

Hello,

I am making comment on the proposal for grid modernization (docket no. M-2026-3059601) that would put deactivated power plants potentially back in play through reopening or redevelopment, including one at Cromby near Phoenixville, my home.

My family and I are fundamentally against this proposal because Pennsylvania's constitution holds a guarantee for clean air as a right, and this proposal is clearly at odds with that. My opposition grows as I recognize that this move is almost entirely in anticipation of coming data centers, which are public nuisances and unwelcome in any community that they are proposed or built.

I fail to see a case where expanding the power grid in this way will be a net benefit to me or any regular Pennsylvanian not caught up in the business of AI.

I urge you to reconsider this proposal.

Frank Otto

Phoenixville, PA
