million in universal service costs annually to the LP-5 rate class.[10] I find that reasonable, but the next step of Witness Cicero's proposal, to allocate remaining universal service costs to all rate classes, has no cost basis or other valid justification. OCA Witness Colton also quantifies the impact of large load customers on universal service costs but offers a proposal that is more consistent with the analysis, i.e., large load customers should pay for the increased costs for which they are responsible. In fairness, Witness Cicero accepts a scenario where only the LP-5 rate class (in addition to residential customers) contributes to universal service costs as a second-best outcome.

Q. What are the practical issues if the Commission were to require all the Company's rate classes to contribute to universal service costs?

A. The form of cost recovery is of primary importance. For example, allocating costs based on each rate class's share of distribution revenues is inequitable because many large load customers take service at transmission voltages. Recovering universal service costs through a volumetric charge, as Witness Havumaki proposes, is a better option but would still unfairly burden small businesses with a new tax without a cost basis. Transparency is another concern. If the Commission decides to abandon long-standing precedent and impose a new tax on small businesses, the new charge should be separately identified on the bills for non-residential customers, simply as a manner of honesty and openness about the policy change.

Q. Does this conclude your rebuttal testimony?

A. Yes, it does.

[10] Direct Testimony of CAUSE-PA Witness Cicero, p. 89.

COMMISSION ON ECONOMIC OPPORTUNITY

CEO Statement No. 1

Direct Testimony of Jennifer Warabak

Pennsylvania Public Utility Commission

v.

PPL Electric Utilities Corporation

Docket Number: R-2025-3057164

Q. Please state your full name and business address.

A. Jennifer Warabak, 165 Amber Lane, PO Box 1127, Wilkes-Barre, Pennsylvania 18703-1127.

Q. By whom are you employed and in what capacity?

A. I am employed by the Commission on Economic Opportunity (CEO) as Executive Director.

Q. What are the interests of the Commission on Economic Opportunity in this rate case?

A. The Commission on Economic Opportunity is a non-profit organization serving the low-income and elderly in Luzerne County, PA. In a typical year, the Commission serves more than 30,000 Luzerne County residents, of which 98% are at or below 150% of the federal poverty level. It is part of our responsibility to our constituency to advocate for their interests in regulatory proceedings, and this proposed request will certainly have an impact upon those low-income ratepayers. In addition to the affordability of rates, CEO is particularly interested in the ability of our clients to save money through conserving energy.

Q. **What background and experience in energy issues qualify you and the Commission on Economic Opportunity to participate in this case?**

A. I was appointed as the Executive Director of the Commission on Economic Opportunity in October 2022. I have been employed at CEO for over 20 years and during

my tenure I have been involved in numerous energy related programs that CEO operates. From 2004 to 2016, I was CEO's Energy Services Coordinator where I supervised CEO's energy programs. During that time, I managed eight hardship utility programs and managed the LIHEAP Crisis program for Luzerne County on behalf of the Pennsylvania Department of Human Services as well as other utility customer assistance programs for several utility companies. In 2016 I became CEO's Program and Planning Coordinator where I evaluated program effectiveness and recommended modifications and/or improvements across the spectrum of programs offered by CEO, in the areas of energy, housing, job training etc.

During my tenure in those positions, CEO's experience and the expertise of its staff in energy programs has been recognized on state and national levels. CEO's energy related programs have been acknowledged by receipt of a Superior Achievement Award from the United States Department of Energy. CEO has weatherized more than 28,000 homes under the U.S. Department of Energy Weatherization Assistance Program. CEO also serves as a subcontractor for universal programs operated by several Pennsylvania gas and electric utility companies, including PPL. CEO is also the PA Department of Public Welfare's contracted operator of the crisis component of the Low-Income Home Energy Assistance Program (LIHEAP) in Luzerne and Wyoming Counties. CEO was also a major contractor for PPL in the Low-Income Renewable Energy Pilot, and secured funding and installed several solar thermal water heating systems for the former PG Energy and UGI Gas Division.

Additionally, CEO has been an active party in many restructuring and rate cases before the PUC including the last rate case of PPL (R-2015-2469275).

Q. Please describe the areas of your testimony.

A. In its request for a rate increase the Company does not propose any changes to its universal service programs-no increases in funding or measures that would help low-income customers deal with the proposed rate increase are offered in this proceeding. Additionally, the Company's request includes proposals that would hinder the ability of low-income ratepayers to reduce their bills by conserving energy. The Company is proposing to increase the residential fixed monthly charge from $15.58 to $17.00, an increase of 9%. The Company's proposal if granted would increase rates, discourage conservation, and leave a customer with less ability to conserve energy and less ability to reduce their electric bills. Despite the impact of its proposal on residential customers, and in particular low-income customers, the Company's proposal offers nothing in the way of changes or increases in funding to its low-income programs, programs that would help mitigate the negative impact of the Company's proposals.

The Company's requested rate increase would, for a typical residential customer using 1000 kWh per month, increase the distribution portion of the customer's bill $14.80, from $65.16 to $79.96, an increase of 22.7%. Despite the requested increase and despite the impact the increase will have on low-income customers, the Company is not proposing any changes to its low-income programs. There is nothing proposed that will help low-income customers deal with the impact of this proposed rate increase. Specifically, my testimony will address how the Company's proposal to increase its monthly fixed service charge effects a customer's ability to conserve and how the impact of the Company's proposal could be mitigated through changes to the funding level of the

Company's low-income reduction program (WRAP) and other universal service programs.

Q. Before addressing the specifics of your testimony, do you have general concerns regarding this rate case?

A. Yes. As I indicate above, I am concerned that this proposed increase does not come with any proposals that will help low-income customers deal with the impact of the rate increase and rate design. Part of the residential customer's increase will be due to an increase in the fixed monthly customer charge, from $15.58 to $17.00, an increase of 9%. This increase in the monthly fixed charge concerns me, as it has the Commission in recent cases, because it discourages conservation and impacts a customer's ability to save money through conservation; as the Company moves towards charging customers based upon the Company's fixed costs and away from a customer's consumption there is less incentive, and ability, to conserve. One of the only defenses a family, particularly a poor family, has against the sharp increases in energy costs is to conserve – lower the thermostat, seal air leaks, change filters regularly, add more insulation, get a more efficient heating unit, etc. The Company's proposal to increase the fixed costs greatly impacts a customer's motive to conserve and the ability to lessen the impact of any rate increase. The combined effect of an increase in rates and an increase in fixed monthly charges, without any changes to universal service funding, not only results in higher rates but also lessens the ability of customers to deal with those increases. In particular, the negative impact would be particularly harsh on the Company's low-income customers and the Company's proposed request ignores the interests of its low-income customers.

The Electric Choice Act requires that the Commission ensure that universal service programs are 'appropriately funded and available' and the result of this proceeding will impact the question of whether the Company's universal service programs are appropriately funded and available.

Q. How does the effect of the Company's requests impact upon your testimony in this case?

A. I do not believe that the Commission should allow an increase in rates and allow an increase in the fixed monthly customer charge without requiring an increase in universal service funding that would allow some relief to low-income customers. For a typical residential customer, a 22.7% increase in the distribution portion of the bill is substantial. The Company has indicated that the average annual income of its low-income customers is $17,103 so one can see the dramatic impact such an increase would have on low-income customers. High utility costs are not the only challenge for a poor person; we are in a time of inflation where the costs of essential items-housing, transportation, food etc.-have been increasing consistently. Our agency has been helping low-income people for years and knows firsthand that they face financial challenges on many fronts and a dramatic increase in the costs for essential items can have a devastating impact. That negative impact goes beyond just an increase in rates in this case because the increase in the fixed monthly charge makes it more difficult for a consumer to lessen the impact of an increase in rates through conservation. Accordingly, I believe that any increase in rates and a rate design that discourages conservation should be accompanied by measures that allow a customer to conserve energy and thereby lower their utility bill.

Q: Does CEO take a position on whether the Company's rate increase should be granted?

A: No. Our concern is with the combination of the Company's request to increase rates and to increase the fixed portion of a customer's bill without any increases proposed for universal service funding or measures to help its low-income customers.

Q: What impact would the Company's proposed rate design have on low-income customers?

A: The more a customer's bill is made up of fixed charges the less incentive and ability there is for a low-income customer to save money by conserving energy. In this case the Company is proposing to increase its monthly fixed residential customer charge from $15.58 to $17.00, an increase of 9%. I am concerned about this proposal and CEO opposes any increase to the fixed monthly customer charge.

Q: Why does CEO oppose an increase to the fixed monthly customer charge?

A: In prior cases, the PUC has expressed concerns about proposals to increase the fixed portion of a customer's bill or any proposal that would impact a customer's motive and ability to conserve. We share the PUC's concern and believe that fixed monthly charges should be held in check.

Q. What would you like to address concerning the Company's WRAP program?

A. The Company has indicated it has an estimated 398,427 low-income customers, customers who are at or below 150% of the federal poverty level and that it has approximately 250,000 confirmed low-income customers. Based upon the number of eligible customers in need of LIURP services per the Company's last needs assessment, the Company estimates that it would take twenty-nine years to provide those low-income ratepayers with LIURP services. In the most recent years completed-2023 and 2024-the Company has exhausted its WRAP budget.

Despite this large unmet need for LIURP services and its proposal to increase rates in this proceeding, the Company is not proposing any increase in WRAP funding. As a result of this proceeding rates are likely to increase, a customer's ability to conserve will decrease (if the fixed monthly charge is increased) yet no relief is being provided to customers that would allow them to increase their conservation of energy and decrease their monthly bills. No significant progress will be made towards reducing the number of low-income customers in need of LIURP services.

Q. Do you believe that funding for the Company's WRAP program should be increased and if so, why?

A. I do believe that funding for LIURP should be increased considering the above-described need and the effect, if approved, of the Company's requests in this proceeding.

Q. Do you have a specific recommendation regarding LIURP funding?

A. Yes. Current funding for WRAP, the Company's LIURP program, is set at $12,000,000 and has been at that level for a number of years. I am recommending that the

annual funding for LIURP be increased by at least $900,000 annually effective upon the effective date of any rate increase emanating from this proceeding. At an approximate job cost of $3,000 per LIURP customer, this increase would allow the Company to complete approximately 300 more jobs annually.

Q. What is the basis for recommending that LIURP funding be increased by at least $900,000 annually?

A. It will take over 29 years to meet the need for so in order to begin to meet that need the number of LIURP jobs will need to be increased as will LIURP funding. With an additional increase the Company can begin to make surer progress in meeting the need that exists in its service territory.

LIURP provides conservation measures that a poor person could otherwise not afford. With the many economic challenges facing a low-income person, they lack the resources to improve energy efficiencies in the home. Additionally, because of the effect of the Company's proposed increase on the residential class and the move towards higher fixed charges, more help must be given to the low-income residential customer in the form of improving their ability to conserve and thereby control their energy costs.

Q. Are there other reasons why you propose increasing WRAP funding by $900,000 annually?

A. Yes. Because I believe, like the Commission, that the energy conservation measures which result from a well funded LIURP program are an essential part of helping low-income consumers deal with rising energy costs. The Commission has also found great value in LIURP programs by stating:

> "The Commission finds that LIURP has been one of the Commonwealth's most successful programs for assisting low-income customers. The Commission has found that LIURP reduces bad debt by reducing customers' bills. Customers who receive LIURP services are able to pay their entire bill plus contribute to their arrearage."

PUC Order on Duquesne Light's Restructuring, R-00974104, page 293.

And I believe that an effective LIURP program is especially important now in light of this Company's current request for a rate increase and change in rate design.

Although I believe the Company's other universal service programs serve important needs, they help a low-income customer only after a problem has arisen, whether it be arrearages or other crisis that impacts a person's ability to pay. Whereas a well-funded usage reduction program helps a poor person avoid a crisis by allowing for greater conservation and thereby a reduction in their monthly bills while at the same time promoting the common good that comes from energy conservation. I believe these are the reasons why the Commission has long recognized the value of a well-funded LIURP program.

Q. Do you have any general comments on the Company's universal service programs?

A. This Company has a history of using community-based organizations in the administration and implementation of its universal service programs, and I commend them for doing so. As part of this proceeding, the Company should be directed to

continue to use community-based organizations in the administration and implementation of its universal service programs as it has traditionally.

These organizations serve thousands of low income and disadvantaged members of the community; they have direct knowledge of the barriers and impediments to self-sufficiency and continually innovate and evolve the service delivery system to better meet the needs of the population they serve. Community based organizations are governed by volunteer Boards of Directors; accountable to the communities they serve and are not conflicted by a duty to shareholders and investors. The focus and active experience of community-based organizations make them singularly suited to speak for the needs of the community. Local, experienced community-based organizations must continue to operate these programs; the CEO operates as a one stop facility for the energy problems of the poor. This system has been shown to be efficient, cost-effective and serves as a vital link between utility programs and the low-income customers served by those programs.

Q. Do you have any recommendations regarding other universal service programs?

A. Yes. I believe that the shareholder contribution to the Company's hardship fund should be increased by $500,000 annually. Considering the current request to increase rates, the number of low-income customers served and the inflationary pressures those customers face I am recommending that the Company's annual contribution to its hardship fund be increased by $500,000.

Q. Can you summarize your recommendations?

A. I am recommending the following:

1. That annual WRAP funding be increased by $900,000 with any unspent portion of WRAP being carried over to the following year;

2. That the Company's request to increase its fixed monthly customer charge be denied;

3. That the Company be directed to continue to use community-based organizations as it has traditionally done in the administration and implementation of its universal service programs;

4. That the Company's annual contribution to its hardship fund be increased by $500,000.

Q. Does this conclude your testimony?

A. Yes.

PREPARED DIRECT TESTIMONY OF PATRICK M. CICERO

I. INTRODUCTION AND BACKGROUND

Q: Please state your name, occupation, and business address?

A: My name is Patrick M. Cicero. I am employed by the Pennsylvania Utility Law Project (PULP), a specialized component of Regional Housing Legal Services. My job title is Of Counsel, which encompasses a broad range of responsibilities. For example, in cases such as this one where I am not representing any clients as an attorney, I provide analysis and testimony on utility matters for clients who are represented by members of the statewide legal aid network, including clients of PULP and other legal aid offices. My business address is 118 Locust Street, Harrisburg, PA 17101.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA intervened to ensure that the terms, conditions, and rates for electric service that are proposed by PPL Electric Utilities Corporation (PPL or the Company) are just, reasonable, and affordable for its low income customers. CAUSE-PA retained PULP's attorneys to represent its interests in this case. While other attorneys at PULP are representing the legal interests of CAUSE-PA, I am providing testimony about PPL's overall rate increase request, including its rate design, its existing tariff provisions, its proposed tariff changes, and the overall adequacy of its policies, procedures, and programs that are designed to ensure that PPL's low income customers are able to afford and maintain electric service at just and reasonable rates.

My testimony assesses PPL's proposed rates, rate design, universal service programs and other assistance programs and customer service, including its billing and collections practices, payment arrangement standards, and quality of service. Further, I outline why approving a rate increase of any amount should be conditioned on significant improvements to its universal service programs and other tariff changes designed to ensure that the Company's low income customers can afford to connect to and maintain service. In CAUSE-PA Statement No. 2, Ben Havumaki addresses PPL's proposed treatment of new large loads and whether the Company's proposal to socialize transmission system upgrades associated with new large load customers has been sufficiently justified.

Q: Have you provided testimony before the Pennsylvania Public Utility Commission in any prior cases?

A: Yes. I have served as a witness in several proceedings. A full list of proceedings in which I previously testified is attached hereto as Appendix A. Apart from those proceedings, my prior experience before the Public Utility Commission (PUC or Commission) has been as an attorney representing clients and in my role as the statutory representative of consumers while serving as Pennsylvania's Consumer Advocate leading the Pennsylvania Office of Consumer Advocate.

Q: What are your qualifications to provide testimony in this case?

A: I have more than 23 years of experience as an attorney, 20 years of which have been in the practice of legal aid or consumer advocacy. I have attached my resume, which outlines my relevant credentials and work experience as Appendix B. After 2 years clerking for a federal district court judge, I spent nearly 5 years as a staff attorney at

MidPenn Legal Services in Harrisburg where I represented clients facing eviction, foreclosure, bankruptcy, and utility termination. After returning briefly to clerk at the federal district court, in early 2011, I began working at the Pennsylvania Utility Law Project – first as a staff attorney and ultimately as its Executive Director. In 2020, I was hired to lead the statewide legal aid network when I became the Executive Director of the Pennsylvania Legal Aid Network. There, I coordinated the work of the legal aid system in Pennsylvania that provides civil legal aid to low income Pennsylvanians on a range of civil legal issues. On December 13, 2021, I was appointed as the Commonwealth's Consumer Advocate leading the Pennsylvania Office of Consumer Advocate (OCA). I was confirmed by the Pennsylvania Senate in June 2022. I served as the Consumer Advocate until January 31, 2025. On February 28, 2025, I returned to PULP in my current role.

Throughout my tenure in these roles, I have had the opportunity to see firsthand the extraordinary efforts that low income consumers take to remain stably housed and connected to essential utility service. Day in and day out, low income consumers – almost all of whom struggle to survive at income levels that are at or below 150% of the federal poverty guidelines[1] – are forced to make difficult decisions about which bills to pay and which they must forgo. I have relevant experience helping low income consumers understand their utility bills and rates, why their charges are what they are, and what assistance, if any, is available to them to help pay their bills.

[1] To put this in context, the 2025 federal poverty income guidelines, known as the Federal Poverty Level (FPL) for a family of 4 require that a household not have more than $32,150 in annual income to be considered poor, which translates to $48,225 at 150% of the federal poverty guidelines. The complete guidelines are available here: Office of the Assistant Secretary for Planning and Evaluation (ASPE), "Poverty Guidelines", available at: https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines (last visited Dec. 11, 2025).

Furthermore, for almost 15 years at PULP and the OCA, I was instrumentally involved in the litigation of hundreds of cases before the PUC including rate cases, default service cases, universal service and energy conservation proceedings, Act 129 cases, and numerous other proceedings that require working knowledge and expertise on the issues about which I am testifying in this proceeding. Throughout my career, I developed specialized expertise in the needs of low income customers, the regulation of public utilities, the nuanced design and policy considerations of utility rates, and the ways that our regulatory system often fails the very consumers it is designed to protect.

The imbalance of power between utilities and consumers has resulted in utilities increasing rates at a significant pace. It has also resulted in utilities implementing more complex rates and rate designs. Taken together, this means that consumers, particularly low income consumers, are now more than ever struggling to understand the complexity of their utility bills, including how they are calculated each month, and what they can do to reign in the ever-increasing costs to allow them to afford and remain connected to essential utility service.

Q: Have you prepared Exhibits or Appendices to accompany your testimony?

A: Yes. I have prepared four (4) appendices. Appendix A contains the list of proceedings in which I have appeared as a witness. Appendix B is my resume. Appendix C attaches the interrogatory responses that I have cited to in my testimony. Appendix D contains various labeled exhibits that were prepared by me or under my supervision.

Q: Do you have any preliminary matters to address?

A: Yes. As noted above, I am an attorney who also represents clients. My role in this case is as a witness; I am not serving as counsel for CAUSE-PA or any other client in this

proceeding. Throughout my testimony, I refer to decisions by regulatory agencies and courts as well as reference statutes and regulations. These statements should not be considered a legal opinion and should not be confused with the legal opinions or advocacy of the attorneys representing CAUSE-PA in this case. Any reference or citation is merely to provide context and support for my opinion about the public policy and rate design issues that I address in my testimony.

II. OVERVIEW OF PPL'S RATE INCREASE PROPOSAL

Q: What is the purpose of this case?

A: PPL seeks to increase the amount that it charges its customers for service by more than $356 million per year. Because its customers do not have a choice to buy electric distribution service from anyone else, PPL must receive the Commission's approval for this increase. The Commission's job is to stand in the gap for consumers to protect them from a utility's monopolistic overreach. Overall, the purpose of rate regulation is to determine the just and reasonable rates necessary to support prudent investment that is in the public interest. Thus, in this case, as in all rate cases, the Commission must determine the just and reasonable rates for PPL under Chapter 13[2] and other provisions of the Public Utility Code. In addition, consistent with the Commission's suspension order in this proceeding, the Commission and parties have been charged with examining all of PPL's proposed and existing rates, rules, and regulations.[3] This includes an examination of the adequacy of PPL's customer assistance program rates and rate structure, as well

[2] 66 Pa. C.S. § 1301 et seq.
[3] Pa. P.U.C. v. PPL Electric Utilities Corp., Docker No. R-2025-3057164, Order at ¶¶ 1 and 4 (Order entered October 23, 2025), available at: https://www.puc.pa.gov/pcdocs/1899807.pdf. (last visited Dec. 3, 2025)

as the adequacy of its programs to assist customers to be able to afford to maintain service.[4]

Thus, in addition to determining whether the Company's requested revenue requirement is just and reasonable, the Commission must also determine whether all rates sought, and rate designs chosen to collect that revenue, are just and reasonable. The Commission must also consider the impact of rates on consumers,[5] including whether the programs designed to assist consumers of limited economic means are sufficient to allow them to continue to afford to maintain and access service on reasonable terms and conditions.

According to PPL, its current rates are inadequate as they would produce – without rate relief – a 4.43% return on equity at the end of the Fully Projected Future Test Year (FPFTY).[6] PPL asserts that this is insufficient and that it requires more than 2.5 times that return as it is requesting an 11.3% return on common equity.[7] PPL also seeks an equity-skewed capital structure comprising 56.05% equity and 43.95% long term debt with a weighted average cost of debt of 5.08%.[8] Combined, PPL seeks an overall rate of return

---

[4] Vice Chair Barrow issued a statement at the time of suspension that requested the parties to address a series of issues in this proceeding: (1) the impact of rate shock for PPL's customers as a result of the fact that PPL has not been in for a rate case since 2015; (2) the impact of PPL's capital structure on customer rates; (3) the impact of transactions between PPL and its affiliated interests on consumer rates; (4) the impact of customer service issues; (5) cost allocation policies and methods employed by PPL; and, (6) the allocation of universal service costs to rate classes other than residential rate classes. Pa. PUC. V. PPL Electric Utilities Corp., Docket No. R-2025-3057164, Statement of Vice Chair Kimberly Barrow (October 23, 2025). ("Vice Chair Barrow Statement"), available at: https://www.puc.pa.gov/pcdocs/1899787.pdf. (last visited Dec. 3, 2025) The Administrative Law Judges issued an Interim Order on November 14, 2025 reminding that parties that they are "to address in this proceeding the issues identified in the Statement of Vice Chair Kimberly Barrow dated October 23, 2025." of 8.56%.[9] In total, PPL requests to increase in its annual base rate operating revenues of $356.3 million, which would produce a system average increase in distribution revenue of more than 33%.[10] Of the total requested increase of $356.3 million, PPL seeks to recover approximately $254 million or 71.3% of the proposed rate increase from residential customers.[11] PPL proposes collecting revenue from residential customers in several ways:

First, it seeks to increase its residential customer charge from $14.09 to $17.00 per month.[12] This is an increase of 20.65%.[13] Second, it seeks to increase its volumetric charge 23.2%, inclusive of all riders, from $0.05109/kWh to $0.06296/kWh.[14] In addition to these two charges, PPL proposes to zero out its Distribution System Improvement Charge (DSIC)[15] and its Storm Damage Expense Rider (SDER), and increase the scope of charges that are collected through its SDER.[16] PPL also proposes to roll $1.4 million of its labor expenses for universal services out of rates and allocate it to its Universal Services Rider (USR).[17]

The Company also proposes several other rate design changes that do not directly impact the overall revenue requirement but affect customer rates in various ways. For example, PPL seeks to eliminate rate RTS service, which has been closed to new

[9] PPL Volume VII, Fully Projected Future 1, Exhibit B-7.

[16] Id. at 9-13.
[17] PPL St. No. 18 at 10-14.

customers since 1995, and move all customers on that rate schedule to its Rate RS.[18] The impact of this change will cause a 73.4% increase in distribution base rates for the 11,509 customers served by rate RTS,[19] including the more than 1,300 confirmed low income customers who are currently served by rate RTS.[20] PPL also seeks to change its definition of maximum registered peak load to include not only peak demand but also peak export for certain net metered customers.[21] In addition, PPL is proposing an electric vehicle time of use charging rebate.[22]

Q: You mention above that the Commission must consider the impact to consumers in making its determination about the appropriate rate increase. Please explain why the Commission must do so?

A: Fundamentally, the Commission's job is to restrain the monopolistic tendencies of public utilities.[23] If left unchecked by regulatory oversight, a utility could charge whatever it wanted because consumers have no other choice but to buy the utility's product if they want service. This is an intentional system design because multiple companies running wires, poles, and transformers to deliver electricity to customers within a geographic area would not function well. Thus, in exchange for the right to serve customers without

[18] PPL St. No. 8 at 12.
[19] Id. at 13, Table 6.
[20] PPL Response to CAUSE-PA Set IV-6, attached hereto at Appendix C.
[21] PPL St. No. 15 at 4.
[22] See PPL St. No. 20.
[23] This principle, that it is the job of the PUC to restrain the monopolistic tendencies of public utilities is not new or novel, but rather foundational to the role of regulators. The PUC recently reaffirmed this principle in its Fully Projected Future Test Year Final Rulemaking Order when it said: "Inherent in the 'cost of providing service' principle of ratemaking is the recognition that public utilities are natural monopolies and that the PUC's oversight through cost-of-service ratemaking regulation serves as a proxy for a competitive market in appropriately restraining, or exerting downward pressure on, the profit-maximizing prices a monopoly could otherwise charge in the absence of price regulation." Use of Fully Projected Future Test Year 52 Pa. Code Chapter 53, PUC Docket No. L-2012-2317273, Final Form Order at 4 (order entered January 8, 2025), available at: https://www.puc.pa.gov/pcdocs/1874340.pdf (hereinafter "FPFTY Final Form Order"). (last visited Dec. 3, 2025)

competition for its services, and the requirement and duty to provide service to all customers, electric utilities like PPL submit to price regulation by the Commission, including oversight as to rates and service quality. In exchange, the Commission must permit PPL the opportunity to recover its prudently and reasonably incurred costs, including its cost of debt, and allow it the opportunity to earn a fair rate of return on its shareholder investments. This is generally what is referred to as the regulatory compact.

Q: Is the regulatory compact a legal concept?

A: No, it is a public policy concept, but the Commission has statutory authority and discretion to enforce the regulatory compact through the Public Utility Code. Traditionally, this is done through cost-of-service ratemaking that allows a utility the opportunity to earn its allowed rate of return through effective and efficient management. When done correctly, this benefits both customers and the utility.

Q: Please explain.

A: As noted above, there is no competition for public utility service. Thus, traditional cost of service ratemaking serves as a substitute for the beneficial aspects of competition because it sets rates only on a forward-going basis.[24] In a competitive market, a business is not guaranteed a profit, instead it must operate efficiently and control its costs. With traditional ratemaking, this is the same pattern for a utility. Rates are set at a point in time, based on the known and measurable costs and need for revenue by the utility, and then only on a forward-going basis. Once set, the rates are fixed until changed by the Commission in subsequent rate cases. This practice encourages the utility to operate efficiently because it cannot increase rates again without Commission permission. As a

[24] See FPFTY Final Form Order at 4.

result, a utility faces the risk of under recovery due to normal business risks and management underperformance. This lack of any guaranteed revenue is a significant and important protection that traditional cost of service ratemaking provides to consumers.

Q: Do we have traditional cost of service ratemaking in Pennsylvania?

A: Pennsylvania has modified traditional cost of service ratemaking in several ways, three of which are relevant to this case:

- Use of Future Test Year or Fully Projected Future Test Year for setting rates to reduce regulatory lag between plant investment and recovery;[25]
- Utilities can propose and the Commission can approve alternative ratemaking methodologies;[26]
- Approval of a distribution system improvement charge (DSIC) to collect additional revenue over and above the authorized revenue requirement between rate cases.[27]

Each of the above modifies the traditional paradigm and shifts the risk of under recovery of the authorized revenue requirement from the utility to its customers in ways that are often subtle but cumulatively add significantly more certainty for a utility's bottom line. In the end, this shift also minimizes the incentive for a utility to operate efficiently as compared to the regulatory lag inherent in traditional ratemaking.

Q: Please explain.

A: First, there is the use of the fully projected future test year or FPFTY. As applied to this case, PPL is projecting forward to what it believes its expenses, capital additions, and

[25] 66 Pa. C.S. § 315(e).
[26] 66 Pa. C.S. § 1330.
[27] 66 Pa. C.S. § 1353.

other costs will be as of June 30, 2027, but is asking that rates be set as of the end of the suspension period, which is June 30, 2026, on a prospective basis. Like all people and businesses, PPL does not know the future, so it is making projections about what the world will be like as of the end of June 2027, but it is permitted to charge rates *as if* those projections will in fact be true as of June 2026. That is, effective with the end of the suspension, if any rate increase is granted, PPL would be collecting more revenue than it needs at that time because its rates are set to coincide with the world as PPL projects it to be in June 2027. The effect is to reduce the risk of under collection for PPL and shift it to consumers because consumers are, in effect, paying for the cost of providing electric distribution service based on the projection of those costs in the future not as the costs exist when the rates go into effect. This reduces the lag associated with ratemaking for PPL by placing more risk – and cost – onto consumers.

Second, the use of alternative ratemaking mechanisms, like the SDER which is currently in place and which PPL seeks to expand, reduces the risk for PPL that it has accurately projected its storm damage expenses in rates and shifts it to consumers who will bear the impact of storm damage on an as incurred basis.

Third, PPL has an approved Distribution System Improvement Charge (DSIC) that allows it to currently charge up to 7.5% additional surcharge on billed distribution revenue and will allow it to charge 5% once it reaches the end of its fully projected future test year and its net plant in service number. Depending on how long PPL stays out of rate cases in the future, this surcharge has the potential to result in significant additional dollars charged to residential customers. The ability of PPL to charge a DSIC also shifts future

risks onto consumers because it reduces PPL's risk that rates set in this case will be insufficient to meet its planned capital plant investments.

Taken together, these modifications to traditional ratemaking shift risk from PPL to customers and require substantial scrutiny by the Commission in its exercise of discretion in setting rates.

Q: Will you be addressing each of these issues through this direct testimony?

A: No. I do not further address these issues. As to the projections for expenses and plant in service at the end of the fully projected future test year, the statutory advocates and others in this case will address the prudency of those expenses and whether they will be reasonably and foreseeably incurred. I simply urge the Commission to pay attention to the projections provided by statutory advocates and others in contrast to those of PPL, as it is critical for consumers that PPL is not permitted to overestimate its expenses or plant in service numbers. As to the DSIC, I do not further address it in this testimony. However, I would urge the Commission to remember the DSIC is a percentage-based charge and as a result, the amount PPL collects in the future when DSIC is utilized is based on its billed distribution revenue amounts. The higher the approved rates in this proceeding, the more DSIC revenue PPL can collect.

Regarding the SDER, the Commission should be mindful that PPL is the only utility that has received approval to use this rider and it has imposed significant costs on consumers. While under its current operation, the SDER surcharges or refunds consumers if Commission-reportable storms are greater than or less than $14.7 million – the amount included in base rates from the last case[28] – PPL proposes to change the

[28] PPL St. No. 13 at 9.-10.

SDER in this case to increase that amount of $32 million[29] and to include an additional $10.5 million that are proposed to recovered annually through non-reportable storms.[30] Unlike other expenses that are in rates, because of the SDER, PPL gets to recover more than these amounts if there costs exceed these amounts which shifts risks from the Company to customers and is a deviation from traditional ratemaking.

In my view, each of these is relevant to the overall reasonableness of rates set in this proceeding and should be given serious consideration by the Commission in the exercising of its overall regulatory scrutiny.

Q: You previously mentioned that the Commission should exercise scrutiny of PPL's rates in this proceeding. Please explain.

A: There are two areas that have a profound impact on the total annual revenue increase that will be authorized in this case: (1) PPL's authorized rate of return and, (2) PPL's authorized ratemaking capitalization ratio/capital structure. These two things work together and are the primary drivers of the requested rate increase in this case.

Q: What is the return on equity that PPL seeks to use to set rates?

A: In this case, PPL seeks an overall rate of return of 8.56% which consists of the following:

Table 1 – Rate of Return[31]

Description	Capitalization Ratio	Embedded Cost	Return %
Long-Term Debt	43.95%	5.08%	2.23%
Common Equity	56.05%	11.30%	6.33%
Total	**100.00%**		**8.56%**

[29] Id. at 11:18-20.
[30] Id. at 12:9-14.
[31] PPL Exhibit Fully Projected Future 1 B-8, page 1 of 1.

Q: Have you done an analysis of whether 11.30% reflects the actual cost of capital in the market?

A: No. I have not done a market analysis and will rely on the analysis of other parties in this case who will present cost of capital testimony, including but not limited to the Office of Consumer Advocate (OCA) and the Commission's Bureau of Investigation and Enforcement (I&E).

Q: If you have not done this analysis, why are you raising the issue?

A: Because it is one of the clearest and best ways that the Commission can control costs for ratepayers and is one of the many areas where the Commission has an abundance of discretion that it can and should exercise in restraining the monopolistic tendencies of a utility. It bears repeating that PPL's customers are captive. They have no choice about who their electric distribution provider is – if they live in PPL's service territory and wish to receive electric distribution service then they must buy it from PPL. Residential customers, including low income customers, must buy that service at the Commission authorized and tariffed rate as they are not able to negotiate a different rate with PPL like some larger users may be able to do.

As a simplified explanation, base rates consist of various parts. First, there are ongoing costs that are consumed as incurred – this includes the recovery of reasonably and prudently incurred expenses. Utilities like PPL can recover these expenses but do not earn a profit from them. Second there are capital costs that are consumed over time such as poles, wires, transformers, and substation equipment. Utilities like PPL pay for these costs with a mix of debt and equity and recover them in rates over their useful life. This annual charge to recover costs incurred for capital expenses is generally the

depreciation and amortization costs in rates. This is the return "of" the utility's capital – the amount it spent that was allowed to be recovered in rates. In addition to a return "of" dollars spent for capital costs, utility shareholders are allowed a return "on" those expenses because they dedicated their money to this purpose as opposed to something else – they essentially loaned money to customers either in the form of borrowed funds (debt) or shareholder dollars (equity). These two things taken together equal the rate of return (ROR) that a utility is allowed. This return must "be equal to the prudent and actual cost of capital, no more, no less."[32] The rate of return consists of two parts and is determined by an authorized ratemaking capitalization ratio that considers the weighted average cost of debt and the authorized return on equity (ROE). In setting rates, the Commission has an abundance of discretion in determining the appropriate capitalization ratio for ratemaking purposes and the sufficient, but not excessive, ROE that is needed to attract sufficient capital.

Q: Please explain what you mean by capitalization ratio?

A: The capitalization ratio is how the overall rate of return is calculated. It consists of debt and equity. Debt is determined by the actual debt issued by the Company at the weighted average cost of debt. In this case, PPL has a weighted average cost of debt of 5.08% as shown in Table 1, above. PPL has determined that its requested ROE is 11.30%, a rate that is significantly higher than the overall return of the major U.S. stock markets have earned over the last 50 or 100 years.[33] PPL has chosen a capitalization ratio for

[32] Mark Ellis, Rate of Return Equals Cost of Capital: A Simple, Fair Formula to Stop Investor-Owned Utilities from Overcharging the Public, January 2025, at 4, available at: https://www.economicliberties.us/wp-content/uploads/2025/01/20250102-aelp-ror-v5.pdf (Last visited 11/22/25).

[33] The Consumer Price Index inflation adjusted return of the Dow Jones Industrial Average from October 1975 to October 2025 (50 years) is 7.83% if all dividends were reinvested. For the past 100 years (October 1925 to October 2025) the return is 6.86%. See DQYDJ Dow Jones Industrial Average Return

these two costs of 43.95% debt and 56.05% equity. This means that the embedded cost of debt at 5.08% counts less in the overall calculation of the rate of return than the embedded cost of equity at 11.30% as shown in Table 1, above.

Q: Must the Commission accept the capitalization ratio chosen by PPL?

A: No. The Commission can determine that the capitalization ratio chosen by the Company places an excessive and undue emphasis on the higher return on equity at the expense of the lower cost of debt and can impute a capitalization ratio for ratemaking purposes if the evidence demonstrates a reduction would nevertheless be sufficient. In this case, PPLs requested ROE of 11.30% is more than two times higher than its cost of debt and significantly higher than objective measures of returns that shareholders should reasonably expect based on market based returns. PPL's decision to skew its capital structure heavily towards equity should be viewed skeptically as it has a significant impact on the calculated overall rate of return and ultimately on the overall revenue requirement.

Q: Please explain the impact of the chosen capitalization ratio on PPL's requested overall revenue requirement.

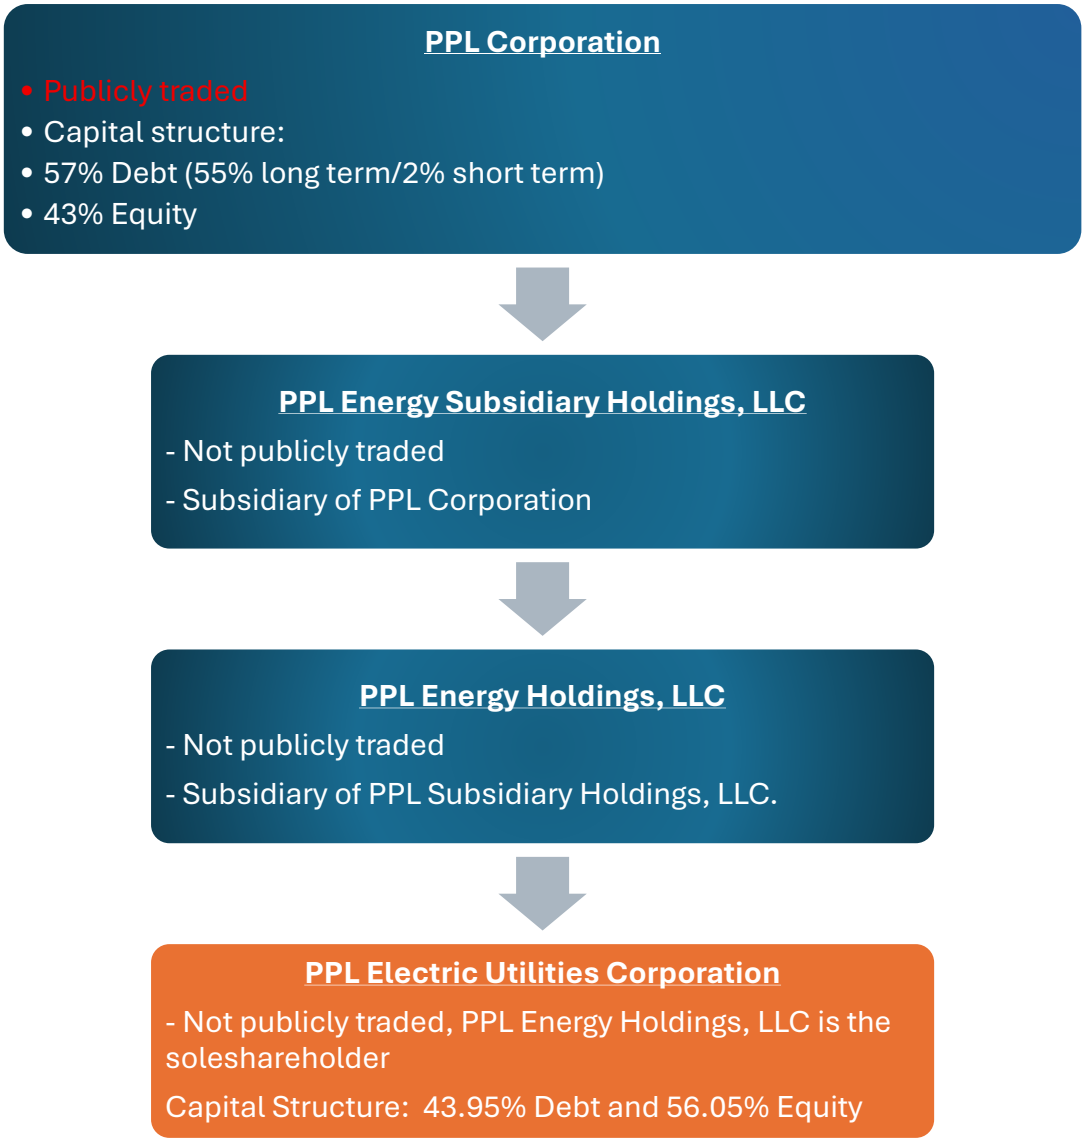
A: If the Commission were to impute a ratemaking capitalization ratio of 50% equity and 50% debt, the overall rate of return at the Company's desired ROE of 11.30% would be reduced to 8.19% as shown in Table 2, below:

Calculator, available at: https://dqydj.com/dow-jones-return-calculator/. (last visited 11/22/25). There are similar results when looking at the S&P 500. Over the last 50 years, the S&P 500 earned an inflation adjusted return of 8.02%. See S&P 500 Return Calculator, with Dividend Reinvestment, available at: https://dqydj.com/sp-500-return-calculator/ (last visited 11/22/25). I recognize that the calculation of the cost of capital for purposes of setting a return on equity is forward focused not backward looking, I make this observation about the overall stock market returns over the past 100 years as a real life gut check on PPL's requested ROE. It defies logic, common sense, and reason that one should reasonably expect to earn 11.3% on one's investment over a long period of time.

Table 2 – Rate of Return at 50/50 Capitalization Ratio.[34]

	Capitalization Rati			Embedded Cost		Return	
Long-Term Debt	50.00	%		5.08	%	2.54	%
Common Equity	50.00			11.30		5.65	
	100.00	%				**8.19**	**%**

Reducing the overall ROR by means of a 50/50 capital structure would *reduce the needed annual revenue requirement increase by $37.7 million.* This is the difference between the $356.3 million sought by PPL in this case and the $318.6 million that would be required if the PUC were to impute a 50/50 capital structure.[35] This means that merely by re-weighing the capitalization ratio to have 50% of the return weighted at PPL calculated cost of debt and 50% weighted at its requested ROE of 11.30%, the Commission could save ratepayers $37.7 million annually.



Q: Are you recommending that the Commission adopt an imputed capital structure for ratemaking purposes?

A: Yes. The Commission should consider imposing a mitigated/imputed ratemaking capital structure. This is important for several reasons. First, as noted above, a 50/50 capital structure for ratemaking purposes would save $37.7 million annually in rates. Second, the Commission should consider the fact that PPL Electric Utilities is not a publicly traded company, and its corporate parents are entirely in control of its capital structure and equity contributions. This matters because there are several layers between PPL Electric Utilities and the actual capital markets. In fact, PPL's corporate structure is

[34] Derived from schedules submitted in response to PPL Response to OCA Set 1-1, Attachment 26, changing capitalization ratio at tab ROR to 50/50. This reduces the overall needed change in revenues displayed at tab "FPFTY DSD-2" from $356.271 million to $318.545 million. All other factors held constant. $326.571 million minus $318.545 is a $37.726 million annual reduction to revenue requirement.
[35] Id.

akin to a Russian nesting doll as there are three layers above it before it gets to any actual market structure that can be evaluated objectively by capital markets and investors. This is illustrated in Figure 1, below.

Figure 1 – PPL Corporate Holding Company Structure[36]

As is evident from the above figure, PPL Corporation – the only company that is subject to the demands of a true market for capital – has a capital structure that is the ***inverse of***

[36] See PPL Response to CAUSE-PA IV-15 and IV-17, attached hereto at Appendix C.

PPL Electric Utilities. This allows PPL Corporation to engage in a form of capital structure alchemy whereby it can flow relatively less expensive market-based debt down its ladder of corporate companies and leverages it at the regulated level as an equity contribution that flows back up to shareholders as a payout and profit. This sort of holding company alchemic arbitrage should be viewed skeptically. The role of the Commission as economic regulator of PPL Electric Utilities should be to ensure that it is not taking unfair and unnecessary advantage of its captive customers. If a capital structure that is 56% debt and 43% equity is acceptable for a PPL's corporate parent, then it should be viewed as a target for the Commission in setting a fair capital structure that forms the overall authorized rate of return. If the Commission imputed the same capital structure as PPL's corporate parent, even at the incredibly high ROE of 11.3% requested by PPL, it would reduce the overall revenue requirement to $274.741 million, a savings for ratepayers of nearly $82 million per year.[37] As noted above, even a 50/50 imputed capital structure would save ratepayers $37.7 million annually.

As noted by Vice Chair Barrow in her October 23, 2025, Statement:

> **Capital Structure**: On several occasions, regulated utilities have requested to be awarded common equity ratio and debt capital outside of the apparently reasonable 50% equity and 50% debt capital structure, along with their requested return on equity (ROE). These deviations result in millions of dollars that go into the rates of utility customers as higher common-equity ratio results in higher rates for public utility services. Therefore, a careful and detailed review of PPL's claimed capital structure and ROE, is warranted.[38]

[37] Derived from schedules submitted in response to PPL Response to OCA Set 1-1, Attachment 26, changing capitalization ratio at tab ROR to 57% debt and 43% equity. This reduces the overall needed change in revenues displayed at tab "FPFTY DSD-2" from $356.271 million to $274.741 million. All other factors held constant. $326.571 million minus $274.741 is a $81.985 million annual reduction to revenue requirement.

[38] Vice Chair Barrow Statement at 1-2.

Because PPL's requested capital structure results in a significant transfer of wealth from its customers to its shareholders, the Commission must scrutinize whether to impute an alternative structure. I recommend that the Commission impute either the capital structure of PPL's grandparent – PPL Corporation – or, at the very least, a more reasonable 50/50 structure. Either would still allow PPL the opportunity to earn a fair rate of return on its investment while mitigating the necessary impact of this rate increase for customers.

Q: What is the impact to the revenue requirement of PPL's request to increase their projected ROE to 11.30%?

A: It is significant and there are several variables about how it affects the revenue requirement needed to support the requested ROR and authorized expenses. As noted above, the requested ROE is blended with the cost of debt to form the overall ROR that is authorized and used to establish an authorized revenue requirement. Reducing the ROE – even if the capital structure is not changed from that which PPL requested – has a profound impact on rates. For example, in response to discovery, PPL calculated that, at the as-filed rate base and capital structure it requested, the dollar impact to revenue requirement for every 10 basis points (0.10%) is $4.289 million.[39] This means that every basis point (0.01%) results in a revenue requirement increase of $428,900 to PPL's customers. Thus, reducing PPL's requested ROE to a rate that is more reflected in the average rates of the overall market would result in a reduction of needed annual revenue requirement by tens of millions of dollars.

[39] PPL Response to CAUSE-PA IV-14, attached hereto at Appendix C.

Q: Are you recommending a specific lower ROE in this case?

A: I am not making a recommendation about the specific return of equity that the Commission should authorize in this case but submit that it should be no higher than the cost of equity that would be required to attract capital in the actual capital markets. PPL is not a publicly traded company, only its grandparent – PPL Corporation – is publicly traded. As such, there is no objective way for the Commission to determine the cost of equity for a company like PPL because of all the layers between it and actual market investors. Thus, I encourage the Commission to look at the ROE recommendations by the other parties who submit a cost of capital analysis in determining what ROE to authorize. The decision about what ROE is sufficient belongs to the Commission. While it should allow PPL a fair return, it should be as low as possible to achieve a return that is fair to both shareholders and ratepayers. The Commission has wide latitude in establishing a fair rate of return. This fact was recognized by PPL witness Nelson in response to discovery when she stated that in her experience "regulatory commissions generally do not adopt a recommendation of a particular witness; the commissions consider the evidence provided by multiple witnesses and determine what is just and reasonable based on the evidence presented."[40] I agree with this statement and, in my view, the Commission must exercise its discretion in a manner that ensures PPL is not taking undue and unfair advantage of its customers through an ROE that is higher than what is reasonably necessary to earn a fair rate of return.

Given that every 10 basis points at the as-filed rate base and capital structure takes $4.289 million annually from the pockets of ratepayers and puts it into the coffers of PPL's

[40] PPL Response to OCA II-4, attached hereto at Appendix C.

parent company,[41] the Commission should seriously consider what ROE is sufficient but not excessive in its determination of setting rates in this proceeding.

III. RATE DESIGN AND CUSTOMER CHARGE

Q: Please summarize PPL's residential customer class.

A: PPL's residential rate class divided between RS (Residential Sales) and RTS (Residential Thermal Storage). Both are residential customers. The vast majority of PPL's residential customer are served under rate RS – the general residential customer class. On average in 2024, PPL had 1,286,891 residential customers.[42] Of this amount, 11,509 customers were assigned rate RTS as of the filing date of PPL's rate case.[43] Rate RTS is a legacy rate that has not accepted any new customers for the last 30 years.[44]

Q: What is the difference between Rate RS and Rate RTS under current rates?

A: Tables with the relative differences in rates at current and as proposed rates are below.

[41] See PPL Filing Requirements III-D-2, A.2. "The Company pays dividends to its Parent, PPL Corporation. Dividends paid to Parent in 2023 were $323 million and dividends paid to Parent in 2024 were $375 million."
[42] PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C.
[43] PPL St. No. 8 at 12:15.
[44] See PPL Electric Utilities Corporation, Supplement No. 400, Electric Pa. P.U.C. No. 201, One-Hundred-Thirty-Second Revised Page 21, available at: https://www.pplelectric.com/site/-/media/PPLElectric/At-Your-Service/Docs/Current-Electric-Tariff/2025/Oct/RTSS--Residential-Thermal-Service-10-1-25.ashx. (last visited Dec. 4, 2025)

Table 3: Rate RS Bills Current versus Proposed at 918 kWh/month.[45]

Rate RS	Current Rates	Current Average Bills	Proposed Rates	Proposed Average Bills	Change in Average Bills (Monthly)	
Fixed Charge	$14.09/Bill	$14.09	$17.00/Bill	$17.00	$2.91	20.7%
Vol. Energy Charge	$0.03534/ kWh	$32.43	$0.04965/ kWh	$45.56	$13.13	40.5%
Riders/ STAS		$15.86		$12.22	($3.64)	(23.0%)
Total Dist. Bill		$62.38		$74.78	$12.40	19.9%

Table 4: Rate RTS Bills Current versus Proposed at 1664 kWh/month.[46]

Rate RTS	Current Rates	Current Average Bills	Proposed Rates	Proposed Average Bills	Change in Average Bills (Monthly)	
Fixed Charge	$18.06/Bill	$18.06	$17.00/Bill	$17.00	$(1.06)	-5.9%
Vol. Energy Charge	$0.02367/k Wh	$39.39	$0.04965/ kWh	$82.63	$43.24	109.8%
Riders/ STAS		$27.84		$22.15	(5.69)	(20.4%)
Total Dist. Bill		$85.29		$121.78	$36.49	42.8%

As can be seen from these tables, rate RS customers currently have a lower customer monthly fixed charge and a higher cost per kWh of electricity consumed monthly as compared to rate RTS customers. PPL is proposing to eliminate rate RTS and move all those customers to rate RS with the effective date of rates. This will have a significant impact on RTS customers because of their relative higher usage as compared to RS customers.

[45] See St. No. 8, PPL Exhibit SWW-1, Page 1 of 16. Total Distribution Bill Rate Schedule RS, including riders and State Tax Adjustment Surcharge (STAS).
[46] See St. No. 8, PPL Exhibit SWW-1, Page 2 of 16. Total Distribution Bill Rate Schedule RTS, including riders and State Tax Adjustment Surcharge (STAS).

Q: How do low income customers fit within the residential rate class?

A: Low income customers are on both Rate RS and Rate RTS. As noted above, based on 2024 averages, PPL had 1,286,891 residential customers.[47] Of this amount, only an average of 74,791[48] of those customers were enrolled in PPL's CAP and received a discounted bill. As shown in Table 5, below, this is only a small fraction of PPL's low income customer population which is measured by both confirmed low income customers – meaning that PPL has a basis for knowing that the customer is low income – and estimated low income customers, which is based on census demographics.

Table 5 – Confirmed and Estimated Low Income Customers, 2024 Average

Confirmed Low Income Customers[49]	Estimated Low Income Customers[50]	Low Income Customers Enrolled in CAP[51]	% of Confirmed Low Income Customers enrolled in CAP[52]	% of Estimated Low Income Customers enrolled in CAP[53]
238,948	347,822	74,791	31%	23%

Thus, there are a significant number of low income customers – by either measure – who are not enrolled in CAP and pay full tariff distribution rates under either Rate RS or Rate RTS.

[47] PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C.
[48] PPL Response to CAUSE-PA I-4, Attachment 1, attached hereto at Appendix C.
[49] PPL Response to CAUSE-PA I-7, Attachment 1, attached hereto at Appendix C.
[50] PPL Response to Response to CAUSE-PA 1-11, Attachment 1, attached hereto at Appendix C.
[51] PPL Response to CAUSE-PA I-4, Attachment 1, attached hereto at Appendix C.
[52] 72,425/249,033= 0.2908 or 29%.
[53] 20,988/91,881 = 0.2284 or 23%.

Q: How much of PPL's requested $356.3 million annual rate increase is it proposing to allocate to residential customers?

A: PPL proposes to allocate 72.45% of the increase – $258,113,550 – to residential customers inclusive of both Rates RS and RTS.[54] Based on the fact that estimated low income customers comprise 27% of the residential customer class,[55] I estimate that PPL is seeking to require its estimated low income customers to pay approximately $69.7 million annually of its $258.1 million increase allocated to residential customers.[56] Even this may be a low estimate because of the difference in average usage between low income households and all residential households.

Q: Why does it matter what percentage of the increase is functionally assessed to PPL's low income customers?

A: As addressed more fully in other sections of my testimony, low income customers who are <u>not</u> enrolled in CAP cannot consistently afford to maintain electric distribution service *at the current rates* being charged by PPL, and they certainly cannot afford to pay the rates sought by PPL in this case. Furthermore, currently PPL's CAP costs are collected exclusively from residential customers, even though all customer classes benefit when CAP customers remain connected to service, and thus, in my view, the allocation of any revenue increase across rate classes must consider the burdens imposed on those least able to afford service and those most at risk of being unable to remain connected to essential electric distribution service to their home.

[54] PPL St. No. 7 at Exhibit BR-1, Page 17 of 118. Derived from the sum of Column N, Line 2 and Column N, Line 3 divided by Column N, line 1 (253,978,986 + $4,140,564) / ($356,271,443) = 0.7245.
[55] 347,822/1,290,755 =.26947 or 27%
[56] $258,113,550*27%=$69,690,659.

Q: Please summarize PPL's proposed rate design for its residential customers.

A: As noted above, PPL has proposed to increase its fixed customer charge for Rate RS customers from $14.09 to $17.00 per month – an increase of 20.7% per month – and it proposes to increase its volumetric charge, inclusive of riders, from $0.05029 kWh to $0.06296/kWh an increase of approximately 25.2%. For customers transferring from Rate RTS to RS, the increase is more significant. While PPL proposes to reduce the customer charge from $18.09 per month to $17.00 per month, it proposes to increase the volumetric charge, inclusive of riders, from $0.03882/kwh to $0.06296/kWh, and increase of 62.2% inclusive of riders. According to the Company, the total bill increase for the average residential customer (RS) using 918 kWh of electricity would be $12.40 more per month.[57] For RTS customers, the average usage is 1,664 kWh per month and so their bills would increase by $36.49 per month.[58] Over the course of the year, the increase for the average residential (RS) customer would be $148.80 and for RTS to RS customers would be $437.88.

Q: In the context of this case, can you put into perspective what PPL's requested increase of $148.80 per year would mean for the average low income Rate RS customer and its proposed increase of $437.88 for the average RTS to RS customer?

A: Yes. Per PPL, the average income of PPL's confirmed low income customers is $17,103 per year.[59] This means that the increase of $148.80 per year that PPL seeks for

[57] See St. No. 8, PPL Exhibit SWW-1, Page 1 of 16. Total Distribution Bill Rate Schedule RS, including riders and State Tax Adjustment Surcharge (STAS).
[58] See St. No. 8, PPL Exhibit SWW-1, Page 2 of 16. Total Distribution Bill Rate Schedule RTS, including riders and State Tax Adjustment Surcharge (STAS).
[59] PPL Response to CAUSE-PA I-22, attached hereto at Appendix C.

a customer currently on Rate RS for the average residential customer is nearly 1% of the total annual household income of PPL's confirmed low income customer.[60] For customers currently on Rate RTS, the average annual increase of $437.88 could take 2.6% of their annual income.[61] Put into further context, the average LIHEAP cash grant for FY 2025 for PPL customers was $211.35.[62] This means that the increase proposed by PPL for customers on Rate RS would consume nearly 70.4% of the LIHEAP cash grant that went to a typical PPL customers and for customers currently on Rate RTS would be more than 2 times (200%) as great as the average LIHEAP cash grant.[63]

As described more fully throughout my testimony, PPL's confirmed low income customers not enrolled in CAP struggle significantly *at current rates* to remain connected to electric service. A further increase of the magnitude contemplated by PPL will have a devastating impact on low and moderate income households – stressing their ability to stay connected to service and eroding the effectiveness of programs like LIHEAP to offset high energy costs.

Q: What is PPL's rationale for increasing its customer charge?

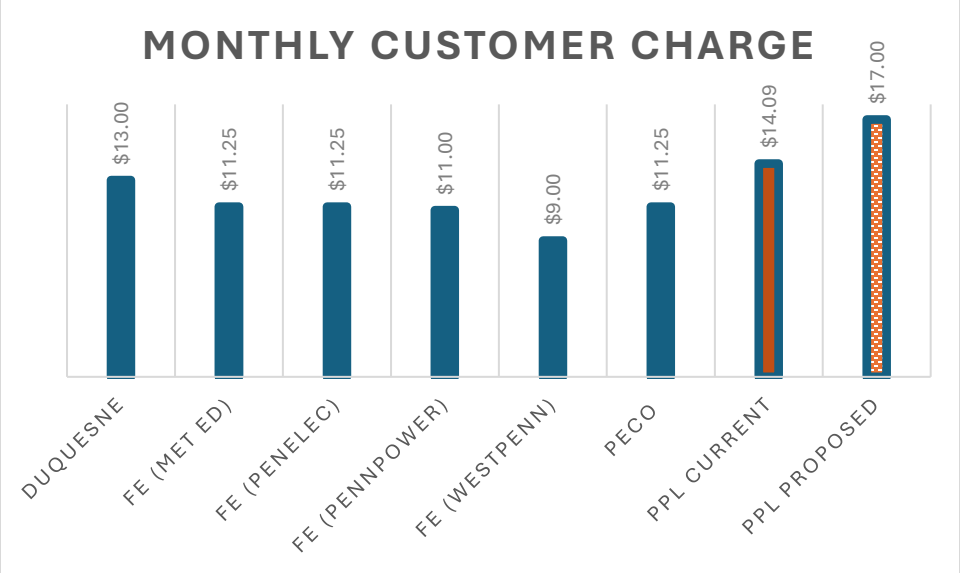
A: PPL is not specific as to why it specifically chose $17.00 as the level at which to set its customer charge. In testimony, PPL witness Rimal states that he calculated that there was $42.96 in unit costs per bill that are "customer related" and, thus, would be supportable to include in a customer charge.[64] PPL witness Wishart asserts that the increase from $14.09 to $17.00 is intended to "better align the residential customer

[60] 148.80/17,103.48 = 0.00869.
[61] 437.88/17,103.48 = 0.0256.
[62] PPL Response to OCA IV-34, Attachment 1, attached hereto at Appendix C.
[63] 148.80/211.35 = 0.704 and 437.88/211.35=2.072.
[64] PPL St. No. 7 at 23-24.

charges with the underlying fixed costs of connecting and serving residential customers."[65] He goes to on further articulate that in setting the charge at $17.00 rather than its calculated $42.92, "PPL Electric is striking a balance between the goal of cost causation and the need for gradualism."[66]

Q: Do you support PPL's proposal to increase its monthly fixed customer charged from $14.09 to $17.00 per month?

A: No. The proposed increase in the fixed monthly customer charge weakens the ability of low income households to save money on their bills each month because less of their bill is dependent on the volume of electricity they consume. The proposed fixed customer charge will result in an increase of approximately $35 per year, an amount which will be unavoidable for low income households struggling to maintain service. Furthermore, PPL witness Rimal appears to include a significant number of costs as customer-related, which are likely not appropriate to be included in a fixed customer charge because they do not actually vary directly with the number of customers. For example, reducing by 100 residential customers does not likely impact that number of transformers, or distribution plant that is coded as primary or secondary. To be sure, there are costs that do vary directly with the number of customers such as meters, meter reading, and billing and collection.



[65] PPL St. No. 8 at 9:17-10:1. Throughout testimony, PPL refers to the current fixed customer charge as variously $14.09 or $15.58. The difference is that the current charge includes $1.50 per month in smart meter rider charges (SMR-2) and a ($0.01) credit in the competitive enhancement rider (CER) rider thus netting the customer charge of $14.09 and the $1.50 SMR-R and the ($0.01) CER to $15.58. These riders are going away under PPL's proposed rate design. Thus, while the real effect of the increase felt by customers will be the difference between $15.58 and $17.00, the actual calculated customer charge is $14.09 and thus is the relevant basis of comparison.

[66] PPL St. No. 8 at 12:5-6.

Q: How does PPL's existing and proposed customer charge compare to other electric distribution companies?

A: PPL's current and proposed customer charges are both higher than the other large electric distribution companies. This is shown visually in the Chart below.

Chart 1: Comparison of Current Monthly Customer Charges by Large EDCs

Thus, it appears that PPL's approach to customer charges is out of step with the other large EDCs.

Q: Do you have an additional reason that you oppose PPL's requested increase in its customer charge?

A: Yes. PPL's proposal undermines the explicit goals of LIURP to "reduce residential energy bills."[67] By reducing the amount of bill reduction that can be obtained through LIURP measures, the proposed increase to the fixed charge threatens the continued

[67] 52 Pa. Code § 58.1 ("The programs are intended to assist low-income customers conserve energy and reduce residential energy bills. The reduction in energy bills should decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs.").

effectiveness of ratepayer investments intended to reduce energy consumption, delinquencies, collections, and uncollectible costs. Thus, the proposed increase to the fixed charge will, in turn, impact the ability of LIURP to "decrease the incidence and risk of customer payment delinquencies and the attendant utility costs associated with uncollectible accounts expense, collection costs and arrearage carrying costs."[68] This would produce an unreasonable result. LIURP is a statutorily mandated program to be provided by PPL to help low income customers reduce or manage their energy consumption in a cost-effective manner. Any increase to the fixed charge would both undermine the goal of LIURP and make the existing program less cost effective.

The ability to save money through energy efficiency is tied directly to a bill structure that bases costs on throughput. But as more residential customer costs are shifted to the fixed charge, the achievable bill savings – and the corresponding impact on bill payment behavior – will erode. The ability to achieve bill savings through energy efficiency and conservation measures is especially important for households with income above 150% but less than 200% of poverty who are ineligible for CAP or LIHEAP but are eligible for energy efficiency and conservation services through LIURP or the federal Weatherization Assistance Program (WAP) – both of which have income guidelines of up to 200% of the Federal Poverty Level (FPL). These households need to retain the ability to reduce their monthly energy costs through adoption of comprehensive energy efficiency and conservation programming.

Given that low income households are disproportionately at risk of termination and often lack the ability to control usage due to poor housing stock and older, less efficient

[68] 52 Pa. Code § 58.1.

appliances, it is critical that they continue to have access to effective conservation tools capable of producing meaningful and lasting bill reductions.

Q: Do you support PPL's proposal to move Rate RTS customers to Rate RS?

A: No. There does not appear to be a purpose to making the change other than for PPL to clean up some of its legacy rates. However, this change would profoundly affect bill affordability for these customers given their relatively high usage compared to residential customers on Rate RS.[69]

Of the more than 11,000 customers on rate RTS, more than 1,300 are confirmed low income and more than 240 are enrolled in CAP.[70] Of those enrolled in CAP, PPL has stated that 224 are classified as electric heating customers, but despite a proposal that would increase annual bills by more than $400 at average rates due to the change from Rate RTS to RS, PPL has no intention or plan to increase the availability of CAP maximum credits to these customers.[71] This could have devastating affects because these customers – even if their usage remained the same –would consume more of their maximum CAP credits annually merely because of PPL's proposed rate increase and this rate change. Moreover, customers not enrolled in CAP would have to bear the increased costs without assistance from PPL. I see no compelling reason why the Commission should approve this rate change. The number of customers taking service at Rate RTS is gradually decreasing as customers move or otherwise discontinue service with PPL and, thus, the rate will eventually go away. But for now, PPL should maintain rate RTS for those

[69] See PPL St. No. 8, Exhibit SWW-1 Page 1 of 16 showing average residential usage for rate RS at 918 kWh as compared to Exhibit SWW-1, Page 2 of 16 showing average used for rate RTS of 1,664 kWh.
[70] PPL Response to CAUSE-PA IV-6 and IX-10, attached hereto at Appendix C.
[71] PPL Response to CAUSE-PA IX-10.c, attached hereto at Appendix C.

customers enrolled in this rate as making the change would adversely affect the affordability of bills for those customers served by Rate RTS.

IV. IMPACT OF RATE INCREASE ON LOW INCOME HOUSEHOLDS

Q: What is the purpose of this section of your testimony?

A: The purpose of this section of my testimony is to describe the impact that PPL's existing rates and its proposed rate increase has on the ability of PPL's low income customers to reasonably afford and maintain electric service to their homes.

Q: Who qualifies as a low income customer?

A: The term "low income customer" is a term of art within the Commission's regulations and includes any residential customer whose household income is at or below 150% of the Federal Poverty Level (FPL).[72] With some exceptions, most utility assistance programs – including PPL's OnTrack Customer Assistance Program (CAP) – require households to have income that is not greater than 150% FPL to qualify for bill discounts and/or arrearage forgiveness.[73]

Q: Please describe the FPL?

A: The FPL is a measure of poverty based on two variables: household size and income. It does not consider the relative difference in economic vulnerability based on the composition of the household (i.e., the age or health condition of household members) or variations in the cost of living based on geographic location.

[72] See 52 Pa. Code § 54.72 (Defining low income customers for the purposes of Universal Service programs and reporting).
[73] 2023-2027 PPL Electric Utilities Corporation Universal Service and Energy Conservation Plan (USECP) at 6, available at: https://www.puc.pa.gov/media/2407/ppl_further_revised_2023-27_usecp.pdf. (last visited Dec. 4, 2025) ("PPL USECP 2023-2027").

A family of four with a household income at **exactly** 150% FPL has a gross annual income of $48,225 ($4,018/month) – while a household of four with income at 50% FPL has a gross annual income of just $16,075 ($1,340/month).[74] Table 3 provides a breakdown of the 2025 household income by FPL and household size:

Table 6: 2025 Federal Poverty Levels by Household Size and Annual Income[75]

Household/Family Size	50%	100%	**150%**	175%	200%	250%
1	$7,825	$15,650	**$23,475**	$27,388	$31,300	$39,125
2	$10,575	$21,150	**$31,725**	$37,013	$42,300	$52,875
3	$13,325	$26,650	**$39,975**	$46,638	$53,300	$66,625
4	$16,075	$32,150	**$48,225**	$56,263	$64,300	$80,375
5	$18,825	$37,650	**$56,475**	$65,888	$75,300	$94,125

For illustrative purposes, a full-time (40 hours/week) worker making $10 per hour which is higher than minimum wage in Pennsylvania[76] has a gross annual income of $20,800, assuming no time off (52 weeks/year). Notably, this is ***higher than*** the average of $17,103 household income of PPL's 249,033 confirmed low income customers.[77] PPL's confirmed low income customers are by any measure deeply fragile economically and live with household income that is substantially less than necessary to meet their basic expenses – including electricity – in any of the counties that PPL serves.[78]

[74] See US Dept. of Health & Human Services, HHS Poverty Guidelines for 2025, available at: https://aspe.hhs.gov/topics/poverty-economic-mobility/poverty-guidelines. (last visited Dec. 4, 2025) (hereafter HHS Poverty Guidelines for 2025)

[77] PPL Response to CAUSE-PA I-22, I-7, Attachment 1, attached hereto at Appendix C.
[78] See Self-Sufficiency Standard, Pennsylvania, available at: https://selfsufficiencystandard.org/Pennsylvania/. (last visited Dec. 4, 2025)

Q: Please explain what you mean by your last statement.

A: The Commission uses FPL in its definition of "low income customer," but the FPL is a fixed national level that does not account for geographic location or other key factors necessary to be truly reflective of the income level necessary to afford basic needs. A more accurate benchmark meant to assess how much income a household needs to live without assistance in Pennsylvania is the Self-Sufficiency Standard. This standard measures the income that a family must earn to meet their basic needs without the help of public subsidies and consists of the combined cost of six (6) basic needs – housing, childcare, food, healthcare, transportation, and taxes.[79] Unlike the FPL, which does not change based on geographic location or family composition, the Self-Sufficiency Standard accounts for the varied costs of the six basic needs in different geographic areas and for differently aged household members.[80]

I have prepared a table, attached hereto at Appendix D, Cicero Exhibit D-1, that shows the amount a family of 4 (two adults and two school-aged children) would need to afford necessities, according to the Self-Sufficiency Standard, in each of the counties where PPL serves residential customers. By way of example, the range of income that such a family requires in counties served by PPL is from a low of $71,648 in Clinton County to a high of $104,762 in Bucks County to reasonably afford their basic needs. [81] This, of course, is far above the maximum income ceiling to qualify for most assistance (150% FPL). In fact, a family of four with the maximum income that would qualify for PPL's

[79] See PathWays PA, Overlooked and Undercounted 2019 Brief: Struggling to Make Ends Meet in Pennsylvania, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (last visited Dec. 4, 2025)
[80] See id.
[81] Self-Sufficiency Standard 2024 Pennsylvania Data Set, 2 adults and 2 school-aged, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (last visited Dec. 4, 2025)

CAP would need income that is between 149% and 217% **greater than** their current level simply to make ends meet each month without assistance.[82] Despite this reality, thousands of PPL's low income customers do not have income that is anywhere close to 150% FPL – let alone income sufficient to meet their basic needs. As noted above, the average annual income for PPL's 249,033 confirmed low income electric customers is just $17,103.[83] This is $54,545 to $87,659 less than a family of four needs to be self-sufficient across PPL's service territory.[84]

Q: If the Commission does not use the Self Sufficiency Standard as a measure of eligibility for assistance, why is this information important?

A: It is important for context. In my experience, parties in these cases – and far too often the Commission itself – often tout the programs available to assist low income customers as a means of excusing themselves from responsibility to ensure that rates remain affordable. However, unlike the FPL standard utilized by the Commission, the Self-Sufficiency Standard helps illuminate the full scope of utility insecurity and the need for utility assistance that is far broader than what is currently provided. The number of households in need of assistance and the amount of assistance needed per household is far greater than PPL, the Commission, or many of the parties to this proceeding allow themselves to admit. Given that households subsisting at more than double the poverty level within PPL service territory cannot afford necessities, there is little to no chance that households at or below 150% of the poverty level can afford essential utility service

[82] 150% of the FPL for a family of 4 is $48,225 – this is the maximum income a household can have to qualify for CAP assistance from PPL. $71,648.23/$48,225=1.49 or 149%. $104,761.80/$48,225 = 2.17 or 217%.
[83] PPL Response to CAUSE-PA, I-7, Attachment 1; PPL Response to CAUSE-PA I-22, attached hereto at Appendix C.
[84] Self-Sufficiency Standard 2024 Pennsylvania Data Set, 2 adults and 2 school-aged, available at: http://www.selfsufficiencystandard.org/Pennsylvania. (last visited Dec. 4, 2025)

without substantial levels of assistance. This fact must be considered by Commission in the exercising of its discretion in this case.

Any increase in the cost of necessities, including the rates for basic electric service, will result in increased unaffordability for low income households living below the self-sufficiency standard, and will likely result in a corresponding increase in uncollectible expenses and service terminations, requiring low income households to make unreasonable choices in terms of what essentials to forgo in order to make ends meet each and every month.

Q: How does PPL determine how many low income customers are in its service territory?

A: Like other large regulated public utilities in Pennsylvania, PPL must track its low income customer population in two ways: "*estimated low income customers*" and "*confirmed low income customers.*"[85] The numbers for PPL breakdown as follows:

- As of April 30, 2025, PPL reported it has 347,822 estimated low income (ELI) customers with income below 150% FPL – or 26.9% of PPL's total residential customers.[86]
- PPL reports in 2024 an average of 238,948 CLI customers[87] This CLI count is limited to the number of customers who PPL has confirmed to have income at or below 150% FPL based on self-declaration of income, receipt of LIHEAP assistance, or enrollment in the company's CAP.[88] CLI customers accounted for 69% of PPL's ELI customers and 19% of its total residential customers.[89]

---

[85] See Pa. PUC, BCS, 2023 Report on Universal Service Programs & Collections Performance, at 6-9, available at: https://www.puc.pa.gov/media/3433/2023_universal_service_report-final_rev041525.pdf. (last visited Dec. 4, 2025)
[86] PPL Response to CAUSE-PA I-11, Attachment 1; PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C (PPL reports 1,291,640 residential customers as of April 2025).
[87] PPL Response to CAUSE-PA I-7, Attachment 1, attached hereto at Appendix C.
[88] PPL Response to CAUSE-PA I-6, attached hereto at Appendix C.
[89] PPL Response to CAUSE-PA I-7, Attachment 1; PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C. (PPL reports 1,290,755 residential customers as of September 2025). PPL Response to CAUSE-PA I-11, Attachment 1, attached hereto at Appendix C.

Thus, between 19% - 27% of PPL's customers – a substantial number by any measure – have income that is at or below 150% FPL. Throughout my analysis, for purposes of evaluating the impact of PPL's rates and terms and conditions of service, including the adequacy of its universal service programs, I believe it is more accurate to utilize the ELI customer counts, rather than relying on the number of CLI households that have already applied for PPL's programs or otherwise provided income information to the Company.

Q: How would PPL's proposed rate increase impact low income households?

A: Severely. Low income families already struggle to make ends meet each month and are regularly forced to make untenable choices between affording utility services and other necessities – such as food, medicine, medical care, and housing. PPL's proposed rate increase represents a substantial increase in a basic living expense that, if approved, will have a destabilizing impact on low income families.

To contextualize the impact of PPL's proposed rate increase on low income households, it is helpful to look at the relative energy burden of low income households compared to other Pennsylvanians. A household whose total housing costs (including utility costs) are more than 30% of the household's total income is considered to be cost burdened.[90] According to formal Commission policy, to be considered affordable, a household's combined energy burden (electric and gas) should not exceed 6% of household income for those with incomes between 0-50% FPL, or 10% of household

[90] U.S. Census Bureau, Nearly Half of Renter Households Are Cost-Burdened, Proportions Differ by Race, available at: https://www.census.gov/newsroom/press-releases/2024/renter-households-cost-burdened-race.html. (last visited Dec. 4, 2025)

income for those with income between 51-150% FPL.[91] But across Pennsylvania, households with income at or below 150% FPL spend as much as 29% of their income on energy costs alone.[92] By comparison, the Bureau of Consumer Services (BCS) estimates that the energy burden of Pennsylvania's residential customers as a whole (excluding of those enrolled in a Customer Assistance Program (CAP)) is roughly 4%.[93]

Energy insecurity resulting from high energy burdens impacts roughly 1 in 4 Pennsylvania households.[94] According to the United States Census Bureau's Household Pulse Survey, roughly 24.4% of Pennsylvania households were unable to afford their home energy bills in 2024, compared to 23% nationwide.[95] Energy insecurity is more pronounced for low income Black families. According to the Energy Information Administration (EIA) Residential Energy Consumption Survey (RECS), 52% of Black and African American households in the United States experience energy insecurity, compared to 23.2% of white households.[96] These disparities are driven in large part by inequities in housing quality and, in turn, home efficiency.

[96] U.S. Energy Information Admin., In 2020, 27% of U.S. households had difficulty meeting their energy needs, available at: https://www.eia.gov/todayinenergy/detail.php?id=51979. (last visited Dec. 4, 2025)

Households that have high bills and insufficient income have high rates of utility termination. I address the deep disparities in termination rates for low income customers – particularly those not enrolled in CAP – in more detail below,[97] for now it is critical to contextualize that involuntary loss of electricity has a deep and lasting impact on the health and well-being of an entire household – as well as the community. The loss of electric service can often mean that a household is unable to use their primary heating source in the winter, even if that heating source is non-electric. When a household is unable to use a primary or secondary heating system, they often resort to dangerous and/or high-cost heating, cooking, and lighting alternatives – such as use the of alternate fuels or portable generators – which increases the risk of carbon monoxide poisoning and home fires.

The loss of electric service can also have a significant impact on the ability of vulnerable populations to manage medical conditions and is particularly dangerous for certain groups – including seniors, families with young children, and individuals with a disability – each of whom are more likely than other residential households to experience poverty and income insecurity.[98] Furthermore, utility insecurity and resulting payment trouble is increasingly recognized as a predictor of first-time homelessness,[99] confirming the need to improve timely access to rate assistance programs to prevent the more costly consequences of homelessness to individuals, families, and communities.

The rate increases proposed by PPL will exacerbate all these concerns as PPL is proposing to substantially increase the portion of low income households' energy burdens attributable to their electric bills. The tables below provide a snapshot of two different average customers. Table 7 shows the average monthly bill and energy burden for the average non-CAP low income household which is an electric heating customer. Table 8 shows that same information for a baseload electric customer. These bills show what the customer would pay at current rates and what they would pay at proposed rates. The results demonstrate stark unaffordability that is magnified by the rate increase.

Table 7: Bills and Energy Burdens – CLI Heating Customer at Average Usage.[100]

	Monthly		Annual		Energy Burden	
	Existing	Proposed	Existing	Proposed	Existing	Proposed
2023-11	$181	$197	$2,169	$2,368	12.68%	13.85%
2024-02	$304	$333	$3,646	$3,991	21.32%	23.33%
2024-05	$154	$169	$1,853	$2,028	10.83%	11.86%
2024-08	$168	$185	$2,015	$2,218	11.78%	12.97%
2024-11	$167	$164	$2,001	$1,968	11.70%	11.51%
2025-02	$388	$421	$4,653	$5,047	27.21%	29.51%
2025-05	$158	$170	$1,893	$2,037	11.07%	11.91%
2025-08	$199	$212	$2,382	$2,548	13.93%	14.90%

Table 8: Bills and Energy Burdens – CLI Baseload Customer at Average Usage.[101]

	Monthly		Annual		Energy Burden	
	Existing	Proposed	Existing	Proposed	Existing	Proposed
2023-11	$139	$151	$1,663	$1,816	9.72%	10.62%
2024-02	$173	$189	$2,071	$2,268	12.11%	13.26%
2024-05	$124	$136	$1,493	$1,634	8.73%	9.55%
2024-08	$177	$194	$2,120	$2,333	12.39%	13.64%
2024-11	$167	$131	$2,001	$1,575	11.70%	9.21%
2025-02	$208	$226	$2,497	$2,712	14.60%	15.86%
2025-05	$128	$138	$1,538	$1,657	9.00%	9.69%
2025-08	$211	$225	$2,527	$2,703	14.77%	15.80%

[100] PPL Response to CAUSE-PA I-20.d., Attachment 1, attached hereto at Appendix C; PPL Response to OCA IV-15, Attachment 1, attached hereto at Appendix C. These calculations utilize the average annual income of PPL's confirmed low income customers (as of October 22, 2025) of $17,103.48 set forth in CAUSE-PA I-22.

[101] Id.

It is not an small number of customers who have these staggering energy burdens as 69% of PPL's confirmed low income customers were *not enrolled in CAP.*[102] These customers are paying full tariff rates and are spending close to 30% of their income during the winter on their electricity bills if they heat with electricity. The significant energy burdens noted in Tables 7 and 8 are shouldered by PPL's low income customers leaving families with insufficient funds to pay for housing, water costs, food, medicine, childcare, and other basic needs and pose significant obstacles for low income families to afford their monthly bills and stay connected to essential energy services in their homes. As noted above, the inability to afford service, in turn, creates a cascade of consequences to the health, safety, and stability of Pennsylvania's economically vulnerable families – at a substantial cost to individuals, families, and the communities in which they live and work. If PPL's rate increase is approved, these costly consequences will grow more pronounced and widespread.

Q: In addition to the high energy burdens discussed above, is there other evidence that PPL's rates are not affordable for low income households?

A: Yes. In addition to facing demonstrably unaffordable energy burdens, PPL's low income customers carry a disproportionate amount of residential customer debt and are far more likely to have their service involuntarily terminated for nonpayment.

First, PPL's low income customers have markedly higher rates of termination for nonpayment compared to residential customers as a whole:

[102] See PPL Response to CAUSE-PA I-7, Attachment 1, attached hereto at Appendix C (showing that on average PPL had 238,948 confirmed low income customers in 2024) and PPL Response to CAUSE-PA I-4, Attachment 1, attached hereto at Appendix C (showing that on average PPL had 74,791 customers enrolled in CAP in 2024). (238,948-74,791)/238,948 = 0.6869 or 69%.

Table 9: 2024 Involuntary Termination Rates (Nonpayment)

Customer Type	Number of Customers (Average)	Number of Terminations[103]	Termination Rate
All Residential	1,286,891[104]	64,502	5.01%
Residential (Excluding CLI)	1,047,943[105]	17,978	1.72%
CLI	238,948[106]	46,524	19.47%
CLI (Excluding CAP)	164,453[107]	34,517	20.99%
CAP	74,791[108]	12,007	16.05%

As Table 9 shows, there is a glaring disparity between the termination rates for confirmed low income customers as compared to residential customers, and an even greater disparity for those confirmed low income customers who are not enrolled in CAP. For example, PPL terminated service to 1 in 5 non-CAP CLI customers in 2024, as compared to fewer than 2 in 100 non-low income residential customers. Notably, even CAP customers have a termination rate that is almost 9.5 times greater than non-low income customers. The stark disparities in termination rates for low income families, especially those not enrolled in CAP, will only deepen if PPL is permitted to increase its basic rates of electric service without addressing the unaffordability of rates.[109]

In addition to termination rates, PPL's low income customers also carry substantially higher levels of arrears compared to non-low-income residential customers.

[103] PPL Response to CAUSE-PA I-17, Attachment 1, attached hereto at Appendix C.
[104] PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C.
[105] PPL Response to CAUSE-PA I-10, Attachment 1, attached hereto at Appendix C.
[106] PPL Response to CAUSE-PA I-7, Attachment 1, attached hereto at Appendix C.
[107] PPL Response to CAUSE-PA I-10, Attachment 1, attached hereto at Appendix C.
[108] PPL Response to CAUSE-PA I-4, Attachment 1, attached hereto at Appendix C.
[109] I note that the difference between the CLI termination rates including and excluding CAP customers underscores that CAP enrollment helps to reduce termination rates, evidencing the critical role of CAP to improve affordability. However, the ability of PPL's CAP to mitigate unaffordability which leads to termination of service is hampered by PPL's maximum CAP credits and the severe undersubscription to the program, as I discuss below.

Table 10 demonstrates that the average arrears carried by CLI customers are consistently higher than the average arrears carried by non-low income customers:

Table 10: Average Arrearage Levels (Dec. 2023, Dec. 2024)[110]

Customer Type	Dec. 2023	Dec. 2024
Residential	$146.16	$109.54
Residential (Excluding CLI)	$51.83	$34.96
CLI (Excluding CAP)	$530.76	$379.34

Table 11 shows the share of each group of customers in terms of total dollars in residential customer debt.

Table 11: Total Dollars in Debt (Dec. 2024)

	Total Debt[111]	% of Total Debt	% of Res. Population[112]
Residential	$137,619,508	100%	100%
Residential (Excluding CLI)	$35,856,941	26.1%	81.4%
CLI (Excluding CAP)	$64,500,050	46.9%	13.5%

Non-CAP CLI customers carry nearly 47% of overall residential customer debt despite making up only 13.5% of the residential population, showing a clear need for assistance among this population. These indicators demonstrate that PPL's low income customers already have excessive energy burdens and struggle to pay for electric service, and will likely experience increased arrears, increased termination, and

[110] PPL Response to CAUSE-PA I-27, Attachment 1, attached hereto at Appendix C. Note that CAP participants were excluded from this table, as debt carried by CAP customers prior to enrollment in CAP is frozen and eligible for forgiveness over time. See PPL USECP 2023-2027 at 2.
[111] PPL Response to CAUSE-PA I-27, Attachment 1, attached hereto at Appendix C.
[112] PPL Response to CAUSE-PA I-10, Attachment 1, attached hereto at Appendix C; PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C. (As of Dec. 2024, 1,049,156 of PPL's 1,289,411 residential customers were non-low-income and 174,453 of PPL's 1,289,411 residential customers were non-CAP CLI).

increased payment trouble if the proposed rate increase is approved without taking necessary measures to mitigate the impact of the increase on low income households.

Q: Will PPL's Customer Assistance Program (CAP) protect low income households from the financial impact of the proposed rate increase?

A: No.

Q: Please briefly describe PPL's CAP

A: PPL's CAP[113] provides reduced monthly rates and arrearage forgiveness to low income customers with household income at or below 150% FPL. The primary customer benefits of CAP include: a reduced fixed payment amount typically based on a percentage of income; arrearage forgiveness over 24 months; protection against shutoff of electric service; referrals to other programs and services; and exemption from late payment fees, including on final bills.[114] I discuss this program in more detail in the next section of my testimony.

Q: Why is PPL's CAP insufficient to protect low income customers from the rate increase?

A: PPL's CAP is a critically important affordability program and is successful in reducing low income termination rates and arrearage levels. However, CAP will not protect the Company's low income customers from the impact of the proposed rate increase for several reasons. First, the program is severely undersubscribed. Second, thousands of those enrolled in PPL's CAP receive average bills, not percentage of income bills, and will feel the full impact of the proposed rate increase. Third, PPL places annual limits on the amount of CAP assistance that a household can receive each year. These

[113] PPL calls its CAP by the trade name "OnTrack". I refer to it simply as CAP throughout my testimony.
[114] PPL USECP 2023-2027 at 2.

limits are called maximum CAP credit limits, and they cause thousands of customers each year to lose their CAP discounts so these customers too will feel the full impact of the proposed rate increase.

As to the first issue, only a small fraction of PPL's low income customers are enrolled in CAP. As noted previously, on average in 2024, a staggering 69% of PPL's confirmed low income customers were *not enrolled in CAP.* That is, more than 164,000 customers who PPL knows are income eligible for assistance are not enrolled in PPL's CAP – limiting the ability of CAP to mitigate unaffordability at present and proposed rates.

As to the second issue, PPL's 2023-2027 Universal Service and Energy Conservation Plan (USECP) includes several CAP rates, including an average bill rate, a percentage of income plan (PIP) rate, and an alternative minimum charge. More than 6,000 customers pay an average bill rather than a PIP rate.[115] These customers will experience an increase in their bills immediately upon their next quarterly budget bill adjustment.[116] As explained further below, because PPL does not screen these CAP average bill customers to ensure that they are not paying more than their PIP,[117] thus locking these customers into higher CAP rates until recertification.

Finally, CAP participants enrolled in a PIP rate will be initially shielded from the rate increase, but only if their total annual CAP credit (the difference between the CAP rate and the full residential tariff rate) is less than the maximum CAP credit limit.[118] If a CAP customer exhausts all of their maximum CAP credits within a 12-month period, they no longer receive a CAP rate that is based on their ability to pay, but instead must pay a

[115] PPL Response to CAUSE-PA I-3, Attachment 1, attached hereto at Appendix C.
[116] PPL Response to CAUSE-PA I-1, attached hereto at Appendix C. PPL USECP 2023-2027 at 5.
[117] PPL Response to CAUSE-PA X-2, attached hereto at Appendix C.
[118] See PPL USECP 2023-2027at 5.

budget bill based on the full residential tariff rate for the remainder of the program year.[119] In 2024, 11,557 OnTrack participants were shifted to budget billing for exceeding their CAP credit maximums.[120]

I will discuss the gross inadequacy of PPL's current maximum CAP credit limits, and the pressing need for PPL to increase its maximum CAP credit limits in Section V.A.2, below. For now, suffice it to say that a substantial number of CAP customers will see their monthly bill increase if the Commission allows residential rates to increase in this proceeding. Of course, as explained below, only a small percentage of PPL's eligible low income population is enrolled in CAP. If the Commission approves any rate increase in this proceeding, low income customers who are not enrolled in CAP will bear the full, unmitigated brunt of that increase.

Q: Will the Low Income Home Energy Assistance Program (LIHEAP) mitigate the harm of the proposed rate increase on low income households?

A: No. LIHEAP is a federal program designed as a supplement to assist households to better afford energy services, but the program only reaches a small fraction of eligible households and is not adequately funded to address existing unaffordability – let alone increased unaffordability because of increased rates. The program is subject to annual reauthorization and allocation of funding by the federal government, a fact brought into sharp focus by the recent federal government shutdown. The shutdown delayed the opening of the 2025-26 LIHEAP season by a month, throwing low income households into uncertainty as they faced the prospect of losing critical heating assistance.[121] It would

[119] See id. at 5.
[120] PPL Response to CAUSE-PA VI-2, Attachment 1 (Corrected), attached hereto at Appendix C.
[121] See Pa. Dept. of Human Services, Due to Federal Government Shutdown, Opening of the 2025-26 Low-Income Home Energy Assistance Program (LIHEAP) Season Delayed to December, available at:

be inappropriate to consider the availability of LIHEAP funding in evaluating the justness and reasonableness of PPL's rates.

Put into further context, the average LIHEAP cash grant for FY 2025 for PPL customers was $211.35.[122] For perspective, under PPL's proposed increase, the total bill for a typical residential customer would increase by $146.68 per year.[123] The proposed increase would thus subsume 69.4% of the average LIHEAP cash grant.

The total LIHEAP dollars received by PPL on behalf of its low income customers substantially decreased from approximately $13.1 million in the 2023/2024 Program year to approximately $12.3 million in the 2024/2025 Program year.[124] The decline in LIHEAP grant awards received by PPL reflects declining minimum and maximum grant award levels, which were in turn driven by declining federal funds.[125] Although the end of the federal government shutdown enabled the release of LIHEAP funding for the 2025-2026 LIHEAP season, the reality is that, in past years, LIHEAP has not eliminated PPL's excessive low income termination, arrears, and energy burden levels. LIHEAP's continuation will also not mitigate the impact of PPL's proposed rate increase – nor would it be appropriate to consider the potential availability of LIHEAP funds as a factor in setting rates.

Q: Do you have any proposals that could help remediate the financial impact of PPL's proposed rate increase on low income customers?

A: Yes. I have several recommendations to help mitigate the financial impact of PPL's proposed rate increase on low income households. As noted at the beginning of my testimony, the Commission should reduce the requested ROE and adjust the Company's capital structure for ratemaking purposes. Both would have an immediate and tangible impact on the overall revenue requirement. I make several recommendations below about how to structure PPL's rate design, how to spread the cost of the universal service programs to all ratepayers, thus reducing the burden on residential ratepayers, including low income customers. I also recommend several reforms to PPL's universal service programs to improve enrollment and retention and to ensure that the programs are more widely available, adequately funded, and prudently designed to assist households in PPL's service territory to reasonably connect and maintain electric service to their homes.

V. UNIVERSAL SERVICE PROGRAMS

Q: What are universal service programs?

A: Universal service programs are the suite of "policies, protections and services that help low-income customers to maintain electric service"[126] as required by the Public Utility Code. Specifically, "[t]he term includes customer assistance programs, termination of service protection and policies and services that help low-income customers to reduce or manage energy consumption in a cost-effective manner, such as the low-income usage reduction programs, application of renewable resources and consumer education."[127]

[126] 66 Pa. C.S. § 2803 (defining "Universal Service and Energy Conservation").
[127] Id.

Q: Please describe PPL's Universal Service Programs.

A: PPL operates four universal service programs that assist low income customers:

(1) OnTrack – PPL's Customer Assistance Program (CAP);

(2) WRAP – PPL's Low Income Usage Reduction Program (LIURP);

(3) Operation HELP – PPL's Hardship Fund; and

(4) Customer Assistance and Referral Evaluation Service (CARES) – PPL's Special Referral Service for "Customers with Temporary Hardships."[128]

Q: Is PPL proposing any changes to its Universal Service and Energy Conservation Programs in the context of the present proceeding?

A: No. Despite the struggles of its low income customers detailed above and the fact that PPL is proposing to substantially increase residential rates, PPL has not proposed any substantive changes to its universal service programs in this proceeding.[129] The Company is proposing to recover the salaries and wages of the internal employees who support the Company's universal service programs in its Universal Service Rider. However, this will not provide any improvements to the any of the programs offered to low income customers.[130] I will address this proposal later in my testimony.

A. Customer Assistance Program (CAP)

1. Overview and Structure of CAP

Q: How are PPL's CAP rates structured?

A: PPL's CAP rates are calculated based on three rate options (1) a percentage of income payment (PIP); (2) an average bill; or (3) a minimum payment.[131] At the time of enrollment, PPL evaluates whether the PIP or average bill would provide the most affordable rate for the customer, subject to the requirement that the customer pay no less than the minimum payment amount.[132] The PIP rate is based on a tiered structure that is tied to the customer's income level and service type, as shown in the table below.

Table 12: PPL CAP Percentage of Income Payment Levels

Income Level	Electric Heat	Non-Electric Heat
50% FPL or below	5%	2%
51 to 100% FPL	6%	3.5%
101 to 150% FPL	7%	4%

The average bill option is calculated according to the customer's usage history.[133] The minimum payment option is $40 per month for heating customers and $20 per month for non-heating customers.[134] The number of PPL's CAP customers at each payment rate, as of September 30, 2025, is shown in the following table:

[131] PPL USECP 2023-2027 at 4-5.
[132] Id.
[133] PPL Response to CAUSE-PA X-1, Attachment 1, attached hereto at Appendix C (The average bill is calculated by adding the past 12 months bills and dividing by 12. The Account is reviewed every three months and adjusted for actual usage.).
[134] PPL USECP 2023-2027 at 5.

Table 13: PPL CAP Customers by Payment Type as of September 30, 2025[135]

	PIP	Average	Minimum	Other	Total
Number of Customers	38,123	6,235	11,695	16,374	72,427
Percent of Customers	53%	9%	16%	23%	100%

Customer in the "Other" category constitute a number of buckets, including some legacy rates from a prior version of their CAP. PPL could not disaggregate who is in this category, although admitted that some of these customers are charged at the average bill rate.[136] In addition, some of "Other" CAP customers include customers who are paying an OnTrack Budget Bill (OTBB) because they have exceeded their maximum CAP credits. I discuss my concerns with the insufficiency of PPL's maximum CAP credits below.

Q: Does PPL have a process to ensure that it is billing CAP customers at the most affordable rate?

A: In part, yes. On a monthly basis, PPL runs a report that alerts it to any CAP PIP participants with a bill amount greater than their average bill rate and will reduce the installment amount if the usage history is adequate.[137] However, if a customer is currently paying the average bill rate, the review process does not check whether the customer is paying more than their PIP rate.[138] Thus, while CAP customers with a PIP rate will not pay more than their average bill, CAP customers with the average bill rate could be paying more than the PIP rate and are not insulated from the impact PPL's proposed rate increase. Indeed, CAP customers who pay the average bill CAP rate will experience the full, unmitigated impact of PPL's proposed rate increase, and will be most directly impacted by both PPL's proposed base rate increase.

[135] PPL Response to CAUSE-PA I-3, Attachment 1, attached hereto at Appendix C.
[136] PPL Response to CAUSE-PA, IX-2, Attachment 1, attached hereto at Appendix C.
[137] PPL Response to CAUSE-PA I-5, attached hereto at Appendix C. PPL USECP 2023-2027 at 5.
[138] PPL Response to CAUSE-PA X-2, attached hereto at Appendix C.

Q: Should PPL modify its current process?

A: Yes. PPL has an obligation to ensure that its customers receive the most advantageous rate. Thus, PPL should be required to modify its monthly CAP bill review process to review rates for all CAP customers, including those receiving the average bill CAP rate, to ensure they are always receiving the most advantageous available rate. In effect, PPL should always charge the lesser of the customer's average CAP rate or their calculated PIP CAP rate, subject to the minimum bill. While PPL should amend its CAP rate adjustment process regardless of any approved rate increase in this case, this procedural adjustment is especially important if rates are permitted to increase because more CAP participants on the average bill CAP rate are likely to qualify for the PIP CAP rate.

2. Maximum CAP Credit Limits.

Q: Please briefly describe PPL's maximum CAP credit limits.

A: As noted above, PPL customers in CAP pay a reduced bill that is based on the selected CAP rate (PIP, average bill or minimum bill). The difference in cost between the customer's CAP rate and their full tariff residential rate is known as the CAP revenue shortfall or CAP credit. In aggregate, the CAP shortfall is currently collected from other residential customers through the Universal Service Rider (USR).

PPL limits the amount of assistance provided each year to any one CAP customer by applying a maximum CAP credit limit.[139] These limits are expressed and calculated as a fixed dollar amount and are not automatically adjusted to account for changes in distribution or generation rates. PPL imposes tiered maximum CAP credit amounts based

[139] PPL USECP 2023-2027 at 13-14.

on a customer's heating source and income.[140] Customers with lower incomes receive higher cap credits because their CAP bills are lower and, thus, the difference between that payment and the full tariff bill is more. The same is true of customers who heat with electricity – they receive higher cap credits than those who heat with another fuel source. PPL's maximum annual CAP credits are shown in the following Table:

Table 14 – PPL OnTrack Maximum CAP Credits[141]

FPL Tier/Level	Account Classification	12 Month Maximum CAP Credit Limit
0% to 50%	Electric Heat	$3,150
51% to 100%	Electric Heat	$2,500
101% to 150%	Electric Heat	$2,150
0% to 50%	Non-Electric Heat	$1,950
51% to 100%	Non-Electric Heat	$1,500
101% to 150%	Non-Electric Heat	$1,250

Q: What happens if a customer reaches their maximum CAP credit limit before the end of 12 months?

A: If a customer reaches their maximum CAP credit limit before the end of a twelve month period, the customer is moved to PPL's OnTrack Budget Billing (OTBB) rate.[142] CAP participants on the OTBB rate are charged their full 12-month budget bill amount. They no longer receive a discounted bill and, thus, no longer receive any CAP credits to help make their bill more affordable. If they can keep up with the OTBB rate, they will continue to receive arrearage forgiveness.[143] At the end of the 12-month period, when the

[140] Id.
[141] PPL USECP 2023-2027 at 14.
[142] Id. at 5.
[143] Another benefit of CAP is that customers who enroll have their arrears frozen at the time of enrollment. That is, they are not immediately collectible and do not incur interest or late fees. With each in full CAP payment, customers receive forgiveness of 1/24th of their frozen arrears. Thus, after 24 in full payments a CAP customer's entire arrears are forgiven. This is significantly better than a payment arrangement

customers recertify, they are again eligible for a standard PIP, average bill, or minimum bill CAP rate.

Q: Do you have concerns about PPL's maximum CAP credit limits?

A: Yes. I am concerned that customers who reach their maximum CAP credits are paying categorically unaffordable bills until the end of their twelve-month period when their CAP credit limit resets.[144] Furthermore, I am concerned that PPL's proposed rate increase, without a corresponding increase to its maximum CAP credits, will increase the number of CAP customers exceeding their maximum CAP credit limits in a given program year, leading to increased termination of CAP customers. PPL's maximum annual CAP credit limits are already inadequate to meet the need for assistance at existing rates, undermining the effectiveness of CAP at reducing energy insecurity and improving bill coverage and payment frequency.

Q: How many CAP customers currently exceed their maximum CAP credit limits?

A: A significant number of PPL's CAP customers have exceeded their CAP maximum credit limit in recent years. The following table shows the number of CAP participants who exceeded their CAP credit limit thresholds, compared to total CAP participants:

because the retirement of arrears through CAP requires only payment of a CAP bill without any additional co-pay towards arrears.

[144] PPL USECP 2023-2027 at 5.

Table 15: PPL CAP Customers Exceeding Maximum CAP Credit Limits

	Number of CAP Participants Exceeding Max. CAP Limit[145]	Average Number of CAP Participants[146]	Percent of CAP Participants Exceeding Max. CAP Limit
Aug. 2023 – July 2024	9,113	75,307	12%
Aug. 2024 – July 2025	10,213	69,851	15%

Critically, PPL CAP customers who exceed their maximum CAP credit limits do so well in advance of their 12-month period. Since August 2023, the average number of months that it took for a customer to exceed their maximum CAP credit limits was only 8 months.[147] Thus, for its highest users and lowest income customers, PPL's annual CAP credit limits cover the need for assistance for three quarters of a year.

Q: What are the consequences for CAP customers who exceed their maximum CAP credit limits?

A: Initially, these customers are placed on the OTBB rate, which significantly increases their bills. Table 16 below shows the monthly average dollar amount for the bills these customers received *after being moved to OTBB.*

Table 16: Average monthly OTBB bill[148]

	Average Monthly Bill After Max Credit Limit Reached
Sep. 2023-Aug. 2024	$377.09
Sep. 2024-Aug. 2025	$313.46

As shown in Table 17, the average bills for CAP participants that exceed their maximum CAP credit limit are considerably higher than the average CAP rate during this same period.

[145] PPL Response to CAUSE-PA VI-2, Attachment 1 (Corrected), attached hereto at Appendix C.
[146] PPL Response to CAUSE-PA I-4, Attachment 1, attached hereto at Appendix C.
[147] PPL Response to CAUSE-PA VI-4 Supp, Attachment 1 (Corrected), attached hereto at Appendix C.
[148] PPL Response to CAUSE-PA VI-11, Attachment 1, Part B, attached hereto as Appendix C.

Table 17: Average CAP rate bill versus OTBB bill[149]

	Average Monthly Bill for Customers who did not reach CAP Credit Maximums	Difference Table 16 and Table 17
Sep. 2023-Aug. 2024	$45.57	$291.52
Sep. 2024-Aug. 2025	$75.12	$238.34

When PPL's CAP customers exceed their maximum, they face substantially higher monthly bills, which adds hundreds of dollars to the monthly CAP bill and creates insurmountable barriers to remaining in CAP and maintaining electric service. Insufficient CAP credit limits are especially problematic for low income customers who live in poor housing stock, have older and/or inefficient appliances, and who have larger family sizes, with correspondingly higher usage.

Q: Do customers who exceed their maximum CAP credits have higher rates of service termination?

A: Yes. Thousands of CAP customers who exceed their maximum CAP credit limits face involuntary termination of service for nonpayment shortly after exceeding PPL's maximum CAP credit limits. This is shown in Table 18, below.

[149] PPL Response to CAUSE-PA VI-11, Attachment 1, Part C, attached hereto at Appendix C. (PPL was only able to provide information starting from the month ending September 2023, because system changes to implement the Company's current USECP were implemented in August 4, 2023.)

Table 18: CAP Terminations for Nonpayment After Exceeding CAP Credit Limits[150]

	Total Customers Exceeding Max CAP Credits	Total Customers Terminated Following Exceedance	Term w/in 0-30 Days	Term w/in 31-60 Days	Term w/in 61-90 Days	Term w/in 91-120 Days	Term w/in 120 Days
Sep. 2023-Aug. 2024	9,760	2,503	6	530	508	313	1,357
Sep. 2024-Aug. 2025	11,470	1,372	14	334	308	212	868
TOTAL	21,230	3,875	20	864	816	525	2,225

Expressed another way, in 2024, 11,754 CAP customers exceeded their maximum CAP credits and incurred increased costs due to being moved to OTBB.[151] During that year, 2,667 CAP customers were terminated for nonpayment after exceeding their maximum CAP credit limits, amounting to a 22% termination rate among these OTBB customers.[152] This is compared to the 16% for CAP customers as whole.[153]

Q: Does PPL offer exemptions to the maximum CAP credit limit?

A: Yes. In PPL's 2023-2027 USECP proceeding, the Commission ordered PPL to provide exemptions to its maximum CAP credit limits and to waive maximums if customers meet exceptions and to list those exceptions in its USECP.[154] PPL's USECP lists exemptions to the maximum CAP credit limits for customers with the following circumstances: (1) additional household members, (2) household member experiencing

[150] PPL Response to CAUSE-PA VI-11, Attachment 1, attached hereto at Appendix C.
[151] PPL Response to CAUSE-PA VI-11, Attachment 1, attached hereto at Appendix C.
[152] Id.
[153] Supra, Table 9.
[154] PPL Electric Utilities Corporation Universal Service and Energy Conservation Plan *for 2023-2027*, Order, Docket No. M-2022-3031727, at 45 (Entered Feb. 9 2023).

serious illness, (3) electricity usage beyond the household's control, (4) home does not meet building code or has been condemned, or (5) estimates based on prior occupant's consumption.

PPL began accepting and reviewing requests for exemptions to its maximum credit limits in August 2023 but did not begin tracking requests until February 2024.[155] Between February 2024 and September 2025, PPL received only 260 requests for exemptions – of which 198 were approved.[156] During this same period, 19,035 customers exceeded their CAP credit limits.[157] In other words, just 1% of CAP participants that exceeded the CAP maximum credit threshold requested an exemption. This is likely the result of PPL's current policy of not offering customers the ability to apply for an exemption and only entertaining the request of a customer affirmatively requests one. In response to discovery, PPL indicated that it instructs its call center representatives that: "**Agents should NOT offer an exemption unless the customer raises the issue during the call.**"[158] PPL also refuses to provide preemptive exemptions if a customer proactively reaches out to the Company to request an exemption upon receiving a 50% or 80% warning notice.[159]

Q: What happens if an exemption is granted?

A: If PPL grants an exemption, PPL requires that the customer submit a new CAP application, with additional proof of income, and does not make a final determination until after the new documentation is received and processed.[160] Essentially, PPL requires

[155] PPL Response to CAUSE-PA VI-10, attached hereto at Appendix C.
[156] PPL Response to CAUSE-PA VI-10, Attachment 1, attached hereto at Appendix C.
[157] PPL Response to CAUSE-PA VI-2 Attachment 1 (Corrected), attached hereto at Appendix C.
[158] PPL Response to CAUSE-PA VI-6, Attachment 1 p. 1 of 2, (emphasis in original), attached hereto at Appendix C.
[159] PPL Response to CAUSE-PA VI-6, Attachment 1 p. 1 of 2, attached hereto at Appendix C.
[160] PPL Response to CAUSE-PA VI-5, attached hereto at Appendix C.

these customers to reapply and reenroll in CAP. This process is onerous and causes serious delays, during which substantial additional arrears may be accrued.

Q: Does the Commission have any guidance regarding maximum energy burdens and maximum CAP credits?

A: Yes. On November 5, 2019, the Commission entered a Final CAP Policy Statement and Order, which amended its the maximum CAP energy burden thresholds.[161] The CAP Policy Statement provides that utilities ***may*** impose maximum CAP credit limits as a cost control measure, "if deemed appropriate," the Commission's Policy Statement includes several explicit exemptions to the maximum CAP credit policy, including:

> (A) The household experienced the addition of a household member.
>
> (B) A member of the household experienced a serious illness.
>
> (C) Energy consumption was beyond the household's ability to control.
>
> (D) The household is located in housing that is or has been condemned or has housing code violations that negatively affect energy consumption.
>
> (E) Energy consumption estimates have been based on consumption of a previous occupant.[162]

Contrary to PPL's requirement that customers submit a new application and essentially re-enroll in CAP, the Commission's exemption policy was intended to suspend application of the maximum credit limit to ensure vulnerable households can maintain an affordable bill for the duration of the CAP program year, without being subject to an arbitrary maximum credit threshold.[163]

---

[161] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code § 69.261–69.267, M-2019-3012599, (Final CAP Policy Statement and Order) at 32.
[162] 52 Pa. Code § 69.265 (2)(vi).
[163] Final CAP Policy Statement and Order at 60.

Q: Based on the information you have reviewed and analyzed, do you have recommendations to address the insufficiency of PPL's maximum CAP credit limits and the high rate of termination among customers who exceed them?

A: Yes. I recommend that PPL be required to eliminate its maximum CAP credit policy and stop imposing maximum CAP credits. This will allow CAP customers to continue to remain in the program so long as they pay their CAP bill, which is targeted at affordable rates per the Commission's policy statement. Given that a significant percentage of customers – more than 15% per year – reach these limits, I submit that this built-in failure rate contravenes the purpose of CAP by limiting the program's ability to provide affordable bills and dramatically increasing the likelihood of CAP customer terminations.

I understand that CAP credits are ostensibly in place as a cost control measure, but in practice, they serve as punitive measures that undercuts the ability of CAP to provide affordable bills and reduce terminations of low income customers, and reduce uncollectible expenses paid by all customers.[164] I further note that the impact of any additional universal service costs incurred by removing the maximum CAP credit limits can be mitigated by appropriately allocating PPL's universal service costs across a larger customer base, not limited to residential customers. I make this recommendation below.

Q: Do you have alternative recommendations if the Commission rejects your recommendation to require PPL to discontinue the use of maximum CAP credit limits?

A: Yes. If the Commission disagrees or rejects my recommendation that PPL discontinue the use of maximum CAP credit limits, I recommend alternatively that PPL

[164] 66 Pa. C.S. § 2803 (Definition of "Universal service and energy conservation.").

increase its maximum CAP credit limits. The increase must be enough to not only address the demonstrated insufficiency of the current limits relative to PPL's current and proposed rates, but also to account for increased rates proposed in this proceeding and to account for the continually increasing Price to Compare (PTC), which is the commodity charge assessed to CAP customer bills. To address the insufficiency at current rates and account for the additional costs going forward PPL should increase the maximum CAP credits for each category of CAP customers by a minimum of 60% to account for the proposed rate increase in this proceeding – together with the rapid increase in the default service rate over the past several years.[165] PPL should also continually update its CAP credit limits commensurate with any future increases in default service and base rates. That is, PPL should be required to accommodate the cost increases on a total bill basis for all the components of its bills.

Q: How did you arrive at this percentage increase?

A: I arrived at this percentage increase by calculating the average monthly CAP credit used by an electric heating CAP customer at average usage over a 1 year period and average income.[166]

- The average electric heating CAP customer uses approximately $1,846 per year in CAP credits at exiting rates and would use approximately $2,092 at proposed rates.
- At 125% of average usage, a CAP customer would use $2,591 in CAP credits at existing rates and at proposed rates use $2,899.

[165] See infra Table 22.

[166] I used the period from October 2024 through September 2025 as this was the most recent full year of information provided by PPL that covered a range of usage. I made this calculation for electric heating customers. These calculations are shown at Cicero Exhibit D-2, Appendix D.

- I then calculated the difference between the credits needed for an average usage customer at current rates and an average customer with 125% of average usage at proposed rates. That is a 57% increase in maximum CAP credits.[167]
- Since the amounts used to make these calculations were based on the PTC in effect between October 2024-September 2025, I also adjusted this by an additional 3% to account for the average $51 increase in the cost of CAP credits based on the increase in commodity costs in the PTC in December 2025 for a CAP customer at average usage.[168]

Thus, I propose the following as new maximum CAP credits with the effective date of rates in this proceeding.

Table 19: Maximum CAP credit increase needed at Proposed Rates

FPL Tier/Level	Account Classification	12 Month Maximum CAP Credit Limit
0% to 50%	Electric Heat	$5,040
51% to 100%	Electric Heat	$4,000
101% to 150%	Electric Heat	$3,440
0% to 50%	Non-Electric Heat	$3,120
51% to 100%	Non-Electric Heat	$2,400
101% to 150%	Non-Electric Heat	$2,000

Of course, if the Commission approves an overall rate increase by PPL that is lower than that requested by PPL, the overall percentage increase could be adjusted downward accordingly. In addition, I propose that PPL be required to adjust these credits upwards each time it raises distribution rates as well as when its price to compare changes. These changes should ensure that the bill increases caused by rate changes do not erode the effectiveness of CAP credit maximums.

[167] (2,899-1846)/1846 = 0.05704 or 57%

[168] The PTC was $0.12490/kWh in June 2025 and increased to $0.1295/kWh in December 2025. This is an increase of 3.7%. For the average customers using 918 kWh, this would result in an increase in their bill of $4.25 per month or $51 per year.

Q: Do you have any other recommendations related to maximum CAP credits?

A: Yes. I have the following additional recommendations that would help to ensure that PPL's CAP credit exemption process is more readily accessible:

- PPL should preemptively screen customers at risk of exceeding their CAP credit limits and educate these customers and the Community Based Organizations who administer their CAP about the availability of CAP credit exemptions
- PPL should also flag accounts *that are known to be eligible* for an exemption before they exceed the limits and automatically apply the exemption if the customer subsequently exceeds the CAP credit limits. These households include households who previously were granted an exemption in a prior year as well as households for whom PPL has information indicating that they meet one of the eligible exemption criteria.
- PPL should develop a plan for screening and education and present it at their next USAC meeting following the effective date for rates in this case. PPL should provide the USAC with copies of its CAP Credit Outreach and Education Plan and will consider, in good faith, incorporation of any feedback provided.
- Finally, PPL should be required to revise its policy to apply a true ***exemption*** to the maximum CAP credit limit, rather than requiring PPL customers to complete a new CAP application and re-enroll in the program.

While these recommendations provide a way to help dull the negative impacts of PPL imposing maximum CAP credit limits, the simpler and far more effective way to address the insufficiency of PPL's maximum CAP credit limit and their regressive effects on CAP customer terminations is to eliminate the use of maximum CAP credit limits in their entirety as recommended previously.

3. CAP Enrollment

Q: How many of PPL's low income customers are enrolled in CAP?

A: OnTrack only reaches a small portion of the eligible population. Notably, in PPL's 2023-2027 USECP proceeding, over CAUSE-PA's objections, the Commission approved PPL's proposal to shorten its CAP recertification timeframe from 18 months to 12

months.[169] In response to discovery, PPL asserts that its decision to shorten the CAP recertification timeframe increased the average number of customers due for recertification per month by approximately 210%.[170] This has resulted in a 17% decrease in enrollment for in the six-month period from July 2024 to January 2025, from 77,488 to 64,665 participants.[171] PPL subsequently increased its efforts to remind customers about recertification and conducted outreach to customers removed for failure to recertify.[172] While PPL's CAP enrollment has since improved, it has failed to return to its pre-July 2024 levels. As of September 2025, 72,439 customers were enrolled in OnTrack – a 6.5% decrease from July 2024.[173] Currently, PPL's CAP serves just 21% of PPL's estimated low income customers.[174] In other words, approximately 79% of PPL's estimated, census-based low income population is not enrolled in CAP and will bear the full, unmitigated impact of any residential increase that the Commission allows to take effect.

Q: Do you have any recommendations for how PPL can improve CAP enrollment?

A: Yes. PPL should increase efforts to enroll customers in CAP that are known to be eligible for the program. As of April 2025, which marked the close of the most recent LIHEAP season, 10,784 of PPL's LIHEAP recipients were not enrolled in CAP, despite the fact they were known by the Company to be income-eligible for a lower rates and

[169] PPL Electric Utilities Corporation Universal Service and Energy Conservation Plan for 2023-2027, Order, Docket No. M-2022-3031727, at 27-30 (Order entered Feb. 9 2023).

arrearage forgiveness through CAP.[175] These customers represent a missed opportunity for PPL to reach a large number of customers with demonstrated need for assistance.

Q: Can you explain the Pennsylvania Department of Human Services (DHS) LIHEAP Data Sharing Program and the status of the program?

A: In October 2024, following years of collaborative policy development through the DHS LIHEAP Advisory Committee, DHS launched a LIHEAP Data Sharing Program. Through the program, if a LIHEAP recipient checks a box on their LIHEAP application providing their affirmative consent, DHS will share detailed income and household composition data for LIHEAP recipients with participating utilities The consent language, included in question 17 on the LIHEAP application,[176] asks:

> Do you want DHS to share information from your application with your utility to help enroll your household in a utility or energy assistance program?
>
> Many Pennsylvania gas and electric utilities offer programs that help low-income customers reduce monthly bills, save energy, and eliminate past-due balances. DHS can share information from your application with your utility, including your income and household members (such as names and dates of birth) to help you enroll in these programs if you want us to share it. Your information will be kept confidential.
>
> This is optional. You can get a LIHEAP grant if you qualify even if you do not want DHS to share your information with your utility.

Thus, when a LIHEAP recipient provides consent to share their data with their utility, they are indicating their desire for assistance – and providing their affirmative consent – to enroll in their utility assistance program.

---

[175] PPL Response to CAUSE-PA 1-14, Attachment 1, attached hereto at Appendix C.
[176] See 2025-2026 Application for the Low Income Home Energy Assistance Program, Q.17, available at: https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/services/assistance/documents/heating-assistance_liheap/hsea-0001.pdf. (last visited Dec. 16, 2025)

To receive LIHEAP recipient data through the program, utilities must sign a data sharing agreement with DHS, which includes detailed data security parameters and affirmatively requires utilities to use the data for the limited purpose of enrolling or recertifying eligible households into the utilities' universal service programs.[177]

On June 13, 2024, in anticipation of DHS's launch of this new LIHEAP Data Sharing Program, the Commission issued an Order encouraging utilities to participate, suggesting ways that utilities could utilize the data, and establishing a process for utilities to follow to implement certain pre-approved data uses – such as streamlined outreach and enrollment and/or auto-recertification.[178] Specifically, the Order established a process by which utilities could file a letter with the Commission outlining how the utility will use the shared data to streamline program outreach and enrollment and/or to implement auto-recertification.[179] While the Commission did not explicitly address utilization of LIHEAP data to support auto-enrollment, it was explicit in noting that its Order did not foreclose consideration of other beneficial uses for the data to improve access to a utility's universal service programs.[180]

While DHS temporarily paused the LIHEAP Data Sharing Program in December 2024 after identifying technical issues with a subset of the data that was resulting in inaccurate reporting for certain categories of LIHEAP participants.[181] I understand that DHS has been working to resolve those issues and, in July 2025, DHS shared revised

[177] See LIHEAP Data Sharing Vendor Agreement, attached hereto as Cicero Exhibit D-3, Appendix D.
[178] 2023 Review of All Jurisdictional Fixed Utilities' Universal Service Programs, Order, Docket No. M-2023-3038944 at 5 (Order, June 13, 2024).
[179] Id.
[180] Id. at 3 n.1.
[181] PPL Response to CAUSE-PA III-15, attached hereto at Appendix C.

data for the full 2024-2025 LIHEAP program year.[182] Data sharing has fully resumed as of the launch of the 2025-2026 LIHEAP season on December 3, 2026.

Q: Did PPL develop a process for utilizing the data provided by DHS in response to the Commission's June 13, 2024 Order?

A: Beginning in September 2024, PPL updated its website with information about the LIHEAP data sharing process and drafted letters to be used for outreach to customers identified through the data sharing process as eligible for CAP.[183] In response to discovery PPL indicated that it intends to make use of the data provided by DHS as follows:

- Validate the DHS list against PPL Electric's internal customer records to establish a list of customers for CAP (OnTrack) enrollment outreach;
- Mail the "OnTrack Enrollment Consent LIHEAP Data Sharing" letter to those customers;
- Enroll customers who provide consent (either in writing or verbally) in OnTrack, using the income provided in the DHS file;
- For customers already active in OnTrack, PPL Electric will provide its partner agencies with a list of customers who are eligible to recertify, have received LIHEAP, and have provided DHS with data sharing consent;
- The agency will re-certify the customer's OnTrack agreement, using the income provided in the DHS file;
- PPL Electric will send the "DHS Data Sharing Letter Auto Recert" letter to customers recertified through the data sharing process.[184]

Q: Does PPL provide a simplified CAP application for customers who are recipients of LIHEAP grants?

A: No. PPL does not provide a simplified CAP application for customers who are recipients of LIHEAP grants.[185] However, if a customer has received a LIHEAP grant, the

[182] Id.
[183] PPL Response to CAUSE-PA III-15, attached hereto at Appendix C.
[184] PPL Response to CAUSE-PA III-15, attached hereto at Appendix C.
[185] PPL Response to CAUSE-PA III-14, attached hereto at Appendix C.

Company indicates that it only requires that the customer to provide income information for the purpose of payment calculation but does not require proof of that income.[186]

Q: Do you have concerns about PPL's current plan for using data shared by DHS?

A: Yes. I am concerned that PPL appears to require customers to fill out an entire CAP application despite the customer certifying that they want their income and household information to be used for enrollment. While PPL has developed a process for households not to have to document income, it nevertheless appears to require the other aspects of a CAP application for enrollment. PPL has not developed a simplified application for LIHEAP recipients to enroll in CAP. [187] I see no reason why customers who have already been screened by DHS should be required to complete PPL's standard application form, when PPL already has the requisite information to complete CAP enrollment.

I am also concerned that, in response to discovery, PPL stated that once it receives the data provided from DHS through data sharing that it intends to: "Mail the 'OnTrack Enrollment Consent LIHEAP Data Sharing' letter to those customers," and obtain the customer's consent to use the income provided by DHS on file.[188] Requiring this consent is unnecessary and duplicative. In order for DHS to share this information with PPL, the LIHEAP recipient has already provided affirmative consent to participate in the data sharing program – explicitly indicating they want DHS to share information from their

[186] PPL Response to CAUSE-PA IX-5, attached hereto at Appendix C.
[187] PPL Response to CAUSE-PA III-14, attached hereto at Appendix C.
[188] PPL Response to CAUSE-PA III-15, attached hereto at Appendix C.

application "*to help enroll [their] household in a utility or energy assistance program.*"[189] It is therefore redundant for PPL to require customers to consent a second time to use their income information for purposes of enrollment into CAP.

Q: What do you recommend?

A: I recommend that PPL be required to utilize data obtained through the DHS Data Sharing Program to automatically enroll eligible households into CAP, helping ensure low income customers (specifically, those who are already determined to be eligible for LIHEAP by DHS and who have affirmatively indicated their desire to enroll in CAP) to receive a reduced CAP rate. Adoption of an auto-enrollment process would help to reduce administrative burdens for both PPL and the customer, which in turn would help to mitigate the negative impact of PPL's proposed rate increase while at the same time promoting administrative efficiencies within the program by reducing unnecessary and duplicative administrative costs. PPL should be required to file a Petition to amend its USECP to implement an auto-enrollment process within 120 days of the Commission's final order in this case.

In developing its Petition, PPL should follow the Commission's recent guidance regarding the threshold elements that must be addressed in an auto-enrollment Petition, including considerations for addressing pre-program arrearages and shopping status; a proposed process for opt-out and consumer education; and an analysis of projected costs and savings through the end of PPL's 2023-2027 USECP.[190] PPL should consult with its

[189] See 2025-2026 Pennsylvania LIHEAP Application, Q.17, available at: https://www.pa.gov/content/dam/copapwp-pagov/en/dhs/documents/services/assistance/documents/heating-assistance_liheap/hsea-0001.pdf. (last visited 12/8/2025)

[190] See Petition of Peoples Natural Gas Company LLC – to Amend 2019-2023 Universal Service and Energy Conservation Plan, Order, Docket No. P-2024-3052324 (Order entered April 24, 2025); see also

Universal Service Advisory Committee (USAC) members and seek their feedback regarding the required design features of an auto-enrollment process.

I further recommend that PPL amend its auto-enrollment letter to simply and clearly inform customers of their rights and responsibilities and provide them with an opportunity to opt out of enrollment within 30 days, either by returning the letter or otherwise contacting the Company. This process would more effectively facilitate enrollment and be less of a hinderance to customers in need of assistance.

Q: Do you have additional recommendations to improve CAP enrollment?

A: Yes. In addition to pursuing approval from the Commission to initiate an auto-enrollment process, I also recommend that the Commission require PPL to implement routine screening of its applicants for service and customers who call its call center for non-emergency calls to determine confirmed low income status and eligibility for CAP and other universal service programs. In response to discovery, PPL states all customers seeking payment arrangements, who identify themselves with incomes at or below 150% FPL, are referred to universal service programs.[191] PPL also indicates that it screens customers for CAP eligibility when a customer contacts the Company about a past due balance or for a bill review.[192] While I am supportive of efforts to connect customers with assistance when they inform the Company that they are experiencing payment difficulties, it is imperative that increased efforts are made to routinely and proactively connect customers with assistance *before* payment difficulties occur.

October 9, 2025 Order granting in part CAUSE-PA's request for reconsideration and ordering Peoples to consult with interested stakeholders and file an amended Petition to Amend its 2019-2024 Universal Service and Energy Conservation Plan that addresses the concerns raised by the Commission in its April 2025 Order.

[191] PPL Response to CAUSE-PA I-26, attached hereto at Appendix C.

[192] PPL Response to CAUSE-PA IX-13, attached hereto at Appendix C.

As discussed below, the significant number of PPL confirmed low income customers on payment arrangements as opposed to CAP demonstrates that PPL's current process of screening customers for CAP is inadequate. Improving the identification of PPL low income customers – and better matching these customers to critical rate assistance and usage reduction services at the earliest opportunity – is essential to providing just and reasonable rates and service to low income households, and to ensuring all consumers, including those eligible for CAP, are receiving the most advantageous available rate. Proactive CAP enrollment strategies, such as routine screening, also serves as a critical collections and cost containment tool – helping to reduce the accrual of unmanageable debts, reduce uncollectible expenses and other collections costs, and reduce the cost of the CAP arrearage management program.

To more accurately identify CAP eligible customers and enroll these customers in available assistance, I recommend that PPL:

- Offer to screen all new and moving customers for income level at the time their service is established by asking them whether they would like information about income qualified programs that may reduce their rate.
- Offer to screen existing customers for household income level on any non-emergency calls and by asking whether they would like information about income qualified programs that may reduce their rate and/or whether there have been any updates to household income information.
- Make these processes available through both phone contact and via web portal.

Customers identified as low income through these regular screening processes should be referred for enrollment in CAP and other universal service programs – as well as LIHEAP. While PPL customers should not require customers to provide household income information, they should first be informed that if they choose to disclose this information, they may be eligible for lower rates or energy efficiency measures. I

recommend that PPL develop and implement screening and referral recommendations within 120 days of the final order in this proceeding.

4. CAP Termination Procedures

Q: Do you have any concerns about PPL's polies and procedures for terminating service to low income customers which you would like to address?

A: Yes. I am concerned that PPL does not have a policy to place a hold on customers' accounts so that customers can successfully enroll in PPL's CAP prior to having their service terminated.

Training materials provided by PPL in response to discovery reveal that a customer may temporarily stop a pending service termination if they (1) dispute available payment options; or (2) obtain a medical certificate.[193] PPL does not indicate that a hold will be placed on a customer's account if they have a pending application for assistance, including a pending CAP application. Similarly, when asked about how a customer who request payment arrangement is referred to PPL's universal service programs, PPL indicates they may refer customers to an agency, or transfer the customer to a live agent if they are interested in applying for CAP.[194] However, there is no indication that a hold is placed on the customer's account so they can successfully apply for assistance before their service is terminated.

I am concerned that failing to place a hold on customers' accounts while they apply for PPL's CAP may deter low income customers from successfully enrolling in CAP. A customer who is facing an imminent service termination may not have time to enroll in

[193] PPL Response to CAUSE-PA III-18, Attachment 2, Payment Assistance - Theory CBT, Page 14-15 of 26, attached hereto at Appendix C.
[194] PPL Response to CAUSE-PA I-26, attached hereto at Appendix C.

CAP before they suffer loss of essential services. These customers may instead elect to enter into payment arrangements which they cannot afford to stave off the immediate threat of losing essential service, which will only exacerbate arrearage levels over time. This is particularly problematic because, as discussed in detail below, many customers who are placed in payment arrangements by PPL are unable to keep up with their payment obligations under these arrangements. Customers must be given a reasonable opportunity to enroll in CAP so that they can avoid agreeing to ineffective payment arrangements or suffering the severe short and long-term consequences that result when service is involuntarily terminated.

Q: Do you have any recommendations to improve PPL's policies and procedures related to service termination for customers who apply for PPL's CAP?

A: Yes. I recommend that PPL be required to revise its policies and procedures so that a 15-day hold is applied to a customer's account if they apply for CAP. Placing a hold on the customer's account for 15 days is consistent with the hold on accounts PPL places if a customer applies for OnTrack and is enrolled with an electric generation supplier (EGS).[195] Placing a hold on customers' accounts will allow customers to apply for and enroll in PPL's CAP without experiencing a service termination while their applications are pending. Placing this hold will also encourage customers to apply for PPL's CAP before they are placed in an unaffordable payment arrangement which are often unsuccessful. I recommend that PPL be required to implement these changes within 120 days of the effective date of rates in this proceeding.

[195] PPL Response to CAUSE-PA VI-19, attached hereto at Appendix C.

Q: Do you have concerns about the ability of customers to reconnect to service by enrolling in PPL's CAP?

A: Yes. PPL makes it difficult for customers who have been terminated and/or applicants for service with prior arrears to connect to service by enrolling in CAP. In order for an applicant for service with prior arrears to connect to service and enroll in CAP, the applicant must first establish service and meet any requirements for service prior to applying for CAP, which could include payment of some or all of the past due balance.[196] This is an insurmountable obstacle for many low income households seeking to connect to service. While PPL indicates these customers could seek assistance from its Hardship Fund, the Company indicates that if the amount required to establish service is greater than the maximum Operation HELP grant, the customer may be required to pay the difference before the agency authorizes a grant.[197] I recommend that PPL be required to allow customers who have been terminated and applicants with prior balances to connect or reconnect to service by enrolling in OnTrack without any additional barriers.

B. Low Income Usage Reduction Program (LIURP)

Q: Please describe the Company's LIURP Program.

A: PPL's LIURP Program is a critical universal service program designed to work in tandem with CAP to help reduce high usage attributable to home energy inefficiencies that low income households cannot afford to address on their own.[198] The program achieves this purpose by conserving energy, reducing bills, improving payments,

[196] PPL Response to CAUSE-PA III-24, attached hereto at Appendix C.
[197] PPL Response to CAUSE-PA III-24, attached hereto at Appendix C.
[198] 52 Pa. Code § 58.1; 2023-2027 PPL USECP at 23.

decreasing collections costs, reducing peak demand, and improving home health, safety, and comfort.[199]

PPL's USECP explains that PPL's Winter Relief Assistance Program (WRAP) is the name of its LIURP.[200] However, PPL also provides WRAP measures through its Act 129 Energy Efficiency and Conservation Program, which it refers to as its Act 129 WRAP.[201] PPL enlists contractors to provide energy audits, weatherization measures, and energy education to high usage, low income customers.[202]

Q: Is the Company proposing any changes or improvements to its LIURP in the present proceeding?

A: No.

Q: Is PPL's LIURP performing adequately to achieve the goals and objectives of the program?

A: No. There is a significant unmet need for LIURP services among PPL's low income customers, which will only grow along with increasing PPL distribution rates and commodity costs. As noted above, PPL's low income customers have substantially higher average usage levels than other customers. These customers often lack control over their usage. Most low income households are unable to afford the costs of repairs and improvements necessary to stem high consumption which lead to increased usage levels

[199] 66 Pa. C.S. § 2803 ("'Universal service and energy conservation.' Policies, protections and services that help low-income customers to maintain electric service. The term includes customer assistance programs, termination of service protection and policies and services that help low-income customers to reduce or manage energy consumption in a cost-effective manner, such as the low-income usage reduction programs, application of renewable resources and consumer education."); 52 Pa. Code § 58.1.
[200] PPL 2023-2027 USECP at 23.
[201] Id. at 24.
[202] Id. at 23.

and higher monthly bills. Thus, low income customers are often charged higher bills but do not have the resources to afford them, leading to higher arrearage and the exceedance of maximum CAP credit limits, which each, in turn, contribute to disproportionate termination rates for low income customers.

PPL's LIURP plays an important role in mitigating rate unaffordability for high usage low income consumers over the long term, which helps reduce collection costs and uncollectible expenses – as well as universal service costs borne by other ratepayers. For customers who have been able to access LIURP, the program has effectively reduced consumption. In 2023, the most recent year for which data is available, PPL reports that its LIURP kWh savings average approximately 10% and the average bill savings for LIURP customers was $315 per year.[203] These savings are significant and can help to substantially reduce the impact of any approved increase in PPL's volumetric rates as well as the rapidly increasing commodity costs.

Despite the potential for the program to provide meaningful savings to low income households, PPL's LIURP serves relatively few households compared to identified need. According to PPL's LIURP Needs Assessment, as of April 30, 2025, 108,875 customers meet the LIURP eligibility criteria.[204] In comparison, PPL's LIURP serves fewer than 4,000 households per year:

[203] PPL Response to CAUSE-PA X-4, Attachment 1 at pp. 3-4, attached hereto at Appendix C.
[204] PPL Response to CAUSE-PA I-11, Attachment 1, attached hereto at Appendix C.

Table 20: LIURP Jobs Completed (July 2023-June 2025)[205]

	Completed LIURP Jobs
July 2023-June 2024	3,844
July 2024-June 2025	3,523

PPL served an average of approximately 3,757 customers per year through LIURP in the past two years – or about 3.5% customers identified in need of LIURP services.[206] At its current rate of production, it would take PPL's LIURP approximately 29 years to weatherize all the homes identified in the needs assessment.[207]

Q: Will PPL's proposed rate increase impact its LIURP?

A: Yes. PPL's proposal to increase residential rates will increase the demand for comprehensive weatherization, conservation, and efficiency services through LIURP to help offset rising energy costs and improve overall bill affordability.

Q: Do you have any proposals regarding LIURP?

A: Yes. PPL should be required to increase its LIURP budget to serve more households. While an increase that would allow it to serve all the eligible households in it needs assessment within a reasonable amount of time of 7-10 years may not be tenable given the cost increase involved, some increase is warranted. Thus, I recommend that PPL make a substantial movement toward a more reasonable target for weatherizing all available households and increase its LIURP budget by 20%, or $2.4 million. While this increase will not fully address the clear unmet need for this important program, it will help prevent the program from falling further behind in addressing unmet need for usage

[205] PPL Response to CAUSE-PA II-1, Attachment 1, attached hereto at Appendix C.
[206] PPL Response to CAUSE-PA II-5, attached hereto at Appendix C.
[207] Id.

reduction assistance – a need which will only grow if PPL is permitted to increase its rates in this proceeding. This will help to improve the availability of LIURP services to better meet increased demand for assistance to help reduce monthly energy use and, in turn, reduce monthly bills.

Q: Do you have other concerns about PPL's LIURP policies?

A: Yes. I am concerned that PPL applies the 5-year LIURP lookback period to customers who receive WRAP funded by Act 129. PPL seems to primarily use its Act 129 budget to fund baseload measures, while its LIURP funds are designated for more comprehensive measures like weatherization. According to PPL's USECP, its Act 129 "Low-Income Assessment" will provide baseload measures for LIURP Assessment customers whose income is less than 150% of the FPIG, allowing more of the LIURP budget to focus on comprehensive measures.[208] Potential LIURP Assessment measures are identified during the Act 129 Low-Income Assessment and if eligibility is determined, a customer are referred to a "Preferred Partner" for the installation of the LIURP measures.[209] Thus, WRAP customers treated exclusively through Act 129 WRAP, may not actually be receiving weatherization. PPL also refers customers who do not meet the LIURP minimum usage threshold to Act 129 for baseload measures.[210]

PPL's 5-year lookback period is intended to prevent premature re-weatherization before the useful life of the initial measures has expired.[211] It should not prevent customers who have previously received only baseload measures from subsequently

[208] PPL Ph IV Plan at 77.
[209] PPL Ph IV Plan at 77.
[210] PPL Response to CAUSE-PA II-11, attached hereto at Appendix C.
[211] See PPL Electric Utilities Corporation Universal Service and Energy Conservation Plan for 2023-2027 Submitted in Compliance with 52 Pa. Code § 57.74, Order, at 84-86 (entered Feb. 9, 2023).

accessing LIURP weatherization if their usage increases. I recommend that PPL amend its policy to apply the 5 year LIURP lookback only in cases where customers have received weatherization measures through WRAP.

C. Hardship Fund (Operation Help).

Q: Do you have any concerns about PPL's hardship fund?

A: Yes. I am concerned that PPL is not exercising an appropriate level of oversight over the Community Based Organizations (CBOs) which administer its hardship fund to ensure that the hardship fund is appropriately accessible and provides meaningful assistance to low income customers.

Review of data provided by PPL in response to discovery reveals that PPL's hardship fund is underutilized compared to the evidenced need for grant assistance by PPL's low income customers. In 2024, only 3,097 customers received a hardship fund grant.[212] By comparison, PPL reports that 46,524 confirmed low income customers experienced service termination for nonpayment in 2024.[213] Similarly, in 2025 between January and September, only 2,537 customers received a hardship fund grant.[214] By comparison, PPL reports that 33,429 confirmed low income customers experienced service termination for nonpayment in 2025 between January and September.[215]

PPL is also not fully utilizing available hardship funding. As of January 2025, PPL reports a hardship fund balance of $689,680.05. By September 2025 (approximately three-fourths through the calendar year), PPL reports that that $476,631.08 remained in

[212] PPL Response to CAUSE-PA II-12, Attachment 1, b-c, attached hereto at Appendix C.
[213] PPL Response to CAUSE-PA I-17, Attachment 1, attached hereto at Appendix C.
[214] PPL Response to CAUSE-PA II-12, Attachment 1, b-c, attached hereto at Appendix C.
[215] PPL Response to CAUSE-PA II-12, Attachment 1, b-c, attached hereto at Appendix C.

its hardship fund.[216] These are significant levels of remaining funding, particularly when compared to the $107,709,846.85 in total dollars of debt amongst confirmed low income customers that PPL reports as of September 2025. [217]

The substantial underutilization of PPL's hardship fund raises questions about how PPL is distributing available funding to customers in need of assistance. Unfortunately, it appears that PPL's policies cede a great deal of authority to its CBOs related to oversight of its hardship fund. In response to discovery, PPL indicates that it does not determine hardship grant amounts that are provided to customers.[218] Instead, customers contact PPL related to their catch up amounts, and CBOs subsequently have the discretion to determine the provided grant amount.[219] While CBOs will "usually" provide a grant amount for this catch up amount, and can contact PPL's regulatory specialists related to extenuating circumstances,[220] there is no indication that PPL provides more direct oversight related to appropriate grant amounts. Without more direct oversight, it becomes difficult to determine whether CBOs are providing appropriate grant amounts to meet customers' need for assistance.

The uncertainty surrounding how and to what extent customers access PPL's hardship fund is worsened because, when a customer applies for assistance, PPL does not specify which programs the customer is applying for. Instead, a single assistance application is used for both CAP and the hardship fund, and the CBO makes determination of what program fits best for the customer.[221] While PPL appears to provide information about

[216] PPL Response to CAUSE-PA II-17a, Attachment 1, attached hereto at Appendix C.
[217] PPL Response to CAUSE-PA I-27, Attachment 1, attached hereto at Appendix C.

[219] Id.
[220] Id.
[221] PPL Response to CAUSE-PA II-12, attached hereto at Appendix C. See also PPL Response to CAUSE-PA III-1, Attachment 1, attached hereto at Appendix C.

available programs to its CBOs, it is unclear whether PPL is providing sufficient top down oversight to ensure that customers are ultimately enrolled in the right program.

Q: Do you have any other concerns about PPL's hardship fund grant?

A: Yes. I am similarly concerned that PPL does not track the number of customers who apply for its hardship fund, and other information related to hardship fund applicants, including how many CLI customers and CAP customers, respectively, applied for the hardship fund.[222] Similarly, PPL does not track denials of its hardship fund.[223] PPL's failure to track information related to applications and denials for its hardship fund creates a gap in important information needed to appropriately evaluate the hardship fund. Without this information, it becomes difficult, if not impossible, to determine whether PPL's customers are able to appropriately learn about and ultimately access grant assistance – and to evaluate whether unreasonable barriers may exist to receiving this assistance.

Q: Do you have any recommendations to improve the oversight of PPL's hardship fund?

A: Yes. I recommend that PPL be directed to undertake review and revision of its policies for its CBOs administering the hardship fund grant so that CBOs are provided more direction related to providing hardship fund grants. If a customer applies for assistance through PPL's unified application, CBOs should be directed to coordinate with PPL's internal teams to determine what forms of assistance to provide the customer. If it is determined that the customer needs a hardship fund grant, CBOs should be provided with clear, detailed, and specific guidance for what grant amount should be provided to a customer to best address their payment difficulties. Prior to a customer being denied a

[222] PPL Response to CAUSE-PA II-12, attached hereto at Appendix C.
[223] PPL Response to CAUSE-PA II-15, attached hereto at Appendix C.

hardship fund grant, the CBO should be required to contact PPL to confirm that the customer should not have access to this assistance.

I also recommend that PPL be required to track important information related to hardship fund applicants and denials, including:

- How many customers applied for a hardship fund grant;
- How many confirmed low income customers applied for a hardship fund grant;
- How many PPL CAP customers applied for a hardship fund grant;
- How many PPL customers were denied a hardship fund grant, disaggregated by reason of denial (e.g. over income; failure to provide documents; payment history; etc.).

I recommend that my recommended reforms that PPL's hardship fund are implemented within 120 days of the effective date of rates in this proceeding.

VI. UNIVERSAL SERVICE COST RECOVERY

Q: What issues will you discuss in this section of your testimony?

A: I address two issues. First, I address the fact that PPL's Universal Service and Energy Conservation program costs are currently only being recovered from the residential rate class and propose an alternative recovery that would allocate these broad public purpose costs equitably across all rate classes. Second, I discuss my opposition to PPL's proposal to allocate approximately $1.4 million in the salary and wage expense of its employees who work on Universal Service issues to the USR Rider as opposed to retaining those costs in base rates where they more appropriately belong.

Q: Please explain the current cost recovery mechanism for PPL's Universal Service and Energy Conservation costs.

A: As noted above, PPL's Universal Service and Energy Conservation programs refer to a suite of assistance programs that help low income households remain connected to service. These programs are required by state law to be offered and effectively implemented by PPL and are overseen by the Commission. The foundation of this requirement is in the Electric Generation and Customer Choice Act codified in Chapter 28 in Title 66. There, the General Assembly made several declarations of state policy regarding continued access to electric service. It stated:

> The General Assembly finds and declares as follows:
>
> . . .
>
> (9) Electric service is essential to the health and well-being of residents, to public safety and to orderly economic development, and electric service should be available to all customers on reasonable terms and conditions.
>
> (10) The Commonwealth must, at a minimum, continue the protections, policies and services that now assist customers who are low-income to afford electric service.
>
> . . .
>
> (17) There are certain public purpose costs, including programs for low-income assistance, energy conservation and others, which have been implemented and supported by public utilities' bundled rates. The public purpose is to be promoted by continuing universal service and energy conservation policies, protections and services, and full recovery of such costs is to be permitted through a nonbypassable rate mechanism.[224]

The term "universal service and energy conservation" as used in Chapter 28, was defined by the General Assembly as:

> **"Universal service and energy conservation."** Policies, protections and services that help low-income customers to maintain electric service. The

[224] 66 Pa. C.S. § 2829(9), (10), and (17).

> term includes customer assistance programs, termination of service protection and policies and services that help low-income customers to reduce or manage energy consumption in a cost-effective manner, such as the low-income usage reduction programs, application of renewable resources and consumer education.[225]

For purposes of this case, all the programs collected through PPL's existing and proposed Universal Service Rider meet the definition of the public purpose costs that the General Assembly has required PPL to develop, offer and implement.

Under its current and proposed Universal Service Rider, PPL assigns the costs of these programs only to residential customers[226] and to those small commercial customers taking voluntary service rates under GS-1 and GS-3.[227] In the Fully Projected Future Test Year, PPL projects these costs to be $143,159,005 annually, prior to grossing up for the gross receipts tax, inclusive of the $1.4 million in salaries and wages from employees who work on universal service issues that it seeks to remove from base rates and assign to the USR.[228] This amount is simply a projection and PPL flows the actual costs of the programs, plus reconciliation for under or over collection. It resets its rate annually. Currently, for the period through December 31, 2025, the cost per kWh imposed for

[228] PPL Response to CAUSE-PA VII-1, attached hereto at Appendix C.

residential customers and those customers served under GS-1 and GS-3 voluntary rates is $0.01111 per kWh.

Q: Why does PPL only recover these costs from residential customers and from a small subset of customers taking service at GS-1 and GS-3 rates?

A: PPL asserts that it only applies the USR to residential customers "[b]ecause the USR recovers costs associated with customer assistance programs for which only residential customers are eligible, it is consistent with cost of service principles to recover these costs only from residential customers."[229] It asserts that it applies the USR to the small subset of voluntary organizations taking rates under GS-1 and GS-3 because these customers pay rates at Rate RS "and, as a result, pay the USR as well."[230]

Q: Do you agree with PPL's decision to only apply the USR to customers taking service at Rate schedule RS?

A: No. I disagree with PPL's rationale and with the decision to limit assessment of broad public purpose costs only to ratepayers taking service under Rate RS or at residential rates. It is unreasonable for residential customers, and a small subset of voluntary organizations/non-profit entities, to solely bear the burden of these costs. The General Assembly has clearly recognized these costs a public purpose costs because they assist poor Pennsylvania families to be able to maintain access to essential electric service. The "cause" of the need for this program is poverty – a societal problem. Residential customers no more cause poverty and the need for these public purpose costs than any other rate class.

[229] PPL Response to CAUSE-PA IV-8, attached hereto at Appendix C.
[230] Id.

This fact was recognized by the Commission in its Final CAP Policy Statement and Order, where the Commission addressed the recovery of universal service program costs. While the Commission did not require jurisdictional utilities to propose specific allocations, the Commission indicated that it is appropriate to consider recovery of the costs of customer assistance programs from all ratepayer classes because "poverty, poor housing stock, and other factors that contribute to households struggling to afford utility service are not just 'residential class' problems."[231] The Commission explained that the provision of universal services to help low income families maintain service to their homes is "a benefit to the economic climate of a community."[232] The Commission directed utilities and stakeholders to address CAP cost recovery in utility-specific rate proceedings, indicating that "*the Commission will no longer routinely exempt non-residential classes from universal service obligations*."[233]

Even looking at a model where the "beneficiary pays" causes the conclusion that while the most obvious benefits of universal service programs are apparent to the residential rate class, this is too narrow of a view as there are a multitude of societal benefits which inure to non-residential ratepayers that cannot be ignored. These programs are meant to remediate the impacts of poverty and utility insecurity with long-term and far-ranging impacts for low income households, as well as the surrounding communities in which they live and work.[234] Households who cannot afford utility services

(as a parallel to energy affordability, discussing the links between energy insecurity and adverse outcomes in health, food insecurity, and access to stable and affordable housing)

are more prone to a host of adverse consequences, including increased rates of health complications and hospitalization, eviction, and food insecurity.[235] For children in low income households, utility insecurity has been linked to adverse impacts on long-term health and developmental delays.[236] Communities of color also continue to experience utility insecurity at disproportionate and high levels.[237] Similarly, since low income customers who do not participate in these programs often have significant arrearages,[238] these costs cannot be avoided in rates. They will either be paid as a part of foregone revenue upfront through assistance programs or collected through uncollectible expenses.

Furthermore, it is important to note that residential customers do not cause poverty or the hardship that requires assistance in the first place. Many low income assistance program participants are employed, but do not receive a wage that is adequate to afford basic household needs. This is evident from the self-sufficiency data that I discuss earlier in my testimony and from the fact that 29.1% of CAP customers, 22.4% of LIURP recipients, and 57.8% of customers who received a hardship fund were employed.[239]

Other low income assistance program participants are retired seniors or individuals on disability who do not receive sufficient social security, disability, or retirement benefits to afford basic life necessities, including energy services.[240]

In addition to the adverse physical health impacts which result from lack of utility services, low income customers who face utility insecurity often struggle with heightened levels of stress, anxiety and depression – and must take time away from work to arrange payments, locate or apply for assistance programs, and arrange for reconnections.[241] These consequences of utility insecurity significantly undermine worker productivity, which – in turn – impacts businesses, nonprofits, governmental entities, schools, and other non-residential customer groups. In addition, low income assistance programs help utility companies to control uncollectible expenses which ultimately impact all ratepayers.

In sum, all customer classes (including industry, business, commerce, educational institutions, hospitals, local and state governments, and other residential customers) benefit from the availability and existence of universal service programs and assistance. It is a sound policy decision for all customers to share the costs of providing these programs to PPL's most vulnerable customers.

Q: Are you providing your opinion about these issues as an attorney in this proceeding?

A: No. Importantly, although I am an attorney, I am not serving in that capacity in this proceeding, and I am not providing a legal position related to universal service cost

recovery, or the legal applicability of the Commission's Final CAP Policy Statement to the current proceeding. These legal aspects will be addressed through briefing. My testimony focuses on the policy reasons why cross-class recovery of low income assistance program costs is appropriate.

Q: If the Commission agrees to assign the costs of the universal service programs to all customers, how do you recommend that they do so.

A: I support a broad allocation of costs to all rate classes. Ultimately, these costs should be assigned to all rate classes either based on their respective distribution revenue requirements per the Company's cost of service study (COSS) filed in the current case or based on an energy usage allocator. CAUSE-PA witness Ben Havumaki lays out the cost impacts of both approaches in his testimony.[242] Based on this analysis, it is my policy recommendation that the Commission utilize PPL's distribution revenue allocators with a slight modification. The modification that I recommend is that it is appropriate in my view to directly assign some of the costs to LP-5 customers because of the significant impact that LP-5 customers have had on the cost of universal service programs – resulting in cost increases that have raised rates for all customer due to data center development. These costs should be directly assigned to LP-5 based on their projected impact on wholesale prices that affect CAP rates for CAP customers and other customers who pay for CAP. After this direct assignment, the allocation of costs would be based on the allocator percentages from PPL's COSS as provided in response to discovery.[243] Mr. Havumaki has attached the allocation as an exhibit to his testimony.[244]

[242] CAUSE-PA St. No. 2 at 24, Table 2.

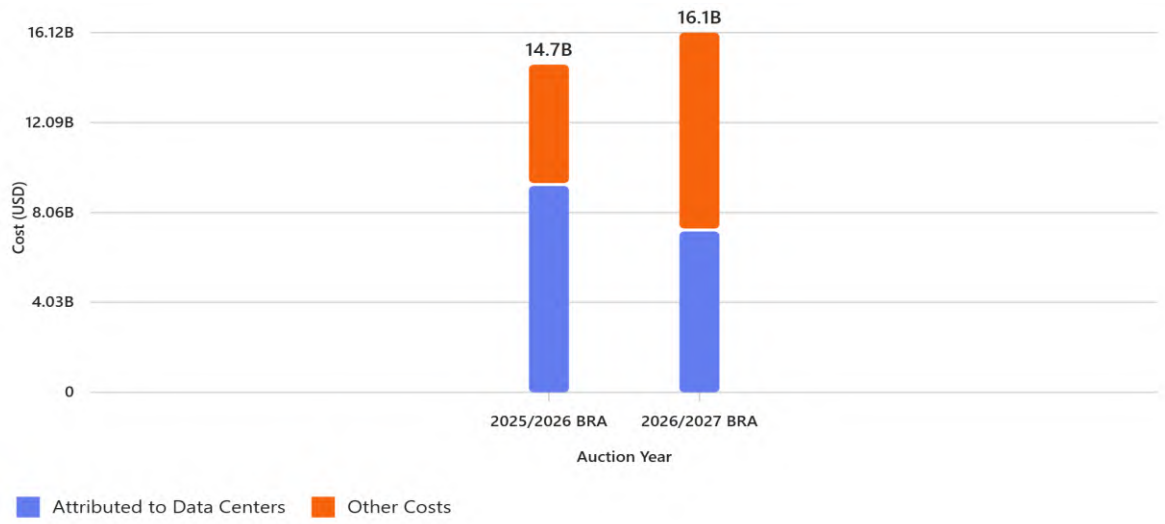
[244] CAUSE-PA St. No. 2, Appendix D, Havumaki Exhibit D-1.

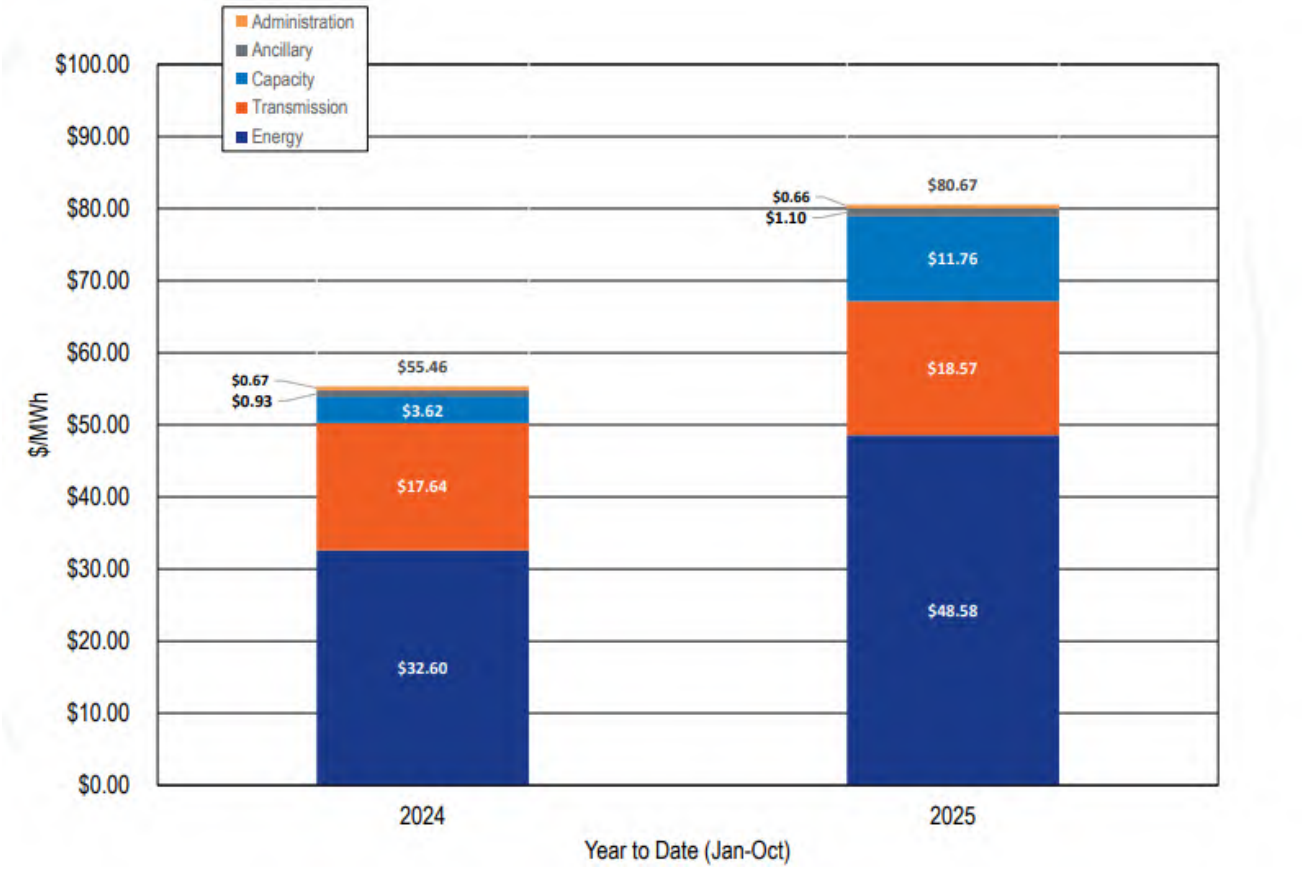
Q: Please explain.



A: Large load additions fueled by data centers and other large load users are already driving higher costs for Pennsylvania consumers. It is widely recognized that the substantial increase in capacity prices, as well as transmission line build-out to serve hyperscale load in Pennsylvania and neighboring states, is driving higher consumer costs. In its analysis of the past two capacity auctions held at PJM – for the 2025/2026 delivery year and for the 2026/2027 delivery year – the PJM Market Monitor found that the total of these two auctions resulted in more than $30.8 billion in capacity payments to existing generators of which more than $16.6 million or 54% were the direct result of actual and projected data center load.[245] This is represented visually in the Table and Chart below, which show the same information in two different formats.

Table 21. Impact of Data Centers on Capacity Prices in last two PJM Base Residual Auctions

Impact of Data Centers on Capacity Prices			
	2025/2026 Base Residual Auction	2026/2027 Base Residual Auction	**Total**
Total	$14,687,047,358	$16,124,370,889	$30,811,418,247
Attributable to Data Centers	**$9,332,103,858**	**$7,271,197,971**	**$16,603,301,829**
Data Center % of Total	**64%**	**45%**	**54%**



[245] See "Analysis of the 2025/2026 RPM Base Residual Auction - Part G Revised," (June 3, 2025), available at: https://www.monitoringanalytics.com/reports/Reports/2025/IMM_Analysis_of_the_20252026 (last visited Dec. 5, 2025) and "Analysis of the 2026/2027 RPM Base Residual Auction - Part A," ("Part A") (October 1, 2025), available at: https://www.monitoringanalytics.com/reports/Reports/2025/IMM_Analysis_of_the_20262027_RPM_Base_Residual_Auction_Part_A_20251001.pdf. (last visited Dec. 5, 2025)

Chart 2. Impact of Data Centers on Capacity Prices in last two PJM Base Residual Auctions

These high capacity payments were not felt in isolation as we are facing steep increase in the costs of transmission and energy costs as well as shown by the chart below prepared by PJM's Independent Market Monitor:

Chart 3: Total Wholesale Cost of Power ($/MWh)[246]

At the beginning of June 2025 and again in December 2025, these high wholesale prices drove a spike in default service prices across the state – including within PPL's service territory. In fact, for the average PPL customer on default service, the results of June 1, 2025, and December 1, 2025 PTC changes increased their average annual bill by more than $240 per year. This is because rates went up by more than 20% over these two periods, as reflected in the below Tables:

[246] See Monitoring Analytics, Market Monitor Report, to PJM Members Committee dated November 20, 2025 at 3. Available at: https://www.pjm.com/-/media/DotCom/committees-groups/committees/mc/2025/20251120/20251120-item-03---market-monitoring-report---presentation.pdf.

Table 22: Impact of Price to Compare Increase

PPL	PTC 12/1/2024	PTC 12/1/2025	Difference
	$0.10771	$0.12953	$0.02182
	Avg Monthly Bill Dec 2024	**Avg Monthly Bill Dec 2025**	**Difference Monthly**
918 kWh	$ 161.83	$ 181.86	$ 20.03
500 kWh	$ 93.67	$ 104.58	$ 10.91
2000 kWh	$ 329.17	$ 372.81	$ 43.64
	Avg Annual Bill Dec 2024	**Avg Annual Bill Dec 2025**	**Difference Annual**
918 kWh	$ 1,941.96	$ 2,182.33	$ 240.37
500 kWh	$ 1,124.04	$ 1,254.96	$ 130.92
2000 kWh	$ 3,950.04	$ 4,473.72	$ 523.68

Table 23: Price to Compare Increase

12/1/24 versus 12/1/25			
	As of Dec 2024	**As of Dec 2025**	**Percentage Increase**
	$ 0.1077	$ 0.1295	20.3%

The impact of this steep increases in default service rates is felt in two discrete ways: (1) directly by CAP customers because it erodes the effectiveness of their annual maximum CAP credits as discussed above, and (2) in the cost that is paid for under the USR based on the difference between what a CAP customer pays under their applicable percentage of income payment and the full tariff bill. Based on my assessment, the impact of this increase over the course of a year – at December 2025 rates – is $18.2 million annually in increased USR costs.

Table 24: Impact of PTC Increase on CAP Shortfall

	Annual Increase / CAP Household	Overall Annual Increase to Shortfall	Overall Monthly Increase to Shortfall
PPL			
918 kWh	**$ 240.37**	**$ 18,157,242.96**	**$ 1,513,103.58**
500 kWh	$ 130.92	$ 7,791,092.46	$ 649,257.71
2000 kWh	$ 523.68	$ 31,164,369.84	$ 2,597,030.82

I estimate that that large load growth across PJM has caused a price increase *of approximately* $10 million annually using the data provided by the PJM Independent Market Monitor as the allocating factor.[247]

Q: Considering your analysis, what is your recommendation?

A: I recommend that PPL assign the USR costs to <u>all</u> rate classes as follows. First, directly assign $10 million of USR rider costs annually to be collected from the LP-5 rate class and that this amount be adjusted at each rate case to account for the cost increases in energy, capacity, and transmission costs associated with data center load growth within PPL's service territory. This contribution should be a direct contribution billed monthly to all LP-5 rate class customers who are classified as Large Loads Additions by PPL. This is reflected in Havumaki Exhibit D-1 that is attached to Mr. Havumaki's testimony, and which reflects my proposed allocation of universal service costs to all ratepayers. After this direct assignment, the remainder of the costs should be assigned based on the allocators in PPL's ACOSS based on the kWh usage for each rate class projected as of the FPFTY.[248] Since these costs are flow-through rider costs, they will change each year

[247] As noted in Tabel 21, above, based on the Independent Market Monitor's analysis, but for data center load growth costs would have been 54% lower in the recent capacity auctions. The $9.8 million estimate in my testimony is 54% of the total CAP Program Shortfall increase ($18,157,242.96 x 54% = $9,804,911.20).

[248] PPL Electric Exhibit BR-1 at 15 (Revenue Allocation percentages).

based on the reconciliation that PPL does to ensure that only the actual direct costs are collected.

Q: If the Commission rejects broad allocation of universal service costs, do you have an alternative recommendation for allocation?

A: Yes, although I support broad allocation of costs because of the public purpose nature of these programs, the Commission's policy statement, and because all utility ratepayers benefit from the existence of these programs, if the Commission rejects this proposal then, at the very least, these costs should be assessed on the LP-5 rate class as its clear that this rate class – in particular the existing and projected large load additions from data centers – are causing significant rate harm to residential customers as a whole and low income customers in particular.

Q: What is the second universal service cost allocation issue that you wish to address?

A: In this case, PPL proposed to remove from rates the employee salary and wages associated with the operation of universal service programs and flow those costs through the universal service rider.[249] This change would affect the salaries and wages for 14 employees and would add $1.4 million costs annually to the USR costs that are directly assigned currently to universal service programs and allow for those costs to be collected on an as incurred basis rather than projected in rates. PPL reasons that this allows it to "better adapt and budget its internal staffing needs to USECP programs" and align these costs with all other universal service costs and would eliminate the regulatory lag associated with recovering these costs through base rates.[250]

[249] PPL St. No. 18 at 10.
[250] Id. at 12-13.

Q: Do you support this reallocation of costs from base rates to universal service rider?

A: No. I do not support this reallocation for several reasons. Fundamentally, these are costs that are being paid for in rates based on projections about staffing levels. PPL wants to bake in cost recovery by collecting it on a fully reconcilable basis which does not benefit consumers. Regulatory lag reflected in rates benefits consumers because these costs and projections must be reasonably foreseeable, certain, and prudent to be incurred. There is no reason to back costs out of rates other than to ensure and guarantee cost recovery for PPL. It does not improve service for customers and has the very real potential of increasing costs because, unlike costs embedded in rates, it guarantees recovery. In addition, these costs that are embedded in rates are currently paid for by all rate classes in proportion to their revenue allocation in PPL's cost of service study. At present, approximately 87% of these costs would be assigned to residential customers under the current allocation methodology, whereas, under PPL's proposal 100% of the costs would be assigned to residential customers through the USR.[251] These costs do not only benefit residential ratepayers as outlined above in my testimony regarding a more fair, equitable, and proper allocation of universal service costs. Furthermore, except for Act 129 costs, no other discrete costs for serving program costs are allocated directly to a rider. For example, PPL does not directly allocate costs to serve its LP-5 large load customer to the LP-5 rate class,[252] instead like it does for all other salaries and wage expenses it allocates those costs broadly to all rate classes. The same should occur with these costs. PPL

[251] PPL Response to CAUSE-PA V-11, attached hereto at Appendix C.
[252] PPL Response to CAUSE-PA V-12, attached hereto at Appendix C.

should not be permitted to directly allocate these costs to the USR and instead should continue to include them in base rates.

Q: If the Commission adopts your proposal to broadly allocate universal service costs to all ratepayers, does that change your position on this issue?

A: No. While that would resolve the equity concerns about socializing these wage and salary costs broadly, it does not address the concerns that I have about it being inappropriate overall to isolate wage and salary costs for certain programs and directly assign those costs through a rider because it guarantees recovery by the Company for a subset of costs that, historically, have never been guaranteed – instead requiring PPL to rely on operational efficiencies to maximize profits.

VII. PAYMENT ARRANGEMENT STANDARDS

Q: Please briefly summarize PPL's policies for issuing payment arrangements to residential customers.

A: Customers can establish a payment arrangement with PPL with a live agent, on the web, or through interactive voice response (IVR).[253] For customers with active service, PPL indicates that its payment arrangement lengths are dependent on income level, with the following income levels being tied to the following payment arrangement terms:

Table 25: PPL PAR Terms Based on FPL [254]

Income Level	Federal Poverty Guideline	Payment Arrangement Terms
1	0 – 149.9%	24 months
2	150% - 249.9%	18 months
3	250% - 300%	12 months
4	300% and above	6 months

[253] PPL Response to CAUSE-PA III-29, attached hereto at Appendix C.
[254] PPL Response to CAUSE-PA III-33, attached hereto at Appendix C.

PPL also provides payment arrangements for customers whose service has been terminated, which take into consideration prior defaulted arrangements and prior service terminations for nonpayment.[255]

Q: Do you have any concerns related to PPL's payment arrangement standards which you would like to address?

A: Yes. I am concerned that PPL's failure rate for its payment arrangements is significant and prohibits customers from reasonably addressing arrears accrued through unaffordable rates. Available data reveals that customers are not only struggling to complete PPL-issued payment arrangements, but they are also struggling to make payments for any length of time.

Table 26: PAR Failure[256]

July 2023 to October 2025	Began PAR	Failed to make any payment	Fewer than Twelve Payments	Subsequent Termination
0-150% FPL	204,447	121,587	158,923	26,031
150.1% - 250%	78,635	44,057	62,041	6,753
>250%	45,243	24,767	33,335	3,484
Totals Across FPLs	328,325	190,411	254,299	36,268

As the above Table shows, between July 2023 to October 2025, PPL reported a total of 328,325 as beginning payment arrangements of which:

- 58% (190,411) did not make any payment towards their payment arrangement.

[255] PPL Response to CAUSE-PA III-22, Attachment 1, attached hereto at Appendix C.
[256] PPL Response to CAUSE-PA III-31, Attachment 1, attached hereto at Appendix C.

- 77% of these customers (254,299) did not successfully complete their payment arrangement, making fewer than 12 payments towards the payment arrangement.
- 11% of these customers subsequently experienced service termination.

These significant rates of failure indicate that PPL's payment arrangements are not affordable or realistically designed to allow customers to meaningfully retire arrearages and remain connected.

I am also concerned that PPL has a significant number of confirmed low income customers who are enrolled in payment arrangements rather than on its CAP. The following number of identified low income customers were placed in a payment arrangement rather than being enrolled in CAP as of January for each of the past three years:[257]

- January 2023: 23,603
- January 2024: 28,295
- January 2025: 26,638

Importantly, low income customers who are placed on payment arrangements, rather than enrolling in PPL's CAP, continue to carry significant arrearage levels. As the following Table shows, total debt reported on low income (non-CAP) accounts which are enrolled in a payment arrangement makes up more than half of total residential payment arrangement debt:

[257] PPL Response to CAUSE-PA I-30, Attachment 1, attached hereto at Appendix C.

Table 27: Residential Debt on Payment Arrangements[258]

	All Residential PAR Customer Debt	Non-CAP CLI Customer Debt on PARs	Percent of Total Debt on PARs attributable to CLI Debt on PARs
January 2023	$32,415,017	$20,647,862	63.7%
January 2024	$42,495,708	$26,339,587	62.0%
January 2025	$29,226,674	$20,189,492	69.1%

As of January 2025, despite confirmed low income customers only comprising 19% of all residential customers,[259] the debt of low income, non-CAP customers in payment arrangements amounted to approximately 69% of total debt of all residential customers enrolled in payment arrangements during this period. These figures underscore that PPL's payment arrangements have had limited success in addressing debt accrued not only by low income customers but also residential customers as a whole.

Q: Are there any other concerns you would like to raise related to PPL's payment arrangement standards?

A: Yes. In addition to the concerns raised above, I am concerned that PPL does not provide appropriately flexible payment arrangements for its customers. Section 56.97 of the Commission's regulations require a public utility to exercise "good faith and fair judgement" when entering into payment arrangements, and to take into account various factors including the customer's ability to pay.[260] In addition, Section 56.285 of the Commission's regulations allow victims of domestic violence with PFAs or applicable other court orders to access more flexible payment arrangements.[261]

[258] PPL Response to CAUSE-PA I-30, Attachment 1, attached hereto at Appendix C.
[259] PPL Response to CAUSE-PA I-7, Attachment 1, attached hereto at Appendix C; PPL Response to CAUSE-PA I-9, Attachment 1, attached hereto at Appendix C. Shows that there were 243,437 CLI customers out of 1,290,343 residential customers.
[260] 52 Pa Code § 56.97.
[261] "An outstanding residential account with the utility may be amortized over a reasonable period of time. Factors to be taken into account include the size of the unpaid balance, the ability of the applicant to pay,

PPL indicates that it provides payment arrangements based on income level, determined by household income level and size.[262] It does not appear that PPL takes into consideration other important hardships faced by the customer which affect their ability to pay their bills, including whether the customer has submitted a Protection from Abuse Order or another court order establishing that they have experienced domestic violence – or who has submitted a medical certificate.[263] While counsel for CAUSE-PA will address the legal aspect of whether PPL's payment arrangements standards set forth in Commission regulations, I am concerned that PPL is failing to consider important factors which impact a customer's ability to pay towards payment arrangements, including whether the customers is a victim of domestic violence or has certain medical conditions in their homes. Failure to engage in this analysis may contribute towards customers entering into unaffordable payment arrangements, and ultimately defaulting on these arrangements when they are cannot keep up with payment obligations. PPL's failure to adequately evaluate customers' ability to pay these arrangements is particularly concerning given the large number of residential and low income customers who are unsuccessful in keeping up with their payment arrangements, which I have discussed above.

Additionally, I am concerned that PPL's process for issuing payment arrangements through its interactive voice response phone system (IVR) does provide appropriate and equitable payment arrangements to customers. As noted, customers can enter payment arrangements through PPL's IVR system. When customers seek to establish payment

---

the payment history of the applicant and the length of time over which the bill accumulated." 52 Pa. Code § 56.285.

[262] PPL Response to CAUSE-PA III-22, attached hereto at Appendix C.

[263] Id.

arrangements through PPL's IVR system, PPL indicates prompts for the same information whether speaking with an agent or self-serving on the web: household income; number of household occupants; and prior payment arrangement status.[264]

Despite PPL indicating that its IVR process for PARs prompts for income information from customers, it is unclear the extent to which IVR system explains the details of PPL's CAP as an alternative to entering a potentially unaffordable payment arrangement. Even if PPL's systems do provide some baseline information for income-eligible customers about PPL's CAP, PPL's IVR system – by its nature – cannot engage in a discussion related to the benefits of CAP or answer customer questions related to CAP. It is imperative that reforms are made to ensure that PPL's customers who receive payment arrangement information through IVR systems are provided with adequate information about enrolling in CAP so that they can access more affordable rates and debt forgiveness offered through CAP. This issue is particularly important because of the high failure rate of PPL's payment arrangements.

Finally, as discussed, I am concerned about PPL's process for referring customers who request payment arrangements to PPL's CAP and other universal service programs. Without a policy in place to place a hold on customer's accounts while they apply for CAP, customers who are otherwise CAP eligible may forgo applying for CAP, and instead opt for a more detrimental payment arrangement, to stave off the immediate threat of termination.

[264] PPL Response to CAUSE-PA III-27, attached hereto at Appendix C.

Q: Do you have any recommendations to reform PPL's payment arrangement standards?

A: Yes. I recommend that PPL implement several reforms to help address the high failure rate of its payment arrangements.

First, PPL should be directed to undertake a revision of its policies and procedures related to payment arrangements to explicitly consider factors related to customers' ability to pay, including the factors set forth at Section 56.97, and whether a customer seeking a payment arrangements has certain vulnerabilities – as well as if they have experienced domestic violence or have medical conditions in their household. Customers should be provided with additional flexibility for payment arrangements based on an analysis of these factors. All customers should have the ability to enter a payment arrangement that they have a reasonable opportunity to complete. In turn, for low and moderate income customers, the priority should be to connect with and enroll in CAP or hardship fund assistance. PPL should no longer have payment arrangements that are merely formulaic application of household income to determine length of the arrangement. Instead, PPL should tailor payment arrangements to the circumstances of the household. Specifically, PPL should analyze the payment arrangements that it has issued that are successful and develop payment arrangement offerings that mirror the attributes of those arrangements – such as what percentage of a customer's overall budget bill in addition to that bill has promoted successful completing of a payment arrangement at various income tranches. Based on this information, PPL should develop new guidelines for payment arrangements that it offers. Specifically, the needs of victims of domestic violence and those with medical certificates should be given additional time above and beyond these guidelines.

Second, I also recommend that PPL revise its policies and procedures for issuing payment arrangements through IVR systems to customers who provide income information indicating low income status. As discussed above, it is imperative that these customers are provided with robust information about the benefits of enrolling in CAP and/or hardship fund grants before they enter potentially unaffordable payment arrangements. If a customer indicates that they are low income through IVR prompts, the customer should be transferred to a customer service representative or directed to the ability to apply for CAP and hardship funds telephonically. This customer service representative can and should subsequently discuss the benefits of CAP enrollment and should assist the customer to enroll in the Program if they are interested.

Finally, as discussed, I recommend that PPL revise its policies and procedures so that a hold is placed on customers' accounts when they have a pending CAP application. Without implementing this hold, a customer may not have the opportunity to enroll in CAP – and may instead chose to enter an unaffordable payment arrangement – if they are facing termination of service.

VIII. MEDICAL CERTIFICATES

Q: Please briefly describe PPL's policies for accepting medical certificates.

A: PPL accepts a written medical certificate signed by "a licensed physician, nurse practitioner, or physician assistant" to stop termination on a delinquent account for up to 30 days.[265] It appears that customers are assess for medical certificate protections through both live PPL agents, and through PPL's IVR systems. [266]

[265] PPL Response to CAUSE-PA III-18, Attachment 4. PPL Response to CAUSE-PA III-19, attached hereto at Appendix C.
[266] PPL Response to CAUSE-PA III-20, attached hereto at Appendix C.

PPL indicates that customers can renew medical certificates twice, but may additionally renew medical certificates if either (1) the customer can reached a zero overdue balance since the submission of a prior medical certificate; or (2) the customer has paid their 30-day bill each month since the original medical certificate was presented.[267] For customers who have experienced service termination, such service would be restored within 24 hours of the receipt of a medical certificate.[268]

PPL has confirmed through discovery in this matter that it will continue to follow the Commission's regulations for (1) not terminating or (2) restoring services to customers who provide a signed medical certificate.[269]

Q: Do you have any concerns about PPL's policies for accepting medical certificates?

A: Yes. I am concerned that (1) PPL's call scripting fails to accurately and adequately inform customers about payment requirements with active medical certificates; (2) PPL's process for customers to submit medical certificate forms is improperly restrictive; and (3) PPL's bills for customers on active medical certificates do not properly inform these customers about payment obligations while during an active medical certificate. In addition to these concerns, I have also outlined above that PPL is failing to provide appropriately flexible payment arrangements for customers with medical certificates. I will address each of these concerns in turn.

First, I am concerned that PPL's scripting is not properly informing customers about payment obligations under medical certificates. Scripting provided by PPL in response to

[267] PPL Response to CAUSE-PA III-19, attached hereto at Appendix C.
[268] PPL Response to CAUSE-PA III-18, Attachment 5, attached hereto at Appendix C.
[269] PPL Response to CAUSE-PA VII-10, attached hereto at Appendix C.

discovery indicates that customers are being informed that "State regulations limit the number of medical certification renewals. To keep your service on and eliminate the risk of a declined medical certification in the future, let's review payment options to help you pay your balance."[270] This fails to capture regulatory protections which permit renewal of medical certificates past two if customers are able to keep up with their current charges,[271] and contradicts PPL's stated policies which allow for these additional renewals.

I am similarly concerned that PPL's call scripting acts as an unnecessary barrier to customers obtaining medical certificates. PPL's stated procedures indicate that, to receive a medical certificate, a customer must direct their medical provider to contact PPL to obtain a medical certificate form, or the medical provider may send a written correspondence on letterhead containing required elements to PPL.[272] As a threshold matter, I disagree with PPL requiring medical providers to contact PPL to get a copy of PPL's medical certificate form, rather than providing this form directly to customers to provide to their medical providers for completion. Creating this extra step is unnecessary and may prevent customers from successfully obtaining a medical certificate, particularly if they are seeking medical certificates to pause a termination that may occur after expiration of the 3-day hold placed on accounts by PPL.

Despite accepting a medical certificate on a doctor's letterhead, as opposed to its own form, I am also concerned that PPL's representatives are not properly informing customers that their medical providers can submit a letter with the requisite information to obtain medical certificate protections. Call scripting provided by PPL indicates that PPL

[270] PPL Response to CAUSE-PA III-18, Attachment 4, p. 3, attached hereto at Appendix C.
[271] 52 Pa. Code § 56.114.
[272] PPL Response to CAUSE-PA III-18, Attachment 4, p. 1-2, attached hereto at Appendix C.

is prompting their CSRs to simply direct customers that: “To obtain a medical certificate, your doctor, nurse practitioner, or physician's assistant would need to contact us.”[273] PPL’s current process ignores the reality that medical professionals do not routinely have the time or staff to make these outbound calls to request a medical certificate form. In my professional experience working with thousands of low income clients over the years they often face significant barriers to getting a medical certificate from a medical professional due to lack of access to a primary care provider, the inability to get an appointment, the unwillingness of large hospital systems to issue medical certificates, lack of transportation or child care to facilitate obtaining a medical certificate, and an array of other obstacles. Requiring already overtaxed systems to call PPL for a medical certificate form places unnecessary and unreasonable barriers for customers to exercise their rights to obtain a temporary pause on service termination.

Second, customers who can obtain medical certificates are not being provided with sufficient information about their payment obligations while their medical certificates are active. An examination of an example of a residential bill for a customer with an active medical certificate reveals that PPL is informs customers with active medical certificates about the total amount due for the account, inclusive of past due balances.[274] PPL’s bills therefore fail to clearly explain to customers the amount they would need to pay to continue to be eligible to renew their medical certificates if they have already exhausted two renewals. I note that the Commission has provided clear guidance that a customer’s obligations to pay on current undisputed bills to continue renewing their medical certificate renewals does not include underlying arrears:

[273] PPL Response to CAUSE-PA III-18, Attachment 4, p. 3, attached hereto at Appendix C.
[274] PPL Response to CAUSE-PA III-17, Attachment 5, p. 2, attached hereto at Appendix C.

> "[I]f the customer is paying their current bills as required by [section 56.116], the outstanding balance will not be increasing, meaning that the customer's and the utility's problems with the account balance will not be aggravated. We expect that once the medical certificate expires, the utility would address the outstanding balance with the customer. We also point to the petition process at § 56.118 that a utility may use to possibly void a medical certificate that a utility believes is being used to avoid the payment of the account balance."[275]

Q: Do you have any recommendations to address these medical certificate issues you have identified above?

A: Yes. As discussed, PPL's call scripting fails to correctly inform customers that they may renew medical certificates past two instances if they are able to keep up with their current charges. This is inaccurate based on both the Commission's regulations and PPL's stated policies which allow for additional medical certificate renewals. To correct these errors, PPL should be required to undertake a review of its call scripting and training materials for its customer service representatives and revise these documents so that PPL's representatives are correctly informing customers that they may continue to renew their medical certificates past two renewals if they are able to pay their current charges.

I also recommend that customers seeking medical certificates should be provided with a medical certificate form by PPL or instructed how to download the form from PPL or the Commission's website, rather than the customer's medical provider having to reach out to obtain this form. This recommendation will help to eliminate an unnecessary barrier which may stand in the way of customers obtaining medical certificates. I further recommend that PPL be required to include a link on its website to the Commission's

[275] Chapter 14 Implementation, Final Order, Docket No. M-2014-2448824, at 15 (order entered July 9, 2015), citing Rulemaking to Amend the Provisions of 52 Pa. Code, Chapter 56 to Comply with the Provisions of 66 Pa. C.S. Chapter 14, Revised Final Order, Docket No. L-00060182, at 149 Attachment One (order entered June 13, 2011).

standard medical certificate form, which should be accepted by PPL as an appropriate vehicle for obtaining medical certificates.

I further recommend that PPL be required to revise its call scripting so that customers are properly informed that they can obtain medical certificates through either a medical certificate form, or through a letter which contains the required elements for medical certificates.

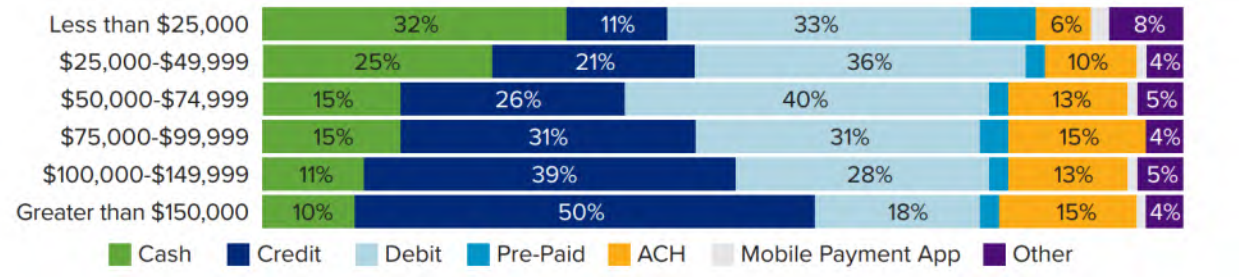
Finally, I recommend that PPL be directed to amend its monthly bill provided to customers with active medical certificates to clearly indicate that, to be eligible for medical certificate renewals past two, the customer must pay their current charges, and the amount of those current charges. To help ensure that this information is being communicated to customers in a clear and accurate manner, I recommend that PPL present a draft of these revisions to its USAC for feedback, and incorporate suggestions provided by the Committee related to the same.

I recommend that these important reforms to PPL's medical certificate policies and procedures be finalized upon 120 days of the implementation of rates in this proceeding.

IX. THIRD-PARTY PAYMENT FEES

Q: Please describe PPL's proposal to eliminate fees for bill payment by its customers.

A: PPL proposes to include in base rates the cost of payment transactions fees in base rates for customers who make payment by credit and debit cards, as well as electronic payment methods such as Venmo and Paypal.[276] PPL clarified in response to



[276] PPL St. 18 at 7.

discovery that it is also proposing to eliminate the fees for customers who pay in cash via either Western Union or via bill payment centers that use Fiserv.[277]

Q: Do you support this proposal?

A: Yes. As noted by PPL, the burden of these fees falls heavily on low income households who paid more than $2.1 million in fees to pay their bills from November 2023 and October 2024.[278] This data is compelling and consistent with national data from the Federal Reserve that shows that low income households are far less likely to use ACH transfers than households at higher income levels. Based on data from the Federal Reserve, lower income households use cash and debit cards far more often than other payment types – together these two payment types comprise 65% of the payment instrument used for households with income less than $25,000.

Table 28: Share of payment methods by household income.[279]

In conducting its study, the Federal Reserve found that approximately 20% of the share of households earning less than $25,000 per year are reported to be unbanked.[280] These unbanked households are thus reliant on payment methods other than check or ACH and that have historically required a fee. Reducing the burden on these households by

[277] PPL Response to CAUSE-PA V-6, attached hereto at Appendix C.
[278] PPL St. No. 18 at 8-9.
[279] The Federal Reserve Financial Services, 2024 Findings from the Diary of Consumer Payment Choice at 10, Figure 8, available at: https://www.frbservices.org/news/research/2024-findings-from-the-diary-of-consumer-payment-choice. (last visited December 2, 2025)
[280] Id.

allowing them to pay their bills without payment of a fee will ensure that these households who are already economically stretched will have more money available to pay their utility bills and other essentials. Thus, I support PPL's proposal to cover these fees in base rates.

Q: Do you have a recommendation of the amount of fees that should be allowed to be recovered in rates?

A: No. I do not have a recommendation but submit that the Commission should ensure that the amount allowed to be included in rates is a reasonable projection of the costs that will be incurred during the FPFTY.

X. ECONOMIC DEVELOPMENT (OPPORTUNITY PA. PROGRAM)

Q: Please explain PPL's proposed Opportunity Pennsylvania Program (OPP).

A: PPL proposes a new ratepayer funded program that would provide direct reimbursement to local governments and nonprofit economic development organizations to support site studies, due diligence, and infrastructure improvements grants for future economic development.[281] In addition, PPL proposes to fund expert consultants or grant writers to prepare and submit competitive applications for state and federal economic development initiatives.[282] PPL specifically seeks $400,000 annually in rates for this program. Of this amount, PPL seeks to allocate $274,677 specifically to residential customers.[283]

[281] PPL St. No. 21 at 6.
[282] Id.
[283] PPL Response to EJA III-34, attached hereto at Appendix C.

Q: Do you support the OPP initiative being paid for with ratepayer funds?

A: No. I take no position about whether the proposed OPP is a good program or would be useful to the communities that PPL targets. I have no reason to think that it would not be, but this is not a program that should be funded by ratepayers' dollars. If PPL wishes to operate this program and provide grant funding to communities, it can do so with shareholder dollars or retained earnings. Other than aspirational platitudes, PPL has made no showing that the funding will result in real or tangible benefit to its ratepayers. These costs are not required by law and are not reasonable, prudent or in furtherance of the provision of public utility service. They should not be paid for in rates by ratepayers.

XI. OTHER TARIFF ISSUES

Q: What will you discuss in this section of your testimony?

A: I discuss various revisions to its tariff that PPL proposes which either directly or indirectly impact the rates or quality of service of low income customers. The issues addressed in this section concern issues with PPL's tariff that I have not addressed in relation to the other issues in my testimony.

First, I discuss PPL's proposed changes to its definitions including its proposal redefine the definition of "maximum registered peak load" to account not only for peak demand, but also peak export for certain net metered no load customers.[284] I also discuss some rider related changes that I propose for net metering customers.

Second, I discuss PPL's proposed definition of the term "tenants" is unreasonably narrow and excludes tenants of single family homes as well as those with a tenure of occupancy less than one years.

[284] PPL St. No. 15 at 4.

Third, I discuss PPL's proposed changes to Rule 5 – Use of Service and its proposed submetering proposals.

Fourth, I discuss PPL's proposed Limitation of Liability provisions and the need to revise these proposals to more equitably account for customers who are experiencing service disruptions.

Fifth, I discuss necessary reforms to PPL's reconnection fees so that low income customers can waive these fees.

Sixth, I will discuss PPL's proposed security deposit policy for confirmed low income customers, as well as its section on the limitation of liability.

Finally, I will discuss PPL's Rule 9 related to billing and payment and the need to accommodate time for mail to arrive before determining when bill is considered received by a customer.

A. Net Metering

Q: Please explain the changes that PPL proposes related to its definition of "maximum registered peak load" in its tariff.

A: PPL proposes to make this definition bi-directional. Under its current tariff, PPL's definition only accounts to the registered peak demand by net metered, non-residential customers. It proposes to change its definition to account for both demand (the amount taken from the system for interconnected customers) and supply or export (the amount provided or sold to the system by these same customers). That is, PPL is proposing to define the term "maximum registered peak load" as "a customer's net demand contribution impact to the Company's default service procurement activity, as determined

upon the net power flow from or into the Company's distribution system."[285] PPL says that it is making this proposed change now because it is projecting a substantial increase in the number of net metered customer generators "who do not have independent load to offset their electric usage."[286] According to PPL, these customers operate on the distribution system for the primary purpose of operating a generation system to sell electricity back to the distribution system under the operable net metering rules. These rules allow them to bank their sales and produce significant excess generation that is paid out at the applicable price to compare – which under current rules is at GSC-1 rates. PPL states that the current system – which does not account for sales back to PPL for the definition of maximum registered peak load – "fails to reflect the stress that the behind-the-meter generation puts on PPL Electric's distribution system and results in non-net metering Small C&I default service customers"[287] paying significant sums to annually cash out what are effectively merchant generators. According to PPL, as of March 31, 2025, the annual net metering cash-out for the Small C&I customer class is $11 million; however, based on the number of projected interconnection requests, that amount could be as high as $300 million by 2029.[288]

Q: What would be the impact of PPL's proposed change?

A: If PPL's proposed change is approved, customers currently receiving service and net metering compensation at the GSC-1 rate schedule will be reclassified as GSC-2 customers and their excess generation will be paid based on the default service pricing for that class, which is significantly lower than the default service pricing for the GSC-1

[285] Id. at 5:16-18.
[286] Id. at 5:28-6:1.
[287] PPL St. No. 15 at 6:10-12.
[288] Id. at 7:3-7

class as GSC-2 is calculated based on real time pricing of the customer class.[289] According to PPL, no other aspect of the rate charged or credited to customers other than the GSC rate will be affected.[290]

Q: Do you support PPL's proposed change?

A: Yes. Many affordable multifamily housing providers that provide subsidized housing to low income households take rates at the small commercial class and are directly impacted by paying out excess compensation to merchant generators at rates that are artificially high because of the current classification. Furthermore, I am concerned that as the rate paid for excess compensation under the current system increases, there will be significant pressure to spread that costs to residential rate classes because of the upward pressure on default service rates for small commercial customers.

Finally, as a matter of public policy, it is my view that the current net metering rules did not envision a situation whereby a net metered customer would have no load or *de minimis* native load and would exist for the sole business purpose of selling energy back to the distribution system at the price to compare. The rules that allow for the sale of excess generation were meant to complement the rules that allow net metered customers to offset their own usage by that system; they were not meant as an end around interconnection at the wholesale level.

[289] Id. at 7.
[290] PPL Response to JSA III-10, attached hereto at Appendix C.

Q: Do you have other tariff-related issues to address for net metered customers?

A: Yes. Under PPL's current and proposed tariff, all net metered customers are able to avoid paying universal service costs for their credited monthly generation which offsets their usage.[291] This is because PPL's net metering rider includes all riders in the full retail rate credited to these customers and only requires these customers to pay the monthly fixed customer charge.[292] In my view, it is not equitable for net metered customers to avoid paying the public purpose costs associated with the universal service rider or the costs associated with Act 129 compliance. Thus, I propose that at the effective date new rates in this case, the net metering rider used to calculate the amount of net metered compensation credited to net-metered customers be *exclusive of* the USR and ACR riders such that customers would still be responsible for these riders based on their volumetric usage notwithstanding their generation. To make this change, I propose the following language be modified in PPL's proposed tariff, on page 21B of PPL's proposed original tariff 202 (my proposed additions are in **red bold and underline**):

> A customer enrolled in net metering under this Rider will be billed under the following terms and conditions.
>
> Customer-Generator Supplies More Electricity than Delivered by the Company.
>
> 1.
>
> . . .
>
> The customer-generator is responsible for the customer charge, demand charge and other applicable charges, **including payment of the Riders USR and ACR-4 at rates that they otherwise would have paid in the absence of net-metering,** under the applicable Rate Schedule.

[291] PPL Response to CAUSE-PA X-17, attached hereto at Appendix C.
[292] See PPL Electric Exhibit GEO-1 at 55, Proposed Electric Pa. P.U.C. No. 202, Original Page No. 21B.

> Company Delivers More Electricity than Supplied by Customer-Generator.
>
> 2.
>
> . . .
>
> The customer-generator is responsible for the customer charge, demand charge and other applicable charges **including payment of the Riders USR and ACR-4 at rates that they otherwise would have paid in the absence of net-metering,** under the applicable Rate Schedule.

This change would continue to compensate net-metering customers at the full retail rate consistent with applicable law while giving credence to the provisions of the public utility code that require that Universal Service costs to be assessed on a *non-bypassable* basis[293] and that Act 129 costs to be recovered on a full and reconcilable basis from customers.[294]

B. Tenants

Q: Please briefly summarize PPL's definition and treatment of tenants contained in its proposed tariff.

A: PPL's proposed tariff provides for a new definition of "tenant":

> [An] occupant of a multi-tenancy commercial building or parcel where it is expected that tenure shall be for a year or more. For the purpose of this rule, the term multi-tenancy commercial building shall include any structure which contains or houses 3 or more separate and distinct residential or commercial units.[295]

In turn, Rule 5.E. of PPL's proposed tariff provides that, for service locations connected after May 21, 1980, tenants must be metered and billed individually by PPL except where PPL has permitted certain master metering with resale, as set forth in proposed Rule 5(E)(2). [296]

---

[293] 66 Pa. C.S. § 2802(17).
[294] 66 Pa. C.S. § 2806.1(k).
[295] PPL Electric Exhibit GEO-1 at Page 14 of 662.
[296] Id. at Page 32 of 662.

Q: Do you have any concerns about PPL's proposed definition of tenant, as you have outlined above?

A: Yes. I am concerned that PPL's definition of tenants is inappropriately narrow and may limit the ability of residential tenants in various types of housing types and metering configurations to exercise their statutory and regulatory rights and protections.[297]

PPL proposes revising its tariff so that the definition of tenants includes only those occupants of multi-tenancy commercial buildings or parcels where it is expected that the tenant will remain for a year or more. This definition fails to capture the wide swath of tenants who receive electric service from PPL, including those tenants who do not live in multitenancy commercial buildings with three or more separate residential/ commercial units. Tenants with short-term leases that are less than a year, or who cannot affirmatively show that they plan to maintain their tenancy for a year or more, will also be excluded from this definition.

Tying this definition of tenancy to Rule 5.E. means, as a practical matter, that if a tenant does not meet the narrow definition currently proposed, they will fall outside the bounds of Rule 5.E. This makes it wholly unclear whether and to what extent these individuals must be metered and billed individually by PPL, as set forth in Rule 5.E. The proposed limitations of PPL's definition of tenancy may also limit the ability of many tenants to access other programs and protections offered by PPL. For example, under this proposed definition, tenants who do not live in narrowly prescribed multitenancy housing, or who cannot show that their tenancy will be for a year or longer, may be unable

[297] See generally 66 Pa. C.S. Ch 15, subch. B; 52 Pa. Code Ch 56.

to access LIURP services, even if they are a PPL customer and have landlord consent to such services.

Q: Do you recommend that PPL revise its definition of "tenant" contained in their proposed tariff?

A: Yes. I recommend that PPL be required to amend its proposed definition of "tenant" to more broadly capture tenants who receive PPL services. I specifically recommend that PPL adhere its definition to the relevant portions of the definition of "tenant" contained in the Section 1521 of the Public Utility Code:

> **"Tenant."** Any person who is contractually obligated to make rental payments to a landlord or property owner pursuant to a rental arrangement, including, but not limited to, an oral or written lease with the landlord or property owner for a dwelling unit in a residential building or mobile home park.

This definition of "tenant" borrows relevant language from the Public Utility Code, which creates an inclusive definition that more appropriately captures the full array of tenants who may be receiving PPL services, rather than narrowing this definition to only those customers who live in specific housing, or who can show lease terms which are a year or longer.

C. Submetering

Q: Please explain the changes that PPL proposes related to submetering.

A: In its proposed changes to Rule 5, PPL is proposing various changes to the way it will allow the redistribution of its service from a master-meter to non-utility owned sub-meters. Specifically, it proposes to allow submetering where it "is neither feasible nor practical from a financial, technical, engineering, and/or any other valid reason. If the Company approves an exception to this Rule, the master meter must be designed so that it will not achieve a notable reduction in consumption of electricity by tenants in the

building than if the tenant units had individual electric meters within the building with efficient heat controls."[298] PPL also proposes two new conditions when and where it will allow submetering to occur: (1) where the master metered customer is part of subsidized or public housing, an assisted living or rehabilitation facility, or student housing, and/or (2) if the Company determines that it is not beneficial for the Company to individually meter tenants.[299]

Q: Do you have concerns about this tariff language?

A: Yes. First, my general concern with submetering is rooted in situations where submetering facilitates the resale of electric service to tenants. This causes a whole host of potentially negative consequences, including but not limited to:

- The inability of submetered tenants – particularly those who reside in public or subsidized housing – from accessing assistance through CAP, LIURP, or Operation Help;
- The difficulty of enforcing Section 1313 of the Public Utility Code[300] and the risk of sub-metered tenants paying more than they otherwise would have paid had they been individually metered by PPL – or if the building remained master metered without submetering;
- Sub-metered units facing termination of their service without required or sufficient notice, during the winter months, or when a member of the household has a medical condition that would be aggravated by termination of service;
- The bundling of multiple utility services on one bill thus obscuring transparency of the charges and the possible bundling of other goods and services; and
- The imposition of other harsh consequences on submetered tenants as a consequence for non-payment, including eviction or the loss of housing.

Second, I am concerned that PPL's tariff restricts submetering to situations where the master metered units are designed to use the same amount of electricity or more than if the units were individually metered by the Company. This would seem to run counter to

[298] See PPL Electric Exhibit GEO-1 at 32, Proposed Electric Pa. P.U.C. No. 202, Original Page No. 10.
[299] See PPL Electric Exhibit GEO-1 at 33, Proposed Electric Pa. P.U.C. No. 202, Original Page No. 10A.
[300] 66 Pa. C.S. § 1313.

the desired purpose of submetering from the perspective of the customer which is likely to facilitate engagement in more targeted and directed energy efficiency and conservation designed to reduce electricity overall in the building.

Q: Do you have proposed revisions to Rule 5(E)?

A: Yes, I propose the following revisions to Rule 5(E). My changes are noted in red.

E. REDISTRIBUTION OF SERVICE

(1) At the service locations covered hereunder connected after May 21, 1980, each tenant shall be served, metered and billed individually by the Company under the appropriate rate schedule except where the Company has permitted master metering with resale in accordance with the provision of Tariff Rule 5(E)(2). Upon application to the Company, any owner (or their duly authorized representative) of a new multi-tenancy commercial building may seek an exception to Tariff Rule 5(E) by demonstrating that the installation of individual electric meters at each separate unit within the building is neither feasible nor practical from a financial, technical, engineering, and/or any other valid reason. If the Company approves an exception to this Rule, the master meter must be designed so that it will not ~~achieve any notable reduction in the consumption of electricity by the tenants in the building than if the tenant units had individual electric meters within the building with efficient heat controls.~~ result in a notable increase in consumption but is designed to allow the master metered customer to either maintain or reduce consumption.

(2) Company, at its discretion, may permit submetering for both existing and new service locations when the conditions are present:

(a) It is impractical for the Company to separately bill each tenant;
(b) Each tenant has control of the majority of their electric energy use;
(c) Customer is part of a US-HUD funded Housing, Assisted Living, Nursing Home Care Rehabilitation facilities, Student Housing - higher education; Federal/State/County/City/Municipal/Public Housing; and/or
(d) At the Company's discretion, it is not beneficial for the Company to meter individual tenants.

Effective July 1, 2026, any locations that are permitted to submeter pursuant to Rule 5(E)(1) or (2) shall not be permitted to resell their energy or re-bill residential tenants for submetered service.

These changes would help to ensure that submetering where permitted promotes energy conservation, does not sever consumer protections accessible directly to customers, and creates a benefit for customers without adding the unnecessary complexity and inherent danger of permitting third party entities to re-bill for service.

Q: Do you have any other submetering issues that you wish to address?

A: Yes. In response to discovery, PPL indicated that it would fully comply with the provisions of DSLPA and would allow tenants "the option to pay the most recent sub-metered bill to maintain service."[301] PPL further indicated that it would rely on the landlord or tenant to provide the amount of that bill that would be paid to maintain service to the building under DSLPA, and that in the event that the tenant paid this amount that service would remain on to the entire building.[302] I support this approach, but in order to be actionable and enforceable by a tenant PPL must include and clarify this in its tariff. Furthermore, to ensure that households who are submetered (whether rebilled or not) can take advantage of this commitment, I propose that PPL make the following addition to Rule 5(E):

> (4) Tenants who are served by a master meter retain all rights under 66 Pa. C.S. § 1521 et seq., the Discontinuance of Service to Leased Premises Act regardless of whether the Landlord Ratepayer has sub-metered the location pursuant to the terms of this tariff. For Tenants who have sub-metered service, the amount that the Tenant will be required to pay to maintain service to the entire premises will be based on the Tenant's sub-metered usage for the 30 days prior to the notice required by law.

Finally, I recommend that sub-metered tenants who are income eligible should be eligible to receive an Operation HELP or Good Neighbor Fund grant from PPL. While I understand

[301] PPL Response to CAUSE-PA V-1, attached hereto at Appendix C.
[302] PPL Response to CAUSE-PA IX-11, attached hereto at Appendix C.

the constraints that would not allow these tenants to take full advantage of CAP, since PPL is permitting master-metered customers to sub-meter and rebill distribution service, these tenants should have access to the emergency grant assistance program offered by the utility. Thus, I recommend that PPL clarify in its tariff and its USECP that sub-metered customers are able to access Operation HELP and Good Neighbor Fund grants under the same terms as if they were otherwise customers of PPL.

D. Security Deposits

Q: Do you have any concerns related to PPL's imposition of security deposits on its residential customers?

A: Yes. I am concerned that PPL's proposed tariff prescribes narrow requirements for waiving security deposits for low income customers, which are out of line with Commission guidance and prevent customers from accessing this protection.

The Commission permits – but does not require – a jurisdictional utility to charge a security deposit in certain situations. If a utility opts to impose a security deposit, is prohibited from assessing such a deposit if an applicant is income eligible for a customer assistance program.[303] The legal aspects of this issue will be addressed by Counsel through briefing, but as a matter of policy, the Commission has issued explicit guidance that a low income household does not need to enroll in CAP, or another universal service program, for the prohibition on security deposits to apply.[304] In its Attachment A to its Chapter 56 Rulemaking Order, the Commission explained that the prohibition on

[303] 52 Pa. Code § 56.32(e).
[304] Rulemaking to Amend the Provisions of 52 Pa. Code, Chapter 56 to Comply with the Amended Provisions of 66 Pa. C.S. Ch. 14, L-2015-2508421, Final Rulemaking Order, Attachment One at 48 (Feb. 28, 2019).

collecting security deposits from low income customers is "referring to eligibility based upon the customer's household income – *not on other miscellaneous eligibility criteria that can vary by utility*."[305] The Commission also requires both verbal notice of the exemption to be provided to applicants and customers *at the time the security deposit is assessed*, as well as instructions for how the applicant or customer can verify income.[306]

PPL indicates that it will not assesses a security deposit for an applicant with income at or below 250% FPL.[307] Pursuant to Rule 9 of PPL's proposed electric tariff, PPL will waive the security deposit for low income applicants if an CAP agency verifies the applicant's household income.[308] Thus, if an applicant or customer provides PPL with information indicating low income status through other means, including through PPL's customer service representatives, they would not be eligible for this protection unless they affirmatively verify their incomes through an CAP agency. Similarly, PPL indicates that it will provide a security deposit refund only where the customer has been verified to be low income either by a partner agency or identified as a LIHEAP recipient through an internal report.[309]

Q: Do you have any recommendations to reform PPL's policies for assessing security deposits against low income customers?

A: Yes. I recommend that PPL be directed to amend its electric tariff so that no security deposits may be imposed in any circumstances where PPL receives information that a customer or applicant for service has a household indicating low income status.

---

[305] Rulemaking to Amend the Provisions of 52 Pa. Code, Chapter 56 to Comply with the Amended Provisions of 66 Pa. C.S. Ch. 14, L-2015-2508421, Final Rulemaking Order, Attachment One at 48 (Feb. 28, 2019).
[306] Id.; see also 52 Pa. Code §§ 56.36, 56.286.
[307] PPL Response to CAUSE-PA III-24, attached hereto at Appendix C.
[308] PPL Electric Exhibit GEO-1 Page 42 of 662.
[309] PPL Response to CAUSE-PA III-11, attached hereto at Appendix C.

PPL is not required to assess these deposits, but is permitted to do so, and thus I recommend that PPL adopt a more permissive approach than requiring income verification and instead it allows customers to attest to their income to a PPL representative or through a CAP agency to receive this protection without the need for additional income verification.

Q: Do you have any other concerns about PPL's security deposit policies?

A: Yes. In addition to the concerns identified above, I am also concerned that PPL's policy for refunding security deposits to customers who are confirmed to be low income is not in line with Commission policy. If a customer is not in arrears and their bill is not yet due, it appears that PPL provides the customer with the option of applying the refund to their current bill or obtaining a refund of the amount.[310] However, PPL does not appear to provide customers with the option of a refund if they have a past due balances – in which case the refund is applied to the current bill.[311] In addition, PPL directs that (1) if the customer has a payment arrangement, they should not be provided a refund until the balance is clear; and (2) if a customer is in arrears without a payment arrangement, the security deposit amount should be applied to the customer's account balance.[312] If PPL provides a customer with a bill credit for a security deposit because the customer enrolls in CAP, PPL credits this amount to the customers' account balance existing prior to CAP enrollment.[313]

I disagree with PPL's method of "refunding" security deposits to its customers. Section 56.32(e) of the Commission's regulations prohibit utilities from collecting cash

[310] PPL Response to CAUSE-PA X-15, Attachment 1, attached hereto at Appendix C.
[311] Id.
[312] Id.
[313] PPL Response to CAUSE-PA X-14, attached hereto at Appendix C.

deposits if a customer or applicant is confirmed to income eligible for CAP.[314] Once it is determined that the customer is low income, any previously collected security deposit should be returned to the customer and should only be applied to the customer's account if the customer explicitly requests this method of refund. I am particularly concerned that PPL appears to be applying security deposits to CAP customers preprogram debt that should otherwise be frozen and eligible for forgiveness – instead of returning the amount to the CAP customer or applying the credit to the customer's asked-to-pay amount.

Low income customers struggle to afford basic necessities and must often make the untenable choice between paying for utility service and these other necessities. Return of an inappropriately assessed security deposit can make the difference of a low income family being able to afford food, water, rent, and medicine that month. The Commission's regulations acknowledge these struggles by prohibiting utilities from collecting security deposits from households determined to be income eligible for CAP. It is critical that low income households can direct how a previously paid security deposit is refunded.

Q: Do you have any recommendations to improve PPL's policies for returning security deposits to customers who are found to be income eligible for CAP?

A: Yes. If a customer is confirmed to be income eligible for CAP and they have previously been assessed a security deposit, customers should be provided with the option about whether they have this amount applied to their bills or refunded, regardless of whether they have a past due balance, are enrolled in CAP, or have a payment arrangement. Under no circumstances should the security deposit amount be applied to

[314] 52 Pa. Code § 56.32(e).

pay down arrears already eligible for forgiveness through PPL's CAP unless that is the fully informed and affirmative choice of the customer. I recommend that PPL amend its policies, procedures, training materials, and customer communications to align with this change within 120 days of the effective date of rates in this proceeding.

E. Limitations of Liability

Q: Please summarize PPL's proposals to limit its liability to customers related to service disruptions which you would like to address.

A: PPL proposes revising its electric tariff to include several provisions which would limit its liability to customers related to the continuity of service. These provisions would limit PPL's liability to its customers for service interruptions and limitations – as well as damages and injuries incurred because of these service interruptions and limitations.[315]

Absent willful and/or wanton misconduct, PPL proposes to include tariff language limiting its liability to customers for damages to a maximum amount of the greater of $500 or two times the charge to the customer for the service affected during the period in which the damages occurred.[316]

Q: Do you have any concerns about these?

A: Yes. I am concerned that PPL's tariff proposals to limit its liability to customers do not provide sufficient protection for customers who experience service disruptions. Specifically, I am concerned that customers whose service is disrupted will still be responsible for paying for services they are not receiving during any disruption of service. This is squarely inequitable, particularly as customers who experience service disruptions

[315] PPL Electric Exhibit GEO-1, Page 29-30 of 662, Rule 4.F.
[316] Id.

may suffer other economic consequences from these disruptions, such as the loss of food and medicine which require refrigeration. Furthermore, PPL has not provided support for its choice of $500 as the threshold for liability.

Q: Do you have any recommendations to improve PPL's liability provisions so that customers are better protected when their service is disrupted?

A: Yes. I recommend that PPL revise its proposed Rule 4 provisions related to limitation of liability to clearly indicate that PPL will not charge customers for affected service during periods of service disruption. I note that my recommendation is in line with provisions contained in PECO's electric tariff. PECO's tariff sets for a cap on liquidated damages of $1,000 or two times the charge to the customer for affected service – and provides, in relevant part that "…no charge will be made to the customer for the affected service during the period in which such interruption, reversal, spike, surge or variation in supply or voltage, transient voltage, or any other failure in the supply of electricity occurs."[317]

I recommend that PPL adopt similar language to that found in PECO's electric tariff related to protecting customers from being charged during periods of service disruption. I also recommend that PPL revise its policies, procedures, and customer communications in line with these revisions. In addition, I recommend that PPL increase its limitation of liability provisions to $1,000 or two times the charge to the customer for affected service in line with PECO's current limitation.

[317] PECO Energy Company, Tariff Electric Pa. P.U.C. No. 8, Original Page No. 22, available at https://www.peco.com/cdn/assets/v3/assets/blt1b5616c79bacadb4/blt9448ea371fcf175a/692cdea0c26a193d43c9ec09/Current_Electric_tariff_Effective_Dec1_2025.pdf?branch=prod_alias. (last visited Dec. 2, 2025)

F. Reconnection Fees

Q: Does PPL charge residential customers a reconnection fee?

A: Yes. PPL charges a flat reconnection fee of $14 for all residential customers, which does not vary by CAP participation or any other factor.[318] PPL does not waive reconnection fees for customers based on eligibility criteria.[319]

Q: Has PPL analyzed the costs and benefits of exempting confirmed low income customers from reconnection fees?

A: No.[320]

Q: Do you have any concerns about PPL's reconnection fees for residential customers?

A: Yes. As a practical matter, any dollars that customers must pay for a reconnection fee is less dollars that they have available for essential goods and services including their electric bill. In my view, it makes little sense to charge low income customers a reconnection fee after they have been involuntarily terminated because of their inability to pay. These households have already demonstrated that they have little to no resources to afford to reconnect service. Any resources that these households do have should be used to pay down debt, not pay and additional cost to reconnect to services.

As discussed extensively above, PPL's low income customers are terminated for nonpayment at far greater rates compared to residential customers. The many low income customers who experience service termination then face the additional barrier of

[318] PPL Response to CAUSE-PA VII-12, attached hereto at Appendix C.
[319] Id. PPL Response to CAUSE-PA VII-13, attached hereto at Appendix C. PPL indicates that its reconnection fee for residential customers is based on the cost savings achieved through implementation of remote switching technology, which was approved as part of PPL's Petition for Approval to Use the Remove Service Switch In Its Meters For Involuntary Service Termination at Docket No. P-2016-2524581.
[320] PPL Response to CAUSE-PA VII-16, attached hereto at Appendix C.

having to provide a reconnection fee in addition to the overall requested amount to reconnect to services.

Q: Do you have any recommendations related to PPL's reconnection fees for confirmed low income customers?

A: Yes. I recommend that PPL waive reconnection fees for all confirmed low income customers whose service is disconnected. As discussed, PPL's low income customers are terminated for nonpayment at far higher rates compared to residential customers as a whole. Since PPL does not waive reconnection fees for any customers, including low income customers, PPL's low income customers ultimately incur reconnection fees at greater rates because of these disparities. Eliminating reconnection fees for confirmed low income customers will alleviate additional barriers that low income customers face when seeking to reconnect to services and make it easier for these financially vulnerable customers to reconnect to services essential to staying safe and healthy in their homes.

Q: Are you suggesting that PPL should not be able to recover the costs associated with reconnection of confirmed low income customers?

A: No. These costs should be quantified and collected on a normalized basis as a part of PPL's overall operating expenses in the context of its next rate case.

G. Billing and Payment Timing

Q: Do you have any concerns about the billing provisions contained in Rule 9 of PPL's proposed tariff which you would like to address?

A: Yes. Pursuant to Rule 9 of PPL's proposed electric tariff, customer bills "are considered as received by customer when delivered via the U.S. Postal Service or rendered electronically to the premises where the service is supplied or an address

mutually agreed upon."[321] A customer's due date is not extended because of a delay in the receipt of payment, or because of failure to receive bill.[322]

I am concerned that it is unclear based on Rule 9 of the proposed tariff whether bills are received by a customer when the bill is mailed via the U.S. Postal Service, or when the customer receives the bill from the U.S. Postal Service. Rule 9 provides that, for services rendered under or in conjunction with residential rate schedules, the due date for a bill is not less than 20 days from the date the bill is sent.[323] These provisions appear to suggest that PPL is basing delivery of their bills for residential customers on the date that bills are provided to the U.S. Postal Service – rather than the date that the customer actually receives their bill.

I am concerned that customers who opt to receive a bill via the U.S. Postal Service will have fewer days to pay their bill. Even assuming that the customer does not experience any mail delays or issues, it still takes approximately 2-3 days for first-class mail to arrive via the U.S. Postal Service.[324] If a customer receives a bill which is delayed through the U.S. Postal Service, they will have a shortened period to make timely payment or contact PPL if they have questions about their bills or are experiencing payment difficulties and need to apply for assistance.

---

[321] PPL Electric Exhibit GEO-1 Page 41 of 662.
[322] Id.
[323] PPL Electric Exhibit GEO-1 Page 40 of 662.
[324] USPS Transit Time Map, available at: https://www.usps.com/service-standards/?msockid=35c09b8157146ba12cca8e4e56666aa2. (last visited Dec. 3, 2025)

Q: Do you have any recommendations to improve how PPL treats bills rendered through the U.S. Postal Service?

A: Yes. PPL should revise its tariff, and attendant policies and procedures, so that bills are considered rendered within 3 days from when they are placed in the mail. This 3-day rule is in line with U.S. Postal Service delivery periods discussed above.

XII. SUMMARY AND CONCLUSION

Q: Please summarize the recommendations which you have set forth in this direct testimony.

A: As described in detail above, I make the following recommendations:

Rates and Rate Design

- The Commission should impose a mitigated/imputed ratemaking capital structure that is either aligned with PPL's corporate grandparent – PPL Corporation – or at least one that weighs debt and equity equally at 50/50.
- The Commission should reduce the requested ROE to no more than the cost of equity.
- The Commission should deny PPL's request to increase its residential fixed monthly customer charge and should retain the current residential customer charge of $14.09 per month.
- The Commission should deny PPL's request to eliminate rate RTS.

Needed Improvements to Universal Service Programs

<u>Customer Assistance Program Recommendations</u>

- PPL should be required to modify its monthly CAP bill review process to review rates for all CAP customers, including those receiving the average bill CAP rate, to ensure they are always receiving the most advantageous available rate.
- PPL should be required to eliminate its maximum CAP credit policy and discontinue imposing maximum CAP credits.
    - If the Commission disagrees or rejects my recommendation that PPL discontinue the use of maximum CAP credit limits, PPL should alternatively be required to increase its maximum CAP credit limits for

each category of CAP customers by a minimum of 60% as outlined in my testimony.

- PPL should also continually update its CAP credit limits commensurate with any future increases in default service and base rates. PPL should be required to adjust these credits upwards each time it raises distribution rates as well as when its price to compare changes.
- PPL should:
    - Preemptively screen customers at risk of exceeding their CAP credit limits and educate these customers and the CBOs who administer their CAP about the availability of CAP credit exemptions.
    - Flag accounts *that are known to be eligible* for an exemption before they exceed the limits and automatically apply the exemption if the customer subsequently exceeds the CAP credit limits.
    - Coordinate with its USAC to develop a plan for screening and education related to CAP credit limits.
- PPL should be required to revise its policy to apply a true ***exemption*** to the maximum CAP credit limit, rather than requiring PPL customers to complete a new CAP application and re-enroll in the program.
- PPL should increase efforts to enroll customers in CAP that are known to be eligible for the program.
- PPL should be required to implement routine screening of its applicants for service and customers who call its call center for non-emergency calls to determine confirmed low income status and eligibility for CAP and other universal service programs.
- PPL should be required to revise its policies and procedures so that a 15-day hold is applied to a customer's account if they apply for CAP.
- PPL should be required to allow customers who have been terminated and applicants with prior balances to connect or reconnect to service by enrolling in CAP without any additional barriers.

LIURP Recommendations

- PPL should increase its LIURP budget by 20%, or $2.4 million.
- PPL should amend its policy to apply the 5-year LIURP lookback only in cases where customers have received weatherization measures through WRAP.

Hardship Fund Recommendations

- PPL should be directed to undertake review and revision of its policies for its Community Based Organizations administering the hardship fund grant so that

CBOs are provided more direction related to providing hardship fund grants, as outlined above.

- PPL should be required to track information related to hardship fund applicants and denials as outlined in my testimony.

Universal Service Cost Recovery

- The Commission should require PPL to assess USR costs broadly across all rate classes. First directly assigning $10 million of USR rider costs annually to be collected from the LP-5 rate class, which should be adjusted at each rate case to account for the cost increases in energy, capacity, and transmission costs associated with data center load growth within PPL's service territory, and then allocate the remainder of costs based on the allocators in PPL's ACOSS based on the kWh usage for each rate class projected as of the FPFTY.

- The Commission should reject PPL's proposal to directly allocate the $1.4 million in employee costs to the USR and instead these costs should continue to be included in base rates.

Payment Arrangements

- PPL should be directed to undertake a revision of its policies and procedures related to payment arrangements to explicitly consider a household's ability to pay rather than simply imposing formulaic payment arrangements

- PPL should revise its policies and procedures for issuing payment arrangements through IVR systems. Customers who provide income information indicating low income status should be informed of the benefits of CAP and hardship funds and should be provided with the opportunity to apply via a transfer to a customer service representative.

- PPL should revise its policies and procedures so that a hold is placed on customers' accounts when they have a pending CAP application.

Medical Certificates

- PPL should be required to undertake a review of its call scripting and training materials for its customer service representatives and revise these documents so that PPL's representatives are correctly informing customers that they may continue to renew their medical certificates past two renewals if they are able to pay their current charges.

- PPL should revise its policies so that customers seeking medical certificates are provided with a medical certificate form by PPL or instructed how to download the form from PPL or the Commission's website, rather than the customer's medical provider having to reach out to obtain this form

- PPL should amend its monthly bill provided to customers with active medical certificates, as outlined above.

Third Party Payment Fees

- The Commission should approve PPL's proposal to eliminate third party payment fees and roll those costs into rates, but should ensure that the amount of fees which are allowed to be recovered in rates is a reasonable projection of the costs that will be incurred during the FPFTY.

Opportunity PA Program

- The Commission should deny PPL's proposal to collect its OPP program costs in rates. If PPL wishes to operate the OPP initiative, it should do so with shareholder dollars or retained earnings, rather than paid for in rates.

Tariff Issues

- PPL's proposed change to the definition of "maximum registered peak load" should be approved.
- At the effective date new rates in this case, the net metering rider used to calculate the amount of net metered compensation credited to net-metered customers should be *exclusive of* the USR and ACR riders such that customers would still be responsible for these riders based on their volumetric usage notwithstanding their generation.

- PPL should be required to amend its proposed definition of "tenant" to more broadly capture tenants who receive PPL services, and to adhere its definition to the relevant portions of the definition of "tenant" contained in the Section 1521 of the Public Utility Code.

- PPL should revise its Tariff Rule 5(E) as outlined above to help to ensure that submetering where permitted promotes energy conservation, does not sever consumer protections accessible directly to customers, and creates a benefit for customers without adding the unnecessary complexity and inherent danger of permitting third party entities to re-bill for service.

- Clarify its Rule 5(E) tariff language so that tenants who are submetered can effectively exercise their rights to continued service in the event of termination of service by PPL to the master meter.

- PPL should be directed to amend its electric tariff so that no security deposits may be imposed in any circumstances where PPL receives information that a customer or applicant for service has a household indicating low income status.

- If a customer is confirmed to be income eligible for CAP and they have previously been assessed a security deposit, customers should be provided with the option about whether they have this amount applied to their bills or refunded, regardless of whether they have a past due balance, are enrolled in CAP, or have a payment arrangement.

- PPL should not be permitted to use the security deposit amount be applied to pay down arrears already eligible for forgiveness through PPL's CAP unless that is the fully informed and affirmative choice of the customer.
- PPL should be directed to revise its proposed Rule 4 provisions related to limitation of liability to clearly indicate that PPL will not charge customers for affected service during periods of service disruption.
- PPL should increase its limitation of liability provisions to $1,000 or two times the charge to the customer for affected service.
- PPL should be required to waive reconnection fees for all confirmed low income customers whose service is disconnected.
- PPL should revise its tariff, and attendant policies and procedures, so that bills are considered rendered within 3 days from when they are placed in the mail.

Q: Does this conclude your direct testimony?

A: Yes.

PROFESSIONAL EXPERIENCE

PENNSYLVANIA UTILITY LAW PROJECT HARRISBURG, PENNSYLVANIA
Of Counsel, February 2025 - Present
Executive Director, July 2015 - January 2020
Co-Director, January 2013 - June 2015
Staff Attorney, January 2011 - December 2012

The Pennsylvania Utility Law Project (PULP) is a specialized legal aid office of the Pennsylvania Legal Aid Network administratively housed within Regional Housing Legal Services. PULP's mission is to promote policies that enable consumers with low and moderate income to receive and maintain affordable utility and energy services and to live in energy-efficient homes.

As Of Counsel, in cases where I am not serving as an attorney, I provide analysis and testimony for PULP's clients in administrative proceedings before relevant state and federal agencies.

I cases where I am not serving as a policy or technical expert, lead the legal and policy work of the office and provide high-level legal expertise and strategic guidance to the organization. I seek to ensure that PULP's legal and policy advocacy and strategies are designed to effectively and zealously represent the interests of PULP's clients. I work to help shape PULP's legal strategy, influencing policy decisions, and ensuring equitable access to utility services for marginalized communities across Pennsylvania.

PENNSYLVANIA OFFICE OF CONSUMER ADVOCATE HARRISBURG, PENNSYLVANIA
Consumer Advocate, December 2021 – January 2025
(*Confirmed by the Pennsylvania Senate June 7, 2022*)

The Office of Consumer Advocate (OCA) is a state agency that represents the interests of Pennsylvania utility consumers before the Pennsylvania Public Utility Commission (PUC), federal regulatory agencies, and state and federal courts. The OCA was created by the Pennsylvania General Assembly in 1976 and is an independent office within the Office of Attorney General. As Consumer Advocate, I served as the head of the office and directed all policy and legal advocacy.

PENNSYLVANIA LEGAL AID NETWORK, INC. HARRISBURG, PENNSYLVANIA
Executive Director, January 2020 – December 2021

The Pennsylvania Legal Aid Network, Inc. (PLAN, Inc.) is a client-centered organization that provides leadership, funding, training, and support to a coordinated network of independent legal aid organizations that deliver civil legal aid to low-income Pennsylvanians and victims of domestic violence. As Executive Director, I provided strategic leadership and direction to PLAN Inc.'s activities and oversaw its advocacy, fundraising, and management.

PROFESSIONAL EXPERIENCE – CONT.

HONORABLE SYLVIA H. RAMBO, DISTRICT JUDGE HARRISBURG, PENNSYLVANIA
THE UNITED STATES DISTRICT COURT FOR THE MIDDLE DISTRICT OF PENNSYLVANIA
Senior Judicial Law Clerk, May 2009 - December 2010

Analyzed federal and state law on civil and criminal motions in all phases of litigation. Drafted judicial opinions in response to civil and criminal motions, including motions to suppress, motions to dismiss, summary judgment, post-trial motions, and habeas corpus petitions. Drafted comments that were given by Judge Rambo at public speaking events and supervised her law clerks and judicial interns.

MIDPENN LEGAL SERVICES HARRISBURG, PENNSYLVANIA
Managing Attorney, January 2009 - April 2009
Staff Attorney, September 2004 - December 2008

MidPenn Legal Services (MidPenn) is a non-profit organization providing legal services to low-income individuals and families, the disabled, the elderly, children, and survivors of domestic violence. I led MidPenn's Consumer Unit where I focused on litigating consumer and housing cases related to anti-predatory mortgage lending and consumer bankruptcy and defended clients against unscrupulous debt collection practices.

THE HONORABLE SYLVIA H. RAMBO, DISTRICT JUDGE HARRISBURG, PENNSYLVANIA
THE UNITED STATES DISTRICT COURT FOR THE MIDDLE DISTRICT OF PENNSYLVANIA
Judicial Law Clerk, August 2002 - August 2004

Researched and analyzed federal and state law on civil and criminal motions in all phases of litigation. Drafted judicial opinions in response to civil and criminal motions, including motions to suppress, motions to dismiss, summary judgment, post-trial motions, and habeas corpus petitions.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-1 Please identify the financial impact of the proposed increase to customers enrolled in PPL's Customer Assistance Program (CAP/OnTrack) by payment plan type. If you are unable to identify the financial impact, or assert that there will be no impact, please explain.

PPL Electric Response PPL Electric is not proposing a change to its OnTrack program in this rate case proceeding, and the Company has not performed a specific analysis of the financial impact of the proposed increase to PPL Electric's OnTrack customers by payment plan type. However, while OnTrack customer payment amounts on the Average Bill option may increase over time, OnTrack customer payment amounts for Percentage of Income ("PIP") option will not change. PPL Electric will, for each OnTrack participant, evaluate whether the PIP option or the Average Bill option will offer the best solution for the customer's situation, pursuant to the terms set forth in the Company's Commission-approved USECP. Further, using the 2024 program costs as a baseline, PPL Electric projects an overall increase to its monthly OnTrack shortfall expense of $968,468 due to proposed rate increases.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-2

Is PPL proposing to implement any changes to its Universal Services and Energy Conservation Plan (USECP) Programs in the context of the present proceeding? If so, please specifically describe any proposed change to PPL's USECP Program(s) PPL proposes, including the timeline for implementing changes.

PPL Electric Response

The Company is not proposing any changes to its Universal Service and Energy Conservation Plan (USECP) programs in the context of the present proceeding.

The Company is proposing to recover the salaries and wages of the internal employees who support the Company's universal service programs in its Universal Service Rider. However, this will not impact or change any program from a customer perspective.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-3

From July 1, 2023, to date, disaggregated by month and year, as of the last day of the month/year, please identify the number of PPL CAP customers whose bills were calculated based on:

a) Percentage of Income (PIP) bill;
b) Average bill;
c) Minimum bill; or
d) Other (please specify).

Please provide this data in a live Excel spreadsheet.

PPL Electric Response

See CAUSE-PA I-3 Attachment 1.

PPL Electric's 2023-2027 USECP eliminated the Agency Selected and the Percent of Bill Payment types and added the Percent of Income payment type. The system programming which put those changes into production went live on August 7, 2023. Customers who were enrolled in OnTrack in July 2023 remained on 18-month agreements.

Other Data results are accounts identified as OnTrack Seamless Move or accounts still active from prior program implementation pre-August 2023. In the Seamless Move process, the monthly installment is recalculated at the new address, but the installment type is not captured by the system; it is instead noted as a "Seamless Move" installment type.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-5

Please explain PPL's process for evaluating the bills of its current CAP customers to determine if they are receiving the most affordable CAP rate and ensuring that they are billed at the most affordable CAP rate.

PPL Electric Response

PPL Electric allows OnTrack customers to self report changes in income status so that an evaluation of their OnTrack installment amount can be performed. The Company also reevaluates a customer's OnTrack installment amount at the time that they re-certify for the program.

Additionally, PPL Electric uses an alert process to evaluate the CAP bill amount compared to the average bill. Specifically, PPL Electric runs a monthly report that will alert the Company to any OnTrack participants with an installment amount (i.e., OnTrack bill) greater than the average bill based on usage. A program specialist reviews the account, primarily usage history, and determines if an adjustment to the installment amount is needed. If the usage history is adequate and the average bill has gone down since enrollment, PPL Electric will reduce the installment amount. If the usage history is not adequate, but historical usage suggests that the installment will fall below average; the installment amount may not be reduced. PPL Electric may also adjust installment amounts at a future review as customers continue to build usage history.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-6

Please identify all categories or identifiers that PPL includes when calculating its "confirmed low income customer" count for the purposes of reporting pursuant to 52 Pa. Code § 54.75. If PPL uses a different definition or categorization criteria for "confirmed low income customer" for any purpose, please identify the alternative definition and/or criteria and explain why a different definition is used.

PPL Electric Response

PPL Electric reports confirmed low-income customers using the following criteria (customer only needs to meet 1 criteria).

1. Customer received a LIHEAP grant within the rolling 12 months from the report month.
2. Active OnTrack participant in the month reported.
3. Customer self-reported level 1 (150% of poverty or below) income to the Company.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-11	As of the most recent available date, how many estimated low income customers reside within PPL's service territory? Please explain how PPL arrived at its estimated figures and include citation and/or copies of all workpapers used to perform the estimation.
PPL Electric Response	See CAUSE-PA I-11 Attachment 1. The Company filed its most recent LIURP needs assessment on April 30, 2025, which included the estimated number of low income customers in the Company's service territory. PPL Electric's estimated low income customer count is 347,822.

PPL Electric Utilities LIURP Needs Assessment		
1. Estimated number of low-income households between 0%-150% of the FPIG	347,822	Confirmed Low Income and Experian estimated customers that all below 150% of poverty.
2. Confirmed number of low-income households between 0%-150% of the FPIG	215,699	Customer received LIHEAP, participated in OnTrack, or reported level 1 income to the Company.
3. Number of confirmed low-income customers with usage above 6,000 kWh	157,868	
3a. Received WRAP in the past 5 years	14,936	
3b. Have less than 9 months of usage history	6,838	
3c. Have been deferred due to health and safety issues	NA	The Company is not able to report this data.
3d. Are renters	39,344	
4. Number of OnTrack customers with annual usage at or above 18,000 kWh	16,545	
4a. Received WRAP in the past 5 years	5,984	
4b. Have less than 9 months of usage history	142	
4c. Have been deferred due to health and safety issues	NA	The Company is not able to report this data.
4d. Are Renters	4,691	
5. The percentage of renters projected to be ineligible due to landlord refusal to participate	NA	Customers that do not have landlord consent are provided baseload measures. The customer is not refused WRAP services.
6. The percentage of customers projected to drop-out, including the factors used to determ	20%	The Company divided the number of unresponsive customers by the total number of jobs created.
7. Entire pool of eligible customers	157,868	
7a. Received WRAP/Act 129	14,936	
Subtotal	142,932	
7b. Have less than 9 months of usage history	6,838	
Subtotal	136,094	
7b. Dropout rate (20%)	27,219	
Remaining eligible customers	**108,875**	
8. Cost to serve calculation		
8a. Percentage of Heating jobs completed in 2024	45%	
8b. Percentage of Non-heating jobs completed in 2024	55%	
8c. Percentage applied to remaining eligible customers (heat)	49,410	
8d. Percentage applied to remaining eligible customers (non-heat)	59,465	
8e. Average cost of heating jobs in 2024	$5,012	2024 Method 2 cost as reported in LIURP Data Request
8f. Subtotal to serve projected heating customers	$247,640,926	
8g. Combined average cost of baseload and water heating jobs in 2024	$3,579	2024 Method 2 cost as reported in LIURP Data Request
8h. Subtotal to serve projected non heating customers	$212,826,659	
Total projected cost to serve remaining eligible pool of customers	**$460,467,585**	

As filed on April 30th 2025

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-22	What is the average annual income of PPL's currently identified confirmed low income customers?
PPL Electric Response	The average annual income of PPL Electric's currently identified (as of October 22, 2025) confirmed low-income customers is $17,103.48. Note that the Company may not have income data for all confirmed low-income customers, particularly when the designation is based solely on the receipt of a LIHEAP grant.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-26 Please explain PPL's current process for referring customers who request payment arrangements to universal service programs. Please also provide copies of all current policies, procedures, and/or call scripts which describe PPL's process for referring customers who request payment arrangements to universal service programs.

PPL Electric Response Customers who contact PPL Electric for payment agreements are provided with information about PPL Electric's Universal Service Programs based on the income reported by the customer during the payment agreement transaction. If the income reported meets the eligibility criteria, scripting is automatically displayed to the call center agent prompting them to offer the programs available to the customer.

If the customer agrees to hear the information, the agent can then provide instructions on how to apply, as well as provide contact details if the application will be reviewed by an entity other than PPL Electric. Agency contact information may also be mailed to the customer, if they prefer. For PPL Electric's CAP program, OnTrack, the customer can request a paper application or may be transferred to a live agent who will take the application by phone.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA I-30

From January 2022 to date, disaggregated by month and year (as of the last day of the month/year), please provide the number of customers with an active payment arrangement and total debt associated with these accounts for each of the following customer segments:

a) All residential PPL customers;
b) Residential PPL customers, excluding confirmed low income customers and CAP customers;
c) Confirmed low income PPL customers;
d) Confirmed low income PPL customers, excluding CAP customers;
e) PPL CAP customers.

Please provide this data in a live Excel spreadsheet.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA II-5

Assuming that PPL treats an identical number of low income units as will be treated through LIURP in the current fiscal year, and assuming no unit will be retreated, please indicate the number of years it would take to treat 100% of the low income units identified in the above requested needs assessment(s).

PPL Electric Response

In its needs assessment, PPL Electric identified 108,875 as its eligible pool of customers. For calendar year 2024, PPL Electric completed 3,757 LIURP treatments.

Assuming an average of 3,757 treatments completed annually, it would take PPL Electric approximately 29 years to treat 100% of the eligible customer base across the territory. By way of further response, in addition to the annual WRAP budget, the Company's ability to complete LIURP jobs is a function of customer cooperation and contractor availability.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA II-11	From July 1, 2023 to date, disaggregated by year (as of the last day of the year), how many PPL customers were denied LIURP services for failure to meet the LIURP minimum usage threshold?
PPL Electric Response	If the customer does not meet the LIURP minimum usage threshold, they are referred to Act 129 for baseload services. The Company does not track the data associated with the referrals specific to this reason.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 16, 2025
Docket No. R-2025-3057164

CAUSE-PA II-12

From July 1, 2023 to date, disaggregated by month and year (as of the last day of the month/year), please provide the following information:

a) How many customers applied for a hardship fund grant?
b) How many customers received a hardship fund grant?
c) How many hardship fund grants were approved?
d) How many confirmed low income customers applied for a hardship fund grant?
e) How many confirmed low income customers received a hardship fund grant?
f) How many Customer Assistance Program (CAP/OnTrack) customers applied for a hardship fund grant?
g) How many CAP customers received a hardship fund grant?

Please provide this data in a live excel spreadsheet.

PPL Electric Response

a), d), & f) PPL Electric does not track the number of customers who apply for a hardship grant. Therefore, it does not have data to report for subparts a), d), and f).

A single assistance application is used for both OnTrack (CAP) and Operation HELP (hardship), and the customer does not specify which program they are applying for. The community-based organization partner makes the determination of which program is the best fit for the customer. The Company has provided data on the number of grants approved/received by confirmed low-income customers and received by CAP customers.

b), c), e), g) See CAUSE-PA II-12 Attachment 1.

CAUSE-PA II-17

Regarding the hardship fund program, for each month from July 1, 2023 to date, disaggregated by month and year, as of the last day of the month/year, please provide for PPL:

a) The total amount of available funds as of the last day of the month;
b) The total amount of grant money awarded in that month disaggregated by Federal Poverty Level (FPL) income tier (0-50%, 51-100%, 101-150%, 151-200%, 201-250%);
c) The average grant amount disaggregated by FPL income tier (0-50%, 51-100%, 101-150%, 151-200%, 201-250%).

Please provide this data in a live Excel spreadsheet

6. Review the terms of the OnTrack Program

As a participant in PPL Electric Utilities' OnTrack Program, i agree to the Program conditions as listed below. Failure to agree or follow through on any of the accepted conditions may result in removal from the Program.

- Provide my household gross income at the time of submitting my OnTrack application and recertify this information at least once yearly, unless I receive an energy assistance grant which is posted to PPL Electric.
- Notify PPL Electric immediately of any changes to my household size or income.
- If eligible, apply for any free weatherization service including PPL Electric's WRAP program and my local county weatherization program.
- I confirm that the facts set forth in my OnTrack application are true and complete to the best of my knowledge. I also hereby authorize PPL Electric to further verify my household income, as it deems appropriate. I understand, agree, and accept that false or knowingly incomplete statements on my OnTrack application will be cause for rejecting my application or removal from the Program.

If you qualify for OnTrack and currently have an electric supplier, PPL Electric will automatically notify the supplier to cancel your contract with no cancellation or early termination fees.

7. Security deposit refund consent request

Once we confirm you are income-eligible, if you have paid some or all of a security deposit billed to your account, you may choose to have it refunded to you or apply it to your account balance.

If you apply the deposit to your balance, it will not change the way we calculate your monthly OnTrack payment (if you are approved). Your decision does not affect your eligibility for our assistance programs.

_____ Apply amount paid to balance

_____ Refund amount paid by check.

8. Submit Your Application

1. Sign and date this application.
2. Mail application and **all items listed on envelope flap** in the enclosed self-addressed envelope.

I **affirm that all information on this application is true and complete.** I **am aware that** I **can be penalized for making false statements.**

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-5 Please describe how PPL determines the Operation HELP grant amount to be awarded to a customer, including but not limited to which staff, either at PPL or its partner agencies, have discretion to determine the grant amount.

PPL Electric Response PPL Electric does not determine the Operation HELP grant amount for individual customers. The Company has provided guidance to its Community Based Organizations (CBOs), but the final determination is within the discretion of the CBO. If an applicant seeking assistance does not have a payment agreement with the Company, the CBO will usually direct the customer to contact the Company to obtain the amount needed to stop termination, reinstate a payment agreement, or reconnect service (collectively the "Catch Up Amount").

Once the Catch Up Amount is established, the CBO will usually grant the amount which satisfies the Catch Up Amount. In cases where the Catch Up Amount is greater than the maximum grant amount, the CBO may decide to provide the maximum grant amount after the customer provides proof of payment for the difference between the Catch Up Amount and the maximum grant amount.

The CBOs may consult with PPL Electric's Regulatory Program Specialist ("RPS") to discuss individual cases with extenuating circumstances and any requests for exceptions to program guidelines.

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-11 From July 1, 2023, to date, for any security deposits not returned to confirmed low-income customers, please specifically explain why security deposits have not been returned to confirmed low-income customers.

PPL Electric Response The Company provides refunds for security deposits only when the customer is verified to be low-income either by a partner agency or is identified as a LIHEAP recipient through internal reports. Therefore, the Company is not holding any security deposits from verified low-income customers.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-14 Does PPL provide a simplified OnTrack application for customers who are recipients of Low Income Home Energy Assistance Program (LIHEAP) grants? Please specifically explain this process and provide a copy of the current PPL OnTrack application, and any simplified OnTrack application provided to customers who are LIHEAP grant recipients.

PPL Electric Response PPL Electric does not provide a simplified OnTrack application for customers who are recipients of LIHEAP grants. However, the Company does require the customer to provide income information if the customer had received a LIHEAP grant.

Refer to CAUSE-PA III-1 Attachment 1 for the standard PPL Electric assistance application.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-15 Please specifically describe how PPL utilizes LIHEAP data received from the Pennsylvania Department of Human Services (DHS) to conduct outreach, recertification, and/or enrollment for its universal service programs. Please also provide a copy of all current letters, written communications, and/or outreach materials PPL utilizes to conduct outreach to LIHEAP recipients for enrollment in universal service programs.

PPL Electric Response

PPL Electric has not yet conducted outreach or completed recertifications or enrollments in its Universal Service Programs based on LIHEAP data received from the Pennsylvania Department of Human Services.

In September 2024, PPL Electric updated its website www.pplelectric.com/LIHEAP with information to educate customers on the LIHEAP data sharing process and its benefits.

PPL Electric also drafted new letters to be used in outreach for customers identified through the data sharing process as eligible for CAP (OnTrack) enrollment or recertification.

After hearing concerns from utilities about the LIHEAP data, DHS agreed to temporarily suspend the process and agreed to provide a single list of 2024-25 season LIHEAP recipient data in July 2025.

Due to DHS not finalizing the implementation of its data sharing program, PPL Electric has not started outreach efforts.

PPL Electric intends to make use of the data provided by DHS as follows:

- Validate the DHS list against PPL Electric's internal customer records to establish a list of customers for CAP (OnTrack) enrollment outreach
- Mail the "OnTrack Enrollment Consent LIHEAP Data Sharing" letter to those customers

- Enroll customers who provide consent (either in writing or verbally) in OnTrack, using the income provided in the DHS file
- For customers already active in OnTrack, PPL Electric will provide its partner agencies with a list of customers who are eligible to recertify, have received LIHEAP, and have provided DHS with data sharing consent
- The agency will re-certify the customer's OnTrack agreement, using the income provided in the DHS file
- PPL Electric will send the "DHS Data Sharing Letter Auto Recert" letter to customers recertified through the data sharing process

General information: Generation prices and charges are set by the electric generation supplier you have chosen. The Public Utility Commission regulates distribution rates and services. The Federal Energy Regulatory Commission regulates transmission prices and services.

Understanding Your Bill

Act 129 Compliance Rider Monthly charge to recover costs for energy efficiency and conservation programs approved by the PUC.
Customer Charge The basic service charge to partially cover costs for billing, meter reading, equipment and service line maintenance. If you select a new supplier, the name, address and telephone number for both your distribution and supplier company will appear on your bill.
Distribution Charge (Delivery) Part of the basic service charges on every customer's bill for delivering electricity from the electric distribution company to your home or business. The distribution charge is regulated by the Public Utility Commission. This charge will vary according to how much electricity you use.
Kilowatt hour (kWh) The basic unit of electric energy for which most customers are charged in cents per kilowatt hour. A kilowatt hour is the equivalent of using ten 100 watt light bulbs for one hour.

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-18 When a customer at risk of termination expresses that a member of their household has a medical condition, what is PPL's policy for applying a hold on the account so that the customer can submit a medical certificate? Please also provide a copy of all current written policies, procedures, training materials, or other documents which describe PPL's policy for applying a hold to a customer's account so that the customer can submit a medical certificate.

PPL Electric Response Upon initial notification from the customer or other occupant of the home that a medical condition exists, PPL Electric will temporarily suspend collection activity for three calendar days.

- Medical certifications are accepted for any occupant of the home.
- Within three calendar days, the customer should contact the medical provider and request they contact PPL Electric to obtain a medical certification form, or the provider may use the Standard Medical Certificate Form found on the PA PUC website, which is also available through the Assistance Programs Link on PPL Electric's website. This form should then be faxed by the provider to PPL Electric, in order for the Company to update its records.
- Alternatively, the physician, nurse practitioner, or physician assistant can send in written correspondence on the medical office's letterhead that includes the following:
    - Name and address of the customer or applicant in whose name the account is registered;
    - Name and address of the afflicted person/person with medical condition and relationship to the customer or applicant;
    - The anticipated length of the affliction/medical condition;

- Name, office address, and telephone number of the certifying physician, physician assistant, or nurse practitioner;
- Signature of the certifying physician, nurse practitioner, physician assistant, or nurse practitioner; and
- License number of the physician, physicians' assistant, or nurse practitioner.

Lesson 1 of 7

Introduction and Learning Objectives

Learning Objectives

This training covers an overview of Pennsylvania Public Utility Commission (PUC) and the residential termination process and is based on several work methods and/or regulatory requirements.

By the end of this course, you will:

- Identify what the Pennsylvania Public Utility Commission (PUC) and Bureau of Consumer Services (BCS) do for customers.
- Define the termination process.
- Explain the months when Pennsylvania utilities typically terminate for non-payment.
- Explain how to stop termination for non-payment.
- Explain the Medical Certification guidelines.

Lesson 2 of 7

Pennsylvania Public Utility Commission (PUC)

The Pennsylvania Public Utility Commission (PUC) is a regulatory agency that balances the needs of the consumers and utilities.

The PUC can balance the needs of the consumers and utilities by:

- Ensuring safe and reliable utility service at reasonable rates.
- Protecting the public interest.
- Educating consumers to make independent and informed utility choices.
- Furthering economic development.
- Fostering new technologies and competitive markets in an environmentally sound manner.

There are several bureaus that support the PUC. One of these bureaus is the Bureau of Consumer Services (BCS). The BCS is our direct link to the PUC. They oversee our billing and credit activities. Our processes, like payment assistance, are established with the PUC regulations built into them.

Lesson 3 of 7

Residential Termination Process

We render a bill to obtain payment for the electricity used by the customer. Although you should not handle billing questions, you will be able to guide the customer to pertinent information on the bill.

Watch the video below to learn about the information on a PPL bill.

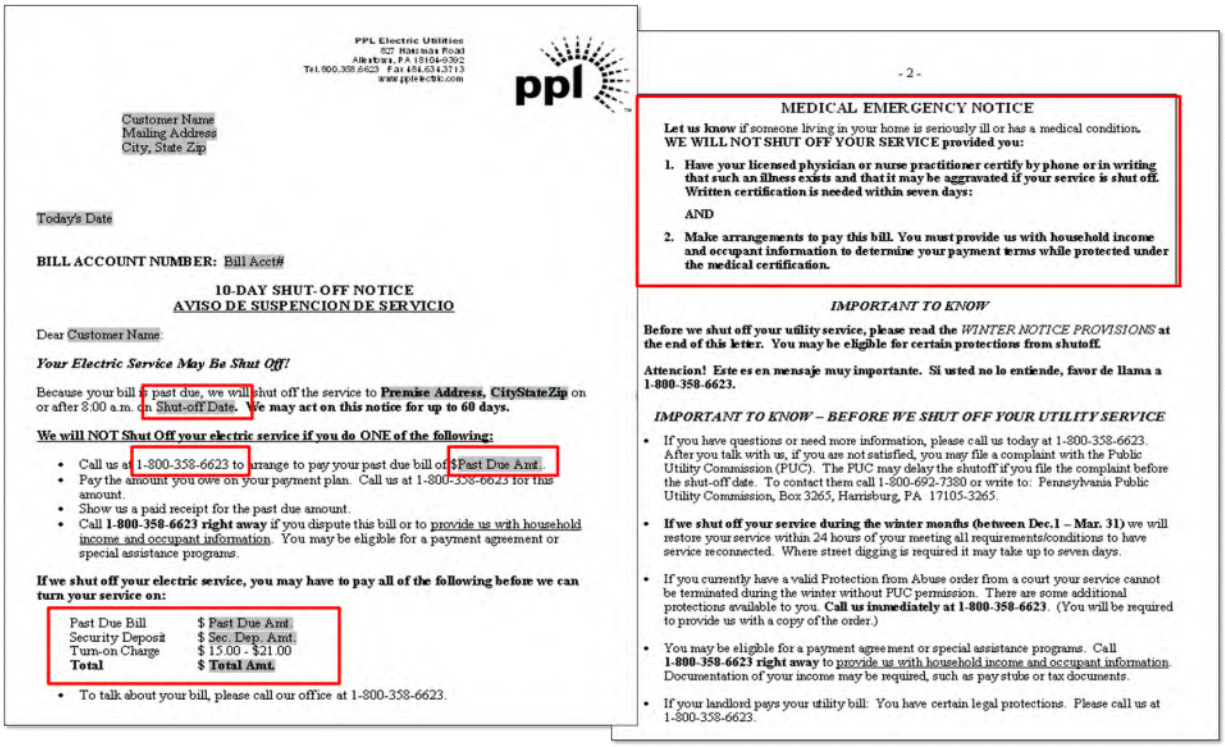
Complete the content above before moving on.

Some customers struggle to pay their bills. If the customer has an overdue balance that is not paid, the termination process begins.

We terminate low-income residential service for non-payment **between April 1 through November 30** (internal information)**.** All other income levels can be terminated all year. Process begins if customer does not pay the amount due.

Residential Termination Process: Overview

- Process takes between 10 days and can go as long as 60 calendar days.
- Orders are voided after 60 days.
- The customer's credit rating helps determine how long the termination process will take.



Ratings range from “A” though “D”:

- “A” is the lowest risk customer. This customer will receive more reminders before a 10-Day Termination Letter is sent.
- “D” is the highest risk customer. This customer will have a higher priority for termination.

10-DAY SHUT-OFF NOTICE
AVISO DE SUSPENCION DE SERVICIO

Dear Customer Name

Your Electric Service May Be Shut Off!

Because your bill is past due, we will shut off the service to **Premise Address, CityStateZip** on or after 8:00 a.m. on Shut-off Date. **We may act on this notice for up to 60 days.**

We will NOT Shut Off your electric service if you do ONE of the following:

- Call us at 1-800-358-6623 to arrange to pay your past due bill of $Past Due Amt.
- Pay the amount you owe on your payment plan. Call us at 1-800-358-6623 for this amount.
- Show us a paid receipt for the past due amount.
- Call **1-800-358-6623 right away** if you dispute this bill or to provide us with household income and occupant information. You may be eligible for a payment agreement or special assistance programs.

If we shut off your electric service, you may have to pay all of the following before we can turn your service on:

Past Due Bill	$ Past Due Amt.
Security Deposit	$ Sec. Dep. Amt.
Turn-on Charge	$ 15.00 - $21.00
Total	**$ Total Amt.**

- To talk about your bill, please call our office at 1-800-358-6623.

- 2 -

MEDICAL EMERGENCY NOTICE

Let us know if someone living in your home is seriously ill or has a medical condition. **WE WILL NOT SHUT OFF YOUR SERVICE provided you:**

1. **Have your licensed physician or nurse practitioner certify by phone or in writing that such an illness exists and that it may be aggravated if your service is shut off. Written certification is needed within seven days:**

   AND

2. **Make arrangements to pay this bill. You must provide us with household income and occupant information to determine your payment terms while protected under the medical certification.**

IMPORTANT TO KNOW

Before we shut off your utility service, please read the *WINTER NOTICE PROVISIONS* at the end of this letter. You may be eligible for certain protections from shutoff.

Attencion! Este es en mensaje muy importante. Si usted no lo entiende, favor de llama a 1-800-358-6623.

IMPORTANT TO KNOW – BEFORE WE SHUT OFF YOUR UTILITY SERVICE

- If you have questions or need more information, please call us today at 1-800-358-6623. After you talk with us, if you are not satisfied, you may file a complaint with the Public Utility Commission (PUC). The PUC may delay the shutoff if you file the complaint before the shut-off date. To contact them call 1-800-692-7380 or write to: Pennsylvania Public Utility Commission, Box 3265, Harrisburg, PA 17105-3265.
- **If we shut off your service during the winter months (between Dec.1 – Mar. 31)** we will restore your service within 24 hours of your meeting all requirements/conditions to have service reconnected. Where street digging is required it may take up to seven days.
- If you currently have a valid Protection from Abuse order from a court your service cannot be terminated during the winter without PUC permission. There are some additional protections available to you. **Call us immediately at 1-800-358-6623**. (You will be required to provide us with a copy of the order.)
- You may be eligible for a payment agreement or special assistance programs. Call **1-800-358-6623 right away** to provide us with household income and occupant information. Documentation of your income may be required, such as pay stubs or tax documents.
- If your landlord pays your utility bill: You have certain legal protections. Please call us at 1-800-358-6623.

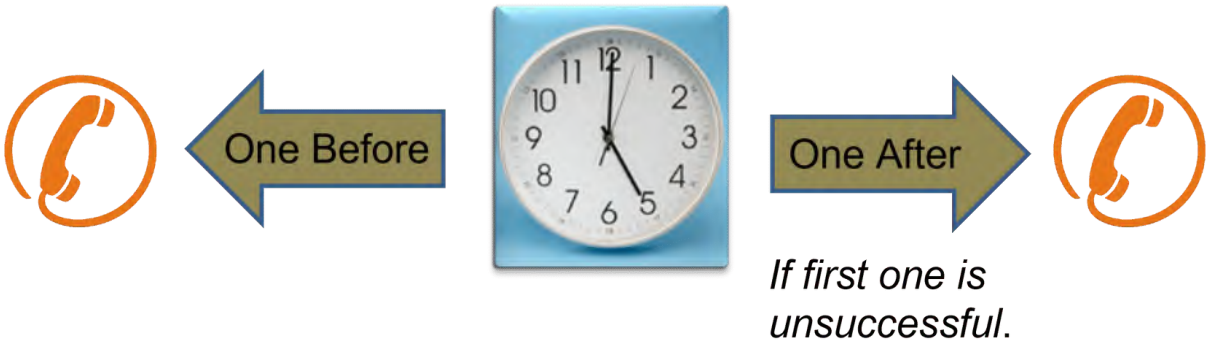
Click on the image to zoom in

The termination letter can be sent as early as 5 days after the bill due date. The 10-day notice includes:

- Intended shut off date.
- PPL Contact information.
- Total past due amount.
- Amount required if termination is not avoided.
- Medical Certification Information (this will be covered in more detail).

3-Day Call

if the customer does not respond to the letter, the next step is a 3-day call. The calls are auto-generated. The PUC requires we make two valid attempts to satisfy the requirement. If we reach the customer on the first attempt, a second is not required. To satisfy the regulatory requirements, a successful attempt is considered:



- Busy signal.
- No answer.
- Answering machine.
- Caller hung up.

> None of these attempts indicate that there is something wrong with the telephone number. If we are unsuccessful by phone, a 3-day door hanger is posted at the property. If the attempts are successful, there is no need for a door hanger.

The two attempts have to be made on two different days:

1. First attempt will happen **three business days** before termination date and must be **before 5:00pm.** If we reach a party and provide termination details, second attempt not required.
2. Second attempt, if needed, must be **after 5:00pm on a different day.**

Making the attempts on different days at different times allows us to try to reach the customer at different times as all customers have different schedules.

Click on the image to zoom in

SHUT OFF DATES

Before we look at how to determine the shut off date when a door hanger is left, we must first understand what days we do not disconnect service for residential customers.

- We will not disconnect service for non-payment on a weekend or PPL recognized holiday.
- We do not work residential shut off orders on a Friday.

The termination date may change from the original date based on the date the second telephone call is made or the date the service person delivers the 3-day notice.

The date of shut off may change based on when we are successful with the 3-Day call attempt. Based on the calendar below, we send the 10-day termination letter on 5/4. Letter displays termination date of 5/14.

The 3-day call is successful on 5/11. Now we must wait 3 **full** business days before we can terminate service. In this case, it is very likely the customer will be disconnected on a day other than the day listed on the shut off notice.

Click on the image to zoom in

5/11	Day 0
5/12	Day 1
5/13	Day 2
5/14	Day 3 **Note:** Original date on shut off notice.
5/15	Day of cut **Note:** This is a Friday. We do not cut on Fridays.
5/18	New day of cut.

We use this chart to determine the date of disconnect based on the date the three day notice was delivered.

3-Day Termination Notice Delivered	Day of Termination
Monday	Monday
Tuesday	Monday
Wednesday	Tuesday
Thursday	Wednesday
Friday	Thursday

Residential Termination Process: Claims Protection from Abuse (PFA)

When a member of the household has provided proof of an active PFA at the premise, we will provide an **additional 48-hour notice** prior to termination of service due to non-payment (all other termination process steps and requirements are the same).

If a copy of the PFA is on file, there will be a critical contact on the account. The additional notice is generated by the system automatically due to the critical contact.

We provide additional protections when there is an active PFA because:

- Customer may not be able to access premise or mail.
- Customer may be in physical danger if power is disconnected.
- It's a PUC requirement.

If we do not have the PFA on file and the caller mentions one exists, then we must follow normal payment assistance and ask that they fax the disposition page showing the following:

- A court seal.
- Expiration date.
- The name of the victim.

Customer must black out their SSN before mailing or faxing the disposition page.

There are times when we may think something is going on that may indicate a PFA exists, but we do not want to assume this in all cases.

Red flags that may require us to discuss the topic:

- Customer states that they are unable to acquire any of their bills/financial information.
- Customer states they had to move out of their old residence because of family problems.
- Divorce or separation is discussed.
- Mention of unstable home/family situation and/or problems with locating their financial/billing information due to prior residence being inaccessible.

If you suspect a PFA situation, state the following to the customer:

"If you currently have a Protection from Abuse order from a court, there are additional protections available to you. You will be required to provide us with a copy of the order."

Note: Advise customer to fax or mail information.

Lesson 4 of 7

Stopping the Termination Process

When customers receive a termination notice, they will typically contact us to identify the amount needed to stop termination. Customers may use our online services, depending on how close they are to termination.

There are three things a customer can do to stop termination. Customers can stop termination at any point in the process by:

1. Paying the full overdue balance or the amount needed to bring the overdue balance below the current threshold.
2. Establishing a new payment agreement or paying the missed installments on the previous defaulted payment agreement.
3. Obtaining the required payment from an assistance agency (i.e. LIHEAP, and Operation Help).

A customer can *temporarily* stop termination if they do one of the following:

1. Disputing the available payment options

2 Obtaining a medical certificate

Disputes

A payment agreement dispute happens when a customer does not agree to the payment agreement terms. Dispute rights are verbally provided to the customer and a 10-day collection hold is placed on the account.

Click on each tab to learn more

10-DAY HOLD ACTIONS | **IF NO ACTION TAKEN** | **IF CUSTOMER CALLS PUC**

During the 10-day collection hold, the customer may do one of the following:

- Pay the full overdue.
- Pay the amount we are requesting to stop collections.
- Contact the Public Utility Commission.

10-DAY HOLD ACTIONS | **IF NO ACTION TAKEN** | **IF CUSTOMER CALLS PUC**

If the customer does not take any action within 10 days, the 10-Day collection hold ends and the account will go back into collections at the point it stopped.

10-DAY HOLD ACTIONS	IF NO ACTION TAKEN	IF CUSTOMER CALLS PUC

If the customer contacts the PUC, the account will stay out of collections until the PUC provides a payment agreement to the customer.

Note: The customer is still required to pay current bills during this period.

Medical Certificates

A **Medical Certification** (Med. Cert.) is a statement from an authorized licensed doctor, physician's assistant or nurse practitioner which protects an account from collection activity for 30 days. If the customer claims to have a medical condition, we follow the guidelines established by the PUC.

- When a **customer first claims a medical condition** following a 10-day termination notice and the customer is eligible, we place a 3-day hold on their account to give them time to contact their health-care provider.
- If the **health care provider's office calls us**, we will provide them with the appropriate form and place a 7-day hold on the customer's account if the customer is eligible for a Med. Cert.
- Once **we have a valid Med. Cert.**, the account is held from collections for 30 days if the customer is eligible

If a customer or medical professional requests an alternate way to obtain the medical certificate form (other than fax), refer them to the Commission website.

A medical certification can be submitted when the power is on or off. If the power is off due to non-payment, we will issue an order to turn the power back on.

VALIDATION	INFORMATION REQUIRED	SUBMISSION

Three valid medical certifications are accepted in a 4-year period unless the customer pays off their past due balance. As indicated in Chapter 56 regulations, Med. Cert's are accepted from the following:

- Medical Doctors (MD)
- Physician's Assistant (PA)
- Doctors of Osteopathy (DO)
- Nurse Practitioners (NP)

VALIDATION	INFORMATION REQUIRED	SUBMISSION

A valid Med. Cert. can be on any form, but must be signed by a Doctor, PA, or NP. It must include the following:

- Name and address of the ratepayer
- Name and address of the afflicted person and their relationship to the ratepayer
- Name, office address, and telephone number of the certifying doctor, physician's assistant, or nurse practitioner

VALIDATION	INFORMATION REQUIRED	SUBMISSION

A Med. Cert. can be submitted:

- In writing
- Through fax
    - If you receive a call from a medical professional attempting to certify a customer's medical condition, please explain that we are happy to help and can fax them the medical certification form. Explain we must receive the certification in writing and provide the caller with instructions on faxing the medical certification form. Advise that once completed and signed by an authorized medical professional, we will protect the account for 30-days.
- Through the Commission website as follows:
    - Visit www.puc.pa.gov/electricity
    - Scroll down to ***Utility Assistance*** and click ***Find Support***
    - Go to the section titled ***Energy Assistance Resources*** - the Medical Certificate Guidance and Standard Medical Certificate Forms are in this section

Note: Even though the PUC created the standard medical certificate form, it is not mandatory. If the medical professional faxes in a letter that includes all required information, the form does not need to be used. The following is required:

- The name and address of the customer or applicant in whose name the account is registered
- The name and address of the afflicted person and relationship to the customer or applicant
- The anticipated length of the affliction
- The name, office address, and telephone number of the certifying physician, nurse practitioner, or physician assistant
- The signature of the certifying physician, nurse practitioner, or physician assistant
- The license number of the certifying physician, nurse practitioner, or physician assistant

Under no circumstances should we accept a medical certification over the phone, nor should we place a 30-day suspend charge on the account (even though the option is still available in ID).

If you question the validity of the individual authorizing the medical certificate, consult a senior customer service representative or supervisor. You should **not**:

- Pass judgment or try to influence the doctor, PA or NP
- Interject personal beliefs about the process or what we assume are the customer's intentions
- Provide information about the customer's payment history
- Inquire on the nature of the affliction

Lesson 5 of 7

Key Takeaways

- The PUC balances the needs of customers and utilities, and the BCS is our direct link to the PUC.
- The termination process begins in April and is over at the end of November. It begins with a 10-Day termination notice.
- After the termination notice, we make 2 phone attempts. If we don't have a valid phone number, we post a notice of termination.
- We do not terminate on Friday, weekend or on a holiday.
- Customer can stop termination by paying the full overdue balance, starting a new PA or activating one that defaulted, or obtaining help from an assistance agency that stops termination.
- Customers have PUC rights if they don't agree with our payment agreement offer, as long as they have not had the same type of 'dispute' since the most recent 10-day termination letter was sent.
- PPL will not accept more than 3 Med Certs in a 4-year period (unless the customer has paid the overdue balance in full within the 4-year period).
- If the customer is eligible, we will put a hold on collection activity for 3 days to give a customer who claims to have a medical condition time to contact a doctor. When we receive a valid Med. Cert., the account is held from the collection process for 30 days. The customer should be advised to make required payments.

Lesson 6 of 7

It's Time to Check Your Knowledge

It's time to check your knowledge! Answer the following questions related to **Payment Assistance Theory**. If you're not sure of an answer, feel free to navigate back through different lessons in this course to refresh your memory.

Click **Continue** to begin.

CONTINUE

Question

01/05

The first step in the termination process is to send the 10-day termination letter.

- ◯ True
- ◯ False

SUBMIT

Complete the content above before moving on.

Question

02/05

When are we required to leave a 3-day door hanger at a location?

- Any time the customer is in the termination process
- When a 3-day call attempt is unsuccessful
- Before we send the 10-day termination notice

SUBMIT

Complete the content above before moving on.

Question

03/05

If the 3-day call was completed on a **Tuesday**, what would the shut off date be?

- ○ Monday
- ○ Tuesday
- ○ Wednesday
- ○ Thursday
- ○ Friday

SUBMIT

Complete the content above before moving on.

Question

04/05

If the 3-day call was completed on a **Friday**, what would the shut off date be?

- ◯ Monday
- ◯ Tuesday
- ◯ Wednesday
- ◯ Thursday
- ◯ Friday

SUBMIT

- ◯ Thursday
- ◯ Friday

SUBMIT

Complete the content above before moving on.

Lesson 7 of 7

Summary

This concludes the **Payment Assistance Theory** training. Now that you have completed this training, you are expected to do the following:

- Identify what the Pennsylvania Public Utility Commission (PUC) and Bureau of Consumer Services (BCS) do for customers
- Define the termination process
- Explain the months when Pennsylvania utilities typically terminate for non-payment
- Explain how to stop termination for non-payment
- Explain the Medical Certification guidelines

Medical Certificates Reference Information

Last Updated: June 2, 2025

DEFINITION

A written document signed by a licensed physician, nurse practitioner, or physician assistant, certifying that a customer or member of the customer's household is seriously ill or has been diagnosed with a medical condition requiring the continuation of service to treat the medical condition.
If you have a question regarding the validity of the individual authorizing the medical certificate (med cert), discuss with a supervisor for approval.

SELECT A TOPIC

- Eligibility for a Med Cert
- Eligible Medical Providers
- How Medical Providers Contact PPL to Request Med Cert
- Faxing a Med Cert
- Must Med Cert Come from the Doctor's Office?
- Valid Med Cert Received After Service Shut-Off
- Scripts (for Reference if Using CSS)

SUPPORTING RESOURCES

- Med Cert Eligibility
- Med Certs-Off Accounts

Eligibility for a Med Cert

Customers are eligible for one 30-day medical certificate and two 30-day renewals on the same balance. To determine if a customer is eligible for additional medical certificates, either one of the following MUST be true.

1. The customer has reached a zero overdue balance since the submission of a prior medical certificate.
    - At the time the customer reaches a zero overdue balance, the customer is eligible for a new 30-day medical and two renewals.
2. The customer has paid his or her 30-day bill each month since the original medical certificate was presented.
    - This is the only exception to the rule regarding a maximum of two renewals. The customer is entitled to unlimited medical certificates so long as the customer continues to pay the monthly bill each month.

- **Customers are eligible for a Med Cert after receiving the 10-day shut-off notice**
    - **Only one Med Cert allowed within a 30-day period**
- Upon initial notification from the Ratepayer or other occupant of the home that a medical condition exists, PPL will temporarily suspend collection activity for three calendar days
- Medical certifications are accepted for any occupant of the home
- Within three calendar days the customer should contact the medical provider and request they contact PPL to obtain a Med Cert form. Alternatively, the physician, nurse practitioner, or physician assistant could send in written correspondence on the medical office's letterhead that includes the following:
    1. Name and address of the customer or applicant in whose name the account is registered
    2. Name and address of the afflicted person/person with medical condition and relationship to the customer or applicant
    3. The anticipated length of the affliction/medical condition
    4. Name, office address, and telephone number of the certifying physician, physician assistant, or nurse practitioner:
    5. Signature of the certifying physician, nurse practitioner, physician assistant, or nurse practitioner.

Scroll To Top

6. License number of the physician, physician's assistant, or nurse practitioner.

- After medical condition is confirmed by the medical provider in writing, collection activity is suspended for 30 calendar days
- **Med certs may be renewed after 30 days**
  - **Customer can receive a maximum of three certificates (one initial certificate and up to two renewal certificates)**

Note: We will accept a Med Cert even if the customer is not in collections. If the customer is not in the termination process, however, the med cert script should not appear, and a med cert should not be offered.

Eligible Medical Providers

PPL accepts medical certification from a:

- Licensed Physician
- Doctor of Medicine (M.D.)
- Doctor of Osteopathic Medicine (D.O.)
- Nurse Practitioner
- Physician Assistant

How Medical Professional and Customers Can Obtain a Medical Certificate

- Call PPL at 1-800-358-6623
- PPL Website
  - Ways to Save >Assistance Programs > Are you looking for a medical certificate (Scroll to bottom)
  - This will provide a link to the PA PUC website.
    - Scroll to **Standard Medical Certificate Form**

Faxing a Med Cert

When a doctor's office calls to request a medical necessity form, explain that you will have it faxed and that it needs to be filled out completely and returned within seven days.

- This is done automatically via Intelligent Desktop (ID) when selecting **Confirm Medical Necessity-Request Form (seven days)**

If faxing fails and the customer is calling back stating the doctor's office has not received the fax, instruct the customer to have their medical office call PPL directly to have the certification form re-faxed.

If faxing fails and the doctor's office is calling back stating they did not receive the medical certification form we faxed to them, please apologize for the inconvenience and offer to re-fax the form. If the doctor's office asks if they can just fax us verification of the medical condition, you may explain:

- We will accept a faxed note sent to (484) 634-3484
  - Please explain the med cert will need to include the following:
    1. Name and address of the customer or applicant in whose name the account is registered.
    2. Name and address of the afflicted person/person with medical condition and relationship to the customer or applicant.
    3. The anticipated length of the affliction/medical condition.
    4. Name, office address, and telephone number of the certifying physician, physician assistant, or nurse practitioner.

Scroll To Top

5. Signature of the certifying physician, physician assistant, or nurse practitioner.
6. License number of the physician, physician's assistant, or nurse practitioner.

Must Med Cert Come from the Doctor's Office?

- Med Certs must be submitted in writing
- If the customer is providing a doctor's note that meets the criteria under the "Eligibility for a Med Cert" section and the note includes **all** required information needed on a faxed note from"Faxing a Med Cert" section, expedite the Med Cert:
  - If anything required is missing on the note, attempt to fax the Med Cert form (if a fax number was provided on the note)
  - If no fax number provided, attempt to contact the doctor's office to obtain a fax number and fax the form
  - If not able to reach the doctor or leave a message, attempt to reach the customer and advise them to contact the doctor and explain what is needed to accept the Med Cert

Valid Med Cert Received After Service Shut-Off

- See Med Certs-Off Accounts

Scripts (for Reference if Using CSS)

Customer is Eligible For a Med Cert

"Is there someone living in your home with an existing medical condition that would be aggravated by the absence of electricity?"

- **If customer responds "Yes" to above question and is eligible for a 3-day Med Cert:**
  "I am sorry to hear that. To obtain a medical certificate, your doctor, nurse practitioner, or physician's assistant would need to contact us. We will hold your account from shut-off for three days. Once we receive the medical certificate, we will not shut off service for up to 30 days. State regulations limit the number of medical certification renewals. To keep your service on and eliminate the risk of a declined medical certification in the future, let's review payment options to help you pay your balance."

- **If customer responds "Yes" to above question and is <u>not</u> eligible for a 3-day Med Cert:**
  "I am sorry to hear that. To obtain a medical certificate, your doctor, nurse practitioner, or physician's assistant would need to contact us. Once we receive the medical certificate, we will not shut off service for up to 30 days. State regulations limit the number of medical certification renewals. To keep your service on and eliminate the risk of a declined medical certification in the future, let's review payment options to help you pay your balance."

If Customer has Exceeded the Number of Med Cert Renewals Permitted:

"*Our records show multiple medical certification renewals on your account. State regulations limit the number of renewals we accept. We will not accept any additional medical certificates until the past due balance is paid in full. If you are unable to pay your balance in full, we can*

Med Certs - Off Accounts

Last Updated: September 29, 2020

DEFINITION

Medical Certification (Med Cert) – A written statement from a physician, nurse practitioner or physician's assistance attesting that a member of the customer's household is seriously ill or has been diagnosed with a medical condition requiring the continuation of service to treat the medical condition.

INTERACTION HANDLING

Reference

Reference Medical Certificates Reference Information for general details regarding med certs.

Off Accounts – Customer vs. Applicant

For med certs, a person remains a "customer" after termination until the final bill for service is past due. After the final bill due date, the person becomes an "applicant."

- **For Customers** – PPL needs to restore service (without requiring payment) within 24 hours of receiving the med cert
- **For Applicants** – PPL does not need to modify or eliminate the financial requirement to obtain service
  - Once the applicant pays the required amount, the med cert "clock" starts ticking (restoration within 24 hours of receiving the med cert)
  - All obligations (if any) must be met, along with the medical certification, for an applicant requesting service at a property with a blocked meter

Processing Med Cert

- When the Med Cert or written notice of medical emergency is returned with the Licensed Physician/Doctor of Osteopathic Medicine/Nurse Practitioner/Physician Assistant's signature, it will be entered in Work Assignment and Tracking System (WATT) via Kofax
- The person assigned to work this WATT will verify there is a 30-day Suspend Charge on the account
- Med cert will be filed electronically via Filenet

Reconnection – Active Account

- Use Intelligent Desktop (ID) reconnect to confirm medical necessity
- ID automatically issues a cut-in order and applies a 30-day suspend charge
- Service scheduled for reconnect within 24 hours of receiving the valid medical certification

ACTION ITEMS

Reconnection – Final Account

- Issue a new account
- If med cert is received and all service requirements are satisfied on a Friday or day before PUC or PPL holiday, issue an After Hours Unblock (PSP Code 88)
  - If a line crew is needed, issue a Trouble Call (PSP Code 89)
  - Enter a WATT Referral – Regional Ops – Same Day Reco
- Check to make sure the system has issued a **same day** reco if today is a Friday or day before a PUC or PPL holiday

SUPPORTING RESOURCES

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-19

Please describe PPL's policy for renewal of medical certificates, including a description of any conditions a customer must satisfy to receive a renewal and the number of renewals available. Please also provide a copy of all current written policies, procedures, or other documents which describe PPL's policy for renewal of medical certificates.

PPL Electric Response

Medical certificates may be renewed after 30 days.

- Customers can receive a maximum of three certificates (one initial certificate and up to two renewal certificates), on the same balance over 4 years.

Customer may receive additional medical certificates, if either of the following is true:

- The customer has reached a zero overdue balance since the submission of a prior medical certificate.
    - At the time the customer reaches a zero overdue balance, the customer is eligible for a new 30-day medical certificate and two renewals.
- The customer has paid their 30-day bill each month since the original medical certificate was presented.
    - This is the only exception to the rule regarding two renewals. The customer is entitled to unlimited medical certificates, so long as the customer continues to pay their monthly bill each month.

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-20 Please describe in detail how PPL informs customers at risk of termination of the availability of medical certificates. Please also provide a copy of all current written policies and/or procedures, memoranda, training materials, call scripts, emails, and/or other written documents which describe the policies and procedures related to informing customers at risk of termination of the availability of medical certificates.

PPL Electric Response

Automated scripting on payment assistance calls prompts the agent to assess whether a medical condition exists in the household. If a customer indicates that someone in the home has an existing medical condition that would be aggravated by the absence of electricity, the Medical Certificate procedures will be displayed for the agent to inform the customer.

Similarly, customers self-serving on the web or through Interactive Voice Response ("IVR") will be prompted to assess a medical condition and receive information accordingly.

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-22

Please describe in detail PPL's process for assessing a customer's eligibility for a payment arrangement and for setting its terms, including a description of how PPL determines the length of a payment arrangement, the amount of any initial payment due at the start of a payment arrangement, and the amount of each payment, for each of the following:

a) Customers with active service.
b) Customers whose service has been terminated.
c) Customers who submit a Protection from Abuse order or another court order establishing that they are experiencing domestic violence.
d) Customers who submit a medical certificate.

PPL Electric Response

The Company provides payment arrangement terms based on income level determined by household income and household size.

a) Customers with active service
    1. Terms range from 6 to 24 installments based on income level
    2. Non-catch-up arrangements based on current charges plus an installment towards overdue balance
    3. Catch-up arrangements require missed bills and installments from the non-catch-up arrangement
b) Customers whose service has been terminated
    1. Reconnection arrangements based on prior number of defaulted arrangements or prior disconnection for non-payment
    2. Initial reconnection payment ranges from 1/24th to full overdue balance based on prior number of defaulted arrangements or prior disconnection for non-payment

c) Customers who submit a Protection from Abuse order or another court order establishing that they are experiencing domestic violence
    1. Customers are offered the same terms outlined in Customers with active service
    2. Exception: 48-hour notification added prior to service termination. If service was terminated, service would be reconnected and a 48-hour notification provided.
d) Customers who submit a medical certificate
    1. Customers are offered the same terms outlined in Customers with active service
    2. If service was terminated, it would be restored upon receipt of medical certificate.

See CAUSE-PA III-22 Attachment 1.

Account Status	Active Service		Service Terminated	
Income level	Non-Catch Up (NCU)	Catch-Up	Reconnection 1	Reconnection 2
	Initial payment for all NCU arrangements are based on current charges plus an installment towards the overdue balance	Initial payment for all Catch-up arrangements equal total missed bills and NCU installments	Eligible for terms if less than 2 defaulted non-catchup or PUC or any prior reconnection arrangement	Terms applied if 2 or more defaulted non-catchup, or PUC or a prior reconnection arrangement
1	24 installments	Remaining installments calculated based on NCU arrangement.	Initial payment = 1/24 of overdue balance 23 monthly installments	Full overdue balance. Can negotiate to 50% of overdue balance to reconnect; remaining overdue balance due with next bill.
2	18 installments	Remaining installments calculated based on NCU arrangement.	Initial payment = 1/24 of overdue balance 12 monthly installments	Full overdue balance. Can negotiate to 50% of overdue balance to reconnect; remaining overdue balance due with next bill.
3	12 installments	Remaining installments calculated based on NCU arrangement.	Initial payment = 1/12 of overdue balance 11 monthly installments Security deposit assessed	Full overdue balance. Can negotiate to 50% of overdue balance to reconnect; remaining overdue balance due with next bill. Security deposit assessed
4	6 installments	Remaining installments calculated based on NCU arrangement.	Initial payment - 1/3 of overdue balance 2 monthly installments Security deposit assessed	Full overdue balance. Can negotiate to 50% of overdue balance to reconnect; remaining overdue balance due with next bill. Security deposit assessed

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-24 Please indicate whether PPL allows an applicant for service with prior arrears to connect to service and enroll in OnTrack to freeze their arrears. If the answer to this question is yes, please indicate whether an applicant with arrears can apply for service and enroll in OnTrack before service begins, or whether such an applicant must first establish service before applying to OnTrack.

PPL Electric Response PPL Electric does allow an applicant for service with prior arrears to connect to service and enroll in OnTrack to freeze their arrears; however, the applicant must first establish service and meet any requirements for service prior to applying for OnTrack.

If the Company requests an up-front security deposit as a requirement to establish service, applicants who have income below 250% of federal poverty guidelines may apply for a low-income waiver of the deposit. The applicant would need to provide proof of income to one of PPL Electric's community-based partner organizations, who would determine if the individual is eligible for a waiver. The agency would then notify PPL Electric to waive the deposit so that service could be established.

If the Company requests payment of some, or all, of a past due balance as a requirement to establish service, applicants who have income below 250% of federal poverty guidelines may apply for an Operation HELP grant. The applicant would need to provide proof of income to one of PPL Electric's community-based partner organizations, who would determine if the individual is eligible for a grant. If the amount required to establish service is greater than the maximum Operation HELP grant, the customer may be required to pay the difference before the agency authorizes a grant.

WITNESS: Lisa Norden

(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-27

Please indicate whether PPL's interactive voice response (IVR) call center system authorizes payment arrangements for customers. If the answer to this question is yes, please describe:

a) The information the IVR requests from customers to assess eligibility for and set the terms of a payment arrangement;
b) The information the IVR considers when assessing eligibility for and setting the terms of a payment arrangement;
c) The information the IVR provides to customers to inform them of the terms and obligations of the payment arrangement;
d) Any other communications, including written communications, provided to a customer entering a payment arrangement via PPL's IVR to inform the customer of the terms and obligations of the payment arrangement.

PPL Electric Response

Yes, customers establishing payment arrangements through the IVR are prompted to provide the same information whether speaking with an agent or self-serving on the web.

a) Household income and number of occupants.
b) The system will then review prior payment arrangement status to determine the type of arrangement to offer.
    - If a customer is scheduled for service termination, the termination date and amount required to stop termination are provided.
    - Payment assistance options offered, if income eligible.
c) The IVR provides the terms which include the additional payment amount and length of term. Customers provide a recap of payment arrangement terms offered.

d) Customers can opt to receive a letter or email with the terms offered.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA III-33 Please indicate whether PPL classifies payment arrangements by levels (e.g., Level 1, Level 2, Level 3, etc.). If the answer to this question is yes, please describe:

a) The factors that PPL uses to classify a payment arrangement at each level;
b) The terms and standards for payment arrangements at each level.

PPL Electric Response The Company offers payment arrangements based on income levels.

Income Level	Federal Poverty Guideline	Payment Arrangement Terms
1	0 – 149.9%	24 months
2	150% - 249.9%	18 months
3	250% - 300%	12 months
4	300% and above	6 months

(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-6

Refer to PPL Elec. Utilities St. No. 8 (Wishart) at 12:13-15. Of the 11,509 residential customers on Rate RTS, please indicate the number of those customers that are:

a) Confirmed Low Income Customers
b) Enrolled in OnTrack

PPL Electric Response

The 11,509 provided in PPL Electric Statement No. 8 is the average monthly bill count for customers on rate schedule RTS during the Future Test Year. Note that the value in the testimony contained an error and should have been 11,609.

As of October 18, 2025, PPL Electric has 11,546 customers on the RTS rate schedule. Of that, 1,383 are confirmed low income customers, and 243 are enrolled in OnTrack.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-8 Refer to PPL Electric Exhibit SWW-1. Please explain which rate classes PPL Electric applies the USR Rider to and the basis for the application of that rider to these rate classes.

PPL Electric Response At present, the USR applies to Rate Schedules RS and RTS. Customers being charged volunteer rates under Rate Schedules GS-1 and GS-3 pay RS rates and thus pay the USR as well.

As shown on page 50 of PPL Electric Exhibit GEO-1, the Company proposes applying the USR to Rate Schedule RS only, as it is proposing to eliminate the RTS rate schedule. Customers being charged volunteer rates under Rate Schedules GS-1 and GS-3 will continue to pay RS rates and, as a result, pay the USR as well.

Because the USR recovers costs associated with customer assistance programs for which only residential customers are eligible, it is consistent with cost of service principles to recover these costs only from residential customers.

Docket No. R-2025-3057164

CAUSE-PA V-1

Refer to PPL Elec. Utilities St. No. 14 (Olsen) at 6-7. Please describe in detail:

a) What factors the Company would consider in determining that "…it is not beneficial for the Company to meter individual tenants";
b) What factors the Company would consider in exercising its discretion to allow for submetering;
c) How the Company would ensure that a master-metered property that submeters complies with Section 1313 of the Public Utility Code;
d) How the Company would ensure that a master-metered property that submeters complies with Section 1529 et seq. of the Public Utility Code known as the Discontinuance of Service to Leased Premises Act.

PPL Electric Response

a.& b.) PPL Electric considers several factors, such as buildings being refurbished without provisions for metering, multi-story structures requiring PPL Electric service cables beyond the point of delivery, and properties with transient or unknown commercial/industrial tenants at the time of installation. Other examples include retail mall stores (excluding strip malls) needing multiple secondary transformers and metering rooms, buildings requiring rewiring to meet tenant-specific electrical needs while complying with code, and shared HVAC systems or electrical wiring that cannot be individually controlled or separated.

c.) PPL Electric notifies the landlord-ratepayer, who operates under a master meter arrangement, of their responsibility to ensure proper redistribution of service to individual tenants in accordance with current Tariff Rule 5(F) (proposed Tariff Rule 5(E)) at the time of connection.

d.) If PPL Electric initiates disconnection of a landlord-ratepayer master metered “residential building,” as defined by 66 Pa. C.S. § 1521, due to nonpayment, the Company will notify affected tenants at least 30 days in advance and offer them the option to pay the most recent sub-metered bill to maintain service. Tenants experiencing financial hardship may contact the Company to discuss available assistance programs or alternative payment arrangements. This process is conducted in accordance with PA Title 66, Chapter 15, Subchapter B.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 24, 2025
Docket No. R-2025-3057164

CAUSE-PA V-6

Refer to PPL Elec. Utilities St. No. 18 (Norden) at 7. Under PPL's proposal to waive payment transaction fees, please indicate:

a) Whether a customer would be able to pay their bill in cash via Western Union without payment of a fee;
b) Whether there would be any other method(s) by which a customer could pay their bill in cash without payment of a fee. If the answer to this subpart is yes, please list these methods and for each describe where and how customers would be able to pay their bill in cash without payment of a fee.

PPL Electric Response

a) Under the proposal, a customer would be able to pay their bill in cash without a transaction fee via Western Union.
b) Yes, under the proposal, a customer would be able to pay their bill in case without a transaction fee via Bill Payment Centers that use Fiserv for payment processing.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 24, 2025
Docket No. R-2025-3057164

CAUSE-PA V-11

Refer to PPL Elec. Utilities St. No. 18 (Norden) at 10-14. Please confirm that, in the absence of the proposal to recover the costs of Universal Service Program salaries and wages through the USR:

a) that the costs would be included in O&M expenses that would be generally allocated according to PPL's proposed cost of service study; and,
b) that such costs would be recovered broadly from all ratepayers, not simply residential ratepayers.

PPL Electric Response

a) Yes.
b) Yes. Residential customers would be allocated approximately 87% of these wage and salary costs in accordance with the Company's cost allocation methodology. However, because these programs are only available to residential customers, PPL Electric believes that the wage and salary costs are better recovered exclusively through the USR.

PPL Electric Utilities Corporation
Response to the Set V Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 24, 2025
Docket No. R-2025-3057164

CAUSE-PA V-12

Refer to PPL Elec. Utilities St. No. 18 (Norden) at 10-14. Does PPL Electric Utilities recover in whole or in part the cost of salaries and wages needed to support data center development in rate class LP-5 directly from data center customers through a reconcilable rider? If not, please indicate how PPL recovers the cost of salaries and wages needed to support data center development in the rate class LP-5, and explain whether PPL is proposing such recovery in this case.

PPL Electric Response

The Company does not recover the cost of salaries and wages needed to support data center development or any other transmission system upgrades in rate class through a reconcilable distribution rider. Any work for LP-5 customers involves work at 69kV or above, which is defined as PPL Electric's transmission system; therefore, in accordance with the Company's Cost of Service study, costs associated with such work is not included in distribution rates.

Further, the majority of the salary and wage costs associated with transmission system upgrades are associated with specific projects and thus are capitalized and included in transmission rate base. Similar transmission-related costs not capitalized directly to a project are recorded to clearing accounts and recovered through the FERC Transmission Formula Rate. Additionally, the Company recovers costs that support data center projects through Constructions in Aid of Capital ("CIAC"), which are charged directly to the customer for upgrades that only support their interconnection and are not part of its rate base (e.g., dedicated line to customer).

The Company is not proposing to make any changes to this methodology.

CAUSE-PA VI-5

For each of the five exemptions to PPL's maximum CAP credit limits contained in its 2023-27 USECP, please specifically describe:

a) All eligibility criteria for each exemption;
b) What information and/or documentation an OnTrack customer must provide to qualify for each exemption;
c) PPL's current policies and procedures for applying each exemption.

PPL Electric Response

a) Customers who exceed their maximum benefits may contact the Company to request an exemption. The customer is asked to provide the following information for each of the exemptions. In all cases, the information is passed along to the PPL Electric management team who will review the request.
    a. Additional household members: Name(s) and age(s) of persons who joined the household since the most recent enrollment.
    b. Household member experiencing serious illness: Name and age of person affected by illness.
    c. Electricity usage beyond the household's control: Details contributing to uncontrollable usage.
    d. Home does not meet building code or has been condemned: No specific criteria has been established.
    e. Estimates based on prior occupant's consumption: Confirmation that the customer's bills were estimated.
b) The customer must explain their situation and the reason they are asking for the exemption. If the PPL Electric management team approves the initial request, the customer is required to submit a new application and provide current proof of income. The final determination is made after the application is received.

c) The PPL Electric management team considers each case individually, which may include a review of, but is not limited to, the information from prior application(s), the customer's usage history, and the customer's participation in WRAP. See response CAUSE-PA II-20 Attachment 1.

OnTrack Max Credit Exception Process for iQor OnTrack Agents

OnTrack customers in danger of exceeding their maximum shortfall credits will receive warning letters if they have used 50% of their credit amount. They will receive a second letter when they reach 80% of their credit amount. The warning letters advise customers they MAY be eligible for an exemption from the maximum credit limit based on the following criteria:

- Additional household members
- Household member experiencing serious illness
- Electricity usage beyond the household's control
- Home does not meet building code or has been condemned
- Estimates based on prior occupant's consumption

If the customer has only received a 50% or 80% warning notice, we will not provide an exception at that time.

iQor agent will review and document the items below with the customer:

50% or 80% letter received	Review shortfall maximum credit amount.	Review # of months remaining on agreement. If recert date is soon, customer may not reach maximum.	Explain possible future transition to OnTrack Budget Billing.	Provide Energy Education; review usage history.	Confirm heating source; if incorrect, create WATT item as normal.	Offer WRAP, if applicable (or encourage participation if there is an open WRAP case)	Offer LIHEAP, when program is open

IMPORTANT: call center staff should NEVER suggest that a customer reduce or limit the usage of any health, safety, or medical-related items or equipment.

If the customer has received the OnTrack Budget Billing Transition letter AND requests an exemption, we will review and consider the account for an exception to the maximum OnTrack credit amount. Agents should NOT offer an exemption unless the customer raises the issue during the call.
iQor agent will follow steps below and review and document the items discussed:

Customer Reports additional household member(s)	Request name(s) and age(s) of persons who joined household.	Explain request will be reviewed. Agency may request new application.	Review # of months until recert / OTBB if no exception granted.	Provide Energy Education	Offer WRAP, if applicable	Offer LIHEAP, when open	Document the account	Email supervisor. Include names/ages of all new occupants.
Resident experiencing serious illness	Request name and age of person affected by illness.	Explain request will be reviewed. Agency may request new application.	Review # of months until recert / OTBB if no exception granted	Provide Energy Education	Offer WRAP, if applicable	Offer LIHEAP, when open	Document the account	Email supervisor. Include name/age of person affected by illness.
Electricity usage beyond the household's control	Request details contributing to uncontrollable usage.	Explain request will be reviewed.	Review # of months until recert / OTBB if no exception granted	Provide Energy Education	Offer WRAP, if applicable	Offer LIHEAP, when open	Document the account	Email supervisor. Include details regarding usage.
Home does not meet building code or has been condemned		Explain request will be reviewed.	Review # of months until recert / OTBB if no exception granted	Provide Energy Education	DO NOT offer WRAP if home is not up to code or is condemned.	Offer LIHEAP, when open	Document the account	Email supervisor. Include in email reason for request.
Consumption estimates are based on prior occupant's consumption		Explain request will be reviewed.	Review # of months until recert / OTBB if no exception granted	Provide Energy Education	Offer WRAP, if applicable	Offer LIHEAP, when open	Document the account	Email supervisor. Include in email reason for request.

PPL Electric Utilities Corporation
Response to the Set VI Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 29, 2025
Docket No. R-2025-3057164

CAUSE-PA VI-19 Please describe PPL's current policies and procedures regarding enrollment of a shopping customer in its CAP. Please provide a copy of all current written policies, procedures, memoranda, training materials, call scripts, and/ or other written documents which describe PPL's policies and procedures regarding enrollment of shopping customers in CAP.

PPL Electric Response As of June 1, 2025, for customers who are approved for PPL Electric's OnTrack program and are shopping with an electric generation supplier ("EGS"), the Company automatically notifies the EGS to submit a cancellation using a special code. This code indicates to the EGS that no early cancellation or termination fees may be charged to the customer.
The paper assistance application includes language pointing out that a customer may not participate with a supplier if they are approved for OnTrack. If a customer applies online, a similar message is displayed. In both cases, the customer is advised that the Company will initiate the process to cancel the EGS.

Immediately upon approval, a 15-day hold is added to protect the customer's account from late payment charges, collection notices, or service terminations and to allow time for the cancellation request and submission to pass from the Company to the EGS and back to the Company. A letter is mailed to the customer which explains they have been approved for OnTrack but cannot remain with any EGS while enrolled in the program. The letter further explains that no action is required on the customer's part and that the EGS will not charge any early cancellation or termination fees because of the customer's OnTrack approval.

A note is automatically added to the account that the supplier cancellation request is being submitted in response to an OnTrack approval. Upon receipt of the cancellation from the EGS, an automated process returns the customer's account to default service. The OnTrack enrollment is then completed

automatically, and the normal OnTrack enrollment letter is sent to the customer.

PPL Electric Utilities Corporation
Response to the Set VII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VII-1 At the overall USR costs projected as of the end of the FPFTY, if PPL were to apply the USR Rider to all rate classes, what would be the applicable charge per kWh/ kW for each rate class?

PPL Electric Response As previously explained in the response to CAUSE-PA IV-9, in order to complete this analysis, the Company must have a means to allocate the Universal Service Rider (USR) costs across customer classes. Because such a method does not exist, the Company has utilized the results of its cost of service study as provided on page 15 of PPL Electric Exhibit BR-1 to allocate USR costs across the customer classes for illustrative purposes. It is the Company's position that this method for allocating costs is inappropriate because it does not reflect cost causation principles.

See CAUSE-PA VII-1 Attachment 1. Note that the value for USR costs includes USR salaries and wages as proposed in PPL Electric St. No. 18 and PPL Electric Exhibit Fully Projected Future 1 Schedule D-11. Additionally, the SC&I customer class provided in the attachment includes rate schedules GS-1, GS-3, BL, SA, SM(R), SHS, SLE, and SE.

Response to the Set VII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VII-12 Please indicate:

a) PPL's current reconnection fee(s) for residential customers, and whether PPL's reconnection fee(s) for residential customers vary based on any factor (i.e. CAP participation; demographics (please specify); other (please specify)). If PPL's reconnection fee(s) for residential customers do vary, please explain the amount and reason for any variation;

b) Under what circumstances, if any, PPL waives its required payment of reconnection fees for residential customers. Please specifically explain and provide a copy of any and all current written policies, procedures, and/ or other documents detailing any exceptions to payment of reconnection fees for residential customers, and the eligibility information to qualify for an exception.

PPL Electric Response

a) Reconnection fee: PPL Electric charges a flat reconnection fee of $14 for all residential customers. This fee does not vary based on CAP participation, demographics, or other factors.

b) Waiver policy: PPL Electric does not waive the reconnection fee for customers whose service was terminated due to eligibility criteria. No exceptions or waiver policies are currently in place.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set VII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VII-13 Please indicate:

a) The basis for PPL's reconnection fee(s) for residential customers;
b) The docket number(s) at which PPL's reconnection fee(s) for residential customers was approved;
c) To what extent, if any, PPL's reconnection fee(s) for residential customers cover the costs associated with involuntary termination and/or reconnection of services. Please specifically explain and provide a copy of any citation and/or workpaper used to determine to what extent PPL's reconnection fee(s) for residential customers cover the costs associated with involuntary termination and/or reconnection of services.

PPL Electric Response

a) PPL Electric's reconnection fee for residential customers is based on the cost savings achieved through the implementation of remote switching technology. Previously, reconnection fees were $30 during normal business hours and $50 for off-hours service. When PPL Electric transitioned to remote reconnection, the fee was reduced to $14 at any time. This reduction reflects the elimination of costs associated with dispatching a service technician to the customer's premises, as most reconnections can now be performed remotely.

b) The reconnection fee was approved as a part of PPL Electric's Petition for Approval to Use the Remove Service Switch In Its Meters For Involuntary Service Termination at Docket No. P-2016-2524581. The $14 reconnection fee was agreed to under the proposed Joint Settlement of the parties in the above-reference proceeding. Upon the recommendation of the ALJs, the Commission adopted

the settlement in its entirety. The fee was implemented as part of the Company's tariff compliance filing in the above-referenced proceeding (Supplement No. 227 to Tariff Electric Pa. P.U.C. No. 201), filed on March 31, 2017 to become effective on April 3, 2017.

c) Costs associated with involuntary termination and/or reconnection services are not tracked against the reconnection fee.

(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VII-16	Has PPL studied the feasibility, cost, and/or benefits of exempting confirmed low income customers from reconnection fees? If so, please provide a copy of the report/ analysis related to the feasibility, cost, and/or benefit of exempting confirmed low income customers from reconnection fees. Please also indicate when this report/ analysis was prepared, and specifically explain any policies and/or procedures PPL has changed or intends to change as a result of this report/ analysis.
PPL Electric Response	PPL Electric has not conducted a study to consider the feasibility, cost, and/or benefits of exempting confirmed low-income customers from reconnection fees.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set IX Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 14, 2025
Docket No. R-2025-3057164

CAUSE-PA IX-2

Please refer to PPL's response to CAUSE-PA I-4, Attachment 1. From July 2024 to January 2025, PPL's OnTrack Enrollment dropped from 77,488 to 64,665. Please respond to the following questions:

a. What was the reason for the rapid decline in OnTrack enrollment during this period? Please provide any documentation or communications regarding the reason for this decline.
b. What steps has PPL taken to reenroll the customers that were lost during this decline? Provide any documentation or communications that reflect PPL's efforts.

PPL Electric Response

a. In PPL Electric's current Universal Service and Energy Conservation Plan ("USECP"), the OnTrack recertification period changed from 18 to 12 months. This increased the average number of customers due for recertification per month by roughly 210%. The Company's USECP was implemented in August 2023, so the first set of customers on 12-month agreements came due for recertification in August 2024. The higher volume of recertifications (and by extension, failures to recertify) outpaced the average monthly number of enrollments, which had remained steady or slightly higher than in 2023.

b. In response, in October 2024, the Company increased the cadence of automated recertification reminder phone calls from bi-weekly to weekly. The automated message was also revised to emphasize the importance of recertification. The Company also encouraged its LIURP

contractors to make customers aware when they are due to recertify.

In November 2024, live agent phone campaigns were conducted to almost 24,000 customers (either recently removed or due for recertification). The Community Based Organizations (“CBOs”) that support OnTrack were notified of these campaigns to help support efforts to recertify these customers. In addition, the Company shared a reminder to call center staff providing emphasis on identifying customers eligible for recertification and the importance of customers recertifying on time.

See CAUSE-PA IX-2 Attachments 1 through 4.

Declining OnTrack Participation Levels

Statement

The OnTrack participation level has decreased from the high of 77,488 on July 31, 2024, to just under 74,000 as of October 11th. In this memo we will review the reason for the decline, associated data, and our next steps.

Background

OnTrack was previously an 18-month program. During our most recent Universal Service and Energy Conservation Plan (USECP) we were ordered to change our recertification period to 12 months but extend our arrearage forgiveness plan to 24 months. This means, if we had 70,000 participants on an 18-month program, we expect that over an 18-month period 3,888 participants would recertify monthly. Now, on a 12-month program it would be 5,833 participants.

The number of customers being prompted to recertify increased 210%, going from an average of 1,500 for the first six months of the year to an average of 4,652 for the past three months. The data shows that 4,778 customers were removed for failure to recertify for the period of July through September.

While we always lose customers who fail to complete recertification and see fluctuation in the numbers with our previous plan their agreement was complete, and arrearages were forgiven. However, with a 24-month arrearage cycle, if the customer does not recertify, they lose the 2nd half of the debt forgiveness. Furthermore, if they reapply it is considered a new agreement and starts the 24-month cycle again.

Existing Process

Our existing recertification process includes:

- Reminder letters and applications are mailed 30-45 days prior to recert due date
- Automated bi-weekly reminder calls to customers in recertification window
- A one-time automatic recertification is processed for a customer who has received LIHEAP in the past 12 months or has an income source of SSI.

If the customer fails to reapply or fails to submit requested documentation the agreement is automatically canceled, and the customer is sent a removal letter.

Proposed Resolution

- Implement email and text reminders to customers in their recertification window
- Use LIHEAP data sharing information to facilitate OnTrack enrollments and recertifications
- Create a new outbound iQor call campaign to remind customers with a balance to recertify
- Review existing letters/blaster message for edits (add statement around the need for recertification for a customer with a balance)
- Educate iQor on the importance of recertification during upcoming tailboards
- Add recertification statement to website
- Continued Outreach and Communication campaigns
    - Continue quarterly email promotions to new income-eligible customers to increase new enrollments
    - During LIHEAP season, continue “Fast Track to OnTrack” emails to eligible customers
    - Continue bimonthly OnTrack promo emails to low-income customers paying more than PTC
    - Increase OnTrack promotions across digital channels, including website and social media

PPL Electric Utilities Corporation
Response to the Set IX Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 14, 2025
Docket No. R-2025-3057164

CAUSE-PA IX-5	In response to CAUSE-PA III-14, PPL responded as follows: "PPL Electric does not provide a simplified OnTrack application for customers who are recipients of LIHEAP grants. However, the Company does require the customer to provide income information if the customer had received a LIHEAP grant." Please clarify whether the second sentence in this response should read that "the Company does not require the customer to provide income information if the customer had received a LIHEAP grant."
PPL Electric Response	The Company clarifies its response to CAUSE-PA III-14 as follows: PPL Electric does not provide a simplified OnTrack application for customers who are recipients of LIHEAP grants. While the Company does require the customer to provide income information for the purpose of payment calculation, it does not require proof of that income if the customer has received a LIHEAP grant.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set IX Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 14, 2025
Docket No. R-2025-3057164

CAUSE-PA IX-10

In response to CAUSE-PA IV-6, PPL indicates that as of October 18, 2025, there are 243 OnTrack customers on Rate RTS. Please answer the following questions:

a. Are these customers currently classified as Electric Heat or Non-Electric Heat?
b. If Electric Heat, are these customers currently receiving the electric heat maximum cap credits described in PPL's current Universal Service and Energy Conservation Plan?
c. Given that PPL projects the total monthly bill for these customers at average usage to increase by 12.4% based on the switch from Rate RTS to Rate R, what provision is PPL proposing regarding any increase to its maximum cap credits?

PPL Electric Response

a. At the time of this response, there are 239 OnTrack customers on Rate RTS. Of those, 224 are classified as Electric Heat and 15 as Non-Electric Heat. The heating classification is based on information provided by the customer at the time service is requested and may be updated upon the customer reporting a change to the installed heating system.

b. Yes, customers enrolled in OnTrack who are on Rate RTS and are classified as Electric Heat receive the electric heat maximum CAP credits as described in PPL Electric's current Universal Service and Energy Conservation Plan.

c. The Company is not proposing any increase in the maximum CAP credits in the context of this proceeding.

(CAUSE-PA)
Dated November 14, 2025
Docket No. R-2025-3057164

CAUSE-PA IX-11

In response to CAUSE-PA V-1, PPL states that if it initiates disconnection of service to a landlord-ratepayer master metered residential building, that it will offer to tenants, "the option to pay the most recent sub-metered bill to maintain service." Please respond to the following:

a. Please clarify how PPL will determine the "most recent sub-metered bill" amount;
b. If a tenant exercises the “option to pay the most recent sub-metered bill to maintain service,” is service maintained for just that unit for the entire building?
c. If the answer to subpart b. of this interrogatory is that service is maintained for just that unit, please explain how PPL maintains service to just one submeter if the building is master metered.

PPL Electric Response

a. PPL Electric must rely on the landlord or tenant to provide the amount of the sub-metered bill. PPL Electric does not render sub-metered bills to tenants.
b. In the event the tenant(s) exercises the option to pay the most recent sub-metered bill, service to the entire building is maintained.
c. See Part b.

Dated November 14, 2025
Docket No. R-2025-3057164

CAUSE-PA IX-13 Please list all touchpoints where PPL screens residential customers for income status and Ontrack eligibility. Please also provide a copy of all current call scripts, training materials, and/ or other guidance provided to customer service representatives on how to conduct such screening.

PPL Electric Response

The Company screens residential customers for income status and OnTrack eligibility at multiple touchpoints, including:

- When a customer contacts the Company regarding a past-due balance.
- When establishing or reviewing a payment agreement.
- During bill review or other interactions where indicators suggest the customer may need assistance.

Customer Service Representatives are trained to engage in these discussions as appropriate based on the customer's circumstances.

See response to CAUSE-PA III-34 and CAUSE-PA VI-19 for copies of current training materials and guidance related to program screening.

PPL Electric Utilities Corporation
Response to the Set X Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-1

Please explain how PPL calculates the monthly payment for a CAP customer who is billed according to the OnTrack Average Bill option. Please also provide copies of current policies, procedures, or other documents which describe how PPL calculates the Ontrack Average Bill option.

PPL Electric Response

PPL Electric calculates the monthly payment for a Customer Assistance Program ("CAP") participant enrolled in the OnTrack Average Bill option using its Budget Billing methodology.

The calculation is as follows:

Average Bill = (Sum of the last 12 months of actual billed amounts) ÷ 12.

See CAUSE-PA X-1 Attachment 1.

Process

Enrollment

Determining Budget Amount

How is the Budget Amount determined?

When there is **sufficient** billing history:

- The monthly installment amount is determined by averaging the last 12 actual monthly bills (adding the last 12 monthly bills and dividing by 12).

When there is **insufficient** billing history:

- If the budget amount is **$100 or greater (electric heat)** or **$50 or greater (non-electric heat)**, use the system-generated budget amount and continue with the budget billing enrollment.
- If the budget amount is **less than $100 (electric heat)** or **less than $50 (non-electric heat)**, use the Budget Bill Estimator to determine the budget amount. Adjust the annual base and continue with the enrollment.

Notes

- The calculation of the budget billing amount includes all services for an account: electric and lighting
- If the quarterly review is within a $10 range (higher or lower) of the current budget figure, the monthly budget figure will remain the same.
- At annual settlement, the new budget amount will be calculated by taking the last 12 months of use and dividing by 12
- When starting on the budget at the time of connect, the first month's budget amount is **not** prorated.

What if the estimate is wrong?

The account is reviewed every three months and can be either increased or decreased according to the actual use.

The budget amount will change only if the new budget amount is higher or lower than a $10 of the old budget amount.

How will the customer know if the budget amount changes?

- The bill will show the new budget amount one month before the change.
- A message is printed on the bill under the Budget Summary.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-2

Please refer to PPL's response to CAUSE-PA 1-5 and PPL's 2023-2027 USECP at p. 5. PPL indicates that if an Ontrack Customer's installment amount is greater than the Average Bill, PPL will reduce the bill to the Average Bill amount.

a. Is this a one-time adjustment or will such customers be moved to the Average Bill option until the next review?
b. If the customers is on the Average Bill option, will the review process check whether the customer is paying more than their Percentage of Income Payment amount and make a corresponding adjustment?

PPL Electric Response

a. If the Company adjusts an OnTrack customer's installment to the Average Bill amount, it is not a one-time adjustment. As explained in CAUSE-PA I-5, PPL Electric's review of the installment in relation to the average bill amount occurs monthly. If a customer whose installment was adjusted in a prior month appears again in a subsequent monthly report, the installment would again be subject to review and possible adjustment.

b. If a customer is currently paying the Average Bill option, the review process does not check whether the customer is paying more than their Percentage of Income Payment.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set X Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-4	Please provide all surveys, reports, and/or other documentation reflecting PPL's LIURP outcomes since January 2023.
PPL Electric Response	See CAUSE-PA X-4 Attachments 1 through 5 for the Company's LIURP reports reflecting program outcomes since January 2023.

PPL Electric Utilities

Low-Income Usage Reduction Program

2023 Annual Report

Submitted April 30, 2025

Table 1

LIURP Cost Information

Utility: PPL Electric Utilities Corporation

Calendar Year: 2023

Table 1a

Cost Category: Non-Coordinated Jobs	Total Annual Cost
Administration	$724,454
Field Support	$59,146
Inspections	$223,781
No Measures Installed Costs	$136,173
Health and Safety	$904,820

Table 1b

Cost Category: Coordinated Jobs	Total Annual Cost
Inter-Utility (LIURP to LIURP)	$5,102
Other Coordinated Jobs	$129,702

Cost Category: Pilot Programs	Total Annual Cost
No pilot programs in 2023	N/A

Executive Summary

PPL Electric Utilities (PPL, PPL Electric or the Company) provides measures and services to reduce the electric bills and improve the comfort of low-income customers in conjunction with its WRAP.[1] In 2023, PPL provided usage reduction measures to 2,066 customers with installed electric heat and/or high cooling usage (full-cost WRAP), 581 water-heating customers (low-cost WRAP) and 1,417 lighting and appliance or baseload customers (baseload WRAP). Customers in all three categories received energy conservation education and baseload measures when eligible.

The Company analyzed the consumption behavior of 2,773 WRAP recipients. The 2023 analysis group had 230 more cases than the 2022 analysis group. Cadmus, the Company's third-party evaluator, excluded 1,291 cases mainly due to outlier customers whose pre- and post-consumption history had anomalies. Cadmus performed its analysis with the following exclusions:

2023 WRAP Customers

Full-Cost WRAP Jobs…….. 2,066
Low-Cost WRAP Jobs……..... 581
Baseload WRAP Jobs…… 1,417

Total Number of WRAP Customers = 4,064

Total Cases Excluded in Savings Analysis = 1,291

Total Cases Analyzed = 2,773

Table 1. 2023 WRAP Kilowatt-hour (kWh) Savings Results

Job Type	% Savers	Number of Saver Customers	% Gainers	Number of Gainer Customers	Net Savings
Baseload	80%	732	20%	188	10.4%
Low-Cost	76%	304	24%	95	9.9%
Full-Cost	80%	1,170	20%	284	9.6%
Total	**80%**	**2,206**	**21%**	**567**	**9.9%**

Percent averages are weighted by the number of customers in each job type.
Savers refers to customers who decreased their consumption in the post-period, while gainers refer to customers who increased their consumption in the post-period.

[1] WRAP is PPL Electric's Low-Income Usage Reduction Program (LIURP).

Executive Summary (cont'd)

A total of 2,206 (80%) WRAP job recipients analyzed decreased their electricity consumption within 12 months after receiving WRAP in 2023. This was the same share as the 2022 evaluation that also reported 80% of recipients decreased consumption. The gross kWh savings[2] for 2023 WRAP recipients increased slightly for all job types compared with 2022. In 2023, customers who received baseload treatments had the highest percentage of savings among all job types, with savings of 10.4% of their pre-participation usage (Table **3**). An overall average of 9.9% of pre-participation usage was saved across all job types.

Average Bill Reduction

The information in Table 2 depicts the change in the average electric bill between the pre- and post-participation periods for customers who received WRAP in 2023 based on $0.14 per kWh.

Table 2. 2023 WRAP Cases - Average Bill Reduction

Job Type	Number of Jobs Analyzed	kWh Usage Change Pre to Post	Electric Bill Change Pre to Post
Baseload	920	2,052	$287
Low-Cost	399	1,952	$273
Full-Cost	1,454	2,460	$344
Average	**2,773**	**2,252**	**$315**

The "Electric Bill Change" as noted above reflects the customer's total bill based on actual usage with PPL as the provider of last resort (currently $0.14 per kWh). WRAP customers' bills vary with consumption, rate, payment plan, and generation supplier.

Changes in Electric Usage 2022 vs. 2023

The analysis for 2023 participants revealed a decline in post-WRAP energy consumption for households that received WRAP. Table 3 offers a comparison of savings.

Table 3. Changes in Electric Usage Between 2022 and 2023

Job Type	Average 2022 Savings per Home	Average 2023 Savings per Home	% Savings Change Savings per Home	Change Statistically Significant ?	Average 2022 kWh Savings Per Home	Average 2023 kWh Savings Per Home	% Change kWh	Change Statistically Significant ?
Baseload	10.1%	10.4%	3%	No	1,932	2,052	6%	No
Low-Cost	8.7%	9.9%	13%	No	1,732	1,952	13%	No
Full-Cost	8.8%	9.6%	10%	No	2,247	2,460	10%	No
Total	9.1%	9.9%	9%	No	2,067	2,252	9%	No

[2] The gross kWh savings accounts for all analyzed customers.

The overall average energy savings per home increased by 9% from 2022 to 2023. The average kWh savings per home increased for customers across all job types.

The percent change in kWh, savings as a percent of pre-program usage, was not statistically different at the 90% confidence level between 2022 and 2023 for baseload, low cost, or full-cost jobs.

A total of 36 of the analyzed homes received measures funded by WRAP and Act 129 weatherization programs. These homes were excluded from the overall savings results because the analysis analyzed whole-home changes in electric usage rather than measure-specific, which would allow savings to be attributed by funding source.

Table 4 compares savings per-home with and without the 36 coordinated jobs excluded from the analysis. Overall, percent savings results did not change for baseload jobs. Percent savings for low-cost and full-cost jobs increased by 0.1%. These results suggest that coordinated jobs did not differ substantially from WRAP-only jobs.

Table 4. Changes in Electric Usage with and without Coordinated Jobs Excluded

Job Type	Exclude Coordinated Jobs % Change	Exclude Coordinated Jobs Average 2023 kWh Savings per Home	Include Coordinated Jobs % Change	Include Coordinated Jobs Average 2023 kWh Savings per Home
Baseload	10.4%	2,052	10.4%	2,046
Low-Cost	9.9%	1,952	9.8%	1,928
Full-Cost	9.8%	2,460	9.7%	2,464
Total	**9.9%**	2,252	9.9%	**2,247**

Results presented in the remainder of the report exclude the coordinated jobs.

Table 5 shows the percentage of savers increased for full-cost jobs and decreased slightly for baseload and low-cost jobs.

Additionally, the number of gainers showing an increase in post-WRAP energy consumption is shown in Table 5 for 2022 and 2023. The percentage of gainers increased for all baseload and low-cost job categories between 2022 and 2023.

Table 5. Savers and Gainers in 2022 and 2023

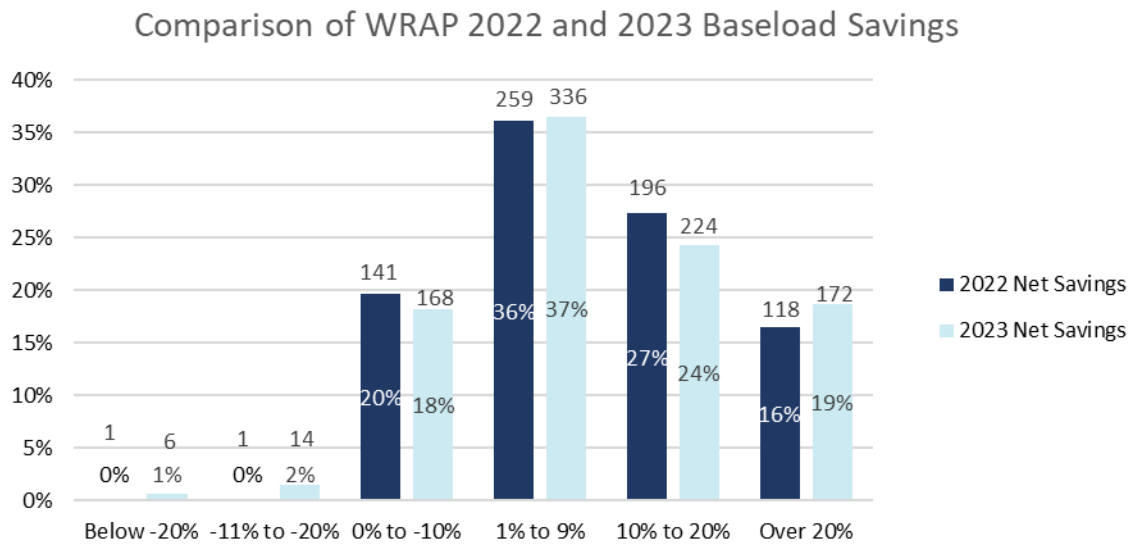
Job Type	2022 Savers	2023 Savers	% Change in Savers	2022 Gainers	2023 Gainers	% Change in Gainers	Change Statistically Significant
Baseload	80.0%	79.6%	-0.6%	20.0%	20.4%	2.3%	No
Low-Cost	77.5%	76.2%	-1.6%	22.5%	23.8%	5.6%	No
Full-Cost	80.0%	80.5%	0.6%	20.0%	19.5%	-2.4%	No
Total	**79.6%**	**79.6%**	**0.0%**	**20.4%**	**20.5%**	**0.5%**	**No**

Baseload Cases: 2022 vs. 2023

Cadmus analyzed 920 out of 1,417 cases (65%) that received baseload WRAP in 2023 and 716 out of 1,296 cases (55%) that received baseload WRAP in 2022.

Cadmus excluded 497 of the 2023 baseload WRAP cases for the following reasons:

141	Cases	-	Less than nine months of pre- or post-billing data
329	Cases	-	Outliers
16	Cases	-	Changed usage by more than 70%
11	Cases	-	Coordinated jobs[3]



Outliers included accounts where the pre- and post-consumption history had anomalies such as vacancies, seasonal usage, or equipment changes. These accounts were identified by reviewing the pre- and post-monthly average daily usage for each participant. Anomalies were further checked with reference to the PRISM model estimates and the measures installed. For example, cases with a high heating system equipment load where only lighting or refrigerator base load savings were expected were removed from the analysis because the changes in usage were unrelated to the measures installed. Customers who showed vacancies or seasonal usage were also removed from the analysis since the change in usage was unrelated to the measures installed. Cadmus performed these screens across all three job types.

The percentage of savings over pre-participation usage decreased from 10.1% in 2022 to 10.4% in 2023 for baseload recipients; this change was not significant at the 90% confidence level. The average kWh savings increased from 1,932 kWh in 2022 to 2,052 kWh in 2023 for baseload recipients; this change was not significant at the 90% confidence level.

Figure 1 illustrates the percentage of baseload participant savings (including savers and gainers) according to energy savings categories for years 2022 and 2023. The number above each bar indicates the number of customers in the category.

[3] Jobs with other weatherization programs.

Figure 1. Comparison of WRAP 2022 and 2023 Baseload Savings

In 2023, 80% of WRAP baseload recipients analyzed reduced their electric usage. The largest group of savers (37%) reduced their electric usage by 1% to 9%. The next largest group (24%) reduced their electric usage by 10% to 20%, and 19% reduced their usage more than 20%. A total of 20% of baseload participants increased their usage after they received their baseload service; of these, 18% increased usage by 0% to 10%.

In comparison, 80% of WRAP baseload recipients in 2022 reduced their electric usage. The largest group of 2022 savers (36%) reduced their electric usage by 1% to 9%. The next largest group (27%) reduced their electric usage by 10% to 20%, and 16% reduced their usage more than 20%. A total of 20% of baseload participants increased their usage after they received their baseload service; of these, 20% increased usage by 0% to 10%.

The average 2023 baseload recipient reduced annual kWh consumption by an estimated 10.4%; pre-WRAP and post-WRAP baseload consumption was estimated at 19,765 and 17,714 kWh, respectively.[4] In comparison, the average 2022 baseload recipient reduced annual kWh consumption by an estimated 10.1%; pre-WRAP and post-WRAP baseload consumption was estimated at 19,156 and 17,224 kWh, respectively.[5] The average cost per job increased by approximately $99 from $1,157 in 2022 to $1,256 in 2023.

The Company did not make changes to WRAP measure offerings between 2022 and 2023. PPL offered the same services and measures during 2022 and 2023. The

[4] The savings percentage, pre-WRAP consumption, and post-WRAP consumption are all estimates derived from statistical models. The slight discrepancy between the savings percentage reported and the difference in pre- and post-consumption is due to the statistical model variations in controlling for exogenous factors; however, it is not statistically significant.
[5] Ibid.

dominant measures in 2023 were lighting (LEDs), smart plugs, refrigerator replacement, and room air conditioner replacement. These were the same dominant baseload measures in 2022.

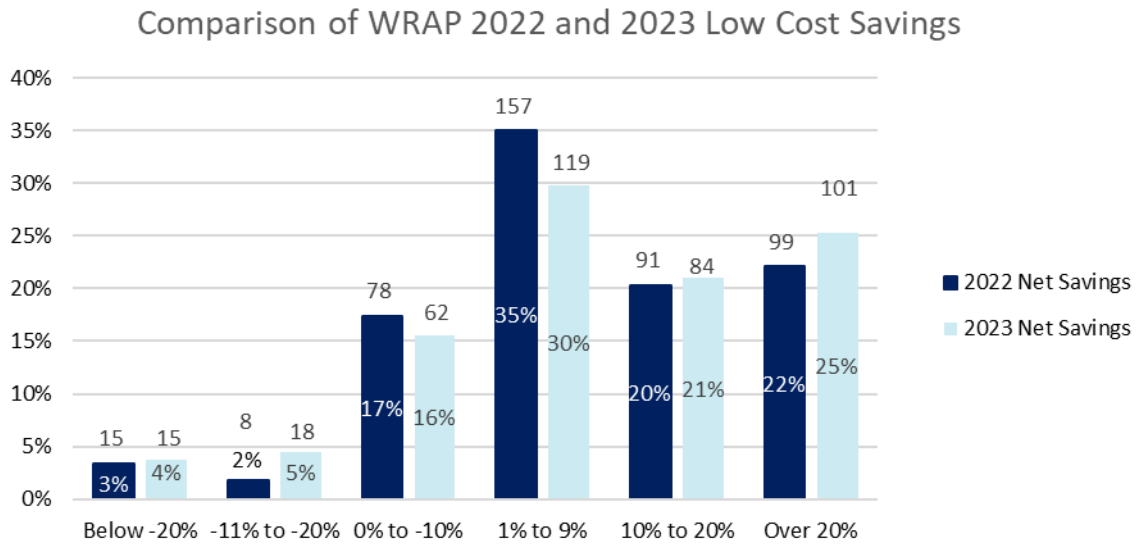
An analysis of the relationship between average cost per job and savings for 2023 baseload participants indicates that, on average, as the cost per job increases, savings decrease slightly. As referenced above, Cadmus binned customers into savers and gainers categories based on total percentage saved. The correlation coefficient between savings and job cost across all the savers and gainers categories of baseload participants is negative at -0.51. Excluding the gainers category of customers who increased their usage by more than 20%, the correlation decreases to -0.58, suggesting that some customers with greater job costs increased usage after the jobs were completed.

In 2023, on average, the Company spent similar amounts on households that increased usage ($1141-$1,305), as households that decreased usage ($1038-$1200), except for four homes with the highest average job ($2,165) who increased usage by 11% to 20%.

Low-Cost Cases: 2022 vs. 2023

Cadmus analyzed 399 out of 581 (69%) water-heating or low-cost cases for the 2023 reporting year compared to 448 out of 654 (69%) in 2022.

Cadmus eliminated 206 low-cost cases for the following reasons:



68	Cases	-	Less than nine months of pre- or post-billing data
94	Cases	-	Outliers
8	Cases	-	Changed usage by more than 70%
12	Cases	-	Coordinated jobs

Outliers included accounts where the pre- and post-consumption history had anomalies such as vacancies, seasonal usage, or equipment changes. The procedures to remove outliers is described above for baseload jobs.

Gross savings for low-cost recipients remained the same in 2023 compared with 2022 at 9.9%. The average kWh savings increased from 1,732 kWh in 2022 to 1,952 kWh in 2023. For low-cost job recipients, this change was not significant at the 90% confidence level.

Figure 2 illustrates the percentage of low-cost participant savings (including savers and gainers) according to energy savings categories for years 2022 and 2023. The number above each bar indicates the number of customers in the category.

Figure 2. Comparison of WRAP 2022 and 2023 Low-Cost Savings

In 2023, 76% of analyzed households receiving low-cost measures reduced their electricity usage. The largest group of savers (30%) reduced their electric usage by 1% to 9%, 21% of households saved between 10% to 20%, and 25% saved more than 20%. A total of 25% of low-cost participants increased their usage after they received their low-cost service; of these, 16% increased usage by only 0% to 10%.

In comparison, 77% of 2022 households receiving low-cost measures reduced their electricity usage. The largest group of savers (35%) reduced their electric usage by 1% to 9%, 20% of households saved between 10% to 20%, and 22% saved more than 20%. A total of 23% of low-cost participants increased their usage after they received their low-cost service; of these, 17% increased usage by only 0% to 10%.

The average 2023 low-cost recipient reduced annual kWh consumption by an estimated 9.9%; pre-WRAP and post-WRAP low-cost consumption was estimated at 19,716 and 17,764 kWh respectively.[6] In comparison, the average 2022 low-cost recipient reduced annual kWh consumption by an estimated 8.7%; pre-WRAP and post-WRAP low-cost consumption was estimated at 19,817 and 18,085 kWh, respectively.[7] The average cost per job increased by $407, from $2,604 to $3,010 between 2022 and 2023.

The Company did not make changes to WRAP low-cost measure offerings between 2022 and 2023. PPL offered the same services and measures during 2022 and 2023. The dominant low-cost measures in 2023 were lighting (LEDs), domestic hot water

[6] The savings percentage, pre-WRAP consumption, and post-WRAP consumption are all estimates derived from statistical models. The slight discrepancy between the savings percentage reported and the difference in pre- and post-consumption is due to the statistical model variations in controlling for exogenous factors; however, it is not statistically significant.
[7] Ibid.

measures, refrigerator replacement, and faucet aerators. These were similar to the dominant measures in 2022.

The Company added the heat pump water heater (HPWH) as a standard measure in late 2010. A total of 81 low-cost recipients received them in 2023, and all 81 cases were included in the savings analysis. All but 11 of the homes that received a low-cost job and HPWH installations were in the savers category, and 32 homes decreased their usage by greater than 20%.

By comparison, 111 low-cost recipients received heat pump water heaters in 2022 with all 111 cases included in the analysis. All but 25 of the homes in the low-cost category were savers; 40 of the households decreased energy by greater than 20%.

An analysis of the relationship between average cost per job and savings for 2023 low-cost participants indicates that, on average, as the cost per job increases, savings increase. As referenced above, Cadmus binned customers into savers and gainers categories based on total percentage saved. The correlation coefficient between savings and job cost across all the savers and gainers categories of low-cost participants is positive at 0.63. Excluding the gainers category of customers who increased consumption by 20% or more, the correlation remained positive and increased to 0.92. Only 16 customers who increased 20% or more were excluded.

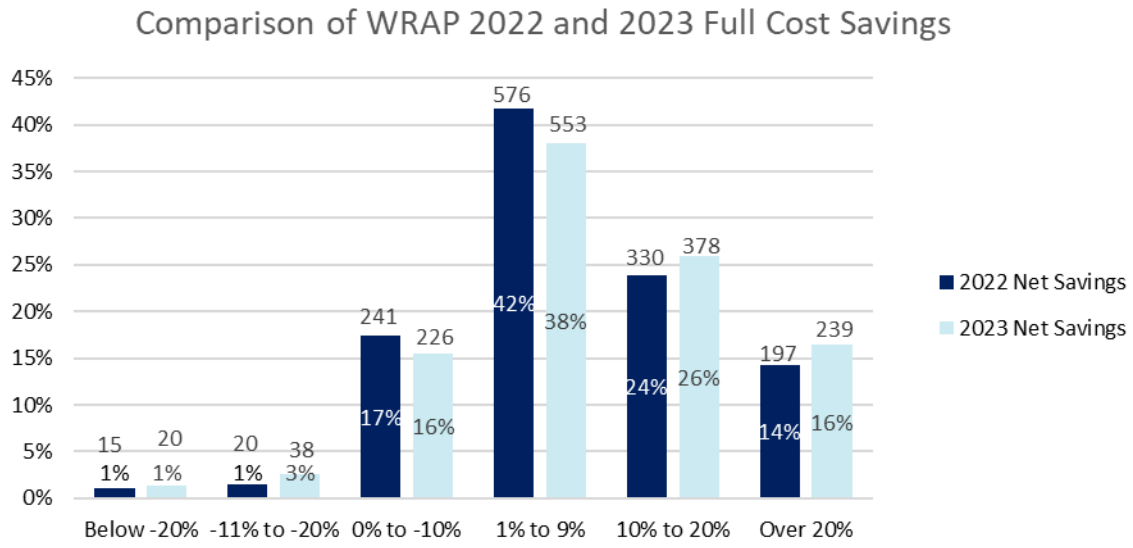
In 2023, on average, across each of the savers and gainers categories, the Company spent comparable amounts on households that increased usage ($2,365 to $2,510) compared with customers who reduced usage ($2,335 to $2,904).

The category that *increased* usage more than 20% (15 customers) had a slightly lower cost per job ($2,510) than the customers who decreased usage by more than 20% ($2,904).

Full-Cost Cases: 2022 vs. 2023

Cadmus analyzed 1,454 out of 2,066 (70%) jobs that received heating and/or cooling shell treatments or full-cost measures in 2023 in comparison to 1,379 out of 2,008 (69%) jobs completed during 2022.

Cadmus excluded the following 612 full-cost cases for the following reasons:



194	Cases	-	Less than nine months of pre- or post-billing data
393	Cases	-	Outliers
12	Cases	-	Changed usage by more than 70%
13	Cases	-	Coordinated jobs

Outliers included accounts where the pre- and post-consumption history had anomalies such as vacancies, seasonal usage, or equipment changes. The procedures to remove outliers is described above for baseload jobs.

Gross savings for full-cost recipients increased from 8.8% in 2022 to 9.6% in 2023. The change was not statistically significant at 90% confidence level. The average kWh savings increased from 2,247 kWh in 2022 to 2,460 kWh in 2023. For full-cost job recipients, this change was not significant at the 90% confidence level.

Figure 3 illustrates the percentage of full-cost participant savings (including savers and gainers) according to energy-savings categories for years 2022 and 2023. The number above each bar indicates the number of customers in the category.

Figure 3. Comparison of WRAP 2022 and 2023 Full-Cost Savings

In 2023, 80% of analyzed households receiving full-cost measures reduced their electricity usage. The largest group of savers (38%) reduced their electric usage by 1% to 9%, followed by the next largest group (26%) that saved between 10% to 20%, and 16% reduced their usage by greater than 20%. A total of 20% of full-cost participants increased their usage after they received their full-cost service, including 16% that increased usage by 0% to 10%.

In comparison, 80% of analyzed households receiving full-cost measures reduced their electricity usage. The largest group of savers (42%) reduced their electric usage by 1% to 9%, followed by the next largest group (24%) that saved between 10% to 20%, and 14% reduced their usage by greater than 20%. A total of 19% of full-cost participants increased their usage after they received their full-cost service, including 17% that increased usage by 0% to 10%.

The average 2023 full-cost recipient reduced annual kWh consumption by an estimated 9.6%; pre-WRAP and post-WRAP full-cost consumption was estimated at 25,526 and

3,061 kWh, respectively.[8] In comparison, the average 2022 full-cost recipient reduced annual kWh consumption by an estimated 8.8%; pre-WRAP and post-WRAP full-cost consumption was estimated at 25,565 and 23,319 kWh, respectively.[9] The average cost per job increased by approximately $571 from $4,915 in 2022 to $5,486 in 2023.

The Company added ductless heat pumps to WRAP full-cost measure offerings to align with the new Universal Service and Energy Conservation Plan, with installations beginning midway through the year. The dominant full-cost measures in 2023 were attic insulation, lighting (LEDs), repairs, and air ventilation. These were the same as the dominant measures in 2022.

Full-cost jobs included 178 HPWH in 2023, and all 178 homes were included in the savings analysis. All but 20 (11%) of the homes that received full-cost measures and HPWH installations were in the savers category, and 42 homes decreased their usage by greater than 20%.

An analysis of the relationship between average cost per job and savings for 2023 full-cost participants indicates that, on average, as the cost per job increases, savings increase. As referenced above, Cadmus binned customers into savers and gainers categories based on total percentage savings. The correlation coefficient between savings and job cost across all the savers and gainers categories of full-cost participants is positive at 0.69. Excluding the gainers category of customers who increased consumption by 20% or more, the correlation remains positive and increases to 0.72. Only 20 customers who increased 20% or more were excluded.

In 2023, on average, across each of the savers and gainers categories, the Company spent less money on households that increased usage ($4,176 to $4,956), as on customers who reduced usage ($4,441 to $5,799). The group that increased usage by over 20% had lower average cost per job ($4,510) while the group that reduced usage by more than 20% had the highest average job costs ($5,799).

2022 vs. 2023 Results: Overall Comparison

The average gross savings and the average percentage savings increased for all job types in 2023 with baseload jobs showing the smallest increase. The percentage of gainers for WRAP participants was 20% in 2023, with no difference in the percentage of gainers in 2022, remaining consistent with prior years, ranging from a low of 20% in 2014 to a high of 26% in 2011.

[8] The savings percentage, pre-WRAP consumption, and post-WRAP consumption are all estimates derived from statistical models. The slight discrepancy between the savings percentage reported and the difference in pre- and post-consumption is due to the statistical model variations in controlling for exogenous factors; however, it is not statistically significant.
[9] Ibid.

Impact of Shifts on Usage Patterns

PPL Electric does not measure peak usage or "demand reduction" as a component in its universal service programs and the Company did not conduct any load management programs in conjunction with LIURP in 2023.

Payment Analysis

The Company did not conduct any payment analysis studies of 2023 WRAP participants. The Company continues to assert that many factors influence payment patterns, most notably, participation in the CAP program.

Year 2023: Goals and Accomplishments:

Goals:

PPL's LIURP objectives are to reduce the electric usage and improve the comfort and energy affordability of customers with limited incomes. In addition, the Company and its contractor network refers customers to other weatherization and utility programs. The Company implemented specific goals as noted below.

1. **Direct the implementation of the PUC-mandated budget of $12,000,000 in a timely and cost-effective manner and meet all regulatory reporting requirements.**

The 2023 expenditure goal of $13,088,930 included the remaining carryover of unspent 2020 funds in the amount of $1,088,930. Additionally, PPL's USECP was approved in 2023 and an additional $2,000,000 was approved, increasing our yearly budget from $10,000,000 to $12,000,000. PPL had expenditures of $13,145,604 (100.4% of goal) and completed 4,108[10] jobs. The Company submitted all reporting requirements in 2023.

2. **Complete 3,500 LIURP jobs.**

PPL completed 4,108 LIURP jobs in 2023.

3. Implement the changes from the approved 2023-2027 Universal Service and Conservation Plan. These include, but are not limited to:

- Ductless Heat Pump installations as a standard measure
- $2M increase in annual budget
- Updating language in the application and landlord consent letters
- Develop a new 6-month post-weatherization letter

[10] Completed number of jobs corresponds to the jobs closed in the calendar year. The number of jobs evaluated for savings are based on the final measure install date.

Additional accomplishments and initiatives for this reporting year included:

- Created and implemented a BOT for WRAP customer communication.

  Participated as a committee member to the Pennsylvania Weatherization Advisory Council.

- Provided WRAP and LIHEAP information to call centers to increase referrals increase awareness and pass along to income eligible customers

- Shared LIURP updates and progress at two stakeholder meetings and invited feedback.

- Sponsored four contractor organizations for attendance and training at the Home Performance Conference

- Completed field observations of each contractor to ensure program guidelines are being followed and continue to look for opportunities to enhance the program.

- Presented Universal Service Program information in November 2023 at a virtual community event organized by PUC Commissioner Brown.

- Presented Universal Service Program information at the Harrisburg area BeWise event in November 2023

- Attended eight additional outreach events to provide PPL customers with Universal Service Program information. These events were hosted by a variety of sources, including State Representative Mackenzie, Salvation Army and local churches and neighborhood centers.

Year 2025: Goals and Initiatives:

PPL's overarching 2025 LIURP goals are to expend the budget of $12,000,000 and ensure equitable service across the service territory.

Specific goals include, but are not limited to:

- Engage and update PPL's LIURP program based on the newly approved regulations

- Continue to coordinate services between Act 129 WRAP and LIURP under the Phase IV plan. Explore options to enhance program benefits.

- Continue to coordinate efforts between LIURP and PA WAP and the gas utility weatherization programs.

- Coordinate and host two universal service stakeholder's meetings.

- Increase LIURP program awareness by employing various marketing methods with a focus on counties with fewest leads as well as CAP customers who are in danger of exceeding maximum benefit limits.

- Manage and partner with improved outreach team to provide up to date program information and potential coordination efforts out in the communities that PPL serves

- Participate in the PA WAP Advisory Panel Council and affiliated proceedings.

- Sponsor or coordinate contractor training "as needed", including sponsorship for the annual Home Performance Conference.

- Manage automation of invoice approvals through BOT technology

- Meet with contractors to review their individual acquisition costs, reinforce good practices, and define areas for improvement.

Coordination with Other Weatherization Programs:

PPL's WRAP system, "LEAP" (Low Income Energy Assistance Program), enables PPL staff and/or WRAP Contractors to perform the following activities in support of coordination with LIURP and other programs:

1. Bypass the audit and initial energy education session if the work was done through another weatherization program within the past twelve months.
2. Enter information for coordinated jobs if the completion or projected completion date is within twelve months of LIURP work.
3. Track referrals to other weatherization and utility programs.
4. Enter comments to facilitate the coordination of work.
5. Transfer new cases from PPL's LIURP WRAP to Act 129 WRAP and vice-versa; transfer recommended measures from Act 129 WRAP to LIURP.

PPL accepts inter-utility coordination referrals via mail, e-mail, phone calls or fax. Third-party organizations can also enter a WRAP application on behalf of the customer on PPL Electric's website. The Company coordinates LIURP work with other programs where possible. Organizations that perform work for multiple weatherization programs will sometimes take the lead in coordinating and will assist the customer in completing an application.

PPL requires that WRAP Auditors/Energy Educators make applicable referrals during WRAP visits. PPL's data shows that WRAP contractors made the following referrals in conjunction with 2023 LIURP:[11]

Program	# Referrals
County Weatherization	540
PA WAP	689
Gas Utility Program	375
Crises	62
OnTrack and Operation HELP	1,203
LIHEAP	1,667
Other, including ERAP	167

PPL's LEAP reveals a direct coordination with cases completed by LIURP and other weatherization programs within calendar year 2023:

Program	Cases
PA WAP	11
County Weatherization	13
Act 129 WRAP	36
Crises	15
UGI	7

Barriers to coordination include variances in program goals and objectives, funding levels, and eligibility criteria. Timeliness and tracking are also challenges. Referrals issued during LIURP may result in coordinated jobs months, or even years, after the referral and coordinated jobs that take place within two separate program years are not reflected on annual LIURP Reports.

Most of the coordination between PPL's LIURP and Act 129 takes place during the application process where customers are auto-matched to the appropriate program. Barriers include inability to obtain landlord consent and/or highly transient customers.

Conclusion

In 2023, PPL showed a slight increase in the savings results for all of the three job types. The Company is pleased to report that 80% of customers reduced usage in the pre to post measurement period, and the average customer reduced electricity usage by 9.9% over the energy used before participating in WRAP. In addition, many customers enjoyed the secondary benefits of WRAP, such as improved comfort and health and safety conditions.

In 2025, PPL will focus on serving eligible customers across the entire service territory, overseeing the upcoming program changes due to the updated LIURP regulations, continuing to find ways to improve on customer outreach and maintaining reasonable job costs during this continued period of inflated housing material prices and fluctuations in availability/pricing.

PPL Electric Utilities Corporation
Response to the Set X Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-14	Please refer to PPL's response to CAUSE-PA 3-13. When PPL bill credits a customer's security deposit because the customer enrolls in OnTrack, please specifically describe whether PPL applies the bill credit to the customer's asked-to-pay amount, the customer's pre-program arrearage balance, or some other method (please specify).
PPL Electric Response	When a customer enrolls in OnTrack, PPL Electric credits any paid security deposit to the account balance existing prior to OnTrack enrollment and cancels any outstanding billed but unpaid deposit amounts.

(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-15	Please also provide copies of current policies, procedures, or other documents which describe how PPL applies refunded security deposits to customers' account when a customer is confirmed to be low income.
PPL Electric Response	See CAUSE-PA X-15 Attachment 1.

Security Deposit Waiver Exception

Why this is generated:
These are submitted from agencies and other sources.

Steps/Tips to Issue:

1. These are issued automatically.

Backoffice Steps to Resolve:

Do not waive the deposit if the account is a bankruptcy!

A bankruptcy account does not qualify for waiver even if low income -- unless they are pending OnTrack or filed a motion with their attorney to have a full or portion waived.

NOTE: The agency is not required to include attachment or income/household details on the WATT in order to complete back office steps. If agency does provide the details...enter the financial information provided by the agency in the financial statement window.

If the agency waives the security deposit and also states that the customer's POS ID was verified....
- We require a notarized ID however, if an agency does verify the ID, we will waive the obligation even if it is not notarized.

Whether the security deposit is satisfied by a payment, guarantee or waiver, COMPLETE the obligation, do not override it.

- On the Desktop Screen in Intelligent Desktop, select the Obligations/Deposit Tab on the right.
- Click the Waive/Credit button to remove the deposit from the account.
- The account will be automatically documented that the deposit has been waived.
- WATT security deposit waivers will be automatically documented with an account contact.

NOTE: If the Security Deposit has been paid or there is any money on hand, that amount will be applied to the excess credit field in CSS, which will be applied to future bills.

If there is a PUC Informal Complaint on the account:

- **Email the EU, Compliance Team and they will contact BCS to request the case to be closed.**
- **Information needed:**
  - **Security deposit waiver for account #00000-00000**

If you are waiving the security deposit for low income and it is NOT for an OnTrack enrollment, please mail the customer the Programs and Services brochure via WATT letters.

Current Bill Not Yet Due:

1. Ask the customer if they want the excess credit (security deposit refund) applied to the current bill:
  ○ **If yes,** move the credit to the current bill amount and provide the customer with the remaining balance due (if any).
  ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).

Current Bill Past Due:

1. Apply the excess credit (security deposit refund) to the current bill.
2. If there is a remaining excess credit (security deposit refund), ask the customer if they want the credit to remain to pay future bills:
  ○ **If yes,** leave the excess credit on the account.
  ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).

Account on Payment Agreement:
1. Do NOT refund the security deposit. 2. We keep the deposit on hand until the balance is clear.
Acco nt in Arrears, No Payment Agreement:
1. Remove the security deposit, but do **NOT** refund the security deposit to the customer. 2. Apply the excess credit (security deposit refund) to the balance on the account.

(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA X-17	Please specifically explain whether and to what extent customer generators are responsible for paying all riders set forth in PPL's tariffs.
PPL Electric Response	Customer generators are responsible for paying all riders under their applicable rate schedule. See PPL Electric Exhibit GEO-1, p. 50. Some riders are based on usage, and if a customer generator has low or zero usage, the charge for those riders will be low or zero, respectively.

WITNESS: Jennifer E. Nelson

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 24, 2025
Docket No. R-2025-3057164

OCA II-4 Please provide a list of all proceedings in which the authorized return on equity recommended by Ms. Nelson was adopted by the regulatory commission in that proceeding.

PPL Electric Response In Ms. Nelson's experience, regulatory commissions generally do not adopt a recommendation of a particular witness; the commissions consider the evidence provided by multiple witnesses and determine what is just and reasonable based on the evidence presented. Notwithstanding, there have been several proceedings in which Ms. Nelson's return on equity ("ROE") recommendations have been referenced in the commission's determination of a just and reasonable ROE or factored into an approved settlement agreement, which the commission had approved. For example, in its order in Dominion Energy North Carolina's ("DENC") 2024 rate case, the North Carolina Utilities Commission ("NCUC") noted that "[t]he [NCUC] finds that the analyses of DENC witness Nelson […] are credible, probative, and entitled to substantial weight." (*In the Matter of Application of Virginia Electric and Power Company, d/b/a Dominion Energy North Carolina for Adjustment of Rates and Charges Applicable to Electric Service in North Carolina*, Order Accepting Stipulations, Granting Partial Rate Increase, and Requiring Public Notice, Docket No. E-22, Sub 694, January 14, 2025, at 23, clarification added). See PPL Electric Exhibit JEN-1 for a listing of the proceedings in which Ms. Nelson has provided testimony.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 24, 2025
Docket No. R-2025-3057164

OCA IV-34

In Excel format, by year for the most recent three completed LIHEAP program years, as well as the current year to date, please provide for residential customers:

a. The number of accounts receiving a LIHEAP grant disaggregated by basic cash grant and LIHEAP crisis grant;
b. The total dollars of LIHEAP grants received, disaggregated by basic cash grant and LIHEAP crisis grant;
c. The average LIHEAP grant received, disaggregated by basic cash grant and LIHEAP crisis grant.

PPL Electric Response

a. See CAUSE-PA I-12 Attachment 1.
b. See tab “B) Totals” in OCA IV-34 Attachment 1.
c. See tab “C) Averages” in OCA IV-34 Attachment 1.

In Excel format, by year for the most recent three completed LIHEAP program years, as well as the current year to date, please provide for residential customers:

b. The total dollars of LIHEAP grants received, disaggregated by basic cash grant and LIHEAP crisis grant;

LIHEAP Season	Grant Type	Total Dollars Received
2021 to 2022	Crisis	$ 3,108,772.68
2021 to 2022	Grant	$ 18,048,447.94
2022 to 2023	Crisis	$ 2,034,269.97
2022 to 2023	Grant	$ 14,307,024.45
2023 to 2024	Crisis	$ 2,753,127.09
2023 to 2024	Grant	$ 10,325,920.37
2024 to 2025	Crisis	$ 2,818,398.70
2024 to 2025	Grant	$ 9,491,206.34

In Excel format, by year for the most recent three completed LIHEAP program years, as well as the current year to date, please provide for residential customers:

a. The average LIHEAP grant received, disaggregated by basic cash grant and LIHEAP crisis grant.

LIHEAP Season	Grant Type	Average DollarsPer Grant
2021 to 2022	Crisis	$ 743.37
2021 to 2022	Grant	$ 399.13
2022 to 2023	Crisis	$ 630.00
2022 to 2023	Grant	$ 270.15
2023 to 2024	Crisis	$ 650.55
2023 to 2024	Grant	$ 372.58
2024 to 2025	Crisis	$ 616.31
2024 to 2025	Grant	$ 211.35

WITNESS: Jason Hunt
Daniel S. Dane
Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Energy Justice Advocates (EJA)
Dated November 11, 2025
Docket No. R-2025-3057164

EJA-PPL-III-34

Please refer to the direct testimony of PPL witness Hunt. Please detail all current and proposed economic development programs, rates, or services offered by PPL and funded by customers, whether directly or through rate discounts. For historical initiatives, please provide five (5) years of data, including costs, discounts, allocations by amount to other customers, and rate impacts. For proposed initiatives, please provide the revenue requirement impacts, by rate class for the Fully Projected Future Test Year.

Please provide the quantitative information requested by this question in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to a Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The Company does not have, and has not offered in the last 5 years, any economic development programs or rates. The Company has proposed in this case, the Opportunity Pennsylvania Program. For details on that program, please see the direct testimony of Jason Hunt (PPL Electric St. No. 21).

The table below shows how the $400,000 associated with the Opportunity Pennsylvania Program is allocated to the various rate classes in the Fully Projected Future Test Year. This information can be found on pages 30-34 of PPL Electric Exhibit BR-1.

RS	Residential	274,677
RTS	Residential-Thermal Storage	4,083
GS-1	Small General Service - Sec. Voltage	30,941
GS-3	Large General Service - Sec. Voltage	56,463
LP-4	Large General Service - 12 KV	21,702
LP-5	Large General Service - 69 KV or Higher	366
GH-2	Separate Meter General Space Heating Service	545
SL/AL	Street Lighting/Area Lighting	11,222
	Total	**400,000**

WITNESS: Gregory Olsen

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Solar Energy Industries Association and the Coalition for Community Solar Access, collectively "Joint Solar Advocates" (JSA)
Dated November 19, 2025
Docket No. R-2025-3057164

JSA III-10	Refer to PPL's response to JSA I-5. Identify, describe, provide, explain and indicate whether net-metered customer generators pay for all "system reinforcements" required to ensure safe and reliable interconnection. Provide all Documents that support, are utilized and/or relied upon in your answer.
PPL Electric Response	See response to JSA III-5.

DATA SHARING AGREEMENT

This Data Sharing Agreement is between the Commonwealth of Pennsylvania ("Commonwealth"), Department of Human Services ("Department" or "DHS") and [Full Legal Name of Other Party] ("Organization").

The parties, intending to be legally bound, agree as follows:

1. Term. The term of this agreement commences on the Effective Date, as defined in Paragraph two below, and will remain in effect for a period of two years, unless earlier terminated by either party in accordance with Paragraph three of this agreement. The Department, in its sole discretion, may renew the term of this agreement under the same terms and conditions for up to three additional one-year periods. The Department will notify the Organization of its election to exercise each renewal option in writing at least 30 days prior to the expiration of the then-current term. The Department's right to exercise any such renewal option will not expire unless and until the Organization has given the Department written notice of the Department's failure to timely exercise its renewal option and has provided the Department a 30-day opportunity from the Department's receipt of the notice to cure the failure.

2. Effective Date. The Effective Date of this agreement is the date that it has been fully executed by both parties and all approvals required by Commonwealth contracting procedures have been obtained, as indicated by the date of the last Commonwealth signature.

3. Termination. Either party may terminate this agreement by providing 30 days written notice of termination to the other party.

4. Data Sharing. The Department will provide the Organization with information as described in Rider 1, Data Sharing Summary, which is attached to and made part of this agreement. The Organization may not use information disclosed by the Department for any purpose other than those set forth in this agreement.

5. Compensation. The Organization is not entitled to any consideration, compensation, salary, wages, or any other type of remuneration for any services or research, reports, findings, outcomes, or similar work product under this agreement.

6. Restrictions on Use of Data. The Organization may not use the information disclosed by the Department to the Organization under this agreement for any commercial or political purpose.

7. Confidential Information.

    a. General. All information disclosed by the Department to the Organization under this agreement is confidential and proprietary, whether provided orally or in writing or through any other means. Notwithstanding the foregoing,

insofar as information is not otherwise protected by law or regulation, the obligations set forth in this paragraph seven do not apply to information:

i. identified by the Department, in writing, as neither confidential nor proprietary;
ii. already known to the Organization at the time of disclosure other than through the contractual relationship;
iii. independently generated by the Organization and not derived from the information supplied by the Department;
iv. required to be disclosed by the Organization by law, regulation, court order, or other legal process upon approval of the Department.

b. Confidentiality Requirements. Unless otherwise required by law, with respect to the confidential information provided under this agreement by the Department, the Organization shall:

i. hold all confidential information in confidence;

ii. restrict disclosure of the minimum necessary confidential information solely to those officers, employees, consultants, agents, and attorneys ("Representatives") of the Organization who have a reasonable need to know the confidential information to perform their duties under this agreement or related subcontract, are bound by non-disclosure requirements or a non-disclosure agreement no less restrictive than this agreement, and who will not disclose the confidential information to any other party;

iii. use the confidential information only for the purposes set forth in this agreement;

iv. use at least the same degree of care to hold the confidential information in confidence as the Organization uses in maintaining its own confidential information, but always at least a reasonable degree of care;

v. advise each Representative, before the Representative receives access to the confidential information, of the obligations of the Organization under this agreement, and require such Representative to maintain those obligations; and

vi. immediately upon sale of the Organization or merger of the Organization with a third-party, return to the Department all documentation, copies, notes, diagrams, computer memory media, and other materials containing any portion of the confidential information, or confirm to the Department, in writing, the destruction of such materials.

c. Breach of Confidentiality.

i. The Organization shall be liable for its improper dissemination of confidential information by the Organization or its Representatives. The Organization shall provide notice of any breach or potential breach of confidentiality immediately to the Department upon become aware of the breach or potential breach.

ii. Money damages alone are not a sufficient remedy for any breach of this agreement by the Organization or its Representatives, and the Department shall be entitled to specific performance and injunctive relief as remedies upon proof of any such breach. Such remedies are the exclusive remedies for a breach of this agreement but are in addition to all other remedies deemed proper by a court of competent jurisdiction.

8. Ownership. All information disclosed to the Organization under this agreement, including, but not limited to, confidential information, is, and will remain at all times, the sole and exclusive property of the Department. The Organization may not, in any manner, represent that the Organization has any ownership interest in the information disclosed by the Department to the Organization.

9. Notice. Any written notice to any party under this agreement is deemed sufficient if delivered personally, or by electronic or digital transmission (provided such delivery is confirmed), or by a recognized overnight courier service (e.g., DHL, Federal Express, etc.), with confirmed written receipt, or by certified or registered United States mail, postage prepaid, return receipt requested, sent to the designated contacts at the addresses set forth below or to such other contact or address as such party may designate by notice given pursuant to this section:

For DHS:

Brian Whorl
Director – Division of Federal Programs
2525 N. 7th St
Suite 240/250
Harrisburg, PA 17105
bwhorl@pa.gov

For Organization:

[Name]
[Position]
[Address]
[E-mail Address]

The parties may change their designated contact or address by providing written notice to the other party in the manner specified above.

10. Return/Destruction of Information. Upon expiration of this agreement, the Organization shall return to the Department or destroy all information disclosed by the Department to the Organization. At the Department's written request or as required by law, the Organization shall provide a written certification of such destruction executed by an authorized officer of the Organization.

11. Compliance With Law. The Organization shall comply with all applicable state and federal statutes, regulations, and policies, including, but not limited to, laws or regulations related to the use and disclosure of information that constitutes Protected Health Information as defined by the *Health Insurance Portability and Accountability Act* and as defined in Rider 2, Business Associate Addendum. This also includes compliance with all applicable data protection, data security, data privacy, and data breach notification laws, including, but not limited to, the *Breach of Personal Information Notification* Act, as amended November 22, 2022, P.L. 2139, No. 151, 73 P.S. §§ 2301-330. The Organization shall comply with Rider 2, Business Associate Addendum, which is attached to and made part of this Agreement.

12. Right-to-Know Law. This agreement is subject to the Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101 – .3104.

13. Indemnification.

    a. Organization Obligations. The Organization shall indemnify the Commonwealth against all third-party claims, suits, demands, losses, damages, costs, and expenses, including without limitation, litigation expenses, attorneys' fees, and liabilities, arising out of or in connection with any activities performed by the Organization or its employees and agents that are related to this contract, as determined by the Commonwealth in its sole discretion.

    b. Commonwealth Attorneys Act. The Commonwealth shall provide the Organization with prompt notice of any claim or suit of which it learns. Pursuant to the Commonwealth Attorneys Act (71 P.S. Section 732-101, et seq.), the Office of Attorney General (OAG) has the sole authority to represent the Commonwealth in actions brought against the Commonwealth. The OAG may, however, in its sole discretion and under any terms as it deems appropriate, delegate its right of defense. If OAG delegates the defense to the Organization, the Commonwealth will cooperate with all reasonable requests of Organization made in the defense of such suits.

    c. Settlement. Notwithstanding the above, neither party may enter into a settlement of any claim or suit without the other party's written consent, which will not be unreasonably withheld. The Commonwealth may, in its sole

discretion, allow the Organization to control the defense and any related settlement negotiations.

14. Governing Law. This agreement is governed by and must be interpreted and enforced in accordance with the laws of the Commonwealth of Pennsylvania (without regard to any conflict of laws provisions) and the decisions of the Pennsylvania courts. The Organization consents to the jurisdiction of any court of the Commonwealth of Pennsylvania and any federal courts in Pennsylvania, and waives any claim or defense that such forum is not convenient or proper. Any Pennsylvania court or tribunal has in personal jurisdiction over the Organization, and the Organization consents to service of process in any manner authorized by Pennsylvania law. This provision may not be interpreted as a waiver or limitation of the Commonwealth's rights or defenses.

15. Amendments and Modifications. No amendments or modifications of this agreement are valid unless made in writing and signed by the parties with the same formality as this original agreement.

16. Headings. The headings set forth in this agreement are for convenience only and do not constitute a substantive part of this agreement.

17. Severability. The provisions of this agreement are severable. If any phrase, clause, sentence, or provision of this agreement is declared to be contrary to the Constitution of Pennsylvania or of the United States or of the laws of the Commonwealth, the applicability of that phrase, clause, sentence, or provision to any government, agency, person, or circumstance is held invalid, the validity of the remainder of this agreement and the applicability thereof to any government, agency, person, or circumstance will not be affected.

18. Integration. When fully executed by the parties, the parties intend this agreement to constitute the complete, exclusive, and fully integrated statement of their agreement. As such, it is the sole expression of their agreement, and they are not bound by any other agreements of whatsoever kind or nature. The parties also intend that this agreement may not be supplemented, explained, or interpreted by any evidence of trade usage or course of dealing. In entering this agreement, the parties did not rely upon oral or written statements or representations not contained within the document itself.

19. Counterparts. This agreement may be executed in counterparts, each of which is an original and has the full force and effect as an original but all of which constitute one and the same instrument.

20. Electronic Signatures. This agreement may be electronically signed in accordance with the Electronic Transaction Act, 73 P.S. § 2260.301 *et seq.*

[SIGNATURE PAGE FOLLOWS.]

The parties have caused this agreement to be executed by their duly authorized officials.

RIDER 1
DATA SHARING SUMMARY

1. Purpose.

   DHS operates and maintains the Low-Income Home Energy Assistance Program ("LIHEAP"). DHS uses an eligibility system that securely stores certain recipient household information. All or portions of the recipient household data is confidential under state or federal law and regulation. The Organization requires the data for the exclusive purpose of enrolling or recertifying LIHEAP recipient households into its Utility or Energy Assistance Program (UEAP). A UEAP is defined for the purposes of this Agreement as a program that provides bill assistance, rate discounts, or free energy efficiency or weatherization services to low-income utility or energy consumers and is administered by the Organization or the Organization's subcontractor.

2. Data Description.

   DHS shall provide the Organization with the data described below for only those LIHEAP recipient households that are deemed eligible to receive a LIHEAP grant, whether LIHEAP Cash or LIHEAP Crisis.

Data Source Field Name	Data Description/Metadata	Business Name
Payment Name	The individual indicated on the LIHEAP application as the representative for the household and who shall receive the LIHEAP payment if paid directly to the household.	Payment Name
Household Members	The full name, first and last, of each individual living in the household, regardless of LIHEAP eligibility.	Household Members
Date of Birth	The date of birth of each individual living in the household.	DOB
Physical Address	The full address (Address Line 1, Address Line 2, City, State, and Zip Code) for the LIHEAP household's physical address	Service Address
Account Number	The Organization's account number that the LIHEAP household provided for their approved LIHEAP application.	Account Number
Income	The verified income for each household member used as a part of the LIHEAP eligibility determination.	Individual Income
Income Type	A description of the type of income listed for each individual, such as wages, Retirement, Survivors, and Disability Insurance, unemployment compensation, etc.	Individual Income Type
Verification Date	The date that the individual's income was last verified by DHS as a part of the LIHEAP application process.	Income Verification Date
Telephone Number	The telephone number provided on the approved household's LIHEAP application, if provided.	Telephone number
Email Address	The email address provided on the approved household's LIHEAP application, if provided.	Email address

3. Duration of the Exchange and Refresh Schedule of the Data.

   DHS shall transfer the data to the Organization on a monthly basis for the duration of the agreement term, including any exercised renewal years.

4. Method of Exchange.

   DHS shall transfer the data using its secure file transfer platform, SeGOV. DHS shall provide access to the site for one user from the Organization. DHS shall provide instructions and user support for accessing the site. DHS may provide the data in either a Comma-Separated Values (CSV) format, if possible, or in a pipe delimited Text format if a CSV format is not possible.

5. Work Product.

   The Organization shall use the data provided by DHS only to enroll or recertify its eligible LIHEAP recipients into one of its UEAPs, in accordance with applicable law, regulation, policy, the Organization's authorized Universal Service and Energy Conservation Plan (USECP), or the Organization's program rules if the Organization does not have a USECP. Provided the household recipient is not currently barred from participation in a UEAP pursuant to applicable law, regulation, policy, or USECP, the Organization will make a good faith attempt to enroll or recertify the LIHEAP household without seeking an application or income documentation for the UEAP from the LIHEAP household.

   The Organization shall track and annually report to DHS on the number of LIHEAP households that were successfully enrolled in or recertified for the Organization's UEAPs through this data transfer process if DHS data was utilized to enroll or recertify the customer in a specific program. The Organization shall separately track and report on each UEAP. The Organization shall submit its report to the LIHEAP Program Director, LIHEAP Policy Unit Supervisor, and LIHEAP Vendor Unit Supervisor during the first quarter of the subsequent Federal Fiscal Year.

   The Organization shall include in all initial contact, whether verbal or written, with households enrolled in its UEAPs via this data transfer process that data used in UEAP enrollment or recertification was provided via DHS' LIHEAP.

6. Historical Requirements and Data Purge.

   Except as otherwise required by statute, regulation, court order, or other applicable law, the Organization shall only retain the data files for up to three years from the date of receipt, after which the Organization shall securely and permanently purge the data files provided by DHS.

7. Special Instructions or Requirements.

The Organization shall store the data provided by DHS in a secure location. The Organization shall not share the data for any purpose, except as set forth in this agreement.

[Remainder of page intentionally left blank.]

RIDER 2
COMMONWEALTH OF PENNSYLVANIA
BUSINESS ASSOCIATE ADDENDUM

The Pennsylvania Department of Human Services (Covered Entity) and the Organization (Business Associate) intend to protect the privacy and security of certain Protected Health Information (PHI) to which Business Associate may have access in order to provide services to or on behalf of Covered Entity, in accordance with the Health Insurance Portability and Accountability Act of 1996, Pub. L. No. 104-191 (HIPAA), the Health Information Technology for Economic and Clinical Health (HITECH) Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Pub. L. No. 111-5 (Feb. 17, 2009) and related regulations, the HIPAA Privacy Rule (Privacy Rule), 45 C.F.R. Parts 160 and 164, as amended, the HIPAA Security Rule (Security Rule), 45 C.F.R. Parts 160, 162 and 164,), as amended, 42 C.F.R. §§ 431.301-431.302, 42 C.F.R. Part 2, 45 C.F.R. § 205.50, 42 U.S.C. § 602(a)(1)(A)(iv), 42 U.S.C. § 1396a(a)(7), 35 P.S. § 7607, 50 Pa.C.S. § 7111, 71 P.S. § 1690.108(c), 62 P.S. § 404, 55 Pa. Code Chapter 105, 55 Pa. Code Chapter 5100, the Pennsylvania Breach of Personal Information Notification Act, 73 P.S. § 2301 *et seq*., and other relevant laws, including subsequently adopted provisions applicable to use and disclosure of confidential information, and applicable agency guidance.

Business Associate may receive PHI from Covered Entity, or may create or obtain PHI from other parties for use on behalf of Covered Entity, which PHI may be used or disclosed only in accordance with this Addendum and the standards established by applicable laws and agency guidance.

Business Associate may receive PHI from Covered Entity, or may create or obtain PHI from other parties for use on behalf of Covered Entity, which PHI must be handled in accordance with this addendum and the standards established by HIPAA, the HITECH Act and related regulations, and other applicable laws and agency guidance.

The parties, intending to be legally bound, agree as follows:

1. Definitions.

A. "Business Associate" has the meaning given to the term under HIPAA, the HITECH Act, applicable regulations, and agency guidance.

B. "Covered Entity" has the meaning given to the term under HIPAA, the HITECH Act and applicable regulations and agency guidance.

C. "HIPAA" means the Health Insurance Portability and Accountability Act of 1996, Pub. L. No. 104-191.

D. "HITECH Act" means the Health Information Technology for Economic and Clinical Health Act, Title XIII of Division A and Title IV of Division B of the ARRA, Pub. L. No. 111-5 (Feb. 17, 2009).

E. "Privacy Rule" means the standards for privacy of individually identifiable health information in 45 C.F.R. Parts 160 and 164, as amended, and related agency guidance.

F. "Protected Health Information" or "PHI" means any information, transmitted, or recorded in any form or medium; (i) that relates to the past, present, or future physical or mental condition of an individual; the provision of health care to an individual; or the past, present, or future payment for the provision of health care to an individual, and (ii) that identifies the individual or which there is a reasonable basis to believe the information can be used to identify the individual, and has the meaning given to the term under HIPAA, the HITECH Act, and related regulations and agency guidance. PHI also includes any information that can be used to identify a current or former applicant or recipient of benefits or services of Covered Entity (or Covered Entity's contractors/business associates).

G. "Security Rule" means the security standards in 45 C.F.R. Parts 160, 162 and 164, as amended, and related agency guidance.

H. "Unsecured PHI" means PHI that is not secured through the use of a technology or methodology as specified in HITECH regulations and agency guidance or as otherwise defined in the HITECH Act.

2. **Stated Purposes for Which Business Associate May Use or Disclose PHI.** The Business Associate may use, disclose, or both PHI provided by or obtained on behalf of Covered Entity for the purposes of providing services under its agreement with Covered Entity, except as otherwise stated in this addendum.

   NO OTHER DISCLOSURES OF PHI OR OTHER INFORMATION ARE PERMITTED.

3. **BUSINESS ASSOCIATE OBLIGATIONS:**

   A. Limits On Use And Further Disclosure. Business Associate shall not further use or disclose PHI provided by or created or obtained on behalf of Covered Entity other than as permitted or required by this addendum or as required by law and agency guidance.

   B. Appropriate Safeguards. Business Associate shall establish and maintain appropriate safeguards to prevent any use or disclosure of PHI other than as provided for by this addendum. Appropriate safeguards must include implementing administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of the electronic PHI that is created, received, maintained, or transmitted on behalf of the Covered Entity and limiting use and disclosure to applicable minimum

necessary requirements as set forth in applicable federal and state statutory and regulatory requirements and agency guidance.

C. **Reports of Improper Use Or Disclosure.** Business Associate shall report to the Commonwealth of Pennsylvania, Governor's Office of Administration, Office of Information Technology at OA-SecurityIncidents@pa.gov or 1-877-552-7478**,** within two days of discovery any use or disclosure of PHI not provided for or allowed by this Agreement.

D. **Reports of Security Incidents.** In addition to the breach notification requirements in section 13402 of the HITECH Act and related regulations, agency guidance and other applicable federal and state laws, Business Associate shall report to the Office of Administration, Office of Information Technology at OA-SecurityIncidents@pa.gov or 1-877-552-7478*,* within two days of discovery any security incident of which it becomes aware. At the sole expense of Business Associate, Business Associate shall comply with all federal and state breach notification requirements, including those applicable to Business Associate and those applicable to Covered Entity. Business Associate shall indemnify the Covered Entity for costs associated with any incident involving the acquisition, access, use or disclosure of Unsecured PHI in a manner not permitted under federal or state law and agency guidance.

E. **Subcontractors And Agents.** When PHI is provided or made available to Business Associate subcontractors or agents, Business Associate shall provide only the minimum necessary PHI for the purpose of the covered transaction and shall first enter into a subcontract or contract with the subcontractor or agent that contains the same terms, conditions, and restrictions on the use and disclosure of PHI as contained in this addendum.

F. **Right Of Access To PHI.** Business Associate shall allow an individual who is the subject of PHI maintained in a designated record set, to have access to and copy that individual's PHI within five business days of receiving a written request from the Covered Entity. Business Associate shall provide PHI in the format requested, if it is readily producible in such form and format; or if not, in a readable hard copy form or such other form and format as agreed to by Business Associate and the individual. If the request is for information maintained in one or more designated record sets electronically and if the individual requests an electronic copy of the information, Business Associate must provide the individual with access to the PHI in the electronic form and format requested by the individual, if it is readily producible in the form and format; or, if not, in a readable electronic form and format as agreed to by the Business Associate and the individual. If any individual requests from Business Associate or its agents or subcontractors access to PHI, Business Associate shall notify Covered Entity within five business days. Business associate shall further conform with all of the requirements of 45 C.F.R. §164.524 and other applicable laws, including the HITECH Act and related

regulations, and agency guidance.

G. Amendment And Incorporation Of Amendments. Within five business days of receiving a request from Covered Entity for an amendment of PHI maintained in a designated record set, Business Associate shall make the PHI available and incorporate the amendment to enable Covered Entity to comply with 45 C.F.R. §164.526, applicable federal and state law, including the HITECH Act and related regulations, and agency guidance. If an individual requests an amendment from Business Associate or its agents or subcontractors, Business Associate shall notify Covered Entity within five business days.

H. Provide Accounting of Disclosures. Business Associate shall maintain a record of all disclosures of PHI in accordance with 45 C.F.R. §164.528 and other applicable laws and agency guidance, including the HITECH Act and related regulations. The records shall include, for each disclosure, the date of the disclosure, the name and address of the recipient of the PHI, a description of the PHI disclosed, the name of the individual who is the subject of the PHI disclosed, and the purpose of the disclosure. Business Associate shall make such record available to the individual or the Covered Entity within five business days of a request for an accounting of disclosures.

I. Requests for Restriction. Business Associate shall comply with requests for restrictions on disclosures of PHI about an individual if the disclosure is to a health plan for purposes of carrying out payment or health care operations (and is not for treatment purposes), and the PHI pertains solely to a health care item or service for which the service involved was paid in full out-of-pocket. For other requests for restriction, Business Associate shall otherwise comply with the Privacy Rules, as amended, and other applicable statutory and regulatory requirements and agency guidance.

J. Access to Books and Records. Business Associate shall make its internal practices, books, and records relating to the use or disclosure of PHI received from, or created, or received by Business Associate on behalf of the Covered Entity, available to the Secretary of Health and Human Services or designee for purposes of determining compliance with applicable laws and agency guidance.

K. Return or Destruction of PHI. At termination or expiration of the contract, Business Associate shall return or destroy all PHI provided by or obtained on behalf of Covered Entity. Business Associate may not retain any copies of the PHI after termination or expiration of its contract. If return or destruction of the PHI is not feasible, Business Associate shall extend the protections of this addendum to limit any further use or disclosure until such time as the PHI may be returned or destroyed. If Business Associate elects to destroy the PHI, it shall certify to Covered Entity that the PHI has been destroyed.

L. Maintenance of PHI. Notwithstanding Section 3(k) of this Addendum,

Business Associate and its subcontractors or agents shall retain all PHI throughout the term of the its contract and this addendum and shall continue to maintain the information required under the various documentation requirements of its contract and this addendum (such as those in § 3.H above) for a period of six years after termination or expiration of its contract, unless Covered Entity and Business Associate agree otherwise.

M. Mitigation Procedures. Business Associate shall establish and provide to Covered Entity upon request, procedures for mitigating, to the maximum extent practicable, any harmful effect from the use or disclosure of PHI in a manner contrary to this addendum or the Privacy Rules, as amended. Business Associate shall mitigate any harmful effect that is known to Business Associate of a use or disclosure of PHI by Business Associate in violation of this addendum or applicable laws and agency guidance.

N. Sanction Procedures. Business Associate shall develop and implement a system of sanctions for any employee, subcontractor, or agent who violates this addendum, applicable laws, or agency guidance.

O. Grounds For Breach. Non-compliance by Business Associate with this addendum or the Privacy or Security Rules, as amended, is a breach of the contract, for which the Commonwealth may elect to terminate Business Associate's contract.

P. Termination by Commonwealth. Business Associate authorizes termination of the contract by the Commonwealth if the Commonwealth determines, in its sole discretion that Business Associate has violated a material term of this addendum.

Q. Failure to Perform Obligations. In the event Business Associate fails to perform its obligations under this addendum, Covered Entity may immediately discontinue providing PHI to Business Associate. Covered Entity may also, at its option, require Business Associate to submit to a plan of compliance, including monitoring by Covered Entity and reporting by Business Associate, as Covered Entity in its sole discretion determines to be necessary to maintain compliance with this addendum and applicable laws and agency guidance.

R. Privacy Practices. Covered Entity will provide and Business Associate shall immediately begin using any applicable form, including, but not limited to, any form used for Notice of Privacy Practices, Accounting for Disclosures, or Authorization, upon the effective date designated by the Program or Covered Entity. Covered Entity may change applicable privacy practices, documents, and forms. The Business Associate shall implement changes as soon as practicable, but not later than 45 days from the date of notice of the change. Business Associate shall otherwise comply with all applicable laws and agency guidance pertaining to notices of privacy practices, including the requirements

set forth in 45 C.F.R. § 164.520.

4. OBLIGATIONS OF COVERED ENTITY:

A. Provision of Notice of Privacy Practices. Covered Entity shall provide Business Associate with the notice of privacy practices that the Covered Entity produces in accordance with applicable law and agency guidance, as well as changes to such notice. Covered Entity will post on its website any material changes to its notice of privacy practices by the effective date of the material change.

B. Permissions. Covered Entity shall provide Business Associate with any changes in, or revocation of, permission by individual to use or disclose PHI of which Covered Entity is aware, if such changes affect Business Associate's permitted or required uses and disclosures.

C. Restrictions. Covered Entity shall notify Business Associate of any restriction to the use or disclosure of PHI that the Covered Entity has agreed to in accordance with 45 C.F.R. §164.522 and other applicable laws and applicable agency guidance, to the extent that such restriction may affect Business Associate's use or disclosure of PHI.

PREPARED SURREBUTTAL TESTIMONY OF PATRICK M. CICERO

I. INTRODUCTION

Q: Please state your name, occupation, and business address?

A: My name is Patrick M. Cicero. I serve as Of Counsel to the Pennsylvania Utility Law Project (PULP). In this capacity, I serve PULP's clients by, among other things, providing testimony in matters such as this one that addresses the ability of Pennsylvanians experiencing poverty to secure just and equitable access to safe and affordable utility services, including electricity. My office address at PULP is 118 Locust Street, Harrisburg, PA 17101.

Q: Have you previously submitted testimony in this proceeding?

A: Yes. On December 22, 2025, I submitted direct testimony on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your surrebuttal testimony?

A: The purpose of my surrebuttal testimony is to respond to portions of the rebuttal testimony submitted by other parties on January 23, 2026. Specifically, I will be responding to the following:

- Rebuttal testimony of PPL Electric Utilities Corporation (PPL or the Company) witnesses: Christine Martin[1], Bethany Johnson[2], Bickey Rimal[3], Steven E. Wishart[4], Julissa Burgos[5], Jennifer Nelson[6], Gregory Olsen[7], and Lisa Norden.[8]
- Office of Small Business Advocate (OSBA) witness Mark D. Ewen.[9]
- Bureau of Investigation and Enforcement (I&E) witness Christopher Keller.[10]
- PP&L Industrial Customer Alliance (PPLICA) witness Billie S. LaConte.[11]
- IGS Solar (IGS) witness Kathleen Bolcar Rever.[12]
- Retail Energy Supply Association (RESA) witness Frank Lacey.[13]

Rather than respond to each of the witnesses individually, my surrebuttal is arranged topically and responds to the arguments provided in these witnesses' rebuttal testimony about each of the areas that I address in this testimony. There are several issues that I addressed in my direct and were addressed in rebuttal testimony but that I have chosen not to address here. My silence with respect to these issues or other issues raised in the rebuttal testimony of these witnesses or of any other witness in this proceeding should not be taken as acquiescence to, an endorsement of, or an agreement with their positions or recommendations. Instead, I have prioritized responding to issues where additional clarity is needed. Unless I state otherwise, I stand by the analysis, conclusions, and

recommendations in my direct testimony and have elected not to respond to PPL or other parties on certain issues because no response is needed. Simply put, nothing stated in PPL's or any other parties' rebuttal testimony has changed or revised my positions unless I have specifically stated otherwise in this testimony.

Q: Have you prepared an appendix to accompany your testimony?

A: Yes. Attached hereto at Appendix A-SR are the discovery responses that I cite in this testimony.

Q: Do you have any preliminary matters to address?

A: Yes. As noted in my direct testimony, I am an attorney who also represents clients. My role in this case is as a witness; I am not serving as counsel for CAUSE-PA or any other client in this proceeding. Throughout this testimony, I refer to decisions by regulatory agencies and courts as well as reference statutes and regulations. These statements should not be considered a legal opinion and should not be confused with the legal opinions or advocacy of the attorneys representing CAUSE-PA in this case. Any reference or citation is merely to provide context and support for my opinion about the public policy and rate design issues that I address here in response to the statements and opinions of other witnesses.

II. PPL'S RATES ARE UNAFFORDABLE FOR LOW INCOME HOUSEHOLDS

Q: What will you address in this section of your testimony?

A: I will be addressing the claims made by several of PPL's witnesses that overall PPL's rates remain affordable for customers, despite evidence to the contrary. Specifically, I address claims made by PPL witnesses Martin, Wishart, and Bethany Johnson. In addition, I will briefly address the rebuttal testimony of PPL witnesses Rimal

and Burgos concerning an appropriate return on equity (ROE) and capital structure for PPL.

Q: Before addressing PPL's overall position on issues of utility affordability, do you have any rebuttal testimony to PPL's witnesses who address the Company's overall revenue requirement, its requested ROE, and its requested capital structure?

A: Yes. While I did not specifically address the level of revenue requirement or ROE in my direct testimony, I outlined the basic purposes of a rate case as well as the framework for how PPL's requested ROE and capital structure were the primary drivers of the level of revenue requirement increase that PPL is seeking in this case.[14] Specifically, I pointed out that the choices PPL made in its requested ROE of 11.3% and its equity-rich capital structure, in which is seeks a 56.05 to 43.95 equity to debt ratio, were the primary drivers for the amount of the requested increase. For example, all other things being equal, if the Commission were to reduce the requested ROE to a more reasonable level that is reflective of the overall market for equity, such as the 8.4% calculated by the Office of Consumer Advocate (OCA) witness Mr. David Garrett, the revenue requirement needed at the as-filed rate base and capital structure would be reduced by $124.38 million.[15] In addition, based on the discovery provided by PPL, I outlined in my testimony that reducing its capital structure to a more reasonable 50/50 ratio, would save ratepayers at least $37.7 million annually even at PPL's inflated ROE

[14] See CAUSE-PA St 1 at 5-21.
[15] See CAUSE-PA St. 1 at 20: 14-16 (citing PPL's discovery response indicating that every 10 basis points (0.10%) of ROE at the Company's as filed rate base and capital structure costs $4.289 million). The Company's requested ROE in this case is 11.3%. The difference between it and the OCA's calculated market-based ROE of 8.4% is 2.9% or 290 basis points. (290/10) * 4.289 =124.381.

request.[16] My purpose in raising these issues in direct and now was to ensure that both PPL and the Commission do not narrowly focus on the needs to PPL and overlook the needs of consumers – particularly low income consumers – in the rate setting process. Unfortunately, this is exactly what PPL seeks to do in this case. As discussed more thoroughly in the rest of my testimony, PPL's rebuttal insists on its revenue demands and rate design but cedes no ground in terms of mitigating the impact of those proposals on its most vulnerable customers.

Concerning capital structure and ROE specifically, PPL's witnesses take a "nothing to see here, move on" attitude about the choices the Company has made in this case. For example, Ms. Nelson asserts that my assumptions about savings associated with increasing leverage (i.e., increasing the amount of debt in the capital structure while reducing equity) would not produce the savings that I contend because the debt rates would not remain the same due to a reduction in PPL's credit ratings.[17] Ms. Nelson did not produce any evidence that PPL's debt ratings would materially decline, certainly not to the point where it would cause the cost of debt (around 5% currently) to equal the cost of PPL's requested equity (11.3% as filed). It simply strains credulity to assume that imputing a ratemaking capital structure of 50/50 would not save ratepayers millions of dollars while at the same time allowing the Company the ability to earn a fair rate or return on its investments. Ms. Burgos asserts that the Company's choice of capital structure "are driven by legitimate business needs and sound financial management, not opportunistic behavior"[18] From PPL's perspective, I am sure that this rings true. But it is the

[16] CAUSE-PA St. 1 at 19.
[17] PPL Electric St. 10-R at 88.
[18] PPL Electric St. 9-R at 2:16-17.

Commission's job to test these statements and ensure that PPL is receiving sufficient, but not excessive returns on its investments. PPL's witnesses all seek to engage in a comparative examination of whether its behavior – its chosen ROE, its capital structure, and its requested revenue requirement – are in line with its peers. This sort of look-to-your-neighbor approach is harmful to consumers and ignores the circularity of setting capital structures and ROEs based on peers rather than objective market-based evidence. I urge the Commission to reject PPL's analysis on these issues. Of all the parties in this case who presented evidence on authorized ROE, capital structure, and revenue requirement, only PPL has a financial interest in the outcome. All other parties who presented testimony on these issues represent broad swaths of the public's interest. While PPL seeks the highest rates it can get, consumers who have no choice in the matter must rely on the Commission to set rates that are no higher than necessary. In my direct testimony, I outlined several ways in which the Commission can exercise its discretionary restraint.[19] Nothing in PPL's rebuttal testimony effectively refutes those issues or the evidence presented by other parties.

As I did in direct, I continue to urge the Commission, in the exercise of its obligations to set just and reasonable rates and restrain the monopolistic tendencies of regulated public utilities, to exercise exacting scrutiny of the claims presented by PPL in

[19] This includes recognizing that PPL already benefits significantly from a host of alternative ratemaking mechanisms and other ways in which their risk of regulatory lag is significantly reduced, including its use of the Distribution System Improvement Charge (DSIC), its use of the Fully Projected Future Test Year (FPFTY), and its use of a reconcilable Storm Damage Expense Rider (SDER). As noted in direct, each of these shift risk from PPL to its consumers in subtle and cumulative ways. See CAUSE-PA St. 1 at 11-13. This reduction in risk should be accompanied by a reduction in ROE by the PUC. PPL's witnesses go to great length to try to reassure the Commission that its peer groups also employ these same techniques and thus no scrutiny is warranted. See e.g., PPL St. No 10-R at 13, 80-81. However, I would urge the Commission not to heed this sort of comparative analysis that has the effect of increasing costs to consumers without commensurate gain to the public.

this case and, where necessary make "pragmatic adjustments"[20] so that it approves a revenue increase that is sufficient to allow PPL only to recover its reasonably and prudently incurred expenses and provide the opportunity to earn a fair return, but not an unreasonable or excessive return.

Q: PPL witness Martin's rebuttal testimony outlines an *increase* in the revenue requirement from the originally requested $356 million to a newly calculated $389 million.[21] Please explain PPL's position on this issue.

A: Ms. Martin asserts that after the case was filed, PPL identified various corrections which mean "that the Company's original proposal for a base rate revenue increase should have been approximately $389 million, not the approximately $356 million increase originally proposed."[22] While acknowledging that PPL cannot be awarded more than it originally requested, Ms. Martin nevertheless suggests that if the Commission accepts any downward adjustments to the revenue requirement that it should start from the updated amount rather than the as filed amount.[23]

Q: What is your response to this request?

A: I disagree with Ms. Martin. This is exactly the sort of request that belies the claim from PPL that it is concerned about the impact that their rates have on the public. PPL made a claim to the public about its needs. Now PPL claims its math was wrong and that its new, higher number is correct. PPL argues that, because it *could* have asked for more, any further corrections to its calculation of rates must be made from this new higher amount.

[23] PPL Electric St. 1-R at 3.

PPL should not be permitted to move the goal posts in the middle of a case. As noted in my direct testimony, PPL already has the benefit from a FPFTY, which allows it to set rates based on its projections about its expenses in the future. Projections necessarily involve some degree of uncertainty and approximation. The Commission should not permit PPL to redo the math in the middle of the case and should reject PPL's claim that its newly calculated revenue requirement creates any sort of baseline from which adjustments should be made.

Q: In your direct testimony, you outlined how PPL's rates are unaffordable for hundreds of thousands of low income customers in its service territory who are not enrolled in PPL's Customer Assistance Program (CAP). Please briefly explain.

A: In my direct testimony, I outlined how PPL is seeking to require its estimated low income customers to pay approximately $69.7 million of the total requested $356 million annual increase that it requested.[24] It is imperative to recall that approximately 240,000 (27%) of PPL's customers have income less than 150% of the Federal Poverty Level (FPL), and that PPL's low income customers have an average household income totaling just $17,100 per year.[25] In practical terms, PPL's increase will be devasting for these customers. Low income customers already exhibit indicia of significant utility insecurity at existing rates, which will be exacerbated by the choices that PPL makes in this case, including its proposed increase. For example, as outlined in my direct testimony:

- Confirmed Low Income customers not enrolled in CAP have utility termination rates of 21% – more than 4 times higher than residential customers overall.[26]

[24] CAUSE-PA St. 1 at 26.
[25] Id. at 36-37.
[26] Id. at 43, Table 9.

- Confirmed Low Income customers not enrolled in CAP have average arrearage levels that are 3-5x of residential customers overall.[27]
- Confirmed Low Income customers not enrolled in CAP have 46.9% of the total residential dollars in debt despite consisting of only 13.5% of the total residential population.[28]

Q: Despite this information, what was PPL's response in rebuttal to your concerns about significant existing unaffordability at current rates?

A: PPL's witnesses generally offered platitudes about affordability while simultaneously arguing that PPL requires every dollar of the rate increase requested, at the capital structure and ROE sought, while arguing strenuously against suggestions that would meaningfully improve the ability of its low income customers to more consistently afford to remain connected to service. For example, Ms. Martin asserts that PPL has a focus on affordability of its rates because it "strives to be judicious with its [expenses] and capital expenditures" – which she asserts has "led to the Company having some of the lowest electric distribution rates."[29] This focus on distribution rates – at the exclusion of looking at the total bill – is a theme throughout the testimony. For example, Mr. Wishart as a lead in to his generalized affordability analysis asserts that "electric distribution charges account for a limited share of the customer bills, have remained relatively stable over time, and are well below national benchmarks."[30] Additionally, Ms. Johnson asserts that while PPL is "concerned about affordability for its customers" it is nevertheless "limited in what it has control over."[31] In general, PPL asserts that the current levels of concern about rate affordability are not PPL's fault, but are instead the consequence of

[27] Id. at 44, Table 10.
[28] Id. at 44, Table 11.
[29] PPL Electric St. 1-R at 9:7-9.

[31] PPL Electric St. 5-R at 14:15-16.

wholesale energy markets that "are driven by the PJM market (for all of Pennsylvania)" – and that the costs associated with these markets will simply "fluctuate."[32]

Q: Do you agree with PPL's conclusions?

A: No. Certainly I agree that the generation and transmission side of a customer's bill is skyrocketing due in large part to data center demand, broken markets at PJM, as well as an acceleration of transmission system build-out by PPL and other transmission owners.[33] However, PPL is not a hapless actor in somebody else's drama. As noted above, PPL's choices in this case are unnecessarily inflating distribution rates, while PPL's low income customers face real, acute, and tangible bill insecurity both at current and proposed rates. Of the total bill for the average customer, PPL's current distribution rates constitute 35% of the average customer's total bill.[34] This increase to 40% of the bill at PPL's proposed rates.[35] Thus, while PPL has limited ability to influence generation costs, it certainly has direct and immediate control over the 40% of the bill that constitutes its charges. PPL has made decisions in this case about its revenue request, its ROE, its capital structure, its rate design, and its proposed tariff changes. All these choices will increase distribution rates for customers by 22% if PPL's full revenue request, cost allocation, and rate design are approved.[36]

Moreover, even though PPL does not have direct influence over generation charges, PPL contributes to higher capacity prices through significantly higher load

[32] PPL Electric St. 5-R at 14:22.
[33] CAUSE-PA St. 1 at 92, Chart 3.
[34] See PPL Electric Exhibit SWW-1R at 2 of 17. Total distribution charges at current rates of $62.38 divided by Total average monthly bill at current rates of $177.01 equals 35.24%.
[35] See PPL Electric Exhibit SWW-1R at 2 of 17. Total distribution charges at proposed rates of $76.04 divided by total average monthly bill at proposed rates of $190.66 equals 39.88%.
[36] See PPL Electric Exhibit SWW-1R at 2 of 17.

growth forecast than its peer utilities in Pennsylvania,[37] which in turn raises future capacity prices for its customers. PPL has argued that its load forecasts are accurate and that data center load growth will lower transmission rates for other customers. Even accepting, for the sake of argument, both of those assertions as true PPL's forecast impacts the overall cost of electricity that its customers must pay by virtue of significantly increased capacity costs. While I am not suggesting that PPL should under-forecast its load growth, *the fact of this growth* is a material cause of capacity cost increases. As such, the Commission should take with a grain of salt PPL's assertions that it is not responsible for the impacts of generation related price increases felt by its customers. It may not be solely responsible for all the causes, but it certainly is responsible for mitigating the effects on its economically vulnerable households. In the context of electric restructuring, the General Assembly required that PPL remain responsible for maintaining a suite of programs that help low income households pay their bills and maintain service.[38] While PPL asserts that its universal service programs are sufficient, the data and facts outlined in my direct and that of the direct of other parties suggest otherwise.[39]

Q: In his rebuttal testimony, PPL witness Wishart presents a generalized affordability analysis, please summarize his position.

A: Mr. Wishart's reiterates the refrain of other witnesses that PPL is only responsible for a limited share of the overall electricity bill (distribution) and claims that overall

[37] See 2026 PJM Load Forecast Report dated January 14, 2026. Compare PPL Electric Utilities Summer and Winter Peak forecasts through 2024 with all other Pennsylvania EDCs, available at: 2026-load-report.pdf.
[38] 66 Pa. C.S. §§ 2802(10) and (17); 2803 (definition of "Universal Service and Energy Conservation).
[39] See CAUSE-PA St. 1 at 32-82 (outlining in detail the impact of the rate increase on PPL's low income customers and detailing deficiencies in PPL's Universal Service and Energy Conservation Programs); See also, OCA St. 8 at 7-17 (outlining key data about the unaffordability of PPL's bills to low and moderate income customers as well as the importance of considering affordability in setting rates.)

electricity bills "represent a relatively small portion of total household spending and have grown more slowly than other essential cost categories such as housing, transportation, food, and health care."[40] Mr. Wishart then presents pages of data about the cost of the distribution portion of electricity bills, as well as long term trends on the costs of electricity in the United States.[41] He presents data on the overall average energy burden in the United States between 1959 and 2022 which shows that overall average burdens for all U.S. households decreased over this period.[42] Finally, he presents data concerning the percentage of spending on electricity for households with the lowest 10 percent of the U.S. population as compared to other essential household expenses and asserts that this information is "important context for evaluating claims that electricity costs are the primary driver of household affordability claims"[43]

Q: What is your response to Mr. Wishart's testimony?

A: His testimony provides little useful analysis. My testimony focused on the discrete needs of PPL's confirmed low income customers who cannot afford electric service at current rates, let alone at the increased rates. As noted above, based on the data provided by PPL, its low income customers have significantly higher rates of termination of service, significantly higher levels of arrears, and make up a disproportionate share of the total dollars in debt.[44] PPL's low income customers have an acute affordability crisis. The fact that average households across the United States do not have the same energy burdens or bill payment difficulties as PPL's low income households is not at all surprising and

[40] PPL Electric St. 8-R at 5:16-18
[41] Id. at 6-8
[42] Id. at 9, Figure 2.
[43] Id. at 10:9-11.
[44] See supra at 8-9.

quite frankly irrelevant to the issues in this proceeding. The issues I presented in my direct testimony did not deal with some vague notion of household affordability in general, but rather the specific needs of the more than 240,000 PPL customers who try to remain connected to electric service despite having an average income that is barely more than $17,000 per year.

The fact of the matter is that PPL must collect on its total bill, and a customer must pay their total bill to retain service. PPL's efforts to cast the distribution portion of the bill as affordable rings hollow in this context. In fact, PPL's own witnesses present conflicting views on whether the issue in this proceeding is only distribution rates as compared to the total bill. For example, in addressing recommendations by witnesses for I&E and the Sustainable Energy Fund (SEF) who argued that PPL's rate case notice was misleading because it emphasized the rate increase on a total bill basis rather than simply on a distribution only basis, PPL witness Bethany Johnson stated that "most customers do not engage with the specifics of ratemaking procedures. Rather, they want to know how much their bill will go up in total. It is the Company's position that giving the total bill impact is more transparent as it provides a more accurate representation of how the rate case will affect customer finances."[45] It is clear when PPL discusses the magnitude of its rate increase to customers it discloses rates on a total bill basis because those rates will go up by a lower percentage than if they only showed the impact of their increase on distribution bills. However, when PPL wants to talk about affordability it says that one should only look at distribution impacts. PPL can't have it both ways. I agree with Ms.

[45] PPL Electric St. 5-R at 31:11-15.

Johnson that most customers do not understand the nuances of rates or ratemaking, they get bills that they can either afford to pay, or they cannot afford to pay.

The evidence I presented in direct demonstrates a significant and pervasive inability of PPL's 240,000 low income customers to regularly and consistently afford to pay their monthly PPL electricity bills at both current and proposed rates. This is not acceptable. To be just and reasonable, it is critical that rates are also affordable for PPL's customers. For low income customers, the law requires that there be sufficient policies, protections and services that help them to maintain electric service.[46] Thus, the structure and design or rates, including CAP rates, and delivery of PPL's universal service and energy conservation programs, determine whether and to what extent low income customers can reasonably afford to maintain service.

III. A FAIRER RATE DESIGN WILL IMPROVE AFFORDABILITY

Q: Mr. Wishart takes issue with your conclusion, and that of OCA witness Johnson, that the current customer charge is $14.09 per month – arguing that you should have included the per bill riders that are assessed.[47] What is your response?

A: As an initial matter, it is not clear which figure Mr. Wishart thinks should be the appropriate baseline to measure the current customer charge as he says that the charge is currently $15.49 and also that it is $15.58.[48] Based on PPL Exhibit SWW 1R, I believe he intended to argue that the current customer charge is $15.58, but this is only if you

[46] 66 Pa. C.S. § 2802(10) and (17); 2803 (definition of "Universal Service and Energy Conservation)
[47] See PPL Electric St. 8-R at 13-14.
[48] Id.

include the actual fixed customer charge of $14.09, which is based on PPL's cost of service study and the sum of the riders which net to $1.49 per month.

The current calculated fixed customer charge is $14.09. The difference between that and the $17.00 proposed by PPL is a 20.65% increase. The OCA's witness, Clarence Johnson, also made the same comparison from this base that I made.[49] Mr. Wishart argued that this is misleading because the riders increase this amount and the effective rate of the fixed charge is $15.58, and thus, customers will only see an adjustment of 9.1% rather than 20.65%.

Certainly, I agree that, from the perspective of the customer, the fixed amount they must pay each month will increase under PPL's proposal from $15.58 to $17.00. My analysis in direct testimony accurately explained that the increase to the base amount of PPL's fixed residential customer charge was changing from $14.09 to $17.00. Ultimately, Mr. Wishart's distinction does not matter. My opposition was not dependent on degree of the increase as I reiterate below. I remain opposed to an increase in the customer charge based on the reasons outlined in my direct and my responses herein.

Q. PPL witness Wishart asserts that the proposed increase to the fixed customer charge would not meaningfully impede the ability of customers to control their bills through conservation and the objections to any increase should be disregarded.[50] What is your response?

A: In my direst testimony, I opposed an increase in the fixed customer charge for two primary reasons. First, despite not having filed a rate case in more than 10 years, PPL already – at either $14.09 or $15.58 – has the highest fixed customer charge of all larger

[49] OCA St. 4 at 31.
[50] PPL Electric St. 8 at 15-16.

electric distribution utilities.[51] That gap would only widen at $17 per month. Second, the proposed increase would weaken the ability of customers to be able to save money each month through reduced usage and would undermine the explicit goals of the Low Income Usage Reduction Program (LIURP).[52] Both the OCA[53] and the Energy Justice Advocates (EJA)[54] agreed with me and provide thorough and complete analysis around why the current charge is already too high. In fact, OCA calculates that the customer charge *should be* $8.54 per month based on a true cost calculation that includes only direct customer costs while ultimately concluding that it simply should not be increased from its current level.[55] EJA's witness calculates that the charge should be no higher than $10.20 per month.[56]

For his part, Mr. Wishart concludes that if the fixed customer charge would be reduced to $10 per month, the average customer using 918 kWh would break even at proposed rates because of the need to increase the volumetric charge, and that if this customer engaged in energy efficiency that reduced demand by 25% to 688 kWh per month, they would only save 4% more ($1.75 per month) under a $10 customer charge as opposed to a $17 customer charge.[57] He asserts that this change is not meaningful enough to matter.

Mr. Wishart misses the point of my position in direct. I did not argue that low income customers would be more incentivized to engage in energy efficiency because of the cost

[51] CAUSE-PA St. 1 at 29, Chart 1.
[52] Id. at 29-30.

[57] PPL St. 8-R at 16, Table 3.

savings, I argued that these customers require all the help that they can get to reduce their bills in every way possible. One such way is through rate design that limits the amount each month that is unavoidable. Many low income households are low use households. Of course, many low income households also have higher usage than average, but the solution to ensuring low income high use household can afford their bills is not through the manipulation of rate design to increase the fixed component of their bill. Instead, as recommended in my direct testimony, it is by ensuring that they have robust access to CAP and increased resources dedicated to LIURP. I stand by my position in direct that PPL's customer charge should not be increased.[58]

Q: Mr. Wishart disagreed with you that rate RTS should be maintained and says your bill impact analysis did not account for the fact that, if maintained, rate RTS customers would see an increase in their bills.[59] Please explain his position and your response.

A: Mr. Wishart asserts that, while transitioning RTS customers to rate RS would increase the total bill by more than $465 per year on a total bill basis, maintaining rate RTS customers would still require these customers to see an increase of $319 per year on a total bill basis.[60] In his opinion, the bill impact differences alone do not justify

[58] PPL witness Bethany Johnson argues that if the Commission scales back its awarded rate increase that the customer charge proposed by PPL should not be scaled back based on PPL's position that the charge could be more than $40 per month. PPL St. 5 at 20. I disagree. Scaling back the customer charge is a common practice and there is no reason that PPL – with the highest charge in the state for electric utilities – should be exempt from this accepted ratemaking practice. This is particularly the case where there is ample evidence that the charge should be reduced from its current level. Thus, if the Commission determines that award PPL an increase in rates and an increase in the customer charge from its current level, that charge should be scaled back commensurate with the increase awarded.

[59] PPL Electric St. 8-R at 20.

[60] Id. at 21, Table 4.

maintaining a separate rate schedule where there is no longer a benefit to the system for doing so.[61]

With all due respect to Mr. Wishart, the benefit maintaining rate RTS is to protect the more than 11,000 customers who remain on this rate – of which more than 1,300 are confirmed low income customers and more than 240 are enrolled in CAP.[62] These low income customers would see an incremental impact of moving from rate RTS to RS of more than $400 per year at proposed rates at average usage.[63] This would be devastating and would threaten their ability to remain connected to service, particularly because PPL proposed no increase in rate RTS CAP customers' maximum CAP credits and proposed no additional assistance for any of the other non-CAP low income RTS customers that would mitigate this increase. Thus, I continue to object to the elimination of the RTS rate for the reasons outlined in my direct as well as those outlined by OCA witness Mr. Colton.[64]

IV. CAP AND LIURP FUNDING INVOLVE RATES THAT SHOULD BE ADDRESSED IN A RATE CASE

Q: In your direct testimony, you outlined three reasons why PPL's existing CAP does not adequately protect program participants from the rate increase and made recommendations about how to ensure that CAP provides adequate protection. Can you briefly summarize those points?

A: Yes. In direct I outlined how PPL's CAP is a critically important affordability program and is successful in reducing low income termination rates and arrearage levels.

[61] PPL Electric St. 8-R at 21.
[62] CAUSE-PA St. 1 at 31.
[63] Id.
[64] OCA St. 8 at 101-103.

However, I also outlined why CAP will not protect the Company's low income customers from the impact of the proposed rate increase:

First, the program is severely undersubscribed – for example on average in 2024, more than 164,000 confirmed low income households (69% of PPL's confirmed low income customers) were *not enrolled in CAP.*

Second, more than 6,000 customers pay an average bill CAP rate, rather than a percentage of income (PIP) rate. Unlike PIP CAP rates, which are reviewed monthly, PPL does not review average bill CAP rates to ensure the CAP participant is receiving the most advantageous rate. Thus, when rates increase, CAP customers enrolled at the average bill CAP rate are locked into higher CAP rates until recertification.

Third, PPL places annual limits on the amount of CAP assistance that a household can receive each year in the form of maximum CAP credit limits. If a CAP customer exhausts all their maximum CAP credits within a 12-month period, they no longer receive a CAP rate that is based on their ability to pay but instead must pay a budget bill based on the full residential tariff rate for the remainder of the program year. In 2024, 11,557 OnTrack participants were shifted to budget billing because they exceeded their CAP credit maximums.[65]

[65] See CAUSE-PA St. 1 at 44-46.

Q: Before you discuss your specific suggestions for improving each of these deficiencies and PPL's responses to your suggestions, please respond to PPL witness Norden's assertion that each of the above issues are not appropriate to be addressed in a base rate proceeding and "should be proposed and evaluated in a USECP proceeding."[66] Is she correct?

A: No. Ms. Norden is mistaken. While I agree that the issues *could be raised* in a USECP proceeding, the flaws that I identified in my direct testimony about PPL's CAP are perfectly appropriate to raise in a rate case. Counsel for CAUSE-PA will address the legal analysis of these issues in briefing, though I note here that Ms. Norden's arguments and citations to Commission orders are outdated and ignore recent Commission orders finding that universal service issues, including LIURP and CAP funding issues, are properly addressed in rate proceedings.[67] The issues that I have raised regarding PPL's CAP fit squarely within the confines of a rate case. I have not sought to broadly address CAP, CAP discount levels, or CAP eligibility rules, but I have limited my inquiry into those issues that are directly related to the ability of low income households to be able to continue to afford and maintain access electric service at PPL's proposed rates and proposed rate

[66] PPL Electric St. 18-R at 51-52.

[67] See Initiative to Review and Revise the Existing Low Income Usage Reduction Program (LIURP) Regulations at 52 Pa. Code §§ 58.1—58.18, Docket No. L-2016-2557886 (Final-Form Rulemaking Order issued March 12, 2025), published in Pennsylvania Bulletin on December 13, 2025. 55 Pa.B., Vol 50, at 8459-8553. ("LIURP Final Form Rulemaking Order") (noting the appropriateness of addressing universal service issues in rate cases because it would "allow parties to, inter alia, consider the justness and reasonableness of the cost of a public utility's universal service programs"), available at: https://www.puc.pa.gov/pcdocs/1911229.pdf; see also, Pa. Pub. Utility Comm'n v. PGW, Docket No. R-2023-3037933, Opinion and Order at 215-216 (Order entered Nov. 9, 2023) (where the Commission found that tabling consideration of universal service issues to the next USECP proceeding would deny low income customers relief for an extended period of time and would unreasonably "thwart the purpose of universal service, which is to help low-income customers maintain their natural gas services.").

design.[68] Thus, the Commission should ignore PPL's concerns about whether this is the appropriate forum to address the CAP issues I have raised.

A. PPL should improve CAP screening and enrollment

Q: Briefly review the suggested improvements to the CAP enrollment processes that you made in direct testimony.

A: As a threshold matter, where multiple rates are applicable, the Public Utility Code makes it clear that a public utility must charge "the rate most advantageous" to the customer.[69] This is why I made recommendations about improving CAP screening and enrollment. CAP is the most advantageous rate for eligible customers, yet, as noted in my direct testimony, 79% of PPL's census-estimated low income population is not enrolled in CAP and will bear the full, unmitigated impact of the residential increase authorized in this case.[70] I suggested that PPL should (1) eliminate its requirement that LIHEAP recipients who authorize data sharing with PPL must fill out a CAP application;[71] (2) eliminate its practice of mailing a letter to customers seeking consent to use the data provided by LIHEAP;[72] (3) routinely screen applicants for service and customers who call the call center for non-emergency calls to determine whether they are eligible for CAP and other universal service programs;[73] (4) apply a 15-day hold on an account with a pending termination when a customer applies for CAP; and, (5) allow customers or

[68] To be clear, I do not concede that even if I had raised concerns about the efficacy of the CAP design or eligibility requirements that those issues would be excluded from being addressed in a general base rate case, however, I mention the narrow scope of my requests merely to point out that the issues I raised are tailored to the ability of households to be able to afford PPL's proposed increase.

[71] Id. at 68.
[72] Id.
[73] CAUSE-PA St. 1 at 70-71.

applicants whose service has been terminated to reconnect service through CAP enrollment without added barriers.

Q: What was PPL witness Norden's position regarding LIHEAP auto-enrollment?

A: PPL witness Norden rejected the use of LIHEAP data without additional barriers (such as a new CAP application or additional consent to use LIHEAP data letter), and stated simply that PPL already uses the information provided by LIHEAP to streamline enrollment.[74] This level of generality obscures the fact that PPL requires customers to fill out a CAP application and expressly consent – a second time – to using the LIHEAP data for the purposes of CAP enrollment. PPL only receives data from DHS if the customer already consented to have the data used "*to help enroll*" the household in their utility's CAP or other energy assistance program.[75] The processes that PPL has put into place are simply insufficient to meaningfully streamline CAP enrollment and I stand by my recommendations. PPL should be required to use the DHS-provided data to automatically enroll eligible households who have previously consented to have their information used for such a purpose. Specifically, PPL should be required to file a petition to amend its USECP to implement auto-enrollment within 120 days of the Commission's final order in this case and follow the Commission's recent guidance regarding the threshold elements that should be used in an auto-enrollment petition.[76]

[74] PPL Electric St. 18-R at 54.
[75] CAUSE-PA St. 1 at 65:10-24 (quoting LIHEAP application).
[76] See CAUSE-PA St. 1 at 69-70.

Q: What was PPL's response to your recommendation that they develop a process to routinely screen applicants for service and customers who call the call center for non-emergency calls to determine whether they are eligible for CAP and other universal service programs?

A: Ms. Norden also rejected this proposal and stated that the Company already screens its customers for CAP eligibility and listed a series of *outreach activities* that PPL conducts to inform its customers and the community about its programs.[77] She then added that "blanket screening of every contact regardless of income is not practical or consistent with current customer service standards."[78] Of course, both of these responses ignore what I actually recommended. I did not recommend that PPL engage in more outreach or education (though additional outreach and education is always helpful), and I did not recommend that PPL conduct "blanket screening at every contact regardless of income." Instead, I recommended that PPL engage in tailored and targeted screening in two specific instances:

- Offer to screen all new and moving customers for income level at the time their service is established by asking them whether they would like information about income qualified programs that may reduce their rate.
- Offer to screen existing customers for household income level on any non-emergency calls and by asking whether they would like information about income qualified programs that may reduce their rate and/or whether there have been any updates to household income information.

I also recommended that PPL make these processes available through both phone contact and via web portal. Note, this is categorically different from the outreach and education that PPL already conducts. It is also fundamentally consistent with the process that the Commission just required Columbia to undertake in its most recently fully litigated

[77] PPL Electric St. 18-R at 55-56.
[78] Id. at 56:1-3.

base rate case.[79] To avoid any ambiguity about what I am recommending, I am not recommending the PPL screen all callers for CAP or other universal service programs, I recommended that PPL ask customers whether they would want to provide their income information to determine if they are eligible for these programs. If the customer or applicant declines, then the inquiry ends there. If the customer or applicant accepts and the customer's household income indicates that they are eligible for CAP or other assistance, then the customer or applicant should be referred for enrollment in CAP and provided a CAP application right then and there either online or over the phone. These customers should also be informed about other universal service programs – as well as LIHEAP. Thus, while PPL should not require customers to provide household income information, customers and applicants should first be informed that if they choose to disclose this information, they may be eligible for lower rates or energy efficiency measures. I stand by these recommendations as outlined in my direct testimony.

Q: What was PPL's response to your recommendation that they place a 15-day hold on an account with a pending termination when a customer applies for CAP?

A: Ms. Norden states that my recommendation is unnecessary because, under their current policies, "an initial referral to [CAP] creates a [hold] on the account for 21 days to allow the customer time to apply."[80] She also asserts that any subsequent "referrals within one year are marked as 'Recurring' and only create a one-day suspension on the account."[81] She says that my recommendation would add complexity, and risk being

[79] Pa. Pub. Utility Comm'n v. Columbia Gas of Pennsylvania, Inc., Docket No. R-2025-3053499, Opinion and Order at 350-351 (Order entered December 9, 2025).
[80] PPL Electric St. 18-R at 20:20-21.
[81] Id. at 20:21-21:1.

misused because I do not suggest a limit on the number of times that a customer could have a hold.[82]

I appreciate Ms. Norden's clarification about PPL's current process and believe that my recommendations can be modified based on this clarification. While Ms. Norden indicates that PPL places a 21-day hold when making an initial referral to CAP, I recommend, following submission of an initial application, this hold remains in place until the initial application for CAP is processed and a decision about CAP enrollment is made. Once the customer completes their CAP application, it is out of their hands about how long it will take for the application to be processed. As such, I am modifying my recommendation as follows:

- The initial referral of a customer should continue to result in a 21-day hold to allow a CAP application. Once an application is submitted, that hold should continue until a completed CAP application is processed by the agency and a decision is made. If the decision is made that the household is eligible for CAP, then the termination order should be cancelled, and they should be enrolled in CAP. If the application is denied, the hold can be released at the later of 21-days or the date of the denial.
- For a subsequent referral within the year, for any account that is in active termination status, I recommend that PPL modify its process and place a 15-day hold on the account for any household facing termination of service and who reaches out to PPL by any means to allow them to apply for CAP. Again, once the application is submitted, this hold should remain in place until the CAP agency renders a decision on the application.
- All subsequent referrals within one year of the initial referral should continue to receive the one-day hold as outlined by PPL's current policy.

I believe that these recommendations will cover the range of concerns that I expressed while respecting the concerns raised by Ms. Norden. While I do not share the concern that Ms. Norden has about households abusing the process, my revised recommendation creates appropriate safeguards that seek to address her concerns.

[82] Id. at 21.

Finally, in response to discovery, PPL admitted that they do not inform CAP customers that a hold is placed on their account when this occurs.[83] PPL should change this policy. There is no reason to exacerbate the stress of a household facing termination of service. Since PPL indicted its willingness to revise its call scripting in this area,[84] I suggest that they add scripting that specifically advises the customer that they have placed a hold on the customer's account to allow them to complete the CAP application and stress the benefits of CAP in assisting the customer if they are eligible for the program.

Q: What was PPL's response to your recommendation that it should allow customers or applicants whose service has been terminated to reconnect service through CAP enrollment without added barriers?

A: Ms. Norden rejected my proposal but provided no basis for doing so, stating merely that "once disconnected, customers who are not enrolled in [CAP] are reasonably expected to make the required payment to reconnect service."[85] I disagree with Ms. Norden. There is nothing reasonable about requiring a customer[86] or applicant for service who is otherwise eligible to enroll in CAP to pay arrears or a reconnection fee to have service restored. If the customer or applicant applies for CAP and is demonstrated to be eligible, that should be sufficient on its own for the individual to have service restored without further payment. My direct testimony was replete with evidence of the economic

[83] PPL Response to CAUSE-PA XIV-5, attached hereto at Appendix A-SR.
[84] Id.
[85] PPL Electric St. 18-R at 56:9-10.
[86] PUC regulations define "Customer" to include "a person who, within 30 days after service termination or discontinuance of service, seeks to have service reconnected at the same location or transferred to another location within the service territory of the public utility." 52 Pa. Code § 56.2 (definition of "Customer").

hardship faced by CAP-eligible households.[87] Requiring these households – who have demonstrated CAP eligibility – to nevertheless pay funds they do not have to restore service is not reasonable, it is needlessly cruel and serves only delay restoration of essential services to the household. Thus, I stand by my recommendations in my direct testimony on this issue.

B. PPL should offer CAP customers the lowest CAP rate

Q: PPL witness Norden rejects your proposal that PPL should modify its CAP review process to ensure that customers who are paying their average bill will not pay more than their percentage of income payment (PIP) rate, stating that because the average bill was selected at the time of enrollment it was less than the PIP rate, and thus the average bill will not be higher than the PIP rate. What is your response?

A: I think Ms. Norden misunderstands what I am asking PPL to do, so let me clarify. At initial enrollment in CAP, PPL determines whether a customer's PIP bill or average bill results in a lower bill and then places the customer on the lower of the two. I support this. If a customer is placed on a PIP bill at the time of enrollment, PPL runs a monthly report to identify whether any CAP PIP participants are paying a higher PIP amount than their average bill and then adjusts the amount due to the average amount for accounts with sufficient usage history. I support this. However, if at the time of enrollment, PPL places the customer on an average bill CAP rate, it does not run a monthly check to see if the customer's PIP CAP rate would be more advantageous. This is the process that I want PPL to change.

[87] See CAUSE-PA St. 1 at 32-48.

While I understand that in a world where distribution and generation rates are flat and usage is relatively stable, there may not be a need for this check, but that is not the world in which we live. PPL is raising distribution rates in this case. As outlined in my direct testimony, generation rates for default service customers (which include CAP customers) have risen by more than 20% over in calendar year 2024 alone[88] and are projected to continue to increase. Furthermore, we have increasingly volatile weather ranging from significant cold spells in winter to significant heat spells in summer thus increasing the likelihood of unstable usage amounts driving up bills. All these factors could cause a customer who pays an average bill to have an average bill that is higher than their PIP bill. My request is merely that PPL conduct its monthly check and compare both bills (PIP and average) and always bill at the most advantageous rate. In my opinion, this is consistent with its obligations under the Commission's CAP Policy Statement[89] and the Public Utility Code, though counsel for CAUSE-PA reserves the legal aspects of this issue for briefing.[90]

[88] CAUSE-PA St. 1 at 93, Table 23.
[89] 52 Pa. Code § 69.265(2) ("Generally, CAP payments for jurisdictional home energy should not exceed the percentages of CAP participants' annual income" as outlined in that section.)
[90] 66 Pa. C.S. § 1303 (stating that utilities must provide its customers – including its low income customers with "the rate most advantageous" where multiple rates are applicable).

C. PPL must eliminate or adjust its maximum CAP credits to account for the distribution rate and commodity cost increases.

Q: In your direct testimony, you provided significant detail about PPL's maximum annual CAP credit limits, the impact that the rate case increase and generation cost increases has or will have on these limits, as well as the how many customers exceed these limits each year.[91] You also made several recommendations including your primary recommendation that the limits be eliminated or in the alternative be increased.[92] Which parties responded to your proposal?

A: PPL and I&E both objected to my proposals. For PPL, Ms. Norden states simply that its current maximum CAP credit covers "90% of all [CAP] participants and has resulted in an 89% success rate."[93] Ms. Norden also states that the intent of CAP is not to have unlimited subsidies.[94] For I&E, Mr. Keller disagreed with my recommendations for two reasons: (1) "due to the impact of increased CAP costs to non-CAP customers, especially non-CAP low-income customers;"[95] and, (2) because the Commission's CAP Policy Statement states that cap credit limits "will be established in individual USECP proceedings."[96]

[91] CAUSE-PA St. 1 at 52-57.
[92] Id. at 60-63.
[93] PPL Electric St. 18-R at 53:5. In response to discovery, PPL clarified that the 89% success rate that Ms. Norden quotes is a blended rate for 2025 and is for customers that have not transitioned to OnTrack Budget Billing for exhausting their maximum cap credits. The data PPL provides shows a range of outcomes for customers but broadly show 8,881 customers exceeded their CAP credit limits in 2025. PPL Response to CAUSE-PA XIV-6, Attachment 1, attached hereto at Appendix A-SR.
[94] PPL Electric St. 18-R at 53.
[95] I&E St. 2-R at 5-7.
[96] Id. at 8.

Q: What is your response to these witnesses?

A: I understand the concerns noted by Mr. Keller and Ms. Norden about why CAP credits are in place and the concern that there are a significant number of confirmed low income customers who are eligible for CAP but not enrolled in CAP and thus would have to bear some of the cost associated with my proposal. However, I disagree with the position of I&E and PPL. Their response is simply to ignore the problem. In my direct testimony, I made several recommendations that would seek to address these concerns including recommendations about increased CAP screening and enrollment practices to get more CAP eligible households enrolled in CAP, as well as proposals that would allocate universal service costs across all customer classes thus lessening the burden on residential customers.

As to Mr. Keller's concerns that households who are not eligible for CAP, but who nevertheless have incomes that are insufficient (i.e., those with incomes above 150% but less than 300% of the federal poverty level)[97] would also bear the brunt of these additional costs. I agree with Mr. Keller but disagree that the solution to this is to limit access to assistance to those households who are eligible. As noted in my direct testimony, one of the most glaring problems with maximum CAP credit limits is that they are expressed and calculated as a fixed dollar amount and are not automatically adjusted to account for changes in distribution or generation rates. When rates increase but maximum CAP credits do not, more CAP customers will receive categorically unaffordable bills once they reach their annual limits. When this occurs, they are very likely to fall into arrears and face

[97] In my direct testimony, I outlined that these household would generally fall below what is known as the self-sufficiency standard and pointed out the overall deficiencies of the federal poverty level to gauge need for assistance. See CAUSE-PA St. 1 at 35-36.

termination of service. Simply put, these limits are punitive rather than preventative because most low income households cannot control the factors that impact their total bill. They cannot control how hot or cold the weather is that dictates their usage. They typically cannot control the level of insulation or weatherization in their home. They typically cannot control their appliance efficiency. Certainly, they cannot control distribution, transmission, or generation costs – all of which are rising at an unyielding rate. Households with incomes that hover around $17,000 per year simply do not have the resources able to affect these causal factors. CAP itself is meant to be preventative. By providing customers will bills targeted at an affordable level and an opportunity to reduce arrears with each in full payment, the program ensures that customers remain connected to service, that debt is managed. All of this is negated if customers lose their discount as outlined more fully in my direct testimony, but by way of summary:

- From August 2024-July 2025, 10,213 CAP customers exceeded their CAP credit limits, a full 15% of CAP customers.[98]
- Of those customers who exceeded their limits, Since August 2023, the average number of months that it took for a customer to exceed their maximum CAP credit limits was only 8 months.[99] Thus, for its highest users and lowest income customers, PPL's annual CAP credit limits cover the need for assistance for only three quarters of a year.
- From September 2025-August 2025, the average monthly bill for CAP customers was $75.12. During this same period, the average for CAP customers who exceeded their CAP credit limit was $313.46.[100]
- Customers who exceed their CAP credit limit have materially higher termination rates (22%) than CAP customers (16%).[101]

[98] CAUSE-PA St. 1 at 56, Table 15. Note that while the overall number of 8,881 for 2025 was lower, as compared to the period noted above (August 2024 – July 2025), see n. 96 supra, my concerns and analysis and concerns remain the same.
[99] Id. at 56.
[100] CAUSE-PA St. 1 at 56-57.
[101] Id. at 58.

Thus, while I agree with Mr. Keller's concern about households who are just above the CAP eligibility guidelines, one remedy for this concern is to spread the cost of the programs to encompass more than just residential customers as I have proposed in this proceeding. Before that occurs, pointing to those just above the eligibility cut off as a reason to deny an appropriate level of assistance to those below is merely pitting the desperately poor against the near poor. I cannot condone such an approach.

Regarding Mr. Keller's observation that the CAP policy statement indicates that exemption levels should be established in USECP proceedings, my response is the same as it was to the arguments by Ms. Norden's arguments regarding the proper forum for universal service programs: while it is correct that these matters can be addressed in USECP proceedings, since they involve tariffed rates, they also can be addressed in base rate proceedings. To the extent that there are legal arguments to be made regarding this point, counsel for CAUSE-PA will address the issues in briefing. Finally, while Ms. Norden correctly asserts that there are exemptions in place for households and I support the continued availability of exemptions, the fact that households can be exempted does not negate the need to address this issue more fully either through elimination of the credits or through an increase as outlined in my direct testimony.

I stand by my recommendations in my direct testimony. The Commission should require PPL to eliminate its maximum CAP credit policy and stop imposing maximums. This will allow CAP customers to continue to remain in the program so long as they pay their CAP bill, which is targeted at affordable rates per the Commission's policy statement. Given that a significant percentage of customers reach these limits, this built-in failure rate contravenes the purpose of CAP by limiting the program's ability to provide affordable

bills and dramatically increasing the likelihood of CAP customer terminations. In the absence of full elimination of the CAP credit maximums, and to address the insufficiency at current rates and account for the additional costs going forward PPL should increase the maximum CAP credits for each category of CAP customers by a minimum of 60% to account for the proposed rate increase in this proceeding – together with the rapid increase in the default service rate over the past several years.[102] PPL should also continually update its CAP credit limits commensurate with any future increases in default service and base rates. That is, PPL should be required to accommodate the cost increases on a total bill basis for all the components of its bills.

D. PPL should increase its LIURP budget and eliminate unnecessary barriers to full weatherization

Q: In your direct testimony, you outlined the significant unmet need for LIURP services within PPL's service territory and proposed that PPL's budget increase by 20% or $2.4 million. What other witnesses addressed this issue in their rebuttal?

A: I&E witness Keller, while not agreeing with the specific dollar amount that I proposed, agreed that a LIURP increase may be necessary and is not opposing an increase.[103] In addition, John Costlow, witness for the Sustainable Energy Fund, while not specifically referencing my testimony, argued that the increase requested by the Commission on Economic Opportunity (CEO) of at least $900,000[104] was insufficient and proposed an increase of $2 million annually.[105] For PPL, Ms. Norden, opposed the increase arguing that the Company increased the annual budget in its last USECP and

[102] See CAUSE-PA St. 1 at 63, Table 19 for the specific amounts of the increase recommended.
[103] I&E St. 2-R at 8-9.
[104] CEO St. 1 at 7-8.
[105] SEF St. 1-R at 2-3.

that "[b]udget expansion solely for the sake of expansion without a corresponding showing of cost-effectiveness and contractor availability would impose unnecessary additional costs on residential ratepayers."[106]

Q: What is your response to these witnesses' testimony?

A: I agree with Mr. Costlow and Mr. Keller that an increase is needed and continue to support my analysis in support of a proposed increase of $2.4 million annually. No one in this proceeding has argued that the LIURP budget should be expanded "solely for the sake of expansion". I presented evidence in my direct testimony that the program is effective at reducing usage, PPL is current exhausting its budget, yet there remains significant unmet need as it will take PPL twenty-nine (29) years to weatherize all the homes identified in its needs assessment at current spending levels.[107] Ms. Norden's criticism ignores the evidence, is without basis, and should be disregarded. Additionally, Ms. Norden argues that the USECP is "the appropriate proceeding" in which to address this issue. As noted above regarding my discussion of universal service funding in general, the Commission has unequivocally stated that LIURP funding may be addressed in rate cases.[108] Mr. Norden's position that the USECP is the appropriate proceeding is misplaced and incorrect.

[106] PPL Electric St. 2-R at 58.
[107] CAUSE-PA St. 1 at 77.
[108] See LIURP Final Form Rulemaking Order at 123, 55 Pa.B., Vol. 50, at 8493 ("We acknowledge that rate case proceedings, for example, allow parties to, inter alia, consider the justness and reasonableness of the cost of a public utility's universal service programs including its LIURP.")

Q: Ms. Norden also opposed your recommendation that PPL eliminate its 5-year look back period for LIURP-eligible households who only received baseload measures. What were her reasons?

A: It appears that Ms. Norden misunderstood my recommendation as she stated that "the 5-year lookback protects against repeated or duplicative weatherization that does not produce additional savings. [LIURP] is a deep, comprehensive treatment program, so performing multiple full [LIURP] jobs on the same household within 5 years is rarely cost-effective."[109] I did not propose elimination of the look back for households that received full weatherization, I proposed that the lookback should not apply to customers who have previously only received baseload measure (through Act 129 or LIURP) in a manner that would keep them from subsequently receiving full weatherization. My proposed modification was a modest one – to apply the look back only to those who have already received full weatherization. I stand by the assessment as Ms. Norden's stated concern did not respond to my proposal.[110]

V. THE COST OF UNIVERSAL SERVICE PROGRAMS SHOULD BE SHARED BY ALL CUSTOMERS

Q: In your direct testimony, you raised three issues concerning cost recovery of universal service costs what were they?

A: I recommended (1) that PPL allocate these broad public purpose costs equitably across all rate classes, or failing to do that allocate these costs to the LP-5 rate class;[111]

[109] PPL Electric St. 18-R at 58:3-6.
[110] Ms. Norden also continues to suggest in this context that the design of LIURP should be addressed in the USECP proceeding. For the reasons articulated in other places in my rebuttal testimony, she is incorrect about this position.
[111] CAUSE-PA St. 1 at 83-96.

(2) that the Commission deny PPL's request to collect $1.4 million in salary and wage expense in the Universal Service Rider (USR) rather than through rates;[112] and, (3) that PPL change its net metering tariff to ensure that customers who net meter pay USR and Act 129 rider costs irrespective of their generation.[113]

Q: On the first issue, the allocation of the USR broadly across all rate classes, how did other parties respond?

A: While PPL opposes allocation to all rate classes based on PPL witness Wishart's assertion that universal service costs should be paid only by residential customers because it is only those customers who are eligible for program benefits,[114] it supports my proposal to allocate costs to large load customers and my proposal to allocate $10 million of these costs annually to their newly proposed LP-6 rate class.[115] OSBA witness Ewen opposes cost recovery of universal service programs on small businesses, but supports the allocation of these costs on data center load consistent with my recommendation in direct.[116] PPLICA witness LaConte opposes my recommendation and says that if the Commission finds that Universal Service costs will increase because large load additions, then she recommends that only very large load additions be assessed these costs.[117]

Q: What is your response to these parties?

A: Regarding assignment of costs to large load additions, there appears to be growing consensus that this is either proper or acceptable given the costs that I documented in

[112] Id. at 96-98.
[113] Id. at 117-118.
[114] PPL Electric St. 8-R at 24
[115] PPL Electric St. 16-R at 25.
[116] OSBA St. 1-R at 7-8.
[117] PPLICA St. 1R at 14-15.

my direct testimony. I appreciate the parties recognizing the direct, causal link between the cost increases to support these programs and the rapid addition of large loads on the system. As outlined in my direct testimony, these new large load additions have added at least $10 million in annual USR costs, without adding any benefit for customers who are eligible for those programs. PPL's willingness to create a new LP-6 rate class and assign $10 million annually is a good first step, but it is not sufficient. Nothing in the other parties' rebuttal addresses the reasons why USR costs should not be assigned broadly to all rate classes consistent with the allocators recommended by CAUSE-PA witness Havumaki in his direct testimony. Instead, these parties merely rely on the fact that it has always been the case that these costs have been assigned exclusively to residential customers. This fact is not dispositive, as the Commission recognized in implementing its CAP Policy Statement and as fully laid out in my direct testimony.[118] Thus, I continue to stand by the recommendations I have made in my direct testimony.[119]

Specifically, I recommend that PPL assign the USR costs to all rate classes as follows. First, I support the creation of an LP-6 rate class. CAUSE-PA witness Havumaki outlines in his rebuttal testimony some modifications to the proposed scope of that class, but the creation of a separate rate class for large loads is appropriate. Second, PPL should directly assign $10 million of USR costs annually to be collected from the newly created LP-6 rate class and that this amount be adjusted at each rate case to account for the cost increases in energy, capacity, and transmission costs associated with data center

[118] The Commission directed utilities and stakeholders to address CAP cost recovery in utility-specific rate proceedings, indicating *that "the Commission will no longer routinely exempt non-residential classes from universal service obligations."* Final CAP Policy Statement and Order, Docket No. M-2019-3012599, at 97 (Order entered Nov. 5, 2019) (emphasis added); see also 52 Pa. Code §§ 69.265(1), 69.266(b).
[119] See CAUSE-PA St. 1 at 83-96.

load growth within PPL's service territory. This contribution should be a direct contribution billed monthly to all LP-6 rate class customers who are classified as Large Loads additions by PPL. After this direct assignment, the remainder of the costs should be assigned based on the allocators in PPL's ACOSS based on the kWh usage for each rate class projected as of the FPFTY.[120] Since these costs are flow-through rider costs, they will change each time the USR is updated based on the reconciliation that PPL does to ensure that only the actual direct costs are collected. That is, in addition to the $10 million direct assignment to LP-6, PPL should allocate an additional amount to based on volumetric throughput to all classes, including LP-6.

Q: On the second universal service issue, PPL witness Norden continues to support PPL's initial proposal to remove $1.4 million from rates that are attributable to USR wages and salaries and collect them through the USR, arguing that this better reflects cost causation and the ratepayers would benefit because they would only be permitted to collect costs that were actually incurred.[121] Has her response caused you to change your position that these costs should remain in rates?

A: No. While Ms. Norden asserts that parties would still have the right to challenge these costs in the context of PPL's USR reconciliation filings, this is not practical as parties – particular those representing low income customers – simply do not have the time or resources needed to review every filing that PPL makes. Wages and salaries of employees are operating expenses of the Company. The aggregate, normalized amount of those costs should be reflected in rates. While I agree that the USR is a fully reconcilable rider both up and down, I do not agree with Ms. Norden that this necessarily

[120] PPL Electric Exhibit BR-1 at 15 (Revenue Allocation percentages).
[121] PPL Electric St. 18-R at 45.

protects ratepayers because the nature of the rider guarantees cost recovery. As I pointed out in my direct testimony, cost recovery for rates is set at a point and time and remains fixed until adjusted in the next rate case.[122] This requires a utility to act prudently and efficiently between rate cases. In contrast to riders which allow full recovery with little lag. I continue to support my position in direct that staff and wage costs for universal service staff should remain in rates and PPL's proposal to include them in USR should be disallowed.

Q: Regarding your proposed modifications to PPL's net metering rider to impose USR and Act 129 (ACR) costs on net metered customers, please summarize the responsive rebuttal testimony.

A: Two parties responded to this proposal. First, PPL witness Bethany Johnson agreed with my proposal "in principle" but she asserts that doing so would violate the Commission's AEPS regulations and that "[u]nder current law, [the] only available option to achieve [my] goal" would be to change the manner in which the ACR and USR were recovered and apply it as either a fixed charge or a kW-based charge.[123] Second, IGS Solar witness Rever incorrectly labels my proposal as a "solar surcharge", which she argues is ambiguous, and asserts that my proposal should be rejected because it is unworkable, unreasonable, and that it would reduce the compensation paid to net metered customers.[124] She also asserts that it is inconsistent with the goals and objectives of Pennsylvania's net metering law.[125]

[122] CAUSE-PA St. 1 at 97-98.
[123] PPL Electric St. 5-R at 27.
[124] IGS Solar St. 1R at 7-12.
[125] Id. at 13.

Q: Please respond to these witnesses.

A: As a threshold matter, I disagree with both witnesses' assertions that my proposal is inconsistent with the Commission's AEPS regulations or the AEPS statute. Counsel for CAUSE-PA will fully address the legal basis for my position in briefing. Simply put, however, the fact that net metered customers will receive less compensation for each kWh of generation does not mean that they are not receiving the full retail rate as required by law. Since this is the crux of the disagreement that PPL has with my proposal, I do not have further response to Ms. Johnson on this issue.

Regarding Ms. Rever's testimony, I have several responses. First, I disagree with her rhetorical framework that this is a "solar surcharge." I am not singling out solar generation or net metered customers. Instead, I proposed a policy solution that would treat net metered customers the same as all other residential customers – they would be assessed USR and ACR costs for all kWh that they use each month on a volumetric basis. From my perspective, it does not matter whether this usage is grid supplied or self-supplied since these riders are for the recovery of public purpose costs mandated by the General Assembly and, at least with respect to the USR, are *non-bypassable*. In my view, *all customers* should pay these essential public purpose costs.[126]

[126] Ms. Rever also asserts that my proposal is ambiguous and inconsistent because of my responses to interrogatories showed the amount that small business customers would pay "even though small commercial customers are exempt from the USR per the terms of PPL's tariff." IGS Solar St. 1-R at 6-7. This statement ignores two fundamental facts: (1) that I was responding to the hypothetical questions asked by IGS Solar in response to their interrogatories; and (2) that I have proposed in this proceeding that the USR apply to all rate classes, including small business customers. See CAUSE-PA Statement No. 1 at 83-96.

Second, Ms. Rever's rebuttal also points out that PPL's current USR and ACR tariff only applies to "each kilowatt-hour *supplied* to customers" each month.[127] Since the usage that is self-generated by net metered customer is not supplied to customers from PPL, she argues that these riders cannot apply. I agree with Ms. Rever that this is the case based on the proposed language in the proposed Original Tariff and agree that my direct testimony did not address this issue. I do not agree that this is a fatal flaw and recommend a change to these tariffs to accommodate my proposal.

Specifically, I recommend that the language in the two riders, for purposes of collecting USR costs, be changed from "supplied to customers" each month to "consumed by customers" each month. This change would allow for my proposal to be implemented. To the extent that Ms. Rever imputes statutory or regulatory significance from the fact that PPL's riders use the word "supplied to" in these riders, I disagree and this matter will be addressed more fully by Counsel for CAUSE-PA in briefing.

Simply stated, there is nothing inherent about the USR and ACR costs that means they should be assessed only because of energy or usage supplied from the grid. These are nonbypassable public purpose costs, they are not costs associated with the generation, transmission, and distribution of electricity; they are costs associated with ensuring that PPL recovers all of its expenditures to provide rate assistance, arrearage forgiveness, and weatherization/energy efficiency programing to low income customers in the case of the USR and all customers in the case of ACR. My proposal on this issue – like my proposals on all the USR cost allocation issues – is simply meant to ensure that

[127] See PPL Electric GEO-1, page 52 of 662, Electric Pa. P.U.C. No 202, Original Page 20 (USR) and PPL Electric GEO-1, page 71 of 662, Electric Pa. P.U.C. No 202, Original Page 26 (ACR4 Rider) (emphasis added).

all customers contribute to these costs broadly and that they not be avoided by any set of customers or customer classes.[128]

VI. PPL'S PAYMENT ARRANGEMENT STANDARDS REQUIRE REFORM

Q: In your direct testimony, you made several recommendations about improving PPL's payment arrangement standards. Ms. Norden asserts that PPL already follows the Commission's regulations and that PPL is concerned that following your recommendations would lead to "inconsistent payment arrangements to similarly situated customers"[129] and could "expose the Company to potential regulatory liability."[130] What is your response to these concerns?

A: I disagree with Ms. Norden that PPL's current process complies with the requirements of the Commission's regulations set forth at 52 Pa. Code § 56.97(b). While counsel for CAUSE-PA will fully brief this issue as it relates to PPL's legal requirements, based on my review of PPL's materials, including its response to interrogatories, PPL's current payment arrangement process is a formulaic process that considers only household income in four tranches and household size.[131] I have seen no evidence that PPL considers the other required factors in establishing an equitable payment agreement, including the size of the balance or a household's ability to successfully pay down arrearages. PPL's payment arrangements processes are designed for efficiency and

[128] In her testimony, Mr. Rever asserts that PPL would not necessarily know how much was generated by a net metered customer because of meter configuration and thus there would be implementation issues with my proposal. IGS St. 1R at 9-10. In response to discovery, PPL indicated that its meters have "two channels: one that records total net usage and a second that records total net generation." PPL Response to CAUSE-PA XIV-3, attached hereto at Appendix A-SR. They further state that "[t]he meter does not record usage independent of the generation." Since my proposal would assign USR and ACR based on total usage regardless of supply, PPL's meters appear to have sufficient information necessary for billing.
[129] PPL Electric St. 18-R at 19:22.
[130] Id. at 20:3-4.
[131] See CAUSE-PA St. 1 at 98, Table 25.

standardization, but not customer success. For example, in response to discovery, when specifically asked how PPL's current payment arrangement process considers the size of the unpaid balance at the time the payment arrangement is entered, a requirement under Commission regulations, PPL responded simply that "[a] customer's outstanding balance is allocated into equal monthly installments account to the estimated payment arrangement term, which is determined by household size and income."[132] This response is illustrative that PPL does not specifically consider the size of the unpaid balance as it amortizes *any balance of any size* over the same term based on the household's income and household size.

PPL's payment arrangements have significant rates of failure. As outlined more fully in my direct testimony, 58% of all arrangements result in zero (0) payments towards arrearages and 77% of all arrangements failing because a customer made fewer than twelve (12) payments.[133] This is not surprising given Ms. Norden's statements in rebuttal that PPL uses an "automated process" that considers only "household income and number of household occupants" and that "[t]his efficient process would be hampered by changes to the factors that PPL must consider in establishing payment arrangements."[134] Thus, it is apparent that PPL values efficiency rather than effectiveness when it comes to setting payment arrangements. That is a bad tradeoff for PPL's customers for several reasons. In my professional experience working with thousands of consumers over the years, consumers agree to payment arrangements that are offered – particularly those offered via IVR or the web – because they have little choice if they want to keep their

[132] PPL Response to CAUSE-PA XIV-4, attached hereto at Appendix A-SR.
[133] CAUSE-PA St. 1 at 99-100.
[134] PPL Electric St. 18-R at 20.

service. They do so even if they know they are unlikely to be able to make the payment or do not understand the terms of the arrangement. This does not serve their long-term interests, and it is not good for PPL either as it results in significant failure rates.

The setting of payment arrangements should not be a performative, "check the box" exercise that does not meaningfully ensure households can pay down their arrears. It should be a process that is tailored based on the factors required by the Commission's regulations and designed to ensure that the household has a chance to succeed in paying down arrears. The onus is on PPL to ensure that this occurs.

Ms. Norden's warning that PPL is concerned about regulatory liability is a red herring. Of course, PPL should try to be as consistent as possible and avoid arbitrary and whimsical decisions about how long to provide a payment arrangement. But consistency should not be used as a shield to compliance with all the factors that are required by the Commission's regulations or improvements that would materially ensure that households have a meaningful opportunity to pay down their arrears. Moreover, as noted in my direct testimony, PPL has an even greater obligation to establish an equitable payment arrangement for victims of domestic violence who have a qualifying court order. Ms. Norden glaringly omits any acknowledgement of this heightened obligation to uniquely vulnerable customers.

In my direct testimony, I set forth reasonable modifications to PPLs current processes.[135] I stand my all these recommendations as they are designed to ensure that customers who enter payment arrangements have a greater likelihood of retiring arrears.

[135] CAUSE-PA St. 1 at 104-105.

These recommendations would benefit all ratepayers and PPL because they would reduce uncollectible expenses.

VII. PPL'S MEDICAL CERTIFICATE PROCESS REQUIRES REFORM

Q: In your direct testimony, you outlined a series of concerns about PPL's medical certificate process. PPL witness Norden objected to each of your recommendations. Please summarize Ms. Norden's objections.

A: Ms. Norden says that my concerns about PPL's medical certificate practices are unfounded, PPL's scripts are fine and customers are adequately informed.[136] She specifically objects to any modifications to PPL's bills for several reasons. First she asserts that PPL's bills provide the information required by Commission regulations, and nothing in those regulations requires the Company to provide the information that I suggested.[137] Second, she believes that my suggestions will confuse customers because a possible disconnect between the 30-day hold period of a medical certificate may not align with a billing date that would require PPL to manually cancel and rebill customers.[138] Finally, she asserts that I fail to understand the practical limitations and costs to implement my proposal, which she asserts would take 6 months and between $250,000 to $200,000 to implement.[139]

I want to make clear what I have and have not recommended on this issue, as Ms. Norden seems to believe that I am proposing wholesale changes. I am not. First, I recognize that there are a lot of PPL processes and call scripting that would have to be

[136] PPL Electric St. 18-R at 23.
[137] Id. at 23.
[138] Id. at 24.
[139] Id.

reviewed, and I did not suggest specific language PPL should be required to use. I merely stated my view that what they provided in response to discovery is insufficient because they provide confusing and inaccurate information. Thus, my recommendations in direct testimony were as follows:[140]

- PPL should be required to undertake a review of its call scripting and training materials for its customer service representatives and revise these documents so that PPL's representatives are correctly informing customers that they may continue to renew their medical certificates past two renewals if they are able to pay their current charges.
- I also recommended that customers seeking medical certificates should be provided with a medical certificate form by PPL or instructed how to download the form from PPL or the Commission's website, rather than the customer's medical provider having to reach out to obtain this form and provide a link to the Commission's form.
- I recommended that PPL be directed to amend its monthly bill provided to customers with active medical certificates to clearly indicate that, to be eligible for medical certificate renewals past two, the customer must pay their current charges, and the amount of those current charges.

As to the first recommendation, PPL says it does this already but has not pointed to where in their scripting this occurs. Based on my review of the material submitted in response to discovery that PPL's scripts are not consistent, accurate or clear on this point and I maintain this recommendation. As to my second recommendation, Ms. Norden says that they do inform customs that they can submit either PPL's form or the Commission's form. Again, she does not point to where in PPL's call scripting this is stated, and I maintain my recommendation on this point. I also specifically maintain my recommendation that PPL remove any references to the currently stated requirement that a doctor call PPL to get a form. PPL should provide a form to the customer if they ask,

[140] CAUSE-PA St. 1 at 109-110.

including telling them where to download the form on PPL's and the Commission's website. There is no reason for medical professionals to call.

Finally, regarding its bill, I am not insisting that PPL have a medical certificate-specific bill although I am not opposed to it either. Instead, PPL could add language to its bill messaging that says to customers who have a medical certificate that they must pay the amount indicated in the "usage charges" section on the customer's bill, which for PPL is the sum of the supply and distribution charges of the month, to maintain more than three medical certificates. Better yet, PPL could also include language the encourages the customer to reach out to PPL to negotiate a payment arrangement or enroll in an assistance program. I continue to believe these changes would improve clarity of a customer's obligations. It is important to remember that customers who have medical certificates are very, very ill. Providing clear, consistent, and concise information that provides customers with what they need to do to maintain service is critical. As such, I continue to recommend that PPL be required to make the changes outlined in my direct testimony on these issues.

VIII. OTHER TARIFF CHANGES SHOULD BE ADOPTED.

A. Tenants

Q: In rebuttal, PPL witness Gregory Olsen outlined several changes that PPL would make to their tariff definition of tenant based on the recommendations that you made in your direct testimony. Are the changes that PPL agrees to make sufficient to satisfy your concerns?

A: No. I appreciate the changes that PPL has agreed to make as they get closer to addressing the concerns that I raised in my direct testimony. However, there are two areas about which I continue to have concerns: (1) the language needs to be clarified to ensure

that tenants residing in single family homes are covered; and (2) the language should eliminate the requirement that tenancy be for more than 1 year. PPL proposes to amend its definition of "tenant" to:

> Any person or group of persons who occupies or is entitled to occupy a residential or commercial unit within a multitenancy building, parcel, or mobile home park and who is contractually obligated to make rental payments to a landlord or landlord ratepayer pursuant to a written or oral lease or rental arrangement. The term includes occupants of residential or commercial units where electric service is provided as an included service under the rental agreement and where the occupant is not the ratepayer of the utility providing such service. For purposes of this definition, a multitenancy building shall include any structure containing three (3) or more separate and distinct residential or commercial units, and tenancy may be expected to be for a duration of one (1) year or more.[141]

I propose the following changes in red to this definition.

> Any person or group of persons who occupies or is entitled to occupy a residential property, a ~~or~~ commercial unit within a multitenancy building, parcel, or a unit in mobile home park and who is contractually obligated to make rental payments to a landlord or landlord ratepayer pursuant to a written or oral lease or rental arrangement. The term includes occupants of residential or commercial units where electric service is provided as an included service under the rental agreement and where the occupant is not the ratepayer of the utility providing such service. For purposes of this definition, a multitenancy building shall include any structure containing three (3) or more separate and distinct residential or commercial units~~., and tenancy may be expected to be for a duration of one (1) year or more~~

The first set of proposed changes are meant to add clarity to ensure that individuals who live in residential units as tenants are covered. The strike through language at the end of the document is meant to ensure that the tariff definition conforms to the accepted understanding that tenancy does not have to be for the duration of one year or more. With these additional changes, I agree that the proposed definition satisfies the concerns raised in my direct testimony.

[141] PPL Electric St. 14-R at 2:20-3:7.

B. Reconnection Fees

Q: Please summarize the rebuttal testimony submitted by PPL witnesses regarding your proposal that PPL waive reconnection fees for its low income customers.

A: PPL witness Bethany Johnson objected to my recommendation that PPL waive reconnection fees for confirmed low income customers whose service is terminated because I did not include an adjustment to their revenue requirement.[142] In addition, Ms. Norden says that the Commission's regulations allow PPL to charge the fees directly to customers so that is why they charge the fees.[143] She also objects for the same reason that Ms. Johnson objects; namely, because I did not reflect the costs of this waiver in PPL's revenue requirement.[144] As for the amount that should be added to the revenue requirement, Ms. Johnson asserts that I should have proposed a pro forma adjustment to remove $500,000 from other revenue and made the same adjustment to increase PPL's claimed revenue requirement by this amount.[145]

Q: Please respond to these witnesses.

A: First, PPL can agree to include these fees in rates rather than assess them directly to low income consumers who have already evidenced an inability to pay and, thus, had their service terminated. PPL has simply chosen not to do so because they assert that they are not required to do so.

[142] PPL Electric St. 5-R at 19.
[143] PPL Electric St. 18-R at 41-42.
[144] Id.
[145] PPL Electric St. 5-R at 19.

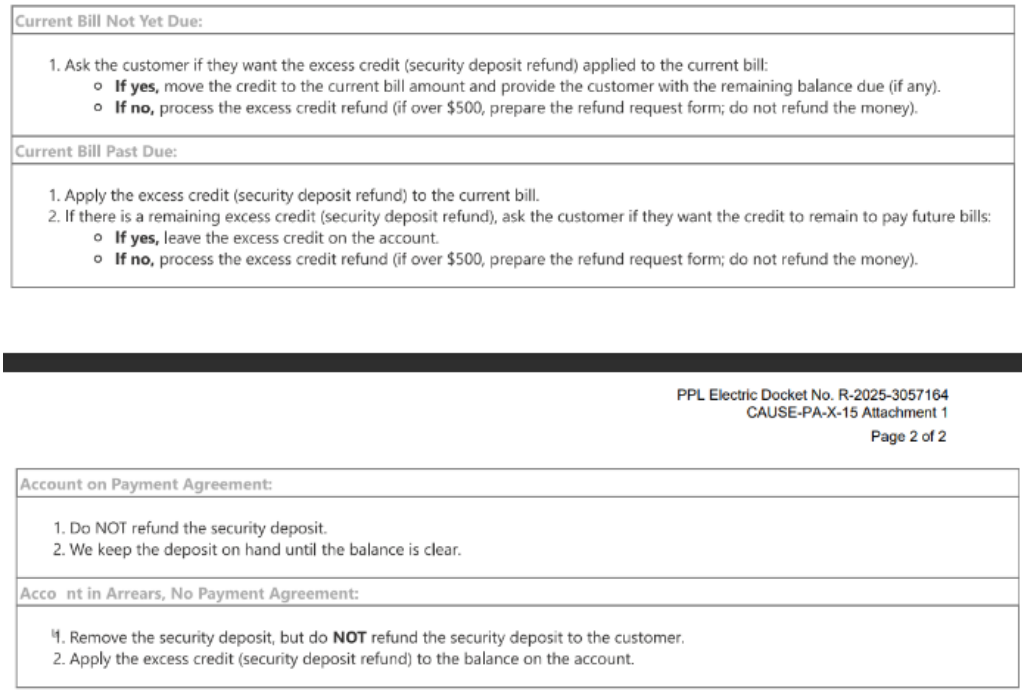
Second, I agree with Ms. Johnson that an adjustment to revenue should occur, and I am not opposed to the mechanics she describes. However, I do not agree that $500,000 is the correct amount to be added to the requested revenue requirement. When asked how PPL determined that this was the correct amount, PPL indicated that this was reflective of the cost for the period from July 2024 through June 2025.[146] I do not believe that one year's worth of data should be the benchmark for the amount added to rates. Instead, as shown in the table below, based on the 5 year average of total reconnection fees paid by low income customers for calendar years 2021-2025, the amount added to rates should be $291,390 annually rather than the $500,000 suggested by Ms. Johnson.[147]

Table 1: Total Residential Reconnection Fees Paid by Low Income Customers

Year	Total Fees by Low Income Customers
2021	$184,044
2022	$242,802
2023	$111,790
2023	$504,938
2025	$413,378
Annual Normalized Number	$291,390

I do not oppose adding this normalized amount to the overall revenue request. PPL should collect this expense based on this normalized amount because it is a recurring expense, but the amount varies each year. The normalization period of 5 years coincides with that which was recommended by the OCA for rate case expenses and is reasonable for waived reconnection fees as well.[148]

[146] PPL Response to CAUSE-PA XIV-1, attached hereto at Appendix A-SR.
[147] PPL Response to CAUSE-PA XIV-2, attached hereto at Appendix A-SR.
[148] OCA St. 1 at 18.



C. Security Deposit

Q: In her rebuttal testimony, PPL witness Norden rejected your proposed modifications to PPL's current security deposit practices, please explain her reasons.

A: In direct, I made two recommendations: (1) that PPL reform its security deposit waiver eligibility to allow households to state their income without having to demonstrate their eligibility for a waiver through income documentation; and (2) that PPL provide all customers eligible for a security deposit refund with the option of either having that refund applied to their balance or refunded directly to them. While PPL does this currently for households who do not have an outstanding balance, for those who do not have an outstanding balance, PPL applies the refund to the balance without customer consent.[149] Ms. Norden opposed both recommendations. As to the first, she states simply that they are not required to do so.[150] While I agree that PPL *can* require customers to verify their income before waiving the deposit, they are *not required* to do so, and I continue to support my recommendation as a best practice.

Regarding the second recommendation, Ms. Norden's responsive states that "Deposits are applied as credits to the account unless the customer requests otherwise."[151] But this is only true for customers without a balance. In response to discovery, PPL provided its security deposit waiver policy.[152] That policy states:

[149] CAUSE-PA St. 1 at 125-126.
[150] PPL Electric St. 18-R at 33.
[151] Id. at 33:14.
[152] PPL Response to CAUSE-PA X-15, Attachment 1, attached hereto at Appendix A-SR.

Current Bill Not Yet Due:
1. Ask the customer if they want the excess credit (security deposit refund) applied to the current bill: ○ **If yes,** move the credit to the current bill amount and provide the customer with the remaining balance due (if any). ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).
Current Bill Past Due:
1. Apply the excess credit (security deposit refund) to the current bill. 2. If there is a remaining excess credit (security deposit refund), ask the customer if they want the credit to remain to pay future bills: ○ **If yes,** leave the excess credit on the account. ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).

PPL Electric Docket No. R-2025-3057164
CAUSE-PA-X-15 Attachment 1
Page 2 of 2

Account on Payment Agreement:
1. Do NOT refund the security deposit. 2. We keep the deposit on hand until the balance is clear.
Acco nt in Arrears, No Payment Agreement:
1. Remove the security deposit, but do **NOT** refund the security deposit to the customer. 2. Apply the excess credit (security deposit refund) to the balance on the account.

Thus, as noted in my direct testimony, PPL applies a waived security deposit to the unpaid balance based on its judgment as opposed to the customer's judgment. While PPL says that this is "consistent with Commission rules,"[153] recent Commission decisions, including in PPL's own USECP proceeding, have reached the opposite conclusion.[154] In the Commission's 2023 Order in PPL's USECP, the Commission stated:

> Both the statute and Commission regulations prohibit requiring a cash deposit for utility service from customers who are confirmed to be eligible for a CAP. See 66 Pa.C.S. § 1404(a.1) and 52 Pa. Code § 56.32(e). Commission regulations also state that a public utility must "refund a deposit, along with any applicable interest, within 60 days upon determining that the customer or applicant from whom a deposit was collected is not subject to a deposit.…" See 52 Pa. Code § 56.53(f). ***The regulations do not permit the public utility to apply a deposit to a delinquent account***

[153] PPL Electric St. 18-R at 33:13.
[154] See Columbia 2023 USCEP Order on Columbia 2024 Petition Docket No M-2023-3039487 (order entered on July 11, 2024) at 7, PGW 2023 USCEP Order, Docket No M-2021-3029323 (order entered on January 12, 2023) at 28, PPL 2023 USECP Order, Docket No M-2022-3031727 (order entered on February 9, 2023) at 55-56, and Duquesne 2020 USECP Order (order entered on April 14, 2022) at 57.

> ***balance if it is determined the customer was not responsible to pay the deposit.*** Therefore, the Commission supports PPL's proposal to refund security deposits collected from customers who are income eligible for OnTrack, with applicable interest. ***PPL may apply the security deposit to the account balance only with the customer's informed consent. As part of obtaining this informed consent, PPL must explain how applying the security deposit to the account balance will impact the customer's monthly bill.***[155]

Counsel for CAUSE-PA will brief the legal impact of these orders. However, I stand by my recommendation that customers should be provided with the option about whether to have their security deposit refund applied to their bills or refunded to them directly, regardless of whether they have a past due balance, are enrolled in CAP, or have a payment arrangement.

XI. RESA's ARGUMENTS ABOUT THE COMPETIVE MARKET IGNORE THE FACTS.

Q: In your direct testimony you did not address any issues related to retail electric competition, but in rebuttal Mr. Frank Lacey on behalf of the Retail Energy Supply Association (RESA) asserted that your recommendations were "harmful to consumers and should be rejected."[156] What is the basis for his assertion?

A: It is not clear exactly what recommendation I made in my direct testimony that Mr. Lacey takes issue with, as he states merely that he would "caution against looking exclusively at enhancing and expanding low-income customer assistance programs to provide benefit to [low-income] customers."[157] He then asserts that he is "not opposing specific suggestions by [me or Ms. Alexander for the OCA] to make electricity more

[155] PPL 2023 USECP Order, Docket No. M-2022-3031727 (order entered on February 9, 2023) at 55-56 (emphasis added).
[156] RESA St. 1R at 1:15.
[157] Id. at 2:21-23.

affordable for low-income customers."[158] Nevertheless, he says that I have "miss[ed] the mark on affordability by ignoring market options."[159] And, specifically says that if all low income customers had shopped before the default service price increases went into effect in 2024, that these customers could have saved $83.4 million.[160] Quite frankly, this is absurd.

Mr. Lacey provides no basis for this amount other than multiplication of hypothetical EGS contract rates, for hypothetical lengths, by a hypothetical number of customers. Even he admits that this is "highly improbable." Mr. Lacey's calculation is speculation at best and should be ignored.

In contrast, the data presented by PPL in discovery, as outlined by Ms. Alexander in her direct testimony, which used actual data provided comparing what customers paid to retail suppliers in 2024 compared to what they would have paid had they been on default service, showed the following:

Residential Shopping Summary- 2024

	Residential					
	Customers paying higher rate than Default Rate (Dollars paid over PTC)	Higher Rate Customer Count	Customers paying lower rate than Default Rate (Dollars saved under PTC)	Lower Rate Customer Count	Total Payment Dollars Over/Under Default Rate	Default rate
January	$10,702,659.46	258,377	-$6,920,410.60	269,035	$3,782,248.86	0.110342
February	$9,176,288.37	246,988	-$6,288,397.24	274,172	$2,887,891.13	0.110287
March	$8,101,151.66	241,880	-$5,785,426.15	281,861	$2,315,725.51	0.110286
April	$7,178,221.82	238,913	-$5,116,357.62	284,390	$2,061,864.21	0.110284

* Negative amounts in dollars represent customer savings vs the same usage at the default rate
* Customer Counts and default rates in the total row represent the average across all months in 2024

This data, from PPL's discovery responses,[161] shows:

[158] Id. at 2:24-25.
[159] Id. at 3:1
[160] Id. at 5.
[161] PPL Response to OCA VII-12, Attachment 2. Attached hereto at Appendix A-SR.

- In 2024, approximately 267,000 shopping customers paid on net EGS rates of $103.7 million more than they otherwise would have paid had they been on default service.

- In 2024, approximately 253,000 shopping customers paid EGS rates on net of $47 million less than they would have paid had they been on default service.

- Thus, on net, residential customers paid $56 million more than they otherwise would have paid had they all been on default service during 2024.

- On average Residential Customers billed at a higher rate were billed an additional $388 in 2024

PPL's discovery showed similar data for its low income customers who shopped and were not enrolled in CAP:

Residential- Low Income Shopping Summary- 2024

	Residential Low Income					
	Customers paying higher rate than Default Rate (Dollars paid over PTC)	Higher Rate Customer Count	Customers paying lower rate than Default Rate (Dollars saved under PTC)	Lower Rate Customer Count	Total Payment Dollars Over/Under Default Rate	Default rate
January						0.110342
February	$1,717,695.45	35,978	($614,786.38)	23,951	$1,162,838.07	0.110287
March	$1,510,854.29	35,026	($550,613.05)	24,677	$995,267.24	0.110286
April	$1,323,779.83	34,660	($474,800.98)	25,187	$883,638.85	0.110284
May	$1,044,964.66	33,861	($335,082.36)	24,737	$743,743.30	0.110285
June	$1,195,924.30	35,841	($275,047.29)	21,185	$956,718.01	0.105991
July	$1,665,765.11	39,308	($241,626.88)	18,352	$1,463,446.23	0.100422
August	$1,600,955.26	38,140	($233,474.02)	18,875	$1,405,621.24	0.100403
September	$1,343,153.50	37,619	($187,305.81)	18,956	$1,193,466.69	0.100402
October	$1,142,213.12	37,981	($153,438.14)	19,584	$1,046,339.98	0.100401
November	$1,184,486.65	36,704	($164,490.79)	18,841	$1,056,699.86	0.100401
December	$1,663,592.75	36,118	($390,564.94)	22,124	$1,309,145.81	0.103387
Total	$15,393,384.93	36,476	($3,621,230.64)	21,497	$11,772,154.29	0.105241

*Negative amounts in dollars represent customer savings vs the same usage at the default rate ,Customer Counts and default rates in the total row represent the average across all months in 2024.
*No Data for January 2024. Tracking for residential low-income customers started in February 2024. Totals for low-Income customers are for 11 months in 2024.

This data, from PPL's discovery responses,[162] shows:

- In 2024, approximately 36,476 shopping customers paid on net EGS rates of $15.4 million more than they otherwise would have paid had they been on default service.

- In 2024, approximately 21,497 shopping customers paid EGS rates on net of $3.6 million less than they would have paid had they been on default service.

- Thus, on net, residential customers paid $11.7 million more than they otherwise would have paid had they all been on default service during 2024.

- On average Residential Customers billed at a higher rate were billed an additional $422 in 2024

[162] PPL Response to OCA VII-12, Attachment 2. Attached hereto at Appendix A-SR.

Similar data was presented by PPL for the first 9 months of (Jan. – Sept.) 2025.[163] All of this data consistent with the data that was presented in PPL's last default service proceeding, in which it was uncontroverted that:

- Since 2015, PPL's residential shopping customers were charged over $339 million more than the default service price.
- On a per customer basis since 2018, PPL's residential shopping customers were charged, on average, $482.27 more than the default service price.
- Since 2015, PPL's confirmed low income (non-CAP) customers were charged over $86.6 million more than the default service price.
- On a per customer basis from January to April, 2024, PPL's confirmed low income (non CAP) customers were charged, on average, $62.40 in excess of the default service price compared to $19.68 for residential shopping customers as a whole.[164]

Contrary to Mr. Lacy's assertion, this data stands in stark contrast to his speculative savings. On this matter, Mr. Lacey's opinion about what he believes would be possible in the retail market has run headlong into the facts about what has actually occurred.

[163] PPL Response to OCA VII-12, Attachment 1. Attached hereto at Appendix A-SR.
[164] Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the Period from June 1, 2025 through May 31, 2029 (DSP VI Program), Docket No. P-2024-3047290 (Order entered Nov. 7, 2024). Data is summarized from CAUSE-PA's Statement in Support of the Settlement which contains citations to the record for the underlying data in that proceeding, available at: https://www.puc.pa.gov/pcdocs/1846242.pdf at page 858 of 889 of PDF.

Q: Mr. Lacey also asserts that he is concerned that the costs of the program changes you recommend will result in increased costs to other ratepayers, though he again notes that he does not have an opinion about the merits of your proposals. Instead, he suggests certain "distribution solutions" such as a market-based residential electric storage program, or comprehensive home energy management program.[165] What is your response to this recommendation?

A. Mr. Lacey is offering opinions unsupported by facts. He offers only high level ideas that are vague, ambiguous and aspirational – which he then characterizes as "solutions". While Mr. Lacey may wish that the retail-competitive market has the solution to energy insecurity, the facts have only ever suggested that exact opposite. Nothing that he posits comes anywhere close to providing the same level of discounts or weatherization assistance that is provided by PPL's legally required USECP programs such as CAP and LIURP. Mr. Lacey seems to suggest that PPL's universal service rider should pay for some of these vague supplier programs, as he suggests that my proposals should be "modified or enhanced to consider how to utilize distribution resources . . . including allowing customers to contribute to energy, capacity, and ancillary services to the grid through retail DER or similar programs."[166] I reject this modification to my proposal. Mr. Lacey's other suggestions lack clarity or details and, thus, should be summarily rejected. All of Mr. Lacey's suggestions in rebuttal should be rejected as they lack merit, would undermine the statutory universal service programs, and would exacerbate rather than ameliorate energy insecurity for economically vulnerable households.

[165] RESA St. 1R at 6-7.
[166] Id. at 8.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

PPL Electric Response	See CAUSE-PA X-15 Attachment 1.

Security Deposit Waiver Exception

Why this is generated:
These are submitted from agencies and other sources.

Steps/Tips to Issue:

1. These are issued automatically.

Backoffice Steps to Resolve:

Do not waive the deposit if the account is a bankruptcy!

A bankruptcy account does not qualify for waiver even if low income -- unless they are pending OnTrack or filed a motion with their attorney to have a full or portion waived.

NOTE: The agency is not required to include attachment or income/household details on the WATT in order to complete back office steps. If agency does provide the details...enter the financial information provided by the agency in the financial statement window.

If the agency waives the security deposit and also states that the customer's POS ID was verified....
- We require a notarized ID however, if an agency does verify the ID, we will waive the obligation even if it is not notarized.

Whether the security deposit is satisfied by a payment, guarantee or waiver, COMPLETE the obligation, do not override it.

- On the Desktop Screen in Intelligent Desktop, select the Obligations/Deposit Tab on the right.
- Click the Waive/Credit button to remove the deposit from the account.
- The account will be automatically documented that the deposit has been waived.
- WATT security deposit waivers will be automatically documented with an account contact.

NOTE: If the Security Deposit has been paid or there is any money on hand, that amount will be applied to the excess credit field in CSS, which will be applied to future bills.

If there is a PUC Informal Complaint on the account:

- **Email the EU, Compliance Team and they will contact BCS to request the case to be closed.**
- **Information needed:**
  - **Security deposit waiver for account #00000-00000**

If you are waiving the security deposit for low income and it is NOT for an OnTrack enrollment, please mail the customer the Programs and Services brochure via WATT letters.

Current Bill Not Yet Due:

1. Ask the customer if they want the excess credit (security deposit refund) applied to the current bill:
  ○ **If yes,** move the credit to the current bill amount and provide the customer with the remaining balance due (if any).
  ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).

Current Bill Past Due:

1. Apply the excess credit (security deposit refund) to the current bill.
2. If there is a remaining excess credit (security deposit refund), ask the customer if they want the credit to remain to pay future bills:
  ○ **If yes,** leave the excess credit on the account.
  ○ **If no,** process the excess credit refund (if over $500, prepare the refund request form; do not refund the money).

Account on Payment Agreement:
1. Do NOT refund the security deposit. 2. We keep the deposit on hand until the balance is clear.
Acco nt in Arrears, No Payment Agreement:
1. Remove the security deposit, but do **NOT** refund the security deposit to the customer. 2. Apply the excess credit (security deposit refund) to the balance on the account.

CAUSE-PA XIV-3

See PPL Electric Statement No. 5-R at 26:15-21. For customers who are net-metered, does PPL know how much electricity on a per kWh basis a customer uses each month regardless of whether that customer self-generates or whether the electricity is provided by PPL? In addition to answering the above, please specifically, answer the following:

a. If a customer's monthly usage was 1000 kWh and all 1000 kWh was generated onsite from a customer's distributed generation system, would PPL have knowledge of the customer's usage?
b. If the answer to part a. is yes, please explain how PPL would have knowledge of the customer's usage amount. If the answer to part a. is no, please explain why PPL would not have knowledge of a customer's usage amount.

PPL Electric Response

If a customer does not have generating or storage facilities that offset their electric usage, PPL Electric's meter would record the per kWh usage. If a customer has such facilities, PPL Electric's meter has two channels: one that records total net usage and a second that records total net generation. The meter does not record usage independent of the generation. However, if the customer is participating in PPL Electric's Second DER Management Plan, the Company's DER Management device would have visibility into the total generation, as opposed to total net generation, produced at the service address.

a. It depends. See explanation above
b. It depends. See explanation above.

Docket No. R-2025-3057164

CAUSE-PA XIV-5

See PPL Electric Statement No. 18-R at 20-21 wherein Ms. Norden says that PPL's current policy states that an initial referral to CAP places a 21 day hold on the account to allow customers time to apply for CAP and subsequent referrals within 1 year suspend for 1 day. Please provide a copy of this policy and any and all call scripts or training processes that refer to this policy.

PPL Electric Response

When a CAP referral is issued, the applicable hold is automatically applied to the account. Customer service representatives do not explicitly advise customers that a 21-day collection hold is being applied. Instead, representatives explain the OnTrack program, discuss the referral, encourage customers to complete the application process as soon as possible, and offer to transfer the customer to a live agent to initiate the application.

There are no scripts or training materials regarding the 21-day hold on accounts for customers who apply for OnTrack. The Company is willing to consider adding this to customer service representative’s scripts and training material.

Dated October 27, 2025
Docket No. R-2025-3057164

OCA VII-12	Has PPL Electric evaluated the price differential and bill impact between customers on the PTC and those served by an EGS? If so, provide such evaluation and results. If not, why not?
PPL Electric Response	See OCA VII-12 Attachments 1 and 2.

PPL Electric Utilities

2025 Shopping Summary YTD

October 2025

PPL Electric Utilities

Residential Shopping Summary- 2025 YTD

	Residential					
	Customers paying a higher rate than the Default Rate	Higher Rate Customer Count	Customers paying a lower rate than the Default Rate	Lower Rate Customer Count	Total Payment Dollars Over/Under Default rate	Default Rate
January	($11,913,878.34)	257,840	$7,006,106.63	260,341	($4,907,771.71)	$ 0.1076
February	($12,271,274.93)	259,974	$7,031,103.54	255,962	($5,240,171.39)	$ 0.1077
March	($9,548,395.39)	262,617	$4,929,437.54	250,767	($4,618,957.84)	$ 0.1077
April	($8,003,023.63)	264,077	$3,305,122.90	239,022	($4,697,900.73)	$ 0.1077
May	($7,466,435.47)	272,981	$2,462,502.70	229,226	($5,003,932.77)	$ 0.1077
June	($7,371,950.70)	247,750	$3,640,317.61	257,017	($3,731,633.09)	$ 0.1154
July	($8,789,601.65)	210,777	$6,926,990.44	287,277	($1,862,611.21)	$ 0.1249
August	($9,079,065.83)	214,430	$6,207,601.37	275,353	($2,871,464.47)	$ 0.1249
September	($7,419,819.66)	216,683	$4,541,768.38	271,653	($2,878,051.28)	$ 0.1249
October						
November						
December						
Total	($81,863,445.59)	245,237	$46,050,951.10	258,513	($35,812,494.49)	$ 0.1143

* Customer Counts and default rates in the total row represent the average across all months in 2025 YTD

- 2025 Residential Shopping Customers billed at a higher rate than the default rate(PTC: Price to compare) were billed an additional ~$82 million dollars vs. the same usage had these customers utilized PPL's default rate(PTC).
- Residential Shopping Customers billed at a lower rate then the default rate(PTC) saved ~$46 million dollars YTD.
- Overall Residential Shopping Customers were billed an additional ~$36 million dollars more vs. the same usage had every residential customers utilized PPL's default rate.
- On average ~245K Residential Shopping Customers were billed higher rates than the default rate each month vs. ~258K customers billed at lower rates.

Residential- Low Income Shopping Summary- 2025 YTD

Residential - Low Income						
	Customers paying a higher rate than the Default Rate	Higher Rate Customer Count	Customers paying a lower rate than the Default Rate	Lower Rate Customer Count	Total Payment Dollars Over/Under Default rate	Default Rate
January	($2,059,656.50)	35,402	$677,700.21	23,109	($1,381,956.30)	$ 0.1076
February	($2,227,938.69)	36,773	$697,479.81	23,280	($1,530,458.89)	$ 0.1077
March	($1,775,513.73)	37,874	$486,832.50	23,004	($1,288,681.22)	$ 0.1077

PPL Electric Utilities Corporation	:	

SURREBUTTAL TESTIMONY OF BEN HAVUMAKI ON BEHALF OF THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

February 9, 2026

Table of Contents

I. Introduction 1

II. Response to Mr. Lookup's Rebuttal on Socialization of Upgrade Costs for New Large Load Customers 2

III. Response to PPL's Updated Proposal for New Large Load Customers 8

VII. Summary of Recommendations 10

Appendix A-SR: Cited Discovery Responses

PREPARED SURREBUTTAL TESTIMONY OF BEN HAVUMAKI

I. Introduction

Q: Please state your name, occupation, and business address?

A: My name is Ben Havumaki. I am a Principal Associate at Synapse Energy Economics (Synapse), located at 485 Massachusetts Avenue #3, Cambridge, MA 02139.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: Have you previously submitted testimony in this proceeding?

A: Yes. I submitted direct testimony in this proceeding, CAUSE-PA Statement 2.

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal responds to the rebuttal testimony of PPL witness Joseph Lookup[1] on new large load customer issues. I first address Mr. Lookup's statements concerning cost socialization, cost shifting, and the reliability impacts of new large load customers – topics covered in my direct testimony – and later, I respond to modifications to the Company's proposed treatment of new large load customers set forth in Mr. Lookup's rebuttal testimony. The absence of comment on any particular aspect of Mr. Lookup's rebuttal testimony or that of any other party submitting rebuttal testimony should not be understood to signal agreement with it.

[1] PPL Electric St. 16-R.

II. Response to Mr. Lookup's Rebuttal on Socialization of Upgrade Costs for New Large Load Customers

Q: Which aspects of your direct testimony does Mr. Lookup respond to in his rebuttal?

A: PPL witness Joseph Lookup responds to several elements from my direct testimony. He addresses my recommendation that new large load customers pay for all transmission upgrades through contributions in aid of construction (CIAC).[2] He responds to concerns that I raised about affordability impacts of new large loads driving up wholesale generation and capacity costs.[3] Mr. Lookup also responds to potential reliability impacts of large loads,[4] my recommendation for a separate rate class for large load customers,[5] and my recommendation that large load customers contribute to universal service costs through the Universal Service Rider.[6]

Q: How does Mr. Lookup respond to the arguments made by you and other intervenors against socializing transmission upgrade costs from new large load customers?

A: Mr. Lookup reaffirms the Company's intention to socialize all upgrades to the bulk power system and any other upgrades that are determined by the Company to provide broader grid benefits.[7] Mr. Lookup suggests that I and other intervenors are "underestimating the potential for new large load customers to create a "win-win" for existing customers" in conferring both reliability and rate reduction benefits.[8] Mr. Lookup

[8] Id. at 3.

asserts that I and other intervenors are asking the Commission to exceed its authority and "dictate the terms of transmission ratemaking," when this regulatory authority properly resides with FERC.[9] He suggests that since the Company is already subject to oversight from FERC, intervenor concerns about the lack of oversight regarding socialization are unfounded.[10]

Q: Are you "underestimating" the benefits of new large load customers?

A: No. Mr. Lookup suggests that I do not understand the benefits that could result from these customers. This is incorrect. My concern is about the considerable uncertainty surrounding whether and when these potential benefits will actually materialize. The Company is asking its customers to participate in an experiment at scale, testing whether a doubling of total load will result in reliable service at meaningfully lower rates. The Company does not know what the upgrade costs to accommodate these large load customers will be, and the Company does not know what the reliability implications will be. My recommendations are about risk management, and they reflect core principles that are geared toward ensuring that new large load customers actually deliver benefits to the wider grid and to the existing customer base.

Q: Please describe the principles that you have considered in this case.

A: I have followed two simple principles. The first principle is that large load customers should be responsible both for covering their marginal costs and for contributing to embedded costs. The second principle is that other customers should be protected from undue financial and operational risks associated with new large load customers.

[9] Id. at 10.
[10] Id.

Q: Why is it important for new large load customers to cover their marginal costs and contribute to embedded costs?

A: Because this is the only way that they will exert downward pressure on rates. If new large load customers cover only their marginal costs (i.e., the costs of associated upgrades), then rates will not fall, all else equal. If new large load customers do not even cover their marginal costs, then all else equal, rates will rise.

Q: Could socializing upgrade costs contravene these principles?

A: Yes. If the Company is permitted to socialize the costs of transmission upgrades associated with new large load customers, then there will be no assurance that new large load customers will both cover their marginal costs and contribute to embedded costs of the existing transmission system from which they receive service. In other words, there will be a risk that new large load customers will actually cause rates to increase on all customers. While Mr. Lookup provides projections of rate reductions in his rebuttal testimony, these are merely projections and not assurances.[11]

Q: Would the Company's proposal ensure that new large load customers cover their marginal costs?

A: No. The Company's socialization and revenue-guarantee scheme cannot assure that new large load customers will cover their marginal costs because the revenue guarantee only covers the capital costs of socialized upgrades, not the Company's return on those upgrades.[12] In other words, the Company's proposed treatment would not even guard against rate *increases* caused by new large load customers.

[11] PPL Electric St. No. 16-R at 3.
[12] Id. at 14.

Q: How would you respond to the Company's assurances that new large load customers will cover their marginal costs?

A: The Company offers what it asserts are various assurances that new large load customers will not increase rates on other customers as a result of the socialized cost of transmission system upgrades. For example, Mr. Lookup states about concerns that these customers will not cover their marginal costs, "[w]hat is more likely is that once a new large load customer begins taking service it will continue to take service for decades. Given how the FERC Formula Rate is allocated, it is far more likely that the new large load customers will pay for the socialized upgrades several times over. In the event that the new large load customer terminates early, the minimum load guarantee will be used to lower rate base which will essentially have the effect of CIAC on rates."[13]

Mr. Lookup's statement, quoted above, warrants a couple of clarifications. First, the minimum load guarantee has no bearing on whether a customer covers its marginal costs even if it stays on the system past the minimum contract term. Second, if a customer terminates early and the minimum load guarantee and exit fee are utilized to reduce rate base, there is still no assurance that the exiting large load customer will have covered the costs imposed on the system to date through revenues already provided. Socialized upgrade costs associated with this customer might raise rates, even if only temporarily.

Q: What conclusions do you draw from the considerable uncertainty relating to rate and reliability impacts from new large load customers?

A: I conclude that the purported "win-win" could end up being simply a loss if service quality declines and rates do not meaningfully fall as PPL projects. PPL acts as if its

[13] PPL Electric St. No. 16-R at 14.

projections are certainties, but they are not. There is a lot of uncertainty in the future of data center development and my suggestions in direct are meant to protect ratepayers from the worst outcomes associated with these uncertainties. Even if rates do not increase over the long term, transitory rate increases combined with minimal long-term rate reductions would represent a poor outcome for customers who bear the financial risk of this experiment. PPL is essentially asking its low income customers to bear the risk of these investments that may or may not pan out. My proposals would require the data centers to bear that risk and is a more appropriate tradeoff.

Q: Are Mr. Lookup's concerns about PUC jurisdictional authority valid?

A: The jurisdictional issues surrounding transmission ratemaking are complex, and the substantive legal matters that Mr. Lookup has raised will be addressed by counsel for CAUSE-PA through briefing. While I am not a lawyer, I believe that Mr. Lookup is significantly oversimplifying things by asserting that the decision to socialize transmission costs is entirely between the Company and FERC. By extension, Mr. Lookup is suggesting that the Commission would be overstepping its authority if it were to implement the model large load tariff's ratemaking standards as requirements.[14]

Q: Does the Company have any discretion over which costs to socialize?

A: Of course it does, and the Company's own position confirms this fact. The Company states its intention to evaluate investments on a "case-by-case" basis to assess whether they will yield benefits to the wider grid and whether their costs should therefore be socialized.[15]

[14] PPL Electric St. 16-R at 16: 1-14.

[15] PPL response to CAUSE-PA IV-23, attached hereto at Appendix A-SR. See also PPL response to CAUSE-PA XV-4.a., attached hereto at Appendix A-SR ("PPL Electric makes the determination of whether transmission investments should be paid for by the customer or included in rate base. These

Q: Please restate your recommendation on cost socialization for transmission upgrades.

A: To ensure that new large load customers cover their marginal costs and contribute to embedded costs, and to provide reasonable protection against risk to other customers, I maintain my recommendation from direct testimony that the Company require CIAC for all system upgrades associated with large load customers.[16] I also maintain my recommendations from direct testimony addressing customer protections, should the Commission be inclined to permit any socialization of large load customer-driven upgrade costs. Specifically, if the Commission permits socialization, it should only do so if the interconnecting customer is not expected to receive greater than 50 percent of the benefits of new facility construction, and then only if the Commission establishes a clear, transparent, and objective methodology for how to measure and assess benefits that would actually occur and which are not based on speculation. These benefits should include improved affordability, enhanced reliability, and expanded capacity. The Commission should also require that the Company impose its proposed revenue guarantees and security requirements, including a revenue guarantee that would cover the Company's return on the rate-based investment.[17]

decisions are subject to FERC oversight and must comply with FERC regulations, decisions, and policies.").

[16] CAUSE-PA St. No. 2 at 12-16.

[17] CAUSE-PA St. No. 2 at 17-19.

III. Response to PPL's Updated Proposal for New Large Load Customers

Q: Please describe the updates to PPL's proposal regarding large load customers contained within Mr. Lookup's rebuttal testimony.

A: In rebuttal, Mr. Lookup proposes several modifications to the Company's original proposal. First, PPL states it is "not opposed" to creating a separate rate class for customers with peak demands in excess of 100 MW.[18] Second, PPL proposes extending the minimum contract term for large load ESAs to 10 years, with an 80% minimum load guarantee for the first five years and 50% for the second five years, plus an exit fee equal to the remaining minimum load guarantee obligation.[19] Third, PPL agrees to clarify that minimum load guarantee payments received in the event of customer default will be credited to transmission rate base, which would lower the rate base and reduce the Company's return.[20] Fourth, PPL proposes a voluntary interruptible service option that would reduce the minimum load guarantee to 60% for the first five years and 30% for the second five years.[21] Finally, PPL indicates that it would agree to create an LP-6 rate class, and that it would allocate $10 million of USR costs annually to the class.[22]

Q: What is your general reaction to these updates?

A: I find that these updates are generally customer protective and move PPL's proposal in the right direction. Specifically, I am supportive of the Company's proposal increasing the minimum contract term length and to create a new rate class for certain large load customers. However, I still believe that it is imperative that new large load

[18] PPL Electric St. No. 16-R at 5.
[19] Id. at 19.
[20] Id. at 13.
[21] Id. at 21.
[22] Id. at 25.

customers be required to cover the costs of all associated system upgrades through CIAC. Even with the longer proposed minimum contract term and exit fee provisions, there is no assurance that new large load customers will drive down transmission rates overall.

Q: Do you have any other specific responses to PPL's updates?

A: Yes. While I appreciate PPL's agreement on the creation of a new LP-6 class, I maintain my recommendation from direct testimony that the threshold for inclusion in this class should be 50 MW, consistent with the Commission's model tariff. Mr. Lookup suggests an alternative, higher threshold, providing the following explanation: "PPL Electric chose the 100 MW threshold because that is a customer that is large enough to have the impact on the generation and capacity markets that the other parties have raised concerns about. By segregating these customers in a separate rate class, the Company can apply terms and conditions to these customers to address their unique characteristics. It was also important to the Company to not capture any existing LP-5 customers, which the 100 MW threshold accomplishes."[23]

While I agree that a 100 MW customer is large enough to impact generation and capacity markets, a 50 MW customer would still be a major addition to PPL's system. I understand that PPL currently has just one customer with a peak load between 50 MW and 100 MW.[24] Establishing the minimum threshold for LP-6 based on this single customer's load is not sensible from a ratemaking perspective. Therefore, I recommend that all customers with peak loads at or above 50 MW be assigned to the new LP-6 rate

[23] PPL response to CAUSE-PA XV-2, attached hereto at Appendix A-SR.
[24] PPL response to CAUSE-PA IV-26, Attachment 1, attached hereto at Appendix A-SR.

class. This approach is reasonable, and as I explained in direct testimony, it is consistent with the Commission's proposed model large load tariff.[25]

VII. Summary of Recommendations

Q: Do you maintain all of your recommendations from direct testimony?

A: Yes. I have not altered any of the initial recommendations put forward in direct testimony.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-23 Refer to PPL Elec. Utilities St. No. 14 (Olsen) at 9-10. What factors will the Company use to determine whether certain line extensions for LP-5 customers "…will provide reliability or other benefits to the Company's transmission system"?

PPL Electric Response

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load under the existing Rule 4(C)(4) of the Company's retail electric tariff. However, certain upgrades benefit other PPL Electric customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer. More specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customer's substation is the customer's responsibility. All other upgrades, including PPL Electric substations/switchyards, will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility; or

Expanded capacity for new generation flow and interconnections.

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-2

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 5 stating "PPL Electric is not opposed to creating a rate class for customers with peak demands in excess of 100 MW." Refer also to Lookup Rebuttal Testimony p. 29 stating "Create a new LP-6 rate class for customers with peak demands of 75 MW and above."

a. Please explain the basis for the threshold for customer assignment to the new LP-6 rate class.

PPL Electric Response

The reference to 75 MW in Mr. Lookup's rebuttal testimony was a typo that has been corrected in an errata filing.

PPL Electric chose the 100 MW threshold because that is a customer that is large enough to have the impact on the generation and capacity markets that the other parties have raised concerns about. By segregating these customers in a separate rate class, the Company can apply terms and conditions to these customers to address their unique characteristics. It was also important to the Company to not capture any existing LP-5 customers, which the 100 MW threshold accomplishes.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation

Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-4

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 10 stating "No. PPL Electric is following FERC precedent in socializing network upgrades that benefit other customers. The other parties' recommendations are asking the PUC to exceed its jurisdictional authority and dictate the terms of transmission ratemaking."

a. Please clarify whether the Company believes that it has any discretion over whether to place new transmission investments into its FERC regulated transmission rate base.
b. If the Company believes that it possesses any discretion whatsoever over whether to place new transmission investments into the FERC regulated transmission rate base, then please explain the specific circumstances in which it is entitled to choose to directly recover the costs of a new transmission addition rather than placing it into transmission rate base.
c. Is it the Company's opinion that the standards for cost socialization proposed in the model large load tariff would amount to the PUC exceeding its jurisdictional authority and dictate the terms of transmission ratemaking?

PPL Electric Response

a. PPL Electric makes the determination of whether transmission investments should be paid for by the customer or included in rate base. These decisions are subject to FERC oversight and must comply with FERC regulations, decisions, and policies.

b. PPL Electric disagrees with the use of the term discretion. Rather, the Company has the ability to make determinations on what is included in transmission rate base subject to FERC oversight. PPL Electric makes these determinations in accordance with its internal policy that has been provided at OCA VIII-9 Attachment 1.

c. Yes. PPL Electric raised these concerns in its comments filed at Docket No. M-2025-3054271.

PREPARED DIRECT TESTIMONY OF BEN HAVUMAKI

I. INTRODUCTION AND BACKGROUND

Q: Please state your name, occupation, and business address?

A: My name is Ben Havumaki. I am a Principal Associate at Synapse Energy Economics (Synapse), located at 485 Massachusetts Avenue #3, Cambridge, MA 02139.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: What is the purpose of your testimony?

A: CAUSE-PA intervened to ensure that the terms, conditions, and rates for electric service that are proposed by PPL Electric Utilities Corporation (PPL or the Company) are just, reasonable, and affordable for its low-income customers. My testimony focuses on PPL's proposed treatment of new large load customers. I address the Company's proposal to socialize transmission system upgrade costs associated with new large load customers. My testimony considers whether the Company has sufficiently justified socialization of these costs and assesses the risks associated with these new loads. I also respond to other specific elements of PPL's ratemaking proposal. I offer recommendations to maximize benefits to all customers while mitigating risks. In CAUSE-PA Statement No. 1, Patrick Cicero addresses an array of issues concerning the ability of PPL's low income customers to afford to maintain and connect service.

Q: Have you provided testimony before the Pennsylvania Public Utility Commission in any prior cases?

A: Yes. I served as a witness on behalf of POWER Interfaith in the People's Gas 2023 rate case. A full list of proceedings in which I have provided sworn testimony is attached hereto as Appendix A.

Q: What are your qualifications to provide testimony in this case?

A: For more than seven years, my work has focused on electric and gas utility regulatory issues, usually in the context of litigated proceedings. I provide technical analysis, consulting, and expert witness support in general rate cases, where I focus on rate design and cost allocation. I also have expertise in performance-based regulation and grid modernization, and I focus on helping clients navigate the many interactions between these emerging paradigms on the one hand, and enduring utility regulatory principles and priorities on the other.

I have testified before utility regulatory commissions in Georgia, Illinois, New York, Minnesota, Rhode Island, New Hampshire, New Brunswick, Pennsylvania, West Virginia, Nova Scotia, and New Brunswick. I have also drafted comments and contributed to formal reports in numerous other jurisdictions in the United States and Canada. I hold a Bachelor of Arts degree in History from McGill University and a Master of Arts degree in Applied Economics from the University of Massachusetts. My resume is attached as Appendix B.

Q: Have you prepared Exhibits or Appendices to accompany your testimony?

A: Yes. I have prepared four (4) appendices. Appendix A contains the list of proceedings in which I have appeared as a witness. Appendix B is my resume. Appendix

C attaches the interrogatory responses that I have cited to in my testimony. Appendix D contains various labeled exhibits that were prepared by me or under my supervision.

II. OVERVIEW OF PPL'S PROPOSAL FOR NEW LARGE LOADS

Q: How does PPL define large loads?

A: PPL does not provide a formal definition of large load customers, but the Company broadly appears to consider all customers taking service at above 69 kV to be large loads.[1] The Company also indicates that recent and anticipated large load customers (new large loads) have peak demands in excess of 100 MW, will likely necessitate upgrades to the bulk electric system, and have limited distribution system impacts other than metering.[2]

Q: What are PPL's expectations for large load growth in its service territory?

A: PPL expects a substantial increase in its system peak demand as a result of new large loads. The Company projects that it will interconnect approximately 1.9 GW of new large loads by October 1, 2026.[3] The total pipeline of large load projects exceeds the Company's current peak demand of 7.8 GW.[4] The Company proposes to assign these new customers to rate class LP-5, which serves industrial customers taking service at transmission voltage.[5]

[1] PPL Electric St. No. 16 at 17
[2] PPL Response to CAUSE-PA XI-1(a) and XI-3(a), attached hereto at Appendix C.
[3] PPL Response to CAUSE-PA IV-29(a), attached hereto at Appendix C.
[4] PPL Electric St. No. 16 at 15.
[5] Id. at 17.

Q: Do new large load customers differ from the legacy customers already taking service on LP-5?

A: Yes. New large load customers are categorically different because they have much higher peak demand requirements than legacy LP-5 customers.[6] The addition of these large loads to PPL's service territory is also uniquely disruptive to the grid, as these interconnecting customers will require significant upgrades to the transmission system to accommodate their loads.[7] For example, PPL projects the need to make approximately $450 million in data-center-related transmission capital investment through just December 31, 2027.[8] This represents an extraordinary level of investment driven by a small number of customers.

Q: How many new large load customers does PPL project to connect by the end of its Fully Projected Future Test Year (FPFTY)?

A. The Company projects to interconnect 11 new large load customers by the end of the FPFTY, ending June 30, 2027.[9] Based on data provided by PPL in discovery, however, it is clear that at the end of the FPFTY, the LP-5 rate class will still mainly consist of smaller users, as shown in the table below that provides a distribution of expected LP-5 customers by peak demand.

[6] PPL Response to CAUSE-PA XI-3(a), attached hereto at Appendix C.
[7] PPL Electric St. No. 16, at 16-17.
[8] PPL Response to CAUSE-PA IV-29(a), attached hereto at Appendix C.
[9] PPL Electric Exhibit CRS-1.

Table 1: Distribution of LP-5 customers by peak demand

Projected Load	Projected Number of Customers 06/30/27[10]	Projected Number of Customers 06/30/2028[11]
Less than 5 MW	75	76
More than 5 MW but less than 10MW	37	36
More than 10 MW but less than 20MW	30	27
More than 20 MW but less than 50MW	24	17
More than 50 MW but less than 75MW	1	2
More than 75 MW but less than 100MW	0	2
More than 100MW	4	12

Q: What ratemaking and contractual provisions does PPL propose for new large load customers?

A: The Company proposes to socialize the costs of certain transmission system upgrades and then to impose a revenue guarantee to ensure that new large load customers contribute through rate revenues an amount equal to any associated socialized upgrade costs.[12] The Company also includes an 80-percent minimum demand obligation, a five-year initial contract term, and associated security provisions to backstop the revenue guarantee.[13]

Q: Why does the Company propose to socialize certain upgrade costs associated with new large load customers?

A: The Company proposes to socialize the costs of upgrades to the networked bulk power system and certain other upgrades based on its assertion that these investments will enhance reliability and provide other benefits to the wider grid – and not only to the

[10] PPL Response to CAUSE-PA IV-26, Attachment 1, attached hereto at Appendix C.
[11] Id.
[12] PPL Electric St. No. 16 at 17.
[13] Id. at 16-17.

triggering large load customer.[14,15] I will address these putative benefits in more detail later.

Q: Does the Company's proposal to require a revenue guarantee mitigate the impact of cost socialization?

A: It may help to ensure that there are not stranded assets, but it does not address significant concerns about the cost impacts associated with socialization. Even with revenue guarantees and security provisions, placing large-load-driven upgrades into rate base differs materially from requiring these costs to be paid by customers in the form of contributions in aid of construction (CIAC). Costs that are socialized and put into rate base are allowed a return on investment by the utility through either its distribution return authorized by the Public Utility Commission or its transmission equity return through its federally authorized formula rates. On the other hand, dollars paid directly by interconnecting customers in the form of CIAC are excluded from rate base, thereby reducing the utility's investment on which it earns a return.

For its part, PPL may have an incentive to grow its rate base more than would be required if it were instead relying on CIAC, so that it can earn a return on this investment while it recovers the costs. Under PPL's proposal, which could result in significant cost socialization, the Company would earn a return on assets that would not have been constructed but for the large load customer, with cost recovery occurring through the

[14] PPL Response to OCA VIII-9 Attachment 1, attached hereto at Appendix C. Note that the Company does not define the universe of infrastructure qualifying for "case-by-case" evaluation for potential cost socialization.

[15] PPL Response to CAUSE-PA IV-23, attached hereto at Appendix C. PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C. In its response to CAUSE-PA IV-23, the Company suggests that it will evaluate all investments for grid benefits as a condition for socialization and make this determination on a case-by-case basis. This position appears to be inconsistent with the Company's "Policy on Cost Allocation for Large Customer Interconnections," provided in PPL Response to OCA VIII-9 Attachment 1 and reiterated in PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C.

general transmission revenue requirement rather than as a direct offset to utility plant paid for by the customer. That treatment constitutes cost socialization as a matter of regulatory structure, regardless of whether given customer revenues ultimately equal the socialized costs of upgrades triggered by that customer.

The Company cannot credibly claim that its revenue guarantee means that the rate-based investments have not been socialized, because it has made no showing that it plans to utilize these revenue dollars in a dedicated fashion to back these investments out of rate base. As long as any large load customer upgrade remains on the utility's books, it should be considered to have been socialized.

Q: How significant is the return on investment that the Company stands to earn from placing new transmission assets into rate base?

A: Very significant. The return earned by the Company on new assets could easily be equivalent to a large share of the original capital investment, or it could even exceed the value of this original investment. It appears that any revenue guarantee and security provisions implemented by the Company would *not* cover the cumulative return on investment for any socialized asset, only the amount of the asset initially placed in rate base. In other words, the revenue guarantee is only designed to include the initial costs to construct the upgrades. It does not include the Company's return through the FERC formula rate. Thus, the large load customer that has triggered an upgrade is not held responsible for paying revenues that equal the rate of return on socialized upgrade costs, which is paid by all PPL ratepayers.

Q: What claims does PPL make about the benefits of new large loads?

A: PPL claims that the transmission upgrades triggered by these customers will provide broad reliability, resiliency, congestion relief, and capacity benefits and will provide additional operational flexibility.[16] The Company further anticipates that large load customers will place downward pressure on transmission rates for all customers by reducing the Company's FERC Transmission Formula Rate.[17] For example, the Company estimates that for the first gigawatt of data-center demand connected to the system, residential customers could experience approximately $3 per month in bill savings.[18]

Q: Does PPL acknowledge any risks associated with new large loads?

A: Yes. Witness Lookup states that "the Company is mindful not to create stranded asset risk for other customers" regarding investments related to the large load customers that will be placed into the Company's rate base.[19] Witness Lookup also acknowledges "resource adequacy challenges" associated with this load growth.[20]

Q: Has the Commission acknowledged the risks associated with large load customers?

A: Yes. The Commission convened its Large Load Tariff Proceeding in response to a Motion from Chairman Stephen M. DeFrank citing concerns about significant new

[16] PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C. PPL Response to CAUSE-PA IV-23, attached hereto at Appendix C.
[17] For clarity, I refer to these projected rate reduction benefits as "rate reduction benefits" to distinguish them from the wider grid benefits, including reliability, that the Company cites to justify socialization of upgrade costs.
[18] PPL Response to CAUSE-PA IV-29(a), attached hereto at Appendix C.
19 PPL Electric St. No. 16 at 16.
20 Id.

demand from these loads and the need to protect customers from "undue burdens and costs."[21]

Q: Are the Company's expectations of the benefits of new large loads overly optimistic?

A: Yes. The Company does not demonstrate that wider grid benefits, including improvements to reliability and resiliency, will necessarily materialize. Further, there may be new system reliability and operational risks associated with these loads. While the Company also forecasts rate reduction benefits resulting from these new large loads, the rate forecasts are based on myriad assumptions about future transmission costs and allocators. There is no guarantee that they will materialize. It is worth noting that not all utilities in Pennsylvania are similarly optimistic about new large loads.[22]

Q: What are the system reliability and operational risks to which you refer?

A: While it is true that certain system upgrades associated with new large loads could yield wider reliability benefits, the performance characteristics of the new large loads may cut in the other direction by eroding power quality and challenging system reliability. For example, in one notable event in July 2024, almost 1.5 gigawatts of data center load in Northern Virginia went offline, nearly triggering regional grid destabilization.[23] In an "Incident Review" about this event, the North American Electric Reliability Corporation

[21] Motion of Chairman Stephen M. DeFrank. *En Banc* Hearing Concerning Interconnection and Tariffs for Large Load Customers. Public Meeting of March 27, 2025 Agenda No. 3054271-CMR.
[22] For example, in comments filed in conjunction with the Commission's En Banc hearing on large load interconnection and tariffs (Large Load Tariff Proceeding), Duquesne Light articulated doubts about whether the growth of large loads would in fact create downward pressure on rates. See: En Banc Hearing on Interconnection and Tariffs for Large Load Customers, Comments of Duquesne Light Company, Docket No. M-2025-3054271, at 6 (Comments of Duquesne Light dated June 6, 2025).
[23] McLaughlin, Tim. Big Tech's data center boom poses new risk to US grid operators. Reuters. March 19, 2025, available at: https://www.reuters.com/technology/big-techs-data-center-boom-poses-new-risk-us-grid-operators-2025-03-19/. (Accessed: December 12, 2025)

(NERC) noted that "While this disturbance did not cause significant operating issues with the grid at this location and at this time, as data center loads continue to grow rapidly, the risk could quickly increase."[24] Meanwhile, even when large loads remain online, they can erode power quality for all users.[25]

Q: Explain why PPL's expectation of rate reduction benefits may not materialize.

A: The Company states that "customers should see significant reductions in their transmission costs"[26] when large load customers interconnect, because the new load would increase PPL Electric's single coincident system peak, thus reducing PPL's FERC Transmission Formula Rate and, accordingly, the costs charged to PPL Electric in its role as a default service provider.[27] However, the Company itself acknowledges that customer savings "depend on several factors, including the timing of load ramp, the amount of investments required and added to rate base, and the peak load on the system."[28] The assumptions that PPL has made when calculating expected savings are unsubstantiated and should not lead the Company or the Commission to conclude that customers will see significant transmission cost reductions.

[26] PPL Electric St. No. 16 at 19.
[27] PPL Response to CAUSE-PA IV-29b, attached hereto at Appendix C.
[28] PPL Response to CAUSE-PA IV-29a, attached hereto at Appendix C.

Q: What unsubstantiated assumptions are you referring to?

A: First, PPL assumes that 1 GW of data center demand necessitates adding $100M of network upgrades to rate base.[29] The Company has not presented data that supports this assumption about the potential network upgrade costs required for an additional GW of load. Several factors could impact this cost, such as the voltage of existing infrastructure and the proximity of the new load to generation or existing electrical assets. The Company's signed ESAs do not provide a sufficient sample size for determining the upgrade cost associated with incremental load additions.

Second, PPL assumes that 1 GW of new contracted load will increase its 1 CP FERC formula rate allocator by a commensurate 1 GW.[30] However, each of these new large load customers faces only a minimum load guarantee of 80% of contracted load - which incentivizes them to achieve and maintain 80% of their contracted demand but not necessarily all of it - and is also subject to the customer's ramp schedule. Further, individual customer peak may not occur at the same time as PPL's coincident system peak. Taken together, these factors suggest considerable uncertainty about the magnitude of the new large load contribution to PPL's coincident peak. Assumptions about PPL's coincident peak demand have a very meaningful impact on its FERC formula rate, the resulting class revenue requirements, and the ultimate bill impacts and projected savings.

[29] PPL Response to CAUSE-PA IV-29a and PPL Response to CAUSE-PA VIII-9 Attachment 1, tab "Talking Points & Notes", attached hereto at Appendix C.
[30] PPL Response to CAUSE-PA VIII-9 Attachment 1, tab "Summary", attached hereto at Appendix C.

III. PPL SHOULD NOT SOCIALIZE UPGRADE COSTS FOR NEW LARGE LOAD CUSTOMERS

Q: Please outline the Company's proposal to socialize certain costs.

A: As I noted earlier, the Company proposes to socialize the costs of upgrades to the networked bulk power system and certain other upgrades on grounds that these investments will provide benefits to the wider grid and not only to the triggering large load customer.[31,32] Meanwhile, the costs of direct connection facilities that solely serve the customer would continue to be paid by the customer (through CIAC), consistent with PPL's existing tariff practice.[33]

Q: Why don't you support the Company's proposal to socialize upgrade costs?

A: The Company has not substantiated the wider grid benefits, including enhanced reliability and resiliency, congestion relief, expanded capacity, and operational flexibility that serve as the justification for cost socialization of transmission upgrades. This issue is not academic: the Company has already begun signing energy service agreements (ESAs) with large load customers under this cost socialization framework. I therefore recommend that large load customers be required to pay through CIAC for all system upgrades that they trigger, provided that these upgrades would not otherwise have been required absent the new large load.

---

[31] PPL Response to OCA VIII-9 Attachment 1, attached hereto at Appendix C. Note that the Company does not define the universe of infrastructure qualifying for "case-by-case" evaluation for potential cost socialization.

[32] PPL Response to CAUSE-PA IV-23, attached hereto at Appendix C. PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C. In its response to CAUSE-PA IV-23, the Company suggests that it will evaluate all investments for grid benefits as a condition for socialization and make this determination on a case-by-case basis. This position appears to be inconsistent with the Company's "Policy on Cost Allocation for Large Customer Interconnections," provided in PPL Response to OCA VIII-9 Attachment 1 and reiterated in PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C.

[33] PPL Response to OCA VIII-9 Attachment 1, attached hereto at Appendix C.

As I will discuss below, even if PPL had demonstrated that such wider grid benefits would result from its proposal, it would be imprudent to socialize upgrade costs based on these alleged benefits without considering whether the benefits are truly worth the costs for PPL's customers.

Q: Why do you conclude that the Company has not substantiated the wider grid benefits from large load customer upgrades?

A: The Company has provided little evidence of these benefits. The Company appears to take the position that upgrades to the networked bulk power system made in connection with LP-5 customer interconnections always provide reliability benefits, and so the Company does not appear to consider measurement or quantification of those benefits to be necessary.[34] Concerning other investments that will be evaluated on a case-by-case basis, the Company alludes to "transmission level power flow studies, topology review, and engineering judgement," and the study of contingencies by PPL's Transmission Planning team.[35] However, as far as I can tell, the Company has not produced any analysis quantifying reliability, resiliency, or other benefits associated with large load driven transmission facility upgrades. Nor has PPL shown that these proposed upgrades are prudent in light of other needed upgrades to PPL's systems which may impact customers' ability to access safe and reliable services.

When specifically asked by Environmental Intervenors through discovery about analysis that the Company has conducted related to enhanced grid reliability from system upgrades associated with new large loads, PPL cited to its "Policy on Cost Allocation for Large Customer Interconnection," which describes the socialization eligibility criteria and

[34] PPL Response to CAUSE-PA VIII-10(a), attached hereto at Appendix C.
[35] PPL Response to CAUSE-PA VIII-10(b), attached hereto at Appendix C.

general approach to evaluating benefits, but does not include project-specific analysis of benefits.[36] That is, PPL pointed to its internal policy as a means of justifying its policy. This circular reasoning is hardly sufficient to reach the conclusion that there will be quantifiable reliability, resiliency, or other benefits associated with large load driven transmission facility upgrades that PPL seeks to socialize.

Q: Please explain your concern about whether broader grid benefits would be worth the costs.

A: Even if benefits were to accrue to the broader grid from certain system upgrades, it is not clear that these benefits would justify the upgrade costs – a key consideration since these investments would not otherwise have been undertaken by the Company but for the large load customer. For many customers, a small amount of incremental reliability benefit may *not* justify the upward rate pressure associated with the socialization of upgrade costs.[37]

Q: Has the Company explained how it will determine whether to socialize costs in conjunction with its "case-by-case" assessment?

A: It is not clear how the Company will make decisions about whether to socialize upgrade costs for those "case-by-case" investments. It is unclear whether the mere existence of *some* reliability benefits associated with substation construction for a new large load customer would warrant cost socialization, for example, or whether the Company intends to apply a threshold or other quantitative standard. PPL's proposal for

[36] PPL Response to EI-PPL-III-1, attached hereto at Appendix C.

[37] Even if the aggregate impact of a new large load customer coming onto the grid is to exert downward pressure on rates, socialization of any associated upgrade costs will result in *upward* rate pressure. Thus, it is important to understand two separate effects: the impact of increased sales associated with a new large load customer (downward rate pressure) and the impact of socialization of associated upgrade costs (upward rate pressure).

a "case-by-case" assessment further obscures whether customers will see tangible benefits as a result of PPL's proposals.

Q: Is the Company's proposed approach to socializing certain upgrade costs for new large loads consistent with its historical practices?

A: No. In the past, LP-5 customers fully funded upgrade costs at the outset.[38] These legacy LP-5 customers were smaller than the new large load customers. PPL argues in response to discovery that upgrades taken on behalf of these smaller LP-5 customers did not result in grid benefits warranting socialization of their costs.[39] However, as discussed above, it is wholly unclear whether, and to what extent, the system upgrades triggered by the larger LP-5 customers would result in benefits which would justify the socialization of the associated costs.

Q: How will your proposal to require large load customers to pay upfront for the cost of any associated upgrades benefit other customers?

A: Requiring large load customers to fund all upgrades via CIAC will prevent any potential upward rate pressure associated with placing upgrades into rate base, helping to ensure that the net effect of new rate revenues from large load customers will be a reduction in the transmission rates that all customers pay.

It is also important to note that the Company has not demonstrated clearly how it will track revenues from large load customers against the costs of socialized upgrades.[40] Requiring large load customers to fund upgrades through CIAC removes any concerns about tracking these revenues against socialized costs.[41]

---

[38] PPL Electric St. No. 16 at 17.
[39] PPL Response to CAUSE-PA XI-3(b), attached hereto at Appendix C.
[40] PPL Response to EI-PPL-III-7, attached hereto at Appendix C.
[41] PPL Response to EI-PPL-III-6, attached hereto at Appendix C.

Q: If large load customers pay for upfront costs, would they still pay the incremental costs of the transmission system through ongoing transmission rates?

A: Yes.

Q: Why is it reasonable for large load customers to pay for both the upgrades that they cause and their use of the existing system?

A: Large load customers are not served only by the portions of the grid where any triggered upgrades might occur. Rather, large load customers benefit from the *entire* grid and should therefore be held accountable for both the new costs that they impose on the system and their use of the wider, interconnected electrical system. This means paying embedded system costs through standard transmission rates in addition to CIAC for all incremental upgrade costs.

Q: Does the unique nature of large load customers warrant holding them responsible for both marginal and embedded system costs?

A: Yes. While smaller customers are not generally held individually responsible for any upgrades that they might trigger, such upgrades tend to be more incidental. For new large load customers such as data centers, their peak demands are so high that the grid must be reshaped for their benefit, and they must be held responsible for the costs that they cause.

IV. IF THE COMMISSION IS INCLINED TO PERMIT COST SOCIALIZATION, IT SHOULD INCLUDE KEY PROTECTIONS

Q: What is your recommendation if the Commission is inclined to permit some socialization of upgrade costs?

A: If the Commission is inclined to allow socialization, then I recommend that it maintain the standard that it put forward in its model tariff – permitting socialization only if the interconnecting customer is not expected to receive greater than 50 percent of the benefits of new facility construction.[42] The Commission's 50-percent standard would place the burden on the large load customer to substantiate benefits prior to utility cost socialization. To this end, prior to permitting any socialization of costs, the Commission should direct the Company to establish a clear methodology for evaluating benefits and determining whether socialization of costs is warranted. This methodology should clearly be spelled out in PPL's tariff through a compliance filing submitted in this docket, subject to Commission approval after a comment period by parties to this proceeding and considering the guidance that is developed in its model tariff proceeding.

Furthermore, even if an upgrade were to meet the 50-percent standard and be socialized, the Company should still impose its proposed revenue guarantees and security requirements, also including a revenue guarantee for the Company's return on the rate-based investment.

[42] Interconnection and Tariffs for Large Load Customers, Tentative Order, in Model Large Load Tariff Docket No. M-2025-3054271 at 16 (Tentative Order entered Nov. 6, 2025).

Q: Why is it necessary for the Company to establish a clear methodology for evaluating benefits?

A: The Company identifies a range of possible benefits associated with upgrades, including reliability and resiliency and enhanced capacity. As I already noted, however, the Company has provided no specific evidence substantiating the existence of these benefits. There may be many approaches to measurement and quantification of upgrade benefits; a clear methodology is required to address the approach to measurement and to clarify how different types of benefits, potentially expressed in different units, are to be assessed as part of a comprehensive accounting of benefits. Absent a standardized valuation protocol, implementation of the 50-percent threshold could be administratively and analytically challenging.

Q: What types of benefits and impacts should the Company's methodology address?

A: At a minimum, the methodology should address quantification of reliability, resiliency, capacity, congestion relief, and operational flexibility benefits, consistent with the Company's statements about the potential benefits of upgrades. The Company's methodology should also address the distribution of benefits across customer classes or subgroups of customers, and it should address affordability. Specifically, the methodology should describe how investments will be evaluated for prudence in light of the impacts to customers' monthly bill affordability; this evaluation of affordability should include a distributional affordability analysis and a determination of whether upgrades will alleviate other planned expenditures.

Q: How will the Commission and other stakeholders monitor any cost socialization and recovery?

A: The Commission should require that the Company provide an annual filing detailing any cost socialization, with supporting analyses showing the calculation of benefits, justifying the socialization, and tracking cost recovery from each large load customer still repaying socialized upgrade costs. The Commission should require that these filings and all costs be justified by PPL in its next rate case and any costs that have been improperly allocated should be refunded to customers. Later in my testimony, I recommend that PPL be required to establish a new large load rate class in its next filed rate case with a full cost of service study to justify and allocate costs to this class of customers. In its cost of service study, PPL should be required to clearly demonstrate which categories of costs it allocates directly to interconnecting large load customers and which categories of costs are appropriate for socialization. In addition, PPL should be required to file schedules that show the actual allocation of costs for those large load customers who have interconnected since the effective date of rates in this proceeding showing the allocation of costs and justification for those allocations.

V. PPL'S PROPOSED RATE CLASS TREATMENT FOR NEW LARGE LOADS

Q: Why does PPL assign new large load customers to rate class LP-5?

A: The Company explains that it defines customer classes by service voltage. Since new large load customers will take service at transmission voltage, the Company's position is that they belong in rate class LP-5.[43] According to the Company, assigning

[43] PPL Response to CAUSE-PA XI-1(a), attached hereto at Appendix C.

these large load customers to LP-5 meets the criteria that similarly situated customers should be treated the same, while also avoiding the burden of creating a new class.[44]

Q: Do you agree that large load customers are "similarly situated" to the non-large load customer in rate class LP-5?

A: No, and I would point to the Company's statements to confirm this. In response to a data request, Witness Lookup states:

> Previously, LP-5 customers had lower peak demand requirements, typically less than 100 MW. This resulted in LP-5 customers taking service at 69 kV or 138 kV. The facilities needed to serve these customers only benefited the new customer which is why the customer paid for the system upgrades with CIAC. The newer large load customers have peak demand requirements well in excess of 100 MW. This often requires upgrades to the 230 kV and 500 kV bulk electric system. Upgrades to the bulk electric system create broader reliability benefits to all customers.[45]

It is clear from the Company's statement that the new LP-5 customers exhibit different load characteristics and impose different costs on the system. The fact that these new customers happen to fit within the Company's current LP-5 definition does not mean that the Company could not or should not create a separate class for higher-usage customers.

Q: What are the benefits of a dedicated rate class for large load customers?

A: Assigning large load customers to a dedicated class would permit the Company to separately assign costs to these customers. As I will discuss in the next section, I recommend that the Company directly assign a larger share of Universal Service Rider costs to these customers, in part because large load customers are driving increases in the wholesale market generation capacity prices that affect all of PPL's ratepayers.[46]

---

[44] PPL Response to CAUSE-PA XI-1(C), attached hereto at Appendix C.
[45] PPL Response to CAUSE-PA XI-3(a), attached hereto at Appendix C.
[46] See CAUSE-PA Statement No. 1 at 90-94.

Creating a separate rate class for large load customers would also give the Company the option to directly assign transmission costs to the large load class as a whole. While the Company suggests that its FERC formula rate applies to all customers "uniformly," this obscures an important nuance about the extent of the Company's discretion over retail cost recovery for shared transmission facilities.

Q: Have other jurisdictions created separate classes for new large loads?

A: Yes, there are relevant examples within PJM. The Virginia State Corporation Commission recently ordered the creation of a new customer class for Dominion customers with peak demands of 25 MW or greater, effective January 1, 2027.[47] Meanwhile, Maryland has also recently enacted legislation, entitled the "Next Generation Energy Act," that directs the Maryland Public Service Commission to create a new rate class for data centers.[48]

Q: How do you recommend that the Company establish the new large load class?

A: I recommend that the Company establish a new class in its next rate case, with eligibility criteria for this class based upon customer peak load. The Company should assign all customers with peak loads at or above 50 MW to this class, consistent with the Commission's model large load tariff.[49]

[47] Final Order in Application of Virginia Electric and Power Company for a 2025 biennial review of the rates, terms and conditions for the provision of generation, distribution, and transmission services pursuant to § 56-585.1 A of the Code of Virginia,Case No. PUR-2025-00058, at 10 (Nov. 25, 2025)
[48] See MD HB1035, available at: https://legiscan.com/MD/bill/HB1035/2025 (Last visited Dec. 19, 2025).
[49] Tentative Order in Model Large Load Tariff Docket at 6.

VI. UNIVERSAL SERVICE RIDER COST ALLOCATION

Q: What is the purpose of this section of your testimony?

A: I analyze approaches for assigning the costs of PPL's Universal Service and Energy Conservation programs across PPL's various customer classes. These programs help low-income households remain connected to service. As CAUSE-PA witness Patrick M. Cicero describes,[50] PPL's universal service rider (USR) currently collects costs only from residential customers. Witness Cicero challenges PPL's rationale and decision to assess these broad public purpose costs only to ratepayers taking service under Rate RS or at residential rates and instead recommends assigning the costs to all customers.[51] The Commission, too, has previously endorsed holding non-residential classes responsible for universal service obligations.[52]

Q: How does Witness Cicero recommend assigning universal service costs among customer classes?

A: Witness Cicero recommends modifying the allocation approach originally put forward by PPL and recommends that these costs be assigned to all rate classes.[53] When asked in discovery what the per KWh cost would be at current USR costs to apply the USR Rider to all rate classes, PPL provided information that allowed for the assignment of costs to the customer classes based on their respective distribution revenue

[50] CAUSE-PA St. No. 1 at 83-88.
[51] Id.
[52] 2019 Amendments to Policy Statement on Customer Assistance Program, 52 Pa. Code §§ 69.261—69.267, Resolution: Amend Section 69.265(1)—Program funding; see also Section 69.266(b)—Cost recovery. "Utilities and stakeholders are advised to be prepared to address CAP cost recovery in utility-specific rate cases consistent with the understanding that the Commission will no longer routinely exempt non-residential classes from universal service obligations."
[53] CAUSE-PA St. No. 1 at 89.

requirements per the Company's cost of service study (COSS) filed in the current case.[54] That allocation approach assigns a very small portion of costs to large primary C&I and large transmission C&I customers because they take service at higher distribution or transmission voltages, which means that the Company's COSS assigns them a fraction of the distribution revenue requirement. Assigning universal service costs based only on distribution revenues fails to account for the fact that universal service costs are not incurred just to help low-income customers pay for distribution service but also serve to provide assistance with the total bill, which includes transmission and generation services.

As a result, Witness Cicero recommends modifying the Company's allocation by first directly assigning $10 million of universal service expenses to the LP-5 rate class, before then using the distribution-revenue-based allocation.[55] I support this approach and have prepared an exhibit showing what that allocation would look like at proposed rates. This is attached to my testimony as Appendix D, Havumaki Exhibit D-1. Consistent with the recommendation of Mr. Cicero, my allocation backs out the $1.4 million in wage and labor costs that PPL had originally included. Per Mr. Cicero, it is CAUSE-PA's position that those costs should continue to be included in base rates.[56]

Q: Could PPL instead assign universal service costs based on energy usage?

A: Yes, it would be reasonable to assign universal service costs among PPL's customer classes based on energy usage, particularly given that assignment based on distribution revenue does not account for the full scope of universal service costs and

[54] PPL Response to CAUSE-PA VII-1, attached hereto at Appendix C.
[55] CAUSE-PA St. No. 1 at 94-95.
[56] Id. at 95-96.

cost causation. A volumetric charge is appropriate because electricity consumption is a reasonable proxy for a customer's contribution to system energy demand and peak-driven costs. Large energy users, including data centers, materially influence wholesale energy prices, capacity procurement costs, and transmission investments as outlined more fully by Mr. Cicero. A volumetric charge ensures that customers contributing most to those system cost drivers contribute proportionally to mitigating their impacts. However, an energy allocator would assign far more universal service costs to large users compared to Witness Cicero's recommended assignment. Table 2, below, compares USR charges when allocating universal service costs based on energy consumption[57] versus using Witness Cicero's modification to the Company's distribution revenue-based assignment.[58]

Table 2: Universal Service Rider ($/kWh) under different allocation approaches

	RES	SCI	LP-4	LP-5
Energy-based kWh Allocation	$0.0036	$0.0036	$0.0035	$0.0033
Cicero Distribution Revenue Allocation	$0.0071	$0.0032	$0.0010	$0.0009

Mr. Cicero's approach reasonably assigns costs across all customer classes without shifting more costs than may be warranted onto non-residential customers, particularly those large load customers taking service at LP-5 rate class.

VII. SUMMARY OF RECOMMENDATIONS

Q: Please summarize your recommendations set forth throughout your direct testimony.

A: As described in detail above, I recommend as follows:

[57] See Appendix D, Havumaki Exhibit D-2.
[58] Appendix D, Havumaki Exhibit D-1.

- Large load customers should be required to pay for all system upgrades that they trigger through CIAC.

- However, if the Commission is inclined to permit socialization of certain upgrade costs associated with large load customers, then it should establish the following requirements:

    - Socialization of upgrade costs should only be permitted if the interconnecting customer is expected to receive less than 50 percent of the benefits of new facility construction, consistent with the standard that the Commission put forward in its model tariff.

    - The revenue guarantee and security provisions should apply to any socialized costs and should cover both the value of any rate-based investment and the cumulative return on investment that the Company will collect over the investment's life.

    - The Company should develop a clear methodology for evaluating benefits and determining whether socialization of costs is warranted, to be submitted to the Commission for review as a compliance filing. This standard should be applied alongside the Company's proposed revenue guarantees and security requirements.

    - PPL should provide an annual filing detailing any cost socialization, with supporting analyses showing the calculation of benefits, justifying the socialization, and tracking cost recovery from each large load customer still repaying socialized upgrade costs.

- PPL should define a new large load class, and the eligibility criteria for this class should be based upon customer peak demand. Consistent with the Commission's model large load tariff, customers with peak demands of at least 50 MW should be assigned to this new class.

- PPL should directly assign a larger share of Universal Service Rider costs to large load customers

Q: Does this conclude your direct testimony?

A: Yes.

PROFESSIONAL EXPERIENCE

Synapse Energy Economics, Inc., Cambridge, MA. *Principal Associate,* April 2024 – Present; *Senior Associate,* June 2021 – April 2024; *Associate,* July 2018 – June 2021.

- Provides research, analysis, and consulting services, frequently in the context of regulated proceedings, with expertise in the following topic areas:
    - Rate design and performance-based regulation: Evaluates utility proposals and formulates new recommendations based on best practices and informed by innovative emerging models. Evaluates rate designs for consistency with policy goals using quantitative modeling and jurisdictional data. Provides expert testimony and other formal input in the context of regulated proceedings.
    - Benefit-cost analysis: Evaluates utility BCAs with reference to best practices, including emerging standards for grid modernization and distributed energy resources. Engaged in the development of new BCA practices in the arenas of grid modernization and resilience.
    - Macroeconomic analysis: Uses the IMPLAN model in conjunction with primary research and analysis and core economic principles to evaluate the GDP, job, and income implications of major grid changes.
- Contributing author to reports covering a range of topics including plant decommissioning, transportation electrification, and distributed energy resources (DER) growth.

University of Massachusetts Boston, MA. *Graduate Teaching and Research Assistant,* 2017 – 2018

- Led ecosystem-valuation workshops for EPA-funded initiative to shape resilience policymaking in the Great Bay region of New Hampshire.
- Served as a teaching assistant in graduate econometrics course and undergraduate macroeconomics and urban economics courses.

Notre Dame Education Center and Jewish Vocational Service Boston, MA. *Math Instructor*, 2012 – 2017

- Taught foundational math to adult learners and standard high school math curriculum to students in non-traditional school program.

The City of New York New York, NY. *Senior Investigator*, 2007 – 2010

- Investigated complaints against officers of the New York City Police Department and issued disciplinary recommendations in formal reports to the agency board.

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-23 Refer to PPL Elec. Utilities St. No. 14 (Olsen) at 9-10. What factors will the Company use to determine whether certain line extensions for LP-5 customers "…will provide reliability or other benefits to the Company's transmission system"?

PPL Electric Response

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load under the existing Rule 4(C)(4) of the Company's retail electric tariff. However, certain upgrades benefit other PPL Electric customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer. More specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customer's substation is the customer's responsibility. All other upgrades, including PPL Electric substations/switchyards, will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility; or

Expanded capacity for new generation flow and interconnections.

Lisa Norden

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-24 Will PPL be able to separately identify existing and/or new data center load from other class LP-5 customers?

PPL Electric Response Yes, the Company may be able to separately identify data center customers in its Rate Schedule LP-5 using a Standard Industrial Classification (SIC) code. However, customers self-report their SIC code to the Company, and PPL Electric does not verify the accuracy of the submissions.

Additionally, there will be some new large load customers who are required to provide additional customer protections in their Electrical Service Agreement, including a minimum load guarantee, because a portion of their system upgrades are being socialized in transmission rates.

Docket No. R-2025-3057164

CAUSE-PA IV-26

For each of the customers identified in response to each of the subparts of CAUSE-PA 4-25, please identify the number of class LP-5 customers with a peak load of:

a) Less than 5 MW;
b) More than 5 MW but less than 10MW;
c) More than 10 MW but less than 20MW;
d) More than 20 MW but less than 50MW;
e) More than 50MW but less than 75MW;
f) More than 75 MW but less than 100MW;
g) More than 100MW.

Please provide this data in a live Excel spreadsheet.

PPL Electric Response

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-29

Refer to PPL Elec. Utilities St. No. 16 (Lookup) at 19:15-20. Please answer the following questions:

a) What is the dollar amount on a monthly basis of the "…significant reductions in their transmission costs" that PPL anticipates customers will see as a result of the large load additions that PPL anticipates to be in place before the end of the FPFTY?

b) When does PPL reasonably anticipate these reductions to flow through to customers' bills?

PPL Electric Response

It should be noted that PPL Electric's transmission cost recovery is through its FERC Transmission Formula Rate and PPL Electric's provision of transmission service recovered through its Transmission Service Charge, as part of the Company's obligation as a Default Service Provider, does not effect and is not claimed to effect the Company's distribution service revenue requirement claim, or resulting distribution rates in the instant proceeding.

a) PPL Electric's single coincident system peak, FERC Transmission Formula Rate, and Transmission Service Charge are not on the same period as the FPFTY. The Company anticipates approximately 1.9 GW of load to be connected by October 1, 2026, and data center only related capital investment of approximately $450 million through December 31, 2027, resulting in a PPL Zone Network Integration Service Charge ("NITS") of $265.10/MWD for the period January 1, 2027, through December 31, 2027, all else equal as current. This is less than the PPL Zone NITS rate of $307.87/MWD effective January 1, 2026, through December 31, 2026. This equates to approximately $59 dollars/year for a PPL Electric Default Service residential customer using 1,000 kWh.

As of December 31, 2024, the Company estimated that for the first 1 GW of data center demand connected to the grid, residential customers may save nearly 10% on the transmission portion of their bill, assuming $100M of network upgrades added to rate base. In dollars this would equate to approximately $3 per month of savings for an average residential customer. The percentage and amount of customer savings year-over-year will depend on several factors, including the timing of load ramp, the amount of investments required and added to rate base, and the peak load on the system.

b) Once load increases PPL Electric's single system coincident peak ("1 CP") used in its FERC Transmission Formula Rate, all else equal, it would reduce the FERC Transmission Formula Rate, thus reducing the costs charged to Load Serving Entities ("LSE"), including PPL Electric in its role as a default service provider. It is anticipated that the new load will increase PPL Electric's 1 CP at a faster rate than the Company's transmission rate base will grow, thus putting downward pressure on transmission rates.

PPL Electric's FERC Transmission Formula Rate uses the 1 CP from the prior year in setting the current year's transmission rates. For example: Note – the year is used for illustrative purposes only.

- The 1 CP Period of – November 1, 2024, through October 31, 2025, will be used for the FERC Transmission Formula Rate Period of – January 1, 2026, through December 31, 2026.

WITNESS: Lisa Norden
Katelyn Arnold

PPL Electric Utilities Corporation
Response to the Set VII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VII-1 At the overall USR costs projected as of the end of the FPFTY, if PPL were to apply the USR Rider to all rate classes, what would be the applicable charge per kWh/ kW for each rate class?

PPL Electric Response As previously explained in the response to CAUSE-PA IV-9, in order to complete this analysis, the Company must have a means to allocate the Universal Service Rider (USR) costs across customer classes. Because such a method does not exist, the Company has utilized the results of its cost of service study as provided on page 15 of PPL Electric Exhibit BR-1 to allocate USR costs across the customer classes for illustrative purposes. It is the Company's position that this method for allocating costs is inappropriate because it does not reflect cost causation principles.

See CAUSE-PA VII-1 Attachment 1. Note that the value for USR costs includes USR salaries and wages as proposed in PPL Electric St. No. 18 and PPL Electric Exhibit Fully Projected Future 1 Schedule D-11. Additionally, the SC&I customer class provided in the attachment includes rate schedules GS-1, GS-3, BL, SA, SM(R), SHS, SLE, and SE.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set VIII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VIII-9	Refer to Lookup Direct Testimony p.19 stating "customers should see significant reductions in their transmission costs." In live, unlocked Excel file format with all links and formulas intact, provide all analysis that the Company has conducted demonstrating that "customers should see significant reductions in their transmission costs."
PPL Electric Response	See CAUSE-PA VIII-9 Attachments 1 through 3 and the response to CAUSE-PA IV-29.

Data Center – TSC Analysis Talking Points – Q3 Earnings call/notes
Developed 2024-10-25

Assumptions/Changes/Notes:
Q2 Analysis used data assuming that data center load would be default service
Current analysis assumes that data center load will be shopping
Assumes all load & cost scenarios are instantaneous (not phased in over time)
$100M Plant-in-service results in ~$12M revenue requirement
Assumes ALL else equal
Uses pricing in effect as of July 1, 2024
FERC Formula Rate changes on January 1
Price-To-Compare changes on December 1 and June 1

Talking Points
In its most recent analysis, the Company has assumed that any data center load would be in front of the meter as a shopping customer.

Investor Talking Point:

Compared to the Company's current average bill amounts, $100M to $1B, assuming 1GW per $100M, of additional transmission investment results in a Transmission Service Charge reduction of ~10% [note: 8.95% rounded to 10%] to ~45% [Note: 42% rounded to 45%] resulting in a total bill decrease ranging from ~$3 [Note: $2.87 rounded to$3] to ~$15/month[Note: $13.56 rounded to $15] or ~$36 to ~$180/annually. Impact will vary as PPL Electric's rates and PJM 1CP vary.

FERC Formula Rate and Transmission Service Charge Trend

Yellow Highlighted Numbers were used for Q2 2025 earnings call

@$100M Plant-In-Service & 1GW Increments, assuming additional load is shopping

Capital Investment	Current Rate As of June 1, 2025	$100M Capital Investment + 1 GW Increase	$200M Capital Investment + 2 GW Increase	$400M Capital Investment + 4 GW Increase	$600M Capital Investment + 6 GW Increase	$800M Capital Investment + 8 GW Increase	$1B Capital Investment + 10 GW Increase	$1,100M Capital Investment + 11 GW Increase	$1,300M Capital Investment + 13 GW Increase	$1,500M Capital Investment + 15 GW Increase	$1,700M Capital Investment + 17 GW Increase	$600M, 8GW	$700M, 8GW	$700M & 7 GW Variance to Current
FFR Impact														
Revenue Requirement	$ 797,094,549	$ 808,894,404	$ 820,694,259	$ 844,293,969	$ 867,893,679	$ 891,493,389	$ 915,093,099	$ 926,892,954	$ 950,492,664	$ 974,092,374	$ 997,692,084	$ 867,893,679	$ 879,693,534	16%

A rate is a function of 2 components. In order for the rate to result in a specific % decrease, both the revenue requirement (numerator) and the load (denominator) must move at different amounts.
Your revenue requirement does not increase at the same rate as your load. By the time you have doubled your load at 15GW, you've only increased you're revenue requirement by 11%.
In order to get a 10% increase for every increment, the revenue requirement must decrease until ultimately, there is no revenue to recover, resulting in a 100% decrease.
As long as there are costs to recover, there will be a revenue requirement.

PPL Electric Utilities Corporation
Response to the Set VIII Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 10, 2025
Docket No. R-2025-3057164

CAUSE-PA VIII-10 Refer to Exhibit GEO-1 p.98 of 662.

a. Explain why any upgrades to the 230 kV and 500 kV networked bulk electric system may be presumed to provide reliability benefits to the Company's transmission system.
b. For each of the following, explain in detail how the Company will determine that a line extension for service under LP-5 would provide the benefit: increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections.
c. How will the Company determine the "amount of all line extension costs that were not directly charged to the customer" for which the customer shall provide a revenue guarantee?
d. Explain how the Company chose an initial term length of five years.

PPL Electric Response

a. It is PPL Electric's policy that upgrades to the networked bulk electric system made in connection with LP-5 customer interconnections will generally be excluded from the customer's obligation and included in transmission rate base. This policy is informed by FERC policy, which generally favors charging network customers for the costs of network facilities without an individualized benefit calculation:

> "[D]ue to the integrated nature of the transmission network, network facilities benefit all network users," even if "the facilities were installed to meet a particular customer's request for service." "[T]here is

> no need to identify further actual benefits in order to include the costs of network transmission facilities in transmission rates."

City of Anaheim, Cal., 113 FERC ¶ 61,091, at P 58 (2005), *reh'g denied*, 114 FERC ¶ 61,311 (2006).

b. PPL Electric leverages transmission level power flow studies, topology review, and engineering judgment to evaluate whether a new 230 kV or 500 kV asset will increase the overall capacity of the network, reduce congestion, improve efficiency, or reduce the risk of overload during peak conditions. Power flow study results will indicate the line loading, and if new assets show a decrease in line loading, more capacity is available.

   Additionally, PPL Electric's Transmission Planning team studies contingencies based on NERC TPL 001 to ensure the system can withstand the loss of one or more elements without service interruption. Additional lines provide flexibility for maintenance outages and fault isolation, improving overall system resiliency.

c. See OCA VIII-9 Attachment 1.

d. PPL Electric determined that this time frame would enable it to receive transmission revenues from new large load customers in an amount to cover the socialized upgrade costs.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set XI Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA XI-1

Refer to Martin Direct Testimony p. 7 indicating that new data center customers would take service on Rate Schedule LP-5.

a) Did the Company consider separate rate class treatment for new large loads? If so, please explain how it determined to place them in LP-5 rather than create a new rate class. If not, then why not?

b) In the Company's view, what if any would be the potential benefits to creating a separate rate class for new large load customers? Please explain in detail and please specifically address any potential benefits in achieving more accurate allocation of system costs to these large load customers.

c) In the Company's view, what are the potential benefits to serving new large load customers on LP-5? Please explain in detail and please specifically address any potential benefits in achieving more accurate allocation of system costs to these large load customers.

PPL Electric Response

a) No, PPL Electric did not consider serving new large loads under a rate schedule other than LP-5. The Company's distribution rate schedules are distinguished by service voltage levels. New large load customers typically take service at 69 kV and above which appropriately puts them in the LP-5 rate schedule. Additionally, PPL Electric recovers the costs of operating its transmission system through its FERC Transmission Formula Rate ("Formula Rate"). The Company defines its transmission system as facilities at or above 69 kV. LP-5 customers only use the transmission system, which is why they only have a small customer charge in distribution rates to cover certain fixed costs. The Formula Rate is allocated to all customers uniformly based on the customer's contribution to the PPL Electric system peak.

Therefore, there is no benefit to creating a separate distribution rate schedule for new large load customers.

b) See response to Part a. There is no benefit to creating a separate rate schedule for new large load customers.

c) The benefits to serving new large load customers under Rate Schedule LP-5 is that it treats similarly situated customers the same without creating new distribution rate classes. Moreover, the Formula Rate allocates transmission system costs uniformly across all customer classes. Creating a new distribution rate schedule would have no impact on how transmission costs are allocated under the Formula Rate.

PPL Electric Utilities Corporation
Response to the Set XI Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA XI-3

Refer to Lookup Direct p. 17 about the retail tariff for Rate Schedule LP-5 stating that the tariff "generally requires the customer to pay for all interconnection costs. Historically, this approach has worked well, as the system upgrade facilities needed to interconnect the LP-5 customer only benefited the interconnecting customer, justifying the customer covering the cost."

a) Please explain the categorical difference between system upgrades made for LP-5 customers in the past, and those that will be made for new large load customers. How has the Company determined that historical upgrades provided no broader system benefits?

b) Did the Company consider requiring new large load customers to pay for full upgrade costs upfront? Please explain why the Company does not consider this to be a viable option, given that the Company is proposing to include a revenue guarantee provision that will ultimately result in every new large load customer paying the full costs of any upgrade.

PPL Electric Response

a) Previously LP-5 customers had lower peak demand requirements, typically less than 100 MW. This resulted in LP-5 customers taking service at 69 kV or 138 kV. The facilities needed to serve these customers only benefited the new customer which is why the customer paid for the system upgrades with CIAC. The newer large load customers have peak demand requirements well in excess of 100 MW. This often requires upgrades to the 230 kV and 500 kV bulk electric system. Upgrades to the bulk electric system create broader reliability benefits to all customers.

b) No, the Company did not consider having the new large load customer pay the entire cost of upgrades that benefit the

entire system. The Company's policy is consistent with FERC cost allocation principles. See OCA VIII-9 Attachment 1.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set VIII Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 28, 2025
Docket No. R-2025-3057164

OCA VIII-9	Please provide the utilities policies, procedures, and analyses related to the assignment of large load interconnection costs to the interconnection load versus other ratepayers.
PPL Electric Response	See OCA VIII-9 Attachment 1.

PPL Electric Utilities Corporation – Policy on Cost Allocation for Large Customer Interconnections

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load. PPL Electric Retail Tariff, Rule 4 – (C).4. However, certain upgrades benefit other PPL customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

It is PPL Electric's policy that upgrades to the networked bulk electric system made in connection with LP-5 customer interconnections will generally be excluded from the customer's obligation and included in transmission rate base. This policy is informed by FERC policy, which generally favors charging network customers for the costs of network facilities without an individualized benefit calculation:

> "[D]ue to the integrated nature of the transmission network, network facilities benefit all network users," even if "the facilities were installed to meet a particular customer's request for service." "[T]here is no need to identify further actual benefits in order to include the costs of network transmission facilities in transmission rates."

City of Anaheim, Cal., 113 FERC ¶ 61,091, at P 58 (2005), *reh'g denied*, 114 FERC ¶ 61,311 (2006).

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer, more specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customers substation.

All other upgrades, including PPL Electric substations/switchyards will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility;
- Expanded capacity for new generation flow and interconnections

If the customer's interconnection results in upgrades that will be included in transmission rate base, the Company reserves the right to include revenue guarantee provisions in the customer's Electric Service Agreement.

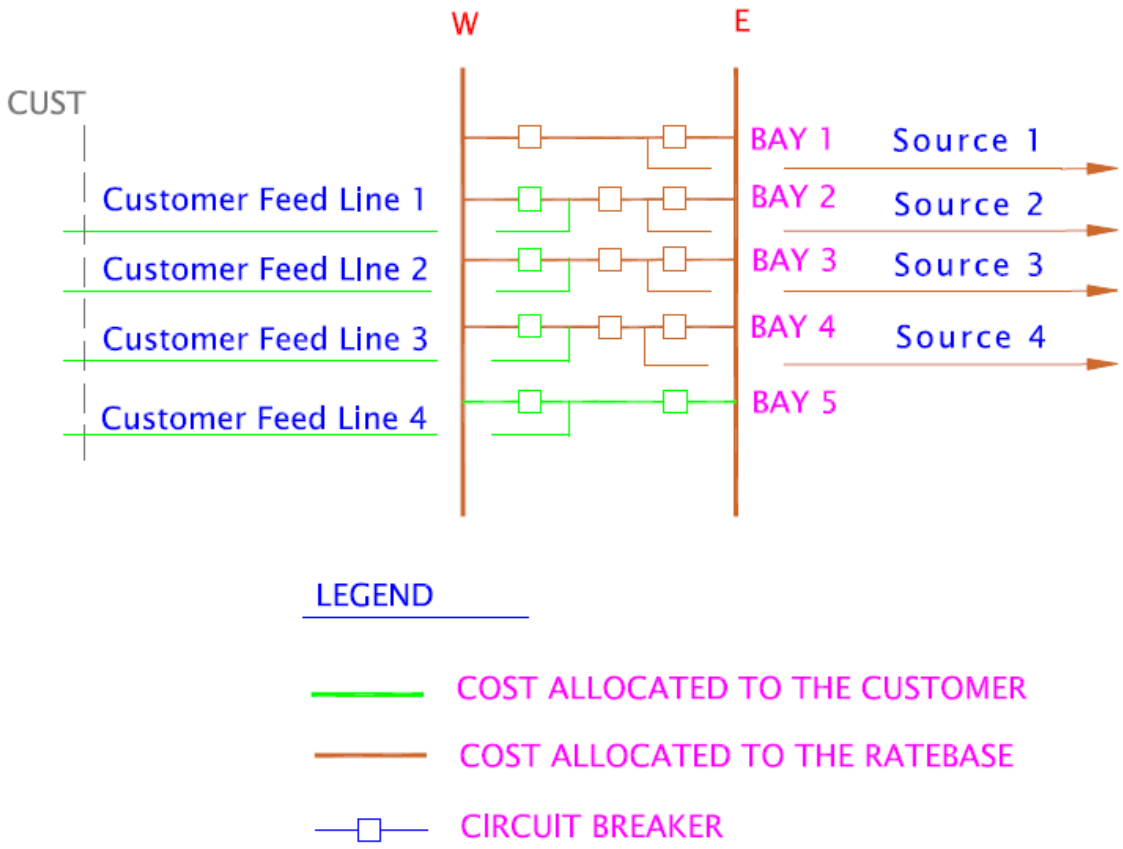
PPL Electric Utilities Corporation – Cost Allocation Review and Methodology for Large Customer Interconnections

Cost Allocation Review Process:

The Interconnection Affairs PM will pull together the following groups within Transmission Asset Management to review each project for their functional area:

- Interconnection Affairs – Rapid Response (RR) to interconnection request, Project Feasibility Report (PFR), Electrical Service Agreements (ESA), Construction Service Agreement (CSA), and confirmation of project costs.
- Planning – Line and sub equipment review and determination of dedicated vs network benefit.
- Project Development – Lead the development of deliverables for project scope, schedule and budget. Includes but not limited to project cost estimating, construction feasibility, confirmation of CSA scope and one-line, and financial budget.
- VP Planning and Asset Management – Provides approval for final cost allocation decision.

Cost Allocation Methodology is as follows for Direct Connect Transmission Line:



- All direct connection transmission lines that supplies customer substation. Below are typical assets but are not limited to:
    - Transmission Structures
    - Transmission conductor
    - Associated insulation and line hardware
    - Sectionalizing devices (i.e. switches, power circuit breakers, reclosers)
    - Grounding cable and hardware
    - Right of way easements and fee owned land

Cost Allocation Methodology is as follows for Substation equipment reviews:

The determining factor for cost allocation will be illustrated with the circuit breaker assets shown on Examples 1, 2, and 3 for ease of understanding at the highest level.

Interconnection Affairs will keep documented proof of each project site that is reviewed. A one-line will be color coded to denote direct customer costs vs network costs along with a cost spreadsheet.

Responsibility of Asset Matrix for Breaker and a Half (BAAH) Example 1:

Customer Responsible:

- Bay 1: No assets
- Bay 2:
  - Line: Customer Line 1
  - Sub: 2W down-lead and dead-end structure
  - Sub: CB 2W
  - Sub: Two switches: 2WW & 2WE
  - Sub: Three associated CCVT's
  - Sub: Three associated surge arrestors
- Bay 3:
  - Line: Customer Line 2
  - Sub: 3W down-lead and dead-end structure
  - Sub: CB 3W
  - Sub: Two switches: 3WW & 3WE
  - Sub: Three associated CCVT's

    - Sub: Three associated surge arrestors
- Bay 4:
    - Line: Customer Line 3
    - Sub: 4W down-lead and dead-end structure
    - Sub: CB 4W
    - Sub: Two switches: 4WW & 4WE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 5:
    - Line: Customer Line 4
    - Sub: 5W down-lead, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 5W & 5E
    - Sub: Four switches: 5WW, 5WE, 5TW, & 5EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

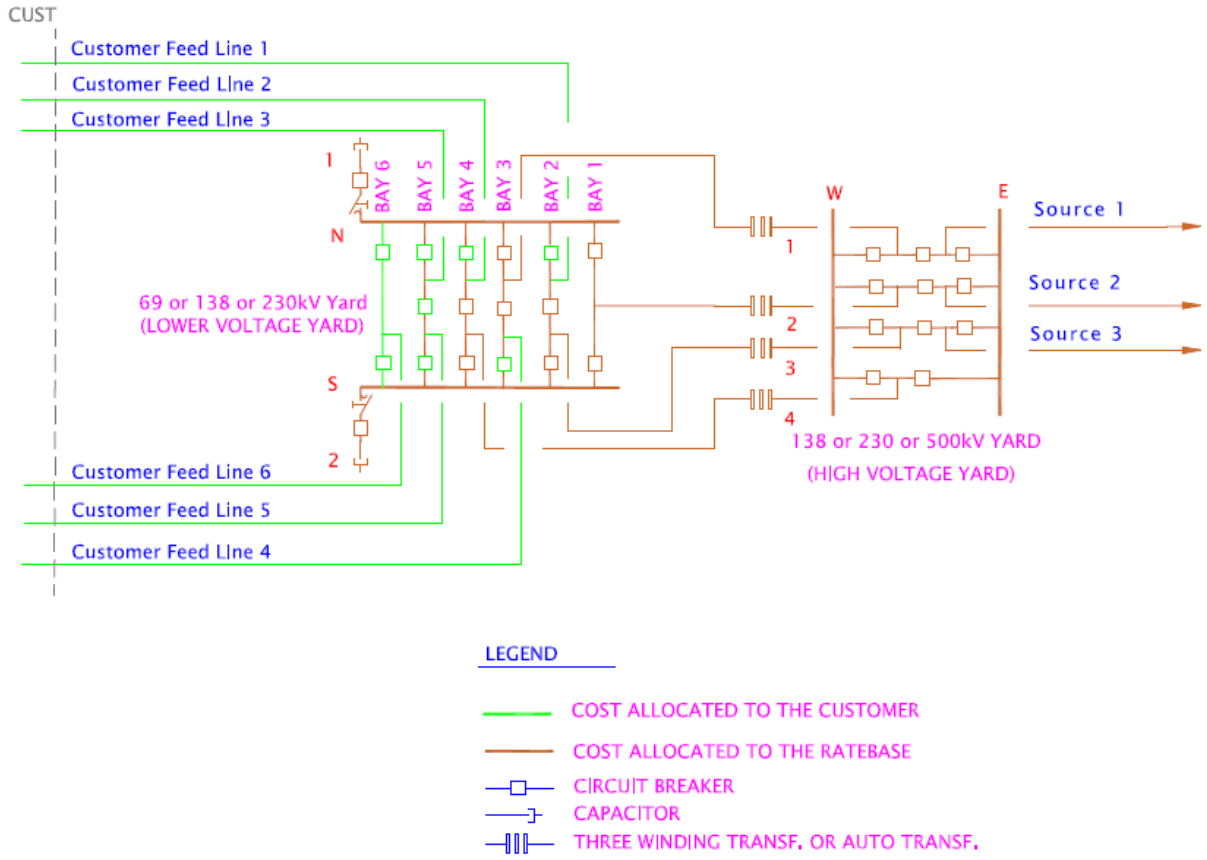
PPL Responsible:

- All other equipment and associated minor assets.

Responsibility of Asset Matrix for Double Breaker Double Buss (DBDB) Example 2:

Customer Responsible:

- Bay 1-4: No assets
- Bay 5:
  - Line: Customer Line 1
  - Sub: Bay 5 downleads, dead-end structure, bay conductor, and bay structures
  - Sub: CBs 5W &5E
  - Sub: Four switches: 5WW, 5WE, 5EW & 5EE
  - Sub: Three associated CCVT's
  - Sub: Three associated surge arrestors



- Bay 6:
    - Line: Customer Line 2
    - Sub: Bay 6 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 6W & 6E
    - Sub: Four switches: 6WW, 6WE, 6EW & 6EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 7:
    - Line: Customer Line 3
    - Sub: Bay 7 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 7W & 7E
    - Sub: Four switches: 7WW, 7WE, 7EW & 7EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 8:
    - Line: Customer Line 4
    - Sub: Bay 8 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 8W & 8E
    - Sub: Four switches: 8WW, 8WE, 8EW & 8EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

PPL Responsible:

- All other equipment.

Responsibility of Asset Matrix for Step Down Substation Example 3:

Customer Responsible:

- Higher voltage yard:
  - No assets

- Lower voltage yard:
- Bay 1: No assets
- Bay 2:
  - Line: Customer Line 1
  - Sub: 2N downleads and dead-end structure
  - Sub: CB 1N

    - Sub: Two switches: 2NN & 2NS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 3:
    - Line: Customer Line 4
    - Sub: 3S downleads and dead-end structure
    - Sub: CB 3S
    - Sub: Four switches: 3SS & 3SN
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 4:
    - Line: Customer Line 2
    - Sub: 4N downleads and dead-end structure
    - Sub: CB 4N
    - Sub: Two switches: 4NN & 4NS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 5:
    - Line: Customer Line 3 & 5
    - Sub: 5N & 5S downleads, dead-end structures, bay conductors, and bay structures
    - Sub: CBs 5N, 5T, & 5S
    - Sub: Six switches: 5NN, 5NS, 5TN, 5TS, 5SN, & 5SS
    - Sub: Six associated CCVT's
    - Sub: Six associated surge arrestors
- Bay 6:
    - Line: Customer Line 6
    - Sub: 6S downleads, dead-end structure, bay conductors, and bay structures
    - Sub: CBs 6N & 6S
    - Sub: Four switches: 6NN, 6TS, 6SN, & 6SS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

<u>PPL Responsible:</u>

All other equipment.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 25, 2025
Docket No. R-2025-3057164

EI-PPL-III-1

Reference PPL St. No. 16, Direct Testimony of Joseph Lookup, page15, stating "It drives down costs, improves grid reliability, and helps ensure that households and communities reap the rewards of robust infrastructure while supporting economic revitalization and job creation across the region." Provide all analysis the Company conducted on each of the claims made within this statement. Where applicable, provide the response in a live, unlocked Excel spreadsheet with all links and formulas intact.

PPL Electric Response

See response to CAUSE-PA VIII-9 regarding the Company's analysis that large load growth drives down transmission rates. See OCA VIII-9 Attachment 1 regarding the Company's policy on analyzing reliability benefits of new large load interconnections. The Company does not have any specific analysis regarding the economic benefits of large load growth.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 25, 2025
Docket No. R-2025-3057164

EI-PPL-III-6

Reference PPL's response to EI-PPL-I-9. Provide all analysis the Company has conducted on the minimum contract period for both the 1 and 5 year terms including, but not limited to, revenue and rate analysis on break even periods for investments. Where applicable, provide the response in a live, unlocked Excel spreadsheet with all links and formulas intact.

PPL Electric Response

PPL Electric has not conducted any specific analyses on minimum contract periods. With respect to the standard 1-year minimum contract term for LP-5 customers, all investments are paid for by the customer through CIAC, and there is no revenue, rate impact, or break-even period. With respect to the 5-year minimum term for large load customers which require network upgrades that will be socialized in rates, the Company has informally analyzed the transmission rates to be paid by these customers, and in all circumstances these customers pay transmission rates to cover the socialized upgrade costs prior to the expiration of the initial 5-year term.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 25, 2025
Docket No. R-2025-3057164

EI-PPL-III-7

Reference PPL St. No. 16, Direct Testimony of Joseph Lookup, at page 18, lines 1-4. Provide any supporting analysis that is used to determine whether the customer "will pay electric service rates equal to the upgrade costs that are socialized through transmission rates." Where applicable, provide the response in a live, unlocked Excel spreadsheet with all links and formulas intact.

PPL Electric Response

The Company will monitor large load customer's usage and the amount the customer pays in transmission rates to determine if the customer has satisfied its obligation to pay electric service rates equal to the upgrade costs that are socialized through transmission rates. Transmission rates are allocated based on a customer's contribution to the PPL Electric system peak. The Company can estimate the transmission revenue it will receive from a new large load customer's load ramp schedule. Additionally, the new large load customer agrees to pay transmission rates at a minimum of 80% of the requested load ramp schedule regardless of actual usage. There is no specific analysis responsive to this request; rather, the Company will administer Electric Service Agreements with new large load customers to ensure compliance with the terms and conditions.

SURREBUTTAL TESTIMONY OF BEN HAVUMAKI ON BEHALF OF THE COALITION FOR AFFORDABLE UTILITY SERVICES AND ENERGY EFFICIENCY IN PENNSYLVANIA ("CAUSE-PA")

February 9, 2026

Table of Contents

I. Introduction 1

II. Response to Mr. Lookup's Rebuttal on Socialization of Upgrade Costs for New Large Load Customers 2

III. Response to PPL's Updated Proposal for New Large Load Customers 8

VII. Summary of Recommendations 10

Appendix A-SR: Cited Discovery Responses

PREPARED SURREBUTTAL TESTIMONY OF BEN HAVUMAKI

I. Introduction

Q: Please state your name, occupation, and business address?

A: My name is Ben Havumaki. I am a Principal Associate at Synapse Energy Economics (Synapse), located at 485 Massachusetts Avenue #3, Cambridge, MA 02139.

Q: For whom are you testifying in this proceeding?

A: I am testifying on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA).

Q: Have you previously submitted testimony in this proceeding?

A: Yes. I submitted direct testimony in this proceeding, CAUSE-PA Statement 2.

Q: What is the purpose of your surrebuttal testimony?

A: My surrebuttal responds to the rebuttal testimony of PPL witness Joseph Lookup[1] on new large load customer issues. I first address Mr. Lookup's statements concerning cost socialization, cost shifting, and the reliability impacts of new large load customers – topics covered in my direct testimony – and later, I respond to modifications to the Company's proposed treatment of new large load customers set forth in Mr. Lookup's rebuttal testimony. The absence of comment on any particular aspect of Mr. Lookup's rebuttal testimony or that of any other party submitting rebuttal testimony should not be understood to signal agreement with it.

[1] PPL Electric St. 16-R.

II. Response to Mr. Lookup's Rebuttal on Socialization of Upgrade Costs for New Large Load Customers

Q: Which aspects of your direct testimony does Mr. Lookup respond to in his rebuttal?

A: PPL witness Joseph Lookup responds to several elements from my direct testimony. He addresses my recommendation that new large load customers pay for all transmission upgrades through contributions in aid of construction (CIAC).[2] He responds to concerns that I raised about affordability impacts of new large loads driving up wholesale generation and capacity costs.[3] Mr. Lookup also responds to potential reliability impacts of large loads,[4] my recommendation for a separate rate class for large load customers,[5] and my recommendation that large load customers contribute to universal service costs through the Universal Service Rider.[6]

Q: How does Mr. Lookup respond to the arguments made by you and other intervenors against socializing transmission upgrade costs from new large load customers?

A: Mr. Lookup reaffirms the Company's intention to socialize all upgrades to the bulk power system and any other upgrades that are determined by the Company to provide broader grid benefits.[7] Mr. Lookup suggests that I and other intervenors are "underestimating the potential for new large load customers to create a "win-win" for existing customers" in conferring both reliability and rate reduction benefits.[8] Mr. Lookup

[2] PPL Electric St. No. 16-R at 8-11, 15.
[3] Id. at 7.

[8] Id. at 3.

asserts that I and other intervenors are asking the Commission to exceed its authority and "dictate the terms of transmission ratemaking," when this regulatory authority properly resides with FERC.[9] He suggests that since the Company is already subject to oversight from FERC, intervenor concerns about the lack of oversight regarding socialization are unfounded.[10]

Q: Are you "underestimating" the benefits of new large load customers?

A: No. Mr. Lookup suggests that I do not understand the benefits that could result from these customers. This is incorrect. My concern is about the considerable uncertainty surrounding whether and when these potential benefits will actually materialize. The Company is asking its customers to participate in an experiment at scale, testing whether a doubling of total load will result in reliable service at meaningfully lower rates. The Company does not know what the upgrade costs to accommodate these large load customers will be, and the Company does not know what the reliability implications will be. My recommendations are about risk management, and they reflect core principles that are geared toward ensuring that new large load customers actually deliver benefits to the wider grid and to the existing customer base.

Q: Please describe the principles that you have considered in this case.

A: I have followed two simple principles. The first principle is that large load customers should be responsible both for covering their marginal costs and for contributing to embedded costs. The second principle is that other customers should be protected from undue financial and operational risks associated with new large load customers.

[9] Id. at 10.
[10] Id.

Q: Why is it important for new large load customers to cover their marginal costs and contribute to embedded costs?

A: Because this is the only way that they will exert downward pressure on rates. If new large load customers cover only their marginal costs (i.e., the costs of associated upgrades), then rates will not fall, all else equal. If new large load customers do not even cover their marginal costs, then all else equal, rates will rise.

Q: Could socializing upgrade costs contravene these principles?

A: Yes. If the Company is permitted to socialize the costs of transmission upgrades associated with new large load customers, then there will be no assurance that new large load customers will both cover their marginal costs and contribute to embedded costs of the existing transmission system from which they receive service. In other words, there will be a risk that new large load customers will actually cause rates to increase on all customers. While Mr. Lookup provides projections of rate reductions in his rebuttal testimony, these are merely projections and not assurances.[11]

Q: Would the Company's proposal ensure that new large load customers cover their marginal costs?

A: No. The Company's socialization and revenue-guarantee scheme cannot assure that new large load customers will cover their marginal costs because the revenue guarantee only covers the capital costs of socialized upgrades, not the Company's return on those upgrades.[12] In other words, the Company's proposed treatment would not even guard against rate *increases* caused by new large load customers.

[11] PPL Electric St. No. 16-R at 3.
[12] Id. at 14.

Q: How would you respond to the Company's assurances that new large load customers will cover their marginal costs?

A: The Company offers what it asserts are various assurances that new large load customers will not increase rates on other customers as a result of the socialized cost of transmission system upgrades. For example, Mr. Lookup states about concerns that these customers will not cover their marginal costs, "[w]hat is more likely is that once a new large load customer begins taking service it will continue to take service for decades. Given how the FERC Formula Rate is allocated, it is far more likely that the new large load customers will pay for the socialized upgrades several times over. In the event that the new large load customer terminates early, the minimum load guarantee will be used to lower rate base which will essentially have the effect of CIAC on rates."[13]

Mr. Lookup's statement, quoted above, warrants a couple of clarifications. First, the minimum load guarantee has no bearing on whether a customer covers its marginal costs even if it stays on the system past the minimum contract term. Second, if a customer terminates early and the minimum load guarantee and exit fee are utilized to reduce rate base, there is still no assurance that the exiting large load customer will have covered the costs imposed on the system to date through revenues already provided. Socialized upgrade costs associated with this customer might raise rates, even if only temporarily.

Q: What conclusions do you draw from the considerable uncertainty relating to rate and reliability impacts from new large load customers?

A: I conclude that the purported "win-win" could end up being simply a loss if service quality declines and rates do not meaningfully fall as PPL projects. PPL acts as if its

[13] PPL Electric St. No. 16-R at 14.

projections are certainties, but they are not. There is a lot of uncertainty in the future of data center development and my suggestions in direct are meant to protect ratepayers from the worst outcomes associated with these uncertainties. Even if rates do not increase over the long term, transitory rate increases combined with minimal long-term rate reductions would represent a poor outcome for customers who bear the financial risk of this experiment. PPL is essentially asking its low income customers to bear the risk of these investments that may or may not pan out. My proposals would require the data centers to bear that risk and is a more appropriate tradeoff.

Q: Are Mr. Lookup's concerns about PUC jurisdictional authority valid?

A: The jurisdictional issues surrounding transmission ratemaking are complex, and the substantive legal matters that Mr. Lookup has raised will be addressed by counsel for CAUSE-PA through briefing. While I am not a lawyer, I believe that Mr. Lookup is significantly oversimplifying things by asserting that the decision to socialize transmission costs is entirely between the Company and FERC. By extension, Mr. Lookup is suggesting that the Commission would be overstepping its authority if it were to implement the model large load tariff's ratemaking standards as requirements.[14]

Q: Does the Company have any discretion over which costs to socialize?

A: Of course it does, and the Company's own position confirms this fact. The Company states its intention to evaluate investments on a "case-by-case" basis to assess whether they will yield benefits to the wider grid and whether their costs should therefore be socialized.[15]

[14] PPL Electric St. 16-R at 16: 1-14.

[15] PPL response to CAUSE-PA IV-23, attached hereto at Appendix A-SR. See also PPL response to CAUSE-PA XV-4.a., attached hereto at Appendix A-SR ("PPL Electric makes the determination of whether transmission investments should be paid for by the customer or included in rate base. These

Q: Please restate your recommendation on cost socialization for transmission upgrades.

A: To ensure that new large load customers cover their marginal costs and contribute to embedded costs, and to provide reasonable protection against risk to other customers, I maintain my recommendation from direct testimony that the Company require CIAC for all system upgrades associated with large load customers.[16] I also maintain my recommendations from direct testimony addressing customer protections, should the Commission be inclined to permit any socialization of large load customer-driven upgrade costs. Specifically, if the Commission permits socialization, it should only do so if the interconnecting customer is not expected to receive greater than 50 percent of the benefits of new facility construction, and then only if the Commission establishes a clear, transparent, and objective methodology for how to measure and assess benefits that would actually occur and which are not based on speculation. These benefits should include improved affordability, enhanced reliability, and expanded capacity. The Commission should also require that the Company impose its proposed revenue guarantees and security requirements, including a revenue guarantee that would cover the Company's return on the rate-based investment.[17]

decisions are subject to FERC oversight and must comply with FERC regulations, decisions, and policies.").

[16] CAUSE-PA St. No. 2 at 12-16.

[17] CAUSE-PA St. No. 2 at 17-19.

III. Response to PPL's Updated Proposal for New Large Load Customers

Q: Please describe the updates to PPL's proposal regarding large load customers contained within Mr. Lookup's rebuttal testimony.

A: In rebuttal, Mr. Lookup proposes several modifications to the Company's original proposal. First, PPL states it is "not opposed" to creating a separate rate class for customers with peak demands in excess of 100 MW.[18] Second, PPL proposes extending the minimum contract term for large load ESAs to 10 years, with an 80% minimum load guarantee for the first five years and 50% for the second five years, plus an exit fee equal to the remaining minimum load guarantee obligation.[19] Third, PPL agrees to clarify that minimum load guarantee payments received in the event of customer default will be credited to transmission rate base, which would lower the rate base and reduce the Company's return.[20] Fourth, PPL proposes a voluntary interruptible service option that would reduce the minimum load guarantee to 60% for the first five years and 30% for the second five years.[21] Finally, PPL indicates that it would agree to create an LP-6 rate class, and that it would allocate $10 million of USR costs annually to the class.[22]

Q: What is your general reaction to these updates?

A: I find that these updates are generally customer protective and move PPL's proposal in the right direction. Specifically, I am supportive of the Company's proposal increasing the minimum contract term length and to create a new rate class for certain large load customers. However, I still believe that it is imperative that new large load

[18] PPL Electric St. No. 16-R at 5.
[19] Id. at 19.
[20] Id. at 13.
[21] Id. at 21.
[22] Id. at 25.

customers be required to cover the costs of all associated system upgrades through CIAC. Even with the longer proposed minimum contract term and exit fee provisions, there is no assurance that new large load customers will drive down transmission rates overall.

Q: Do you have any other specific responses to PPL's updates?

A: Yes. While I appreciate PPL's agreement on the creation of a new LP-6 class, I maintain my recommendation from direct testimony that the threshold for inclusion in this class should be 50 MW, consistent with the Commission's model tariff. Mr. Lookup suggests an alternative, higher threshold, providing the following explanation: "PPL Electric chose the 100 MW threshold because that is a customer that is large enough to have the impact on the generation and capacity markets that the other parties have raised concerns about. By segregating these customers in a separate rate class, the Company can apply terms and conditions to these customers to address their unique characteristics. It was also important to the Company to not capture any existing LP-5 customers, which the 100 MW threshold accomplishes."[23]

While I agree that a 100 MW customer is large enough to impact generation and capacity markets, a 50 MW customer would still be a major addition to PPL's system. I understand that PPL currently has just one customer with a peak load between 50 MW and 100 MW.[24] Establishing the minimum threshold for LP-6 based on this single customer's load is not sensible from a ratemaking perspective. Therefore, I recommend that all customers with peak loads at or above 50 MW be assigned to the new LP-6 rate

[23] PPL response to CAUSE-PA XV-2, attached hereto at Appendix A-SR.
[24] PPL response to CAUSE-PA IV-26, Attachment 1, attached hereto at Appendix A-SR.

class. This approach is reasonable, and as I explained in direct testimony, it is consistent with the Commission's proposed model large load tariff.[25]

VII. Summary of Recommendations

Q: Do you maintain all of your recommendations from direct testimony?

A: Yes. I have not altered any of the initial recommendations put forward in direct testimony.

Q: Does this conclude your surrebuttal testimony?

A: Yes.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-23 Refer to PPL Elec. Utilities St. No. 14 (Olsen) at 9-10. What factors will the Company use to determine whether certain line extensions for LP-5 customers "…will provide reliability or other benefits to the Company's transmission system"?

PPL Electric Response

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load under the existing Rule 4(C)(4) of the Company's retail electric tariff. However, certain upgrades benefit other PPL Electric customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer. More specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customer's substation is the customer's responsibility. All other upgrades, including PPL Electric substations/switchyards, will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility; or

Expanded capacity for new generation flow and interconnections.

Response to the Set XV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-2

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 5 stating "PPL Electric is not opposed to creating a rate class for customers with peak demands in excess of 100 MW." Refer also to Lookup Rebuttal Testimony p. 29 stating "Create a new LP-6 rate class for customers with peak demands of 75 MW and above."

a. Please explain the basis for the threshold for customer assignment to the new LP-6 rate class.

PPL Electric Response

The reference to 75 MW in Mr. Lookup's rebuttal testimony was a typo that has been corrected in an errata filing.

PPL Electric chose the 100 MW threshold because that is a customer that is large enough to have the impact on the generation and capacity markets that the other parties have raised concerns about. By segregating these customers in a separate rate class, the Company can apply terms and conditions to these customers to address their unique characteristics. It was also important to the Company to not capture any existing LP-5 customers, which the 100 MW threshold accomplishes.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set XV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-4

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 10 stating "No. PPL Electric is following FERC precedent in socializing network upgrades that benefit other customers. The other parties' recommendations are asking the PUC to exceed its jurisdictional authority and dictate the terms of transmission ratemaking."

a. Please clarify whether the Company believes that it has any discretion over whether to place new transmission investments into its FERC regulated transmission rate base.
b. If the Company believes that it possesses any discretion whatsoever over whether to place new transmission investments into the FERC regulated transmission rate base, then please explain the specific circumstances in which it is entitled to choose to directly recover the costs of a new transmission addition rather than placing it into transmission rate base.
c. Is it the Company's opinion that the standards for cost socialization proposed in the model large load tariff would amount to the PUC exceeding its jurisdictional authority and dictate the terms of transmission ratemaking?

PPL Electric Response

a. PPL Electric makes the determination of whether transmission investments should be paid for by the customer or included in rate base. These decisions are subject to FERC oversight and must comply with FERC regulations, decisions, and policies.

b. PPL Electric disagrees with the use of the term discretion. Rather, the Company has the ability to make determinations on what is included in transmission rate base subject to FERC oversight. PPL Electric makes these determinations in accordance with its internal policy that has been provided at OCA VIII-9 Attachment 1.

c. Yes. PPL Electric raised these concerns in its comments filed at Docket No. M-2025-3054271.

DIRECT TESTIMONY OF

GUY SHARFMAN

SECTION I.

INTRODUCTION AND PURPOSE

Q: PLEASE STATE YOUR NAME, TITLE, EMPLOYER AND BUSINESS ADDRESS.

A: My name is Guy Sharfman. I am a Co-Founder and Vice President of Market Analytics at Intelometry, Inc., a systems, data and consulting company specializing in the electric industry. My business address is 5373 W Alabama St., Suite 400, Houston, Texas 77056.

Q: PLEASE DESCRIBE YOUR CURRENT RESPONSIBILITIES.

A: I oversee Intelometry's data services and consulting business. Our data services encompass the development, maintenance and distribution of electric industry data products and market reports utilized by energy companies, brokers, governmental entities, consulting firms, trade associations and aggregators used for electric supply and renewable energy operations and analyses across U.S. markets. I also head Intelometry's consulting business that specializes in electric market operations, generation asset valuations, market strategy, and regulatory advisement.

Q: PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND.

A: I received a B.A. degree in economics from the University of Illinois at Urbana/Champaign in 1994, and an M.A. in economics from DePaul University at Chicago in 1998.

Q: PLEASE DESCRIBE YOUR PROFESSIONAL EXPERIENCE

A: I have over 25 years of experience in electric industry operations and regulatory matters and have testified on electric restructuring before various state commissions and legislative bodies. From 1998 to 2000, I was employed as a Consultant for Analytical Support Network, Inc. ("ASNI"), a firm specializing in regulatory and economic consulting in the electricity industry. During my time at ASNI, I became involved in energy deregulation, providing support for various cases before state commissions, assisting energy retailers with product structuring and pricing related issues, and working with consumer groups looking to participate in deregulation. In 2000, I became Manager of Electric Services for Nicor Energy Services, L.L.C. in Lisle, Illinois. In that position, I managed the power-pricing desk, negotiated power supply agreements with wholesalers, developed electric service capabilities for the company in various Illinois, Michigan, and Ohio utility service territories, and structured mass-market and individualized retail power products. In 2001, I took a position with Enron Energy Services where I managed Enron's retail commodity positions in the Midwest region. My responsibilities at Enron included buying and selling power, forward curve creation and maintenance for numerous utility service territories, developing Enron's capability to serve load in new markets, as well as assisting regulatory affairs in various matters. In 2002, I took a position with Econ One Research, Inc, a company specializing in energy economics and litigation. My duties at Econ One included consulting on wholesale, retail, and regulatory matters to energy companies, governmental bodies, as well as end users. We formed Intelometry in 2003. My Curriculum Vitae is attached as Exhibit CGC 1.0.

Q: ON WHOSE BEHALF ARE YOU TESTIFYING?

A: I am testifying on Behalf of the Customer-Generator Coalition ("CGC").

Q: HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A: Yes.

Q: WHAT ISSUES HAVE YOU BEEN ASKED TO EVALUATE WITH RESPECT TO PPL ELECTRIC'S 2025 BASE RATE FILING?

A: I have been asked to review and comment on PPL's proposal to amend the definition of *Maximum Registered Peak Load* ("MRPL"). It's clear that the new definition will reclassify many customer generators belonging to the PPL Generation Supply Charge - 1 ("GSC-1") customer class as Generation Supply Charge - 2 ("GSC-2"). This change will have a material impact on the revenue stream customer generators receive for excess generation. The proposed change reneges on the tariff structure that drove behind-the-meter solar development for GSC-1 customers residing in PPL's service area.

Q: CAN YOU PLEASE SUMMARIZE THE KEY POINTS IN YOUR TESTIMONY?

A: After reviewing key documents submitted as part this docket including PPL's proposed changes, the Direct Testimony and exhibits of PPL witness Andrew Castanaro, responses to data requests and other documents, my conclusions are the following:

I. The tariff structure that governs solar crediting is a key factor that drives solar development in a market. PPL's proposed tariff changes effectively renege on the

solar crediting structure that drove solar expansion in PPL's service area. The proposed changes will harm many GSC-1 customers by reclassifying them as GSC-2 customers, thereby greatly lowering the revenue they currently receive for excess solar generation.

II. The reclassification of GSC-1 customers to GSC-2 would also expose these customers to a highly volatile and unpredictable wholesale electricity market. Since these customers likely lack the tools to analyze and mitigate the risks associated with the wholesale market they may be harmed as a result.

III. If approved, the PPL proposal could materially hinder solar development in PPL's service area since planned GSC-1 solar installs may be canceled if the array is no longer economically viable under GSC-2. Further, since solar developers cannot predict or hedge PPL changes to solar crediting rules, they may focus their efforts on utilities that don't pull the rug out from under them midstream.

IV. PPL has not demonstrated that either the Company or its customers will be harmed if the tariff proposal is rejected by the Commission.

V. The Commission should summarily reject the PPL proposal to redefine MRPL. However, should the Commission adopt the PPL rule change, existing GSC-1 customer generators should be allowed to remain on GSC-1 since that was the rate that the economic viability of their generation was modeled on. This would be akin to PPL receiving stranded cost recovery with open access.

Q: ARE YOU SPONSORING ANY ACCOMPANYING EXHIBITS OR SCHEDULES SUPPORTING YOUR TESTIMONY?

A: Yes, I am sponsoring the following exhibits:

Exhibit CGC 1.0: Curriculum Vitae of Guy Sharfman

Exhibit CGC 2.0: GSC-1 Solar Credit v GSC-2 Solar Credit

Exhibit CGC 3.0: Estimated 2028 GSC-1 PTC based on Amerex Peak Forwards

Exhibit CGC 4.0: PPL Electric Utilities Corporation's Exceptions to Recommended Decision, Second Distributed Energy Resources Management Plan Proceeding

SECTION II.

PPL' PROPOSAL TO AMEND THE MRPL DERIVATION FOR THE GSC-1 CLASS WILL HARM GSC-1 CUSTOMER GENERATORS

Q: WHY IS THE TARIFF STRUCTURE THAT GOVERNS SOLAR CREDITING A KEY FACTOR THAT DRIVES SOLAR DEVELOPMENT IN A MARKET?

A: Market entry in the electric industry is never easy. For solar companies, market entry and operations require committing considerable dollars and time to site assessment, system design, permitting, interconnection, installation, utility approvals, regulatory approvals and net metering enrollment, not to mention sales and marketing expenses. CGC members, for example, have spent millions of dollars on such endeavors in PPL's service territory alone. The high cost and risks associated with market penetration compel solar companies to model the economics of planned facilities prior to building, and tariffs that govern solar

crediting are a key input of that assessment since they dictate the facility's revenue stream for generation.

Q: CAN YOU ELABORATE ON THE MONEY SPENT BY CGC MEMBERS TO DEVELOP SOLAR IN PPL'S SERVICE AREA?

A: CGC members have paid PPL millions to cover the cost of system upgrades as a prerequisite for interconnection. This is in addition to the other costs associated with building and operations.

Q: WHAT IS THE IMPACT ON EXISTING AND PLANNED SOLAR FACILITIES IF TARIFF REVISIONS LOWER THE SOLAR CREDITS THOSE FACILITIES USED TO GET?

A: The economics of impacted facilities will be reevaluated. For existing facilities, project cost recovery may take longer, or never be fully realized. Planned projects may be revised or even canceled.

Q: PLEASE EXPLAIN HOW THE CURRENT TARIFF TREATMENT FOR CUSTOMER-GENERATORS IN PPL'S SERVICE TERRITORY, SPECIFICALLY HOW (I) CUSTOMER-GENERATORS ARE CLASSIFIED BETWEEN GSC-1 AND GSC-2, (II) MAXIMUM REGISTERED PEAK LOAD (MRPL) IS DEFINED TODAY, AND (III) NET-METERING COMPENSATION OPERATES UNDER THE COMPANY'S PRESENT DEFAULT SERVICE STRUCTURE.

A: Under PPL's current tariff structure, the assignment of a full-service customer to either the Small Commercial & Industrial class (GSC-1) or the Large Commercial & Industrial class (GSC-2) is determined by a peak demand threshold of 100 kW. A customer's peak demand value is "*based on the customer's ICAP peak load contribution to PJM peak load assigned for the most recent PJM Planning Year*.[1]" Customer-generators with peak demands of less than 100kW fall into the GSC-1 class and those with peak demands of 100kW and above fall into the GSC-2 class. While the PPL tariff does not explicitly contain the term "*maximum registered peak load*", PPL witness Castanaro implies in his direct testimony that the term refers to the "*peak demand*" in PPL's existing tariff.

Under the current PPL tariff, excess-generation customers falling into the GSC-1 class receive a credit based on the PPL generation rate to full service GSC-customers. Excess-generation customers falling into the GSC-2 class receive a credit based on PJM real-time energy market settlement.

[1] See PPL tariff, page 19Z.4

Q: UNDER THE EXISTING STRUCTURE, HOW ARE EXCESS GENERATION CREDITS CALCULATED AND APPLIED FOR CUSTOMER-GENERATORS FALLING IN THE GSC-1 CLASS?

A: For customers generators falling into the GSC-1 class, the PPL tariff states that:

> "*On an annual basis consistent with the PJM planning period, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of the kilowatt hours delivered by Company to the customer-generator during the preceding year at the Company's Rate Schedule Price To Compare consistent with Commission regulations.*[2]*"*

PPL defines the ***Price to Compare*** as the:

> *"…default rate, as a reference when shopping for electric generation suppliers. This is the rate you'll pay if you don't shop or you're on our OnTrack program.*[3]*"*

This essentially means that a GSC-1 customer generator that produces more electricity than they purchase from PPL on an annual basis receives a credit equal to PPL's default generation tariff rate for customers that do not opt for competitive electric supply. These rates are usually held fixed for six months at a time, changing each June and December. Although, these rates have changed off cycle from time to time in past years.

[2] See PPL Electric Utilities Corporation, page PPL 19L.4

[3] https://www.pplelectric.com/site/Ways-to-Save/Rates-and-Shopping

Q: UNDER THE EXISTING REGIME, HOW ARE EXCESS GENERATION CREDITS CALCULATED AND APPLIED FOR CUSTOMER-GENERATORS FALLING IN THE GSC-2 CLASS?

A: PPL's GSC-2 service rate charges customers a PJM based energy charge and capacity charge and a PJM and PPL based administrative charge. While the PPL tariff does not state so explicitly, the tariff structure implies that for excess-generation GSC-2 customers receive only receive the energy charge as a credit. This charge is based on PJM real-time market settlement at the PPL zone. The specific language that implies this is the following:

> "*GSC-2 Energy Charge per KWH: The product of actual real-time LMPs at the PPL Residual Aggregate Node as reported by PJM for each hour of the billing month expressed in cents per KWH multiplied by the customer's actual energy use, adjusted for losses, during each hour of the billing month.*[4]*"*

PPL witness Castanaro also confirms in his direct testimony that the credit for excess-generation that GSC-2 customers receive is "*calculated using real-time pricing based on the hourly generation needs of the customer class.*[5]**"**

Q: ARE THERE DIFFERENCES BETWEEN GSC-1 AND GSC-2 SOLAR CREDITS?

A: Absolutely. PPL's GSC-2 excess-generation customers receive an index-based credit where the credit amount is based on PJM real-time settlement at the PPL zone. It should be noted that PJM real-time prices are highly volatile and can swing wildly from hour to hour and day to day. From my experience, energy users that opt for supply rates like GSC-2 tend to

[4] See PPL tariff, Original Page No. 25

[5] See Castanaro Direct, page 7, lines 15-16

be more sophisticated users with capability to assess and mitigate risks and even profit from wholesale market volatility.

PPL's GSC-1 excess-generation credit is very different. While GSC-2 excess generation customers receive a wholesale electricity-based credit, GSC-1 excess-generation customers receive a retail electricity-based credit equal to the full GSC-1 PTC. Unlike the wholesale market, the GSC-1 PTC remains fixed for months at a time, thereby shielding customers from wholesale market volatility. As such, GSC-1 customers tend to be less sophisticated energy users that lack the capability, systems and expertise to effectively analyze and engage the wholesale electricity market directly.

Q: HOW DOES THE CURRENT STRUCTURE PROVIDE STABILITY AND PREDICTABILITY FOR CUSTOMER-GENERATORS, ESPECIALLY SMALL-SCALE RESIDENTIAL OR SMALL COMMERCIAL SYSTEMS?

A: PPL residential and small commercial PTCs remain fixed for months at a time, most often from June to December and December to June. This shields these customers from wholesale market volatility they are likely ill-equipped to deal with. Additionally, because the PTC remains fixed for all hours, it is much easier for less sophisticated energy users to understand as well as audit PPL invoices and credits.

Q: PLEASE SUMMARIZE PPL'S PROPOSED REDEFINITION OF MAXIMUM REGISTERED PEAK LOAD TO INCLUDE *NET EXPORT* RATHER THAN *ACTUAL DEMAND.*

A: PPL seeks to redefine the MRPL, or Peak Demand as it's called in the PPL tariff, in two fundamental ways that appear to artificially inflate a customer's MRPL. The first is that PPL wants to bifurcate MRPL derivation from PJM ICAP. Under the current definition, the MRPL is derived using a customer's load during the five PJM summer coincident peak hours ("5CP") that determine a customer's capacity tag for PJM ICAP. Under PPL's proposed new schema, the MRPL will be derived based on a "*customer's highest maximum registered peak load (kW) in the most recent 12-month period ending in September 30.*[6]"

The second definition change is that PPL wants to add a customer-generator's nameplate capacity to their new MRPL value, which will then count towards the MRPL threshold that determines whether a customer falls in the GSC-1 or GSC-2 class.

Q: HOW DOES BIFURCATING THE MRPL DERIVATION FROM PJM ICAP ARTIFICIALLY INFLATE THE MRPL?

A: PJM's capacity tag derivation for a given customer takes an average of a customer's load during PJM's 5CP for a capacity year. 5CP are the five hours boasting the highest PJM system peak demand during summer months. Unless a customer's individual load movement is identical to the PJM system, the customer's actual peak demand during the year will not be incorporated into MRPL under current rules, meaning their MRPL used to determine the GSC-1 or GSC-2 class will likely be lower than the customer's actual peak.

[6] See Castanaro Direct, page 5, line 20

Further, the PJM derivation uses the average load during the 5CP hours, meaning that a customer's capacity obligation will fall below their annual peak demand even if the customer's actual peak is coincident with one of the 5CP hours.

Under PPL's new MRPL definition, PJM's 5CP will no longer be used. Instead, a customer's MRPL will be determined by the customer's annual peak demand in a single hour. It's likely that many PPL customers will see their MRPL rise as a result.

Q: HOW WOULD ADDING CUSTOMER-GENERATOR'S NAMEPLATE CAPACITY TO THE MRPL ARTIFICIALLY INFLATE THE MRPL?

A: A customer generator's nameplate capacity is the maximum amount of power a generator is designed to produce under ideal conditions. Note that this value is tied to a customer's ability to produce energy, as opposed to demanding it. Nevertheless, PPL proposes to erroneously incorporate this value into a customer's MRPL derivation, thereby inflating, and potentially greatly inflating, a customer's MRPL.

Q: WHY DO YOU CONTEND THAT PPL IS ERRONEOUSLY APPLYING A CUSTOMER GENERATOR'S NAMEPLATE CAPACITY TO THEIR MRPL DERIVATION UNDER PPL'S PROPOSED SCHEMA?

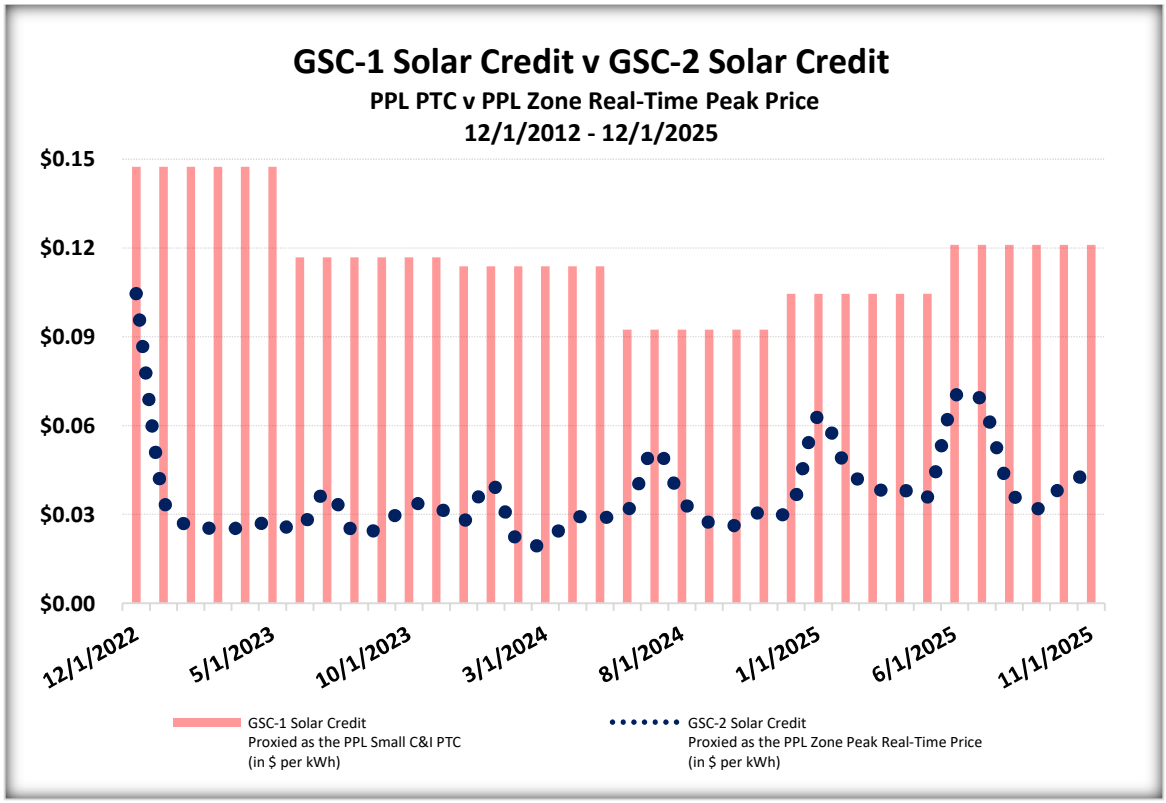
A: From an electricity portfolio management perspective, customer load is considered a short position, meaning that customer load represents a supply obligation that must be met. A generator, customer-based or otherwise, produces the energy to meet that supply obligation, and is therefore considered a long position. If PPL's intent is to incorporate customer-generation nameplate capacity into MRPL derivation, that nameplate capacity

should, if anything, offset a customer's peak demand, not add to it. Instead, PPL seeks to essentially convert a customer-generator's nameplate capacity from a long position to a short position and then add that artificial short position to the customer's annual peak demand. The result would be a complete mischaracterization of a customer's actual MRPL, since their actual peak demand will have little relation to their calculated MRPL.

PPL's own filings in other Commission proceedings confirm that distributed energy resources ("DERs") reduce, rather than increase, customer demand and system load. In its Exceptions to the Recommended Decision in its Second DER Management Plan proceeding, PPL expressly states that continuous monitoring and archiving of DER output data "avoids load masking" and leads to "more accurate forecasting of both DER output and customer load demand."[7] PPL further acknowledges that increased DER hosting capacity "reduces the demand on its distribution circuits and, by extension, the demand they are pulling from the transmission system ."[8] These admissions are inconsistent with PPL's proposal in this proceeding to treat customer-generator nameplate capacity as additional demand for purposes of calculating MRPL. A resource that reduces net load, improves demand forecasting, and mitigates load masking cannot, as a matter of sound electric system analytics or cost-causation principles, be recharacterized as incremental customer demand.

[7] *PPL Electric Utilities Corporation, Exceptions to Recommended Decision*, Docket No. P-2024-3049223, at pp. 14–15 (PDF pp. 21–22) (stating that "continuous monitoring and archiving of DER output data avoids load masking" and leads to "more accurate forecasting of both DER output and customer load demand").

[8] *Id*. at p. 6 (PDF p. 13) (explaining that increased DER hosting capacity "improve[s] safety, reliability and resiliency, reduce interconnection costs for DER interconnection applicants (e.g., avoidance of paying for distribution system upgrades), mitigate the impact of DERs on the distribution system, and increase the distribution circuits' hosting capacity by monitoring and actively managing DERs in the service territory").



Q: HOW WOULD THIS NEW DEFINITION AFFECT CUSTOMER CLASSIFICATION BETWEEN GSC-1 AND GSC-2?

A: If the Commission were to accept PPL's proposal, I believe many GSC-1 customer-generators would be reclassified as GSC-2. These customers would then be served under the highly volatile GSC-2 wholesale-based rate, instead of the more stable and easier to understand GSC-1 PTC.

Q: HOW WOULD THIS RECLASSIFICATION CHANGE THE PRICE CUSTOMER-GENERATORS RECEIVE FOR THEIR EXPORTS AND THE PRICE THEY PAY FOR IMPORTS?

A: Customer-generators currently receiving the GSC-1 credit that will be reclassified to receive the GSC-2 credit will likely see a drastic drop in revenue due to the PPL change. Exhibit CGC 2.0 compares historical average monthly peak real-time prices for the PJM PPL zone to the GSC-1 PTC from 12/1/2022 to 12/1/2025. . In this comparison peak real-time prices serve as a proxy for GSC-2 zonal credits, while the GSC-1 PTC serves as a proxy for GSC-1 solar credits. Analysis results indicate that GSC-1 solar credits average 67% higher than GSC-2 solar credits. Further, the drop in revenue with the GSC-2 solar credit averages nearly $79 per MWh or 7.9 cents per kWh. Chart CGC 2.1 below illustrates this comparison over time.

Chart CGC 2.1

GSC-1 Solar Credit v GSC-2 Solar Credit

(in $ per kWh)
GSC-2 Solar Credit
Proxied as the PPL Zone Peak Real-Time Price
(in $ per kWh)

Q: WHY IS THE GSC-1 CREDIT FOR EXCESS GENERATION CUSTOMERS SO MUCH HIGHER THAN THE GSC-2 CREDIT?

A: As previously stated, PPL's GSC-2 tariff rate consists of an energy, capacity and administrative charge. However, GSC-2 excess generation customers only receive the energy charge as a credit. GSC-1 customers receive the full PPL PTC which includes capacity, transmission, ancillary services, ISO and administrative fees and other attributes in addition to energy. As such, the GSC-1 credit will be much higher than the GSC-2 credit for the overwhelming majority of the time. The GSC-1 credit is also much less volatile, since PTC prices remain fixed for months at a time.

SECTION III.

GSC-1 CUSTOMERS LACK THE TOOLS TO BOTH ANALYZE AND MITIGATE THE RISKS ASSOCIATED WITH A VOLATILE WHOLESALE MARKET

Q: HOW WOULD PPL'S PROPOSED CHANGES TO THE MRPL AFFECT FUTURE SOLAR ADOPTION?

A: I believe it would deter new solar development.

Q: WHAT EFFECT WOULD THIS HAVE ON PENNSYLVANIA'S AEPS COMPLIANCE PATH?

A: If the goal is to increase renewable generation in the Commonwealth, the PPL proposal would stand in opposition to that path.

Q: IN YOUR EXPERT VIEW, IS IT ACCURATE TO CHARACTERIZE A BEHIND-THE-METER SOLAR ARRAY EXPORTING INTERMITTENTLY AS EQUIVALENT TO A 3 MW INDUSTRIAL LOAD?

A: No. Outside of the fact that a solar array generates power and load consumes it, there is no reason to suggest that any industrial load would behave in the same manner as a solar generator that depends on hours of sunlight.

Q: WOULD SHIFTING SMALL RESIDENTIAL OR SMALL-BUSINESS SOLAR CUSTOMERS TO LMP-BASED SETTLEMENT INCREASE VOLATILITY AND CONSUMER CONFUSION?

A: I believe so, yes. Real-time LMP is extremely volatile. Wholesale-level players such as large users or energy companies possess the tools to mitigate the costs and risks associated with this market. Small players do not. As such, forcing smaller customers to operate in this market will undoubtedly create confusion, and unpredictability.

Q: AT PAGE 7, LINES 18–20 OF CASTANARO'S TESTIMONY, HE STATES THAT SMALL CUSTOMER-GENERATORS ARE *"NOT SOPHISTICATED MARKET PARTICIPANTS"*. DOES HIS PROPOSAL TO COMPENSATE THEM USING REAL-TIME LMP ALIGN WITH THAT ADMISSION?

A: No. Customers that take service under PPL GSC-1 tend to be less sophisticated electric users that do not have the ability to assess and mitigate wholesale market risk. This risk can be significant, as wholesale real-time energy prices are highly volatile and change every hour.

Q: HOW DO LARGER CUSTOMERS OR *"SOPHISTICATED MARKET PARTICIPANTS"* DEAL WITH WHOLESALE MARKET RISK?

A: Larger and more sophisticated energy users have tools at their disposal that enable them to analyze and mitigate wholesale risk. These tools include:

1) Expertise: energy experts on staff that manage energy requirements, energy costs and associated risks.

2) **Data:** access to historical real-time and day-ahead market data, forward and futures market data, and historical and forecast weather data used to predict market prices and make strategic decisions as a result.

3) **Hedges**: ability to buy fixed price hedges to mitigate hourly market risk.

4) **Day-Ahead Scheduling**: utilize the day-ahead market to mitigate the risk of the real-time market.

In open access choice markets like Pennsylvania, larger customers also tend to partner with competitive energy providers that help them navigate and take advantage of the wholesale market to lower their energy spend.

Q: WHAT VULNERABILITY WOULD GSC-1 CUSTOMERS FACE BECAUSE THEY LACK SUCH TOOLS?

A: The real-time market can spike without warning, saddling customers with unexpected invoices that can be many times their normal spend. In February 2021, Winter Storm Uri struck the United States sending natural gas and electricity markets soaring. Prior to the storm, an energy company called Griddy was selling real-time electricity to residential customers in Texas tied to the ERCOT LMP market. The Storm caused ERCOT LMP prices

to spike for days, saddling Griddy residential customers with electric bills as high as $15,000[9]. The state of Texas banned residential customers from accessing real-time rates as a result. PPL now seeks to force GSC-1 customers to take service on a rate banned for such customers in other states.

Q: BUT WOULDN'T CUSTOMER GENERATORS WITH EXCESS GENERATION BE SHIELDED FROM REAL-TIME PRICE VOLATILITY?

A: No. GSC-1 excess generation customers will have no way to predict solar credit revenue, since they lack access to real-time data, along with the expertise, tools and other data required to effectively mitigate wholesale market risk. This will make business planning difficult. In addition, there is no guarantee that the solar array on their premises will be generating when the market spikes.

Q: HOW WOULD THIS AFFECT THEIR ABILITY TO PREDICT PAYBACK PERIODS OR PROJECT VIABILITY?

A: The ability to predict payback periods would be greatly diminished for these customers, as they lack the tools, data and expertise necessary to perform this kind of assessment.

[9] 'Price Gouging': Texas Power Supplier Griddy Energy Hit with Class Action Over 'Exorbitant' Bills Amid Winter Storm Uri.

SECTION IV.

IMPACT ON SOLAR DEVELOPMENT IN THE PPL SERVICE AREA

Q: DO YOU BELIEVE THAT FORCING EXCESS-GENERATION CUSTOMERS CURRENTLY RECEIVING GSC-1 CREDITS TO RECEIVE GSC-2 CREDITS INSTEAD COULD IMPACT SOLAR DEVELOPMENT IN PPL'S SERVICE AREA AND PENNSYLVANIA IN GENERAL?

A: Yes. The decision to build new generation, solar or otherwise, is a function of expected revenue and cost of the facility. Since renewable portfolio standards are state specific, compensation for solar facilities varies state to state. Solar providers will assess solar crediting rules as part of their decision to enter a new market, expand in an existing market, as well as determine which customer classes to target. Solar generators operating in PPL's service area based their investments on the rules for solar generation compensation set forth by the Commission. Adopting the PPL proposal to change the MRPL definition will effectively renege on the promises made to these solar generators that enticed them to build solar generation in the PPL service area in the first place. Forcing GSC-1 customer generators into GSC-2 would result in a write-down of existing assets due to diminished revenue expectations. Solar companies would also be forced to reevaluate planned projects or expansion in the PPL market. Adopting the PPL proposal would also showcase the PPL service area as a risky place to build solar.

Q: WHY DO YOU SAY THE PPL PROPOSAL WILL CAUSE A WRITE-DOWN OF EXISTING GSC-1 SOLAR FACILITIES THAT MOVE TO GSC-2?

A: Determining the economic viability of a solar installation is a function of the expected cost and revenue of the solar array. For GSC-1 customer generators, the economic viability of their solar installation was based on a solar credit revenue stream modeled on the GSC-1 PTC. Changing that revenue stream to the real-time market, which is volatile, unpredictable, and significantly lower than the GSC-1 PTC, will no doubt lower the value of the solar array, causing a write-down.

Q: WHY WOULD PPL'S PROPOSED CHANGE TO MRPL DERIVATION POTENTIALLY RESULT IN THE CANCELATION OF PLANNED PROJECTS?

A: The economics of GSC-1 planned projects were based on solar credit revenue tied to the GSC-1 PTC, not the real-time wholesale market. Remodeling these projects because of the PPL rule change with a lower revenue assumption may result in projects being underwater, thereby forcing their cancelation.

SECTION V.

NO EVIDENCE OF EXISTING CUSTOMERS BEING HARMED

Q: WHY IS PPL LOOKING TO REVISE THE MRPL TO FORCE SOME GSC-1 CUSTOMERS TO THE GSC-2 CLASS?

A: PPL witness Castanaro claims that while the threshold for the GSC-1 customer class is 100kW of demand, there are GSC-1 customers with behind the meter solar arrays

generating as much 1-3MW of electricity. Currently, these customers, which Mr. Castanaro terms "no load" customers receive the GSC-1 solar credit for their excess generation. Mr. Castanaro contends that because the solar installations of these customers produce more power than the 100kW class threshold, they should instead be classified as GSC-2 customers. Otherwise, the principle of equity in cost recovery is undermined because:

> "*Small C&I customers taking default service end up bearing the financial burden for projects that, by virtue of their size and output, should be classified as Large C&I.*"[10]

Q: WHAT ARE YOUR THOUGHTS ABOUT PPL WITNESS CASTANARO'S ASSESSMENT?

A: Mr. Castanaro's contentions are hard to follow. Utility rate classes are generally set based on electric demand and usage pattern. It is not clear why a GSC-1 customer that behaves nothing like a GSC-2 customer should be forced to take service under GSC-2 just because they have a solar generator on-site that produces more than 100kW of electricity. Further, Mr. Castanaro's assertion that GSC-1 customers pay the "financial burden" for projects is also puzzling. The installation and maintenance of solar generation is paid for by the customer generator and solar company. The MWh associated with solar generation offset the fuel-based generation PPL would be forced to purchase otherwise. Aside from the fact that offsetting fuel-based generation was the goal of AEPS to begin with, the MWh generated by GSC-1 customer generators reduce the MWh PPL must procure to supply the GSC-1 class. As such, I would expect the GSC-1 PTC to decline over time, which benefits the GSC-1 class.

[10] Castanaro Direct, page 3, lines 20-22

Further, PPL's assertion that existing GSC-1 customers impose a cost burden on other customers is also inconsistent with the Company's own evidence regarding the system-level benefits of distributed energy resources ("DERs"). In its Exceptions to the Recommended Decision in the Second Distributed Energy Resources Management Plan proceeding, PPL explains that incremental DER deployment "will avoid market purchases" and reduce the need for procurement from wholesale markets.[11] PPL further states that DER integration enables deferral of infrastructure upgrades and produces net system benefits, placing downward pressure on customer costs rather than increasing them.[12] These admissions undermine the premise that existing customer-generators receiving GSC-1 treatment shift costs to other customers or justify reclassification based on equity or cost-causation principles.

Q: DOES PPL PROVIDE ANY EMPIRICAL BASIS (E.G., DATA, MODELING, COST STUDIES, OR LOAD-FLOW ANALYSIS) TO JUSTIFY ITS CLAIM THAT THE CURRENT TARIFF "MISALIGNS" COST RESPONSIBILITY?

A: No, Mr. Castanaro does not adequately explain his reasoning or provide exhibits to illustrate it.

[11] *PPL Electric Utilities Corporation, Exceptions to Recommended Decision*, Docket No. P-2024-3049223, at p. 32 (PDF p. 39) (stating that incremental DERs "will avoid market purchases").
[12] *Id*. at pp. 14–16 (PDF pp. 21–23) (describing DER integration as producing system benefits, deferring infrastructure investment, and improving planning and reliability).

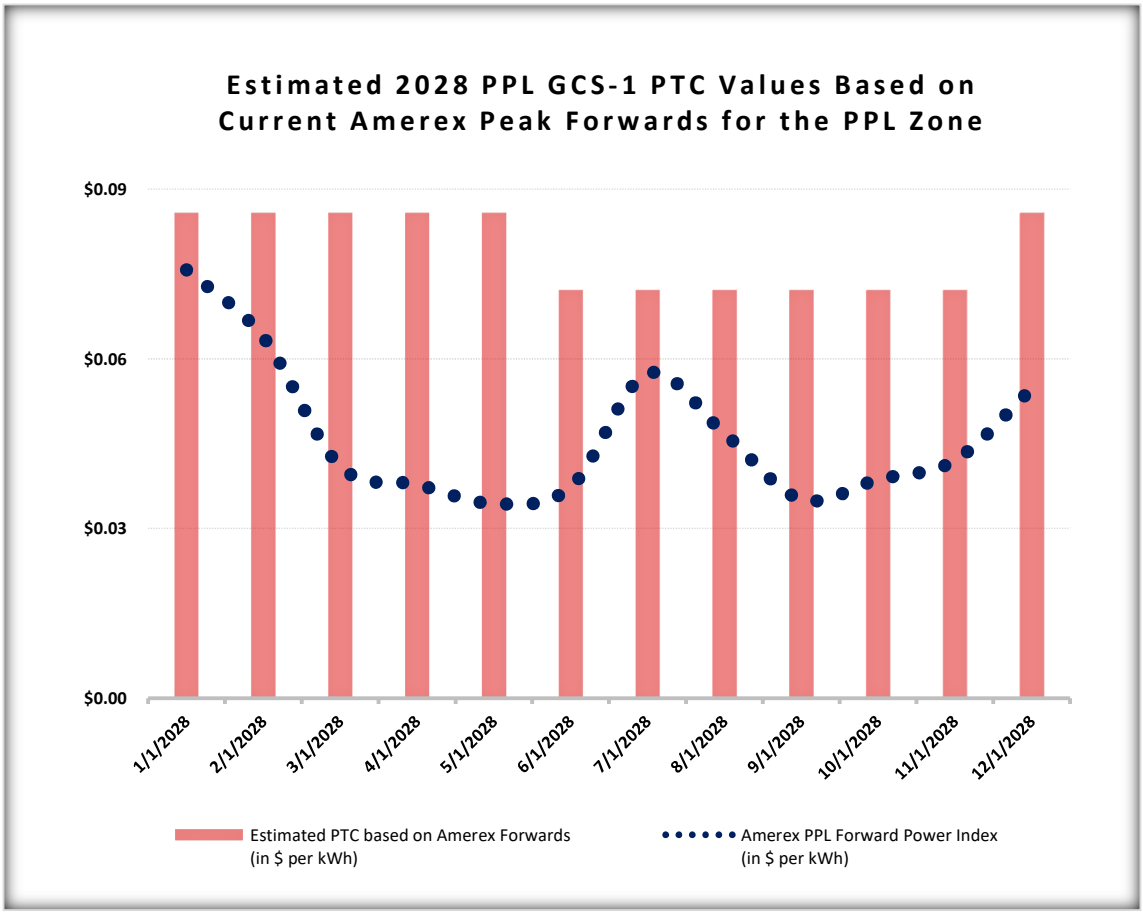
Q: DOES HE SHOW ANY EVIDENCE THAT SUCH DISTRIBUTED GENERATION FACILITIES CREATE A COST BURDEN COMPARABLE TO LARGE INDUSTRIAL CUSTOMERS?

A: No. PPL has not presented any empirical evidence demonstrating that distributed generation facilities create a cost burden comparable to large industrial customers. To the contrary, solar generation provides tangible benefits to the Commonwealth and to PPL's distribution system, rather than imposing a burden as PPL suggests. In addition to supplying zero-emission generation, customer-generators are required, as a prerequisite to interconnection, to fund substantial upgrades to the surrounding distribution infrastructure identified through PPL's interconnection studies. In many instances, customer-generators pay millions of dollars to upgrade substations, feeders, protection equipment, and related facilities in order to secure their position in the interconnection queue. These infrastructure costs are not borne by the general ratepayer, but are paid directly by customer-generators and remain on the system for the benefit of PPL and other customers.

For these reasons, the CGC views customer-generators not as a cost burden, but as partners of PPL; contributing both clean generation and customer-funded infrastructure investments that support system reliability and advance the Commonwealth's energy policy objectives.

Q: DOES MR. CASTANARO PROVIDE ANY EVIDENCE SHOWING THAT SMALL C&I CUSTOMERS SUFFER HIGHER DEFAULT-SERVICE PROCUREMENT COSTS DUE TO NET-METERING EXPORTS?

A: No.



Q: DOES HE PROVIDE ANY STUDY COMPARING COST-TO-SERVE FOR A 3 MW NET-METERED FACILITY TO A 3 MW LOAD-CONSISTENT INDUSTRIAL FACILITY?

A: No.

Q: MR. CASTANARO PRESENTS AN EXHIBIT AT PPL ELECTRIC EXHIBITS AC-1 THROUGH AC-3 CLAIMING THE PTC COULD REACH $300/MWH BY 2028. IN YOUR EXPERT OPINION, IS THIS NUMBER GROUNDED IN ANY PUBLICLY AVAILABLE FORWARD CURVE, PJM FORECAST, EIA PROJECTION, OR WHOLESALE MARKET TREND?

A: No, forward and futures-based power markets provide no indication whatsoever that a $300 per MWh PTC price is on the horizon for 2028. Exhibit CGC 3.0 provides Amerex peak forwards for the PJM PPL zone measured on 12/17/2025 as well as estimated GSC-1 PTC values based on the Amerex forwards. Amerex is a major wholesale power and natural gas broker that does business throughout the energy industry. Amerex forwards are an industry standard benchmark for future power prices. This data suggests that GSC-1 PTC prices will be nowhere near $300 per MWh in 2028. As illustrated by Chart CGC 3.1 below, PTC prices for 2028 are not even expected to surpass $100 per MWh (10 cents per kWh), much less $300 per MWh.

Chart CGC 3.1

Q: IS SUCH AN EXTREME SCENARIO CONSISTENT WITH THE EXISTENCE OF A COMPETITIVE RETAIL SUPPLY MARKET, WHICH DISCIPLINES UPWARD PRESSURE ON THE PTC?

A: No. If the PTC rose to $300/MWh when wholesale prices do not warrant it, full-service customers would leave PPL service in droves and take supply service from competitive suppliers at more attractive prices.

SECTION VI.

THE COMMISSION SHOULD REJECT PPL'S PROPOSED RULE CHANGES

Q: SHOULD THE COMMISSION ADOPT PPL'S PROPOSED RULE CHANGES TO MRPL?

A: No. The change will harm GSC-1 customer generators that will be forced to take service under GSC-2. These customers made the economic decision to install solar based on receiving solar credits set by the GSC-1 PTC. Forcing them to GSC-2 will lower solar credit revenue as well as make their revenue and cost unpredictable. PPL has also failed to present any evidence demonstrating that either PPL or GSC-1 customers will be harmed if the proposal is rejected by the Commission. For all these reasons the Commission should reject the PPL proposal.

Q: IF THE COMMISSION ADOPTS THE PPL PROPOSAL, IS THERE ANYTHING THAT CAN BE DONE TO HELP EXISTING GSC-1 CUSTOMER GENERATORS THAT WILL BE IMPACTED.

A: Yes. The Commission can apply the rules to new customer generators only, thereby shielding existing customers from the change. This would be akin to allowing PPL to stranded cost recovery after the Commonwealth's electric restructuring. After the rule change goes into effect, new customer generators will base the economics of future solar installations on GSC-2 solar credits and so won't be blindsided by the PPL change in the manner that existing customers will be.

Q: ACCORDING TO DOCKET NO. R-00973954, WHAT AMOUNT DID THE ADMINISTRATIVE LAW JUDGE APPROVE IN THE RECOMMENDED DECISION ISSUED ON APRIL 7, 1998?

A: $4 billion.

Q: DID THE COMMISSION MODIFY THAT APPROVED AMOUNT? IF SO, WHAT WAS THE FINAL APPROVED AMOUNT?

A: Yes. The Commission approved $2.86 billion by an Order on June 15, 1998.

Q: SHOULD THE SAME PRINCIPLE APPLY HERE TO PROTECT CUSTOMERS WHO INVESTED IN RELIANCE ON COMMISSION-APPROVED TARIFFS?

A: Again, I believe the PPL proposal should be rejected. However, should the Commission adopt the PPL proposal, then yes, I believe the same principal should apply and existing GSC-1 customer generators should be grandfathered under the current rules.

Q: DOES THIS CONCLUDE YOUR TESTIMONY?

A: Yes.

CGC Exhibit No. 1.0

CURRICULUM VITAE OF GUY SHARFMAN

Guy Sharfman

Co-founder and Vice President of Market Analytics at Intelometry, Inc.

KEY QUALIFICATIONS

Guy Sharfman has over twenty years of operational and consulting experience in the energy industry and is a recognized industry expert in the retail and wholesale electricity arenas. Mr. Sharfman has held key leadership roles in risk management, structuring and pricing, hedging and position management, and wholesale and retail market development and expansion. In his present role Mr. Sharfman oversees Intelometry Inc.'s data services business which encompasses the development, collection, maintenance and distribution of retail and renewable energy data and market reports utilized by energy companies, brokers, governmental entities, consulting firms, trade associations and aggregators to support retail and renewable energy operations and analysis across U.S. markets. Mr. Sharfman also heads Intelometry's consulting business which specializes in retail energy market operations, renewable asset valuations, market strategy and regulation.

Mr. Sharfman has testified in cases before numerous state utility commissions and state legislatures. Mr. Sharfman's industry experience includes buying and selling power, creating hedging strategies to manage risks associated with term supply, developing physical delivery capabilities for companies to serve new markets, electricity product structuring and pricing, wholesale and retail contract negotiation, utility tariff modeling, power plant value assessment, supply and demand forecasting, benchmarking evaluations, and electric procurement analyses.

PREVSIOUS INDUSTRY EXPERIENCE

Econ One Research, Inc. (2001 - 2004)

Director of Energy Strategy responsible for establishing a new business consulting practice centering on the power and natural gas industries in North America. Acquired and managed consulting projects for major energy companies, law firms and energy publications. Conducted studies and gave presentations on the future of energy markets to clients and associations.

Enron Wholesale Services (2001-2002)

Managed Enron's retail power positions and developed new markets in the Central region. Created and managed retail power forward curves into all major control areas in the ECAR, MAIN and MAPP regions. Structured financial and physical products for retail power customers in Illinois, Michigan, Ohio and Virginia. Assisted Enron regulatory affairs group in various energy proceedings in front of FERC and State Commissions in Illinois, Ohio and Michigan.

Nicor Energy, L.L.C. (2000-2001)

Manager of Electric Services responsible for structuring and pricing retail electricity in Illinois control areas. Trained and supervised Nicor Energy's power pricing desk. Negotiated electric supply agreements with wholesale companies to supply portions of Nicor Energy's retail load obligations. Developed retail electric service capabilities for Nicor Energy in Michigan and Ohio control areas. Developed a Green Power supply option for Nicor Energy in Illinois.

Analytical Support Network, Inc. (1998-2000)

Performed open access pricing for an alternative retail electric supplier. Constructed retail power pricing models for the Commonwealth Edison control area. Created indices that predicted a company's open access savings potential based on variables such as SIC codes in order to develop a target market. Conducted open access option assessment for various electric consumers. Performed all types of economic cost and efficiency analyses including contract assessment, price and demand forecasting, future revenue expectations and efficiency of operations assessments. Assessed expert testimony and prepared cross-examination questions for legal staff. Assisted in the testimony strategy of expert witnesses testifying in various electric deregulation proceedings before the Illinois Commerce Commission and the Public Utility Commission of Wisconsin.

SELECT CONSULTING EXPERIENCE

System Implementation for Various Retail Energy Companies

Engagement Director and Project Manager for the implementation of Intelometry's inRetail product suite for various national energy marketers. The product suite installation focused on processing and profiling historic customer load data, managing forward curve and market spot price data, pricing and structuring retail power deals for large and small consumers, load forecasting, settlements, position management and integrating to existing legacy systems.

Market Monitoring Services and Support

Directs the creation, service and support of Intelometry's inMonitor service, which assesses the headroom between electric utility tariff costs and the cost to serve typical retail customers in deregulated markets across the country. This service includes the building and maintenance of a library of utility tariffs in conjunction with the estimation of retail supply costs that include forward energy, capacity, ancillary services, risks and other retail uplift costs incurred in supplying retail customers.

Structured Supply Assessment

Managed team to assist client in finding Midwest counterparties for wholesale supply to back their retail load obligations, develop portfolio management strategies, and determine alternate methods of procurement.

Market Segmentation

Researched and developed an individual market profile for each of nineteen utilities across five states for the one to fifteen megawatt customer segment. Constructed tables for each utility depicting the number of existing commercial and industrial customers falling in each of seven demand class categories contained within the one to fifteen megawatt segment. Developed an expected annual kWh consumption range by utility for each demand class category for both commercial as well as industrial customer groups.

Michigan Market Entry and Operations Strategy

Managed team to perform a comprehensive market assessment to advise client of entry strategy into the Michigan retail natural gas and power market. Assessment included a full review of wholesale supply options, regulatory issues, transactional issues, value proposition assessment, and recommendations on product structures and risks.

Transition Charge Forecast

Conducted a forecast of Illinois transition charges for the ComEd control area for the entire transition (the end of the Illinois retail electricity deregulation transition period). Assessed how changes in the current forward market and proposed changes in ComEd distribution rates would affect transition charges over time. Analyzed how changes in transition charges would affect the viability of the retail electric market in Illinois.

Electricity Rate Analysis

Conducted rate audits and analysis for CBS facilities in New York City in order to determine if CBS was overcharged for electric service. Facilitated negotiations between CBS and opposing parties to settle outstanding disputes over energy bills. Assessed whether previous charges allowed under current lease agreements.

Market Value Calculation Audit

Conducted an audit of market setting "Market Value Energy" numbers put forth by Commonwealth Edison Company ("ComEd") on an annualized basis. Used snapshots of the into Cinergy peak forward market, historical PJM hourly price shapes and into ComEd historical off peak prices to

recreate ComEd's output and assess how changes in the wholesale market have affected the viability of the Illinois retail market since the numbers have been put forth.

TESTIFYING EXPERIENCE

Maine Legislature

Provided testimony before the Committee on Energy, Utilities and Technology regarding Bill LD 1431, An Act Requiring the Public Utilities Commission to Adopt Rules Promoting Renewable Energy. Drafted and presented a White Paper that showed residential customers in Maine benefit from electric choice despite opposition reports to the contrary. Advocated to maintain retail competition for residential customers in Maine.

Massachusetts Legislature

Provided testimony before the Joint Committee on Telecommunications, Utilities and Energy regarding House Bill 3352 and Senate Bill S2150. Drafted and presented a White Paper that showed residential customers in Massachusetts can achieve savings with retail choice while going green at the same time. Advocated to maintain retail competition for residential customers in the Commonwealth.

Massachusetts Legislature

Provided testimony before the Joint Committee on Telecommunications, Utilities and Energy regarding the Office of the Massachusetts General study that claimed retail suppliers are over charging customers in Massachusetts. Illustrated the flaws inherent in the study and demonstrated that retail suppliers do save customers money in Massachusetts as well as provide other benefits.

New York Public Service Commission

Provided testimony before the New York Public Service Commission ("NY PSC") in the Matter of Eligibility Criteria for Energy Service Companies (ESCOs). Prepared analysis and related testimony and exhibits that demonstrated the benefits of ESCO supply to mass market customers.

New York Public Service Commission

Submitted an expert report to the New York Public Service Commission ("NY PSC") commenting on a reference price proposal put forth by the NY PSC staff that presented a methodology to cap ESCO electric and natural gas mass market price offers in the State of New York. Prepared detailed analyses using historical market and utility data illustrating issues with the proposed reference price and demonstrating that the reference price proposal did not meet its stated goals.

Illinois Commerce Commission

Provided testimony before the Illinois Commerce Commission ("ICC") in a docket to determine distribution rate increases and related riders for Commonwealth Edison Company ("ComEd"). Prepared analysis and related testimony and exhibits illustrating historical and forecasted distribution and bundled rate costs paid by ComEd customer classes.

Massachusetts Department of Public Utilities

Provided an expert report and testimony before the Massachusetts Department of Public Utilities ("Department") regarding NSTAR Electric's filed request to enter into two proposed purchased power agreements ("PPA") for wind generation. The report and related testimony assessed the value of the wind PPAs to NSTAR customers and measured the impacts of the PPAs on existing default rates.

Connecticut Department of Public Utility Control

Provided an expert report to the Connecticut Department of Public Utility Control ("Department") regarding historical cost differentials between CL&P regulated and market prices. Participated in a round-table style hearing before the Department to determine the benefits and detriments of allowing Connecticut utilities to engage in portfolio management.

Public Service Commission of Maryland

Testified on behalf of a prominent energy company in a case before the Public Service Commission of Maryland ("PSCM") regarding historical cost differentials between BG&E regulated tariff prices and PJM market prices. Cross examination was conducted in front of the five Maryland Commissioners, who were interested in understanding the impacts of default price volatility that would be associated with a decrease in default rate price levels.

Pennsylvania Public Utilities Commission

Testified on behalf of a coalition of energy companies in a case before the Pennsylvania Public Utilities Commission ("PPUC") regarding historical cost differentials between Duquesne Light regulated tariff prices and PJM market prices. Testimony analyzed the savings that residential and small commercial customers would have attained had they procured their electric requirements directly from the market, as opposed to Duquesne Light tariffs.

Public Utilities Commission of Ohio

Testified on behalf of a coalition of energy companies and a manufacturer's association in a case before the Public Utilities Commission of Ohio (PUCO) on the market impacts of a rate stabilization plan proposed by First Energy Corporation. Testimony analyzed the impacts that the proposed plan would exert on regional energy markets, and provided the PUCO with alternative options to the plan including a wholesale Provider of Last Resort (POLR) auction.

Illinois Commerce Commission

Testified in a hearing before the Illinois Commerce Commission to determine how energy values that set alternative electricity rates for all investor owned Illinois electric utilities should be calculated. Used the Retail Power Index ("RPI"), which I constructed and published in Platts Megawatt Daily and Power Markets Week, in testimony to demonstrate the inadequacies of the current energy value calculation. Testified as to which remedies to the current calculation would improve market efficiency.

Illinois Commerce Commission

Testified in a proceeding before the Illinois Commerce Commission to set an electricity default rate for Commonwealth Edison Company ("ComEd"). In testimony, presented an alternative tariff design to the one proposed by ComEd that offered greater transparency and allowed for more adequate cost recovery. The final negotiated design incorporated many of the revisions that I proposed.

ADDITIONAL EXPERT ENGAGEMENTS

Honorarium to discuss agent-based modeling of electricity markets at Argon National Laboratory, Chicago, Illinois

Attended an honorarium for power marketers to assist Argon National Laboratory in building an electricity market modeling system that will allow regulators to anticipate market gaming behavior on the part of generators and power marketers in the event of market rule changes. Discussed the differences in market structures between current independent system operators and how energy companies use these different structures to create arbitrage opportunities. Offered insights into trading behavior in different NERC regions across the United States in real time, day ahead and term wholesale and retail markets.

Illinois Commerce Commission Electric Market Roundtable, Chicago, Illinois

Participated in the annual electric market roundtable discussions at the Illinois Commerce Commission. The Chairman of the Illinois Commerce Commission hosts the roundtable discussions. Participants include CEOs and CFOs of energy firms, leaders of commercial and industrial consumer groups as well as selected industry experts. The topics center around the development of competition in the electricity markets in Illinois both on a wholesale and retail level and what can be done to further foster competition's development.

Operational Task Force for the Midwest Independent System Operator, Indianapolis, Indiana

Attended an operational task force comprised of representatives from transmission owners and market participants to resolve operational issues for the Midwest Independent System Operator. Discussed issues involving methods of interaction and settlement between the transmission owners participating in the Midwest Independent System operator, independent marketers serving or planning to serve retail load, and municipalities.

PRESENTATIONS AND PUBLISHED WORKS

"What happened to Enron? (And other issues in the energy industry)", presentation before the Rotary Club of Chicago Financial District.

"After Enron, Will Power Competition Survive?" Natural Gas - The Monthly Journal for Producers, Marketers, Pipelines, Distributors, and End-Users, Wiley Periodicals, Inc.

"The Impacts of The Enron Bankruptcy and the California Crisis on The Future of Wholesale and Retail Power Markets" Presentation to the International Association for Energy Economics.

The Retail Power Index ("RPI") published previously in Platts Megawatt Daily and Power Markets Week.

Statement of Chairman Brown Dutrieuille, Docket No. P-2019-3010128 (Dec. 17, 2020) 1, 7

I. INTRODUCTION

Pending before the Pennsylvania Public Utility Commission ("Commission") is PPL Electric's Petition for Approval of its Second Distributed Energy Resources ("DER") Management Plan ("Second DER Management Plan" or the "Plan"). Under the Company's proposal, PPL Electric would continue actively managing and monitoring DERs in its service territory, as the Company has done for over the past 3 years under its First DER Management Plan. Specifically, pursuant to the Commission-approved Settlement at Docket No. P-2019-3010128, PPL Electric has operated a pilot program ("DER Management Pilot Program" or "Pilot Program") where the Company uses DER Management devices to actively manage and monitor the DERs to which they are connected. When that Settlement was approved unanimously, former Chairman Brown Dutrieuille "commend[ed] PPL for being in the vanguard of distributed energy advancement" and declared that "[t]aking this next step in managing distributed energy has the potential to permit PPL to better control power quality, reliability, and safety throughout the grid while further fostering investment in resources such as rooftop solar and combined heat and power."[1]

Building on the foundation of its Pilot Program, PPL Electric has proposed a Second DER Management Plan so that it can continue actively monitoring and managing DERs on its system. Through several expert witnesses, PPL Electric proved that its Plan would improve the safety, reliability, adequacy, and resiliency of its electric service. In fact, under the Pilot Program, the Company has mitigated over 680,000 voltage violations through active management of DERs and saw that DERs in the Pilot Program's control and grandfathered groups, which cannot be actively managed, caused approximately 604,000 voltage violations. Also, even though benefits to safety, reliability, adequacy, and resiliency should not solely turn on a cost-benefit analysis, PPL Electric

[1] Statement of Chairman Brown Dutrieuille, Docket No. P-2019-3010128 (Dec. 17, 2020) (emphasis added).

retained an outside expert to perform a complete cost-benefit analysis of the Plan. That analysis shows the Plan producing net benefits of approximately $65.5 million over the 2025-2030 period, putting downward pressure on customers' distribution rates.

In addition, PPL Electric's proposal will help address the daunting resource adequacy challenges facing the Commonwealth. With the Plan, the Company gains situational awareness and system-wide connectivity that could help de-stress the transmission system and better focus and enhance investments in transmission and generation infrastructure to meet the increased electric demand. The Company's proposal also helps address climate change and sustainability objectives by increasing the hosting capacity on distribution circuits, which enables customers to interconnect more DERs and larger-sized DERs on distribution circuits without requiring distribution system upgrades. Unless the Plan is approved, the Commonwealth, Commission, and PPL Electric will lose a vital tool in responding to these challenges.

Nevertheless, on June 30, 2025, the Commission issued Administrative Law Judge John M. Coogan's ("ALJ") Recommended Decision ("RD"), which recommends that the Commission deny the Petition because of the Company's purported "failure to meet its burden of proof in this proceeding." (RD at 1, 42-46.) According to the RD, other parties' evidence on the scope of the Second DER Management Plan, the impact of the Plan's requirements, and the Company's cost-benefit analyses outweighed PPL Electric's evidence. (*Id.* at 42-46.) Therefore, the RD believes that the Commission should deny the Company's entire proposal. (*Id.* at 42, 46, 49.)

The Commission should grant these Exceptions, approve the Company's Plan, and modify the RD accordingly. PPL Electric's proposal is reasonable and justified,[2] especially given the

[2] The Commission recently showed interest in electric vehicle ("EV") managed charging to address increases in electric demand. *See Energy Efficiency and Conservation Program*, Docket No. M-2025-3052826, at 40-41 (Order entered June 18, 2025). Notably, EVs are exempt from the proposed Plan (PPL MB at 39), so the proposed Plan could work alongside a managed EV charging measure in Phase V of Act 129 Energy Efficiency and Conservation.

unprecedented resource adequacy challenges facing the Commonwealth. Further, the Company thoroughly rebutted the other parties' evidence regarding the impact of the Plan's requirements on solar installers, customers, and inverter manufacturers. For example, while the Joint Solar Parties ("JSPs")[3] claim that the DER Management devices have interfered with inverter communications, only 0.51% of customers enrolled in the Pilot Program ever experienced a communication interruption (i.e., 46 out of 9,038 customers as of December 2, 2024). The JSPs even attribute an inverter's alleged "thermal event" to the Company's DER Management device for a service address where no device was installed. Also, at least 12% of the alleged "lost sales" were for services addresses outside of PPL Electric's service territory. Despite these and other fatal errors with the JSPs' evidence, the RD relies upon it as grounds for denying the Plan. Additionally, even though the proposal's fate should not turn solely on cost-benefit analyses due to its safety, resiliency, adequacy, and reliability benefits, PPL Electric presented robust cost-benefit analyses supporting the Plan and refuted criticisms of those analyses. Lastly, the RD errs by denying the Plan outright without considering changes to the Company's proposal, such as parties' alternative proposals to impose a DER size requirement for participation or setting a term of years for the Plan. By denying the Plan entirely, the RD is unreasonable and contravenes the public interest.

For these reasons, and as explained in more detail below, the Commission should grant these Exceptions and approve the Company's proposal in its entirety. Nevertheless, if the Commission gives any credence to other parties' arguments, the Commission should, at the very least, approve the Company's Petition with reasonable modifications that address parties' concerns about the proposal's scope instead of denying the Petition outright.

[3] The JSPs consist of American Home Contractors, Inc. ("AHC"), Enphase Energy, Inc. ("Enphase"), the Solar Energy Industries Association ("SEIA"), SolarEdge Technologies, Inc. ("SolarEdge"), Sun Directed, Tesla, Inc. ("Tesla"), and Trinity Solar, LLC ("Trinity Solar").

II. EXCEPTIONS

A. BACKGROUND ON THE DER MANAGEMENT PILOT PROGRAM AND THE PROPOSED SECOND DER MANAGEMENT PLAN

1. The First DER Management Plan Settlement and Pilot Program

In 2019, the Company took a proactive step requesting Commission approval to implement its First DER Management Plan, under which customers applying to interconnect new DERs to PPL Electric's distribution system would be required to: (1) use Company-approved smart inverters that are compliant with Institute of Electrical and Electronics Engineers ("IEEE") 1547-2018 and then-forthcoming revisions to Underwriters Laboratories ("UL") Standard 1741; and (2) install DER Management devices that enable PPL Electric to monitor and actively manage DERs. (PPL MB at 8-9.) On December 17, 2020, the Commission approved a Settlement in the First DER Management Plan proceeding, which, among other things: (1) required the use of smart inverters in PPL Electric's service territory effective January 1, 2021; and (2) set the terms and conditions for PPL Electric's Pilot Program, including the submission of a detailed Pilot Implementation Plan. (*Id.* at 9-10.) As such, effective January 1, 2021, new DERs interconnecting with the Company's distribution system were required to have smart inverters installed that meet: (1) UL 1741 SA; and (2) the Company's testing for the communications requirements under IEEE 1547-2018. (*Id*. at 10.) Effective January 1, 2023, the Company transitioned from the interim requirements to requiring new DERs to have smart inverters that meet IEEE 1547-2018 and have been certified with IEEE 1547.1 / UL 1741 SB. (*Id.*)

Since the Pilot Program began on January 1, 2021, the Company has been authorized to purchase and install DER Management devices on all new DERs with inverters up to an annual limit of 3,000 DER Management devices, with such cap not limiting the number of DERs that can be interconnected. (PPL MB at 10-11.) DERs installed above the annual limit are not part of the

Pilot Program. (*Id*. at 10.) All DER Management devices are owned, operated, and maintained by the Company at no direct cost to interconnecting customers. (*Id*.)

2. The Second DER Management Plan

The Company's proposed Second DER Management Plan builds upon the successes achieved through its Commission-approved First DER Management Plan and Pilot Program. (PPL MB at 11.) PPL Electric's Second DER Management Plan will enable the Company to continue to integrate, monitor, and manage DER resources throughout PPL Electric's service territory. (*Id.*)

As proposed, PPL Electric's Second DER Management Plan will require that all customer-owned and third party-owned, inverter-based DER system installations be equipped with DER Management devices so that the Company can monitor and manage the DERs. (PPL MB at 11.) In addition, the Plan would expand on the Pilot Program by authorizing PPL Electric to: (1) actively monitor and manage the smart inverter settings on all DERs that are in the Pilot Program's control groups; (2) utilize the Volt/Watt functionality, with customer consent, when the interconnecting DER could create a localized high voltage issue on the distribution system at the time of interconnection, which would not be resolved by the Volt/VAR or Constant Power Factor grid support functions[4]; and (3) make the Pilot Program permanent. (*Id.* at 11-12.) Therefore, provisions in the Settlement that limit the scope of the Pilot Program's requirements, such as the annual cap of 3,000 DER Management devices, would be removed. (*Id*. at 12.) The Company also proposes to install DER Management devices on: (1) solar photovoltaic systems interconnected before the Pilot Program started on January 1, 2021; and (2) inverter-based DERs interconnected after the Pilot Program started without those devices installed on them.[5] (*Id*.)

[4] Such customer consent will be required because the Volt/Watt functionality will affect the generating facility's production. (PPL MB at 12 n.8.)

[5] As proposed in PPL Electric Exhibit SS-2, customer-generators with these systems must submit a new interconnection application when they upgrade their system, install a new inverter on their system, or by March 22,

These proposals are necessary and appropriate because they will help PPL Electric fully realize the benefits of actively monitoring and managing DERs. (PPL MB at 13.) As proven by the Pilot Program, the Company can leverage the smart inverters' grid support functions to improve safety, reliability and resiliency, reduce interconnection costs for DER interconnection applicants (e.g., avoidance of paying for distribution system upgrades), mitigate the impact of DERs on the distribution system, and increase the distribution circuits' hosting capacity by monitoring and actively managing DERs in the service territory. (*Id.*)

B. EXCEPTION NO. 1: THE RD INCORRECTLY DETERMINES THAT THE SCOPE OF PPL ELECTRIC'S SECOND DER MANAGEMENT PLAN IS NOT REASONABLE OR NECESSARY (RD AT 1, 11, 42-46, 49; FINDINGS OF FACT NOS. 33-39; CONCLUSION OF LAW NO. 12)

The RD errs in finding that "PPL has not demonstrated why the scope of its proposed active monitoring and control of DER devices is reasonable or necessary." (RD at 43.) As alleged support, the RD predominantly relies on other parties' arguments that PPL Electric is the first electric utility to make a DER management proposal of this scale and that other jurisdictions have higher levels of DER penetration. (*Id.*) The RD also concludes that "if PPL's proposal is approved as designed, customers will be subject to a level of utility control they may not have envisioned." (*Id.*) The Commission should reject these findings and approve the Company's proposal.

1. PPL Electric's "First-in-the-Nation" Proposal Is Consistent with the Company's Charge to Lead the "Vanguard of Distributed Energy Advancement" and with the Commission's Long History of Spearheading Innovation in the Utility Sphere

The fact that the PPL Electric's Second DER Management Plan is a "first-in-the-nation" proposal is not a credible reason to deny the Petition. (RD at 43.) If that were the measure by

2040, whichever is earlier. (PPL MB at 12 n.9.) The DER Management devices will be installed on those systems after their new interconnection applications are approved as compliant with the Company's current requirements for DERs and inverters and after their systems are installed and inspected. (*Id.*)

which utilities' proposals were adjudicated, there would be no innovation in the utility sector. However, this Commission has long fostered and encouraged innovative proposals by public utilities. The Commission was the first to ever approve a Distribution System Improvement Charge[6] ("DSIC") and, by approving the First DER Management Plan Settlement, the first ever to approve a program that enables an electric utility to actively manage and monitor the DERs on its distribution system.[7] The Commission should build on its past successes and continue to lead the "vanguard of distributed energy advancement," much like former Chairman Brown Dutrieuille commended PPL Electric for doing in the First DER Management Plan proceeding,[8] especially when the Pilot Program has provided so many benefits to the grid and customers.

Additionally, the Company's pioneering of a "first-in-the-nation" DER management model "reflects PPL Electric's forward-thinking approach to address the DERs currently on the system and be prepared for future DER growth." (PPL RB at 5) (emphasis in original). Dr. Elizabeth Cook,[9] one of PPL Electric's expert witnesses, explained how JSP witness White drew the wrong

[6] *See Petition of Phila. Suburban Water Co. for Approval to Implement a Tariff Supplement Establishing a Distrib. Sys. Improvement Charge*, Docket No. P-00961036, 1996 Pa. PUC LEXIS 211, at *9-10, 21-22 (Order entered Aug. 22, 1996) ("*Philadelphia Suburban DSIC*") (approving in part and denying in part the petition and "applaud[ing] companies who present this Commission with innovative ideas to address recurring problems for their respective industries"); *Petition of Pennsylvania-American Water Co. for Approval to Implement a Tariff Supplement Establishing a Distrib. Sys. Improvement Charge*, Docket No. P-009661031, 1996 Pa. PUC LEXIS 182, at *9-10, 21-22 (Order entered Aug. 26, 1996) ("*PAWC DSIC*") (approving in part and denying in part the petition and stating the same).

[7] *See Petition of PPL Elec. Utils. Corp. for Approval of Tariff Modifications and Waivers of Regulations Necessary to Implement its Distributed Energy Res. Mgmt. Plan*, 2020 Pa. PUC LEXIS 663 (Order entered Dec. 17, 2020).

[8] Statement of Chairman Brown Dutrieuille, Docket No. P-2019-3010128 (Dec. 17, 2020).

[9] Dr. Cook received a B.S. degree in Electrical Engineering from the University of Pittsburgh in May 2004, an M.S. degree in Electrical Engineering from Kansas State University in May 2011, and Ph.D. in Electrical Engineering from the University of Pittsburgh in October 2020. (PPL Electric St. No. 6 at 1.) In her role as the Vice President of Technical Strategy at the Association of Edison Illumination Companies ("AEIC"), she drives initiatives in electric energy innovation and operational excellence by working closely with technical committees and member companies and by directing projects at AEIC's Center for Operational Excellence. (*Id.*) As the Founder of EMC^2 Collective Power, she independently advises clients on the impacts and integration of new technologies in the electric industry and on the processes and leadership required to ensure the safe, reliable, and affordable electrical service when integrating those new technologies. (*Id.*) During her 20-year career in the energy industry, she has held many positions, including Senior System Studies Engineer at Mitsubishi Electric Power Products ("Mitsubishi"), Power System Stability Studies Section Manager at Mitsubishi Electric Power Products, Transmission & Distribution System

conclusion from the Company being the first to implement a DER management proposal of this scale:

> Erroneously, she assumes that being first necessarily means that the Second DER Management Plan is not necessary or justified based on conditions that actually exist on PPL Electric's distribution system. In fact, being the first to adopt a model of this kind highlights PPL Electric's commitment to proactively addressing the complexities and demands of a rapidly evolving energy landscape. By spearheading this initiative, PPL Electric is preparing for today's needs and positioning itself to effectively manage the anticipated increase in DERs and the associated operational challenges.

(*Id.*) By following this flawed logic, the RD essentially repeats that error. (RD at 43.)

Dr. Cook gave another basic reason why PPL Electric is the first to propose active management and monitoring of DERs—unlike other electric utilities, PPL Electric has invested the time and resources "over the last 10 plus years to prepare [itself] to have the capability" to implement the Second DER Management Plan. (PPL RB at 6.) So, when the RD and other parties reference other utilities' actions or inactions, it is critical "to understand where [those utilities] are in a maturity scale, grid modernization, and having even the capability to be able to request and have the due diligence and the processes and the people in place" and then take the "data and use it." (*Id.*) Further, although other electric utilities with higher DER penetration levels have not required active management and monitoring of DERs yet, "the awareness and feasibility of the technology and the capabilities that now exist" were not available to those utilities back then. (*Id.*) As such, it is unfair "to compare those that have more DER[s]" to PPL Electric and say those other utilities "are in a better position and/or creating policy that may or may not be effective." (*Id.*)

Planning Senior Manager at Duquesne Light Company ("Duquesne Light"), General Manager of Advanced Grid Solutions at Duquesne Light, and Director of Grid Modernization and Advanced Grid Solutions at Duquesne Light. (*Id.* at 2-3.)

Moreover, the Company's proactive approach aligns with past statements made by one of the JSPs' own expert witnesses, Mr. Brian Lydic. (PPL RB at 6-9.) As seen in PPL Electric Exhibit SS-6R, Mr. Lydic has averred repeatedly that states and utilities could implement IEEE 1547-2018 even before UL 1741-SB was finalized by using UL 1741-SA, which is exactly what the Company did under its First DER Management Plan, and could "clarify which voltage regulation function DERs should use" and "adjust from Standard defaults accordingly," including on a "state-wide or case-by-case" basis. (PPL RB at 6-7.) Also, in the publication "Making the Grid Smarter," which Mr. Lydic co-authored and was published over six years ago in January 2019, it states, "Even though the full implementation of the updated [IEEE 1547-2018] Standard will take a few more years, it is not too soon for states, utility regulators, utilities and stakeholders to begin the process to adopt and integrate it into interconnection rules." (PPL Electric Exhibit SS-6R at 122) (emphasis added). The publication further claims that "[t]o make the most of the standard and prepare for higher DER penetration in the future, regulators and utilities should consider the opportunity to utilize certain functions before achieving higher penetration of DERs, so as to optimize future DER growth and avoid negative impacts as penetration increases." (*Id.* at 121-22) (emphasis added). Indeed, as further noted in the publication:

> Implementing voltage regulation only for new DERs after higher DER penetration has been achieved may dramatically reduce the effectiveness of this function. In addition, such late-stage adoption of voltage regulation functions may disproportionately affect new DER customers seeking to connect to the grid after a significant amount of non-voltage regulating DER projects are connected. Hawaii, for example, learned that the grid would have been able to host higher penetration of DERs if they had been able to deploy these functions early on.

(*Id.* at 131) (footnote omitted) (emphasis added). Yet, in this case, Mr. Lydic has opposed the Company's proposal on the grounds that it "seems premature from a policy perspective" and "technical standpoint." (PPL RB at 8.) Although Mr. Lydic tries to distinguish these past

proclamations by pointing to the mandatory nature of PPL Electric's proposal and the Company's use of a utility-owned device to monitor DERs,[10] those elements have nothing to do with whether the Company must act now to leverage the capabilities of IEEE 1547-2018 and get ahead of the issues caused by DERs before DER penetration increases significantly. (PPL RB at 8.) Therefore, even one of the JSPs' own expert witnesses' past positions support the Commission's need to act now and approve PPL Electric's Second DER Management Plan. (*Id.*)

2. PPL Electric's Proposal Will Help Improve the Safety, Reliability, Adequacy, and Resiliency of the Company's Electric Service

PPL Electric established that its proposal will improve the safety, reliability, adequacy, and resiliency of the Company's electric service. (PPL MB at 13.) Under Section 1501 of the Public Utility Code, the Company must provide safe, reliable, adequate, and reasonable electric service to all its customers, including those who have not installed DERs. (*Id.* at 14.) However, the deployment of DERs that cannot be monitored and actively managed continues to present challenges to the "safe and reliable operation of electric distribution systems and to the electrical grid at large." (*Id.* at 13.) These challenges include:

1. "[C]reating voltage changes that can result in voltage exceeding regulatory limits" (i.e., voltage violations);

2. "[E]xcessively low voltage provided to some customers, as well as high voltage to other customers";

3. "[D]isrupt[ed] conservation voltage reduction schemes," which "lead[s] to excess energy consumption by consumers";

4. "[I]ncreasing wear-and-tear of" the "mechanical devices intended for voltage management (e.g., regulators and switched capacitor banks)," thereby "leading to premature failure or increased maintenance requirements";

5. "[O]verload[ing] circuits and equipment, leading to failure or accelerated loss of life";

[10] (*See* JSP St. No. 9-SR at 5, 13-14, 16-17, 19.)

6. The potential for "[c]ontinued energization of an 'islanded' distribution feeder or system by DERs," which can "pose a significant risk to utility workers and to the public";

7. Damaging "other customers' equipment" when "transient and temporary overvoltages" reach certain "magnitudes"; and

8. Issues due to "load masking," where the "DER output inherently masks, or cancels, actual load demand," which can cause problems, such as "lead[in]g to faulty switching decisions when a distribution system is reconfigured following an outage" and making the "determination of minimum load conditions difficult."

(*Id.* at 13-14.)

None of these problems depend on significant increases in the number of DER deployments in PPL Electric's service territory. (PPL MB at 15.) Even with existing levels of DER penetration, PPL Electric's distribution system can experience safety, reliability, adequacy, and resiliency issues due to DERs. (*Id.*) In fact, Dr. Karen Miu, a Professor of Electric and Computer Engineering at Drexel University,[11] conducted multiple studies of PPL Electric's distribution circuits to evaluate the impacts of DERs on the Company's distribution system. (PPL MB at 15-16.) "Throughout all of this research," Dr. Miu "found that even the then-existing DER levels measurably impacted voltage power quality at various individual nodes throughout the distribution system itself" and that "DER injections are non-uniform across electrical phases." (*Id.* at 16.) For example, Dr. Miu's simulations on the Company's distribution system in 2024 "consistently demonstrate[d] that DER impacts on a distribution system change with the type of DER

[11] Dr. Karen Miu's educational background is in the field of electrical engineering. (PPL Electric St. No. 8 at 1.) Her MS thesis and Ph.D. dissertation focused on electric power distribution systems. (*Id.*) Her degrees received include: B.S. in Electrical Engineering from Cornell University, Ithaca NY, 1992; M.S. in Electrical Engineering from Cornell University, Ithaca NY, 1995; and Ph.D. in Electrical Engineering from Cornell University, Ithaca NY, 1998. (*Id.*) Since 1998, her professional experience has primarily been at Drexel University, although she also has been a visiting professor at Northeastern University and the University of Hong Kong. (*Id.*) Her research related to DER impacts on distribution systems has addressed aspects of the modeling, analysis, planning and control of the impacted distribution system. (*Id.* at 3.) Her approach is based on fundamental electric circuit theory and subsequent power system foundations. (*Id.*) Her research studies were conducted using advanced mathematics and engineering principles to create new, multi-phase models for capturing distributed energy generation flows and to integrate and implement them into large-scale distribution system models. (*Id.* at 3-4.)

installations, their locations, and the system operating conditions." (*Id.* at 16-17.) Critically, Dr. Miu's analysis revealed that this is not a localized problem, as "[t]he installation of individually owned and operated DERs directly impacts voltages at other customer locations." (*Id*. at 17.)

PPL Electric's Second DER Management Plan is the optimal solution to resolving these issues. To date, PPL Electric's DER Management Pilot Program, under which the Company is capped at installing 3,000 DER Management devices annually, has mitigated over 680,000 voltage violations through active management of DERs. (PPL Electric St. No. 1-R at 12.) Meanwhile, the Company lost out on the opportunity to mitigate or resolve approximately 604,000 voltage violations that were caused by interconnected DERs in the control and grandfathered groups. (*Id.*)

Moreover, active management and monitoring of DERs far outperforms the autonomous inverter settings advocated by other parties. (*Id.* at 18.) As Dr. Miu found, "[a]utonomous power factor control stops when its local voltage is satisfied," whereas active management of DERs "can enact a potentially larger amount of power management than autonomous functions." (*Id*. at 18) As a result, active management removed a much larger number of overvoltages than autonomous settings . . . and, in fact, removed all system overvoltage violations in the scenario . . . ." (*Id.*) Thus, Dr. Miu's studies have shown that "active management of the DERs allows for targeted actions, such as appropriate phase and location selection, to fix the problems that the DERs themselves have created." (*Id*.)

Aside from fully resolving voltage violations, PPL Electric's active management of DER power factors can significantly reduce the frequency, duration, and severity of customer voltage violations. (PPL MB at 18.) In turn, the Company's active management can decrease the number of customers who contact PPL Electric about voltage violations and, subsequently, decrease the number of investigations performed by the reliability engineering team and the number of visits to

customer locations by PPL Electric (commonly referred to as "truck rolls"). (*Id*. at 18-19.) Even under conservative assumptions, PPL Electric can significantly reduce its O&M expenditures by resolving those voltage violations without performing truck rolls.[12] (*Id.* at 19.)

In addition, the Company's proposed Second DER Management Plan will provide other benefits to safety, reliability, and resiliency. (PPL MB at 19-20.) As an example, Reigh Walling,[13] one of the Company's expert witnesses, noted that "there is a substantial uncertainty regarding the reliability of many DER island detection schemes when applied in practical circumstances," despite DERs being "required by IEEE 1547 to cease energization of disconnected distribution circuits (islanding)." (*Id*. at 16.) Such "[c]ontinued energization of an 'islanded' distribution feeder or system by DER can pose a significant risk to utility workers and the public." (*Id*.) Mr. Walling even highlighted "an incident in Ontario, Canada" that "serve[s] as an example where the on/off functionality" provided by the Second DER Management Plan "could be an important safety feature," as "utility management of DER operating status can be applied as a backup to DER island detection capabilities, increasing worker and public safety." (*Id.* at 20.) Mr. Walling also noted

[12] Also, reducing the frequency, duration, and severity of voltage violations can help reduce the need to make system modifications or investments in voltage support equipment, further demonstrating how active management and monitoring of DERs can help maintain and improve the safety, reliability, adequacy, and resiliency of the Company's electric service in an effective and efficient manner. (PPL MB at 19.)

[13] For approximately 13 years, Mr. Walling has provided independent electric power system consulting services to electric utilities, DER developers, DER equipment manufacturers, and research institutions. (PPL Electric St. No. 4 at 1.) Most of his work in this consultancy has involved DERs and renewable energy systems, specifically about standards, interconnection requirements, and system performance. (*Id.*) He has been a major contributor to the development of the IEEE Std 1547 series of standards, including the original version and the 2018 revision, and the current working group developing the next revision of this standard. (*Id.*) Mr. Walling participated in numerous DER-related research projects for the Electric Power Research Institute ("EPRI"). (*Id.* at 2.) One of these projects was specifically focused on the subject of "smart inverter" settings (parameters) and how these affect system performance and stability. (*Id.*) For one of his clients, a major utility in the Northeast, he has developed DER interconnection technical requirements, including comprehensive screening criteria. (*Id.*) Other consulting work he performs involves large-scale transmission-connected renewable resource interconnection (e.g., wind and solar farms), High-Voltage Direct Current ("HVDC") transmission systems, and the impacts of geomagnetic disturbances on electric power systems. (*Id.*) Mr. Walling was elected a Fellow of IEEE in 2005, an honor limited to one-tenth of one percent of the IEEE membership in any one year. (*Id.* at 2-3.) In 2009, he was awarded the IEEE Excellence in Power Distribution Award. (*Id.* at 3.) He has participated in many IEEE working groups, including leadership roles, including as the founding chair of the IEEE's Distributed Generation Integration working group. (*Id.*)

that the "continuous monitoring and archiving of DER output data avoids load masking," which "leads to more reliable circuit reconfiguration to restore service following outages and to more accurate forecasting of both DER output and customer load demand." (*Id.*) With more accurate forecasts, PPL Electric can better plan and reliably operate its distribution system. (*Id.*) Consequently, the Plan can produce several safety, reliability, adequacy, and resiliency benefits, but all of them will be lost if the Commission adopts the RD and rejects the Plan in its entirety.

3. The Second DER Management Plan Will Help Address the Significant Resource Adequacy Challenges Facing the Commonwealth

The Second DER Management Plan will help address the significant resource adequacy challenges facing the Commonwealth due to substantial increases in electric demand. (PPL MB at 24.) After over two decades of declining or stagnant growth in electric demand, electric utilities across the country, including PPL Electric, are now dealing with surging growth in electric demand, fueled principally by data centers, electric vehicles, and electrification. (*Id.*) As noted by the U.S. Department of Energy ("DOE"), "in response to transformations in technologies like artificial intelligence ('AI'), data center expansion, new domestic manufacturing, and electrification in different sectors, the United States is returning to a period of rising electricity demand, with total energy demand potentially growing ~15-20% in the next decade." (*Id*. at 24-25.) Regulators, electric generators, electric transmission companies, and electric distribution utilities all face serious challenges due to this significant growth in electric demand. (*Id*. at 25.) Chief among those challenges is ensuring that there is enough transmission and generation capacity to meet that demand now and in the future. (*Id*.) As the regulator of EDCs' electric service and facilities, the Commission has rightly recognized the role it must play in this area. (*Id.* at 25-26.)

PPL Electric's proposal can help address these resource adequacy issues facing the Commonwealth. (*Id.*) As Dr. Elizabeth Cook explained, "PPL Electric's Second DER

Management Plan can increase the hosting capacity on distribution circuits," which "enables customers to interconnect more DERs and larger-sized DERs on distribution circuits without requiring distribution system upgrades." (*Id*.) By bringing those additional and larger DERs online, PPL Electric can reduce the demand on its distribution circuits and, by extension, the demand they are pulling from the transmission system. (*Id*.) Furthermore, "the situational awareness and system-wide connectivity provided by the Second DER Management Plan would help de-stress the transmission system and better focus and enhance investments in transmission and generation infrastructure to meet the increased electric demand." (*Id*.) No party submitted testimony rebutting Dr. Cook's testimony on these points.

Without active DER management and monitoring, however, the Commonwealth, Commission, and PPL Electric will lose a vital tool in addressing these resource adequacy challenges. Although other parties have suggested various forms of data collection instead of the Company's proposal,[14] such data collection alone cannot provide the situational awareness and system-wide connectivity needed to meet these resource adequacy challenges and help de-stress the transmission system. (PPL Electric St. No. 6-R at 9.) Achieving the necessary level of situational awareness and system-wide connectivity requires "a robust data strategy and a cohesive framework that integrates, and responds to, insights from across the utility's operations." (*Id*.) "The process of developing this framework begins at the edge of the grid"[15] and then "flows through every layer of the distribution system." (*Id*.)

[14] (*See, e.g.*, OCA St. 1SR at 36-44; SEF St. No. 1 at 21; JSP St. No. 1-SR at 15-19.)

[15] The "edge of the grid" is "where DERs, smart meters, and other customer-side technologies reside" and "can provide real-time, granular insights that enable better distribution grid performance." (PPL Electric St. No. 6-R at 5.) "When connected and coordinated, these edge resources become not just isolated energy assets but part of a larger intelligence network that strengthens both operational planning and real-time management." (PPL Electric St. No. 6-R at 5.)

As a result, the Company's Second DER Management Plan is a part of a larger strategy that must be executed. (*Id*.) The Company's capital and O&M planning can become far more strategic with data from the edge because knowing where non-wires alternatives (such as energy storage or demand response) can defer infrastructure upgrades in certain locations will give the Company the flexibility to allocate resources more efficiently and effectively. (*Id*.) The ultimate goal is to prioritize investments and allocate resources to areas of highest need, not to defer capital investments merely for the sake of deferral. (*Id*.) PPL Electric and other utilities can achieve that goal by using interconnectivity and a strong data strategy to glean added knowledge and insight from what, in the past, were disparate and unconnected datasets. (*Id*.) Therefore, the Commission should approve the Second DER Management Plan so that the Company can help address the resource adequacy challenges facing PPL Electric, its customers, and the Commonwealth.

4. The Second DER Management Plan Will Help Address Climate Change and Sustainability Objectives by Facilitating and Encouraging Increased Deployments of DERs

PPL Electric's proposal should also be approved because it will help address climate change and sustainability objectives. (PPL MB at 21.) As PPL Electric's expert witness on this subject, Lee Krevat[16] testified that electric power generation emits approximately 25% of total greenhouse gases ("GHG") and combined with the transportation sector, accounts for over 50%. (*Id.*) Given the imperative to reduce GHG, the carbon intensity of electric power generation and

[16] Mr. Krevat has a Bachelor of Science with University Honors from Carnegie Mellon University in Mathematics/Computer Science. (PPL Electric St. No. 7 at 2.) He has almost four decades of experience in the energy and technology industries. (*Id.*) While working at San Diego Gas & Electric Company ("SDG&E"), a subsidiary of Sempra Energy, he founded and served as director of smart grid and led SDG&E's smart grid and electric vehicle initiatives, advocating Grid Modernization and Electric Vehicle grid integration. (*Id.*) He was twice named one of the top 100 movers and shakers influencing the smart grid market by GreenTech Media and twice recognized as a Top 12 Utility Mover and Shaker and Utility Champion by Intelligent Utility Magazine. (*Id.*) Mr. Krevat also has served serving on the Board of Directors or as an active member of the GridWise Alliance since 2011, where he led the development of the GridWise Alliance Grid Modernization Index ("GMI"). (*Id.* at 2-3.) The GMI has been used since 2013 to evaluate the status of electric grid modernization in the United States, to identify and promote best practices, and to provide insights to state policymakers, regulators, and other stakeholders regarding the progress of their grid modernization. (*Id.* at 3.)

the availability of reasonably priced renewable energy make power production a low hanging fruit that also has the potential to make an impact in the transportation sector as the electric vehicle movement gains momentum. (*Id*. at 21-22.) Also, increased customer investment in solar and energy storage solutions "has the potential to significantly reduce the evening peak, further extending the benefits of solar." (*Id*. at 22.)

PPL Electric's First DER Management Plan has helped encourage and facilitate renewable energy development, which helps address climate change and sustainability objectives. (PPL MB at 22.) Over the course of the DER Management Pilot Program, PPL Electric has seen large increases in the number of DERs deployed, growing from 3,493 in 2021 to 6,799 in 2023. (*Id.*) Relatedly, by deferring capital investments, generating and non-generating customers will see lower bill increases, and by avoiding bill increases for distribution system upgrades that are needed to accommodate DERs, financial-driven pushbacks against solar can be kept at bay. (*Id.*)

The Second DER Management Plan will further address climate change and sustainability objectives by building upon these foundations and continuing to encourage and facilitate the development of DERs in multiple ways. (PPL MB at 23.) The Second DER Management Plan makes the requirements permanent, thereby cementing the continued benefits of active management and monitoring of DERs, which will continue to grow as more customers install DERs. (*Id*.) Moreover, by removing the 3,000 DER Management device cap, the Plan can ensure that opportunities to help customers avoid distribution system upgrades and encourage renewable energy development are not lost. (*Id.*) Additionally, PPL Electric's Second DER Management Plan would increase the potential DER hosting capacity on its distribution circuits more significantly. (*Id.* at 23-24.) By actively managing DERs' real power output with customer consent, PPL Electric can reduce customers' upfront interconnection costs in exchange for the

ability to curtail the generation output for a few hours each year. (*Id*. at 24.) Such reduction in upfront costs will help encourage new solar installations. (*Id.*)

C. EXCEPTION NO. 2: THE RD ERRS IN FINDING THAT PPL ELECTRIC'S REQUIREMENTS FOR INTERCONNECTING DERS HAVE RESULTED IN "CREDIBLE HARMS" (RD AT 1, 42, 44-46, 49, FINDINGS OF FACT NOS. 43-114; CONCLUSION OF LAW NO. 12)

The RD inappropriately credits the JSPs' evidence purportedly showing harms to solar installers, inverter manufacturers, and customers and fails to properly consider the Company's overwhelming evidence offered in rebuttal, which fully demonstrated that the harms alleged by the JSPs were overstated, flawed, and speculative. (RD at 13-24, 44-45.) Specifically, the RD errs in determining that "[t]he JSPs in particular also raised a number of credible harms resulting from Second DER Management Plan standards" and that "[a]s a result of the standards imposed by PPL, the JSPs demonstrated harm to the JSPs, other solar customers and companies, and the public interest generally." (*Id.* at 44.) Here, the RD fails to conduct a complete analysis of PPL Electric's evidence and concludes that the JSPs "demonstrated" the following harms: "lost sales resulting from PPL's program restrictions"; "failure to account for additional losses to Pennsylvania businesses and customers"; "blocked or limited market entry"; "failure to account for the interference with customers' communications and power generation"; "blocked or impeded competition from third-party grid services providers"; and "failure to account for its device installation voiding customers' warranties and causing thermal damage." (*Id.* at 44-45.) However, the record evidence does not support these conclusory findings. As explained below, PPL Electric has fully rebutted each of these claims, and the RD's findings on these points should be reversed.

1. PPL Electric Fully Rebutted the JSPs' Unsupported and Flawed Allegations Regarding Lost Sales and Interconnection Delays

The RD erroneously concludes that "the JSPs demonstrated . . . lost sales resulting from PPL's program restrictions" and that PPL Electric "fail[ed] to account for additional losses to

Pennsylvania businesses and customers." (RD at 44-45.) In support of these conclusions, the RD incorrectly credits certain JSP arguments related to lost sales and interconnection delays that PPL Electric has demonstrated are unsupported and flawed. (*Id.* at 13-17.)

PPL Electric presented overwhelming evidence rebutting the JSPs' claims concerning adverse effects of the DER Management Pilot Program and Second DER Management Plan on solar and inverter companies' sales and interconnections. The RD overlooks this evidence. For example, PPL Electric demonstrated that:

- Of the 52 alleged lost sales by AHC, at least 6 of the potential sales were for addresses located outside PPL Electric's service territory, meaning AHC overstated its losses by at least 12% and calling into question the reliability of the data used by AHC to generate those figures. (FoF Nos. 43-46, PPL MB at 43.) [17]

- Sun Directed's claims that it had to deny larger-sized single phase commercial projects because it could not use inverters that were "best value" were based on a flawed cost analysis that failed to accurately compare similar inverter system setups. (FoF No. 47; *see* PPL Electric St. No. 2-R at 21-22.)

- Sun Directed's claims that the Pilot Program has limited a third of its business were not based on any actual data about Sun Directed's operations showing that its business is split evenly between three main utilities in Central Pennsylvania or any analysis of Sun Directed's actual revenues or number of projects in those service territories. (FoF Nos. 48-49; PPL Electric St. No. 2-R at 49.)

- Trinity Solar's alleged increased labor costs it attributed to the Pilot Program were grossly exaggerated, and the coordination needed between Trinity Solar and PPL Electric related to SolarEdge inverters was due to inverter issues that were unrelated to the Company's DER Management devices. Indeed, in the vast majority of the instances where Trinity Solar conducted inverter failure investigations in the Company's service territory, there was no DER Management device installed at all. (FoF Nos. 51-53; PPL Electric St. No. 2-R at 29-31.)

- For at least 3 of Greenway Solar's installations where it was asserted that the timeline took longer than 14 calendar days, those installations were delayed because there were missing signatures from the customer on the certificate of electrical inspection, which is required for all interconnections, regardless of whether the Company must install a

[17] At a minimum, the RD's finding that 52 sales were lost should be modified to reflect only potential sales locations within the Company's service territory. (PPL MB at 43.) AHC's inaccurate data also calls into question the reliability of the information it obtained from the prospective customers, how far along in the process the customers decided not to go forward with the sales, and the role in which PPL Electric's DER Management Pilot Program played in the sales being purportedly "lost." (PPL MB 43.)

DER Management device. (FoF Nos. 54-58; PPL MB at 44; PPL Electric St. No. 2-RJ at 40.)

- Enphase's claim that PPL Electric excluded Enphase from the solar market in the Company's service territory for four months in early 2021 is unfounded; rather, Enphase failed to provide all of the required documentation when it originally submitted its inverters for review on January 5, 2021. After Enphase provided the outstanding documentation on February 23, 2021, PPL Electric approved the inverters and added them to the Approved Inverter List only two days later, on February 25, 2021. (FoF Nos. 59-63; PPL MB at 43.)

- SolarEdge's claims regarding increased employee labor costs were not based on actual salary data, and PPL Electric demonstrated that the increased labor costs were largely due to SolarEdge's preferred method for enabling its inverters to be connected to a DER Management device, which required inverters to be enabled individually and upon request. (FoF Nos. 65-67; PPL Electric St. No. 2 at 34-36.)

Despite PPL Electric's evidence in rebuttal on each of these issues, the part of the RD's "Recommendation" section on these matters contains no citations to PPL Electric's testimony or briefs, no acknowledgement that evidence was presented in opposition to these claims, and no explanation as to why the JSPs' flawed arguments were credited while the Company's well-supported evidence in rebuttal was rejected. (RD at 44-45.) Instead, the RD simply concludes that "the JSPs demonstrated harm to the JSPs, other solar customers and companies, and the public interest generally." (*Id.* at 44.) The Commission should reject the RD's findings that are based on the JSPs' flawed claims and should properly rely on the Company's evidence in rebuttal.

In addition, the RD's finding that the Pilot Program caused a $116,000 loss to a single customer is not supported by the record evidence in this case. Specifically, Finding of Fact No. 56 states that "[a] 38-day delay in obtaining PTO cost one Green Way customer $116,000.00, because his ability to obtain financing was pegged to his showing that his system was successfully operating for 30 days." (FoF No. 56.) This finding misstates the evidence presented by the JSPs, which never alleged that the customer did not receive the grant payment at issue but rather that the payment was delayed. As JSP witness Stahlman stated, "[i]n the case of this farmer, that meant

that the farmer was set to receive $116,000 in the form of a REAP grant, which would allow the farmer to repay half of his loan. However, the farmer would not be awarded the grant until the system was operational for 30 days, which means that any delay to PTO would cost this farmer in the form of additional interest payments on his loan." (JSP St. No. 10 at 5-6.) At no point did the JSPs claim that this customer did not receive this grant payment at all, as the RD finds. (*Id.*) As such, the RD's Finding of Fact No. 56 contradicts the evidentiary record and should be reversed.

2. The RD Erroneously Concludes that PPL Electric Has Blocked or Limited Market Entry for Third-Party Aggregation and Blocked or Impeded Competition from Third-Party Grid Service Providers

The RD incorrectly finds that PPL Electric has "blocked or limited market entry" for third-party aggregators and "blocked or impeded competition from third-party grid service providers." (RD at 45.) In support of these conclusions, the RD states that "PPL's hegemony over DER control presents a high degree of uncertainty for prospective third-party aggregators, interfering with their ability to be able to confidently deliver grid services, particularly wholesale electricity market reliability services." (*Id.* at 21.) The RD's conclusions regarding third-party aggregation rely on speculative allegations from the JSPs—none of which engage in third-party aggregation or provide grid services in Pennsylvania—which claim that the Plan could, at some point in the future, create uncertainty or risk for prospective aggregators. (PPL RB at 38; RD at 21-22.).

The Commission should reject the RD's reliance on these speculative claims as grounds for denying PPL Electric's Petition. As explained in the Company's Reply Brief, nothing in the Second DER Management Plan inhibits or precludes DERs from contracting with aggregators or participating in third-party aggregation. (PPL RB at 36-37.) While Federal Energy Regulatory Commission ("FERC") Order 2222 would allow DERs to monetize active (real) power, PPL Electric's active DER management does not materially affect the production of active (real) power. (*Id.* at 37.) Rather, active DER management will address other aspects of DER operations, voltage

regulation principally through reactive power production or absorption, for which no market currently exists. (*Id.*) As such, the Company's active management of DERs cannot be considered as materially affecting DERs' ability to contract with aggregators or participating in third-party aggregation. (*Id.*)

Importantly, PPL Electric has explained that forms of DER aggregation that are capable of being monetized at the bulk power level will not be available in the PPL control zone until 2028, which is the earliest point at which PJM Interconnection LLC's FERC Order 2222 tariff is expected to be implemented. (PPL RB at 37.) Nor has the Commission completed its FERC Order 2222 rulemaking. (*Id.*) Until both of those processes are completed, PPL Electric's proposed Second DER Management Plan cannot truly affect the aggregation of DERs that participate in the PJM wholesale markets. (*Id.*) Considering the lack of a defined market for third-party aggregators in Pennsylvania, the JSPs' speculative concerns about the impact of PPL Electric's proposal on the market for third-party aggregation are not ripe for consideration. (*Id.* at 38.) It is also unclear how PPL Electric's Pilot Program or the proposed Second DER Management Plan can impede competition in a market that does not exist yet in its service territory. (RD at 45.) PPL Electric has stated on the record its willingness to conduct an RFP for the procurement of grid services from third-party aggregators and original equipment manufacturers, which weighs against the claim that PPL Electric is attempting to bar or limit market entry by third-party aggregators' grid services. (PPL RB at 38.) Accordingly, the RD errs by relying on the JSPs' speculative claims regarding third-party aggregators as support for the denial of the Company's Petition.

3. PPL Electric Demonstrated that the JSPs' Claims Related to the DER Management Device's Interference with Communications Were Overstated and Flawed

The RD also errs in agreeing with the JSPs that PPL Electric "fail[ed] to account for the interference [of PPL Electric's DER Management device] with customers' communications and

power generation." (RD at 45.) In reaching this conclusion, the RD relies on the JSPs' allegations that PPL Electric's DER Management device disrupted communications at certain Tesla, Enphase, SolarEdge, and Sun Directed installations. (*Id.* at 19-20.)

The RD disregards the Company's evidence establishing that the JSPs' claims of disrupted communications were flawed and overstated, that the underlying causes were not solely attributable to PPL Electric, or that the Company has since resolved or developed solutions for the issues. (PPL RB at 38-41.) Only 0.51% of customers enrolled in the DER Management Pilot Program have experienced a communication interruption (i.e., 46 out of 9,038 customers as of December 2, 2024). (*Id.* at 38.) Only 8 of those 46 customer locations (i.e., 28 Tesla locations and 18 Enphase locations) that experienced interruptions still had communications issues as of December 2, 2024, and they were all Tesla locations where the Company had been waiting months for Tesla to respond to PPL Electric's proposal for rolling out the solutions needed to resolve those communications issues. (*Id.* at 38-39.) Also, in the select situations when customers experienced communications issues, nearly all the issues were caused by problems with the inverters or DER systems themselves, not the DER Management devices, and any communications issues stemming from the DER Management devices' installation have been resolved. (*Id.* at 39.) Even assuming *arguendo* that the DER Management devices were causing or contributing to all those communications issues, customers have other means by which to monitor their DERs. (*Id.*) As an example, customers with SolarEdge and Enphase inverters can access information about their DER systems through the SolarEdge and Enphase apps, respectively. (*Id.*)

Importantly, no customer had the use of their DER intentionally disrupted due to the DER Management Pilot Program. (PPL RB at 39.) For 8 of the Enphase communications incidents, Enphase provided PPL Electric with the incorrect programming value format, and the Company

resolved the issue for each of the customers' systems once the Company was given the proper format by Enphase. (*Id.*) Nor did the DER Management Pilot Program interfere with the production of Solar Renewable Energy Credits ("SRECs"). (*Id.*) At all times, the customer-generators could still pull the revenue-grade meter data required for the SRECs. (*Id.*) In fact, PPL Electric worked diligently with solar installers and inverters to resolve communications issues and troubleshoot solutions that would work for the JSPs and their customers alike. (See PPL MB at 42-43; PPL RB at 38-41.) For these reasons, the Commission should reject the RD's reliance on allegations that PPL Electric's DER Management device disrupted DER communications as a basis to deny the Petition.

4. PPL Electric Fully Rebutted the JSPs' Claims Related to Voided Warranties and Thermal Damage

The RD erroneously concludes that the Company "fail[ed] to account for its device installation voiding customers' warranties and causing thermal damage." (RD at 45.) The RD incorrectly credits the JSPs' safety-related allegations concerning the installation of PPL Electric's DER Management devices. (*See id.* at 23-24.) However, the RD fails to give weight to the Company's extensive evidence and expert testimony rebutting these claims.

The RD's finding that the JSPs identified 8 instances of thermal damage on inverters with a DER Management device installed contradicts the JSPs' own testimony and fails to consider the serious credibility issues with the JSPs' "evidence." (RD at 23-24.) The JSPs' direct case was founded on the unreliable and uncredible testimony of JSP witness Bobruk. (PPL MB at 46.)[18] Mr. Bobruk's testimony about the 8 alleged incidents depended on SolarEdge's "PPL Case Review," a PowerPoint presentation where each of the purported incidents was listed on a slide

[18] As explained in PPL Electric's Main Brief, JSP witness Dinh also lacked credibility when he testified about his knowledge of how PPL Electric installed its DER Management device. (*See* PPL MB at 50.)

and accompanied by photographs and information about the site. (*Id.*) However, Mr. Bobruk admitted on cross-examination that he did not know who took the photographs or when those photographs were taken and that he does not handle SolarEdge's "return merchant authorization" process, where a SolarEdge employee actually reviews the damaged inverter and determines whether the damaged inverter is covered by the warranty. (*Id.* at 46-47.)[19]

The JSPs attempted to bolster the unreliable testimony of Mr. Bobruk in surrebuttal by introducing the testimony of JSP witness Geller. (PPL MB at 49.) However, Mr. Geller conceded that there was no conclusive evidence to determine that PPL Electric's DER Management device caused or contributed to 3 of the 8 alleged thermal events.[20] (JSP St. No. 13-SR at 8.) In one of these cases, Mr. Geller even admitted that he could only "speculate that PPL caused the thermal damage." (*Id.*) (emphasis added). However, bald assertions, personal opinions, or perceptions, when unsubstantiated by facts, do not constitute evidence.[21] Given Mr. Geller's own admissions that he could not determine that PPL Electric's DER Management device caused 3 of the 8 alleged thermal events, the RD should have rejected the JSPs' evidence of alleged thermal events.

The RD also overlooks PPL Electric's detailed evidence refuting the JSPs' contentions that the Company's DER Management devices caused or contributed to the alleged thermal events. (PPL MB at 51.) After the JSPs made these claims for the first time in their direct testimony, PPL Electric engaged H. Landis Floyd, PE as an outside expert to investigate and address the JSPs' allegations. Mr. Floyd holds a Bachelor of Science degree in Electrical Engineering from Virginia

[19] PPL Electric also rebutted Mr. Bobruk's testimony claiming that SolarEdge first became aware of PPL Electric's method for installing its DER Management devices on SolarEdge inverters in August 2024, detailing numerous instances before that time when PPL Electric provided actual or constructive notice to SolarEdge about its installation method. (PPL MB at 47.)

[20] Specifically, Mr. Geller states that for Case 3884887 he "could not form an opinion to this case, as the photo from the field service tech . . . was too far out" and he "cannot attribute [the damage] to PPL's work," for Case 4141508 he states that he "could not draw a conclusion with regard to this case," and for Case 3456467 he "could not tie PPL's device to physical or thermal damage." (JSP St. No. 13-SR at 8.)

[21] *Pa. Bureau of Corrections v. City of Pittsburgh*, 532 A.2d 12, 14 (Pa. 1987).

Polytechnic Institute and State University, and his professional experience with electrical safety is extensive. (PPL MB at 51.)[22] Mr. Floyd reviewed all the JSPs' testimony and exhibits regarding their electric safety-related claims. In his expert opinion, "PPL Electric's devices, including the way in which they are installed, are well-designed and well-engineered and are consistent with electric industry best practices." (PPL Electric St. No. 12-R at 13.) Mr. Floyd further testified that the device installations do not need to comply the NEC because they are considered "approved" by virtue of the Commission's approval of the Pilot Program, and even if device installations were required to comply, they do not violate any of the NEC provisions cited by the JSPs. (*Id.* at 6-9.) He also stated "there is no credible evidence to support that PPL Electric's DER Management devices are creating an electric arc within the inverters" and that "PPL Electric is, in actuality, maintaining consistent spacing when it installs its DER Management device." (*Id*. at 15, 17.)

Moreover, Mr. Floyd established that the JSPs' "PPL Case Review" is not a properly conducted root cause analysis. (PPL MB at 52.)[23] As Mr. Floyd explained, "[a] properly conducted root cause analysis identifies all possible causes of failure and, using scientific and engineering methods, rules out possible causes that could not have caused the failure being investigated." (PPL Electric St. No. 12-R at 7-8.) "The root cause analysis, as described by Mr. Geller, did not follow this protocol." (*Id*. at 8.)

[22] Mr. Floyd worked for the DuPont Company for over 45 years, with assignments in the design, construction, commissioning, operation, maintenance, and safety of industrial electrical systems. (PPL Electric St. No. 12-R at 1.) He also provided technical and leadership contributions in the technical activities of IEEE since 1984. (*Id.*) Mr. Floyd was elected to IEEE Fellow in 2000 and served on the National Fire Protection Association ("NFPA") and the National Electrical Code ("NEC") technical committee from 1990 to 2014. (*Id.*) Since 2014, he has been an adjunct faculty member of the Advanced Safety Engineering and Management graduate engineering program at the University of Alabama at Birmingham. (*Id.* at 1-2.) In this capacity, he has developed and taught the course Electrical Systems Safety. (*Id.* at 2.) Mr. Floyd also has provided consulting and expert witness services with Electrical Safety Group Inc. since 2005. (*Id.*) Mr. Floyd also is a professional engineer in several states, including the Commonwealth of Pennsylvania. (*Id.*)

[23] Mr. Floyd has performed "[m]ore than 100" root cause analyses in his career. (*Id*. at 7.)

In addition, Mr. Floyd and Ms. Dombrowski-Diamond went through, in detail, the allegations in SolarEdge's "PPL Case Review." (PPL MB at 52.) Both witnesses identified critical flaws with that document and the allegations based thereon. (*Id.* at 52.) For example, Ms. Dombrowski-Diamond explained how the inverter involved with Case 3456467 "did not have the DER Management device connected, so any failure could not be caused by the DER Management device." (*Id.*) (emphasis added). Mr. Floyd and Ms. Dombrowski-Diamond also testified about how PPL Electric's connections cannot reduce the space between the AC terminals and the board, as alleged by JSP witness Geller. (*Id.*)

Further, the RD ignores PPL Electric's evidence demonstrating the steps that the Company has taken to ensure the safety of its DER Management devices. (PPL MB at 44-46.) The Company's DER Management devices undergo a series of internal and manufacturer tests to confirm they are safe for use. (*Id.* at 45.) All the DER Management devices have passed safety tests including tampering, voltage checks, amperage checks, and weatherproof checks and the DER Lab team also performs a series of steps to confirm the DER Management device properly connects and communicates with the DER system. (*Id.*) The Company's DER Management device installations are all performed by thoroughly trained and tested PPL Electric meter technicians, who follow specific steps to install the DER Management device based on the type of inverter, with only qualified and trained personnel are installing DER Management devices in the field. (*Id.*) The RD errs in failing to take any of these safety measures into account.

Finally, the RD disregards the evidence presented by PPL Electric demonstrating that it would be inappropriate to void any customer warranties due to the Company's installation of the DER Management devices. (PPL MB at 44.) PPL Electric explained that the voiding of customers' warranties, particularly after multiple instances where SolarEdge personnel were

advised of the installation method and did not raise any issues, is inappropriate. (PPL MB at 44; PPL RB at 49, n.24.)[24] Thus, the Commission should reject the RD's findings on this subject.

5. The RD Incorrectly Finds that PPL Electric's Inverter Testing Requirements Erode Uniformity and Market Certainty

The RD errs by agreeing with the JSPs that PPL Electric's inverter testing requirements "erode uniformity and the market certainty that the standards are intended to provide." (RD at 45.) Relatedly, the RD agrees with the JSPs' and Sustainable Energy Fund's ("SEF") arguments calling for a statewide proceeding to address the requirements of IEEE 1547-2018 and UL 1741-SB. (*Id.*)

The RD fails to account for the Company's need to test inverters for compatibility with the DER Management device before installation and disregards the evidence showing that the Company's requirements align with the applicable standards. (PPL RB at 41-43.) Regarding compatibility testing, PPL Electric must provide safe, adequate, efficient, and reasonable service. *See* 66 Pa. C.S. § 1501. Therefore, before the Company deploys its DER Management devices in the field, it must ensure that the inverters and its devices are safe to use together. (PPL RB at 42.)

As explained in PPL Electric's Reply Brief, the Company instituted inverter testing requirements, with Commission approval, that align with the requirements under IEEE 1547-2018 and UL 1741-SB, with which every inverter used in Pennsylvania today should already comply. (PPL RB at 41.) While certain entities may have interpreted those communications protocols incorrectly, which led to the creation of interoperability gaps, those gaps have been closed. (*Id.*) Indeed, the Pilot Program helped identify and close those gaps. (*Id.* at 8, 40-42.) Contrary to the RD's findings, the Company is not creating additional requirements for inverter manufacturers,

[24] PPL Electric questions the Commission's authority to declare whether these contractual provisions, i.e., the warranties, were breached, given well-established case law providing that the Commission lacks subject matter jurisdiction over breach of contract questions. *See Adams v. Pa. PUC*, 819 A.2d 631, (Pa. Cmwlth. 2003) (citing *Allport Water Auth. v. Winburne Water Co.*, 393 A.2d 673 (Pa. Super. 1978)) ("The PUC lacks jurisdiction over private contractual disputes.").

but merely requiring that the inverters interconnected to its distribution system adhere to fundamental industry standards.

D. EXCEPTION NO. 3: THE RD ERRONEOUSLY CONCLUDES THAT PPL ELECTRIC'S COST-BENEFIT ANALYSES DO NOT SUPPORT THE COMPANY'S PROPOSAL (RD AT 1, 42-46, 49; FINDINGS OF FACT NOS. 19, 42; CONCLUSION OF LAW NO. 12)

The RD incorrectly determines that the Company's cost-benefit analyses do not support the Second DER Management Plan. (RD at 44, 46.) In particular, the RD "find[s] merit in the parties' criticisms that PPL failed to provide reliable or positive cost-benefit analyses to support its proposal." (*Id.* at 46.) The RD further accepts the JSPs' claim that PPL Electric's cost-benefit analyses "overstat[ed] the amount of benefits PPL's program would provide from incremental hosting capacity." (*Id.*) Also, the RD agrees with the JSPs and Office of Consumer Advocate ("OCA") that the Company's cost-benefit analyses failed to adequately compare the value of active management versus autonomous smart inverter functions. (*Id.* at 44.) The RD states that "[s]uch analyses were one of the stated purposes of the Pilot Program" and that "[w]ithout such analysis, it is not possible to fully evaluate whether PPL's proposed Second DER Management Plan is either reasonable or necessary." (*Id.*) Moreover, according to the RD, the Company's cost benefit analyses were undermined by PPL Electric presenting a new cost-benefit analysis in rebuttal testimony and by the Company's point that "even without benefits the rate impact is 'minimal.'" (*Id.*) The Commission should reject all these findings by the RD.

1. The Company's Overly Conservative and Reliable Cost-Benefit Analysis Shows that the Second DER Management Plan Will Produce Net Benefits of $65.5 Million over the 2025-2030 Period

The Company thoroughly demonstrated that its proposal will produce significant benefits for PPL Electric's ratepayers, interconnecting customer-generators, and electric distribution system well in excess of its costs, with a projected $65.5 million in net benefits over the 2025-

2030 period. (PPL MB at 28-31.) In fact, after parties criticized the scope and methodology of the Company's historical cost-benefit analysis of the Pilot Program, PPL Electric retained Concentric Energy Advisors, Inc. ("Concentric") to conduct a cost-benefit analysis for the Second DER Management Plan. (*Id.* at 29; PPL RB at 14-15.) That cost-benefit analysis demonstrates that the Plan's benefits will exceed its cost significantly. (PPL MB at 29.)

Specifically, based solely on the active management of DERs under the proposed Plan, Concentric determined that between 2025 and 2030, active management would produce $21.4 in net benefits, achieving a cost-benefit ratio of 1.8. (PPL MB at 30.) Concentric projected that the total costs related to active management in that period will total $26.5 million, with active management producing more than $48 million in benefits, including approximately $7.9 million in reduced O&M expense, $13.4 million in avoided distribution infrastructure investments, $18.7 million in energy reduction, and $7.8 million in conservation voltage reduction. (*Id.*) In addition to examining the benefits associated exclusively with active management, Concentric's modeling further projected the benefits attributable to the detailed monitoring of the Company's distribution system enabled by DER Management devices. (*Id.* at 30-31.) Accounting for the monitoring capabilities created by the installation of DER Management devices results in net benefits that are even greater, growing to approximately $65.5 million on a net present value basis, with the monitoring capabilities alone producing an additional $98.6 million in total benefits. (*Id.* at 31.)

These results are overly conservative and reliable. (PPL MB at 37.) In preparing the analysis, Concentric intentionally used moderated assumptions related to the number of truck rolls related to voltage violations and capacitor bank switching, the cost of distribution investments, and the cost of wholesale energy that can be saved through the Plan. (*Id*. at 38-39.) The analysis also conservatively specified that the cost of DER Management devices would only increase over time

and did not allow for the possibility that technological advancements could reduce device costs in the future. (*Id.* at 39.) Furthermore, the cost-benefit analysis included approximately $1 million per year in "other costs" to account for costs that may not have been otherwise recognized. (*Id.*)

The Company also produced a sensitivity analysis that stress-tested the findings of the cost-benefit analysis under various scenarios, including eliminating all benefits except incremental hosting capacity, eliminating half of the incremental hosting capacity, increasing the costs associated with DER Management devices, their maintenance, and the administration of the Plan, as well as a lower DER interconnection forecast. (PPL MB at 31.) Crucially, none of the sensitivities conducted resulted in overall negative net benefits for the proposal, proving that even under unfavorable conditions, the Plan remains projected to achieve net benefits. (*Id.*)

By producing these net benefits, the Company's DER Management Pilot Program and Second DER Management Plan will directly benefit ratepayers through decreased revenue requirements in base rate proceedings. (PPL MB at 35.) Specifically, after accounting for the reduced capital costs and expenses from the Company's DER Management Pilot Program and Second DER Management Plan, the estimated revenue requirement impact in a hypothetical 2025 base rate case would be approximately $4,497,918 lower than without them, which would put a downward pressure on the base rates ultimately adopted in that proceeding. (*Id.*) In fact, all else being equal, the amount of that decrease in the revenue requirement would equal a decrease in the estimated average residential bill of $2.62 per year. (*Id.*) The bottom line is that customers' distribution rates are estimated to be lower with the Company's proposal in place. (*Id.* at 36.)

2. The Cost-Benefit Analysis Does Not Overstate the Benefits of Incremental Hosting Capacity

Contrary to the RD's findings, the cost-benefit analyses do not overstate the benefits of incremental hosting capacity. (RD at 46.) The RD bases this flawed finding on the JSPs'

allegation that PPL Electric witness Wishart double-counted the incremental hosting capacity benefits of "Avoided Distribution Infrastructure Investments" and "Avoided Energy from Incremental Hosting Capacity," on the premise that an interconnecting customer-generator can produce only one of those benefits but not both. (PPL RB at 12.) However, the RD overlooks how the JSPs overstated and mischaracterized Mr. Wishart's testimony at the evidentiary hearing. (*See* Tr. 213-15; PPL RB at 12.)

When asked about this issue at the hearing, Mr. Wishart testified that he was not double counting these benefits. (PPL RB at 12.) "The Company's DER program, based on the achievements of the pilot, is projected to create 256 megawatts of incremental hosting capacity for new DERs, [and] those new DERs will avoid market purchases." (*Id.*) In conducting his cost-benefit analysis, Mr. Wishart "was trying to show the comprehensive impact of all incremental DERs that will be welcomed into the system as a result of the DER management plan." (*Id.*) Indeed, Mr. Wishart "took a total resource cost approach, which is consistent with the way the Pennsylvania Commission has run their [demand-side] management cost benefit analyses." (*Id.*) Using that approach, Mr. Wishart "quantif[ied] all cost and benefits associated with the program, whether they accrue to individual customers or whether they accrue to the system" as a whole. (*Id.* at 12-13.) Thus, Mr. Wishart's analysis was consistent with a Total Resource Cost ("TRC") Test approach, which the Commission has utilized pursuant to Act 129 of 2008 for well over a decade. *See* 66 Pa. C.S. § 2806.1(a)(3); (PPL RB at 13).

Mr. Wishart also never stated, as alleged in the JSPs' Main Brief, that "it is inappropriate to count avoided energy costs" when an interconnection applicant would have paid for the "avoided infrastructure investments," nor did he acknowledge that "a specific DER cannot produce both benefits." (JSP MB at 28-29; PPL RB at 13.) The two passages from the transcript that the

JSPs cite about Mr. Wishart's treatment of avoided energy costs are taken out of context and actually do not support the JSPs' claims.[25] (PPL RB at 13.)

As for the avoided distribution infrastructure investments, Mr. Wishart only stated that it is a "fair statement" that there "would be no grid upgrades for a DER that didn't interconnect." (PPL RB at 13.) Additionally, the JSPs' scenario only contemplates a single interconnection applicant that would be unwilling to pay for the distribution system upgrades. (*Id.*) However, the Commission employs a first come, first served interconnection queue process, where multiple projects could be seeking to interconnect.[26] (*Id.* at 13-14.) Therefore, the JSPs fail to account for situations where projects behind that interconnection applicant would have been willing to pay for the distribution system upgrades but avoided those costs because the Second DER Management Plan increased the distribution circuit's hosting capacity. (*Id.* at 14.)

---

[25] Below are full quotations of the exchanges referenced by the JSPs (i.e., page 214, line 15 and page 216, lines 5-8):

> Q. If, on the other hand, some of these DERs would have been interconnected regardless of PPL's plan, then wouldn't those DERs provide the same avoided energy costs as you're claiming as a benefit attributable to PPL's plan?
> A. Yes, but I was trying to show the comprehensive impact of all the incremental DERs that will be welcomed into the system as a result of the DER management plan.
> . . .
> Q. So it [is] not accounted for in your analysis. Correct?
> A. Correct. I did not account for any lost sales in my analysis. But again, going back to the TRC approach that I took, if you look at DSM program evaluation using the TRC construct, they don't include the due [sic] sales associated with DSM and [sic] those analysis either.

(Tr. 214, lines 1018; Tr. 216, lines 5-12.)

[26] 52 Pa. Code §§ 75.13(a) (stating that net metering is offered a "first come, first served" basis), 75.22 (defining "queue position"), 75.37(c)(5) (setting forth the provisions for assignment and retention of interconnection applicant's queue position after a project is not approved under the Level 1 review procedures), 75.38(c)(3), (g) (providing the Level 2 review procedures' assignment and retention of queue position provisions), 75.39(b)(3) (setting forth the Level 3 review procedures' provision for assignment of queue position), 75.39(d) (stating that an "interconnection system impact study" must "consider all generating facilities that, on the date the interconnection system impact study is commenced, are directly interconnected with the EDC's system, have a pending higher queue position to interconnect to the system, or have a signed interconnection agreement"), 75.40(b), (c)(7)(ii), (f) (providing the Level 4 review procedures' provisions governing assignment and retention of queue position).

3. The RD Fails to Recognize Why PPL Electric's Cost-Benefit Analyses Utilized Different Methodologies

In attempting to criticize the Company's cost-benefit analyses for the DER Management Pilot Program and the Second DER Management Plan, other parties observe that there were different methodologies and assumptions used in those two cost-benefit analyses. (*See* OCA MB at 26; JSP MB at 26-27; OSBA MB at 7.) Other parties argued that those differences raise concerns about the cost-benefit analyses' reliability. (OCA MB at 26; JSP MB at 26-27.) The RD errs in agreeing with those parties. (RD at 46.)

PPL Electric explained in detail why its cost-benefit analyses utilized different methodologies. (PPL RB at 14-15.) PPL Electric's initial cost-benefit analysis was prepared as part of its Program Year 2 Annual Report for the DER Management Pilot Program. (*Id.* at 14.) That historical cost-benefit analysis relied upon the data that was available at that time and was solely focused on the costs and benefits of the DER Management Pilot Program to date. (*Id.*)

Conversely, after the Company reviewed the other parties' direct testimony about that initial cost-benefit analysis, PPL Electric retained Concentric to conduct a complete and detailed cost-benefit analysis of the Second DER Management Plan. (PPL RB at 14.) In so doing, PPL Electric tried to respond to the other parties' criticisms about the initial cost-benefit analysis. (*Id.* at 15.) For example, PPL Electric witness Wishart noted how his cost-benefit analysis "addresses those concerns and features detailed calculations that provide intervenors an increased opportunity for review," like how Office of Small Business Advocate ("OSBA") witness Farr was able to "us[e] the Company's [cost-benefit analysis] model to run his own sensitivity scenarios." (*Id.*)

In addition, the fact that Mr. Wishart's cost-benefit analysis used different, more conservative assumptions than the initial cost-benefit analysis does not mean that the initial cost-benefit analysis was flawed. (PPL RB at 15.) As Mr. Wishart explained, "While it is true that my

independent analysis of the benefit of avoided truck rolls differed from that of the DER Management Pilot Program, my more conservative assumptions, which decrease the calculated benefit, lower the overall [cost-benefit analysis] results compared to what those results would have been absent this conservative approach." (*Id.*) Therefore, "the difference in methodologies in isolation should not be the focus"; rather, the "[f]ocus should be placed on evaluating the reasonableness of an assumption and its impact on the analysis." (*Id.*) Here, "the methodology and assumptions used in the [cost-benefit analysis] are both robust and reasonable." (*Id.*)

4. PPL Electric Explained Why the Company Did Not Present a Separate Cost-Benefit Analysis for Autonomous Smart Inverter Functions

Although PPL Electric witness Wishart did not analyze autonomous settings separately in his cost-benefit analysis, the reason was that IEEE Standard 1547-2018 had been incorporated into the Commission's regulations for DERs after the Commission approved the Settlement in the First DER Management Plan proceeding. (PPL RB at 19.) This means that smart inverters with their voltage regulations, frequency support, and ride-through capabilities are required for all new DER interconnections. (*Id.*) Given that autonomous settings became the baseline since the Settlement was approved, there was no value in conducting an analysis on smart inverters with autonomous operation that are already required by the Commission's regulations. (*Id.*; PPL MB at 40.)

Also, the RD's position creates a false competition between already-required autonomous smart inverter functionality and the Company's proposed active management of DERs. (PPL RB at 19.) The reality is that active management is complementary to the autonomous operation of smart inverters. (*Id.*) Active management enhances autonomous operation by updating settings such as Volt/VAR curves and in certain circumstances temporarily overriding the autonomous setting based on system conditions. (*Id.*) Commission approval of PPL Electric's Second DER Management Plan would not eliminate or diminish the benefits of autonomous operation but would

add to the total net benefits that can be realized through IEEE 1547-2018. (*Id.*) Thus, the Commission can fully evaluate the Plan's merits without a separate cost-benefit analysis about the autonomous smart inverter functions that are already required by the Commission's regulations.

5. The Company's Evidence Showing a Minimal Impact on Customers' Bills Even After Excluding All Benefits Does Not Undermine the Cost-Benefit Analyses

The RD errs in stating that the cost-benefit analyses are undermined by PPL Electric's statement that its proposal would have a minimal rate impact even after excluding all benefits. (RD at 46.) PPL Electric presented evidence that "[s]etting aside the reduced capital costs and expenses from the Company's DER Management Pilot Program and Second DER Management Plan, the estimated revenue requirement impact is approximately $6,382,157, resulting in an estimated average residential bill increase of $4.83 per year" based on a hypothetical 2025 base rate case. (PPL MB at 36.) The Company did not present this evidence due to a lack of confidence in the cost-benefit analyses. Rather, it was important to show the proposal's absolute costs and the impact on customers' rates because not all benefits of the proposal were quantifiable (e.g., safety benefits). Therefore, PPL Electric properly pointed out that the rate impact is minimal when solely looking at the costs of the Second DER Management Plan. (*Id.*)

E. EXCEPTION NO. 4: AT THE VERY LEAST, THE COMMISSION SHOULD APPROVE THE SECOND DER MANAGEMENT PLAN WITH REASONABLE MODIFICATIONS TO ADDRESS CONCERNS ABOUT THE SCOPE OF THE COMPANY'S PROPOSAL (RD AT 1, 42-46, 49; CONCLUSION OF LAW NO. 12)

Even if the Commission gives credence to other parties' concerns with PPL Electric's proposal, the Commission should not deny the Second DER Management Plan wholesale like the RD. (RD at 42, 46, 49; PPL MB at 55.) The significant issues that the Company's proposal can address, such as safety, reliability, and resource adequacy, are too immediate and dire to warrant

denying the whole proposal. Instead, the Commission should approve the proposal with reasonable modifications to address concerns about the proposal's scope.[27] (PPL MB at 55.)

PPL Electric and other parties presented several alternatives to complete approval of the Second DER Management Plan. (PPL MB at 53-59.) In the Company's Main Brief, PPL Electric explained that, at the very least, the Second DER Management Plan should not be denied outright if the Commission agrees with the OCA's criticisms about the Plan's scope. (*Id.* at 55.) Rather, the Commission should approve the Second DER Management Plan and direct the Company to modify the Plan such that an appropriate threshold for determining when DERs must participate in active management or have the option to participate in active management. (*Id.*) Indeed, PPL Electric noted how JSP witness White stated: (1) "DER management and flexible interconnection only become necessary when the distribution grid is highly saturated with DER"; and (2) the circuit would be highly saturated with solar DERs if they equaled 100% of the "minimum daytime load." (*Id.* at 55 n.26.) Thus, even one of the staunchest critics of PPL Electric's proposal recognizes there is a threshold when management of DERs becomes necessary.

Moreover, PPL Electric fully rebutted the JSPs' meritless claims that the Company's DER Management devices have caused or contributed to alleged thermal events. *See* Section II.C, *supra*. However, to the extent that the RD factored those allegations into its recommendation to reject the Second DER Management Plan, the remedy is not to deny the Plan or cease the installation of DER Management devices on SolarEdge inverters. (PPL MB at 59.) Instead, PPL Electric should be directed to use a different device, method of installation, or mode of communication (such as cloud-based communications), similar to how PECO Energy Company

[27] The Commission took a similar approach with the DSIC when it first approved in part and denied in part the petitions and set forth parameters for the tariff supplements to establish DSIC mechanisms, including various customer protections. *Philadelphia Suburban DSIC*, 1996 Pa. PUC LEXIS 211, at 17-28; *PAWC DSIC*, 1996 Pa. PUC LEXIS 182, at *17-30.

changed the type of smart meters it was deploying under its Commission-approved Smart Meter Plan after certain issues arose with the ones it was using.[28] (*Id.*)

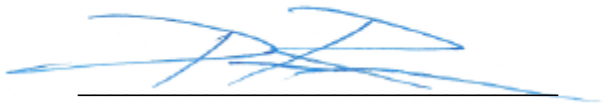
Likewise, the Company indicated in its rejoinder testimony that it is willing to investigate cloud-based communications as an alternative to the DER Management devices. (PPL MB at 36.) The Company believes that based on its prior work setting up servers with JSP member Enphase, it could seamlessly incorporate cloud-based communications through the Enphase modems into its ADMS/DERMS. (*Id*.) Because cloud-based communications would not require the procurement, installation, and maintenance of a DER Management device, the largest driver of cost identified in the cost-benefit analysis could be reduced (the capital cost and maintenance of DER Management devices account for $69.8 million of the $81 million in projected total costs under the cost-benefit analysis of active management and monitoring). (*Id.*)

In addition, the OCA recommended in its direct testimony that the Commission approve the Second DER Management Plan with certain modifications, namely that the Commission exempt all DERs with a capacity of 200 kW or less from mandatory participation in active management and provide those DERs with the option to participate in active management.[29] (PPL MB at 53.) The OCA also made recommendations for the Company to file a DER Orchestration Plan and provide an evaluation of three different flexible interconnection approaches within 12 months of the Commission's Order in this proceeding. (*Id.*) However, despite PPL Electric making no programmatic changes to its proposal in its rebuttal testimony and expressing its

[28] *See Frompovich v. PECO Energy Co.*, Docket No. C-2015-2474602 (Order entered May 3, 2018) (citing *Petition of PECO Energy Company for Approval of its Smart Meter Technology Procurement and Installation Plan*, Docket No. M-2009-2123944 (Recommended Decision issued July 12, 2013)).

[29] As alleged support, OCA witness Nelson testified that "[c]onsidering the lower cost and potential benefits of enabling DER management through the 2nd DER plan, compared to the costs of traditional utility-controlled switching, it may be reasonable to control DER smaller than 500 kW within PPL's system"; however, he "recommend[ed] that the initial threshold for mandatory control and monitoring be set at 200 kW." (OCA St. 1 at 31-32) (emphasis added).

willingness to file a DER Orchestration Plan, the OCA changed its recommendation at the surrebuttal stage and recommended that the Second DER Management Plan be denied. (*Id.*) Nonetheless, the RD could have explored setting a nameplate capacity threshold for determining which DERs must participate or have the option to participate in the Plan. (*See* RD at 42-46.)



Furthermore, OSBA recommended that the Pilot Program be extended or paused until a cost benefit framework to analyze the costs and benefits of the Second DER Management Plan is established and approved by the Commission. (PPL MB at 55.) Alternatively, OSBA proposed that the term of the DER Management Plan be limited to three years and for PPL Electric to be required to file reports on the costs and benefits of the Second DER Management Plan annually with the Commission. (*Id.*) Similarly, SEF recommended that the Commission deny the Second DER Management Plan but continue the Pilot Program "with the goal of gathering and analyzing more data" related to the costs and benefits of DER management. (*Id.* at 56.) Although OSBA's and SEF's recommendations were opposed by PPL Electric, they certainly are preferable to the RD's complete rejection of the Second DER Management Plan. At a minimum, those recommendations would enable the Company to continue monitoring and actively managing the DERs that already have DER Management devices installed.

For these reasons, the Commission should, at the very least, approve the Plan with reasonable modifications that address concerns with the Company's proposal.

III. CONCLUSION

WHEREFORE, the Pennsylvania Public Utility Commission should grant PPL Electric Utilities Corporation's Exceptions and enter a Final Order consistent with these Exceptions that approves the Company's Second DER Management Plan, approves the Company's proposed tariff modifications, and grants any other approvals or authorizations that are necessary to implement PPL Electric's Second DER Management Plan.

REBUTTAL TESTIMONY OF

GUY SHARFMAN

SECTION I.

INTRODUCTION AND PURPOSE

Q: PLEASE STATE YOUR NAME, TITLE, EMPLOYER AND BUSINESS ADDRESS.

A: My name is Guy Sharfman. I am a Co-Founder and Vice President of Market Analytics at Intelometry, Inc., a systems, data and consulting company specializing in the electric industry. My business address is 5373 W Alabama St., Suite 400, Houston, Texas 77056.

Q: ON WHOSE BEHALF ARE YOU TESTIFYING?

A: I am testifying on Behalf of the Customer-Generator Coalition ("CGC").

Q: ARE YOU THE SAME GUY SHARFMAN THAT PREVIOUSLY SUBMITTED TESTIMONY IN THIS DOCKET?

A: Yes.

Q: WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A: The purpose of my rebuttal testimony is to provide additional details requested by PPL in interrogatories regarding the millions of dollars CGC members have committed to PPL system upgrades for the purpose of interconnection, as well as building and operations. I also provide additional detail requested by PPL regarding CGC expected revenue losses

should the PPL proposal be approved. Finally, I provide additional details on my proposal in my Direct Testimony that certain projects be grandfathered should the Commission approve the PPL proposal.

Q: CAN YOU PLEASE SUMMARIZE THE KEY POINTS IN YOUR REBUTTAL TESTIMONY?

A: The key points of my Rebuttal Testimony are the following:

I. CGC members have paid millions of dollars for PPL system upgrades as a prerequisite to interconnection & building & operations.

II. Approval of the PPL proposal will result in millions in lost revenue to CGC members.

III. If the PPL proposal is approved, existing projects should be grandfathered.

Q: ARE YOU SPONSORING ANY ACCOMPANYING EXHIBITS OR SCHEDULES SUPPORTING YOUR TESTIMONY?

A: Yes, I am sponsoring the following exhibits:

Exhibit CGC Rebuttal 1.0 Confidential:	Costs Incurred by CGC Members for PPL System Upgrades as a Prerequisite to Interconnection
Exhibit CGC Rebuttal 2.0 Confidential:	Costs Incurred by CGC Members for Building and Operations

Exhibit CGC Rebuttal 3.0 Confidential:	CGC Member Expected Lost Revenue if the PPL Proposal is Approved

SECTION II.

CGC MEMBERS HAVE PAID MILLIONS OF DOLLARS FOR PPL SYSTEM UPGRADES AS A PREREQUISITE TO INTERCONNECTION & HAVE COMMITTED SIGNIFICANT CAPITAL TOWARD CONSTRUCTION & OPERATIONS

Q: DID CGC MEMBERS PROVIDE DETAIL ON THEIR COSTS INCURRED FOR PPL SYSTEM UPGRADES AS A PREREQUISITE TO INTERCONNECTION?

A: Yes. As part of the CGC's response to PPL's second set of interrogatories, ten CGC members provided their PPL system upgrade costs as a prerequisite for interconnection. These costs were broken down by money that has already been paid and the outstanding balance still owed.

Q: DO THE CGC MEMBERS HAVE TO PAY PPL TO EFFECTUATE INTERCONNECTION?

A: Yes. Prior to interconnection, PPL provides each customer-generator with an "Interconnection Impact Review", or IIR, that spells out what upgrades are needed to the PPL system prior to effectuating the interconnection.

Q: HOW MUCH MONEY HAVE THE CGC MEMBERS PAID TO PPL FOR THESE SYSTEM UPGRADES REQUIRED BY THE IIR?

A: CGC member data shows that CGC members have already paid a total of at least $12,070,889 to cover such costs, with a remaining balance still owed of at least $38,762,776. In total, CGC members are on the hook to pay PPL a minimum of $50,833,665 to cover the cost of system upgrades as a prerequisite for interconnection.[1]

Q: ARE THESE PAYMENTS TO PPL MADE TO SATISFY THE IIR REQUIREMENTS IN ADDITION TO THE COST OF PROCURING, INSTALLING, AND OPERATING THE FACILITIES?

A: Yes. The customer-generator is still responsible for also paying for land, engineering, procurement, permitting, installation/construction, and operations.

Q: HOW MUCH MONEY HAVE THE CGC MEMBERS ALREADY SPENT TOWARD DEVELOPING THESE PROJECTS IN RELIANCE ON EXISTING TARIFFS AND THE ALTERNATIVE ENERGY PORTFOLIO STANDARDS ACT ("AEPS ACT")?

A: CGC member data shows that CGC members have already paid at least $48,914,485 to cover such costs, with a remaining balance still owed of at least $340,516,623. In total, CGC members are on the hook for a minimum of $389,431,108 to cover building and operation costs[2].

[1] *See Exhibit CGC Rebuttal 1.0 Confidential.*
[2] *See Exhibit CGC Rebuttal 2.0 Confidential.*

Q: HOW MUCH CAPITAL HAVE THE CGC MEMBERS COMMITTED TOWARD DEVELOPING PROJECTS IN THE PPL OPERATING TERRITORY IN RELIANCE OF EXISTING TARIFFS AND AEPS?

A: The known amount committed by CGC members to cover such costs totals a minimum of $440,264,773, or nearly half a billion dollars. Since this value does not encompass all CGC members, the total actual costs is likely much higher.

Q: DOES THIS TOTAL REPRESENT ALL SIMILARLY-SITUATED CUSTOMER-GENERATORS?

A: No. This only represents our clients. There are many other similarly-situated customer-generators not accounted for.

SECTION III.

APPROVAL OF THE PPL PROPOSAL WILL RESULT IN MILLIONS IN LOST REVENUE TO CGC MEMBERS

Q: IN YOUR DIRECT TESTIMONY YOU ARGUED THAT APPROVAL OF THE PPL PROPOSAL WILL LEAD TO CGC PROJECT WRITE DOWNS AND PROJECT CANCELATIONS. DID CGC MEMBERS PROVIDE DATA ILLUSTRATING THIS?

A: As part of CGC's response to PPL -INT II-1 and PPL -INT II-2 six CGC members provided both their expected revenues under current rules and under PPL's proposed rules.

Q: WHAT DOES THIS DATA SHOW?

A: The data shows that the six CGC members that responded are collectively expecting to lose $243,043,443 if the PPL proposal went into effect.[3] This also means that expected lost revenue for the full CGC membership is likely much higher. The data further shows that expected revenue losses across the six respondents average 55%. One CGC member even stated that their projects will no longer be viable if the PPL proposal goes into effect, and so would be canceled if the Commission rules in PPL's favor with no changes.

SECTION IV.

IF THE PPL PROPOSAL IS APPROVED THERE EXISTING PROJECTS SHOULD BE GRANDFATHERED

Q: IN YOUR DIRECT TESTIMONY, YOU ARGUED THAT, SHOULD THE COMMISSION APPROVE THE PPL PROPOSAL, CUSTOMER-GENERATOR PROJECTS SHOULD BE GRANDFATHERED. WHAT DO YOU MEAN BY GRANDFATHERED?

A: By "grandfathered" I mean that, should the Commission approve the PPL proposal, qualifying projects would remain as part of the GSC-1 class even if the new MRPL derivation would put them in the GSC-2 class. In this manner they would continue to receive GSC-1 solar credits as opposed to GSC-2 solar credits.

Q: WHY SHOULD QUALIFYING PROJECTS BE GRANDFATHERED?

[3] *See Exhibit CGC Rebuttal 3.0 Confidential.*

A: As previously stated in this testimony, CGC members have already collective committed to nearly half a billion dollars in expenditure for PPL system upgrades, building and operations at the very minimum. CGC members committed to these investments based on the existing PPL definition of the GSC-1 customer class and the ability of GSC-1 customer-generators to receive GSC-1 solar credits. GSC members estimate that PPL's proposal to move certain GSC-1 customer-generators to the GSC-2 class would result in lost revenue of over $243 million across projects at the very minimum. Approving the PPL proposal without grandfathering provisions would mean that CGC members were lured to build solar generation in PPL's service territory under false pretense, and thus they should be made whole.

Q: SHOULD THE PPL PROPOSAL BE APPROVED, WHICH PROJECTS SHOULD QUALIFY FOR GRANDFATHERING?

A: Projects that apply for PPL interconnection on or before July 4, 2026, should be grandfathered.

Q: WHY DO YOU BELIEVE JULY 4, 2026 SHOULD BE THE CUTOFF DATE FOR GRANDFATHERING?

A: July 4, 2026 is a fitting date from two perspectives. First**,** as per the current docket schedule, the Commission is expected to rule on the PPL proposal prior to that date. Secondarily, this date aligns with changes to federal solar crediting rules as stipulated by the One, Big, Beautiful Bill Act ("OBBBA"). The OBBBA stipulates that solar projects beginning construction after July 4, 2026, will no longer qualify for federal tax credits. In this manner,

using July 4, 2026, as the grandfathering cutoff date would align state and federal rules on solar crediting.

Q: HAVE OTHER INTERVENERS PROPOSED GRANDFATHERING PROVISIONS IN THIS DOCKET?

A: Yes. Justin Barnes submitted Direct Testimony on behalf of the Joint Solar Advocates ("JSA") where he also proposed that projects meeting a set criterion be grandfathered.

Q: WHAT DOES THE JSA PROPOSE FOR GRANDFATHERING PROJECTS?

A: The JSA proposes two levels of grandfathering, one for what the JSA terms "Existing Facilities" and another for what the JSA terms "Transition Facilities."

The JSA defines *Existing Facilities* as projects "that were either operational or for which interconnection upgrade work orders are under construction as of the date of PPL's rate filing in this proceeding."[4] Grandfathered Existing Facilities will remain in the GSC-1 class even if the new definition of the MRPL would place them in the GSC-2 category.

The JSA defines *Transition Facilities* as projects with pending interconnection requests submitted prior to the date of PPL's rate application "who make a one-time election to both: (i) make a nonrefundable deposit of 50% of the Company's estimated costs of distribution upgrades, and (ii) transfer AECs produced by the project to PPL at no cost"[5]. Such projects

[4] See JSA Witness Barnbes Direct Testimony, Page 37, lines 19-21
[5] See JSA Witness Barnbes Direct Testimony, Page 38, lines 2-7

would remain in their current customer class even if PPL's proposed rule changes would move them to a different class.

Q: DO YOU AGREE WITH THE JSA ON THEIR PROPOSAL FOR EXISTING FACILITES?

A: I commend the JSA for highlighting the importance of grandfathering *Existing Facilities* should the Commission approve the PPL proposal. However, I do not agree that September 30, 2025, the date PPL made their rate filing, should be the cutoff date for grandfathering these projects.

Q: WHY IS SEPTEMBER 30, 2025, NOT SUITABLE TO SERVE AS THE CUTOFF DATE FOR GRANDFATHERING?

A: There is nothing significant about a filing date, so the purpose of using a PPL filing date as a grandfathering marker is not clear to me. Also, the PPL filing is a technical proposal. On the day it was filed no market player had enough information or time to even analyze it, much less react to it. Again, I believe the grandfathering cutoff date should be July 4, 2026.

Q: DO YOU AGREE WITH THE JSA ON THEIR PROPOSAL FOR TRANSITION FACILITES?

A: I do not agree with the JSA that projects with pending interconnection requests submitted prior to the date of PPL's rate application should be considered *Transition Facilities*.

Q: WHY NOT?

A: There are CGC members who have been waiting years for PPL to approve their interconnection requests. Those projects shouldn't be deprived of full grandfathering because of this delay.

Q: DO YOU HAVE ANY OTHER ISSUES WITH THE JSA'S PROPOSED TRANSITION FACILITES?

A: Well, moving pending interconnection projects from the *Transition Facilities* category to the *Existing Facilities* category, pretty much wipes out the entire *Transition Facilities categories.* That notwithstanding, I disagree with the JSA's view that any project should be forced to surrender their Alternative Energy Credits ("AEC") to PPL at no cost. Doing this would set a bad precedent and would deny companies that played by the rules a fundamental aspect of their revenue.

Q: DOES THIS CONCLUDE YOUR TESTIMONY?

A: Yes.

VERIFICATION

I, GUY SHARFMAN, hereby state that the facts above set forth are true and correct (or are true and correct to the best of my knowledge, information and belief) and that I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa.C.S. § 4904 (relating to unsworn falsification to authorities).

SURREBUTTAL TESTIMONY OF

GUY SHARFMAN

I. PURPOSE AND SCOPE OF SURREBUTTAL

Q: PLEASE EXPLAIN THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY IN THIS PROCEEDING.

A: My surrebuttal testimony responds to the rebuttal testimonies of PPL Electric Witness, Andrew Castanaro, PPL Electric Statement No. 15-R, and intervenors, Office of Consumer Advocate ("OCA") Statement No. 6R, Zachary F. Teti, and Office of Small Business Advocate ("OSBA") Statement No. 1-R, Mark D. Ewen.

Q: ARE YOU OFFERING ANY NEW TARIFF PROPOSALS OR ALTERNATIVE RATE DESIGNS IN THIS SURREBUTTAL TESTIMONY?

A: No.

II. RESPONSE TO PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO

Q: PPL WITNESS CASTANARO CLAIMS THAT PPL IS ONLY ADVOCATING FOR THEIR PROPOSAL BECAUSE IT "PROTECTS NON-CUSTOMER GENERATORS." HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 8, LINES 19-22 AND PAGE 9, LINES 1-8)

A: I disagree with Mr. Castanaro's assertion.

Q: PLEASE EXPLAIN THE BASIS FOR YOUR DISAGREEMENT.

A: PPL has not presented quantitative evidence demonstrating that GSC-1 non-customer-generators are being harmed under the current net metering and rate design framework. In particular, PPL has not shown that customer-generator participation under GSC-1 results in higher procurement costs or otherwise causes adverse rate impacts to non-participating customers.

To the contrary, customer-generator facilities reduce the amount of generation PPL must procure through wholesale auctions. Solar generation can contribute energy during certain peak periods and can lower wholesale market clearing prices. Reduced procurement volumes and lower peak prices tend to affect the costs PPL incurs to serve load. Because payments to GSC-1 customer-generators are tied to PPL's avoided procurement costs, any reduction in those costs flows through to all customers. Based on the information in the

record, it is not evident that customer-generators impose net costs on non-generating customers.

In addition, Exhibit CGC_Surrebuttal_1.0 reflects a public statement by PPL leadership regarding the Company's support for new generation development in Pennsylvania. I do not offer an opinion on corporate strategy or motive. I reference this exhibit only to show that PPL's asserted justification for MRPL in this proceeding should be evaluated based on the quantitative and operational evidence in the record, rather than assumed. PPL has not provided record evidence establishing a causal link between GSC-1 customer-generators and harm to non-customer-generators.

Q: MR. CASTANARO CLAIMS THAT CGC MEMBERS ONLY AIM TO "CONTINUE PROFITING FROM AN INFLATED PTC". HOW DO YOU RESPOND?

A: I do not agree that the record supports that characterization.

Q: PLEASE EXPLAIN YOUR RESPONSE

A: PPL Witness Castanaro has not provided quantitative evidence demonstrating that the current Price To Compare ("PTC") is inflated or that it results in harm to non-customer-generators under existing PPL tariffs. Nor has PPL presented evidence quantifying the alleged level of profit earned by CGC members under current rules, or how that level would materially change under PPL's proposed MRPL framework.

CGC members have made substantial long-term capital investments in PPL's service territory, including significant expenditures on interconnection-related upgrades that are now owned and controlled by PPL. Those investment decisions were made in reliance on the tariff structures and crediting mechanisms in effect at the time, including the PTC design approved by the Commission.

From an economic standpoint, CGC members are not seeking preferential treatment or additional benefits beyond what the existing tariff provides. Rather, they seek continued application of the same tariff framework that informed their original investment decisions. The record does not demonstrate that maintaining the existing PTC structure results in unjust or unreasonable outcomes for non-participating customers.

Finally, customer-generators contribute distributed generation resources that advance the Commonwealth's Alternative Energy Portfolio Standards ("AEPS") and reduce the amount of centrally procured generation needed to serve load. These effects are relevant to evaluating whether the current PTC is excessive or misaligned with system costs. Based on the evidence presented, I do not find support for the claim that CGC members are merely seeking to preserve an "inflated" credit.

Q: MR. CASTANARO CLAIMS THAT ANNUAL CASH-OUTS FOR THE SMALL C&I CUSTOMER CLASS WILL CAUSE THE PTC TO RISE BY $0.01806 PER KWH TO $0.0836 PER KWH BY 2029. HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 10, LINES 18-22 AND PAGE 11, LINES 1-10)

A: I do not agree that the record supports that projection.

Q: PLEASE EXPLAIN THE BASIS FOR YOUR RESPONSE.

A: Mr. Castanaro has not identified the specific assumptions, inputs, or market forecasts underlying this projected increase in the PTC. In particular, the rebuttal testimony does not explain how increased annual cash-outs translate into a sustained increase in the underlying procurement costs from which the PTC is derived.

As discussed in my direct testimony, the PTC is a function of PPL's avoided procurement costs. Increased customer-generation reduces the volume of energy PPL must procure through wholesale markets. All else equal, lower procurement volumes and peak demand tend to exert downward pressure on procurement costs, not upward pressure.

Moreover, the projection presented by Mr. Castanaro does not explain how prevailing market forecasts and procurement inputs were incorporated into the projection. Without a clear explanation of how those market conditions were incorporated, it is not possible to assess the reliability of the projected PTC increase.

Absent a demonstrated causal link between annual cash-outs and rising procurement costs, and without transparency into the modeling assumptions used, I do not find sufficient support in the record for the projected increase in the PTC cited by Mr. Castanaro.

Q: MR. CASTANARO CLAIMS THAT BECAUSE CGC MEMBER REVENUE ESTIMATES GREATLY DECLINE IF THE PPL PROPOSAL WENT INTO EFFECT, IT MEANS THAT THE PPL PROPOSAL IS BENEFICIAL. HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 11, LINES 12-22)

A: I do not agree that a decline in CGC member revenues, standing alone, demonstrates a benefit to customers.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: It is expected that a material change to the solar crediting structure under which CGC members made investment decisions would reduce projected revenues for those projects. However, a reduction in developer revenues does not, by itself, establish that customers will experience corresponding benefits. The record does not demonstrate that reduced CGC revenues translate into lower procurement costs, improved system reliability, or reduced rates for PPL customers. Without such a showing, the conclusion that the proposal is beneficial to customers is not supported.

Exhibit CGC_Rebuttal_3.0 (Highly Confidential) indicates that at least one CGC member would cancel projects if PPL's proposal were implemented. Project cancellations would

reduce distributed generation in PPL's service territory, which could increase PPL's future reliance on wholesale procurement and potentially offset any assumed short-term effects on crediting levels. Moreover, the exhibit reflects information from only a subset of CGC members, and does not account for non-CGC-affiliated customer-generators. As a result, the full extent of potential project cancellations and their system-level impacts is not captured in PPL's analysis.

Absent evidence that reduced customer-generation revenues produce measurable and durable benefits for customers, I do not agree that the projected decline in CGC member revenues supports the conclusion advanced by Mr. Castanaro.

Q: MR. CASTANARO CLAIMS THAT CGC INVOLVEMENT IN THIS CASE PROVES THAT CGC MEMBERS SHOULD HAVE THE TOOLS TO ANALYZE AND EVALUATE RISK ASSOCIATED WITH MARKET VOLATILITY. HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 14, LINES 15-22, AND PAGE 15, LINES 1-3)

A: I do not agree that CGC's participation in this proceeding supports that conclusion.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: The issue raised in this proceeding concerns regulatory and tariff uncertainty, not routine market volatility. CGC members intervened because PPL's proposal would alter the regulatory framework governing GSC-1 customer-generators in a way that was not contemplated at the time investments were made.

There is an important distinction between exposure to market price risk and exposure to regulatory risk. Even if a customer-generator has the data, systems and expertise required to assess market risk, that is very different from assessing the risk of a material change to tariff structures or crediting mechanisms previously approved by the Commission that drove long-term investment decisions.

With respect to sophistication, PPL has not presented evidence demonstrating that customer-generators, as a class, possess the data access, analytical tools, or operational capabilities necessary to model or manage exposure to highly volatile wholesale markets. Nor has PPL shown how many customer-generators would be capable of doing so if subjected to market-based risk under the proposed MRPL framework. Absent such evidence, I do not agree that CGC's involvement in this case establishes that customer-generators should reasonably be expected to assume wholesale market volatility risk as a consequence of PPL's proposed changes.

Q: MR. CASTANARO CONTENDS THAT THE PPL PROPOSAL "MAY ALTER THE ECONOMICS OF NO-LOAD CUSTOMER-GENERATOR PROJECTS, BUT IT WILL NOT HAVE A MATERIAL IMPACT ON OVERALL SOLAR INSTALLATION." HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 15, LINES 18-21 AND PAGE 16 LINES 1-7)

A: I do not agree that the record supports the conclusion that the proposal will not materially affect solar installation.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: PPL Witness Castanaro acknowledges that the proposal would alter the economics of customer-generator projects. For customer-generators currently classified under GSC-1 that would be reclassified to GSC-2, the resulting change in crediting and rate treatment would materially reduce projected revenues. For some projects, that reduction would affect whether the projects remain economically viable. This is consistent with the revenue impacts reflected in CGC's discovery responses and confidential exhibits submitted in this docket.

With respect to overall solar installation, CGC's response to PPL-INT-II-3 indicates that at least one CGC member would cancel a substantial number of planned projects if the proposal were implemented. That evidence demonstrates that the proposal has the potential to affect not only project economics, but actual development decisions.

While the interrogatory response reflects information from a limited number of CGC members, it does not capture impacts to non-CGC-affiliated customer-generators or projects that have not yet reached a stage where cancellation decisions have been formally evaluated. As a result, the record does not support the conclusion that impacts would be immaterial at the system level.

Based on the evidence presented, it is not reasonable to conclude that a proposal that materially degrades project economics would have no meaningful effect on future solar development in PPL's service territory.

Q: PPL WITNESS CASTANARO APPEARS TO SUGGEST THAT YOU ARE ARGUING PPL'S PROPOSED MRPL CALCULATION IS NOT INTENDED TO ASSIGN PJM CAPACITY OBLIGATIONS. HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 16 LINES 9-18)

A: That is not an accurate characterization of my testimony.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: In his direct testimony, Mr. Castanaro defines a customer's Maximum Registered Peak Load ("MRPL") as a measure of the customer's net demand contribution. Under that framework, a customer with no load would have an MRPL of zero, and a customer-generator with net exports during peak periods could have a zero or negative net demand value.

My testimony focused on the internal consistency of that definition. If MRPL is defined as a demand-based metric, then treating customer-generation output as demand for purposes of the calculation introduces a conceptual inconsistency. Demand and generation are distinct quantities and combining them in that manner departs from the stated definition of MRPL as a measure of net demand.

My concern is not whether MRPL interacts with PJM capacity obligations, but whether the proposed calculation applies the demand-based definition consistently across customer classes. Based on the description provided by Mr. Castanaro, the treatment of customer-

generators does not appear to align with the way MRPL is defined elsewhere in his testimony.

Q: MR. CASTANARO CLAIMS THAT ONLY 18 PROJECTS WOULD BE RECLASSIFIED FROM GSC-1 TO GSC-2 IF THE PPL PROPOSAL IS APPROVED. HOW DO YOU RESPOND?

A: I do not believe the record supports that conclusion.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: Mr. Castanaro has not identified the criteria, assumptions, or data used to arrive at the figure of 18 projects, nor has he specified which projects are included in that estimate. Without that information, it is not possible to evaluate whether the estimate accurately reflects the scope of projects that would be affected by the proposed MRPL framework.

Even if the number of impacted projects were limited, the reclassification of any GSC-1 customer-generator would materially affect the economics of those projects by changing the applicable rate treatment and crediting structure. The significance of the impact is therefore not determined solely by the number of projects affected, but by the magnitude of the economic consequences for those projects.

Moreover, the estimate appears to reflect only a subset of currently identified projects and does not account for projects in earlier stages of development or projects that have not yet

been modeled under the proposed MRPL criteria. As a result, the record does not establish that the proposal's effects would be limited to the number cited by Mr. Castanaro.

Q: IN PPL ELECTRIC STATEMENT NO. 15-R, MR. CASTANARO DISPUTES YOUR CHARACTERIZATION OF HOW GSC-2 CUSTOMER-GENERATORS ARE COMPENSATED FOR EXCESS GENERATION. DOES THAT DISPUTE CHANGE YOUR ECONOMIC CONCLUSIONS? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 17, LINES 19-22 THROUGH PAGE 18, LINES 1-2)

A: No. The distinction Mr. Castanaro raises does not change the economic comparison underlying my testimony. More importantly, based on my review of the GSC-2 tariff structure and the way the Price to Compare is applied, GSC-2 customer-generators do not appear to receive the full set of price components that are included in the GSC-2 Price to Compare for purposes of excess generation compensation. To the extent that is the case, it raises a concern that, under the current GSC-2 crediting mechanics described in the record, the excess generation credit may not reflect the same set of Price to Compare components the customer is charged for default service.

Q: WHAT IS THE BASIS FOR YOUR CONCERN THAT GSC-2 CUSTOMER-GENERATORS MAY NOT BE RECEIVING FULL RETAIL VALUE FOR EXCESS GENERATION?

A: My concern is based on how the GSC-2 Price to Compare is structured and how excess generation credits appear to be applied. The GSC-2 Price to Compare includes multiple

components, including an energy component, a capacity component, and an administrative component. If a GSC-2 customer is charged those components as part of its retail default service price, but excess generation credits exclude one or more of those components, then the excess generation credit would not reflect the same retail price components the customer pays for retail service. That mismatch is the basis for my concern.

Q: IF THE CAPACITY COMPONENT IS EXCLUDED FROM EXCESS GENERATION CREDITS, IS THAT ECONOMICALLY MEANINGFUL?

A: Yes. Capacity is a material component of retail default service pricing. For example, PJM capacity prices for the PPL zone in recent auctions have been substantial. When translated into an energy-equivalent value, capacity can represent a meaningful portion of the retail price often on the order of cents per kWh depending on the customer's load factor and the applicable capacity obligation. As a result, excluding capacity from the excess generation credit can materially reduce compensation relative to the full retail price components reflected in the Price to Compare.

Q: IS YOUR UNDERSTANDING THAT GSC-1 AND GSC-2 TREAT EXCESS GENERATION CREDITS DIFFERENTLY WITH RESPECT TO THE CAPACITY COMPONENT?

A: Yes. Under GSC-1, excess generation credits are tied to the Price to Compare structure applicable to that class, which includes the capacity component. Under GSC-2, my understanding based on the tariff structure and record testimony is that excess generation credits may not include the full set of Price to Compare components, including capacity.

That difference is significant for purposes of evaluating how a reclassification from GSC-1 to GSC-2 would affect compensation.

Q: DOES THE STATEMENT THAT A CUSTOMER'S FIXED PEAK LOAD CAPACITY OBLIGATION CANNOT BE NEGATIVE EXPLAIN WHY EXCESS GENERATION CREDITS WOULD EXCLUDE THE CAPACITY COMPONENT?

A: No. Whether a customer's capacity obligation can be negative is a separate concept from whether excess generation credits reflect the same price components included in the retail Price to Compare.

Q. HOW DOES THAT RELATE TO PPL'S MRPL PROPOSAL?

A: This issue also highlights an internal inconsistency in PPL's approach. PPL's MRPL proposal treats behind-the-meter generation as if it were demand for purposes of determining rate class eligibility. But when it comes to compensating excess generation, PPL's current practice under GSC-2 appears not to treat that same generation as entitled to the full retail Price to Compare components. Those two positions are difficult to reconcile.

Q: IF GSC-1 CUSTOMER-GENERATORS ARE RECLASSIFIED TO GSC-2, WHAT IS THE IMPACT ON COMPENSATION FOR EXCESS GENERATION?

A: If GSC-1 customer-generators are reclassified to GSC-2, they would no longer receive excess generation credits under the GSC-1 Price to Compare framework. If, as my testimony explains, GSC-2 excess generation credits do not include the full set of Price to Compare components, including capacity, then those customer-generators would

experience a reduction in compensation for excess generation. This reduction would be in addition to other impacts associated with moving behind-the-meter customer-generators into a rate structure designed for larger customers with different usage patterns and pricing mechanics.

Q: HOW DOES YOUR TESTIMONY RELATE TO MR. CASTANARO'S ASSERTION THAT THE AEPS REFLECTS A BALANCING OF PROMOTING ALTERNATIVE ENERGY WHILE CONSIDERING COSTS TO OTHER CUSTOMERS?

A: My testimony does not dispute that policy considerations exist in the AEPS framework. My point is narrower: PPL has not presented record evidence quantifying harm to non-customer-generators under the current GSC-1 tariff structure that would justify reclassifying customer-generators based on a demand metric that treats generation as demand. In addition, if customer-generators are moved to GSC-2, the record raises questions as to whether excess generation credits under GSC-2 reflect the same retail price components charged to those customers, including capacity.

Q: MR. CASTANARO CLAIMS THAT YOUR CONTENTION THAT THERE IS NO REASON TO SUGGEST THAT ANY INDUSTRIAL LOAD WOULD BEHAVE IN THE SAME MANNER AS A GSC-1 CUSTIOMER-GENERATOR "LACKS MERIT BECAUSE ALL RATE CLASSES INCLUDE USERS WITH DISSIMILAR USAGE PATTERNS." HOW DO YOU RESPOND? (PPL ELECTRIC STATEMENT NO. 15-R, ANDREW CASTANARO, PAGE 18, LINES 20-21)

A: I do not agree that the existence of variation within a rate class supports treating fundamentally different customer types as economically interchangeable.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: While rate classes may not be perfectly uniform, customers belonging to a given rate class share certain characteristics with other customers belonging to that same rate class. For example, the PPL residential rate class includes residential customers, as opposed to a random grouping of small, medium and large commercial and industrial customers. PPL's GSC-2 rate class was designed for customers with electric demands of 100 kW and above. It was not designed for residential customers with demands far lower than that, even if those customers made the decision to install onsite solar. The point is that the presence of load shape variation within a class does not eliminate the relevance of those underlying distinctions of that class. Otherwise there would be no reason for PPL, much less any other regulated utility in the Commonwealth or elsewhere to designate customer classes.

In this proceeding, the issue is not whether customers within GSC-1 exhibit some diversity, but whether customer-generators, whose net demand may be zero or negative during peak

periods, can be reasonably be assumed to behave like larger non-generating customers traditionally served under GSC-2. PPL has not demonstrated that assumption to be valid.

PPL's proposal relies on treating customer-generation output as demand for purposes of reclassification. That methodological choice effectively collapses the distinction between load-serving behavior and generation behavior, even though those quantities have different operational and economic implications.

The record does not show that customer-generators share the same usage profiles, risk exposure, or market interaction characteristics as larger GSC-2 customers. Absent such evidence, the mere fact that rate classes include some diversity does not support reclassifying customer-generators based on assumptions drawn from fundamentally different customer types.

Q: MR. CASTANARO CLAIMS THAT YOU ARE ARGUING THAT NO-LOAD CUSTOMER-GENERATORS SHOULD BE IN A SEPARATE DEFAULT SERVICE RATE CLASS BY THEMSELVES. IS THIS TRUE?

A: No, that is not my opinion.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: My testimony does not propose the creation of a separate default service rate class for no-load customer-generators. Rather, my analysis evaluates whether PPL has demonstrated a need to modify the existing rate structure applicable to customer-generators. Based on the

evidence in the record, PPL has not shown that the current tariff framework results in harm to other customers, nor has it demonstrated that reclassifying customer-generators under the proposed MRPL methodology is supported by cost causation or usage characteristics.

Accordingly, my testimony focuses on the economic and analytical shortcomings of PPL's proposal, not on advocating for the creation of a new rate class.

Q: MR. CASTANARO ASSERTS THAT SYSTEM-LEVEL BENEFITS ARE REAL BUT GENERALIZED AND THAT THEY ACCRUE TO THE GRID AS A WHOLE AND DO NOT OFFEST THE INCREMENTAL FINANCIAL OBLIGATIONS IMPOSED ON NON-PARTICIPATING CUSTOMERS UNDER THE CURRENT TARIFF RULES. CAN YOU PLEASE RESPOND?

A: I do not agree that system-level benefits fail to offset costs to non-participating customers.

Q: PLEASE EXPLAIN YOUR RESPONSE.

A: Grid-level benefits associated with customer-generation do flow through to customers. Customer-generators may reduce the amount of generation PPL must procure from the market, reduce exposure to transmission congestion because generation occurs within the distribution system, contribute renewable energy consistent with AEPS objectives, and place downward pressure on peak wholesale prices. These effects flow through the same cost components that determine rates for all customers, including non-participating customers.

Q: MR. CASTANARO SAYS PPL DOES NOT SHOW THAT A $300/MWH PTC SCENARIO IN 2028. HOW DO YOU RESPOND?

A: In my testimony, I was referring to PPL Electric Exhibit AC-1, which reflects PTC projections that approach approximately $300 per MWh by the end of the forecast period, specifically by 2029–2030, rather than in 2028. Exhibit AC-1 shows the PTC increasing to approximately $295 per MWh by 2030 based on PPL's own assumptions and modeling.

PPL Electric Exhibit AC-1
Page 1 of 1

Year of Reconciliation/Cashout:	2024	2025	2026	2027	2028	2029	PTC at 12/1/30	
SCI Excess kWh for MGs (kWh Cashed Out)			60,202,851	391,960,372	932,128,980	1,430,455,085		<-- Updated 8/20/25

SCI Net Metering Expense from MGs			$ 7,292,672	$ 49,287,057	$ 140,441,077	$ 292,867,083		
Total Estimated SCI Net Metering Expense	$ 10,350,518	$ 10,841,474	$ 18,134,146	$ 60,128,531	$ 151,282,551	$ 303,708,557		<--cashout amount to be reflected in reconciliation for March of each column year, based on projected kWh balance for 5/31 of each column year
	* Actual expense	* Actual expense						

NOTES:
The amount of the net metering expense that is included in the reconciliation is only through March of a given year and the cashout kWh is through May of that same year, so some estimation is necessary due to timing
Utilizing Cashout kWh amount on 5/31 to calculate net metering expense used in 3/31 reconciliation

III. RESPONSE TO OCA STATEMENT NO. 6R, ZACHARY F. TETI

Q: MR. TETI STATES THAT THE CURRENT PPL ELECTRIC PRACTICE IS TO DETERMINE A SMALL COMMERCIAL CUSTOMER'S DEMAND BY BASING THEIR LOAD INDEPENDENT OF THE NAMEPLATE CAPACITY OF ANY BEHIND THE METER GENERATION AND THAT THIS CURRENT PRACTICE "FAILS TO REFLECT THE STRESS THAT THE BEHIND-THE-METER GENERATION PUTS ON PPL ELECTRIC'S DISTRIBUTION SYSTEM." HOW DO YOU RESPOND? (OCA STATEMENT NO. 6R, PAGE 3, LINES 17-23 AND PAGE 4, LINES 1-5)

A: Mr. Teti asserts that PPL Electric's current practice of determining a small commercial customer's demand does not account for what he characterizes as distribution system stress associated with behind-the-meter generation. I disagree with that characterization.

Behind-the-meter customer generation reduces the net energy that must be delivered across PPL's distribution and transmission systems, which in turn reduces the amount of energy PPL must procure from the wholesale market. Generation located within the distribution system can also reduce exposure to transmission congestion and peak-period energy costs. To the extent that solar generation offsets load during peak conditions, it places downward pressure on zonal energy prices and contributes renewable energy within the system.

Mr. Teti does not identify record evidence quantifying incremental distribution system stress attributable to customer-generators under the existing tariff and operational practices,

nor does he distinguish such impacts from normal system planning considerations that PPL already addresses through its distribution planning and interconnection processes.

Q: MR. TETI STATES THAT THE ENERGY INDUSTRY DOES NOT REALLY CONTAIN PROMISES ON WHICH TO RENEGE AND THERE ARE MANY LAYERS OF HEDGING ACTIVITY IN THE INDUSTRY. HOW DO YOU RESPOND?

A: Mr. Teti suggests that the energy industry does not involve commitments on which parties reasonably rely because market participants engage in various forms of hedging. I disagree with that characterization. Tariffs, interconnection agreements, and Commission-approved rate structures establish the rules and economic framework under which participants make long-term investment decisions, even in markets that otherwise involve price volatility and risk management.

The existence of hedging activity does not eliminate reliance on the underlying tariff framework. CGC members committed substantial capital to projects in PPL's service territory based on the tariff provisions and regulatory structure in effect at the time those decisions were made. Those investments were made in response to Pennsylvania's policy objectives, including the promotion of alternative energy resources under the AEPS framework.

Changes to that framework that materially alter project economics affect investments that were made under a different set of Commission-approved rules. Mr. Teti does not identify

evidence showing that existing hedging practices address or mitigate the regulatory risk associated with retroactive changes to tariff treatment for customer-generators. I am not addressing legal enforceability, but rather how tariff stability affects investment decisions in practice.

IV. RESPONSE TO OSBA STATEMENT NO. 1-R, MARK D. EWEN

Q: MR. EWEN STATES THAT RECLASSIFYING LARGE CUSTOMER-GENERATORS AS MERCHANT GENERATORS UNDER GSC-2 WOULD OFFER THESE CUSTOMERS "FAIR COMPENSATION" WITHOUT UNDULY BURDENING NON-CUSTOMER-GENERATORS UNDER GSC-1. HOW DO YOU RESPOND?

A: Mr. Ewen uses the term 'fair compensation,' but does not identify a benchmark in the record supporting that conclusion. That said, customer-generators in the GSC-1 class currently receive fair compensation, and no one in this proceeding has demonstrated that they don't. Again, GSC-1 customer generation facilities were built in response to the existing PPL tariff. The changes proposed by PPL will harm these customers and impact the future of green generation in the Commonwealth.

Q: MR. EWEN STATES THAT PPL ELECTRIC INTENDED TO DIFFERENTIATE BETWEEN SMALL, BEHIND-THE-METER CUSTOMER-GENERATORS THAT STILL DRAW ENERGY FROM THE GRID AND LARGER FRONT-OF-METER CUSTOMERS THAT ARE ESSENTIALLY MERCHANT GENERATORS AND THAT MERCHANT GENERATORS SHOULD BE VIEWED AS MORE SOPHISTICATED MARKET ACTORS. FURTHER, HE STATES THAT LARGE GSC-1 CUSTOMER-GENERATORS DO NOT ASSUME THE SAME RISKS AS GSC-1 DEFAULT SERVICE SUPPLIERS, YET RECEIVE THE SAME PRICE TO COMPARE. CAN YOU PLEASE RESPOND? (OSBA STATEMENT NO. 1-R, PAGE 5, LINES 14-26 AND PAGE 6, LINES 1-14)

A: Mr. Ewen characterizes reclassification of large customer-generators to GSC-2 as providing "fair compensation," but he does not identify a benchmark or analysis in the record demonstrating that compensation under GSC-2 would be comparable to the compensation structure applied when these projects were developed.

Customer-generators currently classified under GSC-1 receive compensation pursuant to Commission-approved tariffs, and no witness has demonstrated in this proceeding that such compensation is excessive or inconsistent with the costs avoided by PPL under the existing framework. These facilities were developed in reliance on that tariff structure.

Reclassifying customer-generators as merchant generators under GSC-2 would materially change the compensation mechanism applicable to those facilities. Mr. Ewen does not quantify how such a change would affect project economics or explain why compensation

under GSC-2 would be more appropriate given the behind-the-meter nature of Customer-Generator facilities. Absent such analysis, I do not agree that reclassification necessarily results in "fair" compensation.

Q: DOES THIS CONCLUDE YOUR TESTIMONY?

A: Yes. This concludes my surrebuttal testimony at this time. However, I reserve the right to amend or supplement my testimony as appropriate in this proceeding should additional evidence, testimony, clarification, or direction from the commission become necessary.

Jan. 20, 2026

PPL Corporation statement on Trump-Shapiro call for new power auction to spur construction of power plants paid for by data centers

Share.

ALLENTOWN, Pa., Jan. 20, 2026 /PRNewswire/ -- PPL Corporation President and Chief Executive Officer Vincent Sorgi today issued the following statement in response to President Trump and a bipartisan group of governors calling on PJM Interconnection to hold a special auction to fund new generation in support of data centers:

"We thank President Trump and Governor Shapiro for their role in recognizing the seriousness of today's generation challenges and championing solutions to improve grid reliability, power large-scale data centers and help keep energy affordable for the families and businesses we serve.

The announcement from Friday, January 16, is a clear acknowledgment that new, dispatchable generation is urgently needed, and PPL stands ready to be part of the solution.

This is why we created a joint venture with Blackstone Infrastructure to build, own and operate new generation to serve data centers under long-term energy services agreements and help mitigate rising electricity prices for our other customers. Since our announcement in July at the Pennsylvania Energy and Innovation Summit, the joint venture has been laying the necessary groundwork to move as quickly as possible to build new, dispatchable generation to serve large-load data centers in Pennsylvania.

In addition, we support legislation that's been proposed in Pennsylvania to facilitate construction of new, dispatchable generation in the Commonwealth. That proposed legislation includes long-term contracting provisions with independent power producers and would also allow regulated utilities, including PPL Electric Utilities, to build and own regulated generation again. We continue to believe that whoever is able and willing to build new generation should be encouraged to do so. And at PPL, we are absolutely willing and able to be part of the solution.

We're committed to bringing our expertise forward to move the President's announcement from concept to reality. And we will continue to engage with a wide range of stakeholders, including federal and state leaders and data center developers, to address today's energy challenges and ensure a safe, reliable and affordable energy future for our customers — all while enabling the U.S. to win the AI race."

About PPL

PPL Corporation (NYSE: PPL), headquartered in Allentown, Pennsylvania, is a leading U.S. energy company focused on providing electricity and natural gas safely, reliably and affordably to more than 3.6 million customers in the U.S. PPL's high-performing, award-winning utilities are addressing energy challenges head-on by building smarter, more resilient and more dynamic power grids and advancing sustainable energy solutions. SURREJOINDER TESTIMONY OF

GUY SHARFMAN

I. PURPOSE AND SCOPE OF SURREJOINDER

Q: PLEASE EXPLAIN THE PURPOSE OF YOUR SURREJOINDER TESTIMONY IN THIS PROCEEDING.

A: My surrejoinder testimony responds to the rejoinder testimony of PPL Electric Witness, Andrew Castanaro.

Q: ARE YOU OFFERING ANY NEW TARIFF PROPOSALS OR ALTERNATIVE RATE DESIGNS IN THIS SURREJOINDER TESTIMONY?

A: No.

II. CORRECTIONS TO PRIOR MODELING

Q: IN HIS REJOINDER TESTIMONY, MR. CASTANARO STATES THAT HE DISCOVERED CORRECTIONS THAT NEEDED TO BE MADE TO HIS ORIGINAL ANALYSES AND THAT THOSE CORRECTIONS ARE REFLECTED IN EXHIBITS AC-4RJ THROUGH AC-6RJ (STATEMENT NO. 15-RJ, PAGE 2, LINES 1-4; PAGE 3, LINES 1-8). HOW DO YOU RESPOND?

A: Mr. Castanaro admits to making the following errors in his original analysis presented in direct testimony:

1) He used a 0% cancellation rate for customer-generator projects when he meant to use 36%.
2) He used a 29.8% capacity factor for customer-generator projects when he should have used 17.3%.
3) He mistakenly failed to capture the excess generation attributable to Rate LP-4 "no-load" customer-generator projects.
4) He failed to account for the reduction in PPL's default service requirement due to an increase in excess customer generation.

He provides exhibits AC-4RJ, AC-5RJ & AC-6RJ as part of his rejoinder testimony that revise the values provided in his original exhibits AC-1RJ, AC-2RJ & AC-3RJ.

Q: WHAT ARE THE IMPACTS OF MR. CASTARANO'S ANALYSIS REVISIONS?

A: Mr. Castanaro's analysis revisions result in his original values changing significantly in later years. The table below compares the original PTC forecast values provided in PPL

exhibit AC-1RJ to the new PTC forecast values provided in PPL exhibit AC-4RJ. As noted by the table, the impact of Castanaro's revisions result in his 2029 PTC forecast value rising by nearly 50%, while his 2030 PTC projection dropped by almost 90%.

Year	PPL Electric Exhibit AC-1RJ GSC-1 PTC Projection (in $ per kWh)	PPL Electric Exhibit AC-4RJ GSC-1 PTC Projection (in $ per kWh)	DELTA (in %)
2024	$0.11386	$0.11386	0.00%
2025	$0.12114	$0.12114	0.00%
2026	$0.12114	$0.12114	0.00%
2027	$0.12575	$0.12437	(1.10%)
2028	$0.15067	$0.15064	(0.02%)
2029	$0.20474	$0.30562	49.27%
2030	$0.29515	$0.03158	(89.30%)

Q: DOES MR. CASTANARO'S ANALYSIS REVISIONS STRENGTHEN HIS ARGUMENT THAT GSC-1 NON-GENERATOR CUSTOMERS WILL BE HARMED IF THE PPL MRPL PROPOSAL IS REJECTED?

A: No. Mr. Castanaro has yet to establish that anyone would be harmed if the PPL MRPL proposal is rejected.

Q: DO YOU FIND MR. CASTANARO'S LATEST PTC FORECAST VALUES CREDIBLE?

A: No. Mr. Castanaro's PTC projections do not line up with the current wholesale forward market. For example, CGC Exhibit No. 1-SRJ compares PPL's 2027 and 2028 PTC projections under the 36% cancelation scenario to 2027 and 2028 PPL zone forward prices. The exhibit shows that while Mr. Castanaro projects the PTC to rise by 21% from 2027 to 2028 the forward market indicates that 2028 energy prices into the PPL zone actually decline slightly from 2027.

Q: WHY WOULD YOU EXPECT THE PPL PTC TO NECESSARILY FOLLOW THE FORWARD MARKET?

A: PPL procures energy for PTC service from competitive suppliers who price their bids based on the wholesale market. Pennsylvania is also an electric choice state, meaning Pennsylvania electric customers are not trapped by utility service rates the way they are in electric monopoly states. If the PPL PTC significantly exceeds the market cost to supply end users, PPL rate payers would leave PPL and take EGS service at more attractive prices. As such, while I do not anticipate the PPL PTC to approach $300 per MWh over the next 3 years, EGS service will protect PPL customers even if such high PTCs materialized.

Q: MR. CASTANARO CLAIMS THAT INCREASED EGS SWITCHING LEADS TO FEWER CUSTOMERS ON RATE GSC-1 BEING ABLE TO ABSORB PTC COSTS. HOW DO YOU RESPOND?

A: The purpose of Pennsylvania electric choice is to create alternatives to the PTC, not to refine PTC pricing. Increased EGS switching is a sign of a healthy market and should be encouraged.

Q: MR. CASTANARO STATES THAT HE EXPECTS THAT EGS' WOULD INCREASE THEIR RATE OFFERINGS TO CUSTOMERS BASED ON THE INCREASED LEVEL OF THE PTC. DO YOU AGREE WITH HIM?

A: No. While EGS' compete against PPL, they also compete against one another. That means that if any EGS charges a premium for service to match an increased PTC, they leave themselves open to being undercut by another EGS.

Q: IS THERE EVIDENCE THAT EGS PRICING DOES NOT SIMPLY FOLLOW THE PTC?

A: Yes. Intelometry prepares monthly reports that compare utility PTCs to EGS offers for all U.S. deregulated electric markets. Our latest report for Pennsylvania is provided as CGC Exhibit No. 2-SRJ. The exhibit compares the residential PTCs of Pennsylvania electric utilities to publicly available EGS offers posted on the Commission website at www.papowerswitch.com. As illustrated by the exhibit, the lowest competitive offers posted in January 2026 are 11% to 29% lower than the PTC depending on utility. The lowest offer in PPL's service territory is 24% lower than the PPL PTC. There would be a much tighter spread if EGS' simply moved their prices to match the PTC price level.

III. CLAIMED PTC INCREASES AND "CATASTROPHIC" IMPACTS

Q. MR. CASTANARO TESTIFIES THAT THE CORRECTED ANALYSES SHOW THE PTC RISING TO $0.29980 PER KWH UNDER THE 36% CANCELLATION RATE SCENARIO AND DESCRIBES POTENTIAL "CATASTROPHIC IMPACTS" (STATEMENT NO. 15-RJ, P. 5, LL. 8-13). DOES THE RECORD DEMONSTRATE THAT SUCH OUTCOMES ARE LIKELY UNDER REALISTIC PROCUREMENT ADJUSTMENTS?

A. Exhibit AC-4RJ shows the PTC under the 36% cancellation scenario rising to $0.30562, not the $0.29980 value Mr. Castanaro refers to in testimony. It is not clear why Mr. Castanaro's exhibit and testimony values differ. Neither the testimony nor exhibit value, however, is likely to materialize and wouldn't harm customers even if they did materialize.

Q. WHY DO YOU SAY THAT MR. CASTANARO'S EXTREME PTC PROJECTIONS ARE UNLIKELY TO MATERIALIZE?

A. As previously stated, there is no indication from the wholesale market that 2029 PTCs would run anywhere near $0.30 per kWh or $300 per MWh. Other mainstream industry projections illustrate the same. CGC Exhibit No. 3-SRJ shows the most recent Electric Power Projections by Electricity Market Module Region report 54.10 form the Energy Information Administration ("EIA") for PJM East. The exhibit also compares the movement of EIA generation price projections to PTC prices projected by Mr. Castanaro. As illustrated by the exhibit, the EIA anticipates regional generation prices to rise 10% in 2028, 1% in 2029 and another 1% in 2030. By contrast, Mr. Castanaro projects prices to rise by 17% in 2028, rise by another 51% in 2029 and then massively drop in 2030 by 868%. Given that both wholesale market benchmarks and EIA analysis expect generation prices to remain stable from 2028 to 2030, I simply don't see a $300 PTC materializing. That said, if PTC prices greatly exceeded the market cost to supply, customers would leave PPL for EGS services that are less expensive and provide more benefits to consumers than the PPL PTC would, should that scenario materialize.

Q. WHY DO YOU SAY THAT MR. CASTANARO'S EXTREME PTC PROJECTIONS WON'T HARM CUSTOMERS EVEN IF THEY COME TO FRUITION?

A. A signature benefit of a competitive electric market is that customers are not forced to remain on electric utility service rates they don't like. If the PPL PTC exceeds the market cost to supply PPL customers, then PPL customers would leave PPL for EGS service.

IV. EXTREME $1.32804/KWH SCENARIO

Q: MR. CASTANARO EXPLAINS THAT UNDER ONE SCENARIO, THE PTC AS OF MAY 31, 2030 WOULD REACH $1.32804 PER KWH (STATEMENT NO. 15-RJ, P. 8, LL. 1-4). DOES THE REJOINDER IDENTIFY THIS AS A BASE CASE FORECAST OR A STRESS-CASE SCENARIO?

A: This value represents Mr. Castanaro's PTC projection for 2029 under the 50% cancelation scenario.

Q: IS THIS PROJECTION CREDIBLE?

A: No. A $1.32804 PTC equates to over $1,300 a MWh. There are no market or industry benchmarks projecting retail generation prices to climb that high by 2029. Further, Mr. Castanaro's 2029 projected PTC value of approximately $300 per MWh under the 36% cancelation scenario is substantially lower. This contradicts PPL's position that lower cancelation rates result in higher PTCs.

Q: MR. CASTANARO ATTRIBUTES THIS SPIKE TO RECONCILIATION OF EXCESS GENERATION COMPENSATION (STATEMENT NO. 15-RJ, P. 8, LL. 5-13). DOES THE TESTIMONY ACCOUNT FOR BEHAVIORAL RESPONSES BY CUSTOMERS, SUPPLIERS, OR PROCUREMENT ADMINISTRATORS?

A: No. If PPL were to charge $1.32804 per kWh PTC to GSC-1 customers when the market cost to supply those same customers is much less, there would be a mass exodus of PPL customers to EGS service.

V. CAUSATION AND EVIDENCE OF HARM

Q: MR. CASTANARO STATES THAT PPL ELECTRIC HAS "PUT FORWARD THAT EVIDENCE" DEMONSTRATING HARM (STATEMENT NO. 15-RJ, P. 12, LL. 1-4). DOES THE REJOINDER PRESENT HISTORICAL DATA SHOWING MEASURABLE HARM TO NON-CUSTOMER-GENERATORS UNDER THE CURRENT GSC-1 TARIFF?

A: No.

Q: MR. CASTANARO REJECTS YOUR PRIOR STATEMENT THAT THERE IS NO RECORD EVIDENCE ESTABLISHING A CAUSAL LINK (STATEMENT NO. 15-RJ, P. 12, LL. 4-6). HOW DO YOU RESPOND?

A: Mr. Castanaro states in his rejoinder testimony that values presented in his direct testimony are invalid. So, Mr. Castanaro agrees with me, at least as far as his direct testimony is concerned. Regarding Mr. Castanaro's analysis revisions, I find that the wholesale market and other industry sources do not support his PTC projections. Finally, let me reiterate that Pennsylvania is an electric choice state. Any customer that does not like the PPL PTC can switch to EGS.

VI. RECLASSIFICATION SCOPE – "18 PROJECTS"

Q: MR. CASTANARO REFERENCES THE NUMBER OF PROJECTS THAT WOULD BE AFFECTED BY MRPL AND RESPONDS TO CONCERNS REGARDING SCOPE (STATEMENT NO. 15-RJ, P. 12, L. 8 THROUGH P. 13, L. 7). DOES THE REJOINDER IDENTIFY THE SPECIFIC PROJECTS INCLUDED IN THAT ESTIMATE?

A: No.

Q: DOES THE TESTIMONY CLARIFY WHETHER THE ESTIMATE INCLUDES PROJECTS CURRENTLY IN THE INTERCONNECTION QUEUE BUT NOT YET OPERATIONAL (STATEMENT NO. 15-RJ, P. 12-13)?

A: No.

VII. CAPACITY COMPONENT UNDER GSC-2

Q: MR. CASTANARO STATES THAT PPL WOULD BE WILLING TO INCORPORATE A CAPACITY COMPONENT INTO THE NET METERING COMPENSATION CALCULATION FOR RATE GSC-2 AS PART OF A COMPLIANCE FILING (STATEMENT NO. 15-RJ, P. 11, LL. 14-16). DOES THIS STATEMENT QUANTIFY THE PROPOSED CAPACITY COMPONENT?

A: No.

Q: DOES THE REJOINDER DEMONSTRATE THAT INCLUSION OF A CAPACITY COMPONENT WOULD RENDER RECLASSIFIED GSC-1 PROJECTS ECONOMICALLY NEUTRAL RELATIVE TO CURRENT TREATMENT?

A: No.

VIII. LEGISLATIVE AND POLICY REFERENCES

Q. MR. CASTANARO REFERENCES THE POSSIBILITY THAT LEGISLATION COULD PROHIBIT GENERATING FACILITIES WITH NO INDEPENDENT LOAD FROM PARTICIPATING IN NET METERING (STATEMENT NO. 15-RJ, P. 13, LL. 1-3). IS SPECULATIVE FUTURE LEGISLATION A BASIS FOR MODIFYING EXISTING COMMISSION-APPROVED TARIFFS IN THIS PROCEEDING?

A: No.

IX. CONCLUSION

Q. BASED ON THE CORRECTIONS AND UPDATED ANALYSES PRESENTED IN PPL ELECTRIC STATEMENT NO. 15-RJ, HAS PPL DEMONSTRATED MEASURABLE, PRESENT HARM TO NON-CUSTOMER-GENERATORS UNDER THE EXISTING GSC-1 TARIFF?

A. No.

Q. IN YOUR OPINION, DOES THE RECORD AS SUPPLEMENTED BY STATEMENT NO. 15-RJ SUPPORT APPROVAL OF PPL'S MRPL PROPOSAL?

A. No.

Q. DOES THIS CONCLUDE YOUR SURREJOINDER TESTIMONY?

A. Yes.

III. CONCLUSION 4

SUR-SURREJOINDER TESTIMONY OF
GUY SHARFMAN

I. PURPOSE AND SCOPE OF SUR-SURREJOINDER

Q: PLEASE STATE YOUR NAME AND THE PURPOSE OF YOUR SUR-SURREJOINDER TESTIMONY.

A: My name is Guy Sharfman. I am a co-Founder and Vice President with Intelometry, Inc., a retail electric market systems, data and consulting company. The purpose of my testimony is to respond to select Sur-Rejoinder Testimony.

Q: ARE YOU RESPONDING TO CERTAIN STATEMENTS MADE IN THE SUR-REJOINDER TESTIMONY OF THE OFFICE OF SMALL BUSINESS ADVOCATE ("OSBA")?

A: Yes.

II. RESPONSE TO OSBA STATEMENT NO. 1-SRJ, MARK D. EWAN

Q: OSBA CHARACTERIZES CERTAIN CUSTOMER-GENERATORS EXPORTING ELECTRICITY AS "MERCHANT GENERATORS." IS "MERCHANT GENERATOR" A DEFINED CUSTOMER CLASS IN PPL ELECTRIC UTILITIES' COMMISSION-APPROVED TARIFF?

A: No.

Q: DO NET-METERED CUSTOMER-GENERATORS REMAIN RETAIL CUSTOMERS TAKING SERVICE UNDER COMMISSION-APPROVED RETAIL RATE SCHEDULES?

A: Yes.

Q: OSBA SUPPORTS PPL'S PROPOSAL TO REDEFINE MAXIMUM REGISTERED PEAK LOAD ("MRPL") BASED IN PART ON "NET POWER FLOW." WOULD THAT APPROACH ALLOW EXPORTED GENERATION TO INFLUENCE A CUSTOMER'S RETAIL SERVICE CLASSIFICATION?

A: Yes.

Q: HOW DOES THE PENNSYLVANIA UTILITY CODE DEFINE "MAXIMUM REGISTERED PEAK LOAD"

A: Pennsylvania Code 54.182 defines MRPL as "The highest level of demand for a particular customer, based on the PJM Interconnection, LLC "Peak Load Contribution Standard" or its equivalent, and as may be further defined by the EDC tariff in a particular service territory."

Q: DOES THIS DEFINITION INCLUDE "GENERATION" OR "EXPORT"?

A: No. MRPL is a demand-based value, not a generation-based value.

Q: DOES THE PJM PEAK LOAD CONTRIBUTION ("PLC") FORMULAE CONTAIN "GENERATION" OR "EXPORT"?

A: No. PJM does not allow PLCs to go negative precisely because generation is not involved in setting the PLC value.

Q: DOES THE PENNSYLVANIA NET-METERING FRAMEWORK EXPRESSLY CONTEMPLATE THAT CUSTOMER-GENERATORS MAY EXPORT EXCESS ELECTRICITY TO THE GRID?

A: Yes.

Q: DO CUSTOMER-GENERATORS MEET THE DEFINITION OF "DEFAULT SERVICE SUPPLIERS" AS DEFINED IN THE PPL DEFAULT SERVICE CONTRACT?

A: No. According to PPL's Default Supplier Agreement, a Default Service Supplier must:

1) have been selected through the Default Service Supplier Solicitation;
2) accepted the obligations and associated rights to provide Default Service Supply to PPL for Default Service Customers;
3) has entered into the PPL Default Supplier Agreement.

Customer-generators do not meet this criterion.

Q: IN YOUR OPINION, DOES THE FACT THAT A CUSTOMER EXPORTS EXCESS GENERATION TRANSFORM THAT RETAIL CUSTOMER INTO A "MERCHANT GENERATOR"?

A: No.

Q: IN YOUR OPINION, DOES THE GSC-2 SOLAR CREDIT COMPENSATE CUSTOMERS-GENERATORS THE "FULL RETAIL RATE" SIMILAR TO WHAT IS PROVIDED IN "GSC-1"?

A: No. The PPL GSC-2 solar credit omits capacity, even though capacity is charged for in the GSC-2 PTC. PPL witness Castanaro acknowledged this in rejoinder testimony, stating that "PPL Electric would be willing to incorporate a capacity component to the net metering compensation calculation for Rate GSC-2 customer-generators as part of its compliance retail tariff filing in this case." However, PPL has not provided detail on how the capacity credit component will be derived and assessed to customer-generators.

III. CONCLUSION

Q: BASED ON OSBA'S SUR-REJOINDER TESTIMONY, DO YOU HAVE ANY REASON TO CHANGE THE CONCLUSIONS YOU PREVIOUSLY PRESENTED IN THIS PROCEEDING?

A: No.

Q. DOES THIS CONCLUDE YOUR SUR-SURREJOINDER TESTIMONY?

A. Yes.

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

Pennsylvania Public Utility Commission, et al. v. PPL Electric Utilities Corporation	R-2025-3057164 C-2025-3057844 C-2025-3057889 C-2025-3058130 C-2025-3057946 C-2025-3058271 C-2025-3058300 C-2025-3058251 C-2025-3058846 C-2025-3058982 C-2025-3059151

* This confidential exhibit will be provided to parties who have executed the protective agreement.

I. INTRODUCTION AND WITNESS QUALIFICATIONS

Q. Please state your name, business name and address, and role in this matter.

A. My name is Karl R. Rábago. I am the principal of Rábago Energy LLC, a Colorado limited liability company, located at 1350 Gaylord Street, Denver, Colorado. I appear here in my capacity as an expert witness on behalf of Clean Air Council, Vote Solar, and the Union for Concerned Scientists (collectively the "Energy Justice Advocates" or "EJA").

Q. Please list your formal educational degrees.

A. I earned a Bachelor of Business Administration in Management from Texas A&M University in 1977, a Juris Doctorate with Honors from the University of Texas School of Law in 1984, a Master of Laws in Military Law from the U.S. Army Judge Advocate General's School in 1988, and a Master of Laws in Environmental Law from the Pace University Elisabeth Haub School of Law in 1990.

Q. Please summarize your experience and expertise in the field of utility regulation.

A. I have worked for 35 years in the utility industry and related fields following my honorable discharge from the U.S. Army, where I served as an Armored Cavalry officer and a Judge Advocate. I am actively involved in a wide range of utility regulatory and ratemaking issues across the United States. My previous employment experience includes serving as Commissioner with the Public Utility Commission of Texas, Deputy Assistant Secretary with the U.S. Department of Energy, Vice President with Austin Energy, Executive Director of the Pace Energy and Climate Center, Managing

Director with the Rocky Mountain Institute, and Director with AES Corporation, among others. For the past thirteen years, I have operated Rábago Energy LLC as a vehicle for my consulting and expert witness work. For the past two years, I have also served as a member of the board of directors of the Colorado Electric Transmission Authority. My resume is attached as Exhibit KRR-1.

Q. Have you ever testified before the Pennsylvania Public Utility Commission ("the Commission") or other regulatory agencies in the past?

A. Yes. I appeared as an expert witness in the following proceedings before the Commission: Docket Nos. P-2020-3019290, R-2021-3024601, and P-2024-3046008. In the past thirteen years, I have submitted testimony, comments, or presentations in utility proceedings in Alabama, Arkansas, Arizona, California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Guam, Hawaii, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nevada, New Hampshire, New York, North Carolina, Ohio, Pennsylvania, Puerto Rico, Rhode Island, Texas, Vermont, Virginia, Washington, and Wisconsin. I have also testified before the U.S. Congress and several state legislative bodies and have been a participant in comments and briefs filed at several federal agencies and courts. A listing of my previous testimony is attached as Exhibit KRR-2.

Q. Does your experience give you insights into the responsibilities and duties of the Commission in this proceeding?

A. Yes. As a public utility commissioner in Texas, I participated in making decisions on hundreds of rate-review, rulemaking, and planning decisions in cases involving investor-owned, municipal, and cooperative electric and telephone utilities. Those matters ranged widely, from ministerial annual interest rate approvals, for example, to prudence and rate decisions on a $12.4 billion nuclear power plant, to mergers and acquisitions. I have appeared before hundreds of commissioners and board members in formal, informal, and educational proceedings in the years since. I have contributed to the writing and passage of laws and rules in many jurisdictions and have made a career of advancing regulatory and market opportunities for competitive alternatives to monopoly control of essential-services businesses, especially through the expanded deployment and use of distributed energy resources. I am honored to have served as a utility regulator and remain deeply respectful of the public interest obligation that comes with the profession.

II. OVERVIEW OF TESTIMONY AND RECOMMENDATIONS

Q. Please provide an overview of your testimony in this proceeding.

A. In this testimony, I review the petition by PPL Electric Utilities Corporation ("PPL Electric"). Despite very little growth in electricity demand in the past and forecasted future growth from PPL Electric's residential and small commercial customers, who make up the overwhelming majority of the population that it serves, PPL Electric proposes a huge increase in revenues in this case. PPL Electric is asking the Commission to approve a distribution rate increase of approximately $356.3 million, which would produce a system average increase in distribution revenues of

approximately 33.42%, effective for service rendered on or after December 1, 2025.[1] My testimony addresses several issues associated with PPL Electric's filing, including PPL's following requests:

- PPL Electric proposes an allowed return on equity ("ROE") of 11.30%.[2]
- Calculation of rates based on an equity fraction of 56.05% in the capital structure and calculation of its allowed rate of return ("ROR").[3]
- Continued reliance on a minimum system method for classifying customer costs and a request for an increase in the fixed monthly customer charge from $14.09 per customer per month (without riders) to $17.00, or nearly 20%.[4]
- PPL Electric proposes $4 billion in capital spending over the years 2025 through 2029, a dramatic increase in spending compared to the $5 billion it spent over the past ten years.[5]
- PPL Electric proposes a 40.5% increase in the distribution charge for residential customers.[6]

[2] PPL, St. No. 1, Direct Testimony of Christine Martin, 8:7–15, Docket No. R-2025-3057164 (Sept. 30, 2025).
[3] PPL, St. No. 10, Direct Testimony of Jennifer E. Nelson, 4:3–6, Docket No. R-2025-3057164 (Sept. 30, 2025).
[4] PPL, Exh. Regs. § 53.53, Part IV – Rate Structure & Cost Allocation, Att. IV-C 1, Docket No. R-2025-3057164 (Sept. 30, 2025).
[5] PPL, Exh. Fully Projected Future 1, Summary of Rate Base & Rate of Return, Statement of Reasons A-1, 5, Docket No. R-2025-3057164 (Sept. 30, 2025).
[6] PPL, St. No. 8, Direct Testimony of Steven W. Wishart, 11, Table 4, Docket No. R-2025-3057164 (Sept. 30, 2025). Calculated as ($0.04965 - $0.03534) / $0.03534 = 40.5%.

- PPL Electric also proposes granting itself unreasonable latitude to force residential and other distribution customers to bear the costs associated with interconnecting large load customers under its LP-5 rate.[7]

Q. How is this testimony organized?

A. This testimony is organized into the following sections:

- Section I provides an introduction and describes my qualifications.
- Section II provides an overview of this testimony and my recommendations.
- Section III summarizes applicable law and regulatory policy.
- Section IV addresses the affordability crisis facing customers in Pennsylvania and the territory served by PPL Electric.
- Section V addresses and provides recommendations on PPL Electric's return on equity and capital structure.
- Section VI addresses fixed customer charges for residential customers and the minimum system method used to derive them.
- Section VII addresses PPL Electric's Large Load tariff LP-5.
- Sections VIII and IX reprise my recommendations and conclude my testimony.

Q. Based on your examination of PPL Electric's proposal, how do you recommend that the Commission rule?

[7] PPL, St. No. 14, Direct Testimony of Gregory Olsen, 4:5–6:9, Docket No. R-2025-3057164 (Sept. 30, 2025).

A. As discussed in detail below, I recommend that the Commission reject or modify several of PPL Electric's proposals. In sum, the Commission should:

- Direct PPL Electric to revise the Universal Service Rider so that it equitably recovers program revenues from all rate classes, including LP-5 customers, to more effectively address the electric service affordability crisis facing residential and small business customers.
- Reject PPL Electric's proposal for an allowed return on equity ("ROE") of 11.30% and for a capital structure equity fraction of 56.05%.
- Approve an ROE of 7.67% for PPL Electric.
- Direct PPL Electric to use an equity fraction of 50% in its capital structure used to calculate rates and for other purposes.
- Reject PPL Electric's proposal for a $17 per customer per month fixed customer charge for residential customers.
- Disapprove of PPL Electric's use of the minimum system method to classify costs for inclusion in the fixed customer charge for residential customers.
- Approve a fixed customer charge of $10.20 per customer per month for residential customers.
- Direct PPL Electric to use the basic customer method to classify costs for inclusion in the fixed customer charge for residential customers in future rate cases.
- Direct PPL Electric to only classify costs for inclusion in the fixed customer charge which vary entirely or nearly entirely with customer count.

With regard to LP-5, I recommend that the Commission:

- Direct PPL Electric to cease any further use of confidential negotiated ESAs with special contract rates for large load customers taking service under rate schedule LP-5.
- Reject PPL Electric's proposed amendments to LP-5 and direct the utility to develop and submit for Commission approval a revised LP-5 tariff within 90 days of the final order in this proceeding.
- Direct PPL Electric to make its revised LP-5 tariff draft consistent with (1) the recommendations in this testimony, and (2) the draft model tariff published by the Commission in its tentative order in Docket No. M-2025-3054271, issued on November 6, 2025, as modified and expanded in the recommendations submitted on behalf of Sierra Club, Pennsylvania Stands Up, Vote Solar, Clean Air Council, POWER Interfaith, and Earthjustice, on December 22, 2025.
- Direct PPL Electric to ensure that any agreement to interconnect new LP-5 customers or to modify service provided to existing LP-5 customers is fully consistent with the approved revised LP-5 tariff and results in LP-5 customers taking service under the tariff and not special contracted rates and terms.

III. APPLICABLE LAW AND REGULATORY POLICY

Q. What statutory principles guide the Commission in reviewing PPL Electric's proposed rates in this proceeding?

A. The Pennsylvania Public Utility Code sets out the basic principles for review of PPL Electric's application. Key provisions include:

- 66 Pa.C.S. § 315(a), declaring that the burden of proof is on the public utility to show that the rates proposed are just and reasonable.
- 66 Pa.C.S. § 315(c), declaring that the burden is likewise on the utility to show that utility service and facilities are adequate, efficient, safe, and reasonable.
- 66 Pa.C.S. § 1301, which requires that all rates made, demanded, or received by a public utility must be just and reasonable and in conformity with regulations and orders of the Commission.
- 66 Pa.C.S. § 1304, which forbids discrimination in rates and rates that make or grant any unreasonable preference or advantage to any person, corporation, or municipal corporation, or subject any person, corporation, or municipal corporation to any unreasonable prejudice or disadvantage.

IV. THE AFFORDABILITY CRISIS FACING PPL'S CUSTOMERS

Q. How are electric rates impacting customers in the U.S. today?

A. Rising electric rates are a key component of an affordability crisis facing residential customers in the U.S. today. The costs of many household goods, including groceries, are rising—the U.S. Bureau of Labor Statistics reports that the Consumer Price Index for all urban consumers increased 3.0% for 12 months, ending in September 2025, and while gasoline prices were 0.5% lower than a year earlier, methane gas prices increased 11.7%, and electricity prices increased 5.1%.[8] Jobs are being lost. Lower

[8] The Economics Daily, U.S. Bureau of Labor Statistics, *Consumer Prices Up 3.0 Percent from September 2024 to September 2025* (Nov. 19, 2025), https://www.bls.gov/opub/ted/2025/consumer-prices-up-3-0-percent-from-september-2024-to-september-2025.htm.

cost electricity generation projects have been cancelled across the nation. Electricity rates are being inflated by cost shifts from large load customers to residential, small business, and general service customers. Investor-owned utilities and their consultants are requesting outsized increases in profits through higher ROEs, RORs, and equity fractions in capital structures.[9]

Q. Have any organizations reported on rising utility bills?

A. Yes. As reported by PowerLines,[10] rising utility bills have become a national issue as electricity and gas prices have outpaced the rate of inflation, and because these prices are inputs to so many other costs, they are also among the top drivers of inflation.[11] The numbers are staggering: Cumulatively in 2025, 124 million customer accounts will reflect rate increases in higher monthly bills.[12] Wholesale auction results in PJM increased bills for 67 million Americans in the PJM region.[13] Customers are aware;

[13] PowerLines, *Utility Bills are Rising: Q3 2025 Update*, 14 (Oct. 2025), https://powerlines.org/wp-content/uploads/2025/10/1026_PowerLines_Rising-Utility-Bills-Q3-Update-2.pdf.

polling shows three in four Americans are concerned about their rising utility bills, but four in five feel powerless to do anything about them.[14]

Q. Are there other indicators of a crisis in utility bill affordability?

A. Yes. On December 15, 2025, ABC News reported that energy bills have increased 13% in 2025, with data centers and overall demand among the root causes.[15] On the same day, S&P Global reported that 16% of U.S. households are behind on their electric bills; that number is expected to rise, and utility shutoffs are expected to increase.[16] The Century Foundation reports that since 2022, the average overdue balance on utility bills in the U.S. grew by 32% from $597 to $789, with Black and Asian consumers carrying the highest overdue utility balances, and that nearly one in twenty households, or roughly 14 million Americans, have utility debt so severe that it was or will be sent to collections.[17]

Q. What is the situation in Pennsylvania?

A. According to the United Way's ALICE Report released in 2025, 40% of Pennsylvania households faced financial instability in 2023.[18] (See chart to the right).

Sources: ALICE Threshold, 2010-2023; U.S. Census Bureau, American Community Survey, 2023

KEY TERMS

- **ALICE:** Asset Limited, Income Constrained, Employed – households with income above the Federal Poverty Level (FPL) but less than the basic cost of living in their county
- **ALICE Household Survival Budget:** Reflects the minimum costs of household necessities (housing, child care, food, transportation, health care, and technology) plus taxes, adjusted for all U.S. counties and various household compositions
- **ALICE Threshold:** Derived from the Household Survival Budget, the minimum average income that a household needs to afford basic costs, calculated for all U.S. counties
- **Below ALICE Threshold:** Includes households in poverty and ALICE households combined

Q. What is the situation in PPL Electric's service territory?

A. PPL Electric does not maintain detailed data on electricity affordability in its service territory.[19] However, I was able to obtain data for the counties where PPL Electric serves customers. Among these counties, about 10% of households, or some 254,000 households, are estimated to be in poverty in 2023 according to United for ALICE data.[20] Because the federal poverty level is set so low, these figures do not tell the full

[18] United for ALICE, *The State of ALICE in Pennsylvania – 2025 Update on Financial Hardship* 3 (2025), https://www.unitedforalice.org/introducing-ALICE/pennsylvania.
[19] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-22.
[20] United for ALICE, *The State of ALICE in Pennsylvania – 2025 Update on Financial Hardship*, Data Sheet (2025), https://www.unitedforalice.org/introducing-ALICE/pennsylvania.

story. An additional 28% of households have high energy burdens—meaning a high proportion of household income must be spent on energy—and experience financial hardship. These are ALICE households: Asset Limited, Income Constrained, Employed. ALICE households have a household income above the Federal Poverty Limit, but not enough to enjoy financial security.[21] United for ALICE data shows that some 38.1%, or about 970,000 households in the counties where PPL Electric serves customers, have household income at or below the ALICE threshold.[22]

By comparison, PPL Electric reports about 114,000 residential households that are not enrolled in the Customer Assistance Program ("CAP") that take default service and are Confirmed Low-Income ("CLI") customers,[23] and an additional 72 thousand customers enrolled in the CAP.[24] While it is good that these customers, and others, receive some kind of assistance, there remain hundreds of thousands of households in PPL Electric's service territory that are ALICE and unserved by such programs.

Q. Why is it important to understand when customers have high energy burdens and face energy insecurity?

[21] United for ALICE, *The State of ALICE in Pennsylvania – 2025 Update on Financial Hardship*, 2025 Report, 1 (2025), https://www.unitedforalice.org/introducing-ALICE/pennsylvania.
[22] These figures are calculated using United for ALICE's Data Sheet. United for ALICE, *The State of ALICE in Pennsylvania – 2025 Update on Financial Hardship*, Data Sheet (2025), https://www.unitedforalice.org/introducing-ALICE/pennsylvania.
[23] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-VI-12(s).
[24] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-VI-12(m).

A. Customers with high energy burdens are vulnerable to rate and bill volatility. Month-to-month changes in rates that might not frustrate the household budgets of well-to-do customers can cause rate shock to customers with high energy burdens. Low-income customers often live on the edge of economic or energy insecurity—an inability to meet basic household energy needs that is sometimes referred to as the "heat (or cool) or eat" dilemma.[25] An unaffordable electric bill can create a long-lived cascade of household economic problems, made worse with pancaking fees and charges from utilities and other businesses. Energy insecurity is not just an economic issue, but a social and public health matter as well.[26]

Q. Does growth in residential demand account for PPL Electric's proposals to dramatically increase rates for those customers?

A. No. PPL Electric proposes to increase distribution rates for residential customers by nearly 20% in this proceeding.[27] The Edison Electric Institute ("EEI") reports that total electricity sales to residential customers in the U.S. increased 2.7% after falling 3.6% in 2023.[28] PPL Electric reports a very different business situation:

[25] Diana Hernández, *Understanding 'Energy Insecurity' and Why It Matters to Health*, 167 Soc. Sci. Med. 2016 October, 2 (Oct. 2016), https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5114037/.
[26] Diana Hernández, *Understanding 'Energy Insecurity' and Why It Matters to Health*, 167 Soc. Sci. Med. 2016 October, 1 (Oct. 2016), https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5114037/.
[27] PPL, St. No. 8, Direct Testimony of Steven Wishart, 7, table 2, Docket No. R-2025-3057164 (Sept. 30, 2025).
[28] Exh. KRR-4, Edison Electric Institute ("EEI"), *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry*, 58 (2024), https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf.

> PPL Electric has experienced and is expected to continue experiencing little or no growth in customers or sales due to slow economic growth and increased distributed generation. In 2024, Pennsylvania's GDP grew by 2.415% as compared to 2.796% nationally. Sales and revenues have been further eroded by increased interconnections of distributed generation and customer-generator net metering. This new distributed generation totals an additional 477 MW of capacity on PPL Electric's system since the Company's last base distribution rate case took effect in early 2016.
>
> PPL Electric anticipates only marginal customer growth for customers taking distribution service below 69 kV (0.44% per year from 2025-2027 for residential customers). Electric anticipates only marginal customer growth for customers taking distribution service below 69 kV (0.44% per year from 2025-2027 for residential customers). This is a slight decline from the 0.51% annual growth that the Company has seen from 2016 to 2024. In terms of total sales, the Company has seen only a 0.24% Total Compound Annual Growth Rate ("CAGR") across residential, small, and larger commercial and industrial customers, excluding new large load interconnections. With respect to the residential customer group, sales growth has been offset by distributed generation and energy efficiency, with the net effect being essentially flat growth over the next 5 years with a CAGR of only 0.45%.[29]

In sum, while Pennsylvania consumers face rising bills, and while customer count and demand for electric service by small customers has been essentially flat, PPL Electric proposes to fuel the affordability crisis with a nearly 20% increase in distribution rates—largely driven, as explained in this testimony, by proposals that would unreasonably increase utility profits.

Q. What do you conclude about electricity service affordability issues in PPL Electric's service territory?

A. PPL Electric's proposals will worsen the affordability crisis for hundreds of thousands of its customers. In this request, PPL Electric advances proposals to excessively

[29] PPL, Exh. Fully Projected Future 1, Summary of Rate Base & Rate of Return, Statement of Reasons A-1, Docket No. R-2025-3057164 (Sept. 30, 2025).

increase its profits, to unreasonably increase its already excessive fixed customer charge, and to spend billions of dollars on capital projects. PPL Electric seeks to enrich its shareholders and impoverish its customers.

Q. Do these issues of affordability give rise to any recommendations that you would like to make at this point in your testimony?

A. The remainder of this testimony addresses key issues relating to affordable and efficiently priced electric service from PPL Electric. The pressing issues of the day justify strong and meaningful action by the Commission and PPL Electric as recommended in this testimony and through the full and increased funding of universal service programs through the Universal Service Rider ("USR"), as well as the collection of USR costs from all customer classes. At the federal level, uncertainty continues over the funding and delivery of key programs, such as the Low-Income Home Energy Assistance Program ("LIHEAP"), the Weatherization Assistance Program ("WAP"), the State Energy Program ("SEP"), the Rural Energy for America Program ("REAP"), and Energy STAR.[30] Increased electricity rates and charges to residential and small commercial customers resulting from interconnecting and serving large loads—data centers, in particular—have already contributed to significant increases in PPL Electric's price to compare.[31]

[30] Sapna Gheewala-Dowla, *The Good, The Bad and The Ugly: Energy Efficiency Implications of Bipartisan Action to Reopen Government*, Alliance to Save Energy (Nov. 13, 2025), https://www.ase.org/blog/good-bad-and-ugly-energy-efficiency-implications-bipartisan-action-reopen-government.

[31] Pennsylvania Public Utility Commission, *En Banc* Hearing Concerning Interconnection and Tariffs for Large Load Customers, Joint Comments of Coalition for Affordable Utility

Analysis presented in a policy brief by the Union of Concerned Scientists reveals $4.3 billion approved in 2024 for transmission costs related to connecting large data centers and to be imposed on customers in Illinois, Maryland, New Jersey, Ohio, Pennsylvania, Virginia, and West Virginia.[32] These are costs incurred to connect data centers and other large loads, but then allocated to all customers. The total for Pennsylvania in 2024 was $491.8 million,[33] and for PPL Electric, the total was $461.1 million,[34] or 94% of the Pennsylvania total.

Though energy supply rates are not directly at issue in this case, PPL Electric's proposal for amendments to its Large Load Tariff in Rate Schedule LP-5 are. And as discussed later in this testimony, transmission-related costs add significantly to residential and small commercial bills. These costs would likely increase given the unreasonably wide latitude PPL Electric proposes that the Commission grant the utility in decisions about spreading interconnection costs to other customers.

Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") and Tenant Union Representative Network ("TURN"), 3, Docket No. M-2025-3054271 (Jun. 6, 2025).

Residential energy insecurity and burdens on universal service programs are increasing regardless of how large load–related costs are paid, though these problems will be worsened if PPL Electric's LP-5 proposals are approved.

In its petition, PPL Electric proposes to begin collection of labor costs for administration of the Universal Service and Energy Conservation Plan through the USR.[35] Without increased funding to offset these costs, the USR funds available will be diluted.

High electric bills for residential customers raise labor costs for all businesses, and high electric bills for commercial and government customers raise the cost of doing business in Pennsylvania.

In the end, energy insecurity is an issue that impacts every person and business in PPL Electric's service territory. Unpaid bills, service terminations, and costs that are ultimately classified as uncollectible impact rates for all customers directly and indirectly.

As pointed out in comments filed by the Pennsylvania Utility Law Project on behalf of CAUSE-PA and TURN in the Commission's large load model tariff proceeding, with one exception, universal service costs are charged only to residential customers

[35] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-III-36.

even though residential customers are not causing energy poverty.[36] The CAUSE-PA and TURN joint comments also point out that there is no reason to routinely exempt non-residential customers from universal service obligations.[37]

For all these reasons, I recommend that the Commission require PPL Electric to amend the USR to equitably recover USR program costs from all customers, including LP-5 customers, and not just residential customers. In that regard, a useful starting point is the proposal from CAUSE-PA and TURN earlier this year in the statewide model large load tariff docket that utilities should be required to charge large load customers through a two-part rider that includes both a flat upfront fee and an on-going volumetric charge.[38]

V. RETURN ON EQUITY AND CAPITAL STRUCTURE

Q. What amount does PPL Electric propose it should receive as a return on equity in this proceeding, and what fraction of the capital structure does it propose that equity should comprise?

A. PPL Electric, through witnesses Jennifer E. Nelson[39] and Julissa Burgos,[40] proposes an allowed ROE for PPL Electric of 11.30%, a cost of long-term debt of 5.08%, and a capital structure composed of 56.05% equity ("equity ratio" or "equity fraction"), and 43.95% debt. Taken together, PPL Electric proposes a ROR of 8.56%.[41]

Q. How do the 11.30% ROE and 56.05% equity ratio requests square with experience across the U.S.?

A. PPL Electric's proposals are materially out of step with authorized returns and equity ratios across the U.S. The EEI's Annual Financial Review for 2024[42] reports:

> In 2024, there were 81 rate reviews filed across 34 states, and 78 rate reviews decided in 32 states. In comparison, there were 80 rate reviews filed and 91 rate reviews decided in 2023. The average awarded ROE was 9.73 percent, an increase of 15 basis points from 2023, which had an average awarded ROE of 9.58 percent. The average awarded ROE for distribution-only companies was 9.53 percent, compared to 9.84 percent for vertically integrated companies.[43]

[42] Exh. KRR-4, EEI, *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry* (2024), https://www.eei.org/-/media/Project/EEI/Documents/ Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf.
[43] Exh. KRR-4, EEI, *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry*, 40 (2024), https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf.

EEI's graphs of requested and allowed ROE show that regulators have not allowed an ROE above 10% since 2016, despite consistently higher requests by utilities.[44]

Q. Why does it matter that PPL Electric seeks such an unreasonably high ROE?

A. As previously explained, PPL Electric customers face significant affordability problems. PPL Electric's request for an unreasonably high ROE is an egregious effort to make additional profits during challenging economic times. According to data provided by PPL Electric, every percentage point of ROE reflects more than $48 million dollars ($48,290,000) in revenue requirement, solely for profits to PPL Electric's parent companies.[45]

Q. Does additional research confirm EEI's data?

A. Yes. S&P Global's subsidiary, Regulatory Research Associates ("RRA") reports that in recent decisions on major U.S. rate cases, the average awarded ROE was 9.68% for the first half of 2024 and 9.60% for all of 2023, representing about 120 decided

[44] Exh. KRR-4, EEI, *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry*, 41 (2024), https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf.

[45] This figure was calculated with data provided by PPL. Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-IV-14.

cases.[46] RRA reported that awarded ROE for distribution utilities was 9.28% for cases decided in the last half of 2023 and the first half of 2024.[47]

RRA reports that the average equity ratio for cases decided in 2023 was 51.15%.[48] RRA further reports that the average equity fraction approved in major utility cases resolved during the first half of 2024 was lower: 49.26%, or 6.79% less than that requested by PPL Electric.[49]

Q. How much extra profit is PPL Electric seeking through its 11.30% ROE request in this proceeding?

A. PPL Electric's request for an 11.30% allowed ROE results in an increase in revenue requirement, solely for profit, that is more than $85,000,000 higher than if the ROE were equal to the average award of 9.53% during 2024.

[46] Lisa Fontanella, *Major Energy Rate Case Decisions in the US: Quarterly Update on Decided Rate Cases*, S&P Global, 3–6, 10 (Jul. 29, 2024), https://pscdocs.utah.gov/electric/24docs/2403504/336109DPUExhbt3.14MjrEnrgyRtCsDcsns10-17-2024.pdf. RRA defines a "major" case as on in which the "utility's request would result in a rate change of at least $5 million or in which the commission approves a rate change of at least $3 million."

Q. How does PPL Electric justify a request so out of step with utility industry conditions?

A. PPL Electric Witness Nelson presents results from estimating ROE with three models.[50] Witness Nelson's analysis is like many that I have seen and is the product of two key factors: First, general arguments that high returns are necessary to ensure access to capital at reasonable costs, and second, the strong incentive to generate the highest ROE values possible.

I offer no argument that Witness Nelson's calculations did not produce the results they do, or that Witness Nelson's selection of a proposed ROE is inconsistent with those modeling results. My testimony is that PPL Electric's proposed ROE and equity ratio are out of step with industry norms and that there is substantial evidence that PPL Electric's proposed ROE exceeds the actual cost of equity for PPL Electric and its parent corporations. I further note that there is no evidence that PPL Electric has faced any difficulty in accessing capital at reasonable costs.

Q. Is the problem with excessive authorized rates of return limited to PPL Electric?

A. The problem of excessive authorized returns is unfortunately endemic among investor-owned utilities in the U.S., but PPL's request is near the top of the stack.

[50] PPL, St. No. 10, Direct Testimony of Jennifer E. Nelson Direct, 3, Docket No. R-2025-3057164 (Sept. 30, 2025).

According to EEI, it appears that it has been over ten years since the average ROE requested by U.S. investor-owned utilities was higher than 11%.[51]

A recent study from the American Economic Liberties Project documents these and other problems with awarded ROEs for investor-owned utilities in detail, hereinafter the "ROR=COC" report, for "Rate of Return Equals Cost of Capital."[52] A very accessible primer published by RMI, hereinafter "RMI ROE Primer,"[53] also recognizes these problems and points out that on average, utility profits now reflect nearly 17% of the average customer bill. The Pearl Street Station Finance Lab observed that utility ROEs above those for similarly credit-rated industries could have cost American utility customers up to $214 billion during the decade 2010–20, and $34 billion in 2020 alone.[54]

[51] Exh. KRR-4, EEI, *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry*, Allowed ROE vs. Corresponding ROE 2005-2024, 41 (2024), https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf

Q. You stated that you do not take issue with the fact that PPL Electric's modeling of a proposed ROE produced the results that it did. Does that mean that you approve of the models themselves?

A. Just as ROR should equal COC, ROE should equal cost of equity ("COE"). There are recognized problems with excessive utility rates of return allowed by utility commissions as well as the modeling that utilities provide to support their ROE requests. In general, these models produce recommended ROEs that greatly exceed the cost of equity, which should be where the ROE is set. As noted in the ROR=COC report:

> [U]tility rate of return experts frequently employ four different models to estimate the cost of equity. Two of them — the risk premium model and expected earnings analysis — are used only in utility regulatory proceedings and nowhere else in finance. This is because they do not even purport to estimate the cost of equity but merely calculate return on equity based on either historical regulatory-awarded ROEs (the risk premium model) or forecasts of future ROEs which, in turn, are based on recently awarded ROEs (the expected earnings analysis). Promisingly, in 2022, the FERC recognized these models' circularity and prohibited their use, observing that they "def[y] general financial logic." Nonetheless, both utility and non-utility experts continue to use them in state proceedings, mostly unchallenged.
>
> The other two models commonly used in utility regulatory proceedings, the capital asset pricing model (CAPM) and discounted cash flow model (DCF), are all used by other finance practitioners and academics. Nonetheless, utility ROR experts routinely implement the DCF and CAPM with unrealistic assumptions to arrive at results comparable to those produced by the conceptually flawed ROE-based models. Examples of faulty implementation include growth projections for corporate profits, which currently account for less than 10% of US GDP, overtaking GDP in its entirety within a decade or two; and relying on input assumptions from providers with multi-decade track records of systematic upward bias.[55]

[55] Mark Ellis, American Economic Liberties Project, *Rate of Return Equals Cost of Capital: A Simple, Fair Formula to Stop Investor-Owned Utilities from Overcharging the Public*, 11 (Jan. 2025), https://www.economicliberties.us/wp-content/uploads/2025/01/20250102-aelp-ror-v5.pdf.

I therefore recommend that the Commission not rely on the modeling results submitted by PPL Electric's Witness Nelson.

Q. Does PPL Electric's current allowed ROE accurately reflect its *cost* of equity ("COE")?

A. If PPL Electric's ROE were numerically the same as its COE, its stock should trade at its book value, which reflects historical investment used to inform revenue requirement calculations.[56] Comparing the market value or price of a stock to its book value indicates whether the ROE is set at the COE. PPL Electric is owned by PPL Corporation. PPL Corporation has a current price-to-book ratio of 1.78,[57] and Eqvista reports that as of January 2025, the electric utility industry in general had a price to book ratio of 1.67.[58] PPL Electric's ROE is higher than its COE, as evidenced by the market's willingness to pay a premium over its book value.

Q. Can you estimate what return investors require from PPL Electric?

A. Using a discounted cash flow calculation can inform whether PPL's cost of equity is lower than its authorized ROE. I used the formula below, provided in the RMI ROE Primer to estimate PPL Electric's cost of equity.

[56] Joe Daniel, Ryan Foelske & Steve Kihm, *Rebalancing "Return on Equity" to Accelerate an Affordable Clean Energy Future*, RMI (Feb. 21, 2025), https://rmi.org/rebalancing-return-on-equity-to-accelerate-an-affordable-clean-energy-future/.
[57] Yahoo!Finance, *PPL Corp. (PPL)* (data as of close of markets, Dec. 19, 2025), https://finance.yahoo.com/quote/PPL/key-statistics/.
[58] Sarath, *Price-to-Book Ratio by Industry (2025)*, Eqvista (Dec. 2025), https://eqvista.com/price-to-book-ratio-by-industry/.

$$COE = \frac{ROE}{\left(\frac{P}{B}\right)} + \left[1 - \frac{1}{\left(\frac{P}{B}\right)}\right](b \times ROE)$$

In this formula:

COE = cost of equity ROE = return on equity

P|B = price to book ratio b = earnings retention ratio

In my estimation, I used PPL Electric's last approved ROE of 10.4%,[59] its price-to-book ratio of 1.78,[60] and an estimated earnings retention ratio of 40%. The earnings retention ratio of 40% represents a reasonable midpoint between the industry-wide ratio of 36% and the PPL Corporation-specific value of 44.8% reported by EEI in its 2024 financial review for electric utilities.[61]

My calculations estimate that PPL Electric's COE is 7.67%, substantially lower than its current allowed ROE of 10.4%, and a full 3.63% lower than its requested 11.30% ROE.

Q. Are you recommending an allowed ROE based on the 7.67% level?

[59] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-4(d).
[60] Yahoo!Finance, *PPL Corp. (PPL)* (data as of close of markets, Dec. 19, 2025), https://finance.yahoo.com/quote/PPL/key-statistics/.
[61] Exh. KRR-4, EEI, *2024 Financial Review: Annual Report of the U.S. Investor-Owned Electric Utility Industry*, 17 (2024), https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Finance-And-Tax/Financial_Review/FinancialReview_2024.pdf.

A. Yes. My calculation was based on publicly available data about the electric industry as a whole. I offer this calculation to make two additional points in this testimony. First, PPL Electric's requested allowed ROE of 11.30% is extreme and estimated to be 363 basis points higher than its cost of capital. Second, the Commission should not have confidence in PPL Electric's analysis in setting its proposed allowed ROE.

Q. Witness Nelson discussed business risk factors facing PPL Electric. Do these factors justify the proposed 11.30% ROE?

A. No, and Witness Nelson expressly declines to make an adjustment to her recommendations based on business risk.[62] I agree that no adjustment based on business risk is justified.

Q. Witness Nelson also offered an analysis of the capital market environment faced by PPL Electric and its parent corporation. Do you agree with her testimony on this issue?

A. Witness Nelson opines that three key factors should inform the cost of equity decision that the Commission must make in this case, relating to interest rates, inflation, and economic uncertainty. Again, while Witness Nelson cites these factors as support for using multiple analysis models for estimating the cost of equity for PPL Electric, she makes no specific recommendation for an adjustment based on these factors. Indeed, these factors have mixed effects—interest rates are falling, domestic manufacturing is

[62] PPL, St. No. 10, Direct Testimony of Jennifer E. Nelson Direct, 37, Docket No. R-2025-3057164 (Sept. 30, 2025).

rising in response to tariff conditions, and customers are being more careful with their spending. I have already addressed the way the models used by utility ROE witnesses like Witness Nelson inflate the estimated ROE. The cited capital market factors do not justify the excessive proposed ROE.

Q. Why do these economic and business factors not justify an increased ROE for PPL Electric?

A. PPL Electric has in place and is proposing resetting rider mechanisms that ensure full and timely recovery of all revenue requirements. These include riders for distribution spending and storm costs recovery. PPL Electric can argue for ROE to compensate for revenue risk, or it can argue for rate and accounting mechanisms to do the same, but it is not reasonable that it be allowed both. If this business risk is real, PPL Electric should decrease its capital spending plans *and* its requested ROE, not increase both. Further, the presence of these revenue-recovery mechanisms countenances a lower return to account for reduced business risk for PPL Electric.

Q. What ROE do you recommend that the Commission approve for PPL Electric?

A. Because PPL Electric faces substantially lower business risk than assessed by Witness Nelson; because PPL's stock trades at a price-to-book ratio of 1.78 and electric utility price-to-book ratios are in the range of 1.67, indicating that the required return is substantially lower than PPL Electric's current allowed ROE of 10.4%; because PPL Electric faces substantially reduced risk of revenue recovery due to riders; and because a straightforward calculation of the cost of equity that focuses on observable

market data reveals a cost of equity well below 10%; I recommend an allowed ROE set at equal to the cost of equity as calculated earlier in this testimony. If the Commission is not inclined to adopt this recommendation, I urge the Commission to authorize an allowed ROE no higher than the average of awarded ROEs for distribution utilities in 2023 and the first half of 2024, as reported by RRA.

Q. Why does the equity fraction matter to consumers and electric service affordability?

A. The equity fraction of the capital structure is the multiplier used to calculate the weighted ROE in the overall ROR. These values are used to calculate approved rates for electric service. A higher equity fraction means higher profits and higher rates when the weighted ROE exceeds the weighted cost of debt. It has been traditional in the U.S. for regulators to approve a capital structure of about 50% equity and 50% debt based on concern about utilities becoming over-leveraged and at risk in volatile risk markets, even though I am not aware of empirical evidence that such risk really exists in financial markets today.

Q. Does the capital structure constitute a limit or establish requirements for how the utility raises capital to fund its activities?

A. No. In fact, with the cost of debt substantially lower than the cost of equity, utilities have a strong incentive to seek an unreasonably high equity fraction, as PPL Electric has done in this case, to receive approval for higher rates. Then, in the interim between rate cases, and outside of the historic test year, the utility can obtain debt

financing for its capital projects to create an unearned windfall for the parent corporation and shareholders in New York. During the historic test year, the utility's owners can issue equity, as PPL Corporation did,[63] to inflate its actual equity fraction, though historic analysis will show higher debt to equity ratios.[64] This is another reason that approved capital structures for investor-owned utilities in the U.S. tend to center around the 50% equity to 50% debt ratio.

Q. What equity fraction do you recommend the Commission approve for PPL Electric's capital structure used in setting rates?

A. For the reasons previously discussed, and in keeping with current trends in the industry and those observed among the utilities identified by Witness Nelson in her testimony,[65] I recommend an equity fraction of 50%.

Q. What are the impacts of the adjustments to ROE and equity ratio you would propose in terms of revenue requirement?

A. Due to the proprietary "black box" nature of the model relied upon by PPL Electric's rate consultant, I cannot calculate a precise impact of my recommendations. Relying on PPL Electric's calculation of the impact of changes in the ROE and equity

[63] PPL, St. No. 10, Direct Testimony of Jennifer E. Nelson Direct, 51, Docket No. R-2025-3057164 (Sept. 30, 2025).

[65] PPL, St. No. 10, Direct Testimony of Jennifer E. Nelson, Exh. JEN-9, 2, "Common Equity Ratio – Utility Operating Companies [2]", Docket No. R-2025-3057164 (Sept. 30, 2025).

fraction,[66] I estimate that my recommendations would reduce PPL Electric's system revenue requirement by about $178 million to about $1,217 million, or about 13% below the current proposed revenue requirement of $1,395 million. Even if all the spending proposed by PPL Electric is approved, this would reduce the rate charges for excess profits to residential customers by about $124 million, or about $7.85 per customer per month, as compared to PPL Electric's proposed rates.

VI. FIXED CUSTOMER CHARGES AND THE MINIMUM SYSTEM METHOD

Q. What is PPL Electric's proposal regarding the residential fixed customer charge?

A. PPL Electric proposes to increase the residential fixed customer charge from $15.58 per customer per month to $17.00.[67] PPL Electric already has the highest fixed customer charge for residential customers among major utilities in Pennsylvania; the next highest is $13.10 for Citizens Electric of Lewisburg.[68] PPL Electric relies on a minimum system method to classify costs as customer costs, which treats both true customer costs and demand-related costs as customer costs for inclusion in the fixed customer charge. The key assumption of the minimum system method is that costs that are labeled "fixed" for accounting purposes—those generally associated with

[66] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-IV-14.
[67] PPL, St. No. 8, Direct Testimony of Steven Wishart, 9, Docket No. R-2025-3057164 (Sept. 30, 2025).
[68] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to OCA-XXI-15.

long-lived assets—should be recovered in utility rates or sales prices through fixed charges.[69]

Q. Why does PPL Electric argue that rate structure should mimic accounting cost structure?

A. PPL Electric asserts that using fixed charges to recover customer- and demand-related fixed costs provides customers with "proper" price signals that will result in efficient choices and proper allocation of resources.[70] The extreme version of this argument leads to "straight fixed variable rates" in which accounting classifications purely dictate rate form. While the minimum system method produces lower fixed customer charges than other options, it is important to recognize that only considerations of gradualism and bill impacts appear to prevent PPL Electric from seeking customer charges that equal the $42.46 per customer per month charge that their minimum system method generates.[71]

PPL Electric cites the principles articulated in James C. Bonbright's treatise on public utility rates and asserts that the minimum system method for creating customer fixed charges aligns with three of these: maintaining rate stability, avoiding undue discrimination, and maintaining the efficiency of rates. PPL Electric also cites scholarly writings relating to public utility pricing.[72] PPL Electric further asserts that

[69] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-40.
[70] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-40.

[72] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-40, fns. 1–3.

its minimum system method approach aligns with the NARUC Electric Utility Cost Allocation Manual.[73]

Q. Do the authorities and arguments from PPL Electric support the concept that rate design should mimic cost structure?

A. No. In my 35 years in public utility regulation, I have never seen a single learned treatise or analysis that supports the idea that economic efficiency is enhanced when rate design mimics the accounting labels used to describe costs. In simple terms, "fixed charges for fixed costs" is alliterative, but has never been shown to optimize or even enhance economic efficiency in the pricing of utility services. The authorities cited by PPL Electric do not provide any support for the kind of high fixed customer charges that reliance on the minimum system method creates. Bonbright specifically condemned the approach, and other experts recognized the regressive nature of high fixed charges, even while they acknowledged that multi-part rate designs can leverage the fact that most customers have no alternatives to utility services through the industry's use of Ramsey pricing approaches that maximize utility profits. Finally, the NARUC Cost Allocation Manual is descriptive and not normative; it does not serve as justification for use of the minimum system and minimum or zero intercept methods.[74]

[74] NARUC, *Electric Utility Cost Allocation Manual*, ii (Jan. 1992) ("The [Manual's] writing style should be non-judgmental; not advocating any one particular method but trying to include all currently used methods with pros and cons.").

Q. Did Bonbright address the minimum system method specifically?

A. It is surprising that PPL Electric cited Bonbright's principles articulated in his "Principles of Public Utility Rates"[75] because in the same treatise he sets out clear opposition for reliance on the minimum system method:

> [T]he really controversial aspect of customer-cost imputation arises because of the cost analyst's frequent practice of including, not just those costs that can be definitely earmarked as incurred for the benefit of specific customers but also a substantial fraction of the annual maintenance and capital costs of the secondary (low-voltage) distribution system—a fraction equal to the estimated annual costs of a hypothetical system of minimum capacity. This minimum capacity is sometimes determined by the smallest sizes of conductors deemed adequate to maintain voltage and to keep from falling of their own weight. In any case, the annual costs of this phantom, minimum-sized distribution system are treated as customer costs and are deducted from the annual costs of the existing system, only the balance being included among those demand-related costs to be mentioned in the following section. Their inclusion among the customer costs is defended on the ground that, since they vary directly with the area of the distribution system (or else with the lengths of the distribution lines, depending on the type of distribution system), they therefore vary indirectly with the number of customers.
>
> What this last-named cost imputation overlooks, of course, is the very weak correlation between the area (or the mileage) of a distribution system and the number of customers served by this system. For it makes no allowance for the density factor (customers per linear mile or per square mile). Indeed, if the company's entire service area stays fixed, an increase in number of customers does not necessarily betoken any increase whatever in the costs of a minimum-sized distribution system.
>
> While, for the reason just suggested, the inclusion of the costs of a minimum-sized distribution system among the customer-related costs seems to me clearly indefensible, its exclusion from the demand-related costs stands on much firmer ground. For this exclusion makes more plausible the assumption that the remaining cost of the secondary distribution system is a cost which varies continuously (and, perhaps, even more or less directly) with the maximum demand imposed on this system as measured by peak load. But if the hypothetical cost of a minimum-sized distribution system is properly excluded from the demand-related costs for the reason just given,

[75] James C. Bonbright, *Principles of Public Utility Rates*, 347 (1961), https://www.raponline.org/wp-content/uploads/2023/09/powellgoldstein-bonbright-principlesofpublicutilityrates-1960-10-10.pdf.

> while it is also denied a place among the customer costs for the reason stated previously, to which cost function does it then belong? The only defensible answer, in my opinion, is that it belongs to none of them. Instead, it should be recognized as a strictly unallocable portion of total costs. And this is the disposition that it would probably receive in an estimate of long-run marginal costs. But the fully-distributed cost analyst dare not avail himself of this solution, since he is the prisoner of his own assumption that 'the sum of the parts equals the whole.' He is therefore under impelling pressure to 'fudge' his cost apportionments by using the category of customer costs as a dumping ground for costs that he cannot plausibly impute to any of his other cost categories.[76]

Accordingly, the minimum system analysis does not identify customer costs but partially non-demand and partially non-energy costs. Using it to set a customer charge is nothing more than a preference to socialize the costs rather than have customers pay for them based on usage.

Q. Have more modern articulations of generally accepted rate making principles than Bonbright's addressed the minimum system and minimum and zero intercept methods?

A. Yes. In the 65 years since Bonbright published his treatise, the 40 years since the economists cited by PPL Electric did their work,[77] and the 25 years since NARUC published its cost allocation manual, much has changed. Most importantly, distributed energy resources have become common and affordable, and growth in residential electricity demand has slowed. In 2020, the Regulatory Assistance Project published a new manual for electric cost allocation that addresses minimum system and minimum

[76] James C. Bonbright, *Principles of Public Utility Rates* 347–49 (1961), https://www.raponline.org/wp-content/uploads/2023/09/powellgoldstein-bonbright-principlesofpublicutilityrates-1960-10-10.pdf.
[77] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-40, fns.1–3.

and zero intercept methods.[78] I reprise the discussion from the RAP Cost Allocation Manual in great detail because of the thoroughness of its explanation:

> [M]ore general attempts by utilities to include a far greater portion of shared distribution system costs as customer-related are frequently unfair and wholly unjustified. These methods include straight fixed/variable approaches where all distribution costs are treated as customer-related . . . and the more nuanced minimum system and zero-intercept approaches included in the 1992 NARUC cost allocation manual.
>
> The minimum system method attempts to calculate the cost (in constant dollars) if the utility's installed units (transformers, poles, feet of conductors, etc.) were each the minimum-sized unit of that type of equipment that would ever be used on the system. The analysis asks: How much would it have cost to install the same number of units (poles, feet of conductors, transformers) but with the size of the units installed limited to the current minimum unit normally installed? This minimum system cost is then designated as customer-related, and the remaining system cost is designated as demand-related. The ratio of the costs of the minimum system to the actual system (in the same year's dollars) produces a percentage of plant that is claimed to be customer-related. This minimum system analysis does not provide a reliable basis for classifying distribution investment and vastly overstates the portion of distribution that is customer-related. Specifically, it is unrealistic to suppose that the mileage of the shared distribution system and the number of physical units are customer-related and that only the size of the components is demand-related, for at least eight reasons.
>
> 1. Much of the cost of a distribution system is required to cover an area and is not sensitive to either load or customer number. The distribution system is built to cover an area because the total load that the utility expects to serve will justify the expansion into that area. Serving many customers in one multifamily building is no more expensive than serving one commercial customer of the same size, other than metering. The shared distribution cost of serving a geographical area for a given load is roughly the same whether that load is from concentrated commercial or dispersed residential customers along a circuit of equivalent length and hence does not vary with customer number . . .
>
> 2. The minimum system approach erroneously assumes that the minimum system would consist of the same number of units (e.g., number of poles, feet of conductors) as the actual system. In reality, load levels help determine the

[78] Jim Lazar, Paul Chernick & William Marcus, Regulatory Assistance Project, *Electric Cost Allocation for a New Era: A Manual* (Jan. 2020), https://www.raponline.org/wp-content/uploads/2023/09/rap-lazar-chernick-marcus-lebel-electric-cost-allocation-new-era-2020-january.pdf.

number of units as well as their size. Utilities build an additional feeder along the route of an existing feeder (or even on the same poles); loop a second feeder to the end of an existing line to pick up some load from the existing line; build an additional feeder in parallel with an existing feeder to pick up the load of some of its branches; and upgrade feeders from single-phase to three-phase. As secondary load grows, the utility typically will add transformers, splitting smaller customers among the existing and new transformers. Some other feeder construction is designed to improve reliability (e.g., to interconnect feeders with automatic switching to reduce the number of customers affected by outages and outage duration).

3. Load can determine the type of equipment installed as well. When load increases, electric distribution systems are often relocated from overhead to underground (which is more expensive) because the weight of lines required to meet load makes overhead service infeasible. Voltages may also be increased to carry more load, requiring early replacement of some equipment with more expensive equipment (e.g., new transformers, increased insulation, higher poles to accommodate higher voltage or additional circuits). Thus, a portion of the extra costs of moving equipment underground or of newer equipment may be driven in part by load.

4. The "minimum system" would still meet a large portion of the average residential customer's demand requirements. Using a minimum system approach requires reducing the demand measure for each class or otherwise crediting the classes with many customers for the load-carrying capability of the minimum system.

5. Minimum system analyses tend to use the current minimum-sized unit typically installed, not the minimum size ever installed or available. The current minimum unit is sized to carry expected demand for a large percentage of customers or situations. As demand has risen over time, so has the minimum size of equipment installed. In fact, utilities usually stop stocking some less expensive small equipment because rising demand results in very rare use of the small equipment and the cost of maintaining stock is no longer warranted. However, the transformer industry could produce truly minimum-sized utility transformers, the size of those used for cellular telephone chargers, if there were a demand for these.

6. Adding customers without adding peak demand or serving new areas does not require any additional poles or conductors. For example, dividing an existing home into two dwelling units increases the customer count but likely adds nothing in utility investment other than a second meter. Converting an office building from one large tenant to a dozen small offices similarly increases customer number without increasing shared distribution costs. And the shared distribution investment on a block with four large customers is essentially the same as for a block with 20 small customers with the same load

characteristics. If an additional service is added into an existing street with electrical service, there is usually no need to add poles, and it would not be reasonable to assume any pole savings if the number of customers had been half the actual number.

7. Most utilities limit the investment they will make for low projected sales levels, as we also discuss in Section 15.2, where we address the relationship between the utility line extension policy and the utility cost allocation methodology. The prospect of adding revenues from a few commercial customers may induce the utility to spend much more on extending the distribution system than it would invest for dozens of residential customers.

8. Not all of the distribution system is embedded in rates, since some customers pay for the extension of the system with contributions in aid of construction, …. Factoring in the entire length of the system, including the part paid for with these contributions, overstates the customer component of ratepayer-funded lines.

Thus, the frequent assumption that the number of feet of conductors and the number of secondary service lines is related to customer number is unrealistic. A piece of equipment (e.g., conductor, pole, service drop or meter) should be considered customer-related only if the removal of one customer eliminates the need for the unit. The number of meters and, in most cases, service drops is customer-related, while feet of conductors and number of poles are almost entirely load-related. Reducing the number of customers, without reducing area load, will only rarely affect the length of lines or the number of poles or transformers. For example, removing one customer will avoid overhead distribution equipment only under several unusual circumstances. These circumstances represent a very small part of the shared distribution cost for the typical urban or suburban utility, particularly since many of the most remote customers for these utilities might be charged a contribution in aid of construction. These circumstances may be more prevalent for rural utilities, principally cooperatives.

The related zero-intercept method attempts to extrapolate from the cost of actual equipment (including actual minimum-sized equipment) to the cost of hypothetical equipment that carries zero load. The zero-intercept method usually involves statistical regression analysis to decompose the costs of distribution equipment into customer-related costs and costs that vary with load or size of the equipment, although some utilities use labor installation costs with no equipment. The idea is that this procedure identifies the amount of equipment required to connect existing customers that is not load-related (a zero-kVA transformer, a zero-ampere conductor or a pole that is zero feet high). The zero-intercept regression analysis is so abstract that it can produce a wide range of results, which vary depending on arcane statistical methods and the choice of types of equipment to include or exclude from an equation.

As a result, the zero-intercept method is even less realistic than the minimum system method.[79]

Q. Why do utilities want to use classification methods that increase fixed charges by assigning additional costs to the customer charge?

A. The obvious answer is that higher fixed charges increase the certainty of revenue recovery for a wider range of costs without much expectation of losing customers. Residential customers don't have access to substitute sources of electricity at costs that would allow many of them to terminate their utility service subscription. Customers, including low-income customers, tend to prioritize electricity bill payment, especially during very hot and very cold weather, and will even forego food and medicine to pay their electric bills. High fixed charges exploit such behavior to improve utility profits and financial metrics.

Q. Please summarize the problems created by high fixed customer charges.

A. High fixed charges created by the minimum system method create a number of problems and harm customers in several ways:[80]

- Fixed charges reduce customer control. Fixed charges are non-bypassable charges that cannot be reduced by reducing consumption. The only option for avoiding fixed charges is to stop being a customer.

[79] Jim Lazar, Paul Chernick & William Marcus, Regulatory Assistance Project, *Electric Cost Allocation for a New Era: A Manual*, 146–48 (Jan. 2020), https://www.raponline.org/wp-content/uploads/2023/09/rap-lazar-chernick-marcus-lebel-electric-cost-allocation-new-era-2020-january.pdf.

[80] Melissa Whited, Tim Woolf & Joseph Daniel, Synapse Energy Economics, *Caught in a Fix*, (Feb. 9, 2016) (prepared for Consumers Union), https://www.synapse-energy.com/sites/default/files/Caught-in-a-Fix.pdf.

- Fixed charges hit low-usage customers the hardest. Customers become low-usage customers by becoming efficient, suffering inconvenience, or living in smaller forms of housing. Low-usage customers impose the lowest costs on the distribution grid, but with high fixed charges, they pay the highest effective rates.
- Fixed charges disproportionately impact low-income customers. The correlation between income and energy usage is well-established, so high fixed charges increase bills for customers that can least afford to pay.
- Fixed charges reduce incentives for energy efficiency, demand response, and distributed generation.[81] Fixed charges reduce the value of saved or self-generated electricity, weakening the economic benefits of investment in these options.
- Fixed charges increase electricity system costs and spending. All things being equal, higher fixed charges result in lower marginal per-unit charges for energy, which in turn create an incentive for wasteful use. Perhaps even more importantly, high fixed charges create an incentive for utilities to overspend on the distribution system, knowing that costs embedded in fixed charges are non-bypassable.

[81] This would include adverse impacts on efficiency, demand response, and other distributed energy resource programs, such as the programs being considered under Commission final order in PPL's Act 129 Phase V Energy Efficiency and Conservation Plan proceeding, Docket No. M-2025-3057329. *See* Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to SEF-II-3.

Q. You state that high fixed customer charges are unfair to low-use customers, who are often low-income customers as well. Is there evidence of these effects in the rate design proposed by PPL Electric?

A. PPL Electric's proposed residential rate design violates the principle of assigning costs based on cost causation. The high fixed customer charge means that low-use customers pay a higher effective rate for electric service than high-use customers. For a customer using the average 918 kilowatt-hours ("kWh") of electricity every month, the effective rate is the sum of fixed and volumetric charges, proposed at $74.80, divided by 918, to yield an effective rate of 8.15 cents per kWh. Because of the high proposed fixed customer charge, the effective rate for the half of all residential customers using 750 kWh per month is 9.70 cents per kWh, or nearly 20% higher. The effective rate is 13.10 cents per kWh for customers using 500 kWh per month on average. These numbers are significant because more than half of all residential customers use 750 kWh per average month or less, and nearly a third of residential customers use 500 kWh per average month or less.[82]

Q. What conclusion do you draw from this high-level analysis of the effects of PPL Electric's proposed residential rate design?

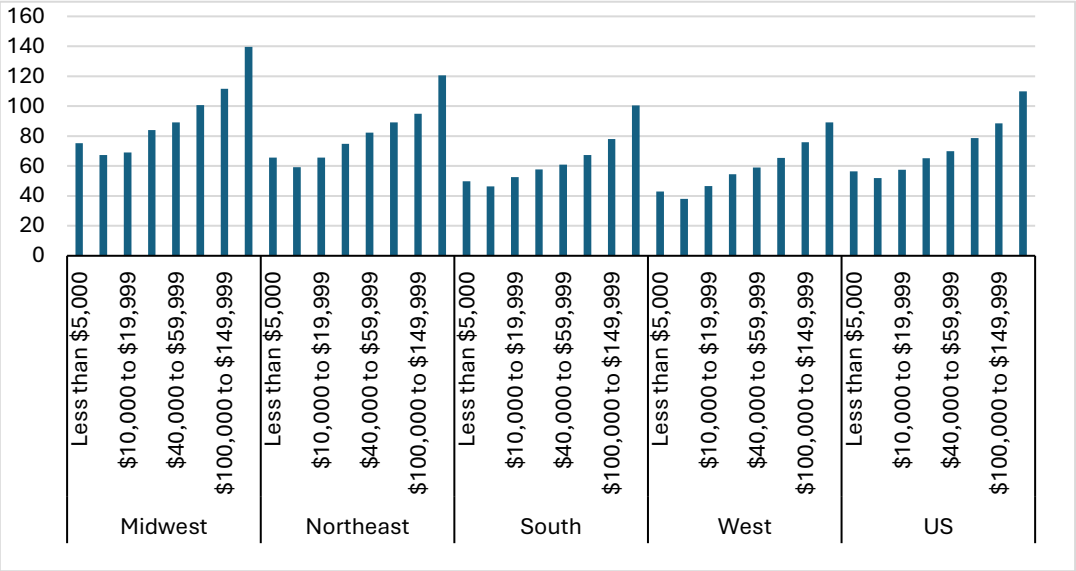
A. First, it is important to note that the method used by PPL Electric to set the fixed customer charge—the minimum system method—classifies a wide range of costs as customer-related that are not customer costs, it is PPL Electric's position that but for

[82] These figures are calculated with data provided by PPL. Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-16, Atts. 1 & 2.

the interests of gradualism, it could charge residential customers as much as $42.96 per month under its cost-of-service methods.[83] Second, because consumption correlates with income, PPL Electric's residential rate design is economically regressive—it assigns higher burdens to customers least able to handle them—and does not reflect the fact that low-use/lower-income customers cost less to serve than higher use/higher-income customers.

Q. Does PPL Electric recognize this effect of high fixed customer charges on affordability?

A. PPL Electric takes the position that its rates are not economically regressive because it does not have household income data for all its residential customers, and because for the customers participating in assistance programs, usage rates are higher than for those for residential customers as a whole.[84] The selection bias problem is obvious: customers with higher usage and lower income are more likely to need assistance, but this does not justify an assumption that all low-income customers are enrolled in PPL Electric's assistance programs. PPL Electric's own data shows that the number of confirmed low-income ("CLI") customers and customers enrolled in assistance programs is far smaller than the population of households living in poverty or below the ALICE threshold.[85]



[83] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-34.
[84] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-20.
[85] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-VI-12; Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to CAUSE-PA-VI-12, Att. 1.

PPL Electric further seeks to justify its regressive rate design by arguing that high fixed customer charges "can actually reduce certain low-income customers' bills by shifting costs away from kWh-based charges,"[86] and that even with high fixed charges, the utility's consumption-based charges are still high enough to induce conservation behavior. In my opinion, these arguments do not offset the adverse effects of PPL Electric's rate design on hundreds of thousands of low-income and low-use customers.

According to 2020 EIA Residential Energy Consumption Survey ("RECS") data,[87] there is a clear correlation between income and electricity use, with lowest-income customers consuming as little as half as much energy annually compared to their wealthiest counterparts. Pennsylvania is in the Northeast region.

[86] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-20.
[87] *See* U.S. Energy Info. Admin., EIA 2020 RECS Survey Data, Tables CE1.1 through 1.5, https://www.eia.gov/consumption/residential/data/2020/index.php?view=consumption.

Figure KRR-1: U.S. Mean Annual Household Energy Consumption by Income Category and Region 2020, million Btu)

As previously discussed, lower-income customers, despite using less energy, also suffer from a higher energy burden than higher-income customers—their energy bills constitute a higher share of their household income.

Q. How should the Commission rule on PPL Electric's proposed fixed customer charge and the method used to derive it?

A. The Commission should reject PPL Electric's proposed fixed customer charge increase for residential customers and the utility's reliance on the minimum system method to derive it. As I explain in this testimony, the Commission should order the use of the basic customer method for calculating a just and reasonable fixed customer charge and instead approve a fixed customer charge of no more than $10.20 per customer per month for the residential class, based on a re-calculation of customer

costs that excludes demand costs incorrectly classified as customer costs under the minimum system method used by PPL Electric.

With that step, the current proposed fixed customer charge would be reduced by 40%. PPL Electric should be further directed to eliminate other cost classifications that are demand-related to further reduce the approved fixed customer charge in the next rate case. The Commission should further direct PPL Electric to allocate any demand-related changes in revenue requirement to volumetric base rates. I estimate that the increase in the energy charge would be $0.00741 per kWh, which is fully offset by the fixed charge reduction, and which substantially reduces the regressive nature of the proposed rate design. Finally, the Commission should direct PPL Electric to use only the basic customer method in all future general rate cases.

Q. How do differences in fixed customer charges emerge from different methods used to classify cost when they all start from a single common pool of cost-of-service data?

A. The differences arise based on which costs are classified as customer costs and whether the utility performs calculations on underlying data to classify demand-related costs as customer costs. The basic customer method identifies costs that vary only with the number of customers—costs that are incurred to connect a customer to the network. The zero intercept and minimum system methods, like PPL Electric's approach, classify costs as customer costs when they relate to meeting customer demand and are not caused by connection of the customer to the grid. Again, these

minimum system methods mathematically extrapolate from costs incurred to meet demand and hypothetically reflect the costs of infrastructure to serve customers even if they use no energy at all.

Q. Does the method of classifying customer costs impact the total amount of revenue requirement reflected in rates?

A. Ultimately, no. Under the zero-sum process of rate design, lower fixed charges mean more revenue is recovered in volumetric rates; higher fixed charges result in lower volumetric rates. In both, the total revenue to be collected is the same.

Q. How does PPL Electric define customer costs?

A. PPL Electric witness Bickey Rimal, who testifies on cost allocation on behalf of the utility, states that:

> *Customer* Costs are incurred to extend service to and attach a customer to the distribution system, meter any electric usage, and maintain the customer's account. Customer Costs are largely a function of the number of customers served and continue to be incurred whether the customer uses any electricity or not. They may include capital costs associated with minimum size distribution systems, services, meters, and customer billing and accounting expenses.[88]

Q. Does this definition of customer costs align with traditional and established definitions?

A. No. The statement that customer costs are "largely a function of the number of customers served" expands the costs treated as customer costs without limitation. In

[88] PPL, St. No. 7, Direct Testimony of Bickey Rimal, 7, Docket No. R-2025-3057164 (Sept. 30, 2025).

this proceeding, I calculate that more than half the costs that PPL Electric proposes to recover through the fixed customer charge are not a function of the number of customers served, but instead reflects infrastructure and service costs driven by demand and energy use.

Q. What costs should be charged on a per-customer basis?

A. The principle of cost causation means that the costs of connecting a customer to the electric and billing systems are the costs that vary with customer count and should be included in the derivation of the fixed customer charge. Other costs are based on sizing the distribution system components such as conductors and transformers, customer service that overwhelmingly deals with usage-related issues, and billing and collection issues that are likewise driven by usage. Where a customer charge is used, a good rule of thumb is this: If the cost disappears because the customer leaves the system, the cost is a customer cost. PPL Electric turns this definition on its head to justify higher fixed customer charges and per-customer charging for costs that vary with use, asserting that sunk fixed costs and all service and collection costs would remain even if customers did not use energy or create demand.[89]

PPL Electric's circular argument is that costs incurred for the distribution system or to respond to billing and collection issues and those based on usage should be treated as customer costs because such spending cannot be reduced retroactively when a customer stops using electricity but remains a connected customer. PPL Electric's

[89] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-35, 36.

method for deriving its customer charge is essentially a "take or pay" rate that conflicts with cost causation.[90]

The consumption function of the meter, the service drop, and a reasonable share of customer service and billing and collection spending would all meet the traditional test for classifying customer costs—costs that vary entirely or almost entirely based on the number of customers—and therefore are included in approaches like the basic customer method. Likewise, if the cost remains after a customer leaves the system, the cost is not a customer cost. Transformers, secondary and primary distribution lines, program-specific marketing and customer care expenses, uncollectible costs, and general operations, administrative and maintenance expenses and taxes are all non-customer costs. The principle of cost causation dictates that those costs should not be recovered through a fixed or customer charge.

Q. Please provide more detail on how costs are classified to the customer costs category.

A. Some costs can be easily and objectively classified as customer costs. In general, the customer costs are the costs incurred to connect a new customer to basic electric service. These include the cost of establishing service, which includes a fraction of a customer accounts system, billing software, and the time that customer service representatives spend on establishing new accounts. These are all costs that pass the simple test—they go away if the customer goes away. These also include costs

[90] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-35, 36.

related to the consumption function of meter purchase, installation, activation, and service, but not the entire costs of modern meter functions, which are incurred to enable detailed usage data, demand response, efficiency, and other functions relating to use. And the customer costs include the incremental costs of the service drop from the last, smallest transformer to the customer meter box. These costs are classified as customer costs under the dominant method for classifying customer costs—the basic customer method. In my opinion, this is the most appropriate method.

In sum, the customer costs category, and therefore the customer charge, should reflect no more than the costs incurred by the utility to connect the average customer to the electric system for service. I would note that the strongest price signals would be sent under the "new customer" method, which only charges customers with the incremental connection costs for new customers on a per-customer basis, and which I believe the Commission should order PPL Electric to study in preparing its next general rate application.

Q. Are there any well-accepted references that comport with your view that the basic customer method is the most appropriate method to use in classifying customer costs?

A. Yes. Bonbright defined customer costs as follows:

> [The customer costs] are those operating and capital costs found to vary with number of customers regardless, or almost regardless, of power consumption. Included as a minimum are the costs of metering and billing along with whatever other expenses the company must incur in taking on another

consumer.[91]

Simply stated, Bonbright's definition—which describes the basic customer method—ensures that the customer charge should be limited to the marginal cost of connecting the customer to the grid and should include only costs that vary directly with the number of customers.[92]

Q. Are there any benefits to relying on Bonbright's definition of customer costs in building the customer charge?

A. Adhering to the principle that customer costs are costs that vary with customer count and almost or entirely without regard for usage advances other ratemaking principles, such as equity and cost-causation, and preserves the power of volumetric charges as a price signal. Residential customers can see a direct correlation, both positive and negative, between their level of usage and their contributions to cost creation when energy- and demand-related costs are recovered through volumetric charges. Allocating demand-related costs or even unallocable costs (as Bonbright viewed the minimum system costs) to the fixed customer charge eliminates, or at least severely weakens, the price signal impact.

Q. How much cost does connecting a new customer cause?

[91] James C. Bonbright, *Principles of Public Utility Rates*, 347 (1961), https://www.raponline.org/wp-content/uploads/2023/09/powellgoldstein-bonbright-principlesofpublicutilityrates-1960-10-10.pdf.

[92] Jim Lazar & Wilson Gonzalez, Regulatory Assistance Project, *Smart Rate Design For a Smart Future*, 6, 36, (Jul. 2015), https://www.raponline.org/wp-content/uploads/2023/09/rap-lazar-gonzalez-smart-rate-design-july2015.pdf.

A. Costs directly related to grid connection for new customers include a portion of the cost of a meter, billing and metering services, and collection costs—in Bonbright's words, the costs the utility "must incur in taking on another customer."[93] By my calculation, when demand- and usage-driven costs are properly classified, the figure is far less than the $17 per customer per month charge that PPL Electric proposes in this proceeding, and less than 25% of the amount of costs that PPL Electric allocates to the customer cost category.

Q. What costs does PPL Electric include in calculating the total costs that it classifies as customer costs for purposes of determining its fixed charge proposal?

A. As shown in PPL Electric's allocated cost-of-service study,[94] the utility includes in its cost-of-service classification several true customer costs relating to the following functions:

- Deposits and Advances (typically a credit)
- Services
- Meters
- Meter Reading

[93] James C. Bonbright, *Principles of Public Utility Rates*, 347 (1961), https://www.raponline.org/wp-content/uploads/2023/09/powellgoldstein-bonbright-principlesofpublicutilityrates-1960-10-10.pdf.

[94] PPL Electric's summary of what it includes as customer costs appears in PPL Electric's response to the Pennsylvania PUC's Investigation and Enforcement Bureau. Confidential Exh. KRR-5, PPL Response to I&E-RE-I-14-D, Confidential Att. 1 Supplemental. While the formula and methods contained in the spreadsheet are proprietary and labeled confidential, the data is not.

- Customer Service (in part)[95]
- Billing and Collection (in part)[96]

PPL Electric also classifies non-customer costs as customer costs, including costs more directly related to demand and energy use:

- Primary Distribution
- Secondary Distribution
- Line Transformers
- Customer Service (in part)
- Billing and Collection (in part)

Again, PPL Electric's minimum system method is based on a fantasy hypothetical distribution system sized to meet the demands of its customers when those customers use no energy and place no demand on the system.[97]

Q. Does PPL Electric's approach account for the original costs of customer connection, variation in customer geographic density, or for the fact that low-use customers require much less expensive connection investments than high users?

A. No. PPL Electric's approach uses the current costs of distribution spending for what is

[95] PPL Electric conducts its ACOSS at the relatively high level of FERC accounts and does not rely on data that differentiates the nature of customer services provided, and it cannot isolate customer service costs dedicated to connecting customers to the system. Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-37.
[96] PPL Electric conducts its ACOSS at the relatively high level of FERC accounts and does not rely on data that differentiates the nature of billing and collection services provided, and it cannot isolate billing and collection costs dedicated to connecting customers to the system. Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-I-37.

deemed to be "minimum-sized assets"[98] and uses current replacement costs for meters,[99] but it does allocate operations and maintenance costs related to the distribution system to the customer category,[100] as well as administrative costs based on a general labor allocator.[101] PPL Electric does not differentiate among customers based on the costs and sizing of equipment used to meet customer demand such as transformers and conductors,[102] even though it concedes that distribution system components are sized according to demand.[103] Again, in a regulatory version of the sunk cost fallacy, PPL Electric justifies charging customers for not using the distribution system by asserting that once distribution investments are made, they are fixed costs and not variable costs.[104] Finally, PPL Electric's ACOSS and method of categorizing costs as customer costs does not account for differences in the costs of connections among customers.[105]

Q. What is the result of all these elements of PPL Electric's approach to developing the fixed customer charge and ACOSS classification of customer costs?

A. PPL Electric's approach and methods are a mechanism for maintaining and even increasing a large, unjust, and unreasonable cost shift from low users and low-income customers to other residential customers who have higher use and cause more

distribution system costs. There are other problems as well.

Q. Isn't economic efficiency improved when prices reflect marginal costs?

A. Yes, prices advance efficiency when they reflect marginal costs, but that is an entirely different issue than reflexively asserting that fixed charges should be used to collect marginal fixed costs as a matter of rate design. Marginal costs can be recovered through either fixed or variable charges. By weakening the price signal that customers see from marginal changes in consumption, high fixed charges deviate from marginal cost pricing.

Q. Since you described the rate design issue as a zero-sum game, does it matter, then, whether costs are collected through a fixed charge or through a volumetric charge?

A. Yes, very much so. Fixed charges are inherently regressive—they have greater cost impact on low users who are often also low-income customers. Guaranteeing non-bypassable revenues through high fixed customer charges is extremely desirable to PPL Electric and its parent corporation so as to meet the expectations for steady generation of profits promised to investors. Guaranteeing recovery of fixed costs associated with infrastructure spending, as occurs when these costs are recovered through a non-bypassable fixed customer charge, creates an incentive for the utility to increase that kind of spending, which in turn further increases rate base and profits. Increasing fixed non-bypassable charges has an impact on the cost-effectiveness of energy efficiency, distributed generation, and other distributed energy resource

("DER") investments by customers because higher non-bypassable charges mean lower volumetric rates and therefore result in longer payback on customers' investments designed to reduce usage of utility-supplied energy. In sum, the decision about whether to recover costs through fixed charges or volumetric rates is a decision about what price signals the rate sends both to customers and to the utility. It is a fundamental question of rate design.

Q. Are there other disparate impacts from high fixed charges on lower-income customers?

A. Yes. In my experience, low users of electricity have lower and flatter load curves—less peaky demand—than high users. As a result, when peak-driven, demand-related costs are allocated to the residential class, and some of those costs are included in fixed customer charges, low-use, often low-income customers are required to pay more than their fair share of these costs—another aspect of the unjust cost shift. As a result of PPL Electric's reliance on the minimum system method to classify customer costs, low-income customers are being charged for costs driven by the usage levels and patterns of more well-to-do, higher-demand customers. Because fixed customer charges do not differentiate between the usage levels and patterns of customers, just as PPL Electric's charges fail to do, they unjustly discriminate.

Q. How do high fixed customer charges discourage adoption and weaken the economics of energy efficiency, conservation, and distributed renewable energy?

A. High fixed charges work against energy policy and rate-making goals favoring and

encouraging energy efficiency and increased use of renewable energy resources in two insidious and overlapping ways. First, they increase the amount of the customer's total bill that cannot be reduced through efficiency, conservation, renewable energy subscription, or self-generation. This makes customer actions that would increase efficiency, conservation, and customer participation in renewable generation less likely to occur. Second, in the zero-sum-game of rate design, the charges also result in lower volumetric rates. This has the effect of reducing the marginal value of energy efficiency, conservation, and customer-sited renewable generation, also making those actions less likely to occur. For example, when use-based charges are deflated by 20% by shifting the revenue requirement to the fixed charges, every efficiency measure, conservation practice, and solar investment takes 20% longer to deliver a payback on its initial investment. This problem is exacerbated by the recent and sudden elimination of federal tax credits for these investments. As a result of these two effects, basic economics dictates that customers are less interested in reducing usage because it will yield fewer benefits in reducing bills. I have seen no evidence that PPL Electric has conducted or used a demand elasticity study—an analysis to determine how usage behaviors change in response to price changes—to inform its rate design proposals.

Q. As high-fixed-cost businesses, should utilities impose high fixed charges in order to align rate structure with cost structure?

A. No. As far as I can tell, PPL Electric does not directly assert that it should charge high fixed customer charges just because it has high fixed costs. Rather, the utility takes an

indirect path: PPL Electric's position is that it should be charging higher fixed customer charges because it uses a method that classifies higher amounts of fixed costs as customer costs—an intentional choice of classification method that inexorably leads to the same result—higher fixed charges. This is bootstrapping. Again, after 35 years in utility regulation I have yet to find a single authoritative economic text to support the argument that economic efficiency results from mimicking cost structure in rate design.

Q. Are there competitive businesses with high fixed costs that impose high fixed charges?

A. There are very few. The vast majority of high-fixed-cost businesses do not impose fixed charges at all and would likely not survive long in a competitive market if they did. For example, airlines and transit services do not require monthly subscriptions. Neither do hotels or shopping malls. There are some businesses like warehouse retailers and on-line shopping services with optional levels of fixed charges, but those charges appear designed to increase sales to loyal customers, which in the electric utility regulatory setting would be called "load building." The fact that many businesses must make large fixed-cost investments does not translate into fixed charges in almost all business cases; rather, the forces of competition reward businesses for careful investment analysis, inventory management, and cost control—all disciplines that if mastered would greatly improve the performance of electric and gas utilities far more than a guarantee of fixed costs recovery through non-bypassable customer charges.

Q. How do PPL Electric's fixed customer charges compare to those for other PPL Corporation operating companies?

A. PPL Electric singles out its customers for special treatment. Louisville Gas and Electric Company charges $0.45 per day, or about $13.73 per month, and Kentucky Utilities charges $0.53 per day, or about $16.17 per month.[106] Rhode Island Energy charges $6 per customer per month.[107]

Q. Are high fixed charges and methods that assign higher levels of customers costs an appropriate mechanism to ensure that low-use customers pay their fair share of demand-related fixed costs?

A. No. Some utilities attempt to justify higher fixed customer charges on the basis that when large amounts of costs are classified as customer costs, higher fixed charges are necessary to avoid subsidization of low-use customers by high-use customers. This argument is a logical fallacy known as "begging the question." That is, it assumes that the minimum system and zero-intercept methods that classify more costs as customer costs are themselves sound rate-making methods to justify assigning more costs for

recovery through fixed customer charges. These arguments are seldom accompanied by anything but an assumption that because low users pay less in fixed costs embedded in volumetric rates than the *average* customer in the class, they are not paying enough.

Q. What should PPL Electric do to determine customer-related costs and ultimately build a just and reasonable customer charge?

A. The Company should use the basic customer method. The RAP Cost Allocation Manual provides additional explanatory detail that the Company should consult.[108]

Q. Are the minimum system and zero-intercept methods common practice in the majority of states?

A. No. The minimum system method is out of step with practice in most states.[109] The RAP Cost Allocation Manual cites several regulatory decisions that have rejected the methods.[110]

[108] Jim Lazar, Paul Chernick & William Marcus, Regulatory Assistance Project, *Electric Cost Allocation for a New Era: A Manual*, (Jan. 2020), https://www.raponline.org/wp-content/uploads/2023/09/rap-lazar-chernick-marcus-lebel-electric-cost-allocation-new-era-2020-january.pdf.

Q. If, as Bonbright suggests, some of the legitimate and reasonable costs that PPL Electric's minimum system method allocates to the customer-cost category are neither customer costs nor demand-related costs, then how do you propose that PPL Electric should recover those costs?

A. First, it is important to recognize that there is no general principle of rate making that requires a cost to be recovered through a particular kind of charge solely because of the accounting category to which the cost is assigned.[111] Rate design is a separate rate-making step following cost-of-service analysis, functionalization, and classification. Given the important policy, equity, and market issues that I discuss in this testimony, prudent distribution system costs properly allocated to residential customers that may not neatly fit into either the customer or demand categories should be recovered through the volumetric delivery charge. The typically high correlation between energy use and demand means that assignment of transmission and distribution costs (other than the costs to connect) to volumetric rates creates a more efficient price signal than assigning those costs to fixed customer charges.

Q. Does the minimum system method support just, reasonable, and equitable rates?

A. No. The major problem with minimum system methods is that they are designed to meet a predetermined revenue recovery level choice rather than to reflect, as best as possible, objective reality about system costs and cost-causation. Indeed, the underlying policy choice made in adopting minimum system methods is that costs

[111] As such, there is no validity in rate making by alliteration, as proposed in the so-called "straight fixed-variable method" which promotes fixed charges for fixed costs.

should not be paid according to causation and, instead, socialized. The minimum system methods assign all customers a per-customer share of the system costs regardless of the very real differences in the cost to connect and serve different kinds of customers, even customers in the same class.

Q. Do PPL Electric's fixed charges proposals raise any other economic efficiency concerns?

A. Yes. I have explained how the increased fixed charges and companion lower base volumetric rates are economically regressive and send price signals that disincentivize investment in energy efficiency, distributed generation, demand response, and other distributed energy resources. They also send the wrong price signal to PPL Electric and PPL Corporation. When marginal distribution infrastructure costs are allocated to volumetric rates, demand elasticity means that sales will go down as customers seek alternatives to high usage and higher bills. In this way, a Commission decision to limit the costs that can be loaded into fixed charges serves as the classic substitute for the forces of free-market competition. Conversely, the utility that is allowed to increase spending and allocate those costs to non-bypassable charges will have less incentive to operate and spend in a least-cost manner because it will be immunized, to a degree, from consumption changes that accompany higher prices. That is, a higher fixed customer charge can encourage economic inefficiency and waste *and* stronger revenues by and for the Company. Revenues that a regulated monopoly can extract from customers without fear or with reduced fear of consumption changes are called monopoly rents—neither markets nor regulatory commissions should encourage them

by allowing high fixed charge rate designs.

Q. Please summarize your testimony on this issue. If some of the minimum system costs are, according to Bonbright, neither pure customer costs nor pure demand costs, how should they be treated?

A. It is important to start with the reminder that the only fixed and variable costs included in the customer charge should be those true customer costs that would go away in the absence of the customer. Then, the decision on how to treat minimum system costs that are not customer or demand costs should be informed by policy. On the one hand, recovering these costs on a per-customer basis enriches shareholders with more certain revenue recovery; increases the incentive for profit-generating infrastructure investments even if not cost-effective; decreases the incentive for energy efficiency, conservation, and distributed generation investment; and weakens price signals relating to fixed costs creation in general. The alternative is recovering these costs on a volumetric basis, as is done in most states. This alternative provides incentives to customers to become more efficient and to invest in clean distributed generation, sends stronger price signals to the utility to manage and reduce infrastructure costs, aligns bill impacts with customer cost-causation, and aligns with generally accepted rate design and energy policy goals.

Q. What do you conclude about the fixed charges proposed for approval in this case?

A. The charges are too high because they unjustly and unreasonably charge customers

for costs that are not customer costs, and they are bad rate-making policy. PPL Electric has calculated an unreasonable residential customer cost of more than $40 per customer per month and proposed a fixed customer charge of $17 per customer per month based on its minimum system method. This charge and that method should not be approved by the Commission.

Q. What residential fixed customer charge should the Commission approve?

A. The Commission should approve a fixed customer charge for residential customers based on treatment of only true customer costs as eligible for inclusion in the fixed customer charge. I calculate, using PPL Electric data, that a reasonable residential customer charge should be no higher than $10.20 per customer per month. To make this calculation, I remove Primary and Secondary Distribution costs, as well as transformer costs for the customer cost category. I keep Deposits and Advances, Services, Meters, and Meter Reading costs in the customer cost category. These true customer costs constitute about 17% of the total costs that PPL Electric classifies as customer costs, so I use that factor to assign 17% of customer service and billing and collection costs to the customer cost category. With better accounting records, PPL Electric could refine this method in the future.

As a result of my adjustments, the total customer-related costs for the residential class are reduced by about $534 million, or 77%, from the unreasonably inflated $694 million classified as customer costs by PPL Electric. The resulting customer charge is $10.20 per customer per month. Assuming full approval of PPL Electric's revenue

requirement as proposed, my adjustments reduce the proposed customer charge of $17 by $6.80, which can be recovered through an increase in the volumetric rate at $0.00740 per kWh—a conservative assumption.

Q. Why do you say that the residential fixed customer charge should be *no higher* than $10.20 per customer per month?

A. Consistent with my testimony, the Commission should also direct PPL Electric to exclude from the calculation of the residential customer charge additional amounts that are not true customer costs and develop the detailed cost records to properly sub-allocate customer service and billing and collection costs. My assumption is that 17% of the customer service call volume is related to turning on service and connecting customers to the grid, but in my experience the amount is probably less, especially with the low growth rates PPL Electric is experiencing. The remainder of customer service expenses relate to account issues, service disconnections, payment issues, and other activities that are associated with ongoing customer use of electric services. Likewise, uncollectible expenses are directly a result of use of energy and demand and are not basic customer costs.

PPL Electric also deploys various sizes and types of equipment and infrastructure to connect customers to the grid. The costs that should be classified as customer costs should only be those associated with the smallest, least expensive equipment necessary to connect customers to ensure that low users of electricity are not required to subsidize the equipment and infrastructure needs of larger consumers with higher

demand for electricity. The Commission should direct PPL Electric to further reduce the residential fixed customer charge by eliminating connection costs attributable only to larger users.

Making these changes will reduce the level of a just and reasonable residential fixed customer charge below the $10.20 per customer per month that I initially calculate.

Q. What effect does the correct classification of demand- and energy-related distribution costs have on volumetric rates?

A. My proposal has three primary impacts. First, it removes a significant amount of the regressive nature of PPL Electric's proposed rates and better aligns overall rates with cost causation. At the fixed and volumetric charge levels that I propose, the effective rate for customers using an average 750 kWh is reduced from 9.70 cents per kWh to 9.23 cents per kWh, and the effective rate for customers using an average 500 kWh per month is reduced to 11.24 cents per kWh, compared to 13.10 cents per kWh under PPL Electric's more regressive rate design. Again, these numbers are significant because more than half of all residential customers use 750 kWh per average month or less, and nearly a third of residential customers use 500 kWh per average month or less. The changes I propose empower low-use and low-income customers to better manage their electric bills through changes in usage and behavior to the extent that they can or can be helped to do so. Second, my approach increases the volumetric rates, sending a more efficient price signal to high users and reflects the fact that high users drive distribution system costs. This in turn improves the economics of efficient

use and efficiency programs, self-generation, and reliance on zero- or low-marginal cost resources like solar energy. Third, the changes will send better price signals to PPL Electric relating to its level of distribution spending.

VII. LARGE LOAD TARIFF (LP-5)

Q. Please characterize the large load/data center issues raised in this proceeding.

A. PPL Electric witness Joseph Lookup states that a large load influx onto PPL Electric's system presents new challenges.[112] Large loads, almost exclusively data centers, will take service at transmission level at 69,000 volts or higher under PPL Electric Rate Schedule LP-5.[113] Witness Lookup states that the pipeline of data center projects in PPL Electric's service territory exceeds the current system peak of 7.8 gigawatts ("GW") and that the utility is therefore preparing to more than double its system demand in just five to six years—growth that "directly enhances the lives of PPL Electric's 1.5 million customers in eastern and central Pennsylvania."[114] Witness Lookup makes these assertions despite the utility also stating that PPL Electric does not forecast changes in the Transmission Service Charge ("TSC"),[115] and the fact that small customers bear the overwhelming costs designated for recovery through the TSC.

[112] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 15, Docket No. R-2025-3057164 (Sept. 30, 2025).

[115] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-5.

Q. What changes does PPL Electric propose in rate schedule LP-5?

A. In this proceeding, PPL Electric is proposing revisions to the LP-5 tariff relating to how costs associated with interconnecting large load customers are allocated and charged.[116] PPL Electric asserts that it is already following a process of "carefully planning and executing" the significant investments in the transmission system, including spending paid for by LP-5 customers and those paid for by other customers,[117] through its existing ESA process.[118] Witness Lookup, apparently referring to PPL's ESA template, states that "the current ESA" includes specific provisions relating to minimum load guarantees, load ramp schedules, security interests to ensure that LP-5 customers pay "enough" in revenue to cover the cost of rate-based investments, and termination terms and conditions.[119] Witness Lookup states that PPL Electric "aims to maintain a balanced and sustainable approach to managing the increased demand [from data centers] while mitigating stranded cost risk to other customers."[120] Witness Lookup states that the proposed modifications of rate schedule LP-5 are intended to memorialize large load interconnection terms for transparency and consistency.[121]

---

[116] PPL, Exh. GEO-1, 411–31, Docket No. R-2025-3057164 (Sept. 30, 2025).
[117] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 16, Docket No. R-2025-3057164 (Sept. 30, 2025). Witness Lookup actually says, "investments that are paid for by the customer and investments that are paid for by the Company." Of course, PPL Electric charges customers fully for all investments it makes, with an added return.

[121] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 16, Docket No. R-2025-3057164 (Sept. 30, 2025).

Q. What are the specific language changes that PPL Electric proposes for schedule LP-5?

A. The proposed changes to schedule LP-5 include the following:[122]

- LP-5 customers are responsible for applicable charges under the TSC rate schedule.[123]
- Demand billing is based on the LP-5 customer's peak load contribution to the PJM peak load for PPL Electric.[124]
- The minimum term of service is one year.[125]
- The LP-5 customer is responsible for paying all costs associated with line extensions and service extensions except when, *in PPL Electric's discretion*, the utility decides that the line extensions will provide benefits to the transmission system, *as determined by PPL Electric.*[126]
- Any upgrades to the 230 kV and 500 kV networked bulk electric system that are necessary to serve LP-5 loads may be presumed to provide reliability benefits to the transmission system.[127]
- PPL Electric may also excuse LP-5 customers from paying connection and upgrade costs if the utility finds that the investments will increase capacity, lower system congestion, provide service to multiple customers, increase

[122] PPL, Exh. GEO-1, 411–31, Docket No. R-2025-3057164 (Sept. 30, 2025).

resiliency and operational flexibility, or expand capacity for new generation and interconnections.[128]

- LP-5 customers would be required to enter into an agreement providing a revenue guarantee under certain terms relating to collection of gross transmission revenues in an amount equal to socialized connection costs.[129]
- An option for PPL Electric to construct, own, operate, and or maintain LP-5 customer transformation equipment, under terms decided by PPL Electric and the LP-5 customer.[130]

Q. Do these proposed amendments provide transparency and ensure consistency and fair treatment of non-LP-5 customers?

A. No. I support the principle that the Commission should establish policies related to large load service agreements that promote transparency to ensure that other customers are fairly treated and that costs created by interconnection of these loads are not unreasonably shifted to non–large load customers. Moreover, the unprecedented scale of these loads and the potential for massive unjust cost shifts justifies "radical transparency"[131] in utility contracting terms and conditions long before they are finalized in secret negotiations on ESA terms. The foundation for schedule LP-5 is PPL Electric's complete autonomy to decide whether transmission

[128] PPL, Exh. GEO-1, 418, Docket No. R-2025-3057164 (Sept. 30, 2025).
[129] PPL, Exh. GEO-1, 418–23, Docket No. R-2025-3057164 (Sept. 30, 2025).
[130] PPL, Exh. GEO-1, 424, Docket No. R-2025-3057164 (Sept. 30, 2025).
[131] Pennsylvania Public Utility Commission, *En Banc* Hearing Concerning Interconnection and Tariffs for Large Load Customers, Joint Comments of CAUSE-PA and TURN, 1, Docket No. M-2025-3054271 (Jun. 6, 2025).

spending to connect and serve data centers provides benefits such that PPL Electric will choose to socialize transmission costs through the TSC.

The exercise of this autonomy added $461.1 million in approved transmission costs in PPL Electric's service territory in 2024 alone.[132] As explained by the Union of Concerned Scientists, what begins as a request for interconnection by a large load customer is transformed in the PJM process into a transmission project charged to all customers.[133] PPL Electric's proposal is that it will have sole discretion as to when such projects provide the benefits that it believes justify socialization of costs.

PPL Electric's proposal is that it will make all the decisions about the way in which key elements of ESAs with large load customers are addressed. The "highly confidential" designation for these agreements means that the LP-5 tariff must be made much more specific to maintain a reasonable level of transparency.

Moreover, even though the proposed ESA with large loads has an 80% revenue recovery provision, the revenues required are gross transmission revenues.[134] That is,

[132] Mike Jacobs, Union of Concerned Scientists, *Appendix to Policy Brief: Connection Costs—Loophole Costs Customers Over $4 billion to Connect Data Centers to Power Grid* 10, tbl. 6 (Sept. 2025), https://www.ucs.org/sites/default/files/2025-09/PJM%20Data%20Center%20Issue%20Brief%20Appendix%20-%20Sep%202025.pdf.
[133] Mike Jacobs, Union of Concerned Scientists, *Policy Brief: Connection Costs—Loophole Costs Customers Over $4 billion to Connect Data Centers to Power Grid*, 1–3 (Sept. 2025), https://www.ucs.org/sites/default/files/2025-09/PJM%20Data%20Center%20Issue%20Brief%20-%20Sep%202025.pdf.

when large loads pay their transmission charges, those charges are for services received and are not dedicated to full recovery of socialized costs. Finally, the provision allowing PPL Electric to enter into private service agreements with large load customers relating to on-site transformation equipment is an invitation for monopoly overreach and anti-competitive behavior. There is no evidence that competitive private sector engineering and electrical firms cannot meet the need for transformation equipment support and services.

Q. Does PPL Electric have a policy addressing cost allocation for large customer interconnections?

A. Yes. PPL Electric shared an undated policy on cost allocation for large customer interconnections pursuant to a request from the Office of Consumer Advocate ("OCA").[135] However, that policy document does nothing to limit or detail the discretion PPL Electric proposes for itself. Rather, the policy repeats the general and somewhat tautological concept that improvements to a networked system provide network benefits. The policy states that PPL Electric will allocate "direct" connection costs, while all other upgrades will be evaluated by PPL Electric on a case-by-case basis.[136] The policy lists benefits to be considered in deciding to socialize interconnection costs, but provides no balancing considerations relating to allocation of costs or to considerations that would overcome the capex bias inherent in cost-

[135] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to OCA-VIII-9, Att. 1, 1.
[136] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to OCA-VIII-9, Att. 1, 1.

plus-cost-of-service regulation. More importantly, even though PPL Electric recognizes that the cost drivers associated with large loads and data centers reflect an order-of-magnitude, or more increase in new demand and energy requirements, its policy statement does not address the likelihood of unfairness in allocation of costs under a system built for entirely different circumstances.

Q. Why does it matter that PPL Electric proposes complete discretion for itself in determining whether to socialize transmission- and connection-related costs through the TSC?

A. I assume that PPL Electric seeks this discretion to respond to prospective data center loads in a manner that is attractive and low cost for those prospective customers. But this reflects a serious conflict of economic interests. The utility and the large load customers benefit directly and in the near term from lowered and socialized costs of connection. And again, cost-plus regulation creates powerful financial incentives for adding new transmission infrastructure, even if it happens solely because of potential new demand by extremely large customers. But other customers receive benefits indirectly at best.

Q. Witness Lookup states that "[w]hen these large loads are interconnected, they will represent a significant percentage of PPL Electric's system peak, and as a

result lower the portion other customers are responsible for paying."[137] Does that mean costs will go down?

A. No. The popular notion of cost-spreading due to new large loads between rate cases, repeated by Witness Lookup,[138] is hypothetical. Non–large load customers realize these benefits only under the rare circumstance in which the cost to connect and serve the large load is lower than the revenues from those customers and the utility recalculates and adjusts rates to non–large load customers. Given the cost shift built into the existing TSC cost allocation methodology, the benefits to non–large load customers are unlikely to exceed the added burden of costs.

Q. Does PPL Electric offer information or estimates about the extent to which interconnections and upgrades related to connecting new large loads will affect the TSC?

A. PPL Electric asserts that it has no information about the extent to which large load customers drive or impact the transmission service charge,[139] and that it does not forecast changes in the TSC.[140]

Q. What do you conclude from this review?

[137] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 19, Docket No. R-2025-3057164 (Sept. 30, 2025).
[138] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 19, Docket No. R-2025-3057164 (Sept. 30, 2025).
[139] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-4.
[140] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-5.

A. PPL Electric has strong financial incentives to interconnect new large load customers and shift the associated costs to residential customers. The lack of specificity or certainty in how PPL Electric will implement LP-5, the broad discretion it seeks in implementing the rate schedule, and the absence of evidence about how ESAs executed under LP-5 will flow through to residential customers through the TSC all raise significant additional doubt about whether PPL Electric will ensure that costs caused by large load interconnections are fairly allocated to cost causers.

Q. How are transmission costs distributed among customers through the TSC?

A. The terms of the TSC are set out in PPL Electric's tariff. The TSC includes separate cost calculations for residential, small commercial and industrial ("C&I"), large C&I, and LP-5 customers.[141] PPL Electric provided the worksheets showing its proposed TSC for December 2025 through November 2026 in response to a discovery request.[142]

Q. How does PPL Electric's TSC computation method allocate transmission-related costs once they are so identified?

A. PPL Electric's TSC allocation methodology, as reflected in the utility's "Computation of Proposed Transmission Service Charge," assigns to residential customers 100% of transmission energy expenses and nearly 81% of transmission demand costs, as well as 100% of directly assigned PJM expenses of more than $1 million per month.[143]

[141] PPL, Exh. GEO-1, 59–61, Docket No. R-2025-3057164 (Sept. 30, 2025).
[142] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-1, Att. 1.
[143] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-1, Att. 1.

Altogether, the TSC computation method works extremely well for large customers and is extremely hard on residential and small commercial customers. PPL Electric's proposed computation method for December 2025 through November 2026 totals nearly $300 million in transmission expenses, of which $290 million, or 90%, is assigned to residential and small commercial customers.[144] LP-5 customers will be assigned nearly $644,000—about two tenths of one percent—in costs during this period through the TSC under PPL Electric's method.[145]

Q. Doesn't transmission cost allocation reflect cost causation principles?

A. The PJM transmission cost allocation method for PPL Electric, as reflected in the TSC, measures the contribution of each customer class during the five hours highest in demand during the previous year—the 5 coincident peak, or 5CP method. All other costs are allocated based on class energy usage during the computation year. This approach heavily weighs the assignment of costs to residential and small commercial customers, presumably on the basis of the peakier nature of their energy demand. Alternative methods, such as a 4CP that allocates costs based on class contribution to the peak hour in each of four months, or a 12CP method for every month in the year, will give greater weight to energy usage and assign less cost to small customers.

Q. Don't small customers tend to drive peak demand?

[144] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-1, Att. 1. Calculated as ($237,424,617 + $52,664,186) / $294,009,359 = 99%.
[145] Exh. KRR-3, Compiled PPL Interrogatory Responses, PPL Response to EJA-IV-1, Att. 1. Calculated as $643,673 / $294,009,359 = 0.22%.

A. In normal situations, small customers do tend to reflect greater causation of peak demand, and so CP methods are common. But, as PPL Electric recognizes, data center demand could be about adding a system's worth of demand with a relatively small number of very large loads.[146] The *incremental* cost causation of these customers does not reflect the demand patterns of incumbent small customers.

Q. Is the TSC computation method part of PPL Electric's proposal in this case?

A. The TSC computation method is not an issue in this case, but the manner in which PPL Electric decides whether to flow costs through the TSC is an issue raised by the utility's proposed amendments to rate schedule LP-5. In my opinion, in terms of cost-of-service rate making, it is a fundamental error to simply extend the cost allocation method used to address decades of stable growth into the new large load reality.

Q. Isn't the Commission also conducting a model tariff proceeding relating to large loads?

A. Yes, and PPL Electric's proposed LP-5 amendments overlap significantly with the issues being addressed in that proceeding.[147]

Q. Where does that leave the Commission in this proceeding?

[146] PPL, St. No. 16, Direct Testimony of Joseph Lookup, 15:1–20, Docket No. R-2025-3057164 (Sept. 30, 2025).
[147] Pennsylvania Public Utility Commission, Tentative Order, Interconnection and Tariffs for Large Load Customers, 2–4, Docket No. M-2025-3054271 (Nov. 6, 2025).

A. The clear interrelationship between the language in rate schedule LP-5, the TSC calculation methodology, and the model tariff proceeding raises a classic issue of piece-meal rate making and invites inconsistency and administrative inefficiency relating to a critical energy and economic issue in Pennsylvania. Adding large load–driven incremental TSC charges to the bills of small customers violates principles of cost causation. In this case, the issue can be best addressed with more specific terms added to rate schedule LP-5 and a requirement that large load customers take service under the tariff and not pursuant to confidential negotiated ESAs.

Q. What is your recommendation?

A. I recommend that the Commission:

- Direct PPL Electric to cease any further use of confidential negotiated ESAs with special contract rates for large load customers taking service under rate schedule LP-5.
- Reject PPL Electric's proposed amendments to LP-5 and direct the utility to develop and submit for Commission approval a revised LP-5 tariff within 90 days of the final order in this proceeding.
- Direct PPL Electric to make its revised LP-5 tariff draft consistent with (1) the recommendations in this testimony, and (2) the draft model tariff published by the Commission in its tentative order in Docket No. M-2025-3054271, issued on November 6, 2025, as modified and expanded in the recommendations submitted on behalf of Sierra Club, Pennsylvania Stands Up, Vote Solar, Clean Air Council, POWER Interfaith, and Earthjustice, on December 22, 2025.

- Direct PPL Electric to ensure that any agreement to interconnect new LP-5 customers or to modify service provided to existing LP-5 customers is fully consistent with the approved revised LP-5 tariff and results in LP-5 customers taking service under the tariff and not special contracted rates and terms.

Q. What are the key provisions you recommend for inclusion in the revised LP-5 tariff?

A. The starting point for sound large load tariffs should be the concepts addressed in the current Draft Model Tariff as contained in the Commission's tentative order in Docket No. M-2025-3054271, issued on November 6, 2025.[148] Consistent with that Draft Model Tariff and the recommendations for modifications and additions submitted on behalf of Sierra Club, Pennsylvania Stands Up, Vote Solar, Clean Air Council, POWER Interfaith, and Earthjustice, on December 22, 2025, the new PPL Electric LP-5 tariff proposal should include additional customer protection measures. Such provisions include:

- Large load customers should be required to provide contributions in aid of construction ("CIAC") for all infrastructure that provides them with benefits.
- The minimum contract term should be at least 20 years.
- The minimum demand charge must be at least 90% of the greater of either the contract capacity for the applicable time period or the highest previously established monthly billing demand during the prior 11 months.

[148] Pennsylvania Public Utility Commission, Tentative Order, Interconnection and Tariffs for Large Load Customers, 2–4, Docket No. M-2025-3054271 (Nov. 6, 2025).

- The tariff, ESA, or contract should include provisions that include effective incentives for investment in Grid-Enhancing Technologies (commonly referred to as "GETs") and Alternative Transmission Technologies ("ATTs").
- Tariff provisions relating to interruptible power should be mandatory and subject to additional conditions to ensure they are effective in addressing network and system peak demand.
- Provisions relating to on-site or "bring your own" generation must provide incentives for zero-emissions generation and storage.
- Tariff provisions should also provide incentives for large load customer investment in new, time-matched, local clean energy programs and infrastructure.

VIII. RECOMMENDATIONS

Q. What should the Commission do with PPL Electric's proposals in this proceeding?

A. This testimony includes recommendations regarding Commission disposition of several PPL Electric proposals. These recommendations are summarized below in the order in which they are addressed in this testimony.

I recommend that the Commission:

- Direct PPL Electric to revise the Universal Service Rider so that it equitably recovers program revenues from all rate classes, including LP-5 customers, to more effectively address the electric service affordability crisis facing residential and small business customers.

- Reject PPL Electric's proposal for an allowed return on equity of 11.30% and for a capital structure equity fraction of 56.05%.
- Approve an ROE of 7.67% for PPL Electric.
- Direct PPL Electric to use an equity fraction of 50% in its capital structure used to calculate rates and for other purposes.
- Reject PPL Electric's proposal for a $17 per customer per month fixed customer charge for residential customers.
- Disapprove of PPL Electric's use of the minimum system method to classify costs for inclusion in the fixed customer charge for residential customers.
- Approve a fixed customer charge of $10.20 per customer per month for residential customers.
- Direct PPL Electric to use the basic customer method to classify costs for inclusion in the fixed customer charge for residential customers in future rate cases.
- Direct PPL Electric to only classify costs for inclusion in the fixed customer charge which vary entirely or nearly entirely with customer count.

With regard to LP-5, I recommend that the Commission:

- Direct PPL Electric to cease any further use of confidential negotiated ESAs with special contract rates for large load customers taking service under rate schedule LP-5.
- Reject PPL Electric's proposed amendments to LP-5 and direct the utility to develop and submit for Commission approval a revised LP-5 tariff within 90 days of the final order in this proceeding.

- Direct PPL Electric to make its revised LP-5 tariff draft consistent with (1) the recommendations in this testimony, and (2) the draft model tariff published by the Commission in its tentative order in Docket No. M-2025-3054271, issued on November 6, 2025, as modified and expanded in the recommendations submitted on behalf of Sierra Club, Pennsylvania Stands Up, Vote Solar, Clean Air Council, POWER Interfaith, and Earthjustice, on December 22, 2025.
- Direct PPL Electric to ensure that any agreement to interconnect new LP-5 customers or to modify service provided to existing LP-5 customers is fully consistent with the approved revised LP-5 tariff and results in LP-5 customers taking service under the tariff and not special contracted rates and terms.

IX. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

VERIFICATION

I hereby verify that the facts contained in the foregoing testimony are true and accurate to the best of my knowledge and that I am duly authorized to make this verification, and that I expect to be able to prove the same at any hearing held in this matter. I understand that the statements herein are made subject to penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Employment

RÁBAGO ENERGY LLC

Principal: July 2012—Present. Consulting practice dedicated to providing business sustainability, expert witness, and regulatory advice and services to organizations in the clean and advanced energy sectors. Prepared and submitted testimony in more than 35 jurisdictions and 185 electricity and gas regulatory proceedings. Recognized national leader in development and implementation of innovative "Value of Solar" alternative to traditional net metering. Additional information at rabagoenergy.com.

- Chairman of the Board, Center for Resource Solutions (1997-present). Past chair of the Green-e Governance Board.
- Director, Colorado Electric Transmission Authority (2022-present).
- Director, Inside Climate News (2024-present)
- Advisor, Commission Shift (2021-present).
- Director, Solar United Neighbors (2018-2024).
- Director, Texas Solar Energy Society (2022-2024).

PACE ENERGY AND CLIMATE CENTER, PACE UNIVERSITY ELISABETH HAUB SCHOOL OF LAW

Senior Policy Advisor: September 2019—September 2020. Part-time advisor and staff member. Provided transitional expert witness, project management, and business development support on electric and gas regulatory and policy issues and activities.

Executive Director: May 2014—August 2019. Leader of a team of professional and technical experts and law students in energy and climate law, policy, and regulation. Secured funding for and managed execution of regulatory intervention, research, market development support, and advisory services. Taught Energy Law. Provided learning and development opportunities for law students. Additional activities:

- Director, Alliance for Clean Energy – New York (2018-2019).
- Director, Interstate Renewable Energy Council (IREC) (2012-2018).
- Co-Director and Principal Investigator, Northeast Solar Energy Market Coalition (2015-2017). The NESEMC was a US Department of Energy's SunShot Initiative Solar Market Pathways project. Funded under a cooperative agreement between the US DOE and Pace University, the NESEMC worked to harmonize solar market policy and advance supportive policy and regulatory practices in the northeast United States.

AUSTIN ENERGY – THE CITY OF AUSTIN, TEXAS

Vice President, Distributed Energy Services: April 2009—June 2012. Executive in one of the largest public power electric utilities, serving more than one million people in central Texas. Responsible for management and oversight of energy efficiency, demand response, and conservation programs; low-income weatherization; distributed solar and other renewable energy technologies; green buildings program; key accounts relationships; electric vehicle infrastructure; and market research and product development. Executive sponsor of Austin Energy's participation in an innovative federally funded smart grid demonstration project led by the Pecan

Street Project. Led teams that successfully secured over $39 million in federal stimulus funds for energy efficiency, smart grid, and advanced electric transportation initiatives. Additional activities included:

- Director, Renewable Energy Markets Association. REMA is a trade association dedicated to maintaining and strengthening renewable energy markets in the United States.
- Member, Pedernales Electric Cooperative Member Advisory Board. Invited by the Board of Directors to sit on first-ever board to provide formal input and guidance on energy efficiency and renewable energy issues for the nation's largest electric cooperative.

THE AES CORPORATION

Director, Government & Regulatory Affairs: June 2006—December 2008. Director, Global Regulatory Affairs, provided regulatory support and group management to AES's international electric utility operations on five continents. Managing Director, Standards and Practices, for Greenhouse Gas Services, LLC, a GE Energy and AES venture committed to generating and marketing voluntary market greenhouse gas credits. Government and regulatory affairs manager for AES Wind Generation. Managed a portfolio of regulatory and legislative initiatives to support wind energy market development in Texas, across the United States, and in many international markets.

JICARILLA APACHE NATION UTILITY AUTHORITY

Director: 1998—2008. Located in New Mexico, the JANUA was an independent utility developing profitable and autonomous utility services that provided natural gas, water utility services, low-income housing, and energy planning for the Nation. Authored "First Steps" renewable energy and energy efficiency strategic plan with support from U.S. Department of Energy.

HOUSTON ADVANCED RESEARCH CENTER

Group Director, Energy and Buildings Solutions: December 2003—May 2006. Leader of energy and building science staff at a mission-driven not-for-profit contract research organization based in The Woodlands, Texas. Responsible for developing, maintaining, and expanding on technology development, application, and commercialization support programmatic activities, including the Center for Fuel Cell Research and Applications; the Gulf Coast Combined Heat and Power Application Center; and the High-Performance Green Buildings Practice. Secured funding for major new initiative in carbon nanotechnology applications in the energy sector.

- President, Texas Renewable Energy Industries Association. As elected president of the statewide business association, led and managed successful efforts to secure and implement significant expansion of the state's renewable portfolio standard as well as other policy, regulatory, and market development activities.
- Director, Southwest Biofuels Initiative. Established the Initiative as an umbrella structure for multiple biofuels related projects.
- Member, Committee to Study the Environmental Impacts of Wind Power, National Academies of Science National Research Council. The Committee was chartered by Congress and the Council on Environmental Quality to assess the impacts of wind power on the environment.
- Advisory Board Member, Environmental & Energy Law & Policy Journal, University of Houston Law Center.

CARGILL DOW LLC (NOW NATUREWORKS, LLC)

Sustainability Alliances Leader: April 2002—December 2003. Integrated sustainability principles into all aspects of a ground-breaking bio-based polymer manufacturing venture. Responsible for maintaining, enhancing, and building relationships with stakeholders in the worldwide sustainability community, as well as managing corporate and external sustainability initiatives.

- Successfully completed Minnesota Management Institute at University of Minnesota Carlson School of Management, an alternative to an executive MBA program that surveyed fundamentals and new developments in finance, accounting, operations management, strategic planning, and human resource management.

ROCKY MOUNTAIN INSTITUTE

Managing Director/Principal: October 1999–April 2002. Co-authored "Small Is Profitable," a comprehensive analysis of the benefits of distributed energy resources. Provided consulting and advisory services to help business and government clients achieve sustainability through application and incorporation of Natural Capitalism principles.

- President of the Board, Texas Ratepayers Organization to Save Energy. Texas R.O.S.E. is a non-profit organization advocating low-income consumer issues and energy efficiency programs.
- Co-Founder and Chair of the Advisory Board, Renewable Energy Policy Project-Center for Renewable Energy and Sustainable Technology. REPP-CREST was a national non-profit research and internet services organization.

CH2M HILL

Vice President, Energy, Environment and Systems Group: July 1998–August 1999. Responsible for providing consulting services to a wide range of energy-related businesses and organizations, and for creating new business opportunities in the energy industry for an established engineering and consulting firm. Completed comprehensive electric utility restructuring studies for Colorado and Alaska.

PLANERGY

Vice President, New Energy Markets: January 1998–July 1998. Responsible for developing and managing new business opportunities for the energy services market. Provided consulting and advisory services to utility and energy service companies.

ENVIRONMENTAL DEFENSE FUND

Energy Program Manager: March 1996–January 1998. Managed renewable energy, energy efficiency, and electric utility restructuring programs. Led regulatory intervention activities in Texas and California. In Texas, played a key role in crafting Deliberative Polling processes. Participated in national environmental and energy advocacy networks, including the Energy Advocates Network, the National Wind Coordinating Committee, the NCSL Advisory Committee on Energy, and the PV-COMPACT Coordinating Council. Frequently appeared before the Texas Legislature, Austin City Council, and regulatory commissions on electric restructuring issues.

UNITED STATES DEPARTMENT OF ENERGY

Deputy Assistant Secretary, Utility Technologies: January 1995–March 1996. Manager of the Department's programs in renewable energy technologies and systems, electric energy systems, energy efficiency, and integrated resource planning. Supervised technology research, development and deployment activities in photovoltaics, wind energy, geothermal energy, solar thermal energy, biomass energy, high-temperature superconductivity, transmission and

distribution, hydrogen, and electric and magnetic fields. Managed, coordinated, and developed international agreements. Supervised development and deployment support activities at national laboratories. Developed, advocated, and managed a Congressional budget appropriation of approximately $300 million.

STATE OF TEXAS

Commissioner, Public Utility Commission of Texas. May 1992–December 1994. Appointed by Governor Ann W. Richards. Regulated electric and telephone utilities in Texas. Co-chair and organizer of the Texas Sustainable Energy Development Council. Vice-Chair of the National Association of Regulatory Utility Commissioners (NARUC) Committee on Energy Conservation. Member and co-creator of the Photovoltaic Collaborative Market Project to Accelerate Commercial Technology (PV-COMPACT).

LAW TEACHING

Professor for a Designated Service: Pace University Elisabeth Haub School of Law, 2014-2019. Non-tenured member of faculty. Taught Energy Law. Supervised a student intern practice.

Associate Professor of Law: University of Houston Law Center, 1990–1992. Full time, tenure track member of faculty. Courses taught: Criminal Law, Environmental Law, Criminal Procedure, Environmental Crimes Seminar, Wildlife Protection Law.

Assistant Professor: United States Military Academy, West Point, New York, 1988–1990. Member of the faculty in the Department of Law. Honorably discharged in August 1990, as Major in the Regular Army. Courses taught: Constitutional Law, Military Law, and Environmental Law Seminar.

LITIGATION

Trial Defense Attorney and Prosecutor, U.S. Army Judge Advocate General's Corps, Fort Polk, Louisiana, January 1985–July 1987. Assigned to Trial Defense Service and Office of the Staff Judge Advocate.

NON-LEGAL MILITARY SERVICE

Armored Cavalry Officer, 2d Squadron 9th Armored Cavalry, Fort Stewart, Georgia, May 1978–August 1981. Served as Logistics Staff Officer (S-4). Managed budget, supplies, fuel, ammunition, and other support for an Armored Cavalry Squadron. Served as Support Platoon Leader for the Squadron (logistical support), and as line Platoon Leader in an Armored Cavalry Troop. Graduate of Airborne and Ranger Schools. Special training in Air Mobilization Planning and Nuclear, Biological and Chemical Warfare.

Formal Education

LL.M., Environmental Law, Pace University School of Law, 1990: Curriculum designed to provide breadth and depth in study of theoretical and practical aspects of environmental law. Courses included: International and Comparative Environmental Law, Conservation Law, Land Use Law, Seminar in Electric Utility Regulation, Scientific and Technical Issues Affecting Environmental Law, Environmental Regulation of Real Estate, Hazardous Wastes Law. Individual research with Hudson Riverkeeper Fund, Garrison, New York, on federal regulation of cooling water intake structures for electric power plants.

LL.M., Military Law, U.S. Army Judge Advocate General's School, 1988: Curriculum designed to prepare Judge Advocates for senior level staff service. Courses included: Administrative Law, Defensive Federal Litigation, Government Information Practices, Advanced Federal Litigation, Federal Tort Claims Act Seminar, Legal Writing and Communications, Comparative International Law.

J.D. with Honors, University of Texas School of Law, 1984: Attended law school under the U.S. Army Funded Legal Education Program, a fully funded scholarship awarded to 25 or fewer officers each year. Served as Editor-in-Chief (1983–84); Articles Editor (1982–83); Member (1982) of the Review of Litigation. Moot Court, Mock Trial, Board of Advocates. Summer internship at Staff Judge Advocate's offices. Prosecuted first cases prior to entering law school.

B.B.A., Business Management, Texas A&M University, 1977: ROTC Scholarship (3–yr). Member: Corps of Cadets, Parson's Mounted Cavalry, Wings & Sabers Scholarship Society, Rudder's Rangers, Town Hall Society, Freshman Honor Society, Alpha Phi Omega service fraternity.

Exhibit KRR-3

Compiled PPL Interrogatory Responses

WITNESS: Steven W. Wishart

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-12	At the overall USR costs projected as of the end of the FPFTY, if PPL were to apply the USR Rider to only those New Large Load Interconnections that it projects to include Rate Class LP-5 at the applicable charge per kW, as provided in response to CAUSE-PA 4-10, what would be the applicable USR Rider costs for all other rate classes to which the USR applies?
PPL Electric Response	See the response to CAUSE-PA IV-9.

WITNESS: Daniel S. Dane

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 22, 2025
Docket No. R-2025-3057164

CAUSE-PA IV-14	At the ratemaking rate base and capital structure requested in this case, please specify in dollars what every 10 basis points of return on equity costs would be.
PPL Electric Response	At the ratemaking rate base and capital structure requested in this case, every 10 basis points of return on equity costs would equate to a change in the requested revenue increase of approximately $4,829 (in thousands). See CAUSE-PA-IV-14 Attachment 1.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set VI Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated October 29, 2025
Docket No. R-2025-3057164

CAUSE-PA VI-12 In a live Excel spreadsheet, please provide the following for May 2024 to date, disaggregated by month and by year:

a) The total usage of residential customers
b) The total amount billed for generation supply charges for residential customers.
c) The total number of residential shopping customers.
d) The total usage of residential shopping customers.
e) The total amount billed for generation supply charges for residential shopping customers.
f) The total number of residential default service customers.
g) The total usage of residential default service customers.
h) The total amount billed for generation supply charges for residential default service customers.
i) The total usage of CLI customers.
j) The total amount billed for generation supply charges for all CLI customers.
k) The total usage of all CLI customers who are not enrolled in PPL's Customer Assistance Program, OnTrack (hereinafter "CAP" or "OnTrack").
l) The total amount billed for generation supply charges for all non-CAP CLI customers.
m) The total number of all CAP customers
n) The total usage of all CAP customers
o) The total amount billed for generation supply charges for all CAP customers before CAP credit was applied.
p) The total number of residential non-CAP CLI shopping customers.
q) The total usage of residential non-CAP CLI shopping customers.
r) The total amount billed for generation supply charges for non-CAP CLI shopping customers.
s) The total number of residential, non-CAP, default service CLI customers.

t) The total usage of residential, non-CAP, default service CLI customers.
u) The total amount billed for generation supply charges for non-CAP default service CLI customers.

WITNESS: Jennifer E. Nelson

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-4

Please provide the following data for the most recent complete fiscal year. Please provide the source of the data and please explain whether the data is calculated or imputed. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

a) PPL's price to book ratio

b) The price to book ratio for all investor-owned utilities in the U.S.

c) The price to book ratio for all utilities in the proxy group created by PPL witness Nelson

d) PPL's allowed return on equity

e) The average allowed return on equity for all investor-owned utilities in the U.S.

f) The average allowed return on equity for all utilities in the proxy group created by PPL witness Nelson

g) PPL's earnings retention ratio

h) The average earnings retention ratio for all investor-owned utilities in the U.S.

i) The average earnings retention ratio for all utilities in the proxy group created by PPL witness Nelson

PPL Electric Response

a. and c. See I&E-RR-1-D-Attachment 1 (PPL Electric Exhibit JEN-7) and EJA-PPL-I-4 CONFIDENTIAL Attachment 1.

PPL Electric is not publicly traded and therefore does not have a price to book ratio. PPL Corporation's price to book ratio for the 30-trading days as of June 30, 2025 (the date of Ms. Nelson's analysis) is provided in EJA-PPL-I-4 CONFIDENTIAL Attachment 1.

Ms. Nelson provided the 30-day average price to book ratios (also referred to as the market to book ratio) for her proxy group in PPL Electric Exhibit JEN-7. EJA-PPL-I-4 CONFIDENTIAL Attachment 1 includes the daily price to book ratios for Ms. Nelson's proxy companies for the 30 trading days as of June 30, 2025.

b. See EJA-PPL-I-4 CONFIDENTIAL Attachment 1. Only companies that are publicly traded will have a price to book ratio; therefore, Ms. Nelson cannot provide the price to book ratio for all investor-owned utilities as some are privately owned. EJA-PPL-I-4 CONFIDENTIAL Attachment 1 provides the daily price to book ratios for Ms. Nelson's proxy companies for the 52 publicly traded electric, natural gas, and water utilities covered by Value Line for the 30 trading days as of June 30, 2025.

d. An authorized ROE for PPL Electric was not disclosed in its last distribution base rate case (Docket No. R-2015-2469275). The most recent distribution base rate case in which an ROE was determined by the Commission for PPL Electric was in Docket No. R-2012-2290597, in which the allowed ROE was 10.40%.

e. and f. Ms. Nelson did not analyze average authorized ROEs for all investor-owned utilities or the companies within her proxy group over specific time periods as part of developing her testimony in this case. However, I&E-RR-2-D-CONFIDENTIAL Attachment 2 ("WP-9 JEN-6 Past Rate Cases" worksheet) contains the rate case decisions for more than 1,800 electric rate cases covered by S&P affiliate Regulatory Research Associates (RRA) between January 1980 and June 2025.

Ms. Nelson also notes several limitations of the RRA rate case data. First, RRA's database does not include all utilities and all

ROE outcomes. It excludes rate cases in which the company has requested a rate change of less than $5 million or has been authorized a rate change of less than $3 million. Second, RRA only covers base rate cases and certain limited issue rider cases. Some utilities (including several in Ms. Nelson's proxy group) operate under Formula Rate Plans and the authorized ROE and capital structure is not determined in a base rate case; thus, those allowed ROEs are not included in RRA's database.

Second, authorized ROEs must be considered within the context of the market environment in which they were determined. Authorized ROEs rely on market data from periods prior to the commission's decision date, which may reflect different capital cost environments than those observed in Ms. Nelson's Direct Testimony. For example, the current trend in authorized ROEs in the last three years has been an increasing trend relative to the lower ROEs approved in 2020 and 2021, consistent with the general increase in long-term Treasury and utility bond yields discussed in Ms. Nelson's Direct Testimony (see PPL Electric St. No. 10, pp. 54–57). Comparisons to other subsidiaries or past cases cannot substitute for a fact-based analysis of the current market information related to PPL Electric in this docket.

g., h., and i. Ms. Nelson does not track average earnings retention ratio data for all investor-owned utilities in the U.S. In the interest of being responsive, Ms. Nelson provides the 2024 retention ratios reported from Value Line for the 52 U.S. publicly traded holding companies that Value Line classifies as Electric Utilities, Natural Gas Utilities, or Water Utilities. Value Line reports the payout ratio (column "All Dividends to Net Profits (2024)") and the retention ratio is 1-payout ratio (%). See EJA-PPL-I-4 CONFIDENTIAL Attachment 2.

WITNESS: Steven W. Wishart

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-20

Please confirm or deny whether increased reliance on fixed customer charges has an economically regressive impact due to the correlation between income and energy use. If denied, please explain why and provide citations to metered data, studies, or learned treatises that support PPL's position.

PPL Electric Response

Denied. This premise assumes that lower income is correlated to lower energy usage. However, in PPL Electric's service territory, low-income customers tend to be high use customers when compared to other customers in the residential customer class. See the response to CAUSE-PA I-20 Attachment 1. That data shows that Confirmed Low Income Customers use 16% to 20% more electricity on average than average residential customers, and customers enrolled in CAP use about 25% more electricity than average residential customers. Therefore, increases in fixed customer charges can actually reduce certain low-income customers' electric bills by shifting costs away from kWh-based charges. Moreover, even with the Company's proposed increases in fixed customer charges, a substantial portion of the bill remains subject to consumption-based or, in the case of certain non-residential customers, demand-based charges. Thus, customers still have a strong incentive to reduce their electric consumption and demand if they want to reduce their overall electric bills.

In addition, this premise fails to recognize the importance of PPL Electric's Customer Assistance Program ("CAP") in mitigating the impacts of the Company's proposed base rate increase on low-income customers. For example, under the Percent of Income ("PIP") option, CAP participants' monthly bills are calculated based on their monthly income. As such, their monthly bill amounts would be unaffected by the proposed base rate increase or by shifts in costs to be recovered between the Company's fixed customer charges versus consumption-based charges.

WITNESS: Lisa Norden
Steven W. Wishart

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-22

Please provide data showing average household income and associated data for average household size and average household electricity use for residential customers of PPL for the last three complete years available. For the same time period, please provide the residential bill impacts as shown in Table 5 of the direct testimony of PPL witness Wishart by (a) household usage in 50 kWh increments and (b) for household income ranging from zero to one times the federal poverty level, 1 to 1.5 times the federal poverty level, 1.5 to 2 times the federal poverty level, 2 to 2.5 times the federal poverty level, 2.5 to 3 times the federal poverty level, 3 to 3.5 times the federal poverty level, and 3.5 to 4 times the federal poverty level. Please provide the requested quantitative information in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

PPL Electric Response

The Company does not have the requested "data showing average household income and associated data for average household size . . . for the last three complete years available." The Company only has household income and size information for customers that have provided that information to PPL Electric, usually for the purpose of enrolling in assistance programs. The average residential electric consumption for each of the last three years can be found in the "Average Rate History" tab of EJA I-18 Attachment 1.

See EJA I-16 Attachment 1 for a spreadsheet that allows for bill impact calculations.

WITNESS: Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-34

Please refer to the direct testimony of PPL witness Rimal. Please explain how the minimum system method for classifying customer costs ensures that customer charges only include costs that vary exclusively or almost exclusively based on the number of customers served. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The minimum system method is part of the allocated cost of service study ("ACOSS") and is not directly used to set the customer charge. The per unit customer cost from the ACOSS was used as a guide to inform the customer charge proposed by PPL Electric witness Wishart. As explained in PPL Electric's witness Wishart's testimony (PPL Electric St. No. 8), the Company is only proposing a modest increase in customer charge and setting it at $17.00 when the cost of service analysis supports $42.96. Notwithstanding the fact that the proposed customer charge is not directly based on the customer costs calculated in the ACOSS, it is appropriate to classify a portion of the distribution system as being customer-related based on the results of the minimum system study. As explained in the direct testimony of PPL Electric witness Rimal (PPL Electric St. No. 7), the minimum system isolates the portion of cost that varies based on the number of customers and is not related to the level of demand.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-35

Please refer to the direct testimony of PPL witness Rimal. Please explain why Concentric does not recommend use of the basic customer method for classifying customer costs. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The basic customer method is based on a very restrictive definition of customer costs and, as a result, does not include all appropriate customer-related costs in the calculations. The concept underlying the minimum system methodology, on the other hand, recognizes that a significant portion of the distribution system costs are incurred irrespective of the peak demand of the customers. In other words, increases or decreases in demand alone do not result in proportional increases or decreases in the number of poles and miles of conductors required to distribute electricity geographically. For example, if the load of customers in the Company's service territory was significantly reduced, but the number of customers was unchanged, we would not expect the number of poles and miles of wires to be reduced by the same proportion. As a result, the costs associated with a distribution system relate to both the peak amount of load the system is designed to deliver and the number of customers it is designed to serve. Hence, it is appropriate to classify distribution system costs on both a demand-related and customer-related basis.

In addition, the Commission has approved the use of the minimum system methodology in PPL Electric's prior rate cases, including its most recent fully litigated base rate case at Docket Nos. R-2012-2290597, et al. As the Commission

declared on page 113 of its Opinion and Order entered on December 28, 2012, in that proceeding:

> We conclude that the OCA has not presented convincing arguments in this proceeding that would cause us to re-evaluate our determination in PPL's prior proceeding. PPL's proposed COSS in the instant proceeding is virtually identical to the COSS approved in 2010, is consistent with the NARUC Manual and more accurately reflects cost-causation principles than the COSS methodology the Company utilized prior to the 2010 base rate case.

Also, consistent with the above-quoted passage, the Electric Utility Cost Allocation Manual published by the National Association of Regulatory Utility Commissioners, or "NARUC" ("NARUC Manual") dedicates an entire chapter to the classification and allocation of distribution plant.[1] As a part of that chapter, the NARUC Manual identifies the minimum system methodology as one of the two methods used to determine the demand-related and customer-related components of the distribution system.

[1] NARUC, Electric Utility Cost Allocation Manual, Chapter 6, at p. 83-99 (1992).

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-36

Please refer to the direct testimony of PPL witness Rimal. Please confirm or deny that distribution system components, including services, transformers, and secondary conductors, are sized based on demand. Please explain PPL's position. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

Yes. However, a portion of distribution system costs are incurred irrespective of the peak demand of the customers. In other words, increases or decreases in demand alone do not result in proportional increases or decreases in the number of poles and miles of conductors required to distribute electricity geographically. For example, if the load of customers in the Company's service territory was significantly reduced, but the number of customers was unchanged, the Company would not expect the number of poles and miles of wires to be reduced by the same proportion.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-37

Please provide a full, disaggregated, and detailed account of all cost types classified as customer costs (see Table 3 of the direct testimony of PPL witness Rimal, at page 24) and for each, the reason that PPL takes the position that the particular cost is a customer cost. For example, please break out "customer service" into costs for establishing new accounts, costs to handle billing inquiries and disputes, costs for disconnection and reconnection. Please indicate how bill arrearages are classified and the reason for the approach. Please provide the requested quantitative information in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

PPL Electric Response

The calculations supporting Table 3 of the direct testimony of PPL Electric witness Rimal can be found in the "testimony" tab of the ACOSS model, which was provided as I&E-RE-I-14-D CONFIDENTIAL Attachment 1. The "ACCT DETAIL" sheet of the same attachment shows how costs in each FERC account (both plant-related and O&M) are classified as customer-related.

The ACOSS is conducted at the FERC Account level and hence the level of detail this question seeks is not available. For example, customer service related expenses are tracked under FERC Account 908, and the ACOSS allocated the entirety of FERC Account 908 to the various rate classes. Additionally, the Company does not track costs at the disaggregated level contemplated by this question (i.e., breaking out "customer service" into costs for establishing new accounts, costs to handle billing inquiries and disputes, costs for disconnection and reconnection, etc.).

The portion of bill arrearages that is deemed uncollectible is tracked in FERC Account 904 and is classified as customer-related and allocated to rate classes based on the estimated uncollectible expense by class. The uncollectible costs are

classified as customer-related because those costs are not related to the energy consumed or demand imposed by the customers. In addition, FERC Account 904 is categorized under Customer Accounts Expense under the Uniform Systems of Accounts. As a result, the ACOSS classifies FERC Account 904 as customer-related.

WITNESS: Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-39

Please detail the extent to witness PPL or its consultants have analyzed differences in the costs of services, meters, and other infrastructure based on customer premises types, number of customers at a premise, and expected demand. For example, has PPL studied how the cost to connect a customer in a multi-family dwelling is lower than that for a single-family home on a large suburban residential lot? Please provide all such analysis, and please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

Since PPL Electric does not have a separate tariff definition for residential customer by dwelling type (i.e., multi-family dwelling, single family dwelling, etc.), the Company has not analyzed differences in the costs of services, meters, and other infrastructure based on customer premises types, number of customers at a premises, and expected demand. However, to the extent that a residential class composed solely of single-family housing has a higher cost to serve than a residential class that has other housing types besides single-family housing, that difference would already be captured in the allocated cost of service study (“ACOSS”). For example, if a residential class composed of both individually-metered multi-family and single-family housing has lower energy and demand than a residential class composed solely of single-family housing, those cost differences would already be captured by the allocators used in the ACOSS. Moreover, master-metered multi-family buildings would not be a part of the residential customer class. However, the Company does not have a separate tariff definition for small commercial customers by building type either.

WITNESS: Bickey Rimal
Sharon Leskowsky

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-40 Please indicate whether PPL and its consultants take the position that fixed costs, as the term is used in accounting, means that those costs should also be recovered through fixed charges. Please provide any and all learned treatises, authoritative references, or economics papers or briefs that establish that economic efficiency in rate making is improved when fixed costs are recovered through fixed charges.

PPL Electric Response

It is desirable to recover fixed costs through fixed charges to the extent possible, subject to gradualism and bill impact considerations. When rate structures are not aligned with cost structures, customers do not receive proper price signals, which will ultimately lead to inefficient choices and improper allocations of resources.

Professor James C. Bonbright's eight criteria of a desirable rate structure have remained viable and resilient over the four decades since their first publication (*Principles of Public Utility Rates*, 1961, page 291). As a general matter, rate structures that are aligned with cost structures will result in rates that align with several of these criteria espoused by Professor Bonbright:

1) Revenue stability from year over year: Rate structure that matches cost structure will lead to stability of revenue generated by the rates. For example, under a rate structure where a significantly larger portion of fixed costs is recovered in variable rates, changes in weather and other variables that impact consumption will result in volatility in revenue collection for the utility.
2) Avoidance of "undue discrimination" in rate relationships: Rate structure that matches cost structure will reduce cross-subsidization between and among different customers. When volumetric rates or variable rates recover a significant portion of the fixed cost, it increases the risk of cost shifting between

customers, specifically from low volume users to high volume users. When a large proportion of fixed costs are recovered from volumetric rates, the volumetric rates will, by design, be higher than the volumetric costs and as a result, larger users will pay more than their share of fixed cost, while the low volume users will pay less than their share of fixed cost.

3) Efficiency of the rate classes and rate blocks in discouraging wasteful use of service while promoting all justified types and amount of use: Rate structures that are aligned with cost structure will provide proper price signals and promote efficiency by discouraging waste while encouraging justified usage.

In addition to fulfilling some of the desirable rate structure criteria described above, the existence of multi-part tariffs is founded on rate and cost structure alignment. There is extensive literature regarding how economic welfare can be maximized for natural monopolies by moving from a linear one-part pricing based on marginal cost to a non-linear pricing involving multiple part tariffs. For example, Brown and Sibley (1986) and Berg and Tschirhart (1988) discuss how multi-part tariffs can maximize economic welfare.[1,2] Joskow (2007) also provides a summary of literature on non-linear pricing.[3]

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-43

Please refer to page 15 of the direct testimony of PPL witness Rimal. Please provide a detailed explanation of how PPL and its consultants characterized the hypothetical minimum system. Please provide copies of the analysis used to derive the components and their sizes and costs that are deemed to be part of the hypothetical minimum system. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The minimum system used in the analysis was selected based on the guidance provided by the NARUC Manual. The minimum size used in the minimum system studies is based on the guidance provided by the NARUC Manual regarding the selection of the minimum-sized assets. According to the Manual, across all asset types (i.e., poles, conductors, and line transformers), the minimum-sized asset used in the analysis should be the minimum-sized asset currently being installed. The hypothetical minimum system was constructed using the minimum-sized assets currently being installed by the Company, based on the information provided by engineering personnel at the Company. For example, minimum sized poles used in the study are the “minimum height pole currently being installed” in accordance with the NARUC Manual.[1] Similarly, the minimum sized overhead and underground conductors used in the study are “minimum size conductor currently being installed” and “minimum size cable currently being installed”, respectively. Finally, the minimum sized transformer used is the “minimum size transformer currently being installed.”

[1] NARUC, Electric Utility Cost Allocation Manual, Chapter 6, at p. 91 (1992).

The minimum system studies were provided as part of Company's prior response to OCA I-1. See the following attachments:

1) OCA I-1 Attachment 162 Rimal: Pole_Study;
2) OCA I-1 Attachment 163 Rimal: PPL_Conductor_Study; and
3) OCA I-1 Attachment 169 Rimal: Transformers_Study

WITNESS: Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-44

Please refer to page 16 of the direct testimony of PPL witness Rimal. Please explain whether PPL or its consultants have done any analysis of the correlation of the level of demand to the incidence of operations and maintenance ("O&M") costs. If so, please provide any such analysis. If not, please explain why not.

PPL Electric Response

No such analysis has been conducted. At page 16 of his testimony (PPL Electric St. No. 7), Mr. Rimal does not discuss the correlation of the level of demand to the incidence of operations and maintenance ("O&M") costs. Mr. Rimal functionalized and allocated O&M costs based on the cost allocation methods used for the Company's corresponding plant accounts based on the assumption that a utility's distribution-related O&M expenses support the utility's corresponding plant-in-service accounts.

WITNESS: Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-45

Please refer to page 17 of the direct testimony of PPL witness Rimal. Please detail the amount and categories of Administrative and General Expenses classified as customer costs, and the basis for PPL's decision to take the approach it does relating to classification of such costs. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The assignment of classification factors associated with the Administrative and General (A&G) Expenses can be found in the "ACCOUNTS" tab of the Allocated Cost of Service Study ("ACOSS") model, which was provided in prior response I&E-RE-I-14-D CONFIDENTIAL Attachment 1. The A&G expenses can be found in rows 505-516 of the "ACCOUNTS" tab. All the A&G costs are classified and allocated using internal allocators developed within the ACOSS model. Since the A&G costs are overhead costs not tied to a specific function or sub-function, they are classified and allocated using general allocators based on labor and plant ratios. A&G expenses related to labor (for example, A&G salaries, Employee Benefits, Injuries & Damages, etc.) are allocated using the labor allocator, while other A&G expenses are allocated using plant-based allocators.

WITNESS: Bickey Rimal

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-49

Please refer to page 19 of the direct testimony of PPL witness Rimal. Please explain whether meter-related costs are adjusted for the age and historical cost of meters used within a class, and if not, why not. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The development of the meter allocator is described on page 13 of PPL Electric Exhibit BR-2. Specifically, a meter study was conducted to develop the meter allocator. The meter allocator is based on the number and type(s) of meters installed for each rate class and the associated replacement costs of each type of meter. The age and historical cost of meters by customer class is not available, hence it was not used to develop the meter allocator. The Company believes that the allocator it developed is a reasonable allocator to allocate meter costs.

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Energy Justice Advocates (EJA)
Dated November 4, 2025
Docket No. R-2025-3057164

EJA-PPL-I-50

Please refer to page 19 of the direct testimony of PPL witness Rimal. Please confirm that PPL and its consultants do not differentiate among customers within a class as regards the cost of meters, the cost and size of services, and the cost and size of transformers serving customers. Please explain why PPL takes the position that it does on this issue. Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

No. The meter allocator is based on the on the number and type(s) of meters installed for each rate class and the associated replacement costs of each type of meter. To the extent a particular class has customers that have different types of meters, those differences will be accounted for in the overall meter allocator. Similarly, the service allocator accounts for differences in size and length of service by class while developing the services allocator. The demand portion of line transformers is allocated to classes using non-coincident peak demand and accounts for the contributions of individual customers to the class peak. The customer component of line transformers is allocated using customer counts and does not distinguish based on the size of the customer.

WITNESS: Lisa Norden

PPL Electric Utilities Corporation
Response to the Set III Data Requests of the
Energy Justice Advocates (EJA)
Dated November 11, 2025
Docket No. R-2025-3057164

EJA-PPL-III-36

Please refer to pages 12-13 of the direct testimony of PPL witness Norden. Please detail by the amount and customer class how costs in the USR are allocated and recovered, for the historical, future, and fully-projected future test years. If USR costs are not allocated to or recovered from any specific customer classes, please explain why not.

Please provide the quantitative information requested by this question in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to a Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

Costs in the Universal Service Rider ("USR") are not allocated or recovered in the Historic, Future, or Fully Projected Future Test Years because those costs are recovered through the rider mechanism and not base distribution rates. The USR rider mechanism is recovered from residential customers. The Company notes that it has proposed to recover the costs associated with employees' salaries and wages supporting the Universal Service and Energy Conservation Plan ("USECP") through the USR beginning in the Fully Projected Future Test Year. As such, those costs are included in the costs being allocated and recovered through base rates in the Historic and Future Test Years.

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Energy Justice Advocates (EJA)
Dated December 5, 2025
Docket No. R-2025-3057164

EJA-PPL-IV-4

Please explain whether any changes in the transmission service charge over the past five years were for transmission infrastructure investments related in any material way to providing transmission service to large load customers. Please detail those changes, the amount of costs that the changes are based upon, and the impacts on the residential transmission service charge. Please provide spreadsheet(s) reflecting the calculation of the transmission service charge and how it is derived from the transmission infrastructure costs incurred.

Please provide the quantitative information requested by this question in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to a Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The Transmission Service Charge ("TSC") is a §1307 automatic adjustment clause through which the Company recovers transmission expenses applicable to its default service customers. The expense and resulting Company revenue is removed from the calculation of the Company's base distribution revenue requirement. As such, it is PPL Electric's position that the TSC is outside of the scope of this instant proceeding.

A description of costs recovered through the TSC is described in the Company's tariff. The TSC applies only to default service customers. The Company does not have this information broken down specifically for large load customers. See PPL Electric Exhibit GEO-1, pp. 59-61 and response to EJA-PPL-IV-1.

The Company has not interconnected any new large loads as of the date of this response, and there is no impact on the TSC. However, as shown in CAUSE-PA VIII-9 Attachments 1-3, it is anticipated that the addition of new large load customers will result in a reduction of residential customer transmission rates.

WITNESS: Andrew Castanaro

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Energy Justice Advocates (EJA)
Dated December 5, 2025
Docket No. R-2025-3057164

EJA-PPL-IV-5

Please explain whether any changes in the transmission service charge forecasted over the next five years are for transmission infrastructure investments that relate in any material way to providing transmission service to large load customers. Please detail those changes, the amount of costs that the changes are based upon, and the impacts on the residential transmission service charge. Please provide spreadsheet(s) reflecting the calculation of the transmission service charge and how it is derived from the transmission infrastructure costs incurred.

Please provide the quantitative information requested by this question in Microsoft Excel spreadsheet format, with all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included.

Please provide all documents and data relied upon in answering this question. Where any responsive information exists in or can be exported to a Microsoft Excel format (meaning *.xlsx, *.xls, *.ods, *.csv, or other formats compatible with Microsoft Excel), please provide it in a Microsoft Excel format file that has all cells unlocked, all formulae intact, and all assumptions, units, and referenced data sources or linked files specified and included, as well as any other format it exists in.

PPL Electric Response

The Transmission Service Charge ("TSC") is a §1307 automatic adjustment clause through which the Company recovers transmission expenses applicable to its default service customers. The expense and resulting Company revenue is removed from the calculation of the Company's base distribution revenue requirement. As such, it is PPL Electric's position that the TSC is outside of the scope of this instant proceeding.

The Company does not forecast changes in the TSC.

PPL Electric Utilities Corporation – Policy on Cost Allocation for Large Customer Interconnections

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load. PPL Electric Retail Tariff, Rule 4 – (C).4. However, certain upgrades benefit other PPL customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

It is PPL Electric's policy that upgrades to the networked bulk electric system made in connection with LP-5 customer interconnections will generally be excluded from the customer's obligation and included in transmission rate base. This policy is informed by FERC policy, which generally favors charging network customers for the costs of network facilities without an individualized benefit calculation:

> "[D]ue to the integrated nature of the transmission network, network facilities benefit all network users," even if "the facilities were installed to meet a particular customer's request for service." "[T]here is no need to identify further actual benefits in order to include the costs of network transmission facilities in transmission rates."

City of Anaheim, Cal., 113 FERC ¶ 61,091, at P 58 (2005), *reh'g denied*, 114 FERC ¶ 61,311 (2006).

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer, more specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customers substation.

All other upgrades, including PPL Electric substations/switchyards will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility;
- Expanded capacity for new generation flow and interconnections

If the customer's interconnection results in upgrades that will be included in transmission rate base, the Company reserves the right to include revenue guarantee provisions in the customer's Electric Service Agreement.

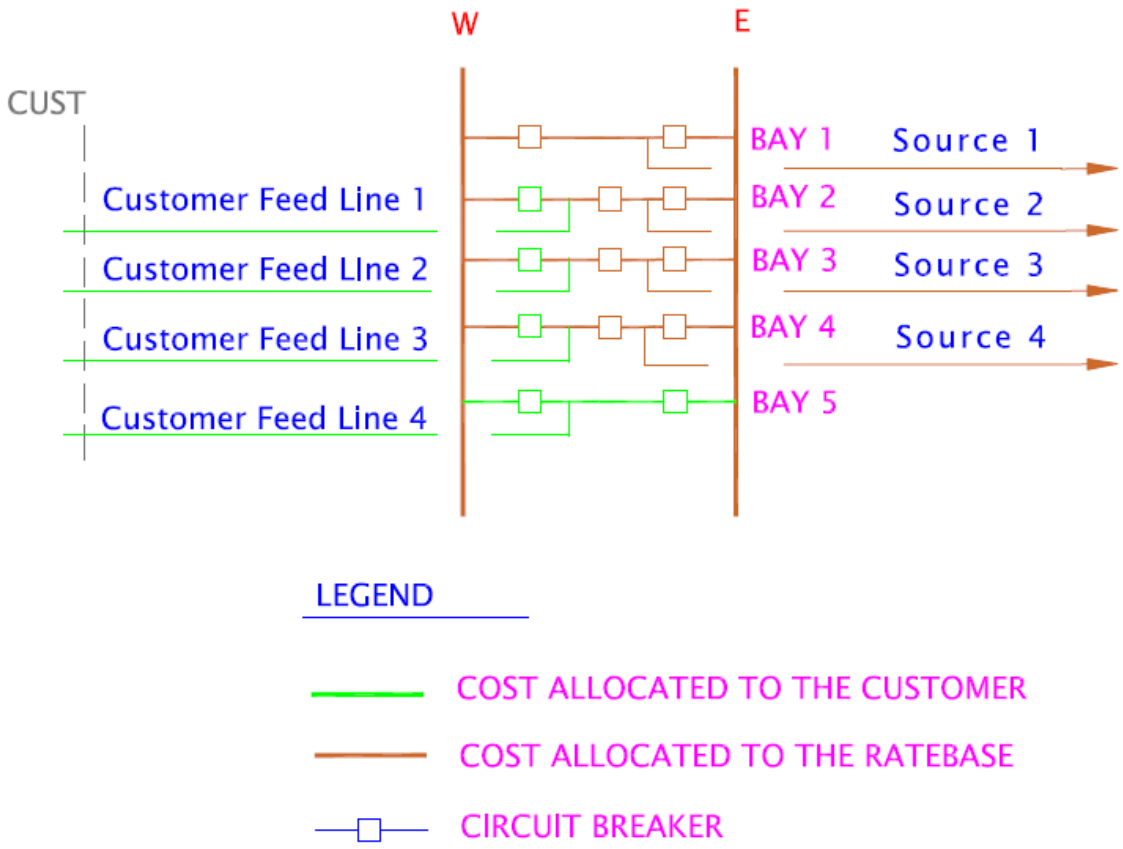
PPL Electric Utilities Corporation – Cost Allocation Review and Methodology for Large Customer Interconnections

Cost Allocation Review Process:

The Interconnection Affairs PM will pull together the following groups within Transmission Asset Management to review each project for their functional area:

- Interconnection Affairs – Rapid Response (RR) to interconnection request, Project Feasibility Report (PFR), Electrical Service Agreements (ESA), Construction Service Agreement (CSA), and confirmation of project costs.
- Planning – Line and sub equipment review and determination of dedicated vs network benefit.
- Project Development – Lead the development of deliverables for project scope, schedule and budget. Includes but not limited to project cost estimating, construction feasibility, confirmation of CSA scope and one-line, and financial budget.
- VP Planning and Asset Management – Provides approval for final cost allocation decision.

Cost Allocation Methodology is as follows for Direct Connect Transmission Line:



- All direct connection transmission lines that supplies customer substation. Below are typical assets but are not limited to:
    - Transmission Structures
    - Transmission conductor
    - Associated insulation and line hardware
    - Sectionalizing devices (i.e. switches, power circuit breakers, reclosers)
    - Grounding cable and hardware
    - Right of way easements and fee owned land

Cost Allocation Methodology is as follows for Substation equipment reviews:

The determining factor for cost allocation will be illustrated with the circuit breaker assets shown on Examples 1, 2, and 3 for ease of understanding at the highest level.

Interconnection Affairs will keep documented proof of each project site that is reviewed. A one-line will be color coded to denote direct customer costs vs network costs along with a cost spreadsheet.

Responsibility of Asset Matrix for Breaker and a Half (BAAH) Example 1:

Customer Responsible:

- Bay 1: No assets
- Bay 2:
  - Line: Customer Line 1
  - Sub: 2W down-lead and dead-end structure
  - Sub: CB 2W
  - Sub: Two switches: 2WW & 2WE
  - Sub: Three associated CCVT's
  - Sub: Three associated surge arrestors
- Bay 3:
  - Line: Customer Line 2
  - Sub: 3W down-lead and dead-end structure
  - Sub: CB 3W
  - Sub: Two switches: 3WW & 3WE
  - Sub: Three associated CCVT's

    - Sub: Three associated surge arrestors
- Bay 4:
    - Line: Customer Line 3
    - Sub: 4W down-lead and dead-end structure
    - Sub: CB 4W
    - Sub: Two switches: 4WW & 4WE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 5:
    - Line: Customer Line 4
    - Sub: 5W down-lead, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 5W & 5E
    - Sub: Four switches: 5WW, 5WE, 5TW, & 5EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

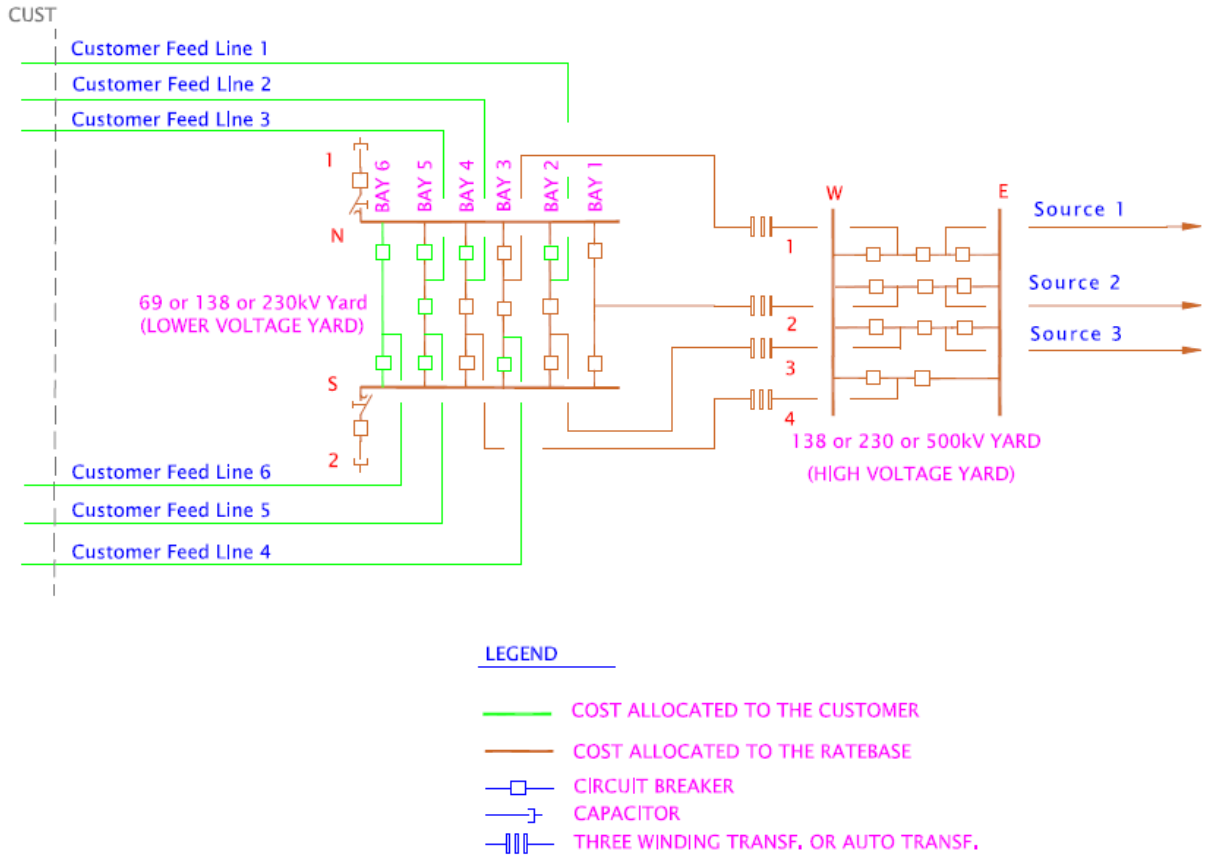
PPL Responsible:

- All other equipment and associated minor assets.

Responsibility of Asset Matrix for Double Breaker Double Buss (DBDB) Example 2:

Customer Responsible:

- Bay 1-4: No assets
- Bay 5:
  - Line: Customer Line 1
  - Sub: Bay 5 downleads, dead-end structure, bay conductor, and bay structures
  - Sub: CBs 5W &5E
  - Sub: Four switches: 5WW, 5WE, 5EW & 5EE
  - Sub: Three associated CCVT's
  - Sub: Three associated surge arrestors



- Bay 6:
    - Line: Customer Line 2
    - Sub: Bay 6 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 6W & 6E
    - Sub: Four switches: 6WW, 6WE, 6EW & 6EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 7:
    - Line: Customer Line 3
    - Sub: Bay 7 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 7W & 7E
    - Sub: Four switches: 7WW, 7WE, 7EW & 7EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 8:
    - Line: Customer Line 4
    - Sub: Bay 8 downleads, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 8W & 8E
    - Sub: Four switches: 8WW, 8WE, 8EW & 8EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

PPL Responsible:

- All other equipment.

Responsibility of Asset Matrix for Step Down Substation Example 3:

Customer Responsible:

- Higher voltage yard:
  - No assets

- Lower voltage yard:
- Bay 1: No assets
- Bay 2:
  - Line: Customer Line 1
  - Sub: 2N downleads and dead-end structure
  - Sub: CB 1N

    - Sub: Two switches: 2NN & 2NS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 3:
    - Line: Customer Line 4
    - Sub: 3S downleads and dead-end structure
    - Sub: CB 3S
    - Sub: Four switches: 3SS & 3SN
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 4:
    - Line: Customer Line 2
    - Sub: 4N downleads and dead-end structure
    - Sub: CB 4N
    - Sub: Two switches: 4NN & 4NS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 5:
    - Line: Customer Line 3 & 5
    - Sub: 5N & 5S downleads, dead-end structures, bay conductors, and bay structures
    - Sub: CBs 5N, 5T, & 5S
    - Sub: Six switches: 5NN, 5NS, 5TN, 5TS, 5SN, & 5SS
    - Sub: Six associated CCVT's
    - Sub: Six associated surge arrestors
- Bay 6:
    - Line: Customer Line 6
    - Sub: 6S downleads, dead-end structure, bay conductors, and bay structures
    - Sub: CBs 6N & 6S
    - Sub: Four switches: 6NN, 6TS, 6SN, & 6SS
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

<u>PPL Responsible:</u>

All other equipment.

WITNESS: Steven W. Wishart

PPL Electric Utilities Corporation
Response to the Set XXI Data Requests of the
Office of Consumer Advocate (OCA)
Dated December 2, 2025
Docket No. R-2025-3057164

OCA XXI-15 Please provide a comparison of PPL's proposed residential customer charge to the residential customer charges of other major Pennsylvania electric utilities.

PPL Electric Response

Residential Customer Charge

PPL Proposed	$17.00
Citizens Electric of Lewisburg	$13.10
Duquense Light Company	$13.00
Met-Ed	$11.25
PECO	$11.30
Penelec	$11.25
PennPower	$11.00
Pike County	$9.55
UGI	$10.75

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Sustainable Energy Fund (SEF)
Dated November 25, 2025
Docket No. R-2025-3057164

SEF II-3	Regarding any incentives PPL offers customers regarding load management, provide a comparison of the eligibility and incentives provided as compared to the incentives provided by the proposed EV TOU program.
PPL Electric Response	The Company does not currently offer any other load management or demand response programs. However, under the Commission's Final Implementation Order for Phase V Act 129 EE&C (Docket No. M-2025-3052826), PPLE Electric may offer such programs as part of the Company's Phase V EE&C Plan. The Company filed its Phase V EE&C Plan on December 1, 2025, at Docket No. M-2025-3057329, and that proposed Plan is currently the subject of ongoing litigation in that proceeding.

Annual Report of the U.S. Investor-Owned Electric Utility Industry

Thank you to the following EEI Power Member for sponsoring the 2024 Financial Review.

POWERPLAN nxt

The Only Fully Integrated Accounting & Tax Platform Built for Investor-Owned Electric Utilities

30 years of industry expertise, now powered by AI

PowerPlan NXT is purpose-built SaaS to help utility finance teams manage the full lifecycle of asset accounting with precision and control. But it doesn't stop there. Our fully integrated tax suite works seamlessly with your accounting data to automate compliance, accelerate audits, and support strategic decision-making.

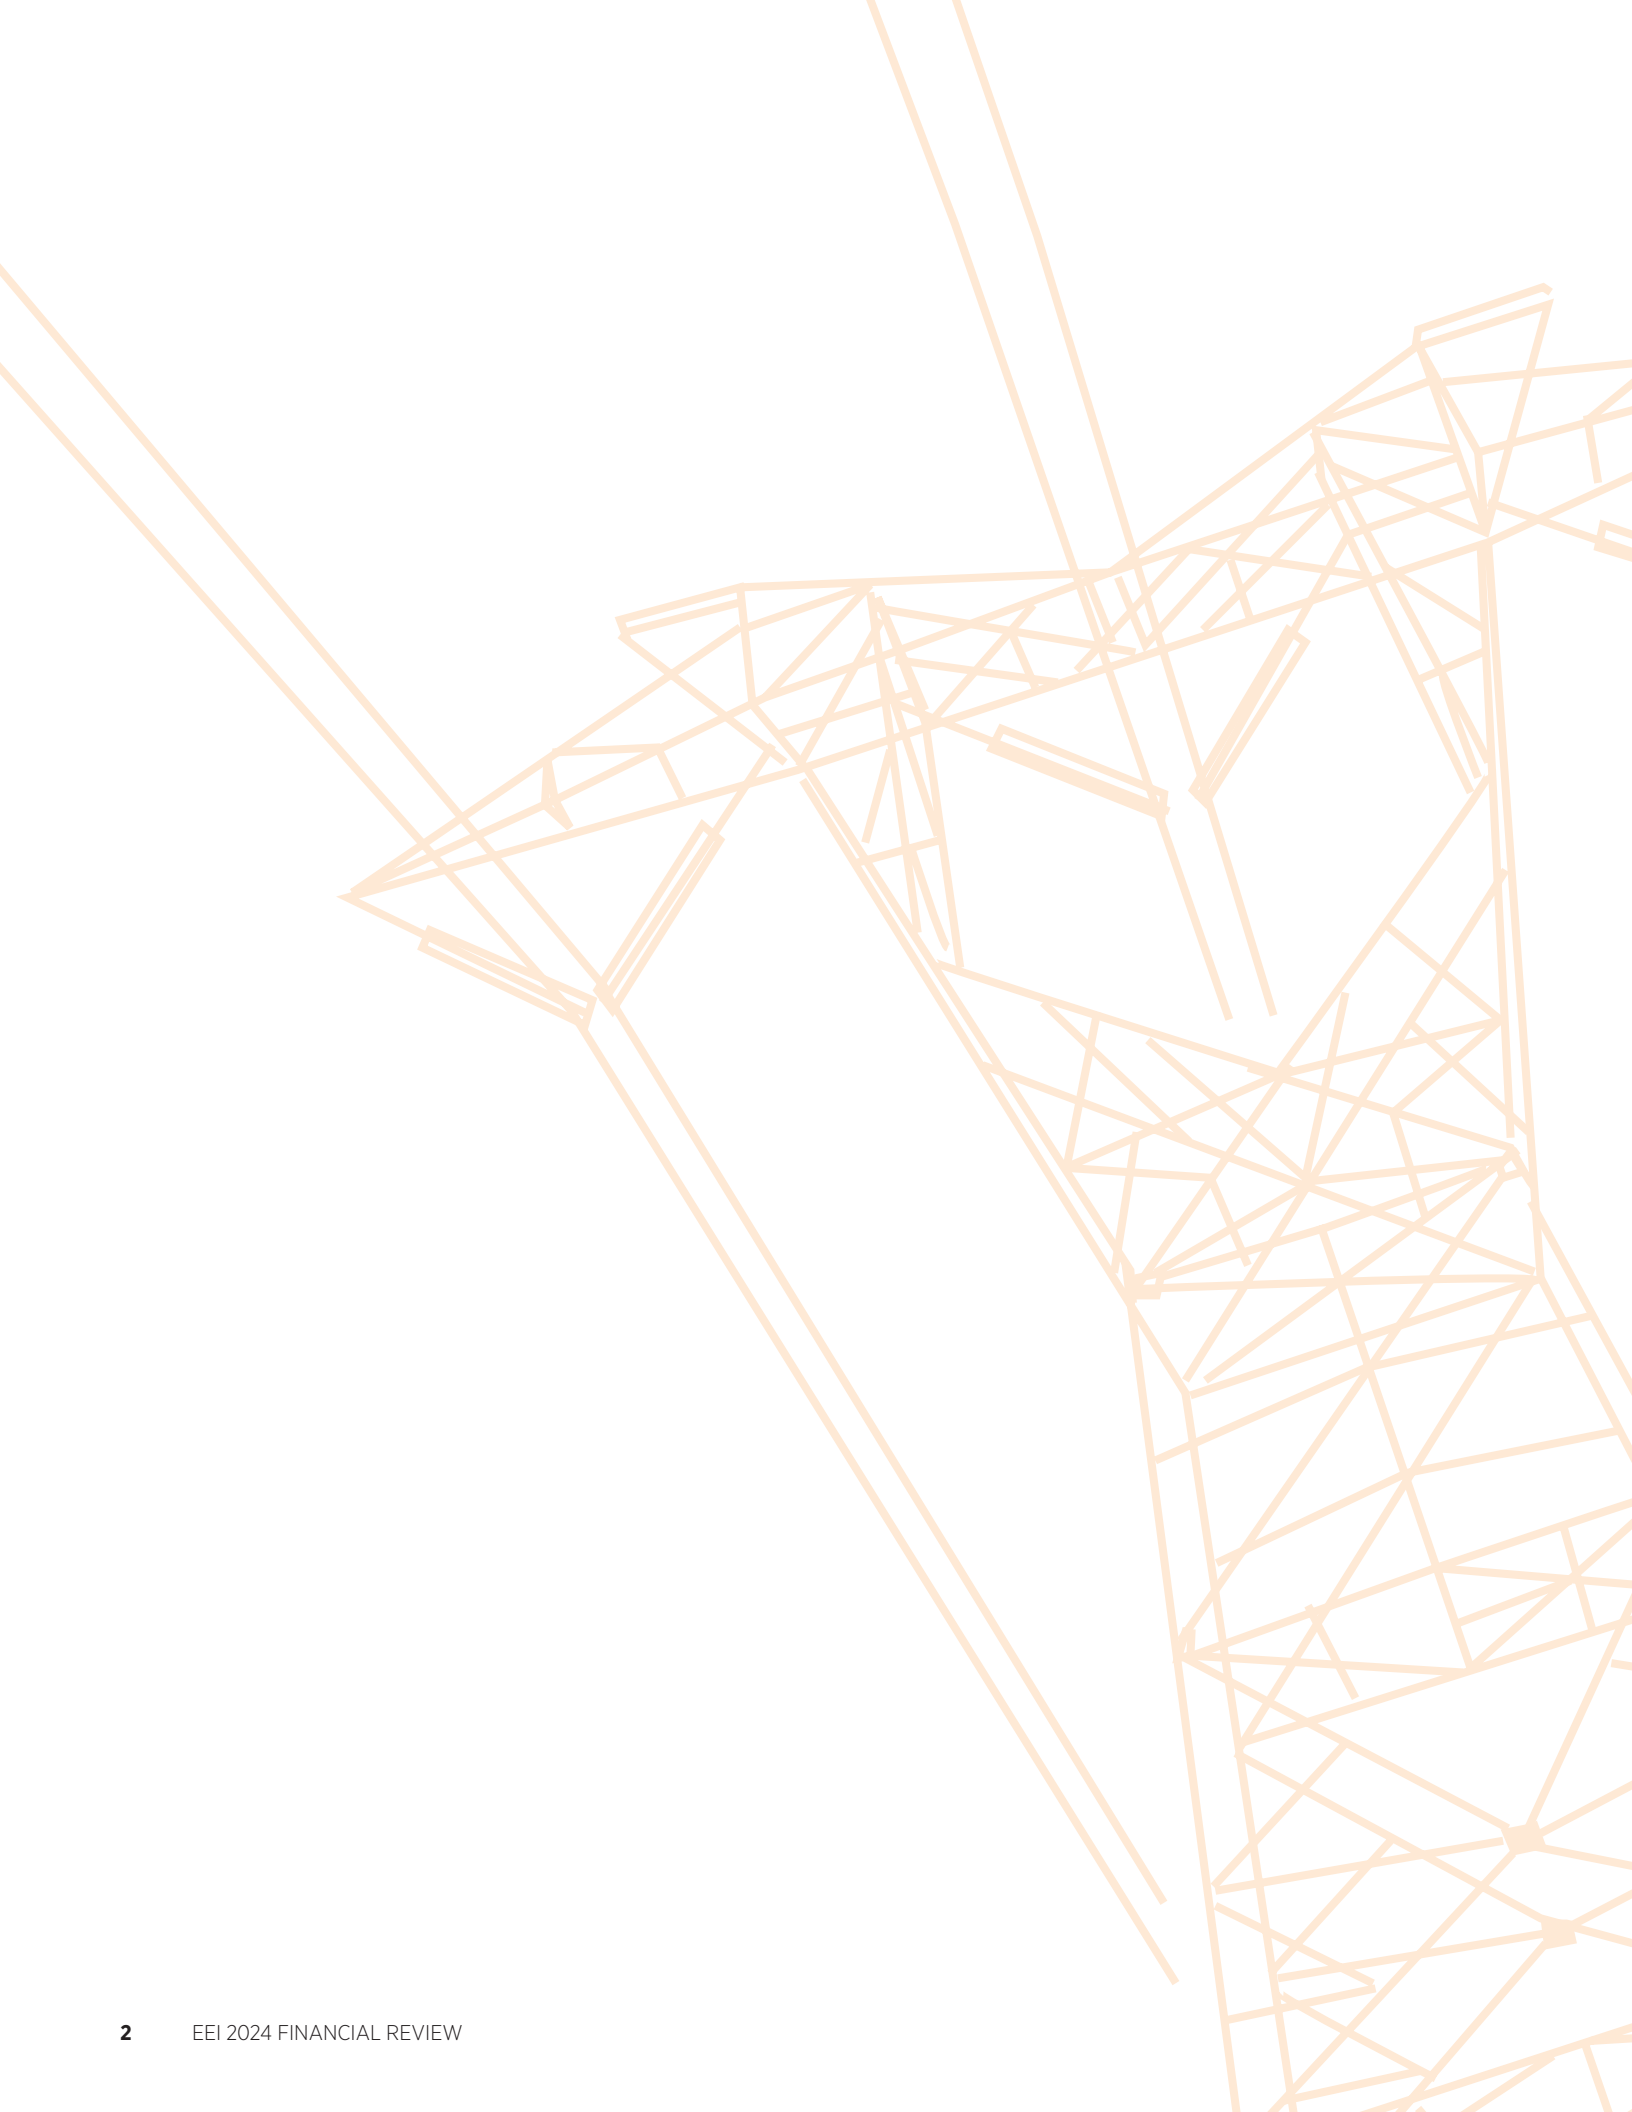
Edison Electric
INSTITUTE



2024 Financial Review

ANNUAL REPORT OF THE U.S. INVESTOR-OWNED ELECTRIC UTILITY INDUSTRY

About EEI and the Financial Review

The Edison Electric Institute (EEI) is the association that represents all U.S. investor-owned electric companies. Our U.S. members provide electricity for nearly 250 million Americans and operate in all 50 states and the District of Columbia. As a whole, the electric power industry supports more than 7 million jobs in communities across the U.S. and contributes 5 percent to the nation's GDP.

The 2024 Financial Review is a comprehensive source for critical financial data covering 38 investor-owned electric companies whose stocks are publicly traded on major U.S. stock exchanges. The report also includes data on five additional companies that provide regulated electric service in the United States but are not listed on U.S. stock exchanges. These 43 companies are referred to throughout the publication as the U.S. Investor-Owned Electric Utilities.

COMPANY CATEGORIES

Two categories are used throughout this publication that group companies based on their percentage of total assets that are regulated. These categories are used to provide an informative framework for tracking financial trends:

Regulated: 80% or more of total assets are regulated.

Mostly Regulated: Less than 80% of total assets are regulated.

U.S. INVESTOR-OWNED ELECTRIC UTILITIES

(At 12/31/2024)

ALLETE, Inc.
Alliant Energy Corporation
Ameren Corporation

TXNM Energy, Inc.
Unitil Corporation
WEC Energy Group, Inc.
Xcel Energy Inc.

Note: This list includes 38 publicly traded U.S. electric utility holding companies plus an additional five electric utilities (shown in italics) that are not listed on U.S. stock exchanges but do publish financial data with sufficient granularity.

* The AES Corporation is not included, but its two U.S. electric utility subsidiaries are included in the group of five italicized companies.

OTHER EEI MEMBER COMPANIES

American Transmission Company
Avangrid, Inc.
Central Hudson Gas & Electric Corp.
Duquesne Light Company
El Paso Electric
Florida Public Utilities
Green Mountain Power
ITC Holdings Corp.
Liberty Utilities
Mt. Carmel Public Utility Company
National Grid
Ohio Valley Electric Corporation
Sharyland Utilities
Tampa Electric
UGI Corporation
UNS Energy Corporation
Vermont Electric Power Company
Versant Power

Note: These companies are not included in the EEI Financial Review data sets for one of the following reasons: they do not provide retail electric distribution service (i.e., transmission-only), they are subsidiaries of foreign-owned companies, they are not traded on a major U.S. stock exchange, or they are owned by a non-utility holding company and the granularity of publicly available financial data is insufficient.

Letter from the President and CEO

2024 FINANCIAL REVIEW

Electricity is the energy that runs America, and investor-owned electric companies are the backbone powering our economic and national security. As demand for electricity increases, EEI and our member companies are leading efforts to build more transmission and grid infrastructure and to deliver reliable, affordable energy to our growing economy and the nearly 250 million customers we serve.

In July, I was honored to join EEI as President and CEO. I am looking forward to working with our member companies, our partners in the financial community, federal and state policymakers, and with a range of stakeholders to provide the investment and infrastructure required to drive innovation, connect data centers as quickly as they are built, and create thousands of good-paying jobs.

Our capital expenditures are higher than any other sector in the U.S. economy, outpacing transportation, retail, and other capital-intensive industries. Our continued financial health is critical to accessing the capital that we need to serve our customers and build new energy projects of all kinds. EEI member companies made a record $178.2 billion last year in grid investments and have invested more than $1.3 trillion during the past decade to enhance our nation's critical energy infrastructure.

Importantly, EEI member companies are projected to make similar investments of more than $1.1 trillion between 2025 and 2029, creating millions of jobs and supporting local economies across the country. As always, we remain committed to keeping customer bills as low as possible as we work to deliver the reliable, secure electricity that is enabling innovation and enhancing the energy leadership of the United States.

EEI and America's investor-owned electric companies are leading in this unique and critical moment for our industry and our nation. We value and appreciate the partnership that we share with the financial community—as well as the critical role that each of you plays in helping us to strengthen the country's energy and economic security.

Drew Maloney
President and CEO
Edison Electric Institute

Executive Summary

Investor-owned electric companies are the backbone powering America's economic and national security.

Their financial health is critical to unlocking the capital necessary to build new critical energy infrastructure of all kinds. EEI member companies provide safe, reliable, and affordable electricity for nearly 250 million Americans. The industry accounts for at least 5 percent of the nation's GDP and supports more than 7 million jobs in communities across the United States. As the economy continues to electrify—and as data centers and artificial intelligence technologies transform our industries—the role that electric companies play in powering prosperity has never been more important.

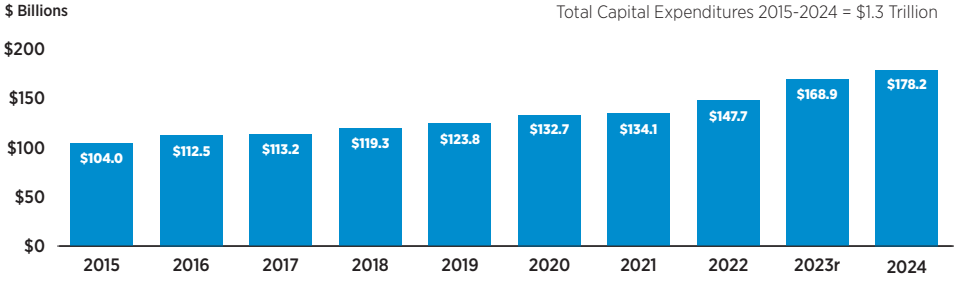
EEI's 2024 Financial Review is a comprehensive source of financial information that covers the 38 companies that comprise the EEI Index with stocks publicly traded on major U.S. stock exchanges and five additional companies that are not publicly listed because they are owned by holding companies not primarily engaged in retail electric distribution in the United States. These 43 investor-owned electric companies are listed on page 5.

This report shows that EEI's member companies continue to build on a strong financial foundation.

Key Findings

EEI member companies invested a record $178.2 billion last year to make the energy grid smarter, stronger, cleaner, more dynamic, and more secure.

- This was the 13th-consecutive year of record capital investment, with more than $30 billion allocated to adaptation, hardening, and resilience projects to strengthen the nation's transmission and distribution infrastructure for all customers.
- EEI member companies have invested more than $1.3 trillion during the past decade to enhance our nation's critical energy infrastructure, leading to additional jobs and wide-ranging economic benefits.



Industry Leaders in U.S. Capital Expenditures. Our capital expenditures are higher than any other sector in the U.S. economy, outpacing transportation, retail, and other capital-intensive industries.[1]

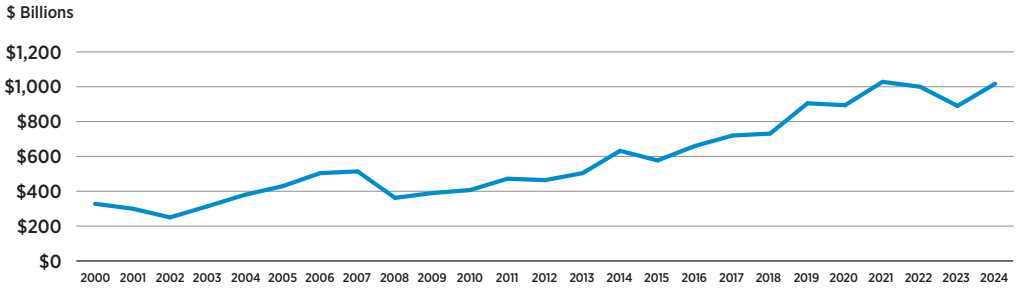
Robust Capital Expenditure Projections. The industry projects capital expenditures to be in excess of $1.1 trillion for the five-year period of 2025-2029.

- EEI member companies continue to invest to support the growing electricity demand driven by artificial intelligence and data center expansion, industrialization and the reshoring of manufacturing activity, and the electrification of the broader economy. These investments support local jobs, empower communities, and drive economic development.

CAPITAL EXPENDITURES 2015–2024

U.S. Investor-Owned Electric Utilities

r = Revised
Source: S&P Global Market Intelligence and EEI Financial Analysis Department



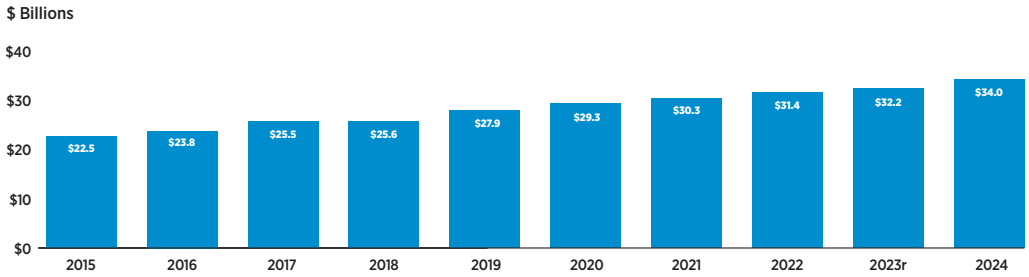
1 U.S. Census Bureau, Annual Capital Expenditures Survey (ACES), February 2024. NYU Stern School of Business, Capital Expenditures by Sector, January 2025

Strong Stock Performance. The EEI Index had a total shareholder return of 19.1 percent in 2024.

- The EEI Index has had a positive total return in 16 of the past 20 years. The total market capitalization of the 38 electric companies in the EEI Index totaled more than $1 trillion on December 31, 2024.

MARKET CAPITALIZATION 2000–2024

EEI Index Companies



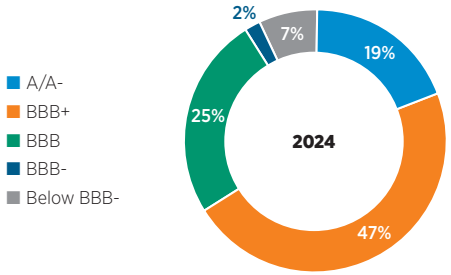
Source: S&P Global Market Intelligence and EEI Financial Analysis Department

Dividends Lead All U.S. Business Sectors. In 2024, 94 percent of EEI Index companies raised their dividend, helping them to secure the capital needed to build a modern and resilient grid.

- Total dividend payments increased 5.5 percent to a record $34 billion. The industry led all U.S. business sectors with a dividend payout ratio of 62.2 percent in 2024 and a dividend yield of 3.6 percent at year-end 2024. The industry's history of strong dividends is especially attractive to investors seeking a combination of growth and income.

COMMON DIVIDENDS PAID 2015–2024

U.S. Investor-Owned Electric Utilities



r = Revised
Source: S&P Global Market Intelligence and EEI Financial Analysis Department

Strong Credit Ratings and Investor Confidence. In 2024, the industry's average credit rating at the parent company level remained at BBB+ for the 11th-consecutive year, having increased from BBB in 2014.

- The improved credit quality continues to support the electric power industry as one of the most capital-intensive industries in the country.
- Parent-level upgrades have outnumbered downgrades in six of the past 10 calendar years, with an annual average upgrade percentage of 54 percent during the past decade.

CREDIT RATINGS 2024

U.S. Investor-Owned Electric Utilities

The average credit rating is the unweighted average of all parent holding company ratings, as rated by S&P Global Ratings.

Capital Markets

STOCK PERFORMANCE

The EEI Index returned 19.1% for the year, outperforming the Dow Jones Industrial Average (+15.0%) but short of the S&P 500 (+25.0%) and the Nasdaq (+28.6%). The EEI Index led all three major indices at the nine-month point but gave up some of that leadership during the fourth quarter, primarily due to interest rate headwinds.

Economic Strength Continues

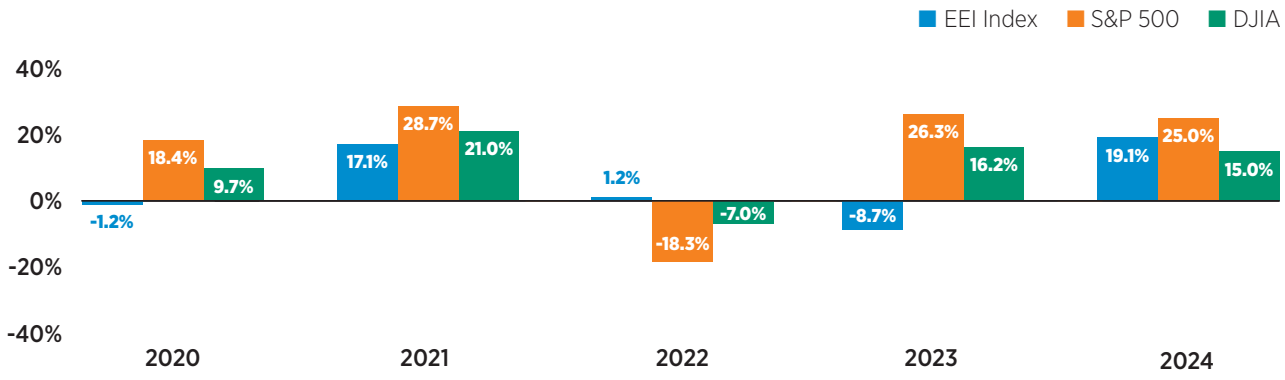
Investor attention focused on strong economic data and on potential Federal Reserve rate decisions and rate outlooks. Economic strength surprised to the upside during most of the year. Real GDP growth in Q1 was a sluggish 1.4% but rose to 3.0% in Q2 and 3.1% in Q3. Wall Street's corporate profit outlook remained optimistic, expecting overall profit growth of 13.9% in 2025 on 5.5% revenue growth.

Utility investors were affected by a rise in long-term yields late in the year. Wall Street thought long-term rates would fall as the Federal Reserve cut short-term rates by 50 basis points in September and 25 basis points in November, and again in December. Long-term yields had declined during four of the past six Fed easing cycles back to the late 1980s. This time the 10-year Treasury yield rose 100 basis points, from 3.6% at the time of the Fed's September cut to 4.6% by the end of Q4. Economists said the strong economy had kept inflation from falling and also cited bond market concern over growing budget deficits.

The Federal Reserve also acknowledged its success against inflation stalled late in the year. The nationwide monthly CPI rose 2.6% in October and 2.7% in November, above the Fed's 2.0% target. Federal Reserve guidance for further rate cuts in 2025 shifted from four to only two, while concerns over continued inflation rose.

The EEI Index total return was 19.1% in 2024

Investors focused on AI and data center load growth



Data Centers in Spotlight

Electric companies are the primary source for the energy that will power AI. The outlook for data center demand, which has surprised everyone since ChatGPT's debut in 2022, remained a hot topic across earnings calls, investor conferences, and Wall Street's industry research in 2024. A McKinsey study predicted data center demand will rise about 20% annually from 2023 to 2030, reaching 170 to 220 gigawatts (GW) from 60 GW today. McKinsey noted an alternate scenario could drive demand higher annually to nearly 300 GW.

Consultant Grid Strategies published research sourced from FERC filings that concluded that U.S. electricity demand could rise 128 GW over the next five years, with growth focused in six regions of the country. The firm called this a five-fold increase in its forecast from two years ago and said it would raise aggregate load growth to 3% annually in the decade's second half. Wall Street also sought to quantify the data center

demand boost to already rising growth outlooks, with estimates of 2% or more annual load growth through 2030.

Utilities Maintain Steady Outlooks

Many utilities cited the prospect for demand growth from data centers in their 2024 earnings calls. Long-term earnings growth guidance remained stable, with most utilities maintaining their 4-6%, 5-7%, or 6-8% targeted five-year earnings growth range. While new demand is indisputably a good thing, some caution is also understandable. Rate structures need to be optimized to accommodate changing demand. Strong load growth may challenge the electric grid as coal plants retire, large-scale energy storage remains in development, and severe weather highlights the need for continued grid hardening. Many utilities are now also planning new natural gas generation capacity in addition to renewable capacity to keep pace with growing demand.

Electric companies are also sensitive to consumer bill inflation, often citing a strategic goal of keeping it at or below broader inflation. Years of low fuel costs helped finance capital expenditures by muting customer bill pressures. If fuel costs rise due to higher demand, this may become more challenging. Coal and natural gas still account for more than 60% of utility-scale power generation.

An Upside Bias

The longer-term bias for electric company growth is on the upside. In recent years investors have generally focused on specific beneficiaries of the AI boom. Utilities are also increasingly seen as an AI beneficiary, which may spark broadened investor interest. Of course, prospects for higher demand growth come from more than AI and data centers. Increased electrification of transportation, manufacturing reshoring, and strong economic development across many service territories are positive factors as well.

DIVIDENDS

The investor-owned electric utility industry continued its long-term trend of widespread dividend increases in 2024. A total of 36 companies increased or reinstated their dividend compared to 34 in both 2023 and 2022.

The percentage of companies that raised or reinstated their dividend in 2024 was 94%, up from 87% in both 2023 and 2022. By contrast, only 27 of the 65 utilities tracked by EEI increased their dividend in 2003, just prior to the passage of legislation that reduced dividend tax rates.

Dividend Patterns

As shown in the Dividend Patterns table, 37 of the 38 publicly traded utilities in the EEI Index paid a common stock dividend during 2024. Each company is limited to one action per year in the table. For example, if a company raised its dividend twice during a year that counts as one in the "Raised" column. Electric utilities generally use the same quarter each year for dividend changes, with Q1 being the most common.

With the completion of Iberdrola's merger with Avangrid on December 23, 2024, Avangrid is no longer publicly traded or in the EEI Index, reducing the benchmark to 38 companies as of year-end 2024.

Dividend Increases

The average dividend increase in 2024 was 5.0%, with a range of 0.7% to 10.2% and a median increase of 5.3%. NextEra Energy (+10.2% in Q1), CenterPoint Energy (+10.0% combined in Q3 and Q4), PPL Corporation (+7.3% in Q1), WEC Energy (+7.1% in Q1), DTE Energy (+6.9% in Q4), and Otter Tail Corporation (+6.9% in Q1) posted the largest percentage increases.

NextEra Energy, based in Juno Beach, Florida, increased its quarterly dividend from $0.4675 to $0.515 per share during the first quarter. The increase is consistent with its plan, announced in 2022, to target roughly 10% annual growth in its per-share dividend through at least 2024, off a 2022 base. NextEra recorded the industry's largest percentage increases in 2023 (+10.0%), 2022 (+10.4%), 2021 (+10.0%), 2020 (+12.0%) and 2019 (+12.6%).

In 2024, 94% of companies raised their dividend

The average dividend increase was 5.0%

CenterPoint Energy, based in Houston, Texas, raised its quarterly dividend $0.01 in both Q3 and Q4 to $0.22 from $0.20 per share. CenterPoint noted its annualized dividend growth rate aligns with the high end of its announced 6-8% non-GAAP earnings per share growth target.

PPL Corporation, based in Allentown, Pennsylvania, increased its quarterly dividend from $0.24 to $0.2575 per share in Q1. PPL said this reflects the company's commitment to dividend growth that is in line with its earnings per share growth targets.

WEC Energy Group, headquartered in Milwaukee, Wisconsin, raised its quarterly dividend from $0.78 to $0.835 in the first quarter. This marked the 21st consecutive year that the company raised its dividend. WEC Energy continues to target a dividend payout ratio of 65 to 70 percent of earnings.

DTE Energy, based in Detroit, Michigan, increased its dividend from $1.02 to $1.09 per quarter, continuing more than 100 years of issuing a dividend.

Otter Tail Corporation, headquartered in Fergus Falls, Minnesota, raised its quarterly dividend from $0.4375 to $0.4675 per share in Q1. The increase was in line with the company's stated long-term earnings growth target rate of 5% to 7%; 2024 marks

Dividend Per Share: Per share amounts are annualized declared figures as of 12/31.
Dividend Payout Ratio: Dividends paid for 12 months ended 12/31 divided by net income before nonrecurring and extraordinary items for 12 months ended 12/31. On an individual company basis, the Payout Ratio in the table could differ slightly from what is reported directly by the company. "NM" applies to companies with negative earnings or payout ratios greater than 200%. Dividend Yield: Annualized Dividend Per Share divided by stock price at market close on last trading day of the year.

the 86th consecutive year that Otter Tail paid a dividend on its common stock.

PG&E Corporation, based in Oakland, California, in November raised its quarterly dividend from $0.01 to $0.025 per share, a 150% increase. When calculating the industry's average dividend increase, we exclude individual company results that are equal to or greater than 50%.

The industry's average and median increases have been relatively consistent in recent years. The average was 5.1% in 2023, 5.2% in 2022, 4.8% in 2021, and ranged between 5.1% and 5.7% from 2016 through 2020. The median increase was 5.4% in 2023, 5.6% in 2022 and ranged between 4.9% and 5.5% from 2017 through 2021.

Dividend Payout Ratio

The industry's dividend payout ratio was 62.2% for the twelve months ending December 31, 2024, higher than all other U.S. business sectors. The industry's payout ratio was 64.0% when measured as an unweighted average of individual company ratios; 62.2% represents an aggregate figure.

Dividend Yield

The industry's average dividend yield was 3.6% on December 31, 2024, leading all U.S. business sectors. The yield had risen to 4.4% on September 30, 2023. It has since fallen due to higher utility stock prices, with that impact somewhat offset by strong dividend activity. The market cap-weighted EEI Index returned 19.1% for calendar year 2024 and 28.6% for the 15-month period ending December 31, 2024. The industry's year-end dividend yield was 3.8% in 2023 and 3.4% in 2022. We calculate the industry's average dividend yield using an unweighted average of the yields of all EEI Index companies that pay a dividend.

A History of Strong Dividends

The electric utility sector has long been known as a leading dividend payer among U.S. business sectors. This reputation is founded on:

A steady stream of income from a product that is universally needed and with low elasticity of demand.

The industry's aggregate dividend payout ratio was 62.2% in 2024

Electric companies typically lead all U.S. business sectors in dividend metrics

A mostly regulated industry that provides reasonable returns on investment and relatively low investment risk.

A mature industry comprised of companies with very long track records of maintaining and/or steadily increasing their dividends over time.

These characteristics are especially attractive to the population of investors who seek a combination of growth and income. A typical total return model for electric utilities is approximately 4% to 8% annual earnings growth and a 3% or higher dividend yield, producing a highly visible and relatively stable 7% to 10%+ annualized long-term total return potential.

Dividend Tax Rates

The top tax rate for dividends and capital gains in 2024 was 20%, applied to income thresholds of $583,750 for couples and $518,900 for individuals. For taxpayers below these thresholds, dividends and capital gains are currently taxed at rates of 15% or 0%, depending on a filer's income.

The Tax Cuts and Jobs Act (TCJA), signed into law in December 2017, maintained the pre-existing and equal tax rates for dividends and capital gains. This parity is crucial to avoid a capital-raising disadvantage for companies, such as electric utilities, that rely on a strong dividend to attract investors and finance capital spending.

CREDIT RATINGS

The industry's average parent company credit rating in 2024 remained at BBB+ for the eleventh straight year. Four parent-level upgrades versus three downgrades caused a slight improvement in aggregate holding company credit quality. There were only 46 total actions, 25 upgrades and 21 downgrades, affecting both parents and subsidiaries. This compares to 43 total actions, 16 upgrades and 27 downgrades, in 2023.

On December 31, 2024, 75% of parent company rating outlooks were "stable", and 9% were "positive" or "watch-positive". Only 16% of outlooks were "negative" or "watch-negative", which is unchanged from year-end 2023.

Electric utility industry credit quality has generally improved over the past decade. The industry's average parent-level rating has held at BBB+ since increasing from BBB in 2014. Parent-level upgrades have outnumbered downgrades in six of the past ten calendar years, with an annual average upgrade percentage of 54% over the decade.

EEI captures upgrades and downgrades at both the parent and subsidiary levels. The industry's average credit rating and outlook are the unweighted averages of all S&P parent holding company ratings and outlooks. However, our upgrade/downgrade totals reflect all actions by the three major rating agencies directed at parent holding companies as well as individual subsidiaries.

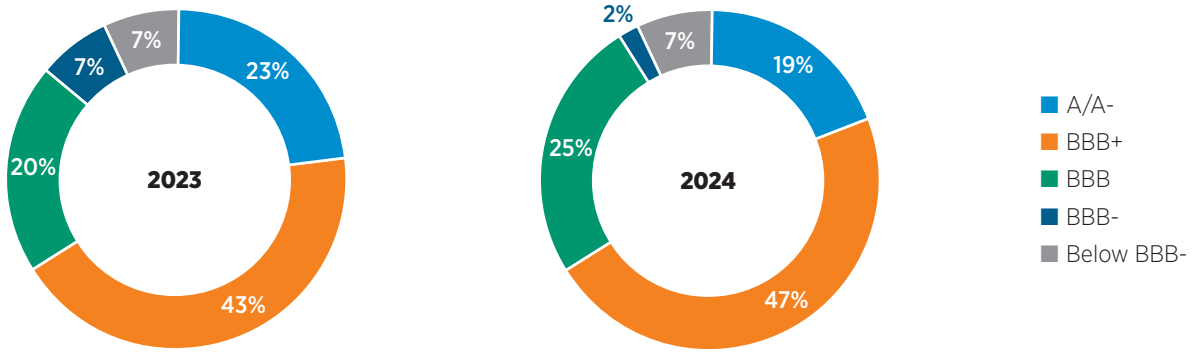
The average parent company S&P credit rating was BBB+ for the eleventh straight year

75% of parent company rating outlooks were "stable" on December 31, 2024

S&P Actions at Parent Level

S&P Global's parent-level rating actions (that determine the industry's average rating and outlook) in 2024 included four upgrades and three downgrades. By comparison, there were four downgrades and no upgrades in 2023, one downgrade and no upgrades in 2022, and three downgrades and one upgrade in 2021.

On February 23, S&P Global Ratings upgraded PG&E Corporation (PCG) to BB from BB-. Subsidiary Pacific Gas & Electric was also upgraded to BB from BB-. S&P cited the successful implementation of ongoing wildfire mitigation efforts for the upgrade. Initiatives such as public safety power shutoffs, enhanced vegetation management, and underground distribution lines have decreased the likelihood of wildfire in PG&E's service territory.



On March 4, S&P Global Ratings downgraded American Electric Power Co. (AEP) and most subsidiaries to BBB+ from A-. Subsidiaries AEP Texas, Appalachian Power, Indiana Michigan Power, Ohio Power, Public Service Company of Oklahoma, Southwestern Electric Power, and AEP Transmission Company were downgraded by one notch. The downgrades resulted from concern that AEP's financial measures will be pressured by higher capital spending relative to historical levels.

On March 13, S&P Global Ratings downgraded Xcel Energy (XEL) to BBB+ from A-. S&P also lowered the ratings of subsidiaries Southwestern Public Service (BBB from A-) and Northern States Power (A- from A). S&P cited greater wildfire risk, driven by developments related to the Smokehouse Creek fire in the Texas panhandle. Xcel's exposure to wildfire risk may also require increased investments in advanced technologies and system hardening.

On April 23, S&P Global Ratings upgraded FirstEnergy Corporation (FE) to BBB from BBB-. Subsidiaries FirstEnergy Pennsylvania Electric, Ohio Edison, and Toledo Edison were upgraded to BBB+ from BBB, while subsidiary FirstEnergy Transmission (FET) was upgraded to BBB from

DIRECTION OF CREDIT RATING ACTIONS 2015–2024

U.S. Investor-Owned Electric Utilities

EEI captures upgrades and downgrades at both the parent and subsidiary levels. Includes all occurrences, even if multiple rating actions for a single company.
Source: Fitch Ratings, Moody's, and S&P Global Ratings

BBB-. S&P stated that the sale of a 30% minority interest in FirstEnergy Transmission to Brookfield Infrastructure Partners for $3.5 billion will likely drive an improvement in FirstEnergy's credit metrics.

On May 2, S&P Global Ratings upgraded Southern Company (SO) to A- from BBB+, observing that subsidiary Georgia Power had recently placed nuclear plant Vogtle Unit 4 in service. S&P also raised the ratings of subsidiaries Alabama Power (A from A-), Georgia Power (A from BBB+), Mississippi Power (A- from BBB+), and Southern Power (BBB+ from BBB). The upgrades reflected decreased construction risk given the completion of Vogtle Unit 4, and an expectation that consolidated financial measures will continue to improve after the plant's completion.

On June 7, S&P Global Ratings upgraded Cleco Corporate Holdings to BBB from BBB-. Subsidiary Cleco Power was upgraded to A- from BBB+. On June 4, Cleco announced the completion of the sale of subsidiary Cleco Cajun to affiliates of Atlas Capital Resources for $600 million. Cleco Cajun was Cleco's non-utility generation business. According to S&P, Cleco is now a low-risk, fully regulated utility, warranting a revision of the company's business risk profile to excellent from satisfactory.

On December 9, S&P Global Ratings downgraded Eversource Energy (ES) to BBB+ from A-. Subsidiaries NSTAR Electric, Public Service Company of New Hampshire (PSNH), and Connecticut Light and Power (CL&P) were also downgraded to A- from A. The downgrades were driven by adverse regulatory developments for utilities operating in Connecticut. Recent orders for other Connecticut utilities included base rate decreases, below-average authorized returns on equity (ROE), and significant reductions in proforma rate base.

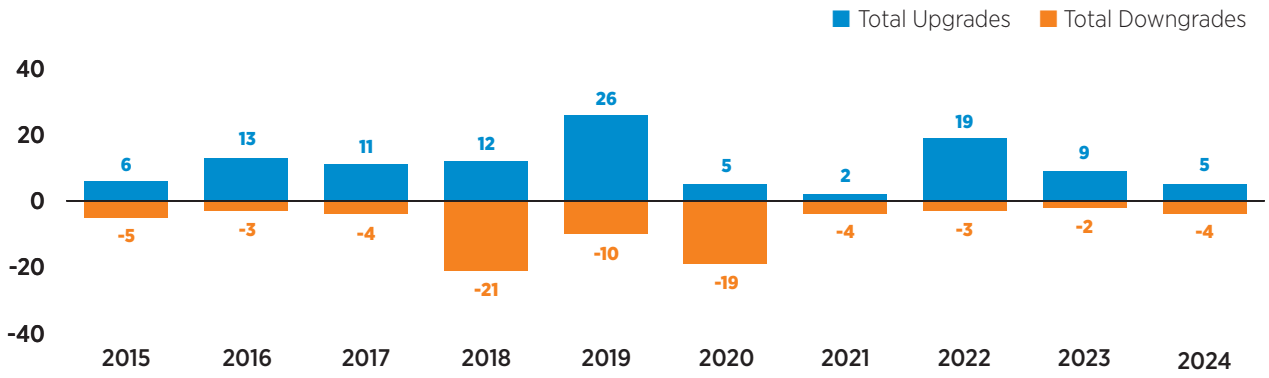
Rating Activity Remained Slow

The 46 rating actions during 2024 (upgrades and downgrades) was the third-lowest total for any year since our dataset's inception in 2000. By comparison, there were 43 actions in 2023, 35 actions in 2022, 52 actions in 2021, and an annual average of 59 over the last decade.

Upgrades cited lower wildfire risk and less financial leverage that improved credit metrics

The industry's 25 upgrades in 2024 versus 21 downgrades produced an upgrade percentage of 54%, up from 37% in 2023. Upgrades outnumbered downgrades in six of the past ten calendar years, with an annual average upgrade percentage of 54%.

Other Upgrades in 2024



In addition to S&P's parent-level actions, the other upgrades in 2024 (that contribute to upgrade totals) cited reduced wildfire risk, less financial leverage, and less nuclear construction risk as key drivers for improved credit metrics.

On February 20, Moody's upgraded PG&E Corporation (PCG) to Ba1 from Ba2 and upgraded its subsidiary Pacific Gas & Electric to Baa2 from Baa3. Moody's stated that the upgrade reflected significant investments to mitigate wildfire risk, an improved relationship with key stakeholders, and an overall stronger financial profile. Access to California's wildfire insurance fund and the supportive provisions contained in California's AB1054 legislation were also important. PG&E has invested $20 billion in wildfire mitigation since its emergence from bankruptcy in 2020.

On March 28, Moody's upgraded FirstEnergy Corporation (FE) to Baa3 from Ba1. The move followed the completion of FirstEnergy's sale of an equity stake in subsidiary FirstEnergy Transmission (FET) for approximately $3.5 billion. A large portion of the sale proceeds will be used to improve FirstEnergy's balance sheet. Moody's expects FirstEnergy's credit metrics to improve, with its cash flow from operations (before changes in working capital) to debt ratio increasing from 9% at the end of 2023 to 14%.

U.S. Investor-Owned Electric Utilities

EEI captures upgrades and downgrades at both the parent and subsidiary levels. Includes all occurrences, even if multiple rating actions for a single company.
Source: S&P Global Ratings

On July 22, S&P Global Ratings upgraded FirstEnergy (FE) subsidiary FirstEnergy Transmission (FET) to A- from BBB. The upgrade was driven by a review of the revised separateness and structural insulating measures between FET and parent FE after the sale of a minority interest to Brookfield Infrastructure Partners. S&P expects that FET will maintain a stand-alone funds from operations to debt ratio consistently above 12%. S&P also noted that FET's operating companies are regulated by the FERC, which is viewed as highly supportive of credit quality.

On September 26, Moody's upgraded Southern Company (SO) to Baa1 from Baa2 and upgraded subsidiary Georgia Power to A3 from Baa1. The upgrades primarily reflected lower business risk following successful operation of both the Vogtle 3 new nuclear unit (July 2023, 1,100 MW) and Vogtle 4 new nuclear unit (April 2024, 1,100 MW). Moody's also expects that Southern and Georgia Power's financial profiles will strengthen now that the nuclear construction project is over and cost recovery has begun.

On October 2, Fitch upgraded FirstEnergy (FE) to BBB from BBB-. Subsidiaries Jersey Central Power & Light (JCPL), Monongahela Power, and Keystone Appalachian Transmission were upgraded to A- from BBB+. Subsidiary FirstEnergy Transmission was upgraded to BBB+ from BBB. Fitch cited the completion of requirements under the company's agreement with the U.S. Department of Justice as a key driver. Fitch also noted relatively balanced outcomes in several Ohio regulatory proceedings as supportive. Fitch stated that FirstEnergy's sale of an incremental 30% ownership interest in FirstEnergy Transmission (FET) to Brookfield earlier in 2024 underscored management's commitment to solid investment-grade credit ratings.

Other Downgrades in 2024

In addition to S&P's parent-level downgrades, the other downgrades in 2024 were linked to challenges associated with three offshore wind developments and credit metric pressures related to higher capital expenditures.

On January 11, Fitch downgraded Eversource (ES) to BBB from BBB+ and downgraded subsidiary NSTAR Electric to A- from A. Fitch cited uncertainty around the sale of Eversource's 50% interest in three offshore wind projects. The wind projects faced challenges related to supply issues, increasing costs, and power price adjustments.

On March 20, Moody's downgraded Pinnacle West (PNW) to Baa2 from Baa1 and downgraded subsidiary Arizona Public Service to Baa1 from A3. Moody's stated that the downgrade of the parent company reflected the downgrade of its key utility subsidiary. Moody's expects the financial profile of Arizona Public Service to be pressured by higher capital expenditures and increased regulatory lag because of a historic test year framework in Arizona.

On March 26, Fitch downgraded Pinnacle West (PNW) to BBB from BBB+. The downgrade reflected Fitch's expectations for high leverage through the 2024-2026 forecast period, partially due to increased capital expenditures focused on new generation and distribution investments. Fitch expects APS to spend approximately $10 billion in total capex during 2024-2028, with total capex approximately 35% higher than the preceding five-year period. The investments are needed to support a growing economy in the APS service territory.

On November 15, Fitch downgraded AEP subsidiary Ohio Power Co. to BBB+ from A-. Fitch stated that the downgrade was driven by pressure on credit metrics from growing capital expenditures and growth in lower-margin commercial customers. Ohio Power is experiencing unprecedented growth in its territory, driven primarily by data centers.

Rating Agency Credit Outlooks

The three major rating agencies held divergent industry credit outlooks as 2025 began. S&P maintained a negative outlook for regulated utilities, which it revised from stable in February 2024. Moody's maintained a stable outlook for regulated utilities. Fitch Ratings published a neutral sector outlook for North American Utilities. The agencies cited rising levels of capital spending, customer bill affordability, and extreme weather activity due to climate change as key themes they are watching. The groups of underlying companies vary slightly across the three rating agency outlooks.

Industry Financial Performance

INCOME STATEMENT

Nationwide electricity demand increased in 2024, but industry revenue decreased, primarily due to lower natural gas prices. The industry's aggregate Energy Operating Revenues fell 0.1% compared to the prior year, even as U.S. electric output rose by 2.6%, with output gains across eight of the nation's nine power market regions. Twenty-one of the 43 companies whose financial results are aggregated reported lower revenue in 2024.

Energy Operating Expenses

Total Energy Operating Expenses fell for a second straight year. This line item decreased by 9.8% as its two constituents each showed large declines. Total Electrical Generation Cost fell 6.2% as the average cost of natural gas for electricity generation was 18% lower year-to-year. Higher output from renewable generation (with zero fuel cost) also constrained aggregate fuel costs. Gas Cost for the industry's natural gas distribution segment declined by 29.7%.

Operating Expenses

Operations and Maintenance (O&M) expense rose 4.7%. O&M spending in recent years has benefitted from productivity gains driven by smart-grid investment, and the industry worked hard to constrain O&M expenses during the pandemic. However, O&M spending is also driven by essential safety and reliability needs. O&M costs rose for 31 of the 42 companies that reported this line item. Depreciation & Amortization (D&A) expenses rose 6.9%, slightly above 2023's 5.8% increase. This increase reflects the industry's ongoing investments in generation, transmission, distribution, reliability, and grid modernization.

Net Income rose $2.3 billion or 4.5% in 2024

Operating Income

Operating Income rose $2.1 billion, or 2.4%, with higher O&M and depreciation expenses offsetting the impact of lower electric generation and gas costs. While most utilities are focused on state-regulated operations, enough variety remains in individual corporate structures and business models to make broad generalizations difficult. In 2024, operating income was flat to lower at ten companies and rose at 33.

Interest Expense

Interest Expense increased by 6.7%, reflecting a moderation in 2024 of the sharp rise in interest rates in 2022 and 2023. Widespread debt issuance to fund the modernization programs seen across the industry also caused interest expense to rise. In a rare display of consistency between aggregate industry figures and individual company reports, interest expense increased for all but four of the industry's 43 constituent companies in 2024.

Net Income

Net Income rose $2.3 billion or 4.5% in 2024. Net income rose for 32 companies and was unchanged or declined at 11.

BALANCE SHEET

The industry's financial condition remained strong in 2024. The multi-year trend toward increased state-regulated operations has driven balance-sheet leverage appropriate for a lower risk profile. Leverage, in the aggregate, increased slightly in 2024, but aggregate figures convey only broad, long-term trends and emphasize large holding companies. Balance sheet structures vary widely across the industry. Leverage rose more than one percentage point at 26 companies. Leverage was reduced by more than one percentage point or was essentially unchanged at the remaining 17.

Total Debt

The industry's consolidated total debt rose in 2024, a consequence of financing a widespread build-out of energy infrastructure. Most companies have managed their balance sheet ratios and cash flows to maintain investment-grade credit ratings. A majority of the industry increased long-term debt in 2024, while aggregate short-term debt declined. Short-term debt decreased at 27 companies, although significant reductions at a few large companies drove much of the change in the total.

Equity Issuance

Common equity issuance (a cash flow item) rose from 2023's amount but remained below its level from 2018 through 2020. Many have sought to fund higher capital expenditures without significant equity dilution, in some cases with proceeds from asset sales. Equity issuance was strong in 2019 and 2020 as companies augmented balance sheets and addressed the impact of tax reform. Equity issuance was also strong in 2018 as the industry took advantage of high price-earnings ratios and supportive capital markets to fund capex and offset debt issuance.

Most EEI companies continued to maintain investment-grade credit ratings

Equity issuance grew in 2024 but remained below 2018–2020 levels

PPE in Service, Net

Property, Plant and Equipment in Service (PPE in Service, Net) rose 7.1% from its year-end 2023 level, slightly exceeding last year's 6.4% increase. This metric grew at all 43 companies in the consolidated data set. Such broad growth shows the size and scope of the industry's build-out of new generation, transmission and distribution infrastructure, reliability-related projects, and other capital investments.

Construction Work In Progress (CWIP), a part of the PPE total, jumped more than 16% from 2023's year-end total. CWIP accounts for capital investment in infrastructure that is still under construction and not yet in service. The growth in CWIP offers another view of the industry's rising capex.

CASH FLOW STATEMENT

The industry's consolidated cash flow statement in 2024 continued to depict an industry investing aggressively in the nation's energy future. The industry was able to access supportive stock and bond markets to finance over $178 billion in capital spending. Dividend payments to stockholders also increased, growing 5.5% to a record $34.0 billion.

Capital expenditures reached a record high for the 13th consecutive year

Dividend payments increased 5.5% to a record $34 billion

Operating Activities

Supported by $54.6 billion in Net Income, Net Cash Provided by Operating Activities increased by $13.9 billion, or 12.0%, to $130.2 billion. Depreciation and Amortization (D&A), a non-cash charge on the income statement, increased by $3.0 billion, or 4.5%, at the consolidated industry level.

Deferred Taxes & Investment Credits increased to $6.8 billion from $3.5 billion in 2023. This metric ranged from $9.3 billion to $16.5 billion annually from 2010 through 2017, which were historically high levels due to elevated capex and the use of bonus depreciation. The Tax Cuts & Jobs Act (TCJA), passed in late 2017, significantly reduced deferred taxes due to the reduction in the corporate income tax rate from 35% to 21% and the elimination of bonus depreciation. Since then, the aggregate industry total has been much lower.

Other Operating Changes in Cash provided $6.2 billion more cash in 2024 than in 2023. The difference mainly traced to accounting at several large holding companies. Change in Working Capital was little changed.

Investing Activities

Net Cash Used in Investing Activities increased by $8.9 billion, or 5.6%. The industry's capital spending—by far the most significant component of this metric—increased 5.5% to $178.2 billion from $168.9 billion in 2023. Industry capex has reached a new record high in each of the past fourteen years. EEI member companies continue to invest in new energy resources and the infrastructure necessary to make the power grid more modernized, more resilient, and more secure for all customers. Investment in generation continues to be driven by the development of renewable energy as well as natural gas generation.

Financing Activities

Net Cash Provided by Financing Activities decreased by $5.8 billion, or 13.5%. The decline resulted primarily from a large paydown in short-term debt. While 27 companies decreased short-term debt in 2024, the consolidated industry totals tend to be shaped by balance sheet management at a handful of large companies. The use of long-term debt, conversely, increased in 2024. Most of the 43 underlying companies tracked by EEI increased their use of long-term debt in 2024.

Dividends Paid

Dividends Paid to Common Shareholders rose 5.5% to $34.0 billion in 2024. Investors that supply equity capital are always attracted to steady and growing dividends. Even during difficult times, such as the 2008/2009 financial crisis and the more recent pandemic, the industry continued its long-running pattern of annual aggregate dividend increases.

Business Strategies

RATE REVIEW

In 2024, there were 81 rate reviews filed across 34 states, and 78 rate reviews decided in 32 states. In comparison, there were 80 rate reviews filed and 91 rate reviews decided in 2023. The average awarded ROE was 9.73 percent, an increase of 15 basis points from 2023, which had an average awarded ROE of 9.58 percent. The average awarded ROE for distribution-only companies was 9.53 percent, compared to 9.84 percent for vertically integrated companies.

Regulatory lag was approximately 8.7 months, essentially unchanged from 2023.

Demand Growth

Demand growth was a major topic for regulators. As more data centers are connected to the grid, state regulators and electric companies are working to accommodate these new large loads. Many regulators are working with electric companies to explore a wide array of frameworks aimed at addressing the potential for stranded costs. Data centers and other large loads are exploring more sophisticated demand-side management tools, while system planners are examining new techniques for load forecasting that account for single customers exploring numerous opportunities to connect across multiple planning areas.

In 2024, electric companies proposed new tariffs that address these growth issues in several states, including California, Georgia, Indiana, Nevada, Ohio, Oregon, and West Virginia. Resource planning and grid modernization were the most common topics in regulatory proceedings, with over 50 open dockets.

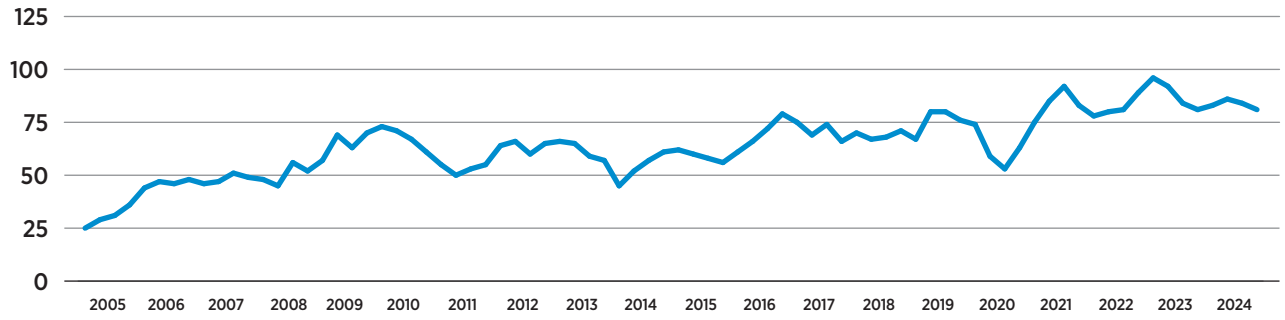
Resilience Plans

As the electric industry has increasingly faced more severe impacts from natural events such as flooding, hurricanes, and wildfires, discussions around resilience

Demand growth was a major topic for regulators

Affordability remains an important consideration

investments have continued. Regulators in several states are exploring strategies to harden the system, including wildfire mitigation plan requirements. In 2024, for example, Texas required regulated electric companies to file resilience plans for the first time, covering plans to mitigate a range of issues.



Cost Considerations for Retail Electricity Rates

Inflation continued to impact the broader economy, with significant attention to rising energy costs. Regulators also examined retail customer affordability in the context of the impending interconnection of data centers and other loads. Commissioners voiced concerns that related infrastructure investments may result in longer-term stranded costs for other customer classes. More specifically, they highlighted the potential for residential customers cross-subsidizing investments.

Efforts continued in 2024 to advance wide-ranging actions that support low-to-moderate-income (LMI) customers. These frameworks included expanding electric company credits or bill discounts, such as income-qualified rate discounts, as in Massachusetts. Other approaches involved stacking programs offered by various states, electric companies, and federal agencies to make them more accessible.

BUSINESS SEGMENTATION

The industry's regulated business segments—Regulated Electric and Natural Gas Distribution—grew their combined assets by $127.5 billion, or 7.0%, in 2024.

Regulated assets were 86.5% of the industry total at year-end 2024, an increase from the 85.3% total at year-end 2023. The Regulated Electric segment's share of total industry assets increased to 73.7% from 72.4% at year-end 2023. A record-high $178.2 billion of capital expenditures in 2024 and generally constructive regulatory relations supported the significant growth in regulated assets.

Total industry revenue was $403.5 billion in 2024, a minor decline versus 2023's $403.9 billion. While U.S. electric output rose by 2.6%, the effect on total revenue was offset by a significant decline in natural gas prices.

2024 Revenue by Segment

Regulated Electric revenue increased by $10.6 billion, or 3.5%, to $316.4 billion in 2024. The segment's share of total industry revenue rose to 76.6% from 73.9% in 2023, remaining well above its level at the start of the industry's two-decade-long migration back to a regulated focus (Regulated Electric's share of total revenue was only 52% in 2005).

Natural Gas Distribution revenue fell $5.3 billion, or 8.8%, to $54.6 billion. Total regulated revenue, the sum of the Regulated Electric and Natural Gas Distribution segments, increased by $5.3 billion, or 1.4%, to $371.0 billion in 2024. Regulated revenue accounted for 89.8% of total industry revenue in 2024 compared to 88.4% in 2023, in each case well above 2005's 65.3% share.

Eliminations and reconciling items are added back to arrive at the denominator for the segment percentage calculations shown in the Revenue Breakdown 2023-2024 and Asset Breakdown 2023-2024 charts.

The industry's regulated business segments grew their combined assets by 7.0%

Regulated Electric

Regulated Electric segment operations include the generation, transmission and distribution of electricity under state regulation for residential, commercial and industrial customers. Regulated Electric assets increased by $113.0 billion, or 7.3%, in 2024, representing the largest asset growth in dollar terms of all business segments. The robust growth in assets reflects the size of the industry's build-out of new generation, new reliability-related infrastructure, and other capital projects in recent years.

Competitive Energy

Competitive Energy assets increased by $6.8 billion, or 4.4%, to $160.2 billion at year-end 2024 from $153.4 billion at year-end 2023. Competitive Energy covers the generation and/or sale of electricity in competitive markets, including both wholesale and retail transactions. Wholesale buyers are typically regional power pools, large industrial customers, and electric utilities looking to supplement generation capacity. Competitive Energy also includes the trading and marketing of natural gas.

Natural Gas

Natural Gas Distribution assets increased by $14.5 billion, or 5.3%, to $288.4 billion at year-end 2024 from $274.0 billion at year-end 2023. Natural Gas Distribution includes the delivery of natural gas to homes, businesses and industrial customers throughout the United States.

Natural Gas Pipeline assets increased by $247 million, or 0.7%, to $35.4 billion at year-end 2024

from $35.2 billion at year-end 2023. Four of the five companies that report this segment showed moderate asset growth. The Natural Gas Pipeline business concentrates on the transmission and storage of natural gas for local distribution companies, marketers and traders, electric power generators and natural gas producers.

Regulated assets were 87% of the industry total in 2024, up from 65% in 2005

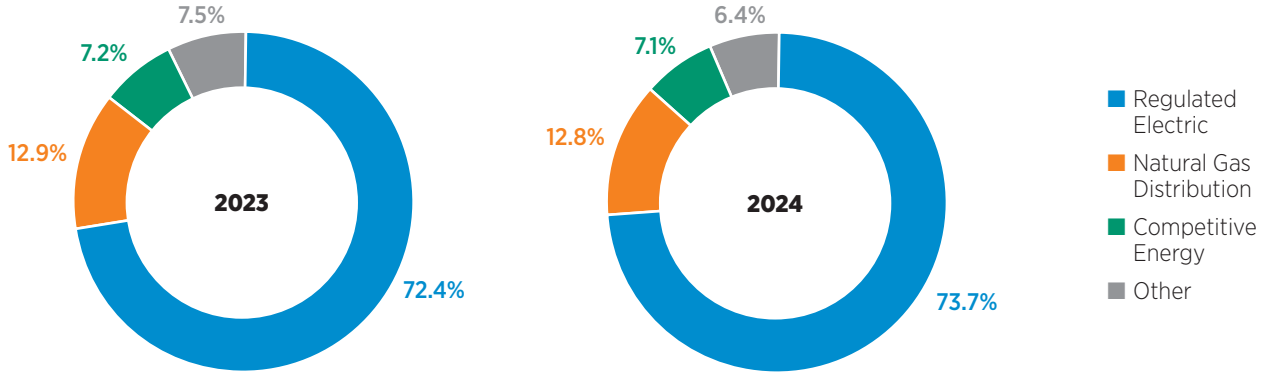
Strategic Moves Completed in 2024

Several companies completed transactions in 2024 that may affect their business segmentation reporting.

In March 2024, FirstEnergy completed the sale of an additional 30% ownership interest in its transmission business, FirstEnergy Transmission (FET), to Brookfield Super-Core Infrastructure Partners (BSIP) for $3.5 billion. This transaction followed Brookfield's previous purchase of a 19.9% ownership interest in FET for $2.4 billion in 2022. FirstEnergy stated that the proceeds from Brookfield's follow-on investment in FET will be used to further strengthen FirstEnergy's balance sheet and support its five-year, $26 billion grid investment program.

In June 2024, Cleco completed the sale of its nonutility generation business, Cleco Cajun LLC, to private investor group Atlas Capital Resources for approximately $600 million. Cleco Cajun owns 14 generating units with a rated capacity of 3,379 MW and wholesale contracts serving nine Louisiana-based electric cooperatives. Cleco's regulated electric utility, Cleco Power, serves approximately 295,000 customers in 24 of Louisiana's parishes.

With two separate transactions in 2024, Eversource divested all its ownership interests in the offshore wind business to become what it called a "pure-play regulated pipes and wires utility". In July 2024, Eversource completed the sale of its 50 percent ownership share in the 924 MW Sunrise Wind project to Orsted. Gross proceeds of the transaction were $230 million. In September 2024, Eversource Energy completed the sale of its 50 percent interest in the 132 MW South Fork Wind project and the 704 MW Revolution Wind project to Global Infrastructure Partners (GIP). Adjusted gross proceeds from this transaction were $745 million. Eversource planned to use the proceeds to strengthen its balance sheet and improve credit metrics.



In September 2024, Dominion Energy completed the sale of three natural gas local distribution companies to Canadian energy company Enbridge in a transaction valued at $14 billion. The three natural gas distribution companies—East Ohio Gas, Public Service Company of North Carolina, and Questar Gas—serve three million customers in Ohio, North Carolina, Utah, Wyoming and Idaho.

In November 2024, MDU Resources Group completed the spinoff of its construction services subsidiary, Everus Construction Group, into an independent public company. MDU spun off its construction materials subsidiary, Knife River, into a stand-alone, publicly traded company in 2023. These two spinoffs completed the MDU Resources transition to a pure-play regulated energy delivery business. MDU's utility group provides electric power and natural gas to 1.2 million customers across eight states.

In late December 2024, Hawaiian Electric Industries closed a deal to sell a 90.1% stake in its American Savings Bank (ASB) unit, supporting its effort to raise $1.99 billion for a Maui wildfire settlement. Investors purchased 90.1% of American Savings Bank common stock for a cash consideration of $405 million. HEI retained a 9.9% stake in the bank. With the completion of the sale, HEI plans to operate with a streamlined focus on its utility, Hawaiian Electric. Hawaiian Electric serves 95 percent of Hawaii's 1.4 million residents on the islands of Oahu, Maui, Hawaii, Lanai and Molokai.

Strategic Announcements in 2024

In addition to 2024's completed transactions, several announcements were made that, if completed, will impact business segment reporting in 2025 and beyond.

In February 2024, CenterPoint Energy announced the sale of its Louisiana and Mississippi natural gas LDC businesses to Bernhard Capital Partners for $1.2 billion. The businesses serve approximately 380,000 customers. CenterPoint said the transaction would allow it to redeploy approximately $1 billion of future capital expenditures into other jurisdictions.

In September 2024, CDPQ (Caisse de dépôt et placement du Québec), the second-largest pension fund in Canada, agreed to acquire a 30% stake in The Dayton Power and Light Company (AES Ohio) from The AES Corporation for approximately $546 million. As part of the agreement, CDPQ also committed to funding its pro rata share of AES Ohio's capital requirements to support growth plans in its service territory. AES has been in a partnership with CDPQ at AES Indiana since 2014, and this deal will create a similar ownership structure. The sale is expected to close in the first half of 2025.

2024 Year-End List of Companies

Early each calendar year, EEI updates our list of investor-owned electric utility holding companies organized by business category. The list is based on the prior year-end business segmentation data presented in 10Ks. Our two categories are Regulated (80% or more of holding company assets are regulated) and Mostly Regulated (less than 80% of holding company assets are regulated).

We use assets rather than revenue for determining category membership because we believe assets provide a clearer picture of strategic trends; fluctuating commodity prices for natural gas and power can impact revenue so greatly that a company's strategic approach to business segmentation may be distorted by reliance on revenue data alone. Comparing the list of companies from year to year reveals company migrations between categories and shows the general trend in industry business models.

Two companies changed categories in 2024. Hawaiian Electric Industries, Inc. moved to the Regulated category after the sale of a 90.1% stake in its American Savings Bank (ASB) unit. MDU Resources Group, Inc. also moved to the Regulated category after the company completed the spinoff of its construction services subsidiary, Everus Construction Group, into an independent public company.

The total number of parent companies in the EEI universe fell from 44 at year-end 2023 to 43 at year-end 2024. In December 2024, Iberdrola completed the acquisition of the remaining 18% of U.S. utility Avangrid that it did not already own, and Avangrid became a wholly-owned member of the Iberdrola Group. At year-end 2024, the EEI universe included 39 Regulated and 4 Mostly Regulated utility holding companies (see List of Companies by Category.

COMPANIES LISTED BY CATEGORY (AS OF DECEMBER 31, 2024)

U.S. Investor-Owned Electric Utilities

Regulated (39 of 43)	Mostly Regulated (4 of 43)

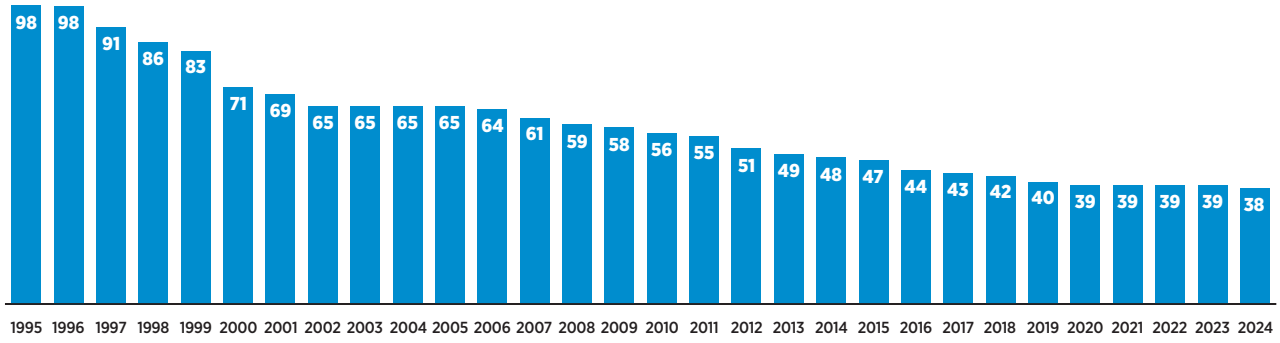
MERGERS AND ACQUISITIONS

Utility M&A activity involving whole operating companies with regulated service territories remained slow in 2024 for an eighth year. The three announced deals in 2024 were: 1) Iberdrola's move to boost its ownership stake in Avangrid from 82% to 100%, turning Avangrid into a wholly-owned subsidiary; 2) the proposed purchase of ALLETE by the Canada Pension Plan Investment Board and Global Infrastructure Partners, and 3) the sale of CenterPoint Energy's Louisiana and Mississippi natural gas LDC businesses to Bernhard Capital Partners, an infrastructure-focused private equity management firm.

Only one of the two transactions still pending at year-end 2023 was completed in 2024: Dominion's sale of three natural gas distribution utilities to Enbridge. The other pending 2023 deal, Entergy's sale of its natural gas distribution business to Bernhard Capital Partners, remained in progress at year-end.

The Avangrid/Iberdrola transaction moved quickly from a March 7 announcement to completion on December 23, 2024. As a result, the number of U.S. investor-owned utilities in the EEI Index declined to 38 from 39, a level that had held steady since year-end 2020. By contrast, consolidation from the mid-1990s through 2019 reduced the number of EEI Index companies by more than half, from 98 to 40. As 2024 ended, the buyout of ALLETE was expected to close in 2025. If it does, that will reduce the number of EEI Index companies to 37.

The forces that have sidelined M&A as a strategic imperative remained relevant in 2024. Most electric utilities are focused on investment programs that seek internal growth through the expansion of regulated electric rate base. Economic development in many service territories is driving load growth, with the emergence of data centers as an additional tailwind. Earnings calls mainly focused on the planning and execution needed to take advantage of these trends, as well as the traditional review of regulatory initiatives. Wall Street research likewise focused on quantifying load growth prospects and tracking regulatory support for rising capex. At least for now, most utilities don't see M&A as a priority, particularly given the well-known challenges of steering deals through a complex regulatory approval process.



The number of utilities in the EEI Index declined to 38

Completed 2023 Transactions

In September 2024, Dominion Energy and Enbridge completed the sale of three Dominion natural gas companies to Enbridge. Virginia-based Dominion Energy agreed to sell its three natural gas local distribution companies (LDCs) to Canadian energy company Enbridge in September 2023 for $9.4 billion cash plus debt in a transaction valued at $14 billion. The three LDCs, East Ohio Gas, Public Service Company of North Carolina, and Questar Gas, serve three million customers in Ohio, North Carolina, Utah, Wyoming, and Idaho. Dominion noted the sale resulted from its business review initiative, announced in November 2022, which sought to position the utility to create maximum long-term value for shareholders. Dominion said sale proceeds will be used to reduce debt and strengthen its credit position. Dominion is focusing its growth strategy on state-regulated electric infrastructure, noting that data center expansion and general economic activity in its service territories are driving the most significant electric demand growth in the company's history.

Iberdrola Acquires 100% of Avangrid

In March 2024, Spanish renewables giant Iberdrola said it would seek to buy the remaining 18% of U.S. utility Avangrid that it did not already own in a deal valued at approximately $2.6 billion. The move followed quickly on the heels of Avangrid's decision at year-end 2023 to end its three-year-long effort to buy New Mexico-based PNM Resources. The PNM Resources (now TXNM Energy) acquisition, announced in October 2020, lacked support from the New Mexico Public Regulation Commission.

Iberdrola's initial 82% stake in Avangrid dates to 2015, when Iberdrola USA and Connecticut utility UIL Holdings combined to form the U.S. utility renamed Avangrid. Iberdrola said the original acquisition reflected its ongoing interest in the U.S. market and preference for friendly M&A transactions. In the March 2024 announcement, Iberdrola said it wants to increase its exposure to the regulated electric distribution business in the United States.

In May 2024, Iberdrola reached a final agreement to buy the remaining Avangrid stake at a revised $35.75 per share, an approximate 15% premium to Avangrid's price before the initial announcement. The deal required approval from the Federal Energy Regulatory Commission (FERC), Maine regulators, and New York state regulators. The utilities announced the deal was completed on December 23, 2024.

Connecticut-based Avangrid operates in 24 states with approximately $47 billion in assets. Through its Avangrid Networks business, Avangrid owns and operates eight electric and natural gas utilities, serving 3.3 million customers in New York and New England. Through its Avangrid Renewables business, Avangrid owns a portfolio of renewable energy generation facilities in more than 20 states.

Iberdrola acquired remaining 18% stake in Avangrid for $2.6 billion

ALLETE agreed to a $6.2 billion sale to a private partnership

Private Investor Group Bids for ALLETE

In May 2024, Minnesota-based utility ALLETE agreed to be bought by a partnership led by the Canada Pension Plan Investment Board (CPP) and infrastructure investor Global Infrastructure Partners (GIP). The $67 per share cash offer represented a 20% premium to ALLETE's stock price before media reports said the company was exploring a sale. The transaction reflects an enterprise value of $6.2 billion, including net debt.

ALLETE said transitioning to a private company with strong partners will ensure it has access to the capital needed for an ambitious clean energy-focused investment plan. With a market capitalization of approximately $4 billion at year-end 2024, the company was among the smallest by that measure in the EEI Index. The buyers made several commitments to continuity, including workforce retention, maintenance of current headquarters and leadership, community support, retention of

clean energy goals, and no adverse impact on rates. The transaction requires approval from Minnesota and Wisconsin state utility regulators and FERC. The parties hoped to gain approval from the two state commissions by mid-year 2025, and the FERC approved the deal in December 2024.

ALLETE's largest business unit, Minnesota Power, serves 150,000 customers. Other businesses include ALLETE Clean Energy; BNI Energy in North Dakota; Superior Water, Light and Power in Superior, Wisconsin; and New Energy Equity, a leading developer of distributed solar energy projects.

CPP manages global investments for the Canada Pension Plan in public and private equities, real estate, infrastructure and fixed income. GIP is a leading infrastructure investor that specializes in energy, transport, digital infrastructure, and water and waste management. GIP notes decarbonization is central to its investment thesis.

CenterPoint to Sell Louisiana and Mississippi Gas Businesses

In February 2024, CenterPoint Energy announced the sale of its Louisiana and Mississippi natural gas LDC businesses to Bernhard Capital Partners for $1.2 billion. The sale includes approximately 12,000 miles of main pipeline in Louisiana and Mississippi, serving approximately 380,000 customers. CenterPoint explained that the transaction would allow the company to redeploy approximately $1 billion of future capital expenditures into other jurisdictions. CenterPoint also stated that the natural gas business remains core to the company, and they are committed to the regulated natural gas utilities in Texas, Indiana, Minnesota, and Ohio, where they have significant footprints. CenterPoint's Louisiana and Mississippi gas LDCs represented less than 4% of the company's overall rate base.

Pending 2023 Transactions

One of 2023's announced deals remained pending at year-end 2024. In October 2023, Entergy agreed to sell its natural gas distribution business to Bernhard Capital Partners, an infrastructure-focused private equity firm, for approximately $484 million in cash. The Entergy natural gas business serves about 200,000 customers in the Baton Rouge and New Orleans regions. Entergy said net proceeds from the transaction, if approved, will be used to strengthen Entergy's credit through the repayment of debt and to support investment needs in its growing electric utility business.

Media coverage in late 2024 suggested the deal's progress was slowed by local political concerns. Reports also noted that the proposed sale would boost local jobs and enable Entergy to invest more in its electric grid. In December 2024, the New Orleans City Council found the proposed transaction in the public interest and approved it, subject to certain conditions. The closing of the transaction is expected in July 2025.

CONSTRUCTION

The industry brought 52,038 MW of new generating capacity online in 2024, 11% more than the 46,763 MW in 2023 and 48% more than the 35,096 MW in 2022.

The increase from 2023 to 2024 was primarily due to additional solar and storage capacity. Solar capacity installations increased 63% to 32,486 MW in 2024, the fastest annual growth since 2020. New natural gas capacity brought online decreased 79% to 2,428 MW in 2024, marking natural gas's lowest increase since 2020. Wind capacity additions also decreased, from 6,343 MW in 2023 to 4,132 MW in 2024, indicating a maturing technology after decades of rapid growth. Energy storage additions, such as battery energy storage systems (BESS), increased 54% to 11,534 MW in 2024.

Overall, new plants comprised 84% of the added generation capacity in 2024, up from 65% in 2023. Plant expansions and rerates accounted for the remaining 16%, a decrease from 35% in 2023.

Renewables

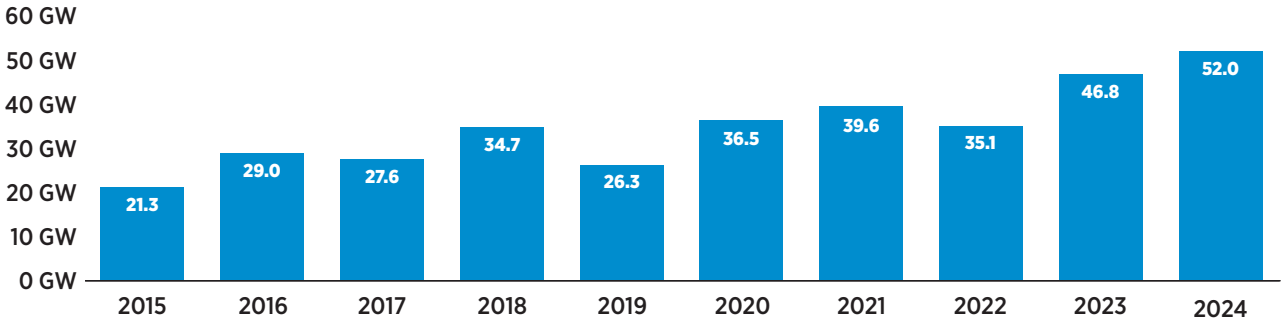
Renewables continued to lead generation capacity additions, accounting for 90% of total new capacity in 2024 versus 67% in 2023. Solar led new capacity additions in 2024, accounting for 32,486 MW or 80% of the total across all fuels. Wind was second with 4,132 MW added, or 10% of the total. Wind and solar have powered more than half of the new generation added to the grid in each of the last five years. Investor-owned utilities that brought the most new renewable capacity online in 2024 were NextEra Energy (810 MW of wind, 4,896 MW of solar), AES (601 MW of wind, 1,001 MW of solar), Xcel Energy (710 MW of solar), Alliant Energy (409 MW of solar), Duke Energy (316 MW of solar), DTE Energy (296 MW of solar), Berkshire Hathaway (150 MW of solar, 135 MW of wind), Avangrid (239 MW of solar), and NiSource (200 MW of solar).

The industry brought 52 GW of new generating capacity online in 2024

Natural Gas

Natural gas accounted for 6% of the new generation capacity added in 2024. The 2,428 MW total was 79% lower than 11,348 MW in 2023 due to the growing backlog of gas turbine orders. New plants represented 37% of the year's total, expansions accounted for 60% and the remaining 3% were rerates. Duke Energy led natural gas additions with 536 MW, followed by Berkshire Hathaway with 315 MW. NorthWestern Energy was third with 207 MW.

Energy Storage



Energy storage, which includes technologies such as battery storage, pumped hydro, thermal, compressed air, and flywheel, continues to be a fast-growing area for the industry. A total of 11,534 MW of energy storage was brought online in 2024, a 54% increase from 2023. Investor-owned utilities that brought the most energy storage capacity online included NextEra Energy (510 MW), AES Corp (485 MW), Edison International (319 MW), Berkshire Hathaway (100 MW), and National Grid (99 MW). At year-end 2024, utilities owned or operated 53,094 MW of energy storage capacity, or about 92% of all energy storage in the United States.

Battery storage is the fastest-growing storage technology in terms of capacity, with total capacity up more than fifteen times from 2,116 MW in 2019 to 33,670 MW in 2024. Between 2019 and 2024, battery energy storage grew from 8% of total energy storage capacity to 58%. Pumped hydro accounted for 39% of energy storage capacity owned by both utilities and non-utilities, at 22,202 MW in 2024.

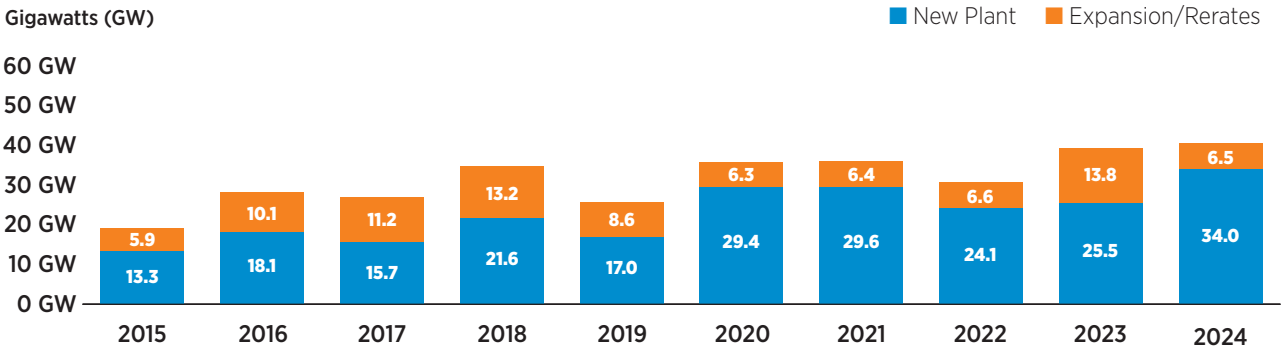
Projected Capacity Additions

New capacity expected to come online from 2025 through 2029, including energy storage, totaled 578,754 MW. This includes new capacity both currently under construction as well as proposed.

Renewable capacity accounted for most of the total, with solar representing 39,565 MW under construction and 215,829 proposed. Wind capacity accounted for 19,457 MW under construction and 63,296 MW proposed. Energy storage expected to come online from 2025 through 2029, both under construction and proposed, totaled 174,226 MW, a 34% increase over the comparable projection one year ago for the 2024 through 2028 period.



Retirements

As of early 2025, 112,617 MW of capacity was scheduled to be retired from 2025 through 2029. Coal continued to lead scheduled retirements, accounting for 50% of the total. Natural gas ranked second and fuel oil third in terms of projected retirements over the five-year period, at 33% and 15% of the total, respectively. Wind and solar retirements remain minimal, together accounting for only 0.2% of total projected retirements. Nuclear retirements peaked in 2020, at 2,031 MW, with the shutdowns of the Duane Arnold Energy Center in Iowa (660 MW) and Indian Point Unit 2 in New York (1,371 MW), and then fell to 1,074 MW in 2021 and 823 MW in 2022. There were no nuclear retirements in 2024 nor are any projected through 2028; Diablo Canyon and Nine Mile Point Unit 1, totaling 1,801 MW nuclear capacity, are expected to retire in 2029 unless license extensions are pursued.

Over 90 GW of new capacity is currently under construction

FUEL SOURCES

Electric power industry net generation totaled 4,388,669 gigawatt hours (GWh) in 2024, an increase of 3.1% compared to 2023.

Nationwide retail electricity sales increased 2.3%, showing gains across 45 states and the District of Columbia, after 2023's decline of 1.7%.

Electricity Sales Growth

Total electricity sales to residential customers increased 2.7% after falling 3.6% in 2023. Nevada (+8.4%), Kentucky (+6.3%), and Tennessee (+5.9%) were the states with the highest percentage growth in 2024. California experienced the highest growth in absolute terms, at 3,303 GWh, followed by North Carolina at 2,880 GWh. Only 13 states experienced a decrease in residential electricity sales in 2024. Oregon (-2.8%), North Dakota (-2.7%), and Nebraska (2.7%) had the largest percentage declines.

Total electricity sales to commercial customers increased 1.8% in 2024 after 2023's decrease of 1.1%. The rise in commercial sales can be attributed to the development of large-scale computing facilities including data centers. Almost every state experienced growth in commercial sales in 2024, with Oklahoma (+10.8%), Nebraska (+10.0%), Ohio (+9.2%), and Arizona (+8.8%) experiencing the largest percentage gains.

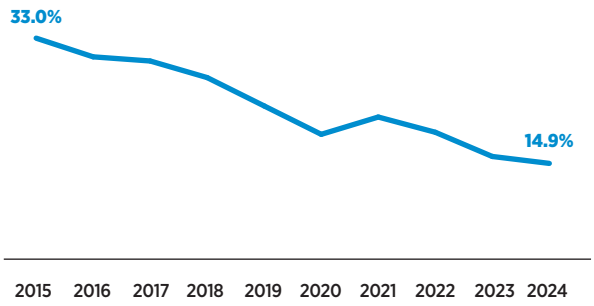
Total electricity sales to industrial customers increased 2.2% compared to 2023, showing year-to-year gains in 36 states and the District of Columbia. The nationwide gain was substantially higher than 2023's 0.4% and 2022's 0.7%, reaffirming the resumption and expansion of industrial activities. New Mexico (+14.5%) and North Dakota (+8.7%) had the highest percentage increases, while Texas showed the highest increase in absolute terms, at 6,894 GWh. The rise in these three states was partially driven by an expansion of oil and gas production, which is an energy-intensive process.

Electric power industry net generation increased 3.1%

Nationwide retail electricity sales increased 2.3%

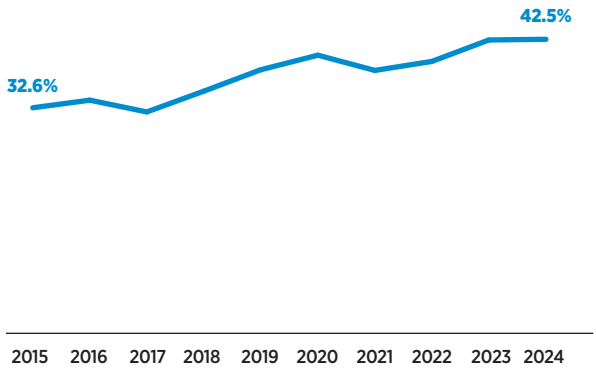
Coal

Generation from coal-fired plants decreased in 2024, with coal accounting for 15% of total electricity generation. The 652,760 GWh of generation with coal placed third, behind natural gas and nuclear, among individual fuel sources. The coal fleet's capacity factor increased slightly, from 42.4% in 2023 to 42.6% in 2024.



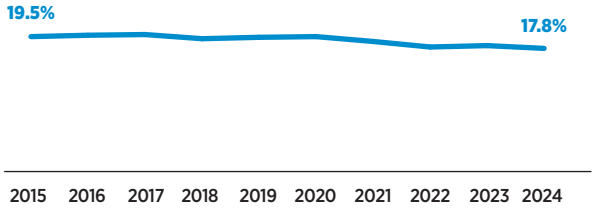
The cost of coal generation, combined with operations and maintenance costs, decreased 3.3% from $42.06/MWh in 2023 to $40.67/MWh in 2024. This was the first time in four years that the total cost of coal-powered electricity generation decreased. The average price of coal for electricity generation decreased by 1.2%, from $2.51 per MMBtu in 2023 to $2.48 per MMBtu in 2024. At the same time, average operations and maintenance expenses for coal decreased by 6.4%, from $11.60/MWh in 2023 to $10.86/MWh in 2024.

FUEL SOURCES FOR NET ELECTRIC GENERATION 2015–2024

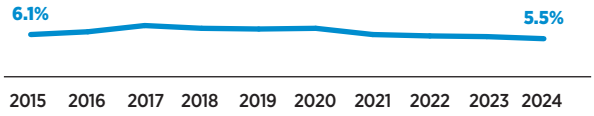


U.S. Electric Utility And Non-Utility

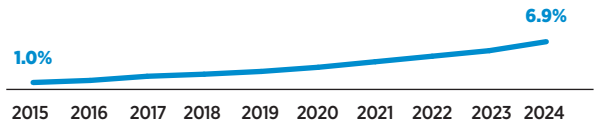
Percent of Total U.S. Electric Generation



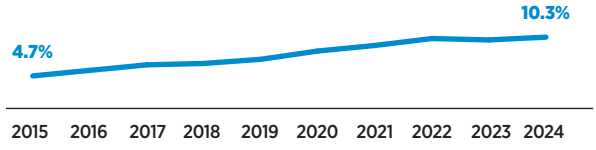
COAL



NATURAL GAS



NUCLEAR



HYDRO

SOLAR

WIND

U.S. Electric Utility: Owns and/or operates facilities for the generation, transmission, distribution, or sale of electric energy primarily for use by the public. This includes investor-owned utilities, public power, and cooperatives. Non-Utility Power Producer: Non-utility power producers include qualifying cogenerators, qualifying small power producers, and other non-utility generators (including independent power producers) without a designated franchised service area.
Source: Energy Information Administration (EIA), U.S. Department of Energy, EEI Financial Analysis Department, April 2025

Natural Gas

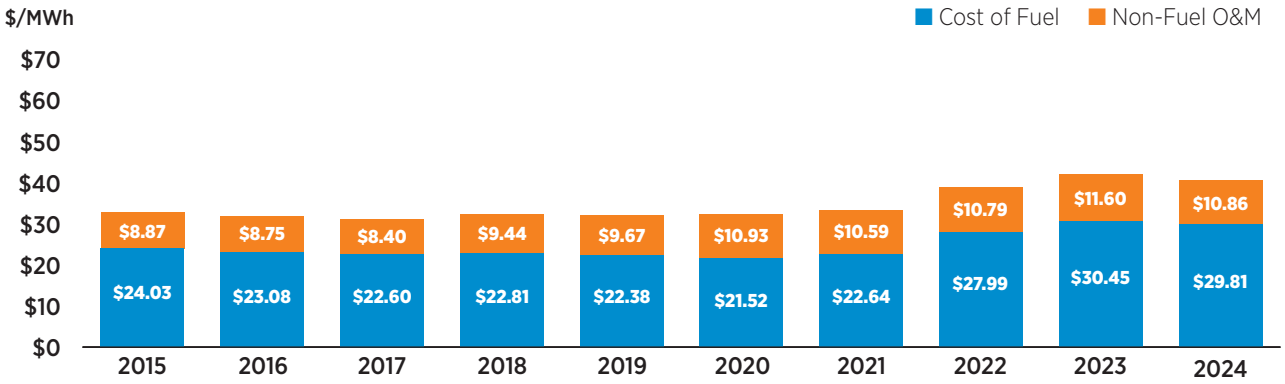
Natural gas accounted for 42.5% of total generation from utility-scale facilities, more than any other fuel type. Its share increased 0.1% to another record high. The average cost of natural gas for electricity generation decreased 18.2% from $3.36/MMBtu in 2023 to $2.75/MMBtu in 2024. As a result, the average cost to produce electricity from natural gas declined by 25% in 2024 versus 2023 and was 38% lower than the average cost to produce electricity from coal.

Renewables

The industry continues to add record amounts of renewable capacity. As a result, electric generation from carbon-free sources (including nuclear) increased to 1,843,237 MWh in 2024, representing 42% of the electric power industry's total generation. Generation from all renewable sources was 1,061,258 MWh, or 24% of the total, in 2024 compared with 968,646 MWh, or 23%, in 2023.

Generation from wind power increased 8%, from 421,141 MWh in 2023 to 453,454 MWh in 2024 and accounted for 10% of total electricity generation. Solar generation increased 27%, from 238,936 MWh in 2023 to 303,168 MWh in 2024, reaching 7% of total electricity generation. Conventional hydroelectric generation declined to 242,226 MWh, a 1% decrease from 2023's 245,002 MWh. It accounted for 5.5% of electricity generation in 2024, the lowest it has been in recent years.

Natural gas accounted for 43% of total generation, more than any other fuel type



Generation from carbon-free sources (including nuclear) increased to 42% share

Nuclear

Nuclear generation increased 0.9%, from 774,873 MWh in 2023 to 781,979 MWh in 2024. Its share of total generation decreased slightly, to 17.8% from 18.2% in 2023, due to increases in generation from natural gas and renewables. Nuclear power plants had an average capacity factor of 92.3% in 2024, compared to average capacity factors of 42.6% for coal and 39.2% for natural gas. Nuclear fuel costs increased 2%, from $6.15/MWh in 2023 to $6.27/MWh in 2024. However, non-fuel operations and maintenance costs decreased 5.9%, from $15.55/MWh in 2023 to $14.64/MWh in 2024.

Tax, Finance, & Accounting

EEI represents investor-owned electric companies on industry tax, finance, and accounting issues, promoting sound business practices and regulatory policies that ensure electric companies are well-positioned to deliver the safe, reliable, affordable, and resilient energy that customers need and expect.

The Tax, Finance & Accounting team provides leadership for advocating industry policies, produces technical research, and enhances the capabilities of individual members through education and information sharing.

Under the direction of the Finance and the Accounting Executive Advisory Committees, EEI staff work with issue area committees. These committees give member company personnel a forum to exchange information and an opportunity to comment on legislative, accounting, and regulatory proposals.

ACCOUNTING MEETINGS AND TRAINING

Accounting Leadership Conference

This annual meeting, held jointly with the Chief Audit Executives and their counterparts from AGA, covers accounting, finance, business, and management issues for the Chief Accounting Officers and accounting leadership of EEI member companies. In 2024, the EEI Accounting Standards Committee and AGA Accounting Principles Committee joined this conference. Contact Jennifer Porter (jporter@eei.org) for information.

Chief Audit Executives Conference

This annual conference provides a forum for EEI and AGA Chief Audit Executives to discuss issues and challenges and exchange ideas on utility-specific internal auditing topics. The conference is open to members of the Internal Auditing Committee and other employees of EEI/AGA member companies designated by the CAE. Contact Dave Dougher (ddougher@eei.org) for information.

Spring Accounting Conference

Hosted by the EEI Accounting, Reporting, & Automation Committee, the Property Accounting & Valuation Committee, the Budgeting & Financial Forecasting Committee and the AGA Corporate Accounting and Property Accounting Committees, this conference provides a forum for members to discuss current issues. The meeting is open to members of the Committees and other employees of EEI/AGA companies. Contact Dave Dougher (ddougher@eei.org) for information.

Intro to Public Utility Accounting

This 4-day program, offered jointly with AGA, concentrates on the fundamentals of public utility accounting. It focuses on providing basic knowledge and a forum for understanding the elements of the utility business. It is intended primarily for recently hired electric and gas utility staff in the areas of accounting, auditing, and finance. Contact Dave Dougher (ddougher@eei.org) for information.

Advanced Public Utility Accounting

This intensive, 4-day course, jointly sponsored with AGA, focuses on complex and specific advanced accounting and industry topics. It addresses current accounting issues including those related to deregulation and competition, as they affect EEI member companies. Contact Dave Dougher (ddougher@eei.org) for information.

Utility Internal Auditor Training

This program provides staff auditors, managers, and directors with the fundamentals of public utility auditing including advanced internal auditing topics and is presented jointly by EEI and AGA. Contact Jennifer Porter (jporter@eei.org) for information.

Standard Setter Liaison Meetings

Representatives of the Accounting Executive Advisory Committee and AGA Accounting Leadership Council, EEI Staff, and the Utility Industry Accounting Fellows meet each year with representatives of the primary standard-setters: FASB Board and staff (Norwalk, CT); FERC Chief Accountant and staff (Washington, DC); SEC Chief Accountant and staff (Washington, DC).

FERC Accounting and Reporting

This virtual training course is offered by EEI and AGA and presented by Deloitte. The course is designed to provide a foundation for FERC accounting and reporting. The course also provides an understanding of the difference between GAAP and FERC accounting and reporting requirements, FERC formula rates, AFUDC, and other FERC accounting matters. Contact Dave Dougher (ddougher@eei.org) for information.

Additional Training Opportunities

EEI provides additional training opportunities as appropriate, such as Accounting for Energy Derivatives and FERC Accounting. Contact Dave Dougher (ddougher@eei.org) for information.

TAX MEETINGS AND TRAINING

Taxation Committee Meeting

This 3-day meeting is held every June and November, providing an opportunity for member company tax personnel to discuss technical information on utility tax issues. In addition to information exchange, members are briefed on current developments concerning major tax issues through presentations by committee members, outside tax specialists, and EEI staff. Contact Mark Agnew (magnew@eei.org) for information.

Tax School Training

Hosted by the EEI Taxation Committee, the Tax School training program is held every year as a virtual meeting over 2–3 days. The program is designed for tax managers and tax staff with two-plus years of tax experience or for financial accounting supervisors with tax responsibilities. The school is taught by a faculty of outstanding speakers from the accounting and legal professions. The Tax School will rotate in alternate years between an intermediate level focus and a beginner level focus. The 2025 EEI Tax School will be held in September and have a beginner level focus. Contact Mark Agnew (magnew@eei.org) for information.

FINANCE MEETINGS

Financial Conference

The 3-day EEI Financial Conference is the premier industry gathering of electric company c-suite officers, investors, and the financial community. This annual conference provides a unique opportunity for delegates to network and discuss issues impacting electric companies, investors, customers, and key stakeholders. The meeting features general session presentations, breakout company visit rooms, and entertaining receptions. Contact Jacob Moshel (jmoshel@eei.org) for information.

Chief Financial Officers Forum

This forum is held in the fall in conjunction with the EEI Financial Conference. The forum provides an opportunity for chief financial officers to discuss critical issues and challenges impacting the financial health of the industry. The forum is open to member company chief financial officers only. Contact Jacob Moshel (jmoshel@eei.org) for information.

Investor Relations Meeting

This 1-day meeting is held in the spring. Executives gain insight on current and evolving industry issues, analysts' perspectives on the industry and have an opportunity to identify and share IR best practice concepts within and outside the electric utility industry. Contact Jacob Moshel (jmoshel@eei.org) for information.

Treasury Group Meetings

These half-day meetings are held in the spring and the fall. Discussion is focused on pension funding, capital markets and economic and regulatory impacts on debt and equity issuances. Members are provided an opportunity to share best practices beneficial to the industry. Contact Jacob Moshel (jmoshel@eei.org) for information.

PUBLICATIONS

EEI Financial Review

The EEI Financial Review is an annual report detailing the financial performance of investor-owned electric companies, including stock performance, dividends, credit ratings, and rate review activity. The report also includes additional analysis related to mergers & acquisitions, business segmentation, construction, and fuel use.

EEI Quarterly Financial Updates

The EEI Quarterly Financial Updates are a series of financial reports on the investor-owned segment of the electric utility industry. These reports focus on quarterly stock performance, dividends, credit ratings, and rate review activity.

EEI Index

The EEI index, which measures total shareholder return and provides company rankings for year to date and trailing one-year periods, is widely used in company proxy statements and for benchmarking.

Accounting News Flash

The Accounting News Flash provides information about the impact of evolving accounting issues. This update is prepared jointly with AGA by the Utility Industry Accounting Fellows in coordination with our accounting staff to keep members informed on proposed and new requirements related to key accounting standards.

Deloitte/EEI/AGA FERC Findings

The report summarizes FERC audit findings for the period 2015–2024. The report compiles the audit findings by topic to enable research related to applying the requirements of the FERC Uniform System of Accounts.

SCHEDULE OF UPCOMING MEETINGS (2025)

Accounting Meetings/Training

June 22–25, 2025
AGA/EEI Accounting Leadership Conference
Omni LaCosta Resort & Spa
Carlsbad, CA

June 22–25, 2025

The **Edison Electric Institute** (EEI) is the association that represents all U.S. investor-owned electric companies. Our members provide safe, reliable electricity for nearly 250 million Americans, and operate in all 50 states and the District of Columbia. As a whole, the electric power industry supports more than 7 million jobs in communities across the United States. In addition to our U.S. members, EEI has more than 70 international electric companies as International Members, and hundreds of industry suppliers and related organizations as Associate Members.

Organized in 1933, EEI provides public policy leadership, strategic business intelligence, and essential conferences and forums.

For more information, visit our Web site at **www.eei.org**.

Exhibit KRR-SR-3	Additional Compiled PPL Interrogatory Responses

I. INTRODUCTION AND WITNESS QUALIFICATIONS

Q. Please state your name, business name and address, and role in this matter.

A. My name is Karl R. Rábago. I am the principal of Rábago Energy LLC, a Colorado limited liability company, located at 1350 Gaylord Street, Denver, Colorado. I appear here in my capacity as an expert witness on behalf of Clean Air Council, Vote Solar, the Union of Concerned Scientists, POWER Interfaith, and Physicians for Social Responsibility Pennsylvania (collectively the "Energy Justice Advocates" or "EJA").

Q. Are you the same Karl R. Rábago who previously submitted Direct Testimony on behalf of Energy Justice Advocates?

A. Yes.

Q. What is the purpose of this Surrebuttal Testimony?

A. In this Surrebuttal Testimony, I offer a response to the Rebuttal Testimony of several PPL Electric witnesses and to the witnesses for the Sustainable Energy Fund ("SEF") and the Office of the Small Business Advocate ("OSBA"). My not addressing any particular piece of testimony or issue addressed in testimony does not indicate that I am taking a particular position on that testimony.

Q. How does this Surrebuttal Testimony relate to your previously served Direct Testimony as reflected in EJA Statement No. 1?

A. In my Direct Testimony, I focused on three thematic issues: Affordability of electric service and how PPL Electric's proposals impact affordability; PPL Electric's proposals

to maintain and increase massive cost shifts—unjustly shifting costs from cost-causers to residential and small business customers through rate design and large load tariff provisions; and PPL Electric's proposed unreasonable increase to its allowed return on equity ("ROE") and use of a unreasonably high equity ratio in its capital structure for calculating rates. I reviewed the rebuttal testimony from PPL Electric with a view toward whether they considered my testimony and the testimony of other intervenor parties, and responded with meaningful rebuttal and/or modifications.

Q. What did you find overall in PPL Electric's rebuttal?

A. PPL Electric fails to adequately and reasonably address the affordability crisis that its electric distribution customers face and continues to advocate for rates and practices that would worsen the economic situation of its customers. At the same time, PPL Electric continues to prioritize the unjust and unearned enrichment of its corporate owners. PPL Electric proposes to maintain its regressive and economically inefficient approach to classifying customer costs and fails to follow the sound rate making principle of classifying as customer costs only those costs that vary entirely or almost entirely with customer count. PPL Electric filed in its rebuttal a proposal to maintain the status quo in its treatment of large load customers, with loads between 25 and 100 megawatt ("MW"), and proposes a special category tariff (LP-6) for customers with more than 100 MW of load that does not materially differ from the current large load. Included in PPL Electric's current and proposed large load tariffs are inadequate cost recovery mechanisms; complete subjective determination by PPL Electric of when large load interconnection costs will be socialized as transmission investments; lack of

accountability to the Commission in ensuring that large load contracts truly and objectively serve the public interest; failure to take proper account of the Commission's model large load tariff proceeding; and other weaknesses. Finally, PPL Electric's proposal for its profit level reflected in its proposed ROE and its proposal to rely unreasonably on a more expensive fraction of much more expensive equity in its capital structure means a revenue requirement over-inflated with additional profits that, ultimately, yields higher rate for all customers.

Before I address my specific issues with PPL Electric's rebuttal witness testimony, I want to call out the cordial and professional manner in which witnesses Bickey Rimal and Steven W. Wishart provided responses to discovery requests and met with me to help me navigate the spreadsheet evidence in PPL Electric's filing and discovery responses. Their conduct reflects well on their professionalism and supports the broader effort to serve the public interest inherent in electric services.

Q. Did you also file a correction to your initially-filed direct testimony?

A. Yes. I made errors in calculating the revenue requirement resulting from my recommendations and filed corrections to address those errors.

Q. Have you reviewed your testimony on this issue since that time?

A. Yes. While I am not making any additional corrections to my testimony at this time, I have now had the benefit of the revenue requirement model developed by OCA witness

Morgan[1] as well as the direct evidence submitted by OCA and other party witnesses. With that OCA model I am able to demonstrate the impact of the revenue requirement adjustments proposed by OCA and that result from adjustments to the allowed ROE and capital structure. I concur with the revenue adjustments offered by OCA and can support OCA witness David Garrett's proposal for an equity ratio at 42%.[2] The following table also summarizes the impact of the combined effect of OCA's recommendation and mine to generate maximum affordability benefits for PPL Electric customers.

Table KRR-1: Impacts to Revenue Requirement from EJA and OCA Adjustments

Variables	**EJA**	**OCA**	**EJA + OCA**
ROE	7.67%	8.40%	7.67%
Equity Ratio	50.00%	42.00%	42.00%
Debt Ratio	50.00%	58.00%	58.00%
Rate of Return (calculated)	6.38%	6.48%	6.17%
Revenue Requirement		*($thousands)*	
PPL Request	$356,272	$356,272	$356,272
Rev Reqt Reduction	$205,415	$206,237	$232,935
Rev Requirement	$150,857	$150,035	$123,337
% Reduction	57.7%	57.9%	65.4%

II. APPLICABLE LAW AND REGULATORY POLICY

Q. What statutory principles guide the Commission in reviewing PPL Electric's proposed rates in this proceeding?

[1] Exh. KRR-SR-1, PPL-OCA-1-1 Morgan PPL PA Rev Req Model.
[2] OCA, St. No. 3, Direct Testimony of David Garrett, 60, Docket No. R-2025-3057164 (Dec. 22, 2025).

A. I reprise a brief summary of applicable law from my Direct Testimony because of its relevance to points I make in this Surrebuttal Testimony. The Pennsylvania Public Utility Code sets out the basic principles for review of PPL Electric's application. Key provisions include:

- 66 Pa.C.S. § 315(a), declaring that the burden of proof is on the public utility to show that the rates proposed are just and reasonable.
- 66 Pa.C.S. § 315(c), declaring that the burden is likewise on the utility to show that utility service and facilities are adequate, efficient, safe, and reasonable.
- 66 Pa.C.S. § 1301, which requires that all rates made, demanded, or received by a public utility must be just and reasonable and in conformity with regulations and orders of the Commission.
- 66 Pa.C.S. § 1304, which forbids discrimination in rates and rates that make or grant any unreasonable preference or advantage to any person, corporation, or municipal corporation, or subject any person, corporation, or municipal corporation to any unreasonable prejudice or disadvantage.

III. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF SEF WITNESS JOHN M. COSTLOW

Q. How do you respond to Mr. Costlow's Rebuttal Testimony?

A. Mr. Costlow submitted Rebuttal Testimony on behalf of SEF recognizing the need for greater funding for PPL's Winter Relief Assistance Program ("WRAP") Low-Income

Usage Reduction Program ("LIURP").[3] Having administered utility weatherization programs as a utility executive, I agree that weatherization is a key strategy in addressing energy affordability, and I support this SEF proposal. However, witness Costlow supports an egregiously high $42.96 per customer per month fixed customer charge,[4] and incorrectly—without offering data—agrees with the undocumented assertion by PPL Electric that any correlation exists between high use by low-income customers that have been identified and enrolled in assistance programs and the broader universe of low- and moderate-income customers.[5] In rejecting Mr. Costlow's proposal for the fixed customer charge, I concur with the Rebuttal Testimony of OCA witness Clarence L. Johnson.[6] My testimony showed that generally income and usage levels are correlated, and Mr. Costlow's reliance on PPL Electric's assertions is therefore flawed. In this regard, I concur with and support the extensive rebuttal to the SEF and PPL Electric assertions provided by OCA witness Roger Colton.[7]

I therefore maintain my position that PPL Electric's minimum system method for classifying customer costs results in fixed customer charges that are economically regressive, unjust, and unreasonable. Mr. Costlow further makes the callous assertion

[3] SEF, St. No. 1-R, Rebuttal Testimony of John M. Costlow, 2–3, Docket No. R-2025-3057164 (Jan. 23, 2026).

[5] SEF, St. No. 1-R, Rebuttal Testimony of John M. Costlow, 3, Docket No. R-2025-3057164 (Jan. 23, 2026).
[6] OCA, St. No. 4-R, Rebuttal Testimony of Clarence L. Johnson, 10–12, Docket No. R-2025-3057164 (Jan. 23, 2026).
[7] OCA, St. No. 8-R, Rebuttal Testimony of Roger Colton, 1–13, Docket No. R-2025-3057164 (Jan. 23, 2026).

that all customers desiring to conserve energy are already doing so and that increased fixed charges offer bill relief for very high users of electricity.[8] Mr. Costlow's argument lacks an appreciation of the well-documented energy efficiency gap,[9] and does not rebut my testimony that PPL Electric's unreasonably high fixed customer charges impose much higher effective rates on low users of electricity who often have low incomes.[10]

Finally, Mr. Costlow ironically dismisses the adverse impact of high fixed charges on energy efficiency uptake because low-income customers are struggling to meet basic needs, which include electric and other energy services.[11] Electricity is a basic necessity in modern life.

IV. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF OSBA WITNESS MARK D. EWEN

Q. How do you respond to Mr. Ewen's rebuttal testimony?

A. Mr. Ewen argues that the Commission should reject any proposals to apply the universal service rider ("USR") to non-residential customers, asserting that there is no causal relationship between universal service costs and small business customers, and

[8] SEF, St. No. 1-R, Rebuttal Testimony of John M. Costlow, 4, Docket No. R-2025-3057164 (Jan. 23, 2026).
[9] *See, e.g.*, Kristin Hayes, Sizing Up the Energy-Efficiency Gap, Resources for the Future (Jun. 14, 2013), https://www.resources.org/archives/sizing-up-the-energy-efficiency-gap/.
[10] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 41–44, Docket No. R-2025-3057164 (Dec. 22, 2025).
[11] SEF, St. No. 1-R, Rebuttal Testimony of John M. Costlow, 4, Docket No. R-2025-3057164 (Jan. 23, 2026).

because non-residential customers cannot take advantage of residential-only universal service programs.[12] In addition, Mr. Ewen argues that if non-residential customers were responsible for paying USR, they would have the added burden of contributing effort to ensuring that USR-funded programs are "properly designed, effective, and necessary."[13] Mr. Ewen's argument is flawed in its one-sided approach. While the principle of cost causation is a core tenet of sound rate making, Mr. Ewen's statement that non-residential customers should not bear a fair share of the costs of USR-funded programs ignores four important considerations.

First, the need for universal service cost is caused when rates and bills exceed customer ability to pay—when reliable and adequate electric service becomes unaffordable for customers in one or more classes. This includes situations when utility costs of service are allocated to customers in a manner that results in rates that are unjust and unreasonable. The Commission has a duty to ensure that all rates charged by utilities are just and reasonable and that rates are not unjustly discriminatory.[14]

Second, all customers see economic benefits from the effective implementation of universal service programs. Uncollectible costs are reduced, and low-income customers can participate more fully in the economy, including as customers of businesses large and small. Affordable electric bills reduce or mitigate wage pressure

[12] OSBA, St. No. 1-R, Rebuttal Testimony of Mark D. Ewene, 6–8, Docket No. R-2025-3057164 (Jan. 23, 2026).
[13] OSBA, St. No. 1-R, Rebuttal Testimony of Mark D. Ewen, 7:11, Docket No. R-2025-3057164 (Jan. 23, 2026).
[14] 66 Pa.C.S. §§ 1301, 1304.

as well. So all customer classes benefit from USR programs, whether they participate in those programs or not. Simply stated, the customers that receive benefits from utility spending can also reasonably be expected to support the programs and measures that create those benefits as an essential non-discrimination corollary to narrowly focusing on cost causation as witness Ewen defines it. Cost causation must be viewed in the context of an integrated grid and economy to ensure just, reasonable, and non-discriminatory rates and charges.

Third, witness Ewen recognizes that Vice Chair Barrow as well as CAUSE-PA witness Cicero and OCA witness Colton have all identified a cost basis for allocating universal service costs to large load customers.[15] Again, however, Mr. Ewen fails to recognize that small businesses participate in the same economy and grid network as these large load customers that take PPL Electric's service. The affordability impacts of these economic externalities—real costs not reflected in the prices of electricity to large load customers—extend to the small, mid-sized, and large commercial customers as well as large load customers. Failure to spread the costs of affordability remediation among all customers taking such service will result in an undue cost shift and unjust, unreasonable, and discriminatory rates.

Fourth, Mr. Ewen appears to argue that if large load customers are not allowed by PPL Electric to shift costs to other customer classes, there would be no cost causation to

[15] OSBA, St. No. 1-R, Rebuttal Testimony of Mark D. Ewen, 7, Docket No. R-2025-3057164 (Jan. 23, 2026).

support broad allocation of universal service costs. Again, this argument fails to recognize the considerations that I have already explained. Moreover, Mr. Ewen fails to recognize that cost causation is not and has never been only an exercise in allocating directly assignable costs on a customer-specific basis. All customers contribute specifically and generally to cost causation when they take service from an interconnected grid as a member of a customer class. Moreover, the benefits of improving affordability are attributable to all customers. Accordingly, funding for these programs should come from all customer classes.

V. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS CHRISTINE M. MARTIN

Q. PPL Electric witness Martin makes the assertion that low-income customers are not "synonymous" with low-usage customers, and that therefore increasing the residential fixed customer charge is a benefit for high-use low-income customers.[16] How do you respond?

A. Witness Martin chooses her words carefully, but her assertion does not rebut my testimony. My testimony showed that generally income and usage levels are *correlated*, and witness Martin's assertions are at best misleading. I concur with and support the extensive rebuttal to the SEF and PPL Electric assertions provided by OCA witness Roger Colton.[17] The fact that the low-income customers *identified* by

[16] PPL, St. No. 1-R, Rebuttal Testimony of Christine M. Martin, 10:11–13, Docket No. R-2025-3057164 (Jan. 23, 2026).
[17] OCA, St. No. 8-R, Rebuttal Testimony of Roger Colton, 1–13, Docket No. R-2025-3057164 (Jan. 23, 2026).

PPL Electric through universal service program enrollments are higher users is evidence that high bills associated with high usage do create problems for customers that face energy insecurity, but it does not establish a correlation between high use and all low-income customers, as suggested (but not substantiated) by PPL Electric's witnesses and allies.

My testimony shows that the numbers of low-income and affordability challenged customers greatly exceeds the number receiving universal service assistance.[18] Relying on the incorrect assumption that the correlation between low-usage and low-income does not exist in order to justify higher fixed customer charges may well offer a measure of benefit to very high user low-income customers, as witness Martin argues.[19] But, as I presented in my testimony, it also creates an economic incentive for wasteful use, undermines the economics of energy efficiency investments, results in unreasonably high effective rates for low-users in general, and—under the minimum system method used by PPL Electric—shifts distribution system costs from high-use cost causers to low users.[20]

[18] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 8–13, Docket No. R-2025-3057164 (Dec. 22, 2025).
[19] PPL, St. No. 1-R, Rebuttal Testimony of Christine M. Martin, 10:15–18, Docket No. R-2025-3057164 (Jan. 23, 2026).
[20] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 31–66, Docket No. R-2025-3057164 (Dec. 22, 2025).

VI. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS BETHANY L. JOHNSON

Q. PPL Electric witness B. Johnson states that PPL Electric's approach to the cost of service study results in a residential fixed customer charge that should be over $40 per customer per month, that it is not true that low-income customers are most harmed by increases to fixed customer charges, and that PPL Electric's proposed fixed customer charge is not as great, in percentage terms as that proposed by UGI Utilities, Inc.'s electric utility in 2018.[21] How do you respond?

A. Witness B. Johnson is essentially arguing that PPL Electric's fixed customer charge proposal could be worse. That is not the standard and does not rebut my testimony that the PPL Electric residential fixed customer charge proposal, the method, and the cost of service study used to support that proposal is unjust, unreasonable, and unfairly discriminatory, as laid out in my Direct Testimony.[22]

Q. Witness B. Johnson also argues that your testimony about the unreasonable nature of the minimum system method and the results of the use of that method is wholly inappropriate, and that the Commission cannot find that the minimum system method relied upon by the utility is unreasonable for use in future cases.[23] How do you respond?

[21] PPL, St. No. 5-R, Rebuttal Testimony of Bethany L. Johnson, 20, Docket No. R-2025-3057164 (Jan. 23, 2026).
[22] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 33–66, Docket No. R-2025-3057164 (Dec. 22, 2025).
[23] PPL, St. No. 5-R, Rebuttal Testimony of Bethany L. Johnson, 21–22, Docket No. R-2025-3057164 (Jan. 23, 2026).

A. I continue to assert that the minimum system is bad rate making and that it should not be used in this proceeding. I offer no proposal regarding prior Commission decisions, even while I may respectfully disagree with them. My testimony is that the Commission should reject the use of the minimum system method in this case and approve only a fixed customer charge of $10.20 for residential customers, and that PPL Electric should be required to "use the basic customer method to classify costs for inclusion in the fixed customer charge for residential customers in future rate cases."[24]

VII. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS BICKEY RIMAL

Q. PPL Electric witness Rimal implies that your testimony relating to exclusion of costs for distribution poles, conductors, and line transformers is based on an assertion that those costs are only related to demand.[25] Was that your testimony and position?

A. No, and witness Rimal's implication and associated argument is therefore not a rebuttal to my testimony. My testimony comprehensively addressed why such costs, which might vary to a degree based on the number of customers, do not meet the test for a customer cost—they do not vary entirely or nearly entirely based on customer

[24] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 80:12–14, Docket No. R-2025-3057164 (Dec. 22, 2025).
[25] PPL, St. No. 7-R, Rebuttal Testimony of Bickey Rimal, 5–6, Docket No. R-2025-3057164 (Jan. 23, 2026).

count.[26] Witness Rimal's rebuttal arguments rest on a core logical fallacy known as a "straw man" argument in his characterization of my testimony. In my testimony, I offered a simple rubric for identifying customer costs that was consistent with the generally-accepted principle that customer costs are costs that vary entirely or nearly entirely with customer count.[27] I also explain that customer costs are also reasonably characterized as the costs incurred by the utility to connect the customer to the grid for electric service.[28] Mr. Rimal's error of logic is in translating my testimony into an assertion that I did not make—that all line transformers and secondary and primary distribution costs related to poles and conductors are *entirely* demand-based costs.[29] Even if it is true that customer count relates to some degree to customer count, such as in the situation where a pole, transformer, and conductors are installed to serve a single customer, which is not common, this does not mean that these costs vary entirely or nearly entirely based on customer count. For such joint or common costs, I point out that allocation of these costs to demand or energy is the more efficient and equitable approach.[30] Mr. Rimal's testimony does not rebut mine and does not serve as a reasonable basis for the classification of costs related more to demand and energy as customer costs.

[26] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 37–50, Docket No. R-2025-3057164 (Dec. 22, 2025).

[28] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 37–50, Docket No. R-2025-3057164 (Dec. 22, 2025).
[29] PPL, St. No. 7-R, Rebuttal Testimony of Bickey Rimal, 6, Docket No. R-2025-3057164 (Jan. 23, 2026).
[30] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 47–50, Docket No. R-2025-3057164 (Dec. 22, 2025).

Q. Mr. Rimal also cites the NARUC Cost Allocation Manual as identifying the minimum system method as a method for cost classification.[31] Does this rebut your direct testimony?

A. No. I addressed this argument in my Direct Testimony and pointed out that the NARUC Cost Allocation Manual is merely descriptive, and not normative.[32] Mr. Rimal's citation to the Manual does not rebut my testimony.

Q. Mr. Rimal states that the minimum system method has been used in Pennsylvania, and as recently as in 2018, the Commission found the minimum system method to be an accepted approach to cost classification.[33] How do you respond?

A. With all due respect to prior Commission decisions, my testimony is that the Commission should no longer find the minimum system method to be an acceptable approach for classifying customer and demand costs.[34] The affordability crisis facing PPL Electric's customers and the many flaws inherent in the minimum system method mean that the approach is not now acceptable and will not result in rates that are just, reasonable, and non-discriminatory.

Q. Mr. Rimal argues that Professor Bonbright took the position that distribution system costs related to the minimum-sized distribution system should not be classified as demand-related costs, and therefore, Bonbright supports classification of these costs as customer costs as a matter of preference.[35] Do you agree?

A. Mr. Rimal's interpretation of Bonbright's position is both incomplete and wrong. As I noted in my testimony, Bonbright went on to explain that these minimum-sized distribution system costs are, in his words, "unallocable."[36] Bonbright specifically disparaged proposals "to 'fudge' his cost apportionments by using the category of customer costs as a dumping ground for [these unallocable] costs."[37] As I explained in my Direct Testimony, the question therefore is not one of classification of minimum-sized system costs as either customer or demand costs, but one of designing rates that meet general rate making principles, including economic efficiency, fairness, and non-discrimination. My testimony explains why these minimum-sized system costs should be recovered through usage-based charges and not fixed charges in order to achieve those rate making goals.[38]

[38] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 35–62, Docket No. R-2025-3057164 (Dec. 22, 2025).

Q. Mr. Rimal states that your proposed reductions in the amount of customer service costs excluded from the fixed customer charge fail to align with chart of account labels and the classification of costs in PPL Electric's Allocated Cost of Service Study ("ACOSS"), and that there is no merit to CAUSE-PA witness Cicero's testimony that PPL Electric classifies as customer costs many costs that do not vary directly with the number of customers.[39] Mr. Rimal goes on to argue that if all customer service and billing and collection costs are classified as customer costs, the customer charge could be as high as $22.27 per residential customer per month.[40] How do you respond?

A. Mr. Rimal's argument is boot-strapping—an assertion that because broad accounting category labels for some costs include the word "customer," and because the ACOSS that PPL Electric and its consultants used allocates minimum-sized system distribution costs as customer costs, then these costs are properly classified as customer costs. Accounting labels and ACOSS labels do not constitute substantive evidence that the classification and recovery of these costs as customer costs is just, reasonable, and non-discriminatory. Mr. Rimal does not rebut my testimony that a more granular approach to customer service and billing and collection costs is necessary to limit the classification of costs as customer costs to those which vary entirely or almost entirely with customer count.[41]

VIII. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS STEVEN W. WISHART

Q. PPL Electric witness Wishart responds to testimony by you and other witnesses on the issue of electricity affordability with national data and observations about rates and energy burdens.[42] He states that PPL Electric's "proposed distribution rate changes represent a modest adjustment to one component of the overall electric bill and should be evaluated in the context of broader household spending trends."[43] Does witness Wishart's testimony effectively rebut the affordability testimony provided by you and other intervenor witnesses?

A. No. The data presented by witness Wishart is no comfort to me or to the tens of thousands of PPL Electric customers who live in a state of energy insecurity. In fact, the data presented by witness Wishart shows that household electricity spending by customers in the lowest income percent decile alone is twice the total average household energy burden in the U.S.[44] PPL Electric's reliance on the minimum system method to generate outsized fixed customer charges it proposes in this proceeding worsens energy insecurity and affordability problems for its residential customers. Further, in my experience, most moderation of electric utility price increases in recent decades has been largely due to legislatures and regulators

[42] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 5–11, Docket No. R-2025-3057164 (Jan. 23, 2026).
[43] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 5:11–13, Docket No. R-2025-3057164 (Jan. 23, 2026).
[44] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 9–10, Docket No. R-2025-3057164 (Jan. 23, 2026).

requiring electric utilities to do things they have resisted—like energy efficiency, distributed self-generation, transitioning away from coal to gas and renewables, competition in generation, and integrated resource planning.

Q. Witness Wishart argues that PPL Electric is only proposing a 9.1% increase in the residential fixed customer charge, from $15.49 per customer per month to $17.00 per customer per month, and not a 20% increase from $14.09 to $17.00.[45] How do you respond?

A. I did not directly address the percent increase proposed because my testimony found that the residential fixed customer charge is too high today and would be even more so under the utility's proposal. However, it is important to point out that Mr. Wishart's argument is fundamentally misleading. He asserts that the proposed increase should be measured from the fixed charge, plus applicable riders, as increased to a $17 customer charge alone because the riders have been rolled into base rates.[46] This assertion is apples-to-oranges and fundamentally misleading.

Q. Witness Wishart attempts to argue that a reduction in the fixed customer charge, when offset by an increase in volumetric rates, will not provide a meaningful economic incentive for customers to undertake energy efficiency efforts and investments, and summarizes his argument in a table that shows a four percent

[45] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 14, Docket No. R-2025-3057164 (Jan. 23, 2026).
[46] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 14:1–4, Docket No. R-2025-3057164 (Jan. 23, 2026).

or $1.75 monthly bill savings for a residential customer that reduces usage by 25%.[47] How do you respond?

A. Mr. Wishart's arguments are both misleading and somewhat insensitive. For customers living in energy insecurity, saving 4% or $21 per year on electricity on top of annual savings of savings of about $480 per year on electric bills is especially meaningful to low- and moderate-income customers. And if that savings is obtained through investment in energy efficiency, and not through privation, the customer realizes all the energy service benefits as before under a higher use scenario. Moreover, the shifting of revenue recovery for distribution infrastructure costs that are not customer costs is more efficient, fair, and equitable—meaning that high users who cause costs related to demand pay their fair share of those costs. In addition, as Mr. Wishart's example calculation demonstrates, the energy charge under a $17 per month customer charge is 13% lower than it should be under a more equitable and justified customer charge of $10, all other things being equal.[48] This discount for high use echoes the load-building tariffs of bygone days that encourage inefficient use, unnecessarily drive capital spending and increased rates, and create a shift of system costs from high users to low users of electricity.

Q. Witness Wishart makes an argument, also raised by PPL Electric witness Rimal,[49] attempting to justify a high fixed charge based on price signals and

[47] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 15–16, tbl. 3, Docket No. R-2025-3057164 (Jan. 23, 2026).
[48] Calculated as ($0.05864/kWh - $0.05102/kWh) / $0.05864 = 12.9%
[49] PPL, St. No. 7-R, Rebuttal Testimony of Bickey Rimal, 5–6, Docket No. R-2025-3057164 (Jan. 23, 2026).

marginal system savings realized by energy conservation and efficiency.[50] Does this argument rebut your direct testimony?

A. It does not. Witnesses Wishart and Rimal are essentially arguing for regulation by alliteration—that "fixed" costs, which PPL Electric assumes are all sunk, should be recovered with "fixed" charges. Three points I made in my Direct Testimony address this base assumption. First, fixed costs are not all sunk, despite the "fixed" accounting label. Reductions in consumption will reduce demand-related fixed costs over time. Volumetric rates that reflect this relationship between demand and fixed costs are appropriate. Volumetric rates that do not are artificially deflated by recovering these costs through the fixed charge.[51] Second, there is no evidence in the economic literature that supports the idea that rate design should mimic cost structure.[52] Third, PPL Electric's proposed approach creates significant economic inefficiency, is economically regressive, and therefore does not support just, reasonable, and non-discriminatory rates.[53]

Q. Witness Wishart repeats the assertion by PPL Electric and SEF that high use among low-income customers means that low-income customers, as a whole, have higher than average usage among residential customers, and that therefore,

[50] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 17, Docket No. R-2025-3057164 (Jan. 23, 2026).

[52] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 32–33, Docket No. R-2025-3057164 (Dec. 22, 2025).
[53] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 35–40, Docket No. R-2025-3057164 (Dec. 22, 2025).

reducing fixed charges does not provide affordability benefits to low-income households.[54] Do you agree?

A. Witness Wishart cites SEF witness Costlow, who in turn cited witness Wishart for the proposition that low-income customers—and not just those seen by PPL Electric and SEF in universal service programs—generally have higher use than residential customers as a whole.[55] Witness Wishart goes on to argue that low-income affordability challenges are not driven by low consumption levels, and therefore that reducing the fixed charge is not an effective solution to affordability challenges.[56] This argument is illogical. First, I have seen no evidence in this proceeding of anyone arguing that affordability challenges are driven by unusually low consumption levels. Second, the evidence that I and other witnesses have provided regarding the insidious impacts of high fixed charges under the demonstrated condition of a correlation between income level and usage provides more than adequate foundation for correcting the high fixed charge problem for PPL Electric customers.

Q. Witness Wishart argues on behalf of PPL Electric that USR funding should be recovered only from residential customers and should not be recovered from all customer classes except under circumstances where PPL Electric is proposing a

[54] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 17–18, Docket No. R-2025-3057164 (Jan. 23, 2026).
[55] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 17–18, Docket No. R-2025-3057164 (Jan. 23, 2026); SEF, St. No. 1, Direct Testimony of John M. Costlow, 20–22, Docket No. R-2025-3057164 (Dec. 22, 2025).
[56] PPL, St. No. 8-R, Rebuttal Testimony of Steven W. Wishart, 18:5–9, Docket No. R-2025-3057164 (Jan. 23, 2026).

new large load tariff and/or the Commission has provided guidance on the issue.[57] Do you agree?

A. My surrebuttal testimony in response to OSBA witness Ewen addresses why sound and proper rate making can include allocation of USR costs to all rate classes served by an integrated utility.[58] I do agree that Commission guidance is important, which is why I recommend that the Commission direct PPL Electric to fairly assign USR costs among all rate classes.[59]

Q. Witness Wishart argues that large load customers are not driving increases in costs for other customers because historical peaks have not increased in the PJM over the last decade, and because many other factors, including design characteristics of the PJM market itself have been factors in recent wholesale price increases.[60] Do you accept this argument as a basis for a conclusion that new large data center load will not result in higher costs for all customers?

A. No. To paraphrase a famous U.S. politician, data centers are added to the grid you have, not the grid you wish you had. Witness Wishart's argument does not change the fact that new large loads are the cause of cost increases in the current PJM system with all its attributes. And that fact justifies the Commission's efforts to ensure that these costs are equitably allocated among customer classes.

IX. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESSES JULISSA BURGOS AND JENNIFER NELSON

Q. How do PPL witnesses Burgos and Nelson respond to your testimony?

A. PPL witnesses Burgos and Nelson address my Direct Testimony relating to allowed return on equity and capital structure.[61] In that testimony, I proposed an allowed ROE of 7.67% and a capital structure of 50% equity and 50% debt. As previously stated in this Surrebuttal Testimony, I can support OCA's recommendation for a 42% equity and 58% debt capital structure. PPL's witnesses argue that the capital structure used to calculate rates should be set at 56.05% equity and 43.95% debt because that structure falls within the five-year average range of the capital structures for the operating companies that PPL Electric selected for its proxy group; because PPL Electric has outsized capital investment plans; and because markets prefer the higher rates and revenues that follow from using more expensive equity to finance capital spending.[62]

PPL Electric's witnesses offer speculative assertions that if the allowed ROE and equity ratio are not set higher for PPL Electric than the averages for utilities in general, financial markets will punish PPL Corporation. PPL Electric's witnesses therefore imply that the utility will have difficulty obtaining capital at affordable

[61] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 19–31, Docket No. R-2025-3057164 (Dec. 22, 2025).
[62] PPL, St. No. 9-R, Rebuttal Testimony of Julissa Burgos, 6–8, Docket No. R-2025-3057164 (Jan. 23, 2026); PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 84–96, Docket No. R-2025-3057164 (Jan. 23, 2026).

rates, and that higher costs of capital will exceed the savings realized from more reasonable ROE and equity ratio levels.

In simple terms, and consistent with my testimony, I recommended that the Commission evaluate PPL Electric's financial proposals in this case through an affordability lens. In my opinion, the Commission should not, when considering the allowed ROE and the capital structure used for calculating rates, ignore its statutory obligation to approve only rates that are just and reasonable. Nor should it disregard the impact that affordability problems compounded by excess profits have on PPL's customers and on its operating and regulatory environment.

In response, PPL Electric's witness Nelson responds with callous disregard for the affordability impacts of an excessive allowed ROE and equity ratio on customers. Witness Nelson adopts a "let them eat cake" approach on affordability in pointing out that PPL Electric has customer assistance programs and that affordability problems are rampant in the electric utility industry,[63] and she further argues that affordability is not explicitly included in the standards established for determining a just and reasonable return for the utility and therefore should be addressed elsewhere.[64] This approach is fundamentally inconsistent with the Commission's rate making obligations, but it does stand as evidence that the problems of excessive profits and

[63] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 11, Docket No. R-2025-3057164 (Jan. 23, 2026).
[64] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 12, Docket No. R-2025-3057164 (Jan. 23, 2026).

utility costs are endemic in the industry. This in turn gives the Commission additional ground for rejecting a fundamental premise of PPL Electric's contentions—that PPL Electric's proposed allowed ROE and capital structure are reasonable because they are aligned with the allowed ROE and capital structure of utilities in witness Nelson's proposed proxy group. In simple terms, PPL Electric's proposed allowed ROE and equity ratio are too high—just like those of the utilities PPL Electric's witnesses compare them with.

Q. How should the Commission respond to witness Nelson's position that "affordability issues are better addressed with the universal service programs"?[65]

A. The Commission should not rely on PPL Electric witness Nelson for guidance on how to best address affordability issues plaguing PPL Electric's customers,[66] and should reject PPL Electric's proposals to worsen the affordability problem by granting an excessive allowed ROE and to set rates in this case based on a capital structure that assumes PPL Electric will continue to rely on excessively-expensive equity to finance its capital investments even while higher leverage with lower cost debt can reduce the utility's overall cost of capital going forward.

[65] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 12, Docket No. R-2025-3057164 (Jan. 23, 2026).
[66] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 8–18, Docket No. R-2025-3057164 (Dec. 22, 2025).

Instead, the affordability problems facing PPL Electric's customers should be addressed through a broad strategy that includes both strengthening universal service programs and reining in the excessive rent-seeking represented by PPL's excessive proposed allowed ROE and equity ratio, which magnify the affordability challenges that universal service programs seek to assist with.[67]

Q. Witness Nelson also argues that the risk-reducing effect of PPL Electric's regulatory mechanisms should be ignored when the Commission approves the allowed ROE for PPL Electric.[68] Do you agree?

A. No. Witness Nelson's "Catch-22" argument is that the many mechanisms in place to guarantee and stabilize revenue recovery for PPL Electric, while reducing lag and passing market risk to customers, should be ignored because regulators have approved such mechanisms for other utilities in other jurisdictions. So, without these mechanisms PPL Electric would have outsized risk and would ask for a higher ROE; with these mechanisms that reduce PPL Electric's risk, they still need a higher ROE because proxy group utilities also enjoy risk reduction mechanisms.

The argument is that overearning should always be supported as long as utility witnesses like witness Nelson can construct a proxy group of over-earners and that broad-based regulatory efforts to support the financial health of regulated utilities

[67] Investopedia, *Understanding Rent Seeking*, https://www.investopedia.com/terms/r/rentseeking.asp.

must always result in profit inflation without concomitant benefits to customers. As I have discussed, this is not consistent with basic rate making principles.

Q. What do you recommend?

A. I maintain my recommendation for an allowed ROE of 7.67% for PPL Electric. I recommend an equity ratio of 50% and can support a lower 42% equity ratio as proposed by OCA witness Garrett. The rebuttal testimony from witnesses Burgos and Nelson does not rebut the points I made in my direct testimony that demonstrate that PPL Electric's ROE request is far in excess of its cost of equity.[69]

In my opinion, many electric utilities, including PPL Electric in particular, enjoy excessive profits and rates based on excess use of equity to fund capital investments. This is not just my opinion. The sources cited in my testimony similarly address this issue and OCA witness Garrett's testimony reaches the same result using the same models relied upon by PPL Electric witness Nelson.[70] Researchers have looked carefully at this gap between cost of equity and allowed ROEs and have concluded that allowed returns are excessive.[71]

[69] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 25–27, Docket No. R-2025-3057164 (Dec. 22, 2025).
[70] OCA, St. No. 3, Direct Testimony of David Garrett, 6–59, Docket No. R-2025-3057164 (Dec. 22, 2025).
[71] Exh. KRR-SR-2, David C. Rode & Paul S. Fischbeck, "Regulated Equity Returns: A Puzzle," *Energy Policy* vol. 133 (Oct. 2019), https://doi.org/10.1016/j.enpol.2019.110891.

Q. Witness Nelson accuses you of misstatement and misinterpretation of national data on allowed ROEs in your direct testimony.[72] How do you respond?

A. In my Direct Testimony about national average allowed ROEs for the electric industry, I stated that regulators have not allowed an ROE above 10% since 2016,[73] but that this statement is not true as to specific regulatory decisions. I appreciate witness Nelson's testimony. While I assumed it was clear that because I was addressing how PPL Electric's proposal is out of step with national averages that my statement applied to the average values depicted in the referenced chart, I agree that an added clarification is appropriate. My statement relates to the average allowed ROE in each year.

Q. Witness Nelson takes issue with reference to electric utility "price to book" or "market to book" ratios as an indication that allowed ROE exceeds cost of equity for regulated electric utilities in general and for PPL Electric and PPL Corporation in particular, because most publicly traded companies trade above book value and because PPL Electric does not have a directly observable price-to-book ratio.[74] How do you respond?

A. First, it is reasonable to use the PPL Corporation price-to-book ratio in evaluating whether PPL Electric is proposing an excessive ROE because PPL

[72] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 22, Docket No. R-2025-3057164 (Jan. 23, 2026).
[73] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 20, Docket No. R-2025-3057164 (Dec. 22, 2025).
[74] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 25–27, Docket No. R-2025-3057164 (Jan. 23, 2026).

Corporation wholly owns PPL Electric, as well as other regulated operating utilities. Second, witness Nelson's assertion that most publicly traded companies have price-to-book ratios higher than 1.0 ignores the key fact that monopoly electric utilities are supposed to be cost of service businesses that recover their investment and a reasonable return on their investment in light of the business risk they face. That risk is lower than the risk for competitive businesses, as should be the case.

Finally, witness Nelson cites commentary to the effect that if competitive businesses generate high earnings and utilities earn only reasonable returns, then utilities will not be able to compete for and attract capital.[75] There is no evidence in this record that the regulated utility industry has had any difficulty obtaining reasonably-priced capital even at average levels much lower than requested by PPL Electric.

Q. Witnesses Burgos and Nelson argue for the Commission's approval of use of PPL Electric's actual capital structure to calculate rates in this proceeding, citing potential reductions in credit ratings and increased financial risk from high debt leverage.[76] How do you respond?

A. I continue to recommend an adjustment in the capital structure used to calculate the rates in this case in the interests of affordability and financial discipline. PPL Electric's proposed use of an equity ratio of 56.05% will increase the revenue requirement based on use of more equity and less lower-cost debt. That PPL Electric

[75] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 26–27, Docket No. R-2025-3057164 (Jan. 23, 2026).

[76] PPL, St. No. 10-R, Rebuttal Testimony of Jennifer Nelson, 88–89, Docket No. R-2025-3057164 (Jan. 23, 2026); PPL, St. No. 9-R, Rebuttal Testimony of Julissa Burgos, 2–3, Docket No. R-2025-3057164 (Jan. 23, 2026).

has been choosing to use more expensive equity to raise capital in the past raises an issue of prudence in its investment strategy and an unfair preference for PPL Corporation profits over electricity affordability. PPL Electric should use a more reasonable and conventional equity ratio of 50% or even lower, as recommended by OCA witness Garrett, to calculate rates that encourage the utility to lower its overall capital costs to better align with national industry averages.

X. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS JOSEPH LOOKUP

Q. PPL Electric witness Lookup accuses intervenor witnesses of "underestimating the potential for new large load customers to create a win-win situation for existing customers."[77] Do you agree?

A. No. PPL Electric's responses to data requests from EI Set IV and CAUSE-PA Set XV show that PPL Electric's assertions about benefits and avoidance of costs for non-large load customers are hypothetical and unsupported by rigorous analysis.[78]

Q. For the first time in this proceeding, PPL Electric proposes a new rate class for large load customers with peak demands in excess of 100 MW,[79] and appears to maintain its original proposals for the LP-5 tariff and customers with peak

[77] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 3:6–7, Docket No. R-2025-3057164 (Jan. 23, 2026).
[78] Exh. KRR-SR-3, Additional Compiled PPL Interrogatory Responses, PPL Responses to EI IV-1; EI IV-2; EI IV-4; CAUSE-PA-XV-1; CAUSE-PA-XV-9.
[79] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 4–5, Docket No. R-2025-3057164 (Jan. 23, 2026).

demands between 25 MW and 100 MW. Do these proposals address the concerns raised by you and other parties relating to large load tariffs?

A. No. As discussed below, the fundamental issues that I raised in my testimony are not effectively addressed or rebutted by PPL Electric's proposals regarding the LP-5 and proposed LP-6 tariffs. Moreover, PPL Electric's proposal invites gaming by new large loads, since the proposal includes impact mitigation proposals for LP-6 customers that would not apply to LP-5 customers.

Q. Witness Lookup cites FERC decisions in support of an unconditional assertion that "network upgrades" benefit all customers including, and without limitation, capacity, congestion, resiliency, flexibility, and other benefits.[80] How do you respond?

A. Such unbounded assertions are not substantial evidence of prudence or cost-effectiveness sufficient to sustain a decision to grant PPL Electric unfettered authority to socialize network upgrade costs. Witness Lookup states that calculating network benefits is a difficult and contentious topic.[81] Moreover, a FERC policy presumption that favors rolling in transmission costs related to integrated transmission networks for wholesale formula rates does not substitute for the Commission's determination of the reasonableness and distribution among classes of charges under the TSC.[82]

[80] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 15:8–9, Docket No. R-2025-3057164 (Jan. 23, 2026).
[81] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 16:6–8, Docket No. R-2025-3057164 (Jan. 23, 2026).
[82] PPL Electric witness B. Johnson confirms the division of jurisdictional responsibility between the FERC and the Commission. PPL, St. No. 5-R, Rebuttal Testimony of Bethany L. Johnson, 8, Docket No. R-2025-3057164 (Jan. 23, 2026).

Q. PPL Electric witness Lookup states that his Rebuttal Testimony addresses many of the topics raised in the Commission's model large load tariff proceeding order issued on November 6, 2025, in Docket M-2025-3054271. How do you assess this consideration?

A. Witness Lookup's rebuttal testimony contains only cursory reflection on the Commission's model large load tariff order and proceeding.[83] The Commission's model tariff order merits more considered response. As demonstrated in Colorado, model tariff provisions can serve a useful function as a baseline set of conditions for large load tariffs, on which regulated utilities can build to develop terms that meet the needs of their particular service territories, including where data center demand is growing substantially.[84]

Q. PPL Electric witness Lookup argues that even if the new large load class tariff LP-6 is approved, it would not allow direct assignment of transmission costs to the rate class because such issues are governed by PPL Electric's Federal Energy

[83] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 4, 16, 18–19, 26, Docket No. R-2025-3057164 (Jan. 23, 2026) (detailing provisions requiring up-front CIAC payments when the large load customer receives more than 50% of associated benefits deemed unworkable; relating to exit fees proposed to be addressed as payment for amount of minimum load guarantee remaining at time of customer exit; and relating to large load customer contributions to universal service program addresses as provision for $10 in USR funding allocated among LP-6 customers only).

[84] Mark Jaffe, *More Data Centers are Coming to Colorado, Demanding More Power than They'll Need. Will Customers Foot the Bill?*, Colorado Sun (Dec. 11. 2025), https://coloradosun.com/2025/12/10/data-center-power-demands-colorado-xcel-tri-state/#:~:text=The%20Colorado%20Public%20Utilities%20Commission,load%20tariff"%20with%20similar%20protections.

Regulatory Commission ("FERC") formula rate, which is not affected by a customer's distribution rate classification.[85] How do you respond?

A. As I explain later, the critical juncture when a large load customer requests interconnection is the point when the PPL Electric decides how much transmission to construct in association with the interconnection and whether this transmission spending provides benefits to all customers. PPL Electric seeks sole discretion in these determinations, with significant cost implications for non-large load customers. I therefore support a "but-for" standard that classifies as customer interconnection costs those costs which would not have been incurred but for the interconnection of the large load customer.

Q. PPL Electric witness Lookup addresses the FERC formula rate and states that upgrades that only benefit the new customer are recovered through the Contribution in Aid of Construction ("CIAC") charge, and that upgrades that PPL Electric determines will provide broader benefits, as determined by PPL Electric, are socialized.[86] Does that rebut your testimony about the subjectivity inherent in PPL Electric's proposed large load tariffs?

A. No. PPL Electric's FERC formula rate discussion is misleading. The determination of which parties benefit from transmission spending associated with large load interconnections is what leads to classification of costs as customer-serving

[85] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 5, Docket No. R-2025-3057164 (Jan. 23, 2026).
[86] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 9–11, Docket No. R-2025-3057164 (Jan. 23, 2026) .

interconnection or transmission in nature. After that, the FERC tariff classifies and assigns costs for wholesale rates. But after that is a jurisdictionally distinct determination by the state commission as to how transmission costs are appropriately allocated among interconnected customers. As I explained in my testimony, historical allocation approaches built on system-wide relatively uniform load growth are not appropriate and will not result in just and reasonable allocation of transmission-related costs in this world of hyperbolic data center load growth.[87] It is entirely consistent with principles of cost causation for the Commission to review and only approve retail rate allocations that comport with its statutory obligation to ensure retail utilities only charge just and reasonable and non-discriminatory rates. Again, those determinations are in play and germane in this proceeding because PPL Electric proposes to assign to itself the control of the process for determining which costs, which would not be incurred but for the interconnection of new large loads, will be socialized in rates. Retail rate allocation does no violence to the allocation of regulatory responsibilities among federal and state authorities under the blended jurisdictional world in which the Commission and PPL Electric operate.

Q. PPL Electric Witness Lookup says that you do not understand how the Transmission Service Charge ("TSC") works, and that TSC costs are recovered based on class contribution to system peak.[88] How do you respond?

[87] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 69–77, Docket No. R-2025-3057164 (Dec. 22, 2025).
[88] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 11, Docket No. R-2025-3057164 (Jan. 23, 2026).

A. Witness Lookup's testimony is misleading. Witness Lookup appears to argue that under the 5CP allocation method that drives cost allocation under the TSC, residential TSC charges could be reduced by the increased contribution to the 5CP by new large loads. This misses the point that by deciding to socialize and classify as transmission those costs that would not have arisen *but for* the interconnection of new loads, PPL Electric proposes to have sole discretion over which interconnection-related customer and transmission costs will be subjected to the 5CP allocation calculation.

New incremental costs should be assigned to the customers that cause them. For the large load and data center customers specifically, this includes the incremental interconnection and related transmission spending for such customers. If they are not so assigned, the rates and charges resulting from a 5CP method are unjust, unreasonable, and improperly discriminatory. In simple terms, the mere potential of lower TSC charges[89] or of decades of transmission revenues[90] are not enough to render PPL Electric's large load tariff provisions in the public interest.

Q. Do you agree with PPL Electric Witness Lookup that "[a]ny challenge of the Company's decision to include certain costs in transmission rates should be raised at FERC"?[91]

[89] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 11, Docket No. R-2025-3057164 (Jan. 23, 2026).
[90] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 14, Docket No. R-2025-3057164 (Jan. 23, 2026).
[91] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 17–18, Docket No. R-2025-3057164 (Jan. 23, 2026).

A. No. The tariff language for the LP-5 and LP-6 tariffs is in this proceeding at PPL Electric's request. As I've discussed above, the allocation among retail customers of costs approved by the FERC in formula rates is a core state function.

Q. Do you agree with PPL Electric Witness Lookup that the Commission should have no right to review ESAs?[92]

A. No. Again, PPL Electric is proposing that it will be the sole arbiter of whether interconnection costs will be built up into transmission costs for treatment under FERC formula rates. Under PPL Electric's proposal, the Commission cannot exercise its statutory obligation to ensure that TSC costs are allocated according to cost causation and that just, reasonable, and non-discriminatory retail rates are the result. PPL Electric's proposal is unreasonable.

Q. Do you agree that PPL Electric's proposed tariffs will ensure adequate protections for all its retail customers?[93]

A. No, not as long as PPL Electric chooses when to socialize interconnection-related transmission costs.

[92] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 17, Docket No. R-2025-3057164 (Jan. 23, 2026).
[93] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 18, Docket No. R-2025-3057164 (Jan. 23, 2026).

Q. Do you agree that the deployment and use of grid enhancing technologies ("GETs") cannot address reliability or other concerns associated with interconnecting and serving large load customers?[94]

A. No. Witness Lookup incorrectly asserts that GETs provide no benefits to new transmission developed to interconnect and serve large loads and only impact the amount of generation required to serve those loads. By reducing costs and maximizing the value of existing and new assets, GETs can yield transmission savings by reducing and optimizing transmission operations on both new and existing lines. This is a function of the network integration that PPL Electric argues serves as a justification for socialization of interconection-related transmission cost shifts to non-large load customers.

Q. Are "bring your own generation" ("BYOG") options irrelevant in this proceeding?[95]

A. No. Self-generation with renewable resources at large load sites can reduce the capacity requirements for interconnection-related transmission, reduce the environmental impacts that all customers experience from non-renewable generation, and enhance grid reliability and resilience. This is a function of the network integration that PPL Electric argues serves as a justification for socialization of interconnection-related transmission cost shifts to non-large load customers.

[94] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 20, Docket No. R-2025-3057164 (Jan. 23, 2026).
[95] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 21, Docket No. R-2025-3057164 (Jan. 23, 2026).

Q. Do you agree that PPL Electric cannot require that large loads be interruptible?[96]

A. No. All load is interruptible when necessary to maintain grid stability. I agree that cost-effective voluntary interruptible rates are a good place to start for ordinary grid management. In this regard, PPL Electric's new proposal of minimum load guarantee reductions is unsupported by evidence of cost-effectiveness and should not be approved by the Commission without a rigorous analysis showing that such options do not increase the cost shifts already proposed by PPL Electric. Under emergency situations, large loads should be curtailed first.

Q. Do you agree that large load customers should support funding for universal service programs?[97]

A. Yes. As previously explained, all customers realize benefits from measures to improve affordability and reduce arrearages and disconnections of service. All customer classes, including those in the LP-5 and proposed LP-6 classes, should pay into the USR. I disagree with witness Lookup's test that participation in universal service programs should be the sole basis for assigning program costs to customers.

[96] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 22–23, Docket No. R-2025-3057164 (Jan. 23, 2026).
[97] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 24–25, Docket No. R-2025-3057164 (Jan. 23, 2026).

Q. Do you agree that the environmental impacts of large loads and data centers are beyond the purview of this proceeding and the Commission's authority to address?[98]

A. No. PPL Electric is proposing to subsidize large load interconnection by socializing related transmission spending that it proposes. This subsidy enables data center construction and operations in an uneconomic manner by facilitating externalization of construction and operating costs. Measures like requiring or encouraging renewable 'bring your own generation' could address this problem and are germane to the tariff conditions included in LP-5 and proposed LP-6.

XI. SURREBUTTAL TO THE REBUTTAL TESTIMONY OF PPL WITNESS LISA NORDEN

Q. PPL Electric Witness Norden offers evidence that your proposed basic customer charge is likely too high given how customer service staff actually spends time on connecting customers to the utility system.[99] How do you respond?

A. Witness Norden takes issue with my assumption that 17% of customer service costs involve starting service or grid connections for customers. I derived the 17% figure from the percentage of infrastructure costs for connecting customers to the system and providing them with service as a fraction of the total amount of costs that PPL

[98] PPL, St. No. 16-R, Rebuttal Testimony of Joseph Lookup, 28, Docket No. R-2025-3057164 (Jan. 23, 2026).
[99] PPL, St. No. 18-R, Rebuttal Testimony of Lisa Norden, 26, Docket No. R-2025-3057164 (Jan. 23, 2026).

Electric classifies as customer costs.[100] That is, 83% of the capital costs are not customer costs, so I reduced the spending on customer service by 83% to estimate how much of that spending should be classified as a customer cost.

Witness Norden states that only 9% of customer calls are associated with connecting customers. Witness Norden does not cite a figure for customer costs, which was the specific subject of my testimony, and does not offer any evidence about the relationship between customer calls and customer costs. I do not propose to change my recommendation at this time, because I also proposed that PPL Electric be directed to develop its fixed customer charge with the basic customer method and to do the kind of detailed analysis that witness Norden failed to offer in rebuttal. As I stated in my Direct Testimony, it is my belief that this analysis will reveal other costs that should not be classified as customer costs.[101]

Q. PPL Electric Witness Norden also points out that my concern about diluting USR budgets if PPL Electric recovers universal service program labor costs through the USR[102] is misplaced.[103] How do you respond?

[100] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 63–65, Docket No. R-2025-3057164 (Dec. 22, 2025).
[101] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 63–65, Docket No. R-2025-3057164 (Dec. 22, 2025).
[102] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 17, Docket No. R-2025-3057164 (Dec. 22, 2025).
[103] PPL, St. No. 18-R, Rebuttal Testimony of Lisa Norden, 47, Docket No. R-2025-3057164 (Jan. 23, 2026).

A. I appreciate the clarification provided by witness Norden. I also reiterate my testimony that the driving concern should be affordability and finding the best allocation of funding to address that issue, as well as my recommendation that the USR be applicable to all customer classes.[104]

XII. CONCLUSION

Q. Does this conclude your testimony?

A. Yes.

[104] EJA, St. No. 1, Direct Testimony of Karl R. Rábago (Corrected), 18, Docket No. R-2025-3057164 (Dec. 22, 2025).

VERIFICATION

I hereby verify that the facts contained in the foregoing testimony are true and accurate to the best of my knowledge and that I am duly authorized to make this verification, and that I expect to be able to prove the same at any hearing held in this matter. I understand that the statements herein are made subject to penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dated: February 9, 2026

/s/ Karl R. Rábago

ABSTRACT

Based on a database of U.S. electric utility rate cases spanning nearly four decades, the returns on equity authorized by regulators have exhibited a large and growing premium over the riskless rate of return. This growing premium does not appear to be explained by traditional asset-pricing models, often in direct contrast to regulators' stated intent. We suggest possible alternative explanations drawn from finance, public policy, public choice, and the behavioral economics literature. However, absent some normative justification for this premium, it would appear that regulators are authorizing excessive returns on equity to utility investors and that these excess returns translate into tangible profits for utility firms.

1. Introduction

In economics, the equity-premium puzzle refers to the empirical phenomenon that returns on a diversified equity portfolio have exceeded the riskless rate of return on average by more than can be explained by traditional models of compensation for bearing risk. Since Mehra and Prescott's (1985) initial paper on the subject, a large body of research has attempted to explain away the puzzle, but without much success (Mehra and Prescott, 2003). The most likely explanations for the premium appear to reside outside of classical equilibrium models. We call the reader's attention to the Mehra-Prescott puzzle as a means of introducing our instant problem, of which it may be considered an applied case. Simply put: why are the equity returns authorized by electric utility regulators so high, given that riskless rates are so low?

Our scope is as follows. We employ a much larger dataset than has previously been examined in the literature and seek to explain the rates of return *authorized* by state electric utility regulators. We investigate the extent to which the actual returns authorized can be explained by the Capital Asset Pricing Model (CAPM), which regulators (and others) purport to use. We also examine whether the CAPM is capable of explaining the clear trend of rising risk premiums present over the last four decades in electric utility rate cases.

While previous studies have investigated rates of return for regulated electric utilities, the majority of this work has either examined *actual* rates of return to utility stockholders, relied on very limited samples of rate cases, or tested a variety of hypotheses connecting utility earnings to various structural and institutional factors. Table 1 summarizes the previous literature most similar to our study. By contrast, our study employs a far larger sample of rate cases (1,596) than previously examined in the literature. In addition, our focus on authorized rates of return highlights the impact of regulatory rate-setting on consumers, as opposed to stockholders, to the extent that authorized rates are used to set utility revenue requirements, while earned returns accrue to stockholders. This setting also enables us to analyze rate-setting in the context of regulatory decision-making. Actual rates of return earned by utilities can differ from the rates of return authorized by regulators due to factors such as the impact of weather on demand, but primarily due to the operational performance of a utility, including its ability to operate efficiently and control costs to those approved by regulators.

This regulated equity return puzzle is important not just from a theoretical asset-pricing perspective, but also for very practical reasons. The database used in this study reflects more than $3.3 trillion (in 2018 dollars) in cumulative rate-base exposure.[1] An error or bias of merely one percentage point in the allowed return would imply tens of billions of dollars in additional cost for ratepayers in the form of higher retail power prices and could play a profound role in the allocation of investment capital. Coupled with utilities' tendencies toward excessive capital accumulation under rate regulation (Averch and Johnson, 1962; Spann, 1974; Courville, 1974; Hayashi and Trapani, 1976; Vitaliano

[1] This figure reflects the simple cumulative sum of authorized rate bases across all cases. Because rate-base decisions may remain in place for several years, this sum most likely underestimates the actual figure, which should be the authorized rate base in each year examined, whether or not a new case was decided. We cite this figure merely as evidence of the substantial magnitude of the costs at stake.

Table 1
Previous studies of the determinants of electric utility rates of return.

Study	Sample	Description
Joskow (1972)	20 cases in New York between 1960 and 1970	Only capital markets parameter included was cost of debt. Focused on the requested rate of return.
Joskow (1974)	174 cases between 1958 and 1972	No CAPM parameters tested. Regulators tended to ignoring overearning as long as prices were falling.
Hagerman and Ratchford (1978)	79 survey responses from utilities about their last rate case	Used authorized rates. Found positive coefficients related to beta and the debt/equity ratio.
Roberts et al. (1978)	59 cases from 4 Florida utilities between 1960 and 1976	No CAPM parameters tested. Only structural factors examined.
Roll and Ross (1983)	Utility stock returns between 1925 and 1980	No authorized returns used. CAPM underestimates returns relative to the APT.
Pettway and Jordan (1987)	58 electric service companies between 1969 and 1976	Used stockholder returns only.
Binder and Norton (1999)	92 firms	Used stockholder returns to estimate beta. Suggested that regulation causes cash flow "buffering" and that firms may be underearning.
PJM Interconnection (2016)	22 regulated firms between 2000 and 2015	Examined stockholder returns and found regulated firms had positive alpha.
Haug and Wieshammer (2019)	N/A	Regulators in continental Europe "uniformly adopt the [CAPM]" and courts have ruled that the authorized rates are too low. The opposite finding to our study.

and Stella, 2009), the magnitude of the problem makes it incumbent on the industry and regulators to get it right.

There are also policy implications for market design and regulation. A recent PJM Interconnection (2016) study compared and contrasted entry and exit decisions in competitive and regulated markets to evaluate the efficiency of competitive markets for power. One finding that emerged from the study was that regulated utilities appeared to be "overearning" and had generated positive alpha, while competitive firms had not generated positive alpha.[2] Although the study used a limited time window of rate case data and focused on utility stock returns, not returns authorized by regulators, its findings are consistent with those we explore in more detail here.

As an old joke goes, an economist is someone who sees something work in practice and asks whether it can work in theory. Undoubtedly, the utility sector has been successful in attracting capital over the past four decades. We cannot necessarily say, however, that had returns been consistent with the dominant theoretical model used (and thus lower), this would still have been the case. Accordingly, this article also raises the question of whether our theoretical models of required return and asset pricing must be refined. Or, at the very least, whether there are important considerations that must be accounted for in the application of those models to the regulated electric utility industry.

In this article, therefore, we examine the historical data on authorized rates of return on equity in U.S. electric utility rate cases. We compare these rates of return to several conventional benchmarks and the classical theoretical asset-pricing model. We demonstrate that the spread between authorized equity returns (and also earned equity returns) and the riskless rate has grown steadily over time. We investigate whether this growing spread can be explained by classical asset-pricing parameters and conclude that it cannot. We then evaluate possible explanations outside of classical finance to suggest fruitful paths for future research. Specifically, we investigate whether the addition of variables for commission selection and case adjudication contribute explanatory power, in line with existing theories in the pubic choice literature. We conclude with a discussion of the policy implications of the observed premiums and how regulatory rate-setting could be adjusted to mitigate higher premiums.

Section 2 reviews the legal, regulatory, and financial foundations of rate of return determination for utilities. Section 3 describes the data used in our analysis and defines the risk premium on which our analysis is based. Section 4 presents the results of our analysis and outlines the various factors explored, including both classical financial factors and factors outside of the classical paradigm. Section 5 highlights the policy implications of our research, suggests potential mitigating strategies, and concludes.

2. Regulated equity returns and the Capital Asset Pricing Model

At the outset, let us make clear that we are addressing only *regulated* rates of return on equity in this article. We draw no conclusions or inferences about the behavior of returns on non-regulated assets. Our focus is limited to regulated returns because in such cases it is regulators who are tasked with standing in for the discipline of a competitive market and ensuring that returns are just and reasonable. For more than a century, U.S. courts have ruled consistently in support of this objective, while recognizing that achieving it requires consideration of numerous factors that are subject to change over time. The task set to regulators, then, is to approximate what a competitive market would provide, *if one existed*.

Mindful of this mandate, two U.S. Supreme Court decisions are commonly thought to provide the conceptual foundation for utility rate-of-return regulation. In *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia* (262 U.S. 679 (1923)), the Court identified eight factors that were to be considered in determining a fair rate of return, ruling that "[t]he return should be reasonable, sufficient to assure confidence in the financial soundness of the utility, and should be adequate, under efficient and economic management, to maintain and support its credit and enable it to raise money necessary for the proper discharge of its public duties." This position was made more concrete in *Federal Power Commission v. Hope Natural Gas Company* (320 U.S. 591 (1944)), wherein the Court ruled that the "return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks."

In both *Bluefield* and *Hope*, the Court sought to balance the need for utilities to attract capital sufficient to discharge their duties with the need for regulators to protect ratepayers from what would otherwise be rent-seeking monopolists. These efforts in determining "just and reasonable" returns received significant assistance in the 1960s when groundbreaking advances in asset-pricing theory were made in finance. Specifically, the development of the Capital Asset Pricing Model (CAPM) (Sharpe, 1964; Lintner, 1965; Mossin, 1966) provided a rigorous framework within which the question of the appropriate rate of return could be addressed in an objective fashion. The security market line representation of the CAPM [1] set out the equilibrium rate of return on equity, r_E, as the sum of the rate of return on a riskless asset,

[2] In asset pricing models, positive alpha is evidence of non-equilibrium returns, meaning that investors are receiving compensation in excess of what would be required for bearing the risks they have assumed.

r_f, and a premium related to the level of risk being assumed that was defined in relation (through the factor β) to the expected excess rate of return on the overall market for capital, r_m.

$$r_E = r_f + \beta(r_m - r_f) \quad (1)$$

It is outside of the scope of this paper to delve too deeply into the foundations of asset pricing. We note, also, that the CAPM methodology is not the sole candidate for rate-of-return determination in utility rate cases. Morin (2006, p. 13) identifies four main approaches used in the determination of the "fair return to the equity holder of a public utility's common stock," of which the CAPM is but one.[3] Nevertheless, the concept of the appropriate rate of return on equity being a combination of a riskless rate of return and a premium for risk-bearing has since become widely accepted as a means of determining the appropriate authorized return on equity in state-level utility rate cases (Phillips, 1993, pp. 394–400). In contrast, the Federal Energy Regulatory Commission relies exclusively on the DCF approach, which is also common with natural gas utilities. For electric utilities, however, the CAPM in particular is seen as the "preferred" (Myers, 1972; Roll and Ross, 1983, p.22) and "most widely used" (Villadsen et al., 2017, p. 51) method in regulatory proceedings. Multi-factor approaches such as Arbitrage Pricing Theory (APT) (Ross, 1976) and the Fama and French (1993) framework are used with significantly less frequency in practice (Villadsen et al., 2017, p. 206). In other words, our focus on the CAPM is not solely because of its perceived normative status, but also because it is the method most regulators *say they are using*.

In *Hope,* however, the Court also advocated the "end results doctrine," acknowledging that regulatory methods were (legally) immaterial so long as the end result was reasonable to the consumer and investor. In other words, there was no single formula for determining rates. A typical example of the latitude granted by the doctrine is found in Pennsylvania Public Utility Commission (2016, p. 17): "The Commission determines the [return on equity] based on the range of reasonableness from the DCF barometer group data, CAPM data, recent [returns on equity] adjudicated by the Commission, and **informed judgment** [emphasis added]." Rate determination in practice is often not simply a matter of arithmetic; rather, it is an act of judgment performed by regulators. As a result, our investigation examines not just the relation of authorized rates to those implied by the CAPM, but also the potential for that relationship to be influenced by regulator judgment.

Before we turn to the data, however, let us dispense with an alternate formulation of the underlying question. In questioning the size of the premium and why equity returns are so high, one might also ask instead why the riskless rate is so low. Indeed, Mehra and Prescott (1985) ask this very question, before dismissing it on theoretical grounds. We revisit this question in light of recent data and ask whether the premium during the period in question is more a function of riskless rates being forced down by the Federal Reserve's intervention, than of equity premiums increasing (since the manifest intent of quantitative easing was to lower riskless rates).[4] Our historical data, as Section 3 indicates, do not support that hypothesis. The premium growth has persisted since the beginning of our data series in 1980 and has persisted across a variety of monetary and fiscal policy regimes.

3. Regulated electric utility returns on equity, 1980–2018

3.1. Historical authorized return on equity data

The data used in this study were collected and maintained by Regulatory Research Associates (RRA), a unit of S&P Global. The RRA database is comprehensive. It contains every electric utility rate case in the United States since 1980 in which the utility has requested a rate change of at least $5 million or a regulator has authorized a rate change of at least $3 million. Our study comprises the period from 1980 through 2018. Table 2 illustrates the bridge from the RRA rate-case population to the rate-case sample used in our analyses. We examined the returns on equity authorized by the regulatory agencies, *not* the returns requested by the utilities.[5] The sample we use in this paper contains 79% of the RRA universe, but 97% of the rate cases in which a rate of return on equity was authorized by a state regulator.

Nearly all fifty states and Washington D.C. are represented in the data set.[6] Thirty-two electric utility rate cases satisfying the qualifications listed above were filed in the average state over the past thirty-eight years, with the most being filed in Wisconsin (120) and the fewest being filed in Tennessee (3), Alaska (2), and Alabama (1). The frequency of filing in a state does not appear to have any relationship to premium growth. The average risk premium has grown in both the ten states that completed the most rate cases and the ten states that completed the fewest rate cases and has grown at very similar rates (see Fig. 1). In fact, as Fig. 2 illustrates, the general trend across all states is similar.

In the early 1980s there were over 100 rate cases filed each year. By the late 1990s, in the midst of widespread deregulation of the electric power industry, the number of filings reached its lowest point (with six in 1999). Since then, filing frequency has increased to an average of forty-eight per year over the last three years (see Fig. 3). The decline in rate case activity in many instances was the direct result of rate moratoria related to the transition to competitive markets in the late 1990s, as well as to moratorium-like concessions made to regulators related to merger approvals over the last decade. Many of these moratoria will expire over the next two years, suggesting a new increase in rate case activity is likely. Finally, no individual utility had an outsized influence on the sample. One hundred forty-four different companies filed rate cases, but many have since merged or otherwise stopped filing.[7] The average firm filed eleven rate cases in our sample. Within our sample the most frequently-filing entity was PacifiCorp, which filed seventy-three rate cases, or less than 5% of the sample.

3.2. Calculating the regulated equity premium

Regulated equity returns are generally equal to the sum of the riskless rate of return and a premium for risk-bearing. In the CAPM, the premium for risk-bearing is given by $\beta(r_m - r_f)$, where β is the utility's

[3] The other three approaches identified by Morin (2006) are: Risk Premium (which is an attempt to estimate empirically what the CAPM derives theoretically), Discounted Cash Flows (or "DCF," which is a dividend capitalization model), and Comparable Earnings (which is an empirical approach to deriving cost of capital from market comparables based on *Hope*).

[4] This has also been an ongoing issue of contention in recent regulatory proceedings. In Opinion 531-B (Federal Energy Regulatory Commission, March 3, 2015, 150 FERC 61,165), the Federal Energy Regulatory Commission (FERC) found that "anomalous capital market conditions" caused the traditional discount rate determination methods not to satisfy the *Hope* and *Bluefield* requirements (150 FERC 61,165 at 7). But in a related decision only eighteen months later (Federal Energy Regulatory Commission, September 20, 2016, 156 FERC 61,198), FERC acknowledged that expert witnesses disagreed as to whether any market conditions were, in fact, "anomalous" (156 FERC 61,198 at 10).

[5] To be clear, we refer to the rates set by regulators as the "authorized" rates. These may be contrasted with utilities' "requested" rates and also with the "earned" rates of return actually realized by utilities. Regulatory *authorization* of a rate is not a guarantee that a utility will actually *earn* such a rate. We address this issue in further detail in Section 4.5.

[6] Only Nebraska did not have a reported rate case meeting the parameters of the data set. Nebraska is unique in that it is the only state served entirely by consumer-owned entities (e.g., cooperatives, municipal power districts) and therefore absent a profit motive it does not have the same adversarial regulatory system as all other states.

[7] The level of analysis is at the regulated utility level. We recognize that many holding companies have multiple ring-fenced regulated utility subsidiaries.

Table 2
Bridge illustrating how our sample is constructed from the RRA electric utility rate case population data.

Number of cases	Percent of cases	Description
2033	100.0%	All electric utility rate cases 1980–2018 in which utility has requested a rate change of at least $5 million or a regulator has authorized a rate change of at least $3 million.
−19	−0.9%	Rate cases with final adjudication (i.e., fully-litigated or settled) still pending as of December 31, 2018, are excluded
−369	−18.2%	Rate cases with no return on equity determination are excluded
−30	−1.5%	Rate cases with no capital structure determination are excluded
−19	−0.9%	Rate cases with authorized rates lower than the then-prevailing riskless rate are excluded
1596	79.0%	Rate cases used in our analysis

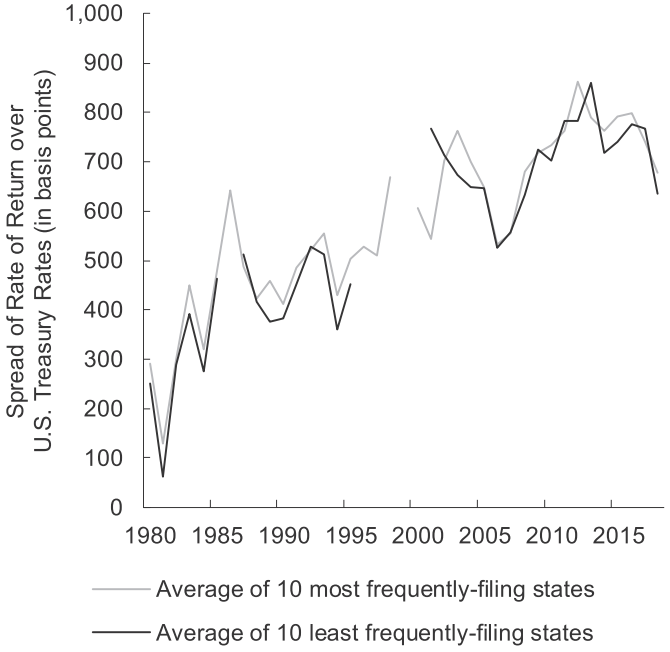

Fig. 1. Risk-premium growth by frequency of case filing. Gaps in the series reflect years in which no rate cases were filed for the subject group. The risk premium is calculated as $r_E - r_f$, or the excess of the authorized return on equity over the then-current riskless rate.

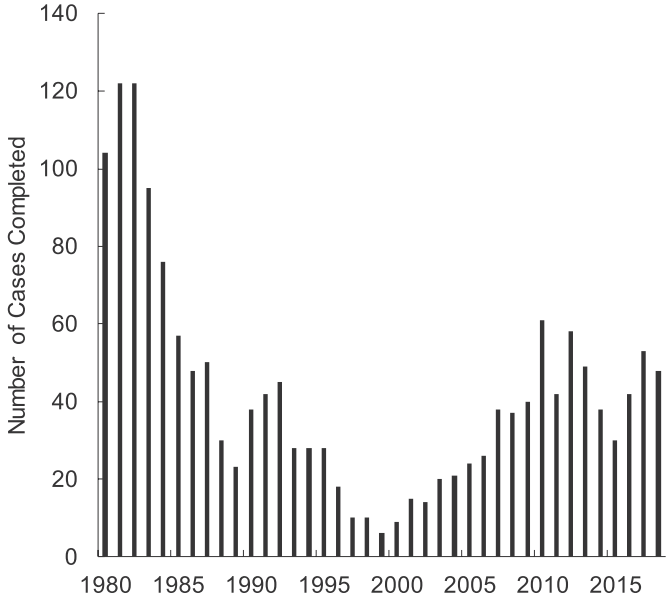

Fig. 3. Number of electric utility rate cases finalized by year.

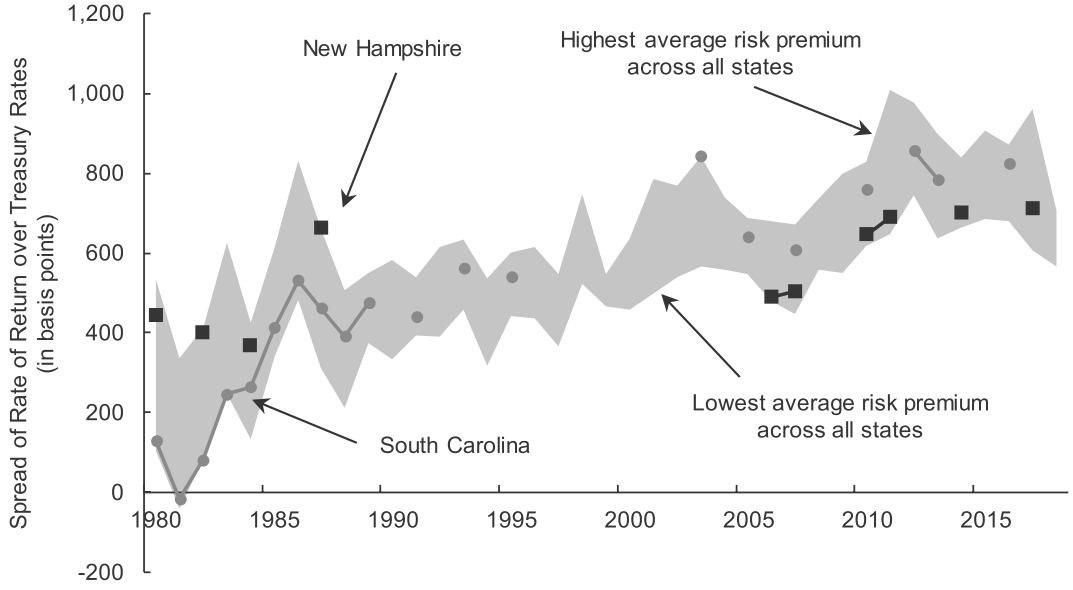

Fig. 2. Range of risk-premium growth across states. States with highest (New Hampshire) and lowest (South Carolina) rates of risk-premium growth over the period (among states with at least five rate cases) are highlighted.

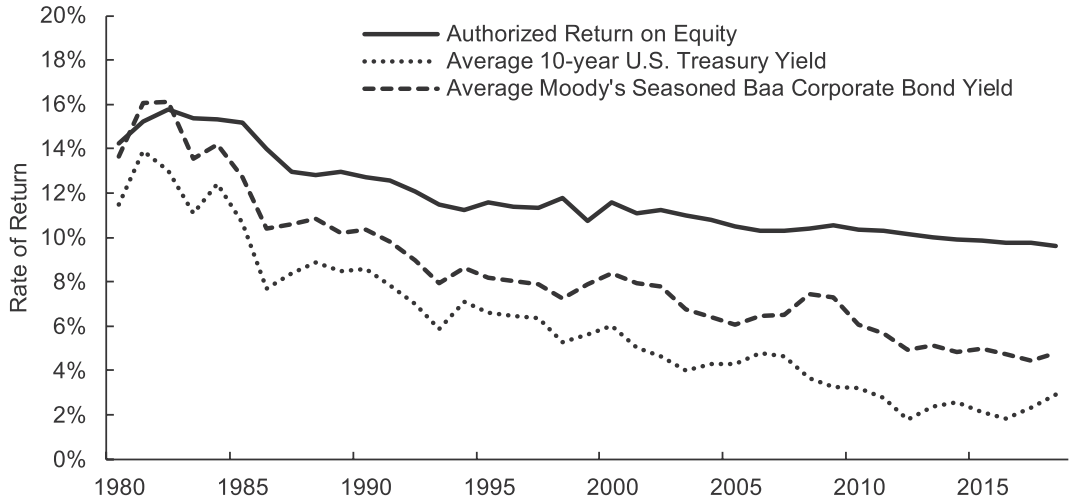

Fig. 4. Annual average authorized return on equity vs. U.S. Treasury and investment grade corporate bond rates.

equity beta. Rearranging the security market line equation [1], we define the regulated equity premium as $r_E - r_f = \beta(r_m - r_f)$. Presented thus, we first note that the existence of a (positive) regulated equity premium is not, by itself, evidence of irrational investor behavior or model failure. Neither is the existence of a growing regulated equity premium. We take no position here on what the "correct" premium should be in any instance. Rather, we shall be content in this article simply to determine whether or not the behavior of the risk premium in practice is consistent with financial theory.

On average, the authorized return on equity is 5.1% (standard deviation = 2.2%) higher than the riskless rate. Fig. 4 illustrates the average authorized return on equity over the period against the average annual riskless rate and investment-grade corporate bond rate.[8] For avoidance of doubt, we note that only the U.S. Treasury note rate should be considered the riskless rate. We include corporate bond rates solely to assess whether the trend in riskless rates is materially different from the trend in risky debt.

While the regulated equity premium has averaged 510 basis points across the entire time period, in 1980 the average premium was only 277 basis points, whereas in 2018 it averaged 668 basis points. Fig. 5 shows the difference between the authorized return on equity and the riskless rate for each case in the data over the past thirty-eight years. Although the premium is determined against the riskless rate of return (represented here as the yield on a 10-year U.S. Treasury note), we also present for comparison the spreads determined against the yield on the Moody's Seasoned Baa Corporate Bond Index to illustrate that the effect is not an artifact of recent monetary policy on Treasury rates. The trends of the two series are quite similar (and both have statistically-significant positive slopes); accordingly, we shall present only the Treasury rate-determined premiums throughout the remainder of this paper.

Given that a large and growing regulated equity premium exists, our question is whether or not it can be explained within an equilibrium asset-pricing framework such as the CAPM. If β were to have increased during the time period in question, for example, the growth of the regulated equity premium may well be explained by the increasing (relative) riskiness of utility equity. As Section 4 demonstrates, however, in fact it cannot.

[8] We used the 10-year constant maturity U.S. Treasury note yield as a proxy for the riskless rate and the yield on the Moody's Seasoned Baa Corporate Bond Index as a proxy for investment-grade corporate bond rates. Both series were obtained from the Federal Reserve's FRED database (Board of Governors of the Federal Reserve System, n.d.-a; n.d.-b).

4. Potential explanations for the premium

Having demonstrated the existence of a large and growing regulated equity premium, we investigate various potential explanations. As we indicated above, we proceed with our investigation of explanations for the premium via the Capital Asset Pricing Model. The CAPM allows three basic mechanisms of action for a change in the risk premium: (i) the manner in which the underlying assets are financed has changed, (ii) the risk of the underlying assets themselves has changed, and/or (iii) the rate at which the market in general prices risk has changed. We explore each in turn and formally test whether the trend in the data can be explained by the CAPM. Finding that it cannot, we then turn to theoretical explanations outside of the CAPM. The potential alternative explanations in Sections 4.5 through 4.7 all represent viable paths for further research.

4.1. Capital structure effects

As corporate leverage increases, the underlying equity becomes riskier and thus deserving of higher expected returns. In finance, the Hamada equation decomposes the CAPM equity beta (β) into an underlying asset beta (β_A) and the impact of capital structure (Hamada, 1969, 1972). Specifically, the Hamada equation states that $\beta = \beta_A\left[1 + (1-\tau)\frac{D}{E}\right]$, where τ is the tax rate and D and E are the debt and equity in the firm's capital structure, respectively. We use the marginal corporate federal income tax rate for the highest bracket, as provided in Internal Revenue Service (n.d.).

One explanation for a growing risk premium would be steadily increasing leverage among regulated utilities. However, regulators also generally approve of specific capital structures as part of the rate-making process. As a result, our database also contains the authorized capital structures for each utility.[9] In fact, utilities are *less* leveraged today than they were in 1980. The average debt-to-equity ratio in the first five years of the data set (1980–1984) was 1.74; in 2014–2018 it was 1.05. More generally, we can observe the impact of leverage

[9] To be clear, the authorized capital structures evaluated here apply to the regulated utility subsidiaries, and not necessarily to any holding companies to which they belong. The holding companies themselves may utilize more or less leverage, but typically the regulated utility subsidiaries are "ring-fenced" so as to isolate them from holding company-level risks. Similarly, rate-of-return regulation would apply only to the regulated subsidiaries, not to the parent holding company. As a result, the capitalization of the regulated entity (studied here) is often different from the capitalization of the publicly-traded entity that owns it.

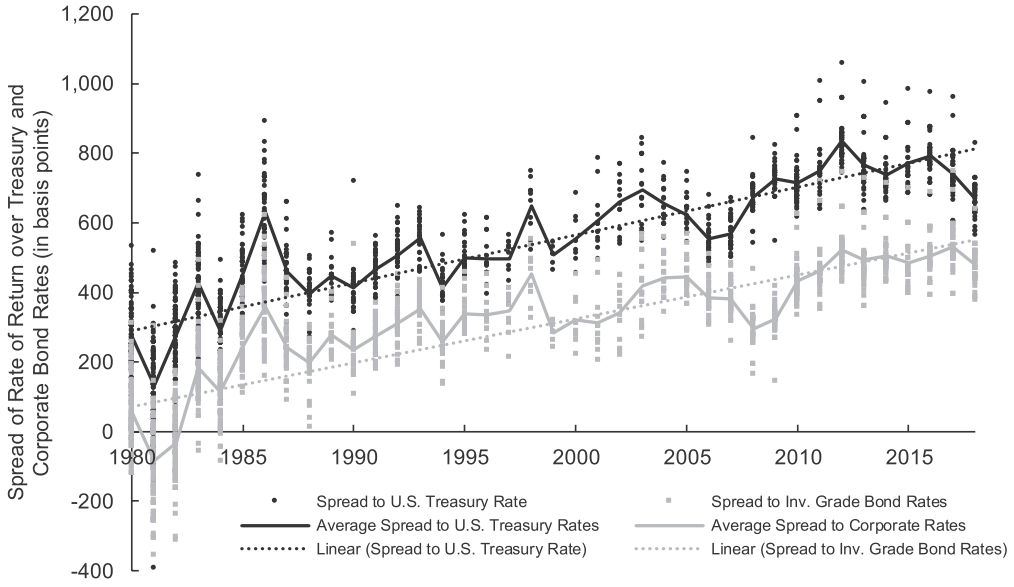

Fig. 5. Authorized return on equity premium, 1980–2018.

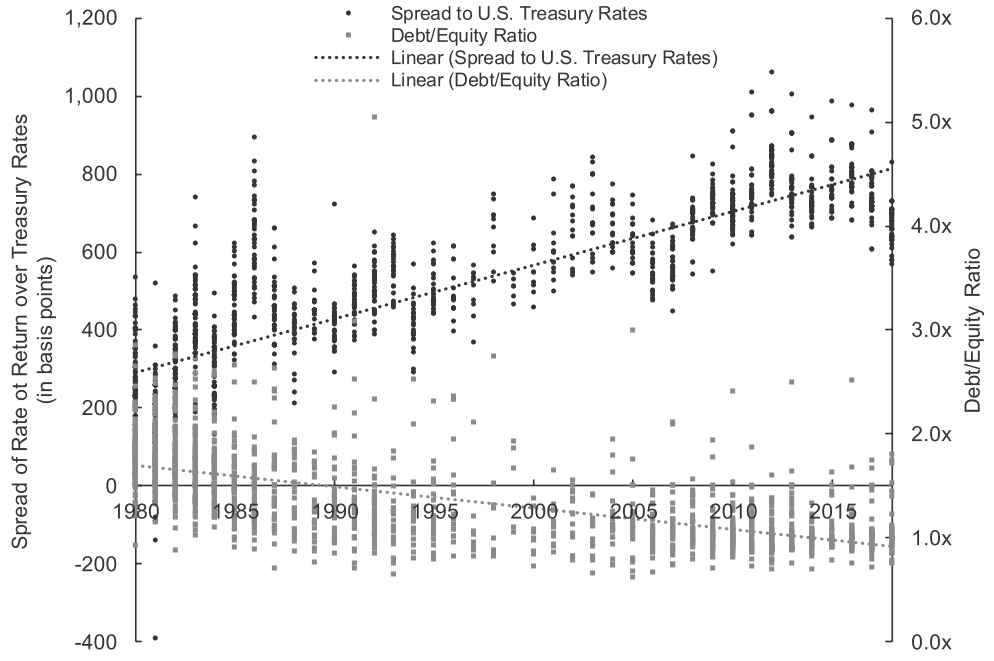

Fig. 6. Authorized return on equity premium vs. utility leverage.

moving in the opposite direction of what one may expect, whether we examine the debt-to-equity ratio exclusively or the Hamada capital structure parameter (i.e., the portion of the Hamada equation multiplied by β_A, or $\left[1 + (1 - \tau)\frac{D}{E}\right]$) in its entirety. Figs. 6 and 7 illustrate these results. As a result, it does not appear as if capital structure itself can explain the behavior of the risk premium.

4.2. Asset-specific risk

As noted above, the Hamada equation decomposes returns into compensation for bearing asset-specific risks and for bearing capital structure-specific risks. Even if a firm's capital structure remains unchanged, the riskiness of its underlying assets may change. This risk is represented by the unlevered asset beta, β_A. An increase in the asset beta applicable to such investments would, all else held equal, justify an increase in the risk premium.

To examine such a hypothesis, we used the fifteen members of the Dow Jones Utility Average between 1980 and 2018 as a proxy for "utility asset risk." We estimated five-year equity betas for each firm by regression of their monthly total returns against the total return on the S&P 500 index.[10] The equity betas calculated were then converted to

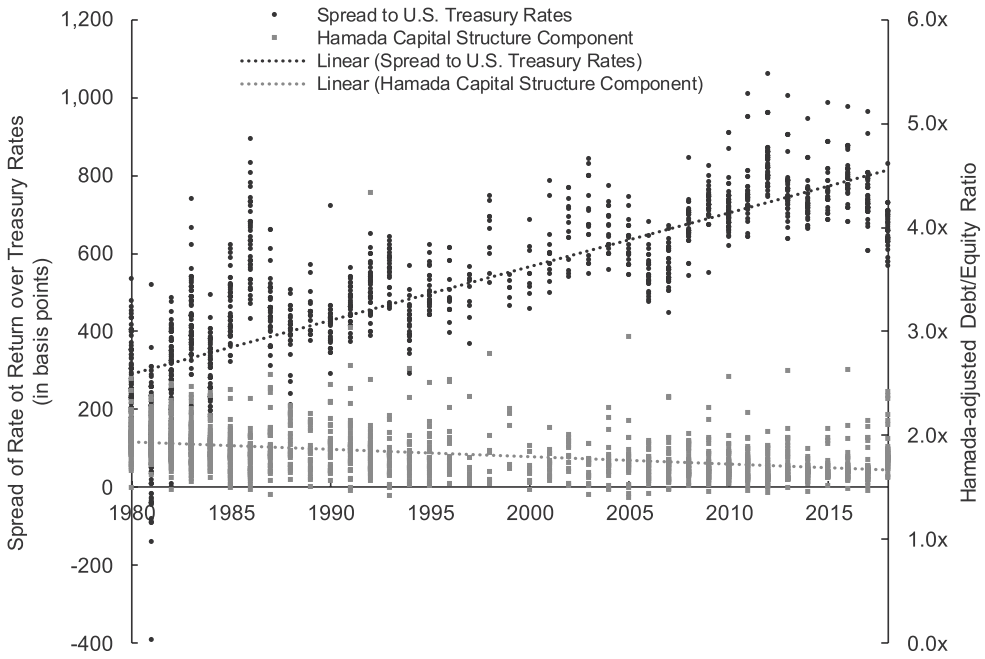

Fig. 7. Authorized return on equity premium vs. the Hamada capital structure parameter.

asset betas using Hamada's equation and corrected for firm cash holdings using firm-specific balance sheet information. We then averaged the fifteen asset betas calculated in each year as our proxy for utility asset risk.[11] The results remain substantively unchanged whether an equal-weighted or a capitalization-weighted average is used.

Although there is, of course, variation in the industry average asset beta across the thirty-eight years, the general trend is down. Fig. 8 presents the risk premium in comparison to the industry average asset beta. As a result, the asset beta is moving in the opposite direction from what one might expect, given a steadily-increasing risk premium, and therefore does not appear to explain the observed behavior of the risk premium.

4.3. The market risk premium

The last CAPM-derived explanation for a changing risk premium relates to the pricing of risk assets in general. If investors require greater compensation for bearing the systematic risk of the market in general, then the risk premium across all assets would increase as well (all else held equal) as a result of the average risk aversion coefficient of investors increasing. The market risk premium reflects this risk-bearing cost in the CAPM.

Although we can observe the *ex post* market risk premium, investors' assessment of the *ex ante* market risk premium is generally based on assuming that historical experience provides a meaningful guide to future experience.[12] It is customary to examine the actual market risk premium over some historical time period and base one's estimate of the *expected* future market risk premium on that historical experience (Sears and Trennepohl, 1993; Villadsen et al., 2017, p. 59). While the size of the historical window is subjective, it is sufficient for our purposes to note that the slope of the market risk premium over time has been negative irrespective of the historical window used.[13] Most sources advocate for using the longest time window available (Villadsen et al., 2017, p. 61); we use a fifty-year historical window for calculation purposes. As Fig. 9 illustrates, that declining trend in the market risk premium appears to be inconsistent with the increasing risk premium exhibited by the rates of return authorized by regulators.

4.4. Testing a theoretical model of the risk premium

Although we have illustrated that each component of the CAPM risk premium appears at odds with the risk premium derived from rates of return authorized by regulators, we now turn to a formal exploration of these relationships. By combining the security market line representation of the CAPM [1] and the Hamada equation, we can define the risk premium, $r_E - r_f$.

$$r_E - r_f = \beta_A \times \left[1 + (1-\tau)\frac{D}{E}\right] \times MRP \tag{2}$$

In [2], $r_E - r_f$ is the risk premium, or the difference between the authorized rate of return on equity for a given firm in a given rate case and the then-prevailing riskless rate. The asset beta, β_A, is calculated as described in Section 4.2. The middle component is taken from the Hamada equation and reflects the marginal corporate income tax rate (τ) in effect in the year in which the equity return was authorized and the authorized debt-to-equity ratio reflected in the regulators' decision for each case. Lastly, *MRP* is the *ex ante* estimate of the market risk

[10] We determined the composition of the Dow Jones Utility Average index at the end of each year and used a rolling five-year window to perform the regressions. For example, the 1980 regression betas were estimated based on monthly returns from 1975 to 1979, the 1981 regression betas were estimated based on monthly returns from 1976 to 1980, and so on.

[11] The balance sheet and total return data are taken from Standard & Poor's COMPUSTAT database. We calculate $\beta'_A = \beta / \left[1 + (1-\tau)\frac{D}{E}\right]$ and $\beta_A = \beta'_A / \left[1 - \frac{C}{D+E}\right]$, where C equals the amount of cash and cash equivalents held by each firm and D and E represent, respectively, the debt and equity of each firm. We measure D as the sum of Current Liabilities, Long-Term Debt, and Liabilities–Other in the COMPUSTAT data. Because final firm accounting information was not available for 2018 at the time of writing, we maintained the capital structures calculated using 2017 data.

[12] We do not dwell here on the issue of the "observability" of the market portfolio as it relates to testability of the CAPM. We shall assume that the S&P 500 index is a reasonable proxy for the market portfolio.

[13] The market risk premium data used here are taken from data on the S&P 500 and 10-year U.S. Treasury notes collected from the Federal Reserve (Damodaran, n.d.).

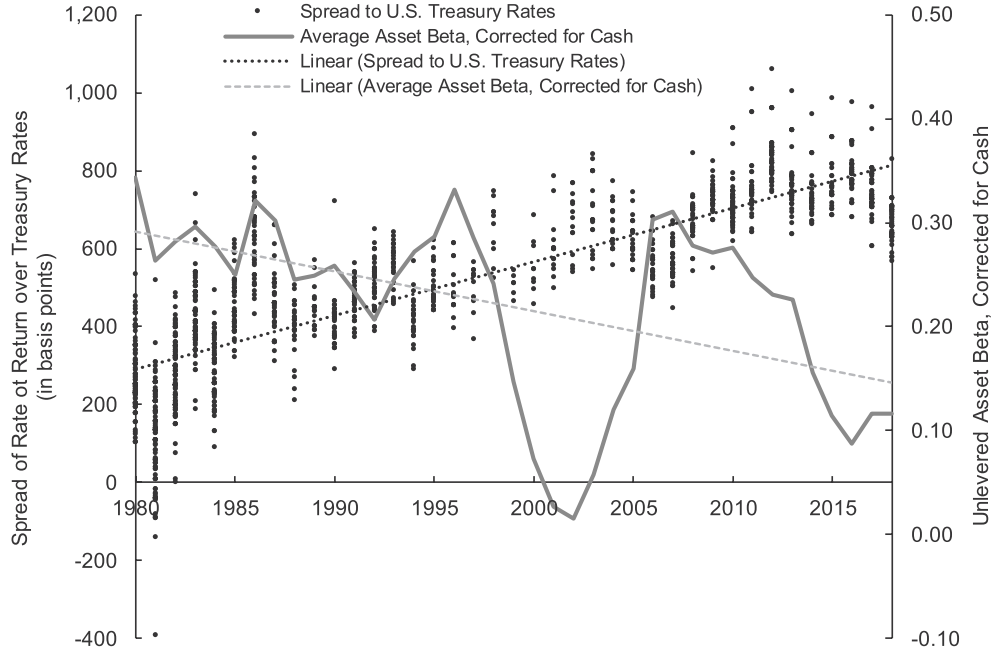

Fig. 8. Authorized return on equity premium vs. industry average asset beta.

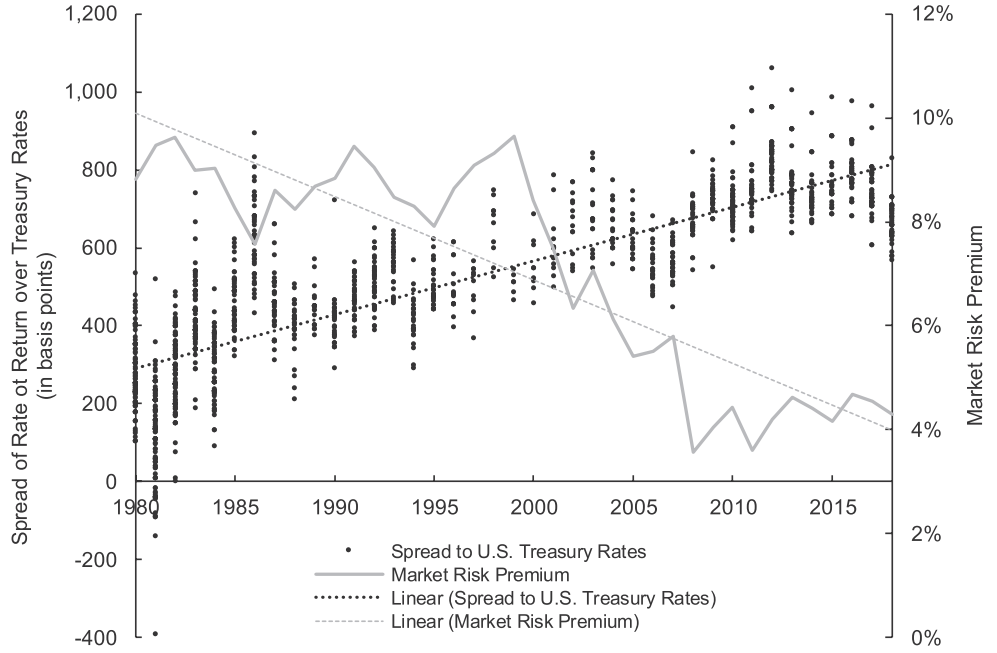

Fig. 9. Authorized rate-of-return premium vs. *ex ante* estimated market risk premium.

premium based on a fifty-year historical window as of the year in which each equity return was authorized.

Let $i = 1, ...,N$ index firms and $t = 1, ...,T$ index years. Not every firm files a rate case in every year. In addition, firms enter and exit over time due to merger or bankruptcy. Because regulators must have an evidentiary record to support their determinations, we assume that each rate case is evaluated independently in an adversarial hearing across time.

By using a logarithmic transform of [2], we arrive at equation [3].

$$ln(r_{E,it} - r_{f,t}) = \gamma_0 + \gamma_1 ln(\beta_{A,t}) + \gamma_2 ln\left[1 + (1 - \tau_t)\frac{D_{it}}{E_{it}}\right] + \gamma_3 ln(MRP_t) \quad (3)$$

In a traditional ordinary least squares (OLS) regression setting, the CAPM would hypothesize that γ_0 should be zero (or not significant) and γ_1, γ_2, and γ_3 should be positive and significant. What we find, however, is exactly the opposite of that (Table 3). The coefficients are negative and strongly significant. Further, a comparison of the observed risk premium to the risk premium estimated by our regression model reveals a good fit (Fig. 10). The negative coefficients are problematic for the CAPM, but also suggest rather counterintuitive effects at an applied

level. Regulators use CAPM prescriptively in rate cases; they are determining what utilities *should* earn. A negative capital structure coefficient suggests, for example, that investors in firms with high leverage *should* be compensated with *lower* returns. Similarly, negative coefficients imply that investors in firms with riskier assets (higher asset betas) and during periods of higher risk aversion (higher market risk premiums) should also be compensated with *lower* returns. These results would be difficult for regulators to justify on normative grounds.

It may be the case, however, that common cross-sectional variation is biasing the results for this data by creating endogeneity issues for the OLS-estimated coefficients. For example, the repeated presence of the same utilities over time could introduce entity-level fixed effects into the analysis. Accordingly, we performed an F-test to evaluate the presence of individual-level effects in the data (Judge et al., 1985: p. 521). The test strongly supports the presence of individual (utility-level) effects ($F_{143,1449} = 1.5$, $p < 0.001$). In addition, the Hausman test (Hausman, 1978; Hausman and Taylor, 1981) supports the fixed-effect specification in lieu of random effects ($\chi^2(3) = 24.0$, $p < 0.001$). As a result, Table 3 also provides the regression coefficients controlling for utility-level fixed effects. These coefficients, while numerically different than the OLS results, are nevertheless still negative and strongly significant, in conflict with both financial theory and regulator intent.

Fig. 10 also reveals a distinct shift in the predicted trend of the risk premium beginning in 1999. This is notable because for many parts of the U.S., 1999 represented the year that implementation of electric market reform and restructuring began, with wholesale markets such as ISO-New England opening and several divestiture transactions of formerly-regulated generating assets occurring, establishing market valuations for formerly regulated assets (Borenstein and Bushnell, 2015). In addition, FERC issued its landmark Order 2000 encouraging the creation of Regional Transmission Organizations. To examine this point in time, we divided the data into two sets, 1980–1998 and 1999–2018, and estimated separate regression models for each subset using both OLS and controlling for utility-level fixed effects (Table 4). As before, the F (pre-1999 $F_{129,805} = 1.6$, $p < 0.001$; post-1998 $F_{129,525} = 3.2$, $p < 0.001$) and Hausman (pre-1999 $\chi^2(3) = 15.5$, $p < 0.01$; post-1998 $\chi^2(3) = 23.8$, $p < 0.001$) tests both strongly support the model controlling for utility-level fixed effects over OLS.

Although the results in both cases are consistent with our earlier finding that the standard finance model appears at odds with the empirical data, the two regression models are noticeably different from one another and appear to better represent the data (Fig. 11). We performed the Chow (1960) test and confirmed the presence of a structural break in the data in 1999 ($F_{4,1588} = 91.6$, $p < 0.001$).[14] We find this result suggestive that deregulatory activity may have an influence even on still-regulated utilities—a point to which we shall return in Section 5.2.

4.5. Potential finance explanations other than the CAPM

In Mehra and Prescott's (2003) review of the equity premium puzzle literature, the authors acknowledge that uncertainty about changes in the prevailing tax and regulatory regimes may explain the premium. Such forces may also be at work with regard to regulated rates of return. To the extent that investors require higher current rates of return because they are concerned about future shocks to the tax or regulatory structure of investments in regulated electric utilities (e.g., EPA's promulgation of the Clean Power Plan, the U.S. Supreme Court's stay of the Clean Power Plan, expiration of tax credits), such concern may be manifest in a higher degree of risk aversion that is unique to investors in the electric utility sector, and therefore a higher "market" risk premium on the assumption that capital markets are segmented for electric utilities.

A separate line of inquiry concerns a criticism of the Hamada equation in the presence of risky debt (Hamada (1972) excluded default from consideration). Conine (1980) extended the Hamada equation to accommodate risky debt by applying a debt beta. Subsequently, Cohen (2008) sought to extend the Hamada equation by adjusting the debt-to-equity parameter to incorporate risky debt in the calculation of the equity beta [4].

$$\beta = \beta_A \left[1 + (1-\tau)\frac{r_D}{r_f}\frac{D}{E}\right] \tag{4}$$

We view neither of these proposed solutions as entirely satisfying, and note that they tend to be material only for high leverage, which is not common to regulated utilities. Nevertheless, we acknowledge that adjustments to the capital structure may influence the risk premium. However, applying the Cohen (2008) modification and using the Moody's Seasoned Baa Corporate Bond Yield as a proxy for the cost of risky debt (r_D), we note that our regression results are substantively unchanged. As Table 5 illustrates, use of the Cohen betas still results in highly significant, but negative coefficients, which is contrary to theory. These results are maintained when controlling for utility-level fixed effects, and the F (Hamada $F_{143,1449} = 1.5$, $p < 0.001$; Cohen $F_{143,1449} = 1.3$, $p < 0.01$) and Hausman (Hamada $\chi^2(3) = 24.0$, $p < 0.001$; Cohen $\chi^2(3) = 6.3$, $p < 0.1$) tests are significant in support of the fixed effects model.

In lieu of modifying the CAPM parameters, some researchers have suggested that Ross's (1976) Arbitrage Pricing Theory (APT) is preferable to the CAPM because the CAPM produces a "shortfall" in estimated returns (Roll and Ross, 1983) and "underestimates" actual returns in utility settings (Pettway and Jordan, 1987). While the works of these authors are suggestively similar to the analysis contained in this paper, we note that those authors were examining the *actual* returns on utility common stocks, rather than the rates of return *authorized* by regulators for assets held in utility rate bases. The distinction is important. In the case of the former, it is a question of asset pricing models and efficient capital markets. In the case of the latter, it is an issue of regulator judgment. We note specifically that regulators are making decisions that set these rates, and in many cases are doing so explicitly stating that they are relying in whole or in part on the CAPM. Our question concerns not just whether the CAPM is a better asset pricing model (than the APT, for example), but whether regulators' own judgment can

[14] Additional testing using the Andrews (1993) approach supports the presence of structural breaks during the transitional regulatory period identified by Borenstein and Bushnell (2015), confirming the appropriateness of our selection of 1999 as a year with strong historical motivation for a structural break.

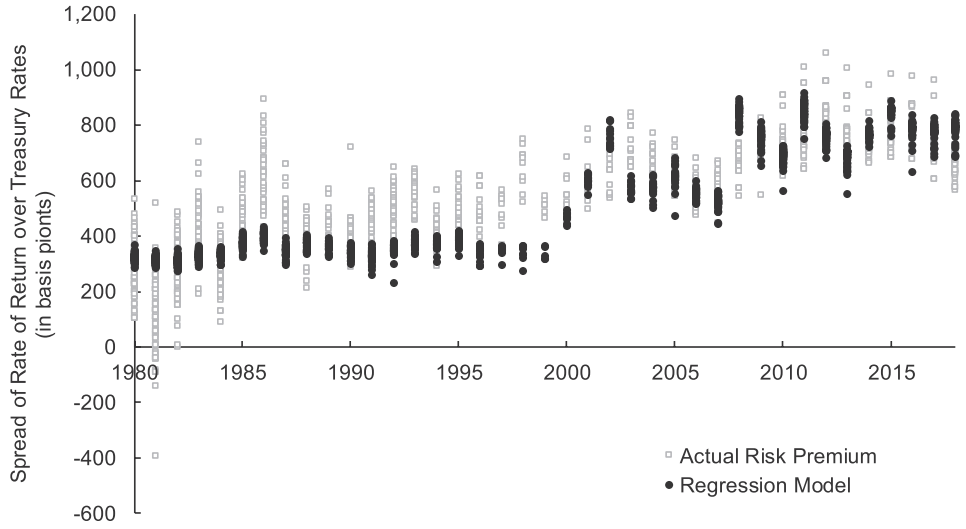

Fig. 10. Actual vs. OLS regression-model risk premium.

be explained by the model on which they claim to rely.

Lastly, to address a related point, we also examined the actual earned rates of return on equity for the 15 utilities in the Dow Jones Utility Average over our historical window. We used each firm's actual return on equity, calculated annually as Net Income divided by Total Equity, as reported in the COMPUSTAT database. This measure of firm profitability examines how successful the firms were at converting their *authorized* returns into *earned* returns. In general, the earned returns closely tracked the authorized returns, suggesting that the decisions of regulators are significantly influencing the actual earnings of regulated utilities. Fig. 12 compares the spread of *authorized* rates of return over riskless rates to the spread of *earned* rates of return over riskless rates and to the median net income of utilities in constant 2018 dollars.[15] The steadily increasing risk premium we have identified is present in both series. The series are correlated at 0.77 (authorized vs. earned), 0.59 (authorized vs. median net income), and 0.75 (earned vs. median net income), all of which are significantly greater than zero ($p < 0.001$). Further, the "capture rate" (the percentage of authorized rates actually earned by the utilities) averaged 96% over the entire time period. As a result, we conclude that the trend of increasing risk premiums is not an abstract anomaly occurring in a regulatory vacuum, but rather a direct contributor to the earnings of regulated utilities.

However, these measures of firm performance must be interpreted with caution. The authorized rates of return apply to jurisdictional utilities, while the earned rates of return are calculated based on holding company performance, which in many cases are not strictly equivalent. Further, increasing net income may be due to industry consolidation producing larger firms (with income increasing only proportionally to size), rather than an increase in profitability itself. In fact, the average income-to-sales ratio of the Dow Jones Utility Average members remained remarkably stable across the period of our study,

[15] We used the median earned rate of return over the 15 Dow Jones utilities. The results are substantively equivalent if the average earned rate of return is used but are more volatile due to the impact on earnings of the California energy crisis of 2000–2001 and the collapse of Enron in 2001.

and actually slightly declined, suggesting that gains in net income came from growing revenue, rather than increasing margins (although revenue growth may itself be a function of rising authorized rates of return). Nevertheless, the results are suggestive.

We have not repeated the analysis of Roll and Ross (1983) and Pettway and Jordan (1987) and examined the relationship between firm performance and stock performance. Their findings, however, suggest that regulated utilities have realized *higher* stock returns than can be explained by the CAPM—a finding congruent with our work and suggestive of other factors being priced by the market. This does not entirely explain the judgment issue, however: why regulators appearing to use a CAPM approach provide utilities with returns that also appear to be excessive.

4.6. Potential public choice explanations

Another category of potential explanations emerges from the public choice literature on the role of institutional factors. Regulators may be deliberately or inadvertently providing a “windfall” of sorts to electric utilities. Stigler (1971), among others in the literature on regulatory capture, noted that firms may seek out regulation as a means of protection and self-benefit. This is particularly true when the circumstances are present for a collective action problem (Olson, 1965) of concentrated benefits (excess profits to utilities may be significant) and diffuse costs (the impact of those excess profits on each individual ratepayer may be small). Close relationships between regulators and the industries that they regulate have been observed repeatedly, and one possible explanation for the size and growth of the risk premium is the electric utility industry's increasing “capture” of regulatory power.

We are somewhat skeptical of this explanation, however, both because of the degree of intervention in most utility rate cases by non-utility parties, and because the data do not suggest that regulators have become progressively laxer over time. Fig. 13 compares the rates of return on equity *requested* by utilities in our data set against the rates of return ultimately authorized. As the trend line illustrates, this ratio has remained remarkably stable (within a few percent) over the thirty-eight

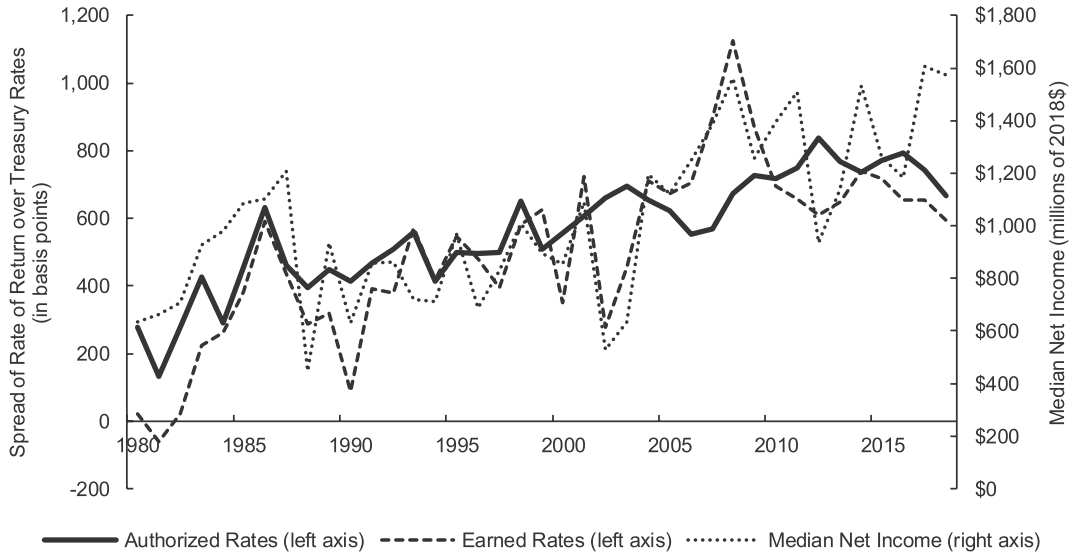

Fig. 12. Comparability of spreads measured with authorized and earned rates of return and utility net income.

years of data, even as the risk premium itself has steadily increased. As a result, the data do not suggest in general an obvious, growing permissiveness on the part of regulators. However, the last nine years are *suggestive* of an increasing level of accommodation among regulators. We propose a possible explanation for this particular pattern in Section 4.7.

To examine the public choice issues further, we investigated whether the risk premiums were related to the selection method of public utility commissioners and whether or not the rate cases in question were settled or fully litigated. The traditional hypothesis has been that elected (instead of appointed) commissioners were less susceptible to capture, more "responsive" to the public, and therefore more pro-consumer. Further, that cases that were settled were more likely to be accommodating to utilities (as money was "left on the table") and therefore would result in higher rates.

A sizable body of literature, however, has largely rejected the selection method hypothesis. Hagerman and Ratchford (1978) and Primeaux and Mann (1986) concluded that the selection method had no impact on returns or electricity prices respectively. Others have agreed that the selection method alone doesn't matter; it is how closely the regulators selected are monitored that matters (Boyes and McDowell, 1989). In addition, whatever evidence of an effect that may exist is likely due to selection method being a proxy for states with different intrinsic structural conditions (Harris and Navarro, 1983). Lastly, while states with elected utility commissioners (Kwoka, 2002) or commissioners whose appointment by the executive requires approval by the legislature (Boyes and McDowell, 1989) tend to have lower electricity prices, those low prices may create the perception of an "unfavorable" investment climate and may therefore lead to a higher cost of capital (Navarro, 1982). Alternatively, if lower prices are observed, it then remains unclear who actually pays (utility shareholders in foregone profits or consumers in higher costs of capital) for the lower observed prices (Besley and Coate, 2003).

To examine the impact of commission selection method and means of case resolution on risk premium, we categorized each state as having an elected or appointed utility commission based on data in Costello (1984), Besley and Coate (2003), and Advanced Energy Economy (2018). In addition, each rate case was reported as being either fully litigated or settled. The literature has hypothesized (but largely not found) that elected commissions are more "responsive" and therefore more pro-consumer. As a result, the expectation would be that the risk premiums implicit in authorized rates were higher for appointed commissions. Similarly, for means of case resolution, risk premiums would

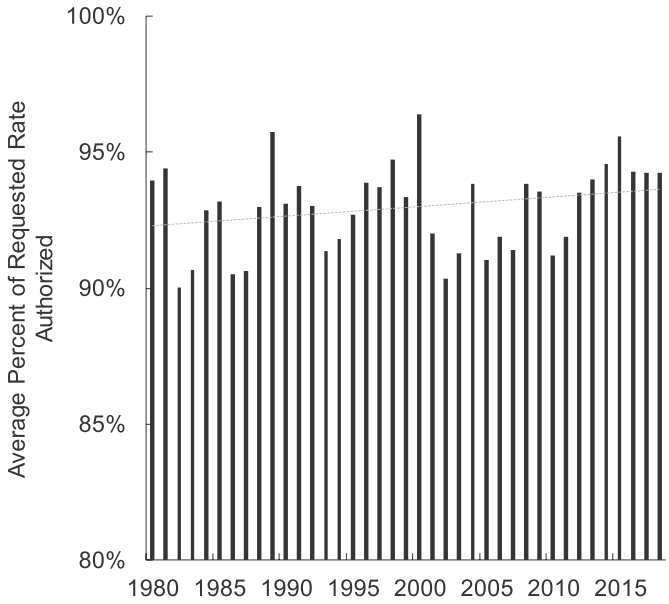

Fig. 13. Rate of return authorized as a percent of rate of return requested.

Table 6
Average risk premium in basis points by commission selection method and means of case resolution. The number of cases in each group is provided in parentheses.

	Appointed Commissions	Elected Commissions	Subtotals

Subtotals	500 (1375)	557 (270)	510 (1645)

be higher for settled, rather than fully litigated rate cases.

Like other authors, we found no significant effect *overall* for selection method, but a very significant effect for whether cases were settled or fully litigated. In addition, there appears to be a significant *interaction* between selection method and means of case resolution, suggesting that the lack of evidence of an effect in the literature may be related to its interaction with the means of case resolution, which has not been examined in this depth before. Table 6 illustrates the average risk

premium observed in each group. The average risk premium for settled cases is significantly higher than for fully litigated cases ($p < 0.001$). Further, while the average risk premium for settled cases and appointed commissions is significantly greater than for fully litigated cases and elected commissions ($p < 0.001$), there is an interaction effect suggesting that the impact of selection method on risk premium depends on the means of case resolution ($p < 0.05$).

Notwithstanding these differences, the incremental explanatory value of these public choice variables is minimal (but significant). Table 7 compares the standard CAPM model with an OLS model that incorporates selection method and means of case resolution. The Akaike Information Criterion (AIC) indicates that incorporation of the public choice variables has only slight incremental value. We estimate that the marginal impact is only approximately 8 basis points—much less than the observed increase over time.[16] As before, the F (CAPM $F_{143,1449} = 1.5$, $p < 0.001$; CAPM + Public Choice $F_{143,1446} = 1.4$, $p < 0.001$) and Hausman (CAPM $\chi^2(3) = 24.0$, $p < 0.001$; CAPM + Public Choice $\chi^2(6) = 24.1$, $p < 0.001$) tests strongly support controlling for utility-level fixed effects in the model. Table 7 also includes coefficients incorporating such controls.

4.7. Potential behavioral economics explanations

To this point, we have examined a number of factors related to economic and institutional influences. At the outset, however, we noted the potential for rate determination to be influenced by regulator judgment. In many cases there is evidence that regulators are not behaving in accordance with the method they in fact purport to be using (i.e., CAPM). As we cannot escape the fact that ultimately the authorized return on equity is a product of regulator decision-making, we now consider possible explanations for the risk premium based on insights from behavioral economics.

First, we note that regulator attachment to rate decisions from the recent past may be coloring their forward-looking decisions. Earlier we referenced a report from Pennsylvania regulators about their stated reliance on (*inter alia*) "recent [returns on equity] adjudicated by the Commission" (Pennsylvania Public Utility Commission, 2016, p. 17). The legal weight attached to precedent may give rise here to a recency bias, where regulators anchor on recent rate decisions and insufficiently adjust them for new information. While stability in regulatory decision-making is seen as useful in assuring investors, to the extent that it results in a slowing of regulatory response when market conditions change, regulators should be encouraged to weigh the benefits of stability against the costs of distortionary responses to authorized returns that lag market conditions.

Our second insight from behavioral economics involves a curious observation in the empirical data: the average rate of return on regulated equity appears to have "converged" to 10% over time. Although the underlying riskless rate has continued to drop, authorized equity returns have generally remained fixed in the neighborhood of 10%, only dropping below (on average) over the last few years. Anecdotally, we have observed a reluctance among potential electric power investors to accept equity returns on power investments of less than 10%—even though those same investors readily acknowledge that *debt* costs have fallen. To that extent, then, a behavioral bias may be at work.

The finance literature has noted a similar effect related to crossing index threshold points (e.g., every thousand points for the Dow Jones Industrial Average). These focal points, which have no normative import, appear to influence investor behavior. Trading is reduced near major crossings (Donaldson and Kim, 1993; Koedijk and Stork, 1994; Aragon and Dieckmann, 2011), with some asserting that the behavior of investors in clienteles may produce this behavior (Balduzzi et al., 1997). We propose a related theory.

In economics, "money illusion" refers to the misperception of nominal price changes as real price changes (Fisher, 1928). Shafir et al. (1997) proposed that this type of choice anomaly arises from framing effects, in that individuals give improper influence to the nominal representation of a choice due to the convenience and salience of the nominal representation. The experimental results have been upheld in several subsequent studies in the behavioral economics literature (Fehr and Tyran, 2001; Svedsäter et al., 2007).

The effect here may be similar: investors and regulators may conflate "nominal" rates of return (the authorized rates) with the risk

[16] For example, the marginal impact of a settled vs. fully-litigated case would be $exp(3.513 + 0.223) - exp(3.513) = 8.4$ using the OLS coefficients.

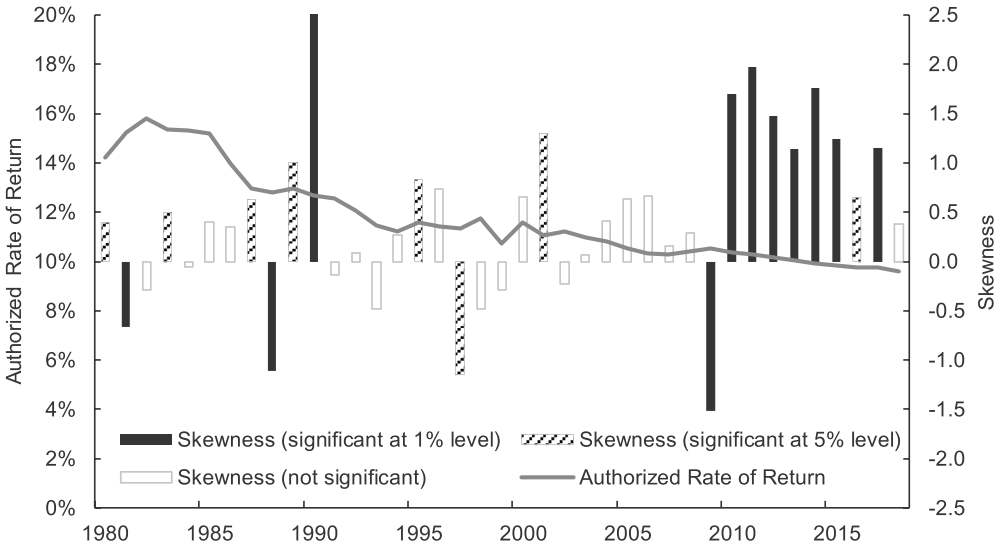

Fig. 14. Authorized rates of return on equity and skewness.

premium underlying the authorized rate. The apparent "stickiness" of rates of return on equity around 10% is similar to the "price stickiness" common in the money illusion (and, indeed, the rate of return is the price of capital). If there was in fact a tendency (intentional or otherwise) to respect a 10% "floor," one might expect that the distribution of authorized returns within each year may "bunch up" in the left tail at 10%, where absent such a floor one may expect them to be distributed symmetrically around a mean. As Fig. 14 illustrates, we see precisely such behavior. As average authorized returns decline to 10% (between 2010 and 2015), the skewness of the within-year distributions of returns becomes persistently and statistically significantly positive, suggesting a longer right-hand tail to the distributions, consistent with a lack of symmetry below the 10% threshold.[17] We note also that this period of statistically significant positive skewness coincides precisely with what appeared to be a period of increased regulator accommodation in Fig. 13. Further, once the threshold is definitively crossed, skewness appears to moderate and the distribution of returns appears to revert toward symmetry.

A related finding has been reported by Fernandez and colleagues (Fernandez et al., 2015, 2017, 2018), where respondents to a large survey of finance and economics professors, analysts, and corporate managers tended, on average, to overestimate the riskless rate of return. In addition, their estimates exhibited substantial positive skew, in that overestimates of the riskless rate far exceed underestimates.[18] The authors found similar results not just in the U.S., but also in Germany, Spain, and the U.K. In the U.S., the average response during the high skewness period exceeded the contemporaneous 10-year U.S. Treasury rate by 20–40 basis points, before declining as skewness moderated in 2018. It may be that overestimating the riskless rate is simply one way for participants in regulatory proceedings to "rationalize" maintaining the authorized return in excess of 10%. Alternatively, it may be an additional bias in the determination of authorized rates of return.

If such biases exist, there are clear implications for the regulatory function itself. For example, this apparent 10% "floor" was even recognized recently in a U.S. Federal Energy Regulatory Commission proceeding (Initial Decision, Martha Coakley, et al. v. Bangor Hydro-Electric Co., et al., 2013, 144 FERC 63,012 at 576): "if [return on equity] is set substantially below 10% for long periods […], it could negatively impact future investment in the (New England Transmission Owners)." Our findings here draw us back to Joskow's (1972) characterization of regulator decision-making as a sort of meta-analysis. That is, commissioners do not merely directly evaluate the CAPM equations. Rather, they look at the nature of the evidence *as presented to them*. Accordingly, their judgments are based not just on capital market conditions in a vacuum, but on the format, detail, and context of the information contained within the evidentiary record of a rate case. As a result, regulators are susceptible to biases in judgment, and calibration of regulatory decision-making during the rate-setting process should be a required step.

5. Conclusions and policy implications

In this paper, we have examined a database of electric utility rates of return authorized by U.S. state regulatory agencies over a thirty-eight-year period. These rates have demonstrated a growing spread over the riskless rate of return across the time horizon studied. The size and growth of this spread—the risk premium—does not appear to be consistent with classical finance theory, as expressed by the CAPM. In fact, regression analysis of the data suggests the *opposite* of what would be predicted if the CAPM holds. This is particularly perplexing given that regulators often *claim* to be using the CAPM. In addition to the traditional finance factors, our work examined the influence of institutional, structural, and behavioral factors on the determination of authorized rates of return. We find support for many of these factors, although most cannot be justified on traditional normative grounds.

The pattern of large and growing risk premiums illustrated in this paper has significant implications for both utility and infrastructure investment and regulation and market design in environments where both regulated and restructured firms compete for capital. In particular, if rate case activity increases over the next several years as rate moratoria expire, the implications for retail rate escalation and capital investment may be significant. We discuss each in turn before offering some thoughts on possible mitigating factors.

[17] Formally, we test the hypothesis that the observed skewness is equal to zero (a symmetric, normal distribution). The test statistic is equal to the skewness divided by its standard error $\sqrt{6n(n-1)/(n-2)(n+1)(n+3)}$, where n is the sample size. The test statistic has an approximately normal distribution (Cramer and Howitt, 2004).

[18] At the time of the 2015 survey, for example, the 10-year U.S. Treasury rate was 2.0%. The average riskless rate reported by the 1983 U.S. survey respondents was 2.4% (median 2.3%), but responses ranged from 0.0% to 8.0%.

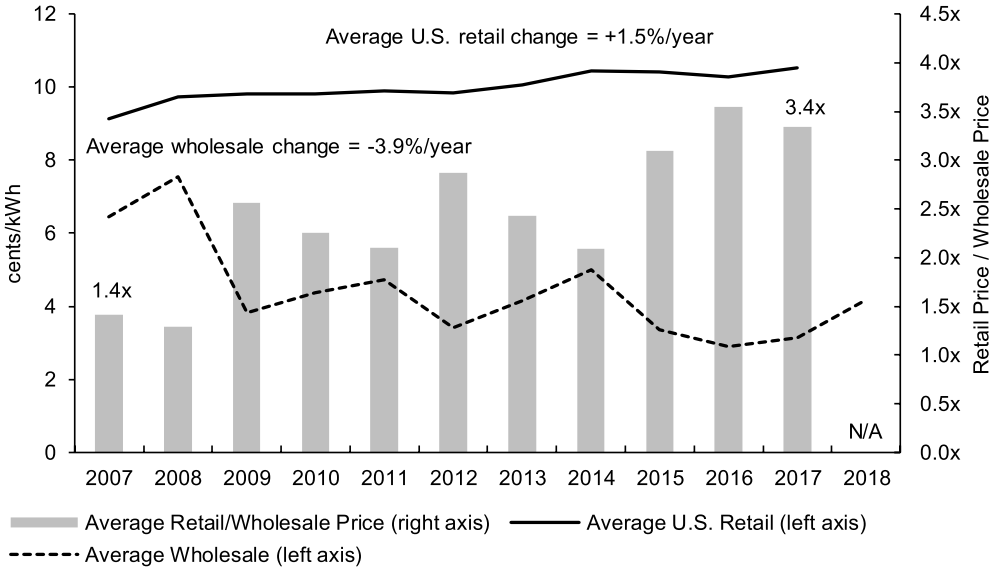

Fig. 15. Peak wholesale (2007–2018) vs. retail (2007–2017) power prices. Wholesale prices represent the average annual peak electricity price in MISO-IN, ISO-NE Mass Hub, Mid-C, Palo Verde, PJM-West, SP-15, and ERCOT-North. Retail prices collected from U.S. Energy Information Administration (https://www.eia.gov/electricity/data/state/avgprice_annual.xlsx). The retail price is the average for the entire country (using only the 7 states with wholesale markets included does not change the result).

5.1. Wholesale and retail electricity price divergence

A growing divergence has emerged over the last decade. Although fuel costs and wholesale power prices have declined since 2007, the *retail* price of power has increased over the same period (see Fig. 15). One explanation for this divergence in wholesale and retail rates may be the presence of a growing premium attached to regulated equity returns and therefore embedded into rates. To be sure, other forces may also be at work (for example, recovery of transmission and distribution system investments is consuming a greater portion of retail bills—a circumstance potentially exacerbated by excessive risk premiums). Further, even if the growing divergence between wholesale and retail rates is related to a growing risk premium, it does not necessarily follow that such growth is inappropriate or inconsistent with economic theory. Nevertheless, the potential for embedding of such quasi-fixed costs into the cost structure of electricity production may be significant for end users, as efficiency gains on the wholesale side are more than offset by excess costs of equity capital on the retail side.

5.2. Regulation itself as a source of risk

Public policy, or regulation itself, may be a causal factor in the observed behavior of the risk premium. The U.S. Supreme Court acknowledged, in *Duquesne Light Company* et al. *v. David M. Barasch* et al. (488 U.S. 299 (1989), p. 315) that "the risks a utility faces are in large part defined by the rate methodology, because utilities are virtually always public monopolies dealing in an essential service, and so relatively immune to the usual market risks." The recognition that the very act of regulating utilities subjects them to a unique class of risks may influence their cost of capital determination. And yet, if the *purpose* (or at least *a* purpose) of regulating electric utilities is to prevent these quasi-monopolists from charging excessive prices, but the *practice* of regulating them results in a higher cost of equity capital than might otherwise apply, it calls into question the role of such regulation in the first place.

Similarly, we may also question whether the hybrid regulated and non-regulated nature of the electric power sector in the U.S. plays a role as well. Has deregulation caused risk to "leak" into the regulated world because both regulated and non-regulated firms must compete for the same pool of capital? Has the presence of non-regulated market participants raised the marginal price of capital to all firms? In Section 4.4 we illustrated a shift in the trend of risk premium growth in 1999, as several U.S. markets were switching to deregulation, but further study of this question is needed.

The trajectory of public policy during the entire time period studied has been toward deregulation (beginning before 1980 with Public Utility Regulatory Policy Act, through the Natural Gas Policy Act in the 1980s, and electric industry deregulation in the 1990s) and "today's investments face market, political and regulatory risks, many of which have no historical antecedent that might serve as a starting point for modeling risk." (PJM Interconnection, 2016) The general unobservability of the *ex ante* expected returns on deregulated assets complicates determining if the progressive deregulation of the industry has caused a convergence in regulated and non-regulated returns over that time period. While the data do not suggest that utilities in states that have never undertaken deregulation have meaningfully different risk premiums, there are many ways to evaluate the "degree" of deregulatory activity that could be explored.

Another public policy-related factor could be a change in the nature of the rate base or of rate-making itself. Toward the beginning of our study period, most of the electric utilities were vertically integrated (i.e., in the business of both generation and transmission of power). Over time, generation became increasingly exposed to deregulation, while transmission and distribution of power have tended to remain regulated. To the extent that the portion of the rate base comprised of transmission and distribution assets has increased at the expense of generation assets, it may suggest a shift in the underlying risk profile of the assets being recognized by regulators. We note, for example, that public policy has tended to favor transmission investments with "incentive rates" in recent years in order to address a perceived relative lack of investment in transmission within the electric power sector. Our data, however, reveal the opposite. Based on data since 2000, there have been 172 transmission and distribution-only cases, out of 653 total cases. The average rate of return authorized in the transmission and distribution cases is approximately 60 basis points *lower* than those in vertically-integrated cases from the same period. These have been *state-*

level cases however. We note as deserving of further study that (interstate) electric transmission is regulated by FERC using a well-defined DCF approach instead of CAPM. The impact of having differing regulatory frameworks to set rates for assets that are functionally substantially identical remains an open question.

As for a change in the nature of rate-making itself, we note that the industry has tended to move from cost-of-service rate-making to performance-based ratemaking. If this shift, in an attempt to increase utility operating efficiency, has inadvertently raised the cost of equity capital through the use of incentive rates, it would be important to ascertain if the net cost-benefit balance has been positive. In general, there has been a lack of attention to the impact of regulatory changes on discount rates. The data on authorized returns on equity provides a unique dataset for such investigations.

5.3. Strategies for mitigating the growing premium

Our research does not necessarily imply that the rates of return authorized by regulators are too high, or otherwise necessarily inappropriate for utilities. An evaluation of whether these non-normative factors constitute a legitimate basis of rate of return determination deserves separate study. But if institutional or behavioral factors lead to departures from normative outcomes in setting rates of return on equity, then perhaps like Ulysses and the Sirens, regulators' hands should be "tied to the mast."

One notable jurisdictional difference in regulatory practice is between formulaic and judgment-based approaches to setting the cost of capital. In Canada, for example, formulaic approaches are more prevalent than in the United States (Villadsen and Brown, 2012). California also adjusts returns on equity for variations in bond yields beyond a "dead band," and the performance-based regulatory approaches in Mississippi and Alabama rely on formulaic cost of capital determination (Villadsen et al., 2017).

By pre-committing to a set formula (e.g., government bond rates plus *n* basis points) in lieu of holding adversarial hearings, regulators could minimize the potential for deviation from outcomes consistent with finance theory. Villadsen and Brown (2012) noted, for example, that then-recent rates set by Canadian regulators tended to be lower than those set by U.S. regulators despite nearly equivalent riskless rates of return. An intermediate approach would be to require regulators to calculate and present a formulaic result, but then allow them the discretion to authorize deviations from such a result when circumstances justify such departures. In such cases, regulators could avoid anchoring on past results, and instead anchor on a theoretically-justifiable return, before adjusting for any mitigating factors. If regulator judgment is impaired or subject to bias, then minimizing the influence of judgment by deferring to models may be prudent. In the end, we may observe simply that what regulators *should* do, what regulators *say* they're doing, and what regulators *actually* do may be three very different things.

Conflicts of interest

The authors declare that they have no conflict of interest.

Funding

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors.

Acknowledgements

This paper is based on a portion of the first author's doctoral dissertation. The authors gratefully acknowledge the thoughtful comments and assistance received from Jay Apt, Tony Páez, Thomas Yu, Chad Schafer, participants at the Carnegie Mellon Electricity Industry Center's 2017 Advisory Committee Meeting, and two anonymous reviewers. Exhibit KRR-SR-3

Additional Compiled PPL Interrogatory Responses

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set XV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-1

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 3 stating "In real numbers, the Company is anticipating that a residential customer with average monthly usage of 1,000 kWh will see their transmission costs go down by approximately $40/year with the first addition of 1 GW of load."

a. How much time will it take to achieve the anticipated rate reduction benefit?
b. Might rates go up first?

PPL Electric Response

a. It depends on the specific customer's load ramp schedule. However, the Company's minimum load guarantee requirements allow for a predictable schedule of when and how much the new large load customer will contribute to transmission rates.

b. It is a possibility, but such increase would likely be small and temporary. It is important to note that transmission rates rely on many variables. While the specific 1 GW customer will likely have a load ramp schedule, other customers will not see the final transmission rate reduction immediately. There may be other large customers interconnecting at the same time, and their combined new customer load, consistent with their load ramp schedules, may begin to result in lower transmission rates sooner than you would see with any one customer alone.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set XV Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated January 28, 2026
Docket No. R-2025-3057164

CAUSE-PA XV-9

Refer to Lookup Rebuttal Testimony (PPL Electric Statement No. 16-R), p. 19 stating: "That being said, the Company is not opposed to having a minimum 10-year term for its large load ESAs. The minimum load guarantee would be 80% for the first five years, and 50% for the second five years. The customer would still provide security for the initial amount of socialized investment, however there would be an additional exit fee equal to the amount of the remaining minimum load guarantee. Proceeds from the exit fee would be used to reduce the Company's transmission revenue requirement. This proposal will result in new large load customers agreeing to take service in an amount that far exceeds the initial cost of upgrades placed into transmission rates."

a. Has the Company conducted any analysis of the extent to which the revenue commitment for a new large load customer under its updated provisions would exceed the initial cost of upgrades placed into transmission rates? If so, then please provide all such analyses.
b. Has the Company conducted any analysis of the extent to which the revenue commitment for a new large load customer under its updated provisions would exceed the sum of (a) the initial cost of upgrades placed into transmission rates, plus (b) the ongoing return on equity and return of capital that the Company would recover over the life of the asset? If so, then please provide all such analyses.

PPL Electric Response

a. The Company has not conducted the requested analysis.

b. The Company has not conducted the requested analysis.

Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated January 27, 2026
Docket No. R-2025-3057164

EI-PPL-IV-1

Reference PPL Statement No. 16-R, Rebuttal Testimony of J. Lookup, page 3, lines 11-16, describing the potential bill impacts of a hypothetical 1 GW new large load customer.

a. Please confirm that the Company's calculation of bill impacts assumes that the Company would incur $100 million of incremental transmission rate base to serve the hypothetical 1 GW new load. If no, please clarify.

b. Please explain the basis for the Company's assumption.

PPL Electric Response

a. Confirmed.

b. The assumption is based on PPL Electric's experience in evaluating requests to serve new large load customers. The Company is assuming a new customer needing several miles of new 230 kV or 500 kV with associated substation/switchyard work. The purpose of the assumption is to show the positive impact on transmission rates from interconnecting a new large load customer even with a significant addition to rate base from required upgrades. Actual upgrade costs, and the CIAC/socialized split, are highly dependent on the specifics of the customer's interconnection request.

WITNESS: Bethany L. Johnson
Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated January 27, 2026
Docket No. R-2025-3057164

EI-PPL-IV-2

Reference PPL Statement No. 16-R, Rebuttal Testimony of J. Lookup, page 3, lines 11-16 and Exhibit JL-1R, describing the potential bill impacts of a hypothetical new large load customers.

a. Please confirm that Mr. Lookup's estimated bill impact of "approximately $225/year" attributable to 20 GW of new load (page 3, lines 14-15) assumes incremental network transmission upgrade costs of approximately $2B.
b. Does the Company project that it will cost approximately $2B in network transmission upgrades to interconnect the projected 20 GW of new large load it is anticipating?
c. If the answer to (b) is yes, please explain how the Company developed this projection, and provide all relevant analyses, studies, etc.
d. If the answer to (b) is anything other than an unqualified "yes," please explain why Mr. Lookup cites a bill impact premised upon this projection.
e. Provide the Company's estimated costs, including any relevant analyses, studies, etc., for interconnecting the projected 20 GW of new large load it is anticipating.

PPL Electric Response

a. Confirmed.
b. No.
c. N/A.
d. The Company has used the approximately $100 million capital investment and 1 GW of load hypothetical to demonstrate the potential impact. As PPL Electric continues to evaluate the projects of interested customers, should any particular project of approximately 1 GW requires less than $100 million of capital investment, then the savings to customers would be even greater. The Company has used the hypothetical as a conservative estimate.

e. See OCA VIII-1 HIGHLY CONFIDENTIAL Attachments 2-8 for the estimated costs to interconnect the customers who have executed an ESA. PPL Electric is still in the process of developing the costs of the remaining 20 GW of projected load.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated January 27, 2026
Docket No. R-2025-3057164

EI-PPL-IV-4

Reference PPL Statement No. 16-R, Rebuttal Testimony of J. Lookup, page 21, line 16 through page 22, line 2, describing the voluntary interruptible tariff option that PPL is willing to provide.

a. Describe how a customer taking interruptible service would be less likely to create ancillary costs than a customer not on an interruptible tariff.
b. Provide all analysis that supports the Company's proposed minimum load guarantee percentage for customers on an interruptible tariff
c. Provide any analysis examining the potential impact of the Company's proposed reduced minimum load guarantee on the amount of socialized transmission costs.
d. Does the Company's proposal include incentives for interruptible tariff other than a lower minimum load guarantee? If so, please articulate and explain such aspects of the Company's proposal. If not, why not?
e. Provide all interruptible load tariffs currently offered by the Company and describe how this proposed tariff may differ from any existing tariffs.
f. Does the Company's proposal include provisions for economic interruptions to reduce transmission and/or capacity costs to customers in its service territory? If so, please articulate and explain such aspects of the Company's proposal. If not, why not?

PPL Electric Response

a. An interruptible rate has the potential to lessen upward pressure on generation and capacity costs. As the Company has said in Mr. Lookup's rebuttal testimony (PPL Electric St. No. 16-R, p. 7), many of the impacts that have been raised by the other parties arise from the generation and capacity markets which the Company has no control over. However,

PPL Electric revised its proposal to create an interruptible rate in response to the concerns of the other parties.

b. PPL Electric did not perform an analysis.

c. The reduced minimum load guarantee would reduce the amount of the exit fee. It would not impact the amount of security needed to be provided by the large load customer to secure the cost of socialized upgrades. However, the reduced minimum load guarantee may extend the security obligation to cover the socialized costs because the Company may receive transmission revenues at a slower pace.

d. No.

e. The Company does not have any other interruptible load tariffs.

f. The interruptible rate is not designed to reduce transmission costs because transmission costs are based on the Company's revenue requirement stated in its FERC Transmission Formula Rate and not on peak demand. The intent of the interruptible rate proposal is to reduce generation and capacity costs, but PPL Electric has no direct control over the generation and capacity markets.

I. INTRODUCTION & PURPOSE OF TESTIMONY

Q: PLEASE STATE YOUR NAME AND OCCUPATION.

A: My name is Ron Nelson. I am a Founding Partner of Current Energy Group LLC ("CEG"). My business address is 4764 E Sunrise Drive, Unit #508, Tucson, Arizona 85718.

Q: PLEASE SUMMARIZE YOUR WORK EXPERIENCE AND EDUCATIONAL BACKGROUND.

A: I have worked with numerous consumer advocates, nongovernmental organizations, utilities, and public utility commissions on issues related to cost-of-service modeling, rate design, grid modernization, distributed energy resource valuation and integration, and performance-based regulation. CEG specializes in providing clients regulatory services in the areas of cost-of-service modeling, regulatory innovation, performance-based regulation, distributed energy resources ("DER"), rate design, renewable program development, grid modernization, new grid technologies, integrated resource planning, and electric vehicles ("EVs"). Prior to founding CEG, I briefly worked for my own sole proprietorship and was at Strategen Consulting in various roles for six years, including as a Senior Director.

Before joining Strategen in early 2018, I worked for the Minnesota Attorney General's Office for almost five years, where I led that office's work on cost of service, rate design, renewable energy program design, performance-based regulation, and utility business model issues. Before that, I worked for two universities and the United States Geological Survey as an economic researcher. I have a Master of Science from Colorado State University in Agriculture and Resource Economics, and a Bachelor of Arts in Environmental Economics from Western Washington

University, where I also minored in Mathematics. My curriculum vitae is attached as RN-1.

Q: ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A: I am submitting testimony on behalf of Environmental Intervenors.

Q: HAVE YOU TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A: Yes. I previously testified in Dockets No. R-2024-3049223, R-2024-03046932, R-2024-3046931, R-2022-3034264, and P-2019-3010128.

Q: HAVE YOU TESTIFIED BEFORE OTHER REGULATORY JURISDICTIONS?

A: Yes. I have testified in over 85 proceedings in Alaska, Colorado, Georgia, Illinois, Indiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Nevada, New Hampshire, New York, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, Utah, Virginia, and Vermont. The issues covered in these proceedings include marginal and embedded cost of service studies, revenue allocation, rate design, load management, renewable program design, fuel clause adjustments, formula rates, decoupling, performance-based regulation, multi-year rate plans, performance metrics, DER interconnection, flexible interconnection, pre-emptive DER and load upgrades, DER compensation, DER integration, EV infrastructure investments, pilot frameworks, automated metering infrastructure, prudence review, distribution system planning, capital investment plan review, large load tariffs and cost allocation, and smart inverter integration, among other topics.

I have also advised the Connecticut, Colorado, Hawaii, and Kentucky, state utility commissions, and have testified and supported clients at the Federal Energy Regulatory Commission ("FERC").

Q: HAVE YOU TESTIFIED PREVIOUSLY ON LARGE LOAD TARIFFS AND RELATED ISSUES?

A: Yes, I recently testified on Dominion's and Appalachian Power's large load tariffs, and I have assisted or testified on large load issues in Colorado, South Carolina, and before the Federal Energy Regulatory Commission (FERC).

Q: WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A: In my testimony I respond to PPL Electric Utilities Corporation's ("PPL" or "Company") LP-5 tariff changes and make recommendations to the Commission to protect customers and minimize the risk of stranded assets from new large loads. In addition, I make recommendations to the Commission related to the Company's proposal to recover DERMS costs through rates, its electric vehicle-related proposal, and its corporate parent's Joint Venture with Blackstone.

Q: WHAT DOCUMENTS DO YOU RELY UPON FOR YOUR ANALYSIS, FINDINGS, AND RECOMMENDATIONS?

A: My analysis relies primarily upon the workpapers, exhibits, and discovery responses of PPL's witnesses associated with this proceeding. To a limited extent, I also rely on certain external, publicly available documents.

Q: ARE YOU SPONSORING ANY EXHIBITS?

A: Yes. I am sponsoring the following exhibits:

Exhibit No.	Description of Exhibit
Exhibit RN-1	Curriculum Vitae of Ron Nelson
Exhibit RN-2	Tariff Redlines
Exhibit RN-3	Compiled Discovery Responses

II. SUMMARY & RECOMMENDATIONS

Q: PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

A: I recommend the Commission:

1. Require PPL to directly assign all costs of transmission network upgrades built to serve large load customers to such customers. PPL should recover those costs directly from interconnecting customers through up-front deposits or other financial security, and refund such deposits or security over time in parallel with the customer's payment of transmission charges.
2. Require PPL to increase the initial contract term to 15 years for LP-5 customers, excluding any ramping period.
3. Require PPL to include evaluation of flexible connections tariffs and options for large load customers within the assessment already required of the Company in Docket P-2024-3049223.
4. Direct PPL to only include new large load customers into its load forecast after they have signed an Electric Service Agreement (ESA).
5. Strike the term from the LP-5 tariff that allows the Company to construct, own, operate, and/or maintain LP-5 customers' transformation equipment at

terms and rates determined between the Company and the LP-5 customer, allowing existing contracts to be grandfathered in.

6. Not permit PPL to connect any projects involving PPL Corporation's Joint Venture (JV) unless and until it files, and receives Commission approval of, applicable affiliated interest agreement(s) and relevant policies to safeguard against conflicts.
7. Reject PPL's proposal to include DERMS Capability costs within rates until the Company completes its DER Orchestration Plan.
8. Reject PPL's Electric Vehicle (EV) Time of Use (TOU) charging rebate program and, instead, direct PPL to implement a time-varying residential delivery rate option for interested customers with peak hours consistent with the Company's Supply TOU rate and a peak to off-peak price ratio of 2.8.

III. LARGE LOAD TARIFF

Q: HOW IS THIS SECTION OF YOUR TESTIMONY ORGANIZED?

A: In part (i) of this section, I will provide an overview of PPL's LP-5 tariff and the changes the Company proposes to make. In parts (ii) through (v) of the section, I will address my concerns with the tariff and recommend modifications designed to resolve its shortcomings.

i. Overview of PPL's LP-5 Changes

Q: HOW MUCH PROSPECTIVE LOAD HAS PPL IDENTIFIED FROM POTENTIAL NEW LARGE CUSTOMERS?

PPL has seen a rapid increase in the number of data centers and other large customers potentially seeking to interconnect in its service territory. The Company's current

pipeline of projects would more than double its current peak load of 7.8 GW, and it would do so within the next 5 to 6 years.[1]

PPL is not alone in experiencing a significant increase in new large load customers. Within PJM, data centers are driving substantial upward revisions in load forecasts. In its estimate 2025 Load Forecast, PJM revised its estimate of 2026 summer peak load upwards to 158,937 MW, a more than 4% increase from its 2023 Load Forecast of 152,736 MW.[2] PJM attributed 93 percent of load growth to data centers.[3]

The PJM Independent Market Monitor has blamed data center load growth, in particular, for recent high capacity prices, higher energy market prices, and increased transmission costs, and has asked the Federal Energy Regulatory Commission ("FERC") to stop PJM from adding new data center loads until it has rules to add transmission and capacity resources to serve those new loads.[4]

Further, Department of Energy's ("DOE") recent letter ("403 Letter") to FERC containing an Advance Notice of Proposed Rulemaking[5] affirms that large

[5] Secretary of Energy, *Secretary of Energy's Direction that the Federal Energy Regulatory Commission Initiate Rulemaking Procedures and Proposal Regarding the Interconnection of Large Loads Pursuant to the Secretary s Authority Under Section 403 of the Department of Energy Organization Act* (Oct. 23, 2025) https://www.energy.gov/sites/default/files/2025-10/403%20Large%20Loads%20Letter.pdf ("DOE 403 Letter").

load customers, most notably data centers, are rapidly connecting to the transmission system and driving overall electricity demand growth. The DOE 403 Letter solidifies beyond doubt that the emergence of data center load growth is unprecedented, and business as usual in terms of interconnection policy, transmission planning, and the resultant cost allocation for transmission network upgrades will no longer suffice.

Q: DOES THE SIGNIFICANT INCREASE IN LARGE LOAD CONNECTION REQUESTS INTRODUCE RISK FOR THE UTILITY AND ITS CUSTOMERS?

A: Yes. These large new loads represent an unprecedented scale and pace of capacity expansion that would more than double PPL's current system peak load, if it were all to materialize. New large loads, particularly data centers, are unique in that they are exceptionally large, can come online quickly, are highly speculative in some cases, and have an unknown lifecycle. Recent data center customers are much larger than historic large customers, with the majority of prospective customers requesting capacity of hundreds of megawatts.[6] Large data centers can be constructed and bring demand online rapidly compared to historic large load customers, such as industrial facilities.[7] Further, given the relative infancy of the data center boom, it is unknown whether the data centers that are constructed will continue to operate long into the future, maintain their forecasted load patterns, relocate, or rapidly retire. These customer characteristics are at odds with the nature of utility generation and

[6] Ex. RN-3, Compiled Discovery Responses, OCA-VIII-6.
[7] New data centers may have lead times of only one to two years. *See* Electric Power Research Institute, *Powering Intelligence: Analyzing Artificial Intelligence and Data Center Energy Consumption* ("EPRI Principles") 6 (May 2024), https://www.epri.com/research/products/000000003002028905.

transmission investments that have typically allocated to and recovered from customers over long time periods. As a result, current large load growth poses a risk of stranded assets, unrecovered costs, and cross-subsidization from other ratepayers.[8]

Q: IS PPL PROPOSING REVISIONS TO ITS LARGE LOAD TARIFF IN RESPONSE TO THIS RISK?

A: Yes. The Company has proposed revisions to rate LP-5, which applies to customers taking service at 69kV or greater, including anticipated future large load customers. I will also refer to LP-5 herein as the Company's "large load tariff." The Company states that these revisions will, among other things, memorialize terms that PPL asserts have historically applied to large load customers through customer-specific Electric Service Agreements (ESA). PPL asserts that these revisions will protect other customers from the risks of large loads failing to materialize.[9]

Q: HAVE YOU DEVELOPED RECOMMENDATIONS WITH RESPECT TO PPL'S PROPOSED LARGE LOAD TARIFF?

A: Yes. As I discuss below, I have several concerns with PPL's proposed treatment of large load customers, including how such treatment would be memorialized in its large load tariff. Accordingly, I propose redlines to PPL's large load tariff, included as Exhibit RN-2, which would address certain of my concerns related to (1) cost allocation; (2) financial security; (3) minimum contract duration; and (4) exit or early termination fees.

[8] *See* Lookup Direct at 16:21–23
[9] Lookup Direct at 18:15-19:8.

ii. The Company's Proposed Transmission Cost Allocation for LP-5 customers Harms Ratepayers

Q: HOW WOULD PPL ALLOCATE TRANSMISSION COSTS BUILT TO SERVE LP-5 CUSTOMERS?

A: LP-5 provides: "Customer is responsible for paying all costs associated with line extensions and service extensions to take service under this rate schedule, except when, in the Company's discretion, it is determined that certain line extensions will provide reliability or other benefits to the Company's transmission system."[10]

Q: IN OTHER WORDS, WILL SOME COSTS OF SYSTEM UPGRADES NEEDED TO SERVE LARGE LOAD CUSTOMERS BE SOCIALIZED?

A: Yes. Company witness Lookup states that, historically, large load customers taking service at 69 kV or higher would generally pay for all interconnection costs, as those customers exclusively benefited from interconnection facilities.[11] However, he states that "[n]ew large load customers have created the situation that they are necessitating upgrades that provide benefits to the entire grid. These include reliability benefits arising out of upgrading the networked bulk electric system."[12] Because of the claimed benefits to the entire grid, PPL proposes to socialize certain costs associated with interconnecting and serving LP-5 customers.[13]

---

[10] PPL, Ex. GEO-1 ("Ex. GEO-1"), p. 418 Docket No. R-2025-3057164 (Sept. 30. 2025); *see also* PPL, St. No. 14, Direct Testimony of Gregory Olsen ("Olsen Direct"), 9:22–10:2, Docket No. R-2025-3057164 (Sept. 30. 2025).
[11] Lookup Direct at 17:14–18.
[12] Lookup Direct at 17:16–21.
[13] Lookup Direct at 17:16–22.

HAS PPL INCLUDED PROTECTIONS FOR NON-PARTICIPATING CUSTOMERS IN THIS TARIFF?

A: Yes, PPL proposes requiring new large load customers needing upgrades to the transmission system whose costs will be socialized to "provide adequate security that it will meet a revenue guarantee equal to the amount of costs placed into rates"—in other words, the amount of cost that will be socialized—including "minimum load guarantees for the term of the service commitment and security instruments covering the obligation in the event that the customer defaults."[14] The revenue guarantee includes capital upgrade costs but excludes operation and maintenance costs.[15]

Q: HOW DOES THE COMPANY PROPOSE TO ALLOCATE TRANSMISSION COSTS UNDER THE LP-5 TARIFF?

A: Customers taking service under the LP-5 tariff are required to pay for transmission costs to interconnect the customer's substation with PPL's substation or switchyard.[16] All other transmission upgrades that may be required to interconnect and serve new large load customers are within the Company's rate base and socialized through general transmission rates, paid by all customers, if the Company determines they "provide…benefits to the Company's transmission system."[17]

[14] Lookup Direct at 17:5–10.
[15] Ex. RN-3, Compiled Discovery Responses, EI-PPL-I-7.
[16] Ex. RN-3, Compiled Discovery Responses, OCA VIII-9 Attachment 1.
[17] Ex. GEO-1 at 418.

Q: HOW DOES THE COMPANY PROPOSE TO DETERMINE IF AN UPGRADE PROVIDES BENEFITS TO THE COMPANY'S TRANSMISSION SYSTEM, AND THEREFORE SHOULD BE SOCIALIZED?

A: The Company identifies factors that would warrant such a determination. First, the Company assumes that all upgrades to its 230 kV and 500 kV transmission system provide benefits to the bulk electric system and should therefore be socialized.[18] For all other upgrades, the Company will socialize costs of assets that it determines, **at its own discretion**, provide benefits such as, but not necessarily limited to, "increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections.[19]

Q: WHAT IS YOUR RESPONSE TO THE COMPANY'S TRANSMISSION COST ALLOCATION PROPOSAL?

A: There are several flaws with PPL's LP-5 Tariff proposal, which I will walk through in order. First, the Company's proposal would presumptively socialize all costs of 230kV and 500kV facilities built to serve LP-5 customers, which is not appropriate for reasons that will be explored further below. Second, with respect to other facilities built to serve LP-5 customers, the utility's tariff language is unclear regarding when costs would be socialized versus directly allocated to the large-load customer. Certain customer-specific costs (*e.g.*, "direct connection costs") would be directly assigned to the customer, whereas the costs of "[a]ll other upgrades, including PPL Electric

[18] Exhibit RN-3, Compiled Discovery Responses, OCA VIII-9 Attachment 1.
[19] Ex. GEO-1 at 418.

substations/switchyards will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid."[20] The Company would rely heavily on its own judgment around a broad set of benefits, with no meaningful guardrails or means for validating its assumptions,[21] to allocate these costs. This yields avenues for PPL to inappropriately socialize additional costs associated with LP-5 customers. At a high level, the Company's statement that any upgrade that increases capacity or improves reliability can be socialized essentially covers almost every imaginable upgrade, except those that are customer-specific, which are limited with large upgrades.[22]

Q: WHY DO YOU FIND PPL'S TRANSMISSION COST ALLOCATION PROPOSAL TO UNFAIRLY SOCIALIZE TRANSMISSION COSTS?

A: Contrary to Mr. Lookup's suggestion, due to the novel nature of large loads, PPL should be seeking to socialize fewer of their associated costs, not more. Transmission costs that are socialized by the Company are included in the Company's transmission rates, which are set by the Federal Energy Regulatory Commission (FERC) according to the Company's FERC-approved transmission tariff. These costs have long been allocated based on the principles of cost causation and the "beneficiary pays"

[20] Exhibit RN-3, Compiled Discovery Responses, OCA VIII-9 Attachment 1.
[21] PPL does not track whether benefits are tangibly accrued over time, so the test lacks applied data demonstrating that it is accurate. *See* Exhibit RN-3, Compiled Discovery Responses, CAUSE-PA XI-2.c.; EI-PPL II-8.
[22] *See* Exhibit RN-3, Compiled Discovery Responses, OCA VIII-9 for the definition of customer specific costs versus socialized rate base costs, according to PPL.

principle.[23] However, applying these principles of cost allocation to large loads does not result in reasonable outcomes, as traditionally these principles have been applied to much slower and dispersed loads with different causal and beneficial characteristics.

Q: PLEASE EXPLAIN WHY TRADITIONAL COST ALLOCATION THEORY NO LONGER HOLDS WHEN APPLIED TO LARGE LOADS?

A: By assuming that all transmission upgrades that are not directly assigned to an individual customer represent reliability upgrades, FERC has traditionally assumed that all customers would broadly benefit from these upgrades. One assumption traditional cost allocation logic relied on is that capacity within the transmission network can be repurposed if it was not used by the entity that initially caused the need for the upgrade. With new large loads that could potentially double the Company's existing peak demands, this assumption no longer holds true. Regulators cannot assume that transmission network capacity, to the magnitude forecasted by PPL, can be repurposed to another use, as no use currently exists—data center demand is unprecedented. For example, a 230 kV transmission line can benefit large cities of residents, or it can primarily benefit a single data center campus and the respective shareholders. Applying the same cost allocation approach to this 230 kV line in each scenario would not be reasonable. For this reason alone, transmission cost allocation must be reassessed to ensure reasonableness.

Cmwlth. 2006)**;** *see also* Transmission Planning and Cost Allocation by Transmission Owning and Operating Public Utilities, FERC Order 1000, Docket No. RM10-23-000, at 358 (July 21, 2011); Lazar, J. et al., Regulatory Assistance Project, *Electric cost allocation for a new era: A manual* 18 (Jan. 2020).

Q: HAS THE COMMISSION RECENTLY REACHED A SIMILAR CONCLUSION?

A: Yes, it has. In its recent tentative order regarding tariffs for large load customers ("Tentative Order"), the Commission stated:

> Beyond facilities which solely benefit the new large load, we further tentatively find that given the nature of large loads, they may receive most of the benefits from facilities that would have historically benefited the system as a whole. That is, very large loads may cause network upgrades which benefit the system as a whole, but they themselves still use up most of the benefits. For example, 230 kV facilities that would normally be deemed transmission due to their size have line ratings setting their maximum capacity typically between 250-1000 MW depending on utility and other factors. A new line of this size would historically be allocated broadly because that capacity would be used by many customers. Seeing as many of the loads at issue here could use most of that capacity or even nearly all of the capacity, we tentatively find that the triggering customer should make a CIAC contribution to offset the cost of the line if they receive more than half of the benefit of this line.[24]

Q: ARE THERE OTHER UNIQUE CHARACTERISTICS OF LARGE LOADS THAT FAVOR DIRECTLY ASSIGNING TRANSMISSION COSTS TO THEM?

A: Yes. As discussed elsewhere in my testimony, it is almost certain that many of the potential large loads will not materialize due to inaccurate load forecasts, speculative market positions, duplicative applications, economic factors, and other reasons.[25] As these loads are speculative, socializing transmission costs shifts increased risk to

[24] Tentative Order Issued November 6, 2025 ("Tentative Order"), *Interconnection and Tariffs for Large Load Customers*, at 16, Docket No. M-2025-3054271, (Pa. Pub. Util. Comm'n) https://www.puc.pa.gov/pcdocs/1901687.pdf .

[25] London Economics International, *Uncertainty and Upward Bias are Inherent in Data Center Electricity Demand Projections*, (Jul. 2025) https://www.londoneconomics.com/wp-content/uploads/2025/07/LEI-Data-Center-Final-Report-07072025.pdf.

customers, and inappropriately incentivizes PPL to overbuild transmission facilities that may become stranded assets.

Q: PLEASE SUMMARIZE YOUR CONCERNS WITH HOW PPL PROPOSES TO ALLOCATE COSTS OF FACILITIES TO SERVE LP-5 CUSTOMERS OTHER THAN 230KV AND 500KV NETWORK UPGRADES?

A: The Company's proposed approach is likely to lead to inappropriate socialization of the costs of these facilities. The Company proposes to review such facilities on a case-by-case basis to determine whether they produce a "benefit" to other customers and therefore would be socialized. The Company's proposed list of factors that would support a finding of "benefit" is extremely broad, to the point of being effectively unbounded. The Company proposes to retain an unreasonable degree of discretion, without meaningful guardrails, when applying these factors and making a "benefit" determination. This creates additional opportunities for inappropriate cost-socialization.

The Company states that a facility's "benefits" warranting cost socialization can "include, but are not limited to, increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections."[26] Even before considering the other unlisted "benefits" that would ostensibly warrant socialization – which the Company refused to identify in discovery[27] – this list is unreasonably

[26] Ex. GEO-1 at 418; Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-6.
[27] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-6(e).

broad. For example, per the Company, "increased capacity" means "increased capacity on the transmission system"[28] – which could conceivably apply to any transmission facility built to serve new load. Likewise, "expanded capacity for new generation" would apparently include new LP-5 customers' behind-the-meter generation[29] – which most or all new large load customers are expected to install. Taken together with PPL's undefined other "benefits," it is difficult to imagine any hypothetical transmission facility that would fail the Company's proposed test.

The problem is compounded by the degree of discretion the Company proposes to enjoy in administering this test. According to the proposed tariff, the Company has discretion to determine if a facility provides benefits warranting cost socialization.[30] The tariff does not impose any external review or check on the Company's cost-socialization determination. With this level of discretion, coupled with the Company's overly permissive test, there is no guarantee that any transmission upgrade costs will be directly allocated to new large customers, even if those costs are fully incurred to serve large loads.

Q: ARE THERE UNIQUE FACTORS IN THIS CASE THAT WARRANT EXTRA ATTENTION TO PPL'S EXERCISE OF DISCRETION WITH RESPECT TO LARGE LOAD INTERCONNECTIONS?

A: Yes. As I discuss later in my testimony, PPL's corporate parent, PPL Corporation, is the majority owner of an unregulated Joint Venture ("JV") that seeks to attract, and

[28] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-6(c).
[29] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-6(b).
[30] Ex. GEO-1 at 418.

develop generation facilities to serve, large load customers.[31] This JV is pursuing projects in PPL's service territory.[32] PPL's corporate parent therefore has a direct financial interest in reducing costs to those customers – including reducing their costs to interconnect to PPL's system – through means such as through cost socialization. Accordingly, PPL faces a financial incentive to subsidize its parent's unregulated business at the expense of captive ratepayers.

To be clear, I am not here accusing the Company or PPL Corporation of malfeasance. But in light of the perverse incentives presented by the JV, it is appropriate to approach PPL's intended exercises of discretion with a high degree of scrutiny, and to carefully circumscribe when and how PPL may exercise such discretion.

Q: GIVEN YOUR CONCERNS, HOW DO YOU RECOMMEND PPL ALLOCATE TRANSMISSION FACILITY COSTS UNDER THE LP-5 TARIFF?

A: To ensure appropriate allocation and recovery of incremental costs to serve a new large load customer, PPL should allocate all costs of transmission built to serve large load customers to such customers. It should collect the costs from such customers upfront as a deposit in the form of cash or other high-quality financial security. The portion of this deposit corresponding to costs other than direct-connection facilities

[31] *PPL Corporation and Blackstone Infrastructure create joint venture to build natural gas generation in Pennsylvania in support of data center development*, (July 15, 2025) https://investors.pplweb.com/2025-07-15-PPL-Corporation-and-Blackstone-Infrastructure-create-joint-venture-to-build-natural-gas-generation-in-Pennsylvania-in-support-of-data-center-development; *see also* Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-4.
[32] *Id*.

(i.e., network upgrades, substation upgrades, etc.) would be subject to refund through credits, over a fixed time period not to exceed 10 years, in parallel with the customer's payment of transmission charges. During and after the crediting period, the customer shall pay full transmission rates for use of the transmission system. The remaining portion of this deposit, which corresponds to direct-connection facilities, would be retained by the Company as nonrefundable contribution in aid of construction (CIAC). This CIAC approach is consistent with my understanding of how PPL already recovers such costs from LP-5 customers.[33]

Q: WHY DO YOU RECOMMEND THIS APPROACH?

A: Several reasons. First, and most importantly, this approach mitigates rate impacts and stranded asset risk associated with transmission upgrades. Second, it does not rely on quantification of benefits that would accrue to non-LP-5 customers from any given facility. As the preceding discussion demonstrates, attempting to quantify such benefits for purposes of allocating costs – even if PPL were to identify and track project-specific benefits to validate such quantification, which it does not do[34] – is likely to be a highly fraught exercise vulnerable to abuse. Third, it significantly mitigates many other potential concerns associated with other LP-5 tariff provisions. For example, the minimum monthly bill for an LP-5 customer is much less important where the customer has already essentially pre-paid its entire transmission network upgrade. Fourth, this approach is fair to large load customers, representing only a modest change to the financial security PPL already requires of them. PPL states that

[33] *See* Exhibit RN-3, Compiled Discovery Responses, OCA VIII-9.
[34] Exhibit RN-3, Compiled Discovery Responses, CAUSE-PA XI-2.c; EI-PPL II-8.

under its current process, "Large Load Customers provide financial security for all network upgrades costs associated with the required enhancements to support their project that are socialized in rates".[35] In other words, large load customers are already required to make up-front deposits; my recommended approach would clarify that it encompass all incremental costs (i.e., direct-connection costs, network upgrade costs, and costs of any other facilities, such as substation upgrades) incurred to serve the large load customer. Fifth, this approach is consistent with analogous federal and Pennsylvania precedents.

Q: PLEASE DESCRIBE SUCH PRECEDENTS.

A: FERC has adopted a similar approach to direct assignment of transmission costs for generators to ensure that transmission network upgrade costs required to interconnect merchant generators are not subsidized by other customers.[36] The centralized nature of large loads has more in common with generation customers than loads, and thus, it is reasonable to treat them more akin to generators. In addition, the recent letter from the Department of Energy to FERC on large load interconnection describes a similar mechanism. The DOE 403 Letter, at principle 8, describes the necessary evolution to extend cost allocation method for generators to new large load customers.[37]

This approach is also analogous to Pennsylvania electric distribution companies' (EDC) refundable CIAC/cash advance rules for supply line extensions, which provide for EDCs to require up-front security for system upgrades, then refund

[35] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-II-8.
[36] FERC Order 2003, 104 F.E.R.C. ¶ 61,103, at 4 (2003).
[37] DOE 403 Letter, *supra* n.5, at 12.

such security over five years as the customer satisfies their revenue requirement through payment of delivery charges.[38]

Q: COULD YOUR PROPOSAL ALSO INCORPORATE A HIGHER CONTRIBUTION IN AID OF CONSTRUCTION (CIAC)?

A: Possibly. Clarifying LP-5 customers' cost responsibility for network upgrades could conceivably lead new large load customers to request service that relies more on direct-connection facilities, rather than network upgrades. To this extent this occurs, it may increase the proportion of PPL's transmission costs recovered through CIAC. The Commission found in its Tentative Order that it may be appropriate that large load customers pay a portion of transmission network upgrades through CIAC. My recommendation could be combined with these terms. Together, the recommendations would ensure that large load customers are presented with accurate upfront price signals, pay a fair portion of upgrade costs, and are credited back a fair portion of costs as load materializes and continues to use the system over time.

iii. <u>PPL's LP-5 Contract Term Length is Insufficient to Protect Customers.</u>

Q: WHAT DOES PPL PROPOSE AS THE CONTRACT TERM FOR THE LP-5 TARIFF?

A: The Company proposes a one-year minimum service contract for LP-5 customers that do not cause the Company to incur socialized transmission costs. The Company

[38] *See* FirstEnergy Pennsylvania Electric Company Electric Service Tariff, Electric Pa P.U.C. No. 1, Rule 4 (providing a 5-year refund period for cash advances); PPL Electric Utilities Corporation General Tariff, Electric Pa P.U.C. No. 201, Rule 3 (providing a 5-year maximum guarantee period); PECO Energy Company Electric Service Tariff, Electric Pa P.U.C. No. 8, Rule 7.2(C) (providing a 5-year guarantee period); Duquesne Light Company Electric Service Tariff, Electric Pa. P.U.C. No. 25, Rule 7(C) and 7(F) (providing 5-year guarantee periods).

reserves the right to shorten this initial term to less then one year where "the Company and the customer mutually agree to a different term in the contract for service."[39] Where the customer causes the Company to incur interconnection costs that will be socialized in transmission rates, the Company proposes a five-year minimum contract term.[40]

Q: WHAT IS THE MINIMUM TERM BASED ON?

A: The minimum term of one year is based on the Company's historic requirement.[41] The Company does not provide adequate analysis to support the five-year minimum contract for customers that incur socialized transmission costs, though it states that it "determined that this time frame would enable it to receive transmission revenues from new large load customers in an amount to cover the socialized upgrade costs."[42]

Q: WHAT IS YOUR RESPONSE TO THIS PROPOSAL?

A: As shown in Table 1, PPL's proposed contract term for a large load tariff is a significant outlier from other tariffs that have been adopted (marked by an asterisk) or are under consideration around the country. Per Table 1, most recent large load tariffs have an initial term of approximately 15 years or more. This is because five years does not typically present a long enough period to recoup the utility's socialized incremental investments while contributing to embedded system costs and, thus, would result in cost shifting to other customer classes. Typically, a customer would

[39] Ex. GEO-1 at 413.
[40] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-9.
[41] *Id*.
[42] Exhibit RN-3, Compiled Discovery Responses, CAUSE-PA VIII-10(d).

need to pay rates for 15-20 years until the utility breaks even on the investment.[43] And for large load, it could take significantly longer for large loads to pay for their share of large upgrades due to the magnitude of socialized upgrades. After that period, the customer's contribution to average rates creates a benefit. Before that point, the asset would be partially stranded if the customer were to stop paying and exit the system or reduce its load below initial projections.

Q: PLEASE ELABORATE ON THE ISSUE OF CONTRACT TERM LENGTH.

A: The contract term length, together with revenue guarantee/financial security and enforcement provisions, effectively dictate the minimum total revenue which a new customer will be responsible for paying to the Company. Such provisions should ensure that a customer that terminates service early will still be required to pay the minimum charges for the remaining contract term (or forfeit a corresponding amount of their financial security). Therefore, the contract length should be set to ensure recovery of incremental costs plus a reasonable contribution to embedded utility costs.

All of the utilities listed in Table 1 have contract terms longer than PPL's proposed five-year term. PPL's contract term length could be extended to recover a larger portion of connection and service costs from these large customers. The alternative is an exit fee that recovers additional revenue on top of the minimum demand charges throughout the term, recognizing that the infrastructure of connecting

[43] Virginia Joint Legislative Audit & Review Commission, *Report to the Governor and the General Assembly of Virginia: Data Centers in Virginia* 88 (December 2024), https://jlarc.virginia.gov/pdfs/reports/Rpt598.pdf.

the customer is paid for over a substantially longer timeframe than the contract term. I will discuss the exit fee concept in more detail below.

LSE	Type of Tariff (*=approved)	Elgibility Threshold	Contract Period	Minimum Billing (% of contract capacity)
Ameren Missouri	Tariff adjustment	100MW	Minimum of 15 Years (up to 17)	70%
Appalachian Power	Tariff adjustment	100MW	12 Years	80%
Appalachian Power Company and Wheeling Power Company	Tariff adjustment*	100MW with 60% load factor	12 Years	80%
Colorado Springs Utilities	New rate sub-class*	10MW	10 Years	100% in Initial Term
Consumers Energy	Tariff adjustment	100MW	15 Years	80%
Dominion Energy Virginia	New rate sub-class	25MW with 75% load factor	14 Years	Distribution 85%, Transmission 85%, Generation 60%
Duke Energy Florida	Supplmental agreement on new rate sub-class	100MW	15 Years	75% - 85%
Evergy	New rate sub-class	100MW	15 Years	80%
Florida Power & Light	New rate sub-class	25MW with 85% load factor	20 Years	90%
Georgia Power	Tariff adjustment*	100MW	15 years	Individual Customer Contract Terms
Indiana Michigan Power	Tariff adjustment*	70MW	12 Years	80%
Indiana Michigan Power	Tariff adjustment	50MW	15 Years	90%
Kentucky Power	Tariff adjustment*	150MW	20 Years	90%
Kentucky Utilities Company	New rate sub-class	100MVA with 85% load factor	15 Years	80%

We Energies	New rate sub-class	500MW	10 Years (VLC tariff), depreciable life of the resource (BR tariff)	Not Specified
Xcel Energy MN	New rate sub-class	100MW	15 years	75%

Table 1. Comparison Of Current Large-Load Tariff Proposals

Source: Data from Database of Emerging Large-Load Tariffs (DELTa). Smart Electric Power Alliance (SEPA) and North Carolina Clean Energy Technology Center (NCCETC). Retrieved November 7, 2025, from https://sepapower.org/large-load-tariffs-database.

Q: WHAT IS YOUR RECOMMENDATION RELATED TO THE LP-5 MINIMUM CONTRACT LENGTH?

A: To bring the LP-5 tariff in line with national best practices and protect customers from bearing the costs of stranded assets, I recommend that the Commission require PPL to increase the initial contract term to 15 years. This period should exclude an initial ramp-up and begin once the facility is fully operational.

Q: DOES PPL'S PROPOSED LARGE LOAD TARIFF PROVIDE FOR LARGE LOAD CUSTOMERS TO PAY AN "EXIT FEE" IF THEY REDUCE OR STOP TAKING SERVICE IN SOME CIRCUMSTANCES?

A: No, but it should. As the Commission explained in its Tentative Order, such exit fees are appropriate "as a mechanism to provide utilities with adequate planning time for capacity adjustments while limiting the financial impact of customer load reductions."[44] The Commission tentatively recommended requiring large load customers to provide notice at least 42 months prior to reducing their contract for capacity by 20% or more. This 42-month period "account[s] for the timing of the PJM Base Residual Auction (BRA) schedule, which typically purchases capacity three years in advance of a delivery year. By requiring notice of a load reduction three-and-a-half years in advance allows PJM to account for this load reduction in determining its resource requirements to be acquired in the BRA. Reflecting the Large Load Customer's reduction in the BRA allows PJM to avoid purchasing

[44] Tentative Order, *supra* n.24, at 33.

capacity that otherwise would have been purchased for the Large Load Customer, thus avoiding stranded costs paid for by other customers."[45]

Q: DO ANY OTHER JURISDICTIONS REQUIRE LARGE LOAD CUSTOMERS TO PAY AN EXIT FEE?

A: Yes. Dominion, which has the largest concentration of data centers of any US utility, introduced a new large load customer class (GS-5) in its most recent rate case.[46] Under the new rate schedule, customers must sign an Electric Service Agreement with a minimum term of 14 years. Customers that cease operations or otherwise default on the agreement before the end of the term will pay an exit fee covering any outstanding minimum charges over the remaining contract duration.[47] The minimum charge is the sum of the (1) minimum distribution charge of 85% contracted demand; (2) minimum transmission charge of 85% contracted demand; and (3) minimum generation charge of 60% contracted demand.[48]

Q: WHAT EXIT FEE REQUIREMENTS DO YOU RECOMMEND PPL INSTITUTE?

A: Consistent with the Commission's tentative finding, I recommend PPL require LP-5 customers to provide at least 42 months' notice prior to reducing their load by 20% or

[45] *Id.* at 34.
[46] Application of Virginia Electric and Power Company For a 2025 biennial review of the rates, terms and conditions for the provision of generation, distribution and transmission services pursuant to § 56-585.1 A of the Code of Virginia, Case No. PUR-2025-00058 (State Corp. Comm'n. July 14, 2025).
[47] Final Order Issued November 25, 2025, at 24–25, Case No. PUR-2025-00058 (State Corp. Comm'n Nov. 25, 2025) https://www.scc.virginia.gov/docketsearch/DOCS/89g601!.PDF.
[48] *Id*.

more, including where such reduction occurs after the customer's initial contract term.

The Company should require customers to post additional financial security to secure their compliance with this provision. The exit fee provision will likely otherwise be partially unenforceable, as there would be little to stop an LP-5 customer from declining to provide adequate notice before ceasing service. Indeed, absent such security, a departing customer's payment of an exit fee would be effectively voluntary. It is difficult to imagine why an insolvent large load customer would choose to pay an exit fee before going out of business.

I recommend the amount of such additional security be calculated to approximate the anticipated harms attributable to a customer's failure to comply with the exit fee – that is, the noncompliant customer's impact on capacity costs ultimately borne by other Pennsylvania customers. My recommended revisions to Rate LP-5, attached in Exhibit RN-2, include language intended to describe, at a high level, how such amount could be calculated at the outset of the large load customer's service contract.

These recommended tariff redlines do not specify a process by which liquidated security amounts would ultimately be returned to customers. I recognize that the costs of overprocured capacity would not be borne exclusively by PPL's customers, and that PPL probably cannot, on its own, return liquidated security amounts to all affected Pennsylvania customers. I urge the Commission to work with utilities and other stakeholders to develop and implement a mechanism to effect such refunds. This mechanism need not be finalized in this proceeding. The more pressing

need is to begin requiring such security of new customers as soon as possible, to ensure the resulting funds will be available if (or really, when) customers violate minimum notice provisions in the future.

iv. PPL should be required to allow non-firm transmission service.

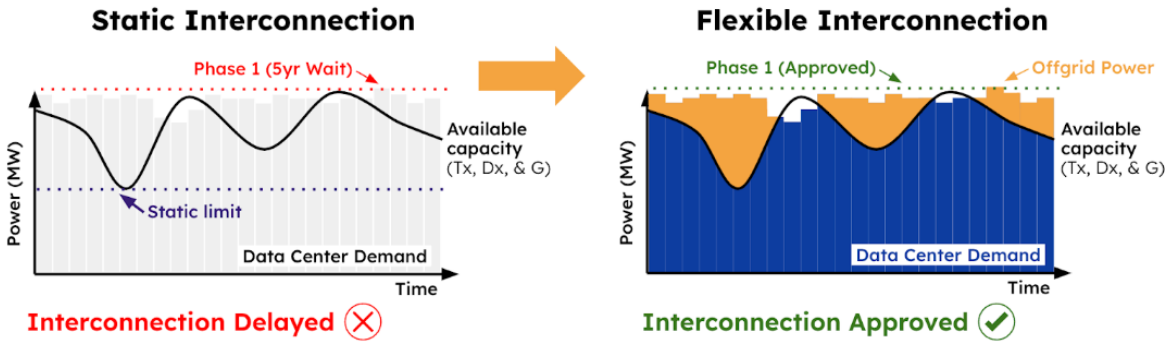
Q: CAN YOU DEFINE NON-FIRM TRANSMISSION CAPACITY SERVICE?

A: Non-firm capacity service, also called flexible connections, refers to a connection to the grid that can be flexibly interrupted as needed by the grid operator. This is typically done because of grid congestion or capacity constraints.

Q: WHY ARE FLEXIBLE CONNECTIONS RELEVANT TO THE DISCUSSION OF NEW LARGE CUSTOMER LOAD GROWTH?

A: The risk and costs of serving new large loads can be further mitigated by connecting these large loads flexibly. Flexible connections allow loads to connect with a mixture of firm and non-firm capacity. The firm capacity delivers uninterrupted grid power to serve a portion of the customer's load, while the non-firm capacity is served when power is available, utilizing on-site generation or demand flexibility to reduce demand during times of grid constraints. This non-firm load is integrated into the utility's operations. In practice, flexible connections rely on more advanced monitoring and control approaches than traditional interruptible tariffs, and provide system operators more confidence in relying on these resources.[49] Additionally, flexible connections have different dispatch requirements than traditional interruptible customers, including but not limited to economic dispatch considerations.

[49] *E.g.*, Astrid Atkinson, *Flexible Data Centers: A Faster, More Affordable Path to Power* (Dec. 10, 2025) https://www.camus.energy/blog/flexible-data-centers-a-faster-more-affordable-path-to-power.



Relevant to this proceeding, PPL is proposing a tariff with the terms of service under which a large customer can request service. PPL has not proposed offering a non-firm option, which will likely result in increased stranded asset risk, increase times to connect large customers, and increase costs when compared to options that connect customers with non-firm service. Non-firm service options are also directly related to cost allocation, as methods for recovering system costs for non-firm service need to be established under the new large load paradigm.

Q: HOW DO NON-FIRM CONNECTIONS DEFER AND AVOID SYSTEM INVESTMENT?

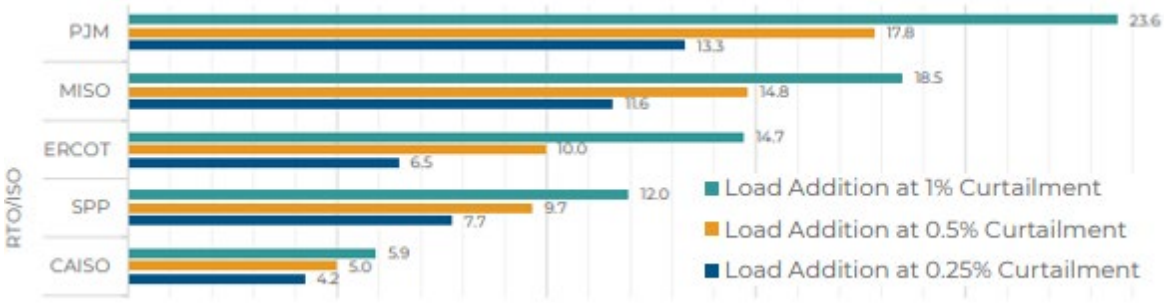
A: Non-firm or flexible connection defers or avoids system upgrades and/or increases distribution and transmission system utilization generally by limiting demand from customers when they have the potential to create grid overloads.[50] The approach increases grid utilization, which can mitigate or defer the need for current and future generation, transmission, and distribution system upgrades.[51] For example, Figure 1 illustrates a situation where a data center would be unable to connect without a capacity upgrade with a five-year construction lead-time. Rather than waiting for that infrastructure, the data center could utilize flexible connection to connect, initially modifying its net load using behind the meter generation, or curtailment when capacity is unavailable.

[50] EPRI Principles, *supra* note 7, at 6.
[51] *Id*.

Figure 1: Data center flexible connection example[52]

Q: WHY SHOULD NON-FIRM CONNECTIONS BE CONSIDERED FOR LARGE LOAD CUSTOMERS?

A: Non-firm connections can create benefits for all types of electric grid users, including load and customers with their own generation. Flexible connections are especially relevant to large loads because new large loads, particularly data centers, create risk with the rapid and significant infrastructure build-out required to connect them.



Q: IS THERE SIGNIFICANT POTENTIAL FOR NON-FIRM CONNECTION TO REDUCE THE COSTS AND RISK OF LARGE CUSTOMER CONNECTIONS?

A: Yes. According to a recent study by Duke University looking at curtailment enabled headroom, curtailment of new large loads in the top 0.5 percent of load hours could enable nearly 100 GW of capacity of new connected load across the country without

[52] Adapted from Steven Brisley, *What is Flexible Interconnection and How Does it Help?*, Camus Energy (June 23, 2025) https://www.camus.energy/blog/what-is-flexible-interconnection--and-how-does-it-help.

increasing system peak loads or requiring new infrastructure.[53] Within PJM alone, curtailing new data center load during the top 0.5 percent of load hours could support approximately 17.8 GW of additional load to interconnect, as shown in Figure 2.[54] While only a small portion of this capacity could be available within the PPL service territory, this finding underscores the need for further study as to how these new large loads can be incorporated using flexible arrangements.

FIGURE 2 [55]

Q: CAN YOU SUMMARIZE THE BENEFITS OF NON-FIRM CONNECTIONS FOR LARGE LOAD CUSTOMERS CONNECTING TO THE GRID?

A: The two primary benefits for new large load customers that arise from connecting on a non-firm basis are speed to power and lower cost. Because connecting on a non-firm basis enables the utility to defer system upgrades and/or increases the utilization of the transmission system, connecting flexibly can lower costs. Further, because this

[53] Tyler H. Norris et al., *Rethinking Load Growth: Assessing the Potential for Integration of Large Flexible Loads in US Power Systems*, 18–20 Duke University Nicholas Institute for Energy, *Environment & Sustainability* (2025) https://hdl.handle.net/10161/32077.
[54] *Id*. at 4 (Figure 1).
[55] *Id*. at 4 (excerpt from Figure 1).

approach can enable large loads to connect without waiting for system upgrades to be completed, it can reduce their time to connect. For example, a recent study by Google and Camus found that flexible connections and Bring Your Own Capacity programs will allow data centers to connect 3-5 years faster than the traditional interconnection process, and claims that method could lead to data centers covering approximately 100% of the incremental system supply costs.[56]

Q: ARE THERE BENEFITS FOR OTHER RATEPAYERS THAT FOLLOW FROM A NON-FIRM CONNECTION APPROACH?

A: Yes. By improving the speed to power for new large load customers, flexible connections reduce the incentive for speculative, or "phantom," load requests. Challenges associated with phantom requests are discussed in more detail in Section IV, but in brief, phantom requests are a problem that arise when large load customers submit connection requests with multiple utilities, seeking to understand which can connect them fastest and cheapest. The problem for utilities, and other ratepayers, is that this can lead to inflated load forecasts, and in turn, overbuilding generation and transmission assets, which increases costs and the risk of stranded assets. By reducing the incentive for speculative connection requests, a non-firm connection strategy can reduce system costs and risks for other ratepayers.

[56] Brancucci et al., *Flexible Data Centers: A Faster, More Affordable Path to Power*, Camus Energy (Dec. 2025) https://www.camus.energy/flexible-data-center-report.

Q: HAS THE PENNSYLVANIA PUBLIC UTILITY COMMISSION VOICED SUPPORT FOR OR OPPOSITION TO THE IDEA OF NON-FIRM CONNECTIONS?

A: Yes, in Docket No. M-2025-3054271, *Interconnection and Tariffs for Large Load Customers,* the Commission delivered a tentative order finding it beneficial to develop programs for non-firm grid service for large load customers.[57] Because taking non-firm service may lead to customers not using their full interconnection limit, the Commission also found that lower stand-by charges or lower minimum demand charges for those customers may be equitable.[58]

Q: DID PPL SUBMIT ITS PERSPECTIVE ON NON-FIRM SERVICE IN THE COMMISSION'S LARGE LOAD DOCKET?

A: Yes. PPL recognized that non-firm service could reduce the amount of necessary system upgrades, lowering costs that would otherwise be socialized in rates, and that non-firm service could help address concerns related to resource adequacy.[59]

Despite those benefits, PPL stated that it believes the Commission does not have the authority to require a customer to take non-firm service, but that a tariff should be able to accommodate firm or non-firm service.[60]

[57] Tentative Order, *supra* note 24.
[58] *Id*.
[59] PPL Comments Dated June 6, 2025, *In En Banc Hearing on Interconnection and Tariffs for Large Load Customer*, Docket No. M-2025-3054271, Pa. Pub. Util. Comm'n.
[60] *Id*.

Q: IS PPL REQUIRED TO ASSESS FLEXIBLE INTERCONNECTION APPROACHES ELSEWHERE ON ITS SYSTEM?

A: Yes, it is. In its December 3, 2025, Order approving PPL's Second DER Management Plan, the Commission directed the Company to provide an evaluation of three different flexible interconnection approaches within 12 months of the Commission's Order.[61] That Order does not apply to non-firm service for large load customers, but many of the underlying rationales for examining flexible interconnections (in addition to those I articulate above) apply to both contexts.

Q: ARE OTHER UTILITIES AND JURISDICTIONS PURSUING NON-FIRM CONNECTIONS?

A: Growing efforts are underway to enable flexible, non-firm connection for large data centers, among other large energy users.[62] Utilities as varied as Entergy Arkansas, Salt River Project, and Black Hills Power already offer interruptible service agreements for cryptocurrency customers, which point to the promise of the practice.[63] Utilities like Idaho Power, El Paso Electric, and Chelan County Public

Comm'n, Dec. 2023) https://www.entergyarkansas.com/wp-content/uploads/2024/11/eal_lphlds.pdf; *Standard Electric Price Plans* at 162, Salt River Project, November 2025, https://www.srpnet.com/assets/srpnet/pdf/price-plans/2024/2025-Ratebook.pdf; *Schedule of Rates for Electric Service Available in the Entire Territory Served by Cheyenne Light, Fuel & Power Company D/B/A Black Hills Energy* at 37, Black Hills Power (June 2025) https://www.blackhillsenergy.com/sites/blackhillsenergy.com/files/clfp_electric.pdf.

Utility District have expanded this from cryptocurrency customers to data center customers.[64]

Q: ARE THERE ANY REGIONAL TRANSMISSION OPERATORS (RTOS) THAT ARE PROPOSING TO USE NON-FIRM CONNECTIONS?

A: Yes. The Southwest Power Pool (SPP) has recently proposed using flexible connections for large customers. SPP has proposed several non-firm connection offerings across its jurisdiction to connect loads larger than 10 MW.[65] The offerings allow for large load to connect without firm generation or transmission capacity.[66] One of the flexible connection offerings, the Conditional High Impact Large Load Service (CHILLS), is developed for large customers to transfer to firm service within five years. In addition, SPP has proposed the Generation Supported High-Impact Large Load (HILLGA) tariff that allows large load customers to utilize behind-the-meter and local generation resources to service their own load. SPP will study the load and generation together. The large customer can elect to have partial service permanently (i.e., non-firm transmission or generation capacity) and rely on their own resources.[67] The ability to allow large customers to rely on their own resources is a

[66] *Id*.
[67] *Id*.

significant offering from SPP because it will create a pathway to dramatically reduce cost shifting from large customers to other customers, while reducing the need for transmission and generation buildout. The Electric Reliability Council of Texas (ERCOT) has similarly been directed to establish standards for interconnecting large loads that would require those customers to be ready to either deploy on-site backup generating facilities or curtail load when directed to by ERCOT.[68]

Q: HAS FERC RECENTLY ORDERED ACTIONS RELATED TO NON-FIRM OPTIONS FOR LARGE LOADS?

A: Yes. On December 18, 2025, FERC issued an Order that, among other things, directed PJM to revise its Tariff to establish flexible connection options for certain transmission-interconnected customers. The Order provides in part:

> We also direct PJM to establish three new transmission services that reflect that Eligible Customers taking service on behalf of Co-Located Load are willing and able to limit their energy withdrawals from the transmission system under certain conditions. Specifically, we direct PJM to revise its Tariff to allow Eligible Customers seeking to take NITS on behalf of Co-Located Load to, at their option, take a new interim, non-firm transmission service until all Network Upgrades necessary to provide NITS are complete. We further direct PJM to offer two other new transmission services—a Firm Contract Demand transmission service and a Non-Firm Contract Demand transmission service—that an Eligible Customer can choose to take on behalf of a Co-Located Load instead of taking NITS. These new transmission service options reflect a Co-Located Load's ability to limit withdrawals from the transmission system and potentially avoid costly and inefficient transmission system buildout that may not be necessary.[69]

[68] Tex. S.B. 6 (amending Tex. Util. Code Ann. § 37).
[69] *Order On Show Cause Proceeding, Directing Compliance Filings, Establishing Paper Hearing, And Granting In Part And Denying In Part Complaint*, Docket No. EL25-49-000, 193 FERC ¶ 61,217 ¶160 (December 18, 2025).

The Order directed PJM to make a compliance filing to revise its Tariff within 60 days.[70]

Q: IN LIGHT OF THE FOREGOING, WHAT IS YOUR RECOMMENDATION AS IT RELATES TO NON-FIRM CONNECTIONS?

A: I recommend that the Commission direct the Company to update its tariff, as part of its compliance filing at the conclusion of this proceeding, to provide non-firm service options for LP-5 customers.

FERC's recent Order affects, but does not obviate, this recommendation. First, I understand it applies only to certain transmission-interconnected customers, which may leave open the need for service options provided by PPL. Second, depending on how PJM ultimately implements the FERC Order, PPL may need to update rules and conditions applicable to transmission-voltage retail service to ensure alignment. Third, while I am not an attorney, I understand that there may be some questions regarding the jurisdictional boundaries between FERC and Commission with respect to large load retail customers, such that the Commission may wish to exercise jurisdiction over some non-firm service issues.

v. <u>The Company's Proposal to Allow Distribution Asset Leasing Should be Rejected</u>

Q: WHAT DOES THE PROPOSED LP-5 TARIFF ALLOW RELATED TO OWNERSHIP OF TRANSFORMATION EQUIPMENT?

A: The proposed LP-5 tariff would allow the Company to construct, own, operate, and/or maintain LP-5 customers' transformation equipment at terms and rates determined

[70] *Id.* at ¶ 2.

between the Company and the LP-5 customer.[71] In essence, it would allow the Company to build equipment and lease it back to the customer outside of base rates.

Q: HAS THE COMPANY PROVIDED ANY DETAIL ON THIS PROVISION OF THE TARIFF?

A: The Company states that it currently leases two 69,000 Volt to 12,470 Volt substations to customers under lease agreements that began in 1998 and 1991, respectively.[72] The Company states that it is not forecasting leasing additional equipment under these terms, but that it will respond to such customer requests.[73]

Q: WHAT IS YOUR CONCERN WITH THIS PROVISION OF THE LP-5 TARIFF?

A: This provision essentially allows large customers to take service at distribution voltages but avoid paying commensurate distribution rates. For example, the two customers subject to the legacy agreements identified above are effectively taking service at 12,470 volts, which would ordinarily place them on Rate Schedule LP-4 (Large General Service at 12,470 volts). The tariff provision PPL proposes, and presumably these customers' legacy contracts, effect an end-run around this rate classification, enabling them to instead enjoy considerably lower delivery charges on Rate LP-5. This is unfair to other ratepayers.

Q: WHAT IS YOUR RECOMMENDATION RELATED TO THIS LP-5 TARIFF TERM?

[71] Ex. GEO 1 at 99.
[72] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-1-8a.
[73] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-1-8b.

A: I recommend the Commission direct the Company to strike this term from the LP-5 tariff moving forward. Given the age of the two existing contracts, it is appropriate to grandfather those existing customers, but there is no reason to allow this provision to remain in the LP-5 tariff moving forward.

IV. PPL'S LOAD FORECASTING DOES NOT ALIGN WITH BEST PRACTICES

Q: PLEASE EXPLAIN THE UNCERTAINTY INHERENT IN LARGE LOAD FORECASTING.

A: Data centers, with their large size and unique characteristics, are subject to extreme uncertainty. This uncertainty in large load forecasts is not just the conclusion of industry observers and analysts, it is also the outlook and perspective of PJM. According to PJM, "[t]here is growing uncertainty around the accuracy of forward load forecasts because of the unprecedented nature of data center load growth, and there is the need to examine who should bear the risk of these forecasts being incorrect in either direction."[74]

Q: HAVE INDUSTRY PARTICIPANTS VOICED SIMILAR CONCERNS ABOUT THE ACCURACY OF FORECASTS?

A: Yes, there have been examples of industry participants expressing that forecasts of large load growth are likely overstated. For example, Astrid Atkinson, a former senior director of software engineering at Google, stated that there are "five to 10 times

[74] Statement of Manu Asthana on Behalf of PJM Interconnection, L.L.C. FERC Resource Adequacy Technical Conference (May 20, 2025) https://www.pjm.com/-/media/DotCom/documents/ferc/filings/2025/20250516-ad25-7-000-manu.pdf.

more interconnection requests than data centers actually being built."[75] The president of a shale gas producer has likewise said he expects only 10% of data center projects that have been announced to be built.[76] Similarly, Microsoft, in testimony on Georgia Power Company's 2023 IRP Update, commented over-forecasting demand from data centers could lead to procuring excessive carbon intensive generation, and recommended that the Georgia Public Service Commission ("GPSC") only approve near-term resource planning decisions based on "known, mature projects that have made firm commitments to Georgia Power."[77] Data centers customers have suggested that current forecasts are inaccurate and include double counting issues, speculative loads, and low probability projects.[78]

Q: WHY ARE THESE FORECASTS SO UNCERTAIN, AND HOW DO PROSPECTIVE LARGE LOAD CUSTOMERS EXACERBATE THESE CHALLENGES?

A: Duplicate or phantom requests are a primary driver of uncertainty, while utilities have little reason to be skeptical of requests because of their economic incentive to build rate base and receive a return on these investments.

[78] *See, e.g.,* Amazon, Calpine, Constellation, Google, Microsoft, Talen, *Joint Stakeholder Options PJM CIFP – Large Load Additions* (Oct. 1, 2025) https://www.pjm.com/-/media/DotCom/committees-groups/cifp-lla/2025/20251001/20251001-item-05d---joint-stakeholder-options---amazon-calpine-constellation-google-microsoft-talen.pdf.

Q: WHAT DO YOU MEAN BY PHANTOM REQUESTS?

A: Phantom requests are speculative and often duplicative requests to connect being submitted by data center customers or developers to multiple utility jurisdictions.

Q: WHY WOULD A PROSPECTIVE DATA CENTER CUSTOMER SUBMIT REQUESTS TO CONNECT TO MULTIPLE UTILITIES?

A: Data center customers are looking to get connected to the grid faster than new energy infrastructure can be built, which has led developers to submit requests to multiple utilities to understand their timeline, rates, and incentives.[79] Industry participants note that "[d]ata center developers consider multiple states as possible locations for data centers, and they query multiple utilities simultaneously for electricity rates and incentives prior to making a final selection."[80]

Q: HOW COMMON ARE PHANTOM REQUESTS?

A: It is difficult to precisely identify the rate of phantom requests. However, utilities have seen up to 30% of their applications submitted in 2024 cancelled.[81] Since 2020, PPL has seen requests for over 151 GW of large load over 269 applications, but only a fraction of that has resulted in signed ESAs.[82] Similarly, Public Interest Organizations commented on a recent FERC docket that "… PJM has no way to cross-check whether a data center in, for example, Exelon's service territory has also

[81] Giacobone, *supra* n.79.
[82] Exhibit RN-3, Compiled Discovery Responses, OCA VIII-1 Attachment 1.

made the same proposal in Dominion's territory, and both proposals end up in PJM's forecast even though only one will be built. … [I]n a recent presentation at the Pennsylvania Environmental Law Forum, PJM's own Senior Manager of Government Services, Stephen Bennett, stated that data center companies 'are pitching the same data centers in different locations.'"[83]

Q: DO DATA CENTER CUSTOMERS FACE COSTS FOR SUBMITTING PHANTOM REQUESTS?

A: In general, interconnection requests do not require potential data center customers to make significant financial commitments in comparison to the upgrade costs triggered. Although developers know that they will ultimately need to sign an ESA and make the corresponding financial commitments, until they do so, the cost is relatively low to submit multiple requests.[84] Reflecting on this, a former commissioner with the Public Utilities Commission of Texas stated, "When it's cheaper to buy a queue position than not use your queue position, you'll buy queue positions all day long."[85]

Q: HOW DO PHANTOM REQUESTS REDUCE THE ACCURACY OF LOAD FORECASTS?

A: Often, the number of early-stage customers exceeds later-stage customers that have signed an ESA.[86] In PPL's case, the Company reports that more than 60 GW of potential data center projects have expressed interest in their territory, but that only 13

[83] Public Interest Organizations, *Comments of Public Interest Organizations in response to PJM Interconnection, L.L.C.'s 03/24/2025 Answer to FERC's 02/20/2025 Order under EL25-49* at 16–17, FERC Docket No. EL25-49-000 (April 23, 2025).
[84] LEI Report, *supra* n.25, at 13.
[85] Martucci, *supra* n.75.
[86] LEI Report, *supra* n.25, at 13.

GW are in sufficiently advanced stages to be included in their load forecast.[87] The fact that such a large proportion of load requests may be speculative makes it difficult to develop an accurate load forecast.

Q: DID THE LEGISLATURE RECENTLY IDENTIFY A SIMILAR CONCERN?

A: The legislature recently directed the Commission to provide oversight of the load forecasts submitted by electric distribution companies to PJM.[88] The law includes specific mention of large-load interconnection requests and requires the Commission to "ensure that only projects with a high likelihood of development are included in a forecast, including consideration of financial commitments made by an interconnecting customer."[89] In addition, the Commission is required to collaborate with PJM and other state utility commissions to prevent double-counting of new large loads.[90]

Q: WHEN DOES PPL INCLUDE LOAD FORECASTS FROM INDIVIDUAL LARGE LOAD CUSTOMERS INTO ITS SYSTEMWIDE FORECAST?

A: PPL includes load requests into its forecast after prospective customers have signed a Letter of Authorization ("LOA"). By this point, customers have paid a deposit to proceed with the engineering and design of the requested interconnection, which the

[87] PPL Corp., *PPL Corporation and Blackstone Infrastructure create joint venture to build natural gas generation in Pennsylvania in support of data center development.*, (July 15, 2025) https://investors.pplweb.com/2025-07-15-PPL-Corporation-and-Blackstone-Infrastructure-create-joint-venture-to-build-natural-gas-generation-in-Pennsylvania-in-support-of-data-center-development.
[88] Pa. Act No. 45 of 2025 §1804-B(B)(3).
[89] *Id*.
[90] *Id*.

Company states is a sign that projects are "sufficiently committed to moving forward to be included in load forecasts."[91]

Q: DO YOU AGREE THAT THE EXECUTION OF A LOA DEMONSTRATES THAT A PROJECT IS SUFFICIENTLY CERTAIN TO BE INCLUDED IN A LOAD FORECAST?

Q: No. As I discuss above, data center developers prioritizing speed-to-power may be incented to execute LOAs for more projects than they intend to ultimately build. Such customers will often find it economically preferable to pay for extra queue positions, even where such payments include liquidated engineering and design deposits, as these amounts are relatively insignificant compared to connection costs that are committed to when signing an ESA. I further note that PPL's discovery responses appear to acknowledge this reality: in OSBA-PPL-I-40.c., it defined its "pipeline of [large load customer] projects" as projects for which the customer had executed an ESA.[92]

Q: HOW DOES PPL'S APPROACH COMPARE WITH THE POINT AT WHICH OTHER UTILITIES INCLUDE LARGE LOAD PROJECTS IN THEIR FORECASTS?

A: While approaches to incorporating large loads into forecasts are rapidly evolving, PPL includes the full load forecast from projects much sooner than utilities in other leading jurisdictions typically do. For example, Dominion Energy applies a phased-based approach to categorizing future large load requests, only including loads that

[91] Exhibit RN-3, Compiled Discovery Responses, OCA-VIII-7.
[92] Exhibit RN-3, Compiled Discovery Responses, OSBA-PPL-I-40.c.

have executed an ESA fully in its load forecasts.[93] Similarly, Public Service Company of Colorado recently adopted a similar approach, where only loads that have signed ESA or Interconnection Agreements are included in the company's load forecast.[94]

Q: ARE THERE ANY PROBLEMS THAT CAN ARISE FROM INCLUDING LOAD IN FORECASTS TOO QUICKLY?

A: Yes. If load is included in forecasts too quickly but ultimately does not materialize, then there is a high likely that investments made to interconnect that load will become stranded assets and costs may be shifted onto other customers.

Q: WHAT IS YOUR RECOMMENDATION RELATED TO THE INCORPORATION OF LARGE LOADS INTO LOAD FORECAST?

A: I recommend that the Commission direct PPL to include new large load customers into its load forecast after they have signed an ESA.

Q: DOES THIS RECOMMENDATION APPLY TO ALL LOAD FORECASTS?

A: No. Forecasts of increasing load from EVs and electrification are less subject to the uncertainty I discussed above, and the potential cost impacts of mis-forecasting such distribution-interconnected loads are also less significant. Therefore, I only recommend this treatment of new large loads, such as data centers, which are uniquely uncertain and are at unprecedented magnitudes, as I discussed above.

[94] Colorado Pub. Util. Comm'n, Proceeding No. 24A-0442E, Decision No. C25-0747 at 31 (Nov. 6, 2025).

V. PPL CORPORATION'S JOINT VENTURE WITH BLACKSTONE

Q: PLEASE DESCRIBE THE JOINT VENTURE BETWEEN PPL CORPORATION AND BLACKSTONE INFRASTRUCTURE.

A: In July of 2025, PPL Corporation and Blackstone Infrastructure announced a new joint venture (the "JV") to build natural gas plants in Pennsylvania to power new data centers in the state.[95] The JV will construct front-of-the-meter generation on the Marcellus and Utica shale basins, with the intention of quickly accessing gas pipeline capacity in areas of significant data center interest.[96] While PPL Electric is not a party to the joint venture, the Company and the JV share a corporate parent company, PPL Corporation.

Q: WHAT NEED DOES PPL CORPORATION STATE THE NEW JV WILL MEET?

A: In the press release announcing the JV, PPL Corporation states that data center interest in its Pennsylvania service territory has reached 60 GW of potential projects, with more than 13 GW in advanced stages of planning. If all of these projects were to come online, PPL Corporation estimates that there would be a 6 GW capacity shortfall within five to six years. The JV is intended to help meet that capacity

[95] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-I-4 (confirming information in the press release "PPL Corporation and Blackstone Infrastructure create joint venture to build natural gas generation in Pennsylvania in support of data center development" is accurate); PPL Corporation, *PPL Corporation and Blackstone Infrastructure create joint venture to build natural gas generation in Pennsylvania in support of data center development* (July 15, 2025) https://investors.pplweb.com/2025-07-15-PPL-Corporation-and-Blackstone-Infrastructure-create-joint-venture-to-build-natural-gas-generation-in-Pennsylvania-in-support-of-data-center-development.

[96] *Id*.

shortage, which it estimates would require $15 billion in investment, "assuming natural gas combined-cycle units are used to meet this need."[97]

Q: DOES THIS MEAN THAT THE JV WILL BE COMPETING WITH OTHER POWER PRODUCERS TO BUILD GENERATION IN PPL'S SERVICE TERRITORY?

A: Yes, that is exactly what this means. The press release states it expects the JV to build capacity in PPL's service territory,[98] and representatives for the Company have confirmed this in response to discovery.[99]

Q: COULD THIS PRESENT CONFLICTS OF INTEREST AMONG PPL ELECTRIC, PPL CORPORATION, AND THE JOINT VENTURE?

A: Yes, because the obligations of PPL Electric to provide reasonably nondiscriminatory service at just and reasonable rates can conflict with PPL Corporation's financial interests related to the JV. The Proposed Tariff creates two clear opportunities for conflicts of interest, explored further below.

Q: HOW COULD THIS CONFLICT OF INTEREST INAPPROPRIATELY INFLUENCE PPL'S DECISIONS IN WAYS THAT IMPACT CUSTOMERS?

A: First, it could encourage PPL Electric to socialize costs triggered by large load customers. PPL Electric oversees interconnection within its service territory, and as discussed in Section II.ii above, proposes to exercise significant discretion in deciding whether to socialize or directly assign costs of transmission facilities built to serve new interconnection customers. In fact, PPL Electric will probably still retain

[97] *Id*.
[98] *Id*.
[99] *Id*.

influence over cost-allocation outcomes even with the tariff revisions I recommend above, because it will make many decisions regarding the transmission facilities and customer-specific arrangements that may inform LP-5 customers' ultimate cost responsibility.

The allocation of costs of LP-5-customer-triggered facilities will have a direct and immediate impact on those customers' bottom lines. Such impacts can reasonably be expected to influence where, when, and the extent to which such customers establish service – which will correspondingly affect the JV's business prospects. The JV has an interest in reducing LP-5 customers' costs as much as possible, because such reductions may help the JV attract more customers for its services, and/or enable the JV to charge higher prices to those customers.

Indeed, PPL Electric's proposed tariff language appears well-suited to produce this outcome. As I discussed above, PPL Electric proposes to socialize the costs of LP-5 customer-triggered facilities that result in "expanded capacity for new generation,"[100] apparently including new generation developed by the JV. This invites any number of scenarios in which the JV's involvement or influence leads PPL Electric to socialize costs. For example, the JV might partner with a prospective large load customer to propose a joint project that includes both incremental load and JV-sponsored generation. Or, when evaluating a prospective large load customer's application for service – even where the customer might not have already partnered with the JV – PPL Electric may be tempted to oversize transmission upgrades so as to accommodate more future generation additions, thereby expanding the JV's potential

[100] Ex. GEO-1; Exhibit RN-3, Compiled Discovery Responses, EI-PPL I-6(b).

business opportunities and driving down the LP-5 customer's interconnection costs at the expense of captive customers.

Second, PPL Electric could preference the JV projects in the interconnection process, helping those projects connect to the system faster than other projects. This potential conflict exists regardless of the extent to which PPL socializes the costs of JV-supported customer interconnections, as speed to power is often an overriding priority for data centers.

Q: DOES PPL HAVE APPROPRIATE GUARDRAILS IN PLACE TO PROTECT AGAINST THESE POTENTIAL CONFLICTS OF INTEREST?

A: Apparently not. In discovery, EDF asked PPL to produce "all applicable rules, regulations, and policies that would pertain to potential conflicts of interest between PPL and the Joint Venture, including, but not limited to, pertaining to sharing of confidential information and anti-competitive practices."[101] In its response, PPL provided in relevant part that "PPL Electric and any affiliates operating in Pennsylvania will comply with all applicable laws and regulations, including, but not limited to, the Electricity Generation Customer Choice and Competition Act (66 Pa. C.S. § 2801, et seq.), Chapter 54 of the PUC's regulations (52 Pa. Code §§ 54.1, et seq.), and the FERC Standards of Conduct (18 C.F.R. § 358.1, et seq.)."[102]

Notably, this response refers only to publicly-available statutes and regulations. PPL did not provide any internal business rules or policies by which it plans to carry out its compliance with these laws, nor did PPL assert any justification

[101] Exhibit RN-3, Compiled Discovery Responses, EI-PPL III-3.
[102] *Id*. (citing EE II-3).

for withholding such rules or policies. This raises the possibility that PPL has no such rules or policies, which if true, would be extremely concerning.

Moreover, it is not clear whether the laws PPL cites, even with corresponding implementing policies, would be sufficient to address the conflicts that present here. I am not an attorney, and do not purport to offer a legal opinion; I understand such issues are more properly addressed elsewhere in this proceeding. At such stage of the proceeding, I would urge the parties and Commission to examine how, if at all, PPL's cited laws would apply to my chief concern: PPL's incentives to preference certain customers with respect to retail delivery service, where such preference has the effect of benefiting an unregulated affiliate.

Q: WHAT IS YOUR RECOMMENDATION TO MITIGATE CONFLICTS OF INTEREST FROM THE JV?

A: At a minimum, the Commission should adopt my recommendations above concerning allocation of costs to serve LP-5 customers. Directly assigning and securing payment of all such costs removes the need for PPL Electric to exercise discretion about whether and when to allocate costs to JV-supported large load customers. This would go a long way toward mitigating (though not eliminating) the risk of over-socializing costs to benefit JV-supported customers. This approach would not, however, resolve PPL Electric's potential incentives to prioritize JV-owned generation projects over competitors' projects.

Therefore, PPL Electric should not be permitted to connect any projects involving its JV unless and until it files, and receives Commission approval of, applicable affiliated interest agreement(s) and relevant policies to safeguard against

these conflicts. At a minimum, these proposed agreement(s) and policies should be served upon parties to this proceeding contemporaneous with their filing, to ensure transparency and opportunity for input.

VI. DISTRIBUTED ENERGY MANAGEMENT SYSTEM (DERMS)

Q: DOES PPL PROPOSE RECOVERING COSTS RELATED TO IMPLEMENTING ITS DERMS CAPABILITIES IN THIS PROCEEDING?

A: Yes. PPL has included a forecast of costs related to implementing "DERMS Capabilities" in years 2025-2029. Specifically, the Company is asking to include approximately $5 million in rate base in the fully projected test year, projects similar annual expenditures for the following four years, for a total of $26.3 million over the five-year period.[103]

Q: HOW DOES PPL DEFINE WHAT THESE COSTS WILL SUPPORT?

A: The Company states that these costs will support the installation of remote monitoring devices to improve the function and performance of PPL's electric grid by integrating customer solar systems into the Company's Distributed Energy Management System ("DERMS").[104] The Company states that these cost estimates were developed based on an assumption of deploying 3,000 devices per year over the five-year period, based on the Company's DER Management Pilot Program.[105]

[103] PPL, Ex. DAU 1, Docket No. R-2025-3057164 (Sept. 30, 2025).
[104] PPL, Direct Testimony of Dennis A. Urban, Jr., 15:3-7, Docket No. R-2025-3057164 (Sept. 30, 2025).
[105] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-II-1.

Q: HAS THE COMMISSION ADDRESSED THE COMPANY'S DERMS PLAN ELSEWHERE?

A: Yes, it has. On December 3, 2025, the Commission entered an Order in Docket P-2024-3049223 approving, with certain modifications, the Company's Second DER Management Plan, which describes how the Company plans to implement certain DERMS capabilities. In its Order, the Commission approved expansion of the Company's DER Capability Pilot program, coupled with a requirement to conduct an RFP from third-party aggregators who could also provide DER control capabilities.[106] The Order also requires the Company to file a DER Orchestration Plan with the Commission within twelve months of the Commission's Order.[107] This Plan must include "(1) PPL's DER integration strategy; (2) alternatives analysis considering the size and type of DER, third-party services and procurements, and the enabling costs for integration; and (3) a cost-benefit or cost-effectiveness framework used to evaluate the alternatives analysis and selected approach," and must be filed contemporaneously with "an evaluation of three different flexible interconnection approaches."[108]

Q: HOW DOES THE COMMISSION'S DECISION IMPACT THE COMPANY'S FORECAST DERMS CAPABILITY COSTS?

A: The Commission's Order did not authorize the Company to recover the costs of the Second DER Management Plan, which is instead under consideration in this

[106] Rewrite Opinion and Order, *supra* n. 61, at 56–58.
[107] *Id*. at 63
[108] *Id*.

proceeding.[109] The Order increases the uncertainty around these costs. It appears that the program costs could increase significantly as the Order removes the 3,000 device annual cap, which the Company's forecast was based on. However, the costs could also be significantly reduced if the results of its RFP and the details of the DER Orchestration Plan identify a lower-cost option to achieve the same capabilities.

Q: DO YOU HAVE OTHER CONCERNS AROUND THE COMPANY'S PROJECTED COSTS TO IMPLEMENT THE DERMS CAPABILITY?

A: Yes. First, the Company's proposal is relatively costly, at approximately $1,700 per device.[110] This is a significant expenditure per device and the Company does not provide granular cost analysis to support this estimate. Second, whereas the Company's DER Management Plan itself is limited to control of solar resources, the DER Orchestration plan will not be, as it will include analysis considering the size and type of DER. The deployment and management of DER technologies besides solar, such as distributed storage and flexible loads, can provide substantial additional opportunities. The Company's analysis of such DERs, and its treatment thereof in the DER Orchestration Plan, will likely inform both potential costs and benefits of program implementation.

[109] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-II-4 ("The Company does not have a 'DERMS proposal' in this proceeding. PPL Electric is only seeking to recover the costs associated with the 'DERMS Capability' described in Mr. Urban's direct testimony (PPL Electric St. No. 2).").
[110] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-II-1.

Q: ARE THERE OTHER BENEFITS RELATED TO DERS THAT THE COMPANY SHOULD BE LEVERAGING?

A: As discussed previously in my testimony, data center load flexibility can utilize DERS and operational changes to provide significant benefits to the grid. The Company forecasts up to 8 GW of data center load over the next 5-6 years. The potential load increase comes with significant concerns around resource adequacy, as the Commission has acknowledged.

The Company should leverage the development of the DER Orchestration Plan, and its ultimate use of the DERMS and related systems, to deliver maximum value from its investments. In particular, the Company should examine and explain how its analyses and investments can support orchestration of flexible loads, including large loads, to mitigate the system issues they pose.

Q: WHAT IS YOUR RECOMMENDATION RELATED TO THE PROPOSED DERMS CAPABILITIES COSTS?

A: It is premature to include these costs within the Company's rates, given the uncertainty around the magnitude of these costs, the third-party aggregators' RFP, and the development of the DER Orchestration Plan. For these reasons, I recommend that the Commission reject the Company's proposal to include these costs within rates as the accuracy and prudence of these costs cannot be supported at this time.

Q: DO YOU HAVE OTHER RECOMMENDATIONS RELATED TO THE DER ORCHESTRATION PLAN?

A: As the Company develops its DER Orchestration Plan, the Commission should direct the Company to explore data center load flexibility, as I discussed previously in my

testimony. In addition, the Company must look beyond solar to other DER technologies and control approaches, while ensuring that robust decision analysis and analytics, such as cost-benefit analysis, is used to ensure that ratepayers are protected from frivolous investments.

VII. EV TOU REBATE

Q: WHY IS THE COMPANY PROPOSING A RESIDENTIAL EV TIME-OF-USE (TOU) CHARGING REBATE PROGRAM?

A: Electric vehicle (EV) adoption is accelerating across the Company's Pennsylvania territory, which is critical for decarbonizing the transportation sector but can raise challenges for the distribution grid. The Company highlights that EV charging, which tends to increase net load during PPL's peak demand periods, can lead to load variability and congestion at the distribution level, causing stress on local feeders and substations.[111] To mitigate these effects, particularly during peak demand periods, PPL is proposing its Residential EV TOU Charging Rebate program.

Q: WHAT IS PPL PROPOSING IN THIS CASE WITH RESPECT TO ITS EV TOU PROGRAM?

A: PPL is proposing to offer a flat rebate of $10 to customers who conduct at least 80% of their charging during off-peak hours in the applicable billing period.[112] To qualify, customers must use Level 2 chargers that are compatible and certified by PPL.[113] On-peak periods are defined as from 4:00 PM to 7:00 PM during June, July, and August,

[111] PPL, St. No. 20, Direct Testimony of James Conrad at 4: 9–14 ("Conrad Direct"), Docket No. R-2025-3057164 (Sept. 30, 2025).
[112] Conrad Direct at 5:12–14.
[113] Conrad Direct at 5:5, 5:16–17.

as well as from 6:00 AM to 9:00 AM and from 6:00 PM to 8:00 PM during December, January, and February; all other times are considered off-peak.[114]

Q: WHO IS ELIGIBLE TO PARTICIPATE IN THE EV TOU REBATE PROGRAM?

A: All residential customers who own an EV are eligible to participate, though participation will be capped at 2,000 customers.[115]

Q: WHAT DATA IS PPL PLANNING TO COLLECT AS PART OF THIS PROGRAM?

A: The Company plans to use approved telematics or Electric Vehicle Supply Equipment ("EVSE") platforms to validate charging session data. PPL will then use that data to improve planning practices and operational efficiencies. Though the Company has not committed to specific uses of the data, it states that examples of data usage could include (i) determining EV charging load shapes and peak capacity; (ii) identifying the locational distribution of EV charging and identifying areas of high growth; or (iii) forecasting day-ahead load and potential system constraints.[116]

Q: WHAT RELATED COSTS DOES PPL PROPOSE TO RECOVER HERE?

A: In addition to rebate costs of $10/customer (or up to $120/customer annually), the Software as a Service (SaaS) provider chosen by PPL will cost $125,000 per year, plus an additional $36 per year for EV/EVSE devices above 1,250 devices.[117] In

[114] Ex. GEO-1 at page 87; *but see* Conrad Direct at 5: 6–8 (defining these times as "on-peak" rather than "off-peak"). It was clarified in PPL Response to Data Request CAUSE-PA-V-17 that this was a mistake which will be corrected in the Company's rebuttal testimony.
[115] Conrad Direct at 5:14–18.
[116] Conrad Direct at 6:20 – 7:6.
[117] Exhibit RN-3, Compiled Discovery Responses, OCA-VII-74.

addition to these costs, the program has a $5,000 setup fee and will cost an additional $120,000 in O&M expenses to provide the rebates.[118] If the program were to reach its 2,000 participant limit, that would come out to $136 per participant for non-rebate costs; $76 and $60 per participant, respectively, would pay for the data vendor and the O&M expense. This means that the cost per participant of running the program would be $16 higher than the maximum annual rebate a customer could earn ($10 per period times 12 months), for total per-customer program cost of up to $256 each year.

Q: DO YOU HAVE CONCERNS WITH PPL'S PROPOSAL FOR AN EV TOU PROGRAM?

A: Yes, I have several concerns with the design of the Company's proposal. First, it uses different on- and off-peak periods than PPL's currently available supply TOU rate.[119] Although distribution and supply rates serve somewhat different purposes – *i.e.*, distribution system peaks do not necessarily align with supply system peaks – the benefits of embedding such distinction in a distribution TOU rate program here are outweighed by the considerable customer confusion it would create. Second, a rebate program is often a more expensive and less effective way to incentivize customers to shift their load than providing a price signal via a TOU rate. Third, the Company does not provide any cost justification for the program. While I agree in concept with time-varying distribution rates, the Company has not shown that the benefits of its proposal will outweigh its implementation costs, which increases my concern that this may not be an efficient solution to the problem PPL is trying to solve. Finally, the rebate is

[118] *Id.*
[119] *See* Ex. GEO-1, at 297, 380.

structured in a way that a customer could have no behavioral change at all, and still be paid the rebate by other non-participants. Specifically, PPL does not have baseline charging data so the customer could already be charging off-peak the majority of the time. This does not align with cost causation and is inequitable.

Q: WHAT DO YOU MEAN THAT A REBATE PROGRAM IS MORE EXPENSIVE THAN PROVIDING A PRICE SIGNAL VIA A TOU RATE?

A: The Company's proposed program seeks to pay a flat award to customers that avoid peak load periods. It does not include countervailing negative incentives for customers that do not avoid peak periods. Thus, the program creates new costs as the rebates must be funded by all other customers. On balance, these new costs offset the potential savings to be gained. Indeed, PPL's proposed rebate amount is not tethered to a quantification of system costs avoided through customer load-shifting, so it is not clear whether such benefits would outweigh the program's costs.

A well-designed TOU rate, on the other hand, would offer participating customers an opportunity to lower their bills in exchange for lowering system costs. Such a rate should also penalize customers who charge during peak system conditions and thereby increase the Company's costs to serve them. This approach does not require the Company to spend ratepayer money to provide rebates; rather, it would compensate customers in proportion to the costs they impose.

Q: EXPLAIN YOUR CONCERN THAT THE COMPANY HAS NOT PROVIDED SUFFICIENT PRICE JUSTIFICATION?

A: The Company provides no reasoning for the $10 per customer rebate, and as discussed above, has neither data nor analysis that would quantify the expected benefits of the Program.

Q: HOW COULD PPL IMPROVE ITS EV TOU PROGRAM TO MORE EFFECTIVELY ACHIEVE THEIR GOALS?

A: Rather than paying customers to avoid costs through a rebate, a Residential EV TOU distribution rate would likely be cheaper and more equitable for customers.

Q: HAS PPL CONSIDERED A RESIDENTIAL EV TOU RATE?

A: Yes, PPL states that it considered a TOU rate for distribution rates as an alternative to the proposed program.[120] However, the Company states it does not have sufficient EV penetration to "create system benefits from a TOU rate that could be charged to other customers and be consistent with cost of service principles."[121]

Q: DO YOU AGREE WITH PPL'S RATIONALE?

A: No. The distribution cost of serving on-peak load, versus off-peak load, does not solely depend on EV penetration levels. It is instead a function of the extent of PPL's investments that are driven by peak demand, as opposed to other cost drivers. The Company apparently acknowledged this in discovery.[122] Fortunately, PPL has already

[120] Exhibit RN-3, Compiled Discovery Responses, EI-PPL-II-10.
[121] *Id*.
[122] Exhibit RN-3, Compiled Discovery Responses, OSBA-PPL-I-35.a ("Off-peak loads do not drive upstream distribution capacity needs because upstream distribution investments are planned based on the system's peak loading conditions. . . . PPL Electric's statement regarding off-peak Electric Vehicle charging was intended to reflect that distribution planning is based on system peak periods, not on individual customer billing determinants.").

identified the proportion of its demand-driven system costs as part of its Allocated Cost of Service Study filed as part of this proceeding.

Q: HAVE OTHER UTILITIES DEVELOPED TIME-VARYING DISTRIBUTION RATES?

A: Commonwealth Edison and Ameren in Illinois recently had time-varying delivery rates for residential customers approved. Under these proposals, customers who choose this rate, both energy supply and delivery rates will be time-varying to incentivize customers to change the timing of their electricity usage. The rates were specifically designed to provide EV owners with an incentive to charge during off-peak periods.[123]

Q: WHY IS A TOU RATE PREFERABLE TO A REBATE PROGRAM?

A: As discussed, above TOU rates provide customers with a similar or greater price signal as a rebate program, and also penalize customers who choose to charge during peak times. In addition, a TOU rate should not require significant data-acquisition costs, because the Company already collects time-differentiated customer consumption data to administer its supply TOU rate. Thus, it should achieve the same or greater benefit as the program proposed by the Company at a lower cost.

Q: WHAT IS YOUR RECOMMENDATION FOR THE EV TOU CHARGING REBATE PROGRAM?

A: I recommend that the Commission reject the Company's proposal and, instead, direct the Company to implement a time-varying residential delivery rate option for

[123] *E.g.*, January 16, 2025 Order, Docket 24-0378 (Ill. Comm. Comm'n Jan. 16, 2025) https://www.icc.illinois.gov/docket/P2024-0378/documents/360200/files/630772.pdf.

interested customers. This rate could be marketed to EV owners and other customers who may want to control costs.

Q: DO YOU HAVE RECOMMENDATIONS ON THE DESIGN OF THE TOU DELIVERY RATE OPTION?

A: For ease and simplicity, the peak and off-peak periods should be aligned with the Company's time-of-use Generation Supply Charge, which defines on-peak hours as 2-6 p.m. in the summer and 4-8 p.m. in the winter.[124] Creating a program with different peak hours, as proposed by the Company, would be confusing for customers.

The base residential distribution rate ultimately adopted in this proceeding should be the TOU rate's foundation. Such rate would then be adjusted up for the on-peak period, and down for the off-peak period, to achieve a ratio (or "rate factor") of 2.8.

Q: HOW DID YOU DERIVE THIS RATE FACTOR OF 2.8?

A: I used the residential distribution costs in the Company's Cost of Service study and assigned all demand-related costs to the peak hours. Costs in the off-peak hours include fuel costs and customer costs recovered through volumetric rates. This peak to off-peak price ratio is consistent with the rate in Illinois approved for Commonwealth Edison that has a peak to off-peak price ratio of 2.7.[125]

[124] PPL Electric Utilities Corp., Supplement No. 314, Electric Pa. P.U.C. No. 201, Generation Supply Charge-1, GenerationSupplyCharge1GSC.ashx
[125] *See, e.g.,* January 16, 2025 Order at 141, *supra* note 123.

VIII. RECOMMENDATIONS AND CONCLUSION

Q: PLEASE SUMMARIZE YOUR RECOMMENDATIONS FOR THE COMMISSION.

A: In my testimony I recommend the Commission:

9. Require PPL to directly assign all costs of transmission network upgrades built to serve large load customers to such customers. PPL should recover those costs directly from interconnecting customers through up-front deposits or other financial security, and refund such deposits or security over time in parallel with the customer's payment of transmission charges.
10. Require PPL to increase the initial contract term to 15 years for LP-5 customers, excluding any ramping period.
11. Require PPL to include evaluation of flexible connection tariffs and options for large load customers as part of, or contemporaneous with, the DER Orchestration Plan already required of the Company in Docket P-2024-3049223.
12. Direct PPL to only include new large load customers into its load forecast after they have signed an ESA.
13. Strike the term from the LP-5 tariff moving forward that allows the Company to construct, own, operate, and/or maintain LP-5 customers' transformation equipment at terms and rates determined between the Company and the LP-5 customer, allowing existing contracts to be grandfathered in.
14. Not permit PPL to connect any projects involving its JV unless and until it files, and receives Commission approval of, applicable affiliated interest agreement(s) and relevant policies to safeguard against conflicts.
15. Reject PPL's proposal to include DERMS costs within rates until the Company completes its DER Orchestration Plan.
16. Reject PPL's EV TOU charging rebate program and, instead, direct PPL to implement a time-varying residential delivery rate option for interested customers with peak hours consistent with the Company's Supply TOU rate

and a peak to off-peak price ratio of 2.8.

Q: DOES THIS CONCLUDE YOUR TESTIMONY?

A: Yes.

EXHBIT RN-1

RON NELSON CIRRICULUM VITAE

RON NELSON

ON BEHALF OF

ENVIRONMENTAL INTERVENORS

Ron Nelson

Partner, (360) 201-2827, rnelson@currentenergy.group

Education

MS Agricultural and Resource Economics
Colorado State University, 2013

BA Environmental Economics
Western Washington University, 2006

Work Experience

Founding Partner, Current Energy Group (May 2024 – Present)

- Subject matter and testimony expert in advanced rate design, embedded and marginal cost of service modeling, performance-based regulation, gas decarbonization, and DER integration and compensation.
- Designing and implementing policies and programs to decarbonize energy systems including deployment of distributed energy resources, demand-side management programs, energy storage and grid integration.

Founder, Volt-Watt Consulting LLC (2024 – Present)

Senior Director, Strategen Consulting, (2018 –February 2024)

- Expert witness and advisor that has testified across 20 states in over 80 proceedings and supported multiple state commissions in various proceedings

Economist, Minnesota Attorney General's Office (2013-2017)

- Provided expert testimony on cost of service modeling, rate design, grid modernization and utility business models.
- Analyzing issues related to conservation incentive programs, value of solar, grid modernization, performance-based regulation, renewable energy program design, and MISO.
- Reviewed and made recommendation to improve gas company pipeline replacement programs, demand response tariffs, performance metrics, and rate designs

Graduate Research Associate, Colorado State University (2011-2013)

"A Regulator's Blueprint for 21st Century Has Utility Planning," A Report for Advanced Energy United (2023)
Report

Led the development of a report that provided a blueprint for state public utility commissions that are interested in developing gas utility planning requirements to improve transparency into gas utility resource and capital investment plans.

Nonpipeline Alternative Analysis Framework for the Colorado Public Utilities Commission on Behalf of Lawrence Berkeley National Laboratory (2023)
Available: https://emp.lbl.gov/publications/framework-non-pipeline-alternatives

Through a collaboration with Lawrence Berkeley National Laboratory and the Colorado Public Utilities Commission, I led the development of two reports that first examined the existing regulatory approaches for non-pipeline alternatives, and then proposed a regulatory framework.

Consumers Energy Gas Bill Impact Analysis: A Case Study of the Effects of Planned Capital Expenditures and Electrification Trends on Behalf of Advanced Energy United (2023)
White Paper

Quantified the impact of gas utility capital improvement projects on customer rates Consumers Energy gas in Michigan. The paper found that Michigan residential customers with Consumers Energy can expect to see their gas bills steadily increase over the next decade – up to 49% over 2021 levels – due to projected utility capital expenditures and electrification trends.

Projects

Represent Maryland OPC in PC44 DSP and Interconnection Working Groups. 2022-Present. The DSP has been working on a process for stakeholder engagement and review of Maryland utilities distribution system planning processes. The interconnection has designed and implemented a new DER cost allocation approach called the Maryland Cost Allocation Mechanism (MCAM). The ultimately adopted MCAM was designed by Ron and prices hosting capacity by location and scarcity.

GridLab CHARGED Initiative - Flexible Connections, DER Planning, and Advance Rate Design Working Groups – Represent clients in Minnesota, Massachusetts, and Illinois in interconnection, flexible interconnection, interagency rates working group, long term system planning processes, and proactive planning processes. 2021-Present

Maine's Governor's Energy Office: Working in collaboration with Central Maine Power to design and implement non-firm import and export tariffs. 2024

Puerto Rico Energy Bureau – Facilitator and presenter for the Smart Inverter Implementation Working Group. Case No. NEPR-MI-2019-0009. 2024-Present

Puerto Rico Energy Bureau – Support on various regulatory matters. 2024-Present

Hawaii Public Utilities Commission: Advanced Rate Design Proceeding. Docket No. 201-90323. 2020-2021. Documents available: https://puc.hawaii.gov/energy/der/ard/

Hawaii Public Utilities Commission -Consulted on PBR, rate design, community solar gardens program design, and DER integration. 2018-2024

Kentucky Public Service Commission – Trained staff on cost of service, rate design, distribution system planning, and DER integration. Supported the Commission on all Net Energy Metering Dockets from 2020-2024.

Minnesota Valley Electric Cooperative. Supported on power supply and advanced rate design roadmap. 2023

Xcel C&I Rate Design. Ron used the cost duration model and other embedded cost results to inform a C&I critical peak pricing rate proposal on behalf of Fresh Energy. The MN PUC eventually required Xcel to pilot Ron's proposal across 100s of its customers. Available here: https://www.edockets.state.mn.us/documents/%7B20226272-0000-C71D-A2A8-39EA2C541997%7D/download?contentSequence=0&rowIndex=10

California Energy Storage Alliance. Supported CESA in the SCE Wholesale Distribution Access Tariff Proceeding at FERC. 2019

EXHBIT RN-2

Tariff Redlines to LP-5

RON NELSON

ON BEHALF OF

ENVIRONMENTAL INTERVENORS

MINIMUM SERVICE PERIOD

Service under this Rate Schedule is for no less than ~~one (1) year~~ **five (5) years** from the date service is first rendered~~, unless the Company and the customer mutually agree to a different term in the contract for service~~ **except where the Company constructs line extensions, service extensions, or network upgrades to serve the customer, in which case service under this Rate Schedule is for no less than fifteen (15) years from the date service is first rendered**.

LINE EXTENSIONS AND SERVICE EXTENSIONS

Customer is responsible for paying all costs associated with line extensions~~ and~~ service extensions**, network upgrades, and other Company facilities built (together, "Company Facilities")** to take service under this rate schedule~~, except when, in the Company's discretion, it is determined that certain line extensions will provide reliability or other benefits to the Company's transmission system. The Company shall not charge the customer directly for line extension upgrades that provide benefits to the Company's transmission system, as determined by PPL Electric. For the purposes of this rate schedule, any upgrades to the 230 kV and 500 kV networked bulk electric system may be presumed to provide reliability benefits to the Company's transmission system. Other benefits that would support relieving the customer of the obligation to directly pay for line extension costs include, but not are not limited to, increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections~~.

The customer shall enter into an agreement providing a revenue guarantee in the amount of all ~~line extension~~**Company Facilities** costs that were not directly charged to the customer. The agreement shall include, at a minimum, the following terms:

- Initial term of not less than ~~five (5)~~ **fifteen (15)** years**, which shall include a Revenue Guarantee Period of not less than five (5) and not more than ten (10) years**;
- Customer shall provide an initial load ramp schedule for the initial five (5) year term;
- Customer shall provide a revenue guarantee in the amount of the ~~line extension~~ **Company Facilities** costs that customer was not directly charged;
- Until the revenue guarantee is satisfied, the customer shall pay applicable rates based on the greater of actual peak demand values, or 80% of the load provided in the load ramp schedule;
- **In each year during the Revenue Guarantee Period where the customer's payments of applicable rates were less than the amount of the revenue guarantee divided by the number of years in the Revenue Guarantee Period, the customer shall make a payment equal to such shortfall, inclusive of related income tax, and the Company shall reduce the amount of the customer's applicable security accordingly;**
- Customer's revenue guarantee shall be satisfied when the Company has received transmission revenue from the customer **during the Revenue Guarantee Period** equaling the amount of costs for the ~~line extensions,~~ **Company Facilities** that ~~was~~ **were** not directly charged to the customer;
- Customer shall provide security in the form of a letter of credit, surety bond, parent guarantee, or other security instrument acceptable to the Company for the amount of the outstanding revenue guarantee;
- In the event of default, the Company shall draw on the security instrument in the amount of the outstanding revenue guarantee and apply the funds to the remaining cost**s** of the ~~line extension,~~ **Company Facilities** that ~~was~~ **were** not directly charged to the customer.

MATERIAL REDUCTION OR CESSATION OF SERVICE

The customer shall notify the Company and PJM Interconnection at least 42 months prior to any reduction of the customer's projected electric capacity requirement of 20% or more, including where the customer ceases taking electric service from the Company. The customer shall provide financial security, separate from and in addition to any other security the Company requires of the customer, to secure its compliance with this requirement. Such additional security shall be in the form of a letter of credit, surety bond, parent guarantee, or other security instrument acceptable to the Company for an amount equal to the estimated impact of the customer's capacity requirement on PJM capacity prices, prorated to reflect Pennsylvania's proportion of PJM capacity requirements. Where the customer provides at least 42 months' notice prior to material reduction or cessation of service, the Company shall reduce the amount of the security accordingly within 60 days of the date of such material reduction or cessation of service. Where the customer provides less than 42 months' notice prior to material reduction or cessation of service, the Company shall draw on the security instrument, and shall remit or refund such monies consistent with Commission instructions.

~~**CUSTOMER TRANSFORMATION EQUIPMENT**~~

~~**Customers taking service under this rate schedule can request, and the Company can choose to agree at its own discretion, that the Company construct, own, operate, and/or maintain the customer's transformation equipment. The Company shall provide service regarding the customer's transformation equipment upon terms and rates mutually agreeable to the customer and Company. Such terms and rates shall be set forth in the contract for service.**~~

Compiled Discovery Responses

RON NELSON

ON BEHALF OF

ENVIRONMENTAL INTERVENORS

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 6, 2025
Docket No. R-2025-3057164

EI-PPL-I-4

Please see attached Exhibit I-4, a PPL press release dated July 15, 2025 (copy saved November 6, 2025), "PPL Corporation and Blackstone Infrastructure create joint venture to build natural gas generation in Pennsylvania in support of data center development," available at https://investors.pplweb.com/2025-07-15-PPL-Corporation-and-Blackstone-Infrastructure-create-joint-venture-to-build-natural-gas-generation-in-Pennsylvania-in-support-of-data-center-development

a. Is all information in this press release accurate? If not, please identify relevant updates or corrections.
b. Do or will any of the Company's employees work on the joint venture described in this press release? If so, please (i) describe the nature of any such work; (ii) identify the costs of such work; and (iii) identify how the Company proposes to allocate such costs, with citation(s) to relevant schedule(s) or other supporting documentation.
c. Has the Company incurred, or may incur, any other costs associated with the joint venture described in this press release? If so, please (i) describe the nature of each such cost; (ii) identify the amount of each such cost; and (iii) identify how the Company proposes to allocate each such cost, with citation(s) to relevant schedule(s) or other supporting documentation.

PPL Electric Response

a. Yes, all information in the press release is accurate.

b. PPL Electric employees do not currently work on the joint venture described in the press release. To the extent that PPL Electric employees work on any project for affiliate companies, those costs are charged in accordance with the Cost Allocation Manual. See Schedule II-D-8.

c. PPL Electric has not incurred and is not anticipating incurring any costs associated with the joint venture described in the press release.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 6, 2025
Docket No. R-2025-3057164

EI-PPL-I-6

Reference Exhibit GEO-1, page 418 of 662, containing the following proposed provision applicable to rate LP-5: Customer is responsible for paying all costs associated with line extensions and service extensions to take service under this rate schedule, except when, in the Company's discretion, it is determined that certain line extensions will provide reliability or other benefits to the Company's transmission system. The Company shall not charge the customer directly for line extension upgrades that provide benefits to the Company's transmission system, as determined by PPL Electric. For the purposes of this rate schedule, any upgrades to the 230 kV and 500 kV networked bulk electric system may be presumed to provide reliability benefits to the Company's transmission system. Other benefits that would support relieving the customer of the obligation to directly pay for line extension costs include, but not are not limited to, increased capacity, lower system congestion, service to multiple customers, increased resiliency and operational flexibility, and expanded capacity for new generation and interconnections.

a. Provide the test that PPL will use to determine when an upgrade to serve a customer on LP-5 will "provide benefits to the Company's transmission system."
b. Does "expanded capacity for new generation", as used in this provision, include behind-the-meter generation or generation otherwise co-located with load? If so, why? If not, why not? Describe in detail the reasons.
c. What does "increased capacity" mean, as used in this provision?
d. For each of the "benefits that would support relieving the customer of the obligation to directly pay for line extension costs" listed in this provision, please explain how PPL will identify, measure, and validate the benefit.
e. What are the other "benefits that would support relieving the customer of the obligation to directly pay for line extension costs" that are not listed in this provision?

Explain how PPL will identify, measure, and validate each such benefit.

PPL Electric Response

a. See response to OCA VIII-9.

b. The Company was not directly referring to increased capacity for behind the meter generation, but the increased capacity could support additional behind the meter generation.

c. Increased capacity on the transmission system.

d. PPL Electric validates benefits that provide more than one customer benefits with any combination of the following improvements to enhance the resiliency, reliability, capacity, and cost efficiency benefits. See response to OCA VIII-9.

e. Specific benefits have not been identified, but the Company will evaluate interconnections on a case-by-case basis to determine if there are benefits to the grid to justify socializing upgrade costs.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 6, 2025
Docket No. R-2025-3057164

EI-PPL-I-7

Reference Exhibit GEO-1, pages 418-19 of 662, describing revenue guarantee provisions applicable to rate LP-5.

a. Please explain all costs that would be subject to a revenue guarantee. As part of this response, please identify the extent to which operations and maintenance costs associated with facilities serving the customer will be included in the calculation of the revenue guarantee. To the extent any such costs are not included in the revenue guarantee, please explain why not.
b. Please explain the extent to which taxes associated with facilities that serve the customer (including income taxes) will be included in the calculation of the revenue guarantee. To the extent any such costs are not included in the revenue guarantee, please explain why not.
c. Please explain how the Company will monitor and enforce compliance with the revenue guarantee.

PPL Electric Response

a. The revenue guarantee includes capital upgrade costs that are placed into rate base. Operation and maintenance costs are not included in the revenue guarantee. The Company decided to include capital upgrade costs in the revenue guarantee to follow the line extension guarantee terms available at lower voltages.

b. Taxes applicable to the capital project are included in the revenue guarantee.

c. See response to EI-PPL-I-5, Part a.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 6, 2025
Docket No. R-2025-3057164

EI-PPL-I-8

Reference Exhibit GEO-1, pages 424 of 662, containing the following proposed provision applicable to rate LP-5:

CUSTOMER TRANSFORMATION EQUIPMENT
Customers taking service under this rate schedule can request, and the Company can choose to agree at its own discretion, that the Company construct, own, operate, and/or maintain the customer's transformation equipment. The Company shall provide service regarding the customer's transformation equipment upon terms and rates mutually agreeable to the customer and Company. Such terms and rates shall be set forth in the contract for service.

a. Does the Company currently own, operate, and/or maintain transformation equipment on behalf of retail customers served on rate LP-5 or otherwise served at transmission voltages? If so, please identify (i) the number of customers for which the Company provides such services; (ii) the voltage(s) at which the customer(s) receive service at the "low side" of the transformation equipment; (iii) all costs the Company incurs associated with such services; and (iv) how the Company recovers each such cost, including the allocation(s) thereof, with citation(s) to relevant schedule(s) or other supporting documentation.
b. Does the Company anticipate constructing, owning, operating, and/or maintaining transformation equipment on behalf of retail customers served on rate LP-5 or otherwise served at transmission voltages during the Fully Projected Future Test Year? If so, please identify (i) the number of customers for which the Company anticipates providing such services; (ii) the voltage(s) at which the customer(s) will receive service at the "low side" of the transformation equipment; (iii) all costs the Company expects to incur associated with such services, with citation(s) to relevant schedule(s) in this proceeding; and (iv) how the Company plans to recover each such

cost, including the allocation(s) thereof, with citation(s) to relevant schedule(s) or other supporting documentation.

c. Explain how the Company will determine the terms under which it will construct, own, operate, and/or maintain the customer's transformation equipment under this provision.

d. Explain how the Company will ensure that all incremental costs associated with constructing, owning, operating, and/or maintaining transformation equipment on behalf of a customer served on rate LP-5 or otherwise served at transmission voltages will be borne exclusively by such customer.

PPL Electric Response

a. The Company leases two 69,000 Volt to 12,470 Volt "low side" primary (69 to 12 kV) substations of which the Company has constructed, continues to operate and maintains under lease agreements from 1988 and 1991 respectively. (iii) any changes to these specific service facilities are applied for the monthly lease billing agreements. (iv) The applicable Rate Schedule to each customer is LP-5.

b. The Company is not forecasting owning, operating, and maintaining customer substations. Rather, the Company will respond to requests from customers. Costs associated with owning, operating, and maintaining the customer substation will be recovered from that customer.

c. PPL Electric will negotiate these terms with the customer based on the customer's specific needs.

d. The contractual terms with the customer will dictate that all costs associated with owning, operating, and maintaining the substation will be recovered from that customer.

WITNESS: Gregory Olsen

PPL Electric Utilities Corporation
Response to the Set I Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 6, 2025
Docket No. R-2025-3057164

EI-PPL-I-9 Reference Exhibit GEO-1, page 413 of 662. Please explain why the Company proposes a minimum contract period of one year for rate LP-5. In your response, please explain the extent to which the Company considered a longer or shorter minimum contract period, and any reasons why it did not propose such a longer or shorter period.

PPL Electric Response The Company has historically required minimum service contracts of 1 year. Service terms of less than 1 year are considered temporary service under Rule 7. PPL Electric has proposed LP-5 customers with interconnection costs that are to be socialized in transmission rates to have a minimum 5-year initial term.

WITNESS: James Conrad

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 14, 2025
Docket No. R-2025-3057164

EI-PPL-II-1

Reference PPL St. No 2, Direct Testimony of Dennis A. Urban, Jr. at p. 15, lines 3-7 and Exhibit DAU 1. Provide all analysis conducted by PPL, or on its behalf, that informed the projected DERMS cost. Where applicable, provide your response in a live, unlocked Excel spreadsheet with all links and formulas intact.

PPL Electric Response

The projected "DERMS Capability" costs were developed based on PPL Electric's forecasted costs associated with the deployment of its DER Management devices and related infrastructure costs. Those forecasted costs assumed an annual limit of 3,000 DER Management devices being installed due to the parameters of the existing DER Management Pilot Program. However, on November 20, 2025, the Commission approved a Joint Motion by Chairman DeFrank and Commissioner Yanora to approve PPL Electric's Second DER Management Plan at Docket No. P-2024-3049223, under which there is no annual limit for the number of DER Management devices that can be installed. In its Second DER Management Plan proceeding, PPL Electric submitted a cost-benefit analysis prepared by Steven Wishart as PPL Electric Exhibit SWW-1R, which provided forecasted costs associated with the Second DER Management Plan based on the Company's as-filed proposal. A copy of PPL Electric Exhibit SWW-1R is attached hereto as EI-PPL-II-1 Attachment 1.

WITNESS: James Conrad

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 14, 2025
Docket No. R-2025-3057164

EI-PPL-II-4	Reference PPL St. No 2, Direct Testimony of Dennis A. Urban, Jr. at p. 15, lines 3-7 and Exhibit DAU 1. Please identify each way in which the Company's DERMS proposal in this proceeding differs from its proposal described in the *Petition of PPL Electric Utilities Corporation for Approval of its Section Distributed Energy Resources Management Plan*, filed May 20, 2024, at Docket No. R-2024-3049223. In your response, identify and explain any updates or changes to projected DERMS system functions, applications, uses, costs, and benefits; as well as any other changes. Please provide documentation to support your response.
PPL Electric Response	The Company does not have a "DERMS proposal" in this proceeding. PPL Electric is only seeking to recover the costs associated with the "DERMS Capability" described in Mr. Urban's direct testimony (PPL Electric St. No. 2). For information on how the Company's recently-approved Second DER Management Plan differs from its existing DER Management Pilot Program, please see the response to EI-PPL-II-3.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 14, 2025
Docket No. R-2025-3057164

EI-PPL-II-8

Reference the PUC's Tentative Order issued November 6, 2025 at Docket No. M-2025-3054271, page 13 ("We tentatively determine that financial security should be sufficient to cover the cost of any Large Load Customers share of network upgrades for which the Large Load Customer is the majority beneficiary and that will be partially allocated to other customers of the EDC.") Does or will the Company identify major beneficiaries of network upgrades? If so, how does the Company define "majority beneficiary"? Please provide all relevant tests and criteria. If not, why not?

PPL Electric Response

PPL Electric does not assign percentages of benefits to certain customers. Rather the Company evaluates whether the upgrades solely benefit the new customer or if there are broader benefits to the transmission system. See OCA VIII-9 Attachment 1.

Large Load Customers provide financial security for all network upgrades costs associated with the required enhancements to support their project that are socialized in rates.

WITNESS: James Conrad

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 14, 2025
Docket No. R-2025-3057164

EI-PPL-II-10 Reference PPL St. No. 20, Direct Testimony of James Conrad. Explain why the Company proposes to limit the EV TOU Charging Rebate Program to customers with EVs. Identify any alternative proposals considered, and explain why they were not used.

PPL Electric Response PPL Electric considered a time of use rate for distribution rates (the Company currently has a TOU default service rate, but it only applies to the generation portion of the bill). However, the Company does not have enough EV penetration to create system benefits from a TOU rate that could be charged to other customers and be consistent with cost of service principles. The Company's EV TOU Charging Rebate Program is designed to gain information so that the Company is prepared to offer an EV distribution rate if systems conditions warrant it in the future.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation

EI-PPL-III-3	Provide all applicable rules, regulations, and policies that would pertain to potential conflicts of interest between PPL and the Joint Venture, including, but not limited to, pertaining to sharing of confidential information and anti-competitive practices.
PPL Electric Response	See response to EI-PPL-II-3.

WITNESS: James Conrad

PPL Electric Utilities Corporation
Response to the Set II Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated November 14, 2025
Docket No. R-2025-3057164

EI-PPL-II-3	Reference PPL St. No 2, Direct Testimony of Dennis A. Urban, Jr. at p. 15, lines 3-7 and Exhibit DAU 1. Provide all plans related to the Company's actual or planned use of the DERMS, including how it plans to integrate the DERMS in its system planning and operations processes. Where applicable, provide your response in a live, unlocked Excel spreadsheet with all links and formulas intact.
PPL Electric Response	For information on the Company's planned use of its DERMS, please see PPL Electric's Second DER Management Implementation Plan.[1] For information on the Company's current use of its DERMS, please see PPL Electric's Second Revised DER Management Pilot Implementation Plan.[2] As noted in response to EI-PPL-II-1, the Commission recently adopted a Joint Motion by Chairman DeFrank and Commissioner Yanora on November 20, 2025, to approve PPL Electric's Second DER Management Plan.

[1]PPL Electric Exhibit SS-1 https://www.puc.pa.gov/pcdocs/1830626.pdf
[2] https://www.puc.pa.gov/pcdocs/1775616.pdf

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set XI Data Requests of the
Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania
(CAUSE-PA)
Dated November 21, 2025
Docket No. R-2025-3057164

CAUSE-PA XI-2

Refer to Lookup Direct Testimony p. 16 stating "Additionally, PPL Electric must account for the resource adequacy challenges created by this significant load growth. By carefully planning and executing these investments, PPL Electric aims to support the growth of new customers without compromising the service quality for existing customers." Further, refer to Lookup Direct Testimony p. 19 stating that "upgrades to the bulk electric system will improve the reliability and resiliency of the transmission grid."

a. Please confirm that the first statement (p. 16) relates to a need to procure sufficient generation capacity resources to meet new load. If not confirmed, then please explain.

b. Which "investments" is the Company referring to in the referenced statement on page 16? Provide documentation of the referenced investments or of plans for the referenced investments.

c. Has the Company attempted to project or otherwise quantify the reliability and resiliency benefits that will result from upgrades to the bulk electric system? If yes, then please detail any analyses and provide supporting workpapers in live, unlocked Excel file format with all links and formulas intact. If no, then please explain why not and please also address whether the Company expects to be able to quantify these benefits in the future.

PPL Electric Response

a. The statement on page 16 is referring to the Company making transmission investments. PPL Electric does not procure generation capacity except in its limited role as a default service provider. The Company plans and designs transmission system upgrades to maintain the reliability and resiliency of the transmission system.

b. The Company is referring to transmission investments necessary to interconnect new large load customers. These investments are dependent on specific customer interconnection requests. See response to OCA VIII-1.

c. The benefits are identified in the planning engineering process based on the operational characteristics of the upgrades. PPL Electric monitors the reliability of its transmission system but does not measure the reliability benefits from discreet upgrades.

PPL Electric Utilities Corporation
Response to the Set VII Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 27, 2025
Docket No. R-2025-3057164

OCA VII-74

Identify the marketing and billing costs associated with the proposed EV charging rebate program and state whether those costs are included in the filing and where they are reflected in the proposed revenue requirement.

PPL Electric Response

The EV TOU Rebate Program ("EV Proposal") will be provided by a third-party vendor as a Software as a Service ("SaaS") product. The costs include:

- $125,000/year - Includes setup, program management, vendor management and fees, EV TOU rebate platform access. Includes 1,250 EV/EVSE devices ("Included Devices") for rebate processing, and TOU enrollment and reporting.

- $36/year – for each EV/EVSE device beyond the Included Devices.

- $5,000 one-time setup fee - Includes setup and management of incentive processing for all customers.

Included in the $125,000/year costs are marketing services which consist of setting up a website and sending an email blast to potentially interested customers. The marketing costs are de minimis to the $125,000/year costs which is primarily the SaaS cost for the EV TOU rebate platform. The above-described costs are included in the IT Capital Plan – Grid & Pipeline Value stream represented in the Company's plant in service claim in the Fully Projected Future Test Year ("FPFTY").

There is an additional $120,000 of O&M expenses in the FPFTY representing the cost of providing the rebates for the EV Proposal. The rebate costs were mistakenly included in the claim for capital in the FPFTY. The rebate costs should have

been included in the Company's O&M claim as part of the initial filing. This matter will be addressed in rebuttal testimony.

WITNESS: Joseph Lookup

PPL Electric Utilities Corporation
Response to the Set VIII Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 28, 2025
Docket No. R-2025-3057164

OCA VIII-6

Please provide all draft and final internal and external electricity load and demand forecasts, energy and capacity, including those related to large load customers since 2020 considered by the utility.

PPL Electric Response

See OCA VIII-6 Attachment 1 for the Company's Large Load Adjustment Request Summary for the PJM Load Forecast for 2024.

See OCA VIII-6 CONFIDENTIAL Attachment 2 for the Company's 2020 Annual Resource Planning Report filed with the PA PUC and OCA VIII-6 Attachment 3 for the Company's Annual Resource Planning Reports from 2021-2025.

See PPL Electric Exhibit CRS-1 for a comparison of sales, customer counts, and billed demands in the Historic Test Year (HTY) to the Fully Projected Future Test Year (FPFTY).

See OCA I-1 Attachments 175, 176, and 177 for the workpapers supporting the Company's internal load forecast.

See OCA VIII-1 Attachment 1.

Re: PPL Electric Utilities Corporation
2021 Annual Resource Planning Report
Docket No. M-2021-3023553

Dear Ms. Chiavetta:

Enclosed for filing on behalf of PPL Electric Utilities Corporation ("PPL Electric") is the public version of PPL Electric's 2021 Annual Resource Planning Report ("ARPR"). A confidential version of this report was previously filed via email on April 30, 2021. PPL Electric is submitting this Annual Resource Planning Report pursuant to the Commission's regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

As required by the Commission's regulations, copies of the enclosed ARPR have been served via email upon the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA").

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Director of Regulatory Affairs, at (610) 774-7011.

Respectfully submitted,

Michael J. Shafer

ARPR 12. Conservation and Load Management Program Description*

Program Name: Time of Use - Residential, Commercial and Industrial
Customer Class: Residential, Commercial and Industrial
Status: Existing x Proposed _____

Contact Person: Gary Hartman Phone No: 610-774-6058

Program Objective: Provides PPL Electric Utilities Corporation's eligible residential, commercial and industrial customers with an opportunity to shift energy usage awa the on-peak periods, when demands and prices are lower. This Time-of-Use (TOU) Rate Option provides for the voluntary participation of eligible existing and new customers in a year-round TOU rate program.

Details of Activity and Implementation Schedule:

Actual and/or Anticipated Results:

Year	Peak Load Reduction (kW)	Load Shifted to Off-Peak (kW)	Energy Savings				Other Results
			Electric (kWh)	Gas (CCF)	Oil (Gallons)	Coal (Tons)	

Monetary and Personnel Resources:

Estimated Workhours	Categorized Program Expenses ($)				
	Payroll	Advertising	Customer Grants	Other	Total

Re: PPL Electric Utilities Corporation
2022 Annual Resource Planning Report
Docket No. M-2022-3030279

Dear Ms. Chiavetta:

Enclosed for filing on behalf of PPL Electric Utilities Corporation ("PPL Electric") is the **NON-CONFIDENTIAL** version of PPL Electric's 2022 Annual Resource Planning Report ("ARPR"). PPL Electric is submitting this report pursuant to the Commission's regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

Pursuant to 52 Pa. Code § 1.11, the enclosed document is to be deemed filed on April 29, 2022, which is the date it was filed electronically with the Commission's E-Filing System.

A proprietary and confidential version of this report has also been filed with the Commission, the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), on this date via overnight delivery.

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Director of Regulatory Affairs, at (610) 774-7011.

Respectfully submitted,

Kimberly A. Klock

Re: PPL Electric Utilities Corporation
2023 Annual Resource Planning Report
Docket No. M-2023-3037449

Dear Ms. Chiavetta:

Enclosed for filing on behalf of PPL Electric Utilities Corporation ("PPL Electric") is the **NON-CONFIDENTIAL** version of PPL Electric's 2023 Annual Resource Planning Report ("ARPR"). PPL Electric is submitting this report pursuant to the Commission's regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

Pursuant to 52 Pa. Code § 1.11, the enclosed document is to be deemed filed on May 1, 2023, which is the date it was filed electronically with the Commission's E-Filing System.

A proprietary and confidential version of this report has also been filed with the Commission, the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), on this date via overnight delivery.

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Director of Regulatory Affairs, at (610) 774-7011.

Respectfully submitted,

Kimberly A. Klock

Re: PPL Electric Utilities Corporation
2024 Annual Resource Planning Report
Docket No. M-2024-3045243

Dear Ms. Chiavetta:

Enclosed for filing on behalf of PPL Electric Utilities Corporation ("PPL Electric") is the **NON-CONFIDENTIAL** version of PPL Electric's 2024 Annual Resource Planning Report ("ARPR"). PPL Electric is submitting this report pursuant to the Commission's regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

Pursuant to 52 Pa. Code § 1.11, the enclosed document is to be deemed filed on May 1, 2024, which is the date it was filed electronically with the Commission's E-Filing System.

A proprietary and confidential version of this report has also been filed with the Commission, the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), on this date via overnight delivery.

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Senior Director - Regulatory, at (610) 774-7011.

Respectfully submitted,

Kimberly A. Klock

Matthew Homsher, Secretary
Pennsylvania Public Utility Commission
Commonwealth Keystone Building
400 North Street
Harrisburg, PA 17120

Re: PPL Electric Utilities Corporation
2025 Annual Resource Planning Report
Docket No. M-2025-3052803

Dear Secretary Homsher:

Enclosed for filing on behalf of PPL Electric Utilities Corporation ("PPL Electric") is the **NON-CONFIDENTIAL** version of PPL Electric's 2025 Annual Resource Planning Report ("ARPR"). PPL Electric is submitting this report pursuant to the Commission's regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

Pursuant to 52 Pa. Code § 1.11, the enclosed document is to be deemed filed on May 1, 2025, which is the date it was filed electronically with the Commission's E-Filing System.

A proprietary and confidential version of this report has also been filed with the Commission, the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), on this date via overnight delivery.

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Senior Director - Regulatory, at (610) 774-7011.

Respectfully submitted,

Kimberly A. Klock

E-FILE

August 8, 2025

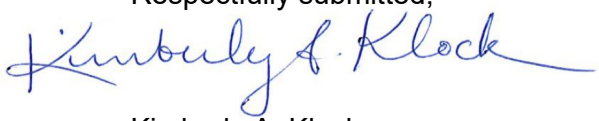
Matthew Homsher, Secretary
Pennsylvania Public Utility Commission
Commonwealth Keystone Building
400 North Street
Harrisburg, PA 17120

Re: PPL Electric Utilities Corporation
2025 Annual Resource Planning Report
Docket No. M-2025-3052803

Dear Secretary Homsher:

On May 1, 2025, PPL Electric Utilities Corporation ("PPL Electric") submitted its **NON-CONFIDENTIAL** 2025 Annual Resource Planning Report ("ARPR"), pursuant to the Pennsylvania Public Utility Commission's (the "Commission") regulations at 52 Pa. Code § 57.141, et seq., and the Commission's order, entered December 6, 1999, at Docket No. L-00980136.

Pursuant to recent discussions with staff in the Commission's Bureau of Technical Utility Services, PPL Electric is now filing a revised **NON-CONFIDENTIAL** 2025 ARPR containing supplemental information that was requested.



PPL Electric respectfully requests that the instant filing replace the previously filed May 1, 2025 ARPR filing, and that the Secretary's Bureau remove the previous filing from the above-referenced docket.

Pursuant to 52 Pa. Code § 1.11, the enclosed document is to be deemed filed on August 8, 2025, which is the date it was filed electronically with the Commission's E-Filing System.

A proprietary and confidential version of this report has also been filed with the Commission, the Office of Consumer Advocate ("OCA") and the Office of Small Business Advocate ("OSBA"), on this date via overnight delivery.

If you have any questions regarding the enclosed report, please call me, or Bethany L. Johnson, Senior Director - Regulatory, at (610) 774-7011.

Respectfully submitted,

Kimberly A. Klock

Program Name: Time of Use - Residential, Commercial and Industrial
Customer Class: Residential, Commercial and Industrial
Status: Existing x Proposed _____

Contact Person: Gary Hartman Phone No: 502-627-2216

Program Objective: Provides PPL Electric Utilities Corporation's eligible residential, commercial and industrial customers with an opportunity to shift energy usage awa the on-peak periods, when demands and prices are lower. This Time-of-Use (TOU) Rate Option provides for the voluntary participation of eligible existing and new customers in a year-round TOU rate program.

Details of Activity and Implementation Schedule:

Actual and/or Anticipated Results:

Year	Peak Load Reduction (kW)	Load Shifted to Off-Peak (kW)	Energy Savings				Other Results
			Electric (kWh)	Gas (CCF)	Oil (Gallons)	Coal (Tons)	

Monetary and Personnel Resources:

Estimated Workhours	Categorized Program Expenses ($)				
	Payroll	Advertising	Customer Grants	Other	Total

SYMBOL CODES

STATUS/REASON FOR CHANGE

P	Planned for installation but not utility authorized
L	Regulatory approval pending but not under construction
T	Regulatory approval received but not under construction
U	Under construction, less than 50% of plant completed
V	Under construction, greater than 50% of plant completed
A	Generating unit capability increased (rerated or relicensed)
D	Generating unit capability decreased (rerated or relicensed)
M	Generating unit is in deactivated shutdown status
S	Generating unit returned to service from deactivated shutdown status
R	Generating unit permanently removed from any service

PPL Electric Utilities Corporation
Response to the Set VIII Data Requests of the
Office of Consumer Advocate (OCA)
Dated October 28, 2025
Docket No. R-2025-3057164

OCA VIII-7 Please describe all efforts undertaken to identify duplicative, speculative, and projects unlikely to be developed by potential large load customers to interconnect to the utility's system.

PPL Electric Response PPL Electric only includes requests that have reached the letter of authorization ("LOA") stage in its load forecasts. At the LOA stage, the customer has paid a significant deposit to proceed with engineering and design of the requested interconnection. The Company has found that projects that reach this stage are sufficiently committed to moving forward to be included in load forecasts. Additionally, if the Company receives requests for the same parcel, it will not include both projects in its load forecast.

Office of Consumer Advocate (OCA)
Dated October 28, 2025
Docket No. R-2025-3057164

OCA VIII-9	Please provide the utilities policies, procedures, and analyses related to the assignment of large load interconnection costs to the interconnection load versus other ratepayers.
PPL Electric Response	See OCA VIII-9 Attachment 1.

PPL Electric Utilities Corporation – Policy on Cost Allocation for Large Customer Interconnections

PPL Electric serves customers taking service at 69 kV and above at its LP-5 rate class. LP-5 customers are required to pay for the costs of the upgrades necessary to serve their load. PPL Electric Retail Tariff, Rule 4 – (C).4. However, certain upgrades benefit other PPL customers and/or the transmission grid. The costs of these upgrades may be excluded from the interconnecting customer's obligation and added to PPL Electric's transmission rate base.

It is PPL Electric's policy that upgrades to the networked bulk electric system made in connection with LP-5 customer interconnections will generally be excluded from the customer's obligation and included in transmission rate base. This policy is informed by FERC policy, which generally favors charging network customers for the costs of network facilities without an individualized benefit calculation:

> "[D]ue to the integrated nature of the transmission network, network facilities benefit all network users," even if "the facilities were installed to meet a particular customer's request for service." "[T]here is no need to identify further actual benefits in order to include the costs of network transmission facilities in transmission rates."

City of Anaheim, Cal., 113 FERC ¶ 61,091, at P 58 (2005), *reh'g denied*, 114 FERC ¶ 61,311 (2006).

At a minimum, the customer's direct connection cost is the sole responsibility of the connecting customer, more specifically, the transmission lines sourced from PPL Electric's substation/switchyard that terminate into the customers substation.

All other upgrades, including PPL Electric substations/switchyards will be evaluated on a case-by-case basis to determine if they provide benefits to other customers and/or the transmission grid. Examples of benefits to other customers that would cause an upgrade to be included in transmission rates includes, but is not limited to:

- Added system reliability;
- Increased capacity/lower congestion;
- Improved asset condition of existing facilities;
- Service to multiple transmission customers and/or retail feeders;
- Increased resiliency and operational flexibility;
- Expanded capacity for new generation flow and interconnections

If the customer's interconnection results in upgrades that will be included in transmission rate base, the Company reserves the right to include revenue guarantee provisions in the customer's Electric Service Agreement.

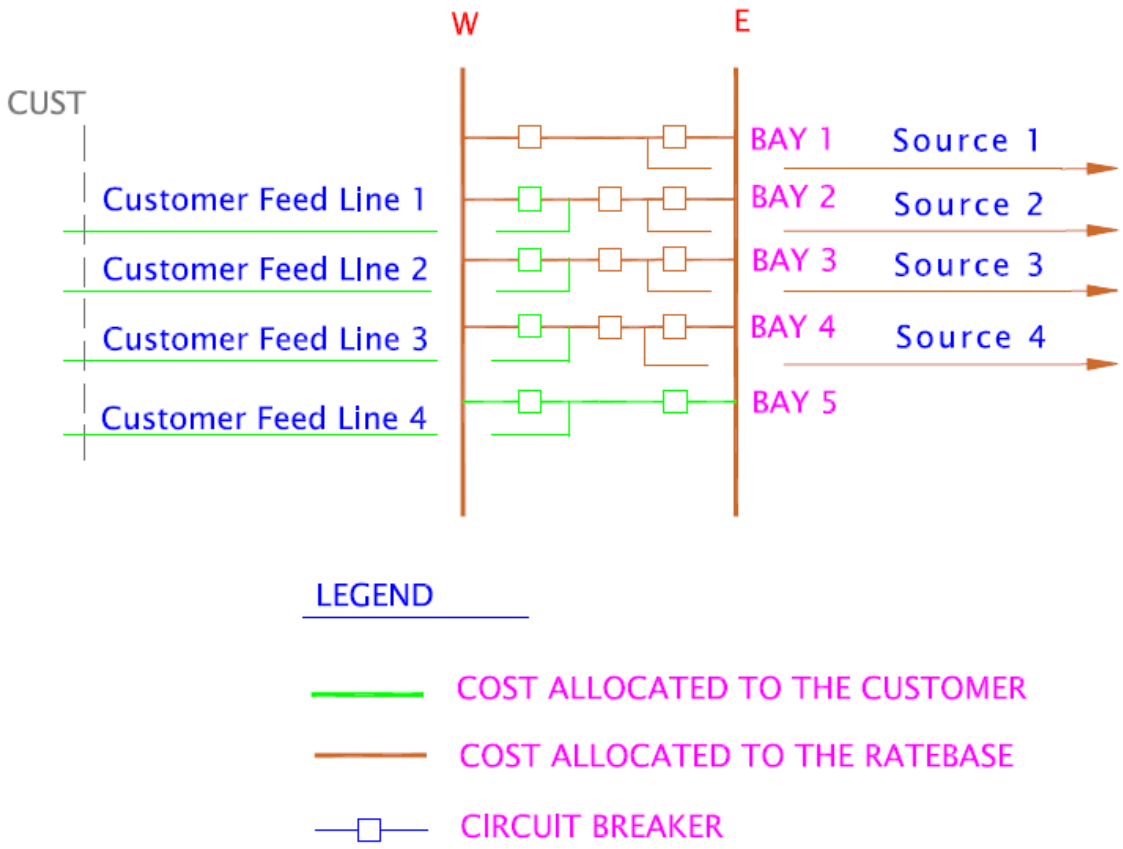
PPL Electric Utilities Corporation – Cost Allocation Review and Methodology for Large Customer Interconnections

Cost Allocation Review Process:

The Interconnection Affairs PM will pull together the following groups within Transmission Asset Management to review each project for their functional area:

- Interconnection Affairs – Rapid Response (RR) to interconnection request, Project Feasibility Report (PFR), Electrical Service Agreements (ESA), Construction Service Agreement (CSA), and confirmation of project costs.
- Planning – Line and sub equipment review and determination of dedicated vs network benefit.
- Project Development – Lead the development of deliverables for project scope, schedule and budget. Includes but not limited to project cost estimating, construction feasibility, confirmation of CSA scope and one-line, and financial budget.
- VP Planning and Asset Management – Provides approval for final cost allocation decision.

Cost Allocation Methodology is as follows for Direct Connect Transmission Line:



- All direct connection transmission lines that supplies customer substation. Below are typical assets but are not limited to:
    - Transmission Structures
    - Transmission conductor
    - Associated insulation and line hardware
    - Sectionalizing devices (i.e. switches, power circuit breakers, reclosers)
    - Grounding cable and hardware
    - Right of way easements and fee owned land

Cost Allocation Methodology is as follows for Substation equipment reviews:

The determining factor for cost allocation will be illustrated with the circuit breaker assets shown on Examples 1, 2, and 3 for ease of understanding at the highest level.

Interconnection Affairs will keep documented proof of each project site that is reviewed. A one-line will be color coded to denote direct customer costs vs network costs along with a cost spreadsheet.

Responsibility of Asset Matrix for Breaker and a Half (BAAH) Example 1:

Customer Responsible:

- Bay 1: No assets
- Bay 2:
  - Line: Customer Line 1
  - Sub: 2W down-lead and dead-end structure
  - Sub: CB 2W
  - Sub: Two switches: 2WW & 2WE
  - Sub: Three associated CCVT's
  - Sub: Three associated surge arrestors
- Bay 3:
  - Line: Customer Line 2
  - Sub: 3W down-lead and dead-end structure
  - Sub: CB 3W
  - Sub: Two switches: 3WW & 3WE
  - Sub: Three associated CCVT's

    - Sub: Three associated surge arrestors
- Bay 4:
    - Line: Customer Line 3
    - Sub: 4W down-lead and dead-end structure
    - Sub: CB 4W
    - Sub: Two switches: 4WW & 4WE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors
- Bay 5:
    - Line: Customer Line 4
    - Sub: 5W down-lead, dead-end structure, bay conductor, and bay structures
    - Sub: CBs 5W & 5E
    - Sub: Four switches: 5WW, 5WE, 5TW, & 5EE
    - Sub: Three associated CCVT's
    - Sub: Three associated surge arrestors

All associated wiring, conduit, relays and other minor assets associated with the above equipment.

PPL Responsible:

- All other equipment and associated minor assets.

Responsibility of Asset Matrix for Double Breaker Double Buss (DBDB) Example 2:

Customer Responsible:

- Bay 1-4: No assets
- Bay 5:
  - Line: Customer Line 1
  - Sub: Bay 5 downleads, dead-end structure, bay conductor, and bay structures
  - Sub: CBs 5W &5E

I. INTRODUCTION

Q: PLEASE STATE YOUR NAME AND OCCUPATION.

A: My name is Ron Nelson. I am a Founding Partner of Current Energy Group LLC ("CEG"). My business address is 4764 E Sunrise Drive, Unit #508, Tucson, Arizona 85718.

Q: ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

A: I am submitting testimony on behalf of Environmental Intervenors.

Q: DID YOU SUBMIT DIRECT TESTIMONY IN THIS PROCEEDING?

A: Yes. I submitted direct testimony on December 24, 2025. That testimony includes a summary of my qualifications.

Q: WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A: In my surrebuttal testimony, I respond to PPL Electric Utilities Corporation's ("PPL", or "Company") witness Lookup's rebuttal testimony on issues related to the Company's proposed tariff for large loads, especially related to allocation of transmission costs and the Company's proposed interruptible tariff offering. I also respond to PPL witness Conrad's rebuttal testimony related to the Company's Distributed Energy Resource Management System ("DERMS"), and Mr. Conrad's and OCA witness Hoyt's rebuttal testimony related to electric vehicle time-of-use rates.

II. LARGE LOAD ISSUES

Q: HOW IS THIS SECTION OF YOUR TESTIMONY ORGANIZED?

A: I start by responding to the PPL's claims around transmission cost allocation, including PPL's argument as to whether or not the Pennsylvania Public Utilities Commission has the authority to set retail transmission rates. Second, I address the

Company's transmission revenue guarantee and its analysis showing transmission cost reductions for all customers from the interconnection of new large loads. Third, I discuss the Company's forecasting regarding large loads. Fourth, I respond to the Company's proposal to develop an interruptible tariff option for large loads. Fifth, I respond to the Company's proposed contract terms and minimum size threshold. Finally, I respond to the Company's claims regarding conflicts of interest for its Joint Venture to develop new generation to serve large loads.

i. The PA PUC should determine the just and reasonable allocation of transmission costs as it pertains to retail sales, including cost allocation associated with transmission network upgrades attributable to large loads.

Q: PLEASE EXPLAIN THE COMPANY'S CLAIMS WITH RESPECT TO THE COMMISSION'S JURISDICTION OVER ALLOCATING TRANSMISSION COSTS AND ASSOCIATED TARIFF MECHANISMS.

A: PPL makes several references to jurisdictional issues that it argues limit the Commission's authority to adopt certain recommendations that I, along with other intervenors and statutory advocates, raised in direct testimony. These can be categorized along two main lines: 1. The Commission's authority over the allocation of transmission network upgrade costs between the large load customers that cause them and other ratepayers; and 2. The Commission's authority over the Electric Services Agreement (ESA) between PPL Electric and the large load customer.

Q: CAN YOU ELABORATE ON THE FIRST ITEM?

A: The Company claims that other parties' recommendations, including mine, to isolate the costs of transmission network upgrades triggered by large load customers and

assign them to large load customers amounts to "asking the PUC to exceed its jurisdictional authority and dictate the terms."[1]

Elsewhere in its rebuttal testimony, when discussing recommendations to allocate upfront costs for transmission network upgrades through CIAC or adopt the Commission's tentative Model Tariff provision, the Company states that "PPL Electric has serious concerns about the Commission's jurisdiction over this subject. Recovery of investment in transmission network upgrades is a ratemaking question. For transmission facilities, ratemaking is regulated by FERC, not by the Commission."[2]

Q: CAN YOU ELABORATE ON THE SECOND JURISDICTIONAL ARGUMENT?

A: Several parties, including myself, raised the issue of transparency into the specific terms and conditions of ESAs between the Company and prospective large load customers.

Q: HOW DID THE COMPANY RESPOND TO YOUR AND OTHER PARTIES' RECOMMENDATIONS REGARDING TRANSPARENCY AND COMMISSION OVERSIGHT OF THE ESA?

A: The Company states that it is not opposed to providing ESAs "for information" purposes, but argues that the Commission should not be able to "review and reject"

[1] PPL, Rebuttal Testimony of Joseph Lookup ("Lookup Rebuttal"), 10:7–10, Docket No. R-2025-3057164 (Jan. 23, 2026).
[2] Lookup Rebuttal at 16:11–14.

the cost allocation determinations made by PPL related to how interconnection costs and network upgrades should be allocated "between the customer and rates."[3]

Q: DOES THE COMMISSION HAVE THE AUTHORITY TO ADOPT YOUR TRANSMISSION NETWORK UPGRADE COST ALLOCATION PROPOSAL?

A: Yes. While I am not a lawyer, it is my understanding that FERC has repeatedly upheld states' exclusive authority to determine retail rates, including allocation of transmission costs, even while the overall transmission revenue requirement and rates charged by the responsible Transmission Provider (i.e., PJM) are set by FERC. For example, FERC has recently stated in an order regarding co-located large loads, "[S]tates retain exclusive authority over the specific terms of retail sales and retail rate design, including how the costs of interstate wholesale sales and transmission of electricity assigned to a wholesale customer are allocated among that wholesale customer's retail customers."[4] FERC also stated "it is within a state's exclusive jurisdiction to determine how those FERC-approved rates are collected among the relevant retail consumers.…"[5]

Q: DO YOU HAVE ANY OTHER CONCERNS WITH PPL'S ARGUMENTS AROUND JURISDICTIONAL ISSUES?

A: Yes. The issues pertaining to large load are quickly evolving, as evidenced by the recent Co-Location Order, and the FERC Advance Notice of Proposed Rulemaking

[3] Lookup Rebuttal at 17:16–20.
[4] PJM Interconnection, L.L.C., 193 FERC ¶ 61,217, P 167 (2025) (*hereinafter* "Co-Location Order"); *see also* Order No. 888, 75 FERC 61,080 (1996).
[5] Co-Location Order, P 167.

investigation into large load interconnections.[6] PPL's position that the Commission must simply defer these types of questions to FERC ignores the complex nature of the challenge. As stated by FERC, "the issues presented in [the co-location] proceeding implicate both federal and state interests, and their resolution will require the involvement of both federal and state actors, including the Commission, state public utility commissions, and other state and local entities."[7] It does not follow that the Commission may not address these critical issues simply because they are related to large load interconnections.

Q: CAN YOU PROVIDE AN EXAMPLE OF HOW RECENT FERC POLICY STATEMENTS IMPACT THE NEXUS OF LARGE LOAD INTERCONNECTION PROCESSES AND NETWORK UPGRADES REQUIRED TO SERVE LOAD LOADS?

A: Yes, in its recent Co-Location Order, FERC writes that planning for expansion of the transmission grid and assuming that all large load customers will be required to take firm transmission service (and the corresponding NITS rate) "may in some circumstances result in costly and inefficient transmission system buildout that may not be necessary if such Eligible Customers are willing and able to take a transmission service that requires fewer Network Upgrades to provide, and therefore may result in lower Network Upgrade costs, than would NITS."[8] While I do not purport to provide a legal opinion on FERC's Order, this factual conclusion suggests

[6] Interconnection of Large Loads to the Interstate Transmission System, Advance Notice of Proposed Rulemaking, Docket No. RM26-4-000 (Oct. 23, 2025).
[7] Co-Location Order, P 165.
[8] *Id*. at P 177.

that the relationship between large load interconnection and maintaining reasonable costs of network upgrades is not as simple as the Company argues.

Q: ARE PPL'S OWN PROPOSALS CONSISTENT WITH ITS ASSERTIONS THAT THE COMMISSION MAY NOT CONSIDER TRANSMISSION FACILITY COST ASSIGNMENT IN THIS CASE?

A: No. In both its direct and rebuttal cases, PPL has proposed changes to its state-jurisdictional retail tariff that establishes terms and conditions of service to customers taking service at transmission voltages. Most materially, PPL has proposed retail tariff rules that would govern – albeit inadequately – which transmission costs PPL would directly assign to such customers, and which it would place into transmission rate base. PPL has also proposed other tariff rules premised in part on such cost assignments, including rules related to minimum contract duration, minimum contract demand, and so on.[9] PPL effectively argues that although such rules would exist within its Commission-jurisdictional tariff, the Commission nevertheless has no authority over such rules, because cost allocation determinations can only be made by FERC. This position is logically untenable.

ii. PPL's Proposed Cost Allocation for Transmission Network Upgrade Costs Shifts Costs to Other Customer Classes.

Q: PLEASE SUMMARIZE YOUR DIRECT TESTIMONY ON TRANSMISSION NETWORK UPGRADE COST ALLOCATION.

A: In my direct testimony, I demonstrated that the Company's proposed methods for allocation of transmission network upgrade costs would likely lead to inappropriate socialization of these costs. This is the result of the Company directly assigning too

[9] *See, e.g.*, PPL Electric St. No. 16 (Direct Testimony of Joseph Lookup), 17: 2–10.

few costs to the large load customers who necessitate network upgrades, and proposing an overly-broad list of factors that could be used to demonstrate such upgrades "benefit" other customers, justifying their socialization. Such factors are broad enough that almost any conceivable transmission project would qualify, and further, the Company proposes to retain significant discretion when applying these factors to a "benefits" determination, creating opportunities for inappropriate cost-socialization. The Company's proposal contains no guarantee that transmission network upgrade costs will be directly allocated to new large customers, even if those costs are fully incurred to serve large loads.[10]

To ensure that incremental costs incurred to serve new large load customers are appropriately allocated and to insulate existing customers from risk, such incremental costs should be directly allocated to the new large load customers. I recommended that such costs be collected upfront as a deposit in the form of cash or high-quality financial security, with the portion corresponding to costs other than direct-connection facilities being subject to refund over time as credits on the customers' payment of transmission charges. During and after the crediting period, the new large load customer would pay full transmission rates for use of the transmission system.[11]

[10] Nelson Direct at 16:4–17:15; *see also* EI-PPL-V-1.
[11] Nelson Direct at 18:12–19:8.

Q: PLEASE SUMMARIZE, IN YOUR OWN WORDS, PPL'S RESPONSE TO YOUR DIRECT TESTIMONY ON TRANSMISSION NETWORK UPGRADE COSTS.

A: Aside from its jurisdictional objections, the Company's witnesses disagree with my and other parties' recommendation to assign direct costs of network upgrades to large load customers. Mr. Lookup states that it believes it is following FERC precedent when it comes to socializing network upgrade costs to all ratepayers.[12] He goes on to argue that directly allocating network upgrade costs to large load customers is not necessary to ensure that these customers pay their "fair share" of the costs. To support this, the Company states that under the existing rate structure for transmission costs, large loads will add significant revenue to offset their costs and alleges that other parties and I are not considering this fact when recommending direct assignment of network upgrade costs.[13] For instance, Mr. Lookup states that "…what is being ignored in that criticism is that the hypothetical 1 GW large load customer would be paying over $100 million a year in transmission rates under current rates. This will in turn lessen the amount of transmission costs to be recovered from other customers."[14] Finally, Mr. Lookup argues that there is no need to allocate the upfront costs because the existing protections proposed by the Company, including the minimum load guarantee and the standby charges, adequately shield other customers from risk of a

[12] Lookup Rebuttal, 10:7–16.
[13] *Id*. at 10:18–11:8.
[14] *Id*.

large load customer not ramping to its full expected loading levels and will address stranded asset risk.[15]

Q: HOW DO YOU RESPOND TO THE COMPANY?

A: The Company's main arguments suffer from material flaws. These flaws are:

- Incorrect assumptions around expected large load contribution to offset the transmission revenue requirement result in the Company presenting an overly optimistic view of the share of new transmission costs paid by large load customers under the proposed tariff, and
- Overstating the efficacy of the minimum load guarantee in terms of protecting existing customers from undue risk and cross-subsidization.

The company's witnesses also mischaracterizes my testimony as recommending the use of CIAC as the sole vehicle to allocate upfront network charges and related credits, and then, based on this mischaracterization, inappropriately dismisses my suggested redlines to Schedule LP-5. I address the mischaracterization of my testimony regarding upfront financing for network upgrade costs and its relation to the CIAC in more detail below.

Q: EXPLAIN YOUR FIRST CONCERN THAT PPL HAS USED INCORRECT ASSUMPTIONS IN CALCULATING EXPECTED FUTURE TRANSMISSION REVENUES FROM 1 GW OF LARGE LOAD GROWTH UNDER CURRENT TRANSMISSION RATES.

A: PPL argues that recommendations to allocate the full cost of transmission network upgrade costs to large loads is not needed, in part because of the large expected

[15] *Id*. at 12:8–13:11; 14:1–15.

contributions future large load customers would pay in transmission rates.[16] PPL estimates that a 1 GW large load customer would pay over $100 million per year in transmission rates under current rates, and suggests that such payments would significantly exceed incremental costs of network upgrades they trigger.[17]

Q: DO YOU AGREE WITH THE COMPANY'S ARGUMENT?

A: No. Mr. Lookup overstates likely revenues and understates likely costs, which paints an unrealistically optimistic picture of ratepayer impacts attributable to large loads.

Q: HOW DOES MR. LOOKUP OVERSTATE REVENUES FROM LARGE LOAD CUSTOMERS?

A: First, as I will describe later in my testimony, the projected future transmission revenue from large load customers in this hypothetical example assumes full load ramp (*i.e.*, a 1 GW interconnection request translates to 1 GW of expected contribution to peak). This ignores the forecast ramping risk that I described in my direct testimony, and also ignores the fact that most data center facilities will not use 100% of their connected service levels, even during facility peak usage. In addition, the chance that a large load customer will find ways to reduce its peak demand and avoid paying the embedded transmission costs is non-negligible.[18]

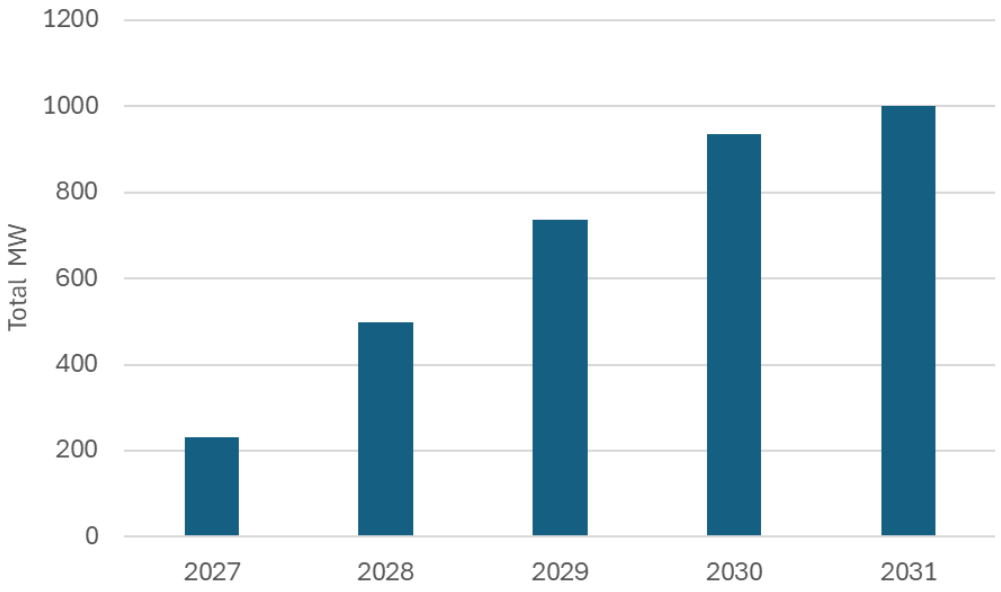
[16] *Id*. at 10:18–11:4.
[17] *Id*. at 11:5–7.
[18] For example, a large load customer might install behind-the-meter generation, adopt load flexibility, sign a co-location agreement, or a combination of all of these things in order to reduce its transmission capacity charges under current tariff constructs. This eventuality is expressly cited by FERC related to finding PJM's tariff as unjust and unreasonable in terms of previous treatment for behind-the-meter generation. *See* Co-Location Order, P 179.

Q: HOW DOES MR. LOOKUP UNDERSTATE COSTS ATTRIBUTABLE TO LARGE LOAD CUSTOMERS?

A: Mr. Lookup uses an unrealistic hypothetical 1GW large load customer, instead of relying on historic data, to illustrate the customer's impacts on transmission rates.[19] Mr. Lookup's illustration assumes that a $100 million investment in socialized transmission network upgrades would be required to interconnect this hypothetical 1 GW customer.[20] Mr. Lookup stated that residential customers using 1000 kWh/month will see their transmission costs decrease by $40 per year with the addition of 1 GW of load; if the Company connects 20 GW of load, it expects that same residential customer to save $255 per year on transmission costs.[21]

Q: PLEASE ARTICULATE WHY MR. LOOKUP'S CALCULATIONS AND ASSERTIONS REGARDING RATE IMPACTS ARE MISLEADING AND SHOULD BE DISMISSED.

A: First, the cost of network upgrades of $100 million is an unsubstantiated, and likely inaccurate, assumption. I have reviewed recent transmission reliability need statements and accompanying transmission upgrade solutions proposed by PPL as part of PJM's "local supplemental projects" planning process to support reliability.[22] I filtered my search to identify only those projects driven by service connection requests for large load customers. Based on my analysis of there were 15 such



[19] Lookup Rebuttal at 3:11–15.
[20] *Id*. at 3:11–16; *see also* CAUSE-PA–PPL-VIII-9 Attachment 1 ("Investor Talking Point").
[21] Lookup Rebuttal at 3:11–15.
[22] I reviewed transmission reliability needs from meeting materials posted to PJM's Transmission Expansion Advisory Committee web page covering the 2025 and 2026 time period in order to capture recent cost trends. *See* https://www.pjm.com/committees-and-groups/committees/teac.

transmission upgrade projects to integrate large loads, and the cost of the initial project estimates is closer to $150 million in upfront capital costs per GW of large customer load request.[23] However, in PJM's tracking of actual projects, as they are developed and cost allocated through the Regional Transmission Expansion Process, the updated project costs estimates for transmission upgrades in PPL service area are roughly 10 percent higher than the initial project estimates.[24] Therefore, after adjusting the average network upgrade cost of $150 million that I mentioned for this 10 percent average cost increase, I estimate the expected costs to be added to the revenue requirement to be closer to $164 million per GW of new load. With this said, connection costs will vary dramatically by location and are also highly contingent on the current system's topology. As additional large loads connect to the system, the topology will change and, at some point, require significant regional upgrades to support large load connections which can reach into the billions of dollars.

Second, the assumption underlying Mr. Lookup's calculations does not consider the impact of load ramping. In other words, the example calculations PPL provides assume a "fully ramped" 1 GW and 20 GW customer, compared to a simple annual transmission revenue requirement. Using data that I collected for the same 15 transmission projects PPL identified and proposed to PJM in order to accommodate large load service connections, I have analyzed the near-term load ramp (through 2031). Figure 1 shows the annual load ramp.

[23] *See* Exhibit RN-SR-1, CEG Workpaper: Analysis of PPL supplemental transmission projects from RTEP TEAC.
[24] *See* https://tcplanner.pjm.com/tcplanner/pages/secure/upgrades-general.jsf, accessed 10/30/2025 (log-in required).

Figure 1. Five Year Large Load Customer Load Ramping based on Recent PPL Supplemental Transmission Reliability Projects (n=15).[25]

This distinction is important because the large load customer facilities are not expected to fully ramp to total requested service levels until year 5 of the load ramp schedules as evidenced by these PJM planning materials. Therefore, there is an imbalance between when the assumed reduction in $/MW/day of PJM's Network Integration Transmission Service (NITS) rate for PPL's area can be expected to occur, versus when the network upgrades are placed in service. This is a material difference, given the impact on discounting for the time value of money.[26]

[25] The figure presents a normalized annual load ramping for a hypothetical 1 GW large load customer in order to keep with PPL's example. The data that I based my analysis on includes large load customers ranging from 450 MW to 1,980 MW facilities with the largest ramping out through 2033.

[26] Discounting the expected future costs and benefits of making transmission network upgrades to accommodate large loads is important because large capital investments placed in service in 2027 will be discounted relatively little compared to expected future benefits of a reduced NITS rate in 2031.

Third, Mr. Lookup's estimate of $255 per year bill savings for the average residential customer is based on assumed reductions to NITS rates that stem from adding 20 GW of large load, and yet the commensurate cost to integrate this 20 GW is the same cost that PPL's own discovery responses assumes will be needed to interconnect 10 GW.[27] Even if that optimistic 10 GW estimate were accurate, it is unrealistic to assume that PPL could interconnect an additional 10 GW of new large load at zero incremental cost.

Q: EXPLAIN YOUR SECOND CONCERN REGARDING THE PROTECTIONS AFFORDED BY THE MINIMUM LOAD GUARANTEE.

A: As I stated in my direct testimony, PPL's protections do not go far enough to shield customers from the significant risks posed by new large loads and regarding stranded asset risk and cross-subsidization. PPL states in its rebuttal arguments that it "designed its minimum load guarantee and standby charges to ensure that new large load customers are paying their fair share for the transmission system...[i]n practice, this will mean that the customer's peak demand value will be at least 80% of the agreed upon load ramp schedule."[28] PPL's rebuttal does not respond to the concerns I stated in my direct testimony, because they do not address why other customers should bear the residual risk not covered by the 80% minimum demand charge. With the 1 GW large load customer example, this still leaves 200 MW of unaccounted for risk that is shifted onto other customers. If we were to consider the full 20 GW of data center load PPL states is in its pipeline, the same 80% minimum load guarantee

[27] CAUSE-PA-PPL-VIII-9 Attachment 2-Summary.
[28] Lookup Rebuttal, 12:15–20.

would lead to 4,000 MW of risk shifted onto other customers. This is an unacceptable level of risk for residential and other ratepayers to bear for the purpose of connecting data centers to the grid.

Q: WHAT OTHER CONCERNS DO YOU HAVE REGARDING THE COMPANY'S JUSTIFICATION OF THE MINIMUM LOAD GUARANTEE?

A: The Company responded to my and other parties' criticism that the minimum load guarantee is insufficient to the extent it only covers the initial capital cost of the upgrade, and not the full revenue requirement, by responding that "[W]hat is more likely is that once a new large load customer begins taking service it will continue to take service for decades…" and that as a consequence, "it is far more likely that the new large load customers will pay for the socialized upgrades several times over."[29] This is a red herring argument. My testimony did not raise the issue of whether or not a large load customer who "takes service for decades" will ultimately pay an amount equal or greater than the cost of the initial upgrades. Rather, I specifically raised the issue that if a large load customer does not ramp to its full potential, or otherwise exits the system before the cost of the network upgrades triggered by its interconnection (plus a reasonable share of embedded system costs) are recovered through ongoing use of system charges, that PPL's design of the minimum guarantee does not go far enough to protect customers from unjust and unreasonable risk and cost shifting. PPL's witness rebuttal does nothing to counter this, and instead asks the Commission to ignore my recommendation, even though it admits that it is

[29] *Id*. at 14:7–10.

"technically true"[30] in favor of what it merely thinks is "more likely." This reasoning does nothing to address the core issue of the design of the minimum load guarantee and obscures the rationale presented by parties, including myself in my direct testimony.

Witness Lookup's claim that large customers will take service "for decades" is completely unsupported and speculates on a market in its infancy. Furthermore, such prediction has not been accurate for other large customer types such as mining. Minnesota Power has hundreds of MW of mining and large industrial loads that have shut down, restarted, and shut down several times over the last 20 years due to global economic turns, such as competition, war, and inflation, among other issues. It is not reasonable to assume that modern large load data centers will remain in PPL's service territory for decades, particularly to the extent data centers grow increasingly able to shift their services (and loads) among sites.

Q: 2DOES PPL'S EXPLANATION OF THE PROPOSED CONTRACT PROTECTIONS MADE IN REBUTTAL ADDRESS YOUR CONCERNS WHETHER OTHER CUSTOMER CLASSES ARE ADEQUATELY SHIELDED FROM UNDUE RISK?

A: No, it does not. The main provision PPL relies on to protect customers from load ramping risk and subsequent stranded asset risk is the provision in its proposed LP-6 tariff language around a minimum revenue guarantee. Based on this framework, "[u]ntil the revenue guarantee is satisfied, ***the customer shall pay applicable rates***

[30] *Id*. at 14:4–5, 7. Not only does the Company admit that the critiques I raised were true, but this is also the language applied to the Company's legally-binding terms of its proposed tariff construct.

based on the greater of actual peak demand values, or 80% of the load provided in the load ramp schedule."[31] To see the limitation in this mechanism more clearly, we can assess it in connection with my comments above, where I demonstrated the timing difference between when the transmission network upgrades are placed in service, and thus added to the annual transmission revenue requirement, with the expected load ramp of the large load customer (see Figure 1 above and accompanying discussion).

In effect, PPL is arguing that stakeholders should evaluate the merits of its proposal based on an assumed 1 GW of instantaneous contribution to PPL's peak load contribution which will reduce its annual NITS $/MW/year rate billed to PPL by PJM. However, the load ramping risk that the minimum revenue guarantee is meant to address does not get applied to the MW factoring into the NITS rate. This amount is based on actual daily metered demand reported by PPL to PJM.[32] Therefore, if a large load customer only reaches 25 or 50 percent of their expected load levels contained in their load ramping schedule, the NITS rate will reflect the 25 or 50 percent metered value, not the 80 percent minimum revenue guarantee. This changes the expected bill reduction calculation that PPL presents based on integrating the new large load. More importantly, it is unclear how the mechanics of PPL's proposed revenue guarantee mechanism would be extended to apply to load shopping customers to ensure recovery and offsetting of the revenue requirement. PPL's proposed tariff terms and conditions do not support its bill impact calculations.

[31] PPL Electric Exhibit GEO-1 at 98 (emphasis added).
[32] PJM Open Access Transmission Tariff, https://www.pjm.com/pjmfiles/directory/merged-tariffs/oatt.pdf.

Instead, PPL' bill impact calculations rely heavily on unsupported speculative assumptions, not tangible ratepayer protections.

Q: CAN YOU EXPLAIN WHAT YOU MEAN WHEN YOU SAY THAT IT IS UNCLEAR HOW THE MECHANICS OF PPL'S PROPOSED REVENUE GUARANTEE MECHANISM WOULD APPLY TO SHOPPING CUSTOMERS?

A: Yes. As I discussed above, the 80% minimum demand provision in PPL's proposal will have no impact on PJM's calculation of the NITS charges that are assigned to load serving entities operating in PPL's PJM zone. Therefore, there is risk that the large load customers who are shopping customers will request 1 GW of total firm transmission service from PPL, and then those loads may, because of any number of factors, fail to materialize at the expected levels.[33] However, for shopping customers, the Network Customer is billed by their LSE for the applicable NITS charge which amounts to the actual ramped load, not the minimum demand guarantee. This means that the supposed bill reductions to all customers (of $40 per year with 1 GW of assumed contribution to peak demand, and $255 per year for 20 GW of assumed contribution to peak demand) would fail to materialize at the levels presumed by PPL, and the remaining amounts would need to be collected from shopping customers.

[33] *See* Lookup Rebuttal, 8:1–12.

Q: WHAT DID YOU RECOMMEND FOR THE MINIMUM CONTRACT TERM IN DIRECT TESTIMONY?

A: In direct testimony I recommended that the Company increase the initial contract term to 15 years excluding any ramp period.[34]

Q: HOW DID THE COMPANY RESPOND TO THIS PROPOSAL?

A: In rebuttal testimony the Company stated that is it not opposed to having a minimum 10-year term for its large load ESAs, though it combined this recommendation with a proposal to update its minimum load guarantee to 80% for the first five years, and 50% for the second five years of the 10-year contract.[35]

Q: DID THE COMPANY MAKE ANY OTHER CHANGES TO ITS LARGE LOAD TARIFF PROVISIONS IN RESPONSE TO DIRECT TESTIMONY FROM OTHER PARTIES?

A: The Company proposed to establish a new LP-6 rate class for customers with peak demands above 100 MW and assign a portion of Universal Service costs to this new rate class.[36]

Q: HOW DO YOU RESPOND TO THESE PROPOSED TARIFF CHANGES?

A: I am not opposed to establishing a new rate class for customers above a certain size threshold, however the 100 MW threshold proposed by the Company is too high and should be lowered. Also, as shown in my direct testimony, many of the tariffs for new large loads that have been established around the country have an eligibility threshold

[34] EI, Direct Testimony of Ron Nelson ("Nelson Direct"), 6:10–11, Docket No. R-2025-3057164 (Dec. 24, 2025).
[35] Lookup Rebuttal, 19:3–5.
[36] *Id*. at 5:6–9.

of below 100 MW, including many utilities within PJM such as Dominion Energy.[37] To be consistent with emerging best practices, I recommend that any new rate class have a minimum demand of 25 MW. This would ensure that smaller new data centers are also captured within this new class and better avoid gaming the size of new facilities. I further suggest grandfathering in existing PPL customers over 25 MW (as the Company notes in its testimony, its largest customer today is approximately 50 MW[38]) to avoid impacts to those customers.

As for the Company's proposal to increase the minimum contract length to 10 years, this does not go far enough. I maintain my recommendation of a 15-year minimum contract as necessary to minimize the risks to other ratepayers and ensure that new large loads are paying their fair share. In addition, the Company did not address the issues of the ramp period within its proposal. It can take many years for a new data center to ramp-up to its maximum contracted capacity and the initial contract term should explicitly exclude the ramp-up period to minimize gaming of the system and risks to other customers.

Q: HOW DOES MR. LOOKUP RESPOND TO YOUR PROPOSAL TO REQUIRE LARGE LOAD CUSTOMERS TO PROVIDE UP-FRONT SECURITY IN THE AMOUNT OF TRANSMISSION FACILITY COSTS BUILT TO SERVE THEM?

A: Mr. Lookup mischaracterizes my recommendation to require large load customers to provide an upfront security deposit equal to the cost of transmission network

[37] Nelson Direct, 24 Table 1.
[38] Lookup Rebuttal, 13:9–11.

upgrades as relying on the CIAC mechanism to accomplish this posting/crediting of collateral. He objects to my proposal that the Company refund this security deposit over time as the customer satisfies their revenue guarantee. Mr. Lookup states, "Under Mr. Nelson's recommendation, rate base would need to be increased as the CIAC was reimbursed to the customer. This defeats the entire purpose of having a customer pay CIAC."[39]

Q: DO YOU AGREE?

A: No. As a threshold matter, Mr. Lookup's stated objection relies on a mischaracterization of my proposal—*i.e.*, that the customer's security deposit is CIAC—that does not appear in my testimony. My testimony clearly referred to a large load customer's CIAC as that portion of a customer's upfront payment <u>not subject to refund.</u> The refundable portion of their upfront payment is a security deposit, and I did not recommend a specific accounting treatment.

In any event, the refundable security deposit mechanism I proposed is substantially identical to one the Company already employs with respect to distribution supply line extensions pursuant to Rule 3 of its tariff. That Rule empowers PPL to require customers to guarantee distribution revenues for the costs of certain supply extensions. Rule 3(A)(3)(g) provides for customers to make an up-front payment—*i.e.*, a security deposit—in the amount of such guarantee, which PPL then refunds to the customer over time as the customer satisfies their guarantee

[39] *Id*. at 17:1–3.

through payment of their utility bills.[40] I have proposed using the same mechanism for large load customers' deposits.

iii. The Company Should Only Include LLC with a Signed Electronic Service Agreement in Load Forecasts.

Q: WHAT DID YOU RECOMMEND WITH RESPECT TO LOAD FORECASTING IN DIRECT TESTIMONY?

A: In my direct testimony, I recommended that the Commission direct PPL to include new large load customers into its forecast only after the customer has signed an Electronic Service Agreement (ESA).[41]

Q: HOW DID THE COMPANY RESPOND TO YOUR RECOMMENDATION?

A: Company witness Lookup states that the Company aims to provide transparent and accurate information so that other parties who need to ensure resource adequacy are able to procure sufficient generation resources. Witness Lookup notes that while I and OCA witness Hoyt highlight risks that stem from inflating a load forecast by including projects at the Letter of Authorization stage, we failed to account for the risks of underestimating load growth. In particular, if "load does materialize and adequate market signals have not been sent for new generation to be built, the price shock for capacity will likely be similar to an overestimate."[42]

[40] *See* PPL ELECTRIC Exhibit GEO-1 at 21–22.
[41] Nelson Direct at 45:10–13.
[42] Lookup Rebuttal at 22:15–17.

Q: DO YOU AGREE WITH PPL THAT YOUR RECOMMENDATIONS FOR FORECASTING LARGE LOAD GROWTH COULD CAUSE THE COMPANY TO UNDERESTIMATE RESOURCE NEEDS?

A: No, I do not, nor has the Company demonstrated that there is a basis for such a concern. Considering examples from areas with significant experience with large loads illustrates why there is no basis: Dominion Energy Virginia is the largest data center market in the world, and it includes new large load customers in their load forecast only after an ESA has been signed.[43] To date, Dominion has connected at least 3,600 MWs of large loads, with 9,815 MWs of additional load under an ESA, 7,098 MW of load under construction letters of authorization, and 30,132 MW of load under engineering letters of authorization in its pipeline.[44] Despite tremendous load growth from data centers, Dominion avers that it has continued to provide reliable service to customers.[45] In other words, the utility with more experience connecting large load customers than any other utility in the country has found it useful to follow the same process I am recommending PPL follow, and has not encountered the problems that PPL argues my recommendation may create.

State Corp. Comm'n,* Case No. PUR-2025-00058 (2025), https://www.scc.virginia.gov/docketsearch/DOCS/84s501!.PDF.

Q: HAVE ANY OTHER COMMISSIONS ACKNOWLEDGED THE VALUE OF A MORE STRINGENT LARGE LOAD FORECASTING PROCESS?

A: Yes, the Colorado Public Utilities Commission directed Public Service Company of Colorado to only include large loads in their forecasts if the prospect customer is negotiating either an ESA or interconnection agreement ("IA") with the Company.[46] One of the primary reasons for this decision was the Commission's determination that "uncommitted new large load customers could inappropriately and dramatically increase rates for existing customers while also increasing greenhouse gas emissions."[47] The Commission found that the "record in this Proceeding demonstrates how easily large customers can withdraw their interconnection requests even after negotiating an ESA or IA with the Company," and that procuring resources to serve the needs of customers who had not yet signed an ESA or IA would unreasonably shift financial risk onto existing customers.[48]

Q: WHAT OPTIONS DOES PPL DISCUSS THAT WOULD ADDRESS YOUR AND OTHER PARTIES' CONCERNS WITH ITS LOAD FORECASTS?

A: The Company states it is not opposed to providing load forecasts to regulators and stakeholders that identify potential load as under an ESA, under an LOA, or having made an inquiry.[49] The Company also states that it is not opposed to sharing site control and permitting information, to the extent that it has such information.[50]

[47] *Id*. at 27.
[48] *Id*. at 29.
[49] Lookup Rebuttal, 23:18–22.
[50] *Id*. at 24:4–6.

Q: DOES THE COMPANY'S REBUTTAL PROPOSAL ADDRESS YOUR CONCERNS?

A: No, it does not address my concerns. While I am in favor of measures that increase transparency, the Company's proposal alone is insufficient to protect customers from the risk of overstated large load forecasts leading to over-procurement of generation resources and rapidly rising prices in PJM's capacity market. Given this, I maintain my recommendation from Direct testimony that the Commission direct PPL to only include new large load customers in its load forecast that have signed an ESA, though it would also be helpful to include large loads at other stages of development within its reporting to the Commission and other stakeholders.

iv. <u>The Company's Proposal for an Interruptible Rate Option is Deficient</u>

Q: PLEASE SUMMARIZE YOUR RECOMMENDATION ON INTERRUPTIBLE RATES.

A: In my direct testimony, I recommended that the Commission direct PPL to update its tariff, as part of its compliance filing in this proceeding, to provide non-firm service options for LP-5 customers.[51]

Q: HOW DID THE COMPANY RESPOND TO THIS RECOMMENDATION?

A: The Company stated that it would be willing to provide a voluntary interruptible option in its proposed new LP-6 tariff that would allow the Company to curtail load during periods of system stress.[52] For customers who elect this voluntary option, the

[51] Nelson Direct, 37:5–7.
[52] Lookup Rebuttal, 21:18–20.

Company would reduce the minimum load guarantee from 80% to 60% during the first five years of the ESA and from 50% to 30% for the next five years.[53]

Q: WHAT IS YOUR RESPONSE TO THE COMPANY'S PROPOSED INTERRUPTIBLE RATE PROPOSAL?

A: The Company's proposed interruptible rate option is a step in the right direction, but it is not sufficient in its current form. As it stands, the Company's proposal lacks detail or sophistication, and does not maximize the potential savings to the grid and customers from flexibility.

Q: PLEASE DESCRIBE HOW YOU WOULD IMPROVE UPON THE COMPANY'S INTERRUPTIBLE RATE PROPOSAL.

A: At a minimum, the interruptible rate should allow for economic interruptions in addition to interruptions during periods of grid stress. It may be appropriate to compensate customers for such economic interruptions, separate from potential reductions in their required load guarantee. Further, there should be a process in place to monitor utility utilization of large load flexibility to evaluate its effectiveness and ensure that the utility is adequately considering the impacts of large load flexibility within its planning and cost of service models.

In addition, the Company should conduct analysis to support its proposed discounted demand charges. The Company states that customers on an interruptible rate "would be less likely to create the ancillary costs that the other parties are concerned about which justifies the lower minimum load guarantee percentage," but

[53] *Id*. at 19:4–5 (default minimum load guarantee); 21:20–22 (minimum load guarantee for customers on interruptible service tariff).

does not support this quantitatively. Given the magnitude of costs that are being allocated, it is necessary to analyze the potential impact of reducing the minimum demand charges on the revenues from large load customers and the costs to serve those customers.

Finally, PPL should move beyond a traditional interruptible tariff to more sophisticated flexible load control, where the utility is coordinating and controlling behind-the-meter resources, so that large loads can optimize clean behind-the-meter resources with flexibility events.

Q: WHAT DO YOU RECOMMEND?

A: While I appreciate the Company bringing forward its proposal for an interruptible option, as stated above this recommendation does not go far enough, nor does it have adequate factual basis. However, given the urgency of addressing large load flexibility, it would be inappropriate to defer the implementation of an interruptible service rate to the Company's next rate case, which could be years (or decades) in the future. I therefore recommend that the Commission require PPL to file a more comprehensive load flexibility option for large load customers within 90 days after the final order in this proceeding.

v. <u>The Company's conflict of interest policy for its Joint Venture is inadequate.</u>

Q: PLEASE SUMMARIZE THE RECOMMENDATION YOU MADE IN DIRECT TESTIMONY RELATING TO CONFLICT OF INTEREST POLICIES.

A: In my direct testimony, I recommended that PPL not be permitted to connect projects involving its Joint Venture ("JV") unless and until it files, and the Commission approves, applicable affiliated interest agreement(s) and relevant policies to safeguard

against the Company's potential conflicts of interest[54] regarding (i) socializing costs for transmission network upgrades such that potential customers of the JV would benefit and (ii) giving preferential treatment to the JV's projects in the interconnection process, helping those projects connect faster than others.[55]

Q: DID ANY OTHER WITNESS PROVIDE A SIMILAR RECOMMENDATION?

A: Yes, OCA witness Hoyt recommended that the Commission require PPL to incorporate affiliate conflict of interest safeguards into a future PPL Electric large load tariff prohibiting the Company from reducing, crediting, or otherwise offsetting large load interconnection or service costs based on system benefit where those benefits either directly or indirectly accrue to a PPL Electric affiliate.[56]

Q: DID THE COMPANY RESPOND TO YOUR RECOMMENDATIONS, AND THOSE OF OCA WITNESS HOYT, REGARDING POTENTIAL CONFLICTS OF INTEREST ASSOCIATED WITH ITS JOINT VENTURE?

A: Yes. Ms. Johnson suggests that the Company already has robust protections to guard against conflicts of interest with affiliates. She names "bankruptcy protections, separate credit ratings, capital structure requirements under stand-alone credit facility agreements, collateral requirements under debt financing agreements and independence of board of directors" as examples of such protections.[57] Further, she cites applicable laws and regulations as providing protection against conflicts of

[54] Nelson Direct, 50:11–51:3.
[55] *Id*. at 48:12-49:7.
[56] OCA St. 5, Direct Testimony of Matthew Hoyt, 10:17–21, Docket No. R-2025-3057164 (Dec. 22, 2025).
[57] PPL, Statement 5-R, Rebuttal Testimony of Bethany L. Johnson ("Johnson Rebuttal"), 32:13–16, Docket No. R-2025-3057164 (Jan. 23, 2026).

interest, including the Electricity Generation Customer Choice and Competition Act (66 Pa. C.S. § 2801, et seq.), Chapter 54 of the PUC's regulations (52 Pa. Code §§ 54.1, et seq.), and the FERC Standards of Conduct (18 C.F.R. § 358.1, et seq.). Ms. Johnson states that these protections have historically been sufficient, including when PPL had a subsidiary that owned generation assets, and that there has not been sufficient evidence presented demonstrating why these existing protections would now be insufficient.[58] Further, Ms. Johnson observes that the Company is already required to receive PUC approval of affiliate interest agreements under Section 2102 of the Public Utility Code. Because of this, she disagrees with OCA witness Hoyt's recommendation and finds my recommendation to be unnecessary.[59]

Q: DO YOU AGREE?

A: No. The conflict-of-interest protections Ms. Johnson cites do not resolve the chief potential conflict I identify in my direct testimony: namely, the Company's potential incentives to socialize transmission costs to improve business opportunities for the JV. Ms. Johnson implies in rebuttal testimony that the Commission's existing rules regarding affiliate interest agreements will address this risk.[60] But as she conceded in discovery, those rules only apply to contracts to which PPL and the JV are parties.[61] She further admits that the JV may not be party to the Company's service contracts

[58] *Id*. at 32:18–22.
[59] *Id*. at 32:16–18.
[60] *Id*. at 34:5–9 ("PPL Electric is already required to receive PUC approval of affiliate interest agreements under Section 2102 of the Public Utility Code. As I have already discussed, there is a full regulatory framework governing a public utility's interactions with affiliates, and there is no need to create additional rules with respect to PPL Corporation's joint venture with Blackstone.").
[61] *See* EI-PPL-IV-7(c).

with large load customers receiving energy services from the JV. Thus, despite that scenario presenting a clear potential for a conflict of interest, the Commission's existing rules regarding affiliate interest agreements would not appear to come into play.

III. ELECTRIC VEHICLE TOU

Q: PLEASE SUMMARIZE THE RECOMMENDATIONS YOU MADE IN DIRECT TESTIMONY ON PPL'S PROPOSED EV TOU PROGRAM.

A: In my direct testimony, I recommended that the Commission reject the Company's proposal and direct PPL to implement a time-varying residential delivery rate option for interested customers, which could be marketed to EV owners and other customers who are interested in controlling costs. I recommended that the TOU Delivery rate be designed such that the on-peak and off-peak periods align with the Company's TOU Generation Supply Charge, because differing on-peak and off-peak periods between the two rates could confuse customers. Finally, I recommended that the base residential distribution rate adopted in this proceeding be the basis for the TOU rate, with rates adjusted up (down) for on-peak (off-peak) periods. I recommended a ratio between the on-peak and off-peak rates of 2.8, which was derived using the Company's Cost of Service Study and assigning demand-related costs to the peak hours.[62]

Q: HOW DID PARTIES RESPOND TO YOUR DIRECT TESTIMONY?

A: The Company and OCA both raised concerns with my recommendation to establish a residential delivery TOU rate, arguing that it is not supported with sufficient rate

[62] Nelson Direct, 60:18-61:19.

design analysis. Company Witness Conrad states that the Company's proposed EV TOU Charging Rebate Program ("EV-TOU Program") is intended as a "capped, opt-in, distributed focused learning initiative" to generate learnings for the future, while my recommendation would be a major rate design change and require a fully developed cost of service and rate design record to account for potential bill impacts and significant operational complexity. OCA witness Hoyt argues that my proposal lacks details regarding implementation costs, bill impacts, and equity considerations.[63] Instead, witness Hoyt offers recommendations for improving PPL's EV-TOU Program.[64]

Q: HOW DO YOU RESPOND TO THE CONCERNS OF THE COMPANY AND OCA?

A: While I am sympathetic to some of their objections to the TOU proposal, I find other concerns misplaced. I certainly agree that new residential delivery rate offerings require underlying support, but it does not follow that each such rate must be built from scratch. I would suggest we lean on the over 300 time-varying rate pilots that utilities have already deployed as support for certain aspects of rate structure and likely impacts.[65] This wealth of examples of historical TOU test program analyses resolve the bulk of the Company and OCA's concerns I address the Company's and OCA's concerns in further detail below.

---

[63] OCA St. 5R, Rebuttal Testimony of Matthew T. Hoyt ("Hoyt Rebuttal), 6:16–22, Docket No. R-2025-3057164 (Jan. 23, 2026).
[64] *Id*. at 7:1-9:5.
[65] *See* AHMAD FARUQUI, MOVING AHEAD WITH TIME-VARYING RATES (TVR) (2020); https://www.brattle.com/wp-content/uploads/2021/05/18500_moving_ahead_with_time-varying_rates_tvr_-_us_and_global_perspectives.pdf ("Brattle TVR Report").

Q: BOTH PARTIES HAD CONCERNS ABOUT THE POTENTIAL RISKS PRESENTED BY THE SCOPE, UNCAPPED PARTICIPATION LEVELS, AND DURATION OF YOUR PROPOSED TOU RATE.[66] HOW DO YOU RESPOND?

A: I believe these concerns are overblown. I care deeply about protecting customers from risk, as my preceding testimony indicates. Based on my experience, I do not share OCA's and the Company's concern that my EV-TOU rate proposal poses a material risk to customers. In fact, the evidence suggests that TOU rates benefit participants through the ability to control their bills and lower them, and benefit non-participants by reducing system needs.[67]

That said, I appreciate parties' desire to further mitigate any residual risk associated with a TOU rate. As discussed further herein, I suggest modifications to my proposal intended to address this concern. I further recommend that the Commission order PPL to provide a revenue neutral TOU rate, consistent with these modifications and with applicable workpapers, as part of a compliance filing in this proceeding. This would provide stakeholders an additional opportunity to review the rate details and provide comment for the Commission's consideration.

Q: HAVE OTHER COMMISSIONS DIRECTED UTILITIES TO FILE RATES AS COMPLIANCE FILINGS, AS YOU SUGGEST PPL DO HERE?

A: Yes. In Northern States Power Company's petition for approval of an experimental TOU rate, the Minnesota PUC adopted my proposed C&I rate, which was a counter

[66] Hoyt Rebuttal, 6:12–15; PPL St. 20R, Rebuttal Testimony of James Conrad ("Conrad Rebuttal"), 12:1–8, Docket No. R-2025-3057164 (Jan. 23, 2026).
[67] *See* Brattle TVR Report.

to the utility's.[68] In that proceeding, Northern States had proposed a limited TOU pilot for C&I customers that relied primarily on demand charges, and I proposed an alternative TOU based on volumetric energy charges. Over the course of the proceeding, my proposed rate was slightly trued up to be revenue neutral, and the PUC required the utility to pilot the rate based on my design.[69] Additionally, in Consolidated Edison of New York ("ConEd") recent rate case, the New York Public Service Commission approved a settlement including a TOU rate I whose structure I proposed on behalf of an intervenor.[70]

Q: MR. CONRAD CRITIQUES YOUR EV TOU RATE PROPOSAL ON THE GROUNDS THAT YOU DID NOT PROVIDE A PROOF OF REVENUES OR ANALYSIS OF REVENUE ALLOCATION IMPACTS. HOW DO YOU RESPOND?

A: A revenue-neutral EV-TOU rate will not materially affect the Company's proof of revenues or revenue allocation. Utilities have been deploying revenue-neutral time-varying rates for decades; any calibrations to my proposed rate to ensure revenue neutrality (e.g., to incorporate final non-TOU residential distribution rates established through this proceeding) should not pose a challenge to the Company.

---

[69] *Id*.

[70] *See* Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of Consolidated Edison Company of New York, Inc. for Electric Service, N.Y. Pub. Serv. Comm'n Case 25-E-0072 (2025).

Specifically, to design a revenue neutral rate, the Company would use residential load profiles or characteristics to create revenue neutral TOU rate components. A TOU rate that is revenue neutral to the average residential customer will not impact the revenue proof. Revenue apportionment is similar: I have recommended changes to the rate design for participating residential customers, not changes to the total revenues allocated to the residential class. In the Consolidated Edison rate case discussed above, the utility used this approach to derive a revenue neutral rate. There is no reason to accept that the Company, with access to residential customer load shape data, could not readily calculate revenue-neutral TOU rates and update them through a compliance filing, as has been achieved in other jurisdictions.

Q: ARE THERE OTHER REVENUE RELATED REASONS UTILITIES FIGHT DYNAMIC RATES?

A: Though Mr. Conrad does not expressly cite it in his testimony, utilities often push back on TOU distribution rates out of fear of revenue erosion. Over time, TOU rates by their nature reduce capital investment needs for utilities by shifting peak demand, leading eventually to lower rate base investments. TOU rates can also lead to reduced revenues in the short run when customers shift load. Both are desirable from a ratepayer perspective, but not from a utility shareholder perspective.

Q: HOW DO YOU RESPOND TO OCA WITNESS HOYT'S CONTENTION THAT APPROVAL OF A RESIDENTIAL DELIVERY TOU RATE

PROGRAM REQUIRES MORE DETAILED ANALYSIS THAN IS CURRENTLY IN THE RECORD?

A: Witness Hoyt notes that implementation costs, bill impacts, equity considerations, and ongoing evaluation plans are not in the record, and argues that "In the absence of this information, approval of EI witness Nelson's proposal would be premature."[71] I address each of these issues in turn.

As for implementation costs for the proposed TOU rate, these costs should be de minimis. PPL has already deployed a supply TOU rate with the same on- and off-peak hours for the same customer class. The Company should not need to incur material expense to input substantially similar rate codes for a distribution rate. If the costs are significant, that might create some additional questions around how efficient and prudently PPL has designed its customer information system.

As for bill impacts, TOU rate impacts to each participating customer are more customer specific. Some utilities have developed tools so that customers can understand their bill impacts. As of the date of this testimony, the Company's website describing its TOU supply rate does not appear to provide such a bill-impact tool.[72] I would have no objection to the Company developing such a tool or other resources to help educate customers; I mention the absence of such a tool here to note that its provision is apparently not a precondition of implementing a TOU rate. In any event, where the Company does not provide such tools, third parties can assist customers, especially when green-button connect is available. Without either tool, customers can

[71] Hoyt Rebuttal, 6:22–23.

[72] *See* TIME-OF-USE PROGRAM; https://www.pplelectric.com/site/Ways-to-Save/Rates-and-Shopping/Time-of-Use-Plan (last visited Feb. 9, 2026).

evaluate the rate themselves to determine whether it is beneficial to their individual circumstances. Regardless, the rate is cost based, and better reflects costs than the default rate, so it is a fair rate for customers to take service under. Most importantly, the rate is voluntary.

With respect to "equity considerations:" I interpret witness Hoyt's concern to be related to distribution rate impacts on vulnerable customers, especially low-income customers. Numerous studies have shown that the benefits of dynamic rate designs extend to low-income communities, even without technology adoption or behavior change.[73,74] In one such study, Brattle Group studied the results of three TOU pilot programs in Maryland. They found that not only did low and medium income ("LMI") customers respond to price signals with peak-shifting behavior at similar rates as non-LMI customers, but LMI participant also realized significant bill savings over the two-year study period with higher percentage savings than non-LMI customers.[75]

[73] SANEM SERGICI, AHMAD FARUQUI, AND SYLVIA TANG, DO CUSTOMERS RESPOND TO TIME-VARYING RATES: A PREVIEW OF ARCTURUS 3.0 at 9 (2023), https://www.brattle.com/wp-content/uploads/2023/02/Do-Customers-Respond-to-Time-Varying-Rates-A-Preview-of-Arcturus-3.0.pdf; Jeff Zethmayr and Ramandeep Singh Makhija, *Six Unique Load Shapes: A Segmentation Analysis of Illinois Residential Electricity Customers*, THE ELECTRICITY JOURNAL, No. 32, 2019, at 5–8.

[74] Jeff Zethmayr and Ramandeep Singh Makhija, "Six unique load shapes: A segmentation analysis of Illinois residential electricity consumers," *The Electricity Journal* No. 32 (2019) 106643: pg. 5, available at https://www.citizensutilityboard.org/wp-content/uploads/2019/06/ClusterAnalysisFinal.pdf.

[75] SANEM SERGICI *ET AL.*, PC44 TIME OF USE PILOTS: END OF PILOT EVALUATION 46–51 (2021), https://www.brattle.com/wp-content/uploads/2021/12/PC44-Time-of-Use-Pilots-End-of-Pilot-Evaluation.pdf.

Figure 2. Annual Average Bill Impacts by Customer Group[76]

	BGE	Pepco	DPL
Net Change in Year 1 Bills (Relative to Pre-Pilot Period)			
LMI Customers	-6.5%	-8.4%	-5.4%
Non-LMI Customers	-4.2%	-10.9%	-8.0%
All Customers	***-5.3%***	***-9.7%***	***-6.4%***
Net Change in Year 2 Bills (Relative to Pre-Pilot Period)			
LMI Customers	-7.2%	-7.7%	-3.0%
Non-LMI Customers	-5.5%	-7.4%	-1.0%
All Customers	***-6.3%***	***-7.5%***	***-2.3%***

Furthermore, low-income customers who remain on non-TOU rates can because, over time, TOU rates drive down system costs for everyone.

Finally, to the issue of evaluation: As discussed above, I believe the question of TOU rate efficacy has been settled over their long history of deployments. With that said, I am open to including evaluation options from PPL or OCA, including the approach PPL witness Conrad suggest in his rebuttal testimony, to the extent they are cost-effective pursuits. Such evaluations should not be so burdensome or costly that they skew the apparent costs and benefits of the EV-TOU rate itself.

Q: WHAT CHANGES TO YOUR PROGRAM DESIGN WOULD FURTHER MITIGATE PARTIES' CONCERNS ADDRESSED ABOVE?

A: While I believe a successful delivery TOU rate design could safely be made available to all residential customers within this proceeding, in recognition of parties' concerns, I suggest adopting my EV-TOU rate proposal on a pilot basis, with an initial term

[76] Sergici, "Time of Use Pilots" 51, *supra* n.75.

(consistent with Mr. Hoyt's recommendation regarding PPL's proposal) to expire June 30, 2027, and an enrollment cap of 5,000 customers. I believe this would mitigate most of the parties' concerns. I propose 5,000 customers because the scale would need to be large enough to justify implementation and evaluation costs, and because 5,000 would still represent a distinct minority of EV drivers within PPL's territory. Limiting the duration to a prescribed evaluation period would allow the Company to analyze the revenue impacts and equity concerns. I suggest a five-year period expiring 2030 to roughly align with the development timeline of PPL's Phase VI Energy Efficiency & Conservation plan.

i. <u>Other EV-related rebuttal testimonies.</u>

Q: DO YOU WISH TO RESPOND TO ANY OTHER REBUTTAL TESTIMONY CONCERNING EV RATES?

A: Yes. In his rebuttal testimony, Company witness Conrad addressed Walmart witness Matthew Lyon's direct testimony regarding DC fast charger rates. Specifically, Mr. Conrad agreed that it is "appropriate to evaluate whether existing rate designs for high load-factor and low-load-factor public DCFCs are sending efficient price signals and appropriately reflecting cost causation without cross-subsidization," and "that stakeholder engagement is important when considering new tariffs." However, Mr. Conrad disagreed with Mr. Lyon's recommendation that the Company engage stakeholders to develop and file a DCFC rate within one year of the conclusion of this proceeding. Instead, Mr. Conrad stated "PPL Electric supports addressing these issues through the appropriate process and evidentiary record."[77]

[77] Conrad Rebuttal, 15:7–10.

Q: WHAT IS YOUR RESPONSE?

A: First, I note that the Company's position with respect to Walmart's proposal is inconsistent with its proposal to establish an interruptible rate option for large load customers. The Company has proposed an interruptible service rate at the rebuttal stage of this proceeding. As I discussed earlier, the Company's interruptible rate proposal lacks significant detail, including a cost basis. The Company nevertheless appears to contemplate finalizing the rate as part of this proceeding. In contrast, Mr. Conrad asserts that a yearlong process of study and stakeholder engagement, as Mr. Lyon proposed, is insufficient to develop a DCFC rate.

Additionally, I note that although the Company "supports addressing the . . . issues" Mr. Lyon raises, it does not actually commit to do so. Given the Company's apparent desire to engage with stakeholders with respect to DCFC rate design, it should at a minimum affirm that it intends to do so, and ideally should also articulate how.

IV. DERMS

Q: PLEASE SUMMARIZE THE TESTIMONY YOU PROVIDED IN DIRECT ON THE COMPANY'S DERMS.

A: I provided an overview of the Company's revenue request associated with DERMS capital costs. Additionally, I discussed that the Company is not utilizing its DERMS functionality to provide optimal benefits to ratepayers, including flexible large load connections.

Q: HOW DID THE COMPANY RESPOND?

A: The Company noted that the Commission recently approved its Second DER Management Plan, which, among other things, removes the 3,000 device cap for its

DER pilot.[78] The Company claims that in that plan it forecasted the connection of 11,000 DERs in 2026 and 12,100 DERs in 2027, which equates to approximately $11M per year in connection, making its current proposal conservative.[79] Further, the Company discusses the RFP for aggregator grid services and DER orchestration plan, and claims that these processes will not reduce the DER management costs that it has already incurred and that this process won't be complete until after the fully projected test year used for ratemaking purposes in this proceeding.[80]

Q: HOW DO YOU RESPOND TO THE COMPANY?

A: The Company is missing the primary point of my direct testimony: namely, that in implementing the Commission's recent DERMS Plan Order, the Company should take reasonable steps – many of which will occur during the FPFTY – to maximize the value of the investments for which it seeks cost recovery here. I agree that the Commission's Order *may* resolve many issues regarding specific DERMS plan details, though I understand that that Order is currently subject to two requests for reconsideration, including one from OCA. But I also believe that the steps the Company takes in response to that Order are relevant to this proceeding, particularly with respect to those steps on which the Order is silent. For that reason, I recommended considerations that the Company should account for in its development of the Grid Orchestration Plan during the FPFTY.

Q: DOES THIS CONCLUDE YOUR SURREBUTTAL TESTIMONY

A: Yes.

---

[78] Conrad Rebuttal, 16:15–20.
[79] *Id*. at 17:1–4.
[80] *Id*. at 18:18-20:7.

EXHBIT RN-SR-2

PUBLIC DISCOVERY RESPONSES RELIED UPON

RON NELSON

ON BEHALF OF

ENVIRONMENTAL INTERVENORS

WITNESS: Bethany L. Johnson

PPL Electric Utilities Corporation
Response to the Set IV Data Requests of the
Environmental Defense Fund, Natural Resources Defense Council, and Citizens for Pennsylvania's Future, collectively "Environmental Intervenors" (EI)
Dated January 27, 2026
Docket No. R-2025-3057164

EI-PPL-IV-7

Reference PPL Statement No. 5-R, Rebuttal Testimony of B. Johnson, page 33, lines 14-16. Where the Joint Venture enters into an arrangement to provide energy services to a prospective new large load customer:

a. Will the Joint Venture necessarily be a party to the customer's service contract with the Company? If so, please explain why, including all applicable policies, rules, etc. that require the Joint Venture to be party to the customer's service contract with the Company.
b. Will the Joint Venture necessarily be a party to any other contracts between the customer and the Company governing the assignment and/or payment of transmission facility costs? If so, please explain why, including all applicable policies, rules, etc. that require the Joint Venture to be party to such contracts.
c. Please explain how the Commission's rules governing contractual relationships between the Company and its affiliates apply to contracts to which the Company is not a party.

PPL Electric Response

a. No.
b. No.
c. They do not. As stated in PPL Electric Statement No. 5-R, lines 16-21:

"While I agree that the joint venture should not realize any special benefits from being an affiliate with PPL Electric, it is also true that the joint venture should not be treated at a disadvantage to other customers simply because it is an affiliate. **If the joint venture is taking electric service** from PPL Electric under its Commission approved tariff, it should be treated like any other customer, subject to affiliate interest rules." (Emphasis added)

I specifically state the condition that “If the joint venture is taking electric service from PPL Electric…” and so in that instance, the joint venture is the customer and would be subject to the affiliate interest rules.

VERIFICATION OF RON NELSON

I, Ron Nelson, verify that the following testimony and exhibits were prepared by me or under my direct supervision, and are true and correct to the best of my knowledge, information and belief, and that I expect to be able to prove the same at a hearing held in this matter:

- **Direct Testimony of Ron Nelson on Behalf of Environmental Intervenors, EI Statement 1**
    - 63 pages of written testimony
    - Exhibit RN-1: Ron Nelson Curriculum Vitae
    - Exhibit RN-2: Tariff Redlines to LP-5
    - Exhibit RN-3: Compiled Discovery Responses
- **Surrebuttal Testimony of Ron Nelson on Behalf of Environmental Intervenors, EI Statement 1-SR**
    - 41 pages of written testimony
    - Exhibit RN-SR-1: CEG Workpaper: Analysis of PPL Supplemental Transmission Projects from RTEP TEAC
    - Exhibit RN-SR-2: Public Discovery Responses Relied Upon

I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Dated: February 12, 2026

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

A. My name is Frank Lacey and I am the founder of Electric Advisors Consulting. My business address is 3 Traylor Drive, West Chester, PA 19382.

Q. PLEASE DESCRIBE ELECTRIC ADVISORS CONSULTING AND YOUR ROLE?

A. Through Electric Advisors Consulting, I am an energy market consultant who helps companies and customers advance energy markets with innovative products, technologies and services. I have provided value to clients by leveraging regulatory change, developing and implementing corporate strategies, and developing and executing M&A strategies.

Q. PLEASE SUMMARIZE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL EXPERIENCE.

A. As a consultant, I provide policy- and market-related consulting services to advanced energy management companies and end-use customers. I have worked in the electric power industry for approximately 32 years, beginning immediately after earning my graduate degree. I have worked on major industry restructuring issues including generation asset divestiture, with a specialization in environmental asset valuation; stranded cost valuations; transmission restructuring including the development of Independent System Operators ("ISOs"), Regional Transmission Organization ("RTOs") and other independent transmission entities; the development of retail energy markets; and the development of demand response markets. Early in my career, I was employed as a consultant to industry participants, first by Putnam, Hayes & Bartlett, Inc. and then by Arthur Andersen Business Consulting. Within the industry, I have worked for Strategic Energy, a retail electricity supplier, Direct Energy, a retail energy

supplier that acquired Strategic Energy in 2008, and Comverge, Inc. and CPower, two companies that shared a common owner and provided demand response services to residential and to commercial & industrial customers, respectively. I created Electric Advisors Consulting LLC in the fall of 2015. I hold a Bachelor of Science degree in Transportation and Logistics from the University of Maryland and a Master of Science in Industrial Administration with concentrations in finance and environmental management from the Tepper School of Business at Carnegie Mellon University. My resume is provided as Exhibit FL-1.

Q. HAVE YOU EVER PROVIDED TESTIMONY BEFORE THIS COMMISSION?

A. Yes. I have testified before the Pennsylvania PUC Public Utility Commission ("PUC" or "Commission") several times. I have also testified numerous times before other state regulatory agencies, legislatures, and twice as a technical conference witness at the Federal Energy Regulatory Commission ("FERC"). I have provided expert testimony to the utility commissions in Virginia, New York, Rhode Island, Ohio, Maryland, Massachusetts, Illinois, Utah, and California. I have presented oral testimony in less formal proceedings before the Commissions of Maryland, Pennsylvania, Delaware, and Texas. I have presented legislative testimony in New York, Maryland, Pennsylvania, Delaware, Michigan, California, and Texas. I have filed expert reports on energy matters in the United States District Court for the Eastern District of North Carolina, Northern Division, in the Superior Court of New Jersey in Bergen County and in the Supreme Court of the State of New York in New York County. I have also spoken at numerous trade shows, conferences and other industry and corporate events as an expert on electricity market issues. A summary of my prior testimony is contained in Exhibit FL-2.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING?

A. I am an independent consultant submitting this testimony on behalf of the Retail Energy Supply Association ("RESA").[1]

Q. PLEASE DESCRIBE RESA.

A. RESA is an association of diverse competitive energy suppliers devoted to promoting vibrant and sustainable competitive retail energy markets for residential and business customers. Members of RESA include electric generation suppliers ("EGSs" or "competitive suppliers") licensed by the Commission, pursuant to the Electricity Generation Customer Choice and Competition Act ("Competition Act"),[2] to sell electric generation services to retail customers throughout Pennsylvania and in PPL's service territory. EGSs accomplish these sales pursuant to electric supply contracts entered into with retail customers and, for residential and small business customers, are required to follow the Commission's detailed regulations regarding language to be included in the contracts as well as the timing and content of notices to be provided to customers upon pending expiration of the contract or notice of material changes.[3]

Q. PLEASE PROVIDE AN OVERVIEW OF YOUR TESTIMONY.

A. First, I address why the Commission must reject consideration of any of PPL's proposed changes to its Electric Generation Supplier Coordination Tariff ("Supplier

---

[1] The comments expressed in this filing represent the position of the Retail Energy Supply Association (RESA) as an organization but may not represent the views of any particular member of the Association. Founded in 1990, RESA is a broad and diverse group of retail energy suppliers dedicated to promoting efficient, sustainable and customer-oriented competitive retail energy markets. RESA members operate throughout the United States delivering value-added electricity and natural gas service at retail to residential, commercial and industrial energy customers. More information on RESA can be found at www.resausa.org.

[2] 66 Pa.C.S. §§ 2801 et seq.

[3] 52 Pa Code §§ 54.5 and 54.10.

Tariff") presented in this proceeding. While I am not opposed to all of the proposed changes, the document is riddled with inconsistencies, does not reflect actual market operations and includes many terms that leave too much discretion to PPL.

Second, I consider the information technology ("IT") changes proposed by PPL and explain why it is important to include Competitive Suppliers in the update process as PPL begins to make systems changes.

Finally, I discuss some of the especially egregious components of the proposed Supplier Tariff that the Commission should reject if it allows the document to be considered in this proceeding.

Q. PLEASE SUMMARIZE RESA'S RECOMMENDATIONS.

A. As an initial matter, RESA recommends that the Commission reject consideration of PPL's proposed new Supplier Tariff in this proceeding. As part of PPL's on-going IT upgrade, RESA recommends that the Commission direct PPL to make the following changes:

1. an update to its data management systems to create an online portal where suppliers can access real-time data and "self-serve" and find out at any point in time, the status of their accounts, if they are active or inactive, dates of service, low income flags, move transactions, reinstatement transactions, bill cycle calendar information, commercial meter flags, customer mailing address changes and any other information relative to EDC/EGS shared customers;
2. a migration of the NEM customer policies to be aligned with the other Pennsylvania EDCs;
3. establish a strict standard response time for supplier inquiries to no more than one (1) full business day;
4. add EDI functionality for supplier-initiated rebill cancellations; and
5. conduct an exercise to unbundle all of PPL's costs to serve customers and to allocate those costs appropriately to default service and distribution-only customers to facilitate a much more fair and competitive electricity market.

Finally, and only if the Commission agrees to consider PPL's Supplier Tariff proposals in this proceeding, RESA recommends that the following:

1. Rejection of PPL's proposal to assess EGSs PPL's EDI and DUNS testing costs;
2. Rejection of PPL's newly proposed credit requirements for suppliers;
3. Rejection of PPL's new rule defining "Standard Rates" and limited the amount per quarter an EGS is permitted to submit; and,
4. Rejection of any new proposal to require EGSs to provide written authorization as a pre-condition to receiving the information necessary to serve their customers.

Q. IS PPL MAKING PROPOSALS IN THIS PROCEEDING WHICH WILL HAVE A DIRECT IMPACT ON COMPETITIVE SUPPLIERS?

A. Yes. In this proceeding, PPL is proposing to adopt a new Supplier Tariff on the basis that it is "well overdue for an update to address current policies and procedures governing PPL Electric's interaction with and charges to EGSs and other issues." (PPL St. No. 18 at 15-16). While PPL witnesses provide some limited testimony regarding a few new proposals to assess EGSs fees that have not been charged to them before, a review of the proposed new Supplier Tariff reveals many other issues that will impact suppliers which I will discuss further below. In addition, PPL is seeking to upgrade its IT infrastructure which will necessarily impact operations between suppliers and PPL that could have negative impacts on customers if not managed properly prior to implementation. (PPL St. No. 19). As I will discuss more below, PPL's own recent experience with system upgrades clearly shows the negative impacts that can occur for customers when these upgrades impact operational processes with suppliers.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. Yes. I am sponsoring the exhibits set forth in the Table of Exhibits following the Table of Contents to this testimony.

II. PPL'S SUBSTANTIALLY REVISED SUPPLIER TARIFF SHOULD NOT BE ADDRESSED IN THIS PROCEEDING

Q. HAVE YOU READ THE DIRECT TESTIMONY OF PPL WITNESS LISA NORDEN?

A. I have.

Q. DO YOU HAVE ANY PARTICULAR REACTIONS TO HER TESTIMONY?

A. Yes. Ms. Noden's testimony is sponsoring the changes to the Supplier Tariff. I find that much of her testimony is unsupported by data or facts. Some proposed changes are not supported by any testimony at all, and her arguments used to support some changes are exactly opposite of her arguments to support other changes. I will explain this later, but it makes her requests for certain changes seem vindictive toward the EGS community and not based in any sound policy argument.

Q. SHOULD THE COMMISSION ENTERTAIN PPL'S PROPOSALS REGARDING REVISIONS TO ITS SUPPLIER TARIFF WHICH WILL DIRECTLY IMPACT CURRENT OPERATIONS BETWEEN PPL AND COMPETITIVE SUPPLIERS?

A. No, the Commission should reject consideration of PPL's proposed supplier tariff changes – including the imposition of PPL's EDI fees – in the context of this rate proceeding. PPL is proposing significant and detailed changes to the supplier tariff which amount to a wholesale change of how PPL interacts with suppliers. Given the extent of the changes, and the complete lack of stakeholder engagement about the Supplier Tariff changes, I believe any updates to the supplier tariff should be addressed in a separate proceeding and are not appropriate for this base rate proceeding.

Q. DOES PPL'S DIRECT TESTIMONY SUPPORT THE SIGNIFICANT CHANGES TO ITS SUPPLIER TARIFF?

A. No. PPL's Exhibit LN-1 provides clean and redlined versions of the supplier tariff and PPL Exhibit LN-2 provides a list of proposed changes to the supplier tariff, but PPL's

testimony does not support these changes or provide any discussion of why PPL believes these changes are necessary. Exhibit LN-2 indicates that some of the changes are "clarifying" edits, but never recognizes how some of these proposed edits will have a significant impact on how suppliers currently interact with PPL to facilitate the ability of consumers to choose an alternative supplier.

Q. IN YOUR VIEW, HAS PPL EVEN ACCOMPLISHED ITS STATED GOAL OF "UPDATING" ITS SUPPLIER TARIFF "TO ADDRESS CURRENT POLICIES AND PROCEDURES?"

A. No. PPL's significantly misses the mark in encapsulating the way PPL and EGSs operationally interact today. Some examples include: (1) though PPL offers both Bill Ready billing and Rate Ready billing, it fails to update its tariff to include a definition for "Bill Ready" billing or even mention Bill Ready in any context; but it includes a new definition of "Rate Ready"; (2) as further discussed below, PPL proposes new requirements (which RESA strongly opposes) for EGSs that utilize Rate Ready billing but fails to provide any similar detail for Bill Ready billing; and (3) The Competitive Billing Specifications Rider, included at the end of the Supplier Tariff does not use the terms Rate Ready or Bill Ready. Instead, it uses the generic term "Consolidated EDC Billing." In that rider, PPL provides detailed requirements for a Bill Ready billing scenario ("The EGS will calculate its customers' charges and will send its customers' basic charges including … usage, rate and resulting calculation ('EGS Charges') to PPL…"),[4] however the section is silent on the mechanics for Rate Ready billing. The

[4] PPL Exhibit LN-1, Paragraph 3, page 239 of 264.

Commission should not approve the proposed Supplier Tariff due to inconsistencies and uncertainties found here.

Q. ARE YOU PRESENTING SUBSTANTIVE TESTIMONY ABOUT RESA'S CONCERNS WITH SOME OF THE PROPOSED SUPPLIER TARIFF CHANGES?

A. Yes. I will later discuss the most problematic changes embedded in PPL's proposed new supplier tariff and explain how they will significantly change current competitive market interactions. But, I wish to be clear that I do not believe that the volume of changes proffered by PPL for its supplier tariff, which are inconsistent and vague can be properly assessed in the context of a rate base proceeding and, therefore, the Commission must reject consideration of PPL's proposed Supplier Tariff in this proceeding.

Q. WHY DOES RESA OPPOSE ADDRESSING PPL'S SUPPLIER TARIFF REVISIONS IN THIS PROCEEDING?

A. The changes are too numerous and detailed to be fully examined in this base rate case. Many of the proposed edits are also vague and leave much interpretation to PPL, to the potential detriment of Competitive Suppliers. To my knowledge, there was no stakeholder engagement about the proposed changes, and this filing was not served on all suppliers that are active in PPL's service territory. Thus, many suppliers (all of whom will be impacted) are likely not even aware of the proposals PPL is requesting which will directly implicate their ability to provide competitive service to consumers in the PPL service territory. Additionally, base rate case proceedings follow a statutorily mandated constrained timeline. By including such a significant comprehensive set of revisions to its supplier tariff in this rate case, rather than as a stand-alone tariff supplement filing, PPL is significantly limiting the ability of both the

suppliers and the Commission to fully consider what is being proposed and how the proposals will impact the ability of consumers to have access to a workable competitive market.

Q. CAN YOU PROVIDE EXAMPLES OF RECOMMENDATIONS THAT ARE VAGUE AND COULD BE INTERPRETED BY PPL TO THE DETRIMENT OF COMPETITIVE SUPPLIERS?

A. Yes. PPL has proposed an amendment to the definition of Meter Read Date to include the phrase "as may be modified from time to time."[5] Neither the proposed tariff nor the testimony provided discusses what may lead to meter read date modifications or how and when those modifications will be communicated to the EGSs. It provides PPL with unlimited flexibility on meter read dates but puts no obligations on PPL to communicate any changes.

As another example, in the newly proposed credit Section 4.14, PPL proposes the following new language:

> These standards will take into consideration the scope of operations of each EGS and the level of risk to the Company. This determination will be aided by appropriate data concerning the EGS, including load data or reasonable estimates thereof, where applicable. The Company requires an initial credit amount of $250,000 and shall adjust the amount required commensurate with the financial risks placed on the Company by an EGS, including recognition of an EGS's performance.

PPL offered no supporting testimony to explain whether a large company (scope) places more or less credit risk on PPL. PPL does not define how it will calculate the "level of risk" to PPL. PPL does not describe what appropriate data might include other than "load data or reasonable estimates thereof, where applicable." What load data? Is it

[5] PPL Exh. LN-1 at 94 (definition of "Meter Read Date.")

aggregated load data? Rate class specific load data? How might PPL get a "reasonable estimate" of load data? There is no testimony to support the $250,000 requirement, and PPL's adjustment of that requirement includes "recognition of an EGS's performance." What performance? What does that mean? What metric will be used to evaluate an EGS's performance?

These are just a few of the areas of concern. There are other areas of vagueness and inconsistency as well. In short, the Commission should dismiss the entirety of the Supplier Tariff proposals and direct PPL to meet with Competitive Suppliers to create a document that will improve the market, be instructive to market participants and implement boundaries and requirements on PPL's operations. Such a result will support the ability of consumers in PPL's service territory to have direct access to the competitive market.

Q. BASED ON THIS, WHAT DO YOU RECOMMEND?

A. I recommend that PPL's proposed changes to the Supplier Tariff be rejected at this time. PPL could instead propose these changes in a separate tariff filing which would give suppliers a full and fair opportunity to review and respond to PPL's proposals. It would certainly be helpful for PPL to engage the Competitive Supplier community before it makes the tariff filing. It is possible that many of the disagreements could be worked out before such a filing, which would minimize the burden on the Commission when that filing is made. Notwithstanding this primary recommendation, however, I will specifically address the most concerning proposals included in PPL's supplier tariff and explain why they are problematic from a competitive market standpoint and should

be rejected, even if the Commission is not inclined to move the Supplier Tariff issues to a different proceeding.

III. IMPACT OF IT UPGRADES ON SUPPLIER OPERATIONS

Q. DOES PPL PROPOSE TO UPGRADE ITS INFORMATION TECHNOLOGY SYSTEMS?

A. Yes. PPL witness Daniel Johnson states that many of the Company's information technology ("IT") system are aging, nearing the end of their service contracts, or reaching the end of their useful lives such that the product will no longer be maintained or supported by the manufacturer.[6] To address this, PPL has developed a five-year plan to overhaul its aging IT infrastructure.[7] This overhaul will be wide-ranging and includes replacement of the Company's customer information system ("CIS"), customer experience ("CX") platform, and Enterprise Resource Planning ("ERP") system.[8]

Q. DOES PPL'S RATE FILING INCLUDE ANY PROPOSED ENGAGEMENT WITH STAKEHOLDERS DURING THE IT UPGRADE PROCESS?

A. No. PPL's filing does not include any indication that it intends to work with stakeholders as it implements the various IT upgrades.

Q. DOES PPL'S RATE FILING ADDRESS HOW THE PROPOSED IT UPGRADES WILL IMPACT COMPETITIVE SUPPLIERS AND THEIR CUSTOMERS?

A. No, PPL's testimony does not address how the IT upgrades will impact Competitive Suppliers or customers who enroll to receive service from EGSs. In fact, in discovery responses, PPL has indicated that it does not believe these extensive IT upgrades will

---

[6] *See* PPL St. No. 19 at 8.

[7] *See* PPL St. No. 19 at 10-11.

[8] PPL St. Nos. 18 and 19.

have any impact whatsoever on suppliers or shopping customers. For example, PPL states in discovery responses that the Company is not planning any changes that would affect default service customers who choose to shop (PPL Response to RESA-I-12 – Exhibit FL-3), customers returning to default service (PPL Response to RESA-I-13 – Exhibit FL-4), or to facilitate shopping choices (PPL Response to RESA-I-14 – Exhibit FL-5). The Company also states that it will "continue to support the competitive market in the same way it does currently," and that the IT upgrades are "not designed to have an impact on the competitive market." (PPL Response to RESA-I-41 and 42, respectively – Exhibit FL-6).

1. Stakeholder Involvement

Q. DO YOU HAVE CONCERNS WITH PPL'S CONTENTION THAT ITS PROPOSED TOTAL OVERHAUL OF ITS IT SYSTEMS WILL NOT HAVE ANY IMPACT ON SUPPLIERS OR SHOPPING CUSTOMERS?

A. Yes, I have significant concerns. While it may be true that PPL does not *intend* for its IT overhaul to have a direct impact on supplier operations or shopping customers, in my experience and the experience of many RESA members, such significant IT changes often have major impacts on supplier operations and the ability of customers to shop both during and after the transition. Moreover, I fail to understand why PPL's proposed upgrades would <u>not</u> include operational improvements to better support the ability of its ratepayers to participate in retail choice. As noted below, PPL is proposing constraints on the EGSs that could easily be avoided with modern data processing systems. The plea for IT upgrades to improve its own operations, coupled with a simultaneous plea to constrain EGS operations is puzzling at best.

Q. ARE YOU AWARE OF PREVIOUS EXAMPLE WHERE PPL MADE SYSTEM CHANGES THAT AFFECTED SUPPLIERS?

A. Yes, In 2022, PPL made changes to its meter data management system ("MDSM"). Those changes resulted in over 91,000 customer accounts not receiving bills from December 2022 through April 2023 and over 850,000 customers receiving estimated bills that were unusually high or low or contained missing or incomplete supplier charges over that same time period. These problems were well-documented in Commission Docket No. M-2023-3038060 and resulted in PPL accepting several operational obligations and accepting a civil penalty of $1 million that was paid into its Hardship Fund, which supports low-income customers.[9] It is important to remember that the impacted customers included customers of EGSs. As a result, the EDI transactions from PPL to EGSs exponentially increased during this period, largely with cancel/rebill requests from PPL to the EGSs, to address the issues created by PPL's system. The disruption in PPL's system had resulting impacts to EGSs and their customers. All customers would have benefitted from better coordination and communication from PPL and a more flexible system in place to quickly and more smoothly address problems as they occurred.

Q. CAN YOU PROVIDE EXAMPLES OF OTHER UTILITIES IN PENNSYLVANIA THAT MADE SIGNIFICANT IT UPGRADES THAT AFFECTED SUPPLIER OPERATIONS?

A. Yes. When PECO recently upgraded its CIS, RESA members and other suppliers encountered numerous challenges throughout that process that negatively impacted

---

[9] *See Pennsylvania Public Utility Commission, Bureau of Investigation and Enforcement v. PPL Electric Utilities Corporation*, Docket No. M-2023-3038060, Opinion and Order entered May 16, 2024 and *Joint Motion of Chairman Stephen M. DeFrank & Commissioner Katheryn L. Zerfuss*, adopted April 25, 2025.

EGS operations. For example, as part of the CIS upgrade, PECO assigned both new customer account numbers *and* new "Choice ID" numbers to be used when changing suppliers. These numbers were easily confused, and during the transition neither customers nor suppliers had ready access to the Choice IDs. Further, there had been no communication with suppliers about this transition and the need to ensure that the correct identification number was being used, resulting in many rejected enrollments. RESA members also experienced the rejection of invoices for supplier customer accounts that had been closed by the utility. These challenges and others that suppliers experienced were discussed in detail in RESA's testimony in PECO's recent default service proceeding.[10]

Q. WHAT LESSONS WERE LEARNED AS A RESULT OF THE CHALLENGES EXPERIENCED WITH PECO'S CIS UPGRADE?

A. RESA members certainly understand that challenges and unexpected issues may arise when an integral part of a utility's operations undergoes a system upgrade. However, in my opinion many of the challenges that suppliers and customers experienced could have been avoided or mitigated significantly if there had been consistent communication between the utility and suppliers throughout the process. It is vital to have processes in place to ensure open communication between the utility and suppliers (who are business partners of the utility to provide service to end user customers) throughout the system transition, particularly given the significant potential impact that

[10] *See* RESA St. No. 1, Direct Testimony of Frank Caliva III, at 24-28, *PECO Energy Company Petition for Approval of Default Service Program June 1, 2026 Through May 31, 2029*, Docket No. P-2024-3046008 ("PECO DSP VI").

the change may have on the ability of competitive suppliers to offer and provide service to customers.

Q. BASED ON THIS, WHAT DO YOU RECOMMEND?

A. I recommend that PPL be directed to develop and implement specific processes whereby it collaboratively works with competitive suppliers to reasonably support their ability to provide service and make offers to customers, both before and throughout the IT upgrade process. Specifically, PPL should be directed to do the following:

- First, PPL should be directed to provide daily updates to competitive suppliers and weekly updates to Commission staff for at least the first 90 days of any system upgrade/transition, including reporting on the number of issues identified by suppliers, the estimated number of customers impacted, an explanation of PPL's efforts to resolve those issues without placing undue burden on suppliers, and an estimated timeline for resolution.
- Second, PPL should be directed to assign each supplier operating in the market a consistent point of contact for addressing any customer system information upgrade issues experienced by that supplier.
- Finally, PPL should be directed to exercise flexibility regarding troubleshooting supplier-specific issues with the ultimate goal of offering realistic workarounds and solutions that do not place unnecessary burdens on the supplier.

Q. HOW WOULD CUSTOMERS BENEFIT FROM THE REQUIRED IMPLEMENTATION OF THESE PROCESSES?

A. Unexpected and/or unintended challenges may arise during PPL's proposed IT overhaul that could lead to inconveniences and frustration for customers if the IT upgrades limit their ability to shop, limit their ability to get a bill, pay a bill or otherwise have interruptions in normal interactions with their EGS or PPL. Not only is placing customers in this position unreasonable, but it also frustrates the ability of competitive suppliers to provide competitive products and services in PPL's service territory and can leave consumers with a negative impression about suppliers. Implementation of a new CIS, which is being paid for by all PPL customers, in a way

which frustrates the ability of those customers to shop is unacceptable. Measures must be put in place to satisfactorily address supplier operational issues if and when they arise and, where necessary, to enable Commission Staff to lead a forum whereby such problems can be addressed in real time without further frustrating the ability of customers to elect to shop for a competitive supplier.

Q. DID RESA OFFER THE SAME SUGGESTIONS FOR PECO'S SERVICE TERRITORY?

A. Yes, RESA offered the same suggestions to address the challenges experienced as part of PECO's CIS upgrade as part of PECO's recent default service proceeding.[11]

Q. DID THE COMMISSION ACCEPT RESA'S RECOMMENDATION IN THE PECO DSP VI PROCEEDING?

A. No, the Commission did not adopt RESA's proposal in the PECO DSP VI proceeding. The Commission was persuaded that, even though PECO's CIS upgrade continues, it fixed the problems in the past and any future problems were speculative.

Q. SHOULD THE COMMISSION REACH A DIFFERENT CONCLUSION HERE?

A. Yes. In this case, PPL's IT upgrades have not yet begun, and PPL is currently in the planning stages. By taking into account the needs of suppliers and shopping customers from the start and ensuring open lines of communication to address any issues that may arise, PPL can avoid or significantly mitigate the type of negative impact that suppliers and their customers experienced during PECO's CIS upgrade.

[11] *See PECO DSP VI*, RESA Main Brief at 41-44, and RESA St. No. 1 at 24-28.

2. RESA Proposed System Upgrades

Q. PLEASE IDENTIFY THE SYSTEM IMPROVEMENTS TO FACILITATE CHOICE THAT THE COMMISSION SHOULD DIRECT PPL TO CONSIDER AS PART OF ITS SYSTEM UPGRADE.

A. It is not reasonable for PPL to embark upon such a significant IT upgrade and propose no changes to operational or other processes regarding the facilitation of retail choice. It is unacceptable to permit PPL to use ratepayer money to modernize all of its systems except for the ones supporting retail choice while at the same time authorizing PPL to shift costs to EGSs. Thus, instead of shifting costs to EGSs which will likely hurt the ability of consumers to shop in the long term, I propose that the Commission direct PPL to include systems that support retail choice as part of its infrastructure modernization and upgrade process.

For example, PPL could update its data management systems to create an online portal where suppliers can "self-serve" and find out at any point in time the status of their customer accounts, if they are active or inactive, dates of service, low income flags, move transactions, reinstatement transactions, bill cycle calendar information, commercial meter flags, customer mailing address changes and any other information relative to their shared customers. This data should be made available to suppliers in real time data, instead of being updated once a month.

PPL could migrate their policies to treat net energy metering ("NEM") customers in a similar manner as the other Pennsylvania EDCs. PPL operates more like the New Jersey utilities, implementing a "banking" system for NEM customers. The PPL program adds a layer of complexity that is unnecessary and confuses customers, which also results in extra EDI transactions. For example, for some customers, the PPL bill window closes before the prices have settled in the PJM market, so suppliers are not

able to calculate a generation credit before the window closes. In some cases, PPL has rejected the initial EDI billing transactions, requiring purposeful work with PPL to open the bill window for each NEM account because PPL insists on processing the generation credit at the same time as the charges. These iterations require additional EDI transactions. The other Pennsylvania EDCs do not have this requirement. Modifying the NEM program could result in fewer billing hiccups and more efficient EDI operations.

I have been advised by RESA members that PPL response times are notoriously slow. It would be beneficial to establish a strict standard response time for supplier inquiries to no more than one (1) full business day.

PPL could add EDI functionality for supplier-initiated rebill cancellations. This would allow suppliers to be proactive and correct billing issues as they arise. Ideally, PPL's process should work similar to FirstEnergy's processes where a supplier-initiated cancel/rebill could be sent outside the bill window and held until the next open bill window. This allows the supplier to send a rebill transaction proactively, rather than having to request, then wait, then follow-up with the utility to send the initial cancellation transaction to which the supplier than needs to respond for the new charges. Revising the current inefficient process would reduce waiting times to process cancel/rebills.

Additionally, PPL currently allocates many of its costs such as customer service, call center, billing, IT, HR, rent and other service costs ("costs to serve") to all customers when they should rightfully not be fully allocated to shopping customers. An exercise to unbundle all of PPL's costs to serve customers and to allocate those costs

appropriately to default service and distribution customers would facilitate a much more fair and competitive electricity market.

IV. IF THE COMMISSION PROCEEDS TO CONSIDER PPL's PROPOSED SUPPLIER TARIFF CHANGES IT MUST REJECT VARIOUS PROPOSALS

Q. DOES RESA SUPPORT ADDRESSING PPL'S PROPOSED SUPPLIER TARIFF CHANGES IN THIS PROCEEDING?

A. No, for all the reasons I discussed previously, the Commission should reject PPL's proposed new supplier tariff as inappropriate for this rate case proceeding. In the event that the Commission does not take this approach, I have identified some of the more problematic issues with PPL's proposed supplier tariff. These proposals should be rejected. In addition, they also illustrate the magnitude and significant potential negative impact to retail choice of PPL's proposals.

A. PPL's Proposal to Impose EDI and DUNS Testing Fees on EGSs

Q. IS PPL PROPOSING TO IMPOSE NEW COSTS ON ELECTRIC GENERATION SUPPLIERS ("EGS")?

A. Yes. PPL is asking the Commission to permit it to charge EGSs: (1) the costs of integration testing a new Data Universal Numbering System ("DUNs") which is a prerequisite to ensuring that the EDC and EGS systems are compatible; and, (2) the costs PPL incurs to process the electronic data interchange ("EDI") transactions necessary to support the shopping decisions of customers. (PPL St. No. 18 at 16). PPL currently incurs costs to support the ability of all consumers to shop for a competitive electricity supply as mandated by Pennsylvania law.[12] These costs include general market management costs and costs specific to PPL's interactions with EGSs. The EGS

[12] *See, e.g,* 66 Pa. C.S. § 2806(a) (". . . all customers of electric distribution companies in this Commonwealth shall have the opportunity to purchase electricity from their choice of electric generation suppliers."

interactions include initial data transfer testing with an EGS as well as on-going data transaction costs. These costs are required to allow PPL to interact with EGS systems to manage the movement of customers to EGSs, between EGSs and between EGSs and PPL. PPL has recovered these market management costs from all ratepayers through distribution charges since electric retail choice was implemented in the Commonwealth. PPL now seeks to impose its market management costs on the EGS community, but is not providing the EGS community with any of the tools or authority to manage the market. It is essentially attempting to "tax" the EGS community for implementation costs of a market program required by statute.

Q. WHY DOES RESA OPPOSE THE PROPOSAL TO BEGIN ASSESSING EGSS THE DUNS AND EDI FEES?

While I will discuss the origin and importance of DUNS testing and EDI as well as PPL's lack of evidence to support its proposals shortly, there are two fundamental points to bear in mind about PPL's proposal. First, the operational system in place today was carefully designed by the Commission to support the ability of all customers to shop. Second, neither the Pennsylvania Commission nor, to the best of my knowledge, any other jurisdiction allowing retail choice, has required the competitive suppliers to pay operational costs incurred by the electric distribution company. Such a decision would have likely doomed retail competition from the start, exacerbating the already significant operational, financial and historical customer relationship enjoyed by the EDCs. It is important to remember that EDCs had monopoly control over all electric service provided to their captive customers. To some extent, the EDCs, including PPL, continue to have monopoly control over customers with respect to billing data, usage data and other components of their interactions in the electricity market. With ratepayer

funds, the EDCs built the operational mechanisms and customer service systems necessary to provide service. For retail choice to work, the EDCs had to provide open and nondiscriminatory access to these foundational systems so that consumers could exercise their right to choose.[13] The EDI system facilitates operations between EDCs and EGSs. As discussed below, the Commission specifically rejected requiring EGSs to pay for the required initial DUNS testing. It has supported requiring EGSs and EDCs to each recover the costs of their own EDI costs – an approach that has been embedded in Pennsylvania's system since the beginning of competition. PPL has offered no testimony that would support a change in this long-standing policy framework. The best they could muster is a belief "that these costs are better recovered from the entities directly causing the costs' incurrence." They state further that "Moreover, these EDI costs are a necessary component of the EGSs' ability to do business in the PPL Electric's service territory…" (PPL St. No. 18 at 17, emphasis added) The legislature is the entity that has caused these costs. By PPL's own words, these costs are "a necessary component" to operate the competitive market. There is simply no argument that these costs are not utility costs that they should not be borne by the utility and its ratepayers, every one of which benefits from the existence of a competitive market. PPL's proposals would erect competitive barriers in the market with respect to customer

[13] The Competition Act defines "direct access" as "the right of electric generation suppliers and end-use customers to utilize and interconnect with the electric transmission and distribution system on a nondiscriminatory basis at rates, terms and conditions of service comparable to the transmission and distribution companies' own use of the system. . ." 66 Pa. C.S. § 2803. The Declaration of Policy also makes clear that "This chapter requires electric utilities to unbundle their rates and services and to provide open access over their transmission and distribution systems to allow competitive suppliers to generate and sell electricity directly to consumers in this Commonwealth." 66 Pa. C.S. § 2802(14).

choice while asking the very entities who must overcome those barriers to pay for them as a prerequisite for offering retail choice to customers.

3. PPL's Proposed DUNS Setup / Testing Fees

Q. WHAT IS "DUNS" SETUP / TESTING?

A. "DUNS" setup / testing refers to the utility's process of checking an EGSs' nine-digit data universal numbering system ("DUNS") identifier issued by Dun & Bradstreet ("D&B"). In the case of a new supplier, PPL performs "full" testing to test DUNS activity, and in the case of an existing supplier requesting an additional DUNS number, PPL performs "abbreviated" testing.[14] DUNS setup ultimately ensures that suppliers have the ability to integrate into PPL's EDI system and is directly tied to initial set up for EDI transactions coordinated under PPL's supplier tariff.[15]

Q. ARE THERE FEES ASSOCIATED WITH DUNS TESTING?

A. Yes, a September 2011 Retail Market Investigation ("2011 Investigation") noted that for PPL, the cost for testing a single EGS was between $4,000.00 and $5,000.00 and reflected in distribution rates as a non-bypassable cost of facilitating competition (recovered from all ratepayers).[16] The report further notes that the requirement that EGSs complete certain fundamental requirements also helps to assure that testing will

[15] PPL Electric Response to RESA I-27.

[16] Pennsylvania Retail Market Investigation, Supplier of First Resort, Policies & Information, *Pennsylvania Public Utility Commission,* https://www.puc.pa.gov/electric/pdf/RetailMI/Direct_Energy_Supplier_of_First_Resort-EDC_Policies_Information.pdf, at 15 (September 30, 2011).

be successful and that the ratepayer investment will result in an additional competitive retail supply option.[17]

Q. DO SUPPLIERS INCUR SIMILAR DUNS TESTING COSTS?

A. Yes. Suppliers incur their own costs for DUNS testing. PPL is not paying for any of the suppliers' testing costs. It is a cost that is necessary for Competitive Suppliers to integrate with the utility's systems. DUNS testing is done to ensure a two-way transfer of data can be executed. PPL incurs its costs on one end of the testing transaction. The Competitive Suppliers bear their own costs to ensure technical capabilities on the other end of the testing transactions.

Q. HAS THE COMMISSION RECOGNIZED THE IMPORTANCE OF DUNS TESTING TO FACILITATE RETAIL CHOICE?

A. Yes. The Commission has consistently recognized the importance of DUNS testing. During the initial implementation of EDI and testing, the Commission adopted the Mid-Atlantic Power Supply Association's ("MAPSA") position that EDCs should not be able to unilaterally refuse to allow an EGS to complete testing, agreeing with MAPSA's comment that "the EDC cannot be the final arbiter of whether an EGS is successful or not."[18] The 2011 Investigation noted that EDCs should make testing available throughout the year, rather than waiting or scheduling "flights."[19] These decisions were designed to support the ability of EGSs to be able to successfully

---

[17] *Id.* at 15–16.

[18] Standards for Electronic Data Transfer and Exchange Between Electric Distribution Companies and Electric Generation Suppliers, Docket No. M-00960890 F0015 (Order entered June 19, 1998), at 23.

[19] Pennsylvania Retail Market Investigation, Supplier of First Resort, Policies & Information, September 30, 2011 Status Report, *Pennsylvania Public Utility Commission,* https://www.puc.pa.gov/electric/PDF/RetailMI/DD-Subgroup-Supplier_First_Resort_093011.pdf, at 18 (September 30, 2011).

operate in PPL's service territory to provide competitive alternatives to PPL's distribution ratepayers.

Q. WHAT DOES PPL PROPOSE WITH RESPECT TO DUNS TESTING?

A. PPL proposes to pass on its costs of DUNS testing to EGSs via the Coordination Services Charge. (PPL St. No. 18 at 17) This equates to a one-time fee of either $4,867.20 ("full testing) or $2,215.98 ("abbreviated testing"). (PPL Electric Responses to RESA I-19, I-21 – Exhibit FL-7) In addition, PPL notes that its related proposal of assessing EDI fees will in turn encourage EGSs to eliminate unused DUNS numbers / consolidate identifiers and discourage the use of redundant identifiers without operational need. (PPL Electric Response to RESA I-23 – Exhibit FL-8). PPL will not require EGSs already operating on PPL's system to undergo re-testing of DUNS, so long as they remain active and use the same DUNS number. (PPL Electric Response to RESA I-25 – Exhibit FL-9). However, when an EGS first joins PPL Electric's system or adds a new DUNS number, the onetime testing fee (full or abbreviated) will apply. (Exhibit FL-9).

Q. DO YOU AGREE WITH PPL'S PROPOSAL REGARDING DUNS TESTING FEES?

A. No, I do not. As PPL witness Norden accurately notes "EDI transactions and testing costs are a necessary component of the EGSs' ability to do business in PPL Electric's service territory." (PPL St. No. 18 at 17) But it does not follow that EGSs are therefore reasonably obligated to assume PPL's cost of those processes which, the Commission has already determined, are intended to ensure that *all* PPL's distribution ratepayers have access to the competitive market. PPL has presented nothing to justify its claims that assessing these charges to EGSs will "encourage EGSs to more efficiently use"

PPL's resources. (PPL St. No. 18 at 17) To the contrary, the proposed shifting of costs will require EGSs to determine how to absorb these costs and whether such increased costs will prevent them from being able to offer competitive service in PPL's service territory or disincentivize them from entering the PPL market. These charges are punitive to EGSs, particularly a new market entrant. In today's market, each side of the data transaction testing pays its own costs. That is the way the market should be set up. It "levelizes" the playing field with respect to this set of costs. If an EGS were to pay PPL's share of these costs (costs EGSs have no control over), they ultimately get passed along to the EGS's customers. This would result in shopping customers subsidizing non-shopping customers.

Q. HOW DO YOU RESPOND TO PPL'S ARGUMENT THAT IT IS JUST PROPOSING TO SHIFT COSTS TO THE "COST CAUSERS?"

A. PPL's reasoning is fundamentally flawed. PPL witness Norden states that costs associated with DUNS testing "are better recovered from the entities directly causing the costs' incurrence (i.e., EGSs) as opposed to [PPL]'s general customer base, which includes both shopping and non-shopping customers." (PPL St. No. 18 at 17) However, this makes no sense. EGSs exist to provide retail choice to any and all eligible customers. The availability of retail choice benefits all customers whether they elect to shop or not. In fact, the mere option of retail choice imposes a competitive market discipline on wholesale energy providers participating in PPL's default service that provides a direct and immediate benefit to non-shopping customers. EGSs are not "causing" the costs as PPL witness Norden claims. Rather the statute establishing retail choice is the root of the cost. All of PPL's distribution ratepayers benefit from the existence of retail choice. Thus, continuing to require all distribution ratepayers to pay

PPL's costs of DUNS testing is both logical and reasonable as it facilitates retail choice. PPL's DUNS testing fees should remain dispersed amongst ratepayers to ensure the ratepayer investment will result in an additional competitive retail supply option—not to impede competitive retail supply, which would be a consequence of this proposal.

Q. HAS PPL SHOWN THAT THE COSTS FOR DUNS TESTING ARE INCREMENTAL COSTS TO THE UTILITY?

A. They have not. PPL has already invested in EDI system developments that have been paid for over time by their rate payers. They have not shown these DUNS testing costs to be incremental, or additive to their costs in any way. PPL does not have to hire incremental labor to perform DUNS testing, nor do they have to build new systems to perform DUNS testing. Similarly, if no EGS sought DUNS testing in any particular month or year, PPL has not shown that their costs would go down. Because these costs are fixed as a result of PPL "operating" the retail electricity market, the costs should rightfully stay with PPL and its customers.

Q. HOW DO YOU RESPOND TO PPL'S TESTIMONY ABOUT IT NEEDING TO ADJUST ITS REVENUE REQUIREMENT IF IT IS NOT PERMITTED TO CHARGE THE TRANSACTION COSTS TO SUPPLIERS?

A. This is a misrepresentation of reality. PPL has included its DUNS testing costs in distribution rates since the advent of retail choice. It has elected to propose this change in this rate case without any compelling policy arguments. Rejecting this change does not require an adjustment to base rates. It requires a continuation of the status quo. As noted above, these costs are a necessary component of the utility operating the competitive market.

Q. IS CHARGING DUNS TESTING FEES TO SUPPLIERS COMMON AMONGST UTILITIES IN PENNSYLVANIA?

A. Based on my research, no it is not. No other electric utility in Pennsylvania has a supplier tariff that contains such an onerous provision. Passing on DUNS testing fees to EGSs increases the costs EGSs must consider when determining to enter the market or to provide competitive service to customers. The end result could be to deny customers their right to retail choice.

Q. WHAT ABOUT IN OTHER STATES?

A. Based on my limited research, it is not common to require suppliers to absorb DUNS testing fees – at least the fees associated with initial testing. For example, the Public Service Electric and Gas Company's ("PSE&G") Third Party Supplier Electric Operating Manual is instructive here. That tariff specifies that "[t]here will be a charge for EDI testing over and beyond the initial testing" and when an active third party supplier switchers their EDI provider to a vendor who is new to PSE&G's New Jersey service territory.[20] In other words, PSE&G will charge suppliers only when they incur new or incremental costs – costs "over and beyond" their ordinary costs. The fixed costs of operating the market stays with PSE&G.

4. On-Going EDI Transaction Fees Incurred by PPL

Q. WHAT IS "EDI," AND WHY IS IT IMPORTANT FOR FACILITATING THE ABILITY OF CONSUMERS TO SHOP FOR A COMPETITIVE ELECTRICITY SUPPLIER?

A. "EDI" is an acronym for "electronic data interchange," which is the computer-to-computer exchange of business data in standard, machine-readable formats used between electric distribution companies ("EDCs") and EGSs. EDI is the framework that both entities use to communicate information about consumers to ensure their ability to receive generation supply services of their choice. The type of information exchanged through EDI includes, but is not limited to, billing data, energy usage, enrollment transactions, drops, reinstatement transactions, and banking transactions – the exchange of which is critical to facilitating customer choice. Currently, there are more than 20 EDI standards that are in use by utilities and competitive suppliers participating in the Pennsylvania retail electricity market.

Q. WHAT IS THE ORIGIN OF THE CURRENT EDI SYSTEM IN PLACE?

A. The Commission created the Pennsylvania Electronic Data Exchange Working Group ("EDEWG") in November 1997 to develop a standard set of data transaction guidelines for the implementation of electric competition on January 1, 1999 as required by the Electricity Generation Customer Choice and Competition Act ("Choice Act").[21] The Commission recognized that "[t]he successful development of a competitive generation market depends in large measure on the effective electronic exchange of vast quantities

[21] 66 Pa. C.S. §§ 2801, et. seq.

of data among EDCs and EGSs."[22] By order entered June 19, 1998, the Commission adopted the Consensus Plan for Electronic Data Exchange Standards for Electric Deregulation in the Commonwealth of Pennsylvania and established EDEWG as an independent stakeholder group.[23] The order also directed that all EDCs and EGSs operating in Pennsylvania were to comply with these standards.[24] EDEWG then developed a series of reports outlining specific protocols for use by the EDCs and the EGSs in the transfer and exchange of electronic data relating to customer information. EDI is a tool for the entire industry—meaning it benefits EDCs, EGSs, and all customers.

Q. WHO BENEFITS FROM THE IMPLEMENTATION OF EDI?

A. All customers including those who remain on default service supply with the EDC and those who are customers of an EGS benefit from the implementation of EDI. EDI allows for customers to seamlessly receive generation supply, switch between providers, receive accurate bills, and be credited for payment for service regardless of which entity supplies the customer's electricity. Additionally, the existence of the EDI systems provides all customers with an option to protect against default service price volatility, monopoly pricing from wholesale suppliers and other market risks. The EDI system is utilized by EDCs and EGSs to execute the desires of customers. Through careful and deliberate evaluation, the Commission, with the technical assistance of EDEWG, directed the implementation of the EDI system that has been used for decades

[22] Standards for Electronic Data Transfer and Exchange Between Electric Distribution Companies and Electric Generation Suppliers, Docket No. M-00960890 F0015 (Order entered June 19, 1998), at 24.

[23] *Id.*

[24] *Id.* at 27.

and is the backbone of ensuring that all customers have the ability to make a choice regarding their generation supply in the most cost-effective means for transacting/sharing information.

Q. ARE THERE COSTS ASSOCIATED WITH EDI?

A. Yes. EDCs and EGSs both incur costs for their side of EDI transactions.[25] In other words, PPL's systems do not provide "free" EDI transactions for a Competitive Supplier. A Competitive Supplier needs to develop EDI systems to communicate with EDCs and incurs those costs in every EDC market they operate in. EDI costs are data management expenses that are required of both sides of the data transaction. As the market operator and the monopoly controller of customer data, it is wholly appropriate for PPL to pay for its own EDI transaction costs. It is also appropriate for a supplier to pay for its own EDI transaction costs.

Q. HOW DO PPL AND ITS DEFAULT SERVICE CUSTOMERS BENEFIT FROM THE EDI TRANSACTION?

A. PPL indicates that each EDI transaction (e.g., enrollment, usage data exchange) is logged in PPL Electric's system, and that PPL Electric incurs a vendor fee for each transaction, which are tracked by transaction ID and EGS identifier. (PPL Electric Response to RESA I-22 – Exhibit FL-10). PPL's ability to record these transactions allows PPL to account for supply service to all of its customers, including its default service customers. The EDI transaction provides PPL with the information needed for it to track which EGSs are serving which customers and which customers remain on default service. It enables PPL to understand how many customers it is serving, or more

[25] EDI costs may be incurred through use of third party vendors or via internal operations.

importantly, it is not serving. It also informs PPL how to bill each customer. Without such information, PPL could be saddled with excess default supply costs and capacity allocations from PJM. It would potentially overbill its default service customers or double-bill competitive supply customers. In other words, the EDI transactions assist all parties in keeping costs where they belong. This is an extremely important benefit to PPL and its default service customers.

Q. HOW ARE PPL'S EDI COSTS ALLOCATED TO CUSTOMERS TODAY?

A. EDI costs incurred by PPL are collected in distribution rates from all customers.

Q. IS THIS A REASONABLE WAY TO ALLOCATE AND COLLECT PPL'S EDI COSTS?

A. Yes. It is a perfectly fair approach to EDI cost allocation. EDI costs are incurred by both PPL and a supplier when a customer switches to a supplier or switches back to PPL. Costs are also incurred with PPL requests billing data from the EGS and when EGSs send that billing data to PPL or when a customer seamlessly moves from one residence to another. As noted above, all consumers benefit from the existence of EDI and PPL's use of it because it enables PPL to manage its operations effectively and provides all consumers with the ability to receive competitive supply from an EGS. If a customer chooses not to choose competitive supply service, it still has the protections that exist from a competitive market and has an option to choose a supplier at any time. All entities, the EDCs and EGSs, bear the costs of utilizing the EDI system. EDCs receive cost recovery of their costs from all distribution customers and that is reasonable because the EDI system is in place to enable all distribution customers to shop.

Q. WHAT IS PPL'S PROPOSAL WITH RESPECT TO EDI?

A. As part of revisions to its Supplier Tariff, PPL proposes to charge EGSs for the costs that PPL incurs to process their EDI transactions and offset PPL's payments to EGSs by an allocated amount of the EDI transaction fees incurred by PPL.[26] If an EGS is not participating in PPL's purchase of receivables ("POR") program, then the new EDI transaction fee would be billed separately in the Coordination Services Charge on a monthly basis.[27] PPL states that the EDI transaction charges to be recovered from EGSs includes "cancel/rebill transactions," but only if the request is initiated by the EGS and not by PPL's internal process.[28] To ensure accuracy in allocating EDI usage to the appropriate EGS, PPL will maintain a "transactional volume report" by EGSs from the EDI vendor.[29] This report will contain per-transaction billing information that accounts for each EDI transaction.[30]

Q. WHAT DO YOU SEE AS THE FUNDAMENTAL PROBLEM WITH PPL'S PROPOSAL TO SHIFT ITS EDI COST RECOVERY TO THE COMPETITIVE MARKET?

A. PPL's proposed change shifts the costs of a system that benefits all distribution customers to EGSs and specifically to those customers who exercise their right to choose competitive supply energy as granted by the legislature. This cost shift will necessarily impact EGS decisions about their participation in the competitive market and the competitive offers they make to offer consumers. While I recognize that the line

[29] PPL Electric Response to RESA I-22.

[30] PPL Electric Response to RESA I-22.

between an EGS's cost recovery to its customers is not as straightforward as PPL's ability to recover its costs in distribution rates, there can be no dispute that increasing (potentially doubling or tripling) EGSs' EDI costs to provide service by requiring them to bear PPL's EDI costs will negatively impact Pennsylvania's competitive energy market. PPL's distribution customers may find themselves with few or no competitive energy supply options. PPL's proposal to shift its EDI costs to EGSs is extremely one-sided and detrimental to the competitive electricity markets. The negative impacts to all customers resulting from increased costs to EGSs is a very real concern which could jeopardize the functioning of the competitive market. The Commission must continue its policy that directs EDCs and EGSs to have responsibility for their own EDI costs to ensure a level playing field for fair competition at least for this important cost component.

Q. HAS THE COMMISSION PROVIDED ANY GUIDANCE ON THE ISSUE OF EDI COST RECOVERY?

A. Yes, to my knowledge, the EDEWG, throughout its many years as a technical working group providing advice to the Commission, has never suggested that EGSs should be required to bear the EDI costs of the EDCs. Moreover, as the Commission was considering the transition to a common EDI platform, it had to address the issue of already existing, non-conforming platforms in place. As explained by the Commission, "The most commonly used method of electronic communications implemented by EDCs and EGSs at this time is the VAN, which is a service provider that provides

mailbox access and related services for the exchange of EDI transactions."[31] While the Commission wanted to drive toward implementation of the Internet Protocol ("IP") EDI in place today, it was careful about the cost impacts on suppliers. Specifically, the Commission explained: "Small, licensed EGSs may not find it cost-effective to implement an Internet transfer protocol. Requiring these suppliers to pay all of the VAN charges, however, may be cost-prohibitive."[32] For this reason, the Commission required that VAN costs be shared between EGSs and EDCs until January 1, 1999. By that time, the Commission expected EGSs and EDCs to transition to the preferable IP EDI network in place today and, if they had not, then the entity still utilizing VAN would pay all VAN fees.[33] The Commission elected to impose all costs of these fees to the entity electing to use the platform as a way to incent all entities to move to the IP EDI platform whereby each entity paid its own EDI fees. And this cost recovery system has remained in place for the last 26 years. PPL has provided no evidence that the market has changed in any way that would warrant the imposition of its market management costs on the EGS community.

Q. IS CHARGING EDI FEES TO SUPPLIERS COMMON AMONGST UTILITIES?

A. No other Pennsylvania utility's supplier tariff explicitly passes on EDI fees to suppliers. Some other utilities refer to a "Coordination Services Charge" and the EGS's obligation

---

[31] Standards for Electronic Data Transfer and Exchange Between Electric Distribution Companies and Electric Generation Suppliers, Docket No. M-00960890 F0015 (Order entered June 10, 1999), at 10.

[33] Standards for Electronic Data Transfer and Exchange Between Electric Distribution Companies and Electric Generation Suppliers, Docket No. M-00960890 F0015 (Order entered June 19, 1998), at 20.

to pay that charge. For example, Section 5.0 of UGI Electric template coordination agreement (part of the supplier tariff) states as follows: "As consideration for Coordination Services provided by the Company, the EGS shall pay the Company those Coordination Services Charges billed to the EGS in accordance with the terms and conditions of the EGS Coordination Tariff."[34] Identical language appears in the supplier tariffs / template coordination agreements of PECO,[35] FirstEnergy Pennsylvania,[36] and Duquesne Light Company.[37] However, nowhere in the supplier tariffs of any other electric utility in Pennsylvania is there language indicating that the utility will charge EGSs for the costs that the utility incurs to process their EDI transactions.

Q. WHAT IS YOUR REACTION TO MS. NORDEN'S TESTIMONY WITH RESPECT TO ADDING CUSTOMERS' BILL PAYMENT TRANSACTION COSTS TO BASE RATES?

I find the internal contradictions in her testimony to be quite remarkable. PPL is proposing to "no longer directly charge individual customers making one-time electric payments for those fees and, instead recover the costs associated with the fees through base rates." She opines that "the fees assessed for [bill payment] transactions make these payment options less convenient and desirable." (PPL St. 18 at 7-8). In this instance, PPL is seeking to directly subsidize the set of customers who cause costs by using certain tools to pay their monthly bills. However, in the case of EDI costs, she is proposing to move costs which benefit all customers to the competitive suppliers (and their customers)

[34] UGI Electric – Pa. P.U.C. No. 2S at Second Revised Page No. 40.

[35] Supp. No. 5 to Tariff Electric – Pa. P.U.C. No. 1S at First Revised Page No. 56.

[37] Supp. No. 11 to Electric – Pa. P.U.C. No. 3S at Second Revised Page No. 44.

serving the market, even though they are costs incurred to run the statutorily required competitive market. She makes no mention that those charges might make competitive supply offers "less convenient and desirable." I take no position on the issue of putting these costs in base rates. I raise this issue only to point out the inconsistency and the discriminatory nature of the proposal to move PPL's EDI costs to the EGS community.

5. RESA's Recommendations

Q. RATHER THAN IMPOSING ITS COSTS ON EGSS, DO YOU HAVE RECOMMENDATIONS OF CHANGES PPL SHOULD BE DIRECTED TO MAKE TO SUPPORT RETAIL CHOICE?

A. Yes, as I previously discussed below are some changes that PPL could make that would drastically improve the competitiveness and robustness of the competitive electricity market in the PPL territory:

1. an update to its data management systems to create an online portal where suppliers can access real-time data and "self-serve" and find out at any point in time, the status of their accounts, if they are active or inactive, dates of service, low income flags, move transactions, reinstatement transactions, bill cycle calendar information, commercial meter flags, customer mailing address changes and any other information relative to EDC/EGS shared customers;
2. a migration of the NEM customer policies to be aligned with the other Pennsylvania EDCs;
3. establish a strict standard response time for supplier inquiries to no more than one (1) full business day;
4. add EDI functionality for supplier-initiated rebill cancellations; and
5. conduct an exercise to unbundle all of PPL's costs to serve customers and to allocate those costs appropriately to default service and distribution-only customers to facilitate a much more fair and competitive electricity market.

B. PPL's New Credit Requirements

Q. IS PPL PROPOSING TO UPDATE ITS CREDIT REQUIREMENTS FOR EGSS?

A. Yes. According to PPL Electric Exhibit LN-2, which is a Summary List of Supplier Tariff Changes, PPL is proposing to incorporate "updated credit requirements for EGSs" as part of new language in Rule 4.

Q. IS THERE ANY TESTIMONY IN SUPPORT OF THIS PROPOSED UPDATE REGARDING EGS FINANCIAL SECURITY REQUIREMENTS?

A. No. I could not find any testimony from PPL's witnesses providing any explanation regarding this proposed change. There is no testimony supporting the change. There is no testimony that indicates that any suppliers have taken actions that have caused PPL to incur any costs outside of ordinary business costs. There is no testimony addressing changes in the market that would support any imposition of credit obligations on suppliers.

Q. HOW DOES PPL'S CURRENT SUPPLIER TARIFF ADDRESS THE FINANCIAL SECURITY REQUIREMENTS?

A. Rule 3 of PPL's current Supplier Tariff addresses requirements for EGSs to successfully register to operate on PPL's system. Rule 3.5 sets forth grounds for rejecting an EGS's registration based on "Bad Credit." Bad Credit is defined by PPL's current Supplier Tariff as "Insolvency. . . or a failure to pay Company invoices when they become due on two (2) or more occasions within the last twelve (12) billing cycles." According to PPL's current Supplier Tariff, security requirements are required by PPL only when an EGS is determined to have Bad Credit. In this proceeding, PPL has added new definitions including a formalization of the term "Bad Credit," and has added an entire new Rule 4.14 called "Credit Requirements." This section obliges

EGSs to post an initial credit of $250,000 and states that the amount will be adjusted with the financial risks placed on PPL by an EGS.

Q. HAS PPL IDENTIFIED ANY AREAS OF FINANCIAL RISK THAT AN EGS COULD SUBJECT THEM TO?

A. Ms. Norden's testimony does not address EGS credit issues in any way. In fact, she did not mention the credit changes, nor many of the other changes proposed in their revamped supplier tariff.

Q. PLEASE DESCRIBE THE NEW LANGUAGE PPL PROPOSES TO INCLUDE IN ITS SUPPLIER TARIFF AS PART OF THIS PROCEEDING.

As shown on pages 112 through 113 of PPL Exhibit LN-1, PPL is proposing new language under the new "Credit Requirements" heading. Pursuant to this language, PPL proposes to "apply, on a non-discriminatory and consistent basis, reasonable financial standards to assess and examine an EGS's Creditworthiness." The language includes a required initial credit amount of $250,000 and PPL "shall adjust the amount required commensurate with the financial risks placed on the Company by an EGS, including recognition of an EGS's performance."

Q. WHAT IS THE GENERAL PURPOSE OF SECURITY REQUIREMENTS FOR SUPPLIERS?

A. I have evaluated the various security requirements imposed on EGSs in an effort to identify what risks may be of concern to PPL. According to 52 Pa Code § 54.40(f)(2), the purposes of the Commission's EGS security requirements are to: (1) ensure compliance with the public utility code and commission regulations; (2) ensure payment of the gross receipts tax ("GRT"); and (3) ensure the supply of electricity at retail in accordance with contracts, agreements or arrangements.

Q. WHAT ARE THE SECURITY REQUIREMENTS FOR SUPPLIERS?

A. Suppliers are subject to multiple security requirements. Each supplier is subject to the "Peak Market Activity" requirements for PJM, whereby all participants must maintain credit generally equal to the greatest amount invoiced in the rolling past one, two, three or four-week period. Competitive Suppliers must also comply with the Commission's security requirements set forth by 52 Pa. Code § 54.40. This means that the initial security amount for each supplier is $250,000.00 and after one year in operation, the security requirement is annually recalculated based on ten percent of an EGS's prior year annual gross receipts. An EGS may also seek approval from the Commission of an alternative level of bonding appropriate for the nature and scope of its operations.

Q. ARE YOU AWARE OF ANY REASONABLE BUSINESS OUTCOME WHERE AN EGS COULD IMPOSE ANY MATERIAL FINANCIAL RISKS ON PPL OR ANY EDC?

A. Under normal competitive retail electricity market provisions, as they exist today, I am not aware of any outcome where an EGS could impose a financial risk to PPL or any EDC in the Commonwealth.

Q. DO YOU AGREE WITH PPL'S PROPOSALS REGARDING TO REVISE ITS CURRENT SECURITY REQUIREMENTS?

A. No, I do not. First, PPL has not provided any testimony regarding the risks that it is trying to protect with a security requirement. It seems that in more cases than not, especially given the presence of a purchase of receivables program, that PPL will owe suppliers money significantly more often than suppliers will owe PPL. This would imply that that PPL should be posting collateral or credit with the EGSs and not the other way around. PPL vaguely claims that it will "take into consideration an EGSs' performance of its supplier coordination obligations when determining

creditworthiness." They have not offered any testimony that suppliers have ever breached their obligations to PPL. They have not shown that as a result of any such breach, they bear any material financial harm for which they seek financial protection. Under the terms of its existing Supplier Tariff, PPL's "provision of Coordination Services to an EGS is contingent upon the EGS's payment of all charges provided for" in the tariff. In other words, PPL already holds the ultimate hammer against a non-payment scenario – they can simply disable an EGS's ability to conduct business in their distribution service territory. A financial security obligation to PPL is not needed and should not be allowed. Ensuring reasonable requirements is important to assuring that security requirements do not become a barrier to entry and harm Pennsylvania's competitive retail electric market.

C. New Rule Regarding "Standard Rates" and Limiting EGSs to No More Than 200 Discrete Rate Ready Rates Per Calendar Quarter

Q. HAVE YOU REVIEWED PPL'S REVISIONS TO SECTION 3.1 OF THE SUPPLIER TARIFF?

A. I have. This is a section entitled "Registration for Coordination Services." In this proposed revision, PPL has expanded the requirements for registration from needing an executed Coordination Agreement, a copy of the EGS's signed PJM OA and RAA documents, and the EGS's tax identification number to include seven more requirements. PPL also includes in this proposal a lengthy requirement in a new section 3.1(f) that seems to regulate an EGS's internal business practices.

Q. COULD YOU DESCRIBE THE REQUIREMENTS PROPOSED IN SECTION 3.1(F)?

A. Yes. Section 3.1(f) is related to EGSs that utilize PPL's consolidated billing platform. In this section, PPL is attempting to manage or regulate the EGS's pricing by limiting

an EGS's "Standard Rate" schedule to prices that range from $0.0500 to $0.1199 per kWh and allows four-decimal precision. PPL is also proposing a limitation on "percent off" shopping rates to a range between 1% and 50% in one-half percent increments. Finally, PPL is proposing to limit an EGS to no more than 200 discrete rate ready rates per calendar quarter. Each of these limitations is problematic and more importantly, reflects PPL attempting to regulate an EGS's prices. This is not acceptable under any circumstance.

Q. CAN YOU DESCRIBE THE PROBLEM WITH THE STANDARD RATE BANDWIDTH?

A. Yes. PPL is proposing to limit a supplier's pricing to a range that is only 6.99 cents wide. The volatility in the electricity markets is well known, and electricity rates have fluctuated significantly in the past and will continue to do so. Limiting a supplier to a specific price range is price regulation and should not be allowed in a supplier tariff. More importantly, PPL's current price to compare is outside of the proposed price range. PPL's current price to compare, as published on their website on December 18, 2025 is 12.953 cents per kWh. In other words, PPL is proposing that any supplier that uses EDC consolidated billing be limited to a price that is roughly a penny or more less than their own price. Under this proposal, an EGS would not be allowed to match PPL's price to compare. PPL has not identified any system limitation that requires that prices stay in this bandwidth. If such a limitation exists, it would seem reasonable that PPL would include this in its list of system upgrades.

Q. WHAT IS THE PROBLEM WITH PPL'S PROPOSAL FOR "PERCENT OFF" RATES?

A. This is more of a mechanical issue than a market issue, but as noted above, retail electricity prices are significant to 4 decimal places. A supplier might not be able to

secure power in a manner that allows them to sell at exactly half-percent increments off of the price to compare rate. The half-percent requirement could force EGSs to sell at prices higher than they would like or lower than they would like to earn a reasonable return. Again, PPL has not indicated that its systems are incapable of handling other increments of discounted rates. It seems that if a billing system could calculate a price that is discounted by 5.5%, that same system could calculate a discount of 5.75%, 5.99% or any other discount rate. There is no justification for this limitation.

Q. WHAT IS THE PROBLEM WITH LIMITING A SUPPLIER TO 200 DISCREET RATE READY RATES PER QUARTER?

A. This could limit a supplier's ability to be competitive in the market, or expand its business in the market. The problems are easy to envision in a volatile (rising or declining) price market. Again, retail electricity prices go out to 4 decimal places ($0.XXXX/kWh). This means that there could be 10,000 discreet possible prices in any one cent bandwidth. The pricing bandwidth proposed by PPL for EDC consolidated billing includes approximately 70,000 discreet potential prices. One product offered by suppliers is a "price certainty" product, where a customer can lock in a price for long period of time, perhaps up to three years. If a supplier, in a volatile pricing market, changed its residential price offering once a week and was signing some of its customers on one-, two- and three-year contracts, at the end of three years, that supplier would have well over 200 discreet prices for its customers. There will also be shorter term, or mid-year term contracts being billed. If customers are being priced discreetly, based on their actual historic usage, there could be many more varied prices being charged to customers. A 200-discreet price limit inhibits efficient pricing, might cause a supplier to be forced to change a customer's price mid-contract or drop a customer or

group of customers to make room for new customers that cannot be brought on at one of the already used price points. Alternatively, it might force a supplier to cease making offers in the market until certain existing contracts terminate. Again, PPL has offered no justification for this limitation. If its systems are incapable of billing varied prices, its systems should be upgraded so accommodate the needs of a modern electricity market, or it should migrate to a supplier consolidated billing platform.

Each of these three proposals limit a Competitive Supplier's ability to offer competitive products and services. Each of these proposals represents a step backward from where the market is operating today. As PPL is presenting proposals that limit the market, it is also proposing comprehensive IT changes, none of which address these issues. I urge the Commission to reject these proposals as unsupported and regressive.

D. New Limitations Regarding Provision of "Customer-Specific Information"

Q. HAVE YOU REVIEWED PPL'S PROPOSED SUPPLIER TARIFF CHANGES REGARDING ACCESS TO CUSTOMERS' USAGE DATA?

A. I have. PPL has added a provision to its proposed tariff changes in a Paragraph titled "CONDITIONS" in the "Load Data Supply Charge" section which reads: "No Customer-specific information will be supplied to an EGS before the Company's receipt of a Customer's written authorization to release such data to such EGS."

Q. WHAT IS YOUR REACTION TO THOSE PROPOSED CHANGES?

A. My initial reaction to this clause was "welcome to fax machines and the world before computers." But upon closer review of the proposed tariff, I find this section to be not only antiquated, but in direct conflict to another provision about access to customer data. PPL is proposing to amend Section 5.3.4 to read (emphasis added):

> 5.3.3: If an EGS wishes to obtain from the Company confidential Customer-specific information about a Customer with whom it is

> discussing the possibility of providing Competitive Energy Supply but who has restricted access to the information, the Company will only provide such information after receiving ***written, electronic or telephonic customer authorization*** from the requesting supplier ***or attestation from the supplier that it has such authorization***. The EGS will share its records of Customer authorization with the Company upon request and those records shall be subject to audit by the Commission.

In this section, access to the data is provided if PPL receives written, electronic or telephonic authorization or an attestation from the supplier that it has the authorization. In this digital economy, "written authorization" should not be required for a release of customer data. I am not opposing an authorization process, but the process should be inclusive of modern digital technologies. Also, I see no need for PPL to verify a customer authorization. The Commission has the right to scrutinize a supplier's business practices and if PPL believes an EGS is operating outside the bounds of its tariffs or Commission regulations, it can seek action through the Commission. PPL is not an enforcement authority.

V. CONCLUSION

Q. DOES THAT COMPLETE YOUR DIRECT TESTIMONY?

A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate based on the receipt of PPL's responses to pending discovery requests.

Docusign Envelope ID: 177FE1E9-EC22-4D48-8D6B-F59BEAF5BF48

VERIFICATION

I, Frank P. Lacey, hereby state that: (1) I am the founding principal of Electric Advisors Consulting, LLC; (2) the facts set forth in my testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Summary

Disciplined energy industry executive consultant and leader known for implementing innovative regulatory and business strategies empowering clients to benefit from emerging and complex competitive energy market and environmental policies. Successful in achieving growth and shareholder value through regulatory strategy.

Experience

Board of Directors
Current: Atmospheric G2 (Regulatory chair); HData (advisory board); Emerald AI (advisory board).

Prior experience: Advanced Energy Management Alliance (Founding member and chairman); Smart Electric Power Alliance (finance); Association for Demand Response and Smart Grid (finance); Electric Power Supply Association (finance); ERCOT (finance); Retail Energy Supply Association; Kennett Square Golf and Country Club (Long-Range Planning).

Electric Advisors Consulting, LLC 2015- Present
Founder and President

Identify competitive market policy priorities and advise senior leadership on strategic implications of potential changes in the electricity industry, including data center interconnection, renewable integration, nuclear developments, storage and Electric Vehicle charging integration, DER integration and other evolving trends. Advocate for RTO/ISO market reforms to create competitive opportunities and value for clients. Apply strong analytical skills to relevant consultancy engagements including M&A strategies; government (state and federal) funding initiatives; ratemaking and rate design, ESG implementation; FERC and state regulatory and legislative policy engagement; stakeholder engagement; strategic planning; complex litigation assistance; expert testimony; and complex tariff analysis.

Comverge, Inc./CPower Corporation 2011- 2015
Senior Vice President, Regulatory and Market Strategy

Developed and implemented corporate legislative and regulatory strategy, including new market entry plans for a $150 million company performing demand response services. Identified revenue growth opportunities through regulatory channels adding over $10 million in annual earnings. Developed FERC-accepted credit and risk management policies. Developed M&A opportunities including acquisition of, integration with Enerwise, and ultimate spin-off of CPower.

Direct Energy 2006 - 2011
Director, Products and Complex Transactions (2008-2011)

For a multi-billion dollar retail electric and gas company, managed Complex Transaction team consisting of four direct reports and eight operations and functional leaders. Generated over $50 million in incremental gross margin sold. Delivered quality customer service and internal communications to enable incremental business commitments. Implemented Customer Experience team to receive customer feedback and adjust internal operations, increasing Net Promoter Scores by 22 points in one year.

Director, Government and Regulatory Affairs (2006-2008)

Managed legislative and regulatory strategy and regulatory risk in Mid-Atlantic region of US, participating in multiple rate proceedings and regulatory initiatives, securing approximately $100 million in value from regulatory developments. Positioned firm as leading industry voice on policy matters.

Starlight Energy 2004 - 2005
President

Led the development of business plan and pro formas for venture seeking $20 million in equity financing and other financial relationships. Secured $100 million credit relationship and working capital financing to enable launch of retail Electricity Company. Secured FERC approval for market-based rate authority.

Strategic Energy 2001- 2004
Director, Regulatory Affairs,

For a $2 Billion retail electric and gas services firm, served on the company's Leadership team, managing a regulatory group of 15 people. Created and/or protected more than $400 million in market opportunities through regulatory channels. Created the leading industry voice on policy issues; Led the development of regulatory strategy, advocacy campaigns, the oversight of regulatory risk and the attainment of desired regulatory results, advocating across 15 states and at FERC.

Arthur Andersen Business Consulting 1998 - 2001
Senior Manager

Developed and grew Andersen's transmission restructuring business in the eastern half of US market. Achieved consulting sales in excess of $2 million annually. Projects included complete restructuring and development of new transmission entities such as American Transmission Company and Independent Transmission Company.

Putnam, Hayes and Bartlett, Inc 1995 - 1998

Oral Cross-examination Testimony of Frank Lacey (as part of the Cape Light Compact Panel of Witnesses) before the Massachusetts Department of Public Utilities in the *Petition of NSTAR Electric Company and Western Massachusetts Electric Company d/b/a Eversource Energy for Approval of their Grid Modernization Plans*, Docket No. D.P.U. 15-122/123, May 31, 2017.

Prepared Direct Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the Massachusetts Department of Public Utilities in the *Petition of NSTAR Electric Company and Western Massachusetts Electric Company each d/b/a Eversource Energy for Approval of an Increase in Base Distribution Rates for Electric Service Pursuant to G.L. C. 164, § 94 and 220 C.M.R. § 5.00*, Docket No. D.P.U. 17-05, April 28, 2017.

Oral Cross-examination Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the Massachusetts Department of Public Utilities in the *Petition of NSTAR Electric Company and Western Massachusetts Electric Company each d/b/a Eversource Energy for Approval of an Increase in Base Distribution*

Rates for Electric Service Pursuant to G.L. C. 164, § 94 and 220 C.M.R. § 5.00, Docket No. D.P.U. 17-05, June 27, 2017.

Prepared Direct Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the New York Public Service Commission in the *Matter of Eligibility Criteria for Energy Service Companies*, Case No. 15-M-0127, in the *Proceeding on the Motion of the Commission to Assess Certain Aspects of the Residential and Small Non-Residential Retail Energy Markets in New York State*, Case No. 12-M-0476, and in the *Matter of Retail Access Business Rules*, Case No. 98-M-1343, September 15, 2017.

Prepared Rebuttal Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the New York Public Service Commission in the *Matter of Eligibility Criteria for Energy Service Companies*, Case No. 15-M-0127, in the *Proceeding on the Motion of the Commission to Assess Certain Aspects of the Residential and Small Non-Residential Retail Energy Markets in New York State*, Case No. 12-M-0476, and in the *Matter of Retail Access Business Rules*, Case No. 98-M-1343, October 27, 2017.

Oral Cross-examination Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the New York Public Service Commission in the *Matter of Eligibility Criteria for Energy Service Companies*, Case No. 15-M-0127, in the *Proceeding on the Motion of the Commission to Assess Certain Aspects of the Residential and Small Non-Residential Retail Energy Markets in New York State*, Case No. 12-M-0476, and in the *Matter of Retail Access Business Rules*, Case No. 98-M-1343, November, 2017.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy Services and its Affiliates before the Virginia State Commerce Commission in the *Application of Virginia Electric and Power Company for Approval of 100% Renewable Energy Tariffs Pursuant to Subsection 56-577 A 5 and 56-234 of the Code of Virginia*, Docket No. PUR-2017-00060, August 23, 2017.

Oral Surrebuttal and Cross-examination Testimony of Frank Lacey on behalf of Direct Energy Services and its Affiliates before the Virginia State Commerce Commission in the *Application of Virginia Electric and Power Company for Approval of 100% Renewable Energy Tariffs Pursuant to Subsection 56-577 A 5 and 56-234 of the Code of Virginia*, Docket No. PUR-2017-00060, December 4, 2017.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy and its affiliates before the Commonwealth of Virginia State Corporate Commission in the *Application of Virginia Electric and Power Company for Approval of 100 Percent Renewable Energy Tariffs for Residential and Non-residential Customers Pursuant to SS 56-577 A 5 and 56-234 of the Code of Virginia*, Case No. PUR-2017-00157, April 17, 2018

Oral Direct and Cross-examination Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the Public Service Commission of the State of Delaware, *In the Matter of the Review of Customer Choice in the State of Delaware*, Docket No. 15-1693, April 19, 2018.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy and Direct Energy Solar before the Rhode Island Public Utilities Commission in the matter of *The Narragansett Electric Co. d/b/a National Grid's Proposed Power Sector Transformation (PST) Vision and Implementation Plan*, Docket No. 4780, April 25, 2018, (Case Settled).

Oral Testimony on behalf of the Advanced Energy Management Alliance before the Pennsylvania Public Utilities Commission *En Banc Hearing for Supplier Consolidated Billing*, Docket No. M-2018-2645254, June 14, 2018.

Prepared Supplemental Direct Testimony of Frank Lacey on behalf of Direct Energy and its affiliates before the Commonwealth of Virginia State Corporate Commission in the *Application of Virginia Electric and Power Company for Approval of 100 Percent Renewable Energy Tariffs for Residential and Non-residential Customers Pursuant to SS 56-577 A 5 and 56-234 of the Code of Virginia*, Case No. PUR-2017-00157, June 19, 2018.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy and its affiliates before the New Jersey Board of Public Utilities, *In the Matter of the Petition of Public Service Electric and Gas Company for Approval of an Increase in Electric and Gas Rates and for Changes in the Tariffs for Electric and Gas Service, B.P.U.N.J. No. 16 Electric and B.P.U.N.J. No. 16 Gas, and for Changes in Depreciation Rates, Pursuant to N.J.S.A. 48:2-18, N.J.S.A. 48:2-21 and N.J.S.A. 48:2-21.1, and for Other Appropriate Relief*, BPU Docket Nos. ER18010029 and GR18010030, OAL Docket No. PUC 01151-18, August 6, 2018, (Case Settled).

Oral Testimony and Cross Examination of Frank Lacey (as part of Direct Energy Panel) before the Rhode Island Public Utilities Commission in the matter of *The Narragansett Electric Co. d/b/a National Grid's 2018 Standard Offer Service (SOS) Procurement Plan and 2018 Renewable Energy Standard (RES) Procurement Plan*, Docket No. 4692, August 27, 2018.

Oral surrebuttal testimony and cross examination of Frank Lacey on behalf of Direct Energy and its affiliates before the Commonwealth of Virginia State Corporate Commission in the *Application of Virginia Electric and Power Company for Approval of 100 Percent Renewable Energy Tariffs for Residential and Non-residential Customers Pursuant to SS 56-577 A 5 and 56-234 of the Code of Virginia*, Case No. PUR-2017-00157, September 18, 2018.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy *In the Matter of the Long-Term Forecast Report of Ohio Power Company and Related Matters; In the Matter of the Application Seeking Approval of Ohio Power Company's Proposal to Enter Into Renewable Energy Purchase Agreements for Inclusion in the Renewable Generation Rider; In the Matter of the Application of Ohio Power Company to Amend its Tariffs*, Case Nos. 18-501-EL-FOR; 18-1392-EL-RDR and 18-1393-EL-ATA, January 2, 2019.

Oral rebuttal testimony and cross-examination of Frank Lacey on behalf of Direct Energy *In the Matter of the Long-Term Forecast Report of Ohio Power Company and Related Matters; In the Matter of the Application Seeking Approval of Ohio Power Company's Proposal to Enter Into Renewable Energy Purchase Agreements for Inclusion in the Renewable Generation Rider; In the Matter of the Application of Ohio Power Company to Amend its Tariffs*, Case Nos. 18-501-EL-FOR; 18-1392-EL-RDR and 18-1393-EL-ATA, January 23, 2019.

Oral Testimony of Frank Lacey On behalf of Direct Energy and its Affiliate Companies in Opposition to Senate Bill 716,
Before the Maryland Senate Finance Committee, Honorable Delores Kelley, Chair, March 5, 2019.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy Services and Direct Energy Business before the Virginia State Corporation Commission in the *Application of Virginia Electric and Power Company for Approval to Establish Rate Schedule, Designated Rate Schedule MBR, Pursuant to §§ 56-234 A of the Code of Virginia,* Case No. PUR-2018-00192, June 13, 2019.

Oral surrebuttal testimony and cross examination of Frank Lacey on behalf of Direct Energy Services and Direct Energy Business before the Virginia State Corporation Commission in the *Application of Virginia Electric and Power Company for Approval to Establish Rate Schedule, Designated Rate Schedule MBR, Pursuant to §§ 56-234 A of the Code of Virginia,* Case No. PUR-2018-00192, July 26, 2019.

Oral direct testimony and cross examination of Frank Lacey on behalf of Direct Energy Business before the Virginia State Corporation Commission on the *Motion of Direct Energy Business for Temporary Injunctive Relief and Request for Expedited Action*, Case No. PUR-2019-00117, August 7, 2019.

Oral direct testimony and cross examination of Frank Lacey on behalf of Direct Energy Business before the Virginia State Corporation Commission in the joint hearing in the *Petition of Virginia Electric and Power Company for a Declaratory Judgement* against Direct Energy and the *Petition of Virginia Electric and Power Company for a Declaratory Judgement* against Calpine Energy Solutions, Case Nos. PUR-2019-00117 and PUR-2019-00118, August 20, 2019.

Prepared Direct Testimony of Frank Lacey on behalf of the Energy Supplier Coalition before the Maryland Public Service Commission in the *Application of Baltimore Gas & Electric Company to Adjust Electric and Gas Base Rates*, Case No. 9610, September 10, 2019.

Prepared Rebuttal Testimony of Frank Lacey on behalf of the Energy Supplier Coalition before the Maryland Public Service Commission in the *Application of Baltimore Gas & Electric Company to Adjust Electric and Gas Base Rates*, Case No. 9610, October 4, 2019.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy before the Virginia State Corporate Commission in *the Application of Virginia Electric and Power Company For Approval of a 100 Percent Renewable Energy Tariff, Designated Rider TRG, Pursuant to 56-577 A 5 and 56-234 of the Code of Virginia*, Case No. PUR-2019-00094, October 17, 2019.

Prepared Surrebuttal Testimony of Frank Lacey on behalf of the Energy Supplier Coalition before the Maryland Public Service Commission in the *Application of Baltimore Gas & Electric Company to Adjust Electric and Gas Base Rates*, Case No. 9610, October 22, 2019.

Prepared Rejoinder Testimony of Frank Lacey on behalf of the Energy Supplier Coalition before the Maryland Public Service Commission in the *Application of Baltimore Gas & Electric Company to Adjust Electric and Gas Base Rates*, Case No. 9610, November 8, 2019.

Oral testimony and cross-examination of Frank Lacey on behalf of the Energy Supplier Coalition before the Maryland Public Service Commission in the *Application of Baltimore Gas & Electric Company to Adjust Electric and Gas Base Rates*, Case No. 9610, November 14, 2019.

Oral Rebuttal Testimony of Frank Lacey on behalf of Direct Energy before the Virginia State Corporate Commission in *the Application of Virginia Electric and Power Company For Approval of a 100 Percent Renewable Energy Tariff, Designated Rider TRG, Pursuant to 56-577 A 5 and 56-234 of the Code of Virginia*, Case No. PUR-2019-00094, November 21, 2019.

Affidavit of Frank Lacey in opposition to Plaintiffs' Motion for Class Certification before the Supreme Court of New York, County of New York, IAS Part 17, in *BLT Steak, LLC and BLT Fish LLC v. Liberty Power Corp., LLC, d/b/a Liberty Power New York and Liberty Power Holdings LLC*, Index No 151293/2013 (S Hagler, J.S.C.) Mot. Seq. 11, February 20, 2020.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy before the Virginia State Corporation Commission in *Commonwealth of Virginia, ex rel. State Corporation Commission Ex Parte: Allocating RPS costs to Certain Customers of Virginia Electric and*

Power Company, Case No. PUR-2020-0164 (Rider CE), February 19, 2021.

Prepared Direct Testimony of Frank Lacey on behalf of Direct Energy before the Virginia State Corporation Commission in *Commonwealth of Virginia, ex rel. State Corporation Commission Ex Parte: Allocating RPS costs to Certain Customers of Virginia Electric and Power Company*, Case No. PUR-2020-0164 (Rider NBC), February 19, 2021.

Oral Surrebuttal Testimony and Cross-examination of Frank Lacey on behalf of Direct Energy before the Virginia State Corporation Commission in *Commonwealth of Virginia, ex rel. State Corporation Commission Ex Parte: Allocating RPS costs to Certain Customers of Virginia Electric and Power Company*, Case No. PUR-2020-0164 (Rider NBC), March 29, 2021.

Oral Testimony of Frank Lacey on Behalf of NRG Energy, Inc, in Opposition to RB 6526, before the Connecticut General Assembly Energy and Technology Committee, Honorable Norman Needleman and Honorable David Arconti, Co-Chairmen, March 4, 2021.

Prepared Rebuttal Testimony of Frank Lacey on behalf of Direct Energy Services, LLC before the Maryland Public Service Commission, *In the Matter of the Complaint filed by Staff of the Public Service Commission against Direct Energy Services, LLC*, Case No. 9614, March 19, 2021.

Prepared Surrebuttal Testimony of Frank Lacey on behalf of Direct Energy Services, LLC before the Maryland Public Service Commission, *In the Matter of the Complaint filed by Staff of the Public Service Commission against Direct Energy Services, LLC, Case No. 9614*, April 9, 2021.

Prepared Testimony in Support of Settlement of Frank Lacey on behalf of Direct Energy Services, LLC before the Maryland Public Service Commission, *In the Matter of the Complaint filed by Staff of the Public Service Commission against Direct Energy Services, LLC, Case No. 9614*, May 5, 2021.

Prepared Direct Testimony of Frank Lacey on behalf of EnergyMark LLC, Vineyard Oil and Gas Company, Mid American Natural Resources LLC, and Total Energy Resources LLC ("Gas Supplier Companies") before the Pennsylvania Public Utility Commission in *EnergyMark LLC, Vineyard Oil and Gas Company, Mid American Natural Resources LLC, and Total Energy Resources LLC v. National Fuel Gas Distribution*, Docket No. C-2020-3019621, March 5, 2021.

Prepared Surrebuttal Testimony of Frank Lacey on behalf of EnergyMark LLC, Vineyard Oil and Gas Company, Mid American Natural Resources LLC, and Total Energy Resources LLC ("Gas Supplier Companies") before the Pennsylvania Public Utility Commission in *EnergyMark LLC, Vineyard Oil and Gas Company, Mid*

American Natural Resources LLC, and Total Energy Resources LLC v. National Fuel Gas Distribution, Docket No. C-2020-3019621, April 16, 2021.

Oral Testimony and Cross-examination of Frank Lacey on behalf of EnergyMark LLC, Vineyard Oil and Gas Company, Mid American Natural Resources LLC, and Total Energy Resources LLC ("Gas Supplier Companies") before the Pennsylvania Public Utility Commission in *EnergyMark LLC, Vineyard Oil and Gas Company, Mid American Natural Resources LLC, and Total Energy Resources LLC v. National Fuel Gas Distribution*, Docket No. C-2020-3019621, April 29, 2021.

Prepared Direct Testimony of Frank Lacey on behalf of IGS Energy Corporation and Direct Energy, LLC before the Public Utilities Commission of Ohio *In the Matter of the Application of Ohio Power Company for an Increase in Electric Distribution Rates, For Tariff Approval and For Approval to Change Accounting Methods*, Case Nos. 20-0585-EL-AIR, 20-0586-EL-ATA and 20-0587-EL-AAM, April 20, 2021.

Oral Testimony and Cross-examination of Frank Lacey on behalf of IGS Energy Corporation and Direct Energy, LLC before the Public Utilities Commission of Ohio *In the Matter of the Application of Ohio Power Company for an Increase in Electric Distribution Rates, For Tariff Approval and For Approval to Change Accounting Methods*, Case Nos. 20-0585-EL-AIR, 20-0586-EL-ATA and 20-0587-EL-AAM, May 18, 2021.

Direct Testimony of Frank Lacey on Behalf of The Retail Energy Supply Association and Interstate Gas Supply, Inc. before the Public Utilities Commission of Ohio *In the Matter of the Application of Duke Energy Ohio, Inc. for an Adjustment to Rider MGP Rates, Case No.* 14-0375-GA-RDR (and 17 other dockets), November 12, 2021.

Deposition of Frank Lacey on Behalf of The Retail Energy Supply Association and Interstate Gas Supply, Inc. before the Public Utilities Commission of Ohio *In the Matter of the Application of Duke Energy Ohio, Inc. for an Adjustment to Rider MGP Rates, Case No.* 14-0375-GA-RDR (and 17 other dockets), November 15, 2021.

Oral Testimony and Cross-examination of Frank Lacey on Behalf of The Retail Energy Supply Association and Interstate Gas Supply, Inc. before the Public Utilities Commission of Ohio *In the Matter of the Application of Duke Energy Ohio, Inc. for an Adjustment to Rider MGP Rates, Case No.* 14-0375-GA-RDR (and 17 other dockets), November 18, 2021.

Prepared Direct Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission *In the Matter of: Establishing A Proceeding Concerning the Allocation of RPS-Related Costs and the Determination Of*

Certain Proxy Values For Virginia Electric and Power, Docket No. PUR-2021-00156, June 7, 2022.

Prepared Rebuttal Testimony of Frank Lacey on behalf of Philadelphia Gas Works before the Pennsylvania Public Utilities Commission in *Grays Ferry Cogeneration Partnership and Vicinity Energy Philadelphia, Inc v. Philadelphia Gas Works*, Docket No. C-2021-3029259, June 17, 2022.

Prepared Surrebuttal Testimony of Frank Lacey on behalf of Philadelphia Gas Works before the Pennsylvania Public Utilities Commission in *Grays Ferry Cogeneration Partnership and Vicinity Energy Philadelphia, Inc v. Philadelphia Gas Works*, Docket No. C-2021-3029259, July 22, 2022.

Prepared Expert Opinion Report, "An Analysis of the Value of Energy, Capacity and REC Sales from the Ahoskie-South Solar Farm; A Review of Contract and Market-based Outcomes", on behalf of Solar Green Development, LLC in *Solar Green Development, LLC v Kruger Energy (USA) Renewables, LLC*, Civil Action No.: 2:21-cv-00038-M, August 1, 2022.

Oral Testimony and Cross-examination of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission *In the Matter of: Establishing A Proceeding Concerning the Allocation of RPS-Related Costs and the Determination Of Certain Proxy Values For Virginia Electric and Power*, Docket No. PUR-2021-00156, August 9, 2022.

Oral Testimony and Cross-Examination of Frank Lacey on behalf of Philadelphia Gas Works before the Pennsylvania Public Utilities Commission in *Grays Ferry Cogeneration Partnership and Vicinity Energy Philadelphia, Inc v. Philadelphia Gas Works*, Docket No. C-2021-3029259, August 9, 2022.

Prepared Direct Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the Public Utilities Commission of Ohio *In the Matter of the Application of Duke Energy Ohio, Inc., for Approval of a General Exemption of Certain Natural Gas Commodity Sales Services or Ancillary Services*, Case No. 21-0903-GA-EXM, *In the Matter of the Application of Duke Energy Ohio, Inc., for Tariff Approval*, Case No. 21-0904-GA-ATA, and *In the Matter of the Application of Duke Energy Ohio, Inc., for Approval to Change Accounting Methods*, Case No. 21-0905-GA-AAM, September 7, 2022.

Prepared Expert Reply Report, "An Analysis of The Berkeley Research Group Report; Reply to Identify Flawed Data", on behalf of Solar Green Development, LLC in *Solar Green Development, LLC v Kruger Energy (USA) Renewables, LLC*, Civil Action No.: 2:21-cv-00038-M, September 21, 2022.

Deposition of Frank Lacey, on behalf of Solar Green Development, LLC in *Solar Green Development, LLC v Kruger Energy (USA) Renewables, LLC*, Civil Action No.: 2:21-cv-00038-M, October 7, 2022.

Prepared Direct Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission in the *Petition of Virginia Electric and Power Company For revision of a rate adjustment clause, designated Rider RPS, under § 56-585.1 A 5 d of the Code of Virginia for the Rate Year commencing September 1, 2023*, Docket No. PUR-2022-00208, March 7, 2023.

Oral Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission in the *Petition of Virginia Electric and Power Company For revision of a rate adjustment clause, designated Rider RPS, under § 56-585.1 A 5 d of the Code of Virginia for the Rate Year commencing September 1, 2023*, Docket No. PUR-2022-00208, April 18, 2023.

Prepared Direct Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission In the *Petition of Virginia Electric and Power Company For a financing order authorizing the issuance of Deferred fuel cost bonds pursuant to Va. Code §56-24.6:1*, Docket No. PUR-2023-00112, August 9, 2023.

Oral Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission In the *Petition of Virginia Electric and Power Company For a financing order authorizing the issuance of Deferred fuel cost bonds pursuant to Va. Code §56-24.6:1*, Docket No. PUR-2023-00112, September 6, 2023.

Oral Testimony of Frank Lacey on behalf of the Retail Energy Supply Association before the Public Utilities Commission of Ohio *In the Matter of the Application of Duke Energy Ohio, Inc., for Approval of a General Exemption of Certain Natural Gas Commodity Sales Services or Ancillary Services*, Case No. 21-0903-GA-EXM, *In the Matter of the Application of Duke Energy Ohio, Inc., for Tariff Approval*, Case No. 21-0904-GA-ATA, and *In the Matter of the Application of Duke Energy Ohio, Inc., for Approval to Change Accounting Methods*, Case No. 21-0905-GA-AAM, September 18, 2023.

Prepared Direct Testimony of Frank Lacey on Behalf of Direct Energy (an NRG Company) before the Virginia State Corporation Commission In the *Application of Virginia Electric and Power Company for a 2023 Biennial Review of the Rates, Terms and Conditions for the Provision of Generation, Distribution and Transmission Services Pursuant to 56-585.1 A of the Code of Virginia*, Docket No. PUR-2023-00101, October 10, 2023.

Prepared Direct Testimony of Frank Lacey on Behalf of SCH USA, LLC before the Pennsylvania Public Utility Commission in *SCH USA, LLC v. Aqua Pennsylvania Wastewater, Inc.* Docket Nos. C-2022-3036993 and C-2022-3037118, April 3, 2024.

Prepared Direct Testimony of Frank Lacey on Behalf of Calpine Energy Solutions, LLC, Constellation NewEnergy, Inc., Direct Energy Business, LLC, Direct Energy Services, LLC and MP2 Energy NE LLC D/B/A Shell Energy Solutions Retail Services ("The CSP Coalition") before the Virginia State Corporation Commission in the *Petitions of Appalachian Power Company and Virginia Electric and Power Company for Determining the Treatment of Renewable Energy Customers' Renewable Energy Certificates for Purposes of Each Utility's RPS Program Compliance*, Case No. PUR-2024-00010, June 5, 2024.

Prepared Direct Testimony of Frank Lacey on Behalf of The Illinois Competitive Energy Association and the Retail Energy Supply Association before the Illinois Commerce Commission, in the *Petition of Commonwealth Edison Company for Revenue Neutral Tariff Changes Related to Rate Design*, Docket No. 24-0378, July 24, 2024.

Oral Testimony of Frank Lacey on Behalf of Calpine Energy Solutions, LLC, Constellation NewEnergy, Inc., Direct Energy Business, LLC, Direct Energy Services, LLC and MP2 Energy NE LLC D/B/A Shell Energy Solutions Retail Services ("The CSP Coalition") before the Virginia State Corporation Commission in the *Petitions of Appalachian Power Company and Virginia Electric and Power Company for Determining the Treatment of Renewable Energy Customers' Renewable Energy Certificates for Purposes of Each Utility's RPS Program Compliance*, Case No. PUR-2024-00010, July 31, 2024.

Prepared Direct Testimony of Frank Lacey on Behalf of SCH USA, LLC before the Pennsylvania Public Utility Commission in *Pennsylvania Public Utility Commission v. Aqua Pennsylvania Wastewater, Inc.*, Docket No. R-2024-3047824, August 16, 2024.

Prepared Surrebuttal Testimony of Frank Lacey on Behalf of SCH USA, LLC before the Pennsylvania Public Utility Commission in *SCH USA, LLC v. Aqua Pennsylvania Wastewater, Inc.* Docket Nos. C-2022-3036993 and C-2022-3037118, August 23, 2024.

Prepared Rebuttal Testimony of Frank Lacey on Behalf of The Illinois Competitive Energy Association and the Retail Energy Supply Association before the Illinois Commerce Commission, in the *Petition of Commonwealth Edison Company for Revenue Neutral Tariff Changes Related to Rate Design*, Docket No. 24-0378, September 16, 2024.

Prepared Direct Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State

Corporation Commission in the *Application of Virginia Electric and Power Company for Approval to Establish a Voluntary, Experimental Companion Tariff to Support Carbon-free and Renewable Energy generation, Designated Schedule CFG, pursuant to § 56-234 B of the Code of Virginia*, Docket No. PUR-2024-00114, September 25, 2024.

Oral Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State Corporation Commission in the *Application of Virginia Electric and Power Company for Approval to Establish a Voluntary, Experimental Companion Tariff to Support Carbon-free and Renewable Energy generation, Designated Schedule CFG, pursuant to § 56-234 B of the Code of Virginia*, Docket No. PUR-2024-00114, October 30, 2024.

Prepared Direct Testimony of Frank Lacey on Behalf of Nationwide Energy Partners before the Public Utilities Commission of Ohio, *In the Matter of the Application of Duke Energy Ohio, Inc., for Authority to Establish a Standard Service Offer Pursuant to Ohio Revised Code Section 4928.143 in the Form of an Electric Security Plan,* Case No. 24-278-EL-SSO et al., January 23, 2025.

Oral Testimony of Frank Lacey on Behalf of Nationwide Energy Partners before the Public Utilities Commission of Ohio, *In the Matter of the Application of Duke Energy Ohio, Inc., for Authority to Establish a Standard Service Offer Pursuant to Ohio Revised Code Section 4928.143 in the Form of an Electric Security Plan,* Case No. 24-278-EL-SSO et al., January 10, 2025.

Prepared Direct Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State Corporation Commission in the Petition of Virginia Electric and Power Company For a 2025 biennial review of the rates, terms and conditions for the provision of generation, distribution and transmission services pursuant to § 56-585.1 A of the Code of Virginia, Docket No. PUR-2025-00058, July 16, 2025.

Oral Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State Corporation Commission in the Petition of Virginia Electric and Power Company For a 2025 biennial review of the rates, terms and conditions for the provision of generation, distribution and transmission services pursuant to § 56-585.1 A of the Code of Virginia, Docket No. PUR-2025-00058, September 4, 2025.

Prepared Direct Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State Corporation Commission in the Petition of Appalachian Power Company For approval of Revisions to the Terms and Conditions of Rate Schedule L.P.S., Docket No. PUR-2025-00057, October 1, 2025.

Oral Testimony of Frank Lacey on Behalf of the Retail Energy Advancement League ("REAL") before the Virginia State Corporation Commission in the Petition of Appalachian Power Company For approval of Revisions to the Terms and Conditions of Rate Schedule L.P.S., Docket No. PUR-2025-00057, November 12, 2025.

List all specific EDI transactions and their purpose for which PPL proposes to bill EGSs. Specifically, is PPL proposing to charge EGSs for cancel, rebill transactions or other transactions that are initiated by PPL such as contemplated in new Rules 5.4(b) and 5.5 of PPL Exh. LN-1?

PPL Electric Response

PPL Electric will charge EGSs for the following transactions:

- Cancel/Rebill Transactions (867 EDI)
  - These will be billed only when initiated by the EGS, not by PPL Electric's internal process.
- New Supplier Setup – Full Testing
  - One-time fee (e.g., $4,867.20).
- Additional DUNS Setup – Abbreviated Testing
  - One-time fee (e.g., $2,215.98).

There is no automatic way for an EGS to initiate a cancel/rebill through EDI transaction. EGSs would need notify PPL Electric of the need to cancel/rebill specific accounts.

PPL Electric Utilities Corporation

Retail Energy Supply Association (RESA)
Dated November 14, 2025
Docket No. R-2025-3057164

RESA I-21

Reference PPL St. No. 18, p. 16, lines 10-18
Provide a mathematical example of how PPL proposes to determine the "allocated amount" of PPL's incurred EDI transaction fees that it would then bill EGSs. Include in your example how the total "allocated amount" will be charged to specific EGSs.

PPL Electric Response

PPL Electric will charge specific EGSs a one-time duns cost plus ongoing monthly transaction cost. PPL Electric will provide a monthly number of transactions by specific EGS.

One-Time DUNS Testing Fee

- Full testing: $4,867.20
- Abbreviated testing: $2,215.98

(Charged when an EGS is set up or adds a new Duns.)

Monthly Transaction Charges

Monthly Charge for EGSs = (Number of Transactions for EGSs)×(Per-Transaction Cost)

Explain in detail how assessing EGS EDI charges will "encourage EGS to more efficiently use company resources." Provide (on an anonymized basis) any examples, with supporting documentation, of specific instances where PPL determined an EGS was not "efficiently" using company resources. Please explain how assessing EDI charges in these specific examples would have resulted in a more efficient use of company resources.

PPL Electric Response

By assigning costs directly to EGSs based on their transaction volume, PPL Electric:

- Creates Cost Accountability: EGSs that generate excessive or redundant transactions will bear the cost, thereby incentivizing them to streamline processes.
- Promotes System Efficiency: EGSs will reduce duplicate requests and improve data quality to avoid costly rejections.
- Aligns Costs: Instead of allocating costs across all ratepayers, charges are allocated to entities driving the expense.

Examples of Inefficient EGS Use of Resources

- High Volume of Rejected Transactions
  - EGSs failing to follow EDI standards often submit incorrect data, leading to multiple retries.
- Unnecessary Account Maintenance
  - Certain suppliers send frequent non-critical updates (name changes, address corrections) creating high volume transactions.

How charges would improve efficiency:

- Enrollment errors: If the EGS bears the cost of each failed enrollment, they can invest in better validation tools to reduce the number of entries.

- Rejected transactions: Financial impact motivates EGSs to comply with EDI standards, which should reduce error rates and manual intervention.

If EDI charges were assessed:

- EGSs would have financial incentives to eliminate unused DUNS numbers and consolidate identifiers.
- Charges for the set-up would discourage suppliers from creating redundant identifiers without operational need.
- Overall transaction costs would decrease.

Will all EGSs continuing operations in PPL's service territory be required to undergo DUNS testing and be assessed the new DUNS charges PPL is proposing? If so, provide all supporting documentation as to why the new DUNS testing is necessary for EGSs already operating on PPL's system.

PPL Electric Response

PPL Electric will not require re-testing of DUNS for EGSs already operating on PPL Electric's system.

- **Initial Testing Still Applies:** When an EGS first joins PPL Electric's system or adds a new DUNS number, the one-time testing fee (full or abbreviated) will apply.
- **No Re-Testing for Existing EGSs:** If the EGS is already active and using the same DUNS number, PPL Electric will not charge for re-testing in future periods.

RESA I-22

Reference PPL St. No. 18, p. 16, lines 10-18.
Is PPL proposing to assess its EDI costs which it claims are incurred for a specific EGS to the specific EGS incurring the cost? If so, please explain how PPL plans to track that information to ensure its accuracy.

PPL Electric Response

Yes, PPL Electric will have a transactional volume report by EGSs from the EDI vendor.

- Per-Transaction Billing
  - Each EDI transaction (e.g., enrollment, usage data exchange) is logged in PPL Electric's EDI system.
  - PPL Electric incurs a vendor fee for each transaction, and these are tracked by transaction ID and EGS identifier.
- Monthly Transaction Reporting
  - PPL Electric will provide each EGS with a monthly report of the number of EDI transactions attributed to that EGS.
- This report forms the basis for calculating the monthly charge:

Monthly Charge = (Number of Transactions for EGS)×(Per-Transaction Cost)

V. CONCLUSION 24

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND CURRENT POSITION.

A. My name is Frank Lacey and I am the founder of Electric Advisors Consulting.

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?

A. Yes. My Direct Testimony was served on December 22, 2025 pre-marked as RESA St. No. 1 and included RESA Exhibits FL-1 through FL-10. My written Rebuttal Testimony was served on January 23, 2026 and it did not include any additional exhibits.

Q. ARE YOU SPONSORING ANY EXHIBITS IN YOUR SURREBUTTAL TESTIMONY?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR SURREBUTTAL TESTIMONY?

A. I am responding to the rebuttal testimony of PPL Witnesses Lisa Norden and OCA Witness Barbara Alexander regarding Supplier Tariff issues. I will also respond to the testimony of PPL Witness Danial Johnson and OCA Witness Clarence L. Johnson regarding PPL's information technology ("IT") upgrades. I have attempted to respond to the specific statements and recommendations made by these witnesses. In the event that an issue is not addressed, this should not be viewed as my acceptance of their testimony. Rather it reflects my belief that a further response in this surrebuttal testimony is not warranted, either because it was adequately addressed in my direct or rebuttal testimony, or because it is a legal matter that is better addressed by counsel in briefs or other pleadings.

II. SUPPLIER TARIFF ISSUES

A. Review of Supplier Tariff Revisions in Base Rate Proceeding

Q. PLEASE SUMMARIZE RESA'S PRIMARY POSITION REGARDING THE SUPPLIER TARIFF ISSUES AS EXPLAINED MORE FULLY IN YOUR DIRECT TESTIMONY.

A. RESA's position is that the Commission should reject consideration of PPL's proposed changes to its Electric Generation Supplier Coordination Tariff ("Supplier Tariff") on the basis that PPL is proposing significant and detailed changes to the Supplier Tariff which amount to a wholesale change of how PPL interacts with suppliers, including a proposal to move a significant amount of its market operations cost to EGSs and numerous other significant changes to the operations of the competitive market. As explained in my Direct Testimony, I do not believe a thorough examination and consideration of these changes is reasonable in a base rate proceeding. (RESA St. No. 1 at 6-8).

Q. WHAT PARTIES DISAGREED WITH YOUR RECOMMENDATION FOR REVIEW OF THE SUPPLIER TARIFF CHANGES IN THIS BASE RATE PROCEEDING?

A. Witness Norden on behalf of PPL and Witness Alexander on behalf of OCA opposed this recommendation.

Q. WHAT OPPOSITION WAS EXPRESSED BY OCA WITNESS ALEXANDER REGARDING THE CONSIDERATION OF SUPPLIER TARIFF ISSUES IN THIS BASE RATE PROCEEDING?

A. Ms. Alexander supports review of the Supplier Tariff changes in this proceeding on the basis that PPL's proposals to shift cost recovery for PPL's EDI/DUNS charges to EGSs and any potential IT investments related to retail choice have an impact on the final distribution rates that PPL will assess all customers. According to Ms. Alexander, "changes to the Supplier Tariff that impact base rates for all customers" are appropriate for a rate case. (OCA St. No. 7-R at 6).

Q. DO YOU AGREE WITH MS. ALEXANDER THAT PPL'S PROPOSAL TO ASSESS EGSS FOR THE COSTS THAT PPL INCURS WHEN PERFORMING ITS FUNCTION AS THE RETAIL MARKET OPERATOR IMPACT BASE RATES FOR ALL CUSTOMERS?

A. Of course. Any movement of costs from PPL to another entity will impact base rates paid by all customers. That is irrelevant. If PPL moved its costs for billing its distribution customers, for its president's salary or for anything else to a different entity, it would affect base rates for all customers. The relevant question for the Commission to consider in the context of its statutory duty to foster a properly functioning competitive market is not whether the proposal will impact distribution rates, but rather whether it is appropriate for PPL to move its own transactional costs for operating the retail market to EGSs as PPL has suggested. Based on the experience restructured electricity markets across the country, it is not appropriate for PPL to assess EGSs for its transactional costs.

Q. DO YOU AGREE THAT JUST BECAUSE ONE OF PPL'S MANY PROPOSED SUPPLIER TARIFF CHANGES INVOLVES A PROPOSAL TO SHIFT COST RECOVERY OUT OF BASE RATES, ALL OF PPL'S SUPPLIER TARIFF CHANGES ARE APPROPRIATE FOR CONSIDERATION IN THIS PROCEEDING?

A. I do not. Both Ms. Alexander and Ms. Norden point to just <u>one</u> proposed revision of PPL's Supplier Tariff which proposes to change cost recovery for PPL's EDI/DUNS charges from all distribution customers to EGSs. However, as I will discuss further in response to PPL's rebuttal, there are numerous operational and other issues implicated by PPL's extensive proposed red-line to its Supplier Tariff at play in this proceeding. Perhaps if PPL just offered this one proposal, that has distribution rate impacts, rather than a near wholesale revision of a decade old tariff in this proceeding, I might have a different view about the appropriateness of trying to address all revisions here. Unfortunately, PPL has chosen to present dozens of changes to the supplier tariff in this

proceeding, most of which have no effect on distribution base rates, but do have significant impact on the costs that suppliers would incur to conduct business in the PPL service territory. While Ms. Alexander notes the shorter timeframe (6 months) of the default service proceedings to claim that this 9-month proceeding provides more time to consider PPL's Supplier Tariff, Ms. Alexander fails to acknowledge the depth of the issues proposed by PPL regarding both the Supplier Tariff and every other issue raised in a base rate proceeding. In fact, Ms. Norden testified PPL has also proposed "many substantive changes … to its Retail Tariff in this same proceeding." (PPL St. No. 18-R at 63-64) It is appropriate for the distribution utility to propose changes to its distribution rates, terms and conditions in a distribution rate proceeding. It is not appropriate to make comprehensive changes to the fundamental operational framework for competitive markets in a distribution rate proceeding.

Whereas a default service proceeding would be more laser focused on retail market issues, a rate case is not. Further, PPL is always able to file a tariff supplement with the Commission at any time outside of either a base rate case or a default service proceeding. Such a filing would also more narrowly focus the scope of issues to be addressed to the Supplier Tariff to provide a more reasonable and fair opportunity for the supplier community to consider PPL's proposals and offer reasonable feedback for the Commission's consideration.

Q. WHAT WAS PPL'S RESPONSE TO RESA'S POSITION THAT THE SUPPLIER TARIFF CHANGES SHOULD NOT BE ADDRESSED IN THIS BASE RATE PROCEEDING?

A. PPL Witness Lisa Norden opposed the recommendation on the basis that: (1) nothing prohibits the update of the Supplier Tariff in a base rate proceeding; (2) a base rate proceeding "draw great interest across many interested stakeholders;" (3) PPL's proposed

revisions to the Supplier Tariff are "mostly clarifying edits, with only a handful of truly substantive changes;" (4) PPL "benchmarked its existing Supplier Tariff" against FirstEnergy's Supplier Tariff so the PPL proposed changes which adopt FirstEnergy's current operations "should not be new to EGSs operating in Pennsylvania;" (5) it has been "decades since the Company revised its Supplier Tariff" and a base rate proceeding ensures a "defined timeframe" for resolution; and, (6) PPL's new proposal to remove cost recovery for its electronic data interchange ("EDI") and to directly assess EGSs for those PPL costs requires all Supplier Tariff issues to be addressed in this base rate case. (PPL St. No. 18-R at 63-65).

Q. DO YOU AGREE THAT JUST BECAUSE NOTHING "PROHIBITS" THE UPDATE OF THE SUPPLIER TARIFF IN A BASE RATE PROCEEDING, RESA'S POSITION MUST BE REJECTED?

A. No, of course not. As I explained in my direct testimony, PPL's proposals are extensive. Perhaps a couple of tariff revisions or even just one proposal regarding EDI cost recovery shift would be reasonable to address in a base rate case. But that is not what PPL is proposing here. As Ms. Norden states, it has been "over a decade" since PPL has updated it Supplier Tariff. Much has changed in that time and it is not reasonable to expect a fair and balanced review of proposed changes in the context of a base rate proceeding. I acknowledge Ms. Norden's testimony that "a base rate proceeding is a significant matter that draws great interest across many interested stakeholders," but she fails to acknowledge that such a dissolution of issues and interests detracts focus away from the specific Supplier Tariff proposals. Moreover, it is not reasonable to believe that EGSs have the resources and ability to participate in such a large proceeding (PPL alone submitted 22 pieces of direct testimony and 13 other parties submitted testimony) as shown by the fact that RESA is the only entity participating addressing supplier issues.

For all these reasons and the potential significant impact of PPL's changes to result in unintended consequences regarding the competitive market, I do not agree that a base rate proceeding is a reasonable forum to address these issues.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S VIEW THAT A BASE RATE CASE HAS A SPECIFIC TIMEFRAME FOR ACTION AND IT WOULD BE A "WASTE OF TIME AND ADMINISTRATIVE RESOURCES SIMPLY TO START OVER IN ANOTHER PROCEEDING?" (PPL ST. NO 18-R).

A. Respectfully, PPL has elected not to update its Supplier Tariff for a decade, I do not think it reasonable for it to now claim fast action from the Commission is necessary. Further, I respect the point about time and resources, but Ms. Norden is assuming that a proceeding addressing Supplier Tariffs would lead to an extensive litigation proceeding. Tariff supplements are routinely filed by utilities and addressed by staff with the opportunity for stakeholders to provide input. Moreover, I think a safe assumption is that suppliers too are cautious about incurring legal fees and wasting resources incenting them to work collaboratively with PPL to discuss and address concerns. It is feasible that if PPL had engaged EGSs in a discussion about problems with the way the market is operating that mutually acceptable solutions could be reached and that EGSs would actually support a supplier tariff filing. Unfortunately, PPL has not taken that approach and has proposed many significant changes to the Supplier tariff. My opposition is rooted in the magnitude and volume of the proposed changes, the fact that they are thrown into a significant base rate proceeding and PPL made no effort to communicate these changes with suppliers before they were filed. As a result, there has been zero opportunity for collaboration or discussion with the suppliers – who are directly affected – prior to the proposals being put before the Commission. And to be clear, RESA does not represent all suppliers. RESA is a trade association that includes only a portion of the suppliers licensed to serve

customers in the PPL service territory and it is possible that many of the non-RESA members have no knowledge of the supplier tariff proposals in this proceeding. This is a distribution base rate case. On its face, nothing in a distribution rate case should affect the energy market and competitors in the energy market. PPL Witness Christine M. Martin, who is PPL's president, specifically states: "This filing deals only with distribution base rates. Rates impacting default service and transmission service are not part of this filing." (PPL St. No. 1 at 9). In my opinion, PPL was – at best – derelict in its responsibly to communicate with suppliers about the proposed changes or at worst, it is acting maliciously in its lack of communications with suppliers about the changes it is proposing.

B. <u>Specific Proposed Supplier Tariff Revisions</u>

Q. NOTWITHSTANDING YOUR STRONG VIEW THAT THE SUPPLIER TARIFF REVISIONS SHOULD NOT BE CONSIDERED IN THIS BASE RATE PROCEEDING, DID YOU EVALUATE SOME OF THE SPECIFIC PROPOSALS OF PPL IN THE REVISED SUPPLIER TARIFF?

A. Yes, in my direct testimony I raised concerns and discussed the following provisions of PPL's proposed Supplier Tariff revisions:

- Rule 4.18 of the Supplier Tariff addressing EDI Transactions and DUNS testing fees (RESA St. No. 1 at 19-36);
- Rule 4.14 of the Supplier Tariff addressing credit requirements for EGSs (RESA St. No. 1 at 37-40);
- Rule 3.1(f)of the Supplier Tariff imposing new rules setting forth requirements for "Standard Rates" and limiting an EGS to no more than 200 discrete Rate Ready rates per calendar quarter (RESA St. No. 1 at 40-43);
- Newly renumbered Rule 5.5.5 and new "Conditions" under Load Data Supply Charge (Original Page No. 24) regarding EGS access to customers' usage data (RESA St. No. 1 at 43-44); and,
- Failure to include a definition for "Bill Ready" billing or to even mention Bill Ready billing in any context. (RESA St. No. 1 at 7-8).

Q. HAS PPL AGREED TO WITHDRAW ANY OF THESE PROPOSALS YOU DISCUSSED IN YOUR DIRECT TESTIMONY?

A. Yes. According to PPL Witness Norden, PPL is withdrawing its proposal for Section 3.1(f) regarding new rules related to "Standard Rates." (PPL St. No. 18-R at 72). I support this withdrawal.

Q. WHAT PROPOSALS DISCUSSED IN YOUR DIRECT TESTIMONY HAS PPL AGREED TO REVISE?

A. PPL agreed to make the following revisions to its initial Supplier Tariff proposals addressed in my direct testimony:

- PPL agreed to modify its proposed revised credit requirements in Rule 4.14 of the Supplier Tariff to: (1) apply to EGSs that are not participating in the Purchase of Receivables ("POR") program; and, (2) reduce the required credit amount from the proposed $250,000 to $50,000 (PPL St. No. 18-R at 71-76);
- PPL agreed to clarify the customer authorization language in the Load Data Supply Charge section of its Supplier Tariff to cross reference newly renumbered Rule 5.3.3 which Ms. Norden specifically states is not intended to require EGSs to provide "written" authorization as a pre-condition of receiving information necessary to serve their customers. (PPL St. No. 18-R at 73-74).
- PPL agreed to add a definition of "Bill Ready" and to include revisions in the Competitive Billing Specifications Rider to recognize both Rate Ready and Bill Ready billing. (PPL St No. 18-R at 75-76).

Q. DO YOU SUPPORT PPL'S PROPOSED CLARIFICATION REGARDING EGS ACCESS TO THEIR CUSTOMER'S INFORMATION?

A. Yes. I appreciate this clarification. However, EGS access to customer information is sprinkled throughout PPL's Supplier Tariff, as such, PPL should ensure that all such sections are aligned with the clarified language and RESA reserves the right to raise any concerns regarding this issue once PPL's compliance tariffs are generated for review.

Q. DO YOU SUPPORT PPL'S PROPOSED CLARIFICATION REGARDING BILL READY BILLING?

A. Yes. However, Ms. Norden's response highlights my overall point that a reasonable assessment of PPL's proposed Supplier Tariff changes would be better done outside this

rate case. Ms. Norden testifies that PPL has "not proposed any substantive changes to this provision in the Competitive Billing Specifications Rider." (PPL St. No. 18-R at 76). But, that proves my point. If PPL's intent is to bring its Supplier Tariff (and all associated riders) in alignment with current operations, then why did it elect not to propose appropriate operational revisions to this rider? Further, while I appreciate PPL's willingness to address the concern I raised, it reinforces my overall point that a more collaborative interaction with suppliers about the Supplier Tariff needs to occur.

1. New EGS Credit Requirements

Q. DO YOU SUPPORT PPL'S PROFFERED CHANGES TO ITS NEWLY PROPOSED EGS CREDIT REQUIREMENTS?

A. I do not. While I appreciate Ms. Norden's willingness to reduce the credit obligation from $250,000 to $50,000, I am of the opinion that a $50,000 credit requirement on suppliers is still inappropriate. And, while Ms. Norden offers to impose the new credit requirements only on suppliers not using POR, the proposed requirements would still apply to EGSs serving commercial and industrial load who do not participate in POR. PPL has not provided any testimony or data that suppliers impose any financial risks to PPL whether using POR or not. Moreover, PPL's willingness to drop the requirement by 80% is clear evidence that the original number was unsupportable. Similarly, a $50,000 requirement is unsupportable and if not, PPL should have included some semblance of support to justify the number. The only financial exposure that I have envisioned that PPL has to suppliers is that if a supplier does not pay its monthly charges to PPL. No different than any non-paying customer that PPL can terminate service to, if a supplier fails to pay PPL its monthly fees, PPL holds the ultimate hammer in that it can literally shut down a supplier's operations in the PPL service territory. Having operations

terminated is a much bigger risk to a supplier than it is to PPL. Presumably, the monthly charges to a supplier are only a small fraction of the magnitude of any supplier's business. Simple business logic would tell you that a supplier is not going to miss that payment to PPL and put its entire portfolio of business in the service territory at risk.

2. EDI/DUNS Cost Assessments to EGS

Q. DOES RESA OPPOSE PPL'S PROPOSAL TO SHIFT COST RECOVERY OF EDI/DUNS TESTING TO EGSS?

A. Yes. I addressed this issue at great length in my direct testimony. RESA vehemently opposes this proposal and it should be summarily rejected by the Commission. (RESA St. No. 1 at 19-36).

Q. WHAT PARTIES ADDRESSED THIS RECOMMENDATION IN REBUTTAL TESTIMONY?

A. Both OCA Witness Alexander and PPL Witness Norden opposed my recommendations. Ms. Alexander takes the view that the fact that EDCs and EGSs have always paid their own EDI/DUNS costs "should not require all ratepayers to pay higher rates to reflect the incremental costs for any or all EDI transactions for all time." (OCA St. No. 7-R at 2-3). She offers no policy or economic arguments that would support the cost shift that PPL is proposing. Ms. Alexandar also spends time trying to explain that not <u>all</u> customers benefit from retail competition. (OCA St. No. 7-R at 3-5). Ms. Norden makes similar and additional arguments which I will address shortly.

Q. BEFORE TURNING TO PPL WITNESS NORDEN'S OBJECTIONS, WHAT IS YOUR REBUTTAL TO THE TESTIMONY OF OCA WITNESS ALEXANDER REGARDING THE IMPOSITION OF PPL'S EDI/DUNS COSTS TO EGSS?

A. It is undisputed that restructuring of the electricity markets has been tremendously beneficial to all consumers. Ms. Alexander takes exception to my citation to former

Pennsylvania PUC Commissioner John Hanger's analysis of rates and the rate impact of restructured markets. Her biggest critique of Mr. Hanger's work is that the "Mr. Hanger also compares the 1996 'utility monopoly supply charge' (inflation adjusted) to the lowest offer made by EGSs on the Commission's shopping web portal in 2024 and claims that this analysis documents customer savings as well." She then claims that "This aspect of Mr. Hanger's Report is seriously defective." (OCA St. No. 7-R at 5). Her contention is that the lowest EGS rate is not the price that consumers pay. Mr. Hanger's report, however, clearly shows that over 30 years, all consumers have benefited from electricity competition. He could have chosen another data point to compare to 1996. In fact, he did. He also analyzed PPL's default service rate and showed that PPL's supply rate was 20% lower than the inflation adjusted PPL regulated rate.[1]

Q. WHY DO YOU MAINTAIN THAT MR. HANGER'S REPORT IS THE APPROPRIATE ONE TO CONSIDER WHEN ADDRESSING THE IMPACT OF THE COMPETITIVE MARKET?

A. The most important attribute of Mr. Hanger's report is that it is honest. It looks at a world before restructuring and a world after restructuring and essentially proves that customers are now better off than they would have been. Mr. Hanger does not even opine about what vertically integrated costs would be today. His main theme is that when adjusted for inflation, energy costs are lower today in a restructured market than they were in a vertically integrated market in 1996. Ms. Alexander did not and cannot refute this claim.

[1] Hanger report, Table A, p. 5.

Q. WHAT IS YOUR OPINION ABOUT THE STUDIES MS. ALEXANDER POINTS TO IN SUPPORT OF HER VIEWS?

A. Ms. Alexander testifies about "numerous studies using actual customer pricing data compared to default service prices" suggesting that EGS customers pay more on average than default service customers. (OCA St. No 7-R at 5). The analysis presented are fatally flawed. They hardly deserve to be called "studies." They are simple comparisons of prices of multiple different products, the prices of which change on a relatively frequent basis both because the default service rates change and because shopping customers enter into contracts at different periods of time and for varying lengths of time, with different product attributes and some may include variable pricing elements. Those "studies" like the one she cited in her testimony in this proceeding, provide no context in showing the value of competition in electricity markets. In fact, they show that skilled competitive retail providers can provide more competitively priced services than the wholesale pass-through default service price, that is heavily subsidized by distribution rate payers. The "study" presented by Ms. Alexander in this proceeding showed that more than 258,000 (more than 50%) of residential shopping customers in PPL's service territory saved money versus the default service price in 2025. (RESA St. No. 1R at 3-4). That is an amazing economic result that only happens with competitive markets. The competitive forces in the retail electricity market overcame the distribution subsidies and all of the other incumbent advantages of the default service suppliers.

Q. DOES PPL CONTINUE TO SUPPORT ITS INITIAL PROPOSAL TO SHIFT PPL'S EDI/DUNS COSTS TO EGSS DESPITE YOUR DIRECT TESTIMONY?

A. Yes. Even though all EDCs and EGSs have paid their own costs regarding EDI transactions since the inception of the competitive market, PPL remains steadfast that EGSs should be required to pay PPL's EDI costs (which includes DUNS testing costs).

Ms. Norden testifies that: (1) nothing prohibits PPL from assessing its EDI costs to EGSs (PPL St. No. 18-R at 68); (2) making EGSs pay for PPL's EDI costs is somehow a "direct assignment" of the costs (PPL St. No. 18-R at 68-69); (3) not all customers benefit from the retail market and; therefore, imposing PPL's EDI transaction costs on EGSs customers is somehow reasonable (PPL St. No. 18-R at 69); (4) "the competitive market is now mature" and, in PPL's view, that means PPL's costs to support retail markets should be borne by EGSs and their shopping customers (PPL St. No. 18-R at 70); (5) Ms. Norden claims PPL's proposed way of shifting costs to EGSs does not create a competitive barrier because she claims costs will be assessed at the individual EGS level (PPL St. No. 18-R at 70); (6) the fact that EGSs also incur EDI transactions costs, according to Ms. Norden, "is comparing apples to oranges" and irrelevant to PPL's imposition of its costs on EGSs (PPL St. No. 18-R at 71); and, (6) Ms. Norden claims PPL's proposal is necessary because of EGSs she claims are "inefficiently using the Company's [re]sources" based on an alleged "high volume of rejected transactions for EGSs that fail to follow EDI standards and has unnecessary account maintenance." (PPL St. N0. 18-R at 71).

Q. HOW DO YOU RESPOND TO MS. NORDEN'S STATEMENT THAT NOTHING PROHIBITS PPL FROM ASSESSING EDI COSTS TO EGSS?

A. Ms. Norden was "advised by counsel that nothing in the Public Utility Code or Commission's regulations prohibits the assessment of these costs directly to the EGSs who cause their incurrence." (PPL St. No. 18-R at 63). I am not a lawyer so I have no reason to doubt that there is not a statute that would prohibit the assessment of costs to EGSs. However, I am aware that there is a statute that requires a competitive electricity market in Pennsylvania, and operating some of the core functions of that market is a

responsibility that has been bestowed upon the utilities in the Commonwealth. For better or for worse, suppliers are operating in a market where the utilities, including PPL, continue to serve as the market operator and impose burdensome processes for data acquisition, billing and other tasks. I am aware that the Pennsylvania statutes allow for a default service provider other than the incumbent utility. Pennsylvania has yet taken that step. Until it does, the monopoly distribution company continues to be the market operator and default service provider. As explained more fully in my direct testimony, the Commission has determined that EDI transactions (in which the utility and suppliers pay their own EDI transaction costs) are the technological data communications protocol that the participants in Pennsylvania's competitive market utilize today. So, while no statute exists that prohibits PPL's proposed behavior, common regulatory sense over the past 30 years has required the utility and suppliers to bear their own data transaction costs, including EDI.

Q. HOW DO YOU RESPOND TO THE CLAIM THAT MAKING EGSS PAY FOR PPL'S EDI COSTS IS SOMEHOW A "DIRECT ASSIGNMENT" OF THE COSTS?

A. As noted above, Ms. Norden alleges that EGSs cause the incurrence of PPL's EDI transaction costs. That is simply not true. That is akin to saying that someone shopping at a grocery store is the cost causer of the cashier. As demonstrated above, there is a statutory obligation for some entity to be the default service provider and, in Pennsylvania today, that entity is the historical monopoly utility provider which has ratepayer funded access and control of all customer data and systems necessary to operate the market. The true "cost causer" of which PPL expresses concern is really PPL's resistance to developing more technologically advanced and easier systems to allow EGSs to have common access to their customers' data, PPL's opposition to other ways of

operating the market like supplier consolidated billing which would significantly reduce PPL costs and many other market changes that would lessen the difficulties of which PPL complains regarding the current EDI system. Just like many grocery stores have adopted advanced technologies like self-checkout to reduce cashier expenses, PPL could implement technologies to reduce their EDI expenses and the retail community would likely welcome those changes and all customers would benefit from a more cost efficient system where cost savings would be passed on in the form of lower electricity costs.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S CLAIM THAT NOT ALL CUSTOMERS BENEFIT FROM THE RETAIL MARKET AND; THEREFORE, IMPOSING PPL'S EDI TRANSACTION COSTS ON EGSS CUSTOMERS IS SOMEHOW REASONABLE?

A. I addressed this issue above. It is irrefutable that competitive markets have benefited customers tremendously over the past 30 years and there is nothing in this record or anywhere that I am aware of that suggests that the pattern of value creation will not continue under a restructured market.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S STATEMENT THAT THE COMPETITIVE MARKET IS NOW MATURE AND, IN PPL'S VIEW, THAT MEANS PPL'S COSTS TO SUPPORT RETAIL MARKETS SHOULD BE BORN BY EGSS AND THEIR SHOPPING CUSTOMERS?

A. This is such an audacious claim, it is difficult to know how to respond. My initial reaction is that clearly, the market is not mature. It is 30 years old, but it is not mature. Most notably, according to the Pennsylvania Office of Consumer Advocate's electricity shopping report, as of July 1, 2025, the last reporting period for which data is available, only 37.2% of PPL's residential customers are taking competitive supply.[2] The flip side

[2] See Pennsylvania Office of Consumer Advocate: https://www.oca.pa.gov/electric-shopping-guide-22/, July 2025 data.

of that is more telling of an immature market. PPL's default service is providing electricity to 62.8% of the residential customers. With one entity having a 62.8% market share of any product, the department of justice guidelines for market concentration would show that the electricity market in the PPL service territory has a Herfindahl-Hirschman Index greater than 3,900 (that is the score exclusive of all other suppliers in the market, which would only add to the index). According to the US Department of Justice, government agencies generally consider markets in which the HHI is in excess of 1,800 points to be highly concentrated.[3] Highly concentrated markets are not necessarily a measure of market maturity, but when after a deregulation initiative, a formerly regulated incumbent still maintains a 62.8% market share after restructuring the market, that is an indication of market immaturity.

Q. ASSUME THAT THE MARKET IS "MATURE" AS MS. NORDEN CLAIMS, WHAT DO YOU VIEW AS THE APPROPRIATE WAY FORWARD?

A. Of course, if the market is mature, then we should rid the market of a default service, and transition to a competitively provided Provider of Last Resort ("POLR") service model. We should free the distribution customers from the expense of including in their rates any amount for "default service" or competitive market enhancements controlled and operated by the historic monopoly provider. The market should fully transition to one where an independent entity warehouses customer data and the responsibility for supplying customers, billing customers and otherwise servicing customers should be the responsibility of the competitive market. PPL is not asking for that. It is only asking that

[3] See US Department of Justice Antitrust Division: https://www.justice.gov/atr/herfindahl-hirschman-index

suppliers pay for PPL's incurred costs for EDI transactions. If the market is mature, let it act maturely. If the market is not there, and we continue operating the market with a default service provider, the default service operator has to be responsible for its own costs. And, it is also worth noting that because the default service provider is the monopoly utility, it has the unique ability to seek full cost recovery from all of its distribution customers in rate cases such as this. This is appropriate, because as stated above, all customers benefit from the services of the default service utility. No competitive supplier has a similar option for cost recovery. Rather, each competitive supplier has to determine its own costs of providing service and balance that with what it can reasonably receive from its unique set of customers (or private investors) to fund its necessary operations.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S CLAIM THAT PPL'S PROPOSED WAY OF SHIFTING COSTS TO EGSS DOES NOT CREATE A COMPETITIVE BARRIER BECAUSE SHE CLAIMS COSTS WILL BE ASSESSED AT THE INDIVIDUAL EGS LEVEL?

A. The fatal flaw in PPL's proposal is that it will provide the monopoly EDC default service provider with another economic advantage over the competitive market suppliers because it would be receiving additional payment of its costs from third party entities. As noted in my direct testimony, EGSs already pay for their own EDI costs and, unlike PPL, they do not have a base of captive ratepayers from which to seek cost recovery. There is no justification to require them to also subsidize PPL's EDI costs which, as I discussed above, are an obligation emanating from the legislature when it created the competitive electricity markets and from the Commission as it has implemented the market as it is operated today. PPL already enjoys a 62.8% market share of the generation supply market. This is largely a factor of its historical monopoly provider role, its current default

service role and the funding of default service operations with distribution base rates. PPL's proposal to shift its EDI transactions costs to suppliers will increase suppliers' costs, which will in turn place negative pressure on the ability of suppliers to make competitive price offerings forcing more customers back to the subsidized default service, moving the market further from market maturity.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S TESTIMONY THAT THE FACT THAT EGSS ALSO INCUR EDI TRANSACTIONS COSTS "IS COMPARING APPLES TO ORANGES" AND IRRELEVANT TO PPL'S IMPOSITION OF ITS COSTS ON EGSS

A. Ms. Norden's argument is not convincing. She testifies "although EGSs may incur costs to 'develop EDI systems to communicate with EDCs' along with 'data management expenses,' that is not a reason to deny [PPL's] proposal. PPL Electric incurs costs similar to those costs, too, and they are different from the EDI transaction and DUNS testing fees that the Company proposes to assess to EGSs here. In other words, Mr. Lacey is comparing apples and oranges, and the EGSs' incurrence of these other costs should not determine who should bear the costs associated with the EDI transactions and DUNS testing." (PPL St. No. 18-R at 70-71). In simple words, Ms. Norden states that PPL incurs costs similar to the EGSs' costs for developing EDI systems and data management expenses but does not assess those costs to EGS. And, according to Ms. Norden, it does not matter if EGSs pay for their own transaction costs, EGSs should still <u>also</u> pay for PPL's transaction costs. My argument is not apples to oranges as it addresses cost responsibility for the same types of costs and of costs that the Commission has already determined are required to be incurred for the competitive market to be operated. Ms. Norden's argument is irrelevant. As noted previously, PPL is the default service provider and the only entity with access to the ratepayer funded customer systems necessary to run

the market. All customers benefit from the market and requiring each entity to bear its own EDI transaction costs is reasonable. Nothing that PPL has presented as evidence in support of its unprecedented proposal to shift these costs to EGSs has convinced me otherwise.

Q. HOW DO YOU RESPOND TO MS. NORDEN'S CLAIM THAT PPL'S PROPOSAL IS NECESSARY BECAUSE OF EGSS "INEFFICIENTLY USING THE COMPANY'S [RE]SOURCES" BASED ON AN ALLEGED "HIGH VOLUME OF REJECTED TRANSACTIONS FOR EGSS THAT FAIL TO FOLLOW EDI STANDARDS AND HAS UNNECESSARY ACCOUNT MAINTENANCE?"

A. This is a great example of the need for open dialog between suppliers and PPL. In this proceeding, PPL has not addressed any root causes for a high volume of rejected transactions. If I looked to a competitive market and saw that all, or a significant portion of the competitors were not communicating with my systems, my reaction would be to ask why and understand the root cause of the problem. Perhaps PPL could change something internally to address the cause of the problem. And maybe, with a productive dialog, efficient changes could be made to suppliers' systems. Instead, PPL is throwing blame at a group of companies without any analysis of the problem and asking EGSs to pay for the continuation of the problem. And, PPL is doing this in the face of actual real world evidence showing how PPL's own system failures can drive up the costs to competitive suppliers (not to mention customers) of attempting to continue to operate. (RESA St. No. 1 at 13). To be clear, EGSs incur costs for each transaction, just like PPL does. Unlike PPL, EGSs operate in a fiercely competitive market. It would be tremendously beneficial to PPL, the EGS and all customers if PPL engaged in a dialog and discovered and addressed the root cause(s) of the inefficient use of PPL's systems. This, among other reasons, is why the Commission should reject all of the proposed

changes to the Supplier tariff and compel PPL to engage with suppliers to understand the root cause of the EDI problems. In PPL's world, the problems can remain as long as the suppliers pay for them. That is bad policy and should be flatly rejected by the Commission.

III. PROCESSES FOR SUPPLIER OPERATION SUPPORT DURING IT UPGRADES

Q. PLEASE SUMMARIZE YOUR TESTIMONY REGARDING PPL'S PLANNED IT UPGRADE.

A. As explained more fully in my direct testimony, RESA is concerned about potential impacts to competitive suppliers as PPL moves forward to replace its customer information system ("CIS"), customer experience platform and enterprise resource planning system. Importantly, nothing in PPL's filing indicates that it intends to work with suppliers as it implements the various IT upgrades and it offers no information about how the IT upgrades will impact competitive suppliers or customers who enroll to receive service from EGSs. RESA has significant concerns about this as both my experience and the experience of many RESA members has demonstrated that such significant IT changes often have major impacts on supplier operations and the ability of customers to shop both during and after the transition. (RESA St. No. 1 at 11-12). I even discussed the well-documented and undisputed interruption to supplier operations of PPL's 2022 changes to its meter data management system and the experience of many RESA members regarding PECO's recent customer information systems upgrade. (RESA St. No. 1 at 13-14). With the goal of trying to avoid as many problems as possible later on with the operations of the competitive market and to enable productive coordination between PPL and suppliers, I proposed that PPL develop and implement processes to

work with competitive suppliers both before and throughout the IT upgrade process. (RESA St. No. 1 at 15).

Q. WHAT IS PPL'S RESPONSE TO YOUR SUGGESTIONS?

A. Mr. Johnson on behalf of PPL does acknowledge that the CIS "is foundational to facilitating all customer interactions, including retail choice" and "that it is important to provide adequate support during the Company's IT upgrades." (PPL St. No. 19-R at 5-6). Regarding my recommendation to ensure communication and coordination regarding competitive market operational issues during the upgrade,[4] Mr. Johnson posits that my recommendations: (1) are not necessary; (2) would result in "EGSs micromanaging the daily operations of the Company;" and, PPL "has planned for significant support to respond to and resolve any issues stemming from the implementation in a timely manner." (PPL St. No. 19-R at 4-6).

Q. WHAT IS YOUR RESPONSE TO MR. JOHNSON'S TESTIMONY REGARDING THE FORTHCOMING IT UPGRADES?

A. I believe he is not being realistic about the changes PPL is likely to face as a result of the upcoming IT upgrade or of the consequences (whether intended or not) to the operation of the competitive market. As noted in my direct testimony, there are numerous examples in Pennsylvania and other jurisdictions where CIS upgrades lead to negative consequences for the functioning of the competitive market. And, we have an example as recently as in 2022 for PPL. Shopping customers (customers of EGSs) were impacted by the fact that PPL failed to send bills to over 91,000 customer accounts and over 850,000

[4] I offered very specific recommendations related to the IT upgrade focused on creating a collaborative/open communication process between PPL and competitive suppliers. (RESA St. No. 1 at 15). I also offered substantive suggestions for PPL's consideration as part of its on-going IT upgrade. (RESA St. No. 1 at 4-5).

customers receiving estimated bills that were unusually high or low or containing missing or incomplete supplier charges. Working through these issues – generally caused solely by PPL's system changes – which caused the EDI transactions from PPL to EGSs to exponentially increase during this period of time, appears to have meant nothing to PPL. Communication with EGSs appears to have been then and continue to be now, a low priority for PPL. The point of RESA's recommendations on this issue here are to try to put systems in place to avoid such unnecessary difficulties and disruptions for customers in the future. RESA is not trying to micromanage PPL's daily operations. RESA fully supports enhanced systems at PPL to avoid competitive market operational difficulties in the future. Embarking upon such a significant IT upgrade and, given past experience, RESA also fully supports collegial communications from PPL to the EGS community during the transition process.

IV. OTHER SUGGESTIONS FOR CONSIDERATION DURING THE IT UPGRADE PROCESS

Q. APART FROM RECOMMENDING FUTURE PROCESSES TO SUPPORT COMPETITIVE SUPPLIERS DURING PPL'S ON-GOING IT UPGRADE, DID YOU MAKE OTHER RECOMMENDATIONS FOR CONSIDERATION?

A. Yes. I offered five substantive retail market focused suggestions that PPL should consider as it moves forward with its IT upgrade. These suggestions were meant to address issues that have real impact on competitive market issues and provide PPL actionable suggestions for operations issues that would support the competitive market if they were to be included as part of future IT upgrades. (RESA St. No. 1 at 4). These suggestions included:

1. an update to its data management systems to create an online portal where suppliers can access real-time data and "self-serve" and find out at any point in time, the status of their accounts, if they are active or inactive, dates of service, low income flags, move transactions, reinstatement transactions, bill cycle

calendar information, commercial meter flags, customer mailing address changes and any other information relative to EDC/EGS shared customers;

2. a migration of the NEM customer policies to be aligned with the other Pennsylvania EDCs;

3. establish a strict standard response time for supplier inquiries to no more than one (1) full business day;

4. add EDI functionality for supplier-initiated rebill cancellations; and

5. conduct an exercise to unbundle all of PPL's costs to serve customers and to allocate those costs appropriately to default service and distribution-only customers to facilitate a much more fair and competitive electricity market.

Q. DID YOU RECEIVE FEEDBACK FROM PARTIES ABOUT THESE SUGGESTIONS?

A. Yes. OCA Witness Alexander broadly stated that any proposed changes to the current EDI system functionality "would need to be documented and considered and . . . charged to EGSs and not non-shopping customers." (OCA St. No. 7-R at 6). Ms. Alexander also opposes any review of PPL's costs to serve customers to ensure they are allocated appropriately to default service and distribution-only customers. (OCA St. No. 7-R at 6). OCA Witness Johnson more fully examines this issue to conclude that the recommendation should be denied on the basis that I have "not identified the specific costs which should be removed" nor did I "set out proposed reallocation methods." (OCA St. No. 4-R at 13-15). On behalf of PPL, Ms. Norden raises opposition to considering any changes to its net energy metering ("NEM") policies or to establishing a strict standard response time for supplier inquiries to no more than one full business day. (PPL St. N. 18-R at 74-75). Also, on behalf of PPL, Mr. Johnson opposes consideration of any updates to its data managements systems to create an online portal where suppliers can access real-time data and 'self-serve.' (PPL St. No. 19-R at 2-3).

Q. HAS ANY OF THIS TESTIMONY PERSUADED YOU TO CHANGE YOUR INITIAL RECOMMENDATIONS?

A. No. Mr. Johnson's opposition to a centralized data portal where EGSs can access customer data is the precise reason that PPL's proposal to assess EDI costs to suppliers should be rejected. PPL opposes system improvements that would reduce costs for PPL and for suppliers, but is proposing that EGSs pay for PPL's transaction costs in an antiquated system. With respect to the review of PPL's cost allocations as to default service customers and distribution customers, that would be of great value to all customers by addressing a concern the advocates often raise – direct cost allocation. Ultimately, the specific suggestions for consideration that I offered about PPL's existing systems were meant to provide concrete examples of issues that are of importance to the functioning of the competitive market that would merit consideration by PPL and stakeholders as PPL goes forward in its IT upgrade. I did not recommend that any of these exercises be specifically adopted at this time but rather that they considered as part of PPL's on-going IT upgrade. I stand by my initial recommendations. Frankly, what PPL has proposed here, which is supported by OCA, focuses on ways to negatively impact the competitive market rather than how to support it. That is the wrong direction for customers.

V. <u>CONCLUSION</u>

Q. DOES THAT COMPLETE YOUR SURREBUTTAL TESTIMONY?

A. Yes.

VERIFICATION

I, Frank P. Lacey, hereby state that: (1) I am the founding principal of Electric Advisors Consulting, LLC; (2) the facts set forth in my testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

I. INTRODUCTION

Q. PLEASE STATE YOUR NAME AND CURRENT POSITION.

A. My name is Frank Lacey. I am the head of Electric Advisors Consulting, LLC

Q. HAVE YOU PREVIOUSLY PROVIDED TESTIMONY IN THIS PROCEEDING?

A. Yes. My Direct Testimony was served on December 22, 2025 pre-marked as RESA St. No. 1 and included RESA Exhibits FL-1 through FL-10.

Q. ARE YOU SPONSORING ANY EXHIBITS?

A. No.

Q. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

A. I am providing rebuttal testimony in response to Ms. Barbara Alexander on behalf of the Office of Consumer Advocate ("OCA") and Mr. Patrick Cicero on behalf of the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania ("CAUSE-PA") regarding the role of competitive electric generation suppliers ("EGSs") as it relates to the cost of energy supply paid by customers. These witnesses make certain recommendations that are harmful to customers and should be rejected.

Q. DID YOU ADDRESS THESE ISSUES IN YOUR DIRECT TESTIMONY?

A. No. This is a distribution rate proceeding. I did not believe that I needed to protect the concept of electricity market choice in this rate proceeding. PPL proposed some troubling changes to the supplier tariff, but they did not suggest anything that would eliminate customer choice.

Q. WHAT WERE THE PRIMARY CONCERNS ADDRESSED IN YOUR DIRECT TESTIMONY?

A. My testimony expressed opposition to the changes proposed by PPL to the Supplier tariff. In my opinion, this forum is not the appropriate forum to address changes to a supplier

tariff, especially changes of the magnitude and importance proposed by PPL. In addition, the proposed changes were largely unsupported by any testimony whatsoever, and to the extent that they were supported by testimony, the testimony did not include any analytics, policy arguments or facts that would warrant the proposed changes.

Q. DID ANY STAKEHOLDERS OFFER SUPPORT FOR PPL'S PROPOSED CHANGES TO THEIR SUPPLIER TARIFF?

A. Based on my review of the stakeholders' testimony, I did not see any support whatsoever for PPL's proposed changes to the supplier tariff.

Q. DOES YOUR LACK OF RESPONSE TO ANY PARTICULAR ISSUE RAISED BY THE OTHER PARTIES INDICATE YOUR ACCEPTANCE OF THEIR TESTIMONY?

A. No. While I have attempted to respond to the specific statements and recommendations made by the other parties' witnesses within the scope of my subject matter area, the failure to address any specific issues should not be viewed as my acceptance or endorsement of that testimony.

Q. PLEASE SUMMARIZE YOUR REBUTTAL TESTIMONY.

A. First, I will explain why I oppose recommendations which either ignore or remove the ability of low income customers to participate in the competitive market. More specifically, the recommendation of Ms. Alexander on behalf of OCA that customers with "an indicia of low-income" be excluded from the retail market. (OCA St. No. 7 at 31) should be rejected. I also caution against looking exclusively at enhancing and expanding low-income customer assistance programs to provide benefit to these customers as Mr. Cicero on behalf of CAUSE-PA recommends. (CAUSE-PA St. No. 1 at 132-133). Although I am not opposing specific suggestions by either witness to make electricity more affordable for the low-income customers, I will explain why both

witnesses miss the mark on affordability by ignoring market options and, in Ms. Alexander's case, by outright advocating the elimination of market options for low income customers.

Second, I will explain why Ms. Alexander's recommendation that the Commission direct PPL to conduct additional outreach and messaging to its residential customers "to alert them about the potential for higher EGS charges and how to find and take action in response to this information" (OCA St. No. 7 at 32) should also be rejected. As I will discuss, this type of direction is wholly unnecessary and in contradiction to the full settlement reached in PPL's last default service case which specifically addressed the parameters of PPL's communications with customers regarding shopping issues.

II. PROPOSALS TO DENY LOW INCOME CUSTOMERS THEIR RIGHT TO PARTICIPATE IN THE COMPETITIVE MARKET MUST BE REJECTED

Q. PLEASE EXPLAIN HOW MS. ALEXANDER'S ADVOCACY IN SUPPORT OF HER POSITION THAT LOW INCOME CUSTOMERS SHOULD BE DENIED COMPETITIVE MARKET ACCESS IGNORES THE POSITIVE ATTRIBUTES OF MARKET PARTICIPATION.

A. In her testimony, Ms. Alexander presents her conclusions regarding data provided by PPL to compare the EGS charges billed to its residential customers with the PPL's applicable default service rate.[1] (OCA St. No. 7 at 29-30). Ms. Alexander discusses the instances, based on this data set, where customers were charged higher than PPL's default service rate by EGSs. What Ms. Alexander does not discuss is that the data relied on by Ms. Alexander shows that in 2024, a group of approximately 21,000 low-income customers in aggregate, saved over $3.6 million compared to the default service rate in 2024. This equates to slightly more than $168 per customer per year in savings. The same

[1] *See* PPL Response to OCA-VII-12, Attachment 1 (2025) and Attachment 2 (2024).

data set shows that for the nine months ending September 2025 (partial year data), 22,893 low-income customers saved $4.2 million relative to PPL's default service rate, equating to approximately $184 in savings over just nine months of 2025 versus the default rate. These numbers can be conservatively extrapolated to suggest that these customers saved on average, approximately $230 for the full year in 2025. Collectively, over 250,000 residential customers paid nearly $94 million less than they would have paid to PPL for default service over that 21-month span.

Setting aside my very real concerns about attempting to draw conclusions about value to customers from participating in the competitive market based on point-in-time comparisons of just one factor, i.e. the price charged, this data shows unequivocally that customers can save money by participating in the competitive market. If, as Ms. Alexander recommends, this choice is taken away from these customers,[2] so too will this price saving opportunity. It seems reasonable that everyone should support the ability of customers to save money on electricity bills. Additionally, a more accurate comparison of the value of competition is a comparison to the price that customers would see in the absence of competition. Recent empirical evidence supports the view that the availability of retail competition lowers the costs of energy for all customers, including non-shopping customers.[3]

---

[2] I am informed that counsel will address legal arguments in briefs regarding the statutory right of customers to have direct access to the competitive market and the illegality of Mr. Alexander's proposal that the Commission should take a way this right for anyone with the undefined "indica" of low income.

[3] According to a 2025 study, Pennsylvania's Continued Success: Competition Maintains Low Electric Prices For All Residents, authored by John Hanger, a former Pennsylvania PUC Commissioner, PPL's default service prices in 2024, were 20% lower than the utilities electricity supply rate in 1996, when adjusted for inflation. That report notes "Restructuring has resulted in additional benefits beyond the original intent of reliability and cost-savings, such as carbon emission reductions, product innovation, and variety and most importantly, a robust market that responds to customer demand without the use of ratepayer dollars." That study can be found on the Public Utility Fortnightly website at:

Q. DOES THE TESTIMONY PRESENTED BY MR. CICERO SIMILARLY SHOW THAT SHOPPING CUSTOMERS COULD HAVE PAID LOWER PRICES FOR ELECTRICITY THAN IF THEY HAD STAYED ON PPL'S DEFAULT SERVICE?

A. Yes. Mr. Cicero testified that PPL's default service rate increased 20.3% between December 1, 2024 and December 1, 2025, from 10.77 cents to 12.95 cents per kWh. (CAUSE-PA St. No. 1 at 93, Table 23). If low-income customers were encouraged to enter into EGS contracts and were able to find a one-year contract at or near the 10.77 cent level after the 10.77 cent rate went into effect, they would have saved an average of $20 per month off of the higher default rate, or approximately $240 per year. PPL estimates that there are 347,822 low income customers in their service territory.[4] If all of those customers were on cost-savings contracts, the total savings could be more than $83.4 million.

Q. IS IT REALISTIC TO EXPECT THAT ALMOST 350,000 PEOPLE WILL MAKE THE SAME DECISION AT THE SAME TIME TO EXPERIENCE LOWER PRICED GENERATION SERVICE FROM THE COMPETITIVE MARKET?

A. While I realize this is highly improbable, the point of that exercise is to show that there are significant opportunities available to shopping customers, including low income customers. This opportunity is not hypothetical. The data accompanying Ms. Alexander's testimony shows that the savings are real and low-income customers have saved significant sums of money versus PPL's default service rate. Ms Alexander's recommendation of denying any customer with an indicia of low income the right to shop will prohibit them from achieving those savings. This is equivalent to telling a low-

https://www.fortnightly.com/sites/default/files/whitepapers/Pennsylvanias_Continued_Success_Competition_Maintains_Low_Electric_Prices_For_All_Residents.pdf.

[4] See PPL Response to CAUSE-PA I-11 attached as Appendix C to CAUSE-PA St. No. 1.

income customer shopping for groceries that they cannot go to a cost-saving warehouse store because there is a regular grocery store in their neighborhood.

Q. WHAT ARE YOUR CONCERNS ABOUT MR. CICERO'S PROPOSALS REGARDING THE LOW INCOME CUSTOMER ASSISTANCE PROGRAMS?

A. I am concerned that increased costs of these programs will result in increased costs to all other customers. Since this is a distribution rate case (and not a default service proceeding), I would encourage consideration of how to utilize distribution resources that to minimize costs to customers. To be clear, I am not opposed to expanding low-income support programs. Unfortunately, Mr. Cicero has not provided any analysis of the cost of his proposals and how those costs would be recovered. The lack of detail makes it difficult to form an opinion as to the merit of his proposals.

Q. PLEASE PROVIDE SOME EXAMPLES OF WHAT YOU MEAN REGARDING USING DISTRIBUTION RESOURCES TO MINIMIZE COSTS.

A. Mr. Cicero testifies that low-income households often lack the ability to control usage due to poor housing stock and older, less efficient appliances. (CAUSE-PA St. No. 1 at 30-31). Based on this, he testifies that it is critical that they have access to effective conservation tools capable of producing meaningful and lasting bill reductions. While I recognize the value of residential low income usage reduction programs as required by the Commission's regulations for low income customers,[5] it would be worthwhile to also explore policies that would create distribution solutions to the poor housing stock problem. Perhaps more effective might be a utility-funded, but market-based residential electricity storage program, or comprehensive home energy management program, allowing customers to contribute energy, capacity and ancillary services to the grid when

[5] 52 Pa. Code § 58.1.

needed. This would provide the participating customers with lower energy costs and provide system benefits to all customers. PPL could offer retail distributed energy resource ("DER") solutions that align with the Commission's NOPR on FERC Order No. 2222 integration.[6] The adage "if you give a man a fish, you feed him for a day, but if you teach a man to fish, you feed him for a lifetime" is fitting in this scenario. These types of programs will teach and incentivize customers to be better stewards of their electricity consumption and the grid and reduce the need for payment assistance over time. These programs could be targeted at low-income customers or the entire residential rate class. In the short-term, these programs will lead to lower capacity and energy costs resulting in near term savings for all customers. Long-term, these programs would potentially result in avoided transmission and/or distribution investment, resulting in incremental savings to all customers.

Typically, a utility would seek recovery for these types of programs in a traditional rate case. The Pennsylvania utilities collect an Act 129 rider that is used to fund energy efficiency and demand management programs. Perhaps that is why Mr. Cicero's testimony does not include any of the market-supported solutions for low-income customers to manage load and costs. I am not aware of any restriction on the ability of PPL to implement a market-based retail level DER program. These programs reduce costs for participating and non-participating customers. They should be part of any comprehensive effort to address the costs of electricity.

[6] See PA PUC Docket No. L-2023-3044115.

Q. PLEASE SUMMARIZE YOUR RESPONSE REGARDING MS. ALEXANDER AND MR. CICERO'S TESTIMONY ABOUT LOW INCOME AFFORDABILITY ISSUES.

A. Ms. Alexander's suggestion to exclude customers with indicia of low income from the retail market should be rejected. (OCA St. No. 7 at 31). The tools offered in the competitive electricity market are too powerful and too beneficial to customers to impose this type of restriction. Mr. Cicero's suggestions to increase funding for different low-income support programs should be modified or enhanced to consider how to utilize distribution resources that to minimize costs to customer, including allowing customers to contribute energy, capacity and ancillary services to the grid through retail DER or similar programs.

III. PROPOSALS TO REQUIRE PPL TO ENGAGE IN OUTREACH TO "ALERT CUSTOMERS" OF POTENTIAL FOR HIGHER EGS CHARGES MUST BE REJECTED

Q. WHAT DOES MS. ALEXANDER ON BEHALF OF OCA RECOMMEND REGARDING PPL OUTREACH TO RESIDENTIAL CUSTOMERS ABOUT EGS CHARGES?

A. Ms. Alexander recommends that PPL undertake "targeted outreach and education to its residential customers concerning high EGS charges and the impact of those charges on the customer's PPL Electric bill, payment plan, and collection actions." (OCA St. No 7 at 8-9 *emphasis added*). She further explains that this campaign should "alert" customers about "the potential for higher EGS charges" and "how to find and take action in response to this information" to include identifying any "web or text based option to return to default service." (OCA St. No. 7 at 32).

Q. DO YOU OPPOSE FAIR AND ACCURATE CUSTOMER EDUCATION ABOUT THE COMPETITIVE MARKET?

A. Absolutely not but that is not what Ms. Alexander is proposing. In fact, as it appears that we are entering into a period of constrained generation resources, I would encourage PPL to deliver strong messages to customers urging them to protect themselves with energy contracts from EGSs. Ms. Alexander's focus, unfortunately, is on "higher EGS charges" only and it appears to me to be more like a doom and gloom warning for customers who are considering shopping and not accurate information about competitive energy markets. As I discussed above, customers, including low-income customers, can and do save money on their electricity by shopping. However, there are a number of reasons why a customer may elect an EGS over the default service provider which may have nothing to do with price, or any comparison to a volatile default service price. Moreover, point-in-time pricing cannot accurately show whether a customer has achieved true cost savings over the period of any particular EGS contract given that the default service rate changes semi-annually and the EGS contract terms may include other incentives and or pricing structures that provide value over the long term.[7] The issue of how to educate consumers about shopping has been well considered and the subject of many Commission proceedings and processes over the past 30 years and it is inappropriate based only on Ms. Alexander's one-sided presentation of point-in-time (and undocumented) data from this one utility to rewrite those standards and procedures in the context of this proceeding.

[7] In addition, there are various costs and other factors that are not reflected in advertised default service rate, such as indirect or overhead costs. Other components of an EGS offer that may be of value to customers, include long-term price stability, renewable energy, charitable contributions and shopping rewards. None of this is factored

Q. HAS THE COMMISSION MORE RECENTLY ADDRESSED THE ISSUE OF CONSUMER EDUCATION FOR PPL'S SERVICE TERRITORY?

A. Yes. RESA's concerns about PPL's communications with customers were brought to the Commission's attention through a Petition for Declaratory Order that was initiated on November 30, 2022 at Docket No. P-2022-3036985 in which RESA has sought to eliminate misleading statements regarding comparisons between PPL's default service rates and EGS supply prices in the market and PPL's characterization of default service as the "lowest" or "best" rate available. Ultimately, the issues raised by RESA's petition were addressed during PPL's last default service proceeding at Docket No. P-2024-3047290 ("PPL DSP 6 Proceeding"). A full settlement was reached in the DSP 6 Proceeding which included the establishment of a collaborative process to "determine the timing, frequency, and content" of PPL's communications with EGS customers and includes specific timeframes for action as well as a process to submit the matter to the Commission's Office of Competitive Market Oversight ("OCMO") for a staff decision if consensus is not reached. As part of this commitment, PPL agreed not to send written communications to shopping customers during the collaborative process and agreed to make sure all suppliers have copies of final approved communications to EGS customers.[8] As part of the settlement, RESA withdrew its Petition for Declaratory Order. The Commission approved the proposed settlement without modification on November 7, 2024.[9]

[8] Joint Petition for Settlement at Section III, H, paragraph 24.

[9] *Petition of PPL Electric Utilities Corporation for Approval of a Default Service Program and Procurement Plan for the Period from June 1, 2025 through May 31, 2029 (DSP VI Program)*, Docket No. P-2024-3047290, Order entered November 7, 2024.

Q. BASED ON THIS DO YOU BELIEVE MS. ALEXANDER'S RECOMMENDATIONS REGARDING PPL'S COMMUNICATIONS WITH CUSTOMERS ABOUT EGSS SHOULD BE ADDRESSED HERE?

A. No, I do not, other than that the Commission should reject her proposal. Based on my reading of the settlement documents, the recommendation of the Administrative Law Judge, and the Commission's final order, the issue of PPL's communications with customers about EGSs appears to have been fully considered in the PPL DSP 6 Proceeding through a settlement, signed by OCA. While legal counsel will further address the legality of raising those previously litigated and settled issues in the context of this proceeding, my view is that Ms. Alexander raising these issues on behalf of OCA now is, at best, inappropriate. For all these reasons, Ms. Alexander's recommendations regarding communications by PPL to customers about EGSs should be summarily rejected.

IV. CONCLUSION

Q. DOES THAT COMPLETE YOUR REBUTTAL TESTIMONY?

A. Yes; however, I do reserve the right to supplement this testimony as may be appropriate.

VERIFICATION

I, Frank P. Lacey, hereby state that: (1) I am the founding principal of Electric Advisors Consulting, LLC; (2) the facts set forth in my testimony are true and correct (or are true and correct to the best of my knowledge, information and belief); and, (3) I expect to be able to prove the same at a hearing held in this matter. I understand that the statements herein are made subject to the penalties of 18 Pa. C.S. § 4904 (relating to unsworn falsification to authorities).

Exhibit MTL-3: Impact of PPL Electric Corporation's Proposed Increase in ROE vs. National Average ROE for Distribution Only Utilities (9.41%)

I. Introduction

Q. PLEASE STATE YOUR NAME, BUSINESS ADDRESS, AND OCCUPATION.

A. My name is Matthew T. Lyon. My business address is 814 Respect Drive, Bentonville, AR 72716. I am employed by Walmart Inc. ("Walmart") as a Senior Manager, Utility Partnerships – Regulatory.

Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS DOCKET?

A. I am testifying on behalf of Walmart.

Q. PLEASE DESCRIBE YOUR EDUCATION AND EXPERIENCE.

A. I hold multiple degrees and a graduate certificate relevant to my work in energy, supply chains, and sustainability. My education includes a B.A. in Philosophy from Spring Hill College in 2004, an M.B.A. in Supply Chain Management from the University of Arkansas Walton College of Business in 2014, a Master of Public Service (M.P.S.) from the University of Arkansas Clinton School of Public Service, also completed in 2014, and a Graduate Certificate in Tropical Forest Landscapes: Conservation, Restoration, and Sustainable Use from Yale University School of the Environment, obtained in 2021. My professional experience spans 15 years in corporate sustainability, with a strong focus on transportation electrification, utility partnerships, and greenhouse gas emissions reduction. In 2010 and 2011 I worked as an Oil Spill Field Researcher on behalf of the National Oceanic Atmospheric Administration collecting data for a U.S. government impact study related to the BP/Deepwater Horizon Oil Spill. In 2012, I consulted Pan-Himalayan Grassroots Development Foundation in Ranikhet, India on environmentally, economically,

and socially sustainable development initiatives. From 2012 to 2016, I was the Lead Research Manager at The Sustainability Consortium where I worked with global companies to address environmental and social supply chain issues. In 2016 and 2017, I was the Principal at Versio Consulting where I served as an internal consultant for Walmart's global sustainability team on transformative supply chains. From 2017 to 2019, I was Manager of Supply Chains at Environmental Defense Fund working with Walmart to drive impacts on issues such as energy and transportation logistics. In 2022, I joined Walmart as Senior Manager of Zero Emissions Fleet Strategy at Walmart Inc. working primarily to accelerate transportation electrification across internal fleet and public electric vehicle ("EV") charging. This involved distilling corporate goals, state-level compliance, incentives, and public utility regulatory proceedings into actionable plans. In 2024, I joined the Utility Partnerships – Regulatory team to support Walmart's intervention in public utility commission dockets focusing on transportation electrification, EV rates, Vehicle-to-Grid ("V2G"), Community Solar, and near-grid generation and energy storage systems. My Witness Qualifications Statement is attached as Exhibit MTL-1.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION ("COMMISSION")?

A. No.

Q. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE OTHER STATE REGULATORY COMMISSIONS?

A. Yes, I have submitted testimony with the state regulatory commissions in Indiana, Michigan, and New York. My testimony has addressed topics including, but not limited to, cost of service and rate design, return on equity ("ROE"), revenue requirements, and EV rates.

Q. ARE YOU SPONSORING EXHIBITS IN YOUR TESTIMONY?

A. Yes. I am sponsoring the Exhibits listed in the Table of Contents.

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS IN PENNSYLVANIA.

A. As shown on Walmart's website, Walmart operates 159 retail units, 11 supply chain facilities, and employs nearly 60,000 associates within the Commonwealth of Pennsylvania.[1] In fiscal year ending 2025, Walmart purchased $17.5 billion worth of goods and services from Pennsylvania-based suppliers, supporting over 131,000 supplier jobs.[2]

Q. PLEASE BRIEFLY DESCRIBE WALMART'S OPERATIONS WITHIN THE SERVICE TERRITORY FOR PPL ELECTRIC UTILITIES CORPORATION ("PPL" OR "COMPANY").

A. Walmart has approximately 37 retail stores, four distribution centers, six fuel stations, and related facilities located within PPL's service territory in Pennsylvania. These facilities are served on the Small General Service-Secondary ("GS-1"), Large

[1] https://corporate.walmart.com/about/location-facts/united-states/pennsylvania
[2] *Id.*

General Service-Secondary ("GS-3"), and Large General Service-Primary ("LP-4") class rate schedules.

II. Purpose of Testimony and Summary of Recommendations

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. The purpose of my testimony is to respond to PPL's Tariff Electric – Pa. P.U.C. No. 202 filed in this docket on August 29, 2025, along with supporting testimony, in which the Company is proposing an increase in its electric distribution rates and to provide recommendations to assist the Commission in its thorough and careful consideration of the Company's proposed rate increase, including the impact on customers. Specifically, my Direct Testimony addresses: (i) the ROE proposed by the Company; (ii) the cost of service study ("COSS") and revenue allocation proposed by the Company; (iii) specific rate structure changes, (iv) proposed changes to compensation for solar energy produced by customer-generators; and (v) the need for the Company to offer a tariff specifically for public direct current fast charging ("DCFC") EV charging.

Q. IN SETTING THE REVENUE REQUIREMENT AND ROE FOR THE COMPANY, SHOULD THE COMMISSION CONSIDER THE IMPACT OF THE ASSOCIATED RATE INCREASE ON BUSINESS CUSTOMERS?

A. Yes. Electricity is a significant operating cost for retailers such as Walmart. When electric rates increase, the increased cost to retailers can put pressure on consumer prices and on the other expenses required by a business to operate. The Commission should thoroughly and carefully consider the impact on customers, including

business customers, in examining the requested revenue requirement and ROE to ensure that any increase in the Company's rates is the minimum amount necessary to provide safe, adequate, and reliable service, while also providing PPL the opportunity to recover its reasonable and prudent costs and earn a reasonable return on its investment.

Q. PLEASE SUMMARIZE WALMART'S RECOMMENDATIONS TO THE COMMISSION.

A. Walmart's recommendations to the Commission are as follows:

(1) The Commission should reject the 11.30 percent ROE requested by the Company. When setting the ROE for the Company, the Commission should thoroughly and carefully consider the impact on customers associated with the approved ROE, in addition to all other facets of this case, to ensure that any increase in the Company's rates reflects the minimum amount necessary to compensate the Company for adequate and reliable service, while also providing the Company an opportunity to earn a reasonable return for its shareholders.

(2) The Commission should closely examine the Company's proposed revenue requirement increase and the associated ROE in light of:

(a) The customer impact of the resulting revenue requirement increase;

(b) ROEs approved by other utility regulatory commissions nationwide, which do not support the Company's requested ROE; and

(c) The Company's use of a fully projected future test year ("FPFTY"), which reduces the risk due to regulatory lag based on the inclusion

of the most current information in the Company's rates when they will be in effect.

(3) Walmart does not take a position on the Company's proposed COSS at this time. However, to the extent that alternative cost of service methodologies or modifications to the Company's methodology are proposed by other parties, Walmart reserves the right to address any such changes in accordance with the Commission's procedures in this docket.

(4) At the Company's proposed revenue requirement, Walmart does not oppose the Company's revenue allocation proposal at this time, which includes mitigation measures to adjust the resulting revenue allocation based on cost of service results.

(5) If the Commission determines that the appropriate revenue requirement is less than the revenue requirement proposed by the Company, then to the extent that rate classes are not at their cost of service levels, the Commission should take steps to further reduce interclass subsidies. To do this, starting with the third revenue allocation proposed by the Company, the Commission should allocate 50 percent of the overall revenue reduction to the rate classes currently below their cost of service levels, ensuring that no class receives an increase that exceeds their cost of service levels. The remaining 50 percent of the overall revenue reduction should be evenly applied to mitigate the proposed increases for all rate classes on an equal percentage basis.

(6) Walmart does not take a position on the Company's proposed rate design changes for the GS-3 and LP-4 rates at this time. However, to the extent that an alternative rate design for either the GS-3 or LP-4 rates or modifications to the Company's rate designs are proposed by other parties, Walmart reserves the right to address any such changes in accordance with the Commission's procedures in this docket.

(7) Walmart respectfully recommends that the Commission reject PPL's proposal to change how customer-generators are classified under the Generation Supply Charge ("GSC"), as it would:

(a) Abruptly and sharply shift customer-generators above 100 kW to hourly Locational Marginal Pricing ("LMP")-based kWh generation valuation under GSC-2, which would fundamentally change project value propositions; and

(b) Disincentivize generation in PPL's service territory at a time when capacity markets are seeing extremely high prices and forecasts are trending toward increasing demand.

(8) In light of the growth of EVs around the country, Walmart recommends that the Commission require the Company to work with interested stakeholders to develop a new EV tariff that encourages investment specifically for third party-owned public-facing DCFC EV stations and to seek Commission approval of such no later than one year from the date of the final order in this case.

Q. DOES THE FACT THAT YOU MAY NOT ADDRESS AN ISSUE OR POSITION ADVOCATED BY THE COMPANY INDICATE WALMART'S SUPPORT?

A. No. The fact that an issue is not addressed herein or in related filings should not be construed as an endorsement of, agreement with, or consent to any filed position.

III. Revenue Requirement and ROE

(A) Revenue Requirement and Requested ROE

Q. WHAT IS YOUR UNDERSTANDING OF THE COMPANY'S PROPOSED REVENUE REQUIREMENT INCREASE IN THIS DOCKET?

A. My understanding is that the Company proposes a total annual base rate electric operating revenue increase of approximately $356.3 million, or 33.42 percent.[3] The Company provided in its filing data from two different time periods, being (i) historic test year ("HTY") ending June 30, 2025; and (ii) FPFTY ending June 30, 2027, with its proposed rate increase being based on the adjusted FPFTY.[4]

Q. WHAT IS THE COMPANY'S PROPOSED ROE IN THIS DOCKET?

A. The Company proposes an ROE of 11.30 percent based on an adjusted range of 10.30 percent to 12.35 percent.[5] The proposed capital structure is 56.05 percent equity and 43.95 percent debt.[6] The cost of long-term debt is calculated to be 5.08

[3] *See* Direct Testimony of Christine M. Martin ("Martin Direct"), p. 8, lines 7-10.
[4] *See* Direct Testimony of Direct Testimony of Dennis A. Urban, Jr. ("Urban, Jr. Direct"), p. 3, line 22 to p. 4, line 5.
[5] *See* Direct Testimony of Jennifer E. Nelson ("Nelson Direct"), p. 3, lines 15-17.
[6] *See id.* at 4, lines 3-6.

percent.[7] The Company is proposing a weighted average cost of capital ("WACC") of 8.56 percent.[8]

Q. IS WALMART CONCERNED THAT THE COMPANY'S PROPOSED ROE IS EXCESSIVE?

A. Yes. Walmart is concerned that the Company's proposed total ROE of 11.30 percent is excessive, especially in light of:

1) The customer impact of the resulting revenue requirement increase, as discussed in more detail below;

2) ROEs approved by other utility regulatory commissions nationwide, as discussed more fully below, which do not support the Company's requested ROE; and

3) The Company's use of an FPFTY, which reduces the risk due to regulatory lag based on the inclusion of the most current information in the Company's rates when they will be in effect.

[7] *See* Direct Testimony of Julissa Burgos ("Burgos Direct"), p. 3, lines 19-20.
[8] *See* Direct Testimony of Daniel S. Dane ("Dane Direct"), p. 7, lines 18-21.

(B) State and National Utility Industry ROE Trends

Q. IS THE COMPANY'S PROPOSED 11.30 PERCENT ROE SIGNIFICANTLY HIGHER THAN THE AVERAGE APPROVED ROE FOR INVESTOR-OWNED UTILITIES IN THE STATE OF PENNSYLVANIA?

A. In recent orders, approved ROEs have not been specifically provided by the Commission, and therefore an average cannot be calculated.

Q. IS THE COMPANY'S PROPOSED 11.30 PERCENT ROE SIGNIFICANTLY HIGHER THAN THE ROEs APPROVED BY OTHER UTILITY REGULATORY COMMISSIONS IN 2023, 2024 AND SO FAR IN 2025?

A. Yes. According to data from S&P Global Market Intelligence ("S&P Global"), a financial news and reporting company, the average of the 116 reported electric utility rate case ROEs authorized by commissions to investor-owned utilities in 2023, 2024, and so far in 2025, is 9.67 percent.[9] The range of reported authorized ROEs for the period is 8.63 percent to 11.45 percent, and the median authorized ROE is 9.68 percent.[10] The average and median values are significantly below the Company's proposed ROE of 11.30 percent. As such, the Company's proposed 11.30 percent ROE is counter to broader electric industry trends.

[9] *See* Exhibit MTL-2.
[10] *See id.*

Q. SEVERAL OF THE REPORTED AUTHORIZED ROEs ARE FOR VERTICALLY INTEGRATED UTILITIES. WHAT IS THE AVERAGE AUTHORIZED ROE IN THE REPORTED GROUP FOR DISTRIBUTION ONLY UTILITIES?

A. In the group reported by S&P Global, the average ROE for distribution only utilities authorized from 2023 through present is 9.41 percent.[11] The average ROE authorized for distribution only utilities in 2023 was 9.24 percent; in 2024, it was 9.53 percent; and thus far in 2025, it is 9.51 percent.[12] As such, the Company's proposed 11.30 percent ROE is counter to broader electric industry trends and, in fact, as shown in Figure 1, would be the highest approved ROE (out of 31) for a distribution only utility from 2023 to present, if approved by the Commission.

[11] *See id.*
[12] *See id.*

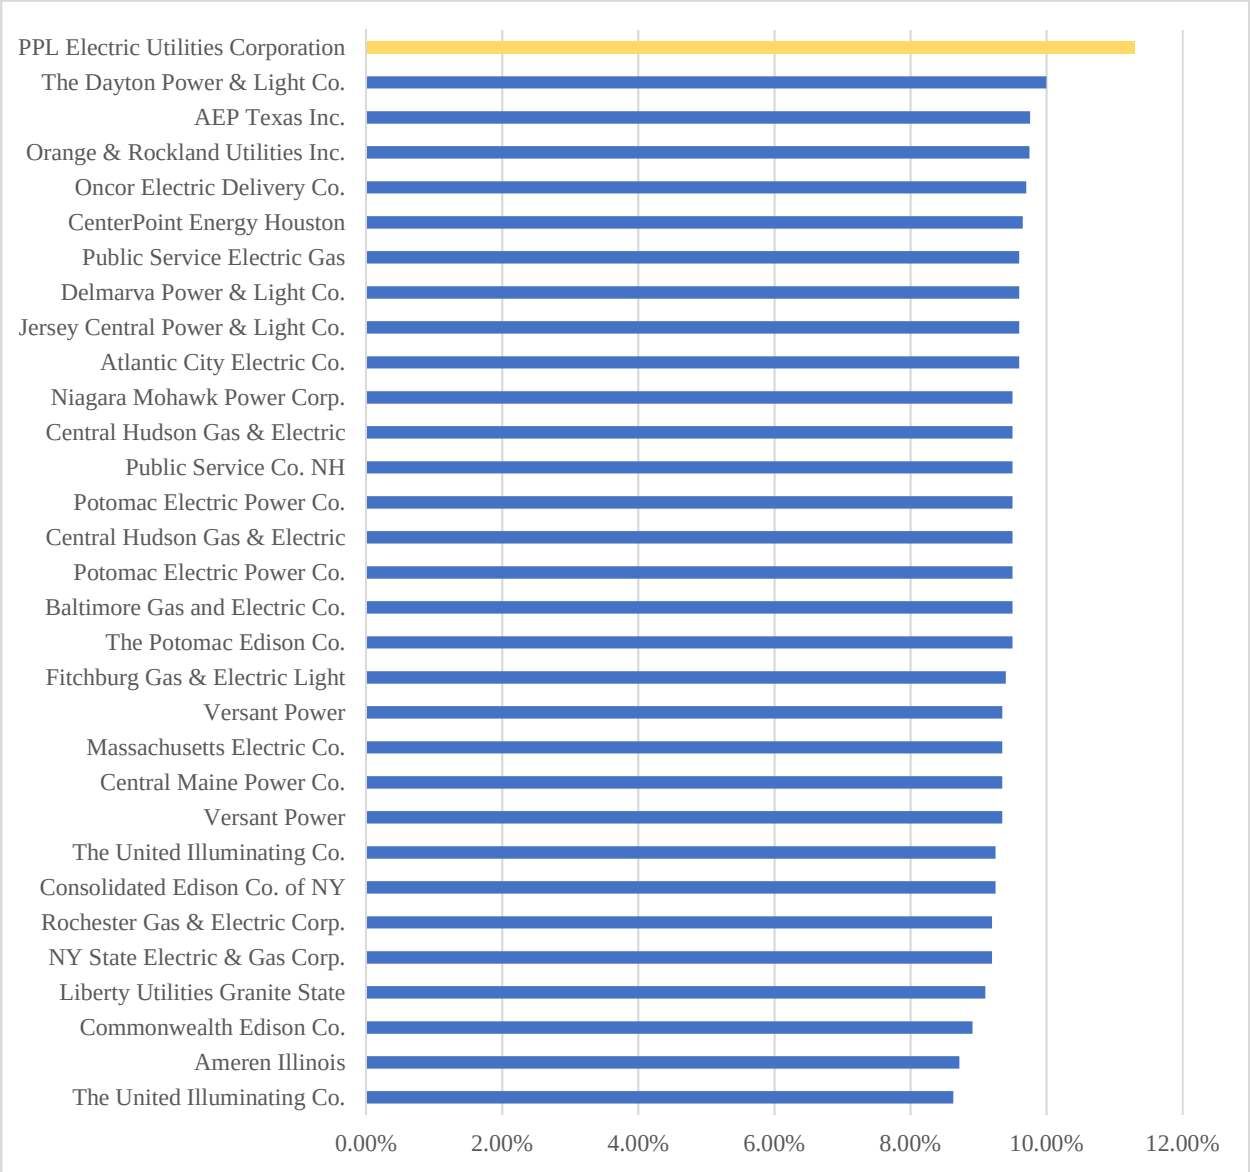

Figure 1. PPL's Proposed ROE Versus Authorized ROEs for Distribution Only Utilities, 2023 to present. Source: Exhibit MTL-2.

Q. WHAT IS THE REVENUE REQUIREMENT IMPACT WERE THE COMMISSION TO APPROVE AN ROE FOR THE COMPANY EQUIVALENT TO 9.41 PERCENT, THE AVERAGE AUTHORIZED ROE NATIONWIDE IN 2023, 2024, AND SO FAR IN 2025 FOR DISTRIBUTION ONLY UTILITIES?

A. If the Commission were to approve an ROE for the Company of 9.41 percent, versus the Company's proposal of 11.30 percent, it would result in a reduction in the Company's total proposed revenue requirement, inclusive of taxes, of approximately $80.9 million, or 22.70 percent.[13]

Q. IS WALMART RECOMMENDING THAT THE COMMISSION BE BOUND BY ROEs AUTHORIZED BY OTHER STATE REGULATORY COMMISSIONS?

A. No. Decisions of other state regulatory commissions are not binding on the Commission. Additionally, each state regulatory commission considers the specific circumstances in each case in its determination of the proper ROE. Walmart is providing this information to illustrate a national customer perspective on industry trends in authorized ROEs.

[13] *See* Exhibit MTL-3.

(C) Walmart's Recommendation

Q. WHAT IS YOUR RECOMMENDATION TO THE COMMISSION IN REGARD TO THE COMPANY'S PROPOSED ROE?

A. The Commission should thoroughly and carefully consider the impact on customers in setting the ROE, in addition to all other facets of this case, to ensure that any increase in the Company's rates reflects the minimum amount necessary to compensate the Company for adequate and reliable service, while also providing PPL an opportunity to earn a reasonable return for its shareholders.

Specifically, the Commission should closely examine the Company's proposed revenue requirement increase and the associated ROE in light of:

1) The customer impact of the resulting revenue requirement increase;
2) ROEs approved by other utility regulatory commissions nationwide, which do not support the Company's requested ROE; and
3) The Company's use of an FPFTY, which reduces the risk due to regulatory lag based on the inclusion of the most current information in its rates when they will be in effect.

IV. Cost of Service, Revenue Allocation, and Rate Design

(A) Cost of Service

Q. GENERALLY, WHAT IS WALMART'S POSITION ON SETTING RATES BASED ON THE UTILITY'S COST OF SERVICE?

A. Walmart advocates that rates be set based on the utility's cost of service for each rate class. This produces equitable rates that reflect cost causation, sends proper price signals, and minimizes price distortions.

Q. DOES WALMART TAKE A POSITION ON THE COMPANY'S PROPOSED COST OF SERVICE METHODOLOGY AT THIS TIME?

A. No. However, to the extent that alternative cost of service methodologies or modifications to the Company's methodology are proposed by other parties, Walmart reserves the right to address any such changes in accordance with the Commission's procedures in this docket.

(B) Revenue Allocation

Q. HOW DOES THE COMPANY PROPOSE TO ALLOCATE REVENUE AMONG THE CUSTOMER CLASSES?

A. The Company is proposing to move the rate of return for each customer class at or very near the system average return. This approach is intended to more fully align updated rates with cost of service;[14] however, the Company also considered customer affordability and, as a result, determined that the percentage rate increases assigned to individual customer classes should be moderated to mitigate the bill

[14] *See* Direct Testimony of Bickey Rimal ("Rimal Direct"), p. 21, lines 8-12.

impacts on any one class.[15] In order to achieve this goal, the Company has proposed rate increases to the following schedules that Walmart is on: GS-1 (SC&I), GS-3 (SC&I), and LP-4 (LC&I).[16]

Q. WHAT IS WALMART'S REVENUE ALLOCATION RECOMMENDATION TO THE COMMISSION AT THE COMPANY'S PROPOSED REVENUE REQUIREMENT?

A. At the Company's proposed revenue requirement, Walmart does not oppose the Company's proposal at this time, which includes mitigation measures to adjust the resulting revenue allocation based on cost of service results.

Q. WHAT IS WALMART'S RECOMMENDATION TO THE COMMISSION IF THE COMMISSION DETERMINES THAT A LOWER REVENUE REQUIREMENT IS APPROPRIATE?

A. If the Commission determines that the appropriate revenue requirement is less than the revenue requirement proposed by the Company, then to the extent that rate classes are not at their cost of service levels, the Commission should take steps to further reduce interclass subsidies. To do this, starting with the third revenue allocation proposed by the Company, the Commission should allocate 50 percent of the overall revenue reduction to the rate classes currently below their cost of service levels, ensuring that no class receives an increase that exceeds their cost of service levels. The remaining 50 percent of the overall revenue reduction should be

[15] *See id.*
[16] *See* Exhibit Fully Projected Future 1 – Summary of Rate Base & Rate of Return, Section A-1, p. 13.

evenly applied to mitigate the proposed increases for all rate classes on an equal percentage basis.

V. Rate Design

(A) GS-3 Rate

Q. DOES THE COMPANY PROPOSE TO MAKE ANY STRUCTURAL CHANGES TO THE GS-3 RATE?

A. The Company is not proposing any structural changes to Rate GS-3; however, it does propose to increase the monthly fixed customer charge from $60.00 to $78.00 per bill.[17] The Company also plans to increase the demand charge from $3.985/kW to $5.272/kW.[18] Based on my understanding, the Company's proposal would bring the demand charge for the GS-3 rate significantly closer to the cost-based charge of 5.369/kW.[19]

Q. DOES WALMART TAKE A POSITION ON THE COMPANY'S PROPOSED RATE DESIGN FOR THE GS-3 RATE AT THIS TIME?

A. No. However, to the extent that an alternative rate design for the GS-3 rate or modifications to the Company's rate design are proposed by other parties, Walmart reserves the right to address any such changes in accordance with the Commission's procedures in this docket.

[17] *See* Direct Testimony of Steven W. Wishart ("Wishart Direct") p. 16, Table 10.
[18] *See id.*
[19] *See id.*

(B) LP-4 Rate

Q. DOES THE COMPANY PROPOSE TO MAKE ANY STRUCTURAL CHANGES TO THE LP-4 RATE?

A. The Company is not proposing any structural changes to the LP-4 rate; however, it does propose to increase the customer charge from $169.80 to $235.00 per bill.[20] The Company also plans to increase the demand charge from $2.547/kW to $3.881/kW.[21] Based on my understanding, the Company's proposal would bring the demand charge for the LP-4 rate significantly closer to the cost-based charge of $3.907/kW.[22]

Q. DOES WALMART TAKE A POSITION ON THE COMPANY'S PROPOSED RATE DESIGN FOR THE LP-4 RATE AT THIS TIME?

A. No. However, to the extent that an alternative rate design for the LP-4 rate or modifications to the Company's rate design are proposed by other parties, Walmart reserves the right to address any such changes in accordance with the Commission's procedures in this docket.

[20] *See id.* at 18, Table 12.
[21] *See id.*
[22] *See id.*

VI. Customer-Generator Compensation

Q. WHAT IS YOUR UNDERSTANDING OF THE COMPANY'S PROPOSED CHANGES TO COMPENSATION FOR SOLAR ENERGY PRODUCED BY CUSTOMER-GENERATORS?

A. The Company proposes significant changes to how customer-generators are classified under the GSC rate structure. The Company seeks to classify customers on the GSC into two distinct categories: Rate GSC-1 (Small Commercial and Industrial – < 100 kW) and GSC-2 (Large Commercial and Industrial – > 100 kW), based on their maximum registered peak load and PPL's revised definition of maximum registered peak load in the proposed tariff.

Q. IS THIS CHANGE A CONCERN FOR WALMART?

A. Yes. Walmart has long had aggressive and significant company-wide renewable energy goals, and on September 21, 2020, Walmart announced new targets as a part of its sustainability goals, including: (1) to be supplied 100 percent by renewable energy by 2035; and (2) zero carbon emissions in its operations, including its transportation fleet vehicles, without the use of offsets, by 2040. Walmart has also set a goal to transition to zero emission buildings by deploying low-impact refrigerants for cooling and electric equipment for heating by 2040.[23] Additionally, on January 9, 2024, Walmart announced a goal to bring 10 GW of new clean energy projects online by the end of 2030, including 1 GW of new onsite solar plus storage, and enabling 2 GW of new community solar projects.[24]

[23] https://corporate.walmart.com/news/2020/09/21/walmart-sets-goal-to-become-a-regenerative-company.
[24] *Walmart Keynote at CES 2024* (Jan. 9, 2024) https://tech.walmart.com/content/dam/walmart-global-tech/documents/Walmart%20CES%20Keynote%20Script%20Transcript_1.9.24.pdf.

In support of these goals, Walmart actively evaluates onsite solar opportunities across the United States. These analyses rely on a clear, stable understanding of the value of each kilowatt-hour of onsite generation. In Pennsylvania, the benchmark has historically been the Price-To-Compare ("PTC") under GSC-1, which captures the avoidable, volumetric components of retail service. The proposed shift to hourly LMP-based valuation under GSC-2 would fundamentally change this value proposition and could significantly impact customer-generators' ability to develop positive-value solar projects in PPL's territory.

Q. DOES PENNSYLVANIA HAVE AN OVER-SUPPLY OF GENERATION THAT WOULD JUSTIFY DISINCENTIVIZING ONSITE SOLAR DEVELOPMENT PROJECTS IN PPL'S TERRITORY?

A. No. There is no evidence suggesting that Pennsylvania has an over-supply of generation that would justify disincentivizing onsite solar development in PPL's territory. To the contrary, market and monitor reports show tightening trends and localized risks – not broad oversupply. Monitoring Analytics and PJM Interconnection, LLC ("PJM") analyses have documented tightening fundamentals, price signals of scarcity in recent capacity auctions, and scenarios where local constraints or retirements could cause shortfalls – especially if demand grows faster than expected.[25]

[25] *Activities of the Market Monitoring Unit 2024*, Monitoring Analytics (Dec. 15, 2025) https://www.monitoringanalytics.com/reports/Reports/2025/IMM_Activities_Report_2024_20251215.pdf.

Q. WOULD ONSITE SOLAR PROJECTS THAT ARE CURRENTLY IN VARIOUS PHASES OF DEVELOPMENT BE NEGATIVELY IMPACTED BY THE COMPANY'S PROPOSAL?

A. Yes. Changing the classification of customer-generators under the GSC without robust transition protections would retroactively alter the economics of those investments. Approving such an abrupt and sharp reclassification would create stranded value for customers who acted reasonably under the current rules.

Q. WHAT IS WALMART'S RECOMMENDATION TO THE COMMISSION ON THE COMPANY'S PROPOSAL TO CHANGE HOW CUSTOMER-GENERATORS ARE CLASSIFIED UNDER THE GSC RATE STRUCTURE?

A. Walmart respectfully recommends that the Commission reject PPL's proposal to change how customer-generators are classified under the GSC, as it would:

(a) Abruptly and sharply shift customer-generators above 100 kW to hourly LMP-based kWh generation valuation under GSC-2, which would fundamentally change project value propositions; and

(b) Disincentivize generation in PPL territory at a time when capacity markets are seeing extremely high prices and forecasts are trending toward increasing demand.

VII. Public DCFC EV Distribution Charging Rate

Q. DOES THE COMPANY CURRENTLY OFFER OR PROPOSE TO OFFER IN THIS DOCKET A DISTRIBUTION RATE SPECIFICALLY FOR THIRD PARTY-OWNED PUBLIC DCFC EV STATIONS?

A. To the best of my knowledge, the Company does not currently offer distribution rates specifically for third party-owned public DCFC EV stations.

Q. DOES WALMART SUPPORT THE NEED FOR THIRD PARTY-OWNED DCFC EV RATE DESIGN?

A. Yes. Walmart supports DCFC EV charging rates that are specifically designed for public charging at third-party locations.

Q. WHY DOES WALMART BELIEVE THAT THE COMPANY SHOULD OFFER A RATE FOR THIRD-PARTY OWNED PUBLIC DCFC EV STATIONS?

A. Building a strong public network of direct current ("DC") fast chargers is essential for supporting the EV industry and encouraging the transition to EVs. This network helps eliminate range anxiety and other challenges that EV drivers face when charging, making the experience more comparable to refueling a traditional gasoline car. To meet the growing need for EV chargers in the Company's service area, the number of public-facing DC fast chargers must increase. This requires new initiatives and rate structures to build a robust public DCFC network. Discussed in more detail below, a key factor in attracting third-party investment in these public chargers is offering specific EV-friendly rate options.

Q. DOES WALMART HAVE EXPERIENCE IN THE EV CHARGING SPACE?

A. Yes. Walmart has substantial experience with offering EV charging to its customers and is actively growing its presence in the EV charging space. Specifically, Walmart currently hosts more than 1,200 public DCFCs at 285 different locations across 43 states. Walmart opened its first Walmart-owned and operated charging station in McKinney, Texas[26] in March 2025, and since then it has opened several more stations in Arizona, Florida, Texas and Oklahoma. The base configuration of its charging stations is eight stalls supplied by four 400 kW units with two handles each. Depending on the site, additional units may be added. Walmart retail sites are ideally situated for EV charging stations because of their large parking lots, easy public access, and multi-site locations.

Q. WHY HAS WALMART DECIDED TO PARTICIPATE IN THE PUBLIC DCFC EV SPACE?

A. In support of its clean energy and carbon reduction goals, Walmart is committed to building its own EV fast charging network, which also supports the growth of the nation's overall EV infrastructure. By installing fast charging stations at thousands of locations, Walmart supports EV drivers in local communities and along major travel corridors, a crucial combination for encouraging more people to choose an electric vehicle. Walmart is proud to offer EV fast charging as a convenient, reliable, and affordable service for its current EV-driving customers, as well as future EV drivers.

[26] https://www.walmart.com/store/206-mckinney-tx/ev-charging-station

Q. ARE ELECTRIC RATES A FACTOR THAT WALMART CONSIDERS WHEN INSTALLING OR SITING EV CHARGING INFRASTRUCTURE AT ITS FACILITIES?

A. Yes. Walmart seeks to balance the risks and costs of installing and maintaining a particular EV fast charging station, which is informed, in part, by the tariff under which the electricity is provided from the utility to the owner of the EV fast charging station.

Q. ARE THERE CERTAIN EV RATE STRUCTURES THAT THE COMMISSION SHOULD CONSIDER WITH REGARD TO THIRD PARTY-OWNED PUBLIC DCFC EV STATIONS?

A. Yes. The Company should offer a rate structure that encourages investment for business customers who are interested in owning and operating public DCFC equipment and EV stations. These rates should be volumetric in nature and created in such a way to recover the utility's cost without cross subsidization while also providing the best use case for the DCFC owner operator.

Q. SHOULD THE COMMISSION REQUIRE THE COMPANY TO DEVELOP AN EV CHARGING-SPECIFIC RATE FOR THIRD PARTY-OWNED PUBLIC DCFC EV STATIONS?

A. Yes, it should. In the short term, public EV charging-specific rates are needed to support third-party investment in EV charging equipment. As an investor in EV charging equipment for both the public and for its own private fleet, Walmart understands how EV charging rates can either promote or impede EV charging investment and user experience. While the EV industry continues to grow, there

will still be a ramp-up to sufficient EV adoption to support an extensive public EV charging network. This will create geographical locations where public EV chargers are either not being used or are used infrequently. For these under-utilized chargers that are being billed by the utility under a more traditional rate tariff with a demand charge, the charger operator may be assessed the maximum demand charge even after only a single use of that charging unit regardless of whether there is any additional charging during that month. This outcome negatively impacts the economics for that unit and may lead to little or no third-party investment in public EV chargers sited in areas of initial low usage.

Q. WHAT IS WALMART'S RECOMMENDATION TO THE COMMISSION WITH REGARD TO DEVELOPING AN EV RATE SPECIFICALLY FOR THIRD PARTY-OWNED PUBLIC DCFC EV STATIONS?

A. Walmart recommends that the Commission require the Company to work with interested stakeholders to develop a new EV tariff that encourages investment specifically for third party-owned public-facing DCFC EV stations and to seek Commission approval of such no later than one year from the date of the final order in this case.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes.

FILED TESTIMONY
2025

New York Public Service Commission Case 25-G-0380, Proceeding on motion of the Commission as to the rates, charges, rules and regulations of Rochester Gas and Electric corporation for gas service.
Issue: General rate case.

New York Public Service Commission Case 25-E-0379, Proceeding on motion of the Commission as to the rates, charges, rules and regulations of Rochester Gas and Electric corporation for electric service.
Issue: General rate case.

New York Public Service Commission Case 25-G-0378, Proceeding on motion of the Commission as to the rates, charges, rules and regulations of New York State Electric & Gas corporation for gas service.
Issue: General rate case.

New York Public Service Commission Case 25-E-0375, Proceeding on motion of the Commission as to the rates, charges, rules and regulations of New York State Electric & Gas corporation for electric service.
Issue: General rate case.

Michigan Public Service Commission Case No. U-21860: In the matter of the Application of DTE ELECTRIC COMPANY for authority to increase its rates, amend its rate schedules and rules governing the distribution and supply of electric energy, and for miscellaneous accounting authority.
Issue: General rate case.

State Of Indiana Utility Regulatory Commission Cause No. 46258: Petition Of Indianapolis Power & Light Company D/B/A AES Indiana ("AES Indiana") For Authority To Increase Rates And Charges For Electric Utility Service Through A Phase-In Rate Adjustment; And For Approval Of Related Relief, Including (1) Revised Depreciation Rates, Including Cost Of Removal Less Salvage And Updated Depreciation Expense; (2) Accounting Relief, Including Deferrals And Amortizations, (3) Inclusion Of Capital Investment, (4) Rate Adjustment Mechanism Proposals, Including A New Property Tax Rider, And (5) New Schedules Of Rates, Rules And Regulations For Service.
Issue: General rate case.

Michigan Public Service Commission Case No. U-21870: In the matter of the application of CONSUMERS ENERGY COMPANY for authority to increase its rates, amend its rate schedules and rules governing the distribution and supply of electric energy, and for miscellaneous accounting authority
Issue: General rate case.

Source: S&P Global Market Intelligence

Last Updated: 11/11/2025

λ S&P incorrectly reports the ROE ask as 10.26% and the authorized ROE as 9.56%

[1] S&P incorrectly reports the ROE as 9.80% rather than 9.75%

[2] S&P incorrectly reports the utility as Kingsport Power Company rather than Kentucky Power Company
