains on a customer basis."[2]

OSBA Witness Ewen does not present a separate ACOSS methodology or recommend a specific alternative treatment of distribution mains. Rather, Witness Ewen recommends modifications to the allocation of the Company's requested revenue increase based primarily on considerations of gradualism and value-of-service principles.[3] While Witness Ewen discusses prior Commission decisions regarding the allocation of

[1] OCA Stmt. No. 1, at p. 5.
[2] I&E Stmt. No. 3, at p. 35.
[3] OSBA Stmt. No. 2, at p. 10.

distribution mains, his revenue allocation recommendations are not principally driven by an independent assessment of class cost responsibility reflected in an alternative ACOSS.[4]

Q. HAVE YOU PREPARED A COMPARISON OF THE VARIOUS REVENUE APPORTIONMENT PROPOSALS PRESENTED IN THIS PROCEEDING?

A. Yes. Table 1 summarizes the percentage of the overall revenue increase assigned to each customer class under the principal revenue apportionment proposals presented in this proceeding.

Table 1 - Revenue Apportionment Comparison

Rate Classes	Peoples	OCA	I&E	OSBA	Average (OCA, I&E, OSBA)
Residential	73%	72%	51%	73%	65%
Small General	13%	10%	21%	12%	14%
Medium General	13%	12%	25%	11%	16%
Large General	0%	5%	0%	3%	3%
Mainline Service	0%	1%	3%	0%	1%
Total	100%	100%	100%	100%	100%

Note: I&E did not present a specific revenue apportionment recommendation but instead recommended a revenue allocation based on the P&A ACOSS study with no decrease to the Large General Service class, thus this presentation spreads the ~$6.6M of decrease to LGS to the remaining classes based on their percentage of the revenue increase, excluding LGS.

Q. WHAT OBSERVATIONS CAN BE MADE FROM THESE RESULTS?

The primary differences among the revenue apportionment proposals are driven either by (1) differing views regarding class cost responsibility reflected in the underlying ACOSS, or (2) differing views regarding the appropriate degree of gradualism in moving customer classes toward cost-based rates. The issue before the Commission is not simply

[4] OSBA Stmt. No. 2, at pp. 7-8

which ACOSS is preferred, but how cost responsibility should be balanced with other accepted revenue apportionment principles.

Witnesses Deupree and Cline primarily focus on the first issue. Their recommendations are based upon alternative ACOSS methodologies that assign distribution mains and related costs differently than the Company's study. As a result, their proposed revenue apportionments produce different indications of class cost responsibility.

Witness Ewen's recommendations largely represent the second issue. While Witness Ewen discusses historical Commission treatment of distribution mains, his revenue allocation recommendations place greater emphasis on gradualism and value-of-service considerations than on the cost responsibility reflected in the Company's ACOSS.

Q. DOES PEOPLES' PROPOSED ACOSS ALREADY INCORPORATE ELEMENTS OF THE APPROACH ADVOCATED BY OCA WITNESS DEUPREE AND I&E WITNESS CLINE?

A. Yes. Unlike a cost study that relies exclusively on a single allocation methodology, the Company's proposed revenue apportionment already recognizes a balanced consideration of customer-related and load-related cost responsibility as identified by the Company's ACOSS.

By contrast, the recommendations of Witnesses Deupree and Cline would effectively eliminate the customer-related component reflected in the Company's study and place exclusive reliance on a Peak-and-Average framework.

Q. DO YOU AGREE WITH WITNESS DEUPREE'S RECOMMENDATION TO CAP CLASS RATE INCREASES AT 1.15 TIMES THE SYSTEM AVERAGE INCREASE AND ESTABLISH A FLOOR OF 0.50 TIMES THE SYSTEM AVERAGE INCREASE?[5]

A. No. While gradualism is an appropriate consideration in revenue apportionment, the specific caps and floors proposed by Witness Deupree are not derived from any cost-of-service principle. Rather, they are policy constraints that override the cost responsibility reflected in the underlying study. The practical effect of such constraints is to preserve existing disparities in class rates of return and slow movement toward rates that more closely identify the costs incurred to serve each class.

Q. DO YOU AGREE WITH WITNESS CLINE'S RECOMMENDED REVENUE APPORTIONMENT?

A. No. Witness Cline's revenue apportionment recommendation is entirely dependent upon his proposed Peak-and-Average ACOSS. As discussed later in my rebuttal testimony, I do not agree with Witness Cline's recommendation to eliminate the customer-related component reflected in the Company's ACOSS. Because his revenue apportionment results are derived directly from that alternative ACOSS, I likewise do not agree with his proposed allocation of the Company's requested revenue increase among customer classes.

Q. DO YOU AGREE WITH WITNESS EWEN'S APPROACH TO REVENUE APPORTIONMENT?

[5] OCA Stmt. No. 1, at p. 64.

A. No. Revenue apportionment necessarily involves the exercise of judgment and consideration of multiple ratemaking objectives. However, in my opinion, cost responsibility should remain the primary guide in determining how a utility's revenue requirement is allocated among customer classes. Other considerations, including gradualism, customer impacts, and value-of-service considerations, may appropriately influence the final result, but they should not replace cost responsibility as the starting point for revenue allocation decisions.

Witness Ewen's recommendations place significant emphasis on gradualism and value-of-service considerations. While those factors may be relevant, I do not believe they should be given greater weight than the cost responsibility reflected in a reasonable cost of service study. Doing so risks perpetuating existing disparities among classes and weakening the relationship between rates and the costs incurred to serve those classes. There is also a subjective level of interpretation when it comes to value-of-service considerations, which is not fully vetted or explained by Witness Ewen.

Q. WHAT IS YOUR OVERALL CONCLUSION REGARDING REVENUE APPORTIONMENT?

A. Peoples' proposed revenue apportionment appropriately represents the class cost responsibility identified in the Company's balanced ACOSS while also incorporating accepted ratemaking considerations such as gradualism and rate stability. The alternative recommendations presented by OCA, I&E, and OSBA either rely on different assessments of class cost responsibility or place greater emphasis on policy considerations than on the

cost responsibility reflected in the Company's ACOSS. Therefore, I continue to support the Company's proposed revenue apportionment.

III. ALLOCATED COST OF SERVICE STUDY

A. Allocated Cost of Service Study

Q. PLEASE SUMMARIZE THE COMPANY'S ACOSS PRESENTED IN YOUR DIRECT TESTIMONY.

A. As discussed in my Direct Testimony, Peoples developed an Allocated Cost of Service Study ("ACOSS") to measure the cost responsibility of each customer class and provide a reasonable basis for revenue apportionment and rate design. The Company's ACOSS incorporates the results of both a Customer-Demand study and a Demand-Commodity study. Rather than relying exclusively on either methodology, Peoples assigned equal weight to the results of the two studies.

This approach appropriately recognizes that distribution system costs exhibit both customer-related and load-related characteristics. Accordingly, the Company's ACOSS recognizes a balanced assessment of class cost responsibility and provides a reasonable foundation for revenue apportionment and rate design.

Q. WHAT ACOSS RECOMMENDATIONS HAVE BEEN PRESENTED BY OTHER PARTIES?

A. OCA Witness Deupree recommends that the Commission reject the Company's Minimum System Study ("MSS") approach and related customer classification of a portion of distribution mains. Witness Deupree states that "MSS approaches that are used to classify distribution mains investments are fundamentally flawed and provide little to no value in

setting just and reasonable rates." Witness Deupree further recommends replacing the Company's approach with a Peak-and-Average ("P&A") methodology that allocates distribution mains entirely on a load-related basis.[6]

I&E Witness Cline similarly recommends that "cost allocation and rates should be designed based on the Peak and Average methodology and that the costs associated with distribution mains are not considered customer costs."[7] Witness Cline also recommends that the Commission reject the Company's blended methodology and instead rely exclusively on a P&A methodology.[8]

OSBA Witness Ewen does not present a separate ACOSS methodology. However, Witness Ewen discusses prior Commission decisions regarding the treatment of distribution mains and relies upon those decisions in support of his recommendations concerning revenue allocation and rate design.[9]

CAUSE-PA Witness Cicero generally aligns with the recommendations advanced by OCA Witness Deupree regarding the treatment of distribution mains and the Company's ACOSS methodology.[10]

Q. WHAT OBSERVATIONS CAN BE MADE REGARDING THESE RECOMMENDATIONS?

A. The principal disagreement concerns the treatment of distribution mains and related facilities. Witnesses Deupree and Cline recommend methodologies that allocate

[6] OCA Stmt. No.1, at pp.58-59.
[7] I&E Stmt. No. 3, at p. 31.
[8] I&E Stmt. No. 3, at p. 35.
[9] OSBA Stmt. No. 2, at pp. 7-8
[10] CAUSE-PA Stmt. 1, at p. 20.

distribution mains entirely on a load-related basis through a P&A methodology. Witnesses Deupree, Cline, and Ewen also rely, to varying degrees, on prior Commission decisions that favored similar approaches. Witness Cicero generally supports the OCA's position.

Q. DO YOU AGREE WITH THE RECOMMENDATIONS OF WITNESSES DEUPREE, CLINE, EWEN, AND CICERO?

A. No. At a fundamental level, the recommendations of these witnesses are based on the premise that distribution mains should be allocated exclusively on a load-related basis and that customer-related classification of distribution mains is inappropriate. I disagree with that premise.

Cost allocation is not an exact science. Different methodologies reflect different judgments regarding cost causation and the allocation of common utility costs among customer classes. The relevant question is whether a methodology reasonably captures the characteristics of the utility system and provides a reasonable measure of class cost responsibility.

Unlike the recommendations of Witnesses Deupree and Cline, Peoples did not ask the Commission to choose exclusively between competing methodologies. Rather, the Company evaluated both approaches and incorporated both into its proposed ACOSS through an equal weighting of the Customer-Demand and Demand-Commodity studies. That equal-weighting approach more fairly reflects multiple parties' perspectives on the factors that drive distribution system investment than either methodology standing alone.

Q. DOES THE COMPANY'S USE OF AN EQUAL WEIGHTING OF THE CUSTOMER-DEMAND AND DEMAND-COMMODITY STUDIES HAVE ANY RELEVANCE TO THE CRITICISMS ADVANCED BY WITNESS DEUPREE?

A. Yes. Witness Deupree's testimony largely critiques methodologies that assign a substantial portion of distribution mains costs to customer-related factors. However, Peoples did not rely exclusively on a Customer-Demand methodology. Instead, the Company developed both a Customer-Demand study and a Demand-Commodity study and assigned equal weight to each. Consequently, the Company's ACOSS already incorporates substantial recognition of the load-related considerations advocated by Witness Deupree.

That balanced approach more reasonably reflects the multiple factors that drive distribution system investment than either methodology standing alone.

Q. DO YOU AGREE WITH WITNESS DEUPREE'S ASSERTION THAT MSS METHODOLOGIES ARE "FUNDAMENTALLY FLAWED"?[11]

A. No. Witness Deupree's characterization overstates the limitations of MSS methodologies. MSS and related zero-intercept approaches have been utilized by natural gas utilities and regulatory commissions for decades as one means of identifying the customer-related characteristics of distribution systems. While reasonable experts may disagree regarding the appropriate classification of distribution mains, such disagreement does not render MSS methodologies "fundamentally flawed."

Like all cost allocation methodologies, MSS studies involve assumptions and professional judgment. The fact that a methodology has limitations does not establish that

[11] OCA Stmt. No.1, at p. 76.

it should be discarded entirely. The relevant question is whether the methodology provides useful information regarding cost causation. The Company's study does. Moreover, Peoples did not rely exclusively on the results of the Customer-Demand study. Instead, the Company balanced those results with a Demand-Commodity study and assigned equal weight to each methodology.

Q. ON PAGES 50 AND 51 OF HIS DIRECT TESTIMONY, MR. DEUPREE PRESENTS SELECTED STATEMENTS FROM A RECOGNIZED AUTHORITY THAT HE CONTENDS SUPPORTS HIS CONCLUSION THAT IT IS IMPROPER TO ALLOCATE A PORTION OF A GAS UTILITY'S DISTRIBUTION MAINS ON A CUSTOMER BASIS. HOW DO YOU RESPOND?

A. The recognized authority cited by Witness Deupree, Professor James Bonbright, makes other statements that strongly suggest the opposite view that the recognition of a customer component of distribution mains for a gas utility is appropriate.

In Principles of Public Utility Rates[12], Professor Bonbright notes that the use of a two-part rate structure is based on the assumption that one part of the total cost of a utility's business is a function of the output or energy of the system, whereas another part is a function of plant capacity and hence of all costs related to this capacity. Professor Bonbright goes on to point out, however, that "this two-fold distinction overlooks the fact that a material part of the operation and capital costs of a utility business is more directly

[12] Principles of Public Utility Rates, Second Editions, James C. Bonbright, Albert L. Danielson, David R. Kamerschen, Public Utility Reports, Inc., 1988

and closely related to the number of customers than to energy consumption on the one hand or maximum kilowatt demand on the other hand." (Emphasis added).[13]

In addition, in this section dealing with the criteria of a sound rate structure, Professor Bonbright states that,

> "customer costs incurred to serve a customer are invariant with respect to consumption. They are the costs incurred to serve a customer even if the customer does not use the service at all. The most obvious examples of these customer costs are the expenses associated with local connection facilities, metering equipment and meter reading, billing and accounting, and a portion of the distribution system."[14] (emphasis added)

Finally, on page 492, Professor Bonbright states that "in actual practice the vast majority of utilities utilized some form of minimum system to classify costs, which is in line with FERC accounts."

Q. WITNESS DEUPREE SUGGESTS THAT YOUR POSITION IN THIS PROCEEDING IS INCONSISTENT WITH POSITIONS YOU HAVE TAKEN IN OTHER PENNSYLVANIA RATE PROCEEDINGS. DO YOU AGREE?[15]

A. No. Cost allocation is inherently a matter of judgment, and no single methodology can be demonstrated to be universally appropriate in all circumstances. The appropriate inquiry is whether the methodology proposed in a particular proceeding reasonably recognizes the characteristics of the utility system being studied and provides a better measure of class cost responsibility.

[13] Id. at page 401.
[14] Id. at page 401.
[15] OCA Stmt. No. 1, at pp. 54-55.

Moreover, Witness Deupree's characterization overlooks an important aspect of the Company's proposal in this proceeding. Peoples is not proposing exclusive reliance on a Customer-Demand methodology. Rather, Peoples developed both a Customer-Demand study and a Demand-Commodity study and assigned equal weight to each methodology. As a result, the Company's cost study already incorporates substantial recognition of the load-related concepts advocated by Witness Deupree.

Q. WITNESS DEUPREE ALSO CRITICIZES THE COMPANY'S DEMAND-COMMODITY STUDY BECAUSE IT UTILIZES PEAK-DAY DEMAND AS THE DEMAND ALLOCATOR. DO YOU AGREE WITH THAT CRITICISM?[16]

A. No. By definition, a Demand-Commodity methodology recognizes both demand-related and commodity-related characteristics of the distribution system. The demand component captures peak-day usage requirements, while the commodity component represents throughput-related usage.

Therefore, the Company's Demand-Commodity study incorporates both peak-demand and throughput considerations. Witness Deupree's criticism focuses on the demand allocator while overlooking the fact that throughput is explicitly recognized through the commodity allocation component of the study. The Company's Demand-Commodity study appropriately recognizes both peak-day requirements and throughput-related usage characteristics.

Q. WITNESSES DEUPREE, CLINE, AND EWEN ALL RELY ON PRIOR COMMISSION DECISIONS, INCLUDING THE RECENT COLUMBIA GAS OF

[16] OCA Stmt. No. 1, at p. 53.

PENNSYLVANIA PROCEEDING, IN SUPPORT OF THEIR POSITIONS. DO YOU BELIEVE THOSE DECISIONS REQUIRE REJECTION OF THE COMPANY'S ACOSS?

A. I agree that prior Commission decisions provide useful guidance regarding cost allocation issues. However, those decisions must be considered in the context of the facts, evidence, and methodologies presented in the specific proceedings in which they were rendered. Witnesses Deupree, Cline, and Ewen overstate the applicability of those decisions to the facts and circumstances presented in this proceeding.

Accordingly, even if one accepts the concerns expressed in prior proceedings regarding exclusive reliance on customer-demand methodologies, those concerns do not apply with the same force to the Company's blended methodology in this proceeding. The Company's blended methodology directly addresses many of the concerns raised in those prior proceedings by recognizing both customer-related and load-related cost causation.

Moreover, I do not believe prior Commission decisions establish that any single cost allocation methodology must be adopted in every future proceeding regardless of the circumstances presented. Cost allocation is inherently a matter of judgment, and reasonable differences of opinion exist regarding the classification and allocation of distribution mains. In this proceeding, the Commission should evaluate whether Peoples' methodology reasonably reflects the characteristics of its distribution system and provides a reasonable measure of class cost responsibility.

Q. DO YOU AGREE WITH THE CONTENTION OF WITNESSES DEUPREE AND CLINE THAT COST CAUSATION PRINCIPLES REQUIRE EXCLUSIVE RELIANCE ON A PEAK-AND-AVERAGE METHODOLOGY?

A. The key to a reasonable cost allocation is a thorough understanding of cost causation. Witnesses Deupree and Cline place too much emphasis on a single dimension of cost causation while giving insufficient recognition to the customer-related characteristics of the distribution system. Simply stated, system use is not the same as cost causation.

Distribution mains recognize two cost-causative realities. First, mains investment is driven by the need to connect and maintain an integrated delivery system for a given number and geographic dispersion of customers. Second, mains must be sized to provide sufficient capacity to serve coincident peak-day requirements safely and reliably.

Therefore, distribution facilities are not constructed solely to accommodate annual throughput; if they were built to this standard, there would be massive outages and significant safety implications. They are also constructed to connect customers to the system, provide access to service, and maintain sufficient capacity to meet customer requirements. The Company's blended methodology recognizes both realities and therefore provides a more balanced assessment of cost causation than an approach that relies exclusively on a single methodology.

Q. DO YOU AGREE WITH WITNESS CICERO'S RECOMMENDATION TO ADOPT THE OCA'S ACOSS APPROACH?[17]

[17] CAUSE-PA, Stmt. 1, at p. 20.

A. No. Witness Cicero does not present an independent ACOSS methodology. Rather, his recommendation largely relies upon and supports the conclusions reached by Witness Deupree. For the reasons discussed above, I do not agree with Witness Deupree's recommendation to eliminate the customer-related component reflected in the Company's ACOSS or to rely exclusively on a Peak-and-Average framework.[18] Likewise, I do not support Witness Cicero's recommendation.

Q. WHAT IS YOUR OVERALL CONCLUSION REGARDING THE COMPANY'S ACOSS?

A. The Company's ACOSS recognizes the two principal drivers of distribution system investment. Distribution mains are installed to connect and serve customers across the service territory, but they also must be sized to satisfy peak-day requirements. Neither a purely customer-related methodology nor a purely load-related methodology fully captures those realities.

Unlike Witnesses Deupree and Cline, Peoples did not ask the Commission to choose exclusively between competing methodologies. The Company evaluated both a Customer-Demand study and a Demand-Commodity study and incorporated both into its proposed ACOSS through an equal weighting of the two studies.

As a result, the Company's ACOSS captures both customer-related and load-related characteristics of the distribution system. That blended approach provides a more reasonable measure of class cost responsibility than the exclusive reliance on a single methodology advocated by Witnesses Deupree and Cline.

[18] OCA Stmt. No. 1, at pp. 4-5.

B. Negotiated-Rate Customers

Q. PLEASE SUMMARIZE THE COMPANY'S TREATMENT OF NEGOTIATED-RATE CUSTOMERS IN THIS PROCEEDING.

A. Negotiated-rate customers remain within the tariff classes under which they receive service and were not presented as a separate customer class in the Company's ACOSS. However, the Company's revenue proof separately identifies negotiated delivery volumes and applies the applicable negotiated delivery rates in calculating current class revenues. Accordingly, the Company's study reflects the negotiated delivery revenues associated with those customers rather than assuming they pay the otherwise applicable tariff delivery rates.

Q. WHAT RECOMMENDATION DOES OSBA WITNESS KUBAS MAKE REGARDING NEGOTIATED-RATE CUSTOMERS?

A. Witness Kubas recommends that future cost-of-service studies separately identify negotiated-rate customers and the associated revenues as a distinct negotiated customer class.[19] According to Witness Kubas, presenting negotiated-rate customers separately would allow the Commission and interested parties to evaluate the cost responsibility and revenue relationships of tariff-rate customers independently of negotiated-rate customers.[20]

Q. DO YOU AGREE WITH WITNESS KUBAS' RECOMMENDATION?

A. I believe Witness Kubas identifies one reasonable approach that could be considered in future cost-of-service studies. However, I do not believe his recommendation

[19] OSBA Stmt. No. 1, at p. 10.
[20] OSBA Stmt. No. 1, at pp. 10-11.

demonstrates that the Company's ACOSS is unreasonable or that any modification to the Company's revenue allocation or rate design proposals is warranted in this proceeding.

The Company's study evaluates the tariff classes as they currently exist while separately recognizing negotiated delivery volumes and negotiated delivery rates in the revenue proof. As a result, negotiated delivery revenues are reflected based upon the negotiated rates actually associated with those customers rather than being assumed to pay otherwise applicable tariff rates. Negotiated-rate arrangements are generally intended to retain customers that may have competitive alternatives while continuing to recover a portion of the Company's fixed costs from those customers.

Although establishing a separate negotiated customer class represents an alternative study design, Witness Kubas has not demonstrated that the Company's current treatment of negotiated-rate customers results in unreasonable cost allocations, unreasonable revenue apportionment, or unreasonable rates in this proceeding. Accordingly, I do not recommend any modification to the Company's ACOSS, revenue allocation, or proposed rates based on Witness Kubas' recommendation.

C. Allocation and Recovery of Universal Service Program Costs

Q. HOW DO YOU RESPOND TO CAUSE-PA WITNESS CICERO'S PROPOSAL TO ALLOCATE UNIVERSAL SERVICE COSTS TO ALL CUSTOMER CLASSES.

A. Witness Cicero raises a policy question regarding whether universal service costs should continue to be recovered exclusively from residential customers, and a policy issue that should not be isolated to this case. His proposal would materially change the recovery of these costs by shifting a portion of them to commercial and industrial customers that do

not currently pay the Universal Service Rider. Before adopting such a change, the Commission should require a complete analysis of the resulting rate and bill impacts by customer class. Just as important as determining who pays these costs is determining how they are recovered. Whether universal service costs are recovered through a fixed monthly charge, a volumetric charge, or some combination of the two can produce significantly different outcomes for customers with different usage characteristics and load factors. For example, a predominantly fixed recovery mechanism would generally place a proportionally greater burden on smaller-use customers, while a volumetric recovery would affect higher-volume customers more significantly. Before modifying the recovery of universal service costs, the Commission should evaluate both the proposed allocation among customer classes and the resulting bill impacts under the proposed recovery mechanism to ensure the costs are recovered in an equitable and reasonable manner.

Q. DO YOU HAVE ANY ADDITIONAL OBSERVATIONS REGARDING WITNESS CICERO'S PROPOSAL?

Witness Cicero correctly observes that assisting low-income customers serves an important public policy objective that benefits society more broadly. To the extent the Commission determines that commercial and industrial customers should begin contributing to these costs, I believe it is important that the policy be implemented consistently across Pennsylvania's natural gas utilities. Commercial and industrial customers routinely evaluate energy costs when making siting, expansion, and investment decisions. If one utility recovers universal service costs from all customer classes while another continues to recover those costs only from residential customers, similarly situated

businesses could face different utility cost structures depending solely on their service territory. Such inconsistencies can affect the relative competitiveness of different regions within the Commonwealth without any corresponding difference in the underlying cost of providing utility service. Accordingly, if the Commission concludes that a broader allocation of universal service costs is appropriate as a matter of policy, consideration should be given to implementing that policy on a consistent statewide basis and on a similar timeline of implementation rather than on a utility-by-utility basis.

IV. RATE DESIGN

Q. PLEASE SUMMARIZE THE COMPANY'S PROPOSED RATE DESIGN.

A. Peoples proposes to increase certain monthly customer charges as part of its overall rate design proposal. The proposed customer charges are supported by the customer-related costs identified in the Company's ACOSS and customer cost studies. As demonstrated in my Direct Testimony, the proposed customer charges remain below the customer-related unit costs identified for the applicable customer classes.

The Company's proposal better advances more cost-reflective rates by recovering a greater portion of customer-related fixed costs through the monthly customer charge while preserving substantial recovery through volumetric delivery charges. This approach better aligns the recovery of customer-related costs with the manner in which those costs are caused and incurred, promotes more equal contributions toward recovery of customer-related costs among customers within a class, and improves the relationship between fixed customer-related costs and fixed monthly charges. The proposed customer charges also

represent a reasonable balance among the various objectives of rate design, including cost causation, fairness, customer impacts, revenue stability, and conservation.

Q. WHAT RECOMMENDATIONS HAVE BEEN PRESENTED BY OTHER PARTIES REGARDING THE COMPANY'S PROPOSED RATE DESIGN?

A. Several intervenors raise concerns regarding the Company's proposed rate design, including the proposed customer charges, affordability, conservation, bill impacts, and customer bill management. While those witnesses approach the issues from different perspectives, they generally recommend rejecting or modifying aspects of the Company's proposed residential rate design, including the proposed residential customer charge increases, or urge the Commission to place greater emphasis on affordability and customer bill impacts when evaluating the Company's proposal.

OCA Witness Deupree recommends that the Commission reject the Company's proposed increases to customer charges and retain existing customer charge levels.[21] Witness Deupree argues that current customer charges already recover a substantial portion of customer-related costs and that higher customer charges weaken conservation incentives and disproportionately impact lower-use customers.[22]

OSBA Witness Kubas recommends retaining the current SGS customer charge for customers using between 0 and 499 Mcf annually.[23] Witness Kubas argues that the Company did not provide sufficient detail regarding the customer-related costs supporting

[21] OCA Stmt. No. 1, at p. 74.
[22] OCA Stmt. No. 1, at p. 74.
[23] OSBA Stmt. No. 1, at p 6.

the proposed SGS customer charge and further expresses concern regarding the impact of higher customer charges on conservation and customer bill management.[24]

I&E Witness Cline does not recommend a specific adjustment to the Company's proposed customer charges. However, Witness Cline argues that customer charges should be based upon a Peak-and-Average ACOSS that excludes distribution mains from customer-related costs.[25] Witness Cline also recommends that customer charges be proportionately reduced if the Commission authorizes less than the Company's requested revenue increase.[26]

CAUSE-PA Witness Cicero recommends that the Commission reject the Company's proposed increase in the residential customer charge, or alternatively approve only a modest increase if the Company's Weather Normalization Adjustment remains in place.[27] Witness Cicero's concerns focus primarily on affordability, low-income customer impacts, and customer bill control.

PWPTF Witness Warabak likewise recommends that the Company's proposed increase in the residential customer charge be denied.[28] Witness Warabak argues that higher fixed charges reduce customers' ability to lower bills through conservation and disproportionately affect low-income customers.[29]

OCA Witness Colton recommends that the Commission evaluate the Company's proposed residential rates in light of customer affordability and bill impacts, particularly

[24] OSBA Stmt. No. 1, at p 6.
[25] I&E Stmt. No.3, at p. 35.
[26] I&E Stmt. No.3, at p. 36.
[27] CAUSE-PA Stmt. No. 1, at p. 56.
[28] PWPTF Stmt. No. 1, at p. 7.
[29] PWPTF Stmt. No. 1, at p. 4.

for lower-income households.[30] Witness Colton contends that affordability should play a more prominent role in evaluating the reasonableness of the Company's proposed residential rate design and concludes that the proposed rates would increase customer bill burdens for financially vulnerable customers.

Q. DO YOU AGREE WITH THE CUSTOMER CHARGE RECOMMENDATIONS OF WITNESSES DEUPREE, KUBAS, AND CLINE?

A. No. Although Witnesses Deupree, Kubas, and Cline approach the issue from different perspectives, they recommend lower customer charges based on differing views regarding customer-related costs, affordability, conservation, customer bill management, and the appropriate balance between fixed and variable charges.

As discussed in Section III of my rebuttal testimony, I do not agree with the alternative cost allocation methodologies relied upon by Witnesses Deupree and Cline. Likewise, I do not agree with the customer charge recommendations that flow from those methodologies. Rather than repeating those cost allocation issues here, this section addresses the broader rate design considerations raised by the intervenors.

Unlike Witnesses Deupree and Cline, Witness Kubas does not challenge the Company's cost allocation methodology. Rather, Witness Kubas argues that the Company did not provide sufficient support for the proposed SGS customer charge. I address those concerns separately below.

[30] OCA Stmt. 4, at p. 6.

Q. HOW DO YOU RESPOND TO WITNESS KUBAS' CLAIM THAT THE COMPANY FAILED TO PROVIDE SUFFICIENT SUPPORT FOR THE PROPOSED SGS CUSTOMER CHARGE?[31]

A. I disagree. Witness Kubas argues that the Company did not provide sufficient detail regarding the costs underlying the proposed SGS customer charge.[32] However, Witness Kubas does not identify any specific cost that is improperly included in the Company's customer cost analysis, nor does he demonstrate that the customer-related costs reflected in the ACOSS are unreasonable.

The Company's ACOSS provides the information necessary to evaluate the customer-related costs supporting the proposed customer charge. Furthermore, Witness Kubas utilized the Company's ACOSS in the formulation of his recommendations. The customer-related unit costs presented in the ACOSS are derived from the functionalized revenue requirement, which in turn is based on the underlying plant, expense, and other cost components measured in the study. Interested parties can trace the customer-related costs through the ACOSS model and evaluate the accounts included in those customer-related cost assignments. The fact that Witness Kubas would have preferred the information to be presented in a different format does not mean that the Company's customer cost analysis lacks adequate support.

The Company's customer cost study identifies customer-related costs that exceed the proposed SGS customer charge. Therefore, the Company is not proposing to recover

[31] OSBA Stmt. No. 1, at pp. 8-9.
[32] OSBA Stmt. No. 1, at pp. 8-9.

the full customer-related cost of serving SGS customers through the monthly customer charge.

Witness Kubas also disputes the Company's discussion of intra-class equity and fixed cost recovery.[33] However, those considerations follow directly from the customer cost analysis. To the extent customer-related costs exceed the existing customer charge, a greater portion of those costs must be recovered through volumetric rates, resulting in differing contributions toward recovery of customer-related costs among customers within the class. The Company's proposal represents a reasonable movement toward improved alignment between customer-related costs and customer-related revenues.

Q. HOW DO YOU RESPOND TO THE ARGUMENTS OF WITNESSES DEUPREE, KUBAS, CICERO, AND WARABAK THAT HIGHER CUSTOMER CHARGES ARE INCONSISTENT WITH CONSERVATION?

A. Conservation is an important policy objective, but it is only one of several objectives that must be considered in rate design. Rate design must also consider cost causation, fairness, revenue stability, rate continuity, customer impacts, and the appropriate relationship between fixed and variable cost recovery.

Witness Kubas also questions several of the Company's broader rate design objectives, including improved recovery of fixed costs, revenue stability, and appropriate price signals.[34] However, the Company's proposed customer charges are not based on any single rate design objective. Instead, they reflect a balancing of multiple ratemaking

[33] OSBA Stmt. No. 1, at p 8.
[34] OSBA Stmt. No. 1, at p 7.

considerations, including cost causation, fairness, revenue stability, customer impacts, rate continuity, and conservation. Focusing on any one objective in isolation does not provide an appropriate basis for evaluating the overall reasonableness of the Company's proposed rate design.

The customer charge is intended to recover a portion of costs that do not vary with usage. Placing too much emphasis on conservation in designing customer charges risks shifting fixed customer-related costs into volumetric delivery rates. Because those costs do not vary with usage, recovering them through volumetric charges can produce less stable recovery of fixed distribution costs over time while weakening the relationship between costs and the manner in which they are recovered. That can create less accurate price signals because customers may be led to believe they can avoid fixed distribution costs by reducing usage even though many of those costs do not change when usage declines.

Energy efficiency can still be promoted through volumetric delivery rates, commodity charges, and targeted conservation programs without compromising the appropriate recovery of customer-related fixed costs. The Company's proposal does not eliminate volumetric pricing signals. Rather, it preserves substantial usage-based recovery while improving the alignment between fixed customer-related costs and fixed monthly charges.

Q. WHAT DEFINITION OF CONSERVATION SHOULD BE USED WHEN EVALUATING RATE DESIGN?

A. In the context of distribution rate design, conservation should be understood as the wise and efficient use of utility resources, not merely a reduction in consumption for its own sake.

A rate design that recovers fixed distribution costs through volumetric rates may encourage reductions in usage, but those reductions do not necessarily reduce the fixed costs incurred to connect and serve customers. If a customer reduces usage but the Company's fixed cost to serve that customer remains unchanged, those unrecovered costs must ultimately be recovered from other customers or addressed in future rate proceedings.

Rate design should not create price signals that overstate the avoidable cost of using natural gas distribution service. A balanced rate design recognizes that some costs are customer-related and fixed while others vary with usage.

Q. DO HIGHER CUSTOMER CHARGES ELIMINATE CUSTOMERS' ABILITY TO REDUCE THEIR BILLS THROUGH CONSERVATION?

A. No. Customers continue to have the ability to reduce their bills through reductions in usage because a substantial portion of the residential bill remains usage-based. Under the Company's proposed residential distribution rate design, approximately 65% of residential distribution base rate revenues would continue to be recovered through volumetric delivery charges. Accordingly, a majority of the Company's residential distribution base rate revenues—and all commodity costs—remain associated with usage, allowing customers to continue to realize meaningful savings through conservation and energy efficiency.

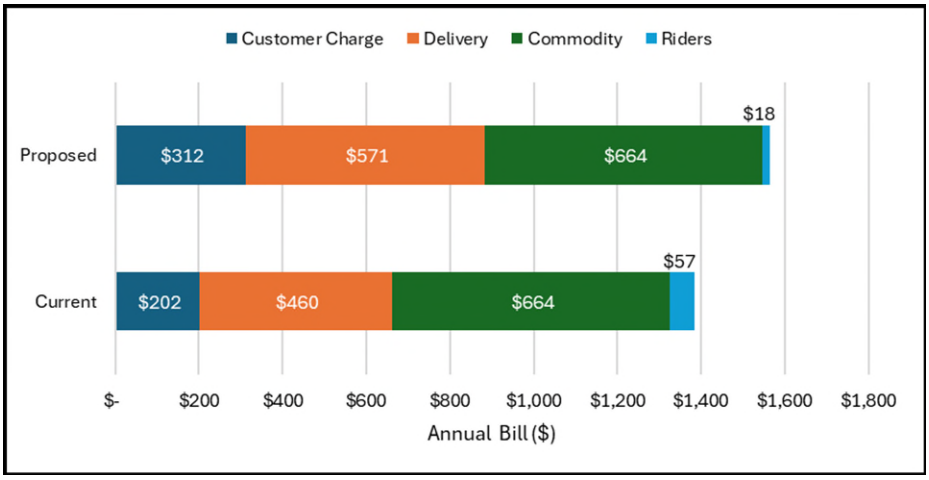
The Company's proposal does not eliminate volumetric delivery rates or gas cost recovery. Rather, it modestly changes the balance between fixed and variable recovery to better align rates with the underlying cost structure. The assertion that the Company's proposal eliminates customers' ability or incentive to conserve is therefore overstated and not supported by facts presented by these witnesses. Customers continue to benefit from reducing usage through lower commodity costs and lower volumetric delivery charges while the Company more appropriately recovers a portion of customer-related costs through the monthly customer charge.

Q. CAN THE COMPANY'S PROPOSED CUSTOMER CHARGE BE EVALUATED IN THE CONTEXT OF A CUSTOMER'S TOTAL BILL?

A. Yes. Several intervenors focus primarily on the percentage increase in the monthly customer charge. While the percentage increase in that individual rate component is readily observable, evaluating only that component does not provide a complete picture of the Company's proposed rate design or its effect on a customer's overall bill.

Figure 1 illustrates the composition of the average residential customer's annual bill under current and proposed rates. As shown, although the proposed customer charge increases, it represents approximately 20 percent of the average customer's annual bill under the proposed rates. The remaining approximately 80 percent of the bill continues to consist of delivery charges, commodity costs, and volumetric rider charges.

Figure 1: Annual Average Residential Bill



Q. WHAT DOES FIGURE 1 DEMONSTRATE REGARDING THE COMPANY'S PROPOSED RATE DESIGN?

A. Figure 1 demonstrates that the Company's proposal should be evaluated based upon its effect on a customer's total bill rather than the percentage change in any single rate component. Although the proposed customer charge increases, it remains only one component of the customer's annual bill. Commodity costs continue to represent the largest portion of the average residential customer's annual bill, while delivery charges and rider charges also comprise significant portions of the total bill.

The figure further illustrates that a substantial majority of the average residential customer's annual bill continues to consist of charges that vary with customer usage. Therefore, customers retain meaningful opportunities to manage their bills through conservation while the Company more appropriately aligns recovery of customer-related costs with the manner in which those costs are incurred.

Q. HOW DO THE COMPANY'S PROPOSED RATES AFFECT REPRESENTATIVE CUSTOMER BILLS?

A. Several intervenors express concern that the Company's proposed rate design would result in unreasonable bill impacts, particularly for lower-income customers. To evaluate those assertions, I analyzed representative annual bill impacts for several customer groups, including the average residential customer, CAP participants, non-CAP customers, and customers grouped by Federal Poverty Level ("FPL").

Table 2 summarizes those representative bill impacts under current and proposed rates using 2025 billing data. As shown, the Company's proposed rate design produces generally consistent bill impacts across the representative customer groups evaluated. While bill impacts vary modestly based upon customer usage characteristics, the analysis does not indicate that the Company's proposed rate design produces disproportionate bill impacts for the representative lower-income customer groups evaluated. In fact, there is a lower annual percentage increase for customers with the same usage as average CAP customers and customers that are at or below the 250% FPL.

Table 2 - Average Annual Bill Impacts Under Current and Proposed Rates

Customer Group	Annual Usage (Mcf)	Current Annual Bill	Company Proposed Annual Bill	Annual Increase ($)	Annual Increase (%)
Residential Average	88	$1,404	$1,587	$183	13.0%
CAP	114	$1,765	$1,972	$207	11.7%
Non-CAP	86	$1,385	$1,566	$181	13.1%
<150% FPL	96	$1,513	$1,703	$190	12.6%
151% to 250% FPL	90	$1,438	$1,622	$185	12.9%
251% to 350% FPL	87	$1,400	$1,582	$182	13.0%
>350% FPL	86	$1,386	$1,567	$181	13.1%

Note: the CAP bill impact is representative of customers that use the same average annual usage as CAP participants, not the actual impact to CAP participants.

Q. DO THESE ANALYSES SUPPORT THE ASSERTION THAT THE COMPANY'S PROPOSED CUSTOMER CHARGE PRODUCES DISPROPORTIONATE BILL IMPACTS FOR LOWER-USE OR LOWER-INCOME CUSTOMERS?

A. No. The representative bill impact analyses presented above indicate that the Company's proposed rate design produces generally consistent annual bill impacts across the customer groups evaluated, with modest benefits to low-income customers who have higher than average usage. While bill impacts naturally vary based on usage characteristics, the analyses do not demonstrate that the proposed customer charge produces disproportionate annual bill impacts for representative lower-income customer groups. Moreover, as discussed below, maintaining the current customer charge and recovering the same revenue through higher volumetric delivery charges does not necessarily produce lower annual bills for those customers.

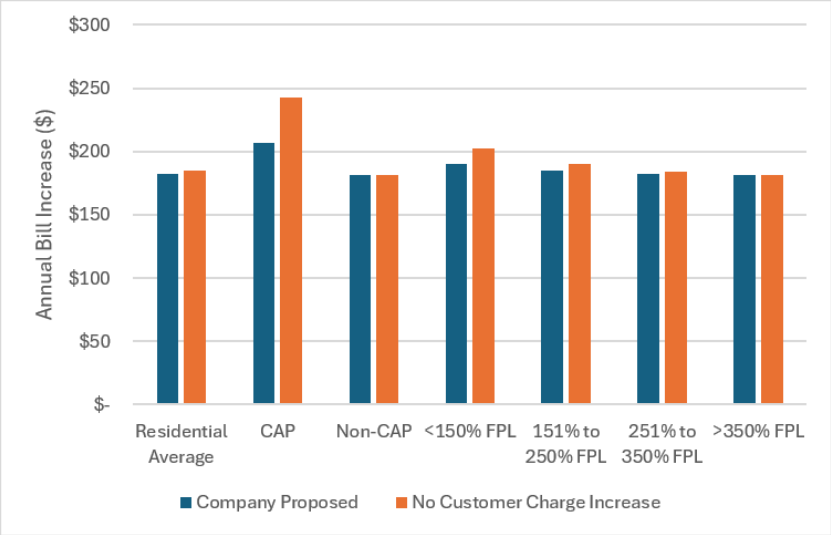
Q. HOW DOES THE COMPANY'S PROPOSED RATE DESIGN COMPARE TO AN ALTERNATIVE THAT MAINTAINS THE CURRENT RESIDENTIAL CUSTOMER CHARGE?

A. Several intervenors recommend rejecting or limiting the Company's proposed residential customer charge increase. To illustrate the practical effect of that recommendation, I compared the Company's proposed rate design to an alternative scenario that maintains the current residential customer charge while recovering the same revenue requirement through higher volumetric delivery charges.

Figure 2 compares the annual bill increases produced under each approach. The analysis demonstrates that maintaining the current residential customer charge produces

only minimal differences in annual bill impacts for the average residential customer and representative non-CAP customers. However, because the alternative recovers a greater portion of revenues through volumetric delivery charges, representative CAP customers and customers within the lowest FPL cohort experience larger annual bill increases than under the Company's proposed rate design. These results demonstrate that maintaining the current residential customer charge does not result in lower annual bills for representative lower-income customer groups, as increased recovery through volumetric delivery charges offsets the lower monthly customer charge.

Figure 2 - Comparison of Annual Bill Increases Under Alternative Customer Charge Scenario



Likewise, Table 3 below provides the numerical dollar values that are observed in Figure 2 above. As shown in Table 3, the representative CAP customer experiences an annual bill that is approximately $36 higher if this Commission were to maintain the current residential customer charge than under the Company's proposed rate design.

Table 3 - Comparison of Annual Bill Increases Under Alternative Customer Charge Scenario

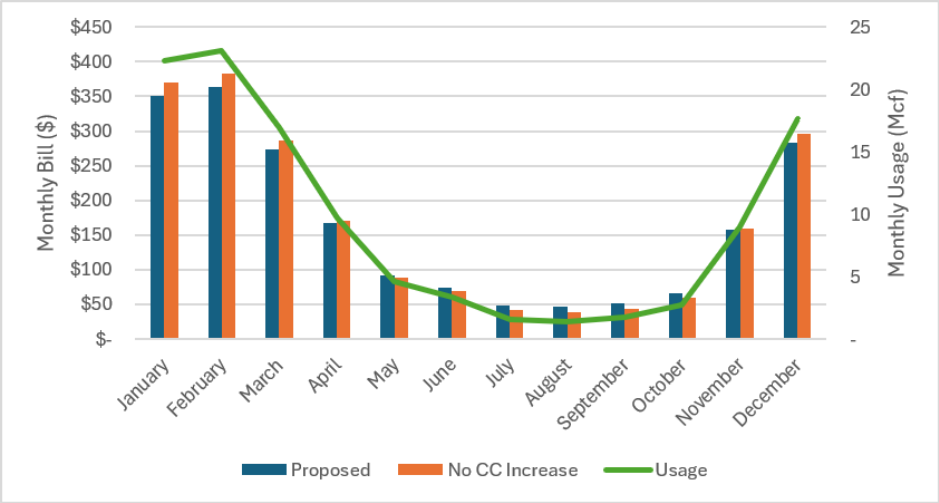
Customer Group	Company Proposed	No Customer Charge Increase	Diference
Residential Average	$182.56	$184.69	$2.13
CAP	$206.81	$242.96	$36.15
Non-CAP	$181.24	$181.57	$0.33
<150% FPL	$190.07	$202.48	$12.40
151% to 250% FPL	$184.87	$190.15	$5.28
251% to 350% FPL	$182.25	$183.95	$1.70
>350% FPL	$181.32	$181.75	$0.43

Q. DOES THE COMPANY'S PROPOSED RATE DESIGN ALSO AFFECT WHEN CUSTOMERS EXPERIENCE BILL IMPACTS?

A. Yes. Although annual bill impacts under the Company's proposed rate design and the alternative scenario are generally similar for many customer groups, the timing of those bill impacts differs because the alternative recovers a greater portion of fixed costs through volumetric delivery charges.

Figure 3 illustrates representative monthly CAP customer bills under the Company's proposal and the alternative rate design. As shown, maintaining the current residential customer charge results in modestly higher customer bills during the Weather Normalization Adjustment ("WNA") period, when customer heating costs are generally highest. Conversely, the Company's proposed rate design modestly lowers customer bills during the WNA period while shifting a comparable amount of recovery to lower-usage summer months.

Figure 3 - Average Monthly CAP Customer Bills Under Alternative Rate Design



For the representative CAP customer evaluated, the Company's proposed rate design reduces the average monthly bill during the WNA period (October through May) by approximately $7.84 compared to the alternative scenario, while increasing the average monthly bill during the non-WNA period (June through September) by approximately $6.64. Accordingly, the Company's proposed rate design modestly moderates customer bills during the highest-usage winter months while producing substantially similar annual bill impacts overall.

Table 4 - Summary of Average CAP Customer Monthly Bill Impacts

Period	Company Proposed	No CC Increase	$ Difference
Avg Winter - Oct. to May	$219.02	$226.85	**$7.84**
Avg Summer - Jun. to Sep.	$54.92	$48.28	**-$6.64**

Taken together, Figures 1 through 3 and Tables 2 through 4 demonstrate that the Company's proposed rate design should be evaluated based on its overall effect on customer bills rather than the percentage change in any single rate component. These

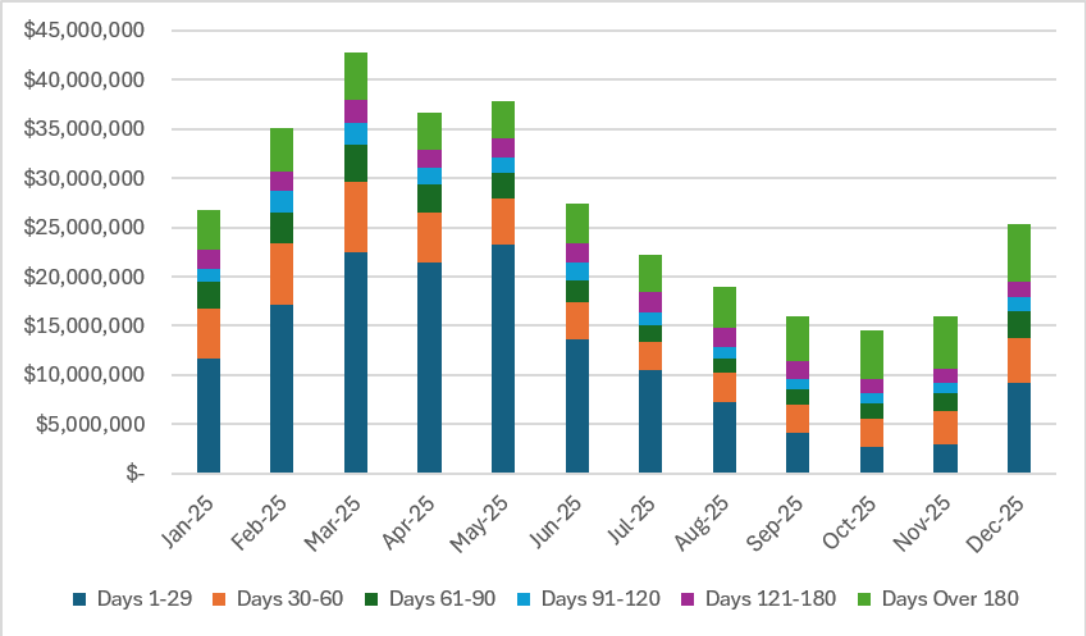
analyses further demonstrate that maintaining the current residential customer charge does not necessarily produce more favorable bill outcomes for representative lower-income customer groups.

Q. WHAT DOES THE COMPANY'S ARREARAGE DATA SHOW ABOUT WHEN CUSTOMERS STRUGGLE MOST TO PAY THEIR BILLS?

A. Figure 4 below provides the monthly residential arrears data for the Company and demonstrates a clear seasonal pattern; arrears increase materially during the winter heating season. As shown in the accompanying stacked column chart, the amount of arrears increases significantly starting in December, and further increase over the winter season. This indicates that customers are not only falling behind, but are increasingly unable to catch up as the heating season continues. This compounding effect results in a buildup of arrearages over the course of the winter. Notably, these elevated arrearage levels do not dissipate immediately after the heating season ends. The Company continues to carry millions of dollars in arrearages well into the summer months.

Taken together, this pattern shows that affordability challenges are most acute during the winter months, when energy usage is highest and least discretionary, and that the effects of those challenges persist behind the heating season. Ultimately, a portion of these delinquent bills are never recovered from the customers billed, contributing to the Company's uncollectible expense. This demonstrates that rate designs which concentrate cost recovery in volumetric charges can exacerbate these outcomes by increasing bills during precisely the periods when customers are least able to manage their usage, resulting in a higher number of delinquent customers and higher amounts of uncollectible expense.

Figure 4 - Monthly Residential Arrearages by Aging Category



Q. TO THE EXTENT INTERVENORS RAISE BROADER AFFORDABILITY AND UNIVERSAL SERVICE POLICY ISSUES, WHO ADDRESSES THOSE MATTERS?

Witnesses Colton, Cicero, and Warabak, together with portions of Witness Deupree's testimony, raise broader affordability, low-income customer impact, and universal service policy issues. My testimony demonstrates that the Company's proposed rate design results in reasonable representative bill impacts and does not support the conclusion that maintaining the current residential customer charge produces more favorable bill outcomes for representative lower-income customers. Those broader affordability and universal service policy considerations, however, are addressed by Company Witness Mike Huwar at **Peoples Statement No. 1-R,** Rita Black at **Peoples Statement No. 10-R**, and Cyndee Fang at **Peoples Statement No. 20-R**.

My testimony addresses the cost-causation and rate-design aspects of the proposed customer charges. The Company incurs costs to connect, maintain, meter, bill, and serve customers regardless of individual usage levels. Those customer-related costs should be reasonably recognized when designing customer charges.

In addition, the Company is not proposing full recovery of customer-related costs through the monthly customer charge. The proposed charges represent a measured movement toward cost-based rates while preserving substantial volumetric recovery. In that respect, the Company's proposal balances cost causation with customer impact considerations.

Q. DO YOU AGREE WITH WITNESS CLINE'S RECOMMENDATION THAT CUSTOMER CHARGES SHOULD BE INCLUDED IN ANY PROPORTIONAL SCALE-BACK IF THE COMMISSION AUTHORIZES LESS THAN THE COMPANY'S REQUESTED REVENUE INCREASE?[35]

A. No. Customer charges should be evaluated based upon customer-related costs and sound rate design principles, not mechanically reduced in proportion to any reduction in the Company's requested revenue increase.

The purpose of the customer charge is to recover customer-related fixed costs. A reduction in the overall revenue requirement does not necessarily alter the customer-related costs identified in the Company's customer cost analysis. Consequently, a mechanical scale-back of customer charges could disconnect customer charges from cost causation and shift additional fixed costs into volumetric rates.

[35] I&E Stmt. No.3, at pp. 36-37.

Q. WHAT IS YOUR OVERALL CONCLUSION REGARDING CUSTOMER CHARGES?

A. The Company's proposed customer charges are reasonable and should be approved. They remain below the customer-related costs identified for the applicable customer classes and represent a measured movement toward more cost-reflective rate design.

The analyses presented in this rebuttal testimony further demonstrate that the Company's proposed rate design preserves meaningful conservation incentives, produces generally consistent bill impacts across representative customer groups, and should be evaluated based upon its overall effect on customer bills rather than the percentage change in any single rate component. The bill impact analyses also demonstrate that maintaining the current residential customer charge while recovering the same revenue requirement through higher volumetric delivery charges does not necessarily produce more favorable bill outcomes for representative lower-income customer groups and results in higher bills during the WNA period for the representative CAP customer evaluated. While Witnesses Deupree and Cline rely upon alternative cost allocation methodologies that I do not support, and Witnesses Cicero, Warabak, and Colton raise broader affordability and low-income policy considerations that are addressed elsewhere by the Company, the Company's proposed customer charges are reasonable from both a cost-of-service and rate design perspective and should be approved.

V. MERCHANT FUNCTION CHARGE UPDATE

Q. ARE THERE ANY ADDITIONAL RATE DESIGN ISSUES THAT SHOULD BE ADDRESSED?

A. Yes. Since the filing of the Company's Direct Testimony, the Company's gas cost rates have declined from the levels reflected in the Company's originally proposed Merchant Function Charge. Because the Merchant Function Charge is calculated based upon the applicable gas cost rate, I recommend that the Merchant Function Charge included in the Company's final rate design be updated to reflect the gas cost rates expected to be in effect when the Company's new base rates become effective.

Q. WHAT UPDATE ARE YOU RECOMMENDING TO THE MERCHANT FUNCTION CHARGE?

A. The Company's original application reflected a Merchant Function Charge of $0.1490 per Mcf for Residential class and $0.0327 per Mcf for Commercial and Industrial classes, which was based upon the gas cost rates in effect at the time the application was prepared. Based upon the Company's current gas cost rates effective July 1, 2026, the Merchant Function Charge would be $0.1045 per Mcf for Residential class and $0.0229 per Mcf for Commercial and Industrial classes.. Accordingly, I recommend that the final rate design reflect the updated Merchant Function Charge calculated using the gas cost rates expected to be in effect when the Company's new base rates become effective.

Q. WHY IS THE COMPANY PROPOSING THIS UPDATE?

A. The purpose of this update is simply to ensure that the Merchant Function Charge reflected in the Company's final tariffs is based upon current gas cost information rather than commodity prices that existed several months earlier when the Company's application was filed. Updating the Merchant Function Charge in this manner allows the Company's final

rate design to reflect the most current information available at the time rates become effective.

Q. DOES THIS UPDATE CHANGE ANY OF YOUR OTHER RATE DESIGN RECOMMENDATIONS?

A. No. This recommendation affects only the Merchant Function Charge reflected in the Company's final rate design. It does not affect my recommendations regarding revenue apportionment, customer charges, or any of the other rate design issues addressed in my testimony.

VI. NORMAL WEATHER METHODOLOGY

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY REGARDING THE COMPANY'S PROPOSED NORMAL WEATHER METHODOLOGY.

A. In my direct testimony, I explained that the Company proposes to continue its Weather Normalization Adjustment ("WNA") while updating the methodology used to estimate normal Heating Degree Days ("HDD").[36] Specifically, I recommended replacing the current methodology of averaging a 65-year trend with a 20-year average with a regression-based trend methodology utilizing 65 years of historical HDD data to estimate normal weather for the Fully Projected Future Test Year ("FPFTY"). I explained that the proposed methodology provides a statistically sound and objective estimate of normal weather that reflects the long-term downward (i.e., warming) trend in annual Pittsburgh Area HDD.

[36] Peoples Stmt. No. 17, at p. 37.

Q. HAVE YOU REVIEWED THE TESTIMONY OF WITNESSES DEUPREE, CLINE, EWEN, AND CICERO REGARDING THE COMPANY'S PROPOSED NORMAL WEATHER METHODOLOGY?

A. Yes. I have reviewed each witness's testimony regarding the Company's proposed methodology for estimating normal Heating Degree Days and developing weather-normalized billing determinants. Although the witnesses recommend different modifications to the Company's proposal, including retaining the current methodology or requiring additional analyses before approving the Company's proposal, I do not believe they demonstrate that the Company's proposed methodology is unreasonable. Rather, I continue to believe the Company's proposed methodology provides the most reasonable estimate of normal HDD for the FPFTY and should be approved.

Q. WHAT IS THE FUNDAMENTAL DIFFERENCE BETWEEN THE COMPANY'S PROPOSED METHODOLOGY AND THE APPROACHES RECOMMENDED BY THE INTERVENORS?

A. The principal difference is not whether historical weather data should be considered, but rather how historical data should be used to estimate normal weather.

As discussed in my direct testimony, Peoples proposes to estimate normal HDD using a regression methodology that statistically estimates the long-term downward (i.e., warming) trend in Pittsburgh Area annual HDD using sixty-five years of historical data.[37] That estimated trend is then projected (extrapolated) to develop an estimate of normal HDD for the FPFTY.

[37] Peoples Stmt. No. 17, at pp. 40-41.

By contrast, the intervenors generally recommend continuing to rely upon the current blended methodology or evaluating alternative historical periods rather than adopting the Company's proposal. In my opinion, those recommendations do not demonstrate that the Company's regression methodology is unreasonable nor that an alternative methodology would provide a better estimate of expected future HDD.

Q. WHY DO YOU BELIEVE THE COMPANY'S REGRESSION METHODOLOGY PROVIDES THE MOST REASONABLE ESTIMATE OF NORMAL HDD?

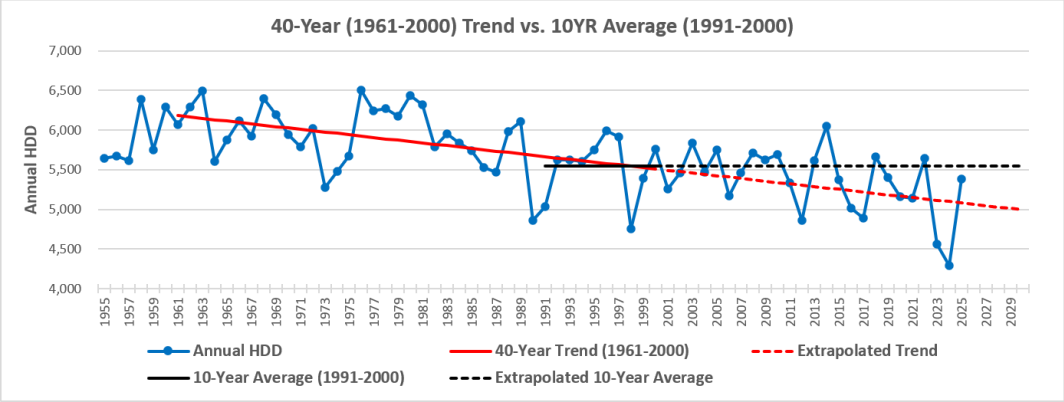
A. The Company's methodology to estimate normal HDD recognizes that there is a well-established and accepted long-term warming trend reflected in the historical HDD record. Rather than simply averaging historical HDD, such as over 20 years or 10 years, the regression statistically estimates the downward trend in HDD and projects (extrapolates) that trend forward to 2027, the FPFTY.

Given the downward trend in Pittsburgh Area annual HDD, it stands to reason that a trend provides a better indication or estimate of future HDD than a simple average. The trend does not strictly provide a "forecast" of future HDD for any particular year, but provides an indication of central tendency or mean of future HDD.

Consider a simple example illustrated in Figure 4. Although not necessarily accurate as a forecast of annual HDD for every single year or period, a trend has generally been a more accurate estimate of future annual HDD than a 10-year average (or any average). The Root Mean Squared Error ("RMSE") is a common method for evaluating regression and forecast accuracy. The RMSE of the extrapolated 40-year (1961-2000) trend to estimate future annual HDD from 2001 to 2025 is less (i.e., more accurate) than

the RMSE from extrapolating the 10-year (1991-2000) average. Trend RMSE = 365, Average RMSE = 441. It is also visually clear the trend provides a better estimate of future HDD than the 10-year average.

Figure 5 –
Comparison of Trend and Simple Average Estimate of Future HDD



Accordingly, I continue to believe the regression trend methodology provides a transparent, objective, unbiased and analytically sound estimate of normal HDD.

Q. WITNESS CLINE DISAGREES WITH THE COMPANY'S PROPOSAL TO USE A 65-YEAR TREND REGRESSION METHODOLOGY TO DEFINE NORMAL HDD, ON GROUNDS OF INSUFFICIENT ANALYSIS AND LACK OF SUPPORT FOR WHY 65 YEARS IS SELECTED. HOW DO YOU RESPOND?[38]

A. I respectfully disagree with witness Cline for two reasons:

1. There is ample statistical support for the use of 65 years, both in the current case and the prior case, and

[38] I&E Stmt. No. 3, at pp. 14, 18.

2. The use of 65 years is consistent with the methodology relied upon in the prior case, where it was used as part of the calculation of normal HDD[39]. Normal HDD was defined using the average of the normal HDD resulting from a 65-year regression analysis and a 20-year historical average. The intention at the time was that the methodology be transitional to a purely regression trend-based methodology (as is proposed in the current case).

The use of 65 years is **not**, as suggested by witness Cline, used to justify a specific HDD result[40]; not in the present case, nor in the prior case (as discussed below).

Q. PLEASE EXPLAIN AND PROVIDE STATISTICAL SUPPORT FOR THE SPECIFIC USE OF 65 YEARS.

A. As stated in my direct testimony[41], to estimate a trend in data, in this case annual Pittsburgh Area HDD, a standard approach is to estimate a regression with a constant and a trend variable (e.g., 1, 2, 3, … or equivalently 1960, 1961, 1962, …).

$$Annual\ HDD_y = \mathbf{Constant} + \boldsymbol{\beta} \times Trend_y$$

Standard statistical tests, such as R^2 and t-statistics, are useful in evaluating regression results, and thus the statistical veracity of the trend estimate (i.e., the estimate of **β**).

In evaluating the trend regression results, both for the current rate case proceeding, and recreating results from the prior proceeding[42], I calculated R^2 for the overall regression, and t-statistics for the Trend coefficient, β, for all regression terms from 70

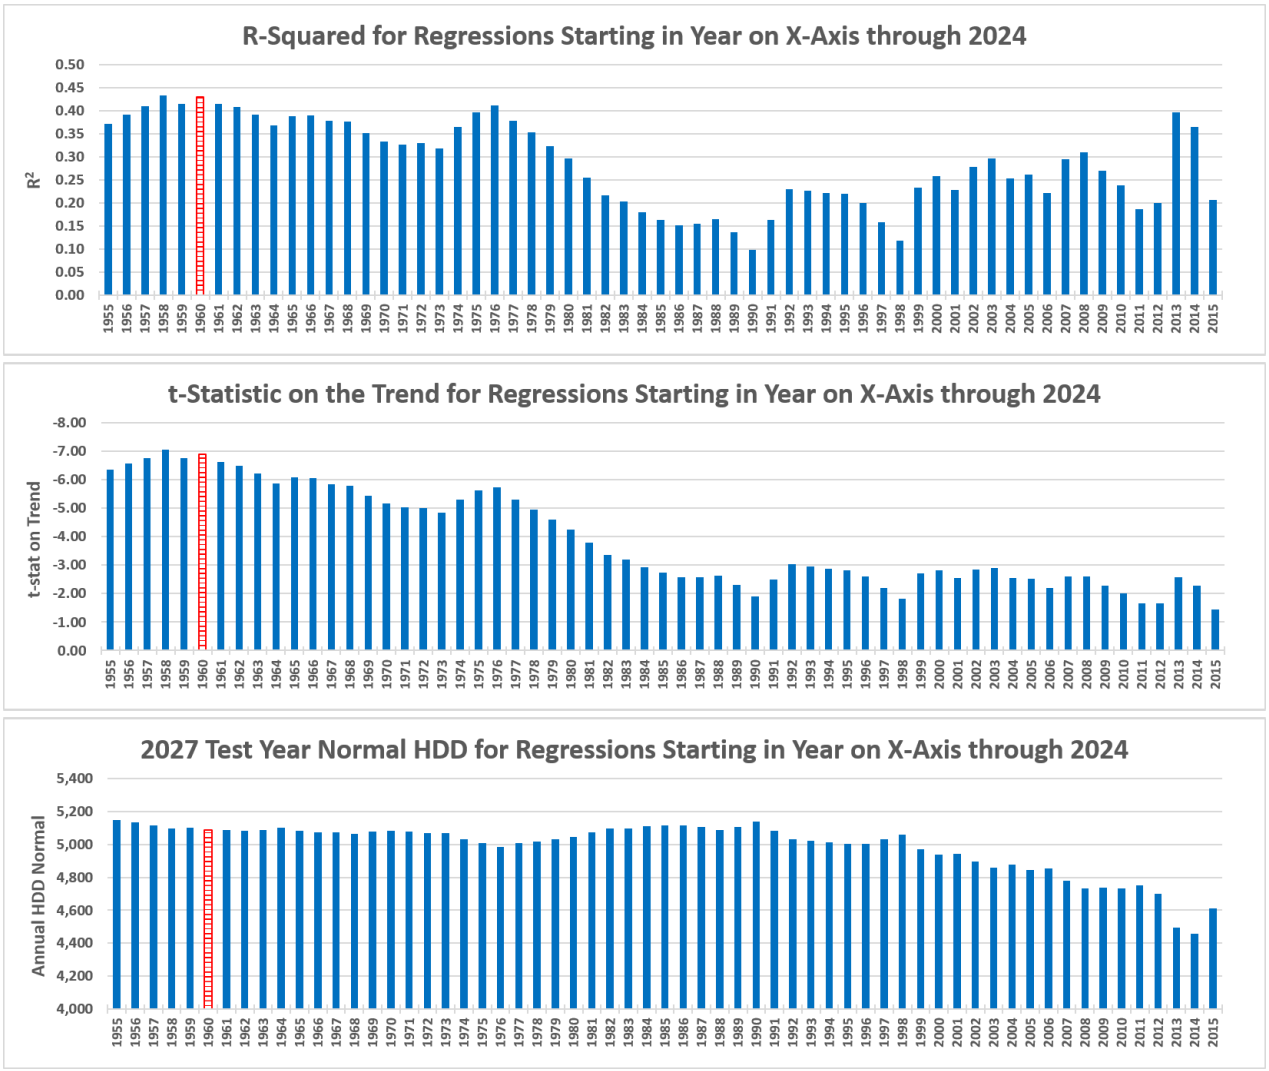
[39] Docket No. R-2023-3044549.
[40] I&E Stmt. No. 3 at p. 19, lines. 1-2.
[41] Peoples Stmt. No. 17, at pp. 3-4.
[42] Although I did not originally calculate the 65-year regression in the prior case, I recreated and evaluated the results.

years to 8 years using annual Pittsburgh Area HDD data from 1955 to 2024. For each regression term I also calculated the implied normal HDD for the test year 2027 in the current case and for 2024 in the prior case.

In the current proceeding, the Company proposes using a 65-year regression on annual Pittsburgh Area HDD from 1960 to 2024. All regressions from a 70-year term (1955 to 2024) to a 10-year term (2015 to 2024) were evaluated. Please see Figure 6 for a presentation of these results[43]. The red horizontally slashed bars are for the currently proposed 65-year regression (1960-2024). The R^2 and t-statistics for the proposed regression are the second largest (absolute value of the t-statistic) of the regressions evaluated. A larger t-statistic for the Trend coefficient can generally be interpreted as the trend from that regression being "more significant." The normal HDD from the proposed 65-year regression is 5,086; higher than average of the evaluated regressions, and only slightly lower than the normal HDD (5,096) from the regression with the slightly "better" statistics (the 67-year regression beginning in 1958).

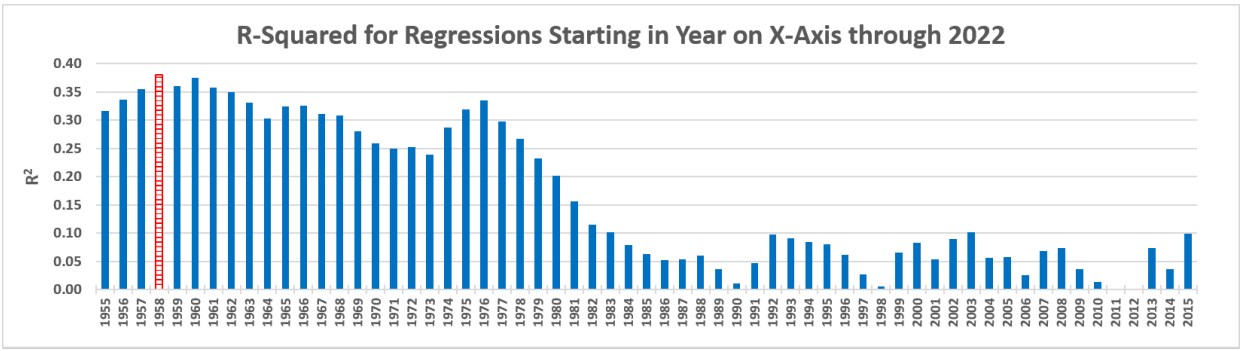
[43] All the data needed to recreate this analysis is provided in response to OSBA TO PNG-II-14 B, with the addition of the following data: Annual HDD, 1955 (5647 HDD), 1956 (5672 HDD), 1957 (5617 HDD), 1958 (6385 HDD), 1959 (5751 HDD).

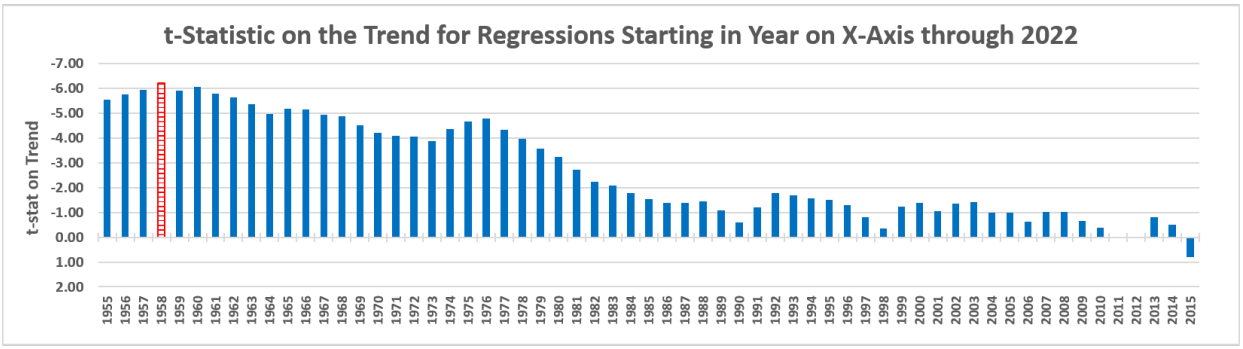
Figure 6 - Evaluation of Regression Results & Alternatives – 2027 Test Year

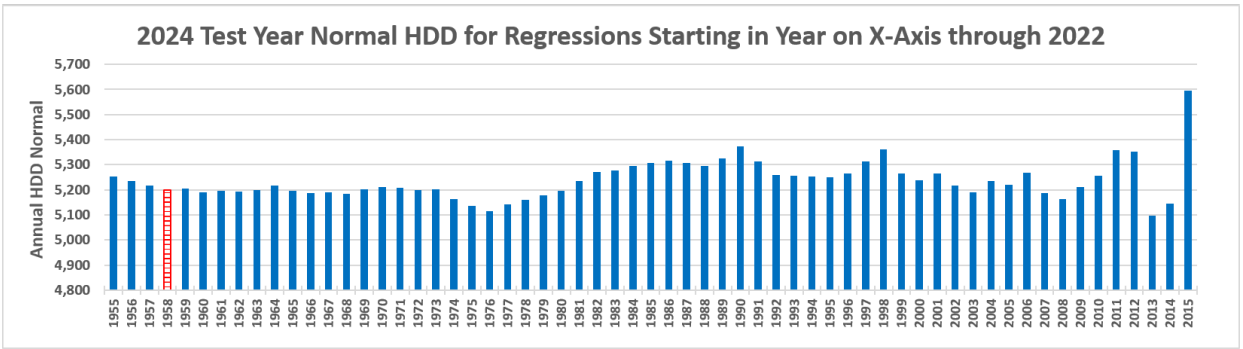


I performed a similar analysis on the prior case regression, see Figure 7. In that case, a 65-year regression from 1958 to 2022 was used. All regressions from a 68-year term (1955 to 2022) to an 8-year term (2013 to 2022) were evaluated. The 65-year regression had the highest R^2, the lowest t-statistic on the Trend coefficient, and a normal HDD close to the average of all the evaluated regressions.

Figure 7 - Evaluation of Regression Results & Alternatives – 2022 Test Year







In summary, supported by my analysis, the 65-year regression was chosen based on statistical significance, and in the current rate case to be consistent with precedent set in the previous rate case; not simply to justify a specific normal HDD result as hypothesized by I&E witness Cline.

Q. WITNESS CLINE RECOMMENDS THAT THE COMPANY PROVIDE ADDITIONAL ANALYSES USING A TEN-YEAR HDD METHODOLOGY. HOW DO YOU RESPOND?[44]

A. While additional analyses can always be performed using different historical periods or assumptions, the existence of alternative analytical approaches does not demonstrate that the Company's methodology is unreasonable. Nor has Witness Cline presented an alternative regression analysis demonstrating that the Company's methodology is statistically unsound or that another methodology provides a more reasonable estimate of expected future HDD.

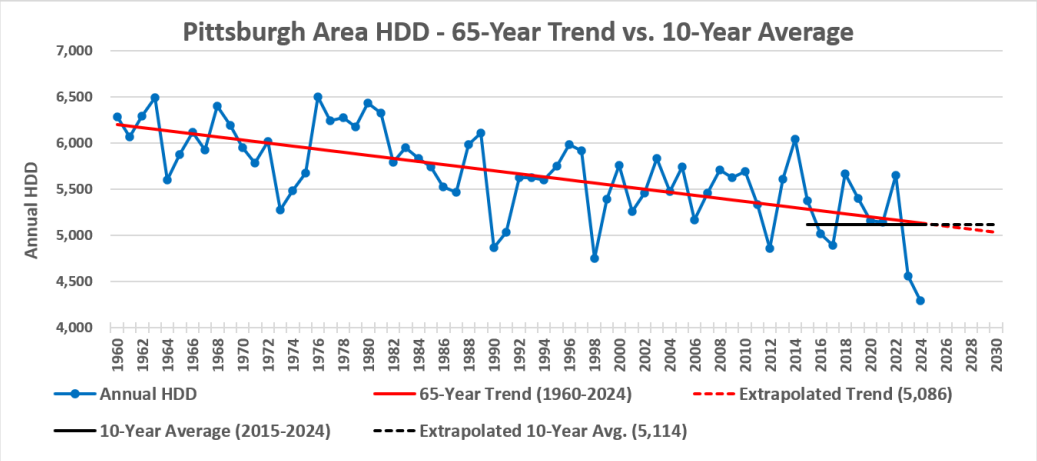
Q. DID YOU EVALUATE THE DIFFERENCE BETWEEN THE PROPOSED 65-YEAR TREND METHODOLOGY AND 10-YEAR AVERAGE METHODOLOGY FOR CALCULATING NORMAL HDD?

A. Yes. The 65-year trend methodology results in an annual normal HDD estimate of 5,086 for 2027, the FPFTY. A 10-year average results in a very similar annual normal HDD estimate of 5,114 HDD. Please see Figure 8 for a graphical representation of this result. Updating this analysis through 2025 produces a 65-year trend (1961-2025) estimate for 2027 of 5,105 HDD and a 10-average (2016-2025) estimate of 5,115; again, very similar.

Although similar in this instance, as previously discussed, the trend methodology will likely produce a superior estimate of annual normal HDD, given the clear downward (i.e., warming) trend in Pittsburgh Area HDD.

[44] I&E Stmt. No. 3, at p. 14.

Figure 8 - HDD Normal Methodology Comparison



Q. WHY IS THE COMPANY NO LONGER PROPOSING THE BLENDED METHODOLOGY USED IN ITS LAST RATE CASE?

A. As I explained in my direct testimony, the blended methodology adopted in the Company's previous rate case reflected a gradual transition toward greater reliance on regression-based weather normalization.[45] At that time, averaging the regression estimate with a twenty-year historical average balanced recognition of the long-term trend with a more recent historical reference point, consistent with the principle of gradualism.

Since that proceeding, however, additional historical data have continued to confirm both the persistence and consistency of the long-term warming trend. Consequently, continued reliance upon the blended methodology no longer provides the most reasonable estimate of normal HDD for the FPFTY. In my opinion, the regression methodology alone now provides the more appropriate estimate because it recognizes and incorporates the recognized and accepted long-term warming trend.

[45] Peoples Stmt. No. 17, at pp. 6-7.

Q. WITNESS EWEN RECOMMENDS THAT THE COMPANY PREPARE AN ADDITIONAL BILL IMPACT ANALYSIS BEFORE THE COMMISSION APPROVES THE COMPANY'S PROPOSED HDD METHODOLOGY. DO YOU BELIEVE SUCH ANALYSIS IS NECESSARY?[46]

A. No. Additional sensitivity analyses or bill impact analyses could always be prepared using alternative assumptions or methodologies. However, I do not believe such analyses are necessary for the Commission to evaluate the reasonableness of the Company's proposal. If Witness Ewen feels this type of analysis would add probative facts to this proceeding, he could have completed one.

The issue before the Commission is whether the Company's proposed methodology provides a reasonable estimate of normal HDD. In my opinion, it does. The methodology is transparent, statistically sound, supported by historical data, and consistently applied throughout the Company's weather normalization analyses. I do not believe the Commission should require additional comparative analyses before approving the Company's proposed methodology.

Q. WHY IS IT IMPORTANT THAT THE SAME NORMAL WEATHER METHODOLOGY BE USED THROUGHOUT THE COMPANY'S RATEMAKING ANALYSIS?

A. Consistency is an important attribute of sound ratemaking. As discussed in my direct testimony, the Company utilizes the proposed regression methodology to develop weather-normalized billing determinants for this proceeding. The Company likewise

[46] OSBA Stmt. No. 2, at p. 16.

proposes to utilize that same methodology for purposes of the WNA. Using a common estimate of normal HDD ensures that the weather assumptions embedded in customer rates are the same weather assumptions used when the WNA subsequently reconciles revenues.

If different methodologies were used for rate development and WNA administration, the WNA could either over- or under-correct relative to the weather assumptions captured in base rates. Aligning both processes with the same methodology maintains internal consistency, avoids unintended distortions, preserves the matching principle, and enhances transparency for both the Commission and customers.

VII. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE SUMMARIZE YOUR DIRECT TESTIMONY REGARDING THE COMPANY'S WEATHER NORMALIZATION ADJUSTMENT.

A. In my direct testimony, I explain that the Company's approved WNA continues to serve its intended purpose of reducing the impact of abnormal weather on the recovery of authorized weather-sensitive distribution revenues while preserving symmetrical treatment of both the Company and its customers. The mechanism benefits customers as well because it reduces the degree to which customer bills vary solely due to actual weather being warmer or colder than the normal weather assumptions used to establish rates. Based on the Company's experience under the Commission-approved mechanism and the analyses presented in my direct testimony, I concluded that the Company's updates to the normal weather methodology and continued use of the WNA are reasonable and should be approved.

Q. PLEASE SUMMARIZE THE POSITIONS OF THE INTERVENORS REGARDING THE COMPANY'S PROPOSED NORMAL WEATHER METHODOLOGY AND EXISTING, APPROVED WEATHER NORMALIZATION ADJUSTMENT.

A. Several intervenors address the Company's proposed updates to the normal weather methodology and continued use of the Weather Normalization Adjustment, although they approach these issues from different perspectives and recommend different modifications to the Company's proposal.

OCA Witness Deupree recommends that the Commission discontinue the Company's WNA, arguing that the Company's use of a FPFTY and Distribution System Improvement Charge ("DSIC") have substantially reduced regulatory lag and weather-related business risk, thereby eliminating the need for the WNA.[47] Alternatively, Witness Deupree recommends increasing the WNA deadband from three percent to five percent, excluding the months of October and May from the WNA, rejecting the Company's proposed 65-year regression methodology for estimating normal Heating Degree Days, and limiting continued operation of the WNA to an additional three-year period.[48] Witness Deupree also discusses the Company's historical WNA experience, including recent colder-than-normal weather, and questions whether the Company's proposed methodology changes are supported by the operating experience under the WNA.[49]

[47] OCA Stmt. No. 1, at pp. 37-38.
[48] OCA Stmt. No. 1, at pp. 37-38.
[49] OCA Stmt. No. 1, at pp. 36-37

I&E Witness Cline does not oppose weather normalization in concept but recommends modifications to the Company's proposal. Witness Cline opposes the Company's proposed use of a 65-year regression methodology to estimate normal HDD, recommends increasing the WNA deadband from three percent to five percent, and raises concerns regarding the Company's present-rate revenue weather adjustment and related weather normalization assumptions.[50]

OSBA Witness Ewen likewise does not oppose continuation of the WNA but recommends that the Commission reject the Company's proposed change to the normal weather methodology unless the Company first performs additional analyses evaluating the customer bill impacts associated with replacing the current blended methodology with the proposed 65-year regression methodology.[51] Witness Ewen also recommends increasing the WNA deadband from three percent to five percent and raises broader concerns regarding customer understanding of the WNA, customer bill volatility, conservation incentives, and the Company's operating experience under the Commission-approved WNA.[52]

CAUSE-PA Witness Cicero recommends that the Commission discontinue the Company's WNA.[53] Witness Cicero contends that the WNA improperly shifts weather-related risk from the Company to customers, reduces traditional regulatory risk borne by shareholders, increases customer bill complexity, and is no longer warranted given the

[50] I&E Stmt. No. 3, at pp. 11-15.
[51] OSBA Stmt. No. 2, at pp. 16-17.
[52] OSBA Stmt. No. 2, at pp. 16-17.
[53] CAUSE-PA, Stmt. 1, at pp. 63-64.

Company's use of a FPFTY and other regulatory mechanisms.[54] Witness Cicero also raises broader concerns regarding affordability, customer bill impacts, and the interaction between the WNA and the Company's proposed rate design.[55]

Q. WITNESSES DEUPREE AND CICERO CONTEND THAT THE COMPANY'S USE OF A FULLY PROJECTED FUTURE TEST YEAR, THE DSIC, AND OTHER REGULATORY MECHANISMS ELIMINATES OR SUBSTANTIALLY REDUCES THE NEED FOR THE COMPANY'S WEATHER NORMALIZATION ADJUSTMENT. DO YOU AGREE?

A. No. I believe those arguments conflate several regulatory mechanisms that serve fundamentally different purposes.

The Company's FPFTY is intended to better align authorized rates with the costs expected during the period rates will be in effect, thereby reducing traditional regulatory lag associated with historic test years. Likewise, the DSIC provides a mechanism for recovering qualifying infrastructure investments between general rate cases.

The WNA serves a different purpose. While the FPFTY and DSIC address the timing of cost recovery and infrastructure investment recovery, the WNA addresses the impact of abnormal weather on weather-sensitive distribution revenues after rates have been established. It does so by normalizing customer bills to the same estimate of normal weather that was used in developing the Company's billing determinants.

[54] CAUSE-PA, Stmt. 1, at pp. 58-59.
[55] CAUSE-PA, Stmt. 1, at pp. 65-66.

Accordingly, the existence of a FPFTY or other regulatory mechanisms does not eliminate the effects of abnormal weather or diminish the need for an appropriate weather normalization mechanism. Those mechanisms are complementary rather than duplicative because each addresses a different source of revenue or bill variability. The WNA also benefits customers by moderating bill impacts caused solely by weather deviations from normal, thereby reducing the extent to which customers experience higher or lower bills because actual weather differs from the weather assumptions used to set rates.

Q. WITNESS CICERO CONTENDS THAT THE COMPANY'S EXISTING APPROVED WNA IMPROPERLY SHIFTS WEATHER-RELATED RISK FROM SHAREHOLDERS TO CUSTOMERS AND REDUCES THE COMPANY'S TRADITIONAL REGULATORY RISK. DO YOU AGREE?[56]

A. No. The WNA does not eliminate the Company's business risk nor does it guarantee the recovery of earnings. Rather, it addresses a single, identifiable source of revenue variability—abnormal weather—that is unrelated to the Company's management decisions or operational performance.

Under the Company's existing WNA, customers continue to pay for the gas they consume, and the Company remains responsible for prudently managing its operating costs, capital investments, and all other aspects of its business. The WNA does not affect the Commission's determination of the Company's authorized revenue requirement or authorized return, nor does it insulate the Company from changes in customer growth,

[56] CAUSE-PA Stmt. 1, at p. 50.

operating expenses, capital expenditures, bad debt expense, or numerous other business risks.

Instead, the WNA simply partially normalizes weather-sensitive distribution revenues to the same estimate of normal weather that was used to establish rates. In that respect, it promotes greater consistency between the assumptions used to set rates and the revenues ultimately collected under those rates.

It is also important to recognize that weather risk is not borne only by the Company. Abnormal weather also affects customers because colder-than-normal weather can materially increase customer bills, while warmer-than-normal weather can reduce usage and produce under-recovery of weather-sensitive distribution revenues. The WNA moderates these effects by reducing the degree to which customer bills and Company revenues vary solely because actual weather differs from the normal weather assumptions embedded in rates.

Therefore, I do not agree that the WNA improperly shifts business risk to customers. Rather, it appropriately limits the effects of abnormal weather while leaving the Company responsible for the many other risks inherent in providing utility service.

Q. DOES THE COMPANY'S EXISTING WNA GUARANTEE THE RECOVERY OF AUTHORIZED REVENUES?

A. No. The WNA should not be viewed as a revenue guarantee. The Company's opportunity to recover its authorized revenues continues to depend upon numerous factors unrelated to weather, including customer growth, economic conditions, operating efficiency,

collection of customer bills, capital investment, regulatory outcomes, and the Company's overall management of its business.

The WNA addresses only deviations in weather from the normal weather assumptions used to establish rates. Consequently, the mechanism neither guarantees revenues nor ensures that the Company will earn its authorized rate of return. Rather, it removes only one source of revenue variability while leaving all other business and regulatory risks unchanged.

Q. WITNESS DEUPREE DISCUSSES THE COMPANY'S RECENT OPERATING EXPERIENCE UNDER THE WEATHER NORMALIZATION ADJUSTMENT AND QUESTIONS WHETHER THAT EXPERIENCE SUPPORTS CONTINUATION OF THE MECHANISM. HOW DO YOU RESPOND?[57]

A. I do not agree with Witness Deupree's characterization of the Company's operating experience. The purpose of the WNA is not to produce a charge or a credit in every year, nor should its effectiveness be evaluated based upon the results experienced during one or two recent heating seasons. Rather, the WNA is intended to reduce the effect that abnormal weather can have on the Company's recovery of weather-sensitive distribution revenues while also reducing the degree to which customers experience bill variations caused by weather that is warmer or colder than normal over time by comparing actual weather to the normal weather assumptions that were used to establish rates.

As discussed in my Direct Testimony, the Company's proposed updates to the estimation of normal weather are intended to improve the consistency between the weather

[57] OCA Stmt. No. 1, at pp 32-33.

assumptions used to establish base rates and the weather assumptions used to administer the WNA. That objective is independent of whether recent weather has resulted in customer credits or customer surcharges.

Individual years will naturally produce different WNA outcomes depending upon actual weather conditions. Some years will produce customer credits, while other years will produce customer surcharges. Those results simply reflect whether actual weather was warmer or colder than normal during a particular period and do not, by themselves, demonstrate that the mechanism is functioning improperly.

As identified by witness Deupree and illustrated in his first[58] Table 1 on page 32 of his direct testimony[59], the WNA provided a net credit to date to customers across the past two heating seasons (2024-205, 2025-2026); the only two heating seasons the WNA has been in effect. Both credits and charges occurred in each heating season, credits in months when weather was colder than normal, and charges in warmer than normal months (credits occurred January and February in both heating seasons). This is precisely how the WNA is intended to work.

Accordingly, and contrary to witness Deupree's suggestion, the recent operating experience of the WNA provides strong support for the continuation of the existing and approved WNA.

Additionally, the proposed change in the methodology to calculate normal HDD is likely to increase the chance of evenly distributed WNA credits and charges (as weather

[58] There are 2 Table 1s in witness Deupree's testimony; one on page 32 and another on page 35.
[59] OCA Stmt. No 1, at p 32, lines 12-15, p. 33, 1-3.

is colder or warmer than normal); again contrary to witness Deupree's suggestion that the WNA is more likely to result in charges.

Q. WITNESS DEUPREE SUGGESTS THAT THE COLDER-THAN-NORMAL, WEATHER EXPERIENCED DURING THE 2025-2026 HEATING SEASON THAT PRODUCED WNA CREDITS FOR CUSTOMERS WAS "ANOMALOUS."[60] WHAT IS YOUR RESPONSE TO THIS?

A. I respectfully disagree with witness Deupree's characterization of colder-than-normal weather as being "anomalous" and the implication that future weather will be consistently warmer-than-normal, resulting predominantly in WNA charges to customers.

Observed weather is highly volatile, and however "normal" weather is defined, there have been, and likely will continue to be, years and even longer periods of weather that is warmer and colder than normal (resulting in WNA credits and charges to customers). Despite the observed warming trend, each and every year has not been, nor is likely to be warmer than the prior year. Colder than normal weather is not "anomalous" as witness Deupree suggests, it is simply an observed characteristic of volatile weather.

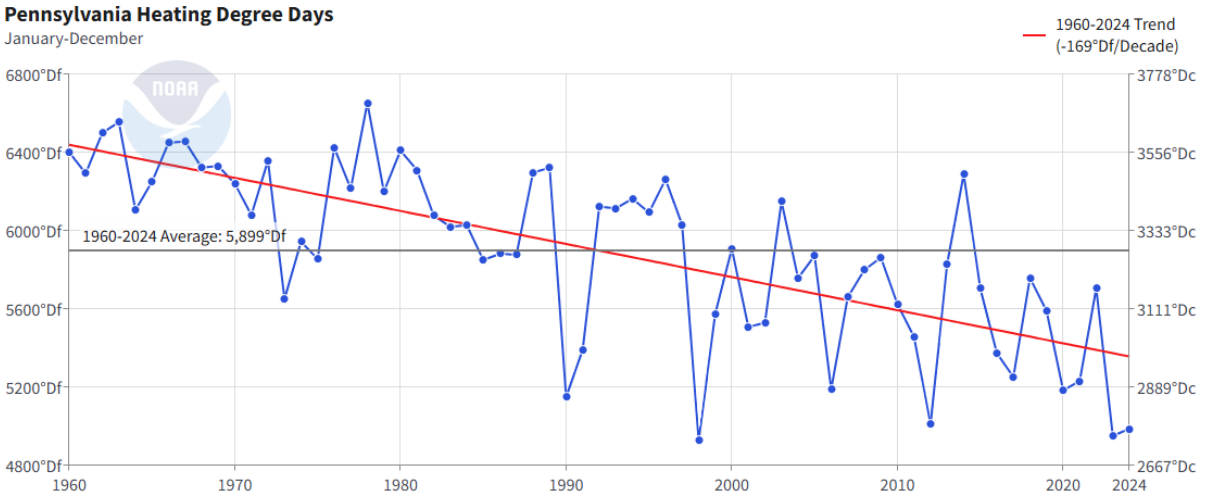
Please see Figure 9 which charts annual Pennsylvania HDD. For transparency, this figure is from NOAA[61] and displays annual HDD for all of Pennsylvania, not just the Pittsburgh Area, but the overall pattern is very similar to Pittsburgh Area HDD. Even using a 65-year average definition of normal HDD (black horizontal line in Figure 9),

[60] OCA Stmt. No 1, at p 33, lines 1-10.
[61] NOAA, https://www.ncei.noaa.gov/access/monitoring/climate-at-a-glance/statewide/time-series/.

which is clearly too high (too “cold”), there are still recent years that are colder than normal (which imply credits to customers).

If a simple historical average of HDD were used as the definition of normal HDD, Witness Deupree's implication could be correct if the historical average is no longer representative of future weather conditions. This is precisely why the Company is proposing a trend-based definition of normal HDD and not a simple average; so that future observed HDD is more likely to be evenly distributed around calculated normal HDD, resulting in a more even distribution of charges and credits to customers than would occur with a simple average-based definition of normal HDD. As demonstrated above, and clear from Figure 9, a trend is a better representation of historic, and presumably future, HDD that any simple average, regardless of term.

Figure 9 - Pennsylvania Annual HDD



Q. WITNESSES DEUPREE, CLINE, AND EWEN RECOMMEND INCREASING THE WNA DEADBAND FROM THREE PERCENT TO FIVE PERCENT.[62] DO YOU AGREE?

A. No. The purported purpose of the deadband is to prevent relatively minor weather deviations from triggering WNA adjustments while continuing to recognize more meaningful departures from normal weather. In that respect, the deadband establishes a reasonable threshold below which no adjustment is made because the variation is not sufficiently material to warrant operation of the mechanism. However, any deadband will reduce credits to customers in colder than normal periods and similarly will reduce surcharges in warmer than normal periods.

The Company's existing three-percent deadband already limits the application of the WNA. It excludes relatively small weather deviations while preserving the general effectiveness of the WNA during periods of more significant abnormal weather. Increasing the deadband to five percent would reduce the effectiveness of the WNA by allowing a greater amount of weather-related revenue variation to remain outside the mechanism before any adjustment occurs.

Importantly, Witnesses Deupree, Cline, and Ewen have not demonstrated that the existing three-percent deadband has failed to function as intended or has produced unreasonable results. Rather, their recommendations simply represent a preference for shifting additional weather-related variability back outside the WNA.

[62] OCA Stmt. No. 1, at pp.34-35; I&E Stmt. No. 3, at p. 15; OSBA Stmt. No. 2, at pp. 16-17.

I continue to recommend that the Commission retain the existing three-percent deadband.

Q. WITNESS DEUPREE ALSO RECOMMENDS EXCLUDING OCTOBER AND MAY FROM THE OPERATION OF THE WNA.[63] DO YOU AGREE?

A. No. Witness Deupree's recommendation is based primarily upon his observation that October and May exhibit greater relative variation in historical Heating Degree Days than the core winter months. While I do not disagree that weather during the shoulder months is generally more variable, I do not believe that observation supports excluding those months from the operation of the WNA.

The purpose of the WNA is to normalize the effects of abnormal weather on weather-sensitive distribution revenues. Consequently, the existence of greater weather variability during October and May is not, by itself, a reason to exclude those months from the mechanism. To the contrary, weather variability is precisely the circumstance the WNA is intended to address; and the higher observed variability of October and May HDD identified by witness Deupree is likely a better argument for why October and May should be retained, not excluded.

Moreover, Witness Deupree's analysis focuses on the relative variability of monthly HDD but does not demonstrate that including October and May has produced unreasonable WNA results or that excluding those months would improve the operation of the mechanism. Nor does his analysis evaluate the effect that excluding those months

[63] OCA Stmt. No. 1, at p. 35.

would have on the Company's ability to normalize weather-sensitive distribution revenues over the full heating season.

Finally, retaining October and May is also consistent with the Company's objective of applying the same weather assumptions throughout its weather normalization framework. Excluding those months from the WNA would reduce that consistency by treating portions of the heating season differently than the remainder of the period.

Accordingly, I continue to recommend that October and May remain within the WNA period.

Q. WITNESS DEUPREE RECOMMENDS THAT THE COMMISSION CONTINUE THE WNA FOR ONLY AN ADDITIONAL THREE YEARS[64], WHILE WITNESS EWEN RECOMMENDS THAT THE COMPANY OBTAIN ADDITIONAL EXPERIENCE BEFORE IMPLEMENTING THE PROPOSED METHODOLOGY[65]. DO YOU AGREE?

A. No. I believe the Commission has sufficient evidence in this proceeding to evaluate both the Company's proposed updates to the estimation of normal weather and the continued operation of the Company's existing WNA mechanism.

As discussed in my Direct Testimony, the Company is proposing updates (Peoples agreed to update its Heating Degree Days in its next base rate case, which is now the instant case) intended to improve the consistency between the weather assumptions used to establish rates and those used to administer the WNA.[66] Those updates are supported

[64] OCA Stmt. No. 1, at p. 38.
[65] OSBA Stmt. No. 2, at pp. 16-17.
[66] Peoples Stmt. No. 17, at pp.40-41.

by the Company's analyses and are consistent with the objective of ensuring that the same estimate of normal weather is applied throughout the ratemaking process.

While additional operating experience will naturally be accumulated over time, I do not believe the Commission should delay approval of otherwise reasonable updates simply because additional years of experience may become available in the future. Nearly every regulatory mechanism can be refined as additional experience is gained. That possibility, standing alone, does not provide a basis for rejecting or postponing reasonable updates supported by the evidentiary record developed in this proceeding.

Accordingly, I believe the Commission has sufficient information to approve the continuation of the Company's existing WNA.

Q. SEVERAL WITNESSES ALSO EXPRESS CONCERNS REGARDING CUSTOMER BILL IMPACTS, BILL VOLATILITY, AND CUSTOMER AFFORDABILITY ASSOCIATED WITH THE WNA. HOW DO YOU RESPOND?

A. The Company recognizes that customer bill stability and affordability are important considerations in the design and operation of any rate mechanism. However, those broader policy considerations do not alter the purpose of the WNA.

The WNA is intended to normalize weather-sensitive distribution revenues to the same normal weather assumptions used to establish rates. It does not change the Commission-approved revenue requirement, alter the Company's authorized rate of return, or affect the recovery of gas costs. Rather, it reduces the impact of abnormal weather on weather-sensitive distribution revenues by applying the same normal weather assumptions prospectively and retrospectively.

That purpose benefits both the Company and customers. For the Company, the WNA reduces the extent to which recovery of weather-sensitive distribution revenues depends on whether actual weather is warmer or colder than normal. For customers, the WNA reduces the extent to which bills vary solely because actual weather differs from the normal weather used to set rates. This customer benefit is particularly relevant in a rate design that continues to recover a substantial portion of distribution costs through volumetric rates, because weather-related usage variation can otherwise produce larger bill swings during the heating season.

To the extent the intervenors raise broader concerns regarding affordability, customer bill burdens, or universal service policy, those matters are addressed by Company Witness Fang and other Company witnesses. My testimony is limited to the technical design and operation of the Company's existing WNA.

Q. HOW DO YOU RESPOND TO CAUSE-PA WITNESS CICERO'S ALTERNATIVE PROPOSAL TO ACCUMULATE WNA CHARGES AND CREDITS BY CUSTOMER CLASS AND RECOVER OR REFUND THE RESULTING NET AMOUNT OVER THE SUBSEQUENT 12-MONTH PERIOD.

A. While I continue to recommend that the Commission approve the continuation of the Company's existing Normal Weather Normalization Adjustment, conceptually, a class-based mechanism that accumulates WNA adjustments during the heating season and subsequently spreads the net class-level charge or credit over a longer period is not inherently unreasonable. However, Witness Cicero has not developed the proposal in sufficient detail to determine whether it would be administratively workable, equitable

among customers, or superior to Peoples' existing WNA design. Among other matters, the proposal does not fully address how charges and credits would be calculated and reconciled by class, how customers entering or leaving the system during the recovery period would be treated, whether the adjustment would apply to usage occurring during the recovery period or to customers responsible for the underlying weather variance, how credits would be distributed, how carrying costs and regulatory accounting would be handled, or how the mechanism would interact with CAP and other customer protections. Witness Cicero also has not provided an analysis comparing the customer impacts, revenue effects, administrative requirements, or potential intergenerational and intraclass cost shifts of his proposal with those of the existing WNA. Accordingly, the record does not presently support a conclusion that CAUSE-PA's alternative is preferable to Peoples' current WNA mechanism. If CAUSE-PA continues to advocate for this alternative, it should provide the additional operational details and supporting analysis necessary for the Company and the Commission to evaluate the proposal more fully.

Q. PLEASE SUMMARIZE YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED NORMAL WEATHER METHODOLOGY AND WEATHER NORMALIZATION ADJUSTMENT.

A. I continue to recommend that the Commission approve the Company's proposed estimation of normal weather and the continuation of the Company's existing and approved Weather Normalization Adjustment mechanism.

As discussed throughout my Direct and Rebuttal Testimony, the Company's sixty-five-year regression framework provides a transparent, objective, and analytically sound

estimate of normal Heating Degree Days by recognizing the demonstrated long-term trend reflected in the historical weather data. The methodology is independently supported by NOAA data, provides the most reasonable estimate of normal HDD for the Fully Projected Future Test Year and promotes internal consistency by applying the same weather assumptions throughout the Company's weather normalization analyses.

I further believe the Company's existing WNA remains a reasonable and appropriate mechanism for normalizing the effects of abnormal weather on weather-sensitive distribution revenues and for reducing customer bill variation caused solely by deviations from normal weather. The intervenors have not demonstrated that the Company's proposed HDD methodology or existing WNA are unreasonable, nor have they shown that the modifications they recommend would improve the operation of the mechanism. To the contrary, several of those recommendations would reduce the effectiveness or consistency of the WNA without advancing its underlying purpose.

I continue to recommend that the Commission approve the Company's proposed estimation of normal weather and continuation of the existing Weather Normalization Adjustment mechanism.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes.

VII. CONCLUSION 22

PREPARED REBUTTAL TESTIMONY OF
MICHELLE PARKS

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Michelle Parks. My business address is 375 North Shore Drive, Suite 600, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. ("Essential") as Director Customer Operations. Essential is the ultimate parent company of PNG Companies LLC ("PNG"), and PNG provides various administrative functions for Peoples Natural Gas Company LLC ("Peoples" or the "Company") including Customer Operations.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. The purpose of my Rebuttal Testimony is to respond to certain portions of the direct testimony and recommendations of Office of Consumer Advocate ("OCA") witnesses Roger Colton and Brendan Larkin-Connolly, Office of Small Business Advocate witness Mark Ewen and Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") witness Patrick Cicero as they relate to the Company's customer service.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REBUTTAL TESTIMONY?

A. My testimony is divided into sections based on the witness to whom I am responding.

II. CUSTOMER SERVICE

Q. DO ANY OF THE PARTIES PROVIDE COMMENTS OR PROPOSE ADJUSTMENTS OR RECOMMENDATIONS RELATED TO THE COMPANY'S CUSTOMER SERVICE?

A. Yes. OCA Witness Colton makes comments and recommendations related to Peoples' Customer Assistance Program ("CAP") enrollments, credit and collection expenses, disconnections, and use of social security numbers ("SSN"). OCA Witness Larkin-Connolly makes comments and recommendations related to Peoples' customer service performance. CAUSE-PA Witness Cicero testifies about termination rates.

III. RESPONSE TO OCA WITNESS COLTON

Q. WHAT DOES MR. COLTON AVER WITH RESPECT TO PEOPLES' IDENTIFICATION OF LOW-INCOME CUSTOMERS?

A. Mr. Colton testifies that Peoples is not effective in identifying its low-income customers and in enrolling those customers in its Customer Assistance Program ("CAP"). (OCA Statement No. 4, pp. 43, 49-50.) Mr. Colton also testifies that Peoples "substantially" under-enrolls its low-income customers in CAP, and that it "seems to ignore" the

Commission's findings regarding customer assistance programs in that Peoples is relying on unrealistic agreements rather than aggressively identifying low-income customers and enrolling them in CAP. (OCA Statement No. 4, pp. 47-49.)

Q. HAS MR. COLTON FAIRLY OR ACCURATELY CHARACTERIZED THE COMPANY'S EFFORTS TO IDENTIFY ITS LOW-INCOME CUSTOMERS AND TO ENROLL THOSE CUSTOMERS IN CAP?

A. No. The Company acknowledges the importance of engaging in efforts to identify low-income customers and enroll those customers in CAP. The Company stresses the importance of obtaining up-to-date income information to all employees from the time of new-hire training through refresher training that occurs on a regular basis. Peoples Customer Service Representatives ("CSRs") are trained and skilled in identifying low-income customers, and in the normal course of business, refer customers to CAP.

Specifically, Peoples encourages enrollment in CAP through several methods. Prior to the issuance of a termination notice, Peoples provides a plain language CAP notice to customers who have reported their status as low-income, but have not enrolled in CAP. Further, all of Peoples' termination notices include information on currently available energy assistance programs. The Company also encourages customers to call and to discuss CAP options and eligibility with representatives from its contact center, who do an exceptional job of identifying CAP eligible customers and explaining the program. Finally, Peoples attempts to encourage CAP enrollment and promote awareness using broad methods such as bill inserts, email campaigns, advertising, and participation in local community events.

Q. MR. COLTON AVERS THAT A DISPROPORTIONATELY HIGH NUMBER OF PEOPLES' CONFIRMED LOW-INCOME ("CLI") CUSTOMERS HAVE BALANCES IN ARREARS, AND THAT THESE CLI CUSTOMERS ALSO "HAVE A LARGE AMOUNT IN ARREARS." (OCA STATEMENT NO. 4, p. 45.) DO YOU HAVE A RESPONSE TO THIS STATEMENT?

A. As shown in the tables below, CLI customers are more likely to carry a balance and to have a larger balance than non-CLI customers, across NGDC's generally. Peoples' results, as shown in these tables taken from the 2024 Universal Service Programs and Collections Report, are similar to other NGDC's in western Pennsylvania and better than the NGDC group in total.

Percent of Customers in Debt – Confirmed Low-Income Natural Gas – 2022-2024

Utility	2022		2023		2024

Total Average Arrearage – Natural Gas – 2022-2024

Utility	2022		2023		2024	
	Total Residential	Confirmed Low-Income	Total Residential	Confirmed Low-Income	Total Residential	Confirmed Low-Income
Columbia	$788.61	$955.15	$791.92	$945.16	$692.92	$861.47
NFG	$342.06	$535.44	$396.89	$565.21	$339.69	$481.79
PECO-Gas	$759.34	$2,158.61	$798.08	$2,035.87	$948.22	$1,776.19
Peoples	$394.22	$599.51	$484.60	$681.02	$393.34	$572.82
PGW	$789.81	$998.95	$809.82	$892.75	$645.80	$745.57
UGI Gas	$523.84	$896.65	$538.37	$884.22	$492.15	$798.34
Total/Industry Average	**$634.39**	**$859.88**	**$654.03**	**$851.30**	**$571.67**	**$747.59**

The increased likelihood of a CLI household to carry arrears points to broader economic strains and is not a reflection on Peoples' collections practices. Further, I note that the confirmed low income customers are those that have provided us their income not all low income customers. As such, if a low income customer were able to regularly pay their bill they would be unlikely to provide their income to Company thus they would be excluded from the confirmed low income and skew the results of this data.

Q. HOW DOES MR. COLTON SUMMARIZE THE COMPANY'S USAGE OF PAYMENT ARRANGEMENTS?

A. Mr. Colton testifies that Peoples' usage of payment arrangements is that they are not effective or efficient because they do not provide customers with a "reasonable opportunity" to pay off their balances in arrears. (OCA Statement No. 4, p. 46.) He also provides his own analysis of data provided by Peoples regarding defaults on residential payment arrangements and opines that this is "likely an undercount of the number of broken arrangements." (OCA Statement No. 4, pp. 46-47.)

Q. IS THIS A FAIR SUMMARY OF THE COMPANY'S USAGE OF PAYMENT ARRANGEMENTS?

A. No. Peoples disagrees that the default rates show its payment arrangements fail to give residential customers a reasonable opportunity to retire arrears. The testimony relies on aggregate default percentages from 2023–2025, but those figures alone do not prove the arrangements were ineffective or unreasonable because defaults are affected by many factors outside the Company's control, including income instability, other household bills,

customer behavior, and changing financial circumstances within the household. The testimony also does not assess whether arrangements complied with Pennsylvania regulatory requirements or account-specific conditions, nor does it show that alternative terms would have produced better outcomes. While payment arrangements are an important tool to help customers manage arrears and maintain service, they cannot eliminate all defaults or resolve broader financial challenges that may be faced by the household.

Q. WHAT RECOMMENDATION(S) DOES MR. COLTON MAKE WITH RESPECT TO PEOPLES' CREDIT AND COLLECTION EXPENSE?

A. Mr. Colton recommends an adjustment to Peoples' claimed cost of service based on his suggestion that Peoples be directed to implement a 50-50 sharing of the credit and collection expenses which Peoples most recently reported to BCS. (OCA Statement No. 4, pp. 4, 50.)

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. No.

Q. WHY NOT?

A. First, Mr. Colton's argument that the Company should share its credit and collections expenses 50/50 due to what he deems as ineffective collections practices is flawed. The Company's payment arrangement practices are consistent with regulations as reflected in

its justified PAR Rate which is one third of the industry average as shown in the 2024 Utilities Consumer Activities Report and Evaluation Report.

2024 Residential PAR Rates,
Justified PAR Rates, and Percent of Justified PARs
Major Natural Gas Distribution Companies

Utility	PAR Rate	Justified PAR Rate	Percent of Justified PARs
Columbia	1.49	0.06	4.1%
NFG	1.58	0.12	7.5%
Peoples	1.80	0.10	5.8%
PGW	9.95	0.91	9.2%
UGI Gas	6.55	0.44	6.8%
Industry Average	**4.27**	**0.33**	**7.6%**

Mr. Colton also cites concern regarding CAP enrollment. However, CAP enrollment has grown significantly as discussed in the rebuttal testimony of Rita Black, **Peoples Statement No. 10-R**. Further, the Annual Collection Operating Expense Mr. Colton refers to is reported to the Commission following the requirements of the Universal Service Reporting Requirements Data Dictionary[1]. Specifically, the Data Dictionary definition for reportable expenses states the following should be provided in the total reported Annual Collection Operating Expenses field: "include administrative expenses associated with termination activity, negotiating payment arrangements, budget counseling, investigation and resolving informal and formal complaints associated with payment arrangements, securing and maintaining deposits, tracking delinquent accounts, collection agencies' expenses, litigation expenses other than Commission related, dunning

[1] 52 Pa. Code § 54.75.

expenses and winter survey expenses." The data dictionary also states that CAP recipients should be excluded in the calculation of this figure. While some of these expenses may be directly identified, many are derived by developing an estimated cost of internal labor and applying that estimate against a count of tasks to arrive at an estimated total cost for that activity. The 2025 residential annual collection operating expense amount is addressed in the rebuttal testimony of Andrew Wachter, **Peoples Statement No. 2-R.** The reported figures are intended to provide a comparison point between utilities and to provide broad information to interested stakeholders regarding credit and collection activities. This figure is not intended for ratemaking purposes. For these reasons, his recommendation to share the credit and collections expense should be rejected.

Q. DOES MR. COLTON MAKE ANY FINDINGS RELATED TO THE RACIAL IMPACTS OF PEOPLES' DISCONNECTIONS?

A. Yes. Mr. Colton testifies that, while not an issue unique to Peoples, the nonpayment disconnections employed by Peoples have a disparate impact on Black and African-American populations. (OCA Statement No. 4, pp. 51-56.) Mr. Colton concludes through this finding that "Peoples should recognize that its disconnection of service for nonpayment has a disparate impact on its Black neighborhoods," and undertake an analysis to determine how to address those impacts. (OCA Statement No. 4, p. 56.)

Q. DOES PEOPLES HAVE A RESPONSE TO THIS FINDING?

A. Peoples disagree with this finding. Peoples' termination process is automated through established SAP workflow controls and is based strictly on objective arrearage criteria. The

process does not consider, collect, or apply customer race, ethnicity, neighborhood demographics, or any other protected characteristic in determining whether an account is eligible for nonpayment disconnection. Accordingly, Peoples does not agree that its nonpayment disconnection practices reflect disparate treatment or are administered in a manner that targets any racial or ethnic population. Peoples remains committed to administering its credit and collections practices consistently, fairly, and in compliance with Commission regulations and customer protection requirements.

Q. WHAT RECOMMENDATIONS(S) DOES MR. COLTON MAKE WITH RESPECT TO DISCONNECTIONS WITHIN PEOPLES' SERVICE TERRITORY?

A. Mr. Colton makes two recommendations related to Peoples' disconnection rates. Mr. Colton first recommends that "Peoples be directed to conduct an independent root cause analysis to determine the driver of the disproportionate level of utility disconnections within the Company's service territory," and that the Company "commit to taking steps to address the cause with the commitment of reducing the disproportionate level of disconnections." (OCA Statement No. 4, pp. 4-5, 56.) Mr. Colton also recommends that "the extent to which Peoples mitigates the disproportionate disconnection of service for nonpayment in zip codes with high penetrations of Black households," be reviewed in its next base rate case. (OCA Statement No. 4, pp. 5, 56.)

Q. DO YOU AGREE WITH THIS RECOMMENDATION?

A. I do not. Mr. Colton made this same recommendation in the Company's 2023 Base Rate Case at Docket No. R-2023-3044549, and the Company's position remains the same. It is

important to note that, before resorting to termination of service, it is always Peoples' desire to work with customers with arrearages and to assist those customers in identifying resources such as LIHEAP, CAP, hardship funds or payment arrangements. However, the steps taken in Peoples' collection and service termination process are automated and are based strictly on arrearages. Peoples does not terminate its customers' service based on demographics or geographical location, nor does it discriminate.

Q. HOW DOES MR. COLTON CHARACTERIZE THE USE OF SSNs?

A. Mr. Colton describes in great detail the importance of SSNs and refers to the use of SSNs as an "aging technology." (OCA Statement No. 4, pp. 57-62.) He cites to guidance from the federal Office of Management and Budget and the Federal Trade Commission regarding a reduction in the use of SSNs and opines that there is no need for Peoples to use SSNs in order to prevent fraud. (OCA Statement No. 4, pp. 59-61.)

Q. DOES THE COMPANY AGREE WITH MR. COLTON'S CHARACTERIZATION OF THE USE OF SSNs?

A. Peoples respectfully disagrees with Mr. Colton's position. Peoples believes it is important to accurately identify and understand who our customers are. However, Peoples agrees that there may be opportunities to enhance its processes and reduce the retention of SSNs within its systems where feasible and appropriate.

Q. WHAT RECOMMENDATION(S) DOES MR. COLTON MAKE WITH RESPSECT TO PEOPLES' USE OF SSNs?

A. Mr. Colton makes several recommendations with respect to SSNs. He first recommends that Peoples be directed to develop and adopt an alternative to its use of SSNs within twelve months of the issuance of the final order in the instant proceeding. (OCA Statement No. 4, pp. 5, 57.) Mr. Colton next recommends that Peoples "be directed to: (1) refrain from retaining SSNs for more than 30 days after the customer establishes service, (2) refrain from providing a customer SSN to any entity outside of the Company, and (3) notify the Customer at the time the customer is asked to provide his/her/their SSN that, in the absence of the first two steps outlined above, that the SSN will be retained in perpetuity and that the SSN will be provided to a multi-national credit firm to allow the customer to take such notice into account in deciding whether to provide their SSN."

Q. DO YOU AGREE WITH THESE RECOMMENDATIONS?

A. Peoples does not agree with Mr. Colton's recommendation that the Company be required to develop and adopt an alternative to its use of SSNs within twelve months, or that it be restricted from retaining SSNs beyond 30 days after service is established. As a public utility, Peoples has a responsibility to maintain reliable and accurate customer-identification information throughout the customer relationship. The SSN remains one of the most effective and consistent identifiers available to confirm customer identity, distinguish between customers with similar names or addresses, and support the Company's ability to administer accounts accurately and responsibly.

Accurate customer identification is particularly important when applying for service, in addition to when a customer moves from one premises to another within Peoples' service territory. In those circumstances, the Company must be able to confidently

determine whether the customer establishing service at the new premises is the same customer responsible for any prior account balance. SSNs support that process by helping Peoples appropriately associate prior balances with the correct customer and avoid either failing to transfer a valid balance or, conversely, transferring a balance to the wrong individual. The ability to make that identification with confidence is important for both sound utility operations and fair treatment of customers.

The continued availability of SSNs also supports Peoples' credit, collections, and bankruptcy processes. For collection activities, SSNs assist in identifying the correct customer, linking accounts that belong to the same individual, and pursuing lawful collection efforts against the appropriate responsible party. Similarly, in bankruptcy processing, the ability to accurately match a customer account to a bankruptcy filing is essential to ensure that Peoples complies with applicable legal requirements, applies the correct account treatment, and avoids collection activity that may be prohibited by a bankruptcy stay or discharge.

Peoples is also concerned that eliminating or materially limiting the use and availability of SSNs could impair the Company's ability to identify customers with sufficient certainty. That risk could result in account mismatches, delayed or inaccurate balance transfers, reduced effectiveness of collection efforts, and complications in bankruptcy administration. Over time, those impacts could increase uncollectible accounts and bad debt expense, which ultimately affects the Company's ability to manage customer account risk in a prudent and responsible manner. For these reasons, Peoples does not believe Mr. Colton's recommendation adequately accounts for the operational and financial importance of SSNs as a customer-identification tool. While Peoples recognizes

the sensitivity of SSNs and the importance of protecting customer information, the Company's position is that appropriate data-protection practices should be balanced against the need to maintain accurate customer records, support lawful collections and bankruptcy processes, and prevent avoidable increases in bad debt. Accordingly, Peoples does not support adoption of Mr. Colton's recommendations as stated in the form proposed.

IV. RESPONSE TO OCA WITNESS LARKIN-CONNOLLY

Q. WHAT FINDING(S) DOES MR. LARKIN-CONNOLLY MAKE WITH RESPECT TO PEOPLES' CUSTOMER SERVICE PERFORMANCE?

A. Mr. Larkin-Connolly finds that Peoples' customer service is "adequate but unexceptional," in that it performs at or near the average of its peer utilities. (OCA Statement No. 5, p. 6.) Mr. Larkin-Connolly also testifies that Peoples has "no clear area of strength," and points to satisfaction measures which have declined over the past six years. (OCA Statement No. 5, p. 6.)

Q. DO YOU AGREE WITH MR. LARKIN-CONNOLLY'S FINDINGS?

A. No. The data shows that customers continue to have strong access to live assistance and generally positive experiences with Peoples CSRs. Call abandonment has remained very low, speed of answer has improved modestly since 2019, and representative courtesy and knowledge continue to score in the 90% range. Recent improvement in satisfaction with reaching the company and wait time also suggests stabilization in key access-related measures. Overall, the results indicate that the Company's live customer service

interactions remain a strength, while automated telephone system experience represents the clearest opportunity for improvement.

Q. DOES MR. LARKIN-CONNOLLY IDENTIFY ANY CONCERNS RELATED TO PEOPLE'S CALL CENTER PERFORMANCE?

A. Yes. Mr. Larkin-Connolly testifies that the Company has not taken steps to increase the number of representatives within its call center during the months that phone calls peaked. (OCA Statement No. 5, p. 14.) He also testifies that staffing data shows a gap between Peoples' actual staffing and its approved staffing level, in that it is operating at a "chronic deficit." (OCA Statement No. 5, pp. 15-16.)

Q. IS THIS A FAIR CHARACTERIZATION OF PEOPLES' CALL CENTER PERFORMANCE AND STAFFING?

A. The Company disagrees with Mr. Larkin-Connolly's characterization that Peoples has failed to take steps to increase call center staffing during periods of elevated call volume or that the organization is operating with a "chronic deficit" in staffing. Peoples continuously monitors call volumes, service levels, staffing availability, and workload trends, and it takes operational steps to align resources with customer demand, including the use of schedule utilization of Back Office support staff who are trained for Contact Center call handling, to assist with inbound voice calls in high call volume months. Peoples also adjusts CSR schedules to cover peak volumes, offers overtime, and other workforce management measures as appropriate. While actual staffing levels may fluctuate due to ordinary attrition, hiring timelines, training requirements, leave activity, and other

operational factors, those fluctuations do not demonstrate inaction or a sustained failure to properly staff the contact center. Rather, the Company actively manages staffing needs in response to seasonal call volume expectations, and customer service requirements.

Q. MR. LARKIN-CONNOLLY AVERS THAT THE DATA ON PEOPLES' CALL CENTER STAFFING SHOWS A LACK OF INVESTMENT IN LIGHT OF A "FORESEEABLE DROP IN SERVICE QUALITY". (OCA STATEMENT NO. 5, p. 18.) HOW DO YOU RESPOND TO THIS TESTIMONY?

A. Peoples disagrees with Mr. Larkin-Connolly's assertion that Peoples' call center staffing data reflects a lack of investment or supports a conclusion that any decline in service quality was foreseeable. Staffing levels must be evaluated in the context of overall operational performance, evolving customer demand, workforce availability, process improvements, and the Company's broader customer service strategy. Peoples has continued to monitor contact center performance and resource needs and has taken actions intended to support service quality, including staffing adjustments, training, technology enhancements, and process improvements where appropriate. Accordingly, the staffing data alone does not establish that the Company failed to invest in customer service or that any service quality impact was foreseeable.

Q. DOES MR. LARKIN-CONNOLLY IDENTIFY ANY OTHER AREAS OF PEOPLES' CUSTOMER SERVICE PERFORMANCE?

A. Yes. Mr. Larkin-Connolly testifies in regards to billing events experienced by Peoples in 2024. He avers that Peoples only explained these events "in general terms," that it

"attributes the rebill increase to a cause that does not reconcile with the figures it provided," and raises concern that Peoples was not aware of a vendor failure "until BCS and a member of the Consumer Advisory Council raised it." (OCA Statement No. 5, pp. 6-7.) Mr. Larkin-Connolly also opines that data provided by Peoples indicates that "there were other billing issues that the Company is unable to account for." (OCA Statement No. 5, p. 23.) He also expresses concern that the 2024 billing events were not treated with the seriousness they warranted and were rather treated as "operational blips." (OCA Statement No. 5, p. 24.)

Q. HOW DOES THE COMPANY RESPOND TO MR. LARKIN-CONNOLLY'S TESTIMONY ON THE 2024 BILING EVENTS?

A. Peoples' billing operations remain reliable and effective when viewed in the context of its annual billing volume. The Company produces approximately 9.36 million bills each year, and the 2024 vendor failure represented an isolated exception rather than a systemic deficiency. Peoples continues to maintain billing processes, controls, and vendor oversight intended to support timely and accurate customer billing.

Q. MR. LARKING-CONNOLLY RECOMMENDED IN HIS TESTIMONY THAT PEOPLES "SHOULD ADDRESS THESE 2024 BILLING ISSUES IN EVEN GREATER DETAIL" IN ITS REBUTTAL TESTIMONY. (OCA STATEMENT NO. 5, p. 23.) DO YOU HAVE ANY FURTHER COMMENTARY OR INFORMATION TO PROIVDE WITH REGARD TO BILLING EVENTS IN 2024?

A. Peoples does not agree with the characterization that it experienced "multiple billing problems" in 2024. With respect to the bill-print vendor issue, the Company notified the

Bureau of Consumer Services promptly once the issue was identified. This was a one-time vendor failure, not an ongoing Company billing-system issue. Upon discovery, Peoples took immediate steps to protect affected customers and ensure accounts were made whole, including removing late payment charges or issuing credits and dunning locks on all accounts processed in those billing files, posting customer notifications on the Company website and e-Account customer portal, and adding messaging to the interactive voice response system.

Q. DOES MR. LARKIN-CONNOLLY TESTIFY ABOUT PEOPLES' REBILLING AND BACK-BILING POLICY?

A. Yes. Mr. Larkin-Connolly expresses unsurety as to when Peoples employs its rebilling or back-billing policy with regard to the number of customers affected, dollar amount, or otherwise. (OCA Statement No. 5, p. 35.) He also testifies that notification is "left to a case-by-case judgment about expected call volume." (OCA Statement No. 5, p. 35.)

Q. CAN YOU PROVIDE ANY FURTHER CLARITY REGARDING MR. LARKIN-CONNOLLY'S STATEMENT ON THE COMPANY'S REBILLING AND BACK-BILLING POLICY?

A. When an account is reviewed and rebilled on a case-by-case basis—for example, but not limited to, a non-registering meter situation that results in a significant credit or debit to the account—the customer is notified by letter and/or phone call. The communication includes the reason for the rebill, the amount of the adjustment, available payment arrangement options if applicable, the total account balance, an account statement and

copies of the rebill month. In the event of a system error that affects a broader group of customers, any related credits and/or debits are processed in mass. Historically, these adjustments have been minimal and are not comparable to a rebill that may cover several months of usage. These system errors have not resulted in customers requiring payment arrangements or account statements.

For system-related mass adjustments, an interaction record is placed on the customer's account. In addition, a message is added to the IVR and website, and talking points are provided to call center representatives so they can appropriately respond to customer inquiries.

Q. MR. LARKIN-CONNOLLY TESTIFIES THAT HE IS UNSURE WHETHER THERE WAS A VIOLATION OF THE COMMISSION'S REGULATIONS AT 52 PA. CODE § 56.14 RESULTING FROM THE 2024 BILLING INCIDENT INVOLVING A DELAY IN PRINTED BILLS. (OCA STATEMENT NO. 5, p. 37.) HOW DO YOU RESPOND TO THIS TESTIMONY?

A. Although 52 Pa. Code § 56.14 addresses back billing requirements, the print vendor issue did not involve back billing. The matter related to the timing and/or delivery of customer bills, not the rebilling of previously unbilled or underbilled service. Accordingly, the Company does not view § 56.14 as applicable to this issue.

Q. WHAT RECOMMENDATION(S) DOES MR. LARKIN-CONNOLLY MAKE WITH RESPECT TO PEOPLES CUSTOMER SERVICE PERFORMANCE?

A. Mr. Larkin-Connolly makes several recommendations as related to customer service: (1) the Commission reject Peoples' proposed tariff changes regarding nonliability limits, dishonored payment procedures, and CAP restrictions; (2) a requirement that Peoples notify BCS of any rebilling, back-billing, or billing-delivery event affecting more than 1,000 customers within a defined timeframe; (3) a requirement that Peoples send "a direct written explanation to every customer whose bill is rebilled or back-billed, stating the reason for the correction, the period covered, the amount, and the available payment arrangement"; (4) that every account affected by a billing event such that it must be rebilled or back-billed should be flagged so that customers can obtain immediate and consistent information about the billing event and the customer's options; and (5) that the Commission consider a policy for NGDCs requiring periodic mailed cost summaries for all residential customers in order to preserve "baseline bill visibility." (OCA Statement No. 5, pp. 6-7, 39-40.)

Q. DO YOU AGREE WITH THOSE RECOMMENDATIONS? WHY OR WHY NOT?

A. When Peoples issues a revised bill through its SAP CR&B Billing Implausible and/or Exception case process, the customer is notified either through a phone call or written notification that includes the details of the amount, the reason, copies of the rebills and options they have for payment. Further, the Company already self-reports any large-scale billing issues that may affect its customers to BCS leadership.

Q. CAN YOU COMMENT ON MR. LARKIN-CONNOLLY'S RECOMMENDATION THAT THE COMMISSION CONSIDER A POLICY WHEREBY NGDCS MAIL COST SUMMARIES TO ALL RESIDENTIAL CUSTOMERS?

A. Yes. I question whether one utility's rate case is the best place for the Commission to make a general policy decision impacting all natural gas utilities in Pennsylvania. Nonetheless, while I do not know exactly what OCA deems a cost summary, I do want to note that we can and do provide, upon request, any available customer-specific billing information. We do not need a Commission decision to provide customers with information about their accounts. Further, Mr. Larkin-Connolly does not address the additional costs that the Company would incur to provide customers with mailed "cost summaries" nor does he provide any evidence that demonstrates that customers would want to receive a mailed cost summary without requesting this information. Moreover, much of the information that a customer would typically seek regarding their bill (e.g., usage and rate information) is readily available either on the customer's regular mailed bill or online for those customers with an online account, and that information can be accessed by customers at any time.

Q. DO YOU HAVE A REPLY TO MR. LARKIN-CONNOLLY'S AVERMENT THAT "BILL ENGAGEMENT TENDS TO BE INVERSELY RELATED TO INCOME", AND THAT PEOPLES' DATA PROVIDES AN ILLUSTRATION OF THIS TYPE OF DYNAMIC?

A. Enrollment in those options should not be treated as a direct proxy for bill engagement without additional supporting evidence. While it is possible that customers facing greater pressures may review their bills more closely, the record does not establish that lower-

income customers are disproportionately more likely to identify broader billing or cost issues, or that their concerns are routinely categorized in a way that obscures wider system impacts.

V. RESPONSE TO CAUSE-PA WITNESS CICERO

Q. WHAT DOES MR. CICERO AVER WITH RESPECT TO TERMINATION RATES?

A. Mr. Cicero testifies about a spike in termination rates of CAP customers that occurred in 2024 and characterizes this spike as troubling. (CAUSE-PA Statement 1, pp. 28-29.)

Q. DO YOU HAVE A REPLY TO MR. CICERO'S TESTIMONY ABOUT PEOPLES' TERMINATION RATES, IN BOTH 2024 AND 2025?

A. Peoples disagrees with Mr. Cicero's characterization of the increase in CAP customer terminations in 2024 as troubling, given that the termination rate in 2025 for the CAP population is reduced by more than 38% to 6.5%. The termination process is automated and driven by customer account balances and arrearages, not by a customer's participation in CAP. Work orders are generated through the automated workflow and assigned to field personnel based on schedule availability.

VI. RESPONSE TO OSBA WITNESS MARK EWEN

Q. MR. EWEN RECOMMENDS THE COMPANY ADD A FORMAL PAYMENT PLAN OPTION FOR SMALL GENERAL SERVICE ("SGS") AND MEDIUM GENERAL SERVICE ("MGS") CUSTOMERS ALONG WITH IMPLEMENTING A TRACKING MECHANISM TO ALLOW FOR REPORTING ON THE NUMBER

OF THESE CUSTOMERS EXPERIENCING FINANCIAL DIFFICULTIES. HE ALSO RECOMMENDS THAT PEOPLES ADD OSBA'S CONTACT INFORMATION AND A DESCRIPTION OF ITS SERVICES TO THE COMPANY'S WEBSITE. PLEASE RESPOND TO THESE RECOMMENDATIONS.

A. Peoples works with all of its customers, both residential and non-residential, that are facing short-term financial difficulties. SGS and MGS customers contacting the Company for assistance may request a temporary hold to allow for payment. And, in some cases, the Company establishes a payment arrangement, spreading arrears across a number of months as well. I do not believe a formal payment plan option for SGS and MGS customers is necessary. Regarding Mr. Ewen's second recommendation, that Peoples add OSBA's information to its website, I would note that Peoples' website does not include information or links for any of the statutory advocates or other stakeholders, and OSBA's information is already publicly available online and through the PUC.

VII. <u>CONCLUSION</u>

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

PREPARED REBUTTAL TESTIMONY OF
DANIEL J. SCHULLER
EXECUTIVE VICE PRESIDENT, CHIEF FINANCIAL OFFICER,
ESSENTIAL UTILITIES

DATE SERVED: July 16, 2026
DATE ADMITTED: _____

Peoples Statement No. 19-R

TABLE OF CONTENTS

I. INTRODUCTION 1

II. CONCLUSION.....9

PREPARED REBUTTAL TESTIMONY OF
DANIEL SCHULLER

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Daniel J. Schuller. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. ("Essential") as Executive Vice President and Chief Financial Officer. Peoples Natural Gas Company LLC ("Peoples" or the "Company") is a wholly-owned subsidiary of PNG Companies LLC ("PNG"). PNG is a wholly-owned, indirect subsidiary of Essential Utilities, Inc. f/k/a Aqua American, Inc. Essential acquired PNG effective March 16, 2020.

Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND.

A. I have a Bachelor of Science, Master of Science, and Doctorate in civil engineering from Purdue University. I participated in continuing executive education at the University of Chicago's Booth School of Business.

Prior to joining Essential (previously known as Aqua America, Inc.) in 2015, I spent eight years focused on infrastructure investments with J.P. Morgan Asset Management's Infrastructure Investments Group. In this role, I was responsible for a three-state water and wastewater utility owned by the group's infrastructure fund. I also sat on the board of directors of a natural gas LDC owned by the fund. Prior to J.P. Morgan, I spent eight years

as a management consultant with Mars & Co. Upon joining Essential, I was Executive Vice President of Strategy & Corporate Development. In this role, I was responsible for overseeing Essential's efforts to proactively serve additional customers throughout our multi-state footprint. I was named to my current role in 2018.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony will respond to certain portions of the testimony presented at the public input hearings held in this matter as it pertains to how the Company finances its capital projects.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring exhibits **Peoples Natural Gas Exhibit No. DJS-1R**.

Q. PLEASE EXPLAIN THE RELATIONSHIP BETWEEN ESSENTIAL UTILITIES AND PEOPLES NATURAL GAS.

A. Essential is the holding company for Aqua, Peoples, and their affiliates. Essential's leadership provides management, oversight, and overall guidance for Aqua, Peoples, and their affiliates. The organization operates under a shared services platform in which many services, including, but not limited to, accounting, finance, human resources, information

technology, and customer service are provided to Aqua and Peoples. These services have been reviewed in PUC management audits and other regulatory filings.

Q. MARK SZYBIST, SPECIAL COUNSEL FOR ENERGY AFFORDABILITY FOR GOVERNOR JOSH SHAPIRO, TESTIFIED THAT GOVERNOR SHAPIRO HAS CALLED ON UTILITIES TO RAISE CAPITAL IN THE MOST EFFECTIVE WAY POSSIBLE. (TR. AT 250-51). DO YOU WISH TO RESPOND?

A. Yes, Essential, on behalf of Peoples, raises capital in a highly effective manner and, in my opinion, in the most cost-effective manner possible. Essential, as a public company, raises both equity and debt capital for funding its operations and capital investments in the existing, well-functioning United States capital markets, which are recognized to be the most liquid markets in the world. For equity financing, Essential is listed on the New York Stock Exchange or NYSE as WTRG and is able to efficiently raise equity via a variety of offering types, including issuing additional WTRG shares under an At-the-Market Program or ATM, whereby we can issue shares directly into the market on an opportunistic basis, paying a minimal discount to do so.

Additionally, we undertake multiple efforts to obtain low-cost debt financing. These efforts include but are not limited to engaging with credit rating agencies to obtain the highest credit rating possible to facilitate our competitive, market-based debt financing process. Since Essential has owned Peoples, we have worked hard to maintain investment grade credit metrics at both the Essential and PNG levels to ensure the most favorable borrowing costs. Moreover, by financing at the Essential level (on behalf of our subsidiaries), we aggregate the borrowing needs of many subsidiaries, which allows us to

access the competitive public debt markets where a wider investor base can lead to optimal pricing. On a standalone basis, none of our subsidiaries, including Peoples, would have an issuance need in excess of $300M, which is generally the minimum offering size to attract public market participants, as smaller offerings cannot be included in bond index funds. I will note that Peoples was formerly owned by private equity and lacked a larger parent, and thus only had regular access to private debt markets; the 2020 acquisition by Essential facilitated access to the public markets.

One example of our public market borrowings, is our most recent 10-year $500 million public debt offering, where the issuance was oversubscribed by seven (7) times, allowing us to reduce the credit spread (i.e., the interest amount paid over the 10-year treasury rate) from 130 basis points at the initial announcement to 100 basis points, resulting in an all-in borrowing cost of 5.142%. The competitively priced public debt raised at the Essential level is then allocated as intercompany debt ("Pushdown Debt") to Essential's subsidiaries to allow them to realign their capital structures to their regulatory capital structure targets, including Peoples. The Pushdown Debt interest rate, repayment terms, maturity date and debt issuance expenses allocated are on a pro rata basis based on the principal amount allocated as a percent of the total unallocated balance as of the allocation date. There are no additional mark ups or fees allocated to the subsidiaries. Essential continually pursues other types of debt for its subsidiaries. For example, at its Pennsylvania water subsidiary, Aqua PA, Essential has issued low interest rate Pennvest loans and received loan forgiveness for eligible capital projects and passed those savings along to Aqua PA customers. At this time, we are unaware of such opportunities for Peoples but continue to explore such options.

Finally, in accordance with the Essential Acquisition Settlement Paragraph 39 at Docket Nos. A-2018-3006061, A-2018-3006062 and A-2018-3006063, we have implemented a commercial paper ("CP") program to reduce the cost of short-term borrowings. This CP program provides short-term borrowing flexibility as borrowing levels are set each day and can be more closely matched to our exact short-term cash needs. These short-term CP borrowings are at a lower interest rate than we pay for our revolving credit facilities.

Q. PLEASE EXPLAIN HOW PEOPLES RECEIVES THE CAPITAL THAT IS NEEDED TO FUND ITS INFRASTRUCTURE REPLACEMENT PROGRAM.

A. The Company's most recently approved Securities Certificate Registration on file with the Pennsylvania Public Utility Commission at Docket No. S-2024-3049880 and G-2024-3049928, describes one part of Peoples' financing strategy to obtain funding for its capital programs. Peoples is authorized to issue up to $950 million of long-term financing to support the Company's capital needs. In the interim period between the time the capital expenditures are incurred and the allocation of Pushdown Debt, the Company borrows under the intercompany short-term demand note between PNG and the Company. The Pushdown Debt is used to refinance a portion of the Company's intercompany short-term debt to rebalance Peoples' capital structure to be in line with other utilities, and to refinance Peoples' debt maturing through December 31, 2026. The new long-term debt will be issued through a series of tranches under the PNG Promissory Note. All the debt is expected to be issued on or before December 31, 2026. Through this process, Peoples agreed to pay PNG

the aggregate principal sum not to exceed $950 million. See **Peoples Natural Gas Exhibit No. DJS-1R** for a copy of the Company's Promissory Note.

PNG obtains the funds lent to Peoples from Essential, pursuant to a Pushdown Debt Promissory Note between PNG and Essential (the "Essential Promissory Note"). The Essential Promissory Note has similar terms to the promissory note between PNG and Peoples. The full terms and conditions of the Essential Promissory Note are expected to be similar to the form of the PNG Promissory Note. Essential will periodically issue the underlying debt supporting the tranches in the external debt markets at competitive market rates and prices, as described above. The interest rates and maturity dates of long-term debt issued by Essential form the basis for the interest rates and maturity dates under the Essential Promissory Note, which in turn establish the interest rates and maturity dates for the PNG Promissory Note. Essential is following generally accepted debt placement procedures to ensure market-based interest rates and terms in the tranches to be issued pursuant to the Essential Promissory Note. Therefore, the interest rates associated with the PNG Promissory Note are reasonable in light of the market coupon rates.

A pro rata portion of the unamortized debt issuance expenses incurred by Essential will be allocated each time additional debt is allocated to Peoples. The issuance costs that will be allocated to Peoples are expected to be approximately 1% of the principal allocation amount and will not exceed 2% of the principal allocation. The recovery of costs associated with the PNG Promissory Note are determined in a base rate case proceeding.

The issuance of the PNG Promissory Note will not result in Peoples' capital structure exceeding 50% debt measured at an annual level, consistent with the

Commission-approved Joint Petition for Settlement in the Aqua/Peoples Acquisition Proceeding.

Q. HOW DOES PEOPLES ENSURE THAT IT HAS ACCESS TO COST-EFFECTIVE SOURCES OF CAPITAL?

A. Essential is an active participant in the US equity and debt markets as previously mentioned above. On an ongoing basis we are looking at competitive market options and opportunities.

Q. MR. SZYBIST STATED THAT THE COMPANY'S PARENT (ESSENTIAL) IS ABLE TO ACCESS CAPITAL AT RELATIVELY LOW RATES, BUT CUSTOMERS OF THE COMPANY (PEOPLES) PAYS RELATIVELY HIGH COSTS FOR CAPITAL. DO YOU WISH TO RESPOND?

A. Yes. Mr. Szybist's understanding is not accurate. The Company interprets that by "low rates", Mr. Szybist is referring to interest paid on debt/borrowings. In the Company's push down debt process, where Essential issues debt in the market and then loans it to PNG Peoples via intercompany notes, our customers pay exactly the same interest rate that Essential is paying on its public debt. As mentioned previously, the interest rates on the debt issued by Essential are competitive market-based rates.

Q. AT THE PUBLIC INPUT HEARINGS, CHRIS HARRISON TESTIFIED THAT BLACKROCK IS ESSENTIAL'S BIGGEST SHAREHOLDER AND RATEPAYER FUNDS ARE NOT GOING TOWARD INFRASTRUCTURE INVESTMENTS BUT

ARE GOING TO BLACKROCK. (TR. AT 114-17.) DO YOU WISH TO RESPOND TO THESE STATEMENTS?

A. Yes. Mr. Harrison's understanding of BlackRock is misguided and inaccurate. While BlackRock-managed funds may be a large holder of WTRG/Essential stock, it is important to understand what Blackrock is – and who "owns" Blackrock. BlackRock is one of the world's largest asset managers and is a publicly traded corporation. BlackRock manages funds that hold the common stock of diverse groups of companies, including Essential, with the funds used to buy these stocks coming from the investments of institutional and retail investors. Thus, the retail investor who selects a Blackrock fund (that holds WTRG shares) for his or her 401K or brokerage account is the ultimate investor in Essential, not BlackRock itself.

With respect to ratepayer funds, I disagree with Mr. Harrison's characterization as to what we do with ratepayer funds. Ratepayer revenue helps to fund the Company's infrastructure investments, cover our operations and maintenance expenses, pay interest costs and taxes, and provide a fair and reasonable return to our equity investors (i.e., shareholders), but ratepayer revenue is not enough to fund it all. We need incremental debt and equity to fund all of our outlays. Additionally, the portion actually flowing back to investors, "BlackRock" in Mr. Harrison's lexicon, is only the Essential dividend, which is currently approximately $1.37 per share. As outlined in the testimony of Company witness Paul Becker, the Company anticipates that, since its last base rate case in 2023 through the end of the Fully Projected Future Test Year ("FPFTY") presented in this filing, it will invest nearly $2.3 billion to replace more than 1,250 miles of its aging infrastructure with new plastic pipe. This is real investment in system improvements for our customers, not a

flowback of capital to investors. Over the past several years, the Company has made material improvements to its distribution system, which reduces methane emissions and allows the Company to operate the system safely and reliably for many years to come.

Not only does the debt and capital markets activity, combined with Ratepayer funds cover the aforementioned investments at Peoples, it also includes the investment across all of Essential. In 2025 alone, we invested more than $1.6 billion across the company – nearly three times the Essential profits.

Regarding funds that go to investors, on an annual basis Tare limited to dividends paid by the company on its outstanding public share at a yield of 3.5% of the particular day's share price. Dividends compensate investors for the use of the capital they have entrusted to Essential and, as such, constitute an integral element of the aforementioned U.S. capital markets as indicated in Jennifer Nelson's rebuttal testimony, established regulatory standards have recognized the concept that a utility's capital costs recovered in rates be sufficient not only for debt service payments, but also for dividends on the stock.

II. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

INTERCOMPANY PROMISSORY NOTE

No. 2025-B December 31, 2025

$385,145,000

For Value Received, PEOPLES NATURAL GAS COMPANY LLC, a limited liability company formed under the laws of the Commonwealth of Pennsylvania (the "Borrower"), hereby promises to pay to the order of PNG COMPANIES LLC or registered assigns (the "Lender"), a limited liability company formed under the laws of the State of Delaware, the principal sum of THREE HUNDRED EIGHTY FIVE MILLION ONE HUNDRED FORTY FIVE THOUSAND DOLLARS ($385,145,000), together with interest (computed on the basis of a 360 day year of twelve 30-day months) on the unpaid balance thereof at the rate per annum from the date hereof as noted on Exhibit A.

Payments of principal of and interest on this Note are to be made in lawful money of the United States of America at the principal office of the Lender in Pittsburgh, Pennsylvania or at such other place as the Lender shall have designated by written notice to the Borrower.

This Note is subject to optional prepayment, in whole or in part, from time to time, at a redemption price of 100% or the principal amount prepaid, plus accrued interest thereon. Prepayments of this Note shall be noted on Exhibit B. attached hereto and made a part hereof; provided that the failure of the Lender to make any such recordation shall not limit or otherwise affect the obligations of the Borrower hereunder.

The Borrower represents that (a) it has full power and authority, not restricted by any law or governmental regulation, to execute and deliver this Note and to perform hereunder; (b) this Note evidences its valid and legally binding obligation, enforceable in accordance with its terms; and (c) its execution, delivery and performance of this Note do not and will not contravene any bylaw or contractual restriction binding on or affecting it.

This Note may not be changed or modified orally, nor any right or provision hereof be waived orally, but in each instance only by an instrument in writing signed by the party against which enforcement of such change, modification or waiver is sought.

No failure on the part of the Lender to exercise, and no delay in exercising, any right, remedy or power hereunder shall operate as a waiver thereof, nor shall any single or partial exercise by the Lender of any right, remedy or power hereunder preclude any other or future exercise thereof or the exercise of any other right, remedy or power.

Each and every right, remedy and power hereby granted to the Lender or allowed it by law or other agreement shall be cumulative and not exclusive the one of any other and may be exercised by the Lender from time to time.

Every provision of this note is intended to be severable; if any term or provision of this note shall be invalid, illegal or unenforceable for any reason whatsoever, the validity, legality and enforceability of the remaining provisions hereof shall not in any way be affected or impaired.

This Note shall be construed and enforced in accordance with, and the rights of the issuer and holder hereof shall be governed by, the law of the Commonwealth of Pennsylvania excluding choice-of-law principles of the law such Commonwealth that would require the application of the laws of a jurisdiction other than such Commonwealth.

IN WITNESS WHEREOF, the undersigned has executed this Note as of the day and year first above written.

PREPARED REBUTTAL TESTIMONY
OF CYNDEE S. FANG

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME, AFFILIATION, AND BUSINESS ADDRESS.

A. My name is Cynthia ("Cyndee") S. Fang. I am employed by Atrium Economics, LLC as a Director. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, South Carolina 29926.

Q. PLEASE DESCRIBE YOUR PROFESSIONAL BACKGROUND AND EXPERIENCE.

A. I have more than 20 years of experience in utility regulation, regulatory strategy, rate design, cost recovery, utility finance, and affordability issues. I joined Atrium Economics in December 2024. Before joining Atrium Economics, I was Vice President of Regulatory at NorthWestern Energy. In this role I was responsible for the development and execution of the Company's regulatory strategy in Montana, South Dakota, and Nebraska. I joined NorthWestern Energy in 2021 as the Director of Regulatory Affairs in Montana. Prior to NorthWestern Energy, I held various leadership roles at San Diego Gas & Electric, which included overseeing the Company's electric rate strategy as well as electric forecasting, electric load analysis and research, and origination teams. I began my career in the energy industry as a Public Utilities Rates Analyst at the Minnesota Department of Commerce, Energy Division. I received my Bachelor of Science in Political Economics of Natural Resources from the University of California at Berkeley and completed all coursework required for a Ph.D. in Applied Economics at the University of Minnesota, focusing on environmental economics. My qualifications and experience are outlined in my resume which is attached as Exhibit CSF-1.

Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF PEOPLES NATURAL GAS COMPANY ("PEOPLES" OR "COMPANY")?

A. No, I did not. However, this rebuttal testimony is submitted in response to the direct testimony filed by certain intervening parties in this proceeding. My rebuttal testimony explains that utility ratemaking is not a reasonable mechanism for addressing economywide inflationary pressures or other macroeconomic conditions, and that energy affordability concerns are more appropriately addressed through Pennsylvania Public Utility Commission ("PUC" or "Commission")-approved, targeted universal service programs that are the subject of separate proceedings designed to address those issues specifically.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. My rebuttal testimony responds to certain portions of the direct testimony submitted by the other parties listed below, specific to affordability issues that are experienced by residential customers:

- Office of Consumer Advocate ("OCA") Witness Michael Deupree;
- OCA Witness Roger Colton;
- Office of Small Business Advocate ("OSBA") Witness Mark Ewen; and
- Pennsylvania Weatherization Providers Task Force ("PWPTF") Witness Jennifer Warabak.
- The Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Witness Patrick Cicero.

Q. **ARE YOU THE ONLY PEOPLES WITNESS THAT IS ADDRESSING AFFORDABILITY ISSUES RAISED BY OTHER PARTIES IN THEIR DIRECT TESTIMONY?**

A. No. Other Company witnesses address affordability-related issues that fall within their respective areas of responsibility. Company Witness Rita Black addresses the Company's customer assistance programs and Company Witness John Taylor addresses revenue apportionment, cost of service, and rate design issues, including the relationship between rate design, conservation, bill impacts, and affordability. Company witness Huwar also addresses the affordability of the Company's rates for natural gas service in Pennsylvania.

Q. ARE YOU SPONSORING ANY EXHIBITS IN SUPPORT OF YOUR REBUTTAL TESTIMONY?

A. Yes. I am sponsoring Exhibit CSF-1 – Resume.

II. SCOPE OF UTILITY RESPONSIBILITY

Q. PLEASE SUMMARIZE THE PRINCIPAL AFFORDABILITY-RELATED POSITIONS ADVANCED BY THE INTERVENOR WITNESSES ADDRESSED IN THIS REBUTTAL TESTIMONY.

A. OCA Witness Michael Deupree addresses affordability through broader macroeconomic conditions and customer cost-of-living pressures, including inflation, energy prices, interest rates, tariffs, and economic uncertainty. He recommends that the Commission take those conditions into account when determining just and reasonable rates.[1] That macroeconomic discussion provides useful context regarding current customer pressures, but it does not alter the Commission's obligation to evaluate the Company's proposed rates under established cost-of-service and prudence principles.

[1] Deupree Direct at 3, 8-19.

OCA Witness Roger Colton addresses the role of affordability in this proceeding and presents affordability analyses for low-income, moderate-income, and residential customers generally. He also discusses energy burden, household resources, bill volatility, arrears, payment behavior, and the financial circumstances of aging customers.[2]

OSBA Witness Mark Ewen asserts that the Company's affordability discussion does not adequately address small business customers and recommends that affordability and ratepayer interests be considered in evaluating the Company's requested rates.[3]

PWPTF Witness Jennifer Warabak addresses affordability for low-income customers in connection with the proposed rate increase, including concerns regarding low-income customer impacts, LIURP funding, hardship fund support, and conservation-related affordability issues.[4]

CAUSE-PA Witness Patrick Cicero addresses affordability impacts on low- and moderate-income customers, measures of household financial need including the Self-Sufficiency Standard, and related recommendations concerning rate levels, rate design, and universal service cost recovery.

Q. HOW SHOULD THE COMMISSION DISTINGUISH BETWEEN RESIDENTIAL AFFORDABILITY CONCERNS AND THE SMALL BUSINESS CONCERNS RAISED BY OSBA WITNESS EWEN?

A. While both residential affordability and small business impacts are important customer considerations, they should be evaluated through related but distinct policy lenses. Residential affordability focuses on whether households, particularly low-income and

[2] Colton Direct at 7-43.
[3] Ewen Direct at 2-4
[4] Warabak Direct at 3-8.

limited-income households, can maintain essential utility service while meeting other basic needs. By contrast, OSBA Witness Ewen's concerns relate primarily to the financial condition of small commercial customers and are more appropriately understood as business sustainability or economic development concerns. Those concerns may be considered through the Commission's traditional rate design framework, including gradualism and customer impacts, but they do not, standing alone, justify departing from cost-causation principles or shifting costs to other customers.

Q. PLEASE SUMMARIZE THE INTERVENOR PERCEIVED SCOPE OF A REGULATED UTILITY'S RESPONSIBILITY FOR ADDRESSING AFFORDABILITY CONCERNS THROUGH BASE RATES.

A. Intervenors contend that, because household budgets are strained by rising costs for housing, food, healthcare, and other necessities, utilities should take on a broader role in addressing overall affordability through base rates.

Q. DO YOU AGREE WITH HOW PARTIES HAVE CHARACTERIZED THE SCOPE OF A REGULATED UTILITY'S RESPONSIBILITY FOR ADDRESSING BROADER AFFORDABILITY CONCERNS THROUGH A RATE CASE?

A. No. I do not agree with that characterization. It would expand the role of utility regulation beyond its appropriate scope. The Commission's statutory obligation is to ensure that utility rates are just and reasonable based on the prudent costs of providing regulated utility service. That obligation does not require utilities to offset or internalize macroeconomic conditions unrelated to the provision of regulated utility service. Expanding utility responsibility to address economywide affordability pressures through base rates would move ratemaking away from its traditional cost-of-service function and toward broader

social policy objectives that are more appropriately addressed through targeted programs and statewide policy processes.

Q. HOW DOES THE EXISTING CUSTOMER PROTECTION AND ASSISTANCE FRAMEWORK INFORM THE BOUNDARIES OF UTILITY RESPONSIBILITY FOR AFFORDABILITY?

A. The regulatory framework includes well-established customer protection and assistance tools that address payment difficulty in a focused, practical way— through clear rules for: billing (52 Pa. Code § 56.11 et seq.), collections and payment arrangements (52 Pa. Code §§ 56.41, 56.97, 56.151, 56.191), termination (52 Pa. Code §§ 56.81 et seq.); and low-income assistance programs and universal service plans (52 Pa. Code § 62.1 et seq.). Those tools are designed to help customers maintain service on reasonable terms while also protecting timely paying customers from undue cost shifting. Importantly, this framework does not treat utilities as responsible for offsetting the full range of household cost pressures (such as housing, food, or healthcare) through base rates. Instead, it reflects a policy choice to address utility affordability through targeted mechanisms within utility regulation, rather than by changing core, cost-based ratemaking principles. Consistent with that structure, the Commission's role in rate regulation is to balance the interests of customers and the utility by establishing just and reasonable rates based on the cost of providing regulated service, while ensuring the utility can maintain safe and reliable operations over the long term.

This framework reflects an important distinction between cost-based ratemaking and targeted affordability mechanisms. It addresses utility affordability through customer protection rules, payment options, and Commission-approved assistance programs rather than by treating base rates as the mechanism for offsetting the full range of household cost

pressures, such as housing, food, healthcare, or other broader economic conditions. Consistent with that structure, the Commission's role in a base rate proceeding is to balance customer impacts with the utility's obligation to provide safe, adequate, and reliable service by establishing just and reasonable rates based on the cost of providing regulated utility service.

Further, Pennsylvania's affordability challenges are best addressed through coordinated policy processes that can evaluate customer needs, program design, funding, and cost allocation across essential utility services and across multiple utilities. The Commission's affordability proceeding at Docket No. M-2017-2587711 and the January 2019 Staff Affordability Study reflect that broader statewide approach. Accordingly, material changes to affordability programs are more appropriately considered through universal service proceedings, rulemakings, or other Commission policy processes, rather than through ad hoc modifications in an individual base rate case.

Q. HOW SHOULD THE COMMISSION EVALUATE INTERVENORS' BROADER AFFORDABILITY RECOMMENDATIONS WITHIN ITS STATUTORY OBLIGATION TO ESTABLISH JUST AND REASONABLE RATES?

A. The Commission's responsibility is to establish just and reasonable rates based on the prudent costs of providing regulated utility service while ensuring the Company can continue to provide safe, adequate, and reliable service. In carrying out that responsibility, the Commission appropriately considers affordability together with other important ratemaking objectives, including cost recovery, financial integrity, and customer equity. I recognize that many customers are experiencing real financial hardship and that those concerns warrant careful consideration. However, broader macroeconomic conditions do not alter the Commission's statutory role or transform a base rate proceeding into a vehicle

to address economywide affordability challenges. Pennsylvania's regulatory framework deliberately distinguishes between cost-of-service ratemaking and targeted Universal Service Programs, allowing affordability concerns to be addressed through Commission-approved assistance mechanisms while preserving the integrity of traditional ratemaking principles. Maintaining that distinction promotes regulatory certainty, protects customers from undue cost shifting, and ensures affordability policy is addressed through Commission-approved processes rather than ad hoc adjustments to otherwise prudent cost recovery.

Q. WHAT ROLE SHOULD AFFORDABILITY PLAY IN THE COMMISSION'S EVALUATION OF THE COMPANY'S REQUESTED RATE INCREASE?

A. Affordability is an important consideration in every base rate proceeding involving an essential utility service. I agree with OCA Witnesses Michael Deupree and Roger Colton and CAUSE-PA Witness Patrick Cicero that the Commission should consider the potential impact of proposed rates on customers, particularly those who have limited household income. At the same time, affordability is one of several important considerations the Commission balances in determining whether proposed rates are just and reasonable under the Pennsylvania Public Utility Code. See 66 Pa. C.S. § 1301(a). The Commission must also ensure that the Company has a reasonable opportunity to recover the prudent costs of providing regulated utility service while continuing to provide safe, adequate, and reliable natural gas service. See 66 Pa. C.S. §§ 1301. Affordability should be evaluated within this broader regulatory framework rather than in isolation. Overall, preserving cost-of-service ratemaking while directly providing affordability relief through targeted public programs and Commission-approved universal service mechanisms provides a more appropriate and effective framework.

Q. WHY IS IT IMPORTANT TO CONSIDER MULTIPLE AFFORDABILITY INDICATORS RATHER THAN RELYING ON A SINGLE METRIC?

A. Different affordability metrics capture distinct aspects of customers' financial circumstances. For example, energy burden analyses estimate the share of household income devoted to energy costs. Delinquency and arrearage statistics provide information on payment behavior. Household financial data offers insight into customers' ability to absorb unexpected expenses or seasonal household bill fluctuations. Each of these measures can contribute valuable information, but each also has limitations. Accordingly, these metrics should be viewed collectively and interpreted within the broader context of the Company's rates, customer assistance programs, and the Commission's statutory responsibility to establish just and reasonable rates. To the extent the Commission seeks to develop a more comprehensive affordability framework or determine which metrics should guide program policy, that inquiry should occur in a focused Universal Service Program review, rulemaking, or other policy proceeding rather than in this base rate case.

Q. WHAT ARE THE IMPLICATIONS OF USING UTILITY RATES TO ADDRESS MACROECONOMIC AFFORDABILITY PRESSURES ON A UTILITY'S ABILITY TO EARN A FAIR RETURN AND ATTRACT CAPITAL FOR NECESSARY INVESTMENTS?

A. Expanding the role of utility rate regulation to address economywide affordability pressures by suppressing or denying recovery of prudent costs would increase regulatory uncertainty and weaken the link between the cost of service and rates. Over time, that approach can impair a utility's opportunity to achieve a fair rate of return, which, in turn, can increase the Company's cost of capital and hinder access to financing on reasonable terms. These outcomes directly affect customers because safe and reliable service depends

on continued investment in distribution infrastructure, system integrity, and compliance with safety and environmental requirements. Maintaining traditional cost-based ratemaking, while addressing affordability through targeted assistance and program design, supports both customer protection and the Company's ability to attract capital for the investments necessary to provide safe and reliable service.

Q. WHAT IS THE PRACTICAL EFFECT OF PROPOSALS TO DENY OR MATERIALLY REDUCE RECOVERY DUE TO BROADER MACROECONOMIC ISSUES?

A. The practical effect is to shift the burden of economywide affordability pressures onto the utility by suppressing recovery of prudent costs and, in turn, eroding the Company's opportunity to earn a fair return. Over time, that can weaken financial integrity by increasing regulatory risk, impairing credit quality and access to capital, and constraining the Company's ability to make needed investments in safety, reliability, and compliance. Those impacts can be significant for all customers because they can increase long-run costs through higher financing costs, deferred maintenance, or accelerated replacement needs, and raise operational and service risks that a stable, cost-based ratemaking framework is intended to avoid. This is discussed further by Company Witness Jennifer Nelson.

Q. IF MACROECONOMIC CONSIDERATIONS ARE CONTRIBUTING TO BROADER AFFORDABILITY PRESSURES, WHAT IS THE APPROPRIATE FORUM FOR ADDRESSING THOSE ISSUES?

A. To the extent broader macroeconomic conditions are driving household hardship, the most effective tools for addressing those conditions generally lie at the state or federal level through tax policy and broad-based social assistance programs designed to be income-

targeted and coordinated across essential needs, including housing, food, healthcare, and energy. If utility rates are expected to absorb or offset broader macroeconomic pressures by suppressing the recovery of prudent costs, that creates regulatory uncertainty and can impair the Company's opportunity to earn a fair return and to attract capital on reasonable terms. Those risks ultimately affect customers because continued access to capital supports the investments necessary to maintain safe and reliable service for essential energy needs. Preserving cost-of-service ratemaking while providing affordability relief through targeted public programs and Commission-approved universal service mechanisms provides a more appropriate and effective framework.

Similarly, references to broader state policy discussions or public statements regarding utility affordability do not change the Commission's obligation in this proceeding to apply the statutory just-and-reasonable standard based on the record evidence.

Q. PLEASE RESPOND TO MR. CICERO'S DISCUSSION REGARDING THE SELF SUFFICIENCY STANDARD AND HOW THIS STANDARD PERTAINS TO ESTABLISHING RATES IN THIS CASE.

A. The Self Sufficiency Standard is similar to the Asset-Limited, Income Constrained, Employed ("ALICE") Survival Budget that is discussed in Mr. Colton's testimony. Both measures estimate the income needed to meet basic household expenses without public assistance. Mr. Cicero notes that the Commission does not use the Self Sufficiency Standard to determine eligibility for utility assistance programs. To the extent parties believe that eligibility thresholds or related affordability benchmarks should be reconsidered, these concerns regarding eligibility are best examined in a broad Commission review of universal service programs rather than in this base rate proceeding.

III. ENERGY BURDEN AND AFFORDABILITY ANALYSIS

Q. HOW DO YOU RESPOND TO MR. COLTON'S ENERGY-BURDEN METRICS AND AFFORDABILITY CONCERNS?

A. I recognize that many customers are under real financial strain, and that higher bills can be especially difficult for low-income households with limited flexibility in their budgets. The energy-burden metrics presented by Mr. Colton highlight the real financial pressures many customers face, and they underscore why affordability is an important issue for both the Commission and the Company. Consistent with that concern, the Company supports and administers multiple universal service programs intended to mitigate bill burdens for vulnerable customers, which are discussed further by Company Witness Black. This evidence further reinforces the importance of ensuring that available assistance programs are effective, accessible, and functioning as intended for the customers they are designed to serve.

Q. WHAT IS YOUR PRINCIPAL CONCERN WITH MR. COLTON'S AFFORDABILITY ANALYSIS?

A. My principal concern is the weight Mr. Colton places on individual affordability metrics to support his recommendations. Metrics such as energy burden, income, arrears, household liquidity, household resources, and bill volatility are informative, but each has limitations and reflects assumptions about customer circumstances and broader economic conditions. Income alone does not capture all aspects of household financial stress, and Mr. Colton's discussion of aging customers further illustrates that customer circumstances may differ across groups.

These considerations are relevant to broader affordability policy and program design, including whether additional or redesigned assistance may be appropriate for seniors or other customer groups. However, those issues are better evaluated in a focused Universal Service Program review, rulemaking, or other policy proceeding rather than through base-rate cost recovery adjustments. In this base rate case, affordability metrics and customer circumstances should be considered collectively, together with customer-level billing and income data, assistance programs, and the Commission's obligation to set just and reasonable rates based on the prudent costs of providing regulated utility service.

Q. DOES MR. COLTON'S AFFORDABILITY AND ENERGY-BURDEN ANALYSIS DEMONSTRATE THAT THE COMPANY'S PROPOSED RATES ARE UNREASONABLE?

A. No. Mr. Colton's analysis provides useful insight into customer circumstances, but it primarily reflects income limitations and broader economic conditions, not the prudence of the Company's costs or the revenue needed to provide safe and reliable service. His testimony supports continued attention to assistance program effectiveness, which Company Witness Black addresses. Mr. Colton's analysis does not support a conclusion that recovery of the prudent costs of providing regulated utility service should be denied.

Q. OCA WITNESS MR. COLTON NOTES THAT AFFORDABILITY CHALLENGES ARE EXACERBATED BY SEASONAL BILL VOLATILITY, PARTICULARLY DURING WINTER MONTHS WHEN USAGE INCREASES. HOW DO YOU RESPOND?

A. Seasonal usage can create significant winter bill volatility and cash-flow stress, particularly for low-income customers with limited savings. That issue reflects timing and usage patterns, not the prudence of the Company's costs. Rate design can help moderate seasonal bill swings, while targeted assistance programs address underlying income and liquidity constraints. Company Witness Taylor further explains that the Company's Weather Normalization Adjustment reduces the extent to which customer bills vary solely because actual weather differs from the normal weather assumptions used to establish rates, thereby helping to moderate seasonal bill volatility. Company Witness Taylor also addresses rate design impacts on affordability. Company Witness Black discusses the availability of the Company's budget program to smooth utility payments across the year, avoiding seasonal variances of payment obligations.

Q. MR. COLTON PRESENTS AFFORDABILITY ANALYSES FOR FIRST QUARTILE-INCOME HOUSEHOLDS, LOW-INCOME HOUSEHOLDS, MODERATE-INCOME HOUSEHOLDS, AND RESIDENTIAL CUSTOMERS IN GENERAL. DO YOU HAVE ANY OBSERVATIONS REGARDING THESE ANALYSES?

A. Yes. Considering multiple customer populations is useful, but those analyses rely on generalized assumptions about income, household composition, expenditures, or representative customer characteristics. They can identify broad trends, but they do not fully capture the diversity of customer circumstances or actual bill impacts. For that reason, they should be supplemented, where possible, with customer-level analyses of actual Peoples customers.

Q. DID ATRIUM ECONOMICS CONDUCT A GAS-BURDEN ANALYSIS FOR THE COMPANY, AND IF SO, WHAT DID IT ENTAIL?

A. Yes. Atrium conducted additional analyses using Peoples' customer billing and usage data, which supplement Mr. Colton's analyses that primarily evaluate affordability using population-level data and representative household characteristics. Atrium Economics conducted a customer-level "gas-burden" study, defining gas burden as the percentage of household income spent on the Peoples gas bill, with the household income data available. The testimony of Peoples Witness Black discusses how the Company obtains income information. Customer-level analyses complement broader affordability measures by illustrating how proposed rates affect customers across the Company's service territory rather than relying solely on representative households or generalized assumptions. The analysis excludes benefits from customer assistance programs.

Q. WHY DID YOU PERFORM A CUSTOMER-LEVEL AFFORDABILITY ANALYSIS RATHER THAN RELYING SOLELY ON GENERALIZED AFFORDABILITY METRICS?

A. Customer-level analyses evaluate actual customers rather than representative households constructed from population averages. While both approaches provide useful information, customer-level analyses better reflect how gas burdens vary across the Company's service territory and therefore provide a more direct assessment of affordability conditions for Peoples' customers. They also reduce the need to rely upon assumptions regarding representative household income, consumption patterns, or demographic characteristics. For these reasons, customer-level analyses provide important context for the Commission's evaluation of the Company's requested rate increase by showing current

affordability conditions for Peoples' customers and the extent to which existing targeted assistance mitigates gas burdens for CAP-enrolled customers.

Q. WHAT DOES ATRIUM'S GAS-BURDEN ANALYSIS SHOW FOR PEOPLES CUSTOMERS AS A WHOLE?

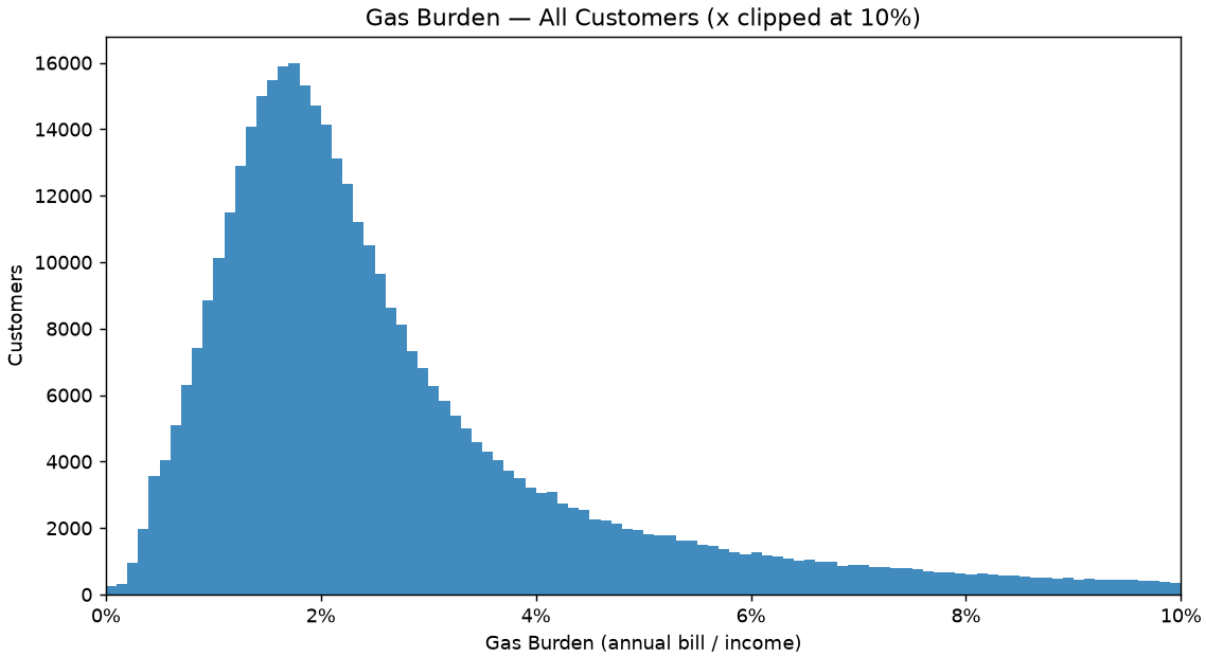
A. The analysis included 412,655 residential gas customers with at least 12 months of usage data.[5]

- Estimated average annual household income: $54,974
- Estimated median annual household income: $48,732
- Average Annual gas spend: $1,196
- Median annual gas spend: $1,108
- Average annual gas usage: 87.8 MCF
- Median annual gas usage: 80.6 MCF

The average gas burden for this group was 3.40% with a median of 2.20% and a maximum energy burden of 544.20%. The results of the gas burden analysis are presented in Figure 1 below.

[5] This number excludes transportation customers and only includes customers with 12 or more months of gas usage.

Figure 1: Gas Burden for Residential Customers



In addition, Table 1 summarizes Figure 1. The analysis includes 412,655 residential customers. The distribution shows an average gas burden of 3.40%. The first quartile (25% of customers) has a gas burden of 1.50% or below, the median (50% of customers) is 2.20%, and the third quartile (75% of customers) is 3.50%. A more granular look at the upper tail shows that 90% of customers have a gas burden of 6.30% or below, 95% have a gas burden of 9.20% or below, and 99% have a gas burden of 19.20% or below. The maximum calculated gas burden is 544.20%.

Table 1: Gas Burden for Residential Customers

Residential Customers	
Number of Customers included in analysis	**412,655**
Average	**3.40%**
First Quartile - 25% of population	**1.50%**
Second Quartile/Median – 50% of population	**2.20%**
Third Quartile – 75 % of population	**3.50%**
90% of population	**6.30%**
95% of population	**9.20%**

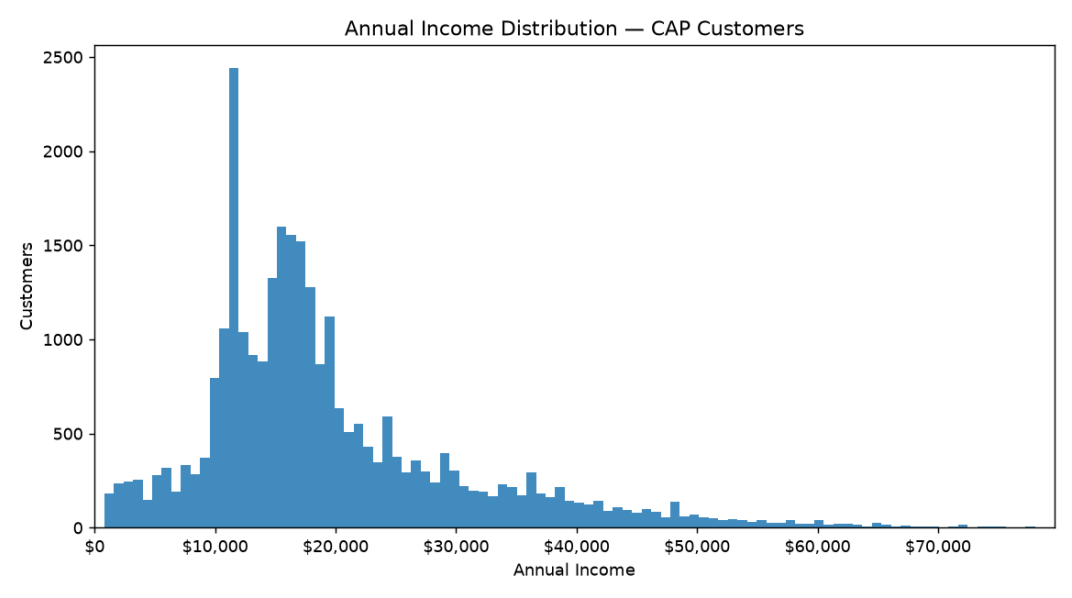
99% of population	**19.20%**
Maximum	**544.20%**

Q. DID ATRIUM CONDUCT ANY ADDITIONAL ANALYSIS TO EVALUATE THE GAS BURDEN FOR PEOPLES' CAP-ENROLLED CUSTOMERS? IF SO, PLEASE DESCRIBE.

A. Atrium conducted a customer-level gas-burden analysis using anonymized customer data provided by the Company. For purposes of this analysis, references to CAP-enrolled customers include customers enrolled in Customer Assistance Program ("CAP"). Gas burden was defined as the percentage of household income spent on the customer's gas bill. Rather than relying on publicly available income estimates, the analysis utilized customer-specific income information provided by the Company, along with customer billing data for the period beginning January 2025 and ending December 2025. Gas burden was calculated by dividing each customer's annual gas bill by the corresponding household income. The analysis included:

- **Customer income information** (monthly, aggregated across the 12 months), which reflects the most recent income information provided by the customer to the Company; and
- **CAP bill amount** (monthly, aggregated across the 12 months), which reflects the with-benefits bill amount charged to a CAP customer; and
- **Normal bill amount** (monthly, aggregated across the 12 months), which reflects what the CAP-enrolled customer would have been charged on their bill if they were not enrolled in the CAP (i.e., the without-benefits bill amount).

Figure 2: Distribution of Annual Income for CAP Enrolled Customers



Atrium's analysis included 28,975 CAP-enrolled gas-only customers with 12 months of CAP bill data; customers with fewer than 12 months of CAP bill data were excluded. Figure 2 presents the distribution of annual income for this population. The average annual income for this population was $19,643, with a median annual income of $16,668.

For all charts in this section, Atrium effectively "clipped" the right tail of the x-axis in an effort to keep the distribution charts legible. The cutoff removes the long, sparse right tail that would otherwise compress the bulk of the distribution into a small portion of the chart. For any chart that includes two distributions (overlaid on top of each other), the cutoff brings the majority of both distributions into view. For the annual income chart, the cutoff is the 99.9th percentile of the income distribution itself. Because gas burden is defined as the ratio of the annual gas bill to the annual household income, it cannot be calculated for customers with a verified annual income of $0, as the metric is undefined

(division by zero). This data limitation was also identified in the Commission's report on Home Energy Affordability for Low-Income Customers in Pennsylvania published in January 2019 under Docket No. M-2017-2587711. As noted in that report, there are mathematical limitations when performing an energy burden analysis for customers who enroll in utility CAPs with zero income. Such customers must sign an affidavit at the time of enrollment stating that there is currently no adult receiving income and identifying the source of funds to meet monthly living expenses, such as savings; support from friends, family, or the community; or other means. The PUC stated:

> Customers who enroll in utility CAPs with zero income (zero-income customers) may inflate the average energy burden levels, particularly for the analysis of customers with incomes at or below 50% of the FPIG. Utilities require customers that report zero income to pay the utility's CAP minimum payment amount. Thus, it is not mathematically possible for zero-income customers to receive bills below the maximum energy burden guidelines in the CAP Policy Statement because any billed amount will exceed 100% of their household income (pp. 21).

Due to these limitations, customers enrolled in CAP with zero income have been excluded from this analysis. Pursuant to the Company's approved USECP at Docket Nos. For M-2019-3014966 and P-2020-3019196, zero-income customers would be subject to the minimum CAP payment amount of $25.

Q. DID ATRIUM LOOK AT ANY METRICS IN ADDITION TO GAS BURDEN?

A. Yes. Atrium also evaluated annual gas bill amounts (in dollars) without and with CAP benefits, i.e., comparing each customer's estimated bill without CAP benefits (the amount that would be charged to the CAP-enrolled customer) to the CAP bill (with benefits) to quantify the extent to which CAP benefits reduce customers' actual billed charges.

Q. PLEASE SUMMARIZE THE RESULTS OF THAT ANALYSIS.

A. Figure 3 presents the distribution of gas burden for CAP-enrolled customers with and without CAP benefits. The results show that CAP is functioning as an effective affordability tool for participating customers. CAP benefits materially reduce gas burdens across the distribution. The mean gas burden falls from 10.50% without benefits to 4.00% with benefits, the median falls from 7.40% to 4.00%, and the 95th percentile falls from 26.20% to 6.60%. Overall, the with-benefits distribution is more concentrated at lower burden levels, indicating that CAP substantially mitigates both typical burdens and high-burden outliers for participating customers. Although some customers still experience high gas burdens, the analysis demonstrates that the existing CAP provides meaningful and measurable affordability benefits to enrolled customers. These results are further summarized in Table 2 discussed below.

Figure 3: Gas Burden for Peoples' CAP-Enrolled Customers With and Without CAP Benefits

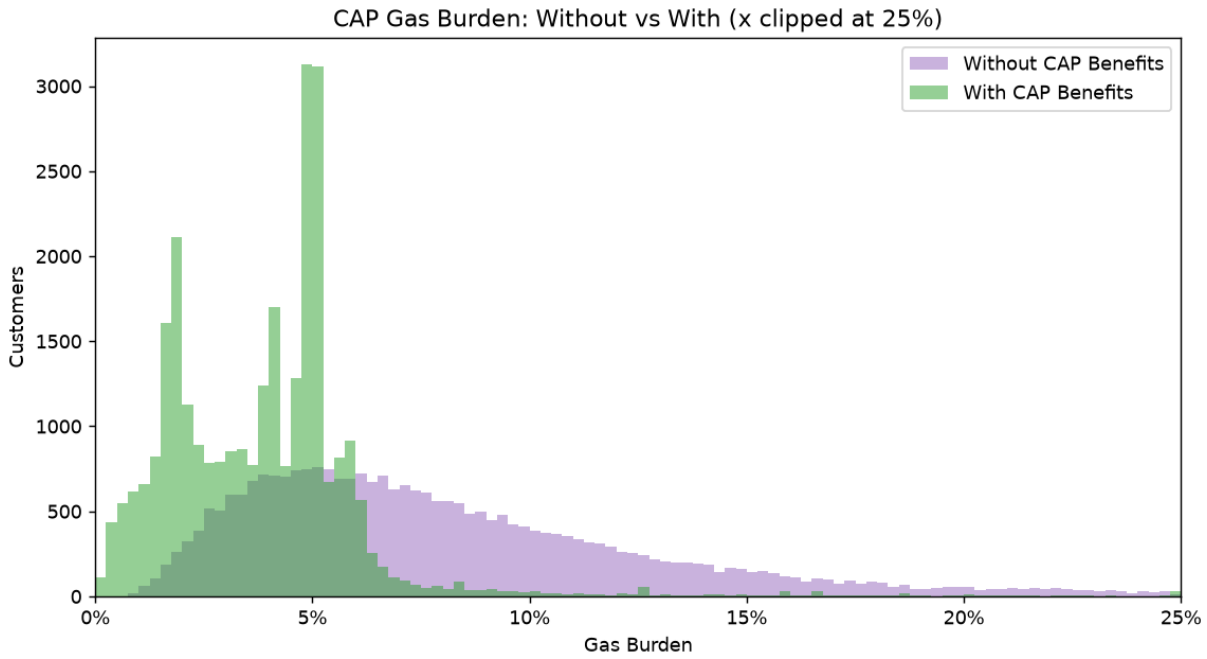


Table 2 summarizes the same result numerically. For the 28,975 CAP-enrolled customers included in the analysis, CAP benefits reduce gas burdens across the distribution: the average gas burden falls from 10.50% without CAP benefits to 4.00% with CAP benefits, the median falls from 7.40% to 4.00%, and the 95th percentile falls from 26.20% to 6.60%. These results show that CAP benefits materially reduce both typical burdens and higher-burden outcomes for participating customers. These results are consistent with the Commission's CAP Policy Statement, which generally provides that maximum payments for natural gas heating should not exceed 4% of income for

households at 0–50% of the Federal Poverty Income Guidelines and 6% of income for households at 51–150% of the Federal Poverty Income Guidelines.[6]

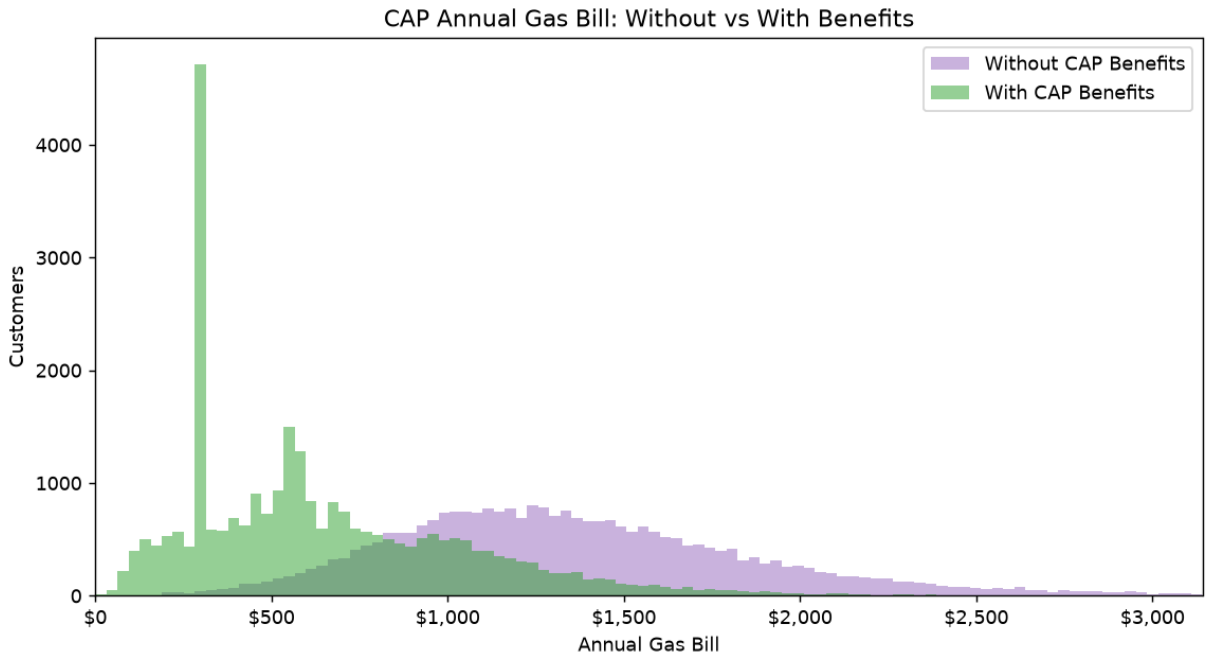
Table 2: Gas Burden for Peoples' CAP-Enrolled Customers

	Without CAP Benefits	With CAP Benefits
Number of Customers included in analysis	**28,975**	**28,975**
Average	**10.50%**	**4.00%**
First Quartile - 25% of population	**4.80%**	**2.10%**
Second Quartile/Median – 50% of population	**7.40%**	**4.00%**
Third Quartile – 75 % of population	**11.30%**	**5.00%**
90% of population	**17.50%**	**5.90%**
95% of population	**26.20%**	**6.6%**
99% of population	**74.10%**	**16.20%**
Maximum	**250.2%**	**48.80%**

Figure 4 summarizes Atrium's analysis of annual billed amounts for CAP-enrolled customers, comparing each customer's annual bill without CAP benefits to the annual bill charged with CAP benefits. The results show that CAP benefits substantially reduce customers' actual billed charges: the median annual bill declines from approximately $1,301 to $576, a reduction of approximately 55.7%, and the mean annual bill declines from approximately $1,376 to $665, a reduction of approximately 51.7%.

[6] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code §§ 69.261—69.267

Figure 4: Annual Gas Bills for Peoples' CAP-Enrolled Customers with and without CAP Benefits- excluding zero income



Q. HOW SHOULD THE COMMISSION INTERPRET MR. COLTON'S AFFORDABILITY ANALYSES IN LIGHT OF ATRIUM'S CUSTOMER-LEVEL ANALYSES?

A. Mr. Colton presents a thoughtful and comprehensive discussion of affordability and the financial challenges experienced by many utility customers. I agree that affordability deserves careful consideration and that multiple measures, including energy burden, payment behavior, household resources, and representative affordability methodologies such as Patterson and Doyle, can provide useful information. I do not reject the use of representative affordability methodologies, but they should not substitute for customer-level analysis of actual Peoples customers where such analysis is available. My principal

difference is not whether affordability matters, but how that evidence should be interpreted in a base rate case. Collectively, the customer-level analyses sponsored with my testimony provide the Commission with direct and more useful evidence regarding the affordability impacts of the Company's proposed rates and complement the broader affordability metrics discussed by Mr. Colton.

Q. WHAT DO YOU CONCLUDE REGARDING THE AFFORDABILITY OF PEOPLES RATES AND THE PROPOSED RATE INCREASE BASED ON YOUR ANALYSIS?

A. The customer-level analyses discussed above provide important context regarding the current state of affordability for Peoples customers and the effectiveness of existing assistance programs for CAP-enrolled customers. For residential customers overall, the gas-burden analysis shows that the median gas burden is approximately 2.00%, and 90% of customers have a gas burden of 4.70% or below. For CAP-enrolled customers, the analysis shows that CAP materially reduces gas burdens and annual billed amounts, lowering the average gas burden from 10.50% without CAP benefits to 4.00% with CAP benefits and reducing the median annual bill by more than 50%. These results demonstrate that the Company's targeted assistance programs provide meaningful affordability benefits to participating customers under current rates.

Company witness Taylor presents annual bill impacts for the average residential customer and for average CAP and non-CAP customers under current rates and the Company's proposed rates.[7] The table below uses those illustrative annual bill amounts, together with the average annual income levels identified in the affordability analysis

[7] Taylor Direct at 32.

discussed above, to estimate the corresponding gas-burden impacts for each illustrative customer group.

Table 3: Impact of the Company's Proposed Rates on the Gas Burden of Illustrative Residential Customers

Customer Group	Annual Usage (Mcf)	Average Annual Income	Current Annual Bill	Gas Burden - Current Rates	Company Proposed Annual Bill	Gas Burden - Proposed Rates	Gas Burden - Change
Residential Average	88	$59,619	$1,404	2.4%	$1,587	2.7%	0.3%
CAP	114	$19,643	$1,765	9.0%	$1,972	10.0%	1.1%
Non-CAP	86	$63,024	$1,385	2.2%	$1,566	2.5%	0.3%

As shown in Table 3, the illustrative impact of the Company's proposed rates is modest for the average residential and non-CAP customer groups, increasing gas burden by approximately 0.3 percentage points. Even under the Company's proposed rates, the illustrative average residential gas burden remains below the maximum payment levels reflected in the Commission's CAP Policy Statement for natural gas heating customers.

The illustrative CAP impact is larger because it is measured against lower average income and is shown before CAP benefits. As discussed above, those benefits materially reduce gas burdens for participating customers, including reducing the average burden from 10.50% to 4.00%.

Taken together, the customer-level affordability analysis and the illustrative examples provided in Table 3 support the conclusion that Peoples' current residential gas bills are generally within reasonable affordability ranges for most customers and that the proposed increase does not materially change that overall profile. The analysis also confirms that the existing CAP is functioning as an effective affordability tool for enrolled customers. Accordingly, the affordability evidence provides useful customer-

impact context for the Commission's review, while the requested increase should continue to be evaluated under traditional prudence and cost-of-service principles.

IV. ROLE OF UTILITY ASSISTANCE PROGRAMS

Q. DO CUSTOMER ASSISTANCE AND UNIVERSAL SERVICE PROGRAMS PLAY AN IMPORTANT ROLE IN ADDRESSING AFFORDABILITY CONCERNS?

A. Yes. Customer assistance and Universal Service Programs play an important role in promoting affordability for customers experiencing financial hardship. Natural gas is an essential service, and targeted assistance programs, including the Company's CAP, help eligible customers maintain service and reduce the financial burden of paying utility bills. As discussed above, these programs are the appropriate regulatory tools for addressing income-based utility hardship while preserving cost-based ratemaking. The current affordability analysis, discussed further below, reinforces that targeted programs are the appropriate affordability tool because CAP benefits materially reduce burdens for enrolled customers while preserving the Commission's ability to evaluate base rates under traditional prudence and cost-of-service principles.

Peoples offers and supports a suite of programs that generally fall into three categories: (i) grant assistance for customers facing financial hardship; (ii) usage-reduction offerings intended to lower bills over time by reducing consumption; and (iii) bill-stabilization and payment-flexibility options that help customers manage seasonal volatility and cash-flow constraints. These tools include federal programs, utility-administered assistance, community-based grants, usage-reduction initiatives, and flexible payment options.

I do not address the reasonableness of specific program funding levels, tariff modifications, administration issues, eligibility, participation, or program performance. Those program-specific matters, are addressed by Company Witness Black. My testimony addresses the broader regulatory and economic framework for considering affordability concerns in this base rate case.

Q. AT A HIGH LEVEL, HOW DO THESE TOOLS DIFFER IN PURPOSE AND FUNDING?

A. These tools serve different functions and rely on different funding sources. Some bill-payment assistance is supported through the federal Low Income Home Energy Assistance Program ("LIHEAP") that provides grants to eligible households. Other components—particularly the Company's Commission-approved Universal Service Programs, including ratepayer-funded assistance and usage-reduction offerings—are supported through Commission-approved cost recovery and therefore reflect an explicit balancing of the interests of participating and non-participating customers. Still other resources, such as the Company's hardship fund, rely on voluntary or community-based support. Regardless of funding source, the common objective is targeted relief for customers with demonstrated need, coupled with tools that help reduce usage or stabilize payment obligations.

Q. WHAT DO THE INTERVENOR WITNESSES' CUSTOMER ASSISTANCE CONCERNS INDICATE, EVEN WITH THESE TOOLS IN PLACE?

A. The intervenor witnesses identify real customer affordability concerns, including the difficulty that even modest bill increases or seasonal bill changes can create for customers with limited resources. As discussed above, those concerns provide useful context and reinforce the importance of effective, accessible assistance programs. These concerns

support continued focus on effective, accessible targeted assistance programs; they do not, standing alone, show that the Company's proposed rates are unreasonable or that recovery of prudent costs of providing regulated utility service should be denied.

Q. DO RECOMMENDATIONS TO INCREASE LIURP, HARDSHIP FUNDING, OR OTHER UNIVERSAL SERVICE PROGRAM SUPPORT CHANGE YOUR OVERALL CONCLUSION REGARDING THE APPROPRIATE REGULATORY RESPONSE TO AFFORDABILITY CONCERNS?

A. A. No. Those recommendations confirm that customer assistance and usage-reduction programs are important affordability tools. My testimony does not reject the importance of those programs; rather, it explains that targeted program tools are the appropriate mechanism for addressing income-based utility hardship, while base rates should continue to reflect the prudent costs necessary to provide safe, adequate, and reliable natural gas service. My analysis further demonstrates that the Company's CAP materially reduces energy burden for participating customers and provides meaningful affordability benefits.

Q. CAN UTILITY ASSISTANCE PROGRAMS OR BASE RATEMAKING RESOLVE BROADER MACROECONOMIC AFFORDABILITY CHALLENGES?

A. Utility assistance programs can provide important, targeted relief for income-eligible customers, but neither assistance programs nor base ratemaking is designed to resolve broader macroeconomic affordability pressures such as inflation, housing costs, or healthcare expenses. Those broader issues, along with any proposed changes to CAP design, funding, or program structure, are better addressed through Universal Service Program review, rulemakings, or other focused policy proceedings where all stakeholders across the industry have an opportunity to participate.

Q. WHAT IS THE APPROPRIATE ROLE OF A REGULATED UTILITY IN ADDRESSING CUSTOMER AFFORDABILITY CONCERNS?

A. The Company's responsibility is to provide safe, adequate, and reliable service at rates that reflect prudent costs and comply with statutory ratemaking principles, while also implementing Commission-approved customer assistance and Universal Service Programs. These programs can help mitigate bill impacts for income-eligible customers, but they cannot fully resolve affordability challenges that are driven by income disparities, household liquidity constraints, broader economic forces, and other factors that are outside of the company's control. Assigning utilities undue responsibility for addressing economywide affordability pressures through base rates would extend beyond traditional ratemaking objectives and would not be an effective substitute for broader public policy solutions.

Q. WHY ARE TARGETED CUSTOMER ASSISTANCE PROGRAMS GENERALLY MORE APPROPRIATE THAN ACROSS-THE-BOARD REDUCTIONS IN COST RECOVERY?

A. Targeted customer assistance programs are generally more appropriate because they direct available resources to customers with demonstrated need. Across-the-board reductions provide benefits to all customers regardless of financial circumstances and may not meaningfully address the specific customers experiencing the greatest hardship. By contrast, targeted programs improve affordability for customers most in need while preserving the Company's ability to recover prudent costs and continue investing in the infrastructure, operations, and compliance activities necessary to provide safe, adequate, and reliable service.

Q. HOW WOULD YOU SUMMARIZE THE COMPANY'S OVERALL APPROACH TO AFFORDABILITY WHILE CONTINUING TO MAINTAIN SAFE AND RELIABLE SERVICE?

A. The Company's approach to affordability is responsible, targeted, and balanced. Peoples administers and supports customer assistance, Universal Service, usage-reduction, and payment-flexibility tools for customers facing hardship, with program-specific details addressed by Company Witness Black. At the same time, the Company must continue making prudent investments necessary to maintain the safety, adequacy, and reliability of its natural gas system. This approach reflects the fundamental ratemaking principle, discussed throughout my testimony, that just and reasonable rates must support both customer protection and the utility's operational integrity. The Company's proposed rates are consistent with that principle.

V. CONCLUSIONS

Q. PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS.

A. My conclusions and recommendations are as follows:

- **Affordability concerns are legitimate, but broader program and policy questions should be addressed outside this base rate case**. The testimony of OCA Witnesses Michael Deupree and Roger Colton, OSBA Witness Mark Ewen, PWPTF Witness Jennifer Warabak and CAUSE-PA Witness Patrick Cicero identifies real customer affordability concerns. Those concerns warrant attention, but questions regarding program design, funding levels, enrollment, and broader affordability policy are more appropriately evaluated through the Commission's Universal Service Program review processes, rulemakings, or other focused policy proceedings, rather than by departing from cost-of-service ratemaking in this base rate case.

- **No single affordability metric is determinative, and metric development should occur in a focused forum.** Energy burden, arrears, payment behavior, household resources, and bill volatility provide useful context, but each metric has limitations and should be considered together with customer-level evidence. To the extent the Commission seeks to develop a more comprehensive understanding of affordability, that assessment is better suited to a Universal Service Program review, rulemaking, or other focused policy proceeding where parties can evaluate definitions, data sources, thresholds, customer segments, and program objectives on a consistent record.
- **Customer-level affordability analysis provides important context for evaluating the requested rate increase..** The customer-level gas-burden analysis provides important context for the Commission's evaluation of the Company's requested rate increase. Under current rates, Peoples' residential gas bills are generally within reasonable affordability ranges for most customers: the median gas burden is approximately 2.00%, and 90% of residential customers have a gas burden of 4.70% or below. The analysis provides important context regarding current affordability conditions for Peoples' customers, while the proposed rate increase should continue to be evaluated within the Commission's traditional prudence and cost-of-service framework.
- **CAP effectiveness and potential program changes should be evaluated in the appropriate program forum.** The CAP-specific analysis shows that existing CAP benefits materially reduce gas burdens and payment obligations for enrolled customers. CAP benefits reduce the average gas burden from 10.50% to 4.00%, reduce the median gas burden from 7.40% to 4.00%, reduce the 95th percentile gas burden from 26.20% to 6.60%, and reduce the median annual bill by more than 50%. These

results support the conclusion that CAP is functioning as an effective affordability tool for enrolled customers.

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does.

Cyndee Fang

Ms. Fang is a utility regulatory and pricing executive with more than 20 years of experience leading regulatory strategy, rate design, cost recovery, and affordability initiatives. She has served as an expert witness in numerous proceedings and jurisdictions and is recognized for developing practical, data-driven solutions to complex utility policy and pricing challenges.

EDUCATION

University of Minnesota, Ph.D. (ABD), Applied Economics

University of California, Berkeley, B.S., Political Economics of Natural Resources

YEARS EXPERIENCE

20+

RELEVANT EXPERTISE

Expert Witness, Allocated Cost of Service & Rate Design, Regulatory Strategy

PROFESSIONAL HISTORY

ATRIUM ECONOMICS

DIRECTOR, 2024 - CURRENT

- Expert witness focused on the following areas:
  - Regulatory Policy & Strategy;
  - Cost Recovery & Alternative Regulatory Mechanisms;
  - Allocated Cost of Service Studies & other Base Rate Case issues; and
  - Rate Design.

NORTHWESTERN ENERGY

VICE PRESIDENT - REGULATORY; 2021 - 2024

- Oversaw the Company's regulatory activities in Montana, South Dakota, and Nebraska.
- Developed and executed a regulatory strategy to advance a more constructive regulatory framework to meet the Company's strategic needs.
- Established an in-house cost of service and rate design team.
- Led regulatory strategy for Montana rate reviews, including proposals to modernize and strengthen the regulatory framework.

SAN DIEGO GAS AND ELECTRIC

ENERGY SUPPLY - ORIGINATION & PORTFOLIO DESIGN MANAGER; 2020 – 2021

- Led electric and fuel procurement portfolio design as SDG&E right-sized its portfolio, using market analytics to guide long-term strategy, daily optimization, and forward planning.
- Led competitive procurement of renewable and conventional resources beyond one year to meet SDG&E's energy and resource capacity needs.

FORECASTING, RESEARCH & ANALYTICS – MANAGER OF ENERGY RESEARCH & ANALYSIS; 2018 – 2020

- Led load forecasting, research, and analysis teams to advance data-driven decision-making in support of the company's strategic objectives, including operational improvements responsive to evolving California energy policy.
- Developed collaborative internal stakeholder processes to align the company's direction on electric sales forecasting, including key drivers and CCA expansion.
- Built collaborative relationships with external stakeholders to support the company's strategic objectives related to the sales forecast.

RATES AND PRICING – MANAGER OF CUSTOMER PRICING; 2017 – 2018

- Oversaw pricing policy to support SDG&E's strategic objectives and ensure fair, equitable rates for 1.4 million electric customers.
- Developed, advocated, and implemented the company's rate strategy, including regulatory filings to support that strategy.
- Developed collaborative internal stakeholder processes to align the company's direction on electric rates.
- Built collaborative relationships with external stakeholders, served as a witness in regulatory proceedings, and led settlement negotiations in support of the company's rate strategy.

RATE STRATEGY AND ANALYSIS MANAGER; 2015 – 2017
ELECTRIC RATES MANAGER; 2010 – 2015
PRINCIPAL/REGULATORY ECONOMIC ADVISOR; 2006 - 2010

MINNESOTA DEPARTMENT OF COMMERCE

PUBLIC UTILITIES RATES ANALYST; 2003 - 2006

- Developed the Minnesota Department of Commerce's positions on energy policy matters and presented those positions before the Minnesota Public Utilities Commission.
- Supported implementation of Minnesota's Renewable Energy Objective, including establishment of the Minnesota Renewable Energy Tracking System and review of utility compliance filings, integrated resource plans, and certificates of need.

REGULATORY EXPERIENCE

Alternative Regulatory Mechanisms/Cost Recovery

- Consideration of the Formula Rate Mechanism Tariff Revision Designated as TA 353-4 *on behalf of ENSTAR Natural Gas Company, LLC of Alaska* (Docket No. U-25-013). Filed April 2025.
- 2022 Montana Rate Review (Docket No. 2022.07.078) - Witness: Priority Regulatory Mechanisms proposing new revenue adjustment mechanisms and redesign of existing mechanisms https://www.northwesternenergy.com/docs/default- source/default-document-library/billing-and-payment/2022-montana-rate-review/08-fang- direct-testimony-regulatory-policy.pdf
- PCIA Reform (A.17-04-018) - Joint Application of Southern California Edison Company, Pacific Gas and Electric Company, and San Diego Gas & Electric Company for Approval of the Portfolio Allocation Methodology for All Customers – *Cost Recovery and Rate Design witness for SDG&E*
- Establishment of Tree Mortality Non-Bypassable Charge (TM-NBC) (A.16-11-005) Application to Establish Non-Bypassable Charge ("NBC") for Above-Market Costs Associated with Tree Mortality Power Purchase Agreements ("Tree Mortality") in Compliance with Senate Bill 859 and Resolution E-4805 – *Cost Recovery and Rate Design witness for SDG&E*
- SDG&E's Wildfire Expense Memorandum Account (WEMA) Proceeding (A.15-09-010) – *Cost Recovery witness*
- SONGS Decommissioning (A.14-12-007) Joint Application of SDG&E and SCE for 2014 SONGS Units 2 & 3 Decommissioning Cost Estimate and related Decommissioning – *Cost Recovery witness*
- Establishment of Cost Allocation Mechanism (CAM) (A.11-05-023) - SDG&E's Authority to Enter into Purchase Power Tolling Agreements with Escondido Energy Center, Pio Pico Energy Center and Quail Brush Power – *Cost Recovery and Rate Design witness*
- ERRA Trigger (A.17-05-012) Expedited Application of San Diego Gas & Electric Under the Energy Resource Recovery Account Trigger Mechanism
- SDG&E's Energy Resource Recovery Account (ERRA) Forecast Application for the recovery of costs associated with electric procurement – *Cost Recovery and Rate Design witness, multiple years*

Affordability

- 2026 Base Rate Case *on behalf of UGI Utilities, Inc. – Gas Division* (Docket No. R-2025-3059523) - *rebuttal witness to address general affordability concerns*. Filed May 2026.
- Affordability Rulemaking – R.18-07-006: Order Instituting Rulemaking to Establish A Framework and Processes for Assessing the Affordability of Utility Service – *SDG&E lead*
- Residential Essential Use Study – A.19-11-019: Joint Utility Proposal for the Study to Identify Electric Essential Usage for Residential Customers – *SDG&E lead*

- A.17-10-007: SDG&E 2019 General Rate Case – *rebuttal witness addressing affordability*
- Residential TOU Exclusions Pursuant to Section 745 – R.12-06-013: To ensure residential customers defaulting to TOU do not experience unreasonable hardship under TOU rates – *Rate Design Policy witness*

Future of Gas

- Petition of the Office of People's Counsel for Near-Term, Priority Actions and Comprehensive, Long-Term Planning for Maryland's Gas Companies *on behalf of NiSOURCE d/b/a Columbia Gas of Maryland, Inc.* (Case No. 9707) Filed February 2026.
- Assessment of Potential Gas LDC Capital Transition Costs and Analysis of Depreciation and Alternative Cost Recovery Approaches for Pathways to Commonwealth Decarbonization Goals *on behalf of Massachusetts Gas Local Distribution Companies (National Grid; Eversource Energy; Berkshire Gas Company; Liberty Utilities; Unitil)* Filed March 2025.
- Strategic Targeted Pipe Replacement Plan *on behalf of Washington Gas and Light Company of the District of Columbia* (Formal Case No. 1179) – rebuttal witness: responding to parties on risk of stranded assets and stranded costs. Filed January 2025.

Base Rate Case/Allocated Cost of Service

- In the Matter of the Application of Ohio Edison Company, The Cleveland Electric Illuminating Company and The Toledo Edison Company for an Increase in Electric Distribution Rates; for Tariff Approval; for Approval to Change Accounting Methods; and for Approval of Miscellaneous Customer Programs (Case Nos. 26-0347-EL-AIR; 26-0348-EL-ATA; 26-0349-EL-AAM; 26-0350-EL-UNC)– *witness: Load forecast process and projected billing units for TYRP*. Filed May 2026.
- In the Matter of the Application of Duke Energy Ohio, Inc., for an Increase in Electric Distribution Rates; for Tariff Approval; and for Approval to Change Accounting Methods (Case Nos. 26-132-EL-AIR; 26-133-EL-ATA; 26-134-EL-AAM)– *witness: cost of service study*. Filed March 2026.
- 2026 Base Rate Case on behalf of UGI Utilities, Inc. – Electric Division (Docket No. R-2025-3059430) – *witness: Cost of Service Revenue Allocation Rate Design*. Filed March 2026.
- In the matter of the application of SEMCO Energy Gas Company for authority to increase its rates for the distribution and transportation of natural gas and for other relief. (Case No. U-22002) – *witness: billing determinants, allocated cost of service study, weather normalization adjustment mechanisms.* Filed February 2026.
- Washington Gas Light Company's Application for Authority to Increase Rates and Charges for Natural Gas (Case No. 9849) – *Witness: Class Cost of Service Studies, Revenue Apportionment, and Rate Design*. Filed December 2025.

- 2022 Montana Rate Review (Docket No. 2022.07.078) - Witness: Allocated Cost of Service and Rate Design presenting the Company's moderation proposals to allocated cost of service and rate design for customers https://www.northwesternenergy.com/docs/default-source/default-document-library/billing- and-payment/2022-montana-rate-review/31-fang-acos-rd-direct-testimony.pdf
- SDG&E General Rate Case Application for Authority to Update its Electric and Gas Revenue Requirements and Base Rates - *Cost Recovery and Rate Design witness; multiple years*
- SDG&E General Rate Case Phase 2 Application for Authority to Update Marginal Costs, Cost Allocation, and Electric Rate Design - *Rate Design and Policy Witness*

Rate Design

Time-Variant Pricing and Residential Default Time-of-Use

- The Narragansett Electric Company d/b/a Rhode Island Energy Application for Approval of a Change in Electric and Gas Base Distribution Rates Pursuant to R.I. Gen. Laws §§39-3-10 and 39-3-11 (Docket No. 25-45-GE) – Witness: presenting the Company's framework for development of time-varying rates ("TVR") and a TVR implementation plan. Filed November 2025.
- Petition for Approval of (1) Time of Use ("TOU") and Critical Peak Pricing ("CPP") Rates and (2) Modification of the TOU Summer Period for the CPP Pilot Program, and (3) CEI South's Rate RS-CPP Tariff *on behalf of Southern Indiana Gas and Electric Company d/b/a CenterPoint Energy Indiana South* (Cause No. 46263) Filed June 2025.
- Application of San Diego Gas & Electric Company for Authority to Update Electric Rate Design Regarding Residential Default Time-Of-Use Rates and Fixed Charges (A.17-12-013)
- Residential Rate Reform (R.12-06-013) - SDG&E's Application in response to Order Instituting Rulemaking on the Commission's Own Motion to Conduct a Comprehensive Examination of Investor Owned Electric Utilities' Residential Rate Structures, the Transition to Time Varying and Dynamic Rates, and Other Statutory Obligations – *multiple phases*
- SDG&E's 2016 General Rate Case Phase 2 Proceeding (A.15-04-012) - includes proposal to update TOU periods
- SDG&E's 2015 Rate Design Window Filing (A.14-01-027) – includes proposal to update TOU periods and residential baseline

Innovative Rate Design and Emerging Technologies

- SDG&E's Electric Vehicle Grid Integration (VGI) Pilot Program (A.14-04-014) – *Rate Design Policy and Cost Recovery witness*
    - SDG&E was recognized as the 2020 Investor-Owned Utility of the Year by Smart Electric Power Alliance (SEPA) for its "Power Your Drive" program and the innovative VGI rate, an hourly dynamic grid integrated rate. https://sepapower.org/knowledge/2020-sepa-power-players- award-winners/

- Net Energy Metering Reform (R.14-07-002) - SDG&E Application in response to Order Instituting Rulemaking to Develop a Successor to Existing Net Energy Metering Tariffs Pursuant to Public Utilities Code Section 2827.1, and to Address Other Issues Related to Net Energy Metering
- Application of SDG&E for Authority to Implement Priority Review and Standard Review Proposals to Accelerate Widespread Transportation Electrification (A.17-01-020) – *Rate Design Policy and Cost Recovery witness*

Economic Development Rates

- Application of San Diego Gas & Electric Company for Authority to Implement Rate Relief and Increase Spend in Support of the San Diego Unified Port District's Energy Management Plan (A.17-09-005) – *Cost Recovery and Rate Design witness*
- Application of SDG&E for Authority to Implement Economic Development Rates (A.17-02-008) – *Cost Recovery and Rate Design witness*

PREPARED REBUTTAL TESTIMONY OF
STEVEN KOLICH
DIRECTOR GAS SUPPLY
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: July 16, 2026
DATE ADMITTED: _____

TABLE OF CONTENTS

I. INTRODUCTION 1

II. DEFINITIONS 2

III. POR PROGRAM 2

IV. CONCLUSION 5

PREPARED REBUTTAL TESTIMONY OF
STEVEN KOLICH

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Steven P. Kolich. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as the Director, Gas Supply. In this position, I manage the team that provides the gas supply acquisition services and administers the transportation services programs for Peoples Natural Gas Company LLC ("Peoples," "Peoples Natural Gas" or "the Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. In my rebuttal testimony, I respond to certain recommendations raised by CAUSE-PA Witness Patrick Cicero regarding the Company's Purchase of Receivable ("POR") Program.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

II. DEFINITIONS

Q. WHAT IS RATE GS-T GENERAL SERVICE TRANSPORTATION?

A. Rate GS-T General Service – Transportation provides customers with the option to purchase natural gas from a third-party supplier while utilizing Peoples' distribution system to transport and deliver that gas to their premises. Under this rate, the customer is responsible for procuring its gas supply, and Peoples provides transportation, balancing, metering, and related delivery services pursuant to its approved tariff. Peoples is required by its Pennsylvania Public Utility Commission ("PUC" or the "Commission") approved tariff and authorized by the Pennsylvania Public Utility Code to offer this program.

Q. WHAT IS THE PRICE TO COMPARE ("PTC")?

A. The PTC is the Company's default service price and serves as the gas supply benchmark for the purpose of allowing customers to compare the price of gas supply offered by the Company with the price of gas supply offered by suppliers.

III. POR PROGRAM

Q. WHAT IS THE POR PROGRAM?

A. Peoples' POR Program enables participating Natural Gas Suppliers ("NGS") to sell eligible customer commodity receivables to Peoples at a tariff-approved discount. Participating suppliers must comply with the requirements of Peoples' tariff, and only eligible basic natural gas supply charges qualify for purchase under the program. In exchange, Peoples assumes responsibility for consolidated billing, collection, and uncollectible account risk associated with those receivables which facilitate customer choice and participation in Pennsylvania's competitive natural gas market. Consolidated billing is a billing

arrangement under which Peoples issues a single bill containing both the Company's delivery charges and a participating Natural Gas Supplier's commodity charges and is mandatory if participating in the POR program. This approach provides customers with the convenience of one bill and one payment while enabling participation in Pennsylvania's competitive natural gas market. Suppliers may also choose consolidated billing without participating in the POR but would be responsible for their own collections if their charges go unpaid.

Q. DID ANY PARTIES RAISE CONCERNS REGARDING THE POR PROGRAM?

A. Yes. CAUSE-PA Witness Cicero proposes that the Company provide notice to suppliers that as of June 1, 2027, the Company will no longer purchase the receivables from participating suppliers unless the supplier provides natural gas supply service at a price that is at or below the Company's default service price, also known as the PTC. (CAUSE-PA Statement 1, pp. 83-89.)

Q. WHAT REASONING DID MR. CICERO PROVIDE FOR HIS PROPOSAL?

A. Witness Cicero points to data indicating that residential shopping customers have paid more than default service customers. (CAUSE-PA Statement 1, pp. 85-86.) He also states that suppliers' participation in the POR program removes the risk proposed by uncollectible costs from suppliers, which leaves them with little incentive to moderate the prices that they charge customers. (CAUSE-PA Statement 1, p. 84.) Additionally, he argues that write-offs for shopping customers are much higher than non-shopping customers. (CAUSE-PA Statement 1, p. 87.)

Q. WHAT IS THE COMPANY'S RESPONSE?

A. Peoples administers its POR Program in accordance with PUC regulations and recognizes the important role POR programs have played in facilitating the entry of alternative suppliers into Pennsylvania's competitive natural gas market. By reducing suppliers' credit and collection risks, the POR program has helped remove barriers to participation and supported the development of retail competition. However, the Commission's competitive market framework was developed with the expectation that competition would provide benefits to customers.

When POR protections are coupled with unrestricted supplier pricing, the result can cause significant market distortions. POR programs insulate NGSs from much of the financial risk associated with uncollectible accounts and allow NGSs the ability to charge prices above or substantially above the utility's default service rate. This structure has led to excessive commodity charges and as a result, in most cases, shopping customers are paying more than the Company's default service customers.

Mr. Cicero's recommendation would not eliminate the Company's POR program or consolidated billing option, nor would it prevent suppliers from offering the same commodity pricing options currently available to customers. Rather, the recommendation would limit POR participation to suppliers whose prices are at or below the Company's PTC. In doing so, it would help reduce the risk that customers, including low-income customers or limited-credit customers, are enrolled in higher-priced gas commodity products and pay more than they would under the Company's default service rate.

Q. DO YOU BELIEVE THAT MR. CICERO'S RECOMMENDATION COULD HELP CUSTOMERS SAVE MONEY ON NATURAL GAS COMMODITY COSTS?

A. Yes. I believe the recommendation could help reduce customer costs. As of July 2026, approximately 95.8% of residential shopping customers pay more than the PTC for commodity service, and the average supplier price is 82% above the PTC, with some supplier prices reaching as much as ten times the PTC. If suppliers charging above the PTC are no longer permitted to participate in Peoples' POR program, many may choose not to offer those higher-priced products.

Q. PLEASE EXPLAIN THE LEVEL OF EFFORT AND POTENTIAL COSTS OF IMPLEMENTING MR. CICERO'S RECOMMENDATIONS?

A. The Company has not yet fully evaluated the level of effort or potential costs associated with implementing Mr. Cicero's recommendation because the proposal does not specify how the Company would be expected to adopt it. However, the Company expects any implementation costs to be minimal because it already has the capability for suppliers to operate both POR and non-POR pools. There would need to be clear rules for Suppliers regarding timing for entry into a POR pool and exiting a POR pool, as well as rules for communicating with customers.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

A. Yes, it does and I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

3. Increase in O&M of $1,738,446 related to Insurance expense referenced in the response to I&E-RE-21 (see Insurance section below). This increases the claim.

Please note that there is an increase in Cash Working Capital associated with these adjustments as well.

Q. PLEASE EXPLAIN THE IMPACT THESE ADJUSTMENTS HAVE ON THE COST OF SERVICE AS FILED?

A. The impact of these changes increases the overall claimed revenues by approximately $746,~~783~~ 833 excluding the cash working capital amount.

III. RESPONSE TO OTHER PARTIES ADJUSTMENTS

A. AVERAGE ANNUAL INCREASES

Q. PLEASE SUMMARIZE HOW THE COMPANY USED AVERAGE ANNUAL INCREASES TO MAKE ADJUSTMENTS TO CERTAIN HISTORIC TEST YEAR ("HTY") EXPENSES.

A. In order to appropriately project how certain expenses are expected to change during the FTY and FPFTY, the Company used a multi-year historical percentage experience change for each expense type individually and applied it to the HTY balances to determine the amount of change in balance to expect.

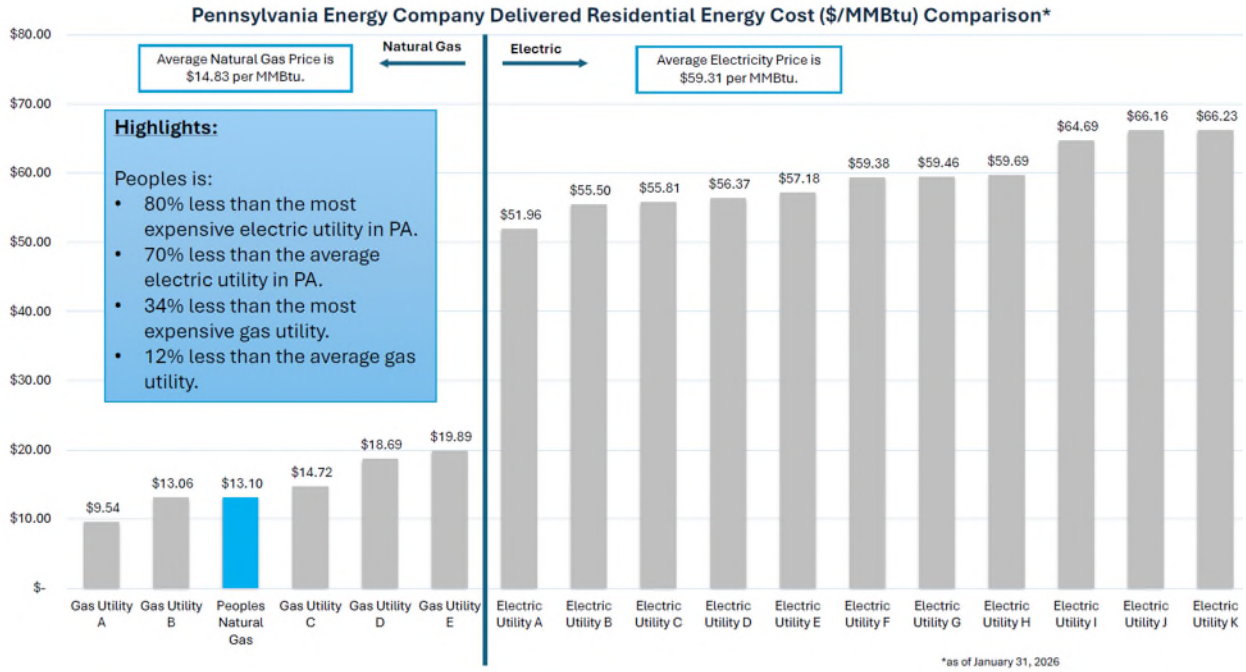
Q. HOW IS APPLYING AVERAGE ANNUAL INCREASES DIFFERENT THAN APPLYING A STANDARD INFLATION ADJUSTMENT?

A. Utilizing a multi-year average increase methodology, as described above, utilizes known and recently incurred activity for each specific expense account. Whereas a standard

A. Yes. Overall, based upon the assessment presented below, Peoples gas service is clearly affordable. This was determined by evaluating the cost of Peoples service compared to the other Pennsylvania energy companies (natural gas distribution utilities and electric utilities).

Q. EXPLAIN THE ANALYSIS PEOPLES CREATED TO DETERMINE THAT PEOPLES' SERVICE IS AFFORDABLE.

A. The Company has prepared **Peoples Natural Gas Exhibit No. MAH-1R**, which is attached to my testimony and also shown below. This compares the per MMBtu price of all PA-PUC regulated energy companies in Pennsylvania.



Q. PLEASE SUMMARIZE HOW PEOPLES COMPARES TO THE OTHER ENERGY COMPANIES.

III. CONCLUSION.....6

PREPARED REBUTTAL TESTIMONY OF
CAROL A. SCANLON

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. In my position as Rates Manager, I provide rates and regulatory services to Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 3 and my rebuttal testimony is set forth in Peoples Statement No. 3-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I will respond to certain points raised in the Office of Consumer Advocate ("OCA") witness Michael Deupree's rebuttal testimony on regulatory lag.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. RESPONSE TO OCA WITNESS DEUPREE ON REGULATORY LAG

Q. WITNESS DUEPREE CLAIMS THAT THE COMPANY'S ABILITY TO USE THE DISTRIBUTION SYSTEM IMPROVEMENT CHARGE ("DSIC") BETWEEN RATE CASES MITIGATES THE RISK PROPOSED BY REGULATORY LAG. (OCA Statement No. 1-R, p. 7.) ARE THERE ANY LIMITATIONS TO THE COMPANY'S USE OF THE DSIC?

A. Yes. There are two main limitations. First, as set forth in 66 Pa. C.S.A § 1358(a)(l), the DSIC mechanism has a limit of 5.00% of distribution revenue. Once this rate cap of 5.00% is reached, additional investments cannot be recovered through the DSIC mechanism until base rates are reset through a base rate case proceeding. The Company's current DSIC rate is 5% and will be until new rates from this base rate case go into effect later this year. I note that the Company has experienced a total of six quarterly periods from 2023, 2024 and 2026 where the fixed costs eligible for recovery under DSIC surpassed the rate cap of 5.00%, as evidenced in Table 1 below.

Table 1 – Quarterly DSIC Surcharge Rate Based on Investment Amounts for Periods Exceeding the DSIC Rate Cap

DSIC RATE BASED ON INVESTMENT FOR PERIODS OVER THE DSIC RATE CAP OF 5.00%

Quarterly Filing	2023	2024	2026
Jan 1		24.20%	
Apr 1		25.95%	
Jul 1	17.63%	28.51%	6.20%
Oct 1	20.27%		

As demonstrated in Table 1 above, the DSIC rate based on the Company's investment amount, if no cap existed, increased over 10% from July 1, 2023 through July 1, 2024. Further, the DSIC rate based on investment amount as of July 1, 2024, is over 5

times the DSIC cap amount of 5.00%. On October 1, 2024 the DSIC rate was re-set to zero due to new rates going into effect on September 27, 2024 from Peoples Base Rate Case at Docket No. R-2023-3044549. From April 1, 2025 through July 1, 2026 quarterly rate changes, the DSIC eligible plant through the reporting period has surpassed the eligible plant in Peoples base rates from the 2023 rate case. As of July 1, 2026, the DSIC rate reached the DSIC cap of 5%.

Second, the DSIC mechanism recovers costs for historical capital expenditures; it does not recover the revenue requirement associated with capital expenditures as they are incurred, as the company may do when using a Fully Projected Future Test Year in a base rate case. In other words, when a quarterly DSIC rate takes effect, the Company earns a return on and of capital expenditures incurred from one month to four months prior. For example, the July 1, 2026 rate provided the Company a return on capital expenditures incurred from March 2026 (four months earlier) through May 2026 (one month earlier).

Q. HAS THE COMPANY UTILIZED THE DSIC?

A. Yes. As illustrated in Table 2 below, the Company has used DSIC to offset the capital needs for its capital expenditure program. Starting July 1, 2023, the DSIC rate was turned on once the DSIC eligible plant exceeded the amounts included in base rates from the 2019 Peoples Base Rate Case (R-2018-3006818).

Table 2 – Effective Quarterly DSIC Surcharge Rate January 1, 2020-July 1, 2026

Quarterly Filing	2020	2021	2022	2023	2024	2025	2026
Jan 1	0.00%	-0.13%	0.00%	0.00%	5.00%[1/]	0.00%	3.57%
Apr 1	-0.13%	-0.06%	0.00%	0.00%	5.00%[1/]	0.42%	4.17%
Jul 1	-0.13%	0.00%	0.00%	5.00%[1/]	5.00%[1/]	0.42%	5.00%[1/]
Oct 1	-0.13%	0.00%	0.00%	5.00%[1/]	0.00%	0.83%	

[1/] DSIC surcharge over the 5% cap

Q. IS THE DSIC A VIABLE SOLUTION FOR THE COMPANY TO REDUCE REGULATORY LAG?

A. It helps, but it has its limits. The DSIC is not a complete solution to reduce regulatory lag at the existing 5% limit. Since the implementation of Peoples' 2023 base rate case, the Company was only able to utilize the DSIC mechanism for approximately 15 months (April 1, 2025 through July 1, 2026) before reaching the cap on July 1, 2026. At this point, Peoples' can no longer use the DSIC mechanism for any additional investments despite plans to spend significant amounts on capital expenditures from July 1, 2026 until new rates from this proceeding go into effect at the end of 2026.

Q. IS THERE ANYTHING ELSE THAT YOU WISH TO NOTE IN TERMS OF REGULATORY LAG?

A. Yes. I would like to state that the Company has only filed three rate cases in the past thirteen years (see Table 3 below). Prior to that, the former Peoples Gas Division filed a rate case in 2013 and the former Peoples Natural Gas Division filed a rate case in 2012.

Table 3 - Rate Case History

	Filing Date	Effective Date	FPFTY End
1	3/27/2026	12/27/2026	12/31/2027
2	12/29/2023	9/27/2024	9/20/2025
3	1/28/2019	10/29/2019	10/31/2020

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

IV. CONCLUSION.....8

PREPARED SURREBUTTAL TESTIMONY OF
RITA F. BLACK

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in Peoples Statement No. 10 and my rebuttal testimony is set forth in Peoples Statement No. 10-R.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I will respond to universal service program matters and issues pertaining to vulnerable populations discussed in the rebuttal testimony of Office of Consumer Advocate ("OCA")

witness Michael Dupree and Retail Energy Supply Association ("RESA") witness Francis Caliva.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. Yes. I am sponsoring Exhibit Peoples Natural Gas Exhibit No. RFB-1SR.

Q. HOW HAVE YOU ARRANGED YOUR SURREBUTTAL TESTIMONY?

A. My testimony is ordered by the witness to which I am responding.

II. RESPONSE TO OCA WITNESS MICHAEL DUPREE.

Q. PLEASE SUMMARIZE MR. DUPREE'S TESTIMONY WITH REGARDS TO THE LOW-INCOME USAGE REDUCTION PROGRAM ("LIURP") FUNDING RECOMMENDATION OF WITNESS JENNIFER WARABACK ON BEHALF OF THE PENNSYLVANIA WEATHERIZATION PROVIDERS TASK FORCE ("PWPTF").

A. On page 3 of his testimony, Mr. Dupree summarizes the position of PWPTF regarding PWPTF's proposal to increase the Company's LIURP budget by $975,000[1]. Mr. Dupree states, "The PWPTF recommends that annual LIURP funding be increased at least commensurate with the percentage increase in rates for residential customers that result from this proceeding."

[1] See PWPTF Stmt. 1, Page 7.

Q. DO YOU AGREE WITH MR. DUPREE'S SUMMARY OF PWPTF'S POSITION REGARDING LIURP FUNDING?

A. No. On page 7 of her testimony, Ms. Warabek recommends an increase of $975,000 to the LIURP budget. She goes on to explain her proposed increase was developed by considering an average job cost of $13,000 and a desire to increase the number of jobs completed annually by 75. She does not tie an increase in LIURP funding to the percentage increase in rates in this proceeding.

Q. DO YOU AGREE WITH MS. WARABEK'S DIRECT TESTIMONY REGARDING THE LIURP INCREASE?

A. I do not. I responded to Ms. Warabek's LIURP recommendation in my rebuttal testimony.

Q. IN HIS TESTIMONY, WITNESS DUPREE ASSERTS THE PROPOSED INCREASE IN THE RESIDENTIAL CUSTOMER CHARGE WILL LIKELY IMPACT LIURP PARTICIPATION[2]. DO YOU FORSEE SUCH AN IMPACT?

A. I do not. In both his Direct and Rebuttal testimony, Mr. Dupree appears to conclude that a higher residential customer charge leads to a lack of conservation efforts by customers as they are not as incentivized to reduce usage if those efforts will not correlate directly with lowering their monthly bill. He then ties this idea to LIURP participation and appears to conclude that if the proposed customer charge is approved, low-income households will begin using more gas, as they would not be incentivized to conserve, and thus more of these households would require LIURP services, leading to a need to increase LIURP

[2] See OCA Stmt. 1R, Page 3, lines 10 through 12.

funding. My experience with LIURP qualifying households does not align with this train of thought. To be eligible for LIURP services, a household must use 120 MCF or more annually. This is a significantly high threshold in comparison to typical residential household usage. The homes that we serve through LIURP are typically old housing stock, often in significant disrepair. These homes have little or no insulation and may also have very old heating equipment. All of these issues, which are directly impacting household usage, are beyond the ability of the household to control as income qualifying customers do not have the means to make these needed improvements. Therefore, approval of the proposed monthly charge will not have a corresponding impact to LIURP participation.

III. RESPONSE TO RESA WITNESS FRANCIS CALIVA

Q. IN HIS REBUTTAL TESTIMONY, MR. CALIVA RESPONDS TO THE DIRECT TESTIMONY OF THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA") PATRICK CICERO. MR. CALIVA POINTS TO LOW WRITE-OFF RATES FOR BOTH THE RESIDENTIAL CLASS IN TOTAL AND LOW-INCOME CUSTOMERS AS WELL IN HIS TESTIMONY. WOULD YOU LIKE TO RESPOND?

A. Yes, I would. Beginning on page 9 and continuing to page 10 of his rebuttal testimony, Mr. Caliva discusses the write-off percentages of receivables pertaining to suppliers for both residential and low-income groups. I think it is important to consider how the write-off process works in order to temper the claim that low write-offs indicate that pricing by suppliers participating in the Company's Purchase of Receivables ("POR") is not a concern. Accounts are only written off when a customer is no longer a customer of Peoples. If a customer remains in their home, or remains in the Peoples' service territory, any

balance they owe will continue to be part of their active account balance and is subject to collections activities. These balances are not reflected in the Company's write-offs. This matters, because if the argument is that write-offs are low for receivables pertaining to suppliers, therefore supplier pricing under POR is not a concern, then we have missed the full impact of supplier pricing for residential customers, in particular low income and senior populations.

Q. YOU MENTION THE IMPACT OF SUPPLIER PRICING TO LOW-INCOME AND SENIOR HOUSEHOLDS. WHAT HAVE YOU OBSERVED REGARDING THESE POPULATIONS?

A. In addition to my work with the Company's universal service programs, I also lead our compliance team as they respond to customer complaint cases submitted to the Pennsylvania Public Utility Commission ("PUC"). When a customer opens a complaint regarding a supplier issue, the Natural Gas Distribution Company ("NGDC") is also served with the complaint and must provide a response. My team maintains an informal tracker of supplier complaints that includes both the price the customer was being charged for natural gas commodity at the time of their complaint, along with notations from our team on whether the customer is a senior and/or has income at or below 150% of the federal poverty level. We have been tracking this information since 2024. Using this tracker, I prepared a table that reflects the average commodity price of customers filing supplier-related complaints in the year, the highest commodity price among those customer complaints and the percentage of the customers who are low-income or seniors. Some of these customers are both senior and low income.

Year	Avg. Supplier Price	High Supplier Price	Average PTC	Highest PTC	% Seniors	% Low-income
2024	$7.1272	$20.0730	$2.3511	$2.5214	40%	29%
2025	$7.2460	$21.9966	$3.4510	$4.2511	26%	20%
2026 (Jan to May)	$11.0025	$22.8990	$4.8948	$6.0732	35%	37%

The tracker is provided as Peoples Natural Gas Exhibit No. RFB-1SR.. To maintain pricing and customer confidentiality, I have removed customer details along with the name of the supplier involved. I included average and highest Peoples Price to Compare ("PTC") in the table above as a comparison point.

Q. THE TRACKER REFLECTS A RELATIVELY SMALL NUMBER OF ACCOUNTS. WHY DO YOU BELIEVE THIS TRACKER IS SIGNIFICANT?

A. Only a small portion of customers experiencing a utility concern contact the PUC. Many more contact their utility and/or supplier directly. As a result, we are only seeing a sub-set of customers in this informal tracker. I believe the tracker provides some important and concerning trend information for consideration in this discussion of how POR may be impacting the ability of suppliers to apply pricing. First, the average price increased from $7.1272 to $11.0025. The high price has also increased from $20.0730 to $22.8990. The average price (and the highest supplier price) is significantly higher than Peoples' PTC. The share of these customers that are identified as either seniors or low-income in 2026 is

more than 1/3 of all customers who filed a complaint pertaining to a supplier. This, in particular, is concerning as these are vulnerable populations that may not have a full understanding of alternative supplier pricing or contracts. And, as I noted earlier, write-off statistics do not capture active receivables. As we think about the senior population, for example, and their likelihood of remaining in one home for a long period of time, their balances pertaining to supplier charges are not reflected in write-off statistics. Company witness Steven Kolich provides a further discussion of pricing impacts to customers in Peoples Statement No. 21-SR.

Q. WHAT DO YOU CONCLUDE FROM YOUR REVIEW OF THE INFORMAL TRACKER AND THE TESTIMONY PROVIDED BY MR. CALIVA?

A. As the informal tracker shows, supplier prices are increasing and those increases have a direct impact on residential households, particularly if those households include seniors or low-income customers. Write-off rates are only one piece of data that should be considered in the discussion of the impact of supplier rates on any household, but in particular, vulnerable households. Write-off rates are not reflective of the current economic impact of supplier pricing to customers who remain active within Peoples' service territory.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

Surrebuttal Testimony of Jennifer E. Nelson

Topics: **Return on Equity**
Capital Structure

Dated: July 31, 2026

I. INTRODUCTION AND SUMMARY

Q. Please state your name and business address.

A. My name is Jennifer E. Nelson, and I am employed by Concentric Energy Advisors, Inc. ("Concentric") as a Vice President. My business address is 293 Boston Post Road West, Suite 500, Marlborough, MA 01752.

Q. Did you previously file testimony in this proceeding?

A. Yes. I submitted my direct testimony, **Peoples Natural Gas Company LLC Statement No. 15** ("Peoples St. No. 15"), to the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on behalf Peoples Natural Gas Company LLC ("Peoples", "Peoples Gas" or the "Company"), which is a wholly-owned subsidiary of PNG Companies LLC, which is ultimately owned by Essential Utilities, Inc. ("Essential"), on March 27, 2026. I also submitted rebuttal testimony, **Peoples Statement No. 15-R** ("Peoples St. No. 15-R") to the Commission on behalf of Peoples Gas on July 16, 2026.

Q. Are you sponsoring any surrebuttal schedules in this case?

A. No, I am not.

Q. What is the purpose of your surrebuttal testimony?

A. The purpose of my surrebuttal testimony is to respond to the rebuttal testimony of Mr. David J. Garrett on behalf of the Pennsylvania Office of Consumer Advocate ("OCA", "OCA St. 3-R") and the errata direct testimony of Mr. Patrick M. Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA", "CAUSE-PA St. 1 Errata"). My silence on a particular issue should not be construed as agreement with respect to that issue.

Q. Based on your review of the rebuttal testimony of Mr. Garrett and errata direct testimony of Mr. Cicero, do you propose any changes in your recommended return for Peoples in this proceeding?

A. No. Nothing contained in either Mr. Garrett's rebuttal testimony or Mr. Cicero's errata testimony changes my conclusions or recommendation in this proceeding. My analyses, positions, and recommendations made in my direct and rebuttal testimonies remain unchanged. Specifically, my 11.25 percent ROE recommendation (including management adder of 25 basis points) remains a just and reasonable estimate of Peoples Gas's cost of equity, and I continue to support Peoples Gas's requested 54.47 percent equity ratio. Further, I reiterate my responses to, and criticisms of, the Witnesses' direct testimonies that I discussed in my rebuttal testimony. I respond to select topics presented by Mr. Garrett in his rebuttal testimony and Mr. Cicero in his errata direct testimony.

Q. What does Mr. Garrett conclude in his rebuttal testimony?

A. Mr. Garrett concludes that Mr. Patel's proposed 10.2 percent ROE is too high, principally because Mr. Patel's Discounted Cash Flow ("DCF") model result of 11.33 percent relies on growth rates that Mr. Garrett characterizes as unsustainable, and because Mr. Garrett views Mr. Patel's 8.86 percent Kroll-based Capital Asset Pricing Model ("CAPM") result as generally consistent with his own 8.8 percent recommendation.[1]

Q. What is the basis for Mr. Garrett's arguments?

A. Mr. Garrett largely repeats arguments already made in his direct testimony and observes that his analysis resulted in a lower ROE than that recommended by Mr. Patel.

[1] OCA St. 3-R, at 1-2, 4-5.

Q. Please summarize Mr. Garrett's criticism of Mr. Patel's DCF analysis.

A. Mr. Garrett argues that Mr. Patel's DCF result is too high because Mr. Patel used an adjusted composite proxy group growth rate of approximately 8.10 percent (based on analyst earnings-per-share ("EPS") growth rates), rather than his own gross domestic product ("GDP") capped "sustainable" growth rate of 3.7 percent or alternative 6.2 percent "analyst" growth rate based on Value Line dividend growth rates.[2] These figures, however, are incorrect and do not match his direct testimony and exhibits that include a 3.8 percent GDP growth rate and 4.3 percent analyst growth rate.[3] Further, Mr. Garrett incorrectly states that Mr. Patel considered a five-year annual growth rate of 12.59 percent for Spire Inc ("Spire").[4] However, Mr. Patel's direct testimony stated that the 12.59 percent S&P growth estimate was for Southwest Gas Holdings ("Southwest Gas"), not Spire.[5] Additionally, Mr. Garrett ignores Mr. Patel's testimony that he excluded S&P's 12.59 percent estimate for Southwest Gas from his DCF analysis.[6]

Q. Do you agree with Mr. Garrett that analyst EPS growth rates should be rejected as unsustainable?

A. No. As I explained in my rebuttal testimony, analyst EPS growth rates are widely used in DCF analyses because earnings growth is the growth measure most directly tied to investor valuation and long-term dividend sustainability.[7] I also explained that both Mr. Patel and I used analyst EPS growth rates in our DCF models, while Mr. Garrett relied on dividend

growth and GDP growth measures that produced results well below reasonable market-based estimates of Peoples' cost of equity.[8]

Q. Does the evidence in your rebuttal testimony support the reasonableness of analyst EPS growth rates for gas utilities, rather than GDP growth rates?

A. Yes. My rebuttal testimony showed that the S&P 500 Utilities Index had a compound annual price-only growth rate of 7.33 percent from 2010 through May 2026 and that utility capital expenditures grew at compound annual rates that exceeded GDP over the three-, five-, and ten-year periods presented in my Figure 11.[9] Those data points support the conclusion that utility growth is not mechanically limited to GDP growth and that analyst EPS growth rates are not inherently overstated simply because they exceed long-term GDP growth.

Additionally, Mr. Garrett's 3.8 percent GDP growth rate estimate is far below the long-term average historical GDP growth rate of 6.4 percent.[10] Mr. Garrett has not explained what factors in the U.S. economy would cause future GDP growth to slow by 40 percent relative to historical GDP growth over the last nearly 80 years.

Q. What conclusion should the Commission draw regarding Mr. Garrett's DCF results?

A. The Commission should reject Mr. Garrett's DCF results and his position that utility earnings growth rates are unsustainable. As explained in my rebuttal testimony, his 7.1 percent and 7.6 percent DCF estimates are not reliable indicators of Peoples' cost of equity

[8] Peoples St. 15-R, at 75-76.
[9] Peoples St. 15-R, at 74.
[10] Source: Federal Reserve Bank of St. Louis, FRED Economic Database, series GDP 1947-2025, https://fred.stlouisfed.org/series/GDP#

because they are based on growth assumptions that are inconsistent with investor expectations, inconsistent with utility capital investment trends, and materially below recently authorized ROEs for natural gas utilities in Pennsylvania and across the United States.

Q. Please summarize Mr. Garrett's CAPM position in his rebuttal testimony.

A. Mr. Garrett states that his CAPM analysis indicates a cost of equity of 8.8 percent for Peoples and that Mr. Patel's Kroll-based CAPM result of 8.86 percent indicates a reasonable cost of equity.[11] He also states that Mr. Patel's higher CAPM result of 10.28 percent should be rejected because it overstates Peoples' cost of equity.[12]

Q. Do you agree that Mr. Patel's 8.86 percent Kroll-based CAPM result validates Mr. Garrett's 8.8 percent ROE recommendation?[13]

A. No. The fact that two flawed CAPM estimates are numerically similar does not make either estimate reliable. As stated in my rebuttal testimony, I disagree with reliance on Kroll's recommended equity risk premium because Kroll's methodology is not transparent enough to demonstrate that its market risk premium is developed in relation to the contemporaneous risk-free rate.[14] As I explained in my rebuttal testimony, the market risk premium and risk-free rate are interrelated, but my analysis of Kroll's published recommendations showed no clear relationship between the two variables, with the risk-

[14] Peoples St. 15-R, at 84-86.

free rate explaining only 3.97 percent of the change in Kroll's recommended equity risk premium.[15]

Q. What is your conclusion regarding Mr. Garrett's CAPM analysis?

A. Mr. Garrett's CAPM analysis should be rejected because it produces an ROE estimate that is below nearly all authorized natural gas utility ROEs, relies on market risk premium inputs that understate current investor return requirements, and fails to reflect the current higher-cost capital market environment.

Q. Please summarize the CAUSE-PA errata filed by Mr. Cicero.[16]

A. Mr. Cicero's errata revises certain calculations in CAUSE-PA Statement No. 1 related to the revenue requirement impact of applying his 7.68 percent ROE under alternative capital structure scenarios. The errata changes the arithmetic, but does not change the underlying analytical concern: a 7.68 percent ROE remains far below any reasonable market-based estimate of Peoples' cost of equity. The correction therefore does not provide a basis for the Commission to adopt Mr. Cicero's analysis or to impute a more leveraged capital structure to Peoples.

Q. Does the CAUSE-PA errata change your opinion regarding Mr. Cicero's ROE analysis?

A. No. The errata does not address the central capital structure concern raised in my rebuttal testimony: Peoples' requested 54.47 percent common equity ratio should be evaluated based on the Company's regulated utility operations, financing needs, business risks, and

[15] Peoples St. 15-R, at 85.
[16] CAUSE-PA Stmt. 1 Errata, at 45.

ability to attract capital, rather than by mechanically imputing a parent-company or alternative capital structure. The errata also does not address the fact that increasing leverage is not costless. A proposal that increases the debt ratio while holding the cost of debt and cost of equity fixed wholly ignores the increase in financial risk that would result from a more leveraged capital structure.

Q. What conclusion should the Commission draw from the CAUSE-PA errata?

A. The Commission should conclude that the errata does not cure the fundamental flaws in CAUSE-PA's cost of capital proposal. A corrected arithmetic table does not transform an unsupported 7.68 percent ROE into a market-based estimate of Peoples' cost of equity, nor does it justify imputing a parent company capital structure to the regulated operating utility.

Q. What is your conclusion regarding the positions advanced in Mr. Garrett's rebuttal testimony and Mr. Cicero's errata?

A. Neither filing changes my recommendations or undermines my analysis and conclusions. Mr. Garrett's rebuttal testimony does not undermine my 11.00 percent base ROE recommendation or the Company's requested 11.25 percent ROE, inclusive of the management performance adder. His rebuttal testimony selectively focuses on Mr. Patel's 8.86 percent Kroll CAPM result while ignoring the full record that supports an ROE within my recommended range. The filed workpapers also show that Mr. Garrett's criticism of Mr. Patel's growth rate is overstated and, in part, factually inaccurate. Mr. Patel did not use a 12.59 percent Spire growth rate; the 12.59 percent S&P estimate related to Southwest Gas, and Mr. Patel removed that estimate from his DCF analysis. Mr. Garrett's own DCF analysis relies on Value Line dividend growth rates and a GDP cap, which are not comparable to Mr. Patel's EPS-based DCF analysis.

Mr. Cicero's errata likewise does not affect my recommendation. It revises numerical outputs associated with his 7.68 percent ROE, but it does not address the fundamental problem that 7.68 percent is far below a reasonable market-based cost of equity and does not support imputing a more leveraged capital structure to Peoples. For these reasons, the Commission should reject Mr. Garrett's 8.80 percent ROE recommendation and CAUSE-PA's 7.68 percent ROE analysis, approve Peoples' requested 54.47 percent common equity ratio, and authorize an ROE consistent with my 11.00 percent base ROE recommendation and the Company's 11.25 percent final ROE request.

Q. Does this conclude your surrebuttal testimony?

A. Yes, it does.

III. CUSTOMER CHARGES 3
IV. UNIVERSAL SERVICE COST RECOVERY 5

PREPARED SURREBUTTAL TESTIMONY
OF JOHN D. TAYLOR

I. WITNESS IDENTIFICATION AND BACKGROUND

Q. PLEASE STATE YOUR NAME, AFFILIATION, AND BUSINESS ADDRESS.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Chief Executive Officer. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. DID YOU PREVIOUSLY SUBMIT TESTIMONY IN THIS PROCEEDING ON BEHALF OF PEOPLES NATURAL GAS COMPANY LLC ("PEOPLES" OR THE "COMPANY")?

A. Yes. I submitted my direct and rebuttal testimony, **Peoples Statement No. 17 and 17-R**, on March 27, 2026, and July 16, 2026, respectively.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. My surrebuttal testimony responds to certain portions of the rebuttal testimony submitted by the Pennsylvania Office of Consumer Advocate Witness Michael W. Deupree ("Witness Deupree") and the Pennsylvania Office of Small Business Advocate Witness Mark D. Ewen ("Witness Ewen") regarding revenue allocation, customer charges and the Universal Service Program cost recovery.

II. REVENUE ALLOCATION

Q. PLEASE SUMMARIZE THE REVENUE ALLOCATION RECOMMENDATIONS PRESENTED IN THE INTERVENORS' REBUTTAL TESTIMONY.

A. Witness Deupree continues to recommend a revenue allocation based on his alternative ACOSS, together with a maximum class increase of 1.15 times the system average and a minimum increase of 0.50 times the system average.[1] Witness Ewen, whose original revenue allocation proposal used the Company's ACOSS, states in rebuttal that he considers Witness Deupree's proposal reasonable given the size of the proposed rate increases, although he acknowledges that Witness Deupree's proposal places greater emphasis on gradualism than movement toward cost-based rates.[2]

Q. DOES WITNESS EWEN'S REBUTTAL TESTIMONY CHANGE YOUR OPINION?

A. No. Witness Ewen does not present a new cost-of-service study or new revenue allocation analysis. Rather, he expresses support for Witness Deupree's proposal as a matter of gradualism. As explained in my rebuttal testimony, I continue to believe the Company's proposed revenue allocation provides the more reasonable balance of class cost responsibility, gradualism, rate stability, and customer impacts. Witness Ewen's preference for a different balance between gradualism and movement toward cost-based rates does not change that conclusion.

Q. HOW DO YOU RESPOND TO WITNESS DEUPREE'S CONTINUED REVENUE ALLOCATION RECOMMENDATION?

A. Witness Deupree's recommendation remains dependent on his alternative ACOSS and his proposed class caps and floors. I addressed both issues in my rebuttal testimony. Nothing in his rebuttal testimony changes my conclusion that the Company's proposed revenue

[1] OCA Statement No. 1R, at p. 5
[2] OSBA Statement No. 2-R, at pp. 2-3

allocation more reasonably reflects class cost responsibility while also considering gradualism and rate stability.

III. CUSTOMER CHARGES

Q. PLEASE SUMMARIZE WITNESS DEUPREE'S REBUTTAL TESTIMONY REGARDING THE COMPANY'S PROPOSED CUSTOMER CHARGES.

A. Witness Deupree continues to recommend rejection of the Company's proposed customer charges. In addition to reiterating the concerns presented in his direct testimony, he disagrees with Witness Cline's decision not to recommend a modification to the Company's customer charge proposal. Witness Deupree maintains that the proposed charges are not supported by an appropriate cost-of-service methodology and that the Company's future test year, Distribution System Improvement Charge ("DSIC"), and proposed Weather Normalization Adjustment ("WNA") reduce the need to increase the fixed monthly charges. He also continues to raise concerns regarding conservation, affordability, and customer bill impacts.[3]

Q. DOES WITNESS DEUPREE'S DISAGREEMENT WITH WITNESS CLINE CHANGE YOUR OPINION REGARDING THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. No. Witness Deupree's disagreement with Witness Cline does not provide new evidence regarding the reasonableness of the Company's proposal. Witness Cline evaluated the Company's proposed customer charges and did not recommend that they be modified. While Witness Deupree may disagree with that conclusion, his rebuttal testimony

[3] OCA Statement No. 1R, at pp. 5-7

reiterates the same methodological and policy arguments that I addressed in my rebuttal testimony.

Q. HOW DO YOU RESPOND TO WITNESS DEUPREE'S CONTINUED RELIANCE ON HIS ALTERNATIVE COST-OF-SERVICE METHODOLOGY?

A. As explained in my rebuttal testimony, I disagree with the methodology upon which Witness Deupree evaluates the Company's customer charges. His conclusions are driven in substantial part by his rejection of a customer-related component of distribution mains. I continue to believe the Company's customer cost study provides a more reasonable basis for evaluating the customer-related costs of providing service. The Company's proposed charges remain below the full level of customer-related costs indicated by that study and represent a measured movement toward more cost-reflective rates.

Q. DO THE FUTURE TEST YEAR, DSIC, OR PROPOSED WNA ELIMINATE THE BASIS FOR THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. No. Those mechanisms address different regulatory and revenue-recovery issues. A future test year is intended to align rates with the period in which they will be in effect. The DSIC provides recovery of qualifying infrastructure investment between base rate cases, and the proposed WNA addresses variations in usage associated with weather. None of those mechanisms changes the customer-related costs the Company incurs to connect, meter, bill, and remain available to serve each customer. Accordingly, none of these mechanisms eliminates the basis for recovering an appropriate portion of those costs through the monthly customer charge.

Q. DOES WITNESS DEUPREE'S REBUTTAL TESTIMONY CHANGE YOUR CONCLUSIONS REGARDING CONSERVATION, AFFORDABILITY, OR CUSTOMER IMPACTS?

A. No. I addressed those considerations in my rebuttal testimony. Customer charges are not established solely by reference to a cost study, but the study provides important information concerning the costs caused by each customer. The Company's proposal balances that information with gradualism, affordability, conservation, bill impacts, and revenue stability. Nothing in Witness Deupree's rebuttal testimony demonstrates that the Company failed to consider those objectives or that its proposed charges are unreasonable.

Q. HAS YOUR RECOMMENDATION REGARDING THE COMPANY'S PROPOSED CUSTOMER CHARGES CHANGED?

A. No. For the reasons discussed in my rebuttal and surrebuttal testimony, I continue to recommend approval of the Company's proposed customer charges.

IV. UNIVERSAL SERVICE COST RECOVERY

Q. PLEASE SUMMARIZE WITNESS EWEN'S REBUTTAL TESTIMONY REGARDING UNIVERSAL SERVICE COST RECOVERY.

A. Witness Ewen continues to oppose proposals to allocate universal service costs to non-residential customer classes. He recommends that such costs continue to be recovered solely from residential customers and further states that, if the Commission were to approve broader recovery, those costs should be separately identified on customer bills.

Q. DOES WITNESS EWEN'S REBUTTAL TESTIMONY CHANGE YOUR OPINION REGARDING THE COMPANY'S PROPOSED TREATMENT OF UNIVERSAL SERVICE COSTS?

A. No. Witness Ewen's rebuttal testimony does not present new information that changes the conclusions I reached in my rebuttal testimony. As I explained there, any proposal to expand recovery of universal service costs beyond the residential class would represent a significant policy decision that should not be considered in isolation in this proceeding.

Before adopting such a change, the Commission should evaluate both the appropriate allocation of those costs among customer classes and the resulting bill impacts under the proposed recovery mechanism.

Q. HAVE YOUR RECOMMENDATIONS REGARDING UNIVERSAL SERVICE COST RECOVERY CHANGED?

A. No. I continue to recommend that the Commission approve the Company's proposed and current treatment of universal service costs which recover universal service costs entirely from Residential customers. If the Commission ultimately determines that a broader allocation of universal service costs is appropriate as a matter of policy, I continue to believe such a policy should be implemented consistently across Pennsylvania's natural gas utilities rather than on a utility-by-utility basis.

Q. HAVE THE INTERVENORS' REBUTTAL TESTIMONIES CAUSED YOU TO CHANGE ANY OF THE RECOMMENDATIONS PRESENTED IN YOUR DIRECT OR REBUTTAL TESTIMONY?

A. No. For the reasons discussed in my rebuttal, and surrebuttal testimony, I continue to recommend that the Commission approve the Company's proposed revenue allocation, customer charges, and treatment of universal service costs.

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

III. CONCLUSION 8

PREPARED REBUTTAL TESTIMONY OF
STEVEN KOLICH

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Steven P. Kolich. My business address is 375 North Shore Drive, Pittsburgh, Pennsylvania 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as the Director, Gas Supply. In this position, I manage the team that provides the gas supply acquisition services and administers the transportation services programs for Peoples Natural Gas Company LLC ("Peoples," "Peoples Natural Gas" or "the Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT TESTIMONY IN THIS PROCEEDING?

A. No. I did not submit direct testimony in this proceeding, but my rebuttal testimony is **Peoples Statement No. 21-R**.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. In my surrebuttal testimony, I respond to certain recommendations raised by Retail Energy Supply Association ("RESA") Witness Francis S. Caliva III regarding the Company's Purchase of Receivable ("POR") Program.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

II. POR PROGRAM

Q. WHAT DO YOU ADDRESS IN YOUR SURREBUTTAL TESTIMONY?

A. I respond to RESA Witness Francis S. Caliva III's rebuttal testimony opposing CAUSE-PA Witness Patrick Cicero's recommendation to condition participation in Peoples' POR Program on suppliers pricing POR-eligible basic natural gas supply at or below Peoples' applicable Price to Compare, or PTC.

Q. HOW DOES MR. CALIVA CHARACTERIZE MR. CICERO'S RECOMMENDATIONS REGARDING THE COMPANY'S POR PROGRAM?

A. Mr. Caliva opines that Mr. Cicero's recommendations will "radically and negatively" modify Peoples' POR Program, "that has been working without issue for more than 10 years." (RESA Statement No. 1-R, p. 3.)

Q. DO YOU HAVE A RESPONSE TO MR. CALIVA'S CHARACTERIZATION OF MR. CICERO'S RECOMMENDATIONS WITH RESPECT TO THE POR PROGRAM?

A. Yes. From the Company's perspective, Mr. Cicero's recommendation does not eliminate customer choice, nor does it prohibit suppliers from offering products. However, Mr. Cicero's recommendation would place a condition on the Company's purchase of receivable program.

Q. DO YOU HAVE ANY ADDITIONAL COMMENT ON CAUSE-PA'S POR RECOMMENDATION?

A. It is Peoples position that the current POR structure allows suppliers to receive the benefit of prompt payment and the structure transfers collection risk regardless of whether the supplier charges a price at, below or above the PTC. POR was initiated to promote competition that benefits customers. [1] 52 Pa. Code § 62.221. It is Peoples' position that there must be a balanced approach between promoting competition and protecting customers. Currently, Peoples' shopping customers are, on average, paying more than the Company's Price To Compare ("PTC"). Peoples will continue to follow the law with respect to natural gas choice and competition, but at the same time, the Company wants to ensure that the proper consumer protections are in place with respect to shopping.

Q. DOES MR. CICERO SHOW THAT SHOPPING CUSTOMERS HAVE PAID MORE THAN PEOPLES' PTC?

A. Yes. Mr. Cicero's analysis shows that from January 2024-April 2026, residential customers who were served by a retail NGS paid in aggregate $57.3 million more than they would have otherwise paid had they been charged the default service rate for the same period. (CAUSE PA Statement No. 1, pp. 85-86.)

Q. DOES PEOPLES' DATA SHOW THAT A MAJORITY OF SHOPPING CUSTOMERS ARE PAYING MORE THAN THE PTC?

A. Yes it does. The chart below shows that, over the last three years, the percentage of shopping customers on Peoples' system who paid more than the PTC ranged from 71.6% of shopping customers to 99.4% of shopping customers. The vast majority of shopping

[1] *Pennsylvania Public Utility Commission et. al v. PPL Electric Utilities Corporation*, 2010 Pa. PUC LEXIS 2001, *95 Docket No. R-2010-2161694 et. al (Order Entered December 21, 2010).

customers paid more than Peoples' PTC for commodity supply, with many paying two to three times as much and with some customers currently paying more than $40 per Mcf. Please note that the Company instituted monthly tracking in January of 2025 and prior to that date, collected the data periodically on a bi-annual basis.

P1 Customers (Residential & Human Needs Commercial) - Supplier Statistics								
Month	PTC	Wtd Avg NGS Price	% Above/ (Below) PTC	No. of Customer Participating	% of Customers Paying > PTC	Highest Price Charged	No. of Customer Paying > 2 X PTC	No. of Customer Paying > 3 X PTC

Jun-26	$ 4.14	$ 6.75	63%	76,755	87.2%	$ 40.90	5,611	3,634
Jul-26	$ 3.71	$ 6.75	82%	76,755	95.8%	$ 40.90	6,986	4,177

The Company is concerned about customers paying well above the PTC and wants to make sure that customers understand what they are paying for and that there are adequate protections in place to protect consumers who choose an alternate supplier.

Q. WHAT DOES THE RECORD SHOW CONCERNING WRITE-OFFS FOR SHOPPING CUSTOMERS?

A. According to the analysis presented in Mr. Cicero's testimony, shopping customers with debt written off experienced much higher average write-offs than default service customers. (OCA Statement 1, pp. 86-87). For the January 2024 through April 2026 period,

residential shopping customers with debt written off had average write-offs of $602.13, compared to $124.31 for residential default service customers. For confirmed low-income non-CAP customers, average write-offs were $978.89 for shopping customers compared to $114.75 for default service customers.

Q. DO YOU HAVE ANY ADDITIONAL COMMENTS ON MR. CALIVA'S REBUTTAL TESTIMONY?

A. Yes. Mr. Caliva correctly notes that suppliers receive payment net of the POR discount. In the Company's experience, this means the Company assumes the collection risk for shopping customers – and the suppliers yield little to no risk. The POR discount is an average system-based discount; it is not tied to a particular supplier's prices, customer portfolio, or collection experience. This also means that the Company's collection risk goes up if supplier pricing increases but the risk remains the same for suppliers which is little to no risk.

Q. ON PAGE 11 OF HIS TESTIMONY, MR CALIVA STATES THAT SUPPLIERS ARE PRICING BASED ON THEIR EXPECTATIONS FOR FUTURE MARKET PRICES. MEANWHILE, THE UTILITY'S PTC, BASED ON PURCHASED GAS COSTS, WITH GUARANTEED COST RECOVERY, CHANGES AT A DIFFERENT CADENCE – EVERY QUARTER. IT IS NOT A TRUE MARKET PRICE AND MAY OR MAY NOT BE REFLECTIVE OF CURRENT WHOLESALE MARKET REALITIES. DO YOU HAVE A RESPONSE?

A. Yes. While there may be slight differences in timing and perhaps, cost recovery[2], the Company's PTC is a transparent and useful benchmark available to customers, suppliers, Peoples, and the Commission to compare and contrast commodity rates. The Company's PTC reflects the default commodity supply price available to customers who purchase their natural gas supplies from Peoples. While suppliers may offer products with different terms or features outside the POR framework, the issue here concerns POR-eligible basic natural gas supply. For that purpose, the PTC is the relevant comparison because it shows what a customer would pay for basic commodity supply from Peoples.

Q. IN YOUR OPINION, DOES CAUSE-PA'S RECOMMENDATION ELIMINATE CUSTOMER CHOICE?

A. No. Customers would remain free to choose a supplier. The proposal conditions access to POR on suppliers' pricing POR-eligible basic natural gas supply at or below the PTC. Suppliers that elect not to participate in POR would retain flexibility to offer non-basic gas supply products or other differentiated services outside the POR framework, including offerings for which customers may be willing to pay a premium. Peoples' own experience also demonstrates that POR is not necessary for customer choice. Before Peoples implemented POR, approximately 30%[3] of eligible residential customers chose a supplier.

[2] Note that the Company is not guaranteed cost recovery for its purchased gas costs. The Company undergoes an annual proceeding on its purchased gas costs and periodic Commission audit reviews of its expenditures as well. Moreover, the Company's purchased gas costs are based on future markets, as the Company uses NYMEX futures pricing to set its gas costs.

[3] This was calculated by taking the average number of residential customers who shopped in Calendar Year 2009 of 98,127 divided by the average number of total residential customers during that same time period of 328,332.

By comparison, only around 13%[4] of eligible residential customers currently choose a supplier. That experience shows that customer choice can continue without requiring Peoples to purchase receivables for above-PTC supplier charges.

Q. WHY SHOULD THE COMMISSION BE PARTICULARLY CONCERNED ABOUT LOW-INCOME CUSTOMERS?

A. Low-income customers have less ability to absorb avoidable commodity-cost increases. Mr. Cicero's updated analysis shows that confirmed low-income non-CAP shopping customers paid approximately $7.4 million more than they would have paid at Peoples' default service price from January 2024 through April 2026, and that their average shopping price was more than twice the average PTC. The same analysis shows much higher average write-offs for low-income shopping customers than for low-income default service customers. These results indicate that higher-priced supplier service can contribute to affordability challenges, arrearages, and service insecurity for customers least likely to effectively manage those costs.

Q. DOES PEOPLES AGREE WITH RESA THAT MR. CICERO'S POR RECOMMENDATION WOULD CREATE BILLING OR CUSTOMER-SERVICE PROBLEMS THAT OUTWEIGH THE CUSTOMER-PROTECTION BENEFITS?

A. Not exactly. Peoples already administers supplier billing and POR functions through tariffed processes, data exchanges, and supplier agreements. POR is not necessary for a

[4] This was calculated by taking the average number of residential customers who shopped during January 2026 through June 2026 of 75,211 divided by the average number of total residential customers during that same time period of 592,350.

supplier to participate in the combined bill option offered by Peoples. In addition, even if a supplier were to separately bill or collect its own supply charges, Peoples would still issue bills to customers for distribution service and other non-supplier utility charges. Customers would not be removed from Peoples' billing platform for utility charges merely because a supplier elects not to participate in POR. Peoples therefore would continue to maintain billing and collections capabilities for its utility service obligations.

Q. COULD MR. CICERO'S POR RECOMMENDATION REDUCE CUSTOMER CONFUSION OR COMPLAINTS?

A. Possibly. Mr. Cicero's POR recommendation could actually reduce friction among customers, suppliers, Peoples, and the Commission by reducing high-bill inquiries and complaints from customers whose introductory or fixed supplier rates convert to materially higher variable rates without the customer fully understanding the change. This concern is especially significant during the winter heating season, when customer usage is highest.

Q. IN WHAT OTHER WAYS CAN THE COMMISSION ADDRESS CONCERNS REGARDING SHOPPING CUSTOMERS PAYING HIGHER PRICES?

A. The Commission could consider broad retail market reforms in a separate statewide rulemaking or policy proceeding with the goal of striking a balance between the availability of a competitive shopping market and proper consumer protections.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY?

A. Yes, it does, and I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Andrew P. Wachter, and my business address is 375 North Shore Drive, Suite 600, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed as Director, Finance and Regulation for PNG Companies LLC ("PNG"). I provide services to Peoples Natural Gas Company LLC ("Peoples" or the "Company"). As Director, Finance and Regulation, I oversee the Rates and Regulatory department and the Financial, Planning and Analysis department at Peoples and its affiliates.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in **Peoples Statement No. 2**, and my rebuttal testimony is set forth in **Peoples Statement No. 2-R** and the Errata to **Peoples Statement No. 2-R**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I am presenting testimony in response to certain expense positions and recommendations contained in the surrebuttal testimony submitted by Michael Deupree, Jared N. Geiger and Roger Colton on behalf of the Office of Consumer Advocate ("OCA") and by Vanessa Okum on behalf of the Bureau of Investigation and Enforcement ("I&E"). Please note that The Coalition for Affordable Utility Services and Energy Efficiency in

Pennsylvania ("CAUSE-PA") witness Patrick Cicero mentions that he will address my Rebuttal Testimony in his Surrebuttal (CAUSE-PA Statement No. 1), but he does not ultimately address my testimony in the body of his Surrebuttal.

My silence on a particular issue should not be construed as agreement with respect to that issue. It is not my intention to address every matter in my Rejoinder.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. I have arranged my rejoinder testimony by subject matter. Where more than one witness has addressed the same subject matter with testimony that I wish to rebut, I address all of that testimony in the same section. I will address the following issues in the order listed.

- Responses to Other Parties Adjustments
  - Average Annual Increases
  - Labor/Vacancy Expense
  - Incentive Compensation
  - Employee Benefits Expense
  - Corporate Insurance
  - Employee Expenses
  - Travel & Entertainment
  - Company Memberships
  - License and Permits

- Utilities and Fuel Expense
- Advertising Expense
- Fleet Expense
- Materials and Supplies Expense
- Rate Case Expense
- Pension Expense
- Outside Services – CONTRACTED
- Outside Services – IT
- Outside Services – A&G
- Payment Processing Expense
- Building Leases
- Universal Service Program Rider
- Residential Collection Expense
- Interest Synchronization
- Cost of Other Parties Proposals
- Uncollectible Accounts Expense

II. RESPONSE TO OTHER PARTIES ADJUSTMENTS

A. UPDATES TO ORIGINAL FILING

Q. CAN YOU SUMMARIZE THE UPDATES TO THE ORIGINAL FILING YOU DISCUSSED IN YOUR REBUTTAL TESTIMONY – PEOPLES STATEMENT NO. 2-R.

A. Yes. Below are the adjustments:

1. Increase in existing Revenue of $206,179. This reduces the claim;
2. Reduction in O&M of $785,433 related to building leases. This reduces the claim; and
3. Increase in O&M of $1,738,446 related to insurance expense. This increases the claim.

The impact of these changes increases the overall claimed revenue requirement by $746,833 excluding the cash working capital amount.

Q. DID ANY PARTY FILE SURREBUTTAL ON YOUR UPDATES TO THE ORIGINAL FILING?

A. Yes, I&E Witness Okum filed Surrebuttal on this matter.

Q. DID I&E WITNESS OKUM ACCEPT YOUR UPDATES TO THE ORIGINAL FILING?

A. Yes. Although not clearly explained, Witness Okum updated the Proforma Present Rates column in Table I on page 7 of her Rebuttal to reflect the adjustments.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL REFLECT YOUR UPDATES TO THE ORIGINAL FILING?

A. Not entirely. Based upon review of Schedule JNG-1 as compared to Schedule JNG-1SR, it appears OCA Witness Geiger only reflected the revenue adjustment and not the expense adjustments. Based upon review of the Insurance Expense adjustment of his Surrebuttal he intended to accept that adjustment but did not update the Company

Amounts at Present rates column on JNG-1SR. He just removed his adjustment. He did not address the Building Lease Expense adjustment.

B. AVERAGE ANNUAL INCREASES AND INFLATION ADJUSTMENTS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE INSURANCE EXPENSE CLAIM?

A. Yes, OCA witness Deupree, OCA witness Geiger and I&E Witness Okum filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS DEUPREE'S SURREBUTTAL CHANGE YOUR POSITION ON YOUR USE OF MULTI-YEAR AVERAGE ANNUAL INCREASES?

A. No. OCA Witness Geiger makes the argument that references to inflation should only be considered by the PUC in the context of affordability for customers, but its impact would be "speculative as it pertains to the Company's expense claim." Specifically, OCA witness Deupree stated "Decisions on appropriate expense estimates require examination of known and measurable expected growth in expenses in order to ensure that the Company is allowed a reasonable opportunity to recover all prudent expenses while not burdening ratepayers with speculative future expenses that may never arise." (OCA Statement No. 1SR, page 5) He goes on to note that his reference was to a consumer index so it is not applicable to the Company.

My reference to the index was merely pointing out that one of OCA's witnesses believes costs are going to rise and thus it supports the "known and reasonable" amounts that I proposed in this case. OCA witness Deupree seems to contradict himself by saying

that inflation and rising costs are "speculative" when it comes to the Company requesting FPFTY expenses, but it should be considered fact when evaluating the impacts on customers with regards to affordability. As I discussed in my direct testimony and rebuttal testimony, the Company has put forth a historical look at rising costs that are known and measurable and references to inflation are merely another indicator of the appropriateness of the costs.

Q. DID OCA WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON YOUR USE OF MULTI -YEAR AVERAGE ANNUAL INCREASES?

A. No.

C. <u>LABOR/VACANCY ADJUSTMENTS</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S LABOR CLAIM?

A. Yes, both I&E Witness Okum and OCA witness Geiger filed Surrebuttal on this claim.

Q. DOES I&E WITNESS OKUM'S OR OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON YOUR CALCULATION OF THE VACANCY RATE?

A. They do not. However, I note that Witness Okum accepted the corrections I proposed to her original calculation as discussed in my Rebuttal Testimony, **Peoples Statement No. 2-R**. I further note that Mr. Geiger accepted the corrections I proposed to his original calculation as discussed in my Rebuttal Testimony, **Peoples Statement No. 2-R**.

D. INCENTIVE COMPENSATION

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S INCENTIVE COMPENSATION CLAIM?

A. Yes, both I&E Witness Okum and OCA witness Geiger filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON INCENTIVE COMPENSATION EXPENSE BASED UPON FINANCIAL METRICS?

A. It does not.

Q. IS THE CALCULATION CORRECT?

A. The calculation appears to be reasonable. However, due to the limited time between surrebuttal and rejoinder testimony I was unable to do as thorough of a review as I would have been able to if the adjustment was timely provided with Witness Okum's Direct testimony or soon thereafter.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON INCENTIVE COMPENSATION EXPENSE BASED UPON FINANCIAL METRICS?

A. It does not. Overall, Mr. Geiger believes our compensation levels are appropriate and no other party challenged the overall level of incentive compensation. However, he continues to make arguments about the financial metrics in the Company's incentive

compensation plan. Incentive compensation is a necessary part of overall compensation in order to attract and retain employees, which directly benefits customers as discussed in my Rebuttal testimony. Offering incentive compensation is a standard practice among utilities in Pennsylvania. I note that if incentive compensation tied to financial metrics was switched to other non-financial metrics the Company would still seek the same overall level of expense.

E. EMPLOYEE BENEFITS EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE EMPLOYEE EXPENSES CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON EMPLOYEE EXPENSES?

A. It does not. However, I note that Witness Okum accepted the corrections I proposed to her original calculation and discussed in my Rebuttal Testimony, **Peoples Statement No. 2-R**.

F. CORPORATE INSURANCE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE INSURANCE EXPENSE CLAIM?

A. Yes, both I&E Witness Okum and OCA witness Geiger filed Surrebuttal on this claim.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL UPDATE HIS POSITION ON INSURANCE EXPENSE?

A. Yes. Based upon the clarification of amounts in my Surrebuttal Testimony, Mr. Geiger no longer has an adjustment for insurance expense. However, as noted above in Section II. A., Mr. Geiger did not appropriately reflect the Company's correction to the insurance claim thus the overall level of insurance expense is not correctly reflected by OCA.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON CORPORATE INSURANCE EXPENSE?

A. It does not.

G. <u>EMPLOYEE EXPENSES</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S EMPLOYEE EXPENSES CLAIM?

A. Yes, OCA witness Geiger filed Surrebuttal regarding this claim.

Q. DID OCA WITNESS GEIGER CHANGE HIS POSITION ON RECOVERABILITY OF EMPLOYEE EXPENSES?

A. Yes. He no longer challenges the inclusion of costs related to the reimbursement of employee use of personal cell phones for company use of $126,820 and the reimbursement of parking at the Company's headquarters of $203,085.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON TRAVEL AND ENTERTAINMENT EXPENSE?

A. It does not. OCA Witness Geiger did not provide any rebuttal to the remaining costs that he proposes to remove from the case despite the additional information provided in my Rebuttal Testimony, **Peoples Statement No. 2-R**.

H. TRAVEL AND ENTERTAINMENT EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S TRAVEL AND ENTERTAINMENT EXPENSE CLAIM?

A. Yes, both I&E Witness Okum and OCA witness Geiger filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S OR OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR CLAIM FOR TRAVEL AND ENTERTAINMENT EXPENSE?

A. No.

I. COMPANY MEMBERSHIPS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE MEMBERSHIPS EXPENSE CLAIM?

A. Yes, both I&E Witness Okum and OCA witness Geiger filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR COMPANY MEMBERSHIPS?

A. No.

Q. DID OCA WITNESS GEIGER CHANGE HIS POSITION ON RECOVERABILITY OF COMPANY MEMBERSHIPS?

A. Yes. Mr. Geiger now recommends recovery of 50% of the disputed memberships, or $57,914. His basis for this change is that he now agrees that they provide both customer and shareholder benefits.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY MEMBERSHIP EXPENSE?

A. It does not. I believe that by admitting these have a benefit to customers he is supporting my argument that 100% of these costs should be recovered. He also offers no basis for why these benefit shareholders nor does he make a primary or secondary argument about benefit as he does in his incentive compensation arguments. I reiterate my position in my Rebuttal Testimony, **Peoples Statement No. 2-R**, that these costs are valid, recoverable business expenses and point to the chart provided in my Surrebuttal testimony on pages 28-30 that explains the reasoning.

J. <u>LICENSES & PERMITS</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S CORPORATE LICENSES & PERMITS EXPENSE CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR CORPORATE LICENSES AND PERMITS?

A. It does not.

K. <u>UTILITIES AND FUEL EXPENSE</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S UTILITIES AND FUEL EXPENSE CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR UTILITIES AND FUEL EXPENSE?

A. It does not.

L. <u>ADVERTISING EXPENSES</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S ADVERTISING EXPENSE CLAIM?

A. Yes, both I&E Witness Okum and OCA Witness Geiger filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY ADVERTISING EXPENSE?

A. It does not.

Q. DID OCA WITNESS GEIGER UPDATE HIS RECOMMENDATION ON ADVERTISING EXPENSE?

A. Yes. Mr. Geiger removed his reduction in expense of $125,000 related to the Holiday Market based upon the explanation in my Rebuttal Testimony.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY ADVERTISING EXPENSE?

A. It does not as Mr. Geiger provided no additional information on the remainder of his recommendation.

M. <u>FLEET EXPENSE</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S FLEET EXPENSE?

A. Yes, I&E Witness Okum filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON FLEET EXPENSE?

A. It does not.

N. <u>MATERIALS AND SUPPLIES</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S MATERIALS AND SUPPLIES EXPENSE?

A. Yes, both I&E Witness Okum and OCA Witness Geiger filed Surrebuttal regarding this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON MATERIALS AND SUPPLIES EXPENSE?

A. It does not.

Q. OCA WITNESS GEIGER MENTIONED AN ERROR IN YOUR CALCULATION OF THE INCREASE IN MATERIALS AND SUPPLIES. DO YOU AGREE WITH HIS ASSESSMENT?

A. I am unsure. Based upon the limited time between surrebuttal testimony and rejoinder, the Company was unable to validate Mr. Geiger's calculation.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON MATERIALS AND SUPPLIES EXPENSE?

A. It does not.

O. RATE CASE EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S RATE CASE EXPENSE CLAIM?

A. Yes, both I&E Witness Okum and OCA Witness Geiger filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S OR OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON THE CLAIM FOR RATE CASE EXPENSES?

A. It does not. I have clearly demonstrated why the Company's rate case filing history should be normalized for unique circumstances that caused extended periods of time between previous rate case filings. These items are unlikely to occur in the next two years.

I do note that OCA witness Geiger updated his position to a 3.5-year amortization period. This is based upon Mr. Geiger recognizing that the stay out period between 2012 to 2019 as less representative of future base rate case filing frequency.

I agree with Mr. Geiger that it is appropriate to ignore the 2012 to 2019 period but that same thought process should be applied to the period of 2019 to 2023 as described in both my Direct Testimony, **Peoples Statement No. 2** and my Rebuttal Testimony, **Peoples Statement No. 2-R.** This testimony explains that the period between 2019 to 2023 was impacted by the Company's election of a tax methodology change which was a one-time occurrence. For these reasons, it is clear that the Company's original claim should be accepted.

P. <u>PENSION EXPENSE</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S PENSION EXPENSE CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR PENSION EXPENSE?

A. It does not. However, I note that Ms. Okum does provide an alternative to her original recommendation which would be to utilize a 3-year average rather than the Company's methodology. Ms. Okum continues to make the argument that she believes we will not make a contribution which is inconsistent with the methodology used in prior cases (i.e. to utilize a historical approach to contributions).

Q. <u>OUTSIDE SERVICES – CONTRACTED</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – CONTRACTED EXPENSE CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR OUTSIDE SERVICES – CONTRACTED?

A. It does not.

R. <u>OUTSIDE SERVICES – IT</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – IT EXPENSE CLAIM?

A. Yes, I&E Witness Okum filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR OUTSIDE SERVICES – IT?

A. It does not.

S. <u>OUTSIDE SERVICES – A&G</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S OUTSIDE SERVICES – A&G EXPENSE CLAIM AND DID IT CHANGE YOUR POSITION

A. Yes, both I&E Witness Okum and OCA Witness Geiger filed Surrebuttal on this claim.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR CLAIM FOR OUTSIDE SERVICES – A&G?

A. It does not.

Q. DID OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR POSITION ON COMPANY OUTSIDE SERVICES – A&G?

A. It does not as Mr. Geiger provided no additional information to support his recommendation.

T. <u>NATURL GAS WATER TANK REBATE PROGRAM</u>

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S NATURAL GAS WATER TANK REBATE PROGRAM?

A. Yes, OCA witness Geiger filed Surrebuttal regarding this claim. Please refer to the Rejoinder Testimony of Luke Ravenstahl, **Peoples Statement No. 8-RJ**, for further discussion of this topic.

U. PAYMENT PROCESSING EXPENSES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S PAYMENT PROCESSING EXPENSE CLAIM?

A. Yes, both I&E witness Okum and OCA Witness Geiger filed Surrebuttal regarding this claim.

Q. DID EITHER I&E WITNESS OKUM'S OR OCA WITNESS GEIGER'S SURREBUTTAL CHANGE YOUR CLAIM FOR PAYMENT PROCESSING EXPENSES?

A. Neither did. However, I note that Mr. Geiger's reference to Peoples Gas adoption of fee-free payment processing was to explain why we used a short period of time for the increase rather than a reason for the increase.

V. BUILDING LEASES

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S BUILDING LEASES?

A. The only testimony that mentioned building leases was with regard to the Company Adjustments, discussed above.

W. UNIVERSAL SERVICE PROGRAM ("USP") RIDER

Q. DID ANY PARTY FILE SURREBUTTAL ON YOUR UNIVERSAL SERVICE PROGRAM ("USP") RIDER TESTIMONY?

A. Yes, I&E witness Okum filed Surrebuttal on this matter.

Q. DID I&E WITNESS OKUM'S SURREBUTTAL CHANGE YOUR POSITION ON THE INCLUSION OF THIS UNIVERSAL SERVICE RIDER EXPENSES?

A. It does not. However, I note that I&E does not reflect the offsetting reduction in existing revenue for this claim as the Company included that in its original existing revenue amount. Thus, even if Ms. Okum's position would be granted it would have no impact on the rate increase granted in this proceeding.

Q. I&E WITNESS OKUM SUGGESTED THAT IT IS IMPORTANT TO HAVE TRANSPARENCY AROUND LABOR AND LABOR-RELATED COSTS AND THAT IF PARTIES ARE UNABLE TO REVIEW THESE COSTS IN ISOLATION IT COULD HINDER THE PARTIES ABILITY TO VERIFY SUCH COSTS ARE PRUDENTLY REVIEWED?

A. This is not accurate. I would argue that the costs would receive as much if not more scrutiny if they were included in USP Rider as that rider is subject to extensive scrutiny as part to of the PUC's annual review of the Company programs and cost recovery via the audits performed by the PUC's Bureau of Audits.

X. RESIDENTIAL COLLECTION EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON YOUR RESIDENTIAL COLLECTION EXPENSE TESTIMONY?

A. Yes, OCA witness Colton filed Surrebuttal on this matter.

Q. DID OCA WITNESS COLTON ACCEPT YOUR CORRECTION TO HIS ADJUSTMENT FOR RESIDENTIAL COLLECTION EXPENSE?

A. Yes. Mr. Colton recognized that he inadvertently double counted the $1,150,487 of low-income collection expense in his adjustment. As such, he reduced his proposed disallowance by $575,244. Please note that on page 50 of my Rebuttal Testimony, **Peoples Statement No. 2-R**, I inadvertently utilized the incorrect numbers in lines 12 through 19 on page 50. The correct amounts are reflected in lines 14 through 23 on page 49 and 1 through 2 on page 50.

Q. DID OCA WITNESS GEIGER PROPERLY REFLECT MR. COLTON'S UPDATE TO HIS RECOMMMENDATION?

A. He did not. Mr. Geiger makes no mention of updating Mr. Colton's recommended amount. Further, the amount was not updated in any of his surrebuttal schedules, nor in the calculation of his revised recommended increase in the revenue requirement.

Q. DID OCA WITNESS COLTON'S SURREBUTTAL CHANGE YOUR POSITION ON RESIDENTIAL COLLECTION EXPENSE?

A. It does not. Please refer to the Rejoinder Testimony of Michelle Parks (**Peoples Statement No. 18-RJ**) for further response to Mr. Colton's recommendation.

Y. INTEREST SYNCRONIZATION

Q. DID ANY PARTY FILE SURREBUTTAL ON INTEREST SYNCRONIZATION?

A. Yes, OCA Witness Geiger filed Surrebuttal testimony.

Q. DOES MR. GEIGER'S REBUTTAL TESTIMONY CHANGE YOUR POSITION ON INTEREST SYNCHRONIZATION?

A. It does not. Mr. Geiger did update his Federal income tax rate in response to my Rebuttal testimony. However, he did not correct his state income tax rate to zero which, as I discussed in my Rebuttal testimony, is necessary because the Company is not requesting nor is it currently recovering state income taxes. I note that Mr. Geiger did not respond to my Rebuttal that the adjustment in and of itself should be rejected because of an offsetting change in revenue which results in no overall revenue requirement impact.

Z. COST OF OTHER PROPOSALS

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S COST OF OTHER PARTIES' PROPOSALS IN THEIR REBUTTAL TESTIMONY?

A. Yes, OCA witness Colton filed Surrebuttal on this claim.

Q. PLEASE ADDRESS OCA WITNESS COLTON'S SURREBUTTAL ON THE COST OF HIS PROPOSALS?

A. We appreciate the information provided by OCA Witness Colton. However, the Company's request that certain accommodations be made for future recovery of incremental

costs incurred as a result of recommendations made by the other parties in this proceeding is reasonable considering the unknown ultimate impact of such recommendations as the Company has not had sufficient time during this proceeding to evaluate the true impact of Mr. Colton's recommendations.

AA. UNCOLLECTIBLE ACCOUNTS EXPENSE

Q. DID ANY PARTY FILE SURREBUTTAL ON THE COMPANY'S UNCOLLECTIBLE ACCOUNTS EXPENSE CLAIM?

A. No. Neither I&E Witness Okum nor OCA witness Geiger filed Surrebuttal on this claim.

Q. DO YOU HAVE ANYTHING TO ADDRESS ON THIS TOPIC?

A. Yes. In both of the overall revenue requirements put forth by I&E Witness Okum and OCA witness Geiger they rolled back their allowance for uncollectable accounts expense concurrently with their reduction in the overall claim based upon their adjustments.

For the reasons noted in the Company' rebuttal testimony, surrebuttal testimony and now rejoinder testimony, both I&E's and OCA's *revenue* adjustments are unreasonable. Therefore, both I&E's and OCA's adjustments to uncollectible accounts expense also should be rejected. Ultimate recovery of incremental uncollectable accounts expense should be calculated based on the rate increase approved in this proceeding.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

CAROL A. SCANLON,
MANAGER, RATES
PEOPLES NATURAL GAS COMPANY LLC

DATE SERVED: August 3, 2026
DATE ADMITTED: _____

Peoples Statement No. 3-RJ

Table of Contents

I. INTRODUCTION AND SUMMARY 2

II. RESPONSE TO TIMING OF WNA MODIFICATIONS PROPOSAL 3

III. RESPONSE TO THE ONE-TIME CREDIT ADJUSTMENT TO UNIVERSAL SERVICE RIDER 6

IV. CONCLUSION 8

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Carol A. Scanlon. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by PNG Companies LLC ("PNG Companies" or "PNG") as Rates Manager. In my position as Rates Manager, I provide rates and regulatory services to Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company").

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in **Peoples Statement No. 3**, my rebuttal testimony is set forth in **Peoples Statement No. 3-R** and my surrebuttal testimony is set forth in **Peoples Statement No. 3-SR**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will address the surrebuttal testimonies related to the Company's proposal to delay implementation of new WNA modifications in this proceeding, but most specifically responding to the surrebuttal testimony set forth by the Commission's Bureau of Investigation and Enforcement's ("I&E") witness Ethan H. Cline. I also respond to I&E witness Vanessa Okum related to the one-time credit adjustment proposal to the Company's Universal Service Rider ("USR").

My silence on a particular issue should not be interpreted as agreement with respect to that issue. It is not my intention to address every matter in my Rejoinder.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. RESPONSE TO TIMING OF WNA MODIFICATIONS PROPOSAL

Q. DID OTHER PARTIES SUBMIT SURREBUTTAL TESTIMONY REGARDING THE COMPANY'S TIMING REQUEST FOR NEW MODIFICATIONS TO PEOPLES' EXISTING WNA MECHANISM?

A. Yes, in addition to I&E Witness Cline, the Office of Consumer Advocate's ("OCA") witness Michael Deupree, and the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") witness Patrick Cicero filed Surrebuttal testimony that touched on this matter.

Q. BRIEFLY SUMMARIZE THE MATTER AND SURREBUTTAL POSITIONS.

A. In my Rebuttal testimony at **Peoples Statement No. 3-R**, the Company requested that if the Commission approves changes to the existing WNA mechanism, outside of the Company's proposal to update the Normal Heating Degree Days ("NHDD") to rely on a 65-year regression-based normal, that the changes not be applicable until the start of the next WNA heating season after the Final Order in this proceeding (i.e. October 1, 2027). In surrebuttal testimony, both I&E witness Cline and OCA witness Deupree disagreed with

this request. CAUSE-PA witness Cicero noted, in part, that he did not take issue with this request (CAUSE-PA Statement No. 1-SR, p. 40).

Q. DID I&E WITNESS CLINE OR OCA WITNESS DEUPREE MAKE RECOMMENDATIONS RELATED TO THE TIMING REQUEST FOR ANY CHANGES TO THE WNA?

A. In part. Mr. Deupree did not make a new recommendation, but rather pointed back to his recommendations in Direct Testimony and recapped his initial position. However, Mr. Cline offered a new solution which is to pause the WNA program in its entirety for the 2026-2027 WNA period.

Q. HOW DO YOU RESPOND TO MR. CLINE'S RECOMMENDATION?

A. I disagree with Mr. Cline's recommendation. The WNA mechanism should continue as-is and not be "turned off" until such newly proposed and unanticipated changes can be accommodated. I do not agree that suspending it, or turning it off, is a reasonable solution. In fact, I note that based on the most recent WNA season, for the months of January 1, 2026 through May 31, 2026, Mr. Cline's solution of suspending the WNA for this time frame would have resulted in customers not receiving approximately $2.7M of credits.

Q. DO YOU HAVE ANYTHING FURTHER TO ADD?

A. Yes. I would like to elaborate on the Company's request in my Rebuttal testimony. Peoples' request was not intended to mean that only the Company's proposal to update the

NHDD to rely on a 65-year regression-based normal could be accommodated. Peoples' current WNA tariff language states, in part:

> *d) NHDD shall be based upon the heating degree days utilized to develop the revenue requirement in the Company's general rate case proceeding at Docket No. R-2023-3044549. NHDD shall be updated in future general rate case proceedings.*

As such, Peoples anticipated a change to the NHDD as a result of this proceeding. Whether the methodology for determining the NHDDs is ultimately the 65-year regression or another means, Peoples stands ready to implement the new NHDD at the same time the new base rates in this proceeding are effective.

Q. WHAT WAS THE COMPANY'S REQUEST RELATED TO TIMING OF ANY CHANGES TO WNA PERTAINING TO?

A. The last public meeting date before rates from this proceeding are effective is December 17, 2026. With rates effective by the end of 2026, it is possible the Company may only have two weeks, over a holiday also, to implement the new rates. As mentioned in my Rebuttal testimony, several parties made recommendations in this proceeding to modify the Company's WNA mechanism beyond updating the NHDD. Most specifically, several such recommendations include changing the deadband amount, changing the existing WNA mechanism from a per customer basis to a per class basis and the recommendation that WNA should not apply to Distribution System Improvement Charge ("DSIC") revenues. The spirit of the Company's timing request was in relation to the above mentioned types of extensive modifications that were not already anticipated. Peoples does not agree the said changes are necessary. Refer to witness John Taylor's testimonies in this proceeding at Statement Nos. 17, 17-R, 17-SR, and 17-RJ for more detail addressing why

Peoples' does not agree with the recommendations. However, to the extent that Peoples would be ordered to implement any of these other modifications to the existing WNA mechanism, outside of the NHDD changes already planned, the Company will need adequate time to effectuate the billing changes and conduct testing, in addition to ensuring consistent WNA treatment to all customers during the heating season.

III. RESPONSE TO THE ONE-TIME CREDIT ADJUSTMENT TO UNIVERSAL SERVICE RIDER

Q. DID OTHER PARTIES SUBMIT SURREBUTTAL TESTIMONY REGARDING THE COMPANY'S PROPOSAL FOR THE ONE TIME CREDIT ADJUSTMENT TO THE UNIVERSAL SERVICE RIDER?

A. Yes. I&E witness Okum submitted surrebuttal on this matter.

Q. SUMMARIZE MS. OKUM'S POSITION.

A. In my Rebuttal testimony at **Peoples Statement No. 3-R**, I discussed that while the Company understands Ms. Okum's position on the credit adjustment matter, that the Company's proposal to partially offset universal service costs as a measure towards maintaining affordability for customers is an optimal approach in this unique circumstance. I further went on to say that if the Commission ultimately supports Ms. Okum's position, that Peoples' proposes that the credit amount would flow through the existing Tax Repairs Surcredit ("TRS") mechanism rather than the Universal Service Rider mechanism.

In surrebuttal testimony, Ms. Okum addresses the Company's proposal to effectuate the credit through the TRS mechanism if the Commission supports the position

that all customers should receive the credit amount. Ms. Okum is in agreement with this approach for the portion of the credit related to the tax repairs collar refund. However, Ms. Okum does not support this proposal related to the Sales and Use tax portion of the refund. For the $3,900,000 Sales and Use tax portion of the refund, Ms. Okum recommends the amount be treated as a regulatory liability and be amortized over a period of four years, which is consistent with Ms. Okum's recommendation for rate case expense. This equates to an annual amortization of ($975,000) for four years.

Q. HOW DO YOU RESPOND TO MS. OKUM'S RECOMMENDATIONS?

A. Again, consistent with my Rebuttal testimony, Peoples believes that its initial proposal to partially offset universal service costs as a measure towards maintaining affordability for customers is the optimal approach in this unique circumstance. If, however, the Commission supports the position that all customers receive the credit, Peoples recommends that the credit amount flow through the existing TRS mechanism rather than the Universal Service Rider mechanism for all of the credit amounts. In the event that the Commission supports Ms. Okum's position that it is not appropriate to include the $3,900,000 Sales and Use tax portion of the credit in the TRS mechanism, Peoples is amenable to Ms. Okums recommendation to treat the amount as a regulatory liability, amortized over a four year period.[1]

[1] The Company notes that acceptance of the four year amortization is a comprise on this specific matter. Peoples does not agree that rate case expenses should be amortized over four years also. Refer to the Rejoinder testimony of Andrew Wachter at Statement No. 2-RJ.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

I. INTRODUCTION AND SUMMARY 2

II. RESPONSE TO WITNESS GOBRECHT ON METHANE DETECTION 3

III. CONCLUSION.....4

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Paul Becker. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples" or the "Company") as the Vice President, Construction and Engineering.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in **Peoples Statement No. 6** and my rebuttal testimony is set forth in **Peoples Statement No. 6-R**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I am presenting testimony in response to the Bureau of Investigation and Enforcement's ("I&E") surrebuttal testimony submitted by Robert N. Gobrecht IV concerning Methane Detection.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. RESPONSE TO WITNESS GOBRECHT ON METHANE DETECTION

Q. MR. GOBRECHT'S DIRECT TESTIMONY RECOMMENDS THE COMPANY IMPLEMENT A METHANE DETECTION PILOT. WHAT DOES MR. GOBRECHT RECOMMEND IN HIS SURREBUTTAL TESTIMONY REGARDING METHANE DETECTION?

A. On page 6 of his surrebuttal testimony, Mr. Gobrecht states that "I continue to maintain that a pilot program of methane detectors, whether smart or simply audible, would benefit overall public safety, especially in those rural areas where response times may be slower."

Q. DOES THE COMPANY HAVE A RESPONSE TO MR. GOBRECHT'S RECOMMENDATION REGARDING METHANE DETECTION?

A. Yes. The Company understands the importance of I&E's recommendation and agrees to explore the feasibility of methane detection, so long as the Company is afforded the flexibility and time to properly evaluate the efficacy of methane detection and its impact on the Company's natural gas distribution system. Currently, the Company does not have the network capabilities to centrally monitor smart methane detection equipment as Advanced Metering Infrastructure is not deployed across Peoples' territory. It follows then, that the Company would begin with an assessment of audible methane detection.

Q. WHAT DOES THE COMPANY RECOMMEND WITH RESPECT TO A METHANE DETECTION PILOT?

A. The Company is willing to implement a methane detection pilot which will include but is not limited to: the evaluation of available methane detection technology equipment such as

local audible alarms; the operational impacts and requirements associated with the methane detection equipment; the legal and regulatory implications of deploying methane detection across the Peoples service territory; customer interest in methane detection; and the remote communication capabilities of that methane detection and Peoples' systems. As part of its pilot, the Company agrees to monitor related expenses. The Company will report on the results of its pilot in its next base rate proceeding.

Q. DO YOU HAVE ANYTHING FURTHER TO ADD ON THIS TOPIC?

A. Yes. If the Pennsylvania Public Utility Commission ("Commission") orders the Company to perform a methane detection pilot, Peoples respectfully requests that it be afforded the flexibility and time to evaluate the feasibility of methane detection across the Peoples service territory prior to mandated deployment of any specific methane detection technology.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

I. INTRODUCTION AND SUMMARY 2

II. RESPONSE TO I&E WITNESS GOBRECHT REGARDING DAMAGE PREVENTION 3

III. RESPONSE TO CAUSE-PA WITNESS CICERO REGARDING PEOPLES' HOT WATER TANK PILOT. 5

IV. CONCLUSION 7

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Luke Ravenstahl. My business address is 375 North Shore Drive, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or the "Company") as the Vice President of Sales and Marketing.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in P**eoples Statement No. 8** and my rebuttal testimony is set forth in **Peoples Statement No. 8-R**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I am presenting testimony in response to certain recommendations made in surrebuttal testimony by the Investigation and Enforcement's ("I&E") Witness Robert N. Gobrecht IV regarding damage prevention. I will also respond to certain claims made in surrebuttal testimony by CAUSE-PA's Witness Patrick Cicero regarding the Company's proposed hot water tank pilot.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. RESPONSE TO I&E WITNESS GOBRECHT REGARDING DAMAGE PREVENTION

Q. IN DIRECT TESTIMONY PP. 13-15, WITNESS GOBRECHT RECOMMENDS THAT THE COMPANY REVIEW ITS FIRST AND SECOND PARTY DAMAGES, PROVIDE ADDITIONAL TRAINING FOR EMPLOYEES AND CONTRACTORS AND THAT PEOPLES CREATE A QA/QC PROGRAM FOR IMPROVEMENTS TO REDUCE DAMAGES. WHAT DOES MR. GOBRECHT'S SURREBUTTAL TESTIMONY RECOMMEND?

A. Mr. Gobrecht's surrebuttal testimony reaffirms his original recommendations and adds the following to his recommendation:

> *Peoples should provide to I&E's Gas Safety Division a list of metrics and root cause procedures that Peoples will use to analyze their Damage Prevention Program by October 2026. Then, beginning in 2027, Peoples should schedule quarterly meetings with I&E's Gas Safety Division to review the root cause investigations that were performed along with the metrics that were created to show Peoples is driving down its damage numbers on its facilities. (I&E No. 4-SR, p. 4).*

Q. HOW DO YOU RESPOND TO MR. GOBRECHT'S SURREBUTTAL TESTIMONY?

A. Before addressing Mr. Gobrecht's recommendations, it is important to clarify how damage events are classified within the damage prevention industry. Damage events are commonly categorized based on the responsible party and the underlying cause of the damage. These classifications are standard throughout the damage prevention industry and are not unique to Peoples. First-party damages occur when Peoples employees damage Company facilities while performing work. Second-party damages occur when

contractors performing work on behalf of Peoples damage Company facilities. Third-party damages occur when external excavators or other entities damage Company facilities. Separately, Peoples assigns a root cause to every damage event to identify contributing factors and opportunities for corrective action.

Q. WHAT SPECIFIC ISSUES RELATED TO DAMAGE PREVENTION DOES MR. GOBRECHT IDENTIFY AS NEEDING FURTHER IMPROVEMENT?

A. In his direct testimony on page 14, Mr. Gobrecht asserts that Peoples needs to improve its damage prevention metrics related to certain causes of damages, specifically (1) mapping errors, (2) lines not marked, and (3) lines marked incorrectly, to determine areas of improvement to reduce damages.

Q. ARE MR. GOBRECHT'S DAMAGE PREVENTION RECOMMENDATIONS ACCEPTABLE TO THE COMPANY?

A. Generally, the Company can accept what Mr. Gobrecht recommends, but with certain specific clarifying edits. First, Mr. Gobrecht asks the Company to assess all first and second party damages. As I stated in my rebuttal testimony, the Company already performs a root cause analysis on every first and second party damage. Second, since Mr. Gobrecht expresses concerns over three specific causes of damages (lines not marked, lines marked incorrectly and mapping errors), the Company proposes to tailor Mr. Gobrecht's recommendations to specifically address those three causes of damages.

Q. WHAT IS THE COMPANY'S RECOMMENDATION REGARDING DAMAGE PREVENTION?

A. The Company's recommendation is as follows:

1) The Company agrees to continue performing root cause analyses of utility fault damages to determine areas of improvement;

2) The Company agrees that Peoples employees and contractors (as well as locator personnel) will receive additional training to address damage trends on Peoples system;

3) The Company agrees to create a QA/QC program to assess causes of damages related to (1) mapping errors, (2) lines not marked and (3) lines marked incorrectly to determine areas of improvements to reduce damages.

The Company agrees to meet with I&E periodically to review its root cause analyses and the metrics related to the specific causes of damages referenced herein.

Q. ARE THE COMPANY'S RECOMMENDATIONS CONSISTENT WITH WITNESS GOBRECHT'S DAMAGE PREVENTION RECOMMENDATIONS?

A. Yes, the Company's recommendations are consistent with Witness Gobrecht's recommendations and they add further clarity regarding the assessment of certain areas of improvement related to damages on Peoples system.

III. <u>RESPONSE TO CAUSE-PA WITNESS CICERO REGARDING PEOPLES' HOT WATER TANK PILOT.</u>

Q. WHAT DOES MR. CICERO'S SURREBUTTAL TESTIMONY RECOMMEND WITH RESPECT TO PEOPLES PROPOSED HOT WATER TANK PILOT?

A. On pages 52-53 of his surrebuttal testimony, Mr. Cicero continues to recommend that the Company's pilot proposal be denied. Mr. Cicero also continues to ignore that this pilot could produce affordability benefits to customers.

Q. WHAT EVIDENCE DOES MR. CICERO IGNORE?

A. Mr. Cicero claims that I provided no evidence to substantiate my claim that this pilot would "meaningfully" put downward pressure on rates. In my direct testimony on pages 11-12, I demonstrate how this pilot program is projected to save customers money. For example, if a customer installed a 40-gallon natural gas gravity vent water heater, with the proposed rebate offered instead of a 40-gallon electric water heater, the customer would begin saving on their electric bill almost immediately, with only a slight increase to their gas bill resulting in net savings. Over the course of the next year, the customer could save a few hundred dollars a year by lowering electric usage and thereby their electric utility rates. Annually, a few hundred dollars can represent meaningful cost savings for customers.

Q. MR. CICERO STATES THAT BOTH ELECTRIC UTILITIES IN PEOPLES' SERVICE TERRITORY OFFER REBATES FOR ELECTRIC HOT WATER HEATERS SO HE STANDS BY HIS RECOMMENDATION THAT THE COMMISSION DISALLOW PEOPLES PILOT PROGRAM. HOW DO YOU RESPOND?

A. Again, I want to reiterate that the goal of this pilot is to help customers afford their utility bills. I demonstrated in my direct testimony on pages 11-12 that converting an electric

hot water heater to a gas hot water heater can save customers money. The Company has also demonstrated that Peoples overall rates are more affordable than most utilities in the Commonwealth and specifically more affordable than all the electric utilities in the Commonwealth[1]. Since our rates are lower than the two electric utilities in Peoples' service territory, Peoples hot water tank pilot is an avenue through which customers can have the option to reduce their overall utility costs by using a more affordable energy source for hot water heat.

Q. MR. CICERO ALSO STATES THAT RATEPAYERS SHOULD NOT PAY FOR THIS PILOT PROGRAM. DO RATEPAYERS PAY FOR THE ELECTRIC UTILITY REBATES MR. CICERO MENTIONED?

A. Yes. I have been informed by counsel that electric utilities in Pennsylvania have energy efficiency riders through which they recover the costs of their rebate programs and those riders are assessed to ratepayers.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

A. Yes. Thank you.

[1] *See MAH-1R, attached to the rebuttal testimony of Company Witness Michael Huwar.*

V. RESPONSE TO OCA WITNESS BRENDAN LARKIN-CONNOLLY.....14

VI. CONCLUSION.....14

PREPARED SURREBUTTAL TESTIMONY OF
RITA F. BLACK

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Rita F. Black and my business address is located at 375 North Shore Drive, Pittsburgh, Pennsylvania 15212

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. as the Director of Community Assistance Programs. In this role, I lead assistance programs for Peoples Natural Gas Company LLC ("Peoples", "Peoples Natural Gas", or "the Company"), Aqua Pennsylvania Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively "Aqua PA"), as well as these companies' affiliated regulated utilities operating in other states.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT, REBUTTAL AND SURREBUTTAL TESTIMONIES IN THIS PROCEEDING?

A. Yes. My direct testimony is set forth in **Peoples Statement No. 10**, my rebuttal testimony is set forth in **Peoples Statement No. 10-R**, and my surrebuttal testimony is set forth in **Peoples Statement No. 10-SR**.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. I will respond to surrebuttal testimony provided by Bureau of Investigation and Enforcement ("I&E") witness Vanessa Okum, the Coalition for Affordable Utility Service

and Energy Efficiency in Pennsylvania ("CAUSE-PA") witness Patrick Cicero and Office of Consumer Advocate ("OCA") witnesses Roger Colton and Brendon Larkin-Connolly.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

Q. HOW HAVE YOU ARRANGED YOUR SURREBUTTAL TESTIMONY?

A. My testimony is arranged according to the witness testimony to which I am responding. To the extent that I do not address an issue raised in the surrebuttal testimony of another witness, it should not be construed as agreement with that testimony.

II. RESPONSE TO I&E WITNESS VANESSA OKUM

Q. IN HER TESTIMONY, MS. OKUM DISCUSSES THE COMPANY'S PROPOSAL TO INCLUDE THE COST OF THE LOW INCOME USAGE REDUCTION PROGRAM ("LIURP") SPECIALIST POSITION THROUGH THE UNIVERSAL SERVICE RIDER. WOULD YOU LIKE TO RESPOND?

A. Yes. On page 41, lines 14 through 17, Ms. Okum raises a concern that IF Peoples recovered these labor costs through the rider, the Company could make "unverified changes to such costs without the ability of parties to review them for prudency". I disagree with this concern. All charges recovered through the universal service rider are subject to a detailed audit through the Bureau of Audits. The Company must show documentation of each charge reported on its 1307(e) annual filing as part of these audits. In my opinion, the audit

process provides a more thorough review of costs than is available through the base rate process.

III. RESPONSE TO CAUSE-PA WITNESS PATRICK CICERO.

Q. ON PAGE 31 OF HIS TESTIMONY, LINES 9 AND 10, MR. CICERO STATES THAT THE PROPOSED INCREASE WOULD "WEAKEN THE EFFECTIVENESS OF WEATHERIZATION MEASURES" PROVIDED THROUGH THE COMPANY'S LOW INCOME USAGE REDUCTION PROGRAM ("LIURP"). DO YOU AGREE?

A. I do not. The usage threshold for participation in the Company's LIURP is 120 Mcf per year. This is significantly high usage, typically due to lack of insulation in the home, overall age of the housing stock and inefficient appliances. The measures installed through LIURP address the high usage of the home, providing a strong reduction to annual usage and therefore a reduction to the annual charges that is well beyond the proposed increase to the monthly service charge of $9.20. In its most recent report to the Commission, Peoples LIURP results for 2024 reflected an average reduction of 24.89% in annual usage for homes served. This is important because Mr. Cicero raises concern in his testimony on pages 34 and 35, that while the Customer Assistance Program ("CAP") participation rate in the 2024 report was 97% for LIURP participants, customers may not remain in CAP. The significant reductions in annual usage continue to provide savings to the household, even while not participating in CAP and these savings are significantly higher than the proposed increase in the monthly customer charge.

Q. MOVING ON TO MR. CICERO'S TESTIMONY REGARDING CAP, LET'S BEGIN WITH HIS RESPONSE TO YOUR TESTIMONY REGARDING THE PROPOSED TARIFF PROVISION PERTAINING TO FRAUDULENT USE OF CAP BENEFITS. WOULD YOU LIKE TO RESPOND?

A. Yes, I would. Mr. Cicero continues his recommendation that the Company's Universal Service Advisory Group ("USAG") should be involved in the development of a dispute process specific to this tariff provision and recommends the tariff provision be rejected. As noted in my rebuttal testimony, I welcome the input of the USAG into the Company's processes and programs. Also noted in my rebuttal testimony is clarification that these cases are not handled by our CAP administrator, but are handled with care by a member of our internal team to ensure that customers involved in this process are given every opportunity and sufficient flexibility to provide documentation of their eligibility. Therefore, I disagree that this tariff provision be rejected. Instead, it is my opinion that the tariff provision should be approved, in order to protect non-CAP ratepayers from paying the costs of CAP benefits obtained fraudulently, and the USAG be consulted on the implementation of the provision, following approval, but before implementation.

IV. <u>RESPONSE TO OCA WITNESS ROGER COLTON</u>

Q. ON PAGES 7 AND 8 OF HIS TESTIMONY, MR. COLTON DISCUSSES HIS CONCERNS REGARDING AFFORDABILITY FOR LOW-INCOME POPULATIONS AS WELL AS THOSE HOUSEHOLDS HE DESCRIBED IN HIS DIRECT TESTIMONY – ASSET-LIMITED, INCOME-CONSTRAINED, EMPLOYED ("ALICE"). WOULD YOU LIKE TO RESPOND TO THESE CONCERNS?

A. Yes, I would. Affordability and providing appropriate safety nets to customers who are struggling economically has long been recognized at Peoples. As I noted on page 28 of my rebuttal testimony, Peoples expanded its CAP eligibility threshold more than a decade ago, beyond the standard definition of 150% of federal poverty level ("FPL") that is utilized by energy CAPs in Pennsylvania, to provide more support to this households in this income group. The Company developed a strong Consumer Education and Outreach Plan ("CEOP"), the current version which is provided as Exhibit A in my direct testimony, to provide a comprehensive approach to outreach with the goal of increasing participation in available programs for income eligible households.

Q. ON PAGES 9 AND 10 OF HIS TESTIMONY REGARDING THE GAS BURDEN ANALSYIS PREPARED BY COMPANY WITNESS CYNDEE FANG, MR. COLTON DISCUSSES THE INCOME USED IN THE ANALYSIS AND STATES ON PAGE 10, BEGINNING WITH LINE 1, THAT "THERE IS NO BASIS, IN OTHER WORDS, TO DETERMINE THAT THE INCOME INFORMATION USED BY MS. FANG IS ACCURATE, LET ALONE TIMELY." WOULD YOU LIKE TO RESPOND TO THIS STATEMENT?

A. Yes, I would. As described in my rebuttal testimony, I explained the many opportunities at which customers are asked if they would like to provide their income information. I would like to further clarify that income information is asked from any residential customer starting service with Peoples. This information not only screens customers for eligibility to participate in universal service programs, it also allows the income-eligible customers to avoid certain fees or charges, such as reconnection fees and security deposits. As a result

of this initial income screening of all customers who choose to provide their income, Peoples has amassed, over time, income information for more than 400,000 of its customers, as described in Ms. Fang's gas burden analysis. This information is also updated at other points in time when the Company interacts with customers, such as in the negotiation of a payment arrangement. The income information that the Company has obtained is not only reflective of low-income households, but any households who agreed to share income information with the Company. The income used by Ms. Fang in her analysis is the most recent known income information available.

Q. LET'S MOVE ON TO MR. COLTON'S RESPONSE TO YOUR TESTIMONY REGARDING THE TARIFF PROVISION THAT RESTRICTS THE USE OF GAS FOR RECREATIONAL PURPOSES. MR. COLTON PROVIDES FOUR ISSUES THAT HE SAYS YOU DID NOT ADDRESS IN YOUR REBUTTAL TESTIMONY PERTAINING TO THIS ISSUE. PLEASE BRIEFLY EXPLAIN THOSE ITEMS AND RESPOND TO THEM.

A. First, he states that I did not provide an explanation on how the tariff provision would be enforced. He goes on to state that I did not explain how the Company determines the customer is actually using the recreational appliance. He says that I do not quantify the extent of the problem or document the cost of providing the CAP credits is more than the cost of identifying this situation. He then closes this discussion with the statement that the tariff provision proposal should be rejected.

As pool heaters are the key appliance for which this provision is targeted, I will explain the Company's process regarding identifying these situations. Natural gas in

Pennsylvania is used in a seasonal manner. We see usage begin to climb in the fall, reach its highest point in the coldest part of winter, then gradually reduce in the spring. Summer usage is low in comparison to winter usage and is base load only usage for appliances such as gas stoves, gas dryers and gas water heaters. When high summer usage indicates the presence of a pool heater, or if there is a prior pool heater flag on the account that was present before the customer enrolled in CAP, a letter is sent to the customer advising our records indicate use of a pool heater which is prohibited while participating in CAP. Customers have the ability to restore participation in CAP by providing documentation from their medical provider that the pool heater is necessary. Therefore, if the pool heater were not being used, the customer would not be flagged for removal from CAP. Mr. Colton appears to ignore the enforceable provision in the Company's Universal Service and Energy Conservation Plan ("USECP") on this topic in his testimony. It is not the Company's option to weigh the costs of enforcement of the USECP provision against the cost of CAP credits that may be given when a pool heater is used by a CAP participant. CAP is intended to assist income eligible households obtain necessary natural gas service for home heating, water heating, cooking and laundry purposes, all of which are important needs. Non-CAP customers subject to the Rider should not be asked to subsidize unnecessary uses of natural gas by CAP participants, unless such use is medically required.

Q. MR. COLTON ALSO PROVIDED TESTIMONY REGARDING THE SECOND PROPOSED TARIFF PROVISION PERTAINING TO THE FRAUDULENT USE OF CAP BENEFITS. WOULD YOU LIKE TO RESPOND?

A. Yes. Mr. Colton describes the level of fraudulent use as *de minimis* because I provided one example of what the Company sees as a misuse of CAP benefits and noted that the majority of customers use CAP appropriately. He goes on to conclude that because the Company has not quantified the costs of this behavior along with the costs of implementing this tariff provision, the proposed tariff language should be rejected. He also recommends revisiting Mr. Cicero's recommendation that the USAG be consulted on this issue. As I stated earlier in my response to Mr. Cicero, I do not believe a delay in the tariff language approval is necessary to allow for the engagement of the USAG before the tariff provision is implemented into practice. To delay this tariff provision is to allow customers to obtain benefits to which they are not entitled while non-CAP ratepayers subsidize their behavior.

Q. MR. COLTON DISCUSSES HIS CONCERNS REGARDING TERMINATION OF CONFIRMED LOW-INCOME ("CLI") HOUSEHOLDS AND CLI HOUSEHOLDS CARRYING DEBT ON PAGES 17-19 OF HIS TESTIMONY. WOULD YOU LIKE TO RESPOND?

A. Yes. Mr. Colton uses a number of statistics that are reflected in the Universal Service and Collections Report published by the PUC's Bureau of Consumer Services ("BCS") on an annual basis, using data reported by the utilities using the BCS data dictionary. To gain a clear picture of Peoples' statistics and how it compares to its peer utilities for termination rates, it is helpful to look at the three-year review and average termination rate for CLI as provided in the Report.

Terminations – Confirmed Low-Income Natural Gas – 2022-2024

Utility	2022		2023		2024	
	Number	Termination Rate	Number	Termination Rate	Number	Termination Rate
Columbia	6,124	8.7%	5,974	8.3%	6,277	8.9%
NFG	3,260	13.9%	3,268	13.7%	2,895	12.2%
PECO-Gas	5,531	19.1%	6,487	20.9%	570*	2.0%
Peoples	4,253	3.9%	11,815	10.5%	11,502	10.2%
PGW	9,548	8.3%	20,339	15.8%	19,806	15.0%
UGI Gas	4,810	5.7%	5,548	6.2%	5,681	6.4%
Total/Industry Average	**33,526**	**7.8%**	**53,431**	**11.6%**	**46,731**	**10.2%**

*In 2024, PECO suspended terminations for several months due to the implementation of a new operating system, which resulted in a reduction in terminations in 2024.

As shown, Peoples termination rate aligns with the industry average, the latter of which was calculated using an extremely low figure from PECO-Gas due to their suspension of terminations in 2024, indicating that without this abnormality in PECO-Gas' reported statistics, Peoples termination rate would fall below the industry average.

Similarly, with regards to CLI households in debt, it is important to view the entire picture. The data dictionary requires a customer to be reported as 'in debt' using the due date as day zero. Therefore, if a customer is late in making a payment, they are considered in debt. When reviewing the full picture of households in debt, including those that are actively participating in a payment arrangement as well as those that are not in a formal payment arrangement, Peoples has a total in debt percentage of 14.1% as compared to the industry average of 16.8%.

Number of Customers in Debt – Confirmed Low-Income Natural Gas – 2024

Utility	On Arrangement		Not On Arrangement		Total in Debt	
	Number	Percent of Confirmed Low-Income	Number	Percent of Confirmed Low-Income	Number	Percent of Confirmed Low-Income
Columbia	7,246	10.2%	3,211	4.5%	10,457	14.8%

Q. MR. COLTON'S CONCLUSION IN THE DISCUSSION OF THESE STATISTICS IS THAT PEOPLES SHOULD BE ENROLLING MORE CUSTOMERS INTO CAP.

A. The statistics discussed in Mr. Colton's testimony are through 2024. Peoples continues to encourage enrollment into its CAP through the activities described in its Consumer Education and Outreach Plan ("CEOP") and has succeeded in steadily increasing its enrollment as reflected in the rebuttal testimony of Company witness Carol Scanlon in Peoples Statement No. 13-R.

Q. LET'S MOVE ON TO MR. COLTON'S TESTIMONY THAT PEOPLES DISPROPORTIONALLY DISCONNECTS SERVICE TO COMMUNITIES OF COLOR AND SPECIFICALLY STATES 'MS. BLACK'S REBUTTAL TESTIMONY IMPLICITLY DENIES THE PRESENCE OF THE RACIAL DISCRIMINATION WHICH I DOCUMENTED IN MY DIRECT TESTIMONY[1].' PLEASE RESPOND.

[1] *See* OCA Statement No. 4SR, Page 20, lines 16 through 18.

A. I disagree that Mr. Colton has in any way proven that the households disconnected were in fact households of color, therefore he has not documented "the presence of racial discrimination". As the Company's data reviewed by Mr. Colton in discovery does not include racial data on its customers because the Company does not obtain such data and the census data used by Mr. Colton in his prior testimony is not specific to households, a direct correlation cannot be drawn. For this reason, my rebuttal testimony focused on the zip codes that he highlighted as being of concern. These zip codes mirror the analysis performed by Peoples Energy Analytics ("PEA") in the development of its heat maps of vulnerable households to be targeted for increased CAP outreach. Following Mr. Colton's own hypothesis that the Company should be enrolling more customers into CAP to avoid termination of service, my recommendation, as a result of his analysis, is the application of additional outreach to encourage CAP enrollment, thereby avoiding disconnections.

Q. MR. COLTON ALSO RESPONDS TO YOUR TESTIMONY ON THE TOPIC OF BUDGET BILLING AND STATES THAT YOU DID NOT 'ADDRESS THE NEED FOR INCREASED MARKETING[2]'

A. Marketing of budget billing is not an issue in this proceeding, nor was an issue to which I was responding in my rebuttal testimony. My testimony regarding budget billing, as provided on page 19 of my rebuttal testimony, was in response to concerns raised by Mr. Colton and Mr. Cicero that seasonality of bills has a negative impact on low-income customers that are not participating in CAP. I responded by noting that budget billing, the method by which any residential customer, regardless of income, can spread their annual

[2] *See* OCA Stmt. No. 4SR, page 21, lines 7 and 8.

gas bills evenly across the year to better manage their household budget is an available option to smooth out the impacts of seasonality. Budget billing is widely publicized by Peoples through a number of methods including bill inserts, the Company's website, digital and social media advertising and email campaigns. I would also note that customers contacting Peoples are regularly offered budget billing.

Q. FINALLY, MR. COLTON DISCUSSES THE ISSUE OF SPREADING UNIVERSAL SERVICE COSTS RECOVERED THROUGH THE RIDER TO ADDITIONAL CLASSES. REGARDING YOUR TESTIMONY ON THIS TOPIC, HE STATES, "IT IS, HOWEVER, IMPORTANT THAT MS. BLACK OFFERS NO DISPUTE OF THE NEED TO MAKE SUCH CHANGES"[3]. WOULD YOU LIKE TO RESPOND TO HIS STATEMENT?

A. My rebuttal testimony on the topic of sharing the costs of universal service programs to other classes of customers is provided on page 24. Prior to leading universal service programs for Peoples, I was a rates analyst for the Company, responsible for preparing the Company's cost recovery filings pertaining to universal service costs. As a result, I am familiar with both the history of cost recovery as well as the rider which is currently in use. In my rebuttal testimony, I responded to two aspects of other parties' direct testimony on this issue. In particular, I confirmed that 4.25% of costs pertaining to CAP were shared with non-residential ratepayers prior to the implementation of the Company's universal service rider. I then stated that the Company acknowledged the desire of some parties in this proceeding to spread costs beyond the residential class, in reference to the testimony

[3] *See* OCA Stmt. 4SR, page 22, lines 16 and 17.

of other parties on this issue, but that such a change would require an evaluation of the feasibility of this change, including considering potential IT impacts. I did not opine the appropriateness of such a change, therefore my testimony should not be viewed as having agreed to a 'need' to make such a change.

V. RESPONSE TO OCA WITNESS BRENDAN LARKIN-CONNOLLY.

Q. REGARDING THE PROPOSED TARIFF PROVISION PERTAINING TO CUSTOMERS OBTAINING CAP BENEFITS TO WHICH THEY ARE NOT ELIGIBLE, PLEASE RESPOND TO THE RECOMMENDATION OF MR. LARKIN-CONNOLLY AS PROVIDED IN HIS SURREBUTTAL TESTIMONY.

A. Mr. Larkin-Connolly recommended "a defined standard of proof, advance notice and a customer appeal process before any reversal or repayment obligations take effect[4]." It has always been the Company's approach to provide sufficient notice to customers and to allow the customers to provide evidence of their eligibility to avoid a reversal of benefits. As noted earlier in my testimony, the Company commits to working with the USAG in defining a process that balances the needs of both the affected customer and the non-CAP ratepayers who are impacted by any inappropriate use of CAP benefits.

VI. CONCLUSION

Q. DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY AT THIS TIME?

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

DATE ADMITTED: _____

Peoples Statement No. 17-RJ

Table of Contents

I. INTRODUCTION AND SUMMARY 2

II. RESPONSE TO OTHER PARTIES ARGUMENTS 3

A. CUSTOMER RELATED COSTS 3

B. WEATHER NORMALIZATION ADJUSTMENT 5

C. GATHERING RATES AND REVENUES 12

III. CONCLUSION 15

I. INTRODUCTION AND SUMMARY

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is John D. Taylor, and I am employed by Atrium Economics, LLC ("Atrium") as a Chief Executive Officer. My business address is 10 Hospital Center Commons, Suite 400, Hilton Head Island, SC 29926.

Q. HAVE YOU PREVIOUSLY SUBMITTED DIRECT AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

A. Yes. I submitted my direct, rebuttal, and surrebuttal testimony, Peoples Statement No. 17, 17-R, and 17-SR on March 27, 2026, July 16, 2026, and July 31, 2026 respectively.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. My rejoinder testimony responds to certain arguments of the surrebuttal testimony submitted by other parties. The areas I address are outlined below, with reference to the corresponding surrebuttal testimony of the other parties:

A. Customer-Related Costs

- Pennsylvania Office of Small Business Advocate ("OSBA") Statement 1-SR – surrebuttal testimony of Joseph Kubas ("OSBA witness Kubas").

B. Weather Normalization Adjustment ("WNA")

- Bureau of Investigation and Enforcement ("I&E") Statement No. 3-SR – surrebuttal testimony of Ethan H. Cline ("I&E witness Cline"); and

- Coalition For Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") Statement No. 1-SR – surrebuttal testimony of witness Patrick M. Cicero ("CAUSE-PA witness Cicero").

C. Gathering Rates and Revenues

- Pennsylvania Independent Oil & Gas Association ("PIOGA") – surrebuttal testimony of Daniel J. Weaver ("PIOGA witness Weaver").

Q. DOES YOUR REJOINDER TESTIMONY ADDRESS EVERY ARGUMENT RAISED BY THE OTHER PARTIES IN SURREBUTTAL TESTIMONY?

A. No. My rejoinder testimony focuses on certain arguments in the surrebuttal testimony submitted by other parties that have not already been addressed in prior rebuttal or surrebuttal testimony, to avoid unnecessary repetition. The fact that I do not address a particular argument in this testimony should not be interpreted as agreement with, or acceptance of, any position advanced by an intervenor that is contrary to the Company's position.

Q. ARE YOU SPONSORING ANY ADDITIONAL EXHIBITS?

A. No.

II. <u>RESPONSE TO OTHER PARTIES ARGUMENTS</u>

A. <u>CUSTOMER RELATED COSTS</u>

Q. HOW DO YOU RESPOND TO OSBA WITNESS KUBAS'S CLAIM THAT THE COMPANY DID NOT PROVIDE EVIDENCE IDENTIFYING THE

COMPONENTS OF CUSTOMER-RELATED COSTS SUPPORTING THE PROPOSED CUSTOMER CHARGES[1]?

A. I disagree with OSBA witness Kubas's characterization. His surrebuttal testimony asserts that the Company failed to provide a customer cost analysis showing the individual components supporting the proposed SGS customer charge. However, he also acknowledges that the Company's allocated cost of service study ("ACOSS") identifies the customer-related cost components he discusses, including Distribution On-site and Accounts and Service. Accordingly, his testimony confirms that the information was provided, even if he believes it was not presented in the particular summary format he would have preferred.

Q. DID YOUR PRIOR TESTIMONY AND EXHIBITS PROVIDE THE INFORMATION NECESSARY TO EVALUATE THE CUSTOMER-RELATED COSTS SUPPORTING THE COMPANY'S PROPOSED CUSTOMER CHARGES?

A. Yes. My direct testimony sponsored Peoples Exhibit No. 11, the Company's ACOSS, and explained the functionalization, classification, and allocation process used to identify customer-, demand-, and commodity-related costs.[2] My direct testimony also described the types of costs included in the customer cost category, including costs incurred to attach a customer to the distribution system, meter usage, and maintain the customer's account.[3] In addition, Peoples Exhibit No. 11, Schedule 2 provides the customer-related unit cost per customer per month by rate class, for each and every combination of functions and

[1] OSBA Statement No. 1-SR, at pp. 5-11
[2] Peoples Statement No. 17, at p. 22
[3] Peoples Statement No. 17, at pp. 18-19

classification where costs reside, including the SGS class, and Schedule 3 provides the detailed allocation of the Company's proposed revenue requirement by account and customer class.

Q. DOES OSBA WITNESS KUBAS'S CLAIM CHANGE YOUR CONCLUSION REGARDING THE COMPANY'S PROPOSED SGS CUSTOMER CHARGE?

A. No. The evidence provided in my direct and rebuttal testimony, together with Peoples Exhibit No. 11, provides the information necessary to evaluate the customer-related costs supporting the Company's proposed SGS customer charge. The fact that OSBA witness Kubas would have preferred an additional one- or two-page summary does not mean the underlying evidence was absent. The Company's proposed SGS customer charge remains below the customer-related unit cost indicated by the ACOSS and represents a measured movement toward more cost-reflective rates.

B. WEATHER NORMALIZATION ADJUSTMENT

Q. PLEASE RESPOND TO I&E WITNESS CLINE'S RECOMMENDATION TO INCREASE THE WNA DEADBAND FROM 3% TO 5% WHICH RELIES ON THE COMMISSION'S DECISION IN THE COLUMBIA GAS OF PENNSYLVANIA, INC. ("COLUMBIA GAS") 2025 RATE CASE.[4]

A. I continue to disagree with increasing the WNA deadband from 3% to 5%.[5] While I do not dispute that a 5% deadband may have been found reasonable for Columbia Gas based on

[4] I&E Statement No. 3-SR, p. 7
[5] Peoples Statement No. 17, at pp. 63-64

the record and WNA design presented in that proceeding, it does not mean a 5% deadband is the most appropriate result for Peoples in this proceeding. The question here is not whether 5% can be a reasonable deadband in some circumstances; the question is whether increasing Peoples's deadband from 3% to 5% is appropriate when evaluated together with the Company's full WNA proposal and the evidentiary record in this case.

Q. WHY IS INCREASING THE DEADBAND NOT APPROPRIATE FOR PEOPLES?

A. The deadband level should not be evaluated in isolation. In this case, the Company made a proposal to move from an average of the 65-year trend and a 20-year average ("the average method") to a 65-year trend that better represents forward-looking weather expectations. This change narrows the circumstances in which the WNA will produce adjustments by improving the definition of "normal" weather- by moving from the average method to the 65-year trend weather normal. These facts were not present in the Columbia Gas 2025 Rate Case's evidentiary record, and the Commission made its determination without the benefit of any analysis on the impact changing the normal weather period would have on the function of the WNA and deadband. Adding a larger 5% deadband on top of the move to a 65-year trend normal weather is unnecessary.

Q. HOW DO YOU RESPOND TO I&E WITNESS CLINE'S POINT THAT A 5% DEADBAND CAPTURES "NORMAL WEATHER FLUCTUATIONS"?[6]

[6] I&E Statement 3-SR, p. 5.

A. Mr. Cline's statement does not resolve the issue, nor was it supported by any analysis. A deadband is not simply a meteorological judgment about what range of weather may be considered "normal." It is a ratemaking design choice that determines how much of the weather-related revenue and bill volatility remains unaddressed and is still borne as risk to customers and the Company. A 3% deadband already prevents minor weather variations from triggering WNA adjustments. Increasing the deadband to 5% would expand the range of deviations for which no adjustment is made, even when those deviations can still have meaningful bill and revenue effects that distort the revenue recovered away from the cost of service.

Q. WOULD INCREASING THE DEADBAND FROM 3% TO 5% BENEFIT CUSTOMERS?

A. No, and I&E witness Cline has not demonstrated that it would. A larger deadband would reduce surcharges in some warmer-than-normal periods, but it would also reduce credits to customers in colder-than-normal periods. The recent colder-than-normal winter months illustrate this point: larger deadbands reduce the extent to which customers receive the benefit of WNA credits when actual weather is colder than the normal weather assumptions embedded in rates. In my review, the Company should make the adjustment from the average method to the 65-year trend normal and evaluate that change's impact, which is expected to result in a more symmetrical set of WNA credits and collections, before layering on another significant change, i.e., increasing the deadband from 3% to 5%.

Q. HOW DO YOU RESPOND TO I&E WITNESS CLINE'S STATEMENT THAT "EXTENDING THE 20-YEAR AVERAGE ANALYSIS TO A 65-YEAR REGRESSION IS NOT CONSISTENT WITH COMMISSION PRECEDENT"[7]?

A. I disagree. I&E witness Cline's conclusion overstates the relevance of the Commission's decision in the Columbia Gas 2025 Rate Case and treats that decision as if it resolved an evidentiary question that was not before the Commission in that proceeding. Columbia Gas did not present the Commission with the same record presented by Peoples here. In Columbia Gas, the options before the Commission were shorter historical averaging periods, including a 20-year average and a 10-year average. The Commission was not asked to evaluate, and did not reject, a 65-year regression methodology comparable to the methodology supported in this proceeding.

Q. WHY DOES THE COLUMBIA GAS DECISION NOT CONTROL THE NORMAL WEATHER METHODOLOGY IN THIS PROCEEDING?

A. The Columbia Gas decision should be understood in the context of the record presented in that case. A Commission decision selecting one methodology from among the alternatives presented in a particular record does not establish that no other methodology can be reasonable in a later case supported by different evidence. Here, Peoples has presented statistical evidence supporting a 65-year regression methodology, including the relationship between long-term weather trends and forward-looking normal heating degree days. I&E witness Cline does not identify a flaw in that analysis. Instead, he states that his

[7] I&E Statement No. 3-SR, p. 8

recommendation is not based on the statistical analysis or results of the 65-year regression, but on his reading of the Columbia Gas decision. That approach does not rebut the evidence supporting Peoples's proposed methodology. In addition, I&E's position in the Columbia case was that the ten-year weather cycle better reflects the warming trend. That may be the case when compared to a 20-year average as was the alternative offered in the Columbia case, but I&E has provided no factual basis or analysis disputing that the 65-year regression is a better reflection than the 10 year average, and has provided no response to the plethora of analysis and facts presented by the Company on why the 65-year regression is superior.

Q. DOES I&E WITNESS CLINE'S RELIANCE ON THE COLUMBIA GAS DECISION CHANGE YOUR RECOMMENDATION?

A. No. Peoples's proposed 65-year regression methodology remains reasonable and better aligned with the purpose of establishing forward-looking normal weather for base-rate billing determinants and WNA administration. I&E witness Cline's reliance on Columbia Gas does not demonstrate that the Company's proposal is wrong; it only reflects his preference to follow what he considers precedent from a case that involved different options and a different evidentiary record. The Commission should evaluate the evidence in this proceeding and approve the Company's proposed 65-year regression methodology.

Q. HOW DO YOU RESPOND TO CAUSE-PA WITNESS CICERO'S RECOMMENDATION TO EXEMPT CAP CUSTOMERS FROM WNA CHARGES[8]?

[8] CAUSE-PA Statement No. 1-SR, pp. 41-42

A. I disagree with CAUSE-PA witness Cicero's recommendation. His concern appears to assume that the WNA will operate only as a surcharge and, therefore, will always increase CAP customer bills, CAP program costs, and universal service rider recovery. That assumption is incorrect. The WNA is designed to operate symmetrically and has done so. When weather is warmer than normal (and outside the deadband), the WNA produces a surcharge; when weather is colder than normal (and outside the deadband), the WNA will produce a credit. Exempting CAP customers from the WNA would therefore exclude them from both potential charges and potential credits.

Q. WOULD EXEMPTING CAP CUSTOMERS FROM THE WNA IMPROVE THE OPERATION OF THE MECHANISM?

A. No. The WNA reconciles weather-driven differences between the normal weather assumptions embedded in base rates and actual weather during the WNA period. CAP customers are part of the residential class and receive service under rates that embed those same normal weather assumptions. Removing CAP customers from the WNA would create a mismatch between the rates used to establish revenues and the customers included in the weather reconciliation. It would also shift the effect of that exemption to other customers or to the universal service recovery mechanism, depending on how the exemption were implemented. In other words, it could subject the customers who pay for CAP credits to have such credits be subject to 100% of the fluctuations in weather for CAP customer usage. That outcome would not make the mechanism more accurate or more equitable.

Q. DOES CAUSE-PA WITNESS CICERO'S RECOMMENDATION CHANGE YOUR POSITION REGARDING THE WNA?

A. No. The WNA should continue to apply to the residential class, including CAP customers, consistent with its approved design and symmetric operation. The possibility that a WNA surcharge may increase CAP-related costs in a warmer-than-normal period does not justify excluding CAP customers from the mechanism, particularly when the same mechanism can provide credits in colder-than-normal periods. The more appropriate approach is to evaluate the WNA based on its full operation over time, not based on an assumption that it will only produce surcharges.

Q. HOW DO YOU RESPOND TO CAUSE-PA WITNESS CICERO'S ALTERNATIVE CLASS-BASED WNA PROPOSAL[9]?

A. As I stated in rebuttal testimony, the concept of a class-based WNA is not inherently unreasonable[10]. However, CAUSE-PA witness Cicero's proposal still lacks the supporting analysis necessary for the Commission to determine whether it would be preferable to the Company's existing WNA. In surrebuttal, he provides additional procedural detail, including a proposal to track class-level WNA charges and credits during the WNA period and then recover or refund the net amount over the following 12 months. That additional detail is helpful, but it does not resolve the practical and analytical questions that would need to be answered before adopting such a change.

[9] CAUSE-PA Statement No. 1-SR, pp. 39-40
[10] Peoples Statement No. 17-R, at pp. 67-68

Q. WHAT ADDITIONAL EVALUATION WOULD BE NECESSARY BEFORE ADOPTING SUCH A PROPOSAL?

A. At a minimum, the proposal would require testing of the mechanics, evaluation of customer and class impacts, and comparison of results against the current WNA methodology. The proposed schedule does not provide time to perform that work in this proceeding. It is not enough to describe when entries would be accumulated and when a later charge or credit would be applied. The Commission and Company would also need to understand how the proposal would affect monthly bills, annual bills, cash flow, class-level revenue recovery, customer credits, and customer charges under different weather scenarios.

Q. HAS CAUSE-PA WITNESS CICERO PROVIDED THE ANALYSIS NEEDED TO SUPPORT ADOPTION OF HIS ALTERNATIVE WNA PROPOSAL IN THIS CASE?

A. No. CAUSE-PA witness Cicero does not provide supporting calculations, illustrative bill-impact comparisons, or quantitative results showing how his proposal would perform relative to the existing WNA. Without that information, the Commission cannot determine whether the proposed alternative would improve customer outcomes, reduce volatility, preserve symmetry, or create unintended cost shifts among customers or classes. For those reasons, his alternative class-based WNA proposal should not be adopted in this proceeding.

C. GATHERING RATES AND REVENUES

Q. DO YOU AGREE WITH PIOGA WITNESS WEAVER THAT PEOPLES MUST IDENTIFY PRODUCER-SPECIFIC INCREMENTAL COSTS TO SUPPORT THE PROPOSED RATE APPALACHIAN GATHERING SERVICE ("RATE AGS") INCREASE?

A. No. PIOGA witness Weaver's position places too much emphasis on narrowly defined incremental costs and does not adequately account for the embedded and common costs of the gathering system. Rate AGS enables producers to contribute towards the cost of an existing system that Peoples must continue to own, operate, maintain, inspect, repair, and replace in order to receive and move producer gas. Those costs do not arise only when a producer causes a new, separately identifiable expense.

Cost of service is the principal foundation of Pennsylvania ratemaking, but a just-and-reasonable rate is not limited to incremental cost or determined by a single mechanical allocation. A reasonable allocation should recognize both directly attributable costs and an appropriate share of the embedded and common costs necessary to provide the service. Peoples has identified the total gathering cost of service, and PIOGA does not dispute that producers use and benefit from the facilities whose costs are at issue.

Q. DOES THE ABSENCE OF A SEPARATE PRODUCER-ONLY COST STUDY MEAN THAT THE PROPOSED RATE CANNOT BE FOUND JUST AND REASONABLE?

A. No. A cost-of-service analysis involving shared infrastructure does not necessarily produce one uniquely correct allocation or rate. Reasonable judgment is required in determining how common costs should be shared, and final rates may also reflect gradualism, rate

stability, and rate impacts, provided cost responsibility remains the primary consideration. Peoples identified the gathering system's fully allocated cost of service, considered several approaches to the producer contribution, and selected a measured increase that remains substantially below full gathering cost recovery from producers. The alternatives demonstrate that the proposed rate represents a gradual rate-design judgment within a broader cost-of-service framework, not an attempt to assign all gathering costs to producers.

Q. WHAT IS THE COST-ALLOCATION CONSEQUENCE OF WITNESS WEAVER'S RECOMMENDATION TO RETAIN THE EXISTING RATE?

A. Retaining the existing Rate AGS would not eliminate or reduce Peoples' gathering-system costs. It would reduce producer contributions toward those costs and leave a greater share to be borne by customers. Witness Weaver has not presented an alternative fully allocated cost analysis demonstrating that the existing $0.24/Mcf rate produces a more reasonable allocation than the proposed rate of $0.29/Mcf. His recommendation therefore preserves a larger customer responsibility without establishing that the resulting allocation is more consistent with cost causation or the just-and-reasonable standard. The Commission should evaluate whether producers are making a reasonable contribution toward the embedded and common costs of the gathering facilities they use—not require Peoples to prove that each cent of the proposed increase corresponds to a newly incurred, producer-specific incremental cost.

Q. IS THERE OTHER RELEVANT RATE EVIDENCE THAT HELPS PLACE PEOPLES' PROPOSED RATE AGS IN CONTEXT?

A. Yes. Although another utility's tariff does not determine the appropriate rate for Peoples, it can provide a useful reasonableness check. Just across the Pennsylvania border, Hope Gas, Inc.'s West Virginia Production Gathering and Aggregation Service tariff establishes gathering rates of $0.55 per Dth for its DGP facilities and $0.65 per Dth for its Equitrans facilities.[11]

Using the 1.039 Dth-per-Mcf system-average conversion factor applied by Peoples in Exhibit EAP-1, those rates are equivalent to approximately $0.57 per Mcf and $0.68 per Mcf, respectively. Peoples' proposed rate of $0.29 per Mcf is therefore approximately one-half of those nearby tariffed producer gathering rates. In addition, this comparison is conservative because Peoples' tariff applies a relatively low 2.61% retainage rate to conventional production, whereas Hope applies retention percentages of 15% for DGP facilities and 20% for Equitrans facilities, further increasing the producer's effective cost of gathering service under those neighboring tariff provisions. This comparison does not establish that Hope Gas's rates should apply to Peoples or that the two tariff structures are completely comparable, but it provides a useful reasonableness check and additional context indicating that Peoples' proposed rate does not appear excessive relative to nearby producer gathering charges.

III. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY AT THIS TIME?

[11] https://hopegas.com/docs/complete%20tariff%20package.pdf – Original Sheet No. 73

A. Yes. I reserve the right to supplement my testimony as additional issues arise during the course of this proceeding. Thank you.

III. RESPONSE TO OCA WITNESS LARKIN-CONNOLLY 6

IV. CONCLUSION.....7

PREPARED REJOINDER TESTIMONY OF
MICHELLE PARKS

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND ADDRESS.

A. My name is Michelle Parks. My business address is 375 North Shore Drive, Suite 600, Pittsburgh, PA 15212.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Essential Utilities, Inc. ("Essential") as Director Customer Operations. Essential is the ultimate parent company of PNG Companies LLC ("PNG"), and PNG provides various administrative functions for Peoples Natural Gas Company LLC ("Peoples" or the "Company") including Customer Operations.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY IN THIS PROCEEDING?

A. Yes, I submitted Rebuttal Testimony in this proceeding.

Q. WHAT IS THE PURPOSE OF YOUR REJOINDER TESTIMONY?

A. The purpose of my Rejoinder Testimony is to respond to certain portions of the testimony and recommendations of Office of Consumer Advocate ("OCA") witnesses Roger Colton and Brendan Larkin-Connolly.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No

Q. HOW HAVE YOU ARRANGED YOUR REJOINDER TESTIMONY?

A. My testimony is divided into sections based on the witness to whom I am responding. To the extent that I do not address an issue raised in the surrebuttal testimony of another witness, it should not be construed as agreement with that testimony.

II. RESPONSE TO OCA WITNESS COLTON

Q. Mr. Colton claims that you make a fundamental error in responding to his testimony on Peoples' collections activity by examining the issue only from the perspective of Confirmed Low-Income ("CLI") Customers. (OCA St. 4-SR, pp. 23-24.) When looking at the Company's collections activity for residential customers as a whole, does this change your conclusion?

A. No it does not. My rebuttal testimony was responsive to Mr. Colton's testimony, specifically 'Part 2. The Effectiveness and Efficiency of Peoples Collection Activities' which began on page 43 of OCA Statement 4. Mr. Colton discussed CLI related issues extensively in this section, therefore my rebuttal testimony responded to those issues accordingly. His broader discussion regarding residential collections was limited to the use of payment arrangements in the collections process and collections expenses, both of which I addressed in my rebuttal testimony. On pages 6-8 of my Rebuttal Testimony, I responded to Mr. Colton's recommendation to adjust Peoples' credit and collection expenses.[1] I do not focus solely on CLI customers in my response. My objective was not to focus solely on the CLI subset of residential customers, but rather, I respond to the ways in which Mr. Colton calls out CLI customer arrears and payment arrangements in his argument concerning Peoples' credit and collection efforts. If you look on pages 43-50 of

[1] See the Rejoinder testimony of Company Witness Wachter for further response as to this recommended expense adjustment.

his direct testimony, Mr. Colton focuses on collection efforts, payment arrangements and arrears while toggling back and forth with comparison between residential and confirmed low-income customers. The Company's response to this overall recommendation to adjust the Company's credit and collection expenses regards both residential customers and CLI customers – just as Mr. Colton's testimony reflected on both categories and just as credit and collections activities covers all residential customers, including CLI customers. Overall, the Company's position remains the same. The report Mr. Colton uses to argue for an adjustment to credit and collection expenses is a reported figure intended to compare utility information on credit and collection activities – this report is not used, nor should it be used for justification of ratemaking expense adjustments.

Q. Why did Peoples see an increase in terminations among CLI in 2023 and 2024?

A. The increase in terminations in 2023 and 2024 must be understood in the context of Peoples' expanded definition of residential customers subject to collection activity as Confirmed Low Income. As the Company broadened the population of Confirmed Low Income, using the definition agreed upon in its 2023 base rate proceeding[2] to include customers who self-identify as low-income, it follows that, with a larger population of accounts within that definition, the Company would also experience increases in reported collection activities within that group. All residential customers are eligible for a number of collections activities including notices, payment follow-up, and ultimately terminations where customers did not resolve arrearages or establish and maintain satisfactory payment arrangements. Therefore, the increase in reported figures as CLI does not indicate that

[2] See Docket No. R-2023-3044549, Settlement page 69.

Peoples' practices were inappropriate or targeted toward low-income customers; rather, it reflects the application of a different definition of which accounts were classified as general residential versus CLI.

Q. Mr. Colton claims that the data regarding Peoples' performance relative to Low-Income customers "fails to present a complimentary picture." (OCA St. 4-SR, pp. 24-25.) Do you wish to respond?

A. The comparison presented by Mr. Colton does not support the conclusion that Peoples' collections performance with respect to CLI customers was in "sharp decline." Rather, the data reflects that Peoples continued to manage arrearages within a highly constrained post-pandemic collections environment while complying with applicable Commission requirements governing payment arrangements, notices, termination activity, and customer protections. The fact that CLI arrearage dollars remained essentially flat from 2022 to 2024—despite continuing inflationary pressure, customer affordability challenges, and changing payment behavior—undercuts the suggestion that Peoples' approach was ineffective. Disconnection activity is not, by itself, a measure of collection "effectiveness"; it is one component of a regulated collections process that is used only after required notices, outreach, payment opportunities, and applicable protections have been provided. Similarly, the increase in payment-troubled customers does not establish that Peoples failed to offer or administer payment arrangements appropriately. A customer may become payment-troubled because an arrangement is defaulted, which reflects the customer's ability or willingness to maintain the arrangement—not merely the utility collection practices. Peoples' increased credit and collections expenditures further demonstrate that

the Company devoted additional resources to customer contact, account management, and compliance activities; those costs should not be characterized as evidence of inefficiency. Finally, comparisons to statewide percentages are incomplete unless they control differences in service territory demographics, customer mix, arrearage aging, heating load, enrollment patterns, local economic conditions, and the timing of collections activity. I would also note that among other Pennsylvania utilities, the definitions applied when reporting statistics, such as CLI identification, vary by utility, therefore caution must be taken when making statewide comparisons. For these reasons, the cited figures do not demonstrate that Peoples performed poorly relative to CLI customers.

Q. Mr. Colton claims that your response to his testimony on disconnections for nonpayment misses the point that Mr. Colton was making, which is not that the Company engages in disparate "treatment" but rather that there are disparate "impacts". He further claims that Peoples addresses the difference between disparate treatment and disparate impacts when it comes to the Company's tariff regarding cash security deposits. (OCA St. 4-SR, pp. 26-27.) What is your response?

A. Mr. Colten's statement is incorrect. My response did not rest on a distinction between disparate "treatment" and disparate "impact," nor did it miss the point of Mr. Colton's testimony. The Company's position is that its disconnection practices for nonpayment are applied consistently and in accordance with applicable regulations, customer protections, and established procedures. Mr. Colton has not demonstrated that the Company's practices result in an unlawful or improper disparate impact. To the extent he asserts such an impact, that claim requires evidence showing that the Company's policies or practices cause the

alleged disparity, rather than merely identifying differences in outcomes that may be attributable to other factors outside the Company's control. Moreover, Mr. Colton's reference to the tariff language around cash security deposits is irrelevant to the Company's termination procedures. His reference to the tariff language regarding cash security deposits is an attempt find new ways to criticize the Company's termination procedures as evidence of his "disparate impact" does not exist. The security deposit tariff language that Mr. Colton references was modified by the Low Income Stipulation in the 2023 base rate proceeding. It was not added to address any alleged disparate treatment or disparate impacts, but rather was intended to align with other credit approval related language as reflected in the Equal Credit Opportunity Act.

Q. Mr. Colton disagrees with your testimony that SSNs are effective at verifying a customer's identity and claims that the use of SSNs does not address "extensive research" against the use of SSNs. Has your position on the use of SSNs changed?

A. No, my opinion has not changed. I continue to believe that Social Security numbers are an effective tool for verifying a customer's identity when used appropriately. While I understand Mr. Colton's concerns regarding the risks associated with SSNs, those concerns do not alter my position that SSNs may still serve a legitimate verification purpose when handled securely, limited to appropriate circumstances and protected by applicable privacy and security controls.

III. RESPONSE TO OCA WITNESS LARKIN-CONNOLLY

Q. While Mr. Larkin-Connolly accepts that the Company already self reports any large scale billing issues, he continues to claim that the Company has not provided the customer counts or dollar amounts for certain rebilling instances. Accordingly, he revises his recommendation to suggest that the Company maintain contemporaneous records of each back billing or rebilling event affecting more than 100 customers and be prepared to provide them in its next rate case. (OCA St. 5-Sr, pp. 6-7). How do you respond?

A. I disagree with Mr. Larkin-Connolly's revised recommendation. As he acknowledges, the Company already self-reports large-scale billing issues when they occur, consistent with its regulatory obligations and established internal escalation practices. The Company does not lack adequate control, records, or transparency. Rather, rebilling events can vary significantly in cause, scope, timing, customer impact, and remediation approach, and the relevant information is often maintained through existing operational, billing, customer service, and regulatory processes. Requiring the Company to maintain a separate contemporaneous record for every back billing or rebilling event affecting more than 100 customers, solely for potential production in a future rate case, would create an additional administrative requirement without a clear showing that existing processes are insufficient or that customers would receive a corresponding benefit. Accordingly, the Company does not believe Mr. Larkin-Connolly's recommendation is necessary. The appropriate focus should remain on timely identification, customer impact mitigation, accurate billing corrections, and compliance.

IV. CONCLUSION

Q. DOES THIS CONCLUDE YOUR REJOINDER TESTIMONY?

A. Yes, it does.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Docket No. R-2026-3060855

Peoples Natural Gas Company LLC

Statement No. 15-RJ

Rejoinder Testimony of Jennifer E. Nelson

Topics: **Return on Equity**
Capital Structure

Dated: August 4, 2026

I. INTRODUCTION AND SUMMARY

Q. Please state your name and business address.

A. My name is Jennifer E. Nelson, and I am employed by Concentric Energy Advisors, Inc. ("Concentric") as a Vice President. My business address is 293 Boston Post Road West, Suite 500, Marlborough, Massachusetts, 01752.

Q. Did you previously file testimony in this proceeding?

A. Yes. I submitted my direct testimony, Peoples Natural Gas Company LLC Statement No. 15 ("Peoples St. No. 15") to the Pennsylvania Public Utility Commission ("PUC" or the "Commission") on behalf of Peoples Natural Gas Company LLC ("Peoples", or the "Company"), which is a wholly-owned subsidiary of PNG Companies LLC, which is ultimately owned by Essential Utilities, Inc. ("Essential"), on March 27, 2026. I also submitted rebuttal testimony, Peoples Statement No. 15-R ("Peoples St. No. 15-R"), on July 16, 2026, and surrebuttal testimony, Peoples Statement No. 15-SR ("Peoples St. No. 15-SR"), to the Commission on behalf of Peoples on July 31, 2026.

Q. Are you sponsoring any rejoinder schedules in this case?

A. Yes, I sponsor two exhibits:

- Exhibit JEN-1RJ: Value Line Summary & Index Report, May 22, 2026; and
- Exhibit JEN-2RJ: National Association of Regulatory Utility Commissioners CPI-1 Resolution Regarding Sound Public Utility Ratemaking Principles.

Q. What is the purpose of your rejoinder testimony?

A. The purpose of my rejoinder testimony is to respond to the surrebuttal testimony of D.C. Patel on behalf of the Bureau of Investigation and Enforcement ("I&E", "I&E St. No. 2-SR"). I also respond to the surrebuttal testimonies of David J. Garrett on behalf of the

Pennsylvania Office of Consumer Advocate ("OCA", "OCA St. No. 3-SR") and Patrick M. Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA", "CAUSE-PA St. No. 1-SR") regarding the Company's return on equity ("ROE") and capital structure. I collectively refer to these individuals as the "Witnesses." My silence on a particular issue should not be construed as agreement with respect to that issue.

Q. Please summarize your rejoinder testimony.

A. My analyses, positions, and recommendations made in my direct, rebuttal, and surrebuttal testimonies remain unchanged. My base ROE recommendation of 11.00 percent (11.25 percent inclusive of an adjustment for Peoples' management performance) remains a just and reasonable estimate of Peoples' cost of equity, and I continue to support Peoples' requested 54.47 percent equity ratio. Further, I reiterate my responses to, and criticisms of, the Witnesses' direct and rebuttal testimonies that I discussed in my rebuttal and surrebuttal testimonies. I respond to select topics raised by Messrs. Patel, Garrett, and Cicero in their surrebuttal testimonies; lack of a response on a particular issue does not mean that I agree with that witness's position.

Q. How is the remainder of your rejoinder testimony organized?

A. My rejoinder testimony is organized by witness, as follows:

Section II – responds to the surrebuttal testimony of I&E Witness Patel;

Section III – responds to the surrebuttal testimony of OCA Witness Garrett;

Section IV – responds to the surrebuttal testimony of CAUSE-PA Witness Cicero; and

Section V – concludes my rejoinder testimony.

II. RESPONSE TO I&E WITNESS PATEL

Q. Mr. Patel continues to recommend a hypothetical 50/50 capital structure and asserts that Peoples' requested 54.47 percent equity ratio is "unreasonable for ratemaking purposes."[1] Has he demonstrated that Peoples' actual capital structure is atypical or unsound?

A. No, he has not. As explained in my rebuttal testimony, the Commission's standard is to adopt a company's actual capital structure unless it is "atypical or too heavily weighted toward either debt or equity."[2] Even the sources Mr. Patel relies upon in his surrebuttal testimony apply the same standard. For example, Mr. Patel refers to the Society of Utility and Regulatory Financial Analysts ("SURFA") Cost of Capital Manual provided as a study guide for candidates for the Certified Rate of Return Certification Examination,[3] which explains that a hypothetical capital structure is appropriate when the actual structure is "*substantially different* from the typical or proper utility capital structure," subject to a "reasonableness test."[4] In practice, the Commission has evaluated the reasonableness of a utility's capital structure by reference to the *range* of proxy group equity ratios,[5] not the *average* that Mr. Patel believes to be the valid test of reasonableness. The fact of the matter is that regardless of the data source presented in this case, Peoples' equity ratio is *within the range* of actual and authorized equity ratios, and meets the standard for concluding a utility's capital structure is not atypical:

[1] I&E St. No. 2-SR, at 6.
[2] Peoples St. No. 15-R, at 19.
[3] I&E St. No. 2-SR, at 8-9, citing *The Cost of Capital – A Practitioner's Guide* prepared for the Society of Utility and Regulatory Financial Analysts, 2020 Edition, at 47. As noted in my Direct Testimony, I earned the CRRA certification and am a Certified Rate of Return Analyst.
[4] I&E St. No. 2-SR, at 9 (emphasis added).
[5] Peoples St. No. 15-R, at 19, footnote 16.

- Peoples' requested 54.47 percent equity ratio is *below* the proxy group operating companies' three-year and five-year average equity ratios (54.51 percent and 54.63 percent, respectively) and falls within the proxy group five-year range of 48.15 percent to 60.07 percent (see Exhibit JEN-6R);
- Peoples' requested equity ratio is consistent with the average and median current authorized equity ratios of the proxy group (of 54.32 percent and 54.00 percent, respectively), and falls within the proxy group range of 43.17 percent to 61.05 percent (see Exhibit JEN-8R);
- Peoples' requested equity ratio is within the range of authorized equity ratios in 2025 and 2026 as reported by Mr. Patel (43.17 percent to 61.05 percent; see I&E Exhibit No. 2, Schedule 2, pp. 17-18 and Exhibit JEN-7R);
- Peoples' requested equity ratio is within the range of the five-year average proxy group consolidated holding company equity ratios reported by Mr. Patel (37.17 percent to 60.58 percent;[6] see I&E Exhibit No. 2, Schedule 2, pp. 6-7);
- Peoples' requested equity ratio is within the range of Value Line's projected equity ratios in 2027 for the proxy group consolidated holding companies as reported by Mr. Patel (39.00 percent to 60.00 percent; see I&E St. No. 2, p. 17); and

[6] As explained in my rebuttal testimony, ONE Gas's 2021 and 2022 reported equity ratios are abnormally low due to interim financing associated with extraordinary gas commodity costs from Winter Storm Uri. See Peoples St. No. 15-R, at 26-27.

- Peoples' requested equity ratio is within the range of Value Line's reported equity ratios for the proxy group consolidated holding companies in 2025 as reported by Mr. Garrett (38 percent to 60 percent, see Exhibit DJG-13).[7]

All evidence in the record supports the conclusion that Peoples' capital structure is not substantially different from its peers nor atypical.

Q. Mr. Patel asserts that the national average authorized equity ratio of 51.64 percent for natural gas distribution utilities should serve as an "upper limit" for Peoples' equity ratio.[8] Do you agree?

A. No. Mr. Patel's position that the national average authorized equity ratio should be an "upper limit" is unsupported and is an attempt to move the goalposts of the Commission's long-standing precedent. Undoubtedly, all capital structures approved for ratemaking purposes have been deemed by the regulator to be "in compliance with recognized regulatory ratemaking principles,"[9] not just those that equal the nationwide average. There is no analytical or regulatory basis for treating an industry average as a ceiling; by definition, roughly half of the authorized equity ratios in any sample fall above the average. As I explained in my rebuttal testimony and Exhibit JEN-7R, more than 61 percent of the 52 cases in Mr. Patel's own data set are above his recommended 50 percent equity ratio, and more than one-third of those are equal to or greater than 54 percent.[10] Patel's recommended 50 percent equity ratio sits at the low end of authorized equity ratios for natural gas distribution utilities.

[7] Calculated as 100% - debt ratio reported in Exhibit DJG-13.
[8] I&E St. No. 2-SR, at 8.
[9] I&E St. No. 2-SR, at 8.
[10] Peoples St. No. 15-R, at 28-29; Exhibit JEN-7R

Q. Mr. Patel argues that the current economic environment and rate affordability now make it "necessary" to impute a 50/50 capital structure, and calculates an approximate $22.9 million in ratepayer savings from doing so.[11] How do you respond?

A. Mr. Patel's $22.9 million savings figure is illusory because it holds the cost of debt and equity constant.[12] That unsound assumption disregards the interrelationship between the capital structure and the costs of both debt and equity. The fact of the matter is that if the Commission were to impute Mr. Patel's recommended 50/50 capital structure, not only would it represent a significant departure from the Commission's long-standing practice heightening regulatory risk, but the greater financial risk resulting from higher leverage would also increase the costs of both debt and equity, largely offsetting any claimed savings.[13] Further, Mr. Patel's acceptance of Peoples' proposed cost of debt[14] conflicts with his recommendation to impute a hypothetical capital structure. As explained in my rebuttal testimony, the Commission has acknowledged that a company's cost of long-term debt is based on its actual capitalization and that "there is a direct relationship between the cost of debt and the amount of financial risk shown by the debt ratio."[15] Customers benefit over the long term from being served by a financially healthy utility and those benefits outweigh the illusory short-term "benefits" of a negative regulatory climate that heightens regulatory risk.[16]

[11] I&E St. No. 2-SR, at 7-8.
[12] I&E St. No. 2-SR, at 8 ("if the company were to employ a 50/50 capital structure instead of 54.47% equity and 45.53% long-term debt *and not change the cost of debt or requested return on equity*, the cost savings to ratepayers would be $22,881,642". Emphasis added).
[13] Peoples St. No. 15-R, at 20.
[14] I&E St. No. 2, at 6-7.
[15] Peoples St. No. 15-R, at 36, footnote 49.
[16] Peoples St. No. 15-R, at 56-57.

Q. Mr. Patel points to Essential's consolidated capital structure as evidence that Peoples' requested 54.47 percent equity ratio is too high.[17] Do you agree?

A. No. I explained at length in my rebuttal testimony the reasons why operating utilities are financed differently than consolidated holding companies and why consolidated holding company capital structures are not the appropriate benchmark for assessing the reasonableness of an operating utility's capital structure.[18] The standalone ratemaking principle requires that Peoples' rates reflect the costs, risks, and financial requirements of Peoples, not those of its parent. There is no rational basis why Peoples' cost of capital should be determined differently. Essential's consolidated capital structure finances a portfolio of regulated water, regulated natural gas, and other operations, each with a different risk profile and financing requirement. Further, Essential's debt ratio incorporates the consolidated debt within the Essential family, including debt from other affiliates. Imputing Essential's more leveraged consolidated capital structure to Peoples effectively conveys the risks of debt incurred for other Essential affiliates to Peoples' customers. I do not believe it is reasonable for Peoples' customers to bear the risks of debt incurred for other Essential affiliates. I reiterate that Peoples' cost of debt – which all parties have either accepted or not objected to – assumes Peoples' actual book capitalization. One cannot accept the cost of debt without accepting the capital structure that enables that cost of debt.

Q. Mr. Patel continues to give one-third weight to the national average authorized ROE of 9.69 percent and asserts that his 10.20 percent recommendation is

[17] I&E St. No. 2-SR, at 7.
[18] Peoples St. No. 15-R, at 21-23, 24-26.

reasonable because it is "comparable, yet higher than" that average.[19] What is your response?

A. Mr. Patel believes it is reasonable to determine Peoples' authorized ROE, in part, by reference to authorized ROEs, yet continues to criticize my Risk Premium analysis, a perplexing contradiction. The difference is that my Risk Premium analysis uses a statistical analysis to model the relationship between the utility equity risk premium that references authorized ROEs and the prevailing bond yield during the pendency of rate cases, an objective approach rather than a simple average calculated over a subjective period of time.

Q. Mr. Patel clarifies that his point regarding monetary policy is that potential future reductions in interest rates could reduce Peoples' debt costs in 2027, when new rates take effect.[20] Does that change your view of the current capital market environment?

A. No. Mr. Patel's position assumes a direct pass-through from the Federal Funds rate to Peoples' long-term cost of capital that the market data do not support. The ROE models and long-term debt costs are driven by long-term yields, and long-term yields have not followed the Federal Reserve's short-term rate cuts. As I showed in my rebuttal testimony, even though the Federal Reserve cut the Federal Funds rate in 2024 and 2025, 10-year and 30-year Treasury yields actually increased over the same period, and long-term government and utility bond yields remain elevated relative to the levels at the time of Peoples' last rate case.[21] A speculative future reduction in short-term rates therefore

[19] I&E St. No. 2-SR, at 16.
[20] I&E St. No. 2-SR, at 17-18.
[21] Peoples St. No. 15-R, at 60–64.

provides no basis to reduce Peoples' authorized ROE, which must reflect the forward-looking, long-term cost of equity.

Q. Mr. Patel maintains that the 10-year U.S. Treasury note is the appropriate risk-free rate because the "most important consideration is that the rate be as risk-free as possible," and he argues that the risk-free rate need only reflect the period during which rates will be in effect.[22] What is your response?

A. I continue to respectfully disagree, for the reasons detailed in my rebuttal testimony. The position that the risk-free rate must match the underlying life of the security is supported by financial texts.[23] Utility assets are long-lived, and the life of equity is perpetual and infinite; therefore, the 30-year Treasury bond is the appropriate risk-free rate. Mr. Patel conflates the interest rate risk of holding a bond with default risk. Mr. Patel's new emphasis confuses the periodic resetting of rates with the long-lived nature of the assets investors value.[24]

Q. In your rebuttal testimony, you corrected Mr. Patel's characterization of his forward market return using Value Line's dividend yield and three- to five-year price appreciation as the *median*, not the *average*.[25] Has Mr. Patel acknowledged this correction?

A. No. Mr. Patel continues to misconstrue Value Line's dividend yield and three- to five-year price appreciation reported in its Summary and Index report as the *average* of the 1,700 stocks covered by Value Line.[26] Exhibit JEN-1RJ is the May 22, 2026 Summary and Index

[22] I&E St. No. 2-SR, at 25.
[23] Peoples St. No. 15-R, at 80.
[24] I&E St. No. 2-SR, at 26.
[25] Peoples St. No. 15-R, at 87.
[26] I&E St. No. 2-SR, at 27.

report that Mr. Patel relies on, which clearly shows Value Line reports *median* values, not *average* values. My primary point in my rebuttal testimony is that if Mr. Patel intends to use an average, he should calculate the weighted average as an index is traditionally calculated, rather than erroneously applying a median misconstrued as an average.

Additionally, Mr. Patel's surrebuttal testimony contains a second error: he mistakenly asserts that when his Value Line market return estimate is corrected using a weighted average calculation, the market return estimate "would be 11.99% rather than 11.83%."[27] The 11.99 percent correction in my rebuttal testimony is not Mr. Patel's corrected market return estimate using a weighted average, it is his corrected CAPM-based *ROE estimate*.[28]

Q. Mr. Patel continues to rely on Kroll's recommended equity risk premium in his composite CAPM and points to the Commission's use of the Kroll ERP CAPM in the 2025 Columbia Gas order.[29] What is your response?

A. Continued reliance on flawed inputs that are inconsistent with financial theory (including the reliance on the 10-year Treasury yield as the risk-free rate and Kroll's recommended equity risk premium) is misguided and perpetuates flawed and unreliable measures of the cost of equity. As I discussed in my rebuttal testimony, Kroll's methodology is opaque and contradicts the fundamental concept that the equity risk premium is a function of the risk-free rate at a point in time. Other commissions have rejected it as failing the comparable return standard established by the U.S. Supreme Court.[30] Mr. Patel's reliance

[27] I&E St. No. 2-SR, at 26.
[28] Peoples St. No. 15-R, at 87, lines 15-16 ("Adjusting Mr. Patel's CAPM analysis to use the *weighted average* market return (without any other corrections) produces an ROE estimate of 11.99 percent." Underline added. Italics in original).
[29] I&E St. No. 2-SR, at 28-29.
[30] Peoples St. No. 15-R, at 86.

on the Commission's 2025 Columbia Gas order does not change the fact that his Kroll-based CAPM produces an ROE of 8.86 percent, below nearly every authorized gas-utility ROE in the past 46 years. Regardless of methodology and inputs, the cost of equity must meet the constitutional standards that even Mr. Patel acknowledges,[31] and the estimates produced from Kroll's recommended equity risk premium fail those standards.

Q. Mr. Patel suggests that you criticize him for not performing an ECAPM analysis.[32] Is he correct?

A. No. Nowhere in my testimony do I criticize Mr. Patel for not performing an ECAPM analysis. I simply respond to his critique of my analysis. Mr. Patel mischaracterizes my testimony.

Q. Mr. Patel argues that the ECAPM "merely adds another measure of subjectivity to the CAPM," "reduces the purpose of the beta," and has not been used by the Commission.[33] How do you respond?

A. Mr. Patel simply repeats his arguments from his direct testimony that are answered in my rebuttal testimony.[34] Further, I reiterate that the ECAPM is not an adjustment to the Beta coefficient; it is an adjustment to the slope of the security market line, or the market risk premium. I further reiterate that it has been relied upon by commissions in New York, North Carolina, Alaska, Maryland, and Mississippi, among others. I continue to believe it has probative value and should be considered as one of several models in determining Peoples' cost of equity.

[31] I&E St. No. 2, at 4.
[32] I&E St. No. 2-SR, at 4.
[33] I&E St. No. 2-SR, at 30-31.
[34] Peoples St. No. 15-R, at 93–97.

Q. Mr. Patel maintains that your Risk Premium analysis should be excluded because it is a "simplified version of the CAPM" that does not recognize company-specific risk, and he argues that you misread the Commission's orders in the 2012 PPL Electric and 2021 Aqua Pennsylvania cases.[35] How do you respond?

A. Mr. Patel again repeats his arguments from his direct testimony and I addressed these arguments in detail in my rebuttal testimony.[36] I emphasize that the Risk Premium approach is not duplicative of the CAPM; the differences between the two models are summarized in Figure 20 in my rebuttal testimony. Further, since Mr. Patel gives explicit weight to average authorized ROEs for natural gas utilities in reaching his recommended 10.20 percent ROE, his criticisms of the Risk Premium approach that models the relationship between the change in bond yields and the natural gas utility equity risk premium that are established by reference to the authorized ROEs is puzzling. Lastly, I reiterate that the Commission recognized the method as a check on the DCF results in the 2012 PPL Electric and 2021 Aqua Pennsylvania cases and I do not misinterpret these orders.

Q. Mr. Patel characterizes your discussion of Peoples' capital expenditure program, bypass risk, and regulatory mechanisms as support for a higher ROE, and he describes your credit-related concerns as "speculative and unsupported."[37] Have you recommended an upward ROE adjustment for Peoples' business risk?

A. No. As I explained in my rebuttal testimony, I make no explicit upward ROE adjustment for business risk; I discuss Peoples' risks because the cost of equity is proportional to the

[35] I&E St. No. 2-SR, at 33.
[36] Peoples St. No. 15-R, at 99–102.
[37] I&E St. No. 2-SR, at 35.

risk of the investment. Further, risk is relative and determining the cost of equity is a comparative exercise. Mr. Patel does not evaluate Peoples' risks relative to the proxy group.[38] Mr. Patel's surrebuttal testimony adds no new information that changes these facts.

Q. Mr. Patel continues to argue that flotation costs are irrelevant because Peoples and the PNG companies do not directly issue common equity, and that any such costs should be recovered as an operating expense rather than through the ROE.[39] How do you respond?

A. As I stated in my rebuttal testimony, I have not recommended an explicit ROE adjustment for flotation costs, and I disagree with Mr. Patel's reasoning.[40] Flotation costs are real issuance costs incurred when equity capital is raised — directly or through the parent — and, because they are recorded as a reduction to paid-in capital rather than as a day-to-day operating expense, issuance costs should be reflected in the ROE, as shown in Exhibit JEN-11R.

[38] Peoples St. No. 15-R, at 103–107.
[39] I&E St. No. 2-SR, at 37-38.
[40] Peoples St. No. 15-R, at 108–110.

III. RESPONSE TO OCA WITNESS GARRETT

Q. Mr. Garrett contends that your updated ROE analysis "suffer[s] from the same errors and unrealistic assumptions" as your direct testimony.[41] Have these arguments caused you to change your recommendation?

A. No. Mr. Garrett states that his surrebuttal does not change his positions and that his criticisms rest on "the same reasons discussed in [his] direct testimony."[42] He raises no new arguments in his surrebuttal testimony, and I responded to his criticisms in detail in my rebuttal testimony.

Mr. Garrett's criticism repeats his growth rate arguments from his direct testimony, which I addressed in detail in my rebuttal.[43] Mr. Garrett concedes that it is not "unreasonable to consider earnings growth rates as a proxy for a dividend growth rate," subject to his subjective opinion on whether the growth rates are "sustainable."[44] His surrebuttal presents no new basis to disregard my DCF results.

Mr. Garrett also continues to defend his equity risk premium, which he draws from the IESE Business School survey, Kroll, and Dr. Damodaran, and his own implied equity risk premium calculation. Further, he mischaracterizes the estimates of the equity risk premium I use as my "personal" estimates. However, the equity risk premium estimates I use in my CAPM are not, as he asserts, my "personal" estimate.[45] My equity risk premium estimates are developed from independent, investor-focused sources and I rely on the most

[41] OCA St. No. 3-SR, at 2-3.
[42] OCA St. No. 3-SR, at 1–2.
[43] Peoples St. No. 15-R, at 69–76.
[44] OCA St. No. 3-SR, at 4.
[45] OCA St. No. 3-SR, at 5-7.

conservative estimates.[46] Instead, it is Mr. Garrett's equity risk premium that falls outside the range of reasonableness. His estimates are well below both investors' forward-looking expectations and long-term historical experience, as I demonstrated in my rebuttal testimony, where I showed that the implied market risk premium Mr. Garrett relies upon has been far removed from the market risk premia actually observed.[47] Mr. Garrett offers no evidence to explain why investors would expect a market risk premium so far below the level actually experienced over nearly the last century.

Q. Mr. Garrett argues that cost of equity and authorized returns are "entirely different concepts," that an authorized return is "simply whatever a regulator says it is," and that your comparison of his CAPM results to recently authorized ROEs is therefore misplaced.[48] Do you agree?

A. No. The objective in this proceeding is to estimate the cost of equity for Peoples, and the authorized ROE is widely understood to represent regulators' determination of the cost of equity, based on evidence from market-based models like those presented in this proceeding. Moreover, regulators, including this Commission, are guided by the constitutional standards established in the *Hope* and *Bluefield* decisions when setting authorized ROEs. The *Hope* and *Bluefield* comparable return standard — that Mr. Garrett acknowledges — governs[49] that the authorized return be commensurate with the returns available on investments of comparable risk. The ROEs authorized for comparable-risk natural gas utilities are direct, observable evidence of that comparable return. When a model input produces a CAPM result — in Mr. Garrett's case, approximately 8.8 percent

[46] Peoples St. No. 15-R, at 83–93.
[47] Peoples St. No. 15-R, at 83–93.
[48] OCA St. No. 3-SR, at 5.
[49] OCA St. No. 3, at 11-12.

— that is below all but one authorized ROE for natural gas distribution utilities in at least the past 46 years, that is a strong indication that the input (i.e., Mr. Garrett's equity risk premium) does not produce a return that meets the required standards.

Q. Mr. Garrett maintains that Peoples' actual capital structure is "not at issue in this case," that the proxy group holding companies' capital structures should be used, and that your approach improperly "mismatches" holding-company return data with operating-company capital-structure data.[50] What is your response?

A. I strongly disagree and Mr. Garrett makes several inaccurate statements. Peoples' capital structure is absolutely at issue in this case. As explained earlier in my response to Mr. Patel, the objective in this proceeding is to set the rates for Peoples, based on Peoples' costs, revenues, and expenses, including Peoples' cost of capital. Therefore, its cost of capital should be based on Peoples' costs, risks, and financial requirements, not those of its parent. There is no "mismatch" and I do not use a different group of companies as Mr. Garrett erroneously asserts. My capital structure analysis calculates the per-book capital structures for the same proxy group companies as my cost of equity analyses; the difference is that the capital structure analysis appropriately uses only debt and equity capital that finances the regulated natural gas utilities within those proxy companies. Holding company market data must be used in the cost of equity models because only holding companies are publicly traded and have the market data the ROE models require. That constraint does not exist for capital structure data where capital structure data is available at the regulated operating company level. My analysis, therefore, accurately reflects the capitalization and financial risk of an operating company like Peoples. Furthermore, as I

[50] OCA St. No. 3-SR, at 8-9.

explained in response to Mr. Patel, imputing the capital structure of the consolidated parent effectively asks Peoples' customers to bear the financial risk of debt incurred for other affiliates unrelated to Peoples. This is an unreasonable ask. Lastly, Mr. Garrett also accepts Peoples' proposed cost of long-term debt, and since the Company's cost of debt is fundamentally based on its actual book capital structure, his acceptance of the cost of debt conflicts with his recommendation to impute a more leveraged capital structure.

IV. RESPONSE TO CAUSE-PA WITNESS CICERO

Q. Mr. Cicero contends that your recommendation reflects your own "judgment … over the judgment of other witnesses" rather than objective evidence, and that the Commission should center affordability instead of on the parties' cost of capital models in setting the ROE.[51] Do you agree?

A. No. As a preliminary matter, my analyses are based on objective market-based evidence. The cost of equity is an opportunity cost that, by definition, is estimated against a comparable peer group. The *Hope* and *Bluefield* comparable-return standard is firmly grounded in the opportunity cost concept and requires exactly that comparison as I explained in my direct and rebuttal testimonies.[52]

Moreover, Mr. Cicero appears to contradict statements he has made previously; in a 2024 article in the *Pittsburgh Post Gazette*, Mr. Cicero suggests that regulators should ignore market-based evidence and instead set the return at the same (presumably below market) level without regard to differences in risk, stating, "If all PUCs across all the land

[51] CAUSE-PA St. No. 1-SR, at 19.
[52] Peoples St. No. 15-R, at 58–60.

started granting 8% [ROEs], that's what it would be."[53] As explained above, it is necessary to compare Peoples to a proxy group of comparable peers, and the *Hope* and *Bluefield* comparable return standard requires it.

Q. Mr. Cicero maintains that he does not perform a traditional cost-of-equity analysis and instead recommends that the Commission authorize the lowest ROE the financial models suggest and then consider whether an even lower return is "legally" justified.[54] Does that framework satisfy the *Hope* and *Bluefield* standards?

A. No. The *Hope* and *Bluefield* decisions require a return that is commensurate with the returns investors expect on other investments of comparable risk and sufficient to assure the utility's financial integrity and to attract capital. Mr. Cicero performs no DCF, CAPM, or Risk Premium analysis and offers no market-based estimate of the return investors actually require to commit capital to Peoples. As I explained in my rebuttal testimony, the only defensible, reliable way to estimate the cost of equity is through the rigorous application of multiple financial models using market data, considered together with the utility's risk profile.[55] Mr. Cicero's affordability-driven framework, however well intentioned, does not measure Peoples' cost of equity and does not substitute for a robust, market-based analysis grounded in long-standing established principles.[56]

The importance of maintaining a transparent, rigorous regulatory process grounded in case-specific evidence, expert testimony, comprehensive financial analysis, and the fair return principles established in the *Hope* and *Bluefield* decisions was recently affirmed by the

National Association of Regulatory Utility Commissioners ("NARUC") in its Resolution Regarding Sound Public Utility Ratemaking Principles (see Exhibit JEN-2RJ):

> *Resolved*, that the Board of Directors of the National Association of Regulatory Utility Commissioners, convened at its 2026 Summer Policy Summit in Minneapolis, Minnesota, reaffirms that sound public utility ratemaking should remain grounded in the evidentiary record, governing law, and the informed judgment of state commissions, consistent with the principles reflected in *Munn*, *Bluefield*, and *Hope*; supports regulatory frameworks that preserve and optimize commission authority to determine return on equity and other ratemaking components based on the facts and circumstances presented in each proceeding; maintains that under rate-of-return regulation, commissions determine appropriate returns on equity, and other rate case elements, based on case-specific analysis, expert evaluation, and record evidence rather than imposing arbitrary limits; and supports the technical expertise of commissions to resolve issues that clearly fall within their statutory jurisdiction.[57]

Q. Mr. Cicero points to Essential Utilities' price-to-book ratio of 1.63 as evidence that investors believe the company is "over-performing relative to what it should earn," and argues that a lower ROE would not cause investors to flee.[58] How do you respond?

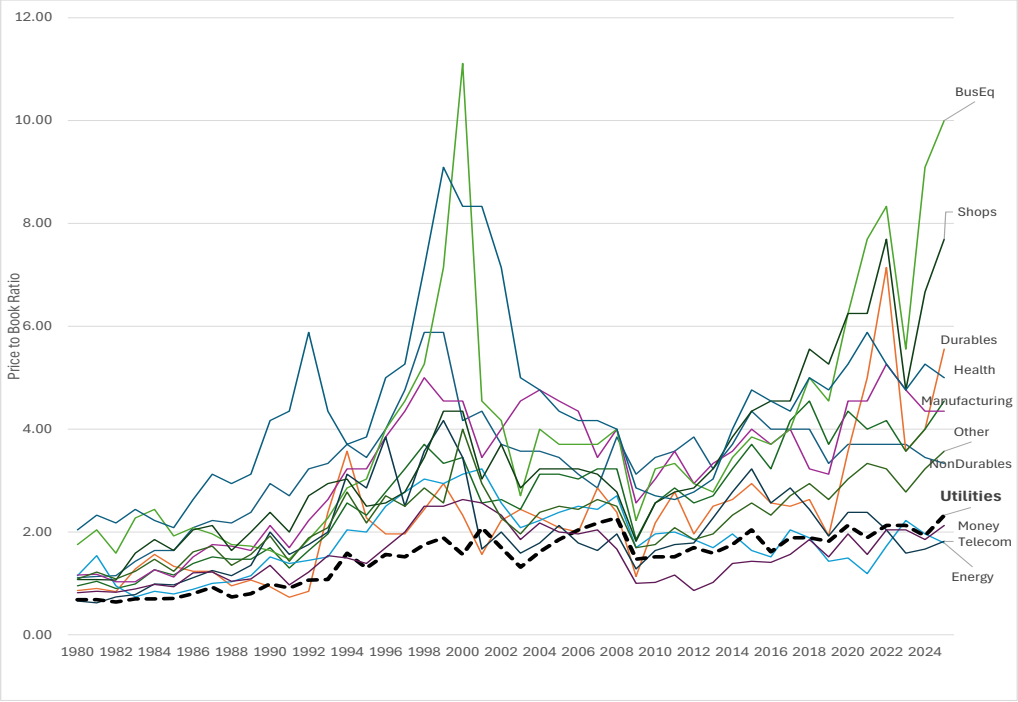
A. I have several responses. First and foremost, the objective in this proceeding is not to determine the cost of equity for Essential; it is to determine the cost of equity for Peoples, a company that is not publicly traded with no observable price-to-book ratio. Second, publicly traded holding companies are diversified companies, many of which operate both regulated and unregulated business segments across multiple jurisdictions. The stock prices of these publicly traded holding companies therefore reflect investors' return requirements

[57] National Association of Regulatory Utility Commissioners, CPI-1 Resolution Regarding Sound Public Utility Ratemaking Principles, 2026. Provided as Exhibit JEN-2RJ.
[58] CAUSE-PA St. No. 1-SR, at 22.

for the consolidated entity on a sum-of-the-parts basis. Mr. Cicero conflates Essential's price-to-book ratio with that of Peoples with no evidence to support that conclusion.

Third, a price-to-book ratio above 1.0 is not evidence of over-earning. Utility price-to-book ratios have exceeded 1.0 across the industry for decades, yet are well below those of other sectors. As shown in Figure 1 below, fluctuations in price-to-book ratios over time have not been unique to utilities, and utilities are at the lower end of all sectors. Price-to-book ratios have increased across industries and economic cycles since 1980 due to factors unrelated to the authorized ROEs, including structural macroeconomic factors, the increasing real value of all assets, the interest rate environment, and shifts in investor expectations.

Figure 1: Price-to-Book Ratios by Industry (1980 – 2025)[59]



[59] Source: Dartmouth College Data Library, Eugene F. Fama and Kenneth R. French Current Research Returns. Accessible here: https://mba.tuck.dartmouth.edu/pages/faculty/ken.french/data_library.html.

Book value (or book equity) is an accounting measure that reflects historical cost less depreciation, and depreciation, accumulated deferred taxes, regulatory assets and liabilities each affect regulatory value. Market value is forward-looking and reflects future earnings dependent upon many factors, including future cash flows. Market value reflects, in part, the outcome of regulation, not the inverse. The expectation that a backward-looking accounting measure should equal a forward-looking market measure is contrary to market economics.

Lastly, a regulator publicly committed to driving the price-to-book ratio down toward 1.0 signals to the market that it will reduce the allowed return whenever the stock appreciates above that level. Investors thus face capped upside but retain full exposure to downside risk. This asymmetry increases the perceived risk of the security, and investors respond by demanding a higher required return. The result is paradoxical and self-defeating. In short, a policy aimed at lowering the allowed return raises the utility's cost of capital, further impairing its access to capital relative to peers whose regulators impose no comparable constraint.

Q. Mr. Cicero comments on Peoples' profits over the last four years and observes it has not had a "capital infusion of any capital since 2018" and has "kicked considerable income up the corporate ladder over this same period".[60] Is Mr. Cicero's characterization accurate?

A. Not entirely. First, I agree that Peoples has not had an *equity* infusion from its parent in the last five years, however, it has had capital infusions of *debt*. Second, capital returned to the parent between 2021 and 2025 has totaled less than two percent of Peoples' retained

[60] CAUSE-PA St. No. 1-SR, at 21.

earnings and accounted for less than one percent of its uses of funds.[61] Between 2022 and 2025, Peoples has returned only [BEGIN PROPRIETARY] [redacted] [END PROPRIETARY] to the parent. I do not consider that amount to be "considerable."

More importantly, Mr. Cicero's commentary regarding Peoples' profits ignores the fact that Peoples has been reinvesting all its profits back into its system. For example, the Company's ratio of capital expenditures to retained earnings between 2021 and 2025 has been approximately 2.3x on average, meaning that Peoples' capital needs exceed its internally generated funds by more than double.[62] Company witness Schuller explains that Peoples is investing billions into system improvements rather than a flowback of capital to investors.[63] Nevertheless, even if Peoples was paying dividends regularly, the U.S. Supreme Court concluded in *Hope* that a public utility is entitled to revenues that allow it to repay its debt expense, and pay dividends on the stock:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. **These include service on the debt and dividends on the stock**...By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.[64]

Q. Mr. Cicero argues that Peoples' regulatory mechanisms reduce its risk and that treating an aggressive capital program as a basis for a higher return reflects

[61] Peoples' Confidential response to OCA-I-008.
[62] Peoples' Confidential response to OCA-I-008.
[63] Peoples St. No. 19-R, at 8-9.
[64] *Federal Power Comm'n v. Hope Natural Gas Co*., 320 U.S. 591, 603 (1944). (Emphasis added.)

"capital bias" that lets the utility "set the conditions for its own awarded equity."[65] How do you respond?

A. Mr. Cicero's argument is misdirected. I make no upward ROE adjustment for Peoples' capital program or business risk. My 11.00 percent base ROE is derived from market-based models applied to companies of comparable risk. As I explained in my rebuttal testimony, the Distribution System Improvement Charge ("DSIC"), forecasted test years, and the Weather Normalization Adjustment are common across the proxy group and are already reflected in the market data used to estimate the cost of equity.[66] Like Mr. Patel, Mr. Cicero does not compare Peoples' regulatory mechanisms to those of the proxy group, as I have.

Q. Mr. Cicero recommends a 50/50 capital structure in order to move Peoples "gradually" toward a structure that he says is "more reflective" of the risk of its corporate parent, Essential Utilities.[67] Do you agree?

A. No. For the reasons explained earlier in response to Mr. Patel and Mr. Garrett, Peoples' ratemaking capital structure should reflect the financial risk of Peoples, not Essential. Further, Mr. Cicero's recommendation effectively asks customers to bear the risk of Essential's consolidated debt, including that of other affiliates. Mr. Cicero's 50/50 recommendation rests on qualitative grounds rather than a comparable financial risk analysis. When that comparison is made, Peoples' requested 54.47 percent equity ratio is within the proxy group range and slightly below the average.

[65] CAUSE-PA St. No. 1-SR, at 23-24.
[66] Peoples St. No. 15-R, at 103–107.
[67] CAUSE-PA St. No. 1-SR, at 4.

Q. Mr. Cicero presents a table showing that, even assuming a 100-basis-point increase in Peoples' cost of debt, imputing a 50/50 capital structure would still reduce the revenue requirement, and he argues that the large spread between the requested ROE and the cost of debt means debt costs would have to rise "dramatically" to offset the change.[68] How do you respond?

A. Mr. Cicero commits the same mistake as Mr. Patel by assuming that the costs of both debt and equity will remain unchanged if Peoples' capital structure is dramatically altered. Increasing the debt ratio and an unjustifiably low authorized ROE both increase Peoples' risk, increasing both the cost of debt and the cost of equity. Further, a material reduction in authorized ROE and the equity ratio to the levels that Mr. Cicero presents would significantly impair Peoples' cash flow and pressure its cash-flow-to-debt metric, which is the primary metric monitored by the rating agencies.

Additionally, Mr. Cicero compares his ROE estimate under Governor Shapiro's proposal (7.68 percent) to Peoples' requested cost of debt to conclude that "it is 307 basis points higher than the company's cost of long-term debt."[69] Mr. Cicero fails to acknowledge that the Company's requested 4.61 percent cost of debt is an *embedded* cost of debt that is a weighted average of all outstanding and projected debt issuances, including those that were issued during a lower interest rate environment than exists currently. The proper comparison is to the current yield on utility bonds, which is currently above 6 percent, which is only a 165-basis point premium, rather than the 307-basis point premium Mr. Cicero references in error.

[68] CAUSE-PA St. No. 1-SR, at 25–26.
[69] CAUSE-PA St. No. 1-SR, at 25–26.

Q. Mr. Cicero asserts that you testify that "the Commission should not look to the authorized capital structure in place at other natural gas distribution companies".[70] Has Mr. Cicero accurately quoted your testimony?

A. No, Mr. Cicero mischaracterizes my testimony. It is not my testimony that the Commission should not look to authorized capital structures in place at other natural gas distribution companies. In fact, I evaluated the current authorized equity ratios of my proxy companies in Exhibit JEN-12 and updated in Exhibit JEN-8R. That evaluation demonstrated that Peoples' requested equity ratio is consistent with authorized equity ratios "in place at other natural gas distribution utilities." My primary point is that each utility is unique and is financed according to the unique risks and needs of the business. Simplistic references to an average at a point in time fail to capture the wide range of capital structures and presume that all utilities should be capitalized the same. This assumption defies reality.

Q. Mr. Cicero argues that because the Federal Reserve Bank of Philadelphia's Survey of Professional Forecasters projects a median 10-year return of approximately 7 percent for the overall market, and utilities are safer than the market, a 7.68 percent ROE for Peoples under Governor Shapiro's approach is sufficient.[71] How do you respond?

A. I disagree, for several reasons. First, I explained the limitations of relying on survey responses in my rebuttal testimony.[72] Second, the survey represents just 37 responses that range from 4.00 percent to 13.50 percent.[73] The wide dispersion in estimates illustrates the

considerable uncertainty in investors' market return expectations. Nevertheless, a 7.68 percent ROE is well below nearly every authorized ROE for natural gas distribution utilities in at least the past 46 years and would fail to meet the *Hope* and *Bluefield* standards for a fair return. For these reasons, the Philadelphia Fed Survey does not show that a 7.68 percent return is adequate for Peoples.[74]

V. CONCLUSION

Q. Have any of the Witnesses' surrebuttal arguments caused you to change your recommendations?

A. No. I continue to recommend an 11.00 percent base ROE (11.25 percent inclusive of the management performance adjustment) and Peoples' requested capital structure of 54.47 percent common equity and 45.53 percent long-term debt.

Q. Does this conclude your rejoinder testimony?

A. Yes, it does.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

Volume LXXXI, Number 42, Issue 3. The Value Line Investment Survey (ISSN 0042-2401) is published weekly by Value Line Publishing LLC, 551 Fifth Avenue New York, NY 10176 and is accorded expeditious treatment prescribed for newspapers. Subscription rate for one year in the United States and US possessions is $598. Foreign rates upon request. Periodical Postage Paid at New York, NY and additional mailing offices.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

(•) All data adjusted for announced stock split or stock dividend. See back page of Ratings & Reports.
◆ New figure this week.
(b) Canadian Dollars.
(d) Deficit.
(f) The estimate may reflect a probable increase or decrease. If a dividend boost or cut is possible but not probable, two figures are shown, the first is the more likely.
(g) Dividends subject to foreign withholding tax for U.S. residents.
(h) Est'd Earnings & Est'd Dividends after conversion to U.S. dollars at Value Line estimated translation rate.
(j) All Index data expressed in hundreds.
(p) 6 months (q) Asset Value
N=Negative figure NA=Not available NMF=No meaningful figure

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

(•) All data adjusted for announced stock split or stock dividend. See back page of Ratings & Reports.
◆ New figure this week.
(b) Canadian Dollars.
(d) Deficit.
(f) The estimate may reflect a probable increase or decrease. If a dividend boost or cut is possible but not probable, two figures are shown, the first is the more likely.
(g) Dividends subject to foreign withholding tax for U.S. residents.
(h) Est'd Earnings & Est'd Dividends after conversion to U.S. dollars at Value Line estimated translation rate.
(j) All Index data expressed in hundreds.
(p) 6 months (q) Asset Value
N=Negative figure NA=Not available NMF=No meaningful figure

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

(•) All data adjusted for announced stock split or stock dividend. See back page of Ratings & Reports.
◆ New figure this week.
(b) Canadian Dollars.
(d) Deficit.
(f) The estimate may reflect a probable increase or decrease. If a dividend boost or cut is possible but not probable, two figures are shown, the first is the more likely.
(g) Dividends subject to foreign withholding tax for U.S. residents.
(h) Est'd Earnings & Est'd Dividends after conversion to U.S. dollars at Value Line estimated translation rate.
(j) All Index data expressed in hundreds.
(p) 6 months (q) Asset Value
N=Negative figure NA=Not available NMF=No meaningful figure

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

★★ Supplementary Report in this week's issue.
▲ Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 12-31-26, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

***Based on the Timeliness™ ranks of the stocks in the industry**

Noteworthy Rank Changes

Listed below are some of the stocks whose Timeliness ranks have changed this week. We include mostly rank changes caused by fundamentals such as new earnings reports. Even when a significant change in earnings momentum has been forecast, the stock's rank will not be affected until the actual results, confirming that forecast, are reported. In most cases, we omit stocks that have been bumped up or down in rank by the dynamism of the ranking system.

STOCKS MOVING UP IN TIMELINESS RANK

Stock Name	Old Rank	New Rank	Reason for Change	Earnings Est. 12 months to 12-31-26
ADT Inc.	2	1	Dynamism of the ranking system.	
ArcelorMittal	2	1	Dynamism of the ranking system.	
Arrow Electronics	2	1	Dynamism of the ranking system.	
BJ's Wholesale Club	2	1	Dynamism of the ranking system.	
Chemed Corp.	2	1	Dynamism of the ranking system.	
Cimpress plc	2	1	Dynamism of the ranking system.	
ConocoPhillips	2	1	Dynamism of the ranking system.	
DexCom Inc.	2	1	Dynamism of the ranking system.	
Gartner Inc.	2	1	Dynamism of the ranking system.	
Int'l Seaways Inc	2	1	Dynamism of the ranking system.	
Plexus Corp.	2	1	Dynamism of the ranking system.	
Ryder System	2	1	Dynamism of the ranking system.	

STOCKS MOVING DOWN IN TIMELINESS RANK

Stock Name	Old Rank	New Rank	Reason for Change	Earnings Est. 12 months to 12-31-26
Allison Transmission	1	2	Dynamism of the ranking system.	
Cheniere Energy Inc.	1	2	Dynamism of the ranking system.	
EPAM Systems	1	2	Dynamism of the ranking system.	
Installed Building Prod.	1	2	Dynamism of the ranking system.	
Kennametal Inc.	1	2	Dynamism of the ranking system.	
MGM Resorts Int'l	1	2	Dynamism of the ranking system.
