Re: Docket # **M-2026-3059601 Cromby Generating Station Redevelopment**

Dear Commissioners,

I am one of many recreational boating users of the Schuylkill River just below the former Cromby Generating station. I am very concerned with the impact any redevelopment project would have that would draw water from the river and not return 100% of that drawn water to the river. We already have times in summer of very low water making it difficult to use a boat in the river. There are very few sections of the Schuylkill River that are suitable for boating related recreation.

I am also concerned about contaminants being released into the river for any redevelopment project. For us as river users' contaminants + less volume = higher concentration. Less volume back to the river also means lower water levels. Less flow means warmer water. Warmer water means more algae and less oxygen. Less oxygen means more die-off. In combination with impacts further upstream, this could render this stretch of river hypoxic and unsafe for boating and swimming.

We in Southeastern PA do not have many rivers or lakes where we can use boats, swim and enjoy fresh-water related recreation. I would ask that the PUC please consider all of this when evaluating any redevelopment project.

Thank You,
